l. **pancreati'ni** (N.F.), pancreatic solution; each dose of ℥1 (4 0) contains pancreatin gr. 1 (0 06) in a 25 per cent. glycerin solution flavored with compound tincture of cardamom; intestinal digestive.

l. **pancre'atis** (Br.), pancreatic solution; finely divided pancreas from the pig 1, 20 per cent. alcohol 4, macerate for seven days and filter; contains the amylolytic and proteolytic properties of the pancreatic secretion; dose, ℥1–2 (4.0–8.0).

l. **pepsi'ni** (N.F.), liquid pepsin; each dose of ℥2 (8.0) contains pepsin gr. ½ (0.03) and hydrochloric acid ♏1½ (0.08) in a 34 per cent. glycerin solution; digestive.

l. **pepsi'næ antisep'ticus** (N.F.), antiseptic solution of pepsin; composed of pepsin 50, menthol 0.5, eucalyp-

tol 0.5, methyl salicylate 0.5, alcohol 10, glycerin 50, diluted hydrochloric acid 5, distilled water to make 1000.

l. **pepsi'ni aromat'icus** (N.F.), aromatic solution of pepsin; each dose of ʒ2 (8.0) contains pepsin gr. 2 (0.13) and hydrochloric acid ♏1 (0.06) in 25 per cent. glycerin solution flavored with allspice, cinnamon, and cloves; digestive.

l. **phospha'tum ac'idus** (N.F.), acid solution of phosphates, acid phosphates; obtained by treating bone ash with sulphuric acid and filtering; employed in rickets and osteomalacia in dose of ʒ2 (8.0).

l. **phospha'tum compos'itus** (N.F.), compound solution of phosphates; precipitated calcium carbonate 70, ferric phosphate 35, ammonium phosphate 35, sodium citrate 35, citric acid 120, glycerin 375, phosphoric acid 106, orange-flower water 125, distilled water to make 1000.

l. **phos'phori** (N.F.), solution of phosphorus, Thompson's solution; a solution of phosphorus 0.07, in absolute alcohol and glycerin 100.0, flavored with peppermint, nerve tonic in dose of ♏10 (0.6), containing phosphorus gr. 1/150 (0.0004).

l. **pi'cis alkali'nus,** alkaline solution of tar, containing tar 25, potassium hydroxide 12.5, water 62.5; employed externally in dermatology.

l. **pi'cis carbo'nis** (N.F., Br.), coal-tar solution, containing prepared coal-tar (pix carbonis), 1, in tincture of quillaria, 5; employed externally in various skin diseases.

l. **pituita'rii** (U.S.), solution of pituitary, pituitary extract, l. hypophysis; a colorless liquid containing the water-soluble principles of the posterior lobe of the fresh pituitary gland of cattle; vasoconstrictor and oxytocic in doses of ♏15 (1.0).

l. **plum'bi lacta'tis,** a mixture of one part l. plumbi subacetatis in from 9 to 15 of milk.

l. **plum'bi subaceta'tis** (U.S.), l. **plum'bi subaceta'tis for'tis** (Br.), solution of lead subacetate, strong solution of lead subacetate, Goulard's extract; lead acetate 180, lead oxide 110, distilled water to make 1000; employed locally well diluted for bruises and sprains.

l. **plum'bi subaceta'tis dilu'tus** (N.F., Br.), diluted solution of lead subacetate, lead water; solution of lead subacetate 40, in distilled water 1000 (U.S.); strong solution of lead subacetate 2 fluidrachms, 90 per cent alcohol 2 fluidrachms, distilled water 19½ fluidounces (Br.); external application to bruises and sprains.

l. **potas'sæ,** solution of potassa, l. potassii hydroxidi (U.S.); contains 5.85 per cent of potassium hydroxide.

l. **potas'sæ chlorina'tæ** (N.F.), solution of chlorinated potassa, Javelle water, an aqueous solution of chlorinated potassa employed as a disinfectant, deodorant, and bleaching fluid.

l. **potas'sæ chlorina'tæ,** solution of chlorinated tion of potassium arsenite, arsenical solution, Fowler's solution, powdered arsenic trioxide 10, potassium bicarbonate 20, distilled water 1000; a convenient means of administering arsenic; dose, ♏1–5 (0.06–0.3).

l. **potas'sii citra'tis** (U.S.), solution of potassium citrate; citric acid 6, water 50; potassium bicarbonate 8, water 50; mix the two solutions and bottle before effervescence has quite ceased; diaphoretic, diuretic, and refrigerant in doses of ʒ½–1 (15.0–30.0).

l. **potas'sii hydrox'idi** (U.S., Br.), solution of potassium hydroxide, l. potassæ potassium hydroxide 60, distilled water 940; slightly diuretic, also employed to still the pains of gastric acidity in doses of ♏10–30 (0.6–2.0).

l. **potas'sii iod'idi** (N.F.), solution of potassium iodide, saturated solution of potassium iodide, an aqueous solution containing not less than 97 and not more than 103 gm. of potassium iodide and 0.05 gm. of sodium thiosulphate in each 100 c.c.; a clear colorless and odorless solution having a strongly saline taste; average dose, ♏ 5 (0.3).

l. **potas'sii permangana'tis** (Br.), solution of potassium permanganate, a one per cent. solution; dose ʒ2–4 (8.0–16.0).

l. **procai'næ hydrochlori'di** (N.F.), solution of procaine hydrochloride, dental anesthetic solution; procaine hydrochloride 2.00, sodium chloride 0.92, thymol, 0.02, sterilized distilled water to make 100 c.c.; employed as an anesthetic, especially in dental work.

l. **quas'siæ concentra'tus** (Br.), concentrated solution of quassia; powdered quassia 2, percolated with 20 per cent. alcohol 20; dose ʒ½–1 (2.0–4.0).

l. **quini'næ ammonia'tus** (Br.), ammoniated solution of quinine, tinctura quininae ammoniata (Br. '14), contains 2 per cent. of quinine sulphate, and 10 per cent of dilute solution of ammonia in 60 per cent. alcohol; dose, ♏ 30–60 (2.0–4.0).

l. **rhe'i concentra'tus** (Br.), concentrated solution of rhubarb; powdered rhubarb 10, percolated with 20 per cent. alcohol 20; dose ʒ½–1 (2.0–4.0).

l. **sacchari'ni,** solution of saccharin or glusidum; 7 per cent. strength in alcohol 25, water 75; used for sweetening in place of sugar.

l. **sar'sæ compos'itus concentra'tus** (Br.), concentrated compound solution of sarsaparilla; sarsaparilla 20, sassafras 2, guaiac 2, liquorice root 2, mezereon bark 1; 90 per cent. alcohol 4½, distilled water to make 20; dose ʒ2–4 (8.0–16 0).

l. **sen'egæ concentra'tus** (Br.), concentrated solution of senega; senega powder 10, percolated with 25 of a mixture of 1 part 45 per cent. alcohol and 2 parts 20 per cent. alcohol; dose ʒ½–1 (2.0–4.0).

l. **sen'næ concentra'tus** (Br.), concentrated solution of senna; senna in powder 20, percolated and repercolated with water to make 16, to which are added 90 per cent. alcohol 2, and tincture of ginger 2½; dose ʒ½–1 (2.0–4.0).

l. **serip'arus** [L. whey-producing], liquid rennet; a 10 per cent. solution of fresh calves' rennet with sodium chloride 4 per cent. and alcohol 18 per cent.; used as a digestant and for curdling milk.

l. **serpenta'riæ concentra'tus** (Br.), concentrated solution of serpentary; powdered serpentary 10, percolated with 20 per cent. alcohol 25, dose ʒ½–1 (2.0–4.0).

l. **so'dæ** (U.S. 1890), l. sodii hydroxidi.

l. **so'dæ chlorina'tæ** (U.S., Br.), solution of chlorinated soda, Labarraque's solution is ¼ the strength of this; monohydrated sodium carbonate 70, chlorinated lime 100, water to make 1000; disinfectant, deodorant, used as an antiseptic application to ulcers, and given internally as an intestinal antiseptic in doses of ♏20–30 (1.3–2.0).

l. **so'dæ clorina'tæ chirurgica'lis** (U.S., Br.), surgical solution of chlorinated soda, modified Dakin's solution, an aqueous solution of chlorine compounds of sodium, containing not less than 0.45 and not more than 0.50 per cent. of NaOCl, equivalent to from 0.43 to 0.48 per cent. of available chlorine; a colorless or faintly yellow liquid having a slight odor suggesting chlorine; see Dakin's* fluid.

l. **so'dæ et men'thæ** (N.F.), solution of soda and mint, replacing the mistura sodæ et menthæ of the previous edition of the N.F., sodium bicarbonate 50, aromatic spirit of ammonia 10, spearmint or peppermint water to make 1000; dose, ʒ2 (8 0).

l. **so'dii arsena'tis** (N.F. and Br.), solution of sodium arsenate, contains 1 per cent. sodium arsenate; dose, ♏1–5 (0.06–0.3).

l. **so'dii arsena'tis dilu'tus** (N.F.), diluted solution of sodium arsenate, Pearson's solution; a ¼ per cent. solution of crystallized sodium arsenate, 1/8 the strength of liquor sodii arsenatis (N.F.); alterative in doses of ♏2–4 (0.13–0.26).

l. **so'dii bora'tis compos'itus** (N.F.), compound solution of sodium borate, Dobell's solution; contains sodium borate and sodium bicarbonate each 1.5, phenol 0.3, glycerin 3.5, distilled water to make 100; an alkaline antiseptic solution.

l. **so'dii carbola'tis,** solution of sodium carbolate; contains 50 per cent. phenol and 3 5 per cent. sodium hydroxide in aqueous solution; deodorant and disinfectant.

l. **so'dii chlo'ridi physiolog'icus** (U.S., Br.), physiological salt solution,* of the strength of 8.5 grains in 1000 mils (cubic centimeters) of distilled water.

l. **so'dii citra'tis** (N.F.), solution of sodium citrate, potio Riveri; citric acid 2, sodium bicarbonate 2.5, water 100; diaphoretic and diuretic in doses of ʒ2 (8.0).

l. **so'dii citrotartra'tis efferves'cens,** effervescent solution of sodium citrotartrate, tartrocitric lemon-

ade; an effervescent solution of sodium tartrate containing some citric acid and syrup; laxative and refrigerant in doses of ℥12 (360.0), one bottle.

l. **so'dii ethyla'tis** (Br.), solution of sodium ethylate or alcoholate; sodium 22 grains, dissolved in absolute alcohol 1 fluidounce; employed externally as a caustic.

l. **so'dii glycerophospha'tis,** solution of sodium glycerophosphate, or glycerinophosphate; a yellowish syrupy liquid, containing not less than 50 per cent. of the anhydrous salt; dose, ♏6 (0.35).

l. **so'dii hydrox'idi** (U.S.), l. sodæ (U.S. 1890), solution of sodium hydroxide, solution of caustic soda; sodium hydroxide 56, distilled water 944; used for the same purpose as l. potassii hydroxidi.

l. **so'dii olea'tis,** solution of sodium oleate or of soap; white castile soap, gr. 30 (1 0), water ℥1 (30 0); used in the preparation of oleates.

l. **so'dii phospha'tis compos'itus** (N.F.), compound solution of sodium phosphate; sodium phosphate 1000, citric acid 130, glycerin 150, distilled water to make 1000; laxative in doses of ℥2 (8 0).

l. **so'dii silica'tis,** solution of sodium silicate, liquid glass, a transparent syrupy fluid; employed in surgery in applying fixed dressings and splints.

l. **strychni'næ aceta'tis,** solution of strychnine acetate, Hall's solution of strychnine; strychnine acetate gr. 1 (0.6) in water ℥1 (30.0), with acetic acid and alcohol, colored red; dose ♏8–15 (0.5–1.0).

l. **strychni'næ hydrochlo'ridi** (Br.), solution of strychnine hydrochloride; strychnine hydrochloride 17½ grains, 90 per cent. alcohol 1 fluidounce, distilled water 3 fluidounces; dose, ♏2–8 (0.13–0.5).

l. **thyroid'ei** (Br.), thyroid solution, thyroid extract, a liquid extract of the thyroid gland of the sheep; employed in myxedema, cretinism, and various disturbances of metabolism in doses of ♏5–15 (0.3–1.0).

l. **tinos'poræ concentra'tus** (B.A.), concentrated solution of tinospora or gulancha; dose, ♏30–60 (2.0–4.0).

l. **todda'liæ concentra'tus** (B.A.), concentrated solution of toddalia or of lopez-root; stomachic tonic in doses of ℥½–1 (2.0–4.0).

l. **trinitri'ni** (Br.), solution of nitroglycerin, spiritus glycerylis nitratis (U.S.).

l. **zin'ci chlo'ridi** (U.S., Br.), solution of zinc chloride, Burnett's solution; zinc 240, hydrochloric acid 840, nitric acid 12, precipitated zinc carbonate 12, distilled water to make 1000; disinfectant and deodorant.

l. **zin'ci et alu'mini compos'itus,** compound solution of zinc and aluminum; zinc sulphate and aluminum sulphate each 20, betanaphthol 0.06, oil of thyme 0.2, water 100; antiseptic and deodorant.

l. **zin'ci et fer'ri compos'itus,** compound solution of zinc and iron; zinc sulphate 26, ferrous sulphate 20, copper sulphate 6.5, betanaphthol 0.06, oil of thyme 0.2, hypophosphorous acid, 0.4, water 100; antiseptic and deodorant.

l. **zingib'eris,** solution of ginger, soluble essence of ginger; a liquid preparation, miscible with water, containing about 35 per cent. of ginger; carminative in doses of ℥½–1 (2 0–4 0), and used as a flavoring agent.

liquorice (lik'or-is). Licorice, glycyrrhiza.*

Lisfranc's amputa'tion (lis-frahnk')[Jacques *Lisfranc*, French surgeon, 1790–1847.] Amputation of the foot at the tarsometatarsal joint, the sole being preserved to make the flap. **L.'s joint,** the tarsometatarsal joint **L.'s lig'ament,** a very strong fibrous band extending between the lower part of the external surface of the first cuneiform bone and the lower two-thirds of the internal surface of the base of the second metatarsal bone. **L.'s opera'tion,** L.'s amputation. **L.'s tu'bercle,** tuberculum scaleni.

lisp [A.S. *wlisp.*] To pronounce *s* and *z* as *th*.

Lissauer's tract or **mar'ginal zone** (lis'ow-er) [Heinrich *Lissauer*, German neurologist 1861–1891.] Spitzka's* marginal tract.

lissencephalic (lis-en-sĕ-fal'ik) [G. *lissos*, smooth, + *enkephalos*, brain.] Having a brain with few and shallow convolutions.

Lissoflagella'ta [G. *lissos*, smooth.] A subclass of the *Zoömastigophora*, flagellated organisms without a protoplasmic collar around the base of the flagellum.

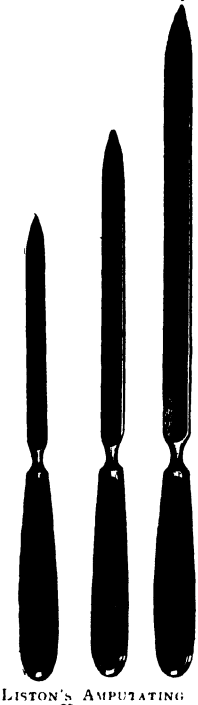
Lis'ter's doub'le salt [Joseph *Lister* (later Lord Lister) English surgeon, 1827–1912.] Hydrargyri et zinci cyanidum. **L.s dress'ing,** an antiseptic dressing of gauze impregnated with carbolic acid. **L.'s meth'od,** antiseptic surgery, first advocated by Lister in an article published in 1867. The operation was performed under a cloud of diluted carbolic acid spray, the instruments were dipped in a carbolic solution before use, and the wound was dressed with a thick layer of carbolized gauze. From this was developed the present practice of aseptic* surgery. **L.'s ointment,** composed of boric acid, white wax, paraffin, and almond oil.

lis'terine. Trade name of a liquid proposed for use in various conditions in which an antiseptic solution is said to be beneficial.

Lis'terism. Lister's* method.

Lis'ting's law [Joseph Benedict *Listing*, German physicist, 1808–1882.] When the eye leaves one object and fixes another, it revolves about an axis perpendicular to a plane cutting both the former and present lines of vision. **L.'s schemat'ic eye,** an apparatus representing the refracting media of the eye in distant vision.

Lis'ton's for'ceps [Robert *Liston*, London surgeon of Scottish birth, 1794–1847.] A bone-cutting forceps. **L.'s knives,** long-bladed knives of various sizes used in amputations. (See illustration.) **L.'s scis'sors** or **shears,** strong shears for cutting plaster-of-Paris bandages.



LISTON'S AMPUTATING KNIVES

liter, litre (le'ter) [Fr.] A measure of capacity of 1000 cubic centimeters, or 1 cubic decimeter, the equivalent of 1.056 quarts.

lithagogue (lith'ă-gog) [G. *lithos*, stone, + *agōgos*, drawing forth.] 1. Causing the dislodgment or expulsion of calculi, especially urinary calculi. 2. An agent which is credited with causing the partial solution and expulsion of urinary calculi.

litharge (lith'arj) [G. *lithos*, stone, + *argyros*, silver.] Lead oxide, a yellowish or reddish scaly powder or mass, plumbi oxidum. l. **plas'ter,** lead plaster, diachylon.

lith'ate. A salt of lithic acid.

lithec'tasy [G. *lithos*, stone, + *ektasis*, a stretching out.] The urethral extraction of a vesical calculus after a preliminary dilatation of this canal.

lithec'tomy [G. *lithos*, stone, + *ektomē*, excision.] Lithotomy.

lithe'mia, lithæ'mia. The presence of uric acid in excess in the blood; uricemia.

lithe'mic. Relating in any way to lithemia

lith'ia. Lithium oxide.

lithiasis (lĭ-thi'a-sis) [G. *lithos*, stone.] 1. The so-called uric-acid diathesis. 2. The formation of calculi of any kind, especially of biliary or urinary calculi.

lith'ic acid [G. *lithos*, stone.] Uric* acid.

lithico'sis [G. *lithikos*, of stone.] Pneumonoconiosis, stone-mason's phthisis.

ith'ium, gen. *lith'ii* [G. *lithos*, a stone.] An alkaline metallic element, symbol Li, atomic weight 7, of silvery white color, somewhat softer than lead; a number of its salts are more or less employed in medicine. **lith'ii ben'zoas** (N.F.), lithium benzoate, $LiC_7H_5O_2$, occurs as a white powder or glistening scales of a soapy feel, soluble in water; diuretic, antilithic, and antirheumatic, in doses of gr. 15–30 (1.0–2.0). **l. bitar'trate,** tartar-lithin, a white soluble powder diuretic and laxative; employed in rheumatism and pyorrhea alveolaris in doses of gr. 3–8 (0.2–0.5). **lith'ii bro'midum** (N.F.), lithium bromide LiBr, a white deliquescent powder; sedative and hypnotic in doses of gr. 10–30 (0.6–2.0). **l. caf'feine-sul'phonate,** symphorol-lithium, a white crystalline powder of bitter taste, soluble in water; employed in Bright's disease, gout, rheumatism and obesity in doses of gr. 10–15 (0.6–1.0). **lith'ii carbo'nas** (N.F., Br.), lithium carbonate Li_2CO_3, soluble in 75 parts of water; antirheumatic and antilithic in doses of gr. 5–15 (0.3–1.0). **lith'ii ci'tras** (N.F., Br.), lithium citrate, $Li_3C_6H_5O_7 + 4H_2O$, occurs as colorless crystals or a white powder, soluble in water; diuretic and antirheumatic in doses of gr. 10–20 (0.6–1.3). **lith'ii ci'tras efferves'cens** (Br.), effervescent lithium citrate, sal lithii citratis effervescens (N.F.); lithium citrate 50, sodium bicarbonate 570, tartaric acid 300, citric acid 195; all the ingredients are thoroughly mixed and in a moist state pressed through a sieve and the resulting coarse granules are dried; dose ʒ1–2 (4.0–8.0). **l. diuret'in,** l. theobromine salicylate. **l. ichthyolsul'phonate,** ichthyol-lithium, a black tarry mass, employed externally for the same purposes as ichthyol, and internally in rheumatism in doses of gr. 5–8 (0.3–0.5). **l. i'odate,** a white soluble powder, employed in gout and renal colic in doses of gr. 2–3 (0.13–0.2). **lith'ii salicy'las** (N.F.), lithium salicylate, $LiC_7H_5O_3$; a white, odorless, sweetish, soluble powder, employed as a substitute for sodium salicylate in doses of gr. 10–15 (0.6–1.0). **l. sulphoich'thyolate,** l. ichthyolsulphonate. **l. theobro'mine ben'zoate,** diuretin, uropherin b., uropherin benzoate, a white soluble powder, recommended as a diuretic in cardiac and renal dropsy in doses of gr. 10–15 (0.6–1.0). **l. theobro'mine sal'icylate,** uropherin s., uropherin salicylate, a white soluble powder, employed in cardiac and renal dropsy in doses of gr. 10–15 (0.6–1.0). **l. val'erate,** a white crystalline soluble powder, recommended in rheumatic conditions with nervous symptoms, in doses of gr. 5–15 (0.3–1.0). **l. van'adate,** a yellowish soluble powder, recommended in rheumatism in doses of gr. $\frac{1}{5}$ (0.004) every second day.

lithocenosis (lith"o-se-no'sis) [G. *lithos*, stone, + *kenōsis*, an emptying.] The removal of the crushed fragments of a vesical calculus; litholapaxy.

lith'oclast [G. *lithos*, stone, + *klastos; klaō*, I break in pieces.] A powerful lithotrite.

litholeine (lith-o'le-ēn) [G. *lithos*, stone + L. *oleum*, oil.] A yellowish oily liquid distilled from petroleum, used externally in eczema and other skin diseases.

lithoclysma (lith-o-kliz'mah) [G. *lithos*, stone, + *klysma*, clyster.] The injection of calculary solvents into the bladder.

lithoco'nion [G. *lithos*, stone, + *koniō*, I make dusty] A form of lithotrite.

lithocystot'omy [G. *lithos*, stone, + *kystis*, bladder + *tomē*, incision.] Vesical lithotomy.

lithodialysis (lith"o-di-al'i-sis) [G. *lithos*, stone + *dialysis* a breaking up.] The fragmentation or solution of a calculus.

lithogenesis, lithogeny (lith-o-jen'e-sis, lith-oj'en-i) [G. *lithos*, stone, + *genesis*, production.] The formation of calculi.

lithokelyphopædion, lithokelyphopedium (lith"o-kel"i-fo-pe'dĭ-on, or um) [G. *lithos*, stone, + *kelyphos*, husk, shell, + *paidion*, child.] Lithopædion, lithokelyphos.*

lithokel'yphos [G. *lithos*, stone, *kelyphos*, rind, shell.] A fetus, usually extrauterine, the membranes of which have become calcified, forming a stonelike shell

lith'olapaxy [G. *lithos*, stone, + *lapaxis*, an emptying out.] The operation of crushing a stone in the bladder and washing out the fragments through a catheter of wide lumen.

lithol'ogy [G. *lithos*, stone, + *-logia*.] The branch of medical science relating to calculi or concretions

lithol'ysis [G. *lithos*, stone, + *lysis*, solution] The dissolving of urinary calculi.

lith'olyte. An instrument for injecting calculary solvents.

lithom'eter [G *lithos*, stone, + *metron*, measure.] An instrument for measuring the size of a vesical calculus.

lithome'tra [G. *lithos*, stone, + *mētra*, womb.] Calcification of the uterine tissues.

lithomoschus (lith-o-mos'kus) [G. *lithos*, stone, + *moschos*, the young of any animal, especially a calf.] The term applied to lithopedion* when occurring in animals, especially cattle.

lithomyl (lith'o-mil) [G. *lithos*, stone, + *mylē*, mill.] An instrument for pulverizing a stone in the bladder.

lithoneph'ria [G. *lithos*, stone, + *nephros*, kidney] Stone in the kidney, the presence of renal calculi

lithonephrot'omy [G. *lithos*, stone, + *nephros*, kidney, + *tomē*, incision.] Incision into the kidney for the removal of a calculus, renal lithotomy.

lithontrip'tic. Lithotriptic(2).

lithope'dion, lithopæ'dion, lithope'dium [G. *lithos* stone, + *paidion*, small child.] A calcified fetus in utero, ostembryon.

lith'ophone [G. *lithos*, stone, + *phōnē*, sound] An instrument which gives a sound when in contact with a stone in the bladder.

lith'oscope [G. *lithos*, stone, + *skopeō*, I view.] A cystoscope used for the detection of a stone in the bladder.

litho'sis [G. *lithos*, a stone.] Pneumonoconiosis

lith'otome. A knife used in lithotomy.

lithot'omist. A person skilled in lithotomy.

lithot'omy [G. *lithos*, stone, + *tomē*, incision.] Cutting for stone; a cutting operation for the removal of a calculus, especially a vesical calculus. **bilat'eral l.,** one in which the perineal incision is made transversely across the median raphe. **lat'eral l.,** one in which the perineum is incised to one side of the median line. **mar'ian l.** [L. *mas* (*mar-*) male], median l. **me'dian l.,** an operation in which the perineal incision is made in the line

of the median raphe. **perine'al l.,** any operation for stone in which the bladder is approached by an incision in the perineum. **suprapu'bic l.,** one in which the bladder is entered by an incision immediately above the symphysis pubis. **vag'inal l.,** one in which the bladder is entered through an incision in the vagina.

lithot'ony [G. *lithos*, stone, + *tonos*, a stretching.] Extraction of a stone from the bladder through a small incision which is then dilated instrumentally.

lithotre'sis [G. *lithos*, stone, + *trēsis*, a boring.] The boring of holes in a calculus to facilitate its crushing.

lith'otripsy [G. *lithos*, stone, + *tripsis*, a rubbing.] The operation of crushing a stone in the bladder or urethra.

lithotrip'tic. 1. Relating to lithotripsy 2. An agent which effects the solution of a calculus; lithontriptic.

lith'otriptor. Lithotrite.

lith'otrite [G. *lithos*, stone, + L. *tritus; terere*, to rub.] Lithoclast, lithotriptor; an instrument used to crush a stone in the bladder or urethra.

lithot'rity [G. *lithos*, stone, + L. *tritus; terere*, to rub.] The operation of crushing a calculus in the bladder or urethra.

lithous (lith'us) [G. *lithos*, stone.] Calculous, calculary, relating to a calculus.

lithure'sis [G. *lithos*, stone, + *ourēsis*, urination.] The passage of gravel in the urine.

lithu'ria [*lithic* (acid) + G. *ouron* urine.] The excretion of uric acid or urates in large amount in the urine.

lit'mus [a corruption of *lacmus*.] Lacmus, a blue coloring matter obtained from *Roccella tinctoria* and other species of lichens; it is reddened by acids and turned blue again by alkalies. **l. pa'per,** blotting paper stained with litmus, employed to test the reaction of urine and other fluids, being turned red if the fluid is acid.

litre (le'ter) [Fr.] Liter.

Lit'ten's phenom'enon or **sign** [Moritz *Litten*, Berlin physician, 1845–1907.] Diaphragm* phenomenon.

litt'er [Fr. *litière; lit*, bed.] A stretcher or portable couch for moving the sick or wounded.

Litt'le's disease [William John *Little*, English surgeon, 1810–1894.] Lateral sclerosis, spastic spinal paralysis.* **L.'s paral'ysis,** acute anterior poliomyelitis.

Littré's glands (le-tra') [Alexis *Littré*, Parisian anatomist, 1658–1726.] Mucous glands in the bulbous urethra, Morgagni's glands, glandulæ* urethrales. **L.'s her'nia,** hernia of Meckel's diverticulum. **L.'s opera'tion,** inguinal colostomy formation of an artificial anus in the left inguinal region.

littritis (lit-tri'(tre')tis) [*Littré.*] Inflammation of Littré's glands.

Litzmann obliq'uity (lits'mahn) [Karl Konrad Theodor *Litzmann*, German gynecologist, 1815–1890.] Posterior asynclitism; inclination of the fetal head so that the biparietal diameter is oblique in relation to the plane of the pelvic brim, the posterior parietal bone presenting to the parturient canal.

live blood. Myokymia, or twitching of the eyelid.

live'do [L. a black and blue spot.] A bluish discoloration of the skin, either in limited patches or general. **l. reticula'ris,** cutis marmorata, a purplish mottling of the skin usually seen in infants and young children, but occasionally occurring also in adults with weak circulation. **l. r. idiopath'ica,** a permanent form of l. r. **l. r. symptomat'ica,** a discoloration or mottling of the skin due to some demonstrable cause, such as seen in erythema ab igne, in certain tuberculides, or due to the action of cold. **l. telangiectat'ica,** a permanent mottling of the skin due to an anomaly, probably congenital, of the cutaneous capillaries; a form of l. reticularis idiopathica.

liv'er [A.S. *lifer*.] Hepar jecur; the largest gland of the body, lying beneath the diaphragm in the right hypochondrium and upper part of the epigastrium; it is of irregular shape and weighs from 3 to 3½ pounds, or about $\frac{1}{40}$ the weight of the body. It secretes the bile and is also of great importance in both carbohydrate and proteid metabolism. **acute' yel'low at'rophy of the l.,** icterus gravis, malignant jaundice, acute parenchymatous hepatitis; a disease marked by rapid destruction of the parenchyma cells of the liver and atrophy and softening of the entire organ, with symptoms of jaundice, hemorrhages, and cerebral disturbances. **brim'stone l.,** a bright yellow, bile-stained liver seen in congenital syphilis and acute yellow atrophy. **car'diac l.,** hepatic congestion with intralobular cellular destruction, due to backward venous pressure in heart disease, cyanotic atrophy of the l., pseudocirrhosis. **fissures of the l.,** five in number: (1) umbilical, (2) of the ductus venosus (these two constituting the left sagittal fissure), (3) portal or porta hepatis, (4) for the vena cava, (5) for the gall-bladder (these two constituting the right sagittal fissure); see also under *fossa* and *porta hepatis*. **hob'nail l.,** atrophic or portal cirrhosis of the l., the contraction of the connective-tissue septa and cell proliferation causing a pebbly or small lobular appearance of the surface. **in'fantile l.,** biliary cirrhosis* of children. **larda'ceous l.,** waxy l. **lig'aments of the l.,** five in number: coronary, two lateral, longitudinal, and round ligament. **lobes of the l.,** four in number: lobus caudatus, or lobus Spigelii, lobus hepatis dexter, lobus hepatis sinister, and lobus quadratus. **nut'meg l.,** chronic congestion of the liver with hyperplasia of the connective tissue of the organ; cyanotic atrophy of the l. **trop'ical l.,** chronic congestion of the liver resulting in hypertrophic cirrhosis, with occasionally lardaceous or fatty degeneration, occurring in northerners who have lived for many years in the tropics. **wax'y l.,** amyloid degeneration of the liver. **yellow at'rophy** of the l., acute yellow atrophy of the l

abscess, hepatapostema. **atrophy,** hepatophthissi, hepatatrophia. **calculus,** hepatolith, gallstone. **cancer,** hepatocarcinia, hepatocarcinoma, hepatomyeloma, hepatoscirrhus, hepatencephaloma. **congestion,** hepatohemia. **description of,** hepatography. **disease of,** hepatopathy. **disordered function,** hepatism. **enlargement,** hepatauxe, hepatomegaly, hepatoncus. **excision of a part,** hepatectomy. **fatty,** hepar adiposum, jecur adiposum. **fixation of floating,** hepatopexia, hepatopexy. **floating,** hepatoptosia. **gangrene,** hepatocace, hepatonecrosis. **hemorrhage,** hepatorrhagia. **hernia,** hepatocele, hepatomphalocele. **incision,** hepatotomy. **induration,** hepatocirrhosis. **inflammation,** hepatitis, hepatopyitis, hepatophlegmon-perihepatitis, glissonitis. **obstruction of ducts,** hepatemphraxis. **pain,** hepatalgia, hepatodynia, hepaticocolica. **resembling in structure,** hepatoid. **rupture,** hepatorrhexis. **suture,** hepatorrhaphy. **tumor,** hepatophyma, hepatoncus. **ulceration,** hepathelcosis.

liv'er-fluke. *Fasciola hepatica.* **Chinese' l.-f.,** *Opisthorchis sinensis.*

liv'er-rot. A disease of the liver in sheep caused by the liver fluke.

liv'er-spots. The lesions of chloasma.

liv'er-wort [A.S. *wyrt*, plant.] Hepatica

livetin (li-vet'in). A protein body, containing 0.1 per cent. phosphorus, found with ovovitellin in yolk of egg.

liv'id [L. *lividus*.] 1. Discolored from a contusion, black and blue. 2. Cyanotic; ashen.

livid'ity. The state of being black and blue; discoloration from venous congestion; cyanosis; a leaden or ashy-gray hue.

Livierato's sign (le-ve-er-ah'to) [P. E. *Livierato*, Italian physician, *1860.] Abdominocardiac reflex.*

li'vor [L. a black and blue spot.] 1. Lividity. 2. The discoloration of the skin on the dependent parts of a corpse.

lixivia'tion [L. *lixiviare*, to make lye.] The removal of the soluble constituents of a substance by running water through it, leaching.

lixiv'ium. Lye, a solution of alkaline salts obtained by leaching or lixiviation.

Li'zars' opera'tion [John *Lizars*, Edinburgh surgeon, 1808–1860.] Exsection of the lower jaw.

L.M. Abbreviation for licentiate in midwifery.

L.M.A. Abbreviation for left mentoanterior presentation of the fetus, *i.e.* with the chin directed to the left acetabulum of the mother.

L.M.P. Abbreviation for left mentoposterior, noting the presentation of the fetus with its chin directed to the left sacroiliac joint of the mother.

L.O.A. Abbreviation of left occipitoanterior presentation, the occiput of the fetus being in relation with the left acetabulum of the mother.

loading (lo'ding). In insurance the amount necessary to be added to the net premium to provide for expenses and contingencies.

Loa loa (lo'ah-lo'ah). A species of filaria, *F. loa*, *F. oculi*, which invades the conjunctiva and the superficial connective tissue generally throughout the body.

loasis (lo'ah-sis). Infestation with *Loa* (*Filaria*) *loa*, giving rise probably to the condition called Calabar* swellings.

lo'bar. Relating to any lobe.

lo'bate. Lobose, lobed, divided into lobes, lobe-shaped; noting a bacterial colony with deeply undulate margins.

lobe [L. *lobus*.] 1. One of the subdivisions of an organ or other part, bounded by fissures, connective-tissue septa, or other structural demarcations. 2. One of the larger divisions of the crown of a tooth formed from a distinct point of calcification. 3. A rounded projecting part, as the lobe of the ear, lobulus auriculæ. See *lobulus* and *lobus*. **supplemen'tal l.**, in dental anatomy an extra lobe, one that is not included in the typical formation of a tooth.

lobec'tomy [L. *lobus*, lobe, + *ektomē*, excision.] Excision of a lobe of any organ or gland.

lobe'lia (U.S., Br.). Indian tobacco, asthma-weed, poke-weed; the dried leaves and tops of *Lobelia inflata*, an herb of eastern and central North America; employed as an expectorant and emetic in doses of gr. 5–8 (0.3–0.5), in eclectic practice, in drop doses repeated, as a vascular stimulant, and in angina pectoris in single dose of 20-30 drops of the specific medicine in water.

lobeline sulphate (lo'be-lēn sul'fāt). The sulphate of an alkaloid from lobelia; occurs in yellow friable masses soluble in water; employed in whooping-cough and asthma in doses of gr. ¼–½ (0.015–0.03).

lobopo'dium, pl. *lobopo'dia* [L. *lobus*, lobe, + (*pseudo*)*podium*.] A thick lobose pseudopodium.

lo'bose, lo'bous. Lobate.

Lobstein's disease' (lōb'stīn) [Johann Georg *Lobstein*, Strasbourg pathologist, 1777–1835.] Constitutional fragility of the bones, fractures being readily produced by slight injuries. **L.'s gan'glion**, an inconstant enlargement on the sympathetic trunk a little above the diaphragm **L.'s placen'ta**, placenta velamentosa.

lob'ular. Relating to a lobule.

lob'ulate, lob'ulated. Divided into lobules.

lob'ule [L. *lobulus*] A small lobe or one of the subdivisions of a lobe. See *lobulus*. **crescen'tic l.** of the cerebellum, see *lobulus quadrangularis*.

lob'ulet, lobulette'. A very small lobule or one of the smaller subdivisions of a lobule.

lob'ulus [L. dim. of *lobus* lobe.] Lobule, a small lobe or subdivision of a lobe.

l. auric'ulæ [BNA], lobule of the auricle, the dependent fleshy process at the lower portion of the auricle.

l. biven'ter [BNA], biventral lobule, a lobule on the under surface of each cerebellar hemisphere, divided by a curved sulcus into a lateral and a medial portion; it corresponds to the pyramid of the vermis

l. centra'lis [BNA], central lobule, a division of the superior vermis of the cerebellum between the lingula and the monticulus.

l. fusifor'mis, gyrus fusiformis [BNA], a small gyrus on the mesial aspect of the cerebral hemisphere below the fissura collateralis.

l. gra'cilis, slender lobule, the anterior portion of the posteroinferior lobule of the cerebellum, the posterior portion being the l. semilunaris inferior; the two correspond to the tuber of the vermis.

l. paracentra'lis [BNA], paracentral lobule, a division of the mesial aspect of the pallium, lying above the sulcus cinguli and bounded by the precentral sulcus in front and the pars marginalis of the sulcus cinguli behind.

l. parieta'lis infe'rior [BNA], inferior parietal lobule, inferior parietal gyrus, the area of the parietal lobe of the cerebrum lying below the interparietal sulcus; it contains the angular and the supramarginal gyri.

l. parieta'lis supe'rior [BNA], superior parietal lobule, superior parietal gyrus, the area of the convex surface of the parietal lobe of the cerebrum lying between the longitudinal fissure and the interparietal sulcus behind the posterior central gyrus; it is continuous with the præcuneus on the mesial aspect of the hemisphere.

l. posteroinfe'rior, see *l. gracilis* and *l. semilunaris inferior*.

l. quadrangula'ris [BNA], quadrangular lobule, l. quadratus, the main portion of the superior part of each hemisphere of the cerebellum, corresponding to the monticulus of the vermis; it is divided into two portions, the anterior and the posterior crescentic lobules, corresponding to the culmen and the declive of the vermis.

l. quadra'tus, (1) l. quadrangularis [BNA]; (2) precuneus.

l. semiluna'ris infe'rior [BNA], inferior semilunar lobule, posteroinferior lobule, the posterior lobule of the under surface of each cerebellar hemisphere, corresponding to the tuber of the vermis; by some this term is applied to the posterior portion of the posteroinferior lobule, the anterior portion being called l. gracilis.

l. semiluna'ris supe'rior [BNA], superior semilunar lobule, posterosuperior lobule, the posterior lobule of the upper surface of each cerebellar hemisphere, corresponding to the folium of the vermis.

lo'bus [L.] Lobe.

l. appendicula'ris, l. linguiformis, Riedel's lobe, an occasional tongue-like process extending downward from the right lobe of the liver external to the gallbladder; a similar process may, though rarely, extend from the left lobe.

l. az'ygos, a small accessory lobe, pyramidal in form, sometimes found on the lower part of the inner aspect of the right lung.

l. biventra'lis, lobulus biventer.

l. cacu'minis, folium vermis.

l. cauda'tus [BNA], l. Spigelii, a lobe on the under surface of the liver posteriorly, separated from the right lobe by the fossa for the vena cava, and from the left

by the fossa for the ductus venosus, and from the quadrate lobe by the porta hepatis; the [BNA] makes l. caudatus and l. Spigelii synonymous, but usually l. caudatus is described as a narrow bridge of liver substance connecting the l. Spigelii with the right lobe, the processus caudatus [BNA], of the caudate lobe.

l. centra'lis, central lobe of cerebrum, insula [BNA].

l. cli'vi, the clivus monticuli and the posterior crescentic lobules of the cerebellum considered as one lobe.

l. cul'minis, the culmen monticuli and the anterior crescentic lobules of the cerebellum considered as one lobe.

l. cuneifor'mis, lobulus biventer

l. falcifor'mis, falciform lobe, limbic lobe, gyrus* fornicatus [BNA].

l. fronta'lis [BNA] frontal lobe, the portion of each cerebral hemisphere anterior to the fissure of Rolando, or sulcus centralis.

l. gra'cilis, lobulus gracilis.

l. hep'atis dex'ter [BNA], right lobe of the liver, the largest of the lobes of the liver, separated from the left lobe above and in front by the attachment of the falciform ligament, from the caudate and quadrate lobes below by the fossæ for the vena cava and for the gall-gladder, respectively.

l. hep'atis sinis'ter [BNA], left lobe of the liver, separated from the right lobe above and anteriorly by the attachment for the falciform ligament, from the quadrate and caudate lobes below by the umbilical fossa and the fossa for the ductus venosus, respectively.

l. lim'bicus, limbic lobe, gyrus* fornicatus [BNA].

l. luna'tus ante'rior, lobulus semilunaris superior [BNA].

l. luna'tus supe'rior, lobulus semilunaris inferior [BNA].

l. occipita'lis [BNA], occipital lobe, the posterior pyramidal portion of each cerebral hemisphere, separated by no distinct surface markings from the parietal and temporal lobes (with the exception of the sulcus parieto-occipitalis) in the human adult; in the fetus its anterior boundary is marked on the outer surface by a groove, fissura perpendicularis externa, which corresponds to the "Affenspalte" or ape-fissure.

l. olfacto'rius [BNA], olfactory lobe, a rudimentary lobe of each cerebral hemisphere, consisting of an anterior lobule (olfactory bulb, olfactory trigone, and Broca's area) and a posterior lobule (the anterior perforated substance).

l. parieta'lis [BNA], parietal lobe, the middle portion of each cerebral hemisphere, separated from the frontal lobe by the central (Rolandic) sulcus, from the temporal lobe by the lateral (Sylvian) fissure in front and an imaginary line continuing it posteriorly, and from the occipital lobe only partly by the parieto-occipital on its mesial aspect.

l. quadra'tus (1) [BNA] a lobe on the under surface of the liver anteriorly, separated from the right lobe by the fossa of the gall-bladder, from the left lobe by the umbilical fossa, and from the caudate lobe by the porta hepatis, (2) lobulus quadrangularis, (3) precuneus

l. rena'lis [BNA], reniculus.

l. Spige'lii, l. caudatus.

l. tempora'lis [BNA], temporal lobe, a lobe on the outer side and under surface of each hemisphere; it is bounded above by the fissure of Sylvius and an imaginary line prolonged backward from this to the occipital lobe; posteriorly it is continuous with the occipital lobe from which it is separated only by an imaginary plane; on the under surface of the hemisphere it is separated from the hippocampal gyrus (limbic lobe) by the collateral fissure.

lo'cal [L *localis; locus*, place.] Having reference or confined to a limited part; not general or systemic

localiza'tion. 1. Limitation to a definite area. 2. The reference of a sensation to its point of origin. 3. The determination of the location of a morbid process. **cer'ebral l.,** the determination of the areas of the cerebral cortex in which are located the centers for various movements or processes.

lo'calized. Restricted or limited to a definite part

lo'calizer. An apparatus for determining, by means of the Roentgen rays, the location of a solid particle imbedded in the eyeball

lochia (lo'kĭ-ah) [G. neut. pl. of *lochios*, relating to childbirth.] The discharge from the vagina of mucus, blood, and tissue débris, following childbirth. **l. al'ba,** the later discharge no longer tinged with blood. **l. cruen'ta,** the earlier discharge stained with blood. **l. ru'bra,** l. cruenta. **l. sero'sa,** a very thin and watery discharge.

lochial (lo'kĭ-al). Relating to the lochia

lochiometra (lo-kĭ-o-me'trah) [G *lochia* + *mētra*, womb.] Distention of the uterus with retained lochia.

lochiometritis (lo-kĭ-o-me-trī'(tre')tis). Puerperal metritus.

lochioperitonitis (lo-kĭ-o-per-ĭ-ton-ī'(e')tis). Puerperal peritonitis

lochiopyra (lo-kĭ-op'ĭ-rah) [G. *lochia* + *pyr*, fire, fever.] Post-partum rise of temperature; puerperal fever.

lochiorrhagia (lo-kĭ-ŏ-ra'jĭ-ah) [G. *lochia* + *rhē gnymi*, I burst forth.] Lochiorrhea

lochiorrhea, lochiorrhœa (lo-kĭ-ŏ-re'ah) [G *lochia* + *rhoia*, a flow.] A profuse flow of the lochia

lochioschesis (lo-kĭ-os'kĕ-sis) [G. *lochia* + *schesis*, retention.] Retention of the lochia.

lock'-finger. Retention of one of the joints of a finger in a semiflexed position, not from ankylosis but in consequence of a fibrous growth on the extensor tendon.

Locke's solution (loks so-lu'shun). A solution used, like Ringer's* solution, for irrigating the mammalian heart, in laboratory experiments, in order to maintain its beating; the solution is composed of sodium chloride, 0.9, calcium chloride, 0.024, potassium chloride, 0.042, sodium bicarbonate, 0.01 to 0.03, dextrose 0.1, distilled water 100.

lock'jaw. Tetanus, specifically, trismus

Lock'wood's lig'ament [Charles Barrett *Lockwood*, English surgeon, 1858–1914.] A thickening of the lower portion of Tenon's capsule, attached to the lacrymal bone on one side, the malar bone on the other, acting as a suspensory ligament for the eyeball.

lo'co [Sp crack-brained] Loco-weed disease, a disease affecting cattle on the great plains of the western United States, caused by eating the loco weed; it is characterized by paresis, incoordination, dulness, and a tendency to become solitary in habit. **l. plant, l. weed,** a term applied to a number of plants of the family *Leguminosæ*, but especially to two: the purple, woolly, or stemmed l. *Astragalus mollissimus;* and the white or stemless l., *Aragallus lamberti.*

locoed (lo'kōd). Poisoned by the loco weed

locoism (lo'ko-izm). Poisoning by loco weed.

locomo'tion [L. *locus*, place, + *motio; movere*, to move.] Movement from one place to another.

locomo'tive. Locomotor.

locomo'tor. Relating to locomotion, or movement from one place to another. **l. atax'ia,** tabes dorsalis.

locomoto'rial. Relating to the locomotor apparatus of the body.

locomoto'rium [L. *locus*, place, + *motorius*, moving.] The locomotor apparatus of the body.

locomo'tory. Locomotor

loc'ular. Relating to a loculus.

loc'ulate. Containing numerous loculi.

loculation (lok-u-la'shun). Formation of loculi in a tissue or organ. **l. syn'drome,** Froin's syndrome.

loc'ulus, pl. *loc'uli* [L. dim of *locus*, place.] A small cavity or chamber.

lo'cum te'nens [L. *locus*, place, + *tenere*, to hold.] A substitute; a physician taking another's practice during the temporary absence or incapacity of the latter.

lo'cus [L.] A place. **l. cæru'leus** [BNA], blue place, a shallow depression, of a blue color in the fresh brain, lying laterally in the upper portion of the rhomboidal fossa leading toward the aqueduct of Sylvius. **l. cine'reus, l. ferrugin'eus,** l. cæruleus. **l. minor'is resisten'tiæ,** a place of less resistance, any part or organ which is more susceptible than the others to the attack of a morbific agent. **l. ni'ger,** substantia nigra. **l. perfora'tus anti'cus,** anterior perforated place or space, substantia perforata anterior [BNA]. **l. perfora'tus posti'cus,** posterior perforated place or space, substantia perforata posterior [BNA].

Loeffler's bacill'us (lĕf'ler) [Friedrich August Johannes *Loeffler*, German bacteriologist, 1852–1915.] *Corynebacterium diphtheriæ.* **L.'s blood serum,** a culture medium consisting of 3 parts beef blood-serum and sheep's blood-serum and 1 part of beef bouillon containing 1 per cent. peptone, 1 per cent. glucose, and ½ per cent. sodium chloride **L.'s caus'tic solu'tion,** an aqueous solution of tannin and sulphate of iron with the addition of an alcoholic fuchsin solution. **L.'s meth'ylene blue,** add 30 c.c. of a saturated alcoholic solution of methylene blue to 100 c.c. of a 0.01 per cent. solution of potash. **L.'s stain,** for flagella, the specimen is treated with a mixture of ferrous sulphate, tannic acid, and alcoholic fuchsin, then stained with aniline-water fuchsin or gentian violet made alkaline with 0.1 per cent. sodium hydrate solution.

loeffleria (lef-le'rĭ-ah). A condition in which the Klebs-Loeffler bacillus of diphtheria is present without producing any symptoms.

lœmograph'ia. Lemography.

lœmol'ogy, loimol'ogy. Lemology

Loenen's sign (le'nen). Ladin's* sign.

Loeschia (le'shyü). A genus of the order *Gymnamœbidæ*, including most of the forms formerly in the genus *Amœba*. **L. co'li,** *Entamœba coli*. **L. denta'lis,** *Entamœba buccalis*. **L. histolyt'ica,** *Entamœba histolytica*. **L. mortinata'lium,** a species which has been found in the internal organs of stillborn infants. **L. un'dulans,** *Entamœba undulans*.

loeschiasis (lĕ-shi'ă-sis). Infection with the ameba, amebiasis.

Loewe's ring (le'veh). A circular chromophose which sometimes surrounds the aphose of the macula lutea when one looks toward a bright white object after regarding a blue field. **L.'s test,** for sugar in the urine, the presence of which is indicated by a dark precipitate on boiling with a mixture of bismuth subnitrate, sodic hydrate, and glycerin

Loewenberg's canal' (lē'ven-berg) [Benjamin Benno *Loewenberg*, Parisian laryngologist of German birth, *1836.] L.'s scala. **L.'s for'ceps,** forceps with short curved blades ending in rounded grasping extremities devised for the removal of adenoid growths in the nasopharynx. **L.'s sca'la,** scala media, ductus* cochlearis [BNA]

Loewenthal's reac'tion (lē'ven-tahl) [Wilhelm *Loewenthal*, German physician, *1850.] The agglutinative reaction in relapsing fever. **L.'s test,** a test for glucose in blood serum; on treating with ferric chloride, sodium carbonate, and tartaric acid, a precipitate of iron oxide is thrown down if glucose is present. **L.'s tract,** Marchi's tract, the cerebellospinal (descending) tract of the spinal cord.

Loewi's test (lĕ've) [Otto *Loewi*, German pharmacologist, *1873.] For pancreatic insufficiency: upon the instillation of one or two drops of a 1–1000 solution of adrenalin into the conjunctival sac, the pupil will dilate if disease of the pancreas is present, no result follows if the pancreas is healthy; the reliability of the test lacks proof.

logaditis (lo-gă dī'(de')tis) [G. *logades*, the whites of the eyes, + *-itis*.] Scleritis.

logagno'sia [G. *logos*, word, + *a-* priv. + *gnōsis*, knowledge.] Aphasia.

logagraphia (log-ă-graf'ĭ-ah) [G. *logos*, word, + *a-* priv. + *graphō*, I write.] Agraphia.

logamne'sia [G. *logos*, word, + *amnēsia*, forgetfulness.] Aphasia.

logaphasia (log-ă-fa'zĭ-ah)[G. *logos*, word, + *aphasia*, speechlessness.] Aphasia of articulation.

-logia [G. *logos*, discourse, treatise.] 1. A Greek suffix, expressing in a general way the study of the subject noted in the body of the word, or a treatise on the same; the English equivalent is *-logy*, or, with the connecting vowel, *-ology*. A number of words thus formed have been transformed bodily from the Greek, as *osteologia* osteology; others have been formed on this model, as urology, laryngology, etc. 2 [G. *legō*, I collect] A suffix with the signification of collecting, picking, as in *carphologia*, picking off imaginary bits of straw or lint.

logocopho'sia [G. *logos*, word, + *kophōsis*, deafness] Word-deafness.

logomania (log-o-ma'nĭ-ah) [G. *logos*, word, + *mania*, frenzy.] Garrulous insanity.

logoneurosis (log-o-nu-ro'sis) [G. *logos*, word.] Any neurosis associated with a speech defect.

logop'athy [G. *logos*, word, + *pathos*, suffering.] Aphasia or any speech disorder of cerebral origin.

logopedia (lo-go-pe'dĭ-ah) [G. *logos*, word, + *pais* (*paid-*) child.] A branch of science dealing with the physiology and pathology of the organs of speech and with the correction of speech defects.

logoplegia (log-o-ple'jĭ-ah) [G. *logos*, word, + *plēgē*, stroke.] Paralysis of the organs of speech.

logorrhe'a, logorrhœ'a [G. *logos*, word, + *rhoia*, a flow.] Garrulousness.

log'ospasm [G. *logos*, word, + *spasmos*, spasm Stuttering; explosive speech.

log'wood. Hæmatoxylon.

Lohnstein's saccharim'eter (lōn'stīn) [Theodor *Lohnstein*, German physician, 1866–1918.] An apparatus for making a quantitative fermentation test of sugar in the urine.

loi'mic. Lemic.

loimograph'ia. Lemography.

loimol'ogy. Lemology.

loin [Fr. *longe*; L. *lumbus*.] Flank, the part of the side and back between the ribs and the pelvis.

loliism (lo'lĭ-izm). Giddiness, tremor, green vision, dilated pupils, great prostration, and sometimes vomiting—symptoms of poisoning by the seeds of a grass, *Lolium temulentum*, in the form of flour made into bread.

Lombardi's sign (lawm-bar'de) [Antonio *Lombardi*, Italian clinician.] Venous varicosities in the neighborhood of the spinous processes of the 7th cervical and first 3 thoracic vertebræ in incipient pulmonary tuberculosis.

lo'ment, lomen'tum. In botany, a legume which splits by transverse divisions.

Lon'don paste. A caustic of equal parts of caustic soda and unslaked lime, moistened with water at the time of application; soda cum calce (N.F.).

Long's coeffi'cient [John Harper *Long*, American physician, *1856.] The figures 2.6 by which the last two figures of the specific gravity of the urine are multiplied in order to obtain the number of grams of solids in 1000 c.c.

longevity (lon-jev'i-ti) [L. *longævus*, aged; *longus*, long, + *ævum*, age.] Great length of life.

long'ing-mark. Birthmark, nevus.

longinymph (lon'ji-nimf) [L. *longus*, long, + *nymphæ*, labia minora.] Noting an hypertrophy of the labia minora, as in the so-called Hottentot apron.

longis'simus [L. superlative of *longus*, long.] Name applied to certain muscles; see *musculus longissimus*.

longitu'dinal [L. *longitudo*, length.] Running lengthwise; in the direction of the long axis of the body or any of its parts

longsightedness (lawng-sīt'ed-nes). Hyperopia.

longus (long'gus) [L long.] Term applied to certain muscles; see *musculus longus*.

Loo'mis's diarrhe'a mix'ture [Alfred L. *Loomis*, New York physician, 1831–1895.] Oil of sassafras 1, tincture of opium 12, tincture of rhubarb 8, tincture of gambir 40, compound tincture of lavender to make 100; dose ℥30 (2.9).

loop [Gael. *lub*, bend(?).] 1. A curve or complete bend in a cord or other cylindrical body, forming an oval or circular ring. 2. A more or less sharp and more or less complete bend or curve in a nerve or blood-vessel or urinary tubule. 3 A platinum wire, set in a glass handle, its extremity bent into a small circle; used for transferring part of a bacterial colony to a fresh culture medium.

L.O.P. Abbreviation of left occipitoposterior presentation, the occiput of the fetus being in relation with the left sacroiliac joint of the mother.

lo'pez-root. Toddalia.

lophoc'omi [G. *lophos*, tuft, + *komē*, hair of the head.] The negroid races of man having tufted hair, such as the Negritos, Papuans, Malanesians, and Hottentots

loph'odont [G. *lophos*, ridge, + *odous*(*odont-*), tooth.] Having the crowns of the molar teeth formed in transverse or longitudinal crests or ridges; opposed to *bunodont*.

lophoph'orine. An alkaloid, $C_{13}H_{18}NO_3$, from *Anhalonium lewinii*.

lophotrichea (lō-fo-trik'e-ah) [G. *lophos*, tuft, + *thrix*(*trich-*) hair.] Microorganisms having cilia or flagella arranged in one or more tufts.

lophotrichous (lō-fot'ri-kus). Having cilia or flagella arranged in one or more tufts.

Lorain's disease (lo-ran') [Paul *Lorain*, French physician, 1827–1875.] Idiopathic infantilism*.

Lorantha'ceæ [G. *lōros*, strong, + *anthos*, flower.] A family of parasitic plants, the mistletoes; it includes some twenty genera and five hundred species.

lordo'ma [G. *lordōma*.] Lordosis.

lordoscolio'sis. Combined backward and lateral curvature of the spine.

lordo'sis [G. *lordōsis*.] Anteroposterior curvature of the spine, generally lumbar with the convexity looking anteriorly.

Lor'enz's meth'od [Adolf *Lorenz*, Viennese orthopedic surgeon, *1854.] Manual, non-bloody, reduction of congenital dislocation of the hip, with retention of the head of the femur in place by a plaster-of-Paris splint. **L.'s sign,** stiffness of the thoracic spine in early pulmonary tuberculosis.

Loreta's opera'tion (law-ra'tah) [Pietro *Loreta*, Italian surgeon 1831–1889.] Gastrotomy followed by digital dilatation of a cicatricial stenosis of the pylorus.

lor'etin [after Pietro *Loreta*.] Metaiodo-ortho-oxyquinoline-anasulphonic acid, a yellow crystalline powder, odorless, slightly soluble in water; antiseptic, employed as a substitute for iodoform.

Lor'ing's ophthal'moscope [Edward Greely *Loring*, New York ophthalmologist, 1837–1888.] See cut under *ophthalmoscope*.

Lortet lamp (lor-ta'). A form of electric lamp used in the Finsen light treatment.

lo'sophan. Triiodometacresol, occurs in colorless needle-shaped crystals insoluble in water; employed externally as an antiseptic and astringent in acute inflammatory conditions of the skin.

loss [A.S. *los*, damage.] In life-insurance, a death claim.

lotio, gen. *lotio'nis*, pl. *lotio'nes* (lo'ti-o or lo'shyo) [L. a washing.] Lotion, wash, a class of preparations of the B.P and N.F., consisting of a medicated liquid, usually containing an insoluble substance in suspension, employed externally. **l. adstrin'gens,** astringent lotion, Warren's styptic; sulphuric acid 38, oil of turpentine and alcohol each 31; astringent and styptic for local use. **l. al'ba veterina'ria** (N.F.), veterinary white lotion; zinc sulphate 23, lead acetate 30, water 1000. **l. ammoniaca'lis camphora'ta** (N.F.), ammoniated camphor wash, aqua sedativa, eau sédative de Raspail; sodium chloride, 60; ammonia water, 60; spirit of camphor, 10; water to make 1000. **l. calami'næ** (N.F.), calamine lotion; prepared calamine and zinc oxide, of each 80, glycerin 20, solution of calcium hydroxide to make 1000. **l. c. compos'ita** (N.F.), compound calamine lotion; liquefied phenol 10, calamine lotion 900. **l. fla'va** (N.F.), yellow wash, similar to l. hydrargyri flava **l. hydrar'gyri fla'va,** Br. '14. l. flava (N.F.), yellow mercurial lotion, yellow wash; corrosive sublimate 20 grains, lime water 10 fluidounces; an application for venereal sores; the N.F. preparation is slightly weaker than this. **l. hydrar'gyri ni'gra** (Br.), l. nigra (N.F.), black mercurial lotion, black wash; calomel 30 grains, glycerin ½ fluidounce, mucilage of tragacanth 1½ fluidounces, lime water 10 fluidounces; an application for venereal sores; the N.F. preparation contains no glycerin or tragacanth. **l. ni'gra** (N.F.), black wash, calomel 8 75, water 15, solution of calcium hydroxide to make 1000; see l. hydrargyri nigra (Br.). **l. plum'bi et o'pii** (N.F.), lead and opium wash; lead acetate 1.75, tincture of opium 3 5, water 100; applied to sprains and bruises. **l. ru'bra,** a solution of zinc sulphate in diluted compound tincture of lavender.

lotion (lo'shun) [L. *lotio*.] 1. A washing. 2. A wash; see *lotio*. **evap'orating l.,** a solution of lead acetate in dilute alcohol.

Louis's ang'le (loo-e') [Antoine *Louis*, Parisian surgeon, 1723–1792.] Angulus Ludovici, the angle, with forward convexity, between the manubrium and the body of the sternum. (The angle is referred to Antoine Louis on the authority of the dictionary of Landouzy et Jayle; it is commonly, however, referred to Pierre Louis.)

Louis's law (loo-e') [Pierre Charles Alexandre *Louis*, Parisian physician, 1787–1872.] 1. Pulmonary tuberculosis usually begins in the left lung. 2.

Every form of tuberculosis is accompanied by pulmonary localization.

loupe [Fr.] A lens.

louping-ill (low'ping-il) Leaping*-ill, thorter-ill.

louse, pl. *lice* (lows) [A.S. *lūs.*] Pediculus, phthirius; an animal parasite infesting the hairy parts or the clothing. **bod'y l.,** *Pediculus vestimenti.* **crab l.,** *Phthirius inguinalis.* **head l.,** *Pediculus capitis.*

lousiness (low'zĭ-nes). Pediculosis, phthiriasis.

lovage (luv'ăj) [O.F. *luvesche;* L. *ligusticum.*] Levisticum.

love'-sickness. Erotomania.

Low'er's rings [Richard *Lower,* London physician, 1631–1691.] The four tendinous rings surrounding the orifices of the heart. **L.'s tu'bercle,** tuberculum intervenosum.

Lowy's test (lo'wi)[Ötto *Lowy,* American pathologist.] A modification of the Abderhalden test applied to the diagnosis of cancer.

lox'a-bark. Pale Peruvian bark, the bark of *Cinchona officinalis.*

loxar'thron, loxar'thrus [G. *loxos,* slanting, + *arthron,* joint.] A deformity of a joint without dislocation or fracture, such as knock-knee or clubfoot.

lox'ia [G. *loxos,* slanting.] Wryneck, muscular torticollis.

loxophthal'mus [G. *loxos,* slanting, + *ophthalmos* eye.] Heterophoria, strabismus, squint.

Loxopterygium (loks-o-tĕ-rij'i-um) [G *loxos,* inclined, + *pteryx,* wing.] A genus of trees the bark of some species of which, red quebracho, is used as a substitute for cinchona.

loxot'ic [G. *loxotēs,* obliquity.] Slanting, distorted, awry.

loxot'omy [G. *loxos,* slanting, + *tomē,* incision.] Amputation by means of an oblique incision through the soft parts; distinguished from a circular amputation.

loz'enge. A troche formerly of rhombic or "lozenge" shape, but now usually of disc form; see *trochiscus*

L-radia'tion. A radiation of slight penetrating power (300 times softer than the K-radiation) excited by *x*-rays impinging on a metal anticathode.

L.R.C.P. Abbreviation of Licentiate of the Royal College of Physicians.

L.R.C.P.E. Abbreviation of Licentiate of the Royal College of Physicians of Edinburgh.

L.R.C.P.I. Abbreviation of Licentiate of the Royal College of Physicians in Ireland.

L.R.C.S. Abbreviation of Licentiate of the Royal College of Surgeons.

L.R.C.S.E. Abbreviation of Licentiate of Royal College of Surgeons of Edinburgh.

L.R.C.S.I. Abbreviation of Licentiate of the Royal College of Surgeons in Ireland.

L.R.F.P.S. Abbreviation for Licentiate of the Royal Faculty of Physicians and Surgeons, a Scottish institution.

L.S.A. 1. Abbreviation of Licentiate of the Society of Apothecaries. 2. Abbreviation for left sacroanterior presentation of the fetus, a breech presentation with the back of the child directed toward the left acetabulum of the mother.

L.S.P. Abbreviation for left sacroposterior presentation of the fetus, a breech presentation with the sacrum of the child directed toward the left sacroiliac articulation of the mother.

Lu. Chemical symbol of *lutecium.*

luargol (lu-ar'gol). No. 102; remedy for syphilis proposed by Danysz as a substitute for salvarsan; it is an orange-yellow powder, chemically dioxydiaminoarsenobenzolstibicosilver sulphate, whose formula is: $(C_{12}H_{13}O_2N_2As_2)_2AgBrSbO(H_2SO_4)_2$; it is recommended for syphilis and trypanosomiasis in dose of 1.5 gram in six injections of 0.15 to 0.3 each at intervals of two to four days; it is also given in trypanosomiasis of animals.

Lu'barsch's crys'tals [Otto *Lubarsch,* German pathologist, *1860] Intracellular crystals in the testis resembling sperm crystals.

lubrichondrin [lu-brĭ-kon'drin). Trade name of an antiseptic lubricant made from chondrus with formaldehyde and eucalyptol.

Luc's opera'tion [Henri *Luc,* French laryngologist, 1855–1925.] See *Caldwell-Luc.*

Lucae's pres'sure probe (loo'ka) [Johann Constantin August *Lucae,* Berlin otologist, 1835–1911.] A probe in a hollow handle at the bottom of which is a fine steel spring; it is used in producing a form of massage in the treatment of non-suppurative catarrhal otitis media.

Lu'cas's sign [Richard Clement *Lucas,* English surgeon, 1846–1915.] Abdominal enlargement in rickets.

Lucas-Championnière's disease' (lu-kah'shahn-pe-on-e-air') [Just Marie Marcellin *Lucas-Championnière,* French surgeon, 1843–1913.] Pseudomembranous bronchitis.

lu'cid [L. *lucidus; lucere,* to shine.] Clear, distinct; marked by mental clarity.

lucidifica'tion [L. *lucidus,* clear, + *facere,* to make.] Clarification, making clear.

lucid'ity. Clarity, especially mental clarity.

lu'cotherapy [L. *lux(luc-),* light, + G. *therapeia,* treatment] Phototherapy.

Ludloff's sign (lood'lawf) [Karl *Ludloff,* Breslau surgeon, *1864.] 1. Swelling and ecchymosis at the base of Scarpa's triangle in traumatic separation of the epiphysis of the small trochanter. 2. Inability to raise the thigh when in the sitting posture in case of the same accident.

Ludovi'ci ang'ulus [gen. of *Ludovicus,* Latinized form of Louis or Ludwig.] Louis's* angle.

Ludwig's an'gina (lood'vig) [Wilhelm Friedrich von *Ludwig,* Stuttgart surgeon, 1790–1865.] A phlegmonous inflammation of the floor of the mouth and upper part of the neck; it is a streptococcal infection occurring usually as a complication of some other disease; angina Ludovici, cynanche sublingualis; cynanche cellularis maligna gangrænosa, Gensoul's disease.

Ludwig's ang'le (lood'vig) [Daniel *Ludwig,* German anatomist, 1625–1680.] The bend at the junction of the manubrium and body of the sternum, usually called Louis's angle, after Antoine or Pierre Louis.

Ludwig's gan'glia (lood'vig) [Karl Friedrich Wilhelm *Ludwig,* German physiologist, 1816–1895.] Small collections of cells along the course of the cardiac nerves in the septum atriorum (interauricular septum). **L.'s lab'yrinth,** pars convoluta of the renal cortex, labyrinth(3).

ludyl (lu'dil). Trade name of an organic arsenical compound having properties similar to those of galyl and, like the latter, employed in the treatment of syphilis and diseases of protozoal origin.

Luecke's test (lūk'eh) [Georg Albert *Luecke,* German surgeon, 1829–1894.] For hippuric acid: add hot nitric acid to the urine and evaporate to dryness; the presence of hippuric acid is indicated by an odor of nitrobenzol upon further heating.

Lu'er syr'inge. A glass syringe with air-tight glass piston, for hypodermic and intravenous use.

lues (lu'ēz) [L. pestilence.] A plague, or pestilence; specifically, syphilis. **l. nervo'sa,** a form of syphilis in which nervous lesions occur with unusual frequency, or which is followed by tabes or paresis. **l. vene'rea,** syphilis.

lu'etin. A killed culture of *Treponema pallidum* employed in the Noguchi cutireaction or luetin test for syphilis; see *Noguchi* test* (3).

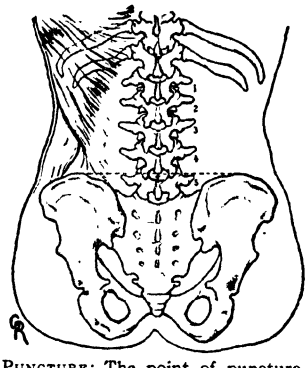
luet'ic. Syphilitic. **l. mask,** see *mask*.

Lugol's' caus'tic [J. G. A. *Lugol*, Parisian physician. 1786–1851.] Iodine 1, potassium iodide 1, water 2. **L.'s solu'tion,** liquor* iodi compositus.

lumal'gin. Trade name of a mixture of luminal and acetylsalicylic acid; esporific and analgesic.

lumba'go [L. *lumbus*, loin] Rheumatism of the tendinous attachments of the muscles of the lumbar region, causing great pain and rigidity; osphyalgia, osphyitis, lumbodynia. **ische'mic l.,** a lumbar type of intermittent claudication,* a vascular form of backache characterized by a painful cramp of the muscles in the lumbar region excited by the exertion of walking or standing and promptly relieved by rest.

lum'bar. Relating to the loins, or the part of the back and sides between the ribs and the pelvis. **l. punc'ture,** a puncture into the subarachnoid space of the spinal cord, made between the fourth and fifth lumbar vertebræ, in order to remove an excess of fluid, or a specimen of fluid for examination, or to inject an anesthetic solution. **l. re'gion,** the space on either side of the umbilical region bounded above and below by the subcostal and intertubercular lines; see cut under *abdominal*. **l. ver'tebræ,** the five vertebræ between the thoracic vertebræ and the sacrum.



LUMBAR PUNCTURE: The point of puncture is on the transverse line joining the summits of the two iliac crests.

lumboabdominal (lum"bo-ab-dom'i-nal). Relating to the sides and front of the abdomen.

lumbocolos'tomy. The formation of an artificial anus by opening into the colon in the left lumbar region.

lumbocolot'omy. Incision into the colon in the left lumbar region.

lumbocos'tal. 1. Relating to the lumbar and the hypochondriac regions. 2. Relating to the lumbar spine and the ribs, noting a ligament connecting the first lumbar vertebra with the neck of the twelfth rib.

lumbodyn'ia [L. *lumbus*, loin, + *odynē*, pain.] Lumbago.

lumboiliac (lum-bo-il'i-ak). Lumboinguinal.

lumboinguinal (lum-bo-in'gwi-nal) [L *lumbus*, loin, + *inguen*, groin.] Relating to the lumbar and the inguinal regions, lumboiliac.

lumboovarian (lum-bo-o-va'ri-an). Relating to the ovary and the lumbar regions.

lumbosa'cral. Relating to the lumbar spine and the sacrum.

lum'brical. 1. Relating to or resembling an earthworm, vermiform, lumbricoid 2. Musculus lumbricalis

lumbrica'lis [L *lumbricus*, an earthworm.] One of the worm-like muscles of the hand or foot; see under *musculus*.

lumbricide (lum'bri-sid) [L. *lumbricus* + *cædere*, to kill.] 1. Destructive to lumbricoid worms. 2. An agent which kills intestinal worms.

lum'bricoid [L. *lumbricus*, earthworm, + G. *eidos*, resemblance.] 1. Resembling an earthworm, vermiform. 2. A round worm parasitic in the human intestine, *Ascaris lumbricoides*.

lumbrico'sis. Infestation with lumbricoids or round intestinal worms.

lumbri'cus [L. an earthworm.] An intestinal parasitic worm, *Ascaris lumbricoides*.

lum'bus, gen. *lum'bi* [L.] The loin.

lu'men, pl. *lu'mina* [L. window.] The space in the interior of a tubular structure, such as an artery or the intestine.

lu'minal. 1 Relating to the lumen of a blood-vessel or other tubular structure 2 Trade name of phenobarbitalum (U.S.). **l. so'dium,** phenobarbital* sodium

luminif'erous [L. *lumen*, light + *ferre*, to carry.] Producing or conveying light

luminous (lu'mi-nus) [L. *lumen*, a light.] Phosphorescent, glowing in the dark.

lumodrin (lu'mo-drin). Trade name of a combination of ephedrine, luminal, and pyramidon suggested for the treatment of bronchitis, acute or chronic, of asthma, and of pertussis in dose of 1 or 2 tablets for adults, and ½ to 1 tablet for children over 5 years of age.

lum'py-jaw. Actinomycosis in cattle.

lu'nacy [L. *luna*, moon.] Insanity.

lu'nar [L. *luna*, moon.] 1. Relating to the moon or to a month. 2. Resembling the moon, especially a half-moon, semilunar, crescentic. 3. Relating to the os lunatum, or semilunar bone of the carpus. 4. Relating to silver (the moon was the symbol of silver in alchemy). **l. bone,** os lunatum. **l. caustic,** nitrate of silver in pencil form.

luna're. Os lunatum.

lu'nate bone. Semilunar bone, os* lunatum.

lu'natic. An insane person, a madman

lunat'ic. Insane, crazy.

Lundvall's blood cri'sis (loond'vahl) [Halvar *Lundvall*, Swedish neurologist.] The change from leucopenia to leucocytosis in cases of improvement, and the reverse in deterioration, in dementia præcox.

lung [A.S. *lungen*.] One of a pair of viscera occupying the cavity of the thorax, the organs of respiration in which aeration of the blood takes place. The right lung is slightly larger than the left and is divided into three lobes (an upper, a middle, and a lower or basal), while the left has but two lobes (an upper and a basal). Each lung is irregularly conical in shape, presenting a blunt upper extremity (the *apex*), a concave *base* following the curve of the diaphragm, an outer convex surface (*facies costalis*), an inner or mediastinal surface (*facies mediastinalis*), a thin and sharp anterior border (*margo anterior*), and a thick and rounded posterior border (*margo posterior*). **brown indura'tion of the l.,** a condition characterized by consolidation of portions of the lungs consequent upon long-continued congestion

due to heart disease. **dust-disease of the l.,** pneumonoconiosis. **fi'broid l.,** a l. which is the seat of chronic interstitial pneumonia. **inflamma'tion of the l.,** pneumonitis. **l. fever,** pneumonia. **l. fluke,** *Distoma ringeri*. **mason's l.,** pneumonoconiosis. **miner's l.,** anthracosis, chalicosis. **pig'ment indura'tion of the l.,** brown induration of the l.

abscess, pneumapostema. **absence,** apneumia. **calculus,** pneumolith, pneumonolith. **collapse,** atelectasis, pneumatelectasis, apneumatosis. **congestion,** pneumonemia, stetnemia, hypostasis pulmonum. **dilatation of alveoli,** empnysema, pneumonectasia. **disease,** pneumonopathy, pneumopat y, pneumonosus, pneumonosis. **dropsy,** pneumonedema, pneumochysis, hydropneumonia, pulmonary edema. **dust deposit,** pneumonoconiosis, pneumoconiosis, anthracosis, chalicosis, siderosis, lithicosis, lithosis. **edema,** pneumonedema, hydropneumonia, pneumochysis. **excision of a part,** pneumonectomy pneumectomy, pulmonectomy. **fistula,** pneumonosyrinx. **fixation to thoracic wall,** pneumonopexy, pneumopexy. **fungous disease,** pneumomycosis **gangrene,** pneumocace, pneumonecrosis, necropneumonia **hemorrhage from,** pneumorrhagia, hemoptysis, pneumop ysis; stethomenia (vicarious menstruation). **hemorrhage into,** pneumohæmorrhagia, pulmonary apoplexy. **incision,** pneumonotomy, pneumotomy, pneumatotomy. **inflammation,** pneumonitis pulmonitis, pneumopleuritis, pleuropneumonitis, peripneumonitis **measurement of capacity,** pneumometry, pneumonometry, pulmometry. **pain,** pneumonalgia, pneumonodynia **plague involving,** pneumonopestis **puncture,** pneumocentesis. **pus-containing cavity,** vomica **science relating to,** pneumology **softening,** pneumomalacia, pneumonomalacia. **suture,** pneumonorrhaphy. **tuberculosis,** pneumonophthisis, pneumonophymatosis.

lung'er. Slang for consumptive.

lungmotor (lung'mo-tor). A device similar to the pulmotor, used to pump air or a mixture of air and oxygen into the lungs in cases of asphyxia.

lung'wort. The herb *Pulmonaria officinalis*, formerly used in pulmonary and bronchial affections.

lu'nosol. Trade name of a preparation of colloidal silver chloride, 10 per cent., and sucrose, 90 per cent., occurring as a white granular powder, odorless, and with a sweet metallic taste, freely soluble in water; employed as an antiseptic in infection of the eye, ear, nose, throat, and genito-urinary tract in solutions of from 1 to 50 per cent., the average for conjunctival application being 10 per cent. but running up to 25 to 50 per cent. concentration in ophthalmia neonatorum.

lu'nula [L. dim. of *luna*, moon.] [BNA] The opaque whitish semilunar area near the root of the nail. **l. val'vulæ semiluna'ris,** the free border of a semilunar valve at each side of the nodulus or corpus Arantii.

lu'panine. An alkaloid, $C_{18}H_{24}N_2O$, from the seed of *Lupinus albus*, *L. angustifolia*, and *L. perennis*.

lupet'azin. A white crystalline powder, resembling piperazin in its therapeutic action.

lu'piform [L. *lupus* + *forma*, form.] Resembling lupus.

lu'pine. A plant of the genus *Lupinus*, the seeds of some species of which are used for fodder, those of others contain poisonous alkaloids.

lupin'idine. Sparteine, an alkaloid from *Lupinus luteus* and *L. niger*.

lu'pinine. An alkaloid, $C_{10}H_{19}N$, from *Lupinus luteus*.

lupino'sis [L. *lupinus*, lupine.] Lathyrism.

lu'poid [L. *lupus* + G. *eidos*, resemblance.] Lupiform.

lupo'ma. One of the tubercles of lupus vulgaris.

lu'pous. Relating to lupus.

lupuli'num [L. *lupulus*, dim. of *lupus*, hop-plant.] (N.F., Br.). Lupulin, the glandular trichomes of the fruit of *Humulus lupulus*, the hop-plant; a light yellowish brown granular powder of bitter taste; antispasmodic and sedative in doses of gr. 2–5 (0.13–0.3).

lu'pulus. The hop-plant, *Humulus lupulus*.

lu'pus [L. wolf.] Tuberculosis of the skin, occurring in the form of reddish brown tubercles, aggregated in the form of nodules or patches; same as l. vulgaris. **acute' .,** a form in which the disease advances rapidly with inflammatory symptoms. **l. annula'ris,** l. occurring in a spreading circle, healing in the center and spreading at the periphery. **l. discre'tus,** an eruption of isolated tubercles or groups of tubercles of lupus, scattered over the body. **l. dissemina'tus,** l. discretus. **l. erythemato'des, l. erythemato'sus,** Cazenare's l., l. sebaceus, l. superficialis, seborrhœa congestiva, ulerythema centrifugum; an eruption of flattish red papules, usually with a small white scale in the center of each, occurring in patches on the face and scalp—often on each cheek with a bridge extending over the nose (*butterfly* eruption); scarring follows healing of the eruption. **l. exfoliati'vus,** a desquamative form of l. **l. hypertroph'icus,** (1) a form of l. in which the tubercles are grouped into prominent nodules constituting distinct tumors; (2) l. sclerosis. **l. liv'ido,** persistent cyanotic lesions on the extremities, possibly allied to the eruption of Raynaud's disease. **l. lymphat'icus,** lymphangioma circumscriptum. **l. margina'tus,** Hilliard's l., a disease of the skin, resembling l. verrucosus, situated on the hand and spreading up the arm. **l. papillomato'sus,** l. verrucosus. **l. per'nio,** l. erythematodes of the ears and hands following chilblains. **l. psori'asis,** a form of l. in which there is a formation of scales simulating psoriasis. **l. sclero'sus,** a permanent thickening of the skin due to excessive connective-tissue formation in lupus. **l. serpigino'sus,** a creeping l which continually involves new areas of the skin on one side while healing with scar formation on the other. **l. tu'midus,** l. hypertrophicus. **l. verruco'sus,** (1) a warty or papillomatous vegetation springing from a lupous ulcer; (2) anatomical tubercle, verruca necrogenica, tuberculosis verrucosa cutis, a skin lesion having a warty papillary surface on a raised plaque with inflammatory base, with some exudation of pus on the surface that dries into crusts. **l. vulga'ris,** tuberculous lupus, see the main title. **l. vulga'ris erythematoi'des,** Leloir's l., a form of tuberculous l. having a superficial resemblance to l. erythematosus.

lu'ra [L. the mouth of a bottle.] The contracted termination of the infundibulum of the brain.

Lusch'ka's bur'sa [Hubert von *Luschka*, German anatomist, 1820–1875.] L.'s tonsil. **L.'s car'tilage** (1) a small cartilaginous nodule sometimes found in the anterior portion of the vocal cord; (2) a small cartilaginous mass in the lower part of the faucial tonsil. **L.'s cys'tic glands,** minute glandular lobules occupying little oval depressions in the wall of the gall-bladder near the neck. **L.'s ducts,** gland-like tubular structures in the wall of the gall-bladder, especially in the part covered with peritoneum. **L.'s foram'ina,** Key-Retzius* foramina. **L.'s gland,** (1) L.'s tonsil; (2) glomus caroticum; (3) glomus coccygeum. **L.'s lig'ament,** a fibrous band stretching between the anterior surface of the pericardium and the posterior surface of the sternum. **L.'s ton'sil,** pharyngeal tonsil.*

Lusk's contrac'tion ring [William T. *Lusk*, New York physician, 1838–1897.] Bandl's* ring.

Lust'garten's bacill'us (loost'gar-ten) [Sigmund *Lustgarten*, New York dermatologist, born in Austria, 1857–1911.] A bacillus, resembling the smegma bacillus, formerly thought to be the specific microorganism of syphilis.

Lus'tig's plague se'rum [Alessandro *Lustig* Italian pathologist, contemporary.] An antitoxic and bactericidal serum obtained by immunizing horses with a substance prepared by dissolving plague bacilli in a 1 per cent. caustic soda solution, filtering, and precipitating with dilute hydrochloric acid.

lu'sus natu'ræ [L. a joke of nature.] A monstrosity or congenital abnormality.

lutecium (lu-te'shyum) [L. *Lutetia*, Paris.] Cassiopeium, a rare element, symbol Lu, atomic weight 174.

lu'tein (lu'te-in). 1. The yellow pigment in the corpus luteum, in the yolk of eggs, or any lipochrome. 2. An internal secretion of the ovary which, with ovulin and folliculin, constitutes the hormone oophorin.

lu'tidin. A liquid, C_7H_9N, obtained by the action of caustic potassa on cinchonine; antispasmodic.

luxa'tio [L. *luxare*, to dislocate.] Luxation. l. **imperfec'ta,** sprain.

luxa'tion [L. *luxatio*] Dislocation.

luxu'riant [L. *luxuriare*, to run riot.] Exuberant, growing in excess.

lux'us [L. extravagance, luxury.] Excess of any sort. l. **breath'ing,** unnecessarily deep and forcible inspiration. l. **consump'tion,** excessive consumption of food beyond the needs of the organism. l. **heart,** combined dilatation and hypertrophy of the heart.

Luys' bod'y (lü-ēs') [Jules Bernard *Luys*, French physician, 1828–1897.] Nucleus hypothalamicus, a small ganglion beneath the optic layer, connected above with the corpus striatum and below with the superior cerebellar peduncle. **L.'s me'dian cen'ter** or **nu'cleus,** the internal nucleus of the optic layer

Luys' sep'arator (lu-ēs') [Georges *Luys*, Paris surgeon, contemporary.] A diaphragm attached to a curved and doubly tunnelled sound, by means of which the cavity of the bladder is divided into two compartments, so that the urine entering from each ureter may be collected separately.

lycan'thropy [G. *lykos*, wolf, + *anthropos*, man] The insane delusion that the subject is a wolf, possibly a mental atavism of the were-wolf superstition.

ly'cetol. Dimethylpiperazine tartrate; a white odorless, soluble powder, made by the reaction of glycerin and ammonium chloride during distillation; employed as a diuretic and uric-acid solvent in doses of gr. 15–30 (1.0–2.0) per day.

Lychnis githago (lik'nis gith'a-go). *Agrostemma githago*, corn-cockle, the seeds of which are said to produce githagism when eaten.

lycoc'tonine. An alkaloid, possibly the same as pseudaconine, obtained from *Aconitum lycoctonum*, an exceedingly poisonous species of aconite.

lycoma'nia. Lycanthropy.

Lycoper'don [G. *lykos*, wolf, + *perdomai*, I break wind.] A genus of fungi, the puffballs.

ly'copin. A resinous extract of lycopus, a brownish powder of bitter taste; employed as an internal hemostatic in doses of gr 1–5 (0.06–0.3).

lycopo'dium [G. *lykos*, wolf, + *pous(pod-)*, foot.] (U.S.) Vegetable sulphur, the spores of *Lycopodium clavatum* and other species of *L.*, club-moss, a yellow tasteless, and odorless powder; employed as a dusting powder and in pharmacy to prevent the agglutination of pills in a box. It is employed in eclectic practice in the treatment of dyspepsia, catarrhal cystitis, spasmodic retention of urine in children, congestive headache, vertigo, and boils, in doses of ♏5–10 (0.3–0.6) of the specific preparation every hour. In homeopathic practice it is employed for pyrosis, constipation, brick-dust deposit in the urine, jaundice, and impotence, in the 30th potency.

ly'copus [G. *lykos*, wolf, + *pous*, foot.] Bugleweed, the whole plant *Lycopus virginicus*, an herb of eastern and central North America; hemostatic and astringent, employed in diarrhea in doses of gr. 5–30 (0.3–2.0); in eclectic practice it is given for the relief of pulmonary congestion, irritable cough, hemoptysis, and irritability and irregularity of the heart's action in doses of 5–20 drops of the specific medicine in water every half to two hours. **L. europæ'us,** the bitter bugle-weed of Europe is employed as a tonic in doses of ʒ½–1 (2.0–4.0) of the fluidextract.

lycorex'ia [G. *lykos*, wolf, + *orexis*, appetite] Bulimia.

lye (li) [A.S. *leáh*.] Lixivium, the liquid obtained by leaching wood ashes; a solution of potassa or soda.

ly'gosine. The sodium salt of a condensation product of acetone and salicylic aldehyde, sodium diorthocumarketone; employed externally as a bactericide in gonorrhea, vaginitis, and ulcerative skin diseases, in 2 to 10 per cent. solution.

lying-in'. 1. Confinement, labor, childbirth. 2. Relating to childbirth, obstetrical.

Lyman rays. Rays of wave-lengths between about 600 and 12,300 A.u.

lymph [L. *lympha*, clear spring water.] 1. A clear yellowish or light straw-colored fluid, resembling chyle in chemical composition, but containing less fibrinogen and fat, which circulates in the lymph spaces, or lymphatic vessels, of the body; it consists of a clear liquid, *liquor lymphæ*, and white cells, *lymphocytes*. 2. Vaccine. **an'imal l.,** vaccine virus derived from the heifer. **aplas'tic l.,** an inflammatory l. containing little fibrin and many leucocytes, which therefore does not tend to form a fibrinous exudate or become organized. **blood-l.,** l exuded from the blood-vessels and not derived from the tissues. **bo'vine l.,** animal l **corpus'cular l.,** aplastic l **euplas'tic l.,** inflammatory l. containing much fibrin and few leucocytes, which tends to become organized. **hu'manized l.,** vaccine l derived from the human subject. **inflamm'atory l.,** a yellowish usually coagulable fluid effused on the surface of an inflamed serous membrane or any wound. **Koch's l.,** tuberculin. **l.-cell,** lymphocyte. **l.-channel,** the space in a l.-node through which the lymph circulates. **l. cor'puscle,** lymphocyte. **l.-gland, l.-node,** lymphaden, lymphoglandula.* **l.-scrotum,** see *lymphscrotum*. **l.-sinus,** l. space (1). **l.-space** (1) any cavity or circumscribed dilatation of a l.-vessel filled with lymph; (2) l.-channel. **l.-vessel,** lymphatic (3), lymphangion, vas* lymphaticum. **tissue-l.,** lymph, as distinguished from blood-l. **vaccine l.,** the dried serum from the vesicles of vaccina in the heifer (bovine l.) or man (humanized l.).

lymphaceus (lim-fa'se-us) [NK]. Lymphatic.

lymph'aden [L. *lympha*, + G. *adēn*, gland.] Lymphnode.*

lymphad"enecta'sia [*lymphaden* + G. *ektasis*, extension.] Enlargement of a lymph-node.

lymphade'nia. Hyperplasia of the lymph-nodes. l. **os'sium,** myelomatosis.

ymphad'enism. 1. Enlargement of the lymphatic glands. 2. The general symptoms of lymphadenoma.

ymphadenitis (limf-ad-en-ī'(e')tis). Inflammation of a lymph node. **paratuber'culous l.,** an enlargement of the mesenteric and other lymph-nodes containing no tubercle bacilli, but associated with the presence of tuberculosis in some other region.

ymphad'enoid [*lymphaden* + G. *eidos*, resemblance.] Relating to, or resembling, or derived from a lymph-node.

ymphadenoma (limf-ad-e-no'mah) [*lymphaden* + G. *-ōma.*] 1. An enlarged lymph-node. 2. A circumscribed hyperplasia of lymphoid tissue, lymphoma. **malig'nant l.,** lymphosarcoma. **mul'tiple l.,** Hodgkin's* disease.

ymphadenomatosis (limf-ad"e-no-mă-to'sis). A condition marked by the occurrence of multiple lymphadenomatous growths, lymphomatosis. **general l. of bones,** Kahler's* disease.

ymphadeno'matous. Relating to lymphadenoma.

ymphadenosis (limf-ă-de-no'sis) [*lymphaden* + *-osis.*] Lymphatic leucemia.

ymph'æduct. Lymphoduct, a lymphatic vessel.

ymphæ'mia. Lymphemia.

ymphagogue (limf'ă-gog) [L. *lympha* + G. *agōgos* drawing forth.] An agent which promotes an increase of fluid in the lymph-channels.

ymphangeitis (lymf-an-je-ī'(e')tis). Lymphangitis.

ymphan'gial. Relating to a lymphatic vessel.

ymphangiecta'sia [L. *lympha* + G. *angeion*, vessel + *ektasis*, extension] Dilatation of the lymphatic vessels; lymphangiectasis lymphangioma.

ymphangiecto'des [L. *lympha* + G. *angeion*, vessel, + *ektasis* dilatation, + *eidos*, appearance.] Lymphangioma circumscriptum

ymphangiitis (lim-fan-je-ī'(e')tis). Lymphangitis.

ymphan"gioendothelio'ma. Lymphendothelioma.

ymphangiology (limf"an-ji-ol'o-jī) [*lymphangion* + G. *-logia*] The branch of medical science which deals with the lymphatic system.

ymphangioma (limf"an-ji-o'mah) [L. *lympha* + G. *angeion*, vessel, + *-ōma.*] A circumscribed enlargement and new formation of the lymphatic vessels. **l. capilla're varico'sum, l.** circumscriptum. **l. caverno'sum,** cavernous lymphangiectasia, cavernoma lymphaticum, a condition of marked dilatation of the lymphatic vessels forming cavities of varying size filled with lymph. **l. circumscrip'tum,** l. superficium, l. capillare varicosum, a localized new formation and dilatation of the cutaneous lymphatics. **l. cys'ticum,** cystic lymphangiectasia, a condition marked by the occurrence of multiple cysts, filled with lymph. **l. sim'plex,** simple lymphangiectasia, a circumscribed area of dilatation in moderate degree of the lymphatic vessels. **l. superfic'ium sim'plex,** l. circumscriptum. **l. tubero'sum mul'tiplex,** a skin disease marked by the occurrence of multiple reddish cystic nodules, chiefly on the trunk, due to enlarged lymph spaces in the cutis with proliferation of the endothelium; it resembles spiradenoma in all but its location. **l. xanthelasmoid'eum,** a capillary l. with colloid degeneration of the elastic tissues of the skin, marked by the occurrence of yellowish or whitish brown plaques scarcely, if at all, raised above the level of the skin.

lymphangio'matous. Relating to lymphangioma.

lymphan'gion [L. *lympha*, lymph, + G. *angeion*, vessel.] A lymphatic vessel, vas lymphaticum [BNA].

lymphangiophlebitis (limf-an-je-o-flĕ-bī'(be')tis). Inflammation of the lymphatics and veins.

lymphan'gioplasty [L. *lympha*, a clear fluid, + G. *angeion*, vessel, + *plassō*, I form.] The formation of artificial lymphatics by the introduction of buried silk threads, with the object of draining the tissues (*e.g.* of the "brawny arm" in cases of mammary carcinoma) when the lymphatic vessels are obliterated.

lymphangiot'omy [*lymphangion* + G. *tomē*, incision. 1. The anatomy of the lymphatics. 2 Incision of lymphatic vessels.

lymphan"giosar'coma. A tumor possessing the characteristics of both lymphoma and sarcoma.

lymphangitis (limf-an-jī'(je')tis) [L. *lympha*, lymph + G. *angeion*, vessel, + *-itis.*] Inflammation of the lymphatic vessels. **l. epizootica** (ep-ī-zo-ot'ī-kah), a blastomycosis of the skin and trachea in the horse.

lymphat'ic [L. *lymphaticus.*] 1. Relating to the lymph. 2. A lymph-node. 3. A lymphatic vessel. 4. Sluggish in disposition. **l. cachex'ia,** Hodgkin's disease. **l. dyscra'sia,** (1) status lymphaticus; (2) Hodgkin's disease. **l. gland, l node,** lymphaden, lymphoglandula. **l. sarco'ma,** lymphosarcoma. **l. tissue,** lymphoid* tissue. **l. vessel,** vas lymphaticum, lymphangion.

lymph'atism. 1. A condition in which there is an excess in the lymphoid or tonsillar structures. 2. The lymphatic temperament. 3. Status lymphaticus. 4 A condition marked by sluggishness in the vital processes.

lymphatitis (limf-ah-ti'(te')tis). Inflammation of the lymphatic vessels or nodes.

lymphatol'ysis [G. *lysis*, solution.] Destruction of the lymphatics or lymphoid tissue.

lymphatolyt'ic. Destroying the lymphatics or lymphoid tissue.

lymphectasia (limf-ek-ta'sī-ah) [G. *ektasis*, extension.] Dilatation of the lymphatics.

lymphede'ma, lymphœde'ma [L. *lympha*, lymph + *oidēma*, a swelling.] Edema due to obstruction of the lymphatics, as in elephantiasis and lymph-scrotum.

lymphe'mia, lymphæ'mia [*lymph*(*ocyte*) + G *haima*, blood.] The presence of lymphocytes in large number in the blood, as in leucemia.

lymphen"dothelio'ma. A tumor formed by proliferation and dilatation of the lymphatics with marked overgrowth of the endothelium of the vessels; see *perithelioma.*

lymphenteritis (limf-en-ter-ī'(e')tis) [L. *lympha*, lymph, + G. *enteron*, intestine, + *-itis.*] Inflammation of the peritoneal covering of the intestine.

lympherythrocyte (limf-er'ī-thro-sīt). Anerythrocyte.

lymphiza'tion. The formation of lymph.

lymph-node. Lymphoglandula [BNA], one of a number of nodules of various sizes found along the course of a lymphatic vessel, it is composed chiefly of lymphoid tissue.

lymphnoditis (limf"no-di'(e')tis). Inflammation of the lymph nodes.

lymphoadeno'ma. Lymphadenoma.

lymph'oblast [*lympho*(*cyte*) + G. *blastos*, germ.] Myeloblast.

lymphoblastosis (lim-fo-blas-to'sis) [L. *lympha*, lymph, + G. *blastos*, germ, + *-osis.*] Acute infectious mononucleosis, glandular fever.*

lymphocele (lim'fo-sēl) [L. *lympha*, lymph, + G. *kēlē*, tumor.] Lymphocyst, a cystic tumor containing lymph.

lymphocerastism (lim-fo-ser'as-tizm) [lymph + G. *kerastos*, mixed, mingled.] The process of formation of lymphoid cells.

lymphocinesia (lim-fo-sin-e'sĭ-ŭ). 1. The circulation of lymph. 2. The movement of fluid in the semicircular canals.

lymphococcus (lim-fo-kok'us). A diplococcus found in certain cases of elephantiasis.

lymphocyst (lim'fo-sist) [L. *lympha*, lymph, + G. *kystis*, bladder.] Lymphocele.

lymphocyte (lim'fo-sīt) [L. *lympha*, lymph, + G. *kytos*, cell.] 1. A white blood corpuscle having no granules in its cytoplasm. There are two varieties of lymphocytes; (*a*) the *small lymphocytes*, about the size of a red corpuscle, having a large, homogeneously staining nucleus; these form from 20 to 25 per cent. of the white corpuscles; (*b*) the *large lymphocytes*, from 2 to 3 times the size of the preceding and containing a relatively larger proportion of cytoplasm; they form only about 1 per cent. of the white corpuscles. 2. Lymph-corpuscle, a granular white cell indistinguishable from a white blood-corpuscle.

lymphocythe'mia, lymphocythæ'mia [*lymphocyte* + G. *haima*, blood.] Lymphocytosis, lymphemia

lymphocyt'ic. Relating to lymphocytes.

lymphocytoblast (lim-fo-si'to-blast) [*lymphocyte*, + G. *blastos*, germ.] The mother cell of a lymphocyte.

lymphocyto'sis. A form of relative leucocytosis in which there is an increase in the number of lymphocytes; achroacytosis.

Lymphocytozoon (lim"fo-si-to-zo'on) [L. *lympha*, lymph, + G. *kytos*, cell, + *zōon*, animal.] A supposed genus of parasitic ameboid cells found in lymphocytes or uninuclear leucocytes. **L. coba'yæ** Kurloff's* body. **L. pall'idum**, Ross's* body.

lymphoder'mia. A condition due to any disease of the cutaneous lymphatics **l. pernicio'sa,** leucemia cutis.

lymph'oduct [L. *lympha*, lymph + *ductus*, duct] A lymphatic vessel, lymphangion.

lymphogen'ic. Lymphogenous, having origin from lymph or the lymphatics.

lymphogenous (lim-foj'en-us) [L. *lympha*, lymph, + G. *gennaō*, I produce.] 1. Originating from lymph or the lymphatics, lymphogenic. 2. Producing lymph.

lymphoglan'dula [L. *lympha*, lymph, + *glandula*, gland.] [BNA] Lymphonodus [NK], lymph-node.*

lymphogranulomatosis (lim-fo-gran"u-lo-mă-to'sis). Granuloma malignum, lymphomatosis granulosa, poradenitis, Paltauf-Sternberg disease, a diffuse hyperplasia of the lymphatic structures, especially the lymph-nodes and spleen. **benign l.,** Nicolai-Favre disease, fourth venereal disease, a small erosion appears on the glans penis following coitus and is succeeded in one or two weeks by enlargement of the inguinal glands which may go on to suppuration and fistula-formation. **l. inguinalis,** benign l.

lym'phoid [L. *lympha*, lymph, + G. *eidos*, appearance.] 1. Resembling lymph 2. Adenoid **l. cell** or **el'ement,** a small non-granular basophile cell with large nucleus, found in lymphoid tissue **l. tissue,** a tissue composed of a connective-tissue framework containing lymphoid cells in its meshes.

lymphoidectomy (lim-foy-dek'to-mĭ) [*lymphoid* + G. *ektomē*, excision.] Excision of lymphoid tissue; adenoidectomy, tonsillectomy.

lymphoididity (lim-foy-did'ĭ-tĭ). A state in which lymphoid characteristics are present.

lymphoidocyte (lim-foy'do-sīt) [*lymphoid* + G. *kytos*, cell.] Myeloblast.

lymphoi"dotoxe'mia, lymphoi"dotoxæ'mia. Lymphatism, status* lymphaticus.

lympholeu'cocyte. Lymphocyte(1).

lymphol'ogy. Lymphangiology, the branch of medical science relating to the lymphatics.

lympho'ma, pl. *lympho'mata* [L. *lympha*, lymph, + G. *-ōma*.] A tumor composed of lymphoid tissue; lymphadenoma. **atyp'ical l.,** lymphosarcoma. **malig'nant l.,** Hodgkin's disease. **mul'tiple l.,** lymphomatosis. **typ'ical l.,** lymphomatosis.

lymphomato'sis. Multiple lymphoma, the occurrence of deposits of lymphadenoid tissue generally throughout the body. **l. granulo'sa,** lymphogranulomatosis.

lympho'matous. Relating to lymphoma.

lymphomegaloblast (lim-fo-meg'al-o-blast). A megaloblast containing no hemoglobin.

lymphomonocyte (lim-fo-mo'no-sīt) [*lympho(cyte)* + *monocyte*.] A large uninuclear leucocyte.

lymphomyelocyte (lim-fo-mi'el-o-sīt). Myeloblast.

lymphomyelo'ma. A medullary tumor composed largely of round cells, resembling lymphoid tissue.

lymphomyxo'ma. A soft non-malignant tumor containing lymphoid tissue.

lymphono'di [NK]. Lymphnodes, lymphoglandulæ. **l. anorecta'les** [NK], anorectal or hemorrhoidal lymph glands. **l. prælarynge'i** [NK], two or three small lymph glands in front of the lower portion of the larynx. **l. retropharynge'i** [NK], a number of lymphnodes between the pharynx and the cervical vertebræ. **l. submenta'les** [NK], lymph glands lying superficially in the mandibular region.

lymphop'athy [L. *lympha*, lymph, + G. *pathos*, suffering.] Any disease of the lymphatic vessels or glands.

lymphopenia (lim-fo-pe'nĭ-ah) [*lympho(cyte)* + G. *penia*, poverty.] A reduction, relative or absolute, in the number of lymphocytes in the circulating blood.

lymphoplasm (lim'fo-plazm). Spongioplasm

lymphoplasmia (lim-fo-plaz'mĭ-ah). Absence of hemoglobin in red blood-cells.

lymphopoiesis (lim-fo-poy-e'sis) [L. *lympha*, lymph, + G. *poiēsis*, producing.] The formation of lymphocytes.

lymphopoietic (lim"fo-poy-et'ik). Producing or relating to the production of lymphocytes.

lymphorrha'gia [L. *lympha* + G. *rhēgnymi*, I burst forth] Lymphorrhea.

lymphorrhea, lymphorrhœa (lim-for-re'ah) [L. *lympha*, lymph, + G. *rhoia*, a flow] An escape of lymph on the surface from ruptured lymphatics

lymphosarco'ma, pl. *lymphosarco'mata*. A tumor formed by infiltration of lymphoid tissue by small round cells.

lymph"osarcomato'sis. A condition marked by the occurrence of multiple independent lymphosarcomata.

Lymphosporidium (lim-fo-spo-rid'ĭ-um). Leucocytozoon.

lymphotaxis (lim-fo-tak'sis) [*lympho(cyte)* + G. *taxis*, orderly arrangement.] The exertion of a power of attraction or repulsion of lymphocytes.

lymph'otome. An instrument for removing adenoid growths in the rhinopharynx.

lymphot'omy. 1. The anatomy of the lymphatic system. 2. Removal of adenoid growths.

lymphotoxe'mia [L. *lympha*, lymph, + *toxikon* poison, + *haima*, blood.] Status lymphaticus.

lymphot'rophy [L. *lympha*, lymph, + *trophē*, nourishment.] Nourishment of the tissues by lymph in parts devoid of blood-vessels.

lymph-scro'tum. Elephantiasis of the scrotum with varicose lymphatics, due to the presence of filariæ.

lymphu'ria [*lymph* + G. *ouron*, urine.] Discharge of lymph in the urine.

lymph-var'ix, pl. *lymp-var'ices.* The formation of varices or cysts in the lymph-nodes in consequence of obstruction in the efferent lymphatics

lymph-vas'cular. Relating to the lymphatic vessels.

lyophil, lyophilic (li'o-fil, li''o-fil'ik) [G. *lyō*, I dissolve, + *phileō*, I love.] In colloid chemistry, noting a dispersed phase having a pronounced affinity for the dispersion medium; when the dispersed phase is lyophile, the colloid is usually a reversible one. **l. coll'oid,** hydrophilic colloid, emulsoid, emulsion colloid.

lyophobe, lyophobic (li'o-fōb, li''o-fo'bik) [G. *lyō*, I dissolve, + *phobos*, fear.] Noting a dispersed phase having but slight affinity for the dispersion medium; when the dispersed phase is lyophobic the colloid is usually an irreversible one. **l. coll'oid,** hydrophobic colloid, dispersoid, suspension colloid.

lyotropic (li-o-trop'ik) [G. *lyō*, I dissolve, + *tropē*, a burning.] Lyophile; readily soluble.

Lyozoon atrophicans (li-o-zo'on ă-trot'i-canz) [G. lyō, I dissolve, + zōon, animal; L. *atrophicans*, atrophying. A species of Chlamydozoa found in the trachoma-like bodies in epitheliosis desquamativa.

lypema'nia (li-pe-ma'ni-ah [G. *lypē*, sadness, + *mania*.] Melancholia depressive insanity.

lypothymia [G *lypē*, sadness, + *thymos*, mind.] Lypomania

ly'ra [L and G lyre] Psalterium, lyre of David, commissura* hippocampi [BNA]. **l. uteri'na,** arbor vitæ uteri, plicæ palmatæ [BNA].

lysar'gin. Trade name of a preparation of colloidal silver, used like the organic silver salts as an antiseptic.

lyse'mia [G *lysis*, solution, + *haima*, blood.] Hemoglobinuria.

lys'idine. Ethylene-ethenyldiamine, occurring in pinkish crystals; employed in 50 per cent. solution in the treatment of the uric-acid diathesis, in doses of ♏30–60 (2.0–4.0) **l. bitar'trate,** a colorless crystalline powder soluble in water, employed in the uric-acid diathesis in doses of gr 15–45 (1.0–3.0).

lysim'eter [G. *l. sis*, solution + *metron*, measure.] An apparatus for determining the degree of solubility of any substance.

ly'sin [G. *lysis*, solution.] A specific antibody which acts destructively upon cells and tissues; the different lysins are designated, according to the parts acted upon, hemolysin, bacteriolysin, nephrolysin, etc.

lysine (li'sēn). One of the hexone bases produced from various proteins by hydrolytic cleavage; upon putrefaction it yields cadaverine.

ly'sis [G. solution or loosening.] 1. The gradual subsidence of the symptoms of an acute disease a form of the curative process, distinguished from *crisis*. 2. The destruction of blood-cells, bacteria, etc., by a specific lysin; according to the form of cell destroyed the process is called hemolysis nephrolysis, bacteriolysis, etc.

ly'soform. Trade name for a liquid formaldehyde potash soap, antiseptic and deodorant; employed in solution or ointment in the treatment of psoriasis and various skin diseases, bromidrosis, alopecia and for the sterilization of surgical instruments.

ly'sogen. An antigen causing the production of a specific lysin.

lysogen'ic. Relating to the formation of lysins.

ly'sol. Trade name of a mixture of soaps and phenols, obtained by boiling a mixture of tarry oils, resins, fats, and alkalies; an oily brownish liquid having an odor of creosote; employed as a disinfectant dressing and wash for the hands in 2 to 4 per cent. solution.

lysozyme (li'so-zīm) [G. *lysis*, solution, + *zymē*, leaven.] A lytic agent, destructive to certain bacteria, which is present in tears and some other fluids of the body, in egg-white and in some plant tissues; it is incapable of multiplication thereby differing from the bacteriophage of d'Herelle.

lys'sa [G. *lyssa*, fury.] Rabies, hydrophobia.

lyss'in. 1. The virus of rabies. 2. Hydrophobinum

lyssophobia (lis"o-fo'bi-ah) [G. *lyssa*, rabies, + *phobos*, fear] 1. A morbid fear of acquiring rabies. 2. A neurosis resembling hydrophobia in its symptoms, sometimes affecting one who has been bitten by a supposedly rabid dog and who is morbidly apprehensive of having the disease.

Lyster bag (lis'tur) [Wm. J. L. *Lyster*, U. S. Army surgeon, *1869.] A large bag, rubber lined, with faucets and with brass eyelets and lanyards for slinging; used to hold the water supply in temporary camps. **L. tubes,** glass tubes containing calcium hypochlorite for sterilization of water when the supply is not known to be pure.

lysul'fol. Trade name of a black mass said to be a mixture of lysol and sulphur; recommended as a local application in psoriasis, scabies, and prurigo.

lyt'ic. Relating to lysis in either sense.

lyze (līz). To cause lysis.

M

M. Abbreviation for myopia or myopic; for *mille*, a thousand; in prescriptions, for *misce*, mix; in bacteriology, for *Micrococcus*.

m. Abbreviation for meter, minim.

m-. Abbreviation, in chemistry, for *meta-*.

μ [Greek m.] Abbreviation for micron.

μμ. Abbreviation for micromicron, the millionth part of a micron, 10^{-12} m.

mμ. Abbreviation for millimicron, the one-millionth part of a millimeter, 10^{-9} m.

ma. Abbreviation for milliampère.

M.A. Abbreviation for meter angle.

M+Am. Abbreviation for compound myopic astigmatism.

macaco-worm (mah-kah'ko-wurm). The grub of a fly, *Dermatobia* noxialis*.

McAr'thur's meth'od [Louis Linn *McArthur*, American surgeon, *1858.] Enteroclysis by means of a catheter introduced into the ductus choledochus, in toxic cases following operation on the gall-bladder.

McBur'ney's incision [Charles *McBurney*, New York surgeon, 1845–1913.] An incision parallel with the course of the external oblique muscle, one or two inches from the anterior superior spine of the ilium; employed in the operation for appendicitis. **McB.'s point**, a point between 1½ and 2 inches above the anterior superior spine of the ilium, on a straight line joining that process and the umbilicus, where pressure of the finger elicits tenderness in cases of acute appendicitis.

McCar'thy's re'flex. Supraorbital reflex.

McClin'tock's sign [Alfred Henry *McClintock*, Irish physician, 1822–1881.] A pulse rate of over 100, an hour or more after childbirth, indicative of post-partum hemorrhage.

MacConk'ey's bile-salt agar [Alfred Theodore *MacConkey*, *English* bacteriologist, 1861–1931.] See under *agar*. **MacC.'s bile-salt bouillon**, see under *bouillon*. **MacC.'s stain for capsules**, dahlia, 0.5 gm., methyl green, 1.5 gm., distilled water, 100 c.c., when dissolved add a saturated alcoholic solution of fuchsin 10 c.c., and enough distilled water to bring the volume up to 200 c.c.; keep for a fortnight in the dark.

MacCormac's re'flex. Crossed knee-jerk; when the patellar tendon is struck, adduction of the opposite leg results.

McDon'ald's solu'tion [Ellice *McDonald*, American surgeon, *1876.] A solution for the disinfection of the hands and the field of operation, consisting of pyxol, 2; acetone, 40; alcohol, 60.

Macdow'ell's fre'num. That part of the tendon of the pectoralis major which extends into the muscular substance.

mace [L. *macis*.] Arillus myristicæ, the arillode, or husk, surrounding the nutmeg; employed for the same purposes as nutmeg.

macerate (mas'ur-āt) [L. *macerare*, to make soft, to soak.] To soften by steeping or soaking.

maceration (mas-ur-a'shun). 1. [L. *macerare*, to soak.] Softening by the action of a liquid. 2. [L. *macer*, lean.] Emaciation.

Macewen's opera'tion (mak-u'en) [Sir William *Macewen*, Scotch surgeon, 1848–1924.] Supracondyloid osteotomy of the femur for knock-knee. **M.'s sign**, **M.'s symp'tom**, percussion of the skull one or two inches behind the junction of the frontal, parietal, and temporal bones gives a more resonant note in cases of abscess of the brain or of internal hydrocephalus.

McGav'in meth'od. Filigree* implantation.

Mache u'nit (mah'kheh) [Heinrich *Mache*, Vienna physicist, *1876.] A unit of measure of radium emanation; abbr. M.u., in German writings M. E. One thousand Mache units denote the amount of emanation in equilibrium with $\frac{1}{2000}$ mg. of radium; 1 microcurie equals 2670 Mache units.

macies (mā'se-ēz) [L. leanness.] Emaciation

macintosh (mak'in-tosh) [after the inventor, Charles *Macintosh*, Scotch chemist, 1766–1843.] A waterproof cloth or tissue made by treating with a solution of india-rubber; used for waterproof garments and in surgical dressings

ma'cis. Mace, the arillode or seed-covering of the nutmeg, *Myristica fragrans;* similar in its properties to nutmeg; dose gr. 8 (0.5).

McKees' line. A line drawn from the tip of the cartilage of the eleventh rib to a point an inch and a half to the inner side of the anterior superior spine, then curved downward, forward, and inward to just above the internal abdominal ring; a guide to the common iliac artery.

Mackenrodt's meth'od (mahk'en-rōt) [Alwin Karl *Mackenrodt*, German gynecologist, *1859.] Vaginal fixation of the round ligaments for the correction of backward displacement of the uterus.

Macken'zie's amputa'tion A modification of Syme's amputation at the ankle joint, the flap being taken from the inner side; see cut under *amputation*.

Macken'zie's disease [Sir James *Mackenzie*, London physician, 1853–1925.] X-disease.

macken'zol [after Sir Morell *Mackenzie*, English laryngologist, 1837–1892.] Trade name of an antiseptic solution for use as a spray in diseases of the upper respiratory tract

mack'intosh. Macintosh.

McLean's for'mula (mak-lān') [Franklin C. *McLean*, American physician, *1888.] A modification of Ambard's formula, giving the result in terms per cent.: The index of urea excretion =

$$\frac{\text{gm. urea per 24 hrs.}}{\text{weight in kilos} \times (\text{gm urea per liter blood})^2} \sqrt{\text{gm urea per liter urine}} \times 8.96$$

MacLean'-Max'well disease' [Charles Murray *MacLean*, Canadian physician in West Africa, contemporary; James Laidlaw *Maxwell*, English physician in Formosa, contemporary.] A chronic enlargement of the posterior third of the os calcis accompanied by pain on pressure and in walking.

Macleod's rheumatism [Roderick *Macleod*, Scotch physician, 1795–1852.] Rheumatoid arthritis with abundant serous effusion in the affected joints.

MacNeal's stain. For *Treponema pallidum:* crude methylene violet 0.25, medicinal methylene blue 0.10, yellowish eosin 0.20, methyl alcohol 100; after this solution has stood for 24 hours, the film is treated by it for ½ to 1 minute and is then immersed, without washing, for a couple of minutes in a 1:20,000 sodium carbonate

solution, and then is washed and mounted in distilled water.

Macracanthorhynchus (mak-ră-can-tho-rin'kus) [G. *makros*, large, + *akantha*, thorn, + *rhynchos*, snout.] A genus of thorny-headed worms (*Acanthocephala*), one species of which, *M. hirudina'ceus, Echinorhynchus* gigas*, a parasite of the pig, is said to occur in man in Russia.

macrencepha'lia, macrenceph'aly [G. *makros*, large, + *enkephalos*, brain.] Hypertrophy of the brain; the condition of having a large brain.

macrobacte'rium [G. *makros*, large.] A bacterium of large size, megabacterium.

macrobio'sis [G *makros*, long, + *bios*, life.] Longevity.

mac'roblast [G. *makros*, large, + *blastos*, germ.] Megaloblast.

macrobrachia (mak-ro-bra'kĭ-ah) [G. *makros*, long, + *brachiōn*, arm.] Condition of having abnormally large or long arms.

macrocar'dius [G. *makros*, large, + *kardia*, heart.] A monster with abnormally large heart.

macrocepha'lia, macroceph'aly [G. *makros*, long, large, + *kephalē*, head] 1. Dolichocephaly. 2. Megalocephaly.

macrocephal'ic. Macrocephalous.

macroceph'alous. Having a long or large head.

macrochemistry (mak-ro-kem'is-trĭ). The employment of chemical tests, the reactions of which (color change, effervescence, etc.) are visible to the naked eye; distinguished from microchemistry.

macrochilia (mak-ro-kĭ'lĭ-ah) [G. *makros*, large, + *cheilos*, lip.] A condition of permanent swelling of the lip due to the presence of greatly distended lymph spaces; cavernous lymphangioma of the lip

macrochiria (mak-ro-kĭ'rĭ-ah) [G. *makros* large, + *cheir*, hand.] Cheiromegaly; abnormal size of one or both hands.

macrococ'cus. One of a group of bacterial cocci of large size, megacoccus.

macroco'lon [G. *makros*, long, + *kōlon*, colon] A sigmoid colon of unusual length.

macroconidium (mak''ro-ko-nid'ĭ-um). A conidium, or exospore, of large size.

macrocor'nea [G. *makros*, large.] A cornea of unusual size or projection; megalocornea.

macrocytase (mak-ro-si'tāz). According to Metchnikoff, a cytase or complement, formed by the large uninuclear leucocytes, which acts upon the animal cells, blood-corpuscles, etc.

mac'rocyte [G. *makros*, large, + *kytos*, cell] 1. A large uninuclear leucocyte, macrophag. 2 A large erythrocyte present in pernicious anemia.

macrocythe'mia, macrocythæ'mia [G. *haima*, blood] The presence of macrocytes in unusual number in the blood. **hyperchromat'ic m.**, m. in which the large red cells contain an undue amount of hemoglobin.

macrocyto'sis. Macrocythemia.

macrodac'tylism [G. *makros*, long, + *daktylos*, finger.] Dactylomegaly, megalodactylism; abnormal size of one or more fingers or toes.

macrodac'tyly, macrodactyl'ia. Macrodactylism

mac'rodont [G. *makros*, large, + *odous*(*odont-*), tooth.] Having large teeth, megadont.

macrodon'tia, mac'rodontism. The presence of abnormally large teeth.

macroerythroblast (mak-ro-er'ĭ-thro-blast). Macronormoblast, a cell derived by mitosis from a mesolymphoidocyte.

macroesthesia, macroæsthesia (mak''ro-es-the'zĭ-ah) [G. *makros*, large, + *aisthēsis*, sensation.] A subjective sensation of large size of all objects touched.

macrogamete (mak-ro-gam'ēt) [G. *makros*, large, + *gametē*, wife.] The female element in anisogamy, or conjugation of unicellular organisms of unequal size; it is the larger of the two cells, more full of reserve material, and but little if at all motile megagamete.

macrogametocyte (mak-ro-gam'e-to-sīt) [*macrogamete* + *kytos*, cell.] The mother-cell producing the macrogametes, or female elements of sexual reproduction in *Protozoa*.

macrog'amy. [G *makros*, large, + *gamos*, marriage.] Conjugation of two adult cells or gametes.

macrogen'esy [G. *makros*, large, + *genesis*, origin, production.] Gigantism.

macroglia (mă-krog'lĭ-ă). Neurogliar tissue containing mossy cells.

macroglos'sia [G. *makros*, large, + *glōssa* tongue.] Enlargement of the tongue, due usually to local lymphangiectasia, or to muscular hypertrophy; megaloglossia.

macrog'raphy [G. *makros*, large, + *graphō*, I write.] Writing with very large letters, sometimes observed in the insane.

macrola'bia [G. *makros*, large, + L. *labium* lip.] Macrochilia.

macroleucoblast (mak-ro-lu'ko-blast). An excessively large leucoblast.

macroma'nia [G. *makros*, large, + *mania*, frenzy.] 1 Megalomania. 2. A delusion that all objects surrounding the subject, or the subject himself or his members, are of immense size.

macromas'tia [G *makros*, large + *mastos*, breast.] Macromazia. abnormal size of the breasts.

macroma'zia [G. *makros*, large, + *mazos*, breast.] Macromastia.

macrome'lia [G *makros*, large, + *melos*, limb.] Megalomelia, abnormal size of one or more of the extremities.

macrom'elus [G. *makros*, large, + *melos*, limb.] A monster with abnormally large extremities.

macromere (mak'ro-mēr) [G. *makros*, large, + *meros*, part] A blastomere of large size.

macromerozoite (mak-ro-me-ro-zo'ĭt) [G. *makros*, long, large, + *merozoite*.] A large merozoite.

macromon'ocyte. An excessively large monocyte.

macronormoblast (mak-ro-nor'mo-blast). Macroerythroblast.

macronormochromoblast (mak-ro-nor''mo-kro'mo-blast). A large normoblast, macroerythroblast.*

macronu'cleus [G. *makros*, large.] The larger of the two nuclei in infusoria; it governs the vegetative metabolic functions, and has nothing to do with reproduction; trophonucleus, somatic nucleus.

macronychia (mak-ro-nik'ĭ-ah) [G *makros*, large, + *onyx*(*onych-*), nail.] Abnormal size of the nails of fingers or toes.

macropathol'ogy [G. *makros*, large.] The part of pathology which deals with the gross anatomical changes of disease.

macrophag, macrophage (mak'ro-fag, mak'ro-fāj) [G. *makros*, large, + *phag*(*ocyte*).] One of the large uninuclear or transitional leucocytes, phagocytic especially for other cells of the body, animal cells, such as the malarial parasite, and pigment; it also englobes the plasma of the blood surrounding the red cells—see hydrophagocytosis; according to Metchnikoff this form is probably the main source of antitoxin.

macrophag'ocyte. Macrophag.

macrophallus (mak-ro-fal'lus) [G. *makros*, long, + *phallos*, penis.] Abnormally large size of the penis, megalopenis.

macrophthal'mous [G. *makros*, large + *ophthalmos*, eye.] Having abnormally large eyes.

macroplasia (mak-ro-pla'zĭ-ah) [G. *makros*, large, + *plasis*, moulding, formation.] Overgrowth, hypertrophy, hyperplasia; gigantism.

macropo'dia [G. *makros*, large, + *pous*(*pod-*), foot.] Abnormally large size of the feet.

macropromyelocyte (mak"ro-pro-mi'el-o-sīt). A promyelocyte derived from a large instead of a small lymphoidocyte.

macrop'sia [G *makros*, large, + *opsis*, vision.] The subjective perception of objects as larger than they are.

macrorrhin'ia [G. *makros*, large, + *rhis*(*rhin-*), nose.] Excessive size of the nose, either congenital or pathological.

macroscelia (mak-ro-se'lĭ-ah) [G. *makros*, large, + *skelos*, leg.] Abnormal length or thickness of the legs.

macroscop'ic [G. *makros*, large, + *skopeō*, I view.] Noting an object which is visible to the naked eye, megascopic.

macroscop'ical. Relating to macroscopy or the examination of objects without the aid of a magnifying glass or microscope.

macros'copy. The examination of objects with the naked eye.

macrosis (mă-kro'sis) [G.] A lengthening, or an increase in volume generally.

macrosmatic (mak-roz-mat'ik) [G. *makros*, large, + *osmē*, smell.] Noting an abnormally keen olfactory sense.

macroso'mia [G. *makros*, large, + *sōma*, body.] Abnormally large size of the body.

mac'rospore [G. *makros*, large, + *sporos*, seed.] One of the larger spores of certain protozoans, their size being due to their paucity.

macrosto'mia [G. *makros*, large, + *stoma*, mouth.] Abnormally large size of the mouth.

mac'rotin. Cimicifugin.

macrotys (mak-ro'tis) [G. *makrōtēs*, long-eared.] Cimicifuga, employed in eclectic practice for the relief of rheumatism and rheumatic pains, and as a partus preparator during the last months of pregnancy in doses of 1–4 drops of the specific medicine in water every two hours.

mac'rotome [G *makros*, large, + *tomē*, cutting.] An instrument for making gross anatomical sections.

mac'ula, pl. *mac'ulæ* [L. a spot.] 1. A small spot, or what appears as a spot on section, differing in color from the surrounding tissue. 2. A small discolored patch or spot on the skin, not elevated above the general surface; macule. 3. A moderately dense opacity of the cornea. **m. acus'tica** [BNA], acoustic macula or spot; an oval area about 3 mm in length in the wall of both sacculus (*m. a. sac'culi* [BNA]) and utriculus (*m. a. utric'uli* [BNA]) in the membranous labyrinth; each of these maculæ consists of fusiform nucleated *supporting cells*, between which are flask cells (also nucleated) having a hair-like process projecting from the free extremity of each, hence called *hair-cells;* on the surface of each macula is a collection of rhombic calcium carbonate crystals called *otoconia;* the macula is in relation with the nerve-fibers which terminate in arborizations around the hair-cells. **m. al'bida,** pl. *maculæ albidæ*, one of a number of white spots or patches, sometimes observed post mortem on the serous layer of the pericardium. **m. atroph'ica,** an atrophic glistening white spot in the skin, usually following a circumscribed hemorrhage. **m. cæru'lea,** blue spot, a bluish stain on the skin caused by the bites of fleas, lice or other cutaneous parasites. **m. cor'neæ,** macula (3). **m. cribro'sa** [BNA], one of three areas (*inferior, media,* and *superior*) on the wall of the vestibule of the labyrinth, marked by numerous foramina giving passage to nerve-filaments supplying portions of the membranous labyrinth; sometimes a fourth (*m. cribrosa quarta*) is described, giving passage to the cochlear nerve. **m. fla'va** [BNA], a yellowish spot at the anterior extremity of the rima glottidis where the two labia vocalia join. **m. germinati'va,** germinal spot.* **m. gonorrho'ica,** a spot of brighter red than the surrounding membrane, the congested lips of the duct of Bartholin's gland, sometimes seen in gonorrhea. **m. lac'tea,** m. albida. **m. lu'tea** [BNA], yellow spot, a small orange-yellow area on the inner surface of the retina at a point corresponding to the posterior pole of the eyeball, and therefore in the visual axis. **m. tendin'ea,** m. albida. **Mongo'lian mac'ulæ,** Mongolian spots.*

mac'ular. Relating to or marked by macules, spotted.

mac'ulate. Marked by macules, spotted.

macula'tion. The formation of macules; the presence of macules.

macule (mak'ūl) [L. *macula*, spot.] A small, smooth, circumscribed area of discoloration of the skin; see *macula.*

maculocer'ebral. Relating to the macula lutea and the brain, noting a type of nervous disease marked by degenerative lesions in both the retina and the brain.

maculopap'ule. A papule rising from a macule.

maculosus (mak-u-lo'sus) [L.] Maculate, spotted.

MacWill'iam's test [John Alexander *MacWilliam*, English physician, *1857.] On the addition of a few crystals of salicyl-sulphonic acid to thirty drops of urine in a small test-tube, a precipitate not dissipated on heating indicates albumin; if boiling clears the urine the precipitate is albumose

mad [A S. *gemād.*] 1. Rabid, hydrophobic 2. Insane.

madaro'ma. Madarosis.

madaro'sis [G. making bald] Loss of the eyebrows or of the eyelashes.

Mad'dox doub'le prism [Ernest Edmund *Maddox*, English ophthalmologist, *1860.] Two prisms with their bases in close apposition, employed in testing for torsion of the eyeball. **M.'s rod,** a glass rod, or series of parallel glass rods, set in the center of an opaque disc; when held in front of one eye it converts the image of a candle into a streak of light, and the position of this streak in relation to the image of the candle seen by the other eye indicates the presence and degree of heterophoria.

Mad'elung's defor'mity [Otto Wilhelm *Madelung*, German surgeon, 1846–1926.] Manus valga, radius* curvus. **M.'s disease',** diffuse symmetrical lipomatosis, or deposit of fatty tissue, on the upper part of the back, shoulders, and neck. **M.'s neck,** M.'s disease confined to the neck. **M.'s sign,** increased difference between the axillary and rectal temperatures in purulent peritonitis.

madescent (mad-es'ent) [L. *madescere* to become moist.] Becoming moist; slightly moist.

madidans (mad'ĭ-danz) [L. *madidus*, wet, moist.] Moist, noting certain skin lesions.

Madu'ra foot [*Madura*, in India.] Mycetoma.

Madurella (mă-du-rel'lah). A genus of fungi secreting a black pigment. **M. myceto'mi,** *Streptothrix mycetomi*, a species found in black maduromycosis.

maduromycosis (mă-du-ro-mi-ko'sis). A form of mycetoma in which the grains consist of large segmented mycelial filaments; there are three varieties distinguished by the color of the grains, as yellow or white, red, and black.

Magendie's fora'men (mă-zhahn-de') [François *Magendie*, French physiologist, 1783–1855.] Median aperture of the fourth ventricle, metapore, an opening in the roof of the fourth ventricle, a short distance above the calamus scriptorius, by which the cavity communicates with the subarachnoid space. **M.'s law,** Bell's law, the anterior spinal roots are motor the posterior are sensory. **M.'s solu'tion,** liquor morphinæ hypodermicus (N.F.). **M.'s spa'ces,** spaces between the pia and arachnoid at the level of the fissures of the brain.

Magendie-Hertwig sign (mă-zhahn-de' hairt'vig). Skew deviation of the eyes, one eye being directed higher than the other.

magistery (maj'is-ter-i) [L. *magister*, master.] A precipitate or other medicinal preparation supposed to have been authoritatively compounded.

magistral (maj'is-tral) [L. *magister*, master.] 1. Relating to a master or one in authority, authoritative. 2. Noting a preparation compounded according to a physician's prescription.

Magitot's disease' (mă-zhi-to') [Emile *Magitot*, French dentist, 1833–1897.] Osteoperiostitis of the dental alveoli.

mag'ma [G a soft mass or salve.] 1. A soft mass left after extraction of the active principles. 2. A salve or thick paste. **m. bismu'thi** (N.F.), milk of bismuth, a thick white liquid, consisting of an aqueous suspension of bismuth subcarbonate and hydroxide; dose ℥1 (4 0). **m. fer'ri hydrox'idi,** magma of ferric hydroxide, formerly ferri hydroxidum (U.S.); solution of ferric sulphate, 100, ammonia water, 138, water to make 300; antidote to arsenic. **m. magne'siæ** (U.S.), magnesia magma, milk of magnesia; an aqueous suspension of very finely divided magnesium hydroxide made by the interaction of magnesium sulphate and sodium hydroxide; antacid in doses of ℥1 (4.0), and laxative in dose of ℥4 (15.0). **m. reticula're,** delicate strands running between the yolk-sac and the wall of the blastocyst.

magna'lium. An alloy of aluminum with magnesium, lighter in weight, but harder, than aluminum.

Magnan's sign (man-yoń') [Valentin *Magnan*, Paris alienist, 1835–1916.] Paresthesia in the psychosis of cocaine habitués, who imagine they have a foreign body, in the shape of a powder or fine sand, under the skin, and that it is constantly changing its position. **M.'s trom'bone move'ment,** an involuntary forward and back movement of the tongue when it is drawn out of the mouth, occurring in general paralysis of the insane.

magne'sia. Magnesii oxidum. **m. al'ba,** magnesii carbonas. **cal'cined m.,** magnesii oxidum. **Hen'ry's m.,** a proprietary preparation of m. ponderosa. **Hus'band's m.,** a proprietary preparation similar to Henry's m **m. le'vis** (Br.), light magnesia, magnesii oxidum. **m. pondero'sa** (Br.), heavy magnesia, magnesii oxidum ponderosum.

magne'sium [G. *Magnēsia*, a region in Thessaly whence magnesia was largely obtained in ancient times.] A mineral element, symbol Mg, atomic weight 24.32, of silvery luster, the base of the alkaline earth magnesia. It burns with an intense white light, very rich in actinic rays, and is therefore employed in photography. **magne'sii ben'zoas,** magnesium benzoate, a white crystalline powder, recommended in gout and renal lithiasis in doses of gr. 3–15 (0.2–1.0). **magne'sii boroci'tras,** magnesium borocitrate, occurs in the form of a white powder or colorless scales; employed as a urinary antiseptic in doses of gr. 15–30 (1.0–2.0). **magne'sii carbo'nas** (U.S., Br.) magnesium carbonate, magnesia alba, a white odorless powder of a slight earthy taste, insoluble in water; the U.S.P. recognizes but one form, the light carbonate, but in the B.P. there are two forms: *magnesii carbonas levis*, light magnesium carbonate, and *magnesii carbonas ponderosus*, heavy magnesium carbonate, the latter being somewhat granular and heavier; employed in gastric and intestinal acidity in doses of gr. 10–60 (0 6–4.0). **magne'sii chlor'idum** (N.F.), colorless crystals or white masses, deliquescent, soluble in water and in alcohol; dose, ℥ 4 (16.0). **magne'sii ci'tras effer'vescens,** effervescent magnesium citrate; magnesium carbonate 60, citric acid 46, sodium bicarbonate 34, sugar 8, moistened with alcohol, passed through a sieve, and dried to a coarse granular powder; laxative in doses of ℥1–3 (4 0–12.0). **m. group,** three of the basylous elements, magnesium, zinc, and cadmium. **magne'sii lac'tas,** magnesium lactate occurring in white acicular crystals soluble in 30 parts of water; laxative in doses of gr. 15–60 (1.0–4.0). **magne'sii ox'idum** (U.S.), **magnesii oxidum læve** (Br.), magnesia, light magnesia, calcined magnesia, a fine white odorless powder of an earthy taste, insoluble in water antacid and laxative in doses of gr. 15–30 (1.0–2.0). **magne'sii ox'idum pondero'sum** (U.S., Br.), heavy magnesium oxide, magnesia ponderosa, heavy magnesia; antacid and laxative in doses of gr. 15–30 (1.0–2.0). **magnesii perox'idum,** magnesium peroxide, a white powder insoluble in water, but decomposed in it to hydrogen peroxide; dose gr. 4 to 8 (0.25 to 0.5). **magnesii phos'phas tribus'icus,** tertiary magnesium phosphate, $Mg_3(PO_4)_2.7H_2O$, a salt proposed for use as an antacid; it is said to neutralize an excess of acid in the stomach, but not to produce general alkalization of the system. **magne'sii salicyl'as,** magnesium salicylate, occurring as faintly reddish crystals, soluble in 10 parts of water; recommended in typhoid fever in doses of gr. 15–20 (1.0–1.3). **magne'sii sil'icas,** see *asbestos*. **magne'sii ste'aras,** magnesium stearate, dolomol.* **magne'sii sul'phas** (U.S., Br.), magnesium sulphate, Epsom salt, occurs in the form of acicular crystals (sometimes confused, with untoward result, with those of oxalic acid), of bitter, disagreeable, saline taste, soluble in water; purgative in doses of ℥½ (16.0); externally employed as an analgesic in arthritis and other superficial inflammations; magnesium sulphate is the active ingredient of most of the advertised natural laxative waters. **magne'sii sul'phas effer'vescens** (Br.'14), effervescent magnesium sulphate, effervescent Epsom salt, magnesium sulphate 500, sodium bicarbonate, 403, tartaric acid 211, citric acid 136, moisten, pass through a sieve, and dry to a coarse granular powder; this is the former U. S. formula, the Br. preparation was practically the same; purgative in doses of ℥½–1 (16.0–32.0). **magne'sii sul'phis,** magnesium sulphite, a white powder, slightly soluble in water; recommended in pyemic conditions in doses of gr. 15–30 (1.0–2.0).

mag'net [G. *magnēs*.] Lodestone, magnetite, native magnetic oxide of iron, a body which has the

property of attracting particles of iron and which has magnetic polarity, *i.e.* when freely suspended, it tends to assume a definite direction between the magnetic poles of the earth. This is a natural magnet; an artificial magnet is a bar or horseshoe-shaped piece of iron which has been made magnetic by contact with another magnet. **elec'tro-magnet,** a bar of iron rendered magnetic by the passage round it of an electric current. **m. opera'tion,** the drawing out of a fragment of iron or steel from the eyeball by means of a powerful electromagnet.

magnet'ic. Relating to a magnet; possessing magnetism.

mag'netism. 1. The property of mutual attraction or repulsion possessed by magnets. 2. The science which has to do with magnets and their properties.

magnetiza'tion. Rendering magnetic.

magnetoelectricity (mag"nĕ-to-el-ek-tris'i-ti) Electricity generated by the action of a magnet.

magneton (mag-ne'ton). A ring of negative electricity assumed to consist of an electron traveling in a circular motion with the velocity of light. (Hackh.) The ultimate elemental unit of magnetism a magnetic particle smaller than the atom but possessing a positive and a negative pole. (Wilson Simplified Dictionary.)

magnetother'apy [G. *therapeia*, treatment.] Treatment of disease by the application of a magnet.

magniduc'tor. Musculus adductor magnus

magnification (mag"ni-fi-ka'shun) [L. *magnus*, great + *facere*, to make.] 1. Apparent increase in size of an object viewed under the microscope; when noted, this increased size is expressed by a figure preceded by ×, indicating the number of times its diameter is apparently enlarged. 2. Noting, in a lens, the degree of penetration as well as of amplification.

mag'nify. To cause to appear of larger size

magno'lia. The bark of various species of *Magnolia* sweet bay, swamp laurel, beaver tree, shrubs and trees of the eastern coast of North America; employed as a bitter tonic and diaphoretic in doses of 3½–1 (2.0–4.0).

mag'num [L. *magnus*, large] Os magnum.

Magnus's sign of death (mahg'noos). Constriction of a limb or one of its segments is not followed by venous congestion of the distal part.

mag'olan. Trade name of an organic phosphorus compound, calcium anhydro-oxydiamine-phosphate, recommended in the treatment of diabetes.

Maher's disease' (ma'her) [J. J. E. *Maher*, New York physician, *1857.] Paracolpitis.

Mah'ler's sign [Richard A. *Mahler*, German obstetrician, contemporary.] A gradual increase in the rapidity of the pulse, without change in temperature, in venous thrombosis in the puerperium.

maid'enhead. The hymen

maidism (ma'dizm) [*Zea mays*, maize.] Pellagra.

Mai'er's si'nus [Rudolf *Maier*, German physician, 1824–1888.] An infundibuliform depression on the internal surface of the lacrymal sac.

maieusiomania (mi-u-si-o-ma'ni-ah) [G. *maieusis* childbirth, + *mania*.] Puerperal insanity.

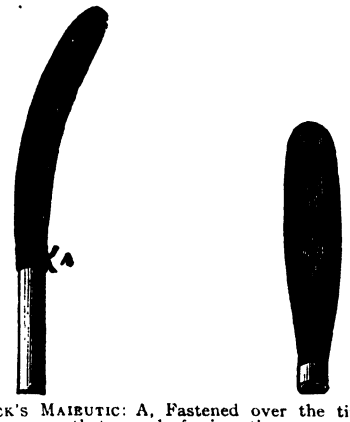
maieusiophobia (mi-u-si-o-fo'bi-ah) [G. *maieusis*, childbirth, + *phobos* fear.] Extreme dread of childbirth.

maieutic (mi-u'tik) [G. *maieutikos*, relating to obstetrics.] A rubber bag for dilatation of the cervix uteri; it is inserted over the end of a catheter and then inflated with gas or water; see illustration.

maieutics (mi-u'tiks) [G. *maieutikos*, relating to midwifery.] Obstetrics.

maim (mām). 1. To disable or cripple by an injury. 2. A hurt, injury, trauma.

main (mañ) [Fr.] Hand. **m. en crochet** (oñ krŏ-sha'), a permanent flexure of the fourth and fifth fingers, resembling the hand of a woman crocheting with three fingers bent to guide the thread. **m. en griffe,** griffin-claw. **m. succulente** (su-ku-lont'), edema of the hand.



HORROCK'S MAIEUTIC: A, Fastened over the tip of a catheter ready for insertion

maisonneuve (ma-zon-nev') [J. G. *Maisonneuve*.] A form of urethrotome with concealed knife, which is passed to the point of stricture and expanded to the desired degree, and then the knife is exposed and cuts the stricture.

Maisonneuve's opera'tion (ma-zon-nev') [Jacques Gilles *Maisonneuve*, Parisian surgeon, 1809–1897.] Intestinal anastomosis. **M.'s ure'throtome,** an instrument for cutting urethral strictures, see the preceding title.

Maissiat's band (may-se-ă') [Jacques Henri *Maissiat*, Parisian anatomist, 1805–1878.] Iliotibial band, tractus* iliotibialis.

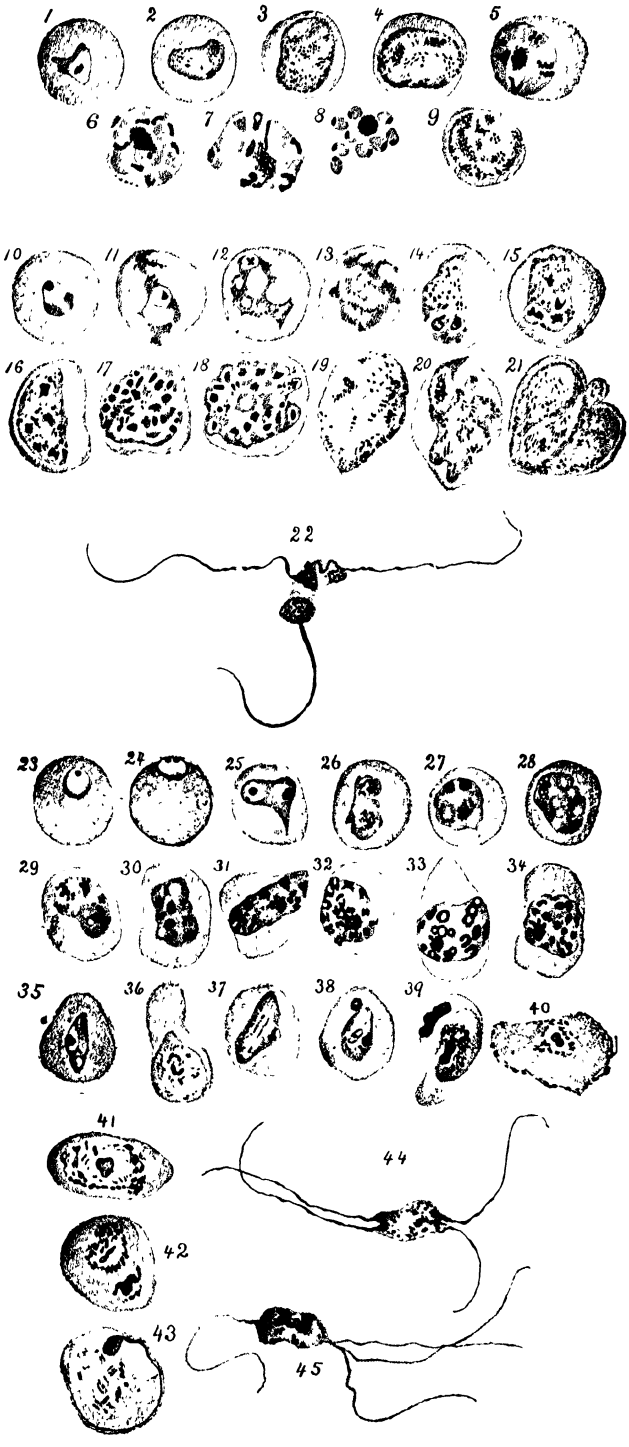
maize. Indian corn, *Zea mays*.

Majocchi's disease' (mah-yok'ke) [Domenico *Majocchi*, Italian dermatologist, 1849–1929.] Purpura annularis telangiectodes.

make. The closure of an electric circuit and establishment of the current.

Make'ham's hypoth'esis. A development of Gompertz's hypothesis as to the law of mortality following some mathematical law. M. assumed that death was the consequence of two generally coexisting causes: (1) chance, (2) a deterioration or increased inability to withstand destruction; the first of these is constant, the second is an increasing geometrical progression.

mal [Fr.; L. *malum*, an evil.] A disease or disorder; an evil. **grand m.** (grahñ), a severe, or major, attack of epilepsy, marked by convulsions, first tonic, then clonic, oscillating pupils, feeble pulse, stupor, and unconsciousness. **haut m.** (o') [Fr. high], grand m. **m. comitial** (kŭ-me-se-al'), epilepsy. **m. de caderas** (kah-da'rahs) [Sp. *cadera*, hip], a disease of horses in South America caused by infection with *Trypanosoma equinum*. **m. de Cayenne',** elephantiasis. **m. de coit** (ko-e'), dourine. **m. de los pin'tos,** pinta. **m. de Meleda** (ma-la'dah), endemic symmetrical keratodermia of the extremities occurring on the island of Meleda off the coast of Dalmatia. **m. de mer,** seasickness. **m. de San Laz'aro,** elephantiasis



Malarial Parasites Stained by Romanowsky's Method in which there is a Selective Stain for the Nuclear Chromatin 1–9, Quartan Parasites; 10–22, Tertian Parasites; 22, a Flagellated Body having two Chromatin Flagella and one of Protoplasm; 23–45, Estivoautumnal Parasites; 44 and 45, Flagellated Bodies, in one of which (44) the Flagella are chiefly of Chromatin, in the other (45) of Protoplasm.

m. perforant (per-fŭ-roń'), perforating ulcer* of the foot. **m. perforant' palatin** (pă-lă-tań'), a perforating ulcer of the roof of the mouth opening into the nasal cavity. **petit m.** (pĕ-te') [Fr. small], a mild, or minor, attack of epilepsy, characterized by momentary unconsciousness but without convulsions other than slight twitching of the muscles of the face or extremities.

ma'la [L. cheek-bone.] 1. The cheek, bucca. 2. Cheek-bone, os zygomaticum.

Malacarne's pyr'amid (mah-lah-car'na) [Michele Vincenzo Giacinto *Malacarne*, Italian surgeon, 1744–1816.] A lobule on the under surface of the cerebellum, the posterior portion of the vermis. **M.'s space,** posterior perforated space, substantia* perforata posterior.

malachite green (mal'a-kīt). A dye which has been employed in trypanosomiasis by injection of ℥15 (1.0) of a 1–2000 solution.

mala'cia [G. *malakia*, a softness.] 1. A softening of any of the tissues. 2. An extreme desire for highly spiced foods, such as curries, chile con carne, etc.; a form of pica.* **metaplas'tic m.,** osteitis fibrosa cystica, v. Recklinghausen's disease (2). **myeloplas'tic m.,** osteogenesis imperfecta (1).

malaco'ma. Malacia.

malacoplakia (mal-ă-ko-pla'kī-ah) [G. *malakos*, soft, + *plax*, a plaque.] The presence of soft fungoid patches in the mucous membrane of a hollow organ, as the stomach or the bladder.

malaco'sis. Malacia.

malacos'teon [G. *malakia*, softening, + *osteon*, bone.] Osteomalacia.

malacotic (mal-ă-kot'ik) [G. *malakos*, soft.] Soft, subject to malacia. **m. teeth,** teeth of comparatively soft texture, white in color, and susceptible to caries.

malacot'omy [G. *malakos*, soft, + *tomē*, incision.] Incision of soft parts, especially of the abdominal wall.

malac'tic [G. *malaktikos*, softening.] Emollient.

maladie du coit (mal-ă-de' dü ko-e') [Fr. disease from coitus.] Dourine.

mal'ady [Fr. *maladie*, illness.] Disease, illness; especially a chronic, usually fatal, disease.

malag'ma [G. a poultice.] A cataplasm or emollient.

malaise (mă-lāz') [Fr. discomfort.] A feeling of general discomfort or uneasiness, an out-of-sorts feeling, often the first indication of an infection.

mal'akin. Salicylparaphenetidin, an antipyretic, analgesic, and anthelmintic remedy, used in doses of gr 8–15 (0.5–1.0).

malanders (mal'an-durz) [L. *malandria*, pustules on the neck of a horse.] Psoriasis at the flexure of the knee in the horse.

ma'lar. Mala'ris [NK], relating to the mala, the cheek or cheek-bone. **m. arch,** zygoma. **m. bone,** os zygomaticum. **m. flush,** a localized redness (hectic flush) over the malar eminences, occurring especially in tuberculosis. **m. point,** a craniometric point on the apex of the tuberosity of the zygomatic bone.

malaria (mă-la'rĭ-ah) [It. *malo* (fem. *mala*), bad, + *aria*, air, referring to the old theory of the miasmatic origin of the disease.] A disease caused by the presence of a protozoan parasite of the red blood-corpuscles. *Acute* malaria (intermittent* or remittent*) appears under three chief forms: tertian* fever caused by *Plasmodium vivax*, quartan* fever caused by *P. malariæ*, and estivo-autumnal* fever caused by *P. præcox*. The disease is transmitted by the bite of a mosquito of the genus *Anopheles* which has previously sucked the blood of a person suffering from malaria. The unicellular parasite has two cycles of existence, the sexual in the body of the mosquito, the non-sexual in the human blood. A malarial attack or paroxysm consists of a chill, accompanied and followed by fever, with its attendant general symptoms, and terminates in a sweating stage. The paroxysms which are caused by the sporulation of the parasite recur every second day in tertian fever, every third day in quartan fever, at indefinite but frequent intervals in estivo-autumnal fever. In *pernicious* malaria the usual symptoms are very severe and are complicated by gastroenteric, hemorrhagic, or cerebral disturbances. *Chronic* malaria, malarial cachexia, develops after frequently repeated attacks of one of the acute forms; it is marked by profound anemia, enlargement of the spleen, emaciation, mental depression, and muscular weakness. See the fevers mentioned and *congestive chill,** *hemoglobinuria*, and *malarial cachexia.**

malarial (mă-la'rĭ-al). Relating to malaria in in any sense. **m. ther'apy,** malariotherapy.

mal'arin. Acetophenonephenetidin citrate, a colorless crystalline powder, slightly soluble in water; recommended as an antipyretic and analgesic in doses of gr 7½–15 (0.5–1.0).

malariology (mă-la-rĭ-ol'o-jĭ) [*malaria* + *-ology*.] A study of malaria in all its relations.

malariotherapy (mă-la'rĭ-ŭ-ther'ŭ-pĭ). Treatment of parasyphilitic and other affections by inoculation with malarial organisms; see *pyretotherapy*.

mala'rious. Relating to or characterized by the prevalence of malaria.

Malassez's disease' (mal-ah-sa') [Louis Charles *Malassez*, French physiologist, 1842–1910.] Cystic degeneration of the testis. **M.'s epithe'lial rests,** epithelial remains of Hertwig's sheath in the alveolodental periosteum near the cementum; occasionally they develop into dental cysts or cancer of the jaw. **M.'s meth'od,** for staining the neuroglia; stain the section in ammoniacal picrocarmine, place in a 40 per cent. solution of potassa for 10 minutes, wash in distilled water, treat with concentrated acetic acid, mount in glycerin.

Malasse'zia [Louis Charles *Malassez*.] A genus of fungi, various species of which have been identified as the cause of tinea flava and other forms of tinea in the tropics.

mal"assimila'tion. Incomplete or faulty assimilation.

mal'ate. A salt of malic acid.

malaxa'tion [L. *malaxare*, to soften.] 1. The preparation of a soft mass for making pills. 2. A kneading process in massage.

maldiges'tion. Imperfect digestion.

male [L. *masculus*.] Masculine; noting the sex of a man as distinguished from that of a woman.

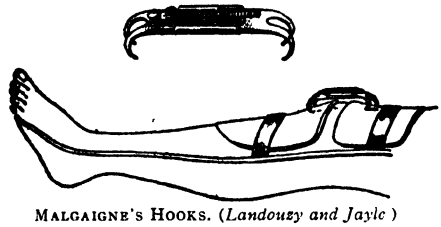
malemission (mal-e-mish'un) [L. *malus*, weak, + *e*, out, + *mittere*, to send.] Failure of the semen to be ejected from the urethra in coitus.

Malerba's test (mahl-er'bah) [Pasquale *Malerba*, Italian physician, contemporary.] For acetone, the presence of which is indicated by the appearance of a red color on the addition of dimethylparaphenylendiamine.

malforma'tion. A congenital deformity

Malgaigne's amputa'tion (mal-găn') [Joseph François *Malgaigne*, Parisian surgeon, 1806–1865.] Amputation of the foot with preservation of the astragalus to form the stump. **M.'s appara'tus,**

a double-inclined plane for fracture of the thigh. **M.'s foss'a,** fossa carotica. **M.'s her'nia,** infantile inguinal hernia prior to the descent of the testis. **M.'s hooks,** hooks which seize the upper and lower fragments of a fractured patella and are then approximated by screws. **M.'s tri'angle,** the superior carotid triangle.



MALGAIGNE'S HOOKS. (*Landouzy and Jayle*)

mal'ic [L. *malum*, apple.] Relating to apples. **m. acid,** an acid, $C_4H_6O_5$, found in apples and various other tart fruits.

malig'nancy. The property or condition of being malignant; virulence; noting the characteristic of a cancerous growth as distinguished from a benign neoplasm.

malig'nant[L. *malignare*, to do anything maliciously.] Resistant to treatment; occurring in severe form; tending to grow worse and (in the case of a tumor) to recur after removal **m. pur'pura,** epidemic cerebrospinal meningitis. **m. tumor,** cancer.

malig'nin. A supposed intracellular ferment which endows cancer cells with their malignant character, having the property of digesting normal tissues in an acid medium.

malinger (mă-ling'gur) [Fr. *malingre*, poor, weakly.] To sham; to feign an illness usually in order to escape work or excite sympathy.

malingerer (mă-ling'gur-ur). One who feigns disease.

malingering (mă-ling'gur-ing). Feigning disease.

ma'lis [G. a distemper.] Any parasitic skin disease **m. pedic'uli,** pediculosis, lousiness, phthiriasis.

Mall's for'mula (mawl) [Franklin Paine *Mall*, American embryologist, 1862–1917.] The age (in days) of an embryo is indicated by the square root of its length (measured from vertex to breech) in millimeters multiplied by 100. **M.'s ovum,** a specimen of an impregnated ovum about 13 days old; and another 26 days old.

mall'eable [L. *malleus*, a hammer.] Capable of being beaten out into a thin plate, noting certain metals such as gold and silver.

mallea'tion. A sort of hammering movement of the hands against the thighs, a form of tic.

mallein (mal'e-in). A glycerin extract of a culture of the glanders bacillus (*B. mallei*), employed in the diagnosis of glanders, a rise of temperature and tumefaction at the site of injection denoting a positive reaction.

mall'enders. Malanders.

malleoidosis (mal"e-oy-do'sis) [L. *malleus*, glanders, + G. *eidos*, resemblance, + *-osis*.] Melioidosis.

malleoincudal (mal-e-o-in'ku-dal). Relating to the malleus and the incus in the tympanum.

malle'olar. Relating to one or both malleoli.

malle'olus [L. dim. of *malleus*, hammer.] One of two rounded bony prominences on either side of the ankle-joint. **m. latera'lis** [BNA], m. fibulæ [NK] lateral m.; external or outer m., the process at the outer side of the lower end of the fibula, forming the projection of the outer ankle. **m. media'lis** [BNA], m. tibiæ [NK], medial m., internal or inner m., the process at the inner side of the lower end of the tibia, forming the projection of the inner ankle.

malleot'omy [*malleus* + G. *tomē*, incision.] 1. Division of the malleus. 2. Division of the ligaments holding the malleoli in apposition in order to permit of their separation in certain cases of clubfoot.

mall'et-finger. Drop-finger.

malleus, gen. *mal'lei* (mal'e-us) [L.] 1. Hammer, the largest of the three ossicles, resembling a club rather than a hammer; it is regarded as having a head or capitulum, below which is the neck or collum, and from this diverge the manubrium, or handle, and the anterior or slender process; from the base of the manubrium the lateral or short process arises. The manubrium and lateral process are firmly attached to the membrana tympani, and the head articulates with a saddle-shaped surface on the body of the incus. 2. Glanders, equinia.*

Mall'ory's bod'ies [Frank Burr *Mallory*, American physician, *1863.] Protozoon-like bodies found in the epithelial cells and lymph spaces in the skin in scarlatina. **M.'s stain for actinomyces,** immerse for 10 minutes in a saturated aqueous solution of eosin, wash and immerse in aniline gentian violet for 2 to 5 minutes, wash in saline, then treat for 1 minute with Weigert's iodine solution, wash again, dehydrate in aniline oil and clear in xylol. **M.'s trip'le stain.** a connective-tissue stain: I, acid fuchsin, 1, distilled water, 1000; II, phosphomolybdic acid, 1, distilled water, 100, water-soluble aniline blue, 0.5, orange G, 2.

mallow [L. *malva*.] A plant of the family *Malvaceæ*, to which belong the marshmallow, *Althæa officinalis*, and the mallow leaves, from *Malva rotundiflora* and *M. sylvestris*, of the N.F.

malnutrition (mal-nu-trish'un). Faulty nutrition resulting from malassimilation.

malocclusion (mal"ŏ-klu'zhun) [L. *malus*, bad, + *occlusus; occludere*, to close up.] Abnormal occlusion of the teeth, a misfit of the masticatory or occlusal surfaces.

malonylure'a. Barbituric acid, a crystalline substance, $C_4H_4N_2O_3$, from which barbital is derived.

mal'oplasty [L. *mala*, cheek, + G. *plassō*, I form.] Meloplasty, genyplasty, plastic surgery of the cheek.

Malpighian (mal-pe'ge-an). Referring to or described by Marcello *Malphighi* (mahl-pe'ge), an Italian anatomist, born at Crevalcuore, near Bologna in 1628, died at Rome in 1694. **M. bod'y,** M. corpuscle. **M. cap'sule** (1) a thin fibrous membrane enveloping the spleen and continued over the vessels entering at the hilus; (2) Bowman's capsule, the membrane surrounding the M. tuft and constituting with it the M. corpuscle of the kidney, **M. cor'puscle,** (1) corpusculum* renis; (2) nodulus* lymphaticus lienalis. **M. gland,** M. corpuscle (2). **M. glomer'ulus,** the coil of capillary blood-vessels surrounded by the M. capsule, and constituting with it the M. body or corpuscle. **M. lay'er,** the deeper portion of the epidermis, including the germinative, mucous, and granular layers; some anatomists include also the stratum lucidum. **M. nod'ule,** M. corpuscle, nodulus* lymphaticus lienalis. **M. pyr'amid,** pyramis renalis. **M re'te,** rete mucosum, stratum* germinativum. **M. stig'mata,** the points of entrance of the smaller veins into the larger veins of the spleen. **M. stra'tum,** M.

layer. **M. tuft,** M. glomerulus. **M. ves'icles,** the minute air-filled vesicles on the surface of an expanded lung.

malposition (mal-po-zish'un) Faulty or abnormal position of a part or of the body.

malprac'tice. 1. Mistreatment of a disease or injury through ignorance, carelessness, or criminal intent. 2. Criminal abortion.

malprax'is [L. *malus*, bad, + G. *praxis*, action.] Malpractice.

malpresenta'tion. Faulty presentation of the fetus; presentation of any part other than the occiput or the breech.

malt, mal'tum (mawlt) [A.S. *mealt.*] (U.S.) The seed of barley, *Hordeum distichum*, artificially germinated and dried, containing diastase and peptose; employed in the form of an extract, extractum* malti, as a tonic digestive.

Mal'ta fe'ver [*Malta*, an island in the Mediterranean sea.] Rock fever, Mediterranean fever, Gibraltar fever, Neapolitan fever, undulant* fever.

maltase (mawl'tāz) [*malt(ose)* + *-ase.*] A sugar-splitting enzyme in the saliva and pancreatic secretion which converts maltose into dextrose.

Malthusianism (mal-thu'sĭ-an-izm) [Thomas Robert *Malthus*, English political economist, 1766–1834.] The doctrine that population increases in geometrical progression; and the teaching, based upon this doctrine, that overpopulation should be prevented by sexual continence or by late marriage.

maltine (mawl'tēn). Trade name of a preparation of malt used as a food or a tonic.

maltopep'sine. Trade name of a digestant containing malt and pepsin.

maltope'trol. Trade name of a preparation of malt with a petroleum derivative.

mal'tose. Malt sugar ($C_{12}H_{22}O_{11}$); a dextrorotatory disaccharide formed by the hydrolysis of starch through the action of an enzyme.

malt-sugar. Maltose.

ma'lum [L. an evil.] A disease. **m. cox'æ,** hip-disease. **m. cox'æ seni'le,** senile hip-disease, osteoarthritis of the hip occurring in the aged. **m. per'forans pe'dis,** perforating ulcer* of the foot. **m. vene'reum,** syphilis. **m. vertebra'le suboccipita'le,** Rust's disease, tuberculosis of the atlas and axis and their articulations.

malu'nion. Incomplete union, or union in a faulty position, after fracture or a wound of the soft parts.

Mal'va [L.] A genus of plants of the mallow family. *M. rotundifolia* and *M. sylvestris* are sources of malvæ folia (N.F.).

malvæ folia (mal've fo'lĭ-ah). (N.F.) Mallow leaves, the dried leaves of *Malva sylvestris* and *M. rotundifolia.*

Maly's test (mah'le) [Richard Leo *Maly*, Austrian physiological chemist, 1839–1894.] Van der Velden's test, for free hydrochloric acid: the presence of hydrochloric acid will change the color of a solution of methylene blue from violet to blue or bluish green.

mamanpian (mă-moń-pe-oń'). Mother yaw, the most marked of the lesions in a case of yaws, or frambesia.

mam'elon, mamm'elon [Fr. *mamelon*, nipple.] One of the rounded prominences, three in number, on the cutting edge of an incisor tooth when it first pierces the gum.

mam'elonated. [Fr. *mamelon*, nipple.] Having rounded teat-like elevations; nodulated.

mam'elonation. The formation of rounded projections or nodules on bony and other structures.

mamil'la. Mammilla.

mam'ma, gen. and pl. *mam'mæ* [L.] Breast, mammary gland, the organ of milk secretion; one of two large hemispherical projections situated in the superficial fascia over the pectoralis major muscle on either side of the chest; it is rudimentary in the male. The breast is divided by fibrous and adipose septa into from 15 to 24 irregularly shaped lobes, each lobe having its independent lactiferous duct opening at the nipple. Each lobe is made up of a number of lobules containing the secreting glands, the ducts of which join to form the common duct of the lobe. **m. accesso'ria** [BNA], accessory breast, supernumerary mamma a milk-secreting gland located elsewhere than at the normal place on the chest and existing in addition to the two usual mammæ. **m. errat'ica,** a supernumerary breast aberrantly located, *i.e.* in some part other than the milk* line. **m. viri'lis** [BNA] male breast, one of the two, usually rudimentary, mammary glands in the man.

mam'mal. An animal of the class *Mammalia.*

mammal'gia [L. *mamma*, breast, + G. *algos*, pain.] Mastalgia.

Mamma'lia [L. *mamma*, breast.] The highest class of living organisms; it includes all the vertebrate animals which suckle their young.

mam'mary. Relating to the breasts. **m. gland,** mamma, breast.

mammectomy (mam-ek'to-mĭ) [L. *mamma*, breast, + G. *ektomē*, excision.] Mastectomy, amputation of the breast.

mam'miform [L. *mamma*, breast, + *forma*, form.] Resembling a breast, breast-shaped.

mammil'la [L. dim. of *mamma*, breast.] 1. Nipple, papilla mammæ [BNA]. 2. Any nipple-like structure

mammilla'ria. See *corpus mamillare;* the [BNA] spelling is with one *m.*

mam'millary. Relating to or shaped like a nipple **m. bod'ies,** m. processes, m. eminences. **m. car'uncles,** m. processes, olfactory bulbs. **m. em'inences,** corpora albicantia; prominences on the inner surface of the cranium. **m. proc'esses,** (1) an old name for the olfactory bulbs; (2) projections from the superior articular processes of the lumbar vertebræ. **m. tu'bercles,** m. eminences.

mam'millate, mam'millated. Studded with nipple-like projections.

mammilla'tion. 1. A nipple-like projection. 2 The condition of being mammillated.

mammill'iform [L. *mammilla*, nipple, + *forma*, form.] Nipple-shaped.

mammill'iplasty [L. *mammilla*, nipple, + G. *plassō*, I form.] Thelyplasty.

mammillitis (mam-mil-li'(le')tis) [L. *mammilla* + G. *-itis.*] Thelitis, inflammation of the nipple.

mam'min [*L. mamma*, breast.] A hormone secreted by the mammary gland which is said to antagonize an ovarian hormone, folliculin, causing suppression of the menses.

mammitis (mam-mi'(me')tis) [L *mamma*, breast, + G. *-itis*] Mastitis.

mam'mose. 1 Mammiform. 2. Having large breasts.

mammot'omy [L. *mamma*, breast, + G. *tomē*, incision.] Mastotomy.

manaca (man'ă-kah) (N.F.). The dried root of *Brunfelsia hopeana*, or *Franciscea uniflora* (fam. *Solanaceæ*); occurs in cylindrical or tortuous pieces, dark brown in color, of bitter taste, with slight odor; a plant of Brazil lowlands, employed in rheumatism and syphilis in doses of gr. 10–30 (0.6–2.0) of the powder or ℥10–30 (0.6–2.0) of a fluidextract.

manchineel'. A tree of tropical North America, having a caustic sap with emetic properties.

Manchu'rian fever. A disease resembling typhus or typhoid fever, endemic in Manchuria.

man'cinism [L. *mancus*, crippled.] Lefthandedness.

manco'na bark. Erythrophleum.

Man'del's test [John A. *Mandel*, American physiological chemist, contemporary.] For albumin: the addition of a 5 per cent. solution of chromic acid will precipitate any protein present.

Mandelbaum's reac'tion (man'del-bowm) [M. *Mandelbaum*, German bacteriologist, *1881.] Thread-reaction.

mandible (man'dĭ-bl). Mandibula, the lower jaw.

mandib'ula [L. a jaw.] [BNA] Mandible, inferior maxilla; a bone of horse-shoe shape, forming the lower jaw, articulating by its up-turned extremities with the temporal bone on either side.

mandib'ular. Relating to the lower jaw.

mandib"ulopharyn'geal. Maxillopharyngeal.

mandib'ulum. Mandibula.

Mandl's solu'tion (mahn'dl) [Louis *Mandl*, Hungarian physician in Paris, 1812–1881.] Iodine gr. v, potassium iodide gr. x, carbolic acid ♏ii, glycerin ℥ss; employed as a local application in chronic catarrhal inflammations.

mandrag'ora [G. *mandragoras*.] The European mandrake, *Mandragora officinalis*, or *Atropa mandragora*, the mandrake of the Bible; its properties are similar to those of stramonium, hyoscyamus, and belladonna.

mandrag'orine. A mydriatic alkaloid from mandragora, similar to atropine and hyoscine.

man'drake. 1. Mandragora. 2. Podophyllum.

man'drel, man'dril. 1 The shaft, spindle, or handle to which a tool is attached and by means of which it is rotated. 2. Mandrin.

man'drin [Fr. *mandrin*, mandrel] A stiff wire inserted in the lumen of a soft catheter in order to give it shape and firmness while passing through the urethra; mandrel.

manduca'tion [L. *manducare*, to chew.] Chewing.

manganese (man'gan-ēz). Manganum.

mangan'ic. Noting a salt of manganese having the metal in a higher valence than the manganous salt.

manganous (mangan-us). Noting a salt of manganese containing the metal in a lower valence than the manganic salt.

man'ganum [L. *manganesium*, an altered form of *magnesium*.] A metallic element resembling, and often associated in ores with iron, symbol Mn, atomic weight 54.93; the manganous salts are sometimes employed in medicine, some of them being official. **man'gani carbo'nas,** manganese carbonate, a brownish white powder; employed in anemia in doses of gr. 10–20 (0.6–1.3). **man'gani ci'tras solu'bilis** (N.F.), soluble manganese citrate, manganese and sodium citrate, a mixture of manganum citrate and sodium citrate, a whitish powder or translucent scales, soluble in 4 parts of cold water; dose, gr. 3 (0 2). **man'gani diox'idum præcipita'tum,** precipitated manganese dioxide or binoxide, pyrolusite, a black, odorless, tasteless powder insoluble in water; recommended as a tonic and alterative in syphilis in doses of gr. 3–8 (0.2–0 5). **man'gani glycerophos'phas solu'bilis** (N.F.), soluble manganese glycerophosphate, manganese glycerophosphate rendered soluble by the addition of citric acid; dose, gr. 3 (0.2). **man'gani hypophos'phis** (N.F.), manganese hypophosphite, manganous hypophosphite, a pinkish odorless powder soluble in about 7 parts of water; employed in anemia and nervous conditions in doses of gr. 2–5 (0.13–0.3). **man'gani iod'idum,** manganese iodide; employed in anemia, usually in the form of syrup, in doses of gr. 1–3 (0.06–0.2). **man'gani lac'tas,** manganese lactate, occurs as pale reddish crystals, soluble in 12 parts of water; employed in anemia in doses of gr. 1–5 (0.06–0.3). **man'gani phos'phas,** manganese phosphate, a white or pinkish powder, recommended in chlorosis and as an alterative in doses of gr. 2–5 (0.13–0.3). **mangani sulphas,** manganese sulphate, manganous sulphate, occurs as light pinkish, prismatic crystals, freely soluble in water; sometimes employed as an alterative and in anemia in doses of gr. 1–3 (0.06–0.2). **man'gani tar'tras,** manganese tartrate, occurs as white or light reddish crystals; employed in anemia and chlorosis in doses of gr. 2–5 (0.13–0.3).

man'gasol. Magnesium chlorphenolsulphonate, employed as an internal antiseptic in doses of gr. 10–20 (0.6–1.3).

mange (mānj) [Fr. *manger*, to eat.] A cutaneous affection of dogs and other animals, similar to scabies, due to the presence in the skin of a burrowing mite.

Mangifera indica (man-jif'er-ŭ in'dĭ-kŭ) [*mango* + L. *ferre* to bear.] The East Indian mango tree, the root of which is employed in eclectic practice in atonic conditions of the mucous membranes accompanied with profuse discharge, and in cases of passive hemorrhage, in doses of 1–2 drops of the specific medicine in water every hour or two.

man'gostan, man'gosteen. The bark of *Garciian mangostana*, a tropical fruit-tree; it is employed as an astringent.

ma'nia [G. frenzy.] A mental disorder characterized by great psychomotor activity, excitement, a rapid passing of ideas, exaltation, and unstable attention. **dan'cing m.,** epidemic chorea, choreomania. **doubt'ing m.,** folie de doute, an excessive dubiety about all the affairs of life and a morbid scrupulosity in regard to minutiæ. **m. a po'tu** [L. *a*, from, + *potus*, drinking], an acute mania associated with hallucinations, due to chronic alcoholic poisoning; delirium tremens. **peracute' m.,** acute maniacal* excitement. **puer'peral m.,** acute insanity occurring in women after childbirth.

ma'niac. A violently insane person, one suffering from mania.

maniacal (ma-ni'ă-kal). Relating to or characterized by mania; wild, furious. **m. excite'ment,** a mental state resembling acute delirium from which it differs, however, in the fact that there are less confusion and incoherence of ideas and sometimes the patient has a measure of control over his actions.

man'ic. Relating to mania.

man'ic-depres'sive insan'ity. Alternating or circular or cyclic insanity, cyclothymia; a mental disease in which stages of melancholia and of more or less pronounced maniacal excitement alternate.

man'icure [L. *manus*, hand, + *cura*, treatment.] 1 A careful toilet of the hands and nails. 2. A manicurist.

man'icurist. One who makes a business of caring for the hands and finger-nails

man'ihot. Cassava.

man'ikin [dim. of *man*.] 1. A very little man a dwarf. 2. A model of the human body or any of its parts, used in demonstrating the anatomy, or

practising certain manipulations, as those of obstetrics; a phantom.

maniphalanx (man"i-fa'lanks) [L. *manus*, hand.] A phalanx of the hand, a bony segment of a finger; distinguished from pediphalanx.*

manipula'tion [L. *manipulare*, to handle.] Any manual operation, as palpation, extracting the fetus in difficult labor, expressing the placenta, etc. **conjoined' m.,** the use of both hands in an obstetric operation, one being on the abdomen, the other in the vagina.

manip'ulus [L.] A handful, a rough measure of quantity.

Mann's sign [John Dixon *Mann*, English physician, 1840–1912.] The two eyes appear not to be on the same level in exophthalmic goiter.

man'na [the food of the Children of Israel in the desert.] (U.S., Br.) A saccharine exudation from *Fraxinus ornus*, flowering ash, a tree of the Mediterranean shores. It occurs as *m. cannellata*, flake m., *m. in lacrimis*, m. in tears or small flakes, and *m. communis* or *m. in sortis*, m. in sorts; employed as a laxative, especially for children, in doses of ʒ 1–2 (4.0–8.0). **Turkish m.,** trehala.

Mannaberg's symp'tom (mahn'nah-bairg) [Julius *Mannaberg*, Vienna physician, *1860.] The frequent accentuation of the second pulmonic sound in abdominal diseases, especially in perityphlitis.

manninositose (man-ni"no-si'tōz). A disaccharide, a compound of mannite and inosite, a white crystalline powder said to be formed in the tubercle bacillus.

mannite (man'īt). Manna sugar, $C_6H_{14}O_6$, a white crystalline substance, of sweet taste, obtained from manna; laxative in doses of ʒ ½–1 (15.0–30.0).

mann'itol, mann'itose. Mannite.

Mann'kopf's sign [Emil Wilhelm *Mannkopf*, German physician, 1836–1918.] Acceleration of the pulse when a painful point is pressed upon, in a neurasthenic.

mann'ose. Mannite.

Manoiloff's reaction (mă-noy'lof) [E. O. *Manoiloff*, Russian obstetrician, contemporary.] To 0.3 c.c. of clear fresh serum from the patient to be tested 1 c.c. of a 2 per cent aqueous solution of theobromine-sodiosalicylate is added, and after shaking, 1 drop of a 0.2 per cent alcoholic solution of Nile blue; if the woman is pregnant the mixture is decolorized, but if she is not the color is a little lighter but remains distinctly blue; the test is unreliable before the fourth month, and is not wholly reliable later.

manom'eter [G. *manos*, thin, scanty, + *metron*, measure.] An instrument for indicating the pressure of gases or vapor, or the tension of the blood. **an'eroid m., di'al m.,** one in which the pressure is indicated by a revolving pointer on a metallic box exhausted of air. **mercu'rial m.,** one in which the varying pressures are shown by differences of elevation in a column of mercury.

manomet'ric. Relating to a manometer.

Man'son's disease' [Sir Patrick *Manson*, of the London School of Tropical Medicine, 1844–1922.] Schistosomiasis intestinalis. **M.'s pyo'sis,** pemphigus contagiosus, a contagious eruption characterized by the formation of large vesicles or bullæ, becoming purulent but never ulcerating or crusting.

man'tle. The cerebral cortex with the subjacent white substance; brain-mantle, pallium.

Mantoux's reac'tion (mahn-too') [Charles *Mantoux*, French physician, *1877.] Mendel's test, v. Pirquet's reaction, tuberculin reaction following the intracutaneous injection of that substance.

man'ual [L. *manus*, hand.] Relating to or performed with the hand.

manu'brium [L. handle.] The portion of the sternum or of the malleus which represents the handle. **m. mal'lei,** the handle of the malleus running downward, inward, and backward from the neck and attached throughout its length to the tympanic membrane. **m. ster'ni,** the upper segment of the sternum, the presternum, a flattened, roughly triangular bone, occasionally fused with the body of the sternum, forming with it a slight angle, the sternal angle.

manudynamometer (man"u-di-nă-mom'e-tur) [L. *manus*, hand, + G. *dynamis*, force, + *metron*, measure.] In dentistry, a device for measuring the force exerted by the thrust of an instrument.

ma'nus, gen. and pl. *manus* [L.] Hand. **m. cava,** a condition of extreme concavity of the palm of the hand. **m. exten'sa,** clubhand with deviation backward. **m. flexa,** clubhand with forward deviation. **m. superexten'sa,** m. extensa. **m. valga,** clubhand with deviation to the ulnar side **m. vara,** clubhand with deviation to the radial side

manustupration (man"u-stu-pra'shun) [L. *manus*, hand, + *stupratio*, fornication.] Masturbation.

manyplies (men'i-pliz). The omasum, psalterium, or third stomach of an ox or other ruminant animal.

Manz's glands [Wilhelm *Manz*, German oculist, 1833–1911.] Gland-like structures found in the conjunctiva of animals, and sometimes of man, near the corneal circumference; Waldeyer claims that they are not glands, but simple collections of epithelial cells.

map'py tongue. Geographical tongue.

maqui (mah'ke). A shrub of Chile, from the berries of which a wine having antiperiodic properties is made.

Maragliano's se'rum (mah-rahl-yah'no) [D. *Maragliano*, Italian physician, contemporary.] A serum, antitoxic to *Bacillus tuberculosis*, prepared by the injection into horses of a mixture of tuberculous toxalbumin and a watery tuberculin (endotoxin).

Marañon's sign (mar-ahn-yōn') [*Marañon*, Madrid physician, contemporary.] An intense vasomotor reaction follows pinching or rubbing the skin of the throat in Graves' disease.

maran'sis [G. withering.] Marasmus.

maran'tic [G. *marantikos* wasting.] Ill nourished, wasting away, relating to marasmus, marasmic.

maraschino (mar-as-ke'no). A cordial originally made in Dalmatia from a special sort of cherry growing in that country.

maras'mic. Relating to or suffering from marasmus, marantic.

maras'moid [G. *marasmos*, marasmus, + *eidos*, resemblance.] Resembling marasmus.

maras'mus [G. *marasmos* withering.] Extreme emaciation or general atrophy, occurring especially in young children, not due to any specific and obvious cause, such as tuberculosis; possibly a form of intestinal autointoxication.

marble bones (mar'bl-bōnz). A condition of extreme fragility of the bones, occurring apparently as a familial affection of unknown causation; Albers-Schoenberg disease, disseminated condensing osteopathy,* osteopetrosis.

marbleization (mar-bl-i-za'shun). Becoming, or the condition of being, marbled or veined.

marc [Fr.] The residue remaining after percolation of a drug.

marcescent (mar-ses'ent) [L. *marcescere*, to pine away.] In botany, noting leaves or flowers which are withering but have not yet fallen off.

Marchand's adre'nals (mar'shant) [Felix *Marchand*, **German pathologist**, 1846–1928.] Accessory adrenal bodies in the broad ligament. **M.'s wan'dering cell,** perithelial cell,* pyrrhol* cell.

Marchi's bun'dle (mar'ke) [Vittorio *Marchi*, Italian physician, contemporary.] A group of fibers on the surface of the anterior funiculus, or white column, of the spinal cord, descending from the cerebellum to the cells of the anterior gray column; Loewenthal's tract. **M.'s meth'od,** hardening the specimen for 8 or 10 days in Müller's fluid, followed by immersion for from 1 to 3 weeks in the same with the addition of ½ part of a 1 per cent. solution of osmic acid; stains fat black. **M.'s reac'tion,** failure of the myelin sheath of a nerve to blacken when submitted to the action of osmic acid. **M.'s tract,** M.'s bundle.

mar'cid [L. *marcidus; marcere*, to wither.] Wasting away, emaciating, tabid.

Marckwald's opera'tion (mark'valt) [Max *Marckwald*, German surgeon, *1844.] An operation for stenosis of the external os uteri, consisting in the excision of two wedge-shaped pieces from opposite sides of the portio vaginalis, and suturing the edges of the defects.

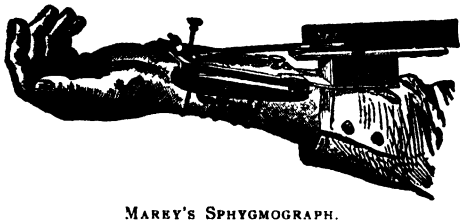
mar'cor [L. *marcere*, to wither.] Marasmus.

Maréchal's test (mar-a-shal') [Louis Eugène *Maréchal*, French physician, contemporary.] For bile in the urine: the addition of a drop of a solution of tincture of iodine, 1, in alcohol, 10, to the suspected urine produces a bright green color at the point of contact of the two fluids if bile is present.

mare's-tail. Erigeron.

mar'etin. Trade name for a coal-tar derivative, metatolylhydrazine carbaminate, or carbamic acid tolylhydracid; a white crystalline substance employed as an antipyretic and analgesic in doses of gr. 3–10 (0.2–0.6).

Marey's law (mă-ray') [Étienne *Marey*, French physiologist, 1830–1904.] The pulse varies inversely as the blood-pressure, *i.e.* it is slow when the pressure is high. **M's sphyg'mograph,** an apparatus for recording the curve of the radial pulse.



MAREY'S SPHYGMOGRAPH.

Marfan's disease' (mar-fahn') [B. A. *Marfan*, Parisian physician, *1858.] A progressive spastic paraplegia occurring in children the subjects of hereditary syphilis; the lesion is a myelitis involving the pyramidal tracts. **M.'s tongue sign,** a coated tongue with a red triangle at its tip, pointing to typhoid fever; of value especially in infants.

margar'ic. Resembling or relating to pearl; margarid. **m. acid,** a mixture of palmitic and stearic acids.

mar'garid. Pearl-like; margaric.

Margar'opus annula'tus. The cattle tick or North American fever tick, instrumental in the spread of Texas cattle fever; the genus was formerly called *Boophilus*.

margin (mar'jin) [L. *margo*, border, edge.] The boundary or edge of any surface. **gum m.,** the termination of the gums at the necks of the teeth.

marginal (mar'ji-nal) [L. *margo*, a border.] Relating to a border or edge.

margina'tion. The adhesion of the leucocytes to the walls of the blood-vessels in beginning inflammation. **m. of the placen'ta,** see *placenta marginata*.

mar'ginoplasty. Plastic or reparative surgery of the tarsal border of an eyelid.

mar'go, gen. *mar'ginis*, pl. *mar'gines* [L. margin.] Edge, margin, border. **m. palpe'brae** [NK], margin of the eyelid. **m. radia'lis hu'meri,** the lateral border of the humerus. **m. ulna'ris humeri,** the medial border of the humerus.

Marie's disease' (mă-re') [Pierre *Marie*, Parisian neurologist, *1853.] 1. Acromegaly 2. Hypertrophic pulmonary osteoarthropathy. 3. Hereditary cerebellar ataxia. 4. Rhizomelic spondylosis. **M.'s sign,** tremor of the hands in exophthalmic goiter.

Marie'-Kah'ler symp'tom. Marie's* sign.

Marie'-Rob'inson syn'drome. Insomnia and mild melancholia associated with alimentary levulosuria.

Marie-Strüm'pell disease'. Marie's* disease(4).

mar'igold. Calendula.

Marines'co's succ'ulent hand. Edema of the hand with coldness and lividity of the skin, observed in syringomyelia.

Mariotte's blind spot (mă-re-ot') [Edme *Mariotte*, French physicist, 1620–1684.] The optic papilla. **M.'s exper'iment,** one looks fixedly with one eye (the other being closed), at a black dot on a card, on which is also marked a black cross; as the card is moved to or from the eye, at a certain distance the cross becomes invisible but appears again as the card is moved further; this proves the existence of the blind spot where the optic nerve enters the eye. **M.'s law,** Boyle's* law.

maritonucleus (mar"i-to-nu'kle-us) [L. *maritus* conjugal.] The nucleus of an impregnated ovum, genoblast.

Marjolin's ul'cer (mar-zhŏ-lañ') [René *Marjolin*, French physician, 1812–1895.] A malignant, verrucose, ulcerating growth occurring in cicatricial tissue or at the epithelial edge of a chronic benign ulcer.

mar'joram. Origanum.

mark (A.S. *mearc*) 1. Any spot, line, or other figure on the surface, visible through difference in color, elevation, or other peculiarity. 2. Infundibulum, the hollow in the incisor tooth of a horse, extending down about half an inch in the milk teeth and rather deeper in the permanent incisors; it appears as a black mark on the occlusal surface of the incisors; as the permanent incisors wear away by attrition, the mark tends gradually to disappear, and it is chiefly by a study of its condition that one is able to tell the age of a horse. **double m.,** a blackening of the dentine on the side of the infundibulum of an incisor tooth in the horse, surrounding the central mark with a black ring. **mother's m.,** nævus. **port-wine m.,** nævus vascularis. **sec'ondary m.,** a wearing away of the center of the incisor tooth in an old horse, which, becoming blackened, presents the appearance of the mark.

mar'kasol. Bismuth borophenate, employed as a substitute for iodoform

Markee tests (mar-ke') [J. E. *Markee*, American anatomist.] Two tests for pregnancy, based on

the fact that endometrial transplants in the anterior chamber of the eye rhythmically blush and blanch. The injection of the follicular hormone, extracted from the woman's urine, into a gonadectomized male or female rabbit whose eye contains the endometrial transplant, causes an irregularity of the rhythm and an intensification of the blush if the woman is pregnant; this is the direct method. In the indirect method only non-ovariectomized females can be used, but the untreated urine is used. The direct test requires two hours, the indirect test eight hours and a half.

marmite (mar-mēt'). Trade name of a preparation said to contain the antineuritic vitamin.

Mar'mo's meth'od [Serafino *Marmo*, Italian obstetrician, contemporary.] A method of resuscitation of asphyxiated infants; the child is suspended from the hands of the accoucheur in the axillæ; the hands are stretched apart, and the child is raised a little, then suddenly dropped a couple of feet when inspiration occurs; expiration is effected by pressure of the palms and fingers against the chest wall.

marmora'tion [L. *marmor*, marble] Marbleization.

Mar'morek's se'rum [Alexander *Marmorek*, Austrian physician, in Paris, 1865–1923.] 1. A serum antitoxic to *Streptococcus pyogenes*. 2. A serum antitoxic to *Bacillus tuberculosis*.

mar'morek'in. Marmorek's serum.

Mar'ris's test. A hypodermic injection of gr. $\frac{1}{50}$–$\frac{1}{30}$ of atropine causes a rise in the pulse-rate of 15 beats or more per minute in health or in fever other than typhoid or the paratyphoids; in them there is little or no increased rapidity of pulse.

marr'ow [A.S. *mearh*] 1. The soft fatty substance filling the medullary cavities and cancellous extremities of the long bones. 2. Any soft gelatinous or fatty material resembling the marrow of bone. See also *medulla*. **red m.,** m. found in the cancellous extremities of the long bones, the ribs, sternum, and diploe of the cranial bones; it is largely concerned in blood formation. **spinal m.,** spinal cord. **yellow m.,** the m. contained in the medullary cavities of the long bones, it contains much fat and is thought not to have much if anything to do with blood-formation

mar'row-lymph gland. See *gland*.

marru'bium [L. hoarhound.] Hoarhound, the leaves and tops of *Marrubium vulgare*, an herb, native of Europe and Asia; employed as an expectorant and diaphoretic, chiefly in domestic medicine in the form of candy; dose indefinite.

Mars'den's paste [Alexander Edwin *Marsden*, English physician, 1832–1902.] A mixture of two parts of arsenous acid and one of powdered gum acacia moistened with water, used in the treatment of cancer.

Marsh's disease' [Sir Henry *Marsh*, Dublin physician, 1790–1860.] Exophthalmic goiter.

Marsh's test [James *Marsh*, English chemist, 1794–1846.] Hydrogen test for arsenic; in a bottle with a funnel-tube and a delivery tube, hydrogen is generated by zinc and diluted sulphuric acid, and when all the air in the bottle has been replaced by hydrogen a little of the suspected fluid is poured through the funnel-tube; the hydrogen escaping through the delivery tube is then lighted and the flame is directed against a glass or porcelain plate; the former is mirrored by the deposit of arsenic, on the latter the arsenic is deposited as a brown spot.

Mar'shall's oblique' vein [John M. *Marshall*, English anatomist, 1818–1891.] Vena obliqua atrii sinistri. **M.'s vestig'ial fold,** ligamentum venæ cavæ sinistræ.

Mar'shall Hall's disease' [*Marshall Hall*, English physician, 1790–1857.] Cerebral anemia in infants, marked by symptoms simulating those of hydrocephalus. **M.H.'s fa'cies,** the disproportion of forehead to face seen in hydrocephalus. **M.H.'s meth'od,** artificial respiration effected by turning the asphyxiated person alternately on the abdomen and on the back (or side), pressure being made as he lies prone, in order to compress the lungs and expel the air.

marsh-fe'ver. Malaria.

marsh gas. Methyl hydride, methane, fire-damp CH_4; a colorless, odorless gas, forming an explosive mixture with oxygen.

marsh'mallow. Althæa.

marsupialization (mar-su"pĭ-al-i-za'shun) [L. *marsupium*, pouch.] An operation for the cure of an hydatid or other cyst; the sac of the tumor is opened and emptied of its contents, and then its edges are stitched to the edges of the external incision, which is kept open while the interior of the cyst suppurates and closes by granulation.

marsupium (mar-su'pĭ-um) [L. pouch.] Scrotum. **m. patella're,** plicæ alares.

marsyle (mar'sĭl). Trade name of a preparation of iron cacodylate.

Martegiani's a'rea or funn'el (mar-tĕ-jah'ne). The funnel-shaped beginning of the hyaloid canal in the fetus.

martial (mar'shal) [L *mars*, an old term for iron. Relating to or containing iron, ferruginous, chalybeate.

Mar'tin's ban'dage [Henry Austin *Martin*, American surgeon, 1824–1884.] A roller bandage of soft rubber used to make compression on a limb in the treatment of varicose veins or ulcers. **M.'s disease',** a periosteo-arthritis of the foot from excessive walking.

Mar'tin's tube [August *Martin*, Berlin gynecologist, *1847.] A drainage tube with a cross piece near the extremity to keep it from slipping out of a cavity.

Martinot'ti's cell [Giovanni *Martinotti*, Italian physician, contemporary.] A small cell in the deeper portion of the cerebral cortex having a long slender axon running toward the surface, *i.e.* in a direction contrary to that of the axons of the pyramidal and polymorphic cells.

maru'ta. Mayweed, stinking chamomile, the flowers of *Anthemis cotula*, employed like chamomile, or anthemis.

Marx's stain. A stain composed of eosin, potassium hydrate, and quinine.

maschaladenitis (mas-kal-ad-en-ī'(e')tis) [G. *maschalē*, axilla, + *adēn*, gland, + *-itis*.] Inflammation of the axillary glands.

maschale (mas'kal-e) [G.] Axilla, armpit.

maschalephidrosis (mas-kal-ef-ĭ-dro'sis) [G. *maschalē*, axilla, + *ephidrōsis*, perspiration.] Sweating in the axillæ.

maschaliatria (mas-kal-e-at'rĭ-ah) [G. *maschalē*, axilla, + *iatreia*, healing.] Medication by means of inunction in the axilla where absorption is prompt.

maschaloncus (mas-kal-on'kus) [G. *maschalē*, axilla, + *onkos*, tumor.] A tumor in the axilla.

maschalyperidro'sis (mas"kal-ĭ"per-ĭ-dro'sis) [G. *maschalē*, axilla, + *hyper*, over, + *hidrōs*, sweat] Excessive sweating in the axillæ.

Maschke's test (mahsh'keh). For creatinin: the suspected fluid is mixed with sodium carbonate solution and then Fehling's solution is added; the presence of creatinin is indicated by a flocculent precipitate.

mas'culine [L. *masculus*, male.] Relating to or marked by the characteristics of the male sex.

masculin'ity. The characteristics of a male.

masculonucleus (mas"ku-lo-nu'kle-us). Arsenoblast.

mash. A fermenting mixture of malted rye, maize, or other [illegible] or sometimes potatoes, by the distillation of which whiskey is made.

Masini's sig[illegible]'ne) [*Masini*, Italian physician, [illegible]ntempora[illegible]] A marked degree of dorsal extension of the fingers [illegible] the metacarpals and of the toes on the meta[illegible]als, noted in children of mental instability or degeneracy.

mask. A cloth, with apertures cut for the eyes and nostrils, impregnated with a medicated solution and applied to the face in the treatment of erysipelas and other affections of the skin of this part. **ecchymot'ic m.,** traumatic asphyxia, pressure stasis, a dusky discoloration of the head and neck occurring when the trunk has been subjected to sudden and extreme compression. **luet'ic m.,** a dirty brownish yellow pigmentation, blotchy in character, resembling that of chloasma, occurring on the forehead, temples, and sometimes the cheeks in the subjects of tertiary syphilis. **trop'ical m.,** chloasma bronzinum. **u'terine m.,** chloasma uterinum.

masked. Concealed.

masochism (mas'o-kizm) [after Leopold von Sacher-*Masoch*, Austrian historian, nineteenth century, who first described it.] A form of perversion in which sexual pleasure is heightened when one is beaten and maltreated at the hands of the other party; the opposite of sadism.

masochist (mas'o-kist). The passive party in the practice of masochism.

mas'rium [Ar. *Masr*, Egypt] An assumed new element, the existence of which is doubtful

mass [L. *massa*] 1. A lump or aggregation of coherent material. 2. In pharmacy a soft solid preparation containing an active medicinal agent, of such consistency that it can be divided into small pieces and rolled into pills. **blue m.,** massa hydrargyri. **Vallet's m.** (vă-la'), massa ferri carbonatis.

mas'sa, gen. and pl. *mas'sæ* [L.] A mass. In pharmacy, a soft solid preparation, containing a medicinal substance, of such consistency that it can readily be made into pills; there are two massæ official in the U.S.P. **m. copai'bæ** (U S. 1890), mass of copaiba; contains 94 parts of copaiba thickened with 6 parts of magnesia; no longer official; dose gr. 10–30 (0.6–2.0). **m. fer'ri carbona'tis** (U.S.), mass of ferrous carbonate, Vallet's mass; prepared by adding a solution of ferrous sulphate to one of monohydrated sodium carbonate; a precipitate of ferrous carbonate is formed, carbon dioxide being given off, and the precipitate is then made into a mass with honey, dose, gr. 3–5 (0.2–0.3). **m. hydrar'gyri** (U.S.), mass of mercury, blue mass, blue pill, pilula hydrargyri (Br.); made by triturating metallic mercury with honey of rose and adding glycerin, powdered althæa, and licorice; dose, gr. 3–5 (0.2–0.3). **m. interme'dia** [BNA], intermediate mass, gray, middle, or soft commissure, medicommissure; a band crossing the third ventricle of the brain, a little in front of the middle, connecting the two thalami.

massage (mă-sazh') [Fr. from G. *massō* I knead.] A scientific method of manipulation of the body by rubbing, pinching, kneading, tapping, etc.; it is employed in therapeutics to increase metabolism, promote absorption, stretch adhesions, etc. **au'ditory m.,** a form of vibratory m. applied to the drum membrane for the purpose of loosening adhesions between the ossicles. **muscle m.,** muscular contractions induced by exposure to the rays of the sun. **vi'bratory m.,** very rapid tapping of the surface effected by means of an instrument, usually with elastic tip, used to promote absorption, relieve pain, etc.

Masselon's spec'tacles (mah-sĕ-lawn') [Michel Julien *Masselon*, Parisian physician, *1844] Spectacles with little offsets of metal with smooth edges, which engage below the upper eyelid and keep it raised above the pupil in cases of paralytic ptosis. **M.'s test,** for mental disease; the patient is asked to form sentences containing certain groups of words, such as man, wood, coal, stove, dinner; pen, ink, letter; pipe, match, smoke, etc.

Masset's test (mah-sa') [Alfred Auguste *Masset*, French physician, *1870.] For bile in the urine. potassium nitrite is added and then a few drops of sulphuric acid; the presence of bile is indicated by the appearance of a grass-green color.

masse'ter [G. *masētēr*, masticator.] One of the muscles of mastication; see under *musculus*.

masseur (mă-sĕr') 1 A man who massages. 2. An instrument employed in mechanical massage

masseuse (mă-sez'). A woman who massages.

mass'icot. Protoxide or yellow oxide of lead, PbO.

Massol's' bacill'us [Léon *Massol*, Swiss bacteriologist, 1837–1909.] *Bacillus bulgaricus*.

massother'apy [G. *massō*, I knead, + *therapeia*, treatment.] The therapeutic use of massage.

mastadenitis (mast-ad-e-ni'(ne')tis) [G. *mastos*, breast, + *adēn*, gland, + *-itis*.] Mastitis.

mastadeno'ma [G. *mastos*, breast, + *adēn*, gland, + *-ōma*.] Tumor of the breast.

mastalgia (mas-tal'jĭ-ah) [G. *mastos*, breast, + *algos*, pain.] Pain in the breast, mastodynia.

mastatro'phia, mastat'trophy [G. *mastos*, breast, + *atrophia*, atrophy.] Atrophy or wasting of the breasts.

masteauxe (mast-awk'se) [G. *mastos*, breast, + *auxē*, increase.] Hypertrophy of the breast.

mast-cell (Ger. *masten*, to feed, fatten.] 1. A mononuclear leucocyte containing numerous basophil granules of varying size, present occasionally in apparent health, but found especially, and in larger numbers, in leucemia. 2. A cell resembling a connective-tissue cell, present in the corium, the hyaloplasm of which contains numerous coarse basophil granules.

mastectomy (mas-tek'to-mĭ) [G. *mastos*, breast, + *ektomē*, excision.] Amputation of the breast; mammectomy.

masthelcosis (mas-thel-ko'sis) [G. *mastos*, breast, + *helkōsis*, ulceration.] Ulceration of the breast.

mastic, mastich, mastiche (mas'tik, mas'te-ke) [G. *mastichē*, chewing-gum.] (N.F.) A resinous exudate from *Pistacia lentiscus*, a small tree of the Mediterranean shores; used as a chewing-gum and as an excipient in pilula aloes et mastiches.

mas'ticate [L. *masticare*.] To chew, to grind and comminute with the teeth. **mas'ticating surface,** masticatory or grinding surface of a tooth.

mastica'tion. Chewing, manducation. **muscles of m.,** masseter, temporalis, pterygoideus externus and pterygoideus internus

mas'ticatory. Relating to mastication. **m. surface,** grinding or occlusal surface, the surface of a premolar or molar tooth which comes in contact with the corresponding tooth in the other jaw.

Mastigoph'ora [G. *mastix*(*mastig-*), whip, + *phoreō*, I carry, wear.] A subphylum (or class) of *Protozoa*, embracing cells provided with flagella of various sorts serving for locomotion or the prehension of food; it includes the trypanosomes.

mastigote (mas'ti-gōt). An individual member of the family *Mastigophora*.

mastitis (mas-ti'(te')tis) [G. *mastos*, breast, + *-itis*.] Inflammation of the breast. **stagna'tion m.,** caked breast, painful distention of the breast occurring during the latter days of pregnancy and the first days of lactation.

mastocarcino'ma [G. *mastos*, breast] Cancer of the breast.

mastoccip'ital. Mastooccipital.

mastochondroma (mas-to-kon-dro'mah) [G. *mastos*, breast, + *chondros*, cartilage, + *-ōma*] A cartilaginous tumor of the breast.

mastodyn'ia [G. *mastos*, breast, + *odynē*, pain] Mammary neuralgia, mastalgia, mazodynia.

mas'toid [G. *mastos*, breast, + *eidos*, resemblance.] 1. Resembling a mamma, breast-shaped 2. Relating to the mastoid process, antrum, cells, etc. **m. angle,** posterior inferior angle of the parietal bone. **m. antrum,** a cavity in the mastoid process, communicating with the m. cells and with the tympanum. **m. bone,** m portion of the temporal bone. **m. cells,** a number of small spaces in the mastoid process, surrounding and communicating with the m. antrum. **m. dyspep'sia,** dyspepsia occurring as the main symptomatic expression of mastoiditis **m. fora'men,** foramen mastoideum, an opening of some size in the posterior border of the mastoid portion of the temporal bone, transmitting an artery to the dura and a vein to the lateral sinus. **m. fossa,** fossa mastoidea, a depression on the mastoid portion of the temporal bone, behind the supermeatal spine. **m. groove,** m notch. **m. notch,** incisura mastoidea [BNA], digastric fossa, a deep groove to the inner side of and below the tip of the mastoid process, giving origin to the posterior belly of the digastric muscle. **m. portion,** the lower posterior portion of the temporal bone; it is usually fused at birth with the petrous portion of the same bone. **m. process,** a conical, nipple-like projection on the temporal bone behind and below the tympanic portion

mastoid'al. Mastoid(*2*).

mastoidectomy (mas"-toy-dek'to-mĭ) [*mastoid* (process) + G. *ektomē*, excision.] Hollowing out of the mastoid process by scraping away the bony partitions forming the mastoid cells.

mastoideocentesis (mas-to-id"e-o-sen-te'sis). The operation of drilling or chiselling into the mastoid cells and antrum.

mastoideum (mas-to-id'e-um). Os mastoideum, mastoid bone, mastoid portion of the temporal regarded as an independent bone.

mastoiditis (mas"toy-di'(de')tis). Inflammation of any part of the mastoid process. **m. exter'na,** inflammation of the periosteum of the mastoid process. **m. inter'na,** inflammation of the mastoid cells. **sclero'sing m.,** a chronic m. interna in which the trabeculæ are greatly thickened, almost or entirely obliterating the cells.

mastoidot'omy [*mastoid*(process) + *tomē*, cutting.] Incision into the mastoid process of the temporal bone, Wilde's incision.

mastol'ogy [G. *mastos*, breast, + *-logia*.] The branch of medical science which has to do with the breasts—their anatomy, physiology, pathology, etc ; mazology.

mastome'nia [G. *mastos*, breast, + *mēn*, month.] Vicarious menstruation from the mammæ.

maston'cus [G. *mastos*, breast, + *onkos*, tumor.] A tumor or swelling of the breasts.

mastooccipital (mas-to-ok-sip'ĭ-tal). Relating to the mastoid portion of the temporal bone and to the occipital bone, noting the suture uniting them mastoccipital.

mastoparietal (mas-to-pă-ri'e-tal). Relating to the mastoid portion of the temporal bone and to the parietal bone, noting the suture uniting them

mastop'athy [G. *mastos*, breast, + *pathos* suffering.] Any disease of the breasts, mazopathy.

mas'topexy [G. *mastos*, breast, + *pēxis*, fixation.] An operation for correcting an exaggerated sagging of the breasts; mazopexy.

mastorrha'gia [G. *mastos*, breast, + *rhēgnymi*, I burst forth.] Hemorrhage from a breast.

mastoscirrhus (mas-to-skir'(sir')us) [G. *mastos*, breast, + *skirrhos*, a hard tumor] A scirrhous cancer of the breast.

mastosquam'ous. Relating to the mastoid and the squamous portions of the temporal bone.

mastot'omy [G. *mastos*, breast, + *tomē*, incision.] Incision of the breast

mas'turbate [L. *masturbari*] To excite the genital organs by unnatural means, to practise self-abuse.

masturba'tion. Self-abuse, the habit or the act of masturbating.

Mat'as' opera'tion [Rudolph *Matas*, New Orleans surgeon, *1860.] Endoaneurysmorrhaphy, arterioplasty; the treatment of an aneurysm by opening the sac and stitching its walls together so as to obliterate it and restore the lumen of the artery.

maté (mah'ta) [Sp. *mate*, a vessel in which the leaves are prepared.] Paraguay tea, the dried leaves of *Ilex paraguayensis* and other species of *Ilex*, shrubs growing in Paraguay and Brazil; they contain caffeine and tannin, and are used as a substitute for tea, as a diuretic and diaphoretic, and for the relief of headache.

mate'ria med'ica [L. medical matter.] 1. The branch of medical science which treats of the origin and preparation of drugs, their doses, and their mode of administration. 2. Any agent employed therapeutically. **Materia Medica Pura,** a treatise by Hahnemann embodying the results of his provings, or the records of the drug pathogenesis of sixty-one drugs, the basis of the homeopathic materia medica.

materies morbi (mă-te'rĭ-ēz mor'bi) [L. the matter of disease.] The substance acting as the immediate cause of a disease.

mater'nal [L. *maternus; mater*, mother.] Relating to or derived from the mother.

mater'nity [L *mater*, mother.] 1. Motherhood. 2 A lying-in hospital, or institution in which women are cared for during their confinement and the puerperal period.

Mathieu's disease (mă-te-e') [Albert *Mathieu*, Parisian physician, 1855–1917.] Weil's* disease. **M.'s serum,** an inorganic serum containing sodium chloride 1, sodium phosphate 4, sodium sulphate 6, glycerin 20, water 100.

matico (mat-e'ko) [Sp.] (N.F.) The leaves of *Piper angustifolium*, a small tree of Peru and Bolivia, tonic and diuretic in doses of ʒ½–1 (2.0–4.0)

matin sleep (mat'in slēp) [F. *matin*, morning.] See under *sleep*.

matlazahuatl (mat-lah-sah-waht'l) [Aztec name.] Tabardillo, typhus fever in Mexico.

mat'rass [Fr. *matras.*] A long-necked glass vessel used for heating dry substances in chemical manipulations.

matrica'ria [L. *matrix,* womb.] (N.F.) German chamomile, wild chamomile, horse gowan; the flowers of *Matricaria chamomilla;* tonic in doses of 3½–1 (15.0–30.0) of an extemporaneous infusion (1 ounce to the pint), it is employed in eclectic practice in the treatment of nervous irritability, especially in children, and of atonic constipation, in doses of 2–4 drops of the specific medicine in water every hour.

matricial (ma-trish'yal). Relating to any matrix.

matricula'tion [L. *matriculare,* to enroll.] Registering or enrollment as a student in a college or university.

ma'trix, pl. *ma'trices* [L. a breeding animal.] 1. The womb. 2. The formative portion of (*a*) a tooth, (*b*) a nail. 3. The intercellular substance of a tissue. 4. A mould in which anything is cast or swaged, a counter-die; a specially shaped instrument used for holding and shaping the material used in filling a tooth-cavity. **m. un'guis,** nail-bed, the area of the corium on which the nail rests; it is extremely sensitive and presents numerous longitudinal ridges on its surface, according to some anatomists the nail bed is the portion covered by the body of the nail, the nail matrix being only the part on which the root of the nail rests.

matrixitis (ma-triks-i'(e')tis). Inflammation of the nail-bed.

matt'er [L. *materies,* substance.] 1. Substance. 2. Pus.

mat'toid [L. *mattus,* stupid, + G. *eidos,* resemblance] A person of abnormal mentality; one whose ideas and actions, while possibly of a high order, at times even approaching brilliancy, have an undercurrent of absurdity or inconsequentiality; one in whom the mentally normal and abnormal are inextricably interwoven; in popular language, a crank.

matt'ress-su'ture. See under *suture.*

mat'urate [L. *maturare,* to make ripe.] 1 To ripen or come to maturity. 2. To suppurate.

matura'tion. 1. Ripening, coming to maturity. 2. Suppuration. 3. The final stage in the formation of sex cells, characterized by two specific cell divisions.

mature (ma-tūr') [L. *maturare,* to ripen; *maturus,* ripe.] 1. To come to maturity. 2. Fully developed; ripe.

matu'tinal [L. *matutinalis; matutinum,* morning.] Relating to the morning; in or during the morning hours.

mat'zol. A mixture of cod-liver oil and matzoon.

matzoon' [Armenian.] A milk treated with a special ferment containing lactic acid bacilli and other organisms; employed as a food and as a preventive of intestinal putrefaction.

Matzuschita's liv'er-gall a'gar (mat-zoo-she'tah). See under *agar.*

Mauchart's lig'ament (mow'khart) [Burkhard David *Mauchart,* German anatomist, 1696–1751.] Ligamentum alare.

Maumené's test (mōm-na') [Edme Jules *Maumené:* French chemist. *1818.] For sugar in the urine, on heating the suspected urine with chloride of tin a dark brown precipitate will be thrown down if glucose is present.

Maunoir's hy'drocele (mo-nwar') [Jean Pierre *Maunoir,* French surgeon, 1768–1861.] Cervical hydrocele.*

Maurer's dots and **clefts** (mow'rer) [Georg *Maurer,* German physician in Sumatra.] Irregular formations, staining red with Leishman, found in the protoplasm of the infected erythrocytes in subtertian malaria; their significance is uncertain.

Mauriceau's lance (mo-re-so') [François *Mauriceau,* French obstetrician, 1637–1709.] A knife with sharp point, used in embryotomy. **M.'s method,** delivery of the after-coming head by supporting the fetus on the forearm with one or two fingers in the mouth to flex the head, and making traction with three fingers and with two fingers of the other hand curved over the shoulders behind.

Mauthner's sheath (mowt'ner) [Ludwig *Mauthner,* Austrian physician, 1840–1894.] A fine membrane surrounding the axis-cylinder of a nerve-fiber separating it from the white substance of Schwann. **M.'s test,** a test for color perception similar to Holmgren's, but made with vials filled with pigments instead of with skeins of worsted.

maxil'la, gen. and pl. *maxil'læ* [L. jawbone.] [BNA] Superior maxilla, superior maxillary bone, supramaxilla, upper jawbone; an irregularly shaped bone, articulating with all the bones of the face, the ethmoid, inferior turbinated, and sometimes the sphenoid bones, and forming with its fellow the upper jaw. **inferior m., lower m.,** mandibula, mandible. **superior m., upper m.,** maxilla.

max'illary. Supramaxillary, relating to the maxilla, or upper jaw. **inferior m.,** relating to the mandible, or lower jaw. **m. glands,** submaxillary glands, see *glandula submaxillaris.* **m. ram'part,** primitive alveolus, a row of epithelial cells in the head of the embryo, which marks the beginning of the alveolar process.

maxillitis (maks-I-li'(le')tis). 1. Inflammation of the maxilla. 2. Inflammation of the submaxillary salivary gland.

maxilloden'tal. Relating to the jaw and the teeth, alveolodental.

maxilloju'gal. Relating to the maxilla and the zygoma.

maxill"omandib'ular. Relating to the upper and lower jaws.

maxillopalatine (maks-il"o-pal'a-tīn). Relating to the maxilla and the palatine bone.

maxill"opharyn'geal. Mandibulopharyngeal, relating to the inferior maxilla, or mandible, and the pharynx, noting a space between the pharynx and the ramus of the lower jaw, in which are found the internal carotid artery and internal jugular vein and the vagus, glossopharyngeal, accessory, and hypoglossal nerves.

maxillotur'binal. Relating to the inferior turbinated bone, concha* nasalis inferior

max'imal [L. *maximus,* greatest.] The greatest possible, at the highest limit.

max'imum [L. neuter of *maximus,* greatest.] 1. The highest limit, the greatest amount possible. 2. Fastigium. **m. dose,** the largest dose of a drug that can be taken without danger of poisoning. **m. temperature,** see under *temperature.*

Max'well's ring [Patrick William *Maxwell,* Dublin ophthalmologist, 1856–1917.] Loewe's* ring.

May's sign [Charles H. *May,* New York ophthalmologist, *1861.] The instillation of a drop of adrenalin often causes dilatation of the pupil in glaucoma, but has no such effect in the normal eye.

maya (mah'yah) [Bulg.] A ferment used in the preparation of yaghourth, a Bulgarian soured and curdled milk food.

May'-apple. Podophyllum

Maydl's her'nia (mi'di) [Karl *Maydl*, Prague surgeon, 1853–1903.] Retrograde strangulated hernia, the intestine having descended into the sac in the form of a W the two external loops being connected by an internal or intra-abdominal loop. **M.'s meth'od,** insertion of the ureters into the rectum in cases of exstrophy of the bladder. **M.'s opera'tion,** colostomy in which the wound is kept open until the adhesions attaching the colon are formed.

May'er's fluid [Ferdinand F. *Mayer*, American pharmaceutical chemist, nineteenth century.] A solution of calcium phosphate, magnesium sulphate, and potassium phosphate, of each 5, in water, 1000; used as a culture medium. **M.'s test,** for alkaloids: the addition of a solution of mercuric chloride and potassium iodide to an alkaloidal solution causes the formation of a white precipitate.

May'er's lig'ament. Ligamentum carpi radiatum.

Mayet's' paste. A cancer paste of zinc oxide 1, zinc chloride 8, and flour 7.

mayhem (ma'hem) [an old form of *maim*.] The inflicting of a violent bodily injury which more or less incapacitates the victim.

mayidism (ma'i-dizm). Pellagra.

May'o's meth'od [Charles H. *Mayo*, American surgeon* 1865.] Treatment of tic douloureux by exsection of the affected nerve-branch and plugging the foramen of exit by a silver screw to prevent reunion. **M.'s treat'ment,** of a bunion; the skin over the bunion is dissected from the bursa, the latter is lifted by a horse-shoe incision, being left attached to the base of the first phalanx; the head of the metatarsal bone is removed and the bursal flap is turned into the joint area in front of the bone in order to secure a movable joint.

May'o's opera'tion [William J. *Mayo*, American surgeon,* 1861.] An operation for the radical cure of umbilical hernia; the neck of the sac is exposed by two elliptical incisions, the gut is returned to the abdomen, the sac and adherent omentum are cut away, and the opening is closed with mattress sutures.

May'o's opera'tion [William James *Mayo*, Charles Horace *Mayo*.] Excision of the pylorus and exclusion of the duodenum with posterior gastrojejunostomy. **M.'s sign,** relaxation of the muscles of the lower jaw, when surgical anesthesia is complete.

Mayo-Robson's point [A. W. *Mayo-Robson*, English surgeon, contemporary.] A point just above and to the right of the umbilicus, where tenderness on pressure exists in cases of disease of the pancreas. **M.-R.'s position,** the patient lies on the back with a thick pad under the loins, causing a marked lordosis in this region; employed in operations on the gall-bladder.

Mayor's hamm'er [Mathias Louis *Mayor*, Swiss surgeon, 1776–1846.] A metal hammer which is heated in boiling water and then applied to the skin as a counterirritant or vesicant.

ma'za [G. a large coarse cake.] The placenta.

ma'zic. Placental.

ma"zocacoth'esis [G. *maza*, barley-cake (placenta), + *kakos*, bad, + *thesis*, place.] Placenta prævia.

mazodyn'ia [G. *mazos*, breast, + *odynē*, pain.] Mastodynia.

mazol'ogy [G. *mazos*, breast, + *-logia*] Mastology

mazol'ysis [G. *maza*, a barley cake (placenta), + *lysis*, a loosing.] Detachment of the placenta.

mazopath'ia, mazop'athy [G. *maza*, a barley cake (placenta), + *pathos*, suffering.] 1. Any disease of the placenta. 2 [G. *mazos*, breast.] Disease of the breast, mastopathy.

maz'opexy [G. *mazos*, breast, + *pēxis*, fixation.] Mastopexy.

mazoplasia (maz-o-pla'zĭ-ŭ) [G. *mazos*, breast, + *plasis*, a moulding.] Increase in size of the breast.

Mazzoni's cor'puscle (mad-zo'ne) [Vittorio *Mazzoni*, Italian physician, contemporary.] A tactile corpuscle apparently identical with Krause's end-bulb.

M.b. Abbreviation in prescription writing for L. *misce bene*, mix well.

M.C. Abbreviation of (1) *Magister Chirurgiæ*, Master of Surgery, (2) Medical Corps.

M.D. Abbreviation of *Medicinæ Doctor*, Doctor of Medicine.

M.D.S. Abbreviation of *Master of Dental Surgery*.

M.E. Abbreviation of Mache Einheit; see *Mache* unit*.

meadow-saffron (med'o-saf"ron). Colchicum.

measle (me'zl). The larva (*Cysticercus cellulosæ*) of *Tænia solium*, the pork tapeworm.

measles (me'zlz) [D. *maselen*] 1. Morbilli, rubeola; an acute exanthematous disease, marked by fever and other constitutional disturbances, a catarrhal inflammation of the respiratory mucous membranes, and a generalized maculopapular eruption of a dusky red color, followed by a branny desquamation. The eruption occurs early on the buccal mucous membrane in the form of the so-called Koplik's* spots, a fact utilized in the early diagnosis of the disease. The average incubation period is from 10 to 12 days. 2. A disease of swine caused by the presence of *Cysticercus cellulosæ*, the larva of *Tænia solium*, the pork tapeworm. 3. Plural of *measle*. **black m.,** hemorrhagic m. **German m.,** rubella. **hemorrhag'ic m.,** a severe form in which the eruption is dark in color due to an effusion of blood into the skin.

measly (me'zli). Containing the larvæ, cysticerci, of *Tænia solium*.

me'atal. Relating to a meatus.

meat-hole. A space or pocket between two teeth in which food particles lodge.

me"atom'eter [*meatus* + G. *metron*, measure.] An instrument for measuring the size of a meatus, especially the meatus urethræ.

me"ator'rhaphy [*meatus* + *rhaphē*, suture.] Closing by suture the wound made in a previous meatotomy.

meatoscope (me-at'o-skōp) [*meatus* + *skopeō*, I view.] A form of speculum for examining a meatus, especially the meatus urethræ.

meatoscopy (me-ă-tos'ko-pi). Inspection, usually instrumental, of any meatus, especially of the meatus urinarius and of the urethra immediately adjacent. **ure'teral m.,** inspection, through a cystoscope, of the orifices of the ureters in the wall of the bladder.

meatotome (me-at'o-tōm). A knife with short cutting edge for use in meatotomy.

meatotomy (me-ă-tot'o-mi) [L. *meatus* + G. *tomē*, incision.] Porotomy, an incision made to enlarge the meatus urinarius.

meat'ox. Trade name of a beef powder said to contain 80 per cent. of protein.

meatus, pl. *meatus* (me-a'tus) [L. passage.] A passage or channel, especially the external opening of a canal. **exter'nal au'ditory m.,** m. acusticus ex-

ternus. **fish-mouth m.,** a red and swollen condition of the lips of the meatus urinarius in gonorrhea. **inter'nal au'ditory m.,** m. acusticus internus. **m. acus'ticus exter'nus** [BNA], external acoustic or auditory m., the passage leading inward through the tympanic portion of the temporal bone, from the auricle to the membrana tympani; it consists of an osseous (internal) portion and a fibrocartilaginous (external) portion. **m. acus'ticus inter'nus** [BNA], internal acoustic or internal auditory m., a canal running from the internal auditory foramen, or acoustic pore, through the petrous portion of the temporal bone, ending at the fundus where a thin plate of bone separates it from the vestibule; it gives passage to the facial and auditory nerves and the pars intermedia of Wrisberg, together with the auditory branch of the basilar artery and the internal auditory veins. **m. con'chæ maxilloturbina'lis** [NK], inferior nasal m. **m. conchæ ethmoturbina'lis majoris** [NK], middle nasal m. **m. conchæ ethmoturbina'lis minoris** [NK], superior nasal m. **m. na'si** [BNA], the three passages in the nasal cavity formed by the projection of the turbinated bodies; the *inferior m.* lies below the inferior turbinated, the *middle m.* between the middle and inferior turbinated, the *superior m.* between the superior and middle turbinated. **m. na"sopharynge'us** [BNA], posterior nares, the pharyngeal opening of the nostrils. **m. urina'rius,** orificium urethræ externum [BNA], the external opening of the urethra.

Mec'ca bal'sam. Balm of Gilead, opobalsamum.

mechanical (me-kan'ĭ-kal) [G. *mēchanikos*, relating to a machine.] Performed by means of some apparatus, not manual. **m. man,** in dentistry, artificer.

mechanics (me-kan'iks). The branch of science which treats of forces.

mechanism (mek'an-izm) [G. *mēchanisma*, a contrivance.] 1. An arrangement or grouping of the parts of anything which has a definite action 2 The means by which an effect is obtained.

mechanotherapy (mek"an-o-ther'ă-pi) [G. *mēchanē*, machine, + *therapeia*, treatment.] Treatment of disease by means of apparatus or mechanical appliances of any kind.

mèche (mesh) [Fr. wick.] A strip of gauze or other material used as a tent or drain.

Mecistocirrus (me-sis-to-sir'rus) [G. *mēkistos*, very long, + L. *cirrus*, curl, the protruding male organ of a nematode.] A genus of *Nematodes*, the single species of which, *M. digita'tus*, is parasitic in bovines and sheep and found exceptionally in man.

Meck'el's band [Johann Friedrich *Meckel*, German anatomist, 1714–1774.] A portion of the anterior ligament binding the malleus to the wall of the tympanum. **M.'s cav'ity,** a space formed by separation of the two laminæ of the dura mater at the tip of the petrous portion of the temporal bone; it encloses the semilunar (Gasserian) ganglion. **M.'s divertic'ulum,** a blind sac or pouch, the remains of the omphaloenteric duct, extending from the ileum a short distance above the cecum. **M.'s gan'glion,** (1) ganglion sphenopalatinum; (2) ganglion submaxillare (M.'s lesser ganglion). **M.'s lig'ament,** M.'s band. **M.'s space,** M.'s cavity.

Meck'el's car'tilage [Johann Friedrich *Meckel*, the younger, grandson of the elder Meckel, German surgeon, 1781–1833.] The lower and larger part of the first branchial arch, the cartilage of the mandibular arch in the embryo **M.'s plane,** a craniometric plane cutting the alveolar and the auricular points. **M.'s rod,** M.'s cartilage.

meckelec'tomy. Excision of the sphenopalatine, or Meckel's, ganglion.

mecom'eter [G. *mēkos*, length, + *metron*, measure.] An instrument, like calipers with a scale attachment, for ready measurement of the newborn child.

mec'onate. A salt of meconic acid.

mecon'ic ac'id. An acid obtained from opium, $C_7H_4O_7$, occurring in the form of white scales slightly soluble in water; it forms soluble salts (meconates) with many of the alkaloids of opium.

mecon'idine. An alkaloid obtained from the mother liquor of morphine, $C_{21}H_{23}NO_4$, an amorphous, yellowish, tasteless powder.

mec'onin. Opianyl, a neutral principle derived from opium, $C_{10}H_{10}O_4$, and found also in hydrastis canadensis; occurs in colorless crystals, hypnotic in doses of gr. ½–1 (0.03–0.06).

meconiorrhe'a, meconiorrhœ'a [G. *rhoia*, flow.] The passage, by the newborn infant, of an abnormally large amount of meconium.

me'conism [G. *mēkōn*, the poppy.] Chronic opium poisoning; opium addiction.

meco'nium [G. *mēkōn*, poppy.] 1. Poppy-juice, opium. 2. The first intestinal discharges of the newborn infant, greenish in color and consisting of epithelial cells, mucus, and bile.

mecono'isin. A neutral principle, $C_8H_{10}O_2$, obtained from the mother liquor after the abstraction of meconin; occurs in brown plates or scales

me'dia [L. fem of *medius*, middle, agreeing with *tunica*, coat.] The middle, or muscular, coat of an artery, muscularis.

me'dia. Plural of medium.

me'diad. Toward the middle line.

me'dial [L. *medialis; medius* middle] 1. Relating to the middle or center. 2 [BNA] Internal, opposed to *lateral* or external, [NK] nearer to the median or midsagittal plane.

me'dian. Central, middle, medial mesal; a name given to various structures, especially blood-vessels and nerves; see *arteria, nervus, vena.*

medias'tinal. Relating to the mediastinum.

mediastinitis (me-de-as-ti-ni'(ne')tis) [L. *mediastinum* + G. *-itis*] Inflammation of the cellular tissue of the mediastinum.

mediasti"nopericardi'tis. Inflammation of the outer laver of the pericardium and of the surrounding mediastinal cellular tissue.

mediastinot'omy [G. *tomē*, incision.] Incision into the mediastinum.

mediastinum (me"dĭ-ah-sti'num) [L. *mediastinus* being in the middle.] 1. A septum between two parts of an organ or a cavity. 2. The median dividing wall of the thoracic cavity, covered by the mediastinal pleura and containing all the thoracic viscera and structures except the lungs. It is divided arbitrarily into four parts: the *superior m.* is that part lying above the pericardium; it contains the arch of the aorta and the vessels arising from it, the innominate veins, and upper portion of the superior vena cava, the trachea, the esophagus, the thoracic duct, the thymus, and the phrenic, pneumogastric, cardiac, and left recurrent laryngeal nerves. The *middle m.* contains the pericardium and its contents and the phrenic nerves and accompanying vessels. The *anterior m.* is the narrow space between the pericardium and the sternum containing some lymphatic glands and vessels and branches of the internal mammary artery. The *posterior m.* lies between the pericardium and the vertebral

column, below the level of the fourth thoracic vertebra; it contains the descending aorta, thoracic duct, esophagus, azygos veins, and pneumogastric nerves. **m. cerebel'li,** falx cerebelli. **m. cer'ebri,** falx cerebri. **m. testis** [BNA], corpus Highmori, a mass of fibrous tissue continuous with the tunica albuginea, projecting forward into the testis along its posterior border.

me'diate [L *mediatus; mediare,* to divide in the middle.] 1. Effected by means of something else; not immediate or direct. 2. Situated between two parts, intermediate

me'diator. Amboceptor

medicable (med'ĭ-ka-bl). Admitting of treatment with hope of cure.

med'ical. 1. Relating to medicine or the practice of medicine. 2. Medicinal. **m. board,** the body of attending and consulting physicians and surgeons attached to a hospital. **m. detachment,** a small unit of the Medical Department, U. S. Army serving a regiment or smaller organization. Its functions are medical and sanitary and include among others, the treatment given to the sick and casualties, both men and animals, in the combatant units and the care given them in aid stations, until they are evacuated by the medical regiment. **m. direc'tor,** (1) a physician at the head of the medical department, or the corps of medical examiners of an insurance company; he decides upon the insurability of the risks, appoints the examiners, inspects death claims, compiles statistics from the mortuary returns, and studies impairments in regard to their influence on longevity; (2) a medical officer in the U. S. Navy, who ranks with a captain. **m. exam'iner,** (1) a physician who makes an investigation to determine the state of health of a candidate for life insurance or of any other person; (2) in certain States, a physician appointed to perform the duties of a coroner. **m. finger,** digitus medicus. **m. inspec'tor,** (1) a physician in the employ of a life-insurance company who travels through the territory in which his company does business, investigating into the standing and ability of the m. examiners and determining the desirability of risks offered to the company; (2) one who selects **dence,** see under *jurisprudence.* **m. regiment,** a unit of the Medical Department, U. S. Army, consisting of a headquarters, a service company, a veterinary company, a collecting battalion, an ambulance battalion and a hospital battalion. The functions are medical and sanitary and include, among others, the collection of the sick and casualties, both men and animals, from aid stations and from the veterinary aid station, and the care of these in the hospital station and in the veterinary collecting station. One medical regiment is included in each infantry division, or in each equivalent number of corps or army troops. **m. squadron,** a unit of the Medical Department, U. S. Army, serving a cavalry division and consisting of a headquarters, a collecting troop, an ambulance troop, a hospital troop and a veterinary troop. The functions are similar to those of a medical regiment of an infantry division.

med'icament [L. *medicamentum; medicari,* to heal.] A medicine, a medicinal application; a remedy.

medicamentosus (med"ĭ-ka-men-to'sus) [L.] Relating to a drug, a term characterizing a drug eruption.

med'icate [L. *medicatus; medicari,* to heal.] 1. To treat disease by the giving of drugs. 2. To impregnate with a medicinal substance.

med'icated. Impregnated with a medicinal substance.

medica'tion. The act of medicating, in either sense. **ion'ic m.,** cataphoresis.

med'icator. 1. One who gives medicaments for the relief of disease; a term sometimes applied in derision to one who prescribes drugs for every minor ailment. 2 An instrument for use in making therapeutic applications to the deeper parts.

medicephal'ic. Median cephalic, noting the communicating vessel between the median and the cephalic veins.

medicerebell'ar. Relating to the central part of the cerebellum, middle cerebellar.

medicer'ebral. Relating to the central portion of the cerebrum, middle cerebral.

medicinal (me-dis'ĭ-nal). 1. Relating to medicine having curative properties. 2. Medical. **m. finger,** digitus* medicus, ring finger.

med'icine [L. *medicina.*] 1. A drug. 2. The art of preventing or curing disease; the science which treats of disease in all its relations. 3. The study and treatment of general diseases or those affecting the internal parts of the body, distinguished from *surgery.* **clin'ical m.,** the study and practice of medicine in relation to the actual patient; the art of medicine as distinguished from laboratory science. **domes'tic m.,** the treatment of minor ailments at home without the direction of a physician. **foren'sic m.,** medical jurisprudence.* **le'gal m.,** medical jurisprudence.* **pat'ent m.,** a remedy, often a quack remedy, the name and mode of manufacture of which are patented. **preclin'ical m.,** preventive m., the practice of periodic health examinations. **preven'tive m.,** the branch of medical science which treats of the prevention of disease. **quack m.,** a compound advertised to the laity as curative of a certain disease or diseases. **propri'etary m.,** a medicinal compound the formula and mode of manufacture of which are the property of the maker. **specif'ic m.,** see under *specific.* **State m.,** public m., that branch of medical science which deals with statistics, hygiene, the prevention and overcoming of epidemics, etc.

medicine'rea [L. *medius,* middle, + *cinereus,* ashen.] The gray matter of the claustrum and lentiform nucleus of the brain.

medicister'na [L. *medius,* middle, + *cisterna,* cistern, reservoir] Cisterna ambiens.

medicochirurgical (med"ĭ-ko-kĭ-rur'jĭ-kal) Relating to both medicine and surgery, or to both physicians and surgeons.

medicole'gal [L. *medicus,* medical, + *legalis,* legal.] Relating to both medicine and the law, or to medical jurisprudence.

medicomechanical (med"ĭ-ko-me-kan'ĭ-kal). Relating to both medicinal and mechanical measures in therapeutics.

medicommissure (med-ĭ-kom'ĭ-sur). Middle commissure, massa* intermedia.

medicophys'ical. Relating to disease and the condition of the body generally; as *m. examination* in which a person is examined with a view to determine the presence or absence of disease as well as to note the general physical condition.

medicopsychology (med-ĭ-ko-sĭ-kol'o-jĭ) Psychology in its relation to medicine.

medicornu (med-ĭ-kor'nu) [L. *medius,* middle, + *cornu,* horn.] The middle horn, cornu inferius, of the lateral ventricle.

med'icus [L.] Physician

medifron'tal. Midfrontal, noting a gyre or convolution of the frontal lobe of the brain, gyrus

frontalis medius, and a fissure in the m. gyre, sulcus frontalis medius.

Medin's disease (ma'dēn) [Oskar *Medin*, Swedish physician, 1874–1928.] Heine-Medin disease, anterior poliomyelitis.

med'inal [*Medina*, "the city of peaceful repose."] Trade name of the monosodium salt of diethylbarbituric acid, or barbitalum solubile (U.S.).

Medi'na-worm. *Filaria medinensis.*

mediocar'pal [L. *medius*, middle, + G. *karpos*, carpus.] Relating to the central part of the carpus, noting the articulation of the carpal bones with each other; mesocarpal, midcarpal, carpocarpal.

medioccip'ital. Midoccipital.

mediolat'eral. Relating to the median plane and a side.

mediopon'tine [L. *medius*, middle.] Relating to the central part of the pons Varolii.

mediotar'sal [L. *medius*, middle, + G. *tarsos*, tarsus.] Relating to the middle of the tarsus, noting the articulations of the tarsal bones with each other; mesotarsal, midtarsal, tarsotarsal.

mediscale'nus. Musculus scalenus medius.

medisect' [L. *medius*, middle, + *sectus; secare*, to cut.] To incise in the median line.

Mediterra'nean fe'ver. Undulant fever.

meditullium profundum (mĕ-dı-tul'ĭ-um profun'dum) [L. deep midland.] A portion of the tectum mesencephali, colliculus inferior.

me'dium, pl. *me'dia* [L. neuter of *medius*, middle.] 1. Anything through which an action is performed, a means. 2. A substance, either solid or liquid, containing nutrient material for the cultivation of microorganisms; a culture-medium. 3. The liquid vehicle holding a substance in solution or suspension. 4. A substance used for treating or mounting histological specimens. 5. A substance through which impulses or impressions are transmitted. **clear'ing m.,** one used in histology for making specimens translucent or transparent. **cul'ture m.,** medium (2). **disper'sion m., exter'nal m.,** external phase.* **pass'ive m.,** one which produces no change in the specimens placed in it.

medorrhea, medorrhœa (me-dor-re'ah) [G. *mēdos*, penis, + *rhoia*, flow.] A discharge from the urethra; gleet.

medorrhi'num [*medorrhea*, gleet.] In homeopathic practice, a trituration of the gonorrheal virus; employed in the chronic sequelæ of gonorrhea and in chronic rheumatism, in high potencies.

medulla (me-du'ah) [L. marrow.] Any soft marrow-like structure, especially in the center of a part. Specifically, (1) bone-marrow, (2) the spinal cord, (3) the medulla oblongata. **m. oblonga'ta** [BNA], the prolongation of the spinal cord into the brain, extending from the lower end of the decussation of the pyramids to the pons Varolii; it is about an inch long, cylindrical in shape, somewhat enlarged at its upper extremity, its anterior surface resembling in configuration the spinal cord, and posteriorly forming part of the floor of the fourth ventricle. **m. os'sium** [BNA], the bone-marrow. **m. spina'lis** [BNA], spinal marrow, spinal cord; the elongated cylindrical portion of the cerebrospinal axis, or central nervous system, which is contained in the canal of the spinal or vertebral column.

medull'aden. Trade name of a preparation of the red bone marrow of cattle; recommended in anemia and leucemia in doses of gr. 15–30 (1.0–2.0).

medull'ar. Medullary

med'ullary. Relating to the medulla or marrow. **m. sheath,** (1) m. substance; (2) in botany, the sheath of protoxylem surrounding the pith of a stem. **m. space,** the central cavity and the cellular intervals between the trabeculæ of bone, filled with marrow. **m. sub'stance,** (1) myelin substance, white substance of Schwann; a soft material, composed of a network of neurokeratin enclosing in its meshes the semifluid myelin, which surrounds the axis-cylinder of a medullated nerve-fiber, and is itself surrounded by a delicate membrane, the neurilemma; it is interrupted at more or less regular intervals by constrictions of the neurilemma forming the nodes of Ranvier, the portion between two nodes being called an internode; (2) substantia medullaris [BNA].

med'ullated. Having a medulla or medullary substance. **m. nerve-fiber,** one the axis-cylinder of which is surrounded by a sheath of medullary substance.

medullation (mĕ-dul-a'shun). Acquiring, or the act of formation of, marrow or medulla, or a medullary sheath.

medullispi'nal. Relating to the spinal cord.

medullitis (mĕ-dul-ı'(e')tis). Inflammation of marrow, either bone-marrow (osteomyelitis) or the spinal cord (myelitis).

medulliza'tion. The enlargement of the medullary spaces in rarefying osteitis.

medulloarthritis (mĕ-dul"o-ar-thrı'(thre')tis). Inflammation of the cancellous articular extremity of a long bone.

medull'ocell. Myelocyte.

Medu'sa san'guinis. A parasite, of undetermined nature, found in the blood in certain cases of fever in Eastern Asia.

megabacte'rium [G. *megas* great.] A bacterium of unusually large size.

megabladder (meg'ă-blad''ur). Megalocystis.

megacar'dia. Cardiomegaly

megacaryocyte (meg-ah-kar'ĭ-o-sīt) [G. *megas*, large, + *karyon*, nut (nucleus), + *kytos*, hollow vessel (cell).] 1. A large cell with lobulated nucleus found in the spleen of the embryo and the young of many animals. 2. A large cell with a large nucleus derived from the bone marrow; it is sometimes found blocking a capillary in pneumonic hepatization.

megacepha'lia. Megacephaly.

megacephal'ic [G. *megas*, large, + *kephalē*, head.] Having a large head. Noting a skull with a capacity of over 1450 c.c., or an individual having such a skull. Among the megacephalic races are Europeans, Japanese, and Eskimo

megaceph'alous. Megacephalic.

megaceph'aly [G. *megas*, large, + *kephalē*, head.] Large size of the head, either congenital or acquired (leontiasis).

megacoc'cus [G. *megas*, large.] Macrococcus.

megaco'lon [G. *megas*, great, + *colon*.] A condition of extreme dilatation of the large intestine. **m. congen'itum,** congenital dilatation of the colon, Hirschsprung's or Myà's disease

meg'acoly. Megacolon.

meg'adont [G. *megas*, large, + *odous*(*odont-*), tooth.] Having large teeth. Noting a skull with a dental index above 44.

megadyne (meg'ah-dīn) [G. *megas*, great, + *dyne*.] One million dynes.

megagamete (meg-ah-gam'ēt) [G. *megas*, large, + *gamete*.] Macrogamete.

meg"akar'yocyte. Megacaryocyte.

megalac'ria [G. *megas*, large, + *akros*, at the top or end.] Acromegaly.

megalerythema. Megaloerythema.

megal'gia [G. *megas*, large, + *algos*, pain.] Very severe pain, hyperalgia.

meg'aloblast [G. *megas(megal-)*, large, + *blastos*, germ, sprout.] A large nucleated red blood, corpuscle, or primitive erythroblast.

megalocardia (meg-al-o-kar'dĭ-ah). Cardiomegally.

megalocaryocyte (meg-a-lo-kar-ĭ-o-sīt). Megacaryocyte.

megalocepha'lia, megaloceph'aly. Megacephaly.

megalocephal'ic, megaloceph'alous. Megacephalic.

Megalococ'cus myxoi'des. A blastomycete found in a tumor resembling a myxosarcoma.

megalocor'nea [G. *megas(megal-)*, large.] Macrocornea.

megalocystis (meg-ă-lo-sis'tis) [G. *megas (megal-)*, large, + *kystis*, bladder.] An enlarged or overdistended bladder.

megalocyte (meg'al-o-sīt) [G. *megas (megal-)*, large, + *kytos*, cell.] A large (10 to 20μ) non-nucleated red blood corpuscle.

megalodac'tylism [G. *megas(megal-)*, large, + *daktylos*, finger.] Dactylomegaly, macrodactylism.

megalodac'tylous. Having large fingers or toes.

meg'alodont [G. *megas(megal-)*, large, + *odous (odont,)*- tooth.] Macrodont.

megalodontia (meg-al-o-don'she-ah). Macrodontia.

megaloenteron (meg"al-o-en'ter-on) [G. *megas*, large, + *enteron*, intestine.] Abnormal largeness of the intestine, enteromegaly.

megaloerythe'ma (meg"al-o-er-ĭ-the'mŭ) [G. *megas (megal-)*, great *erythema*, flush.] An eruption beginning as rapidly coalescing rose-colored macules, first on the cheeks, then on the extremities, but seldom on the torso; there is usually some swelling of the erythematous parts; the affection is apyretic and lasts about ten days.

megalogas'tria [G. *megas(megal-)*, large, + *gastĕr*, stomach.] Abnormal size of the stomach.

megaloglossia (meg-ă-lo-glos'sĭ-ah) [G. *megas (megal-)*, large, + *glōssa*, tongue.] Macroglossia.

megalohepatia (meg"ă-lo-hĕ-pah'tĭ-ah) [G. *megas (megal-)*, great, + *hepar(hepat-)*, liver.] Enlargement of the liver, hepatomegaly.

meg"aloma'nia [G. *megas(megal-)*, large, + *mania*, frenzy.] A delusion of grandeur; insanity in which the patient believes himself to be a person of great importance, wealth, or intellect.

megaloma'niac. A person suffering from megalomania.

megalome'lia [G. *megas(megal-)*, great, + *melos*, an extremity.] Macromelia.

megalonychosis (meg"al-on-ĭ-ko'sis) [G. *megas (megal-)*, great, + *onyx(onych-)*, nail.] Large size or hypertrophy of the nails on the fingers or toes.

megalope'nis [G. *megas(megal-)* great.] Abnormal size of the penis, macrophallus.

megalophon'ic [G. *megas(megal-)*, great, + *phōnē*, sound.] Magnifying sound, polyacoustic.

megalophthal'mus [G. *megas(megal-)*, great, + *ophthalmos*, eye.] Large size of the eyes.

megalo'pia [G. *megas(megal-)*, great, + *ōps(ōp-)*, eye.] Megalopsia, macropsia.

megalop'sia [G. *megas(megal-)*, great, + *opsis*, vision.] The subjective magnification of objects seen, macropsia.

megaloscope (meg'-ă-lo-skōp) [G. *megas(megal-)*, great, + *skopeō*, I view.] An endoscope which magnifies the part inspected by means of a reflecting mirror or a lens.

megalosple'nia [G. *megas(megal-)*, great, + *splēn* spleen.] Abnormal size of the spleen, splenomegaly.

megalospore (meg'al-o-spōr). 1. Macrospore. 2. Megalosporon.

megalos'poron [G. *megas*, great, + *sporos*, seed.] *Trichophyton megalosporon.*

megalosyndactylia (meg"ă-lo-sin-dak-til'ĭ-ah) [G. *megas(megal-)*, great, + *syn*, together, + *daktylos*, finger.] A condition of webbed or fused fingers or toes of large size.

megalo-ureter (meg'ă-lo-u-re'tur) [G. *megas (megal-)*, large, + *ureter*.] Increase in size of the ureter.

megamerozoite (meg"ă-mer-o-zo'it) [G. *megas*, large, + *merozoite*.] A large merozoite.

meganu'cleus. Macronucleus.

megapros'opous [G. *megas*, great, + *prosōpon*, face.] Having a large face, noting a skull in which the face is out of proportion to the vault of the cranium.

megarectum (meg-ah-rek'tum) [G. *megas*, great.] Extreme dilatation of the rectum.

megaseme (meg'ă-sēm) [G. *megas*, large, + *sēma*, sign.] Noting an orbital aperture with an index above 89.

megasigmoid (meg-ă-sig'moyd) [G. *megas*, large, + *sigmoid*.] Dilatation of the sigmoid colon.

megaso'ma [G. *megas*, great, + *sōma*, body.] Macrosomia.

meg'aspore [G. *megas*, great, + *sporos*, seed.] Macrospore.

Megas'toma enter'icum [G. *megas*, great, + *stoma*, mouth.] *Lamblia intestinalis.*

megastria (mĕ-gas'trĭ-ă). Megalogastria.

meg'avolt [G. *megas*, great.] A unit of electromotive force, equal to one million volts.

Méglin's point (ma-glaṅ') [J. A. *Méglin*, French physician, 1756–1824.] The point of emergence of the palatine nerve at the foramen palatinum majus, sometimes painful on pressure in neuralgia.

meg'ohm [G. *megas*, great.] A unit of electrical resistance equal to one million ohms.

megophthal'mus. Megalophthalmus.

megox'ycyte [G. *megas*, great, + *oxys*, acid, + *kytos*, cell] Megoxyphil.

megoxyphil, megoxyphile (meg-oks'ĭ-fil, or fīl) [G. *megas*, great, + *oxys*, acid, + *phileō*, I like.] An eosinophil leucocyte, containing coarse granules.

me'grim. Migraine.

me'grims. Vertigo in the horse.

Meibo'mian cyst [Hendrik *Meibom*, Dutch anatomist, 1638–1700.] Chalazion. **M. gland,** glandula tarsalis [BNA], one of the acinous glands on the margins of the eyelids.

Meige's disease' (mehzh) [Henri *Meige*, French physician, *1866.] Milroy's* disease.

Meigs's cap'illaries (megz) [Arthur V. *Meigs*, American physician, 1850–1912.] Capillaries in the muscular tissue of the heart.

meio-. For words beginning thus, see *mio-*.

Meissner's cor'puscles (mīs'ner) [Georg *Meissner*, German histologist, 1829–1905.] Tactile or touch corpuscles, Wagner's corpuscles, corpuscula tactus; oval masses of wedge-shaped epithelioid cells, containing the flattened plate-like terminations of one or several axons; they are found chiefly in the papillæ of the finger tips and in the conjunctiva. **M.'s plex'us,** Remak's plexus, Meissner-Billroth's plexus, plexus* submucosus.

mel, gen. *mel'lis* [L.] (U.S., Br.) 1. Honey, a saccharine substance prepared by the honey-bee, *Apis mellifica;* employed as an excipient, especially for application to the buccal mucous membrane and in cough remedies. 2. A pharmacopeial

preparation with honey as the excipient. **m. bora'cis** (Br.), honey of borax, borax 1, glycerin ½, honey 8; employed locally in the treatment of aphthæ and other affections of the oral mucous membrane. **m. depura'tum** (Br.), clarified honey, honey melted in a water-bath and strained; now replaced in the U.S.P. by the simple term mel. **m. despuma'tum,** m. depuratum. **m. ro'sæ** (U.S.), honey of rose, fluid-extract of rose 120, honey to make 1000; employed as an excipient in extemporaneous mixtures. **m. ro'sæ et so'dii bora'tis** (N.F.), honey of rose and borax; borax 10, glycerin 5, honey of rose 85. **m. so'dii bora'tis** (N.F.), mel boracis, honey and borax, honey of sodium borate; borax 10, glycerin 5, honey 85.

melæ'na. Melena.

melag'ra [G. *melos*, limb, + *agra*, seizure] Rheumatic or myalgic pains in the arms or legs.

melaleuca (mel-ă-lu'kŭ) [G. *melas*, black, + *leukos*, white.] A volatile oil derived from the leaves of *Melaleuca leucodendron*, a tree of India and Australia; it has been employed in bronchitis and whooping-cough and as a vermifuge, especially in the case of hookworm disease.

melal'gia [G. *melos*, a limb, + *algos*, pain.] Pain in a limb; meralgia.*

melancholia (mel-an-ko'lĭ-ah) [G. *melas*, black, + *cholē*, bile.] 1. A mental disease marked by apathy and indifference to one's surroundings, mental sluggishness and depression. 2. A symptom occurring in other psychoses, marked by depression of spirits and by a sluggish and painful process of thought. **acute' m.,** simple, functional m., occurring usually during the first half of adult life, marked by insomnia, emaciation, and a subnormal temperature, in addition to the ordinary symptoms of m. **chron'ic m.,** involution m., m. agitata; a form of long duration, occurring after middle life, marked by depression, anxiety, restlessness, and more or less hypochondria. **hypochondri'acal m.,** chronic m. **involu'tion m.,** chronic m. **m. agita'ta,** chronic m. **m. sim'plex,** acute m. **recur'rent m.,** acute or simple m. which shows a tendency to recur after longer or shorter periods of remission

melancholiac (mel-an-ko'lĭ-ak). A person suffering from melancholia

melanede'ma, melanœde'ma [G. *melas(melan-)*, black, + *oidēma*, swelling.] A black pigmented deposit in the lung; anthracosis.

melane'mia, melanæ'mia [*melan(in)* + G. *haima*, blood.] The presence of free black pigment (melanin) in the blood stream.

melanephidro'sis [G. *melas(melan-)*, black, + *ephidrōsis*, perspiration.] A form of chromidrosis in which the sweat is nearly black.

mélangeur (ma-lon-zhĕr') [Fr. mixer.] A glass tube with a bulb at one extremity used for diluting the blood drawn for microscopical examination.

melanif'erous (*melanin* + L *ferre*, to carry.] Containing melanin or other black pigment.

mel'anin [G *melas(melan-)*, black] The dark or black pigment in the epidermis and hair in dark-skinned races, and in the choriold coat of the eye **artific'ial m., facti'tious m.,** melanoid(2).

mel'anism. Melanosis.

melanis'tic. Melanotic.

melano- [G. *melas(melan-)*, black] A prefix conveying the notion of black or extreme darkness of hue.

mel"anocarcino'ma. A deeply pigmented cancer, melanoid carcinoma.

melanochroous (mel-an-ok'ro-us) [G. *melas(melan-)*, black, + *chroa*, complexion.] Melanochrous; having dark complexion, dark-skinned, brunette.

melanoc'omous [G. *melas(melan-)*, black, + *komē*, hair of the head.] Black-haired.

melanocyte (mel'an-o-sīt) [G. *melas(melan-)*, black, + *kytos*, cell.] A pigmented ameboid cell or leucocyte.

melanoderm (mel'an-o-durm) [G. *melas (melan-)*, black, + *derma*, skin.] A member of one of the black races.

melanoderma (mel-an-o-dur'mah) [G. *melas(melan-)*, black, + *derma*, skin.] An abnormal pigmentation of the skin; melasma. **m. cachecticorum** (kă-kek-tĭ-ko'rum), m. of the cachectic, m. occurring in certain chronic diseases, such as malaria, tuberculosis, etc. **m. seni'le,** cutaneous pigmentation occurring in the aged. **parasit'ic m.,** vagabonds'* disease

melanoder'mic. Relating to or marked by melanoderma or pigmentation of the skin.

melanodes (mel-an-o'dēz). Melanoid.

mel'anogen [*melanin* + G. *gennaō*, I produce.] A chromogen in urine which is converted into melanin.

mel'anoid [G. *melas(melan-)*, black, + *eidos*, resemblance.] 1. Blackish, deeply pigmented. 2. A pigment obtained by treating a protein with hydrochloric acid and heating.

melanoleucoderma (mel"an-o-lu-ko-dur'mŭ) [G. *melas*, black, + *leukos*, white, + *derma*, skin.] Marbled, or marmorated, skin. **m. col'li,** Venus's* collar.

melano'ma, pl *melano'mata* [G. *melas(melan-)*, black, + *-ōma*.] A pigmented mole, chromatophoroma.

melanomatosis (mel-an-o-mă-to'sis). Chromatophoromatosis, the occurrence of several melanomata on or beneath the skin.

Melanonychia (mel-ă-no-nik'ĭ-ah) [G. *melas (melan-)*, black, + *onyx (onych-)*, nail.] Black pigmentation of the nails, occurring especially on the free border.

melanop'athy [G. *melas(melan-)*, black, + *pathos*, suffering.] 1. Any disease marked by pigmentation of the skin or tissues. 2. Melanoderma, melasma.

melanophore (mel'an-o-for) [G. *melas (melan-)*, black, + *phoreō*, I carry.] A black pigment bearing cell.

melanoplacia, melanoplakia (mel"ă-no-pla'sĭ-(kĭ)ah) [G. *melas(melan-)*, black, + *plax*, a flat plain.] The occurrence of pigmented patches on the tongue and buccal mucous membrane.

melanorrha'gia [G. *melas(melan-)*, black, + *rhēgnymi*, I burst forth] Melanorrhea.

melanorrhe'a [G. *melas(melan-)*, black, + *rhoia*, flow.] The discharge of dark colored or black stools; melena.

melanosarco'ma [G. *melas(melan-)*, black.] A malignant form of deeply pigmented sarcoma.

mel"anosarcomato'sis. The occurrence of multiple melanosarcomata generalized melanosarcoma.

melanoscirrhus (mel-an-o-skir'(sir')us). A deeply pigmented scirrhous carcinoma.

melano'sis [G. *melas(melan-)*, black.] 1. Abnormal pigmentation of the tissues and organs. 2. Cachexia due to the presence of melanoid neoplasms.

melanos'ity [G. *melas(melan-)*, black] Darkness of complexion.

melanot'ic. Relating to melanosis; marked by deep pigmentation.

mel'anous. Dark complexioned, brunette

mel'anthin. A glucoside, resembling saponin and helleborin, in black caraway, the seeds of *Nigella sativa.*

melanu'ria [*melanin* + G. *ouron*, urine.] The excretion of urine of a dark color, due to the presence of melanin or other pigments or to the action of phenol, creosote, resorcin, and other coal-tar derivatives.

melanu'ric. Relating to or characterized by melanuria.

melan'urin. A dark pigment found at times in the urine.

melas'ma [G. a black color, a black spot] Melanoderma, a patchy or generalized pigmentation of the skin. **m. Addiso'nii,** Addison's disease. **m. gravida'rum,** pigmentation of the skin in pregnant women. **m. suprena'le,** Addison's* disease. **m. universa'le,** melanoderma senile.

melena, melæna (mel-e'nah) [G. *melaina*, fem. of *melas*, black.] 1. Melenemesis, black vomit. 2. The passage of dark colored, tarry stools, due to the presence of blood altered by the intestinal juices. **m. neonato'rum,** m. of the newborn, a form occurring in young infants. **m. spu'ria,** the passage of blood which has been swallowed, especially that from a fissured nipple, swallowed by nurslings. **m. ve'ra,** true m. as distinguished from m. spuria

melenemesis melænemesis (mel-e-nem'e-sis) [G. *melas*(*t. melaina*), black, + *emesis*, vomiting.] Black vomit, melena (1), vomiting of dark colored or blackish material, consisting of blood altered by the action of the gastric juice.

melicera, meliceris (mel-ĭ-se'rah, mel-ĭ-se'ris) [G. *meli*, honey, + *kēros*, wax] An hygroma or other cyst containing matter of a honey-like consistence.

melilo'tus [G. *meli*, honey, + *lōtos*, lotus.] (N.F.) Melilot, the dried leaves and flowering tops of *Melilotus officinalis*, sweet or king's clover, a plant of the pulse family; formerly employed internally in the treatment of dysmenorrhea and flatulent diarrhea, and externally as a poultice for the relief of colic and muscular pain.

melioform (mel'ĭ-o-form). Trade name of a soft soap preparation containing formaldehyde.

melioidosis (me'lĭ-oy-do'sis) [G. *mēlis*, glanders, + *eidos*, resemblance, + *-osis.*] An infectious disease of rodents in Singapore, Rangoon, and neighboring regions, which is communicable to man; the characteristic lesion is a small caseous nodule, found generally throughout the body, which breaks down into an abscess; the symptoms vary according to the tracts or organs involved; the pathogenic organism is *Bacterium whitmori*, resembling morphologically *Bacillus mallei;* the lesions also bear a resemblance to those of glanders; malleoidosis.

melis'sa [G. a bee.] Balm, sweet balm, lemon lobella, sweet Mary; the leaves and tops of *Melissa officinalis*, a plant of southern Europe; diaphoretic in doses of ʒi–4 (30.0–120.0) of an infusion of 1 ounce to 1 pint.

melissopho'bia [G. *melissa*, bee, + *phobos*, fear.] A morbid fear of bees and wasps.

melitag'ra [G. *meli*, honey, + *agra*, a seizure.] Eczema with soft honey-like crusts.

melite'mia, melitæ'mia [G. *meli*, honey, + *haima*, blood.] Glycemia, glycosemia.

melitis (mel-ĭ'(e')tis) [G. *mēlon*, cheek, + *-itis.*] Inflammation of the cheek.

melitococcosis (mel-ĭ-to-kok-ko'sis). Undulant* fever, febris melitensis.

melitococcus (mel-ĭ-to-kok'kus). *Brucella melitensis.*

melitoptyalism (mel-ĭ-to-tī'al-izm). Glycoptyalism.

mel'itose. A crystalline dextrorotatory sugar, $C_{12}H_{22}O_{11}$, obtained from the manna of the Tasmanian eucalyptus.

melitu'ria [G. *meli*(*melit-*), honey, + *ouron*, urine.] The excretion of sugar in the urine, glycosuria.

melitu'ric. Relating to or affected with melituria, glycosuric.

mel'lite. Mellitum.

melli'tum, gen. *melli'ti*, pl. *melli'ta* [L. neut. of *mellitus*, honeyed.] A pharmaceutical preparation with honey as an excipient: same as *mel* (2).

mellitu'ria. Melituria.

meloma'nia [G. *melos*, song, + *mania*, frenzy.] 1. An insane or inordinate passion for music. 2. A form of insanity in which the patient sings incessantly.

meloma'niac. A person affected with melomania.

melom'elus [*melos* + *melos*, limb] A monster with normal and rudimentary accessory limbs.

melonoplasty (me'lon-o-plas"tĭ) [G. *mēlon*, cheek, + *plassō*, I form.] Plastic surgery of the cheek; repair of a defect in the cheek by grafting or the sliding of tissue from a neighboring part.

mel'on-seed bodies. Small fibrous bodies lying loose in the joints or tendon sheaths.

mel'oplasty [G *melos*, limb, + *plassō*, I form.] Reparative or plastic surgery of the extremities.

melorheostosis (mel"o-re-os-to'sis) [G. *melos*, limb, + *rheos*, stream, + *osteon*, bone, + *-ōsis.*] Rheostosis confined to the extremities.

Meltzer's law (melt'ser) [Samuel J. *Meltzer*, American physician, 1851–1920.] Law of contrary innervation; "all living functions are continually controlled by two opposite forces—augmentation or action on the one hand, and inhibition on the other." **M.'s meth'od,** continuous intratracheal insufflation of air containing an anesthetic vapor, in thoracic surgery.

melubrin (mel-u'brin). A synthetic drug, the sodium salt of 1-phenyl-2, 3-dimethyl-5-pyrazolon-4-aminomethane-sulphonic acid; antipyretic and analgesic, recommended in the treatment of neuralgia and acute articular rheumatism in doses of gr. 15–30 (1.0–2.0).

mem'ber [L. *membrum*] A limb or extremity.

membrana, gen. and pl. *membra'næ* (mem-brah'-(bra')nah) [L. membrane.] A membrane.

m. abdom'inis, peritoneum

m. adamantin'ea, Nasmyth's membrane. cuticula* dentis [BNA].

m. adventi'tia, (1) the outer serous covering of an organ which does not form an integral part of such organ but is derived from without; (2) decidua reflexa.

m. agni'na, amnion

m. atlantoepistroph'ica dorsa'lis [NK], posterior atlantoepistrophic ligament.

m. atlantoepistroph'ica ventra'lis [NK], anterior atlantoepistrophic ligament.

m. atlan'to-occipita'lis, one of two membranes passing from the skull to the anterior and posterior arches of the atlas respectively; occipitoatlantal or occipitoatloid membrane.

m. basila'ris, a membrane extending from the lamina spiralis ossea to the crista basilaris of the cochlea, forming the greater part of the floor of the ductus cochlearis, or scala media, and supporting the organ of Corti

m. cadu'ca, decidua.

m. carno'sa, dartos

m. capsula'ris, the portion of the nutritive capsule which covers the posterior surface of the crystalline lens

m. capsulopupilla'ris, the portion of the m. pupillaris which extends laterally from the pupil to the anterior surface of the lens.

m. choriocapilla'ris, the vascular (inner) layer of the chorioid coat of the eye.

m. cer'ebri, any one of the cerebral meninges, especially the pia mater.

m. cor'dis, pericardium.

m. cortica'lis, m. vitellina.

m. cricothyreoid'ea, conus elasticus [BNA], a membrane filling the interval between the cricoid and thyroid cartilages anteriorly; laterally it is attached above to the inferior thyroarytenoid ligament (ligamentum vocale).

m. decid'ua [BNA], see under *decidua*.

m. duddelia'na, Descemet's* membrane.

m. e'boris, the lining membrane of the pulp cavity of a tooth.

m. elas'tica laryn'gis [BNA], a layer of elastic fibers, taking the place in the larynx of the submucosa.

m. flac'cida, flaccid membrane, Shrapnell's* membrane.

m. fus'ca [L. *fuscus*, swarthy], the pigment layer between the chorioid and the sclera of the eyeball.

m. germinati'va, blastoderm.

m. granulo'sa, a layer of yellow granules lining the Graafian follicle.

m. hyaloid'ea [BNA], hyaloid membrane, a membranous thickening of the stroma of the vitreous, forming a capsule of this body.

m. hyothyreoid'ea [BNA], thyrohyoid membrane, a somewhat elastic membrane filling the interval between the hyoid bone and thyroid cartilage.

m. interos'sea, a membrane connecting the radius and ulna (*m. i. antibra'chii* [BNA]), or the tibia and fibula (*m. i. cruris* [BNA]).

m. lim'itans, one of two layers of the retina, *m. l interna*, or investing membrane, and the *m. l. externa*, between the nuclear layer and the layer of rods and cones.

m. muco'sa, tunica mucosa [BNA].

m. nic'titans, palpebra tertia, the third eyelid of the horse, consisting of a semilunar fold of the conjunctiva, covering and partly enclosing a curved plate of hyaline cartilage, at the inner angle of the eye.

m. non vi'brans, m. flaccida, Shrapnell's* membrane.

m. obturato'ria [BNA], the thin membrane of strong interlacing fibers filling the obturator foramen.

m. pituito'sa, the nasal mucous membrane.

m. pro'pria, the basement layer of a mucous membrane.

m. præformati'va, a membrane described as existing between the enamel pulp and the enamel of the tooth, probably an artefact.

m. pupilla'ris [BNA], a thin vascular membrane, forming the anterior portion of the capsule of the lens and occluding the pupil in fetal life; it normally disappears about the seventh month, but may persist and cause congenital blindness; called also Wachendorf's membrane.

m. putam'inis [L. *putamen*, husk], the membrane lining the shell of an egg.

m. quadrangula'ris, a portion of the m. elastica laryngis connecting the epiglottis, thyroid cartilages, arytenoid cartilage, and cartilago corniculata.

m. reticula'ris, m. reticula'ta, reticular membrane, lamina reticularis; a thin cuticular membrane covering the organ of Corti from the outer rods to Hensen's cells.

m. saccifor'mis, the synovial membrane of the inferior radio-ulnar articulation.

m. sero'sa, (1) a serous membrane; (2) the false amnion.

m. seroti'na, the portion of the decidua entering into the formation of the placenta.

m. ster'ni [BNA], sternal membrane, interlacing fibers from the anterior costosternal ligaments covering the anterior surface of the sternum.

m. stria'ta, zona radiata.

m. subzona'lis, false amnion.

m. succin'gens [L. *succingere*, to surround], the pleura.

m. tecto'ria [BNA], tectorial (roof) membrane, posterior occipitoaxial ligament, the upward continuation of the posterior common, or longitudinal, ligament of the spine, attached to the basilar groove on the upper surface of the basilar portion of the occipital bone.

m. ten'sa, m. vibrans.

m. tym'pani [BNA], membrane of the tympanum, drum membrane, drumhead; a thin tense membrane forming the greater part of the outer wall of the tympanic cavity and separating it from the external auditory meatus; it constitutes the boundary between the external and middle ear.

m. tym'pani secunda'ria, secondary tympanic membrane, the membrane closing the fenestra cochleæ or rotunda.

m. versic'olor, Fielding's membrane, tapetum.*

m. vestibula'ris Reiss'neri [BNA], Reissner's vestibular membrane, a delicate homogeneous membrane forming the roof of the ductus cochlearis, or scala media, and separating it from the cavity of the scala vestibularis.

m. vi'brans, the main, tense, portion of the m. tympani, distinguished from *m. non vibrans*, or Shrapnell's* membranes.

m. vitelli'na, the membrane enclosing the ovum; zona pellucida.

membrana'ceous. Membranous

mem'branate. Of the nature of a membrane.

membrane (mem'brān) [L. *membrana*.] A thin sheet or layer of pliable tissue, serving as a covering or envelope of a part, the lining of a cavity, as a partition or septum, or to connect two structures. (For the anatomical terms not found here, see under *membrana*.) **acciden'tal m.,** false m. **anhis'tous m.,** decidua. **base'ment m.,** a thin structureless layer underlying the epithelium of the integument and mucous membrane, and serving as a support for numerous delicate structures. **cell m.,** the layer of condensed protoplasm serving as the enveloping capsule of a cell. **crou'pous m.,** false m. **diphtherit'ic m.,** the false membrane forming on the mucous surfaces in diphtheria. **drum m.,** membrana tympani **dysmenorrhe'al m.,** a membrane, resembling the decidua, cast off in cases of membranous dysmenorrhea **elas'tic m.,** one formed of elastic connective-tissue fibers, present in the trachea, the coats of the arteries, and elsewhere. **false m.,** pseudomembrane, a more or less thick, tough fibrinous exudate on the surface of a mucous membrane or the skin. **fenes'trated m.,** tunica intima of an artery. **fi'brous m.,** a strong m. composed chiefly of fibrous tissue. **fe'tal m.,** one of the membranes forming the sac which encloses and supports the fetus. **germ m., ger'minal m.,** blastoderm. **hap'togen m.,** a membrane supposed to surround the fat globules in milk and in other albuminous fluids. **homoge'neous m.,** structureless membrane, noting specifically a fine membrane covering the villi of the placenta. **hy'aline m.,** membrana propria. **hy'aloid m.,** membrana hyaloidea. **i'vory m.,** membrana eboris. **keratog'enous m.,** the matrix of the nail. **med'ullary m.,** endosteum. **mu'cous m.,** tunica mucosa [BNA], see under *mucous*. **nic'titating m.,** membrana nictitans. **nu'clear m.,** the outer layer of the nucleoplasm. **olfac'tory m.,** membrana pituitosa. **ov'ular m.,** membrana vitellina. **periden'tal m., periodon'tal m.,** alveolar periosteum, the membrane surrounding the root of a tooth and lining the alveolar cavity. **perior'bital m.,** the periosteum of the orbit. **per'meable m.,** one which permits of the passage of water and of certain dissolved substances (crystalloids); distinguished from a semipermeable **m. pituitary m.,** membrana pituitosa. **prolig'erous m.,** discus proligerus, cumulus* oophorus. **prophylac'tic m.,** the enveloping m. of an abscess. a term more accurately descriptive in many

cases than pyogenic m.; see *pyophylactic*. **pyogen'ic m.**, the granular lining membrane of an abscesse avity. **Schneide'rian m.**, membrana pituitosa. **semiper'meable m.**, a membrane which allows of the passage of water but not of any substances (crystalloids) held in solution. **se'rous m.**, serosa, see under *serous*. **stri'ated m.** of the oocyte, zona radiata. **subenam'el m.**, membrana præformativa. **subepithe'lial m.**, basement m. **subzo'nal m.**, the outer layer of the amnion, false amnion, derived from the mesoblast. **syno'vial m.**, the lining membrane of a joint, secreting the synovia. **tecto'rial m.**, (1) Corti's* membrane; (2) membrana tectoria. **testa'ceous m.**, membrana putaminis. **tu'bular m.**, neurilemma. **un'dulating m., un'dulatory m.**, a membrane projecting laterally from certain unicellular organisms, or protozoa, especially well developed in trypanosomes; it is a kinetic or locomotor organ. **u"teroepicho'rial m.**, decidua vera. **vir'ginal m.**, hymen. **vi'tellary m.**, zona pellucida. **vit'reous m.**, Descemet's* membrane. **yolk m.**, membrana vitellina, zona pellucida.

abdomen, peritoneum; mesentery, omentum. **blood-vessels,** intima, endangium (lining); extima, adventitia (enveloping). **bone,** periosteum, endosteum. **brain,** meninx (pl. meninges), pachymeninx, dura mater; leptomeninx, pia mater, arachnoid, arachnopia. **cardiac,** endocardium (lining), pericardium (enveloping). **chest,** pleura. **dissection,** hymenotomy. **ear,** drum membrane, membrana tympani, myringa, myrinx; consisting of membrana flaccida, Shrapnell's membrane, and membrana tensa or vibrans; membrana tympani secundaria (in fenestra rotunda). **eye,** conjunctiva; membrana hyaloidea (enclosing the vitreous humor), membrana nictitans (in certain animals and birds). **false,** pseudomembrane, neomembrane, neohymen **fetal,** amnion, chorion, allantois. **fibrous,** fascia, aponeurosis. **inflammation,** hymenitis; catarrh (mucous membrane); **serositis** (serous membranes); meningitis (brain and spinal cord); endocarditis, pericarditis (heart); pleuritis, pleurisy (chest); peritonitis (abdomen); synovitis, meningarthrocace (joints); coryza, rhinitis (nose), conjunctivitis (eye); myringitis (drum membrane) **intestinal,** mucosa (lining); serosa, peritoneum (enveloping), mesentery (supporting); epiploon, omentum (covering) **joints,** synovial membrane, arthromeninx **mucous,** mucosa. **muscle,** fascia, aponeurosis, myolemma, sarcolemma, endomysium, epimysium, perimysium. **nerves,** neurilemma, epineurium, perineurium endoneurium. **nose,** membrana pituitaria or pituitosa, pituitary membrane, Schneiderian mucous membrane. **passage of liquids through,** osmosis, diosmosis, endosmosis, exosmosis. **resembling,** membranoid, hymenoid. **science relating to,** hymenology, membranology. **serous,** serosa, endothelium. **skull,** epicranium; galea aponeurotica; galea capitis **softening,** hymenomalacia, meningomalacia. **spinal cord,** same as of brain; ependyma (lining central canal). **testicle,** tunica albuginea. **thin,** leptomeninx, pellicle. **thinness,** lepthymenia, leptohymenia. **union of bones by,** meningosis. **uterus,** endometrium; decidua (exfoliated or altered).

membranelle'. A minute membrane formed of fused cilia, found in certain of the *Ciliata*.

membran'iform [L. *membrana*, membrane, + *forma*, form.] Of the appearance or character of a membrane.

mem'branin. A protein derived from the capsule of the crystalline lens of the eye.

membranocartilaginous (mem"bră-no-kar-til-aj'in-us). 1. Partly membranous and partly cartilaginous. 2. Derived from both membrane and cartilage, noting certain bones.

mem'branoid [L. *membrana*, membrane, + G. *eidos*, resemblance.] Membraniform.

mem'branous. Relating to or of the form of a membrane.

mem'broid. A membranous capsule, resistant to the action of the gastric juice but dissolving in the intestine, used for inclosing medicaments which it is desired to introduce unaltered into the duodenum.

mem'brum, pl. *mem'bra* [L. member.] A limb; a member. **m. mulieb're** [L. *muliebris*, feminine], clitoris. **m. viri'le** [L. *viri'lis*, virile, belonging to a man], the penis.

mem'ory [L. *memoria*.] The power of retaining in subconsciousness and of reviving an impression or idea of which the mind has once been conscious; recollection. **affect' m.**, see affect*-memory. **an'terograde m.**, a memory for events of long ago, but not for those of recent occurrence, senile m.

menac'me [G. *mēn*, month, + *akmē*, prime.] The period of menstrual activity in a woman's life.

menarche (men-ar'ke) [G. *mēn*, month, + *archē*, beginning.] The establishment of the menstrual function.

Menckeberg's degenera'tion (meng'keh-bārg). Lesion of the middle coat of an artery, medial arteriosclerosis.

Men'del's in'step re'flex [Kurt *Mendel*, German neurologist, *1874.] The foot being firmly supported on its inner side, a sharp tap on the doral tendons causes extension of the toes from the 2d to the 5th.

Men'del's law [Johann Gregor *Mendel*, Austrian monk and naturalist, 1822–1884.] When two varieties of plants, differing from each other in one characteristic, are crossed, the hybrids preserve for the most part the peculiarity of one or the other parent and do not exhibit a blend of the two. The characteristic which persists in the hybrids is called the *dominate;* that which tends to disappear the *recessive*. When these hybrids interbreed the recessive appears in one-fourth, the dominant in three-fourths of the descendants.

Men'del's test, Mantoux t., v. Pirquet's reaction, intracutaneous tuberculin injections, causing an inflammatory reaction of tuberculosis is present.

Mendel-Bechterew re'flex (men'del-bekh-ter'yef) [Kurt *Mendel;* Vladimir von *Bechterew*.] Mendel's* instep reflex. **M.-B. sign,** Bechterew's* pupil reflex.

Mendeléeff's law (men-da-la'yef) [Dimitrii Ivanovich *Mendeléeff*, Russian chemist, 1834–1907.] Periodic law, Meyer's law; the properties of an element are a periodical function of its atomic weight; that is to say, the elements being arranged in the order of their atomic weights, every element in the series will be related in respect of its properties to the eighth in order before or after it.

Mendelism (men'del-izm). Inheritable mutation according to Mendel's* law.

menelip'sis. Menolipsis.

menhidro'sis, menidro'sis [G. *mēn*, month, + *hidrōsis*, perspiration.] Hemorrhage from the skin occurring as a form of vicarious menstruation.

Ménière's disease' (ma-ne-er') [Prosper *Ménière*, French physician, 1799–1862.] M.'s syndrome, M.'s vertigo; an affection characterized clinically by vertigo, nausea, vomiting, tinnitus, and progressive deafness; due probably to an effusion of blood into the semicircular canals.

menin'geal. Relating to the meninges.

meningeocortical (men-in"je-o-kor'ti-kal). Relating to the membranes and the cortex of the brain.

meningeorrhaphy (men-in"je-or'ă-fe) [G. *mēninx-* (*mēning-*), membrane, + *raphē*, suture.] Suture of the meninges of the brain or spinal cord, or of any membrane.

meninges (men-in'jēz) [pl. of *mēninx*, membrane.] Membranes; specifically the membranous envelop of the brain and spinal cord.

meningi'na. The combined pia mater and adjacent layer of the arachnoid.

meninginitis (men-in-jin-i'(e')tis). Piarachnitis, leptomeningitis.*

men'ingism. A condition of irritation of the brain or spinal cord in which the symptoms simulate a meningitis, but in which no actual inflammation of these membranes is present.

meningit'ic. Relating to or characterized by meningitis.

meningitis (men-in-ji'(je')tis) [G. *mēninx(mēning-)*, membrane, + *-itis*.] Inflammation of the membranes of the brain or spinal cord. **Af'rican m.,** sleeping-sickness. **alcohol'ic m.,** serous m.(2) due to chronic alcoholism. **bas'ilar m.,** m. at the base of the brain, due usually to tuberculosis. **cerebrospi'nal m.,** inflammation of the meninges of the brain and spinal cord. **epidem'ic cerebrospi'nal m.,** an acute infectious disease affecting children usually, caused by a special microorganism, the meningococcus; the symptoms are nasopharyngeal catarrh, headache, vomiting, convulsions, stiffness in the neck, photophobia, constipation, cutaneous hyperesthesia, a purpuric or herpetic eruption, and the presence of Kernig's sign; in cases of recovery, blindness, deafness, and paralysis are frequent sequelæ. **exter'nal m.,** pachymeningitis externa. **inter'nal m.,** pachymeningitis interna. **occlu'sive m.,** leptomeningitis causing occlusion of the metapore, or foramen of Magendie. **se'rous m.,** (1) acute m. with secondary external hydrocephalus; (2) alcoholic m., wet-brain, serous apoplexy, a serous exudation in the ventricles and subarachnoid spaces occurring in alcoholic subjects after a prolonged debauch **tuber'culous m.,** inflammation of the cerebral pia mater marked by the presence of tubercles; it is usually confined to the base of the brain (*basilar m.*) and is accompanied in children by an accumulation of serum in the ventricles (acute hydrocephalus).

meningitophobia (men-in-jit-o-fo'bĭ-ah) [*meningitis* + G. *phobos*, fear.] An hysterical meningism caused by an exaggerated fear of brain disease.

meningocele (men-in'go-sēl) [G. *mēninx(mēning-)*, membrane, + *kēlē*, tumor.] A protrusion of the membranes of the brain or spinal cord through a defect in the skull or spinal column.

meningocephalitis (men-in-go-sef-al-i'(e')tis) [G. *mēninx(mēning-)*, membrane, + *kephalē*, head, + *-itis*.] Meningoencephalitis.

meningocerebritis (men-in-go-sĕ-re-bri'(bre')tis) [G. *mēninx(mēning-)*, membrane, + L. *cerebrum* + G. *-itis*.] Meningoencephalitis.

meningococcemia (men-in-go-kok-se'mĭ-ah). The presence of meningococci in the blood.

menin"gococ'cus. *Diplococcus intracellularis meningitidis, Neisseria intracellularis.*[0]

meningocor'tical [G. *mēninx(mēning-)*, membrane, + L. *cortex*, bark.] Relating to the meninges and the cerebral cortex.

meningoencephalitis (men-in"go-en-sef-al-i'(e')tis). An inflammation of the brain and its membranes.

meningoencephalomyelitis (men-in"go-en-sef"al-o-mi-el-i'(e')tis). Inflammation of the brain and spinal cord together with their membranes.

meningomyelitis (men-in"go-mi-el-i'(e')tis) [G. *mēninx(mēning-)*, membrane + *myelos*, marrow, + *-itis*.] Inflammation of the spinal cord and of its enveloping arachnoid and pia mater, and less commonly also of the dura mater.

meningomyelocele (men-in"go-my'el-o-sēl) [G. *mēninx*, membrane, + *myelos*, marrow, + *kēlē*, tumor.] A protrusion of the membranes and cord through a defect in the vertebral column.

meningoosteophlebitis (men-in"go-os-te-o-fle-bi'(be')tis). Inflammation of the veins of the periosteum.

meningoradicular (mĕ-nin"go-ră-dik'u-lar). [G. *mēninx*, membrane, + L. *radix*, root.] Relating to the meninges and the cranial or spinal nerve-roots.

meningorrhachidian (men-in"go-ră-kid'ĭ-an) [G. *mēninx(mēning-)*, membrane, + *rhachis*, spine.] Relating to the spinal cord and its membranes.

meningorrhe'a, meningorrhœ'a [G. *mēninx(mēning-)*, membrane, + *rhoia*, flow.] Meningorrhagia.

meningorrha'gia [G. *mēninx(mēning-)*, membrane, + *rhēgnymi*, I burst forth.] Hemorrhage into or beneath the cerebral or spinal meninges.

meningo'sis [G *mēninx(mēning-)*, membrane.] Membranous union of bones, as in the skull of the newborn.

meningotyphoid fever (men-in"go-ti'foid fe'vur). Typhoid fever marked by symptoms of more or less irritation or inflammation of the cerebral or spinal meninges.

meningu'ria [G. *mēninx(mēning-)*, membrane, + *ouron*, urine.] The passage of membraniform shreds in the urine.

me'ninx, gen. *menin'gis*, pl. *menin'ges* [L. from G. *mēninx*, membrane.] Any membrane; specifically one of the membranous coverings of the brain and spinal cord. **m. fibro'sa,** dura mater. **m. sero'sa,** arachnoid. **m. ten'uis,** arachnopia, piarachnoid. **m. vasculo'sa,** pia mater.

meniscitis (men-is-ki'(ke')tis). Inflammation of an interarticular cartilage.

meniscocyte (mĕ-nis'ko-sīt) [G. *mēniskos*, a crescent, + *kytos*, cell.] Sickle*-cell, crescent-cell.

meniscocytosis (me-nis-ko-si-to'sis). Crescent-cell, or sickle-cell, anemia.*

menis'cus [G. *meniskos*, crescent.] 1. A concavo-convex lens thicker in the center than at the sides the convexity being greater than the concavity. 2. An interarticular fibrocartilage of crescentic or discoid shape found in certain joints; called also *m. articularis* [BNA]. **conver'ging m.,** a meniscus in which the convexity exceeds the concavity, positive m **diver'ging m.,** a concavoconvex lens in which the concavity has a greater radius than the convexity, a negative m. **m. latera'lis** [BNA], lateral meniscus, external semilunar fibrocartilage, attached to the outer border of the upper articular surface of the tibia. **m. media'lis** [BNA], medial meniscus, internal semilunar fibrocartilage of the knee-joint, attached to the inner border of the upper articular surface of the tibia. **neg'ative m.,** diverging m **pos'itive m.,** converging m.

menisper'mum [G. *mēnē*, moon, + *sperma*, seed.] The rhizome and roots of *Menispermum canadense*, Canadian moonseed, vine maple, Texas or yellow sarsaparilla, a climbing plant of eastern North America; it has been employed as a substitute for sarsaparilla.

menocelis (men-o-se'lis) [G. *mēn*, month, + *kēlis*, spot.] A dark macular or petechial eruption sometimes occurring in cases of amenorrhea.

menolip'sis [G. *mēn*, month, + *leipsis*, a failing.] Temporary cessation of menstruation; amenorrhea.

menopause (men'o-pawz) [G. *mēn*, month, + *pausis*, cessation.] Permanent cessation of the menses; termination of the menstrual life.

menopha'nia [G. *mēn*, month, + *phainō*, I show.] The first sign of the menses at puberty.

menopla'nia [G. *mēn*, month, + *planē*, a wandering.] Vicarious menstruation.

menorrhagia (men-or-raj'ĭ-ah) [G. *mēn*, month, + *rhēgnymi*, I burst forth.] Excessively profuse menstruation.

menorrhalgia (men-or-ral'jĭ-ă) [*menorrhea* + G. *algos*, pain.] Dysmenorrhea, painful menstruation.

menorrhe'a, menorrhœ'a [G. *mēn*, month, + *rhoia*, flow.] 1. Normal menstruation. 2. Menorrhagia.

men'osal. Trade name of a preparation (menthyl salicylic methyl ester) recommended as an analgesic and in the treatment of rheumatic affections.

menoschesis (men-os'kĕ-sis) [G *mēn*, month, + *schesis*, retention.] Suppression of menstruation.

menosep'sis [G. *mēn*, month + *sēpsis*, putrefaction.] Blood-poisoning due to the absorption of septic material from a retained menstrual discharge.

menosta'sia [G. *mēn*, month, + *stasis*, a standing.] Amenorrhea.

menostaxis (men-o-stak'sis) [*menses* + G. *staxis*, a dripping.] Unduly prolonged menstrual flow

menoxenia (men-o-ze'nĭ-ah) [G. *mēn*, month, + *xenos*, strange.] Any abnormality of menstruation.

men'ses [L. *mensis*, month.] The periodical discharge of a bloody fluid from the uterus, occurring normally about once a month; catamenia.

men'strual. Catamenial; relating to the menses.

men'struant. Menstruating

men'struate [L. *menstruare*.] To perform menstruation; to pass through the catamenial period.

menstrua'tion. The periodical discharge of a bloody fluid from the uterus, menorrhea (1). **ret'rograde m.**, a flow of menstrual blood back through the Fallopian tubes; it sometimes carries with it endometrial cells giving rise to endometriosis. **vica'rious m.**, bleeding from any surface, other than the mucous membrane of the uterine cavity, occurring periodically at the time when the normal m. should take place, this latter being suppressed.

absence, amenorrhea, menolipsis, menostasia **agent facilitating,** emmenagogue. **anomalous,** paramenia. **beginning of function,** menophania, menarche. **cessation of function,** menopause, climacteric. **disorder of,** emmeniopathy, paramenia **excessive,** menorrhagia, menorrhea **painful,** dysmenorrhea, menorrhalgia, **period of menstrual activity,** menacme. **retention,** menolipsis **scanty,** oligomenorrhea **suppression,** menostasia, menoschesis ischomenia, menolipsis. **vicarious,** menopania, menoxenia xenomenia, menometastasis, atopomenorrhea stomatomenia, stomenorrhagia (mouth); enteromenia (intestine); gastromenia (stomach); proctomenia (rectum); mastomenia (breasts); menidrosis (sweat glands), helcomenia (from an ulcer); myelomenia (spinal cord).

men'struous. Menstrual, catamenial.

men'struum, pl. *men'strua* [L. menstrual fluid, this having been thought to possess markedly solvent properties.] A solvent, a fluid containing another substance in solution.

men'sual [L. *mensis*, month.] Monthly.

mensura'tion [L *mensurare*, to measure.] Measurement.

mentag'ra [L. *mentum*, chin, + G. *agra*, a seizure.] Sycosis.

mentagrophy'ton [*mentagra* + *phyton*, a plant.] The fungus causing sycosis parasitica.

men'tal [L. *mens*, mind.] 1. Relating to the mind. 2. [L. *mentum*, chin.] Relating to the chin, genial. **m. fog,** a clouding of consciousness, usually with more or less complete loss of memory for the past life or a part of it

menta'lis. See under *musculus*.

mental'ity. The functional condition of the mind, mental activity.

men'tha [L.] Mint. **m. arven'sis piperas'cens,** Japanese or Chinese peppermint, a source of menthol. **m. piperi'ta** (U.S.), peppermint, the leaves and flowering tops of *Mentha piperita;* carminative and antiemetic. **m. pule'gium,** pennyroyal. **m. vir'idis** (U.S.), spearmint, green, garden, or lamb mint, the leaves and flowering tops of *Mentha spicata;* carminative.

menthene (men'thēn). A liquid hydrocarbon, $C_{10}H_{18}$, derived from menthol or from peppermint oil.

menthi'odol. Trade name of a mixture of menthol and iodine, used externally in neuralgia.

men'thol (U.S., Br.). Peppermint camphor, a stearopten obtained from oil of peppermint; occurs in colorless needles or crystalline masses, of peppermint odor and cool taste; employed locally as an antipruritic and analgesic and as a spray in affections of the respiratory mucous membranes. **m. camphora'tum** (N.F.), camphomenthol, a liquid obtained by triturating equal parts of camphor and menthol; employed locally as a counterirritant in neuralgia and (diluted) as a spray in rhinitis and pharyngitis. **m. val'erate,** validol.

men'tholin. Trade name of a catarrh snuff containing boric acid, menthol, and coffee.

mentholyp'tine. Trade name of an antiseptic solution for external use, containing eucalyptol and menthol.

menthophe'nol. Trade name of a mixture of menthol and of phenol, used as a local antiseptic and anesthetic.

mentoanterior (men"to-an-te'rĭ-or) [L. *mentum*, chin.] Noting a presentation of the fetus with its chin pointing to the right or left acetabulum of the mother.

mentolabia'lis. The mentalis (levator labii inferioris) and quadratus labii inferioris (quadratus menti) considered as one muscle.

mentoposte'rior [L. *mentum*, chin.] Noting a presentation of the fetus with its chin pointing to the right or left sacroiliac articulation of the mother.

men'tum, gen *menti* [L.] The chin, genium.

menyanthes (men-ĭ-an'thēz) [G. *mēn*, month, + *anthos*, flower.] Buckbean, bogbean, water shamrock, marsh trefoil, the leaves of *Menyanthes trifoliata*, an herb found in wet and marshy places; has been employed as a tonic, emmenagogue, and antiscorbutic in doses of gr. 10–30 (0.6–2.0).

Menzer's se'rum (ment'ser) [Arthur August Ludwig *Menzer*, German bacteriologist, *1871.] An antistreptococcus serum prepared by injecting into horses a culture of streptococci from the tonsils of patients with articular rheumatism.

mephit'ic [L. *mephitis*, a noxious exhalation.] Foul, poisonous, noxious. **m. gas,** carbon dioxide.

meralgia (me-ral'jĭ-ah) [*mēros*, thigh, + *algos*, pain.] Pain in the thigh, sciatica. **m. paræsthet'ica,** Bernhardt's disease, tingling, formication, itching, and other forms of paresthesia in the outer side of the lower part of the thigh in the area of distribution of the external cutaneous branch of the femoral nerve; there may be pain, but the skin is usually hypesthetic to the touch.

merbaphen (mur'bă-fen). Novasurol.

mercap'tan [L. *mer(curius)*, mercury, + *captans*, seizing.] Thioalcohol, a class of substances in which the oxygen of an alcohol has been replaced

by sulphur; they form white compounds with mercuric oxide.

mercap'tol. A substance derived from a ketone by the replacement of the bivalent oxygen by two thioalkyl groups.

mercauro (mur-kaw'ro). Trade name of a preparation containing a mixture of the bromides of mercury and gold.

Mercier's bar or **barr'ier** (mer-se-a') [Louis Auguste *Mercier*, French urologist, 1811–1882.] The hypertrophied middle lobe of the prostate. **M.'s sound,** a catheter the beak of which is short and bent almost at a right angle. **M.'s valve,** the enlarged sphincter vesicæ muscle, or annulus* urethralis.

mer'colint. Trade name of a thick soft woven material impregnated with a mercurial preparation; it is worn next the skin so as to obtain a continuous slight absorption of mercury.

mercurette'. Trade name of a preparation of mercury extinguished in cacoa butter and perfumed, used for inunction; each tablet, weighing 120 grains, contains 50 grains of metallic mercury.

mercurial (mur-ku'rĭ-al). 1. Relating to mercury. 2. Any salt of mercury employed medicinally.

mercuria'lis. Herb of *Mercurialis annua*, French mercury, mercury herb, and of *M. perennis*, dog's mercury, Kentish balsam, European plants possessing alterative properties; employed in syphilis scrofula, and dysmenorrhea in doses of ♏5–30 (0.3–2.0) of a fluidextract.

mercu'rialism. Hydrargyrism, poisoning by mercury.

mercurializa'tion. The being or the bringing under the therapeutic influence of mercury.

mercu'rialize. 1. To impregnate with mercury. 2. To bring under the therapeutic influence of mercury.

mercu'ric. Noting a salt of mercury in which the ion of the metal is bivalent, as in corrosive sublimate, mercuric chloride, $HgCl_2$; the mercurous chloride is calomel, HgCl.

Mercurio's position (mer-koo'rĭ-o) [Geronimo Scipione *Mercurio*, Italian accoucheur, 1550–1595(?)] An obstetrical position similar to Walcher's *

mercu'rius. The homeopathic term for hydrargyrum or mercury. **m. corrosi'vus,** corrosive sublimate, used in dysentery with tenesmus, in gonorrhea, ophthalmia, and syphilitic iritis, and in profuse watery coryza in the 6th to 30th potency. **m. dul'cis,** calomel, employed in Eustachian catarrh, diarrhea, and prostatitis in doses of the 3d to 6th trituration. **m. ioda'tus fla'vus,** yellow iodide of mercury, employed in sore throat, faucial ulceration, and syphilis in doses of the 3d decimal trituration. **m. ioda'tus ru'ber,** red iodide of mercury, employed in ulcerated sore throat and diphtheria in doses of the 3d trituration. **m. vi'rus,** metallic mercury triturated with sugar of milk, employed in bromidrosis, cough with a ropy mucous expectoration, and syphilis, in doses of the 6th to 30th potency.

mercurochrome (mur'ku-ro-krōm) [*mercury* + G. *chrōma*, color.] Any dye containing by substitution one or more atoms of mercury in the molecule. **m.-220,** a red powder, dibrom-oxymercuryfluorescein, a germicide recommended for use in the genitourinary tract and in the treatment of streptococcic infections, obtained by the substitution of one atom of mercury in the molecule of dibromfluorescein. **m.-220 soluble,** the disodium salt of m.-220 occurring as iridescent green scales or granules, odorless, freely soluble in water; it is used in the treatment of streptococcic, staphylococcic and especially colibacillary infections of the urinary tract; it has been employed also with varying success by intravenous injection in septicemia, in doses of 5 mg. per kg. ($\frac{1}{10}$ grain per 2½ lb.) of body weight, given in 1 per cent. solution.

mer'curol. Mercury nucleinate or nucleide, a compound of mercury and nucleinic acid; a light brown powder soluble in water, employed locally as an astringent antiseptic in various affections of the conjunctiva and urogenital tract in 5 to 10 per cent. solution, and internally in syphilis in doses of gr. 2–3 (0.13–0.2).

mercurophen (mur'ku-ro-fen) [*mercury* + *phenol.*] Sodium hydroxymercury-ortho-nitro-phenolate, a local antiseptic recommended for the treatment of external diplococcic infections such as gonorrhea, pneumococcic inflammations of the conjunctiva and cornea, and also various pyogenic skin troubles.

mercurosal (mur'ku-ro-sal). Trade name of disodium-hydroxy-mercurisalicyl-oxyacetate, a white, amorphous powder, soluble in 10 parts of water, and containing about 43 per cent. of mercury; employed in the treatment of syphilis by intramuscular or intravenous injection in doses of gr. 1 to 2 (0.06 to 0.13 gm.).

mer'curous. Noting a salt of mercury in which the ion of the metal is univalent, as in calomel, mercurous chloride, HgCl; the mercuric chloride is corrosive sublimate, $HgCl_2$.

mercury (mur'ku-rĭ) [L. *Mercurius*, Mercury, the god of trade.] Quicksilver, mercurius, hydrargyrum.* For the other salts of mercury see under *hydrargyri.* **cal'cined m.,** mercuric oxide. **dog's m.,** mercurialis. **French m.,** mercurialis. **girl's m.,** mercurialis. **m. atox'ylate,** a compound of mercury and atoxyl, used in the treatment of syphilis in doses of gr. ½–¾ (0.03–0.045) by hypodermic injection every three days. **m. herb,** mercurialis. **m. velop'ural,** mercury 1 part, triturated to extinction with hydrous woolfat, and mixed with velopural 2 parts. **veg'etable m.,** manaca.

merergasia, meroergasia (mer-er-gā'zĭ-ă) [G. *meros*, part, + *ergasia*, work.] A mild form of mental incapacity.

mer'gal. Trade name of a preparation said to consist of mercury cholate and tannin albuminate in the proportion of 1 part of the former to 2 parts of the latter; recommended in the treatment of syphilis in dose of gr. 2 (0.13).

mer'icarp [G. *meros*, part, + *karpos*, fruit.] Hemicarp.

merid'ian [L. *meridianus.*] A line encircling a globular body at right angles to its equator and touching both poles, or the half of such a circle extending from pole to pole.

merid'ional. Relating to a meridian.

Mérieux-Baillon test (ma-re-ĕ'bi-yawn'). If the serum from a tuberculous individual is injected into another person, there will be a reaction if the latter is tuberculous.

merinthophobia (me-rin"tho-fo'bĭ-ah) [G. *mērinthos*, a cord.] A morbid fear of being bound.

merismope'dia [G. *merismos*, dividing, + *pedion*, field.] A term which has been used to include all the micrococci dividing in two planes, both the pediococci and the planococci.

mer'ispore [G. *meros*, a part, + *sporos*, seed.] A secondary spore, a spore resulting from the segmentation of another (compound or septate) spore.

meristem (mer'is-tem) [G. *merizō*, I divide.] 1. In botany, the new tissue at the sprouting end of a twig or growing leaf, consisting largely of actively dividing cells. Hence in histology—2. Embryonal tissue.

meristic (mĕ-ris'tik) [G. *meristikos*, suitable for dividing.] Symmetrical, that can be divided evenly, noting bilateral or longitudinal symmetry in the arrangement of parts in one organism.

meris'tiform [G. *meristos*, divided, + L. *forma*, form.] Sarcinous, having the packet-shape of sarcinæ.

Merkel's cor'puscles (mer'kel) [Karl Ludwig *Merkel*, German anatomist, 1812–1876.] M.'s touch cells. **M.'s fil'trum ventric'uli,** a grove between the two prominences, in each lateral wall of the vestibule of the larynx, formed by the cuneiform and the arytenoid cartilages. **M.'s gan'glia,** M.'s touch cells. **M.'s mus'cle,** musculus ceratocricoides. **M.'s touch cells,** small rounded or piriform groups of cells, in the papillæ of the skin, connected with the nerve terminations.

meroacra'nia [G. *meros*, part, + *a-* priv. + *kranion*, skull.] Congenital lack of a part of the cranium.

meroblas'tic [G. *meros*, part, + *blastos*, germ.] Noting an ovum the yolk of which is large and contains nutrient material, such as the eggs of birds, reptiles, and fishes; the opposite of *holoblastic*.

merocele (me'ro-sēl) [G. *mēros*, thigh, + *kēlē*, hernia.] A femoral hernia.

merocrine (mer'o-krin, mer'o-krin) [G. *meros*, a part, + *krinō*, I separate.] Noting a gland the product of which is secreted by the cells, the latter not being thereby destroyed, such as a mucous gland; opposed to *holocrine*.

merodiastolic (mer-o-di-as-tol'ik) [G. *meros*, part.] Partially diastolic; relating to a part of the diastole of the heart.

merogas'trula. The gastrula of a meroblastic ovum.

merogen'esis [G. *meros*, part, + *genesis*, production] Segmentation, merotomy

merogenet'ic, merogen'ic. Relating to merogenesis, segmental.

merogony (mĕ-rog'o-nĭ) [G. *meros*, part, + *gonē*, generation.] The development of an ovum, the chromatin of the nucleus of which has been disorganized, when fertilized by a normal sperm cell.

meromicroso'mia [G. *meros*, part, + *mikros*, small, + *sōma*, body.] Abnormal smallness of some portion of the body, local dwarfism.

merorrhachischisis (mĕ-ro-răk-kis'kĭ-sis) [G. *meros*, part, + *rhachis*, spine, + *schisis*, fissure.] Fissure of a portion of the spinal cord.

merosystol'ic [G. *meros*, part.] Partially systolic; relating to a portion of the systole of the heart.

merot'omy [G. *meros*, part, + *tomē*, incision.] Merogenesis, segmentation.

meroxyl (mur-oks'il). Trade name of an organic salt of mercury, occurring as a pinkish powder soluble in 10 parts of water; recommended as an antiseptic wet dressing of wounds and in the treatment of gonorrhea in 0.5 per cent. solution.

merozoite (mĕ-ro-zo'it) [G. *meros*, a part, + *zōon*, animal.] One of the segments resulting from the fission or gemmation of the schizont.

mersalyl (mur-sal'il). Salyrgan.

merthiolate (mur-thi'o-lāt). Trade name of sodium ethylmercuri-thiosalicylate, $C_2H_5.Hg.S.C_6H_4.COONa$, containing 49.15 to 49.65 per cent. of mercury in organic combination; employed in solution of 1:1000 to 1:5000, as an external antiseptic.

Meru'lius [L. *merula*, blackbird.] A genus of fungi. **M. lac'rimans,** the cause of dry-rot in wood derived from coniferous trees.

Méry's glands (ma-re') [Jean *Méry*, Parisian anatomist, 1645–1722.] Cowper's* glands.

merycism, merycismus (mer'ĭ-sizm, mer-ĭ-siz'mus) [G. *mērykismos*, chewing the cud.] Rumination; the raising of food from the stomach and submitting it to a rechewing, a normal act in certain animals.

mes'ad [G. *mesos*, middle, + L. *ad*, to.] Toward the median plane of the body or of a part.

mes'al [G. *mesos*, middle.] Relating to the median plane of the body or a part; median, middle.

mesameboid, mesamœboid (mes-ă-me'boyd) [G. *mesos*, middle, + *amoibē*, change (amœba,) + *eidos*, resemblance.] 1. A wandering cell or leucocyte. 2. An unattached cell of the embryonic middle germ-layer, or mesoderm.

mesaortitis (mes-a-or-ti'(te')tis) [G. *mesos* middle, + *aorta* + *-itis*.] Inflammation of the middle or muscular coat of the aorta.

mesara'ic [G. *mesaraion*, mesentery.] Mesaraic.

mesare'ic, mesaræ'ic [G. *mesaraion*, mesentery.] Relating to the mesentery, mesenteric.

mesarteritis (mes-ar-ter-ĭ'(e')tis)[G. *mesos*, middle, + *artēria*, artery, + *-itis*.] Inflammation of the middle (muscular) coat of an artery.

mesaticephalic (mes-at''ĭ-sĕ-fal'ik) [G. *mesatos*, midmost, + *kephalē*, head.] Having a head of medium length. Noting a skull with a cephalic index between 75 and 80 and with a capacity of 1350 c.c. to 1450 c.c., or an individual with such a skull. Among the mesaticephalic races are the Europeans, American Indians, Polynesians, and Chinese.

mesatipel'lic, mesatipel'vic [G. *mesatos*, midmost, + *pellis*, a bowl (the pelvis)] Noting an individual with a pelvic index between 90° and 95°.

mescal'. A spirit distilled from pulque. **m. butt'ons,** *Anhalonium lewinii*.

mes'caline. An alkaloid, $C_{11}H_{17}NO_3$, from *Anhalonium lewinii*.

mescalism (mes'kal-izm). Addiction to mescaline, the main symptom of which is the production of visions of great beauty.

mesectic (mes-ek'tik) [G. *mesos*, middle, + *echō*, I have.] Noting a specimen of blood which has a normal percentage saturation of oxygen at any given pressure; see *mionectic* and *pleonectic*.

mesen'cephal. Mesencephalon.

mesencephal'ic. Relating to the mesencephalon.

mesencephalohypophyseal (mes''en-sef''al-o-hi-po-fiz'e-al). Relating to the posterior lobe of the pituitary body and the hypothalamus in their combined action on normal and abnormal metabolism, as in diabetes insipidus, adiposogenital dystrophy, and acromegaly.

mesenceph'alon [G. *mesos*, middle, + *enkephalos*, brant.] The mid-brain, the second of the three primitive cerebral vesicles from which are developed the corpora quadrigemina, the crura cerebri, and the aqueduct of Sylvius.

mesenchyma (mes-en'ki-mah) [G. *mesos*, middle + *enchyma*, infusion.] An embryonic mesodermal tissue, consisting of cells forming a network of protoplasm, the meshes of which are filled by a homogeneous matrix; it gives origin to the connective tissues.

mesenchymal (mes-en'ki-mal). Relating to the mesenchyma.

mesenchyme (mes'en-kīm). Mesenchyma.

mesenna (mĕ-sen'ă). Musenna.

mesenter'ic. Relating to the mesentery.

mesenteriolum (mes-en-tĕ-ri'o-lum) [L. dim. of *mesenterium*, mesentery.] A small mesentery, as one of an intestinal diverticulum. **m. proces'sus vermifor'mis** [BNA], mesoappendix, the mesentery of the vermiform appendix.

mesenteritis (mes-en-tĕ-ri'(re')tis). Inflammation of the mesentery.

mesenterium (mes-en-te'rĭ-um) [L.] [BNA] Mesentery. **m. commu'ne,** the mesentery proper as distinguished from the mesocolon, mesorectum, and mesenteriolum of the appendix.

mesen'teron [G. *mesos*, middle, + *enteron*, intestine. The interior of the primitive intestine or cavity of the archenteron.

mes'entery [L. *mesenterium;* G. *mesos*, middle,t+ *enteron*, intestine.] A double layer of peritoneum attached to the abdominal wall and enclosing in its fold a portion or all of one of the abdominal viscera, conveying to it its vessels and nerves. Specifically the fan-shaped fold of peritoneum encircling the greater part of the small intestines (jejunum and ileum) and attaching it to the posterior abdominal wall.

mes'iad. Mesad.

mesial (mes'ĭ-al or me'zĭ-al). Median, middle, mesal; toward the middle line or apex of the dental arch. **m. angle,** the angle formed by the meeting of the mesial with the labial (or buccal) or lingual surface of a tooth. **m. surface,** the contact surface of a tooth looking toward the preceding tooth in the row, *i.e.* the one nearer the middle line of the jaw.

mes'in. Trade name of hexamethylene-tetramine lithium citrate, recommended as a urinary antiseptic.

mesiobuccal (me"sĭ-o-buk'al). Relating to the mesial and buccal surfaces of a tooth, noting especially the angle formed by the junction of these two surfaces.

mesiobucco-occlusal (me"sĭ-o-buk"o-ŏ-klu'sal). A term designating the angle formed by the junction of the mesial, buccal, and occlusal surfaces of a bicuspid or molar tooth.

mesioclusion (me"sĭ-ŏ-klu'zhun). Abbreviated form of mesio-occlusion, or mesial occulsion.

mesiodistal (me"sĭ-o-dis'tal). Noting the plane or diameter of a tooth cutting its mesial and distal surfaces.

mesio-incisal (me"sĭ-o-in-si'zal). Relating to the mesial and incisal surfaces of a tooth, noting the angle formed by their junction.

mesiolabial (me"sĭ-o-la'bĭ-al). Relating to the mesial and labial surfaces of a tooth, noting especially the angle formed by their junction.

mesiolingual (me"sĭ-o-ling'gwal). Relating to the mesial and lingual surfaces of a tooth, noting especially the angle formed by their junction.

mesiolinguo-occlusal (me"sĭ-o-ling"gwo-ŏ-klu'sal). Noting the angle formed by the junction of the mesial, lingual, and occlusal surfaces of a bicuspid or molar tooth.

mes'ion. Meson.

mesio-occlusal (me"sĭ-o-ŏ-klu'sal). Noting the angle formed by the junction of the mesial and occlusal surfaces of a bicuspid or molar tooth.

mesio-occlusion (me"sĭ-o-ŏ-klu'shun). A condition in which the occlusal surface of one or more teeth in the lower jaw is displaced forward in relation to the corresponding tooth or teeth in the upper jaw.

Mes'merism [Friedrich Anton *Mesmer*, Austrian physician, 1733–1815.] Animal magnetism, a system of therapeutics from which were developed hypnotism and therapeutic suggestion.

mes'merize. To hypnotize.

mesoappendix (mes"o-ă-pen'diks) [G. *mesos*, middle, + L. *appendix* (*vermiformis*).] Mesenteriolum processus vermiformis [BNA].

mesoarial (mes-o-a'rĭ-al). Relating to the mesoarium.

mesoarium (mes-o-a'rĭ-um) [G. *mesos*, middle, + *ōarion*, small egg.] A peritoneal fold supporting the ovary and its blood-vessels and nerves as the mesentery does the intestine, mesentery of the ovary, mesovarium.

mesobacter'ium. A bacterium of medium size.

mes'oblast [G. *mesos*, middle, + *blastos*, germ.] The middle germinal layer of the embryo, lying between the hypoblast and the epiblast and derived from the endoderm and ectoderm. The greater part of the body (skin, connective tissue, bone, muscle, and excretory organs) is derived from the mesoblast.

mes"oblaste'ma [G. *mesos*, middle, + *blastēma*, a sprout.] All the cells collectively which constitute the mesoblast.

mesoblaste'mic. Relating to or derived from the mesoblastema.

mesoblas'tic. Relating to or derived from the mesoblast.

mesobronchitis (mes"o-brong-kī'(ke')tis) [G. *mesos* middle, + *bronchos*, bronchus, + *-itis*.] Inflammation of the middle, or muscular, coat of the bronchi.

mesocar'dia. Malposition of the heart which occupies a central position in the chest, as in early fetal life.

mesocardium (mes-o-kar'dĭ-um) [G. *mesos*, middle, + *kardia*, heart.] The pericardial pleura, that portion of the mediastinal pleura which is fused with the pericardium.

mes'ocarp [G. *mesos*, middle, + *karpos*, fruit] In botany, the middle layer of the pericarp or wall of a mature ovary.

mesoce'cal. Relating to the mesocecum.

mesoce'cum, mesocæ'cum. The mesentery of the cecum.

mes'ocele, mes'ocœle. Mesocelia.

mesocelia (mes-o-se'lĭ-ah) [G. *mesos*, middle, + *koilia*, hollow.] Aqueduct of Sylvius connecting the third with the fourth ventricle of the brain.

mesocephal'ic [G. *mesos*, middle, + *kephalē*, head.] 1. Mesaticephalic. 2. Mesencephalic.

mesoceph'alon [G. *mesos*, middle, + *kephalē*, head.] Mesencephalon.

mesochymal (mes-ok'i-mal). Mesenchymal.

mesoceph'alous. Mesocephalic.

mesococ'cus. A coccus of medium size, neither micrococcus nor macrococcus.

mesocœ'lia. Mesocelia.

mesocol'ic. Relating to the mesocolon.

mesoco'lon [G. *mesos*, middle, + *kōlon*, colon.] The fold of peritoneum attaching the colon to the posterior abdominal wall; it is variously called *ascending*, *transverse*, *descending*, and *pelvic* or *sigmoid* corresponding to the respective divisions of the colon; the ascending and descending portions are usually more or less deficient or absent.

mesoco'lopexy [*mesocolon* + *pēxis*, fixation.] An operation for shortening the mesocolon by making a fold in it and suturing; for the correction of undue mobility and ptosis of the colon.

mesoco"loplica'tion [*mesocolon* + L. *plicare* to fold.] Mesocolopexy

mes'ocord. A fold of amnion which sometimes binds a segment of the umbilical cord to the placenta.

mesocuneiform (mes-o-ku'ne-i-form) [G. *mesos*, middle.] The middle cuneiform bone, os cuneiforme secundum.

mesocyte (mes'o-sīt) [G. *mesos*, middle, + *kytos*, cell.] Mesolymphocyte.

mesocyto'ma [G. *mesos*, middle, + *kytos*, cell, + *-ōma*.] A tumor formed of connective-tissue, lymphoid, or muscle cells (mesocytes); a sarcoma.

mes'oderm [G. *mesos*, middle, + *derma*, skin.] Mesoblast; the middle of the three layers of the primitive embryo, formed by cells budding off from the primitive streak.

mesoder'mic. Relating to the mesoderm.

mesodesma (mes-o-dez'mah) [G. *mesos*, middle, + *desma*, band, ligament.] A division of the broad ligament of the uterus. **m. suspenso'rium** an upward extension of the broad ligament at its external insertion into the lateral wall of the pelvis. **m. teres,** a fold of the broad ligament enclosing the round ligament.

mesodiastol'ic. During the diastole of the heart.

mesodmitis (mes-od-mī'(me')tis) [G. *mesodmē*, a panelled compartment.] Mediastinitis.

mes'odont [G. *mesos*, middle, mean, + *odous(odont-)*, tooth.] Having teeth of medium size. Noting a skull with a dental index between 42 and 44.

mesoduod'enal. Relating to the mesoduodenum.

mes'oduode'num [G. *mesos*, middle, + L. *duodenum*.] The mesentery of the duodenum.

mesoenteri'olum. Mesenteriolum.

mesoepididymis (mes-o-ep-i-did'i-mis). An occasional fold of the tunica vaginalis binding the epididymis to the testis.

mesogas'ter [G. *mesos*, middle, + *gastēr*, belly.] Midgut.

mesogas'tric. Relating to the mesogastrium.

mesogas'trium [G. *mesos*, middle, + *gastēr*, stomach.] 1. In the embryo, the mesentery in relation with the dilated portion of the enteric canal which is the future stomach. 2. The umbilical region of the abdomen, see cut under *abdominal*.

mesoglia (mes-og'lĭ-ă) [G. *mesos*, medium, + *glia*, glue.] Oligodendroglia, neuroglia tissue containing cells of size intermediate between the mossy and the spider cells; see also under *cell*.

mesoglu'teal. Relating to the mesoglutæus.

mesoglutæ'us. Musculus glutæus medius.

mesognath'ic. 1. Relating to the mesognathion. 2. Mesognathous.

mesognath'ion [G. *mesos*, middle, + *gnathos*, jaw.] The lateral segment of the premaxillary or incisive bone external to the endognathion.

mesog'nathous [G. *mesos*, middle, mean, + *gnathos* jaw.] Having a face with slightly projecting jaw, one with a gnathic index from 98 to 103.

Mesogon'imus [G. *mesos*, middle, + *gonimos*, with generative power.] A genus of flukes, the same in general as *Paragonimus*. **M. heteroph'yes,** *Cotylogonimus heterophyes*. **M. westermann'i,** *Paragonimus westermanni*.

mesohylo'ma. A tumor derived from tissue formed from the mesoblastic pulp, or mesothelium.

mesoileum (mes-o-il'e-um). The mesentery of the ileum.

mesojeju'num. The mesentery of the jejunum.

mesolepido'ma [G. *mesos*, middle, + *lepis(lepid-)* rind, + *-ōma*.] A tumor composed of cells derived from the persistent embryonic mesothelium. **atyp'ical m.,** carcinoma of one of the urogenital organs or of the serous membranes **typ'ical m.,** adenoma of the urogenital organs or of the serous membranes.

mesol'obus [G. *mesos*, middle, + *lobos*, lobe.] Corpus callosum.

mesolymphocyte (mes-o-lim'fo-sīt) [G. *mesos*, middle.] A medium sized uninuclear white cell, with deeply staining nucleus of large size but relatively smaller than that in most of the lymphocytes.

mesometritis (mes'o-me-trī'(tre')tis) [G. *mesos*, middle, + *mētra*, uterus, + *-itis*.] Myometritis.

mesome'trium [G. *mesos*, middle, + *mētra*, uterus.] 1. Myometrium. 2. [BNA] The broad ligament (ligamentum latum) of the uterus, below the mesosalpinx.

mes'omorph [G. *mesos*, middle, + *morphē*, form.] A person of medium height and well proportioned. See *hypermorph* and *hypomorph*.

mes'on [G. neuter of *mesos*, middle.] The median anteroposterior plane of the body.

mesoneph'ric. Relating to the mesonephron.

mesoneph'ron, mesoneph'ros [G. *mesos*, middle, + *nephros*, kidney.] The Wolffian* body.

mesoneuritis (mes"o-nu-rī'(re')tis) [G. *mesos*, middle.] Neuritis; inflammation of a nerve or of its connective tissue without involvement of its sheath. **nod'ular m.,** inflammation of the connective tissue beneath the nerve-sheath, with the formation of circumscribed fibrous thickenings.

mesoomentum (mes"o-o-men'tum). The attachment of the omentum.

meso-ontomorph (mĕ-so-on'to-morf) [G. *mesos*, middle, + *ōn*, being, + *morphē*, shape.] An individual of broad stocky type, with a tendency to hypothyroidism.

mesophil'ic [G. *mesos*, middle, + *phileō*, I love. Preferring a medium temperature, said of bacteria developing between the limits of 10° and 45° C. (50° and 113° F.), with an optimum of 37° C.

mesophragma (mes-o-frag'mah) [G. *mesos*, middle, + *phragma*, palisade.] The light line in the middle of the dark band of a sarcomere, Henle's line.

mesoph'ryon [G. *mesos*, middle, + *ophrys*, eyebrow.] Glabella.

mes'ophyll [G. *mesos*, middle + *phyllon*, leaf.] The inner tissue of a leaf.

mesopneumon (mes-o-nu'mon) **mesopneumo'nium** [NK] [G. *mesos*, middle, +s *pneumōn*, lung.] The junction of the two layer of the pleura at the hilus of the lung.

mesoproso'pic [G. *mesos*, middle, + *prosōpon*, face.] Having a face of moderate width, *i.e.* with a facial index of about 90.

mesopsyche (mes-o-si'ke) [G. *mesos*, middle, + *psychē*, soul.] Mesencephalon.

mesorchial (mes-or'ki-al). Relating to the mesorchium.

mesorchium (mes-or'kĭ-um) [G. *mesos*, middle, + *orchis*, testicle.] 1. A fold of peritoneum supporting the mesonephros and its ventromedian genital gland. 2. A fold of peritoneum, in the fetus, holding the testis in place against the abdominal wall

mesorec'tum [G. *mesos*, middle, + L. *rectum*.] [BNA] The peritoneal investment of the rectum, covering the upper part only.

mesoret'ina [G. *mesos*, middle.] The combined nuclear layer and layer of rods and cones, or mosaic layer, of the retina.

mesorrhachischisis (mes-o-răk-is'kĭ-sis). Merorrhachischisis.

mesorrhine (mes'-o-rin) [G. *mesos*, middle, mean, + *rhis*, nose.] Having a nose of moderate width. Noting a skull with a nasal index from

47 to 51 (Frankfort agreement) or 48 to 53 (Broca).

mesosal'pinx [G. *mesos*, middle, + *salpinx*, tuba (uterina).] [BNA] The part of the broad ligament investing the Fallopian tube.

mes"oscap'ula. The spine of the scapula.

mesoseme (mes'o-sēm) [G. *mesos*, middle, mean, + *sēma*, sign.] Noting an orbital aperture with an index between 84 and 89.

mesosig'moid. The mesocolon of the sigmoid flexure.

mesosigmoiditis (mes-o-sig-moy-dī'(de')tis). Inflammation of the mesosigmoid.

mesosigmoidopexy (me-so-sig-moy'do-pek-sĭ). Surgical fixation of the mesosigmoid.

mesoso'matous [G. *mesos*, middle, + *sōma*, body.] Noting a person of medium height.

mesostate (mes'o-stāt) [G. *mesos*, middle, + *statos*, placed.] An intermediate product in metabolism, one of the substances formed during the process of the conversion of the raw material into an assimilable product.

mesoster'num [G. *mesos*, middle, + *sternon*, sternum.] The corpus or body of the sternum, gladiolus.

mesosyphilis (mes"o-sif'ĭ-lis) [G. *mesos*, middle.] Secondary syphilis.

mesosystol'ic [G. *mesos*, middle.] Occurring during the systole of the heart.

mes'otan. Salmester; methyloxymethyl ester of salicylic acid ($C_6H_4(OH)COOCH_2OCH_3$); a yellowish, odorless, oily liquid containing 75 per cent. of salicylic acid; employed externally in the treatment of articular and muscular rheumatism, gout, and neuralgia.

mesothe'lial. Relating to the mesothelium.

mesothelio'ma. A lepidoma of the second order composed of cells descended from the persistent mesothelium of the embryo.

mesothe'lium. A layer of flattened mesodermal cells lining the coelum or body cavity of the embryo; it develops later into the endothelium lining the serous cavities.

mesoth'enar [g. *mesos*, middle, + *thenar*, palm of the hand.] Musculus adductor pollicis.

mes"otho'rium. The disintegration product of thorium; m. 1 is rayless, but m. 2, the next step in the process of disintegration, gives off beta and gamma rays; its disintegration product is radiothorium.

mesotrop'ic [G. *mesos*, middle, + *tropē*, a turning.] Turned toward the median plane.

mesotur'binate. The middle turbinate body.

mesouranic (mes"o-u-ran'ĭk) [G. *mesos*, middle, + *ouranos*, palate.] Having a palatal index between 110 and 115.

mesova'rium [G. *mesos*, middle, + L. *ovarium*, ovary.] [BNA] A short peritoneal fold connecting the anterior border of the ovary with the posterior layer of the broad ligament of the uterus;

mesuran'ic. Mesouranic.

mesurol (mĕ'su-rol). Benzobis, basic bismuth methoxy-hydroxy-benzoate, recommended for the treatment of syphilis in doses of 0.5 to 1.0 c.c. of a 20 per cent. emulsion intramuscularly.

meta- [G. after, between, over.] 1. In chemistry a prefix denoting that a compound is formed by two substitutions in the benzene ring arranged unsymmetrically, *i.e.* linked to the first and third second and fourth, third and fifth, etc., carbon atoms of the series. 2. A prefix in many words denoting a change, transformation, or occurrence behind or after something else in the series.

metab'asis [G. a passing over, change.] A change of any kind in symptoms or course of a disease.

metablogen (mĕ-tab'lo-jen) [*metabolism* + G. *gennaō*, I produce.] Trade name of a mixture of salts similar to metallogen* for use with the so-called dietetic treatment of tuberculosis.

metabol'ic. Relating to metabolism.

metabolimeter (mĕ-tab-o-lim'e-tur). An apparatus for measuring the rate of basal metabolism; a modified calorimeter.

metab'olin. Metabolite.

metab'olism [G. *metabolē*, change.] Tissue-change, the sum of the chemical changes whereby the function of nutrition is effected; it consists of anabolism, or the constructive or assimilative changes, and catabolism, or the destructive or retrograde changes. **ba'sal m.**, heat production of an individual at the lowest level of cell chemistry; or the minimal amount of cell activity associated with the continuous organic functions of respiration, circulation, and secretion.

metabolite (mĕ-tab'o-līt) Any product of metabolism, especially of catabolism.

metab'olon [G. neuter of *metabolos*, changeable.] A particle, having only a temporary existence in its present form, produced during the disintegration of a radioactive substance.

metacar'pal. Relating to the metacarpus.

metacar"pophalan'geal. Relating to the metacarpus and the phalanges, noting the articulations.

metacar'pus [G. *meta*, beyond, + *karpos*, wrist.] The part of the hand between the wrist and the fingers, the palm; the five metacarpal bones collectively which form the skeleton of this part.

metacasein (met-ah-ka'se-in). One of the mesostates in the digestion of casein.

metacele (met'ah-sēl). Metacœlia.

metacetone (met-as'e-tōn). Diethylketone

metachloral (met-ah-clo'ral). Parachloral, trichloral, obtained from chloral by prolonged contact with sulphuric acid; a polymer of chloral.

metachromatic (met"ah-kro-mat'ik). Relating to metachromatism. **m. bodies,** certain granules in bacterial cells which differ in staining properties from the surrounding protoplasm.

metachromatin (met-ah-kro'mă-tin). The basophile constituent of nuclear chromatin.

metachro'matism [G. *meta*, beyond, + *chrōma*, color.] Any color change, whether natural or produced by staining fluids.

metachromophil, metachromophile (met-ah-kro'mo-fil, or fīl) [G. *meta*, beyond, + *chrōma*, color, + *philos*, fond.] Not staining true with a given dye.

metachrosis (met-ă-kro'sis) [G. *meta*, after, + *chrōs*, color, complexion.] A change of color, such as occurs in certain animals, as the chameleon; metachromatism.

metachysis (mĕ-tak'ĭ-sis) [G. *meta* beyond, trans, + *chysis*, a pouring out, fusion.] Transfusion.

metacine'sia [G. *meta*, beyond, + *kinēsis*, movement.] Moving apart, noting the separation of the new cells formed by caryocinesia.

metacœ'lia [G. *meta*, beyond, + *koilia*, a hollow.] The posterior portion of the fourth ventricle of the brain.

metacone (met'ah-kōn) [G. *meta*, behind, + *kōnos*, cone.] The distobuccal cusp of an upper molar tooth.

metaconid (met"ah-kon'id). The mesiolingual cusp of a lower molar tooth.

metaconule (met-ah-kon'ūl). The distal intermediate cusp of an upper molar tooth.

metacre'salol. Metacresylic ester of salicylic acid, obtained by the action of metacresol on salicylic acid; a white insoluble powder employed as a substitute for salol.

metacre'sol. One of the three isomeric cresols, a colorless liquid, boiling at 201° C.

metadysentery (met''ă-dis'en-ter-ĭ). An affection resembling bacillary dysentery, but without pus and blood in the stools; three organisms are responsible for it, viz., *B. ceylonensis* A, *B. ceylonensis* B, and *B. metadysenter'icus.*

metagas'ter [G. *meta*, after, + *gastĕr*, belly.] The secondary and permanent intestinal canal in the embryo, derived from the protogaster.

metagas'trula [G *meta*, over.] A gastrula formed by a cleavage differing from the normal in any way.

metagen (met'ah-jen) [*metabolism* + G. *gennaō*, I produce.] Trade name of a mixture of fat-soluble vitamin A and water-soluble vitamins B and C.

metagen'esis [G. *meta*, beyond, + *genesis*, production.] A modified form of alternate generation in which there are several changes of form from the ovum to the mature typical individual.

metagglu'tinin. Partial agglutinin, an agglutinin in immune serum which acts upon microorganisms closely related to the specific antigen.

Metagonimus (met-ŭ-gon'ĭ-mus) [G. *meta*, over + *gonimos*, productive.] A genus of the family *Hete ophyidæ* or flukes. **M. yokoga'wai,** a species occurring in the small intestine in man and the smaller domestic animals, as well as in certain birds, in Asia.

metagrippal (met-ah-grip'al). Postgrippal, occurring as a sequence of grip, or influenza.

metaicteric (met-ah-ik'ter-ik) Occurring as a sequence of jaundice.

metainfective (met''ah-in-fek'tiv). [G. *meta*, after.] Occurring subsequent to an infection, noting specifically a febrile condition which is sometimes observed during convalescence from an infectious disease.

metakine'sis. Metacinesia.

met'al [G. *metallon*]. One of the electropositive elements, either amphoteric or basylous. **al'kali m.,** one of the members of the sodium group of basylous elements. **colloid'al m.,** electrosol, metallic ferment; a colloidal solution of a metal obtained by passing electric sparks between terminals of the metal through distilled water; it is alleged to exert a profound influence on metabolism when given by subcutaneous injection. **noble m.,** one that cannot be oxidized by heat alone.

metalbu'min. Pseudomucin, paralbumin, a substance found in ovarian cysts and sometimes in the urine.

metal'dehyde. A polymer of acetaldehyde; used as a sedative in dose of gr. 2–8 (0.12–0.5). **metall'ic.** Relating to, composed of, or resembling metal.

metallocy'anide. A compound of cyanogen with a metal forming a radical which combines with hydrogen to form an acid or with a basic element to form a salt.

met'alloid [G. *metallon*, metal, + *eidos*, resemblance.] 1. Resembling a metal. 2. A term formerly applied to sodium and potassium, but now designating a non-metal, one of the acidulous elements.

metallopho'bia [G. *metallon*, metal, + *phobos*, fear.] Morbid fear of metal objects.

metallos'copy [G. *metallon*, metal, + *skopeō*, I examine.] Testing the action of various metals applied to the surface of the body, in certain cases of hysteria.

met"allother'apy [G. *metallon*, metal, + *therapeia*, treatment.] Treatment of various neuroses by the external application of metal discs to the skin.

metaluetic (met'ŭ-lu-et'ik). Metasyphilitic.

metamer (met'ă-mur). One of two or more metameric substances.

metamere (met'ă-mēr) [G. *meta*, beyond, + *meros*, part.] One of a series of homologous segments in the body.

metamer'ic [G. *meta*, after, + *meros*, a part.] 1. Noting isomeric substances having the same percentage composition and the same molecular weight, but differing in chemical constitution. 2. Relating to a metamere or segment of the body. **m. ner'vous sys'tem,** propriospinal nervous system, paleencephalon, the phylogenetically older portion of the cerebrospinal nervous system, comprising the grey matter of the spinal cord.

metam'erid. A metamer.

metam'erism. 1. The condition of metamers or metameric substances. 2. Segmentation of the embryo, resulting in the formation of a series of homologous parts.

metamorphop'sia [G. *meta*, over, + *morphē*, shape, + *opsis*, vision.] A condition in which objects appear distorted in various ways.

metamorphosis (met-ŭ-mor'fo-sis) [G. transformation; *meta*, beyond, over, + *morphē*, form.] 1. A change in form, structure, or function. 2. Degeneration.

metamorphot'ic. Relating to or marked by metamorphosis.

metamyelocyte (met-ŭ-mi'el-o-sīt) [G. *meta*, beyond, after, + *myelocyte*.] A developmental form of the myelocyte, having an oxyphile cell-body with neutrophile granules scattered through its substance.

metaneph'ron, metaneph'ros [G. *meta*, after, + *nephros*, kidney.] The posterior portion of the Wolffian body from which the kidney is derived.

metaneutrophil, metaneutrophile (met-ŭ-nu'tro-fil, or fil) [G. *meta*, beyond, + L. *neuter*, neither, + G. *philos*, fond.] Not staining true with neutral dyes.

metanu'cleus [G. *meta*, after, + L. *nucleus*.] The nucleus of the impregnated ovum after leaving the germinal vesicle.

metapeptone (met''ă-pep'tōn). One of the stages in peptone formation.

met'aphase [G. *meta*, after, + *phasis*, from *phainō*, I appear.] The stage in mitosis embracing the period of the splitting up of the chromosomes.

metaphen (met'ă-fen) [G. *meta*, beyond, + *phenol*.] Trade name of a yellow, odorless, and tasteless substance, biacetoxymercuri-4-intro-2-cresol, insoluble in water, but soluble in dilute aqueous sodium hydroxide solution and in ammonium hydroxide solution, containing from 58 to 60 per cent. of mercury in organic combination; recommended for external use as a powerful germicide in solutions of 1:10,000 to 1:1,000 for application to the skin and mucous membranes.

metaphosphoric acid (met"ŭ-fos-for'ik as'id) [G. *meta*, between, after.] See *phosphoric* acid.*

metaphysis (mĕ-taf'ĭ-sis) [G. *meta*, after, + *physis*, growth.] The extremity of the diaphysis, or shaft, of a long bone where it joins the epiphysis.

metaphysitis (met-ă-fĭ-si'(se')tis). Inflammation of the metaphysis, or line of union of the epiphysis and diaphysis of a long bone.

metaplasia (met-ŭ-pla'zĭ-ah) [G. *metaplasis*, transformation.] 1. The transformation of one tissue into another, as of cartilage into bone; the production of one tissue by cells which normally produce another kind of tissue. 2 Excessive proliferation of cells which are not histologically or functionally important in an organ or tissue

autoparenchy'matous m., m. occurring in the parenchymal cells proper to the tissue.

metap'lasis [G. a transformation.] 1. Haeckel's term for the stage of completed growth or development of the individual. 2. Metaplasia.

met'aplasm [G. *meta*, in the midst of, + *plasma*.] Separated matter, secretions or excretions, such as fatty granules, glycogen, etc., temporarily present within the protoplasm of a cell.

metaplas'tic. Relating to metaplasis or metaplasis.

metaplex'us [G. *meta*, after, + L. *plexus*.] The choroid plexus in the fourth ventricle of the brain.

metapneumonic, (met"ŭ-nu-mon'ik). Occurring after or as a sequel of pneumonia.

metapoph'ysis [G. *meta*, after, + *apophysis*, a process.] The processus* mamillaris.

met'apore [G. *meta*, behind, + *poros*, pore.] Magendie's* foramen.

metaprotein (met-ŭ-pro'te-in) [G. *meta*, after.] A derived protein obtained by the action of acids or alkalies; it is soluble in weak acids or alkalies, but insoluble in neutral solutions. **acid m.,** acid albumin or albuminate, obtained by the action of acid on protein. **al'kali m.,** alkali albumin or albuminate, abtained by the action of an alkali on protein.

metapsyche (met-ŭ-si'ke) [G. *meta*, after, + *psychē*, soul.] Metencephalon or hindbrain.

metapyret'ic [G. *meta*, after, + *pyretos*, fever.] Post-febrile.

metar'gon [G. *meta*, beyond, + *argon*.] An element existing in very minute proportion in the atmosphere.

metastable (met'ŭ-sta-bl) [G. *meta*, over, + L. *stabilis*, stable.] Of uncertain stability, in a condition to pass into another phase when slightly disturbed. Water, for example, when cooled below the freezing point may remain liquid but will at once congeal if a piece of ice is added to it.

metastasis (mĕ-tas'ta-sis) [G. *meta*, in the midst of, + *stasis*, a placing.] 1. The shifting of a disease, or its local manifestations, from one part of the body to another, as is seen in mumps when the symptoms referable to the parotid gland subside and the testis becomes affected. 2. In cancer, the appearance of neoplasms in parts of the body remote from the seat of the primary tumor. 3. Transportation of bacteria from one part of the body to another, through the blood streams (*hematogenous m.*) or through lymph channels (*lymphogenous m.*). **calca'reous m.,** a deposit of bone salts in the kidneys in cases of osteopsathyrosis and other forms of bone softening. **crossed m.,** the passage of any substance from the venous to the arterial circulation without passing through the lungs, as through a persistent ductus arteriosus or foramen ovule. **direct' m.,** transportation in the direction of the blood or lymph stream. **implanta'tion m.,** transportation along a free surface. **m. ad ner'vos,** reflex nervous disturbance. **paradox'ical m.,** (1) crossed m.; (2) retrograde m. **re'trograde m.,** m. occurring in a direction opposed to that of the blood-current. **transplanta'tion m.,** m. from one tissue to another.

metas'tasize. To pass into or invade by metastasis.

metastat'ic. Relating to metastasis.

metaster'num [G. *meta*, after, + *sternon*, sternum]. The xiphoid or ensiform process of the sternum.

Metastrongylus (met-ŭ-stron'jĭ-lus). A genus of nematode worms, containing two species, *M. a'pri* and *M. sal'mi*, the former a parasite in the lungs of the pig, and occasionally found in man.

metasyph'ilis [G. *meta*, after.] 1. The constitutional state due to hereditary or congenital syphilis without local lesions. 2. Parasyphilis.

metasyphilit'ic. 1. Relating to metasyphilis. 2. Following or occurring as a sequel of syphilis. 3. Parasyphilitic.

metatarsal'gia [G. *algos*, pain.] Neuralgia of the metatarsus, especially of the metatarsophalangeal articulation, Morton's disease.

metatarsophalan'geal. Relating to the metatarsal bones and the phalanges, noting the articulations between them.

metatar'sus [G. *meta*, beyond, + *tarsos*, tarsus.] The anterior portion of the foot between the instep and the toes, having as its skeleton the five long bones (*metatarsal bones*) articulating posteriorly with the cuboid and cuneiform bones and anteriorly with the phalanges. **m. atav'icus,** abnormal shortness of the first metatarsal bone as compared with the second, the symptomatology resembling and usually mistaken for that of Morton's neuralgia. **m. la'tus,** spread foot, broad foot, deformity caused by sinking down of the transverse arch of the foot.

metate'la [G. *meta*, behind, + L. *tela*, cloth.] Tela chorioidea ventriculi quarti.

metathal'amus [G. *meta*, after, + *thalamos*, thalamus.] [BNA] The portion of the thalamencephalon which includes the two geniculate bodies.

metath'esis [G. *meta*, over, + *thesis*, a placing.] The transfer of a pathological product from one place to another where it causes less inconvenience or injury, when it is not possible or expedient to remove it from the body.

metathrombin (met-ŭ-throm'bin). An inactive derivative of fibrin ferment formed during the process of contraction of the coagulum.

metatroph'ic [G. *meta*, after, + *trophē*, nourishment] Deriving sustenance from dead organic matter; same as saprophitic when applied to bacteria; see *paratrophic, prototrophic*.

metatyp'ical. Noting a neoplasm formed of the elements of the tissue from which it springs; these occur irregularly, however, and not according to the arrangement typical of the normal tissue.

metax'eny. Metoxeny.

Metazo'a [G. *meta*, after, + *zōon*, animal.] A division of the animal kingdom, including all the multicellular animal organisms in which the cells are differentiated and form tissues; distinguished from the *Protozoa*, or unicellular animal organisms.

metazo'nal [G. *meta*, after, + *zōnē*, girdle, zone.] Behind a sclerozone, usually the pelvic arch or girdle.

Metch'nikoff's the'ory [Elie *Metchnikoff*, Russian biologist at the Pasteur Institute. Paris, 1845–1916.] The phagocytic theory, that the body is protected against infection by the leucocytes and other cells which englobe and destroy the invading microorganisms.

mete'cious, metœ'cious [G. *meta*, beyond, + *oikion*, house.] Heterecious.

met'ecism, met'œcism. Metoxeny, heterecism.*

meten'cephal. Metencephalon.

metencephal'ic. Relating to the metencephalon.

metencephalon (met-en-sef'ă-lon) [G. *meta*, after, + *enkephalos*, brain.] 1. [BNA] Hind-brain, the anterior of the two divisions of the rhombencephalon, or posterior primitive cerebral vesicle; from it are developed the pons and

cerebellum and the pontine part of the fourth ventricle. 2. Cerebellum.

me'teorism [G. *meteōrismos*, a swelling.] Tympanites, distention of the abdomen with gas.

meteorology (me-te-or-ol'o-jĭ) [G. *meteōra*, heavenly bodies, natural phenomena, + *-ology*.] Science relating to the weather.

meteorop'athy [G. *meteōra*, atmospheric conditions, + *pathos*, suffering.] Ill health due to climatic conditions.

meteorotropic (me-te-or-o-trop'ik) [*meteorology*, the science of the weather, + *tropos*, a turning.] Denoting diseases affected in their incidence by the weather.

metepenceph'alon [G. *meta* after, + *epi*, upon, + *enkephalos*, brain.] The myelencephalon, the posterior division of the third cerebral vesicle or rhombencephalon.

me'ter, me'tre [Fr. *mètre;* G. *metron*, measure.] A measure of length; the equivalent of 39.371 inches. **atom m.,** Ångström unit. **m. angle,** the angle made by the visual axes meeting at an object one meter distant.

metergasia (met-ur-gah'sĭ-ah) [G. *meta*, denoting change, + *ergasia*, work.] Change of function.

me'ter-pump. An instrument used in air analysis; the air passes in measured volume through the pump and at each fiftieth stroke one volume is diverted into a special receptacle whence it is drawn for analysis.

methacetin (meth-as'et-in). A white powder very slightly soluble in water, a homologue of acetphenetidin; antipyretic and antineuralgic in doses of gr. 4–8 (0.25–0.5).

meth'aform. Dimethylcarbinolchloroform, occurs as white acicular crystals with a faint odor of camphor, slightly soluble in water; hypnotic and analgesic in doses of gr. 3–8 (0.2–0.5).

meth'anal. Formalin.

meth'ane. Marsh-gas, CH_4; an odorless gas produced by the decomposition of organic matter; it is explosive when mixed with seven or eight volumes of air, constituting then the fire-damp in coal-mines.

methanol (meth'ăn-ŏl). Wood alcohol, methyl alcohol.

Methanomonas[0] (meth-ān-om'o-nas). A genus of the family *Nitrobacteriaceæ*, containing short, uniflagellate, rod-shaped forms, which cause the oxidation of methane, producing carbon dioxide and water.

methemoglobin, methæmoglobin (met-he-mo-glo'bin or meth-e-mo-glo'bin) [G. *meta*, across.] A transformation-product of oxyhemoglobin found in sanguineous effusions and in the circulating blood after poisoning with acetanilid, potassium chlorate, and other substances.

methemoglobinemia, methæmoglobinæmia (met-he-mo-glo-bin-e'mĭ-ah or meth-e-mo-glo-bin-e'mĭ-ah) [G. *haima*, blood.] The presence of methemoglobin in the blood

methemoglobinuria, methæmoglobinuria (met-he-mo-glo-bin-u'rĭ-ah or meth-e-mo-glo-bin-u'rĭ-ah) [G. *ouron*, urine.] The presence of methemoglobin in the urine.

methenamina (meth"ĕn-ă-me'nŭ). (U.S.) Hexamina (Br.) methenamine, hexamethylenamina (U.S. IX.), a condensation product obtained by the action of ammonia upon formaldehyde, $C_6H_{12}N_4$; occurs in the form of odorless lustrous crystals, or a white crystalline powder, soluble at room temperature in 1½ parts of water; urinary antiseptic in doses of gr. 3–10 (0.2–0.6); called also hexamethylene tetramine, formin, ammonioform, urotropin, cystogen, uritone, cystamine, ammonioformaldehyde.

meth'ene. Methylene.

meth'enyl. Formyl.

metheth'yl. A liquid mixture of methyl and ethyl chlorides and chloroform, recommended as a local anesthetic.

meth'od [G. *methodos; meta*, after, + *hodos*, way.] The mode or manner of performing an operation, making a test, etc.

methoma'nia [G. *methē*, strong drink, + *mania*, frenzy.] Dipsomania; a craving for alcohol.

meth'onal. Dimethylsulphone-dimethylmethane, a colorless crystalline powder resembling sulphonal; hypnotic in doses of gr. 20 (1.3).

methoxycaffeine (meth"oks-ĭ-kaf'e-ēn). A white powder, $C_9H_{12}N_4O_3$, slightly soluble in water; antineuralgic in doses of gr. 4 (0.25), and locally anesthetic in doses of ♏15 (1.0) of a 2 per cent. solution hypodermically.

methox'yl. The characterizing group (CH_3OH) of the primary alcohols.

meth'ozine. Antipyrine.

meth'yl [G. *methy*, wine, + *hylē*, wood.] The radical, CH_3, of wood alcohol. **m. acetan'ilid,** exalgin, a derivative of acetanilid, employed as an analgesic in doses of gr. 3–10 (0.2–0.6). **m. al'cohol,** methylic alcohol, pyroxylic spirit, wood alcohol, obtained by the destructive distillation of wood; it is actively poisonous, causing blindness. **m. al'dehyde,** formalin. **m. as'pirin,** m **rhodin. m. ben'zoylsal'icylate,** benzosaline. **m. chlo'ride,** chlormethyl monochlormethane, a liquid formed by compressing a gas obtained by the distillation of methyl alcohol, sulphuric acid, and sodium chloride; employed in spray as a local anesthetic, and as a general anesthetic by inhalation when diluted with ethyl chloride and ethyl bromide. **m. dii"odosal'icylate,** sanoform. **m. ditan'nin,** tannoform. **m. ether,** methyl oxide, æther methylicus, see under *ether*. **m. ethyl ether,** see under *ether*. **m. i'odide,** methylis iodidum, iodomethane, a colorless liquid, boiling at 44° C., obtained by the interreaction of iodine, phosphorus, and methyl alcohol; employed locally as a vesicant in place of cantharides. **m. or'ange,** an indicator which is of pale yellow color in alkaline solutions and faint pink in acid ones. **m. oxide,** m. ether. **m. rho'din,** m. acetyl salicylate, colorless crystals; employed as an antirheumatic and analgesic. **m. sal'icylate,** methylis *salicylas (U.S.), artificial or synthetic oil of wintergreen; employed externally in rheumatism and neuralgia. **m. u'rethane,** urethylane. **m. violet,** a stain employed in histological and bacteriological technique in ½ to 2 per cent. aqueous solution, coloring nuclei and certain bacteria pink.

meth'ylal. Formal, methylenedimethyl ester, obtained by distilling together methyl alcohol, sulphuric acid, water, and manganese dioxide; a colorless liquid of sharp taste and an odor of chloroform; employed as an antispasmodic and hypnotic in doses of gr. 8–30 (0.5–2.0), and as a local anesthetic in 10 per cent. ointment.

methylam'ine. Amidomethane, a gas, CH_3NH_2, resembling ammonia; it is an alkaloid from putrefying fish, and produced artificially from methyl cyanurate.

methylar'sinate. A salt of methylarsinic acid. **so'dium m.,** arrhenal, arsenyl, neoarsycodile.

methylarsin'ic acid. A bivalent organic derivative of arsenic, the sodium salt of which is obtained by treating arsenous acid in an alkaline solution

with methyl iodide; it occurs in the form of white crystalline plates.

meth'ylate. 1. To mix with methyl alcohol. 2. A compound of a base with methyl alcohol.

meth'ylated. Mixed or compounded with methyl alcohol. **m. spirit,** denatured alcohol.

methylat'ropine bro'mide. Atropine methylbromide, a white crystalline powder; employed as a cycloplegic, and internally in doses of gr. $\frac{1}{10}$ (0.006) for night sweats.

methylben'zol. Toluene.

methylben"zoylec'gonine. Cocaine.

methylcre'sol. A cresol derived from creosote

meth'ylene. A hydrocarbon, CH_2, occurring in numerous combinations, but never alone. **m. bichlo'ride,** dichlormethane, a colorless volatile liquid obtained by reducing an alcoholic solution of chloroform by zinc and hydrochloric acid; employed in spray as a local anesthetic and has been used to produce general anesthesia by inhalation. **m. blue,** methylthioninæ chloridum. **m. cit'ryl salicyl'ic ac'id,** novaspirin. **m. hippu'ric acid,** hippol.

methylenophil, methylenophile (meth"il-e'no-fil, or fil) [G. *philos*, fond.] Staining readily with methylene blue, noting certain cells and histological structures.

methylenophil'ic, methylenoph'ilous. Methylenophil.

methylguanidine (meth"il-gwan'i-dēn). A poisonous ptomaine from creatin.

methyl'ic. Relating to methyl.*

meth'ylil. Trade name of an anesthetic mixture of ethyl chloride, methyl chloride, and chloroform.

methylis salicylas (meth'ilis sal-i-sil'as). (U.S., Br.) Methyl salicylate, methyl ester of salicylic acid, oil of wintergreen, produced synthetically or distilled from *Gaultheria procumbens* or from *Betula lenta;* the distilled variety was called in the U.S.P., 1900, oleum gaultheriæ and oleum betulæ; dose, ♏12 (0.73). See *oleum gaultheriæ.*

meth"ylmercap'tan. An intestinal gas arising from the decomposition of proteins.

meth'yl-orthodioxyben'zene. Guaiacol.

methylphenacetin (meth"il-fen-as'ĕ-tin). A colorless crystalline powder obtained by the action of methyl iodide on phenacetin-sodium; hypnotic.

methylprotocatechuic acid (meth"il-pro-to-kat-e-ku'ik as'id). Vanillic acid.

methylpyr'idin sulphocy'anate. An antiseptic substance obtained by treating quinoline with sulphocyanic acid.

meth'yl-pyrocatechin (pi-ro-kat'e-kin). Guaiacol.

methylquin'oline. Lepidine.

methylresor'cinol. Orcin.

methylsulphonal (meth''il-sul'fo-nal) (Br.), diethylsulphonemethylethylmethane, sulphonethylmethane, trional, obtained by the oxidation of the product of the interaction of methyl ethyl ketone and ethyl mercaptan; hypnotic in dose of gr. 5–20 (0.3–1.2).

methylthioni'næ chlo'ridum. (U.S., Br.) Methylthionine chloride, methylene blue, a dark green powder soluble in water; employed in malaria, neuralgia, and inflammatory affections of the urogenital tract in doses of gr. 2–4 (0.13–0.25).

methyluram'ine. Methylguanidine.

methylu'rethane. Urethylane.

methylxanthine (meth-il-zan'thin). Heteroxanthine.

methys'ticum [G. *methystikos*, intoxicating.] Kava or kava-kava, the root of *Macropiper latifolium*, a plant of the Pacific islands, used by the natives as an intoxicant; has been employed in diarrhea and in inflammatory affections of the urogenital tract, in doses of ♏10–60 (0.6–4.0) of the N.F fluidextract of kava.

metop'agus [G. *metōpon*, forehead, + *pagos*, fixed.] A twin monster joined at the forehead.

metopantral'gia [G. *metōpon*, forehead, + *antron*, cavity, + *algos*, pain.] Pain in a frontal sinus.

metopantritis (met"o-pan-tri'(tre')tis) [G. *metōpon*, forehead, + *antron*, cavity, + *-itis*.] Inflammation in a frontal sinus.

meto'pic [G. *metōpon*, forehead.] Relating to the forehead or anterior portion of the cranium, frontal. **m. point,** metopion. **m. suture,** frontal suture, the suture between the two halves of the frontal bone in the newborn.

meto'pion [G. *metōpon*, forehead.] A craniometric point midway between the frontal eminences.

met'opism. The persistence of the frontal suture in the adult.

metopodyn'ia [G *metōpon*, forehead, + *odynē*, pain] Frontal headache.

meto'pon [G. forehead.] The anterior portion of the frontal lobe of the brain.

met'opoplasty [G. *metōpon*, forehead, + *plassō*, I form.] Reparative surgery of the skin or bone of the forehead.

metopos'copy [G. *metōpon*, forehead, + *skopeō*, I view.] The study of physiognomy

Metorchis (met-or'kis) [G. *meta*, behind, + *orchis*, testicle.] A genus of flukes, one species of which, *M. trunca'tus*, occurring in cats and dogs, has occasionally been found in man.

metox'enous [G. *meta*, beyond, + *xenos*, host.] Noting a parasite with two cycles of existence passed on different hosts.

metox'eny [G. *meta*, beyond, + *xenos*, host.] 1. Heterecism. 2. Change of host by a parasite

me'tra [G.] Uterus.

metral'gia [G. *mētra*, uterus, + *algos*, pain.] Uterine neuralgia.

metram'ine. Hexamethylenamine.

metrane'mia, metranæ'mia [G. *mētra*, uterus, + *an-* priv. + *haima*, blood] Local anemia of the uterus.

metranoicter (me-trā-noyk'tur) [G. *mētra*, womb + *anoigō*, I open.] An instrument by which dilatation of the os uteri is effected by means of two or four blades or branches passed into the os and then separated.

metrapectic (me-trah-pek'tik) [G. *mētēr*, mother, + *apechō*, I avoid.] Noting that form of inheritance in which the disease is transmitted chiefly or wholly through the mother who herself remains free, as is seen in hemophilia.

me'tratome [G. *mētra*, uterus, + *tomē*, incision.] An instrument used in hysterotomy.

metrat'omy. Hysterotomy.

metrato'nia [G. *mētra*, uterus, + *a-* priv. + *tonos*, tension.] Atony of the uterine walls after childbirth.

metrauxe (me-trawk'se) [G. *mētra*, uterus, + *auxē*, increase.] Hypertrophy of the uterus.

metrazol (mĕ'tra-zol). Cardiazol.

metre (me'ter). Meter.

metrec'tomy [G. *mētra*, uterus, + *ektomē*, excision] Hysterectomy.

metrecto'pia, metrec'topy [G. *mētra*, uterus, + *ektopos*, out of place.] Displacement of the uterus.

metreurynter (me-tru-rin'tur) [G. *mētra*, womb, + *eurynō*, I dilate.] A collapsible bag which is introduced within the os uteri and distended with air or water in order to dilate the cervix.

metreurysis (me-tru'ri-sis). Dilatation of the cervix uteri.

me'tria [G. *mētra*, womb.] Pelvic cellulitis or other inflammatory affection in the puerperal period.

met'ric [G. *metron*, measure.] Relating to measurement, quantitative. **m. sys'tem**, a system of weights and measures, based upon the meter as a unit. It is the universal system for scientific use and is employed commercially in most countries except those of English-speaking people; it is legalized in the United States and allowable in England. The unit, the meter, is one ten-millionth of a quadrant of the earth's meridian, the equivalent of 39.371 inches. Fractions of a meter are expressed in Latin numerals: decimeter, $\frac{1}{10}$; centimeter, $\frac{1}{100}$; millimeter, $\frac{1}{1000}$; multiples in Greek numerals: decameter, 10; hectometer, 100; kilometer 1000. The unit of weight is the gram which is the weight of one cubic centimeter of distilled water, equivalent to 15.432+ grains. The unit of volume is the liter or one cubic decimeter, equal to 1.056 quarts; a cubic centimeter is about 15 minims.

metriocephalic (met"rĭ-o-se-fal'ik) [G. *metrios*, moderate, + *kephalē*, head.] Having a well proportioned head as regards height. Noting a skull with an index between 72 and 77. Similar to orthocephalic.

metritis (me-tri'(tre')tis) [G. *mētra*, womb, + *-itis*.] Inflammation of the uterus.

me'trocarcino'ma [G. *mētra*, uterus.] Carcinoma of the uterus.

metrocele (me'tro-sēl) [G. *mētra*, uterus, + *kēlē*, hernia.] Hernia of the uterus.

me'troclyst [*mētra*, uterus, + *klystēr*, injection.] A uterine irrigator.

metrocolpocele (me-tro-kol'po-sēl) [G. *mētra*, uterus, + *kolpos*, sinus (vagina), + *kēlē*, hernia.] Prolapse of the uterus.

metrocysto'sis [G. *mētra*, uterus, + *kystis*, cyst.] The formation of uterine cysts.

metrocyte (me'tro-sīt) [G. *mētēr*, mother, + *kytos*, cell.] A mother cell.

metrodyn'ia [G. *mētrē*, uterus, + *odynē*, pain.] Metralgia.

metrofibro'ma [G. *mētra*, uterus.] A fibroma of the uterus.

metrology (me-trol'o-jĭ) [G. *metron*, measure, + *-logia*.] The science of measurement.

metrolymphangitis (me"tro-lim-fan-jī'(je')tis) [G. *mētra*, uterus, + L. *lympha*, lymph, + G. *angeion*, vessel, + *-itis*.] Inflammation of the uterine lymphatics.

metromala'cia [G. *mētra*, uterus, + *malakia*, softness.] Pathological softening of the uterine tissues.

metromalaco'sis. Metromalacia.

metromania (met"ro-ma'nĭ-ah) [G. *metron*, measure, + *mania*, frenzy.] Insanity marked by an incessant writing of verses.

metromania (me"tro-ma'nĭ-ah) [*mētra*, uterus, + *mania*, frenzy.] Insanity associated with uterine disease.

metroneuria (me-tro-nu'rĭ-ah) [G. *mētra*, uterus, + *neuron*, nerve.] A neurosis of the uterus.

metroparalysis (me-tro-par-al'ĭ-sis) [G. *mētra*, uterus, + *paralysis*.] Flaccidity or paralysis of the uterine muscle during or immediately after childbirth.

metropathic (me-tro-path'ik) [G. *mētra*, uterus, + *pathos*, suffering.] Relating to or caused by uterine disease.

metropathy (me-trop'ă-thĭ) [G. *mētra*, uterus, + *pathos*, suffering.] Any disease of the uterus.

metroperitonitis (me-tro-pĕr-ĭ-ton-ī'(e')tis) [G. *mētra*, uterus, + *peritonaion*, peritoneum, + *-itis*.] 1. Inflammation of the uterus with its peritoneal covering. 2. Perimetritis, inflammation of the peritoneum covering the fundus uteri.

metrophlebitis (me-tro-flĕ-bī'(be')tis) [G. *mētra*, uterus, + *phleps* (*phleb-*), vein, + *-itis*.] Inflammation of the uterine veins following childbirth.

metroptosia, metroptosis (me-trop-to'sĭ-ah, me-trop-to'sis) [G. *mētra*, uterus, + *ptōsis*, a falling.] Falling or prolapse of the uterus.

metrorrha'gia [G. *mētra*, uterus, + *rhēgnymi*, I burst forth.] Hemorrhage from the uterus. **m. myopath'ica**, post-partum hemorrhage due to flaccidity of the uterine muscle.

metrorrhe'a, metrorrhœ'a [G. *mētra*, uterus, + *rhoia*, a flow.] A discharge of mucus or pus from the uterus.

metrorrhex'is [G. *mētra*, uterus, + *rhēxis*, rupture.] Rupture of the uterus.

me"trortho'sis [G. *mētra*, uterus, + *orthōsis*, a making straight.] The correction of a displacement of the uterus.

metrosalpingitis (me-tro-sal-pin-jī'(je')tis) [G. *mētra*, uterus, + *salpinx*, trumpet (oviduct), + *-itis*.] Inflammation of the uterus and of one or both Fallopian tubes.

metrosalpingography (me-tro-sal-pin-gog'ră-fĭ) [G. *metra*, womb, + *salpinx*, tube, + *graphō*, I write.] X-ray examination of the uterus and one or both Fallopian tubes.

metroscirrhus (me-tro-skir'(sir')us) [G. *mētra*, uterus, + *skirrhos*, a hard tumor.] A scirrhous cancer of the uterus.

me'troscope [G. *mētra*, uterus, + *skōpeō*, I view.] An endoscope for examination of the uterine cavity.

me"trostax'is [G. *mētra*, uterus, + *staxis*, a trickling.] A dripping of blood from the uterine mucous membrane, a small but continuous uterine hemorrhage.

me"trosteno'sis [G. *mētra*, uterus, + *stenōsis*, contraction.] A narrowing of the uterine cavity.

metrosteresis (me"tro-stĕ-re'sis) [G. *mētra*, uterus, + *sterēsis*, loss.] Hysterectomy, metrectomy.

me'trotome. A knife employed in metrotomy.

metrotomy (me-trot'o-mĭ) [G. *mētra*, uterus, + *tomē*, incision.] 1. Hysterectomy. 2. Incision into the cervix uteri.

metrotox'in. An assumed inhibitory hormone, formed in the pregnant uterus, which arrests ovulation.

metrourethrotome (met'ro-u-re'thro-tōm) [G. *metron*, measure, + *ourēthra*, urethra, + *tomos*, cutting.] A form of urethrotome in which, by means of a screw attachment, the exact extent of division of the urethra can be regulated.

metrypercinesia (me-tri"pur-sin-e'sĭ-ah) [G. *mētra*, uterus, + *hyper*, overmuch, + *kinēsis*, movement.] Excessive labor pains.

metryperemia, metryperæmia (me-tri"pur-e'mĭ-ah) [G. *mētra*, uterus, + *hyper*, overmuch, + *haima*, blood.] Hyperemia of the uterus.

metryperesthesia, metryperæsthesia (me-tri"per-es-the'sĭ-ah) [G. *mētra*, uterus, + *hyper*, overmuch, + *aisthēsis*, sensation.] Extreme sensitiveness or hyperesthesia of the uterus.

metryperkine'sis. Metrypercinesia.

metrypertro'phia [G. *mētra*, uterus, + *hyper*, overmuch, + *trophē*, nourishment.] Hypertrophy of the uterus.

M. et sig. Abbreviation for L. *misce et signa*, mix and write, or label.

Mett's test [Emil Ludwig Paul *Mett*, German physician, 19th century.] A quantitative test for pepsin made by introducing tubes of coagulated albumin into the stomach and observing the amount of digestion occurring in a definite time.

Meunier's sign (më-ne-a'). A loss of weight in the incubation period of measles.

Mey'er's disease' [Georg Hermann *Meyer*, German anatomist, 1815–1892.] Adenoid vegetations. **M.'s line,** a line extending from the middle of the body of the third sacral vertebra to a point midway between the two anterior superior iliac spines. **M.'s or'gan,** a collection of glands and mucous folds at the upper portion of the border of the tongue, found especially in certain of the lower animals. **M.'s si'nus,** a small concavity in the floor of the external auditory canal near the membrana tympani.

Meyer's rea'gent (mi'erz re-a'jent). A solution of phenolphthalin 0.032, in decinormal sodium hydroxide, 21, with water (distilled from glass) sufficient to make 100; in the presence of minute traces of blood the solution assumes a purplish red color

Meyer's the'ory (mi'er) [Adolf *Meyer*, American psychiatrist, *1866.] The theory that dementi præcox is of psychogenic origin, functional rather than organic.

Meynert's bun'dle (mi'nert) [Theodor *Meynert*, Viennese anatomist, 1833–1892.] Fasciculus retroflexus. **M.'s cells,** solitary pyramidal cells found in the cortex in the region of the calcarine fissure. **M.'s com'missure,** commissura superior. **M.'s fascic'ulus,** M.'s bundle. **M.'s lay'er,** the third layer, of pyramidal cells, of the cerebral cortex.

Meynet's nodos'ities (ma-na') [Paul Claude Hyacinthe *Meynet*, French physician, 1831–1892. Small movable, subcutaneous, connective-tissue nodules, formed at times in the neighborhood of the affected joints in acute articular rheumatism.

meze'reon. Mezereum.

meze'reum [Ar. *māzariyūn*, camellia.] (N.F.) The bark of *Daphne mezereum*, wild pepper, spurge-flax, dwarf bay; employed in the treatment of rheumatism and syphilis in doses of gr. 5–10 (0.3–0.6).

Mg. Chemical symbol of *magnesium*.

MgO. Magnesia, calcined magnesia.

$MgSO_4$. Magnesium sulphate, Epsom salt.

mho (mo) [*ohm* reversed.] The unit of electrical conductivity, the conductivity of a body having the resistance of one ohm.

mi'asm, mias'ma [G. *miasma*, stain.] 1. Noxious effluvia or emanations, formerly regarded as the cause of malaria and of various epidemic diseases 2. Hahnemann's term for the infectious principle, or virus, which, when taken into the organism may set up a specific disease.

miasmat'ic. Relating to or caused by miasma

miasmat'ic-conta'gious. A term formerly applied to yellow fever and other diseases which appeared to be both contagious and transportable in miasms.

Mibelli's disease' (me-bel'le) [Vittorio *Mibelli*, Italian dermatologist, 1860–1910.] Porokeratosis.

mi'ca pa'nis [L.] Bread crumb, the soft part of a loaf of bread.

micel'la [L. dim. of *mica*, a crumb.] 1. Nageli's term for one of the ultramicroscopic units of living matter formed of aggregations of molecules; tagma. 2. One of the fine particles held in suspension in colloids.

micracoustic (mi-kră-kus'tik) [G. *mikros*, small, + *akoustikos*, relating to hearing.] 1. Relating to faint sounds. 2. Magnifying very faint sounds so as to make them audible.

micranatomy (mi-kran-at'o-mi) [G. *mikros*, small, + *anatomia*.] Microscopical anatomy, histology.

micrencepha'lia [G. *mikros*, small, + *enkephalos*, brain.] A condition in which the brain is abnormally small in size.

micrencephalon (mi-kren-sef'ă-lon) [G. *mikros* small, + *enkephalos*, brain.] The cerebellum.

micrenceph'alous. Having a small brain.

micro- [G. *mikros*, small.] A prefix noting smallness. (1) When prefixed to a term denoting a unit of any kind it denotes the one-millionth of such unit (the term *micromillimeter* is an exception, or rather is incorrect); (2) applied to words noting chemical examination, methods, etc., it means that minimal quantities of the substance to be examined are used—a drop or two, for example, in place of one or more cubic centimeters; see *Bang's* method*.

microadenopathy (mi-kro-ad'e-no-path-ĭ). Noting a slight enlargement of the small cervical lymphatics.

microaerophile, microaerophilic, microaerophilous (mi-cro-a'er-o-fīl, -a-er-o-fil'ik, -a-er-of'ĭ-lus) [G. *mikros*, small, + *aēr*, air, + *philos*, fond.] Noting microorganisms which need only, or grow best in, a medium with low oxygen content.

microanatomist (mi-kro-an-at'o-mist). Histologist.

microbacte'rium [G *mikros*, small.] A bacterium of very minute size.

microbe (mi'krōb) [G. *mikros*, small, + *bios*, life.] A minute one-celled individual, either animal or vegetable; microorganism.

microbe'mia, microbæ'mia [*microbion* + *haima*, blood.] The presence of microorganisms in the peripheral blood, microbiohemia.

micro'bial, micro'bian. Relating to a microbe or microbes.

micro'bic. Microbial, microbian.

microbicidal (mi-kro-bī-sī'dal) [*microbion* + L. *cædere*, to kill.] Destructive to microbes, microbicide, germicidal, antiseptic.

microbicide (mi-kro'bī-sīd). 1. Microbicidal. 2. An agent which is destructive to microbes, a germicide, an antiseptic.

microbicidin (mi-kro-bis'ĭ-din). Microsidin.

microbiohe'mia, microbiohæ'mia. Microbemia.

microbiological (mi-kro-bī-o-loj'ĭ-kal.) Relating to microbiology.

microbiol'ogist. An adept in microbiology; a bacteriologist or a protozoologist, or both.

microbiol'ogy [G. *mikros*, small, + *bios*, life, + *-logia*.] The science of microorganisms; biology in relation to unicellular organisms.

micro'bion. Microbe.

micro"biopho'bia [*microbion* + G. *phobos*, fear.] A morbid and exaggerated fear of microorganisms, or germs.

microbiosis (mi"kro-bi-o'sis). 1. Infection with microbes. 2. Shortness of life.

microbiot'ic. 1. Short-lived. 2. Microbic.

mi'crobism. Infection with microbes. **latent m.,** the presence of pathogenic microorganisms in the body, which give rise to no symptoms; the condition of a bacilli-carrier.

mi'croblast [G. *mikros*, small, + *blastos*, sprout, germ.] A small nucleated red blood-corpuscle.

microbleph'arism, microbleph'aron [G. *mikros*, small, + *blepharon*, eyelid.] Abnormal smallness of the eyelids.

microbrachia (mi-kro-bra'kĭ-ah) [G. *mikros*, small, + *brachion*, arm.] Abnormal smallness of the arms.

microbrachius (mi-kro-bra'kĭ-us). A monster with rudimentary arms.

microbrenner [G. *mikros*, small, + Ger. *brenner*, burner.] An electric cautery with needle point.

microcalorie, microcalory (mi-kro-kal'o-rĭ) [G. *mikros*, small, + L. *calor*, heat.] A heat unit, noting the heat necessary to raise 1 gram of distilled water from 0° to 1° C.

microcar'dia [G. *mikros*, small, + *kardia*, heart. Abnormally small size of the heart.

microcar'dius [G. *mikros*, small, + *kardia*, heart.] A monster with abnormally small heart.

microcen'trum [G. *mikros*, small, + *kentron*, center.] Micronucleus, cinetonucleus.

microcepha'lia [G. *mikros*, small, + *kephalē*, head.] Abnormal smallness of the head, microcephaly, microcephalism.

microcephalic (mi-kro-sĕ-fal'ik) [G. *mikros*, small, + *kephalē*, head.] Having a small head, microcephalous. Noting a skull with a capacity below 1350 c.c., or an individual having such a skull. Among the microcephalic races are the Australians, Bushmen, and Tasmanians.

microceph'alism. Microcebhaly.

microceph'alous. Having a small head, microcephalic.

microceph'aly. Microcephalia, smallness of the head.

microceph'alus. 1. One with an abnormally small head. 2. A monster with rudimentary or imperfectly developed head.

microchemical (mi-kro-kem'ĭ-kal). Relating to microchemistry.

microchemistry (mi-kro-kem'is-trĭ) [G. *mikros*, small.] The chemistry of microscopic objects, the observation of chemical reactions occurring under the microscope.

microcidin (mi-kros'ĭ-din). Trade name of a preparation of sodium naphthol, or betanaphthol sodium, a grayish powder soluble in water; employed as an antiseptic wash in 1 to 5 per cent. solution.

microclyster (mi'kro-klis-tur) [G. *mikros*, small, + *klystēr*, enema.] A very small rectal injection, such as a teaspoonful or two of glycerin.

Micrococceae[0] (mi-kro-kok'se-e). A tribe of the family *Coccaceae*, containing the genera *Staphylococcus*, *Micrococcus*, *Sarcina*, and *Rhodococcus*.

Micrococcus (mi-kro-kok'us) [G. *mikros*, small, + *kokkos*, berry.] A genus of the family *Coccaceæ*, containing gram-positive, non-flagellated spherical cells, some aerobic others anaerobic, occurring singly, in pairs, or in clumps; some of the species produce a yellowish pigment. The limits of the genus are not strictly defined, the term as commonly employed denoting any coccus or spherical schizomycete. **M. ascofor'mans,** an organism, aggregations of which form Bollinger's granules occurring in botriomycosis; it is probably a variety of *Staph. aureus*. **M. bucca'lis,**[0] a small, anaerobic, gram-negative, non-pathogenic coccus, found in the mouth. **M. capri'nus,**[0] a species said to be the cause of a wasting disease (tecosis) in goats. **M. caseolyt'icus,**[0] aerobic, gram-positive cocci of variable size, occurring in groups, found in cheese and various milk products, and also on the udders of cows. **M. catarrha'lis,** *Neisseria catarrhalis*.[0] **M. cereus,**[0] *Staph. cereus flavus*, a species found occasionally in pus, forming smooth, light yellow colonies; apparently non-pathogenic. **M. endocardit'idis ruga'tus,** a species, presumably pathogenic, found in cases of ulcerative endocarditis. **M. fœt'idus,** a species found in carious teeth and in certain cases of fetid pharyngitis. **M. gingi'væ pyog'enes,** a species of non-motile diplococci (sometimes single) found in cases of alveolar abscess. **M. gonorrhœ'æ,** *Neisseria gonorrhœæ*.[0] **M. intracellula'ris meningit'idis,** *Neisseria meningitidis*.[0] **M. lanceola'tus,** *Diplococcus pneumoniæ*.[0] **M. leucochromag'enes,** a bacterium found among the intestinal flora of residents in the tropics. **M. loewenberg'ii,** a probably pathogenic species found in certain cases of ozena. **M. lute'olus,**[0] small cocci, occurring singly, in pairs, or in clumps, aerobic, gram-positive, found in cheese. **M. lu'teus,**[0] a gram-positive, non-motile coccus, forming light yellow colonies with undulate margins, occurring usually in air and water; the type species of the genus, non-pathogenic. **M. meliten'sis,** *Alkaligenes* (*Brucella*) *melitensis*.[0] **M. neofor'mans,** a diplococcus claimed by Doyen to be pathogenic for cancer. **M. oxycyano'genes,** an intestinal bacterium producing a blue pigment through absorption of oxygen, found in residents of the tropics. **M. parameliten'sis,** an organism resembling *M. melitensis*, and possibly only a strain of this, said to cause para-undulant fever. **M. paratetrag'enus,** a coccus of variable size, often present in the nasal cavities, and thought to be an occasional cause of acute coryza. **M. pasteur'i,** *Diplococcus pneumoniæ*. **M. phosphores'cens,**[0] large, gram-positive, phosphorescent, single cocci, found on stored or market meats, exposed to the air but not spoiled. **M. syzyg'ios,**[0] gram-negative, microaerophilic paired cocci, found in the throat in scarlatina and are agglutinated by the serum of persons immune to that disease. **M. tetrag'enus,** *Gaffkya tetragena*.[0] a small, gram-positive, encapsulated coccus, dividing in two planes, thus forming tetrads; found on the respiratory mucous membranes, has been isolated from the sputum in tuberculosis, and is an occasional cause of pseudomembranous angina and of septicemia in man; is pathogenic for mice and certain laboratory animals. **M. ure'æ,**[0] gram-positive, aerobic spherical organisms occurring singly or in pairs; found in stale urine. **M. zymog'enes,** a small coccus, of uncertain pathogenicity, found in acute valvular endocarditis.

microconidium (mi-kro-ko-nid'ĭ-um). A conidium, or exospore, of less than average size, in certain fungi.

microcor'nea [G. *mikros*, small.] A condition in which the cornea is thinner and flatter than normal.

mi'crocosm [G. *mikros*, small, + *kosmos*, world.] Anything regarded as an epitome of the world or universe, a term sometimes applied to man.

microcos'mic. Relating to anything termed a microcosm. **m. salt,** sodium and ammonium phosphate, originally obtained from human urine, employed as a flux.

microcoulomb (mi-kro-koo'lom). An electrical microunit of quantity, the one-millionth of a coulomb.

microcoustic (mi-kro-koo'stik). Micracoustic.

mi'crocrith [G. *mikros*, small, + *krithē*, barleycorn.] A chemical unit of weight, that of an atom of hydrogen.

microcrys'talline [G. *mikros*, small.] Occurring in minute crystals.

microcurie (mi″kro-ku′re). A measure of radium emanation, one millionth of a curie;* the equivalent of 2,670 Mache* units.

mi′crocyst [G. *mikros*, small.] A small cyst.

microcy′tase. According to Metchnikoff, a cytase or complement, formed by the multinuclear leucocytes, which acts on bacteria.

mi′crocyte [G. *mikros*, small, + *kytos*, cell.] 1. A small (5 μ or less) non-nucleated red blood-corpuscle, showing evidences of degeneration. 2. A multinuclear leucocyte.

microcythe′mia, microcythæ′mia [G. *mikros*, small, + *kytos*, cell, + *haima*, blood.] The presence in the blood of many microcytes, or small red blood-corpuscles.

microcyto′sis. Microcythemia

microdactyl′ia [G. *mikros*, small, + *daktylos*, finger, toe.] Smallness or shortness of the fingers or toes.

microdac′tylous. Relating to microdactylia, having short or small fingers or toes.

microden′tism [G. *mikros*, small, + L. *dens*(*dent-*), tooth.] Smallness of the teeth.

microdetermination (mi′kro-de-tur-mĭ-na′shun). See *micro-* (2).

mi″crodissec′tion. Dissection of tissues under a microscope or magnifying glass, usually done by teasing the tissues apart by means of needles

mi′crodont [G. *mikros*, small, + *odous*(*odont-*), tooth.] Having small teeth. Noting a skull with a dental index below 42.

microestimation (mi″kro-es-ti-ma′shun). See *micro-* (2).

microfar′ad [G. *mikros*, small, + *farad*.] A micro-unit of electrical capacity, the millionth part of a farad.

microfila′ria. A term suggested by Le Dantes to designate the larval form of a filaria circulating in the blood or present in the body cavity or tissues of the insect vector.

microgamete (mi-kro-gam′ēt) [G. *mikros*, small, + *gametēs*, husband.] The male element in anisogamy, or conjugation of cells of unequal size; it is the smaller of the two cells and actively motile.

microgametocyte (mi-kro-gam′e-to-sīt) [*microgamete* + G. *kytos*, cell.] The mother-cell producing the microgametes, or male elements of sexual reproduction in *Protozoa*.

microg′amy [G. *mikros*, small, + *gamos*, marriage.] Conjugation between two young cells the recent product of sporulation or some other form of reproduction.

microgas′tria [G. *mikros*, small, + *gastēr*, stomach.] Smallness of the stomach.

microglia (mi-krog′lĭ-ă). Neurogliar tissue containing spider cells.

microgliacyte (mi-kro-gli′ă-sīt) [C. *micros*, small, + *glia*, glue, + *kytos*, cell.] A cell, especially an embryonic cell, of the neuroglia.

microgloss′ia [G. *mikros*, small, + *glōssa*, tongue.] Smallness of the tongue.

micrognathia (mi-krog-nath′ī-ah) [G. *mikros*, small, + *gnathos*, jaw.] Smallness of the jaws, especially of the underjaw.

microgonid′ium [G. *mikros*, small.] A gonidium, or chlorophyll element of a lichen, below the average size.

mi′crogram [G. *mikros*, small.] The millionth part of a gram, equivalent to about $\frac{1}{65000}$ grain.

mi′crograph [G. *mikros*, small, + *graphō*, I write.] An instrument which magnifies the microscopic movements of a diaphragm by means of light interference and records them on a moving photographic film; it may be used for recording various pulse curves sound waves, and any forms of motion which may be communicated through the air to a diaphragm.

microg′raphy [G. *mikros*, small, + *graphō*, I write.] 1. Writing with very minute letters, sometimes observed in the insane. 2. A description of microscopic objects; a treatise on histology.

microgyria (mi-kro-ji′rī-ah) [G. *mikros*, small, + *gyros*, convolution.] Abnormal narrowness of the cerebral convolutions.

microhepatia (mi-kro-hĕ-pah′tĭ-ah) [G. *mikros*, small, + *hepar*(*hepat-*), liver.] Abnormal smallness of the liver.

microhm (mi′krōm). A microunit of electrical resistance, the millionth of an ohm.

microleucoblast (mi-kro-lu′ko-blast). Micromyeloblast, myeloblast.*

microliter (mi′kro-le-ter) The millionth part of a liter, about $\frac{1}{70}$ drop.

microlith (mi′kro-lith) [G. *mikros*, small, + *lithos*, stone.] A minute calculus, usually multiple and them constituting a coarse sand and called gravel.

microlithiasis (mi-kro-lĭ-thi′ă-sis) [G. *mikros*, small, + *lithos*, stone, + *-iasis*.] The formation, presence, or discharge of minute concretions, or gravel.

micrology (mi-krol′o-jĭ) [G. *mikros*, small + *-ology*.] The science of microscopic objects, of which histology is a branch.

micromania (mi-kro-ma′nĭ-ah) [G. *mikros*, small, + *mania*, frenzy.] A delusion of self-depreciation, or that one's own body is of minute size.

microma′zia [G. *mikros*, small, + *mazos*, breast.] Condition in which the breasts are rudimentary and functionless.

micromeg′aly [G. *mikros*, small, + *megas*(*megal-*), large.] Progeria.

microme′lia [G. *mikros*, small, + *melos*, limb.] Achondroplasia.

microm′elus [G. *mikros*, small, + *melos*, limb.] A monster with rudimentary limbs.

microme′ria. Yerba buena, the leaves of a California plant *Micromeria douglasii;* carminative and anthelmintic in doses of ʒ½–2 (2 0–8 0) of a fluidextract.

micromerozo′ite [G. *mikros*, small, + *merozoite*.] A small merozoite.

microm′eter [G. *mikros*, small, + *metron*, measure.] A device for measuring objects under the microscope.

mi′crometer. The millionth part of a meter, micron; usually called, incorrectly, micromillimeter; its sign is the Greek m, μ.

micromethod (mi″kro-meth′od). See *micro-* (2).

microm′etry. Measurement of objects seen under the microscope.

micromicron (mi-kro-mi′kron). The millionth of a micron, or a meter × 10^{-12}; commonly but incorrectly, used to denote the millionth of a millimeter, or thousandth of a micron, micromillimeter (1); expressed by the Greek letters μμ.

micromill′imeter [G. *mikros*, small.] 1. The millionth part of a millimeter. 2. Incorrectly, but commonly, the thousandth part of a millimeter, or micron; sign, μ.

micromo′toscope [G. *mikros*, small, + L. *motus*, motion, + G. *skopeō*, I view.] A cinematoscope for representing the movements of amebas and other motile microscopic objects.

micromy′ces [G *mikros*, small, + *mykēs*, fungus.] A microscopic fungus, bacterium.

micromyelia (mi″kro-mi-e′lĭ-ah) [G. *mikros*, small, + *myelos*, marrow.] Abnormal smallness or shortness of the spinal cord.

micromyeloblast (mi-kro-mi'el-o-blast). Leucoblast, myeloblast.*

micromyelolymphocyte (mi"kro-mi"el-o-lim'fo-sīt) [G. *mikros*, small, + *myelos*, marrow, + L. *lympha*, lymph, + G. *kyots*, cell.] Myeloblast.

mi'cron [G. *mikros*, small.] 1. The millionth of a meter or thousandth of a millimeter, micromillimeter (2); expressed by the Greek letter μ, properly placed above the line, μ.

micron, microne (mi'kron, mi'krōn). A colloid particle visible under the microscope; distinguished from *hypomicrone* or *submicrone* and *amicrone*.

micronucleus (mi-kro-nu'kle-us) [G. *mikros*, small.] 1. A small nucleus in a large cell. 2. Specifically, the smaller of the two nuclei in infusoria, dividing mitotically, containing the specific inheritable germ substance; germ nucleus, gonad nucleus, caryogonad. See *macronucleus*.

microorganic (mi"-kro-or-gan'ik). Relating to a microorganism.

microorganisms, (mi"kro-or'gan-izmz) [G. *mikros*, small.] Microscopic plants or animals, Schizeomycetes, bacteria, Hyphomycetes or moulds, Blastomycetes, virus (?), and protozoa.

micropar'asite. A parasitic microorganism.

micropathol'ogy [G. *mikros*, small, + *pathos*, suffering, + *-logia*.] 1. Morbid histology, the study of the microscopic changes in tissues and cells associated with disease. 2. Bacteriology and protozoology in their relation to disease.

microphe'nis [G. *mikros*, small.] Microphallus.

microphag, microphage (mi'kro-fag, mi'kro-fāj) [G. *mikros*, small, + *phag(ocyte)*.] A polymorphonuclear leucocyte, ameboid, and actively phagocytic especially for bacteria.

microphag'ocyte. Microphag.

microphallus (mi-kro-fal'us) [G. *mikros*, small, + *phallos*, penis.] Smallness of the penis, micropenis.

microphe'bia. Microbiophobia.

mi'crophone [G. *mikros*, small, + *phōnē*, sound.] An instrument for magnifying sounds.

microphe'nia, microphā'ony [G. *mikros*, small, + *phōnē*, voice.] Weakness of voice.

microphe'noscope. A stethoscope with a diaphragm attachment for magnifying the sound.

microphe'tograph. A minute photograph of a macroscopic object; to be distinguished from *photomicrograph* which is an enlarged photograph of a microscopic object.

microphthal'mia, microphthal'mos [G. *mikros*, small, + *ophthalmos*, eye.] The presence of one or both eyeballs of abnormally small size.

microphthal'mus. 1. Microphthalmia. 2. A person with small eyes.

microphyte (mi'kro-fīt) [G. *mikros*, small, + *phyton*, plant.] A microscopic plant, bacterium.

micropla'sia [G. *mikros*, small, + *plasis*, shaping, forming.] Dwarfism, stunted growth.

mi"croprecipita'tion test. See under *test*.

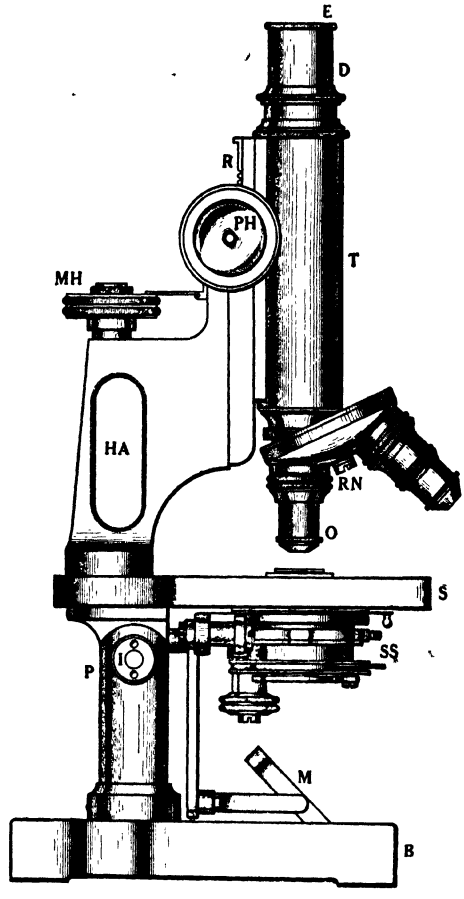
micropromyelocyte (mi-kro-pro-mi'el-o-sīt). A cell derived from a promyelocyte.

microproso'pus [G. *mikros*, small, + *prosōpon*, face.] A monster with abnormally small or imperfectly developed face.

microp'sia [G. *mikros*, small, + *opsis*, sight.] The subjective perception of objects as smaller than they actually are.

micropsychia (mi-krop-si'kī-ah, mi-kro-si'kī-ah) [G. *mikros*, small, + *psychē*, mind.] Congenital mental weakness, imbecility.

mi'cropus [G. *mikros*, small, + *pous*, foot.] A person with very small feet.



COMPOUND MICROSCOPE: E, Eyepiece; D, draw-tube; T body-tube; RN, revolving nose-piece; O, objective, PH, pinion head; MH, micrometer head; HA, handle arm; S, stage; SS, substage, M, mirror; B, base; R, rack, P, pillar; I, inclination joint

micropyle (mi'kro-pīl) [G. *mikros*, small, + *pylē*, gate.] 1. The mark on an ovum at its previous point of attachment to the ovary. 2. One of the pores in the ova of certain vertebrates through which the male element may gain entrance.

microrefractometer (mi"kro-re-frak-tom'e-tur) [G. *mikros*, small, + *refractometer*.] A refractometer employed in the study of blood-corpuscles.

mi'croscope [G. *mikros*, small, + *skopeō*, I view.] An instrument containing one or more lenses for magnifying near objects. **binoc'ular m.**, a compound m. with a single objective but with an eyepiece for each eye. **com'pound m.**, one consisting of two or more lenses (see illustration). **simple m., single m.**, one which consists of a single magnifying lens, a magnifying glass.

microscop'ic. Of minute size, visible only with the aid of the microscope

microscop'ical. Relating to the microscope.

micros'copy. Investigation of minute objects by means of the microscope.

microseme (mi'kro-sēm) [G. *mikros*, small, + *sēma*, sign.] Noting a skull with an orbital index below 84.

microsmat'ic [G. *mikros*, small, + *osmē*, sense of smell.] Having the sense of smell poorly developed.

mi'crosol. Trade name of a mixture of copper sulphate and sulphocarbolate and of diluted sulphuric acid; antiseptic in 2 per cent. solution.

microso'ma, mi'crosome [G. *mikros*, small, + *sōma*, body.] 1. A corpuscle. 2. One of the granules in protoplasm; micella.

microso'mia. Dwarfishness; smallness of body.

microspec'troscope. An instrument for obtaining the spectrum of microscopic objects.

microsphyg'my [G. *mikros*, small, + *sphygmos* pulse.] Microsphyxia, smallness of the pulse.

microsphyx'ia [G. *mikros*, small, + *sphyxis*, pulse.] Microsphygmy.

Microspira (mi-kro-spi'rah) [G. *mikros* small, + *speira*, coil.] A genus of the family *Spirillaceæ* in Migula's classification of bacteria; it contained inflexible comma forms with from one to three polar flagella; see *Vibrio*.

Microspirone'ma. A genus of protozoans; see *Spironema*.

microsplenia (mi-kro-sple'nĭ-ah) [G. *mikros*, small, + *splēn*, spleen.] Abnormal smallness of the spleen.

microspo'ria. Gruby's* disease.

Microsporid'ia [G. *mikros*, small, + *sporos*, seed.] An order of *Neosporidia*, parasites of invertebrates, the spores of which are very minute and piriform with a single polar capsule.

Micros'poron. Microsporum.

Micros'porum [G. *mikros*, small, + *sporos*, seed.] A genus of fungi, causing ringworm and other diseases of the skin. **M. audoui'ni,** *Trichophyton microsporon*, the usual fungus of ringworm in England and the United States. **M. fur'fur,** the fungus of tinea versicolor. **M. minutis'simum** [L. very minute], a small hyphomycetic fungus the pathogen of erythrasma, *Nocardia minutissima*.

microsteth'ophone [G. *mikros*, small, + *stēthos*, chest, + *phōnē*, sound.] A form of magnifying stethoscope.

microsteth'oscope. A form of magnifying stethoscope.

microsto'mia [G. *mikros*, small. + *stoma* mouth.] Smallness of the mouth.

microsyringe (mi-kro-sir'inj). A hypodermic syringe having a micrometer screw attached to the piston, whereby accurately measured minute quantities of fluid may be injected.

microtia (mi-kro'shĭ-ah) [G. *mikros*, small, + *ous* (*ōt-*), ear.] Smallness of the auricle or pinna of the ear.

mi'crotome [G. *mikros*, small, + *tomos*, cutting.] An instrument for making sections for examination under the microscope.

microt'omy. Section-cutting; the making of thin sections of tissues for examination under the microscope.

microunit (mi"kro-u'nit). The millionth of an ordinary unit, such as a meter, gram, ohm, etc

mi'crovolt. A microunit of electromotive force, one-millionth of a volt.

microx'ycyte. Microxyphil.

microx'yphil [G. *mikros*, small, + *oxys*, acid, + *phileō*, I like.] A multinuc'ear oxyphil leucocyte.

microzoaria (mi-kro-zo-ah'rĭ-ah) [G. *mikros*, small, + *zōon*, animal.] A term originally applied to all microorganisms, whether of animal or vegetable nature.

microzo'on. A microscopic animal, a protozoon.

microzyme (mi'kro-zīm) [G. *mikros*, small, + *zymē*, leaven.] A pathogenic microorganism.

mic'turate [L. *micturire*.] To urinate.

micturition (mik-tu-rish'un). Urination.

mid'body. The equatorial part of the spindle in mitosis.

mid'brain. Mesencephalon.

midcar'pal. Between the two rows of carpal bones referring to the articulation there situated; carpocarpal, mediocarpal, mesocarpal.

mid-diastol'ic sound. A clear sharp sound heard just before the normal first sound of the heart, due to the auricular systole when the auricular and ventricular systoles are not continuous.

midfron'tal. Relating to the middle of the frontal bone or frontal lobe of the brain, medifrontal

midgracile (mid-gras'il). Intragracile, noting an occasional fissure dividing the gracile lobe of the cerebellum into two parts.

mid'gut. The central portion of the digestive tube—the small intestine.

midoccip'ital. Relating to the central portion of the occiput, medioccipital.

mid'pain. Intermenstrual pain.*

mid'rib. The main or central vein of a leaf, from which the others branch off.

mid'riff [A S. *mid*, middle, + *hrif*, belly.] The diaphragm.

midster'num. Mesosternum, the body of the sternum, or gladiolus.

midtar'sal. Between the two rows of tarsal bones, referring to the articulation there situated; tarsotarsal, mediotarsal, mesotarsal.

mid'wife [A.S. *mid*, with, + *wif*, wife.] A woman, often one without special medical training, who attends women in confinement; accoucheuse. **man-m.,** obstetrician, accoucheur.

mid'wifery. Practical obstetrics.

Miescher's tubes (me'sher) [Johann Friedrich *Miescher*, Swiss pathologist, 1811–1887.] The spore cases of *Sarcocystis muris*, a sporozoan parasite in the muscular tissue of the mouse and some other animals; called also Rainey's corpuscles, or tubes.

Miesche'ria (me-she'rĭ-ah) [see *Miescher's** *tubes*.] Sarcocystis.

migraina'tor. An instrument for making compression of the head for the relief of migraine.

migraine (me-grān') [G. *hēmi-*, half + *kranion* skull.] Sick headache, hemicrania, megrim, a neurosis characterized by periodical attacks of pain in the head, chiefly in the course of the fifth nerve, vertigo, nausea and vomiting, tinnitus aurium, scintillating flashes of light in the eyes, and pallor, or sometimes flushing, of the face. **ful'gurating m.,** m. coming on abruptly and with violence. **ophthal'mic m.,** a form accompanied by marked disturbances of vision. **red m.,** m. associated with congestion of the face and conjunctivæ. **white m.,** m. associated with pallor of the face.

migrainin (me'gra-nin) Trade name of antipyrine-caffeine citrate.

mi'grate [L. *migrare*, to move from place to place.] To wander, to pass from one part to another in an organ or in the body, said of certain diseases or symptoms.

migra'tion. 1. Passing from place to place, said of certain morbid processes or symptoms. 2. Diapedesis, the passage of leucocytes through the walls of the blood-vessels or through the tissues.

mi'grol. Trade name of a remedy for headache said to contain guaiacetin and caffeine.

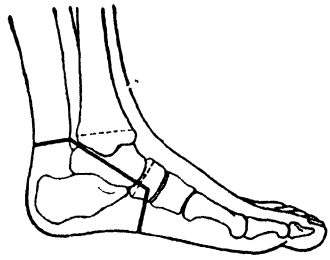
mi'grosine. Trade name of an external application for the relief of simple headache and migraine, said to be composed chiefly of menthol.

Migula's classifica'tion of bacte'ria (me'goo-lah) [Walter *Migula*, German naturalist, contemporary.] See under *bacterium*.

mi'ka opera'tion [Australian native term.] The establishment of a permanent fistula in the bulbous portion of the urethra in order to render the man incapable of procreating; said to be a practice among certain Australian tribes.

mi'kron. Micron.

Mikulicz's cells (mik'oo-lits) [Johannes von *Mikulicz-Radecki*, Polish surgeon in Breslau, 1850–1905.] Foam cells, cells containing the pathogenic bacillus found in rhinoscleroma. **M.'s disease'**, swelling of the lacrymal, and usually also of the salivary, glands in consequence of an infiltration of, and replacement of the normal gland structure by, lymphoid tissue. **M. drain,** a drain made of several strings of gauze held together by a single layer of the same material. **M.'s mask,** a wire frame, to which gauze is attached, used as a mask to cover the mouth and nose of the surgeon while operating. **M.'s method,** increasing the resisting powers of the organism prior to abdominal operations, by injecting a solution of nucleinate of sodium. **M. opera'tion,** exsection of the sternocleidomastoid muscle in torticollis. **M. pad,** a pad made from several layers of gauze folded into a rectangular shape; employed as a sponge, for packing off the viscera in abdominal operations, and in other ways. **M.'s syn'drome,** the symptoms characteristic of M.'s disease occurring as a complication of some other disease, such a lymphocytosis, leucemia, or uveoparotid fever.



MIKULICZ-VLADIMIROFF OSTEOPLASTIC RESECTION OF THE ANKLE: The heavy line shows the line of incision, the dotted lines show the lines of section through the bones.

Mikulicz-Vladimiroff opera'tion (mik'oo-lits-vlă-de'me-rawf). An osteoplastic resection of the foot in which the talus and calcaneus are exsected, the anterior row of tarsal bones being united to the lower end of the tibia, the articular surfaces of both being removed; the lower end of the stump is therefore the anterior portion of the foot, the patient walking thereafter on tiptoe

mil. The thousandth part of a liter, a cubic centimeter; this word was used in the U.S. IX and the N.F. IV in place of cubic centimeter, but has been dropped in the U. S. X and N.F.V.

mil'dew [A.S. *mildēaw.*] A parasitic fungus growing on plants and dead organic matter.

mil'foil [Fr. *millefeuille*, thousand-leaf.] Achillea.

Milian's sign [*Milian*, French physician, contemporary.] Ear sign, in subcutaneous inflammation of the head and face the ears escape because of the close adhesion of the skin and cartilage, but in erysipelas and other skin diseases the ears are involved.

miliaria (mil-ĭ-ah'rĭ-ah) [L. *miliarius*, relating to millet.] 1. An eruption of minute vesicles due to retention of fluid at the mouths of the sweat-follicles. 2. Miliary fever, a mild febrile affection accompanied by an eruption of minute papules, each tipped by a vesicle; the fever is of short duration, the vesicles quickly dry up, and a slight branny desquamation follows. **m. al'ba,** m. with vesicles containing a milky fluid due to maceration and detachment of the epidermal cells lining the same. **m. crystalli'na,** sudamina, a non-inflammatory form of m. in which the vesicles, filled with clear fluid, are seated upon normal skin. **m. papulo'sa,** m. rubra in which the papular lesions predominate **m. ru'bra,** prickly heat, strophulus, lichen tropicus, heat rash; an eruption of papules and vesicles at the mouths of the sweat-follicles, accompanied by redness and inflammatory reaction of the skin **m. vesiculo'sa,** m rubra, in which the vesicular lesions predominate over the papular.

miliary (mil'ĭ-a-rĭ) [L. *milium*, millet-seed.] 1. Resembling a millet-seed in size (about 2 mm. or $\frac{1}{12}$ inch). 2. Marked by the presence of nodules of millet-seed size on any surface or within the tissues. **m. fe'ver,** (1) an infectious disease characterized by fever, profuse sweating, and the production of sudamina, occurring formerly in severe epidemics; (2) miliaria (2). **m. tuberculo'sis,** acute generalized tuberculosis, marked by the presence of numerous minute tubercles in the affected organs or tissues.

mil'ium [L. millet seed] A small whitish or yellowish papule, of the size of a pinhead or smaller, due to a retention of sebum beneath the epidermis. **col'loid m.,** hyeloma.

milk [A.S. *meolc.*] 1. A white liquid, containing proteins, sugar, and oil globules, secreted by the mammary glands, designed for the nourishment of the young. 2. Any whitish "milky" fluid, as the juice of the cocoanut or a suspension of various metallic oxides. **acidoph'ilus m.,** m. inoculated with a culture of *B. acidophilus*. **after-m.,** the stripping, or last portion of milk, taken from the udder of the cow at a milking. **budd'eized m.,** see *buddeize*. **butter m.,** see *buttermilk*. **cer'tified m.,** m. sold under a certification by a committee of physicians or sanitarians that it is produced by healthy cows, and drawn, stored, and transported under proper conditions of cleanliness, and that it contains a minimum bacterial content. **condensed' m.,** a thick liquid prepared by the partial evaporation of cow's milk, with or without the addition of sugar. **fore-m.,** (1) colostrum; (2) the first portion of milk obtained from the cow's udder at a milking. **lactobac'illary m.,** m. inoculated with a culture of *B. acidophilus*, *B. bulgaricus*, or other lactic-acid forming microorganism. **m. line,** an imaginary line extending from the axilla to the groin on the ventral surface, along which the breasts are normally placed in polymastic animals. **m. of asafet'ida,** lac asafœtidæ, emulsum* asafœtidæ. **m. of bis'muth,** magma bismuthi (U.S.). **m. of i'ron,** water containing about 1 per cent. of freshly precipitated ferric phosphate. **m. of magne'sia,** magma magnesiæ (U.S.). **m. of sul'phur,** sulphur præcipitatum. **mod'ified m.,** cow's milk altered, by increasing the fat and reducing the amount of protein, to resemble in composition human milk. **u'terine m.,** a whitish fluid secretion between the villi of

the placenta. **vir'gin's m.,** lac virginis, a toilet preparation consisting of tincture of benzoin 1, in rose water 20.

abnormality of, galactacrasia, cacogalactia. **absence, galactozemia, agalactia. acid of,** lactic acid. **arresting secretion,** lactifugal, galactophygous, ischogalactic, antigalactic. **bloody,** galacthemia. **causing secretion,** galactagogue, galactopoietic, lactific, lactigenous, galactogenous, lactatic, galactic. **conveying** (said of ducts), lactiferous, galactophorous, lactigerous. **diet,** galactoposia, galactophagy, galactodieta. **distention of mamma by,** galactectasia, galactectasis, galactectatic, galactectodynia, galactectomy, galactectopia, galactectopy, galactectosis, galactectotic, galactectotomy, galactectotrophy, galactectotrophic, galactectotrophia, galactectotrophic

mind-deaf'ness. Inability to interpret the meaning of what is heard, the auditory apparatus being unimpaired.

Mindere'rus' spir'it [Raymund *Minderer*, German physician, †1631.] Spiritus Mindereri, liquor* ammonii acetatis.

mind-pain. Psychalgia.

min'eral [L. *minare*, to mine] Any homogeneous inorganic material found in the earth's crust. **crys'tal m.,** sal prunelle, fused potassium nitrate. **m. spring,** a spring the water of which is impregnated with the salts of certain minerals; see *spa*. **m. water,** water naturally or artificially impregnated with appreciable amounts of certain salts which give to it therapeutic properties.

mineralogen (min-er-al'o-jen) [*mineral* + *genesis*, source, origin.] Trade name of a mixture of salts used by Gerson in his dietetic treatment of tuberculosis; it is composed of aluminum-potassium sulphate, calcium phosphate, sodium silicate, magnesium sulphate, bismuth subnitrate, calcium lactate, sodium bisulphate, sodium bromide, sodium sulphate, and albumin, the latter being added as a binding material; the amount of each ingredient is not published.

mi'ner's bunch'es. Circumscribed eczematous elevations of the surface occasionally observed in ancylostomiasis. **m.'s disease',** (1) ancylostomiasis; (2) nystagmus. **m.'s elbow,** inflammation with fluid distention of the olecranon bursa, caused by pressure; it is of the same nature and causation as housemaid's knee

min'im [L. *minimum*, least] A fluid measure, one-sixtieth of a fluidrachm; in the case of water about one drop.

min'imal. Least, smallest.

min'imum [L.] The least, the smallest possible; in relation to sense perceptions, hearing, touch, etc., threshold.* **m. temperature,** see under *temperature*.

Minin lamp [A. V. *Minin*, Russian army surgeon, contemporary.] An electric bulb of colored glass which gives out violet and ultra-violet rays; employed to produce local anesthesia and for other therapeutic purposes

min'ium [L.] Red oxide of lead.

Minkowski's meth'od (min-kov'ske) [Oscar *Minkowski*, German physician, 1858–1931.] Naunyn-Minkowski method. **M.'s figure,** when, in diabetes, sugar is formed from the food albumin, the nitrogen of the latter appears in the urine in the proportion of 1 to 2.8 of sugar.

Mi'not-Mur'phy di'et [George R. *Minot*, *1885, William P. *Murphy*, *1892, Boston physicians.] A diet for use in pernicious anemia; it consists of 120 to 240 grams of beef liver, 120 grams or more of lean beef, or mutton, 300 grams or more of green vegetables, and 250 to 500 grams of fruit, with a maximum of 70 grams of fat.

mint. Mentha.

miocar'dia [G. *meiōn*, less + *kardia*, heart.] Systole.

miodidymus (mi-o-did'i-mus) [G. *meiōn*, less, + *didymos*, twin.] A monster with two heads partly fused in the occipital region.

miod'ymus. Miodidymus.

mionectic (mi-on-ek'tic) [G. *meion*, less, + *echō*, I have.] Having or being less than normal, noting especially blood which has a percentage saturation of oxygen below normal at a given pressure; see *mesectic* and *pleonectic*.

mionexia (mi-o-nek'sĭ-ah) [G. *meiōn*, less, + *hexis*, a state or habit of the body.] Lessened organic resistance.

miopragia (mi-o-pra'jĭ-ah) [G. *meiōn*, less, + *prassō*, I do.] Diminished functional activity in a part.

mio'pus [G. *meiōn*, less, + *ōps*, eye.] A double monster with incompletely fused heads with two ears and three eyes.

mio'sis [G. *meiōsis*, a lessening.] 1. The period of decline of a disease in which the intensity of the symptoms begins to diminish. 2. Contraction of the pupil. 3. Reduction of the chromosomes in the reduction phase of caryocinesis. **paralyt'ic m.,** contraction of the pupil due to paralysis of the radiating muscular fibers. **spastic m.,** m. due to spasmodic contraction of the circular muscular fibers.

miostag'min reac'tion [G. *meiōn*, less, + *stagma*, a drop] A physiochemical immunity test, consisting in determination of the surface tension of an immune serum, to which its specific antigen has been added, before and after incubation at 37° C. for two hours In case of a positive reaction the surface tension, as measured by the stalagmometer,* is lowered.

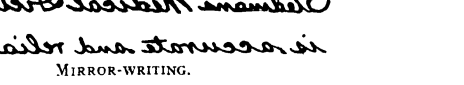
mi'ot'ic. 1. Relating to contraction of the pupil. 2 An agent which causes the pupil to contract. 3. Diminishing, declining. **m. phase,** reduction phase; the stage of nuclear changes in the sexual cells during which reduction of the chromosomes takes place; it embraces the cell-generations of the spermatocytes and oocytes.

miracid'ium [L. *miracidium*, early adolescence] The ciliated embryo of a trematode worm; it develops into the sporocyst.

Mirchamp's sign (mĕr-shahn'). A premonitory symptom of mumps; if a sapid substance is placed on the tongue a painful reflex secretion of saliva occurs in the gland which is the seat of the incipient affection.

mire [L. *mirare*, to look at.] One of the test objects in the ophthalmometer, by means of the images of which the amount of astigmatism is calculated

mirr'or [Fr. *miroir*.] A polished surface reflecting the rays of light from objects in front of it. **head m.,** a circular concave mirror attached to a head band, used to project a beam of light into a cavity such as the nose or larynx, for purposes of examination **m. speech,** a lalopathy in which the order of words in a sentence is reversed, or the words themselves are pronounced backward.



MIRROR-WRITING.

m. writing, writing backward, from right to left the letters appearing like ordinary writing seen in a mirror. **Van Hel'mont's m.,** centrum* tendineum.

mirror-like. Noting a bacterial colony having a smooth glistening surface reflecting the window-bars and other contrasting objects

miryach'it. A nervous affection observed in Siberia similar to palmus, latah, or the jumping disease of Maine.

miscarriage (mis-kar'ej). Expulsion of the product of conception during the fourth, fifth, or sixth month of pregnancy; see *abortion*.

miscar'ry. To give birth to a non-viable fetus, *i e* to one from four to six months old

mis'ce [L. imperative of *miscere*, to mix.] In prescription writing the direction given to the pharmacist to mix the ingredients; it is usually abbreviated to *M*.

miscegenation (mis″e-ge-na'shun) [L. *miscere*, to mix, + *genus*, race.] Marriage or sexual relations between individuals of different races, especially of the white and black races.

misc'ible. Capable of mixing.

misere're me'i [L. have pity on me.] An old term for volvulus or ileus.

misocainia (mis-o-ki'nĭ-ah) [G. *misō*, I hate, + *kainos*, new.] Misoneism.

misog'amy [G. *misō*, I hate, + *gamos*, marriage.] Aversion to marriage.

misogyny (mis-oj'en-ĭ) [G. *misō*, I hate, *gynē*, woman.] Hatred of women.

misoneism (mis-o-ne'izm) [G. *misos*, hatred, + *neos*, new.] Dislike of and disinclination to accept new ideas; extreme conservatism, misocainia.

misope'dia, misopæ'dia, misop'edy [G. *misō* I hate, + *pais*(*paid-*), child.] Dislike or hatred of children

mist. Abbreviation of *mistura*, mixture.

mist bacillus [Ger. *mist*, manure.] *Mycobacterium stercusis*.[0]

mistletoe (mis'(miz')l-to) [A.S *mistel*, bird-lime, + *tān*, a twig.] Viscum.

mistu'ra, gen. and pl. *mistu'ræ* [L.] Mixture, a pharmacopeial preparation, consisting of a liquid holding an insoluble medicinal substance in suspension by means of gum arabic, sugar, or some other viscid material.

m. aca'ciæ, mixture of acacia or gum arabic, m. gummosa; contains about gr. 40 (2 6) each of acacia and sugar in ℥1 (30 0); used as a vehicle.

m. adstrin'gens (N.F.), astringent mixture, Villate's mixture; a solution of copper and zinc sulphates with lead acetate, used as an escharotic or, diluted with three times its volume of water, as an astringent.

m. ammo'nii chlo'ridi, mixture of ammonium chloride, m. simplex, m. solvens; a mixture of ammonium chloride and purified extract of licorice, each 2.5, in water 100; expectorant in doses of ℥2 (8.0).

m. amyg'dalæ (Br.), almond mixture, emulsum amygdalæ (U.S); made of compound powder of almonds 2½, water 20; used as a demulcent and vehicle.

m. antidysenter'ica, m. camphoræ acida (N.F.).

m. asafœt'idæ, emulsum asafœtidæ.

m. campho'ræ ac'ida, acid camphor mixture, Hope's mixture, m. antidysenterica, nitric acid 1.75, tincture of opium 1.2, camphor water to make 100; employed in dysentery in dose of ℥2 (8.0).

m. campho'ræ aromat'ica, aromatic camphor mixture, Parrish's camphor mixture; sugar 3.5, compound tincture of lavender 25, camphor water to make 100; carminative and astringent in diarrhea in dose of ℥2 (8.0).

m. carminati'va (N.F.), carminative mixture, Dalby's carminative; magnesium carbonate 6.5, potassium carbonate 3.0, oils of caraway, fennel, and peppermint each 0.05, laudanum 2.5, syrup 16 0, water to make 100.0; carminative for young children in doses of ♏8 (0.5).

m. chlora'lis et potas'sii bro'midi compos'ita (N.F.), compound mixture of chloral and potassium bromide, chloral and bromide compound; a dose of ℥1 (4.0) contains chloral hydrate and potassium bromide each gr. 12 (0.8), and extracts of cannabis indica and hyoscyamus each gr ½ (0.008); hypnotic and sedative.

m. chloroform'i, chloroform mixture, emulsum* chloroformi.

m. chlorofor'mi et morphi'næ compos'ita (N.F.), compound mixture of chloroform and morphine, chloroform anodyne; each dose of ℥½ (2.0) contains chloroform ♏4 (0.25), tincture of cannabis ♏5½ (0.37) tincture of capsicum ♏1 (0.06), morphine sulphate gr. 1/10 (0.005) in alcohol, glycerin, and water, flavored with oil of peppermint; antispasmodic and hypnotic.

m. con'tra diarrhœ'am, diarrhea mixture; under this head the N.F. formerly admitted 5 diarrhea mixtures, namely Sun cholera mixture, and Squibbs', Loomis's, Thielmann's and Velpeau's diarrhea mixtures; see these names. There are now two in the N.F. having this therapeutic indication, namely, m. opii et chloroformi composita and m. opii et rhei composita.

m. copai'bæ (N.F.), copaiba mixture, Lafayette mixture; copaiba 125, spirit of nitrous ether 125, compound tincture of lavender 125, solution of potassium hydroxide 32, syrup 300, mucilage of acacia sufficient to make 1000; dose, ℥2 (8.0).

m. copai'bæ et o'pii (N.F.), mixture of copaiba and opium, Chapman's mixture; copaiba 250, spirit of nitrous ether 250, compound tincture of lavender 65, tincture of opium 32, mucilage of acacia 125, water to make 1000; dose, ℥1 (4.0).

m. creoso'ti (Br.), creosote mixture, creosote and spirit of juniper each 16 minims, syrup 1 fluidounce, water to make 16 fluidounces; dose ℥1 (30.0).

m. cre'tæ (U.S., Br.), chalk mixture, compound chalk powder 20, cinnamon water 40, water to make 100 (U.S.); prepared chalk 50, tragacanth 7, sugar 100, cinnamon water to make 1600 (Br.); dose ℥1–4 (4.0–16.0).

m. fer'ri compos'ita (Br.), compound iron mixture, Griffith's mixture, ferrous sulphate 6, myrrh 18, sugar 18, potassium carbonate 8, spirit of lavender 60, rose water to make 1000 (U.S.); ferrous sulphate 5, myrrh 12, sugar 12, potassium carbonate 6, spirit of nutmeg 9, rose water to make 875 (Br.); dose, ℥½–2 (15.0–60.0).

m. glycyrrhi'zæ compos'ita (U.S.), compound licorice mixture, brown mixture; extract of glycyrrhiza 30, syrup 50, gum arabic 30, paregoric 120, wine of antimony 60, spirit of nitrous ether 30, water to make 1000; employed as a cough mixture in doses of ℥1–4 (4.0–16.0).

m. guai'aci (Br.), mixture of guaiac; resin of guaiac 25, sugar 25, tragacanth 4, cinnamon water, to make 1000 (Br.); guaiac 25, sugar 25, acacia 15, cinnamon water 1000 (N.F.); employed as an alterative and expectorant, and in acute tonsillitis in doses of ℥½–1 (15.0–30.0).

m. gummo'sa, m. acaciæ (N.F.).

m. magne'siæ, asafœt'idæ et o'pii (N.F.), mixture of magnesia, asafetida, and opium, Dewee's carminative; magnesium carbonate 50, tincture of asafetida 75, tincture of opium 10, sugar 100, water to make 1000; dose, ℥2 (8 0).

m. magne'sii hydroxi'di (Br.) mixture of magnesium hydroxide, cream of magnesia, an aqueous suspension of hydrated magnesium oxide; magnesium sulphate 47.5, sodium hydroxide 15, light magnesium oxide 52.5, distilled water to produce 1000; dose fl. ℥ 1–4 (4.0–16.0).

m. o'lei pi'cis, mixture of oil of tar, tar mixture; each dose of ℥2 (8.0) contains oil of tar ♏4 (0.25), chloroform ♏1½ (0.08), in alcohol and water, flavored with licorice, peppermint, and sugar; expectorant.

m. o'lei ric'ini (Br.), castor-oil mixture: castor oil 6, mucilage of acacia 3, orange-flower water 2, cinnamon water 5; dose ℥½–2 (15.0–60.0).

m. o"leobalsam'ica (N.F.), oleobalsamic mixture, Hoffmann's balsam of life; a 1 per cent. alcoholic solution of balsam of Peru with oils of cinnamon, cloves, orange flowers, lemon, nutmeg, and thyme; employed locally as a stimulant application.

m. o'pii alkali'na, m. opii et sassafras.

m. o'pii et chlorofor'mi compos'ita (N.F.), compound mixture of opium and chloroform, Squibb's diarrhea mixture; tincture of opium 200, tincture o. camphor and tincture of capsicum, of each 100, chloroform 80, alcohol to make 1000; dose, ♏30 (2 0).

m. o'pii et rhe'i compos'ita (N.F.), compound mixture of opium and rhubarb, Sun cholera mixture, tincture of capsicum and tincture of rhubarb, of each 100; tincture of opium, spirit of camphor, spirit of peppermint, and alcohol, of each 200; dose, ♏30 (2 0).

m. o'pii et sas'safras, mixture of sassafras and opium, m. opii alkalina, Godfrey's cordial; potassium carbonate 0.8, tincture of opium 3.5, oil of sassafra; 0.1, alcohol 5, molasses 32.5, water to make 100s anodyne carminative for infants in dose of ♏10 (0.6).

m. pectora'lis (N.F.), Stokes' expectorant; each dose of ℥1 (4.0) contains ammonium carbonate gr. 1 (0.06), fluidextracts of senega and of squill ♏2 (0.13), camphorated tincture of opium ♏10 (0.6), in syrup of tolu.

m. phosphat'ica, emulsum phosphaticum (N.F.).

m. rhe'i alkali'na (N.F.), alkaline rhubarb mixture, neutralizing cordial, formerly called syrupus rhei et potassæ compositus; fluidextract of rhubarb 16, fluidextract of hydrastis 8, potassium carbonate 16, tincture of cinnamon 64, spirit of peppermint 8, syrup 250, diluted alcohol to make 1000; dose, ʒi (4.0).

m. rhe'i compos'ita (N.F.), compound rhubarb mixture, the same as m. rhei et sodæ formerly in the U.S.P.; sodium bicarbonate 35, fluidextract of rhubarb 15, fluidextract of ipecac 3, glycerin 200, spirit of peppermint 35, water to make 1000; antacid and laxative in doses of ʒ½–i (2.0–4.0).

m. sen'næ compo'ita (Br.), compound mixture of senna, black draught; magnesium sulphate 5, liquid extract of licorice 1, compound tincture of cardamoms 2, aromatic spirit of ammonia 1, infusion of senna to make 20; dose ʒi–1½ (30.0–45.0).

m. sim'plex, simple mixture, m. ammonii chloridi (N. F.).

m. so'dæ et men'thæ, now called liquor sodæ et menthæ, soda-mint; sodium bicarbonate 5, aromatic spirit of ammonia 1, spearmint water to make 100; antacid and carminative in dose of ʒ2 (8 0).

m. sol'vens, solvent mixture, m. ammonii chloridi (N.F.).

m. spir'itus vi'ni gal'lici (Br.), mixture of brandy; brandy and cinnamon water of each 4 fluidounces, sugar ½ ounce, yolks of 2 eggs; stimulant food in doses of ʒi–2 (30.0–60.0).

m. splenet'ica, spleen mixture, Gadberry's mixture; quinine sulphate 4 2, potassium nitrate and ferrous sulphate each 1.4, nitric acid 1 4, water to make 100; antiperiodic and tonic in dose of ʒi (4.0).

m. sulphu'rica ac'ida (P.G.), sulphuric acid mixture, Haller's acid elixir; a 25 per cent. solution of sulphuric acid in alcohol; antiscorbutic and astringent in doses of ♏6–10 (0.4–0 6).

Mitch'ell's disease'. See *Weir* Mitchell's disease.*

Mitch'ell's solution [James F. *Mitchell,* American surgeon, *1871.] A tablet containing ¼ grain cocaine and $\frac{1}{100}$ grain adrenalin is dissolved in 50 or 100 c.c. physiological salt solution; the stronger solution is used for anesthetizing the skin or blocking nerves, the weaker for general infiltration anesthesia of the tissues.

mitchell'a (N.F.) [John *Mitchell,* Virginia botanist, eighteenth century.] The herb *Mitchella repens,* partridge berry, squaw vine, a plant of Canada and the United States east of the Mississippi; employed as a uterine tonic and to promote easy parturition, in doses of ♏½–1 (0.03–0.06) of the Electic colloidum every few hours, gr. 30 (2.0) of the powder, or ♏30 (2.0) of the N.F. fluidextract.

mite (mīt) [A.S.] A minute acarid, a tick; often parasitic, or a transmitter of disease germs **har'vest m.,** *Leptus.* **itch-m.,** *Sarcoptes scabiei.* **mange-m.,** *Demodex folliculorum.*

mithridate (mith'ri-dāt). One of several old pharmaceutical preparations reputed to be antidotal to or preventive of poisoning.

mith'ridatism [*Mithridates,* King of Pontus (132–63 B.C.), who is said to have acquired immunity to poison by this means, and to have succeeded so well that he failed later in an attempt at suicide.] Immunity against the action of a poison produced by small and gradually increasing doses of the same.

mit'igate [L. *mitigare,* to make mild or gentle.] To make weaker or milder.

mit'igated caustic. Argenti nitras mitigatus, silver nitrate mixed with two parts of potassium nitrate.

mitis (mi'tis) [L.] Mild.

mitochondria (mi-to-kon'drĭ-ah) [G. *mitos,* thread, + *chondros,* granule, grits.] 1. Granules (cytomicrosomes) and filaments existing in the cytoplasm and forming an essential part thereof; thread-granules. 2. A finely granular protoplasmic layer surrounding the axial filament in the tail of a spermatozoon. 3. Chondroconia.

mitogenesis (mi-to-jen-e'sĭ-ă) [*mitosis* + G. *genesis,* origin.] The production by or origination of during caryocinesis.

mitogenetic (mi-to-jen-et'ik). Noting the Gurvitch rays given forth during mitosis or caryocinesia.

mito'ma, mi'tome [G. *mitos,* thread.] The fine network forming the support or framework of the protoplasm of a cell.

mito'sis [G. *mitos,* thread.] Caryocinesis, indirect nuclear division, the usual process of cell-reproduction. **asymmet'rical m.,** a form of mitosis in which the chromosomes are unequal in number in the two daughter nuclei, in consequence either of irregular distribution or of a reduction of chromosomes in one nucleus. **gametogenet'ic m.,** the process of cell-division characteristic of the ovum after union with the spermatozoon, in which the number of chromosomes in each of the conjugating cells is reduced by one-half in order to preserve in the impregnated ovum the number proper to the species; were it not for this reduction of the chromosomes in these conjugating cells the number of chromosomes in the zygote would be thirty-two instead of sixteen. **het'erotype m.,** a variety of mitosis in which the halved chromosomes are united at their ends forming ring figures. **multipo'lar m.,** a pathological form in which the spindle has three or more poles resulting in the formation of a corresponding number of nuclei. **somat'ic m.,** the ordinary process of mitosis as it occurs in the somatic or body cells, characterized by the formation of a definite number of chromosomes, varying according to the species; in the human subject this number is sixteen.

mi'tosome [G. *mitos,* thread, + *sōma,* body.] Caryosome.

mitot'ic. Relating to or marked by mitosis.

mi'tral [L. *mitra,* a miter] Relating to the mitral or bicuspid valve. **m. a'rea,** the region of the chest over the apex of the heart, where the sounds, normal or pathological, produced at the left atrioventricular orifice are heard most distinctly. **m. mur'mur,** a murmur produced at the mitral orifice. **m. or'ifice,** the left atrioventricular aperture. **m. valve,** valvula bicuspidalis.

mixed. 1. Consisting of two or more ingredients mingled together. 2. Not simple, presenting the signs or characteristics of two or more different things. **m. chancre,** a sore resulting from double infection with the syphilitic and the chancroidal virus. **m. treatment,** treatment of syphilis with both mercury and potassium iodide.

mixos'copy [G. *mixis,* intercourse, + *skopeō,* I look at.] A form of perversion in which pleasure is derived from the sight or thought of sexual intercourse by any person, toward whom one has an attraction, with another; or simply in which gratification is derived from watching the sexual act in man or animals.

mixovariation (miks"o-va-rĭ-a'shun) [G. *mixis,* a mingling.] Transformation in the constitutional germ plasm presenting features characterized by constancy together with numerous inconstant ones.

mix'ture [L. *mistura.*] 1. A mutual incorporation of two or more substances, without chemical union, the physical characteristics of each of the components being retained. A *mechanical m.* is a m. of particles or masses distinguishable as such under the microscope or in other ways; a *physical*

m. is a more intimate m. of molecules as obtains in the case of gases and many solutions. 2. In chemistry a mingling together of two or more substances without the occurrence of a reaction by which they would lose their individual properties. 3. In pharmacy, see *mistura*. **brown m.**, mistura glycyrrhizæ composita. **chalk m.**, mistura cretæ. **French m.**, liquor iodi carbolatus. **m. of rhu'barb and so'da**, mistura rhei composita. **neutral m.**, a solution of potassium citrate.

m. l. d. An abbreviation for minimum lethal dose.

mm. An abbreviation for millimeter.

mmm. Abbreviation for micromillimeter, or micron.

Mn. Chemical symbol for manganese.

mnemasthenia (ne-mas-the'nĭ-ah). A weakening of the memory not due to organic disease.

mnemic hypoth'esis (ne'mik). Semon-Hering hypothesis, mnemism; the theory that stimuli or irritants leave definite traces (*engrams*) on the protoplasm of the animal or plant, and when these stimuli are regularly repeated they induce a habit which persists after the stimuli cease; assuming that the germ cells share with the nerve cells in the possession of engrams, acquired habits may thus be transmitted to the descendants.

mnemism (ne'mizm) [G. *mnēmē*, memory.] Mnemic* hypothesis.

mnemon'ic (ne-mon'ĭk) [G. *mnēmōn*, mindful] Relating to memory

mnemonics (ne-mon'ĭks). The art of improving the memory; a system for aiding the memory.

mnemotechne, mnemotechnics (ne-mo-tek'ne, ne-mo-tek'nĭks) [G. *mnēmē*, memory, + *technē*, art] Mnemonics.

Mo. Chemical symbol of molybdenum

M.O. Abbreviation for Medical Officer.

mobile (mo'bĭl) [L. *mobilis*, movable.] Movable, moving.

mobil'ity [L. *mobilis*, movable.] The quality of being movable.

mobili'zable. Potentially mobile.

mobiliza'tion. 1. Making movable; restoring the power of motion in a joint. 2. The art of mobilizing; the starting of hitherto quiescent material on a round of physiological activity.

mobilize (mo'bĭl-īz) [Fr. *mobiliser*, to make ready a body of troops for active service.] To liberate material stored in the body; to excite quiescent material, such as glycogen, to physiological activity.

mocharras (mo-kar'ras). A reddish gum from *Moringa pterygosperma*, a tree of Western Asia.

mock-knee (mok'ne). A bursitis of the knee in horses and cattle.

m.o.d. Abbreviation of mesial, occlusal, and distal, noting the several openings of a carious tooth cavity.

modal'ity [L. *modalis*, relating to *modus*, a mode.] 1. In homeopathy, any condition influencing or modifying drug-action. 2. Any form of electrical or physiomedical therapeutics.

modi'olus [L. a trephan.] [BNA] Columella cochleæ, the central cone-shaped core of spongy bone about which turns the spiral canal of the cochlea.

mo'dus operan'di [L.] Manner of operating, mode of action.

Moebius' disease' (mē'be-oos) [Paul Julius *Moebius*, German physician, 1853–1907.] Ophthalmoplegic migraine or periodical oculomotor paralysis. **M.'s sign**, the power of convergence of the visual axes is impaired in exophthalmic goiter.

Moel'ler's disease' (mē'ler). 1. [*Moeller*, German surgeon, 1829–1862.] A chronic painful form of superficial glossitis. 2. [Julius Otto Ludwig *Moeller*, German physician, 1819–1887.] Barlow's disease, infantile scurvy.*

Moeller's grass bacil'lus (mē'ler) [Alfred *Moeller* German bacteriologist, *1868.] Hay bacillus, *Myco. phlei.*[0] **M.'s reaction** or **test**, rhinoreaction. **M.'s stain for spores**, fix on cover-glass and treat with 5 per cent. chromic acid solution, wash, and stain with an aqueous solution of methylene-blue.

Moenckeberg's calcifica'tion (mēng'ka-bārg) [J. G. *Moenckeberg*, German pathologist, contemporary.] Arteriosclerosis of the vessels of the lower extremities marked by calcification of the middle coat.

Moerner-Sjöqvist meth'od (mĕr'ner-syĕ'kvist) [Carl Thore *Moerner*, Swedish physician, 1864–1917.] Same as Sjoqvist's* method.

mogigraphia (moj-ĭ-graf'ĭ-ah) [G. *mogis*, with toil and pain, + *graphē*, writing.] Writer's* cramp.

mogilalia (moj-ĭ-la'lĭ-ah) [G. *mogis*, with toil and pain, + *lalia*, speech.] Stuttering, stammering, or any speech defect; mollilalia.

mogiphonia (moj-ĭ-fo'nĭ-ah) [G. *mogis*, with toil and pain, + *phōn* voice.] Laryngeal spasm occurring in elocutionists, a form of professional neurosis.

mogitocia (moj-ĭ-to'sĭ-ah) [G. *mogis*, with difficulty, + *tokos*, childbirth.] Dystocia, difficult labor.

M.O.H. Abbreviation of Medical Officer of Health.

Mohr's test [Francis *Mohr*, American pharmaceutical chemist, nineteenth century.] For free hydrochloric acid in the contents of the stomach: the addition of a solution of acetate of iron containing a little sulphocyanide of iron to the filtered gastric contents will produce a red color in the presence of free hydrochloric acid

Mohrenheim's foss'a or **space** (mo'ren-hīm) [Joseph Jacob Freiherr von *Mohrenheim*, Austrian surgeon, †1799.] Infraclavicular fossa, trigonum* deltoideopectorale.

moist [L. *musteus*, fresh.] Damp, slightly wet. **m. chamber**, an arrangement for keeping objects under the microscope from drying up during examination.

Mojon's meth'od (mo-yon) [Benedetto *Mojon*, Italian physiologist, 19th century.] Injection of acidulated cold water into the umbilical vein to facilitate expulsion of the placenta.

mol. Abbreviation for *gram-molecule*.

mo'lar [L. *molaris*, relating to a mill.] 1. Grinding. 2. A molar tooth, a grinder. 3. Relating to a mole. 4. [L. *moles*, mass.] Massive, relating to a mass, not molecular. **m. tooth**, one of the back teeth or grinders, three on each side of each jaw. **sixth-year m.**, the first permanent molar tooth. **twelfth year m.**, the permanent second molar tooth.

molar'iform [L. *forma*, form.] Having the form of a molar tooth.

molass'es [L. *mellaceus*, honey-like] Treacle, a thick sweet liquid obtained in the process of sugar-making; syrupus fuscus.

mold. Mould.

mole [A.S. *māēl* (L. *macula*), a spot.] 1. Nævus pigmentosus, a brownish spot or patch on the skin. 2. [L. *mola*, moistened meal.] An intrauterine mass formed by the degeneration of the partly developed ovum. 3. gram-molecule, **blood m.**, **car'neous m.**, fleshy m. **cystic m.**, hydatidiform m. **false m.**, an intrauterine polypus. **fleshy m.**, (1) a shapeless fetal monster; (2) a shapeless mass of the secundines retained after abortion. **grape m.**, **hydatidiform m.**

hydat'id m., hydatid'iform m., a vesicular or polycystic mass resulting from the proliferation of the villi of the chorion. **mater'nal m.,** fleshy m. (2). **stone m.,** uterine calculus, womb-stone, a fleshy mole which has undergone calcareous degeneration. **true m.,** fleshy mole (1). **vesic'ular m.,** hydatidiform m.

molec'ular. Relating to a molecule.

molecule (mol'e-kūl) [L. *molecula*, dim. of *moles*, mass.] The smallest possible unit of existence of any substance; it may consist of a single atom, as the molecule of mercury, or it may be composed of a great number of atoms, as in the case of certain alkaloids; according to the number of atoms composing it the molecule is called *monatomic*(1), *diatomic*(2), *triatomic*(3), *tetratomic*(4), *pentatomic*(5), *hexatomic*(6), etc.

molilalia (mol″ĭ-la'lĭ-ah) [G. *molis*, with difficulty, + *lalia*, talking.] Mogilalia, a speech defect; stuttering, stammering.

moli'men [L. an endeavor.] An effort; the laborious performance of a normal function. **m. climacte'rium viri'le,** a condition resembling neurasthenia, occurring in men of 45 to 55 years of age, due to alteration in the internal testicular secretion. **men'strual m.,** the unpleasant symptoms, feeling of weight in the pelvis, nervous and circulatory disturbances, etc., experienced during the menstrual period.

Mol'isch's test [Hans *Molisch*, Viennese chemist and botanist, *1856.] For sugar in the urine: the addition of a mixture of equal parts of strong sulphuric acid and of a 15 per cent. solution of thymol will produce a deep red color if glucose is present.

Moll's gland [Jacob Antonius *Moll*, Dutch oculist, 1832–1914.] Glandula ciliaris.

Mollgaard's rem'edy (mul'gawrd) [Holger *Mollgaard*. Copenhagen physician, contemporary.] Sanocrysin.

mollichthyolin (mol-ik'thi-o-lin) An ointment of ichthyol with mollin as a base.

mol'lin [L *mollis*, soft.] A smooth yellowish ointment composed of soft soap containing a fatty acid from cocoanut oil with glycerin; used as a base for medicated ointments.

mollities (mol-ish'ĭ-ēz) [L.] Softness, or softening, malacia. **m. cer'ebri,** encephalomalacia, softening of the brain. **m. os'sium,** osteomalacia.

moll'osin. Trade name of a mixture of yellow wax and liquid paraffin, used as a base for medicated ointments.

mollus'cous. Relating to or resembling molluscum.

mollus'cum]L. *molluscus*, soft.] A disease marked by the occurrence of soft rounded tumors of the skin. **m. contagio'sum,** a contagious disease of the skin, chiefly of the face, breast, and genitals, marked by the presence of small pearly warty elevations which break down in the center and discharge a caseous material; the affected cells contain certain minute bodies, *m. corpuscles*, which have been variously regarded as protozoan parasites and degenerated cells. **m. epithelia'le** m. contagiosum. **m. gigan'teum,** m. contagiosum with lesions an inch or more in diameter. **m. pen'dulum,** fibroma pendulum. **m. seba'ceum,** m. contagiosum. **m. sessi'le,** m. contagiosum. **m. sim'plex,** fibroma molluscum. **m. verruco'sum,** m. contagiosum.

molt, moult (mōlt) [L. *mutare*, to change.] To cast off feathers, hair, or cuticle; desquamate.

molyb'danize. To impregnate with a salt of molybdic acid, such as ammonium molybdate, noting a method of demonstrating nerve-fibrils.

molyb'date. A salt of molybdic acid.

molybden'ic. Relating to molybdenum, molybdic.

molyb'denous. Molybdic molybdous.

molybde'num [G. *molybdaina*, graphite.] A silvery white metallic element, symbol Mo, atomic weight 96.

molyb'dic. Relating to molybdenum, molybdenic. **m. acid,** MoO_3+H_2O, a yellowish crystalline acid, forming salts called molybdates.

molyb'dous. Relating to molybdenum, molybdenous.

molysmophobia (mŏ-liz″mo-fo'bĭ-ah) [G. *molysma*, filth, infection, + *phobos*, fear.] A morbid fear of infection, mysophobia.

Mom'burg's meth'od [Fritz August *Momburg*, German surgeon, *1870.] Production of artificial anemia of the lower extremities by compression of the abdominal aorta by means of elastic tubing encircling the abdomen midway between the border of the ribs and the iliac crests.

momen'tum [L. equilibrium, motion.] 1. An impulse. 2. The quantity of motion, the product of mass and velocity of a moving body.

monacid (mon-as'id) [G. *monos*, single, + L. *acidus*, acid.] Noting a base having one replaceable hydroxyl group.

mon'ad [G. *monas*, the number one, unity.] 1. A univalent element. 2. A unicellular organism. 3. Specifically a flagellate infusorian.

monadelphous (mon-ă-del'fus) [G. *monos*, single, + *adelphos*, brother.] Noting a flower in which the filaments of all the stamens are united in a single bundle.

Monad'ida. An order of *Zoömastigophora*, embracing cells, often ameboid in form, provided with one or more flagella at one end.

mon'adin. Monad.

Monadi'na. Monadida.

Monakow's fi'bers or **tract** (mo-nah'kov) [Constantin von *Monakow*. Swiss histologist, 1853–1930.] Rubrospinal tract.

monamide (mon-am'id). The same as a monamine,* except that the hydrogen atom is replaced by an oxidized radical instead of hydrocarbon.

monamine (mon-am'ēn). A substance derived from ammonia by the substitution, in each molecule, of a hydrocarbon radical for a portion or all of the hydrogen; according as it contains one, two, or three substituted radicals it is a primary, secondary, or tertiary monamine.

monaminuria (mon-am″in-u'rĭ-ah). The presence of any monamine in the urine when voided.

monar'da [N. *Monardés*, Spanish botanist, sixteenth century.] The leaves of *Monarda punctata*, wild bergamot, American horsemint, a labiate plant of the United States east of the Mississippi; carminative and antiperiodic, employed in intermittent fever and colic in doses of ℥15–30 (1.0–2.0) of a fluidextract.

mon'ardin. A stearopten from oil of monarda, isomeric with thymol.

monarsone (mon-ar'sōn). Disodium monoethylarsone, $CH_3CH_2AsO(NaO)_2$, an aliphatic compound containing 38 per cent. of arsenic, recommended as a substitute for arsphenamine in the treatment of syphilis.

monar'thric [G. *monos*, single, + *arthron*, joint.] Relating to a single joint, monarticular.

monartic'ular [G. *monos*, single, + L. *articulus* joint.] Uniarticular, monarthric, relating to a single joint.

Mon'as [G. single a unit.] 1. A genus of infusorians of the order *Monadida*. 2. A monad. **M. prodigio'sus,** *Bacillus prodigiosus*.

monas'ter [G. *monos*, single, + *astēr*, star.] The single star figure in caryocinesia.

monatheto'sis [G. *monos*, single.] Athetosis affecting one hand or foot.

monatom'ic [G. *monos*, single, + *atomos*, atom.] 1. Relating to or containing a single atom. 2. Univalent.

monax'on, monax'one [G. *monos*, single, + *axōn*, axis.] Having a single neuraxon, noting nerve-cells of the first or second type.

monaxon'ic [G. *monos*, single, + *axōn*, axle.] 1. Having but one axon, noting a form of neuron. 2. Having but one axis, being therefore elongated and slender.

Monday-morn'ing sickness. An affection of the horse marked by lameness after the animal has remained quiet for a day or so. Other symptoms are pain, profuse sweating, accelerated pulse and breathing, tenseness of muscles of loin and thigh, and often nervous excitement. Paralysis of the hind legs may develop. No definite cause is known.

Mondonesi's reflex' (mon-do-na'zi) [Filippo *Mondonesi*, Italian physician in Bologna, contemporary.] Bulbo-mimic reflex.*

mo'ner [G. *monērēs*, solitary.] A non-nucleated mass of protoplasm.

Monera (mo-ne'rah) [pl. of moneron, G. *monērēs*, solitary.] A name given by Haeckel to protozoan organisms having no defined nucleus.

moner'ula [G. *monērēs*, solitary.] The first stage of the impregnated ovum when, according to Haeckel, the nucleus disappears, or is not distinguishable.

mone'sia. The bark of *Crysophyllum glyciphlœum*, a tree of Brazil; employed as an expectorant, alterative, and emmenagogue in doses of gr. 5–15 (0.3–1.0).

mon'esin. A glucoside from monesia, probably saponin, employed as an emmenagogue and oxytocic in doses of gr. ¼–½ (0.015–0.03).

Mongo'lian id'iocy. See *idiocy*. **M. mac'ulæ.** M. spots.* **M. spots,** see under *spot*.

mongo'lianism, mon'golism. Mongolian idiocy *

mon'ilated. Moniliform.

monilethrix (mon-ĭ-leth'riks) [L. *monile*, necklace, + G. *thrix*, hair.] Beaded or moniliform hair; a condition in which the hairs show a series of constrictions, giving the appearance of a string of fusiform beads.

Monilia (mo-nil'ĭ-ah) [L. *monile*, necklace.] Parasaccharomyces (?), a genus of moulds or fungi, fruit moulds. **M. psilo'sis,** a species thought by some observers to be the pathogenic organism in sprue.

moniliasis, moniliosis (mo-nil-i'a-sis, mo-nil-i-o'sis). Infection with any species of *Monilia;* it includes thrush and certain dermatomycoses and bronchomycoses.

monil'iform [L. *monile*, necklace, + *forma*, appearance.] Beaded.

Moniliformis (mo-nil-ĭ-for'mis) [L. *monile*, necklace, + *forma*, form.] A genus of *Acanthocephala*, a species of which, *M. moniliformis*, is a facultative, if unusual, parasite of man, the insect vector being the cockroach.

monks'hood. Aconitum.

mono- [G. *monos*, single.] A prefix denoting the participation or involvement of a single element or part; uni-.

monoanesthesia, monoanæsthesia (mon"o-an-es-the'zĭ-ah) [G. *monos*, single.] Anesthesia of a single extremity or part of an extremity.

monobacillary (mon"o-bas'il-a-rĭ) [G. *monos*, single.] Relating to or caused by one species of bacillus, noting an infection.

mon"obacte'rial [G. *monos*, single.] Associated with one species only of bacteria, said of an infection.

mon"oba'sic [G. *monos*, single, + *basis*, base.] Having but one replaceable hydrogen atom, noting an acid with a basicity of one.

mon"oblep'sia [G. *monos*, single, + *blepsis*, sight.] A condition in which vision is better with one eye than with two.

monobrachius (mon"o-bra'ke-us) [G. *monos*, single, + *brachiōn*, arm.] A monster with but one arm.

monobromacetanilid (mon"o-brōm"as-e-tan'ĭ-lid). Monobromphenyl-acetamide, antisepsin, a coal-tar derivative occurring in white tasteless crystals; has been recommended for neuralgia in doses of gr. 1–8 (0.06–0.5).

mon"obro'mated. Noting a chemical compound in which one atom of bromine is contained in each molecule **m. cam'phor,** camphora monobromata. **m. phe'nol,** an oily yellowish or reddish liquid. C_6H_4BrO, employed as an antiseptic externally in 1 or 2 per cent. ointment.

monoceph'alus [G *monos*, single, + *kephalē*, head] Syncephalus.* symphyocephalus, a twin monster with a single head; see *craniopagus, janiceps*.

monochlamydeous (mo-no-klam-id'e-us) [G. *monos*, single, + *chlamys(chlamyd-)*, cloak.] Noting a flower with a single perianth.

monochlormeth'ane. Methyl chloride

mon"ochlorphe'nol, mon"ochlorophe'nol. A colorless crystalline compound, $C_6H_4Cl(OH)$; used externally in erysipelas in 5 to 20 per cent. solution, and for lupus in 25 per cent. ointment; used also in pulmonary tuberculosis by inhalation, and as an antiseptic in dentistry.

monochorea (mon-o-ko-re'ah) [G. *monos*, single.] Chorea affecting the head alone or only one extremity.

monochorion'ic [G. *monos*, single.] Relating to or having a single chorion, noting enzygotic* twins.

monochroic (mon-o-kro'ik) [G. *monos*, single, + *chroa*, color.] Monochromatic.

monochromasia (mon"o-kro-ma'zĭ-ah) [G. *monos*, single, + *chrōma*, color.] Color blindness, except for a single color.

monochromat'ic [G. *monos*, single, + *chrōma*, color.] Having but one color, monochroic.

mon"ochromat'ophil, mon"ochromat'ophile [G. *monos*, single, + *chrōma*, color, + *philos*, fond.] 1. Taking only one stain. 2. A cell or any histological element staining with only one kind of dye.

monochro'mic. Of a single color, monochromatic, monochroic.

monochro'mophil, monochro'mophile. Monochromatophil.

monoc'linous [G. *monos*, single, + *klinē*, bed.] In botany, hermaphrodite, the stamens and pistil being in the same flower.

monococc'us [G. *monos*, single, + *kokkos*, berry.] A coccus occurring singly and not paired or grouped in various forms.

monoc'ranus [G. *monos*, single, + *kranion*, cranium.] Monocephalus.

monocrot'ic [G. *monos*, single, + *krotos*, stroke.] Noting a pulse the curve of which presents no notch in the downward line.

monoc'rotism. The state in which the pulse is monochrotic.

monoc'ular [G. *monos*, single, + L. *oculus*, eye.] Relating to, affecting, or visible by, one eye only

monoc'ulus. 1. A monster with one eye only, monophthalmus, cyclops. 2. A bandage applied to one eye only.

monocyte (mon'o-sīt) [G. *monos*, single, + *kytos* cell.] A large uninuclear leucocyte.

monocytopenia (mon'o-si-to-pe'nī-ah) [*monocyte* + G. *penia*, poverty.] Diminution in the number of monocytes in the peripheral circulation.

monocytosis (mon'o-si-to'sis). Increase in the number of monocytes in the peripheral blood.

monodac'tylism [G. *monos*, single, + *daktylos*, digit.] The presence of a single finger or a single toe on the hand or foot, respectively.

monœ'cious. Monecious.

monogenesis (mon-o-jen'e-sis) [G. *monos*, single, + *genesis*, production.] 1. The production of similar organisms in each generation; see *metagenesis*. 2. The production of young by a single parent, non-sexual generation, partheno-genesis.

monogerminal (mon-o-jur'min-al) [G. *monos*, single, + L. *germen*, bud, germ.] Unigerminal, relating to a single germ or ovum.

mon'ograph [G. *monos*, single, + *graphē*, a writing.] A treatise on a single subject or group of subjects, as one on valvular disease of the heart, or on diseases of the heart in general.

monohem'erous [Gr. *monos*, single, + *hēmera*, day.] Of one day's duration.

monohybrid (mon-o-hi'brid) [G. *monos*, single, + *hybrid*.] The offspring of parents that differ in one character.

monohy'drated [G. *monos*, single, + *hydōr*, water] Containing or united with a single molecule of water.

monohy'dric [G. *monos*, single.] Having but one hydrogen atom in the molecule.

monoideism (mon-o-i-de'izm) [G. *monos*, solitary, + *idea*, idea.] A harping on one idea; a slight degree of monomania.

mon"oinfec'tion. Simple infection with a single variety of microorganism.

monoke'tone. A ketone containing one atom group (CO).

mon'ol. Trade name of a 1–1000 solution of calcium permanganate; powerfully antiseptic, used chiefly to purify drinking water.

monoloc'ular [G. *monos*, single, + L. *loculus* a small chamber.] Unilocular, having but a single compartment or chamber.

monomania (mon-o-ma'nī-ah) [G. *monos*, single, + *mania*, madness.] Insanity in relation to a single idea or subject; a psychosis marked by the limitation of the symptoms more or less strictly to a certain group, as the delusion in paranoia or the dominating desire in an impulsive psychosis.

monoma'niac. One suffering from monomania.

monomastigote (mo-no-mas'tĭ-gōt) [G. *monos*, single.] A mastigote having but one flagellum.

mon"omercuri'on. The univalent mercurous ion.

monomer'ic [G. *monos*, single, + *meros*, part.] Relating to a single metamere.

monometall'ic [G. *monos*, single, + *metallon*, metal.] Containing but one atom of a metal in the molecule.

mon"omicro'bic. Noting a monoinfection, or an infection due to the presence of a single species of microbe, whether bacterium or protozoon.

monomo'ria [G. *monos*, single, + *mōria*, silliness.] A mild degree of monomania.

monomorphic (mon-o-mor'fik) [G. *monos*, single, + *morphē*, shape.] Of one shape; unchangeable in shape.

monom'phalus [G. *monos*, single, + *omphalos*, umbilicus.] A twin monster joined at the umbilicus.

monomyositis (mon-o-mi-o-sī'(se')tis) [G. *monos*, single, + *mys*, muscle, + *-itis*.] Inflammation of a single muscle.

mononeu'ral, mononeu'ric [G. *monos*, single, + *neuron*, nerve.] 1. Having only one neuron. 2. Supplied by a single nerve.

mononeuritis (mon"o-nu-rī'(re')tis) [G. *monos*, single, + *neuron*, nerve, + *-itis*.] Inflammation of a single nerve. **m. mul'tiplex,** inflammation of several nerves in unrelated portions of the body.

mononuclear (mon-o-nu'kle-ar) [G. *monos*, single, + L. *nucleus*.] Uninuclear, having a single nucleus.

mononucleo'sis. The presence in the peripheral blood of mononuclear leucocytes in abnormal numbers. **infec'tious m.,** lymphoblastosis, glandular fever.*

mononucleotide (mo"no-nu'kle-o-tid) [G. *monos*, single.] A simple nucleic acid combined with one base only.

mon"opar'esis [G. *monos*, single, + *paresis*.] Paresis affecting a single extremity or part of an extremity.

monoparesthesia, monoparæsthesia (mon"o-par-es-the'zī-ah) [G. *monos*, single, + Paresthesia affecting a single region only.

monopath'ic. Relating to a single disease or to a disease affecting a single part.

monop'athy [G. *monos*, single, + *pathos*, suffering.] 1. A single uncomplicated disease. 2. A local disease affecting only one organ or part.

monopegia (mon-o-pe'jī-ah) [G. *monos*, single, + *pēgnymi*, I fix in.] Localized pain in the head, clavus.

monopet'alous [G. *monos*, single.] Gamopetalous.

monoph'agism [G. *monos*, single, + *phagō*, I eat.] Habitual eating of but one kind of food.

monopha'sia [G. *monos*, single, + *phasis*, speech.] A condition in which a single word or sentence is repeated constantly.

monophasic (mon-o-fa'zik). 1. Marked by monophasia. 2. Characterized by only one phase.

monopho'bia [G. *monos*, single, + *phobos*, fear.] Morbid fear of solitude or of being left alone.

mon"ophthal'mus [G. *monos*, single, + *ophthalmos*, eye.] A monster with one eye, cyclops monops.

monophylet'ic [G. *monos*, single, + *phylē*, tribe.] Having a single source or origin; derived from one line of descent; opposed to *polyphyletic*.

monophyletism (mo-no-fi'let-izm) [G. *monos*, single, + *phylē*, tribe.] In hematology, the doctrine that all the blood-cells are derived from one common ancestor, probably the myeloblast.

monophy'odont [G. *monos*, single, + *phyō*, I grow, + *odous*(*odont-*), tooth.] Having one set of teeth only; without deciduous dentition; compare *diphyodont* and *polyphyodont*.

mon"oplasmat'ic [G. *monos*, single, + *plasma*, thing formed.] Formed of but one tissue.

mon'oplast [G. *monos*, single, + *plastos*, formed.] A unicellular organism which retains the same structure or form throughout its existence.

monoplas'tic. Undergoing no change in structure, relating to a monoplast.

monople'gia [G. *monos*, single, + *plēgē*, a stroke.] Paralysis of one limb. **m. masticato'ria,** unilateral paralysis of the muscles of mastication (masseter, temporal, pterygoid).

monopo'dial. Relating to a monopodium.

monopo'dium [G. *monos*, single, + *pous* (*pod-*), foot.] In botany, an axis of growth which extends at the apex, producing branches in succession behind its tip.

mon'ops [G. *monos*, single, + *ōps*, eye.] Cyclops. monophthalmus.

monopsychosis (mon-o-si-ko'sis) [G. *monos*, single, + *psychē*, mind.] Monomania.

mon'opus [G. *monos*, single, + *pous*, foot.] A monster with a single foot, sympus.

monorchidic (mon-or-kid'ik) [G. *monos*, single, + *orchis* (*orchid-*), testis.] Having apparently but one testicle, the other being undescended.

monorchidism, monorchism (mon-or'kĭ-izmd, mon'or-kizm). A condition in which but one testicle is apparent, the other being absent or undescended.

monorchis (mon-or'kis). A person who has apparently but one testicle.

Monorchotrema (mon-or''ko-tre'mah) [G. *monos*, single, + *orchis*, testicle, + *trēma*, a hole.] A genus of flukes of the family *Heterophyidæ*, having two species, *M. taihokui* and *M. taichui*, occasionally found in man in Japan.

monosaccharide (mon-o-sak'ar-id) [G. *monos*, single, + *sakcharis*, sugar.] A carbohydrate which does not form any other sugar by the action upon it of a dilute acid; the pentoses and hexoses are monosaccharides; dextrose (glucose) and levulose belong to this class.

mon'ose. Monosaccharide.

monosep'alous [G. *monos*, single.] Gamosepalous.

monosome (mon'o-som) [G. *monos*, single, + *sōma*, body.] Accessory chromosome, one of the allosomes which are unpaired in the spermatogonium.

mon'ospasm [G. *monos*, single.] Spasm affecting only one muscle or group of muscles, or a single extremity.

monospermy (mon'o-spur-mĭ) [G. *monos*, single, + *sperma*, seed.] Fertilization through the entrance of one spermatozoon only into the egg.

Monos'tomum [G. *monos*, single, + *stoma*, mouth.] A genus of flukes, or trematode worms. **M. len'tis**, a species sometimes found in the crystalline lens of the eye.

monostra'tal [G. *monos*, single, + L. *stratum*, covering.] Composed of a single layer.

monosub'stituted. In chemistry noting an element or radical, only one atom or atom equivalent of which is found in each molecule of a substitution compound.

monosymp'tom. An isolated or single symptom.

mon'osymptomat'ic. Noting a disease or morbid condition manifested by only one marked symptom.

monosyphilide (mo-no-sif'ĭ-lēd) [G. *monos*, single, + *syphilide*.] Marked by the occurrence of a single syphilitic lesion.

mon'otal. Trade name of a derivative of guaiacol, guaiacol methylglycholate, said to be devoid of toxicity; employed in neuralgia and as an antipyretic in doses of gr. 15–30 (1.0–2.0).

monother'mia [G. *monos*, single, + *thermē*, heat.] Evenness of bodily temperature, absence of an evening rise in fever.

Monotricha (mon-ot'rĭ-kah) [G. *monos*, single, + *thrix* (*trich-*), hair.] A group of protozoans having a single flagellum.

monotrichate (mon-o-trik'āt). Monotrichous* monotrichic, uniflagellate.

monotrichous (mon-ot'rĭ-kus) [G. *monos*, single, + *thrix* (*trich-*), hair.] Having one flagellum or cilium only, noting a unicellular organism with this characteristic.

monov'alent [G. *monos*, single, + L. *valere*, to have power.] Univalent.

monox'ide [G. *monos*, single.] Any oxide having only one atom of oxygen.

Monozo'a [G. *monos*, single, + *zōon* (pl. *zōa*), animal.] A group of *Cestoda*, the members of which possess but a single set of reproductive organs, therefore having but one segment.

Monro's' bur'sa [Alexander *Monro*, Scottish anatomist, 1697–1767.] The intratendinous bursa of the olecranon. **M.'s fora'men,** foramen intraventriculare. **M.'s gland,** glandula concreta, the outer or palpebral portion of the lacrymal gland. **M.'s line,** a line passing between the umbilicus and an anterior superior spine of the ilium. **M.'s sul'cus,** sulcus hypothalamicus.

Monro-Richter line (mon-ro'-rickh'ter) [Alexander *Monro;* August Gottlieb *Richter*.] A line passing from the umbilicus to the left anterior superior spine of the ilium.

mons, gen. *mon'tis*, pl. *mon'tes* [L. a mount.] An anatomical prominence or slight elevation above the general level of the surface. **m. pubis** [BNA], m. Veneris. **m. ure'teris,** a pinkish prominence on the wall of the bladder marking each ureteral orifice. **m. Ven'eris** [L. *Venus*], the prominence caused by a pad of fatty tissue over the symphysis pubis of a woman.

Monsel's' salt. Oxypersulphate of iron, the scaly residue obtained by evaporating the solution of ferric subsulphate. **M.'s solu'tion,** liquor ferri subsulphatis.

mon'ster [L. *monstrum*.] A malformed fetus. **autosit'ic m.,** one capable of independent existence, autosite.* **com'pound m.,** one in which there are parts, more or less imperfectly developed, of more than one individual. **double m.,** twin m., one in which all or most of the organs and other parts are duplicated. **emmen'ic m.,** a menstruating infant. **endocy'mic m.** [G. *endon*, within + *kyma*, fetus], a very incomplete parasitic m., usually only a few of the dermal structures, enclosed in another forming a dermoid cyst. **Gila m.,** see *Gila*. **parasit'ic m.,** a partly developed fetus attached to another and incapable of independent existence. **twin m.,** double m., one in which there are two more or less independent individuals joined at some part of the head or trunk. **triplet m.,** a compound m., containing parts, more or fewer, of three individuals.

monstrip'ara [L. *monstrum*, a monster, + *parere*, to bring forth.] A woman who has given birth to one or more monsters.

monstriparity (mon-strĭ-par'i-tĭ) [L. *monstrum*, monster, + *parere*, to bear.] The giving birth to a monster.

monstros'ity. A monster; the condition of being a monster; teratism.

mon'strum [L.] A monster.

Monteggia's disloca'tion (mon-ted'jah) [Giovanni Battista *Monteggia*, Italian surgeon, 1762–1815.] Dislocation of the femur toward the anterior superior spine of the ilium.

Montgom'ery's gland [William Fetherston *Montgomery*, Irish physician, 1797–1859.] Glandula* areolaris, one of the sebaceous glands in the areola of the nipple; they become hypertrophied during pregnancy. **M.'s tu'bercles,** the papular elevations formed by M.'s gland.

month'lies. Menses.

montic'ulus [L. dim. of *mons*, mountain.] 1. Any slight rounded projection above a surface. 2. [BNA] The central portion of the superior vermis forming a projection on the surface of the cerebellum; its anterior and most prominent

portion is called the *culmen*, its posterior sloping portion, the *declive*.

Montpe'lier drops [*Montpelier*, a city in the south of France.] A preparation made by Bon, a French savant of the 18th century, from spider silk and recommended as a remedy in lethargic conditions.

moon'-blindness. 1. Amblyopia alleged to be due to sleeping in the moonlight in the tropics; moon-blink. 2. Night-blindness.

moon'blink. Moon-blindness.

moon-calf [Skr. *garbha*, fetus; a product of conception at one time supposed to have been unfavorably influenced by the moon.] A fleshy mole; a monster.

Moon's mo'lars. Small dome-shaped first molar teeth occurring in hereditary syphilis.

Moore's frac'ture [Edward Mott *Moore*, American surgeon, 1814–1902.] Fracture of the lower end of the radius with displacement of the styloid process of the ulna.

Moore's test [John *Moore*, English physician 19th century.] For sugar in the urine: boiling with caustic soda or potassa produces a brown color in the presence of glucose

Moor'en's ul'cer [Albert *Mooren*, German oculist, 1828–1899.] Rodent ulcer of the cornea, an ulcer along the corneal margin having deeply undermined edges

mope-eyed. Myopic

morament (mōr-am'ent) [*moron* + *ament*.] A low grade moron; a mental defective without moral sense; a subject of moramentia.

moramentia (mor-ă-men'shyah) [G. *mōrōsis* + L. *amentia*.] A condition in which the assumed moral center in the frontal lobe is organically disabled, the subject (a *morament*) being absolutely unmoral, or without moral sense.

Morand's foot (mor-oṅ') [Sauveur François *Morand*, Parisian surgeon, 1697–1773.] A foot having eight toes. **M.'s disease,** a localized paralysis affecting one or more of the extremities. **M.'s fora'men,** foramen cæcum(3). **M.'s spur,** hippocampus minor, calcar* avis.

Morax-Ax'enfeld diplobacill'us [Victor *Morax*, Paris ophthalmologist, *1866; Theodor *Axenfeld*, Freiburg ophthalmologist, 1867–1930.] *B. conjunctivitidis, Haemophilus lacunatus*,[0] an organism causing conjunctivitis of a rather mild type.

mor'bid [L. *morbidus*, ill.] Diseased, pathological

morbid'ity. 1. A diseased state. 2. The ratio of sick to well in a community, the sick-rate, morbility

morbif'ic [L. *morbus*, disease, + *facere*, to make.] Disease-producing, pathogenic.

morbigenous (mor-bij'en-us) [L. *morbus*, disease, + *gennaō*, I produce.] Morbific, pathogenic.

morbil'ity. Morbidity.

morbil'li [L. *morbillus*, dim. of *morbus*, disease.] Measles.

morbill'ous. Relating to measles.

mor'bus [L.] Disease. **m. Addiso'nii,** Addison's* disease. **m. an'glicus,** rickets. **m. Bright'ii,** Bright's* disease. **m. cadu'cus,** falling-sickness, epilepsy. **m. cæru'leus,** blue disease, cyanosis of the newborn. **m. comitia'lis,** epilepsy; so called because, if any one had an epileptic fit during a session of the Comitia in ancient Rome, the assembly had to be closed immediately. **m. coxæ, m. coxa'rius,** hip-disease, coxitis. **m. divi'nus,** epilepsy. **m. dormiti'vus,** sleeping-sickness. **m. el'ephas,** elephantiasis. **m. erro'num,** vagabond's disease. **m. gall'icus,** syphilis. **m. hercu'leus,** (1) elephantiasis; (2) epilepsy. **m. maculo'sus neonato'rum,** a fatal disease in the newborn, marked by hemorrhages from the umbilicus, nose, and gastroenteric canal, with fever and sometimes jaundice. **m. maculo'sus Werlhof'fii,** purpura hæmorrhagica. **m. miser'iæ,** any disease due to privation. **m. pedicula'ris, m. pediculo'sus,** phthiriasis, pediculosis. **m. re'gius,** icterus, jaundice. **m. sa'cer,** sacred disease, epilepsy. **m. seni'lis,** rheumatoid arthritis, arthritis deformans. **m strangulato'rius,** membranous croup, diphtheria. **m. vagabun'dus,** vagabond's* disease. **m. virgin'eus,** chlorosis. **m. vul'pis,** fox's disease, alopecia.

M.O.R.C. Abbreviation for Medical Officers Reserve Corps.

morcel' [Fr. *morceler*, to subdivide.] To remove piecemeal.

morcella'tion [Fr. *morceller*, to subdivide.] Taking away by bits, a mode of removal of a tumor or hypertrophied tissue by nipping or crushing off little bits at a time

morcellement (mor-sel-moṅ') [Fr.] Morcellation.

mor'dant [L. *mordere*, to bite.] A substance, such as alum, used to make fast a dye or stain.

Morel's' delir'ium [Benoit Augustin *Morel*, French alienist, born in Vienna, 1809–1873.] Emotional delirium. **M.'s ear,** a large misshapen outstanding auricle, with obliterated grooves and thinned edges; a stigma of degeneration.

Morel-Kraepelin disease' (mŏ-rel'-kra'peh-lin) [Benoit A. *Morel*; Emil *Kraepelin*, German psychiatrist, 1856-1926.] Dementia* praecox.

Morelli's test (mo-rel'le) [*Morelli*, Italian physician, †1918.] To distinguish between an exudate and a transudate; a few drops of the suspected fluid are added to a saturated solution of mercuric chloride in a test-tube; if the result is a flaky precipitate the fluid is a transudate, if a cohesive clot forms it is an exudate.

Morestin's meth'od (mŏ-res-tan') [H. *Morestin*, French surgeon, 1869–1919.] Disarticulation of the knee with intracondyloid section of the femur.

Morgagni's appen'dix (mor-gahn'ye) [Giovanni Battista *Morgagni*, Italian anatomist and pathologist, 1682–1771.] Lalouette's* pyramid. **M.'s cartilage,** an inconstant cartilage in the form of a nearly vertical cylindrical rod in the substance of each aryteno-epiglottic fold. **M.'s car'uncle,** middle lobe of the prostate gland. **M.'s cat'aract,** a hypermature cataract, see Morgagnian cataract.* **M.'s col'umn,** columna* rectalis, one of a number of vertical ridges in the mucous membrane of the upper half of the anal canal. **M.'s con'cha,** the superior turbinated bone concha* nasalis superior. **M.'s crypts,** one of the pockets at the lower end of the sinus* rectalis, formed by M.'s valves. **M.'s disease',** Stokes*-Adams disease. **M.'s fora'men,** foramen cæcum (3). **M.'s foss'a or fo'vea,** fossa navicularis urethræ. **M.'s fre'num,** frenulum valvulæ coli. **M.'s glands,** Littré's glands, glandulæ* urethrales. **M.'s glob'ules,** minute hyaline bodies beneath the capsule of the crystalline lens. **M.'s hu'mor,** M.'s liquor. **M.'s hydat'id,** (1) appendix testis; (2) appendix vesiculosus. **M.'s lacu'na,** lacuna urethralis. **M.'s liquor,** a fluid found post mortem between the epithelium and the fibers of the crystalline lens, resulting from the liquefaction of a semifluid material existing there during life. **M.'s nod'ule** corpus Arantii, nodulus* valvulæ semilunaris. **M.'s prolapse',** chronic inflammation of M.'s ventricle. **M.'s retinac'ulum,** M.'s frenum. **M.'s si'nus,** (1)

sinus rectalis; (2) utriculus masculinus; (3) ventriculus laryngis. **M.'s spheres,** M.'s globules. **M.'s tu'bercle,** (1) nasal tonsil; (2) bulbus olfactorius. **M.'s valve,** a little fold like a semilunar valve of the heart, at the lower end of each of the grooves (sinus* rectales) separating M.'s columns. **M.'s ven'tricle,** ventriculus laryngis.

Mor'gan's bacillus (mor-ganz bă-sĭl'us) [H. de R. *Morgan*, British physician, contemporary.] *Salmonella morgani*,[0] a strain of the colon bacillus found in some cases of summer diarrhea and of food poisoning.

morgue (morg) [O.Fr. *morguer*, to regard solemnly.] A building where the unknown dead are kept for a time in order to afford an opportunity of identification before burial.

mo'ria [G. *mōros*, stupid, dull.] 1. Foolishness, dulness of comprehension, hebetudinosity. 2. A mental state marked by frivolity, joviality, an inveterate tendency to jest, and inability to take anything seriously, said to be associated with the presence of a tumor in the frontal region of the brain.

mor'ibund [L. *moribundus; moriri*, to die.] Dying, at the point of death

Morin'ga pterygosper'ma. A plant of India yielding mocharras* gum.

mor'ioplasty [G. *morion*, dim. of *moros*, a part, + *plassō*, I form.] Plastic surgery for restoring parts lost by injury or disease.

mo'ri suc'cus [L. *morus*, mulberry; *succus*, juice.] Mulberry juice; used as a flavor in refrigerant beverages.

Moriz Weisz test (mo-rits-vīs'). Weisz* test, urochromogen reaction.

morn'ing paral'ysis. See under *paralysis*.

morn'ing-sick'ness. Nausea and sometimes vomiting on arising in the morning, from which women in the early months of pregnancy often suffer.

Mo'ro's test [Ernst *Moro*, German physician, *1874.] One-tenth grain of a salve of equal parts of old tuberculin and anhydrous lanolin is rubbed into the skin of the epigastrium or thorax for one minute. If the subject is tuberculous a reaction, in the form of pale or bright red nodules appears in from 24 to 48 hours. **M.'s tuber'culin oint'ment,** the mixture of tuberculin and lanolin used in making M 's test.

morococ'cus [L. *morus*, mulberry.] A form of micrococcus in which the individuals are clumped together in rounded masses; it was regarded by Unna as the pathogenic agent in eczema.

mo'ron [G. *mōros*, stupid.] A feeble-minded person of higher grade than an imbecile, one who does not advance beyond the Binet* age of 12 years.

moronity (mo-ron'ĭ-tĭ). Morosis.

morosis (mo-ro'sis) [G. *mōros*, stupid.] Moronity, a grade of feeblemindedness above imbecility; the mental state of a moron.

morphe'a, morphœ'a [G. *morphē*, form, figure.] Circumscribed scleroderma, Addison's keloid, a skin disease marked by the presence of indurated patches of a whitish or yellowish white color surrounded by a pinkish or purplish border; varieties are described, *m. al'ba, m. atroph'ica, m. pigmento'sa*, according as the patches are white, atrophied, or pigmented. **m. acroter'ica,** m. confined chiefly to the extremities. **m. alba,** white m., a form in which there is little or no pigmentation. **m. atroph'ica,** m. with atrophy of the affected portion of the skin. **m. flam'mea,** nævus vascularis. **m. gutta'ta,** the presence of roundish white spots on the skin due to circumscribed degeneration of the papillary layer; white-spot disease. **m. herpetifor'mis,** m. distributed along the course of a nerve, like herpes zoster. **m. linea'ris,** a form in which lesions are arranged in the form of bands. **m. ni'gra,** a pigmented form of morphea.

morphi'na (Br.). Morphine, $C_{17}H_{19}NO_3 + H_2O$, the chief narcotic principle (alkaloid) of opium, occurs in colorless acicular crystals of a bitter taste, nearly insoluble in water; dose, gr. $\frac{1}{4}$–$\frac{1}{2}$ (0.008–0.03), but is usually exhibited in the form of one of its soluble salts. **morphi'næ ace'tas** (Br.), morphine acetate, a faintly yellowish white powder of bitter taste, soluble in water; dose, gr. $\frac{1}{8}$–$\frac{1}{2}$ (0.008–0.03). **morphi'næ hydrochlo'ridum** (U.S., Br.), morphine hydrochloride occurring as white acicular or cubical crystals of bitter taste, soluble in about 25 parts of water; dose, gr. $\frac{1}{8}$–$\frac{1}{2}$ (0.008–0.03). **morphi'næ sul'phas** (U.S.), morphine sulphate, occurring as white, silky, acicular crystals of bitter taste, soluble in 20 parts of water; dose, gr. $\frac{1}{8}$–$\frac{1}{2}$ (0.008–0.03). **morphi'næ tar'tras** (Br.), morphine tartrate, occurs as minute white acicular crystals, soluble in 11 parts of water; dose, gr. $\frac{1}{8}$–$\frac{1}{2}$ (0.008–0.03)

morphine (mor'fēn, mor-fēn') [L. *Morpheus*, the god of dreams or of sleep.] Morphina. **diacet'yl m.,** heroine. **eth'yl m.,** dionine. **meth'yl m.,** or **m. methyl ether,** codeine. **m. methyl bromide,** morphosane.

mor'phinism. Morphine habit; the habitual use of morphine.

morphiniza'tion. Bringing under the influence of morphine.

morphinoma'nia. Morphinism; the habitual use of morphine by ingestion or hypodermic injection.

morphioma'nia. Morphinomania

morphiom'etry [*morphina* + G. *metron*, measure.] The determination of the proportion of morphine in a given sample of opium.

morphœ'a. Morphea.

morphogenesia, morphogenesis (mōr-fo-jen-e'sĭ-ah, mōr-fo-jen'e-sis) [G. *morphē*, shape, + *genesis*, production.] The stimulation of growth.

morphogenetic (mōr-fo-jen-et'ik) [G. *morphē*, shape, + *gennaō*, I produce.] Causing or stimulating growth.

morphog'raphy [G. *morphē*, form, + *graphē*, a writing.] The study of or a treatise on the form and structure of animals and plants.

morpholecithus (mor-fo-les'ĭ-thus) [G. *morphē*, form, + *lekithos*, yolk.] The germinal or true yolk, vitellus* formativus.

morphological (mor-fo-loj'ĭ-kal) Relating to morphology.

morphol'ogy [G. *morphē*, form, + *-logia*.] The science which treats of the external configuration or the structure of animals and plants.

morphom'etry [G *morphē*, form, + *metron*, measure.] The measurement of the different parts entering into the external configuration of bodies.

mor'phon [G. *morphē*, form.] Any one of the individual structures entering into the formation of an organism; a morphological element, such as a cell.

morphophyly (mor-fof'ĭ-lĭ) [G. *morphē*, form, + *phylē*, a tribe.] The branch of phylogenesis dealing with the evolutionary anatomical development.

morphosane (mor'fo-sān]. Trade name of a brand of morphine methyl bromide, employed as a narcotic in hypodermic dose of gr. $\frac{1}{8}$–$\frac{1}{4}$ (0.008–0.015).

morpho'sis [G. a shaping.] The formation of an organism or any of its parts.

morphot'ic. Relating to morphosis.

mor'pio [L.] Crab-louse, *Pediculus pubis*.

Morrant' Ba'ker's cyst. See *Baker*.

Mor'rhua. A genus of fishes, including the cod. The genus is now usually called *Gadus*, morrhua being the specific name of the cod.

morrhuate (mor'ru-āt). A salt of the fatty acid derived from codliver oil.

morrhuol (mor'ru-ol) [L. *morrhua*, codfish, + *oleum*, oil.] 1. Trade name of an extract of codliver oil, claimed to contain the vitamins and other therapeutic principles of this substance, 2. Gaduol.

Mor'ris appen'dix [Robert Tuttle *Morris*, New York surgeon, *1857.] A vermiform appendix undergoing fibroid degeneration. **M.'s point,** a point of tenderness, on deep pressure, about an inch and a half from the umbilicus, on a line drawn between the umbilicus and the right anterior superior spine of the ilium; it is present in the case of an irritative process in the neighborhood of the vermiform appendix.

mors [L.] Death.

mor'sal [L. *morsus; mordere*, to bite.] Noting the masticatory, grinding, or occlusal surface of a tooth.

mor'sel [L. *morsellum*, dim. of *morsus*, a bite.] 1. A bite, a mouthful. 2. A bit, a small piece.

mor'sulus [L. dim. of *morsus*, a bite.] A lozenge or troche.

mor'sus diab'oli [L the devil's bite.] The fimbriated extremity of the Fallopian tube, fimbriæ tubæ.

mor'tal [L. *mortalis; mors*, death.] 1. Fatal, destructive to life. 2 Destined to die.

mortal'ity [L. *mors(mort-)*, death.] Death-rate. 1. The ratio of the number of deaths to the total population. 2. The ratio of the fatal cases to the total number of cases of any disease. 3. In life insurance the ratio of actual deaths to expected deaths. **ac'tual m.,** in life insurance the number of deaths per 1000 lives insured, distinguished from the tabular m. **tab'ular m.,** in life insurance, the death rate per 1000 lives as indicated by a mortality table.

mor'tar [L. *mortarium*.] A vessel with rounded interior in which crude drugs and other substances are crushed or bruised by means of a pestle.

mortif'erous [L. *mors(mort-)*, death, + *ferre*, to bear.] Fatal, lethal; causing death.

mortification (mor'tĭ-fi-ka'shun) [L. *mors(mort-)*, death, + *facere*, to make.] Gangrene.

Mor'timer's disease or **mal'ady.** A cutaneous affection marked by a number of symmetrically arranged, flat-topped sarcoid tumors of a dark reddish color on the face and hands; they may remain indefinitely with or without ulceration, or may disappear spontaneously.

mortinatality (mor-tĭ-na-tal'ĭ-tĭ) [L. *mors (mort-)*, death, + *natalis*, relating to birth.] Natimortality, the still-birth rate.

mor'tise-joint. Ankle-joint, articulatio talocruralis [BNA].

Mor'ton's cough [Richard *Morton*, English physician, 1637–1698.] An obstinate cough in phthisis, which constantly results in vomiting with consequent loss of nourishment and emaciation.

Mor'ton's cur'rent [William James *Morton*, American neurologist, 1845–1920.] Electrical discharges from a Leyden jar passed through the patient, the jar being continuously recharged by means of a static machine.

Mor'ton's disease' or **neural'gia** [Thomas George *Morton*, American physician, 1835–1903.] Metatarsalgia, neuralgia of the metatarsophalangeal joint of the third or fourth toe; called also *M.'s foot*, or *M.'s toe*.

Mor'ton's fluid. Iodine, gr. 10, potassium iodide, gr. 30, glycerin ℥1; employed by injection for the cure of spinal meningocele.

mor'tuary [L. *mortuus*, dead.] 1. Relating to death or to burial. 2. Dead-house, an outbuilding in a hospital or other institution, where the dead are placed before burial.

mor'ula [L. dim. of *morus*, mulberry.] A mass of small nucleated segments resulting from the repeated division of the blastomeres; mulberry mass.

morula'tion. The formation of the morula.

mo'rus [L.] Mulberry.

Morvan's chore'a (mor-van') [Augustin Marie *Morvan*, French physician, 1819–1897.] Fibrillary chorea, pseudochorea **M.'s disease',** analgesic paralysis with whitlow, a progressive paralysis and atrophy of the forearms and hands with analgesia and the formation of painless whitlows; probably the same as syringomyelia.

mor'vin [Fr. *morve*, malleus, glanders.] Mallein

mosaic (mo-za'ĭk). 1. Tesselated, inlaid, resembling inlaid work. 2. The juxtaposition in an organism of genetically different tissues, resulting from mutations during development or from chromosome non-disjunction. **m. layer,** mesoretina.

Mosch'cowitz's opera'tion [Alexis V. *Moschcowitz*, New York surgeon, *1865.] Operation for femoral hernia by the inguinal route. **M.'s test,** a test of the viable areas in threatened senile gangrene; an elastic bandage is applied for five or ten minutes and then quickly removed; the reactionary hyperemia travels from above downward—slowly and imperfectly in doubtful areas but not at all in regions of total ischemia.

moschus (mos'kus) [G. *moschos*, musk.] (Br.) Musk, the dried secretion from the preputial follicles of *Moschus moschiferus*, the musk-deer, a native of Thibet and the table-lands of Central Asia; a diffusible stimulant and nerve sedative, in doses of gr. 2–5 (0.13–0.3)

Moser's se'rum (mo'zer) [P. *Moser*, Vienna pediatrist, *1865.] A polyvalent bactericidal and antitoxic serum prepared by injecting into horses, cultures of streptococci obtained from the heart's blood in fatal cases of scarlet fever.

Mosetig-Moorhof's meth'od (mōs-et'ig-mōr'hof) [Albert Ritter von *Mosetig-Moorhof*, Austrian surgeon, 1838–1907.] Treatment of tuberculous cavities of bone by scraping and plugging with iodoform in wax.

Mosler's diabe'tes (mōs'ler) [Karl Friedrich *Mosler*, German physician,* 1831.] Inosituria with excretion of large quantities of water.

mosquito (mus-ke'to) [Sp. dim. of *mosca*, fly] A blood-sucking dipterous insect of the family *Culicidæ;* see *Aëdes*, *Anopheles*, *Culex*, and *Stegomyia*, the genera containing most of the species instrumental in the transmission of various protozoan and other animal forms of disease-producing parasites. **m. fever,** a term proposed by the Third International Sanitary Congress as a substitute for malaria.

moss [A.S. *mēos*.] 1. A delicate, low-growing, cryptogamous plant of the class *Musci*. 2. Popularly any one of a number of lichens and seaweeds **Ceylon m.,** agar-agar. **club m.,** lycopodium. **Cor'sican m.,** helminthochorton.

Iceland m., cetraria. **Irish m.,** chondrus (3). **Jaffna m.,** agar-agar.

Moss'man fe'ver. A fever, noted especially among sugar cane cutters in the Mossman District of North Queensland, marked by swelling of the axillary and inguinal glands; it lasts for from ten days to two weeks and is apparently uninfluenced by quinine or the salicylates.

Mos'so's er'gograph [Angelo *Mosso*, Italian physiologist, 1846–1910.] See cut under *ergograph*. **M.'s sphymomanom'eter,** an apparatus for measuring the blood-pressure in the digital arteries.

mossy cell (maw'sĭ). One of the larger cells enmeshed in the neuroglia; see under *cell*. **m. foot,** a chronic affection of the foot, common in the Amazon region; the foot is covered with painful warty vascular elevations half an inch or more thick.

Moszkowicz's test (mos'ko-vits). Hyperemia test; a lower limb in a made anemic by means of an Esmarch bandage, which is removed at the end of five minutes; one then notes the return of color, which normally reaches the tips of the toes in a few seconds, but in arteriosclerosis the color returns slowly, requiring sometimes several minutes to involve the entire limb.

Motais' opera'tion (mŏ-teh') [Ernst *Motais*, French ophthalmologist, †1913.] Transplantation of the middle third of the tendon of the superior rectus muscle of the eyeball into the upper lid, between the tarsus and skin, to supplement the action of the levator muscle in ptosis.

moth [A.S. *moththe.*] 1. A lepidopterous insect, distinguished roughly from a butterfly by not having knobbed antennæ, and by flying usually at dusk or at night. 2. Moth-patch. **brown-tail moth,** *Euproctis chrysorrhœa;* the nettling hairs of the caterpillar cause a troublesome dermatitis when brought in contact with the skin.

moth-patch. Liver-spot, the esion of chloasma.

mother (mudh'er) [A.S *mōdor*] 1. The female parent. 2. Any cell or other structure from which other similar bodies are formed.

mother (mudh'er) [A.S. *modder*, mud.] A stringy sediment in vinegar, the fungus of acetous fermentation, *Mycoderma aceti, Acetobacter aceti.*[0]

mother-ab'scess. A primary abscess giving rise to purulent collections in other parts.

mother-cell'. A cell which, by fission or budding, produces other similar cells.

mother-cyst'. The echinococcus cyst, from the inner, or germinal, layer of which secondary cysts containing scolices (daughter-cysts) are developed sometimes tertiary cysts (granddaughter-cysts) are developed within the daughter-cysts. It occurs most frequently in the liver, but may be found in other organs and tissues. The symptoms are those of a tumor of the part affected.

mother-liq'uor. The liquid remaining after certain substances which it contained in solution have been precipitated or crystallized out.

mother's-mark'. Birth-mark, nevus.

moth'er-wort [A.S. *wyrt*, a plant.] A plant, such as *Artemisia vulgaris*, supposed to possess healing virtues in diseases of the womb.

mo'tile [L. *motus*, movement. 1. Having the power of spontaneous movement. 2. Specifically, noting the type of mental imagery in which the person recalls most readily that which he has felt; contrasted with *audile* and *visile*.

motil'ity. The power of spontaneous movement.

mo'tion [L. *motio*, movement] 1. Movement. change of place. 2. Specifically, a movement of the bowels, defecation 3. The matter discharged from the rectum, a stool.

motofacient (mo-to-fa'shyent) [L. *motus*, motion, + *facere*, to make.] Causing motion, noting the second phase of muscular activity in which actual movement is produced.

mo'tor [L. a mover.] 1. Moving or causing motion. 2. Noting a nerve or its center through which or from which impulses travel which excite a muscle to contract. **m. a'rea,** the cerebral cortex of the ascending frontal and parietal convolutions. **m. center,** motorium. **m. fibers,** the filaments in a mixed nerve which transmit motor impulses only and not sensation **m. oc'uli,** the third cranial nerve, nervus oculomotorius. **m. zone,** see *zone* **plas'tic m.,** an artificial point of attachment, on an amputation stump, to which is fastened the cord or extensor by which movement is transmitted to an artificial limb, in cinematization.*

motorgraph'ic. Cinetographic.

moto'rial. Relating to motion, to a motor nerve, or the motor center.

moto'rium. The center for motor impulses in the brain

moto'rius. A motor nerve

mo'tormeter. A device for determining the amount, force, and rapidity of movement.

mo'torpathy. Movement-cure, cinesitherapy.

mottling (mot'ling) [E. *motley*, variegated in color.] A spotting with patches of varying shades or colors; marmoration,* marbleization.

mould. 1. A fungous growth on dead or decaying vegetable matter, forming a furry coating on the surface. 2. A shaped receptacle into which wax is pressed or fluid plaster is poured in making a cast. 3. To shape a mass of plastic material according to a definite pattern. 4. To change in shape, noting especially the adaptation of the fetal head to the pelvic canal.

mound'ing. A localized contraction of a degenerating muscle, occurring at the point where the muscle is sharply struck.

mount. To prepare for microscopical examination.

moun'tain. Relating to, resembling, or occurring in a mountain or mountains. **m. ane'mia,** uncinariasis **m. balm,** eriodictyon **m. fever,** (1) Rocky Mountain fever, tick* fever(4); (2) m. sickness. **m. sick'ness,** a symptom-complex of giddiness, nausea, dyspnea, headache, thirst, malaise, and a slight rise of temperature, due presumably to reduced atmospheric pressure, in those who ascend to great heights in a balloon or airplane or in mountain climbing.

mount'ing. See *mount*.

mouth [A S. *mūth.*] 1. Os, expanded upper portion of the digestive tract, containing the tongue and the teeth; it is bounded by the lips anteriorly, the cheeks laterally, the arch of the palate above (*roof* of the mouth), below by muscular tissue (*floor* of the mouth), and passes posteriorly into the pharynx through the isthmus of the fauces. 2. Os or ostium, orifice; the opening, usually the external opening, of a cavity or canal. **glass'-blower's m.,** a swelling of the parotid gland occurring in glassblowers. **m. of the womb,** os uteri, os tincæ. **parrot m.,** see *parrot*-mouth.* **ta'pir m.,** protrusion of the lips due to weakness of the oral muscle in certain forms of juvenile muscular dystrophy.

absence, astomia, lipostomia. **aperture,** rima oris. **atrophy,** lipostomia, lipostomy. **bleeding from,** stomatorrhagia, hæmorrhagia oris **cavity of,** cavum oris. **disease,** stomatopathy, stomatosis, stomatia. **dry-**

ness, xerostomia. **fluid discharge,** stomatorrhea, sialorrhea, ptyalism. **gangrene,** noma, cancer aquaticus, cancrum oris, stomatonecrosis. **imperforation,** atretostomia. **inflammation,** stomatitis, stomacace, stomatocace, aphthæ, stomatomycosis, thrush, muguet, stomatopyra. **large size,** macrostomia. **odor from,** stomatodysodia, ozostomia. **pain,** stomatodynia, stomatalgia. **plastic surgery,** chalinoplasty, stomatoplasty, stomatopoiesis. **small size,** microstomia. **softening,** stomatomalacia. **spasmodic closure,** trismus, stomatospasmus, lockjaw. **specialty of diseases of,** stomatology, stomatoiatria. **tumor,** stomatophyma. **ulceration,** stomatocace, stomacace, stomatelcosis, canker, cancrum oris. **vestibule of the,** vestibulum oris. **vicarious menstruation from,** stomatomenia, stomenorrhagia.

mouth-wash. Collutorium.

movement (moov'ment) [L. *movere*, to move.] 1. The act of changing position, of passing from one place to another, said of the entire body or of one or more of its numbers or parts. 2. A discharge of feces from the rectum. **ac'tive m.,** effected by the organism itself unaided by external influences. **ame'boid m.,** the m. characteristic of leucocytes and unicellular organisms; see *streaming m.* **assis'tive m.,** in massage, a m. which the partially paralyzed muscle of the patient would be unable to perform unaided but which is effected with the graduated assistance of the operator. **asso'ciated m.,** involuntary m. in a limb corresponding to one voluntarily executed in its fellow. **Brown'ian m., Bruno'nian m.,** rapid oscillation of minute solid particles suspended in a liquid. **chore'ic m.,** an involuntary spasmodic twitching or jerking in groups of muscles not associated in the production of definite purposeful movements. **cil'iary m.,** the rhythmical, sweeping m. of the cilia of epithelial cells, or the sculling movement of flagella, effected possibly by the alternate contraction and relaxation of contractile threads (myoids) on one side of the cilium or flagellum. **grand m.,** a m. of large range embracing the entire body, as in opisthotonus, or one or more of the extremities, occurring especially as one of the stages of hystero-epilepsy **molec'ular m.,** Brownian m. **mus'cular m.,** m. caused by the contraction of the protoplasm of the muscle-cell. **pas'sive m.,** m. imparted to an organism or any of its parts by external agency; m. of any joint effected by the hand of another person, or by mechanical means, without participation of the subject himself. **protoplas'mic m.,** m. produced by the inherent power of contraction and relaxation of protoplasm; such movements are of three kinds: muscular, streaming, and ciliary. **re'flex m.,** an involuntary m. resulting from a stimulus applied near, or it may be at a distance from the part moved. **resis'tive m.,** in massage, a m. made by the patient against the efforts of the operator, or one forced by the operator against the resistance of the patient. **stream'ing m.,** the form of m. characteristic of the protoplasm of leucocytes, amœbæ, and other unicellular organisms; it consists in the massing of the protoplasm at some point where surface pressure is least and its extrusion in the form of a pseudopod; the protoplasm may return to the body of the cell, resulting in the retraction of the pseudopod, or the entire mass may flow into the latter and so effect progression of the cell. **Swe'dish m.,** passive m., cinesitherapy.

move'ment-cure. Cinesitherapy.

mower's mite (mo'urz mit). Harvest mite, *Leptus autumnalis*.

mox'a [Jap. *moe kusa*, burning herb.] 1. A cone or cylinder of cotton wool or other combustible material, placed on the skin and ignited in order to produce counterirritation. 2. A button-shaped iron, heated in the fire or electrically, and applied as a cautery; actual cautery, galvanic moxa.

moxibustion (mok'sĭ-bus'chun) [*moxa* + (*com*)*bustion*.] The production of counterirritation by means of a moxa.

Moynihan's symp'tom-com'plex (moy'nyan) [Lord Berkeley George Andrew *Moynihan*, English surgeon, contemporary.] Hunger-pain, relieved by food; late pain from three to six hours after eating; night-pain (renewed hunger-pain) waking the patient and relieved by food, such as crackers and milk—a sign of duodenal ulcer. **M.'s test,** on gaseous inflation of the stomach by giving the two parts of a Seidlitz powder separately, two distinct sacs can be made out in case of hourglass contraction.

M.R.C. Abbreviation for Medical Reserve Corps.

M.R.C.P. Abbreviation for Member of the Royal College of Physicians.

M.R.C.P.E. Abbreviation for Member of the Royal College of Physicians of Edinburgh.

M.R.C.P.I. Abbreviation for Member of the Royal College of Physicians in Ireland.

M.R.C.S. Abbreviation for Member of the Royal College of Surgeons.

M.R.C.S.E. Abbreviation for Member of the Royal College of Surgeons of Edinburgh.

M.R.C.S.I. Abbreviation for Member of the Royal College of Surgeons in Ireland.

M.R.C.V.S. Abbreviation for Member of the Royal College of Veterinary Surgeons.

M.u. Abbreviation of Mache* unit.

mu'avine. An alkaloid from muava-bark, obtained from an African tree of the genus *Erythrophlæum*, it is similar in its properties to erythrophleine, the alkaloid of sassy-bark.

mu'cedin, mu'cedine [L. *mucedo*, mucus.] A protein of the gliadin group, present in gluten of wheat and other grains.

muchematein (mūk-hem'ă-te-in). A staining fluid consisting of aluminum chloride 0.1, hematin 0.2, glycerin 40.0, water 60.0.

Much's bacil'lus (mookh) [Hans *Much*, German physician, *1880.] An alleged non-acid-fast granular form of the tubercle bacillus, not demonstrable by the Ziehl stain, but taking a modified Gram stain, and resistant to antiformin; it is said to be the form present in the tuberculous skin lesion. **M.'s gran'ules,** rows of non-acid-fast gram-positive granules, supposed to be modified tubercle bacilli. **M.'s reac'tion,** Much-Holzmann reaction.

Much-Holzmann reaction (mookh-holts'mahn reak'shun) [Hans *Much*; W. *Holzmann*, German physician, contemporary.] The alleged property of the serum from a person suffering from dementia præcox or from manic-depressive insanity of inhibiting hemolysis by cobra venom.

Much-Weiss stain (mookh-vīs). Same as Weiss* stain.

mu'cic. Relating to mucus. **m. acid,** a crystalline substance, $C_6H_{10}O_8$, derived from the oxidation of gum arabic, gum tragacanth, lactose, and other carbohydrates.

mucicar'mine. A mucin stain containing aluminum chloride 0.5, carmine 1, distilled water 2.

mu'cid. Mucilaginous, slimy.

mucif'erous [L. *mucus* + *ferre*, to carry.] Muciparous.

mu'ciform [L. *mucus* + *forma*, form.] Resembling mucus.

mu'cigen [L. *mucus* + G. *gennaō*, I produce.] A substance formed in the secreting cells of the mucous membranes, convertible into mucin.

mucigenous (mu-sij'en-us) [L. *mucus* + *gennaō*, I produce.] Muciparous.

mu'cilage. Mucilago.

mucilaginous (mu-si-laj'in-us). 1. Resembling mucilage, viscid, sticky. 2. Muciparous.

mucila'go, gen. *mucilag'inis,* pl. *mucilag'ines* [L. a mouldy juice.] A pharmacopeial preparation consisting of a solution in water of the mucilaginous principles of vegetable substances; employed as a soothing application to the mucous membranes and in the preparation of official and extemporaneous mixtures. **m. aca'ciæ** (U S., Br.), mucilage of acacia or gum arabic; acacia 340, lime water 330, water to make 1000 (U.S.); gum arabic 4, distilled water 6 (Br.); used as an excipient for mixtures and pill masses and troches. **m. chon'dri** (N.F.), mucilage of Irish moss, made with chondrus 3, in water 100; used in the preparation of emulsions. **m. dextri'ni,** mucilage of dextrin, containing dextrin 33 5, in water 100; used for making emulsions. **m. sal'ep** (P.G.), mucilage of salep, made with salep 1, in water 100; demulcent. **m. sas'safras medul'læ** (N.F.), mucilage of sassafras pith; sassafras pith 2, water 100; used in bronchitis and as a local application in conjunctivitis. **m. tragacan'thæ** (U.S., Br.), mucilage of tragacanth; tragacanth 6, glycerin 18, water to make 100; employed as an excipient in extemporaneous mixtures and as a local application to burns. **m. ul'mi,** mucilage of slippery elm; slippery elm 6, water 100, digest for 1 hour in a water-bath, and strain; employed as a demulcent in affections of the mucous membranes.

mu'cin. One of a number of glycoproteins secreted by the goblet cells of the mucous glands and present also in connective tissue and in the umbilical cord; they are soluble in alkaline water and precipitated by acetic acid.

mucine'mia, mucinæ'mia [*mucin* + G. *haima,* blood.] The presence of mucin in the blood.

mu'cinoblast [*mucin* + G. *blastos,* germ.] 1. Mast cell. 2. Goblet cell.

mucin'ogen [*mucin* + G *gennaō,* I produce.] A protein-carbohydrate compound (glycoprotein) which, through the imbibition of water, forms mucin.

mu'cinoid [*mucin* + G *eidos,* appearance.] 1. A glycoprotein resembling mucin but possessing a somewhat higher sulphur content; it is normally found in connective tissue and pathologically in cells undergoing mucinoid or mucoid degeneration. 2. Resembling mucin. **m. degenera'tion,** see *degeneration.*

mucinuria (mu-sin-u'ri-ah) [*mucin* + G. *ouron,* urine.] The presence of mucin in the urine.

mucip'arous [L. *mucus* + *parere,* to bring forth, bear.] Producing mucus, muciferous, mucigenous.

mucitis (mu-si'(se')tis). Inflammation of a mucous membrane.

mucocele (mu'ko-sēl) [L. *mucus* + G. *kēlē,* tumor, hernia.] 1. A cyst containing mucus. 2 A mucous polypus. 3. A retention cyst of the lacrymal sac.

mucoclasis (mu-kok'lă-sis) [*mucosa,* + G. *klasis,* a breaking off.] Denudation of any mucous surface.

mucocolitis (mu-ko-ko-li'(le')tis). Mucous colitis.*

mucocuta'neous. Relating to mucous membrane and skin, noting the line of junction of the two at the nasal, oral, vaginal, and anal orifices.

mucoenteritis (mu"ko-en-ter-i'(e')tis). 1. Inflammation of the intestinal mucous membrane. 2. Mucomembranous enteritis.*

mucoid (mu'koyd) [*mucus* + G. *eidos,* appearance.] 1. A glycoprotein differing from mucin in general only in possessing a higher sulphur content; it is normally found in connective tissue, and pathologically in the cells undergoing mucoid degeneration. 2. Muciform, resembling mucus. **m. degenera'tion,** see *degeneration.* **m. tumor,** myxoma.

mucomem'branous. Relating to a mucous membrane. **m. enteri'tis,** mucous enteritis *

mucoperios'teal. Relating to mucoperiosteum.

mucoperios'teum. Mucous membrane and periosteum so intimately united as to form practically a single membrane, as that covering the hard palate.

mucopu'rulent. Both mucous and purulent, containing or composed of both mucus and pus.

mu"copus'. A mucopurulent discharge, a mixture of mucus and pus.

mu'cor. 1 Mucus. 2. A mould common on dead and decaying vegetable substances, bread, etc.; slime fungus.

mu'corin. A protein present in certain mucors or moulds.

Mucori'ni. A family of mucors, moulds, or slime fungi.

mucormycosis (mu"kor-mi-ko'sis). A mycosis caused by a fungus or mould of the family *Mucoraceæ,* one of the slime fungi.

mucosa (mu-ko'sah) [L. fem. of *mucosus,* mucous.] Membrana mucosa, tunica mucosa, mucous membrane.

muco'sal. Relating to the mucosa or mucous membrane.

mucosanguineous, mucosanguinolent (mu"ko-sangwin'e-us, mu"ko-san-gwin'o-lent). Consisting of mucus mixed with blood.

mucosed'ative. Soothing to the mucous membranes, demulcent.

mucoserous (mu-ko-se'rus). Containing or consisting of mucus and serum.

mu'cosin. A mucin occurring in a very thick adhesive mucous discharge.

mucous (mu'kus). Relating to mucus or a mucous membrane. **m. membrane,** a membrane secreting mucus, which lines passages and cavities communicating with the exterior. **m. patch,** (1) a group of macerated macules and papules occurring in the mucous membrane of the mouth in syphilis; (2) condyloma latum. **m. râle,** a bubbling sound heard on auscultation over bronchial tubes containing mucus. **m. sheath of a tendon,** vagina mucosa tendinis [BNA].

mucro (mu'kro) [L. point, sword.] A term applied to the pointed extremity of a structure. **m. cor'dis,** apex of the heart. **m. ster'ni,** ensiform process of the sternum.

mucronate (mu'kro-nāt) [L. *mucro,* a sword.] Relating to or resembling a sword, ensiform, xiphoid. **m. car'tilage,** ensiform cartilage, processus xiphoideus [BNA].

mucu'na [a native Brazilian name.] The hairs adherent to the pods of the cowhage, *Mucuna pruriens,* and the Florida bean, *M. urens;* anthelmintic in doses of gr. 1–2 (0.06–0.13).

mu'cus. The clear viscid secretion of the mucous membranes, consisting of mucin, epithelial cells, leucocytes, and various inorganic salts suspended in water; animal mucilage.

mu'dar. Calotropis.

Mueller's canal' or **duct** (mü'ler) [Johannes *Mueller*, Berlin physiologist, 1801–1858.] One of two embryonic canals opening into the cloaca, lying on the external surface of the Wolffian body, forming in the female the oviducts, uterus, and vagina; in the male they disappear leaving as vestiges the utriculus* masculinus and the appendix* testis **M.'s capsule,** Bowman's capsule capsula* glomeruli. **M.'s exper'iment,** after a forced expiration, an attempt at inspiration is made with closed mouth and nose, whereby the negative pressure in the lungs is increased. **M.'s gan'glion,** ganglion superius [BNA].

Mueller's fi'bers (mu'ler) [Heinrich *Mueller*, German anatomist, 1820–1864.] 1. The circular fibers of the ciliary muscle, M.'s muscle (2). 2. Sustentacular fibers of the retina, running through the thickness of the retina from within as far as the bases of the rods and cones where they form a network called the membrana limitans externa **M.'s muscle,** (1) musculus orbitalis, a collection of unstriped muscular fibers stretching across the sphenomaxillary fissure and infraorbital groove; it is supplied by sympathetic nerve-fibers; (2) the circular fibers of the ciliary muscle, musculus* ciliaris. **M.'s tri'gone,** a portion of the tuber cinereum which folds over the optic chiasm and adheres to its upper surface.

Mueller's flu'id or **liq'uid** (mu'ler) [Hermann Franz *Mueller*, German histologist, 1866–1898.] A hardening fluid, composed of potassium bichromate 2, sodium sulphate 1, distilled water 100.

Mueller's meth'od (mü'ler). 1. Resection of the sclera for detachment of the retina. 2. The accoucheur with one hand passed through the cervix holds the fetal head in flexion, while with the other hand on the abdomen he endeavors to force the head into the brim of the pelvis, the getting an idea of the possible amount of moulding of the head.

Mueller's sign (mu'ler) [Friedrich von *Mueller*, German physician, *1858.] Rhythmical pulsatory movements of the uvula, with swelling and redness of the velum palati and tonsils, synchronous with the heart's action, in aortic insufficiency. **M.'s steato'ma,** lipoma fibrosum.

Mueller's test (mu'ler) [Eduard *Mueller*, German physician, 1876–1928.] If to some of Millon's reagent in a porcelain dish one adds one or two drops of pure tuberculous pus a slight pellicle is formed and no coloring of the reagent takes place; if the pus is of streptococcic or staphylococcic origin it forms a disc-shaped drop of fluid and stains the reagent red. See *Donné*.

muellerization (mü-ler-i-za'shun). Mueller's method (2).

Muenchmeyer's disease' (munsh'mi-er). A progressive ossifying myositis.

mugwort (mug'wurt) [A. S. *mycg* or *mucg*, midge, + *wyrt*, plant.] A name given to various species of *Artemisia*.

muhin'yo. Native name of a continued fever prevalent in Uganda, probably undulant fever.

muira puama (moo-e'rah poo-ah'mah) [Native Brazilian, wooden strength.] The wood of *Livosoma ovata*, a tree of Brazil, employed as an antirheumatic and antidysenteric in doses of ℥10–20 (0.6–1.3) and as an aphrodisiac in doses of ʒ½–1 (2.0–4.0) of a fluidextract.

mul'berry. A tree of the genus *Morus;* the fruit is edible and the juice, *mori succus*, is sometimes used to flavor refrigerant drinks in fever. **m. cal'culus,** a vesical calculus of calcium oxalate, the surface of which is nodulated giving it a fancied resemblance to a mulberry. **m. mark,** nevus. **m. mass,** morula **m. spots,** the abdominal eruption in typhus fever.

Mul'der's an'gle [Jan *Mulder*, Dutch anatomist, 1769–1810.] The angle formed by the intersection of Camper's horizontal line and a line drawn from the spheno-occipital suture to the root of the nose.

Mul'der's test [G. J. *Mulder*, Dutch chemist, 1802–1880.] If to a fluid containing sugar one adds a solution of indigo-carmine, made alkaline with sodium carbonate, in quantity sufficient to give a faintly blue tint, and then heats, a play of colors takes place through green, purple, and red to violet; on shaking in a vessel containing air the blue color is restored.

Mules's opera'tion [Philip Henry *Mules*, English ophthalmologist, 1843–1905.] Evisceration of the eyeball followed by the insertion within the sclera of a hollow ball of glass, silver, or some other non-irritating material, to give support to an artificial eye.

mulieb'ria [L. neut pl. of *muliebris*, relating to a woman.] The female genital organs.

muliebrity (mu-li-eb'ri-ti). The state of being a woman; the change of character in the human female at puberty.

mull [Hindu, *malmal, mulmul.*] A soft thin cotton cloth, a kind of muslin. **salve m.,** mulla (N.F.).

mulla (mul'lah). Mull, formerly called unguentum extensum; an ointment, consisting of the medicinal agent in a base of a mixture of suet and lard with the occasional addition of wax or lead plaster, spread on mull, or soft muslin. **m. ac'idi salicyl'ici** (N.F.), salicylic acid mull; salicylic acid 10, benzoinated suet 80, benzoinated lard 10. **m. creoso'ti salicyla'ta** (N.F.), salicylated creosote mull; salicylic acid 10, creosote 20, yellow wax 5, benzoinated suet 65. **m. hydrar'gyri chlor' di corrosi'vi** (N.F.), corrosive sublimate mull; corrosive mercuric chloride 2, alcohol 60, benzoinated suet 900, benzoinated lard 50. **m. zin'ci** (N.F.), zinc mull; zinc oxide 10, benzoinated suet 70, benzoinated lard 20.

mullein, mullen (mul'en), [A.S. molegn] Verbascum.

multan'gular. Having many angles. **m. bone,** os multangulum; the *large* m. bone is the [BNA] term for the trapezium, the *small* m. bone for the trapezoid.

multi- [L. *multus*, much, many.] A prefix denoting many; properly joined only to words of Latin derivation; the equivalent in words of Greek origin is *poly-*.

mul"tiartic'ular [L. *multus*, many, + *articulus*, joint] Relating to or involving many joints polyarthric.

multicap'sular [L. *multus*, many, + *capsula*, capsule.] Having numerous capsules.

mul'ticell. A group of cells having similar functions.

multicell'ular [L. *multus*, many, + *cellula* cell.] Composed of many cells.

Multiceps (mul'ti-seps) [L. *multi*, many, + *caput*, head.] *Coenurus*, a genus or group of larval tapeworms (bladder worm, cysticercus). **M. glomera'tus,** a form found once in muscle, in man.

multicus'pid. A multicuspidate* tooth, a molar tooth

multicus'pidate [L. *multus*, many, + *cuspis*, cusp.] 1. Having more than two cusps. 2. A tooth with three or more cusps or projections on the crown, a multicuspid, a molar tooth.

multifamilial (mul-tĭ-fă-mil'ĭ-al) [L. *multus*, many, + *familia*, family.] Noting a familial disease which attacks the children in several successive generations.

mul'tifid [L. *multifidus*.] Divided into many clefts or segments.

multif'idus [L. *multus*, much, + *findere*, to cleave.] Multifid; see under *musculus*.

mul'tiform [L. *multus*, many, + *forma*, form.] Occurring in many forms, polymorphous.

multiglandular (mul-tĭ-glan'du-lar) [G. *multus*, many.] Pluriglandular.

multigrav'ida [L. *multus*, many, + *gravida*, pregnant.] A pregnant woman who has been pregnant two or more times previously.

multiinfection (mul-tĭ-in-fek'shun) [L. *multus*, many.] Mixed infection with two or more varieties of microorganisms developing simultaneously.

multilo'bar [L. *multus*, many, + *lobus*, lobe.] Having several lobes.

multilo'bate, multilobed (mul-tĭ-lōbd'). Multilobar.

multilob'ular [L. *multus*, many, + *lobulus*, lobule.] Having many lobules.

multiloc'ular [L. *multus*, many, + *loculus*, compartment.] Many-celled, having many compartments or loculi.

multimammæ (mul-tĭ-mam'e) [L. *multus*, many, + *mamma*, breast.] Polymastia, a condition in which more than two mammary glands are present in the human.

multino'dal [L. *multus*, many, + *nodus*, node.] Having many nodes.

multinod'ular, multinod'ulate [L. *multus*, many, + *nodulus*, nodule.] Having many nodules.

multinuclear (mul-tĭ-nu'kle-ar) [L. *multus*, many, + *nucleus*.] Having two or more nuclei.

multinucleated (mul-tĭ-nu'kle-a-ted). Multinuclear.

multip'ara [L. *multus*, many, + *parere*, to bring forth, to bear.] A woman who has borne three or more children in as many pregnancies

multipar'ity. 1. The condition of being a multipara. 2. The bringing forth of two or more children at one birth.

multip'arous. 1. Relating to a multipara 2 Bringing forth two or more children at one birth.

multipartial (mul-tĭ-par'shal) [L. *multi*, many, + *partial*. Noting a serum made not from one culture only but from cultures of several strains of the same organism, thus containing a large number of partial* groups; polyvalent.

mul'tiple [L *multiplex; multus*, many, + *plica*, fold.] Manifold, repeated several times; occurring in several parts at the same time, as *m. arthritis*, *m. neuritis*.

multipo'lar [L. *multus*, many, + *polus*, pole.] Having more than two poles, noting a nerve cell in which the branches project from several points

multiroot'ed. Having more than two roots, noting a molar tooth.

multirotation (mul-tĭ-ro-ta'shun) [L. *multus*, much, + *rotation*.] The phenomenon exhibited by certain bodies, such as milk sugar, which rotate widely in the polarimeter when first dissolved, but much less after standing or when heated to the boiling point.

multiv'alence [L. *multus*, many, + *valere*, to have power.] The property of having a combining power of more than one atom of hydrogen.

multiv'alent. 1. In chemistry, having a combining power of more than one atom of hydrogen. 2. Efficacious in more than one direction. **m. vac'cine,** a bacterial vaccine made from killed cultures of several strains of the same microorganism

mu'ma fe'ver [a Samoan word.] Myositis purulenta tropica.

mummifica'tion [*mummy* + L. *facere*, to make.] 1. Dry gangrene 2. The shrivelling of a dead and retained fetus. 3. In dentistry, (1) dry gangrene of the pulp of a tooth; (2) the condensation of a tooth pulp by means of astringents.

mumps [Dialectic English *mump*, a lump or bump.] Epidemic parotitis. **metastat'ic m.,** m. complicated by participation of the testis or the mamma in the morbid process.

Munro's' point. A tender point at the right edge of the rectus abdominis muscle, between the umbilicus and the anterior superior spine of the ilium, in appendicitis.

mu'ral [L. *muralis; murus*, wall.] Relating to the wall of any cavity.

Murat's frem'itus or **symp'tom** (mu-ră'). Subjective vocal fremitus, a vibration in the chest, perceived by the patient himself, when speaking.

Mur'chison's pill [Charles *Murchison*, London physician, 1830–1879.] A pill of digitalis gr. ½ (0.03), squill gr. 1½ (0.1), and blue mass gr. 2 (0.13), employed in the treatment of dropsy.

murexide (mu-reks'īd, or id) [L. *murex*, a marine gastropod furnishing a purple dye.] The ammonium salt of purpuric acid, formerly used as a dye, but superseded by the aniline colors. **m. test,** for uric acid; evaporate the suspected urine nearly to dryness on a water bath with a little nitric acid; when cool add carefully a little ammonia, when, if uric acid is present, a brilliant red color is produced.

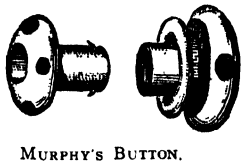
mu'riate [L. *muria*, brine.] The former term for chloride.

muriat'ic [L *muria*, brine.] Hydrochloric **m. acid,** acidum hydrochloricum

mur'mur [L.] Susurrus; a soft sound, like that made by a somewhat forcible expiration with the mouth open, heard on auscultation of the heart, lungs, or blood-vessels **acciden'tal m.,** an evanescent cardiac m. not due to valvular lesion **ane'mic m.,** a non-valvular m heard on auscultation of the heart and large blood-vessels in cases of profound anemia. **aor'tic m.,** one produced at the aortic orifice, either obstructive or regurgitant **arte'rial m.,** a m. heard on auscultating an artery. **blood m.,** hemic m. **car'diac m.,** a m produced within the heart, at one of its orifices or in the pericardial sac. **car"diopul'monary m.,** a m synchronous with the cardiac systole, produced in the lung by movement of air in a cavity or dilated bronchus. **crescen'do m.,** a mitral presystolic (or systolic) m. which increases gradually in intensity and suddenly ceases, heard sometimes in mitral obstruction. **diastol'ic m.,** one heard at the period of cardiac dilatation, or diastole, due usually to regurgitation at the aortic or pulmonary orifice. **direct' m.,** obstructive m. **endocar'dial m.,** one arising, from any cause, within the heart **exocar'dial m.,** a pericardial friction m. **func'tional m.,** a cardiac murmur not associated with valvular lesion. **he'mic m.,** a cardiac or vascular m. heard in anemic persons who have no valvular lesion, due to an abnormal, usually anemic, condition of the blood. **indirect. m.,** regurgitant m. **inorgan'ic m.,** functional m' **lapp'ing m.,** a sound like that of a cat lapping milk, heard sometimes when there is a slit-like rupture of the aorta. **mi'tral m.,** one produced at the mitral valve, either obstructive or regurgitant **mus'cular m.,** the sound produced by contracting muscular tissue. **mu'sical m.,** a cardiac sound having a musical character. **obstruc'tive m.,** one

caused by narrowing of one of the valvular orifices. **organ'ic m.,** a m. due to the presence of some lesion in the part auscultated. **pericar'dial m.,** a friction sound, synchronous with the heart movements, heard in certain cases of pericarditis. **prediastol'ic m.,** a m. heard in the interval between the ventricular systole and diastole. due to mitral or tricuspid obstruction or aortic or pulmonary regurgitation. **presystol'ic m.,** one heard in the interval between the pulmonary diastole and systole, due to obstruction at one of the atrioventricular orifices. **pul'monary m., pulmon'ic m.,** a m. produced at the pulmonary orifice of the heart. either obstructive or regurgitant. **regur'gitant m.,** one due to leakage or backward flow at one of the valvular orifices of the heart. **respiratory m.,** vesicular respiration, the sound heard on auscultating the normal lung. **see'saw m.,** to-and-fro m. **sten'osal m.,** an arterial m. due to narrowing of the vessel from pressure or organic change. **systol'ic m.,** a m. heard during the ventricular systole, due to obstruction at the aortic or pulmonary orifice or to regurgitation at one of the atrioventricular orifices. **to-and-fro m.,** a pericardial m. heard with both the systole and the diastole of the heart. **tricus'pid m.,** a m. produced at the tricuspid orifice, either obstructive or regurgitant. **vas'cular m.,** one originating in a blood-vessel. **ve'nous m.,** one heard over a vein. **vesic'ular m.,** the normal respiratory sound heard on auscultation of the lungs.

Mur'phy's butt'on [John Benjamin *Murphy*, Chicago surgeon, 1857–1916.] An appliance for intestinal anastomosis; it consists of two hollow cylinders, one of which is sutured into each open end of the intestine; the two are then joined and fasten automatically, maintaining the two ends of intestine in apposition by their serous surfaces, after firm union has occurred the cylinders slough away and are passed in the stools. **M.'s meth'od,** (1) treatment of peritonitis, after operation, by drainage from the lower part of the abdomen or the pelvis (this being favored by the Fowler position), and by continuous irrigation of the lower bowel with physiological saline solution, the irrigation being made so slowly (*M. drip*) as to secure the absorption of the fluid; (2) arterial suture by invagination of the ends of the vessel



MURPHY'S BUTTON.

over a removable cylinder in two pieces. **M.'s sign,** pressure on an inflamed gall-bladder at the end of expiration causes a sudden arrest of inspiration.

murrain (mur'en) [Sp. *morrina*, cattle-plague.] An epidemic disease of cattle; epizootic. **bloody m.,** Texas* fever.

murrina (moor-re'nah) [Sp. *murria*, heaviness of the head, or *morriña*, cattle-plague (?)] A disease of horses and mules (cattle seem to be immune), caused by the presence in the blood of *Trypanosoma hippicum;* it is marked by emaciation, weakness, anemia, edema, ecchymotic conjunctivitis, fever, and more or less pronounced paralysis of the hind legs; called also derrengadera.

Mus [L. mouse.] Epimys, a genus of rats and mice of the family *Muridæ*. *M. decu'manus* Norwegian rat, is the common ship or sewer rat; *M. rattus* is the plague rat of India.

Mus'ca [L. fly.] A genus of diptera or flies. **M. domes'tica,** the common house-fly. **M. lute'ola,** *Auchmeromyia luteola*. **M. vomito'ria,** blow-fly or flesh-fly.

muscægenet'ic, muscægen'ic. Muscegenetic.

muscæ volitantes (mus'se vol-i-tan'tēs) [L. flying flies] An appearance as of moving spots before the eyes.

mus'carine [L. Agaricus *muscarius*, fly-agaric.] A crystalline alkaloid, $C_5H_{15}NO_2$, present in the fly-agaric, in certain other poisonous mushrooms, and in putrefying fish.

mus'carinism. Mushroom-poisoning.

muscegenetic, muscegen'ic (mus"e-jen-et'ik). Producing the phenomenon of muscæ volitantes.

muscicide (mus'sī-sīd) [L. *musca*, fly, + *cædere*, to kill.] An agent destructive to flies.

muscle (mus'l) [L. *musculus*.] One of the contractile organs of the body by which the movements of the various organs and parts are effected. The typical muscle is a mass of fleshy tissue (venter or belly), attached at each extremity, by means of a tendon, to a bone or other structure; the narrowing part of the belly which is attached to the tendon of origin or insertion is called the caput or head; the points of attachment of a muscle are called its origin and insertion, the attachment to the more movable part of the skeleton or to the part which is moved by contraction of the muscle being the insertion, the other the origin. The individual muscles are defined under *musculus*. **antagonis'tic muscles,** those having an opposite function, the contraction of one neutralizing that of the other. **appendic'ular m.,** one of the skeletal muscles of the limbs. **artic'ular m.,** joint-muscle. **ax'ial m.,** one of the skeletal muscles of the trunk or head. **bipenn'ate m.,** one having a central tendon toward which the fibers converge on either side like the barbs of a feather. **digas'tric m.,** one with two fleshy bellies separated by a fibrous insertion. **fu'siform m.,** spindle-shaped, one which has a fleshy belly, tapering at either extremity. **involuntary m.,** smooth or unstriated m. **organ'ic m.,** unstriated m. **penn'ate m.,** one which has a central or lateral tendon toward which the fibers run, from one or both sides, like the barbs of a feather. **ri'der's muscles,** the abductor muscles of the thigh which come into play especially in horseback riding. **skel'etal m,** a. muscle connected at either or both extremities with the bony framework of the body; it may be an appendicular or an axial m. **skew m.,** one which draws a part obliquely; or one which is deflected in its course, the belly of insertion and that of origin pulling in different planes. **smooth m.,** unstriated m. **stri'ated m., striped m.,** one of the skeletal muscles, including also the heart; voluntary m.; see *muscular tissue*.* **synergis'tic muscles,** muscles having a similar and mutually helpful function or action. **unipenn'ate m.,** one with a lateral tendon to which the fibers are attached, like the half of a feather. **unstri'ated m., unstriped m.,** smooth, organic or involuntary m., one of the muscles of the internal organs, intestines, blood-vessels, etc. **vol'untary m.,** one whose action is under the control of the will; all

the striated muscles, except the heart, are voluntary muscles.

aiding another, synergist, congener. **atrophy,** amyotrophy, myatrophy, myoatrophy, myodystrophy. **bending a part,** flexor. **compressing a part,** constrictor. **contractility,** myonicity. **contraction,** myospasis; contracture (permanent); myotonia, tetanus (continuous); myoclonia (intermittent); jactitation, myopalmus, myotyrbe, myoseism, chorea (irregular); dyscinesia (painful); crispation, hypocinesia (slight); hypercinesia (excessive). **controlling an orifice,** sphincter. **description,** myography. **disease,** myopathy, myonosus. **drawing away from midline,** abductor. **drawing toward midline,** adductor. **edema,** myoedema. **expelling a secretion,** detrusor, ejaculator. **fatty degeneration,** myodemia, myoliposis. **fibrillary contraction,** myokymia. **fibrous degeneration,** myofibrosis. **hardening,** myosclerosis. **harmonious action,** coordination, synergia. **hernia through sheath,** myocele. **hypertrophy,** myopachynsis. **incision of,** myotomy. **inflammation,** myitis, myositis, initis, sacritis, polymyositis (multiple). **inharmonious action,** incoordination, ataxia, asynergia. **instrument for recording movements,** myograph, myochronograph. **instrument for recording work,** ergograph. **jerking,** clonus, myoclonus, jactitation, myoseism, chorea, myopalmus, myotyrbe. **nomenclature,** myonymy. **numbness,** myonarcosis. **nutrition of,** myotrophy. **opposing, another,** antagonist. **pain,** myalgia, myodynia, myoneuralgia, myorrheuma, neuromyalgia. **paralysis,** myoparalysis, myoplegia. **protein,** myoprotein, myosin, myosinogen. **protoplasm,** sarcoplasm. **rupture** myorrhexis. **science relating to,** myology. **sensation,** myesthesia. **separation of fibers,** myodiastasis. **sheath,** fascia, epimysium; perimysium (of primary bundles); myolemma, sarcolemma (of fibers). **softening,** myomalacia. **sound of contracting,** myophonia, myocrismus. **straightening a part,** extensor. **strength,** myodynamia. **sugar,** inosite. **tumor,** myoma, fibromyoma, myoneoplasm; leiomyoma, liomyoma, inoliomyoma (non-straited); rhabdomyoma, inorhabdomyoma (striated). **weakness,** myasthenia, hypomyosthenia, amyosthenia, hypatonia. **wrinkling the skin,** corrugator.

mus'cle-bound. Noting one whose muscles have become hypertrophied and inelastic from overexercise.

muscle-case'. Muscle-compartment.

muscle-cell'. Myocyte.

muscle-col'umn. Sarcostyle, one of the longitudinal elements of a muscle-fiber, composed of a group of fibrils surrounded by sarcoplasm, the cross section of which shows the figures called Cohnheim's areas.

muscle-compart'ment. The segment of a muscle column, between two Krause's membranes, enclosed in the sarcoplasm; myocœle.

muscle-corpuscle (mus'l-kor'pus-l). The nucleus with adherent protoplasm in a muscle-fiber.

mus'cle-curve. A myograph tracing.

muscle-epithe'lium. Myoepithelium.

muscle-fi'ber. One of the long cylindrical fibers, an inch or more in length and about $\frac{1}{500}$ inch in diameter, composing voluntary muscular tissue.

muscle-fi'bril. One of the fibrils or units composing a muscle-column a number of which are grouped to form a muscle-fiber.

muscle-plasma (mus'l-plaz'mah). The fluid portion of muscular tissue.

muscle-plate'. One of the sets into which the cells of the protovertebral somites are grouped, and from which the muscles are developed; each muscle-plate develops into a myocomma.*

muscle-rod'. One of the segments of a muscle-fibril between two intermediate discs.

muscle-se'rum. The fluid remaining after coagulation of expressed muscle-plasma.

muscle-spin'dle. 1. A fiber of striated muscle. 2. A bundle of encapsuled muscle-fiber from which a number of sensory nerve-fibers take origin.

mus'cular. Relating to a muscle or the muscles. **m. tissue,** see under *tissue.*

muscula'ris [L. muscular.] The muscular coat of a hollow organ or tubular structure. **m. muco'sæ,** a layer of unstriped muscular tissue in mucous membrane.

muscular'ity. The state or condition of having well developed muscles.

mus'cularize. To change into muscle substance, as the partial conversion of cicatricial tissue after the healing of a wound of muscle.

muscula'tion, mus'culature. The arrangement of the muscles in a part or in the body as a whole.

mus'culi. Plural of *musculus,* muscle.

mus'culin. A globulin in muscle, coagulable by slight heat (87° C., 116.6° F.).

musculocutaneous (mus"ku-lo-ku-ta'ne-us). Relating to both muscle and skin, noting certain nerves which give off sensory fibers to the skin and motor fibers to the underlying muscles.

musculomem'branous. Relating to both muscular tissue and membrane, noting certain muscles, such as the occipitofrontalis, which are largely membranous.

musculophren'ic. Relating to the muscular portion of the diaphragm, noting an artery supplying this part.

musculospiral (mus'ku-lo-spi'ral). A term applied to the nervus radialis which supplies certain muscles of the arm and forearm and runs spirally across the back of the humerus. **m. groove,** sulcus radialis, a groove passing obliquely downward on the posterior surface of the humerus, along which the m. nerve and the superior profunda artery run.

musculoten'dinous. Relating to both muscular and tendinous tissues.

mus'culus, gen. and pl. *mus'culi* [L. dim. of *mus* (G. *mys*), a little mouse, from the fancied resemblance of a muscle in contraction to the movements of a mouse under a cloth.] Muscle.

m. abduc'tor dig iti quin'ti [BNA], m. abductor minimi digiti; *origin,* pisiform bone; *insertion,* inner side of base of 1st phalanx of the little finger; *nerve supply,* ulnar; *action,* abducts little finger.

m. abduc'tor hallu'cis [BNA,] *origin,* inner tubercle of os calcis, internal annular ligament, and plantar fascia; *insertion,* inner side of 1st phalanx of great toe; *nerve supply,* internal plantar; *action,* abduction of great toe.

m. abduc'tor min'imi dig'iti: m. abductor digiti quinti [BNA].

m. abduc' tor pol'licis bre'vis [BNA], m. abductor pollicis; *origin,* ridge of trapezium (os multangulum majus) and anterior angular ligament; *inspection,* outer side of first phalanx of thumb; *nerve supply,* median; *action,* abducts thumb.

m. abduc'tor pol'licis lon'gus [BNA], m. extensor ossis metacarpi pollicis; *origin,* posterior surfaces of radius and ulna; *insertion,* outer side of base of first metacarpal bone; *nerve supply,* radial; *action,* abducts and assists in extending thumb.

m. accelera'tor uri'næ, m. bulbovacernosus [BNA].

m. accesso'rius (ad sacrolumba'lem), m. iliocostalis dorsi [BNA].

m. adduc'tor bre'vis [BNA], *origin,* superior ramus of pubis; *insertion,* upper third of inner lip of linea aspera; *nerve supply* obturator; *action,* adducts thigh.

m. adduc'tor hallu'cis [BNA]; *origin,* by oblique head (caput obliquum) from external cuneiform and bases of 3d and 4th metatarsal bones, by transverse head (caput transversum) from the capsules of the outer four metatarsophalangeal joints; *insertion,* outer side of base of first phalanx of great toe; *nerve supply,* external plantar; *action,* adducts great toe.

m. adduc'tor lon'gus [BNA], *origin,* symphysis and crest of pubis; *insertion,* middle third of inner tip of linea aspera; *nerve supply,* obturator; *action,* adducts thigh.

m. adduc'tor mag'nus [BNA], *origin*, ischial tuberosity and edge of pubic arch; *insertion*, linea aspera and internal epicondyle of femur; *nerve supply*, obturator and sciatic; *action*, adducts thigh.

m. adduc'tor min'imus [BNA], a small flat muscle constituting the upper portion of the adductor magnus, *inserted* into space above linea aspera.

m. adduc'tor obli'quus hallu'cis, oblique head (caput obliquum) of m. adductor hallucis [BNA].

m. adduc'tor obli'quus pol'licis, m. adductor pollicis [BNA].

m. adduc'tor pol'licis [BNA], m. adductor obliquus pollicis, *origin*, trapezium (multangulum majus), trapezoid (multangulum minus), os magnum (capitatum), and shaft of 3d metacarpal bone; *insertion*, inner side of base of 1st phalanx of thumb; *nerve supply*, ulnar; *action*, adducts thumb.

m. adduc'tor transver'sus hallu'cis, the transverse head (caput transversum) of the m. adductor hallucis [BNA].

m. amyg"daloglos'sus, a band of muscular fibers arising from alongside the tonsil and joining the palatoglossus muscle.

m. ancone'us, m. anconeus quartus; *origin*, back of external condyle of humerus; *insertion*, olecranon process and posterior surface of ulna; *nerve supply*, radial (musculospiral); *action*, extends forearm.

m. ancone'us latera'lis, outer head of m. triceps brachii.

m. ancone'us lon'gus, long head of m. triceps brachii

m. ancone'us media'lis, inner head of m. triceps brachii.

m. antitrag'icus [BNA], muscle of the antitragus, a band of transverse muscular fibers on the outer surface of the antitragus, arising from the border of the intertragic notch and inserted into the anthelix and cauda helicis.

mus'culi arrecto'res pilo'rum [BNA], bundles of nonstriated muscular fibers, attached to the deep part of the hair follicles, passing outward alongside the sebaceous glands to the papillary layer of the corium.

m. articula'ris ge'nu [BNA], m. subcrureus; *origin*, lower fourth of anterior surface of shaft of femur; *insertion*, synovial membrane of knee-joint; *nerve supply*, femoral (anterior crural); *action*, lifts capsule of knee-joint.

m. aryepiglot'ticus [BNA], m. arytenoepiglottideus portion of the arytænoideus which is inserted into the aryepiglottic fold sometimes reinforced with independent fibers from the cartilage of Santorini.

m. arytænoid'eus obli'quus [BNA], *origin*, muscular process of arytenoid cartilage; *insertion*, summit of arytenoid cartilage of opposite side and the aryepiglottic fold as far as the epiglottis; *nerve supply*, recurrent laryngeal; *action*, narrows rima glottidis.

m. arytænoid'eus transver'sus [BNA], a band of muscular fibers passing between the two arytenoid cartilages posteriorly; *nerve supply*, recurrent laryngeal; *action*, narrows the rima glottidis.

m. aryvoca'lis, a number of the deeper fibers of the m. thyreoarytenoideus internus attached directly to the outer side of the true vocal cord.

m. attol'lens au'rem or **attol'lens auric'ulam** (lifting up the auricle), m. auricularis superior [BNA].

m. at'trahens au'rem or **auric'ulam** (dragging forward the auricle), m. auricularis anterior [BNA].

m. auricula'ris ante'rior [BNA], m. attrahens aurem or auriculam, *origin*, superficial temporal fascia; *insertion*, cartilage of auricle; *action*, draws pinna of ear forward; *nerve supply*, facial.

m. auricula'ris poste'rior [BNA], m. retrahens aurem or auriculam; *origin*, mastoid process; *insertion*, posterior portion of root of auricle; *action*, draws back the pinna; *nerve supply*, facial.

m. auricula'ris supe'rior [BNA], **m. a. temporalis** [NK] m. attollens aurem or auriculam; *origin*, galea aponeurotica; *insertion*, upper margin of root of auricle; *action*, raises pinna of ear; *nerve supply*, facial.

m. az'ygos u'vulæ, m. uvulæ [BNA].

m. bi'ceps bra'chii [BNA], *origin*, long head (caput longum) from supraglenoidal tuberosity of scapula, short head (caput breve) from coracoid process; *insertion*, bicipital tubercle of radius; *nerve supply*, musculocutaneous; *action* flexes and supinates forearm.

m. bi'ceps fem'oris [BNA], m. biceps flexor cruris; *origin*, long head (caput longum) from tuberosity of ischium, short head (caput breve) from lower half of outer lip of linea aspera; *insertion*, head (capitulum) of fibula; *nerve supply*, long head, tibial, short head, peroneal; *action*, flexes knee and rotates it outward.

m. bi'ceps flex'or cru'ris, m. biceps femoris [BNA].

m. biven'ter cervi'cis, m. spinalis capitis, which usually has a tendinous inscription.

m. biven'ter mandib'ulæ, m. digastricus.

m. brachia'lis [BNA], m. brachialis anticus; *origin*, lower two-thirds of anterior surface of humerus; *insertion*, coronoid process of ulna; *nerve supply*, musculocutaneous and (usually) radial (musculospiral); *action*, flexes forearm.

m. brachioradia'lis [BNA], m. supinator longus; *origin*, external supracondyloid ridge of humerus; *insertion*, front of base of styloid process of radius; *nerve supply*, radial (musculospiral); *action*, flexes forearm and assists slightly in supination.

m. bronchoœsophage'us [BNA], muscular fasciculi, arising from the wall of the left bronchus, which reinforce the musculature of the esophagus.

m. buccina'tor (cheek muscle) [BNA], *origin*, buccinator ridge of mandible, posterior portion of alveolar process of maxilla, and pterygomandibular ligament or raphe; *insertion*, orbicularis oris at angle of mouth; *action*, flattens cheek, retracts angle of mouth; *nerve supply*, facial.

m. buccopharynge'us [BNA], portion of m. constrictor pharyngis superior arising from the pterygomandibular ligament.

m. bulbocaverno'sus [BNA], ejaculator seminis, ejaculator or accelerator urinæ, sphincter vaginæ; *origin*, central point of the perineum; *insertion*, in the male, under surface of triangular ligament, membrane covering the corpus cavernosum urethræ, and fascia of the dorsum of the penis; *nerve supply*, pudic; *action*, constricts bulbous urethra; in the female it divides and passes on either side of the vagina and urethra, to be inserted into the root of the clitoris, acting slightly as a sphincter of the vagina.

m. cani'nus (canine) [BNA], m. levator anguli oris; *origin*, canine fossa of maxilla; *insertion*, orbicularis oris and skin at angle of mouth; *action*, raises angle of mouth; *nerve supply*, facial.

m. cephalopharynge'us, m. constrictor pharyngis superior.

m. ceratocricoid'eus [BNA], a fasciculus from the m. cricoarytænoideus posterior inserted into the inferior corun of the thyroid cartilage.

m. ceratopharynge'us [BNA], mke. ratopharyngeus portion of the constrictor pharyngis medius arising from the greater cornu of the hyoid bone.

m. cervica'lis ascen'dens, iliocostalis cervicis [BNA].

m. chondroglos'sus [BNA], muscular fibers occasionally separated from the hyoglossus, but usually forming part of it.

m. chondropharynge'us [BNA], portion of the m. constrictor pharyngis medius arising from the lesser cornu of the hyoid bone.

m. cilia'ris, (1) [BNA] Bowman's muscle, a circular band of non-striated fibers on the outer surface of the chorioid, between that and the iris; it consists of circular fibers (fibræ circulares [BNA], or Müller's muscle) and radiating fibers (fibræ meridionales [BNA], or Brücke's muscle); *action*, it changes the shape of the crystalline lens in the process of accommodation. (2) a separate bundle of the m. orbicularis in the margin of the lids.

m. circumflex'us pala'ti, m. tensor veli palatini [BNA].

m. clei"doepitro"chlea'ris, the anterior portion of the deltoid, arising from the clavicle.

m. cleidomastoid'eus, the portion of the sternocleidomastoid muscle passing between the clavicle and the mastoid process.

m. cleido-occipita'lis, the portion of the sternocleidomastoid muscle between the clavicle and the superior curved line of the occipital bone.

m. coccyge'us [BNA], m. ischiococcygeus; *origin*, spine of ischium and sacrospinous (small sacrosciatic) ligament; *insertion*, sides of lower part of sacrum and upper part of coccyx; *nerve supply*, 3d and 4th sacral; *action*, assists in raising and supporting pelvic floor.

m. complex'us, m. semispinalis capitis [BNA].

m. complex'us mi'nor, m. longissimus capitis [BNA].

m. compres'sor na'rium (compressor of the nostrils), pars transversa of nasalis [BNA]; *origin*, superior maxilla beneath the levator labii alæque nasi; *insertion*, aponeurosis over bridge of nose; *action*, narrows nostrils; *nerve supply*, facial.

m. compres'sor ure'thræ, m. sphincter urethræ membranaceæ [BNA].

m. constric'tor pharyn'gis infe'rior [BNA], *origin*, outer surfaces of thyroid and cricoid cartilages; *insertion*, posterior portion of wall of pharynx; *nerve supply*, pharyngeal plexus; *action*, narrows lower part of pharynx in swallowing.

m. constric'tor pharyn'gis me'dius [BNA, *origin*, stylohyoid ligament and both cornua of the hyoid bone; *insertion*, middle of the posterior wall of the pharynx; *nerve supply*, pharyngeal plexus; *action*, narrows pharynx in the act of swallowing.

m. constric'tor pharyn'gis supe'rior [BNA], m. cephalopharyngeus; *origin*, internal pterygoid plate, pterygomandibular ligament, and mylohyoid ridge of mandible and mucous membrane of floor of the mouth; *insertion*, posterior wall of pharynx; *nerve supply*, pharyngeal plexus; *action*, narrows pharynx.

m. constric'tor ure'thræ, m. sphincter urethræ membranaceæ [BNA].

m. coracobrachia'lis [BNA], *origin*, coracoid process of scapula; *insertion*, middle of inner border of humerus; *nerve supply*, musculocutaneous *action*, raises arm.

m. corruga'tor cu'tis a'ni, unstriped muscular fibers radiating from the anal opening superficial to the external sphincter.

m. corruga'tor supercil'ii (wrinkler of eyebrow), *origin* from orbital portion of orbicularis oculi and nasal prominence; *insertion*, skin of eyebrow; *action*, draws inner angle of eyebrow downward and wrinkles forehead vertically; *nerve supply*, facial.

m. cremas'ter (suspended) [BNA], *origin*, from obliquus internus and Poupart's ligament; *insertion*, cremasteric fascia and spine of pubis; *action*, raises testicle; *nerve supply*, genitocrural; in the male the muscle envelops the spermatic cord and testis, in the female the round ligament of the uterus.

m. cricoarytænoid'eus latera'lis [BNA], *origin*, upper margin of arch of cricoid cartilage; *insertion*, muscular process of arytenoid; *nerve supply*, recurrent laryngeal; *action*, narrows rima glottidis.

m. cricoarytænoid'eus poste'rior [BNA], *origin*, depression on posterior surface of lamina of cricoid; *insertion*, muscular process of arytenoid; *nerve supply*, recurrent laryngeal; *action*, widens rima glottidis.

m. cricopharynge'us [BNA], portion of the constrictor pharyngis inferior arising from the cricoid cartilage.

m. cricothyreoid'eus [BNA], *origin*, anterior surface of arch of cricoid; *insertion*, *pars recta* [BNA], anterior of oblique part, passes upward to ala of thyroid, *pars obliqua* [BNA], posterior or horizontal part, passes more outward to inferior cornu of thyroid; *nerve supply*, superior laryngeal; *action*, makes vocal cords tense.

m. crure'us, m. vastus intermedius [BNA].

m. cucul'laris (forming a hood), m. trapezius [BNA].

m. deltoid'eus [BNA], *origin*, outer third of clavicle, outer border of acromion process, lower border of spine of scapula; *insertion*, outer side of shaft of humerus a little above its middle; *nerve supply*, circumflex from 5th and 6th cervical through brachial plexus; *action*, abduction, flexion, extension, and rotation of arm.

m. depres'sor a'læ na'si (depressor of the wing of the nose), pars alaris of m. nasalis [BNA]; *origin*, upper portion of incisor fossa of maxilla; *insertion*, ala of nose and cartilaginous septum; *nerve supply*, facial.

m. depres'sor an'guli o'ris (depressor of the angle of the mouth), m. triangularis [BNA].

m. depres'sor la'bii inferior'is (depressor of the lower lip), m. quadratus labii inferioris [BNA].

m. depres'sor sep'ti (depressor of the septum) [BNA], a vertical fasciculus from the m. orbicularis oris passing upward along the median line of the upper lip, and inserted into the cartilaginous septum of nose; the septal insertion of the depressor alæ nasi.

m. depres'sor ure'thræ, a band of fibers of the m. sphincter urethræ membranaceæ passing over the urethra.

m. detru'sor uri'næ, the external longitudinal layer of the muscular coat of the bladder.

m. diaphrag'ma, *origin*, ensiform cartilage, 7th to 12th ribs, external and internal arcuate ligaments, and lumbar vertebræ; *insertion*, central tendon; *action*, increases capacity of chest; *nerve supply*, phrenic.

m. digas'tricus (two-bellied) [BNA], m. biventer mandibulæ, consists of two bellies united by a central tendon which is connected to the body of the hyoid bone; *origin* by posterior belly from digastric groove beneath mastoid process; *insertion* by anterior belly into lower border of mandible near symphysis; *action*, posterior belly helps to fix hyoid bone, anterior belly depresses jaw; *nerve supply*, posterior belly from facial, anterior belly by mylohyoid from third division of trigeminus.

m. dilata'tor pupill'æ [BNA], the radali muscular fibers extending from the sphincter pupillæ to the ciliary margin; some anatomists regard them as elastic, not muscular, in man.

m. ejacula'tor sem'inis, m. bulbocavernosus [BNA].

m. epicra'nius [BNA], m. occipitofrontalis, the scalp muscle, formed of two bellies, the *frontalis* and the *occipitalis*, and a central aponeurosis, the *galea aponeurotica*.

m. epitroch'leoancone'us [BNA], an occasional muscle *arising* from the back of the internal condyle of the humerus, and *inserted* into the inner side of the olecranon process.

m. erec'tor clitor'idis, m. ischiocavernosus [BNA].

m. erec'tor pe'nis, m. ischiocavernosus [BNA].

m. erec'tor spi'næ (erector of the spine), m. sacrospinalis [BNA].

m. exten'sor bre'vis digito'rum, m. extensor digitorum brevis [BNA].

m. exten'sor bre'vis pol'licis, m. extensor pollicis brevis [BNA].

m. exten'sor car'pi radia'lis bre'vis [BNA] or **bre'vior,** radialis externus brevis; *origin*, external epicondyle of humerus; *insertion*, base of third metacarpal bone; *nerve supply*, radial (musculospiral); *action*, extends and abducts wrist.

m. exten'sor car'pi radia'lis lon'gus [BNA] or **lon'gior,** m. radialis externus longus; *origin*, external supracondyloid ridge of humerus; *insertion*, back of base of second metacarpal bone; *nerve supply*, radial (musculospiral); *action*, extends and abducts wrist.

m. exten'sor car'pi ulna'ris [BNA], m. ulnaris externus; *origin*, external epicondyle of humerus; *insertion*, base of fifth metacarpal bone; *nerve supply*, radial (dorsal interosseous); *action*, extends and abducts wrist.

m. exten'sor coccy'gis, m. sacrococcygeus posticus; *origin*, posterior surface of the last segment of the sacrum; *insertion*, tip of coccyx; *nerve supply*, posterior primary division of sacral spinal; *action*, is a rudiment of the extensor muscle of the caudal vertebræ in the lower animals.

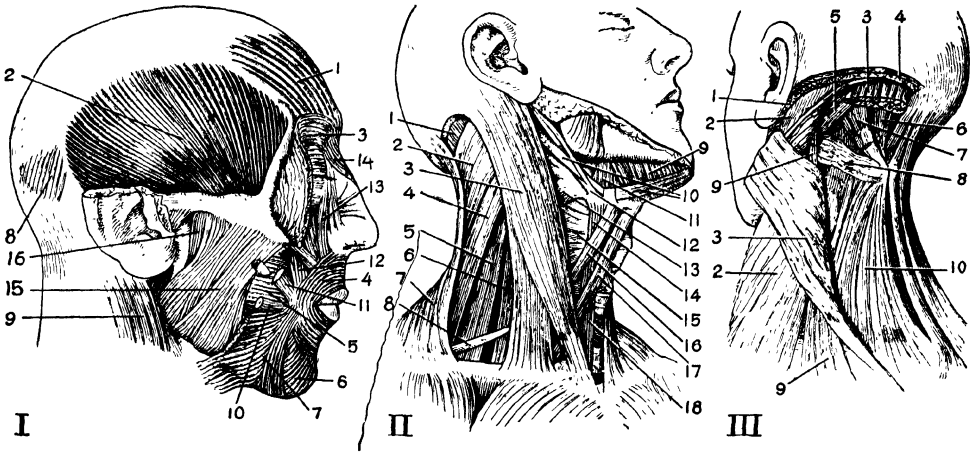
m. exten'sor commu'nis digito'rum, m. extensor digitorum communis [BNA].

m. exten'sor dig'iti quin'ti pro'prius [BNA], m. extensor minimi digiti; *origin*, external epicondyle of humerus; *insertion*, dorsum of first phalanx of little finger; *nerve supply*, radial (dorsal interosseous); *action*, extends little finger.

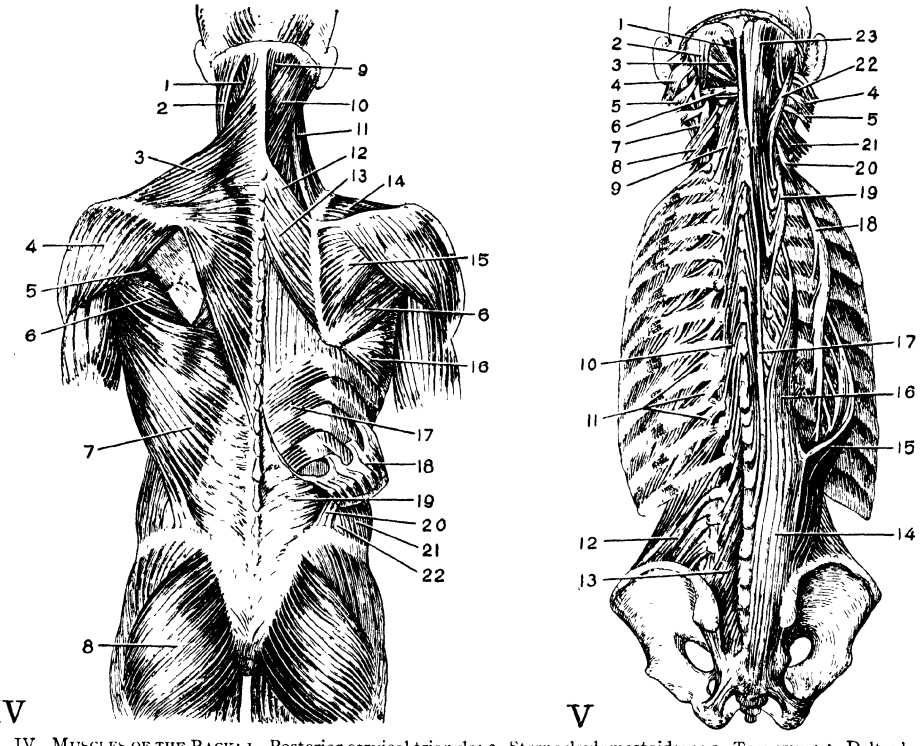
m. exten'sor digito'rum bre'vis [BNA], m. extensor brevis digitorum; *origin*, dorsal surface of os calcis (calcaneus); *insertion*, by four tendons fusing with those of the extensor longus, and by a slip attached independently to the base of the 1st phalanx of the great toe; *nerve supply*, deep peroneal; *action*, extends toes.

m. exten'sor digito'rum commu'nis [BNA], m. extensor communis digitorum; *origin*, external epicondyle of humerus; *insertion* by four tendons into the backs of 1st and 2d and base of terminal phalanges; *nerve supply*, radial (dorsal interosseous); *action*, extends fingers.

m. exten'sor digito'rum lon'gus [BNA], m. extensor longus digitorum; *origin*, external tuberosity of tibia, upper two-thirds of anterior surface of fibula; *insertion*, by four tendons to the dorsal surfaces of the 2d to 5th toes; *nerve supply*, deep branch of peroneal; *action*, extends the four outer toes.



I. Muscles of the Head: 1. Frontalis; 2 Temporalis; 3. Orbicularis oculi; 4. Orbicularis oris; 5. Buccinator; 6. Quadratus labii inferioris; 7. Triangularis; 8 Occipitalis; 9. Sternocleidomastoideus; 10. Risorius; 11. Zygomaticus; 12. Caninus; 13. Quadratus labii superioris; 14. Procerus; 15. Masseter (superficial fibers); 16. Masseter (deep fibers). II. Muscles of the Side of the Neck: 1. Semispinalis capitis; 2. Splenius capitis; 3. Sternocleidomastoideus; 4. Levator scapulæ; 5. Scalenus medius; 6. Scalenus anterior; 7. Trapezius; 8. Omohyoideus (posterior belly); 9. Mylohyoideus; 10. Digastricus; 11. Hyoglossus; 12. Stylohyoideus; 13. Constrictor pharyngeus medius; 14. Thyroideus; 15 Constrictor pharyngeus inferior; 16. Omohyoideus (anterior belly); 17. Sternohyoideus; 18. Sternothyroideus. III. Muscles of the Back of the Neck: 1. Sternocleidomastoideus; 2. Splenius capitis; 3. Semispinalis capitis (below, drawn aside; above, insertion); 4. Trapezius (occipital origin); 5. Obliquus capitis superior; 6. Obliquus capitis inferior; 7. Rectus capitis posterior minor; 8. Obliquus capitis inferior, 9. Longissimus capitis; 7. Semispinalis cervicis.



IV. Muscles of the Back: 1. Posterior cervical triangle; 2. Sternocleidomastoideus; 3. Trapezius; 4. Deltoideus, 5. Teres minor; 6, 6. Teres major; 7. Latissimus dorsi; 8. Gluteus maximus; 9. Semispinalis capitis; 10. Splenius capitis; 11. Levator scapulæ; 12. Rhomboideus minor; 13. Rhomboideus major; 14. Supraspinatus; 15. Infraspinatus, 16. Serratus anterior; 17. Serratus posterior inferior; 18. Latissimus dorsi (turned down); 19. Fascia lumbo-dorsalis; 20. Latissimus dorsi (iliac origin); 21. Obliquus abdominis internus; 22. Trigonum lumbale. V. Deep Muscles of the Back: 1. Rectus capitis posterior minor; 2. Obliquus capitis superior; 3. Rectus capitis posterior major; 4, 4 Splenius capitis; 5, 5. Splenius cervicis; 6. Obliquus capitis inferior; 7. Sternocleidomastoideus; 8. Longissimus cervicis; 9. Semispinalis cervicis; 10. Semispinalis dorsi; 11. Levatores cortarum; 12. Quadratus lumborum; 13. Multifidus; 14. Sacrospinalis; 15. Iliocostalis lumborum; 16. Longissimus dorsi; 17. Spinalis dorsi; 18. Iliocostalis dorsi; 19. Longissimus cervicis; 20. Iliocostalis cervicis; 21. Levator scapulæ; 22. Longissimus capitis, 23. Semispinalis capitis.

m. exten'sor hallu'cis bre'vis [BNA], the inner belly of the extensor digitorum brevis, the tendon of which is inserted into the base of the first phalanx of the great toe.

m. exten'sor hallu'cis longus [BNA], m. extensor proprius hallucis; *origin*, front of tibia and interosseous membrane; *insertion*, base of terminal phalanx of great toe; *action*, extends the great toe; *nerve supply*, anterior tibial.

m. exten'sor in'dicis pro'prius [BNA], m. extensor indicis, indicator muscle; *origin*, dorsal surface of ulna; *insertion*, dorsum of 1st phalanx of index finger; *nerve supply*, radial; *action*, assists in extending the forefinger.

m. exten'sor lon'gus digito'rum, m. extensor digitorum longus [BNA]

m. exten'sor lon'gus pol'licis, m. extensor pollicis longus [BNA]

m. exten'sor min'imi dig'iti, m. extensor digiti quinti proprius [BNA].

m. exten'sor os'sis metacar'pi pol'licis, m. abductor pollicis longus [BNA].

m. exten'sor pol'licis bre'vis [BNA], m extensor primi internodii pollicis; *origin*, dorsal surface of radius; *insertion*, base of 1st phalanx of thumb; *nerve supply*, radial; *action*, extends and abducts 1st phalanx of thumb.

m. exten'sor pol'licis lon'gus [BNA], m. extensor secundi internodii pollicis; *origin*, posterior surface of ulna; *insertion*, base of 2d phalanx of thumb; *nerve supply*, radial; *action*, extends terminal phalanx of thumb.

m. exten'sor pri'mi interno'dii pol'licis, m. extensor pollicis brevis [BNA]

m. exten'sor pro'prius hallu'cis, m. extensor hallucis longus [BNA].

m. exten'sor secun'di interno'dii pol'licis, m. extensor pollicis longus [BNA].

m. flex'or accesso'rius digito'rum, m. quadratus plantæ [BNA].

m. flex'or accesso'rius lon'gus pe'dis, m. quadratus plantæ [BNA].

m. flex'or bre'vis digito'rum, m. flexor digitorum brevis [BNA].

m. flex'or bre'vis hallu'cis, m flexor hallucis brevis [BNA].

m. flex'or bre'vis min'imi dig'iti, m. flexor digiti quinti brevis [BNA].

m. flex'or car'pi radia'lis [BNA], m. radialis internus; *origin*, internal condyle of humerus; *insertion*, anterior surface of bases of 2d and 3d metacarpal bones; *nerve supply*, median; *action*, flexes and abducts wrist.

m. flex'or car'pi ulna'ris [BNA], m. ulnaris internus; *origin*, humeral head (caput humerale) from internal condyle of humerus, ulnar head (caput ulnare) from olecranon process and upper three-fifths of posterior border of ulna; *insertion*, pisiform bone; *nerve supply*, ulnar; *action*, flexes and adducts wrist.

m. flex'or dig'iti quin'ti bre'vis [BNA] (of the foot), *origin*, base of metatarsal bone of the little toe and sheath of peroneus longus; *insertion*, outer side of base of first phalanx of little toe.

m. flex'or dig'iti quin'ti bre'vis [BNA] (of the hand), m. flexor brevis minimi digiti; *origin*, hamulus of unciform (hamate) bone; *insertion*, inner side of 1st phalanx of little finger; *nerve supply*, ulnar; *action*, flexes 1st phalanx of little finger.

m. flex'or digito'rum bre'vis [BNA], m. flexor brevis digitorum; *origin*, internal tubercle of os calcis (calcaneus) and central portion of plantar fascia; *insertion*, second phalanges of four outer toes by tendons perforated by those of the flexor longus; *nerve supply*, internal plantar; *action*, flexes toes.

m. flex'or digito'rum lon'gus [BNA], m. flexor longus digitorum; *origin*, middle third of posterior surface of tibia; *insertion*, by four tendons, perforating those of the flexor brevis, into bases of terminal phalanges of four outer toes; *nerve supply*, tibial; *action*, flexes 2d to 5th toes.

m. flex'or digito'rum profun'dus [BNA], m. flexor profundus digitorum; *origin*, anterior surface of upper third of ulna; *insertion*, by four tendons, piercing those of the sublimis, into base of terminal phalanx of each finger; *nerve supply*, ulnar and median (volar intert osseous); *action*, flexes terminal phalanges of fingers.

m. flex'or digito'rum subli'mis [BNA], m. flexor sublimis digitorum; *origin*, humeral head (caput-humerale) from the internal condyle of the humerus, ulnar head (caput ulnare) from the inner border of the coronoid process, radial head (caput radiale) from the oblique line and middle third of the outer border of the radius; *insertion*, by four split tendons, passing to either side of the profundus tendons, into sides of 2d phalanx of each finger, *nerve supply*, median; *action*, flexes middle phalanges of the fingers.

m. flex'or hallu'cis bre'vis [BNA], m. flexor brevis hallucis; *origin*, inner surface of cuboid and middle and external cuneiform bones; *insertion*, by two tendons, embracing that of the flexor longus hallucis, into the sides of the base of the 1st phalanx of the great toe; *nerve supply*, internal and external plantar; *action*, flexes great toe.

m. flex'or hallu'cis lon'gus [BNA], m. flexor longus hallucis; *origin*, lower two-thirds of posterior surface of fibula; *insertion*, base of ungual phalanx of great toe; *nerve supply*, tibial; *action*, flexes great toe.

m. flex'or lon'gus digito'rum, m. flexor digitorum longus [BNA]

m. flex'or lon'gus hallu'cis, m. flexor hallucis longus [BNA].

m. flex'or lon'gus pol'licis, m. flexor pollicis longus [BNA].

m. flex'or os'sis metacar'pi pol'licis, m. opponens pollicis [BNA].

m. flex'or pol'licis bre'vis [BNA], *origin*, superficial portion from annular ligament of wrist, deep portion from ulnar side of first metacarpal bone; *insertion*, base of 1st phalanx of thumb.

m. flex'or pol'licis lon'gus [BNA], m. flexor longus pollicis; *origin*, anterior surface of middle third of radius; *insertion*, terminal phalanx of thumb; *nerve supply*, median (volar interosseous); *action*, flexes terminal phalanx of thumb.

m. flex'or profun'dus digito'rum, m. flexor digitorum profundus [BNA].

m. flex'or subli'mis digito'rum, m. flexor digitorum sublimis [BNA].

m. fronta'lis [BNA], anterior portion of epicranius; *origin*, frontal bone above supraorbital line; *insertion*, galea aponeurotica; *action*, pulls scalp forward, wrinkles forehead; *nerve supply*, facial.

m. gastrocne'mius [BNA], *origin*, by outer and inner heads (caput laterale and caput mediale) from the external and internal condyles (epicondyles) of the femur; *insertion*, with soleus by tendo Achillis into lower half of posterior surface of os calcis (tuberosity of calcaneus); *nerve supply*, tibial; *action*, plantar flexion of foot.

m. gemel'lus infe'rior [BNA], *origin*, tuberosity of ilium; *insertion*, tendon of obturator internus; *nerve supply* and *action* same as of obturator internus

m. gemel'lus supe'rior [BNA], *origin*, ischial spine and margin of lesser sciatic notch; *insertion*, tendon of obturator internus. *nerve supply* and *action* same as of the obturator internus.

m. genioglos'sus [BNA], m. geniohyoglossus, one of the paired lingual muscles; *origin*, mental spine of the mandible; *insertion*, lingual fascia beneath the mucous membrane, body of hyoid, and epiglottis; *nerve supply*, hypoglossal; *action*, elevates the hyoid bone, protrudes and retracts the tongue.

m. geniohyoid'eus [BNA], *origin*, mental spine of mandible; *insertion*, body of hyoid bone; *action*, draws hyoid forward, or depresses jaw when hyoid is fixed; *nerve supply*, fibers from 1st and 2d cervical accompanying hypoglossal.

m. glossopalati'nus [BNA], m. palatoglossus; forms anterior pillar of fauces; *origin*, under surface of soft palate; *insertion*, side of tongue; *nerve supply*, pharyngeal plexus; *action*, raises back of tongue and narrows fauces.

m. glossopharynge'us [BNA], portion of m. constrictor pharyngis superior arising from the mucous membrane of the floor of the mouth.

m. glute'us max'imus [BNA], *origin*, dorsum ilii above superior curved line, posterior surface of sacrum and coccyx, and great sacrosciatic ligament; *insertion*, iliotibial band of fascia lata and gluteal ridge of femur; *nerve supply*, inferior gluteal; *action*, extends thigh.

m. glute'us me'dius [BNA], *origin*, dorsum ilii between middle and superior curved lines; *insertion*,

outer surface of great trochanter; *nerve supply*, superior gluteal; *action*, abducts and rotates thigh.

m. glute'us min'imus [BNA], *origin*, dorsum ilii between middle and inferior curved lines; *insertion*, great trochanter of femur; *nerve supply*, superior gluteal; *action*, abducts thigh.

m. glute'us quar'tus, m. scansorius.

m. grac'ilis [BNA], *origin*, rami of pubis near symphysis; *insertion*, shaft of tibia below inner tuberosity; *nerve supply*, obturator; *action*, adducts thigh, flexes knee, rotates leg inward.

m. hel'icis ma'jor [BNA], large muscle of the helix, a narrow band of muscular fibers on the anterior border of the helix arising from the spine and inserted at the point where the helix becomes transverse.

m. hel'icis mi'nor [BNA], smaller muscle of the helix a band of oblique fibers covering the crus helicis.

m. hyoglos'sus [BNA], *origin*, body and great cornu of hyoid bone; *insertion*, side of the tongue; *nerve supply*, hypoglossal; *action*, retracts and pulls down side of tongue.

m. hypopharynge'us, m. constrictor pharyngis medius [BNA].

m. ili'acus [BNA], origin, margin of iliac fossa; *insertion*, tendon of psoas, anterior surface of lesser trochanter, and capsule of hip-joint; *nerve supply*, lumbar plexus; *action*, flexes thigh and rotates it inward.

m. ili'acus mi'nor, the external fibers of the m. iliacus inserted into the capsule of the hip-joint; they are sometimes distinctly separate from the rest of the muscle.

m. iliocapsula'ris, m. iliacus minor.

m. iliocosta'lis [BNA], the outer division of the m. sacrospinalis, having three subdivisions: i. lumborum (sacrolumbalis), i. dorsi, and i. cervicis (cervicalis ascendens).

m. iliocosta'lis cervi'cis (iliocostal of the neck) [BNA], m. cervicalis ascendens; *origin*, angle of middle and upper ribs; *insertion*, transverse processes of middle cervical vertebræ; *action*, extends cervical spine; *nerve supply*, branches of cervical.

m. iliocosta'lis dor'si [BNA], *origin*, inner side of angles of 12th to 7th ribs; *insertion*, angles of 6th to 1st ribs and transverse processes of 7th cervical vertebra; *action*, keeps dorsal spine erect; *nerve supply*, branches of dorsal.

m. iliocosta'lis lumbo'rum (iliocostal of the loins) [BNA], m. sacrolumbalis; *origin*, with sacrospinalis; *insertion* into the angles of 5th to 12th ribs; *action*, extends lumbar spine; *nerve supply*, branches of dorsal and lumbar.

m. iliopso'as [BNA], a compound muscle, consisting of the *iliacus*, *psoas major*, and *psoas minor*.

m. incisi'vus la'bii inferior'is [BNA], inferior incisive bundle of origin of orbicularis oris.

m. incisi'vus la'bii superior'is [BNA], superior incisive bundle of origin of orbicularis oris.

m. incisu'ræ hel'icis [BNA], muscle of the notch of the helix, Santorini's muscle, m. intertragicus.

m. infracosta'lis, pl. *infracosta'les*, m. subcostalis [BNA].

m. infraspina'tus [BNA], *origin*, infraspinous fossa of scapula; *insertion*, middle facet of great tuberosity of humerus; *nerve supply*, suprascapular from 5th and 6th cervical; *action*, draws arm backward and rotates it outward.

m. intercosta'lis exter'nus, pl. *intercosta'les exter'ni* [BNA] each arises from lower border of one rib and passes obliquely downward and inward to be inserted into the upper border of rib below; *action*, expands chest; *nerve supply*, intercostal.

m. intercosta'lis inter'nus, pl. *intercosta'les inter'ni* [BNA], each arises from lower border of rib and passes obliquely downward and outward to be inserted into upper border of rib below; *action*, expands chest; *nerve supply*, intercostal.

m. interos'seus dorsa'lis ma'nus, pl. *interos'sei dorsa'les* [BNA], four in number; *origin*, sides of metacarpal bones; *insertion*, 1st phalanges, 1st on radial side of index, 2d on radial side of middle finger, 3d on ulnar side of same finger, 4th on ulnar side of ring finger; *nerve supply*, ulnar; *action*, abducts index, abducts or adducts middle finger, adducts ring finger.

m. interos'seus dorsa'lis pe'dis, pl. *interos'sei dorsa'les* [BNA], four muscles; *origin*, by two heads each from the shafts of the adjacent metatarsal bones; *insertion*, 1st into tibial, 2d into fibular side of 1st phalanx of 2d toe, 3d and 4th into fibular side of 1st phalanx of 3d and 4th toes; *nerve supply*, external plantar; *action*, 1st adducts 2d toe; 2d, 3d, and 4th abduct 2d, 3d, and 4th toes.

m. interos'seus palma'ris, pl. *interos'sei palma'res*, m. interosseus volaris [BNA].

m. interos'seus planta'ris, pl. *interos'sei planta'res* [BNA], three muscles; *origin*, the tibial side of the 3d, 4th, and 5th metatarsal bones; *insertion*, corresponding side of 1st phalanx of the same toes; *nerve supply*, external plantar; *action*, adducts three outer toes.

m. interos'seus vola'ris, pl. *interos'sei vola'res* [BNA], m. interosseus palmaris, three in number; *origin*, 1st from ulnar side of 2d metacarpal, 2d and 3d from radial sides of 4th and 5th metacarpals; *insertion*, 1st into ulnar side of index, 2d and 3d into radial sides of ring and little fingers; *nerve supply*, ulnar; *action*, adducts index finger, abducts ring and little fingers.

m. interspina'lis, pl. *interspina'les* [BNA], one of a series of short muscles developed chiefly in the cervical region; *origin*, spine of one vertebra; *insertion*, spine of vertebra above; *action*, support and extend vertebral column, especially the neck; *nerve supply*, posterior branches of spinal.

m. intertransversa'rius, pl. *intertransversa'rii* [BNA], m. intertransversalis, one of four sets of short muscles; in the neck the *anteriores* and *posteriores* run between the anterior and the posterior tubercles, respectively, of the transverse processes of contiguous vertebræ; in the lumbar region the *laterales* run between the transverse processes, the *mediales* between the accessory and mammillary processes; *action*, support and flex vertebral column laterally; *nerve supply*, posterior branches of the spinal.

m. ischiocaverno'sus [BNA], m. erector penis (or clitoridis); *origin*, tuberosity of ischium and great sacrosciatic ligament; *insertion*, corpus cavernosum penis (or clitoridis); *nerve supply*, perineal; *action*, maintains the penis, or clitoris, erect.

m. ischiococcyge'us, m. coccygeus [BNA].

m. keratopharynge'us, m. ceratopharyngeus [BNA].

m. laryngopharynge'us, m. constrictor pharyngis inferior [BNA].

m. latis'simus col'li [L. broadest of the neck], m. platysma [BNA].

m. latis'simus dor'si (broadest of the back) [BNA], *origin*, spinous processes of lower 5 or 6 thoracic and the lumbar vertebræ, median ridge of sacrum, and outer tip of iliac crest; *insertion*, with teres major into posterior lip of bicipital groove of humerus; *action*, adducts arm, rotates it inward, and carries it backward; *nerve supply*, thoracodorsal from brachial plexus.

m. leva'tor a'læ na'si, portion of caput angulare quadrati labii superioris [BNA], alar insertion of levator labii superioris alæque nasi.

m. leva'tor an'guli o'ris, m. caninus [BNA].

m. leva'tor an'guli scap'ulæ (raiser of the angle of the shoulder-blade), m. levator scapulæ [BNA].

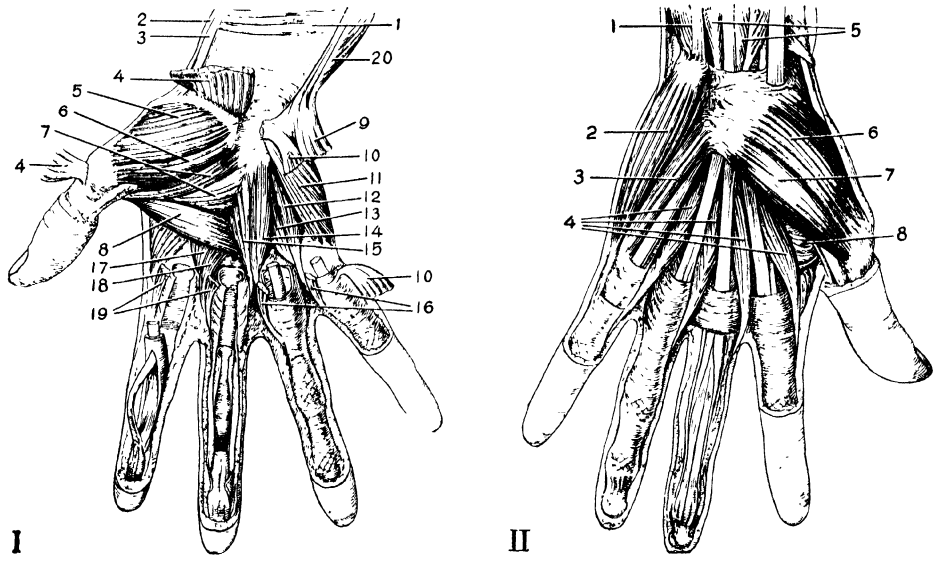
m. leva'tor a'ni [BNA], *origin*, back of pubis, pelvic fascia, spine of ischium; *insertion*, central point of perineum, external sphincter ani, sides of the lower part of the sacrum and of coccyx; *nerve supply*, pudic and 3d and 4th sacral; *action*, chiefly draws the anus upward in defecation, also aids in the support of the pelvic floor.

m. leva'tor cos'tæ, pl. *levato'res costa'rum* [BNA], the levatores costarum breves *arise* from the transverse processes of last cervical and eleven thoracic vertebræ and are *inserted* into ribs next below, between angle and tubercle; the levatores costarum longi are *inserted* into the second rib below their origin; *action*, raise ribs; *nerve supply*, intercostal.

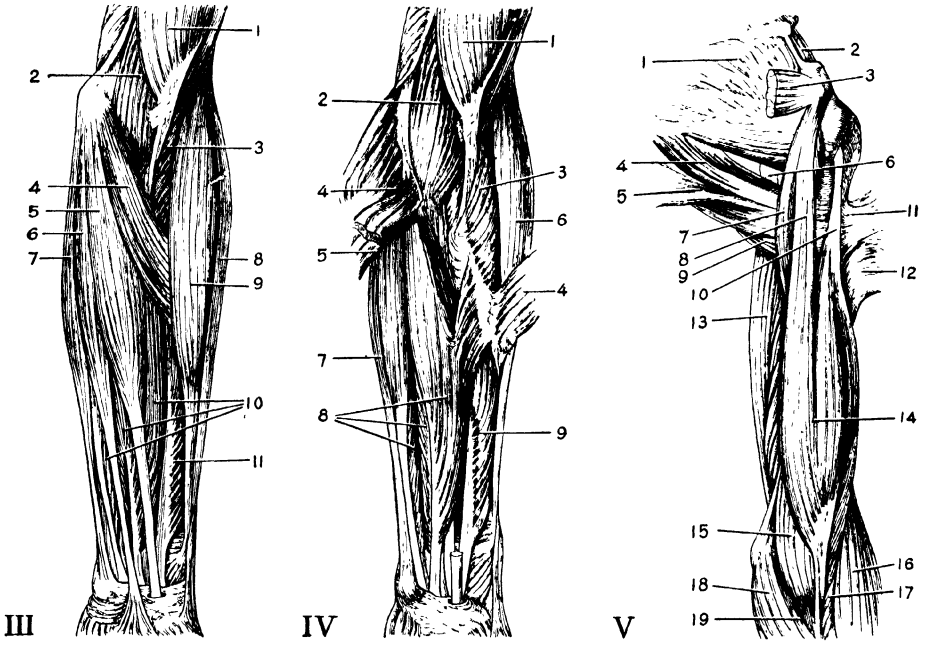
m. leva'tor glan'dulæ thyreoid'eæ (elevator of the thyroid gland) [BNA], a fasciculus occasionally passing from the thyreohyoideus muscle to the isthmus of the thyroid gland.

m. leva'tor la'bii inferio'ris (elevator of the lower lip), m. mentalis [BNA].

m. leva'tor la'bii superio'ris (elevator of the upper lip), caput infraorbitale quadrati labii superioris [BNA], *origin*, maxilla below infraorbital foramen; *insertion*, orbicularis oris of upper lip; *action*, expressed in name; *nerve supply*, facial.



I. Deep Palmar Muscles: 1. Pronator quadratus, 2. Extensor follicis brevis; 3. Abductor pollicis longus; 4. 4 Abductor pollicis brevis; 5. Opponens pollicis; 6. Flexor pollicis brevis; 7. Adductor obliquus pollicis; 8. Adductor transversus pollicis; 9. Abductor digiti quinti; 10, 10. Flexor digiti quinti brevis; 11. Opponens digiti quinti; 12. Interosseus volaris tertius; 13. Interosseus dorsalis quartus; 14. Interosseus volaris secundus; 15. Interosseus dorsalis tertius; 16. Insertion of the third and fourth lumbricales; 17. Interosseus volaris primus; 18. Interosseus dorsalis secundus; 19. Insertion of the first and second lumbricales; 20. Flexor carpi ulnaris. II. Superficial Palmar Muscles: 1. Flexor carpi ulnaris; 2. Abductor digiti quinti; 3. Flexor digiti quarti brevis; 4. Lumbricales; 5. Flexor digitorum sublimis; 6. Abductor pollicis brevis; 7. Flexor pollicis brevis; 8 Adductor pollicis.



III. Superficial Muscles of the Forearm. 1. Biceps brachii; 2. Brachialis, 3. Supinator; 4. Pronator teres; 5. Flexor carpi radialis; 6. Palmaris longus; 7. Flexor carpi ulnaris; 8. Extensor carpi radialis longus; 9. Brachioradialis; 10. Flexor digitorum sublimis; 11. Flexor pollicis longus. IV. Deeper Muscles of the Forearm 1. Biceps brachii; 2. Brachialis; 3. Supinator; 4, 4. Pronator teres. 5. Flexor carpi radialis; 6 Brachioradialis; 7. Flexor carpi ulnaris, 8. Flexor digitorum sublimis; 9. Flexor pollicis longus. V. Muscles of the Axilla and Front of the Arm: 1. Subscapularis; 2. Supraspinatus; 3. Pectoralis minor; 4. Teres major; 5. Latissimus dorsi; 6. Long head of triceps brachii; 7. Coracobrachialis; 8. Short head of the biceps; 9. Teres major; 10. Long head of the biceps; 11. Pectoralis major; 12. Deltoideus; 13. Triceps brachii; 14. Biceps brachii; 15. Brachialis; 16. Brachioradialis; 17. Supinator; 18. Flexor carpi radialis; 19. Pronator teres.

m. leva'tor la'bii superio'ris alæ'que na'si (elevator of the upper lip and wing of the nose), **caput angulare** quadrati labii superioris [BNA], *origin*, root of nasal process of maxilla; *insertion*, ala of nose and orbicularis oris of upper lip; *action*, expressed by name; *nerve supply*, facial.

m. leva'tor men'ti (elevator of the chin), m. mentalis [BNA].

m. leva'tor pala'ti, m. levator veli palatini.

m. leva'tor palpe'bræ superio'ris [BNA], *origin*, under surface of the lesser wing of the sphenoid, above and anterior to the optic foramen; *insertion*, upper margin of the tarsal plate of the upper eyelid; *nerve supply*, oculomotorius; *action*, raises the upper eyelid.

m. leva'tor scap'ulæ (raiser of the shoulder-blade) [BNA], m. levator anguli scapulæ; *origin* from posterior tubercles of transverse processes of four upper cervical vertebræ, *insertion* into superior angle of scapula; *action*, raises the posterior angle of the scapula; *nerve supply*, dorsal scapular from bronchial plexus.

m. leva'tor ve'li palati'ni [BNA], m. levator palati; *origin*, apex of petrous portion of temporal bone and lower part of cartilaginous Eustachian tube; *insertion*, aponeurosis of soft palate; *nerve supply*, pharyngeal plexus; *action*, raises soft palate.

m. longis'simus cap'itis (longest of the head) [BNA], m. trachelomastoideus, m. transversalis capitis, m. complexus minor; *origin*, from transverse processes of upper thoracic and transverse and articular processes of lower and middle cervical vertebræ; *insertion* into mastoid process; *action*, keeps head erect, draws it backward or to one side, *nerve supply*, branches of cervical.

m. longis'simus cervi'cis (longest of the neck) [BNA], m. transversalis colli or cervicis, continuation of m. longissimus dorsi; *origin*, transverse process of upper thoracic vertebræ; *insertion*, transverse processes of middle and upper cervical vertebræ; *action*, extends cervical spine; *nerve supply*, branches of lower cervical and upper dorsal.

m. longis'simus dor'si (longest of the back) [BNA], *origin* with iliocostalis and from transverse processes of lower thoracic vertebræ; *insertion* by outer slips into most or all of the ribs between angles and tubercles and into tips of transverse processes of upper lumbar vertebræ, and by inner slips into accessory processes of upper lumbar and transverse processes of thoracic vertebræ; *action*, extends spinal column; *nerve supply*, dorsal and lumbar.

m. longitudina'lis infe'rior [BNA], **m. profundus** [NK], inferior lingual, an intrinsic muscle of the tongue, cylindrical in shape, occupying the under part on either side.

m. longitudina'lis supe'rior [BNA], **m. superficialis** [NK], superficial lingual, an intrinsic muscle of the tongue, running from base to tip on the dorsum just beneath the mucous membrane.

m. lon'gus cap'itis (long of the head) [BNA], m. rectus capitis anticus major; *origin*, anterior tubercles of transverse processes of 3d to 6th cervical vertebræ; *insertion*, basilar process of occipital bone; *action*, twists or bends neck forward; *nerve supply*, cervical plexus.

m. lon'gus col'li (long of the neck) [BNA], *vertical portion* arises from the bodies of the 3d thoracic to the 5th cervical vertebræ and is inserted into the bodies of the 2d to 4th cervical vertebræ; *upper oblique portion* arises from the anterior tubercles of the transverse processes of the 3d to 5th cervical vertebræ and is inserted into the anterior tubercle of the atlas; the *lower oblique portion* arises from the bodies of the 1st to 3d thoracic vertebræ and is inserted into the anterior tubercles of the transverse processes of the 5th and 6th cervical vertebræ; *action*, twists and bends neck forward; *nerve supply*, anterior branches of cervical.

m. lumbrica'lis ma'nus, pl. *lumbrica'les ma'nus* [BNA], four in number; *origin*, the two outer, or radial, from the radial side of the tendons of the flexor digitorum profundus going to the index and middle fingers, the two inner, or ulnar, from the adjacent sides of the 2d and 3d, and 3d and 4th tendons; *insertion*, radial side of 1st phalanx and extensor tendon on dorsum of each of the four fingers; *nerve supply*, the two radial by the median, the two ulnar by the ulnar; *action*, flex the 1st and extend the 2d and 3d phalanges.

m. lumbrica'lis pe'dis, pl. *lumbrica'les pe'dis* [BNA], four muscles; *origin*, 1st from tibial side of tendon to 2d toe of flexor digitorum longus, 2d, 3d, and 4th from adjacent sides of all four tendons of this muscle; *insertion*, bases of 1st phalanx of the four outer toes in the same way as the lumbricales of the hand; *nerve supply*, external and internal plantar; *action*, flex the 1st and extend the 2d and 3d phalanges.

m. masse'ter (chewer) [BNA], *origin*, inner surface and anterior two-thirds of lower border of zygoma; *insertion*, outer surface of ramus and coronoid process of mandible; *action*, closes jaw; *nerve supply*, branch of third division of trigeminus.

m. menta'lis (chin muscle) [BNA], m. levator labii inferioris, m. menti; *origin*, incisor fossa of mandible; *insertion*, skin of chin; *action* raises and wrinkles skin of chin and pushes up lower lip; *nerve supply*, facial.

m. multif'idus (much divided) [BNA], m. multifidus spinæ; *origin* from the sacrum, sacroiliac ligament, mammillary processes of the lumbar vertebræ, transverse processes of thoracic vertebræ, and articular processes of last four cervical vertebræ; insertion into the spines of all the vertebræ up to and including the axis; *action*, rotates vertebral column; *nerve supply*, posterior divisions of spinal.

m. mylohyoid'eus [BNA], *origin*, mylohyoid line of mandible; *insertion*, upper border of hyoid bone and raphe separating muscle from its fellow; *action*, elevates floor of mouth and the tongue, depresses jaw when hyoid is fixed; *nerve supply*, mylohyoid from third division of trigeminus.

m. mylopharynge'us [BNA], portion of m. constrictor pharyngis superior arising from the mylohyoid ridge of the mandible.

m. nasa'lis [BNA], consists of two portions: pars transversa, compressor narium, and pars alaris, depressor alæ nasi.

m. obli'quus auric'ulæ, oblique muscle of the auricle, a thin band of oblique muscular fibers extending from the upper part of the eminentia conchæ to the convexity of the helix, running across the groove corresponding to the crus anthelicis inferior.

m. obli'quus cap'itis infe'rior (inferior oblique of the head) [BNA], *origin*, spine of axis; *insertion*, transverse processof the atlas; *action*, rotates head; *nerve supply*, suboccipital.

m. obli'quus cap'itis supe'rior (superior oblique of the head) [BNA], *origin*, transverse process of atlas; *insertion*, outer third of inferior curved line of occipital bone; *action*, rotates head; *nerve supply*, suboccipital.

m. obli'quus exter'nus abdom'inis [BNA], *origin*, 5th to 12th ribs; *insertion*, anterior half of outer lip of iliac crest, Poupart's ligament, and anterior layer of the sheath of the rectus; *action*, diminishes capacity of abdomen, draws thorax downward; *nerve supply*, lower thoracic.

m. obli'quus infe'rior [BNA], *origin*, orbital plate of maxilla external to the lacrymal groove; *insertion*, outer part of sclerotic between the superior and external recti; *nerve supply*, oculomotorius; *action*, rotates the eyeball on its anteroposterior axis.

m. obli'quus inter'nus abdom'inis [BNA], *origin*, outer half of Poupart's ligament, anterior half of crest of ilium, and lumbar fascia; *insertion*, 10th to 12th ribs and sheath of rectus, some of the fibers from Poupart's ligament terminate in the falx inguinalis; *action*, diminishes capacity of abdomen, bends thorax forward; *nerve supply*, lower thoracic.

m. obli'quus supe'rior [BNA], *origin*, above the inner margin of the optic foramen; *insertion*, by a tendon passing through the trochlea, or pulley, and then reflected backward, downward, and outward to the sclerotic between the superior and external recti; *nerve supply*, trochlear nerve; *action*, rotates eyeball on its anteroposterior axis.

m. obtura'tor exter'nus [BNA], *origin*, lower half of margin of thyroid foramen and adjacent part of external surface of obturator membrane; *insertion*, digital fossa of great trochanter; *nerve supply*, obturator; *action*, rotates thigh outward.

m. obtura'tor inter'nus [BNA], *origin*, obturator membrane and margin of thyroid foramen; *insertion*, inner surface of great trochanter; *nerve supply*, sacral plexus; *action*, rotates thigh outward.

m. occipita'lis [BNA], posterior portion of the epicranius; *origin*, linea nuchæ suprema of occipital bone; *insertion*, galea aponeurotica; *actio n*, pulls scalp backward; *nerve supply*, facial.

m. occipitofronta'lis, m. epicranius [BNA].

m. omohyoid'eus [BNA], formed of two bellies attached to intermediate tendon; *origin* by inferior belly from upper border of scapula between inner angle and notch; *insertion* by superior belly into hyoid bone; *action*, depresses hyoid; *nerve supply*, upper cervical through ansa hypoglossi.

m. oppo'nens dig'iti quin'ti [BNA], m. opponens minimi digiti; *origin*, hamulus of unciform (hamate) bone; *insertion*, inner margin of 5th metacarpal bones *nerve supply*, ulnar; *action*, draws ulnar side of hand toward center of palm.

m. oppo'nens min'imi dig'iti, m. opponens digiti quinti [BNA].

m. oppo'nens pol'licis [BNA], m. flexor ossis metacarpi pollicis; *origin*, ridge of trapezium (os multangulum majus) and annular ligament; *insertion*, anterior surface of 1st metacarpal bone; *nerve supply*, median; *action*, opposes thumb to other fingers.

m. orbicula'ris oc'uli (orbicular of the eye) [BNA], m. orbicularis palpebrarum; consists of three portions. (*a*) *pars orbitalis*, or external portion, arises from frontal process of maxilla and adjacent portion of frontal bone, encircles aperture of orbit, and is inserted near origin; (*b*) *pars palpebralis*, or internal portion, arises from inner canthus, passes through each eyelid, and is inserted into outer canthus; (*c*) *pars lacrimalis*, tensor tarsi or Horner's muscle, arises from posterior lacrymal ridge of lacrymal bone and passes across lacrymal sac to join palpebral portion; *action*, closes eye, wrinkles forehead vertically, compresses lacrymal sac; *nerve supply*, facial.

m. orbicula'ris o'ris (orbicular of the mouth) [BNA], m. sphincter oris; *origin*, by nasolabial band from septum of the nose, by superior incisive bundle from incisor fossa of maxilla, by inferior incisive bundle from lower jaw each side of symphysis; fibers surround mouth between skin and mucous membrane of lips and cheeks, and are blended with other muscles; *action*, closes lips; *nerve supply*, facial.

m. orbicula'ris palpebra'rum (orbicular of the eyelids), orbicularis oculi [BNA].

m. orbita'lis [BNA], Müller's muscle, a rudimentary nonstriated muscle, crossing the infraorbital groove and sphenomaxillary fissure, intimately united with the periosteum of the orbit.

m. orbitopalpebra'lis, m. levator palpebræ superioris.

m. palatoglos'sus, m. glossopalatinus [BNA].

m. palatopharynge'us, m. pharyngopalatinus [BNA]

m. pal'atosalpinge'us, m. tensor veli palatini [BNA].

m. palma'ris bre'vis [BNA], *origin*, ulnar side of central portion of the palmar aponeurosis; *insertion*, skin of ulnar side of hand; *nerve supply*, ulnar; *action*, wrinkles skin on inner side of hand.

m. palma'ris lon'gus [BNA], *origin*, internal condyle of humerus; *insertion*, anterior annular ligament of wrist and palmar fascia; *nerve supply*, median; *action*, makes palmar fascia tense and flexes forearm; is occasionally absent.

m. papilla'ris [BNA], one of the group of columnæ (trabeculæ) carneæ which terminate in the chordæ tendineæ of the heart.

m. pectina'tus [BNA], one of a number of muscular columns projecting from the inner walls of the auricles (auricular appendages) of the heart.

m. pectine'us [BNA], *origin*, crest of pubis; *insertion*, pectineal line of femur; *nerve supply*, obturator and femoral; *action*, adducts thigh and assists in flexion.

m. pectora'lis ma'jor [BNA], *origin*, by *pars clavicularis* from inner half of clavicle, by *pars sternocostalis* from anterior surface of manubrium and body of sternum and cartilages of 1st to 6th ribs, by *pars abdominalis* from aponeurosis of rectus abdominis or obliquus externus; *insertion*, anterior bicipital ridge of humerus, *action*, adducts and rotates arm; *nerve supply*, anterior thoracic.

m. pectora'lis mi'nor [BNA], *origin*, 3d to 5th ribs at the costochondral articulations; *insertion*, tip of coracoid process of scapula; *action*, draws down scapula or raises ribs; *nerve supply*, anterior thoracic.

m. perone'ocalca'neus, an occasional muscle arising from the shaft of the fibula and inserted into the os calcis.

m. perone'us bre'vis [BNA], *origin*, lower two-thirds of outer surface of fibula; *insertion*, base of 5th metatarsal bone; *nerve supply*, peroneal; *action*, abducts foot.

m. perone'us lon'gus [BNA], *origin*, upper two-thirds of outer surface of fibula and external condyle of tibia; *insertion*, by tendon passing behind external malleolus and across sole of foot to internal cuneiform and base of first metatarsal; *nerve supply*, peroneal; *action*, abducts and pronates foot.

m. perone'us ter'tius [BNA], *origin*, in common with extensor digitorum longus; *insertion*, dorsum of base of 5th metatarsal bone; *nerve supply*, deep branch of peroneal; *action*, assists in dorsal flexion of foot.

m. petropharynge'us, an occasional accessory levator muscle of the pharynx, arising from the under surface of the petrous portion of the temporal bone and inserted into the pharynx.

m. petrosalpin'gostaphyli'nus, m. levator veli palatini [BNA].

m. petrostaphyli'nus, m. levator veli palatini.

m. pharyngopalati'nus [BNA], m. palatopharyngeus; forms the posterior pillar of the fauces; *origin*, soft palate; *insertion*, posterior border of thyroid cartilage and aponeurosis of pharynx; *nerve supply*, pharyngeal plexus; *action*, narrows fauces and shuts off nasopharynx.

m. pirifor'mis [BNA], *origin*, margins of anterior sacral foramina and great sacrosciatic notch of ilium, *insertion*, upper border of great trochanter; *nerve supply*, sciatic plexus; *action*, rotates thigh outward.

m. planta'ris [BNA], *origin*, external supracondyloid ridge (external epicondyle) of femur; *insertion*, inner margin of tendo Achillis and internal annular ligament of ankle; *nerve supply*, tibial; *action*, extends foot (plantar flexion).

m. platys'ma (flat) [BNA], m platysma myoides, m. tetragonus; *origin*, clavicle and fascia covering pectoralis major and deltoid at level of 1st or 2d rib; *insertion*, lower border of mandible, risorius, and platysma of opposite side; *action*, depresses jaw and lower lip, wrinkles skin of neck and upper part of chest; *nerve supply*, cervical branch of facial.

m. pleuroœsophage'us [BNA], muscular fasciculi, arising from the mediastinal pleura, which reinforce the musculature of the esophagus.

m. poplite'us [BNA], *origin*, externale condyle (epicondyle) of femur; *insertion*, posterior surface of tibia above oblique line; *nerve supply*, tibial; *action*, flexes leg and rotates it inward.

m. poplite'us mi'nor, *origin*, popliteal space of femur; *insertion*, posterior ligament of knee-joint, *nerve supply*, tibial; *action*, raises posterior ligament during flexion of knee.

m. proce'rus (prolonged) [BNA], m. pyramidalis nasi; *origin* from membrane covering bridge of nose; *insertion* into frontalis; *action*, assists frontalis; *nerve supply*, branch of facial.

m. prona'tor pe'dis, m. flexor accessorius longus digitorum pedis, m. quadratus plantæ [BNA].

m. prona'tor quadra'tus [BNA], *origin*, lower fourth of anterior surface of ulna; *insertion*, lower fourth of anterior surface of radius; *nerve supply*, volar interosseous; *action*, pronates forearm.

m. prona'tor te'res [BNA], m. pronator radii teres; *origin*, superficial head (caput humerale) from the internal condyle of the humerus, deep head (caput ulnare) from the inner side of the coronoid process of the ulna; *insertion*, middle of the outer surface of the radius; *nerve supply*, median; *action*, pronates forearm.

m. prostat'icus [BNA], the muscular tissue of the prostate, involuntary in character.

m. pso'as ma'jor [BNA] or **magnus**; *origin*, bodies of vertebræ and intervertebral discs from the 12th thoracic to the 5th lumbar, and transverse processes of the lumbar vertebræ; *insertion*, lesser trochanter of femur; *nerve supply*, lumbar plexus; *action*, flexes thigh and rotates it slightly inward.

m. pso'as mi'nor [BNA] or **parvus**, an inconstant muscle, absent in about 40 per cent.; *origin*, bodies of 12th thoracic and 1st lumbar vertebræ and disc between them; *insertion*, iliopectineal line and eminence with

iliac fascia; *nerve supply*, lumbar plexus; *action*, makes iliac fascia tense.

m. pterygoid'eus exter'nus [BNA], *origin*, one inferior and larger head from outer plate of pterygoid, pyramidal process of palate bone, tuberosity of maxilla; the other superior and smaller head from the under surface of the great wing of the sphenoid; *insertion* into pterygoid fossa of head of mandible and interarticular fibrocartilage; *action*, brings jaw forward; *nerve supply*, external pterygoid from third division of trigeminus.

m. pterygoid'eus inter'nus [BNA], *origin*, pterygoid fossa of sphenoid and tuberosity of maxilla; *insertion*, inner surface of lower jaw between angle and mylohyoid groove; *action*, raises mandible, closing jaw; *nerve supply*, internal pterygoid from third division of trigeminus.

m. pterygopharynge'us [BNA], portion of constrictor pharyngis superior arising from the internal pterygoid plate.

m. pterygospino'sus, a muscular slip, occasionally present, passing between the spine of the sphenoid bone and the posterior margin of the outer pterygoid plate.

m. pubococcyge'us, pubococcygeal muscle, fibers of the m. levator ani, arising from the posterior surface of the inferior ramus of the pubis.

m. pubovesica'lis [BNA], the external longitudinally directed muscular fibers of the bladder, attached to the lower part of the back of the symphysis pubis.

m. pyramida'lis [BNA], *origin*, crest of pubis; *insertion*, lower portion of linea alba; *action*, makes linea alba tense; *nerve supply*, last thoracic.

m. pyramida'lis auric'ulæ [BNA], pyramidal muscle of the auricle, Jung's muscle; an occasional prolongation of the fibers of the m. tragicus to the spina helicis.

m. pyramida'lis na'si (pyramidal of the nose), m. procerus [BNA].

m. pyrifor'mis, m. piriformis.

m. quadra'tus fem'oris [BNA], *origin*, outer border of tuberosity of ischium; *insertion*, intertrochanteric ridge; *nerve supply*, sciatic; *action*, rotates thigh outward.

m. quadra'tus la'bii inferior'is [BNA], m. depressor labii inferioris; *origin*, anterior portion of lower border of mandible; *insertion*, orbicularis oris and skin of lower lip; *action*, depresses lower lip; *nerve supply*, facial.

m. quadra'tus la'bii superior'is [BNA], composed of three heads usually described as three muscles: *caput angulare*, levator labii superioris alæque nasi; *caput infraorbitale*, levator labii superioris; *caput zygomaticum*, zygomaticus minor.

m. quadra'tus lumbo'rum [BNA], *origin*, iliac crest, iliolumbar ligament, and transverse processes of lower lumbar vertebræ; *insertion*, 12th rib and transverse processes of upper lumbar vertebræ; *action*, flexes trunk laterally; *nerve supply*, upper lumbar.

m. quadra'tus men'ti, m. quadratus labii inferioris [BNA].

m. quadra'tus plan'tæ [BNA], m. flexor accessorius digitorum; *origin*, by two heads from the outer and inner borders of the inferior surface of the os calcis (calcaneus); *insertion*, tendons of flexor digitorum longus; *nerve supply*, external plantar; *action*, assists long flexor.

m. quad'riceps fem'oris [BNA], m. quadriceps extensor femoris; *origin*, by four heads—rectus femoris, vastus lateralis, vastus intermedius, and vastus medialis; *insertion*, patella, and thence by ligamentum patellæ to tuberosity of tibia; *nerve supply*, femoral (anterior crural); *action*, extends leg.

m. radia'lis exter'nus bre'vis, m. extensor carpi radialis brevis [BNA].

m. radia'lis exter'nus lon'gus, m. extensor carpi radialis longus [BNA].

m. radia'lis inter'nus, m. flexor carpi radialis [BNA].

m. radiocar'pus, m. flexor carpi radialis [BNA].

m. rectococcyge'us [BNA], a band of muscular fibers arising from the anterior surface of 2d or 3d coccygeal segment and passing to the posterior surface of rectum.

m. rectouteri'nus [BNA], a band of fibrous tissue and unstriped muscle-fibers passing between the cervix uteri and the rectum in the fold of Douglas, plica rectouterina, on either side.

m. rectovesica'lis [BNA], fibers (present only in the male) connecting the longitudinal musculature of the rectum with the external muscular coat of the bladder.

m. rec'tus abdom'inis [BNA], *origin*, crest and symphysis of the pubis; *insertion*, xiphoid process and 5th to 7th costal cartilages; *action*, diminishes capacity of abdomen, draws thorax downward; *nerve supply*, branches of lower thoracic.

m. rec'tus bul'bi maxilla'ris [NK], inferior rectus muscle of the eye, m. r. inferior [BNA].

m. rec'tus bul'bi tegmenta'lis [NK], superior rectus muscle of the eye, m. r. superior [BNA].

m. rec'tus cap'itis ante'rior (anterior straight of the head) [BNA], rectus capitis anticus minor; *origin*, base of atlas; *insertion*, basilar process of occipital bone; *action*, turns and inclines head forward; *nervous supply*, 1st and 2d cervical.

m. rec'tus cap'itis anti'cus ma'jor (larger anterior straight of the head), m. longus capitis [BNA].

m. rec'tus cap'itis anti'cus mi'nor (lesser anterior straight of the head), m. rectus capitis anterior [BNA].

m. rec'tus cap'itis latera'lis (lateral straight of the head) [BNA], *origin*, transverse process of atlas; *insertion*, jugular process of occipital bone; *action*, inclines head to one side; *nerve supply*, suboccipital.

m. rec'tus cap'itis poste'rior ma'jor (larger posterior straight of the head) [BNA], m. rectus capitis posticus major; *origin*, spine of axis; *insertion*, middle of inferior curved line of occipital bone; *action*, rotates and draws head backward; *nerve supply*, posterior branch of 1st cervical (suboccipital).

m. rec'tus cap'itis poste'rior mi'nor (lesser posterior straight of the head) [BNA], m. rectus capitis posticus minor; *origin* from posterior tubercle of atlas; *insertion*, into inner third of inferior curved line of occipital bone; *action*, rotates head and draws it backward; *nerve supply*, suboccipital.

m. rec'tus exter'nus, m. rectus lateralis [BNA].

m. rec'tus fem'oris [BNA], *origin*, anterior inferior spine of ilium and upper margin of acetabulum; *insertion*, common tendon of quadriceps femoris.

m. rec'tus infe'rior [BNA], *origin*, by a common tendon with the rectus medialis, the annulus tendineus communis or ligament of Zinn, from the lower and inner margin of the optic foramen; *insertion*, sclerotic coat of the eye; *nerve supply*, oculomotorius; *action*, moves eyeball downward.

m. rec'tus inter'nus, m. rectus medialis [BNA].

m. rec'tus latera'lis [BNA], m. rectus externus; *origin*, by two heads from the outer margin of the optic foramen and from the lower margin of the sphenoidal fissure and the ligament of Zinn; *insertion*, sclerotic; *nerve supply*, abducens; *action*, turns eyeball outward.

m. rec'tus media'lis [BNA], m. rectus internus; *origin*, by a common tendon with the rectus inferior the annulus tendineus communis or ligament of Zinn, from the lower and inner margin of the optic foramen: *insertion*, sclerotic coat of the eye; *nerve supply*, oculomotorius; *action*, moves eyeball inward.

m. rec'tus supe'rior [BNA], *origin*, upper margin of the optic foramen and fibrous sheath of the optic nerve; *insertion*, sclerotic coat of the eye; *nerve supply*, oculomotorius; *action*, moves the eyeball upward.

m. rec'tus thora'cis, an occasional muscle lying beneath the sternalis; seemingly a continuation of the rectus abdominis.

m. re'trahens au'rem or **auric'ulam** (dragging back the auricle), m. auricularis posterior [BNA].

m. rhomboatloid'eus, an occasional muscle arising with the rhomboidei major and minor from the cervical and thoracic vertebræ and inserted into the atlas.

m. rhomboid'eus ma'jor (greater rhomboid) [BNA], *origin*, spinous processes and corresponding supraspinous ligaments of first four thoracic vertebræ; *insertion*, vertebral border of scapula below spine; *action*, draws scapula toward vertebral column; *nerve supply*, dorsal scapular from brachial plexus.

m. rhomboid'eus mi'nor (lesser rhomboid) [BNA], *origin*, spinous processes of 6th and 7th cervical vertebræ; *insertion*, vertebral margin of scapula above spine; *action*, draws scapula toward vertebral column and slightly upward; *nerve supply*, dorsal scapular from brachial plexus.

m. rhombo-occipita'lis, m. occipitoscapularis.

m. riso'rius (smiling) [BNA], *origin*, from platysma and fascia of masseter; *insertion*, orbicularis oris and skin at corner of mouth; *action*, draws out angle of mouth; *nerve supply*, facial.

m. rota'tor spi'næ, one of a number of short muscles chiefly developed in the thoracic region. They are of two sets, *rotato'res bre'ves* (short rotators) [BNA], and *rotato'res lon'gi* (long rotators) [BNA]; the former arise from the transverse process of one vertebra and are inserted into the root of the spinous process of the vertebra above; the latter are inserted into the second or third vertebra above their origin; *action*, rotate the vertebral column; *nerve supply*, posterior branches of the spinal.

m. sacrococcyge'us ante'rior [BNA], an inconstant muscle on the anterior surfaces of the sacrum and coccyx, the remains of a portion of the caudal musculature of lower animals.

m. sacrococcyge'us poste'rior [BNA], an inconstant and poorly developed muscle on the posterior surfaces of the sacrum and coccyx, the remains of a portion of the caudal musculature of lower animals.

m. sacrococcyge'us posti'cus, m. extensor coccygis.

m. sacrolumba'lis, m. iliocostalis lumborum [BNA].

m. sacrospina'lis [BNA], m. erector spinæ; *origin*, from dorsal surface of sacrum, spines of lumbar vertebræ, and crest of ilium; then divides into iliocostalis and longisimus dorsi muscles; *action*, extends spinal column; *nerve supply*, posterior branches of spinal nerves.

m. salpingopharynge'us [BNA], fibers of the pharyngopalatinus arising from the cartilaginous end of the Eustachian tube.

m. sarto'rius [BNA], *origin*, anterior superior spine of ilium; *insertion*, inner border of tuberosity of tibia; *nerve supply*, femoral; *action*, flexes thigh and leg, rotates leg inward and thigh outward.

m. scale'nus ante'rior [BNA], m. scalenus anticus; *origin*, anterior tubercles of transverse processes of 3d to 6th cervical vertebræ; *insertion*, scalene tubercle of 1st rib; *action*, raises 1st rib; *nerve supply*, cervical plexus.

m. scale'nus me'dius [BNA], *origin*, posterior tubercles of transverse processes of 2d to 6th cervical vertebræ; *insertion*, 1st rib to outer side of scalenus anterior; *action*, raises 1st rib; *nerve supply*, cervical plexus.

m. scale'nus min'imus [BNA], an occasional independent muscular fasciculus between the scalenus anterior and medius, and having the same action and innervation as they.

m. scale'nus poste'rior [BNA], m. scalenus posticus; *origin*, posterior tubercles of transverse processes of 4th to 6th cervical vertebræ; insertion, outer side of upper border of 2d rib; *action*, elevates 2d rib; *nerve supply*, cervical and brachial plexus.

m. scanso'rius [L. climbing muscle], m. accessorius gluteus minimus, m. gluteus quartus, anterior fibers of the gluteus minimus (according to some anatomists the piriformis) which are sometimes distinct from the main portion of the muscle.

m. semimembrano'sus [BNA], *origin*, tuberosity of ischium; *insertion*, inner tuberosity of tibia and by membrane to internal lateral ligament of knee-joint, popliteal fascia, and external condyle of femur; *nerve supply*, tibial; *action*, flexes leg and rotates it inward and makes capsular ligament of knee-joint tense.

m. semispina'lis cap'itis (semispinal of the head) [BNA], m. complexus; *origin*, transverse processes of five or six upper thoracic and four lower cervical vertebræ; *insertion*, occipital bone between superior and inferior curved lines; *action*, rotates head and draws it backward; *nerve supply*, suboccipital, great occipital, and branches of cervical.

m. semispina'lis cervi'cis (semispinal of the neck) [BNA], m. semispinalis colli, continuous with semispinalis dorsi; *origin*, transverse processes of 2d to 5th cervical vertebræ; *insertion*, spines of axis and 3d to 5th cervical vertebræ; *action*, extends cervical spine; *nerve supply*, branches of cervical.

m. semispina'lis col'li, m. semispinalis cervicis [BNA].

m. semispina'lis dor'si (semispinal of the back) [BNA], *origin*, transverse processes of 5th to 11th thoracic vertebræ; *insertion*, spines of first four thoracic and 6th and 7th cervical vertebræ; *action*, extends vertebral column; *nerve supply*, branches of cervical.

m. semitendino'sus [BNA], *origin*, ischial tuberosity; *insertion*, side of shaft of tibia below internal tuberosity; *nerve supply*, tibial; *action*, flexes leg and rotates it inward.

m. serra'tus ante'rior [BNA], m. serratus magnus; *origin*, from center of external aspect of first 8 or 9 ribs; *insertion*, superior and inferior angles and intervening vertebral border of scapula; *action*, moves scapula variously, elevates ribs; *nerve supply*, long thoracic from brachial plexus.

m. serra'tus mag'nus, m. serratus anterior [BNA].

m. serra'tus poste'rior infe'rior (inferior posterior serrated) [BNA], *origin*, with latissimus dorsi, from spines of two lower thoracic and two upper lumbar vertebræ; *insertion*, into lower borders of last four ribs; *action*, draws lower ribs backward and downward; *nerve supply*, 9th to 12th intercostal.

m. serra'tus poste'rior supe'rior (superior posterior serrated) [BNA], *origin*, from spines of two lower cervical and two upper thoracic vertebræ; *insertion*, into outer side of angles of 2d to 5th ribs; *nerve supply*, 1st to 4th intercostals.

m. sol'eus [L. *solea*, sandal] [BNA], *origin*, posterior surface of head and upper third of shaft of fibula, oblique line and middle third of inner border of tibia, and a tendinous arch passing between tibia and fibula over the popliteal vessels; *insertion*, with gastrocnemius by tendo calcaneus (Achillis) into tuberosity of os calcis (calcaneus); *nerve supply*, tibial; *action*, produces plantar flexion of foot.

m. sphenosal'pingostaphyli'nus, m. tensor veli palatini [BNA].

m. sphinc'ter a'ni exter'nus [BNA], a fusiform ring of muscular fibers surrounding the anus, attached posteriorly to the coccyx and anteriorly to the central point of the perineum.

m. sphinc'ter a'ni inter'nus [BNA], a muscular ring, formed by an increase of the circular fibers of the rectum, situated at the upper end of the anal canal.

m. sphinc'ter o'ris, m. orbicularis oris [BNA].

m. sphinc'ter pupill'æ [BNA], a ring of muscular fibers surrounding the pupillary border of the iris.

m. sphinc'ter pylo'ri [BNA], a thickening of the middle (circular) layer of the gastric musculature encircling the pylorus.

m. sphinc'ter ure'thræ membrana'ceæ [BNA], m. compressor urethræ, m. constrictor urethræ; *origin*, ramus of pubis; *insertion*, with fellow in median raphe behind and in front of urethra; *nerve supply*, pudic; *action*, constricts membranous urethra.

m. sphinc'ter vagi'næ, m. bulbocavernosus [BNA].

m. sphinc'ter vesi'cæ, annulus* urethralis.

m. spina'lis cap'itis (spinal of the head) [BNA], inconstant; *origin*, spines of upper thoracic and lower cervical vertebræ, forms spinal segments of semispinalis capitis and blends with latter.

m. spina'lis cervi'cis (spinal of the neck) [BNA], spinalis colli, inconstant or rudimentary; *origin*, spines of 6th and 7th cervical; *insertion*, spines of axis and 3d cervical vertebra; *action*, extends cervical spine; *nerve supply*, branches of cervical.

m. spina'lis col'li, m. spinalis cervicis [BNA].

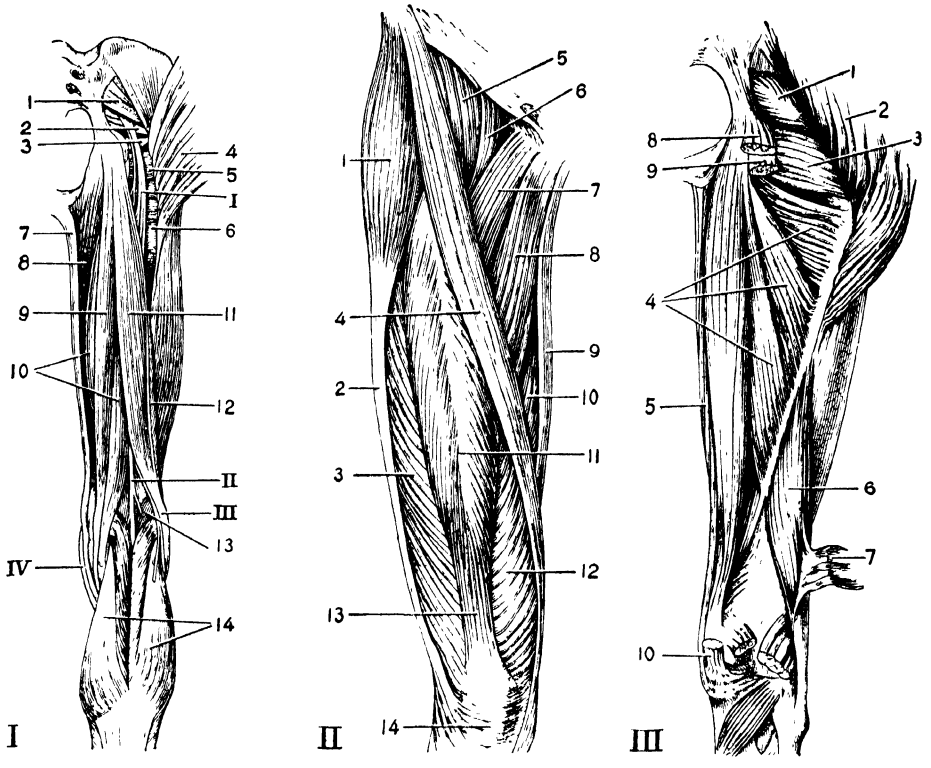
m. spina'lis dor'si (spinal of the back) [BNA], *origin*, spines of upper lumbar and two lower thoracic vertebræ; *insertion*, spines of middle and upper thoracic vertebræ; *action*, supports and extends vertebral column; *nerve supply*, branches of dorsal.

m. sple'nius cap'itis (bandage of the head) [BNA], *origin*, from spines of last four cervical and first three thoracic vertebræ; *insertion*, into outer half of superior curved line of occipital and mastoid process; *action*, rotates head, the two together draw head backward; *nerve supply*, 2d to 8th cervical.

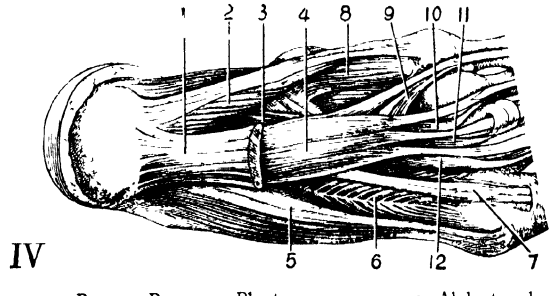
m. sple'nius cervi'cis (bandage of the neck) [BNA], splenius colli; *origin*, from spines of 3d to 5th (or 4th to 6th) cervical vertebræ; *insertion*, posterior tubercles of transverse processes of 1st and 2d (sometimes 3d) cervical vertebræ; *action*, rotates head, both together draw head backward; *nerve supply*, 2d to 8th cervical.

m. sple'nius col'li (bandage of the neck), m. splenius cervicis [BNA].

m. stape'dius [BNA], *origin*, under surface of the pyramid; *insertion*, neck of the stapes; *action*, draws head of stapes backward.



I. Superficial Muscles of the Back of the Thigh. 1. Piriformis, 2. Obturator internus; 2. Obturator externus; 4. Gluteus maximus, 5. Quadratus femoris, 6. Adductor magnus; 7. Gracilis; 8. Adductor magnus, 9. Semitendinosus, 10. Semimembranosus; 11. Long head of biceps, 12. Short head of biceps, 13. Plantaris; 14. Gastrocnemius. I. Sciatic nerve, II. Tibial nerve, III. Peroneal nerve with tendon of biceps, IV. Tendon of sartorius. II. Muscles of the Front of the Thigh. 1. Tensor fasciæ latæ, 2. Tractus iliotibialis of the fascia lata, 3. Vastus lateralis, 4. Sartorius, 5. Iliacus, 6. Psoas major, 7. Pectineus, 8. Adductor longus, 9. Gracilis, 10. Adductor magnus, 11. Rectus femoris; 12. Vastus medialis, 13. Rectus tendon, Ligamentum patellæ. III. Deep Muscles of the Back of the Thigh. 1. Obturator internus, 2. Gluteus maximus, 3. Quadratus femoris; 4. Adductor magnus, 5. Gracilis, 6. Short head of biceps, 7. Long head of biceps, 8. Origin of biceps and semitendinosus, 9. Origin of semimembranosus, 10. Insertion of semimembranosus.



IV. Muscles of the Planta Pedis. 1. Plantar aponeurosis; 2. Abductor digiti quinti; 3. Quadratus plantæ; 4. Flexor digitorum brevis; 5. Abductor hallucis; 6. Flexor hallucis brevis, 7. Flexor hallucis longus; 8. Flexor digiti quinti brevis, 9. Lumbricalis quartus; 10. Lumbricalis tertius; 11. Lumbricalis secundus; 12. Lumbricalis primus.

m. staphyli'nus exter'nus, m. tensor veli palatini.

m. staphyli'nus inter'nus, m. levator veli palatini.

m. staphyli'nus me'dius, m. uvulæ.

m. sterna'lis [BNA], an inconstant muscle, running parallel to the sternum across the costosternal origin of the pectoralis major, and usually connected with the sternocleidomastoid and rectus muscles as well as the pectoralis major.

m. sternochon"droscapula'ris, an occasional muscle arising from the manubrium sterni and first costal cartilage and passing outward and backward to be inserted into the upper border of the scapula.

m. sternoclavicula'ris, an occasional muscle, a slip from the subclavius muscle, passing from the upper part of the sternum to the clavicle beneath the pectoralis major.

m. ster"noclei"domastoid'eus [BNA], *origin*, by two heads from anterior surface of manubrium sterni and sternal end of clavicle; *insertion*, mastoid process and outer half of superior curved line of occipital bone; *action*, turns head obliquely to opposite side; when acting together, the two pull head downward and forward; *nerve supply*, spinal accessory.

m. sternofascia'lis, an occasional muscular slip arising from the manubrium sterni and inserted into the fascia of the neck.

m. sternohyoid'eus [BNA], *origin*, posterior surface of manubrium sterni and 1st costal cartilage; *insertion*, body of hyoid bone; *action*, depresses hyoid bone; *nerve supply*, upper cervical through ansa hypoglossi.

m. sternothyreoid'eus [BNA], *origin*, posterior surface of manubrium sterni and 1st or 2d costal cartilage; *insertion*, oblique line of thyroid cartilage; *action*, depresses larynx: *nerve supply*, upper cervical through the ansa hypoglossi.

m. styloauricula'ris, styloauricular muscle, an occasional small muscle extending from the root of the styloid process to the cartilage of the meatus.

m. styloglos'sus [BNA], *origin*, lower end of styloid process; *insertion*, side and under surface of tongue; *nerve supply*, hypoglossal; *action*, retracts tongue.

m. stylohyoid'eus [BNA], *origin*, styloid process of temporal bone; *insertion*, hyoid bone by two slips on either side of attachment of digastric; *action*, fixes hyoid bone; *nerve supply*, facial.

m. stylolarynge'us, that part of the m. stylopharyngeus which is inserted into the thyroid cartilage.

m. stylopharynge'us [BNA], *origin*, root of styloid process; *insertion*, thyroid cartilage and wall of pharynx; *nerve supply*, glossopharyngeal; *action*, elevates pharynx.

m. subancone'us, an occasional muscle; *origin*, the lower end of the humerus; *insertion*, the posterior ligament of the elbow-joint; *nerve supply*, radial (musculospiral); *action*, makes posterior ligament tense.

m. subcla'vius [BNA], *origin*, 1st costal cartilage; *insertion*, under surface of acromial end of clavicle; *action*, fixes clavicle or elevates 1st rib; *nerve supply*, subclavian from brachial plexus.

m. subcosta'lis, pl. *mus'culi subcosta'les* [BNA], m infracostalis; one of a number of inconstant muscle having the same direction as the intercostales interni, but usually passing over one or more ribs.

m. subcrure'us, m articularis genu [BNA].

m. subcuta'neus col'li, m. platysma [BNA].

m. subscapula'ris [BNA], *origin*, subscapular fossa; *insertion*, lesser tuberosity of humerus; *nerve supply*, upper and lower subscapular from 5th and 6th cervical; *action*, rotates arm inward.

m. supina'tor [BNA], m. supinator radii brevis; *origin*, external epicondyle of humerus and supinator ridge of ulna; *insertion*, anterior and outer surface of radius; *nerve supply*, radial (dorsal interosseous); *action*, supinates the forearm.

m. supina'tor lon'gus, m. brachioradialis [BNA].

m. supraclavicula'ris, an anomalous muscular slip running from the upper edge of the manubrium sterni outward to about the middle of the upper surface of the clavicle.

m. supraspina'lis, one of a number of muscular bands passing between the tips of the spinal processes of the cervical vertebræ.

m. supraspina'tus [BNA], *origin*, supraspinous fossa of scapula; *insertion*, great tuberosity of humerus; *nerve supply*, suprascapular from 5th and 6th cervical; *action*, abducts arm.

m. suspenso'rius duode'ni [BNA], suspensory muscle of the duodenum, muscle of Treitz; a broad flat band of unstriped muscle attached to the left crus of the diaphragm and continuous with the muscular coat of the duodenum at its junction with the jejunum.

m. tarsa'lis [BNA], slips from the m. orbicularis oculi inserted into the tarsal borders of the eyelids.

m. tempora'lis [BNA], *origin*, temporal fossa; *insertion*, anterior border of ramus and apex of coronoid process of mandible; *action*, closes jaw; *nerve supply*, deep temporal branches of third division of trigeminus.

m. ten'sor fas'ciæ la'tæ [BNA], m. tensor fasciæ femoris; *origin*, anterior superior spine and adjacent surface of dorsum of the ilium; *insertion*, iliotibial band of fascia lata; *nerve supply*, superior gluteal; *action*, makes fascia lata tense.

m. ten'sor pala'ti, m. tensor veli palatini [BNA].

m. ten'sor tar'si, Horner's muscle, pars lacrimalis of orbicularis oculi [BNA].

m. ten'sor tym'pani [BNA], *origin*, the cartilaginous part of the Eustachian tube and under surface of the petrous portion of the temporal bone; it passes through the canal just above the bony portion of the Eustachian tube, and is *inserted* into the handle of the malleus; *action*, draws the handle of the malleus inward and makes tense the drum membrane.

m. tensor vagi'næ fem'oris, m. tensor fasciæ latæ [BNA].

m. ten'sor ve'li palati'ni [BNA], m. tensor palati, m. sphenosalpingo-staphylinus; *origin*, spine of sphenoid, scaphoid fossa of internal pterygoid process, and outer wall of cartilaginous Eustachian tube; *insertion*, posterior border of hard palate and aponeurosis of soft palate; *nerve supply*, otic ganglion, *action*, stretches the soft palate.

m. te'res ma'jor [BNA], *origin*, lower third of dorsal aspect of axillary border of scapula; *insertion*, inner border of bicipital groove of humerus; *nerve supply*, lower subscapular from 5th and 6th cervical; *action*, adducts and extends arm and rotates it inward.

m. te'res mi'nor [BNA], *origin*, dorsal aspect of axillary border of scapula; *insertion*, lower facet of great tuberosity of humerus; *nerve supply*, circumflex from 5th and 6th cervical; *action*, adducts arm and rotates it outward.

m. tetrago'nus, m. platysma [BNA].

m. thyreoarytænoid'eus [BNA], m. thyreoarytænoideus externus; *origin*, inner surface of thyroid cartilage; *insertion*, muscular process and outer surface of arytenoid; *nerve supply*, recurrent laryngeal; *action*, relaxes the vocal cords.

m. thyreoarytænoid'eus exter'nus, m. thyreoarytænoideus [BNA].

m. thyreoarytænoid'eus inter'nus, m. vocalis [BNA].

m. thyreoepiglot'ticus [BNA], thyreoepiglottic or thyroepiglottidean muscle; fibers of the thryeoarytænoideus curving upward to be inserted into the aryepiglottic fold and margin of epiglottis.

m. thyreohyoid'eus [BNA], **m. thyreohyalis** [NK], apparently a continuation of the sternothyreoideus; *origin*, oblique line of thyroid cartilage; *insertion*, body of hyoid bone; *action*, approximates hyoid bone to the larynx; *nerve supply*, upper cervical through ansa hypoglossi.

m. thyreopharynge'us, portion of the constrictor pharyngis inferior arising from the thyroid cartilage.

m. tibia'lis ante'rior [BNA], m. tibialis anticus; *origin*, upper two-thirds of outer surface of tibia, interosseous membrane, and intermuscular septum; *insertion*, internal cuneiform and base of first metatarsal; *nerve supply*, deep branches of peroneal; *action*, dorsal flexion and supination of foot.

m. tibia'lis gra'cilis, m. plantaris.

m. tibia'lis poste'rior [BNA], m. tibialis posticus; *origin*, shaft of fibula between interosseous border and oblique line, shaft of tibia between interosseous border and vertical line, and interosseous membrane; *insertion*, navicular, three cuneiform, cuboid, sustentaculum of os calcis, and 2d, 3d, and 4th metatarsal bones; *nerve supply*, tibial; *action*, produces plantar flexion and supination of foot.

m. tibia'lis secun'dus, an inconstant muscle, of small size, arising from the back of the tibia and inserted into the capsular ligament of the ankle-joint.

m. tibioaccesso'rius, m. flexor accessorius digitorum pedis.

m. tibiofascia'lis ante'rior or **anti'cus,** separate fibers of the tibialis anterior inserted into the fascia of the dorsum of the foot.

m. trachea'lis, the band of unstriped muscular fibers in the fibrous membrane connecting posteriorly the ends of the tracheal rings.

m. trachelomastoid'eus, m. longissimus capitis [BNA].

m. trag'icus [BNA], muscle of the tragus, a band of vertical muscular fibers on the outer surface of the tragus of the ear.

m. transversa'lis abdom'inis, m. transversus abdominis [BNA].

m. transversa'lis cap'itis (transverse of the head) m. longissimus capitis [BNA].

m. transversa'lis cervi'cis or **col'li** (transverse of the neck), m. longissimus cervicis [BNA].

m. transversa'lis na'si, m. compressor narium.

m. transver'sus abdom'inis [BNA], m. transversalis abdominis; *origin*, 7th to 12th costal cartilages, lumbar fascia, iliac crest, and Poupart's ligament; *insertion*, xiphoid cartilage and linea alba and, through falx inguinalis, spine and crest of pubis and iliopectineal line; *action*, compresses abdominal contents, bends thorax forward; *nerve supply*, lower thoracic.

m. transver'sus auric'ulæ [BNA], transverse muscle of the auricle, a band of sparse muscular fibers on the cranial surface of the auricle, extending from the eminentia conchæ to the eminentia scaphæ.

m. transver'sus lin'guæ [BNA], an intrinsic muscle of the tongue, the fibers of which arise from the septum and radiate to the dorsum and sides.

m. transver'sus men'ti (transverse of the chin) [BNA], superficial fibers of the triangularis which turn back and to the cross opposite side.

m. transver'sus nu'chæ (transverse of the nape of the neck) [BNA], an occasional muscle passing between the tendons of the trapezius and sternocleidomastoid, possibly a fasciculus of the auricularis posterior.

m. transver'sus perine'i profun'dus [BNA], *origin*, ascending, or inferior, ramus of ischium; *insertion*, with its fellow in a median raphe; *nerve supply*, pudic; *action*, assists compressor urethræ.

m. transver'sus perine'i superficia'lis [BNA], an inconstant muscle; *origin*, ascending ramus of ischium; *insertion*, central point of perineum; *nerve supply*, pudic; *action*, draws back and fixes the central point of the perineum.

m. transver'sus thora'cis (transverse of the chest) [BNA], m. triangularis sterni; *origin*, back of xiphoid cartilage and lower portion of body of sternum; *insertion*, costal cartilages of 2d to 6th ribs; *action*, narrows chest; *nerve supply*, intercostal.

m. trape'zius [BNA], m. cucullaris; *origin* from inner third of superior curved line of the occipital bone, external occipital protuberance, ligamentum nuchæ, spines of 7th cervical and the thoracic vertebræ and corresponding supraspinous ligaments; *insertion* into outer third of posterior surface of clavicle, inner side of acromion process, and upper border and tuberosity at inner end of base of the spine of the scapula; *action*, draws head to one side or backward, rotates scapula; *nerve supply*, spinal accessory and cervical plexus.

m. triangula'ris [BNA], m. depressor anguli oris; *origin*, lower border of lower jaw anteriorly; *insertion*, blends with other muscles in lower lip near angle of mouth; *action*, pulls down corners of mouth; *nerve supply*, facial.

m. triangula'ris la'bii inferior'is, m. depressor anguli oris, m. triangularis [BNA].

m. triangula'ris la'bii superior'is, m. caninus [BNA].

m. triangu a'ris ster'ni, transversus thoracis [BNA].

m. tri'ceps bra'chii [BNA], *origin*, long or scapular head (caput longum) from axillary border of scapula below glenoid fossa, outer head (caput laterale) from outer and posterior surface of humerus below greater tubercle, inner head (caput mediale) from posterior surface of humerus below radial (musculospiral) groove; *insertion*, olecranon process of ulna; *nerve supply*, radial (musculospiral); *action*, extends forearm.

m. tri'ceps su'ræ [BNA], triceps of the calf, the gastrocnemius and soleus considered as one muscle.

m. triti'ceoglos'sus, Bochdalek's muscle, an occasional thin band of muscular fibers passing between the root of the tongue and the triticeum.

m. ulna'ris exter'nus, m. extensor carpi ulnaris [BNA].

m. ulna'ris inter'nus, m. flexor carpi ulnaris [BNA].

m. u'vulæ [BNA], muscle of the uvula, m. azygos uvulæ; *origin*, posterior nasal spine; *insertion*, forms chief bulk of the uvula; *nerve supply*, pharyngeal plexus; *action*, raises the uvula.

m. vas'tus exter'nus, m. vastus lateralis [BNA].

m. vas'tus interme'dius [BNA], m. crureus; *origin*, upper three-fourths of anterior surface of shaft of femur; *insertion*, common tendon of quadriceps femoris.

m. vas'tus inter'nus, m. vastus medialis [BNA].

m. vas'tus latera'lis [BNA], m. vastus externus; *origin*, outer lip of linea aspera as far as great trochanter; *insertion*, common tendon of quadriceps femoris.

m. vas'tus media'lis [BNA], m. vastus internus; *origin*, inner lip of linea aspera; *insertion*, common tendon of quadriceps femoris.

m. ventricula'ris [BNA], fibers of the m. thyreoarytænoideus which pass into the false vocal cord.

m. vertica'lis lin'guæ [BNA], an intrinsic muscle of the tongue, consisting of fibers attached to the dorsal fascia and passing downward and outward to the sides;

m. voca'lis [BNA], m. thyreoarytænoideus internus. *origin*, depression between the two alæ of thyroid cartilage; *insertion*, vocal process of arytenoid; *nerve supply*, recurrent laryngeal; *action*, shortens and relaxes vocal cords.

m. zygomat'icus [BNA], m. zygomaticus major; *origin*, malar bone in front of zygomatic suture; *insertion*, muscles at angle of mouth; *action*, draws upper lip upward, *nerve supply*, facial.

m. zygomat'icus ma'jor, m. zygomaticus [BNA].

m. zygomat'icus mi'nor (lesser zygomatic), caput zygomaticum quadrati labii superioris [BNA]; *origin*, under surface of malar bone, *insertion*, orbicularis oris of upper lip; *action*, draws upper lip upward and outward; *nerve supply*, facial.

musenna (mu-sen'ŭ). The bark of *Albizzia anthelmintica*, a tree of Abyssinia, employed as a teniafuge in dose of ʒ2(60.0).

mush'room [O. Fr. *moucheron;* L. *muscus*, moss.] A large fungus, usually having one erect stem with an expanded top; some varieties are edible, others extremely poisonous. Popularly the poisonous mushrooms are often called toadstools.

musician's cramp (mu-zish'unz). An occupation neurosis, affecting those who play on musical instruments, and named usually according to the instrument played upon.

musicoma'nia [G. *mousikē*, music, + *mania*, frenzy] An insane passion for music.

musicotherapy (mu"zĭ-ko-ther'ă-pĭ) [G. *mousikē*, *music*, + *therapeia*, treatment.] Treatment of nervous and mental disorders by means of music.

musk. Moschus.

musoma'nia. Musicomania.

Musset's sign (mü-sa') [Alfred de *Musset*, French poet, 1810–1857, who died of aortic insufficiency and was the first person in whom the sign was studied.] Rhythmical anteroposterior movements of the head, synchronous with the cardiac pulsations, occurring in some cases of incompetence of the aortic valve with cardiac hypertrophy

mussita'tion [L. *mussitare*, to murmur constantly.] Movements of the lips as if speaking, but without sound observed in delirium and in semicoma.

Mussy's point. See *Guéneau* de Mussy*.

must [A.S.] Unfermented grape-juice.

mus'tard [O. Fr. *moustarde*.] The dried ripe seeds of *Brassica alba* and *B. nigra*, white m. and black m.; see *sinapis*. **m. gas,** dichlorethyl sulphide; see also under *gas*.

mu'tacism. Mytacism.

mutant (mu'tant) [L. *mutare*, to change.] In heredity, a variation or sport which breeds true.

mutation (mu-ta'shun) [L. *mutare*, to change.] 1. De Vries's term for the sudden production of a species, as distinguished from variation. 2. An inherited variation of a striking character.

mute [L. *mutus*.] 1. Dumb. 2. A person who has not the faculty of speech.

mu'tilate [L. *mutilare*, to maim.] To remove any part of the body which is important as to function or looks; to maim.

mutila'tion. 1. Maiming, the removal or destruction of any conspicuous or essential part of the body. 2. The condition of being mutilated, the loss of an important part.

mutis'ia. The flower-heads of *Mutisia viciæfolia*, scale flower, a plant of Bolivia, employed as an expectorant in phthisis and as a sedative in chronic disease of the heart.

mu'tism. Dumbness, absence of the faculty of speech.

mutt'on bird. Sooty petrel, a bird of the southern Pacific islands, living most of the year in the Antarctic; it has a layer of fat beneath the skin from which an oil is extracted which has been used as a substitute for cod-liver oil.

mu'tualism. Symbiosis, the living together of two organisms, in the relation either of host and parasite or of commensals, with benefit to both

mu'tualist [L. *mutuus*, in return, mutual.] An organism living with another in a state of mutualism.

muzzle (muz'l). The snout of an animal; the prominent nose and mouth.

Muzzy's button (muz'iz but'n). A point of tenderness at the junction of the line of the tenth costal cartilage with the parasternal line, believed to indicate inflammation of the diaphragmatic pleura.

mv. Abbreviation of millivolt.

my. Abbreviation of myoma.

Myà's disease' (me-ah') [Giuseppe *Myà*, Italian physician, 1857–1911.] Congenital dilatation of the colon, Hirschsprung's disease.

myalgia (mi-al'jĭ-ah) [G. *mys*, muscle, + *algos*, pain.] Myodynia, muscular pain. **m. ther'mica,** heat-cramps.

mya'sis. Incorrect form of *myiasis*.

myasthe'nia [G. *mys*, muscle, + *astheneia*, weakness.] Muscular weakness. **m. angiosclerot'ica,** intermittent limping.* **m. gra'vis,** a chronic progressive muscular weakness, beginning usually in the face and throat, unaccompanied by atrophy.

myasthen'ic. Relating to myasthenia.

myatonia, myatony (mi-ă-to'nĭ-ah, mi-at'o-nĭ), [G. *mys*, muscle, + *a-* priv. + *tonos*, tone.] Abnormal extensibility of a muscle, muscular hypotonia. **m. congen'ita,** an absence of muscular tone, observed especially in infants and affecting only the muscles innervated by the spinal nerves; Oppenheim's disease.

myce'lian. Relating to mycelium.

yce'lioid [*mycelium* + G. *eidos*, resemblance.] Resembling a mould; composed of closely set radiating filaments, noting the appearance of a form of plate culture; see cut under *colony*, 1, D.

myce'lium [G. *mykēs*, fungus, + *hēlos*, nail.] The vegetative part or body of a fungus, consisting of the protoplasmic mass of hyphæ constituting mould or the substance of mushrooms.

mycethe'mia, mycethæ'mia [G. *mykēs*, fungus, + *haima*, blood.] The presence of some form of fungus in the circulating blood.

my'cetism, mycetis'mus [G. *mykēs*, fungus.] Mushroom poisoning.

mycetogenet'ic, mycetogen'ic [G. *mykēs*, fungus, *gennētos*, begotten.] Caused by fungi.

mycetogenous (mi-se-toj'en-us). Mycetogenetic

myceto'ma [G. *mykēs*, fungus, + *-ōma*.] Fungous foot of India, Madura foot; a disease of the foot, resembling actinomycosis, occurring in East Indians. It is characterized by the formation of large subcutaneous tubercles and nodules which break down and discharge pus containing granules, red, black, or yellow, which are masses of the fungus causing the disease. The specific fungus is variously described as *Actinomyces maduræ* or as a species of *Discomyces, Madurella, Indiella*, and *Aspergillus*. **white m.,** a variety in which the grains are colorless or very slightly pigmented, caused by one of several species of *Indiella*, by *Aspergillus nidulans*, or by *Discomyces* (*Actinomyces*) *maduræ*.

Mycetozo'a [G. *mykēs*(*mykēt*-), fungus, + *zōon*, animal.] A subclass of *Rhizopoda*, which frequently unite to form plasmodia; they resemble the fungi in many respects and are sometimes classed with them in the group of slime-moulds, or *Myxomycetes*.

Myco. Abbreviation for *Mycobacterium*.

Mycobacteriaceæ[0] (mi-ko-bak-te-rĭ-a'se-e). A family of the order *Actinomycetales* containing variously shaped rods, rarely filamentous and seldom branching.

Mycobacterium (mi-ko-bak-te'rĭ-um) [G. *mykos*, mucus.] A genus of the family *Mycobacteriaceæ* containing slender, aerobic, acid-fast, gram-positive rod-shaped organisms of various forms—club-shaped, swollen, and occasionally branching; it includes many species which were formerly and are still called bacilli, such as the pathogens of tuberculosis and leprosy. **Myco. a'vium,**[0] *B. tuberculosis avium*, microorganisms resembling those of bovine tuberculosis, the cause of the disease in fowls and other birds. **Myco. berolinen'sis,**[0] **Myco, butyr'icum,**[0] **Myco. friburgen'sis,**[0] three species resembling *Myco. tuberculosis*, but sometimes clubbed or branching, found in various samples of butter. **Myco. chelo'nii,**[0] turtle bacillus, slender rods, moderately acid-fast, pathogenic for cold-blooded animals, once proposed for use in the prophylaxis and cure of human tuberculosis. **Myco. gram'inis,**[0] acid-fast rods, sometimes branching, found in the dust of grain bins and in hay; non-pathogenic. **Myco. lep'ræ,**[0] *B. lepræ*, Hansen's bacillus, acid-fast, moderately short, straight rods, the cause of leprosy. **Myco. paratuberculosis,**[0] Johne's bacillus, slender non-motile, acid-fast rods, the cause of Johne's* disease in cattle and of scrapie in sheep. **Myco. phle'i**[0] timothy hay, bacillus. Moeller's grass bacillus, short, slender, sometimes club-shaped, acid-fast rods, found in the dust of dried timothy grass (*Phleum pratense*), non-pathogenic. **Myco. pis'cium,**[0] slender, branching, acid-fast rods and filaments, causing a tuberculosis-like disease in fish and perhaps other cold-blooded animals. **Myco. ra'næ,**[0] slender, usually acid-fast, rod-shaped organisms, causing a tuberculosis-like disease in frogs and other cold-blooded animals. **Myco. smeg'matis,**[0] *B. smegmatis*, a non-

pathogenic, rod-shaped organism, resembling morphologically the human tubercle bacillus, but rather thicker and not invariably acid-fast, found in smegma from the genitalia of man and many of the lower animals. **Myco. ster'cusis,**[0] mist bacillus, medium sized, gram-positive, non-motile, acid-fast, rod-shaped organisms, found in the manure of cows and other herbivora. **Myco. tuberculo'sis (bo'vis),**[0] bovine tubercle bacillus, short, mixed with longer, acid-fast rods, the cause of tuberculosis in cattle, and pathogenic also for man. **Myco. tuberculo'sis (hom'inis),**[0] *B. tuberculosis*, human tubercle bacillus, acid-fast, non-motile, short to longer rods or thread-like forms, occasionally branching, the cause of tuberculosis in man, and pathogenic also for other warm-blooded animals.

my'cocyte [G. *mykos*, mucus, + *kytos*, a hollow (a cell).] A mucous cell.

Mycoder'ma [G. *mykēs*, fungus, + *derma*, skin.] An obsolete term for a genus of *Schizomycetes*, to which belongs the mother of vinegar, *M. aceti*, *Acetobacter aceti*.[0]

mycoder'ma [G. *mykos*, mucus, + *derma*, skin.] Mucous membrane.

mycodermatitis (mi-ko-der-mă-ti'(te')tis) [G *mykos* mucus, + *derma*, skin, + *-itis*] Inflammation of any mucous membrane.

mycogastritis (mi-ko-gas-tri'(tre')tis) [G. *mykēs*, fungus, + *gastēr*, stomach, + *-itis*.] Inflammation of the stomach due to the presence of a fungus, not a bacterium

mycohe'mia, mycohæ'mia. Mycethemia

mycol'ogy [G. *mykēs*, fungus, + *-logia*.] Science in relation to fungi, their classification, edibility, cultivation, etc.

mycolysin (mi-kol'i-sin) [G. *mykēs*, fungus, + *lysis*, solution.] Trade name of a preparation of non-pathogenic bacteria and various ferments, recommended as a stimulant to phagocytosis in tuberculosis and other infections.

mycomyringitis (mi-ko-mir-in-ji'(je')tis) [G *mykēs*, fungus, + L. *myringa*, drum-membrane, + G.-*itis*.] Inflammation of the membrana tympani caused by the presence of *Aspergillus* or other fungus.

Myconos'toc [G. *mykēs*, fungus, + *Nostoc*, a genus of algæ.] A group of *Schizomycetes*, consisting of tangled leptothrix threads surrounded by a glairy gelatinous mass.

mycophylax'in. A phylaxin* protective against fungi, bacterial or other.

Mycoplana[0] (mi-ko-pla'nŭ). A genus of soil bacteria of the order *Actinomycetales* including short motile and non-motile, rod-formed organisms.

mycoprecipitin (mi"ko-pre-sip'i-tin) [*mykes*, fungus.] A substance causing a precipitation from fungus cultures.

mycoprotein (mi-ko-pro'te-in) [G. *mykēs*, fungus.] The protoplasm of fungi, specifically that of the putrefactive bacteria.

mycoproteination, mycoproteinization (mi-ko-pro-te-in-a'shun, mi-ko-pro-te-in-i-za'shun). Vaccinotherapy; specifically inoculation, preventive or curative, with killed cultures of the putrefactive bacteria.

my'copus. Mucopus.

my'cose [G *mykēs*, fungus.] Trehalose, a sugar, $C_{12}H_{22}O_{11}+2H_2O$, obtained from ergot and from trehala manna.

myco'sis [G. *mykēs*, fungus.] Any disease caused by the presence of fungi or bacteria. **m. cu'tis chron'ica,** a chronic dermatomycosis, a chronic skin disease caused by the presence of a fungus. **m. favo'sa,** favus. **m. frambœsioi'des,** frambœsia. **m. fungoi'des,** the occurrence of fungoid tumors, of malignant character, arising from circumscribed areas of pruritic dermatitis. **m. intestina'lis,** gastroenteric form of anthrax, the symptoms of which are those of gastroenteritis followed by toxemia and general depression. **m. leptoth'rica,** pharyngitis caused by the presence of *Leptothrix buccalis*.

mycoso'zin. A sozin* protective against fungi, bacterial or other.

mycot'ic. Relating to a mycosis.

mycotoxina'tion, mycotoxiniza'tion. Preventive or curative inoculation with any bacterial toxin.

mydaleine (mi-da'le-ēn) [G. *mydaleos*, mouldy.] A poisonous ptomaine formed in putrefying liver and other viscera; it acts specifically upon the heart, causing arrest of its action in diastole.

mydatox'in [G. *mydaō*, I am dripping.] A ptomaine from putrefying viscera and flesh.

my'dine [G. *mydaō*, I drip.] A ptomaine from putrefying viscera.

mydriasis (mi-dri'a-sis) [G.] Dilatation of the pupil. **bound'ing m.,** a rapid variation in width between the two pupils. **paralyt'ic m.,** dilatation due to paralysis of the circular fibers of the ciliary muscle, cycloplegia. **spasmod'ic m., spas'tic m.,** that due to spasmodic contraction of the radiating fibers of the ciliary muscle.

mydriat'ic. 1. Causing mydriasis or dilatation of the pupil. 2 An agent which dilates the pupil, a cycloplegic.

myd'rin. Trade name of a mixture of homatropine and ephedrine, a white powder causing temporary dilatation of the pupil when instilled in doses of 2 drops of a 10 per cent. aqueous solution.

myd'rol. Trade name of a white powder, iodomethylphenyl pyragolon; mydriatic in 10 per cent. aqueous solution.

myec'tomy [G *mys*, muscle, + *ektomē*, excision.] Exsection of a portion of a muscle.

myecto'pia, myec'topy [G. *mys*, muscle, + *ektopos*, out of place] Dislocation of a muscle.

my'el [G. *myelos*, marrow.] The spinal cord.

myelalgia (mi-el-al'ji-ah) [G. *myelos*, marrow, + *algos*, pain.] Pain in the spinal cord or its membranes.

my"elanalo'sis [G. *myelos*, marrow, + *analōsis*, expenditure.] Tabes dorsalis, myelatrophia.

myelap'oplexy [G. *myelos*, marrow, + *apoplēxia*, apoplexy] Hemorrhage into the spinal cord, spinal apoplexy.

myelasthenia (mi"el-as-the'ni-ah; mi"el-as-the-ni'ah) [G. *myelos*, marrow, + *astheneia*, weakness] Spinal exhaustion, spinal neurasthenia

myelatelia (mi-el-ă-tel'i-ah, mi-el-ă-tel-e'ah) [G *myelos*, marrow, + *ateleia*, incompleteness.] A developmental defect of the spinal cord.

myelatroph'ia, myelat'rophy [G. *myelos*, marrow, + *atrophia*, atrophy] Spinal atrophy, myelanalosis.

myelauxe (mi-el-awk se) [G. *myelos*, marrow, + *auxē*, increase.] Hypertrophy of the spinal cord.

myele'mia, myelæ'mia [*myel(ocyte)* + *haima*, blood.] Myelocytosis.

my'elen. An extract of red bone-marrow of the ox, proposed for treatment of leucemia and rickets.

my"elenceph'alon [G. *myelos*, marrow, + *enkephalos*, brain.] 1. The brain and spinal cord, constituting the cerebrospinal axis. 2. The afterbrain or medullary brain, the posterior division of the rhombencephalon from which are de-

veloped the medulla oblongata and the bulbar portion of the fourth ventricle.

myelencephalospinal (mi″el-en-sef″al-o-spi′nal). Cerebrospinal.

myelenceph'alous. Cerebrospinal.

myeleterosis (mi″el-et-ĕ-ro′sis) [G. *myelos*, marrow, + *heterōsis*, alteration.] Any pathological change in the spinal cord.

myel'ic [G. *myelos*, marrow.] 1. Relating to the spinal cord. 2. Relating to bone-marrow.

my'elin [G. *myelos*, marrow.] 1. White substance of Schwann, medullary* substance. 2. Lipoid droplets formed during autolysis and postmortem degeneration.

myelina'tion. Acquisition of a medullary sheath, said of the axis-cylinder of a nerve-fiber.

myelin'ic. Relating to myelin. **m. axon,** a medullated axis-cylinder process of a neuron.

myelinization. Myelination.

myelinogenesis (mi-el-in-o-jen′e-sis) [G. *genesis*, origin, production.] Myelination.

myelinoma (mi-el-in-o′mă). A tumor of the white substance of Schwann, or medullary* substance.

myelinosis (mi″el-in-o′sis). Fatty decomposition, the formation of lipoid droplets in the process of autolysis and postmortem degeneration.

myelit'ic. Relating to myelitis, or inflammation of the spinal cord, or of the bone-marrow.

myelitis (mi-el-i′(e′)tis) [G. *myelos*, marrow, + *-itis*.] Inflammation (1) of the spinal cord, or (2) of the bone marrow (osteomyelitis). **acute' transverse' m.,** acute softening of the spinal cord, an acute inflammation, limited in longitudinal extent, involving the entire thickness of the spinal cord. **apoplec'tiform m.,** inflammation involving chiefly the gray matter of the spinal cord in which paralysis occurs with suddenness. **ascend'ing m.,** progressive inflammation involving successively higher areas of the spinal cord. **bulbar m.,** inflammation of the medulla oblongata. **cav'itary m.,** syringomyelia. **central m.,** apoplectiform m., periependymal m. **compres'sion m.,** chronic inflammation, or simple atrophy, of the spinal cord due to pressure by a tumor, hemorrhage, meningeal thickening, or angular curvature of the spine **concuss'ion m.,** inflammation following an injury producing concussion of the spinal cord **cor'nual m.,** inflammation involving chiefly the gray cornua of the spinal cord. **descend'ing m.,** progressive inflammation involving successively lower areas of the spinal cord **diffuse' m.,** inflammation of considerable extent involving the entire thickness of the spinal cord. **dissem'inated m.,** inflammation involving several distinct areas in the spinal cord, multiple focal m. **fo'cal m.,** inflammation confined to one or several small circumscribed areas of the spinal cord. **foudroy'ant m.,** apoplectiform m. **hemorrhag'ic m.,** inflammation following spinal apoplexy. **intersti'tial m.,** sclerosing m. **parenchy'matous m.,** inflammation of the nervous substance of the spinal cord, as distinguished from interstitial m. **periepen'dymal m.,** central m., inflammation of the spinal-cord tissue surrounding the central canal. **sclero'sing m.,** inflammation of the connective tissue (neuroglia) of the spinal cord with resultant hypertrophy of this and compression and atrophy of the nervous substance. **system'ic m.,** inflammation confined to special tracts of the spinal cord. **transverse' m.,** inflammation involving the entire thickness of the spinal cord, but of limited longitudinal extent.

my'eloblast [*myelos*, marrow, + *blastos*, germ.] Premyelocyte, a young myelocyte differing from the mature form chiefly in the absence of granules; one of the cells in bone-marrow from which the granular leucocytes of myeloid origin are supposed to be derived; lymphoidocyte.

myeloblasto'ma. Acute myelocytic leucemia.*

myelobrachium (mi″el-o-bra′kĭ-um) [G. *myelos*, marrow, + *brachiōn*, arm] The inferior peduncle of the cerebellum, or restiform body.

myelocele (mi′el-o-sēl) [G. *myelos*, marrow, + *kēlē*, hernia] 1. Protrusion of the spinal cord in spina bifida. 2. Myelocœle.

myelocœle, myelocele (mi′el-o-sēl) [G. *myelos*, marrow, + *koilia*, a hollow.] The central canal of the spinal cord.

my'elocyst [G. *myelos*, marrow, + *kystis*, bladder.] A cyst, usually a dermoid cyst, lined with columnar cells occurring in the central nervous system or its immediate neighborhood.

myelocyst'ic. Relating to or characterized by the presence of a myelocyst.

myelocys'tocele (mi-el-o-sis′to-sēl) [G. *myelos*, marrow, + *kystis*, bladder, + *kēlē*, tumor.] Spina bifida containing spinal cord substance.

myelocystomeningocele (mi′el-o-sis″to-men-in′go-sēl) [G. *myelos*, marrow, + *kystis*, bladder, + *mēninx(mēning-)*, membrane, + *kēlē*, hernia.] Spina bifida with protrusion of spinal cord matter and meninges

myelocyte (mi′el-o-sīt) [G. *myelos*, marrow, + *kytos*, cell.] 1. A uninuclear (mononuclear) granular leucocyte—a pathological type; the myelocytes may be neutrophil, eosinophil, or basophil, according to the staining reaction of the granules 2 A nerve-cell of the gray matter of the brain or spinal cord. 3. A cell originating in the bone-marrow.

myelocythemia, myelocythæmia (mi″el-o-si-the′mĭ-ah) [G. *myelos*, marrow, + *kytos*, cell, + *haima*, blood] The presence in large numbers of myelocytes in the blood; myelogenous leucemia.

myelocy'tic. Noting the presence of myelocytes

myelocyto'ma. Chronic myelocytic leucemia *

myelocyto'sis. The presence of myelocytes in abnormal numbers in the blood.

myelodiastasis (mi″el-o-di-as′ta-sis) [G. *myelos*, marrow, + *diastasis*, separation.] Softening and destruction of the spinal cord.

myelodysplasia (mi″el-o-dis-pla′sĭ-ah) [G. *myelon*, marrow, + *dys-*, difficult, + *plasis*, a moulding.] Occult spina* bifida

myeloencephalitis (mi-el-o-en-sef-al-i′(e′)tis) [G. *myelos*, marrow, + *enkephalos*, brain, + *-itis*.] Encephalomyelitis, inflammation of both spinal cord and brain. **epidem'ic m.** acute anterior poliomyelitis,* infantile paralysis.

myelogangliitis (mi″el-o-gang-gle-i′(e′)tis) [G. *myelos*, marrow, + *ganglion* + *-itis*.] An old term for cholera of severe type.

myelogenetic, myelogen'ic (mi-el-o-jen-et′ik) [G. *myelos*, marrow, + *gennētos*, begotten.] Originating in the bone-marrow.

myelogenous (mi-el-oj′en-us). Myelogenetic.

myelogone, myelogonium (mi′el-o-gōn, mi-el-o-go′nĭ-um) [G. *myelos*, marrow, + *gonē*, seed.] 1. Myeloblast. 2. A myeloid white blood cell showing a reticular nuclear staining with eosine and a deeply staining nucleus.

myelography (mi-ĕ-log′ră-fĭ) [G. *myelos*, marrow, medulla, + *graphē*, picture.] Roentgenography of the spinal cord.

myeloic (mi-el-o′ik) [G. *myelos*, marrow.] Relating to the group of cells from which the neutrophil leucocyte is derived.

my'eloid [G. *myelos*, marrow, + *eidos*, resemblance.] 1. Relating to or derived from the bone-marrow. 2. Relating to the spinal cord. 3. Having myelocytic characteristics, but not necessarily arising from the bone-marrow.

my"elolymph"angio'ma [G. *myelos*, marrow, + L. *lympha*, lymph, + G. *angeion*, vessel, + *-ōma*.] Elephantiasis.

myelolymphocyte (mi"el-o-lim'fo-sīt) [G. *myelon*, marrow, + *lymphocyte*.] A small pathological lymphocyte formed in the bone-marrow.

myelo'ma [G. *myelos*, marrow, + *-ōma*.] 1. A tumor due to hyperplasia of the bone-marrow. 2. Encephaloid tumor. 3. Large-celled sarcoma **giant-cell m.**, a tumor of the bone-marrow or periosteum, composed of short spindle-cells and cells of various shapes containing also numerous giant-cells (myeloplaxes); it is usually benign. **mul'tiple m.**, m. multiplex, Kahler's disease, lymphadenia ossium, myelomatosis.*

myelomato'sis. Myeloma multiplex, Kahler's disease; a disease characterized by pernicious anemia, albumosuria, fever of an intermittent type, pains in the bones and joints, and the occurrence of multiple tumors of the red marrow leading to absorption of the bone and consequent fractures. The lymph nodes and spleen are not affected and metastases do not occur. Called also lymphadenia ossium, myelogenous pseudoleucemia, malignant osteomyelitis, and sarcomatous osteitis.

myelome'nia [G. *myelos*, spinal cord, + *mēniaia*, menses.] Spinal hemorrhage occurring as a form of vicarious menstruation.

myelomeningitis (mi-el-o-men-in-jī'(je')tis) [G. *myelos*, marrow, + *mēninx*, membrane, + *-itis*.] Inflammation of the spinal cord and its membranes.

myelomenin'gocele (mi"el-o-men-ing'go-sēl) [G. *myelos*, marrow, + *mēninx*, membrane, + *kēlē*, hernia.] Spina bifida with protrusion of both the cord and its membranes.

myelomonocyte (mi"el-o-mon'o-sīt) [G. *myelos*, marrow, + *monos*, single, + *kytos*, cell.] Myelocyte (1).

myelom'yces [G. *myelos*, marrow, + *mykēs*, a fungous tumor.] Encephaloid carcinoma.

my'elon [G. *myelos*, marrow.] The spinal cord.

myeloneuritis (mi"el-o-nu-rī'(re')tis). Combined inflammation of the spinal cord and of one or more nerves.

myelon'ic. Relating to the spinal cord.

myeloparal'ysis [G. *myelos*, marrow.] Spinal paralysis.

myelopath'ic. 1. Relating to any myelopathy or disease of the spinal cord. 2. Myelogenetic.

myelop'athy [G. *myelos*, marrow, + *pathos*, suffering.] 1. Any disease of the spinal cord. 2. A disease of the myeloid tissues.

myelop'etal [G. *myelos*, marrow, + L. *petere*, to seek.] Proceeding in a direction toward the spinal cord, said of different nerve impulses.

myelophthisical (mi-el-of-thiz'i-kal). Relating to or suffering from myelophthisis.

myelophthisis (mi-el-of'thi-sis) [G. *myelos*, marrow, + *phthisis*, a wasting away.] Wasting of the spinal cord, myelanalosis, tabes dorsalis. 2. Atrophy of the bone-marrow.

my'eloplaque [G. *myelos*, marrow, + *plaque*.] Myeloplax, osteoclast.

my'eloplast [G. *myelos*, marrow, + *plastos*, formed.] An ameboid cell resembling a large lymphocyte in the bone-marrow.

my'eloplax [G. *myelos*, marrow, + *plax*, a flat stone, plaque.] Osteoclast, a large multinucleated cell of the bone-marrow which is believed to cause absorption of bone.

myelople'gia [G. *myelos*, marrow, + *plēgē*, a stroke.] Spinal paralysis.

myelorrha'gia [G. *myelos*, marrow, + *rhēgnymi*, I burst forth.] Hemorrhage into the spinal cord, spinal apoplexy.

myelor'rhaphy [G. *myelos*, marrow, + *rhaphē*, seam.] Suture of a wound of the spinal cord.

myelosarco'ma [G. *myelos*, marrow, + *sarx*(*sark-*), flesh, + *-ōma*.] Osteosarcoma.

myelosclero'sis [G. *myelos*, marrow, + *sklērōsis*, induration.] Sclerosing myelitis, spinal sclerosis.

myelo'sis. 1. The formation of a myeloma or medullary tumor. 2. Myelocythemia.

myelospon'gium [G. *myelos*, marrow, + *spongos* sponge.] The reticulum of the spinal cord of the embryo, from which the neuroglia is developed

myelosyph'ilis [G. *myelos*, marrow.] Syphilis of the spinal cord.

myelosyringo'sis. Syringomyelia.

myelother'apy [G. *myelos*, marrow, + *therapeia*, treatment.] Opotherapy with a preparation of red bone-marrow or one of the spinal cord.

my'elotome [G. *myelos*, marrow, + *tomos*, cutting.] An instrument used in making serial sections of the spinal cord.

myelotoxic (mi"el-o-toks'ik). 1. Poisonous to bone-marrow. 2. Relating to or derived from diseased bone-marrow.

myenter'ic. Relating to the myenteron, or muscular coat of the intestine. **m. reflex**, law* of the intestine.

myen'teron [G. *mys*, muscle, + *enteron*, intestine.] The muscular coat, or muscularis, of the intestine.

myesthesia (mi-es-the'zī-ah) [G. *mys*, muscle, + *aisthēsis*, sensation.] Muscle sense; the sensation felt in muscle when contracting.

myiasis (mi-i'ă-sis) [G. *myia*, a fly.] Any affection due to the invasion of the tissues or cavities of the body by the larvæ of dipterous insects.

myiocephalon, myiocephalum (mi-ī-o-sef'a-lon, or lum) [G. *myia*, fly, + *kephalē*, head.] Protrusion of the iris through a wound in the cornea.

myiodesopsia (mi-ī-o-des-op'sī-ah) [G. *myiōdēs*, like flies, + *opsis*, vision.] The condition in which muscæ volitantes are seen.

myiosis (mi-i-o'sis). Myiasis.

myitis (mi-ī'(e')tis) [G. *mys*, muscle, + *-itis*.] Inflammation of a muscle; myositis.

myl'abris [G. a cock oach.] (B.A.) The dried beetle, *Mylabris phalerata;* vesicant, like cantharides.

mylohy'oid [G. *mylē*, molar tooth.] Relating to the molar teeth, or posterior portion of the lower jaw, and to the hyoid bone; noting various structures; see under *nervus*, *musculus*, and *sulcus*.

mylohyoideus (mi-lo-hi-o-id'e-us). Mylohyoid.

my'nol. Trade name of a special make of procaine, used as a local anesthetic in dentistry.

myo- [G. *mys*, muscle.] A prefix to many words, properly those from Greek roots, noting muscle.

myoalbumin (mi"o-al-bu'min). An albumin in muscle tissue, possibly the same as serum albumin.

myoarchitectonic (mi"o-ar-kī-tek-ton'ik) [G. *mys*, muscle, + *architektonikos*, relating to construction.] Relating to the structural arrangement of muscle or of fibers in general.

myoatrophy (mi-o-at'ro-fī). Myatrophy, muscular atrophy.

my'oblast [G. *mys*, muscle, + *blastos*, germ.] A primitive muscle-cell developing into a muscle fiber.

myoblas'tic. Relating to a myoblast or to the mode of formation of muscle-cells.

myocardia (mi-o-kar dĭ-ŭ) [G. *mys*, muscle, + *kardia*, heart.] Primary non-inflammatory cardiac failure of unknown etiology.

myocar'dial. Relating to the myocardium, or heart-muscle.

myocar'diograph [G. *mys*, muscle, + *kardia*, heart, + *graphō*, I record.] An instrument composed of a tambour with recording lever attachment, by means of which a tracing is made of the movements of the heart-muscle.

myocarditis (mi-o-kar-dī'(de')tis). Inflammation of the muscular walls of the heart. **fragmenta'tion m.,** fragmentation of the myocardium.* **in'durative m.,** chronic m. leading to hardening of the muscular wall of the heart.

myocardium (mi"o-kar'dĭ-um) [G. *mys*, muscle, + *kardia*, heart.] The muscular substance of the heart, consisting of striated muscular tissue, differing somewhat from that of the voluntary muscles in that the fibers are shorter, many of them being oblong cells with central nuclei and forked extremities. **fragmenta'tion of the m.,** a transverse rupture of the muscular fibers of the heart, especially those of the papillary muscles.

myocardosis (mi-o-kar-do'sis). 1. A condition marked by symptomatic signs of cardiac trouble without any discoverable pathological lesion. 2. Any degenerative condition of the heart muscle except myofibrosis.

myocele (mī'o-sēl) [G. *mys*, muscle, + *kēlē*, hernia.] 1. Protrusion of muscle substance through a rent in its sheath. 2. Myocœle.

myocelialgia, myocœlialgia (mi"o-se-lĭ-al'jĭ-ah) [G. *mys*, muscle, + *koilia*, the belly, + *algos*, pain.] Pain in the abdominal muscles.

myocelitis, myocœlitis (mi-o-se-lī'(le')tis) [G. *mys*, muscle, + *koilia*, belly, + *-itis*.] Inflammation of the abdominal muscles.

myocellulitis (mi-o-sel-u-lī'(le')tis) [G. *mys*, muscle, + L. *cellularis*, cellular (tissue), + G. *-itis*.] Inflammation of muscle and cellular tissue.

myocero'sis [G. *mys*, muscle, + *kēros*, wax.] Waxy degeneration of the muscles. **m. angiot'ica hæmorrhag'ica,** angiohyalinosis hæmorrhagica.

myochorditis (mī-o-kor-dī'(de')tis) [G. *mys*, muscle, + *chordē*, cord, + *-itis*.] Inflammation of the laryngeal muscles.

myochrome (mī'o-krōm) [G. *mys*, muscle, + *chrōma*, color.] Myohematin.

myochronoscope (mī"o-kron'o-skōp)[G. *mys*, muscle, + *chronos*, time, + *skopeō*, I examine.] An instrument for timing a muscular impulse, for determining the interval between the application of the stimulus and the muscular movement in response.

myoclo'nia [G. *mys*, muscle, + *klonos*, a tumult.] Any disorder characterized by muscular twitching, or myoclonus. **fi'brillary m.,** the twitching of a limited part or group of fibers of a muscle. **infec'tious m.,** chorea.

myoc'lonus [G. *mys*, muscle, + *klonos*, tumult.] Clonic spasm or twitching of a muscle or group of muscles. **m. mul'tiplex,** a disorder marked by rapid contractions occurring simultaneously or consecutively in various unrelated muscles, polyclonia.

myocœle, myocele (mi'o-sēl, mi-o-se'le) [G. *mys*, muscle, + *koilia*, a chamber.] Muscle-compartment.

myocolpitis (mī-o-kol-pī'(pe')tis) [G. *mys*, muscle, + *kolpos*, sinus (vagina), + *-itis*.] Inflammation of the muscular tissue of the vagina.

myocom'ma [G. *mys*, muscle, + *komma*, a coin or the stamp of a coin.] Myotome, one of the muscular segments corresponding to a metamere, the mass of muscle-fibers developed from the cells of each muscle-plate layer; this division is not recognizable in the human adult, except in certain regions, such as in the intercostal muscles.

myocris'mus [G. *mys(myo-)*, muscle, + *krizō*, I squeak.] A creaking sound sometimes heard on ascultation of a contracting muscle.

myoc'tonine [G. *mys*, mouse, + *ktonos*, murder.] An alkaloid from a species of aconite.

my'ocyte [G. *mys*, muscle, + *kytos*, cell.] A muscle-cell.

myocytoma (mi-o-si-to'mah). A tumor composed chiefly of myocytes, or muscle-cells.

myode'mia [G. *mys*, muscle, + *dēmos*, tallow] Fatty degeneration of muscle.

myodesop'sia. Myiodesopsia.

myodynamia (mi"o-di-nam'ĭ-ah) [G. *mys*, muscle, + *dynamis*, power.] Muscular strength.

myodynamom'eter [G. *mys*, muscle, + *dynamis*, force, + *metron*, measure.] An instrument for determining the muscular strength.

myodyn'ia [G. *mys*, muscle, + *odynē*, pain.] Myalgia.

myodystony (mi-o-dis'to-nĭ) [G. *mys*, muscle, + *dys*, difficult, + *tonos*, tone, tension.] A condition of slow relaxation, interrupted by a succession of slight contractions, following electrical stimulation of a muscle.

myodystrophy (mi-o-dis'tro-fĭ) [G. *mys*, muscle, + *dys-* difficult, poor, + *trophē*, nourishment.] Myotonia atrophica.

myoedema, myoœdema (mi"o-e-de'mah) [G. *mys*, muscle, + *oidēma*, swelling.] Mounding.

myoelec'tric [G. *mys*, muscle.] Relating to the electrical properties of muscle.

myoendocarditis (mī-o-en-do-kar-dī'(de')tis) [G. *mys*, muscle, + *endon*, within, + *kardia*, heart, + *-itis*.] Inflammation of the muscular wall and lining membrane of the heart.

myoepithe'lial. Relating to myoepithelium.

myoepithelium (mi"o-ep-ĭ-the'lĭ-um) [G. *mys*, muscle.] Epithelial cells with contractile branching processes, muscle-epithelium.

myofascitis (mi-o-fas-si'(se')tis). Myositis fibrosa.

myofibrilla (mi-o-fi-bril'ah)]G. *mys*, muscle, + L. *fibrilla*, fibril.] One of the fine fibrils in the cell plasma of smooth muscle tissue, which are said to pass from one cell to another.

myofibro'ma. A myoma with much intermingling of fibrous tissue.

myofibro'sis. Chronic myositis with diffuse hyperplasia of the interstitial connective tissue pressing upon and causing atrophy of the muscular tissue. **m. cor'dis,** m. of the heart walls.

my'ogen [G. *mys*, muscle, + *gennaō*, I produce.] A coagulable albumin of the muscle-plasma; myosin, or more properly myosinogen.

myogenet'ic, myogen'ic [G. *mys*, muscle, + *gennētos*, begotten.] 1. Originating in or starting from muscle. 2. Relating to the origin of fibers—nervous, muscular, or other. **m. theory,** see *theory*.

myogenous (mi-oj'en-us). Myogenetic.

myoglia (mi-og'lĭ-ah) [G. *mys* (*myo-*), muscle, + *glia*, glue.] A fine fibrillary network in muscular tissue resembling in appearance, if not in function, neuroglia.

myoglob'ulin. A coagulable globulin present in muscle-tissue.

myognath'ia. A monstrosity in which an imperfect head is attached to the lower jaw

myog'nathus [G. *mys*, muscle, + *gnathos*, jaw.] A monster with an imperfect head attached by muscle and skin to the lower jaw.

my'ogram [G. *mys*, muscle, + *gramma*, a drawing.] The tracing made by a myograph.

my'ograph [G. *mys*, muscle, + *graphō*, I register.] A recording instrument by which tracings are made of muscular contractions.

myograph'ic. Relating to a myogram, or the record of a myograph.

myog'raphy [G *mys*, muscle, + *graphē*, a drawing, a description.] 1. The recording of muscular movements by the myograph. 2. A description of or treatise on the muscles, descriptive myology.

myohem'atin, myohæm'atin. The pigment of muscular tissue, myochrome, believed to have an oxygen-fixing function similar to that of the hematin of the blood.

myohysterectomy (mi-o-his-ter-ek'to-mĭ) [G. *mys* (*myo-*), muscle, + *hystera*, uterus, + *ektomē*, excision.] Surgical removal of the body of the uterus, the portio vaginalis remaining.

my'oid [G. *mys*, muscle, + *eidos*, appearance.] 1. Resembling muscle. 2. One of the fine, contractile, thread-like masses of protoplasm found in certain epithelial cells in the simpler forms of animals.

myoidema (mi-oy-de'mah) [G. *mys*, muscle, + *oidēma*, swelling.] Mounding, myoedema.

myoideum (mi-o-id'e-um). Muscular tissue.

my'oidism. A condition in which muscular contraction occurs in response to a direct stimulus independently of nervous control; idiomuscular contraction, mounding.

myoischemia (mi"o-is-ke'mĭ-ah) [G. *mys* (*myo-*), muscle, + *ischemia*.] A condition of localized deficiency or absence of blood supply in muscular tissue.

myokero'sis. Myocerosis.

myoky'mia [G. *mys*, muscle, + *kyma*, wave.] Fibrillary tremor, a twitching of the isolated fasciculi or segments of a muscle.

myolemm'a. Sarcolemma.

myolipo'ma [G. *mys*, muscle, + *lipos*, fat, + *-ōma*] A myoma with a large admixture of fat, a fatty-degenerated myoma; lipomyoma.

myol'ogist. One learned in the knowledge of muscles.

myol'ogy [G. *mys*, muscle, + *-logia*] The branch of science which deals with the muscles and their accessory parts—tendons, aponeuroses, bursæ, and fasciæ. **descrip'tive m.,** myography(2).

myol'ysis [G. *mys*, muscle, + *lysis*, solution.] Destruction of muscular tissue; fatty degeneration and infiltration, with separation and disappearance of the muscle-cells. **cardiotox'ic m.,** cardiomalacia occurring in fever and various systemic infections.

myo'ma, pl. *myo'mata, myo'mas* [G. *mys*, muscle, + *ōma*.] A tumor composed of muscular tissue; usually of smooth muscle fibers (*liomyoma*), with more or less admixture of fibrous tissue (*fibromyoma*), or containing fat-globules (*lipomyoma*); sometimes formed of striated muscular tissue (*rhabdomyoma*). **m. levicellula're** [L. *levis*, smooth], liomyoma. **m. sarcomato'des,** a rapidly growing m. which assumes a sarcomatous character, myosarcoma. **m. striocellula're** [L. *stria*, a furrow], rhabdomyoma. **m. telangiecto'des,** angiomyoma.

myomala'cia [G. *mys*, muscle + *malakia*, softness.] Pathological softening of muscular tissue. **m. cordis,** cardiomalacia. softening of the walls of the heart.

myo'matous. Relating to a myoma.

myomec'tomy [G. *myoma* + *ektomē*, excision.] Operative removal of a myoma, specifically of a uterine myoma.

myomelano'sis [G. *mys*, muscle + *melanōsis*, becoming black.] Increased pigmentation of muscular tissue.

myomere (mi'o-mēr) [G. *mys*, muscle, + *meros*, a part.] Myocomma.

myom'eter [G. *mys*, muscle, + *metron*, measure.] An instrument for measuring the extent of a muscular contraction.

myometritis (mi-o-me-tri'(tre')tis) [G. *mys*, muscle, + *mētra*, uterus, + *-itis*.] Inflammation of the muscular wall of the uterus.

myome'trium [G. *mys*, muscle, + *mētra*, uterus.] The muscular wall of the uterus.

myomohysterectomy (mi-o"mo-his-ter-ek'to-mĭ) [G. *myoma*, + *hystera*, uterus, + *ektomē*, excision.] Operative removal of a uterus affected with myoma.

myomot'omy [G. *tomē*, incision] Myomectomy

my'on [G. *mys*, muscle.] An individual muscle.

myoneme (mi'o-nēm) [G. *mys*, muscle, + *nēma*, thread.] 1. A process formed of differentiated ectoplasm, having contractile properties, in certain protozoa. 2. A muscle-fibril.

myoneural (mi-o-nu'ral) [G. *mys*, muscle, + *neuron*, nerve.] Relating to both muscle and nerve, noting the nerve-terminations in muscular tissue.

myoneural'gia [G. *mys*, muscle, + *neuron*, nerve, + *algos*, pain.] Myalgia, myodynia.

myoneurasthenia (mi"o-nu-ras-the'nĭ-ah; mi"o-nu-ras-the-ni'ah) [G. *mys*, muscle, + *neuron*, nerve, + *astheneia*, weakness.] The condition of muscular weakness associated with neurasthenia.

myoneure (mi'o-nūr) [G. *mys*, muscle, + *neuron*, nerve] A nerve controlling muscular movement, a motor nerve.

myoneuro'ma. A mixed neuroma and myoma.

myon'osus [G. *mys*, muscle, + *nosos*, disease.] Any disease of muscular tissue, myopathy.

myonymy (mi-on'ĭ-mĭ) [G. *mys*, muscle, + *onyma*, *onoma*, name.] Nomenclature of the muscles.

myopachynsis (mi-o-păk-kin'sis) [G. *mys*(*myo-*), muscle, + *pachynsis*, a thickening.] Muscular hypertrophy.

myoparal'ysis [G. *mys*, muscle.] Muscular paralysis, myoparesis.

myopar'esis. Slight muscular paralysis.

myopath'ic. 1. Relating to disease of the muscles. 2. One suffering from disease of a muscle, specifically of the heart muscle or myocardium.

myop'athy [G. *mys*, muscle, + *pathos*, suffering.] Any disease of the muscles, myonosus.

myope (mi'ōp). A near-sighted person, one suffering from myopia.

myopericarditis (mi-o-pĕr-ĭ-kar-di'(de')tis) [G. *mys*, muscle, + *peri*, around, + *kardia*, heart, + *-itis*.] Inflammation of the muscular wall of the heart and of the enveloping pericardium.

myoperitonitis (mi-o-pĕr-ĭ-ton-i'(e')tis) [G. *mys*, muscle.] Inflammation of the parietal peritoneum with myositis of the abdominal wall.

my'ophag, my'ophage [G. *mys*, muscle, + *phagocyte*.] A phagocyte which devours muscle-cells.

my'ophone [G. *mys*, muscle, + *phōnē*, sound.] An instrument to enable one to hear the murmur of muscular contractions.

myo'pia [G. *myōpia; myō*, I wink, half close the eyes, + *ōps*(*ōp-*), eye.] Short-sightedness; near-sightedness; a condition in which, in consequence of an error in refraction or of elongation of the globe of the eye, parallel rays are focussed in front of the retina. **ax'ial m.,** a form due to elongation

of the globe of the eye. **chro'mic m.,** a form of color-blindness in which colors can be recognized in objects near the eye, but cannot be distinguished at long distances. **cur'vature m.,** m. due to refractive errors consequent upon inequality of corneal curvature. **index m.,** m. due to errors of refraction consequent upon an abnormal condition of the media of the eye. **malig'nant m.,** progressive myopia terminating in detachment of the retina and blindness. **prod'romal m.,** a refractive change in beginning cataract, whereby reading without glasses sometimes becomes possible, the so-called "second sight."

myop'ic. Relating to or suffering from myopia. **m. astig'matism,** that form of astigmatism in which the abnormality in curvature or in the refractive power of the media brings the focus in front of the retina. **m. crescent,** a posterior staphyloma, of crescentic form, in the fundus in cases of myopia.

myoplasm (mi'o-plazm) [G. *mys*, muscle, + *plasma*, a thing formed.] The contractlie portion of the muscle-cell, as distinguished from the sarcoplasm.

myoplas'tic [G. *mys*, muscle, + *plassō*, I form.] Relating to the plastic surgery of the muscles, or to the use of muscular tissue in supplying defects.

myopo'lar [G. *mys*, muscle.] Relating to muscular polarity, or to the portion of muscle between two electrodes.

myoproteose (mi"o-pro'te-ōz). A protein in muscle-plasma.

myopsin (mi-op'sin) [G. *mys*, muscle, + *psiō*, I chew up.] A proteolytic ferment similar in its action to trypsin and existing with the latter in the pancreatic juice.

myop'sis. Myiodesopsia

myopsychopathy (mi-o-si-kop'a-thĭ) [G. *mys*, muscle, + *psychē*, mind, + *pathos*, suffering.] A tremor, paralysis, or other muscular disorder associated with the presence of mental weakness or change.

myopsychosis (mi-o-si-ko'sis) [G. *mys*, muscle, + *psychē*, mind.] Myopsychopathy.

myorgal (mi'or-gal) [G. *mys*, muscle.] Trade name of a brand of lacarnol;* employed in the prevention of angina pectoris and to sustain cardiac nutrition.

myor'rhaphy [G. *mys*, muscle, + *rhaphē*, seam.] Suture of a wound in a muscle

myorrhex'is [G. *mys*, muscle, + *rhēxis*, a rupture.] Tearing of a muscle.

myosalgia (mi-o-sal'jĭ-ah) Myalgia.

myosalpingitis (mi"o-sal-pin-ji'(je')tis) [G. *mys*, muscle, + *salpinx* + *-itis*.] Inflammation of the muscular tissue of the Fallopian tube.

myosarco'ma. Myoma sarcomatodes

myosclero'sis. Chronic myositis with hyperplasia of the interstitial connective tissue.

myoseism (mi'o-sīzm) [G. *mys*, muscle, + *seismos*, earthquake.] Non-rhythmical spasmodic muscular contractions.

myosep'tum [G. *mys*, muscle, + L. *sæptum*, a barrier.] The line of division between two adjoining myotomes.

my'osin. A globulin in muscle derived from myosinogen by the action of myosin-ferment, the coagulation of which causes the rigor mortis. **v. Fürth's m.,** paramyosinogen.

my'osin-fer'ment. A coagulating enzyme present in muscle-plasma, under the influence of which myosinogen is converted into myosin.

myosin'ogen [*myosin* + G. *gennaō*, I produce.] A globulin, one of the two principal proteins of muscular tissue, a derivative of which is myosin formed during rigor mortis.

myosinose (mi'o-sin-ōz). A proteose formed by the hydrolysis of myosin.

myosinu'ria [G. *ouron*, urine.] The presence of myosin in the urine.

myo'sis [G. *myō*, I shut the eye.] Contraction of the pupil, miosis.

myosit'ic. Relating to myositis.

myositis (mi-o-si'(se')tis) [G. *mys*, gen. *myos*, muscle, + *-itis*.] Myitis, inflammation of a muscle. **acute dissem'inated m.,** multiple m. **infec'tious m.,** polymyositis, inflammation of the voluntary muscles, marked by swelling and pain, due to an infiltration of small round cells and a proliferation of the connective tissue, affecting usually the shoulders and arms, though almost the entire body may be involved. **interstit'ial m.,** m. fibrosa. **mul'tiple m.,** the occurrence of multiple foci of acute inflammation in the muscular tissue and overlying skin in various parts of the body, accompanied with fever and other signs of systemic infection; pseudotrichiniasis, dermatomyositis. **m. fibro'sa,** induration of a muscle through an interstitial growth of fibrous tissue, myosclerosis, sclerosing m., fibrositis. **m. ossif'icans,** a rare disease characterized by progressive ossification of the muscles; it is not strictly a myositis but a non-inflammatory ossification. **m. purulen'ta trop'ica,** muscular disease observed in Samoa and also in tropical Africa, marked by rheumatoid pains in the extremities, fever of a remittent or intermittent type, and abscesses in the muscles in various parts of the body.

my'ospasm, myospas'mus [G. *mys*, muscle, + *spasmos*.] Spasmodic muscular contraction

my'oston. An extract of muscular tissue suggested for the treatment of hyperpiesis and angina pectoris.

myostroma (mi-o-stro'ma) [*mys(myo-)*, muscle, + *stroma* (*q.v.*).] The basement substance or framework of muscular tissue.

myostromin (mi-o-stro'min) [G. *mys(myo-)*, muscle, + *stroma*.] A protein found in muscle.

myosu'ria. Myosinuria.

myosu'ture. Myorrhaphy.

myotac'tic [G. *mys*, muscle, + L. *tactus*, touch.] Relating to the muscular sense

myot'asis [*mys*, muscle, + *tasis*, a stretching.] Stretching of a muscle

myotat'ic [G. *mys*, muscle, + *tasis*, stretching.] Relating to the stretching of a muscle. **m. contrac'tion,** contraction of a muscle following a sudden stretching, as in the foot- or ankle-clonus. **m. irritabil'ity,** the ability of a muscle to contract in response to the stimulus produced by a sudden stretching.

myotenontoplasty (mi-o-ten-on'to-plas-tĭ). Tenontomyoplasty.

myotenositis (mi-o-ten-o-si'(se')tis) [G. *mys*, muscle, + *tenōn*, tendon, + *-itis*.] Inflammation of a muscle with its tendon.

myotenot'omy [G. *mys*, muscle.] Cutting through the principal tendon of a muscle, with division of the muscle itself in whole or in part.

myothermic (mi-o-thur'mik) [G. *mys* (*myo-*), muscle, + *thermē*, heat.] Relating to the increased temperature in muscular tissue resulting from its contraction.

myot'ic. Miotic.

my'otome [G. *mys*, muscle, + *tomos*, cutting.] 1. A knife for dividing muscle. 2. A muscular metamere, myocomma.

myot'omy. 1. Anatomy of the muscles; dissection of the muscles. 2. Surgical division of a muscle.

my'otone. Muscular tension, myotony.

myoto'nia [G. *mys*, muscle, + *tonos*, tension, stretching.] Any disorder characterized by tonic spasm or temporary rigidity of a muscle. **m. acquis'ita,** Talma's disease, acquired m. following injury or disease. **m. atroph'ica,** a familial m., the spasm being most marked when relaxation following contraction is essayed, in which there is more or less atrophy of the muscles of the face and sometimes of the extremities. **m. congen'ita,** Thomsen's disease, an hereditary or familial disease marked by momentary tonic spasms occurring when a voluntary movement is attempted. **m. neonato'rum,** tetanism.

myotonoid (mi-ot'o-noyd) [G. *mys*, muscle, + *tonos*, tone, tension, + *eidos*, resemblance.] Noting a muscular reaction, naturally or electrically excited, characterized by a slow (lazy) contraction and, especially, relaxation.

myot'onus [G. *mys*, muscle, + *tonos*, tension, stretching.] A tonic spasm or temporary rigidity of a muscle or group of muscles.

myot'ony. Myotone, muscular tonus or tension.

myot'rophy [G. *mys(myo-)*, muscle, + *trophē*, nourishment.] Nutrition of muscular tissue.

myr'cia. Bay-leaves, the leaves of *Pimenta acris*, yielding an oil, *oleum myrciæ*, which was official in the U.S.P. of 1890, and from which is made bay-rum, formerly official as *spiritus myrciæ*.

myriachit (mir-yah'chit) [Kalmuk?] An affection similar to latah, observed in Siberia.

Myri'ca [G. *myrikē*, tamarisk.] A genus of apetalous shrubs, found in temperate regions. **M. asplenifo'lia,** sweet-fern.* **M. cerif'era,** bayberry, myrica.* **M. na'gi,** a Chinese species bearing an edible fruit.

myri'ca (N.F.). The bark of *Myrica cerifera*, bayberry, wax myrtle; employed in diarrhea and icterus in doses of gr. 8 (0.5); also externally in sorethroat. In eclectic practice it is employed as an astringent and in sluggish circulation in the skin, in doses of ♏2–20 (0.13–1.3) of the specific preparation every hour.

myr'icin. A preparation made from myrica; employed as an antisyphilitic and astringent in doses of gr. 2–3 (0.13–0.2).

myr'icyl. Melissyl, $C_{30}H_{61}$, a hypothetical radical occurring in beeswax.

myringectomy (mir-in-jek'to-mĭ) [L. *myringa*, drum-membrane, + G. *ektomē*, excision.] Excision of the membrana tympani.

myringitis (mir-in-ji'(je')tis) [L. *myringa*, drum membrane, + G. *-itis*.] Inflammation of the membrana tympani. **m. bullo'sa,** myringodermatitis, a vesicular or bullous inflammation of the outer or meatal layer of the drum membrane.

myringodec'tomy. Myringectomy.

myringodermatitis (mĭ-ring"go-der-mă-ti'(te')tis) [L, *myringa*, drum-membrane, + G. *derma*, skin, + *-itis*.] Inflammation of the meatal or outer surface of the drum-membrane.

myringomyco'sis. Mycomyringitis.

myringoplasty (mĭ-ring'go-plas-tĭ) [L. *myringa*, drum-membrane, + G. *plassō*, I form.] Closure of a perforation in the drum-membrane.

myringoscope (mĭ-ring'go-skōp) [L. *myringa* drum-membrane, + G. *skopeō*, I examine.] An ear speculum.

myringotome (mir-ing'go-tōm) [L. *myringa*, drum-membrane, + G. *tomos*, cutting.] A knife used for paracentesis of the membrana tympani.

myringot'omy [L. *myringa*, drum membrane, + G. *tomē*, incision.] Incision of the membrana tympani, paracentesis of the drum-membrane.

myris'tic acid. An acid, $C_{14}H_{28}O_2$, occurring as a glyceride in oil of nutmeg, spermaceti, and other oils

myris'tica [G. *myrizō*, I anoint.] (U.S., Br.) Nutmeg, the kernel of the seed of *Muristica fragrans*, a small evergreen tree of the tropics; aromatic and slightly narcotic in doses of gr. 5–10 (0.3–0.6).

myr'istin. A glyceride of myristic acid occurring in oil of nutmeg and other oils.

myrob'alan, myrobal'anum [G. *myron*, a plant juice, + *balanos*, acorn.] (B.A.) Black myrobalan, the dried immature fruit of *Terbinalia chebula;* astringent, employed in diarrhea in doses of gr. 30–60 (2.0–4.0).

my'ronate. A salt of myronic acid. **potass'ium m.,** sinigrin, the form in which myronic acid occurs in black mustard.

myron'ic acid [G. *myron*, a perfume, a scented ointment.] An acid, $C_{10}H_{19}NS_2O_{10}$, occurring in black mustard as the potassium salt

my'rosin [G. *myron*, a sweet juice from plants, + *sinapi*, mustard.] An enzyme in mustard seed which converts the sinalbin of white mustard into acrinyl sulphocyanide, and the sinigrin of black mustard into allyl isosulphocyanate.

myrrh (mur). Myrrha.

myrrha (mir'rah) [L. and G.] (U.S., Br.) A gum-resin from *Commiphora myrrha*, a shrub of Arabia and Eastern Africa; astringent, tonic, and stimulant in doses of gr. 10–15 (0.6–1.0), and employed locally in aphthous sore mouth.

myrtiform (mur'tĭ-form) [L. *myrtus*, myrtle, + *forma*, form.] Resembling myrtle-leaves or myrtle-berries. **m. fossa,** incisive fossa, a depression just above the eminences formed by the incisor teeth in the maxilla, in which is the attachment of origin of the depressor alæ nasi muscle.

myrtle (mur'tl). Myrtus.

myrtol (mur'tol). A distillate of the essential oil of myrtle, employed in bronchitis, cystitis, and menorrhagia in doses of ♏2–4 (0.13–0.25).

myr'tus. The leaves of *Myrtus communis*, myrtle, employed as an astringent in vesical and bronchial catarrhs in doses of gr. 15–30 (1.0–2.0) or the equivalent in a decoction.

mysophobia (mi-so-fo'bĭ-ah) [G. *mysos*, uncleanness, defilement, + *phobos*, fear.] A morbid fear of defilement from touching familiar objects.

mytacism (mi'ta-sizm) [G. *my*, the letter *μ*.] A form of stammering in which the letter *m* is frequently substituted for other consonants.

mythomania (mith-o-ma'nĭ-ah) [G. *mythos*, a tale, fiction, + *mania*, frenzy.] An insane impulse to lie.

mythopho'bia [G. *mythos*, tale, fiction, + *phobos*, fear.] An abnormal fear of making an incorrect statement.

mytilotox'in. A leucomaine, $C_6H_{14}NO_2$, found in mussels, a frequent cause of poisoning.

mytilotox'ism [G. *mytilos*, mussel, + *toxikon*, poison.] Poisoning by mussels.

myurous (mi-u'rus) [G. *mys*, mouse, + *ouros*, tail.] Gradually decreasing, as a mouse's tail, in thickness; noting certain symptoms in process of cessation, and also the heart-beat in certain cases in which it grows feebler and feebler for a while and then strengthens.

myxadenitis (miks-ad-en-i'(e')tis) [G. *myxa*, mucus, + *adēn*, gland, + *-itis*.] Inflammation of the mucous glands. **m. labia'lis,** Baelz's disease, a

chronic painless ulceration of the mucous glands of the lips, chilitis glandularis.

myxadenoma (miks-ad-e-no'mŭ). A tumor containing mucous and glandular elements.

myxangitis (miks-an-ji'(je')tis) [G. *myxa*, mucus, + *angeion*, vessel, + *-itis*] Inflammation of the ducts of the mucous glands.

myxasthenia (miks-as-the'nĭ-ah; miks-as-the-ni'ah) [G. *myxa*, mucus, + *astheneia*, weakness.] Faulty secretion of mucus.

myxede'ma, myxœde'ma [G. *myxa*, mucus, + *oidēma*, swelling.] A trophic disorder marked by hard edema of the subcutaneous tissues, dryness and loss of the hair, subnormal temperature, and hebetude; it is due to deficiency of thyroid secretion following interstitial thyroiditis. **congen'ital m.**, cretinism, a form of idiocy and dwarfism with the general symptoms of m. in adults; it is dependent upon congenital atrophy or absence of the thyroid gland. **in'fantile m.**, m. beginning during infancy in consequence of some acquired injury or disease of the thyroid gland; Bissaud type of infantilism. **op'erative m.**, cachexia strumipriva.

myxedem'atoid [*myxedema*, + G. *eidos*, appearance.] Resembling myxedema.

myxedem'atous. Relating to myxedema.

myxe'mia, myxæ'mia [G. *myxa*, mucus, + *haima*, blood] Mucinemia

myxidiocy (miks-id'ĭ-o-sĭ). Cretinism.

Myxobacteriaceæ[0] (miks-o-bak-te-rĭ-a'se-e). A family of the order *Myxobacteriales* containing rod-shaped organisms which later change into coccoid forms or become encysted.

Myxobacteriales[0] (miks-o-bak-te-rĭ-a'lēs). An order of *Schizomycetes*, rod-shaped, motile organisms aggregated in masses which are later encysted.

myxochondrofibrosarcoma (miks"o-kon"dro-fi"bro-sar-ko'ma) [G. *myxa*, mucus, + *chondros*, cartilage, + L. *fibra*, fiber, + G. *sarx*, flesh, + *-ōma*.] A mixed tumor containing mucoid, cartilaginous, fibrous, and sarcomatous elements.

myxochondroma (miks"o-kon-dro'mah) [G. *myxa*, mucus, + *chondros*, cartilage, + *-ōma*.] A mixed chondroma and myxoma.

Myxococcid'ium stegomy'iæ. A protozoon found in the body of the mosquito, *Stegomyia calopus*, which has sucked the blood of a yellow fever patient; thought by some to be the causal microorganism of this disease.

Myxococcus[0] (miks-o-kok'us) [G. *myxa*, mucus, + *kokkos*, berry.] A genus of the family *Myxobacteriaceæ* containing rod-shaped organisms which change into coccoid forms, and may become encysted; the species, some of which are colored, are found in manure and the dung of various animals and birds.

myxocysto'ma [G. *myxa*, mucus, + *kystis*, bladder, + *-ōma*.] A cystic tumor with mucoid contents; an ovarian cyst with mucous membrane-like lining.

myxocyte (miks'o-sīt) [G. *myxa*, mucus, + *kytos*, cell.] One of the stellate or polyhedral cells present in mucous tissue.

myxoder'mia [G. *myxa*, mucus, + *derma*, skin. Edematous softening of the skin.

myxœde'ma. Myxedema.

myxofibro'ma, pl. *myxofibro'mata* [G. *myxa*, mucus, + L. *fibra*, fiber, + G. *-ōma*.] Myxoinoma, a fibroma undergoing mucoid degeneration; one containing more or less extensive areas of mucoid tissue; fibroma myxomatodes

myxofibrosarcoma (miks"o-fi"bro-sar-ko'mah) [G. *myxa*, mucus, + L. *fibra*, fiber, + G. *sarx* (*sark-*), flesh, + *-ōma*.] A mixed tumor containing mucoid, fibroid, and sarcomatous elements.

myxoglioma (miks"o-gli-o'mah) [G. *myxa*, mucus, + *glia*, glue, + *-ōma*.] A mixed glioma and myxoma.

myxoglobulosis (mix-o-glub-u-lo'sis) [G. *myxa*, mucus, + L. **globulus**, globule, + G. *-ōsis*.] The presence of mucous cysts in the appendix

myx'oid [G. *myxa*, mucus, + *eidos*, resemblance.] Mucoid, resembling mucus. **m. cysto'ma,** myxocystoma.

myxoidedema, myxoidœdema (miks"oyd-e-de'mah). A severe coryza or influenza.

myxoinoma (miks"o-i-no'mah) [G. *myxa*, mucus, + *is*(*in-*), fiber, + *-ōma*.] An inoma undergoing mucoid degeneration, one containing more or less extensive areas of mucoid tissue; myxofibroma, fibroma myxomatodes.

myxolipo'ma, pl. *myxolipo'mata* [G. *myxa*, mucus, + *lipos*, fat, + *-ōma*.] A mixed lipoma and myxoma; a lipoma undergoing mucoid degeneration, lipoma myxomatodes.

myxo'ma, pl. *myxo'mata* [G. *myxa*, mucus, + *-ōma*.] A tumor composed chiefly of polyhedral or stellate cells embedded in a soft matrix containing mucin, **m. fibro'sum,** myxoinoma. **m. enchondromato'sum,** myxochondroma. **m. lipomato'sum,** myxolipoma. **m. sarcomato'sum,** myxosarcoma.

myxo'matous. Relating to a myxoma.

myxomycetes (miks"o-mi-se'tēz) [G. *myxa*, mucus, + *mykēs*, fungus.] The slime-moulds or slime-fungi; an order of protozoan organisms of the subclass *Mycetozoa*, subphylum *Sarcodina*.

myxoneuro'ma [G. *myxa*, mucus, + *neuron*, nerve, + *-ōma*] A neuroma with myxomatous elements.

myxoneurosis (miks"o-nu-ro'sis) [G. *myxa*, mucus, + *neurosis*.] A neurosis affecting the mucous membranes, marked by an excessive secretion; a mucous discharge from the respiratory or intestinal mucous membrane, unaccompanied with signs of active inflammation. **m. intestina'lis membrana'cea,** mucomembranous enteritis.

myxopapillo'ma [G. *myxa*, mucus, + *L. papilla* + G. *-ōma*.] A papilloma with an admixture of myxomatous elements.

myx'opod [G. *myxa*, mucus, + *pous*(*pod-*), foot.] Schizont.

myxorrhe'a, myxorrhœ'a [G. *myxa*, mucus, + *rhoia*, a flow.] Blennorrhea. **m. gas'trica,** gastromyxorrhea, an excessive secretion of mucus in the stomach.

myxosarco'ma, pl. *myxosarco'mata, myxosarco'mas* [G. *myxa*, mucus, + *sarx*, flesh, + *-ōma*.] A mixed myxoma and sarcoma; a tumor of mucoid tissue containing numerous imperfectly differentiated, vegetative, or embryonic cells; myxoma sarcomatosum.

myx'ospore [G. *myxa*, mucus, + *sporos*, seed.] One of a number of spores occurring embedded in a gelatinous mass, noted in certain fungi and protozoan organisms.

Myxosporid'ia [G. *myxa*, mucus.] An order of *Neosporidia*, with pansporoblastic reproduction, the spores having polar capsules containing threads; a number of the members of this order are parasitic in metazoan organisms, both vertebrate and invertebrate.

myze'sis [G. *myzeō*, I suck.] Sucking

N

N. 1. Chemical symbol of *nitrogen*. 2. Abbreviation of *Neisseria*.

n. Abbreviation for nasal, normal.

Na. Chemical symbol for *sodium* (natrium).

N.A. Abbreviation for numerical aperture of the microscope objective.

nab'alus. The herb of several species of *Nabalus*, especially *N. albus*, rattlesnake-root, a plant of eastern North America; employed as a bitter tonic, and reputed to be antidotal to rattlesnake venom.

$Na_2B_4O_7 + 10H_2O$. Disodic tetraborate, borax.

Naboth's glands (nah'bŏt) [Martin *Naboth*, Leipsic anatomist and physician, 1675–1721.] Nabothian glands, dilated mucous follicles in the cervix uteri; sometimes called Nabothian follicles, eggs, ova, or ovules; they are minute retention cysts resulting from closure of the openings of the uterine cervical glands.

Nabothian (na-bo'thĭ-an). Relating to or named after Martin Naboth,* noting certain glands in the cervix uteri.

NaBr. Sodium bromide.

N. A. C. G. N. National Association of Colored Graduate Nurses.

NaCl. Sodium chloride, common salt.

NaClO. Sodium hypochlorite.

Na_2CO_3. Disodic carbonate, sodium carbonate, sal soda, washing soda. See *$NaHCO_3$*.

nacreous (na'kre-us) [L. *nacer*, pearl shell.] Iridescent, lustrous, like mother-of-pearl.

nacyan (na'si-an) [L. *natrium*, sodium, + *cyanate*.] Trade name of sodium sulphocyanate, recommended in the treatment of high blood pressure in doses of gr. 1–2 (0.06–0.13) two or three times a day.

N.A.D. Abbreviation for no appreciable disease.

Naegele obliq'uity (na'ga-leh) [Franz Carl *Naegele*, German obstetrician, 1778–1851.] Anterior asynclitism, inclination of the fetal head in cases of flat pelvis, so that the biparietal diameter is oblique in relation to the plane of the brim, the anterior parietal bone presenting to the parturient canal. **N. pel'vis**, see under *pelvis*.

Naegeli's maneu'ver (na'ga-le) [Otto *Naegeli*, Swiss physician, *1871.] Upward traction on the head, with one hand under the patient's jaw and the other under the occiput, for the relief of epistaxis.

nævolipoma (ne"vo-li-po'mah) [G. *lipos*, fat.] A nævus having a fatty tumor as a base, nævus lipomatodes.

næ'vus, ne'vus [L. birthmark.] A congenital mark or discolored patch of the skin due to pigmentation or to hyperplasia of the blood-vessels. **cap'illary n.**, n. flammeus. **hepat'ic n.**, a hemorrhagic infarct of the liver **n. angiecto'des**, n. vascularis **n. angiomato'des**, a diffuse angiomatous formation in the subcutaneous connective tissue. **n. ara'neus** [L. *aranea*, spider], a figure represented by red lines radiating from a central red point, caused by congenital or acquired capillary dilatation. **n. caverno'sus**, angioma cavernosum. **n. corn'eum**, ichthyosis hystrix **n. flam'meus**, n. vascularis. **n. licheno'des**, linear ichthyosis. **n. linea'ris**, ichthyosis linearis. **n. lipomato'des, n. lipomato'sus**, nævolipoma, a nævus containing a large amount of cutaneous fat; a pigmented lipoma; a mole surmounting a small fatty tumor **n. lu'pus**, angioma serpiginosum. **n. lymphat'icus**, cutaneous lymphangioma. **n. mater'nus**, birthmark, congenital n **n. molluscifor'mis**, n. lipomatodes. **n. nervo'sus**, ichthyosis linearis. **n. papilla'ris**, linear ichthyosis. **n. papillomato'sus**, a prominent wartlike mole. **n. pigmento'sus**, mole, a pigmented spot or patch of varying size, raised or level with the skin. **n. pilo'sus**, hairy mole, a mole covered with a more or less abundant growth of hair. **n. sanguin'eus**, n. vascularis. **n. spi'lus** [G. *spilos*, stain], a flat mole. **n. vascula'ris, n. vasculo'sus**, a red discoloration of the skin, of irregular size and boundaries, caused by an overgrowth of the cutaneous capillaries **n. veno'sus**, one formed of a patch of dilated venules. **n. verruco'sus**, a a mole raised above the level of the skin. **spi'der n.**, n araneus

naf'talan. Naphthalan.

Naga sore (nah gah sōr) [*Naga*, a district in Assam, British India.] An obstinately chronic ulcer occurring in workers in the Assam tea-gardens.

nagana (nah-gah'nah). Tsetse-fly disease, a disease of cattle and horses in South Africa due to the presence in the blood of *Trypanosoma brucei;* the parasite is carried from the sick to the well by a tsetse fly, *Glossina morsitans*.

Nagel's test (nah'gel) [Willibald *Nagel*, German physiologist, 1870–1911.] A test for color-vision by means of cards on which the most commonly confused colors are printed in concentric circles.

Nageotte cell (nă-zhut'). A cell found in the cerebrospinal fluid, one or two per cubic millimeter in health but in greater number in disease.

$NaHCO_3$. Monosodic carbonate, sodium bicarbonate, cooking soda

NaH_2PO_4. Acid sodium phosphate.

Na_2HPO_4. Sodium phosphate, disodic phosphate.

nähr'stoff-Hey'den [Ger. Heyden's nutrient material.] An albumose made from egg-albumin, used in the preparation of various culture media

$NaHSO_4$. Acid sodium sulphate, sodium bisulphate.

NaI. Sodium iodide.

nail [A.S. *nægel*.] 1. Unguis, the horny plate covering the dorsal surface of the distal half of the terminal phalanx of each finger and toe. 2. A slender rod of metal, bone, or other solid substance, employed sometimes in surgery to fasten together the divided extremities of a broken bone. **egg'shell n.**, a thinning of the nail with separation from the matrix and upcurving at the anterior border. **hang-n.**, see *hangnail* **in'growing n.**, a toenail one edge of which is overgrown by the nail-wall in the shape of a fungous mass. **reedy n.**, one marked by longitudinal ridges and furrows. **spoon n.**, a raising of the lateral edges of the nail with incurving of the central portion.

absence, anonychia, anonychosis. **atrophy,** onychatrophia. **bed,** matrix, onychocline, onychostromatia. **biting,** onychophagy, **bleeding beneath,** onychyphemia. **breaking,** onychoclasis. **bruising,** onychothlasis **curvature,** onychogryposis, onychocampe, curvatura unguium, Hippocratic finger. **disease,** onychopathy, onychosis, onychonosus; onychomycosis (parasitic). **distortion,** scabrities unguium. **falling**

of, onychoptosia. **hypertrophy,** onychauxe, onychauxis, onychophyma, hyperonychia. **incurved, spoon-nail. inflammation about,** onychia, paronychia, onychitis, onyxitis, panaris, panaritium, whitlow, felon, run around. **ingrowing of,** onychocryptosis, onyxis. **ingrown,** unguis aduncus, acronyx. **nutrition of,** onychotrophy. **outgrowth of fold,** pterygium. **parasitic disease,** onychomycosis. **quick,** eponychium. **retraction of fold,** ficus unguium. **root,** onychorrhiza, rhizonychia, radix unguis. **softening,** onychomalacia, hapalonychia. **splitting,** onychorrhexis. **tumor of bed,** onychoma, onychophosis. **ulceration,** onychohelcosis; onychostromelcosis (of bed). **white discoloration,** canities unguium, leucopathia unguium, leuconychia; l. punctata (spots); l. striata (lines); l. totalis (general). **white of,** lunula, selene, arcus unguium.

nail-bed. The portion of the terminal phalanx of finger or toe covered by the nail, nail-matrix.

nail-cul'ture. A test-tube culture in which the growth is downward in the shape of an iron nail; see cut under *culture*.

nail-fold. A groove in the cutis in which lie the margins and proximal edge of the nail.

nail-ma'trix. Nail-bed.

nail-skin. Eponychium(2).

nail-wall. Vallum unguis, the cutis overlying the lateral margins and proximal edge of the nail.

Naja (nah'jah) [Hind. *nāg*, a snake.] A genus of venomous serpents, which includes the cobras. **N. tripu'dians** [L. *tripudiare*, to dance, to caper], cobra di capello, the hooded snake of India.

Nakanishi's meth'od (nah-kah-nish'ĭ). For vital staining of bacteria; a slide is treated with hot methylene-blue solution until it acquires a sky-blue color, and then a drop of an emulsion of the bacteria is put on the cover-glass and the latter is laid on the slide; by this means the bacteria are stained differentially, some parts more intensely than others.

nak'ra fe'ver. See under *fever*.

nan'ism [G. *nanos*; L. *nanus*, dwarf] Dwarfishness. **symptomat'ic n.,** n. associated with delayed and deficient ossification, dentition, and sexual development.

$NaNO_3$. Sodium nitrate.

nanocepha'lia, nanoceph'aly [G *nanos*, dwarf, + *kephalē*, head.] Extreme smallness of the head.

nanoceph'alous. Having a very small head.

nanoceph'alus. A monster with a very small or imperfectly developed head.

nanocor'mia [G. *nanos*, dwarf, + *kormos*, trunk of a tree] Extreme smallness of the body compared with the head and extremities.

nanocor'mus. A monster with disproportionately small body.

man'oid [G. *nanos*, dwarf, + *eidos*, resemblance] 1. Dwarfish. 2. A pigmy.

nanome'lia [G. *nanos*, dwarf, + *melos*, limb] Extreme smallness of the extremities.

nanom'elous. Having very small extremities.

nanom'elus. A monster with disproportionately small or undeveloped extremities.

nanoso'ma, nanoso'mia [G. *nanos*, dwarf, + *sōma*, body.] Dwarfishness, nanism.

nanoso'mus. A dwarf.

nan'ous. Dwarfish.

nanukayami (nah-noo-kah-yah'mĭ). Seven-day fever of Japan, autumn fever (2).

nan'us [L.; G. *nanos*.] A dwarf, a pygmy.

NaOH. Sodium hydroxide, caustic soda.

nape. 1. Nucha, the back part of the neck. 2. A variety of cabbage, *Brassica campestris*.

nap'elline. An alkaloid from the root of *Aconitum napellus*, possibly identical with aconine; analgesic in doses of gr. $\frac{1}{100}$ (0.0006).

napex (na'peks) [*nape* + *apex*?] The area of the scalp just below the occipital protuberance.

na'pha-water. Orange-flower water, a perfume distilled from orange-flowers.

naph'tha [G.] A volatile, colorless, inflammable fluid distilled from petroleum.

naph'thalan. A gelatinous substance, a mixture of anhydrous soap and the residue after the distillation of a variety of naphtha; employed alone or mixed with other materials as a protective dressing in burns and skin diseases.

naphthalene (naf'thal-ēn), **naphthale'num.** Tar camphor, a hydrocarbon obtained from coal-tar and crystallized; occurs as white lustrous plates of tarry odor and burning taste; employed as an intestinal antiseptic in doses of gr. 2–8 (0.13–0.5).

naphthalin (naf'thal-in). Naphthalene. **n. io'doform,** pulvis iodoformi compositus (N.F.).

naph'thalol. Naphthyl* salicylate, betanaphthol salicylate, betol.

naph'thamine. Hexamethylenamine.

naphthofor'min. An antiseptic mixture of naphthol and formaldehyde.

naph'thol, naphtho'lum. A phenol of naphthalene, $C_{10}H_7OH$; see *alpha-naphthol* and *beta-naphthol*. **n. aris'tol,** iodonaphthol. **n. carboxyl'ic acid,** an antiseptic naphthol compound.

naph'tholate. A compound of naphthol in which the hydrogen in the hydroxyl radical is substituted by a base.

naphthopyrine (naf-tho-pi'rēn). An antiseptic compound of naphthol and antipyrine.

naphthoquinone (naf'tho-kwin'ōn). A quinone derivative, $C_{20}H_6O_2$; it is shown experimentally to act as a cathartic: see *anthraquinone*.

naphthoresorcin (naf-tho-re-zor'sin). A crystalline antiseptic compound of naphthol and resorcin.

naphthosal'icin. An antiseptic compound of naphthol and salicin.

naphthosal'ol. Naphthyl salicylate.

naphthox'ol. Trade name of an antiseptic solution containing naphthol, hydrogen peroxide, and alcohol.

naphthyl (naf'thil). The naphthol radical, $C_{10}H_7$. **n. al'cohol,** naphthol. **n. ben'zoate,** benzonaphthol, benzoyl*-naphthol. **n. lac'tate,** lactol. **n. phe'nol,** naphthol. **n. sal'icylate,** betol, naphthosalol, napththalol, salinaphthol, formed by the interaction of betanaphthol and salicylic acid in the presence of phosphorus oxychloride; a white, odorless, tasteless powder, insoluble in water; employed in rheumatism, cystitis, and as an intestinal antiseptic in doses of gr. 4–8 (0.25–0.5).

naph'tol. Naphthol.

nap'iform [L. *napus*, turnip, + *forma*, shape.] Turnip-shaped, applied in description of the liquefaction in a gelatin stab-culture; see cut under *culture*, C,2

Na_3PO_4. Basic sodium phosphate, trisodic phosphate.

naprapathy (nă-prap'ă-thĭ) [Bohemian *napravit*, to correct, + G. *pathos*, suffering.] A system of therapeutic manipulation based on the theory that morbid symptoms are dependent upon strained or contracted ligaments in the spine, thorax, or pelvis.

na'pus. Rape-seed, the seed of *Brassica napus*, from which rape-seed oil is obtained.

narceine (nar'se-ēn). An alkaloid of opium, $C_{23}H_{29}NO_9$, occurring as white, silky crystals, slightly soluble in water; said to be similar in its action to morphine, without the disagreeable effects of the latter, in doses of gr. $\frac{1}{4}$–$\frac{3}{4}$ (0.015–0.045).

nar'cism. Narcissism.

narcissine (nar-sis'ēn). An alkaloid prepared from the bulb of the daffodil, *Narcissus pseudonarcissus;* emetic and cathartic.

narcissism (nar-sis'izm) [G. *Narkissos*, the son of a river god who conceived a consuming passion for the reflection of himself which hē saw in a fountain.] 1. Self-love, sexual attraction toward one's own person. 2. A state in which the individual regards everything in relation to himself and not to other persons or things.

Narcis'sus [G. *narkissos*.] A genus of plants of the order *Amaryllidaceæ*, which includes the daffodil, *N. pseudonarcissus*.

narcoanesthesia (nar-ko-an-es-the'zĭ-ah). Surgical anesthesia by scopolamine-morphine or other narcotic.

narcohypnia (nar-ko-hip'nĭ-ah). [G. *narkē*, numbness, + *hypnos*, sleep.] A general numbness sometimes experienced at the moment of waking.

nar'colepsy [G. *narkōsis*, a benumbing, + *lēpsis*, a seizure] 1. Petit mal.* 2. Paroxysmal sleep.*

narco'ma. Narcosis.

narcoma'nia. 1. A craving for narcotics. 2. Insanity resulting from a narcotic-drug habit or alcoholism.

narcoma'niac. A subject of narcomania.

narcophen, narcophine (nar'ko-fen nar'ko-fēn). Trade name of a synthetic opiate, narcotine-morphine meconate.

nar'cosan [*narcotic*, addiction + L. *sanare*, to cure.] A solution of lipoids with non-specific proteins and water-soluble vitamins; at one time recommended for the treatment of narcotic-drug addiction.

narco'sis [G. a benumbing.] Stupor or general anesthesia produced by some narcotic drug. **ba'sal n., ba'sis n.**, initial n., preparatory to general n., as that induced by nitrous oxide to be followed by ether; see *premedication*. **insuffla'tion n.**, general anesthesia induced by passing a tube between the vocal cords into the trachea and insufflating a mixture of compressed air and ether. **med'ullary n.**, general anesthesia induced by the injection of a local anesthetic such as cocaine or stovaine in the sheath of the lumbar spinal cord; spinal anesthesia (2). **n. paral'ysis**, paralysis resulting from pressure on a nerve during surgical anesthesia.

narcot'ico-ir'ritant. Possessing both narcotic and irritant properties, noting certain poisons.

nar'cotile. A liquid mixture of various ethyl and methyl chlorides, recommended for the production of general anesthesia by inhalation.

narcotine (nar'ko-tēn). An alkaloid of opium, $C_{22}H_{23}NO_7$, occurring as colorless prisms insoluble in water; antiperiodic in doses of gr. 1–3 (0.06–0.2).

nar'cotism. Stupor induced by a narcotic drug.

nar'cotize. To bring under the influence of a narcotic.

narcotin'ic acid. An acid obtained by heating narcotine with caustic potassa.

nar'cyl. Trade name of ethylnarceine hydrochloride, antispasmodic; used in whooping-cough and asthma in doses of gr. 1 (0.06).

nard. Spikenard, the rhizome of *Aralia racemosa* and *A. nudicaulis;* aromatic. **Celtic n.**, the rhizome of *Valeriana celtica*, sumbul ekleti.

narega'mia. The root of *Naregamia alata*, Goa ipecac, employed as a substitute for ipecac in doses of ℥10–30 (0.6–2.0) of a tincture.

nareg'amine. An alkaloid from naregamia, resembling emetine.

nar'gol. A trade name for silver nucleinate; a light brownish powder, soluble in warm water and containing 10 per cent. of metallic silver; said to be comparatively non-irritating.

na'ris, pl. *nares* [L.] Nostril; the opening, especially [BNA] the anterior opening, of the nasal fossa on either side. **ante'rior n.**, the nostril, naris [BNA]. **poste'rior n.**, the posterior opening of the nasal fossa on either side, choana [BNA].

nasal (na'zal) [L. *nasalis*.] Relating to the nose. **n. feeding**, the giving of milk or other fluid food through a flexible rubber tube passed through the nostril into the stomach. **n. gleet**, a catarrhal affection of the horse, marked by a chronic nasal discharge of bluish white color and creamy consistency and sometimes having an offensive odor. **n. height**, distance between the nasion and the lower border of the nasal aperture. **n. index**, see *index*. **n. width**, maximum width of the nasal aperture in the macerated skull.

nascent (nas'ent) [L. *nasci*, to be born.] 1. Beginning, incipient. 2. Noting the state of a chemical element at the moment it is set free from one of its compounds.

nash'a fe'ver. A fever of short duration accompanying painful congestion and swelling of the **nasal** mucous membrane: it has been described as occurring in certain parts of India, but its identity is questioned.

Nasik vibrio. An organism differing from the cholera vibrio, being shorter and fatter and less comma-shaped; its cultures are very toxic to laboratory animals on intravenous injection.

nasioiniac (na"sĭ-o-in'ĭ-ak). Relating to the nasion and the inion; noting the distance in a straight line between the frontonasal suture and the external occipital protuberance.

nasion (na'sĭ-on) [L. *nasus*, nose.] A point on the skull corresponding to the middle of the nasofrontal suture.

nasitis (na-si'(se')tis) [L. *nasus*, nose, + G. *-itis*.] Rhinitis.

Nas'myth's cu'ticle or **mem'brane** [Alexander *Nasmyth*, London dentist, born in Scotland, †1847.] Cuticula dentis, enamel cuticle.

$Na_2S_2O_3$. Sodium thiosulphate.

Na_2SO_4. Neutral sodium sulphate, disodic sulphate, Glauber's salt.

nasoan'tral. Relating to the nose and the antrum of Highmore.

nasoantritis (na"zo-an-tri'(tre')tis). Rhinoantritis.

nasofron'tal. Relating to the nose and the forehead, or to the nasal fossæ and the frontal sinuses.

nasola'bial [L. *nasus*, nose, + *labium*, lip.] Relating to the nose and the upper lip; noting a muscular band comprising the attachment of the mesial fibers of the orbicularis oris muscle to the nasal septum.

nasolac'rymal. Relating to the nasal and the lacrymal bones, or to the nasal fossæ and the lacrymal ducts.

nasomanom'eter. A form of manometer used to determine the intranasal air-pressure and consequently the degree of freedom from obstruction of the nasal passages.

nasopalatine (na"zo-pal'a-tĭn). Relating to the nose and the palate; noting a small artery, the continuation of the sphenopalatine, a branch of the internal maxillary; and a nerve, a branch of Meckel's, or the sphenopalatine, ganglion.

nasopharyn'geal. Rhinopharyngeal, relating to the nasal cavity and the pharynx or to the nasopharynx; noting also a slight groove marking the separation of the nasal cavity from the pharynx.

nasopharyngitis (na-zo-far-in-ji'(je')tis). Rhinopharyngitis, inflammation of the mucous membrane of the upper portion of the pharynx and the posterior nares.

nasophar'ynx [L. *nasus*, nose, + G. *pharynx*.] Rhinopharynx, the upper portion of the pharynx, above the level of the palate.

nasorostral (na"zo-ros'tral). Relating to the rostrum of the sphenoid bone.

na'soscope [L. *nasus*, nose, + G. *skopeō*. I examine.] Rhinoscope.

nasosinuitis, nasosinusitis (na"zo-sin-u-i'(e')tis, na"zo-si-nus-i'(e')tis) [L. *nasus*, nose, + *sinus* + G. *-itis*.] Inflammation of the nasal cavities and of the accessory sinuses.

nas'rol. Trade name of a salt, usually the sodium salt, of caffeine-sulphonic acid; diuretic in doses of gr. 10–15 (0.6–1.0); called also symphorol.

nas'tin [G. *nastos*, solid, close-pressed.] A fatty body extracted from a culture of *Streptothrix leproides* by Deycke and Reschad Bey, which it is claimed will produce in conjunction with benzoyl chloride an active immunity against the lepra bacillus and other acid-fast bacilli, including the tubercle bacillus.

na'sus, gen. *na'si* [L.] Nose

na'tal. 1. [L. *natus*, birth.] Relating to birth. 2. [L. *nates*, buttocks.] Relating to the buttocks or nates.

Natal' boil, N. sore [*Natal*, a district in South Africa.] Oriental boil.*

natal'ity [L. *natalis*, relating to birth.] The birth-rate, the ratio of births to the general population.

natal'oin. Aloin derived from Natal aloes, an unofficial variety of the drug.

nates (na'tēz) [pl. of natis.] 1. The buttocks 2. The two anterior bodies or superior hillocks of the corpora quadrigemina, colliculi superiores [BNA].

natimortality (na-tĭ-mor-tal'ĭ-tĭ) [L. *natus*, birth, + *mortalitas*, mortality.] The still-birth rate; the proportion of still-births to the general natality.

National Formulary (nash'on-al for'mu-ler-ĭ). A book issued by the American Pharmaceutical Association, containing several hundred formulas of pharmaceutical preparations, not official in the Pharmacopeia, but in more or less general use by practitioners. It was first issued in 1887 and a fourth edition appeared in 1916; the work was made a legal standard in the United States by the provision of the National Food and Drugs Act in January, 1907. Abbreviation: N.F.

Nativelle's digitalin (nă-tĭ-vel'). French digitalin* (2).

na'trium [G. *natrion*, caustic soda or potassa; Ar. *natrūn*, sodium carbonate.] Sodium.

na'tron. A native hydrous sodium carbonate.

na'trum. The official homeopathic name of sodium. **n. muriat'icum,** sodium chloride, one part of common salt dissolved in nine parts by weight of distilled water; used in anemia, watery coryza, cold sores, cracked lips, marasmus, intermittent fever, headache, constipation, and mental depression, in doses of the 30th to 200th potency. **n. phosphor'icum,** sodium phosphate; used in cases of general acidity, in rheumatism, heartburn, acid dyspepsia, and acid diarrhea, in the 3x to 12x trituration. **n. sulphu'ricum,** sodium sulphate; used in bilious states, influenza, jaundice, diabetes, asthma, and renal disorders, in doses of the 3x to 12x trituration.

nat'uary [L. *natus*, birth.] A lying-in ward; a ward for the care of women during childbirth.

nat'ural [L. *natura*, nature.] Normal, relating to nature; not artificial.

Nauheim treat'ment (now'hīm) [*Nauheim* a city in Hesse-Darmstadt, Germany.] Treatment of certain cardiac affections by baths in water through which carbonic-acid gas is bubbling, followed by resisting exercises and sometimes the terrainkur.* Called also, after the originators, the Schott* treatment.

Naunyn-Minkowski meth'od (now'nin-min-kov'-ske) [Bernhard *Naunyn*, German physician, 1839–1925; Oskar *Minkowski*.] Palpation of the kidney after distention of the colon with gas.

naupathia (naw-path'ĭ-ah) [G. *naus*, ship, + *pathos*, suffering.] Seasickness.

nausea (naw'shyah) [G. *nausia*, seasickness.] Sickness at the stomach, an inclination to vomit. **n. gravida'rum** [L gen. pl. of *gravida*, a pregnant woman], the morning-sickness of pregnant women.

nauseant (naw'shyant). Nauseating, causing nausea.

nauseate (naw'shyāt). To make sick at the stomach.

nauseous (naw'shyus). Nauseant.

na'vel [A S *nafela*.] Umbilicus, the depressed scar at the central part of the abdominal wall, marking the point where the umbilical cord was attached in the fetus. **n. of the drum membrane,** umbo membranæ tympani. **n. string,** umbilical cord.

navicula (nă-vik'u-lah) [L. dim. of *navis*, ship. Fossa navicularis.

navic'ular [L. *navicula*, dim. of *navis*, ship.] Boat-shaped, scaphoid; noting a bone in the carpus and one in the tarsus. **n. disease,** inflammation of the navicular bone and surrounding structures in the horse; it is marked in the beginning by intermittent limping, followed later by atrophy and stiffness of the muscles of the chest and shoulder or chest founder, caused by the unnatural gait. **n. fossa,** see under *fossa*.

navicularthritis (nă-vik"u-lar-thri'(thre')tis) [L. *naviculare* + G. *arthron*, joint, + *-itis*.] Navicular disease, podotrochilitis.*

Nb. Chemical symbol of *niobium*.

N.C.A. Abbreviation for neurocirculatory asthenia.*

N.C.I. pow'der. A parasiticide composed of naphthalene, 96, creosote, 2, and iodoform, 2.

Nd. Chemical symbol of *neodymium*.

N.D.A. Initials standing for National Dental Association.

Ne. Chemical symbol of *neon*.

Neapol'itan fe'ver. Undulant* fever.

near-point. In optics the nearest point at which an object can be seen with perfect distinctness.

near-sight. Short-sight, myopia.

near-sighted. Myopic, short-sighted.

nearsight'edness. Myopia, short-sightedness.

nearthrosis (ne-ar-thro'sis) [G. *neos*, new, + *arthrōsis*, joint.] Pseudarthrosis, false joint.

nebenkern (na'ben-kern) [Ger. *neben*, near, *kern* nucleus.] A mass or shred of chromatin-staining material outside of the nucleus in the cytoplasm.

Nebinger-Praun opera'tion (na'bing-er-prown) [Edward *Praun*, German laryngologist, contemporary.] For frontal sinus disease; skin incision from the nasofrontal suture at edge of orbit to supraorbital notch; the anterior bony wall is removed by chisel and a vertical cut, 4 to 6 cm. long, is made following the frontal vein.

nebula (neb'u-lah) [L. fog, cloud.] 1. A faint, fog-like opacity of the cornea. 2. A class of oily preparations in the National Formulary, intended for application by atomization. **n. aromat'ica** (N.F.), aromatic oil spray, a mixture of phenol, menthol, thymol, camphor, benzoic acid,

eucalyptol, oil of cinnamon, oil of clove, and methyl salicylate in light liquid petrolatum. n. eucalypto'lis (N.F.), eucalyptol spray, a solution of eucalyptol 5, in light liquid petrolatum 95. **n. mentho'lis** (N.F.), menthol spray, menthol, 2 per cent., in light liquid petrolatum. **n. mentho'lis compos'ita** (N.F.), compound menthol spray, contains menthol 1, camphor 1, methyl salicylate 0.5, eucalyptol 0.2, and oil of cinnamon 0.2, in light liquid petrolatum 100. **n. thymo'lis** (N.F.), thymol spray, containing 1 per cent. thymol in light liquid petrolatum.

nebulium (ne-bu'lĭ-um) [L. *nebula.*] A hypothetical element alleged to exist in the nebulæ, as revealed in the spectrum; it is assumed by Nicholson to be one of the four protyles* from which all the elements are formed.

nebuliza'tion. Spraying, vaporization.

neb'ulize [L. *nebula*, mist] To break up a liquid into a fine spray or vapor, to vaporize.

neb'ulizer. An atomizer, a vaporizer; an apparatus for throwing a liquid in the form of a fine spray or vapor.

Necator (ne-ka'tor) [L. a murderer.] A genus of *Nematoda* formerly included in *Ancylostoma* or *Uncinaria;* the worms have a pair of semilunar chitinous plates instead of teeth on the ventral surface of the mouth opening, and they are more slender than ancylostomata. **N. america'nus,** the new-world hook-worm, but found in tropical parts of the Eastern Hemisphere as well; its habitat is the small intestine of man and some of the lower animals; it is a cause of anemia and fatigability. (See *ancylostomiasis.*)

neck [A.S. *hnecca.*] Cervix, collum, trachelos. 1. The part between the shoulders or thorax and the head. 2. In anatomy any constricted portion having a fancied resemblance to the neck of an animal. **anatom'ical n.,** collum anatomicum the constricted portion just below the head of the humerus. **back of the n.,** nucha, nape, scruff. **nape of the n.,** nucha, scruff. **n. of a tooth,** collum dentis, the slightly constricted part of a tooth, covered by the gum, connecting the crown with the root. **n. of the womb,** cervix uteri. **pit of the n.,** suprasternal notch. **scruff of the n.,** nucha, nape. **sur'gical n.,** collum chirurgicum, the narrowing portion of the humerus below the tuberosities, so called because fracture is common here. **wry n.,** torticollis.

neck-band. Cervical localization of skin lesions in pellagra.

necrec'tomy [G. *nekros*, dead, + *ektomē*, excision.] Operative removal of any necrosed tissue.

necremia (nĕ-kre'mĭ-ah) [G. *nekros*, dead, + *haima*, blood.] A condition marked by death of a large proportion of the red blood-corpuscles.

necrobacillosis (nĕ-kro-bas-il-lo'sis). Coagulation necrosis caused by the action of *Actinomyces necrophorus* and other microorganisms.

necrobiosis (nek-ro-bi-o'sis) [G. *nekros*, corpse, + *biōsis*, life.] The gradual death of a part in consequence of degenerative or retrograde processes; by some regarded as synonymous with *necrosis.*

necrobiot'ic. Relating to necrobiosis, necrotic.

necrocyto'sis [G. *nekros*, dead, + *kytos*, a hollow, a cell.] Cellular necrosis, death of the cells of a part.

necrogen'ic [G. *nekros*, a corpse, + *genesis*, origin.] Having origin in dead matter.

necrogenous (nĕ-kroj'en-us). Necrogenic.

necrohormone (nĕ-kro-hor'mōn). Caspari's term for a substance developing during cell destruction; in weak concentration it causes cell irritation and, in strong concentration, cell destruction.

necrol'ogist. A student of, or one expert in, the interpretation of mortality statistics.

necrology (nĕ-krol'o-jĭ). 1. The science of the collection, classification, and interpretation of mortality statistics. 2. Mortality statistics. 3. A list of members of a society or of other persons having social or business relations who have died within the year or some other definite period of time.

necroma'nia [G. *nekros*, a corpse, + *mania*, frenzy. 1. A morbid tendency to dwell with longing on death. 2 A morbid attraction to dead bodies.

necrom'eter [G. *nekros*, corpse, + *metron*, measure.] An instrument for measuring a dead body or any of its parts or organs.

necronec'tomy. Necrectomy.

necroph'agous [G. *nekros*, dead, + *phagō*, I eat.] 1. Living on carrion. 2. Necrophilous.

necrophilism (nĕ-krof'il-ĭzm) [G. *nekros*, a corpse, + *phileō*, I love.] 1. A morbid fondness for being in the presence of dead bodies. 2. A sexual perversion in relation to corpses.

necroph'ilous [G. *nekros*, a corpse, + *phileō*, I am fond of.] Having a preference for dead tissue, noting certain bacteria.

necropho'bia [G. *nekros*, dead, + *phobos*, fear.] 1. Morbid aversion to a corpse. 2. Thanatophobia, morbid fear of death.

necropneumonia (nek-ro-nu-mo'nĭ-ah) [G. *nekros*, dead, + *pneumōn*, lung.] Gangrene of the lungs.

nec'ropsy [G. *nekros*, corpse, + *opsis*, view.] Autopsy, post-mortem examination.

necropyoculture (nek-ro-pi'o-kul-chur) [G. *nekros*, corpse, + *pyon*, pus, + *culture.*] A culture made from pus in which all the leucocytes are dead.

necros'copy [G. *nekros*, corpse, + *skopeō*, I examine.] Necropsy.

necrose (nĕ-krōz') [G. *nekroo*, I make dead.] 1. To cause necrosis. 2. To become the seat of necrosis.

necrosis (nĕ-kro'sis) [G. *nekrōsis*, a killing.] Local death; the death of more or less extensive groups of cells with degenerative changes in the intercellular substance. It is by some distinguished from *necrobiosis* as being a rapid death due to some definite cause, the latter being gradual and the result of retrograde processes. **ca'seous n.,** n. with the formation of a cheesy material such as occurs in tuberculosis. **central n.,** n. involving the deeper portions of an organ, a bone, or other tissue. **coagula'tion n.,** a condition accompanying infarcts, especially of the kidney and spleen, the affected area being converted into a firm, rather homogeneous mass, the process being one of coagulation of proteins of the part, similar to, or identical with, that occurring in coagulation of blood-serum by a bacterial enzyme. **colliq'uative n.,** a condition in which necrotic tissues become soft and almost fluid, of frequent occurrence in the central nervous tissues. **fat n.,** the death of circumscribed areas of fatty tissue with the formation of whitish foci. **fo'cal n.,** the occurrence of numerous small necrotic foci, usually in the course of various infections and intoxications. **liquefac'tion n.,** colliquative. **n. mummifica'tion n.,** dry gangrene.* **n. progre'diens,** progressive sloughing. **n. ustilagin'ea,** gangrene caused by the long-continued use of ergot. **progress'ive emphysem'atous n.,** gas gangrene, gas phlegmon.* **sim'ple n.,** the occurrence of a hyaline or granular change in the protoplasm with disappearance of the

nucleus, the general outlines of the dead tissue being more or less unchanged. **to'tal n.**, death of an entire organ, bone, or other part. **Zen'ker's n.**, Zenker's degeneration.

necrosper'mia [G. *nekros*, dead.] A discharge of non-living spermatozoa.

necrot'ic. Relating to or affected by necrosis.

nec'rotize [G. *nekroō*, I make dead, I mortify.] To necrose.

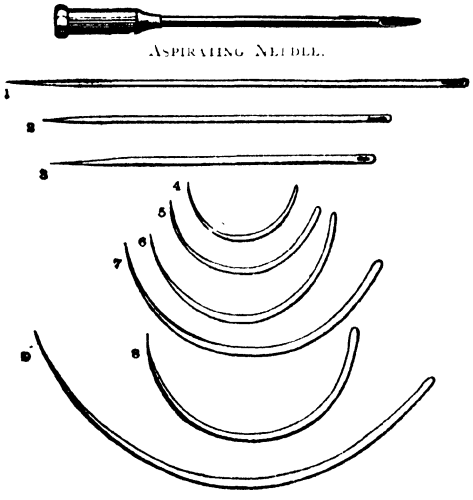
necrot'omy [G. *nekros*, corpse, + *tomē*, cutting.] 1. Dissection. 2. [*necrosis*.] Operation for the removal of a sequestrum or necrosed portion of bone; necrectomy. **osteoplas'tic n.**, an operation for necrosis of a long bone in which a rectangular flap of bone is sawn and chiselled out on three sides and then broken back, by using the chisel as a lever; the sequestrum is then removed and the cavity curetted and irrigated, and finally the flap of sound bone is replaced.

nectan'dra [G. *nektar* + *anēr*(*andr*-), man (stamen).] The bark of *Nectandra rodiæi*, bebeeru* bark.

nec'tary [G. *nektar*, nectar.] In botany, any flower-organ which secretes a sweet liquid.

nectri'anin. A liquid extract from cultures of *Nectria ditissima*, an organism producing excrescences, so-called cancer, on trees; analgesic, and has been suggested in the treatment of cancer in man, in doses of ♏45 (3.0) by hypodermic injection, and externally in the form of a paste.

zur Nedden's bacill'us (tsoor-ned'en) [M. *zur Nedden*, German ophthalmologist, *1870] A small, slightly curved bacillus found at times in ulcerative conditions of the cornea.



ASPIRATING NEEDLE.

SURGICAL NEEDLES.

1, With cutting point for the skin; 2, with round point for suture of the intestine; 3, saddler's needle for the skin; 4, 5, 6, 7, curved round pointed needles for suture of the intestine or peritoneum; 8, 9, curved with cutting point for skin and mucous membrane.

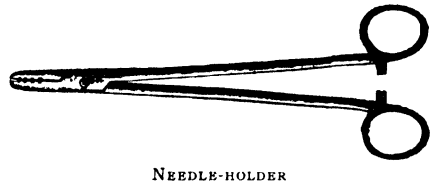
needle (ne'dl). 1. A slender, usually sharp-pointed, instrument used for puncturing the tissues, for guiding the thread or wire in suturing, or for passing a ligature around an artery. 2. To separate the tissues by means of one or two needles, in the dissection of small parts. 3. To perform discission of a cataract by means of a needle or very slender knife. **an'eurysm n., ar'tery n.**, a blunt-pointed curved needle, set in a handle, with the eye at the point, used for passing a ligature beneath and around an artery. **as'pirating n.**, a hollow needle used for withdrawing fluid from a cavity, an aspirator tube being attached to one end, the other being thrust into the cavity. **cat'aract n.**, a form of n. or very slender knife used in the removal or the discission of a cataract. **explor'ing n.**, a stout n. with a longitudinal groove, which is thrust into a tumor or cavity in order to determine whether or not fluid is present, the latter escaping externally along the groove **hypoder'mic n.**, a hollow n. similar to, but smaller than an aspirating n., attached to a syringe; used for injecting liquids beneath the skin or for withdrawing fluid for examination from an abscess or cyst.

nee'dle-bath. A variety of shower bath in which the water is projected forcibly against a part in the form of very fine jets.

nee'dle-carrier. Needle-holder.

nee'dle-forceps. Needle-holder.

nee'dle-holder. An instrument used for grasping a needle when passing sutures in a cavity or other part not easily reached by the fingers.



NEEDLE-HOLDER

nee'dling. 1 Discission of a soft cataract. 2. Treatment of an aneurysm by the insertion of a fine needle far enough to reach the opposite wall, the intima of which is then scratched so as to roughen it and induce coagulation.

Neeff's ham'mer (nāf) [Christopher Ernst *Neeff*, German physician, 1782–1849.] An apparatus for the rapid automatic opening and closing of a galvanic current; called also Wagner's hammer.

neencephalon (ne-en-sef'a-lon) [G. *neos*, new, + *enkephalos*, brain.] Edinger's term for the higher nerve centers superimposed upon the metameric or propriospinal system (paleencephalon); it comprises the cerebral cortex and its projecting fibers of the pyramidal tracts.

Neftel's' disease' [William Basil *Neftel*, New York neurologist of Russian birth, 1830–1906.] Paresthesia of the head and trunk and extreme discomfort in any but the recumbent position.

negative (neg'a-tiv) [L. *negare*, to deny.] Expressing denial, nothingness, the absence of result; sign, −. **n. electric'ity**, resinous electricity, electricity such as is produced by friction of resin or amber. **n. glow**, violet color appearing at the cathode when a current of high potential electricity is passed through a tube from which the air is partially exhausted. **n. phase**, the temporary lowering of the opsonic index following an injection of bacillary vaccine. **n. pole**, cathode, the pole of an electric battery connected with the electropositive element, the chemically active pole.

neg'ativism [L. *negare*, to deny, to refuse.] An insane tendency to do the opposite of what one is requested to do.

Negri bod'ies or cor'puscles (na'gre) [Adelchi *Negri*, Italian physician, 1876–1912.] Minute bodies found as cell inclusions in the Purkinje cells of the cerebellum in rabies; believed to be the protozoal

cause of the disease and called *Neuroryctes hydrophobiæ*.

Ne'gro [Sp. black.] A person with black skin, thick lips, broad nose, and woolly hair, a native or descendant of a native of equatorial Africa. **n. cachex'ia,** geophagy. **n. leth'argy,** sleeping-sickness.

Neisser's coc'cus (ni'ser) [Albert Ludwig Siegmund *Neisser*, Breslau physician, 1855–1916.] *Neisseria gonorrhœæ.*[0]

Neisser's stain (ni'ser) [Max *Neisser*, German bacteriologist, *1869.] For the polar nuclei of the diphtheria bacillus; a mixture of 2 parts of solution *a* (methylene blue 1, absorbent alcohol 20, distilled water 1000, glacial acetic acid 50) and 1 part solution *b* (crystal violet 1, absolute alcohol 10, distilled water 300); after-stain with chrysoidin.

Neisser-Doering phenom'enon (ni'ser-de'ring) [Ernst *Neisser*, German physician, *1863; Hans *Doering*, German physician, *1871.] The lack of hemolytic action in human serum due to the presence of an antihemolytic substance capable of neutralizing the hemolysin normally present; the phenomenon is rare, but has been observed especially in cases of arteriosclerosis and cirrhotic kidney.

Neisser-Wechsberg phenom'enon (ni'ser-vekhs'berg) [Max *Neisser*, German physician, *1869; Friedrich *Wechsberg*, German physician, contemporary.] Deviation of complement; a bacteriolytic or hemolytic serum is active only within certain limits of dose, an amount below or in excess of these limits having little or no effect; the solvent effect on blood-cells or bacteria of amboceptor in the presence of complement is therefore lessened or absent when an excess of amboceptor (immune body or specific antibody) is added.

Neisseria (ni-se'rĭ-ah) [after Albert Ludwig Siegmund *Neisser*, Breslau physician, 1855–1916.] A genus of the family *Coccaceæ* containing spherical organisms, usually flattened and arranged in pairs with the flat surfaces in apposition, non-motile, gram-negative, non-capsulated, and intracellular for the most part; sometimes occur as tetrads or arranged in clumps. **N. catarrha'lis,**[0] *Micrococcus catarrhalis*, a spherical or ovoid, paired (diplococcus), or sometimes (especially in cultures) in fours, non-motile, gram-negative organism, occurring in superficial inflammations of the mucous membrane, and believed to be one of the causes of acute coryza. **N. fla'va,**[0] one of a group of three closely related organisms (*N. perflava*[0] and *N. subflava*[0] being the other members) found on the mucous membranes of the respiratory tract; they are possibly the pathogens of some respiratory catarrhs. **N. gonorrhœ'æ,**[0] gonococcus, *Micrococcus gonorrhœæ*, oval or spherical cocci, arranged in pairs, with the surfaces in apposition usually somewhat concave, thereby differing morphologically from the meningococcus which it otherwise resembles closely; it is the cause of gonorrhea, local and constitutional and of ophthalmia neonatorum. **N. intracellular'is,**[0] *Diplococcus intracellularis meningitidis*, *Streptococcus intracellularis meningitidis*, *Micrococcus intracellularis*, meningococcus, oval or round spheroids, usually in pairs, though occasionally single or in fours, gram-negative, microaerophilic, intracellular for the most part, the cause of cerebrospinal meningitis. **N. pharyn'gis,** gram-negative, non-motile, aerobic diplococci, occurring sometimes in tetrads, or in dense clumps, non-pathogenic, found sometimes on the pharyngeal mucous membrane. **N. sic'ca,**[0] *Diplococcus siccus*, an aerobic micrococcus, occurring singly or in pairs on the respiratory mucous membranes; It is of doubtful pathogenicity.

Neisserieae[0] (ni-se-rĭ-e'e). A tribe of the family *Coccaceae*, containing the genera *Neisseria* and *Gaffkya*.

Nélaton's cath'eter (na-lă-ton') [Auguste *Nélaton*, Parisian surgeon, 1807–1873.] A flexible catheter of red rubber. **N.'s disloca'tion,** wedging of the astragalus between the widely separated tibia and fibula, usually complicated with fracture. **N.'s fi'bers,** N.'s sphincter, **N.'s line,** a line drawn from the anterior superior spine of the ilium to the tuberosity of the ischium; normally the great trochanter lies in this line, but in cases of iliac dislocation of the hip or fracture of the neck of the femur the trochanter is felt above the line; called also *Roser-Nélaton line*. **N.'s probe,** a probe with a rough porcelain tip, used in searching for a bullet which will make a lead mark on the probe. **N.'s sphinc'ter,** an inconstant band of circular muscular fibers in the wall of the rectum between three and four inches above the anus. **N.'s tu'mor,** a fibrous tumor or sarcoma lying between the peritoneum and the muscles of the abdominal wall.

nel'avan. Sleeping-sickness.

nem [Ger. *Nahrung, Einheit, Milch*, nourishment, unit, milk.] The caloric value of one gram of mother's milk of a definite composition; it is a unit of comparison of food values, equivalent to about ⅔ calory; one calory equals 1½ nem.

ne'ma. Abbreviation for nematode or nematoid.

N.E.M.A. Abbreviation for National Eclectic Medical Association.

nemathelminth (ne-mah-thel'minth) [G. *nēma*, thread, + *helmins*, a worm.] A nematode worm, any worm of the order *Nematoda*.

ne'matoblast [G. *nēma*, thread, + *blastos*, germ] Spermatoblast.

nematocide (ne-mat'o-sīd) [*nematode* + L. *cædere*, to kill.] 1. Destructive to nematoid worms. 2. An agent which kills nematoids.

Nemato'da, Nemato'des, Nematoid'ea [G. *nēma* (*nēmat-*), thread, + *eidos*, form] An order of *Vermes*, or worms, mostly parasitic; the nematode, nematoid, round, or thread worms. The order includes most of the parasitic worms such as the pinworms, roundworms, filariæ, trichinæ, etc.

ne'matode, ne'matoid [G. *nēma*(*nēmat-*), thread, + *eidos*, resemblance] Thread-like, noting a parasitic worm of the order *Nematoda*.

nematol'ogist. One versed in nematology.

nematol'ogy. The science dealing with nematoid worms in all their relations.

nematospermia (ne"mă-to-spur'mĭ-ah) [G. *nēma* (*nēmat-*), thread, + *sperma*, seed.] Spermatozoa with an elongated tail, such as in man; opposed to *spherospermia*.

nembu'tal. Trade name of sodium-ethyl-methyl-butyl-barbiturate, a derivative of barbital, advanced as an hypnotic and sedative.

Nencki's test (nents'ke) [Marcellus von *Nencki*, Polish physician, 1847–1901.] Fuming nitric acid gives a red color when added to a liquid containing indol.

neo- [G. *neos*, new.] A prefix noting new or recent.

neoarsphenamina (ne-o-ars-fe-nă-me'nah) (U.S., Br.). Neoarsphenamine, neosalvarsan, a modified soluble arsphenamine, 3 parts of neoarsphena-

mine being the equivalent, in arsenic content, of 2 parts of arsphenamine.

neoarsphenamine (ne-o-ar-sfen-am'ēn). Neoarsphenamina.

neoarsyco'dile. Arrhenal, sodii* methylarsenas.

neoarthro'sis. Nearthrosis.

néocaine (na-o-kah-ēn'). The French term for procaine hydrochloride.

neocerebellum (ne-o-ser-e-bel'um) [G. *neos*, new.] The lateral lobes of the cerebellum which are the later developed portion of this part of the brain; see *paleocerebellum*.

neocinchophen (ne-o-sin'ko-fen). Novatophan, tolysin, the ethyl ester of p-methyl-phenylcinchonic acid; it has the same action and uses as phenylcinchoninic acid, from which it differs chiefly in being tasteless.

neocinetic (ne-o-sin-et'ik) [G. *neos*, new, + *kinētikos*, relating to movement.] Noting one of the divisions of the motor system of peripheral nerves, the function of which is the transmission of isolated synergic movements of cortical origin; it represents a more highly specialized form of movement than the paleokinetic function (*q.v.*) and is subserved by a corticospinoneural system.

neocytosis (ne-o-si-to'sis) [G. *neos*, new, + *kytos*, cell, + *-ōsis*.] Presence of immature cells in the peripheral blood, "deviation to the left."

neodiarsenol (ne-o-di-ar'sĕ-nol). Trade name of a special make of neoarsphenamina.

neoencephalon (ne-o-en-sef'a-lon). Neencephalon.

neo-er'got. A preparation of the specific alkaloids of ergot freed from harmful amines and irritants.

neoferr'um [G. *neos*, new, + L. *ferrum*, iron.] Trade name of a mixture of arsenic, iron, maltine, and manganese in sherry, recommended in anemia and as a general tonic.

neofe'tal. Relating to the neofetus, noting the period of intrauterine life embracing the second half of the second month or the eighth and ninth weeks.

neofe'tus. The intrauterine organism in the transition period between embryo and fetus.

neofor'mans. *Micrococcus neoformans*.

neoforma'tion [G. *neos*, new, + L. *formare*, to form.] 1. Neoplasm. 2. Regeneration.

neog'ala [G. *neos*, new, + *gala*, milk.] The first milk formed in the breasts after childbirth.

neogen'esis [G. *neos*, new, + *genesis*, production.] Regeneration, new formation.

neogenet'ic. Relating to neogenesis.

neohy'men [G. *neos*, new, + *hymēn*, membrane.] Pseudomembrane, false membrane

neokharsivan (ne-o-kar'se-van). Trade name of the English make of neosalvarsan, employed in the same manner and dosage as the latter.

neokinet'ic. Neocinetic.

neologism (ne-ol'o-jizm) [G. *neos*, new, + *logos*, word.] 1. A new word or phrase, or an old word employed in a new sense. 2. A form of lalopathy in which the patient coins new and meaningless words.

neomem'brane [G. *neos*, new.] Pseudomembrane, false membrane.

ne'omorph, neomor'phism [G. *neos*, new, + *morphē*, form.] A new formation; a structure found in higher organisms, no, or only slight, traces of which exist in lower orders.

ne'on [G. *neos*, new.] A gaseous element in the atmosphere, separated from argon by Ramsay in 1898; symbol Ne, atomic weight 20.

ne'onal. A barbital substitute in which one of the ethyl groups of this drug is replaced by a normal butyl group; hypnotic in doses of gr. 1–2 (0.06–0.12).

neona'tal [G. *neos*, new, + L. *natalis*, relating to birth.] Relating to the period immediately succeeding birth.

neona'tus [G. *neos*, new, + L. *natus*, born.] Newborn.

neopal'lium [G. *neos*, new.] The pallium of the cortex (which is of more recent origin), as distinguished from the olfactory portion, or archipallium.

neopancar'pine. Trade name of an ethereal hydro-alcoholic extract of jaborandi, recommended in the treatment of asthma.

neophobia (ne-o-fo'bĭ-ah) [G. *neos*, new, + *phobos*, fear.] Cainophobia, morbid dread of anything new or of novelties.

neophre'nia [G. *neos*, new, + *phrēn*, mind.] Any form of insanity occurring in a child.

neoplasia [G. *neos*, new, + *plasis*, a moulding.] The formation of new tissue or of a tumor.

ne'oplasm [G. *neos*, new, + *plasma*, thing formed.] A new growth, tumor.* **histoid n.**, a tumor of a structure similar to that of the part from which it springs.

neoplas'tic. Relating to a neoplasm.

ne'oplasty. 1. Neoplasia. 2. Reparative or plastic surgery.

neoprobilin (ne'o-pro-bi'lin). Trade name of a preparation containing sodium glycocholate and taurocholate, sodium salicylate, phenolphthalein, and menthol, recommended in various affections of the liver and gallbladder.

neoprotosil (ne-o-pro'to-sil). Trade name of a preparation of colloid silver, employed in solution externally as an antiseptic.

neorobin (ne-or'o-bin). A yellowish-gray powder, a reduction product of chrysarobin, recommended for the same purpose as the latter in 0.2 to 1 per cent. petrolatum ointment.

neosal'varsan [G. *neos*, new.] Neoarsphenamina.

neosil'vol. A compound of silver iodide with a soluble gelatin base containing about 20 per cent. silver iodide in colloidal form; a non-irritating antiseptic in 10 to 40 per cent. solution for application to the ocular and respiratory mucous membranes

neoskiodan (ne-o-ski'o-dan). Trade name of a brand of neomethiodal, 3.5 diiodo-4-pyridon-N-acetic acid diethanolamine, containing 50 per cent. of iodine in firm combination, a white odorless powder readily soluble in water; employed in solution by intravenous injections in pyelography.

Neosporid'ia [G. *neos*, new + *sporos*, seed.] A class of *Sporozoa* in which sporulation occurs without the loss of individuality of the parent cell

neostriatum (ne-o-stri-a'tum). The caudate nucleus and putamen, considered as one.

neosyn'thaline (ne-o-sin'thal-ēn). Synthaline-B.

neothalamus (ne-o-thal'a-mus) [G. *neos*, new, + *thalamus*.] The cortical portion of the thalamus

neothes'in. Gamma-2-methyl-piperidino-propyl benzoate hydrochloride, a whitish crystalline odorless, soluble powder, a local anesthetic in 1 to 2 per cent solution.

neotropin (ne-o-tro'pin). Trade name of butyloxy-diamino-azopirodin, recommended for use as a urinary antiseptic in dose of gr. 1½ (0.1).

neozyme (ne'o-zīm) [G. *neos*, new + *zymē*, leaven.] Metathrombin activated temporarily by the addition of decinormal alkali solution followed by neutralization with acid.

nepenthe (ne-pen'the) [G. *nēpenthēs*, removing sorrow.] Trade name of a deodorized prepara-

tion of opium of the same strength as the official tincture.

nep'eta. Cataria (N.F.), catnip, the herbage of *Nepeta cataria;* used as a domestic remedy in infantile colic, hysteria, amenorrhea, and dysmenorrhea in the form of a tea or infusion; dose of the fluidextract, 3½–1 (2.0–4.0).

nephelom'eter [Gr. *nephelē*, cloud, *metron*, measure.] An instrument for estimating the number of bacteria in a suspension, used as a vaccine in opsonic therapy, by comparing its opacity with that of one of a series of standardizing tubes containing precipitates of barium sulphate of varying density.

nephelom'etry [G. *nephelē*, cloud, + *metron*, measure] The determination of the degree of cloudiness or turbidity in a fluid, such as the urine.

nephelopia (nef"el-o'pĭ-ah) [G. *nephelē*, cloud, + *ōps(ōp-)*, eye.] Dimness of vision due to cataract or cloudiness of the cornea.

nephradenoma (nef-rad-e-no'mah) [G. *nephros*, kidney.] Adenoma of the kidney.

nephral'gia [G. *nephros*, kidney, + *algos*, pain] Pain in the kidney.

nephral'gic. Relating to nephralgia.

nephrapos'tasis [G. *nephros*, kidney, + *apostasis*, an abscess] Abscess of the kidney; pyonephrosis.

nephrasthenia (nĕ-fras-the'nĭ-ŭ) [G. *nephros*, kidney, + *asthenia*, weakness.] A mild nephrosis, a condition of imperfect functioning of the kidney, giving use to slight urinary signs, but without actual disease of the renal tubules.

nephrato'nia, nephrat'ony [G. *nephros*, kidney, + *a-* priv. + *tonos*, tension] Diminished functional activity of the kidneys

nephrauxe (nĕ-frawk'se) [G. *nephros*, kidney, + *auxē*, increase.] Hypertrophy of the kidney.

nephrectasia, nephrectasy (nef-rek-ta'sĭ-ah, nef-rek'ta-sĭ) [G. *nephros*, kidney, + *ektasis*, extension.] Dilatation of the pelvis of the kidney.

nephrec'tomize. To perform nephrectomy upon.

nephrec'tomy [G. *nephros*, kidney, + *ektomē*, excision.] The operation of removing a kidney **abdom'inal n.,** removal of the kidney through an anterior incision, involving a double incision of the peritoneum. **paraperiton'eal n.,** n performed by an incision in the side below the ribs, the kidney being reached by a blunt dissection behind the peritoneum.

nephrelco'sis [G. *nephros*, kidney, + *helkōsis*, ulceration.] Ulceration of the mucous membrane of the pelvis or calyces of the kidney.

nephre'mia, nephræ'mia [G. *nephros*, kidney, + *haima*, bled.] Hyperemia or congestion of the kidney.

neph"remphrax'is [G. *nephros*, kidney, + *emphraxis*, a stoppage.] Obstruction in the renal tubules.

neph'ria. Bright's disease.

neph'ric. Relating to the kidney, renal.

nephrid'ium [G. *nephridios*, relating to the kidney] One of the segments in the embryo developing into the excretory portion of the kidney and a portion of the ovary or testis.

neph'rin. Cystin.

neph'rism. The aggregate of symptoms characteristic of chronic disease of the kidneys.

nephrit'ic. Relating to or suffering from nephritis.

nephrit'ides. Plural of *nephritis.*

nephritis (nĕ-frī'(fre')tis) [G. *nephros*, kidney, + *-itis*.] Inflammation of the kidneys. **acute' n.,** an acute inflammation affecting chiefly the parenchyma of the kidney; it is characterized by the presence of albumin, and often blood, in the urine, by reduction in amount of the urine, edema, headache, and often nausea. **acute' intersti'tial n.,** a form occurring usually in children, in which there is an extensive infiltration of cells resembling plasma-cells; the kidneys are enlarged and the tissue is soft and friable. **catar'rhal n.,** acute n. **chronic n.,** a progressive diffuse inflammatory and degenerative process in the kidneys; the symptoms in the early stages are not pronounced, in the later stages one sees emaciation, edema, and uremic manifestations; the pathological changes are those of the small white kidney and the large white kidney; granular kidney is usually regarded as a noninflammatory sclerotic degeneration, not strictly a nephritis. **croupous n.,** acute n. **desquam'ative n.,** acute n. **diffuse' n.,** inflammation involving all of the kidney structures. **ex'udative n.,** inflammation of the kidneys in which there is exudation of the serum and usually also of the formed elements of the blood. **glomer'ular n.,** chronic inflammation of the kidney involving chiefly the glomeruli. **in'durative n.,** a chronic inflammation of the kidney characterized by a marked increase of the connective-tissue stroma and atrophy of the secreting portions of the organ. **intersti'tial n.,** a form in which the interstitial connective tissue is chiefly affected. **parenchy'matous n.,** inflammation of the stroma of the kidneys; the chronic form constitutes what is called the large white kidney, see *chronic n.* **produc'tive n.,** inflammation of the kidneys in which there is an exudation of the serum, and usually also of the formed elements, of the blood, together with a proliferation of the connective-tissue stroma. **tubal n.,** parenchymatous nephritis in which there are pronounced lesions of the straight and convoluted tubes, with desquamation of the epithelium and the presence of cylinders; nephrosis. **tubular n.,** tubal n. **ura'nium n.,** an experimental nephritis produced by the administration of uranium nitrate.

nephrocapsec'tomy [G. *nephros*, kidney, + L. *capsula*, capsule, + G *ektomē*, excision] Stripping away the capsule of the kidney for the relief of chronic nephritis; Edebohl's operation.

nephrocar'diac [G. *nephros*, kidney, + *kardia*, heart] Relating to the kidney and the heart.

nephrocele (nef'ro-sēl) [G. *nephros*, kidney, + *kēlē*, hernia.] Hernial displacement of a kidney.

nephrocol'ic, nephrocol'ica [G. *nephros*, kidney, + *kōlikē*, colic.] Renal colic.

nephrocystanastomosis (nef"ro-sist"an-as-to-mo'sis) [G. *nephros*, kidney, + *kystis*, bladder, + *anastomōsis*, an outlet.] The establishment of an artificial connection between the kidney and the bladder, in case of permanent obstruction of the ureter.

nephrocystitis (nef-ro-sis-ti'(te')tis) [G *nephros*, kidney, + *kystis*, bladder, + *-itis*] Inflammation of both kidney and bladder.

nephrocysto'sis [G *nephros*, kidney, + *kystis*, cyst.] The formation of renal cysts.

nephroerysipelas (nef"ro-er-ĭ-sip'e-las). Acute inflammation of the kidney occurring with erysipelas; erysipelatous inflammation of the renal tubules.

neph"rogenet'ic, neph"rogen'ic [G. *nephros*, kidney, + *gennētos*, begotten.] Originating in the kidney.

nephrogenous (nef-roj'en-us) [G. *nephros*, kidney, + *gennaō*, I produce.] Nephrogenetic.

nephrohe'mia, nephrohæ'mia. Nephremia.

neph"rohydro'sis [G. *nephros*, kidney, + *hydōr*, water.] Hydronephrosis

neph"rohyper'trophy [G. *nephros*, kidney.] Hypertrophy of the kidney, nephrauxe.

neph'rolith [G. *nephros*, kidney, + *lithos*, stone.] Renal calculus.

nephrolithiasis (nef"ro-lĭ-thi'a-sis) [G. *nephros*, kidney, + *lithos*, stone.] Renal calculus or gravel.

nephrolithot'omy [G. *nephros*, kidney, + *lithos*, stone, + *tomē*, incision.] Incision into the kidney for the removal of a renal calculus.

nephrol'ogist. One who makes a special study of the kidney and its diseases; a specialist in diseases of the kidney.

nephrol'ogy [G. *nephros*, kidney, + *-logia*.] The branch of medical science which deals especially with the kidneys.

nephrol'ysin. An antibody causing destruction of the cells of the kidneys, formed in response to the injection of an emulsion of renal substance; it is specific for the species from which the antigen has been obtained.

nephrol'ysis [G. *nephros*, kidney, + *lysis*, loosening, solution.] 1. Freeing of the kidney from adhesions of inflammatory origin, with preservation of the capsule. 2. Destruction of the kidney cells by the action of a nephrolysin.

nephrolyt'ic. Relating to or causing nephrolysis.

nephromala'cia [G. *nephros*, kidney, + *malakia*, softness.] Softening of the kidneys.

nephromegaly (nef-ro-meg'ah-lĭ) [G. *nephros*, kidney, + *megas(megal-)*, great.] Extreme hypertrophy of one or both kidneys.

nephromere (nef'ro-mēr) [G. *nephros*, kidney, + *meros*, a part.] The protovertebral somite or mesomere in the embryo whence arises the future kidney.

nephroparal'ysis [G. *nephros*, kidney.] Abeyance of the secreting function of the kidney

nephrop'athy [G. *nephros*, kidney, + *pathos*, suffering.] Any disease of the kidney.

neph'ropexy [G. *nephros*, kidney, + *pēxis*, fixation.] The operative fixation of a floating kidney

nephrophthisis (nĕ-frof'the-sis). 1. Suppurative nephritis with wasting of the substance of the organ. 2. Tuberculosis of the kidney

nephropto'sia [G. *nephros*, kidney, + *ptōsis*, a falling.] A downward displacement or falling of the kidney.

nephropyelitis (nef"ro-pi-el-i'(e')tis) [G. *nephros*, kidney, + *pyelos*, basin (pelvis), + *-itis*.] Inflammation of the pelvis of the kidney

nephropyo'sis [G. *nephros*, kidney, + *pyon*, pus.] Suppuration of the kidney.

nephrorrha'gia [G. *nephros*, kidney, + *rhēgnymi*, I break forth.] Hemorrhage into the renal tubules and pelvis

nephror'rhaphy [G. *nephros*, kidney, + *rhaphē*, suture.] Nephropexy by suturing the kidney in place.

nephroscle'ria [G. *nephros*, kidney, + *sklēria*, hardness.] Nephrosclerosis.

nephrosclero'sis [G. *nephros*, kidney, + *sklērōsis*, hardening.] Induration of the kidney from overgrowth and contraction of the interstitial connective tissue.

nephro'sis [G. *nephros*, kidney.] 1. Nephropathy. 2. Specifically, degeneration of the epithelial lining of the renal tubules; that form of Bright's disease (not amyloid) in which marked edema occurs; non-inflammatory disease of the kidneys. **chronic n.**, diabetes albuminurica.

nephrospasia, nephrospasis (nef-ro-spa'sĭ-ah, nĕ-fros'-pa-sis) [G. *nephros*, kidney, + *spasis*, a pulling.] Floating kidney in which the organ is attached only by the blood-vessels entering at the hilus.

nephros'toma, neph'rostome [G. *nephros*, kidney, + *stoma*, mouth.] One of the ciliated funnel-shaped openings by which the tubules of the nephridium communicate with the cœlom.

nephros'tomy [G. *nephros*, kidney, + *stoma*, mouth.] The establishment of an opening between the pelvis of the kidney and the external surface of the body.

neph'rotome [G. *nephros*, kidney, + *tomos*, a slice.] Nephromere.

nephrot'omy [G. *nephros*, kidney, + *tomē*, an incision.] Incision into the substance of the kidney.

nephrotox'ic. Relating to nephrotoxin; poisonous to the cells of the kidney; nephrolytic.

nephrotox'in. A cytotoxin specific for cells of the kidney.

nephrotre'sis [G. *nephros*, kidney, + *trēsis*, a boring.] The establishment of a permanent opening into the kidney from the loin for the purpose of giving exit to the renal excretion.

neph"rotuberculo'sis [G. *nephros*, kidney.] Tuberculosis of the kidney, renal tuberculosis.

nephroty'phoid. Acute nephritis, or symptoms suggesting it (lumbar pain, albuminuria, edema, etc.), caused by the typhoid bacilli or their toxin in a case of typhoid fever.

nephroty'phus [G. *nephros*, kidney.] Acute hemorrhagic nephritis occurring as a complicating lesion in typhus fever

nephro-ureterectomy (nef"ro-u-re"ter-ek'to-mĭ) [G. *nephros*, kidney, + *ureter*, + *ektomē*, excision.] Surgical removal of a kidney and its ureter.

nephrozy'mase [G. *nephros*, kidney.] An enzyme resembling diastase in its ferment action, sometimes found in the urine.

nephrozymosis (nef-ro-zi-mo'sis) An infectious disease with renal localization.

nephrydro'sis. Nephrohydrosis, hydronephrosis.*

nepiology (nĕ-pĭ-ol'o-jĭ) [G. *nepios*, infant, + *-ology*.] The branch of pediatrics dealing with young infants.

nerian'thin. A glucoside from *Nerium odorum*, oleander, resembling digitalis somewhat in its action on the heart and kidneys, dose gr $\frac{1}{10}$–$\frac{1}{5}$ (0.006–0.012)

neriin (ne'rĭ-in) A glucoside from the leaves and bark of the oleander; employed as a substitute for digitalis

Ne'rium [G. *nērion*, oleander.] A genus of shrubs of the Mediterranean region, of the order *Apocynaceæ*, or dogbane family; see *oleander*.

Nernst lamp [Walther *Nernst*, Berlin physicist, *1864.] An electric lamp in which the magnesium filament is not enclosed in a vacuum, but is exposed to the air; it gives a light of great actinic power. **N.'s the'ory,** the passage of an electric current through the tissues causes a dissociation of the ions, with consequent concentration of salts in the solution bathing the cell membranes, the electric stimulus being thereby effected

ner'oli [after Princess *Neroli*.] An essential oil distilled from the bitter orange; the basis of cologne water and various other perfumes.

nerve (nurv) [L. *nervus*.] 1. A whitish cord, made up of nerve-fibers arranged in bundles held together by a connective-tissue sheath, through which stimuli are transmitted from the central nervous system to the periphery or the reverse. 2. In botany, vein, rib, one of the bundles of fibrovascular tissue in a leaf or petal. **accel'erator n.,** a n. containing fibers from the medulla conveying impulses which increase the rapidity of the

heart's action. **aff'erent n.,** a n. conveying impulses from the periphery to the central nervous system. **centrif'ugal n.,** efferent n. **centrip'etal n.,** afferent n. **cra'nial n.,** one of twelve pairs of nerves emerging from the brain or intracranial portion of the central nervous system. **crotaphit'ic n.** [G. *krotaphos,* temple], the superior maxillary division of the trigeminal nerve, nervus* maxillaris. **depres'sor n.,** an afferent n., stimulation of which excites a reflex vasodilatation thereby lowering the blood-pressure. **eff'erent n.,** a n. conveying impulses from the central nervous system to the periphery. **eighth n.,** eighth cranial n., nervus acusticus; according to the old nomenclature which counted but nine cranial nerves, the eighth included what are now called ninth, tenth, and eleventh, or glossopharyngeus, vagus, and accessorius. **elev'enth n.,** eleventh cranial n., nervus accessorius. **esod'ic n.** [G. *es(eis),* in, + *hodos,* way], afferent n. **excitore'flex n.,** a visceral n. the special function of which is to cause reflex action. **exod'ic n.** [G. *ex,* out, + *hodos,* way], efferent n. **fifth n.,** fifth cranial n., nervus trigeminus. **first n.,** first cranial n. nervus olfactorius. **fourth n.,** fourth cranial n., nervus trochlearis **fur'cal n.,** nervus furcalis. **gan'gliated n.,** a sympathetic n. **inhib'itory n.,** a n. conveying impulses which diminish functional activity in a part **mixed n.,** a nerve containing both afferent and efferent fibers **mo'tor n.,** an efferent n. conveying an impulse which excites muscular contraction. **n. of arrest',** inhibitory n. **n. of a tooth,** dentinal* pulp. **ninth n.,** ninth cranial n., nervus glossopharyngeus; under the old nomenclature, which counted but nine cranial nerves the ninth was what is now the twelfth or hypoglossus. **pres'sor n.,** an afferent n., stimulation of which excites a reflex vasoconstriction thereby raising the blood pressure. **sec'ond n.,** second cranial n., nervus opticus. **secre'tory n.,** a n. conveying impulses which excite functional activity in a gland. **sen'sory n.,** an afferent n. conveying stimuli from the outer world which are translated by the central nervous system into the conciousness of sensation. **sev'enth n.,** seventh cranial n , nervus facialis; under the old nomenclature, which counted but nine cranial nerves, the seventh included what are now called the seventh and the eighth, or the facialis and acusticus. **sixth n.,** sixth cranial n., nervus abducens. **somat'ic n.,** one of the nerves of sensation or motion, as distinguished from the trophic and secretory nerves. **space n.,** one of the branches of the nervus acusticus distributed to the semicircular canals. **spi'nal n.,** one of the nerves emerging from the spinal cord; there are thirty-one pairs, each attached to the cord by two roots, anterior and posterior [BNA], or ventral and dorsal; the latter is provided with a circumscribed enlargement or ganglion; the two roots unite in the intervertebral foramen, and the nerve, with fibers from both roots, almost immediately divides again into anterior and posterior rami [BNA], or anterior and posterior primary divisions, the former supplying the foreparts of the body and the limbs, the latter the muscles and skin of the back. **splanch'nic n.,** one of the nerves supplying the viscera. **sympathet'ic n.,** one of the nerves of the sympathetic* nervous system. **tenth n.,** tenth cranial n., nervus vagus. **third n.,** third cranial n., nervus oculomotorius. **trisplanch'nic n.,** sympathetic n. **troph'ic n.,** a n. which is assumed to regulate metabolism and growth of the tissues. **twelfth n.,** twelfth cranial n., nervus hypoglossus. **vasomo'tor n.,** a motor n. effecting dilatation (*vasodilator n.*) or contraction (*vasoconstrictor n.*) of the blood-vessels.

anatomy, neuranatomy, neurotomy. **atrophy,** neuratrophia, neuratrophy, neurophthisis. **axis-cylinder** neuraxon, neurite. **bruising** (operative), neuragmia, neurotripsy. **cell,** neuron, neurocyte. **connective, tissue framework,** endoneurium. **crushing,** neuragmia, neurotripsy. **cutting,** neurotomy. **description of,** neurography. **disease,** neuropathy; neuremia, neurosis (functional). **displacement,** neurectopia. **evulsion,** neurexairesis. **excision,** neurectomy. **exhaustion,** neurolysis, neurasthenia. **ganglion,** neuroganglion, neuroploca. **hardening,** neurosclerosis. **impaired function,** dysneuria. **inflammation,** neuritis, neurophlogosis, neurophlegmon; neuritis multiplex, polyneuritis, panneuritis (of many nerves). **nutrition of,** neurotrophy. **pain,** neuralgia, neurodynia. **phagocyte destroying,** neurophage. **plastic surgery,** neuroplasty. **pressure on,** neurothlipsis. **puncture,** neuronyxis. **regeneration,** neuranagenesis, neuranaphysis. **science relating to,** neurology, neuropathology. **sheath,** epineurium; perineurium (around nerve bundle); neurilemma, neurvmen (around fiber); sheath of Henle (around terminal fiber), axolemma (around axis-cylinder). **stretching,** neurectasia, neurotension, neurotony. **substance,** neuroplasm; neurochitin (of supporting framework); neuroglia (supporting). **suture,** neurosuture, neurorrhaphy. **transplantation from bony canal to soft tissue,** neurosarcocleisis. **treatment of disease,** neurotherapy, neuriatria. **tumor,** neuroma, neurofibroma, neuroneoplasm. **wound,** neurotrosis, neurotrauma.

nerve-block. The arrest of the passage of impulses through a nerve by mechanical or chemical means, such as the injection of alcohol, cocaine, quinine and urea hydrochloride, etc.

nerve-broach (nurv brōch). Broach, a dental tool, often barbed, for extracting the nerve from, or cleaning out, the root canal of a tooth.

nerve-cav'ity. The pulp-cavity of a tooth.

nerve-cell. Neuron.

nerve-cen'ter. Nervous center.*

nerve-cep'tor. Ceptor (2).

nerve-cor'puscle. Nerve-nucleus.

nerve-end'ing. Any one of the specialized terminations of a nerve, variously styled end-bulbs, taste-bulbs, tactile corpuscles, nerve-hillocks, etc.

nerve-en'ergy. "The total potential energy in the neuron available for use in the transmission of impulses" (Adrian), neurine, neurorrheuma, potential energy.

nerve-fi'ber. One of the units of a nerve-trunk; it is the axis-cylinder process of a neuron and is either *medullated, i. e.* surrounded by the white substance of Schwann (myelin), or *non-medullated;* either the medullated or non-medullated axis-cylinder may or may not be surrounded by the primitive sheath or neurilemma, so that there are four forms of nerve-fibers.

nerve-fi'bril. One of a number of fine threads forming a network in the body of a ganglion nerve-cell and extending into the dendrites; theyare believed to form the conducting part of the nerve-fibers.

nerve-gan'glion. Ganglion (1).

nerve-graft'ing. The insertion of nerve substance from a rabbit or other animal to fill a gap between the divided ends of a nerve; the grafted tissue acts as a bridge and does not form part of the new tissue.

nerve-hill'ock. 1. Doyère's eminence or hillock, the slight prominence where a nerve-fiber enters the muscle. 2. Neuromast.

nerve-nucleus (nurv-nu'kle-us). An oval body, one to each internode, lying beneath the neurilemma in a depression in the medullary substance of a nerve-fiber.

nerve-pain. Neuralgia.

nerve-papill'a. One of the papillæ in the skin containing a tactile corpuscle or other form of end organ.

nerve-root. One of the two bundles of nerve-fibers, emerging from (or entering) the spinal cord on either side, which join to form a spinal nerve; the anterior or ventral roots contain the motor fibers and emerge from the cord on either side of the anteromedian fissure in the anterior root-zone; the posterior or dorsal roots contain the sensory fibers and enter the cord in the posterolateral sulcus; each dorsal root is provided with a ganglion.

nerve-stretch'ing. The operation of forcibly extending or stretching a nerve-trunk, resorted to in the treatment of obstinate neuralgia; neurectasia, neurectasis, neurectasy, neurotension, neurotony.

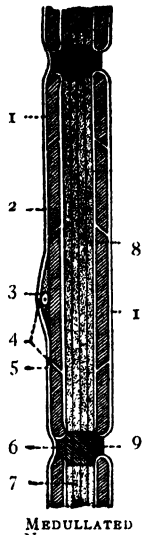
nerve-su'ture. Neurorrhaphy.

nerve-tire. Neurasthenia.

nerve-tract. A bundle or group of white nerve-fibers in the brain or spinal cord.

nerve-trunk. A collection of funiculi or bundles of nerve-fibers enclosed in a connective-tissue sheath, the epineurium.

nerve-tu'mor. Neuroma.



MEDULLATED NERVE-FIBER (schematic.)

1, 1, Sheath of Schwann; 2, medullary sheath; 3, nucleus of neurilemma; 4, nuclei of Henle's sheath; 5, incisure of Schmidt; 6, node of Ranvier, sometimes crossed, sometimes not crossed, by the neurilemma; 7, axon; 8, axolemma; 9, cement substance.

ner'vi. Plural of *nervus*, nerve.

n. nervo'rum [L. nerves of nerves], nerves distributed to the sheaths of nerve-trunks.

nervimotil'ity. Capability of movement in response to a nervous stimulus.

nervimo'tion [L. *nervus*, nerve, + *motus*, motion.] Movement in response to a nervous stimulus.

nervimo'tor. Relating to a motor nerve.

nervimus'cular [L. *nervus*, nerve, + *musculus*, muscle.] Relating to both nerves and muscles: relating to the nerve-supply of a muscle.

nervine (nur'vēn). 1. Acting therapeutically, especially as a sedative, upon the nerves or nerve centers. 2. An agent which increases nerve-force and lessens irritability. **male n.**, cypripedium.

nervocidine (nur-vos'ī-dēn) [L *nervus*, nerve, + *cædere*, to kill.] A local anesthetic, the hydrochloride of an alkaloid from an East Indian plant, *gasubasu*.

ner'vosine. Trade name of a mixture of valerian and iron, recommended in hysteria in doses of gr. 3–5 (0.2–0.3).

nervosism (nur'vo-sizm). 1. Nervousness; nervous erethism. 2. The theory which regards variations in nerve force as the basis of all pathological change.

nervos'ity. Nervosism (1).

ner'vous. 1. Relating to a nerve or the nerves. 2. Easily excited or agitated; suffering from instability or weakness of nerve action. **n. exhaus'tion, n. prostra'tion,** neurasthenia. **n. system,** the entire nerve apparatus of the body, including the brain, spinal cord, nerves, and ganglia; the brain and spinal cord with the nerves arising from them constitute the *cerebrospinal n. system;* the *sympathetic n. system* is composed of the extraspinal ganglia with their nerves. **autonomic n. s.,** see under *autonomic.* **metameric,** or **propriospin'al n.s.,** see under *metameric.* **parasympathetic n.s.,** see under *autonomic.* **n. tissue,** the differentiated tissue composing the n. system; see *tissue.*

ner'vousness. A condition of unrest and of irritability of the nerve-centers.

ner'vus, gen. and pl. *ner'vi* [L.] Nerve.

n. abdu'cens [BNA], abducent nerve, 6th cranial nerve, a small motor nerve supplying the external rectus muscle of the eye; its origin is in the dorsal part of the tegmentum of the pons just below the surface of the rhomboidal fossa, and it emerges from the brain in the fissure between the posterior border of the pons and the anterior end of the pyramid of the pons; it passes along the cavernous sinus and enters the orbit through the sphenoidal fissure.

n. access'orius [BNA], accessory nerve, spinal accessory nerve, 11th cranial nerve, arises from the medulla and from the spinal cord as far down as the level of the fifth cervical nerve, and emerges from the side of the medulla and the cord in two parts, accessory and spinal; the former joins the vagus in the jugular foramen supplying the cardio-inhibitory and the visceromotor fibers of that nerve; the spinal portion passes down the neck and supplies the sternomastoid and trapezius muscles.

n. acus'ticus [BNA], acoustic nerve, auditory nerve, portio mollis, 8th cranial nerve, the nerve of hearing; it has two roots, vestibular and cochlear, the former terminates in a ganglion close to the restiform body, the latter in three nuclei, but chiefly in the nucleus of Deiters in the lateral wall of the fourth ventricle; the radix vestibularis emerges from the brain between the olive and the restiform body, the radix cochlearis winds round the outer side of the restiform body, the two roots unite and pass through the internal acoustic meatus when the roots again separate to form the n vestibuli and n. cochleæ.

n. alveola'ris infe'rior [BNA], inferior alveolar nerve, inferior dental nerve, one of the terminal branches of the mandibular, passing down to enter the inferior dental canal, then distributing branches to the teeth.

n. alveola'ris supe'rior [BNA], superior alveolar nerve, posterior dental nerve, a branch (sometimes two branches) of the maxillary in the pterygopalatine canal, passing through the pterygomaxillary fissure and supplying gums and molar teeth.

n. ampulla'ris [BNA], ampullar nerve, one of three branches of the acoustic nerve; two from the vestibular trunk going to the ampullæ of the superior and lateral semicircular canals, the third from the cochlear trunk going to the ampulla of the inferior semicircular canal

ner'vi anococcyge'i [BNA], anococcygeal nerves several small nerves arising from the lower portion of the pudendal plexus (coccygeal plexus), supplying the posterior portion of the levator ani muscle and the skin over the coccyx.

n. audito'rius, auditory nerve, n. acusticus [BNA].

n. auricula'ris magnus [BNA], great auricular nerve, arises from the 2d and 3d cervical, supplies the skin of part of the ear, adjacent portion of the scalp, and cheek and angle of the jaw.

n. auricula'ris poste'rior [BNA], posterior auricular nerve, a branch of the n. facialis, supplying the posterior surface of the auricle.

n. auric'ulotempora'lis [BNA], auriculotemporal nerve, a branch of the mandibular, usually by two roots embracing the middle meningeal artery; it passes backward beneath the external pterygoid muscle, between the external lateral ligament and the neck of the mandible, and through the parotid gland, terminating in the skin of the temple and scalp.

n. axilla'ris [BNA], axillary nerve, circumflex nerve arises from the posterior cord of the brachial plexus in the axilla, passes downward and outward with the posterior circumflex artery, and winds round the surgical neck of the humerus supplying the deltoid and teres minor muscles.

n. bucca'lis, buccal nerve, n. buccinatorius [BNA].

n. buccinato'rius [BNA], buccinator nerve, bucca nerve, a sensory branch of the masticator nerve

passing downward and forward on the buccinator muscle, supplying the buccal mucous membrane and the skin of the cheek near the angle of the mouth.

n. bigem'inus [L. twin], the third sacral nerve the anterior primary division of which divides to enter into the formation of both sacral and pudendal plexuses.

n. cana'lis pterygoid'ei [BNA], nerve of the pterygoid canal, Vidian nerve, the nerve constituting the motor and sympathetic roots of Meckel's ganglion; it is formed in the foramen lacerum by the union of the larger superficial petrosal and the deep petrosal nerves, and runs through the Vidian (pterygoid) canal to the pterygopalatine fossa.

n. cardi'acus infe'rior [BNA], inferior cardiac nerve, a nerve passing from the inferior cervical ganglion of the sympathetic, receiving fibers also from the first thoracic ganglion, to the cardiac plexus.

n. cardi'acus me'dius [BNA], middle cardiac nerve, a bundle of fibers running downward from the middle cervical ganglion of the sympathetic, along the subclavian artery (on the left) or the innominate (on the right side) to join the cardiac plexus.

n. cardi'acus supe'rior [BNA], superior cardiac nerve, arises from the lower part of the superior cervical ganglion of the sympathetic, and passes down to form, with branches of the vagus, the cardiac plexus.

n. carot'icotympan'icus [BNA], caroticotympanic nerve, small deep petrosal nerve, one of two sympathetic branches from the internal carotid plexus to the tympanic plexus.

ner'vi carot'ici exter'ni [BNA], external carotid nerves, a number of sympathetic nerve-fibers extending upward from the superior cervical ganglion along the external carotid artery, forming the external carotid plexus.

n. carot'icus inter'nus [BNA], internal carotid nerve, a sympathetic cord extending upward from the superior cervical ganglion along the internal carotid artery, forming the internal carotid plexus.

n. caverno'sus clitor'idis [BNA], cavernous nerve of the clitoris, corresponds to the n. cavernosus penis in the male.

n. caverno'sus pe'nis [BNA], cavernous nerve of the penis, one of two nerves, *major* and *minor* (chiefly sympathetic), running from the cavernous plexus at the root of the penis to the corpus cavernosum.

n. cerebra'lis [BNA], cerebral nerve, cranial nerve one of the twelve nerves given off from the brain; these are: 1. n. olfactorius, 2. n. opticus, 3. n. oculomotorius, 4. n. trochlearis, 5. n. trigeminus, 6. n. abducens, 7. n. facialis (with n. intermedius), 8. n. acusticus, 9. n. glossopharyngeus, 10. n. vagus, 11. n accessorius, 12. n. hypoglossus

ner'vi cervica'les [BNA], cervical nerves, nerves whose nuclei of origin are situated in the cervical spinal cord.

n. cervica'lis superficia'lis, superficial cervical nerve, n. cutaneus colli [BNA].

n. chor'da tym'pani, chorda tympani nerve, a nerve given off from the facial (probably fibers of the n. intermedius) in the facial canal, it passes through the iter chordæ posterius into the cavity of the tympanum, crosses over the membrana tympani and handle of the malleus, and passes out through the iter chordæ anterius; beneath the external pterygoid muscle it joins the lingual branch of the mandibular; it is probably a nerve of taste.

n. cilia'ris bre'vis, short ciliary nerve, one of a number of branches of the ciliary ganglion, supplying the ciliary muscles, iris, and tunics of the eyeball.

n. cilia'ris lon'gus, long ciliary nerve, one of two or three branches of the nasal nerve, supplying the ciliary muscles, iris, and cornea.

n. circumflex'us, circumflex nerve, n. axillaris [BNA].

n. coccyge'us [BNA], coccygeal nerve, a small nerve, the lowest of the spinal nerves, entering into the formation of the pudendal plexus.

ner'vi clu'nium latera'les, lateral or inferior cluneal nerves, branches of the posterior femoral cutaneous (small sciatic) nerve supplying the skin of the lower half of the gluteal region.

ner'vi clu'nium me'dii [BNA], middle clunial nerves, terminal branches of the posterior rami of the sacral nerves, supplying the skin of the mid-gluteal region.

ner'vi clu'nium superio'res [BNA], superior clunial nerves, terminal branches of the posterior rami of the lumbar nerves, supplying the skin of the upper half of the gluteal region.

n. coch'leæ [BNA], nerve of the cochlea, cochlear nerve, the lower of the two trunks of the acoustic nerve in the internal acoustic meatus; its branches go to the saccule, posterior semicircular canal, and organ of Corti.

n. commu'nicans peronæ'us, n. commu'nicans fibula'ris, peroneal or fibular communicating nerve, ramus anastomoticus peronæus [BNA].

n. commu'nicans tibia'lis, n. commu'nicans poplite'i tibial or popliteal communicating nerve, n. cutaneus suræ medialis [BNA].

n. crura'lis ante'rior, anterior crural nerve, n. femoralis [BNA].

n. cuta'neus antibra'chii dorsa'lis [BNA], dorsal antibrachial cutaneous nerve, lower external cutaneous branch of the radial (musculospiral nerve), supplying the skin of the dorsal surface of the forearm.

n. cuta'neus antibra'chii latera'lis [BNA], lateral antibrachial cutaneous nerve, terminal cutaneous branch of the musculocutaneous nerve; it is purely sensory, supplying the radial side of the forearm.

n. cuta'neus antibra'chii media'lis [BNA], medial antibrachial cutaneous nerve, internal cutaneous nerve, arises from the inner (medial) fasciculus of the brachial plexus, passes downward in company with the brachial artery and then the basilic vein, and supplies the skin of the flexor and ulnar surfaces of the forearm

n. cuta'neus bra'chii latera'lis [BNA], lateral brachial cutaneous nerve, a sensory branch of the axillary supplying the skin over the lower portion of the deltoid and for a distance below its insertion.

n. cuta'neus bra'chii media'lis [BNA], medial brachial cutaneous nerve, lesser internal cutaneous nerve, nerve of Wrisberg, arises from the inner (medial) fasciculus of the brachial plexus, unites in the axilla with the second intercostal nerve, and supplies the skin of the inner side of the arm.

n. cuta'neus bra'chii poste'rior [BNA], posterior cutaneous nerve of the arm, upper external cutaneous branch of the musculospiral nerve, a branch of the radial (musculospiral) supplying the skin of the posterior surface of the arm

n. cuta'neus col'li [BNA], cutaneous nerve of the throat, superficial cervical nerve, arises from the 2d and 3d cervical, supplies the skin over the anterior triangle of the neck.

n. cuta'neus dorsa'lis interme'dius [BNA], intermediate dorsal cutaneous nerve, one of the branches of the superficial peroneal (musculocutaneous) nerve, supplying dorsal nerves to the toes.

n. cuta'neus dorsa'lis latera'lis [BNA], lateral dorsal cutaneous nerve, the continuation of the sural nerve in the dorsum of the foot.

n. cuta'neus dorsa'lis media'lis [BNA], medial dorsal cutaneous nerve, one of the terminal branches of the superficial peroneal (musculocutaneous) nerve.

n. cuta'neus exter'nus, external cutaneous nerve, n. cutaneus femoris lateralis [BNA].

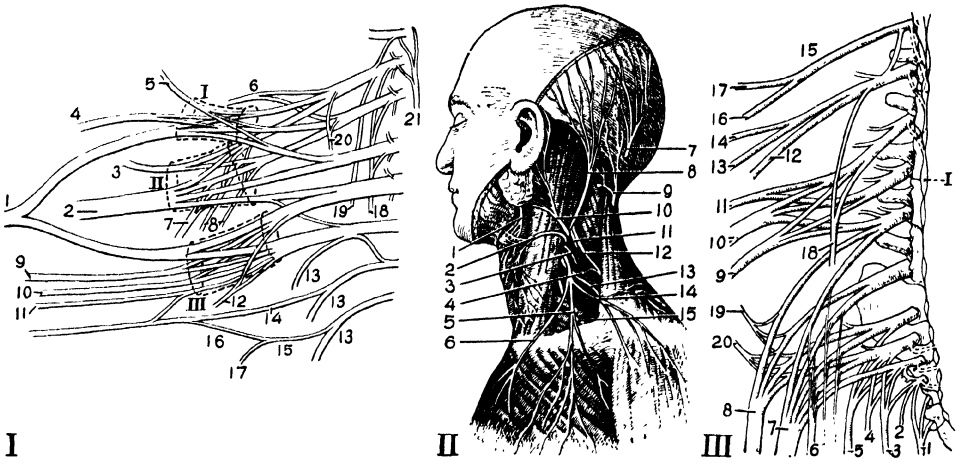
n. cuta'neus fem'oris latera'lis [BNA], lateral cutaneous nerve of the thigh, external cutaneous nerve arises from the 2d and 3d umbar nerves, passes forward beneath the iliac fascia to the anterior superior spine, and extends a short distance down the front of the thigh, supplying the skin of this region and of the outer side of the buttock.

m. cuta'neus fem'oris poste'rior [BNA], posterior femoral cutaneous nerve, small sciatic nerve, arises from the first three sacral nerves, accompanies the sciatic nerve to the lower border of the glutæus maximus muscle, and then supplies the skin of the posterior surface of the thigh and of the popliteal region.

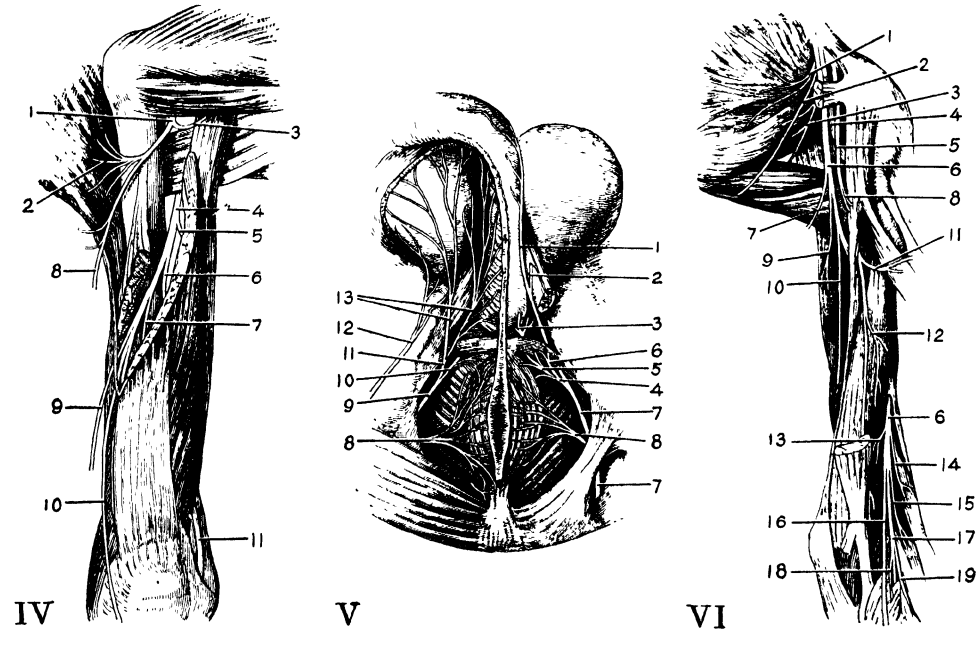
n. cuta'neus inter'nus mi'nor, lesser internal cutaneous nerve, n. cutaneus brachii medialis [BNA].

n. cuta'neus su'ræ latera'lis [BNA], lateral sural cutaneous nerve, arises from the peroneal in the popliteal space and is distributed to the skin of the calf.

n. cuta'neus su'ræ media'lis [BNA], medial sural cutaneous nerve, n. communicans tibialis or poplitei, arises from the tibial in the popliteal space, passes down the calf between the two heads of the gastrocnemius and unites in the middle of the leg with the



I. The Brachial Plexus: I. Lateral cord; II. Posterior cord, III. Medial cord. 1. Medianus; 2. Radialis; 3 Axillaris; 4. Musculocutaneus; 5. Thoracalis anterior; 6. Suprascapularis; 7. Thoracodorsalis; 8. Subscapularis; 9. Ulnaris; 10. Cutaneus antibrachii medialis, 11. Cutaneus brachii medialis; 12. Thoracalis anterior; 13, 13, 13. Intercostales; 14. Intercostobrachialis; 15. Ramus lateralis nervi intercostalis, 16. Ramus posterior n. intercostalis; 17. Ramus posterior n. intercostalis; 18. Thoracalis longus; 19 Dorsalis scapulæ; 20. Subclavius; 21. Phrenicus. II. Nerves of the Neck: 1. Ramus cervicalis fascialis; 2. Cutaneus colli; 3. and 11. N. to levator scapulæ muscle; 4. Communicans accessorii; 5. Supraclavicularis medius; 6. Supraclavicularis anterior; 7. Occipitalis major; 8. Occipitalis minor, 9. Occipitalis tertius; 10. Auricularis magnus; 11. See 3; 12. Accessorius; 13. N. to trapezius; 14 Supraclavicularis posterior; 15. Suprascapularis III. The Lumbosacral Plexus: 1. Anococcygealis; 2. Perinealis; 3. Pudendalis; 4. Ramus perforans; 5. Cutaneus posterior femoris, 6 N. to biceps, semimembranosus, and semitendinosus; 7. Ischiadicus; 8. Peroneal is; 9. Obturatorius; 10. Femoralis; 11. Cutaneus lateralis femoris; 12. Ilio-inguinalis; 13 Hypogastricus; 14. Iliohypogastricus; 15. Thoracalis duodecimus; 16. Ramus anterior; 17. Ramus iliacus. 1 Truncus sympathicus.



IV. 1. Branchus of the Axillary and Radial Nerves 1. Axillaris; 2. N. to deltoideus; 3. N. to teres minor; 4 Radialis; 5. Cutaneus posterior brachii; 6. N. to long head of triceps; 7. N. to median head of triceps; 8. Cutaneus lateralis brachii; 9 and 10. Rami cutanei dorsales antibrachii; 11. Ulnaris. V. Branches of the Pudendalis; 1. Dorsalis penis; 2. N. to corpus cavenosum penis; 3. N. to corpus cavenosum urethræ; 4 and 9. Perinealis; 5. Rami profundi; 6. Rami superficiales; 7. Pudendalis, 8, 8. Rami hæmorrhoidales inferiores; 10. Ramus profundus, 11. Ramus superficiales; 12 Cutaneus posterior femoris, ramus perinealis; 13. Scrotales posteriores. VI. Deep Nerves of the Arm: 1. Subscapularis brevis; 2. Thoracodorsalis; 3. Subscapulares; 4. Axillaris; 5. Musculocuteneus; 6. Radialis; 7. Cutaneus posterior; 8. N. to coracobrachialis; 9. N. to long head of triceps; 10. Collateralis ulnaris; 11. N. to biceps; 12 and 13. N. to brachialis; 14. N. to brachioradialis; 15. N. to extensor carpi radialis longus; 16. Ramus superficialis radialis; 17. Ramus profundus radialis; 18. N. to supinator; 19. N. to extensor carpi radialis brevis.

ramus anastomoticus peronæus of the common peroneal to form the sural (short saphenous) nerve.

n. denta'lis infe'rior, inferior dental nerve, n. alveolaris inferior [BNA].

n. denta'lis poste'rior, posterior dental nerve, n. alveolaris superior [BNA].

n. depres'sor [BNA], depressor nerve, the cardiac branch of the n. vagus.

ner'vi digita'les dorsa'les [BNA], dorsal digital nerves of the hand and foot supplying the skin of the dorsal surface of the fingers and toes.

ner'vi digita'les dorsa'les hallu'cis latera'lis et dig'iti secun'di media'lis [BNA], dorsal digital nerves, branches of the n. peronæus profundus, supplying the lateral surface of the great toe and the medial surface of the second toe.

ner'vi digita'les planta'res commu'nes [BNA], common digital plantar nerves, branches of the n. plantaris medialis and of the superficial ramus of the n. plantaris lateralis.

ner'vi digita'les planta'res pro'prii [BNA], proper digital plantar nerves, branches of the n. plantaris medialis and of the superficial ramus of the n. plantaris lateralis.

n. digita'lis vola'ris commu'nis, common volar digital nerve, one of three branches of the median, passing beneath the superficial volar (palmar) arch to the fingers where they divide further into the seven proper volar digital nerves.

n. digita'lis vola'ris pro'prius [BNA], proper volar digital nerve, collateral palmar digital nerve, one of seven sensory nerves of the fingers derived from the common volar digital nerves.

n. dorsa'lis clitor'idis [BNA], dorsal nerve of the clitoris, the deep terminal branch of the pudendal, supplying especially the glans clitoridis.

n. dorsa'lis pe'nis [BNA], dorsal nerve of the penis, the deep terminal branch of the pudendal running along the dorsum of the penis, supplying the skin of the penis, the prepuce, and the glans.

n. dorsa'lis scap'ulæ [BNA], dorsal nerve of the scapula, posterior scapular nerve, nerve to the rhomboids, arises from the 5th to 7th cervical nerves and passes downward to supply the levator anguli scapulæ and the rhomboideus major and minor muscles.

n. er'igens [L. erecting], one of a number of nerve-fibers derived from the second and third sacral nerves supplying the rectum, bladder, and genitals.

n. ethmoida'lis ante'rior [BNA], anterior ethmoidal nerve, a branch of the n. nasociliaris.

n. ethmoida'lis poste'rior [BNA], posterior ethmoidal nerve, a branch of the n. nasociliaris

n. facia'lis, facial nerve, 7th cranial nerve, portio dura, the chief motor nerve of the face; its origin is in the tegmentum of the lower portion of the pons, and it emerges from the brain between the posterior border of the pons and the upper end of the olive of the medulla; it leaves the cranial cavity through the internal acoustic (auditory) meatus where it is joined by the pars intermedia, traverses the facial canal in the petrous portion of the temporal bone, and enters the parotid gland where it forms the parotid plexus

n. femora'lis [BNA], femoral nerve, anterior crural nerve, arises from the 2d, 3d and 4th lumbar nerves in the substance of the psoas muscle and passing down enters the thigh external to the femoral vessels, breaking up in Scarpa's triangle into a number of terminal branches; it supplies the muscles and skin of the thigh.

n. fronta'lis [BNA], frontal nerve, a branch of the ophthalmic which divides within the orbit into the supratrochlear and the supraorbital nerves.

n. furca'lis [L. forked], the fourth lumbar nerve, the anterior primary division of which is forked to enter into the formation of both lumbar and sacral plexuses.

n. genitocrura'lis, genitocrural nerve, n. genitofemoralis [BNA].

n. genitofemora'lis [BNA], genitofemoral nerve, genitocrural nerve, arises by two roots from the 1st and 2d lumbar nerves, passes downward with the iliac vessels, and divides above Poupart's ligament into genital and femoral branches.

n. glossopharynge'us [BNA], glossopharyngeal nerve, 9th cranial nerve, emerges from the medulla oblongata between the olive and the restiform body by five or six rootlets which soon join to form one trunk; its deep relations are with the nucleus ambiguus, the fasciculus solitarius, and a terminal nucleus in the medulla; it leaves the cranium through the jugular foramen and is distributed as a nerve of sensation to the tongue and pharynx.

n. glutæ'us infe'rior [BNA], inferior gluteal nerve, arises from the 5th lumbar and 1st and 2d sacral, and supplies the glutæus maximus muscle.

n. glutæ'us supe'rior [BNA], superior gluteal nerve, arises from the 4th and 5th lumbar and 1st sacral nerves, and supplies the glutæus medius and minimus muscles.

ner'vi hæmorrhoida'les inferio'res [BNA], inferior hemorrhoidal nerves, several branches of the pudendal nerve, supplying the sphincter ani and skin of the anal region.

ner'vi hæmorrhoida'les me'dii [BNA], middle hemorrhoidal nerves, a number of small nerves from the pudendal plexus, supplying the portion of the rectum lying just above the floor of the pelvis.

ner'vi hæmorrhoida'les superio'res [BNA], superior hemorrhoidal nerves, rectal branches of the inferior mesenteric plexus which themselves form the superior hemorrhoidal plexus.

n. hypoglos'sus [BNA], hypoglossal nerve, 12th cranial nerve, arises from an oblong nucleus in the medulla and emerges from the medulla by several radicles between the pyramid and the olive on either side; it passes downward and then curves forward to the tongue all the intrinsic muscles of which it supplies; the descending ramus supplies the omohyoid, sternohyoid, and sternothyroid muscles, and other small rami supply other neighboring muscles.

n. iliohypogas'tricus, iliohypogastric nerve, arises from the first lumbar nerve, passes through the psoas and then forward above the crest of the ilium and passes thence to the groin; it supplies the abdominal muscles and the skin of the lower part of the anterior abdominal wall.

n. ilioinguina'lis [BNA], ilioinguinal nerve, arises from the first lumbar, passing through the psoas, forward in the abdominal wall, and then through the external abdominal ring when it becomes superficial; it supplies the muscles of the abdominal wall and the skin of the mons Veneris or, in the male, root of the penis.

n. im'par, filum terminale [BNA].

n. infraorbita'lis [BNA], infraorbital nerve, the continuation of the maxillary nerve after it has entered the orbit, transversing the infraorbital canal to reach the face; in the infraorbital canal it gives off the middle and anterior superior alveolar rami [BNA], or the middle and anterior superior dental nerves, which descend in bony canals to the alveolar arch, supplying the premolar and the incisor and canine teeth.

n. infratrochlea'ris [BNA], infratrochlear nerve, a branch of the nasociliaris running beneath the pulley of the superior oblique muscle to the front of the orbit, and supplying the skin of the eyelids and root of the nose.

ner'vi intercosta'les [BNA], intercostal nerves, anterior branches of the nervi thoracales.

ner'vi intercostobrachia'les [BNA], intercostobrachial nerves, branches of the nervi intercostales.

n. intercostohume'ralis, (1) the posterior lateral branch of the second intercostal nerve which supplies the skin of the arm; (2) a similarly disposed branch of the third intercostal nerve.

n. interme'dius [BNA], intermediate nerve, nerve of Wrisberg, pars intermedia, a sensory nerve forming the sensory portion of the facial; its central termination is in relation with that of the glossopharyngeus; in its course it lies between the facial and acoustic nerves, and joins the facial at the geniculate nucleus.

n. interos'seus ante'rior, n. interosseus volaris [BNA].

n. interos'seus cru'ris [BNA], interosseous nerve of the leg, a nerve given off from one of the muscular branches of the tibial which passes down over the posterior surface of the interosseous membrane supplying it and the two bones of the leg.

n. interos'seus dorsa'lis [BNA], dorsal interosseous nerve, posterior interosseous nerve, the deep terminal branch of the radial (musculospiral) nerve, supplying the supinator and all the extensor muscles in the forearm.

n. interos'seus poste'rior, posterior interosseous nerve, radial nerve, nervus interosseus dorsalis [BNA].

n. interos'seus vola'ris [BNA], volar interosseous nerve, anterior interosseous nerve, a branch of the median supplying the pronator quadratus muscle.

n. ischiad'icus [BNA], sciatic nerve, great sciatic nerve, arises by the union of the two main trunks of the sacral plexus, passes through the great sacrosciatic foramen and down the thigh, at about the middle of which it divides into the tibial and common peroneal nerves.

n. jugula'ris [BNA], jugular nerve, a communicating branch between the superior cervical ganglion of the sympathetic and the ganglion nodosum of the vagus and the petrosal ganglion of the glossopharyngeal.

ner'vi labia'les anterio'res [BNA], anterior labial nerves, sensory branches of the ilioinguinal nerve distributed to the labia majora.

ner'vi labia'les posterio'res [BNA], posterior labia, nerves, terminal branches of the perineal nerve, supplying the skin of the posterior portion of the labia and the vestibule of the vagina, corresponding to n. scrotalis posterior in the male.

n. lacrima'lis [BNA], lacrymal nerve, a branch of the ophthalmic; sensory nerve of the upper eyelid, conjunctiva, and lacrymal gland.

n. laryngeus infe'rior [BNA], inferior laryngeal nerve, terminal branch of the recurrent laryngeal.

n. laryngeus recur'rens, recurrent laryngeal nerve, n. recurrens [BNA].

n. laryngeus supe'rior [BNA], superior laryngeal nerve, a branch from the nodose ganglion of the vagus, passing downward and inward to the thyroid cartilage, dividing into two rami, external and internal laryngeal nerves, which supply the mucous membrane of the larynx and epiglottis and the inferior constrictor muscle of the pharynx and the cricothyroid muscle.

n. lingua'lis [BNA], lingual nerve, one of the two terminal divisions of the mandibular, passing down beneath the external pterygoid muscle, between the internal pterygoid and the mandible, and beneath the mucous membrane of the floor of the mouth to the side of the tongue over the anterior two-thirds of which it is distributed; it supplies also the mucous membrane of the floor and outer wall of the mouth.

ner'vi lumba'les [BNA], lumbar nerves, five nerves on each side, emerging from the lumbar portion of the spinal cord; the first four nerves enter into the formation of the lumbar plexus, the fourth and fifth into that of the sacral plexus; the fourth lumbar nerve, being forked to enter into the formation of the two plexuses, is called n. furcalis.

n. lumboinguina'lis [BNA], lumboinguinal nerve, the femoral branch of the n. genitofemoralis, passing beneath Poupart's ligament and in the sheath of the femoral vessels, passing through the fascia lata and supplying the skin of the anterior aspect of the upper half of the thigh.

n. mandibula'ris [BNA], mandibular nerve, inferior maxillary nerve, the third division of the trigeminus formed by the union of the sensory fibers from the Gasserian ganglion and of the motor root of the trigeminus in the foramen ovale, through which the nerve emerges on the face; after giving off branches it divides into the inferior alveolar and the lingual.

n. masseteri'cus [BNA], masseteric nerve, a motor branch of the masticatorius passing to the internal surface of the masseter muscle which it supplies.

n. masticato'rius [BNA], masticator nerve, a very short, chiefly motor, branch of the mandibular, dividing at once into the masseteric, temporal, buccinator, and pterygoid nerves.

n. maxilla'ris [BNA], maxillary nerve, superior maxillary nerve, the second division of the trigeminus, passing from the Gasserian ganglion through the foramen rotundum into the sphenomaxillary (pterygopalatine) fossa, where it gives off the sphenopalatine nerve and continues forward to enter the orbit, where it is named the infraorbital.

n. maxilla'ris infe'rior, inferior maxillary nerve, n. mandibularis [BNA].

n. maxilla'ris supe'rior, superior maxillary nerve, n. maxillaris [BNA].

n. mea'tus audito'rii exter'ni [BNA], nerve of the external auditory meatus, a branch of the n. auriculotemporalis supplying the lining of the external auditory meatus.

n. media'nus, median nerve, arises by two roots from the 5th cervical to 1st thoracic nerves through the two fasciculi of the brachial plexus; the roots join at the lower end of the axillary artery to form one nerve which passes down the arm on the outer side of the brachial artery, crossing it near the bend of the elbow, and then through the middle of the flexor surface of the forearm to the wrist; it gives off a number of cutaneous and muscular branches in the forearm.

n. membra'næ tym'pani [BNA], nerve of the membrana tympani, a branch of the n. auriculotemporalis supplying the drumhead.

n. meninge'us, n. meningeus medius [BNA].

n. meninge'us me'dius [BNA], middle meningeal nerve, recurrent meningeal nerve, a small branch of the maxillary which passes back into the middle cranial fossa, supplying the dura mater.

n meninge'us recur'rens, recurrent meningeal nerve, n. meningeus medius [BNA].

n. menta'lis [BNA], mental nerve, a branch of the inferior alveolar, arising in the inferior dental canal and passing through the mental foramen to the chin and lower lip.

n. mo'tor oc'uli, n. oculomotorius [BNA].

n. musculocuta'neus, musculocutaneous nerve, (1) arises from the 5th, 6th, and 7th cervical, passes outward to the coracobrachialis muscle and then downward between the brachialis and biceps, supplying these three muscles and being prolonged as the sensory lateral cutaneous nerve of the forearm; (2) n. peronæus superficialis [BNA].

n. musculospira'lis, musculospiral nerve, n. radialis [BNA].

n. mus'culi cauda'lis [NK], n. coccygeus.

n. mylohyoid'eus [BNA], mylohyoid nerve, a small branch of the inferior alveolar given off just before the nerve enters the inferior dental foramen, distributed to the anterior belly of the digastric and to the mylohyoid muscle.

n. nasa'lis, n. nasociliaris [BNA].

n. nasocilia'ris [BNA], nasociliary nerve, nasal nerve, a branch of the ophthalmic in the sphenoidal fissure, passing through the orbit, entering the cranial cavity through the anterior ethmoidal foramen, and then the nasal cavity, through the nasal fissure its branches are the long root of the ciliary ganglion, the long ciliary nerves, the infratrochlear, and nasal branches, supplying the mucous membrane of nose, the skin of the tip of the nose, and the conjunctiva

n. nasopalati'nus [BNA], nasopalatine nerve, Scarpa's nerve, a branch from Meckel's ganglion, passing through the sphenopalatine foramen, down the nasal septum, and through the incisor foramen to supply the mucous membrane of the hard palate

n. obturato'rius [BNA], obturator nerve, arises from the 2d, 3d, and 4th lumbar nerves by three roots in the psoas muscle, passes downward and forward below the brim of the pelvis, and enters the thigh through the obturator groove of the thyroid foramen; it supplies muscles and skin on the inner side of the thigh.

n. occipita'lis ma'jor [BNA], larger occipital nerve, medial branch of the posterior primary division of the second cervical nerve, sends branches to the semispinalis capitis and multifidus cervicis, but is mainly sensory, supplying the back part of the scalp.

n. occipita'lis min'imus, least occipital nerve, n occipitalis tertius [BNA]

n. occipita'lis mi'nor [BNA], lesser occipital nerve, arises from the second and third cervical nerves, supplies the skin of the posterior surface of the pinna and the adjacent portion of the scalp.

n. occipita'lis ter'tius [BNA], third occipital nerve, n. occipitalis minimus, medial branch of the posterior primary division of the third cervical nerve; this is usually joined with the n. occipitalis major, but may exist as an independent nerve supplying sensory branches to the scalp and nucha.

n. oculomoto'rius [BNA], oculomotor nerve, motor oculi, 3d cranial nerve; supplies all the extrinsic muscles of the eye, except the external rectus and superior oblique, and also the levator palpebræ superioris, the ciliary muscle, and the sphincter pupillæ; its origin is the floor of the aquæductus cerebri, it emerges

from the brain in the oculomotor sulcus, pierces the dura mater to the side of the posterior clinoid process, passes through the cavernous sinus and enters the orbit through the superior orbital (sphenoidal) fissure.

n. olfacto'rius [BNA], olfactory nerve, 1st cranial, nerve of smell; one of 20 nerves on each side, arising from the olfactory bulb and distributed to the nasal mucous membrane.

n. ophthal'micus [BNA], ophthalmic nerve, the ophthalmic branch of the trigeminus, passes forward from the semilunar ganglion in the outer wall of the cavernous sinus, entering the orbit through the superior orbital (sphenoidal) fissure; through its branches, frontal, lacrymal, and nasociliary, it supplies sensation to the orbit and its contents, the anterior part of the nasal cavity, and the skin of the forehead.

n. op'ticus [BNA], optic nerve, 2d cranial nerve of sight; taking origin from the retina, passes out of the orbit through the optic foramen to the chiasm, where most of the fibers cross to the opposite side and pass through the optic tract to the geniculate bodies and superior corpora quadrigemina.

n. orbita'lis, orbital nerve, n. zygomaticus [BNA].

n. palati'nus [BNA], palatine nerve, one of a number of branches, anterior, middle (external), and posterior, from the sphenopalatine ganglion, supplying the mucous membrane of the palate.

n. pathet'icus, pathetic nerve, fourth nerve, n. trochlearis [BNA].

n. perine'i [BNA], perineal nerve, the superficial terminal branch of the pudendal nerve, supplying most of the muscles of the perineum as well as the skin of that region.

n. peronæ'us commu'nis [BNA], common peroneal nerve, external popliteal nerve, one of the terminal divisions of the sciatic, passing through the lateral portion of the popliteal space to opposite the head of the tibia where it divides into the superficial and deep peroneal nerves.

n. peronæ'us profun'dus [BNA], deep peroneal nerve, anterior tibial nerve, one of the terminal branches of the common peroneal nerve; passing down the front of the leg on the front of the interosseous membrane and lower part of the tibia, supplying the tibialis anterior, extensor proprius hallucis, extensor longus digitorum, and peronæus tertius muscles, and also the skin of the great toe and inner surface of the 2d toe.

n. peronæ'us superficia'lis [BNA], superficial peroneal nerve, musculocutaneous nerve, a branch of the common peroneal, passes downward in front of the fibula to the lower third of the leg where it divides into branches supplying the long and short peroneal muscles and the skin of the dorsum of the foot and the toes.

n. petro'sus profun'dus [BNA], deep petrosal nerve, great deep petrosal branch of the carotid plexus, the sympathetic part of the Vidian nerve; it arises from the internal carotid plexus and joins the larger superficial petrosal at the entrance of the pterygoid canal.

n. petro'sus superficia'lis ma'jor [BNA], larger superficial petrosal nerve, the motor part of the Vidian nerve, a branch of the geniculate ganglion of the facial nerve, running through the groove on the anterior surface of the pyramid of the temporal bone to the foramen lacerum and the pterygoid canal.

n. petro'sus superficia'lis mi'nor [BNA], lesser superficial petrosal nerve, the sensory root of the otic ganglion, derived from the tympanic plexus; it leaves the tympanum through the superior tympanic canaliculus and passes within the cranium to the sphenopetrosal fissure, through which or the foramen innominatum it reaches the otic ganglion.

n. pharynge'us, one of several nerves of the pharynx, branches of the sympathetic, glossopharyngeus, and vagus.

n. phren'icus [BNA], phrenic nerve, arises from the cervical plexus, chiefly from the fourth nerve, passes downward in front of the scalenus anterior and enters the thorax between the subclavian artery and vein behind the sternoclavicular articulation; it then passes in front of the root of the lung to the diaphragm; it is mainly the motor nerve of the diaphragm but sends sensory fibers to the pericardium.

n. planta'ris exter'nus, external plantar nerve, n. plantaris lateralis [BNA].

n. planta'ris inter'nus, internal plantar nerve, n. plantaris medialis [BNA].

n. planta'ris latera'lis [BNA], lateral plantar nerve, external plantar nerve, one of the terminal branches of the tibial, supplying the muscles and skin of the outer portion of the sole of the foot.

n. planta'ris media'lis [BNA], medial plantar nerve, internal plantar nerve, one of the terminal branches of the tibial, supplying the muscles and skin of the inner portion of the sole of the foot.

n. pneumogas'tricus, pneumogastric nerve, n. vagus [BNA].

n. poplite'us exter'nus, external popliteal nerve, n peronæ'us communis [BNA].

n. poplite'us inter'nus, internal popliteal nerve, n tibialis [BNA].

n. praesacra'lis, the superior hypogastric plexus.

n. pterygoid'eus [BNA], pterygoid nerve, one of two motor branches, externus and internus, of the buccinator, supplying the external and internal pterygoid muscles.

n. puden'dus [BNA], pudendal nerve, pudic nerve, formed of the greater portion of the pudendal plexus it passes through the greater sciatic foramen and accompanies the internal pudendal artery, terminating as the dorsal nerve of the penis or of the clitoris.

n. pu'dicus, pudic nerve, n. pudendus [BNA].

n. radia'lis [BNA], radial nerve, (1) musculospiral nerve, arises from the posterior cord of the brachial plexus of which it is practically the continuation after emerging from the axilla it curves round the posterior surface of the humerus and passes down to the cubital fossa where it divides into its two terminal branches, the superficial ramus (radial nerve) which is sensory, and the deep ramus (posterior interosseous) which is motor; (2) ramus superficialis [BNA] of the radial (musculospiral) nerve.

n. recur'rens [BNA], recurrent nerve, (1) recurrent laryngeal nerve, inferior laryngeal nerve; a branch of the vagus curving upward, on the right side round the root of the subclavian artery, on the left side round the arch of the aorta, then passing up behind the common carotid artery and between the trachea and the esophagus to the larynx, all the muscles of which, except the cricothyroid, it supplies; it also sends branches to the cardiac plexus, to the cervical portion of the trachea, and the cervical portion of the esophagus: (2) n. spinosus [BNA].

n. saccula'ris [BNA], saccular nerve, a branch of the cochlear nerve going to the macula acustica of the saccule.

ner'vi sacra'les [BNA], sacral nerves, five nerves issuing from the sacral foramina on either side; three enter into the formation of the sacral plexus, and three into that of the pudendal plexus, the third sacral (n. bigeminus) going to both plexuses.

n. saphe'nus [BNA], saphenous nerve, long or internal saphenous nerve, the terminal branch of the femoral, extending from Scarpa's triangle to the foot, becoming cutaneous on the inner side of the knee; it supplies sensation to the skin of the leg and foot.

n. saphe'nus bre'vis or **exter'nus,** short or external saphenous nerve, n. suralis [BNA]

n. saphe'nus lon'gus, long saphenous nerve, n saphenus [BNA].

ner'vi scrota'les anterio'res [BNA], anterior scrotal nerves, sensory branches of the n. ilioinguinalis, distributed to the skin of the root of the penis, and the anterior surface of the scrotum.

ner'vi scrota'les poste'riores [BNA], posterior scrotal nerves, several terminal branches of the perineal nerve, supplying the skin of the posterior portion of the scrotum, corresponding to n. labialis posterior in the female.

n. spermat'icus exter'nus [BNA], external spermatic nerve, the genital branch of the genitofemoralis or genitocrural nerve, passing along the psoas magnus muscle and through the internal abdominal ring, supplying the cremaster muscle in the male and terminating in the round ligament in the female.

n. sphenopalati'nus [BNA], sphenopalatine nerve, one of two short branches, given off by the maxillary in the sphenomaxillary fossa, which constitute the

short (sensory) roots of the sphenopalatine (Meckel's) ganglion.

ner'vi spina'les [BNA], spinal nerves, those whose nuclei of origin are located in the gray columns of the spinal cord.

n. spino'sus [BNA], spinous nerve, recurrent nerve, a branch of the mandibular, entering the skull by the foramen spinosum to supply the dura mater.

n. splanch'nicus i'mus [BNA], lowest splanchnic nerve, smallest splanchnic nerve, a nerve containing the sympathetic fibers for the renal plexus, usually contained in the lesser splanchnic nerve, but occasionally existing as an independent cord.

n. splanch'nicus ma'jor [BNA], greater splanchnic nerve, arises from the 5th or 6th to the 9th or 10th thoracic ganglia of the sympathetic, and passes downward along the sides of the bodies of the thoracic vertebræ, to join the celiac plexus.

n. splanch'nicus min'imus, smallest splanchnic nerve n. splanchnicus imus [BNA].

n. splanch'nicus mi'nor [BNA], lesser splanchnic nerve, arises from the last two thoracic ganglia of the sympathetic and passes down, on the outer side of the greater splanchnic nerve, to the celiac and renal plexuses.

n. stape'dius [BNA], nerve of the stapedius muscle, a branch of the facial arising in the facial canal and passing forward to the tympanum.

n. subcla'vius [BNA], subclavian nerve, one of the anterior thoracic nerves supplying the subclavius muscle.

n. sublingua'lis [BNA], sublingual nerve, a branch of the lingual to the sublingual gland and mucous membrane of the floor of the mouth.

n. suboccipita'lis [BNA], posterior primary division of the first cervical nerve, passing through the suboccipital triangle and sending branches to the rectus capitis posterior major and minor, obliquus capitis superior and inferior, rectus lateralis, and semispinalis capitis.

ner'vi subscapula'res [BNA], subscapular nerves, branches of the brachial plexus, supplying the subscapularis muscle.

n. subscapula'ris lon'gus, long subscapular nerve, n. thoracodorsalis [BNA].

n. supraacromia'lis, supraacromial nerve, n. supraclavicularis posterior [BNA].

n. supraclavicula'ris, supraclavicular nerve, n supraclavicularis medius [BNA].

n. supraclavicula'ris ante'rior [BNA], anterior supraclavicular nerve, suprasternal nerve, arises from the 3d and 4th cervical, supplies the skin over the upper part of the thorax.

n. supraclavicula'ris me'dius [BNA], middle supraclavicular nerve, supraclavicular nerve, arises from the 3d and 4th cervical, supplies the skin of the infra clavicular fossa.

n. supraclavicula'ris poste'rior [BNA], posterior supraclavicular nerve, supraacromial nerve, arises from the 3d and 4th cervical, supplies the skin of the houlder.

n. supraorbita'lis [BNA], supraorbital nerve, a branch of the frontal leaving the orbit through the supraorbital foramen or groove and dividing into branches distributed to the forehead and scalp, upper eyelid, and frontal sinus.

n. suprascapula'ris [BNA], suprascapular nerve, arises from the 5th and 6th cervical, passes downward parallel to the cords of the brachial plexus, then through the suprascapular foramen, supplying the supraspinatus and infraspinatus muscles, and also sending branches to the shoulder joint.

n. suprasterna'lis, suprasternal nerve, n. supra clavicularis anterior [BNA].

n. supratrochlea'ris [BNA], supratrochlear nerve, a branch of the frontal supplying the inner canthus of the eye, the central part of the skin of the forehead, and the root of the nose

n. sura'lis [BNA], sural nerve, short or external saphenous nerve, formed by the union of the medial sural cutaneous from the tibial and the peroneal anastomotic branch of the common peroneal, about the middle of the calf; thence it accompanies the small saphenous vein around the lateral (external) malleolus to the dorsum of the foot.

n. tempora'lis profun'dus [BNA], deep temporal nerve, one of two branches, anterior and posterior, given off from the masticator nerve, supplying the temporal muscles.

n. temporomala'ris, temporomalar nerve, n. zygomaticus [BNA].

n. tenso'ris tym'pani [BNA], nerve of the tensor tympani muscle, a motor branch of the otic ganglion supplying the tensor tympani muscle.

n. tenso'ris ve'li palati'ni [BNA], nerve of the tensor muscle of the velum palatinum, a motor branch of the otic ganglion, supplying the tensor palati muscle.

n. tento'rii [BNA], tentorial nerve, a branch of the n. ophthalmicus supplying the tentorium.

ner'vi thoraca'les [BNA], thoracic nerves, twelve nerves on each side, mixed motor and sensory, supplying the muscles and skin of the chest.

n. thoraca'lis ante'rior [BNA], anterior thoracic nerve, one of a number of nerves arising from the 5th to 8th cervical, passing forward to be distributed to the pectoralis minor and major muscles.

n. thoraca'lis lon'gus [BNA], long thoracic nerve, posterior thoracic, external respiratory nerve of Bell, arises from the 5th, 6th, and 7th cervical nerves, descends the neck behind the brachial plexus, and is distributed to the serratus magnus muscle.

n. thoraca'lis poste'rior [BNA], posterior thoracic nerve, a name applied to the dorsalis scapulæ and thoracalis longus nerves collectively.

n. thoracodorsa'lis [BNA], thoracodorsal nerve, long subscapular nerve, arises from the 6th and 7th cervical nerves and supplies the latissimus dorsi muscle.

n. tibia'lis anti'cus, anterior tibial nerve, n peronæus profundus [BNA].

n. tibia'lis [BNA], tibial nerve, internal popliteal nerve, one of the two terminal branches of the sciatic, passing down in company with the popliteal and posterior tibial arteries, giving off a number of terminal branches behind the medial (internal) malleolus; it supplies the knee, muscles of the calf, and skin of the leg.

n. trigem'inus [BNA], trigeminal or trifacial nerve, 5th cranial nerve, the chief sensory nerve of the face and the motor nerve of the muscles of mastication; its nuclei are in the mesencephalon and in the pons extending down into the cervical portion of the spinal cord; it emerges by two roots, sensory and motor, from the lateral portion of the surface of the pons, and enters a cavity of the dura mater, cavum of Meckel, at the apex of the petrous portion of the temporal bone, where the sensory root expands to form the Gasserian ganglion; from there the three divisions—ophthalmic, maxillary, and mandibular—branch forth.

n. trochlea'ris [BNA], trochlear nerve, fourth nerve, pathetic nerve, supplies the superior oblique muscle of the eye; its origin is in the floor of the aquæductus cerebri, its fibers decussate in the anterior medullary velum, and it emerges from the brain at the side of the frenulum and enters the orbit through the sphenoidal fissure.

n. tympan'icus [BNA], tympanic nerve, Jacobsons' nerve, a nerve from the petrous ganglion of the glossopharyngeal, passing to the tympanum, forming there the tympanic plexus which supplies the mucous membrane of the tympanum, mastoid cells, and Eustachian tube.

n. ulna'ris [BNA], ulnar nerve, arises through the inner cord of the brachial plexus from the 8th cervical and 1st thoracic nerves, passes down the arm, through the interval between the olecranon process and the inner condyle of the humerus, and down the ulnar side of the forearm to the wrist; it gives off numerous muscular and cutaneous branches in the forearm.

n. utricula'ris [BNA], utricular nerve, a branch of the vestibular trunk of the acoustic, supplying the macula acustica of the utricle.

ner'vi vagina'les [BNA], vaginal nerves, several nerves passing from the pudendal plexus to the vagina.

n. va'gus [BNA], vagus nerve, pneumogastric nerve, 10th cranial nerve, arises by numerous small cords from the side of the medulla oblongata, between the glassopharyngeus above and the accessorius below; its deep connections are similar to those of the glossopharyngeus; it leaves the cranial cavity by the jugular foramen and passes down to supply the larynx, lungs, heart, œsophagus, stomach, and most of the abdominal

viscera; it is a mixed nerve both of sensation and of motion.

ner'vi vesica'les inferio'res [BNA], inferior vesical nerves, several small nerves passing from the pudendal plexus to the bladder.

n. vestib'uli [BNA], nerve of the vestibule, vestibular nerve, the upper of the two trunks of the acoustic nerve in the internal acoustic meatus; its terminal branches pierce the lamina cribrosa and supply the utricle and the superior and lateral semicircular canals.

n. zygomat'icus [BNA], zygomatic nerve, orbital or temporomalar nerve, a branch of the maxillary in the inferior orbital fissure through which it passes and emerges on the face through the zygomatico-orbital foramen; here it divides into two branches supplying the skin of the temple and over the malar bone.

Ness'ler's rea'gent [A. *Nessler*, German chemist, 1827–1905.] A solution of caustic potassa, iodide of mercury, and iodide of potassium, which gives a yellow precipitate with traces of ammonia and a brown precipitate with larger amounts.

nesslerize (nes'lur-īz). To treat with Nessler's reagent; employed in the determination of urea-nitrogen in the blood and in the urine.

nest [A.S.] A structure having a fancied resemblance to a bird's nest; see *nidus*. **Brunn's n.**, see *Brunn*. **epithe'lial n.**, one of a number of small bodies formed of concentrically arranged, flattened, ceratinized cells, found in epitheliomatous growths; called also epithelial pearls. **swallow's n.**, nidus hirundinis.

nestiatria (nes-tī-at'rĭ-ah) [*nēstis*, fasting, + *iatreia*, medical treatment.] Nestitherapy.* hunger-cure.

nestiostomy (nes-tī-os'to-mĭ) [G. *nēstis*, jejunum, + *stoma*, mouth.] The operative establishment of a fistula opening into the jejunum, jejunostomy.

nes'tis [G. *nēstis*, fasting.] Jejunum.

nestither'apy (nes-tī-ther'a-pĭ) [G. *nēstis*, fasting, + *therapeia*, healing.] Treatment of disease by a reduced diet or absolute fast; nestiatria, hunger-cure.

net-knot. Caryosome.

net'tle [A.S. *netele*.] Urtica.

net'tle-rash. Urticaria.

nett'ling hairs. Sharp-pointed barbed hairs of certain caterpillars which contain an irritating toxic substance causing dermatitis when brought in contact with the skin.

net'work. A structure bearing a resemblance to a woven fabric; rete, reticulum. **cell n.**, mitome. **peritar'sal n.**, the lymphatic vessels along the margin of the eyelid. **subpap'illary n.**, the capillary blood-vessels in the deeper layers of the skin.

Neubauer's ar'tery (noy'bow-er) [Johann Ernst *Neubauer*, German anatomist, 1742–1777.] An inconstant artery arising from the arch of the aorta and supplying the thyroid gland, arteria thyreoidea ima.

Neuber's meth'od (noy'ber). Treatment of osseous and articular tuberculosis by removing the carious tissue and filling the cavity with a 10 per cent. emulsion of iodoform in glycerin. **N.'s opera'tion,** filling a bone cavity by flaps of skin from the sides of the wound and tacking them down to the bone. **N.'s tubes,** drainage tubes made of bone.

Neumann's cells (noy'mahn) [Ernst *Neumann*, German pathologist, 1834–1918.] Colored nucleated cells in the bone-marrow developing into red blood-cells. **N.'s sheath,** dentinal* sheath.

Neumann's disease' (noy'mahn) [Isidor *Neumann*, Viennese dermatologist, *1832–1906.] Pemphigus vegetans.

Neumann's law (noy'mahn) [Franz Ernst *Neumann*, German physicist, 1798–1895.] In compounds of analogous chemical constitution, the molecular heat, or the product of the specific heat by the atomic weight, is always the same.

Neumann's meth'od (noy'mahn) [Heinrich *Neumann*, Viennese otologist, contemporary.] Local anesthesia in ear surgery by subperiosteal injection of a solution of cocaine and adrenalin.

neurad (nu'rad) [G. *neuron*, nerve, + L. *ad*, to.] Toward the neural axis.

neuradynamia (nu-rad-i-nam'ĭ-ah) [G. *neuron*, nerve, + *a-* priv. + *dynamis*, force.] Neurasthenia.

neurag'mia [G. *neuron*, nerve, + *agmos*, fracture.] The rupture or tearing asunder of a nerve.

neu'ral [G. *neuron*, nerve.] 1. Relating to any part of the nervous system, especially to the cerebrospinal system in a vertebrate embryo. 2. Referring in a vertebrate embryo to the dorsal region; opposed to visceral or hemal. **n. arch, axis, canal,** etc., see the nouns.

neural'gia [G. *neuron*, nerve, + *algos*, pain.] Nerve-pain; pain of a severe, throbbing or stabbing character in the course or distribution of a nerve. **degen'erative n.**, n. caused by degenerative changes in the nerve or its central origin. **epilep'tiform n.**, tic douloureux. **genic'ulate n.**, a severe paroxysmal lancinating pain deep in the ear, on the anterior wall of the external meatus, and on a small area just in front of the pinna, caused by a lesion of the geniculate ganglion. **hallu'cinatory n.**, a cerebral impression of local pain occurring without any actual peripheral nerve pain, or persisting after an attack of neuralgia has ceased (reminiscent n.). **idiopath'ic n.**, nerve-pain not due to any apparent lesion of the nerve itself or to pressure from a lesion of the surrounding parts. **intercos'tal n.**, pain in the side, frequently the left, due to neuralgia of one or more of the intercostal nerves. **mam'mary n.**, mastodynia, intercostal n. of the branches of the upper dorsal nerves of one side. **n. facia'lis ve'ra,** geniculate n. **red n.**, erythromelalgia. **reminis'cent n.**, a cerebral impression of pain persisting, in a hypersensitive person, after the actual attack of neuralgia has passed away. **sciatic n.**, sciatica. **stump n.**, pain referred to the absent part, caused by pressure on the nerves in an amputation stump. **symptomat'ic n.**, n occurring as a symptom of some local or systemic disease not involving primarily the nerve structures.

neural'gic. Relating to, resembling, or of the character of, neuralgia.

neural'giform [*neuralgia* + L. *forma*, form.] Resembling or of the character of neuralgia.

neural'gin. Trade name of a preparation of acetanilide, caffeine, and sodium salicylate; analgesic in doses of gr. 8–15 (0.5–1.0).

neuramebimeter, neuramœbimeter (nu-ram-e-bim'e-tur) [G. *neuron*, nerve, + *amoibē*, answer, + *metron*, measure.] An instrument for measuring the rapidity of response of a nerve to any stimulus.

neuranagenesis (nu-ran-ah-jen'e-sĭs) [G. *neuron*, nerve, + *ana*, up, again, + *genesis*, generation.] Regeneration of a nerve.

neurapoph'ysis [G. *neuron*, nerve, + *apophysis*, offshoot.] 1. One of the sides of the neural arch of a vertebra. 2. The homologue of a spinal neurapophysis in the reconstructed cranial vertebra. 3. The spinous process of a vertebra.

neurarchy (nu'rar-kē) [G. *neuron*, nerve, + *archē* dominion.] The dominant action of the nervous system over the physical processes of the body.

neurasthenia (nu-ras-the'nĭ-ah, nu-ras-thĕ-ne'ah) [G. *neuron*, nerve, + *astheneia*, weakness.] Nervous exhaustion, Beard's disease, a functional neurosis marked by intense nervous irritability and weakness; the chief symptoms are insomnia, headache, or feelings of constriction about the head, pain in the back, exhaustion after slight mental or physical exertion, excessive sensibility to noises, irregular heart action, vertigo, dyspepsia, disorders of vision, and loss of memory. **acous'tic n.**, n. in which deafness is a prominent symptom. **acquired' n.**, nervous exhaustion appearing in adult life, due to overwork and worry, mental shock, excesses of various sorts, syphilis, chronic poisoning, eyestrain, etc. **angioparalyt'ic n., angiopath'ic n.**, a form of mild n. in which the chief complaint is of a universal throbbing or sense of pulsation throughout the body. **cer'ebral n.**, n. in which headache and mental weakness or irritability are prominent symptoms. **gas'tric n.**, a condition marked by gastric atony and distention, dyspepsia, and mild neurasthenic symptoms. **n. gra'vis**, a condition of extreme and lasting n. **n. præ'cox**, primary n., a form of nervous exhaustion appearing in the adolescent period. **obses'sive n.**, psychasthenia. **optic n.**, a form in which visual disturbances, especially a narrowing of the visual field, are prominent symptoms. **pul'sating n.**, angiopathic n. **sex'ual n.**, a form in which sexual erethism, weakness, or perversion is a marked symptom. **spinal n.**, the common form of n. in which symptoms referable to the spinal cord are marked. **traumat'ic n.**, nervous exhaustion following an injury, especially if accompanied by fright; see *railway-spine*.

neurasthe'niac. One suffering from neurasthenia.

neurasthen'ic. 1. Relating to, or suffering from, neurasthenia. 2. One suffering from neurasthenia, a neurastheniac. **n. hel'met**, a feeling of pressure over the entire cranium in certain cases of neurasthenia.

neuratroph'ia, neurat'rophy [G. *neuron*, nerve, + *atrophia*, atrophy.] Atrophy or defective nutrition of the nerves or central nervous system.

neuratroph'ic. Relating to or marked by neuratrophy.

neurax'is. 1. The neural or cerebrospinal axis * 2. An axis-cylinder, neuraxon.

neuraxon, neuraxone (nu-raks'on, nu-raks'ōn) [G *neuron*, nerve, + *axōn*, axis.] Neurite, axis-cylinder process; a slender, usually single, process from the cell-body of the neuron; it may proceed unbranched to form the axis-cylinder of a nerve-fiber (in cells of the *first type*, or of *Deiters*), or break up into numerous collateral branches to form a dendraxon (in cells of the *second type*, or of *Golgi*), or, finally, there may be two or more neuraxons passing out from one cell (in cells of the *third type*, or of *Cajal*).

neure (nūr). Neuron, nerve-cell.

neurecta'sia, neurec'tasis, neurec'tasy [G. *neuron*, nerve, + *ektasis*, extension.] Nerve-stretching.

neurec'tomy [G. *neuron*, nerve, + *ektomē*, excision.] Excision of a segment of a nerve.

neurecto'pia, neurec'topy [G. *neuron*, nerve, + *ek*, out of, + *topos*, place.] 1. Dislocation of a nerve-trunk. 2. A condition in which a nerve follows an anomalous course.

neurenter'ic [G. *neuron*, nerve, + *enteron*, intestine.] Relating, in the embryo, to both neuron and enteron, to the neural and enteric tubes. **n. canal'**, notochordal* canal; strictly, in the human embryo, only the posterior portion of the notochordal canal, corresponding to the n. canal of the lower vertebrates. **n. pore**, the extremity of the n. canal.

neurepithe'lial. Relating to the neurepithelium.

neurepithe'lium. 1. The specialized epithelium constituting the nerve-endings in the retina and the organ of Corti. 2. The layer of the epiblast developing into the cerebrospinal axis.

neurergic (nu-rur'jik) [G. *neuron*, nerve, + *ergon*, work.] Relating to the activity of a nerve.

neurexairesis (nu-reks-a're-sis) [G. *neuron*, nerve, + *exairesis*, a taking out.] Tearing out or evulsion of a nerve; a procedure recommended by Thiersch in place of exsection for the relief of intractable neuralgia.

neuriatria, neuriatry (nu-rĭ-at'rĭ-ah, nu-rĭ-at'rĭ) [G. *neuron*, nerve, + *iatreia*, medical treatment.] Treatment of nervous diseases.

neuricity (nu-ris'ĭ-tĭ) [G. *neuron*, nerve.] Nervous energy; the property inherent in nervous matter.

neu'ridine. A ptomaine, $C_5H_{14}N_2$, of gelatinous consistence and bad odor, present in decaying animal flesh and brain substance.

neurilem'ma [G. *neuron*, nerve, + *lemma*, husk.] Sheath of Schwann, a delicate hyaline membrane surrounding the medullary substance of a nerve-fiber, or the axis-cylinder in a non-medullated nerve-fiber.

neurilemmitis (nu-rĭ-lem-i'(e')tis). Inflammation of the neurilemma of a nerve fiber.

neuril'ity. The property of conducting stimuli, inherent in nerves.

neurimotility (nu"rĭ-mo-til'i-tĭ) [G. *neuron*, nerve, + L. *motus*, motion.] Nervimotility.

neurimo'tor. Nervimotor, relating to a motor nerve.

neu'rine. A toxic ptomaine, $C_5H_{13}NO$, trimethylvinyl ammonium hydroxide, a product of decomposing animal matter; also a poisonous constituent of mushrooms. 2. An extract of brain matter, suggested for use in various nervous disorders and in cancer. 3. Nerve-energy.

neurino'ma. Neurofibroma.

neurit, neurite (nu'rit, nu'rīt) [G. *neuritēs*, of a nerve] One of the terminal branches of a neuron; both axites and dendrites are neurites.

neurit'ic. Relating to neuritis.

neuritis (nu-rĭ'(re')tis) [G. *neuron*, nerve, + *-itis*] Inflammation of a nerve, marked by neuralgia, hyperesthesia, anesthesia, or parasthesia, paralysis, muscular atrophy in the region supplied by the affected nerve, and by abolition of the reflexes. **adventitial n.** (ad-ven-tish'al), inflammation of the sheath of a nerve. **ascend'ing n.**, inflammation progressing upward along a nerve-trunk in a direction away from the periphery. **ax'ial n.**, parenchymatous n. **degenera'tion n.**, n. accompanied by rapid degeneration of the nerve. **descend'ing n.**, inflammation progressing downward along a nerve-trunk in a direction toward the periphery. **dissem'inated n.**, segmental n. **central n.**, parenchymatous n. **endem'ic n.**, beriberi. **Fallo'pian n.**, a perineuritis of the facial nerve in the Fallopian canal, producing compression of the nerve and consequent facial paralysis. **interstitial n.** (in-ter-stish'al), inflammation of the connective-tissue framework of a nerve. **intraoc'ular n.**, inflammation of the retinal portion of the optic nerve. **mi'grating n.**, a neuritis which extends along the nerve-trunk, in a direction either from the periphery toward the center, *ascending n.*, or from the center toward the periphery, *descending n.* **mul'tiple n.**, simultaneous inflammation of a large number of the spinal nerves, marked by paralysis, pain, and wasting of

the muscles; polyneuritis. **op'tic n.,** inflammation of the optic nerve. **parenchy'matous n.,** inflammation of the nervous substance proper, the axis-cylinders and myelin. **retrobul'bar n.,** inflammation of the orbital portion of the optic nerve. **segmen'tal n., seg'mentary n.,** inflammation occurring at several points along the course of a nerve. **sciat'ic n.,** inflammation of the sciatic nerve, causing sciatica. **toxic n.,** n. due to the action of alcohol, lead, arsenic, or some other poison. **traumat'ic n.,** inflammation of a nerve following an injury.

neuroanatomy (nu″ro-an-at'o-mĭ). The anatomy of the nervous system.

neuroarthritism (nu″ro-ar'thrĭ-tizm). A condition in which there is a predisposition to nervous and rheumatoid or gouty disorders.

neuroarthropathy (nu'ro-ar-throp'ă-thĭ) [G. *neuron*, nerve, + *arthron*, joint, + *pathos*, suffering, disease.] A trophoneurosis affecting one or more joints.

neurobiotaxis (nu-ro-bi-o-tak'sis) [G. *neuron*, nerve, + *bios*, life, + *taxis*, arrangement.] The grouping and cooperation of nerve cells in response to an appropriate stimulus from outside or to a "call" or "command" from other cells.

eu'roblast [G. *neuron*, nerve, + *blastos*, germ.] An embryonic nerve-cell.

neurocaine (nu'ro-ka-in). A preparation of cocaine used as a local anesthetic.

neurocar'diac [G. *neuron*, nerve, + *kardia*, heart.] Relating to the nerve-supply of the heart; relating to a cardiac neurosis.

neurocele (nu'ro-sēl). Neurocœle.

neurocen'tral. Relating to the neurocentrum or central part of the neural axis, the vertebral body. **n. suture, n. synchondro'sis,** the line of union on either side between the body and the arch of a vertebra, in the young child.

neurocen'trum. The central portion of the neural axis, the body of a vertebra.

neurochitin (nu-ro-ki'tin) [G. *neuron*, nerve, + *chitōn*, tunic.] The supporting substance, that which forms the mitome, of the nerve-cell.

neurochorioiditis (nu-ro-ko″rĭ-oy-di'(de')tis). Inflammation of the chorioid coat of the eye and the optic nerve.

neurochorioretinitis (nu-ro-ko″rĭ-o-ret-in-i'(e')tis). Inflammation of the chorioid coat of the eye, the retina, and the optic nerve.

neurocœle (nu'ro-sēl, nu-ro-se'le) [G. *neuron*, nerve, + *koilos*, hollow.] The central cavity of the cerebrospinal axis, the combined ventricles of the brain and central canal of the spinal cord.

neurocra'nium [G. *neuron*, nerve, + *kranion*, skull.] The part of the skull enclosing the brain, as distinguished from the bones of the face.

neurocyte (nu'ro-sīt) [G. *neuron*, nerve, + *kytos*, a hollow (a cell).] A nerve-cell, neuron.*

neurocytoma (nu-ro-si-to'mah) [G. *neuron*, nerve, + *kytos*, cell, + *-oma*.] Neuroma (1).

neurodealgia (nu-ro-de-al'jĭ-ă) [G. *neurōdēs*, retina, + *algos*, pain.] Pain in the retina.

neurodeatrophia (nu-ro-de-ă-tro'fĭ-ă). Retinal atrophy.

neuroden'drite, neuroden'dron [G. *neuron*, nerve, + *dendron*, tree.] Dendrite, dendron.

neurodermatitis (nu-ro-der-mă-ti (te')tis) [G. *neuron*, nerve, + *derma*, skin, + *-itis*.] Inflammation of the skin of nervous origin.

neu″rodermato'sis. Dermatoneurosis.

neurodermite (nu-ro-dur'mīt). A lesion occurring in neurodermatitis.

neu'rodin. Acetylparaoxyphenylurethane; a colorless crystalline substance, antiperiodic and analgesic in doses of gr. 5–15 (0.3–1.0).

neurodyn'ia [G. *neuron*, nerve, + *odynē*, pain.] Neuralgia, nerve-pain.

neu″roepider'mal. Relating to the nerves and the epidermis, noting an embryonic layer from which these tissues are formed.

neuroepithe'lial. Relating to the neurepithelium.

neuroepithelio'ma. Glioma(2).

neuroepithe'lium. Neurepithelium.

neurofi'bril. Nerve-fibril.

neurofibro'ma, pl. *neurofibro'mata, neurofibro'mas.* False neuroma; neuroma(2).

neurofibromato'sis. The occurrence of tumors due to circumscribed hyperplasia of the fibrous structure of the nerves. **mul'tiple n.,** Recklinghausen's disease.

neu'rofil. One of a number of neurofibrils passing back from the origin of the axis-cylinder and enveloping the body of the cell.

neuroganglii'tis (nu″ro-gang-glĭ-i'(e')tis). Inflammation of a nerve-ganglion.

neuroganglion (nu″ro-gang'glĭ-on). Nerve-ganglion.

neurogas'tric. Relating to the nerves of the stomach.

neurogen'esis [G. *neuron*, nerve, + *genesis*, origin.] The formation of nerves and nervous matter.

neurogenet'ic, neurogen'ic [G. *neuron*, nerve, + *gennētos*, begotten.] 1. Originating in, or starting from, or caused by, the nerves or nerve-cells, neurogenous. 2. Relating to neurogenesis.

neurogenous (nu-roj'en-us) [G. *neuron*, nerve, + *gennaō*, I produce.] Neurogenetic(1).

neurog'lia [G. *neuron*, nerve, + *glia*, glue.] The supporting substance of the nerves and cells of the brain and spinal cord, composed of a delicate fibrous network enclosing the varieties of cells called spider cells* and mossy cells,* and small round cells with extremely slender processes, forming the oligodendroglia. See mesoglia cell.*

neurog'liac, neurog'liar. Relating to the neuroglia.

neurogliacyte (nu-rog'lĭ-ah-sīt) [*neuroglia* + G. *kytos*, cell.] One of the cells, mossy cells or spider cells, contained in the neuroglia.

neuroglioma (nu″ro-gli-o'mah). A tumor formed of neurogliar tissue; glioma.

neurogliosis (nu-ro-gli-o'sis). The occurrence of overgrowth or tumors of the neuroglia. **n. gangliocellula'ris diffu'sa,** epiloia.

neurogram (nu'ro-gram) [G. *neuron*, nerve, + *gramma*, diagram, picture.] The imprint on the physical brain substance left behind after every mental experience, *i.e.* the physical register of the mental experience, stimulation of which reproduces the original experience, thereby producing memory.

neurog'raphy [G. *neuron*, nerve, + *graphē*, a description.] Descriptive anatomy of the nervous system.

neurohistol'ogy. The microscopical anatomy of the nervous system.

neurohypnol'ogy [G. *neuron*, nerve, + *hypnos*, sleep, + *-logia*.] The science of hypnostim.

neurohypophyseal (nu″ro-hi-po-phiz'e-al). Relating to the posterior lobe of the pituitary body.

neurohypophysis (nu-ro-hi-pof'ĭ-sis) [G. *neuron*, nerve, + *hypophysis* (cerebri).] The posterior lobe of the hypophysis cerebri, or pituitary body.

neuroid (nu'royd) [G. *neuron*, nerve, + *eidos*, resemblance.] 1. Resembling a nerve, nerve-like. 2. Neurapophysis.

neuroinduction (nu-ro-in-duk'shun) [G. *neuron*, nerve, + L. *in ucere*, to persuade.] Suggestion.

neuroker'atin. A horny substance forming the supporting framework of the medullary substance of a medullated nerve-fiber.

neurokyme (nu'ro-kim) [G. *neuron*, nerve, + *kyma*, wave.] Nervous energy.

neurolapine (nu'ro-lap'ēn). Neurovirus in the rabbit.

neurolem'ma [G. *neuron*, nerve, + *lemma*, husk, skin.] An old term for the retina; not to be confused with *neurilemma*

neurol'ogist. One versed in the science of neurology; a specialist in the treatment of nervous diseases.

neurol'ogy [G. *neuron*, nerve, + *-logia*.] The branch of medical science which has to do with the nervous system and its disorders.

neurol'ysin. An antibody causing destruction of ganglion and cortical cells, obtained by the injection of brain substance.

neurol'ysis [G. *neuron*, nerve, + *lysis*, loosening, solution.] 1. Destruction of nerve tissue. 2. Freeing of a nerve from inflammatory adhesions. 3. Nervous exhaustion.

neurolyt'ic. Relating to neurolysis.

neuroma (nu-ro'mah), pl. *neuro'mata*, *neuro'mas* [G. *neuron*, nerve, + *-ōma*.] 1. A tumor formed chiefly or in great part of cells of the type of sympathetic ganglion cells (true neuroma, ganglioneuroma). 2. A fibrous tumor of a nerve-sheath surrounding and entangling the nerve-fibers (false neuroma, plexiform neuroma, neurofibroma). **amputa'tion n.**, a swelling of the divided end of a nerve in an amputation-stump; it is composed of proliferated nerve-fibers, turned upon themselves and imbedded in a dense fibrous growth. **false n.**, plexiform n., neurofibroma, a fibrous tumor of a nerve-trunk, containing no nerve-cells. **mul'tiple n.**, neuromatosis. **n. cu'tis**, neurofibroma of the skin. **n. telangiecto'des**, a vascular n., one containing an overgrowth of capillary vessels. **nevoid n.**, n. telangiectodes. **plex'iform n.**, a fibrous tumor of a nerve-sheath enclosing and separating the nerve-fibers. **traumat'ic n.**, amputation n., or one occurring in the cicatrix of any wound. **true n.**, ganglioneuroma, a tumor containing nerve-cells.

neuromala'cia [G. *neuron*, nerve, + *malakia*, softness.] Pathological softening of nervous tissue.

neu'romast [G. *neuron*, nerve, + *mastos*, hillock.] A sense-organ composed of neurepithelium; nerve-hillock.

neuromato'sis. The occurrence of multiple neuromata.

neuro'matous. Relating to a neuroma or to neuromatosis.

neuromechanism (nu-ro-mek'an-izm). The nervous apparatus—nerve-trunks, nerve-centers, and nerve-terminals—controlling the function of an organ or system.

neuromelitococcosis (nu"ro-mel-ĭ-to-kok-ko'sis). Malta fever with pronounced nervous (cerebral) complications.

neuromere (nu'ro-mēr) [G. *neuron*, nerve, + *meros*, part.] One of the dilatations formed at the anterior extremity of the neural groove in the embryo; as the groove becomes converted into the neural tube, the neuromeres resolve themselves into the three primary cerebral vesicles.

neuromime'sis [G. *neuron*, nerve, + *mimēsis*, imitation.] Hysterical or neurotic simulation of disease.

neuromus'cular [G. *neuron*, nerve + L. *musculus*, muscle.] Nervimuscular

neuromyelitis (nu"ro-mi-el-i'(e')tis) [G. *neuron*, nerve, + *myelos*, marrow, + *-itis*.] Neuritis combined with spinal-cord inflammation.

neuromyositis (nu"ro-mi-o-si'(se')tis) [G. *neuron*, nerve, + *mys*, muscle, + *-itis*.] Neuritis with inflammation of the muscles with which the affected nerve or nerves are in relation.

neuron (nu'ron) [G. *neuron*, a nerve.] 1. The morphological unit of the nervous system, consisting of the nerve-cell body and its various processes, the dendrites and the axis-cylinder process or neuraxon. 2. The axis-cylinder process of a nerve-cell, a neuraxon. 3. The cerebrospinal axis (obsolete).

neu'ronal. 1. Neuronic. 2. Trade name of bromodiethylacetamide, diethylbromacetamide; a synthetic hypnotic occurring in the form of a white powder of camphoraceous odor and bitter taste; dose, gr. 8–20 (0.5–1.3).

neuronatrophy (nu-ron-at'ro-fī). Atrophic sclerosis of the body of a nerve-cell and the sum of the symptoms resulting therefrom.

neuroneph'ric [G. *neuron*, nerve, + *nephros*, kidney.] Relating to the nerve-supply of the kidney.

neuron'ic. Relating to a neuron or nerve-cell.

neuronidia (nu-ro-nid'ĭ-ă). Trade name of an elixir of diethylmalonylurea (barbitalum).

neuronitis (nu-ron-i'(e')tis). Degenerative inflammation of nerve cells.

neuronophag, neuronophage (nu-ron'o-fag, nu-ron'o-fāj) [G. *phagō*, I eat.] A phagocyte which devours nerve-cells.

neuronopha'gia, neuronoph'agy [G. *neuron*, nerve, + *phagō*, I eat.] Phagocytosis of nerve cells.

neuron'osus [G. *neuron*, nerve, + *nosos*, disease.] Any disease of the nervous system, neuropathy

neuronyx'is [G. *neuron*, nerve, + *nyxis*, pricking.] Acupuncture of a nerve.

neuroparal'ysis. Paralysis resulting from disease of the nerve supplying the affected part.

neu"roparalyt'ic. Relating to neuroparalysis.

neu'ropath. One who suffers from or is predisposed to some disease of the nervous system.

neuropath'ic. Relating in any way to neuropathy.

neuropathogen'esis [G. *neuron*, nerve, + *pathos*, suffering, + *genesis*, origin.] The origin or causation of a disease of the nervous system.

neurop'athist. Neurologist.

neuropathol'ogy. Pathology of the nervous system.

neurop'athy [G. *neuron*, nerve, + *pathos*, suffering.] Any disease of the nervous system, neuronosus.

neurophilic (nu-ro-fil'ik) [G. *neuron*, nerve, + *philos*, fond.] Neurotropic.

neuropho'nia [G. *neuron*, nerve, + *phōnē*, voice.] A spasm or tic of the muscles of phonation causing involuntary sounds or cries.

neurophysiol'ogy. Physiology of the nervous system.

neuropile (nu'ro-pīl) [G. *neuron*, nerve, + *pilos*, felt.] Neurite.

neuropi'lem [G. *neuron*, nerve, + *pilos*, felt.] The network of nerve-fibrils into which the nerve-fiber divides at its termination.

neu'roplasm. The protoplasm of a nerve-cell.

neu'roplasty. Plastic surgery of the nerves.

neu'roplex, neuroplex'us. A plexus of nerves.

neurop'loca [G. *neuron*, nerve, + *plokē*, a web.] A nerve-ganglion.

neuropo'dion, neuropo'dium [G. *neuron*, nerve, + *podion*, little foot.] Dendraxon.

neuropore (nu'ro-pōr) [G. *neuron*, nerve, + *poros*, pore.] An opening in the embryo leading from the neural canal to the exterior.

neuropotential (nu-ro-po-ten'shyal) [G. *neuron*, nerve, + *potential*.] The reserve of energy in nervous structure.

neuropsychiatry (nu-ro-sī-kī'ă-trĭ). Combined neurology and psychiatry, the specialty dealing with diseases of both mind and nervous system.

neuropsychopath'ic. Relating to neuropsychopathy.

neuropsychopathy (nu-ro-si-kop'ă-thĭ) [G. *neuron*, nerve, + *psythe*, mind, + *pathos*, suffering.] A neurosis accompanied by mental symptoms.

neuropsychosis (nu-ro-si-ko'sis). Neuropsychopathy.

neurorelapse (nu''ro-re-laps'). The occurrence of nervous symptoms in syphilis following an injection of salvarsan; called also neurorecidive and neurorecurrence.

neuroretinitis (nu-ro-ret-in-ī'(e')tis) [G. *neuron*, nerve, + L. *retina* + G. *-itis*.] Inflammation of the retina and of the optic nerve.

neurorrhaphy (nu-ror'ră-fĭ) [G. *neuron*, nerve, + *rhaphē*, suture.] Joining by suture the ends of a divided nerve.

neurorrheuma (nu-ro-ru'mah) [G. *neuron*, nerve, + *rheuma*, current.] Nerve-energy

Neuroryc'tes hydropho'biæ [G. *neuron*, nerve, + *oryktēs*, a digger.] Negri* body, the supposed protozoan microorganism of rabies.

neuro'sal. Relating to a neurosis.

neurosarcocleisis (nu-ro-sar-ko-klī'sis) [G. *neuron*, a nerve, + *sarx*(*sark-*), flesh, + *kleiō*, I enclose] An operation for the relief of neuralgia, which consists in resection of one of the walls of the osseous canal traversed by the nerve and the transportation of the latter into the soft tissues.

neurosarco'ma. A mixed neuroma and sarcoma; glioma (2).

neurosclero'sis [G. *neuron*, nerve, + *sklērōsis*, induration.] Hardening of the nerves in consequence of overgrowth of the connective tissue

neuro'sis [G. *neuron*, nerve] 1. A nervous disease, especially a functional nervous disease or one which is dependent upon no evident lesion. 2 A peculiar state of tension or irritability of the nervous system; any form of nervousness. **ac'cident n.,** traumatic n. **anxi'ety n.,** psychasthenia in which gloomy forebodings are a predominant symptom. **fatigue' n.,** neurasthenia or psychasthenia. **occupa'tion** or **profes'sional n.,** a functional disorder of a group of muscles which one uses chiefly in his occupation, marked by the occurrence of spasm, paresis, or incoordination when one attempts to repeat the habitual movements, as in writing, playing the piano and other musical instruments, etc. **sex'ual n.,** a nervous disorder of the sexual function, such as impotence or spermatorrhea. **tor'sion n.,** dysbasia lordotica progressiva. **traumat'ic n.,** any functional nervous disorder following an accident or injury. **war n.,** shell-shock, a nervous disorder, with or without a physical basis, induced by conditions existing in warfare.

neurosism (nu'ro-sizm). Nervousness, neurasthenia, neuroticism; a condition of perverted or irritable nervous action.

neuroskel'eton [G. *neuron*, nerve.] Endoskeleton.

neu'rosome [G. *neuron*, nerve, + *sōma*, body.] 1. One of the minute granules seen in the protoplasm of a neuron and of its axis-cylinder 2. The body of a nerve-cell.

neurospasm (nu'ro-spazm) [G. *neuron*, nerve, + *spasmos*, spasm.] Muscular spasm or twitching caused by a disordered nerve-supply.

neurosplanchnic (nu-ro-splank'nik) [G. *neuron*, nerve, + *splanchnon*, a viscus.] Relating to both the cerebrospinal and the sympathetic nervous systems.

neurospon'gium [G. *neuron*, nerve, + *spongion*, small sponge.] 1. The network of fibrils supporting the neuroplasm. 2. The reticular layer of the retina.

neurostearic acid (nu-ro-ste-ar'ik as'id) [G. *neuron*, nerve, + *stear*, tallow] An acid obtained from brain matter by the action of dilute sulphuric acid

neurosthenia (nu-ro-sthe'nĭ-ah) [G. *neuron*, nerve, + *sthenos*, force] A condition in which the nerves respond with abnormal force or rapidity to slight stimuli.

neurosurgeon (nu-ro-sur'jun) [G. *neuron*, nerve.] A surgeon specializing in operations on the nerves and central nervous system.

neurosurgery (nu-ro-sur'jĭ-rĭ) [G. *neuron*, nerve] Surgery of the nervous system.

neurosu'ture. Nerve-suture, neurorrhaphy.

neurosyphilis (nu-ro-sif'ĭ-lis). Syphilis affecting especially the nerve structures.

neurota'bes [G. *neuron*, nerve, + L *tabes*, a wasting away] Polyneuritis with ataxic symptoms.

neurotagma (nu-ro-tag'mah) [G. *neuron*, nerve, + *tagma*, that which is arranged.] The arrangement of protoplasmic elements in the neuron

neuroten'sion. Nerve-stretching.

neurothele (nu'ro-thēl) [G. *neuron*, nerve, + *thēlē* nipple.] Nerve-papilla.

neurotherapeu'tics, neurother'apy. The treatment of nervous disorders

neurothlip'sia [G. *neuron*, nerve, + *thlipsis*, pressure.] Pressure on one or more nerves

neurot'ic. 1. Nervous, relating to or suffering from a neurosis. 2. One who suffers from a neurosis, or functional nervous disorder. 3. An agent for subduing nervous erethism, a nervine.

neurot'icism. Nervosity, nervosism, neurosism, the condition of being neurotic, or of suffering from perverted or irritable nervous action.

neurotiza'tion. The acquiring of nervous substance; the regeneration of a nerve.

neu'rotize. To provide with nerve substance.

neurotology (nu-ro-tol'o-jĭ) [G. *neuron*, nerve, + *ous* (*ōt-*), ear, + *-ology*.] The science dealing with labyrinthine affections and with the brain lesions complicating disease of the ear.

neu'rotome [G. *neuron*, nerve, + *tomos*, a slice] 1 Neuromere. 2. A very slender knife, or needle, for teazing apart nerve-fibers in microdissection.

neurot'omy [G. *neuron*, nerve, + *tomē*, a cutting.] 1. Operative division of a nerve. 2. Anatomy of the nervous system.

neuroton'ic. 1 Relating to neurotony, or nerve stretching. 2. Strengthening or stimulating impaired nervous action. 3. An agent which improves the tone or force of the nervous system.

neurot'ony [G. *neuron*, nerve, + *tonos*, tension] Nerve-stretching.

neurotox'ic. Poisonous to nervous substance.

neurotox'in. A cytotoxin specific for cells of the central nervous system, neurolysin.

neurotrauma (nu-ro-traw'mah). Neurotrosis.

neurotrip'sy [G. *neuron*, nerve, + *tripsis*, a rubbing.] The operative crushing of a nerve.

neurotrophasthenia (nu''ro-trof-as-the'nĭ-ah) [G. *neuron*, nerve, + *trophē*, nourishment, + *astheneia*, weakness.] Neurasthenia from insufficient nourishment.

neurotroph'ic [G. *neuron*, nerve. + *trophē*, nourishment.] Relating to trophic conditions under nervous influence.

neurot'rophy [G. *neuron*, nerve, + *trophē*, nourishment.] Nutrition of nervous tissue.

neurotropic (nu-ro-trop'ik). Relating to neurotropism, having a chemical affinity for nervous tissue.

neurot'ropism, neurot'ropy [G. *neuron*, nerve, + *tropē*, a turning.] 1. Affinity of basic dyes for nervous tissue. 2. The attraction of certain pathogenic microorganisms, poisons, and nutritive substances, toward the nerve-centers.

neurotro'sis [G. *neuron*, nerve, + *trōsis*, a wounding.] Wounding of a nerve.

neurovac'cine. A fixed or standardized vaccine virus of definite strength, obtained by continued passage through the brain of rabbits.

neu"rovarico'sis, neu"rovaricos'ity [G. *neuron*, nerve, + L. *varix*.] A condition marked by multiple swellings along the course of a nerve.

neurovas'cular. Relating to both nervous and vascular systems; relating to the nerves supplying the walls of the blood-vessels, the vasomotor nerves.

neurovirus (nu'ro-vi"rus). Vaccine virus transformed by passage into nervous substance.

neurovisceral (nu-ro-vis'er-al) [G. *neuron*, nerve, + L. *viscera*, the internal organs.] Neurosplanchnic.

neururgic (nu-rur'jik) [G. *neuron*, nerve, + *ergon*, work.] Relating to nerve action, neurergic.

neuryp nol'ogy. Neurohypnology.

Neusser's gran'ules (noy'ser) [Edmund v. *Neusser*, Austrian physician, 1852–1912.] Basophilic granules near the nucleus of a leucocyte.

neutral (nu'tral) [L. *neuter*, neither.] 1. Exhibiting no positive properties, indifferent. 2 In chemistry, neither acid nor alkaline.

neutraliza'tion. 1. The conversion of the entire amount of an acid or a base into a salt by the addition of an exactly sufficient quantity of a base or of an acid, respectively. 2. The change in reaction of a solution from acid or alkaline to neutral by the addition of just a sufficient amount of an alkaline or of an acid substance, respectively. 3. The rendering ineffective of any action or process.

neu'tralize [L. *neuter*, neither] 1. To render ineffective. 2. To effect neutralization.

neutralon (nu'tral-on). Trade name of a preparation of aluminum silicate, with about 12 p.c. of sodium silicate, a fine, white, odorless, and tasteless powder, recommended in the treatment of hyperacidity and ulceration of the stomach in dose of 1 teaspoonful before meals in the latter, and an hour or two after meals in the former.

neutroclusion (nu"fro-klu'zhun). Normal occlusion.*

neutropenia (nu-tro-pe'nĭ-ah) [*neutro(phil)* + G. *penia*, poverty.] The presence of neutrophile cells in abnormally small number in the peripheral blood stream.

neutrophil, neutrophile (nu'tro-fil, or fil) [L. *neuter*, neither, + G. *philos*, fond.] 1. Having no marked affinity for either acid or basic dyes, taking readily the color of a neutral stain; noting certain cells and tissues. 2. A cell, especially a leucocyte, which does not stain readily with either acid or basic dyes.

neutrophil'ia. The usual form of surgical (relative) leucocytosis in which the main increase is in the number of multinucleár neutrophiles.

neutrophil'ic, neutroph'ilous. Neutrophil (1).

neutrotaxis (nu-tro-tak'sis) [*neutro(phil)* + G. *taxis*, orderly arrangement.] The exertion of an attractive or repellent action in neutrophil leucocytes.

ne'void [L. *nævus*, + G. *eidos*, resemblance.] Resembling a nævus.

nevolipoma (ne"-vo-li-po'mah). A nevus incorporated with much fibrofatty tissue, a mixed nevus and lipoma.

ne'vose, ne'vous. Marked with nævi, nevoid.

ne'vus. Nævus.

Newbouldia lævis (nu-bol'dĭ-ah le'vis). A tree of the calabash family, of West Africa, the root of which is employed as an astringent in diarrhea and dysentery.

Newport bacillus. *Bacterium newport.*

New'ton's disc [Sir Isaac *Newton*, English physicist, 1642–1726.] A cardboard disc on which are seven colored sectors, each occupying proportionally the same space as the corresponding primary color in the spectrum; when the disc is rapidly rotated it appears white.

N.F. Abbreviation for National Formulary.

NH_3. Ammonia.

NH_4Cl. Ammonium chloride.

Ni. Chemical symbol of *niccolum*, nickel.*

nic'colum [L.] Nickel. **nic'coli bro'midum,** nickel bromide, occurs in greenish needles soluble in water; has been recommended as a succedaneum of sodium bromide in doses of gr. 5–10 (0.3–0.6). **nic'coli sul'phas,** nickel sulphate, occurring in greenish soluble crystals, recommended in amenorrhea, chlorosis, and tabes in doses of gr. ½–2 (0.03–0.13).

nick'el [L. *niccolum*.] A metallic element, symbol Ni, atomic weight 58.68, closely resembling cobalt and often associated with it; some of its salts have been employed in medicine; see *niccolum*.

Nicklès's test (ne-kles') [François Joseph Jérome *Nicklès*, French chemist, 1821–1869] For cane-sugar: heating with carbon tetrachloride to the boiling point produces a black color if the sugar is cane-sugar, but not if it is glucose.

Nic'ol prism [William *Nicol*, Edinburgh physicist, 1768–1851.] A polarizing prism made by cutting through a prism of Iceland spar and reuniting the cut surfaces with Canada balsam; light passing through this prism is split, the ordinary rays being deflected by the layers of balsam, only the polarized light being transmitted.

Nicolaier's bacill'us (ne-ko-li'yer) [Arthur *Nicolaier*, German physician, *1862.] *Clostridium tetani.*[9]

Nicolas-Favre disease (ne-kŭ-lah-fă'-vr) [J. *Nicolas* and M. *Favre*, French physicians, contemporaries.] Frei's disease, fourth venereal disease, benign inguinal lymphogranulomatosis.*

Nicolle's stain for capsules (nĭ-kul') [Charles *Nicolle*, Paris physician, contemporary.], Stain in a mixture of a saturated solution of gentian-violet in 95 per cent. alcohol, 10 parts, and a 1 per cent. solution of phenol, 100 parts, then wash off in a mixture of 1 part acetone in 2 parts absolute alcohol.

Nicolle, Novy, and MacNeal medium. See *N.N.N.*

Nicotiana (nĭ-ko-shĭ-ah'nah) [after Jean *Nicot*, French diplomat, 1530–1600.] A genus of narcotic plants, of the order *Solanaceæ*, to which belongs tobacco, *Nicotiana tabacum.*

nicotianin (nĭ-ko'shĭ-an-in). An oily principle derived from tobacco leaves, having the odor of tobacco smoke, upon which the flavor of the tobacco is thought to depend.

nic'otine. A poisonous volatile alkaloid, $C_{10}H_{14}N_2$, derived from tobacco; it has been employed as an antidote to strychnine poisoning in doses of gr.

$\frac{1}{80}$–$\frac{1}{30}$ (0.001–0.002), and also by intravesical injection in paralysis of the bladder. **n. tar'trate,** a reddish crystalline powder, employed as a substitute for nicotine in the same dose.

nic'otinism. Chronic tobacco-poisoning.

nicta'tion [L. *nictare*, to wink.] Nictitation.

nic'titate [L. *nictitare*, to wink repeatedly.] To wink.

nic'titating spasm. A form of tic marked by repeated winking, a spasm of the orbicularis palpebrarum muscle

nictitation (nik-ti-ta'shun). Winking.

ni'dal. Relating to a nidus, or nest; focal

nidation (ni-da'shun) [L. *nidus*, nest.] The formation of the decidua capsularis.

ni'dus [L. nest.] 1. A nest. 2. A focus or point of lodgment and development of a pathogenic organism. 3. The nucleus or central point of origin of a nerve. **n. a'vis, n. hirun'dinis** [L bird's nest, swallow's nest], a depression on each side of the inferior surface of the cerebellum between the uvula and the biventral lobe, in which the tonsil rests.

Niemann-Pick disease (ne'nahm-pik) [Albert *Niemann*, 1880–1921, Ludwig *Pick*, *1868, German physicians.] Lipoid histocytosis.

Niemeyer's pill (ne'mi-er) [Felix von *Niemeyer*, German physician, 1820–1871.] 1. A diuretic pill composed of one grain (0.06) each of squill, digitalis, and calomel 2. A pill of opium gr. ¼ (0.015), digitalis gr. ½ (0.03), and quinine gr 1 (0.06), recommended for use in the pyrexia of pulmonary tuberculosis.

Niewenglowski rays (nya-ven-glov'ske) [Gaston Henri *Niewenglowski*, scientist in Paris, contemporary.] Ethereal waves emitted from a phosphorescent body after exposure to sunlight; the rays are capable of affecting a photographic plate and are penetrative, like *x*-rays.

night'-blindness. Nyctalopia, nyctotyphlosis; frequently, but incorrectly, called hemeralopia.

nightmare (nīt'mair) [A.S. *nyht*, night, + *mara*, a demon.] A terrifying dream in which one is unable to cry for help or to escape from a seemingly impending evil.

night-palsy (nīt'pawl-zi). Acroparesthesia or numbness of the extremities, occurring at night or on waking in the morning, affecting especially women at the menopause.

night-soil. The contents of privies and cesspools, so called because usually removed at night.

night-startings. Night terrors.

night-sweats. Profuse sweating at night, occurring in the course of pulmonary tuberculosis and other chronic debilitating affections.

night'-terrors. Pavor nocturnus; a disorder allied to nightmare, occurring in children. The child awakes screaming with fright, the alarm persisting for a time during a state of semiconsciousness.

night'-walking. Somnambulism.

nigricans (ni'grĭ-kanz) [L. *niger*, black.] Blackish.

nigrities (ni-grish'ī-ēz) [L. *niger*, black.] Black pigmentation. **n. lin'guæ,** glossophytia, black tongue *

ni'grosine. A black coal-tar dye.

nihilism (ni'hil-izm) [L. *nihil*, nothing.] A disbelief in the therapeutic value of drugs, at least in their power to modify the course of the so-called self-limited diseases; called also therapeutic nihilism.

nikalgin (nĭ-kal'jin) [G. *nikaō*, I conquer, + *algos*, pain.] Trade name of a preparation, said to be a solution of quinine chloride, employed as a local anesthetic in the form of a spray to raw surfaces.

niketol (nī'ke-tol). Trade name of an association of ethylphthalamate and paraaminobenzoic ester, a powerful local anesthetic, slightly astringent and nontoxic, formed synthetically from an ethylic ether of phthalamic acid and a derivative of the paraaminobenzoic series.

Nikiforoff's meth'od (ne-ke-for'of) [Mikhail Nikiforovich *Nikiforoff*, Russian physician, *1858.] The fixing of blood films by immersion for from 5 to 15 minutes in absolute alcohol, a mixture of equal parts of alcohol and ether, or pure ether.

Nikol'sky's sign [Pyotr Vasilyevich *Nikolsky*, Russian dermatologist, *1855.] A peculiar vulnerability of the skin in consequence of which the superficial layer slides off under slight trauma.

ninhydrin (nin-hi'drin). Triketohydrinden-hydrate, $C_6H_4CO.CO.C(OH)_2$, occurring in the form of colorless water-soluble crystals; employed as a reagent for determining the presence of albumin, peptone, polypeptids, and amino acids, and also of specific proteolytic ferments in the blood, as in the Abderhalden tests.

ninth nerve. The glossopharyngeal nerve; according to the early nomenclature (which recognized only nine, instead of twelve, cranial nerves), the hypoglossal nerve, now the twelfth nerve.

niobium (ni-o'bĭ-um) [*Niobe*, daughter of Tantalus after whom the element tantalum was named.] A rare metallic element, symbol Nb, atomic weight 94, usually found at the same time with tantalum; it was formerly called columbium and the symbol, Cb, of the latter is sometimes referred to niobium.

niphablepsia (nif-ă-blep'sĭ-ah) [G. *nipha*, snow, + *ablepsia*, blindness.] Snow-blindness, amblyopia caused by the glare of sunlight on the snow.

niphotyphlosis (nif-o-ti-flo'sis) [G. *nipha*, snow, + *typhlōsis*, blindness.] Severe snow-blindness, an aggravated form of niphablepsia.

nipiology (nĭ-pĭ-ol'o-jĭ). Nepiology.

nip'per. An incisor tooth in the horse.

nipple (nip'l) [dim. of A.S. *neb*, beak, nose(?).] Papilla* mammæ [BNA], mamilla, teat.

nipp'le-shield. A glass dome with a rubber teat at the apex, placed over the nipple to protect it during nursing.

nirvanin (nēr-vah'nēne) [Sanskrit, *nirvana*, state of the blessed enjoying freedom from care and passions.] Diethylglycocollpar-amido-oxybenzoylmethyl ester hydrochloride, occurs in colorless, soluble, prismatic crystals; a local anesthetic said to be equally efficacious, but much less toxic than cocaine; used in 0.2–0.5 per cent. solution

nirvanol (nēr-vah'nol). Sodium phenyl-ethyl-hydantoin, formed by combining urea and glycol, hypnotic in hypodermic doses of gr. 4–8 (0.25–0.5).

Nis'bet's chan'cre [William *Nisbet*, English physician, 1759–1822.] Bubonulus (2).

Nissl bod'ies (nis'l) [Franz *Nissl*, Heidelberg neurologist, 1860–1919.] Tigroid or chromophile granules constituting the stainable substance or kinetoplasm of the nerve-cell. **N. degenera'tion,** reaction at a distance, degeneration of the cell body occurring after division of a nerve-fiber. **N.'s meth'od,** for staining nerve-cells; the tissue is hardened in 96 per cent. alcohol, stained in a mixture of methylene blue, Venetian soap, and distilled water, and then transferred to a differentiating fluid composed of colorless aniline oil, 10, and 96 per cent. alcohol, 90; the sections are now covered with benzin colophonium and the benzin is driven off by heating the slide.

ni'sus [L. effort.] An effort, a struggle. **n. formati'vus,** the constant tendency of the impregnated

ovum to assume the form characteristic of the species from which it is derived.

nit [A.S. *knitu*.] The egg of a louse, usually attached to a hair.

ni'ter, ni'tre [G. *nitron*, soda, formerly not distinguished from potash.] Saltpeter, potassii nitras. **cu'bic n.**, sodii nitras. **sweet spirit of n.**, spiritus ætheris nitrosi.

Niths'dale neck [*Nithsdale*, a valley in Dumfriesshire, Scotland, where goiter was frequent.] Goiter.

ni'ton. An inert gas contained in radium emanation regarded as an element, symbol Nt, atomic weight, 222.4; same as radon.

ni'trate. A salt of nitric acid.

ni'tre. Niter.

ni'tric acid. Acidum nitricum.

nitrification (ni"trĭ-fi-ka'shun). The oxidation of nitrogen to form nitric acid and nitrates, effected by certain bacteria, nitrifying bacteria, in the soil

nitrifying bacteria (ni'trĭ-fi"ing bak-te'rĭ-ah). Bacteria which convert free nitrogen and that in ammonia into nitric acid.

ni'tril. A hydrocyanic ester of a univalent alkyl; a compound of the cyanogen radical (CN) with an alcohol radical or alkyl.

nitritoid (ni'tri-toyd) [*nitrite* + G. *eidos*, resemblance.] Resembling a nitrite; specifically a syndrome resembling that produced by the administration of a nitrite, noted especially in the anaphylactic reaction sometimes observed to follow the intravenous injection of arsphenamine; it consists of precordial pain, flushing of the face, dyspnea, and rapid pulse, with, in severe reactions, congestion of the conjunctiva and edema of the lips and tongue.

nitro-. A prefix denoting a compound containing the radical or atom-group, NO_2, or nitryl.

Nitrobacter[0] (ni-tro-bak'tur). A genus of the family *Nitrobacteriaceæ*, the nitrogen-fixing soil bacteria, consisting of small, non-motile, rod-shaped, aerobic organisms, occurring usually in masses.

nitrobacte'ria. Nitrifying bacteria.

Nitrobacteriaceæ (ni"tro-bak-te-rĭ-a'se-e). A family of *Eubacteriales* embracing long or short (sometimes nearly spherical) rod-shaped forms; mostly nitrogen-fixing organisms found in soil, non-pathogenic.

Nitrobacterieæ[0] (ni-tro-bak-te-rĭ-e'e). A tribe of the family *Nitrobacteriaceae*, containing the genera *Hydrogenomonas*, *Methanomonas*, *Carboxydomonas*, *Nitrosomonas*, *Nitrobacter*, *Nitrosococcus*, *Acetobacter*, and *Thiobacillus*.

nitroben'zene, nitroben'zol. A liquid, $C_6H_5NO_2$, obtained by mixing benzol and nitric acid; it is used as a substitute for oil of bitter almonds, and also in the manufacture of aniline dyes

nitrocell'ulose. Pyroxylin, gun-cotton, used in the manufacture of collodion.

nitroerythrol (ni-tro-ĕr'ĭ-throl). A substance having properties similar to those of nitroglycerin.

ni'trogen, nitroge'nium, nitrogenum (ni-troj'en-um) [L. *nitrum*, niter, + G. *gennaō*, I produce.] A gaseous element, symbol N, atomic weight 14.or; it forms about 77 parts by weight of the atmosphere; called also *azote*. **n. distribu'tion**, n. partition. **n. group**, four trivalent or quinquivalent metalloids, nitrogen, phosphorus, arsenic, and antimony; their hydrogen compounds are basic; their oxyacids vary from monobasic to tetrabasic. **n. lag**, the length of time after the ingestion of a given protein before an amount of nitrogen equal to that in this protein has been excreted in the urine. **n. monox'ide**, nitrous* oxide. **n. parti'tion**, the determination of the percentage of total nitrogen in the urine present in each of the nitrogenous constituents. **non-pro'tein n.** The nitrogen content of other than protein bodies—of urea for example, nitrogen constitutes about one-half the weight of urea, and about one-half the non-protein nitrogen in the blood is contained in the urea molecule; hence the weight of the urea in the blood plasma is just about the same as that of the total non-protein nitrogen.

nitroge'nii monox'idum (U.S., Br.). Nitrogen monoxide, nitrous* oxide.

nitrogenous (ni-troj'en-us). Relating to or containing nitrogen.

nitroglu'cose. A substance formed by the action of nitric and sulphuric acids on cane-sugar; its action on the circulation is similar to that of nitroglycerin.

nitroglycerin (ni-tro-glis'er-in). Glonoin, glyceryl trinitrate, $C_3H_5(NO_3)_3$, a yellowish oily fluid formed by the action of sulphuric and nitric acids on glycerin; employed as a vasodilator in doses of gr. $\frac{1}{100}$–$\frac{1}{30}$ (0.0003–0.0013); the official preparation is the *spiritus glycerylis nitratis*.

ni"trohydrochlo'ric acid. Nitromuriatic acid, aqua regia, acidum* nitrohydrochloricum.

nitrolev'ulose. A preparation made by the action of nitric and sulphuric acids on fruit sugar; like nitroglucose, a vasodilator.

nitromann'itol. A preparation made, in the same way as nitroglucose, from mannite; a vasodilator.

nitrom'eter [G. *metron*, measure.] A device for collecting and measuring the nitrogen set free in a chemical reaction.

nitronaph'thalene. A substance, $C_{10}H_7NO_2$, derived from naphthalene by the action of nitric acid.

nitrosaccharose (ni"tro-sak'ar-ōz). Nitroglucose

nitroscleran (ni-tro-skle'ran) [*nitrite* + *sclerosis*.] A proprietary remedy recommended by the manufacturers for arteriosclerosis and allied conditions; it is said to be a "deoxynitrate potentialized by the salts of an inorganic serum," and occurs in the form of a granular salt of which the dose is from ½ to ⅔ gr. (0.02–0.04).

nitroso-. A prefix denoting a compound containing the univalent atom group, (NO), or nitrosyl.

nitro"sobacte'ria. Nitrobacteria.

Nitrosococcus[0] (ni-tro-so-kok'kus). A genus of the family *Nitrobacteriaceæ*, probably identical with *Nitrosomonas*, containing only spherical organisms. **N. americanus** is a species found in America.

Nitrosomonas[0] (ni-tro-som'o-nas). A genus of the family Nitrobacteriaceæ, containing rod-shaped nitrifying organisms, motile (flagellated) or non-motile.

nitrosubstitu'tion. The displacement of a radical or atom in a chemical compound by the radical nitryl.

nitrosugars (ni"tro-shu'garz). A class of vasodilators including nitroglucose, nitrolevulose, etc.

ni'trosyl. A univalent radical or atom-group, NO, forming the nitrosocompounds.

ni'trous. Noting a nitrogen compound containing the fewest possible oxygen atoms, one in which the nitrogen is present in its lowest valency. **n. ox'ide**, nitrogen monoxide, N_2O, laughing gas, nitrogenii monoxidum (U.S., Br.); a gas employed in producing general anesthesia for short operations, such as tooth-pulling or incising

felons, or preliminary to ether or chloroform inhalation.

nitrox'yl, ni'tryl. The hypothetical radical, NO_2, of the nitrocompounds.

Nitze's meth'od (nit'seh). Suture of an artery by turning back one of the cut ends over an ivory ring and then drawing the other end of the artery over the cuff so formed.

ni'zin. Zinc sulphanilate, see *soloid nizin*.

NK. Initials of *Nomenklatur Kommission*, Committee on Nomenclature of the German Anatomical Society, appointed to revise or supplement the BNA.

N. L. N. E. National League of Nursing Education.

N.N.N. me'dium [*N*icolle, *N*ovy, Mc*N*eal.] A modified Novy-McNeal agar medium, employed by Nicolle for the cultivation of *Leishmania donovani;* it consists of agar 14, salt 6, water 900, to which, after sterilization, is added one-third rabbit's blood.

No. Abbreviation of L. *numero*, by number, noting the place of any unit in a series; number. **No. 6,** a preparation in the old Thompsonian formulary, similar to tinctura* capsici et myrrhæ (N.F.), **No. 48-S.** A sulphonated derivative from quinoline, recommended as an internal antiseptic. **No. 102,** luargol. **No. 132,** eparseno. **No. 190,** stovarsol. **No. 205 Bayer,** a water-soluble white powder of the amino-naphthalene-sulphonic acid type, having a nucleus of trypan blue and allied to trypan red, said to possess trypanosidal properties and to be specific in the treatment of African sleeping sickness. **No. 207 Fourneau,** an arsenical preparation, similar in its therapeutic action to tryparsamide. **No. 309 Fourneau,** a preparation closely resembling, if not identical with, No. 205 Bayer, and said to possess powerful trypanocidal properties. **No. 592,** dioxydiamidoarsenobenzol, the base of No. 606, or arsphenamine. **No. 606,** arsphenamina. **No. 914,** neoarsphenamina. **No. 1116,** galyl. **No. 1151,** ludyl. **No. 1495,** a sulphoxylate compound, of secret constitution, proposed as a substitute for arsphenamine.

N_2O. Nitrous oxide.

N_2O_3. Nitrogen trioxide, nitrous anhydride, sometimes improperly called nitrous acid, which is HNO_2.

N_2O_5. Nitrogen pentoxide, nitric anhydride.

Nobel's explo'sive [Alfred Bernhard *Nobel*, Swedish chemist, 1833–1896.] Nitroglycerin. **N.'s prize fund,** a fund left by N. in his will, the interest of which is divided into five parts to be given to the persons anywhere in the world who have made the most important discovery (1) in chemistry, (2) in physical science, or (3) in physiology or medicine; (4) to the writer of the most important idealistic literary work; and (5) to the one who has done most to advance the cause of fraternity among men.

no'ble cells or **el'ements.** The cells of the organs, nerves, and muscles; the differentiated cells of the body as distinguished from the fixed or connective-tissue and wandering cells having phagocytic properties.

Nocard's bacill'us (nŏ-kar') [Edmond Isidore Étienne *Nocard*, French veterinarian, 1850–1903.] *Salmonella psittacosis.*[9]

Nocardia (no-kar'dĭ-ah) [E. I. E. *Nocard*, French veterinarian, 1850–1903.] A term formerly used generically to include a number of microorganisms, moulds as well as bacteria, most of the latter being now grouped as species of *Actinomyces* (*q.v.*) **Nocardia minutissima,** *Microsporum minutissinum.*

Nocardiaceæ (no-kar-dĭ-a'se-e) [E.I.E. *Nocard.*] A family of fungi, *Actinomycetes*, including the ray fungus and other similar organisms.

Nocht's stain. A modified Romanovsky stain; a solution is made of one per cent. methylene blue and ½ per cent. sodium carbonate and kept for a few days at 60° C. Then to 2 c.c. of water in a watch glass 2 or 3 drops of a one-per cent. eosin solution are added, and to this drop by drop the first solution until the eosin tint just disappears.

nociassociation (no-si-as-so-sĭ-a'shun) [L. *nocere*, to injure.] The discharge of nervous energy, in the form of shock, exhaustion, etc., following overstimulation of the nociceptors by trauma, a surgical operation, chronic disease, etc.

nociceptive (no-sĭ-sep'tiv). Capable of appreciation or transmission of injurious influences.

nocicep'tor [L. *nocere*, to injure, + *capere*, to take.] A peripheral nerve organ or mechanism for the appreciation and transmission of painful stimuli.

noci-influence (no"sĭ-in'flu-ens) [L. *nocere*, to injure.] Injurious or harmful influence.

nociperception (no-sĭ-per-sep'shun). The appreciation of injurious influences, referring to nerve centers

noctambula'tion [L. *nox*(*noct-*), night, + *ambulare*, to walk.] Night-walking, sleep-walking.

noctipho'bia [L. *nox*(*noct-*), night, + G *phobos*, fear] Nyctophobia.

nocturia (nok-tu'rĭ-ă) [L. *nox*, night, + *urina*, urine.] Nycturia.

noctur'nal [L. *nocturnus.*] Relating to or occurring during the night.

Noc'ua [L. *nocere*, to injure.] Venenosa.

no'dal. Relating to any node, such as the atrioventricular node in the heart. **n. bradycardia, n. rhythm,** see the nouns.

node [L. *nodus*, a knot.] 1. A knob, a circumscribed swelling. 2. A circumscribed mass of differentiated tissue. 3. A transverse partition such as those occurring on the stems of grasses. 4 A knuckle, or finger-joint. **a"trioventric'ular n., auric"uloventric'ular n.,** a node of differentiated tissue in the wall of the right atrium (auricle) near the mouth of the coronary sinus, from which starts the atrioventricular bundle. **Bouchard's n., Haygarth's n., Heberden's n.,** etc., see the proper nouns **lymph n.,** lymph gland, lymphoglandula]BNA], lymphnode.* **singer's nodes,** singers nodules, vocal nodules, trachoma of the vocal bands, chorditis nodosa or tuberosa; small circumscribed, bead-like enlargements on the vocal cords, caused by overuse or maluse of the voice in singing, especially high notes. **sinoa'trial** or **sinoauric'ular n.,** a small node at the mouth of the superior vena cava, believed by some to represent the remains of the sinus venosus and to be the starting point of the heart's contraction.

nodose (no'dōs) [L. *nodosus.*] 1. Having nodes or knot-like swellings. 2. Divided by transverse partitions, as the stems of grasses.

nodos'itas [L.] Nodosity. **n. crin'ium** [L. gen. pl of *crinis*, hair], trichorrhexis nodosa.

nodos'ity [L. *nodositas.*] 1. A node, a knob-like or knotty swelling 2. The condition of being nodose.

nodous (no'dus). Nodose.

nod'ular. Nodose; relating to or characterized by the presence of nodules.

nod'ulate, nod'ulated. Nodular, marked by the presence of nodules.

nodula'tion. The formation or the presence of nodules.

nod'ule [L. *nodulus*.] A small node. **enam'el n.,** a circumscribed outgrowth of enamel substance, odontoma. **singers' nodules, vocal nodules,** singers' nodes.*

nod'uli. Plural of nodulus.*

nod'ulous. Nodular, nodose.

nod'ulus pl. *nod'uli* [L. dim. of *nodus*, knot.] 1. Nodule. 2. [BNA] The anterior subdivision of the inferior vermis of the cerebellum, forming with the velum medullare posterius the central portion of the nodular lobe. **nod'uli aggrega'ti proces'sus vermifor'mis,** masses of lymphoid tissue in the submucous coat of the vermiform process. **n. carot'icus,** carotid gland. **nod'uli laquea'ti,** an anomaly of the hair in which it appears to be knotted. **nod'uli lymphat'ici aggrega'ti** [BNA], Peyer's patches, aggregated or agminated glands; collections of many lymphoid nodules closely packed together, forming oblong elevations on the mucous membrane of the small intestine, their long axis corresponding to that of the bowel. **nod'uli lymphat'ici laryngе'i** [BNA], laryngeal tonsil.* **nod'uli lymphat'ici liena'les** [BNA], splenic lymph-nodules, Malpighian corpuscles, small nodular masses of lymphoid tissue attached to the sides of the smaller arterial branches. **nod'uli lymphat'ici solita'rii** [BNA], Peyer's glands, solitary glands of the intestine; minute nodules of lymphoid tissue projecting from the mucous membrane of the small and large intestines, being especially numerous in the cecum and appendix. **nod'uli lymphat'ici tuba'rii** [BNA], Eustachian tonsil.* **n. lymphat'icus,** lymph nodule or follicle, one of the masses of lymphoid cells interposed between the lymph sinuses in the cortex of a lymphatic gland. **n. val'vulæ semiluna'ris,** pl. *nod'uli valvula'rum semiluna'rium* [BNA], corpus Arantii, a nodule at the center of the free border of each semilunar valve at the beginning of the aorta and of the pulmonary artery.

no'dus [L. a knot.] Node. **n. cer'ebri,** pons Varolii. **n. cor'dis** [NK], trigonum fibrosum. **n. curso'rius** [L. *cursor*, a runner], a center in the nucleus caudatus, stimulation of which causes leaping or running movements. **n. gutt'uris,** prominentia laryngea, Adam's apple.

noematachograph (no-e″mă-tak'o-graf) [G. *noēma*, thought, + *tachys*, swift, + *graphō*, I write.] An instrument for recording graphically the rapidity of thought.

noematachometer (no-e″mă-tă-kom'e-ter) [G. *noēma*, thought, + *tachys*, swift, + *metron*, measure.] Noematachograph.

noemat'ic (no-e-mat'ik) [G. *noēma* (*noēmat-*) perception, a thought.] Relating to the mental processes.

nœud vital (nĕ″ ve-tal') [F. *nœud*, knot.] The supposed respiratory center in the medulla near the point of exit of the vagus nerve.

Nogu'chi test [Hideyo *Noguchi*, Japanese bacteriologist in New York, 1876–1928.] 1. A test for tabes or general paralysis, depending upon a globulin reaction of the spinal fluid: 0.1 c.c. of the spinal fluid to be tested is placed in a test-tube whose diameter is 1 cm. or less. To this is added 0.5 c.c. of a 10 per cent. solution of butyric acid. The tube is now heated until the fluid is bubbling, and while still hot 0.1 c.c. of a normal (4 per cent.) solution of sodium hydrate is added. In nearly all spinal fluids an opalescence or cloud occurs, but in the spinal fluid of general paralysis the cloud soon separates into a definite flocculence which is characteristic. 2. A test for syphilis, a modification of the Wassermann method: The antigen is a lipoid substance extracted from the liver and heart; human corpuscles instead of sheep's corpuscles are used, and the hemolytic ambocepter is obtained by immunizing rabbits against normal human erythrocytes. The hemolytic ambocepter and antigen are preserved by soaking filter paper and drying. The antigen filter paper is placed in human serum, guinea-pig's serum is added and both are diluted with isotonic salt solution; after this has stood a definite time at incubator temperature the hemolytic amboceptor paper and a definite quantity of washed normal human erythrocytes are added. 3. Luetin test, cutireaction test; a drop of luetin is injected intracutaneously, and if syphilis is present a large, red dish indurated papule surrounded with a purplish areola appears within 24 to 48 hours.

no'li me tan'gere [L. do not touch me.] Rodent ulcer.*

no'ma [G. *nomē*, a spreading (sore).] A progressive gangrenous process occurring in children, beginning on the mucous membrane of the cheek or the gum and spreading to the cutaneous surface; cancrum oris, gangrenous stomatitis. A similar process (*n. puden'di, n. vulvæ*) may also involve the labia majora. 2. Nona.

no'menclature [L. *nomen*, name, + *calare*, to call.] A system of names in any science or art; terminology, onomatology.

nomotopic (no-mo-top'ik) [G. *nomos*, law, custom, + *topos*, place.] Relating to or occurring at the usual or normal place.

non- [L. *non*, not.] A prefix denoting a negation, or the absence of the quality or fact expressed by the word to which it is prefixed.

nona (no'nah) [It. *nono*, f. *nona*, ninth, because it was said to come on nine days after the beginning of an attack of influenza; or, as others conjecture, so named after the silkworm which becomes sluggish every ninth day.] Encephalitis lethargica or epidemica.

no'nan [L. *nonus*, ninth.] Occurring on the ninth day, noting a malarial fever, the paroxysms of which occur every ninth day, *i.e.* every eighth day following the preceding paroxysm, the day of each paroxysm being included in the computation.

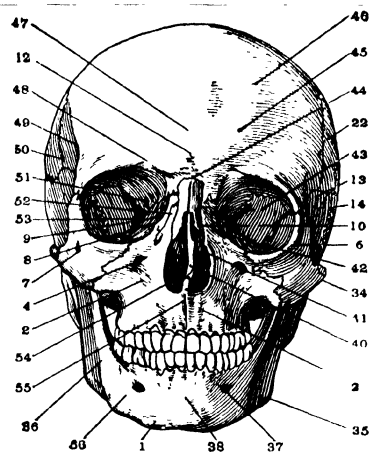
Nonbursata (non-bur-sah'tah) [L. *non*, not, + *bursa*, purse.] A division of *Nematoda* embracing those in which the bursa copulatrix in the male is only a skin fold containing no fleshy ribs; this unsupported bursa as seen in Trichuris, is called a pseudobursa.

non com'pos men'tis [L. *non*, not, + *compos*, participating, competent, + *mens*, gen. *mentis*, mind.] Not of sound mind, mentally incapable of managing one's affairs.

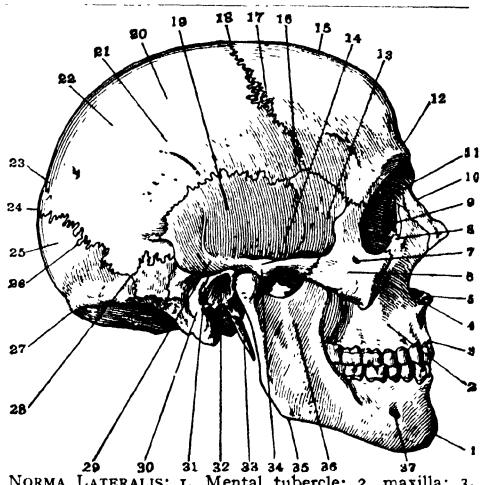
non-conduc'tor. Anything which does not transmit an electrical current, or heat, as the case may be.

non-disjunction. Failure of the pairs of chromosomes to separate at the miotic stage of caryocinesis, with the result that both chromosomes are carried to one daughter cell and none to the other.

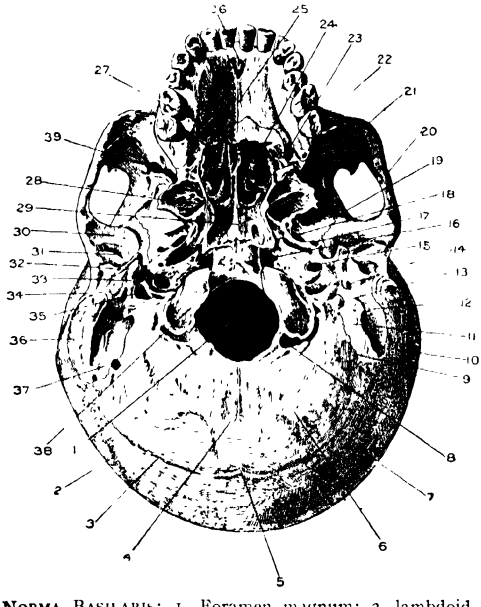
nonigravida (no-nĭ-grav'ĭ-dah) [L. *nonus*, ninth + *gravida*, pregnant.] Noting a woman pregnant for the ninth time.



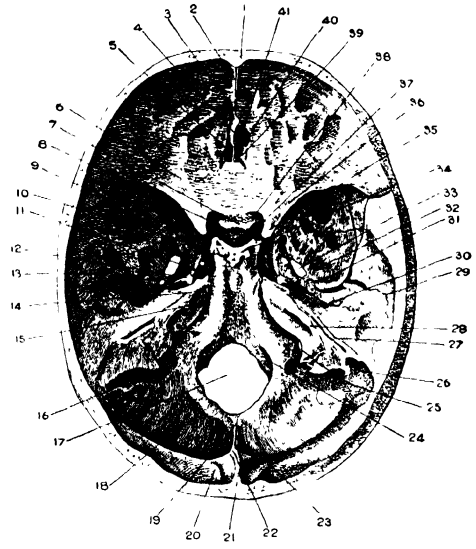
NORMA FRONTALIS: 1, Mental protuberance; 2, maxilla; 4, infraorbital foramen; 6, zygomatic bone; 7, zygomaticofacial (malar) foramen; 8, lacrymal tubercle; 9, lacrymal groove; 10, nasal bone; 12, glabella; 13, great wing of sphenoid; 14, temporal fossa; 22, parietal bone; 34, zygomatic arch; 35, gonion; 36, ramus of mandible; 37, mental foramen; 38, symphysis, 40, nasal septum; 41, middle turbinated bone; 42, sphenomaxillary suture; 43, orbital surface of sphenoid; 44, frontonasal suture; 45, supercilary ridge; 46, frontal eminence; 47, ophryon; 48, supraorbital notch; 49, temporal ridge; 50, anteroinferior angle of parietal bone; 51, optic foramen; 52, nasal process; 53, sphenoidal fissure; 54, inferior turbinated bone; 55, intermaxillary suture; 56, body of mandible.



NORMA LATERALIS: 1, Mental tubercle; 2, maxilla; 3, alveolar point; 4, infraorbital foramen; 5, anterior nasal spine; 6, zygomatic bone; 7, foramen zygomaticofaciale; 8, lacrymal tubercle; 9, lacrymal groove; 10, nasal bone; 11, nasion; 12, glabella; 13, great wing of sphenoid; 14, temporal fossa; 15, frontal bone; 16, pterion; 17, coronal suture; 18, bregma; 19, temporal squama; 20, superior temporal line; 21, inferior temporal line; 22, parietal bone; 23, obelion; 24, lambda; 25, occipital bone; 26, lambdoid suture; 27, inion; 28, asterion; 29, supramastoid crest; 30, mastoid process; 31, suprameatal ridge; 32, auriculare; 33, styloid process; 34, tuberculum articulare; 35, gonion; 36, ramus of mandible; 37, mental foramen



NORMA BASILARIS: 1, Foramen magnum; 2, lambdoid suture; 3, superior curved line; 4, external occipital crest; 5, inion; 6, inferior curved line; 7, lambdoid suture; 8, posterior condyloid foramen; 9, occipitomastoid suture; 10, parietomastoid suture; 11, groove for occipital artery; 12, digastric fossa; 13, jugular process; 14, stylomastoid foramen; 15, carotid canal; 16, foramen lacerum medium; 17, foramen spinosum; 18, foramen ovale; 19, sphenosquamous suture; 20, zygoma; 21, malar; 22, superior maxilla; 23, posterior palatine canal; 24, lateral mass of ethmoid; 25, intermaxillary suture; 26, anterior palatine canal; 27, posterior nasal spine; 28, pterygoid fossa; 29, vomer; 30, eminentia articularis; 31, glenoid fossa; 32, auditory process flooring external auditory canal; 33, styloid process; 34, supramastoid crest; 35, jugular foramen; 36, mastoid process; 37, mastoid foramen; 38, condyle of occipital bone; 39, sphenomaxillary fissure.



FLOOR OF CRANIAL CAVITY: 1, Diploe, 2, crest for attachment of falx; 3, foramen cecum; 4, crista galli; 5, cribriform plate of ethmoid; 6, anterior cranial fossa; 7, olivary eminence; 8, pituitary fossa; 9, foramen rotundum; 10, posterior clinoid process; 11, cavernous groove; 12, foramen lacerum medium; 13, middle cranial fossa; 14, depression for ganglion of Gasser; 15 groove for inferior petrosal sinus; 16, groove for lateral sinus; 17, foramen magnum; 18, posterior cranial fossa; 19, internal occipital crest; 20, fossa for occipital lobe of cerebrum; 21, crest for attachment of falx; 22, internal occipital protuberance; 23, groove for lateral sinus; 24, anterior condyloid foramen; 25, jugular foramen; 26, groove for lateral sinus; 27, groove for superior petrosal sinus; 28, internal auditory canal; 29, petrosquamous suture; 30, hiatus Fallopii; 31, foramen spinosum; 33, foramen ovale; 34, dorsum sellæ; 35, anterior clinoid process; 36, lesser wing of sphenoid; 37, cavernous groove; 38, optic foramen; 39, 40, cribriform plate of ethmoid; 41, slit for nasal nerve.

nonipara (no-nip'ah-rah) [L. *nonus*, ninth. + *parere*, to bear.] Noting a woman who has borne nine children.

Nonne-Apelt reaction (non'neh-ah'pelt re-ak'shun) [Max *Nonne*, *1861, F. *Apelt*, German physicians, contemporary.] If equal parts of cerebrospinal fluid and a neutral saturated solution of ammonium sulphate are mixed, the appearance of marked opalescence or turbidity indicates the presence of globulin in excess and supposedly denotes some abnormality of the nervous system. This is called a "positive phase 1;" the presence of only a faint opalescence or none at all is called a "negative phase 1." A "positive phase 2" is the appearance of turbidity in the cerebrospinal fluid, without admixture of ammonium sulphate solution, when treated with heat and acetic acid.

non-parous (non-par'us). Noting a woman who has borne no children, nulliparous.

non-restraint'. Management of the insane without the use of the strait-jacket or other restriction.

no'nus [L. ninth.] The ninth cranial nerve of the old nomenclature, now called the twelfth or nervus hypoglossus.

non-va'lent. Having no valency because entering into union with no other element; noting in chemistry an element such as argon.

non-vi'able [L. *non*, not, + Fr. *viable*.] Incapable of independent existence, noting a prematurely born child.

noopsyche (no'o-si-ke) [G. *noos*, intelligence, + *psychē*, soul.] Intellectual processes.

N. O. P. H. N. National Organization for Public Health Nursing.

Nordauism (nor'dow-izm) [Max Simon *Nordau*, German sociologist, 1849–1923.] Degeneracy.

Nord'hausen sulphu'ric acid [*Nordhausen*, a town in Saxony where it was first prepared.] Fuming sulphuric acid, sulphuric acid containing sulphurous acid gas in solution.

norleucine (nor-lu'sin). Normal leucine, alpha-aminocaproic acid.

norm [L. *norma*, a carpenter's square.] The usual the typical, the healthy.

nor'ma [L. a carpenter's square.] A line or pattern defining the contour of a part; extended to denote the outline of a surface, referring especially to the various aspects of the cranium. **n. ante'rior,** n. facialis or frontalis. **n. basila'ris,** n. ventralis. **n. facia'lis,** n. frontalis. **n. fronta'lis,** the outline of the skull viewed from in front; see cut under *skull*. **n. infe'rior,** n. ventralis or basilaris. **n. latera'lis,** n. temporalis. **n. occipita'lis,** the outline of the skull viewed from behind. **n. poste'rior,** n. occipitalis. **n. sagitta'lis,** n. temporalis, or the outline of a sagittal section through the skull. **n. supe'rior,** n. verticalis. **n. tempora'lis,** the profile of the skull; the outline of the skull viewed from either side, or of a sagittal section. **n. ventra'lis,** the outline of the inferior aspect of the skull. **n. vertica'lis,** the outline of the superior surface of the skull, or of a vertical section. (See Plate XI.)

normacol (nor'mah-kol). Trade name of a laxative, said to be composed of bassorin* and one per cent. of cascara sagrada.

nor'mal [L. *normalis*, according to pattern.] 1. Typical, usual, healthy, according to the rule or standard. 2. In bacteriology, nonimmune, untreated; noting an animal, or the serum or substance contained therein of an animal which has not been experimentally immunized against any microorganism or its products. **n. an'imal,** in bacteriology an experiment animal which has neither suffered an attack of a particular disease nor received an injection of the specific microorganism or its toxin. **n. serum,** an antitoxic serum of a strength exactly sufficient to render inactive an equal quantity of normal toxin. **n. solu'tion,** a solution of which one liter contains just enough of the dissolved substance to replace one gram of hydrogen; see under *solution*. **n. toxin,** a toxin solution holding exactly 100 lethal doses in 1 c.c.

normaliza'tion. The making normal or according to the standard; noting especially the reducing or strengthening of a solution to make it normal.

nor'malize. To make normal or of the proper strength or standard.

nor'moblast [L. *norma*, a carpenter's square (the norm), + G. *blastos*, sprout, germ.] A nucleated red blood corpuscle of medium size.

normocyte (nor'mo-sīt) [L. *norma*, a carpenter's rule or square (the norm), + G. *kytos*, cell.] A non-nucleated erythrocyte of normal size (averaging 7.5μ); a normal, healthy red blood corpuscle.

normocyto'sis. A normal state of the blood as regards its corpuscular elements.

normoglycemic (nor-mo-gli-se'mik). Noting a condition, such as renal glycosuria, in which the sugar content of the blood is normal.

normoorthocytosis (nor"mo-or"tho-si-to'sis) [L. *norma*, rule, + G. *orthos*, correct, + *kytos*, cell, + *-ōsis*.] A blood state in which the total number of white cells is increased, but the relative proportion of the different varieties is normal.

normoplasia (nor-mo-pla'zī-ah) [L. *norma*, rule, + G. *plasis*, formation.] A specific differentiation characteristic of a cell within normal limits.

normoske"ocyto'sis [L. *norma*, rule, + G. *skaios*, left, + *kytos*, cell, + *-ōsis*.] A blood state in which the white cells are normal in number, but there is deviation* to the left.

normosthenuria (nor-mo-sthen-u'sĭ-ŭ) [L. *norma*, rule, + G. *sthenos*, strength, + *ouron*, urine.] The excretion of normal urine in normal amount.

normoton'ic [L. *norma*, rule, + G. *tonos*, tone, tension.] 1. Relating to normal tonus in the blood pressure or the muscles. 2. Noting a person possessing such tonus.

normoto'pia [L. *norma*, rule, + G. *topos*, place.] The state of being in the normal place.

normotopic (nor-mo-top'ik). Relating to normotopia; in the right place.

Nor'ris's cor'puscles [Richard *Norris*, English physiologist, 1831–1916.] Decolorized red blood-corpuscles, invisible in the blood-plasma.

Nor'wood's tinc'ture [Wesley C. *Norwood*, American physician, 19th century.] A tincture of veratrum viride, said to be prepared from the fresh root in the proportion of 240 grains to each ounce of alcohol.

nose [A.S. *nosu*.] Nasus; the organ of smell, *organon olfactus*, and one of the accessory organs of respiration, the beginning or entrance of the air-passages; the prominence in the center of the face formed of bone and cartilage. The organ of smell occupies the upper portion of the nasal cavity, the respiratory part is the lower portion.

absence, arrhinia. **bleeding from,** nosebleed, **epistaxis** rhinorrhagia, stalaxis narium, hæmorrhagia narium **bridge,** ponticulus nasi, dorsum nasi, spina nasi. **calculus,** rhinolith, rhinolite. **cartilages,** cartilago septi nasi, c. nasi lateralis, c. alaris major, c. vomeronasalis, cartilagines alares minores, cartilagines sesamoideæ nasi. **cavity,** cavum nasi, nasal fossa (pl. fossæ), meatus. **disease,** rhinopathy. **edema of,** rhinedema. **examination of,** rhinoscopy, conchoscopy. **flaring portion,** alæ nasi, pinnæ nasi. **hair at the orifice,**

rhinothrix, vibrissa (pl. vibrissæ). **having a flat, platyrrhine. having a slender,** leptorrhine. **hypertrophy,** macrorrhinia. **imperforation of nostrils,** atretorrhinia. **inflammation,** rhinitis, coryza, nasitis, ozena, rhinocatarrhus. **irrigation of,** nasal douching, rhinechysis. **itching,** rhinocnesmus. **mucous membrane,** pituitary membrane, Schneiderian membrane. **necrosis of bones,** rhinonecrosis. **obstruction,** rhinocleisis, rhinostenosis, rhinostegnosis, rhinangia, rhinanchone. **orifice,** meatus, nares, nostrils; posterior nares, choanæ. **originating from,** rhinogenic. **pain,** rhinalgia, rhinodynia. **partition,** septum narium, septum nasi. **plastic surgery,** rhinoplasty. **reducing size,** rhinomiosis. **root,** nasion. **serous discharge,** rhinorrhea. **specialty of diseases of,** rhinology, rhiniatry. **tampon,** rhinobyon, rhineurynter. **tip,** apex nasi, lobulus nasi. **tumor,** rhinophyma, rhinoscleroma, rhinoncus, nasal polypus, rhinopolypus. **ulceration,** rhinelcosis, rhinocace. **wings,** alæ nasi, pinnæ nasi.

nose'bleed. Epistaxis.

nose-fly. *Œstrus ovis*, a bot-fly infesting the nostril of the sheep.

Nose'ma [G. *nosēma*, plague.] A genus of protozoa, including the supposed hyperparasite of the malarial organism; see *black* spore*.

nosenceph'alus [G. *nosos*, disease, + *enkephalos*, brain.] A monster with absence of skull in the frontal and temporal regions and a rudimentary brain.

nose'piece. A microscope attachment, consisting of several objectives surrounding a central pivot by means of which any one may be brought into position instantly. (See cut under *microscope*.)

nosetiology (nōs"e-tī-ol'o-jĭ) [G. *nosos*, disease, + *aitia*, cause, + *-ology*.] The doctrine of the causation of disease.

nosochthonography (nos-ok-tho-nog'ră-fĭ) [G. *nosos*, disease, + *chthōn*, the earth, + *graphē*, a description.] Nosogeography.

nosoco'mial. Relating to a hospital.

nosocomion, nosocomium (nos-o-ko'mĭ-on, or um) [G. *nosos*, disease, + *komeō*, I take care of.] A hospital.

nos'ode [G. *nosos*, disease, + *eidos*, appearance.] A virus administered in minute dose in the treatment of the disease which, in larger amount, it causes; an isopathic term, signifying practically a bacterine or bacterial vaccine. In homeopathy the potentized virus of an infectious disease.

nosogen'esis, nosogeny (nos-oj'en-ĭ) [G. *nosos*, disease, + *genesis*, origin, production.] Pathogenesis.

nosogenic (nos-o-jen'ik) [G. *nosos*, disease, + *gennaō*, I produce.] Pathogenic; causing disease

nosogeography (nos"o-je-og'ră-fĭ) [G. *nosos*, disease, + *geōgraphia*, geography.] Medical geography, nosochthonography.

nosog'rapher. A writer on diseases.

nosograph'ical. Relating to nosography, or the description of diseases.

nosog'raphy [G. *nosos*, disease, + *graphē*, description.] A treatise on pathology or the practice of medicine.

nosological (nos-o-loj'ĭ-kal). Relating to nosology or the classification of diseases.

nosol'ogy [G. *nosos*, disease, + *-logia*] The classification of diseases.

nosoma'nia [G. *nosos*, disease, + *mania*, frenzy.] Hypochondriasis carried to the point of insanity.

nosometry (no-som'ĭ-trĭ) [G. *nosos*, disease, + *metron*, measure.] The measurement of morbidity or of the sickness rate in the several occupation and social conditions; see *pathometry*.

nosomyco'sis [G. *nosos*, disease, + *mykēs*, fungus.] A microparasitic disease.

noson'omy [G. *nosos*, disease, + *nomos*, law.] The classification of diseases, nosology.

nosopar'asite [G. *nosos*, disease.] 1. A microparasite found in association with a certain disease and modifying its course, but not the actual cause of the morbid process. 2. A pathogenic parasite attacking only diseased tissues, *e.g.* one of a number of protozoans which excite dysenteric symptoms only when a catarrhal or other non-specific form of colitis is present.

nos'ophen. Iodophen, tetraiodophenolphthalein, a yellowish, odorless, tasteless powder; employed locally as a remedy in nasal catarrh and eczema, and internally in intestinal catarrh in doses of gr. 5–8 (0.3–0.5).

nosopho'bia [G. *nosos*, disease, + *phobos*, fear.] Pathophobia; an inordinate dread and fear of disease.

nosophyte (nos'o-fite) [G. *nosos*, disease, + *phyton*, plant] A pathogenic vegetable microorganism.

nosopoietic (nos"o-poy-et'ik) [G. *nosos*, disease, + *poieō*, I make.] Pathogenic.

nos'otaxy [G. *nosos*, disease, + *taxis*, arrangement] The classification of diseases, nosology.

nosotox'ic. Relating to a nosotoxin or to nosotoxicosis.

nosotoxico'sis [G. *nosos*, disease, + *toxicon*, poison.] A morbid state caused by the products of another disease, as is assumed of the acidosis complicating diabetes.

nosotox'in. Any toxin associated with an infectious disease

nosotrophy (nos-ot'ro-fĭ) [G. *nosos*, disease, + *trophē*, nourishment.] Nursing of the sick.

nosotropic (no-so-trop'ik) [G. *nosos*, disease, + *tropē*, a turning.] Directed against the pathological changes or symptoms of a disease; opposed to *etiotropic*.

nostal'gia [G. *nostos*, a return, + *algos*, pain.] Homesickness, a longing to return to one's home or former place of residence

nostal'gic. Relating to nostalgia, homesick.

nostal'gy. Nostalgia.

Nostocaceæ (nos-to-ka'se-e). A family of freshwater algæ containing chlorophyl.

nostol'ogy [G. *nostos*, a return, + *-logia*] Gerontology, the branch of medical science which has to do with the processes, physiological and pathological, of extreme old age, or senility.

nostoma'nia [G. *nostos*, a return, + *mania*, frenzy] Homesickness carried to the point of insanity.

nos'tril. Naris, one of the two external openings of the nasal fossæ **flare of the nostrils,** alæ nasi.

nos'trum [L neuter of *noster*, our, "our own remedy."] A quack medicine; a therapeutic agent, secret or patented, which is offered to the general public as a specific remedy for any disease or class of diseases.

no'tal [G. *nōtos*, the back.] Relating to the back; dorsal.

notal'gia [G. *nōtos*, the back, + *algos*, pain.] Pain in the back; rhachialgia, dorsalgia.

no"tancepha'lia [G. *nōtos*, back, + *an-* priv. + *kephalē*, head.] A monstrosity marked by a deficiency in the occipital region of the skull.

no"tanencepha'lia [G. *nōtos*, back, + *an-* priv. + *enkephalos*, brain] A monstrosity marked by absence of the cerebellum.

notch. An indentation at the edge of any structure, emargination, incisura.* **acetab'ular n.,** cotyloid n., incisura acetabuli [BNA]. **aor'tic n.,** the slight notch in the sphygmographic tracing caused by the rebound at the closure of the aortic valves. **auric'ular n.,** (1) incisura anterior auris [BNA]; (2) incisura terminalis auris [BNA]. **cardiac n.,** incisura cardiaca **cerebell'ar n.,** incisura cerebelli, anterior and posterior. **clavic'ular n.,** a depression at each upper angle of the manubrium

sterni for articulation with the clavicle, incisura clavicularis [BNA]. **conchal n.,** auricular n. **cot'yloid n.,** incisura acetabuli [BNA], a deep notch at the lower part of the acetabulum. **ethmoid'al n.,** incisura ethmoidalis [BNA]. **fib'ular n.,** incisura fibularis [BNA]. **frontal n.,** incisura frontalis. **interclavic'ular n.,** the depression between the two sternoclavicular articulations; sternal n., presternal n., incisura jugularis [BNA]. **intercon'dyloid n.,** fossa intercondyloidea [BNA], the large notch between the condyles of the femur posteriorly. **intertrag'ic n.,** incisura intertragica. **interver'tebral n.,** incisura vertebralis [BNA]. **ischiat'ic n.,** incisura ischiadica [BNA]. **ju'gular n.,** (1) the posterior edge of the jugular foramen; (2) incisura jugularis [BNA]. **lac'rymal n.,** incisura lacrimalis [BNA]. **mandib'ular n.,** incisura mandibulæ [BNA]. **marsu'pial n.,** incisura cerebelli posterior [BNA]. **mas'toid n.,** incisura mastoidea [BNA]. **na'sal n.,** incisura nasalis [BNA]. **parot'id n.,** the space between the ramus of the mandible and the mastoid process of the temporal bone. **poplit'eal n.,** incisura poplitea [BNA]. **preoccip'ital n.,** an indentation in the ventrolateral border of the temporal lobe of the cerebral hemisphere, near the occipital pole. **prester'nal n.,** incisura jugularis [BNA]. **pter'ygoid n.,** fissura pterygoidea [BNA]. **ra'dial n.,** incisura radialis [BNA]. **sacrosciat'ic n.,** the notch of the pelvic outlet on either side, formed by the ischium in front, the sacrum behind, and the ilium above; in life they are converted into foramina by the sacrosciatic ligaments. **scap'ular n.,** incisura scapulæ [BNA]. **semilu'nar n.,** (1) incisura cerebelli anterior [BNA]; (2) incisura semilunaris. **sigmoid n.,** incisura mandibulæ [BNA]. **sphenopal'atine n.,** incisura sphenopalatina [BNA]. **ster'nal n.,** interclavicular notch, incisura jugularis [BNA]. **supraor'bital n.,** incisura supraorbitalis. **suprascap'ular n.,** incisura scapulæ [BNA]. **supraster'nal n.,** interclavicular n. **ter'minal n.,** incisura terminalis auris [BNA]. **thy'roid n.,** incisura thyreoidea. **tympan'ic n.,** incisure of Rivini, incisura* tympanica. **ul'nar n.,** incisura ulnaris [BNA]. **umbil'ical n.,** incisura umbilicalis [BNA]. **ver'tebral n.,** incisura vertebralis [BNA].

notched. Indented, emarginate.

note'-blindness. Loss of the ability to comprehend musical notation.

notencephalocele (no-ten-sef'al-o-sēl) [G. *nōtos*, back, + *enkephalos*, brain, + *kēlē*, hernia.] A defect in the occipital portion of the cranium with protrusion of brain substance.

notenceph'alus. A monster with notencephalocele, see cut under *pygopagus*.

Nothnagel's syndrome (nōt'nah-gel) [Carl Wilhelm Hermann *Nothnagel*, Vienna physician, 1841–1905.] 1. Dizziness, staggering, and rolling gait, with irregular forms of oculomotor paralysis and often nystagmus, seen in cases of tumor of the corpora quadrigemina. 2. Paralysis of the facial muscles in cases of tumor of the thalamus. **N.'s test,** to determine the direction of the intestine in abdominal operations one places a small crystal of sodium chloride on the peritoneal surface of the gut; this causes ascending peristalsis, or antiperistalsis.

no-thresh'old bod'y. A substance in the blood plasma, the presence of which gives rise to no symptoms.

notochord (no'to-cord) [G. *nōtos*, back, + *chordē*, cord, string.] A cartilaginous or fibrocellular rod in the young embryo, constituting the primitive spinal cord or chorda dorsalis.

notochordal (no-to-cor'dal). Relating to the notochord or primitive spinal cord. **n. canal',** a canal, formed from a fissure in the primitive streak, which communicates with the cavity of the yolk-sac; neurenteric canal; the canal, in the embryo, connecting the neural and the enteric tubes. **n. ver'tebrate,** one of the lower vertebrates, as certain fishes, in which the notochord persists unossified, in adult life.

notom'elus [G. *nōtos*, back, + *melos*, limb] A monster with one or more accessory limbs attached to the back.

notomyelitis (no-to-mi-el-ī'(e')tis) [G. *nōtos*, back, + *myelos*, marrow, + *-itis*] Myelitis, inflammation of the spinal cord.

noumenal (noo'men-al) [G. *nooumenos*, perceived; *noeō*, I apprehend.] Intellectually, not sensuously, intuitional; relating to the object of pure thought divorced from all concepts of time or space.

novar'gan. A trade name for silver proteinate, argentoproteinum (U.S.).

novarsenobenzol (nōv-ar''sen-o-ben'zol). Trade name of a French make of neoarsphenamina.

novarsenobillon (nōv-ar-sen-o-be'yoń). Novarsenobenzol.

novas'pirin. Trade name of methylene-citrylsalicylic acid, methyl-citric acid ester of salicylic acid disalicylic acid ester of methylene citric acid, salicitrin; a white odorless powder containing 62 per cent. of salicylic acid; employed as an antipyretic and antirheumatic as a substitute for aspirin (acetylsalicylic acid) and the salicylates, in doses of gr. 10–15 (0.6–1.0).

novasurol (no-vas'u-rol). A double salt of sodium mercurichlorphenyl oxyacetate with barbital; a white odorless, soluble powder, containing 33.9 per cent. of mercury. Employed as an antisyphilitic and diuretic in doses of 15 to 30 minims (1 to 2 c.c.) of a 10 per cent. solution intramuscularly or intravenously.

novatophan (nōv-at'o-fan). Trade name of the ethyl ester of the p-methyl-phenylcinchoninic acid (atophan); it has the same action and uses as atophan from which it differs only in being tasteless.

novocaine (no'vo-kah-ēn). Procainæ hydrochloridum (U.S.).

novoiodine (no-vo-i'o-din) [L. *novus*, new.] Trade name of a compound of formaldehyde and iodine, $C_6H_{12}N_4I_2$ recommended as a substitute for iodoform.

novrenin (nov-ren'in). Trade name of a 2 per cent. solution of novocaine in a 1 : 20,000 solution of adrenalin chloride in physiological salt solution.

Novy-McNeal blood a'gar (no'vī-mak-nēl') [Frederick George *Novy*, American bacteriologist, *1864; Ward J. *McNeal*, American bacteriologist, *1881.] See under *agar*.

nox'a [L. injury.] Anything which exerts a harmful influence, such as trauma, poison, etc.

nox'ious [L. *noxius*, *nocere*, to injure.] Injurious, harmful.

NPN. Abbreviation for non-protein nitrogen.

N-rays [N the initial of Nancy, France, where Blondlot is a professor.] Blondlot* rays.

Nt. Chemical symbol of *niton*.

nubec'ula [L. dim. of *nubes*, cloud.] 1. A faint cloud or cloudiness. 2. Macula acustica sacculi [BNA].

nu'bile [L. *nubilis; nubere*, to marry.] Fit for marriage, said of a young woman at puberty.

nubil'ity. Marriageableness, said of the condition of a woman at puberty.

nucell'us [L. *nucella*, dim. of *nux*, nut.] In botany, the nucleus of the ovule.

nucha (nu'kah) [Fr. *nuque*.] The nape of the neck, the back of the neck.

nuchal (nu'kal). Relating to the nucha, or back of the neck. **n. tu'bercle,** the tip of the spinous process of the seventh cervical vertebra, or vertebra prominens.

nu'cin. Juglandic acid, $C_{36}H_{12}O_{18}$, derived from butternut-bark, or juglans.

nu'cis. Genitive of L. *nux*, nut.

Nuck's canal' or **diverticu'lum** [Anton *Nuck*, Dutch anatomist, 1650–1692.] Processus vaginalis peritonæi. **N.'s hy'drocele,** hydrocele* feminæ.

nuclear (nu'kle-ar). Relating to a nucleus. **n. cap,** one of the tigroid masses of a nerve-cell which, shaped like a hollow cone, caps each pole of the nucleus. **n. solu'tion,** chromatolysis, hypochromatosis, caryolysis.

nuclease (nu'kle-āz). An enzyme which decomposes nucleic acid.

nu'cleated. Provided with a nucleus, a characteristic of all true cells.

nuclei (nu'kle-i). Plural of *nucleus*.

nucleic acid (nu-kle'ik as'id). A body of definite chemical constitution ($C_{29}H_{49}N_9P_3O_{22}$), the combination of which with proteins forms nucleins; it yields on hydrolysis purine bases, pyrimidine bases, phosphoric acid, and sugar.

nu'cleide (nu'kle-īd). A compound of nuclein with a metallic oxide.

nucleiform (nu'kle-i-form) [L. *nucleus* + *forma*, form.] Shaped like or having the appearance of a nucleus.

nuclein (nu'kle-in). Cell-nuclein, true nuclein; a conjugated protein yielding, on hydrolysis, protein and nucleic acid. **n. bases,** adenine, guanine, and, through further cleavage, xanthine and hypoxanthine; also called xanthine bases.

nucleinase (nu'kle-in-āz). Nuclease.

nucleinic acid (nu-kle-in'ik as'id). Nucleic* acid.

nucleinotherapy (nu''kle-in-o-ther'ă-pĭ). Nucleotherapy.

nu"cleoalbu'min. A conjugated protein, phosphoprotein.*

nucleoalbuminuria (nu"kle-o-al-bu-min-u'rĭ-ah) [G *ouron*, urine.] The presence of nucleoalbumin in the urine.

nucleoalbumose (nu-kle-o-al'bu-mōz). A derivative of nucleoalbumin occasionally found in the urine.

nucleochylema (nu-kle-o-ki-le'mah) [L. *nucleus* + G. *chylos*, juice.] The chylema of the cell-nucleus as distinguished from that of the extranuclear cytoplasm.

nucleochyme (nu'kle-o-kīm) [L. *nucleus* + G. *chymos*, juice.] Nucleochylema, caryenchyma.

nucleof'ugal [L. *nucleus* + *fugare*, to flee.] 1. Moving within the cell-body in a direction away from the nucleus. 2. Moving in a direction away from a nerve nucleus, said of nerve transmission.

nucleohis'ton. A highly phosphorized compound of nuclein and histon present in the lymph glands, thymus, and elsewhere.

nu"cleohy'aloplasm [L. *nucleus* + G. *hyalos*, glass, + *plasma*, a thing formed.] Linin,* parachromatin.

nucleoid (nu'kle-oyd) [L. *nucleus* + G. *eidos*, resemblance.] 1. Nucleiform. 2 Inclusion body, *q.v.* under *inclusion*. **Lavdov'sky's n., attraction sphere.**

nu'cleol. Trade name of a preparation of nuclein obtained from yeast.

nucle'olar. Relating to a nucleolus.

nucle'oliform [L. *nucleolus* + *forma*, form.] Resembling a nucleolus.

nucle'olin. Plastin, the substance of which the nucleolus is composed.

nucleoli'nus [dim. of L. *nucleolus*.] Nucleololus.

nucle'oloid [L *nucleolus* + G *eidos*, resemblance.] Nucleoliform.

nucleol'olus [dim. of nucleolus.] Nucleolinus, nucleolonucleus, the nucleus of a nucleolus, a minute point in the germinal spot of an ovum.

nucle"olonu'cleus. Nucleololus.

nucle'olus, pl. *nucle'oli* [L. dim. of *nucleus*]. Plasmosome; a small mass of stainable (oxyphilic) material within the substance of the nucleus of a cell; it is usually single, but there may be from two to five nucleoli. **chro'matin n.,** m-chromosome.*

nucleomicrosome (nu"kle-o-mi'kro-sōm) [L. *nucleus* + G. *mikros*, small, + *sōma*, body.] One of the fine granules of the nucleoplasm.

nu'cleon. Phosphocarnic acid.

nucleop'etal [L. *nucleus* + *petere*, to seek.] 1. Moving in the cell-body in a direction toward the nucleus. 2. Moving in a direction toward a nerve-nucleus, said of a nervous impulse.

Nucleophaga (nu-kle-of'ah-gah) [*nucleus* + G. *phagō*, I eat.] A parasite of amebas, which destroys the nucleus of its host; the parasite itself is thought to be an ameba.

nu'cleoplasm. The protoplasm, or colloid portion, of the nucleus of a cell; nuclear fluid or sap.

nucleoprotein (nu"kle-o-pro'te-in) One of a group of conjugated proteins consisting of a compound of simple protein with nucleic acid; they are an important constituent of the cell-nucleus.

nu"cleoretic'ulum. The reticulum or framework supporting the nucleoplasm.

nucleospindle (nu"kle-o-spin'dl). The fusiform body in caryocinesis.

nu"cleother'apy [L. *nucleus* + G. *therapeia*, treatment.] The employment of nuclein in the treatment of various diseases.

nucleotide (nu'kle-o-tid). A simple nucleic acid combined with one base only; mononucleotide.

nu"cleotox'in. A toxin acting upon the cell nuclei

nucleus, pl. *nu'clei* (nu'kle-us) [L. dim of *nux*, nut.] 1. A differentiated mass of protoplasm, the executive center of the functional activity of the cell. It consists, like the cytoplasm, of a network of unstainable fibers (linin or achromatin) enclosing a fluid substance (caryolymph or nuclear hyaloplasm); along the course of the linin filaments are small masses or granules of a deeply stainable basophilic substance (chromatin). The nucleus also contains one or more minute oxyphilic bodies (nucleoli). 2. A mass of gray matter, composed of ganglion cells, in any part of the brain or spinal cord. 3. Any substance, foreign body-mucus, crystal, etc., around which a urinary or other calculus is formed.

au'ditory n., n. acustici [BNA]
Bechter ew's n., the upper portion of Deiter s n.
Dei'ter's n., lateral vestibular n., the main terminal n. of the vestibular nerve.
gamet'ic n., secondary n., the gonad, or germ n., or caryogonad of *Sarcodina*.
germ n., caryogonad, micronucleus.
gon'ad n., germ n.
mo'tion n., kinetonucleus, macronucleus.

n. abducen'tis, n. nervi abducentis.

nu'clei acus'tici, nuclei nervi acustici.

n. a'læ cine'reæ [BNA], n. of the ala cinerea, the sensory n. of the glossopharyngeal and vagus nerves in the floor of the rhomboidal fossa external to the hypoglossal n.

n. ambig'uus [BNA], ambiguous n., the n. of origin of the motor fibers of the vagus and glossopharyngeal nerves, composed of large multipolar cells arranged in a slender column, in the floor of the rhomboidal fossa posterior to the olive.

n. amyg'dalæ [BNA], amygdaloid, or almond, nucleus, a rounded mass of gray matter in the anterior portion of the temporal lobe of the cerebrum, near the uncus, anterior to the inferior horn of the lateral ventricle; it is continuous with the cortex of the temporal lobe.

n. ante'rior thal'ami [BNA], anterior n. of the thalamus, a small collection of gray matter forming the anterior tubercle; it is partly enclosed by the internal medullary lamina which also divides it into two parts.

nu'clei arcua'ti [BNA], a small collection of gray cells in the medulla, in front and to the inner side of the pyramid.

n. basa'lis, n. olivaris inferior.

n. bul'bi for'nicis, n. corporis mamillaris.

n. cauda'tus [L. tailed] [BNA], caudate nucleus, an elongated curved mass of gray matter, consisting of an anterior thick portion, the caput or head, which projects into the anterior horn of the lateral ventricle, and an elongated curved thin portion, the cauda or tail, which curves downward and backward in the temporal lobes to the wall of the descending horn.

n. centra'lis pon'tis, n. pontis.

n. cerebell'i, n. dentatus.

n. cerebell'oacus'ticus, a collection of nerve-cells in the lateral wall of the fourth ventricle.

n. cilia'ris oli'væ, n. olivaris inferior.

n. cine'reum, commissura posterior.

nu'clei cochlea'ris, nuclei nervi cochlearis.

n. collic'uli inferio'ris [BNA], a circumscribed collection of gray matter forming the central portion of the colliculus inferior (testis) of the corpora quadrigemina.

n. cor'poris genicula'ti latera'lis [BNA], n. of the lateral (external) geniculate body, a collection of gray matter in the lateral geniculate body.

n. cor'poris genicula'ti media'lis [BNA], n. of the medial (internal) geniculate body, a collection of gray matter in the medial geniculate body.

nu'clei cor'poris mamilla'ris [BNA], nuclei of the mammillary body, these clusters of cells within the corpus mamillare, the fibers from which form the fasciculus thalamomamillaris and fasciculus pedunculomamillaris.

n. cunea'tus, cuneate n., the upper portion of the cuneate fasciculus in the medulla oblongata.

n. denta'tus [BNA], dentate n., corpus dentatum, superior or cerebellar olive, a many-folded layer of gray matter enclosing a central core of white substance, situated in the center of each cerebellar hemisphere.

n. den'tis, pulpa dentis.

n. de reliquat (de re-le-kwă') [balance, remainder], rest-body.

n. dorsa'lis [BNA], dorsal nucleus, Clarke's column, posterior vesicular column; a group of column cells, extending longitudinally from the 7th or 8th cervical nerve to the level of the 2d lumbar nerve, in the cervix of the posterior gray column or horn of the spinal cord.

n. embolifor'mis [BNA], emboliform n., embolus, a small elongated mass of gray matter in the central white substance of the cerebellum just internal to the hilum of the dentate nucleus.

nu'clei facia'lis, nuclei nervi fascialis.

n. fastig'ii [BNA], n. of the fastigium, roof nucleus, a small mass of gray matter in the white substance of the vermis of the cerebellum near the middle line.

n. fibro'sus lin'guæ, septum linguæ.

n. funic'uli cunea'ti [BNA], nucleus of the wedge-shaped funiculus or Burdach's column, a group of cells in the cuneate tubercle at the level of the upper end of the decussation of the pyramids.

n. funic'uli grac'ilis [BNA], n. of the slender funiculus or Goll's column, a group of cells in the clava at the level of the upper end of the decussation of the pyramids.

n. gelatino'sus, n. pulposus.

n. globo'sus [BNA], spherical n., a group of two or three small masses of gray substance in the white central core of the cerebellum, to the inner side of and a little below the n. emboliformis.

n. grac'ilis, n. nervi gracilis.

n. haben'ulæ [BNA], n. of the habenula, ganglion habenulæ, a collection of cells in the trigonum habenulæ, the axons of which form the fasciculus retroflexus.

n hypothalam'icus [BNA], hypothalamic n., subthalamic n., Luys' body, an almond-shaped collection of gray matter lying below the thalamus and above the tegmentum of the cerebral peduncles.

n. juxtaoliva'ris, n. olivaris accessorius medialis.

nu'clei latera'les [BNA], a group of cells in the medulla, on either side, in the region between the olive and the substantia gelatinosa Rolandi.

n. latera'lis me'dius, n. ambiguus.

n. latera'lis thal'ami [BNA], lateral n. of the thalamus, a collection of gray matter between the internal and external medullary laminæ in the thalmus.

n. lemnis'ci latera'lis [BNA], n. of the lateral lemniscus or fillet, a collection of gray matter in the angle between the medial and lateral fillets.

n. lentifor'mis [BNA], lentiform n., lenticular n., a mass of gray matter on the outer side of the caudate nucleus, forming with it the corpus striatum.

n. len'tis, nucleus of the lens, the core or inner dense portion of the crystalline lens.

n. media'lis thal'ami [BNA], medial n. of the thalamus, a collection of gray matter in the thalamus between the internal medullary lamina and the massa intermedia of the third ventricle.

n. medull'æ oblonga'tæ, n. olivaris inferior.

n. medulla'ris cerebell'i, corpus medullare.

nu'clei moto rii ner'vi trigem'ini [BNA], motor nucles of the 5th nerve, a collection of gray matter in the dorsal portion of the pons to the inner side of the restiform body.

n. ner'vi abducen'tis [BNA], n. of the abducent (6th cranial) nerve, a mass of gray matter to the outer side of the posterior longitudinal bundle (fasciculus longitudinalis medialis) of the lower part of the pons, beneath the floor of the 4th ventricle.

nu'clei ner'vi acus'tici [BNA], nuclei of the acoustic nerve, auditory n., a diffuse mass of gray matter lying in the floor of the 4th ventricle below the area acustica.

nu'clei ner'vi cochlea'ris [BNA], nuclei of the cochlear nerve, the ventral portion of the nuclei nervi acustici.

nuclei ner'vi facia'lis [BNA], nuclei of the facial nerve, a collection of gray matter lying ventrally and laterally in relation to the abducens nucleus in the dorsal surface of the pons.

n. ner'vi hypoglos'si [BNA], n. of the hypoglossal nerve, the n. of origin of the 12th cranial nerve, composed of several groups of large multipolar cells extending from about the level of the decussation of the pyramids to the striæ acusticæ in the medulla.

n. ner'vi oculomoto'rii [BNA], n. of the oculomotor nerve, n. of the 3d nerve, a group of cells in the ventral part of the stratum griseum centrale beneath the superior quadrigeminal body.

n. ner'vi trochlea'ris [BNA], n. of the trochlear nerve, an oval mass of gray matter in the ventral portion of the central gray stratum enclosing the cerebral aqueduct.

nu'clei ner'vi vestibula'ris [BNA], nuclei of the vestibular nerve, the dorsal portion of the nuclei nervi acustici.

n. oliva'ris accesso'rius [BNA], accessory olivary nucleus, one of two bands of gray matter lying mesially (*n.o.a. medialis*) or dorsally (*n.o.a. dorsalis*) to the inferior olivary nucleus.

n. oliva'ris infe'rior [BNA], inferior olivary n., a wavy lamina of gray matter lying just below the surface o the olive in the medulla oblongata; it is puckered like a purse, the open end of which, directed mesially, is called the hilum or hilus.

n. oliva'ris supe'rior [BNA], superior olivary n., a collection of gray matter to the inner side of the facial nucleus in the dorsal, or tegmental, portion of the pons.

nu'clei orig'inis [BNA], nuclei of origin, motor nuclei, collections of cells (forming a continuous column in the

cord, discontinuous in the medulla and pons) giving origin to the motor nerves.

nu'clei pon'tis [BNA], nuclei of the pons, the gray matter in the ventral portion of the pons Varolii filling the spaces between the transverse and longitudinal bundles of white fibers.

n. principa'lis cerebell'i, n. dentatus.

n. pulpo'sus, pulpy nucleus; the gelatinous center of an intervertebral disc.

n. pyramida'lis, n. olivaris accessorius medialis.

n. rad'icis descenden'tis ner'vi trigem'ini [BNA], n. of the descending root of the trigeminal nerve, mesencephalic root nucleus, a small cluster of cells extending cephalad from the region of the locus cæruleus.

n. restifor'mis, n. funiculi cuneati.

n. rhomboid'eus, n. olivaris inferior.

n. ru'ber [BNA], red n., an elongated mass of gray matter, of a reddish hue in the fresh brain, lying in the upper portion of the tegmentum near the median plane.

n. salivato'rius infe'rior, a. n. located in the reticular formation dorsal to the n. ambiguus; it governs secretion from the parotid gland and its fibers leave the brain with the glossopharyngeal nerve.

n. salivato'rius supe'rior, a n. situated anteriorly and laterally to the n. s. inferior; it governs secretion of the sublingual and submaxillary glands, and its fibers leave the brain with the facial nerve.

n. subthalam'icus, n. hypothalamicus.

n. tæniæfor'mis (1) n. amygdalæ; (2) claustrum.

n. tec'ti, n. fastigii.

nu'clei tegmen'ti [BNA], nuclei of the tegmentum, tectorial nuclei; see *n. ruber*.

nu'clei termina'les [BNA], terminal nuclei, isolated clusters of cells in the brain and medulla in which the afferent sensory nerve fibers terminate.

n. testic'uli, mediastinum testis.

n. trac'tus solita'rii [BNA], n. of the solitary tract or respiratory bundle, the n. of termination of the vagus and glossopharyngeal nerves, extending from somewhat above the decussation of the pyramids to about the level of the striæ acusticæ.

n. trac'tus spina'lis ner'vi trigem'ini [BNA], n. of the spinal tract, or ascending root, of the trigeminal nerve, ganglion cells in the medulla and upper part of the cervical spinal cord, the substantia gelatinosa Rolandi, to which the fibers of the spinal tract of the trigeminal nerve are distributed.

nutri'tion n., trophonucleus, macronucleus.

reduc'tion n., a n. which degenerates in the cell during the changes incident to fertilization.

reproduc'tive n., micronucleus, caryogonad, germ n.

roof n., n. fastigii.

sec'ondary n., one formed by the collection of masses of idiochromidia.

somat'ic n., macronucleus.

Stilling's n., a column of scattered cells just ventrad of Clarke's column in the spinal cord.

troph'ic n., trophonucleus.

Nu'el's cords (nū-el') [J. P. *Nuel*, Belgian oculist 1847–1920.] Hensen's* stripes. **N.'s space,** an interval in the organ of Corti between the outer rods of Corti on one side and the cells of Deiters and hair cells on the other.

Nuhn's gland [Anton *Nuhn*, Heidelberg anatomist 1814–1889] Blandin's gland, glandula* lingualis anterior.

nullip'ara [L. *nullus*, none, + *parere*, to bear.] A woman who has never borne any children.

nulliparity (nul-i-par'i-ti). The condition of having borne no children.

nullip'arous. Never having borne children.

nulliplex character (nul'i-pleks kar'ak-tur [L. *nullus*, no, + *plexus*, fold.] In heredity, a character which is absent because its determiner is present in neither parent.

num'ber. The place of any unit in a series, see *No.*

numbness (num'nes). Anesthesia. **wa'king n.,** a temporary numbness and paresis of the extremities experienced on waking or after lying down for a long period.

numm'iform [L. *nummus*, a coin, + *forma*, form] Shaped like a coin, nummular.

numm'ular. 1. Discoid or coin-shaped, noting the thick mucous sputum in certain respiratory diseases. 2. Arranged like stacks of coins, noting the agglutination of the red blood-corpuscles with flat surfaces apposed, forming rouleaux.

nummula'tion. The formation of nummular masses.

numoquin (nu'mo-kwin). Ethylhydrocupreine, optochin. **n. base,** the preparation employed in the treatment of pneumonia in doses of gr. iv (0.25) with 5 ounces of milk to retard absorption, five times a day for three days. **n. hydrochlo'ride,** employed locally in corneal ulcer and pneumococcal conjunctivitis.

Nun's mur'mur. Bruit* de diable.

nunna'tion [Ar. *nūn*, the letter n.] A form of stammering in which the *n*-sound is given to other consonants.

nupercaine (nu'pur-kah-ēn). Trade name of the hydrochloride of a-butyloxycinchoninic acid diethylethylenediamide, percaine, claimed to produce regional infiltration and spinal anesthesia as well as surface analgesia of skin and mucous membranes.

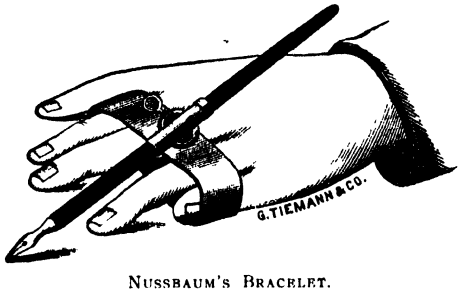
nurse [Fr. *nourrice;* L. *nutrix; nutrire*, to suckle, to tend.] 1. To suckle, to give suck to an infant. 2 To perform all the necessary offices in the care of the sick. 3. A woman who has the care of an infant or young child. 4. One who has the care of a sick person, performing all the necessary offices in relation to the toilet, giving of food and medicine, etc., under the direction of the physician. **charge n.,** a n. in charge of a single hospital ward. **child's n.,** see *nurse* (3). **commu'nity n., dis'trict n.,** a visiting n. whose field of action is limited to a certain district. **dry n.,** a child's n. who does not suckle the infant. **general duty n.,** one who does not specialize in any form of group nursing,* but who is available for any duty of her profession. **grad'uate n.,** one who has been graduated from a recognized training school. **head n.,** (1) supervisor, a graduate n. at the head of the nursing staff in a hospital; called "sister" in Great Britain; (2) charge n. **health n.,** a community n., charged with the duty of instructing the families to which she is sent in general hygiene and the prevention of disease. **hos'pital n.,** one on duty in the wards of a hospital; see *general duty, group,* and *special nursing.** **monthly n.,** one attending confinement cases, engaged usually for a period of four weeks. **prac'tical n.,** one who has had experience in the care of the sick and has received more or less instruction from the physicians with whom she has worked, but who is not a graduate of a training school. **private n.,** one in charge of a single patient either in his home or in a hospital. **private duty n.,** one who is not a member of the hospital staff, but is called upon to take special care of an individual patient in the hospital. **proba'tioner n.,** a young woman in a training school who is not yet accepted as a student but is under observation as to her fitness for nursing duty. **public health n.,** a graduate n. working under the direction of a public health official, who acts as the connecting link between that official and the lay public, and whose duties in relation to the community and the health office are similar on a large scale to the more restricted duties of the school n. **reg'istered n.,** a graduate n. who has satisfied the State authorities regarding her qualifications and is entitled to affix the initials R.N. to

her name. **school n.**, a graduate n. who examines the children in one or more schools, reporting any serious or infectious disease or eye or ear defect among the pupils to the school physician, and carrying out his directions in the care of defectives and in relation to the hygiene of the school and of the pupils' homes. **sick n.**, see nurse (4). **special n.**, (1) one who specializes in the care of patients suffering from diseases of a particular class, such as surgical cases, tuberculosis, children's diseases, etc.; (2) private n. **stu'dent n.**, an undergraduate member of a hospital training school. **the'atre n.**, in Great Britain the chief assistant to the theatre sister.* **trained n.**, same as graduate n. **visiting n.**, one who has charge of several sick persons, visiting each every day and performing the necessary offices. **wet n.**, a woman who gives suck to a child not her own.

nurses' contrac'ture, nurses' tet'any. Tetany sometimes observed in nursing women.

nurs'ing. Feeding an infant at the breast; tending and taking care of a child; caring for the mentally or physically ill or infirm; in general, performing the duties of a nurse in any sense; see *nurse*. **divisional n.**, group n. **general duty n.**, the work of a hospital nurse who is not in charge of one (*special n.* (1)) or more (*group n.*) patients, or of one suffering from a disease of a particular group (*special n.* (2)), but is available for any duty of her profession. **group n.**, a development of special n. (1) in which one nurse has the care of two or more patients in the same neighborhood. **industrial n.**, caring for the sick or injured in large industrial plants, the work of one or more whole time nurses, assisting the medical officer of the plant. **special n.**, (1) service rendered by a nurse to one patient only; (2) service restricted to the n. of those suffering from maladies of a particular class, such as surgical, pediatric, psychiatric, obstetrical, etc.

nursing-home. The British term for a private hospital.



NUSSBAUM'S BRACELET.

Nussbaum's bracelet (noos'bowm) [Jonann Nepomuk von *Nussbaum*, German surgeon, 1829–1890.] An appliance designed for the use of one with writer's cramp. **N.'s narco'sis,** general anesthesia produced by chloroform or ether following an injection of morphine.

Nussbaum's cells [Moritz *Nussbaum*, German histologist, *1850.] Granular cells in the pyloric glands. **N.'s exper'iment,** exclusion of the glomeruli of the kidney from the circulation by ligation of the renal artery in animals.

nutarian (nut-a'rĭ-an). One who relies upon nuts as the main article of his diet.

nutation (nu-ta'shun) [L. *nutare*, to nod.] Nodding.

nut'gall. Galla

nut'meg. Myristica.

nut'megged, nut'meggy. Resembling a nutmeg on section, noting especially a cirrhotic liver.

nut'meg-liv'er. A cirrhotic liver.

nutrescin (nu-tres'in). A hypothetical constituent of the hypothetical bioplasmin, supposed to supply nutriment to the cell.

nutrient (nu'trĭ-ent) [L. *nutrire*, to nourish.] Nutritive, carrying nourishment. **n. ar'tery,** an artery which enters a bone by the *n. foramen*, carrying blood to its interior.

nu'triment. Nourishment.

nutrition (nu-trish'un) [L. *nutrire*, to nourish.] A function of living plants and animals, consisting in the taking in and assimilation through chemical changes (metabolism) of material whereby tissue is built up and energy liberated; its successive stages are known as *digestion*, *absorption*, *assimilation*, and *excretion;* in highly organized animals digestion is preceded by *mastication* and *deglutition*, and excretion is effected by *expiration*, *perspiration urination*, and *defecation*

constructive, anabolism. **deficient,** oligotrophy, atrophy, cacotrophy, hypotrophy, athrepsia, **marasmus,** inanition, emaciation, marcor, trophesy, malnutrition, innutrition. **destructive,** catabolism. **disorder of,** trophopathy, tropnonosus. **excessive,** polytrophia. **normal,** eutrophia. **of bone,** osteotrophy. **of hair,** trichotrophy. **of muscle,** myotrophy. **of nails,** onychotrophy. **of nerve,** neurotrophy. **of skin,** dermotrophy. **perverted,** paratrophy, dystrophy, metatrophia. **process of,** metabolism. **regulating,** limitrophic. **retarded,** bradytrophia. **science of,** trophology, threpsology.

nutritional (nu-trish'un-al). Relating to nutrition

nutritious (nu-trish'us). Affording nutriment, alible.

nu'tritive. Nutrient, relating to nutrition.

nutrito'rium [L. neuter of *nutritorius*, nutritive.] The entire apparatus concerned in the process of nutrition of the body.

nutrolac'tis [L. *nutrire*, to suckle, + *lac(lact-)*, milk.] Trade name of a galactogogue containing galega or goat's rue.

nu'trose. Sodium caseinate, a mixture or compound of sodium hydroxide and freshly precipitated casein; occurs in the form of a white powder; employed as a concentrated food when added to bouillon, milk, or chocolate; used also as a culture medium.

Nuttall's stain for capsules. Same as Welch's* stain.

nux moschata (mos-kah'tah) The homeopathic term for a tincture made from powdered nutmeg, myristica; employed in mental troubles, uncontrollable sleepiness, nervous aphonia, and flatulence, in doses of the 6th, 30th, and 200th potencies.

nux vom'ica [L. *nux*, nut; *vomere*, to vomit; emetic nut.] (U.S., Br.) Poison nut, Quaker button, the seed of *Strychnos nux-vomica*, a tree of tropical Asia; it contains two active alkaloids, strychnine and brucine; tonic, stomachic, and nerve stimulant in doses of gr. 1–2 (0.06–0.13). Employed in homeopathic practice for the relief of hyperesthesia, the constipation of the sedentary, dry catarrh, and alcoholism, in doses of the mother tincture up to the 30th potency. **n.v. pulvera'ta** (Br.). Powdered nux vomica pulvis nucis vomicæ; dose, gr. 1–4 (0.06–0.25).

Nu'zum's micrococ'cus [John W. *Nuzum*, American pathologist and bacteriologist,* 1890.] A microorganism isolated from a mammary cancer, inoculation of which into white mice gives rise to a growth with all the characteristics of a spontaneous alveolar carcinoma.

nyctal'gia [G. *nyx(nykt-)*, night, + *algos*, pain.] Night-pain, noting especially the osteocopic pains of syphilis occurring at night.

nyctalo'pia [G. *nyx(nykt-)* night, + *alaos*, obscure, + *ōps*, eye.] 1. Night-blindness, inability to see as well as persons with normal sight at night or in a dim light. 2. Often incorrectly used to denote day-blindness, or hemeralopia.

nycterohemeral (nik-to-he'mer-al) [G. *nyx(nykt-)*, night, + *hēmera*, day.] Both daily and nightly.

nycterine (nik'ter-in, nik'ter-in) [G. *nykterinos*.] 1 By night. 2. Dark, obscure.

nyctopho'bia [G. *nyx(nykt-)*, night, + *phobos*, fear]. Fear of the dark.

nyctopho'nia [G. *nyx(nykt-)*, night, + *phōnē*, voice.] A neurosis marked by loss of voice during the daylight hours.

Nyctotherus (nik-to-the'rus) [G. *nyktothēras*, one who hunts by night.] A genus of Ciliophora, one species of which, *N. faba*, is said to be parasitic in the human intestine.

nyctotyphlo'sis [G. *nyx(nykt-)*, night, + *typhlōsis*, blindness.] Nyctalopia, night-blindness.

nyctu'ria [G. *nyx(nykt-)*, night, + *ouron*, urine.] 1. Nocturnal enuresis, bed-wetting. 2. A condition in which the secretion of urine is more active at night than during the day

Ny'lander's rea'gent [Emmo *Nylander*, Swedish chemist, 1835–1907.] Bismuth subnitrate 2, Rochelle salt, 4, 8 per cent. solution of caustic soda 100; one part of this reagent is added to 10 parts of the suspected fluid and the mixture is boiled for several minutes when, if sugar is present, a black precipitate of metallic bismuth is formed.

Ny'lic stan'dard [New York Life Insurance Company.] A standard of weight in relation to height and age, adopted by the New York Life Insurance Company.

nympha, pl. *nym'phæ* (nim'fah) [G. *nymphē*, an opening rosebud.] One of the labia minora, the folds of mucous membrane, beneath and to the inner side of the labia majora of the vulva.

nymphec'tomy [G. *nymphē*, nympha, + *ektomē*, excision.] Surgical removal of the hypertrophied nymphæ.

nymphitis (nim-fi'(fe')tis) [G. *nymphē*, labium minus, + *-itis*.] Inflammation of the nymphæ.

nymphocarun'cular sul'cus. A slight groove between the hymen and the labium minus on either side.

nymphohymeneal sulcus (nim-fo-hi-me'ne-al sul'kus). Nymphocaruncular sulcus.

nymphola'bial. Relating to the nymphæ, or labia minora, and the labia majora, noting a furrow between the two labia on each side.

nym'pholepsy [G. *nymphē*, a nymph, + *lēpsis*, a seizure.] Ecstasy, transport, especially one of an erotic nature.

nymphoma'nia [G. *nymphē*, a nymph, + *mania*, frenzy.] Extreme eroticism, or sexual desire, in women; correlated with satyriasis in men.

nymphoma'niac. A woman suffering from nymphomania

nymphomani'acal. Suffering from nymphomania.

nymphon'cus [G. *nymphē*, labium minus, + *onkos*, tumor.] A swelling or hypertrophy of one or both labia minora.

nymphot'omy [G. *nymphē*, labium minus, + *tomē*, incision.] 1. An incision into the edematous nymphæ. 2. Nymphectomy.

Nyssa (nis'ah). A genus of trees, the roots of several species of which, especially *N. aquat'ica*, *N. capita'ta*, and *N. grandidenta'ta*, swamp tupelo, tupelo gum, and large tupelo, respectively, are employed, like laminaria, for surgical tents to dilate sinuses or fistulæ and the cervix uteri.

nystagmic (nis-tag'mik). Relating to or suffering from nystagmus.

nystag'miform [G. *nystagmos*, a nodding, + L. *forma*, form.] Nystagmoid.

nystag'mograph [*nystagmus* + G. *graphō*, I record.] An apparatus for indicating graphically the movements of the eyeball in nystagmus; the receiving tambour is placed on the upper lid of the closed eye, the oscillations being recorded by means of a registering apparatus similar to that of the cardiograph.

nystag'moid [G. *nystagmos*, a nodding, + *eidos*, resemblance.] Noting certain movements of the eyes, partly voluntary and not continuous, resembling nystagmus.

nystagmus (nis-tag'mus) [G. *nystagmos*, a nodding.] Rhythmical oscillation of the eyeballs, either horizontal, rotary, or vertical. **au'ral n.,** a spasmodic movement of the eyes, horizontal, vertical, or rotary, first rather slowly in one direction, then by quick jerking movements in the opposite direction, dependent upon labyrinthine disturbances. **calor'ic n.,** see *Bárány's* sign*. **Cheyne's n.,** a form in which the rhythm of the movements recalls that of Cheyne-Stokes respiration. **lat'eral n.,** a form in which the eyes oscillate from side to side. **miner's n.,** n. occurring in coal miners who wield the pick while lying on the side in a constrained position; when not constantly present it can be elicited by turning the eyes upward. **n. against the rule,** miner's n. excited when the eyes are directed downward. **pal'atal n.,** a clonic spasm of the levator palati muscle, causing an audible click. **ro'tatory n.,** a slight movement of the eyes around the visual axis. **ver'tical n.,** an up-and-down oscillation of the eyes. **vestib'ular n.,** n. occurring as a reflex of disease of the ear; when due to otic irritation the more rapid eye movement is toward the side of the affected ear; when due to paralysis of one vestibular nerve it is toward the sound side; see *Bárány's* sign*.

nyx'is [G.] Pricking, puncture, paracentesis.

O

O. 1. Chemical symbol of *oxygen*. Abbreviation for *opening* (in formulæ for electrical reactions), *oculus*, eye, *octarius*, pint.

o-. In chemistry, abbreviation for *ortho-*.

oak. Quercus.

oakum (o'kum) [A.S. *ācumba*.] The ravellings of tarred rope, employed formerly as a surgical dressing.

oarialgia (o"a-rĭ-al'jĭ-ah) [G. *ōarion*, ovule.] Oothecalgia.

oaric (o-ar'ik). Ovarian.

oariot'omy [G. *ōarion*, ovule, + *tomē*, incision.] Oothecotomy.

oaritis (o-ar-i'(e')tis) [G. *ōarion*, ovule, + *-itis*.] Oothecitis.

oa'rium [G. *ōarion*, ovule.] Ovary, ootheca.

o'asis [G. *Oasis*, a fertile place in a sandy desert.] A focus or circumscribed area of disease.

oat (ōt) [A.S. *āte*.] Avena.

obceca'tion [L. *ob-*, near, *cæcitas*, blindness.] Partial blindness.

obdiplostem'onous [L. *ob*, toward, + G. *diploos*, double, + *stēmōn*, stamen.] In botany, noting a flower in which the stamens are in two whorls, the outer opposite the petals, the inner opposite the sepals.

obdormition (ob-dor-mish'un) [L. *ob*, to, + *dormire*, to sleep.] Numbness of an extremity, due to pressure on the sensory nerve, popularly called *asleep*.

O'Beirne's experiment (o-burn') [James *O'Beirne*, Irish surgeon, 1786–1862.] An experiment made to determine the pathogenesis of strangulation of a hernia; a loop of intestine is passed through a hole in a thick sheet of paper; air or water is then injected into one end of the intestine and passes readily if slowly injected but is arrested at the loop of intestine if injected with force. **O'B.'s sphincter,** a circular band of muscular fibers in the upper part of the rectum. **O'B.'s tube,** a tube for rectal injections

obe'liac. Relating to the obelion.

obe'liad [L. *ad*, to.] Toward the obelion

obelion (ŏ-be'lĭ-on) [G. *obelos*, a spit.] A craniometric point on the sagittal suture between the parietal foramina near the lambdoid suture.

O'bermayer's test [Fritz *Obermayer*, Viennese physician, 1861–1925.] For indican: precipitate the solids in the urine by means of a 20 per cent. solution of acetate of lead, filter, and add to the filtrate fuming hydrochloric acid containing a small amount of ferric chloride solution; the addition now of chloroform causes the formation of indigo, indicated by the blue color, if indican is present.

O'bermeier's spirill'um [Otto Hugo Franz *Obermeier*, German physician, 1843–1873.] *Borrelia recurrentis*.[0]

Obermueller's test (o'ber-mü-ler) [Kuno *Obermueller*, German physician, *1 61.] For cholesterin: the fatty substance is melted in a test-tube with a few drops of propionic anhydride; if cholesterin is present there will be a play of colors in the cooling mass from blue through green, orange, and carmine to a coppery red.

O'berst's method [M. *Oberst*, German surgeon, 1849–1925.] 1. For producing local anesthesia of a finger or toe; constriction of the base of the digit is made by an elastic band, and then subcutaneous injections of a weak solution of cocaine are made in the regions of the four chief nerves; the same in principle as Corning's* method (2). 2. Infiltration anesthesia, local anesthesia obtained by injections of large quantities of distilled water or saline solution into the subcutaneous connective tissue; differs from the Schleich* method in that a weak cocaine solution is used in the latter. **O.'s operation,** for ascites; a pedunculated portion of skin from the abdomen is buried subcutaneously in such a manner, that the apex projects into the abdominal cavity, thus providing continuous drainage without the introduction of any substance foreign to the body.

obese (o-bēs') [L. *obesus*, fat.] Extremely fat or corpulent.

obesity (o-be'si-tĭ) [L. *obesitas; obedere*, to eat up.] An abnormal increase of fat in the subcutaneous connective tissues; corpulence, polysarcia, fatness, general adiposis, general liposis.

o'bex [L. bar.] [BNA]. A small transverse medullary fold at the calamus scriptorius overhanging the opening from the fourth ventricle into the central canal of the spinal cord.

obfuscation (ob-fus-ka'shun) [L. *obfuscare*, to darken.] 1. A rendering dark or obscure. 2. Confusion.

ob'ject-blindness. Apraxia, inability to recognize the nature of what is seen.

ob'ject-glass. Objective.

objec'tive. The lens or lenses in the lower end of a microscope, by means of which the rays coming from the object examined are brought to a focus.

obligate (ob'li-gāt) [L. *ob*, to, + *ligare*, to bind.] Of necessity, compulsory; distinguished from facultative. **o. a'ërobe,** a microorganism which can grow only in the presence of oxygen. **o. ana'ërobe,** a microorganism which can grow only in the absence of oxygen. **o. par'asite,** an organism to which a parasitic existence is necessary for development, one which cannot live as a saprophyte.

oblique (o-blēk') [L. *obliquus*.] Slanting, deviating from the perpendicular or the horizontal.

obli'quus [L.] A name given, with further qualification, to several muscles; see under *musculus*.

oblongata (ob-long-gah'tah) [L. fem. of *oblongatus*, from *oblongus*, rather long.] Medulla oblongata.

oblonga'tal. Relating to the medulla oblongata.

obmutescence (ob-mu-tes'ens) [L. *obmutescere*, to become dumb.] Dumbness, loss of the voice or of the powe of speech.

obnubilation (ob-nu-bĭ-la'shun) [L. *obnubilare*, to overcloud, befog.] A beclouded mental state.

observerscope (ob-zur'vur-skōp) [G. *skopeō*, I see, regard.] An endoscope with two cylinders branching from one, like the letter Y, enabling two observers to inspect the same point at the same time.

obses'sion [L. *obsidere*, to besiege.] A condition in which some one idea constantly fills the mind despite one's efforts to dislodge it; besetment.

obsolescence (ob-so-les'ens) [L. *obsolescere*, to grow out of use.] Falling into disuse, noting the abolition of a function.

ob'solete. Fallen out of use.

obstet'ric, obstet'rical. Relating to obstetrics or midwifery.

obstetrician (ob-stĕ-trish'an). One who is skilled in the medical care of a woman in childbirth; an accoucheur.

obstet'rics [L. *obstare*, to stand before, noting the position formerly taken by the midwife.] Midwifery, the branch of medicine which has to do with the care of the pregnant woman during pregnancy, parturition, and the puerperium

obstet'rist. Obstetrician.

obstet'rix [L.] A midwife.

obstipa'tion [L. *obstipare*, to stop up.] Intestinal obstruction; intractable constipation.

obstruc'tion [see *obstruent*.] 1. Anything that is in the way, that blocks advance. 2. The blocking of advance or interruption in the course of anything.

obstruent (ob'stru-ent) [L. *ob*, before, + *struere*, to build.] 1. Obstructing, blocking advance. 2. An agent that obstructs or prevents a normal discharge, especially a discharge from the bowels.

obtund' [L. *obtundere; ob*, against, + *tundere*, to pound.] To dull or blunt, especially to blunt sensation or deaden pain.

obtun'dent. 1. Dulling, making less acute. 2. An agent which blunts sensibility or deadens pain

obturator (ob'tu-ra-tor) [L. *obturare*, to occlude or stop up.] 1. Any structure that occludes an opening. 2. Noting a large opening in the lower part of the os innominatum, the obturator foramen, the occluding membrane of the same, or any of several parts in relation to this foramen. 3. A plate closing a defect or cleft in the hard palate. **o. fora'men,** foramen obturatum. **o. muscle,** see under *musculus*. **o. nerve,** see under *nervus*. **o. plexus,** see *plexus*.

obtuse (ob-tūs') [L. *obtusus; obtundere*, to blunt.] 1. Dull in intellect, of slow understanding. 2. Blunt, not acute.

obtu'sion. 1. Dulness of sensibility. 2. Dulling or deadening sensibility.

occalcarine (ok-kal'kă-rēn). Occipitocalcarine

occip'ital. Relating to the occiput. **max'imum o. point,** the point on the squama of the occipital bone farthest from the glabella. **o. angle,** posterior superior angle of the parietal bone.

occipita'lis. The posterior belly of the musculus occipitofrontalis.

occip'ito-ante'rior. Noting a fetal presentation with the occiput directed anteriorly.

occipitoatloid (ok-sip"ĭ-to-at'loyd). Relating to the occipital bone and the atlas, noting the articulation between the two bones.

occipitoaxial, occipitoaxoid (ok-sip"ĭ-to-aks'ĭ-al, ok-sip"ĭ-to-aks'oyd). Relating to the occipital bone and the axis, or epistropheus.

occip"itobregmat'ic. Relating to the occiput and the bregma, noting a measurement in craniometry.

occipitocalcarine (ok-sip"ĭ-to-kal'ka-rīn). Noting the posterior calcarine fissure.

occipitofa'cial. Relating to the occiput and the face

occipitofrontal (ok-sip"ĭ-to-frun'tal). Relating to the occiput and the forehead; see musculus occipitofrontalis.

occip"itofronta'lis. See under *musculus*.

occipitoiliac (ok-sip"ĭ-to-il'ĭ-ak). Noting the presentation in childbirth in which the occiput of the child points to one or the other iliac region of the mother; occipitoposterior.

occip"itomas'toid. Relating to the occipital bone and the mastoid process.

occip"itomen'tal [L *mentum*, chin.] Relating to the occiput and the chin.

occip"itopari'etal. Relating to the occipital and the parietal bones

occip"itoposte'rior. Noting a fetal presentation with occiput of the child directed toward one or the other sacroiliac joint of the mother.

occip"itotem'poral. Relating to the occiput and the temple, or the occipital and the temporal bones.

occip"itothalam'ic. Relating to the occipital lobe of the brain and to the thalamus.

oc'ciput, gen. *occip'itis* [L.] The back of the head.

occlude' [L. *occludere*, to close up.] To close up or fit together, noting the relation of the masticatory surfaces of the upper and lower molars.

occlu'sal. That which occludes. **o. surface,** masticatory or grinding surface of a premolar or molar tooth.

occlusion (ŏ-klu'zhun) [L. *occludere; ob*, before, + *claudere*, to close.] 1. The act of closing or the state of being closed. 2. In chemistry, the absorption of a gas by a metal. 3. The adjustment or fitting together of the premolar and molar teeth when the jaws are closed. **afunc'tion o.,** a state of such extreme malocclusion that mastication is impossible. **anatom'ical o.,** normal o. **buc'cal o.,** noting the position of a tooth the occlusal surface of which projects to the buccal side of the line of o. **cen'tric o.,** same as *occlusion*, 3. **distal o.,** distoclusion, a backward position of a tooth in relation to its fellow in the other jaw. **eccen'tric o.,** the relation of the occlusal surfaces of the teeth when the lower jaw is moved laterally or anteroposteriorly. **in'fra-o.,** failure of a tooth to come to the level of the general occlusion surface. **la'bial o.,** noting the position of an incisor or canine tooth the occlusal surface of which projects anteriorly to the line of occlusion. **line of o.,** the curved line formed by the upper and lower teeth when in normal or centric o. **me'sial o.,** mesioclusion, noting the position of a tooth which projects forward or in a direction toward the apex of the dental arch. **neu'tral** or **nor'mal o.,** same as *occlusion* 3. **postnor'mal o.,** mesial o, **prenor'mal o.,** distal o. **su'pra-o.,** projection of a tooth beyond the level of the general occlusal surface. **tor'sive o.,** torsoclusion, the condition of a tooth which is twisted around its long axis. **trau-mat'ic o.,** malocclusion of each a degree as to cause injury to the opposing tooth or teeth.

occlu'sive. Serving to close, noting a bandage or dressing which closes a wound and protects it from the air.

occult' [L. *occulere*, to hide.] Hidden, concealed; noting a concealed hemorrhage, or blood so changed as not to be readily recognized.

occupa'tion-neuro'sis. Professional neurosis; a nervous disorder directly due to the patient's occupation, such as writer's cramp.

occycrystine (ok-sĭ-kris'tēn). Trade name of a hypertonic solution of the neutral sulphates of calcium, magnesium, potassium, and sodium; recommended as a laxative or cathartic and in the treatment of intestinal autointoxication.

ocellus, pl. *ocell'i* (o-sel'us) [L. dim. of *oculus*, eye.] The simple eye or a facet of the compound eye of an insect.

Ochlerotatus (ok-ler-o-ta'tus) [G. *ochlērotatos*, most importunate.] A large genus of mosquitos having many species.

ochlesis (ŏ-kle'sis) [G. *ochlēsis; ochlos*, a crowd.] Crowd-poisoning; a disease occasioned or aggravated by overcrowding.

ochlophobia (ok-lo-fo'bĭ-ah) [G. *ochlos*, crowd, + *phobos*, fear.] Morbid fear of crowds

ochrodermatosis (o-kro-dur-ma-to'sis) [G. *ōchros*, pale yellow, sallow, + *derma*, skin, + *-osis*. The yellow disease, a bright yellow or saffron coloration of the skin sometimes observed in Europeans living in Ceylon and tropical India; it disappears on change of residence to the hills.

ochrometer (o-krom'e-tur) [G. *ōchros*, pallor, + *metron*, measure.] An instrument for determining the capillary blood-pressure; one of two adjacent fingers is compressed by a rubber balloon until blanching of the skin occurs, when the force necessary to accomplish this color change is read in millimeters of mercury.

ochronosis (ō-kron-o'sis) [*ōchros*, sallow, + *nosos*, disease.] A pathological pigmentation of the cartilages and sometimes other tissues, such as muscle, epithelial cells, and connective tissue; it may affect also the sclera, mucous membrane of the lips and skin of the ears, face, and hands; the urine may be dark colored and pigmented casts may be found in it. The pigmentation is thought to be due to a substance similar to melanin, produced by the action of tyrosinase on tyrosin and phenylalanin.

Ochsner's meth'od (ox'ner) [Albert John *Ochsner*, Chicago surgeon, 1858–1925.] Treatment of appendicitis, when operation is not advisable, by peristaltic rest secured by abstention from the use of cathartics and of food by the mouth, by gastric lavage for the relief of nausea and meteorism, and by rectal irrigation (but not large enemata). **O.'s ring,** a circular fold of mucous membrane nearly surrounding the opening of the pancreatic duct. **O.'s solu'tion,** phenol 0.5, alcohol 33, saturated aqueous solution of boric acid 66.5.

Ocimum (os'ĭ-mum) [G. *ōkimon*, basil] A genus of plants of the order *Labiatæ*. **O. basil'icum,** sweet basil, a plant the juice of which is used as a vermifuge **O. ca'num,** a species the juice and leaves of which are employed in catarrhal troubles. **O. vir'ide,** a species of South America employed as an antiperiodic.

oc'tad [L. *octo*, eight.] 1. Octavalent. 2. An octavalent element or radical.

oc'tan [L. *octo*, eight] Noting a fever, the paroxysms of which recur every eighth day, the day of each paroxysm being included in the count.

oc'tane. Dibutyl, an oily paraffin, C_8H_{18}, obtained from petroleum.

octa'rius [L. *octo* eight.] The eighth of a gallon, a pint; abbreviation, O.

octav'alent [L. *octo*, eight, + *valere*, to have power.] Noting a chemical element or radical having a combining power or valency, of eight, an octad.

octigrav'ida [L. *octo*, eight, + *gravida*, pregnant.] A woman pregnant for the eighth time.

octipara (ok-tip'ah-rah) [L. *octo*, eight, + *parere*, to bear.] A woman who has borne eight children.

Octomitidæ (ok-to-mit'i-de) [G. *oktō*, eight, + *mitos*, thread.] A family of Diplozoa having eight flagella.

Octomitus (ok-tom'ĭ-tus) [G. *oktō*, eight, + *mitos*, thread.] A genus of Octomitidæ of which one species, **O. hom'inis,** is parasitic in the human intestine and believed to cause diarrhea.

octoroon'. A person who has one-eighth part of negro blood, the child of a white person and a quadroon.

oc'ular [L. *oculus*, eye.] 1. Relating to the eye; visual; ophthalmic. 2. The eye-piece of a microscope, the lens or lenses at the upper end of a microscope, by means of which the image focussed by the objective is viewed.

oculentum (ok-u-len'tum), pl. *oculenta* [L. *oculus*, eye.] (Br.). Eye ointment. **o. atropi'næ,** contains atropine sulphate, 0.25 per cent. **a. atropi'næ cum hydrar'gyri ox'ido,** atropine sulphate, 0.125 per cent., yellow oxide of mercury, 1 per cent. **o. cocai'næ,** cocaine hydrochloride, 0.25 per cent. **o. hydrar'gyri ox'idi,** yellow oxide of mercury, 1 per cent. **o. hyosci'næ,** hyoscine hydrobromide, 0.125 per cent. **o. iodofor'mi,** iodoform, 4 per cent. **o. physostigmi'næ,** physostigmine salicylate, 0.125 per cent.

oc'ulist [L. *oculus*, eye.] Ophthalmologist.

oculofacial (ok-u-lo-fa'shal). Relating to the eyes and the face.

oculogyria (ok-u-lo-ji'rĭ-ă) [L. *oculus*, eye, + G. *gyrios*, circular.] The limits of motion of the eyeballs.

oculogyric (ok-u-lo-ji'rik) [L. oculus, eye, + G. *gyreuō*, I turn around.] Ophthalmogyric; oculomotor, causing or relating to movements of the eyeball.

oc"ulomo'tor [L. *oculus*, eye, + *motus*, motion] Relating to or causing movements of the eyeball.

oculomoto'rius. The third cranial nerve, see under *nervus*.

oculomycosis (ok-u-lo-mi-ko'sis) [L. *oculus*, eye, + G. *mykēs*, fungus, + *-osis*.] Ophthalmomycosis, any disease of the eye due to the presence of a fungus.

oc"ulona'sal [L. *oculus*, eye, + *nasus*, nose] Relating to the eyes and the nose

oculoreaction (ok"u-lo-re-ak'shun). Ophthalmoreaction.

oc"ulozygomat'ic. Relating to the orbit or its margin and the zygoma.

oc'ulus, gen and pl *oc'uli* [L.] Eye, the organ of vision, consisting of the eyeball and the optic nerve.

ocyodin'ic [G. *ōkys*, swift, + *ōdis*, labor] Oxytocic.

O.D. Abbreviation for *oculus dexter* [L.], right eye.

od [G *hodos*, way.] A force assumed to be exerted upon the nervous system by magnets.

odaxes'mus [G. *odaxēsmos*, an irritation] A biting sensation, a form of paresthesia.

Oddi's sphinc'ter (od'de). A contraction of the outlet of the common bile-duct at the neck of Vater's ampulla.

-odes [G. *-ōdēs*, having the odor of.] A Greek suffix with the original meaning of resemblance in odor, but now confused with *eidos*, resemblance in general, and having practically the same significance as -oid* (in typhoid, for example).

odinagogue (o-din'ah-gog) [G. *ōdis*(*ōdin-*), labor pains, + *agōgos*, drawing forth.] Oxytocic.

odinopœia (o-din-o-pe'ĭ-ah) [G. *ōdis*(*ōdin-*), labor-pains, + *poieō*, I make.] The induction of labor-pains.

o'dol. Trade name of an antiseptic mouth wash containing various aromatic antiseptics.

odontag'ra [G *odous*(*odont-*), tooth, + *agra*, seizure.] Toothache of supposed gouty origin.

odontal'gia [G. *odous*(*odont-*), tooth, + *algos*, pain] Toothache, odontodynia.

odontal'gic. Relating to or marked by adontalgia, or toothache.

odontal'gicum (N.F.) [G. *odous* (*odont-*), tooth, + *algikos*, painful.] Toothache remedy; oil of cinnamon 10, phenol 20, methyl salicylate 30.

odontatroph'ia, odontat'rophy [G. *odous*(*odont-*) tooth, + *atrophia*, atrophy.] Imperfect formation of the teeth.

odon'terism [G. *odous*(*odont-*), tooth, + *erismos* quarrel.] Chattering of the teeth.

odonthæmodia, odonthemodia (o-dont-he-mo'dĭ-ah, o-don-the-mo'dĭ-ah) [G. *odous(odont-)*, tooth, + *haimōdia*, having the teeth on edge.] Odonthyperesthesia, extreme sensitiveness of the teeth.

odonthar'paga [G. *odous(odont-)*, tooth, + *harpagē*, a seizure.] Odontagra, severe toothache.

odonti'asis [G. *odous(odont-)*, tooth.] Dentition, teething.

odon'tic [G. *odous(odont-)*, tooth.] Relating to the teeth, dental.

odon'tinoid [G. *odous(odont-)*, tooth, + *eidos*, resemblance.] 1. Resembling dentine. 2. A small excrescence from a tooth, most common on the root or neck; especially a neoplasm occurring in later life, as distinguished from odontoma.

odontitis (o-don-ti'(te')tis) [G. *odous(odont-)*, tooth, + *-itis*.] Inflammation of the tooth-pulp.

odonto- [G. *odous(odont-)*, tooth.] A prefix, properly in words formed from Greek roots, noting a tooth or teeth.

odon'toblast [G. *odous(odont-)*, tooth, + *blastos*, sprout, germ.] One of a layer of columnar cells, lining the pulp-cavity of a tooth, which form dentine.

odontoblastoma (o-don-to-blas-to'mah). A dentinal overgrowth or tumor.

odontobothrion [(o-don-to-both'rĭ-on) [see *odontobothritis*.] Tooth socket, alveolus dentalis.

odontobothritis (o-don"to-both-rī'(re')tis) [G. *odous(odont-)*, tooth, + *bothrion*, a little pit, + *-itis*.] Inflammation of the tooth-sockets, or alveoli.

odontocele (o-don'to-sēl) [G. *odous (odont-)*, tooth, + *kēlē*, tumor.] Alveolodental cyst.*

odontoceramic (o-don"to-sĕ-ram'ik) [G. *odous (odont-)*, tooth, + *keramos*, pottery.] Relating to porcelain teeth.

odontochirurgical (o-don-to-ki-rur'jĭ-kal) [G. *odous (odont-)*, tooth, + *cheirourgia*, surgery.] Relating to dental surgery.

odontoclasis (o-don-tok'la-sis) [G. *odous (odont-)*, tooth, + *klasis*, fracture.] Breaking of a tooth.

odon'toclast [G. *odous(odont-)*, tooth, + *klaō*, I prune.] One of the cells causing absorption of the roots of the milk teeth.

odontodyn'ia [G. *odous(odont-)*, tooth, + *odynē*, pain.] Odontalgia, toothache.

odon'togen [G. *odous(odont-)* tooth, + *gennaō*, I produce.] A substance forming dentine.

odontogeny (o-don-toj'en-ĭ) [G. *odous(odont-)*, tooth, + *gennaō*, I produce.] The process of development of the teeth.

odontoglyph (o-dont'o-glif) [G. *odous(odont-)*, tooth, + *glyphō*, I engrave.] An instrument for removing tartar from the teeth.

odontogram (o-don'to-gram) [G. *odous(odont-)*, tooth, + *gramma*, a drawing.] The tracing made by the needle of an odontograph.

odontograph (o-don'to-graf) [G. *odous(odont-)*, tooth, + *graphō*, I record.] A device for recording on a revolving tambour the thickness and the inequalities of surface of the enamel of a tooth.

odontog'raphy [G. *odous(odont-)*, tooth, + *graphē*, a description.] 1. A treatise on, or description of, the teeth. 2. The process of determining the condition of the enamel of a tooth.

odon'toid [G. *odous(odont-)*, tooth, + *eidos*, resemblance.] 1. Shaped like a tooth. 2. Relating to the odontoid process. **o. lig'ament,** ligamentum alare, ligamentum apicis dentis. **o. process,** the projection from the axis, or epistropheus, around which the atlas revolves.

odon'tolith [G. *odous(odont-)*, tooth, + *lithos*, stone.] The tartar of the teeth.

odontol'ogy [G. *odous(odont-)*, tooth, + *-logia*.] The branch of medical science dealing w th the teeth; dentistry.

odontolox'ia, odontol'oxy [G. *odous(odont-)*, tooth, + *loxos*, slanting.] Irregularity of the teeth.

odontolysis (o-don-tol'i-sis) [G. *odous(odont-)*, tooth, + *lysis*, solution.] Erosion of the teeth.

odonto'ma, pl. *odonto'mata* [G. *odous(odont-)*, tooth, + *-ōma*.] 1. A tumor composed of dental structures. 2. A tumor arising in connection with a tooth, from the tooth itself, its follicle, or any of the immediately adjacent tissues; an enamel nodule; especially a new growth arising at an early period of development of the tooth before the formation of the dentine.

odontome (o-don'tōm). Odontoma. **cor'onary o.,** an odontoma of the crown. **radic'ular o.,** an odontoma of the root of a tooth.

odontonecrosis (o-don"to-nĕ-kro'sis) [G. *odous(odont-)*, tooth, + *nekrōsis*, a killing.] The death of the whole or a large part of a tooth, as distinguished from caries, or molecular death.

odontoneural'gia. Odontalgia; facial neuralgia caused by a carious tooth.

odontonomy (o-don-ton'o-mĭ) [G *odous (odont-)*, tooth, + *onoma*, name.] Dental nomenclature.

odontonosol'ogy [G. *odous(odont-)*, tooth, + *nosos*, disease, + *-logia*.] Odontology, dentistry.

odontoparallax'is [G. *odous(odont-)*, tooth, + *parallaxis*, alternation.] Irregularity of the teeth, odontoloxia.

odontop'athy [G. *odous(odont-)*, tooth, + *pathos*, suffering.] Any disease of the teeth or of their sockets.

odon"toperios'teum [G. *odous(odont-)*, tooth, + *peri*, around, + *osteon*, bone.] Periodontium.

odontophobia (o-don-to-fo'bĭ-ah) [G. *odous(odont-)*, tooth, + *phobos*, fear.] A morbid fear excited by the sight of an animal's teeth.

odon'toplast [G. *odous(odont-)*, tooth, + *plassō*, I form.] Odontoblast.

odontoplero'sis [G. *odous(odont-)*, tooth, + *plērōsis*, a filling up.] The operation of filling or plugging a cavity in a tooth.

odontop'risis [G. *odous(odont-)*, tooth, + *prisis*, a grinding.] Grinding together of the teeth

odontorrha'gia [G. *odous(odont-)*, tooth, + *-rhagia*.] Profuse bleeding from the socket after the extraction of a tooth.

odontortho'sis [G. *odous(odont-)*, tooth, + *orthos*, straight.] The operation of straightening an irregular line of teeth.

odontoschism (o-don'to-sizm) [G. *odous(odont-)*, tooth, + *schisma*, a cleft.] Fissure of a tooth.

odon'toscope [G. *odous(odont-)*, tooth, + *skopeō*, I examine.] A circular mirror set at an angle on a rod-shaped handle, for use in inspecting the posterior surfaces of the teeth.

odontos'copy [G. *odous*, tooth, + *skopeō*, I look at.] An examination of the markings in prints of the cutting edges of the teeth, employed, like finger prints, as a method of personal identification.

odonto'sis. Odontiasis, odontogeny

odontosmegma (o-don"to-smeg'mah) [G. *odous (odont-)*, tooth, + *smegma*, unguent.] Anything—powder, paste, or wash, used in cleaning the teeth.

odontos'teophyte [G. *odous(odont-)*, tooth + *osteon*, bone, + *phyton*, plant.] A dentinal tumor.

odontostere'sis [G. *odous(odont-)*, tooth, + *sterēsis*, privation.] Loss of the teeth.

odontother'apy [G. *odous(odont-)*, tooth, + *therapeia*, treatment.] Treatment of diseases of the teeth; hygienic care of the teeth.

odontotomy (o-don-tot'o-mĭ) [G. *odous*, tooth, + *tomē*, incision.] Incision into the dental canal, odontotripy.

odontotrip'sis [G. *odous(odont-)*, tooth, + *tripsis*, rubbing.] Abrasion of the cutting surfaces of the teeth.

odontot'rypy, odon'trypy [G. *odous(odont-)*, tooth, + *trypaō*, I bore.] The operation of drilling a hole in a tooth to give exit to pus.

o'dor [L.] An emanation from any substance which stimulates the nerve-endings in the organ of smell; scent. **offensive o.**, fetor, stench.

odorif'erous [L. *odor* + *ferre*, to bear.] Having a scent, perfume, or odor.

odorim'etry [L. *odor* + G. *metron*, measure.] The determination of the comparative power of different substances in exciting olfactory sensations

odorog'raphy [L. *odor* + G. *graphē*, a description.] Description of odors.

O'Dwy'er's meth'od [Joseph *O'Dwyer*, New York physician, 1841–1898] 1. Intubation of the larynx. 2 Treatment of simple ulcers of the vocal cords by the insertion of a tube coated with alum and gelatin. **O'D.'s tube**, a metal tube used for intubation of the larynx after O'D.'s method.

odynacusis (od-in-ă-koo'sis) [G. *odynē*, pain, + *akouō*, I hear.] Hypersensitiveness of the organ of hearing, so that noises cause actual pain.

odynopha'gia. Odynphagia.

odynopho'bia [G. *odynē*, pain, + *phobos*, fear.] An excessive dread of pain.

odynopœia (od-in-o-pe'ĭ-ah) [G. *odynē*, pain, + *poieō*, I make.] The bringing on or strengthening of labor-pains; more properly *odinopœia*.

odynpha'gia [G. *odynē*, pain, + *phagō*, I eat] Painful deglutition.

œ-. For words so beginning, not found here, see *e-*.

œcology (e-kol'o-jĭ). Ecology.

œde ma. Edema

œd'ipism. Edipism.

Œdipus-complex (ed'ĭ-poos kom'pleks) [*Œdipus* Tyrannos, a character in a drama of Sophocles, who killed his father and married his mother.] A complex of hysterical symptoms assumed to be due to a suppressed erotic passion of a young man for his own mother.

Oehl's lay'er [Eusebio *Oehl*, Italian anatomist, 1827–1903] The stratum lucidum of the epidermis.

Oehler's symp'tom (ē'ler) [Johannes *Oehler*, German physician, *1879.] A sudden pallor and coldness in the arm with slight disability, occurring on lifting of a heavy weight, analogous to intermittent limping, a form of dyskinesia intermittens.

œnan'the [G. *oinos*, wine, + *anthē*, flower.] The root of *Œnanthe crocata*, water hemlock, an herb of western Europe; the tincture of the fresh root is employed in homeopathic practice in epilepsy and tetanic and other convulsions, in doses of the 1st decimal to the 6th potency; in eclectic practice it is given for epilepsy associated with feebleness of circulation, in doses of one teaspoonful of a dilution of 5 drops of the specific medicine in 4 ounces of water four times a day.

œrbiss (ĕr'bis). Larbish.

Oertel's meth'od [Max J. *Oertel*, Munich physician, 1835–1897.] 1. Treatment of cardiac insufficiency by reduction of the amount of fluid ingested and increase of the excretion of fluids; by frequent small meals with avoidance of taking solids and fluids together; and by graduated exercises, especially measured walking and climbing exercises (terrainkur), to strengthen the cardiac and voluntary muscles. 2. The reduction of obesity, largely by abstention, as far as possible, from the ingestion of fluids and by gradually increasing exercise.

oese (ē zeh) [Ger.] Loop, a small loop of platinum wire set in a handle; used for transferring portions of a bacterial culture in seeding a new culture.

Œsophagos'tomum (e-sof-ă-gos'to-mum) [*esophagus* + G. *stoma*, mouth.] A genus of nematode worms, three of the nine species of which, *Œ. apios'tomum*, *Œ. brump'li*, and *Œ. stephanos'tomum*, are found in the large intestine in man.

œsophagus, œsophageal, etc., see *esophagus*, etc.

œstrin (es'trin). Estrin, the estrus-producing hormone.

œs'trum. Estrus.

œs'trus. Estrus.

official (of-ish'al) [L. *officialis*.] Authoritative, noting a drug or a chemical or pharmaceutical preparation recognized as standard in the Pharmacopeia; see *officinal*.

officinal (of-is'in-al) [L. *officina*, shop.] Noting a chemical or pharmaceutical preparation kept in stock, as distinguished from one prepared extemporaneously according to a physician's prescription, or a *magistral* preparation. An officinal preparation is often, though not necessarily, official.

off'set. In botany, one of the short branches near the ground, which takes root.

Ogata's meth'od (o-gah'tah) [M. *Ogata*, Japanese physician, contemporary.] 1. A method of resuscitation in asphyxia, consisting in stimulation of the respiration by stroking the chest 2. A method by which respiration is stimulated by shaking of the body combined with artificial respiration

Og'ston's line [Alexander *Ogston*, Scottish surgeon 1844–1929.] A line drawn from the tubercle of the femur to the intercondyloid notch; a guide to resection of the internal condyle for knock-knee. **O.'s opera'tion,** (1) separation of the internal condyle of the femur, followed by forcible straightening of the limb, for the correction of knock-knee. (2) treatment of flatfoot by removal of the adjacent articular surfaces of the talus and navicular bone in order to effect ankylosis between them

Og'ston-Luc opera'tion [Alexander *Ogston*, Scotch surgeon, *1844; H. *Luc*, French surgeon, *1855.] For frontal sinus disease; skin incision from inner third of edge of orbit toward root of nose or outward; the periosteum is pushed upward and outward, and the sinus is opened on outer side of median line; then wide opening is made by curetting nasofrontal duct, interior of sinus, and anterior ethmoid cells.

Ohara's disease' (o-hah'rah) [Hachiro *Ohara*, Japanese physician, contemporary.] A disease, resembling tularemia* very closely, and possibly identical with it, acquired by handling the uncooked flesh of infected rabbits.

O'Har'a for'ceps [Michael *O'Hara*, Jr., Philadelphia surgeon, *1869.] Two slender clamp forceps held together by a serrefine, used in the technique of intestinal anastomosis.

ohm [after Georg Simon *Ohm*.] The unit of electrical resistance. The international ohm is the resistance of a column of mercury at 0° C., 106.3 cm. long, with a constant cross-sectioned area (1 square mm.), having a mass of 14.521 grams; roughly, the resistance of a copper wire 50 meters long and 1 millimeter in diameter.

Ohm's in'strument (ōm) [R. *Ohm*, German physician, contemporary.] An instrument for photographing simultaneously, on a moving sensitized

film, the heart-sounds and the tracings of the jugular and radial pulses; see *phonophotography*.

Ohm's law [Georg Simon *Ohm*, German physicist, 1787–1854.] In an electric current passing through a wire the intensity of the current, in amperes, equals the electromotive force, in volts, divided by the resistance, in ohms. Let C = current in amperes, E = electromotive force in volts, and R = resistance in ohms; then $C = \frac{E}{R}$

$E = C \times R$; $R = \frac{E}{C}$.

ohmammeter (ōm'am-me-tur). A combined ohmmeter and ammeter.

ohm'meter [*ohm* + G. *metron*, measure] An instrument for determining the resistance, in ohms, of a conductor.

oi-. For words so beginning, not found in the following list, see *e-*.

-oid [G. *-o*, the stem vowel of the preceding word, + *eidos*, form, appearance.] A suffix denoting resemblance to the thing indicated by the preceding element of the compound; joined properly to words formed from Greek roots; equivalent to *-form*.

oidiomycetes (o-id"i-o-mi-se'tes) [*oidium* + G. *mykēs*, fungus.] A group of fungi including *Oidium*.

oidiomycetic (o-id-i-o-mi-se'tik) Relating to oidiomycetes.

oidiomyco'sis (o-id"i-o-mi-ko'sis). Infection with a species of *Oidium;* blastomycosis.

oidiomycotic (o-id"i-o-mi-kot'ik). Relating to oidiomycosis.

Oïdium (o-id'i-um) [dim. of G *ōon*, egg] A genus of gymnosporous fungi, some species of which are parasitic in man. **O. al'bicans,** the thrush fungus, *Saccharomyces albicans*. **O. lactis,** a white mould on bread and sour milk. **O. schoenlein'ii,** the fungus of favus, *Achorion schoenleinii* **O. ton'surans,** the fungus of ringworm, *Trichophyton tonsurans*. **O. tropica'le,** a species causing broncho-oidiosis.*

oikiomania (oy-ki-o-ma'ni-ah) [G. *oikion*, house, + *mania*, frenzy.] Ecomania.

oi'koid. Ecoid.

oikology (oy-kol'o-ji). Ecology.

oikoma'nia. Ecomania.

oikophobia (oy-ko-fo'bi-ah). Ecophobia.

oikosite. Ecosite.

oil [L. *oleum;* G. *elaion*, originally olive oil.] A liquid of fatty consistence and unctuous feel, insoluble in water, soluble or not in alcohol, freely soluble in ether, and inflammable. Oils are variously classified into animal, vegetable, and mineral oils according to their source (the mineral oils, are probably of remote animal or vegetable origin); into fixed or fatty (*olea pinguia*) and volatile or ethereal or essential (*olea volatilia, ætherea, essentialia*) oils, the former being permanent, leaving a stain on an absorbent surface, the latter evaporating when exposed to the air and being capable of distillation; and into drying and non-drying (fatty) oils, the former becoming gradually thicker when exposed to the air and finally drying to a varnish, the latter not drying but liable to become rancid on exposure. The volatile oils are of vegetable origin; the fatty oils are of both animal and vegetable origin. Many of the oils, both fixed and volatile, are employed in medicine; see *oleum*. **ben'ne o.,** oleum sesami, **birch o.,** oleum betulæ. **cam'phorated o.,** linimentum camphoræ. **carbol'ic o., car'bolized o.,** a solution of phenol 1, in olive oil 19; employed as an application to burns. **Carron o.,** linimentum calcis. **coal o.,** petroleum. **co'coanut o.,** oleum cocois. **cod-liver o.,** oleum morrhuæ. **cot'ton-seed o.,** oleum gossypii seminis. **croton o.,** oleum tiglii. **Dippel's animal o.,** see *Dippel*. **es'tragon o.,** oleum dracunculi. **flaxseed o.,** oleum lini. **fu'sel o.,** amyl alcohol; in general a mixture in varying proportions of amyl, butyl, hexyl, and propyl alcohols, present in newly distilled spirits. **gin'gili o.,** oleum sesami. **gray o.,** olive oil triturated with metallic mercury. **linseed o.,** oleum lini. **min'eral o.,** petroleum. **neat's-foot o.,** oleum bubulum. **o. of am'ber,** oleum succini. **o. of bay,** oleum myrciæ. **o. of ner'oli,** oleum aurantii florum. **o. of nut'meg,** the expressed oil (a mixture of fixed and volatile oils) oleum nucistæ; the distilled oil (volatile) oleum myristicæ. **o. of tur'pentine,** oleum terebinthinæ. **o. of vit'riol,** sulphuric acid. **o. of wine,** ethyl sulphate, $(C_2H_5)_2SO_4$. **o. of win'tergreen,** oleum gaultheriæ. **phino'tas o.,** trade name of a preparation for oiling stagnant waters for the killing of mosquito larvæ. **rock o.,** petroleum. **ses'ame o.,** oleum sesami **sweet o.,** oleum olivæ. **tar o.,** oleum picis liquidæ. **tar'ragon o.,** oleum dracunculi. **teel o.,** oleum sesami. **vol'atile o.,** oleum volatile. **wood o.,** gurjun balsam, oleoresina* dipterocarpi.

oinoma'nia. Enomania.

oint'ment [O. Fr. *oignement;* L. *unguere*, to smear. A medicated fatty mixture of about the consistency of butter, employed externally; for the official ointments, see *unguentum*. **basil'icon o.,** ceratum resinæ. **blue o.,** unguentum hydrargyri dilutum. **cit'rine o.,** unguentum hydrargyri nitratis. **mercu'rial o.,** unguentum hydrargyri **red precip'itate o.,** unguentum hydrargyri oxidi rubri. **simple o.,** unguentum. **wax o.,** ceratum. **white precip'itate o.,** unguentum hydrargyri ammoniati.

O'ken's bod'y [Lorenz *Oken*, German physiologist, 1779–1851.] Wolffian* body. **O.'s canal',** ductus Wolffi [BNA], Wolffian* duct.

ol. Abbreviation of L. *oleum*, oil.

-ol. A termination noting that the substance is an alcohol or a phenol.

O.L.A. Abbreviation for occipitolævo-anterior noting a fetal presentation with the occiput directed toward the left acetabulum of the mother.

o'lea. Plural of *oleum*, oil.

O'lea. A genus of trees of the olive family, including *O. europæ'a*, the olive.

oleaginous (o-le-aj'in-us) [L. *oleum*, oil] Oily, greasy.

olean'der. The bark and leaves of *Nerium oleander*, a shrub of the eastern Mediterranean, diuretic and heart tonic in doses of gr. ¼–½ (0.015–0.03) of an extract.

olean'drin. Pseudocurarin, a glucoside from oleander, resembling digitalin, dose, gr. $\frac{1}{10}$ (0.006)

o'leas. Oleate.

oleate (o'le-āt). 1. A salt of oleic acid. 2. Oleatum.

oleatum, gen. *olea'ti*, pl. *olea'ta* (o-le-ah'(a')tum). Oleate, a pharmacopeial preparation consisting of a combination or solution of an alkaloid or metallic base in oleic acid; employed as an inunction, being assumed to be more readily absorbed than an ordinary ointment. **o. aconiti'næ,** oleate of aconitine; a 2 per cent. solution of aconitine in oleic acid; employed locally as an anodyne. **o. atropi'næ,** oleate of atropine; atropine 2, alcohol 2, oleic acid 50, olive oil to make 100. **o. cocai'næ,** oleate of cocaine; cocaine 5, alcohol

5, oleic acid 50, olive oil to make 100. **o. hydrar'gyri** (U.S.), oleate of mercury, mercuric oleate, hydra gyri oleas (Br.); yellow mercuric oxide 25, distilled water 25, oleic acid to make 100; employed chiefly by inunction in hereditary syphilis. **o. quini'næ** (N.F.), oleate of quinine; quinine 25, oleic acid to make 100. **o. veratri'næ** (N.F.), oleate of veratrine; veratrine 2, oleic acid 50, olive oil to make 100. **o. zin'ci**, oleate of zinc; a dry powder obtained by precipitation from a mixture of a solution of zinc acetate and soap solution, equivalent to 13 per cent. of zinc oxide; employed as an astringent dusting powder.

olec'ranal. Relating to the olecranon

olecranarthritis (o-lek″ran-ar-thri'(thre')tis) [G. *ōlekranon* + *arthron*, joint, + *-itis*.] Inflammation of the elbow-joint, anconitis, olecranarthrocace.

olecranarthrocace (o-lek'ran-ar-throk'a-se) [G. *ōlekranon* + *arthron*, joint, + *kakos*, bad.] Tuberculosis of the elbow-joint.

olec″ranarthrop'athy [G. *ōlekranon* + *arthron*, joint, + *pathos*, suffering.] Any disease of the elbow.

olec'ranoid [G. *ōlekranon* + *eidos*, resemblance.] Resembling the olecranon process.

olecranon (o-lek'ra-non) [G. *ōlenē*, ulna, + *kranos*, helmet.] [BNA] Tip of the elbow; the prominent curved upper extremity of the ulna, the upper and posterior surface of which gives attachment to the tendon of the triceps muscle, the anterior surface entering into the formation of the great sigmoid cavity; called also olecranon process.

olefiant (o-lef'I-ant) [L. *oleum*, oil, + *facere*, to make.] Producing oil. **o. gas**, ethylene, C_2H_4, the main constituent of illuminating gas.

o'lefin. Any one of a group of hydrocarbons, homologous with ethylene, having twice as many hydrogen atoms as carbon atoms.

ole'ic [L. *oleum*, oil] Relating to oil. **o. acid**, acidum oleicum.

o'lein. Elain, triolein.

oleo-bi-Roche (o-le-o-bi', rōsh). Trade name of a suspension of bismuth oleate in olive oil, recommended for the treatment of syphilis in dose of 2 c.c. intramuscularly, 2 or 3 times a week.

o″leocre'osote. A 33 per cent. solution of creosote in oleic acid; a pale brown oily liquid, employed in bronchitis and pulmonary tuberculosis in doses of ♏10–30 (0.6–2.0).

o'leogen. An oily base for medicaments used in the treatment of skin diseases; it consists of yellow petroleum oil, oleic acid, and ammonia.

oleoguaiacol (o″le-o-gwi'ă kol). Guaiacol oleate, a solution of guaiacol in oleic acid, employed in pulmonary tuberculosis in doses of ♏10–15 (0.6–1.0)

oleoinfusion (o″le-o-in-fu'zhun). Oleum infusum.

o'leol. Oleum infusum.

oleom'eter [L. *oleum*, oil, + G. *metron*, measure] A modified hydrometer for determining the density of an oil.

oleonucleoprotein (o″le-o-nu″kle-o-pro'te-in). The food constituents of milk regarded as a compound substance.

oleopal'mitate. A double salt of oleic and palmitic acids

oleoresin (o″le-o-rez'in) [L. *oleum*, oil, + *resina*, resin.] 1. A compound of an essential oil and resin, present in certain plants. 2. A pharmaceutical preparation, oleoresina.

oleoresina, gen. and pl. *oleoresi'næ* (o″le-o-rĕ-ze'nah). Oleoresin, a pharmacopeial preparation consisting of a thick liquid compounded of oils and resins, extracted from a powdered vegetable drug by means of acetone. **o. aspid'ii** (U.S.), oleoresin of aspidium, extractum filicis liquidum (Br.); employed as a teniafuge in doses of ʒ1–2 (4.0–8.0). **o. cap'sici** (U.S.), oleoresin of capsicum; employed as a gastric stimulant and carminative in doses of ♏½–1 (0.03–0.06), and externally as a counter-irritant. **o. cube'bæ** (N.F.), oleoresin of cubeb; employed in subacute and chronic bronchitis and gonorrhea in doses of ♏5–20 (0.3–1.3). **o. dipterocar'pi,** oleoresin of dipterocarpus, wood oil, gurjun balsam, obtained from *Dipterocarpus alatus* and other species of *Dipterocarpus;* a viscid greenish or brownish liquid of aromatic bitter taste; employed in gonorrhea, bronchitis, and leprosy in doses of ♏10–30 (0.6–2.0). **o. lupuli'ni,** oleoresin of lupulin; employed as a diuretic and tonic in doses of gr. 2–8 (0.13–0.5). **o. petroseli'ni,** oleoresin of parsley fruit, liquid apiol, an ethereal extract of parsley fruit; dose, ♏8 (0.5). **o. pi'peris,** oleoresin of black pepper; carminative and stimulant, in doses of ♏½–1 (0.015–0.6). **o. zingib'eris,** oleoresin of ginger; carminative and stimulant in doses of ♏½–1 (0.015–0.06).

oleosaccharum (o-le-o-sak'ar-um), pl. *oleosacchara* [L. *oleum*, oil, + *saccharum*, sugar.] Oil-sugar, elæosaccharum (P.G.); a class of preparations recognized by the N.F., made by the trituration of a volatile oil (anise, fennel, lemon, etc.) ♏2 (0.13) with sugar ʒ1 (4.0); employed as a diluent or corrigent of powerful or bad-tasting drugs in powder form.

o″leoste'arate. A double salt of oleic and stearic acids.

oleosus (o-le-o'sus) [L. *oleum*, oil.] Greasy, noting certain forms of dermatoses.

oleotherapy (o-le-o-ther'ă-pĭ) [L. *oleum*, oil, + G. *therapeia*, treatment.] Eleotherapy.

oleothorax (o-le-o-tho'raks) [L. *oleum*, oil, + *thorax*.] The introduction of mineral oil or a mixture of gomenol and olive oil into the pleural cavity, either with or without artificial pneumothorax, to make compression of the lung in pulmonary tuberculosis, for the relief of pyothorax, or to meet other indications.

oleum, gen. *o'lei*, pl. *o'lea* (o'le-um) [L.] Oil, a viscous liquid having an unctuous feel, usually insoluble in water, and inflammable.

o. abie'tis (Br.), oil of Siberian fir.

o. ad'ipis, lard oil, a fixed oil expressed from lard, employed for pharmaceutical purposes.

o. æthe'reum, (1) (N.F.) ethereal oil, composed of equal parts of ether and heavy oil of wine; employed in the manufacture of compound spirit of ether; (2) o. volatile.

o. aj'owan (B.A.), ajowan oil, ptychotis oil; a volatile oil distilled from the fruit of *Carum copticum*, one of the sources of thymol; carminative and aromatic, in doses of ♏½–3 (0.03–0.2).

o. amyg'dalæ (U.S., Br.), almond oil.

o. amyg'dalæ ama'ræ (U.S.), oil of bitter almond, a volatile oil containing between 2 and 4 per cent. of hydrocyanic acid and 85 per cent. of benzaldehyde, sedative, used with caution, being very poisonous, in dose of ♏½–½ (0.015–0.03).

o. amyg'dalæ expres'sum (U.S.), expressed oil of almond, a fixed oil; dose, ʒ1–8 (4.0–30.0).

o. androp'ogon nar'di, oil of citronella, a volatile oil distilled from *Andropogon nardi;* employed as an insecticide and perfume.

o. ane'thi (Br.), oil of dill, a volatile oil distilled from the fruit of *Anethum graveolens;* carminative in doses of ♏2–8 (0.13–0.5).

o. anima'le æthe'reum, animal oil, Dippel's oil; a thin oily fluid obtained by double distillation of bones

and animal refuse; seldom if ever employed in medicine at the present time.

o. ani'si (U.S., Br.), oil of anise, a volatile oil distilled from the fruit of *Pimpinella anisum;* stimulant and carminative in doses of ♏1–5 (0.06–0.3).

o. anthem'idis (Br.), oil of chamomile; stimulant and carminative in doses of ♏2–5 (0.13–0.3).

o. arachis (ar'ak-is)[1] (Br.), peanut oil; expressed from the seeds of *Arachis hypogæa,* the peanut; nutritive and mildly laxative.

o. auran'tii (U.S.), oil of orange peel, a volatile oil obtained by express on from the fresh peel of the sweet orange; employed for flavoring.

o. auran'tii ama'ri (N.F.), a volatile oil expressed from the pee' of the bitter orange; dose, ♏3 (0.2).

o. auran'tii flo'rum (N.F.), oil of orange flowers, oil of neroli, a volatile oil distilled from the flowers of the bitter orange; employed in the preparation of orange-flower water.

o. bergamot'æ (N.F.), o. bergami, oil of bergamot, a volatile oil distilled from the fresh rind of the fruit of *Citrus bergamia;* used chiefly as a perfume in toilet preparations.

o. bet'ulæ, oil of betula, oil of sweet birch, methylis salicylas (U.S.), a volatile oil obtained by distillation from the bark of *Betula lenta;* resembles o. gaultheriæ and is employed for the same purposes in doses of ♏10–30 (0.6–2.0).

o. bet'ulæ empyreumat'icum rectifica'tum (N.F.), o. rusci rectificatum, rectified oil of birch tar, rectified empyroligneous oil of birch, obtained by the dry distillation of the wood of *Betula alba,* white birch, and rectified by steam distillation; a thin olive-green liquid of empyreumatic odor, employed externally in the treatment of skin diseases.

o. bu'bulum [L. *bubulus,* relating to cattle], neat's-foot oil, obtained by boiling the feet, without the hoofs, of cattle; has been given in place of cod-liver oil in doses of ʒ1–2 (4.0–8.0).

o. caca'o, o. theobromatis.

o. cadi'num, (U. S. Br.), oil of cade, juniper tar oil, obtained by distillation from the wood of *Juniperus oxycedrus;* a reddish or dark brown liquid of tarry odor and biting taste, employed in the treatment of various chronic skin diseases.

o. cajupu'ti (U.S., Br.), oil of cajuput or cajaput or cajeput, a volatile oil distilled from the fresh leaves of *Cajuputi viridiflora,* a tree of tropical Asia and Australia; a thin colorless liquid of aromatic taste and odor; employed in diarrhea and meteorism, bronchitis, and cystitis, in doses of ♏5–20 (0.3–1.3) and locally in skin diseases.

o. cardamo'mi (N.F.), oil of cardamom, a volatile oil obtained by distillation from the seeds of *Elettaria cardamomum;* a pale yellow aromatic liquid of characteristic odor and taste.

o. ca'ri (U.S., Br.), **o. ca'rui,** oil of caraway, a volatile oil distilled from the fruit of *Carum carui;* carminative in doses of ♏2–10 (0.13–0.6).

o. caryophyl'li (U.S., Br.), oil of cloves, a volatile oil distilled from the unexpanded flowers of *Eugenia aromatica;* carminative in doses of ♏2–5 (0.13–0.3), and employed locally in toothache.

o. cas'siæ, cassia oil, o. cinnamomi.

o. chaulmoo'græ (U.S.), chaulmoogra oil, the fixed oil expressed from the seeds of *Taraktogenos kurzii* (fam. *Flacourtiaceæ*); a yellow or brownish yellow liquid, or, at temperatures below 25° C., a whitish soft solid, it has a characteristic odor and a somewhat acid taste; employed in the treatment of leprosy, psoriasis, and eczema in doses of ♏ 5–60 (0.3–4.0).

o. chenopo'dii (U.S., Br.), oil of chenopodium or of American wormseed, a volatile oil distilled from the fruit of *Chenopodium ambrosioides;* employed as an anthelmintic in doses of ♏5–10 (0.3–0.6).

o. cinnamo'mi (U.S., Br.), oil of cinnamon, oil of cassia, a volatile oil distilled from the bark of *Cinnamomum zeylanicum* (Br.), *C. cassia* (U.S.), employed as carminative and corrective in doses of ♏1–3 (0.06–0.2).

o. co'cois, cocoanut oil, a fixed oil obtained by expression from the fruit of *Cocos nucifera;* has been employed in place of cod-liver oil in doses of ʒ2–4 (8.0–16.0).

o. coc'tum, o. infusum.

o. copai'bæ (Br.), oil of copaiba, a volatile oil obtained by distillation from copaiba; employed for the same purposes as the balsam in doses of ♏5–20 (0.3–1.2).

o. corian'dri (U.S., Br.), oil of coriander, a volatile oil distilled from the fruit of *Coriandrum sativum;* carminative in doses of ♏1–5 (0.06–0.3).

o. croto'nis (Br.), o. tiglii (U.S.).

o. cube'bæ (Br.), oil of cubeb, a volatile oil distilled from the fruit of Piper cubeba; employed for the same purposes as the powdered drug or its oleoresin in doses of ♏10–15 (0.6–1.0).

o. cupres'si, cypress oil, distilled from the leaves and small branches of *Cupressus sempervirens,* recommended by inhalation, when diluted with 5 parts of alcohol, in the treatment of whooping cough

o. dipterocar'pi, oil of dipterocarpus, distilled from gurjun balsam, or oleoresina* dipterocarpi.

o. dracun'culi, oil of estragon, oil of tarragon, a volatile oil distilled from the leaves of *Artemisia dracunculus;* employed as a flavoring.

o. erigeron'tis, oil of erigeron, oil of fleabane, a volatile oil obtained by distillation from *Leptilon canadense:* employed as a hemostatic and in gonorrhea in doses of ♏10–30 (0.6–2.0).

o. essentia'le, pl. *o'lea essentia'lia,* essential oil, o volatile.

o. eucalyp'ti (U.S., Br.), oil of eucalyptus, a volatile oil distilled from the leaves of *Eucalyptus globulus* employed in malaria, bronchitis, gonorrhea, and neuralgic conditions in doses of ♏5–15 (0.3–1.0).

o. fa'gi, oil of beech, beechwood tar.*

o. fœnic'uli (U.S.), oil of fennel, a volatile oil distilled from the fruit of *Fœniculum capillaceum, F. vulgare,* employed as a carminative and corrective in doses of ♏5–15 (0.3–1.0).

o. gaulthe'riæ (U.S., B.A.), oil of gaultheria, oil of wintergreen, a volatile oil distilled from the leaves of *Gaultheria procumbens;* employed in rheumatism in doses of ♏5–10 (0.3–0.6), and also applied externally to the affected joints.

o. gossyp'ii sem'inis (U.S., Br.), cotton-seed oil, a fatty oil expressed from the seeds of *Gossypium herbaceum;* a transparent pale yellow oil of nutty flavor and no odor, employed in pharmacy in the manufacture of liniments, and also used as an adulterant of or substitute for olive oil.

o. gram'inis citra'ti (B.A.), Indian oil of verbena, oil of lemon grass; a volatile oil distilled from the herb, *Andropogon citratus,* a grass of Ceylon and India, carminative in doses of ♏1–3 (0.06–0.2).

o. gynocar'diæ (B.A.), o. chaulmoogræ.

o. hedeo'mæ, oil of hedeoma, oil of pennyroyal, a volatile oil distilled from the tops and leaves of *Hedeoma pulegioides,* the American pennyroyal; carminative emmenagogue, and corrective in doses of ♏2–8 (0.13–0.5).

o. hydnocar'pi (Br.), oil expressed form the ripe seeds of *Hydnocarpus wrightiana,* used in the treatment of leprosy in doses of ♏ 30 (2.0) increasing gradually to ♏ 75 (5.0) intramuscularly.

o. hydnocar'pi æthyl'icum (Br.), ethyl esters of hydnocarpus oil, employed in the treatment of leprosy in the same doses as the above.

o. hyoscy'ami, infused oil of hyoscyamus, leaves of hyoscyamus 4, alcohol 3, olive oil 40; employed as a local application in otalgia.

o. hyoscy'ami compos'itum (N.F.), compound oil o hyoscyamus; a mixture of oils of absinthe, lavender rosemary, and sage, each 0.13, in infused oil (o. infusum) of hyoscyamus; anodyne, employed externally.

o. infu'sum, infused oil; a class of preparations, recognized by the N.F., made by digesting 20 per cent. by weight of dried herbs (usually narcotic), previously macerated in alcohol and ammonia water, in a mixture of equal volumes of lard oil and cotton-seed oil; the preparation contains the alkaloids or other active ingredients of the plants.

o. jec'oris asel'li, o. morrhuæ.

o. junip'eri (U.S., Br.), oil of juniper berries, a volatile oil distilled from the fruit of *Juniperus communis,* carminative, diuretic, and stimulant in doses of ♏5–15 (0.3–1.0).

o. lau'ri, expressed oil of laurel, bayberry oil, a fixed oil expressed from the berries of *Laurus nobilis;* a soft greenish oil or semisolid, employed externally in sprains, rheumatic pains, etc.

o. lavan'dulæ (U.S., Br.), oil of lavender, a volatile oil obtained by distillation from the tops of *Lavandula vera* (*L. officinalis*), seldom employed in medicine except in the flavoring of pharmaceutical products; the dose is given as ♏3 (0.2).

o. limo'nis (U.S., Br.), oil of lemon, a volatile oil expressed from fresh lemon peel; employed chiefly in the flavoring of pharmaceutical preparations.

o. li'ni (U.S., Br.), linseed oil, flaxseed oil, a fatty oil expressed from the bruised seed of *Linum usitatissimum;* has been recommended in the treatment of piles, and is used in the preparation of linimentum calcis.

o. mac'idis, oil of mace, o. myristicæ.

o. men'thæ piperi'tæ (U.S., Br.), oil of peppermint, a volatile oil distilled from the leaves of *Mentha piperita;* carminative and anodyne in doses of ♏2–5 (0.13–0.3).

o. men'thæ vir'idis (U.S.,) oil of spearmint, a volatile oil distilled from *Mentha spicata;* carminative and corrective in doses of ♏2–5 (0.13–0.3).

o. mor'rhuæ (U.S., Br.), codliver oil, o. jecoris aselli, a fixed oil extracted from the liver of *Gadus morrhua, G. callarius,* and other species of cod and hake; a pale yellow oil of slightly fishy odor and taste; employed in tuberculosis, rickets, anemia, and other conditions of impaired nutrition, in doses of ℥2–8 (8.0–30.0).

o. myr'ciæ (N.F.), oil of myrcia or of bay, a volatile oil distilled from the leaves of *Pimenta acris;* employed as a perfume in various hair tonics, but not otherwise in medicine.

o. myris'ticæ (U.S., Br.), oil of nutmeg, o myristicæ æthereum, a volatile oil distilled from nutmeg or mace (o. macidis), the kernel and seed-covering of the fruit of *Myristica fragrans;* carminative in doses of ♏1–3 (0.06–0.2).

o. nucis'tæ, expressed oil of nutmeg, o. myristicæ expressum, a mixture of volatile and fixed oils obtained by expression from the kernel of the fruit of *Myristica fragrans;* employed locally in rheumatic pains.

o. oli'væ (U.S., Br.), olive oil, the expressed oil of the fruit of *Olea europæa;* employed in the preparation of liniments, and sometimes given in various states of malnutrition in doses of ℥½–1 (15 0–30.0).

o. pal'mæ, palm oil, a fixed oil expressed from the fruit of *Elæis guineensis,* the oil-palm, a tree of West Africa; not used in medicine.

o. papav'eris, poppy oil, a fixed (drying) oil expressed from the seed of *Papaver somniferum;* sometimes used in the preparation of liniments and as a solvent of iodine in lipiodol.

o. per'sicæ expres'sum, peach-kernel oil, a fixed oil expressed from the kernels of the peach, *Amygdalus* (*Prunus*) *persica;* sometimes employed in the preparation of liniments.

o. pe'træ, rock oil, coal oil, petroleum.*

o. phenola'tum (N.F.), phenolated or carbolized oil; a 5 per cent. solution of phenol in cotton-seed oil; antiseptic for external use.

o. phosphora'tum (Br.), phosphorated oil, a one per cent. solution of phosphorus in purified expressed oil of almond; dose, ♏1–5 (0.06–0.3).

o. pi'cis rectifica'tum (U.S.), rectified oil of tar, a volatile oil distilled from wood-tar; employed externally in the treatment of various scaly skin diseases.

o. pimen'tæ (N.F., Br.), oil of pimenta or allspice, a volatile oil distilled from the berries of *Pimenta officinalis;* carminative and aromatic stimulant in doses of ♏3–5 (0.2–0.3).

o. pin'gue, pl. *o'lea pin'guia,* fatty oil, fixed oil, an oil which is incapable of being distilled; it is chemically a glyceride of a fatty acid, by substitution of the glycerin by an alkaline base it is converted into a soap; the consistence varies with the temperature, some being liquid (oils proper), others semisolid (fats), and others solid (tallows) at ordinary temperatures; but oils are congealed by cold and the solids are liquified by heat; the fatty oils are of both animal and vegetable origin.

o. pi'ni (Br.), pine oil, pine-needle oil, a volatile oil distilled from the leaves of *Pinus pumilio;* employed by inhalation and spray in catarrhal affections of the air-passages, and locally in rheumatic conditions.

o. pi'ni pumilio'nis (U.S.), o. pini (Br.), dwarf pine oil, oil of dwarf pine needles.

o. ricini (ris'in-i) (U.S., Br.), castor oil, a fixed oil expressed from the seeds of *Ricinus communis;* purgative in doses of ℥2–8 (8.0–30.0).

o. ric'ini aromat'icum (N.F.), aromatic castor oil; contains benzosulphinide 0.5, oil of cinnamon 3, oil of clove 1, vanillin 1, coumarin 0.1, alcohol 30, in castor oil to make 1000; dose, ℥4–6 (15 0–22 0).

o. ro'sæ (Br.), oil of rose, attar of rose, otto of rose, a volatile oil distilled from the flowers of *Rosa damascena;* employed as a perfume in ointments and toilet preparations.

o. rosmari'ni (U.S., Br.), oil of rosemary, a volatile oil distilled from the tops of *Rosmarinus officinalis;* carminative and aromatic stimulant in doses of ♏1–3 (0.06–0.2), and employed locally as a stimulant to the growth of hair.

o. rus'ci, o. betulæ empyreumaticum, birch tar, obtained by destructive distillation of the wood of *Betula alba,* white birch.

o. sabi'næ, oil of savin, a volatile oil distilled from the tops of *Juniperus sabina;* employed in amenorrhea and dysmenorrhea in doses of ♏2–8 (0.13–0.5).

o. san'tali (U.S., Br.), santal oil, sandal-wood oil, a volatile oil distilled from the wood of *Santalum album,* a tree of India; employed in subacute bronchitis and gonorrhea in doses of ♏5–20 (0.3–1.3).

o. san'tali australien'sis (Br.), oil of australian sandal wood, distilled from the wood of *Eucarya spicata.*

o. sas'safras (U.S.), oil of sassafras, a volatile oil obtained by distillation from the bark of the root of *Sassafras variifolium;* employed as a carminative in doses of ♏2–8 (0.13–0.5).

o. ses'ami (N.F., Br.), oil of sesame, benne oil, teel oil, a fixed oil from the seeds of *Sesamum indicum,* an East Indian herb; has been employed as a substitute for cod-liver oil and olive oil.

o. sina'pis volat'ile (U.S., Br.), volatile oil of mustard, obtained by distillation from the seeds of *Brassica nigra* or *B. juncea,* black mustard, employed locally as a counterirritant.

o. suc'cini, oil of amber, a volatile oil distilled from amber; stimulant and antispasmodic in doses of ♏2–6 (0.13–0.4), and used externally as a counterirritant in rheumatism.

o. terebin'thinæ (U.S., Br.), oil of turpentine, a volatile oil distilled from turpentine (terebinthina).

o. terebin'thinæ rectifica'tum (U.S.), rectified oil of turpentine, obtained by treating oil of turpentine with sodium hydroxide and redistilling; employed internally as a carminative and stimulant in doses of ♏5–20 (0.3–1.3), and externally as a counterirritant.

o. theobro'matis (U.S., Br.), oil of theobroma, butter of cacao, cocoa-butter, a fixed oil, solid at ordinary temperature, expressed from the roasted seeds of *Theobroma cacao,* the source of chocolate; employed in the manufacture of suppositories and occasionally of pills.

o. thy'mi (N.F.), oil of thyme, a volatile oil distilled from the tops and leaves of *Thymus vulgaris;* stomachic tonic in doses of ♏1–2 (0.06–0.13), and employed externally as a counterirritant.

o. tig'lii (U.S.), o. crotonis (Br.), croton oil, a fixed oil expressed from the seeds of *Croton tiglium,* an East Indian shrub; an irritant purgative in doses of ♏½–2 (0.03–0.13), externally a counterirritant and vesicant.

o. volat'ile, pl. *o'lea volatil'ia,* volatile, essential, or ethereal oil, a substance of oily consistence and feel, derived from a plant, containing the principles to which the odor and taste of the plant are due; it is capable of distillation; many volatile oils, identical with or closely resembling the natural oils, can be made synthetically; many of the volatile oils are employed in medicine as stimulants, stomachics, correctives, carminatives, and for purposes of flavoring.

olfactie, olfacty (ol-fak'tĭ). The unit of smell; the threshold of olfactory stimulation, or the point where the smell is just perceived in the olfactometer.

olfac'tion [L. *olfactus; olfacere*, to smell. 1 The sense of smell. 2. The act of smelling.

olfactom'eter [L. *olfactus*, smell, + G *metron*, measure.] A device for estimating the keenness of the sense of smell.

olfactom'etry. Determination of the degree of sensibility of the olfactory organ.

olfac'tory [L. *olfactus; olfacere*, to smell.] Relating to the sense of smell. **o. a'rea,** the area embracing the locus perforatus anterior, the trigonum olfactorium, the anterior part of the callosal gyrus, and the uncus. **o. bulb,** the swollen anterior extremity of the o. tract. **o. bundle,** a bundle of fibers in the fornix which pass in front of the anterior commissure and enter the septum lucidum, going finally to the subcallosal gyrus and the locus perforatus anterior, where they divide and pass to the olfactory tract and the uncus. **o. gan'glion,** a collection of neuroblasts in the embryo, the peripheral processes of which form the o. nerves. **o. lobe,** labus olfactorius. **o. lobule,** one of the two parts, an erior and posterior, of the o. lobe. **o. nerve,** the first cranial nerve, nervus olfactorius. **o. striæ,** see *stria*. **o. sulcus,** see *sulcus*. **o. tract,** tractus olfactorius. **o. tri'gome, o. tu'bercle,** trigonum olfactorium.

olib'anum [Ar. *al*, the, + *lubān*, frankincense] Oriental frankincense, a gum-resin from several trees of the genus *Boswellia;* has been used as a stimulant expectorant in bronchitis, and also as an emmenagogue

oligemia, oligæmia (ol-ĭ-ge'mĭ-ah) [G. *oligos*, little, + *haima*, blood.] Olighemia, oligohemia.*

olighe'mia, olighæ'mia. Oligohemia

olighidria, oligidria (ol-ĭ-gid'rĭ-ah) [G. *oligos*, little, + *hidrōs*, sweat.] Scanty perspiration.

oligoamnios (ol-ĭ-go-am'nĭ-os) [G. *oligos*, little.] Deficiency in the amount of the amniotic fluid; oligohydramnios.

oligocar'dia [G. *oligos*, few, + *kardia*, heart] Bradycardia.

oligocholia (ol-ĭ-go-ko'lĭ-ah) [G. *oligos*, little, + *cholē*, bile.] A deficient secretion of bile.

oligochromemia (ol-ĭ-go-kro-me'mĭ-ah) [G. *oligos*, little + *chrōma*, color, + *haima*, blood.] A deficiency of pigment, or hemoglobin, in the blood.

oligochylia (ol-ĭ-go-ki'lĭ-ah) [G. *oligos*, little, + *chylos*, juice.] A deficiency of the gastric juice.

oligochymia (ol-ĭ-go-ki'mĭ-ah) [G. *oligos*, little, + *chymos*, juice. A deficiency of chyme

oligocys'tic [G. *oligos*, few, + *kystis*, bladder, cyst] Composed of few cysts, said of an hydatid or other tumor exhibiting this quality.

oligocythemia (ol"ĭ-go-si-the'mĭ-ah) [G. *oligos*, few, + *kytos*, a cell, + *haima*, blood.] A deficiency in number of red corpuscles in the blood.

oligodactyl'ia [G. *oligos*, few, + *daktylos*, finger or toe.] A deformity marked by fewer than five fingers or toes on each hand or foot.

oligoden'dria. Oligodendroglia, mesoglia.*

oligodendroglia (ol"ĭ-go-den-drog'lĭ-ă) [G. *oligos*, few, + *dendron*, tree, + *glia*, glue.] Mesoglia, consists of cells with extremely slender processes, sometimes described as small round cells, the processes escaping observation.

oligodynamic (ol-ĭ-go-di-nam'ik) [G. *oligos*, small, + *dynamis*, power.] Active in very small quantity; noting, for example, the germicidal effect of an exceedingly dilute solution (such as one to one hundred million) of copper in distilled water.

oligoerythrocythemia (ol"ĭ-go-er"ĭ-thro-si-the'mĭ-ah) [G. *oligos*, few, + *erythros*, red, + *kytos*, cell, + *haima*, blood.] Oligocythemia.

oligogalactia (ol"ĭ-go-gal-ak'tĭ-ah) [G. *oligos*, little, + *gala(galakt-)*, milk.] A deficiency in the secretion of milk.

oligogenics (ol-ĭ-go-jen'iks) [G. *oligos*, few, + *genea*, offspring.] Birth-control, limitation of the number of offspring by contraceptive measures.

oligohe'mia, oligohæ'mia [G. *oligos* little, + *haima*, blood.] A deficiency in the amount of blood in the body; olighemia, oligemia, hypovolemia.

ol"igohydram'nios [G. *oligos*, little, + *hydōr*, water, + *amnion*] An abnormally scanty secretion of liquor amnii; oligoamnios.

oligolecithal (ol-e-go-les'ith-al) [G. *oligos*, little, + *lekithos*, yolk.] Having but little yolk, noting an egg in which there is only a little scattered deutoplasm.

oligoleucocythemia, oligoleucocythæmia (ol"ĭ-go-lu"-ko-si-the'mĭ-ah) [G. *oligos*, few, + *leukos*, white, + *kytos*, cell, + *haima*, blood.] Leucopenia, a deficiency of white corpuscles in the peripheral blood circulation.

oligoma'nia [G. *oligos*, few, + *mania*, frenzy.] Insanity in relation to a few subjects only.

oligomenorrhe'a, oligomenorrhœ'a [G. *oligos*, little, + *mēn*, mouth, + *rhoia*, flow.] Scanty or infrequent menstruation.

oligomor'phic [G. *oligos*, few, + *morphē*, form.] Presenting few changes of form, not polymorphic.

oligophosphatu'ria [G. *oligos*, little, + L. *phosphas* + G. *ouron*, urine] The presence of a small amount of phosphates in the urine.

oligophre'nia [G. *oligos*, little, + *phrēn*, mind] Mental weakness, feeblemindedness

oligoplas'mia [G. *oligos*, little + *plasma*] Deficiency in the amount of blood plasma.

oligoplas'tic [G. *oligos*, little, + *plassō*, I form.] Deficient in reparative power.

oligopnea, oligopnœa (ol"ĭ-gop-ne'ah) [G. *oligos*, few, + *pnoē*, breath.] Infrequent respiration.

oligopo'sia, oligop'osy [G. *oligos*, little, + *pōsis*, drink.] The drinking of little fluid; the absence of thirst.

oligopsychia (ol-ĭ-go-si'kĭ-ah) [G. *oligos*, little, + *psychē*, mind] Oligophrenia, weakness of intellect.

oligoptyalism (ol-e-go-ti'al-izm) [G. *oligos*, small, few, + *ptyalon*, saliva.] A scanty secretion of saliva, oligosialia.

oligoria (o-lĭ-go'rĭ-ah) [G. *oligōria*, negligence, slight esteem.] An abnormal indifference toward or dislike of persons or things, manifested in some forms of melancholia.

oligosialia (ol-e-go-si-al'ĭ-ah) [G. *oligos*, small, few, + *sialon*, saliva.] Oligoptyalism, a scanty secretion of saliva.

oligospermatism, oligospermia (ol"ĭ-go-spur'mă-tizm, ol"ĭ-go-spur'mĭ-ah) [G. *oligos*, little, + *sperma* (*spermat-*), seed.] Deficiency in the secretion of semen

Oligospo'rea. An order of protozoan organisms including those of the genus *Coccidium*

Ol"igosporogen'ea [G. *oligos*, few, + *sporos*, seed, + *gennaō*, I produce.] A group of *Microsporidia*, in which the trophozoite produces a single pansporoblast.

oligotrichia (ol-ĭ-go-trik'ĭ-ah) [G. *oligos*, few, + *thrix(trich-)*, hair.] A deficient growth of hair.

Oligotrichina (ol"ĭ-go-trĭ-ki'nah) [G. *oligos*, few, + *thrix(trich-)*, hair.] A suborder of *Heterotrichida* in which the cilia are comparatively few and grouped in certain regions.

oligotrichosis (ol-e-go-trĭ-ko'sis.) Oligotrichia.

oligotro'phia, oligot'rophy [G *oligos*, little, + *trophē*, nourishment.] Deficient nutrition.

oligozoöspermatism, oligozoöspermia (ol″ĭ-go-zo″o-spur′mă-tizm, ol″ĭ-go-zo″o-spur′mĭ-ah) [G. *oligos*, few, + *zōon*, animal, + *sperma(spermat-)*, seed.] The presence of abnormally few spermatozoa in the semen.

oligure'sia, oligure'sis [G. *oligos*, little, + *ourēsis*, urination.] Scanty urination.

oligu'ria. Oliguresia.

olisthe (o-lis'the) [G. *olisthema*, a slipping.] A slipping, especially of two opposing joint surfaces; an incomplete luxation.

oli'va [L.] 1. [BNA]. Olive, olivary eminence, olivary body, a smooth, oval bulging of the lateral area of the medulla oblongata between the line of the hypoglossal nerve roots in front and the root-bundles of the spinal accessory, vagus, and glossopharyngeal nerves behind; this is called also *o. inferior* in distinction to the *o. cerebelli* or *o. superior*, the cerebellar or superior olive, or nucleus* dentatus. 2. The olive tree or its fruit, a member of the genus *Olea*.

oli'vary. 1. Relating to the oliva. 2. Relating to or of the shape of an olive. **o. body, o. em'inence,** oliva (1).

oli've [L. *oliva*.] 1. The fruit of the olive tree, *Olea europæa*. 2. The olivary eminence, oliva [BNA]. **infe'rior o.,** oliva (1). **superior o.,** nucleus dentatus.

oli'venol i'odate. Trade name of a mixture of iodine and olive oil recommended as a substitute for the iodides.

Oli'ver's sign [Thomas *Oliver*, English physician, *1853.] Oliver-Cardarelli sign.

Oli'ver's test [George *Oliver*, English physician, 1841–1915.] 1. For albumin in the urine: by means of a pipette a mixture of 1:4 sodium tungstate and 1:6 citric acid solutions is introduced at the bottom of a test-tube containing the urine to be tested; if albumin is present there will be a white precipitate at the plane of contact of the two liquids. 2. For sugar in the urine: the suspected urine is boiled with indigo-carmine; the presence of sugar is indicated by a change of the blue color to yellow or red. **O'.s test pa'pers,** strips of bibulous paper impregnated with various reagents used in making uranalyses.

Oli'ver-Cardarel'li sign [Thomas *Oliver*, English physician, *1853; Antonio *Cardarelli*, Italian physician, contemporary.] Recession of the larynx and trachea synchronous with the cardiac systole in cases of aneurysm of the arch of the aorta or of a tumor in that region; Porter's sign, tracheal tugging.

oliv'eri cor'tex. (B.A.) Oliver bark, black sassafras bark; the dried bark of *Cinnamomum oliveri*, a tree of Australia; aromatic, in doses of gr. 3–6 (0.2–0.4).

olivif'ugal [L. *oliva* + *fugare*, to flee.] In a direction away from the olivary body, or oliva.

olivip'etal [L. *oliva* + *petere*, to seek.] In a direction toward the olivary body, or oliva.

Ollier's disease' (ol-e-a') [Léopold Louis Xavier Édouard *Ollier*, French surgeon, 1830–1901.] Asymmetrical chondrodysplasia. **O.'s meth'od,** dermo-epidermic grafting; see *Thiersch's* method.* **O.'s the'ory** of compensatory growth; after resection of the articular extremity of a bone, the articular cartilage of the other bone entering into the structure of the joint takes on an increased growth.

-ology [G. *legō*, I relate, speak; *logios*, learned.] A suffix denoting (1) a science or special branch of study; or (2) [*legō*, I collect, arrange in order] a collection; see *-logia*.

olopho'nia [G. *oloos*, destroyed, lost, + *phōnē*, voice.] Impaired speech due to anatomical defect in the vocal organs.

O.L.P. Abbreviation of occipitolævo-posterior noting a fetal presentation with the occiput directed toward the left sacroiliac articulation of the mother.

Olshausen's meth'od (ols'how-zen) [Robert von *Olshausen*, Berlin obstetrician, 1835–1915.] Treatment of congenital umbilical hernia by separation of the skin around the sac, removal of Wharton's jelly, reduction of the hernia *en masse* without opening the sac, and suture of the skin.

-oma [G. *-ōma*.] A suffix, properly added only to words derived from Greek roots, noting a tumor or neoplasm.

omacephalus (ōm-ă-sef'a-lus) [G. *ōmos*, shoulder, + *a-* priv. + *kephalē*, head.] A monster with a very imperfectly developed head or none at all and without upper extremities.

omag'ra [G. *ōmos*, shoulder, + *agra*, a seizure.] Gouty inflammation of the shoulder-joint.

o'mal. Trade name of a preparation of trichlorphenol; used as an inhalant in respiratory disorders.

omal'gia [G. *ōmos*, shoulder, + *algos*, pain.] Pain in the shoulder-joint or in the deltoid muscle; omodynia.

omarthritis (o-mar-thri'(thre')tis) [G. *ōmos*, shoulder, + *arthron*, joint, + *-itis*.] Inflammation of the shoulder-joint.

omasum (o-ma'sum) [L.] Psalterium, manyplies.*

Ombrédanne mask (om-bra-dahn') [Louis *Ombrédanne*, French surgeon, *1871.] An apparatus for administering ether by inhalation in exact dosage; it is mixed with carbon dioxide, the exhaled air with an admixture of fresh air being breathed over again.

ombrophobia (om-bro-fo'bĭ-ah) [G. *ombros*, rain, + *phobos*, fear.] A morbid fear of rain.

om'brophore [G. *ombros*, a rain storm, + *phoros*, bearer.] A portable apparatus for giving a shower bath, especially one of carbonated water.

omega melancholium (o'mĕ-gah mel-an-kol'ĭ-um) [G. *ōmega*, the last letter of the Greek alphabet; L. of the melancholy, from G. *melas*, black, + *cholē*, bile.] A wrinkle of the shape of the lower case Greek omega (ω) between the eyebrows; assumed to indicate a state of melancholy.

omen'tal. Relating to the omentum.

omentec'tomy [*omentum* + G. *ektomē*, excision] Excision of a part of the omentum.

omentitis (o-men-ti'(te')tis) [L. *omentum* + G. *-itis*.] Inflammation of the omentum, epiploitis.

omen'topexy [L. *omentum* + G. *pēxis*, fixation.] The operation of suturing the omentum to the abdominal wall, after the scarification of both surfaces, in order to establish an anastomosis between the portal system and that of the vena cava for the relief of ascites in Banti's disease; Talma's operation.

omentoplasty (o-men'to-plas-tĭ) [*omentum* + G. *plassō*, I form, manipulate.] Talma's operation, Drummond*-Morison operation.

omentorrhaphy (o-men-tor'ră-fĭ) [*omentum* + G. *rhaphē*, a seam.] Suture of the omentum.

omentovolvulus (o-men-to-vol'vu-lus) [L. *omentum* + *volvere*, to roll.] Twisting of the omentum.

omentulum (o-men'tu-lum) [L. dim. of *omentum*.] Omentum minus.

omen'tum [L.] A single or double fold of peritoneum passing from the stomach to another

abdominal organ. **gastrocol'ic o.,** o. majus. **gastrohepat'ic o.,** o. minus. **gastrosplen'ic o.,** ligamentum gastrolienale [BNA]. **greater o., o. majus. lesser o., o. minus. o. ma'jus** [BNA], greater or gastrocolic o., a fold passing from the greater curvature of the stomach to the transverse colon, hanging like an apron in front of the intestines. **o. mi'nus** [BNA], lesser or gastrohepatic o., a peritoneal fold passing from the margins of the porta hepatis and the bottom of the fossa ductus venosi to the lesser curvature of the stomach and to the upper border of the duodenum for a distance of about an inch from the pylorus.

omitis (o-mi'(me')tis) [G. *ōmos*, shoulder, + *-itis*.] Inflammation of the shoulder.

om'nadin. Trade name of a brand of prolipin, used intramuscularly in 2 cc. doses in non-specific protein injections in the treatment of various acute and chronic infectious diseases.

omniv'orous [L. *omnis*, all, + *vorare*, to eat.] Living on food of all kinds, upon both animal and vegetable food.

om'nopon [L. *omnis*, all, + G. *opos*, juice.] Pantopon.

omoclavicular (o"mo-klă-vik'u-lar). Relating to the shoulder and the clavicle, noting an anomalous muscle attached to the coracoid process or upper edge of the scapula and to the clavicle.

omocotyle (o-mo-kot'i-le) [G. *ōmos*, shoulder, + *kotylē*, joint-socket.] Glenoid cavity.*

omodyn'ia [G. *ōmos*, shoulder, + *odynē*, pain.] Muscular rheumatism affecting especially the deltoid and its fibrous attachments; omalgia.

omohy'oid. Noting a digastric muscle attached to the scapula and the hyoid bone.

omopha'gia [G. *ōmos*, raw, + *phagō*, I eat.] The eating of raw food, especially of raw flesh.

omoster'num. The meniscus of fibrocartilage in the sternoclavicular joint.

omothy'roid, omothy'reoid. Noting a band of muscular fibers passing between the superior cornu of the thyroid cartilage and the omohyoid muscle.

omphalec'tomy [G. *omphalos*, umbilicus, + *ektomē*, excision.] Excision of the umbilicus or of a neoplasm connected with it.

omphalelco'sis [G. *omphalos*, umbilicus, + *helkōsis*, ulceration.] Ulceration at the umbilicus.

omphalexoche (om-fal-eks'o-ke) [G. *omphalos*, umbilicus, + *exochē*, projection.] Umbilical hernia.

omphal'ic [G. *omphalos*, umbilicus.] Umbilical.

omphalitis (om-fal-i'(e')tis) [G. *omphalos*, navel, + *-itis*.] Inflammation of the umbilicus and surrounding parts.

omphaloangiopagous (om"fal-o-an-je-op'a-gus) [G. *omphalos*, umbilicus, + *angeion*, vessel, + *pagos*, fastened together.] Noting enzygotic twins united only by the communicating vessels of the umbilical cords, one of the two usually being defective.

omphalocele (om'fal-o-sēl) [G. *omphalos*, umbilicus + *kēlē*, hernia.] Umbilical hernia.

omphalochorion (om"fal-o-ko'rĭ-on). Fusion of the yolk-sac and the chorion to form one structure.

omphaloma (om-fal-o'mah) [G. *omphalos*, umbilicus, + *-oma*.] Omphaloncus.

omphalomesaraic (om"fal-o-mes-ah-ra'ik) [G. *omphalos*, umbilicus, + *mesaraion*, mesentery.] Omphalomesenteric.

om"phalomesenter'ic [G. *omphalos*, umbilicus, + *mesenterion*, mesentery.] Relating to the umbilicus and the mesentery or intestine. **o. duct,** the vitelline or vitellointestinal duct, a passage, in the embryo, between the yolk-sac and the midgut; a remnant of this sometimes persists in the adult as Meckel's diverticulum.

omphalon'cus [G. *omphalos*, umbilicus, + *onkos*, swelling.] Omphaloma, a tumor at the umbilicus.

omphalop'agus [G. *omphalos*, umbilicus, + *pagos*, fastened.] A twin monster with union at the umbilicus; monomphalus.

omphalophlebitis (om-fal-o-flĕ-bi'(be')tis) [G. *omphalos*, umbilicus, + *phleps(phleb-)*, vein, + *-itis*.] Inflammation of the umbilical veins.

omphalorrha'gia [G. *omphalos*, navel, + *-rhagia*.] Bleeding from the umbilicus.

omphalorrhe'a, omphalorrhœ'a [G. *omphalos*, umbilicus, + *rhoia*, flow.] A serous discharge from the umbilicus.

omphalorrhex'is [G. *omphalos*, umbilicus, + *rhēxis* rupture.] Rupture of the umbilical cord during childbirth.

omphalosite (om'fal-o-sit) [G. *omphalos*, umbilicus, + *sitos*, food.] A monster not capable of independent existence after birth and separation from the placenta.

om"phaloso'ter [G *omphalos*, umbilicus, + *sōtēr*, preserver.] An instrument for pushing back prolapsed loops of the umbilical cord, during childbirth.

omphalospinous (om"fal-o-spi'nus). Relating to the umbilicus and the anterior superior spine of the ilium, noting a line connecting these two parts on which is situated McBurney's point.

omphalot'omy [G *omphalos*, umbilicus, + *tomē*, incision.] Cutting of the umbilical cord at birth.

om'phalos, om'phalus. Umbilicus, navel.

om'phalotripsy [G. *omphalos*, umbilicus, + *tripsis*, a rubbing.] Crushing, instead of cutting, the umbilical cord after childbirth.

o'nanism [*Onan*, son of Judah, who transgressed in this way.] 1. Withdrawal before the completion of the sexual act, in order to prevent insemination and fecundation of the ovum. 2. Masturbation.

Onanoff's sign or **re'flex** (aw-nah-nawf') [Jacques *Onanoff*, physician in Paris, *1859] A sharp contraction of the ischiocavernosus and bulbocavernosus muscles when the glans penis is suddenly compressed; an alleged sign of dementia præcox.

Onchocerca (on-ko-ser'ka). Oncocerca.

Oncocer'ca [G. *onkos*, a barb, + *kerkos*, tail.] A genus of worms of the family *Filariidæ*. **O. cæcu'tiens,** a species causing cutaneous filariasis in man, with complete or partial deafness and loss of sight. **O. gib'soni,** a species which infests cattle. **O. vol'vulus,** a species in South Africa occasionally infesting man, causing the disease volvulosis.

oncocerciasis (on-ko-sur-si'a-sis). Infestation with a species of *Oncocerca;* it is marked by the presence of nodular subcutaneous swellings, formed of a fibrous cyst wall encircling the coiled parasite.

oncogenesis (on-ko-jen'e-sis) [G. *onkos*, tumor, + *genesis*, production.] Origin and growth of a tumor.

oncogenous (on-koj'en-us) [G. *onkos*, tumor, + *gennaō*, I produce.] Producing or favoring tumor formation.

on'cograph [G. *onkos*, bulk, + *graphē*, a record.] A recording oncometer, or the recording portion of an oncometer.

oncog'raphy [G. *onkos*, bulk, + *graphō*, I write.] Graphic representation, by means of a special apparatus, of the size and configuration of an organ.

oncoides (on-koy'dēz) [G. *onkos*, tumor, + *eidos*, resemblance.] Turgidity, turgor, intumescence.

oncol'ogy [G. *onkos*, tumor, + *-logia*.] The study of tumors in all their relations.
oncolysis (on-kŏ'li-sis) [G. *onkos*, tumor, + *lysis*, solution.] The absorption of a tumor.
oncolytic (on-ko-lit'ik) [G. *onkos*, tumor, + *lytikos*, solvent.] Causing the dispersion or absorption of tumors.
onco'ma [G. *onkos*, mass, + *-ōma*.] A tumor, swelling, intumescence.
oncom'eter [G. *onkos*, bulk, + *metron*, measure.] 1. An instrument for measuring the size and configuration of the kidneys and other organs. 2. The measuring, as distinguished from the recording, part of the oncograph.
oncomet'ric. Relating to oncometry.
oncom'etry [G. *onkos*, bulk, + *metron*, measure.] Measurement, by means of a special apparatus of the size of an organ.
onco'sis [G. *onkōsis*, swelling.] Intumescence, swelling, tumor formation.
oncosphere, oncosphæra (on'ko-sfēr, on-ko-sfe'rah) [G. *onkos*, tumor, + *sphaira*, sphere.] The embryo of a tapeworm.
oncot'omy [G. *onkos*, swelling, + *tomē*, incision.] Opening by incision of an abscess, cyst, or other tumor.
oncotropic (ong-ko-trop'ik) [G *onkos*, a tumor, + *tropē*, a turning.] Tumoraffin.
oneiric (o-ni'rik). Relating to dreams.
oneirism (ŏ-ni'rizm) [G. *oneiros*, dream.] A waking dream state.
oneirodynia (ŏ-ni-ro-din'ĭ-ah) [G. *oneiros*, dream, + *odynē*, pain.] Nightmare.
oneiroscopy (o-ni-ros'kŏ-pĭ) [G. *oneiros*, dream, + *skopeō*, I regard, examine.] Dream analysis, diagnosis of the mental state by a study of the person's dreams.
one-two-three. A local anesthetic used in dentistry, composed of oil of cassia 1 part, carbolic acid (melted crystals) 2 parts, oil of wintergreen 3 parts.
oniomania (o-nĭ-o-ma'nĭ-ah) [G. *ōnios*, for sale, + *mania*, frenzy.] An insane impulse to buy everything.
onion (un'yun) [Fr. *oignon*.] The bulb of an herb, *Allium cepa;* its preparations have been employed in bronchitis and as a nerve sedative. **o. bodies,** epithelial pearls.
oni'ric. Oneiric.
onomatol'ogy [G. *onoma(onomat-)*, name, + *-logia*.] Terminology, nomenclature; the science of naming objects; the vocabulary of a science.
onom''atoma'nia [G. *onoma*, name, + *mania*, frenzy.] 1. Insane dwelling on and repeating a name. 2. Insane dread of hearing a certain name spoken. 3. Fretful search after a forgotten word.
onomatopho'bia [G. *phobos*, fever.] Onomatomania (2).
o'nonin. A glucoside from ononis, employed as a diuretic and antirheumatic in doses of gr. 3–5 (0.2–0.3).
ono'nis [G.] The root of *Ononis spinosa*, an herb of northern and central Europe, sometimes employed as a diuretic and antirheumatic in doses of gr. 5–10(0.3–0.6).
ontogen'esis [G. *ōn*, being, + *genesis*, origin.] The development of the individual as distinguished from phylogenesis, or the evolutionary development of the species.
ontogenet'ic, ontogen'ic. Relating to ontogenesis.
ontogeny (on-toj'en-e). Ontogenesis.
onychatrophia, onychatrophy (on-i-kă-tro'fĭ-ah, on-ĭ-kat'ro-fĭ) [G. *onyx(onych-)*, nail, + *atrophia*, atrophy.] Atrophy of the nails.
onychauxis (on-e-kawk'sis) [G. *onyx(onych-)*, nail, + *auxē*, increase.] Enlargement of the nails of fingers or toes.
onychia (ŏ-nik'i-ah) [G. *onyx(onych-)*, nail.] Inflammation of the matrix with suppuration and shedding of the nail. **o. malig'na,** acute o. occurring in scrofulous children or cachectic subjects spontaneously or in response to slight traumatism. **o. parasit'ica,** onychomycosis.
onychitis (ŏ-ne-ki'(ke')tis) [G. *onyx(onych-)*, nail, + *-itis*.] Onychia.
onychocryptosis (on''ĭ-ko-krip-to'sis) [G. *onyx (onych-)*, nail, + *kryptō*, I conceal.] Ingrowing toe-nail.
onychograph (on'e-ko-graf) [G. *onyx(onych-)*, nail, + *graphō*, I write.] An instrument for recording the capillary blood-pressure as shown by the circulation under the nail.
onychogrypho'sis. Onychogryposis.
onychogryposis (on-e-ko-gri-po'sis) [G. *onyx(onych-)*, nail, + *grypōsis*, a curving.] Enlargement with increased curvature of the nails of fingers or toes.
onychoid (on'e-koyd) [G. *onyx(onych-)*, nail, + *eidos*, appearance.] Resembling in structure or form a finger-nail.
onychol'ysis (on-e-kol'i-sis) [G. *onyx(onych-)*, nail, + *lysis*, loosening.] Loosening or shedding of the nails, beginning at the free border, and usually incomplete. See *onychomadesis*.
onychoma (on-e-ko'mah) [G. *onyx(onych-)*, nail, + *-ōma*.] A tumor arising from the nail bed, or due to overgrowth of the nail substance.
onychomadesis (on-ĭ-ko-mă-de'sis) [G. *onyx*, nail, + *madēsis*, a growing bald.] Shedding of the nails beginning at the matrix and becoming complete; see *onycholysis*.
onychomalacia (on''e-ko-mal-a'sĭ-ah) [G. *onyx (onych-)*, nail, + *malakia*, softness.] Absence of rigidity of the nails, hapalonychia.
onychomycosis (on-e-ko-mi-ko'sis) [G. *onyx(onych-)*. nail, + *mykēs*, fungus.] Any parasitic disease (tinea or favus) of the nails. **o. favo'sa,** favus of the nails, the yellow masses being found in the nail substance. **o. trichophyti'na,** tinea unguium.
onychonosus (on-e-kon'o-sus) [G. *onyx(onych-)*, nail, + *nosos*, disease.] Any disease of the nails.
onychopathic (on-e-ko-path'ik) [G. *onyx(onych-)*, nail, + *pathos*, distress.] Relating to or suffering from any disease of the nails.
onychopathy (on-e-kop'ă-thĭ) [G. *onyx(onych-)*, nail, + *pathos*, suffering.] Any disease of the nails, onychonosus.
onychophag, onycophage (on'e-ko-fag, on'e-ko-fāj). A victim of the habit of biting the nails.
onychophagia (on-e-ko-fa'je-ah). Onycophagy.
onychophagist (on-e-kof'ă-jist). Onychophag.
onychophagy (on-e-kof'a-jĭ) [G. *onyx(onych-)*, nail, + *phagō*, I eat.] Nail-biting
onychophosis (on-e-ko-fo'sis) A growth of horny epithelium in the nail-bed.
onychophyma (on-e-ko-fi'mah) [G. *onyx(onych-)*, nail, + *phyma*, growth.] Swelling or hypertrophy of the nails.
onychoptosis (on-e-kop-to'sis) [G. *onyx(onych-)*, nail, + ptōsis, a falling.] Falling off of the nails.
onychorrhexis (on-e-ko-rex'is) [G. *onyx(onych-)*, hair, + *rhēxis*, a breaking.] Abnormal brittleness of the nails with splitting of the free edge.
onychosis (on-e-ko'sis). Onychonosus, onychopathy, any disease of the nails.
onychotrophy (on-e-kot'ro-fĭ) [G. *onyx(onych-)*, nail, + *trophē*, nourishment.] Nutrition of the nails.
on'ym [G. *onyma*, name.] A technical term.

on'yx [G.] 1. A finger-nail or toe-nail. 2. The presence of pus between the layers of the cornea—of doubtful occurrence.

onyx'is. Ingrowing toe-nail.

onyxitis (on-iks-i'(e')tis) [G. *onyx*, nail, + *-itis*.] Onychitis.

o'oblast [G. *ōon*, egg, + *blastos*, germ.] A primitive ovum, a cell from which the ovum is developed.

oocyesis (o-o-si-e'sis) [G. *ōon*, egg, + *kyēsis*, pregnancy.] Ovarian pregnancy.

oocinesia (o-o-sin-e'sĭ-ah) [G. *ōon*, egg, + *kinēsis*, movement.] The caryocinetic processes occurring in the development of the ovum; also written ookinesis.

oocinete (o-o-sin'ēt) [G. *ōon*, egg, + *kinētos*, motile.] The piriform motile body into which the fertilized macrogamete, or zygote, develops.

o'ocyst [G. *ōon*, egg, + *kystis*, bladder.] The encysted form of the fertilized macrogamete, or zygote.

oocytase (o-o-si'tāz). A cytase acting destructively upon the ovarian cells.

oocyte (o'o-site) [G. *ōon*, egg, + *kytos*, cell.] The primitive ovum in the ovary.

oocytine (o-o-si'tēn) [G. *ōon*, egg, + *kytos*, cell.] A substance contained in the blood of fowls and other animals which has the property of fertilizing the eggs of the sea-urchin and probably other aquatic animals.

oodeocele (o-od'e-o-sēl) [G. *ōōdēs*, egg-shaped, + *kēlē*, hernia.] Obturator hernia.*

oogamous (o-og'am-us) [G. *ōon*, egg, + *gamos*, marriage.] In botany and protozoology, noting conjugation between dissimilar forms; opposed to isogamous.

oogenesis (o-o-jen'e-sis) [G. *ōon*, egg, + *genesis*, production.] The process of formation and development of the ovum.

oogenetic, oogenic (o-o-jen-et'ik, o-o-jen'ik) Oogenous.

oogenous (o-oj'en-us). Producing ova, said of the ovary.

oogonium (o-o-gon'ĭ-um) [G. *ōon* egg, + *gonē*, generation.] The primitive ovum, or antenatal egg-cell, from which the oocyte is developed.

ookinete (o-o-kin'ēt). Oocinete.

oolemma (o-o-lem'ah) [G. *ōon*, egg, + *lemma*, sheath]. Zona pellucida.

oophagia, oophagy (o-o-fa'jĭ-ah, o-of'a-jĭ) [G. *ōon*, egg, + *phagō*, I eat.] The habitual eating of eggs; subsisting largely on eggs.

oophor- [G. *ōon*, egg, + *phoros*, a bearer.] A prefix denoting the ovary; correctly, *oothec-*.

oophoralgia (o-of"or-al'jĭ-ah).] Oothecalgia, ovarian neuralgia

oophorauxe (o-of"or-awk'se). Oothecauxe, hypertrophy of the ovary.

o'ophore [G. *ōon*, egg, + *phoros*, bearer.] Oophyte.

oophorectomy (o-of"or-ek'tŏ-mĭ). Oothecotomy, ovariotomy.

oophorin (o-of'or-in). 1. An ovarian hormone which renders the uterine mucosa capable of transforming the contained blood into trophema, or nutrient blood; it is a mixture of folliculin, ovulin, and lutein. 2. Trade name of a therapeutic extract of the cow's ovary.

oophoritis (o-of-or-i'(e')tis) [G. *ōon*, egg, + *phoros*, a bearer, + *-itis*.] Oothecitis, inflammation of an ovary.

oophorocystosis (o-of"or-o-sis-to'sis). Oothecocystosis, the formation of a cyst of the ovary.

oophoroepilepsy (o-of"or-o-ep'ĭ-lep-sĭ). Oothecoepilepsy.

oophorohysterectomy (o-of"or-o-his-ter-ek'to-mĭ). Oothecohysterectomy, ablation of the uterul and ovaries.

oophoroma (o-of-or-o'mah). Oothecoma, an ovarian tumor.

oophoromalacia (o-of"or-o-mal-a'sĭ-ah). Oothecomalacia, softening of an ovary.

oophoroma'nia (o-of"or-o-ma'nĭ-ah). Oothecomania, insanity associated with disease of the ovary.

oophoron (o-of'or-on) [G. *ōon*, egg, + *phoros*, bearer.] Ootheca, ovary.

oophoropathy (o-of-or-op'ă-thĭ). Oothecopathy, ovarian disease.

oophoropelliopexy (o-of"or-o-pel'ĭ-o-pek"sĭ) [G. *ōon*, ovum, + *phoros*, bearer, + *pellis*, pelvis, + *pēxis*, fixation.] Oothecorrhaphy.

oophoropexy (o-of-or-o-pek'sĭ). Oothecopexy, fixation of a displaced ovary.

oophorosalpingectomy (o-of"or-o-sal-pin-jek'to-mĭ). Oothecosalpingectomy, exsection of an ovary and its Fallopian tube.

oophorostomy (o-of-or-os'to-mĭ). Oothecostomy, operative formation of an ovarian fistula in order to drain a cyst of the organ.

oophorrhaphy (o-of-or'ă-fĭ). Oothecorrhaphy, suturing a displaced ovary to the wall of the pelvis.

o'ophyte [G. *ōon*, egg, + *phyton*, plant.] In botany, the stage of the life-cycle of certain plants in which the sexual organs are borne; distinguished from *sporophyte*

ooplasm (o'ŏ-plasm) [G. *ōon*, egg + *plasma*, a thing formed.] The protoplasmic portion of the vitellus.

oosperm (o'ŏ-spurm) [G. *ōon*, egg, + *sperma*, seed.] The fertilized ovum.

o'osphere [G. *ōon*, egg, + *sphaira*, sphere.] In botany, the ovum before impregnation.

Oospora (o-os'po-rah) [G. *ōon*, egg, + *sporos*, seed]. A genus of fungi, consisting of slender mycelium having differentiated nuclei. **O. cani'na,** *Mycoderma caninum*, a species causing favus in dogs which is sometimes transmitted to man, producing lesions resembling ordinary ringworm.

oospore (o'ŏ-spōr) [G. *ōon*, egg, + *sporos*, seed.] The fertilized ovum or egg-cell of fungi and algæ.

oosporosis (o"o-spo-ro'sis). Infection with a species of Oospora, usually *O. canina*.

oothec- [G. *ōothēkē*, ovary.] A prefix denoting the ovary.

ootheca (o-ŏ-the'kah) [G. *ōothēkē; ōon*, egg, + *thēkē*, box, case.] An ovary.

oothecalgia (o-ŏ-the-kal'jĭ-ah) [G. *ōothēkē*, ovary, + *algos*, pain.] Ovarian neuralgia, ovarialgia, oophoralgia.

oothecauxe (o-ŏ-the-kawk'se) [G. *ōothēkē*, ovary, + *auxē*, increase.] Hypertrophy or enlargement of the ovary.

oothecectomy (o-ŏ-the-sek'to-mē) [G. *ōothēkē*, ovary, + *ektomē*, excision.] The ablation of an ovary, ovariotomy.*

oothecitis (o-ŏ-the-si'(se')tis) [G. *ōothēkē*, ovary, + *-itis*.] Inflammation of an ovary.

oothecocele (o-ŏ-the'co-sēl) [G. *ōothēkē*, ovary, + *kēlē*, hernia.] Hernia of an ovary.

oothecocentesis (o-ŏ-the"ko-sen-te'sis) [G. *ōothēkē*, ovary, + *kentēsis*, puncture.] Puncture of an ovary or of an ovarian cyst.

oothecocyesis (o-ŏ-the"ko-si-e'sis) [G *ōothēkē*, ovary, + *kyēsis*, pregnancy.] Ovarian pregnancy retention and development of a fecundated ovum in the ovary.

oothecocystosis (o-ŏ-the"ko-sis-to'sis) [G. *ōothēkē*, ovary, + *kystis*, cyst.] The formation of a cyst of the ovary.

oothecoepilepsy (o-ŏ-the"ko-ep'ĭ-lep-sĭ) [G. *ōothēkē*, ovary, + *epilēpsia*, epilepsy.] Epileptic convulsions excited by ovarian irritation.

oothecohysterectomy (o-ŏ-the"ko-his-ter-ek'to-mĭ) [G. *ōothēkē*, ovary, + *hystera*, uterus, + *ektomē*, excision.] Surgical removal of the uterus and ovaries.

oothecolytic (o-o-the-ko-lit'ik) [G. *ōothēkē*, ovary, + *lytikos*, causing solution.] Destructive to the ovary, ovariolytic.

oothecoma (o-ŏ-the-ko'mah) [G. *ōothēkē*, ovary, + *-ōma*.] Tumor of the ovary.

oothecomalacia (o-ŏ-the"ko-mal-a'sĭ-ah) [G. *ōothēkē*, ovary, + *malakia*, softness.] Pathological softening of an ovary.

oothecomania (o-ŏ-the"ko-ma'nĭ-ah) [G. *ōothēkē*, ovary, + *mania*, frenzy.] Mental disorder associated with ovarian disease.

oothecopathy (o-ŏ-the-kop'ă-thĭ) [G. *ōothēkē*, ovary, + *pathos*, suffering.] Any disease of the ovary.

oothecopexy (o-ŏ-the'ko-pek-sĭ) [G. *ōothēkē*, ovary, + *pēxis*, fixation.] The anchoring or fixation of a prolapsed or wandering ovary.

oothecorrhaphy (o-ŏ-the-kor'ă-fĭ) [G. *ōothēkē*, ovary, + *rhaphē*, suture.] Fixation of a prolapsed ovary by suturing it to the wall of the pelvis.

oothecorrhexis (o-ŏ-the-kŏ-rek'sis) [G. *ōothēkē*, ovary, + *rhēxis*, rupture.] Rupture of an ovary.

oothecosalpingectomy (o-ŏ-the"ko-sal-pin-jek'-o-mĭ) [G. *ōothēkē*, ovary, + *salpinx* (*salping*), trumpet (oviduct), + *ektomē*, excision.] Operative removal of an ovary and the corresponding oviduct.

oothecostomy (o-ŏ-the-kos'to-mĭ) [G *ōothēkē*, ovary, + *stoma*, mouth.] Establishment of a temporary fistula for drainage of a cyst of the ovary.

oothecotomy (o-ŏ-the-kot'o-mĕ) [G. *ōothēkē*, ovary, + *tomē*, incision.] Incision into or removal of an ovary or ovarian tumor; ovariotomy.

opacifica'tion. 1. The process of making opaque. 2. The formation of opacities

opacity (o-pas'i-tĭ) [L. *opacitas*] A lack of transparency; an opaque or non-transparent area.

opacol (o-pa'kol). Iodo-ray, tetraiodophthalein-sodium, iodophthaleinum (Br.).

opalescent (o-pal-es'sent). Resembling an opal in the display of various colors, noting certain bacterial cultures.

opal'gia [G *ōps*(*ōp*-), face, + *algos*, pain.] Facial neuralgia.

opal'isin [G. *opallios*, opal] Whey-protein, an iridescent sulphur-containing protein found only in human milk.

opaque (o-pāk') [Fr.; L. *opacus*, shady.] Impervious to light, not translucent or only slightly so.

opeidoscope (ŏ-pi'do-skōp) [G *ops*(*op*-), a voice, + *eidos*, appearance, + *skopeō*, I view] An apparatus by which the vibrations of a diaphragm, started by the voice, move a mirror by which a ray of light is reflected on a screen.

o'pen [A.S.] Not closed; (1) exposed to the air, said of a wound; (2) interrupted, not giving passage to electricity, said of an electrical circuit

o'pening snap. See under *snap*.

op'erable. That can be operated upon; noting the case of a tumor or other pathological condition in which an operation can be performed with a reasonable expectation of cure or symptomatic relief.

op'erate [L. *operari*, to work.] 1. To cause a movement of the bowels, said of a laxative or cathartic remedy. 2. To work upon the body by the hands or by means of cutting or other instruments for the purpose of correcting a deformity, removing a tumor or a limb, etc. [Operate is here an intransitive verb and should be followed by a preposition, such as *on* or *upon*.]

opera'tion. The act of operating. 1. Any surgical procedure. 2. The action of a drug or other remedy. 3. An evacuation of the bowels. **Adams' o., Alexander's o., Bâssini's o., Chopart's o., Emmet's o.,** etc., see the proper names. **In'dian o.,** a plastic o. for restoration of the nose by means of a flap taken from the forehead. **in'terval o.,** an o. performed during a period of quiescence or of intermission, as in appendicitis after an acute attack has passed away, but when a recurrence may be expected. **Ital'ian o.,** Tagliacotian o., a plastic o. for the restoration of the nose by means of a flap taken from the arm. **major o.,** an o. of great extent or involving vital organs, thereby exposing the patient directly to danger of death. **minor o.,** an o. of slight extent and not in itself dangerous to life. **plastic o.,** reparative o., one undertaken to restore lost parts or lost functions. **rad'ical o.,** a thorough o. intended to cure the abnormal condition and prevent its recurrence. **rad'ical o. for hernia,** an o. by which the hernia is reduced, and the canal through which the gut descended is obliterated. **subcuta'neous o.,** an o., as for the division of a tendon, performed without incising the skin other than by a minute opening made by the entering knife. **Tagliacotian o.** (tal-yah-ko'shan), Italian o., see also *Ital'agliacotian*.

op'erative. 1. Relating to, or effected by means of an operation. 1. Active, effective.

oper'cular. Relating to an operculum.

operculated (o-pur'ku-la-ted). Provided with a lid, noting the eggs of certain parasitic worms, or plant capsules.

oper'culum, gen. *oper'culi*, pl *oper'cula* [L. cover or lid.] 1. Anything resembling a lid or cover 2. [BNA] specifically, in anatomy the overlapping portion of cerebral substance covering the insula; it is defined by different anatomists as consisting of from two to four portions (called *operculum* or *frontoparietal operculum*, *postoperculum*, *preoperculum*, and *suboperculum* or *orbital operculum*), separated from each other by branches of the fissure of Sylvius; called also o. insulæ, Arnold's or Burdach's o. 3. In botany, the lid or cover of a capsule. 4. In parasitology, the lid or cover of a helminth egg. 5. A bit of mucus sealing the mouth of the uterus after conception has taken place. **frontopari'etal o.,** see (2). **occip'ital o.,** a portion of the occipital lobe of the brain cut off by the ape-fissure, rarely present in man. **or'bital o.,** see (2). **o. in'sulæ,** operculum (2).

ophi'asis [G. *ophis*, snake.] 1. A form of alopecia areata in which the loss of hair occurs in bands partially or completely encircling the head. 2. Leprosy.

ophidiomonas (o-fid-ĭ-om'o-nas) [G. *ophidion*, dim. of *ophis*, a serpent, + *monas*, a unit.] A spiral microorganism the cytoplasm of which contains sulphur.

ophidiophobia (o-fid-ĭ-o-fo'bĭ-ah) [G. *ophidion* a small snake, + *phobos*, fear.] A morbid fear of snakes.

ophiol'atry [G. *ophis*(*ophio*-), snake, + *latreia*, worship.] Serpent-worship.

ophiox'yline. An alkaloid from *Ophioxylon serpentinum*, a plant of India of the order *Apocynaceæ*, or dogbane family; oxytocic, antiperiodic, and anthelmintic.

ophritis (of-ri'(re')tis) [G. *ophrys*, eyebrow, + *-itis*.] Dermatitis in the region of the eyebrows.

ophryitis (of-re-i'(e')tis). Ophritis.

oph'ryon [G. *ophrys*, eyebrow.] A point at the center of the transverse diameter of the forehead between the nearest points of the two temporal lines, on a level with the upper margin of the orbits.

oph"ryospi'nal angle [G. *ophrys*, eyebrow, + L. *spina*, spine.] See under *angle*.

ophryosis (of-ri-o'sis) [G. *ophrys*, eyebrow.] Spasmodic twitching of the upper portion of the orbicularis palpebrarum causing a wrinkling of the eyebrow.

ophthalmag'ra [G. *ophthalmos*, eye, + *agra*, seizure. Gouty inflammation of the eye or any of its parts.

ophthalmal'gia [G. *ophthalmos*, eye, + *algos*, pain Ophthalmodynia.

ophthalmatro'phia, ophthalmat'rophy [G. *ophthalmos*, eye, + *atrophia*, atrophy.] Atrophy of the eyeball.

ophthalmec'tomy [G. *ophthalmos*, eye, + *ektomē*, excision.] Enucleation of the eyeball, removal of the entire eyeball.

ophthalmencephalon (of-thal-men-sef'ă-lon) [G. *ophthalmos*, eye, + *enkephalos*, brain.] The nervous mechanism of the organ of sight—the retina, optic nerve, and visual center.

ophthal'mia [G.] 1. Severe, often purulent, conjunctivitis. 2. Inflammation of the deeper structures of the eye. **catar'rhal o.,** ophthalmia (1) **cat'erpillar-hair o.,** o. nodosa. **Egyp'tian o.,** trachoma. **elec'tric o.,** conjunctivitis caused by the irritation of intense light in electric welding. **gonorrhe'al o.,** acute purulent conjunctivitis excited by the presence of the gonococcus. **gran'ular o.,** granular lids, trachoma. **metastat'ic o.,** sympathetic o., chorioiditis in pyemia. **mi'gratory o.,** sympathetic o. **mucous o.,** catarrhal o. **neuroparalyt'ic o.,** corneal inflammation or ulceration following lesion of the ophthalmic branch of the trigeminal nerve. **o. neonato'rum,** acute purulent conjunctivitis in the new-born infant, due to infection by a gonorrheal discharge from the genitals of the mother. **o. nodo'sa,** the presence of nodular swellings on the conjunctiva, due often to mechanical irritation by the hairs of caterpillars. **phlycten'ular o.,** phlyctenular conjunctivitis.* **pseu"dotuber'culous o.,** o. nodosa. **pu'rulent o.,** purulent conjunctivitis, usually of gonorrheal origin. **scrof'ulous o.,** phlyctenular conjunctivitis.* **spring o.,** vernal conjunctivitis.* **sympathet'ic o.,** a serous or plastic uveitis in one eye caused by the presence of a similar trouble in the other eye. **transferred o.,** sympathetic o.

ophthalmiatrics (of-thal-mĭ-at'riks) [G. *ophthalmos*, eye, + *iatreia*, medical treatment.] Treatment of diseases of the eye.

ophthal'mic. Relating to the eye, ocular.

ophthalmine (of-thal'mēn). The virus of purulent ophthalmia.

ophthalmit'ic. Relating to inflammation of the eye.

ophthalmitis (of-thal-mi'(me')tis) [G. *ophthalmos*, eye, + *-itis*.] Ophthalmia.

ophthalmo- [G. *ophthalmos*, eye.] A prefix noting the eye.

ophthal"moblennorrhe'a, ophthal"moblennorrhœ'a [G. *ophthalmos*, eye, + *blenna*, mucus, + *rhoia*, flow.] Purulent, usually gonorrheal, ophthalmia.

ophthal"mocarcino'ma [G. *ophthalmos*, eye.] Carcinoma of the eye.

ophthalmocele (of-thal'mo-sēl) [G. *ophthalmos*, eye. + *kēlē*, hernia.] Exophthalmus.

ophthal"mocop'ia [G. *ophthalmos*, eye, + *kopos*, fatigue.] Asthenopia, eyestrain.

ophthalmodesmitis (of-thal"mo-dez-mi'(me')tis) [G. *ophthalmos*, eye, + *desmos*, band, + *-itis*.] Ophthalmic tenonitis, inflammation of the tendons or fibrous structure of the eye.

ophthal"modiagno'sis [G. *ophthalmos*, eye.] Diagnosis of an infectious disease by means of the ophthalmoreaction.

ophthal"modiastim'eter [G. *ophthalmos*, eye, + *diastasis*, separation, + *metron* measure.] A device for adjusting the lenses of spectacles and eyeglasses so that their axes correspond to the visual axes of the eyes.

ophthal"modynamom'eter [G. *ophthalmos*, eye, + *dynamis* power, + *metron*, measure.] An instrument for determining the power of convergence of the eyes as regards the near point of vision.

ophthalmodyn'ia [G. *ophthalmos*, eye, + *odynē*, pain.] Pain in the eyeballs, optic neuralgia.

ophthal"mofun'doscope [G. *ophthalmos*, eye, + L. *fundus*, bottom, + G. *skopeō*, I view.] An apparatus for enabling one to inspect the fundus oculi under magnification.

ophthalmog'raphy [G. *ophthalmos*, eye, + *graphē*, a description] A treatise on or description of the eyes.

ophthalmogyric (of-thal-mo-ji'rik) [G. *ophthalmos*, eye, + *gyreuō*, I turn around.] Causing eye movements; oculomotor.

ophthalmoleucoscope (of-thal"mo-lu'ko-skōp) [G. *ophthalmos*, eye, + *leukos*, white, + *skopeō*, I examine.] A polarizing instrument used in examining for color-blindness.

ophthal"molith [G. *ophthalmos*, + *lithos*, stone.] A lacrymal calculus.

ophthalmol'ogist. One skilled in ophthalmology, an oculist, a specialist in diseases and refractive errors of the eye.

ophthalmol'ogy [G. *ophthalmos*, eye, + *-logia*] The branch of medical science which has to do with the eye, its diseases and refractive errors.

ophthalmoly'ma [G. *lyma*, ruin.] Destruction of the eye.

ophthal"momala'cia [G. *ophthalmos*, eye, + *malakia*, softness.] Abnormal softening of the eyeball.

ophthalmom'eter [G. *ophthalmos*, eye, + *metron*-measure.] 1. An instrument for determining the amount and direction of corneal and lenticular astigmatism through observation of the distorted images reflected from the cornea and lens. 2. An instrument for determining the distance of distinct vision.

ophthalmom'etry [G. *ophthalmos*, eye, + *metron*, measure.] Measurement of the visual acuity and refractive power of the eyes.

ophthalmomycosis (of-thal-mo-mi-ko'sis) [G. *ophthalmos*, eye, + *mykēs*, fungus, + *-osis*.] Any disease of the eye or its appendages caused by the growth of a fungus.

ophthalmomyitis (of-thal-mo-mi-i'(e')tis) [G. *ophthalmos*, eye, + *mys*, muscle, + *-itis*.] Inflammation of the extrinsic muscles of the eye, ophthalmomyositis.

ophthalmomyositis (of-thal-mo-mi-o-si'(se')tis). Ophthalmomyitis.

ophthalmomyotomy (of-thal"mo-mi-ot'o-mĭ) [G. *ophthalmos*, eye, + *mys*, muscle, + *tomē*, incision.] Division of any of the extrinsic eye muscles.

ophthalmop'athy [G. *ophthalmos*, eye, + *pathos* suffering.] Any disease of the eyes. **exter'nal o.,** any disease of the conjunctiva, cornea, or adnexa of the eye. **inter'nal o.,** any disease of the retina, lens, or other internal structures of the eyeball.

ophthal"mophacom'eter [G. *ophthalmos*, eye, + *phakos*, lens, + *metron*, measure.] An instrument for measuring the refractive power of the crystalline lens of the eye.

ophthalmophlebotomy (of-thal″mo-flĕ-bot′o-mĭ) [G. *ophthalmos*, eye, + *phleps*(*phleb-*), vein, + *tomē*, incision.] Incision to relieve congestion of the veins of the conjunctiva.

ophthalmophthisis (of-thal-mo-ti′(te′)sis, oph-thal-mof′thi(the)-sis) [G. *ophthalmos*, eye, + *phthisis*, wasting.] Ophthalmomalacia,* phthisis bulbi.

ophthal′moplasty [G. *ophthalmos*, eye, + *plassō*, I form.] Reparative or plastic surgery of the eye.

ophthalmople′gia [G. *ophthalmos*, eye, + *plēgē*, stroke.] Paralysis of one or more of the motor nerves of the ye. **fascic′ular o.,** o. due to a lesion in the pons. **nu′clear o.,** o. due to a lesion of the nuclei of origin of the motor nerves of the eye. **o. exter′na,** paralysis affecting one or more of the nerves supplying the extrinsic eye-muscles. **o. inter′na,** paralysis affecting only the branches of the third nerve supplying the iris and ciliary muscle. **o. partia′lis,** incomplete o., o. involving only one or two of the extrinsic or intrinsic ocular muscles. **o. progressi′va,** progressive upper bulbar palsy, due to degeneration of the nuclei of the motor nerves of the eye. **o. tota′lis,** paralysis of all the motor nerves of the eye, those supplying both the extrinsic and the intrinsic muscles. **or′bital o.,** o. due to some lesion within the orbit.

ophthalmople′gic. 1. Relating to or marked by ophthalmoplegia. 2. An agent causing paralysis of the eye muscles, especially of the intrinsic muscles, a cycloplegic.

ophthalmoptosia (of-thal-mop-to′sĭ-ah) [G. *ophthalmos*, eye, + *ptōsis*, a falling.] Protrusion of the eyeball, exophthalmus.

ophthalmoreaction (of-thal″mo-re-ak′shun) [G. *ophthalmos*, eye.] An evanescent mild inflammatory reaction of the conjunctiva excited by the instillation in a tuberculous subject of one drop of a 1–100 solution of tuberculin; the reaction fails in the non-tuberculous, and is therefore of diagnostic value. A similar reaction has been observed after the instillation of typhotoxin in cases of typhoid fever, and it is probable that it may occur in other diseases under like conditions.

ophthal″morrha′gia [G. *ophthalmos*, eye, + *rhēgnymi*, I burst forth.] Hemorrhage from the eye.

ophthalmorrhea, ophthalmorrhœa (of-thal-mor-re′ah) [G. *ophthalmos*, eye, + *rhoia*, flow.] A mucous or purulent discharge from the eye.

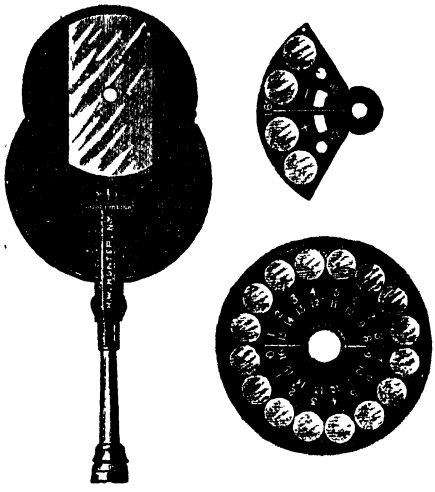
ophthal″morrhex′is [G. *ophthalmos*, eye, + *rhēxis*, rupture.] Rupture of the eyeball.

ophthal′moscope [G. *ophthalmos*, eye, + *skopeō*, I examine.] An instrument consisting of a concave mirror with a small hole in the center; the mirror serving to illuminate, by the reflection of a light behind the patient, the fundus of the eye, which the examiner observes through the central hole. **ghost o.,** an o. in which some of the efferent rays are deflected by means of a plate of polished glass set at an angle of 45° in the path of the illuminating and efferent rays.

oph″thalmos′copy. Examination of the fundus of the eye by means of the ophthalmoscope. **direct′ o.,** examination of the eye without a lens, the image seen being an erect one. **indirect′ o.,** examination of the fundus by means of the interposition of a convex lens, the image being an inverted one. **med′ical o.,** ophthalmoscopic examination of the eye as an aid to the diagnosis of nervous and other non-ocular diseases. **metric o.,** o. as an aid to the determination of refractive errors of the eye.

ophthalmosta′sia, opthalmos′tasis [G. *ophthalmos*, eye, + *stasis*, standing.] Holding the eyeball immovable by means of the ophthalmostat.

ophthal′mostat [G. *ophthalmos*, eye, + *statos*, made to stand.] An instrument for holding the eyeball in order to prevent involuntary movements during an operation.



LORING'S OPHTHALMOSCOPE.

ophthalmostatom′eter [G. *ophthalmos*, eye, + *statos*, a stand, + *metron*, measure.] An instrument for determining the position of the eyes.

ophthalmostatom′etry [G. *ophthalmos*, eye, + *statos*, placed in one position, + *metron*, measure. Determination of the normal position or degree of protrusion or retraction of the eyeball.

ophthal″mothermom′eter [G. *ophthalmos*, eye, + *thermē*, heat, + *metron*, measure.] A thermometer for determining the temperature of the eye.

ophthalmot′omy [G. *ophthalmos*, eye, + *tomē*, incision.] 1. Anatomy of the eye. 2. Any operation involving a cutting operation on the eye. 3. Ophthalmectomy.

ophthal″motonom′eter [G. *ophthalmos*, eye, + *tonos*, tension, + *metron*, measure.] An instrument for determining the tension of the eyeball.

ophthal″motonom′etry. Measurement of the intraocular tension.

ophthal″motox′in. A specific cytotoxin obtained by injections of emulsions of the ciliary body

ophthalmotrope (of-thal′mo-trōp) [G. *ophthalmos*, eye, + *tropos*, turning.] A model of the two eyes, to each of which are attached weighted cords pulling in the direction of the six extrinsic eye muscles; used to demonstrate the action of the ocular muscles singly or in various combinations.

ophthal″motropom′eter [G. *ophthalmos*, eye, + *tropos*, a turning, + *metron*, measure.] An instrument for determining the power of the individual extrinsic muscles of the eye, or of measuring the degree of imbalance present.

ophthalmotropom′etry [G. *ophthalmos*, eye, + *tropē*, a turning around, + *metron*, measure.] Measurement of the extent and direction of the movements of the eyeball.

ophthalmovas′cular. Relating to the blood-vessels of the eye. **o. choke,** a condition in which the blood-supply of the retina is interfered with by mutual pressure of retinal vessels ramifying in such a way as to lie across each other.

ophthalmoxyster (of-thal-mo-zis′ter) [G. *ophthalmos*, eye, + *xystēr*, a scraper.] A conjunctival curette, or instrument for lightly scraping the conjunctiva.

ophthal'mus [G *opthalmos*, eye.] The eye, oculus.

opian'ic acid. An acid, $C_{10}H_{10}O_5$, derived from narcotine, occurring in slender colorless prisms.

o'pianine. Narcotine

o'pianyl [G. *opion*, opium, + *hylē*, stuff.] Meconin.

opiate (o'pĭ-āt). Any preparation of opium.

opioma'nia [G. *opion*, opium, + *mania*, frenzy.] Addiction to the use of opium or any of its derivatives

opioma'niac. A person addicted to the use of opium.

opiophagism, opiophagy (o-pĭ-of'a-jizm, o-pĭ-of'a-jĭ) [G. *opion*, opium, + *phagō*, I eat.] Opium-eating, opiomania, opiumism.

opis'thenar [G. *opisthenar*, back of the hand, from *opisthe*, at the back, + *thenar*, palm of the hand]. Dorsum of the hand.

opisthencephalon (o-pis"then-sef'a-lon) [G. *opisthe*, behind, + *enkephalos*, brain.] Cerebellum.

opis"thioba'sial [G. *opisthios*, posterior, + *basis*, base.] Relating to both opisthion and basion, noting a line connecting the two, or the distance between them.

opis'thion [G. *opisthios*, posterior] The middle point on the posterior margin of the foramen magnum, opposite the basion.

opisthiona'sial. Relating to the opisthion and the nasion, noting the distance between the two points.

opisthoporeia (o-pis"tho-po-ri'(re')ah) [G. *opisthen*, backward, + *poreia*, walk.] Walking backward.

opisthorchiasis (o-pis-thor-ki'a-sis) [see *Opisthorchis*.] Infection with the Asiatic liver-fluke.

Opisthorchis (op-is-thor'kis) [G *opisthe* behind, + *orchis* testicle.] A genus of *Trematoda*, or flukes of the family *Fasciolidæ*. **O. felin'eus,** *Distoma sibiricum, D. conus*, a parasite of the bileducts and gall-bladder of man and of the dog, cat, and fox in Northern Europe and Siberia. **O. nover'ca,** *Distomum conjunctum*, a small lance-shaped fluke, found chiefly in dogs, rarely in man, in India. **O. sinen'sis,** *Distomum sinense, D. japonicum, D. spatulatum*, Chinese or Japanese liver fluke, a common parasite of the bileducts in man in Eastern and Southern Asia. **O. viverri'ni,** a species nearly related to *O. felineus* found occasionally in man in Siam.

opisthotic (op-is-tho'tik) [G. *opisthe*, behind, + *ous(ōt-)*, ear.] Behind the ear.

opisthot'onos [G. *opisthe*, behind, + *tonos*, tension, stretching.] A tetanic spasm in which the spine and extremities are bent with convexity forward, the body resting on the head and the heels.

o'pium [G. *opion*, poppy-juice.] (U.S., Br.) The inspissated juice from the unripe capsules of a species of poppy, *Papaver somniferum;* employed as an analgesic, hypnotic, diaphoretic, stimulant, and in diarrhea, diabetes, and spasmodic conditions, in doses of gr. ½ –1 (0.03 –0.06). **Bos'ton o.,** o. so diluted after importation as barely to meet the official requirements. **o. deodora'tum,** deodorized opium; powdered opium treated with purified petroleum benzin which removes the odorous principle; dose, gr. ½–¾ (0.015–0.045). **o. granula'tum** (U.S.), granulated opium; gum opium dried and reduced to a coarse powder; dose gr. ½–¾ (0.015–0.045). **o. pulvera'tum** (U.S., Br.), powdered opium, opii pulvis, gum opium dried and finely powdered; dose gr. ½–¾ (0.015–0.045). **pudding o.,** Boston o. gum opium dried and finely powdered; dose gr. ½–¾ (0.015–0.045). **pudding o.,** Boston o.

opium-addic'tion. Opium-habit

o'pium-habit. The habitual use of opium or any of its alkaloids; opiumism, opiomania, opiophagism

o'piumism. Opium-habit.

opo- [G. *opos*, juice.] A prefix to the trade names of a number of organic extracts; among these are *opocerebrin, opohypophysin, opolienin, opomammin, opomedullin, opoorchidin, opoovariin, oporenin, oposuprarenalin*, etc; the word itself indicating the organ from which the extract is made.

opobal'samum. Balm* of Gilead **o. siccum,** balsam of tolu.

opoceph'alus [G. *ōps(ōp-)*, face, + *kephalē*, head.] A monster without mouth or nose, with a rudimentary jaw and a single eye, or two eyes very close together, these forming the main part of the head.

opodel'doc [derivation unknown.] Camphorated soap liniment, linimentum saponatocamphoratum (N.F. and P.G.); called also *solid o.* and *Steer's o.* **liq'uid o.,** soap liniment, linimentum saponis (U.S. and Br.).

opodid'ymus, opod'ymus [G. *ōps(ōp-)*, face, + *didymos*, twin.] A double monster with a single body, but with two heads, fused behind but partly separated in the facial region; diprosopus.

OPODYMUS, OR DIPROSOPUS

opother'apy [G *opos*, juice, + *therapeia*, treatment.] Treatment of disease by extracts of various organs of the ox, sheep, or hog; organotherapy.

Op'penheim's disease' [H. *Oppenheim* Berlin neurologist, 1858–1919.] O's syndrome. **O's re'flex** extension of the toes following scratching of the inner side of the leg, or following sudden flexion of the thigh on the abdomen and the leg on the thigh **O.'s syn'drome** amyotonia congenita.

Op'penheimer treat'ment [Isaac *Oppenheimer*, New York physician, contemporary.] A secret method of treatment of alcoholism and drug addiction.

oppila'tion [L. *oppilare*, to stop up] Constipation, obstipation.

opp'ilative. Obstructive to any secretion.

oppo'nens [L. opposing.] A name given to several adductor muscles of the fingers or toes, by the action of which these digits are opposed to the others; see under *musculus*.

opsial'gia [G. *ōps*, face, + *algos*, pain.] Opalgia.

opsin'ogen [*opsonin* + *G. gennaō*, I produce.] A substance which stimulates the production of opsonin, a bacterial vaccine, or bacterine.

opsiom' ter [G. *opsis*, vision, + *metron*, measure.] Optometer.

opsito'cia [G. *opsi*, late, + *tokos*, childbirth.] Labor following an unusually protracted pregnancy.

opsiuria (op-sĭ-u'rĭ-ah) [G. *opsi*, late, + *ouron*, urine.] A more rapid excretion of urine during fasting than after a full meal.

op'sogen. Opsinogen.

opsoma'nia [G. *opson*, seasoning, + *mania*, frenzy.] A longing for a particular article of diet, or for highly seasoned food.

opson'ic. Relating to opsonins or to their utilization in the treatment of disease. **o. in'dex,** a figure denoting the ratio of a normal to a pathological phagocytic* index, the normal phagocytic index being taken as unity, the formula being—

phagocytic index of normal serum: phagocytic index of serum being tested::1:*x*, *x* being the opsonic index. **o. technique'**, the sum of the manipulations employed in relation to o. therapy —the preparation of bacterial vaccines, the determination of the o. index, the injection of vaccines, etc. **o. ther'apy**, treatment of disease by stimulating the tissues to the production of specific opsonins; vaccine therapy.

op'sonin [G. *opson*, sauce, seasoning.] A substance occurring in the blood serum, the action of which is to render microorganisms and possibly other cells attractive to the phagocytes; certain opsonins are present in normal serum and act upon all microorganisms, others are formed in response to special stimuli and are believed to be specific for one bacterial species only. **common o.** normal o. **immune' o.**, specific o. **normal o.**, o present in the blood serum of a non-infected individual; it is thermolabile and acts upon various bacteria. **specif'ic o.**, o. formed in the serum in response to infection by a specific microorganism or to artificial inoculation with dead cultures of this same microbe; it is thermostable and is effective only against this particular bacterial species **thermola'bile o.**, normal o **thermosta'ble o. test**, the serum to be tested is heated to 58° or 60° C. for ten minutes or more, and then its opsonic power is measured by the phagocytic index; as the normal or thermolabile opsonin is destroyed by heating, any opsonic power remaining in the serum is assumed to be due to specific opsonin produced as a result of autoinoculation or of a previous inoculation with a vaccine.

op'sonist. One who employs opsonic technique.

opsoniza'tion. The process by which bacteria are rendered attractive to the phagocytes.

op'sonize. To prepare for phagocytosis, noting the action of opsonins upon microorganisms.

opsonology (op-son-ol'o-jĭ). The science of opsonic methods.

opsonometry (op-son-om'e-trĭ) [G. *metron*, measure.] The determination of the opsonic index.

opsonophilia (op-son-o-fil'ĭ-ah) [G. *phileō*, I love.] The condition in which bacteria readily unite with opsonins, rendering them a prey to phagocytosis.

opsonophilic (op-son-o-fil'ik). Marked by opsonophilia.

opsonother'apy. Opsonic* therapy.

op'tic, op'tical [G. *optikos*.] Relating to the eye or to vision or to optics. **o. chiasm, o. disc, o. nerve, o. neuri'tis**, etc., see the nouns.

optician (op-tish'an). A maker of optical instruments, one who makes and adjusts eye-glasses and spectacles after a formula prescribed by the oculist.

opticocil'iary. Relating to the optic and ciliary nerves.

opticocine'rea [L. *cinereus*, ashy gray.] The gray substance of the tractus opticus.

op"ticopu'pillary. Relating to the optic nerve and the pupil.

op'tics [G. *optikos; opsis*, vision.] The science which treats of the properties of light, its refraction, absorption, etc., and of refracting media, especially of the eye in that relation.

op'timal. Optimum, the best.

optim'eter. Optometer.

op'timism [L. *optimus*, best.] The habit of looking on the best side of everything, of believing that there is good in everything; when carried to an extreme this may degenerate into a form of mental alienation, amenomania. **therapeu'tic o.**, a belief in the efficacy of drugs and other therapeutic agents in the treatment of diseases; opposed to therapeutic pessimism or nihilism.

op'timum .[L. *optimus*, best.] The best or most suitable, noting the dose of a remedy, the temperature for bacterial cultures, etc. **o. dose,** see under *dose*. **o. temperature,** see under *temperature*.

optochin (op'to-kin). Ethylhydrocupreine, numoquin. **o. base,** the free base of ethylhydrocupreine, employed in the treatment of pneumonia in doses of gr. 4 (0.25) with 5 fluidounces of milk every 5 hours for three days. **o. hydrochlor'ide,** used by conjunctival instillation in the treatment of pneumococcic ulceration of the cornea.

op'togram [G. *optos*, visible, + *gramma*, a picture.] The retinal image formed by the decoloration of the visual purple.

optome'ninx [G. *optikos*, optical, + *mēninx*, membrane.] Retina.

optom'eter [G. *optikos*, optical, + *metron*, measure.] An instrument for determining the condition of refraction of the media of the eye; opsiometer, optimeter.

optom'etrist [*optometry* + *-ist*.] One who measures the degree of visual acuity, a refractionist, referring generally to a person without medical training who fits glasses to correct visual defects

optom'etry [G. *optikos*, belonging to sight, + *metron*, measure.] Measurement of the visual power; determination of the defects of vision and the correction of the same by glasses.

optomyometer (op-to-mi-om'e-tur) [G. *optikos*, optical, + *mys*, muscle, + *metron*, measure.] An instrument for determining the relative power of the extrinsic muscles of the eye; ophthalmotropometer.

optostri'ate. Relating to the optic thalamus and the corpus striatum, noting the *o. body*, or these two structures considered as one.

op'totypes [G. *optikos*, optical, + *typos*, type.] Test-letters.

Opuntia (o-pun'shĭ-ah) [G. *Opous*, a town of ancient Greece.] A genus of cacti, including the prickly pear, *O. vulgaris*.

o'ra serra'ta ret'inæ. [BNA] Serrated edge of the retina, a wavy ring in the retina, a little behind the ciliary body, marking the limits of the percipient portion of the membrane, the continuation of it lining the ciliary body and iris consisting only of the pigment layer.

o'rad [L. *os*, mouth + *ad*, to.] Toward the mouth.

o'ral [L. *os(or-)*, mouth.] Relating to the mouth. **o. cav'ity,** cavum oris. **o. teeth,** anterior teeth, the six front teeth in each jaw. **o. whiff,** a puffing sound, synchronous with the heart beat, heard at the open mouth after violent exercise, or at rest in some cases of aortic aneurysm; see Drummond's* sign.

orale (o-ra'lĭ) [L. punctum *orale*, oral point.] A point at the lingual side of the alveolar termination of the premaxillary suture.

oralogy (o-ral'o-jĭ) [L. *oralis*, relating to the mouth, + *-ology*.] 1. The practice of dental and oral hygiene in its relation to the general health. 2. Stomatology.

orange (or'anj) [L. *aurantium*.] Aurantii fructus, the fruit of the orange-tree, *Citrus aurantium;* see *aurantium*. **o. ber'ries,** dried unripe oranges.

orange-acetone (or"anj-as'e-tōn). To 20 c.c. of acetone add a saturated aqueous solution of orange G (an aniline dye) drop by drop, until

the flocculent precipitate dissolves, then filter; used in Flemming's triple stain

orbic'ular [L. *orbiculus*, a small disc.] Annular, circular. **o. bone,** os orbiculare. **o. lig'ament,** ligamentum orbiculare. **o. muscle,** a muscle whose fibers are circularly arranged around a canal or any of the orifices of the body; see under *musculus*. **o. process,** the end of the long process of the incus; lenticular process.

orbicula're. Os* orbiculare.

orbicula'ris. Orbicular* muscle **o. phenom'enon,** early fatigue of the orbicularis oris muscle, when frequently contracted; indicating a loss of energy in the cerebrum as a whole, and especially in its motor neurons. **sign of the o.,** inability of a hemiplegic voluntarily to close the eye upon the paralyzed side except in conjunction with closure of the other eye.

orbic'ulus cilia'ris. Ciliary disc, the portion of the ciliary body adjoining the chorioid; it marks the transition in structure of the two tissues, the lamina choriocapillaris ceasing and the ciliary processes beginning.

or'bit. The eye-socket, orbita.

orbita, gen. *orbitæ* (or'bi-tah) [L. a wheel-track.] [BNA] Orbital cavity, eye-socket, orbit; the bony cavity containing the eyeball and its adnexa; it is formed of parts of seven bones: the frontal, maxillary, sphenoid, lacrymal, zygomatic, ethmoid, and palate bones.

or'bital. Relating to the orbits. **o. height,** the distance between the mid-points of the upper and lower margins of the orbit. **o. index,** see *index*. **o. width,** the distance between the dacryon and the farthest point on the anterior edge of the outer border of the orbit (Broca), or between the latter point and the junction of the frontolacrymal suture and the posterior edge of the lacrymal groove.

or"bitona'sal. Relating to the orbit and the nose or nasal cavity.

orbitop'agus [L. *orbita* + G. *pagos*, fixed.] Teratoma orbitæ; a twin monster, the parasitic fetus, usually very imperfectly developed, being in an orbit of the autosite.

orcein (or'se-in). A reddish brown pigment, $C_{28}H_{24}N_2O_7$, obtained by the action of ammonia on orcin; the alcoholic solution, of a purple color, is employed as a stain in histology and microparasitology.

orchectomy (or-kek'to-mĭ). Orchidectomy.

orchella (or-kel'ah). Archil.

orcheopexy (or'ke-o-pek-sĭ). Orchiopexy.

orcheoplasty (or'ke-o-plas-tĭ) [G. *orchis*, testicle, + *plassō*, I form.] Plastic surgery of the testicle, orchioplasty.

orchialgia (or-kĭ-al'gĭ-ah) [G. *orchis*, testicle, + *algos*, pain.] Pain in the testicle, orchiodynia, orchioneuralgia.

orchiatrophy (or-kĭ-at'ro-fĭ) [G. *orchis*, testicle, + *atrophia*, atrophy.] Atrophy or shrinking of the testis.

orchiauxe (or-kĭ-awk'se) [G. *orchis*, testicle, + *auxē*, increase.] Enlargement of the testicle.

orchichorea (or-kĭ-ko-re'ah) [G. *orchis*, testis, + *choreia*, a dance.] Involuntary rising and falling movements of the testicle.

orchid (or'kid). Orchis (2).

orchidalgia (or-kĭ-dal'jĭ-ah). Orchialgia.

orchidectomy (or-kĭ-dek'to-mĭ). Orchiectomy

orchiditis (or-kĭ-di'(de')tis) [G. *orchis*, testicle, + *-itis*.] Orchitis.

orchidoncus, orchidopathy, orchidopexy, etc., see *orchioncus, orchiopathy, orchiopexy*, etc.

orchiectomy (or-kĭ-ek'to-mĭ) [G. *orchis*, testicle, + *ektomē*, excision.] Castration, removal of one or both testicles.

orchiencephaloma (or"kĭ-en-sef-al-o'ma) [G. *orchis* testicle, + *enkephalos*, brain, + *-ōma*.] Encephaloid tumor of the testicle, orchiomyeloma.

orchiepididymitis (or"kĭ-ep-ĭ-did-ĭ-mi'(me')tis) [G. *orchis*, testicle, + *epididymis* + *-itis*] Inflammation of the testicle and epididymis.

orchil (or'kil). Archil.

orchilytic (or-kĭ-lit'ik) [G. *orchis*, testicle, + *lytikos*, causing solution.] Destructive to the testicle.

orchiocatab'asis (or"kĭ-o-kă-tab'ă-sis) [G. *orchis*, testicle, + *katabasis*, a descent.] The descent of the testicle.

orchiocele (or'kĭ-o-sēl) [G. *orchis*, testicle, + *kēlē*, hernia, tumor.] 1. A tumor of the testicle. 2. A testicle retained in the inguinal canal.

orchiococcus (or"kĭ-o-kok'kus) [G. *orchis*, testicle, + *coccus*.] A microorganism resembling the gonococcus, but more easily cultivated on ordinary media, found sometimes in the vaginal secretions.

orchiodynia (or"kĭ-o-din'ĭ-ah) [G. *orchis*, testicle, + *odynē*, pain.] Orchialgia, pain in the testicle.

orchiomyeloma (or"kĭ-o-mi-ĕ-lo'mah) [G *orchis*, testicle, + *myelos*, marrow, + *-ōma*.] Medullary sarcoma of the testicle.

orchioncus (or-kĭ-on'kus) [G. *orchis*, testicle, + *onkos*, swelling.] A tumor of the testicle.

orchioneuralgia (or"kĭ-o-nu-ral'jĭ-ah) [G. *orchis*, testicle, + *neuron*, nerve, + *algos*, pain.] Orchialgia, orchiodynia, pain in the testicle.

orchiopathy (or-kĭ-op'ă-thĭ) [G. *orchis*, testicle, + *pathos*, suffering.] Disease of a testicle, orchidopathy.

orchiopexy (or'kĭ-o-pek"sĭ) [G. *orchis*, testicle, + *pēxis*, fixation.] Surgical fixation of the testicle; orchiorrhaphy.

orchioplasty (or'kĭ-o-plas-tĭ). Plastic surgery of the testicle.

orchiorrhaphy (or-kĭ-or'ă-fĭ) [G. *orchis*, testicle, + *rhaphē*, a suture.] Orchiopexy, fixation of a testicle in the scrotum by sutures.

orchioscheocele (or"kĭ-os'ke-o-sēl) [G. *orchis*, testicle, + *oschē*, scrotum, + *kēlē*, tumor, hernia.] A tumor of the testicle associated with scrotal hernia.

orchioscirrhus (or-kĭ-o-skir'(sir')us) [G. *orchis*, testicle, + *skirros*, hard.] A hard tumor or sclerosis of the testicle.

orchiotomy (or-kĭ-ot'o-mĭ) [G. *orchis*, testicle, + *tomē*, incision.] 1. Incision into a testicle. 2. Orchiectomy, castration.

orchis (or'kis) [G.] 1. The testicle. 2. Orchid, a plant of the natural order *Orchideæ*, including both epiphytic or parasitic and terrestial varieties, the former growing in the tropics, the latter both in the tropics and in the temperate regions.

orchit'ic. Relating to orchitis, or inflammation of the testicle.

orchitis (or-ki'(ke')tis) [G. *orchis*, testicle, + *-itis*.] Inflammation of the testicle. **o. parotid'ea,** testicular inflammation and swelling, without affection of the parotid gland, in mumps.

orchotomy (or-kot'o-mĭ). Orchiotomy.

or'cin. Methylresorcinol, dioxytoluene, orcinol; a white, crystalline powder of intensely sweet but disagreeable taste, soluble in water, obtained from certain lichens, species of *Roccella;* employed as an external antiseptic in various skin diseases, and in chemistry as a reagent for pentoses and pentosan.

or'cinol. Orcin.

Ord's opera'tion [William Miller *Ord*, London surgeon, 1834–1902.] An operation for overcoming fresh adhesions in the joints.

ordeal bark (or'de-al). The bark of *Erythrophlæum guineense* and that of *Toxicophlæa thunbergii*, two trees of Africa, used as an ordeal poison or an arrow poison. **o. bean, o. nut,** physostigma, or Calabar bean.

or'der. In biological classification, the division just below the *class* (or *subclass*) and above the *family*.

or'derly. A male attendant in a hospital ward; a male nurse.

oreoseli'num [G. *oros*, mountain, + *selinon*, parsley.] Imperatoria, mountain parsley, the rhizome of *Oreoselinum officinale*, a European plant of the parsley family; an aromatic bitter and diuretic, used as a decoction or "tea" in domestic practice.

orex'in [G. *orexis*, appetite.] Phendihydroquinazolin tannate or hydrochloride, a yellowish white, insoluble, tasteless powder derived from quinoline; employed to increase the appetite in tuberculosis and other wasting diseases, and also as an antiemetic, in doses of gr. 5–10 (0.3–0.6).

Orfila muse'um (or-fe-lă') [Mathieu Joseph Bonaventure *Orfila*, Parisian physician, 1787–1853.] An anatomical museum founded by Orfila and given by him to the Medical School of Paris.

or'gan [G. *organon*.] Any part of the body exercising a specific function, as of respiration, secretion, digestion, etc.; see *organon*. **cryptorrhetic o.,** Mathews' term for an endocrine gland. **enam'el o.,** see *enamel*. **end-o.,** see *end-organ*. **Giraldès, o., Jacobson's o.,** etc., see the proper names, **sense o.,** one of the organs of special sensation, such as the skin, the eyes, the ears, the nose, etc.

abnormal position, situs perversus, ectopia, dystopia. **calculus,** splanchnolith, splanchnolite, organolith. **description of,** organography, splanchnography. **development,** organogenesis, organogeny, splanchnogenesis. **disease,** organopathy, splanchnopathy. **displacement,** dystopia, ectopia, ptosis, prolapse, splanchnoptosia, visceroptosia, splanchnodiastasis. **dissection,** splanchnotomy. **enlargement,** splanchnomegaly. **examination,** organoscopy, splanchnoscopy. **fixation,** organopexia. **hardening,** splanchnosclerosis, cirrhosis. **hernia of,** splanchnocele. **inflammation,** splanchnitis, visceritis. **internal,** viscus. **making an impression on,** organoleptic. **nomenclature,** organonymy. **outer portion of,** cortex. **pain,** splanchnodynia, splanchnalgia, visceralgia. **relating to,** visceral, splanchnic, organic. **removal of,** evisceration. **science of,** splanchnology, organology. **sheath of, capsule. softening,** splanchnomalacia, visceromalacia. **transposition,** situs inversus, situs transversus, heterotaxy, heterotopia. **treatment by extract of,** organotherapy, opotherapy.

organacidia (or"gan-as-id'ĭ-ah). Excessive secretion of an organic acid, especially in the stomach, *o. gas'trica*.

organella (or-gă-nel'ah) [L. dim. of *organum*, organ.] Cell-organ, one of the specialized parts of a single-celled organism (protozoon), serving for the performance of some individual function.

organ'ic. 1. Relating to an organ. 2. Relating to an animal or vegetable organism. 3. Organized, structural. **o. chem'istry,** the chemistry of compounds containing carbon. **o. com'pound,** any chemical compound containing carbon.

organism (or'gan-izm). Any living being, either animal or vegetable.

organiza'tion. Constitution; an arrangement of distinct but mutually dependent parts; an organism.

or'ganize. To provide with, or to assume, a structure; an organized clot is a blood-clot in which connective tissue and blood-vessels have formed.

organofac'tion [L. *organum*, organ, + *facere*, to make.] The evolutionary development of an organ of the body.

organofer'ric. Relating to a compound of iron and some organic acid or protein.

organogel (or-gan'o-jel). Same as a hydrogel, with an organic liquid instead of water as the dispersion means.

organogen'esis, organogeny (or-gan-oj'en-I) [G. *organon*, organ, + *genesis*, production.] The formation of organs.

organogenet'ic, organogen'ic. Relating to organogenesis.

organog'raphy [G. *organon*, organ, + *graphĕ*, a description.] A treatise on, or description of, the organs of the body.

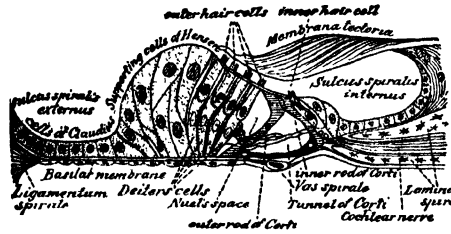
organoid (or'gan-oyd) [G. *organon*, organ, + *eidos*, appearance.] 1. Resembling in superficial appearance or in structure any of the organs or glands of the body. 2. Composed of glandular or organic elements, and not of a single tissue, noting certain tumors, such as adenoma, having a stroma enclosing one or more dissimilar tissues giving it a structure resembling that of a secreting organ; see *histoid* (2).

organolep'tic [G. *organon*, organ, + *lēptikos*, disposed to accept.] 1. Stimulating any of the organs of sensation. 2. Susceptible to a sensory stimulus

organol'ogy [G. *organon*, organ, + *-logia*] The branch of science which deals with the anatomy, physiology, development, and functions of the various organs.

organo'ma [G. *organon*, organ, + *-ōma*] A tumor formed of more or less complete organs atypically arranged; teratoma, dermoid cyst.

or"ganometall'ic. Noting a compound of a metal with an organic acid or protein.



ORGANON SPIRALE, OR CORTI'S ORGAN.

or'ganon [G.] [BNA] An organ. **o. audi'tus** [BNA], organ of hearing, including the external, middle, and internal ear. **or'gana genita'lia** [BNA], the genital organs, the female being distinguished as the *o. g. muliebra*, and the male as *o. g. virilia*. **o. gus'tus** [BNA], gustatory organ, organ of taste, located in the papillæ of the mucous membrane of the tongue, chiefly in the vallate papillæ. **or'gana oc'uli accesso'ria** [BNA], the accessory organs of the eye, consisting of the eyelids, lacrymal apparatus, and extrinsic muscles of the eyeball. **o. olfac'tus** [BNA], olfactory organ, organ of smell, the olfactory region in the superior portion of the nasal cavity. **o. spira'le** [BNA], spiral organ organ of Corti, a prominence on the inner portion of the membrana basilaris in the ductus cochlearis, containing the terminal auditory apparatus of the cochlea; its various structures are the rods of Corti, the hair cells or cells of Corti, the cells of Deiters, the cells of Hensen, the cells of Claudius, and the membrana tectoria. **o. tac'tus,** organ of touch, any one of the sensory

end*-organs. **o. uropoet'icum,** pl. *organa uropoetica* [BNA], one of the uropoietic organs, or organs concerned in the excretion of urine. **o. vi'sus** [BNA], the organ of vision, the eye and its adnexa. **o. vomeronasa'le** [BNA], Jacobson's organ, a fine horizontal canal, ending in a blind pouch, in the mucous membrane of the nasal septum, beginning just behind and above the ductus incisivus.

organonomy (or-gan-on'o-mĭ) [G. *organon*, organ, + *nomos*, law.] The body of laws regulating the life-processes of organized beings.

organonymy (or-gan-on'i-mĭ) [G. *organon*, organ, + *onyma*, name.] The nomenclature of the organs of the body, as distinguished from *toponymy*.*

organop'athy [G. *organon*, organ, + *pathos*, suffering.] 1. Any disease especially affecting one of the organs of the body. 2. Incorrectly, organotherapy.

organopex'ia, or'ganopexy [G. *organon*, organ, + *pēxis*, fixation.] The fixation by suture or otherwise of a floating or ptotic organ.

organosol (or-gan'o-sol). Same as hydrosol, with an organic liquid instead of water as the dispersion means.

organother'apy [G. *organon*, organ, + *therapeia*, treatment.] Treatment of disease by means of preparations made from the organs of the lower animals—chiefly the ox and the sheep; opotherapy.

organotrop'ic [G. *organon*, organ, + *tropikos*, relating to a turning.] Attracted by an organ, noting especially certain substances which act chiefly or exclusively upon the organs of the body.

organot'ropy [G. *organon*, organ, + *tropē*, a turning.] In chemotherapy, the affinity of a substance for the body cells, as distinguished from parasitotrophy.*

orgasm (or'gazm) [G. *orgaō*, I am excited.] The culmination of the sexual act.

oridine (or'ĭ-dēn). The calcium salt of the iodized fatty acids of cottonseed oil; it contains from 23 to 25 per cent. of iodine in organic combination, and occurs as a light brown powder, nearly odorless and tasteless and almost insoluble in water or alcohol; employed as a substitute for the inorganic iodides in dose of gr. 15 (1.0) equivalent to about gr. 5 (0.3) of sodium or potassium iodide.

orien'tal boil. See under *boil*.

orientation (o″rĭ-en-ta'shun) [Fr. *orienter*, to set toward the East, therefore in a definite position.] 1. The act of finding one's way; the determination of one's relation to external objects, or one's position in relation to new environments or new ideas or concepts. 2. The relative positions of the substitutions in the benzene ring.

orifice (or'ĭ-fis) [L. *orificium*.] Any aperture or opening.

orificial (or-i-fish'al). Relating to an orifice of any kind. **o. sur'gery,** a therapeutic system based on the theory that many morbid conditions are due to reflexes originating at the anus or other orifices, and that they can be relieved by dilatation or other forms of treatment of these body openings.

orificialist (or-ĭ-fish'al-ist). One who practises orificial surgery.

orificium (or-ĭ-fish'ĭ-um) [L.] Orifice. **o. exter'num u'teri** [BNA], **o. exter'num isth'mi** [NK], os uteri externum, the mouth of the womb, the opening in the vaginal portion of the cervix uteri. **o. internum isthmi** [NK], the upper part of the os internum uteri where it widens out into the uterine cavity. **o. inter'num u'teri** [BNA], os uteri internum, a slightly constricted portion of the cavity of the uterus marking the separation of the cervix from the corpus uteri. **o. ure'teris** [BNA], the orifice of the ureter in the bladder, situated one at each upper and outer angle of the trigone, the lower angle being occupied by the internal orifice of the urethra. **o. ure'thræ exter'num** [BNA], meatus urinarius, (1) the slit-like opening of the urethra in the glans penis; (2) the external orifice of the urethra (in the female) in the vestibule, usually upon a slight elevation, the papilla urethræ. **o. ure'thræ inter'num** [BNA], the internal orifice of the urethra, at the anterior and inferior angle of the trigone, the upper and outer angles being occupied by the orifices of the ureters. **o. vagi'næ** [BNA], the vaginal opening,the narrowest portion of the canal, in the floor of the vestibule behind the urethral orifice.

orig'anum. The herb, *Origanum vulgare*, wild marjoram, having an aromatic bitter taste. Sweet marjoram, *O. majorana*, is a similar plant. Both yield a volatile oil, used externally as a stimulant rubefacient.

or'igin [L. *origo*, source beginning.] 1. The less movable of the two points of attachment of a muscle, that which is attached to the more fixed part of the skeleton. 2. The starting point of a cranial or spinal nerve; the former have two origins: the *ental*, *deep*, or *real o.*, the cell-group in the brain or medulla, whence the fibers of the nerve begin, and the *ectal*, *superficial*, or *apparent o.*, the point where the nerve emerges from the brain.

orinother'apy [G. *oreinos*, relating to mountains, + *therapeia*, treatment.] Treatment of disease by residence at high altitudes.

Ornithodo'rus [G. *ornis(ornith-)*, bird, + *doros*, bag.] A genus of ticks of the family *Argasidæ*, several species of which are vectors of the pathogens of the various relapsing fevers. **O. lahoren'sis,** possibly a transmitter of the germ (*Borrelia persica?*) of Persian relapsing fever **O. maroca'nus,** probably the vector of the germ of Spanish relapsing fever (*Borrelia hispanica*) **O. mouba'ta,** a night-feeding species, resembling in habit the bedbug; it is a transmitter of *Borrelia duttoni*,[0] the pathogen of the Central African variety of relapsing fever. **O. savi'gni,** a species transmitting the relapsing fever of East Africa, Southern Egypt, Abyssinia, and S. Western Asia (*Borrelia kochii*[0]). **O. talajé,** the vector of the pathogen (*Borrelia venezuelensis?*) of Mexican and Central and South American relapsing fever. **O. tholoza'ni,** a species transmitting the relapsing fever of N. W. India and part of Persia. **O. venezuelen'sis,** the vector of the cause of the relapsing fever of Columbia and Venezuela and other mountainous parts of S. America (*Borrelia venezuelensis*).

orodiagnosis (or-o-di-ag-no'sis) [G. *oros*, whey, serum, + *diagnōsis*, a deciding.] Orrhodiagnosis

oroimmunity (or″o-im-mu'nĭ-tĭ) [G. *oros*, serum.] Passive immunity.*

orokinase (o-ro-kin'āz) [L. *os(or-)*, mouth.] An organic kinase, thought to be secreted by small glands in the mucous membrane of the cheeks and lips, the action of which is assumed to be the conversion of inactive into active ptyalin.

orolingual (o-ro-ling'gwal). Relating to the mouth and the tongue.

orona'sal. Relating to the mouth and the nose.

o″rophar'ynx [L. *os(or-)*, mouth, + G. *pharynx*.] The central portion of the pharynx, extending

from the level of the palate to the vestibule of the larynx.

or"other'apy [G. *oros*, whey, + *therapeia*, treatment.] 1. Whey-cure. 2. Serum-therapy, orrhotherapy; the treatment of disease by means of antitoxins or other sera.

Oro'ya fe'ver [*Oroya*, a place in the Peruvian Andes, near which a severe epidemic occurred during the construction of a railway.] Carrion's disease, an acute fever endemic in certain valleys in the western slope of the Andes from Equador to Chile; its symptoms are a pernicious form of anemia, with intermittent fever and severe pains in the long bones, joints, and head; there are a rapid destruction of the red blood cells, polymorphonuclear leucocytosis, and lesions in the spleen, liver, and bone marrow; the specific pathogen is *Bartonella bacilliformis*. One stage (not constant) of the disease in a granulomatous miliary or nodular eruption on the skin and mucous membranes; see *verruca peruana*.

or'phol. Trade name of bismuthi betanaphtholas.

or'piment [L. *auripigmentum; aurus*, gold, + *pigmentum*.] Arsenous sulphide, As_2S_3, used as a depilatory.

orrhodiagnosis (or-o-di-ag-no'sis) [G. *orrhos*, serum, + *diagnōsis*, a deciding.] Diagnosis by means of a reaction in the blood-serum or other serous fluids in the body; serodiagnosis.

orrhoimmunity (or"o-im-mu'nĭ-tĭ) [G *orrhos*, serum.] Passive immunity.*

orrhol'ogy [G. *orrhos*, blood-serum, + *-logia*.] The branch of medical science dealing with serum, especially with specific immune or lytic sera; serology, orology.

orrhomeningitis (or-o-men-in-ji'(je')tis) [G. *orrhos*, serum, + *mēninx(mēning-)*, membrane, + *-itis*.] Inflammation of a serous membrane, oromeningitis.

orrhoreaction (or"o-re-ak'shun). Seroreaction.

orrhorrhe'a, orrhorrhœ'a [G. *orrhos*, whey, blood-serum, + *rhoia*, a flow.] A serous discharge; written also *ororrhea*.

or'rhotherapeu'tic. Relating to serum-therapy.

orrhotherapy (or"o-ther'ă-pĭ) [G. *orrhos*, wheo, blood-serum, + *therapeia*, treatment.] Oretherapy. 1. Whey-cure. 2. Serum-therapy; thy use of antitoxins or other sera in the treatment of disease.

or'ris. Iris. **o. but'ter,** a fatty volatile oil obtained by distillation with water from Florentine iris. **o. root,** the rhizome of *Iris florentina*.

orsellin, orseillin (or-sel'lin). Roccellin, archil, or one of its constituents.

Or'si-Groc'co meth'od [Francesco *Orsi*, Italian physician, 1828–1890; Pietro *Grocco*.*] Palpatory percussion* of the heart.

or'sudan. An atoxyl derivative, containing one more methyl group than arsacetin; given in syphilis in intramuscular injection of grs. 10 (0.6).

Orth's flu'id (ort) [Johannes *Orth*, German pathologist, 1847–1923.] For fixing specimens; formalin 1, Mueller's fluid 9. **O.'s stain,** for nerve cells and their processes; carmine 2.5, saturated solution of lithium carbonate 97.

or'thin. An unstable synthetic antipyretic of the phenylhydrazine group.

ortho- [G. *orthos*, correct, straight.] 1. A prefix meaning in general normal or in proper order. 2. Specifically, in chemistry, denoting that a compound is formed by substitutions in the benzene ring arranged consecutively, *i.e.* linked to two adjacent carbon atoms. See *meta-* and *para-*.

orthoacid (or'tho-as"id). An acid in which the number of hydroxyl groups equals the valence of the acidulous element; when there is no such acid that one which most nearly approaches this condition is sometimes called an orthoacid.

orthoarteriotony (or"tho-ar-te-rĭ-ot'o-nĭ)[G. *orthos*, correct, + *arteria*, artery, + *tonos*, tension. Normal blood pressure.

orthobio'sis [G. *orthos*, right, + *biōsis*, life.] Correct living, both hygienically and morally.

orthocaina (or"tho-kah-e'nah) (Br.), the methyl ester of *m*-amino-*p*-hydroxybenzoic acid, a white or faintly yellow crystalline powder, odorless and tasteless; dose gr. 1½–3 (0.1–0.2).

orthocephal'ic [G. *orthos*, right, true, + *kephalē*] head.] Having a well proportioned head as regards height. Noting a skull with a vertical index between 70.1 and 75. Similar to *metriocephalic*.*

orthoceph'alous. Orthocephalic.

orthochlorphenol (or"tho-klor-fe'nol). An antiseptic liquid, employed in the treatment of lupus.

orthochorea (or"tho-ko-re'ah). A form of chorea in which the spasms occur only or chiefly when the patient is in the erect posture.

orthochromatic (or"tho-kro-mat'ic) [G. *orthos*, correct, + *chrōma*, color.] Noting any tissue or cell which stains normally.

orthochromophil, orthochromophile (or-tho-kro'mo-fil, or fīl) [G. *orthos*, correct, + *chrōma*, color, + *philos*, fond.] Staining true with neutral dyes.

orthocrasia (or-tho-kra'sĭ-ah) [G. *orthos*, correct. + *krasis*, temperament.] A condition in which there is a normal reaction to drugs, ingested proteins, etc.; distinguished from *idiosyncrasy*, and *eucrasia*.

orthocre'sol (N.F.). The ortho variety of the isomeric cresols, obtained from coal tar, occurring as white crystals or as a colorless or yellow to brown, highly refractive liquid, having a phenol-like odor; soluble in alcohol, slightly so in water.

orthocytosis (or-tho-si-to'sis) [G. *orthos*, correct, + *kytos*, cell, + *-ōsis*.] A blood state in which only mature cells are present.

orthodiagram (or-tho-di'ă-gram). Skiagram of the image made by the orthodiagraph.

orthodi'agraph [G. *orthos*, straight, + *dia*, through. + *graphō*, I write] An instrument by means of which one can determine the true contour and dimensions of any internal organ or other object rendered visible by the *x*-rays, the latter being so deflected as to be made parallel.

orthodiag'raphy. Inspection of an organ or other object by means of the orthodiagraph.

orthodontia (or-tho-don'shĭ-ah) [G. *orthos*, straight. + *odous(odont-)*, tooth.] The straightening of irregularities of the teeth.

or'thoform. Methyl ester of paraaminometaoxybenzoic acid, a white odorless crystalline powder, employed as a local anesthetic and antiseptic in burns, ulcers, etc., and internally in gastric ulcer in doses of gr. 8–15 (0.5–1.0). **or'thoform-new,** methyl ester of metamidoparaoxybenzoic acid; similar to the preceding, and employed for the same purposes and in the same doses.

orthogenesis (or-tho-jen'e-sis) [Gr. *orthos*, straight, + *genesis*, race, descent.] The doctrine that evolution is definitely governed by intrinsic factors.

orthogenic (or-tho-jen'ik). Relating to orthogenesis. **o. evolu'tion,** bathmic evolution, a change of type due to something inherent in the constitution, ndependent of the environment.

orthogenics (or-tho-jen'iks) [G. *orthos*, correct, straight, + *genikos*, relating to a family.] The

science dealing with the study and treatment of mental and physical defects which obstruct or retard normal development.

orthognath'ic, orthog'nathous [G. *orthos*, straight, + *gnathos*, jaw.] Having a face without projecting jaw, one with a gnathic index below 98.

orthograde (or'tho-grād) [G. *orthos*, straight, erect, + *gradi*, to walk.] Walking or standing erect, noting the posture of man; opposed to *pronograde*.

orthoiodoxybenzo'ic acid. An iodine substitution product of benzoic acid. It is strongly oxidizing. The ammonium and calcium salts are used in the treatment of chronic arthritis.

ortholipo'sis [G. *orthos*, right, + *lipos*, fat, + *-ōsis*.] A condition in which the weight of the body in proportion to the height is normal.

orthom'eter [G. *orthos*, correct, + *metron*, measure.] An instrument for determining the degree of protrusion or retraction of the eyeballs.

orthomethylacetanilid (or"tho-meth"il-as-ĕ-tan'-il-id). Exalgine.

orthomon"ochlorphe'nol. Orthochlorphenol.

orthomor'phi [G. *orthos*, correct, + *morphē*, form.] Orthopedics; the correction of any deformity.

orthoneutrophil, orthoneutrophile (or-tho-nu'tro-fil, or fīl). Orthochromophil.

ortho-oxybenzo'ic acid. Salicylic acid.

orthope'dia, orthopæ'dia [G. *orthos*, straight, + *pais(paid-)*, child] Orthopedics.

orthope'dic, orthopæ'dic. Relating to orthopedics.

orthope'dics, orthopæ'dics [G. *orthos*, straight, + *pais(paid-)*, child.] A branch of surgery which has to do with the treatment of chronic diseases of the joints and spine, and the correction of deformities. **dental o.**, orthodontia.

orthope'dist, orthopæ'dist. One who practises orthopedics.

orthopercussion (or"tho-pur-kus'shun) [G. *orthos*, straight.] Very light percussion of the chest, made in a sagittal direction (*i.e.* antero-posteriorly, and not perpendicularly to the wall of the chest) by one finger striking the knuckle of the pleximeter finger bent at a right angle, the impact being transmitted through the two phalanges (middle and distal) to the tip of the finger resting in an intercostal space; it is employed to determine the size of the heart, the faint percussion sound disappearing when the heart is reached even though that may be overlapped by a layer of the lung; called also Goldscheider's method.

orthopho'ria [G. *orthos*, straight, + *phora*, motion.] The normal condition in which the tension of the extrinsic eye muscles is equal, the visual axes being therefore parallel. **asthen'ic o.**, a condition in which there is general weakness of the ocular muscles, the relative tension being undisturbed.

orthophosphoric acid (or"tho-fos-for'ik as'id) [G. *orthos*, correct, regular.] See *phosphoric* acid*.

orthopnea, orthopnœa (or-thop-ne'ah) [G. *orthos*, straight, + *pnoē*, a breathing.] Ability to breathe with comfort only when sitting erect or standing.

orthopne'ic. Relating to or suffering from orthopnea.

orthoprax'ia, or'thopraxy [G. *orthos*, straight, + *praxis*, a doing, making.] Orthopedics, orthomorphia, the correction of deformities.

orthopsychiatry (or-thop-sī-ki'ă-trĭ) [G. *orthos*, straight, correct, + *psychē*, soul, mind, + *iatreia*, medical treatment.] The science relating to the study and treatment of disorders of behavior.

orthop'tic [G. *orthos*, straight, + *optikos*, relating to sight.] Relating to the straightening of a deviating eye

orthoroentgenography (or-tho-rēnt-gen-og'ra-fĭ). Orthodiagraphy.

or'thoscope [G. *orthos*, straight, + *skopeō*, I view.] 1. An instrument by means of which one is able to draw the various normas of the skull. 2. An instrument by which water is held in contact with the eye, enabling the iris and other parts to be examined without the confusion occasioned by the corneal refraction.

orthoscop'ic. 1. Relating to the orthoscope. 2 Having normal vision. 3. Noting an object correctly observed by the eye.

orthos'copy. Examination of the eye by means of the orthoscope.

ortho'sis [G. *orthōsis*, a making straight.] The correction of a deformity, orthomorphia.

orthostat'ic (*orthos*, straight, + *statos*, standing.] Relating to or caused by the erect posture. **o. albuminu'ria**, a form of albuminuria which occurs when the subject is much on his feet or exercises, disappearing after a rest in bed.

or'thotast [G. *orthos*, straight, + *tastos; tassō*, I stretch.] An instrument for the gradual straightening of an abnormally curved bone.

orthoterion (or-tho-te'rĭ-on) [G. *orthōtēr*, one who straightens.] An instrument serving the same purpose as the orthotast.

orthot'ic. 1. Relating to orthosis. 2. Orthostatic.

orthot'onos, orthot'onus [G. *orthos*, straight, + *tonos*, tension.] A form of tetanic spasm in which the neck, limbs, and body are held fixed in a straight line.

orthotrop'ic [G. *orthos*, straight, + *tropē*, a turn.] Extending or growing in a straight, especially a vertical, direction.

orthot'ropous [G. *orthos*, straight, + *tropos*, a turning.] In botany, noting an ovule in which the nucellus is straight with base toward the placenta

ory'za [G.] Rice.

O. S. Abbreviation for oculus sinister [L.], left eye.

Os. The chemical symbol of *Osmium*.

os, gen. *o'ris*, pl. *o'ra* [L. mouth.] 1. [BNA] The mouth. 2. Term applied sometimes to an opening into a hollow organ or canal, especially one with thick, or fleshy edges. **o. tin'cæ** [mouth of the tench], orificium* externum uteri. **o. u'teri exter'num,** orificium* externum uteri. **o. u'teri inter'num,** orificium* internum uteri. **per os,** by the mouth, noting the usual way of administering drugs, distinguished from the hypodermic and other methods.

os, gen. *os'sis*, pl. *os'sa* [L. bone.] [BNA] A bone.

o. alveola're, alveolar bone, processus* alveolaris.

o. basila're [BNA], basilar bone, the basilar process of the occipital bone which unites with the condylic portions about the fourth or fifth year.

o. cal'cis [L. *calx*, heel], calcaneus.

o. capita'tum [BNA], capitate bone, os magnum.

o. carpa'le dista'le primum [NK), o. multangulum majus [BNA].

o. c. d. secundum [NK], o. multangulum minus [BNA].

o. c. d. tertium [NK], o. capitatum [BNA], the largest of the carpal bones, the inner of the two middle bones of the second row; it articulates with the 2d, 3d, and 4th metacarpal, multangulum minus, hamatum, naviculare, and lunatum.

o. c. d. quartum [NK], o. hamatum [BNA].

o. centra'le carpi central bone, a small bone occasionally found at the back of the carpus between the scaphoid, os magnum, and trapezoid; it is developed from an independent cartilage of early fetal life but is usually merged with the scaphoid; it occurs normally in most monkeys.

o. centra'le tarsi [NK], o. naviculare pedis [BNA].

o. coc'cygis [BNA], coccyx, the terminal bone of the spinal column formed by the fusion of four rudimentary vertebræ; it articulates with the sacrum.

o. coro'næ, the small pastern bone, or second phalanx in the foot of the horse.

o. costa'le, the bony part of a rib.

o. cox'æ [BNA], hip-bone, innominate bone; a large flat bone, formed by the fusion of the ilium, ischium, and pubis (in the adult), constituting the lateral half of the pelvis; it articulates with its fellow anteriorly, with the sacrum posteriorly, and with the femur somewhat below the middle of its outer surface.

o. cuboid'eum [BNA], cuboid bone; **o. tarsale quartum** [NK], a bone of the tarsus, about the middle of the outer side of the foot, articulating with the os calcis, external 1 cuneiform, scaphoid (occasionally), and 4th and 5th metatarsal bones.

o. cuneifor'me, cuneiform or wedge bone of the wrist, os triquetrum [BNA].

o. cuneifor'me pri'mum [BNA], first or internal cuneiform or wedge bone, **o. tarsa'le distale primum** [NK], the largest of the three of this name in the tarsus, on the inner border of the foot, articulating with the 2d cuneiform, navicular, and 1st and 2d metatarsal bones.

o. cuneifor'me secun'dum [BNA], second or middle cuneiform or wedge bone of the tarsus, **o. tarsale distale secundum** [NK], articulates with the 1st and 3d cuneiform, navicular, and 2d metatarsal bones.

o. cuneifor'me ter'tium [BNA], third or external cuneiform or wedge bone of the foot, **o. tarsale distale tertium** [NK], articulates with the 2d cuneiform, cuboid, navicular, and 2d, 3d and 4th metatarsal bones.

o. ethmoida'le [BNA], ethmoidal bone; an irregularly shaped bone lying between the orbital plates of the frontal and anterior to the sphenoid bone; it consists of two lateral masses of thin plates enclosing air-cells, attached above to a perforated horizontal lamina, the cribriform plate, from which descends a mesial vertical or perpendicular plate in the interval between the two lateral masses; the bone articulates with the sphenoid, frontal, superior maxillary, lacrymal, nasal, palate, and inferior turbinated bones, and the vomer, and enters into the formation of the anterior cranial fossa, the orbits, and the nasal fossæ.

o. fronta'le [BNA], frontal bone, the large single bone forming the forehead and the upper margin and roof of the orbit on either side; it articulates with the parietal bones above, the parietal and temporal bones on either side, and the nasal, ethmoid, and superior maxillary and malar bones, and the lesser wing of the sphenoid below.

o. hama'tum [BNA], hooked bone, unciform bone, **o. carpale distale quartum** [NK], the bone on the inner (ulnar) side of the second row of the carpus; it articulates with the 4th and 5th metacarpal, triquetrum, lunatum, and capitatum.

o. hyoid'eum [BNA], hyoid bone: a U-shaped bone ying between the mandible and the larynx, articulating with no other bone.

o. il'ium [BNA], iliac or flank bone, the broad flaring portion of the innominate bone, distinct at birth but later becoming fused with the ischium and pubis; it consists of a body, which joins the pubis and ischium to form the acetabulum, and a broad thin portion, like the flat horn of a buck, called the ala.

o. In'cæ, o. interparietale; often found as an independent bone in skulls of the Incas or ancient Peruvians.

o. incisi'vum [BNA], incisive bone, intermaxillary bone, premaxilla; the anterior and inner portion of the superior maxilla, which in the fetus and sometimes in the adult is a separate bone; the line of suture runs from the anterior palatine foramen obliquely outward and forward between the lateral incisor and the canine tooth. According to Albrecht, this is further divided by a suture between the two incisor teeth on each side into two bones, the *endognathion* and the *mesognathion.*

o. innomina'tum, innominate bone, hip-bone, haunch-bone, os coxæ [BNA].

o. intermaxilla're, o. incisivum.

o. intermedium [NK], o. lunatum.

o. intermetatar'seum, a supernumerary bone at the base of the first metatarsal, or between the first and second metatarsal bones, usually fused with one or other or with the internal cuneiform bone.

o. interparieta'le [BNA], interparietal bone, os Incæ, the upper part of the squama of the occipital bone, developed in membrane instead of in cartilage as is the rest of the occipital, and occasionally (especially in ancient Peruvian skulls) existing as a separate bone, separated from the remainder of the occipital by the sutura mendosa; it may be divided by a central fissure into two symmetrical halves, and these may again be divided by a transverse fissure forming four bones, or three when the central fissure ends at the transverse.

o. is'chii [BNA], ischium, the lower and posterior part of the innominate bone, disinct at birth but later becoming fused with the ilium and pubis; it consists of a body, where it joins the ilium and pubis to form the acetabulum, and two rami.

o. japon'icum, a bipartite or tripartite zygomatic bone, found with greater frequency in the Japanese than in other races.

o. lacrima'le [BNA], lacrymal bone, os unguis; an irregularly rectangular thin plate, forming part of the inner wall of the orbit behind the frontal process of the superior maxilla; it articulates with the inferior turbinated, ethmoid, frontal, and superior maxillary bones.

o. lin'guæ, tongue-bone, o. hyoideum.

o. luna'tum [BNA], lunate bone, semilunar bone **o. intermedium** [NK] one of the first row in the carpus between the scaphoid (naviculare) and cuneiform (triquetrum); it articulates with the radius, naviculare, triquetrum, hamatum, and capitatum.

o. mag'num [large bone], os capitatum [BNA].

o. mala're, o. zygomaticum [BNA].

o. mastoid'eum, mastoid bone, the mastoid portion of the temporal regarded as an independent bone.

o. metacarpa'le, pl. *os'sa metacarpa'lia* [BNA], one of the metacarpal bones, five long bones forming the skeleton of the metacarpus or palm; they are numbered I–V, beginning with the bone on the outer or thumb side, and articulate with the bones of the second row of the carpus and with the five first or proximal phalanges.

o. metatarsa'le, pl. *os'sa metatarsa'lia* [BNA], one of the metatarsal bones; the five long bones forming the skeleton of the anterior portion of the foot, articulating posteriorly with the three cuneiform and the cuboid bones, anteriorly with the five first or proximal phalanges.

o. multan'gulum ma'jus [BNA], large multangular bone, trapezoid, **o. carpale distale primum** [NK], the outer bone of the second row of the carpus; it articulates with the 1st and 2d metacarpal, naviculare, and multangulum minus.

o. multan'gulum mi'nus [BNA], small multangular bone, trapezium, **o. carpale distale secundum** [NK], a small bone in the second row of the carpus, articulating with the 2d metacarpal, multangulum majus, capitatum, and naviculare.

o. nasa'le [BNA], nasal bone; an elongated rectangular bone which forms with its fellow the bridge of the nose; it articulates with the frontal bone above, the ethmoid and the frontal process of the superior maxilla behind, and its fellow anteriorly.

o. navicula're ma'nus [BNA], navicular bone of the hand, scaphoid; **o. radiale** [NK], the largest bone of the first row of the carpus on the outer or thumb side, articulating with the radius, lunatum, capitatum, multangulum minus, and multangulum majus.

o. navicula're pe'dis [BNA], navicular bone of the foot, scaphoid; **o. centrale tarsi** [NK], a bone of the tarsus on the inner side of the foot articulating with the head of the astragalus, the three cuneiform bones, and occasionally the cuboid.

o. occipita'le [BNA], occipital bone, at the lower and posterior part of the skull, consisting of three parts (basilar, condylic, and squamous), enclosing a large oval hole, the foramen magnum; it articulates with the parietal and temporal bones on either side, the sphenoid anteriorly, and the atlas below.

o. odontoid'eum, the odontoid process of the axis when anomalously not fused with the body of this bone.

o. orbicula're, orbicular bone, an ossicle of the tympanum which, toward the end of fetal life, unites with the incus to form the lenticular process of that bone.

o. palati'num [BNA], palate bone, an irregularly shaped bone behind the maxilla, which enters into the formation of the nasal fossa, the orbit, and the hard palate; it articulates with the superior maxilla, inferior turbinated, sphenoid, and ethmoid bones, the vomer and its fellow of the opposite side.

o. parieta'le [BNA], parietal bone, a flat curved bone, of irregularly quadrangular shape, at either side of the vault of the cranium; it articulates with its fellow above, with the frontal anteriorly, the occipital posteriorly, and the temporal and sphenoid below.

o. pe'dis, the third or ungual phalanx, or coffin bone, in the horse.

o. pisifor'me [BNA], pisiform bone, a small bone resembling a pea in size and shape, in the first row of the carpus, lying on the anterior surface of the distal end of the os triquetrum with which alone it articulates; it gives insertion to the tendon of the flexor carpi ulnaris muscle.

o. pla'num, lamina papyracea or papyrus [BNA], orbital plate of the ethmoid bone.

o. pneumat'icum [BNA], pneumatic bone, one that is hollow or contains many air-cells.

o. præmaxilla're, o. incisivum.

o. pterygoid'eum, processus pterygoideus [BNA].

o. pu'bis [BNA], pubic bone, pubis, pubes; the forepart of the inferior portion of the innominate bone, distinct at birth but later becoming fused with the ilium and ischium; it is composed of a body where it joins the ischium and ilium to form the acetabulum, two rami, and the angle where they meet, sometimes also called the body, where it articulates with its fellow at the symphysis pubis.

o. pyramida'le, o. triquetrum.

o. radiale [NK], o. naviculare manus [BNA].

o. sa'crum [BNA], the sacrum, the segment of the spinal column forming part of the pelvis; it is formed by the fusion of five vertebræ; it articulates with the last lumbar vertebra, the coccyx, and the os coxæ (innominate bone) on either side.

o. sedenta'rium, tuber ischiadicum.

o. sesamoid'eum, sesamoid* bone.

o. sphenoida'le [BNA], sphenoid bone, a bone of most irregular shape occupying the base of the skull; it is described as consisting of a central portion, or body, and six processes: two great or temporal wings (alisphenoids), two small or orbital wings (orbitosphenoids) and two pterygoid processes; it articulates with the occipital, frontal, ethmoid, and vomer, and with the paired temporal, parietal, malar, palate, and sphenoidal turbinal bones, fourteen bones in all.

o. suffrag'inis, the large pastern bone, or first phalanx in the foot of the horse.

o. suprasterna'le, pl. *os'sa suprasterna'lia* [BNA], suprasternal (episternal) bone, one of the small ossicles occasionally found in the ligaments of the sternoclavicular articulations.

o. sutu'ræ (pl. *os'sa sutura'rum*) [BNA], sutural bone Wormian* bone.

o. Syl'vii, o. orbiculare.

o. tarsale distale primum [NK], o. cuneiforme primum [BNA]. **o. t. d. secundum** [NK], o. cuneiforme secundum [BNA]. **o. t. d. tertium** [NK], o. cuneiforme tertium [BNA]. **o. t. d. quartum** [NK], o. cuboideum [BNA].

o. tar'si fibula're [NK], o. calcis, calcaneus.

o. tempora'le [BNA], temporal bone, a large irregular bone lying about the center of the lower half of the side of the skull; it articulates with the occipital behind and below, the sphenoid in front and below, and the parietal above; it consists of four parts, the squamous, tympanic, petrous, and mastoid, which are distinct at birth, except the two latter which are united to form the petromastoid portion; this portion contains the organ of hearing.

o. tibia'le poste'rius or **posti'cum,** a sesamoid bone in the tendon of the tibialis posterior muscle, occasionally fused with the tuberosity of the os naviculare.

o. triangula're, (1) o. trigonum; (2) o. triquetrum

o tribasila're, the single bone resulting from the fusion in infancy of the occipital and temporal bones at the base of the cranial cavity.

o. trigo'num [BNA], triangular bone, an independent ossicle sometimes present in the tarsus; usually it forms part of the talus, constituting the external or posterior tubercle.

o. trique'trum, (1) Wormian bone; (2) [BNA] three-cornered bone, cuneiform or pyramidal bone; o. ulnare [NK], a bone on the inner side of the first row of the carpus, articulating with the lunatum, pisiforme, and hamatum.

o. ulna're [NK], o. triquetrum [BNA].

o. un'guis [L. *unguis*, finger-nail), o. lacrimale.

o. vesalea'num, o. vesala'nium, the tuberosity of the fifth metatarsal bone sometimes existing as a separate bone.

o. vespertilio'nis, o. sphenoidale [BNA].

o. wormia'num, pl. *os'sa wormia'na,* Wormian,* sutural, or epactal bone.

o. xiphoid'es, sternum.

o. ypsiloi'des, o. hyoideum [BNA].

o. zygomat'icum [BNA], zygomatic or yoke-bone, malar bone, cheek-bone; a three-sided bone which forms the prominence of the cheek; it articulates with the frontal, sphenoid, temporal, and superior maxillary bones.

osazone (o'să-zōn). A substance derived from sugar by the action of dilute acetic acid and phenylhydrazin; it is produced in the phenyldrazin test for glucose.

osce'do [L.] 1. Aphthæ. 2. Yawning.

oscheal (os'ke-al) [G. *oschē*, scrotum.] Scrotal.

oscheitis (os-ke-i'(e')tis) [G. *oschē*, scrotum, + *-itis*.] Inflammation of the scrotum.

oscheocele (os'ke-o-sēl) [G. *oschē*, scrotum, + *kēlē*, hernia, tumor.] 1. Scrotal hernia. 2. A tumor of the scrotum, oscheoncus, oscheoma.

oscheohydrocele (os"ke-o-hi'dro-sēl) [G. *oschē*, scrotum, + *hydōr(hydr-)*, water, + *kēlē*, tumor.] Scrotal hydrocele.

oscheolith (os'ke-o-lith) [G. *oschē*, scrotum, + *lithos*, stone.] A mass of concretions in the sebaceous glands of the scrotum.

oscheoma (os-ke-o'mah) [G. *oschē*, scrotum, + *-ōma*.] A tumor of the scrotum, oscheoncus, oscheocele (2).

oscheoncus (os-ke-on'kus) [G. *oschē*, scrotum, + *onkos*, swelling.] A tumor of the scrotum, oscheoma, oscheocele (2).

oscheoplasty (os'ke-o-plas-tĭ) [G. *oschē*, scrotum, + *plassō*, I form.] Reparative or plastic surgery of the scrotum.

oschitis (os-ki'(ke')tis). Oscheitis

Oscilla'ria. A genus of algæ, forming slimy moulds in stagnant water.

oscillate (os'ĭ-lāt) [L. *oscillare*, to swing.] To move or to cause to move to and fro; to vibrate.

oscillation. 1. A to-and-fro movement. 2. A stage in the vascular changes in inflammation in which the accumulation of leucocytes in the small vessels arrests the passage of blood and there is simply a to-and-fro movement at each cardiac contraction.

os'cillator. An apparatus somewhat like a vibrator, used to give a form of mechanical massage.

oscillometer (os-il-om'e-tur) [L. *oscillare*, to swing, + G. *metron*, measure.] An apparatus for measuring oscillations of any kind, especially those of the blood-stream in sphygmometry, sphygmo-oscillometer.*

oscillometric (os"sil-o-met'rik). Relating to the oscillometer or the records made by its use.

oscine (os'sēn). A decomposition product of hyoscine.

os'citate [L. *oscitare*, to yawn.] To yawn, to gape.

oscita'tion. Yawning, gaping.

os'codal. Trade name of a concentrate of cod-liver oil containing the antiophthalmic and antirachitic vitamins A and D.

os'culum, pl. *os'cula* [L. dim. of *os*, mouth.] A pore or minute opening.

-ose. A termination often indicating a carbohydrate.

Osgood's disease' [Robert Bayley *Osgood*, American orthopedic surgeon, *1873.] Schlatter's disease; partial separation of the tubercle of the tibia, marked by pain at the point of insertion of the ligamentum patellæ, increased by pressure or any attempt at extension of the leg.

-osis [G.] A suffix, properly added only to words formed from Greek roots, noting primarily any production or increase, physiological or pathological (*leucocytosis, tuberculosis*); and secondarily an invasion, and increase within the organism, of parasites (*coccidiosis*); it has, in the latter sense, in general a similar significance, and is often interchangeable with *-iasis*, as seen in *trichinosis, trichiniasis.*

Os'ler's disease' (ōz'ler) [Sir William *Osler*, English physician, born in Canada, 1849–1919.] Polycythemia megalosplenica or polycythemia rubra megalosplenica, an affection marked by increase in the number of red blood-cells, enlargement of the spleen, and cyanosis of the skin and mucous membranes. *Cf.* Vaquez's* disease. **O.'s sign,** circumscribed painful erythematous swellings, from the size of a pinhead to that of a pea, in the skin and subcutaneous tissues of the hands and feet in cases of malignant endocarditis.

os'mate. A salt of osmic acid

osmat'ic [G. *osmē*, smell] Relating to olfaction, or the sense of smell.

os'mazome [G. *osmē*, smell, + *zōmos*, broth] The flavoring substance in cooked meat and broth made from it.

osmesis (oz-me'sis) [G. *osmēsis*, smelling.] Olfaction, the sense of smell.

os'mic acid. 1. An acid, H_2OsO_4, formed from osmium, which unites with bases to form osmates. 2. Osmium tetroxide, perosmic acid, OsO_4; obtained by heating powdered osmium in oxygen, a yellowish crystalline powder, of pungent odor; employed in neuralgia, muscular rheumatism, and goiter, in doses of gr. $\frac{1}{100}$–$\frac{1}{30}$ (0.001–0.002), and externally as a caustic for the removal of warts and small tumors; it is used also as a stain for fats and nervous tissue.

osmicate (oz'mĭ-kāt). To stain with osmic acid.

osmics (oz'miks) [G. *osmē*, smell.] The science of olfaction.

osmidro'sis [G. *osmē*, smell, + *hidrōs*, sweat. Bromidrosis, the excretion of perspiration of a strong odor

os'mium [G. *osmē*, smell, because of the strong odor of the tetroxide.] A metallic element of the platinum group, symbol Os, atomic weight, 189.6.

osmodysphoria (oz"mo-dis-fo'rĭ-ah) [G. *osmē*, smell, + *dys-*, bad, + *pherō*, I endure.] A sense of extreme repugnance to certain odors.

os mogen [G. *ōsmos*, an impulsion, + *gennaō*, I produce] A substance from which an enzyme or ferment is formed.

osmology (oz-mol'o-jĭ) [G. *osmē*, smell, + *-logia*.] 1. The science which treats of odors, their production and their effects; osphresiology. 2. [G. *ōsmos*, an impulsion.] The science treating of osmosis.

osmom'eter [G. *osmē*, smell, + *metron*, a measure.] 1. A device for measuring the acuteness of smell, osphresiometer. 2. [G. *ōsmos*, a thrusting.] An instrument for determining the velocity of osmosis

osmopho'bia [G. *osmē*, odor. + *phobos*, fear.] A morbid dread or fear of strong odors.

osmoreg'ulatory. Influencing the degree and rapidity of osmosis.

osmosis (oz-mo'sis) [G. *ōsmos*, a thrusting, an impulsion.] The phenomenon of the passage of certain fluids and solutions through a membrane or other porous substance. The rapidity of the passage of two fluids separated by a membrane is not always equal; the phenomenon of the more rapid passage is called *endosmosis*, that of the slower passage is called *exosmosis;* these terms also, and more commonly, indicate the direction, *endomosis* being the passage of the fluid from without into a vessel, *exosmosis* being the reverse of this.

osmotherapy (oz-mo-ther'ă-pĭ). Dehydration by means of injections of hypertonic solutions of sodium chloride or of dextrose.

osmot'ic. Relating to osmosis. **o. pres'sure,** the force with which a solution enclosed in a semipermeable membrane attracts water.

OsO_4. Perosmic anhydride, osmium tetroxide, often called osmic acid, which is properly H_2OsO_4.

osphresiological (os-fre-sĭ-o-loj'ĭ-kal). Relating to osphresiology; relating to the sense of smell.

osphresiol'ogy [G. *osphrēsis*, smell, + *-logia*.] The science which treats of odors, their production, their nature, and their effects; osmology (1).

osphresiom'eter [G. *osphrēsis*, smell, + *metron*, measure.] A device for measuring the acuteness of the sense of smell, osmometer (1).

osphre'sis [G. *osphrēsis*, smelling.] Olfaction, the sense of smell.

osphret'ic. Olfactory, relating to the sense of smell.

osphyalgia (os-fe-al'jĭ-ah) [G *osphys*, loin, + *algos*, pain.] Pain in the lumbar region, lumbago.

osphyitis (os-fe-i'(e')tis) [G. *osphys*, loin, + *-itis*.] Inflammation of the muscles in the lumbar region, lumbago.

osphyomyelitis (os"fe-o-mi-el-i'(e')tis) [G. *osphys* loin, + *myelos*, marrow, + *-itis*.] Inflammation of the spinal cord in the lumbar region.

oss'a. Plural of L. *os*, bone.

ossagen (os'a-jen) [L. *os*, bone, + G. *gennaō*, I produce.] Trade name of a preparation of red bone-marrow, recommended in rickets.

ossein, osseine (os'e-in) [L. *os*, bone.] The organic constituent of bone which remains after the earthy matter has been dissolved out by the action of acids; ostein, bone-collagen.

osseoalbu'moid. A protein derived from ossein osteoalbuminoid.

osseocartilaginous (os-e-o-kar-te-laj'in-us) [L. *osseus*, bony, + *cartilagineus*, cartilaginous] Relating to, or composed of, both bone and cartilage, osteochondrous.

osseomucoid (os-e-ō-mu'koyd). A mucoid derived from ossein.

osseous (os'e-us) [L. *osseus*.] Bony.

oss'icle (os'ĭ-kl) [L. *ossiculum*, dim. of *os*, bone.] A small bone; specifically one of the bones of the tympanum, or drum of the ear. **epac'tal o.,** Wormian* bone.

ossiculectomy (ŏ-sik'u-lek'to-mĭ) [L. *ossicula*, ossicles, + G. *ektomē*, excision.] Removal of the ossicles of the middle ear.

ossiculot'omy [L. *ossiculum*, ossicle, + G. *tomē*, incision.] Division of one of the processes of the ossicles of the middle ear, or of a fibrous band causing ankylosis between any two ossicles.

ossic'ulum [L dim. of *os*, bone.] Ossicle, small bone. **o. audi'tus** [BNA], auditory ossicle, one of three minute bones (*malleus, incus*, and *stapes*)

in the tympanic cavity forming a chain between the drum membrane and the vestibular window.

ossiferous (os-if'er-us) [L. *os*, bone, + *ferre*, to bear.] Osseous, containing bone.

ossif'ic [L. *os*, bone, + *facere*, to make.] Producing or forming bone; ossifying, osteogenic.

ossifica'tion. 1. The formation of bone. 2. A change into bone. **metaplas'tic o.**, the formation of bony tissue in various soft structures, such as the muscles, lungs, brain, tumors, etc.

ossif'luence. Softening and removal of bone substance; osteolysis.

ossifluent (os-if'lu-ent) [L. *os*, bone, + *fluens; fluere*, to flow.] Marked by or causing softening of bone tissue. **o. abscess**, an abscess causing or caused by the breaking down of bone substance.

oss'iform [L. *os*, bone, + *forma*, form.] Resembling bone, osteoid.

ossify (os'i-fi) [L. *os*, bone, + *facere*, to make.] To change into bone.

ostal'gia, ostal'gic. See *ostealgia, ostealgic.*

osteal (os'te-al) [G. *osteon*, bone.] Osseous, bony.

ostealbumoid (os-te-al-bu'moyd). A protein derived from ossein, osseoalbuminoid.

ostealgia (os-te-al'jĭ-ah) [G. *osteon*, bone, + *algos*, pain.] Osteodynia, osteocope, pain in a bone.

osteal'gic. Relating to or marked by bone pain.

osteanabro'sis [G. *osteon*, bone, + *anabrōsis*, an eating up.] Atrophy of bone.

osteanagenesis. Osteoanagenesis.

osteanaph'ysis [G. *osteon*, bone, + *anaphysis*, a growing again.] Osteoanagenesis.

ostearthri'tis. Osteoarthritis.

ostearthrot'omy. Osteoarthrotomy.

ostec'tomy, osteectomy (os-te-ek'to-mĭ) [G. *osteon*, bone, + *ektomē*, excision.] Surgical removal of a segment of, or an entire bone.

ostec'topy, osteectopia (os-te-ek-to'pĭ-ah) [G. *osteon*, bone, + *ek*, out of, + *topos*, place.] Displacement of a bone.

ostein, osteine (os'te-in) [G. *osteon*, bone.] Ossein, the organic framework of bone tissue; a scleroprotein present in white fibrous tissue and bone; bone cartilage.

osteitic (os-te-it'ik). Relating to or affected by osteitis; ostitic.

osteitis (os-te-i'(e')tis) [G. *osteon*, bone, + *-itis*.] Inflammation of bone, ostitis. **ca'seous o.**, tuberculous caries. **central o.**, osteomyelitis, endosteitis. **condens'ing o.**, chronic o., resulting in hardening or eburnation of the bone; osteosclerosis. **cor'tical o.**, periostitis with involvement of the superficial layer of bone. **form'ative o.**, condensing o. **o. carno'sa**, o. fungosa. **o. conden'sans generalisa'ta**, disseminated condensing osteopathy.* **o. defor'mans**, a chronic inflammation of many of the bones of the body, accompanied by marked softening and bending, together with a thickening of the affected structures. **o. fibro'sa cys'tica**, Recklinghausen's disease (2), a disease with all the characteristics of o. deformans, with the addition of fibrous nodules here and there over the affected bones, especially near the articular ends, and often with the formation of cysts in the fibrocalcareous tissue. **o. fungo'sa**, chronic o. with dilated Haversian canals filled with a vascular granulation tissue. **o. ossif'icans**, condensing or **rar'efying o.**, chronic o. accompanied by absorption of ostein and widening of the intraosteal spaces, the whole bone becoming more or less cancellated. **o. tuberculo'sa mul'tiplex cys'tica**, Juengling's disease, an o. of tuberculous origin, marked by numerous small cavities in the osseous substance. **sarco'matous o.**, myelomatosis. **scleros'ing o.**, condensing o.

ostembryon (os-tem'brĭ-on) [G. *osteon*, bone, + *embryon*, embryo.] A hardened and calcified fetus, lithopedium.

oste'mia, ostæ'mia [G. *osteon*, bone, + *haima*, blood.] Congestion or hyperemia of a bone.

ostempye'sis [G. *osteon*, bone, + *empyēsis*, suppuration.] Suppurative inflammation of a bone; the formation of an ossifluent abscess, caries.

os"teoanagen'esis (os"te-o-an-ah-jen'e-sis) [G. *osteon*, bone, + *ana*, again, + *genesis*, generation.] Reproduction of bone.

osteoaneurysm (os-te-o-an'u-rizm). A pulsating tumor of a bone, a bone-aneurysm.

osteoarthritis (os-te-o-ar-thri'(thre')tis) [G. *osteon*, bone, + *arthron*, joint, + *-itis*.] 1. Inflammation of the articular extremity of a bone, involving the contiguous joint structures, resulting in erosion and fibrillation of the cartilages, and eburnation of the bones with osteophytic growths. 2. The hypertrophic form of arthritis deformans. **endem'ic o. defor'mans**, a disease observed in a province of Russia, in which a very large proportion of the inhabitants suffered from softening of the articular ends of the bones, thickening of the joints, crepitus, and partial ankylosis. **hyperplas'tic o.**, pulmonary osteoarthropathy.*

osteoarthropathy (os"te-o-ar-throp'ă-thĭ) [G. *osteon*, bone, + *arthron*, joint, + *pathos*, suffering.] Any disease involving both bones and joints, especially a trophic disorder of these structures associated with disease of the central nervous system or of the lungs and pleura. **hypertroph'ic pul'monary o., pneumogen'ic o.**, pulmonary o. **pul'monary o.**, expansion of the distal ends, or the entire shafts, of the long bones, sometimes with erosions of the articular cartilages and thickening and villous proliferation of the synovial membranes; the affection occurs in chronic pulmonary disease, in heart disease, and occasionally in other acute and chronic disorders.

osteoarthrotomy (os"te-o-ar-throt'o-mĭ) [G. *osteon*, bone, + *arthron*, joint, + *tomē*, incision.] Surgical removal of the articular end of a bone.

os'teoblast [G. *osteon*, bone, + *blastos*, germ.] A bone-forming cell, derived from the osteogenic layer of the embryonic perichondrium; it forms first the cell-free osseous matrix and when this is complete, loses its bone-forming function and becomes itself a fixed bone-cell.

osteoblas'tic. Relating to the osteoblasts.

osteocamp'sia [G. *osteon*, bone, + *kampsis*, a bending.] Curvature of a bone, as in rickets or osteomalacia.

osteocarcino'ma. 1. Carcinoma of a bone. 2. A carcinoma containing bone, or a combined osteoma and carcinoma.

osteocartilaginous (os-te-o-kar-tĭ-laj'in-us) [G *osteon*, bone, + L. *cartilago*, cartilage.] Osseocartilaginous,* osteochondrous.

osteocele (os'te-o-sēl) [G. *osteon*, bone, + *kēlē*, hernia, tumor.] A scrotal tumor containing bony elements.

osteocephalo'ma. Osteoencephaloma.

osteochondritis (os-te-o-kon-dri'(dre')tis) [G. *osteon*, bone, + *chondros*, cartilage, + *-itis*.] Inflammation of a bone with its cartilage, osteoarthritis. **o. defor'mans juveni'lis**, coxa plana, pseudocoxalgia, Legg's or Perthes' disease, a chronic inflammation or dystrophy of the head of the femur, occurring in childhood and resulting in a short neck and flattened head of the bone.

osteochondroma (os-te-o-kon-dro'mah) [G. *osteon*, bone, + *chondros*, cartilage, + *-ōma*.] A tumor composed of bony and cartilaginous elements.

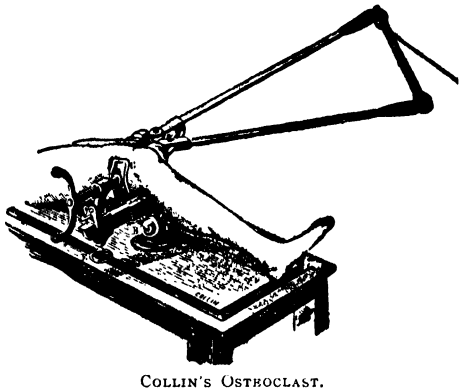
osteochondromatosis (os-te-o-kon-dro-mă-to'sis). The simultaneous occurrence of several osteochondromata.

osteochondrosarcoma (os"te-o-kon"dro-sar-ko'ma) [G. *osteon*, bone, + *chondros*, cartilage, + *sarx(sark-)*, flesh, + *-ōma*.] A sarcoma of bone having a considerable osseous and cartilaginous framework.

osteochondrous (os"te-o-kon'drus) [G. *osteon*, bone, + *chondros*, cartilage] Osseocartilaginous.

osteocla'sia, osteoc'lasis (G. *osteon*, bone, + *klasis*, fracture.] 1. Intentional fracture of a misshapen bone in order to correct deformity. 2. Absorption of bone-substance.

os'teoclast [G. *osteon*, bone, + *klastos; klaō*, I break, I comminute.] 1. Myeloplax, a large multinucleated cell of the bone-marrow which



COLLIN'S OSTEOCLAST.

is believed to produce absorption of bone. 2. An instrument used to break a misshapen bone to correct the deformity. (See illustration.)

osteoclas'tic. Causing absorption of bone-tissue. Relating to an osteoclast in either sense

osteoclastoma (os-te-o-klas-to'mah). Myeloid sarcoma; a sarcoma infiltrated with cells resembling the osteoclasts of bone-marrow.

os'teoclasty. Osteoclasia (1).

os"teocom'ma [G. *osteon*, bone, + *komma*, a coin] A bony segment, osteomere.

osteocope (os'te-o-kōp) [G. *osteokopos*, bone-breaking, bone-racking.] Severe pain in the bones; specifically the night pains of syphilis.

osteocop'ic. Relating to severe bone pain, ostealgic, osteodynic.

osteocra'nium [G. *osteon*, bone, + *kranion*, skull.] The cranium of the fetus after ossification of the membranous cranium has advanced so far as to give it firmness.

osteocysto'ma. A combined osteoma and cystoma; a bone-cyst.

osteodermia (os-te-o-dur'mĭ-ah) [G. *osteon*, bone, + *derma*, skin.] Ossification occurring in portions of the skin.

os"teodias'tasis [G. *osteon*, bone, + *diastasis*, a separation.] Separation of two adjacent bones, as of the cranium.

osteodyn'ia [G. *osteon*, bone, + *odynē*, pain.] Ostealgia, osteocope, pain in a bone

osteodystrophia (os-te-o-dis-tro'fĭ-ŭ) [G. *osteon*, bone, + *dys*, difficult, imperfect, + *trophē*, nourishment.] Osteodystrophy, defective formation of bone. **o. fibro'sa,** osteitis fibrosa cystica. Recklinghausen's disease.

osteoencephaloma (os"te-o-en-sef-al-o'mah) [G. *osteon*, bone, + *enkephalos*, brain + *-ōma*.] An encephaloid tumor of bone.

osteoepiphysis (os-te-o-e-pif'i-sis). An epiphysis of a bone.

os"teofibro'ma, pl. *osteofibro'mata*. A tumor composed of spindle-celled fibrous tissue containing bony lamellæ or islets; fibroosteoma.

os'teogen [G. *osteon*, bone, + *gennaō*, I produce.] The substance forming the inner layer of the periosteum, from which new bone is formed.

osteogen'esis [G. *osteon*, bone, + *genesis*, production.] The formation of bone. **o. imperfec'ta,** (1) dysosteogenesis, a condition of deficient deposit of bone salts, the bones being soft and liable to fracture; (2) achondroplasia.

osteogenet'ic, osteogen'ic. Relating to osteogenesis. making bone. **o. fibers,** the fibers in the o. layer of the periosteum. **o. layer,** the inner layer of the periosteum, containing o. fibers and osteoblasts.

osteogenous (os-te-oj'en-us) [G. *osteon*, bone, + *gennaō*, I produce] Making bone, osteogenic.

osteogeny (os-te-oj'en-ĭ). Osteogenesis.

osteog'raphy [G. *osteon*, bone, + *graphē*, a description.] A treatise on or description of the bones.

osteohalisteresis (os"te-o-hal-is-ter-e'sis) [G. *osteon*, bone, + *hals*, salt, + *sterēsis*, privation.] Softening of the bones through absorption or insufficient supply of the mineral portion.

os'teoid [G *osteon*, bone, + *eidos*, resemblance.] Ossiform, resembling bone; osseous, osteal, bony.

osteolipochondroma (os"te-o-li'po-kon-dro'mah) [G. *osteon*, bone, + *lipos*, fat, + *chondros*, cartilage, + *-ōma*] A chondroma containing bony and fatty elements.

osteol'ogist. A person versed in osteology.

osteol'ogy [G. *osteon*, bone, + *-logia*.] The anatomy of the bones; the science which treats of the bones and their structure.

osteol'ysis [G. *osteon*, bone, + *lysis*, solution.] Osteoclasia (2), softening and absorption of bone substance, ossifluence.

osteolyt'ic. Ossifluent.

osteo'ma, pl. *osteo'mata* [G. *osteon*, bone, + *-ōma*.] A tumor formed of bone. It may occur as an overgrowth of or outgrowth from bone, but constituting an independent tumor (*homoplastic o.*), or independently in tissues apart from bone (*heteroplastic o.*) **o. medulla're,** an o. containing spaces filled with medullary substance. **o. sarcomato'sum,** osteosarcoma. **o. spongio'sum,** an o. composed chiefly of cancellous bone tissue.

osteomala'cia [G. *osteon*, bone, + *malakia*, softness] Mollities ossium; a disease characterized by a gradual softening and bending of the bones with more or less severe pain; it is more common in women than men and often begins during a pregnancy.

osteomala'cic. Relating to, or suffering from, osteomalacia.

osteo'matoid [*osteoma* + G. *eidos*, appearance, form.] Resembling an osteoma; noting a bony tumor intimately connected with the bone from which it springs, an *enostosis* or *exostosis*.

osteomere (os'te-o-mēr) [G. *osteon*, bone, + *meros*, a part.] One of the series of bone-segments such as the vertebræ, osteocomma.

osteom'etry [G. *osteon*, bone, + *metron*, measurement.] The branch of anthropometry which deals with the relative size of the different parts of the skeleton

osteomyelitis (os-te-o-mi-el-i'(e')tis) [G. *osteon*, bone, + *myelos*, marrow, + *-itis*.] Inflammation of the bone-marrow. **hemorrhag'ic o.**, osteitis fibrosa cystica. **malig'nant o.**, myelomatosis.

osteomyelodysplasia (os''te-o-mi''el-o-dis-pla'sĭ-ŭ) [L. *os*, bone, + G. *myelos*, marrow, + *dys-*, difficult, wrong, + *plasis*, a moulding.] A disease marked by enlargement of the marrow cavities of the bones, thinning of the osseous tissue, large thin-walled vascular spaces, leucopenia, and irregular fever.

osteon'cus [G *osteon*, bone, + *onkos*, swelling.] A bone tumor, osteoma.

osetonecro'sis [G. *osteon*, bone, + *nekrōsis*, a killing.] The death of bone in mass, as distinguished from caries, or molecular death.

osteoneural'gia. Ostealgia, osteocope, osteodynia.

osteopath'ic. Relating to osteopathy, a disease of bone, or to osteopathy, a system of therapeutics.

osteop'athy [G. *osteon*, bone, + pathos, suffering.] 1. Any disease of bone. 2. A system of therapeutics based upon the theory that many diseases are due to pressure upon the vessels or nerves by some displaced vertebra or other part of the skeleton, or to a condition of imbalance of the muscles moving any joint; the treatment is directed to the mechanical correction, by means of manipulation, of the assumed osseous displacement or muscular imbalance, with the consequent repression of the abnormal reflexes and a restoration to normal of the circulation and the nerve impulses. **dissem'inated conden'sing o.**, Albers-Schoenberg disease, osteosclerosis fragilis, osteopetrosis, osteitis condensans generalisata, osteopoikilosis, marble bones, a disseminated patchy calcification of the bones, giving an *x*-ray picture of numerous dense spots the size of a lentil; spontaneous fractures are common in this condition.

osteopecilia (os-tĭ-o-pe-sil'ĭ-ŭ) [G. *osteon*, bone, + *poikilia*, spottedness.] Spotted bones, islands of calcinosis in otherwise apparently normal osseous tissue, osteopoikilosis.

osteope'dion, osteopæ'dion, osteope'dium [G. *osteon*, bone, + *paidion*, dim. of *pais*, a child] Ostembryon, lithopedion.*

osteoperiostitis (os''te-o-per-ĭ-os-ti'(te')tis). Inflammation of the periosteum and of the underlying bone.

osteopetrosis (os-te-o-pe-tro'sis) [G. *osteon*, bone, + *petra*, stone, + *-ōsis*.] Marble bones, disseminated condensing osteopathy.*

os'teophag, osteophage (os'te-o-fāj) [G. *osteon*, bone, + *phagō*, I eat.] Myeloplax, osteoclast.

osteophlebitis (os''te-o-flĕ-bi'(be')tis) [G. *osteon*, bone, + *phleps*(*phleb-*), vein, + *-itis*] Inflammation of the veins of a bone.

os'teophone [G. *osteon*, bone, + *phōnē*, voice] An appliance similar to the audiphone* for helping the deaf to hear.

osteoph'ony. Bone-conduction; the transmission of sound waves to the tympanum through the facial bones.

os'teophore [G. *osteon*, bone, + *phoros; pherō*, I carry away.] A bone-crushing forceps with strong blades and teeth; see cut under *forceps*.

osteophy'ma [G. *osteon*, bone, + *phyma*, a tumor. Osteophyte.

os'teophyt [G. *osteon*, bone, + *phyton*, tumor.] A bony outgrowth.

osteoplaque (os'te-o-plak) [G. *osteon*, bone, + Fr. *plaque*, plate.] Any osseous layer.

os'teoplast [G. *osteon*, bone, + *plastos; plassō*, I form.] Osteoblast.

osteoplas'tic. 1. Relating to osteogenesis, osteogenic. 2. Relating to osteoplasty.

os'teoplasty [G. *osteon*, bone, + *plassō*, I form.] Reparative or plastic surgery of the bones; bone-grafting.

osteopoikilosis (os-te-o-poy-kil-o'sis) [G. *osteon*, bone, + *poikilos*, dappled, + *-osis*.] Disseminated condensing osteopathy,* osteopecilia.

osteoporo'sis [G. *osteon*, bone, + *poros*, a pore.] 1. A disease of bone marked by increased porosity from widening of the Haversian canals and softness from absorption of the calcareous material. 2. In horses and other *Equidæ* a specific disease marked by enlargement of the softened and porous bone; big-head, swelled head.

osteoporot'ic. Relating to or causing a porous condition of the bones.

osteopsathyrosis (os''te-op-sath-i-ro'sis) [G. *osteon*, bone, + *psathyros*, friable.] Fragility of the bones, fragilitas ossium; a condition of softening of the bones, attended frequently with spontaneous fractures.

osteor'rhaphy [G. *osteon*, bone, + *rhaphē*, suture.] Wiring together the fragments of a broken bone.

os''teosarco'ma, pl. *osteosarco'mata*, *osteosarco'mas*. A mixed osteoma and sarcoma; a bony tumor containing many imperfectly differentiated, vegetative, or embryonic cells; osteoma sarcomatosum; a sarcoma of bone, of periosteal origin, having a considerable osseous framework.

osteosarco'matous. Relating to an osteosarcoma.

osteoscleró'sis [G. *osteon*, bone, + *sklēros*, hard.] Abnormal hardening or eburnation of bone; condensing osteitis. **e. congen'ita,** achondroplasia. **o. fra'gilis generalisa'ta,** disseminated condensing osteopathy.*

osteoscope (os'te-o-skōp) [G. *osteon*, bone, + *skopeō*, I view.] An apparatus enclosing certain bones of standard density and thickness, used for testing an *x*-ray machine.

osteo'sis [G. *osteon*, bone, + *-ōsis*] Osteogenesis.

osteospongio'ma [G. *osteon*, bone, + *spongos*, sponge, + *-ōma*.] Osteoma spongiosum; spina ventosa.

os''teosteato'ma [G. *osteon*, bone, + *stear*(*steat-*), suet, + *-ōma*] A mixed tumor partaking of the anatomical characters of both osteoma and steatoma.

osteostix'is [G. *osteon*, bone, + *stixis*, a pricking.] Trephining or simple puncture of a bone.

osteosuture (os-te-o-su'chur). Osteorrhaphy.

osteosynthesis (os-te-o-sin'the-sis) [G. *osteon*, bone, + *synthesis*, joining.] Bringing the ends of a fractured bone into close apposition.

osteotabes (os''te-o-ta'bēz) [G. *osteon*, bone, + L. *tabes*, wasting.] Atrophy of the bone-marrow.

os''teotelan''giecta'sia [G. *osteon*, bone, + *telos*, end, + *angeion*, vessel, + *ektasis*, extension.] A telangioma, or sarcoma permeated with dilated capillaries, of a bone.

os''teothrombo'sis [G. *osteon*, bone, + *thrombōsis*, coagulation.] Thrombosis in one or more of the veins of a bone.

os'teotome [G. *osteon*, bone, + *tomos*, cutting.] A chisel for use in cutting bone.

osteotomoclasia, osteotomoclasis (os-te-ot''o-mokla'sĭ-ah, os-te-ot''o-mok'la-sis) [G. *osteon*, bone, + *tomē*, incision, + *klasis*, fracture.] An operation for the straightening of a pathologically curved bone, by partial division with the osteotome followed by forcible bending of the remaining portion of the bone.

osteot'omy [G. *osteon*, bone, + *tomē*, incision.] Cutting a bone, usually by means of a saw or chisel, for the removal of a sequestrum, the correction of knock-knee or other deformity, or for any purpose whatever. Osteotomy for the correction of knock-knee or other deformity may be *cuneiform, i.e.*, the removal of a wedge from the convex side of the curve; or *linear*, cutting through the shaft or articular extremity of the bone by a straight incision.

osteotribe (os'te-o-trīb) [G. *osteon*, bone, + *tribō*, I bruise, I grind down.] An instrument for crushing off bits of necrosed or carious bone.

osteotrite (os'te-o-trit) [G. *osteon*, bone, + L. *tritus*, a grinding, a wearing off.] An instrument with conical or olive-shaped tip having a cutting surface, resembling a dental burr, used for the removal of carious bone.

osteot'rophy [G. *osteon*, bone, + *trophē*, nourishment.] Nutrition of osseous tissue.

osteot'ylus [G. *osteon*, bone, + *tylos*, callus.] The callus ensheathing the ends of a broken bone.

os''teotympan'ic [G. *osteon*, bone, + *tympanon*, drum.] Otocranial.

osthexia (os-theks'ĭ-ah) [G. *osteon*, bone, + *hexis*, state or habit of body.] A condition in which ossification occurs in abnormal situations.

os'tia. Plural of L. *ostium*.

os'tial. Relating to any orifice, or ostium.

ostitis (os-ti'(te')tis). Osteitis.

ostium, pl. *os'tia* (os'tĭ-um) [L. dim. of *os*, mouth.] A small opening, especially one of entrance into a hollow organ or canal. **o. abdomina'le** or **o. abdomina'le tu'bæ uteri'næ** [BNA], the fimbriated or ovarian extremity of an oviduct. **o. arterio'sum** [BNA], arterial orifice, the opening from the ventricle of the heart into the aorta or the pulmonary artery. **o. a'trio-ventricula're,** o. venosum. **o. ileocæcocolicum** [NK], valvula coli [BNA]. **o. inter'num,** o. uterinum tubæ, the uterine extremity of an oviduct. **o. pharynge'um** or **o. pharynge'um tu'b e auditi'væ** [BNA], pharyngeal opening of the auditory (Eustachian) tube, in the upper part of the nasopharynx about half an inch behind the posterior extremity of the inferior turbinal on each side. **o. tympan'icum,** or **o. tympa 'icum tu'bæ auditi'væ** [BNA], tympanic opening of the auditory (Eustachian) tube, in the anterior part of the tympanic cavity below the canal for the tensor tympani muscle. **o. uteri'num tu'bæ** [BNA], the uterine opening of the oviduct. **o. vagi'næ,** the vulvar orifice of the vagina. **o. veno'sum** [BNA], venous orifice, the communication between the auricle (atrium) and ventricle on either side of the heart.

ostosis (os-to'sis). Osteosis, osteogenesis.

os''treotox'ism [G. *ostreon*, oyster, + *toxikon*, poison.] Poisoning from eating oysters.

Os'trya [G.] A genus of trees of the oak family. The heart-wood and bark of *O. virginiana*, ironwood, lever wood, black hazel, possess tonic, astringent, and antiperiodic properties; employed in doses of ʒ½–1 (2.0–4.0).

O. T. Abbreviation for old term, as distinguished from the [BNA] term, in anatomy.

otacoustic (o-tă-koos'tik) [G. *ōtakousteō*, I hearken.] Aiding one to hear.

otacousticon (o-tă-koos'tĭ-kon). An ear-trumpet.

otal'gia [G. *ous(ōt-)*, ear, + *algos*, pain.] Earache, otodynia. **genic'ulate o.,** geniculate neuralgia.

otal'gic. 1. Relating to otalgia, or earache. 2. A remedy for earache.

Otani's test (o-tah'nĭ) [Morisuke *Otani*, Tokyo physician, contemporary.] The citrated blood of a person with suspected typhoid fever or dysentery is mixed with a suspension of the corresponding pathogenic bacilli; then the leucocytes which have taken up the bacilli are counted, and if 30 per cent. or more have taken up the bacilli the test is regarded as positive.

otec'tomy [G. *ous(ōt-)*, ear, + *ektomē*, excision.] Ossiculectomy; removal of the contents of the tympanum.

othelcosis (o-thel-ko'sis) [G. *ous(ōt-)*, ear, + *helkōsis*, ulceration.] 1. Ulceration of the auricle of the ear or the auditory meatus. 2. Suppuration of the middle ear.

othematoma, othæmatoma (o-the-mă-to'mah) [G *ous(ōt-)*, ear, + *haima*, blood, + *-ōma*.] A purplish, rounded, hard swelling of the auricle, due to an effusion of blood between the cartilage and perichondrium; it may be the result of trauma or occur spontaneously in the insane; hematoma auris, the insane ear.

othemorrhagia, othæmorrhagia (o-them-o-raj'ĭ-ah) [G. *ous(ōt-)*, ear, + *haimorrhagia*, hemorrhage.] Bleeding from the ear.

otiatrics (o-tĭ-at'riks) [G. *ous(ōt-)*, ear, + *iatreia*, medical treatment.] The treatment of diseases of the ear.

o'tic (G. *ous(ōt-)*, ear.] Relating to the ear.

oticodinia (o''ti-ko-din'ĭ-ah) [G. *ōtikos*, aural, + *dinē*, whirling.] Ménière's disease.

otiobiosis (o-tĭ-o-bi-o'sis). Otobiosis.

Otiobius (o-tĭ-o'bĭ-us). Ornithodorus.

otit'ic. Relating to otitis.

otitis (o-ti'(te')tis). [G. *ous(ōt-)*, ear, + *-itis*.] Inflammation of the ear. **o. croupo'sa,** o. externa with the formation of a false membrane. **o. desquamati'va,** o. externa with a copious branny desquamation. **o. diphtherit'ica,** o. crouposa, diphtheritic inflammation of the external auditory meatus. **o. exter'na,** inflammation of the external auditory canal. **o. exter'na circumscrip'ta,** furunculosis of the external auditory canal. **o. exter'na diffu'sa,** inflammation of the entire extent of the external auditory meatus. **o. exter'na hæmorrhag'ica,** inflammation, marked by the presence of one or more vesicles filled with blood on the wall of the bony portion of the external auditory canal. **o. furunculo'sa,** o. externa circumscripta. **o. inter'na,** inflammation of the lining membrane of the labyrinth; sometimes, in Germany especially, synonymous with o. media. **o. in'tima,** o. interna. **o. labyrin'thica,** o. interna. **o. mastoid'ea,** mastoidal antritis, inflammation of the mastoid antrum and cells. **o. me'dia,** inflammation of the middle ear, or tympanum. **o. me'dia catar ha'lis,** simple catarrhal inflammation of the middle ear. **o. me'dia purulen'ta,** o. media suppurativa. **o me'dia sclerot'ica,** dry catarrh of the middle ear, chronic inflammation of the middle ear with implication of the labyrinth. **o. me'dia suppurati'va,** suppurative inflammation of the middle ear. **o. mycot'ica,** a fungous growth in the external auditory meatus, usually of *Aspergillus niger*. **o. parasit'ica,** o mycotica. **o. sclerot'ica,** o. media sclerotica.

otoantritis (o-to-an-tri'(tre')tis). Inflammation of the mastoid antrum.

otobiosis (o-to-bi-o'sis) [G. *ous(ot-)*, ear, + *bios*, life, + *-osis*.] Ear-tick disease; presence in the external auditory canal of the "spinose ear-tick," *Otiobius* (*Ornithodorus*) *megnini*.

otoblennorrhea, otoblennorrhœa (o″to-blen-or-re′ah) [G. *ous(ōt-)*, ear, + *blenna*, mucus, + *rhoia*, a flow.] Chronic catarrhal otitis media with perforation of the drum membrane and a mucopurulent discharge.

otoceph'alus [G. *ous(ōt-)*, ear, + *kephalē*, head.] A monster with the lower part of the face wanting, the ears being close together or fused beneath the skull, the nose absent, and the eyes fused into one or both together in a single orbit.

otocerebritis (o-to-ser-e-bri′(bre′)tis) [G. *ous(ōt-)*, ear. + L. *cerebrum*, brain, + G. *-itis*.] Otoencephalitis,

otocleisis (o-to-klī′sis) [G. *ous(ōt-)*, ear, + *kleisis*, closure.] 1. Closure of the Eustachian tube. 2. Closure, by a new growth or accumulation of cerumen, of the external auditory meatus.

otoco'nia [G. *ous(ōt-)*, ear, + *konia*, dust.] Ear-dust, otoliths, rhombic crystals of calcium carbonate on the maculæ acusticæ of the utricle and saccule in the membranous labyrinth.

otoco'nium [a singular form made from *otoconia* mistakenly regarded as a plural.] Otolith.

otocra'nial. Relating to the otocranium.

otocra'nium [G. *ous(ōt-)*, ear, + *kranion*, skull.] The bony case of the internal and middle ear, consisting of the petrous and mastoid portions of the temporal bone.

o'tocyst [G. *ous(ōt-)*, ear, + *kystis*, a bladder.] The embryonic auditory vesicle.

otodyn'ia [G. *ous(ōt-)*, ear, + *odynē*, pain.] Earache, otalgia.

otoencephalitis (o″to-en-sef-al-i′(e′)tis) [G. *ous(ōt-)*, ear, + *enkephalos*, brain, + *-itis*.] Inflammation of the brain by extension of the process from the middle ear and mastoid cells.

otoganglion (o″to-gang′glĭ-on). The otic ganglion.*

otogen'ic, otogenous (o-toj′en us) [G. *ous(ōt-)*, ear, + *gennaō*, I produce.] Of otic origin, originating within the ear, especially from inflammation of the ear

otog'raphy [G. *ous(ōt-)*, ear, + *graphē*, a description.] A treatise on, or a description of the ear.

otohemineurasthenia (o″to-hem″ĭ-nu-ras-the′nĭ-ah) [G. *ous(ōt-)*, ear, + *hēmi-*, half, + *neuron*, nerve, + *astheneia*, weakness.] Nervous deafness affecting one ear.

otolite, otolith (o′to-līt, o′to-lith) [G. *ous(ōt-)*, ear, + *lithos*, stone.] Ear-stone. 1. Otoconium, one of the crystals of calcium carbonate constituting the ear-dust or otoconia. 2. Otosteon (2).

otological (o″to-loj′ĭ-kal). Relating to otology.

otol'ogist. Aurist, one versed in otology, a specialist in diseases of the ear.

otol'ogy [G. *ous(ōt-)*, ear, + *-logia*] The branch of medical science treating of the ears; the specialty of diseases of the ears.

otomassage (o″to-mas-sazh′) [G. *ous(ōt-)*, ear, + Fr. *massage*.] Systematic and regular movement imparted to the membrana tympani and ossicles, by means of sound waves, rapid jets of air in the external auditory meatus, or vibratory tapping of the drum membrane.

otomucormycosis (o-to-mu-kor-mi-ko′sis). Mucormycosis of the ear.

otomyasthenia (o″to-mi-as-the′nĭ-ah) [G. *ous(ōt-)*, ear, + *mys*, muscle, + *astheneia*, weakness.] Weakness of the tympanic muscles, impairing the acuity of hearing.

otomyces (o-to-mi′sēz) [G. *ous(ōt-)*, ear, + *mykēs*, fungus.] Any fungus growing in the external auditory meatus.

otomyco'sis [G. *ous(ōt-)*, ear, + *mykēs*, fungus.] An inflammation due to the presence of a fungus *Aspergillus niger*, or other species of *A.*, in the external auditory canal.

o″tonecrec'tomy, o″tonecronec'tomy [G. *ous(ōt-)*, ear, + *nekron*, something dead, + *ektomē*, excision.] The removal of necrosed tissues from the middle ear.

o″toneural'gia [G. *ous(ōt-)*, ear, + *neuron*, nerve, + *algos*, pain.] Earache of neuralgic origin, not due to inflammation.

o″toneurasthe'nia [G. *ous(ōt-)*, ear, + *neuron*, nerve, + *astheneia*, weakness.] Nervous deafness.

otop'athy [G. *ous(ōt-)*, ear, + *pathos*, suffering.] Any disease of the ear.

otopharyngeal (o″to-far-in′je-al). Relating to the middle ear and the pharynx.

o'tophone [G. *ous(ōt-)*, ear, + *phōnē*, sound.] An ear trumpet in which the ear-piece is replaced by a tightly stretched disc of rubber.

otopiesis (o″to-pi′ĕ-sis) [G. *ous(ōt-)*, ear, + *piesis*, pressure.] 1. Rarefaction of the air in the tympanum causing a bulging in of the drum-membrane. 2. Abnormal pressure within the labyrinth of the ear.

o'toplasty [G. *ous(ōt-)*, ear, + *plassō*, I form.] Reparative or plastic surgery of the auricle of the ear.

otopol'ypus [G. *ous(ōt-)*, ear.] A polypus of the external auditory meatus.

otopyorrhe'a, otopyrrhœ'a [G. *ous(ōt-)*, ear, + *pyon*, pus, + *rhoia*, a flow] Chronic otitis media with perforation of the drum-membrane and a purulent discharge.

otopyo'sis [G. *ous(ōt-)*, ear, + *pyon*, pus, + *-ōsis*.] Suppuration of the external auditory meatus or of the middle ear.

otorhinolaryngology (o″to-ri″no-lar-in-gol′o-jĭ) [G. *ous(ōt-)*, ear, + *rhis(rhin-)*, nose, + *larynx (laryng-)*, larynx, + *-logia*.] The combined specialties of diseases of the ear, nose, and larynx.

otorrha'gia [G. *ous(ōt-)*, ear, + *-rhagia*.] Bleeding from the ear.

otorrhea, otorrhœa (o-tor-re′ah) [G. *ous(ōt-)*, ear, + *rhoia*, flow.] A mucopurulent discharge from the ear.

otosal'pinx [G. *ous(ōt-)*, ear, + *salpinx*, trumpet.] The Eustachian tube, tuba* auditiva [BNA].

otosclerec'tomy, otoscleronec'tomy [G. *ous(ōt-)*, ear, + *sklēros*, hand, + *ektomē*, excision.] Excision of the sclerosed and ankylosed ossicles.

otosclerosis (o″to-skle-ro′sis) [G. *ous(ōt-)*, ear, + *sklērōsis*, hardening.] A new formation of spongy bone about the stapes and fenestra vestibuli (ovalis), resulting in progressively increasing deafness, without signs of disease in the Eustachian tube or membrana tympani; see *Bezold's* triad*.

otoscope (o′to-skōp) [G. *ous(ōt-)*, ear, + *skopeō*, I inspect.] An instrument for examining the drum-membrane or auscultating the ear. **Brun'ton's o.,** an ear speculum illuminated by means of a side funnel. **Sie'gle's o.,** an ear speculum by the use of which the drum-membrane can be moved by change of air pressure during inspection. **Toyn'bee's o.,** a rubber tube with an earpiece at each end, by means of which the otologist can listen to the sounds in the patient's ear during politzerization; called also Toynbee's diagnostic tube.

otos'copy. Inspection of the ear, especially of the drum membrane.

oto'sis [G. *ous(ōt-)*, ear.] Hearing erroneously and so receiving a false impression or repeating incorrectly.

otos'teal [G. *ous(ōt-)*, ear, + *osteon*, bone.] Relating to the ossicles of the ear.

otos'teon [G. *ous(ōt-)*, ear, + *osteon*, bone.] 1. One of the ossicles of the ear. 2. An otolith or concretion in the ear, larger than a grain of otoconia.

otot'omy [G. *ous(ōt-)*, ear, + *tomē*, incision.] 1. Anatomy of the ear; dissection of the ear. 2. Myringotomy, incision of the drum-membrane.

Ott's test [Isaac *Ott*, American physician, 1847–1916.] For nucleoalbumin in the urine: the urine is diluted with an equal volume of a saturated sodium-chloride solution and then treated with Almén's reagent; a white precipitate indicates the presence of nucleoalbumin.

O.U. Abbreviation for oculus uterque [L.] each eye, both eyes.

ouabain (wah'bah-in). A glucoside from the root of ouabaio, *Acocanthera schimperi*, or *A. ouabaio*, or from *Strophanthus gratus;* an African arrow poison; it is a local anesthetic and heart poison; has been given as a substitute for digitalis in doses of gr. $\frac{1}{120}$ (0.0005) by intravenous or or intramuscular injection.

Oudin cur'rent (oo-dan') [Paul *Oudin*, French electrotherapeutist, 1851–1923.] A high frequency current administered from one pole or terminal only of the apparatus.

oudinization (oo"din-i-za'shun). The therapeutic application of the Oudin or high frequency current.

oulectomy, ouletomy, oulitis, etc. See *ulectomy, uletomy, ulitis,* etc.

ounce (owns) [G. *ounkia;* L. *uncia*] A weight, abbreviation *oz.*, sign ℥, containing 480 grains, or $1\frac{1}{2}$ pound troy and apothecaries' weight, or $437\frac{1}{2}$ grains, $1\frac{1}{6}$ pound avoirdupois; the ounce of the U.S P. contains eight drams, and is equivalent to 31.10349 grams.

ourol'ogy. Urology

-ous. A suffix denoting that the element to the name of which it is attached is in combination in one of its lower valencies.

outdoor-relief'. Medical or charitable aid given to persons, not the inmates of an institution, in their own homes or in a dispensary.

out'let of the pel'vis. Apertura* pelvis inferior [BNA].

outlimb (out'lim). The distal segment of an extremity.

out'patient. A patient treated at a hospital dispensary and not in the wards of the institution.

outpock'et. To shut out any part, such as the stump after removal of a pedunculated tumor, by engaging it between the lips of the external wound and closing the latter.

out'put. The waste products of metabolism eliminated from the body; the opposite of intake or income.

out-relief'. Outdoor relief.

o'va. Plural of L. *ovum*.

ovacoids (o'vah-koyds). Trade name of a preparation of the ovarian hormone.

o'vadin. Trade name of a preparation from the ovary of the cow; recommended in chlorosis and amenorrhea.

o'val [L. *ovum*, egg.] 1. Relating to an ovum. 2 Egg-shaped, resembling in outline the longitudinal section of an egg.

ovalbu'min. Egg-albumin, the special form of albumin contained in the white of egg, or albumen.

ovar'aden [L *ovarium* + G. *adēn*, gland.] Trade name of a preparation from the ovary of the cow; used like ovadin. **o.-trifer'rin,** trade name of an ovarian extract combined with triferrin, recommended in various disorders of the female reproductive organs.

ovarialgia (o-va-rĭ-al'jĭ-ah) [L. *ovarium*, ovary, + G. *algos*, pain.] Oothecalgia.

ova'rian. Relating to the ovary.

ovariec'tomy [L. *ovarium*, ovary, + G *ektomē*, excision.] Oothecectomy.

o'varin. Trade name of a preparation from the ovary of the cow.

ova'riocele [L. *ovarium*, ovary, + G. *kēlē*, tumor hernia.] Oothecocele.

ovariocente'sis [L. *ovarium*, ovary, + G. *kentēsis*, puncture.] Oothecocentesis.

ovariocyesis (o-va"rĭ-o-si-e'sis) [L. *ovarium*, ovary, + G. *kyēsis*, pregnancy.] Ovarian pregnancy, oothecocyesis.

ovariodysneuria (o-va"rĭ-o-dis-nu'rĭ-ah) [L. *ovarium*, ovary, + G. *dys-*, bad, + *neuron*, nerve.] Oothecalgia, ovarian neuralgia.

ova"riohysterec'tomy [L. *ovarium*, ovary, + G. *hystera*, uterus, + *ektomē*, excision.] Oothecohysterectomy.

ovariolytic (o-va-rĭ-o-lit'ik) [*ovary* + G. *lytikos*, causing solution.] Oothecolytic, destructive to the ovary.

ova"riorrhex'is [L. *ovarium*, ovary, + G. *rhēxis*, rupture.] Oothecorrhexis.

ovariosalpingectomy (o-va"rĭ-o-sal-pin-jek'to-mĭ) [L. *ovarium*, ovary, + G. *salpinx(salping-)*, trumpet, + *ektomē*, excision.] Oothecosalpingectomy.

ovariosteresis (o-va"rĭ-o-stĕ-re'sis) [L. *ovarium*, ovary, + G. *sterēsis*, deprivation, loss.] Oothecectomy.

ovarios'tomy [L. *ovarium*, ovary, + G. *stoma*, mouth] Oothecostomy

ovariot'omist. One who is skilled in the operation for removing the ovaries.

ovariot'omy [L. *ovarium*, ovary, + G. *tomē*, incision.] 1. The removal of one or both ovaries, oothecotomy. 2. The operative removal of an ovarian tumor. **normal o.,** removal of an apparently healthy ovary, Battey's operation.

ovaritis (o-vă-ri'(re')tis) [L. *ovarium*, ovary, + G. *-itis*.] Oothecitis.

ova'rium [L.] Ovary. **o. masculi'num,** appendix testis.

o'vary [L. *ovarium*, egg-receptacle] 1. Ovarium, ootheca, oophoron; one of the two reproductive glands in the female, containing the ova or germ cells. Its stroma is a vascular connective tissue containing numbers of Graafian vesicles (*folliculi oophori vesiculosi*) enclosing the ova; surrounding this is a more condensed layer of the same substance as the stroma, formerly called the *tunica albuginea*. 2. In botany, the lower expanded part of the pistil of a flower, containing the ovule. **infe'rior o.,** in botany, the ovary of an epigenous flower. **supe'rior o.,** in botany, the ovary of an hypogenous flower.

attaching opened cyst to abdominal wound, marsupialization. **cyst,** ovariydrectasis, oothecocystosis, oophorocystosis, oariydrectasis. **development of embryo in,** oothecocyesis, ovariocyesis, oariocyesis. **disease,** oothecopathy, oophoropathy, ovariopathy. **dropsy,** hydrovarium, oariydrops, hydroarium, hydrops ovarii. **enlargement,** oothecauxe, oophorauxe, ovarioparectasis, oariypertrophy. **fixation,** oothecopexy, oophoropexy, oophoropelliopexy, adnexopexy, annexopexy, oothecorrhaphy, oophororrhaphy. **hernia,** oothecocele, ovariocele, ovarioncus, oariocele. **inflammation,** oothecitis, oophoritis, ovaritis, oaritis. **inflammation of, with oviduct,** oothecosalpingitis, oophorosalpingitis. **ovariosalpingitis,** adnexitis, annexitis. **opening and drainage of cyst,** oothecostomy, ovariostomy. **pain,** oothecalgia, oophoralgia, ovarialgia, ovarian neuralgia, oarialgia. **puncture of,** paracentesis ovarii, oothecocentesis, ovariocentesis. **removal,** oothecec-

tomy, oothectomy, oophorectomy, ovariotomy, ovariectomy, ovariosteresis, castration, spaying, oariotomy. **removal of, with oviduct,** oothecosalpingectomy, oophorosalpingectomy, ovariosalpingectomy. **removal of, with uterus,** oothecohysterectomy, oophorohysterectomy, ovariohysterectomy. **rupture,** oothecorrhexis, ovariorrhexis, oariorrhexis. **softening,** oothecomalacia, oophoromalacia. **tumor,** oothecophyma, ootheconcus, ovariophyma, ovarioncus, oophoroncus, oarioncus, oariophyma, oothecoma, oophoroma.

overbite (o'vur-bit). The overlapping of the lower incisor teeth by the upper.

overdetermination (o"vur-de-tur-mĭ-na'shun). The ascribing of too many meanings to the elements of a dream or neurotic symptom.

overexten'sion. Extension of a limb or any of its segments beyond what is normal.

o'verflow. An escape of fluid owing to overfilling of its usual receptacle. **o. of gall,** jaundice. **o. of sali'va,** drooling, sialorrhea. **o. of tears,** epiphora, stillicidium lacrimarum **o. of urine,** stillicidium urinæ, enuresis. **o. wave,** the descending wave of the sphygmogram from the apex to the first anacrotic break.

o'vergrowth. Hypertrophy, hyperplasia.

overproduc'tion the'ory. Weigert's* law.

overreach'ing. In the horse, striking the heel of the forefoot with the inner edge of the toe of the hind shoe.

overri'ding. 1. The slipping of the lower fragment of a broken long bone up alongside the proximal portion. 2. Moulding of the fetal head during childbirth.

o'vertone. In music, a harmonic. **psy'chic o.,** one of the many faintly perceived associated impressions grouped about a mental image.

o'vi. Gen. of ovum, **egg. o. albu'men re'cens** (N.F.), fresh egg albumen, fresh white of egg. **o. vitell'um re'cens** (N.F.), fresh yolk of egg.

ovicap'sule [L. *ovum*, egg, + *capsula*, dim. of *capsa*, box.] A Graafian follicle or vesicle; ovisac.

ovidu'cal. Relating to an oviduct.

o'viduct [L. *ovum*, egg, + *ductus*, duct] Fallopian tube, salpinx, tuba* uterina [BNA].

ovif'erous [L. *ovum*, egg, + *ferre*, to carry.] Carrying or containing ova

ovifica'tion [L. *ovum*, egg, + *facere*, to make. Ovulation.

o'viform [L. *ovum*, egg, + *for'ma*, form.] 1. Egg-shaped. 2. Resembling an ovum.

ovigen'esis [L. *ovum*, egg, + G. *genesis*, production.] Oogenesis.

ovigenet'ic, ovigen'ic. Ovigenous, oogenous.*

ovigenous (o-vij'en-us) [L. *ovum*, egg, + G. *gennaō*, I produce.] Oogenous.

ovigerm (o'vĭ-jurm) [L. *ovum*, egg, + *germen*, germ.] Ooblast.

ovigerous (o-vij'er-us) [L. *ovum*, egg, + *gerere*, to bear.] Oviferous, bearing ova

ovina'tion [L. *ovinus*, relating to a sheep.] Inoculation with sheeppox virus.

ovin'ia [L. *ovinus*, relating to a sheep.] Sheeppox, a disease in sheep, resembling and probably identical with cowpox.

Ovip'ara [L. *ovum*, egg, + *parere*, to bear.] A term applied to all animals that deposit the ova outside the body there to be developed; distinguished from the *Vivapara* whose ova are developed within the body, the young being born alive.

ovip'arous [L. *ovum*, egg, + *parere*, to bear.] Egg-laying, noting birds and other of the *Ovipara* whose ova are developed outside the body.

ovipos'it [L. *ovum*, egg, + *positus; ponere*, to place.] To lay eggs, said especially of insects.

o'visac [L. *ovum*, egg, + *saccus*, a bag.] Graafian follicle.

o'vium. Waldeyer's term for the mature female germ cell or ovum.

ovocen'ter [L. *ovum*, egg, + *centrum*, center.] The centrosome of the impregnated ovum.

o'vocyte [L. *ovum*, egg, + G. *kytos*, cell.] Oocyte.

ovoferr'in. Trade name of an albuminate of iron; employed in anemia in doses of ʒ 2–4 (8.0–16.0).

o'vogal. Trade name of a compound of albumin and the bile acids from oxgall; recommended as a stimulant of bile-secretion in doses of gr. 8 (0.5)

ovogen'esis. Ovigenesis, oogenesis.*

ovogo'nium [L. *ovum*, egg, + G. *gonē*, generation.] Oogonium.

o'void [L. *ovum*, egg, + G. *eidos*, resemblance.] Oviform, egg-shaped.

ovolecithin (o"vo-les'ĭ-thin) Trade name of a preparation of lecithin from eggs, recommended in diabetes, tuberculosis, and other conditions.

ovomu'coid. A mucoid obtained from the white of egg.

o'voplasm. Ooplasm.

ovopro'togen. Protogen.

ovose'rum. An antiserum obtained by the repeated injection of egg-albumin in increasing doses; it coagulates the albumin of eggs of the same species as that from which the antigen was obtained.

o"vovitell'in. A protein (nucleoalbumin) obtained from the yolk of eggs.

Ovovip'ara [L. *ovum*, egg, + *vivus*, alive, + *parere*, to bear.] Animals producing lecithal eggs which are retained within the body and there developed, but without placental attachment.

o'vular. Relating to an ovule.

ovula'tion. The escape of an ovum from the Graafian follicle.

ovule (o'vūl) [L. *ovulum*, dim. of *ovum*, egg.] 1. The ovum of a mammal, especially while still in the Graafian follicle. 2. A small bead-like structure bearing a fancied resemblance to an ovule; see Naboth's* glands. 3. In botany, an embryonic seed.

ovulin (o'vu-lin). One of the internal secretions of the ovary which, with lutein and folliculin, is said to constitute the hormone oophorin.

ovulogenous (o-vu-loj'en-us) [L. *ovulum*, dim of *ovum*, egg, + G. *gennaō*, I produce.] 1. Producing ovules or ova. 2. Originating from an ovule or ovum.

ovulum (o'vu-lum) [L. dim. of *ovum*.] [BNA] Ovule, ovum contained within a Graafian follicle.

o'vum, gen. *o'vi*, pl. *o'va* [L. egg.] The egg or female sexual cell, from which, when fecundated by union with the male element, a new individual is developed. It is a simple cell, but its parts have received special names; the protoplasm is called the *vitellus* or *yolk*, the ectoplasm is the *zona pellucida* or *zona radiata*, and the cell membrane is the *vitelline membrane;* the nucleus is the *germinal vesicle* and the nucleolus the *germinal spot.* In the *Ovipara* the yolk consists very largely of nutritive material which does not enter into the segmentation process of development but is reserved for the nourishment of the embryo; such an ovum is called *meroblastic* or *lecithal.* In the *Vivipara*, the embryo receives its nourishment through the placenta and the yolk is formative only, containing little or no nutritive material; such an ovum is called *holoblastic* or *alecithal.* The ovum stage of the new human being extends to the end of the second week, at which time the embryonal stage begins, to be

succeeded by the fetal stage at the end of the second month. **alec'ithal o.,** an o. in which the food-yolk is absent or consists of a few particles uniformly distributed. **centrolec'ithal o.,** one in which the food-yolk is large and central, forming the bulk of the ovum, as in a bird's egg. **holoblas'tic o.,** one in which the yolk is largely or entirely formative. **lec'ithal o.,** meroblastic o., one containing a large food-yolk, as in the bird's egg. **meroblas'tic o.,** lecithal o. **ova'rian o.,** oocyte. **o. gallina'ceum** (N.F.), hen's egg. **prim'itive o.,** ooblast. **telolec'ithal o.,** an o. in which there is a large food-yolk situated near one end.

O'wen's typ'ical ver'tebra [Sir Richard *Owen*, English comparative anatomist, 1804–1892.] A hypothetical structure formed of a number of bones so grouped as to form two rings, a small dorsal and a larger ventral, joined at a common center, the body; the two rings enclose the nervous centers and the viscera, and are called the neural arch and the hemal arch, respectively.

oxacid (oks-as'id) [*ox(ygen)* + *acid.*] An acid containing oxygen as well as hydrogen atoms. **inorganic o.,** ternary a., an acid radical combined with oxygen. **organic o.,** one containing carboxyl, COOH, combined with the OH group.

ox'alate. A salt of oxalic acid; acid potassium oxalate is called salts of sorrel or salts of lemon.

oxale'mia, oxalæ'mia [G. *haima*, blood.] The presence of an abnormal amount of oxalates in the blood

oxalethylin (oks-al-eth'il-in). A poisonous derivative of diethyloxamide, an excitant of the nervous system.

oxal'ic acid [G. *oxalis*, sorrel.] An acid, $H_2C_2O_4 + 2H_2O$, originally derived from sorrel, but now obtained commercially from sugar and cellulose (saw-dust) by treating the former with nitric acid, the latter with soda or potassa lye, it occurs in the form of colorless, odorless crystals of intensely acid taste, it is seldom employed in medicine, but is sometimes a source of poisoning, being mistaken for magnesium sulphate which it closely resembles in appearance. It is employed as a disinfectant for the hands in surgery; and has also occasionally been given in amenorrhea, cystitis, and asthma in doses of gr. ¼–½ (0.015–0.03). **o. a. diath'esis,** chronic oxalemia.

oxaluria (oks-ă-lu'rĭ-ah) [G. *ouron*, urine.] The excretion of an abnormal amount of oxalates, especially calcium oxalate, in the urine.

oxalu'ric acid. An acid, $C_3H_4N_2O_4$, derived from uric acid or parabanic acid, occurring in the form of a light yellowish crystalline powder of acid taste.

oxalylurea (oks″al-il-u-re'ah). Parabanic acid, $C_3H_2N_2O_3$, an oxidation product of uric acid from which oxaluric acid is derived.

ox'aphor. A 50 per cent. spirit of oxycamphor, recommended in cardiac and renal dyspnea, asthma, and emphysema in doses of ♏15–30.

ox-bot. Hypoderma bovis.

oxhy'dryl. Hydroxyl.

oxidase (oks'i-dāz). One of a large group of deamidizing oxidizing substances contained in animal and plant tissues; they are believed to have a catalytic action and therefore to belong among the ferments; they cause the oxidation of various organic substances, converting hypoxanthin into xanthin, for example. **direct' o.,** one which has the property of causing the transfer of oxygen from the air directly to other bodies. **indirect' o.,** one which acts only in the presence of a peroxide, peroxidase. **o. reac'tion,** the formation of indol blue when a blood smear containing myeloid leucocytes is treated with a mixture of alpha-naphthol and paradimethyl-aniline-sulphate; the meyloid leucocytes contain a ferment of the oxidase variety which causes this reaction, the lymphoid leucocytes do not. **pri'mary o.,** direct o.

oxida'sis. Oxidation of various organic substances by the action of an oxidase.

oxida'tion. The act of combining or of causing an element or compound to combine with oxygen.

oxide (oks'id, or oks'id). A compound of oxygen with another element or a radical. **acid o.,** acid anhydride, a compound of oxygen with a negative element or radical; it can combine with water to form an acid. **ba'sic o.,** a compound of oxygen with a positive element or radical; it can combine with water to form a base; see *anhydride.* **indif'ferent o.,** neutral o. **neu'tral o.,** one which is neither an acid nor a base, as water, H_2O. **sa'line o.,** a neutral o. formed by the union of two oxides of the same element, one acid the other basic.

oxidization (oks-ĭ-di-za'shun). Oxidation.

oxidize (oks'ĭ-dīz). To combine or cause an element or radical to combine with oxygen.

oxime (ok'sim). A compound resulting from the action of an amine, NH_3O, or a ketone or an aldehyde.

oxo-ate (oks'o-ăt). Trade name of ammonium orthoiodoxybenzoate, employed intravenously in gram (15-grain) doses twice a week in the treatment of chronic arthritis. **o-a B,** trade name of calcium orthoiodoxybenzoate, given per os in daily doses of 15 grains (1.0) in chronic arthritis.

ox'ol. An antiseptic containing hydrogen peroxide and menthol or some other camphor in dilute alcohol; it is designated, according to the camphor employed, menthoxol, naphthoxol, etc.

oxone (oks'ōn). Trade name of fused sodium peroxide, containing a catalyser, which, added to the bath-water, liberates its available content of oxygen.

oxyacanthine (oks″ĭ-ă-kan'thēn). Berbine, an alkaloid, $C_{18}H_{19}NO_3$, from berberis, occurring in white or yellowish crystals of a bitter taste; it causes paralysis of the cerebrospinal centers.

oxyacid (oks″ĭ-as'id). Oxacid.

oxyacoia, oxyakoia (oks″ĭ-ă-koy'ah) [G. *oxys*, acute, + *akoē*, hearing.] Increased sensitiveness to noises, occurring in facial paralysis, especially when the stapedius muscle is paralyzed.

oxyblep'sia [G. *oxys*, acute, + *blepō*, I see.] Extreme acuteness of vision.

oxybutyr'ia. The presence of oxybutyric acid in the blood or its excretion in the urine.

oxybutyric acid (oks″ĭ-bu-tir'ik as'id). A monobasic acid, $CH_3.CHOH.CH_2COOH$, occasionally found in the blood and urine in diabetes.

oxycam'phor. A white crystalline powder, readily soluble in alcohol, an oxidation product of camphor; it is employed in medicine in the form of a 50 per cent. alcoholic solution; see *oxaphor.*

oxycepha'lia, oxyceph'aly [G. *oxys*, sharp, + *kephalē*, head.] Hypsicephalia, the occurrence of a high vertical index in a skull.

oxycephal'ic, oxyceph'alous. Noting a skull marked by oxycephalia, one with a sharp, peaked crown.

oxychinoline (oks″ĭ-kin'o-lin). Oxyquinoline.

oxychloride (oks″ĭ-klo'rīd, or rid). A compound o oxygen with a metallic chloride.

oxycholine (oks-ĭ-ko'lēn). A poisonous alkaloid from several species of mushrooms; muscarine.

oxychromatic (oks″ĭ-kro-mat′ik) [G. *oxys*, acid, + *chrōma*, color.] Oxyphile, acidophile.

oxychromatin (oks-ĭ-kro′mă-tin). Linin, oxyphile chromatin.

oxycine′sia [G. *oxys*, sharp, + *kinēsis*, movement.] Pain on movement.

ox′ydase. Oxidase.

oxyden′dron, oxyden′drum [G. *oxys*, sour, + *dendron*, tree.] The leaves of *Oxydendrum arboreum*, sour-wood, sorrel-tree, a small tree of the mountains of southern Pennsylvania and West Virginia; employed in eclectic practice as a diuretic in dropsy and in the prostatic troubles of old men, in doses of ℥ĭ–5 (0.06–0.3) of the specific preparation.

oxydesis (oks-id′ĕ-sis) [G. *oxys*, acid, + *desis*, a binding together.] The neutralization of acid, such as occurs in the blood through the action of the buffer* salts.

oxidet′ic. Relating to oxidesis. The o. power of the blood is determined by the amount of a centinormal solution of HCl that can be added to a given quantity of oxalated blood without causing agglutination of the red cells.

oxyesthesia, oxyæsthesia (oks″ĭ-es-the′zĭ-ah) [G. *oxys*, acute, + *aisthēsis*, sensation.] Hyperesthesia, abnormal acuteness of sensation.

ox′ygen [G. *oxys*, acid, + *gennaō*, I produce.] Oxygenium (U.S.), a gaseous element, symbol O, atomic weight 16, the most abundant and widely distributed of all the chemical elements; it combines with most of the other elements to form oxides, and is essential to animal and plant life. Oxygen is employed by inhalation in pneumonia, in dyspnea and cyanosis, and is sometimes given to athletes before a contest with the idea that it increases the "wind" and the staying powers.

ox′ygenase. A substance of protein nature, containing iron or manganese, which takes up oxygen and is converted into a peroxide; it is then rendered an active oxidizing enzyme by the action of peroxidase.

ox′ygenate. To saturate with oxygen.

oxygena′tion. Saturation with oxygen, noting especially the aeration of the blood in the lungs.

oxygen′ium (U.S., Br.). Oxygen.

osygenize (oks′ĭ-jen-īz). Oxidize.

ox′ygenoid constitu′tion. In homeopathy one of von Grauvogel's three constitutional groups, the one in which there is too great an oxidation of the blood. See *carbonitrogen* and *hydrogenoid*.

oxygeusia (oks-ĭ-ju′sĭ-ah) [G. *oxys*, acute, + *geusis*, taste.] Abnormal sharpness of the sense of taste.

ox″yhematopor′phyrin. A derivative of hematoporphyrin found at times in the urine; it is distinguished from urohematoporphyrin by its color reaction, which is reddish.

oxyhemoglo′bin, oxyhæmoglo′bin. Hemoglobin in combination with oxygen; it gives solutions of a scarlet or bright red color.

oxyhy′drogen. A mixture of oxygen and hydrogen, the combustion of which produces a brilliant white light when the flame is directed against a piece of lime.

oxyiodide (oks″ĭ-i′o-dīd, or did). A compound of oxygen with a metallic iodide.

oxyla′lia [G. *oxys*, swift, + *lalia*, speech.] Abnormally rapid speaking.

oxyleu′cotin. A substance, $C_{24}H_{32}O_{12}$, derived from paracoto bark, the bark of an unknown tree in Bolivia, sometimes employed as a substitute for or adulteration of coto bark.

oxyliodide (oks-il-i′o-dīd, or -did). Trade name of a synthetic product, hydriodide of phenylcinchoninic acid, said to contain 33 per cent. of iodine; proposed as a remedy in neuritis, myositis, chronic arthritis, and other so-called rheumatic affections in doses of 6 grains three times a day.

ox′ymel [G. *oxys*, acid, + *meli*, honey.] (Br.) Mel acetatum, vinegar of honey, a mixture of honey 40 and acetic acid 5, with distilled water; used as a gargle in sore throat and as an excipient. **o. scil′læ** (Br. and N.F.), o. of squill; squill 2½, acetic acid 2½, water 8, honey sufficient to make a fluid with sp. gr. of 1.320 (Br.); a mixture of equal parts of vinegar of squill and honey (N.F.); dose, ℥½–1 (2.0–4.0). **o. urgin′eæ** (B.A.) oxymel of urginea; urginea 2½, acetic acid 2½, water 8; honey sufficient to make a fluid with specific gravity of 1.320; dose ℥½–1 (2.0–4.0).

oxynar′cotine. An alkaloid isolated from the mother liquor of narceine, $C_{22}H_{23}NO_8$.

oxyneu′rine. Betaine.

oxyn′tic [G. *oxyntos*, making acid.] Acid-forming. **o. cells,** parietal cells, large oval or spherical granular cells in the cardiac gastric glands secreting the acid of the gastric juice. **o. glands,** the acid-secreting glands of the stomach.

oxyopia (oks-ĭ-o′pĭ-ah) [G. *oxys*, acute, + *ōps*, (*ōp-*), eye.] Oxyblepsia.

oxyosis (oks-ĭ-o′sis) [G. *oxys*, acid, + *-osis*.] Acidosis.

oxyosphresia (oks″ĭ-os-fre′sĭ-ah) [G. *oxys*, acute, + *osphrēsis*, smell.] Extreme acuteness of the sense of smell.

oxyparaplastin (ok″sĭ-par-a-phlas′tin). The oxyphil or ampho-oxyphil form of paraplastin.

oxypath′ia [G. *oxys*, acute, + *pathos*, suffering.] 1. An acute disease. 2. Oxyesthesia. 3. Oxypathy.

oxyp′athy [G. *oxys*, acid, + *pathos*, suffering.] A diathesis characterized by inability to eliminate the unoxidizable acids which harm the organism by uniting with the fixed alkalies of the tissues; in general equivalent to arthritism, lithemia, and the exudative diathesis.

ox′yphil, ox′yphile [G. *oxys*, acid, + *philos*, fond.] Acidophil, eosinophil. 1. Having an affinity for acid or protoplasmic dyes, such as eosin; noting certain cell-granules and tissues. 2. A cell, especially a white blood cell, which stains readily with acid dyes.

oxyphil′ic, oxyph′ilous. Oxyphil(1).

oxypho′nia [G. *oxys*, sharp, + *phōnē*, voice.] Shrillness or high pitch of the voice.

ox′yphor. Oxaphor.

oxyproline (oks-ĭ-pro′lin). An acid, $C_5H_9NO_3$, obtained by the hydrolysis of casein and of gelatin, occurring in the form of colorless plates.

ox″ypropion′ic acid. Lactic acid.

oxypropylenediisoamylamine (oks-ĭ-pro″pĭ-lĕn-di-i″, so-am-il-am′ēn). A synthetic alkaloid resembling somewhat atropine in its physiological action.

oxypurine (oks-ĭ-pu′rin). An oxidation product of a purine.

oxyquinasep′tol. Diaphtherin, a yellowish crystalline powder, soluble in water, employed as an antiseptic in 1 per cent. solution.

oxyquin′oline. Oxychinoline, carbostyril, a derivative or substitution product of quinoline. **o. potassium sul′phate,** chinosol, a yellow powder, astringent, antipyretic, and strongly antiseptic, employed in doses of gr. 1–5 (0.06–0.3, internally and in 1–1000 solution externally.

oxyrhine (oks′ĭ-rīn) [G. *oxys*, sharp, + *rhis* (*rhin-*) nose.] Having a sharp-pointed nose.

oxyrygmia (oks-ĭ-rig′mĭ-ah) [G. *oxys*, acid, + *erygmos*, eructation.] Acid eructation.

ox′ysalt. A salt formed from an oxacid

oxysep'sin. An oxytoxin obtained from mixed cultures of the tubercle bacillus and other bacteria present in advanced stages of tuberculosis.

oxysparteine (oks-ĭ-spar'te-ēn). An oxidation derivative of sparteine, occurring in the form of white crystals; employed as a cardiac tonic in doses of gr. ½–1½ (0.03–0.09).

ox'yspore [G. *oxys*, sharp, + *sporos*, seed. Sporozoite.

oxyto'cia [G. *oxys*, swift, + *tokos*, childbirth.] Rapid parturition.

oxytocic (oks-ĭ-to'sik). 1. Hastening childbirth. 2. An agent which promotes the rapidity of labor.

oxytocin (oks-i-to'sin). Trade name of alpha-hypophamin.*

oxytox'in. An oxidized toxin.

oxytuber'culin. A preparation made by treating tuberculin with peroxide of hydrogen; see *Hirschfelder's tuberculin.**

oxyuriasis (ok-sĭ-u-ri'ă-sis). Infestation with pinworms.

oxyuricide (oks-ĭ-u'ri sīd) [*oxyuris* + L. *cædere*, to kill.] 1. Destructive to pinworms. 2. An agent which destroys pinworms.

oxyu'rid. A pinworm, *Oxyuris vermicularis*.

Oxyuris (oks-ĭ-u'ris) [G. *oxys*, sharp, + *oura*, tail.] A genus of *Nematoda* now called *Enterobius*. **O. incogni'ta,** an assumed species based upon the finding of ova in human excreta, but the ova were possibly those of *Heterodera radicicola*, a worm parasitic on the roots of plants, which had been swallowed when these plants were eaten. **O. vermicula'ris,** pinworm, threadworm, ascaris (pl. ascarides); a small white worm, 3 mm. (male) to 10 mm. (female) in length, inhabiting the ileum and cecum, and frequently at night wandering to the anus where it causes intense itching; it sometimes causes reflex symptoms of a convulsive nature.

oxyvas'eline. A proprietary ointment base, vasogen.

oxyzy'mol. Carvacrol

Oz. Abbreviation for *ounce*.

oze'na, ozæ'na [G. *ozaina*, a fetid polypus.] A foul odor present in certain cases of atrophic, syphilitic, and other forms of chronic rhinitis. **o. laryn'gis,** a fetid odor occurring in certain cases of atrophic laryngitis.

o'zenous. Relating to ozena.

ozocerite, ozokerite (o-zo-se'rīt, o-zo-ke'rīt) [G. *ozō*, I smell, + *kēros*, wax.] Mineral wax, mineral tallow, a mixture of paraffins occurring in nature, used as an ointment base.

ozochrotia (o-zo-kro'shĭ-ah) [G. *ozō*, I smell, + *chrōs*, skin.] Bromidrosis.

o'zogen. Trade name of a preparation of hydrogen peroxide.

ozomul'sion. Trade name of a preparation of guaiacol in cod-liver oil, recommended in pulmonary tuberculosis.

o'zonator. An apparatus for generating ozone and diffusing it in the atmosphere of a room.

ozone (o'zōn) [G. *ozō*, I smell.] A modified and condensed form of oxygen, in which three atoms of oxygen are combined to form the molecule, O_3; air containing a perceptible amount of O_3 has an odor suggesting chlorine or sulphurous acid gas. Ozone is formed by an electric discharge or by the slow combustion of phosphorus; it is a powerful oxidizing agent.

o'zonize. To saturate or impregnate with ozone.

ozonom'eter [*ozone* + G. *metron*, measure.] A modified form of ozonoscope, in which by a series of test papers the amount of ozone in the atmosphere may be estimated.

ozon'ophore [*ozone* + *phoros*, a bearer.] 1. A red blood-corpuscle. 2. A protoplasmic granule.

ozonoscope (o-zōn'o-skōp). Filter paper saturated with starch and potassium iodide or with litmus and potassium iodide; it turns blue in the presence of ozone.

ozostomia (o″zo-sto'mĭ-ah) [G. *ozō*, I smell, + *stoma*, mouth.] Bad breath, a foul odor from the mouth.

P

P. Chemical symbol of *phosphorus*. Abbreviation of *pugillus*, a handful, and of *Pharmacopœia*.

p. Abbreviation of *pupil*, and optic *papilla*.

Paas's disease (pahs) [H. R. *Paas*, German physician, contemporary.] A familial, and perhaps also hereditary, skeletal deformation, marked by coxa valga, double patella, shortening of the middle and terminal phalanges of fingers and toes, deformities of the elbows, scoliosis, and spondylitis deformans of the lumbar vertebræ, all these unilateral or bilateral.

pab'ular. Relating to pabulum, or food.

pab'ulin [L. *pabulum*, food.] The products of digestion, fats and proteins, contained in the blood just after the digestion of food.

pab'ulum [L.] Food, nutriment, aliment.

Pacchionian (pak-ke-o'nĭ-an). Relating to Antonio *Pacchioni*, Italian anatomist, 1665–1726; noting especially the *P. bodies, glands*, or *granulations*, granulationes* arachnoideales, the *P. foramen*, incisura* tentorii, and the *P. depressions*, foveolæ* granulares.

pace maker (pās'ma-kur). A fixed point in the wall of the cardiac auricles near the mouths of the great veins, where originates the stimulus exciting the normal heart beat.

pachemia, pachæmia (pă-ke'mĭ-ah). Pachyemia.

pachometer (pă-kom'e-ter). Pachyometer.

Pachon's meth'od (pă-shawń') [Michel Victor *Pachon*, French physician, *1867.] Cardiography, the patient lying on the left side. **P.'s oscillom'eter,** see *sphygmo-oscillometer*. **P.'s test,** determination of the collateral circulation, in a case of aneurysm, by estimation of the blood pressure.

pachy- [G. *pachys*, thick.] A prefix to words formed from Greek roots, carrying the notion of thick.

pachyacria (păk-ke-ak'rĭ-ah) [G. *pachys*, thick, + *akron*, tip.] 1. A bulbous thickening of the extremities of the fingers or toes 2. Acromegaly.

pachyæmia (păk-ke-e'mĭ-ah) Pachyemia.

pachyblepharon (păk-ke-blef'ar-on) [G. *pachys*, thick, + *blepharon*, eyelid.] A thickening of the tarsal border of the eyelid.

pachycephalia, pachycephaly (păk-ke-sef-a'lĭ-ah, păk-ke-sef'al-ĭ) [G. *pachys*, thick, + *kephalē*, head] Abnormal thickness of the skull

pachycephalic, pachycephalous (păk-ke-sef-al'ik, păk-ke-sef'al-us). Relating to or marked by pachycephalia.

pachychilia (păk-ke-ki'lĭ-ah) [G. *pachys*, thick, + *cheilos*, lip.] Swelling or abnormal thickness of the lips.

pachycholia (păk-ke-kol'ĭ-ah) [G. *pachys*, thick, + *cholē*, bile.] Inspissation of the bile.

pachychromatic (pak"ĭ-kro-mat'ik) [G. *pachys*, thick, + *chromatin*.] Having a coarse chromatin reticulum.

pachychymia (păk-ke-ki'mĭ-ah) [G. *pachys*, thick, + *chymos*, juice.] Inspissation of the chyme.

pachydactylous (păk-ke-dak'til-us). Relating to or characterized by abnormal thickness of the fingers or toes.

pachydactyly (păk-ke-dak'til-ĭ) [G. *pachys*, thick, + *daktylos*, finger or toe.] Enlargement of the fingers or toes, especially at their extremities, pachyacria (1)

pachyderma (păk-ke-dur'ma). Pachydermia.

pachydermatocele (păk-ke-dur-mat'o-sēl) [G. *pachys*, thick, + *derma*, skin, + *kēlē*, tumor.] Dermatolysis.

pachydermatosis (păk-ke-der-mă-to'sis) [G. *pachys*, thick, + *derma*, skin, + *ōsis*.] Pachydermia.

pachydermatous (păk-ke-dur'mă-tus). Relating to pachydermia thick-skinned.

pachydermia (păk-ke-dur'mĭ-ah) [G. *pachys*, thick, + ~~*derma*~~ skin.] 1. Elephantiasis. 2. Increased resistance of the red cells in anemia. **p. laryn'gis,** a circumscribed connective-tissue hyperplasia at the posterior commissure of the larynx.

pachydermic (păk-ke-dur'mik). Pachydermatous.

pachyemia, pachyæmia (păk-ke-e'mĭ-ah). Inspissation of the blood.

pachyglossia (păk-ke-glos'ĭ-ah) [G. *pachys*, thick, + *glōssa*, tongue.] Hypertrophy of the tongue, macroglossia.

pachygnathous (păk-kig'nath-us) [G. *pachys* thick, + *gnathos*, jaw.] Characterized by a large or thick jaw.

pachyhematous (păk"hĭ-hem'a-tus). Relating to, or having inspissated blood.

pachyhemia, pachyhæmia (păk-hĭ-he'mĭ-ah). Inspissation of the blood.

pachyhymenia (păk-ke-hi-me'nĭ-ah) [G. *pachys*, thick, + *hymēn*, membrane.] Pachymenia.

pachyhymenic (păk-ke-hi-men'ik). Pachymenic.

pachyleptomeningitis (păk-ke-lep"to-men-in-ji'(je')-tis) [G. *pachys*, thick, + *leptos*, thin, + *mēninx* (*mēning-*), membrane, + *-itis*] Inflammation of all the membranes of the brain or spinal cord.

pachylosis (păk-ke-lo'sis) [G. *pachylos*, rather coarse.] Xerosis, a condition of roughness, dryness, and thickening of the skin, either general or local.

pachymenia (păk-ke-me'nĭ-ah). Pachyhymenia, pachydermia, thickening of the skin or other membranes.

pachymenic (păk-ke-men'ik). Marked by thickening of the skin or other membranes, pachyhymenic, pachydermatous.

pachymeningitis (păk-ke-men-in-ji'(je')tis) [G. *pachys*, thick, + *mēninx*(*mēning-*), membrane, + *-itis*] Inflammation of the dura mater. **p. exter'na,** inflammation of the outer surface of the dura mater. **p. inter'na,** inflammation of the inner surface of the dura mater.

pachymeninx (păk-ke-me'ninks) [G. *pachys*, thick, + *mēninx*, membrane.] The dura mater.

pachymeter (păk-kim'e-ter) [G. *pachys*, thick, + *metron*, measure.] An instrument for measuring the thickness of any object, especially of thin objects such as a plate of bone or a membrane.

pachynsis (păk-kin'sis) [G. thickening.] Any pathological thickening.

pachyntic (păk-kin'tic). Relating to pachynsis, pathologically thickened.

pachyonychia (pak"ĭ-o-nik'ĭ-ă) [G. *pachys*. thick, + *onyx* (*onych-*), nail.] Abnormal thickness of the nails of the fingers or toes.

pachyotia (păk-kĭ-o'shĭ-ah) [G. *pachys*, thick, + *ous*(*ōt-*), ear.] Thickness and coarseness of the auricles.

pachypelviperitonitis (păk-ke-pel"vĭ-per-ĭ-tō-ni'(ne')-tis). Pachyperitonitis of the pelvis.

pachyperitonitis (păk-ke-per-ĭ-tō-ni'(ne')tis) [G. *pachys*, thick, + *peritonaion* peritoneum, +

-itis.] Productive peritonitis, inflammation of the peritoneum with thickening of the membrane.

pachypleuritis (pak-i-plu-ri'(re')tis) [G. *pachys*, thick, + *pleura* + *-itis*.] Productive pleurisy, inflammation of the pleura with thickening of the membrane.

pachypodous (păk-kip'o-dus) [G. *pachys*, thick, + *pous*(*pod-*), foot.] Having large thick feet.

pachysalpingitis (păk-ke-sal-pin-ji'(je)tis) [G. *pachys*, thick, + *salpinx* + *-itis*.] Chronic parenchymatous salpingitis.

pachysalpingo-oothecitis (păk-ke-sal"pin-go-o-o-the-si'(se')tis) [G. *pachys*, thick, + *salpinx*(*salping-*), trumpet, + *ōothēkē*, ovary, + *-itis*.] Chronic parenchymatous inflammation of the ovary and Fallopian tube.

pachysalpingoovaritis (păk-ke-sal"pin-go-o-văr-i'(re')tis) [G. *pachys*, thick, + *salpinx* + L. *ovarium*, ovary, + G. *-itis*.] Pachysalpingo-oothecitis.

pachysomia (păk-ke-so'mĭ-ah) [G. *pachys*, thick, + *sōma*, body.] Pathological thickening of the soft parts of the body, notably in acromegaly.

pachyvaginalitis (păk-ke-vaj-in-al-i'(e')tis) [G. *pachys*, thick, + L. (tunica) *vaginalis* + G. *-itis*.] Chronic inflammation with thickening of the tunica vaginalis testis.

pachyvaginitis (păk-ke-vaj-in-i'(e')tis) [G. *pachys*, thick, + L. *vagina* + G. *-itis*.] Chronic colpitis with thickening and induration of the vaginal walls **p. cys'tica,** colpohyperplasia cystica.

Pacinian (pă-sin'(chin')ĭ-an). Referring to or described by Filippo *Pacini* (pah-che'ne), Italian anatomist, 1812–1883; noting especially the *Pacinian corpuscle* or *body*, corpusculum* lamellosum.

pacinitis (păk-sin-(chin)-i'(e')tis). Inflammation of the Pacinian corpuscles.

pack. 1. To fill or stuff, to tampon. 2. To enwrap, to envelop the body in a wet sheet or blanket. 3. The process of enveloping one in a wet sheet or blanket, or the material so used. **cold p.,** a p. in a sheet wrung out of cold water **dry p.,** enveloping one in dry warmed blankets in order to induce profuse perspiration. **hot p.,** a p. in a sheet wrung out of hot water. **wet p.,** the usual form of p. in a sheet wrung out of hot or cold water.

pack'er. An instrument for use in tamponing the vagina or other cavity.

pack'ing. 1. Tamponing, filling a natural cavity or a wound with cotton-wool, gauze, or other material. 2. The material used in packing. 3. The application of a wet pack.

pad. A bundle of soft material forming a cushion, used in making pressure on a part, in relieving pressure, or in filling a depression so that dressings may fit snugly. **suck'ing p.,** corpus adiposum buccæ.

pæd-. For words so beginning see under *ped-*.

Pagano's reac'tion (pah-gah'no). A reaction similar to the conjunctival reaction of Calmette, when the tuberculin preparation is applied to the meatus urinarius.

Pagenstecher oint'ment (pah'gen-stekh-er) [Alexander *Pagenstecher*, German ophthalmologist, 1828–1879.] An eye-salve containing yellow oxide of mercury.

Pagenstecher's circle (pah'gen-stekh-erz sur'kl). In the case of a freely movable abdominal tumor, the mass is moved throughout its entire range, its position at intervals being marked on the abdominal wall; when these points are joined a circle is formed, the center of which marks the point of attachment of the tumor. **P.'s thread,** celluloid yarn, linen thread impregnated with celluloid; employed as a suture material, especially in intestinal work.

Paget's ab'scess (paj'et) [Sir James *Paget*, English surgeon, 1814–1899.] Residual abscess.* **P.'s cells,** peculiarly transformed epithelial cells, formerly regarded as psorospermia, occurring in P.'s disease of the nipple. **P.'s disease',** (1) osteitis deformans; (2) an eczematoid affection of the nipple and areola, sometimes becoming carcinomatous **P.'s fi'broid,** spindle-cell sarcoma in the subcutaneous connective tissue.

pagoplex'ia [G. *pagos*, frost, + plēxis, stroke.] Frostbite.

-pagus [G. *pago*, *pēgnymi*, I fasten together.] A termination denoting a twin monster, the first element of the word denoting the point of attachment; practically the same as *-dymus*.

Pahvant Valley plague (pah'vant val'ĭ plāg) [*Pahvant* Valley in Millard County, Utah.] Tularemia.

paidol'ogy. Pædology, pedology.*

pain [L. *pœna*, a fine, a penalty] 1. Suffering, either physical or mental; an impression on the sensory nerves causing distress or, when extreme, agony. 2. One of the uterine contractions occurring in childbirth. **after-pains,** uterine contractions continuing after the completion of labor **bearing-down' p.,** a uterine contraction accompanied with straining and tenesmus. **false pains,** colicky pains due to slight uterine contractions, preceding the beginning of labor. **girdle p.,** a painful sensation encircling the body like a belt, occurring in tabes dorsalis or other spinal-cord disease **growing p.,** a rheumatic p or cramp occurring in the young. **imper'ative p.,** an insistent painful sensation, occurring especially in psychasthenics **intermenstrual p.,** mid-pain, pelvic pain of uncertain causation, occurring with each successive intermenstrual period. **osteocop'ic p.,** pains in the bones, especially at night. **referred p.,** a p., such as that of angina pectoris or the knee-pain of coxitis, felt at a place more or less remote from its source.

abdomen, celialgia, celiodynia, cœlialgia, cœliodynia, splanchnodynia, visceralgia, colic, bellyache; see also *bladder*, *intestine*, *kidney*, *liver*, *ovary*, *ureter*, *uterus*. **abnormal,** paralgia, paralgesia. **absence of,** analgia, analgesia, anodynia. **ankle,** tarsalgia. **anus,** proctalgia, proctodynia, proctagra. **arm,** brachialgia. **back,** notalgia, dorsalgia, rachialgia, notodynia, dorsodynia; lumbago, osphyalgia, lumbodynia; see also *spine*. **bladder,** cystalgia, cystodynia. **bone,** osteocopus, dolor nocturnus, dolor tenebrans (night pain of syphilis). **breast,** mastalgia, mastodynia, mazodynia, mammalgia. **burning,** causalgia, adaxoma. **cartilage,** chondralgia, chondrodynia. **caused by a touch,** haphalgesia. **caused by cold,** cryalgesia. **caused by heat,** thermalgesia. **caused by light,** photalgia, hyperalgesia optica. **caused by sounds,** hyperalgia acustica, hyperesthesia acustica, odynacusis. **causing,** algetic, algogenic, odynephorous, dolorific. **chest,** thoracalgia, thoracodynia, thoracomyodynia, intercostal neuralgia, pleurodynia. **coccyx,** coccyodynia, coccygodynia, coccyalgia, coccydynia. **cornea,** keratalgia, ceratalgia, keratodynia, ceratodynia. **diaphragm,** diaphragmalgia, diaphragmodynia. **diminished sensation,** hypalgesia, hypalgia. **during sleep,** hypnalgia. **ear,** otalgia, otodynia, earache. **elbow,** anconalgia. **excessive,** hyperalgia, megalgia. **extremities,** melagra, melalgia. **eye,** ophthalmagra, ophthalmalgia, ophthalmodynia. **face,** dolor faciei, face-ache, facial neuralgia, prosopalgia, prosopodynia, prosoponeuralgia. **fear of,** algophobia, odynephobia. **fingers,** dactylalgia. **foot,** podalgia, pododynia. **hand,** chiralgia. **head,** headache, cephalalgia, cephalodynia, **migraine,** hemicrania, dolor **capitis,** brow-ache, brow-ague, cerebralgia; monopegia, clavus (localized). **heart,** cardiagra, cardiodynia, angina **pectoris** angor pectoris, **heavy, baryodynia. heel,** talalgia. **hip coxagra,** coxalgia, coxodynia, ischias, ischioneuralgia, ischialgia. **increased sensation,** hyperalgesia. **in defecating,** tenes-

mus.in swallowing, odynphagia,sore-throat,dysphagia, angina. **intestine,** enteralgia, enterodynia, tormina, gripes, colic. **in urinating,** odynuria, dysuria, strangury, tenesmus vesicæ. **iris,** iridalgia, iralgia. **jaw,** gnathalgia. **joint,** arthralgia, arthrodynia. **kidney,** nephralgia, **nephrodynia, nephrodysneuria. knee,** gonalgia, gonyalgia. **larynx,** laryngalgia, laryngodynia. **leg,** melagra, melalgia, meralgia, scelalgia. **ligament, desmalgia,** desmodynia. **liver,** hepatalgia, hepatodynia. **loss of sensation of,** analgesia, anesthesia (all sensation); hemianalgesia, hemianesthesia (on one side). **measurement of,** algometry. **menstrual,** dysmenorrhea. **mental,** psychalgia. **mouth,** stomatalgia, stomatodynia. **muscle,** myalgia. myodynia. **neck,** trachelodynia, cervicodynia. **nerve,** neuralgia, neurodynia. **nose,** rhinalgia, rhinodynia. **on movement,** cinesalgia, cinesialgia, kinesalgia, kinesialgia, oxycinesia. **ovary,** oothecalgia, oophoralgia, ovarialgia, ovarialgia, ovarian neuralgia. **pancreas,** pancreatalgia. **penis,** phallalgia, phallodynia. **pharynx,** pharyngalgia, pharyngodynia. **prepuce,** posthalgia, **rectum,** proctagra, proctalgia, proctodynia, rectalgia. **relieving,** analgesic, anodyne, anesthetic. **resulting from overuse of a part,** epersalgia. **sacrum,** heiralgia. **shoulder,** omagra, omalgia, omodynia. **side,** pleurodynia. **slight,** hypalgia. **spine,** rhachiagra, rachiorrheuma, rhachialgia, rhachiodynia, spondylalgia, spondylodynia; hieralgia (sacrum); coccyalgia, coccygodynia, coccydinia, coccyodynia (coccyx); notalgia. **spleen,** splenalgia, splenodynia. **sternum,** sternalgia, sternodynia. **stomach,** gastralgia, gastrodynia, cardialgia, stomachache, stomachalgia. **sympathetic,** synalgia. **teeth,** odontalgia, odontodynia, odontagra, toothache. **testicle,** orchialgia, orchidalgia, orchiodynia, orchidodynia. **thigh,** meralgia; ischias, ischialgia, sciatica (in the sciatic nerve). **tongue,** glossalgia, glossodynia. **ureter,** ureteralgia. **urethra,** urethralgia, urethrodynia. **uterus,** hysteralgia, hysterodynia, hysterocolic, metralgia, metrodynia, uteralgia, uterine colic. **vagina,** colpalgia, colpodynia. **varieties,** boring, pungent, terebrant; darting, shooting, lancinating, fulgurant, lightning; nocturnal, osteocopic; jumping, starting; tearing, lacerating; grinding, tensive; throbbing; acute, sharp; dull; aching; girdle; labor: false, niggling, premonitory, bearing-down, dilating, expulsive, after-

paint'er's col'ic. Lead colic.*

Pajot's hook (pă-zho') [Charles *Pajot,* Parisian accoucheur, 1816–1896.] A hook used in decapitation of the fetus; it has a groove which carries a strong cord, the decapitation being effected by a sawing movement of the string.

palæencephalon, palæogenesis, palæontology, etc. See *paleencephalon, paleogenesis, paleontology,* etc.

pal'atal. Relating to the palate or the palate bone.

pal'ate [L. *palatum.*] Palatum, uraniscus, the roof of the mouth, the bony and muscular partition between the oral and the nasal cavities; popularly the uvula. **arch of the p.,** the vaulted roof of the mouth. **cleft p.,** palatum fissum, uranoschisis; a congenital fissure in the median line of the palate, usually associated with harelip. **falling p.,** elongated uvula, uvula descendens, cionoptosia, staphyloptosia. **hard p.,** palatum durum, the bony portion of the roof of the mouth. **pen'dulous p.,** soft p.; uvula. **soft p.,** palatum molle, velum pendulum palati, the posterior fleshy portion of the palate, dividing the oral from the nasal pharynx.

pal'ate-hook. An instrument for pushing aside the soft palate in order to facilitate posterior rhinoscopy.

palate-my'ograph. Palatograph.

palat'iform [L. *palatum,* palate, + *forma,* form.] Palate-shaped, resembling the palate.

palatine (pal'a-tin) [L. *palatinus.*] Relating to the palate.

pal'atinoid. Trade name of a form of envelope or capsule used for the administration of drugs of bitter or disagreeable taste.

palatitis (pal-ă-ti'(te')tis) [L. *palatum,* palate, + G. *-itis.*] Uranisconitis.

pal"atogloss'al. Relating to the palate and the tongue, or to the palatoglossus muscle.

palatoglos'sus [L. *palatum* + G. *glōssa,* tongue.] The palatoglossal muscle; see under *musculus.*

palatog'nathous [L. *palatum,* palate, + G. *gnathos,* jaw.] Having a cleft palate.

pal'atograph [L. *palatum* + G. *graphō,* I record.] Palate-myograph, an instrument used in recording the movements of the soft palate in speaking and during respiration.

pal"atomax'illary. Relating to the palate and the maxilla.

palatomy'ograph [L. *palatum* + G. *mys,* muscle, + *graphō,* I record.] Palatograph.

palatona'sal. Relating to the palate and the nasal fossæ.

palatopharyn'geal. Relating to palate and pharynx.

pal"atopharynge'us. The palatopharyngeal muscle; musculus* pharyngopalatinus.

pal'atoplasty [L. *palatum* + G. *plassō,* I form. Uranoplasty.

palatople'gia [L. *palatum,* palate, + G. *plēgē,* stroke.] Uranoplegia, paralysis of the soft palate.

palator'rhaphy [L. *palatum* + G. *rhaphē,* suture.] Uranorrhaphy.

pal"atosalpinge'us [L. *palatum,* palate, + G. *salpinx,* trumpet.] Musculus tensor veli palatini.

palatoschisis (pal-ă-tos'kĭ-sis) [L. *palatum* + G. *schisis,* fissure.] Uranoschisis.

pal"atostaphyli'nus [L. *palatum* + *staphylē,* uvula.] A bundle of muscular fibers from the tensor veli palatini joining the musculus uvulæ.

pal"ato-uvula'ris muscle. Musculus uvulæ.

pala'tum [L.] Palate. **p. du'rum** [BNA], hard palate; a concave elliptical bony plate, constituting the roof of the oral cavity, formed of the palatine process of the maxilla and the horizontal portion and part of the pyramidal process of the palate bone on either side. **p. mol'le** [BNA], soft palate, velum pendulum palati, the posterior muscular portion of the palate, forming an incomplete septum between the mouth and the pharynx, and between the pharynx and the nasal fossæ.

pal'ea [L. chaff.] In botany: 1 A scaly outgrowth of the epidermis in ferns. 2. An inner bract subtending the flower in grasses. 3. A bracteole.

paleencephalon, palæencephalon (pal-e-en-sef'a-lon) [G. *palaios,* ancient, + *enkephalos,* brain.] Edinger's term for the metameric* or propriospinal nervous system.

paleocerebellum, palæocerebellum (pal"e-o-ser-e-bel'lum) [G. *palaios,* old.] The earlier developed portions of the cerebellum. The vermis and flocculus; see *neocerebellum.*

paleocinetic (pal"e-o-sin-et'ik) [G. *palaios,* ancient, + *kinētikos,* relating to movement.] Noting one of the divisions of the motor system of peripheral nerves the function of which is the transmission of automatic and associated movements; it represents a primitive and diffuse form of movement which is under the control of the corpus striatum and is subserved by a striospinoneural system; see *neocinetic.*

paleoencephalon, paloæencephalon (pal"e-o-en-sef'a- lon). Paleencephalon.

paleogenesis, palæogenesis (pa"le-o-jen'e-sis) [G *palaios,* ancient, + *genesis,* origin.] The hereditary transmission of peculiarities of organization, in absolute latency for periods of indefinite length; invoked by Hutchinson in explanation of certain human diseases—the dappled skin of leucoderma colli, for example, a similar marking occurring normally in the deer and horse; the condition in both animals and man being an inheritance from some infinitely remote common ancestor.

paleogenet'ic. Relating to palæogenesis.

paleokinetic (pal-e-o-kin-et'ic). Paleocinetic.

paleontology, palæontology (pa''le-on-tol'o-jĭ) [G. *palaios*, ancient, + *ōn(ont-)*, a being, + *-logia*.] Science in relation to life on the globe in the most ancient times, as revealed in the fossil remains.

paleopathology (pa-le-o-păth-ol'o-jĭ) [G. *palaios*, ancient, + *pathology*.] Study of disease in prehistoric times, as revealed in statues, drawings on stone, and the bones of ancient races of mankind.

paleostriatal (pal-e-o-stri'a-tal). Relating to the paleostriatum, pallidal. **p. syn'drome,** Hunt's syndrome (3).

paleostriatum (pal-e-o-stri-a'tum) [G. *palaios*, old, ancient, + *striatum*.] The internal portion of the lenticular nucleus, the globus pallidus, phylogenetically older than the neostriatum.

paleothalamus, palæothalamus (pal-e-o-thal'a-mus.] The medullary portion of the thalamus.

palicinesia, palikinesia (pal-ĭ-sin(kin)-e'sĭ-ŭ) [G. *palin*, again, + *kinēsis*, movement.] Involuntary repetition of movements.

palilalia (pal-ĭ-la'lĭ-ah) [G. *palin*, again, + *lalia*, a form of speech.] Paliphrasia.

pal'inal. [G. *palin*, backward.] Moving backward.

palindromia (pal-in-dro'mĭ-ah) [G. a running back.] A relapse or recurrence of a disease.

palindrom'ic. Relapsing, recurring.

palingen'esis [G. *palin*, again, + *genesis*, production.] 1. The transmission of hereditary peculiarities in succeeding generations. 2. Regeneration.

paliphrasia (pal-ĭ-fra'zĭ-ah) [G. *palin*, again, + *phrasis*, speech.] Involuntary repetition of words or sentences in talking.

palirrhe'a, palirrhœ'a [G. *palirrhoia*, the ebb and flow of the tide.] 1 The return of a discharge after its cessation. 2. Regurgitation.

palisade' lay'er, the basal layer, of columnar epithelial cells containing pigment, of the stratum mucosum. **p. worm,** *Strongylus equinus*.

palla'dium. A metallic element, symbol Pd, atomic weight 106.7, resembling platinum.

pallanesthesia, pallanæsthesia (pal''an-es-the'zĭ-ah) [G. *pallō*, I quiver, + *anaisthēsia*, insensibility.] Apallesthesia, absence of pallesthesia.

palles'cence [L. *pallescere*, to become pale.] Pallor.

pallesthesia (pal''es-the'zĭ-ah) [G. *pallō*, I quiver, + *aisthēsis*, sensation.] A peculiar vibrating sensation, such as is felt when the foot of a tuning-fork in vibration is placed over subcutaneous bony surfaces.

pal'lial. Relating to the pallium cerebri.

pall'iate [L. *palliatus; palliare*, to cloak.] To mitigate, to reduce the severity of, to relieve slightly.

pall'iative. Mitigating, reducing the severity of; noting a method of treatment of a disease or of its symptoms.

pallidal (pal'ĭ-dal). Relating to the pallidum, or globus pallidus. **p. syn'drome,** Hunt's syndrome (3).

pall'idum [L. *pallidus*, pale.] The globus* pallidus of the lenticular nucleus.

pal'lium [L. cloak.] Mantle, brain-mantle, the cerebral cortex with the subjacent white substance.

pall'or [L.] Paleness.

palm (pahm) [L. *palma*.] 1. The flat of the hand, the flexor or anterior surface of the hand, the opposite of the dorsum; vola manus [BNA]; it includes roughly the anterior surface of the metacarpus from the wrist to the fingers. 2. A palm-tree, a member of the order *Palmæ* including the cocoanut-palm, the date-palm, etc.

palma (pal'mah) [L.] 1. Palm of the hand, **vola.** 2. Palm-tree.

pal'mar [L. *palmaris* from *palma*.] Referring to the palm of the hand, volar. **p. arch,** arcus* volaris [BNA].

palmaris (pal-mah'(ma')ris). One of two muscles *p. brevis* and *p. longus;* see under *musculus*.

pal'mate. In botany, noting a leaf about as broad as long.

palmat'ifid [*palmate* + L. *findere*, to cleave.] In botany, noting a palmate leaf with the blade cut about half way in toward the midrib.

palmature (pal-mă-tūr) [L. *palma*, palm.] Adhesion or webbing of the fingers.

Palmel'la [G. *palmos*, a jelly-like vibration.] A genus of algæ, colonies of which occur enclosed in a jelly-like mass. **p. stage,** a stage in the growth of certain of the lower vegetable organisms in which the colonies are enclosed in a jelly-like mass, zooglea stage. **P. cruen'ta,** a species of fresh-water algæ, the source of palmellin.

pal'mellin. A red coloring matter formed by an alga, *Palmella cruenta*.

palmett'o [Sp. *palmito*, dim. of *palma*, palm.] A name given to a number of small palm trees. **saw p.,** sabal.

pal'mic. 1. Relating to a palmus, beating, throbbing. 2. Palmitic.

pal'min. Palmitin. **p. test,** a test of pancreatic efficiency, based upon the fact that the presence of fat in the stomach causes the pylorus to open and admit the pancreatic juice; this splits the palmin so that an examination of the stomach contents after a test-meal containing palmin, will reveal the presence of fatty acids.

palmitate (pal'mĭ-tāt). A salt of palmitic acid.

palmit'ic acid. An acid, $C_{16}H_{32}O_2$, occurring in palm oil and other fats.

pal'mitin. Tripalmitin, a solid crystallizable substance, the triglyceride of palmitic acid, occurring in palm-oil; it melts at 113° F. (85° C.).

palmod'ic. Relating to palmus (1).

pal'moform. Methylene guaiacol, a colorless, tasteless, and odorless powder obtained by the action of formic aldehyde on guaiacol, employed for the same purposes as guaiacol in doses of gr 8–15 (0.5–1.0).

palmos'copy [G. *palmos*, pulsation, + *skopeō*, I examine.] Examination of the cardiac pulsation.

pal'mus [G. *palmos*, pulsation, quivering.] 1. Convulsive tic. 2. Rhythmical fibrillary contractions in a muscle. 3. The heart-beat.

pal'pable [G. *palpabilis; palpare*, to feel.] 1. Perceptible to touch; that can be palpated. 2. Evident, plain, manifest.

pal'pate. To examine by feeling and pressing with the palms of the hands and the fingers.

palpa'tion. 1. Examination by means of the hands, to outline the organs or tumors of the abdomen, to determine the degree of resistance of various parts, to feel the heart beat, the vibrations in the chest, etc. 2. Touching, feeling or perceiving by the sense of touch.

palpatom'etry [*palpation* + G. *metron*, measure.] Measurement of the degree of pressure which can be made without causing pain.

pal''patopercus'sion. Examination by means of combined palpation and percussion.

palpato'rium. An instrument used to detect tender points in the abdomen by palpation during a fluoroscopic examination.

palpebra, pl. *palpe'bræ*, gen. pl. *palpebra'rum* (pal-pe'brah) [L.] Eyelid. **p. infe'rior,** p. **malaris** [NK], lower eyelid. **p. supe'rior,** p. **frontalis**

[NK], upper eyelid. **p. ter'tia,** third eyelid, the membrana* nictitans in the horse.

pal'pebral. Relating to an eyelid or the eyelids.

palpebra'lis. Palpebral muscle, musculus levator palpebræ superioris.

pal'pebrate [L. *palpebra*, eyelid] 1. Having eyelids. 2. To wink.

palpebra'tion. Winking.

palpebritis (pal-pe-bri'(bre')tis) [L. *palpebra*, eyelid, + G. *-itis*.] Blepharitis.

palpitation (pal-pi-ta'shun) [L. *palpitare*, to throb.] Forcible pulsation of the heart, perceptible to the patient, usually with an increase in frequency, with or without irregularity in rhythm.

palsy (pawl'zi). Paralysis. **Bell's p.,** facial paralysis. **birth-p.,** obstetrical paralysis, paralysis, hemiplegia or diplegia, due to cerebral hemorrhage occurring at birth or to a disease of intrauterine life. **bulbar p.,** glossolabiolaryngeal paralysis. **creeping p.,** progressive muscular atrophy. **crutch p.,** paralysis of the arm caused by the pressure of the crosspiece of a crutch. **lead p.,** paralysis of the extensor muscles of the wrist occurring in poisoning by lead; wristdrop. **night p.,** waking numbness.* **printer's p.,** a neuritis, due to chronic antimonial poisoning, affecting chiefly the ulnar side of the forearm and hand. **scriv'ener's p.,** writer's cramp. **shaking p.,** paralysis agitans. **wasting p.,** progressive muscular atrophy.

Paltauf's dwarf'ism or **nan'ism** (pahl'towf) [Arnold *Paltauf*, German physician, 1860–1893.] A form of nanism associated with lymphatism.

Paltauf's modification of Gram's stain (pahl'towf) [Richard *Paltauf*, Vienna, 1858–1924.] To a mixture of 7 c.c. absolute alcohol and 90 c.c. distilled water add 3–5 c.c. aniline oil, and after filtering add 2 gm. Gruebler's gentian-violet.

Paltauf-Sternberg disease' (pahl'towf stärn'bärg) [Richard *Paltauf*, Vienna pathologist, 1858–1924; Karl *Sternberg*, German pathologist, *1872.] Lymphogranulomatosis

pal'udal [L. *palus*, a swamp] 1. Marshy. 2. Malarial.

paludide (pal'u-dēd) [Fr] A skin eruption of supposed malarial causation.

pal'udism [L. *palus(palud-)*, marsh] Malaria.

palus'tral [L. *palus*, a swamp.] Paludal.

pambota'na bark. The bark of a Mexican tree, *Calliandra houstoni*, which has been used as a substitute for cinchona, in doses of ʒ½ (15.0).

pampin'iform [L. *pampinus*, tendril, + *forma*, form.] Resembling a tendril. **p. plexus,** a plexus of veins of the spermatic cord, see *plexus** *pampiniformis*.

pampinocele (pam-pin'o-sēl) [L. *pampinus*, tendril, + G. *kēlē*, tumor.] Varicocele.

pample'gia [G. *pas(pan)*, all, + *plēgē*, stroke.] Panplegia.

pan- [G. *pas(pan)*, all.] A prefix to words derived from Greek roots, implying all, entire.

panacea (pan-ă-se'ah) [G. *panakeia*, a universal remedy.] A remedy claimed to be curative of all diseases; a cure-all.

panagglutinable (pan-ag-glu'tin-a-bl) [G. *pas, pan*, all.] Agglutinable with all types of human serum, noting erythrocytes having this property.

Panama' bark Quillaja. **P. fever,** Chagres fever, pernicious remittent fever.

pan'aris, panaritium (pan-ă-rish'i-um) [L.] Whitlow, paronychia.*

panarteritis (pan-ar-ter-i'(e')tis) [G. *pas (pan)*, all, + *arteria*, artery, + *-itis*.] 1. Generalized arteritis, polyarteritis. 2. Arteritis involving all the coats of the vessel.

panarthritis (pan-ar-thri'(thre')tis) [G. *pas(pan)*, all, + *arthron*, joint, + *-itis*.] 1. Inflammation involving all the tissues of a joint. 2. Inflammation of all the joints of the body.

panase (pan'āz). A mixture of the digestive enzymes from the pancreas of the pig; a light yellowish white powder of faint odor and taste, recommended for use in starch indigestion in doses of gr. 2 (0.13 gm.).

Panas's opera'tion (pă-nah') [Photinos *Panas*, Parisian ophthalmologist, 1832–1903] Connecting the upper eyelid with the occipitofrontalis muscle, for the relief of congenital ptosis.

panat'rophy [G. *pas(pan-)*, all, + *atrophia*, atrophy] 1. Atrophy of all the parts of a structure. 2. General atrophy of the body.

pa'nax. Ginseng, the root of several species of *Panax* of the family *Arabiaceæ*. The American ginseng, *P. quinquefolia* is employed in eclectic practice as a mild sedative and in cases of nervous dyspepsia, in hourly doses of ♏½–1 (0.03–0.06) in water, of the specific preparation.

panblas'tic [G. *pas(pan)*, all, + *blastos*, germ.] Relating to all the layers of the blastoderm.

pancarditis (pan-kar-di'(de')tis) [G. *pas(pan)*, all, + *kardia*, heart, + *-itis*.] Inflammation of all the structures of the heart.

panchrest (pan'krest) [G. *panchrēstos*, good for everything] Panacea, cure-all.

Pan'coast's opera'tion [Joseph *Pancoast*, Philadelphia surgeon, 1805–1882.] Division of the trigeminal nerve at the foramen ovale. **P.'s su'ture,** union of two edges, in plastic surgery, by a tongue-and-groove arrangement.

pancreaden (pan'kre-ă-den). Trade name of a pancreatic extract recommended in diabetes.

pan'creas [G. *pas(pan)*, all, + *kreas*, flesh] Abdominal salivary gland; in animals used for food, abdominal sweetbread; an elongated lobulated gland, devoid of capsule, extending from the concavity of the duodenum to the spleen; it consists of a flattened head (*caput*) at the duodenal end, a curved neck (*collum*) and an elongated three-sided body (*corpus*) extending transversely across the abdomen. The tail (*cauda*) is the pointed left extremity of the body in contact with the spleen. The gland secretes the pancreatic juice, discharged into the intestine, and an internal secretion. **lesser p.,** p. minus. **p. accesso'rium,** a detached portion of pancreatic tissue sometimes found in the wall of the stomach or of the duodenum. **p. minus,** the unciform process of the p., or that part which extends along the upper aspect of the third portion of the duodenum, which is sometimes entirely detached from the rest of the gland; called also lesser, small, uncinate, Willis's, or Winslow's pancreas, and processus uncinatus [BNA]. **p. of Asel'li,** a collection of mesenteric glands near the cecum into which many of the lymphatics of the small intestine and of the beginning of the large intestine empty **small p., un'ciform p., un'cinate p.,** p. minus.

calculus, pancreatolith. **disease,** pancreopathy, pancreatopathy. **enlargement,** pancreatemphraxis, pancreatoncus. **excision,** pancreatectomy, pancreectomy. **ferments,** pancreatin, amylopsin, trypsin, steapsin, **incision,** pancreatomy, pancreatotomy. **inflammation,** pancreatitis. **pain,** pancreatalgia. **tumor,** pancreatoncus. **ulceration,** pancreathelcosis.

pancreatalgia (pan"kre-ă-tal'ji-ah) [G. *pankreas* + *algos*, pain.] Pain in the pancreas.

pancreatectomy (pan''kre-ă-tek'to-mĭ) [G. *pankreas* + *ektomē*, excision.] Excision of the pancreas.

pan''createmphrax'is [G. *pankreas* + *emphraxis*, a stoppage.] Obstruction in the pancreatic duct, causing swelling of the gland.

pancreathelcosis (pan''kre-ath-el-ko'sis) [G. *pankreas* + *helkōsis*, ulceration.] Suppurative inflammation or abscess of the pancreas.

pancreatic (pan-kre-at'ĭk). Relating to the pancreas. **p. juice,** the external secretion of the pancreas, a clear alkaline fluid containing several enzymes: a diastatic enzyme, *amylopsin;* two proteolytic enzymes, *trypsin* and *myopsin;* a steatolytic enzyme, *steapsin;* an enzyme emulsifying neutral fats, and a milk-curdling enzyme.

pancreat''icoduod'enal. Relating to the pancreas and the duodenum.

pancreatin, pancreatinum (pan'kre-ă-tin, pan''kre-ah-te'num). (U.S., Br.) A mixture of the enzymes from the pancreas of the ox or hog, occurring in the form of a cream-colored powder; employed internally as a digestive, and also as a peptonizing agent in preparing predigested foods; it contains the proteolytic *trypsin* and *myopsin*, the amylolytic *amylopsin*, and the lipolytic *steapsin*.

pancreatinokinase (pan-kre-at''ĭ-no-kin'āz). Trade name of a mixture of pancreatin and eukinase, recommended as a digestant.

pancreatism (pan'kre-ă-tizm). Functioning of the pancreas.

pancreatitis (pan-kre-ă-ti'(te')tis). Inflammation of the pancreas.

pancreatolith (pan-kre-at'o-lith) [G. *pankreas* + *lithos*, stone] A pancreatic concretion, pancreatic calculus.

pancreatolithotomy (pan''kre-ă-to-lĭ-thot'o-mĭ) [G. *pankreas* + *lithos*, stone, + *tomē*, incision.] Operation for the removal of a calculus from the pancreas.

pancreatolysis (pan''kre-ă-tol'i-sis) [G. *pankreas* + *lysis*, solution] Destruction of the substance of the pancreas.

pancreatolytic (pan''kre-at-o-lit'ik). Relating to pancreatolysis, destructive to the pancreatic tissues.

pancreat'omy. Pancreatotomy.

pancreaton'cus [G. *pankreas* + *onkos*, swelling. A tumor of the pancreas.

pancreatop'athy [G *pankreas* + *pathos*, suffering. Any disease of the pancreas

pancreatotomy (pan-kre-ă-tot'o-mĭ) [G. *pankreas* + *tomē*, incision.] Incision of the pancreas for the removal of a new growth, evacuation of a calculus, etc.

pancreectomy (pan-kre-ek'to-mĭ). Pancreatectomy.

pancreobis'muth. Trade name of a digestive mixture of bismuth and the pancreatic ferments.

pan''creodiges'tin. Trade name of a mixture of several of the digestive ferments with lactic and hydrochloric acids.

pan'creolith, pan''creolithot'omy. Pancreatolith, pancreatolithotomy.

pancreol'ysis. Pancreatolysis

pancreoly'tic. Pancreatolytic

pan'creon, pan'kreon. Trade name of a gray powder obtained by the action of tannin on pancreatin; recommended as a substitute for pancreatin in doses of gr. 5–8 (0.3–0.5).

pancreop'athy. Pancreatopathy.

pancrobilin (pan-kro-bi'lin). Trade name of a preparation containing pancreatic extract and bile salts, recommended in the treatment of sluggish peristalsis and intestinal indigestion.

pandem'ic [G. *pas(pan)*, all, + *dēmos*, the people.] Noting a disease affecting or attacking all, or a large proportion of the population of a region extensively epidemic.

Pan'der's island or **nu'cleus** [Heinrich Christian von *Pander*, German anatomist, 1794–1865.] A lenticular collection of nerve-cells lying beneath the thalamus, between the nucleus tegmenti and the corpus albicans.

pandicula'tion [L. *pandiculari*, to stretch oneself.] The act of stretching, as when awaking.

pan'digal [G. *pan*, all, + *digitalis*.] Trade name of a preparation said to contain all the glucosides of digitalis without the saponins and other injurious or useless constituents.

Pandy's reac'tion (pahn'de) [K. *Pandy*, Hungarian neurologist, *1868.] To determine the presence of proteins (chiefly globulins) in the spinal fluid. One drop of spinal fluid is added to 1 c.c. of a solution of 1 part carbonic acid crystals in 15 parts distilled water; or of a 4 per cent solution of cresol, or of a 10 per cent solution of pyrogallic acid; the reaction varies from a faint turbidity to a dense "milky" precipitate according to the degree of albuminous content, being therefore a quantitative as well as a qualitative test.

panelec'troscope. A sort of universal electroscope, for viewing the accessible cavities and canals of the body by electric illumination

panesthesia, panæsthesia (pan-es-the'zĭ-ah) [L. *pas(pan)*, all, + *aisthēsis*, sensation.] The sum of all the sensations experienced by a person at a given period; cenesthesia.

Paneth's gran'ular cells (pah'nāt) [Josef *Paneth*, German physician, *1857.] Granular cells in the glands of Lieberkuhn, present between the epithelial cells at the bottom of the crypts.

pangad'uin. A substance supposed to contain all the essential principles of cod-liver oil.

pan'gen [G. *pas*, all, + *gennaō*, I produce.] Determinant.

pangen'esis [G. *pas(pan)*, all, + *genesis*, production.] The theory of Darwin that every separate part of the organism reproduces itself in the progeny, each ovule and spermatozoon containing a particle or germ thrown off from each separate unit in the parent organism.

pangloss'ia [G. *pas(pan)*, all, + *glōssa*, tongue.] Garrulity, especially of the insane.

panhidro'sis [G *pas(pan)*, all, + *hidrōs* sweat.] General perspiration, panidrosis.

panhydrom'eter [G. *pas(pan)*, all, + *hydōr*, water, + *metron*, measure.] An hydrometer for use in determining the specific gravity of any liquid.

panhy'grous [G. *pas(pan)*, all, + *hygros*, damp.] Universally moist.

panhyperemia, panhyperæmia (pan-hi-per-e'mĭ-ah) [G. *pas(pan)*, all, + *hyper*, over, + *haima*, blood.] Universal congestion or hyperemia; plethora.

panhysterec'tomy [G. *pas(pan)*, all, + *hystera*, uterus, + *ektomē*, excision] Removal of the entire uterus, including the cervix.

panhys''terocolpec'tomy [G. *pas(pan)*, all, + *hystera*, uterus, + *kolpos*, sinus (vagina), + *ektomē*, excision.] Removal of the entire uterus with the vagina.

panicle (pan'ĭ-kl) [L. *panicula*, dim. of *panus*, thread wound on a bobbin.] In botany, an irregularly compound raceme.

panidro'sis [G. *pas(pan)*, all, + *hidrōs*, sweat.] Universal sweating, panhidrosis.

panimmunity (pan-im-mu'nĭ-tĭ) [G. *pas(pan)*, all.] A general immunity to all infectious diseases.

pa'nis [L.] Bread **mi'ca p.,** breadcrumb.

panmeris'tic [G. *pas(pan)*, all, + *meros*, part.] Pangenetic; relating to the ovular protoplasm

made up, according to the theory of pangenesis, of a multitude of parental units.

panmix'ia [G. *pas(pan)*, all, + *mixis*, intercourse.] 1 Random mating without selection. 2. Sexual intercourse between individuals of different races 3. Weissmann's term for the tendency of structures to retrograde and disappear when their value to the species becomes nil.

panmyelophthisis (pan-mi"el-of-thi'(the')sis) [G. *pas(pan)*, all, + *myelos*, marrow, + *phthisis*, wasting.] A general wasting or atrophy of the bone-marrow.

panneuritis (pan-nu-ri'(re')tis [G. *pas(pan)*, all, + *neuron*, nerve, + *-itis*.] Extreme polyneuritis. **p. endem'ica,** beriberi.

panneuritis (pă-nik-u-li'(le')tis) [L. *panniculus* + G. *-itis*.] Inflammation of the panniculus adiposus of the abdominal wall.

pannic'ulus [L. dim. of *pannus*, cloth.] A sheet or layer of tissue. **p. adipo'sus,** the superficial fascia which contains more or less fatty deposit in its areolar substance. **p. carno'sus,** a thin layer of muscular tissue, beneath or in the substance of the superficial fascia, such as the musculus* platysma myoides.

pan'nus [L. cloth.] A patch of grayish, membrane-like, vascularized tissue covering the upper half of, sometimes the entire, cornea; a frequent complication of trachoma. It occurs in three forms: *p. cras'sus* [thick], in which the blood-vessels are many and the opacity very dense; *p. sic'cus* [dry], associated with xerophthalmia; *p. ten'uis* [thin], in which the blood-vessels are few and the opacity slight. **p. carate'us,** pinta. **phlycten'ular p.,** p. occurring in phlyctenular conjunctivitis.

panod'ic [G. *pas(pan)*, all, + *hodos*, way] Passing in every direction; noting a nerve-impulse; panthodic.

panopep'tone. Trade name of a predigested prepared food containing peptonized beef and a cereal.

panopho'bia [G. *pas(pan)*, all, + *phobos*, fear.] A state of general apprehension, or fear of everything; pantophobia.

panophthal'mia, panophthalmitis (pan of thal-mi'(me')tis) [G. *pas(pan)*, all, + *ophthalmos*, eye.] Inflammation of the eyeball in all its parts.

panoptic (pan-op'tik) [G. *pas (pan)*, all, + *optikos*, relating to vision.] All visible, noting the effect of multiple or differential staining; see under *stain*.

panopto'sia [G. *pas(pan)*, all, + *ptōsis*, a falling.] A condition of general prolapse of all the viscera.

panosteitis (pan-os-te-i'(e')tis) [G. *pas(pan)*, all, + *osteon*, bone, + *-itis*.] Inflammation of an entire bone with periosteum and marrow; panostitis.

panotitis (pan-o-ti'(te')tis) [G. *pas(pan)*, all, + *ous(ōt-)*, ear, + *-itis*.] General inflammation of all parts of the ear; specifically a disease described by Politzer which begins as an otitis interna, the inflammation subsequently extending to the middle ear and neighboring structures.

panpep'tin. Trade name of a preparation containing a number of digestive enzymes.

panpho'bia. Panophobia.

panple'gia [G. *pas(pan)*, all, + *plēgē*, stroke.] Paralysis of the four extremities; pamplegia.

Pansch's fis'sure [Adolf *Pansch*, German anatomist, 1841–1887.] A cerebral fissure running from the lower extremity of the central fissure nearly to the end of the occipital lobe.

pansinuitis (pan-sin-u-i'(e')tis). Pansinusitis.

pansinusitis (pan-si-nus-i'(e')tis) [G. *pas(pan)*, all, + L. *sinus* + G. *-itis*.] Inflammation of all the accessory sinuses of the nose on one or both sides.

panspermia, panspermatism (pan-spur'mĭ-ah, pan-spur'mă-tizm) [G. *pas(pan)*, all, + *sperma*, seed.] The hypothetical doctrine of omnipresent germs, that the minute forms and spores of animal and vegetable life are everywhere present, thus accounting for apparent spontaneous generation and for the occurrence *de novo* of infectious diseases.

pansphyg'mograph [G. *pas(pan)*, all, + *sphygmos*, pulse, + *graphō*, I record.] A form of polygraph for recording at one time the various forms of pulse—arterial, venous, and cardiac, and also the respiratory movements of the thorax.

panspo'roblast [G. *pas(pan)*, all, + *sporos*, seed, + *blastos*, germ.] The reproductive area in the myxosporidia containing both vegetative and germinal nuclei.

pansporoblas'tic. Referring to a pansporoblast.

pansy (pan'zĭ) [Fr. *pensée*, thought, remembrance.] The dried flowering herb of *Viola tricolor*, heartsease; formerly employed as a "blood-purifier" in cutaneous disorders; the root was also used in dysentery.

pant [Fr. *panteler*, to gasp.] To breathe rapidly, to gasp.

pantachromatic (pant"ă-kro-mat'ik) [G. *pas(pant-)*, all, + *a-* priv. + *chrōma*, color.] Perfectly achromatic.

pantalgia (pan-tal'jĭ-ah) [G. *pas (pant-)*, all, + *algos*, pain.] Pain involving the entire body.

pantamor'phia [G. *pas(pant-)*, all, + *a-* priv. + *morphē*, shape.] Shapelessness.

pantamor'phic. Without form or shape.

pan"tanencepha'lia [G. *pas(pant-)*, all, + *an-* priv. + *enkephalos*, brain.] Absolute anencephalia.

pantan"kyloblepha'ron [G. *pas(pant-)*, all, + *ankylē*, ankylosed joint, + *blepharon*, eyelid.] Complete adhesion of the eyelids to the eyeball and to each other.

pantapho'bia [G. *pas(pant-)*, all, + *a-* priv. + *phobos*, fear.] Absolute fearlessness.

pantatro'phia, pantat'rophy [G. *pas(pant-)*, all, + *atrophia*, atrophy.] General atrophy.

panther'apist [G. *pas(pan)*, all, + *therapeia*, treatment. One who is bound by no therapeutic school, but employs every appropriate method of treatment; an eclectic in the non-technical sense.

panthod'ic [G. *pas(pant-)*, all, + *hodos*, way.] Panodic.

pantocaine (pan'to-kah-ēn). Trade name of a brand of tetracaine,* employed as a local anesthetic applied to the mucous membranes of the eyes, nose, and throat, and also for the production of spinal anesthesia.

pan'tograph [G. *pas(pant-)*, all, + *graphō*, I record.] 1. An instrument for reproducing drawings by a system of levers whereby a recording pencil is made to follow the movements of a stylet passing along the lines of the original. 2. An instrument for reproducing graphically the outlines of the chest.

pantomor'phia [G. *pas(pant-)*, all, + *morphē*, shape.] 1. The condition of an organism, as an amœba, which is capable of assuming all shapes. 2. Perfect shapeliness or symmetry.

pantomor'phic. Capable of assuming all shapes.

pantopho'bia [G. *pas(pant-)*, all, + *phobos*, fear.] A state of general apprehension, or fear of everything; panophobia, panphobia.

pan'topon [G. *pas(pant-)*, all, + *opos*, juice.] Trade name of an opium preparation said to represent

all the alkaloids of the drug in the form of chlorides; dose gr. ½(0.015).

pantoscop'ic [G. *pas(pant-)*, all, + *skopeō*, I view.] Fit for observing objects at all distances, noting bifocal lenses.

Panum's ca'sein (pah'noom) [Peter Ludwig *Panum*, Copenhagen physiologist, 1820–1885.] Serum globulin.

panzootic (pan-zo-ot'ik) [G. *pas(pan)*, all, + *(epi-)*zootic.] Pandemic* in relation to any of the lower animals.

pan'zyme [G. *pas(pant-)*, all, + *zymē*, leaven.] Trade name of a digestant containing a number of enzymes.

pap. A food of soft consistence, like that of bread-crumb soaked in milk or water.

papain (pă-pa'in). A proteolytic enzyme obtained from the fruit of the papaw, *Carica papaya*, employed in indigestion in doses of gr. 2–5 (0.13–0.3), and as an application for loosening diphtheritic membranes.

Papa'ver [L. poppy] A genus of plants, one species of which, *P. somnif'erum*, furnishes opium.

papav'erine. An alkaloid of opium, $C_{20}H_{21}NO_4$; narcotic and sedative; dose gr. ¼–½ (0.01–0.015). **p. hydrochlo'ride** and **p. sul'phate** are employed for the same purposes and in the same dose as the alkaloid.

papav'eris fruc'tus, poppy capsules, the fully grown but unripe fruit of the poppy, *Papaver somniferum*, from which the seeds have been removed; dose ʒi (4.0).

papaw'. Papaya.

papa'ya. Papaw, carica, the juice of the fruit of *Carica papaya*, a tree of tropical America; it possesses a proteolytic action and is employed in indigestion in doses of gr. 2–8 (0.13–0.5).

papayotin (pă-pa'yo-tin). A proteolytic enzyme from the papaw, resembling papain in its action.

pa'per [L. *papyrus;* G. *papyros*, the rush.] Charta. 1. A square of paper folded over so as to form an envelope containing a dose of any medicinal powder. 2. A piece of blotting-paper or filter-paper impregnated with a medicinal solution and dried; when burned the fumes are inhaled in the treatment of asthma and other respiratory affections. 3. A piece of filter-paper impregnated with a solution of litmus or other test-agent and dried; used as a test of the reaction of a fluid; charta exploratoria. **asth'ma p.,** niter p., or blotting p. impregnated with other substances, the fumes of which, when ignited, are inhaled for the relief of the asthmatic paroxysm. **blis'ter p.,** charta epispastica. **fil'ter p.,** an unsized paper used in pharmacy and chemistry for filtering solutions. **lit'mus p.,** a form of test paper. **mus'tard p.,** charta sinapis. **ni'ter p.,** charta potassii nitratis, unsized paper impregnated with potassium nitrate, the fumes of which, when it is burned, are inhaled for the relief of asthma. **test p.,** charta exploratoria.

pa'per-skin. Parchment-skin.

papescent (pă-pes'ent). Pap-like, of the consistence of pap.

papill'a [L. a nipple.] 1. The nipple of the breast; mammilla. 2. Any small nipple-like process. **p. acus'tica,** the organ of Corti, organon spirale [BNA]. **p. circumvalla'ta,** p. vallata [BNA]. **p. clava'ta,** p. fungiformis. **p. con'ica** [BNA], one of numerous projections on the dorsum of the tongue, scattered among the filiform papillæ and similar to them, but shorter. **p. den'tis** [BNA], dentine papilla, a projection of the connective tissue of the jaw into the cup of the enamel organ, later forming the dentine (substantia* eburnea) of the tooth. **p. duode'ni** [BNA], (1) bile papilla, Vater's papilla, Santorini's p. or caruncula major; a projection from the inner wall of the duodenum in which is the common orifice of the bile and pancreatic ducts; (2) some anatomists apply the term, p. duodeni or Vater's p. to the elevation marking the orifice of the accessory pancreatic duct, the bile papilla being called diverticulum duodeni or Vater's diverticulum. **p. filia'ria,** p. duodeni(1). **p. filifor'mis** [BNA], one of numerous elongated conical projections on the dorsum of the tongue, especially at the sides and tip. **p. folia'ta** [BNA], one of numerous projections arranged in several transverse folds upon the lateral margins of the tongue just in front of the anterior pillars of the fauces; they are rudimentary in man. **p. fungifor'mis** [BNA], one of numerous minute elevations on the tip and sides of the tongue, of a fancied mushroom shape, the tip being broader than the base. **p. fusifor'mis,** one of the minute papillæ on the anterior portion of the dorsum of the tongue. **p. incisi'va** [BNA], p. palatina, a slight elevation at the anterior extremity of the raphe of the palate. **p. lacrima'lis** [BNA], lacrymal papilla, a slight projection from the margin of each eyelid near the medial commissure, in the center of which is the punctum lacrimale or opening of the lacrymal duct. **p. lenticula'ris** [BNA], one of the projections on the dorsum of the tongue, similar to, but less elevated than, the fungiform papillæ. **p. lingua'lis** [BNA], one of numerous variously shaped projections of the corium of the mucous membrane of the dorsum of the tongue. **p. mam'mæ** [BNA], papilla of the breast, nipple, mamilla, a wart-like projection at the apex of the mamma, on the surface of which the lactiferous ducts open; it is surrounded by a circular pigmented area, the *areola*. **p. ner'vi op'tici** [BNA], papilla of the optic nerve, optic disc, blind spot, a white spot in the retina to the nasal side of the macula lutea, the point of entrance of the optic nerve. **p. pala'ti'na,** p. incisiva [BNA]. **p. pi'li** [BNA], hair papilla, a knob-like indentation of the bottom of the hair follicle, upon which the hair-bulb fits like a cap; it is derived from the corium and contains vascular loops for the nourishment of the hair-root. **p. rena'lis** [BNA], one of a number of teat-like projections into the sinus of the kidney through which the excretory tubes discharge into the calyces. **p. urethra'lis,** the slight projection in the vestibule of the vagina marking the urethral orifice. **p. valla'ta** [BNA], vallate p., circumvallate p., one of eight or ten projections from the dorsum of the tongue forming a row anterior to and parallel with the sulcus terminalis; each papilla is surrounded by a circular trench (*fossa*) having a slightly raised outer wall (*vallum*); on the sides of the vallate papilla and the opposed margin of the vallum are numerous taste-buds.

pap'illary. Relating to, resembling, or provided with papillæ. **p. lay'er,** pars papillaris, the outer layer of the corium, marked on its surface with numerous papillæ dovetailing with the corresponding depressions on the contiguous surface of the rete Malpighii.

papillate (pă'pil-lāt). Papillary, noting a surface bacterial culture having small nipple-like projections.

papillec'tomy [L. *papilla* + G. *ektomē*, excision.] Surgical removal of any papilla.

papillede'ma. Papillitis, choked disc.

papillif'erous [L. *papilla* + *ferre*, to bear.] Provided with papillæ.

papill'iform [L. *papilla* + *forma*, form.] Resembling or shaped like a papilla.

papillitis (păp-pĭ-li'(le')tis). Choked disc, inflammation of the optic nerve at its entrance into the retina.

papilloadenocystoma (păp-pil"o-ad"e-no-sis-to'mah). A mixed tumor with elements of papilloma, adenoma, and cystoma.

papillocarcinoma (păp-pil"o-kar-sĭ-no'mah) [L. *papilla* + G. *karkinōma*, cancer.] 1. A papilloma which has become malignant. 2. A carcinoma presenting papillary excrescences.

papillo'ma, pl. *papillo'mata* [L. *papilla* + G. *-ōma*.] A circumscribed overgrowth or hypertrophy of the papillæ of a cutaneous or mucous surface; the papillomata include warts, condylomata, cutaneous horns, and various polypi. **intracys'tic p.,** one growing within a cystic adenoma, filling the cavity with a mass of branching epithelial processes. **p. du'rum,** a hard p., a wart, corn, or cutaneous horn. **p. linea're,** linear ichthyosis. **p. mol'le,** soft p., one with but a thin layer of horny epithelium, polypus, condyloma. **p. neuropath'icum** or **neurot'icum,** linear ichthyosis.

papillomato'sis. The development of numerous papillomata.

papillo'matous. Relating to a papilloma.

papilloretinitis (pap"il-o-ret-in-i'(e')tis) Papillitis with extension of the inflammation to the optic disc and neighboring parts of the retina.

papillula (pă-pil'u-lah). [L. dim. of *papilla*] 1. A small papilla. 2. Nipple.

Papin's diges'ter (pă-pañ') [Denis *Papin*, French physicist, 1647–1714.] A metallic vessel with an hermetically tight lid, provided with a safety valve, used for subjecting substances to the action of water at a temperature above 212° F.; it was originally devised to prove that when the pressure on a liquid is raised its boiling point is also raised.

pap'oid. A digestive enzyme from the fruit of the papaw, resembling papain and papayotin.

pappataci fever (pap-pah-tah'sĭ fe'vur). An infectious, not contagious, disease occurring in the Balkan Peninsula and other parts of southern Europe; its symptoms resemble those of dengue but are less severe and of shorter duration; the pathogenic organism is apparently introduced by the bite of a sand-fly, *Phlebotomus papatasii*.

Pappenheim's method (pahp'en-hīm) Arthur *Pappenheim*, German physician, 1870–1916.] For differentiation between the tubercle bacillus and the smegma bacillus: The preparation is stained with hot carbol-fuchsin solution, and then treated with an alcoholic solution of rosolic acid and methylene blue to which glycerin is added; tubercle bacilli are stained bright red, but smegma bacilli are decolorized.

papoose-root (pa-poos'root). *Caulophyllum thalictroides*, blue cohosh.

papp'ose, papp'ous [G. *pappos*, down.] Downy.

papp'us [G. *pappos*, down.] 1. Down, the first hair on the chin, appearing in the young man at puberty. 2. In botany the down on a seed. 3. A tuft of hairs representing the calyx in some of the *Compositæ*.

pap'ula [L.] Papule, pimple. **p. mad'idans,** soft p., condyloma latum. **p. ag'ria,** lichen agrius.

pap'ular. Relating to or marked with papules. **p. fe'ver,** a fever of mild type accompanied with rheumatoid pains and a maculopapular eruption.

papula'tion. The formation of papules.

papule (pap'ūl) [L. *papula*, pimple] A small circumscribed elevation on the skin, containing no fluid; pimple. **dry p.,** the primary chancrous p. **moist p., mucous p.,** condyloma latum.

papulif'erous [L. *papula*, pimple, + *ferre*, to bear.] Having papules.

papuloerythematous (pap"u-lo-er"ĭ-them'a-tus). Noting an eruption of papules upon an erythematous background.

papulosquam'ous. Relating to both papules and scales, noting a cutaneous eruption with those lesions.

pap'ulopus'tular. Noting an eruption marked by both papules and pustules.

pap"ulovesic'ular. Noting an eruption marked by both papules and vesicles.

papyraceous (pap-i-ra'se-us) [L. *papyraceus*] Like parchment or paper.

Paquelin's cau'tery (pak-lañ') [Claude André *Paquelin*, Parisian physician, 1836–1905.] A cauterizing apparatus consisting of a hollow platinum body, in the shape of a knife, needle, ball, etc., which is heated by the forcing into it of a mixture of the vapor of benzin and air.

par [L.] A pair, specifically a pair of cranial nerves, as *p. nonum*, ninth pair (in the modern enumeration, twelfth pair), *p. vagum*, the vagus, pneumogastric, or tenth pair.

para- [G. alongside of, near] A prefix denoting (1) a departure from the normal; (2) an involvement of two like parts, as the two lower extremities; (3) a compound formed by two substitutions in the benzene ring arranged symmetrically, *1 e* linked to opposite carbon atoms in the ring.

para-acetphenetidin (par"ah-ă-set"fen-et'ĭ-din). Phenacetin, acetphenetidinum.*

para-ac"etophe"noleth'yl car'bonate. An hypnotic powder, given in doses of gr. 5–8 (0.3–0.5).

para-actinomycosis (par-ŭ-ak-tĭ-no-mi-ko'sis). Pseudoactinomycosis.

para-analge'sia. Paranalgesia.

para-anesthe'sia, para-anæsthe'sia. Paranesthesia.

para-appendicitis (par"ah-ă-pen-di-si'(se')tis) [G. *para*, near, + L. *appendix*, + G. *-itis*] Inflammation of the parts in the neighborhood of the vermiform appendix, perityphlitis.

paraban'ic acid. Oxalylurea.

parabio'sis [G. *para*, beside, + *biōsis*, life.] 1 Union of two organisms in several or all of the vital processes, though not necessarily dependent upon each other for existence, as in the case of joined twins or of the union of two animals experimentally effected. 2. Suspension of conductivity in a nerve.

parabiot'ic. Relating to, or characterized by, parabiosis.

par'ablast [G. *para*, beside, + *blastos*, germ.] 1. The nutritive or lecithal yolk of a meroblastic ovum. 2. Mesoblast, or that part of it from which the vascular structures are developed.

parablas'tic. Relating to or derived from the parablast

parablasto'ma. A tumor formed of structures of parablastic origin.

parablep'sia [G. *para*, beside, + *blepsis*, sight.] Incorrect or false vision.

parabu'lia [G. *para*, beside + *boulē*, will.] Perversion of the will.

paracantho'ma [G. *para*, beside, + *akantha*, a thorn, + *-ōma*.] A tumor arising from abnormal hyperplasia of the prickle-cell layer of the skin.

paracantho'sis. 1. The development of paracanthomata. 2. A division of tumors which includes the cutaneous epitheliomata.

paracar'mine. A staining fluid consisting of a solution of calcium chloride and carminic acid in 75 per cent. alcohol.

paracele (par'ah-sēl). A lateral ventricle of the brain, paracœle.

Paracel'sian meth'od [see *Paracelsus*.] The use of chemical agents only in the treatment of disease: see *iatrochemical*.

Paracel'sus's propri'etary elix'ir [Philippus Aureolus *Paracelsus* (his true name was Theophrastus Bombastus von Hohenheim), Swiss physician, the "father" of pharmaceutical chemistry, 1493–1541.] Tinctura aloes et myrrhæ.

paracentesis (par"ah-sen-te'sis) [G. *para*, beside, + *kentēsis*, puncture.] Tapping, the passage into a cavity of a trocar and cannula or other hollow instrument for the purpose of removing fluid. The operation is variously designated, according to the cavity punctured. **p. abdom'inis,** of the abdomen. **p. cap'itis,** of the head or skull, cephalocentesis. **p. cordis,** of the heart, cardiocentesis. **p. pericar'dii,** of the pericardium, pericardiocentesis. **p. pulmo'nis,** of the lung, pneumocentesis. **p. thora'cis,** of the chest. thoracentesis. **p. tym'pani,** of the middle ear. **p. vesi'cæ,** of the bladder

paracentet'ic. Relating to paracentesis.

paracen'tral [G. *para*, beside.] Close to or alongside the center or some structure designated "central." **p. fissure,** a curved fissure on the mesal surface of the cerebral hemisphere, bounding the *p. gyrus* and separating it from the precuneus and the callosal gyrus.

paracephalus [G. *para*, beside, + *kephalē*, head.] A monster with very imperfectly developed cranium, *acephalus paracephalus*.

paracerato'sis. Parakeratosis.

parachloralose (par"ah-klo'ral-ōz). Betachloralose, occurring in whitish iridescent crystals; said to be hypnotic.

parachlormetaxylenol (par-ŭ-klor-met-ŭ-zi'len-ol). A chlorinated xylenol C_8H_9OCl), used as a fungicide and in the treatment of scabies and of various bacterial skin diseases.

parachlorphenol (par"ah-klor-fe'nol). An antiseptic crystalline substance derived from phenol; recommended in lupus. **p. sal'icylate,** used as an intestinal antiseptic in doses of gr. 15–20 (1.0–1.3).

parachlorsal'ol. Parachlorphenol salicylate.

paracholera (par-ah-kol'e-rah) [G. *para*, beside, + *cholera*.] A disease clinically resembling Asiatic cholera but due to a vibrio specifically different from *V. choleræ* (Koch).

paracholia (par"ah-kol'ī-ah) [G. *para*, beside, + *cholē*, bile.] The presence of bile in an abnormal situation, as in the circulating blood or in the lymphatic vessels.

parachor'dal [G. *para*, beside, + *chordē*, cord.] Alongside the anterior portion of the notochord in the embryo; noting the two cartilaginous bars on either side, which enter into the formation of the base of the skull.

parachroia (par-ah-kroy'ah) [G. *para*, beside, + *chroia*, color.] Parachroma.

parachroma (par"ah-kro'mah) [G. *para*, beside, + *chrōma*, color.] 1. Abnormal coloration of the skin or other parts. 2. Parachromatopsia.

parachromatin (par-ah-kro'mă-tin). The chromatin of the spindle-figure in caryocinesia.

parachromatism (par-ah-kro'mă-tizm). Color-blindness.

parachromatopsia (par-ah-kro-mă-top'sĭ-ah) [G. *para*, beside, + *chrōma*(*chrōmat-*), color, + *opsis*, vision.] Color-blindness.

parachromatosis (par-ah-kro-mă-to'sis). Parachroma

parachromophore (par-ah-kro'mo-for) [G. *para*, beside, + *chrōma*, color, + *phoros*, bearer.] A pigment-forming microorganism which retains some or all the chromatic substance within its body.

parachymosin (par-ah-ki'mo-sin). A ferment resembling chymosin or rennin, a form of lab-ferment.

paracinesia, paracinesis (par"ah-sin-e'sĭ-ah, par"ah-sin-e'sis) [G. *para*, beside, + *kinēsis*, movement-Any motor abnormality.

parac'masis [G. *parakmazō*, I am fading.] Paracme

paracmas'tic. Relating to the paracme, declining, past the prime; noting the stage of subsidence of a fever, or the stage of senescence or physical decline.

parac'me [G. *para*, beyond, + *akmē*, prime.] 1. The stage of subsidence of a fever. 2. The period of life beyond the prime, the decline or stage of involution of the organism.

paracne'mis, paracne'mion [G. *para*, beside, + *knēmē*, tibia.] The fibula.

paracœle (par'ah-sēl) [G. *para*, beside, + *koilia*, a hollow.] A lateral ventricle of the brain

paracolitis (par-ah-ko-li'(le')tis) [G. *para*, beside, + *kōlon*, colon, + *-itis*.] Inflammation of the peritoneal coat of the colon.

paraco'lon bacill'i. Microorganisms occupying an intermediate place between *B. coli* and *B. typhosus*.

paracolpitis (par-ah-kol-pi'(pe')tis) [G. *para*, beside, + *kolpos*, lap (vagina), + *-itis*.] Inflammation of the cellular tissue alongside the vagina.

paracol'pium [G. *para*, beside, + *kolpos*, vagina.] [NK] The tissues alongside the vagina.

paracone (par'ah-kōn) [G. *para*, beside, + *kōnos*, cone.] The mesiobuccal cusp of an upper molar tooth.

paraconid (par"ah-kon'id). The mesiobuccal cusp of a lower molar tooth.

paraco'to. The bark of an unknown tree of Bolivia, similar, but inferior, to coto bark; employed as an astringent in diarrhea and cholera and in the night sweats of phthisis in doses of gr. 2–7½ (0.13–0.5), or ℥5 (0.3) of the N.F. fluidextract.

paracotoin (par-ah-ko'to-in). A bitter principle $C_{12}H_4O_4$, obtained from paracoto bark; has been employed in the treatment of catarrhal gastritis, diarrhea, and cholera indoses of gr. 1½–3 (0.1–0.2).

paracou'sis. Paracusis.

paracres'alol. Cresalol.

paracre'sol. One of the three isomeric cresols, a solid melting at 36° C. and boiling at 198° C.

paracres'ylol. Cresol.

paracrisis (par-ak'ri-sis) [G. *para*, beside, + *krisis*, a separating.] Any secretory disorder.

paracusia, paracusis (par-ah-ku'sĭ-ah, par-ah-ku'sis) [G. *para*, beside, *akousis*, hearing.] Any abnormality, other than simple deafness, in the faculty of hearing. **p. lo'ci,** loss or diminution of the power of determining the direction of sound. **p. willisia'na** [see *Willis*], the ability to hear better in a noise, as that of a railway train.

paracyesis (par"ah-si-e'sis) [G. *para*, beside, + *kyēsis*, pregnancy.] Extrauterine pregnancy.

paracys'tic [G. *para*, beside, + *kystis*, bladder.] Alongside or near the bladder.

paracystitis (par-ah-sis-ti'(te')tis) [G. *para*, beside, + *kystis*, bladder, + *-itis*.] Inflammation of the connective tissue and other structures about the urinary bladder.

paracys'tium [G. *para*, beside, + *kystis*, bladder.] [NK] The tissues adjacent to the urinary bladder.

paracy'tic [G. *para*, beside, + *kytos*, cell.] 1. Relating to cells other than those normal to the part where they are found. 2. Between or among, but independent of, cells.

paradenitis (par-ad-en-i'(e')tis) [G. *para*, beside, + *adēn*, gland, + *-itis*.] Inflammation of the tissues adjacent to a gland.

paradiagnosis (par"ah-di-ag-no'sis) [G. *para*, beside.] A nearly correct diagnosis, one that just misses the mark.

paradid'ymal. 1. Relating to the paradidymis. 2. Alongside the testicle.

paradid'ymis [G. *para*, beside, + *didymos*, twin (testis).] [BNA] Organ of Giraldès, parepididymis, massa innominata, a small body sometimes attached to the front of the lower part of the spermatic cord above the head of the epididymis; the remains of the distal portion of the Wolffian body.

paradiphthe'rial, paradiphtherit'ic. Indirectly related to or consequent upon diphtheria.

par'adox [G. *paradoxos*, incredible, beyond belief.] That which is apparently, though not actually, inconsistent with or opposed to the known facts in any case. **Weber's p.**, see *Weber*.

paradox'ical. Relating to a paradox, seemingly inconsistent with the fact. **p. contrac'tion,** the contraction of a muscle when its origin and insertion are passively approximated.

paradysentery (par-ah-dis'en-ter-ĭ) [G. *para*, beside.] A mild form of dysentery.

paraeccrisis (par-ah-ek'kri-sis) [G. *para*, beside, + *ekkrisis*, excretion.] Any disorder of excretion

paraenteric fever (par-ah-en-ter'ik fe'vur) [G. *para*, beside.] A fever clinically resembling typhoid but not giving positive laboratory tests.

paraepilepsy (par"ah-ep'i-lep-sĭ) [G. *para*, beside.] An undeveloped form of epilepsy in which the attack consists solely of the aura, without going on to convulsions or loss of consciousness.

para-equilib'rium [G. *para*, beside.] Vertigo, often associated with nausea, nystagmus, and muscular weakness, due to irritation of the vestibular apparatus of the ear.

paræsthe'sia. Paresthesia.

paraffin (par'ă-fĕn) [L. *parum*, little, + *affinis*, having affinity, so called because of its slight tendency to chemical reaction.] 1. One of the methane series of acyclic hydrocarbons. 2. A white, crystalline, solid hydrocarbon; see *paraffinum*. **hard p.,** paraffinum (U.S.), paraffinum durum (Br.). **liquid p.,** petrolatum liquidum (U.S.), paraffinum liquidum (Br.). **p. wax,** ambrine. **soft p.,** petrolatum (U.S.) paraffinum molle (Br.).

par'affin-can'cer. A malignant growth, analogous to chimney sweeps' cancer, affecting workers in paraffin.

paraffino'ma. A hypothetical neoplasm caused by the prosthetic injection of paraffin into the tissues

paraffinum (par-ă-fe'num) [L. *parum*, little, + *affinis*, related, very slightly related to, having little affinity for, other substances.] (U.S.) Paraffinum durum (Br.), a mixture of solid hydrocarbons of the methane series. A colorless, odorless, and tasteless mass of unctuous feel; employed at one time by injection (when melted) in order to fill defects and restore the shapeliness of a part. **p. chlorina'tum** (U.S.), chlorinated paraffin, chlorcosane, a light yellow to light amber, clear, thick, oily liquid, odorless, insoluble in water; employed as a solvent for dichloramina (dichloramine-T). **p. liq'uidum** (Br.), petrolatum* liquidum (U.S.). **p. mol'le** (Br.), petrolatum* (U.S.). **p. mol'le al'bum** (Br.), petrolatum album (U.S.), white soft paraffin, white vaseline. **p. mol'le fla'vum** (Br.), petrolatum (U.S.), yellow vaseline.

parafibrin'ogen. A substance obtained by the precipitation of fibrinogen by means of sodium chloride.

paraflagellate (par-ah-flaj'el-ăt). Having one or more paraflagella, paramastigote.

paraflagell'um, pl. *paraflagell'a*. A minute accessory flagellum sometimes present in addition to the ordinary flagellum of certain protozoans.

paraform, paraformaldehyde. Paraformaldehydum (U.S.).

paraformaldehydum (par-ah-for-mal-de-hi'dum) (U.S.). Paraform, paraformaldehyde, triformol, trioxymethylene $(CH_2O)_3$; a polymerized formic aldehyde made by the action of heat from formaldehyde; white crystalline powder; antiseptic and astringent, employed in surgical dressings, and internally for diarrhea in doses of gr. 5–10 (0.3–0.6); when heated in a suitable lamp it is converted into formaldehyde, and so is used for room disinfection.

parafuchsin (par-ah-fook'sin). A basal aniline dye which has been employed in the destruction of spirochetes and trypanosomes

parafunctional (par-ah-fung'shun-al) [G. *para*, beside.] Noting perversion of function.

paragamm'acism [G. *para*, beside, + *gamma*, the letter g] Faulty pronunciation of the sounds of g and k, or their substitution by other letters.

paragan'glia [pl. of *paraganglion*, *q.v.*] 1. Chromaffin bodies, roundish or oval bodies, with connective-tissue capsule, forming independent groups of chromaffin tissue in various organs and parts of the body, performing probably the same function as the medulla of the adrenal body. 2. Groups of medullary cells in the adrenal bodies.

paragang'line. An extract of the medullary substance of the adrenal body of the ox, recommended as a stimulant of peristalsis.

paraganglioma (par-ah-gang-glĭ-o'mah). A new growth arising from the medullary portion of an adrenal gland.

paraganglion (par-ah-gang'gle-on) [G. *para*, beside, + *ganglion*.] 1. Any structure in the neighborhood of, or supplementing, a ganglion. 2. One of the cells in the medullary portion of an adrenal body. 3. The medullary portion of an adrenal body.

paragel'atose. A non-gelatinizing substance obtained by the superheating or prolonged boiling of gelatin.

parageusia (par-ah-ju'sĭ-ah) [G. *para*, beside, + *geusis*, taste.] Disordered or perverted sense of taste.

parageusic (par-ah-ju'sik). Relating to parageusia, having a perverted sense of taste.

paragglutination (par-ag-glu-tin-a'shun). Agglutination of typhoid bacilli under the influence of paratyphoid serum, and analogous phenomena in other infections.

paraglob'ulin [G. *para*, near, beside, + *globulin*.] A globulin present in the blood-plasma, lymph, and fluid exudates, precipitated by ammonium

or magnesium sulphate; it has the formula, $C_{117}H_{182}N_{30}SO_{38}+\frac{1}{2}H_2O$.

paraglobulinu'ria [*paraglobulin* + G. *ouron*, urine.] The excretion of serum-globulin in the urine.

paragloss'a [G. *para*, beside, + *glōssa*, tongue.] Enlargement of the tongue.

paragloss'ia [G. *para*, beside, + *glōssa*, tongue.] Inflammation of the tissues adjacent to the tongue.

paragnathus (par-ag-nath'us) [G. *para*, beside, + *gnathos*, jaw.] A monster with an accessory lower jaw.

paragompho'sis [G. *para*, beside, + *gomphoō*, I nail or bolt] Impaction of the head of the child in a narrowed parturient canal.

paragonimiasis (par"ah-gon-ĭ-mi'a-sis). Infestation with a worm of the genus *Paragonimus*, especially *P. westermanni*; distomiasis.

Paragon'imus [G. *para*, from the side, + *gonimos*, with generative power.] A genus of *Trematoda* or flukes. **P. westermann'i,** *Distoma westermanni*, *D. pulmonale*, bronchial or lung fluke, infests the lungs of man and many of the lower animals in Eastern Asia, frequently causing hemoptysis.

paragonorrhe'al. Indirectly related to or consequent upon gonorrhea.

paragraphia (par-ah-graf'ĭ-ah) [G. *para*, beside, + *graphō*, I write.] 1. Loss of the power of writing from dictation, although the words are heard and comprehended. 2. Writing one word when another is intended.

Paraguay tea (par'ah-gwi). Maté.

parahemoglo'bin, parahæmoglo'bin. Trade name of a tonic preparation made from the blood of the ox.

parahepat'ic. Adjacent to the liver.

parahepatitis (par-ah-hep-ă-ti'(te')tis) [G. *para* beside, + *hēpar(hēpat-)*, liver, + *-itis*.] Inflammation of structures immediately adjacent to the liver.

parahidro'sis. Paridrosis.

parahormone (par"ah-hor'mōn) [G. *para*, beside, + *hormone*.] A substance (which is a product of ordinary metabolism and not produced for a specific purpose) hich acts like a hormone in modifying the activity of some distant organ; a familiar example is the action of carbon dioxide on the respiratory center.

parahy'dropin. Trade name of a preparation of theobromin, recommended as a diuretic.

parahypno'sis [G. *para*, beside, + *hypnos*, sleep.] Disordered sleep, such as nightmare or somnambulism.

parahypophysis (par-ah-hi-poph'i-sis). A small mass of pituitary tissue, or tissue resembling in structure the anterior lobe of the hypophysis, occasionally found in the dura mater lining of the sella turcica.

parainfection (par"ah-in-fek'shun). The occurrence of symptoms simulating those of any infectious disease, without the discoverable presence of the specific microorganism.

parainfec'tious. Indirectly related to or consequent upon an infectious disease.

parainfluenzal (par"ah-in-flu-en'zal). Indirectly relating to or consequent upon influenza.

paraiodoxyanisol (par-ah-i"o-doks-ĭ-an'ĭ-sol). Isoform.

parakerato'sis [G. *para*, beside, + *keras(kerat-)*, horn, + *-ōsis*.] Any disease or abnormal growth of the corneous layer of the epidermis. **p. psoriasifor'mis,** a form marked by the presence of scabs resembling those of psoriasis. **p. scutula'ris,** a disease of the scalp marked by epidermic scales encircling the hairs. **p. variega'ta,** maculopapular erythrodermia, parapsoriasis.

parakine'sia, parakine'sis. Paracinesia.

paralac'tic acid. Sarcolactic acid, a dextrorotatory form of lactic acid sometimes excreted in the urine after severe muscular exercise.

parala'lia [G. *para*, beside, + *lalia*, talking.] Any speech defect, especially one in which one letter is habitually substituted for another. **p. litera'lis,** stammering.

paralambdacism (par-ah-lam'dah-sizm) [G. *para*, beside, + *lambda*, letter l.] Mispronunciation of the letter l, or the substitution of some other letter for it.

paralbu'min. An albuminous substance, a mixture of metalbumin and serum-albumin, found in the fluid of ovarian cysts and in ascites.

paraldehyde, paraldehydum (par-al'de-hīd, par-al"de-hi'dum). (U.S., Br.) A colorless liquid of strong odor and burning taste prepared by treating aldehyde with hydrochloric acid; formula, $C_6H_{12}O_3$; hypnotic in doses of ʒi–2 (4 0–8.0).

paral'dol. A solid polymer of aldol.

paraleipopho'bia. Paralipophobia.

paraleprosis (par-ah-lĕ-pro'sis) [G. *para*, beside.] The presence of certain trophic or nerve changes suggesting an attenuated form of leprosy in regions where the disease has long prevailed.

paralepsy (par'ah-lep-sĭ) [G. *para*, beside, + *(epi)-lepsy*.] Psycholepsy.

paralexia (par"ah-leks'ĭ-ah) [G. *para*, beside, + *lexis*, speech; confused with the Latin root in *legere*, to read.] Misapprehension of written or printed words, other meaningless words being substituted for them in reading.

paralgesia (par"al-je'zĭ-ah) [G. *para*, beside, + *algēsis* the sense of pain] Any disorder or abnormality of the sense of pain, painful paresthesia.

paral'inin. Achromatin, nucleoplasm, caryochylema.

paralipophobia (par-ŭ-li-po-fo'bi-ŭ) [G. *paraleipo*, I neglect, + *phobos*, fear.] Morbid fear of having neglected some duty however trivial.

parallag'ma [G. something passing alongside] Displacement or overriding of the ends of a broken bone

parallac'tic. Relating to a parallax.

par'allax. 1. The apparent movement of objects due to movement of the observer. 2. The apparent movement of an object when one eye is closed. **crossed p.,** heteronymous p. **direct' p.,** homonymous p. **heteron'ymous p.,** the apparent movement of an object toward the closed eye. **homon'ymous p.,** the apparent movement of an object toward the open eye when one is closed. **p. meth'od,** localization of a foreign body by observation of the shadow upon the fluoroscopic screen while the tube is moving at determined distances from the body.

parallelism (par'ă-lel-izm). The theory that there is no causal interrelation between mental processes and brain function.

parallelometer (par-ă-lel-om'e-tur) [*parallel* + G. *metron*, measure.] An instrument used in dental bridge work for ensuring exact fitting together of the supports.

paralo'gia, paral'ogism, paral'ogy [G. *para*, beside, + *logos*, reason.] False reasoning, involving self-deception. **themat'ic p.,** false reasoning in relation chiefly to one theme or subject, upon which the mind dwells insistently.

paralues (par-ŭ-lu'ēz). Parasyphilis, metasyphilis.

paraluetic (par-ŭ-lu-et'ik). Parasyphilitic, metasyphilitic.

paral'ysin. Agglutinin.

paral'ysis [G.] 1. Akinesia, acinesia, palsy, loss of power of voluntary movement in a muscle through injury or disease of its nerve supply. 2. Anesthesia, loss of sensation in a part. 3. Loss of any function, as of secretion or of mental action. **acous'tic p.**, nervous deafness. **acute ascend'ing p.**, Landry's p., a p. of rapid course, beginning in the legs and involving progressively the trunk, arms, and neck, ending usually in death in from one to three weeks. **acute atroph'ic p.**, infantile p., poliomyelitis* anterior. **acute' infec'tious p.** acute anterior poliomyelitis.* **ante'rior spinal p.**, poliomyelitis anterior. **ascend'ing p.**, p. which advances progressively from the periphery toward the nerve center, or from the lower toward the upper portions of the body. **asthe'nic bulbar**, or **bulbospi'nal p.**, myasthenia gravis. **atroph'ic spinal p.**, poliomyelitis anterior. **bulbar p.**, progressive bulbar p. **central p.**, p. due to a lesion in the brain or spinal cord. **compres'sion p.**, p. due to compression of a nerve, usually of the arm, due to prolonged pressure, as during sleep, or from the pressure of a crutch, etc. **crossed p.**, p. affecting one side of the face and the other side of the body. **crutch p.**, a form of compression p. **decu'bitus p.**, a form of compression p. due to pressure on a limb during sleep. **diphtherit'ic p.** postdiphtheritic p. **diver's p.**, caisson disease. **epidem'ic p.**, acute anterior poliomyelitis.* **essen'tial p. of chil'dren,** acute anterior poliomyelitis.* **facial p.**, Bell's palsy p. of the facial nerve. **general p. of the insane'**, paresis (2).* **gin'ger p.**, "jake" an affection marked by wrist-drop and foot-drop following the drinking of fluid extract of Jamaica ginger, due to an adulteration with triorthocresol phosphate; the symptoms appear clearly and are due to lesions of the motor neurones in the lower cervical and lower lumbar regions of the spinal cord. **gloss''ola''biolaryn'geal p. gloss''ola''biopharyn'geal p.**, progressive bulbar p. **in'fantile spi'nal p.**, acute anterior poliomyelitis. **labial p.**, bulbar p. **lead p.**, lead palsy.* **mixed p.**, combined motor and sensory p. **morn'ing p.**, infantile paralysis in which the stage of fever is slight or absent, a child being put to bed well and waking up paralyzed. **mo'tor p.**, loss of the power of muscular contraction. **musculospi'ral p.**, p. of the muscles of the forearm due to injury of the radial (musculospiral) nerve. **myogen'ic p.**, acute anterior poliomyelitis.* **obstet'ric p.**, birth palsy, p. of the newborn due to injury received during childbirth. **p. ag'itans,** Parkinson's disease, shaking palsy, a disorder marked by muscular weakness, stiffness, and tremor, with paresthesias, myalgic or neuralgic pains, and a feeling of nervousness or restlessness **p. intermit'tens,** intermittent limping.* **p. vacil'lans,** chorea. **postdiphtherit'ic p.**, p. affecting the uvula most frequently, but also any other muscles, due to toxic neuritis; it comes on, as a rule, in the second or third week following the beginning of the attack of diphtheria. **posti'cus p.**, p. of the posterior cricothyroid muscles in tabes dorsalis. **progres'sive bul'bar p.**, glossolabiolaryngeal p., glossolabiopharyngeal p., Duchenne's p., a progressive atrophy and paralysis of the muscles of the tongue, lips, palate, pharynx, and larynx, occurring in later life and due to atrophic degeneration of the nuclei, in the medulla oblongata, of the nerves supplying these muscles. **pseudobul'bar p.**, p. of the lips and tongue, simulating progressive bulbar p., but due to a cerebral lesion **pseudohypertroph'ic p.**, Duchenne's disease, a malady of childhood, marked by progressive muscular atrophy in which an appearance of hypertrophy is given by a deposit of fat taking the place of the wasted muscles. **sen'sory p.**, loss of sensation, anesthesia. **spas'tic spi'nal p.**, Little's disease, a congenital sclerosis of the lateral columns of the spinal cord, causing rigidity of the muscles of the extremities, with atrophy and paresis and exaggerated reflexes; tetanoid paraplegia. **wasting p.**, progressive muscular atrophy.*

arm, brachioplegia. **bilateral,** diplegia. **bladder,** cystoparalysis, cystoplegia, cystoplexia. **crossed,** stauroplegia. **diaphragm,** phrenoplegia, phrenoparalysis. **extremities,** acroparalysis. **eye muscles,** ophthalmoplagia (extrinsic), cycloplegia (intrinsic). **facial,** prosoplegia, prosopoplegia, Bell's palsy, mimic paralysis, hemiprosoplegia (of one side). **false,** pseudoparalysis, pseudoplegia. **fauces,** isthmoplegia. **heart,** cardioplegia, heart-failure. **hysterical,** pseudopar lysis, pseudoplegia. **intestine,** enteroparalysis, enteroplegia. **kidney function,** nephroparalysis, nephroplegia. **larynx,** laryngoparalysis, laryngoplegia. **lead,** wrist-drop, saturnine paralysis, plumbism. **lower extremities,** paraplegia, paraparesis. **muscular,** myoparalysis, myoplegia. **nerve,** neuroparalysis. **one extremity,** monoplegia. **one lower extremity,** hemiparaplegia. **one-sided,** hemiplegia, hemiplexia, semisideratio. **pharynx,** pharyngolysis, pharyngoparalysis, pharyngoplegia. **rectum,** proctoparalysis, proctoplegia. **slight,** paresis. **stomach,** gastroparalysis, gastroplegia. **tongue,** glossoplegia. **uterus,** metroparalysis.

paralyt'ic. 1. Relating to paralysis. 2. A person suffering from paralysis.

par'alyzant. 1. Causing paralysis. 2. Any agent such as curare, which causes paralysis

par'alyze. To produce paralysis in.

paralyzer (par'al-i-zer). 1. Anything causing paralysis. 2. Any substance inhibiting a chemical reaction.

paramagnet'ic. Having the property of paramagnetism.

paramag'netism. The property of being magnetic, as shown by assuming a position parallel with a line drawn between the two poles of a magnet.

paramastigote (par''-ah-mas'tĭ-gōt) [G. *para*, alongside of.] A mastigote having two flagella, one long and one short.

paramastitis (par-ah-mas-ti''(te')tis) [G. *para*, beside, + *mastos*, breast, + *-itis*.] Inflammation of the tissues adjacent to the mamma.

paramas'toid [G. *para*, beside.] Near the mastoid process. **p. process,** an anomalous elevation or process springing from the under surface of the extremity of the jugular process of the occipital bone and occasionally articulating with the transverse process of the atlas; in man it is an exaggeration of the prominence found here, the intrajugular eminence, but is normally present in certain animal skulls.

Parame'cium [G. *paramēkēs*, rather long.] A genus of infusorians, the members of which are of rather elongated form and some of large size even visible to the naked eye.

parame'dian. Near the middle line.

parame'nia [G. *para*, beside, *mēn*, month.] Any disorder or irregularity of menstruation.

parameningococcus (par''ah-men-in-go-kok'us). A microorganism resembling morphologically the *Diplococcus intracellularis*, but differing from it biologically, and also resistant to the action of antimeningitis serum.

parame'sial. Paramedian.

paramet'ric. Relating to the parametrium, or structures immediately adjacent to the uterus.

parametris'mus [*parametrium* + G. *trismos*, a creaking.] Painful spasm of the muscular fibers in the broad ligaments.

parametrit'ic. Relating to parametritis.

parametritis (par-ah-me-tri'(tre')tis) [G. *para*, beside, + *mētra*, uterus, + *-itis*.] Inflammation of the cellular tissue adjacent to the uterus; pelvic cellulitis. **poste'rior p.,** pelvic cellulitis involving mainly the uterosacral ligaments.

parame'trium [G. *para*, beside, + *mētra*, uterus.] The connective tissue and fat along the sides of the cervix uteri in the folds of the broad ligament, together with the pelvic fascia investing the uterus.

paramim'ia [G. *para*, beside, + *mimia*, imitation.] The use of gestures unsuited to the words which they accompany.

paramitome (par-am'ĭ-tōm) [G. *para*, beside, + *mitos*, thread.] Hyaloplasm, paraplasm, the fluid portion of the protoplasm of a cell.

paramnesia (par-am-ne'sĭ-ah) [G. *para*, beside, + *amnēsia*, forgetfulness.] A disorder of memory in which real facts and imaginings are inextricably confused.

Paramœba (par-ă-me'bah). A genus of protozoa of the order *Gymnamœbida*. **P. hom'inis,** *Craigia hominis*, a species which has been found in the stools in severe cases of diarrhea in the Philippines; its pathogenicity is, however, uncertain.

Paramœ'cium. An incorrect spelling of *Paramecium*.

paramonochlorphenol (par"ah-mon'o-klor-fe'nol). A crystalline antiseptic compound used as an application in inflammation of the respiratory passages in 5 to 25 per cent. solution.

paramor'phia [G. *para*, beside, + *morphē*, shape.] Any abnormality in form or structure.

paramor'phine. Thebaine.

paramu'cin [G. *para*, beside, + *mucin*.] A glycoprotein found in ovarian and certain other cysts, like mucin insoluble in water, but unlike mucin precipitated by tannin.

paramu'sia [G. *para*, beside, + *mousa*, muse] Loss of the ability to read or to render music correctly.

paramyoclonus (par"ah-mi-ok'lo-nus) [G. *para*, beside, + *mys*, muscle, + *klonos*, a tumult.] An affection characterized by sharp frequently repeated clonic muscular contractions in the corresponding muscles of opposite sides of the body; called also *p. multiplex*, *myoclonia*, and *polyclonia*.

paramyosinogen (par"ah-mi-o-sin'o-jen) [G. *para*, beside, + *myosin* + G. *gennaō*, I produce.] v. Furth's myosin, a coagulable globulin, constituting about 20 per cent. of the protein of muscle plasma.

paramyotonia (par"ah-mi-o-to'nĭ-ah). An atypical form of myotonia.* **atax'ic p.,** a disorder characterized by a tonic muscular spasm on attempted movement, associated with slight paresis and ataxia. **congen'ital p.,** a familial disease in which tonic muscular spasms, especially of the face, are excited by exposure to cold. **symptomat'ic p.,** a temporary rigidity of the muscles when first attempting to walk, noted in certain cases of paralysis agitans.

paranalge'sia [G. *para*, beside, + *analgēsia*.] Analgesia affecting the two lower extremities.

parane'a. Paranoia.

paraneph'rin. Trade name of an extract of the adrenal glands; a yellow friable mass, soluble in water; causes contraction of the arterioles and raises blood-pressure; employed in internal hemorrhages in doses of ♏8–15 (0.5–1.0) of a 1–1000 aqueous solution, and locally to blanch and arrest hemorrhage from the mucous membranes.

paranephritis (par-ah-ne-fri'(fre')tis.] [G. *para*, beside, + *nephros*, kidney, + *-itis*.] 1. Inflammation of the suprarenal body. 2. Inflammation of the connective tissue surrounding the kidney, perinephritis.

paraneph'ros [G. *para*, beside, + *nephros*, kidney.] The suprarenal or adrenal body.

paranesthesia, paranæsthesia (par"an-es-the'zĭ-ah) [G. *para*, beside, + *anaisthēsia*, insensibility Anesthesia affecting corresponding parts on the two sides of the body, especially the lower extremities.

paraneu'ral [G. *para*, beside, + *neuron*, nerve.] Near or alongside a nerve.

parangi (par-ang'ge). A disease of the skin occurring in Ceylon, thought to be the same as yaws.

paranœ'a. Paranoia.

paranœ'ac. Paranoiac.

paranœ'ic. Relating to paranœa, or paranoia.

paranoia (par"ah-noy'ah) [G. derangement, madness; from *para*, beside, + *noeō*, I think.] A functional mental disorder marked by the presence of systematized delusions without other symptoms of insanity; it begins usually in the middle twenties and in subjects in whom there is some hereditary psychopathic or neuropathic taint. **acute' hallu'cinatory p.,** a form in which there are interjected periods of hallucinations in addition to the systematized delusions. **heb'oid p.,** dementia paranoides. **p. origina'ria,** a form occurring in children. **p. quæ'rula,** a morbid state characterized by discontent and the disposition to complain of imaginary slights.

paranoiac (par"ah-noy'ak). 1. Relating to or affected with paranoia. 2. A person suffering from paranoia.

par'anoid. Resembling paranoia.

paranoidism (par-ah-noyd'izm). The paranoiac character; the condition of one suffering from paranoia.

parano'mia [G. *para*, beside, + *onoma*, name.] A form of aphasia in which objects are called by the wrong names.

paranuclear (par-ah-nu'kle-ar). 1. Paranucleate. 2. Outside of, but near the nucleus.

paranu'cleate. Relating to or having a paranucleus.

paranuclein (par-ah-nu'kle-in). Nucleoalbumin.

paranucleolus (par-ah-nu-kle'o-lus). A minute basophile particle in the envelope of the nucleus.

paranucleoprotein (par-ah-nu"kle-o-pro'te-in). Nucleoalbumin.

paranu'cleus. An accessory nucleus, or small mass of chromatin lying outside of, though near, the nucleus.

paraomphal'ic [G. *para*, beside, + *omphalos*, umbilicus.] Alongside of or near the umbilicus, paraumbilical.

paraop'erative [G. *para*, beside.] Relating to the accessories of an operation, the preparation of the patient, asepsis, selection and care of the instruments, etc.

parapancreatic (par"ah-pan-kre-at'ik) [G. *para*, beside, + *pankreas*.] Near or alongside of the pancreas.

parapar'esis [G. *para*, beside, + *paresis*.] A slight degree of paralysis, affecting the lower extremities.

paraparisol (par-ah-par'i-sol). An antiseptic product similar to parisol.

parapede'sis [G. *para*, beside, + *pedēsis*, deflection.] Excretion or secretion through an abnormal channel.

parapep'tone. Syntonin, acid-albumin, an albuminoid resulting from the incomplete proteolysis of albumin, intermediate between that and peptone; it is obtained by arresting the artificial digestion of a protein by neutralizing the previously acid pepsin solution.

paraperitoneal (par″ah-per″ĭ-to-ne′al). Outside of or alongside the peritoneum. **p. her′nia,** hernia of the bladder in which the protruded portion of the viscus is only partially covered by the peritoneal sac.

parapestis (par-ah-pes′tis) [G. *para*, beside, + L. *pestis*, plague.] Pestis minor (2), climatic bubo.

paraphasia (par″ă-fa′zĭ-ah) [G. *para*, beside, + *phasis*, declaration.] Jargon, a form of aphasia in which the patient has lost the power of speaking correctly, although words are heard and comprehended; he substitutes one word for another, and jumbles his words and sentences in such a way as to make his speech unintelligible.

paropha′sic. Relating to paraphasia.

paraphemia (par″ă-fe′mĭ-ah) [G. *para*, beside, + *phēmē*, speech.] A form of aphasia in which the patient constantly employs the wrong words.

paraph′ia [G. *para*, beside, + *haphē*, touch.] Any disorder of the sense of touch.

paraphimosis (par″ah-fi-mo′sis) [G. *para*, beyond, + *phimōsis*, a stoppage.] 1. Constriction of the glans penis by a foreskin, with narrow orifice, which has been retracted behind the corona and cannot be drawn forward. 2. A retraction of the lid behind a protruding eyeball.

paraphobia (par-ah-fo′bĭ-ah) [G. *para*, beside, + *phobos*, fear.] A mild degree of phobia, in which there is an indisposition or hesitancy to perform certain acts, remain in certain places, etc., but not an absolute impossibility of so doing or being.

parapho′nia [G. *para*, beside, + *phōnē*, voice.] Any disorder of the voice, especially a change in its tone.

paraph′ora [G. derangement.] Mental disturbance of slight degree.

paraphosphoric acid (par″ah-fos-for′ik as′id) [G. *para*, beside.] See *phosphoric* acid*.

paraphrasia (par-ă-fra′zĭ-ah) [G. *para*, beside, + *phrasis*, speech.] Paraphasia.

paraphre′nia [G. *para*, beside, + *phrēn*, mind.] 1. Disordered intellection, intellectual insanity. 2. Paraphrenitis.

paraphrenitis (par-ah-fre-ni′(ne′)tis) [G. *para*, beside, + *phrēn*, diaphragm, + *-itis*.] Inflammation of any tissue adjacent to the diaphragm.

paraph′ysis [G. an offshoot.] 1. A derivative of the roof-plate of the telencephalon. 2. In botany, a sterile filament or narrow band of cells accompanying the sexual organs in cryptogamous plants.

par′aphyte [G. *para*, beside, + *phyton*, plant.] An outgrowth, a vegetation.

paraphy′ton [G. *para*, beside, + *phyton*, plant.] A vegetable parasite.

parapineal (par-ah-pin′e-al) [G. *para*, alongside.] Beside the pineal, noting the visual or photoreceptive portion of the pineal body present, if not functioning, in certain lizards.

par′aplasm [G. *para*, beside, + *plasma*, a thing formed.] 1. Paramitome, hyaloplasm. 2. A malformation.

Paraplasma flavigenum (par-ah-plaz′mah flă-vij′e-num). Seidelin* body.

paraplas′tic. Relating to a paraplasm (2), misshapen, deformed.

paraplas′tin. A substance, occurring in the nucleus and cytoplasm, related to parachromatin.

paraplec′tic [G. *paraplēktikos*, paralyzed.] Paraplegic.

paraplegia (par-ah-ple′jĭ-ah) [G. *para*, beside, + *plēgē*, a stroke.] Paralysis of both lower extremities and also of more or less of the trunk. **atax′ic p.,** progressive ataxia and paresis of the leg muscles due to sclerosis of the lateral and posterior funiculi of the spinal cord. **congen′ital spastic p., in′fantile spastic p.,** a spastic paralysis of the lower extremities occurring in the infant, due to meningeal hemorrhage following injury at birth, a form of obstetric paralysis or birth palsy. **p. doloro′sa,** painful p., paralysis of the lower extremities in which the affected parts, in spite of loss of motion and sensation, are the seat of excruciating pain; it occurs in certain cases of cancer of the spinal cord. **Pott's p.,** paralysis of the lower part of the body and the extremities, due to pressure on the spinal cord in Pott's disease of the spine. **se′nile p.,** (1) simple weakness of the lower extremities, without atrophy or changes in the reflexes, occurring in the aged; (2) an acute p. due to hemorrhage or thrombosis of the spinal arteries; (3) a slowly developing paralysis of the lower, eventually of the upper, extremities, with involvement of the sphincters, due to softening of the anterior cornua of the spinal cord in the aged. **spastic p.,** paresis of the lower extremities with increased irritability and spasmodic contraction of the muscles; spastic spinal paralysis, lateral sclerosis. **supe′rior p.,** paralysis of both arms. **tet′anoid p.,** spastic spinal paralysis.*

paraple′gic. Relating to or suffering from paraplegia.

paraple′giform [*paraplegia* + L. *forma*, form.] Resembling paraplegia.

parapleuritis (par-ah-plu-ri′(re′)tis) [G. *para*, beside, + *pleura*, rib, + *-itis*.] Inflammation of the thoracic wall.

paraplex′us [G. *para*, beside.] The choroid plexus of the lateral ventricles.

parapneumonia (par″ah-nu-mo′nĭ-ah). A variety of pneumonia, simulating croupous pneumonia, but not due to the presence of the pneumococcus.

parapophysis (par″ă-pof′i-sis) [G. *para*, beside, + *apophysis*, an offshoot.] A secondary and slightly developed process sometimes present in front of the transverse process of a vertebra; in some animals it is normally present and of considerable size and strength.

parap′oplexy. Pseudoapoplexy, a condition of partial stupor simulating a mild apoplectic attack.

paraprax′ia (par-ă-praks′ĭ-ah) [G. *para*, beside, + *praxis*, a doing.] A condition analogous to paraphasia and paragraphia in which there is a defective performance of certain purposive acts.

paraproctitis (par-ah-prok-ti′(te′)tis) [G. *para*, beside, + *prōktos*, anus, + *-itis*.] Inflammation of the cellular tissue surrounding the rectum.

paraproc′tium [G. *para*, beside, + *prōktos*, anus.] [NK] The cellular tissue surrounding the rectum.

paraprostatitis (par″ah-pros-tă-ti′(te′)tis) [G. *para*, beside, + *prostata*, prostate gland, + *-itis*.] Inflammation of the tissues around the prostate gland.

parap′sia [G. *para*, beside, + *hapsis*, touch.] Paraphia.

parapsoriasis (par-ah-so-ri′a-sis) [G. *para*, beside.] A term applied by Brocq to a group of scaly dermatoses having certain characteristics in common yet differing from each other in appearance.

parapycnomorphous (par″ah-pik-no-mor′fus) [G. *para*, aside, + *pyknos*, thick, + *morphē*, form, shape.] Noting a cell or other structure which stains fairly well yet not markedly; one which is neither pycnomorphous nor apycnomorphous.

paraqueduct (par-ak′we-dukt) [G. *para*, beside, + L. *aquæductus*, aqueduct.] A lateral extension of the aquæductus cerebri.

pararec'tal. Near the rectum or rectus muscle.

pararedu'cine. An alkaloid or leucomaine found, together with reducine, in the urine.

parareg'ulin. A laxative preparation said to be composed of paraffin and cascara sagrada.

pararhizoclasia (par-ŭ-ri-zo-kla'zĭ-ŭ) [G. *para*, beside, + *rhizos*, root, + *klasis*, a breaking away.] Ulceration of the alveolar structures beside or around the root of a tooth.

pararhotacism (par"ah-ro'tah-sizm) [G. *para*, beside, + *rho*, letter r.] Mispronunciation of the letter r.

pararosan'iline. Parafuchsin.

parar't ria [G. *para*, beside, + *arthron*, articulation.] A faulty mode of articulating.

Parasaccharomyces (par-ŭ-sak-ar-o-mi'sēz). A yeast-like fungus, possibly identical with *Monilia*, found in the intestinal contents; there are several strains or groups designated by letters of the alphabet—A, B, C, etc.

parasa'cral. Alongside the sacrum.

parasalpingitis (par-ah-sal-pin-ji'(je')tis) [G. *para*] beside, + *salpinx(salping-)*, trumpet, + *-itis.*, Inflammation of the tissues surrounding the Fallopian or the Eustachian tube.

parasecre'tion. Paracrisis, parecrisis.

paraserum reaction (par-ah-se'rum re-ak'shun). Paragglutination.

parasig'matism [G. *para*, beside, + *sigma*, letter s.] Mispronunciation of the letter s; lisping.

parasinoidal (par-ah-si-noy'dal) [G. *para*, beside, + L. *sinus*.] Near a sinus in any sense, but particularly a cerebral sinus.

parasite (par'ă-sīt) [G. *parasitos*, a guest, *para*, beside, + *sitos*, food.] 1. An animal or vegetable organism which lives on or in another and draws its nourishment therefrom. 2. In the case of a fetal inclusion or double monster, the more or less incomplete twin which derives its support from the other, the latter being called the *autosite*. **commen'sal p.**, see *commensal*. **fac'ultative p.**, an organism which may lead an independent existence or live as a parasite, according to circumstances; opposed to *obligate p.* **inciden'tal p.**, one which normally lives on another than its present host. **in'quiline p.**, see *inquiline*. **ob'ligate p.**, one which cannot lead an independent non-parasitic existence; opposed to *facultative p.* **specif'ic p.**, one which habitually lives on its present host.

parasit'ic. 1. Relating to, or of the nature of a parasite. 2. Noting microorganisms which normally grow only in or on the living body.

parasit'icide [L. *parasitus*, parasite, + *cædere*, to kill] 1. Destructive to parasites. 2. An agent which destroys parasites.

parasit'ifer [L. *parasitus*, parasite, + *ferre*, to bear.] The host of a parasite; in teratology, the autosite.

par'asitism. 1. Infestation with parasites. 2. The mode of existence of parasites.

par'asitize. To invade as a parasite.

par'asitogen'ic [G. *parasitos*, parasite, + *gennaō* I, produce.] 1. Noting the conditions favorable to parasitism. 2. Caused by parasites.

parasitol'ogist. One who is versed in the science of parasitology.

parasitol'ogy [G. *parasitos*, parasite, + *-logia*.] The branch of zoology and of medicine which treats of parasitism in all its relations.

parasitophobia (par-ah-sit"o-fo'bĭ-ah) [G. *parasitos*, parasite, + *phobos*, fear.] Morbid fear of parasites.

parasitotropic (par"ŭ-si-to-trop'ik) [G. *parasitos*, parasite, + *tropikos*, noting a turn.] Attracted by a parasite, noting especially certain substances which act chiefly or exclusively upon microparasites present in the body tissues or fluids.

parasitot'ropy [G. *parasitos*, parasite, + *tropē*, a turning.] In chemotherapy, the affinity of a remedy for the pathogenic parasites, as distinguished from organotropy.*

par'a-small'pox [G. *para*, beside.] Alastrim.

par'asol inser'tion. A form of attachment of the umbilical cord to the placenta, in which the vessels of the cord separate at a short distance from the placenta and pass to different points of insertion somewhat like the ribs of an open parasol or umbrella.

paraspa'dia, paraspa'dias [G. *paraspaō*, I draw aside.] A condition in which there is a lateral opening into the urethra.

par'aspasm [G. *para*, beside, + *spasmos*, spasm.] 1. Spastic paraplegia. 2. Muscular spasm involving the lower extremities.

paraspecif'ic. Possessing an action other than, and in addition to, the specific one; as the apparently curative action of diphtheria antitoxin in other affections than diphtheria.

parastata (par-as'tă-tah) [G. *para*, beside, + *histēmi*, I am placed.] 1. The prostate gland. 2. The epididymis. **p. adenoi'des,** prostate. **p. cirsoi'des,** epididymis. **p. glandulo'sa,** prostate. **p. varico'sa,** (1) oviduct; (2) epididymis.

parasteato'sis [*para*, beside, + *stear(steat-)*, tallow. Any disorder of the sebaceous secretions.

paraster'nal [G. *para*, beside, + L. *sternum*.] Alongside the sternum.

parastru'ma. A goitrous tumor due to enlargement of a parathyroid gland.

parasympathetic system (par-ŭ-sim-pă-thet'ik sis'tem) [G. *para*, beside.] Autonomic* nervous system.

parasynanchy (par-ŭ-sin-an'ke) [G. *parasyuauchē* sore throat.] Rheumatic inflammation of the muscles of the throat.

parasynap'sis [G. *para*, beside, + *synapsis*, a binding together.] Union of chromosomes side to side in the process of "reduction."

parasynovitis (par-ŭ-si-no-vi'(ve')tis) [G. *para*, beside, + L. *synovia* + G. *-itis*.] Inflammation of the tissues immediately adjacent to a joint.

parasyphilis (par"ŭ-sif'i-lis) [G. *para*, beside] Any affection indirectly due to syphilis.

parasyphilit'ic. Noting certain diseases supposed to be indirectly due to syphilis, though presenting none of the recognized anatomicopathological lesions of that infection; tabes dorsalis and general paralysis paresis (2)* are among these.

parasyphilo'sis. Parasyphilis.

parasystole (par-ŭ-sis'to-lē) [G. *para*, beside.] An interval of rest of unusual duration following the cardiac systole.

paratar'sium [G. *para*, beside, + *tarsos*, tarsus.] The connective tissue of the tarsus of the foot.

paratenon (par-ŭ-ten'on) [G. *para*, beside, + *tenōn*, tendon.] The material, fatty or synovial, between a tendon and its sheath.

paratereseomania (par-ŭ-te-re"se-o-ma'nĭ-ah) [G. *paratērēsis*, a watching for, + *mania*, frenzy.] Inquisitiveness carried to the point of insanity.

paraterm'inal bod'y. The area extending backward from the olfactory peduncle to the lamina terminalis and upward between the callosum and hippocampal commissure.

parathesin (par-ă'thĕ-sin). The ethyl ester of paraminobenzoate, analgesic and local anesthetic.

parathormone (par-ŭ-thor'mōn) [*parathyroid* + *hormone*.] Trade name of a parathyroid extract

recommended for the treatment of tetany in doses of 1.0–1.5 c.c. (20–25 Collip units), repeated two or three times in the first twenty-four hours.

parathymia (par-ă-thi'mĭ-ah) [G. *para*, beside, + *-thymia*.] Misdirection of the emotional faculties, disordered emotivity; impulsive insanity.

parathy'roid [G. *para*, beside.] 1. Adjacent to the thyroid gland. 2. A parathyroid gland, glandula* parathyreoidea.

parathyroidec'tomy [*parathyroid* + *ektomē*, excision.] Excision of the parathyroid glands.

parathyroidin (par-ă-thi'roy-din). Trade name of an extract of the parathyroid glands.

par'atoloid, paratoloi'din. Tuberculin.

parato'nia [G. *para*, beyond, + *tonos*, tension.] Superextension, extension beyond the normal limit.

parat'ophan. Novatophan, neocinchophen.*

paratox'in. A mixture of cholesterin and biliary extract with petroleum ether; has been employed hypodermically in the treatment of tuberculosis and other infectious diseases.

paratrichosis (par-ă-trĭ-ko'sis) [G. *para*, beside, + *trichōsis*, making or being hairy.] Any disorder in the growth of the hair, as regards location or quantity.

paratrimma (par-ă-trim'ah) [G. *para*, beside, + *tribō*, I rub.] Intertrigo; chafing.

paratrip'sis [G. *para*, beside, + *tripsis*, rubbing.] 1. Chafing. 2. Retardation of catabolism or tissue waste.

paratrip'tic. 1. Causing or caused by chafing, 2. Retarding catabolic processes. 3. An agent, such as coffee, which retards tissue waste.

paratro'phia. Dystrophy.

paratroph'ic [G. *para*, beside, + *trophē*, nourishment.] Deriving sustenance from living organic material; parasitic; see *metatrophic, prototrophic.*

parat'rophy. Dystrophy.

paratuberculo'sis [G. *para*, beside, + *tuberculosis*.] 1. A condition marked by symptoms of tuberculosis, in which the presence of the tubercle bacillus cannot be demonstrated; due possibly to the action of the toxins remaining from a previous infection or derived from without. 2. Tuberculide, a scrofulous eruption; an inflammatory lesion of the skin due to the action of tuberculous toxin in the blood.

paratuber'culous. Relating to paratuberculosis.

paratyphlitis (par-ah-ti-fli'(fle')tis) [G. *para*, beside, + *typhlon*, cecum, + *-itis*.] Inflammation of the connective tissue adjacent to the cecum.

paratyp'ic, paratyp'ical [G. *para*, beside, + *typos*, type.] Deviating more or less from a type.

paraty'phoid [G. *para*, beside.] Resembling in some respects, yet not the same as, typhoid; noting a fever and the bacilli causing it. **p. bacill'us,** see below. **p. fe'ver,** an acute infectious disease with symptoms and lesions resembling those of typhoid fever, though milder in character; it is associated with the presence of the paratyphoid bacillus, of which at least three varieties (types A, B, and C) have been described; see *Salmonella paratyphi, S. schotmülleri,* and *S. hirschfeldii.*

paraumbil'ical [G. *para*, beside, + L. *umbilicus*.] Paraomphalic, near the umbilicus.

paraundulant fever (par-ah-un'du-lant fe'vur) [G. *para*, beside.] A fever resembling undulant fever, either an attenuated form of this disease or possibly a distinct affection, bearing a relation to it similar to that borne by paratyphoid to typhoid fever.

paraure'thral [G. *para*, beside, + *onrēthra*, urethra.] Alongside the urethra.

paravaginal (par-ah-vaj'ĭ-nal) [G. *para*, beside, + L. *vagina*.] Alongside of the vagina.

paravaginitis (par-ah-vaj-in-i'(e')tis) [G. *para*, beside, + L. *vagina*.] Inflammation of the cellular tissue alongside the vagina.

paraver'tebral [G. *para*, near, beside, + L. *vertebra*.] Alongside a vertebra or the spinal column. **p. tri'angle,** Grocco's* triangle.

paraves'ical [G. *para*, beside, + L. *vesica*, bladder.] Paracystic. **p. pouch,** the lateral portion of the uterovesical pouch.

paraxanthine (par-ah-zan'thin). A xanthine base, $C_7H_8N_4O_2$, sometimes found in the urine, and formed in excess in cases of gout.

parax'ial [G. *para*, beside, + *axis*.] By the side of the axis of any body or part.

parax'on, parax'one [G. *para*, beside, + *axōn*, axis.] A collateral branch of a neuraxon of a cell of the first type, or of Deiters, given off at a right angle, not forming an arborization, but often in relation with the dendraxon of a cell of the second type, or of Golgi.

Parazoa (par-ah-zo'ah) [G. *para*, beside, + *zōa*, pl. of *zōon*, animal.] One of the three groups into which the animal kingdom is divided; it includes only one phylum, the Porifera, or sponges.

parazoon (par-ah-zo'on) [G. *para*, beside, + *zōon*, animal.] 1. An animal parasite. 2. An individual of the group Parazoa.

parch'ment crack'ling. The sensation as of the crackling of stiff paper or parchment, noted on palpation of the skull in cases of craniotabes. **p.-skin,** a dry whitish condition of the skin in cattle, occurring sometimes as a symptom in verminous bronchitis.

Pardan'thus [G. *pardos*, leopard, + *anthos*, flower.] A genus of plants of the order *Irdieæ*, in eastern Asia. The sole species, *P. sinen'sis*, blackberry lily, is the source of a laxative largely used in China and India.

Paré's su'ture (pă-ra') [Ambroise *Paré*, French surgeon who introduced the method of ligation of arteries, instead of cauterizing them, after amputation, 1510–1590.] The approximation of the edges of a wound by pasting strips of cloth to the surface and stitching them instead of the skin.

parecta'sia, parec'tasis [G. *para*, beside, + *ektasis*, extension.] Extreme distention of a cavity or other part.

parectropia (par-ek-tro'pĭ-ah) [G. *para*, beside, + *ek*, out of, + *tropos*, a turning. Apraxia.

paregor'ic, paregor'ic elix'ir [G. *parēgorikos*, soothing.] Tinctura camphoræ composita (Br.), tinctura opii camphorata (U.S.).

pareira (par-a'-ĭ-rah) (N.F., Br.). Pareira brava, the root of *Chondrodendron tomentosum*, a vine of tropical America; employed as a diuretic in doses of ʒi (30.0) of an infusion of the strength of 1 ounce to the pint.

parelectronom'ic [G. *para*, beside, + *ēlektron* + *nomos*, law.] Not subject to the laws of electricity, *i.e.* not excited by an electric stimulus.

parencepha'lia [G. *para*, beside, + *enkephalos*, brain.] A condition of imperfect cerebral development.

parencephalitis (par-en-sef-al-i'(e')tis) [*parencephalon* + G. *-itis*.] Inflammation of the cerebellum.

parencephalocele (par-en-sef'al-o-sēl) [*parencephalon* + G. *kēlē*, hernia.] Protrusion of the cerebellum through a defect in the cranium.

parenceph'alon [G. *para*, beside, + *enkephalos*, brain.] Cerebellum.

parenceph'alous. Relating to parencephalia or to a parencephalus.

parenceph'alus [G. *para*, beside, + *enkephalos*, brain.] A monster with imperfect cerebral development.

parenchyma (par-en'ki-mah) [G. *parencheō*, I pour in beside, as in a mould.] 1. The distinguishing or specific tissue of a gland or organ, contained in and supported by the connective-tissue framework, or stroma. 2. The endoplasm of a protozoan cell.

parenchymal (par-en'ki-mal). Relating to the parenchyma, parenchymatous.

parenchymatitis (par-en-ki-mă-ti'(te')tis) [G. *parenchyma* + *-itis*.] Inflammation of the parenchyma or differentiated substance of a gland or organ.

parenchymatous (par-en-ki'mă-tus). Relating to the parenchyma, parenchymal. **p. neuri'tis,** neuritis affecting chiefly or exclusively the axis-cylinder and its myelin.

parenchymula (par-en-ki'mu-lah) [L. dim. of G. *parenchyma*.] The stage in embryonic development next succeeding that of the closed blastula, in which the external differentiated cells pass into the interior.

par'ent [L. *parens; parere*, to bring forth.] A father or mother. **p. cell,** (1) the impregnated ovum or cytula; (2) a mother cell.

parenteral (par-en'ter-al) [G. *para*, contrary to, + *enteron*, intestine.] In some way other than by the intestinal canal, referring especially to the assimilation of nutritive material introduced into the veins or subcutaneous tissues, and to a special mode of treatment, non-specific or protein therapy.* **p. ther'apy,** protein therapy.*

parepicœle (par-ep'ĭ-sēl) [G. *para*, beside, + *epi*, upon, + *koilia*, a hollow.] The lateral recess of the fourth ventricle of the brain, passing outward round the upper part of the restiform body.

parepidid'ymis [G. *para*, beside, + *epididymis*.] Paradidymis.

parepithym'ia [G. *para*, beside, + *epithymia*, desire. Morbid longing, perverted desire or craving.

par'esis [G. weakness.] 1. Partial or incomplete paralysis. 2. Dementia paralytica, general paralysis of the insane, a disease of the brain, usually regarded as parasyphilitic in origin, marked by progressive dementia, tremor, speech disturbances, and increasing muscular weakness; in a large proportion of cases there is a preliminary stage of irritability followed by exaltation and delusions of grandeur.

paressine (par'es-sēn). Trade name of a mixture of paraffin, gum elemi, Japan wax, asphalt, and eucalyptol, colored with alkannin and gentian violet; employed, like ambrine, as a protective application to burns and frost-bites.

paresthesia, paræsthesia (par-es-the'zĭ-ah) [G. *para*, beside, + *aisthēsis*, sensation.] An abnormal spontaneous sensation, such as of burning, pricking, numbness, etc.

paresthet'ic. Relating to or marked by paresthesia.

paret'ic. Relating to or suffering from paresis.

pareunia (par-u'nĭ-ah) [G. *pareunos*, lying beside.] Sexual intercourse.

parhormone (pahr-hōr'mōn) [G. *para*, alongside of, + hormone.] A catabolic product supposed to have a hormone-like function.

par'icine. An alkaloid of cinchona, $C_{16}H_{18}N_2O$.

paridro'sis [G. *para*, beside, + *hidrōsis*, sweating. Any derangement of perspiration.

par'ies, gen. *pari'etis*, pl. *pari'etes* [L. wall.] A wall, as of the chest, abdomen, or any hollow organ. **p. carot'ica tym'pani** [BNA], carotid, or anterior, wall of the tympanum; it contains the opening of the Eustachian tube. **p. jugula'ris tym'pani** [BNA], jugular wall of the tympanum, fundus tympani, inferior wall or floor of the tympanic cavity; a thin plate of bone separating the tympanic cavity from the jugular fossa. **p. labyrin'thica tym'pani** [BNA], labyrinthic, or inner, wall of the tympanum, a bony layer separating it from the internal ear or labyrinth, it contains the fenestra vestibuli, or ovalis, and the fenestra cochleæ, or rotunda. **p. mastoid'ea tym'pani** [BNA], mastoid, or posterior wall of the tympanum, containing the opening into the tympanic or mastoid antrum. **p. membrana'cea tym'pani** [BNA], membranous, or outer, wall of the tympanum formed mainly by the membrana tympani. **p. tegmenta lis tym'pani** [BNA], tegmental wall of the tympanum, the superior wall or roof of the tympanic cavity, formed by the tegmen tympani of the temporal bone.

pari'etal. Relating to the wall of any cavity **p. bone,** os parietale.

Parieta'ria [L. *paries*, wall.] A genus of plants, of which the most common species, *P. officinalis*, wall pellitory, has been employed in domestic practice as a diuretic.

parietes (par-i'e-tes). Plural of L. *paries*, a wall.

parietofrontal (par-i"e-to-frun'tal). Relating to the parietal and the frontal bones or the parts of the cerebral cortex corresponding thereto.

parietooccipital (par-i"e-to-ok-sip'ĭ-tal). Relating to the parietal and occipital bones or to the parts of the cerebral cortex corresponding thereto.

pari"etosphe'noid. Relating to the parietal and the sphenoid bones.

parietosplanchnic (par-i"e-to-splank'nik). Parietovisceral.

pari"etosquamo'sal. Relating to the parietal bone and the squamous portion of the temporal bone.

pari"etotem'poral. Relating to the parietal and the temporal bones.

pari"etovis'ceral. Relating to the wall of a cavity and to the contained viscera.

Parinaud's conjunctivi'tis (par-e-no') [Henri *Parinaud*, Parisian ophthalmologist, 1844–1905.] Leptothricosis conjunctivæ, a subacute inflammation of the conjunctiva due to infection with a minute leptothrix; it is characterized by the presence of large irregular reddish granulations in the connective tissue of the lids and fornix with simultaneous swelling of the lymph glands of the ear and throat, said by P. to be contracted by contagion from animals. **P.'s ophthalmople'gia,** paralysis of the rectus lateralis of one eye and spasmodic contraction of the rectus medialis of the other eye.

Paris green. Acetoarsenite of copper, made by boiling solutions of arsenous acid and cupric acetate, Schweinfurt green.

par'isol. An alcoholic soap solution containing formaldehyde.

paristhmic (par-is'mik). Relating to the tonsils.

paristhmion (par-is'mĭ-on) [G. *para*, beside, + *isthmion*, the throat.] A tonsil.

paristhmitis (par-is-mi'(me')tis). Amygdalitis, inflammation of the tonsil.

par'ity [L. *parere*, to bear.] The state of a woman as regards the fact of having borne children. *Nulliparity* is the condition of having had no children, *primiparity* of having borne one child, *secundiparity* of having borne two children, *multiparity* of having had several children, etc.

Park's an'eurysm [Henry *Park*, Liverpool surgeon, 1744–1831.] An arteriovenous aneurysm of the bend of the elbow, in which the brachial artery

communicates with the brachial and median basilic veins.

Parkes' syndrome. Epidemic acidosis in children marked by cyanosis, enlargement of the liver, acetonemic vomiting, somnolence, and disturbances of the respiratory rhythm.

Par'ker's flu'id [George Howard *Parker*, American zoologist, *1864.] A hardening fluid of formaldehyde, 1, in 70 per cent. alcohol, 100.

Par'ker's incis'ion [Willard *Parker*, New York surgeon, 1800–1884.] An oblique incision nearly parallel with Poupart's ligament over the area of dulness in appendical abscess.

Par'kinson's disease' [James *Parkinson*, English physician, 1755–1824.] Paralysis agitans. **P.'s fa'cies, P.'s mask,** the elevated eyebrows and expressionless facies characteristic of paralysis agitans.

parkinsonian. 1. Relating to paralysis agitans. 2. A sufferer from paralysis agitans.

Park-Williams bacillus [William Hallock *Park*, American bacteriologist, *1863; Anna Wessels *Williams*, American bacteriologist.] A special strain of the diphtheria bacillus employed in the preparation of antitoxin. **P.-W. fixative,** for spirochetes: expose for a few seconds to the fumes of a 2 per cent. solution of osmic acid.

paroa'rium. Parovarium.

paroccip'ital [G. *para*, beside, + L. *occipitalis*] Near or beside the occipital bone or the occiput. **p. process,** paramastoid* process.

parodon'tid [G. *para*, beside, + *odous(odont-)* tooth.] A tumor of the gum, epulis.

parodontitis (par-o-don-ti'(te')tis) [G. *para*, beside + *odous*, tooth, + *-itis*.] Pyorrhea alveolaris.

parodontium (par-o-don'shyum). The anatomical and functional entity consisting of the alveolar process, pericementum, and gingiva in the region of a tooth.

parodynia (par-o-din'ĭ-ah) [L. *parere*, to bear, + G. *odynē*, pain] 1. Labor-pains. 2. Abnormal or difficult labor, dystocia. **p. perver'sa,** cross-birth.

par'ogen, parogenum (par-oj'en-um). Vasolinimentum, petroxolinum (N.F.). **thick p.,** petroxolinum spissum (N.F.).

paroidin (par-oy'din). Trade name of a make of parathyroid extract recommended in the treatment of tetany in doses of 0.2–0.4 c.c. twice a day for not more than ten days in succession, followed by an intermission of a week or two.

parol'ivary [G. *para*, beside, + L. *oliva*, olive.] By the side of or near the oliva.

parom'phalocele [G. *para*, beside, + *omphalos*, umbilicus, + *kēlē*, tumor, hernia] 1. A tumor near the umbilicus. 2. A hernia through a defect in the abdominal wall near the umbilicus.

paronir'ia [G. *para*, beside, + *oneiros*, dream.] Dreaming of a disagreeable or terrifying character.

paronychia (par-o-nik'ĭ-ah) [G. *para*, beside, + *onyx(onych-)*, nail.] Felon, panaris, whitlow; inflammation of the structures in the distal phalanx of a finger or toe, either those surrounding the nail or the bone itself.

paronychial (par-o-nik'ĭ-al). Relating to paronychia.

paroophoron (par-o-of'or-on) [G. *para*, beside, + *ōophoros*, egg-bearing.] [BNA] A collection of rudimentary tubules in the mesosalpinx near the uterus, the analogue of the paradidymis in the male; epoophoron, paroarium, parovarium.

parophthalmon'cus [G. *para*, near, + *ophthalmos*, eye, + *onkos*, swelling.] A neoplasm or tumor near the eye

parop'sis [G. *para*, beside, + *opsis*, vision.] Any disorder of vision.

parorchidium (par-or-kid'ĭ-um) [G. *para*, beside, + *orchis*, testis.] Non-descent of the testis, ectopia testis

parorchis (par-or'kis) [*para*, beside, + *orchis*, testis.] The epididymis.

parorex'ia [G. *para*, beside, + *orexis*, appetite.] Perverted appetite.

parosmia (par-oz'mĭ-ah) [G. *para*, beside, + *osmē*, the sense of smell.] Any disorder of the sense of smell especially the subjective perception of odors which do not exist.

parosphresia (par"os-fre'zĭ-ah) [G. *para*, beside, + *osphrēsis*, smell.] Parosmia.

parosteitis (par-os-te-i'(e')tis) [G. *para*, beside, + *osteon*, bone, + *-itis*.] Inflammation of the tissues immediately adjacent to a bone; also written parostitis.

parosteo'sis, parosto'sis [G. *para*, beside, + *osteon*, bone, + *-ōsis*.] 1. The development of bone in an unusual location, as in the skin. 2. Abnormal or defective ossification.

paro'tic [G. *para*, beside, + *ous(ōt-)*, ear] Near or beside the ear.

parot'id [G. *parōtis(parōtid-)*; *para*, beside, + *ous(ōt-)*, ear] Situated near the ear, noting several structures in this neighborhood. **p. artery, duct, gland, recess,** see under *arteria, ductus, glandula, recessus*.

parotidec'tomy [G. *parōtis(parōtid-)* + *ektomē*, excision.] Surgical removal of the parotid gland

parotidi'tis (par-ot-ĭ-di'(de')tis) [G. *parōtis(parōtid-)* + *-itis*] Inflammation of the parotid gland, parotitis; mumps. **epidem'ic p.,** mumps, an acute infectious and contagious disease characterized by inflammation and swelling of the parotid gland, sometimes of other salivary glands, and occasionally by metastasis of the mamma or testis.

parotidoauricularis (par-ot'ĭ-do-aw-rik-u-la'ris). An occasional band of muscle-fibers passing from the surface of the parotid gland to the auricle.

parotidoscirrhus (par-ot-ĭ-do-skir'(sir')us). 1. Parotidosclerosis, hardening of the parotid gland. 2 A scirrhous cancer of the parotid region.

parotidosclerosis (par-ot"ĭ-do-skle-ro'sis) [G. *parōtis(parōtid-)*, parotid gland, + *sklērōsis*, a hardening] Fibrous induration of the parotid gland.

parotitis (par-o-ti'(te')tis). Inflammation of the parotid gland, parotiditis.

parous (par'us) [L. *parere*, to bear.] Noting a woman who has borne children, whether one or more.

parova'rian. 1. Near or beside the ovary. 2. Relating to the parovarium.

parovariot'omy [*parovarium* + G. *tomē*, incision.] Incision into or removal of a tumor of the parovarium.

parovaritis (par-o-var-i'(e')tis) [*parovarium* + G. *-itis*.] Inflammation of the parovarium, or organ of Rosenmüller.

parova'rium [G. *para*, beside, + L. *ovarium*, ovary.] Organ of Rosenmüller, epoophoron.*

paroxysm (par'oks-izm) [G. *paroxysmos*.] 1. A sudden onset of a disease or of any symptoms, especially if they are recurrent, as in malaria. 2. A spasm, convulsion.

paroxysmal (par-oks-iz'mal). Relating to or occurring in paroxysms.

parresine (par'ĕ-sēn). Trade name of a mixture of paraffins, melting at 117° F., employed as a protective dressing to burns and denuded surfaces.

Par'rish's cam'phor mix'ture. Mistura camphoræ aromatica (N.F.). **P.'s food, P.'s syrup,** syrupus ferri phosphatis compositus.

par'rot-beak nail. A markedly curved finger nail.

parr'ot disease. Psittacosis.

Parrot's disease' (pă-ro') [Jules Marie *Parrot*, French physician, 1829–1883.] 1. Syphilitic pseudoparalysis in infants, due to lack of firm union of the epiphyses. 2. Achondroplasia. 3. Marasmus of the newborn, athrepsia. **P.'s mur'mur,** a low soft murmur taking the place of the cardiac sounds in asystole. **P.'s nodes,** nodular periostitic swellings on the cranium in hereditary syphilis. **P.'s sign,** dilatation of the pupil on pinching the skin, in meningitis. **P.'s ul'cer,** the lesions of parasitic stomatitis, or thrush.

parr'ot-mouth. A deformity of the mouth in the horse, characterized by retraction of the lower jaw.

Parr'y's disease' [Caleb Hillier *Parry*, English physician, 1756–1822.] Exophthalmic goiter.*

pars [L.] A part, a portion. **p. cæ'ca oc'uli** [NK], blind spot, papilla nervi optici. **p. caverno'sa** [BNA], p. spongiosa, the third portion of the male urethra, about six inches in length, which traverses the corpus cavernosum urethræ, or corpus spongiosum. **p. centra'lis** [BNA], cella media or body of the lateral ventricle of the brain, lying in the parietal lobe extending from the foramen of Monro to the splenium of the corpus callosum. **p. flac'cida** [BNA], flaccid part, Shrapnell's* membrane. **p. horizonta'lis** [BNA], horizontal part, or horizontal plate, of the palate bone, forming part of the floor of the nasal fossa. **p. inflex'a,** one of the two posterior reflections (*p. l. latera'lis, p. i. media'lis*) of the wall of a horse's hoof; see *bar*. **p. interme'dia foss'æ rhomboid'eæ** [BNA], the broad middle portion of the rhomboid fossa. **p. irid'ica ret'iniæ,** uveal tract. **p. mastoid'ea** [BNA], mastoid portion of the temporal bone. **p. membrana'cea** [BNA], the second portion of the male urethra, about half an inch in length, extending from the prostate to the beginning of the spongy urethra just beyond the bulb. **p. membrana'cea sep'ti atrio'rum** [BNA], a triangular space at the base of the interauricular septum of the heart where the muscular tissue is very thin or absent. **p. nasa'lis** [BNA], nasal portion of the temporal bone which lies between the two orbital parts anteriorly and forms part of the roof of the nasal fossæ. **p. orbita'lis** [BNA], p. o. tractus optici [NK], orbital portion of the frontal bone, consisting of two transversely curved plates separated by the ethmoidal notch and nasal spine. **p. perpendicula'ris** [BNA], perpendicular part, or vertical plate, of the palate bone. **p. petro'sa** [BNA], petrous portion of the temporal bone; pyramid. **p. prostat'ica** [BNA], the portion of the male urethra, about one inch in length, which traverses the prostate. **p. sella'ris** [NK], sella turcica. **p. spongio'sa,** p. cavernosa [BNA]. **p. squamo'sa** [NK], the squamous portion of the temporal bone, squama temporalis [BNA]. **p. ten'sa** [BNA], tense part, the greater portion of the membrana tympani which is tense and firm, contrasting with the small triangular pars flaccida. **p. triangula'ris,** the præoperculum, preoperculum. **p. tympan'ica** [BNA], the tympanic portion of the temporal bone, forming the greater part of the wall of the external auditory meatus.

pars'ley [G. *petroselinon*, rock-parsley.] A garden herb, the root of which is sometimes given as an emmenagogue; see *petroselinum*

Par'son's disease' [James *Parsons*, English physician, 1705–1770.] Exophthalmic goiter.*

parthe'nium. A European plant resembling chamomile; feverfew, *Matricaria parthenium*, practically the same as matricaria.*

parthenogen'esis [G. *parthenos*, virgin, + *genesis*, production.] A form of non-sexual reproduction, or agamogenesis, in which the female reproduces its kind without fecundation by the male.

parthenology (par-then-ol'o-jĭ) [G. *parthenos*, virgin, + *-ology*.] That branch of gynecology which deals with the genital apparatus of the virgin.

partial (par'shal) [L. *partialis* from *pars*, a part.] Incomplete, consisting of a part only. **p. el'ements,** the various molecules in protoplasm which differ biologically from each other. **p. groups,** the sum of the antisubstances or immune bodies in an immune serum which correspond to the p. elements of the microorganism in the culture.

particle (par'tĭ-kl) [L. *particula*, dim. of *pars*, part.] 1. A very small piece or portion of anything. 2. One of the groups of molecules assumed by Hardy to form the constituent elements of bioplasm, being held in suspension in water by electrical equilibrium. **elemen'tary p.,** Zimmermann's elementary p., Hayem's hematoblast, platelet.*

partic'ulate. Relating to or occurring in the form of fine particles.

partigen (par'tĭ-jen). Partial antigen. A term coined by Hans Much* to denote a constituent of a natural antigen, the latter being regarded as a mixture of partial antigens.

parturient (par-tu'rĭ-ent) [L. *parturire*, to be in labor.] Relating to or being in the process of parturition or childbirth. **p. canal,** the passage through which the child passes from the cavity of the uterus to the exterior. **p. woman,** a woman in labor.

parturifacient (par-tu-rĭ-fa'shent) [L. *parturire*, to be in labor, + *facere*, to make.] Oxytocic. 1. Inducing or accelerating labor. 2. An agent which induces or accelerates labor.

parturiom'eter [L. *parturitio*, parturition, + *metron*, measure.] A device for determining the force of the uterine contractions in childbirth.

parturition (par-tu-rish'un) [L. *parturire*, to be in labor.] Childbirth, labor, giving birth to a child.

par'tus [L. *partus; parere*, to bear.] Parturition. **p. agrippi'nus,** delivery by the breech. **p. cæsa'rius,** delivery by cesarean section. **p. prepara'tor,** preparer for parturition, noting any remedy or therapeutic measure designed to render an approaching labor safer or more easy. **p. seroti'nus,** delayed labor. **p. sic'cus,** a dry labor, one in which the amniotic fluid is scanty or flows away too soon.

paru'lis [G. *para*, beside, + *oulon*, gum.] A gumboil.

parumbil'ical. Paraumbilical.

paru'ria [G. *para*, beside, + *ouron*, urine.] Any disorder of micturition.

parvicellular (par''vĭ-sel'u-lar) [L. *parvus*, small, of *cellulari s*, cellular.] Relating or composed + cells of small size.

par'voline. A ptomaine, $C_9H_{13}N$, from decaying fish.

parvule (par'vūl) [L. *parvulus*, very small.] A pillule, pellet, granule; a minute pill.

Pascal's' law [Blaise *Pascal*, French scientist, 1623–1662.] Fluids at rest transmit pressure equally in every direction.

Paschen bodies (pah'shen) [E. *Paschen*, German physician, *1860.] Minute (0.2–0.25 μ or smaller) particles present in great numbers in the

skin exanthem and claimed to be the pathogenic virus of vaccinia.

paspalism (pas'pă-lizm). Poisoning by seeds of a species of grass, *Paspalum scrobiculatum*.

pas'sage [L. *passare*, to pass.] 1. The act of passing. 2. A discharge, as from the bowels or of urine. 3. The inoculation of a series of animals with the same strain of a pathogenic microorganism whereby the virulence of the latter is increased, or sometimes diminished. 4. A channel, duct, pore, or opening.

Passavant's cush'ion (pahs'ah-fahnt) [Gustav *Passavant*, German physician, 1815–1893.] The prominence formed by the contracting belly of the superior constrictor muscle of the pharynx during the act of swallowing.

passiflo'ra (N.F.). Passion-flower, the rhizome of *Passiflora incarnata*, a climbing herb of the southern United States; has been employed in neuralgia, dysmenorrhea, and insomnia, in doses of gr. 3 (0.2), and as an application to hemorrhoids and for burns.

passion (pash'un) [L. *passus; pati*, to suffer.] 1. Intense emotion. 2. Suffering, pain. **il'eac p., il'iac p.**, ileus.

passional (pash'un-al). Relating to any of the passions; emotional. **p. att'itudes**, attitudes expressive of any of the great passions, such as anger, joy, etc., noting one of the stages of hystero-epilepsy.

pass'ive [L. *passivus; pati*, to endure.] Not active, submissive. **p. conges'tion**, congestion due to obstruction to the return flow of blood, in contrast to hyperemia due to dilated capillaries and to increase in the force propelling the blood. **p. ex'ercise**, muscular exercise effected by mechanical means, by massage, and by p. movements. **p. hypere'mia**, congestion, p. congestion. **p. move'ments**, movements of the body and limbs imparted by a second person, without a voluntary effort of muscular contraction on the part of the subject.

pass'ivism. A form of sexual perversion in which the subject, usually the male, is submissive to the will of the partner, either male or female, in unnatural sexual practices.

Past. Abbreviation of *Pasteurella*.

pas'ta, gen. and pl. *pas'tæ* [L.] Paste. **p. betanaphtho'lis** (N.F.), Lassar's naphthol paste; betanaphthol 10, precipitated sulphur 50, soft soap and petrolatum each 20. **p. dermatolog'ica**, dermatological paste; a class of preparations of the N.F. consisting of starch, dextrin, sulphur, calcium carbonate or zinc oxide made into a paste with glycerin, soft soap, petrolatum, or some fat, with which is incorporated some medicinal substance. **p. dextrina'ta** (N.F.), dextrinated paste; a mixture of equal parts of dextrin, glycerin, and distilled water; used as a vehicle in the preparation of many of the dermatological pastes. **p. ichthyo'li**, Unna's ichthyol paste, ammonium ichthyolsulphonate 25, dextrinated paste to make 100. **p. resorcino'lis for'tis** (N.F.), strong resorcinol paste, a mixture of resorcinol, zinc oxide, and starch, of each 20, in light liquid petrolatum 40. **p. resorcino'lis mi'tis** (N.F.), Lassar's mild resorcin paste; resorcinol 10, zinc oxide and starch each 25, liquid petrolatum 40. **p. zin'ci** (N.F.), Lassar's zinc-salicyl paste; zinc oxide 24, salicylic acid 2, starch 24, white petrolatum 50. **p. zin'ci mol'lis** (N.F.), Unna's soft zinc paste; zinc oxide 25, calcium carbonate 25, oleic acid 2.5, linseed oil 25, lime water 22.5. **p. zin'ci ox'idi compos'ita** (Br.), compound paste of zinc oxide; oxide of zinc 250, finely sifted starch 250, white soft paraffin 500. **p. zin'ci sulphura'ta** (N.F.), Unna's sulphurated zinc paste; zinc oxide 15, precipitated sulphur 10, siliceous earth 5, benzoinated lard 70.

paste (pāst) [L. *pasta*.] A soft semisolid of firmer consistence than pap, but soft enough to flow slowly and not to retain its shape. **arsen'ical p.**, an escharotic containing 10 per cent. arsenous acid in a mixture of flour and melted suet. **dermatolog'ical p.**, see *pasta*. **London p.**, a moistened mixture of caustic soda and quick lime. **serum p.**, an application for wounds made of inspissated blood-serum. **sulphu'ric-acid p.**, powdered saffron moistened with sulphuric acid **Vienn'a p.**, a moistened mixture of caustic potash and quicklime.

paster (pās'ter). The oval or circular segment forming the part for near work in bifocal lenses.

pastern (pas'turn) [Fr. *pâturon*, pasture; because the shackle of a horse out at pasture is attached to this part of the leg?] The part of a horse's leg, which corresponds to the first phalanx of the middle finger or toe of man.

pas'tern-bone. One of two bones in the foot of the horse; the *large pastern bone* is the first phalanx in the foot of the horse, the os suffraginis; the *small pastern bone* is the second phalanx or os coronæ.

Pasteur's liq'uid (pahs-ter') [Louis *Pasteur*, French chemist and bacteriologist, 1822–1895.] A culture fluid containing yeast ashes and ammonium carbonate each 1, sugar 10, in water 100. **P.'s meth'od**, treatment of rabies by the injection of attenuated virus of progressively increasing virulence. **P.'s the'ory**, the theory that immunity produced by an attack of a disease or vaccination is due to exhaustion of the soil necessary for the growth of the specific microorganism. **P.'s treatment of rabies**, daily injections of progressively virulent suspensions of the spinal cord of rabbits dead of the disease, attenuated by drying in the air over lime. **P.'s vib'rio**, the pathogenic organism of malignant edema.

Pasteurella (pas-tur-el'ah) [after *Louis Pasteur*.] A genus of the family *Bacteriaceæ* containing several species, two of which are dangerously pathogenic to man. **Past. avici'da,**[0] short non-motile rods occurring singly, the cause of fowl cholera and pathogenic to birds in general. **Past. bovisep'tica,**[0] medium sized non-motile rod-shaped organisms, occurring singly, they are the cause of hemorrhagic septicemia in cattle and other farm animals. **Past. cuniculici'da,**[0] a species consisting of moderately long, non-motile rods, occurring singly or in chains, the cause of snuffles and hemorrhagic septicemia in rabbits, pathogenic also to barnyard fowls and laboratory animals. **Past. pes'tis,**[0] *Bacillus pestis*, moderatly long, non-motile rods, occurring singly; the cause of plague in man and rodents. **Past. suisep'tica,**[0] non-motile rod-shaped organisms of medium length, occurring singly, the cause of swine plague and of hemorrhagic septicemia in hogs and mice. **Past. tularen'sis,**[0] *Bacterium tularense, Brucella tularensis*, short, non-motile, gram-negative rods, occurring singly, the cause of tularemia* in man and rodents.

Pasteurelleae[0] (pas-tur-el'e-e). A tribe of the family *Bacteriaceae*, containing the genus *Pasteurella*.

pasteurello'sis. Infection with bacteria of the group *Pasteurella*, causing hemorrhagic septicemia.

pasteurization (pas″tĕr-i-za′shun) [after Louis *Pasteur*.] The heating of milk, wines, fruit juices, etc. for about thirty minutes to 68° C. (154.4° F.) whereby the living bacteria are destroyed, but the flavor or bouquet is preserved; the spores are unaffected, but are kept from developing by immediately cooling the liquid to 10° C. (50° F.) or lower. See *Sterilization*.

pasteurize (pas′tĕr-īz). To treat milk or other liquids after the manner described under *pasteurization*.

pas′teurizer. An apparatus employed in the pasteurization of fluids.

Pas′tia's sign [C. *Pastia*, Roumanian physician, contemporary.] The presence of pink or red transverse lines at the bend of the elbow in the preeruptive stage of scarlatina; they persist through the eruptive stage and remain as pigmented lines after desquamation.

pas′til, pastille (pas-tēl′) [Fr. *pastille;* L. *pastillus*, a roll (of bread).] 1. A small mass of benzoin and other aromatic substances to be burned for fumigation. 2. A medicated confection in the form of a troche or lozenge. **Sabouraud's p.**, see *Sabouraud*.

past-point′ing. A test of the integrity of the vestibular apparatus of the ear; the person, seated in a revolving chair, is rotated to the right ten rounds, the eyes being closed, then his right index finger, with arm horizontal, is brought to touch the tip of the examiner's finger; now he raises his arm vertically and is told to touch the examiner's finger again on bringing the arm once more to the horizontal; if the vestibular apparatus is normal, the finger will be brought down several inches to the right of the examiner's finger, because he then has the sensation of rotation to the left.

patch. A small circumscribed area differing in color or structure from the surrounding surface. **her′ald p.**, the initial manifestation of pityriasis rosea, consisting of a large, solitary, oval patch of efflorescence preceding sometimes by several days the general eruption. **mu′cous p.**, condyloma latum, one of a group of round or oval grayish yellow macerated papules or macules, occurring on the mucous membrane of the mouth or other orifices in syphilis. **o′paline p.**, a mucous p. of silver gray appearance.

patefaction (pa-te-fak′shun) [L. *patefacere*, to throw open.] A laying open.

Patein's albu′min (pă-taṅ′). [*Patein*, French physician, †1928.] A substance resembling serum albumin, but soluble in acetic acid.

patel′la, gen. and pl. *patellæ* [L. a small plate.] The large sesamoid bone, in the combined tendon of the extensors of the leg, covering the anterior surface of the knee; kneepan, kneecap.

patellar (pă-tel′lar). Relating to the patella or kneecap. **p. fos′sa**, fossa* hyaloidea.

patell′iform [L. *patella* + *forma*, form.] Of the shape of the patella.

pa′tency [L. *patere*, to lie open.] The state of being freely open or patulous.

pa′tent [L. *patens; patere*, to lie open.] Open, expanded.

Pat′erson's nod′ules [Robert *Paterson*, Scotch physician, 1814–1889.] Molluscum corpuscles.

path [A.S. *pæth*.] A road or way; the course taken by an electric current or by nervous impulses.

pathe′ma, pl. *pathe′mata* [G. *pathēma*, suffering.] Any disease or morbid condition.

pathe″matol′ogy [G. *pathēma*(*pathēmat-*), suffering, + *-logia*.] Pathology, especially mental pathology.

pathet′ic [G. *pathētikos*, relating to the feelings.] 1. Causing an emotion, especially of sorrow or pity. 2. Noting the fourth cranial nerve, nervus patheticus, nervus trochlearis [BNA].

pathet′icus [G. *pathētikos*, sensitive, pathetic, so called because of the expression produced by contraction of the superior oblique muscle, which the nerve supplies.] Nervus patheticus, nervus trochlearis [BNA].

path′etism [G. *pathētos*, subject to suffering.] Mesmerism, hypnotism.

path′etist. A mesmerizer, a hypnotist.

path′finder. A filiform bougie for introduction through a narrow stricture and to serve as a guide for the passage of a larger sound or catheter.

pathic (path′ik) [G. *pathikos*, remaining passive.] A sexual pervert, who assumes the passive rôle in any unnatural sexual act.

pathoamine (path-o-am′ēn). A ptomaine.

pathoanatomy (path″o-an-at′o-mĭ). Pathological anatomy.

path″obiol′ogy [G. *pathos*, suffering, + *bios*, life, + *-logia*.] Pathology.

pathobolism (pă-thob′o-lizm) [G. *pathos*, suffering, disease, + *(meta)bolism*.] Morbid metabolism, as in diabetes.

pathoformic (path-o-for′mik) [G. *pathos*, disease, + L. *formare*, to form.] Relating to the beginning of disease; noting especially certain symptoms occurring in the transition period between a normal and a diseased mental state.

path′ogen [G. *pathos*, suffering, + *gennaō*, I produce.] Any virus, microorganism, or other substance causing disease.

pathogen′esis, pathogen′esy [G. *pathos*, suffering, + *genesis*, origin, production.] The mode of origin or development of any disease or morbid process. **drug p.**, (1) the production of morbid symptoms by drugs; (2) in homeopathy, the record of all the symptoms observed in the proving of a drug on persons of all ages and both sexes, as well as of the effects of a poisonous dose of the same drug, or the toxicological record.

pathogenet′ic, pathogen′ic [G. *pathos*, suffering, disease, + *gennaō*, I produce.] Causing disease, morbific.

pathogenicity (path-o-jen-is′ĭ-ty). The condition of being pathogenic or of causing disease.

pathogeny (pă-thoj′en-ĭ). Pathogenesis.

path″ognomon′ic [G. *pathos*, suffering, + *gnōmōn*, index (of a sundial).] Characteristic or indicative of a disease, noting especially one or more typical symptoms.

pathog′nomy [G. *pathos*, suffering, + *gnōmē*, a mark, a sign.] Diagnosis by means of a study of the typical symptoms of a disease, or of the subjective sensations of the patient.

pathognos′tic [G. *pathos*, suffering, + *gnōstikos*, good at knowing.] Pathognomic.

pathog′raphy [G. *pathos*, suffering, + *graphē*, a description.] A treatise on or description of disease: a treatise on pathology.

pathole′sia [G. *pathos*, suffering, disease, + *lēsis*, choice, will.] Any impairment or abnormality of the will, especially hysteria.

pathological (path-o-loj′ĭ-kal). Relating to pathology; morbid, diseased; due to disease.

pathol′ogist. One versed in pathology, one who makes a special study of the morbid changes associated with disease.

pathol′ogy [G. *pathos*, suffering, + *-logia*.] 1. The branch of medical science which deals with disease in all its relations, especially with its nature and the functional and material changes caused

by it. 2. The sum of the morbid changes in any disease. **cell'ular p.**, the view of p. which regards the alterations in the cells as the essential factor in disease. **compar'ative p.**, the p. of diseases of the lower animals, especially in its relation to human p. **func'tional p.**, the consideration of the alterations in function dependent upon morbid changes in the tissues and organs of the body. **geograph'ical p.**, the study of disease in its relation to climate and to the various part, of the earth's surface. **hu'moral p.**, the view of p. which regards the changes in the fluids of the body, especially in the blood, as the essential factor in disease. **med'ical p.**, the p. of internal diseases, or those not remediable by surgical measures. **spec'ial p.**, the p. of individual diseases or of the diseases of special organs or tissues. **sur'gical p.**, the p. of external diseases, or those remediable by surgical procedures. **veg'etable p.**, the p. of the diseases of plants.

pathoma'nia [G. *pathos*, suffering, + *maina*, frenzy.] Moral insanity, an irresistible impulse to wrong or immoral action.

pathomet'ric. Relating to pathometry.

pathometry (path-om'e-trĭ) [G. *pathos*, sufferings + *metron*, measure.] 1. Determination of the proportionate number of individuals affected with a certain disease at a given time, and of the conditions leading to an increase or decrease in this number. 2. The measurement of illness and of incapacity resulting from trauma, as regards both the individual affections and the sum total of disability, in the several occupations and social conditions; see *nosometry*.

pathomorphism (path-o-mor'fizm). Abnormal morphology.

pathono'mia, pathon'omy [G. *pathos*, suffering, + *nomos*, law.] The science of the laws of morbid changes.

pathopho'bia [G. *pathos*, suffering, + *phobos*, fear.] A morbid fear of disease.

pathophoric (path-o-for'ik) [G. *pathos*, suffering, disease, + *phoreō*, I carry.] Disease carrying, noting certain disease-transmitting insects.

pathomimesis (path-o-mim-e'sis) [G. *pathos*, suffering, + *mimēsis*, imitation.] Mimicry of disease, whether intentional or unconscious.

pathomimicry (path-o-mim'ĭ-kri). Pathomimesis.

pathophorous (path-of'or-us). Pathophoric.

pathopœesia, pathopoiesia (path″o-pe-e'sĭ-ah, path″o-poy-e'sĭ-ah) [G. *pathos*, suffering, + *poiēsis*, a making.] The mode of production of disease.

pathopsychology (patho-o-si-kol-o-jĭ) [G. *pathos*, suffering, + *psychē*, mind, + *-logia*.] The science which has to do with deviations from the normal mental processes, occurring in disease, but not as symptoms thereof.

path'way. The aggregation of nerve cells and their processes by means of which a nervous impulse reaches the periphery (*efferent p.*) or the centers (*afferent p.*).

patient (pa'shent) [L. *patiens; pati*, to suffer.] One who is suffering from or under treatment for any disease; not to be confused with *case* (*q.v.*).

Patrick's test [Hugh Talbot *Patrick*, Chicago neurologist, *1860.] Fabere* sign; to distinguish arthritis of the hip from sciatica: with the patient supine the thigh and knee are flexed and the external malleolus is placed above the patella of the opposite leg; except in advanced cases this can ordinarily be done without pain, but on depressing the knee, pain is promptly elicited if the case is one of arthritis of the hip.

patt'en [Fr. *patin*, a clog.] A support placed under one shoe to equalize the length of the two legs, when one is shorter than the other, or when one is artificially lengthened by a brace or splint, as in the treatment of hip disease.

pattern (pat'urn) [M. E. *patron*.] A fanciful design on a carpet, wall-paper, etc. **ac'tion p.**, according to Crile's theory, a complicated set of tracks or grooves (figuratively speaking), partly congenital and partly acquired, for the conduction of stimuli and impulses in the brain, in virtue of which a certain stimulus is apt to be followed by a certain action, the action induced by the stimulus varying in each individual according to the action pattern in his brain.

Patt'erson's cor'puscles. Molluscum corpuscles.*

pat'ulous [L. *patulus; patere*, to lie open.] Patent, lying freely open.

Paul's sign [Constantin Charles Théodore *Paul*, French physician, 1833–1896.] A diffused area of forcible cardiac pulsations in cases of adherent pericardium.

Paul's reac'tion [Gustav *Paul*, Vienna physician, *1859.] Pus is rubbed into a scarification on a rabbit's eye; if the pus is from a variolous or vaccinal pustule a condition of epitheliosis develops in from 36 to 48 hours; the sputum of a smallpox patient is said to cause the same reaction.

Paullin'ia [after C F. *Paullini*, German botanist, 1643–1712.] A genus of shrubs of tropical America, of the order *Sapindaceæ*. **P. sor'bilis**, the source of guarana.

Paul-Mixter tube [Frank Thomas *Paul*, English surgeon, *1851; Samuel Jason Mixter, American surgeon, 1855–1924.] A glass drainage tube of large caliber provided with flanges, employed in intestinal surgery for temporary anastomosis.

paulocardia (paw-lo-kar'dĭ-ah) [G. *paula*, a pause, + *kardia*, heart.] 1. A sensation as of stoppage of the heart. 2. A condition in which the period of rest in the cardiac cycle is unduly prolonged.

pausimenia (paw-zĭ-me'nĭ-ah [G. *pausis*, a ceasing, + *mēn*, mouth] Menopause.

Pauzat's disease' (po-zăʹ) [Jean Eugène *Pauzat*, French physician, contemporary.] Osteoplastic periostitis of the metatarsal bones.

pavement (pāv'ment) [L. *pavimentum; pavire*, to ram down.] Any structure resembling a pavement or a tiled floor. **p. epithe'lium**, tesselated epithelium, an arrangement of flattened epithelial cells with edges in close apposition forming a more or less extensive membrane-like structure.

pavil'ion [F. *pavillon;* L. *papilio*, butterfly, tent.] 1. The auricle or pinna of the ear. 2. Any flaring extremity of a canal or tube, as the fimbriated extremity of the oviduct. **p. of the pelvis**, the expanded portion of the pelvis formed by the flare of the ilia.

Pav'loff (or **Pawlow**) **meth'od** [Ivan Petrovich *Pavloff*, Russian physiologist, *1849.] A quantitative study of the modifications of the salivary reflex caused by psychic reactions. **P. stom'ach**, a section of the stomach of a dog, shut off from all communication with the main part of the organ connected with the outside by a fistula; employed in studies on the gastric secretions.

pa'vor [L.] Fear, terror. **p. noctur'nus**, night-terrors.

Pa'vy's disease' [Frederick William *Pavy*, English physician, 1829–1911.] Cyclic albuminuria. **P.'s rea'gent**, potassium hydrate and Rochelle salt, of each 20.4, copper sulphate, 4.158, ammonia

(sp. gr. 0.880), 300, water, 1000; used in place of Fehling's solution for the quantitative estimation of sugar in the urine, 10 c.c. of the solution being decolorized by 5 mg. of sugar.

Pawlik's grip (pahv'lik) [Karel I. *Pawlik*, Prague obstetrician, 1849–1914.] A method of determining the progress of labor by grasping the fetus through the abdominal wall and thus ascertaining what part still lies above the pelvic brim. **P.'s tri'angle** or **tri'gone,** an area on the anterior wall of the vagina corresponding exactly to the trigonum vesicæ.

Pawlow's meth'od, P.'s stom'ach. See *Pavloff.*

paw'paw. Papaw, papaya.

Pax'ton's disease'. Tinea nodosa.

Payr's meth'od (pīr) [Erwin Payr, German surgeon, *1871.] 1. Suture of arteries by means of absorbable magnesium cylinders; through the cylinder one end of the severed artery is passed and turned back over the edge like a cuff, the other end of the artery being drawn over this and tied to the cylinder. 2. Absorption of the fluid in hydrocephalus by the transplantation of loops of vessels to hang free in the ventricle.

P.B. Abbreviation of *Pharmacopœia Britannica*, British Pharmacopeia; in this work usually abbreviated further to Br.

Pb. Chemical symbol for *plumbum*, lead.

$Pb(C_2H_3O_2)_2$. Lead acetate, sugar of lead.

$PbCO_3$. Lead carbonate.

$PbCrO_4$. Lead chromate, chrome yellow.

PBE [Ger. *perlsucht bacillen-emulsion.*] A preparation similar to Koch's new tuberculin, made from a culture of bovine tubercle bacilli; recommended by Spengler.

PbI_2. Lead iodide.

$Pb(NO_3)_2$. Lead nitrate.

PbO. Lead monoxide, litharge.

PbO_2. Lead dioxide, plumbic anhydride.

PbS. Native sulphide of lead, galena.

$PbSO_4$. Lead sulphate.

p.-d. Abbreviation of prism-diopter.

Pd. Chemical symbol for palladium.

peach-fever. A spasmodic coryza of the nature of hay-fever, excited by the down of a peach.

peak (pēk). The upper limit of the ascending line of a graph.

Péan's for'ceps (pa-oṅ') [Jules *Péan*, Parisian surgeon 1830–1898.] A clamp for obtaining hemostasis by forcipressure. **P.'s meth'od,** morcellation* in the removal of a tumor of greater diameter than the passage through which it must be extracted. **P.'s posi'tion,** the position of the operator sitting on a high stool between the legs of the patient in performing an abdominal section.

pea'nut. Groundnut, goober the fruit, resembling a nut, of *Arachis hypogœa;* its oil is sometimes used, like cotton-seed oil, as a substitute for olive oil.

pearl. 1. A concretion formed around a grain of sand or other foreign body within the shell of certain mollusks. 2. One of a number of small tough masses of mucus occurring in the sputum in asthma. 3. A small hollow sphere of thin glass containing amyl nitrite or other fluid for inhalation; the pearl is crushed in the handkerchief and its contents are inhaled. **epithe'lial p.,** a mass of concentric squamous epithelial cells, of hyaline appearance, occurring in carcinoma; epithelial nest. **gouty p.,** a concretion of sodium urate on the cartilage of the ear, occurring in the gouty.

pearl'ash. Impure potassium carbonate

pearl-disease', pearl-sick'ness [Ger. *perlsucht.*] Bovine tuberculosis.

pearl-tumor. Cholesteatoma.

Pear'son's solu'tion [George *Pearson*. English physician, 1751–1828.] Liquor sodii arsenatis Pearson (N.F.), a solution of sodium arsenate, one-tenth the strength of the official liquor sodii arsenatis.

peat. Partly decomposed vegetable matter found in bogs and swampy places; it is employed sometimes, when thinned down by water, as a form of mud-bath.

pebbles (peb'lz). Lenses for eyeglasses cut from rock crystal.

pébrine (pa-brēn') [Fr.] A microparasitic disease of silkworms.

pecc'ant [L. *peccans; peccare*, to sin.] Morbid, unhealthy, disease-producing. **p. humors,** in humoral pathology, the deranged fluids of the body acting as the materies morbi.

peciloblast, pœciloblast (pe'sil-o-blast) [G. *poikilos*, varied, changeful, + *blastos*, germ.] A nucleated red blood-corpuscle of irregular shape; written also *poikiloblast.*

pecilocyte, pœcilocyte (pe'sil-o-sīt) [G. *poikilos*, varied, changeful, + *kytos*, cell.] A red blood-corpuscle of irregular shape; written also *poikilocyte.*

pecilocythe'mia, pœcilocythæ'mia [G. *poikilos*, varied. + *kytos*, cell, + *haima*, blood.] Pecilocytosis.

pecilocytosis, pœcilocytosis (pe"sil-o-si-to'sis). The presence of pecilocytes in the peripheral blood, pecilocythemia; written also *poikilocytosis.*

pecilon'ymy, pœcilon'ymy [G. *poikilos*, varied, + *onyma*, name] The use of two or more terms to indicate the same thing.

pecilothermal, pecilother'mic, pecilother'mous (pe"sil-o-thur'mal) [G. *poikilos*, varied, changeful, + *thermē*, heat.] 1. Varying in temperature according to the temperature of the surrounding medium, noting the so-called cold-blooded animals and the plants. 2. Capable of existence and growth in media of varying temperature; written also *pœcilothermal, poikilothermal.*

pecilothermism, pœcilothermism (pe"sil-o-thur'mizm) [G. *poikilos*, various, + *thermē*, heat.] The condition of plants and cold-blooded animals, the temperature of which varies with the changes in the temperature of the surrounding medium.

Pecquet's cis'tern (pĕ-ka') [Jean *Pecquet*, French anatomist, 1622–1674.] Cisterna chyli. **P.'s duct,** ductus thoracicus. **P.'s res'ervoir, P.'s cistern.**

pec'ten [L. a comb.] 1. A structure with comb-like processes or projections. 2. The os pubis. 3. The middle third of the anal canal. **p. band,** a fibrous induration of the anal pecten resulting from passive congestion or a low form of inflammation in this region. **p. ossis pubis** [BNA], **p. pubis,** pectineal line of the pubis, the continuation on the pubis of the iliopectineal line. **p. scleræ,** the margin of the scleral opening through which the optic nerve enters.

pec'tic acid [G *pēktikos*, congealing.] An acid contained in many small fruits upon which the property of making jelly depends.

pectin (pek'tin) [G. *pēktos*, stiff, curdled.] Vegetable jelly, $C_{32}H_{40}O_{28} + 4H_2O$; a body formed from certain fruits and vegetables on boiling, which coagulates on cooling to form jelly.

pectinæ'us. Musculus pectineus.

pec'tinate. Combed, comb-shape. **p. fibers,** muscular fibers running transversely over the roof of the cardiac atria (auricles) from the tænia terminalis to the atrioventricular septum. **p. muscles,** musculi pectinati, see under *musculus.*

pectineal (pek-tin'e-al). Relating to the os pubis or to any comb-like structure; ridged. **p. muscle,** musculus pectineus.

pectine'us. See under *musculus.*

pectin'iform [L. *pecten,* a comb, + *forma,* form.] Comb-shaped, pectinate

pectization (pek-ti-za'shun) [G. *pĕktikos,* curdling.] In colloidal chemistry, the same as coagulation.

pec'toral [L. *pectoralis; pectus,* breast-bone.] 1. Relating to the chest. 2. A cough remedy, expectorant, bechic.

pectoral'gia [L. *pectus(pector-),* chest, + G. *algos* pain.] Pain in the chest.

pectora'lis. See under *musculus.*

pectoriloquy (pek-to-ril'o-kwĭ) [L. *pectus(pector-)* breast, + *loqui,* to speak.] Transmission of the voice sound through the pulmonary structures, so that it is audible on auscultation of the chest; it indicates either solidification of the pulmonary structures or the presence of a large cavity. **apho'nic p.,** Baccelli's* sign. **whis'pering p.,** the transmission of the whisper in the same way as that of the voice in ordinary pectoriloquy.

pectoroph'ony [L. *pectus(pector-),* chest, + G. *phōnē,* voice.] Exaggerated vocal resonance, pectoriloquy.

pectose (pek'tōs). A substance in certain fruits and vegetables from which pectin is formed on boiling.

pectous (pek'tus). 1. Relating to or consisting of pectin or pectose. 2. Noting a firm coagulated condition sometimes assumed by a gel, which is permanent in that the substance cannot be made to reassume the gel form.

pec'tus, gen. *pec'toris,* pl. *pec'tora* [L.] The thorax, the chest; especially the anterior wall, the breast. **p. carina'tum** [L. *carina,* keel], pigeon-breast, chicken-breast; flattening of the chest on either side with forward projection of the sternum, like the keel of a boat.

pectun'culus [L. a small scallop.] One of the striæ running longitudinally along the walls of the aquæductus cerebri.

ped'al. Relating to the feet, or to any structure called pes. **p. bone,** the os pedis, or coffin bone of the horse. **p. system,** a system of cerebral ganglia and white fibers, including the caudatum a portion of the lenticular association fibers of the cortex, and the pyramidal tract.

pedarthrocace (ped-ar-throk'as-ē) [G. *pais(paid-),* child, + *arthron,* joint, + *kakos,* bad.] Joint disease in children.

pedatro'phia, pedat'rophy [G. *pais(paid-),* child, + *atrophia,* atrophy.] Marasmus; tabes mesenterica; written also *pædatrophia.*

ped'erast. A person given to pederasty.

pederasty (ped'er-as-tĭ) [G. *paiderastia; pais(paid-),* boy, + *eraō,* I long for.] Coitus per anum practised on boys.

pedesis (pe-de'sis) [G. *pēdēsis,* a leaping.] Brownian* movements.

pedial'gia. Pedionalgia.

pediatric (pe-di-at'rik) [G. *pais(paid-),* child, + *iatrikos,* relating to medicine.] Relating to the study and treatment of disease in children.

pediatrician (pe-dĭ-ă-trish'an). Pediatrist.

pediat'rics, pædiat'rics [G. *pais(paid-),* child, + *iatreia,* medical treatment.] The branch of medical science which treats of children in their hygienic, physiological, and pathological relations; the specialty of the diseases of children.

pediatrist (pe-dĭ-at'rist). A medical practitioner who specializes in the diseases of children.

pediatry (ped-ĭ-at'rĭ). Pediatrics.

ped'icel [L. *pedicellus,* dim. of *pes,* foot.] 1. Pedicle, peduncle. 2. In botany, the stalk of each flower in an inflorescence.

ped'icellate, ped'icellated. Pedunculated, stalked.

pedicellation (ped-ĭ-sel-la'shun). Formation of a pedicel or peduncle.

ped'icle (ped'ĭ-kl) [L. *pediculus,* dim. of *pes,* foot. 1. A stalk, pedicel, or peduncle, a constricted portion, or stem, forming the attachment of a non-sessile tumor. 2. The constricted portion of the arch of a vertebra, connecting the lamina on either side with the body, radix arcus vertebræ [BNA].

pedic'terus, pædic'terus [G. *pais(paid-),* child, + *ikteros,* jaundice.] Icterus neonatorum.

pedic'ular. Relating to pediculi, or lice.

pedic'ulate. Pedunculate, pedicellate.

pedicula'tion [L. *pediculus,* louse.] Infestation with lice, lousiness.

pedic'ulin. Trade name of a preparation, said to be a mixture of chalk and naphthalin, for the destruction of head-lice.

pediculofrontal (pĕ-dik"u-lo-frun'tal). Relating to the pedicles of the frontal convolutions, noting one of Pitres's* sections through the brain 2 cm. in front of the fissure of Rolando.

Pediculoi'des ventrico'sus. A mite infesting the straw of mattresses and causing straw itch.

pedic"ulopari'etal. Relating to the pedicles of the frontal convolutions and the parietal region of the brain, noting one of Pitres's* sections through the brain 3 cm. behind the fissure of Rolando.

pediculopho'bia [L. *pediculus,* louse, + G. *phobos,* fear.] Phthiriophobia.

pediculo'sis. Phthiriasis, lousiness, the state of being infested with pediculi or lice. **p. capillit'ii, p. cap'itis,** the presence of lice in the hair of the head. **p. cor'poris,** vagabond's disease, the habitual presence of lice in the clothing. **p. inguina'lis, p. pu'bis,** the presence of crab lice in the hairs of the pubic region. **p. vestimen'ti, p. vestimento'rum,** p. corporis.

pedic'ulous. Infested with pediculi, lousy.

pedic'ulus, pl. *pedic'uli* [L.] A louse, an animal parasite of the genus *Pediculus* or *Phthirius,* infesting the hairy parts of the body or the clothing.

Pedic'ulus [L.] A genus of lice, fam. *Pediculidæ.* **P. cap'itis,** the head louse, living in the scalp. **P. cor'poris,** *P. vestimenti.* **P. huma'nus,** a common term embracing two of the species of lice infecting man, *P. capitis* and *P. corporis.* **P. pu'bis,** *Phthirius pubis,* crab louse, living in the hairy parts about the genitals. **P. tabescen'tium,** parasite of the lousy disease, morbus pedicularis. **P. vestimen'ti,** the body louse, living in the clothing, and going on the body only to feed.

pedicure (ped'ĭ-kūr) [L. *pes(ped-),* foot, + *cura,* treatment.] A chiropodist.

pedilu'vium [L. *pes(ped-),* foot, + *luere,* to wash.] A foot-bath.

pediococc'us, pediococ'ci [G. *pedion,* plain, + *kokkos,* berry.] A group of cocci which divide in two planes, the new individuals remaining together to form sheets or merismopedia.

pediodontia (ped"i-o-don'shyŭ) [G. *paidion,* small child, + *odous (odont-),* tooth.] Pedodontia.

pedional'gia [G. *pedion,* sole of the foot, + *algos,* pain.] Pain in the sole of the foot, metatarsalgia.

pediopho'bia, pædiopho'bia [G. *paidion,* a little child, + *phobos,* fear.] Morbid fear aroused by the sight of a child or of a doll.

pediphalanx (ped″ĭ-fa′lanks) [L. *pes(ped-)*, foot.] A phalanx of the foot, distinguished from maniphalanx.*

pedistibulum (ped-ĭ-stib′u-lum) [L. *pes*, foot, + *stabulum*, stall.] Stapes.

peditis (pĕ-di′(de′)tis) [L. *pes(ped-)*, foot, + G *-itis*.] Inflammation of the coffin bone and laminæ in the horse.

ped″obar″omacrom′eter [G. *pais(paid-)*, child, + *baros*, weight, + *makros*, length, + *metron*, measure.] A form of scales for weighing a baby and at the same time measuring its length.

ped″obarom′eter [G. *pais(paid-)*, child, + *baros*, weight, + *metron*, measure.] Scales for weighing a baby.

pedodontia (ped-o-don′shyŭ) [G. *pais (paid-)*, child, + *odous (odont-)*, tooth.] Dental care and treatment of children.

pedodynamometer (ped″o-di-nă-mom′e-tur) [L. *pes-(ped-)*, foot, + G. *dynamis*, force, + *metron*, measure.] An instrument for measuring the strength of the leg muscles.

pedog′amy [G. *pais(paid-)*, child, + *gamos*, marriage.] Endogamy.

pedologist (pe-dol′o-jist). One who is skilled in pedology.

pedol′ogy, pædol′ogy [G. *pais(paid-)*, child, + *-logia*.] The branch of biology and of sociology which deals with the child in his physical, mental, and social development.

pedom′eter [G. *pais(paid-)*, child, + *metron*, measure.] 1. An instrument for taking anthropological measurements of children. 2. [L. *pes(ped-)*, foot.] Podometer.

pedonosology (ped″o-nŏ-sol′o-jĭ) [G. *pais(paid-)*, child, + *nosos*, disease, + *-logia*.] Pediatrics.

pedophilia, pædophilia (ped-o-fil′ĭ-ah) [G. *pais*, child, + *philos*, fond.] Fondness for children.

peduncle (pe′dung-kl) [L. *pedunculus*, dim. of *pes*. foot.] 1. A stalk or stem, pedicle or pedicel, forming the attachment of a non-sessile tumor 2. A crus or brachium of the brain; see *pedunculus*. **callo′sal p.,** pedunculus corporis callosi. **infe′rior cerebell′ar p.,** corpus restiforme [BNA]. **middle cerebell′ar p.,** brachium pontis [BNA]. **pin′eal p.,** habenula [BNA]. **supe′rior cerebell′ar p.,** brachium conjunctivum [BNA].

pedun′cular. Relating to a peduncle.

pedun′culate, pedun′culated. Pedicellate, stalked, having a peduncle, not sessile.

pedun′culus, pl. *pedun′culi* [L. dim. of *pes*, foot.] Peduncle. **p. cer′ebri** [BNA], cerebral peduncle, crus cerebri, a large white bundle emerging, in close relation with its fellow, from the upper part of the pons and passing outward and forward to enter the cerebrum. **p. cor′poris callo′si** [BNA], peduncle of the corpus callosum, a term sometimes applied to the gyrus subcallosus because of its position immediately under the anterior part of the corpus callosum. **p. cor′poris mamilla′ris,** peduncle of the mammillary body, fasciculus* pedunculomamillaris. **p. cor′poris pinea′lis,** peduncle of the pineal body, habenula [BNA]. **p. flocc′uli** [BNA], the lateral expansion of the posterior medullary velum toward the flocculus of the cerebellum on either side. **p. thal′ami,** peduncle of the thalamus, one of several groups or strands of fibers streaming out from the thalamus to every part of the cortex; they are designated anterior, superior, posterior, and inferior peduncles, or the frontal, parietal, occipital, and ventral stalks of the thalamic radiation.

peg′nin [G. *pēgnyō*, I solidify.] A preparation of the milk-curdling enzyme of calf's rennet.

Pel's cri′ses [Pieter Klazes *Pel*, Dutch physician, 1852–1919.] Ocular crises.*

pelade (pĕ-lad′) [Fr. *peler*, to remove the hair from a hide.]* Alopecia areata.

pel′age [Fr.] The hairy covering of the body of man and the lower animals.

Pel-Ebstein disease [Pieter Klazes *Pel*, Dutch physician, 1852–1919; Wilhelm *Ebstein*, German physician, 1836–1912.] Lymphadenoma with periodic pyrexia.

pelidisi (pel-ĭ-de′sĭ) [*pe*(pondus decies, ten times the weight) + *li*(linearis, linear) + *di*(divisio, division) + *si*, sidentis altitudo, sitting height.] According to Pirquet the sitting height of a person expressed in centimeters is normally equal to the cube root of ten times the body weight, this relation being called by him a pelidisi; a pelidisi of 96 or over implies a well nourished person.

pelidno′ma [G. *pelidnos*, livid, + *-ōma*.] A circumscribed livid patch on the skin.

pelio′ma. 1. Pelidnoma. 2. Peliosis.

pelio′sis [G. *peliōsis*, a livid spot, livor.] Purpura. **p. rheumat′ica,** purpura rheumatica.

pellag′ra [It. *pelle*, skin, + *agro*, rough.] Erythema endemicum, Lombardy leprosy, elephantiasis italica, dermatagra, maidism, psychoneurosis maidica. An affection characterized by gastrointestinal disturbances, erythema followed by desquamation, and nervous and mental disorders. It was formerly believed to be an intoxication caused by eating diseased maize, but now regarded by many as a deficiency disease. **p. si′ne p.,** p. without the characteristic erythema usually present.

pellagrazeine (pel-ă-gra′ze-ēn). A hypothetical ptomaine from diseased maize, suggested as the exciting cause of pellagra.

pellagrin (pel′ă-grin) [It. *pellagrino*.] One who suffers from pellagra.

pell′agrous. Relating to or suffering from pellagra.

pell′ant [L. *pellans; pellare*, to drive.] Causing the removal of "peccant humors"; depurative.

Pellegrini's disease′ (pel-la-gre′ne). A bony growth of the internal condyle of the femur, a sequel of Stieda's* fracture.

pell′et [Fr. *pelote;* L. *pila*, a ball.] A pilule, a granule, a minute pill. In homeopathy a granule of sugar of milk impregnated with a dilution of definite potency; adult dose, 10 pellets, children 3 to 5 pellets.

pelletierinæ tannas (pel-et-e-re′na-tan′as). (U.S., Br.) Pelletierine tannate, punicine tannate, a mixture of the tannates of four alkaloids of pomegranate bark (see *pelletierine*); a brownish gray tasteless powder, used as a teniacide in doses of gr. 3–8 (0.2–0.5); in large doses it paralyzes the peripheral nerve endings like curare.

pelletierine (pel-et′ĕr-ēn) [after Bertrand *Pelletier*, a French chemist, 1761–1797.] Punicine, a volatile liquid alkaloid, $C_8H_{15}NO$, one of four alkaloids from pomegranate bark (*pelletierine*, *iso-*, *methyl-*, and *pseudo-pelletierine*), a mixture of the tannates of all of which is the official (U.S.) pelletierinæ tannas. **p. sul′phate,** a mixture of the sulphates of p. and isopelletierine; a brownish syrupy liquid or crystalline masses used as a teniacide in doses of gr. 4–6 (0.25–0.4).

pell′icle (pel′ĭ-kl) [L. *pellicula*, dim of *pellis*, skin.] 1. Thin skin, cuticle. 2. A film or scum on the surface of a liquid.

pellicula (pĕ-lĭk'u-lah) [L. dim. of *pellis*, skin.] Epidermis.

pellic'ular, pellic'ulous. Relating to a pellicle, cuticular, characterized by a scum. **p. enteri'tis,** mucomembranous enteritis.

pell'itory. 1. Pyrethrum. 2. Parthenium. 3 Parietaria.

pellote (pa-yo'ta) [Aztec, *peyotl.*] A narcotic, causing hallucinations and unconsciousness, derived from a species of cactus, *Anhelonium lewinii.*

pell'otine. An alkaloid from *Anhalonium williamsii,* a Mexican cactus; the hydrochloride is used as a hypnotic and in maniacal excitement in doses of gr. ½–1 (0.03–0.06).

pellucid (pel-lu'sid) [L. *pellucidus; per,* through, + *lucere,* to shine.] Translucent. **p. septum,** septum lucidum, septum pellucidum [BNA]. **p. zone,** zona pellucida, the outer layer, so-called membrane, of the ovum.

pel'ma [G.] The sole of the foot, planta

pelmat'ic [G. *pelma,* sole.] Relating to the sole of the foot.

pelmat'ogram [G. *pelma(pelmat-),* sole of the foot, + *gramma,* a picture.] An imprint of the sole of the foot, made by resting the inked foot on a sheet of paper, or by pressing the greased foot on a plaster-of-Paris paste.

pelohe'mia, pelohæ'mia [G. *pēlos,* the lees of wine, + *haima,* blood.] Inspissation of the blood, pachyemia, pachyhemia, pycnohemia.

pelopathy (pe-lop'ă-thĭ) [G. *pēlos,* mud, + *pathos,* suffering.] Pelotherapy.

pel'osine. An alkaloid from the root of *Cissampelos pareira,* often substituted for pareira, it is supposed to be the same as bebeerine.

pe"lother'apy [G. *pēlos,* mud, + *therapeia,* treatment.] Treatment of disease by means of mud-baths.

pel'tate [L. *pelta,* a light shield] Shield-shaped, noting a leaf with the stalk attached to some part of the surface away from the margin.

pelta'tion [L. *pelta,* a light shield.] 1. A peltate attachment of the leaf to the stalk. 2. The prophylactic influence of inoculation with an antitoxic serum or with a vaccine.

pelveoperitonitis (pel"ve-o-per-ĭ-tŏ-ni'(ne')tis). Pelviperitonitis.

pel'vic. Relating to a pelvis. **p. blotches,** p. spots. **p. direc'tion,** the curved line denoting the direction of the axis of the canal of the pelvis. **p. girdle,** see *girdle.* **p. in'let,** the upper opening into the pelvis, the circumference of which is the brim of the pelvis. **p. out'let,** the lower opening into the pelvis, bounded by the pubic arch, the rami of the ischium, the great sacrosciatic ligaments, and the tip of the coccyx. **p. spots,** fluoroscopic round or oval shadows sometimes seen in the neighborhood of the inferior spine of the ilium and of the horizontal ramus of the pubis; what the bodies are that cast the shadows is undetermined.

pelvicliseometer (pel"vĭ-kliz-e-om'e-ter) [L. *pelvis* + G. *klisis,* inclination, + *metron,* measure.] An instrument for measuring the degree of inclination of the pelvis.

pelvifixa'tion [L. *pelvis* + *fixus; figere,* to fix.] Surgical attachment of a floating pelvic organ to the wall of the cavity

pel'vigraph [L. *pelvis* + G. *graphō,* I write.] An instrument whereby the contour and dimensions of the pelvis may be drawn to scale.

pelvilithotomy (pel"vĭ-lĭ-thot'o-mĭ) [L. *pelvis,* + G. *lithos,* stone, + *tomē,* incision.] Pyelolithotomy, pelviolithotomy, nephrolithotomy; operative removal of a calculus from the pelvis of the kidney.

pelvim'eter [L. *pelvis* + G. *metron,* measure.] An instrument shaped like calipers for measuring the diameters of the pelvis.

pelvim'etry. Measurement of the diameters of the pelvis.

pelvi'nus [NK]. Pelvic.

pelviolithotomy (pel-vĭ-o-lĭ-thot'o-my). Pelvilithotomy.

pelvioperitonitis (pel"ve-o-per-ĭ-to-ni'(ne')tis). Pelviperitonitis.

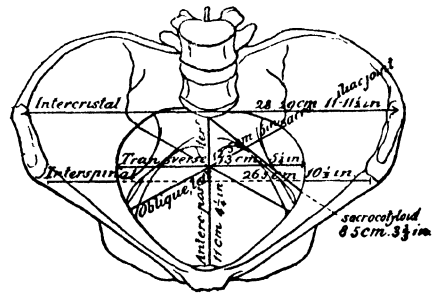
pel'vioplasty [L. *pelvis* + G. *plassō,* I form.] Symphyseotomy or hebotomy for enlargement of the pelvic outlet.

pelvios'copy [L. *pelvis* + G. *skopeō,* I examine.] Examination of the pelvis to determine its diameters or for any other purpose.

pelviot'omy [L. *pelvis* + G. *tomē,* incision.] 1. Symphyseotomy or hebotomy. 2. An incision into the pelvis of the kidney for the removal of a calculus or for any other purpose.

pelviperitonitis (pel-vĭ-per-ĭ-tŏ-ni'(ne')tis). Pelvic peritonitis.*

pelvis [L. basin.] 1. The massive cup-shaped ring of bone, with its ligaments, at the lower end of the trunk, formed of the innominate bone or os coxæ (the pubic bone, ilium, and ischium) on either side and in front, and the fifth lumbar vertebra, sacrum, and coccyx posteriorly. 2. Any basin-like or cup-shaped cavity, as the pelvis of the kidney.



DIAMETERS OF THE FALSE PELVIS AND THE PELVIC BRIM.

assimila'tion p., one into the formation of which an assimilation sacrum* enters, the type being that of a slightly funnel-shaped p.

beaked p., rostrate p.

brim of the p., inlet of the p., superior strait, apertura pelvis superior; the narrow ring formed by the line of the promontory of the sacrum and the iliopectineal lines, separating the false from the true pelvis.

caoutchouc' p., a p. in a case of osteomalacia in which the bones are still soft.

cor'date p., cor'diform p., heart-shaped p., one with sacrum projecting forward between the ilia, giving to the brim a heart shape.

coxal'gic p., an obliquely contracted p. resulting from the uneven pressure of the two femora in a case of hip-disease in early life.

diaphragm of the p., the muscles on the inner surface of the pelvis, the levatores ani and the coccygei on either side.

dwarf p., p. nana.

false p., the expanded portion of the pelvis above the brim, p. major.

flat p., p. plana.

funn'el-shaped p., one in which the pelvic outlet is contracted in the transverse or in both transverse and anteroposterior diameters.

halisteret'ic p., a deformed p. due to softening of the bones through absorption of the lime salts.

indiarubber p., caoutchouc p.

in'let of the p., brim of the p.

ju'venile p., a p. justo minor in which the bones are slender.

Kil'ian's p., p. spinosa.

kyphoscoliot'ic p., an unevenly contracted rachitic p. associated with rachitic kyphoscoliosis.

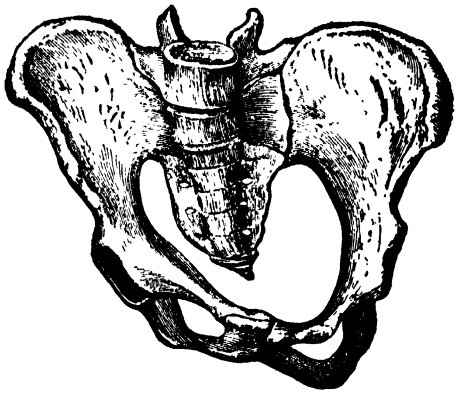
kyphot'ic p., a deformed p. associated with angular spinal curvature; the nature and degree of the deformity vary with the seat and extent of the kyphosis.

large, p., p. major.

lordot'ic p., a deformed p associated with lordosis.

malacos'teon p., an osteomalacic or rachitic p.

mas'culine p., (1) a p. justo minor in which the bones are large and heavy; (2) a slight degree of funnel-shaped p. in the woman, in which the shape approximates that of the male p.



NAEGELE PELVIS.

OSTEOMALACIC PELVIS.

Nae'gele p., an obliquely contracted, or unilateral synostotic, pelvis, marked by arrest of development of one lateral half of the sacrum, usually ankylosis of the sacroiliac joint on that side, rotation of the sacrum toward the same side and deviation of the symphysis pubis to the opposite side.

osteomala'cic p., a variously deformed and contracted p. resulting from the bending of the softened bones in osteomalacia.

out'let of the p., inferior strait, apertura pelvis inferior; bounded by the tip of the coccyx, the ischia and ischiopubic rami, and the lower edge of the symphysis pubis.

p. æquabil'iter justo major, p. justo major.

p. æquabil'iter justo minor, p. justo minor.

p. fal'sa, false p., p. major.

p. justo major, one in which all the diameters are equally enlarged.

p. justo minor, one of female type, but with all its diameters smaller than normal.

p. ma'jor [BNA], large p., false p., the flaring portion of the pelvis above the iliopectineal line.

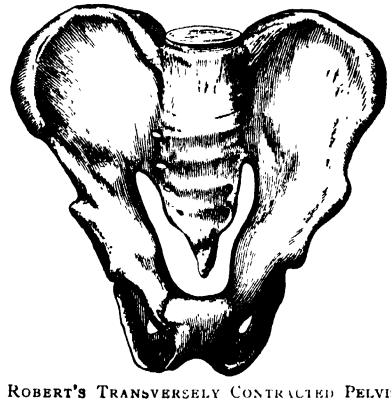
p. mi'nor [BNA], small p., true p., the narrow portion of the p. below the iliopectineal line.

p. na'na, dwarf p., a very small p., in which the several bones are united by cartilage as in the infant.

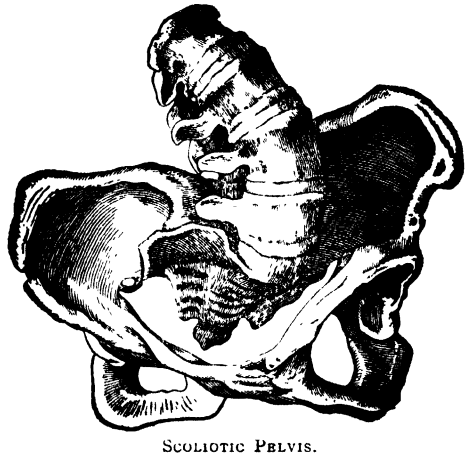
p. obtec'ta, a form of kyphotic p. in which the angular curvature is low down and extreme so that the spinal column projects horizontally across the inlet of the pelvis.

p. of the gall-bladder, Hartmann's pouch.

p. pla'na, flat p., one in which the anteroposterior diameter is uniformly contracted, the sacrum being dislocated forward between the iliac bones.



ROBERT'S TRANSVERSELY CONTRACTED PELVIS.



SCOLIOTIC PELVIS.

p. rena'lis [BNA], a flattened funnel-shaped cavity in the kidney, the broad end receiving the calyces, the apex being continuous with the ureter.

p. spino'sa, Kilian's p., a form of rachitic pelvis in which the crest of the pubes is sharp and the insertions of the psoas minor muscle are ossified, forming spiny projections.

p. spu'ria, false p., p. major.

p. triradia'ta, an osteomalacic p. in which both the acetabula and the promontory encroach markedly upon the canal.

p. ve'ra, true p., p. minor.

Prague p., spondylolisthetic p.

pseud"o-osteomala'cic p., an extreme degree of rachitic p. in which the pelvic canal is obstructed by a forward projection of the sacrum, and an approximation of the acetabula.

rachit'ic p., a contracted and deformed p., most commonly a flat p., occurring from rachitic softening of the bones in early life.

ren'iform p., a modified cordate p., with a long transverse diameter, giving the brim a kidney shape.

Rob'ert's p., one which is narrowed transversely in consequence of the almost entire absence of the alæ of the sacrum.

Rokitan'sky's p., spondylolisthetic p.

ros'trate p., beaked p., a p. with an elongated and narrow outlet.

rubber p., caoutchouc p.

scoliot'ic p., a deformed p. associated with lateral curvature of the spine.

small p., p. minor.

split p., one in which the symphysis pubis is absent, the pelvic bones being separated by quite an interval; it is usually associated with exstrophy of the bladder.

spon"dylolisthet'ic p., Prague p., Rokistansky's p.; one whose brim is more or less occluded by a dislocation forward of the body of the lower lumbar vertebra.

true p., the narrow portion of the pelvis below the brim, p. minor.

pelvisa'cral. Relating to both the pelvis, or innominate bones, and the sacrum.

pelvisternum (pel-vĭ-stur'num). The cartilage of the symphysis pubis, the analogue in the pelvic girdle of the sternum in the shoulder girdle.

pelvitherm (pel'vĭ-thurm) [L. *pelvis* + G. *thermē*, heat.] An instrument for applying heat to the pelvic organs; it consists of a hollow metallic rod with bulbous extremity containing a mass of asbestos powder which is heated by the passage of an electric current.

pelvit'omy. Pelviotomy.

pelviureterography (pel-vĭ-u-re-ter-og'ră-fĭ). Pyelography, radiography of the ureter and renal pelvis after the injection of collargol, argyrol, or some similar substance.

pelvos'copy. Pelvioscopy.

pelycal'gia [G. *pelyx(pelyk-)*, basin (pelvis), + *algos*, pain.] Pelvic pain.

pelycochirometresis (pel"ĭ-ko-ki-ro-me-tre'sis) [G. *pelys*, pelvis, + *cheir*, hand, + *metrēsis*, a measuring.] Manual pelvimetry, estimation of the length of the diameters of the pelvis by the spread of the fingers in the vagina.

pelycograph (pel'ĭ-ko-graf) [G. *pelyx (pelyk-)*, pelvis, + *grapho*, I write.] Pelvigraph.

pelycology (pel"ĭ-kol'o-jĭ) [G. *pelyx(pelyk-)*, basin (pelvis), + *-logia*.] The study of the pelvis in all its relations, especially the female pelvis in its relation to pregnancy and childbirth.

pelycometry (pel"ĭ-kom'e-trĭ) [G. *pelyx(pelyk-)*, basin (pelvis), + *metron*, measure.] Pelvimetry, measurement of the pelvic diameters.

pem'phigoid [G. *eidos*, resemblance.] Resembling pemphigus.

pem'phigus [G. *pemphix*, a blister.] An affection of the skin characterized by the production of bullæ. **p. acu'tus**, acute p., a form of p. running an acute, usually febrile course, frequently terminating fatally. **p. chlorot'icus**, p. virginum. **p. chron'icus**, p. vulgaris. **p. circina'tus**, dermatitis herpetiformis. **p. contagio'sus**, (1) a disease endemic in the Philippines and neighboring countries, marked by a vesicular eruption in the axillæ and on the contiguous surfaces of the thighs; it is apparently a purely local affection, constitutional disturbances being absent; (2) p. neonatorum; (3) Manson's* pyosis. **p. croupo'sus**, the formation of a false membrane on the raw surface left after rupture of the bullæ of pemphigus. **p. diphtherit'icus**, p. crouposus. **p. epidem'icus**, p. contagiosus. **p. febri'lis**, p. acutus. **p. folia'ceus** [L. leafy], a form of p. in which the lesions persist and rupture, leaving denuded surfaces exuding a seropurulent fluid which dries on the surface; nearly the entire body may finally become involved and the buccal mucous membrane is often affected as well; Cazenave's disease. **p. hæmorrhag'icus**, p. in which there is more or less admixture of blood with the serum of the bullæ. **p. hyster'icus**, an eruption of bullæ occurring as an hysterical manifestation. **p. lepro'sus**, an eruption of bullæ, occurring sometimes in the course of anesthetic leprosy. **p. neonato'rum**, an eruption of bullæ with serous or purulent contents, affecting young infants. **p. neurot'icus**, an eruption of bullæ, due to a trophic nerve lesion, occurring in the course of a number of organic nervous affections. **p. prurigino'sus**, p. accompanied with great itching. **p. syphilit'icus**, a bullous eruption occurring in congenital syphilis. **p. veg'etans**, a chronic p. in which the bullæ persist and rupture, papillomatous vegetations springing from the denuded surfaces. **p. vir'ginum**, a form of acute p. occurring in chlorotic girls. **p. vulga'ris**, p. chronicus, an eruption of bullæ without evident cause; the lesion has no red areola, and is at first filled with clear serum which later becomes purulent; there may be slight burning or itching, but the subjective symptoms are usually not marked.

pen'cil [L. *penicillum*, a paint-brush.] 1. A roll of lint or other material in the form of a cylinder. 2. A stick of lunar caustic pointed like a pencil. 3. All the rays of light focussed at a given point. **p. ten'derness**, strictly localized tenderness, elicited by pressure with the rubber tip of a pencil, in cases of incomplete or subperiosteal fracture for example.

Pendj'deh or **Penj'deh sore** [*Penjdeh*, a town in Russian Turkestan.] Oriental boil.*

pen'dular. Relating to or moving like a pendulum. **p. move'ment**, a to-and-fro movement of the intestine, without any propelling or peristaltic action, whereby the contents are churned and thoroughly mixed with the intestinal ferments.

pen'dulous [L. *pendulus; pendere*, to hang.] Hanging freely or loosely. **p. palate**, velum pendulum palati.

pen'dulum-rhythm. A changed rhythm of the heart sounds, in which the two (diastolic and systolic) are alike in pitch and duration, like the click of a swinging pendulum.

pen'etrate [L. *penetratus; penetrare*, to enter.] To pierce, to pass into the deeper tissues or into a cavity.

penetra'tion. 1. Piercing, entering. 2. Mental acumen. 3. The power of the objective of a microscope of giving a moderately clear image at some distance on either side of its exact focus.

penetrometer (pen-e-trom'e-tur) [G. *metron*, measure.] A device for measuring the penetrating power of the *x*-rays from any given tube, and thus determining the degree of hardness of the tube.

pen'ghawar djam'bi. Cibotium, the light hairs from *Cibotium djambianum*, an East Indian tree-fern, employed as a mechanical styptic in wounds.

pe'nial. Relating to the penis, penile.

penicilliosis (pen-i-sil-ĭ-o'sis). Any disease caused by a species of *Penicillium*.

Penicill'ium [L. *penicillus*, paint-brush.] A genus of moulds or saprophytic fungi. **P. glaucum**, the common mildew.

penicil'lus, pl. *penicilli* [L. a painter's brush.] One of the tufts formed by the repeated subdivision of the minute arterial twigs in the spleen.

penile (pe'nīl). Penial, relating to the penis

pe'nis [L.] The organ of copulation in the male; it is formed of three columns of erectile tissue, two arranged laterally on the dorsum (*corpora cavernosa penis*) and the third mesially below (*corpus cavernosum urethræ* [BNA], or *corpus spongiosum*); the urethra traverses the latter; the extremity (*glans penis*) is formed by an expansion of the corpus spongiosum, and is more or less completely covered by a free fold of skin (*preputium*). **clubbed p.**, a deformity of the p. when erect, consisting in a more or less marked curve to one or the other side or toward the scrotum. **p. bone**, see *bone*. **p. capti'vus**, a rare accident during coitus, in which the penis is firmly held by spasmodic contraction of the vaginal and perineal musculature, preventing its withdrawal. **p. cer'ebri**, pineal body. **p. femin'eus**, p. muliebris. **p. luna'tus**, chordee. **p. mulie'bris**, clitoris. **p. palma'tus, webbed p.**, a p. more or less completely enclosed by the scrotum.

abnormal urethral opening, penischisis; epispadia (above), hypospadia (below), paraspadia (side). **adhesion to scrotum**, synoscheos. **amputation**, peotomy. **cancer**, phallocarcinoma. **curvature**, phallocampsis, chordee, penis lunatus. **discharge**, urethrorrhea, caulorrhea, phallorrhea, blennorrhea, phalloblennorrhea, gonorrhea, gleet. **erection**, priapism. **failure of erection**, cauloplegia. **hemorrhage**, caulorrhagia, urethrorrhagia, phallorrhagia. **inflammation**, priapitis, phallitis, penitis; posthitis (prepuce), balanitis (glans); balanoposthitis (glans and prepuce), cavernitis (corpora cavernosa), urethritis. **large**, macrophallus, megalopenis. **narrow prepuce**, phimosis; paraphimosis (retracted). **pain**, phallalgia, phallodynia; posthalgia (prepuce); urethralgia, urethrodynia. **plastic surgery**, phalloplasty; posthioplasty (prepuce); balanoplasty (glans). **removal of prepuce**, circumcision, peritomy, posthectomy, posthetomy. **retraction**, phallocrypsis. **small size**, microcaulia, microphallus. **swelling**, phalloncus.

penischisis (pe-nis'kĭ-sis) [L. *penis*, + G. *schisis*, fissure.] A fissure of the penis resulting in an abnormal opening into the urethra, either above (*epispadia*), below (*hypospadia*), or to one side (*paraspadia*).

penitis (pe-ni'(ne')tis) [L. *penis* + G. *-itis*.] Inflammation of the penis, phallitis, priapitis.

pen'nate [L. *penna*, feather.] Penniform, feathered, resembling a feather. **p. muscle**, a muscle with a central or lateral tendon toward which the fibers run like the barbs of a feather toward its shaft; when the fibers run to one side of a tendon only, the muscle is called *unipennate*, when they converge to both sides of a central tendon, they are called *bipennate*.

penn'iform [L. *penna*, feather, + *forma*, form.] Shaped like a feather, pennate.

pennyroy'al. *Mentha pulegium.*

penn'yweight. A troy weight of $\frac{1}{20}$ ounce, or 24 grains.

penology, pœnology (pe-nol'o-jĭ) [G. *poinē*, penalty, + *-logia*.] The science which relates to correction or punishment for crime.

penoscrotal (pe'no-skro'tal). Relating to both penis and scrotum.

pentaba'sic [G. *pente*, five, + *basis*, base.] Noting an acid having five replaceable hydrogen atoms.

pen'tad [G. *pentas*, the number five.] 1. A collection of five things in some way related. 2. In chemistry, a quinquevalent element.

pentadac'tyl, pentadac'tyle (pen-tah-dak'til) [G. *pente*, five, + *daktylos*, finger.] Having five fingers or toes on each hand or foot.

pentaglu'cose. Pentose.

pen'tal. Trimethylethylene, a pure form of amylene; a colorless, volatile liquid, with an odor of mustard; used as a general anesthetic, especially in dentistry

pentameth"ylendi'amine. Cadaverine.

pen'tane. Amyl hydride, C_5H_{12}, a liquid hydrocarbon possessing anesthetic properties.

Pentas'toma [G. *pente*, five, + *stoma*, mouth.] A genus of arthropods, usually now called *Linguatula*. **P. denticula'tum**, *Porocephalus denticulatus*, the larva of *Linguatula rhinaria*, sometimes parasitic in the nose. **P. monilifor'mis**, *Porocephalus moniliformis*. **P. tenioi'des**, *Linguatula rhinaria*.

Pentastom'ida. A group of parasitic worm-like animals, only occasionally found in man. It includes two genera *Linguatula* and *Porocephalus*, both of which are sometimes called *Pentastoma*.

pentatom'ic [G. *pente*, five, + *atomos*, atom.] Noting a chemical element, five atoms of which occur in the molecule; noting a chemical compound having five replaceable hydrogen atoms.

pentavaccine (pen-tah-vak'sēn) [G. *pentas*, the number five.] A vaccine recommended by Castellani for travellers in Asia Minor and the southeastern Mediterranean region, consisting of a mixture of dead cultures of typhoid, paratyphoid A, paratyphoid B, cholera, and undulant fever.

pentav'alent [G. *pente*, five, + L. *valere*, to have power.] Quinquevalent.

pen'tene. Amylene.

pentobarbital sodium (pen"to-bar'bĭ-tal so'dĭ-um). Nembutal 844, a barbiturate which is said to have a brief hypnotic but prolonged sedative action in doses of 1½–3 gr. (0.09–0.18).

pen'tosan. One of a group of resins convertible into pentoses by hydrolysis.

penthorum (pen'thor-um) [G. *pente*, five, + *horos*, terminal.] A genus of herbs, of one species of which the fresh herb is employed in eclectic practice in chronic catarrhal conditions, especially of the upper air passages in doses of 4–6 drops of the specific medicine in water four times a day.

pen'tose [G. *pente*, five.] A monosaccharide containing five carbon atoms in the molecule ($C_5H_{10}O_5$); arabinose, obtained by boiling gum arabic or the gum of the plum or cherry tree with sulphuric acid, is one of the best known pentoses.

pentosu'ria. The presence of pentose in the urine.

pentox'ide [G. *pente*, five.] An oxide containing five oxygen atoms.

Penzoldt's test (pen'tsōlt) [Franz *Penzoldt*, German physician, 1849–1927.] (1) For acetone: a saturated solution of orthonitrobenzaldehyde with caustic soda is added to the urine, which turns yellow and then green if acetone is present. (2) For glucose: a solution of diazobenzolsulphonic acid with caustic potassa is added to the urine and shaken; a red color appears if sugar is present.

peotillomania (pe"o-til-o-ma'nĭ-ah) [G. *peos*, penis, + *tillomai*, I pull myself, + *mania*, frenzy.] False masturbation, pseudo-masturbation; a nervous tic consisting in constant pulling of the penis.

peotomy (pe-ot'o-mĭ) [G. *peos*, penis, + *tomē*, cutting.] Amputation of the penis.

pe'po (U.S.). Pumpkin seed, the dried seed of *Cucurbita pepo*, pumpkin; a teniacide in doses of ℥ 1–2 (30.0–60.0).

pepp'er [L. *piper*.] Piper. **black p.**, piper nigrum. **red p.**, capsicum. **white p.**, piper album, p. made by grinding bleached black pepper grains or by removing their enveloping membrane, or sarcocarp, before grinding.

pep'permint. Mentha piperita.

pep'sic. Peptic.

pep'sin [G. *pepsis*, digestion.] A digestive ferment or enzyme (protease) of the gastric juice which converts proteins into peptones and proteoses, pepsinum.* **p. u'nit,** a measure of the pepsin content of the gastric juice; 100 units in 1 c.c. of a 1% dilution of the gastric contents obtained after an Ewald test breakfast when added to 2 c.c. of a 1% solution of ricin will cause the latter to become clear. **sac'charated p.,** prepared by triturating pepsin 1, with sugar of milk 9, was official in the U.S.P. 1890; dose ʒ½–2 (2.0–8.0).

pep'sinate. To mix pepsin with.

pepsinif'erous [*pepsin* + L. *ferre*, to bear.] Producing pepsin.

pepsin'ogen. An enzyme in the peptic cells of the stomach, which is converted into pepsin.

pepsinogenous (pep-sin-oj'en-us) [*pepsin* + G. *gennaō*, I produce.] Producing pepsin.

pepsinum (pep-se'(si')num) [G. *pepsis*, digestion.] (U.S., Br.) A proteolytic enzyme contained in the gastric juice; it hydrolyzes protein in an acid medium, differing in this respect from trypsin which acts best in a slightly alkaline medium. Pepsin, extracted from the hog's stomach, is employed in indigestion of protein, in doses of gr. 5–20 (0.3–1.3). **p. aromat'icum,** aromatic pepsin; a mixture of pepsin, 10 per cent., with sodium chloride, tartaric acid, and sugar of milk; dose, ʒ½ (2.0).

peptenzyme (pep'ten-zīm). Trade name of a preparation made from the gastric glands, recommended for indigestion.

pep'tic. Relating to digestion or to pepsin. **p. cells,** chief or central cells, columnar or polyhedral cells of the gastric glands, producing pepsin; distinguished from *oxyntic cells*.

pep'tide. A secondary protein derivative, defined by the American Committee on Protein Nomenclature as a "definitely characterized combination of two or more amino-acids, the carboxyl group of one being united with the amino group of the other, with the elimination of a molecule of water."

peptidolytic (pep-tid-o-lit'ik) [*peptid* + G. *lytikos*, solvent.] Causing the cleavage or digestion of peptids.

peptization (pep-ti-za'shun). In colloid chemistry, an increase in the degree of dispersion, tending toward a uniform distribution of the dispersed phase; the formation of a sol from a gel.

peptize (pep'tīz). In colloidal chemistry, to transform a gel into a sol, as when dry gelatine is "dissolved" or dispersed in water.

peptobromeigon (pep-to-brōm'i-gon). Trade name of a protein compound of bromine, recommended as a substitute for the bromides.

peptocrinine (pep-to-krin'ĕn). An extract of the intestinal mucosa resembling secretin.

peptogas'ter [G. *peptō*, I digest, + *gastēr*, belly.] The digestive tract, including the gastroenteric and urinary tracts.

peptogen'ic, peptogenous (pep-toj'en-us) [*peptone* + G. *gennaō*, I produce] Producing peptone; promoting digestion.

peptoiodeigon (pep-to-i-ōd'i-gon). Trade name of a compound of iodine and protein, recommended as a substitute for iodoform.

peptol'ysis [*peptone* + G. *lysis*, solution.] The hydrolysis of peptones.

peptoman'gan. Trade name of a tonic preparation, said to contain manganese and iron with peptones.

peptone (pep'tōn) [G. *peptōn*, digesting.] A secondary protein derivative formed during the process of digestion, the result of the action of the gastric and pancreatic juices upon native protein; it is soluble in water, the solution being diffusible, and not coagulable by heat. **Dun'ham's p. solu'tion,** a culture medium made by dissolving 10 gm. powdered peptone and 5 gm. table salt in 1000 c.c. water. **p. i'odine,** a protein compound of iodine, recommended in the treatment of tuberculosis, goitre, and syphilis. **silk p. Hoechst,** a preparation of p. derived from silk, employed for the detection of peptolytic ferments which induce changes in its optical activity or the precipitation of tyrosin.

peptone'mia, peptonæ'mia [*peptone* + G. *haima*, blood.] The presence of peptone in the blood.

peptonization (pep-ton-i-za'shun). The conversion by enzymic action, of native protein, as for example curdled milk, into the soluble peptone.

pep'tonize. To convert native protein into peptone.

pep'tonoid [*peptone* + *eidos*, resemblance.] A substance supposed to resemble peptone.

pep'tonoids. Trade name of a predigested food.

pepton'ic. Relating to or containng peptone.

peptonu'ria [*peptone* + G. *ouron*, urine.] The excretion of peptone in the urine.

peptotoxin (pep"to-toks'in). 1. A toxic substance obtained by Bezredka by the action of alexin on a sterile culture medium containing peptone. 2. A poisonous product formed at a certain stage in the digestion of protein and disappearing at a later stage.

peptozyme (pep'to-zīm). A substance, supposed to be derived from certain tissues used in the preparation of peptone, which has the property of preventing the coagulation of the blood.

per- [L. through.] A prefix denoting through, carrying an idea of intensity (*super*), or denoting, in chemistry, the highest of a series.

peracephalus (per-ă-sef'a-lus) [L. *per*, very (intensive), + *acephalus*.] In teratology, an acephalus with thoracic defect and absence of anus.

peracetate (pur-as'e-tāt). That one of a series of salts of acetic acid and a base which contains the greatest proportion of the former.

peracid'ity. Hyperacidity.

peracute'. Exceedingly acute, hyperacute, superacute.

peralga (pur-al'gŭ). Trade name of amidopyrine diethylbarbiturate, recommended as an analgesic and sedative.

per anum [L.] By or through the anus

perarticula'tion [L. *per*, through, + *articulus*, joint.] Diarthrosis.

peratodynia (per-at-o-din'i-ah) [G. *peratos*, the opposite side, + *odynē*, pain.] Heartburn, cardialgia.

perboric acid (pur-bo'rik as'id). Pyroboric acid.

percaine (pur'kah-ēn). A derivative of quinoline, occurring in the form of colorless crystals readily soluble in water; chemically, despite its name, it bears no relation to cocaine; it is recommended as a powerful local anesthetic.

percept (pur'sept) [L. *perceptum*, a thing perceived.] The thing perceived; the complete mental image, formed by the process of perception, of an object present in space.

perception (pur-sep'shun). The mental process by which the nature of an object is recognized through the association of a memory of its other qualities with the special sense, sight, taste, etc., bringing it at the time to consciousness.

percep'tive. Relating to or having the power of perception.

perceptiv'ity. The power of perception.

percepto'rium. Sensorium.

perchlo'ric acid. An oxyacid of chlorine, $HClO_4$, the highest in oxygen content of the series.

perchloride (pur-klo'rīd, or rid). A chloride containing the highest possible amount of chlorine.

percolate (pur'ko-lāt) [L. *per*, through, + *colare*, to filter.] 1. To strain a fluid through one or more substances in powder form, with the intention of impregnating it with the soluble principles of those substances. See *filter* and *osmosis*. 2. To seep or pass through a porous substance. 3. The fluid which has been percolated or filtered.

percola'tion. 1. Filtration. 2. Extraction of the soluble portion of a drug by passing a solvent liquid through it.

per'colator. A funnel-shaped vessel used for the process of percolation in pharmacy.

per contiguum (pur-kon-tig'u-um). In contiguity, touching; noting the mode of spread of an inflammation or other morbid process which passes into an adjacent contiguous structure.

per continuum (pur-kon-tin'u-um). In continuity, continuous; noting the mode of spread of an inflammation or other morbid process from one part to another through continuous tissue.

percuss' [L. *percutere*, to strike.] 1. To tap with the finger or a hammer-like instrument (plessor) on a part of the body with a view to determine, by means of the sound elicited, the degree of density of the parts beneath. 2. To make a succession of taps on a part of the body, as a therapeutic measure.

percussion (per-kush'un). 1. A diagnostic procedure designed to determine the density of a part by means of tapping the surface with the finger or a plessor. 2. A form of massage, consisting of repeated blows or taps of varying force. **auscul'tatory p.,** auscultation of the chest or other part at the same time that percussion is made. **finger p.,** p. in which a finger of one hand is used as a plessimeter and one of the other hand as a plessor. **imme'diate p.,** the striking of the part under examination directly with the finger or a plessor, without the intervention of another finger or a plessimeter. **me'diate p.,** p. effected by the intervention of a finger or a thin plate of ivory or other substance (*plessimeter*) between the striking finger or hammer and the part percussed. **pal'patory p.,** finger p. in which the attention is fixed upon the resistance of the tissues under the finger as well as upon the sound elicited. **threshold p.,** p. effected by means of a glass rod as a plessimeter, the rod being inclined to the wall of the chest or abdomen and touching it only by one extremity.

percuss"opunc'tator. A disc studded with short needles which are driven into the tissues with a sharp blow, used for multiple acupuncture.

percuss'or. A hammer used for making percussion; a plessor.

percuta'neous. Through the skin, noting a method of medicating by inunction and friction. **p. reac'tion,** the reaction obtained in positive cases in Moro's* test.

Per'cy meth'od [James F. *Percy*, American surgeon, *1864.] Treatment of cancer of the uterus by the continuous application of moderate heat—43°–46° C. (109.4°–114.8° F.)—for from 20 to 60 minutes.

pereirine (per-a'e-rēn). An alkaloid with antiperiodic properties derived from the bark of *Geissospermum vellosii*, a tree of Brazil; dose, gr. 10 (0.6).

perencephaly (pēr-en-sef'ă-lĭ) [G. *pēra*, a wallet, + *enkephalos*, brain.] The occurrence of cysts in the brain.

perennial (pur-en'ĭ-al) [L. *perennis; per*, through, + *annus*, year.] Lasting several years; noting, in botany, a plant which does not die down at the end of each season or each two seasons. **p. el'ements** of Bizzozero, cells which multiply by mitosis only during early embryonic life.

Perez bacill'us (pa'rās) [*Perez*, Buenos Aires physician, contemporary.] The supposed pathogenic organism of ozena, *Coccobacillus fœtidus ozænæ*.

Perez's sign (pa'rāth, per'ez) [George Victor *Perez*, Teneriffe physician, †1920.] Râles audible over the upper part of the chest when the arms are alternately raised and lowered, a common occurrence in cases of fibrous mediastinitis and also of aneurysm of the aortic arch.

Pere'zia. A genus of trees in the southwestern United States, Mexico, and Central America, the rhizomes of the different species of which contain a yellow, bitter, cathartic principle, pipitzahoic acid or perezon.*

per'ezon. A yellow principle, pipitzahoic acid, vegetable gold, $C_{18}H_{13}O_3$, derived from the roots of several species of *Perezia;* a drastic cathartic in doses of gr. 4–8 (0.25–0.5).

perfla'tion [L. *perflare*, to blow through.] Blowing air into or through a cavity or canal in order to force apart its walls or to expel any contained pus or other material.

perfo'liate [L. *per*, through, + *folium*, leaf.] In botany, noting a plant the leaves of which seem to be perforated by the stems.

per'forans [L. *perforare*, to perforate.] A term applied to several muscles and nerves which, in their course, perforate other structures; noting especially musculus flexor digitorum longus, musculus flexor digitorum profundus, and nervus musculocutaneus.

per'forated. Pierced with one or more holes.

perforator (pur'for-a-tor). An instrument for perforation of the head in craniotomy.

perforato'rium. A pointed process on the head of a spermatozoon.

perfora'tus [L. *perforare*, to perforate.] A term applied to the muscles whose tendons are pierced by the perforans muscles; these are musculus flexor digitorum brevis, and flexor digitorum sublimis.

perfrica'tion [L. *perfricare*, to rub all over] Thorough rubbing.

perfrigeration (pur-frij-ĕ-ra'shun) [L. *per*, very, + *frigere*, to be cold.] A minor degree of frostbite.

perfringens (pur-frin'jenz) [L. shattering.] Gas bacillus, *Cl. welchii*.[0]

perfu'sion [L. *perfusus; perfundere*, to pour all over] A pouring into or through. **p. cann'ula,** a two-way cannula by means of which a liquid can be injected into a cavity through one tube and flow out through the other tube.

pergenol (pur'jen-ol). Commercial name of a preparation of hydrogen peroxide.

perhy'drase milk. Milk treated by the addition of peroxide of hydrogen.

perhy'drol. The commercial name for a preparation of hydrogen peroxide.

peri- [G. around.] A prefix carrying the idea of around, about.

periacinal, periacinous (per-ĭ-as'in-al(us)) [G. *peri*, around, + L. *acinus*.] Surrounding an acinus.

periadenitis (per-ĭ-ad-e-ni'(ne')tis) [G. *peri*, around, + *adēn*, gland, + *-itis*.] Inflammation of the tissues surrounding a gland.

periadventitial (per-ĭ-ad-ven-tish'-al) [G. *peri*, around, + L. *adventitia*.] Surrounding the adventitia, or outer coat of an artery.

perialienitis (pĕr-ĭ-a-lĭ-en-i'(e')tis) [G. *peri*, around, + L. *alienus*, foreign, + G. *-itis*.] Perixenitis.

periamygdalitis (per-ĭ-am-ig-dal-i'(e')tis) [G. *peri*, around, + *amygdalē*, almond (tonsil), + *-itis*.] Inflammation of the connective tissue in front of and above the tonsil; peritonsillitis.

perianal (pĕr-ĭ-a'nal) [G. *peri*, around, + L. *anus*.] Circumanal, periproctic.

periangiocholitis (pĕr-ĭ-an"jĭ-o-ko-li'(le')tis) [G. *peri*, around, + *angeion*, vessel, + *cholē*, bile, + *-itis*.] Inflammation of the tissues surrounding the bile-ducts.

periangitis (pĕr-ĭ-an-ji'(je')tis) [G. *peri*, around, + *angeion*, a vessel, + *-itis*.] Inflammation of the adventitia of a blood-vessel or of the tissues surrounding it or a lymphatic vessel; including periarteritis, periphlebitis, and perilymphangitis.

per'ianth [G. *peri*, around, + *anthos*, flower.] A floral envelope, especially one in which the calyx and corolla are indistinguishable.

periaortitis (pĕr-ĭ-a-or-ti'(te')tis) [G. *peri*, around, + *aortē*, aorta, + *-itis*.] Inflammation of the adventitia of the aorta and of the tissues surrounding it.

periapical (per-ĭ-ap'i-kal) [G. *peri*, around, + L. *apex*, tip.] Surrounding the apex of a toothroot.

periappendicitis (pĕr"ĭ-ă-pen-dĭ-si'(se')tis) [G. *peri*, around, + L. *appendix* + G. *-itis*.] Inflammation of the tissues surrounding the appendix vermiformis; perityphlitis. **p. decidua'lis,** the presence of decidual cells in the peritoneum of the appendix vermiformis in cases of right tubal pregnancy with adhesions between the Fallopian tube and the appendix.

periappendic'ular [G. *peri*, around, + L. *appendicula*, dim. of *appendix*.] Surrounding an appendix, especially the appendix vermiformis.

per'iapt [G. *periaptos*, hung upon.] An amulet or charm against disease.

periarte'rial [G. *peri*, around, + *artēria*, artery.] Surrounding an artery.

periarteritis (pĕr-ĭ-ar-ter-i'(e')tis) [G. *peri*, around, + *artēria*, artery, + *-itis*.] Inflammation of the outer coat, or adventitia, of an artery. **p. nodo'sa,** a multiple circumscribed inflammation of the outer coat of an artery, resulting in the formation of numerous nodules along its course.

periarthritis (pĕr-ĭ-ar-thri'(thre')tis) [G. *peri*, around, + *arthron*, joint, + *-itis*.] Inflammation of the parts surrounding a joint.

periartic'ular [G. *peri*, around, + L. *articulus*, joint.] Periarthric, circumarticular, surrounding a joint.

periar'thric [G. *peri*, around, + *arthron*, joint.] Surrounding a joint, circumarticular, periarticular.

peria'trial [G. *peri*, around, + *atrium*.] Surrounding the atrium, or auricle, of the heart.

periauric'ular. 1. Periatrial. 2. Periconchal.

periax'ial [G. *peri*, around, + *axis*.] Surrounding an axis.

periax'illary [G. *peri*, around, + L. *axilla*.] Circumaxillary, about the axilla.

periax'onal [G. *peri*, around, + *axōn*, axis.] Surrounding the axis-cylinder of a nerve.

per'iblast [G. *peri*, around, + *blastos*, germ.] Periplast.

periblep'sis [G. a looking about.] The wild stare of a delirious person.

peribronchial (pĕr-ĭ-brong'kĭ-al) [G. *peri*, around, + *bronchos*, bronchus.] Surrounding a bronchus or the bronchial tubes.

peribronchiolar (pĕr-ĭ-brong'kĭ-o-lar) [G. *peri*, around, + L. *bronchiolus*.] Surrounding the capillary bronchial tubes.

peribronchiolitis (pĕr-ĭ-brong-kĭ-o-li'(le')tis). Inflammation of the tissues surrounding the capillary bronchial tubes.

peribronchitis (pĕr-ĭ-brong-ki'(ke')tis) [G. *peri*, around, + *bronchos*, bronchus, + *-itis*.] Inflammation of the tissues surrounding the bronchi or bronchial tubes.

peribul'bar [G. *peri*, around, + L. *bulbus*, bulb.] Surrounding any bulb, especially the eyeball or the bulb of the urethra.

peribur'sal [G. *peri*, around, + L. *bursa*, purse.] Surrounding a bursa.

pericæ'cal. Pericecal.

pericanalic'ular [G. *peri*, around.] Surrounding a canaliculus.

pericardectomy (per-ĭ-kar-dek'to-mĭ). Pericardiectomy.

pericar'diac, pericar'dial [G. *peri*, around, + *kardia*, heart.] 1. Surrounding the heart. 2. Relating to the pericardium.

pericar"dicente'sis, pericar"diocente'sis [*pericardium* + G. *kentēsis*, puncture.] Surgical puncture of the pericardium.

pericardiectomy (per-ĭ-kar-dĭ-ek'to-mĭ) [*pericardium* + G. *ektomē*, excision.] Excision of a portion of the pericardium.

pericar"diophren'ic [*pericardium* + G. *phrēn*, diaphragm.] Relating to the pericardium and the diaphragm.

pericardior'rhaphy [*pericardium* + G. *rhaphē*, suture.] Suture of a wound of the pericardium.

pericardiostomy (per-ĭ-kar-dĭ-os'to-mĭ) [pericardium + G. *stoma*, mouths.] Making a more or less permanent opening into the pericardium; pericardiotomy.

pericardiot'omy [*pericardium* + G. *tomē*, incision.] Incision into the pericardium.

pericardit'ic. Relating to pericarditis.

pericarditis (pĕr-ĭ-kar-di'(de')tis). Inflammation of the pericardium. **p. adhesi'va,** p. obliterans. **p. callo'sa,** chronic p. with no characteristic symptoms other than signs of obstructed return of venous blood to the heart. **p. exter'na,** inflammation of the outer surface of the pericardium, practically always coexistent with inflammation of the serous surface of the pericardium and of the cellular tissue of the mediastinum. **p. exter'na et inter'na,** inflammation of both serous and mediastinal surfaces of the pericardium with, however, little invasion of the mediastinal cellular tissue. **p. oblit'erans,** inflammation of the two layers, obliterating the sac.

pericardium (per-ĭ-kar'dĭ-um) [L.; G. *perikardios*, around the heart.] The fibroserous membrane covering the heart and beginning of the great vessels; it is a closed sac having two layers—that immediately surrounding the heart, the *visceral layer* or *epicardium*, and the outer *parietal layer*, forming the sac, composed of strong fibrous tissue lined with serous membrane. **bread-and-butter p.,** an appearance of the two opposing surfaces of the pericardium resembling that produced by separating two slices of buttered bread, due to the presence of a moderate fibrinous exudate. **shaggy p.,** an exaggerated bread-and-butter p.

pericardot'omy. Pericardiotomy.

per'icarp [G. *peri*, around, + *karpos*, flower.] The mature ovary of a flower.

pericaryon (per-ĭ-kar'ĭ-on) [G. *peri*, around, + *karyon*, nut.] The cytoplasm, periplast, protoplasm surrounding the nucleus.

perice'cal [G. *peri*, around, + L. *cæcum*.] Perityphlic.

pericecitis (per-ĭ-se-si'(se')tis) [G. *peri*, around, + L. *cecum* + G. *-itis*.] Perityphilitis.

pericell'ular [G. *peri*, around, + L. *cellula*, cell.] Pericytial, surrounding a cell.

pericemental (per'ĭ-se-men'tal). Relating to the pericementum.

pericementitis (pĕr-ĭ-se-men-ti'(te')tis). Periodontitis, inflammation with absorption of the alveolus of the jaw; Fauchard's disease.

pericementum (per'ĭ-se-men'tum) [G. *peri*, around, + L. *cementum*, cement.] Periodontium.

pericen'tral [G. *peri*, around, + *kentron*, center.] Surrounding the center.

pericer'ebral [G. *peri*, around, + *cerebrum*.] Around the cerebrum.

perichareia (pĕr-ĭ-kă-ri'ah) [G. excessive joy.] Delirious rejoicing.

pericholangitis (pĕr-ĭ-ko-lan-ji'(je')tis) [G. *peri*, around, + *cholē*, bile, + *angeion*, vessel, + *-itis*.] Inflammation of the tissues around the bile ducts.

pericholecystitis (pĕr-ĭ-ko-le-sis-ti'(te')tis) [G. *peri*, around, + *cholē*, bile, + *kystis*, bladder, + *-itis*.] Inflammation of the peritoneum over the gallbladder.

perichondrial (pĕr-ĭ-kon'drĭ-al). Relating to the perichondrium.

perichondritis (pĕr-ĭ-kon-dri'(dre')tis). Inflammation of the perichondrium.

perichondrium (pĕr-ĭ-kon'drĭ-um) [G. *peri*, around, + *chondros*, cartilage.] The fibrous membrane covering cartilage.

perichord (per'ĭ-kord). Sheath of the notochord.

perichordal (pĕr-ĭ-kor'dal). Surrounding the notochord; relating to the perichord.

perichorioidal, perichoroidal (pĕr-ĭ-ko-rĭ-oy'dal, pĕr-ĭ-ko-roy'dal). Surrounding the chorioid coat of the eye.

perichrome (per'ĭ-krōm) [G. *peri*, around, + *chrōma*, a color.] Noting a nerve-cell in which the tigroid mass, or stainable material, is scattered throughout the protoplasm.

periclaustral (per-ĭ-klaws'tral). Surrounding the claustrum of the brain. **p. lam'ina,** capsula extrema, a layer of white substance separating the claustrum from the cortex of the insula.

pericli'nal [G. *peri*, around, + *klinō*, I bend.] In botany, running in the direction of the circumference of a part.

pericolitis (pĕr-ĭ-ko-li'(le')tis) [G. *peri*, around, + *kōlon*, colon, + *-itis*.] Inflammation of the connective tissue or peritoneum surrounding the colon. **mem'branous p.,** a condition marked by the formation of veil-like adhesions (Jackson's* membrane) over the bowel; it is not necessarily of inflammatory origin. **p. dex'tra,** p. involving the ascending colon. **p. sinis'tra,** perisigmoiditis.

pericolonitis (pĕr-ĭ-ko-lon-i'(e')tis). Pericolitis.

pericolpitis (pĕr-ĭ-kol-pi'(pe')tis) [G. *peri*, around, + *kolpos*, sinus (vagina), + *-itis*.] Inflammation of the connective tissue around the vagina.

periconchal (pĕr-ĭ-kong'kal) [G. *peri*, around, + *konchē*, concha.] Surrounding the concha of the auricle. **p. sulcus,** the groove on the posterior surface of the auricle corresponding to the antihelix.

pericor'neal [G. *peri*, around.] Surrounding the cornea.

pericoronitis (per-ĭ-kor-o-ni'(ne')tis) [G. *peri*, around, + L. *corona*, crown, + G. *-itis*.] Inflammation around the crown of a tooth, usually of an incompletely erupted mandibular third molar.

pericoxitis (pĕr-ĭ-koks-i'(e')tis) [G. *peri*, around, + L. *coxa*, hip, + G. *-itis*.] Inflammation of the tissues surrounding the hip-joint.

pericra'nial. Relating to the pericranium; surrounding the skull.

pericranitis (pĕr-ĭ-kra-ni'(ne')tis). Inflammation of the pericranium.

pericra'nium [G. *peri*, about, + *kranion*, skull.] Periosteum of the skull.

pericys'tic [G. *peri*, about, + *kystis*, bladder.] 1. Surrounding the urinary bladder 2. Surrounding the gall-bladder. 3. Surrounding a cyst.

pericystitis (pĕr-ĭ-sis-ti'(te')tis) [G. *peri*, around, + *kystis*, bladder, + *-itis*.] Inflammation of the tissues surrounding a bladder, especially the urinary bladder; see *pericholecystitis*.

pericys'tium [G. *peri*, around, + *kystis*, bladder, cyst.] 1. The tissues surrounding the urinary bladder or gall-bladder. 2. A vascular investment of a cystic tumor

pericytial (pĕr-ĭ-sish'al) [G. *peri*, around, + *kytos*, cell.] Surrounding a cell or cells, pericellular.

peridec'tomy [G. *peri*, around, + *ektomē*, excision.] Peritomy.

peridendrit'ic [G. *peri*, around, + *dendron*] Surrounding the dendrites of a neuron

periden'tal [G. *peri*, around, + L. *dens(dent-)*, tooth] Periodontal, surrounding a tooth or part of a tooth.

periderm (per'ĭ-durm) [G. *peri*, around, + *derma*, skin.] 1. Cuticle. 2. Rete mucosum, stratum germinativum [BNA]. 3. In botany, the cork layer surrounding a stem.

perider'mal, perider'mic. Cuticular, relating to the periderm.

perides'mic [G. *peri*, around, + *desmos*, band.] Surrounding a ligament, periligamentous; relating to the peridesmium.

peridesmitis (pĕr-ĭ-dez-mi'(me')tis) [G. *peri*, around, + *desmos*, band, + *-itis*.] Inflammation of the connective tissue surrounding a ligament.

perides'mium [G. *peri*, around, + *desmion; desmos*, a band.] The connective-tissue membrane surrounding a ligament.

peridiastole (pĕr-ĭ-di-as'to-le) [G. *peri*, around.] The interval preceding the diastole of the heart, prediastole.

peridiastol'ic. Prediastolic.

peridid'ymis [G. *peri*, around, + *didymis*, testis.] The tunica albuginea testis.

perididymitis (pĕr-ĭ-did-ĭ-mi'(me')tis). Inflammation of the perididymis.

peridiverticulitis (per"ĭ-di-ver-tik-u-li'(le')tis) [G. *peri*, around, + L. *diverticulum* + G. *-itis*] Inflammation of the tissues around an intestinal diverticulum.

periencephalitis (pĕr-ĭ-en-sef-al-i'(e')tis) [G. *peri*, around, + *enkephalos*, brain, + *-itis*.] Inflammation of the cerebral membranes, particularly leptomeningitis or inflammation of the pia mater.

periencephalomeningitis (pĕr-ĭ-en-sef-al-o-men-in-ji'(je')tis) [G. *peri*, around, + *enkephalos*, brain, + *mēninx(mēning-)*, membrane, + *-itis*.] Inflammation of the cerebral cortex and meninges.

periendothelioma (pĕr-ĭ-en-do-the-lĭ-o'mah). A mixed perithelioma and endothelioma.

perienter'ic [G. *peri*, around, + *enteron*, intestine.] Surrounding the intestine.

perienteritis (pĕr-ĭ-en-ter-i'(e')tis) [G. *peri*, around, + *enteron*, intestine, + *-itis*.] Inflammation of the peritoneal investment of the intestine.

perien'teron [G. *peri*, around, + *enteron*, intestine.] The primitive perivisceral cavity in the embryo,

the space between the ectoderm and endoderm in the gastrula.

periepen'dymal [G. *peri*, around.] Surrounding the ependyma.

Périer's opera'tion (pa-re-a') [Charles *Périer*, French surgeon, 1836–1914.] Bloodless amputation of an everted uterus by means of an elastic ligature.

periesophageal, pericesophageal (pĕr-ĭ-e-so-faj'e-al). Surrounding the esophagus.

periesophagitis, pericesophagitis (pĕr-ĭ-e-sof"ă-ji'-(je')tis). Inflammation of the tissues surrounding the esophagus.

perifocal (per-ĭ-fo'kal) [G. *peri*, around, + *focus*.] Surrounding a focus, noting the tissues or the blood which they contain in the vicinity of an infective focus.*

perifolliculitis (pĕr-ĭ-fol-ik-u-li'(le')tis). Inflammation of the tissues surrounding the hair-follicles.

periangliitis (pĕr-ĭ-gang-glĭ-i'(e')tis). Inflammation of the tissues surrounding a ganglion.

periganglion'ic. Surrounding a ganglion, especially a nerve-ganglion.

perigas'tric [G. *peri*, around, + *gastēr*, belly, stomach.] Surrounding the stomach.

perigastritis (pĕr-ĭ-gas-tri'(tre')tis). Inflammation of the peritoneal coat of the stomach.

perigemmal (per"ĭ-jem'al) [G. *peri*, around, + L. *gemma*, bud.] Circumgemmal, surrounding a bud-like or bulb-like body, noting especially a mode of nerve termination by fibrils surrounding an end-bulb.

periglandulitis (pĕr-ĭ-glan-du-li'(le')tis.) Inflammation of the tissues surrounding a gland.

periglott'ic [G. *peri*, around, + *glōssa, glōtta*, tongue; *glōttis*, glottis.] Around the tongue, especially around the base of the tongue and the epiglottis.

periglott'is [G. *peri*, around, + *glōssa, glōtta*, tongue.] The mucous membrane of the tongue.

perigone (per'ĭ-gōn) [G. *peri*, around, + *gonē*, seed.] Perianth.

perigynous (pĕr-ij'in-us) [G. *peri*, around, + *gynē*, woman (pistil).] In botany noting a flower in which the torus is hollowed out in the form of a cup.

perihepat'ic [G. *peri*, around, + *hēpar(hēpat-)*, liver.] Surrounding the liver.

perihepatitis (pĕr-ĭ-hep-ă-ti'(te')tis) [G. *peri*, around, + *hēpar(hēpat-)*, liver, + *-itis*.] Inflammation of the serous, or peritoneal, covering of the liver.

periher'nial, periher'niary. Surrounding a hernia.

perikerat'ic [G. *peri*, around, + *keras*, horn.] Surrounding the cornea, pericorneal.

perilabyrinthitis (per-ĭ-lab-ir-in-thi'(the')tis). Inflammation of the parts about the labyrinth.

perilaryn'geal. Surrounding the larynx.

perilaryngitis (pĕr-ĭ-lar-in-ji'(je')tis) [G. *peri*, around, + *larynx(laryng-)* + *-itis*.] Inflammation of the tissues around the larynx.

periligamen'tous [G. *peri*, around, + L. *ligamentum*, ligament.] Peridesmic.

per'ilymph, perilym'pha [G. *peri*, around, + L. *lympha*, a clear fluid.] Liquor Cotunnii, the fluid contained within the osseous labyrinth, surrounding and protecting the membranous labyrinth.

perilymphan'gial [G. *peri*, around, + *lymphangeion*, lymphatic vessel.] Surrounding a lymphatic vessel.

perilymphangitis (pĕr-ĭ-lim-fan-ji'(je')tis [G. *peri*, around, + L. *lympha*, lymph, + G. *angeion*, vessel, + *-itis*.] Inflammation of the tissues surrounding a lymphatic vessel.

perilymphat'ic. Surrounding a lymphatic vessel.

perimastitis (pĕr-ĭ-mas-ti'(te')tis) [G. *peri*, around, + *mastos*, breast, + *-itis*.] Inflammation of the connective tissue around the breast.

perimeningitis (pĕr-ĭ-men-in-ji'(je')tis) [G. *peri*, around, + *mēninx(mēning-)*, membrane, + *-itis*.] Inflammation of the perimeninges, or dura mater; pachymeningitis.

perim'eter [G. *peri*, around, + *metron*, measure.] 1. A circumference, edge, or border. 2. An instrument for delimiting the field of vision and measuring the degree of strabismus. It consists of a semicircular frame at the center of which the patient looks while a white object is moved along the arc, the exact point where it becomes visible being noted and recorded.

perimet'ric. 1. [G. *peri*, around, + *mētra*, uterus.] Surrounding the uterus, relating to the perimetrium. 2. [G. *perimetros*, circumference.] Relating to (*a*) the circumference of any part or area, or (*b*) perimetry.

perimetrit'ic. Relating to or marked by perimetritis.

perimetritis (pĕr-ĭ-me-tri'(tre')tis). Inflammation of the peritoneal coat of the uterus.

perime'trium [G. *peri*, around, + *mētra*, uterus.] The serous (peritoneal) coat of the uterus.

perimetry (per-im'ĕ-trĭ) [G. *perimetros* circumference.] The determination of the limits of the visual field.

perimy'elis [G. *peri*, around, + *myelos*, marrow.] 1. The membrane lining the central cavity of a bone, endosteum. 2. The pia mater of the spinal cord

perimyelitis (pĕr-ĭ-mi-el-i'(e')tis). 1. Endostitis 2. Spinal leptomeningitis.

perimyoendocarditis (pĕr-ĭ-mi"o-en-do-kar-di'(de')-tis). Endoperimyocarditis.

perimyositis (pĕr-ĭ-mi-o-si'(se')tis). Inflammation of the loose cellular tissue surrounding a muscle.

perimys'ial. Relating to the perimysium; surrounding a muscle.

perimysiitis, perimysitis (pĕr-ĭ-mis-ĭ-i'(e')tis, pĕr-ĭ-mis-i'(e')tis). 1. Inflammation of the perimysium. 2. Perimyositis.

perimysium (per-e-miz'ĭ-um) [G. *peri*, around, + *mys*, muscle.] The fibrous sheath enveloping each of the primary bundles of muscular fibers. **p. exter'num,** epimysium. **p. inter'num,** perimysium.

perinæ'um. Perineum.

perineal (pĕr-ĭ-ne'al). Relating to the perineum. **p. body,** a wedge of fibrous tissue and fat between the rectum and vagina in the female, and the rectum and urethra in the male. **p. fascia,** three layers of fascia between the muscles of the perineum. **p. hernia,** perineocele. **p. region,** the region at the lower end of the trunk, anterior to the sacral region between the thighs; it is divided into the *anal region* posteriorly and the *urogenital region* anteriorly; see cut under *regio*. **p. section,** perineotomy.

perineauxesis (per"ĭ-ne-awks-e'sis) [G. *perinaion*, perineum, + *auxēsis*, amplification] Colpoperineorrhapy.

perineocele (pĕr-ĭ-ne'o-sēl) [G. *perinaion*, perineum, + *kēlē*, hernia.] A hernia in the perineal region, between the rectum and the vagina, between the rectum and the bladder, or alongside the rectum.

perine'oplasty [G. *perinaion*, perineum, + *plassō*, I form.] Reparative or plastic surgery of the perineum; perineorrhaphy.

perineorrhaphy (per-ĭ-ne-or'ră-fĭ) [G. *perinaion*, perineum, + *rhaphē*, suture.] Repair of a ruptured perineum.

perineoscrotal (per-ĭ-ne"o-skro'tal). Relating to the perineum and the scrotum.

perineosyn'thesis [G. *perinaion*, perineum, + *synthesis*, a putting together.] Perineoplasty or perineorrhaphy in a case of extensive laceration of the perineum.

perineot'omy [G. *perinaion*, perineum, + *tomē*, incision.] Incision into the perineum as in external urethrotomy, lithotomy, etc.

perineovaginal (pĕr-ĭ-ne″o-vaj'in-al). Relating to the perineum and the vagina.

perineph'rial. Relating to the perinephrium.

perineph'ric [G. *peri*, around, + *nephros*, kidney.] Surrounding the kidney in whole or part.

perinephrit'ic. Relating to perinephritis.

perinephritis (pĕr-ĭ-ne-fri'(fre')tis) [G. *peri*, around + *nephros*, kidney, + *-itis*.] Inflammation of the tissues surrounding the kidney; paranephritis.

perineph'rium [G. *peri*, around, + *nephros*, kidney.] The connective tissue and fat surrounding the kidney.

perine'um, perinæ'um [G. *perineon* or *perinaion*.] The external surface or base of the perineal body, lying between the vulva and the anus in the female and the scrotum and the anus in the male. **wa'tering-pot p.,** a p. riddled with more or fewer fistulæ resulting from uretheral stricture.

perineu'rial [G. *peri*, around + *neuron*, nerve.] Surrounding a nerve; relating to the perineurium.

perineuritis (pĕr-ĭ-nu-ri'(re')tis) [*perineurium* + G. *-itis*.] Inflammation of the perineurium, or enveloping sheath of a nerve-trunk.

perineu'rium [G. *peri*, around, + *neuron*, nerve.] The connective-tissue sheath surrounding the funiculus or bundle of nerve-fibers.

perinuclear (pĕr-ĭ-nu'kle-ar) [G. *peri*, around, + L. *nucleus*.] Surrounding a nucleus.

perioc'ular [G. *peri*, around, + L. *oculus*, eye.] Periophthalmic, circumocular.

pe'riod [G. *periodos*, a circle; *peri*, around, + *hodos*, way.] 1. A certain duration or division of time. 2. One of the stages of a disease, as the p. of incubation p. of convalescence, etc. **monthly p.,** catamenia.

period'ic. Recurring at regular intervals, noting a disease with regularly recurring exacerbations or paroxysms.

periodicity (pe-re-ŏ-dis'ĭ-tĭ). The tendency to recurrence at regular intervals. In obstetrics, the disposition, during the course of pregnancy, to uterine contractions at times corresponding to the normal menstrual periods. In physics, the rate of interruption in a direct or galvanic electrical current; see *frequency*.

periodon'tal [G *peri*, around, + *odous*(*odont*), tooth.] Around a tooth.

periodontia (per-ĭ-o-don'shyah) [G. *peri*, around, + *odous*(*odont-*), tooth.] A dental specialty devoted to the treatment of abnormal conditions in the tissues immediately about the teeth.

periodontist (per-ĭ-o-don'tist). A dentist who specializes in periodontia.

periodontitis (pĕr-ĭ-o-don-ti'(te')tis). Inflammation of the periodontium; alveolar periostitis. **suppurative p.,** pyorrhea alveolaris.

periodon'tium [G. *peri*, around, + *odous*(*odont-*), tooth.] Peridental membrane, alveolodental membrane, dental periosteum, pericementum; the membrane lining the alveolar cavity and covering the root of the tooth

periodontoclasia (per-ĭ-o-don-to-kla'sĭ-ah) [G. *peri*, around, + *odous*(*odont-*), tooth, + *klasis*, breaking off.] 1. Removal or destruction of the periodontal tissues. 2. Pyorrhea alveolaris.

period'oscope [G. *periodos*, period of time, + *skopeō*, I examine.] A table for finding the probable date of labor, calculated from the last menstrual period.

periœsophag'eal. Periesophageal.

periomphal'ic [G. *peri*, around, + *omphalos*, umbilicus.] Around or near the umbilicus.

perionychia (pĕr-ĭ-o-nik'ĭ-ah) [G. *peri*, around, + *onyx*(*onych-*), nail.] Inflammation of the perionychium; whitlow.

perionychium (pĕr-ĭ-o-nik'ĭ-um) [G. *peri*, around, + *onyx*(*onych-*), nail.] The epidermis forming the ungual wall behind and at the sides of the nail.

perionyx'is. Perionychia.

perioophoritis (pĕr-ĭ-o-ŏ-for-i'(e')tis) [G. *peri*, about, + *ōophoros*, egg-bearer, + *-itis*.] Perioothecitis

perioophorosalpingitis (pĕr-ĭ-o-of″or-o-sal-pin-ji'(je')-tis). Perioothecosalpingitis.

perioothecitis (pĕr-ĭ-o″ŏ-the-si'(se')tis) [G. *peri*, around, + *ōothēkē*, ovary, + *-itis*.] Inflammation of the peritoneal covering of the ovary.

perioothecosalpingitis (pĕr-ĭ-o-ŏ-the″ko-sal-pin-ji'-(je')tis) [G. *peri*, around, + *ōothēkē*, ovary, + *salpinx*(*salping-*), trumpet, + *-itis*.] Inflammation of the peritoneum and other tissues around the ovary and oviduct.

periophthal'mic [G. *peri*, around, + *ophthalmos*, eye.] Surrounding the eye circumocular.

periophthalmitis (pĕr-ĭ-of-thal-mi'(me')tis) [G. *peri*, around, + *ophthalmos*, eye, + *-itis*.] Inflammation of the periophthalmic tissues.

periople (per'ĭ-ōpl) [G. *peri*, around, + *hoplon*, implement] The layer of soft horn that covers the outer aspect of the hoof of the horse.

perioptom'etry [G. *peri*, around, + *optikos*, referring to vision, + *metron*, measure.] Measurement of the field of vision.

perio'ral [G. *peri*, around, + L. *os*(*or-*), mouth] Peristomatous, around the mouth.

perior'bit, perior'bita [G. *peri*, around, + L. *orbita*, orbit.] The periosteum of the orbit of the eye.

perior'bital. 1. Relating to the periorbita. 2. Circumorbital, surrounding the orbit

periorbititis (pĕr-ĭ-or-bĭ-ti'(te')tis). Orbital periostitis, inflammation of the periorbita.

periorchitis (pĕr-ĭ-or-ki'(ke')tis) [G. *peri*, around, + *orchis*, testis, + *-itis*.] Inflammation of the tunica vaginalis testis. **p. hæmorrha'gica,** chronic hematocele of the tunica vaginalis testis.

per'iost. Periosteum.

perios'teal. Relating to the periosteum.

periosteitis (pĕr-ĭ-os-te-i'(e')tis). Periostitis

periosteo'ma [G. *peri*, around, + *osteon*, bone, + *-ōma*.] 1. A tumor of the periosteum. 2. A tumor surrounding a bone.

periosteomedullitis (pĕr-ĭ-os″te-o-mĕ-dŭ-li'(le')tis) [G. *peri*, around, + *osteon*, bone, + L. *medulla*, marrow, + G. *-itis*.] Periosteomyelitis.

periosteomyelitis (pĕr-ĭ-os″te-o-mi-ĕ-li'-(le')tis) [G. *peri*, around, + *osteon*, bone, + *myelos*, marrow, + *-itis*.] Inflammation of the entire bone, with the periosteum and marrow, osteomyelitis.

periosteophyte (per″ĭ-os'te-o-fīt) [G. *peri*, around, + *osteon*, bone, + *phyton*, growth.] Periosteoma (1); a neoplasm of the periosteum.

PERIOSTEUM ELEVATOR.

periosteo'sis [G. *periosteon*, periosteum, + *-ōsis*.] The formation of a periosteoma.

perios'teotome [*periosteon*, periosteum, + *tomos*, cutting.] A strong scalpel-shaped knife for cutting the periosteum.

periosteot'omy [G. *periosteon*, periosteum, + *tomē*, incision.] The operation of cutting through the periosteum to the bone.

perios'teous. Periosteal.

perios'teum [G. *periosteon; peri*, around, + *osteon*, bone.] The thick fibrous membrane covering the entire surface of a bone except its articular cartilage; it consists of two layers: an inner which is osteogenic, forming new bone tissue, and an outer connective-tissue layer conveying the blood-vessels and nerves supplying the bone. **p. alveola're** [BNA], periodontium. **p. cra'nii,** pericranium [BNA]. **p. el'evator,** a flattened bar of steel with narrow, but dull, ends; used to pry away the attachments of the periosteum to bone, when it is desired to preserve the former for plastic purposes. See illustration on page 813.

periostitis (pĕr-ĭ-os-ti'(te')tis) [G. *periosteon* + *-itis*.] Inflammation of the periosteum. **albuminous p.,** p. associated with the exudation of an albuminous serous fluid beneath the affected membrane; serous abscess. **alve'olar p.,** periodontitis. **dental p.,** periodontitis.

periosto'ma. Periosteoma.

periosto'sis. Periosteosis, the formation of a periosteoma.

periostosteitis (pĕr-ĭ-os"tos-te-i'(e')tis) [G. *periosteon*, periosteum, + *osteon*, bone, + *-itis*.] Inflammation of a bone with involvement of the periosteum.

perios'totome. Periosteotome.

periostot'omy. Periosteotomy.

periotic (per-ĭ-o'tik) [G. *peri*, around, + *ous(ōt-)*, ear.] Surrounding the internal ear, referring to the petromastoid portion of the temporal bone. **p. bone,** the petrous and mastoid portions of the temporal bone.

periovaritis (pĕr-ĭ-o-var-i'(e')tis) [G. *peri*, around, + L. *ovarium*, ovary, + G. *-itis*.] Perioothecitis.

periovular (per-ĭ-ov'u-lar) [G. *peri*, around, + L. *ovulum*, ovule.] Surrounding the ovum.

peripachymeningitis (pĕr-ĭ-păk"ĭ-men-in-ji'(je')tis) [G. *peri*, around, + *pachys*, thick, + *mēninx-(mēning-)*, membrane, + *-itis*.] Inflammation of the parietal layer of the dura mater.

peripancreatitis (pĕr-ĭ-pan-kre-ă-ti'(te')-tis) [G. *peri*, around, + *pankreas (pankreat-)* + *-itis*.] Inflammation of the peritoneal coat of the pancreas.

peripap'illary [G. *peri*, around, + L. *papilla*.] Surrounding a papilla, particularly the optic papilla.

peripatetic (per"ĭ-pă-tet'ik) [G. *peripatēsis*, a walking about.] Prone to walk about, noting certain cases of typhoid or other fever, in which the patient does not take to the bed.

peripe'nial [G. *peri*, around, + L. *penis*.] Surrounding the penis.

periphacitis, periphakitis (pĕr-ĭ-fă-si'-(se')tis, pĕr-ĭ-fă-ki'(ke')tis) [G. *peri*, around, + *phakos*, lens, + *-itis*.] Inflammation of the capsule of the crystalline lens of the eye.

peripharyn'geal. Surrounding the pharynx.

periph'erad [G. *periphereia*, periphery, + L. *ad*, to.] In a direction toward the periphery.

periph'eral. Relating to or situated at the periphery, peripheric.

peripheraphose (per-if'er-ă-fōz) [G. *periphereia*, the outer portion, + *a-* priv. + *phōs*, light.] The subjective sensation of a dark spot or patch, the cause residing in the eye itself or the optic nerve, outside of the optic center in the brain.

peripher'ic. Peripheral, situated at the periphery or on the surface of the body or an organ.

periph"erocen'tral. Relating to both the periphery and the center of the body or any part.

peripherophose (per-if'er-o-fōz) [G. *periphereia*, the outer portion, + *phōs*, light.] A subjective sensation of a light spot or patch, the cause residing in the eye itself or in the optic nerve, outside of the optic brain center.

periph'ery [G. *periphereia; peri*, around, + *pherō*, I carry.] The part of a body away from the center, the outer part or surface.

periphlebit'ic. Relating to periphlebitis.

periphlebitis (pĕr-ĭ-flĕ-bi'(be')tis) [G. *peri*, around, + *phleps(phleb-)*, vein, + *-itis*.] Inflammation of the outer coat of a vein or of the tissues surrounding it.

per'iplast [G. *peri*, around, + *plastos*, formed.] 1. Stroma or matrix of an organ. 2. Cytoplasm.

periplas'tic. 1. Relating to the periplast or stroma of a tissue or organ. 2. Surrounding or formed around the nucleus, noting especially flagella or other cell organs formed of the cytoplasm.

peripleuritis (pĕr-ĭ-plu-ri'(re')tis) [G. *peri*, around, + *pleura*, side, + *-itis*.] Inflammation of the connective tissue between the pleura and the wall of the thorax.

perip'loca [G. *periplokē*, a winding around.] The bark and stems of *Periploca græca*, climbing dog's bane, silk vine, a plant of Southern Europe; employed as a cardiac tonic, like digitalis, in doses of ♏5–10 (0.3–0.6) of a fluidextract.

perip'locin. A glucoside from periploca; hypodermic dose, gr. $\frac{1}{120}$ (0.0005).

peripneumenia (pĕr-ĭ-nu-mo'nĭ-ah) [G. *peri*, around, + *pneumōn*, lung] 1. Inflammation of the pulmonary pleura; pulmonary or visceral pleurisy. 2. Lobar pneumonia with involvement of the pleura. **p. no'tha** [L *nothus*, spurious], congestion of the lungs.

peripneumonitis (pĕr-ĭ-nu-mo-ni'(ne')tis) [G. *peri*, around, + *pneumōn*, lung, + *-itis*.] Peripneumonia.

peripo'lar [G. *peri*, around, + *polos*, pole.] Surrounding the pole or poles of any body, or any electric or magnetic poles.

peripor'tal [G. *peri*, around, + L. *porta*, gate.] Peripylic.

periproc'tic [G. *peri*, around, + *prōktos*, anus.] Around the anus, circumanal.

periproctitis (pĕr-ĭ-prok-ti'(te')tis) [G. *peri*, around, + *prōktos*, anus, + *-itis*.] Inflammation of the areolar tissue about the rectum.

periprostat'ic [G. *peri*, around.] Surrounding the prostate.

periprostatitis (pĕr-ĭ-pros-tă-ti'(te')tis) [G. *peri*, around, + *prostatēs*, prostate, + *-itis*.] Inflammation of the tissues surrounding the prostate.

peripylephlebitis (pĕr-ĭ-pi"le-fle-bi'(be')tis) [G. *peri*, around, + *pylē*, gate, + *phleps(phleb-)*, vein, + *-itis*.] Inflammation of the tissues around the portal vein.

peripy'lic [G. *peri*, around, + *pylē*, porta, gate.] Surrounding the portal vein.

peripylor'ic [G. *peri*, around.] Surrounding the pylorus.

perirec'tal [G. *peri*, around, + L. *rectum*.] Surrounding the rectum.

perirectitis (pĕr-ĭ-rek-ti'(te')tis) [G. *peri*, around, + L. *rectum* + G. *-itis*.] Periproctitis.

perire'nal [G. *peri*, around, + L. *ren*, kidney.] Perinephric, circumrenal.

perirhi'nal [G. *peri*, around, + *rhis(rhin-)*, nose.] Around the nose or nasal fossæ.

perirhizoclasia (per-ĭ-ri''zo-kla'sĭ-ă) [G. *peri*, around, + *rhizos*, root, + *klasis*, a breaking away.] Pararhizoclasia.

perisalpingitis (pĕr-ĭ-sal-pin-ji'(je')tis) [G. *peri*, around, + *salpinx*(*salping-*) trumpet, + *-itis*.] Inflammation of the peritoneum covering the Fallopian tube.

perisalpingoovaritis (pĕr-ĭ-sal''pin-go-o-var-i'(e')tis) [G. *peri*, around, + *salpinx*(*salping-*), trumpet, + L. *ovarium*, ovary + G. *-itis*.] Perioothecosalpingitis.

perisal'pinx [G. *peri*, around, + *salpinx*(*salping-*), trumpet.] The peritoneal covering of the oviduct.

periscop'ic [G. *peri* around, + *skopeō*, I view.] Noting the ability, or that which gives the ability, to see objects to one side as well as in the direct axis of vision. **p. lens,** a double microscopic lens with a diaphragm, between the two parts, having an aperture with a diameter one-fifth the focal length of the lens.

perisinuitis (pĕr-ĭ-sin-u-i'(e')tis) [G. *peri*, around, + L. *sinus* + G. *-itis*.] Inflammation of the parts surrounding a sinus, especially a cerebral sinus.

perisigmoiditis (pĕr-ĭ-sig-moy-di'(de')tis). Inflammation of the connective tissue surrounding the sigmoid flexure, giving rise to symptoms, referable to the left iliac fossa, similar to those of perityphlitis in the right iliac fossa: pericolitis sinistra.

perisin'uous [G. *peri*, around.] Surrounding a sinus, especially a cerebral sinus.

perisinusitis (pĕr-ĭ-si-nus-i'(e')tis). Perisinuitis.

per'isperm [G. *peri*, around, + *sperma*, seed.] In botany, the nutrient material surrounding the embryo-sac in a seed.

perispermatitis (pĕr-ĭ-spur-mă-ti'(te')tis) [G. *peri*, around, + *sperma*, seed, + *-itis*.] Inflammation of the tissues around the spermatic cord. **p. sero'sa,** hydrocele of the spermatic cord.

perisplanchnic (pĕr-ĭ-splank'nik) [G. *peri*, around, + *splanchna*, the internal organs, viscera.] Surrounding any viscus or viscera.

perisplanchnitis (per-ĭ-splank-ni'(ne')tis) [G. *peri*, around, + *splanchna*, viscera, + *-itis*.] Perivisceritis, visceral peritonitis; polyorrhomeningitis.

perisplen'ic. Around the spleen.

perisplenitis (pĕr-ĭ-sple-nĭ'(ne')tis) [G. *peri*, around, + *splēn*, spleen, + *-itis*.] Inflammation of the peritoneum covering the spleen.

perispondyl'ic [G. *peri*, around, + *spondylos*, vertebra.] Around a vertebra.

perispondylitis (pĕr-ĭ-spon-dĭ-li'(le')tis) [G. *peri*, around, + *spondylos*, vertebra, + *-itis*.] Inflammation of the tissues about a vertebra.

peris'sad [G. *perissos*, uneven.] An element of uneven valence, a monad, triad, or pentad.

peristal'sis [G. *peri*, around, + *stalsis*, constriction.] The vermiform movement of the intestine or other tubular structure; a wave of alternate circular contraction and relaxation of the tube by which the contents are propelled onward. **mass p.,** forcible peristalic movements of short duration, occurring only three or four times a day, which move the contents of the large intestine from one division to the next, as from the ascending to the transverse colon. **reversed p.,** antiperistalsis, a wave of contraction in a direction the reverse of normal, by which the contents of the tube are forced backward.

peristal'tic. Relating to peristalsis. **p. unrest',** abnormal motility of the stomach and intestine, increased peristalsis, manifested by borborygmi and sensations of movement within the abdomen.

peristal'tin. A glucoside of cascara sagrada; laxative.

peristaphyline (per-ĭ-staf'ĭ-lēn) [G. *peri*, around, + *staphylē*, uvula.] Around the uvula.

peristaphylitis (pĕr-ĭ-staf-il-i'(e')tis) [G. *peri*, around, + *staphylē*, uvula, + *-itis*.] Inflammation of the soft palate and parts about the uvula

peristole (per-is'to-le). See *peristolic*.

peristolic (per-ĭ-stol'ik) [G. *peri*, around, + *stellō*, I contract.] Noting the tonic activity of the walls of the stomach whereby the organ contracts about its contents (*peristole*); contrasting with the peristaltic waves passing from the cardia toward the pylorus.

peris'toma. Peristome.

per'istomal, peristom'atous [G. *peri*, around, + *stoma*, mouth.] Surrounding the mouth.

peristome (per'ĭ-stōm) [G. *peri*, about, + *stoma*, mouth.] A groove leading from the cytostome in infusoria and certain other forms of protozoa.

peristrumitis (pĕr-ĭ-stru-mi'(me')tis) [G. *peri*, around, + L. *struma*, goiter, + G. *-itis*.] Inflammation of the tissues about a goiter.

peristru'mous [G. *peri*, around, + L. *struma*, goiter.] Situated about or near a goiter.

perisyno'vial. Around a synovial membrane.

perisystole (pĕr-ĭ-sis'to-le). 1. Presystole. the pause in the cardiac rhythm preceding the systole. 2. A concentric contraction of the stomach walls around the mass of food ingested.

perisystol'ic. Presystolic.

peritendineum (per-ĭ-ten-din'e-um) [G. *peri*, around.] One of the white fibrous sheaths surrounding the primary bundles of fibers in a tendon.

peritendinitis (pĕr-ĭ-ten-din-i'(e')tis) [G. *peri*, around, + L. *tendo*(*tendin-*), tendon, + G. *-itis*.] Peritenontitis. **p. sero'sa,** ganglion (3).

peritenon (per-ĭ'-ten-on) [G. *peri*, around, + *tenōn*, tendon.] Tendon sheath.

peritenontitis (per-ĭ-ten-on-ti'(te')tis) [G. *peri*, around, + *tenōn*(*tenont-*), tendon, + *-itis*.] Inflammation of the sheath of a tendon.

perithelioma (per''ĭ-the-lĭ-o'mah). A tumor derived from the perithelium, or adventitia, of the blood-vessels, the new cells spreading in a radiate fashion around the vessels; it is regarded as probably an endothelioma (lymphangioendothelioma) of the perivascular lymph spaces.

perithe'lium [G. *peri*, around, + *thēlē*, nipple.] The adventitia or outer coat of the blood-vessels.

perithoracic (pĕr-ĭ-tho-ras'ik) [G. *peri*, around.] Surrounding or encircling the thorax.

perithyreoiditis, perithyroiditis (pĕr-ĭ-thi-re-oy-di'(de')tis, pĕr-ĭ-thi-roy-di'(de')tis) [G. *peri*, around.] Inflammation of the capsule or tissues surrounding the thyroid gland; peristrumitis.

perit'omist. One who performs circumcision.

perit'omize. To perform peritomy upon.

perit'omy [G. *peri*, around, + *tomē*, incision.] 1. Circumcision. 2. The removal of a circular strip of the conjunctiva for the relief of pannus.

peritonæ'um. Peritoneum.

peritone'al. Relating to the peritoneum.

peritonealgia (per-ĭ-to-ne-al'jĭ-ah) [G. *peritonaion*, peritoneum, + *algos*, pain.] Non-inflammatory pain in the peritoneum.

peritoneopathy (per-ĭ-to-ne-op'a-thĭ) [*peritoneum* + G. *pathos*, suffering.] Inflammation or other disease of the peritoneum.

peritoneopericar'dial. Relating to the peritoneum and the pericardium.

peritoneoplasty (per-ĭ-to''ne-o-plas'tĭ) [*peritoneum* + G. *plassō*, I form.] Loosening adhesions and

covering the raw surfaces with peritoneum to prevent reformation.

peritoneot'omy [G. *peritonaion*, peritoneum, + *tomē*, incision.] Operative division or section of the peritoneum, celiotomy.

peritone'um [L.; G. *peritonaion; periteino;* I stretch over.] The serous sac lining the abdominal cavity and covering most of the viscera therein contained. It forms two sacs, the greater and the lesser, connected by the foramen of Winslow. **p. parieta'le,** the layer of p. lining the abdominal walls. **p. viscera'le,** the layer of p. investing the intestines and the other abdominal organs.

peritonism (per'ĭ-ton-izm). 1. A symptom complex marked by vomiting, pain, and shock, in inflammation of any of the abdominal viscera in which the peritoneum is involved. 2. Pseudoperitonitis, a neurosis in which the symptoms simulate those of peritonitis.

peritonitis (pĕr-ĭ-ton-i'(e')tis). Inflammation of the peritoneum. **adhe'sive p.,** a form in which a fibrinous exudate occurs, matting together the intestines and various other organs. **p. defor'mans,** a chronic p. in which thickening of the membrane and contracting adhesions cause shortening of the mesentery and kinking and retraction of the intestines **pel'vic p.,** inflammation, more or less strictly localized, of the peritoneum surrounding the uterus and Fallopian tubes; usually gonorrheal, tuberculous, or septic.

peritonize (per'ĭ-to-nīz). To cover with peritoneum, referring usually to an anastomosis operation on the stomach or intestine.

periton'sillar [G. *peri*, around, + L. *tonsilla*, tonsil] About a tonsil or the tonsils.

peritonsillitis (per-ĭ-ton-sil-i'(e')tis) [G. *peri*, around, + L. *tonsilla*, tonsil, + G. *-itis*.] Periamygdalitis.

peritracheal (pĕr-ĭ-tra'ke-al) [G. *peri*, about.] About the trachea.

peritricha (pĕr-it'rĭ-kah) [G. *peri*, around, + *thrix* (*trich-*), hair.] Microorganisms having flagella attached to all sides.

peritrichal (pĕr-it'rik-al) [G. *peri*, around, + *thrix* (*trich-*), hair.] 1. Relating to cilia or other appendicular organs projecting from the periphery of a cell. 2. Noting microorganisms having cilia or flagella projecting from all sides and not at the poles alone.

peritrichate (per-ĭ-trik'āt). Peritrichal (2).

peritrichic (per-ĭ-trik'ik). Peritrichal (2).

Peritrichida (pĕr-ĭ-trik'ĭ-dah) [G. *peri*, around, + *thrix* (*trich-*), hair.] An order of *Ciliata* of cylindrical shape with the cilia usually limited to the zone surrounding the mouth opening.

peritrichous (per-it'rĭ-kus). Peritrichal (2).

peritrochanter'ic (pĕr-ĭ-tro-kan-ter'ik) [G. *peri*, around.] Around a trochanter.

perityph'lic [G. *peri*, around, + *typhlon*, cecum.] Surrounding the cecum, pericecal.

perityphlitis (pĕr-ĭ-ti-fli'(fle')tis) [G. *peri*, around, + *typhlon*, blind (cecum).] Localized peritonitis in the neighborhood of the cecum and appendix.

periumbil'ical [G. *peri*, around, + *umbilicus*.] Periomphalic.

periureter'ic [G. *peri*, around, + *ourētēr*, ureter.] Surrounding one or both ureters.

periureteritis (pĕr-ĭ-u-re-ter-i'(e')tis) [G. *peri*, around, *ourētēr*, ureter, + *-itis*.] Inflammation of the tissues about an ureter.

periure'thral [G. *peri*, around, + *ourēthra*, urethra.] Surrounding the urethra.

periurethritis (pĕr"ĭ-u-re-thri'(thre')tis) [G. *peri*, around, + *ourēthra*, urethra, + *-itis*.] Inflammation of the parts about the urethra.

periu'terine [G. *peri*, around, + L. *uterus*.] Perimetric (1).

periu'vular. Peristaphyline

perivaginitis (pĕr-ĭ-vaj-in-i'(e')tis) [G. *peri*, around, + L. *vagina* + G. *-itis*.] Pericolpitis.

perivas'cular [G. *peri*, around, + L. *vasculum*, vessel.] Surrounding a vessel, especially a bloodvessel.

perivasculitis (pĕr-ĭ-vas-ku-li'(le')tis) [G. *peri*, around, + L. *vasculum*, vessel, + G. *-itis*.] Periangitis.

perive'nous [G. *peri*, around, + L. *vena*, vein.] Surrounding a vein.

periver'tebral. Perispondylic.

perives'ical [G. *peri*, around, + L. *vesica*, bladder.] Pericystic.

perivisceral (pĕr-ĭ-vis'er-al) [G. *peri*, around, + L. *viscera*, pl. of *viscus*, an internal organ.] Perispianchnic.

perivisceritis (per-ĭ-vis-ser-i'(e')tis) [G. *peri*, around, + L. *viscera* + G. *-itis*.] Perisplanchnitis, visceral peritonitis; polyorrhomeningitis.

perivitelline (per-ĭ-vi'tĕ-līn) [G. *peri*, about, + L. *vitellus*, yolk.] Surrounding the vitellus or yolk.

perixenitis (pĕr-ĭ-zen-i'(e')tis) [G. *peri*, around, + *xenos*, a foreigner, + *-itis*.] Inflammation of the parts about a foreign body.

Per'kins' trac'tors [Elisha *Perkins*, New England physician, 1744–1799.] Metallic tractors, two pointed bars, one of steel and the other of brass, which were supposed to be of therapeutic efficacy (through induced magnetism or electricity) in rheumatism and visceral affections, when drawn across the skin of the diseased region.

perkinism (pur'kin-izm) [after Elisha *Perkins*] The treatment of disease by means of Perkins'* tractors.

perlèche (per-lesh') [Fr. *per*, intensive + *lécher*, to lick.] A contagious affection marked by inflammation at the corners of the mouth, with an accumulation of whitish macerated epithelium, resembling a diphtheritic pseudomembrane; it occurs chiefly among children in institutions.

Perles's bodies (per'lās) [Max *Perles*, German pathologist, 1843–1881.] Minute structures, apparently motile, but of undetermined nature, found occasionally in the blood in cases of pernicious anemia. **P.'s test,** for hemosiderin, the presence of which is indicated by a blue color on the addition of potassium ferrocyanide and hydrochloric acid.

Perlia's nucleus (pĕr'le-ah) [Richard *Perlia*, German ophthalmologist, contemporary.] Spitzka's* nucleus

perlsucht (perl'zukht) [Ger. *perle*, pearl, + *sucht*, disease.] Pearl disease, bovine tuberculosis.

per'manent [L. *per*, through, + *manere*, to remain.] Enduring, not changing. **p. teeth,** the teeth of the second dentition, see *dens permanens*.

perman'ganate. A salt of permanganic acid.

permangan'ic acid. An acid $HMnO_4$, derived from manganese, forming permanganates with bases; see *potassii permanganas*.

per'meable [L. *permeare*, to pass through.] Permitting the passage of liquids into and through.

permeation (pur-me-a'shun) [L. *permeare*, to pass through.] The extension of a tumor by proliferation of the cells continuously along the bloodvessels or lymphatics.

permu'tit [L. *permutare*, to exchange.] A powder obtained by crushing fused soda, pearlash, and various silicates; when added to hard water it softens it by extracting the lime and magnesia in exchange for soda.

per'na disease' (*per*chlor*na*phthalin). Halogen or chloric acne occurring in workers in perchlornaphthalin.

perniciosiform (pur-nĭ-shĭ-ōs'ĭ-form). Apparently pernicious, noting a condition or disease that appears to be, but is not actually pernicious or malignant.

pernicious (per-nish'us) [L. *perniciosus*, destructive.] Destructive, harmful; noting a disease of severe character and usually fatal.

per'nio [L.] Chilblain.

pernio'sis. A chronic condition of chilblains.

pernocton (pur-nok'ton) [L. *per*, through, + *nox*(*noct*-), night.] A ten per cent. solution of the sodium salt of secondary beta-bromallyl barbituric acid, chemically related to sodium amytal but a much more powerful hypnotic; employed as a preliminary to inhalation anesthesia in dose of 4 or 5 c.c. (or 1 c.c. for every 30 lb. body weight.)

perobrachius (pe-ro-bra'kĭ-us) [G. *pēros*, maimed, + *brachiōn*, arm.] A monster with defective arms.

pe"roceph'alus [G. *pēros*, maimed, + *kephalē*, head.] A monster with defective head.

perochirus (pe-ro-ki'rus) [G. *pēros*, maimed, + *cheir*, hand.] A monster with defective hands.

pe"rocor'mus [G. *pēros*, maimed, + *kormos*, trunk.] A monster with defective body, perosomus.

pe"rodac'tylus [G. *pēros*, maimed, + *daktylos*, finger.] A monster with defective fingers or toes.

per'ogen. A preparation of sodium perborate which, when mixed in the bath with the accompanying catalyzer, liberates 10 per cent. of the oxygen in the salt.

perom'elus [G. *pēros*, maimed, + *melos*, limb.] A monster with defective limbs.

peronæ'us. Peroneus.

perone (per-o'ne) [G. *peronē*, brooch.] Fibula.

peroneal (per-o-ne'al). Relating to the fibula, to the outer side of the leg, or to the muscles there present; see *musculus peroneus*.

peroneotib'ial. Tibiofibular, relating to the fibula and the tibia.

peroneus (per-o-ne'us) [G. *peronē*, brooch, fibula.] One of several muscles on the outer or fibular side of the leg; see under *musculus*.

per'onin. Benzylmorphine hydrochloride, a white soluble powder obtained by the action of benzyl chloride on morphine; employed as a succedaneum of morphine in doses of gr. ½–¾ (0.03–0.04).

Peronos'pora [G. *peronē*, brooch, + *sporos*, seed.] A genus of fungi producing mildew, one species of which *P. lutea* was at one time suggested as the cause of yellow fever.

peropus (pe'ro-pus) [G. *pēros*, maimed, + *pous*, foot.] A monster with defective feet.

per os [L.] By or through the mouth.

perosomus (pe-ro-so'mus) [G. *pēros*, maimed, + *sōma*, body.] A monster with defective body, perocormus.

peros'seous [L. *per*, through, *os*, bone.] Through bone.

perox'ide. That oxide of any series which contains the greatest number of oxygen atoms.

perox'idase. Catalase.

perox'ol. A combination of hydrogen peroxide with a camphor.

perplication (pur"pli-ka'shun) [L. *per*, through, + *plicare*, to fold.] The operation of drawing the cut end of an artery through a slit in the wall of the same artery just above, in order to arrest bleeding.

per primam, per primam intentionem (pur pri'mam in-ten-shĭ-o'nem) [L.] By first intention,* noting a manner of healing of a wound.

per rec'tum [L.] By or through the rectum.

persalt (pur'sawlt). In chemistry, any salt which contains the greatest possible amount of the acid radicle.

per sal'tum [L.] At a leap, at one bound, not gradually or through different stages

per secundam, per secundam intentionem (pur sekun'dam in-ten-shĭ-o'nem) [L.] By second intention,* noting a manner of healing of a wound.

perseveration (pur-sev-er-a'shun). 1. The constant repetition of a meaningless word or phrase. 2. The duration of a mental impression, measured by the rapidity with which one impression follows another as determined by the revolving of a two-colored disc.

persim'mon [N.A. Indian word.] Diospyros.

per'sio (N.F.). Cudbear.

per'sonal equa'tion. The factor of individual differences to be reckoned with in studying the results of experiments, especially in psychology; this is to be considered in both the experimenter and the person experimented upon.

perspira'tion [L. *perspiratio*, see *perspire*.] 1. The excretion of fluid by the sweat-glands of the skin. 2. The fluid excreted by the sweat-glands; it consists of water containing sodium chloride and phosphate, urea, ammonia, ethereal sulphates, creatinin, fats, and other waste-products of catabolism; the average daily quantity is estimated at about 1500 grams (3.3 pounds). **insen'sible p.,** the p. excreted continuously in moderate amount which evaporates immediately so that it is not perceived as fluid on the skin. **sen'sible p.,** the p. excreted in large quantity, or when there is much humidity in the atmosphere, so that it appears as moisture on the skin.

persul'phate. That one of a series of sulphates which contains more molecules of sulphuric acid than the others.

persulphide (pur-sul'fīd or fid). That one of a series of sulphides which contains more atoms of sulphur than any other.

per tertiam intentionem (pur tur'shĭ-am in-ten-shĭ-o'nem). By third intention *

Perthes' disease' (pair'tās) [Georg *Perthes*, German surgeon, 1869–1927.] Legg's disease, osteochondritis deformans juvenilis of the hip. **P.'s meth'od,** continuous aspiration of a pleuritic exudate, the drainage tube passing into an air-tight receiving vessel which is connected with water-power exhaust.

Per'tik's divertic'ulum [Otto *Pertik*, Hungarian pathologist, 1852–1913.] An abnormally deep Rosenmueller's fossa, or recessus* pharyngeus or infundibuliformis.

pertuss'in. Trade name of a preparation containing thyme, recommended in the treatment of whooping-cough.

pertussis (pur-tus'is) [L. *per*, very (intensive), + *tussis*, cough.] Whooping-cough

pertussoid (pur-tus'soyd) [*pertussis* + G. *eidos*, resemblance.] A cough, often influenzal, resembling in its general features that of whooping-cough.

peru'gen. Trade name of a synthetic product resembling in appearance, odor, and therapeutic action balsam of Peru; employed externally in skin diseases, and internally in chronic bronchitis in doses of gr. 5 (0.3) in emulsion.

peru'ol. A 25 per cent. solution of peruscabine in castor oil; employed externally in scabies.

peru'scabine. Benzyl benzoic acid ester, a colorless oil, the active principle of balsam of Peru synthetically prepared.

Peru'vian bark. Cinchona.

perversion (pur-vur'shun) [L. *perversio; pervertere*, to turn about.] A turning from what is right or normal. **sex'ual p.**, a condition in which there is an indulgence in unnatural sexual practices.

pervert (pur'vurt). One who has turned from what is normal or proper; noting especially a sexual pervert or a person who is given to any form of unnatural sexual practices.

per vias naturales (per ve'as na-tu-rah'lās) [L.] Through the natural passages; noting, for example, the birth of a child in the natural way and not by cesarean section; or the passage at stool of a foreign body which has been swallowed, instead of its removal by an abdominal section.

pervigil'ium [L. *pervigilis*, very wakeful.] Wakefulness, mild insomnia.

per'vious [L. *pervius; per*, through, + *via*, a way.] Permeable, capable of giving passage to anything, such as heat, moisture, light, etc.

pes, gen. *pe'dis*, pl. *pe'des* [L.] 1. The foot. 2. Any foot-like or basal structure or part. 3. The crusta or ventral portion of the pedunculus (crus) cerebri, basis pedunculi [BNA]. 4. Talipes or club-foot; in this sense always qualified by a word expressing the form of club-foot, as calcaneus, cavus, equinus, planus, etc.; see *talipes*. **p. accesso'rius,** eminentia lateralis. **p. anseri'nus** [L. goose's foot], (1) branching of the facial nerve in the parotid gland, plexus parotideus [BNA]; (2) the tendinous expansions of the sartorius, gracilis, and semitendinosus muscles at the inner border of the tubercle of the tibia. **p. febric'itans,** elephantiasis. **p. gi'gas,** macropodia, congenital hypertrophy of one or both feet. **p. hippocam'pi,** foot of the hippocampus, digitationes hippocampi [BNA], the anterior thickened extremity of the hippocampus major. **p. transver'sopla'nus,** metatarsus latus, flattening of the transverse arch of the foot.

pess'ary [L. *pessarium;* G. *pessos*, an oval stone used in certain games.] 1. An appliance of varied form, introduced into the vagina to support the uterus or to correct any displacement. 2. A medicated vaginal suppository. **p. cell,** see *cell*.

pess'imism [L. *pessimus*, the worst.] A tendency to look on the dark side of life, sometimes carried to actual insanity. **therapeu'tic p.,** a disbelief in the curative virtues of remedies in general and especially of drugs.

pess'ulum, pess'um [L.; G. *pessos*, an oval stone used in games.] Pessary.

pess'us [G. *pessos*, an oval stone.] A medicated vaginal suppository.

pest [L. *pestis*.] Plague. **Sibe'rian p.,** anthrax.

pest house. An isolation hospital for the reception and treatment of cases of contagious disease, especially smallpox.

pesticemia (pes-tĭ-se'mĭ-ah) [L. *pestis*, plague, + G. *haima*, blood.] Lememia; 1. The presence of plague bacilli in the peripheral blood stream, with or without grave general symptoms. 2. Septicemic plague.

pestif'erous [L. *pestis*, pest, + *ferre*, to carry.] Pestilential, conveying the plague or any infectious disease.

pes'tilence [L. *pestilentia*.] 1. The plague. 2. An epidemic of any infectious disease.

pestilential (pes-tĭ-len'shal). Relating to a pestilence, pestiferous.

pes'tis [L.] Plague. **p. am'bulans** [L. walking], larval plague.* **p. ma'jor,** ordinary bubonic plague of severe form. **p. mi'nor,** (1) larval plague; (2) climatic bubo. **p. ful'minans** [L. hurling thunderbolts], p. major. **p. sid'erans** [L. blasting, as with a sunstroke], septicemic plague.

pestle (pes'l) [L. *pistillum*.] An instrument in the shape of a rod with one rounded and weighted extremity, used for bruising and breaking substances in a mortar.

pet'al [G. *petalon*, leaf.] In botany one of the leaves of the corolla of a flower.

pet"alobacte'ria [G. *petalos*, outspread.] Bacteria forming colonies in the shape of broad thin sheets.

pet"alococ'ci. Cocci having the cultural characteristics of the petalobacteria.

petechiæ (pe-tek'e-e) [L. form of it. *petecchie*.] Minute hemorrhagic spots, of pinpoint to pinhead size, in the skin.

petechial (pe-tek'ĭ-al). Relating to or accompanied by petechiæ.

Pe'terman test [Mynie G. *Peterman*, American physician, *1896.] A microprecipitation test for syphilis: 0.05 or 0.025 c.c. inactivated serum and 0.01 or 0.005 c.c. diluted antigen (beef-heart) are stirred together, incubated between glass slides at 37° C. for 10 minutes, and then examined under the microscope.

Peters' ovum (pa'ters) [H. *Peters*, Viennese obstetrician, contemporary.] An ovum of the age of five or six days after impregnation, the study of which furnished many facts regarding the earliest embryonic changes.

Pe'tersen's bag [F. *Petersen*, Kiel surgeon, *1845.] A rubber bag introduced into the rectum and inflated, in order to push up the bladder so as to facilitate the operation of suprapubic cystotomy.

et'iolate, pet'iolated [L. *petiolus*, petiole.] Stalked or pedunculate.

pet'iole. Petiolus.

pet'ioled. Petiolate.

peti'olus [L. dim. of *pes* (foot), the stalk of a fruit.] Petiole, a stem or pedicle; the stalk of a leaf. **p. epiglot'tidis** [BNA], the lower end or pedicle of the cartilage of the epiglottis, attached to the superior notch of the thyroid cartilage.

Petit's canal' (pĕ-te') [François Pourfour du *Petit*, French surgeon and anatomist, 1664–1741.] Spatia zonularia, the space at the equator of the crystalline lens between the two layers of the zonule of Zinn. **P.'s sinus,** sinus of Valsalva.

Petit's her'nia (pĕ-te') [Jean Louis *Petit*, Parisian surgeon, 1674–1750.] Lumbar hernia, occurring in P.'s triangle. **P.'s herniot'omy,** external herniotomy, herniotomy without incision into the sac. **P.'s tri'angle,** trigonum lumbale.

petit mal (pĕ-te' mal) [Fr. little ill.] A mild or larval form of epilepsy.

Petrén's meth'od (pa-tren') [Karl *Petrén*, Swedish physician, 1869–1927.] Treatment of diabetes by a diet rich in fats and almost free from proteins, thereby furnishing sufficient calories without the risk of the conversion of protein into carbohydrate.

Petri dish'es (pa'tre) [Julius *Petri*, German bacteriologist, 1852–1922.] Round glass dishes, fitting one above the other in a pile, about ½ inch deep and 4 inches in diameter; used for holding bacterial cultures. **P.'s reac'tion,** the addition of diazobenzolsulphonic acid with caustic soda to a liquid produces a brown or dark orange color if any protein is present.

petrifac'tion [L. *petra*, rock, + *facere*, to make.] Fossilization, conversion into stone; calcification.

pétrissage (pa-tre-sazh') [Fr. kneading.] A manipulation in massage, consisting in a kneading of the muscles.

petroccip'ital. Petro-occipital.

petrochondrin (pĕ-tro-kon'drin) [*petroleum* + *chondrus*.] Trade name of an emulsion of mineral oil and Irish moss.

pet'rogen [G. *petra*, rock, + *gennaō*, I produce.] The trade name of a mineral oil preparation employed as a vehicle.

pet'rolate. Petrolatum.

petrolatum (pĕ-tro-la'tum). (U.S.) Paraffinum molle (Br.), amber petrolatum, petroleum jelly, paraffin jelly; a yellowish mixture of the softer members of the paraffin or methane series of hydrocarbons, obtained from petroleum as an intermediate product in its distillation; employed as a soothing application to burns and abrasions of the skin, and as a base for ointments. **p. al'bum** (U.S.), white petrolatum, of the same composition as petrolatum except that care is taken in its preparation to keep it colorless, employed for the same purposes as petrolatum (U.S.). **p. liq'uidum** (U.S.), paraffinum liquidum (Br.), liquid petrolatum, liquid paraffin, paraffin oil; made by distilling off the more volatile portion of petroleum, purifying, and removing the solid paraffins from the residue; employed as a vehicle for drugs to be applied by a vaporizer to the mucous membranes. **p. sapona'tum,** a name formerly designating in the National Formulary a class of preparations now called petroxolinum.

petro'leum [L. *petra*, rock, + *oleum*, oil.] Rock oil, coal oil, mineral oil, a mixture of liquid hydrocarbons found in the earth in various parts of the world; its source is uncertain but it is most commonly believed to be derived from fossilized animal remains; the petroleum of the United States is from rocks of the Devonian period, the Russian petroleum from tertiary formations; besides its use for lighting and heating purposes petroleum is the source of vaseline **p. e'ther,** a colorless inflammable liquid, obtained from petroleum, producing intense cold by its rapid evaporation.

pet'rolin. Paraffin.

pet''romas'toid. Relating to the petrous and the mastoid portions of the temporal bone, which are usually united at birth, forming the petromastoid portion.

pet''ro-occip'ital. Noting the cranial suture between the occipital bone and the petrous portion of the temporal.

pet''ropharynge'us. See under *musculus*.

petrosa (pĕ-tro'sah). The petrous portion of the temporal bone.

petrosal (pĕ-tro'sal). [L. *petrosus*, stony.] Relating to the petrosa, or petrous, portion of the temporal bone. **p. bone,** the petrous portion of the temporal bone, in antenatal life, before it is joined to the other portions. **p. nerve,** nervus petrosus. **p. sinus, p. vein,** sinus petrosus.

pet''rosal''pingostaphyli'nus [L. *petrosa*, petrous portion of the temporal, + G. *salpinx(salping-)*, trumpet (Eustachian tube), + *staphylē*, uvula.] Musculus levator veli palatini.

petroseli'ni ra'dix [G. *petra*, rock, + *selinon*, parsley.] Parsley root, the root of *Petroselinum sativum*, *Apium petroselinum*, parsley; emmenagogue in dose of ʒ ½ (2.0).

petroselinum (pet''ro-se-li'num). Parsley fruit, the dried ripe fruit of *P. sativum*.

petro''somas'toid. Petromastoid.

petrosphe'noid. Relating to the petrous portion of the temporal bone and to the sphenoid bone.

pet''rosquamo'sal, pet''rosqua'mous. Relating to the petrous and the squamous portions of the temporal bone.

pet''rostaphyli'nus [G. *petra*, stone, + *staphylē*, uvula.] Musculus levator veli palatini.

pet''rosul'fol. Trade name of a preparation of petroleum and sulphur, made in imitation of ichthyol and employed in the same way in the treatment of diseases of the skin.

petrous (pe'trus, pet'rus) [G. *petra*, a rock.] 1. Of stony hardness. 2. Relating to the petrous portion of the temporal bone, petrosal. **p. bone,** p. portion of the temporal bone. **p. gan'glion,** the inferior ganglion of the glossopharyngeal nerve. **p. por'tion, p. pyr'amid,** a three-sided pyramidal projection, from the inner surface of the temporal bone, containing the structures of the internal ear; it is usually united at birth with the mastoid portion. **p. nerve,** nervus petrosus. **p. sinus,** sinus petrosus.

petrousitis (pe-trus-i'(e')tis) [*petrous* portion of temporal bone.] Inflammation of the internal ear.

petrox (pet'roks). Petrolatum saponatum, petroxolinum (N.F.).

petroxolinum (pĕ-troks-o-li'num) [G. *petra*, rock, + *oxys*, acid, + *oleic.*]. Petroxolin, petrox, petrolatum saponatum, a mixture of petrolatum, oleic acid, and other substances, employed as a vehicle in a class of preparations in the National Formulary; it is prepared in two forms, liquid and solid, *p. liquidum* and *p. spissum*.

p. betanaphtho'lis (N.F.), betanaphthol petroxolin or petrox, a mixture of betanaphthol 10, in liquid petroxolin 90.

p. bitu'minis sulphona'ti (N.F.), a 10 per cent. solution of sulphonated bitumen in liquid petroxolin.

p. cadi'ni (N.F.), cade petroxolin or petrox, a mixture of oil of cade 25, and liquid petroxolin 75.

p. chlorofor'mi camphora'tum (N.F.), camphorated chloroform petroxolin or petrox, contains chloroform and camphor, of each 25, and petroxolin 50

p. creoso'ti creosote petroxolin or petrox, a mixture of creosote 20, oleic acid 5, and liquid petroxolin 75.

p. eucalypto'lis (N.F.), eucalyptol petroxolin or petrox, consisting of eucalyptol 20, and petroxolin 80.

p. guaiaco'lis (N.F.), guaiacol petroxolin or petrox, consisting of guaiacol 20, oleic acid 5, and liquid petroxolin 75.

p. hydrar'gyri (N.F.), mercury petroxolin or petrox, a mixture of mercury 30, hydrous wool fat 13, oleic acid 2, and solid petroxolin 55.

p. io'di (N.F.), iodine petroxolin, iodine petrox 10 per cent., a mixture of iodine 10, oleic acid 40, alcohol, 20, light liquid petrolatum 23, oil of lavender 2, and stronger ammonia water 5.

p. io'di dilu'tum (N.F.), diluted iodine petroxolin iodine petrox 5 per cent., contains iodine 5, in liquid petroxolin 95.

p. iodofor'mi iodoform petroxolin or petrox, a mixture of iodoform 3, acetone 20, oleic acid 10, eucalyptol 3, and liquid petroxolin 64.

p. liq'uidum (N.F.), liquid petroxolin or petrox, formerly called petrolatum saponatum liquidum, a mixture of light liquid petrolatum 500, oleic acid 300, oil of lavender 5, stronger ammonia water 50, and alcohol to make 1000, occurring in the form of a yellowish-brown liquid.

p. mentho'lis (N.F.), menthol petroxolin or petrox, contains menthol 17, in liquid petroxolin 83.

p. meth'ylis salicyla'tis (N.F.), methyl salicylate petroxolin or petrox, containing methyl salicylate 20, in liquid petroxo n 80.

p. pheno'lis (N.F.), phenol petroxolin, carbolic petrox, consists of phenol 5, in petroxolin 95.

p. pheno'lis camphora'tum (N.F.), camphorated phenol petroxolin, camphorated carbolic petrox, a mixture of phenol 12 5, camphor 37 5, and liquid petroxolin 50.

p. pi'cis, tar petroxolin or petrox, rectified oil of tar 25, in liquid petroxolin 75.

p. spis'sum (N.F.), solid petroxolin or petrox, formerly called petrolatum saponatum spissum, a mixture of white wax 35, light liquid petrolatum 20, oleic acid 32, oil of lavender 3, alcohol 5, and stronger ammonia water 5.

p. sulphura'tum (N.F.), sulphurated petroxolin or petrox, a mixture of sublimed sulphur 3, linseed oil 37, oleic acid 30, and liquid petroxolin, q.s. to make 100.

p. sulphura'tum compos'itum (N.F.) compound sulphurated petroxolin or petrox, a mixture of oil of cade and sulphurated petroxolin, of each 10, thymol 0.3, eucalyptol 3, oil of turpentine 30, and liquid petroxolin, q.s. to make 100.

p. terebin'thinæ lar'icis, Venice turpentine petroxolin or petrox, consisting of Venice turpentine 20, in liquid petroxolin 80.

Petrusch'ky's lit'mus whey [Johann *Petruschky*, German bacteriologist, *1863.] A culture medium made by removing the casein from milk, neutralizing the whey, and adding litmus solution.

Pett'enkofer's reac'tion [Max von *Pettenkofer*, German hygienist, 1818–1901.] If to a fluid containing bile-acids one adds a little cane sugar and then drop by drop concentrated sulphuric acid, at first a cherry red and then a purple red color appear. **P.'s the'ory,** ground-water theory, the theory that the development of certain epidemics (cholera, typhoid fever) coincides with a low level of the ground-water; the pathogenic germs are not carried directly from the sick to the well, but are received into the soil and there undergo, when the soil is dry, a "ripening" process.

Petzetaki's reac'tion (pet-sa-tah'kĭ). To 15 c.c. of urine in a test tube a few drops of a 5 per cent. solution of iodine in alcohol is added carefully so that the liquids do not mix; if the upper portion of the urine assumes a yellowish golden color, the reaction is regarded as pointing to the existence of typhoid fever.

pex'in [G. *pēxis*, coagulation.] The ferment of rennet which coagulates the casein of milk, rennin.

pexin'ogen [*pexin* + G. *gennaō*, I produce.] The substance secreted by the gastric glands which is changed into pexin, or rennin.

Peyer's glands (pi'er) [Johann Konrad *Peyer*, Swiss anatomist, 1653–1712.] Noduli lymphatici solitarii. **P.'s patch'es** or **plaques,** noduli lymphatici aggregati.

Peyrot's tho'rax (pa-ro') [Jean Joseph *Peyrot*, Parisian surgeon, 1843–1918.] An obliquely oval deformity of the chest in cases of a very large pleural effusion.

de Pezzer catheter. A self-retaining catheter with a bulbous extremity.

Pf. Abbreviation of *Pfeifferella*.

Pfannenstiel's incis'ion (pfahn'en-stēl) [J. *Pfannenstiel*, German gynecologist, 1862–1909.] An incision made transversely, down to and including the external sheath of the recti muscles, about an inch above the pubes, the muscles being split or separated in the direction of their fibers; advocated for operations on the pelvic organs.

Pfaundler's reac'tion (pfownd'ler) [Meinhard *Pfaundler*, German physician, *1872] Thread* reaction.

Pfeiffer's bacill'us (pfi'fer) [Richard Friedrich Johannes *Pfeiffer*, German physician, *1858.] *Haemophilus influenzæ.*[0] **P.'s blood a'gar,** see under *agar*. **P.'s phenom'enon,** the alteration and complete disintegration of cholera vibrios when introduced into the peritoneal cavity of an immunized guinea-pig, or into that of a normal one if immune serum is injected at the same time; extended to include bacteriolysis in general. The animal is immunized by means of intraperitoneal injections of a culture of the pathogenic bacteria, in gradually increasing doses, until many times the fatal dose is borne; if now a minute quantity of this animal's serum is injected into another animal, the latter is rendered immune against the same bacteria.

Pfeiffer's disease' (pfi'fer) [Emil *Pfeiffer*, German physician, contemporary.] Glandular fever.*

Pfeifferella (pfi-fer-el'lah) [after R. F. J. *Pfeiffer*.] A genus of bacteria of the family *Mycobacteriaceæ*. **Pf. mal'lei,**[0] *B. mallei*, glanders bacillus, slender, straight or slightly curved, non-motile, gram-negative, aerobic, sporeless, rod-shaped organisms, the cause of glanders or farcy, affecting man, horses, sheep, and goats. **Pf. whit'mori,** *B. whitmori*, *Flavobacterium pseudomallei,*[0] small, motile, aerobic, gram-negative organisms, occurring singly, in pairs, or in short chains, showing bipolar staining, the cause of melioidosis in man and rodents and (rarely) in the horse.

Pflueger's laws (pflu'ger) [Eduard Friedrich Wilhelm *Pflueger*, German physiologist, 1829–1910.] 1. *Law of polar excitation;* A given section of a nerve is irritated by the development of catelectrotonus and the disappearance of anelectrotonus, but not by the reverse conditions. 2. *Law of contraction:* The results of the stimulation of an isolated nerve of a frog by opening and closing currents of different intensities and different directions are formulated as follows.

Current	Ascending		Descending	
	Closing	Opening	Closing	Opening
Weak	Contraction	Quiet	Contraction.	Quiet
Medium	Contraction.	Contraction	Contraction	Contraction
Strong	Quiet	Contraction	Contraction	Quiet

P.'s tubes, egg-tubes, ovarian tubes; branching tubes of germinal epithelium, containing the primitive ova, in the cortex of the ovary.

Pfuhl's sign (pfool) [Eduard *Pfuhl*, German physician, 1842–1905.] The pressure of pus within a subphrenic abscess rises during inspiration and falls during expiration, the reverse of what happens in the case of a purulent collection above the diaphragm; when the diaphragm is paralyzed this distinction is lost.

Ph. Abbreviation of Pharmacopœia.

P_H, pH, or P^H. Abbreviation for hydrogen ion concentration; the symbol is derived from the conception of an electric potential of hydrogen ions in contact with hydrogen-gas; pH^7 expresses the normal condition of equilibrium or neutrality; when the figure is above 7 alkalosis is present, when below 7 there is beginning acidosis.

phacitis (fă-si'(se')tis) [G. *phakos*, lens, + *-itis*.] Inflammation of the crystalline lens of the eye; also written *phakitis*.

phacocele (fak'o-sēl) [G. *phakos*, lens, + *kēlē*, hernia.] Dislocation of the crystalline lens of the eye.

phac'ocyst [G. *phakos*, lens, + *kystis*, bladder.] The capsule of the crystalline lens.

phac"ocystec'tomy [G. *phakos*, lens, + *kystis*, bladder, + *ektomē*, excision.] Surgical removal of a portion of the capsule of the crystalline lens.

phacocystitis (fak-o-sis-ti'(te')tis) [G. *phakos*, lens, + *kystis*, bladder, + *-itis*.] Inflammation of the capsule of the crystalline lens.

phacoglaucoma (fak"o-glaw-ko'mah) [G. *phakos*, lens, + *glaukos*, greenish gray, + *-ōma*.] Changes in the crystalline lens in glaucoma

phac'oid [G. *phakos*, lentil, + *eidos*, resemblance.] Of lentil shape.

phacoid'oscope. Phacoscope.

phacol'ysis [G. *phakos*, lens, + *lysis*, solution.] Operative breaking down and removal of the crystalline lens.

phacomalacia (fak"o-mal-a'sĭ-ah) [G. *phakos*, lens, + *malakia*, softness.] Softening of the crystalline lens; soft cataract.

phacometachoresis (fak"o-met-ă-ko-re'sis) [G. *phakos*, lens, + *metachōrēsis*, change of place.] Phacocele.

phacometecesis, phacometœcesis (fak"o-met-e-se'sis) [G. *phakos*, lens, + *metoikēsis*, migration.] Phacocele.

phacom'eter [G. *phakos*, lens, + *metron*, measure.] 1. A device for determining the refractive power of a lens. 2. Phacoscope

phacoplanesis (fak"o-plan-e'sis) [G. *phakos*, lens, + *planēsis*, a wandering.] Phacocele.

phac"osclero'sis [G. *phakos*, lens, + *sklērōsis*, hardening.] Induration of the crystalline lens; hard cataract.

phac'oscope [G. *phakos*, lens, + *skopeō*, I view.] An instrument in the form of a dark chamber for observing the changes in the crystalline lens during accommodation.

phacoscotas'mus [G. *phakos*, lens, + *skotasmos*, darkness.] Loss of transparency of the crystalline lens; lenticular cataract.

phacother'apy [G. *phakos*, lens, + *therapeia*, treatment.] Cauterization of superficial neoplasms and cutaneous lesions by concentration of the heat of the sun by a lens.

phænogam (fe'no-gam) [G. *phainō*, I show, + *gamos*, marriage.] Phanerogam.

phænol'ogy. Phenology.

phæ'notype. Phenotype.

phænoz'ygous. Phenozygous.

phagedena, phagedæna (fă-je-de'nah) [G. *phagedaina*, a canker; *phagō*, I eat.] A sloughing and widely spreading ulcer. **p. trop'ica,** tropical ulcer.* **slough'ing p.,** hospital gangrene.

phagedenic (fă-je-den'ic). Relating to or having the characteristics of phagedena.

phagedenoma, phagedænoma (fă-je-de-no'mah). A fungous form of phagedena.

phagmesis (fag-me'sis). An anomaly of very doubtful occurrence, in which feathers are said to replace hair in man.

phagocaryosis (fag"o-kar-ĭ-o'sis) [G *phagō*, I eat, + *karyon*, kernel (nucleus).] An assumed phagocytic action of the cell-nucleus.

phagocyte (fag'o-sīt) [G. *phagō*, I eat, + *kytos*, cell.] A cell possessing the property of ingesting bacteria, foreign particles, and other cells. Phagocytes are divided into two general classes: *microphags*, small polymorphonuclear leucocytes which ingest chiefly bacteria; and *macrophags*, large mononucleated cells which are largely scavengers, ingesting dead tissue and degenerated cells; the latter are produced mainly by proliferation of the fixed connective-tissue cells. **ed'ucated p.,** a p. which, following an infection, has acquired the ability to withstand the poison of a further infection of the same kind.

phagocyt'ic. Relating to phagocytes or phagocytosis. **p. index,** a figure noting the average number of bacteria contained in each leucocyte after incubating a mixture of washed leucocytes, serum, and a bacterial culture. **p. index of Arneth,** the proportionate number per cubic millimeter of multinuclear neutrophils with nuclei of three or more lobes, which Arneth assumes to possess the greatest phagocytic power.

phagocytin (fag'o-si-tin). Trade name of a nucleic acid preparation suggested for the treatment of sepsis.

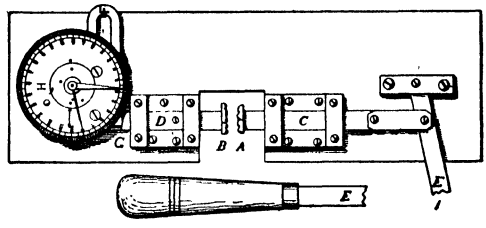
phagocy'toblast [G. *blastos*, germ.] A primitive cell developing into a phagocyte.

phagocytol'ysis [*phagocyte* + G. *lysis*, solution.] 1. Destruction of phagocytes, or leucocytes, occurring in the process of blood coagulation or as the result of the introduction of certain antagonistic foreign substances into the body. 2. A spontaneous breaking down of the phagocytes, preliminary (according to Metchnikoff) to the liberation of cytase, or complement.

phagocytolytic (fag"o-si-to-lit'ik). Relating to phagocytolysis, phagolytic.

phagocytose (fag'o-si-tōz). To englobe and destroy bacteria and other foreign substances, noting the action of the phagocytic cells.

phagocyto'sis. The process of ingestion and digestion by the cells; most of the cells of the body which are concerned in nutrition possess this property; the substances ingested are other cells, bacteria, bits of necrosed tissue, foreign particles, etc. **induced' p.,** p. occurring when bacteria subjected to the action of blood-serum are brought in contact with leucocytes. **sponta'neous p.,** p. occurring when a culture of bacteria is brought in contact with washed leucocytes in an indifferent medium, such as a physiological salt solution.



THE PHAGODYNAMOMETER. A and B are metal reproductions of occlusal surfaces of molar teeth, and the pressure exerted on food placed between these is registered on the dial.

phagodynamometer (fag"o-di"nă-mom'e-tur) [G. *phagō*, I eat, + *dynamis*, force, + *metron*, measure.] A device for measuring the force required to chew various foods.

phagol'ysis [*phago(cyte)* + G. *lysis*, solution.] The disintegration of phagocytes, phagocytolysis.*

phagolyt'ic. Relating to phagolysis, phagocytolytic.

phagoma'nia [G. *phagō*, I eat, + *mania*, frenzy.] Boulimia occurring in the insane.

phagotherapy (fag'o-ther-ă-pĭ). Treatment of infectious disease by a bacteriophage.*

phakitis (fă-ki'(ke')tis). Phacitis.

phako-. For words so beginning, see *phaco-*.

phalacro'sis [G. *phalakrōsis*.] Baldness, alopecia.

phalangeal (fă-lan'je-al). Relating to a phalanx.

phalan'ges. Plural of *phalanx*.

phalangette (fal-an-jet') [Fr. dim. of *phalange*, phalanx.] The distal or ungual phalanx. **drop p.,** falling of the distal phalanx of a finger, and inability to extend it, when the hand is prone, due to an overstretching or rupture of the extensor tendons of the finger near their insertion into the base of the affected segment.

phalanx, gen. *phalan'gis,* pl. *phalan'ges* (fal'anks) [G. a line of soldiers.] 1. One of the long bones of the fingers or toes, 14 in number for

each hand or foot, 2 for the thumb or great toe, and 3 each for the other four digits; they are numbered from I–III, beginning from the metacarpus. The 3d (2d in the thumb or great toe), or terminal, phalanx is called the *ungual phalanx* because of a flattened surface, ungual tuberosity, at its termination which supports the nail. 2. One of a number of cuticular plates, arranged in several rows, on the surface of the organ of Corti; they are the heads of the outer row of Corti's rods and of Deiter's cells, and between them are the free ends of the hair cells.

phallal'gia [G. *phallos*, penis, + *algos*, pain.] Pain in the penis.

phall'ic [G. *phallos*, penis.] Relating to the penis.

phall'iform [G. *phallos*, penis, + L. *forma*, form.] Phalloid.

phall'in. A poisonous albuminoid from the mushroom, *Amanita phalloides;* it is hemolytic, resembling serpent venom in its action.

phallitis (fal-i'(e')tis) [G. *phallos*, penis, + *-itis*. Inflammation of the penis.

phallocamp'sis [G. *phallos*, penis, + *kampsis*, a bending.] Chordee; any curvature of the erect penis.

phallocryp'sis [G. *phallos*, penis, + *krypsis*, concealment.] Dislocation and retraction of the penis.

phallodyn'ia [G. *phallos*, penis, + *odynē*, pain.] Phallalgia, pain in the penis.

phall'oid [G. *phallos*, penis, + *eidos*, resemblance.] Resembling in shape a penis.

phallon'cus [G. *phallos*, penis, + *onkos*, tumor.] A tumor or swelling of the penis.

phall'oplasty [G. *phallos*, penis, + *plassō*, I form.] Reparative or plastic surgery of the penis.

phallorrha'gia [G. *phallos*, penis, + *rhēgnymi*, I burst forth.] Hemorrhage of the penis.

phall'us [L.; G. *phallos*.] Penis.

phan'erogam [G. *phaneros*, visible, + *gamos*, marriage.] In botany, a plant which has true flowers bearing seed.

phanerogenic (fan-er-o-jen'ic) [G. *phaneros*, visible, + *genesis*, origin.] Noting a disease the etiology of which is manifest; opposed to *cryptogenic*.

phaneroma'nia [G. *phaneros*, visible, + *mania*, frenzy.] Constant preoccupation with some external part, as plucking the beard, pulling the lobe of the ear, picking at a pimple, etc.

phaneroscope (fan'er-o-skōp) [G. *phaneros*, visible, + *skopeō*, I view.] A lens used to concentrate the light from a lamp upon the skin, to facilitate examination of lesions of the skin and subcutaneous tissues.

phanerosis (fan-er-o'sis) [G. *phaneroō*, I make manifest.] The act or process of becoming visible.

phan'odorn. Cyclobarbital, a derivative of barbital, one of the ethyl groups of the latter being replaced by a cyclohexenyl group; sedative and hypnotic in doses of gr. 1½ –3(0.1 –0.2).

phantasia (fan-ta-se'ah) [G. appearance.] Fantasy; an illusion.

phan'tasm [G. *phantasma*, an appearance.] An illusion, a delusion, a figment of the imagination in delirium.

phantasmatomoria (fan-taz"mă-to-mo'ri-ah) [G. *phantasma*, an appearance, + *mōria*, folly.] Dementia with delusions.

phantasmol'ogy [G. *phantasma*, specter, + *-logia*.] The scientific study of spiritualistic manifestations and of apparitions.

phantas"mosco'pia, phantasmos'copy [G. *phantasma*, an appearance, + *skopeō*, I view.] The form of delusion which consists in the seeing of phantoms.

phantom [G. *phantasma*, an appearance.] 1. A specter, a phantasm. 2. A model of a part of the body; especially a model of the female pelvis used in demonstrating the process of childbirth and in practising the manipulations employed in a case of labor. **p. tumor,** a localized enlargement of the abdomen, simulating an ovarian or other tumor or pregnancy, which is temporary in character, often disappearing suddenly.

pharbit'isin. Kaladanæ resina (B.A.).

phaochromoblastoma (fa"o-kro-mo-blas-to'mă) [G. *phaos*, light, + *chrōma*, color, + *blastoma*, a tumor.] Paraganglioma.

Phar. D. Abbreviation of Doctor of Pharmacy.

phar'macal. Relating to pharmacy, pharmaceutical.

pharmaceutic, pharmaceutical (far-mă-su'tik, far-mă-su'ti-kal) [G. *pharmakeutikos*, relating to drugs.] Relating to pharmacy. **p. chem'istry,** chemistry in its application to the analysis and the manufacture of drugs.

pharmaceu'tics. Pharmacy.

pharmaceutist (far-mă-su'tist) [G. *pharmakeutēs*, a druggist.] A pharmacist, a druggist, an apothecary.

phar'macist [G. *pharmakon*, a drug.] A druggist, a pharmaceutist, an apothecary, one who prepares and dispenses drugs.

phar"macodynam'ic [G. *pharmakon*, drug, + *dynamis*, force.] Relating to drug action.

phar"macodynam'ics. The science of the physiological and therapeutic action of drugs.

pharmacog'nosist. One skilled in pharmacognosy.

pharmacognos'tics. Pharmacognosy.

pharmacog'nosy [G. *pharmakon*, drug, + *gnōsis*, knowledge.] The science of drugs in all their relations—sources, description, preparation, action, dosage, etc.

pharmacog'raphy [G. *pharmakon*, drug, + *graphē*, description.] A treatise on or description of drugs.

pharmacol'ogist. One versed in a knowledge of drugs, their sources, appearance, chemistry, and action.

pharmacol'ogy [G. *pharmakon*, drug, + *-logia*.] The branch of science which has to do with drugs in all their relations.

phar"macoma'nia [G. *pharmakon*, drug, + *mania*, frenzy.] A morbid fondness for taking drugs; self-drugging carried to the degree of insanity.

pharmacope'dia, pharmacope'dics [G. *pharmakon*, a drug, + *paideia*, instruction.] The teaching of pharmacy and pharmacodynamics.

Pharmacopeia, Pharmacopœia (far"mă-ko-pe'ah) [G. *pharmakon*, a medicine, + *poieō*, I make.] A work containing a list of accepted drugs and establishing standards for their strength and purity, together with directions for making preparations (tinctures, etc.) from them. The first edition of the U.S.P. was compiled in 1820 and it has since been revised every ten years by a committee of physicians and pharmacists. The tenth revision was made in 1920 and issued in 1926; the work was made a legal standard by the terms of the National Food and Drugs Act in January, 1907. In works on Materia Medica, the various national pharmacopeias are referred to under abbreviations, of which the following are those most frequently encountered; *B.P.*, British Pharmacopeia; *Codex*, Codex medicamentarius, the French Pharmacopeia; *I.C.Add.* (or *B.A.*), the Indian and Colonial Addendum to the B.P.; *P.Austr.*, the Austrian Pharmacopeia; *P.G.*, the German Pharmacopeia; *P.Helv.*, the Swiss Pharmacopeia; *U.S.P.*, the United States Pharmacopeia.

pharmacopeial, pharmacopœial (far″mă-ko-pe′al). Relating to the Pharmacopeia; noting a drug in the list of the Pharmacopeia, official.

pharmacophobia (far-mă-ko-fo′bĭ-ah) [G. *pharmakon*, drug, + *phobos*, fear.] Morbid dread of taking medicine.

pharmacopsychosis (far″ma-ko-si-ko′sis) [G. *pharmakon*, drug, + *psychosis*.] Any form of drug addiction.

phar″macother′apy [G. *pharmakon*, drug, + *therapeia*, treatment.] Treatment of disease by means of drugs.

phar′macy [G. *pharmakon*, drug.] 1. The act of preparing and dispensing drugs. 2. A drug store, an apothecary's shop.

pharyngal′gia [G. *pharynx* + *algos*, pain] Pain in the pharynx.

pharyngeal (far-in′jĭ-al). Relating to the pharynx.

pharyngec′tomy [G. *pharynx* + *ektomē*, excision.] Excision of a part of the pharynx.

pharyngemphrax′is [G. *pharynx* + *emphraxis*, a stoppage] Pharyngeal obstruction.

pharynge′us [L.] Pharyngeal, noting (in compounds) a muscle of the pharynx, as musculus *stylopharyngeus;* also one of a number of nerves of the pharynx, see under *nervus*.

pharyngis′mus. Spasm of the muscles of the pharynx, pharyngospasm.

pharyngit′ic. Relating to pharyngitis.

pharyngitis (far-in-ji′(je′)tis). Inflammation of the mucous membrane and underlying parts of the pharynx **atroph′ic p.,** p. sicca, chronic p. accompanied by more or less atrophy of the mucous glands and perversion of their secretion. **follic′ular p.,** granular p. **gan′grenous p.,** gangrenous inflammation of the pharyngeal mucous membrane; putrid sore throat, cynanche maligna, angina maligna or gangrænosa. **glan′dular p.,** granular p. **gran′ular p.,** clergyman's sore throat, a form of p. in which the lymphoid follicles are enlarged, studding the mucous membrane as minute nodules or granules. **mem′branous p.,** inflammation accompanied by a fibrinous exudate, forming a non-diphtheritic false membrane **p. hypertroph′ica latera′lis,** a form of chronic p. in which the glazed central portion is bounded on either side by a band of red thickened mucous membrane. **p. sic′ca,** atrophic p., chronic p. in which the secretion is scanty and adherent giving the appearance of a varnished surface **p. ulcero′sa,** Vincent's* angina.

pharyngoamygdalitis (far-ing″go-ă-mig-dal-i′(e′)-tis) [G. *pharynx* + *amygdalē*, almond, + *-itis*.] Inflammation of the pharynx and the tonsils.

pharyngocele (far-ing′go-sēl) [G. *pharynx(pharyng-)* + *kēlē*, hernia.] A diverticulum from the pharynx.

pharyn″gocerato′sis. Pharyngokeratosis.

pharyngodynia (far-ing″go-din′ĭ-ah) [G. *pharynx*, + *odynē*, pain.] Pain in the pharynx, pharyngalgia.

pharyn″goglos′sal. Relating to the pharynx and the tongue.

pharyn″goepiglott′ic, pharyn″goepiglottid′ean. Relating to the pharynx and the epiglottis. **p. fold,** plica pharyngoepiglottica, a fold of mucous membrane extending backward from the epiglottis on either side.

pharyngoesophageal (far-ing″go-e-so-fă-je′al). Relating to the pharynx and the esophagus.

pharyngoglos′sus. A band of muscular fibers, a part of the superior constrictor of the pharynx, running from the pharynx to the base of the tongue

pharyngokeratosis (far-ing″go-ker-a-to′sis) [G. *pharynx* + *keras(kerat-)*, horn. A thickening of the lining of the lymphoid follicles of the pharynx, with the formation of a tough, firmly adherent, pseudomembranous exudate.

pharyn″golaryn′geal. Relating to both the pharynx and the larynx.

pharyngolaryngitis (far-ing″go-lar-in-ji′ (je′)tis). Inflammation of both the pharynx and the larynx.

pharyn′golith [G. *pharynx* + *lithos*, stone.] A concretion in the pharynx, pharyngeal calculus.

pharyngol′ogy [G. *pharynx(pharyng-)* + *-logia*.] The branch of medical science which deals with the pharynx and its disorders.

pharyngomax′illary. Relating to the pharynx and the maxilla.

pharyn″gomyco′sis [G. *pharynx* + *mykēs*, a fungus.] Invasion of the mucous membrane of the pharynx by a fungous growth, *Leptothrix buccalis*.

pharyn″gona′sal. Relating to the pharynx and the nasal fossæ. **p. cav′ity,** the rhinopharynx, the nasopharynx.

pharyngooral (far-ing″go-o′ral) [G. *pharynx* + L. *os(or-)*, mouth.] Relating to the pharynx and the mouth.

pharyngopalatine (far-ing″go-pal′a-tīn). Relating to the pharynx and the palate.

pharyng″opalati′nus. See under *musculus*.

pharyngopath′ia, pharyngop′athy [G. *pharynx(pharyng-)* + *pathos*, suffering.] Any disease of the pharynx.

pharyngoperistole (far-ing″go-per-is′to-le) [G. *pharynx(pharyng-)* + *peristolē*, a drawing out] Narrowing of the lumen of the pharynx.

pharyngople′gia [G. *pharynx(pharyng-)* + *plēgē*, stroke.] Paralysis of the wall of the pharynx.

pharyn″gosclero′ma [G. *pharynx* + *sklērōma*, an induration.] A scleroma, or indurated patch in the mucous membrane of the pharynx.

pharyngos′copy [G. *pharynx* + *skopeō*, I view.] Inspection and examination of the pharynx.

pharyn′gospasm. Pharyngismus.

pharyn″gostaphyli′nus [G. *pharynx* + *staphylē*, uvula.] Musculus pharyngopalatinus

pharyngorrhinitis (far-ing″go-rı-ni′(ne′)tis). Inflammation of the rhinopharynx, or of the mucous membrane of the pharynx and the nasal fossæ.

pharyn″gorrhinos′copy [G. *pharynx(pharyng-)* + *rhis(rhin-)*, nose, + *skopeō*, I view.] Inspection of the rhinopharynx and posterior nares by means of the rhinoscopic mirror.

pharyngoscope (far-ing′go-skōp) [G. *pharynx* + *skopeō*, I view.] An instrument like a laryngoscope, used for inspection of the mucous membrane of the pharynx.

pharyn″gother′apy [G. *pharynx* + *therapeia*, treatment] Treatment of diseases of the pharynx.

pharyngotome (far-ing′go-tōm). A knife used in pharyngotomy.

pharyngot′omy [G. *pharynx(pharyng-)* + *tomē*, incision.] Any cutting operation upon the pharynx either from without or from within.

pharyngotonsillitis (far-ing″go-ton-sil-i′(e′)tis) [G. *pharynx* + L. *tonsilla* + G. *-itis*.] Pharyngoamygdalitis.

pharyngotyphoid (far-ing″go-ti′foyd). Typhoid fever in which angina is prominent among the initial symptoms.

pharyngoxerosis (far-ing″go-ze-ro′sis) [G. *pharynx* + *xērōsis*, a drying up.] Dryness of the pharyngeal mucous membrane.

pharynx, gen. *pharyn′gis* (far-inks) [G the throat.] The upper expanded portion of the digestive tube, between the esophagus below and the mouth and

nasal cavities above and in front. **laryn'geal p.,** pars laryngea pharyngis [BNA], laryngopharynx, the part of the pharynx lying behind the larynx, passing into the esophagus at about the level of the cricoid cartilage. **na'sal p.,** pars nasalis pharyngis [BNA], nasopharynx, rhinopharynx, the upper end of the pharynx above the soft palate; anteriorly it opens into the nasal cavities. **o'ral p.,** pars oralis pharyngis [BNA], oropharynx, the portion of the pharynx lying behind the mouth, between the soft palate above and the level of the opening of the larynx below.

bleeding, pharyngorrhagia. **calculus,** pharyngolith, **callosities in,** pharyngoceratosis, pharyngokeratosis. **description of,** pharyngography. **disease,** pharyngopathy. **dryness of,** pharyngoxerosis. **examination.** pharyngoscopy. **excision of part,** pharyngectomy, **incision into,** pharyngotomy. **inflammation,** pharyngitis, cynanche, pharyngocynanche; pharyngomycosis (fungous); cynanche maligna (gangrenous). **obstruction,** pharyngemphraxis. **pain,** pharyngalgia, pharyngodynia. **paralysis,** pharyngolysis, pharyngoparalysis, pharyngoplegia. **pouching of,** pharyngocele. **science relating to,** pharyngology. **spasm,** pharyngospasm, pharyngismus. **stricture,** pharyngostenosis, pharyngoperistole. **treatment of disease of,** pharyngotherapy. **vault,** nasopharynx, rhinopharynx.

phase (fāz) [G. *phasis*, an appearance.] 1. One of the stages in which a thing appears during its course of change or development. 2. A homogeneous, physically distinct, and separable portion of a heterogeneous system; thus oil, gum, and water are three phases of an emulsion. **apophylac'tic p.,** negative phase or phase of diminished blood resistance following the injection in vaccine therapy. **contin'uous p.,** external p. **dispersed p.,** the particles contained in a colloid solution or dispersion. **disper'sion p.,** external p. **exter'nal p.,** the dispersion or external medium or fluid in which a disperse is suspended. **inter'nal p.,** disperse, dispersed phase, the particles contained in a colloid solution. **lag p.,** a brief period in the course of a bacterial culture especially at the beginning, during which the growth is very slow or scarcely appreciable. **logarith'mic p.,** a period in the course of a bacterial culture in which maximum multiplication is occurring by geometrical progression; thus if the logarithms of their numbers are plotted against the time they will form a straight upward line. **miot'ic p.,** see *miotic*. **neg'ative p.,** the period during which the opsonic index is lowered following the injection of a vaccine. **Nonne-Apelt p.,** see *Nonne-Apelt*. **p. of decline',** the period in the course of a bacterial culture in which the number of living organisms gradually decreases until finally the culture becomes sterile. **p. of medita'tion,** the interval sometimes occurring between the receipt of the injury and the appearance of the tremor in a case of traumatic neurosis or shell shock. **posi'tive p.,** the period following the negative p., during which the opsonic index rises. **postmiot'ic p.,** see *postmiotic*. **premiot'ic p.,** see *premiotic*. **reduc'tion p.,** miotic* p. **sta'tionary p.,** the period in the course of a bacterial culture during which the multiplication of the organisms becomes gradually less and finally ceases. **synap'tic p.,** synapsis (1).

phatne (fat'ne) [G. manger, feeding-trough.] Dental alveolus.

phatnorrhagia (fat-nor-raj'ĭ-ah) [G. *phatnē*, manger (alveolus), + *-rhagia*.] Alveolar hemorrhage.

phatnorrhea (fat-nor-re'ah) [G. *phatnē*, manger, feeding-trough (alveolus), + *rhoia*, a flow.] Pyorrhea alveolaris.

Ph. B. Abbreviation for Pharmacopœia Britannica, British Pharmacopœia.

Ph. D. Abbreviation for Doctor of Pharmacy.

pheas'ant's-eye. Adonis.

phe'cine. A benzene derivative containing sulphur; recommended as a substitute for ichthyol in diseases of the skin.

phellan'drium. The fruit of *Œnanthe phellandrium*, water-fennel, a shrub of marshy regions of Europe and Asia.

phelloderm (fel'o-durm) [G. *phellos*, cork, + *derma*, skin.] A green layer of cells beneath the cork layer, and constituting the inner portion of the phellogen.

phellogen (fel'o-jen) [G. *phellos*, cork, + *gennaō*, I produce.] The inner, formative, layer of cork.

Phelps' opera'tion [Abel Mix *Phelps*, New York surgeon, 1851–1902.] Division of all the soft parts on the inner border of the foot, including the ligaments and tendons, followed by forcible correction, in the treatment of talipes varus.

phenacaine (fen-a-kah'ēn). Holocaine hydrochloride.

phenacetin (fen-as'ĕ-tin), **phenaceti'num** (Br.). Acetphenetidin, acetphenetidinum (U.S.).

phenal'gene. Trade name of an analgesic preparation said to contain acetanilide.

phenal'gin. Trade name of a powder, claimed to be a mixture of acetanilid, ammonium carbonate, and sodium bicarbonate; employed for the same purposes as acetanilid in doses of gr. 3–15 (0.2–1.0).

phen'alin. Trade name of a preparation of phenolphthalein; laxative.

phenam'ine. Phenocoll.

phenan'threne. A hydrocarbon, isomeric with anthracene, derived from coal-tar; it occurs in the form of colorless plates.

phe'nate. Carbolate, a salt of phenic acid.

phenarsenamine (fen-ar-sen-am'ēn). The name given by the Canadian Board of Health to the local make of salvarsan or arsphenamine.

phen'azone, phenazo'num (Br.). Antipyrina (U.S.); analgesic and antipyretic, in dose of gr. 5 (0.3).

phen'egol. A compound of mercury and potassium nitroparaphenolsulphonate, a reddish brown powder, without odor or taste; antiseptic in 0.4 per cent. solution.

phenethylol (fen-eth'il-ol). Benzyl carbinol, phenylethyl alcohol $C_6H_5CH_2CH_2OH$.

phenet'idin. A substance formed in the course of manufacture of acetphenetidin. **p. acetosal'icylate, p. salicylac'etate,** phenosal.

phenetidinu'ria. The presence of phenetidin in the urine, sometimes noted after the exhibition of acetphenetidin.

phen'etol. An oily liquid, the ethylic ester of phenol.

phenetsal' (fen'et-sal). Salophen.* acetparaminosalol, acetylparaminophenyl salicylate.

phengophobia (feng"go-fo'bĭ-ah) [G. *phengos*, daylight, + *phobos*, fear.] A dread of the daylight, comfort being felt only at night.

phe'nic acid. Carbolic acid, phenol.*

phen'icate. To impregnate or mix with phenic acid.

phen'idin. Acetphenetidin.

phenmeth'yiol. Benzyl alcohol, phenyl carbinol, $C_6H_5.CH_2.OH$, a substance having local anesthetic properties.

phenobarbital (fe-no-bar'bĭ-tal). Phenobarbitalum (U.S.), luminal. **p. so'dium,** luminal sodium, sodium phenyl-ethyl-barbiturate, soluble luminal, the monosodium salt of phenobarbital; a white powder very soluble in water, used for the same purpose as phenobarbital in

doses $\frac{1}{10}$ larger than the latter, either by the mouth or hypodermically.

phenobarbitalum (fe"-no-bar-bĭ-ta'lum) (U.S.). Phenobarbital, phenylethylmalonylurea, phenylethyl barbituric acid, $CO(NH.CO)_2C(C_2H_5)(C_6H_5)$, luminal; it occurs as white glistening, small crystals or a white crystalline powder, odorless, soluble in 1000 parts of water and in 8 of alcohol; sedative and hypnotic in doses of gr. 1–5 (0.06–0.3).

phenobarbitonum (fe-no-bar-bĭ-to'num) (Br.). Phenobarbitone, phenobarbitalum (U.S.). **p. solubile** (sŏ-lu'be-la), soluble phenobarbitonum, phenobarbital sodium, luminal.

phenoco (fe'no-ko). A solution of creosote obtained from coal tar and higher phenol homologues, with soap; a dark brown liquid with the odor of coal tar, antiseptic and germicide.

phe'nocoll. Aminoacetphenetidin, glycocollphenetidin, phenamine, a derivative of acetphenetidin; analgesic, antipyretic, diaphoretic, in doses of gr. 8–12 (0.5–0.8). **p. hydrochlo'ride,** amido-acetparaphenetidin hydrochloride, a white crystalline powder of sharp saline taste; employed in neuralgia and, combined with piperazine, in rheumatoid arthritis in doses of gr. 7½–15 (0.5–1.0). **p. sal'icylate,** salocoll.

phe"nocre'osote. Trade name of a mixture of phenol and creosote.

phe'nodin [G. *phoinŏdēs*, of blood-red appearance.] Hematin.

phe'nol (U.S., Br.). Acidum carbolicum, phenyl alcohol, phenyl hydrate, phenic acid, carbolic acid, C_6H_5OH; occurs in the form of colorless crystals, liquefied by the addition of 10 per cent. of water; antiseptic and disinfectant; locally escharotic and anesthetic in concentrated form; internally a powerful escharotic poison (camphorated oil recommended as an antidote). Liquefied phenol (with addition of 10 per cent. of water) is employed internally for flatulent dyspepsia and in typhoid fever and other infectious diseases in doses of ♏½–1 (0.03–0.06) well diluted. **p. ioda'tum,** iodized phenol, acidum carbolicum iodatum (N F). **p. liquefac'tum** (U.S., Br.), acidum carbolicum liquefactum (Br. '14), an aqueous solution containing 86.4 per cent. of pure phenol. **p. red,** phenolsulphonphthaleinum (U.S.), sulphenthal.

phe'nolated. Phenicated, carbolated, impregnated or mixed with phenol.

phe'nolax. Phenolphthalein.

phe'nolin. A cresol-containing disinfectant.

phenol'ogy, phænol'ogy [G. *phainō*, I appear, I shine forth, + *-logia*.] The branch of climatology which deals with the effects of the recurring seasons of heat and cold upon animal life and animal diseases.

phenolphthalein (fe-nol-fthal'e-in). (Br.) Purgen, phenolax, obtained by the action of phenol on phthalic anhydride; a crystalline substance employed as a reagent, being turned red by alkalies, and as a purgative in doses of gr. 1–5 (0.06–0.3).

phenolphthaleinum (U.S. and Br.) (fe-nol-fthal-e-i'num). Phenolphthalein,* dihydroxyphthalophenone $(C_6H_4OH)_2CO.C_6H_4CO$.

phenolphthalin (fe-nol-fthal'in). Dioxytriphenyl methane carbonic acid, the leuco-compound of phenolphthalein which is converted into the latter by oxidation; employed as a test for blood in Meyer's* reagent.

phenolquinine'. Quininæ carbolas.

phenolsulphon'ic acid. Acidum sulphocarbolicum.

phenolsulphonphthalein (fe"nol-sul"fōn-fthal'e-in). phenolsulphonthaleinum (U.S.). **p. test,** permeation test; the patient having drunk a glass or two of water, 1 c.c. of a 0.6 per cent. solution of p. is injected hypodermically; the time between this injection and the appearance of a pink tinge in the urine as it falls into an alkaline solution is noted; the amount excreted in each of the next two hours is then estimated by chromatometry.

phenolsulphonphthaleinum (fe"nol-sul"fōn-fthal-e-e'num) (U.S.). Phenolsulphonphthalein, phenol red, sulphenthal; a bright red crystalline powder readily soluble in alkaline solutions; it is nontoxic and is excreted in the urine with great rapidity, and is therefore employed as a test for the estimation of the functional activity of the kidneys.

phenoltetrachlorphthalein (fe"nol-tet-rah-klor-fthal'e-in). A synthetic coal-tar derivative used as a dye. **t. test,** a test of the functional activity of the liver; the dye in a specially prepared solution is injected intravenously, and the stools are then collected for 48 hours and the urine for 24, and examined to determine the amount of the dye excreted; a diminution of the amount normally recovered from the feces offers a presumption of disease of the liver.

phenoltetraiodophthalein sodium (fen-ol-tet-rah-i"o-do-fthal'e-in-so'dĭ-um). Phentetiothalein.

phenom'enon, pl. *phenom'ena* [G. *phainomenon; phainomai*, I appear.] 1. A symptom; an occurrence of any sort, whether ordinary or extraordinary, in relation to a disease. 2. Any unusual fact or occurrence. **arm p.,** Pool's* phenomenon (2). **Bordet-Gengou p., Neisser-Wechsberg p., Pfeiffer's p.,** etc., see the proper names. **cog'-wheel p.,** respiratory cog, a sudden brief halt in either inspiration or expiration. **di'aphragm p.,** see under *diaphragm*. **facia'lis p.,** light rubbing of the skin or a tap on the zygoma causes a quick contraction of the lip and ala nasi; sometimes percussion above the zygoma causes contraction of the lip only; observed in tetany and sometimes in exophthalmic goiter. **finger p.,** extension and abduction of the fingers when the arm is raised in cases of slight partial hemiplegia. **hip-flex'ion p.,** when a hemiplegic attempts to raise himself from a lying posture he first flexes the hip on the paralyzed side, and the same movement takes place when he lies down again. **hip p.,** Joffroy's reflex, twitching of the glutei muscles when firm pressure is made on the nates in cases of spastic paralysis. **knee p.,** patellar tendon reflex.* **leg p.,** Pool's* phenomenon (1). **orbicula'ris p.,** paradoxical pupil p. **palmoplan'tar p.,** Filipowicz's* symptom. **paradox'ical di'aphragm p.,** see under *diaphragm*. **paradox'ical pu'pil p.,** (1) contraction followed by dilatation of the pupil upon forcible closure of the eyelids, or upon the attempt to close them while they are held apart. (2) Failure of the pupil to contract when a beam of light is directed upon it, mydriatic rigidity, catatonic rigidity, mobile or alternating spasm of the pupil; it is associated with spasm of the orbicularis muscle; observed frequently as a sequel of epidemic encephalitis. **phrenic p.,** see under *diaphragm*. **ra'dial p.,** dorsal flexion of the hand occurring involuntarily with palmar flexion of the fingers. **symbiot'ic fermenta'tion p.,** see under *symbiotic*. **tib'ial p.,** Strumpell's sign, dorsal flexion of the foot occurring involuntarily in a paralyzed limb when the thigh is

drawn up on the body. **toe p.,** (1) involuntary hyperextension of the great toe when the thigh is drawn up; (2) Babinski's* phenomenon.

phenopy'rine. A mixture of equal parts of phenol and antipyrine; an oily antiseptic fluid.

phenoresorcin (fe"no-re-zor'sin). A mixture of phenol, 2 parts, and resorcin, 1 part; recommended for external use in eczema, seborrhea of the scalp, and other skin diseases.

phen'osal. Phenetidin acetosalicylate or salicylacetate, a colorless crystalline powder, slightly soluble in water; employed as an antipyretic and analgesic in rheumatism and neuralgia, in doses of gr. 5–15 (0.3–1.0).

phenosal'yl. Trade name of a mixture of phenol 9, salicylic acid 1, lactic acid 2, menthol 0.1; employed externally in eczema in 1 per cent. solution, and in conjunctivitis in 0.2–0.4 per cent. solution.

phenosuc'cinate. A compound of amidosuccinic acid with phenol and a base, usually sodium; antipyretic and analgesic in doses of gr. 5–15 (0.3–1.0).

phenotype (fe'no-tīp) [G. *phainō*, I display, show forth, + *typos*, model.] 1. Noting, in heredity, all the individuals bearing the same characters. 2. The individual resulting from the reactions between the genotype (the purely germinal make-up) and the environment.

phenox'in. Trade name of carbon tetrachloride, CCl_4, employed as an anesthetic.

phenoxycaffeine (fe-noks"ī-caf'e-ēn). A white crystalline powder, $C_{14}H_{14}O_3N_4$; recommended in migraine and neuralgia in doses of gr. 4 (0.25)

phenozygous (fe-noz'ī-gus) [G. *phainō*, I show, + *zygon*, yoke.] Having a narrow cranium as compared with the width of the face, so that when the skull is viewed from above, the zygomatic arches are visible.

phentetiothalein sodium (fen-tet-i"o-thal'e-in so'dī-um). Phenoltetraiodophthalein sodium, the sodium salt of a dye; it contains about 57 per cent. of iodine; used as a test of hepatic function and to aid in the *x*-ray examination of the gall-bladder.

phen'yl. The univalent radical, C_6H_5, of phenol. **p. al'cohol,** phenol.* **p. car'binol,** phenmethylol. **p. hy'drate,** carbolic acid, phenol.* **p. sal'icylate,** phenylis* salicylas.

phenylal'anin. Phenylamidopropionic acid; a decomposition product of protein, $CH_2.CH(NH_2)COOH$.

phen"ylam"idopropion'ic acid. Phenylalanin.

phenyl'amine. Aniline. **p. acetosal'icylate,** salacetin.

phenylben'zamide. Benzanilide.

phenylchinaldin (fen-il-kin-al'din) Phenylquinaldin.

phenylchinolin (fen-il-kin'o-lin). Phenylquinolin.

phenylcinchoninic acid (fen"il-sin-ko-nin'ik as'id). cinchophenum (U.S.).

phen"yldimeth"ylpyraz'olon. Antipyrine.

phen"ylenedi'amine hydrochlo'ride. A light reddish crystalline powder, employed in the diarrhea of tuberculosis in dose of gr. 2 (0.13).

phenylethylacetourea (fen"il-eth'il-as"e-to-u-re'ă). Phenylethylhidrantoin.

phenylethylbarbituric acid (fen"il-eth"il-bar-bĭ-tu'rik as'id). Luminal.

phenylethylhidrantoin (fen"il-eth"il-hi-dran'toyn.) Phenylethylacetourea, a white, tasteless, odorless powder, slightly soluble in water, recommended for chorea in once daily dose of gr. 3–4½ (0.2–0.3) according to the age of the child. **so'dium-p.,** nirvanol.

phenylgluco'sazone. A derivative of dextrose by the action of phenylhydrazine hydrochloride; it is the cause of the reaction in the phenylhydrazine test for sugar in the urine.

phenylhy'drazine. A colorless liquid, $C_6H_5NH.NH_2$, the hydrochloride of which is used as a reagent for the detection of sugar in the urine; the reaction forms crystals of phenylglucosazone.

phenyl'ic acid. Phenic acid, phenol.*

phenylis salicylas (fen'i-lis sal-ĭ-si'las). (U.S.) Phenyl salicylate, salol (Br.), the salicylic ester of phenyl, the phenylic ester of salicylic acid; occurring as fine white crystals or a crystalline powder, insoluble in water, of a slight but rather disagreeable taste and faint aromatic odor; antiseptic and antipyretic, employed in rheumatism, diarrhea, cystitis, pharyngitis, diabetes, and a number of other conditions in doses of gr. 5–10 (0.3–0.6).

phenylmeth'ane. Toluol.

phenylmethylacetone (fen"il-meth"il-as'e-tōn). Acetphenone.

phenylmethylquinoline (fen"il-meth"il-kwin'o-lēn). Phenylquinaldine.

phenyl'one. Antipyrine.

phenylpropionic acid (fen"il-pro-pĭ-on'ik as'id). Aciduous hydrocinnamicum, $C_6H_5{\cdot}CH_2{\cdot}CH_2{\cdot}COOH$, recommended in the treatment of pulmonary tuberculosis and bronchitis in doses of ♏10 (0.6) of a 10 per cent. alcoholic solution.

phenylquinaldine (fen-il-kwin-al'dĭn). A substance, $C_{10}H_8(C_6H_5)N$, formed by the action of hydrochloric acid on a mixture of aniline, acetophenone, and aldehyde, occurring in the form of colorless crystals readily soluble in water; it has been given in malaria in doses of gr. 3–5 (0.2–0.3) three times a day, but is inferior to quinine.

phenylquinoline (fen-il-kwin'o-lēn). A phenylic derivative of quinoline; antiperiodic.

phenylsulphonic (fen-il-sul-fon'ik). Relating to the radical, phenylsulphone ($C_6H_5{-}SO_2$), forming with arsenic and with mercury groups of treponemicidal substances—the hectines and hectargyres respectively.

phenylu'rethane. Euphorin.

pheochrome, phæochrome (fe'o-krōm) [G. *phaios*, dusky, + *chrōma*, color.] Chromaffin.

pheochromoblast, phæochromoblast (fe-o-kro'mo-blast) [G. *phaios*, dusky, + *chrōma*, color, + *blastos*, sprout, offspring.] A primitive chromaffin cell which, with the sympathetoblast,* enters into the formation of the adrenal body.

pheochromocyte (fe-o-kro'mo-sīt) [G. *phaios*, dusky, + *chrōma*, color, + *kytos*, cell.] A chromaffin cell.

pheochromocytoma (fe-o-kro-mo-si-to'mă). A tumor due to overgrowth of pheochromocytes in the adrenal medulla.

phes'in. Acetphenetidin-sodium-sulphonate, a sulpho-derivative of acetphenetidin; a light brownish red odorless powder, soluble in water; antipyretic and analgesic in doses of gr. 8–15 (0.5–1.0).

Ph. G. 1. Abbreviation for Pharmacopœia germanica, German Pharmacopœia. 2. Abbreviation for graduate in Pharmacy.

phi'al [G. *phialē* a drinking-bowl.] Vial.

Phialophora verrucosa (fi-al-of'o-rah ver-u-ko'sah) [G. *phialē*, a bowl, + *phoreō*, I carry; L. *verrucosus*, warty.] A fungus of the order Hyphomycetes causing a reaction in the skin resembling a blastomycetic lesion.

philan'thropist [G. *phileō*, I love, + *anthrōpos*, man. One who works for the good of his fellow man.

philan'thropy [G. *phileō*, I love, + *anthrōpos*, man.] A practical benevolence and love of one's fellows, manifested by active works for the betterment of the individual and of mankind.

philiater (fil-i'a-tur) [G. *philos*, fond, + *iatreia*, practice of medicine.] 1. A dilettante in medical science. 2. An earnest student of medicine.

Phil'ip's glands [Robert William *Philip*, Scotch physician, *1857.] Enlarged deep glands just above the clavicle, found always in children with pulmonary tuberculosis and occasionally in others.

philocy'tase [G. *phileō*, I love, + *kytos*, cell.] Immune body, amboceptor.

philoden'dron [G *phileō*, I love, + *dendron*, a tree.] The seed of *Philodendron bipinnatifidum*, a tree of India; anthelmintic.

philoneism (fi-lo'ne-izm) [G. *phileō*, I love, + *neos*, new.] An extreme love of novelty.

philopatridomania (fi-lo-pat"rid-o-ma'nĭ-ah) [G. *philopatris*, loving one's country, + *mania*, frenzy.] Homesickness carried to the point of insanity.

philothion (fi-lo-thi'on) [G. *philos*, fond of, + *theion*, sulphur.] A hypothetical substance in the tissues which reacts to the presence of sulphur, giving rise to sulphides upon which the antiseptic action of sulphur depends.

phil'trum [L. from G. *philtron*, a love-charm.] 1. A philter or love-potion. 2. [BNA], The infranasal depression, the groove in the midline of the upper lip.

phimosis (fi-mo'sis) [G. a muzzling.] Narrowness of the opening of the prepuce preventing its being drawn back over the glans. **p. vagina'lis**, narrowness of the vagina.

phlebarteriectasia (fleb-ar-te"rĭ-ek-ta'sĭ-ah) [G. *phleps*(*phleb*-), vein, + *artēria*, artery, + *ektasis*, extension] General dilatation of the blood-vessels.

phlebectasia (fleb-ek-ta'sĭ-ah) [G. *phleps*(*phleb*-), vein, + *ektasis*, extension] Dilatation of the veins, varicosity.

phlebec'tomy [G. *phleps*(*phleb*-), vein, + *ektomē*, excision.] Excision of a segment of a vein, performed sometimes for the cure of varicose veins.

phlebecto'pia, phlebec'topy [G. *phleps*(*phleb*-), vein, + *ektopos*, out of place] Dislocation of a vein, an abnormal course of a vein.

phlebemphrax'is [G. *phleps*(*phleb*-), vein, + *emphraxis*, a stoppage.] Venous thrombosis.

phleb'in [G. *phleps*(*phleb*-), vein.] An assumed pigment in venous blood, deoxidized hemoglobin.

phlebismus (flĕ-biz'mus). Venous congestion and phlebectasia.

phlebit'ic. Relating to inflammation of a vein

phlebitis (flĕ-bi'(be')tis) [G. *phleps*(*phleb*-), vein, + *-itis*.] Inflammation of a vein. **adhe'sive p.**, a form of p. in which the walls adhere, leading to obliteration of the vessel. **p. nodula'ris necroti'sans,** a circumscribed inflammation of the veins of the skin, leading to the formation of nodules which subsequently ulcerate. **puer'peral p.**, phlegmasia alba dolens. **sinus p.**, inflammation of a cerebral sinus.

phlebocholosis (fleb-o-ko-lo'sis) [G. *chōlos*, maimed.] Disease of a vein.

phleb'ogram [G. *phleps*(*phleb*-), vein, + *gramma*, writing.] A tracing of the venous pulse.

phleb'ograph [G. *phleps*(*phleb*-), vein, + *graphō*, I record.] An instrument for making a tracing of the venous pulse, a venous sphygmograph

phlebog'raphy [G. *phleps*(*phleb*-), vein, + *graphē*, a description.] A treatise on or a description of the veins.

phleb'oid [G. *phleps*(*phleb*-), vein, + *eidos*, resemblance] 1. Resembling a vein. 2. Relating to a vein or veins, venous. 3. Containing many veins.

phleb'olite, phleb'olith [G. *phleps*(*phleb*-), vein, + *lithos*, stone.] Veinstone, a concretion in a vein resulting from the calcification of an old thrombus.

phlebolithi'asis. The formation of phleboliths or venous concretions

phlebol'ogy [G. *phleps*(*phleb*-), vein, + *-logia*] The branch of medical science which treats of the anatomy and diseases of the veins.

phlebometritis (fleb-o-me-tri'(tre')tis). Inflammation of the uterine veins.

phlebomyomatosis (fleb"o-mi-o-mă-to'sis) [G. *phleps* (*phleb*), vein, + myoma.] Thickening of the walls of a vein by an overgrowth of muscular fibers arranged irregularly, intersecting each other without any definite relation to the axis of the vessel.

phlebophthalmot'omy [G. *phleps*(*phleb*-), vein, + *ophthalmos*, eye, + *tomē*, incision.] Ophthalmophlebotomy.

phleborrha'gia [G. *phleps*(*phleb*-), vein, + *rhēgnymi*, I burst forth.] Venous hemorrhage, bleeding from a vein.

phlebor'rhaphy [G. *phleps*(*phleb*-), vein, + *rhaphē*, seam.] Suture of a vein.

phleborrhex'is [G. *phleps*(*phleb*-), vein, + *rhēxis*, rupture] Rupture of a vein.

phlebosclero'sis [G. *phleps*(*phleb*-), vein, + *sklērōsis*, hardening.] Fibrous hardening of the walls of the veins.

phlebostasia (fleb-o-sta'sĭ-ah) [G. *phleps*(*phleb*-), vein, + *stasis*, a standing still.] "Bloodless phlebotomy," compression of the veins of the extremities with consequent temporary abstraction of a certain amount of blood from the general circulation.

phlebostrep'sis [G. *phleps*(*phleb*-), vein, + *strepsis*, a twisting] Twisting the cut or torn end of a vein to arrest hemorrhage

phleb"othrombo'sis [G. *phleps*(*phleb*-), vein, + *thrombōsis*, a curdling] Thrombosis, or clotting, in a vein; strictly, phlebitis with secondary thrombosis, as contrasted with thrombophlebitis.*

phleb'otome [G. *phleps*(*phleb*-), vein, + *tomos*, cutting.] A fleam or lancet for use in bloodletting.

phlebot'omist. One who advocates and practises bloodletting.

phlebot'omize. To perform phlebotomy.

Phlebot'omus [G. *phleps*(*phleb*-), vein, + *tomos*, a cutting.] A genus of blood-sucking sand-flies of the family *Psychodidæ;* several species are found in southern Europe, the Sudan, Uganda, and Ceylon, one of which, *P. papatasii*, is believed to transmit the infection of pappataci * **p. fe'ver,** pappataci* fever.

phlebot'omy [G. *phleps*(*phleb*-), vein, + *tomē*, incision.] Bloodletting, venesection, incision into a vein for the purpose of drawing blood. **blood'-less p.,** phlebostasis.

phlegm (flem) [G. *phlegma*, inflammation.] 1. Mucus. 2. One of the four humors of the body, according to the ancients; these were blood, phlegm, yellow bile, or choler, and black bile, or melancholer. 3. Self-restraint, calmness, apathy.

phlegmasia (fleg-ma'zĭ-ah) [G. *phlegma*, flame.] Inflammation, especially when angry in character. **cellulit'ic p.,** inflammatory swelling of the leg, following childbirth, due to septic

inflammation of the connective tissue. p. al'ba do'lens [L. *albus*, white; *dolens*, causing pain], milk-leg, an extreme edematous swelling of the leg following childbirth, due to thrombosis of the veins which drain the part. **p. do'lens,** cellulitic p. **p. malabar'ica,** elephantiasis. **thrombot'ic p.,** p. alba dolens.

phlegmat'ic [G. *phlegmatikos*, relating to phlegm.] Relating to the heavy one of the four humors (see *phlegm*), and therefore calm, apathetic, unexcitable.

phleg'mon [G. *phlegmonē*, inflammation.] Acute suppurative inflammation of the subcutaneous connective tissue. **bronze p.,** a gaseous p., following a renal operation, marked by large bronze-colored spots near the line of incision. **diffuse p.,** phlegmonous cellulitis, a diffuse inflammation of the subcutaneous tissues accompanied by constitutional symptoms of sepsis. **gas p.,** a form attended with more or less extensive emphysema, due to the presence of *Clostridium welchii* or other of the so-called gas bacilli. **lig'neous p., wood'y p.,** Reclus'* disease (2).

phlegmonous (fleg'mon-us). Relating to a phlegmon, noting inflammation of the subcutaneous connective tissues.

phlo'em [G. *phloios*, bark.] In botany, the bast layer, or vascular tissue containing sieve-tubes, lying beneath the epidermis.

phlogis'tic [G. *phlogistos*, inflammable.] Inflammatory.

phlogocyte (flo'go-sīt) [G. *phlogōsis*, inflammation + *kytos*, cell.] One of a number of cells present in the tissues during the course of an inflammation; plasma-cell, Turck's cell, stimulation cell, irritation cell

phlogocytosis (flo-go-si-to'sis). A blood state in which there are many plasma-cells or phlogocytes in the peripheral circulation.

phlogogenic, phlogogenous (flo-go-jen'ik, flo-goj'enus) [G. *phlox(phlog-)*, flame, + *gennaō*, I produce.] Exciting inflammation.

phlo'gosin [G. *phlogōsis*, inflammation.] A substance, isolated from cultures of pus-producing cocci, injections of sterilized solutions of which will excite suppuration.

phlogo'sis [G. *phlogōsis*, a burning.] 1. Inflammation. 2. Specifically, erysipelas.

phlogot'ic. Phlogistic, inflammatory.

phlor'etin. A yellowish powder obtained by boiling phloridzin with dilute sulphuric acid; recommended as an antipyretic.

phlor'idzin, phlor'rhizin [G. *phloios*, bark, + *rhiza*, root.] A glucoside obtained from the bark of the roots of apple, pear, plumb, and cherry trees, occurring in white silky acicular crystals of a sweetish bitter taste; large doses produce glycosuria, and the drug is employed to induce diabetes experimentally in animals; it has also been employed as an antiperiodic and tonic in doses of gr. 5–10(0.3–0.6).

phloroglu'cin, phloroglu'cinol, phloroglu'col. An isomer of pyrogallol, obtained from resorcinol by fusion with caustic soda; a whitish or yellowish crystalline powder, employed as a reagent with vanillin (Günzburg's reagent) as a test for hydrochloric acid, with which it gives a bright red color.

phlycte'na, phlyctæ'na, pl. *phlycte'næ, phlyctæ'næ* [G *phlyktaina*, a blister.] A small vesicle, especially one of a number of small blisters following a burn of the first degree.

phlyc'tenar. Relating to or marked by the presence of vesicles or phlyctenæ.

phlyctenoid (flik'ten-oyd) [G. *phlyktaina*, blister, + *eidos*, resemblance.] Relating to or resembling a phlyctena, or vesicle.

phlyctenosis (flik-tĕ-no'sis). The occurrence of phlyctenæ; a disease marked by a phlyctenar eruption.

phlyc'tenous. Phlyctenar

phlyctenula (flik-ten'u-lah) pl. *phlycten'ulæ* [L. dim. of G. *phlyktaina*, blister.] A small red nodule of lymphoid cells, with ulcerated apex, occurring in the conjunctiva.

phlycten'ular. Relating to a phlyctenula.

phlyc'tenule. Phlyctenula.

phlysorem'id. Trade name for Koch's bacilli emulsion in capsule form.

phlyzacium (fli-za'sĭ-um) [G. *phlyzakion*, a pimple.] 1. Phlyctena. 2. Ecthyma.

pho'bia [G. *phobos*, fear.] Any unreasonable or insane dread or fear. The word is employed as a suffix to many terms expressing the object which inspires the fear.

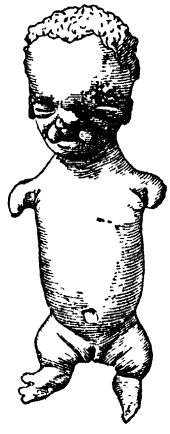
air, aerophobia. **animals,** zoophobia **bacteria,** bacteriophobia, microbiophobia. **bees,** apiphobia, melissophobia. **being alone,** autophobia, eremophobia, monophobia. **being beaten,** rhabdophobia. **being bound,** merinthophobia. **being buried alive,** taphophobia. **being dirty,** automysophobia. **being egotistical,** autophobia. **being stared at,** scopophobia. **blood,** hematophobia, hemophobia. **blushing,** ereuthophobia. **cancer,** carcinomatophobia, cancerophobia. **cats,** ailurophobia, gatophobia. **children,** pediophobia. **choking,** pnigophobia. **cold,** psychrophobia. **colors,** chromatophobia. **corpse,** necrophobia. **crossing a bridge,** gephyrophobia. **crowds,** ochlophobia. **dampness,** hygrophobia. **daylight,** phengophobia. **death,** necrophobia, thanatophobia. **deformity,** dysmorphophobia. **devil,** demonophobia. **dirt,** mysophobia, rhypophobia. **disease,** nosophobia, pathophobia. **disorder,** ataxiophobia. **dogs,** cynophobia. **dolls,** pediophobia. **draft,** aerophobia, anemophobia. **drinking,** dipsophobia. **drugs,** pharmacophobia. **electricity,** electrophobia. **elevated places,** acrophobia. **empty rooms,** cenophobia. **enclosed space,** claustrophobia, clithrophobia. **everything,** panophobia, panphobia, pantophobia. **fatigue,** ponophobia. **fire,** pyrophobia. **fish,** ichthyophobia. **flowers,** anthophobia. **food,** sitophobia, cibophobia. **fur,** doraphobia. **gaiety,** cherophobia. **glass,** crystallophobia, hyalophobia. **God,** theophobia. **grave,** taphophobia. **heart disease,** cardiophobia. **heat,** thermophobia. **heights,** acrophobia. **home surroundings,** ecophobia, oikophobia. **house,** domatophobia. **human beings,** anthropophobia. **infection,** molysmophobia, mysophobia. **itch,** acarophobia, scabiophobia. **leprosy,** eprophobia. **light,** phengophobia, photophobia. **lightning,** astrapophobia, keraunophobia. **love, in its physical expression,** erotophobia. **making false statements,** mythophobia. **marriage,** gamophobia. **men** (males), androphobia. **missiles,** ballistophobia. **moisture,** hygrophobia. **monstrosities,** teratophobia. **nakedness,** gymnophobia. **nameso,** nomatophobia. **needles,** belonophobia. **neglect or omission of some duty,** paralipophobia. **night,** nyctophobia. **noise or loud talking,** phonophobia. **novelty,** cainophobia, neophobia. **odors,** osmophobia; *body odors,* bromidrosiphobia. **oneself,** autophobia. **open spaces,** agoraphobia, cenophobia, kenophobia. **pain,** algophobia, odynephobia. **parasites,** parasitophobia; phthiriophobia, pediculophobia (lice); helminthophobia (worms). **pins,** belonophobia. **places,** topophobia. **poisoning,** toxicophobia, iophobia. **pregnancy,** maieusiophobia. **precipices,** cremnophobia. **rabies,** lyssophobia. **railways,** siderodromophobia. **rain,** ombrophobia. **rivers,** potamophobia. **rust,** iophobia. **sacred things,** hierophobia. **sea,** thalassophobia. **self,** autophobia. **sexual intercourse,** coitophobia, cypridophobia. **sexual love,** erotophobia. **sharp objects,** belonophobia, aichmophobia. **skin diseases,** dermatosiophobia. **skin of animals,** doraphobia. **snakes,** ophidiophobia. **society,** anthropophobia. **solitude,** eremiophobia. **speaking,** lalophobia. **spirits,** demonophobia. **standing upright,** stasiphobia. **stealing,**

cleptophobia. **stillness,** eremiophobia. **sun,** heliophobia. **strangers,** xenophobia. **surgical operations,** ergasiophobia. **tabes dorsalis,** ataxiophobia, tabophobia. **teeth,** odontophobia. **thirteen at table,** triskaidekaphobia. **thunder,** keraunophobia, ceraunophobia, tonitrophobia. **tomb,** taphophobia. **touching or being touched,** haphephobia. **tuberculosis,** phthisiophobia, tuberculophobia. **uncovering the body,** gymnophobia. **vehicles,** amaxophobia. **venereal disease,** cypridophobia, venereophobia. **wind,** anemophobia. **vomiting,** emetophobia. **walking,** basiphobia. **water,** hydrophobia. **women,** gynecophobia. **work,** ergasiophobia, ponophobia. **worms,** helminthophobia.

phobophobia (fo-bo-fo'bĭ-ah) [G. *phobos*, fear.] A morbid dread of developing some phobia.*

Phocas's disease' (fo-kah') [B. G. *Phocas*, French physician, contemporary.] Tillaux's* disease.

phocom'elus [G. *phōkē*, a seal, + *melos*, extremity.] A monster whose hands and feet seem to be attached directly to the shoulders and hips without the intervention of arms and legs.



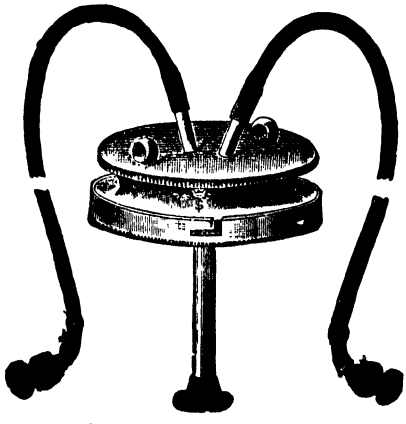
PHOCOMELUS, WITH DOUBLE HARELIP.

phonac'oscope [G. *phōnē*, voice, + *akouō*, I listen, + *skopeō*, I examine.] An instrument for increasing the intensity of the percussion note or of the voice sounds, the examiner's ear or the stethoscope being placed on the opposite side of the chest.

phonacos'copy. Examination of the chest by means of the phonacoscope.

pho'nal [G. *phōnē*, voice.] Relating to the voice.

phonation (fo-na'shun) [G. *phōnē*, voice.] The utterance of sounds by means of vocal cords. **subenerget'ic p.,** hypophonia. **superenerget'ic p.,** hyperphonia.



BIANCHI'S PHONENDOSCOPE.

phonatory (fo'nă-tor-ĭ). Relating to phonation.

phonautograph (fōn-aw'to-graf) [G. *phōnē*, voice, + *autos*, self + *graphō*, I record.] An instrument for registering the vibrations of the voice or any other sound.

phoneme (fo'nēm) [G. *paōnēma*, a voice.] An hallucination of voices.

phonen'doscope [G. *phōnē*, voice, + *endon*, within, + *skopeō*, I examine.] A stethoscope which, by means of two parallel plates of guttapercha, one resting on the patient's chest or attached to a stethoscope tube, the other vibrating in unison with it, intensifies the auscultatory sounds.

phonet'ic [G. *phōnētikos*.] Relating to speech or to the voice.

phonet'ics. The science of speech and of pronunciation; phonology.

pho'nic. Relating to sound or to the voice; phonetic.

pho'nism. One of the complex forms of auditory hallucinations, or hearing of voices.

phonocardiog'raphy [G. *phōnē*, sound, + *kardia*, heart, + *graphō*, I record.] Registration of the heart sounds: the sounds, received by a stethoscope and magnified by a resonator, cause vibrations in a tuning-fork; these excite a microphone which sets in action an electromagnetic signal apparatus, the movements of which are registered by means of a pantograph.

phonogram (fo'no-gram) [G. *phōnē*, sound, + *gramma*, diagram. A graphic curve depicting the duration and intensity of a sound.

phonology [G. *phōnē*, voice, + *-logia*.] The science of vocal sounds, or of pronunciation; phonetics.

phonoma'nia [G. *phonē*, murder, + *mania*, frenzy.] Homicidal mania.

phonomassage (fo-no-mas-sazh'). The imparting of movements to the ossicles by means of loud noises directed into the external auditory meatus.

phonom'eter [G. *phōnē*, sound, + *metron*, measure.] An instrument for measuring the pitch and intensity of sounds.

phonomyoclonus (fo-no-mi-ok'lo-nus [G. *phōnē*, sound, + *mys*, muscle, + *klonos*, tumult.] A condition in which fibrillary muscular contractions are present, as evidenced by the sound heard on auscultation, even though they are not visible.

phonop'athy [G. *phōnē*, sound, + *pathos*, suffering] Any disease of the vocal organs affecting speech.

phonophobia (fo-no-fo'bĭ-ah) [G. *phōnē*, sound, voice, + *phobos*, fear.] 1. An insane fear of speaking above a whisper. 2. An exaggerated aversion to any sound.

pho'nophore [G. *phōnē*, sound, + *phoros*, a bearer.] 1. One of the ossicles of the ear. 2. A form of binaural stethoscope with a bell-shaped chest-piece into which project the recurved extremities of the sound-tubes.

pho"nophotog'raphy [G. *phōnē*, sound, + *phōs*(*phōt-*) light, + *graphō*, I write.] The recording on a moving photographic plate of the movements imparted to a diaphragm by sound-waves.

phonopneumomassage (fo"no-nu"mo-mas-sazh') [G. *phōnē*, sound, + *pneuma*, air.] Phonomassage combined with the forcing of a jet of air into the external auditory meatus.

phonop'sia [G. *phōnē*, sound, + *opsis*, vision.] A condition in which the hearing of certain sounds gives rise to a subjective sensation of color.

pho'noscope [G. *phōnē*, sound, + *skopeō*, I view.] An instrument for photographing the heart sounds; the vibrations are transmitted to a film of soap with a silvered glass thread attached, and the movements of the latter are recorded on a photographic plate.

phonoscopy (fo-nos'ko-pĭ). The recording of the heart sounds by means of the phonoscope.

pho'ria. The position of the eyeball as regards the direction of its visual axis; the term is always qualified by a prefix, such as *ortho*phoria, *hetero*phoria, *hyper*phoria, etc.

phorocyte (for'o-sīt) [G. *phoros*, bearer, + *kytos*, cell.] A connective-tissue cell.

phorocyto'sis. An increase in the number of connective-tissue cells

phorom'eter [G. *phora*, movement, + *metron*.] An instrument for applying Graefe's test for heterophoria.

phor'oplast [G. *phoros*, a bearer, + *plastos*, formed] Connective tissue.

phor'otone [G. *phora*, motion, + *tonos*, tension.] A prism for exercising the eye muscles in cases of imbalance.

phorozo'on [G. *phora*, motion, + *zōon*, animal.] The non-sexual generation in the life history of an animal organism which passes through several phases of existence.

phose (fōz) [G. *phōs*, light.] A subjective perception of a bright spot or patch.

phosgene (fos'jēn) [G. *phōs*, light, + *gennaō*, I produce.] Carbonyl chloride, $COCl_2$, at ordinary temperatures a suffocating gas, below 8° C. (46.4° F.) a colorless liquid.

phosgen'ic. Photogenic.

pho'sis. The production of a phose

pho'sote. Creosote phosphate.

phos'phagon. Trade name of an elixir of various hypophosphates.

phos'phate. A salt of phosphoric acid; for the official phosphates, see under the name of the base. **al'kaline p.,** the phosphate of sodium or of potassium; these are acid salts, but are called alkaline because they are salts of the alkali metals. **trip'le p.,** ammonio-magnesian phosphate, $(NH_4)MgPO_4$.

phos'phated. Containing phosphates.

phosphat'ic. Relating to or containing phosphates

phosphatide (fos'fă-tid). 1. A lecithin containing nitrogen and phosphorus. 2. A lecithoprotein. 3. A lipoid substance which is an ester of orthophosphoric acid.

phos'phatol [*phosphate* + L. *oleum*, oil.] Trade name of a mixture of phosphorus trichloride and creosote; recommended in tuberculosis.

phosphatoptosia (fos-fă-top-to'sī-ah) [*phosphate* + G. *ptōsis*, a falling.] An abnormal precipitation of phosphates in the urine; phosphaturia (2).

phosphatu'ria [*phosphate* + G. *ouron*, urine.] 1. A condition in which there is an excessive excretion of phosphates in the urine. 2. An abnormal deposit of earthy phosphates or triple phosphate in consequence of increased alkalinity of the urine, phosphatoptosia.

phosphene (fos'fēn) [G. *phōs*, light, + *phainō*, I show.] A subjective sensation of light produced by pressure upon the eyeball. **accommoda'tion p.,** a p. occurring during accommodation, caused by contraction of the ciliary muscle.

phospher'got. Trade name of a mixture of ergot and sodium phosphate, recommended in states of mental depression.

phos'phide. A compound of phosphorus with another element.

phos'phine. Phosphureted hydrogen, hydrogen phosphide, PH_3.

phos'phite. A salt of phosphorous acid.

phosphocar'nic acid. Nucleon, carnic acid combined with phosphorus, found in milk and muscle.

phosphoguai'acol. Guaiacol phosphite.

phosphonecrosis (fos-fo-ne-kro'sis). Phossy jaw, necrosis of the alveolar process of the jaw occurring in workers in phosphorus.

phospho'nium. A univalent radical, PH_4, having chemical relations similar to those of ammonium.

phosphoprotein (fos-fo-pro'te-in). Nucleoalbumin, nucleoprotein, a conjugated protein, a compound of protein with some substance, other than lecithin or nucleic acid, containing phosphorus; casein and vitellin are phosphoproteins.

phos'phorated. Phosphureted.

phosphorescence (fos-fo-res'ens) [G. *phōs*, light, + *phoros*, bearer.] The quality or property of emitting light without active combustion or the production of heat.

phosphores'cent. Having the property of phosphorescence

phosphorhidro'sis, phosphoridro'sis [G. *phōs*, light, + *phoros*, bearing, + *hidrōsis*, sweating.] Phosphorescent sweating.

phosphor'ic acid. Acidum phosphoricum; H_3PO_4, an acid obtained usually from bones or by the oxidation of phosphorus. There are several forms of phosphoric acid; the ordinary form is also called orthophosphoric acid, to distinguish it from metaphosphoric monobasic or glacial phosphoric acid, HPO_3, a vitreous solid soluble in water, and pyrophosphoric acid, $2H_2O.P_2O_5$; anhydrous phosphoric acid, P_2O_5, obtained by the complete combustion of phosphorus, is a light deliquescent powder soluble in water; see also *acidum phosphoricum*.

phosphoridrosis (fos-for-i-dro'sis) [*phosphorescence* + *hidrosis*.] Posphorescent sweating.

phos'phorism. Chronic poisoning with phosphorus.

phos'phorized. Containing phosphorus.

phos'phorous acid. An acid, H_3PO_3, occurring in the form of a syrupy liquid; it combines with bases to form phosphites which, according to amount of the dibasic phosphorous acid present, are called acid phosphites and neutral phosphites.

phosphoru'ria. 1. The passage of phosphorescent urine. 2. Phosphaturia.

phos'phorus [G. *phōs*, light, *phoros*, bearer.] (U.S., Br.) A non-metallic chemical element with symbol P, atomic weight 31, occurring extensively in nature, always in combination, and in many animal tissues—bone, muscles, and nerves. It comes usually in sticks, colorless, of soft solid consistence, with lustrous cut surface; it has a great affinity for oxygen, inflaming in the air at a temperature only a little above 100° F. and burning with an intensely bright light and great heat; at ordinary temperatures it oxidizes slowly, being luminous in the dark. It occurs also in an allotropic form as *amorphous* or *red p.* (see below). Phosphorus is exceedingly poisonous, causing intense inflammation and fatty degeneration; inhalation of the fumes by workers in phosphorus may cause necrosis of the jaw (*phossy jaw*). It is employed in the treatment of rickets and other conditions of malnutrition of the bones, and in neurasthenia and sexual impotence, in doses of gr. $\frac{1}{100}$-(0.0006). **amor'phous** or **red p.,** an allotropic form of phosphorus formed by heating ordinary p., in the absence of oxygen, to 500° F.; it occurs as an amorphous dark red mass or powder, non-poisonous, and much less inflammable than ordinary p.; it may be reconverted to the latter by heating to 850° F. in nitrogen gas. **vit'reous p.,** ordinary, colorless, semitranslucent p.

phos'photal. Creosote phosphite.

phosphotung'stic acid. A mixture of phosphoric and tungstic acids; used as a reagent in testing for alkaloids.

phos'phuret. Phosphide.

phos'phureted, phos'phuretted. Forming a compound with phosphorus. **p. hydrogen,** phosphine.

phosphu'ria. Phosphaturia.

phos'sy jaw. Necrosis of the jaw from phosphorus poisoning.

photal'gia [G. *phōs(phōt-)*, light, + *algos*, pain.] Pain caused by light; an extreme degree of photophobia.

photaugiaphobia (fo-taw″jĭ-ah-fo'bĭ-ah) [G. *phōtaugeia*, glare of light, + *phobos*, fear.] Shrinking from a glare of light.

photechy (fo'tek-ĭ) [G. *phōs*, light, + *ēchō*, echo.] The law that an irradiated body produces the same effects as the source itself of the radiation.

photesthesia, photæsthesia (to-tes-the'zĭ-ah) [G. *phōs(phōt-)*, light, + *aisthēsis*, sensation.] 1. The perception of light. 2. Photophobia.

pho'tism. The production of a subjective sensation of light or color by a stimulus to another sense organ, such as of hearing, taste, or touch.

photoactinic (fo-to-ak-tin'ik). Relating to rays producing both luminous and chemical effects.

photobacte'ria. Bacteria the cultures of which are phosphorescent.

photobiot'ic [G. *phōs(phōt-)*, light, + *bios*, life] Living or flourishing only in the light.

photoceptor (fo-to-sep'tor) [G. *phōs (phōt-)*, light, + *ceptor*.] A nerve ceptor sensitive to light rays.

photochemistry (fo-to-kem'is-trĭ) [G. *phōs(phōt-)*, light.] The branch of chemistry which treats of the chemical changes set in action by light.

photocinet'ic [G. *phōs(phōt-)*, light, + *kinētikos*, relating to movement] Relating to movement caused by light.

photodromy (fo-tod'ro-mĭ) [G. *phōs*, light, + *dromos*, a running.] In the induced or spontaneous clarification of certain suspensions the particles or flocks settle on the side nearest the light (*positive p.*) or on the dark side (*negative p.*).

photodynam'ic [G. *phōs(phōt-)*, light, + *dynamis*, force.] Relating to the energy or force exerted by light.

photodynia (fo-to-din'ĭ-ah) [G. *phōs (phōt-)*, light, + *odynē*, pain.] Photalgia, pain caused by light rays; extreme photophobia.

pho″todyspho'ria [G. *phōs(phōt-)*, light, + *dysphoria*, extreme discomfort.] Extreme photophobia.

photoelectricity (fo-to-e-lek-trĭs'ĭ-tĭ). Electricity produced by the action of light.

photoelec'tron. An electron set free under the influence of a ray of light.

photogen [G. *phōs (phōt-)*, light, + *gennaō*, I produce.] A microorganism which produces phosphorescence.

photogene (fo'to-jēn) [G. *phōs(phōt-)*, light, + *gennaō*, I produce.] A prolonged retinal image, after-image.

photogen'esis [G. *phōs(phōt-)*, light, + *genesis*, production.] The production of light; phosphorescence.

photogen'ic, photogenous (fo-toj'en-us) [G. *phōs (phōt-)*, light, + *gennaō*, I produce.] Light-producing, phosphorescent.

photohemotachometer, photohæmotachometer (fo-to-hem″o-tak-om'e-ter) [G. *phōs(phōt-)*, light, + *haima*, blood, + *tachos*, speed, + *metron*, measure.] An appliance for recording photographically the rapidity of the blood-current.

photokinet'ic. Photocinetic.

photol'ogy [G. *phōs*, light, + -ology.] The science of light production and energy, especially in its therapeutic application.

photol'ysis [G. *phōs(phōt-)*, light, + *lysis*, solution.] Decomposition under the influence of light.

pho'tolyte. Any product of decomposition by light.

photoma'nia [G. *phōs(phōt-)*, light, + *mania*, frenzy.] 1. An insane desire for light. 2. Insanity caused by prolonged exposure to intense light.

photom'eter [G. *phōs(phōt-)*, light, + *metron*, measure.] An instrument for measuring the intensity of light. **Foerster's p.**, see under *Foerster*.

photom'etry. The measurement of the intensity of light.

photomi'crograph [G. *phōs(phōt-)*, light, + *mikros*, small, + *graphē*, a record.] An enlarged photograph of an object as seen under the microscope. Distinguished from *microphotograph*.

photomicrog'raphy. The production of a photomicrograph.

photon (fo'ton) [G. phōs, light.] A light particle analogous to the electron.

photoncia (fo-ton'sĭ-ah) [G. *phōs*, light, + *onkos*, a tumor.] Any swelling due to the intense action of light.

photon'osus [G *phōs(phōt-)*, light, + *nosos*, disease.] Any disease caused by prolonged exposure to intense light.

photopathy (fo-top'ă-thĭ) [G. *phōs (phōt-)*, light, + *pathos*, suffering.] Photonosus.

photoperceptive (fo-to-pur-sep'tiv) [G. *phōs(phōt-)*, light, + L. *percipere*, to perceive.] Photoreceptive.

photopho'bia [G. *phōs(phōt-)*, light, + *phobos*, fear.] 1. Abnormal sensitiveness to light, especially of the eyes. 2. Morbid dread and avoidance of light places.

photopho'bic. Relating to or suffering from photophobia.

photophore [G *phōs(phōt-)*, light, + *phoros*, bearer.] A lamp with reflector used in laryngoscopy and in the examination of other internal parts of the body.

photop'sia, pho'topsy [G. *phōs(phōt-)*, light, + *opsis*, vision.] A subjective sensation of light, especially in the form of flashes or sparks.

photoptom'eter [G. *phōs(phōt-)*, light, + *optos*, visible, + *metron*, measure] Foerster's* optometer.

photoptom'etry [G. *phōs(phōt-)*, light, + *optos*, visible, + *metron*, measure.] Measurement of the perception of light.

photoradiom'eter [G. *phōs(phōt-)*, light, + L. *radius*, a ray, + G. *metron*, measure] An instrument for determining the penetrating power of light, Roentgen, or radium rays.

photoreceptive (fo-to-re-sep'tiv) [G. *phōs(phōt-)*, light, + L. *recipere*, to receive.] Photoperceptive, capable of receiving and perceiving light rays.

photoreceptor (fo-to-re-sep'tor) Photoceptor.

pho'toscope [G. *phōs(phōt-)*, light, + *skopeō*, I view.] Skiascope, fluoroscope.

photos'copy. Skiascopy, fluoroscopy.

phototax'is [G. *phōs(phōt-)*, light, + *taxis*, orderly arrangement.] Reaction of living protoplasm to the stimulus of light, whereby the animal or plant is attracted (*positive* phototaxis) or repelled (*negative* phototaxis) by a luminous body, phototropism.

photother'apy [G. *phōs(phōt-)*, light, + *therapeia*, treatment.] Treatment of disease by means of light rays

phototoxis (fo-to-toks'is) [G. *phōs*. light, + *toxis*.] The condition resulting from the injurious effects of over-exposure to light or to the ultraviolet rays or *x*-rays.

photot'ropism [G. *phōs(phōt)*, light, + *tropē*, a turning.] Phototaxis.

photox'ylin. A substance resembling pyroxylin made from wood-pulp; it is used in the manu-

facture of a substance resembling collodion and employed for the same purposes.

photu'ria [G *phōs(phōt-)*, light, + *ouron*, urine.] The passage of phosphorescent urine.

Phragmid'iothrix [G. *phragma*, hedge, + *idios* separate, + *thrix*, hair.] A genus of *Chlamydobacteriaceæ*, including the marine forms in which division occurs in three planes, the cells being enclosed in an almost invisible sheath.

phren [G. *phrēn*, the diaphragm, heart, seat of emotions, mind.] 1. The diaphragm. 2. The mind.

phrenal'gia [G. *phrēn*, mind, diaphragm, + *algos*, pain.] 1. Psychalgia. 2 Pain in the diaphragm.

phrenasthenia (fren-as-the'nĭ-ah) [G. *phrēn*, mind, + *astheneia*, weakness.] 1 Psychasthenia. 2. A loss of tone in the diaphragm.

phrenet'ic [G. *phrenitikos*, frenzied.] 1. Frenzied, maniacal. 2. A maniac.

-phrenia [G. *phrēn*, the mind or seat of the intellectual faculties.] The deuterotheme in the construction of words referring to the intellect.

phren'ic. 1. Relating to the diaphragm. 2. Relating to the mind. **p. avul'sion,** removal of a portion of the p. nerve, causing elevation of that side of the diaphragm with partial collapse of the corresponding lung. **p. nerve,** see *nervus* phrenicus*. **p. phenom'enon, p. wave,** diaphragm* phenomenon.

phrenicectomy (fren-ĭ-sek'to-mĭ) [nervus *phrenicus* + G. *ektomē*, excision.] Exsection of a portion of the phrenic nerve, to prevent reunion such as may follow phrenicotomy.

phreniclasia (fren-ĭ-kla'sĭ-ŭ) [*phrenic* nerve + G. *klasis*, a breaking away.] Crushing of a section of the phrenic nerve as a substitute for phrenicotomy.

phrenicoexeresis (fren-ĭ-ko-eks-er'ĕsis) [G. *phrēn*, diaphragm, + *exairesis*, a taking out.] Phrenicectomy.

phrenicotomy (fren-ĭ-kot'o-mĭ) [*phrenic* nerve + G. *tomē*, a cutting, incision.] Section of the phrenic nerve in order to induce unilateral paralysis of the diaphragm, which is then pushed up by the abdominal viscera and exerts compression upon a diseased lung.

phrenitis (fre-ni'(ne')tis) [G. *phrēn*, mind, + *-itis*.] 1. Encephalitis. 2. Delirium.

phrenocardia (fre-no-kar'dĭ-ah). Cardiac arrhythmia, submammary pain, and dyspnea associated with neurasthenia; cardiovascular neurasthenia.

phrenocol'ic [G. *phrēn*, diaphragm, + *kōlon*, colon.] Relating to the diaphragm and the colon. **p. lig'ament,** costocolic ligament, a fold of peritoneum passing from the diaphragm to the splenic flexure of the colon.

phre"noco'lopexy [G. *phrēn*, diaphragm, + *kōlon*, colon, + *pēxis* fixation.] Suture of a displaced or prolapsed transverse colon to the diaphragm.

phrenogas'tric [G. *phrēn*, diaphragm, + *gastēr*, stomach.] Relating to the diaphragm and the stomach. **p. lig'ament,** a fold of peritoneum passing from the diaphragm to the fundus of the stomach.

phrenoglott'ic [G. *phrēn*, diaphragm, + *glōttis*, glottis.] Relating to the diaphragm and the glottis, noting a spasm involving the diaphragm and the vocal cords.

phre'nograph [G. *phrēn*, diaphragm, + *graphō*, I record.] An instrument for recording graphically the movements of the diaphragm.

phre"nohepat'ic [G. *phrēn*, diaphragm, + *hēpar (hēpat-)*, liver.] Relating to the diaphragm and the liver.

phrenol'ogist. One who claims to be able to indicate the mental powers and characteristics by a study of the external configuration of the skull.

phrenology (fre-nol'o-jĭ) [G. *phrēn*, mind, + *-ology*.] The doctrine that each of the mental faculties is located in a definite part of the cerebral cortex, the size of which part varies in a direct ratio with the development of the corresponding faculty, this size being indicated by the external configuration of the skull. On this theory it would be possible to determine one's mental characteristics by an examination of the prominences on the skull.

phrenop'athy [G. *phrēn*, mind, + *pathos*, suffering.] Any mental disorder.

phre"nople'gia [G. *phrēn*, mind, diaphragm, + *plēgē*, stroke.] 1. A sudden attack of mental derangement. 2. Paralysis of the diaphragm.

phrenoptosia (fren-op-to'sĭ-ah) [G. *phrēn*, the diaphragm, + *ptōsis*, a falling.] An abnormal sinking down of the diaphragm.

phren'osin. A cerebroside containing galactose.

phrenospasm (fre-no-spazm) [G. *phrēn*, diaphragm, + *spasmos*, spasm.] Cardiospasm, spasmodic closure of the cardiac orifice of the stomach.

phrenosplen'ic [G. *phrēn*, diaphragm, + *splēn*, spleen.] Relating to the diaphragm and the spleen. **p. lig'ament,** a fold of peritoneum passing from the diaphragm to the spleen.

phrictopath'ic [G. *phriktos*, causing a shudder, + *pathē*, suffering.] Relating to a peculiar sensation, accompanied by shuddering, provoked by stimulation of an hysterical anesthetic area during the process of recovery.

phry'nin [G. *phrynos*, toad.] A substance contained in the skin secretion of the toad which is an intense irritant of the mucous membranes.

phrynol'ysin [G. *phrynos*, toad, + *lysis*, solution; noting the lytic action of the substance on the red blood-cells.] The poison of the fire-toad, *Bombinator igneus*, contained in the secretion of the skin of the back and abdomen.

phthinoid (thin'oyd) [G. *phthinōdēs*, consumptive.] Relating to or resembling phthisis; wasting, consumptive. **p. chest,** a long narrow chest, the lower ribs being more oblique than usual and sometimes reaching almost to the crest of the ilium; the scapulæ project backward, the manubrium sterni is depressed, and Louis's angle is sharper than normal.

phthiremia (fthi-re'mĭ-ah) [G. *phteirō*, I corrupt, + *haima*, blood.] A morbid state of the blood.

phthiriasis (fthĭ-rĭ'a-sis) [G. *phtheir*, a louse.] Pediculosis, lousiness. **p. cap'itis,** pediculosis capitis. **p. cor'poris,** pediculosis corporis. **p. inguina'lis,** presence of crab lice in the hairy pubic region.

phthiriophobia (fthĭr"i-fo'bĭ-ah) [G. *phtheiriaō* I have lice, + *phobos*, fear.] Unreasonable and extreme fear of infestation with lice.

Phthir'ius [G. *phtheir*, a louse.] A genus of lice, fam. *Pediculidæ*. **P. inguina'lis,** *Pediculus pubis*.

phthisic (tiz'ik). 1. Phthisis. 2. Asthma. 3. Relating to phthisis. 4. A sufferer from phthisis, or from asthma.

phthisical (tiz'ĭ-kal). Relating to or suffering from phthisis.

phthisicky (tiz'ĭ-kĭ). 1. Phthisical. 2. Asthmatic.

phthisin (tiz'in). Trade name of a preparation of the bronchial glands of certain animals, recommended in the treatment of pulmonary affections.

phthisiologist (tiz-ĭ-ol'o-jist). One versed in phthisiology; a specialist in the prevention and treatment of phthisis; a phthisiotherapist.

phthisiology (tiz-ĭ-ol'o-jĭ) [G. *phthisis* + *-logia.*] The branch of medical science which treats of phthisis, or consumption, in all its relations.

phthisiomania (tiz-ĭ-o-ma'nĭ-ah) [G. *phthisis* + *mania,* madness.] A fixed but unfounded belief that one is suffering from pulmonary tuberculosis; tuberculomania.

phthisiophobia (tiz-ĭ-o-fo'bĭ-ah) [G. *phthisis,* + *phobos,* fear.] An unreasoning fear of consumption or of the consumptive, tuberculophobia.

phthisiotherapeutic (tiz-ĭ-o-ther-ă-pu'tik). Relating to the treatment of phthisis.

phthisiotherapeutics (tiz-ĭ-o-ther-ă-pu'tiks) [G. *phthisis* + *therapeutikos,* relating to treatment.] Phthisiotherapy.

phthisiotherapist (tiz-ĭ-o-ther'ă-pist). One who devotes special attention to the treatment of phthisis, phthisiologist.

phthisiotherapy (tiz-ĭ-o-ther'ă-pĭ) [G. *phthisis* + *therapeia,* treatment.] The treatment of phthisis, phthisiotherapeutics.

phthisis [ti'sis, te'sis, thi'sis, the'sis) [G. a wasting.] 1. A wasting or atrophy, local or general. 2. Specifically, tuberculosis of the lungs, consumption. **abdom'inal p.,** intestinal tuberculosis; tabes mesenterica. **black p.,** anthracosis. **colliers' p.,** anthracosis. **essen'tial p. bulbi,** ophthalmomalacia, a softening of the eyeball and reduction in size, not due to inflammation. **fi'broid p.,** pulmonary tuberculosis with hyperplasia of connective tissue in the lung. **file-cutters' p.,** siderosis. **flax-dressers' p.,** pneumonoconiosis, byssinosis, more properly *linosis.* **glan'dular p.,** tuberculous inflammation of the lymph glands, especially in the neck; cervical adenitis. **grinder's p.,** siderosis; silicosis. **knife-grinder's p.,** siderosis. **laryn'geal p.,** tuberculosis of the larynx. **miners' p.,** colliers' p., anthracosis. **p. bulbi,** shrinking of the eyeball following uveitis or other inflammatory disease. **p. confirma'ta,** the second stage of pulmonary tuberculosis. **p. despera'ta,** the third stage of pulmonary tuberculosis. **p. flor'ida,** acute tuberculosis, galloping consumption. **p. incip'iens,** the primary stage of pulmonary tuberculosis. **p. nodo'sa,** miliary tuberculosis. **potter's p.,** silicosis.

phthisopyrin (tiz-o-pi'rin). Trade name of a mixture containing sodium arsenate, camphoric acid, and aspirin; recommended in tuberculosis, especially when fever is present.

phycochrome (fi'ko-krōm). [G. *phykos,* seaweed, + *chrōma,* color.] A bluish green coloring matter from certain algæ.

Phycomyce'tes [G. *phykos,* seaweed, + *mykēs,* fungus.] The lower *Hyphomycetes,* or moulds.

phygogalac'tic [G. *phygē,* flight, + *gala(galakt-),* milk.] 1. Checking the secretion of milk, lactifuge, galactophygous, ischogalactic. 2. An agent which lessens or arrests the secretion of milk lactifuge.

phylacagogic (fi-lak-ă-goj'ik) [G. *phylaxis* (*phylak-*), protector, + *agōgos,* leading.] Stimulating the production of protective antibodies.

phylacogen (fi-lak'o-jen) [G. *phylax(phylak-),* protector, + *gennaō,* I produce.] Trade name of a vaccine composed of the metabolic products obtained from a culture of a pathogenic germ, containing no bacterial bodies nor any animal serum.

phylax'in [G. *phylax,* a sentinel.] Complement, or alexin present in specific serum.

phylaxis (fi-laks'is) [G. a guarding.] Protection against infection.

phylet'ic [G. *phyletikos,* belonging to a tribesman.] Relating to the successive organic modifications undergone during the process of evolution of the species; phylogenetic. phylogenic.

phyllamine (fil'ă-mēn) [G. *phyllon,* leaf, + *amine.*] A mixture of raw spinach juice and honey, claimed to improve the appetite and relieve certain forms of constipation, especially in children.

phyll'oclade [G. *phyllon,* leaf, + *klados,* stem.] Cladophyll.

phyll'ode [G. *phyllon,* leaf, + *eidos,* resemblance.] A flattened, leaf-like petiole.

phylloporphyrin (fil''o-por'fi-rin). A product of the decomposition of chlorophyll.

phyllosan (fil'o-san) [G. *phyllon,* leaf, + L. *sanare,* to heal.] Trade name of a preparation of chlorophyll, suggested for use as a hematopoietic in anemia.

phyllotax'is [G. *phyllon,* leaf, + *taxis,* arrangement.] In botany, the manner of arrangement of the leaves on a stem.

phylogenesis (fi-lo-jen'e-sis) [G. *phylē, phylon,* a tribe, + *genesis,* origin.] The evolutionary development of any plant or animal species; ancestral history of the individual as opposed to *ontogenesis,* or the development of the individual.

phylogenet'ic, phylogen'ic Relating to phylogenesis; phyletic.

phylogeny (fi-loj'en-ĭ). Phylogenesis.

phy'lum, pl. *phyla* [G. *phylon,* tribe] 1. One of the primary divisions of the animal or vegetable kingdom, such as the *Vertebrata* or the *Protozoa;* it is the division next below the *subkingdom* and above the *subphylum.* 2. The history of the evolution of a genus or species graphically represented.

phy'ma, pl. *phy'mata* [G. a tumor.] A nodule or small rounded tumor of the skin.

phymati'asis. Phymatiosis.

phymatio'sis [G. *phymation,* tubercle, + *-ōsis.*] Tuberculosis.

phy'matoid [G. *phyma,* a tumor, + *eidos,* resemblance.] Resembling a tumor.

phymator'rhysin [G. *phyma(phymat-),* tumor, + *rhysis,* a flowing.] A variety of melanin obtained from certain melanotic tumors and from hair and other heavily pigmented parts.

phymato'sis. The growth or the presence of phymata or small nodules in the skin.

physal'iform, physal'liform [G. *physalis,* bladder, bubble, + L. *forma,* form.] Like a bubble or small bleb.

physal'iphore [G. *physalis,* bladder, + *phoros,* bearer.] A brood cell, or giant cell containing a large vacuole, in a malignant growth.

phys'alis [G. a bladder.] A vacuole in a giant cell found in certain cancerous tumors.

Phys'alis. A genus of solanaceous herbs, several species of which are employed medicinally in the regions where they grow.

Physalop'tera [G. *physalis,* bladder, + *pteron,* wing.] A genus of round worms parasitic in many of the higher vertebrates. **P. caucas'ica,** a species found in man in Southern Russia. **P. mordens,** a species of Tropical Africa found in the esophagus, stomach, and intestine of man.

physiatrics (fiz-ĭ-at'riks) [G. *physis,* nature, + *iatrikos,* relating to a physician.] The use of natural forces in the treatment of disease, physiotherapy.

physic (fiz'ik) [G. *physikos,* natural.] 1. The art of medicine. 2. A medicine, especially a cathar-

tic; drugs in general. In'dian p., gillenia. p. nut, the seed of *Jatropha curcas*, which furnishes a purgative oil.

phys'ical. 1. Relating to the body, as distinguished from the mind. **p. diagno'sis,** diagnosis made by means of auscultation, percussion, palpation, and inspection. **p. signs,** the symptoms of disease appreciable by the methods of physical diagnosis. **p. ther'apy,** physiatrics.

physician (fi-zish'un) [Fr. *physicien*, a natural philosopher.] A practitioner of medicine, a medical man, a doctor, a person fitted by knowledge, and licensed by the proper authorities, to examine and treat the sick.

Phys'ick's opera'tion [Philip Syng *Physick*, Philadelphia surgeon, 1768–1837] Iridectomy with the formation of a circular opening. **P.'s pouch'es,** proctitis with mucous discharge and burning pain, involving especially the sacculations between the rectal valves. **P.'s tinc'ture,** a tonic mixture made by steeping gentian, orange-peel, ginger, and iron filings in cider.

physicochemical (fiz"i-ko-kem'i-kal). Relating to both physics and chemistry.

physics (fiz'iks) [G. *physika*.] The branch of science which deals with the phenomena of matter, with the changes which matter undergoes without losing its chemical identity.

physinosis (fiz-i-no'sis) [irregularly from G. *physikos*, physical, + *nosos*, disease] A disease caused by physical agents.

physiog'nomy [G. *physis*, nature, + *gnōmōn*, a judge.] 1. The countenance, especially regarded as an indication of the character. 2 The estimation of one's character and mental qualities by a study of the face and general bodily carriage.

physiological (fiz-i-o-loj'i-kal). 1. Relating to physiology. 2. Normal as opposed to pathological, noting the various vital processes. 3. Noting the action of a drug when given to a healthy person, as distinguished from its therapeutic action.

physiologicoanatomical (fiz-i-o-loj"i-ko-an-ă-tom'i-kal). Relating to both physiology and anatomy.

physiol'ogist. One having a special knowledge, or whose vocation is the study, of physiology

physiol'ogy [G. *physis*, nature, + *-logia*.] The science which deals with living things, with the normal vital processes of animal and vegetable organisms. **hom'inal p.,** p. as applied to the elucidation of the normal functions of the human being. **patholog'ical p.,** that part of the science of disease which treats of disordered function as distinguished from anatomical lesions.

physiomedical (fiz-i-o-med'i-kal). Noting the employment of physical rather than medicinal measures in the treatment of disease.

physiopathic (fiz-i-o-path'ik). Physiopathological; in neurology, noting a functional, nonpsychopathic affection.

physiopatholog'ical. Relating to physiopathology.

physiopathol'ogy [G. *physis*, nature, + *pathos*, suffering, + *-logia*.] Pathological physiology.

physiophyly (fiz-i-of'i-li) [G. *physis*, nature, + *phylē*, a tribe.] The branch of phylogenesis dealing with the evolutionary development of functions.

physiother'apy [G. *physis*, nature, + *therapeia*, treatment.] Physiatrics, the use of natural forces in the treatment of disease—electro-, hydro-, aero-, and mechano-therapy, massage, and therapeutic exercises. **P. technician,** see under *technician*.

physique (fi-zēk') [Fr.] The physical or bodily structure, the "build."

physocele (fi'so-sēl) [G. *physa*, a breath, + *kēlē* tumor, hernia.] 1. A gas tumor, a circumscribed swelling due to the presence of gas. 2 A hernial sac distended with gas.

physohematometra, physohæmatometra (fi"so-hemă-to-me'trah) [G. *physa*, breath, + *haima*, blood, + *mētra*, uterus.] Distention of the cavity of the uterus with blood and gas.

physohydrome'tra [G. *physa*, breath, + *hydōr* (*hydr-*), water, + *mētra*, uterus.] Distention of the cavity of the uterus with gas and a serous fluid

physome'tra [G. *physa*, breath, + *mētra*, uterus.] Distention of the uterine cavity with air or gas.

physopyosal'pinx [G. *physa*, breath, + *pyon*, pus, + *salpinx*, trumpet.] Pyosalpinx accompanied by a formation of gas in the tube.

physostig'ma [G. *physa*, bellows, + *stigma;* so called because of the shape of the stigma.] Physostig'matis sem'ina (Br.), Calabar bean, ordeal bean, the dried seed of *Physostigma venenosum*, a vine of western Africa; in poisonous doses it causes vomiting, colic, salivation, sweating, dyspnea, vertigo, slow pulse, and extreme prostration; therapeutically it is sometimes employed as an expectorant and for the relief of meteorism, in doses of gr. 1–1½ (0.06–0.09).

physostigmi'na. Physostigmine, eserine, an alkaloid of physostigma or Calabar bean. **physostigmi'næ salicy'las** (U.S., Br.), physostigmine salicylate, eserine salicylate; employed by conjunctival instillation to reduce intraocular tension in glaucoma, and hypodermically in doses of gr. $\frac{1}{150}$–$\frac{1}{100}$ (0.001–0.005) for the relief of meteorism **physostigmi'næ sul'phas** (Br.), physostigmine sulphate, eserine sulphate, a white odorless powder of bitter taste; employed for the same purposes as the salicylate.

physostig'mine. Eserine, physostigmina.*

phytal'bumose [G. *phyton*, plant] A vegetable albumose.

phytate (fi'tāt). See *phytin* (1).

phytin (fi'tin) [G. *phyton*, plant.] 1. A hydrocarbonated phosphoric acid, derived from various seeds and legumes, used in the form of salts (*phytates*) of calcium or magnesium in the treatment of rickets and malnutrition. 2. Trade name of a potassio-magnesium salt of an inosit-phosphoric acid, recommended as an appetizer and digestant, its action being said to be that of a powerful stimulatnt to the secretion of the gastric juice

phyto- [G. *phyton*, a plant.] A prefix signifying a plant or noting some relation to plants.

phytobezoar (fi-to-bez'ōr) [G. *phyton*, plant, + *bezoar*.] A gastric concretion formed of vegetable fibers, with the seeds and skins of fruits, and sometimes starch granules and fat globules.

phytocholesterol (fi-to-ko-les'ter-ol) [G. *phyton*, a plant.] Phytostearin, phytosterin, phytosterol.*

Phytoflagella'ta [G. *phyton*, plant.] A subclass of *Phytomastigophora* the members of which have yellow or green chromatophores.

phytogen'esis [G. *phyton*, plant, + *genesis*, production.] The origin or formation of plants.

phytogenet'ic, phytogen'ic. Relating to phytogenesis; of vegetable origin.

phytogenous (fi-toj'en-us). Phytogenetic.

phytogeny (fi-toj'en-i). Phytogenesis.

phy'toid [G. *phyton*, plant, + *eidos*, resemblance.] Resembling a plant, noting an animal having many of the biological characteristics of a vegetable.

phytolac'ca [G. *phyton*, plant, + L. *lacca*, lac.] (N.F.) The root of *Phytolacca decandra*, pokeroot, a common weed of eastern North America; formerly employed in rheumatism in doses of gr. 3–5 (0.2–0.3). Given in eclectic practice in the treatment of sore nipples, the sore mouth of nursing infants, in sore throat, and subinvolution of the uterus. **phytolac'cæ fruc'tus**, pokeberry, the fruit of *Phytolacca decandra*, at one time official in U.S.P., employed for the same purposes as the root.

phytolac'cin. A concentration product of phytolacca, employed in doses of gr. 1–3 (0.06–0.2).

phy'tolin. Trade name of a preparation of phytolacca, recommended in rheumatism and in obesity.

Phytomastigoph'ora [G. *phyton*, vegetable.] A class of the *Mastigophora* in which some plant characteristics are prominent.

Phytomonas[0] (fi-tom'o-nas). A genus of *Bacteriaceæ*, containing a large number of species, not pathogenic to man or animals, but causing many diseases in peas, beans, maize, and other vegetables and in flowering plants.

phytopar'asite [G. *phyton*, vegetable, + *parasitos*, parasite.] Any vegetable parasite, especially a pathogenic fungus or bacterium.

phytopathogen'ic. Causing disease in a plant.

phytopathol'ogy [G. *phyton*, vegetable, + *pathos*, suffering, + *-logia*.] 1. Vegetable pathology, the science of plant diseases. 2. Bacteriological pathology, the pathology of bacterial diseases.

phytoph'agous [G. *phyton*, plant, + *phagō*, I eat.] Plant-eating; vegetarian.

phy'toplasm [G. *phyton*, plant, + *plasma*, anything formed.] The protoplasm of vegetable cells.

phytoprecip'itin. A precipitin formed in response to the injection of a vegetable albumin.

phyto'sis. Any skin disease caused by the presence of a vegetable parasite.

phytostearin (fi-to-ste'ar-in) [G. *phyton*, plant, + *stear*, suet.] Phytosterol.

phytosterin (fi-tos'ter-in) [G. *phyton*, plant, + *steros*, solid.] Phytosterol.

phytosterol (fi-tos'ter-ol). Phytocholesterol, phytosterin, phytostearin, a vegetable fatty substance, resembling cholesterol, present in seeds and young shoots.

phytotox'in [G. *phyton*, a plant.] A toxin produced by one of the higher plants which resembles a bacterial toxin in its property of exciting the formation of antitoxin; abrin and ricin are examples of a phytotoxin.

phytotrichobezoar (fi-to-tri"ko-be'zor). Trichophytobezoar.

phytox'ylin [G. *phyton*, plant, + *xylon*, wood.] A substance similar to photoxylin and pyroxylin.

pi'a [L. fem. of *pius*, tender.] Pia mater.

pia-arachnitis (pe-ah-ar-ak-ni'(ne')tis). Piarachnitis.

pia-arachnoid (pe-ah-ar-ak'noyd). Piarachnoid.

pi'al. Relating to the pia mater.

pi'alyn [G. *piar*, fat, + *lyo*, I dissolve.] Lipase.

pia mater (pe'ah-mah'ter) [L. tender, affectionate mother.] A delicate fibrous membrane closely enveloping the brain and spinal cord. That covering the brain (*p. m. enceph'ali* [BNA]) follows exactly the outer markings of the cerebrum and also sends folds, telæ chorioideæ, into the ventricles; it invests the cerebellum but not so intimately as it does the cerebrum, not dipping down into all the smaller sulci. The spinal pia mater (*p. m. spina'lis* [BNA]) is thicker than that of the brain, being reinforced by a number of longitudinal fibers; it is firmly adherent to the cord and sends folds into the fissures; it also envelops the spinal nerves for a short distance.

piama'tral. Pial, relating to the pia mater.

pian (pe-an' or pi'an). Yaws.

pian'ist's cramp, pian'o-player's cramp. A professional neurosis affecting the muscles of the fingers and forearms in piano-players.

piantic (pi-an'tik) [G. *piantikos*, fattening.] Noting sensitized and readily agglutinative microorganisms, such as have been subjected to piantication.*

piantication (pi-an-ti-ka'shun) [G. *piantikos*, fattening.] Exaggerated sensitization of bacteria by subculturing already sensitized organisms.

piarachnitis (pi-ar-ak-ni'(ne')tis). Leptomeningitis, inflammation of the pia mater and arachnoid.

piarachnoid (pi-ar-ak'noyd). The pia mater and arachnoid seen as one membrane, meningina.

piarrhe'mia, piarrhæ'mia [G. *piar*, fat, + *haima*, blood.] Lipemia.

Piazza's test (pe-aht'sah). A test for tuberculosis through the reaction of the patient's urine when mixed with the serum of a rabbit or guinea-pig immunized by injection of Koch's old tuberculin. The reaction appears in two phases—a precipitate and a lytic one.

pi'ca [L. *pica*, magpie.] A depraved appetite, a longing for substances not fit for food, such as slate pencils, wood, and the like.

Picchini's syn'drome (pik-ke'ne). A form of polyorrhomeningitis involving the three great serosæ in contact with the diaphragm, sometimes also the meninges, tunica vaginalis testis, synovial sheaths, and bursæ, caused by the presence of a trypanosome.

pi'ceous [L. *piceus*.] Relating to or containing pitch.

pichi (pe'che). Fabiana.

Pick's disease' 1. [F. J. *Pick*, Prague dermatologist, 1834–1910.] Erythromelia. 2. [Friedel *Pick*, Prague physician, 1867–1926.] A disease marked by general hyaloserositis (sugar-coated pericarditis with a similar pleuritis and peritonitis), and by pseudocirrhosis, or congestive induration, of the liver.

pic'oline. A base obtained from tobacco smoke, and found also in coal-tar and other substances.

picraconitine (pik-ra-kon'i-tēn). A white amorphous powder, very bitter but not poisonous, obtained from aconitine by prolonged boiling; by further hydrolysis it is split up into benzoic acid and aconine.

picradon'idin. An amorphous glucoside of bitter taste, the active principle of adonis; employed as a substitute for digitalis in doses of gr. $\frac{1}{10}$–$\frac{1}{4}$ (0.006–0.015).

Picræna (pĭ-kre'nŭ). A genus of trees of the order *Simarubaceæ*, natives of tropical America. The wood of all the species is very bitter, quassia being obtained from *P. excelsa*.

picram'ic acid. A substance occurring in the form of minute red granules in the blood after poisoning with picric acid.

Picrasma (pĭ-kraz'mŭ). Picræna.

pic'rate. A salt of picric acid.

pic'ratol. Trade name for silver picrate or silver trinitrophenolate; soluble in 50 parts of water, and contains about 30 per cent. of silver.

pic'ric ac'id [G. *pikros*, bitter.] Trinitrophenol, carbazotic acid, $C_6H_2(NO_2)_3OH$, formed commercially by dropping phenol into fuming nitric acid; it occurs in the form of yellow crystals, of bitter taste, slightly soluble in water; it is sometimes used as an application in burns, eczema, erysipelas, and pruritus.

pic'rin [G. *pikros*, bitter.] A bitter substance obtained from digitalis, and used for the same purposes in doses of gr. ¼ (0.015).

picrocarmine (pik-ro-kar'mĭn or mēn). A stain made of carmine 1, ammonia 5, distilled water 50, aqueous solution of picric acid 50; used in histology.

picrofor'mal. A fixative made of a mixture of solutions of formal and picric acid.

picrogly'cion. Dulcamarin.

pic'rol. Potassium diiodoresorcinol-monosulphonate, an odorless, white crystalline powder employed as a substitute for iodoform.

picroni'grosin. An alcoholic solution of picric acid and aniline black, employed as a histological stain.

pic"ropodoph'yllin. An intensely bitter substance derived by treatment with ammonia from podophyllotoxin; laxative.

picropy'rine. A compound of picric acid and antipyrine, occurring in yellowish acicular crystals.

picrorrhi'za [G. *pikros*, bitter, + *rhiza*, root.] (B.A.) The rhizome of *Picrorrhiza kurroa*, nat. order, *Scrophulariaceæ;* antiperiodic, laxative, and tonic; employed in malaria and dyspepsia in doses of gr. 10–30 (0.6–2.0).

picroscle'rotine. A highly poisonous alkaloid obtained from ergot.

picrotox'in, picrotoxi'num [G. *pikros*, bitter, + *toxicon*, poison.] (Br.) A neutral principle derived from the fruit of *Anamirta paniculata*, cocculus indicus, fishberries; it occurs in colorless, odorless crystals of bitter taste; it has been employed in epilepsy and chorea in doses of gr. $\frac{1}{60}$–$\frac{1}{30}$ (0.001–0.003).

pie'bald skin. A condition of the skin in which it presents spots or patches of pigmentation or loss of pigment; vitiligo, leucoderma.

piedra (pe-a'drah) [Sp. a stone.] A disease of the hair characterized by the presence on the hairs of numerous, hard, nodular masses composed of fungous aggregations of *Trichosporon giganteum.* **p. nos'tras,** a condition similar to piedra, but affecting the hair of the beard. **p. ponso'na,** a snake-stone which enjoys some popular reputation in Mexico.

pier (pēr) [F. *pierre*, stone.] In dentistry, same as abutment.

Piersol's blad'der ex'it point (pēr'sol) [Georg A. *Piersol*, American physician, 1856–1924.] A slight elevation, the beginning of the crista urethralis, at the apex of the trigonum vesicæ.

piesesthesia (pi-es-es-the'zĭ-ă) [G. *piesis*, pressure, + *aisthēsis*, sensation.] Pressure sense, sensibility to pressure.

piesis (pi'ĕ-sis) [G. pressure.] Blood pressure.

piesometer, piesimeter (pi-ĕ-som'e-ter, pi-ĕ-sim'e-ter) [G. *piesis*, pressure, + *metron*, measure.] Piezometer, an instrument for measuring the degree of pressure of a gas or a fluid.

Pietrowski's reac'tion (pya-trov'ske). Biuret reaction; the peptones of the gastric juice give with Fehling's solution a characteristic rose-purple color.

piezometer (pi-ĕ-zom'e-ter) [G. *piezō*, I press, + *metron*, measure.] Piesometer.

Piffard's' paste [Henry G. *Piffard*, New York dermatologist, 1842–1910.] A paste made of sodium tartrate, 5, caustic soda, 2, and copper sulphate, 1.

pigeon-breast (pij'on brest). Pectus carinatum.

pig'ment [L *pigmentum; pingere*, to paint.] 1. Any organic coloring matter, as that of the red blood-cells, of the hair, of the iris, etc. 2. A stain for histological or bacteriological work. 3 A medicinal preparation for external use, applied to the skin like paint. **hematog'enous p.,** a p. derived from the hemoglobin of the red blood-corpuscles. **hepatog'enous p.,** bile p. derived from the destruction of hemoglobin in the liver.

pig'mentary. Relating to a pigment.

pigmenta'tion. Coloration, either normal or pathological, of the skin or tissues by a deposit of pigment. **extra'neous p.,** discoloration of the skin or tissues by a pigment introduced from without, as in argyria.*

pig'mented. Colored by a deposit of pigment.

pigmentol'ysin. An antibody causing destruction of pigment.

pigmen'tophag, pigmen'tophage [L. *pigmentum* + *phag(ocyte).*] Chromophag.

pigmen'tum ni'grum [L. black pigment.] The black pigment lining the chorioid coat of the eye.

pig'my. Pygmy.

Pignet's for'mula (pin-ya') [*Pignet*, French army surgeon, contemporary.] A standard of comparison of physical development: F = H − (C + W); F is the empirical factor, H the height in centimeters, C the chest girth in centimeters at maximum expiration and W the weight in kilograms; a man is classed as very strong when F is less than 10, strong between 10 and 15, good 15 to 20; medium 20 to 25; weak 25 to 30; very weak above 30; see *Black's* formula.*

piitis (pi-i'(e')tis). Inflammation of the pia mater.

pil. Abbreviation of L. *pilula*, pill.

pi'lar, pil'ary [L. *pila'ris; pilus*, a hair.] Relating to or covered with hair.

pilas'ter. An abnormally prominent linea aspera on the femur, the bone being convex anteriorly.

pila'tion [G. *pilus*, a hair.] A capillary fracture.

Pilcz re'flex (pilts) [Jan *Pilcz*, Polish neurologist, 1870–1931.] Change in the size of the pupils when one's attention is suddenly attracted to some object. **P. sign,** paradoxical pupil phenomenon.*

Pilcz-Westphal phenom'enon. See Westphal Pilcz.

pile. 1. [L. *pila*, pillar.] A series of plates of two different metals imposed alternately one on the other separated by a sheet of cloth or paper moistened with a dilute acid solution, used to produce a current of electricity. 2. [L. *pila*, ball.] An individual hemorrhoidal tumor. **sen'tinel p.,** a circumscribed thickening of the mucous membrane at the lower end of a fissure of the anus.

pi'leous [L. *pilus*, hair.] Hairy.

piles [L *pila*, a ball.] Hemorrhoids.

pi'leum [L. a cap] 1. One of the lateral masses or hemispheres of the cerebellum. 2. A caul a piece of amnion sometimes attached to the head of the child when born.

pi'leus [L. a cap.] 1. In botany, the cap on a sporocarp in certain fungi, bearing the hymenia. 2. A nipple-shield. **p. ventric'uli** [L. cap of the stomach], cap, the upper portion of the duodenum, duodenal bulb.

pi'li annula'ti [L. ringed hairs.] Trichonosus versicolor, leucotrichia annularis, ringed hair.*

pilig'anine. An alkaloid from *Lycopodium saururus* a plant of Argentine; the hydrochloride is purgative in doses of gr. ½–¼ (0.01–0.02).

pilimiction (pi-lĭ-mik'shun) [L. *pilus*, hair, + *mictio*, urination.] 1. The passage of hairs in the urine, as has been observed in cases of dermoid tumors. 2. The passage of threads of mucus in the urine.

pi'lin. Spongiopilin.

pill [L. *pilula;* dim. of *pila*, ball.] A small globular mass of some adherent but soluble substance, containing a medicinal substance to be swallowed. [For the official pills, see under *pilula.*] **Ander-**

son's p., Blaud's p., etc., see the proper names **Asiat'ic p.,** a p. containing arsenous acid, $\frac{1}{12}$ grain, with black pepper, $\frac{1}{4}$ grain. **blue p.,** massa hydrargyri. **bread p.,** a placebo made of bread crumb or other indifferent substance. **dinn'er pills,** pilulæ ad prandium. **enter'ic pills,** pills coated with some substance, usually salol, which will not dissolve in the stomach. **large p.,** bolus; ball (in veterinary practice). **small p.,** pellet, pillet, pillule, parvule, granule.

pill'ar [L. *pila.*] A structure or part having a resemblance to a column or pillar. **pillars of the diaphragm,** see *crus intermedium, crus laterale,* and *crus mediale.* **pillars of the fauces,** arcus palatini. **pillars of the fornix,** the anterior (*columna fornicis*) and posterior (*crus fornicis*) portions of the fornix in front of and behind the body.

pill'et. Pellet, a small pill.

pill'eum, pill'eus. Pileum, pileus.

pillion (pil'yon) [Gaelic *pill,* a cover.] 1. A saddle or a cushion behind the saddle for a second rider; hence 2. A temporary artificial leg.

pill-rolling (pil'rōl-ing). A circular movement of the opposed tips of the thumb and index-finger appearing as a form of tremor in paralysis agitans.

pilocar'pidine. A liquid alkaloid, $C_{10}H_{14}N_2O_2$, obtained from the leaves of *Pilocarpus jaborandi,*

pilocarpina, pilocarpine (pi-lo-kar-pi'nah, pi-lo-kar'-pēn). An alkaloid obtained from the leaves of pilocarpus, a syrupy liquid, diuretic, diaphoretic, and sialogogue in doses of gr. $\frac{1}{8}$–$\frac{1}{4}$ (0.008–0.015), and externally as a miotic and to stimulate the growth of the hair. **pilocarpi'næ hydrochlo'ridum** (U.S.), pilocarpine hydrochloride, colorless crystals of slightly bitter taste and no odor; dose, gr. $\frac{1}{8}$–$\frac{1}{2}$ (0.008–0.03); as a miotic in solution of gr. 1–4 to the ounce. **pilocarpi'næ ni'tras** (U.S., Br.), pilocarpine nitrate, in colorless, shining crystals or a white crystalline powder, soluble in water; uses and doses the same as those of pilocarpine hydrochloride. **pilocarpi'næ phe'nas,** aseptolin.

pilocar'pus [G. *pilos,* a hat, + *karpos,* fruit.] Jaborandi, jaborandi folia (Br.), the leaves of *Pilocarpus microphyllus* or of *P. jaborandi,* shrubs of the West Indies and tropical America; diaphoretic in doses of gr. 15–30 (1.0–2.0).

pilocerine (pi-los'er-ēn). An alkaloid from a species of cactus.

pilocys'tic [L. *pilus,* hair.] Noting a dermoid cyst containing hair.

pilomotor (pi-lo-mo'tor) [L. *pilus,* hair, + *motor,* mover.] Moving the hair, noting the arrectores* pilorum muscles of the skin.

piloni'dal [L. *pilus,* hair, + *nidus,* nest.] Noting a growth of hair in a dermoid cyst or other internal part. **p. fis'tula,** an anal or para-anal fistula due to the presence of a subcutaneous growth of hair.

pi'lose [L. *pilosus.*] Hairy, downy, furry, covered with hair.

pilosebaceous (pi"lo-se-ba'shyus) [L. *pilus,* hair, + *sebum,* suet.] Relating to the hair-follicles and sebaceous glands.

pilo'sis [L. *pilus,* hair.] Hirsuties, an excessive growth of hair, or growth of hair in an abnormal location.

pilula, gen. and pl. *pil'ulæ* (pil'u-lah) [L.] Pill, a small spherical, oval, or lenticular mass of some inert material (excipient) containing an active drug evenly incorporated with it; when the drug is bulky it may be made into a pill without an excipient. In the U.S.P. and N.F. the official pills are listed as *pilulæ* (pl.), in the B.P. as pilula (sing.); in the following list the letter *p* stands for either pilula or pilulæ, as the case may be.

p. ad pran'dium, dinner pills; under this title the N.F.IV, admitted three pills, viz, Chapman's, Cole's, and Hall's (see these names), but gave the preference to the Lady Webster, or p. aloes et mastiches (N.F.), when none was specified.

p. al'oes (U.S., Br.), pills of aloes; aloes and soap of each 13.0, to make 100 pills; dose 1 to 3 pills.

p. al'oes et asafœt'idæ (N.F., Br.), pill of aloes and asafetida; Socotrine aloes, asafetida, hard soap, confection of rose, each 1 ounce; dose gr. 4–8 (0.25–0.5) make into 2 to 4 pills; the N.F. prescribes 9 grams each of aloes, asafetida, and soap made into 100 pills; dose, 1 pill.

p. al'oes barbaden'sis (Br.), pill of Barbados aloes; Barbados aloes 2 ounces, soap 1 ounce, confection of rose 1 ounce, oil of caraway 1 fluidrachm; dose, gr. 4–8 (0.25–0.5) in 2 to 4 pills.

p. al'oes et fer'ri (N.F., Br.), pills of aloes and iron; aloes 7, dried ferrous sulphate 7, aromatic powder 7, confection of rose sufficient to make 100 pills (U.S.); dose, 1 to 3 pills; dried ferrous sulphate 1, Barbados aloes 2, compound cinnamon powder 3, glucose syrup 3 (Br); dose gr. 4–8 (0.25–0.5) in 2 to 4 pills.

p. al'oes et mas'tiches (N.F.), pills of aloes and mastic, Lady Webster's dinner pills; aloes 13, mastic 4, red rose 3, to make 100 pills; dose 1 to 3 pills.

p. al'oes et myr'rhæ (N.F., Br.), pills of aloes and myrrh, Rufus's pills; aloes 13, myrrh 6, aromatic powder 4, syrup sufficient to make 100 pills (U.S.); dose, 3 to 6 pills; Socotrine aloes 2, myrrh 1, syrup of glucose 1.5 (Br.); dose, gr. 4–8 (0.25–0.5) in 2 to 4 pills.

p. al'oes et podophyl'li compos'ita (N.F.), compound pills of aloes and podophyllum, Janeway's pills; purified aloes gr. 1 (0.06), resin of podophyllum gr. $\frac{1}{2}$ (0.03), extract of belladonna leaves and extract of nux vomica each gr. $\frac{1}{4}$ (0.015); laxative.

p. al'oes, hydrar'gyri et podophyl'li (N.F.), pills of aloes, mercury, and podophyllum, triplex pills, pilula triplex; aloes 13, mass of mercury 6.5, resin of podophyllum 1 6, to make 100 pills; dose, 1 pill.

p. al'oes, hydrar'gyri et scammo'nii compos'itæ, compound pills of aloes, mercury, and scammony, Francis' triplex pills; aloes 5.5, resin of scammony 5.5, mass of mercury 5 5, croton oil 0.32, oil of caraway 1.6, tincture of aloes and myrrh, to make 100 pills; dose 1 pill.

p. aloi'ni compos'itæ (N.F.), compound pills of aloin; aloin 3 25, resin of podophyllum 0 8, extract of belladonna leaves 1 6, to make 100 pills; dose, 1 pill.

p. aloi'ni, strychni'næ et belladon'næ (N.F.), pills of aloin, strychnine, and belladonna; aloin 1.3, strychnine 0 05, extract of belladonna leaves 0 8, to make 100 pills; dose, 1 pill.

p. aloi'ni, strychni'næ et belladon'næ compos'itæ (N.F.), compound pills of aloin, strychnine, and belladonna; aloin gr. $\frac{1}{8}$ (0.013), strychnine gr. $\frac{1}{150}$ (0.0005), extract of belladonna leaves gr. $\frac{1}{8}$ (0.008), extract of cascara sagrada gr. $\frac{1}{2}$ (0.03); laxative.

p. antidyspep'ticæ, antidyspeptic pills, strychnine gr. $\frac{1}{65}$ (0.0015), ipecac and extract of belladonna leaves each gr. $\frac{1}{15}$ (0.006), mass of mercury and compound extract of colocynth each gr. 2 (0.13).

p. antimo'nii compos'itæ, compound pills of antimony, Plummer's pills; sulphurated antimony 4; calomel 4, guaiac 8, castor oil q.s. to make 100 pills; dose, 1 pill; the same as p. hydrargyri subschloridi composita (Br.).

p. antineural'gica, antineuralgic pill; under this title the N.F. formerly admitted two pills, viz., Gross's and Brown-Séquard's (see these names).

p. antiperiod'icæ (N.F.), antiperiodic pills, Warburg's pills; extract of aloes gr. 1 (0 06), rhubarb and angelica each gr. $\frac{1}{2}$ (0.03), elecampane, fennel, and saffron each gr. $\frac{1}{4}$ (0 015), camphor, cubeb, myrrh, white agaric, and zedoary root each gr. $\frac{1}{8}$ (0 008), quinine sulphate $1\frac{1}{8}$ (0 084), in extract of gentian to make a pill dose, 1 to 3 pills; when specified *without aloes,* the same pill is made without the extract of aloes; this pill is the

equivalent of Warburg's tincture, tinctura antiperiodica.

p. antiperiod'icæ si'ne al'oe (N.F.), antiperiodic pills without aloes; see the preceding

p. asafœt'idæ (U.S.), pills of asafetida; asafetida 20, soap 6, to make 100 pills; dose, 1 to 3 pills.

p. asafœt'idæ compos'ita, p. galbani composita (Br.).

p. cambo'giæ compos'ita (Br.), compound pill of Gamboge; gamboge, Barbados aloes, compound cinnamon powder, each 1, soap 2, syrup of glucose 1; dose gr. 5–10 (0.3–0.6) in 1 to 2 pills.

p. cathar'ticæ compos'itæ, compound cathartic pills; p. hydrargyri chloridi mitis compositæ (U.S.).

p. cathar'ticæ vegetab'iles (N.F.), vegetable cathartic pills; compound extract of colocynth 60, extract of hyoscyamus 30, resin of jalap 20, extract of leptandra 15, resin of podophyllum 15, oil of peppermint 8, diluted alcohol q.s., to make 1000 pills; dose, 1 or 2 pills.

p. coc'ciæ, p. colocynthidis compositæ (N.F.).

p. colocyn'thidis compos'ita, compound colocynth pill, cochia pill, contains colocynth pulp 1, Barbados aloes 2, scammony resin 2, potassium sulphate ½, oil of cloves ½, distilled water q.s.; dose, gr. 4–7½ (0.25–0.5).

p. colocyn'thidis compos'itæ, compound pills of colocynth, p. coccıæ, pills; purified aloes and resin of scammony each 13, extract of colocynth 1.1, oil of clove 1.5, to make 100 pills; dose, 1 pill.

p. colocyn'thidis et hyoscy'ami (Br.), pill of colocynth and hyoscyamus; compound pill of colocynth 2, extract of hyoscyamus 1; dose, gr. 5–10 (0.3–0.6).

p. colocyn'thidis et hyoscy'ami (N.F.), pills of colocynth and hyoscyamus; purified aloes, resin of scammony, and extract of hyoscyamus each 9 7, extract of colocynth 0 65, oil of clove 1, to make 100 pills; dose, 1 pill as a cathartic.

p. colocyn'thidis et podophyl'li, pills of colocynth and podop yllum; compound extract of colocynth 16.2, resin of podophyllum 1.6, to make 100 pills; dose, 1 pill as a cathartic.

p. digita'lis, scil'læ et hydrar'gyri (N.F.), pills of digitalis, squill, and mercury, Niemeyer pills for dropsy, Guy's pills; digitalis, squill, and mass of mercury each 6 5, clarified honey sufficient to make 100 pills; dose, 1 pill.

p. fer'ri (Br.), iron pill, Blaud's pill, p. ferri carbonatis (U.S.); ferrous sulphate 150, sodium carbonate 95, acacia 50, tragacanth 15, syrup 150, glycerin 10, distilled water 20; dose, g.. 5–15 (0.3–1.0).

p. fer'ri carbona'tis (U.S., Br.), pills of ferrous carbonate p. ferri (Br. '14), iron pills, ferruginous pills, Blaud's pills; ferrous sulphate 16, potassium carbonate 8, sugar 4, tragacanth 1, althæa 1, glycerin and water of each q.s to make 100 pills; dose 1 to 6 pills.

p. fer'ri iod'idi (N.F.), pills of ferrous iodide, Blancard's pills; reduced iron 4, iodine 5, licorice 4, sugar 4, extract of licorice 1, acacia 1, balsam of tolu, water, ether of each q s. to make 100 pills; dose 2 to 6 pills.

p. fer'ri, quini'næ, al'oes et nu'cis vom'icæ (N.F.), pills of iron, quinine, aloes, and nux vomica, pilulæ quadruplices, quadruplex pills; dried ferrous sulphate, quinine sulphate, and aloes each 6 5, extract of nux vomica 1 6, extract of gentian sufficient to make 100 pills; dose, 1 pill as a tonic laxative.

p. fer'ri, quini'næ, strychni'næ et arse'ni fortio'res (N.F.), stronger pills of iron, quinine, strychnine, and arsenic, pilulæ metallorum amaræ, bitter metallic pills; reduced iron and quinine sulphate each 6 5, strychnine and arsenic trioxide each 0 32, clarified honey to make 100 pills; dose, 1 pill as a tonic.

p. fer'ri, quini'næ, strychni'næ et arse'ni mi'tes (N.F.), mild pills of iron, quinine, strychnine, and arsenic, Aitken tonic pills; reduced iron 4 5, quinine sulphate 6 5, strychnine and arsenic trioxide each 0 13, clarified honey to make 100 pills; dose, 1 pill as a tonic.

p. galba'ni compos'ita, compound pill of galbanum, compound pill of asafetida; galbanum, asafetida, and myrrh of each 2, syrup of glucose 1; employed in so-called functional neuroses in doses of gr. 5–15 (0.3–1.0).

p. glyceryl'is nitra'tis, pills of nitroglycerin, glonoin pills; spirit of glyceryl nitrate and althea each 6.5, confection of rose to make 100 pills; dose 1 pill as a vasodilator.

p. hydrar'gyri (Br.), pill of mercury, blue pill, massa hydrargyri (U.S.), mercury 2, confection of rose 3, licorice powder 1; dose, gr. 1–5 (0.06–0.3)

p. hydrar'gyri chlor'idi mi'tis compos'itæ (U.S.), compound pills of mild mercurous chloride, p. cathartıcæ compositæ (U.S. IX.); compound extract of colocynth 80, resin of jalap 20, calomel 60, gamboge 15, diluted alcohol q.s. to make 1000 pills; dose, 1 or 2 pills.

p. hydrar'gyri subchlo'ridi compos'ita (Br. '14), compound pill of mercurous chloride, compound pill of antimony, compound calomel pill, Plummer's pill; calomel 1 ounce, sulphurated antimony 1 ounce, resin of guaiac 2 ounces, castor oil 3 drachms, alcohol 1 fluidrachm; employed in rheumatism and for syphilides in doses of gr. 3–8 (0 2–0.5).

p. ipecacuan'hæ cum scil'la (Br. '14), pill of ipecac and squill; compound powder of ipecac 3, squill and ammoniac of each 1, treacle q.s.; employed as an expectorant in doses of gr. 5–10 (0.3–0.6).

p. ipecacuan'hæ cum urgin'ea (B.A.), pill of ipecac and urginea; the same as p. ipecacuanhæ cum scilla (Br.) with substitution of urginea; dose gr. 4–8 (0.25–0.5).

p. laxati'væ compos'itæ (N.F.), compound laxative pills, compound pills of aloin, belladonna, and strychnine; aloin 1.3, strychnine 0.05, extract of belladonna leaves 0.8, ipecac 0.4, licorice 4 6, syrup q.s. to make 100 pills; dose 1 or 2 pills.

p. laxati'væ post par'tum, laxative pills after confinement, Barker's postpartum pill; compound extract of colocynth gr. 1¾ (0.11), purified aloes gr. ⅝ (0.055), extract of nux vomica gr. 12 (0.025), extract of hyoscyamus gr. 1¼ (0.08), ipecac and resin of podophyllum each gr. 1¼ (0.005); laxative.

p. metallo'rum, metallic pills, p. ferri, quininæ strychiniæ et arsenı fortiores (N.F.) and mites (N.F.),

p. o'pii, pills of opium; powdered opium 6.5, soap 2, to make 100 pills; dose, 1 or 2 pills.

p. o'pii, digita s et qı in'n'æ (N.F.), pills of opium, digitalis, and quinine, Niemeyer pills for phthisis; opium 1, digitalis and quinine sulphate each 6 5, clarified, honey to make 100 pills; dose, 1 pill.

p. o'pii et campho'ræ (N.F.), pills of opium and camphor; opium gr. 1 (0 06), camphor gr. 2 (0.13); anodyne.

p. o'pii et plum'bi (N.F), pills of opium and lead; opium and lead acetate each gr. 1 (0.06); used in diarrhea.

p. phos'phori (U.S., Br. '14), phosphorus pills; phosphorus 0.06, althæa 6, acacia 3, chloroform, glycerin, ether, balsam of tolu, and water of each q.s. to make 100 pills (U.S.); phosphorus 1 gr., white beeswax and lard of each 12.5, kaolin 11.5, carbon disulphide 3.3 (Br.); dose 1 or 2 pills (U.S.), gr. 1–2 (0 06–0.13) (Br.).

p. plum'bi cum o'pio (Br. '14), pill of lead with opium; lead acetate 36, powdered opium 6, syrup of glucose 4; employed in diarrhea in doses of gr. 3–5 (0.2–0.3).

p. podophyl'li, belladon'næ et cap'sici, pills of podophyllum, belladonna and capsicum; resin of podophyllum 1.6, extract of belladonna leaves, 0.8, capsicum 3.2, sugar of milk 6.5, acacia 1.6, syrup and glycerin of each q.s. to make 100 pills; dose, 1 to 3 pills.

p. quad'ruplex, p. ferri, quininæ, aloes et nucis vomicæ (N.F.).

p. quat'uor [L. four], pill quatuor, pilula quadruplex.

p. quini'næ sulpha'tis (Br. '14.), pill of quinine sulphate; quinine sulphate 30, tartaric acid 1, tragacanth glycerin 4; dose, gr. 5–30 (0.3–2.0).

p. rhe'i (N.F). pills of rhubarb; rhubarb 20, soap 6, to make 100 pills dose, 1 pill.

p. rhe'i compos'itæ (N.F.), **p. rhe'i compos'ita** (Br.), compound pills of rhubarb, compound rhubarb pill; rhubarb 13, aloes 10, myrrh 6, oil of peppermint 0.5, to make 100 pills (U.S.); rhubarb 48, Socotrine aloes 36, myrrh 24, hard soap 24, oil of peppermint 3, syrup of glucose 44 (Br.); dose, 1 to 4 pills (U.S.), gr. 4–8 (0.25–0.5) (Br.).

p. sapo'nis compos'ita (Br. 14.), compound soap pill; opium powder 1, hard soap 3, syrup of glucose 1; dose, gr. 4–8 (0.25–0.5).

p. scammo'nii compos'ita (Br. '14), compound scammony pill; resin of scammony, resin of jalap, soap of each 1, tincture of ginger 3; purgative in doses of gr. 3–5 (0.2–0 3).

p. scil'læ compos'ita (Br. '14), compound squill pill; squill 5, ginger, ammoniac, hard soap, syrup of glucose of each 4; expectorant in doses of gr. 4–8 (0.25–0.5).

p. tri'plex, p. aloes, hydrargyri et podophylli (N.F.).

p. tri'plex, Fran'cis, p. aloes, hydrargyri et scammonii compositæ.

p. urgin'eæ compos'ita (B.A.), compound pill of urginea; resembles p. scillæ composita (Br.), with the substitution of urginea for squill; dose, gr. 4–8 (0.25–0.5).

pil'ular. Relating to a pill. **p. consis'tency,** noting the consistency which will permit a mass to be rolled into a pill and retain its shape. **p. mass,** any soft solid drug mass which is of the proper consistency to be made into pills.

pil'ule. A small pill, pillet, pellet

pi'lus, gen. and nom. pl. *pi'li*, gen. pl. *pilo'rum* [L.] Hair, one of the fine, thread-like appendages of the skin, covering more or less thickly the entire body, except the palms and soles and the flexor surfaces of the joints. A hair consists of *radix* or root, embedded in the hair follicle, and a free portion, *scapus*, stem or shaft.

pimelitis (pi-mĕ-li'(le')tis) [G. *pimelē*, fat, + *-itis*.] Inflammation of adipose tissue.

pimeloma (pi-mĕ-lo'mah) [G. *pimelē*, fat, + *-ōma*.] Lipoma.

pimelopterygium (pi-mĕ-lo-ter-ij'ĭ-um) [G. *pimelē*, fat, + *pteryx(pteryg-)*, wing.] A pterygium containing fat, composed in part of fatty tissue.

pimelorrhea (pi-mĕ-lŏ-re'ah) [G. *pimelē*, fat, + *rhoia*, a flux.] Fatty diarrhea.

pimelorthopne'a, pimelorthopnœ'a [G. *pimelē*, fat, + *orthos*, straight, + *pnoē*, breath.] Orthopnea, or difficulty in breathing in any but the erect posture, owing to excessive adiposity.

pimelo'sis [G. *pimelē*, fat, + *-ōsis*.] 1. Adiposity, obesity, lipomatosis. 2. Fatty degeneration.

pimelu'ria [G. *pimelē*, fat, + *ouron*, urine.] The passage of fat globules in the urine, lipuria.

pimen'ta (N.F., Br.). Pimento, allspice; the dried fruit of *Pimenta officinalis*, a tree native in Jamaica and other parts of tropical America, employed as a carminative and corrective in doses of gr. 10–30 (0.6–2.0).

pimpinel'la. Pimpernel, the rhizome and root of *Pimpinella saxifraga*, burnet saxifrage: carminative, diuretic, and emmenagogue, in doses of gr. 15 (1.0).

pimple (pim'pl). A papule or small pustule.

pinac'oline. A yellowish liquid of peppermint odor, obtained from acetone.

Pinard's sign (pe-nar') [Adolphe *Pinard*, French obstetrician, *1844.] Pain on pressure over the fundus uteri toward the end of pregnancy, said to denote a breech presentation.

pincement (pañs-mon') [Fr. pinching.] A pinching manipulation in massage

pin'cers. The median deciduous incisor teeth of the horse, two in number.

pine. See *Pinus*.

pineal (pin'e-al) [G. *pineus*, relating to the pine.] Shaped like or relating to a pine-cone. **p. body, p. gland,** conarium, epiphysis cerebri, corpus* pineale [BNA]. **p. habe'na, p. haben'ula,** the peduncle of the corpus pineale. **p. recess',** recessus pinealis of the third ventricle, dividing the habenula into two parts. **p. stria,** stria medullaris, a bundle of white fibers from the hippocampus and the basal optic ganglion passing to the habenula of the corpus pineale.

pinealectomy (pin-ĭ-al-ek'to-mĭ) [pineal body + G. *ektomē* excision.] Removal of the pineal body.

pinealoma (pin-e-al-o'mŭ). A tumor of the pineal gland.

pineapple (pīn'ap-l). The fruit of *Ananas sativa*, or *Bromelia ananas;* it contains a proteolytic enzyme, *bromelin* which is closely related to trypsin. **p. test,** for butyric acid in the stomach; if a few drops of strong sulphuric acid and alcohol are added to a dried ethereal extract of the gastric juice, a pineapple odor (ethyl butyrate) will be given off if butyric acid was present.

Pinel's sys'tem (pe-nel') [Philippe *Pinel*, Parisian alienist, 1745–1826.] The abolition of forcible restraint in the management of the insane.

pi'nene. A volatile oil derived chiefly from turpentine oil, dextropinene from the American and levopinene from the French oil.

pi'neoline. Trade name of a pine-needle extract, employed in dermatology.

pinguecula (pin-gwek'u-lah) [L. *pinguis*, fat.] [BNA]. A yellowish spot sometimes observed on either side of the cornea in the aged; it is a connective-tissue (not fatty) thickening of the conjunctiva.

pin'iform [L. *pinus*, pine, + *forma*, form.] Pineal, shaped like a pine-cone.

pink-eye. Acute contagious conjunctivitis.*

Pinkus's disease' (pin'koos) [Felix *Pinkus*, German dermatologist, *1868.] Lichen nitidus.

pin'na [L. wing.] The external ear exclusive of the meatus; auricle, concha, auricula (1) [BNA]. **p. nasi,** ala nasi.

pinn'al. Relating to the pinna, auricular.

pinn'ate [L. *pinna*, feather.] In botany, noting a leaf which is decidedly longer than it is broad.

pinnat'ifid [*pinnate* + L. *findere*, to cleave.] In botany, noting a pinnate leaf with the blade cut about half way in toward the midrib.

pi'nol. A volatile oil obtained from the needles of *Pinus pumilio*, a dwarf pine of the Alps, Appenines, and Carpathian mountains.

pino'leum [L. *pinus*, pine, + *oleum*, oil.] The trade name of a preparation said to contain menthol, camphor, oil of eucalyptus, oil of Ceylon cinnamon, and pine-needle oil in liquid petroleum; employed locally in catarrhs of the respiratory mucous membranes.

pinother'apy [G. *peina*, hunger, + *therapeia*, treatment] Hunger-cure, nestotherapy, nestitherapy, limotherapy.

Pins's syn'drome [*Pins*, Austrian physician, 1845–1913.] Dulness, diminution of vocal fremitus and of the vesicular murmur, and a slight distant blowing sound, heard in the postero-inferior region of the chest on the left side, in cases of pericardial effusion; there is sometimes also a fine râle in this region, but all the adventitious auscultatory signs disappear when the patient assumes the genupectoral position.

pint (pīnt). A measure of quantity, containing 16 fluidounces, 28.875 cubic inches. **impe'rial p.,** contains 20 fluidounces, 34.659 cubic inches.

pin'ta [Sp. spot, blemish.] A disease of the skin, endemic in tropical South America, marked by an eruption, chiefly on the face and other exposed parts, of patches of varying color, finally becoming white through destruction of the pigment layer of the skin. It is due to the presence of one of several fungi of the genera *Aspergillus*, *Penicillium*, *Monilia*, and *Montoyella*.

pi'nus [L.] 1. [from its fancied resemblance to a pine-cone] Corpus* pineale [BNA], pineal gland. 2. Pine. **p. al'ba** (N.F.), white pine bark, the dried inner bark of *P. strobus;* dose, gr.

30 (2.0); two syrups are official in the N.F. under the title syrupus pini strobi. **p. canadensis,** the bark of red pine, *Pinus resinosa*, employed in eclectic practice in atonic catarrhal conditions of the mucous membranes with cough or diarrhea, in doses of 2–4 drops of the specific medicine in water every hour or two.

Pi'nus [L.] A genus of evergreen coniferous trees yielding tar, turpentine, resin, and volatile oils **P. palus'tris,** long-leaved pine, brown pine, one of the sources of pix liquida. **p. resino'sa,** red pine employed in eclectic practice under the title, *pinus canadensis*. **P. stro'bus,** white pine, the inner bark of which (pinus alba, N.F.) is credited with expectorant properties, being one of the ingredients of the compound syrup of white pine, syrupus* pini strobi compositus.

pin'worm. Oxyuris.

pioepithelium (pi"o-ep-ĭ-the'lĭ-um). Fatty degenerated epithelium, or any epithelium containing fat globules.

pione'mia, pionæ'mia [G. *piōn* fat, + *haima*.] Lipemia.

Piorkowski's stain for metachromatic granules (pyor-kov'ski) [Max *Piorkowski*, German bacteriologist, *1859.] Stain with alkaline methylene-blue, slightly heating; decolorize in alcohol containing 3 p.c. hydrochloric acid, and then stain in 1 p.c. solution of aqueous eosin. **P.'s u'rine-gel'atin,** a culture medium made from stale urine, peptone, and gelatin, used in the differentiation by culture of the typhoid bacillus.

piorthopne'a, piorthopnœ'a [G. *piōn*, fat, + *orthos*, straight, + *pnoē*, breath.] Pimelorthopnea, difficulty in breathing in any but the erect posture, owing to excessive obesity.

Piotrowski' sign (pe-o-trov'ske) [Alex. *Piotrowski*, Berlin neurologist, *1878.] Plantar flexion of the foot, caused by contraction of the gastrocnemius, following a tap on the anterior tibial muscle between the tuberosity of the tibia and the head of the fibula, occurring in spastic conditions.

pi'per (N.F.). Black pepper, the dried unripe fruit of *Piper nigrum*, a climbing plant of the East Indies; employed as a stimulant and carminative, in doses of gr. 5–20 (0.3–1.3), and locally as a counterirritant. **p. methys'ticum,** kava, methysticum, employed in eclectic practice for the relief of irritation of the genito-urinary tract and as an appetizer in doses of 10–30 drops of the specific medicine in water every 3 to 6 hours.

piperazin (pi-per-az'in). Piperazidin, ethyleneimine, pyrazin hexahydride; a crystalline substance obtained from ethylene chloride or ethylene bromide by the action of ammonia; employed in the treatment of uric-acid gravel and in gout in doses of gr. 15–30 (1.0–2.0) a day. **p. quin'ate,** sidonal, a white powder employed as a uric-acid solvent in doses of gr. 15–20 (1.0–1.3).

pi'peridine. A derivative of piperine. **p. guai'acolate,** guaiaperol.

piperina, piperine (pi-per-i'nah, pi'per-ēn). A feebly basic principle obtained from black pepper; employed as a tonic and antiperiodic in doses of gr. 3–5 (0.2–0.3).

pipero'vatine. An alkaloidal body, $C_{16}H_{21}NO_2$, allied to piperine, derived from the leaves of *Piper ovatum*, a West Indian plant.

pipette' [Fr. dim. of *pipe*, pipe.] A tube used to transport small amounts of a gas or liquid in laboratory work.

pipitzahoic acid (pĭ-pit-zah-ho'ik as'id). Perezon.

pipsis'sewa [N.A. Indian name.] Chimaphila.

pir'iform [L *pirum*, pear, + *forma*, form.] Pear-shaped.

pirifor'mis. See under *musculus*.

Pirogoff's amputa'tion (pe-raw'gawf) [Nikolai Ivanovich *Pirogoff*, Moscow surgeon, 1810–1881.] Amputation of the foot, the lower articular surfaces of the tibia and fibula being sawn through and the ends covered with a portion of the os calcis which has also been sawn through from above posteriorly downward and forward; see cut under *amputation*. **P.'s angle,** venous angle.

Piroplas'ma [L. *pirum*, pear, + G. *plasma*, a thing formed.] *Babesia*, a genus of *Sporozoa* of the subclass *Hæmosporidia;* many of the species are parasitic in the blood of the domestic animals. **P. bigem'inum,** the cause of redwater fever in cattle. **P. donovan'i,** a name sometimes given to the Leishman*-Donovan body. **P. hom'inis,** the assumed parasitic cause of Rocky Mountain tick fever. **P. mutans,** a species of indeterminate pathogenicity. **P. ovis,** the protozoan parasite causing heart-water in sheep; it is transmitted by a tick, *Rhipicephalus bursa*. **P. parvum,** *Theileria parva*, the parasite of east-coast fever, or Rhodesian redwater fever, a cattle disease in East Africa, differing in several respects from the redwater fever of Texas.

piroplasmo'sis. Any infectious disease due to the presence in the red blood corpuscles of an animal parasite of the genus *Piroplasma*.

Pirquet's test (pēr-ket') [Clemens von *Pirquet*, Vienna physician, 1874–1929.] A test for the presence of tuberculosis, especially in children, by means of the cutireaction.*

piscid'ia [L. *piscis*, fish, + *cædera*, to kill.] The bark of the root of Jamaica or white dogwood, *Piscidia erythrina*, a tree of Jamaica, Cuba, and southern Florida; employed as an anodyne in doses of gr. 5–8 (0.3–0.5).

pis'cidin. A neutral body, $C_{29}H_{24}O_8$, obtained from piscidia.

pisiform (piz'ĭ-form) [L. *pisum*, pea, + *forma*, appearance. Pea-shaped or pea-sized. **p. bone,** os pisiforme.

pis'til [L. *pistillum*.] The female part of a flower, consisting of the ovary and stigma, with or without a style.

pit [L. *puteus*.] 1. Any natural depression on the surface of the body, as the armpit or axilla. 2. A dimple; one of the pinhead-sized, depressed scars following the pustule of smallpox, pockmark. 3. A sharp-pointed depression in the enamel surface of a tooth. 4. To indent, as by pressure of the finger on the edematous skin; to become indented, said of the edematous tissues when pressure is made with the finger-tip **au'ditory p.,** a depression in the head of the embryo marking the location of the future labyrinth. **p. of the stomach,** scrobiculus cordis, the depression in the epigastrium just below the xiphoid cartilage.

pitch [L. *pix*.] A resinous substance obtained from tar after the volatile substances have been expelled by boiling. See *pix*.

pitch'blende. Uraninite, a substance of pitch-like appearance chiefly uranium oxide, the main source of radium.

Pit'field's meth'od. See *Smith-Pitfield*.

pitglan'din. Trade name of an extract of the anterior lobe of the pituitary body; tethelin.

pith [A.S. *pitha*.] 1. The medulla or light, cellular, central mass of the stems of plants. 2. The center of a hair. 3. The spinal cord and medulla oblongata. 4 To pierce the medulla of an

animal by a knife introduced at the base of the skull.

pithecoid (pith'e-koyd) [G. *pithēkos*, ape, + *eidos*, resemblance.] Resembling an ape. **p. id'iot**, one having an ape-like formation of the face. **p. the'ory**, the theory of man's descent with the ape from a common ancestor.

pithiat'ic. Relating to pithiatism, pithiatric.

pithiatism (pĭ-thi'ă-tizm) [G. *peithō*, I persuade, + *iatos*, curable.] 1. A morbid condition curable by suggestion. 2. The treatment of disease by suggestion.

pithiatric (pith-ĭ-at'rik) [G. *pithanos*, persuasive, + *iatrikos*, relating to medical treatment.] Curable by persuasion or suggestion, referring to the class of hysterical symptoms which can be made to disappear or be reproduced by means of suggestion

pith'ode [G. *pithos*, a spheroidal earthenware vessel, + *eidos*, resemblance.] The nuclear spindle in caryocinesis.

Pit'kin's solu'tion [George P. *Pitkin*, American surgeon, *1885.] A solution of novocaine and strychnine sulphate in alcohol, for use in spinal anesthesia; called also spinocaine.

pitocin (pĭ-to'sin). Trade name of an aqueous solution of the oxytocic principle of the posterior lobe of the hypophysis; see *pitressin*.

Pitres's sections (pētr) [Albert *Pitres*, Bordeaux physician, 1848–1928.] A series of six coronal sections made through the brain for the purpose of studying this organ. **P.'s sign**, (1) the axis of the sternum is marked on the chest wall, then a string is stretched between the center of the sternal notch and the symphysis pubis; normally this line coincides with the line of the sternal axis; if it does not, in cases of pleurisy, the angle which it forms with the sternal line indicates the degree of pleural effusion in the chest; (2) haphalgesia; (3) diminished sensation in the testicles and scrotum in tabes dorsalis.

pitressin (pĭ-tres'sin). An aqueous solution of the posterior lobe of the hypophysis, recommended to raise the blood pressure, impart tone to the musculature of the bladder and intestine, and reduce the urinary secretion in diabetes insipidus; see *pitocin*.

pituglandol (pit-u-glan'dol). An extract of the infundibular portion of the hypophysis cerebri.

pituita (pit-u-i'tah) [L.] A thick, nasal secretion, glairy mucus

pituitarium (pit-u-ĭ-ta'rĭ-um) (U.S.). Pituitary (2), hypophysis sicca (U.S. IX); the cleaned, dried, and powdered posterior lobe obtained from the pituitary body of domesticated animals which are used for food by man; it occurs as a yellowish or grayish amorphous powder, having a characteristic odor, and only partially soluble in water; oxytocic and vasoconstrictor in doses of gr. ½–1 (0.03–0.06).

pituitary (pit-u'ĭ-ta-rĭ). 1. Relating to pituita or glairy mucus. 2. Pituitarium (U.S.). **p. body, p. gland** [so called because it was formerly supposed to secrete the nasal mucus], hypophysis cerebri; Collina's term for the anterior, or epithelial, lobe only of the hypophysis; see *processus infundibuli*. **p. ex'tract**, a number of proprietary extracts, for obstetrical or surgical use, are made from the posterior lobe; most of them differ in strength from the official liquor pituitarii. **p. solu'tion**, liquor pituitarii (U.S.).

pituitol (pit-u'ĭ-tol). Trade name of a pituitary extract from 3 to 6 times the strength of the official liquor pituitarii.

pitu'itous. Pituitary, relating to pituita

pituitotrope (pit-u'ĭ-to-trōp). A person with a pituitotropic endocrine constitution.

pituitotropic (pit-u-ĭ-to-trop'ik). Relating to or marked by pituitotropism.

pituitotropism (pit-u-ĭ-tot'ro-pizm) [*pituitary*, gland, + G. *tropos*, a turning.] A type of endocrine constitution in which the pituitary gland exercises a dominating influence.

pituitrin (pit-u'ĭ-trin). Trade name of an oxytocic extract of the posterior lobe of the pituitary body, three times the strength of the official liquor pituitarii. **p. S.**, a pituitary extract for surgical uses, six times the strength of the official liquor pituitarii.

pit'urine. A liquid alkaloid, $C_{12}H_{16}N_2$, resembling nicotine, obtained from pituri, the leaves of *Duboisea hopwoodii*, used by the Australian aborigines in the same way as tobacco.

pityriasic (pit"ĭ-ri-as'ik). Relating to or suffering from pityriasis.

pityriasis (pit"ĭ-ri'a-sis) [G. *pityra*, bran.] A dermatosis marked by branny desquamation. **p. al'ba atroph'icans**, atrophoderma albidum. **p. cap'itis**, dermatitis seborrhoica of the scalp. **p. circina'ta**, an acute affection marked by a red scaly eruption, with slight fever of short duration. **p. licheno'des**, maculopapular erythrodermia. **p. lin'guæ**, geographical tongue. **p. macula'ta**, p. circinata. **p. margina'ta**, a parasitic scaly eruption **p. nos'tras**, tinea nodosa. **p. pila'ris**, (1) keratosis pilaris; (2) p rubra pilaris. **p. ro'sea**, an eruption of patches of varying size, of a pink color covered with whitish scales; this is the *macular* form; in the *circinate* form the patches tend to increase in size peripherally while clearing in the center. **p. ru'bra**, dermatitis exfoliativa, a generalized red dermatitis marked by branny desquamation. **p. ru'bra pila'ris**, lichen ruber, lichen psoriasis, an eruption of papules surrounding the hair follicles, each papule pierced by a hair, and tipped with a horny, more or less greasy scale. **p. sim'plex**, seborrhea simplex. **p. versic'olor**, tinea versicolor, chromophytosis.

pityroid (pit'ĭ-royd) [G. *pityra*, bran, + *eidos*, resemblance.] Branny, scaly, furfuraceous.

Pityrosporum (pit-ĭ-ros'paw-rum) [G. *pityra*, bran, + *sporos*, seed.] A genus of fungi found in pityriasis capitis, p. alba, and seborrhea in children.

pivot-crown (pĭv'ot-krown). In dentistry an artificial tooth crown fastened by means of a pivot or post inserted into the root canal of the natural tooth.

pivot-joint (piv'ot-joynt). Articulatio trochoidea.

pix, gen. *pi'cis* [L.] Pitch. **p. burgun'dica** (Br.), Burgundy pitch, white pitch, a resinous exudation from the spruce fir or Norway spruce, *Picea excelsa;* employed as a counterirritant in the form of a plaster. **p. canaden'sis**, Canada or hemlock pitch, a resinous exudation from the hemlock *Tsuga canadensis;* sometimes employed as a substitute for p. burgundica. **p. carbo'nis** (N.F.), p. lithanthracis, coal tar, a side product in the manufacture of illuminating gas, a very dark semisolid of characteristic naphthalene-like odor and a sharp burning taste. **p. carbo'nis præpara'ta** (Br.), prepared coal-tar, prepared by heating in a shallow vessel for one hour at 120° F.; used in the preparation of liquor picis carbonis (Br.). **p. liq'uida** (Br.), tar, p. pini (U.S.). **p. lithan'thracis**, p. carbonis (N.F.). **p. pi'ni** (U.S.), pine tar, p. liquida (Br.), obtained by the destructive distillation

of the wood of *Pinus palustris* and other species of pine; employed internally as an expectorant, in doses of gr. 1–3 (0.06–0.2), and externally in the treatment of various skin diseases.

pix'ol. Trade name a of dark brown syrupy liquid obtained by warming 3 parts of pix liquida with 1 part of green soap and adding 3 parts of a 10 per cent. potassium hydroxide solution; employed as an antiseptic as a substitute for phenol.

P.L. Abbreviation for perception of light.

place'bo [L. I will please.] An indifferent substance, in the form of a medicine, given for the moral or suggestive effect.

placen'ta [L. a cake.] 1. The organ of communication between the fetus and the mother; it is formed from the outer layer of the fetal envelopes or chorion, and is of flat circular form, about the size of a soup-plate, or seven inches in diameter. The fetal surface is smooth and from it proceeds the umbilical cord; the maternal surface is marked by a number of lobules, or *cotyledons* which project into sinuses in the wall of the uterus being there bathed in the maternal blood; by this means the fetal blood receives oxygen and nutriment and gives up waste material, the placenta therefore performing the functions of respiration, nutrition, and excretion. After the expulsion of the child the placenta is called the *after-birth*. 2. An enlarged spleen, a clot, or other body having a resemblance to a placenta. 3. In botany, the sporophore, the part of the ovary of a plant which contains the ovules. **abla'tio placen'tæ, abrup'tio placen'tæ,** premature detachment of a normally situated placenta. **access'ory p.,** a mass of placental tissue distinct from the main placenta and sometimes at quite a distance from it. **ann'ular p.,** one in the form of a band encircling more or less completely the interior of the uterus. **batt'ledore p.,** one in which the funis is attached at the border. **fe'tal p.,** the portion composed of the chorion which contains the blood-vessels of the fetus. **horse'shoe p.,** an exaggerated p. reniformis curved in the form of a horseshoe. **mater'nal p.,** the thin membrane lining the p., formed of the decidua serotina. **p. accre'ta,** one attached directly to the muscular wall of the uterus, the mucous layer being absent **p. bilo'ba,** a p. duplex in which the two parts are separated by a constriction. **p. biparti'ta,** p. biloba. **p. circumvalla'ta,** a cupshaped placenta with raised edges; see *p. reflexa*. **p. dimidia'ta** [L. *dimidiare*, to divide into halves], p. duplex. **p. du'plex,** one consisting of two parts, almost entirely detached, being united only at the point of attachment of the cord. **p. febri'lis,** the enlarged spleen in chronic malaria. **p. fenestra'ta,** one in which there are areas of thinning, sometimes extending to entire absence of placental tissue. **p. feta'lis, p. fœta'lis** [BNA], fetal p., the chorionic portion of the p., containing the fetal blood-vessels. **p. incre'ta,** a form of p. accreta in which the chorionic villi invade the myometrium. **p. margina'ta,** a p. with raised edges, less pronounced than the p. circumvallata, see *p. reflexa*. **p. membrana'cea,** a thin placenta covering most of the inner surface of the uterus, due to failure of the chorion læve to atrophy. **p. multilo'ba,** a p. having more than three lobes separated from each other by simple constrictions, the fetus being single. **p. pandurafor'mis** [L. *pandura*, a three-stringed musical instrument], a form of p. dimidiata with the two halves placed side by side in the shape of a violin. **p. præ'via, p. pre'via** [L. *prævius*, leading the way], the condition in which the p. is implanted in the lower segment of the uterus obstructing the os more or less completely. **p. præ'via centra'lis,** that form in which the center of the p. corresponds to the os uteri. **p. præ'via margina'lis,** a form in which the p. comes just to, but does not occlude the os. **p. præ'via partia'lis,** a form in which the os, when fully dilated, is only partly covered by the p. **p. reflex'a,** an anomaly of the p. resulting from the abnormal proliferation of the decidua reflexa; it is manifested as p. circumvallata or p. marginata. **p. renifor'mis,** a kidney-shaped placenta. **p. san'guinis,** blood-clot. **p. spu'ria,** a mass of placental tissue which has no vascular connection with the fetus. **p. succenturia'ta,** an accessory p. **p. tri'loba,** a p. tripartita in which the three parts form one mass separated by more or less deep constrictions. **p. tripartí'ta,** a p. consisting of three parts, entirely separate or joined together, the fetus being single. **p. tri'plex,** p tripartita. **p. velamento'sa,** a form in which the umbilical vessels spread out in the chorion, entering the p. as independent vessels. **stu'dent's p.,** a retained placenta in a case of labor that has not been properly managed. **zo'nary p.,** annular p.

placen'tal. Relating to the placenta.

placenta'tion. The mode of attachment of the placenta.

placentin (plă-sen'tin). A placental extract employed in the cutireaction test for pregnancy.

placentitis (plă-sen-ti'(te')tis) [L. *placenta* + G. *-itis*.] Placuntitis.

placentol'ysin. Syncytiolysin.

placento'ma. Placuntoma.

placentother'apy [G. *therapeia*, treatment.] The therapeutic use of an extract of placental tissue

Placido's disc (plah-se'do) [G. *Placido*, Portuguese oculist, contemporary.] A disc marked with alternate black and white circles, employed as a keratoscope.

placuntitis (plă-kun-ti'(te')tis) [G. *plakous*(*plakount*-), a flat cake (placenta), + *-itis*.] Inflammation of the placenta.

placunto'ma [G. *plakous*(*plakount*-), a flat cake (placenta), + *-ōma*.] A tumor originating in a portion of a retained placenta.

pla"giocephal'ic. Relating to or marked by plagiocephaly.

pladaro'ma, pladaro'sis [G. *pladaros*, flaccid, + *-ōma*.] A soft wart-like growth on the eyelid.

pla"gioceph'alism. Plagiocephaly.

pla"gioceph'alous. Plagiocephalic.

plagiocephaly (pla"jĭ-o-sef'ă-lĭ) [G. *plagios*, oblique, + *kephalē*, head.] A deformity marked by an obliquity of the skull, one side being more developed anteriorly, the other side posteriorly.

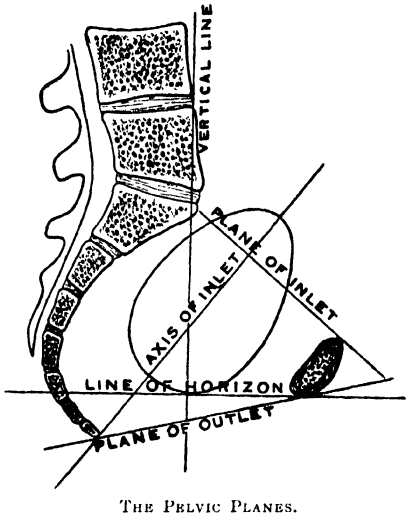
plague (plāg) [L. *plaga*, pestilence.] 1. Any disease of wide prevalence or of excessive mortality. 2. Pest, black death; an acute infectious disease caused by *Pasteurella pestis;* it is marked clinically by high fever, toxemia, prostration, a petechial eruption, and glandular swellings, pneumonia, or hemorrhage from the mucous membranes; it is primarily a disease of rodents and is transmitted to man by fleas which have bitten infected animals. **am'bulant p., am'bulatory p.,** (1) a seemingly mild form in which the patient does not take to the bed, but which is often fatal; (2) pestis minor larval p. **bubon'ic p.,** the usual form of p. marked by inflammatory enlargement of the lymphatic glands in the groins, axillæ, or other parts. **fowl p.,** a contagious affection of chickens

and other barnyard fowls, resembling chicken cholera, but believed to be a distinct disease. **glan'dular p.,** bubonic p. **lar'val p.,** pestis minor, a very mild form, in which bubos are usually present, but the signs of constitutional involvement are slight or wanting entirely. **pneumon'ic p.,** a peculiarly fatal form in which there are scattered areas of pulmonary consolidation, with chill, pain in the side, bloody expectoration, and high fever. **septice'mic p.,** pestis siderans, a generally fatal form in which there is an intense bacteriemia with symptoms of profound toxemia. **Sibe'rian p.,** a cattle disease of Siberia and Manchuria. **swine p.,** hog* cholera.

plain [L. *planus*, flat.] A more or less smooth and level area. **nuchal p., occipital p., orbital p., popliteal p., sternal p.,** see under *planum*.

plaister (plās'tur). Plaster.

Planck's constant or unit [Max *Planck*, German physicist, *1858.] A constant, 6.55×10^{-27} erg-seconds; symbol, *h*.



The Pelvic Planes.

plane [L. *planus*, flat] 1. A flat surface; see *planum*. 2. An imaginary surface formed by extension through any axis or two definite points in reference especially to craniometry and to pelvimetry. **coronal p.,** frontal p., a vertical p. at right angles to a sagittal p., dividing the body into front and rear portions. **horizontal p.,** transverse p. **median p.,** a vertical p. drawn through the longitudinal axis of the body. **midsagittal p.,** median p. **transverse p.,** a p. drawn across the body at right angles to a coronal p. **sagittal p.,** a vertical p. parallel to the median. **da'tum p.,** an arbitrary plane used as a base from which to make craniometric measurements. **p. of pel'vic contrac'tion,** the lower contracted portion of the pelvic cavity. **p. of pel'vic expan'sion,** the upper roomy portion of the pelvic cavity. **tan'gent p.,** perimeter (2). **tooth p.,** any one of the imaginary planes of section of a tooth, such as the axial, horizontal, or vertical. **vis'ual p.,** a plane drawn through the two axes of vision.

planim'eter [L. *planum*, plane, + G. *metron*, measure.] An instrument formed of jointed levers with a recording index, used for measuring the area of any surface, by tracing its boundaries.

planithorax (plan"i-tho'raks). A diagram of the chest showing the front and back in plane projection, after the manner of Mercator's projection of the earth's surface.

plank'ton [G. *planktos*, wandering.] A general term embracing all lower orders of sea animals.

planocell'ular [L. *planus*, flat, + *cellula*, cell.] Relating to or composed of flat cells.

Planococ'cus [G. *planē*, wandering, + *kokkos*, berry.] A genus of *Coccaceæ*, the members of which are flagellated and divide in two planes.

planocon'cave. Flat on one side and concave on the other, noting a lens* of that shape.

planocon'vex. Flat on one side and convex on the other, noting a lens* of that shape.

plan'ocyte [G. *planos*, straying, + *kytos*, cell.] A wandering cell.

Planosar'cina [G. *planē*, wandering, + L. *sarcina*, a bundle] A genus of *Coccaceæ*, including flagellated cells which divide in three planes but do not usually remain united in cube-forms, like *Sarcina*.

plan'ta, gen. and pl. *plan'tæ* [L.] [BNA]. The sole of the foot, vola.

planta'go. The root and leaves of the common or large-leaved plantain, *Plantago major;* employed chiefly in eclectic practice in the treatment of nocturnal incontinence of urine, leucorrhea, and hemorrhoids, and especially, both topically and internally, in toothache and in earache.

plan'tar. Relating to the sole of the foot, volar, dorsalis [NK]. **p. arch,** arcus plantaris.

planta'ris. See under *musculus*.

Planté cell (plahn-ta'). Accumulator or storage battery.*

planula (plan'u-lah) [L. dim. of *planus*, flat.] The name given by Lankester to the embryo when it consists of the two primary germ layers only, viz., ectoderm and endoderm. **invag'inate p.,** gastrula.

pla'num [L. neut of *planus*, flat.] A plane or flat surface, a plain. **p. nuchale** (nu-ka'le) [BNA]; nuchal plain, the outer surface of the squamous part of the occipital bone below the superior curved line, giving attachment to the muscles of the back of the neck. **p. occipita'le** [BNA], occipital plain, the outer surface of the occipital bone above the superior curved line, covered by the hairy scalp **p. orbita'le,** orbital plain, orbital surface of the maxilla. **p. poplite'um** [BNA], popliteal plain, popliteal surface, a flat triangular area at the lower end of the femur posteriorly, bounded by the diverging lips of the linea aspera. **p. sterna'le** [BNA], the sternal plane or anterior surface of the sternum. **p. tempora'le** [BNA], a slightly depressed area on the side of the cranium, below the inferior temporal line, formed by the temporal and parietal bones, the greater wing of the sphenoid, and a part of the frontal bone.

planu'ria [G. *planos*, wandering, + *ouron*, urine] 1. Extravasation of urine. 2. The voiding of urine from an abnormal opening.

planus (pla'nus) [L.] Flat.

plaque (plak) [Fr. a plate.] 1. A blood-platelet.* 2. A patch or small differentiated area on the skin or a mucous surface.

plasm. Plasma.

plas'ma [G. anything formed.] 1. The fluid portion of the circulating blood, distinguished from the *serum* obtained after coagulation. 2. The fluid portion of the lymph. 3. Protoplasm 4. Glycerite of starch, glyceritum* amyli, used as an excipient for ointments. **muscle p.,** an alkaline fluid in muscle which is spontaneously coagulable, separating into myosin and

muscle-serum. **p. activa'tion,** ergotropy. **p. glyceri'ni,** glyceritum amyli. **p. mari'num,** sea-water diluted to make it isotonic with the blood-plasma, recommended in the treatment, by intramuscular injection, of tuberculosis, various skin diseases, and other disorders. **salted p.,** salted serum, the fluid portion of blood drawn from the vessels, which is prevented from coagulating by being drawn into a solution of sodium or magnesium sulphate.

plas'ma-cell. A phagocytic and probably ameboid leucocyte, resembling the mononuclear phagocytic leucocyte of inflammatory exudates; Türck's irritation cell, stimulation cell, phlogocyte.

plas'macule [a dim. Latin form of *plasma*.] One of the minute granules assumed to exist in the blood-plasma and to endow it with vital properties.

plasmame'ba, plasmamœ'ba [*plasma* + *amœba*.] A parasitic organism of amebic form described by Eberle as present in the blood in dengue.

plasmapheresis (plaz-mă-fer'ĕ-sis) [G. *plasma* + *aphairesis*, a withdrawal.] An operation consisting of a copious venesection, centrifugation of the corpuscular elements of the blood, their suspension in a suitable medium, and return to the blood vascular system, thus getting rid of the fluid portion loaded with toxic material.

plas'masome [G. *plasma*, a moulded image (plasm), + *sōma*, body.] Non-chromatin-staining nucleolar substance in the cytoplasm.

plasmat'ic. 1. Relating to plasma. 2. Plastic or formative.

plasmatog'amy [G. *plasma*(*plasmat-*) + *gamos*, marriage.] Union of two or more cells with preservation of the individual nuclei, the formation of a plasmodium.

plas"matorrhex'is [G. *plasma*(*plasmat-*) + *rhēxis*, rupture.] The splitting open of a cell from the pressure of the protoplasm; plasmorrhexis.

plasme'ba, plasmœ'ba. Plasmameba.

plas'mic. Plasmatic.

plas'mine. A hypothetical substance in the blood, the decomposition of which, after escape from the vessels, results in the production of fibrin.

plasmochin (plaz'mo-kin) [*plasmodium* + Ger. *chinin*. quinine.] Trade name of a synthetic quinoline, suggested as a remedy for malaria.

plas'mocyte [G. *plasma* + *kytos*, cell.] 1. Hemameba, a protozoan parasite in the blood. 2. Plasma cell.

plasmocytoma (plaz"mo-si-to'mah) [*plasmocyte* + *-oma*.] Plasmoma (2).

plasmo'dia. Plural of plasmodium.

plasmo'dial. Relating to a plasmodium, or to any species of *Plasmodium*.

plasmodioph'ora bras'sicæ [*plasmodium* + G. *phoros*, a bearer; L. *brassica*, turnip.] Finger-and-toe disease.

plasmo'dium, pl. *plasmo'dia* [G. *plasma*, something formed, + *eidos*, appearance.] 1. A cell containing several nuclei, resulting from multiplication of the nucleus without cell-division. 2. A similar cell resulting from the fusion of several cells, the nuclei remaining distinct; syncytium. **placen'tal p.,** syncytium, a nucleated protoplasmic membrane, without cell outlines, lining the blood lacunæ of the placenta; it is believed by some to be derived from the maternal epithelium, but is more commonly regarded as the surface layer of the chorionic epithelium.

Plasmo'dium. A genus of *Hæmosporidia* including the protozoan parasites of human malaria; the sexual cycle is completed in the body of a mosquito of the genus *Anopheles*. **P. brass'icæ,** the supposed pathogenic organism of finger-and-toe disease of turnips; it or a similar parasite has been accused of causing cancer in man. **P. falcip'arum,** the parasite of tertian estivoautumnal fever, *Laverania malariæ*. **P. falcip'arum quotidia'num,** the parasite of quotidian estivo-autumnal fever. **P. immacula'tum,** (1) the malarial parasite in birds; (2) *P. falciparum*. **P. mala'riæ,** the parasite of quartan malaria. **P. præ'cox,** the pathogenic microorganism of bird malaria, transmitted by mosquitos of the genera *Culex* and *Stegomyia*. **P. ten'ue,** a species described as occurring in a malignant form of malaria in India. **P. vi'vax,** the parasite of tertian malaria.

Plasmodromata (plaz-mo-dro'mă-tŭ) [G. *plasma*, figure, + *dromas*, migratory.] A division of protozoa in which the nucleus is not separated into reproductive (micro-) and vegetative (macro-) portions.

plasmogamy (plaz-mog'ă-mĭ) [*plasma* + G. *gamos*, marriage.] The partial union of the daughter cells of two contiguous protozoan organisms reproducing by bud-fission.

plas'mogen [G. *plasma* + *gennaō*, I produce.] Protoplasm.

plasmol'ogy [G. *plasma* + *-logia*.] Histology, the science relating to the microscopic elements of living structure.

plasmol'ysis [G. *plasma* + *lysis*, solution.] The shrinking or dissolution of the cell protoplasm; achromatolysis; leucolysis, erythrolysis.

plasmolyt'ic. Relating to plasmolysis.

plasmolyzability (plaz"mo-li-za-bil'ĭ-tĭ). Capable of undergoing plasmolysis under certain conditions, as when immersed in distilled water, a characteristic of the cyanophyceæ.

plasmolyzable (plaz"mo-li'za-bl). Noting a cell in which, under certain conditions, the plasma may readily undergo shrinking or dissolution.

plas'molyze. To cause the shrinkage or dissolution of the cell protoplasm.

plasmo'ma. 1. A mass of plasma cells such as is seen in certain specific inflammatory lesions. 2. A myeloma composed chiefly of plasma cells.

plas'mon. Trade name of a solid food preparation made from milk.

plasmop'tysis [G. *plasma* + *ptysis*, a spitting.] The escape of protoplasm from a cell.

plasmoquin (plaz-mo-kwin). Plasmochin.

plasmorrhex'is [G. *plasma* + *rhēxis*, a bursting.] Disintegration of a red blood-cell by shriveling (crenation) with extrusion of particles of varying size, erythrocytorrhexis; plasmatorrhexis.

plasmoschisis (plaz-mos'kĭ-sis) [G. *plasma* + *schisis*, a cleaving.] Rapid disintegration of a red blood-cell by breaking up into numerous particles resembling blood-platelets.

plas'mosome [G. *plasma* + *sōma*, body.] Nucleolus.

plasmotomy (plaz-mot'o-mĭ) [*plasma* + *G. tomē*, incision.] A form of mitosis in multinuclear protozoan cells in which the cytoplasm divides into two or more masses, then reproducing later, in some cases by sporulation.

plasmotrop'ic. Relating to plasmotropism.

plasmot'ropism [G. *plasma* + *tropos*, a turning.] A condition in which the bone-marrow, spleen, and liver contain markedly hemolytic bodies which cause the destruction of the erythrocytes, these remaining, however, unchanged while in the general circulation.

plasmozyme (plaz'mo-zīm) [*plasma* + G. *zymē* leaven.] Thrombogen.

plas'ome [G. *plasis*, a forming, + *sōma*, body.] The hypothetical unit of protoplasm; the smallest possible particle of protoplasm, further division of which would destroy its structure and necessitate chemical change.

Plassomyxineæ (plas-so-mix-in'e-e). A group of minute particles, probably protozoa, same as *Chlamydozoa*, sometimes called molluscum corpuscles.

plass'on [G. *plassōn*, forming.] The protoplasm of a non-nucleated cell, not differentiated into caryoplasm and cytoplasm, but combining the properties of each. See totipotential protoplasm.*

plas'ter [L. *emplastrum*.] A solid preparation which can be spread when heated, and which becomes adhesive at the temperature of the body; plasters are used to keep the edges of a wound in apposition, to protect raw surfaces, and, when medicated, to redden or blister the skin or to apply drugs to the surface to obtain their systemic effects; for the official plasters, see *emplastrum*. **adhe'sive p.**, emplastrum adhæsivum. **ammo'niac and mer'cury p.**, lempastrum ammoniacicum hydrargyro. **belladon'na p.**, emplastrum belladonnæ. **blis'tering p.**, emplastrum cantharidis (U.S.). **cam'phorated mother p.**, emplastrum fuscum camphoratum. **cap'sicum p.**, emplastrum capsici. **com'pound diach'ylon p.**, emplastrum lithargyri compositum. **com'pound gal'banum p.**, emplastrum lithargyri compositum. **com'pound lead p.**, emplastrum lithargyri compositum. **court p.**, isinglass spread on thin silk, used as a protective to slight cuts and excoriations of the skin. **diach'ylon p.**, emplastrum plumbi. **iron p.**, a mixture of ferric hydroxyde, Burgundy pitch, olive oil, and lead plaster. **lead i'odide p.**, emplastrum plumbi iodidi. **lead p.**, emplastrum plumbi. **litharge' p.**, emplastrum plumbi. **menthol p.**, emplastrum menthol. **mercu'rial p.**, emplastrum hydrargyri. **mustard p.**, a paste of powdered mustard seed spread on cloth and applied to the skin as a rubefacient. **p. of Paris**, gypsum, or calcium sulphate, from which the water of crystallization has been expelled by heat, calcii sulphas exsiccatus. **o'pium p.**, emplastrum opii. **pitch p.**, emplastrum picis. **porous p.**, any plaster spread on a cloth perforated with numerous holes. **ros'in p.**, emplastrum resinæ (U.S.). **rubb'er p.**, emplastrum elasticum (U.S.). **soap p.**, emplastrum saponis. **spice p.**, emplastrum aromaticum (N.F.). **strength'ening p.**, iron p. **warming p.**, emplastrum calefaciens. **white-lead p.**, emplastrum cerussæ.

plas"ter-ban'dage. A roller-bandage impregnated with plaster of Paris, and applied moist, in order to make a permanent dressing for a fracture or diseased joint.

plas"ter-jack'et. Sayre's* jacket, a stiff jacket made with plaster-bandages for support of the spine in Pott's disease or scoliosis.

plaster-mull'. Muslin impregnated with medicated guttapercha, employed in certain skin diseases.

plas'tic [G. *plastikos*, relating to moulding.] 1. Plasmic, plasmatic, formative. 2. Capable of being formed or moulded. 3. In dentistry, an easily moulded material, such as amalgam, used for the filling of a tooth-cavity. **p. bronchi'tis**, bronchitis with an exudate of fibrin forming a pseudomembrane or a cast of the bronchial tubes. **p. mo'tor**, the tissues contained in an amputation stump which can be utilized to impart movement to an artificial limb. **p. sur'gery**, restorative surgery, the restoration of lost parts or the repair of defects by grafting or the transfer of tissue from a neighboring part.

plasticity (plas-tis'ĭ-tĭ). The capability of being formed or moulded, the quality of being plastic.

plas'tics. Plastic surgery.

plas'tid [G. *plastos*, formed.] 1. One of the granules of foreign or differentiated matter, food-particles, fat, waste material, chromatophores, trichocysts, etc., in protozoan and other cells. 2. A unicellular organism. 3. Protoplast (1 or 2).

plastidule (plas'tĭ-dūl) [dim. of *plastid*.] Micella.

plas'tin [G. *plastos*, formed.] One of the protein constituents of the cell-nucleus, said to be resistant to the action of pepsin or trypsin.

plastosome (plas'to-sōm) [G. *plastos*, formed, + *sōma*, body.] One of the tingible threads or granules in the protoplasm.

plas'tron [Fr. a breastplate.] The sternum with costal cartilages attached.

plastog'amy. Plasmatogamy.

plate [L. *platum*, G. *plateion*, a dish, a plate., 1. A shallow dish. 2. In anatomy, lamina, lamella, a thin flat differentiated structure. 3. In dentistry, a thin piece of metal or other substance holding false teeth. 4. A narrow flattened metal bar applied by means of screws to a fractured bone in order to maintain the ends in apposition. **anal p.**, an area of fusion of the entoderm and ectoderm, which subsequently disappears, forming the primitive anal opening in the embryo. **approxima'tion p.**, a perforated disc of decalcified bone employed in intestinal anastomosis. **au'ditory p.**, the bony roof of the external auditory meatus. **ax'ial p.**, the primitive streak. **blood p.**, platelet. **crib'riform p.**, lamina cribrosa [BNA] of the ethmoid bone. **dorsal p.**, one of the two prominences of the notochord forming the neural canal in the embryo. **end p.**, the expanded termination of a nerve-fibril in muscular tissue. **equato'rial p.**, the collected chromosomes at the equator of the spindle in the process of mitosis. **foot p.**, basis stapedis [BNA], the flat portion of the stapes. **gray p.**, lamina cinerea, lamina terminalis [BNA]. **med'ullary p.**, the thickened central portion of the ectoderm in the young embryo, constituting the anlage of the central nervous system. **me'sial p.**, the longitudinal thickening of the mesoblast on either side of the notochord, dividing into two laminæ, the outer, or parietal p., and the inner, or visceral p. **moto'rial p.**, a motor end p. **neural p.**, the thickened ectoderm at the bottom of the groove from which the neural canal is formed. **oral p.**, a circumscribed area of fusion of the entoderm and ectoderm in the embryo; it subsequently disappears, being replaced by the opening between the mouth cavity and the pharynx. **or'bital p.**, os planum, lamina papyracea [BNA] of the ethmoid bone. **palate p.**, pars horizontalis [BNA] of the palate bone. **pari'etal p.**, the outer of the two layers of the mesoblast, on either side of the notochord in the embryo. **spiral p.**, lamina spiralis. **suc'tion p.**, in dentistry, one which is held in place by atmospheric pressure. **tri'al p.**, one made of wax or soft metal used for testing and fitting an artificial denture. **tympan'ic p.**, the bony plate between the anterior wall of the external auditory meatus and the tympanum and the posterior wall of the mandibular, or glenoid, fossa. **vis'ceral p.**, the inner of the two layers of the mesoblast in the embryo.

platelet (plāt'let). A little plate or plaque; specifically a blood-plate, a round or oval disc, presenting no biconcavity, one-third to one-half the size of an erythrocyte, and containing no hemoglobin, called also Hayem's hematoblast, Zimmermann's corpuscle or particle. The platelets are more numerous than the leucocytes, numbering from 200,000 to 800,000 per cubic millimeter.

platicul'ture. Plate culture *

pla'ting. 1. The sowing of bacteria on a medium spread out in the form of a plate; the making of a plate culture. 2. The application of a metal strip to keep the ends of a fractured bone in apposition.

platin'ic. Relating to platinum; noting a compound containing platinum in its higher valency.

plat'inode [L. *platinum* + G. *hodos*, way.] The negative plate of an electric cell or battery.

plat'inous. Relating to platinum; noting a compound containing platinum in its lower valency.

plat'inum. A metallic element, symbol Pt, atomic weight 195, of silver white color and of about the consistence of copper; it occurs usually as *spongy p.*, of gray color soft and porous; it is used largely for making chemical apparatus because of its resistance to acids; some of its salts have been employed in the treatment of syphilis in doses of gr. $\frac{1}{8}$–$\frac{1}{2}$ (0.008–0.03). **p. group,** a group of two amphoteric elements, palladium and platinum.

Plat'ner's crys'tals. Crystals of the sodium salt of bile acids, obtained by evaporating bile-containing urine with soda, extracting with absolut alcohol, and adding enough ether to produce a slight cloudiness.

platy- [G. *platys*, flat, broad.] A prefix conveying the idea of width or flatness.

platycephalic, platycephalous (plat"ĭ-sĕ-fal'ik, plat-ĭ-sef'al-us) [G. *platys*, flat, + *kephalē*, head.] Having a flattened skull, one with a vertical index less than 70.

platyceph'aly [G. *platys*, flat, + *kephalē*, head.] Flatness of the skull, a condition in which the vertical cranial index is below 70.

platycnemia (plat"ik-ne'mĭ-ah) [G. *platys*, flat, broad, + *knēmē*, leg.] A condition in which the tibia is abnormally broad and flat, platycnemism.

platycne'mic. Relating to or marked by platycnemism.

platycne'mism. Platycnemia.

platyco'ria [G. *platys*, broad, + *korē*, pupil.] Mydriasis, dilatation of the pupil.

platycra'nia [G. *platys*, flat, + *kranion*, skull. Platycephaly.

platycyte (plat'ĭ-sīt) [G. *platys*, broad, + *kytos*, cell] A small giant cell formed in tubercles.

platygloss'al [G. *platys*, broad, + *glōssa*, tongue.] Having a broad flattened tongue.

platyhel'minth [G. *platys*, flat, + *helmins(helminth-)*, worm.] A flat worm, a cestode or trematode.

Platyhelmin'tha, Platyhelmin'thes. A class of *Vermes*, or worms, which includes the *Cestodes* and *Trematodes*, parasitic in man and the lower animals, as well as *Turbellaria* and other free-living worms.

platyhieric (plat-ĭ-hi-er'ik) [G. *platys*, broad, + *hieron*, sacrum.] Having a broad sacrum.

platymeric (plat-ĭ-me'rik) [G. *platys*, broad, + *mēros*, thigh.] **Having a broad femur.**

platymyoid (plat-ĭ-mi'oyd) [G. *platys*, broad, + *mys*, muscle.] Noting a form of muscle cell in which the contractile layer presents an even surface.

platyo'pia [G. *platys*, broad, + *ōps(ōp-)*, face.] Broadness of the face, noting a condition in which the nasomalar index is less than 107.5.

platyop'ic. Relating to or characterized by platyopia; having a broad face.

platypell'ic [G. *platys*, broad, + *pellis*, bowl (pelvis).] **Having a broad pelvis, with an index below 90°.**

platypo'dia [G. *platys*, flat, + *pous(pod-)*, foot.] Flat-foot, pes planus.

platyrrhine (plat'ir-īn) [G. *platys*, broad, + *rhis (rhin-)*, nose.] 1. Characterized by a nose of abnormal width in proportion to its length. 2. Noting a skull with a nasal index between 51.1 or 53, and 58

platyrrhiny (plat'ĭ-ri-nĭ). A condition in which the anteroposterior diameter of the nasal fossæ is abnormally short.

platys'ma (plă-tiz'mah) [G. *platysma*, a flat plate.] [BNA] A broad thin muscle of the neck, called formerly platysma myoides [G. *mys*, muscle, + *eidos*, resemblance]; see under *musculus*.

platystencephaly (plă-tis"ten-sef'ă-lĭ) [G. *platystos*, widest, + *kephalē*, head.] Extreme width of the skull in the occipital region, with narrowing anteriorly and prognathism.

platytrope (plat-ĭ-trope) [G. *platys*, broad, flat, + *tropos*, a turn.] One of two symmetrical lateral parts of the body.

Plaut's an'gina or **ul'cer** (plowt). [Hugo Karl *Plaut*, Hamburg physician, 1858–1928.] Vincent's angina.

Play'fair's meth'od [William Smoult *Playfair*, British physician, 1836-1903.] Rest and food cure; Weir Mitchell* treatment.

Plectridium (plek-trid'ĭ-um) [G. dim. of *plēktron*, an instrument to strike with.] A genus in certain bacterial classifications, containing bacilli with terminal spores, such as the tetanus or "drum-stick" bacillus.

plectrum [G. *plēktron*, hammer.] 1. The uvula. 2. The styloid process of the temporal bone. 3. The malleus.

pledget (plej'et). A tuft of wool, cotton, or lint.

plegapho'nia [G. *plēgē*, stroke, + *aphōnia*, absence of voice] Tapping on the larynx or trachea, to take the place of the voice sounds in auscultation.

Plehn's caryochromatophile granules (plānz kar"ĭ-o-kro-mat'o-fīl gran'ūlz) [Albert *Plehn*, German physician, *1861.] Basophile granules in the conjugating form of the malarial parasite.

pleiades (plī'ă-dēz) [the group of small stars in the constellation *Taurus*.] A collection of enlarged lymphatic nodes.

pleochroic (ple-o-kro'ik) [G. *pleōn*, more, + *chroa*, color.] Pleochromatic, relating to pleochroism.

pleochroism (ple-ok'ro-izm). Pleochromatism, the condition of showing different colors in different positions, noting certain crystals.

pleocyto'sis [G. *pleōn*, more, + *kytos*, cell, + *-ōsis*.] Lymphocytosis in the cerebrospinal fluid in syphilitic and parasyphilitic diseases of the central nervous system.

pleomas'tia [G. *pleōn*, more, + *mastos*, breast.] The presence of supernumerary breasts or nipples.

pleomas'tic. Relating to or characterized by pleomastia; having supernumerary breasts or nipples.

pleoma'zia [G. *pleōn*, more, + *mazos*, breast.] Pleomastia.

pleomor'phic [G. *pleōn*, more, + *morphē*, form.] Occurring in more than one form; pleomorphous, polymorphous, multiform.

pleomor'phism [G. *pleōn*, more, + *morphē*, shape.] Occurrence in more than one form; the existence in the same species or other natural group of more than one type; polymorphism.

pleomor'phous. Pleomorphic, polymorphous, multiform.

ple'onasm [G. *pleonasmos*, exaggeration.] Redundancy of parts; excess in size.

pleonectic (ple-on-ek'tik). 1. Marked by pleonexia, greedy. 2. Noting specifically a blood which has a percentage saturation of oxygen above normal at any given pressure; see *mesectic* and *mionectic*.

pleonexia (ple-on-eks'ĭ-ah) [G. *pleon*, more, + *echō*, I have.] Excessive greediness; a psychosis characterized by an uncontrollable desire for acquisition or gain.

plerocercoid (ple-ro-sur-koyd). The bothriocephalus measle in the fish, by the ingestion of which infection of *Bothriocephalus latus* occurs in man.

plesiomor'phic. Resembling in form.

plesiomor'phism [G. *plēsios*, near, + *morphē*, form.] Similarity in form.

plesiomor'phous. Plesiomorphic.

plessesthesia, plessæsthesia (ples-es-the'zĭ-ah) [G. *plēssō*, I strike, + *aisthēsis*, sensation.] Palpatory percussion *

plessim'eter [G. *plēssō*, I strike, + *metron*, measure.] Pleximeter, an oblong plate of hard rubber, ivory, or other flexible substance, employed in mediate percussion, being placed against the surface and struck with the plessor.

plessimet'ric. Relating to a plessimeter.

ples'sor [G. *plēssō*, I strike.] Plexor, a small hammer, usually with soft rubber head, used to tap the part directly, or through the plessimeter, in percussion of the chest or other part.

plestrin (ples'trin) [*placenta* + *estrin*.] Trade name of an extract from the placenta, recommended in the treatment of infantilism and in endocrine sterility.

plethora (pleth'o-rah; correctly pleth-o'rah) [G. *plēthōrē*, fullness.] 1. General congestion; increase in the volume of the blood, causing an abnormal distention of the blood-vessels. 2. An excess of any of the body-fluids. **p. apocop'tica**, a temporary increase in the volume of blood in the rest of the body, the result of forcing the blood from a limb which is to be amputated.

pleth'oric. Relating to plethora, having overfilled blood-vessels.

plethys'mograph [G. *plēthysmos*, a filling, + *graphō*, I record.] An instrument for recording graphically the varying size of a part as determined by the state of fullness of its blood-vessels.

plethysmography (pleth-iz-mog'ră-fĭ). The determination of the varying size of an organ according to the amount of blood it contains.

pleura, gen. *pleu'ræ* (plu'rah) [G. *pleura*, side.] The serous membrane enveloping the lungs and lining the walls of the thoracic cavity. **p. cervica'lis,** the pleura rising up into the root of the neck, cupula pleuræ [BNA]. **p. costa'lis** [BNA], the layer lining the chest walls. **p. diaphragmat'ica** [BNA], the layer of parietal pleura covering the upper surface of the diaphragm, except along its costal attachments and where it is covered with the pericardium. **p. med'astina'lis** [BNA], the continuation of the costal pleura passing from the sternum to the vertebral column which covers the side of the mediastinum. **p. parieta'lis** [BNA], that which lines the different parts of the chest wall, called costal, diaphragmatic, mediastinal, and cervical according to the parts invested. **p. pericardi'aca** [BNA], pericardial p., that portion of the mediastinal p. which is fused with the pericardium. **p. phren'ica,** p. diaphragmatica. **p. pulmona'lis** [BNA], the layer investing the lungs and dipping into the fissures between the several lobes. **p. viscera'lis,** p. pulmonalis.

air in, pneumothorax. **air and blood in,** pneumohemothorax, hemopneumothorax, hematopneumothorax. **air and fluid in,** hydropneumothorax, pneumoserothorax, pneumohydrothorax. **air and pus in,** pyopneumothorax, pneumopyothorax. **blood in,** hemothorax. **calcification,** pleurostosis. **calculus in,** pleurolith. **disease,** pleuropathy, pleuropathia. **excision of a part of,** pleurectomy. **fluid in,** hydrothorax, hydropleurisy, pleurorrhea. **gas in,** pneumothorax. **incision into,** pleurotomy. **inflammation,** pleurisy, pleuritis. **pain,** pleuralgia, pleurodynia. **puncture of,** pleurocentesis, thoracentesis. **pus in,** pyothorax, empyema, pleurapostema, pleuropyesis.

pleuracentesis (plu"rah-sen-te'sis) [G. *pleura*, side, + *kentēsis*, puncture.] Pleurocentesis, paracentesis of the pleural cavity.

pleu'ral. Relating to the pleura.

pleural'gia [G. *pleura*, side, + *algos*, pain.] Pleurodynia.

pleural'gic. Relating to pleuralgia.

pleurapoph'ysis [G. *pleuron*, rib, + *apophysis*, process.] A rib, or the process on a cervical or lumbar vertebra corresponding thereto.

pleurec'tomy [G. *pleuron*, rib, + *ektomē*, excision.] Exsection of a portion of one or more ribs.

pleu'risy [G. *pleura*, the side.] Inflammation of the pleura, pleuritis. **adhe'sive p.,** dry p. **costal p.,** inflammation of the pleura lining the thoracic walls. **diaphragmat'ic p.,** inflammation limited more or less to the pleura covering the diaphragm. **dry p.,** p. with a fibrinous exudation, without an effusion of serum, resulting in more or less adhesion between the opposing surfaces of the pleura. **encys'ted p.,** a form of serofibrinous p., in which adhesions occur at various points, circumscribing the serous effusion. **fi'brinous p.,** dry p. **hemorrhag'ic p.,** p. with an effusion of blood-stained serum. **interlob'ular p.,** inflammation more or less limited to the pleura in the sulci between the pulmonary lobes. **metapneumon'ic p.,** purulent p., or empyema, marked by the presence of the pneumococcus. **plastic p.,** dry p. **p. with effu'sion,** p. accompanied with a more or less profuse serous exudation. **pul'monary p.,** inflammation of the pleura covering the lungs; visceral p.; peripneumonia. **pu'rulent p.,** empyema, pyothorax. **serofi'brinous p.,** the more common form of p. characterized by a fibrinous exudate on the surface of the pleura and a more or less extensive effusion of serous fluid into the pleural cavity. **serous p.,** p. with effusion. **supp'urative p.,** empyema **typhoid p.,** acute or subacute p. with typhoid symptoms. **vis'ceral p.,** pulmonary p. **wet p.,** p. with effusion.

pleu'risy-root. Butterfly weed, orange milkweed. *Asclepias tuberosa*.

pleurit'ic. Relating to or suffering from pleurisy.

pleuritis (plu-ri'(re')tis) [G. *pleura* side, + *-itis*.] Pleurisy.

pleurocele (plu'ro-sēl) [G. *pleura*, side, + *kēlē*, hernia.] Pneumocele, hernia of the lung

pleurocente'sis [G. *pleura*, side, + *kentēsis*, puncture.] Operative puncture of the pleural cavity, paracentesis of the thorax.

pleurocen'trum [G. *pleura*, side, + *kentron*, center.] One of the lateral halves of the body of a vertebra.

pleuroc'lysis [G. *pleura*, side, + *klysis*, a washing out.] Washing out of the pleural cavity.

pleu'rodont [G. *pleura*, side, + *odous(odont-)*, tooth.] Noting animals having the teeth ankylosed to the sides of the sockets, or laterally fixed to the jaw.

pleurodyn'ia [G. *pleura*, side, + *odynē* pain.,] A painful rheumatic affection of the tendinous attachments of the thoracic muscles, usually of one side only; pleuralgia.

pleurogen'ic, pleurogenous (plu-roj'en-us) [G. *pleura* + *genesis*, origin.] 1. Of pleural origin, beginning in the pleura. 2. [G. *pleuron*, rib.] Arising from a rib.

pleurohepatitis (plu-ro-hep-ă-ti'(te')tis) [G. *pleura* + *hēpar(hēpat)*, liver, + *-itis*.] Hepatitis with extension of the inflammation to the neighboring portion of the pleura.

pleu'rolith [G. *pleura* + *lithos*, stone.] A concretion in the pleural cavity, pleural calculus.

pleuropericar'dial. Relating to both pleura and pericardium. **p. murmur,** a pleural friction sound over the pericardial region, synchronous with the heart's action, and simulating a pericardial murmur.

pleuropericarditis (plu-ro-per"i-kar-di'(de')tis) [G. *pleura* + *peri*, around, + *kardia*, heart, + *-itis*.] Combined inflammation of the pericardium and of the pleura.

pleuroperitone'al. Relating to both pleura and peritoneum.

pleuropneumonia (plu"ro-nu-mo'nĭ-ah). 1. Lobar pneumonia. 2. A specific infectious disease in cattle, characterized by inflammation of the lungs and pleura.

pleuropul'monary. Relating to the pleura and the lungs.

pleurorrhe'a, pleurorrhœ'a [G. *pleura* + *rhoia*, a flow.] A pleural effusion; hydrothorax.

pleuroso'ma [G. *pleura*, side, + *sōma*, body.] A monster with extensive eventration in the upper abdominal and thoracic regions.

pleurothot'onos [G. *pleurothen*, from the side, + *tonos*, tension.] Tonic muscular spasm curving the body to one side.

pleurot'omy [G. *pleura* + *tomē*, incision.] Incision into the pleural cavity in order to give exit to effused fluid.

pleurotyphoid (plu"ro-ti'foyd). Typhoid fever in which the early stage is masked by the physical signs of pleurisy.

pleurovis'ceral. Relating to the visceral pleura.

plex'al. Relating to a plexus.

plexalgia (pleks-al'jĭ-ah) [G. *plēxis*, a stroke, + *algos*, pain.] A symptom complex observed in bodies of troops after prolonged exposure to cold and wet; it is characterized by multiple pains, paresthesia, general fatigue, excitability, and insomnia.

plex'iform [L. *plexus* + *forma*, form.] Resembling or forming a plexus.

plexim'eter, plexom'eter [G. *plēxis*, stroke, + *metron*, measure.] Plessimeter.

pleximet'ric. Relating to a pleximeter or to mediate percussion.

plex'or [G. *plēxis* a stroke.] Plessor.

plex'us, pl. (Eng.) *plexuses*, (Lat.) *plexus* [L. a braid.] A network or interjoining of nerves (*p. nervosus*), of veins (*p. venosus*), or of lymphatic vessels (*p. lymphaticus*).

p. annula'ris, annular p., a nerve p. near the corneoscleral junction from which medullated and non-medullated nerves pass to the cornea.

p. aor'ticus [BNA], aortic plexus, a plexus of lymph nodes and connecting vessels lying along the lower portion of the abdominal aorta.

p. aor'ticus abdomina'lis [BNA], abdominal aortic p., a sympathetic p. surrounding the abdominal aorta, directly continuous with the thoracic aortic p.

p. aor'ticus thoraca'lis [BNA], thoracic aortic p., a fine sympathetic plexus surrounding the thoracic aorta and passing with it through the aortic opening in the diaphragm, to become continuous with the abdominal aortic p.

p. arte'riæ cer'ebri anterio'ris [BNA], p. of the anterior cerebral artery, a sympathetic p. accompanying the artery of the same name, derived from the internal carotid p.

p. arte'riæ cer'ebri me'diæ [BNA], p. of the middle cerebral artery, a sympathetic p. accompanying the artery of the same name, derived from the internal carotid p.

p. arte'riæ chorioid'eæ [BNA], p. of the choroid artery, a sympathetic p. accompanying the artery of the same name, derived from the internal carotid p.

p. arte'riæ ovar'icæ [BNA], p. of the ovarian artery, a sympathetic p., derived from the aortic and accompanying the ovarian artery to the ovary, broad ligament, and oviduct.

p. arterio"sonervo'sus, p. cavernosus.

p. auricula'ris poste'rior [BNA], posterior auricular p., a sympathetic p. on the artery of this name, derived from the external carotid p.

p. axilla'ris [BNA], axillary p., a lymphatic plexus formed of the lymph nodes, with their afferent and efferent vessels, in the axilla.

p. basila'ris [BNA], sinus basilaris, on the clivus of the occipital bone, connected with the inferior petrosal and cavernous sinuses.

p. brachia'lis [BNA], brachial plexus, formed of the anterior rami (anterior primary divisions) of the fifth cervical to first thoracic nerves; the nerves converge in the posterior triangle of the neck between the scalenus anterior and medius and pass down on the outer side of the subclavian artery behind the clavicle into the axilla.

p. cardi'acus [BNA], cardiac p., a wide-meshed network of anastomosing cords from the sympathetic and vagus nerves, surrounding the arch of the aorta and the pulmonary artery.

p. c. profun'dus [NK], the deeper part of the cardiac p.

p. c. superficia'lis [NK], the superficial and smaller part of the cardiac p.

p. carot'icus commu'nis [BNA], common carotid p., a small p. accompanying the artery of the same name formed by fibers from the middle cervical ganglion of the sympathetic.

p. carot'icus exter'nus [BNA], external carotid p., a sympathetic p. formed by the external carotid nerves surrounding the artery of the same name, and giving origin to a number of secondary plexuses along the branches of this artery and to branches to the carotid glomus.

p. carot'icus inter'nus [BNA], internal carotid p., (1) asympathetic p. surrounding the internal carotid artery in the carotid caanl and cavernous sinus, and sending branches to the tympanic plexus, sphenopalatine ganglion, abducens and oculomotor nerves, the cerebral vessels, and the ciliary ganglion; (2) the internal carotid venous plexus, a venous network around the internal carotid artery in the carotid canal of the temporal bone, connecting with the cavernous sinus and internal jugular vein.

p. caverno'si concha'rum [BNA], venous plexuses in the mucous membrane of the two lower turbinated bodies, giving to this part the property of erectile tissue.

p. caverno'sus [BNA], cavernous plexus, the portion of the p. caroticus internus in the cavernous sinus.

p. caverno'sus pe'nis or **clitor'idis** [BNA], cavernous p. of the penis or of the clitoris, a sympathetic p. at the root of the penis or clitoris, derived from the hypogastric, sending branches to the corpus cavernosum.

p. cervica'lis [BNA], cervical p., formed by loops joining the anterior rami of the first four cervical nerves and receiving communicating rami from the sympathetic cervical ganglion; it lies beneath the sternocleidomastoid muscle, and sends out numerous cutaneous, muscular, and communicating rami.

p. chorioid'eus [BNA], chorioid plexus, a vascular proliferation or fringe of the fold of pia mater, tela chorioidea, in one of the cerebral ventricles; by secre-

tion or absorption of cerebrospinal fluid the chorioid plexus serves to regulate the intraventricular pressure.

p. chorioid'eus ventric'uli latera'lis [BNA], chorioid plexus of the lateral ventricle, the vascular fringe of the lateral edge of the velum interpositum which projects into each lateral ventricle.

p. chorioid'eus ventric'uli quar'ti [BNA], chorioid plexus of the fourth ventricle, one of two vascular fringes of pia mater projecting on either side from the lower part of the roof of the fourth cerebral ventricle.

p. chorioid'eus ventric'uli ter'tii [BNA], chorioid plexus of the third ventricle, the double row of vascular projections from the under surface of the velum interpositum where it roofs over the third cerebral ventricle.

p. coccyge'us [BNA], coccygeal p., a small plexus formed by the 5th sacral and the coccygeal nerves, usually regarded as forming part of the pudendal p.; it gives origin to the anococcygeal nerves.

p. cœli'acus [BNA], celiac p.; (1) solar p., abdominal brain, the largest of the sympathetic plexuses lying in front of the aorta at the level of origin of the celiac artery, behind the stomach; it is formed by the splanchnic and the pneumogastric nerves and cords from the celiac and superior mesenteric ganglia; through its connections with the other abdominal plexuses it sends branches to all the abdominal viscera; (2) a lymphatic plexus formed of the superior mesenteric lymph nodes and the fifteen or twenty celiac nodes behind the stomach, duodenum, and pancreas, together with the connecting vessels.

p. corona'rius cor'dis ante'rior [BNA], anterior coronary p. of the heart, derived from the cardiac p. and accompanying the anterior coronary artery.

p. corona'rius poste'rior [BNA], posterior coronary p., derived from the cardiac p. and accompanying the posterior coronary artery.

p. deferentia'lis [BNA], deferential p., a sympathetic p. on the seminal vesicle and ampulla of the vas deferens on each side, derived from the hypogastric.

p. denta'lis infe'rior [BNA], inferior dental p., formed by branches of the inferior alveolar nerve interlacing before they supply the teeth.

p. denta'lis supe'rior [BNA], superior dental p., formed by branches of the infraorbital nerve; it gives off dental branches (*rami dentales*) and branches to the gums (*rami gingivales*).

p. femora'lis [BNA], femoral p., a sympathetic p. surrounding the femoral artery, derived from the iliac plexus.

p. ganglio'sus cilia'ris [BNA], ciliary ganglionic plexus, a nerve p. lying on the ciliary muscle, derived from the oculomotor, trigeminal, and sympathetic.

p. gas'tricus [BNA], gastric plexus, one of two plexuses, anterior and posterior, formed by a continuation of the esophageal plexuses and containing the terminations of the vagus; they communicate with the abdominal sympathetic plexuses and send rami to most of the abdominal viscera.

p. gas'tricus infe'rior [BNA], inferior gastric p., lying on the greater curvature of the stomach, formed by branches from the hepatic p.

p. gas'tricus supe'rior [BNA], superior gastric p., an unpaired sympathetic p. on the lesser curvature of the stomach, extending thence to the anterior and posterior surfaces and uniting with the gastric plexuses of the vagus.

p. gu'læ [L. *gula*, gullet], p. œsophageus [BNA].

p. hæmorrhoida'lis [BNA], hemorrhoidal plexus of veins, rests upon the posterior and lateral walls of the rectum; from it run the superior hemorrhoidal vein to the portal, the middle hemorrhoidal vein to the hypogastric (internal iliac) vein, and the inferior hemorrhoidal to the inferior pudendal.

p. hæmorrhoida'lis me'dius [BNA], middle hemorrhoidal p., a sympathetic p. on the rectum, derived from the hypogastric.

p. hæmorrhoida'lis supe'rior [BNA], superior hemorrhoidal p., a sympathetic p. on the artery of the same name, derived from the inferior mesenteric and distributed to the rectum.

p. hepat'icus [BNA], hepatic p., an unpaired sympathetic p. lying on the hepatic artery and its branches in the liver.

p. hypogas'tricus [BNA], hypogastric p., (1) a large unpaired sympathetic p. lying in front of the 5th lumbar vertebra and promontory of the sacrum; (2) a lymphatic p. formed of ten or twelve lymph nodes and their connecting vessels situated on the wall of the true pelvis on either side along the hypogastric vessels.

p. ili'acus [BNA], iliac p., lying on the iliac arteries, derived from the hypogastric p.

p. ili'acus exter'nus [BNA], external iliac plexus, a lymphatic plexus formed by the lymph nodes along the external iliac artery on either side, and their afferent and efferent vessels.

p. inguina'lis [BNA], inguinal p., a lymphatic p. formed of ten to fifteen lymph nodes with their connecting vessels lying superficially near the termination of the long saphena vein and more deeply along the femoral artery and vein in the ileopectineal fossa.

p. ischiad'icus [NK], p. sacralis.

p. jugula'ris [BNA], jugular p., a lymphatic plexus formed of many lymph nodes, with their afferent and efferent vessels, extending along the internal jugular vein.

p. liena'lis [BNA], splenic p., a sympathetic p. lying on the splenic artery.

p. lingua'lis [BNA], lingual p., a sympathetic p. on the artery of this name, derived from the external carotid p.

p. lumba'lis [BNA], lumbar p., (1) a nervous p., formed by the first four lumbar nerves; it lies in the substance of the psoas muscle; (2) a lymphatic p. formed of about twenty lymph nodes and connecting vessels situated along the lower portion of the aorta and the common iliac vessels.

p. lumbosacra'lis [BNA], lumbosacral p., formed by the union of the anterior primary divisions of the lumbar, sacral, and coccygeal nerves; it is usually divided into lumbar, sacral, and pudendal plexuses.

p. lymphat'icus [BNA], any network of lymphatic vessels.

p. mamma'rius [BNA], mammary p., a lymphatic plexus, formed of small lymph nodes, with their vessels, situated along the course of the internal mammary arteries.

p. mamma'rius inter'nus [BNA], internal mammary p., a sympathetic plexus on the artery of this name, derived from the subclavian p.

p. maxilla'ris exter'nus [BNA], external maxillary p., a sympathetic p. on the artery of this name, sending a branch to the submaxillary ganglion, derived from the external carotid p.

p. maxilla'ris inter'nus [BNA], internal maxillary p., a sympathetic plexus on the artery of this name, derived from the external carotid p.

p. meninge'us [BNA], a sympathetic nerve plexus on the cerebral meninges, derived from the external carotid plexus.

p. mesenter'icus infe'rior [BNA], inferior mesenteric p., a sympathetic plexus, derived from the aortic, surrounding the inferior mesenteric artery and sending branches to the descending colon, sigmoid, and rectum.

p. mesenter'icus supe'rior [BNA], superior mesenteric p., an unpaired sympathetic p., a continuation or part of the celiac p., sending nerves to the intestines and forming with the vagus the myenteric and submucous plexuses.

p. muco'sus, a lymphatic p. in the mucous membrane of the stomach.

p. myenter'icus [BNA], myenteric p., p. of Auerbach, a gangliated plexus of non-medullated fibers, derived chiefly from the superior mesenteric p., lying in the muscular coat of the intestine.

p. nervo'sus, a p. formed by the interlacing of nerves by means of numerous anastomotic branches.

p. occipita'lis [BNA], occipital p., a sympathetic p. on the artery of this name, derived from the external carotid p.

p. œsophage'us [BNA], esophageal p., p. gulæ, one of two nervous plexuses, posterior and anterior, on the walls of the esophagus; the first is formed by branches from the right vagus and left recurrent, the second by the anastomosing trunks of the vagus after leaving the pulmonary plexuses; branches supply the mucous and muscular coats of the esophagus.

p. ophthal'micus [BNA], ophthalmic p., a sympathetic p, entering the orbit in company with the ophthalmic artery, derived from the internal carotid p.

p. pampiniformis [BNA], a plexus formed, in the male, by veins from the testicle and epididymis, consisting of eight or ten veins lying in front of the vas deferens and forming part of the spermatic cord; in the female the ovarian veins form this plexus between the layers of the broad ligament.

p. parotide'us [BNA], parotid p., pes anserinus, the diverging branches of the facial nerve passing through the substance of the parotid gland, connected by numerous looped anastomoses.

p. pharynge'us [BNA], a venous plexus on the posterolateral walls of the pharynx, emptying through the pharyngeal veins into the jugularis interna.

p. pharynge'us ascen'dens [BNA], ascending pharyngeal p., a sympathetic p. on the artery of the same name formed of fibers from the superior cervical ganglion.

p. phren'icus [BNA], phrenic p., a sympathetic p. surrounding the inferior phrenic artery.

p. poplite'us [BNA], popliteal p., a sympathetic p. surrounding the popliteal artery, derived from the femoral p.

p. prostat'icovesica'lis, prostaticovesical plexus, a venous plexus around the prostate gland and neck of the bladder; it communicates with the vesical and pudendal plexuses, and empties by one or more efferent vessels into the hypogastric (internal iliac) vein; it corresponds to the p. vesicalis inferior in the female.

p. prostat'icus [BNA], prostatic p., a sympathetic p. on the prostate, derived from the hypogastric.

p. pterygoid'eus [BNA], pterygoid plexus, situated in the zygomatic and pterygoid fossæ, receiving veins accompanying the branches of the internal maxillary artery, and terminating in the internal maxillary vein.

p. pudenda'lis [BNA], pudendal plexus, a venous plexus arising chiefly from the dorsal vein of the penis (or clitoris), passing between the arcuate ligament of the pubis and transverse ligament of the pelvis to the prostaticovesical (in the female, inferior vesical) plexus.

p. puden'dus [BNA], pudendal p., formed by the 3rd, 4th, and 5th sacral and the coccygeal nerves; it lies on the inner surface of the posterior wall of the pelvis, and its nerves are distributed almost wholly to the perineum.

p. pulmona'lis [BNA], pulmonary p., one of two nervous plexuses, anterior and posterior, at the hilum of each lung, formed by branches of the sympathetic and bronchial rami of the vagus nerve; from them various branches accompany the bronchi and arteries into the lung.

p. recta'lis [NK], p. hæmorrhoidalis.

p. rena'lis [BNA], renal p., a sympathetic p. surrounding the renal artery and extending with it into the substance of the kidney.

p. sacra'lis [BNA], sacral p., sciatic p., formed by the 4th and 5th lumbar and 1st, 2d and 3d sacral nerves; it lies on the inner surface of the posterior wall of the pelvis; its nerves supply the lower extremities.

p. sacra'lis ante'rior [BNA], anterior sacral plexus, a venous plexus on the anterior surface of the sacrum, formed by branches from the lateral sacral veins.

p. sacra'lis medius [BNA], middle sacral plexus, a lymphatic plexus formed of lymph nodes and connecting vessels situated chiefly in the mesorectum anterior and inferior to the promontory of the sacrum.

p. sola'ris, solar p., p. cœliacus [BNA].

p. spermat'icus [BNA], spermatic p., a sympathetic p. derived from the aortic and accompanying the spermatic artery to the testicle and cord.

p. subcla'vius [BNA], subclavian p., a sympathetic p. accompanying the artery of this name, formed by fibers from the inferior cervical ganglion, and giving off secondary plexuses along the branches of the subclavian.

p. submuco'sus [BNA], submucous p., p. of Meissner, a gangliated p. of non-medullated nerve-fibers, derived chiefly from the superior mesenteric plexus, ramifying in the intestinal submucosa.

p. suprarena'lis [BNA], suprarenal p., a sympathetic p. formed mainly by branches from the celiac ganglion, lying at the hilum of the suprarenal body.

p. sympath'ici [BNA], sympathetic plexuses, see *systema nervorum sympathicum*.

p. tempora'lis superficia'lis [BNA], superficial temporal p., a sympathetic p. on the artery of this name, derived from the external carotid p.

p. thyreoid'eus im'par [BNA], a venous plexus in front of the lower portion of the trachea formed by anastomoses between the inferior thyroid veins; it terminates in the unpaired vena thyreoidea ima.

p. thyreoid'eus infe'rior [BNA], inferior thyroid p., a sympathetic p. on the artery of this name, derived from the subclavian p.

p. thyreoid'eus supe'rior [BNA], superior thyroid p., a sympathetic p. on the artery of the same name, derived from the external carotid p.

p. tympan'icus [BNA], tympanic p., Jacobson's p., a p. on the inner wall of the tympanum and the promontory formed by the tympanic nerve, an anastomotic branch of the facial, and sympathetic branches from the internal carotid p.; it supplies the mucosa of the tympanum, mastoid cells, and Eustachian tube, and gives off the lesser superficial petrosal nerve to the otic ganglion.

p. uterovagina'lis [BNA], uterovaginal p., (1) a gangliated sympathetic p. on each side of the cervix uteri, derived from the hypogastric; (2) a nervous plexus on either side of the vagina and cervix uteri, emptying into the uterine veins.

p. vascule'sus [BNA], a vascular network formed by frequent anastomoses between the blood-vessels (arteries or veins) of a part.

p. veno'si vertebra'les, vertebral venous plexuses, venous networks on the outer and inner surfaces of the spinal column; of the *external* plexuses the posterior are the larger, the anterior being well marked only in the neck; they empty into the intervertebral veins; the *internal* plexuses are found between the dura mater and periosteum the entire length of the spine.

p. veno'sus [BNA], a vascular network formed by numerous anastomoses between veins.

p. veno'sus mamill'æ [BNA], a venous plexus in the areola surrounding the nipple, formed by the mammary veins, and sending its blood to the lateral thoracic vein.

p. vertebra'lis [BNA], vertebral p., a sympathetic p. on the artery of this name, derived from the subclavian p.

p. vesica'lis [BNA], vesical p., (1) a sympathetic p. on the bladder, derived from the hypogastric; (2) a venous plexus at the fundus and sides of the bladder on the outer surface of the muscular coat, draining into the prostaticovesical (in the female, inferior vesical) plexus.

p. vesica'lis infe'rior, inferior vesical plexus in the female, corresponding to the p. prostaticovesicalis in the male.

stroma p., a plexus of nerves in the parenchyma of the cornea consisting of the *primary* or *deep* plexus, in the substance of the cornea, and the *sub-basal* or *superficial* plexus just beneath the anterior limiting membrane.

pli'ca, gen. and pl. *pli'cæ* [L. a plait or fold.] 1. One of several anatomical structures in which there is a folding over of the parts. 2. A matted condition of the hair due to filth and the presence of parasites plica polonica. 3. False membrane. 4. In veterinary practice, mange of the mane and tail.

pli'cæ adipo'sæ [BNA], adipose folds of the pleura, lobules of fat enveloped in the pleura, chiefly in the neighborhood of the costomediastinal sinus.

p. ala'ris, pl. *plicæ alares* [BNA], alar folds, plicæ aliformes, ligamenta alaria; one of the winglike lateral fringes or expansions of the ligamentum mucosum, or plica synovialis patellaris.

p. ampulla'ris [BNA], one of the folds of mucous membrane at the fimbriated extremity of the oviduct.

p. aryepiglot'tica [BNA], aryepiglottic or arytenoepiglottidean fold, a prominent fold of mucous membrane stretching between the lateral margin of the epiglottis and the arytenoid cartilage on either side; it encloses the aryepiglottic muscle.

p. axilla'ris [BNA], axillary fold, one of the folds of skin and muscular tissue bounding the axilla anteriorly and posteriorly.

p. cæca'lis [BNA], cecal fold, one of two peritoneal folds, superior and inferior, the former the outer layer, the latter the inner layer of the ascending mesocolon.

p. chor'dæ uteroinguina'lis [NK], round ligament of the uterus, ligamentura teres uteri.

p. chorioid'ea, a fold in the embryo whence arises the chorioid plexus.

p. cilia'ris [BNA], ciliary fold, one of a number of low ridges in the furrows between the ciliary processes; together with the processes they constitute the corona ciliaris.

p. circula'ris, pl. *plicæ circulares* [BNA], valvulæ conniventes; one of numerous folds of the mucous membrane of the small intestine, running transversely for about two-thirds of the circumference of the gut.

p. duodenojejuna'lis [BNA], superior duodenal fold, a fold of peritoneum bounding the superior duodenal fossa.

p. duodenomesocol'ica [BNA], inferior duodenal fold, a fold of peritoneum bounding the inferior duodenal fossa, or fossa of Treitz.

plicæ epididym'idis [NK], the convoluted tubes of the epididymis.

p. epigas'trica [BNA], epigastric fold, a ridge on the peritoneal surface of the anterior abdominal wall formed by the deep epigastric artery.

p. epiglott'ica, one of three folds of mucous membrane passing between the tongue and the epiglottis, p. glossoepiglottica lateralis on either side and p. glossoepiglottica mediana.

p. fimbria'ta [BNA], fimbriated fold, one of several folds running outward from the frenulum on the under surface of the tongue.

p. gas'tropancreat'ica [BNA], the gastropancreatic fold, a duplication of peritoneum passing between the stomach and the pancreas.

p. glossoepiglot'tica latera'lis [BNA], lateral glossoepiglottidean fold, a fold of mucous membrane extending from the margin of the epiglottis to the sides of the base of the tongue and the pharynx on either side.

p. glossoepiglot'tica media'na [BNA], middle glossoepiglottidean fold, frenulum epiglottidis, a fold of mucous membrane extending from the back part of the dorsum of the tongue to the front of the epiglottis.

p. guberna'trix, a fold of the mesorchium, or mesentery of the testis in the fetus, which is attached below, contains the gubernaculum testis, and terminates at the internal ring in the processus vaginalis.

p. hypogas'trica, p. umbilicalis lateralis [BNA].

p. ileocæca'lis [BNA], ileocecal fold, a fold of peritoneum, said to be non-vascular, bounding the ileocecal or ileoappendicular fossa.

p. interdigita'lis, one of the folds of skin, or rudimentary web, between the fingers and toes.

p. ir'idis [BNA], ruga iridis [NK], fold of the iris, one of a number of very fine, almost microscopic, radial folds on the posterior surface of the iris.

p. lacrima'lis [BNA], lacrymal fold, Huschke's valve, Rosenmueller's valve, Hasner's fold, a fold of mucous membrane guarding the lower opening of the nasolacrymal duct.

p. luna'ta, p. semilunaris conjunctivæ.

p. malleola'ris [BNA], one of two ligamentous bands, anterior and posterior, making folds on the tympanic side of the membrana tympani extending from each extremity of the notch of Rivinus to the malleolar prominence; they mark the boundary between the tense and the flaccid portions of the drum membrane.

p. membra'næ tym'pani, tympanic or tympanomalleolar fold, one of two folds, anterior and posterior, on the outer surface of the membrana tympani, converging from the borders of extremities of the notch of Rivinus toward the short process of the malleus.

p. m. t. oralis, p. m. t. aboralis [NK], p. malleolaris anterior and posterior respectively.

p. neuropath'ica, a twisting together of the hairs, forming a matted or felt-like condition, not due, as in p. polonica, to filth.

p. palma'ta, pl. *plicæ palmatæ* [BNA], arbor vitæ uteri, one of the two longitudinal ridges, anterior and posterior, in the mucous membrane lining the cervix uteri, from which numerous secondary folds, or rugæ, branch off.

p. polon'ica, see *plica* (2).

p. rec'ta, p. transversalis recti.

p. rectouteri'na [BNA], Douglas's fold, a fold of peritoneum, containing the rectouterine muscle, passing from the rectum to the base of the broad ligament on either side, forming the lateral boundary of Douglas's pouch.

p. rectovagina'lis, p. rectouterina.

p. salpingopalati'na [BNA], p. tubopalatina, a ridge passing from the anterior border of the opening of the Eustachian tube to the palate.

p. salpingopharynge'a [BNA], salpingopharyngeal fold, a ridge of mucous membrane extending from the lower end of the torus tubarius along the wall of the pharynx.

p. semiluna'ris conjuncti'væ [BNA], the semilunar fold formed by the palpebral conjunctiva at the inner angle of the eye.

p. sigmoid'ea, one of the transverse folds of mucous membrane in the cecum and colon.

p. sublingua'lis [BNA], an elevation in the floor of the mouth beneath the tongue, on either side, marking the site of the sublingual gland.

p. synovia'lis [BNA], synovial fold; a projection from the synovial membrane of a joint extending toward or between the two articular surfaces.

p. synovia'lis patella'ris [BNA], patellar synovial fold, ligamentum mucosum, a fold of synovial membrane extending from below the level of the articular surface of the patella to the anterior part of the intercondyloid notch.

p. transversa'lis rec'ti [BNA], Houston's valve, Kohlrausch's valve; one of from three to five crescentic folds on the lateral walls of the rectum, caused by an infolding of the mucous and part of the muscular coats.

p. triangula'ris [BNA], a fold of mucous membrane at the point of junction of the anterior pillar of the fauces with the tongue.

pli'cæ tuba'riæ [BNA], many longitudinal folds in the mucous membrane of the Fallopian tube.

p. tubopalati'na, p. salpingopalatina.

p. umbilica'lis latera'lis [BNA], lateral umbilical fold, p. hypogastrica, a fold of peritoneum on the anterior abdominal wall covering the obliterated hypogastric artery on either side of the urachus.

p. umbilica'lis me'dia [BNA], middle umbilical fold p. urachi, a fold of peritoneum on the anterior wall of the abdomen covering the urachus, or remains of the allantois.

p. u'rachi, p. umbilicalis media [BNA].

p. ureter'ica [BNA], a fold of mucous membrane extending from the orifice of the ureter on either side to the median line of the bladder.

p. uterovesica'lis, ligamentum vesicouterinum.

p. vascula'ris, p. vasculo'sa, the fold of the mesorchium, or peritoneal mesentery of the testis in the fetus, which is attached above and ultimately contains the spermatic vessels.

p. ventricula'ris [BNA], ventricular fold, false vocal cord, a fold of mucous membrane on either wall of the larynx above the true vocal cord; it is concerned little, if at all, in voice production.

p. vesica'lis transver'sa [BNA], transverse vesical fold, a duplication of peritoneum passing over the empty bladder, but obliterated when the viscus is full.

p. vesicouteri'na, ligamentum vesicouterinum.

p. vestib'uli, a fold of mucous membrane forming a ridge on the septum of the nose.

p. villo'sa [BNA], one of the ridges of the mucous membrane of the stomach in the region of the pylorus.

p. voca'lis [BNA], vocal fold, true vocal cord; the sharp edge of a fold of mucous membrane stretching along either wall of the larynx from the angle between the alæ of the thyroid to the vocal process of the arytenoid cartilage; the true vocal cords are the agents concerned in voice production.

pli'cate [L. *plicatus*.] Folded, plaited, tucked.

plica'tion [L. *plicare*, to fold.] A folding or putting together in folds. Specifically an operation for reducing the size of a hollow viscus by taking folds or tucks in its walls.

plicot'omy [L. *plica*, fold, + G. *tomē*, incision.] Division of the plica membranæ tympani.

Plimm'er's bodies [Henry George *Plimmer*, London protozoologist, 1857–1918.] Certain cell inclu-

sions, regarded by Plimmer as blastomycetes, found in cases of carcinoma. **P.'s salt,** sodiotartrate of antimony, employed in the treatment of trypanosomiasis.

plocach (plo'kakh) [Gaelic for swollen head.] Headgrit, sheep cholera.

Plotz bacillus (plots bă-sil'lus) [H. *Plotz*, New York physician, *1890.] A small gram-positive bacterium suggested as the pathogenic agent of typhus fever.

plough-share (plow'shār). Vomer.

plug. 1. A peg or any mass filling a hole or closing an orifice. 2. To fill a tooth-cavity.

plugger (plug'ur). An instrument used for compressing gold, amalgam, or other material in a tooth cavity during the operation of filling.

plumbagin (plum-ba'jin). An active principle extracted from the root of *Plumbago zeylanica* and *P. rosea*, Indian evergreen shrubs; it is irritant and vesicant and is employed as an abortifacient.

plumba'go [L.] Black lead, graphite. A crystallizable form of carbon, of grayish black color and unctuous feel.

plum'bic. Relating to or containing lead.

plum'bism [L. *plumbum*, lead.] Lead poisoning.

plumbotherapy (plum-bo-ther'ă-pĭ) [L. *plumbum*, lead, + G. *therapeia*, treatment.] Lead cure.*

plum'bum [L.] Lead, a metallic element, symbol Pb, atomic weight 207.1, of metallic luster and bluish gray color; it occurs in nature as an oxide or one of the salts, but chiefly as the sulphide, or galena. Lead, either the metal or its salts, causes a distressing form of chronic poisoning marked by severe colic with constipation, wrist drop, and the presence of a bluish line on the gums. **plum'bi ace'tas** (U.S., Br.), lead acetate, sugar of lead, occurring in colorless, shining, translucent prismatic crystals, soluble in water; astringent and styptic; employed in diarrhea in doses of gr. 1–3 (0.06–0.2), as an injection in leucorrhea and gonorrhea, and externally in contusions. **plum'bi carbo'nas** (Br.), lead carbonate, white lead, a heavy white powder, insoluble in water; occasionally employed to relieve irritation in dermatitis; it is used largely in the manufacture of paint and in the arts and is thus productive of lead poisoning. **plumbi iod'idum** (N.F., Br.), lead iodide, a yellow powder or yellow lustrous scales; employed externally as a stimulating ointment in the case of sluggish ulcers, and has been used internally in the treatment of tuberculous glands in doses of gr. ½–2 (0.03–0.12). **plum'bi monox'idum** (U.S., Br.), lead monoxide, plumbi oxidum (Br.), lead oxide, litharge, PbO; a heavy yellowish or reddish-yellow powder, or minute scales, without odor or taste, almost insoluble in water. **plum'bi ni'tras** (N.F.), lead nitrate, occurs in colorless, translucent or opaque white, soluble crystals; employed externally in the treatment of chapped hands, cracked nipples, and other similar lesions. **plum'bi ox'idum** (Br. '14), lead oxide, litharge, plumbi monoxidum (U.S., Br.), employed externally as an application to burns, and is used to make the lead plaster of the B.P. **plum'bi ox'idum ru'brum** (N.F.), red oxide of lead, red lead, a bright orange-red powder turning black when heated. **plum'bi sul'phidum,** PbS, lead sulphide, galena, the native form in which lead is chiefly found.

Plum'mer's disease' [Henry S. *Plummer*, American physician, *1874.] Adenomatous goiter with hyperthyroidism; it differs from exophthalmic goiter and is said to be a clinical entity.

Plum'mer's pill [Andrew *Plummer*, Scotch physician, †1756.] Pilula hydrargyri subchloridi composita.

plu'mose [L. *pluma*, feather.] Feathery.

plu'mula [L. dim. of *pluma*, feather.] 1. A feather-like marking on the upper wall of the aquæductus cerebri. 2. In botany, the primary leaf-bud of the embryo.

plumule (plu'mūl). Plumula.

Plunk'et's caus'tic. Arsenic 60, sulphur 100, ranunculus acris and ranunculus flammula each 480, beaten together into a paste.

pluriceptor (plu-rĭ-sep'tor) [L. *plus(plur-)*, more, + *capere*, to take.] A receptor having more than two complementophile groups.

pluriglandular (plu-rĭ-glan'du-lar) [L. *plus(plur-)*, more.] Polyglandular, noting several glands or their secretions. **p. syn'drome,** a group of symptoms supposedly due to perverted action and interaction of several ductless glands.

plurigravida (plu-rĭ-grav'ĭ-dah) [L. *plus(plur-)*, more, + *gravida*, pregnant.] A woman pregnant for the third time or more, multigravida.

pluriloc'ular [L *plus(plur-)*, more, + *loculus*, a small place or cell] Multilocular.

plurip'ara [L. *plus(plur-)*, more, + *parere*, to bear.] A woman who has borne three or more children multipara

pluripar'ity. Multiparity

plutoma'nia [G. *ploutos*, wealth, + *mania*, frenzy.] An insane delusion that one has great wealth.

pneocardiac reflex (ne-o-kar'dĭ-ak re'fleks) [G. *pneō*, I breathe, + *kardia*, heart.] A modification in the blood pressure or heart rhythm caused by the inhalation of an irritating vapor.

pneodynamics (ne"o-di-nam'iks) [G. *pneō*, I breathe, + *dynamis*, force] The mechanics of respiration.

pneogaster (ne-o-gas'ter) [G *pneō*, I breathe, + *gastēr*, belly.] The respiratory tract considered in relation with its development as part of the general intestinal system

pneograph (ne'o-graph) [G *pneō*, I breathe, + *graphō*, I record.] An instrument for recording the force and rapidity of the respiratory movements

pneom'eter (ne-om'e-ter) [G. *pneō*, I breathe, + *metron*, measure] An instrument for measuring the volume of respired air.

pneophore (ne'o-for) [G. *pneō*, I breathe, + *phoros*, a bearer] An instrument for use in artificial respiration.

pneopneic reflex (ne-op-ne'ik re'fleks) [G. *pneō*, I breathe.] A modification of the respiratory rhythm caused by the inhalation of an irritating vapor.

pneoscope (ne'o-skōp) [G. *pneō*, I breathe, + *skopeō*, I examine.] An instrument for measuring the extent of the respiratory excursions of the chest.

pneumarthro'sis (nu-mar-thro'sis) [G. *pneuma*, air, + *arthron*, joint, + *-ōsis*] The presence of air in a joint.

pneumascope (nu'mă-skōp) [G. *pneuma*, breath, + *skopeō*, I examine.] Pneoscope.

pneumascos (nu-mas'kos) [G. *pneuma*, air, + *askos*, bag (the peritoneal sac).] Pneumoperitoneum.

pneumathemia, pneumathæmia (nu-mă-the'mĭ-ah) [G *pneuma(pneumat-)*, air, + *haima*, blood.] The presence of air bubbles or gas in the blood.

pneumatic (nu-mat'ik) [G. *pneumatikos*.] 1. Relating to air or gas. 2. Relating to respiration. **p. bone,** hollow bone, one which contains many air-cells. **p. cab'inet,** an airtight box of steel with plateglass front, large enough to hold a person sitting, in which the air may be condensed or rarified at will.

pneumatinuria (nu-mă-tin-u'rĭ-ah) Pneumaturia.

pneumatics (nu-mat'iks). The science which treats of the physical properties of air or gases.

pneumatocardia (nu-mat-o-kar'dĭ-ah) [G. *pneuma* (*pneumat-*), air, + *kardia*, heart.] The presence of air bubbles or gas in the blood of the heart

pneumatocele (nu-mat'o-sēl) [G. *pneuma*(*pneumat-*), air, + *kēlē*, tumor, hernia.] 1. Distention of the scrotum with gas. 2. An emphysematous or gaseous tumor. 3. Pneumonocele.

pneumatodyspnea, pneumatodyspnœa (nu-mat"o-dis-pne'ah) [G. *pneuma*(*pneumat-*), air, + *dyspnoia*, difficulty in breathing] Shortness of breath in cases of pulmonary emphysema.

pneumatogram (nu-mat'o-gram) [G *pneuma*(*pneumat-*), breath, + *gramma*, a drawing.] The record or tracing made by a pneumatograph.

pneumatograph (nu-mat'o-graf) [G. *pneuma*(*pneumat-*), breath, + *graphō*, I record.] An instrument for recording the respiratory movements: pneograph.

pneumatology (nu-mă-tol'o-jĭ) [G. *pneuma*(*pneumat-*), air, + *-logia*.] The science dealing with air or gases, their physical and chemical properties and, among other things, their therapeutic applications.

pneumatometer (nu-mă-tom'e-ter) [G. *pneuma* (*pneumat-*), breath, + *metron*, measure] Pneometer

pneumatorrhachis (nu-mă-tor'ă-kis) [G. *pneuma* (*pneumat-*), air, + *rhachis*, spine] The presence of air or gas in the spinal canal

pneumatoscope (nu-mat'o-skōp) [G *pneuma*(*pneumat-*), air, + *skopeō*, I examine.] 1 Pneoscope 2. An instrument for use in auscultatory percussion, the percussion sounds of the chest being heard at the mouth 3. A device for determining the presence of air or of a liquid effusion in the mastoid cells, the principle being that a vibrating tuning-fork is heard longer when in contact with the normal mastoid

pneumatosis (nu-mă-to'sis) [G a blowing out] Abnormal accumulation of gas in any part of the body **p. cystoi'des intestina'lis,** a condition marked by the occurrence of gas cysts in the intestinal mucous membrane, especially of the sigmoid; it is due to the formation of gas in the lymph spaces and is probably dependent upon the presence of a gas-forming bacillus.

pneumatotherapy (nu-mat-o-ther'ă-pĭ) [G *pneuma* (*pneumat-*), air, + *therapeia*, treatment] The treatment of disease by means of the pneumatic cabinet or any other method of rarefying or condensing air

pneumatothorax (nu-mat-o-tho'raks) Pneumothorax.

pneumaturia (nu-ma-tu'rĭ-ah) [G *pneuma*(*pneumat-*), air, + *ouron*, urine] The passage of gas from the urethra during or after the discharge of urine, due to the decomposition of urine in the bladder or to the presence of an intestinal fistula.

pneumatype (nu'mă-tīp) [G. *pneuma*, breath, + *typos*, figure, outline.] A device for determining the permeability of the nasal fossæ by exhaling through the nose against a plate of cooled glass.

pneumectomy (nu-mek'to-mĭ). Pneumonectomy.

pneumin (nu'min). Methylene-creosote, an insoluble yellow powder without odor or taste, recommended in bronchitis and tuberculosis in doses of gr. 4–8 (0.25–0.5); it is obtained by the action of formaldehyde on creosote.

pneumobacillin (nu-mo-bas'il-in). A toxin or toxic protein derived from cultures of the pneumobacillus.

pneumobacil'lus. *Bacillus pneumoniæ.*

pneumobacterine (nu-mo-bak'ter-ēn). A stock vaccine* made from killed cultures of the pneumococcus.

pneumobulbar (nu-mo-bul'bar) [G. *pneumon*, lung, + *bolbos*, bulb.] Relating to the lungs and the vagus center in the medulla oblongata.

pneumobulbous (nu-mo-bul'bus). Pneumobulbar

pneumocele (nu'mo-sēl). Pneumonocele.

pneumocentesis (nu"mo-sen-te'sis). Pneumonocentesis

pneumocephalus (nu-mo-sef'ă-lus) [G. *pneuma*, air, + *kephalē*, head.] The presence of air or gas within the cranial cavity.

pneumochirurgia (nu-mo-ki-rur'jĭ-ah). Pneumonochirurgia.

pneumocholin (nu-mo-ko'lin). A preparation made by dissolving pneumococci in sodium taurocholate; recommended as a prophylactic against lobar pneumonia (type I).

pneumochysis (nu-mok'ĭ-sis). Pneumonochysis

pneumococcal (nu-mo-kok'al). Relating to the pneumococcus.

pneumococcemia, pneumococcæmia (nu-mo-kok-se'mĭ-ah) [*pneumococcus* + G. *haima*, blood.] The presence of pneumococci in the blood.

pneumococcus (nu-mo-kok'us). *Diplococcus pneumoniæ,*[0] *Micrococcus lanceolatus, Streptococcus lanceolatus,* the pathogenic microorganism of croupous pneumonia. Four principal types or strains of the p. are recognized, called respectively Type I, II, III, IV; Type III, called also *P. mucosus,* is distinguished quite sharply from the others by morphological and cultural differences; Type IV contains a number of independent strains differing more or less from each other; pneumococci of this type are the ones usually found in the mouth, they are responsible for about 20 per cent. of cases of pneumonia and are the least virulent; Type III gives the lowest incidence in disease of all the types, but is the most virulent; Types I and II are responsible for about 60 per cent. of all cases of pneumonia, Type I causing the greater number.

pneumoconiosis (nu-mo-ko-nĭ-o'sis). Pneumonoconiosis

pneumoderma (nu-mo-der'mah) [G. *pneuma*, air, + *derma*, skin] Subcutaneous emphysema.

pneumodynamics (nu"mo-di-nam'iks) [G. *pneuma*, breath, + *dynamis*, force] Pneodynamics.

pneumoenteritis (nu"mo-en-ter-i'(e')tis) Pneumonoenteritis

pneumoerysipelas (nu"mo-er-ĭ-sip'e-las). Pneumonoerysipelas.

pneumogalactocele (nu-mo-gal-ak'to-sēl) [G. *pneuma*, air, + *gala*(*galakt-*), milk, + *kēlē*, tumor.] A tumor of the breast containing milk and gas.

pneumogastric (nu-mo-gas'trik) [G *pneumōn*, lung, + *gastēr*, stomach] Relating to the lungs and the stomach, noting the *p. nerve*, nervus vagus.

pneumogram (nu'mo-gram). Pneumatogram.

pneumograph (nu'mo-graf). Pneumatograph.

pneumohemopericardium, pneumohæmopericardium (nu"mo-hem"o-per-ĭ-kar'dĭ-um) [G. *pneuma*, air, + *haima*, blood, + *peri*, around, + *kardia*, heart.] The presence of air or gas and blood in the pericardium.

pneumohemothorax, pneumohæmothorax (nu"mo-hem-o-tho'raks) [G. *pneuma*, air, + *haima*, blood, + *thorax*.] The presence of air or gas and blood in the thoracic cavity.

pneumohydrometra (nu"mo-hi"dro-me'trah) [G. *pneuma*, air, + *hydōr*(*hydr-*), water, + *mētra*,

uterus.] The presence of gas and serum in the uterine cavity.

pneumohydropericardium (nu″mo-hi″dro-per-i-kar′dĭ-um) [G. *pneuma*, air, + *hydōr(hydr-)*, water, + *peri*, around, + *kardia*, heart.] The presence of air and serum in the pericardium.

pneumohydrotho′rax (nu-mo-hi-dro-tho′raks). Hydropneumothorax.

pneumohypoderma (nu″mo-hi-po-der′mah) [G. *pneuma*, air, + *hypo*, beneath, + *derma*, skin.] Subcutaneous emphysema.

pneumolith (nu′mo-lith) [G. *pneumōn*, lung, + *lithos*, stone.] A calculus in the lung.

pneumolysis, pneumolysis (nu-mo-liz′ĭ-ah, nu-mol′i-sis) [G. *pneumōn*, lung, + *lysis*, a loosening.] Separation of the lung and costal pleura from the endothoracic fascia.

pneumomalacia (nu-mo-măl-a′sĭ-ah) [G. *pneumōn*, lung, + *malakia*, softness.] Softening of the lung tissue.

pneumomassage (nu″mo-mă-sazh′) [G. *pneuma*, air, + Fr. *massage*.] Compression and rarefaction of the air in the external auditory meatus, causing movement of the ossicles of the tympanum.

pneumomelanosis (nu″mo-mel-an-o′sis). Pneumonomelanosis.

pneumometer (nu-mom′e-ter). Pneumatometer.

pneumomycosis (nu-mo-my-ko′sis). Pneumonomycosis.

pneumonectasia (nu-mon-ek-ta′sĭ-ah) [G. *pneumōn*, lung, + *ektasis*, extension.] Dilatation of the pulmonary air-cells, emphysema.

pneumonectomy (nu-mon-ek′to-mĭ) [G. *pneumōn*, lung, + *ektomē*, excision.] Operative removal of a portion of lung tissue.

pneumonedema, pneumonœdema (nu-mon-e-de′mah) [G. *pneumōn*, lung, + *oidēma*, a swelling] Edema of the lungs.

pneumonemia, pneumonæmia (nu-mon-e′mĭ-ah) [G. *pneumōn*, lung, + *haima*, blood.] Congestion of the lungs.

pneumonia (nu-mo′nĭ-ah) [G. *pneumōn*, lung.] 1. Inflammation of the lungs, pneumonitis. 2. Specifically an acute infectious disease, croupous p. **an′thrax p.,** pulmonary anthrax.* **a′pex p.,** croupous p. affecting the apices, or upper portions, of the lungs. **aspira′tion p.,** bronchopneumonia resulting from the entrance of a foreign body, usually food particles, into the bronchi. **bron′chial p.,** bronchopneumonia. **ca′seous p.,** a form of pulmonary tuberculosis in which tubercles are absent, but there is a diffuse cellular infiltration which undergoes coagulation necrosis resulting in a more or less extensive area of caseation. **catar′rhal p.,** bronchopneumonia. **cen′tral p.,** a form of croupous p. in which the exudation is for a time confined to the central portion of a lobe or near the root of the lung. **cer′ebral p.,** p. accompanied by marked headache, delirium, and other cerebral symptoms. **cheesy p.,** caseous p. **chronic p.,** fibrous phthisis. **contu′sion p.,** inflammation of the lungs following a severe blow on or compression of the chest. **core p.,** central p. **crou′pous p.,** lobar p., an acute infectious disease, caused by one of the types of pneumococcus, *(q.v.)*; marked by fever, pleuritic pains, cough, and rusty or blood-stained sputa; it normally lasts about nine days and ends in crisis with profuse sweating; there is an abundant fibrinous exudation into the pulmonary alveoli, resulting in consolidation of the greater part or all of one or more lobes of the lungs, whence the term *lobar p.* **degluti′tion p.,** aspiration p. **desquam′ative p.,** parenchymatous p. **double p.,** croupous p. in which a larger or smaller portion of each lung is involved. **embol′ic p.,** congestion and infarction of the lung following the plugging of one or more of the smaller pulmonary arteries with emboli. **ether p.,** bronchopneumonia following prolonged ether anesthesia, inhalation p. **fi′brinous p.,** croupous p. **fibrous p.,** interstitial p. **hypostat′ic p.,** pulmonary congestion due to stagnation of blood in the dependent portions of the lungs in the aged or those debilitated by disease who lie in the same position for long periods. **in′durative p.,** interstitial or parenchymatous p. **inhala′tion p.,** (1) aspiration p.; (2) bronchopneumonia following prolonged ether anesthesia or the inhalation of irritating vapors **intersti′tial p.,** a chronic inflammation of the interstitial tissue of the lung resulting in compression of the air-cells, pneumonocirrhosis. **lo′bar p.,** croupous p. **lob′ular p.,** bronchopneumonia, **mas′sive p.,** a form in which a large part or all of one lung is invaded, the exudation filling the bronchi as well. **metastat′ic p.,** a purulent inflammation of the lungs due to pyemic emboli. **mi′gratory p.,** a form in which successive areas of the lung are invaded **parenchy′matous p.,** indurative p, chronic fibrinous, or croupous p. with induration of the exudate and proliferation of the interstitial tissue. **plague p.,** pneumonic plague.* **pleural p., pleurit′ic p.,** pleuropneumonia. **p. al′ba,** white p. **p. crupo′sa,** croupous p. **sec′ondary p.,** pulmonary inflammation, usually of bronchopneumonic type, occurring as a complication of some infectious disease and due to the microorganism of that affection **ter′minal p.,** p. of the lobar type occurring in the course of some acute or chronic disease and materially hastening the fatal termination. **toxe′mic p.,** pneumococcus sepsis, a systemic infection with the pneumococcus in which the pulmonary lesions are slight or absent. **traumat′ic p.,** inflammation of the lung following contusion of the chest or a wound of the lung itself. **ty′phoid p.,** p. complicating typhoid fever, or accompanied with stupor and other evidences of profound depression. **vagus p.,** p. following injury or disease of the vagus nerve. **wan′dering p.,** migratory p. **white p.,** syphilitic inflammation with fatty degeneration of the lungs in the new-born.

pneumonic (nu-mon′ik). 1. Relating to pneumonia. 2. Pulmonary.

pneumonitis (nu-mo-ni′(ne′)tis) [G. *pneumōn*, lung, + *-itis*.] Inflammation of the lungs; streptococcus pneumonia, as distinguished from pneumococcus pneumonia.

pneumonocele (nu-mon′o-sēl). Protrusion of a portion of the lung through a defect in the wall of the chest.

pneumonocentesis (nu-mon″o-sen-te′sis) [G. *pneumōn*, lung, + *kentēsis*, puncture.] Puncture of the lung in order to empty a pus-filled cavity.

pneumonochirurgia (nu-mon″o-ki-rur′jĭ-ah) [G. *pneumōn*, lung, + *cheirourgia*, surgery.] Surgery of the lungs.

pneumonocirrhosis (nu-mon-o-sĭ-ro′sis) [G. *pneumōn*, lung, + *kirrhos*, tawny.] Cirrhosis of the lung, interstitial pneumonia.*

pneumonococcus (nu-mon-o-kok′us). Pneumococcus.

pneumonoconio′sis [G. *pneumōn*, lung, + *konis*, dust.] A fibrous induration of the lungs due to the irritation caused by the inhalation of dust incident to various occupations, such as coal-mining, knife-grinding, stone-cutting, etc.; the

most prominent symptoms are: pain in the chest, cough, little or no expectoration, dyspnea, reduced thoracic excursion, sometimes cyanosis, and fatigue after slight exertion.

pneumonoenteritis (nu-mon″o-en-ter-i′(e′)tis) [G. *pneumōn*, lung, + *enteron*, intestine, + *-itis*.] Pneumonia complicating or complicated by enteritis.

pneumonoerysipelas (nu-mon″o-er-ĭ-sip′e-las) [G. *pneumōn*, lung, + *erysipelas*.] Pneumonia complicating or complicated by erysipelas.

pneumonomelanosis (nu-mon″o-mel-an-o′sis) [G. *pneumōn*, lung, + *melanōsis*, a becoming black.] Anthracosis; a blackening of the lung tissue from the inhalation of coal dust or other black particles.

pneumonometer (nu-mon-om′e-ter). Pneumatometer, pneometer.*

pneumonomycosis (nu-mon-o-mi-ko′sis). Any disease of the lungs due to the presence of fungi or bacteria.

pneumonopaludism (nu″mon-o-pal′u-dizm). Consolidation of the apices of the lungs occurring in chronic malaria; Bruns's disease.

pneumonoparesis (nu-mon-o-par′e-sis) [G. *pneumōn*, lung, + *paresis*, weakness.] A loss of resiliency of the pulmonary tissues resulting in a passive exudation into the air-cells.

pneumonopathy (nu-mon-op′ă-thĭ) [G. *pneumōn*, lung, + *pathos*, suffering.] Any disease of the lungs.

pneumonopexy (nu-mon′o-peks-ĭ) [G. *pneumōn*, lung, + *pēxis*, fixation.] Fixation of the lung by suturing the costal and pulmonary pleuræ or otherwise causing adhesion of the two layers.

pneumonophthisis (nu-mon-of-thi′(the′)sis, nu-mon-o-ti′(te′)sis). Pulmonary phthisis.

pneumonopleuritis (nu-mon″o-plu-ri′(re′)tis) [G. *pneumōn*, lung, + *pleura*, side, + *-itis*.] Inflammation of both lungs and pleura; pleuropneumonia

pneumonorrhagia (nu-mon-ŏ-ra′jĭ-ah) [G. *pneumōn*, lung, + *rhēgnymi*, I burst forth.] 1. Hemorrhage from the lungs, hemoptysis. 2. Hemorrhage into the lung, pulmonary apoplexy.

pneumonorrhaphy (nu-mon-or′ă-fĭ) [G. *pneumōn*, lung, + *rhaphē*, suture.] Suture of a wound of the lung.

pneumonosis (nu-mon-o′sis). Pneumonopathy.

pneumonotherapy (nu-mon-o-ther′ă-pĭ) [G. *pneumōn*, lung, + *therapeia*, treatment.] The treatment of pulmonary diseases.

pneumonotomy (nu-mon-ot′o-mĭ) [G. *pneumōn*, lung, + *tomē*, incision.] Incision of the lung for the evacuation of an abscess or for any other purpose.

pneumopaludism (nu″mo-pal′u-dizm). Pneumonopaludism.

pneumoparesis (nu-mo-par′e-sis). Pneumonoparesis

pneumopericar'dium [G. *pneuma*, air.] The presence of gas in the pericardial sac.

pneumoperitoneum (nu″mo-per-ĭ-ton-e′um) [G. *pneuma*, air.] The presence of gas in the peritoneal cavity outside of the intestine.

pneumoperitonitis (nu″mo-per-ĭ-ton-i′(e′)tis) [G. *pneuma*, air, + *peritonaion*, peritoneum, + *-itis*.] Inflammation of the peritoneum with an accumulation of gas in the peritoneal cavity.

pneumopexy (nu′mo-peks-ĭ). Pneumonopexy.

pneumopleuritis (nu″mo-plu-ri′(re′)tis) 1. [G. *pneuma*, air.] Pleurisy with air or gas in the pleural cavity. 2. [G. *pneumōn*, lung.] Pneumonopleuritis.

pneumopyopericardium (nu-mo-pi″o-per-ĭ-kar′dĭum) [G. *pneuma*, air, + *pyon*, pus.] The presence of gas and pus in the pericardial cavity.

pneumopyothorax (nu-mo-pi-o-tho′raks). Pyopneumothorax

pneumorrhachis (nu-mor′ă-kis) [G. *pneuma*, air, + *rhachis*, spinal column.] The presence of gas in the spinal canal.

pneumorrhagia (nu-mŏ-ra′jĭ-ah). Pneumonorrhagia.

pneumosan (nu′mo-san) [G. *pneumōn*, lung, + L. *sanare*, to heal.] A fluid containing thiotrimethylamine and chlorides, used hypodermically in pulmonary tuberculosis.

pneumosepticemia (nu-mo-sep-ti-se′mĭ-ah) [G. *pneumōn*, lung, + *septicemia*:] A fulminating, usually fatal, form of influenzal pneumonia.

pneumoserothorax (nu″mo-se″ro-tho′raks) [G. *pneuma*, air, + L. *serum* + G. *thorax*.] Pneumohydrothorax.

pneumotherapy (nu-mo-ther′ă-pĭ). 1. Pneumatotherapy. 2 Pneumonotherapy.

pneumothermomassage (nu-mo-ther″mo-mă-sazh′) [G. *pneuma*, air, + *thermē*, heat, + Fr. *massage*.] The application to the body of hot air under varying degrees of pressure

pneumothorax (nu-mo-tho′raks) [G. *pneuma*, air.] The presence of air or gas in the pleural cavity. **val'vular p.**, p. due to a wound in the pulmonary pleura which allows of the passage of air from the lung into the pleural cavity but closes under pressure and does not permit of the return of air into the lung.

pneumotomy (nu-mot′o-mĭ). Pneumonotomy.

pneumotox'in (nu-mo-tok′sin) A toxin produced by the pneumococcus which gives rise to the symptoms of systemic infection in pneumonia.

pneumotyphoid (nu-mo-ti′foyd). 1. Typhoid fever in which the initial symptoms are those of pneumonia. 2. Typhoid pneumonia.

pneumotyphus (nu-mo-ti′fus). Pneumotyphoid

pnigophobia (ni-go-fo′bĭ-ah) [G. *pnigos*, choking. + *phobos*, fear.] A morbid apprehension of choking.

pock [A.S. *poc*, a pustule.] The specific pustular cutaneous lesion of smallpox

pock'et [Fr. *pochette*.] 1. A cul-de-sac or pouch-like cavity. 2. An abnormal space between the gum and the root of a tooth. 3. A collection of pus in a nearly closed sac. 4 To enclose the stump of the pedicle of an ovarian or other abdominal tumor between the lips of the external wound.

pock'mark. The small depressed scar left after the healing of the smallpox pustule.

pock'marked. Bearing on the skin of the face many scars of healed smallpox pustules.

poculum Diogenis (pok′u-lum di-oj′en-is) [L. *poculum*, cup, *Diogenes*, a Greek cynic philosopher 412–323 B.C.] The palm of the hand when contracted and deepened by the action of the muscles on either side.

podag'ra [G. *pous(pod-)*, foot, + *agra*, seizure] Gout, especially typical gout in the great toe.

pod'agral, podag'ric, pod'agrous. Gouty; relating to or suffering from gout.

podal'gia [G. *pous(pod-)*, foot, + *algos*, pain.] Pain in the foot, tarsalgia, pododynia.

podal'ic [G. *pous(pod-)*, foot.] Relating to the foot **p. version**, turning the fetus during childbirth so as to bring it down with the feet presenting.

podarthritis (pod-ar-thri′(thre′)tis) [G. *pous(pod-)*, foot, + *arthron*, joint, + *-itis*.] Inflammation of any of the tarsal or metatarsal joints.

podelco'ma, podhelco'ma [G. *pous(pod-)*, foot, + *helkōma*, ulcer.] Mycetoma.

podenceph'alus [G. *pous(pod-)*, foot, + *enkephalos*, brain.] A monster with brain for the most part outside the cranium, attached only by a pedicle.

podiater (po-dī-a'tur). Podiatrist.

podiatrist (po-dī-at'rist) [G. *pous(pod-)*, foot, + *iatros*, physician.] Podiator, chiropodist; one who practises podiatry or the treatment of foot ills.

podiatry (po-di'at-rĭ) [G. *pous(pod-)*, foot, + *iatreia*, medical treatment.] Chiropody, pathology and treatment of disorders of the feet.

podobromidrosis (pod"o-bro-mĭ-dro'sis) [G. *pous(pod-)*, foot, + *brōmos*, a foul smell, + *hidrōs*, sweat.] Strong smelling perspiration of the feet.

pododerm (pod'o-durm) [G. *pous(pod-)*, foot, + *derma*, skin.] The portion of the skin in *Ungulata* which lies beneath the hoof and secretes the horny structure.

pod"odynamom'eter [G. *pous(pod-)*, foot, + *dynamis*, force, + *metron*, measure.] An instrument for measuring the strength of the muscles of the foot or leg.

pododynia (pod-o-din'ĭ-ah) [G. *pous(pod-)*, foot, + *odynē*, pain.] Podalgia, tarsalgia, pain in the foot.

podogram (pod'o-gram) [G. *pous(pod-)*, foot, + *gramma*, a drawing.] An imprint of the sole of the foot, showing the contour and the condition of the arch, or an outline tracing.

podograph (pod'o-graf) [G. *pous(pod-)*, foot, + *graphō*, I draw.] A device for taking an outline of the foot and an imprint of the sole.

podology (pŏ-dol'o-jĭ) [G. *pous(pod-)*, foot, + *-logia*.] The branch of medical science which has to do with the feet in all their relations.

podom'eter [G. *pous(pod-)*, foot, + *metron*, measure.] An instrument for measuring the distance covered in walking.

podophyllin (pod-of'ĭ-lin). Resina podophylli.

pod"ophyllotox'in. A poisonous substance, $C_{22}H_{24}O_8$, derived from podophyllin; a white, very bitter resin, cathartic in doses of gr. $\frac{1}{6}0$–$\frac{1}{3}0$ (0.001–0.002).

podophyllous tissue (pod-o-fil'us tis'su) [G. *pous(pod-)*, foot, + *phyllon*, leaf.] The sensitive tissue on the inner wall of the hoof of an animal

podophyl'lum [G. *pous(pod-)*, foot, + *phyllon*, leaf, from the fancied resemblance of the leaves to a duck's foot.] (Br.) May-apple, vegetable calomel, the rhizome of *Podophyllum peltatum*, American mandrake, umbrella plant, duck's-foot; employed as a laxative in doses of gr. 5–8 (0.3–0.5). **p. in'dicum** (Br.), the dried rhizome and roots of *P. emodi*, Indian podophyllum, a Himalayan plant; cholagogue and cathartic in doses of gr. 2–10 (0.12–0.6). **podophyl'li resi'na,** resina* podophylli (U.S.).

podotrochilitis (pod-o-trok-il-i'(e')tis) [G. *pous(pod-)*, foot, + *trochilea*, pulley, + *-itis*.] Inflammation of the navicular bone in the horse, navicular arthritis.

pœcilocyte. For this and other words beginning with *pœ-*, see *pecilocyte*, etc.

Poehl's test (pĕl) [Alexander Vasilyevich von *Poehl*, Russian physiological chemist, 1850–1909.] For cholera bacilli: the addition of sulphuric acid to a culture of cholera bacilli produces a pinkish color changing to purple; cholera-red reaction.

pogoniasis (po-go-ni'a-sis) [G. *pōgōnias*, bearded.] Growth of a beard on a woman, or excessive hairiness of the face in men.

pogo'nion [G. *pōgōn*, beard.] The mental point in craniometry, the most anterior point on the symphysis menti.

poi'kiloblast. Peciloblast.

poikilocyte (poy'kil-o-sīt) [G. *poikilos*, manifold, + *kytos*, cell.] An irregular, usually pear-shaped, red blood-corpuscle, pecilocyte.

poikilocythe'mia, poikilocythæ'mia. Poikilocytosis, pecilocytosis.*

poikilocyto'sis. The occurrence of red blood-corpuscles of irregular shape, pecilocytosis.

poikilon'ymy. Pecilonymy.

poikilothermal, poikilothermic (poy-kil-o-thur'mal, poy-kil-o-thur'mik). Pecilothermal, pecilothermic.

poikilother'mism. Pecilothermism.

point [Fr.; L. *punctum*.] 1. A spot or small area 2. A sharp end or apex. 3. A slight projection. 4. A limit, as the *boiling point*. 5. To make ready to open, said of an abscess the wall of which is becoming thin and is about to break. See also *punctum*. **apoph'ysary p., apophys'eal p.,** (1) subnasal p.; (2) Trousseau's* p. **alve'olar p.,** the mid-point of the anterior border of the upper alveolar margin. **auric'ular p.,** the mid-point of the opening of the external auditory meatus. **car'dinal p.,** (1) one of the four points in the pelvic inlet toward one of which the occiput of the child is usually directed in case of head presentation, viz., the two sacroiliac articulations and the two iliopectineal eminences corresponding to the acetabula; (2) one of six points in the eye, viz., the anterior focal p. where rays starting parallel from the retina are focussed; the posterior focal p., the point on the retina where parallel rays entering the eye are focussed; the two principal points in the anterior chamber where the axis is cut by the two principal planes, and the two nodal points near the posterior surface of the lens. **craniomet'ric p.,** one of the fixed points on the skull employed as landmarks in craniometry; these are: acanthion, alveolar p. or prosthion, antinion, asterion, auricular p., basion, bregma, coronion, dacryon, entomion, glabella, gnathion or pogonion or mental point, gonion, hormion, inion, jugale or jugal point, lambda, malar point, maximum occipital point or occipital point, mental point or gnathion or pogonion, metopion or metopic point, nasion or nasal point, obelion, occipital point or maximum occipital point, ophryon or supranasal or supraorbicular point, opisthion, pogonion or gnathion or mental point, prosthion or alveolar point, pterion, rhinion, spinal point or subnasal point, stephanion, subnasal point or spinal point, supra-auricular point, supranasal point or supra-orbital point or ophryon, supraorbital point or ophryon or supranasal point, symphysion, vertex; for descriptions of these points see the respective titles and for illustrations see plate facing *skull*. **far p.,** punctum remotum, the farthest point of distinct vision. **gle'noid p.,** the center of the glenoid cavity of the maxilla. **jugal p.,** the tip of the angle formed by the masseteric and maxillary borders of the malar bone. **malar p.,** apex of the tuberosity of the malar bone. **max'imum occip'ital p.,** the point on the squama of the occipital bone farthest from the glabella. **mental p.,** pogonion, gnathion, the most forward point of the symphysis menti. **metop'ic p.,** metopion. **motor p.,** a point on the skin where the application of an electrode will cause the contraction of a special muscle. **nasal p.,** nasion. **near p.,** punctum proximum, the nearest point of distinct vision. **nodal p.,** one of two points in a compound optical system, so related that a ray directed toward the first before entering the system, will leave the system in a direction as if it had passed through the second point parallel to its original direction.

occip'ital p., the most prominent posterior point on the occipital bone above the inion. **painful p.**, one of several points along the course of a nerve, pressure upon which is painful in cases of neuralgia; see under *Valleix*. **pressure p.**, the seat of the pressure sense, one of the points in the skin where the nerve-terminal organs are located. **prin'cipal p.**, one of two points in an optical system where the axis is cut by the two principal planes; lines drawn from these to corresponding points on the object and the image will be parallel. **spi'nal p.**, subnasal p. **subna'sal p.**, the center of the root of the anterior nasal spine. **supra-auric'ular p.**, a craniometric point directly above the auricular p. at the root of the zygoma. **Syl'vian p.**, the nearest point on the skull to the Sylvian fissure, about 30 mm. behind the external angular process.

pointillage (pwañ-te-yazh') [Fr. dotting, stippling.] A massage manipulation with the tips of the fingers.

point'ing. Preparing to open spontaneously, said of an abscess or a boil. **past p., p.-error test,** see *past-pointing*.

Poirier's line (pwă-re-a') [Paul *Poirier*, Parisian surgeon, 1853–1907] A line extending from the bottom of the nasofrontal angle to a point a little above the lambda.

Poiseuille's space (pwah-ze'e) [Jean Marie *Poiseuille*, Parisian physiologist, 1797–1869.] Still-layer, the periphery of the blood-stream in the capillaries where the white corpuscles roll along slowly, the red corpuscles moving more rapidly in the center.

poison (poy'zn) [Fr from L. *potio*, potion, draught] Any substance which, when taken into the body in a single dose of gr. 15 (1 0) or less, is injurious to health or dangerous to life. **fatigue' p.**, a toxic substance formed in muscular tissue after severe exercise. **micro'bial p.**, toxin.

pois'on-ber'ry. Dulcamara. **p.-el'der,** rhus vernix.

poi'soning. 1 The administering of poison 2, Mixing poison with. 3 The state of being poisoned. **blood p.**, septicemia, pyemia. **food p.**, botulism, mytilotoxism, ptomainotoxism, bromatotoxism, sitotoxism, tyrotoxism. **self-p.**, autointoxication, autotoxemia

poison-i'vy. *Rhus toxicodendron*. **p. i. ex'tract,** a solution in almond oil of an oil extracted from the fresh leaves of *Rhus toxicodendron*, employed in doses of 0.5–1.0 c.c. intramuscularly injected every day or every other day for the relief of poison ivy dermatitis.

poi'son-nut. Nux vomica

poison-oak'. *Rhus diversiloba*, *p. o. ex'tract*, a solution in almond oil of an oil extracted from the fresh leaves of *Rhus diversiloba*, employed by intramuscular injection every day or every second day in doses of 0.5–1.0 c c. for the relief of poison oak dermatitis.

poison-sumach. Rhus vernix

Poisson-Pearson for'mula (pwah-son' pēr'son). A formula to determine the statistical error in calculating the endemic index of malaria: let N = total number of children under 15 years in a locality; n = total number examined for the spleen-rate; x = number found with enlarged spleen; $\frac{x}{n}100$ = spleen-rate; $e\%$ = percentage of error; then the percentage error will be, by this formula: $e\% = \frac{200}{n}\sqrt{\frac{x(n-x)}{n}}\sqrt{1-\frac{n-1}{N-1}}$.

poitrinaire (pwă-tre-nair') [Fr *poitrine*, chest.] One suffering from pulmonary tuberculosis or other chronic disease of the lungs.

poke. Phytolacca.

poke'berry. Phytolaccæ fructus.

po'ker-back. Spondylosis rhizomelica.

poke'root. Phytolaccæ radix.

po'lar [L. *polus*, a pole.] 1. Relating to a pole. 2. Having poles, said of certain nerve cells having one or more processes

polarim'eter [L *polaris*, polar, + G. *metron*, measure.] An instrument for measuring the angle of rotation in polarization or the amount of polarized light.

polarim'etry. Measurement of the angle of rotation of the plane of polarization.

polariscope (po-lar'ĭ-skōp) [L. *polaris*, polar, + *skopeō*, I examine.] An instrument for studying the phenomena of the polarization of light.

polariscop'ic. Relating to the polariscope or to polariscopy.

polaristrobometer (po-lar''ĭ-stro-bom'e-tur). [L. *polaris*, polar, + G. *strobos*, a whirling, + *metron*, a measure.] A form of polarimeter used in examining sugars.

polar'ity. The property of having two opposite poles, as that possessed by a magnet.

polarization (po''lar-i-za'shun). 1. In electricity, the coating of the copper plate of an electric cell with a thick layer of hydrogen bubbles, with the result that the action of the battery is weakened or arrested. 2. A change effected in a ray of light passing through certain media, whereby the transverse vibrations occur in one plane only, instead of in all planes as in the ordinary light ray.

po'larize. To put into a state of polarization, referring either to light rays or to an electric battery.

po'larizer. The part of a polariscope which polarizes the light, as distinguished from the analyzer

pole [L *polus;* G *polos*] 1. One of the two points at the extremities of the axis of any body. 2. One of the two points on a sphere at the greatest distance from the equator. 3. One of the two points in a magnet or an electric battery or cell having the extremes of opposite properties, as of attraction or repulsion. **ani'mal p.**, the point in a telolecithal egg opposite the yolk, where the protoplasm is found in the neighborhood of the germinal vesicle. **cephal'ic p.**, the head-end of the fetus. **fron'tal p.**, polus frontalis. **ger'minal p.**, the part of an ovum where the nucleus lies **neg'ative p.**, cathode, the chemically active pole of an electric battery, the one connected with the electropositive element. **occip'ital p.**, polus occipitalis. **pelvic p.**, the breech-end of a fetus. **pos'itive p.**, anode, the chemically inactive pole of an electric battery, the one connected with the electronegative element. **tem'poral p.**, polus temporalis. **veg'etative p.**, the part of a telolecithal egg where the yolk is situated.

pole-cell. Polar body, directive corpuscle; a minute particle thrown off by cellular division from the maturing oocyte, an abortive ovum.

pole-cor'puscle. Centrosome

polemonium (pol-ĭ-mo'nĭ-um). A genus of plants, one species of which is employed in eclectic practice as a diaphoretic and expectorant in doses of 5 to 30 drops of the specific medicine in water every two to four hours.

poleozone (po-le-o'zōn). Trade name of an antiseptic obtained by the action of sulphuric acid on potassium chlorate

policemen's disease' (po-lēs'men). Tarsalgia.

policlin'ic [G. *polis*, city, + *klinē*, bed.] 1. A public or city dispensary. 2. Polyclinic.

pol'icy [Fr. *police*, a bill, ticket.] The contract made by an insurance company with the insured to pay a definite amount of money in the case of a certain event—accident, sickness, death, or maturation of the policy—on condition that the insured pays to the company an agreed sum yearly or at other stated periods. **cash value,** or **cash surren'der value of a p.,** the amount which the company will pay the insured for the cancellation of his contract, usually a large fraction of the reserve pertaining to that policy. **endow'ment p.,** a life p. payable to the insured at the expiration of a specified period, or to the beneficiary in the event of his prior death. **incontes'table p.,** one payable on death after a specified time, no matter whether the insured observes the conditions of travel, hazardous occupation, etc., or not. **limited-pay'ment life p.,** a p. payable at death but which is fully paid for in a limited number of premiums; it is more exactly designated, according to the number of premiums to be paid, as a *ten-payment p.*, *twenty-payment p.*, etc. **net value of a p.,** the amount of reserve pertaining to a policy, being the difference between the amount due on maturation of the policy and the present value of the net premiums, still to be paid; the *legal net value*, is the net value computed according to a rate of interest assumed and a mortality table prescribed by law. **non-for'feitable p.,** one in which the company contracts to pay a definite amount on surrender or lapse after a stated number of premiums have been paid. **or'dinary life p.,** the simplest form of a life insurance policy, in which the premium is paid every year until the death of the insured, at which time the amount of the policy is payable to the beneficiary or to the estate of the insured. **partic'ipating p.,** one which shares in the profits of the company, in accordance with the previous agreement, its face value being thereby increased without any increase in the amount of the premium. **pure endow'ment p.,** one payable at the end of a specified period, but only in case the insured is living; in the event of his prior death his estate receives nothing. **renew'able term p.,** a term p. which may be renewed at its expiration for another like period, without physical examination of the insured, but at a higher rate; see *natural premium.** **term p.,** a life p. payable only if death occurs before the end of a specified period; designated more exactly as a *one-year term p.*, a *ten-year term p.*, etc.; see also *renewable term p.* **whole life p.,** one which is payable only at death, it may be an ordinary life p. or a limited-payment life p.

polioencephalitis (pol″i-en-sef-al-i′(e′)tis). Polioencephalitis.

polioencephalitis (pol″i-o-en-sef-al-i′(e′)tis) [G. *polios*, gray, + *enkephalos*, brain, + *-itis*.] Inflammation of the gray matter of the brain, either of the cortex or of the central nuclei, acute encephalitis, acute hemorrhagic cortical encephalitis; an acute infectious disease marked at the onset by fever, headache, convulsions, or stupor, followed by ocular palsies, symptoms resembling those of bulbar paralysis, aphasia, or idiocy. **infe'rior p.,** bulbar paralysis. **p. infecti'va,** encephalitis lethargica. **supe'rior p.,** ophthalmoplegia.

polioencephalomeningomyelitis (pol″i-o-en-sef″al-o-men-ing″go-mi-el-i′(e′)tis) [G. *polios*, gray, + *enkephalos*, brain, + *mēninx*, membrane, + *myelon*, marrow, + *-itis*.] Inflammation of the gray matter of the brain and spinal cord and of the meningeal covering of the parts.

pol″ioencephalop'athy [G. *polios*, gray + *enkephalos*, brain, + *pathos*, suffering.] Any disease of the gray matter of the brain.

poliomyelencephalitis (pol″i-o-mi″el-en-sef-al-i′(e′)-tis) [G. *polios*, gray, + *myelon*, marrow, + *enkephalos*, brain, + *-itis*.] Inflammation of the gray matter of the spinal cord and brain.

poliomyelitis (pol″i-o-mi-el-i′(e′)tis) [G. *polios*, gray, + *myelos*, marrow, + *-itis*.] Inflammation of the gray matter of the spinal cord. **acute' ante'rior p.,** inflammation of the anterior cornua of the spinal cord, acute atrophic paralysis, infantile spinal paralysis, essential paralysis of children, Heine-Medin disease; an acute infectious disease marked by fever, pains, and gastroenteric disturbances, followed by a flaccid paralysis of one or more muscular groups, and later by atrophy. **chron'ic ante'rior p.,** remitting spinal atrophy, muscular atrophy of the upper extremities and neck, in which there are long intermissions of quiescence or improvement.

poliomyeloencephalitis (po-li-o-mi″el-o-en-sef-al-i′-(e′)tis) [G. *polios*, gray, + *myelon*, marrow, + *enkephalos*, brain, + *-itis*.] Infantile cerebrospinal paralysis, Heine-Medin disease, inflammation of the gray matter of both brain and spinal cord.

poliomyelopathy (pol″i-o-mi-el-op′a-thi) [G. *polios*, gray, + *myelon*, marrow, + *pathos*, suffering.] Any disease of the gray matter of the spinal cord.

polioneuromere (pol″i-o-nu′ro-mēr) [G. *polios*, gray, + *neuron*, nerve, + *meros*, part.] One of the primitive segments of the gray matter of the spinal cord.

pol'ioplasm [G. *polios*, gray, + *plasma*, anything formed, plasm.] Granular protoplasm.

polio'sis [G. *polios*, gray.] Canities, a turning gray of the hair.

Pol'itzer bag [Adam *Politzer*, Austrian otologist, 1835–1920.] A pear-shaped rubber bag used for forcing air through the Eustachian tube by the P. method. **P.'s lu'minous cone,** a triangular area in the lower segment of the drum membrane which appears brighter than the rest of the membrane. **P. meth'od,** inflation of the Eustachian tube and tympanum by forcing air into the nasal cavity at the instant the patient swallows. **P. spec'ulum,** see under *ear speculum.** **P.'s test,** in cases of unilateral deafness, a tuning-fork held in front of the nares is heard only in the sound ear during deglutition.

politzerization (pol″it-zur-i-za′shun). Inflation of the Eustachian tube and middle ear by the Politzer* method. **neg'ative p.,** withdrawal of secretions from a cavity by suction, effected by attaching a compressed Politzer bag or rubber bulb to a tube inserted in the cavity.

poll (pōl). The head, especially the back part of the head. **p. e'vil,** suppurative inflammation on the head of a horse behind the ears.

pollac'cine. A vaccine prepared from timothy grass pollen, used for the treatment of asthma and hay fever.

pollakiu'ria [G. *pollakis*, often, + *ouron*, urine.] Abnormally frequent micturition.

pollan'tin [*pollen* + G. *anti*, against.] Dunbar's serum, hay-fever antitoxin; a serum claimed to be antitoxic in hay-fever, obtained by injecting horses with a solution derived from the pollen of ragweed or goldenrod; employed by instillation into the conjunctival sac or nares. It occurs also in powder form used by insufflation in the nostrils.

poll'en [L. fine flour.] The male fertilizing element of a flower, the microspores of a phanerogam.

pol'lex, gen. *pol'licis* [L.] The thumb or first finger. **p. exten'sus,** a deformity marked by backward deviation of the thumb. **p. flexus,** a permanent flexion of the thumb. **p. pedis,** the great toe, or hallux. **p. superexten'sus,** p. extensus. **p. valgus,** permanent deviation of the thumb to the ulnar side. **p. varus,** permanent deviation of the thumb to the radial side.

pollina'tion. In botany, the dusting of the stigma or surface of the ovule with pollen.

pollin'ium. A coherent mass of pollen grains.

pollino'dium [L. *pollen* + G. *eidos,* resemblance.] In botany, the male sexual organ of *Ascomycetes* which conjugates directly or by means of an outgrowth with the oogonium, or female sexual organ.

pollino'sis. Hay fever, assumed to be excited by the pollen of various plants.

pollution (pŏ-lu'shun) [L. *polluere,* to defile.] 1. Defilement. 2. The discharge of semen, either voluntary or involuntary, other than during coitus. **self-p.,** masturbation.

polocyte (po'lo-sīt) [G. *polos,* pole, + *kytos,* cell.] One of the polar bodies formed in the maturation of the ovum.

polo'nium [L. *Polonia,* Poland, the native country of Mme. Curie who with her husband discovered the substance.] A radioactive substance or element, isolated from pitchblende; it is one of the disintegration products of radium emanation; called also radiotellurium.

poltoph'agy [G. *poltos,* porridge, + *phagō,* I eat.] Thorough mastication whereby the food is reduced to a pultaceous mass before being swallowed, Fletcherism; opposed to psomophagy.

po'lus [L. pole.] A pole. **p. fronta'lis,** frontal pole, the most projecting part of the anterior extremity of each cerebral hemisphere. **p. occipita'lis,** occipital pole, the most projecting part of the posterior extremity of each cerebral hemisphere, the apex of the pyramidal occipital lobe. **p. tempora'lis,** temporal pole, the most prominent part of the anterior extremity of the temporal lobe of each cerebral hemisphere, a short distance below the fissure of Sylvius.

poly- [G. *polys,* much, many.] A prefix, in words formed from Greek roots, conveying the notion of multiplicity; corresponding to the Latin prefix *multi-*.

poly (pol'ĭ). Abbreviation for polymorphonuclear leucocyte.

Pólya's opera'tion (pōl'yah) [*Pólya,* Hungarian surgeon.] Gastrojejunostomy following pylorectomy; the union is effected through a hole made in the transverse mesocolon, the edges of which are stitched to the stomach after the junction has been passed below the mesocolon.

polyacoustic (pol-ĭ-ă-koos'tik) [G. *polys,* much, + *akoustikos,* relating to hearing.] Magnifying sound, megalophonic.

polyadelphous (pol″ĭ ă-del'fus) [G. *polys,* many, + *adelphos,* brother.] In botany, noting the stamens of a flower which are united by their filaments into several bundles.

polyadenia (pol-ĭ-ă-de'nĭ-ah) [G. *polys,* many, + *adēn,* gland.] Pseudoleucemia.

polyadenitis (pol'ĭ-ă-de-ni'(ne')tis) Inflammation of many glands, especially of the cervical lymph glands. **p. malig'na,** bubonic plague.*

polyadeno'ma. Multiple adenomata.

polyad'enous [G. *polys,* many, + *adēn,* gland.] Relating to or involving many glands.

Polyangium (pol-ĭ-an'jĭ-um) [G. *polyangion,* with many small vessels.] A genus of bacteria of the family *Myxobacteriaceæ,* the species of which are white or reddish rod-shaped organisms forming gelatinous cysts; they are found in manure.

polyarteritis (pol-ĭ-ar-ter-i'(e')tis) [G. *polys,* many + *artēria,* artery, + *-itis.*] Simultaneous inflammation of a number of arteries. **p. nodo'sa,** an affection characterized by the formation of nodules upon the medium-sized and smaller arterial twigs.

polyarthric (pol-ĭ-ar'thrik) [G. *polys,* many, + *arthron,* joint.] Relating to or involving many joints, multiarticular.

polyarthritis (pol″ĭ-ar-thri'(thre')tis) [G. *polys,* many, + *arthron,* joint, + *-itis.*] Simultaneous inflammation of several joints. **p. chron'ica villo'sa,** a chronic inflammation confined to the synovial membrane, involving a number of joints; it occurs in women at the menopause and in children, and has been thought to be due to specific infection with the dumb-bell bacillus. **tuber'culous p.,** pulmonary osteoarthropathy. **ver'tebral p.,** inflammation of a number of the intervertebral discs without involvement of the vertebral bodies.

polyarticular (pol-ĭ-ar-tik'u-lar) [G. *polys,* many, + L. *articulus,* joint.] Polyarthric, multiarticular.

polyatomic (pol-ĭ-ă-tom'ik) [G. *polys,* many, + *atomos,* atom.] Noting a chemical compound having a valency greater than two, or containing more than two replaceable hydrogen atoms.

polyax'on, polyax'one [G. *polys.* many, + *axōn,* axis.] A nerve-cell of the third type, one having several neuraxons.

polyaxon'ic. Relating to or noting a polyaxon.

polyba'sic [G. *polys,* many, + *basis,* base.] Having more than one replaceable hydrogen atom, noting an acid with a basicity greater than 1.

pol'yblast [G. *polys,* many, + *blastos,* germ.] One of a group of ameboid, uninucleated, wandering, phagocytic cells found in inflammatory exudates, derived from primitive wandering cells, clasmatocytes, and lymphocytes.

polycar'dia [G. *polys,* many.] Tachycardia.

polycar'pous [G. *polys,* many, + *karpos,* fruit] Apocarpous.

polycen'tric [G. *polys,* many, + *kentron,* center.] Multinuclear, having several centers.

polychiria (pol-ĭ-ki'rĭ-ah) [G. *polys,* many, + *cheir,* hand.] A monstrosity marked by supernumerary hands.

polycholia (pol-ĭ-ko'lĭ-ah) [G. *polys,* much, + *cholē,* bile.] The excretion of an excess of bile.

polychrest (pol'ĭ-krest) [G. *polychrēstos,* very useful.] In homeopathy, a drug of extensive range of applicability one of frequent employment.

polychromasia (pol'ĭ-kro-ma'zĭ-ah) [G. *polys,* many, + *chrōma,* color.] Polychromatophilia.

polychro'mate [G. *polys,* many, + *chrōma,* color.] One who is able to distinguish many colors. **abnor'mal p.,** one who distinguishes most colors, but fails to perceive one or two, or confuses two colors.

polychromatia (pol-ĭ-kro-ma'shyah). Polychromatophilia,* polychromasia.

polychromat'ic. Multicolored, having several colors.

polychromatophil, polychromatophile (pol-ĭ-kro'-mat-o-fil; pol-ĭ-kro'mat-o-fīl) [G. *polys,* many, + *chrōma,* color, + *phileō,* I love.] 1. Staining readily with acid, neutral, and basic dyes, noting certain cells, particularly certain red blood-cells. 2. A young or degenerating erythrocyte showing acid and basic staining affinities.

polychromatophilia (pol-ĭ-kro-mat-o-fil'ĭ-ah) [G. *polys,* many, + *chrōma,* color, + *philia,* affection.]

1. A tendency of certain cells, such as the red blood-cells in pernicious anemia, to stain with both basic and acid dyes. 2. Condition in which many red blood-cells, taking acid, basic, and neutral stains, are present.

polychromatophil'ic. Polychromatophil (1).

polychromatosis (pol-ĭ-kro-mă-to'-sis). Polychromatophilia (2).

polychromemia, polychromæmia (pol-ĭ-kro-me'mĭ-ah). An increase in the amount of hemoglobin in the blood.

polychromia (pol-ĭ-kro'mĭ-ah). Increased pigmentation in any part.

polychromophil (pol-ĭ-kro'mo-fil). Polychromatophil.

polychromophilia (pol-ĭ-kro-mo-fil'ĭ-ah) Polychromatophilia.

polyclin'ic [G. *polys*, many, + *klinē*, bed.] A dispensary for the treatment of diseases of all kinds and for their study; policlinic.

polyclon'ia [G. *polys*, many, + *klonos*, spasm] Paramyoclonus, myoclonia, myoclonus multiplex.

polyco'ria [G. *polys*, many, + *korē*, pupil.] The presence of two or more pupils in one eye.

polycrot'ic. Relating to or marked by polycrotism.

polyc'rotism [G. *polys*, many, + *krotos*, a beat.] A condition in which the sphygmographic tracing shows several upward breaks in the descending wave.

polycyesia (pol"ĭ-si-e'sĭ-ah) [G. *polys*, many, + *kyēsis*, pregnancy.] Multiple pregnancy.

polycys'tic [G. *polys*, many, + *kystis*, bladder.] Composed of many cysts, noting a tumor such as an hydatid.

polycythæ'mia, polycythe'mia [G. *polys*, many, + *kytos*, cell, + *haima*, blood] 1. An increase in the globular elements of the blood; hyperglobulism. 2. Specifically an increase in the number of red blood-cells, erythrocytosis, erythremia, p. rubra. **p. megalosplen'ica,** Osler's disease **p. myelopath'ica.** Vaquez's disease **p. ru'bra,** erythrocytosis. **p. ve'ra cum splenomega'lia,** Vaquez's disease. **rel'ative p.,** a relative increase in the number of red blood-corpuscles due to loss of the fluid portion of the blood.

polydac'tylism [G *polys*, many, + *daktylos*, finger.] The presence of more than five digits on either hand or foot.

Polydin'ida [G. *polys*, many, + *dinē*, a whirling] An order of *Dinoflagellata* having several flagella lying in transverse furrows.

polydip'sia [G. *polys*, much, + *dipsa*, thirst.] Extreme thirst. **p. ebrio'ria,** a craving for intoxicants.

polydispersoid (pol"ĭ-dis-pur'soyd) [G. *polys*, many.] A colloid system in which the dispersed phase is composed of particles having different degrees of dispersion.

polyeidocyte (pol-ĭ-i'do-sīt) [G *polys*, many, + *eidos*, appearance, + *kytos*, cell.] A large uninuclear cell present in the spleen; lymphoidocyte, myeloblast.*

polyembryony (pol-ĭ-em'bri-o"nĭ) [G. *polys*, many, + *embryon*, embryo.] In botany, the production of two or more embryos in one ovule.

polyemia, polyæmia (pol-ĭ-e'mĭ-ah) [G. *polys*, much, + *haima*, blood.] Plethora.

polyergic (pol-ĭ-ur'jik) [G. *polys*, much, + *ergon*, work.] Capable of acting in several different ways.

polyesthesia, polyæsthesia (pol-ĭ-es-the'zĭ-ah) [G. *polys*, many, + *aisthēsis*, sensation.] A disorder of sensation in which a single touch or other stimulus is felt as several.

polyfor'min. 1. A compound of formaldehyde and resorcin, occurring in the form of a brownish yellow powder; antiseptic, used as a substitute for iodoform; called also insoluble p. 2. A compound of hexamethylenamine and resorcinol, a white crystalline powder used as an intestinal antiseptic and externally; called also soluble p.

polyg'ala [G. *polys*, much, + *gala*, milk.] Milkwort, the herb and root of *Polygala amara;* expectorant and tonic, employed in bronchitis and tuberculosis in doses of gr. 5–10 (0.3–0.6) of the extract. **P. sen'ega,** see *senega.*

polygalac'tia [G. *polys*, much, + *gala*(*galact-*), milk.] An excessive secretion of milk, especially at the weaning period.

polygal'ic acid. Polygalin, a substance existing in senega root and forming, in combination with senegin, the acrid constituents of this drug.

polyg'alin. Polygalic acid.

polyg'amous. In botany, noting plants of the same species which have both unisexual and hermaphrodite flowers.

pol"yganglion'ic. Containing or involving many gangha or lymph-glands.

polygas'tria [G. *polys*, many, + *gastēr*, stomach.] Hyperchylia, excessive secretion of gastric juice.

polyglandular (pol"ĭ-glan'du-lar) [G. *polys*, many.] Pluriglandular.

polyglobulia (pol-ĭ-glo-bu'lĭ-ah) [G. *polys*, many, + L. *globulus*, globule] Hyperglobulia, polycythemia.*

polyglobulism (pol-ĭ-glob'u-lizm). Hyperglobulia, polycythemia.*

polyg'nathus [G. *polys*, much, + *gnathos*, jaw] A double monster in which the parasite is attached to the jaw of the autosite.

polygona'tum [G. *polys*, many, + *gony*, knee.] Solomon's seal, the rhizome of *Polygonatum officinale;* related in its action to convallaria; employed in rheumatism and gout as a diuretic and purgative in doses of ℥5–15 (0.3–1.0) of a fluidextract; employed in eclectic practice in cases of irritable and relaxed mucous membranes with excessive secretion, in portal congestion, and in hemorrhoids.

Polyg'onum [G. *polygonon.*] A genus of plants of the order *Polygonaceæ*, a number of the species of which are employed in domestic medicine. **P. avicula're,** knotgrass; the herb is reputed to be antirheumatic and diuretic. **P. bistor'ta,** snakewort, English serpentary, bistort; astringent, employed in dysentery and diarrhea in doses of gr. 10–30 (0.6–2.0), or ℥15–30 (1.0–2.0) of a fluidextract **P. hydropi'per,** smartweed, the leaves are reputed to be useful in amenorrhea and functional impotence in doses of ℥15–30 (1.0–2.0) of a fluidextract. **P. puncta'ta,** water smartweed; the herb is employed in amenorrhea and dyspepsia in doses of ℥15–30 (1.0–2.0), and externally as a counterirritant in gout, rheumatism, and neuralgia.

polygraph (pol'ĭ-graf) [G. *polys*, many, + *graphō*, I write.] An instrument by means of which simultaneous tracings can be taken of several different pulsations, as the radial and the jugular pulses, the liver pulsation, the apex beat of the heart, etc.

polygyria (pol-ĭ-ji'rĭ-ah) [G. *polys*, many, + *gyros*, circle, gyre.] The presence of more than the usual number of convolutions on the surface of the brain.

polyhe'mia, polyhæ'mia. Polyemia.

polyhe'dral [G. *polys*, many, + *hedra*, base.] Having many sides or facets

polyhidro'sis, polyidro'sis [G. *polys*, much, + *hidrōs*, sweat.] Profuse sweating, hyperhidrosis.

polyhybrid (pol-ĭ-hi'brid) [G. *polys*, many, + *hybrid*.] The offspring of parents differing from each other in more than three characters.

polyhydram'nios [G. *polys*, much, + *hydōr*, water, + *amnion*.] Dropsy of the amnion, an excess in the amount of amniotic fluid.

polyhydruria (pol-ĭ-hi-dru'rĭ-ah) [G. *polys*, much + *hydōr*, water, + *ouron*, urine.] Excessive increase in the watery portion of the urine.

polyhypermenorrhea (pol-ĭ-hi''pur-men-or-re'ă) [G. *polys*, much, + *hyper*, above, + *mēn*, + *rhoia*, flow.] Frequent and excessive menstruation.

polyhypomenorrhea (pol-ĭ-hi-po-men-or-re'ă) [G. *polys*, much, + *hypo*, below, + *mēn*, *month*, + *rhoia*, flow.] Frequent but scanty menstruation.

polyinfection (pol''ĭ-in-fek'shun). Multiinfection.

polylep'tic [G. *polys*, many, + *lēpsis*, a seizing] Noting a disease occurring in many paroxysms, such as malaria or epilepsy.

polymas'tia [G. *polys*, many, + *mastos*, breast.] Polymazia, hypermastia; a condition in which, in the human, more than two breasts are present.

Polymastig'ida [G *polys*, many, + *mastix(mastig-)*, whip] An order of *Zoömastigophora*, embracing cells provided with many flagella distributed uniformly or in groups

polymastigote (pol-ĭ-mas'tĭ-gōt) [G. *polys*, many.] A mastigote having several flagella bunched together.

polyma'zia [G. *polys*, many, + *mazos*, breast] Polymastia.

polyme'lia [G. *polys*, many, + *melos*, limb] The presence of supernumerary limbs or parts of limbs, as in polydactylism

polyme'lius. A monster exhibiting polymelia.

polymenorrhea (pol-ĭ-men-or-re'ă). [G. *poly*, much, + *mēn*, *month*, + *rhoia*, flow.] Very frequent menstruation.

pol'ymer [G. *polys*, many, + *meros*, part.] One of two or more polymeric substances.

polyme'ria [G *polys*, many, + *meros*, part] The presence of supernumerary parts of the body.

polymer'ic [G. *polys*, many, + *meros*, part] Noting two isomeric substances which have the same percentage composition, but the molecular weight of one (therefore the number of atoms in the molecule) is a multiple of that of the other.

polym'erid. Polymer.

polym'erism. 1. The condition of polymers or polymeric substances. 2. Polymeria.

polym'erize. To change a compound into its polymer.

polymicro'bic [G. *polys*, many, + *mikrobion*, microbe.] Caused by a number of different microorganisms.

polymicrolipomatosis (pol-ĭ-mi''-kro-li-po-mă-to'-sis) [G. *polys*, many, + *mikros*, small, + *lipos*, fat, + *-oma* + *-osis*.] The occurrence of multiple, small, nodular, fatty tumors in the subcutaneous connective tissue.

polymi'crotome. A microtome which makes several sections at one stroke.

polymitus (pŏ-lim'ĭ-tus) [G. *polys*, many, + *mitos*, thread.] A term denoting the stage in reproduction of the malarial and similar organisms in which thin threads of protoplasm project from the surface of the microgametocyte; these threads, when detached, constitute the microgamete.

polym'nia. The root of *Polymnia uvedalia*, bearsfoot, yellow leaf cup, a plant of the eastern United States; employed in eclectic practice in rheumatism, enlargement of the liver or spleen, glandular enlargements, and chronic malaria in doses of gtt. 2–3 (0.13–0.2) of the specific preparation every hour or two.

pol'ymorph. Polymorphonuclear leucocyte.

polymor'phic [G. *polys*, many, + *morphē*, form.] Occurring in more than one form; polymorphous, pleomorphic, multiform.

polymor'phism. Occurrence in several forms; the existence in the same species or other natural group of several types; pleomorphism.

polymor''phocell'ular [G. *polys*, many, + *morphē*, form, + L. *cellula*, cell.] Relating to or formed of cells of several different kinds

polymor'phocyte [G. *polymorphos*, multiform, + *kytos*, a hollow (a cell).] A marrow-cell, myelocyte

polymorphonuclear (pol''ĭ-mor-fo-nu'kle-ar) [G. *polymorphos*, multiform, + L. *nucleus*.] Having nuclei of varied forms, noting a variety of leucocyte. **p. leucocytes,** see the main title. **fil'ament p. l.,** mature p. l. whose nuclei are connected by delicate filaments. **non-filament p. l.,** immature cells whose nuclei are connected by broad bands.

polymor'phous. Polymorphic, pleomorphic, multiform.

polymyoc'lonus. Myoclonus multiplex, polyclonia

polymyositis (pol-ĭ-mi-o-si'(se')tis) [G. *polys*, many + *mys*, muscle, + *-itis*] 1. Inflammation of a number of voluntary muscles simultaneously. 2 Infectious myositis.

polyne'sic [G. *polys*, many, + *nēsos*, island.] Occuring in many separate foci, noting certain forms of inflammation or infection.

polyneu'ral [G. *polys*, many, + *neuron*, nerve] Relating to, supplied by, or affecting several nerves

polyneu'ric. 1. Polyneural. 2 Relating to or containing many nerve-cells

polyneuritis (pol-ĭ-nu-ri'(re')tis) [G *polys*, many, + *neuron*, nerve, + *-itis*] Multiple neuritis.

polynuclear (pol-ĭ-nu'kle-ar) [G *polys*, many, + L *nucleus*.] Multinuclear.

polynucleated (pol-ĭ-nu'kle-a-ted) Multinucleated.

polynucleo'sis. Multinucleosis, the presence of numbers of polynuclear, or multinuclear, cells in the peripheral blood.

polynucleotide (pol''ĭ-nu'kle-o-tid) [G *polys*, many.] A complex nucleic acid combined with several bases.

polyodon'tia [G. *polys*, many, + *odous(odont-)*, tooth] The presence of supernumerary teeth.

polyonychia (pol-ĭ-o-nik'ĭ-ah) [G. *polys*, many, + *onyx(onych-)*, nail.] The presence of supernumerary nails on fingers or toes.

polyo'pia, polyop'sia, pol'yopy [G. *polys*, many, + *ōps(ōp-)*, eye] Double, or more correctly multiple, vision, the perception of several images of the same object.

polyorchidism (pol-ĭ-or'kid-izm) [G. *polys*, many, + *orchis*, testicle.] The presence of one or more supernumerary testicles.

polyorchis (pol-ĭ-or'kis) [G. *polys*, many, + *orchis*, testicle.] A person who has more than two testicles

polyorchism (pol-ĭ-or'kizm). Polyorchidism.

polyorrhomenitis (pol-ĭ-or''ro-men-i'(e')tis) [G. *polys*, many, + *orrhos*, serum, + *hymēn*, membrane, + *-itis*.] Polyorrhomeningitis.

polyorrhomeningitis (pol-ĭ-or''ro-men-in-ji'(je')tis) [G. *polys*, many, + *orrhos*, serum, + *mēninx-(mēning-)*, membrane, + *-itis*.] General inflammation of all the serous membranes, Concato's disease, polyorrhomenitis, polyserositis.

polyorrhomenosis (pol-ĭ-or-ro-men-o'sis) [G. *polys*, many, + *orrhos*, serum, + *hymēn*, membrane, + *-osis*.] Polyorrhomeningitis, polyserositis.

polyotia (pol-ĭ-o'shyah) [G. *polys*, many, + *ous* (*ōt-*), ear.] The presence of a supernumerary auricle on one or both sides of the head.

pol'yp. Polypus.

polypapillo'ma [G. *polys*, many.] 1. Multiple papillomata. 2. Frambesia, yaws.

polypar'esis [G. *polys*, much, + *paresis*, weakness.] General paralysis of the insane.

polypeptide (pol"ĭ-pep'tid) [G. *polys*, many.] A peptide formed by the union of more than three amino-acids.

polypet'alous [G. *polys*, many.] In botany, noting a flower with ununited petals.

polypha'gia [G. *polys*, much, + *phagō*, I eat.] Excessive eating, gluttony.

polyphalan'gism [G. *polys*, many, + *phalanx*.] Hyperphalangism.

polyphar'macy [G. *polys*, many, + *pharmakon*, drug.] The mixing of many drugs in one prescription; "shotgun" prescribing.

polypho'bia [G. *polys*, many, + *phobos*, fear.] An abnormal fear or dread of many things; a minor degree of panophobia.

polyphra'sia [G. *polys*, many, + *phrasis*, speech.] Extreme talkativeness or volubility.

polyphylet'ic [G. *polys*, many, + *phylē*, tribe.] Derived from more than one source, or having several lines of descent; opposed to monophyletic.

polyphyll'ous [G. *polys*, many, + *phyllon*, leaf.] In botany, noting a flower with perianth the separate parts of which are not united.

polyphyodont (pol-ĭ-fi'o-dont) [G. *polys*, many, + *phyō*, I produce, + *odous(odont-)*, tooth.] Having several sets of teeth formed in succession throughout life

pol'ypiform [L. *polypus* + *forma*, form.] Resembling a polyp, polypoid.

polyplas'mia [G. *polys*, much, + *plasma*.] Hydremia, excessive fluidity of the blood.

pol'yplast [G. *polys*, many, + *plastos*, formed.] Formed of several different structures.

polyplas'tic [G. *polys*, many, + *plastikos*, plastic.] Assuming or capable of assuming several forms, polymorphic, polymorphous.

polypne'a, polypnœ'a [G. *polys*, many, + *pnoia*, breath.] Tachypnea, rapid, labored breathing.

polypodia (pol-ĭ-po'dĭ-ah) [G. *polys*, many, + *pous* (*pod-*), foot.] A monstrosity marked by supernumerary feet.

pol'ypoid [L. *polypus* + G. *eidos*, resemblance.] Polypiform.

polyp'orous [G. *polys*, many, + *poros*, pore.] Cribriform, having many pores.

Polyp'orus [G. *polys*, many, + *poros*, pore.] A genus of mushrooms. **P. officina'lis,** agaricus, boletus, white or purging agaric, employed in the prevention of the night sweats of phthisis in doses of gr. 3–5 (0.2–0.3).

polypo'sis. The presence of several polypi.

pol'ypotome [L. *polypus* + G. *tomos*, cutting.] An instrument used for cutting away a polypus.

pol'ypous. Relating to a polypus.

pol'ypus [G. *polys*, many + *pous*, foot.] A pedunculated swelling or outgrowth from a mucous membrane. **bleed'ing p.,** a prominent angioma of the nasal mucous membrane. **cell'ular p.,** mucous p. **cystic p.,** a pedunculated cyst. **fi'brinous p.,** a p. formed of a semiorganized blood-clot in a subinvoluted uterus after childbirth. **fibrous p.,** a p. constituted largely of fibrous tissue. **fleshy p.,** a submucous myoma projecting into the cavity of the uterus. **gelat'inous p.,** myxoma. **mucous p.,** a pedunculated growth, springing from the mucous membrane, of soft and jelly-like (myxomatous) consistence. **p. hydatido'sus,** cystic p. **rasp'berry p.,** a pedunculated fungoid tumor in the external auditory meatus. **round-cell p.,** mucous p. **spongy p.,** mucous p. **vas'cular p.,** bleeding p.

polyrrhe'a, polyrrhœ'a [G. *polys*, much, + *rhoia*, a flow.] A profuse discharge of serous or other fluid; hydrorrhea.

polysaccharide (pol-e-sak'ar-id) [G. *polys*, many, + *sakcharis*, sugar.] A carbohydrate containing a large number of saccharide groups, $(C_6H_{10}O_5)n$. Starch is the most familiar example of a polysaccharide.

polysar'cia [G. *polys*, much, + *sarx*, flesh.] Obesity, corpulence, lipomatosis.

polysar'cous. Obese, corpulent excessively fat.

polyscelia (pol-ĭ-se'lĭ-ah). A form of polymelia, the presence of more than two legs.

polyscelus (pol-is'el-us) [G. *polys*, many, + *skelos*, leg.] A monster with one or more supernumerary legs.

pol'yscope [G. *polys*, much, + *skopeō*, I examine.] Diaphanoscope.

polysep'alous [G. *polys*, many.] In botany, noting a flower, the sepals of which are ununited.

polyserositis (pol-ĭ-se-ro-si'(se')tis) [G. *polys*, many, + L. *serum* + G. *-itis*.] Polyorrhomeningitis.

polysinuitis, polysinusitis (pol-ĭ-sin-u-i'(e')tis, pol-ĭ-si-nus-i'(e')tis) [G. *polys*, many, + L. *sinus* + G. *-itis*.] Simultaneous inflammation of two or more sinuses.

pol'ysolve. Sodium sulphoricinate, a solvent of thymol, menthol, and various camphors; polysolveol, solvin.

polyso'mia. The condition of a polysomus.

polyso'mus [G. *polys*, many, + *sōma*, body.] An imperfect double or triple monster with joined bodies.

polyspermia, polyspermism (pol-ĭ-spur'mĭ-ah, pol-ĭ-spur'mizm) [G. *polys*, many, + *sperma*, seed.] 1. Polyspermy. 2. An abnormally profuse spermatic secretion.

polysper'my [G. *polys*, many, + *sperma*, seed.] The entrance of more than one spermatozoon into the ovum.

Polyspo'rea [G. *polys*, many, + *sporos*, seed.] A suborder of *Myxosporidia* in which the pansporoblast contains more than two spores; the latter are as a rule elongated.

polystichia (pol-ĭ-stik'ĭ-ah) [G. *polys*, many, + *stichos*, row.] An arrangement of the eyelashes in two or more rows.

polysuspensoid (pol"ĭ-sus-pen'soyd) [G. *polys*, many.] A colloid system compound of solid phases having different degrees of dispersion.

polysyphilide (pol-ĭ-sif'ĭ-līd) [G. *polys*, many, + *syphilide*.] Marked by the presence of many syphilitic lesions.

polythe'lia [G. *polys*, many, + *thēlē*, nipple.] The presence of supernumerary nipples, either on the breast or elsewhere on the body.

polytrichia (pol-ĭ-trik'ĭ-ah) [G. *polys*, much, + *thrix* (*trich-*), hair.] Hypertrichosis, hirsuties, pilosis, polytrichosis, excessive hairiness.

Polytrichina (pol-ĭ-trĭ-ki'nah) [G. *polys*, many, + *thrix(trich-)*, hair.] A suborder of *Heterotrichida* in which the cilia are uniformly distributed over the surface of the cell.

polytrichosis (pol-ĭ-tri-ko'sis). Polytrichia

polytrichum (pol-it'rĭ-kum) [G. *polys*, many, + *thrix*(*trich*-), hair.] Hair-cap, golden maidenhair, golden moss, the entire plant of *Polytrichum commune*, *P. juniperinum*, and other species of *P.*; diuretic and astringent; employed in bronchitis and menorrhagia; it is also said to be markedly diuretic when given in doses of 5 to 60 drops of the eclectic specific medicine in water every 1 to 3 hours.

polytro'phia, polyt'rophy [G. *polys*, much, + *trophē*, nourishment.] Hypernutrition.

polyuria (pol-ĭ-u'rĭ-ah) [G. *polys*, much, + *ouron*, urine.] Excessive excretion of urine, profuse micturition. **p. test,** Albarran's* test.

polyv'alent [G. *polys*, much, + L. *valere*, to have power.] Multivalent. **p. se'rum,** a serum containing antibodies produced by the injection of several strains of the same species of microorganism. **p. vac'cine,** a bacterial vaccine made from killed cultures of several strains of the same bacterial species; see *mixed vaccine*.

pomade (po-mād') [Fr. *pommade*.] Pomatum.

poma'tum [L. *pomum*, apple.] A medicated ointment for the hair.

pomegranate (pum'gran-at) [L. *pomum*, apple, + *granatus*, many seeded.] Fruit of *Punica granatum*, a reddish yellow fruit the size of an orange containing many seeds enclosed in a reddish subacid pulp; the bark of the root and stem is official in the U.S.P. as *granatum*.

pomm'el joint. Condyloid joint.

pom'pholyx [G. a bubble.] Chiropompholyx, an inflammatory eruption of deeply seated vesicles of varying size, occurring on the hands or feet, accompanied by itching and burning, and followed by desquamation.

pom'phus [G. *pomphos*, blister.] A wheal.

po'mum [L.] Apple. **p. Ada'mi,** Adam's apple, prominentia laryngea.

Poncet's disease' (pawn̄-sa') [Antonin *Poncet*, French surgeon, 1846–1913.] Tuberculous rheumatism.* **P.'s operation,** (1) lengthening of the tendo Achillis for talipes equinus; (2) perineal urethrostomy; (3) perineotomy, perineal cystotomy in prostatic disease.

pon'derable [L. *pondus*, weight, + *habilis*, apt, fit.] Having weight.

Ponfick's shad'ows (pon'fik) [Emil *Ponfick*, German pathologist, 1844–1913.] Shadow corpuscles, phantom corpuscles.*

ponga'mia oil. Poonga oil, the expressed oil of the seeds of an East Indian tree, *Pongamia glabra;* used externally in scabies and various skin affections.

Ponndorf's vac'cine (pon'dorf) [Wilhelm *Ponndorf*. German physician, *1864.] (A) For uncomplicated tuberculosis, consisting of all the tuberculosis antigens; (B) a combined preparation of (A) and one made from the mixed-infection organisms present in the disease focus; one or the other preparation is rubbed into finger-long scarifications in the skin of the upper arm or thigh.

pon'ogen, pl. *pon'ogens*, *ponogena* (pon-oj'en-ah) [G. *ponos*, fatigue, + *gennaō*, I produce.] 1. A fatigue poison, fatigue toxin.* 2. Parhormone.

pon'ograph [G. *ponos*, fatigue, + *graphō*, I record.] An instrument for recording graphically the progressive fatigue of a contracting muscle.

ponopalmosis (pon-o-pal-mo'sis) [G. *ponos*, bodily exertion, + *palmos*, palpitation.] A condition of irritable heart in which palpitation is excited by slight exertion.

ponophobia (pon-o-fo'bĭ-ah) [G. *ponos*, fatigue, + *phobos*, fear.] Morbid fear of overwork or of becoming fatigued; laziness.

pon'os [G. fatigue, pain.] A disease occurring in young children in certain of the islands of Greece; it is characterized by enlargement of the spleen, hemorrhages, fever, and cachexia; possibly due to the presence of the Leishman-Donovan body.

pons [L. bridge.] 1. Pons Varolii, a prominent white mass on the basal aspect of the brain, lying in front of the cerebellum inferiorly, between the medulla and the cerebral peduncles, from each of which it is marked off by a groove; it is convex from side to side anteriorly, and posteriorly it forms part of the floor of the fourth ventricle. 2. Any bridge-like formation connecting two more or less disjoined parts of the same structure or organ. **p. cerebel'li,** p. Varolii. **p. hep'atis,** a bridge of liver tissue which sometimes overlaps the fossa venæ cavæ, converting it into a canal **p. Tari'ni,** posterior perforated space, substantia* perforata posterior [BNA]. **p. Varo'lii,** pons (1).

pontibra'chium. Brachium pontis [BNA].

pontic (pon'tik). Dummy (2).

pontic'ulus [L. dim. of *pons*, bridge.] 1. Ala pontis, propons. 2. A vertical ridge on the eminentia conchæ giving insertion to the auricularis posterior (retrahens aurem) muscle. **p. hep'atis,** pons hepatis. **p. promonto'rii,** a ridge on the wall of the tympanum passing from the promontory to the pyramid.

pon'tile, pon'tine. Relating to a pons, especially the pons Varolii.

pontoon' [L. *ponto*, a small boat, a punt] A loop of the small intestine.

pool [A.S. *pōl*.] A collection of blood in any region of the body, due to a dilatation of and retardation of the circulation in the capillaries and veins of the part. **abdom'inal p.,** the volume of blood within the abdomen, greatly increased in cases of shock, giving rise to the condition of exemia.

Pool's phenom'enon [Eugene Hillhouse *Pool*, New York surgeon, *1874.] 1. Leg phenomenon; contraction of the calf muscles following stretching of the sciatic nerve by placing the patient in a sitting position; it occurs in post-operative tetany. 2. Arm phenomenon; contraction of the arm muscles, resembling that from stimulation of the ulnar nerve, following stretching of the brachial plexus by elevating the arm above the head with the forearm extended; it occurs in post-operative tetany.

Pool-Schlesinger sign (pool-shla'zing-er) [E. H. *Pool*;* H. *Schlesinger*.] A combination of Pool's and Schlesinger's signs; *i.e.* spasm both of the extensor muscles of the knee and of the calf muscles.

pooled blood-serum. The mixed serum from a number of individuals, used to determine the normal phagocytic index.

pop'lar. Populus.

pop'les [L. the ham.] Poplitæus or popliteal space; posterior surface of the knee.

poplitæ'us. Popliteus; see under *musculus*.

popliteal (pop-lit'e-al; more commonly, pop-lĭ-te'al). Relating to the poples or posterior surface of the knee.

poplite'us. See under *musculus*.

popp'y. Papaver. **p. oil,** an expressed oil from the seeds of the poppy, resembling linseed oil.

pop'uli gem'mæ (N.F.). Balm of Gilead buds, balsam poplar buds, the winter leaf-buds of *P. nigra* or *P. balsamifera;* see *Populus*.

pop'ulin. Benzoyl-salicin, $C_{20}H_{22}O_8$, obtained from the bark and leaves of the aspen, *Populus tremuloides;* occurs in the form of white acicular crystals of a sweetish taste; antipyretic in doses of gr. 1–3 (0.06–0.2).

Pop'ulus [L.] A genus of trees of the order *Salicinaceæ*, the poplars, aspens, and cottonwoods; the bark of several species possesses tonic properties, and the buds (populi gemmæ, N.F.) are tonic and stimulant; a fluidextract of the bark is given in doses of ʒi–2 (4.0–8.0), and one of the buds in doses of ɱ10–30 (0.6–2.0). **P. balsamif'era,** balsam poplar, balm of Gilead, tacamahack. **P. ni'gra,** black poplar; this and the preceding are sources of the N.F. populi gemmæ, or poplar buds.

poradenitis (pawr-ad-en-i'(e')tis). Lymphogranulomatosis.

por'cupine disease'. Ichthyosis.

pore [G. *poros.*] A hole, perforation, or foramen; one of the minute openings of the sweat-glands of the skin.

porencepha'lia. Porencephaly.

porencephal'ic. Relating to porencephaly.

porencephalitis (pōr-en-sef-ă-li'(le')tis) [G. *poros*, a pore, + *enkephalos*, brain, + *-itis.*] Chronic inflammation of the brain with the formation of cavities in the substance of the organ.

porenceph'alous. Porencephalic.

porenceph'aly [G. *poros*, a passage-way, pore, + *enkephalos*, brain] The occurrence of cavities in the brain substance, communicating usually with the lateral ventricles.

Porges-Meier reaction (por'ges-mi'er) [O. *Porges*, Viennese bacteriologist.] Equal parts of blood-serum and a 1 per cent. emulsion of lecithin in physiological saline solution are mixed and kept for five hours at room temperature; blood-serum of the patient, under examination is then added and if the patient is syphilitic the lecithin will be precipitated.

Porges-Pollatschek reaction (pol-lă'chek) [Otto *Pollatschek*, Viennese physician.] An intracutaneous injection of posterior pituitary secretion excites no reaction in the case of a pregnant woman, but in the non-pregnant a red circle appears around the site of the injection.

Porges-Salomon test. In a mixture of equal parts of the activated serum of a subject suspected of syphilis and of a 1 per cent. solution of sodium glycocholate, a distinct flocculation will occur if the disease is present.

porioma'nia [G. *poreia*, a journey, + *mania*, frenzy.] Fugue, ambulatory automatism.*

pornog'raphy [G. *pornē*, a prostitute, + *graphō*, I write.] 1. A treatise on prostitution. 2. Obscene writing.

pornolagnia (por-no-lag'nĭ-ah) [G. *pornē*, prostitute, + *lagneia*, lust.] A perverted sexual attraction toward prostitutes.

porocele (po'ro-sēl) [G. *pōros*, callus, + *kēlē*, hernia.] A hernia with indurated coverings.

porocephaliasis, porocephalosis (po-ro-sef-al-i'ă-sis, po-ro-sef-al-o'sis). Infection with a species of *Porocephalus.*

Poroceph'alus [G. *poros*, pore, + *kephalē*, head.] A generic term applied to certain worm-like arthropods or their larvæ, parasitic in a number of animals and in man. **P. armilla'tus,** a species occurring in the python, the larva or nymph being occasionally found in man. **P. clava'tus,** a species found as a parasite in man. **P. constric'tus,** a larval species living parasitically in the mesentery. **P. cro'tali,** a species of linguatulide which has been found in the lung of a rattlesnake and is thought to infest man occasionally. **P. denticula'tus,** the larva of *Linguatula rhinaria.* **P. monilifor'mis,** a species of which the adult form is parasitic in the python; the larva or nymph may infest man.

porokerato'sis [G. *poros*, pore, + *keratosis.*] Keratodermia eccentrica, the pores of the sweat-glands being filled with plugs of horny epithelium.

poro'ma [G. *pōrōma*, callus.] 1. Callus. 2. Exostosis. 3. Induration following a phlegmon.

poroplas'tic felt. A stiffened porous felt which, when moistened, can be readily moulded to any part, so that when dry it forms a strong splint.

poro'sis. 1. [G. callus-formation.] The formation of callus around the ends of a fractured bone. 2. [L. *porosus*, porous.] A porous condition. **cer'ebral p.,** a porous condition of the brain produced post-mortem by the *Bacillus aerogenes capsulatus.*

poros'ity [L. *porosus*, porous.] 1. A porous condition. 2. A perforation.

porot'omy [G. *poros*, pore, + *tomē*, incision.] Division of a narrow meatus urinarius, meatotomy

po'rous [L. *porus*, a pore.] Having pores which pass directly or indirectly through the substance.

porphyrin (por'fi-rin). A red decomposition product of hematin, but containing no iron: or one of chlorophyll, containing no magnesium.

porphyrine (por'fi-rēn). An alkaloid derived from dita bark (*Alstonia constricta*).

porphyrinuria (por''fi-rin-u'rĭ-ă). The excretion of porphyrin in the urine.

porphyriza'tion. Grinding in a mortar (formerly on a slab of porphyry).

porphyru'ria [G. *porphyra*, purple, + *ouron*, urine.] The passage of uroerythrin (purpurin) in the urine.

porri'go [L.] Any scurfy disease of the scalp—ringworm, favus, or eczema. **p. decal'vans** [L. *decalvare*, to make bald], alopecia areata. **p. favo'sa,** honeycomb scall, honeycomb tetter, favus.* **p. fur'furans,** tinea tonsurans. **p. larva'lis,** eczema of the scalp. **p. lupino'sa** [L. *lupinus*, relating to a wolf], favus.

Por'ro opera'tion [Eduardo *Porro*, Milanese obstetrician, 1842–1902.] Celiohysterectomy, Porrocesarean operation; cesarean section followed by supravaginal amputation of the uterus.

por'ta [L. gate.] 1. The part of an organ where the vessels and nerves enter and the excretory ducts pass out, hilum, hilus [BNA]. 2. The foramen of Monro. **p. hep'atis** [BNA], portal fissure, a transverse fissure on the under surface of the liver between the caudate or Spigelian and quadrate lobes, lodging the portal vein, hepatic artery, hepatic nerve plexus, hepatic ducts, and lymphatic vessels. **p. li'enis,** the hilus of the spleen. **p. pulmo'nis,** the hilus of the lung where the bronchi, vessels, and nerves enter and leave the organ **p. re'nis,** hilus of the kidney.

portacid, porteacid (port-as'id) [Fr. *porter*, to carry.] A glass rod for use in making a local application of any caustic acid.

por'tal. Relating to any porta or hilus, specifically to the porta hepatis and the portal vein. **p. circula'tion,** the circulation, within the liver, of the blood brought by the p. vein. **p. system,** the p. vein and its branches through which the p. circulation takes place. **p. vein,** vena* portæ.

portcaustic, portecaustique (port-kaws'tik, port-kŏ-stēk') [Fr. *porter*, to carry.] Any form of handle, permanent or adjustable, for holding a stick of silver nitrate or other solid caustic.

porteaiguille (port-a-gü-e'e) [Fr. *porter*, to carry, + *aiguille*, needle.] A needle-holder.

portemèche (port-ĕ-mesh') [Fr. *porter*, to carry, + *mèche*, wick.] A probe or sound with a notched extremity, used in introducing a drain or tent into a canal.

portenœud (port-ĕ-né') [Fr. *porter*, to carry, + *nœud*, knot.] An instrument used in carrying and tying a ligature around an artery or the stalk of a tumor.

Por'ter's sign [William Henry *Porter*, Irish physician, 1790–1861.] Tracheal tugging.

Por'ter's tests [William Henry *Porter*, New York physician, 1853–1933.] 1. For uric acid in excess; Boil the upper strata of urine in a test-tube and add a few drops of 4 per cent. acetic acid; at the end of 3 or 4 hours the uric acid will crystallize out just below the surface of the urine. 2. For indicanuria: Shake together 10 c.c. urine, 10 c.c. hydrochloric acid, and 5 drops 0.5 per cent. solution potassium permanganate; then add 5 c.c. chloroform and shake; the presence of indican will be indicated by a purple coloration followed by a deposit of blue pigment.

portio (por'shyo) [L. portion.] A part; in gynecology, portio vaginalis. **p. du'ra,** hard part, seventh nerve, nervus facialis; formerly regarded as forming one nerve with the eighth or acoustic, being distinguished from the latter as the harder of the two. **p. interme'dia,** pars intermedia of Wrisberg, a small nerve between the facial and the acoustic, the sensory root of the facial. **p. ma'jor** [BNA], the larger, sensory, portion of the trigeminal nerve. **p. mi'nor** [BNA], the smaller, motor, portion of the trigeminal nerve. **p. mol'lis,** soft part, eighth nerve, nervus acusticus; formerly regarded as forming one nerve with the seventh or facial, being distinguished from the latter as the softer of the two. **p. supravagina'lis** [BNA], the part of the cervix uteri lying above the attachment of the vagina. **p. vagina'lis** [BNA], the part of the cervix uteri contained within the vagina.

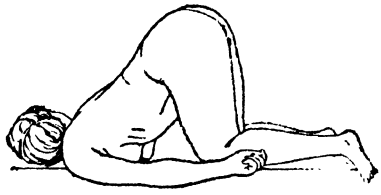
portiplexus (por-tĭ-pleks'us). The connection between the choroid plexuses of the lateral ventricles passing through the porta, or foramen of Monro.

portlig'ature, portelig'ature [Fr. *porter*, to carry.] An appliance for passing a ligature in the depths of a wound or a cavity which the fingers cannot reach.

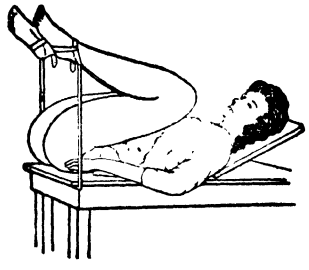
po'rus [L.] A pore, meatus, or foramen. **p. acus'ticus exter'nus** [BNA], external acoustic or auditory pore or foramen, the orifice of the external auditory meatus in the tympanic portion of the temporal bone. **p. acus'ticus inter'nus** [BNA], internal acoustic or auditory pore orforamen, a large round irregular opening on the posterior surface of the pyramid, or petrous portion of the temporal bone, marking the inner termination of the internal auditory meatus. **p. op'ticus,** optic disc, the point of entrance of the optic nerve through the sclera.

posiomania (pos"ĭ-o-ma'nĭ-ah) [G. *posis*, drinking, + *mania*, frenzy.] Dipsomania.

position (po-zish'un) [L. *positus*, placed.] 1. Attitude, posture; see *Bozeman, Edebohls, Elliot-Fowler, Péan, Rose, Simon, Sims, Trendelenburg, Walcher.* 2. The place occupied. 3. Specifically, in obstetrics, the relation of the presenting part of the fetus to the maternal structures; see cuts under *presentation.* **anatom'ical p.,** the erect position of the body with the arms at the side and supinated, the palms of the hands looking forward; the terms *posterior, anterior, lateral, medial,* etc., are applied to the parts as they stand related to each other and to the axis of the body when in this position. **dorsal p., dorsal recum'bent p.,** a position assumed for rectal or vaginal examination, or during parturition, the patient lying on the back with hips and knees flexed and thighs abducted. **dorsosa'cral p.,** lithotomy p. **English p.,** a position of the parturient woman, lying on the left side with right hip and knee flexed. **first p.,** left occipitoanterior position, L.O.A.; see cut under *presentation.* **fourth p.,** left occipitoposterior position, L.O.P.; see cut under *presentation.* **genucu'bital p.,** knee-elbow p. **genupec'toral p.,** knee-chest p. **knee-chest p.,** genupectoral p., a prone posture resting on the knees and upper part of the chest, assumed for gynecological or rectal examination. **knee-elbow p.,** genucubital p., a prone position resting on the knees and elbows, assumed for rectal or vaginal examination or operation; see cut under *Bozeman.* **lat'eral recum'bent p.,** English p. **leap'frog p.,** a stooping p., such as that taken by boys in playing leapfrog, assumed for a rectal examination. **lithot'omy p.,** dorsosacral p., the patient lying on the back with buttocks at the end of the operating table, the hips and knees being fully flexed with feet strapped in position **obstet'ric p.,** the p. assumed by the parturient woman, either dorsal recumbent or lateral recumbent. **second p.,** right occipitoanterior position, R.O.A.; see cut under *presentation.* **third p.,** right occipitoposterior position, R.O.P.; see cut under *presentation.*



KNEE-CHEST, OR GENUPECTORAL, POSITION.



LITHOTOMY POSITION.

pos'itive [L. *positus*, placed.] Sign +. (1) Affirmative, definite, not negative. (2) In laboratory technique, noting the occurrence of the reaction. (3) In diagnosis, noting that examination reveals the presence of an abnormal condition. (4) In postmortem examinations, noting that pathological changes are present. **p. col'umn,** a luminous stream, usually pinkish in color, seen in passing a current of high potential through a tube from which the air has been partly exhausted. **p. electric'ity,** vitreous electricity, electricity such as is produced by friction of glass. **p. pole,** anode, the pole of an electric battery

which is connected with the electronegative element, the chemically inactive pole. **p. phase,** the elevation of the opsonic index, following the negative phase, after an injection of bacillary vaccine.

posological (pos-o-loj'ĭ-kal). Relating to posology, or the dosage of remedies.

posology (po-sol'o-jĭ) [G. *posos*, how much, + *-logia*.] The branch of materia medica and therapeutics which has to do with a determination of the doses of remedies; dosage.

post (pōst). In dentistry a pivot or pin inserted into the root canal of a natural tooth as an attachment for an artificial crown.

post- [L. *post*, after.] A prefix to words derived from Latin roots, noting after, behind, or posterior, corresponding to Greek, *meta-*.

postaccess'ual. After an access or paroxysm of a disease.

postacetab'ular. Behind the acetabular cavity.

posta'nal. Behind the anus.

postanesthet'ic, postanæsthet'ic. Occurring after anesthesia, specifically after surgical or general anesthesia.

postapoplec'tic. Occurring after an attack of apoplexy.

postax'ial. Posterior to the axis of the body or any limb, the latter being in the anatomical position.*

postbrachial (pōst-bra'kĭ-al). On or in the posterior part of the upper arm.

postbrachium (pōst-bra'kĭ-um). Brachium quadrigeminum inferius.

postca'va. Inferior or ascending vena cava.

postca'val. Relating to the inferior vena cava.

postcen'tral. Posterior to a center.

postci'bal [L. *post*, after, + *cibum*, food.] After a meal or the taking of food.

postcister'na. The space in the transverse fissure of the cerebellum covered by the arachnoid.

postclavic'ular. Behind the clavicle.

postcomm'issure. Commissura posterior cerebri.

postcor'dial [L. *post*, behind, + *cor(cord-)*, heart.] Posterior to the heart.

postcor'nu. Cornu posterius of the lateral ventricle of the brain.

postcri'brum [L. *post*, behind, + *cribrum*, sieve.] Substantia perforata posterior.

postcu'bital. On or in the posterior or dorsal part of the forearm.

postdiastol'ic. Following the diastole of the heart.

postdicrot'ic. Following the dicrotic notch in a sphygmogram, noting an additional interruption in the descending line of the pulse tracing.

postdiges'tive. Following digestion.

post"diphtherit'ic. Following or occurring as a sequel of diphtheria.

postdu'ral. Behind the dura mater. **p. ar'tery,** posterior meningeal artery, a branch of the arteria pharyngea ascendens, which enters the cranium through the foramen lacerum posterius.

postencephalitic (post-en-sef-al-it'ik). Following or a sequel of encephalitis.

postepilep'tic. Following an epileptic seizure.

poste'rior [L. comparative of *posterus*, following.] 1. Behind or after in time or place; posticus. 2. In botany, noting that part of a lateral member which is nearest the parent axis.

poste'rius [L.] Neuter of posterior.

post"eroexter'nal. Occupying a position behind and to the outer side; posterolateral.

post"erointer'nal. Occupying a position behind and to the inner side; posteromedial.

posterolat'eral. Behind and to one side, specifically [BNA] to the outer side.

posterome'dial. Behind and to the inner side.

posterome'dian. Occupying a central position posteriorly.

posteropari'etal. Relating to the posterior portion of the parietal lobe of the cerebrum on either side.

posterosupe'rior. Situated behind and at the upper part.

posterotem'poral. Relating to or lying in the posterior portion of the temporal lobe of the cerebrum on either side.

postesophageal, postœsophageal (pōst-e-so-faj'e-al). Behind the esophagus.

postfe'brile. Occurring after a fever.

postfo'vea. Fovea inferior in the floor of the fourth ventricle.

postganglionic (pōst"gang-glĭ-on'ik). Posterior to or following a ganglion; noting especially the efferent visceral fibers of a neurone of the second order whose axone lies in a sympathetic ganglion.

postgem'inum. One of the two testes of the corpora quadrigemina, colliculus inferior [BNA].

postgenicula'tum, postgenic'ulum. The internal geniculate body of the brain.

postgle'noid. Behind the glenoid fossa of the maxilla.

postgracile (pōst-gras'il). Behind the lobulus gracilis of the cerebellum.

postgrad'uate. 1. Relating to the period following graduation from any institution of learning, especially (in medicine) from a medical school, noting a course of clinical and special study then pursued. 2. A recent graduate, especially one pursuing a course of postgraduate study.

postgripp'al. Postinfluenzal.

posthemiple'gic. Following hemiplegia.

posthemorrhagic (pōst-hem-ŏ-raj'ik). Following a hemorrhage.

posthepatic (pōst-he-pat'ik). Behind the liver.

posthetomy (pos-thet'o-mĭ) [G. *posthē*, prepuce, + *tomē*, incision.] Peritomy, circumcision.

pos'thioplasty [G. *posthē*, prepuce, + *plassō*, I form.] Reparative or plastic surgery of the prepuce.

posthippocampal (pōst-hip-o-kam'pal). Behind the hippocampus. **p. fissure,** calcarine fissure.

posthitis (pos-thi'(the')tis) [G. *posthē*, prepuce, + *-itis*.] Inflammation of the prepuce.

pos'tholith [G. *posthē*, prepuce, + *lithos*, stone.] A preputial calculus.

posthumous (pos'tu-mus) [L. *postumus*, last.] Occurring after the death of the producer; born after the death of the father.

posthyoid (pōst-hi'oyd). Behind the hyoid bone.

posthypnotic (pōst-hip-not'ik). Following hypnotism.

posthypophysis (pōst-hi-pof'i-sis). The posterior portion of the pituitary body, or hypophysis cerebri.

posti'cus [L.] Posterior. In the names of muscles the [BNA] substitutes *posterior* for *posticus*, as musculus tibialis posterior instead of musculus tibialis posticus.

postinfluen'zal. Occurring as a sequel of influenza, postgrippal.

postin'sular. 1. Behind the insula. 2. The posterior portion of the insula, or island of Reil.

postischial (post-is'kĭ-al). Behind the ischium.

postmala'rial. Occurring as a sequel of malaria, postpaludal.

postmas'toid. Behind the mastoid process.

postme'dian. Posterior to the median plane.

postmedias'tinal. 1. Behind the mediastinum. 2. Relating to the posterior mediastinum.

postmediasti'num. The posterior mediastinum.

postmeiotic phase (pōst-mi-ot'ik fāz) [L *post*, after + G. *meioō*, I make smaller.] Postreduction

phase; the stage following that of reduction of the chromosomes in the sexual cells, representing the mature forms of these cells, ending with the conjugation of the nuclei in the impregnated ovum.

postmortal (pōst-mor'tal). After death.

post mortem [L. *post*, after; *mors(mort-)*, death.] 1. After death. 2. A post-mortem examination, autopsy, necropsy. **p.-m. pus'tule,** an ulcer resulting from cadaveric infection of an abrasion of the hand. **p.-m. wart,** verruca necrogenica, lupus* verrucosus.

postna'rial. Relating to the posterior nares or choanæ, choanal.

postna'ris. Posterior naris, choana.

postna'sal. 1. Behind the nasal fossæ. 2. Relating to the posterior portion of the nasal fossæ.

postna'tal [L. *post*, after, + *natus*, birth.] Occurring after birth.

postnecrot'ic. Subsequent to the death of a tissue or part of the body.

postneurit'ic. Following neuritis.

postnod'ular. Behind the nodulus vermis of the cerebellum.

postoblonga'ta. The posterior or inferior portion of the medulla oblongata below the pons.

postoc'ular [L. *post*, behind, + *oculus*, eye.] Posterior to the eyeball.

postol'ivary. Situated posterior to the oliva.

postop'erative. Following a surgical operation.

postoper'culum. The posterior portion of the operculum.

postperfora'tum. Posterior perforated space, substantia perforata posterior [BNA].

postop'ticus. Any one of the optic lobes, or quadrigeminal bodies.

posto'ral [L. *post*, behind, + *os(or-)*, mouth.] In the posterior part of, or behind, the mouth.

postor'bital. Behind the orbit.

postpal'atine. Relating to the posterior part of, or behind, the palate or palate bone.

postpallium (pōst-pal'ī-um) [L. *post*, after.] The cerebral cortex posterior to the sulcus centralis, or fissure of Rolando.

postpal'udal. Postmalarial.

postparalyt'ic. Following or consequent upon paralysis.

post partum [L. *post*, after; *partus*, birth.] After childbirth. 2. Following or occurring as a sequel of childbirth, as post-partum hemorrhage.

postpe'duncle. The posterior, or inferior, peduncle of the brain.

postpharyn'geal. Behind the pharynx.

postpneumonic (pōst-nu-mon'ik). Following or occurring as a sequel of pneumonia.

postpo'nent, postpo'ning [L. *post*, after, + *ponere*, to place.] Noting malarial paroxysms which recur each time at a later period, or after progressively longer intervals.

postpon'tile. Behind or below the pons Varolii.

postpubescent (pōst-pu-bes'ent). Subsequent to the period of puberty.

postpycnotic (pōst-pik-not'ik). Following the stage of pycnosis in a red cell, noting the disappearance of the nucleus (chromatolysis).

postpyr'amid. Funiculus gracilis.

postpyramidal (pōst-pī-ram'i-dal). Relating to the posterior pyramid or funiculus gracilis.

postramus (pōst-ra'mus) [L. *post*, behind, + *ramus*, branch.] The posterior portion of the central white matter of the cerebellum.

postreduc'tion phase. Postmeiotic phase.

postrhi'nal fissure. A fissure separating the hippocampal from the subcollateral gyre.

postrolandic (pōst-ro-lan'dik). Behind the fissure of Rolando.

postsa'cral. Behind or below the sacrum; referring to the coccyx.

postscale'nus. Musculus scalenus posterior.

postscap'ular. Posterior scapular, behind the scapula.

postscapula'ris. Musculus infraspinatus.

postscarlatinal (pōst-skar-lah-te'nal). Occurring as a sequel of scarlatina.

postsphe'noid bone. The posterior portion of the body of the sphenoid bone.

postsplen'ic. Behind the spleen.

postsyl'vian. Behind the fissure of Sylvius.

posttar'sal. Relating to the posterior portion of the tarsus.

posttib'ial. Behind the tibia, situated in the posterior portion of the leg; sural.

post tussis (pōst-tus'is) [L. *post*, after + *tussis*, cough.] After coughing, referring usually to certain auscultatory sounds.

postty'phoid. Occurring as a sequel of typhoid fever.

postulate (pos'tu-lāt) [L. *postulatus; postulare*, to demand.] An unproved assertion or assumption; a statement or formula offered as the basis of a theory. **Ehrlich's p.,** side-chain* theory. **Koch's p.,** Koch's* law.

pos'tural. Relating to or effected by posture, as the postural treatment of peritonitis (Fowler's* position) or of a fracture.

posture (pos'tūr) [L. *positura; positus*, placed.] Position* of the body, as the erect posture, the recumbent posture, etc.; attitude. **p. sense,** the ability to recognize the position in which a limb is passively placed, the subject's eyes being closed.

postuterine (pōst-u'ter-in). Posterior to the uterus.

postver'mis. The inferior surface of the vermis of the cerebellum.

po'table [L. *potabilis; potare*, to drink, + *habilis*, fit.] Drinkable, fit to drink.

Potain's apparatus (pō-tañ') [Pierre Carl Edouard *Potain*, Parisian physician, 1825–1901.] A form of aspirator. **P.'s disease',** pulmonary and pleural edema. **P.'s sign,** in dilatation of the aorta dulness on percussion is found extending from the manubrium sterni toward the second intercostal space and the third costal cartilage on the right, the upper limit extending from the base of the sternum in the segment of a circle to the right.

potamophobia (pot-am-o-fo'bī-ah) [G. *potamos*, river, + *phobos*, fear.] Morbid fears aroused by the sight, and sometimes thought, of a river or any stream.

pot'ash. 1. Potassa, potassium hydroxide. 2. Pearlash, potassii carbonas.

potas'sa (U.S. 1890). Potash, potassii hydroxidum (U.S. 1900). **p. caus'tica,** caustic potash, potassii hydroxidum (U.S., Br.). **p. cum cal'ce,** potash with lime, Vienna caustic, a grayish white powder of equal parts of caustic potash and lime; employed as a caustic. **p. sulphura'ta** (U.S., Br.), sulphurated potash, sulphuret of potassium, liver of sulphur; obtained by melting together dried potassium carbonate 10, and sulphur 5; occurs in irregular masses of a liver color changing to brownish yellow; has been employed in whooping-cough, asthma, and tuberculosis in doses of gr. 3–8 (0.2–0.5), and externally in scabies, acne, and psoriasis.

potass'ic. Relating to or containing potassa.

potass'ii. Genitive of potassium.

p. ace'tas (U.S., Br.), potassium acetate, acetate of potash, $KC_2H_3O_2$, a white granular powder or crystalline mass soluble in water and alcohol; diuretic and diaphoretic in doses of gr. 10–30 (0.6–2.0).

p. bicarbo'nas (U.S., Br.), potassium bicarbonate, potassium hydrogen carbonate, $KHCO_3$, occurs in colorless, translucent, prismatic crystals, soluble in water; employed as a diuretic and to decrease the acidity of the urine in doses of gr. 5–30 (0.3–2.0).

p. bisul'phas, potassium bisulphate, acid sulphate of potassium, $KHSO_4$; occurs in colorless, translucent crystals, of acid taste readily soluble in water; resembles potassium sulphate in its purgative action, but is more violent.

p. bitar'tras (U.S.), potassium bitartrate, acid tartrate of potash, cream of tartar, $KHC_4H_4O_6$, a white inodorous powder of acidulous taste; employed as a diuretic and to neutralize alkaline urine in doses of gr. 30–60 (2.0–4.0), and as a laxative in doses of ʒss-8 (16.0–32.0).

p. bro'midum (U.S., Br.), potassium bromide, KBr, occurs as a white, shining, crystalline powder, soluble in water; employed as a nerve sedative, reducing reflex activity, in epilepsy, chorea, and other spasmodic neuroses, and as a hypnotic, in doses of gr. 5–60 (0.3–4.0).

p. carbo'nas (U.S., Br.), potassium carbonate, salt of tartar, K_2CO_3, a white crystalline or granular powder, deliquescent, soluble in equal parts of water; employed chiefly externally in the treatment of cutaneous diseases.

p. chlo'ras (U S., Br.), potassium chlorate, chlorate of potash, $KClO_3$, occurring in colorless shining crystals, soluble in 16 parts of water; has been employed internally in doses of gr. 2–8 (0.13–0.5), and also as a mouth wash and gargle, in stomatitis and follicular pharyngitis.

p. chlo'ridum (N.F.), potassium chloride, colorless crystals or a white granular powder, soluble in about three parts of water.

p. chro'mas, potassium chromate, neutral or yellow chromate of potassium, K_2CrO_4; a yellow crystalline salt, soluble in 2 parts of water; employed as a reagent.

p. ci'tras (U.S., Br.) potassium citrate, $K_3C_6H_5O_7$, a white granular powder, deliquescent and soluble in water; employed as a diuretic and diaphoretic and to diminish the acidity of the urine, in doses of gr. 5–30 (0.3–2.0).

p. ci'tras efferves'cens (U.S.), potassium citrate 200, citric acid 162, sodium bicarbonate 477, tartaric acid 252; the salts are thoroughly mixed, and when moist passed through a sieve, and the granules then dried, dose ʒi–2 (4.0–8.0).

p. cyan'idum, potassium cyanide, KCN, a white granular powder having the odor, when moist, of hydrocyanic acid, deliquescent and soluble in water; employed to meet the same indications as diluted hydrocyanic acid, in doses of gr ½–¼ (0.005–0.008).

p. dichro'mas (Br.), potassium dichromate or bichromate, $K_2Cr_2O_7$, occurs as orange red, translucent crystals, soluble in 9 parts of water employed externally as a caustic to syphilitic vegetations.

p. et so'dii tar'tras (U S.), potassium and sodium tartrate, soda tartarata (Br), Rochelle salt, $KNaC_4H_4O_6$; occurs as white or transparent, inodorous, prismatic crystals, of saline bitterish taste, soluble in water; laxative in doses of ʒ2–4 (8.0–16.0).

p. ferrocyan'idum, potassium ferrocyanide, yellow prussiate of potash, $K_4Fe(CN)_6+3H_2O$, translucent, lemon-yellow crystals, of a sweetish taste, soluble in water; employed in the preparation of various cyanides and in medicine as an antidote to copper sulphate.

p. guai"acol-sul'phonas, thiocol, a colorless and odorless crystalline powder of bitterish taste, recommended as a sedative expectorant in bronchitis and pulmonary tuberculosis, and as an intestinal disinfectant, in doses of gr. 5 to 20 (0.3 to 1.3 Gm.).

p. hydrar'gyri iod'idum, potassium mercuric iodide, K_2HgI_4, occurring as yellow deliquescent crystals, soluble in water and in alcohol; employed as a substitute for mercuric iodide and mercuric chloride, being an effective germicide and not coagulating albumin.

p. hydrox'idum (U.S., Br.), potassium hydroxide, potassa caustica, caustic potash, KOH, occurs in white crystalline masses, inodorous but of an acid, caustic taste; employed as a strong penetrating caustic.

p. hypophos'phis (N.F.), potassium hypophosphite, KH_2PO_2, occurs in white crystalline masses or granular powder, inodorous but of saline bitter taste; employed like the other hypophosphites as a nerve and general tonic.

p. iod'idum (U.S., Br.), potassium iodide, KI, a colorless or whitish crystalline powder soluble in water; employed as an alterative, and in syphilis and chronic rheumatism, in doses of gr. 5–20 (0.3–1.3).

p. ni'tras (U.S., Br.,) potassium nitrate, niter, saltpeter, KNO_3, occurs in colorless, translucent, prismatic crystals, readily soluble in water; sometimes employed as a diuretic and diaphoretic in doses of gr. 5–20 (0.3–1.3), and the fumes are inhaled for the relief of the asthmatic paroxysm.

p. perman'ganas (U.S., Br.), potassium permanganate, $KMnO_4$, occurs in deep purple prismatic crystals, soluble in 15 parts of water; a strong oxidizing agent, employed in solution as an antiseptic and deodorizing application to foul ulcers, cancer, and ozena, used internally in dyspepsia and amenorrhea in doses of gr. 1–2 (0.06–0.13).

p. phos'phas, potassium phosphate, dipotassium phosphate, K_2HPO_4, a white, amorphous, deliquescent salt, used in tuberculosis in doses of gr. 10–30 (0.6–2.0).

p. sozoiod'olas, potassium sozoiodolate, a colorless crystalline powder soluble in 50 parts of water; employed externally as an antiseptic and bactericide in skin diseases, otitis, rhinitis, and gonorrhea.

p. succi'nas, potassium succinate, a deliquescent powder used as a hemostatic in doses of gr. 5–10 (0.3–0.6).

p. sul'phas (N.F., Br.), potassium sulphate, K_2SO_4, occurs as colorless, translucent, prismatic or pyramidal crystals, or as a white powder, soluble in 9 parts of water; laxative in doses of gr. 30–60 (2.0–4.0).

p. tar'tras (Br.), potassium tartrate, soluble tartar, $K_2C_4H_4O_6$; occurs in colorless translucent crystals or white granular powder, soluble in less than its weight of water; diuretic, diminishing urinary acidity, in doses of gr. 30–60 (2.0–4.0).

p. tar'tras ac'idus (Br.), acid potassium tartrate, purified cream of tartar.

potass"iocu'pric. Relating to or containing both potassium and copper

potass"iomercu'ric. Relating to or containing both potassium and mercury

potas'sium [L.] Kalium, an alkaline metallic element, symbol K (*kalium*), atomic weight 39.1, occurring abundantly in nature but always in combination. It is a soft silvery white or gray, lustrous substance. Its salts are largely used in medicine. For the salts of potassium see under *potassii*.

pota'to-cul"ture. A bacterial culture grown on a slice of potato.

po'tency [L. *potentia*, power.] 1. Power, force, strength. 2. In homeopathy, (*a*) the therapeutic efficacy of a drug as increased by succussion or trituration with alcohol or sugar of milk, respectively; (*b*) the degree of dilution or attenuation of a drug by which its therapeutic efficacy is increased. There are two degrees or systems of potency, the decimal and the centesimal. In the decimal system one part of the crude drug is triturated with nine parts of sugar of milk to make the first decimal potency. To make the second decimal potency one part of the first potency is triturated with nine parts of sugar of milk; and so on. In the case of drugs of which tinctures can be made, one drop of the mother tincture is added to nine drops of alcohol (in larger amounts, but in the same proportion) and the mixture is strongly shaken (succussed) to make the first decimal dilution or potency; one drop of this succussed with nine drops of alcohol makes the second decimal dilution, and so on.

The centesimal potencies are made in the same way, except that one grain or one drop is triturated or shaken with 99 grains or drops of the diluent to make the first centesimal potency; and one part of this again is mixed with 99 parts of the diluent to make the second centesimal potency. The centesimal potencies are indicated by numbers from 1 to 30 (usually, though not always, the highest potency used); the decimal potencies are indicated by the signs 1x, 2x. 30x, etc. **fluxion p.,** a dilution or potency made with a machine, water being used as a vehicle, and pushed to an extreme degree—as high, it is stated, as the $\frac{1}{10^{100}}$ or even $\frac{1}{1000^{1000}}$ dilution. **high p.,** the homeopathic preparation of a drug above the 30th dilution.

potentia coeundi (po-ten'shyah ko-e-un'di) [L. the power of cohabiting, *coire*, to come together.] The ability to perform sexual intercourse.

potential (po-ten'shal) [L. *potentia*, power.] 1. Capable of doing or being, though not yet doing or being; possible, but not actual. 2 A state of tension in an electric source enabling it to do work under suitable conditions; in relation to electricity the potential is analogous to the temperature in relation to heat. **p. cau'tery,** see *cautery*.

potentialization (po-ten"shal-i-za'shun). The rendering potent; in homeopathy, the increase in potency of a drug through dilution or attenuation.

potentialize (po-ten'shal-īz). To render potent; specifically, in homeopathy, to increase the potency or therapeutic efficacy of a drug by dilution or attenuation; potentize.

potentiation (po-ten-shī-a'shun). Potentialization.

po'tentize. In homeopathy, to render potent, potentialize, said of the dynamization of drugs by dilution or attenuation.

po'tio [L.] Potion. **p. Rivier'ii,** Rivière's* potion.

po'tion. A draft or large dose of liquid medicine.

potoma'nia [G. *potos*, a drinking-bout, + *mania*, frenzy.] Delirium tremens.

Pott's an'eurysm [Percival *Pott*, English surgeon, 1713–1788.] Aneurysmal varix* **P.'s ca'ries,** P.'s disease. **P.'s cur'vature,** the kyphosis of P.'s disease. **P.'s disease,** tuberculous spondylitis, vertebral caries. **P.'s fracture,** fracture of the lower part of the fibula and of the malleolus of the tibia, with outward displacement of the foot. **P.'s gan'grene,** senile gangrene. **P.'s paral'ysis** or **paraple'gia,** paraplegia resulting from compression of the spinal cord in P.'s disease **P.'s puf'fy tumor,** a circumscribed swelling of the scalp indicating an underlying osteitis of the skull or an extradural abscess.

po'tus [L. drink.] Potio, draft, drink. **p. imperia'lis,** imperial drink, a solution of cream of tartar, ½ ounce in 3 pints of water, sweetened, and flavored with lemon peel.

pouch (powch). Pocket, cul-de-sac. **Broca's p.** pudendal sac. **Douglas's p.,** rectovaginal p., excavatio* rectouterina. **laryn'geal p.,** sacculus laryngis. **paracys'tic p.,** the lateral portion of the uterovesical p. **pararec'tal p.,** the lateral portion of the rectouterine p. **rectou'terine p.,** excavatio rectouterina. **rectovag'inal p.,** excavatio rectouterina. **rectoves'ical p.,** excavatio rectovesicalis. **uteroves'ical p.,** excavatio* vesicouterina. **vesicou'terine p.,** excavatio vesicouterina. **Willis's p.,** the gastrohepatic omentum.

Poulet's disease (poo-la') [Alfred *Poulet*, French physician, 1848–1888.] Rheumatic osteoperiostitis.

poultice (pōl'tis) [L. *puls(pult-)*, a thick pap.] Cataplasm. **alum p.,** cataplasma aluminis. **bread p.,** a p. made by steeping bread crumb in hot milk or water. **carrot p.,** catapla ma carotæ **charcoal p.,** cataplasma carbonis. **chlo'rinated soda p.,** **chlorine p.,** cataplasma sodæ chlorinatæ. **clay p.,** cataplasma kaolini. **flaxseed p.,** cataplasma lini. **ice p.,** a layer of crushed ice and salt between two thin layers of crushed linseed enclosed in an oiled silk bag. **linseed p.,** cataplasma lini. **lobe'lia p.,** cataplasma lobeliæ. **molas'ses p.,** cataplasma syrupi fusci. **mustard p.,** cataplasma sinapis. **spice p.,** a poultice made by moistening a powder of ginger, allspice, cloves, nutmeg, and cinnamon (or some similar mixture) with hot vinegar or alcohol to make a paste; useful in nausea, meteorism, and colic. **starch p.,** a p. made by pouring boiling water over a paste made by stirring starch in cold water. **stramo'nium p.,** cataplasma stramonii. **yeast p.,** cataplasma fermenti.

pound [A.S. *pund;* L. *pondus*, weight.] A unit of weight, containing twelve ounces, apothecaries' weight, or sixteen ounces, avoirdupois.

Poupart's' lig'ament [François *Poupart*, French anatomist, 1616–1708.] Ligamentum inguinale [BNA]. **P.'s line,** vertical line, a line drawn perpendicularly, on either side, from the center of the clavicle to P.'s ligament.

pow'der [Fr. *poudre;* L. *pulvis*.] 1 A dry mass of minute separate particles of any substance. 2. Pulvis, a drug in finely comminuted form. 3. Charta; a single dose of a powdered drug, enclosed in an envelope of folded paper. [For the official powders, see *pulvis*.] **aromat'ic p.,** pulvis cinnamomi compositus. **bleaching p.,** calx chlorinata. **composi'tion p.,** pulvis myricæ compositus (N.F.). **gray p.,** hydrargyrum cum creta. **Jesuits' p.,** powdered cinchona bark. **Seidlitz p.,** pulvis effervescens compositus

pow'der-head. Dynamite headache.*

pox [variant of the pl. of *pock*.] 1. An eruptive disease; usually qualified by some term, as smallpox, cowpox, etc. 2 An eruption, first papular then pustular, occurring in chronic antimony poisoning. 3 Vulgarly, syphilis **chicken-p.,** varicella. **cow-p.,** vaccina, vaccinia. **fowl-p.,** epithelioma contagiosum, a nodular eruption of infectious origin, occurring in fowls and other birds. **glass-p.,** alastrim. **horse-p.,** equinia. **Kaffir-p.,** alastrim. **sheep-p.,** ovinia. **small-p.,** variola. **swine-p.,** (1) a form of varicella with pronounced eruption; (2) a disease of swine of the same nature as cow-p. **white-p.,** alastrim.

Pozzi's syn'drome (pod'ze) [Samuel J. *Pozzi*, French gynecologist, 1846–1918.] Backache and leucorrhea without enlargement of the uterus, in cases of endometritis.

P.p. Abbreviation for *punctum proximum* [L.], near point.

P. P. sub'stance [pellagra preventing.] A substance, such as animal protein or yeast extract, the administration of which in sufficient quantity will often prevent or cure pellagra; the curative principle is thought to be vitamin B_2 (vitamin F, vitamin P).

P.r. Abbreviation for *punctum remotum* [L.], far point.

Pr. 1. Abbreviation for *presbyopia*. 2. Chemical symbol of *praseodymium*.

prac'tice [L. *practica*, business.] The exercise of the profession of medicine.

prac'tise. To exercise the profession of medicine; to treat the sick.

practitioner (prak-tish'on-er). A person who practices medicine; a physician engaged in practice

præ-. For words so beginning, not found here, see *pre-*.

præcor'dia, præcor'dium [L. *præ*, before, + *cor* (*cord-*), heart.] The epigastric region and anterior surface of the lower central portion of the thorax.

præcribrum (pre-krib'rum) [L. *præ*, before, + *cribrum*, sieve.] Præperforatum, substantia perforata anterior [BNA].

præcu'neus [L. *præ*, before, + *cuneus*.] A division of the mesial surface of each cerebral hemisphere between the cuneus and the paracentral lobulus; it lies above the subparietal sulcus and is bounded anteriorly by the pars marginalis of the sulcus cinguli and posteriorly by the parieto-occipital fissure.

prægenicula'tum, prægenic'ulum. Pregeniculatum.

præperfora'tum. Anterior perforated space, præcribrum, substantia perforata anterior [BNA].

præputium (pre-pu'shĭ-um) [L. *præ*, before, + G. *posthion*, penis.] Prepuce, foreskin; the free fold of skin which covers more or less completely the glans penis. **p. clitor'idis,** the external fold of the labia minora, forming a cap over the clitoris.

præver'mis. The upper surface of the vermis of the cerebellum.

prag"matagno'sia [G. *pragma*, thing, + *agnōsia*, ignorance.] Loss of the power of recognizing objects.

prag"matamne'sia [G. *pragma*, a thing, + *amnēsia*, forgetfulness.] Loss of the memory of the appearance of objects.

Prague maneuver (prahg-man-oo'vur) [*Prague*, the capital of Czechoslovakia, celebrated for its obstetric clinic.] A maneuver for engaging the head when it still lies out of the pelvis in breech presentations; the breech is brought down and traction is made on the head by means of the fingers hooked over the nucha. **P. pelvis,** spondylolisthetic pelvis.*

prairie-itch (pra'rĭ-ich). See *itch*.

Prana appara'tus (prah'nah). An apparatus designed for producing pencils of carbonic-oxide snow.

praseodymium (pra-se-o-dim'ĭ-um) [G. *prasios*, relating to garlic, + *didymium*.] A very rare element, symbol Pr, atomic weight 140.6.

pras'oid. Trade name of a preparation, said to be a mixture of globularin, 0.5, and globularetin, 0.7, in 60 per cent. alcohol, 20; employed in gout and rheumatism in doses of gr. 8–20 (0.5–1.3).

Prat's symp'tom. Rigidity in the muscles of an injured limb, which precedes the occurrence of gangrene.

pratique (prat'ik or pră-tēk') [F. *pratique*, practice.] Liberty given a ship having a clean bill of health, or after compliance with quarantine regulations, to hold intercourse with the port at which it has arrived.

Pratt's meth'od. Orificial surgery.*

Pravaz syr'inge (pră-vahz') [Charles Gabriel *Pravaz*, French physician, 1791–1853.] Hypodermic syringe.

praxiology (praks-ĭ-ol'o-jĭ) [G. *praxis*, action, + *-ology*.] The science or study of conduct.

pray'er-beads. Jequirity.

pre- [L. *præ*, before.] A prefix to words formed from Latin roots, denoting anterior or before, in space or time; ante-, pro-.

preagonal (pre-ag'on-al). Immediately preceding the death agony.

preagonic (pre-ag-on'ik). Preagonal. **p. staining,** vital staining.*

prealbuminu'ric. Prior to the actual establishment of albuminuria.

preanal (pre-a'nal). In front of the anus.

preantisep'tic. Noting the period, especially in relation to surgery, before the adoption of the principles of antisepsis.

preaor'tic. Anterior to the aorta, noting certain lymph glands so situated.

preaseptic (pre-ă-sep'tik). Noting the period, especially the early antiseptic period in relation to surgery, before the principles of asepsis were known or adopted.

preataxic (pre-ă-taks'ik). Noting the early stages of tabes dorsalis prior to the appearance of ataxia.

preauricular (pre-aw-rik'u-lar). In front of the auricle of the ear, noting lymphatic glands so situated. **p. point,** a point of the posterior root of the zygoma lying immediately in front of the upper end of the tragus.

preax'ial. Anterior to the axis of a limb or of the body.

prebacillary (pre-bas'il-a-rĭ). Noting the preparatory or predisposing stage of an infectious disease, such as tuberculosis, before the actual invasion by the specific microorganisms has taken place.

prebrachium (pre-bra'kĭ-um). Brachium quadrigeminum superius.

precan'cerous. Noting an assumed period in the growth of a neoplasm, or a local morbid condition, preceding the appearance of malignant characteristics.

precapillary (pre"kap'il-a-rĭ). An arteriole or venule.

precar'diac [L. *præ*, before, + G. *kardia*, heart.] Precordial, in front of the heart.

preca'va. Superior or descending vena cava.

precen'tral. In front of the center.

prechordal (pre-cor'dal). Anterior to the notochord.

precip'itant. 1. Anything causing precipitation of solids from a solution. 2. Hasty, headlong, precipitate.

precip'itate [L. *precipitare*, to cast headlong.] 1. To throw anything down from its solution or suspension in a liquid. 2. To separate out from a solution or suspension. 3. A deposit of a solid separated out from a solution or suspension; a flocculence or clumping resulting from the mixture of a specific antigen and its antibody 4. Hasty, headlong, precipitant. **red p.,** red mercuric oxide, hydrargyri* oxidum rubrum **sweet p.,** calomel. **white p.,** hydrargyrum ammoniatum. **yellow p.,** yellow oxide of mercury, hydrargyri* oxidum flavum.

precipita'tion. 1. The act of precipitating. 2. The process of formation of a deposit of solid matter held in solution or suspension in a liquid. 3. The phenomenon of clumping of proteins in serum produced by the addition of a specific precipitin. 4. Haste, headlong hurry, precipitancy.

precip'itin. A substance formed in the blood serum of an animal as a result of repeated injections of an albuminous body; it possesses the property, when added to a solution of this albumin of causing its precipitation. **p. test,** see under *test*.

precipitinogen (pre-sip-ĭ-tin'o-jen). Precipitogen.

precip'itogen. Precipitable substance, the antigen of a precipitin, a substance which, on injection into the body, excites the formation of precipitins.

precipitogenoid (pre-sip-ĭ-toj'en-oyd). A precipitogen which unites with precipitin, but in which the power of forming a precipitate when so doing has been destroyed by heating.

precip'itoid [G. *eidos*, resemblance.] A precipitin which has lost its labile precipitophore group; it

has the power of binding precipitogen but not of forming a precipitate.

precip'itophore [*precipitin* + G. *phoros*, bearer.] Noting the atom group in a precipitin which causes precipitation; distinguished from the *haptophore* group.

precip'itum. Precipitate (3).

preclin'ical. Before the onset of disease. **p. medicine,** the practice of periodic health examinations.

precli'val. In front of the clivus of the cerebellum.

precomm'issure. Commissura anterior.

preconvul'sive. Noting the stage in an epileptic paroxysm preceding the occurrence of convulsions.

precor'dia. Præcordia, the epigastrium and anterior surface of the lower part of the thorax.

precor'dial. Relating to the precordia.

precordial'gia [L. *præcordia* + G. *algos*, pain.] Pain in the precordial region.

precor'dium. Precordia.

precor'nu. The anterior cornu, cornu anterius, of the lateral ventricle.

precos'tal [L. *præ*, before, + *costa*, rib] In front of the ribs.

precu'neal. Anterior to the cuneus.

precu'neate. Relating to the præcuneus.

precu'neus [BNA]. Præcuneus.

precu'nial. Anterior to the cuneus.

preden'tine. The embryonic substance which develops into the substantia eburnea.

prediastole (pre-di-as'to-le). The interval in the cardiac rhythm immediately preceding the diastole.

prediastol'ic. Relating to the interval preceding the cardiac diastole.

predicrot'ic. Noting an interruption in the sphygmographic tracing preceding the dicrotic notch.

prediges'tion. The artificial initiation of digestion of proteins (proteolysis) and starches (amylolysis) before they are eaten.

predispose' [L. *præ*, before, + *disponere*, to arrange.] To render susceptible. **predispos'ing cause,** anything affecting the body is such a way as to render it vulnerable to the action of the exciting cause.

predisposi'tion. A condition of special susceptibility to a disease.

predormitium (pre-dor-mish'i-um) [L *præ*, before, *dormitare*, to fall asleep.] The stage of semiunconsciousness preceding actual slumber.

preepiglottic (pre-ep-i-glot'ik) Anterior to the epiglottis.

preeruptive (pre-e-rup'tiv). Noting the stage of an exanthematous disease preceding the eruption.

preformation (pre-for-ma'shun) [L. *præ*, before.] The doctrine that the entire organism exists in the germ (as a leaf in the bud) and that it is simply unfolded in the process of development.

prefron'tal. Noting the anterior portion of the frontal lobe.

preganglionic (pre"gang-gli-on'ik). Anterior to or preceding a ganglion; noting especially the efferent visceral fibers of a spinal neurone terminating in a sympathetic ganglion.

pregem'inal. Relating to a pregeminum.

pregem'inum. Either one of the anterior or superior quadrigeminal bodies, natis, colliculus* superior.

pregenicula'tum, pregenic'ulum. The external geniculate body.

Pregl's i'odine solu'tion (pra'gŭl) [Fritz *Pregl*, Prague chemist, 1871–1931.] An aqueous solution containing sodium and iodine ions with 0.04 per cent. of free iodine; a disinfectant.

preglob'ulin. A protein soluble in saline and dilute alkaline solutions, but not in water; it occurs in the protoplasm of certain cells.

preg'nancy [L. *præ*, before, + *gnatus*, birth.] Gestation, fetation, gravidity; the state of a female after conception until the birth of the child. The duration of pregnancy in woman is about forty weeks, ten lunar months, or nine calendar months. **abdom'inal p.,** the development of the ovum in the peritoneal cavity. **bigem'inal p.,** twin p. **cer'vical p.,** the lodgment and development of the impregnated ovum in the cervical canal. **cor'nual p.,** the lodgment and development of the impregnated ovum in one of the cornua of the uterus. **ectop'ic p.,** extrauterine p., the development of an impregnated ovum outside the cavity of the uterus. **extramem'branous p.,** a p. in which during the course of gestation the fetus has broken through its envelopes, coming directly in contact with the uterine walls. **extra-u'terine p.,** ectopic p. **Fallo'pian p.,** tubal p. **false p.,** enlargement of the uterus with some of the signs of p., due to the growth of a tumor or false mole. **hydat'id p.,** the growth of an hydatid mole in the uterine cavity. **intersti'tial p.,** development of the ovum in the uterine portion of the Fallopian tube. **intraperitone'al p.,** abdominal p. **kidney of p.,** see under *kidney*. **mesomet'ric p.,** ectopic p. beginning as a tubal p., the sac being eventually formed by the mesometrium. **molar p.,** p. marked by the degeneration of the fetus into a mole. **mul'tiple p.,** the state of bearing two or more fetuses simultaneously. **mural p.,** interstitial p. **ova'rian p.,** development of an impregnated ovum in a Graafian follicle. **ova"rio-abdom'inal p.,** a beginning ovarian p. which, consequent upon growth of the embryo, later becomes abdominal. **phan'tom p.,** false p. due to the formation of a phantom* tumor in an hysterical subject. **plural p.,** multiple p. **sec'ondary abdom'inal p.,** a condition in which the embryo continues to grow in the abdominal cavity after its expulsion from the tube or other seat of its primary development. **spu'rious p.,** false p. **tu'bal p.,** development of an impregnated ovum in the oviduct. **tubo-abdom'inal p.,** development of the ovum primarily in the oviduct and later, through rupture of the tube, in the abdominal cavity. **tu'bo-ova'rian p.,** development of the ovum at the fimbriated extremity of the oviduct. **tubo-u'terine p.,** interstitial p. **twin p.,** bigeminal p., the simultaneous development of two impregnated ova. **u'terine p.,** normal p. **u"tero-abdom'inal p.,** development of the ovum primarily in the uterus and later, in consequence of the rupture of the uterus, in the abdominal cavity.

abnormal, paracyesia. **diagnosis,** cyesiognosis. **extrauteine,** eccyesia, ectopic gestation, metacyesia, exfetation; salpingocyesia, tubal gestation (oviduct); ovariocyesia, oariocyesia (ovary); abdominocyesia (abdomen); mural gestation (uterine portion of oviduct). **false,** pseudocyesia. **multiple,** superfetation, epicyesia, hypercyesia, polycyesia, multifetation. **normal,** eucyesia. **science of,** cyesiology. **uterine,** hysterocyesia, uterogestation. **woman in,** gravida; primigravida, unigravida (first); secundigravida (second); tertiagravida, tetragravida (third); quadrigravida (fourth); quintigravida fifth); sextigravida (sixth); septigravida (seventh); multigravida (third or later); nulligravida (never pregnant). **woman passed through** (given birth), -para; unipara, primipara (one); bipara, secundipara (two); tripara (three); quadripara, quartipara (four); quintipara (five); sextipara (six); septipara; (seven); multipara (more than two); nullipara (none),

preg'nant. Gravid, big with child; noting a female bearing within her the product of conception.

prehemipleg'ic. Preceding the occurrence of hemiplegia.

prehen'sile [L. *prehendere*, to seize.] Adapted for taking hold of or grasping.

prehen'sion. Grasping, taking hold of.

prehy'oid. In front of the hyoid bone, noting certain accessory thyroid glands lying superior to the mylohyoid muscle.

prehypoph'ysis. The anterior lobe, epithelial or glandular portion, of the hypophysis cerebri.

preinduction (pre-in-duk'shun) [L. *præ*, before, + *inductio*, a bringing in.] A modification in the third generation resulting from the action of environment on the germ cells of one or both individuals of the grandparental generation.

preinsula (pre-in'su-lah). The anterior, larger portion of the insula, separated from the postinsula by the transinsular or central insular fissure.

Preisz-Nocard bacillus (prīs-no-kar'). *Corynebacterium*[0] *pseudo-tuberculosis ovis*.

prelac'rymal. In front of the lacrymal sac.

prelaryn'geal. In front of the larynx, noting especially one or two small lymphatic glands in front of the lower part of the larynx.

prelim'bic. Anterior to the limbus of the fossa ovalis.

prelipoid substance (pre-li'poyd sub'stans). Broken down nerve tissue which has not yet been converted into fat.

pre'lum [L. a press.] Anything making strong compression. **p. arteria'le,** tourniquet. **p. abdomina'le,** the compression of the abdominal viscera caused by straining or bearing down.

premalig'nant. Precancerous.

premani'acal. Preceding a maniacal outbreak.

premature (pre-mă-tūr') [L. *præ*, before, + *maturus*, ripe.] 1. Undeveloped, not mature. 2. Occurring before the appointed time.

premaxil'la. Os incisivum.

premax'illary. 1. Anterior to the maxilla. 2. Noting the premaxilla.

premedica'tion [L. *pre*, before, + *medication*.] Rendering the surgical patient unconscious by internal medication prior to inducing inhalation anesthesia; basal narcosis.

premeiotic phase (pre-mi-ot'ik fāz) [L. *pre*, before, + G. *meioō*, I make smaller.] Prereduction phase; the stage of nuclear changes in the sexual cells prior to the reduction of the chromosomes, embracing the cell-generations up to that of the spermatogonia and oogonia.

premen'strual. Relating to the period preceding menstruation.

premenstruum (pre-men'stroo-um). [L. *pre*, before, + *menstruum*, the menstrual fluid.] The period preceding menstruation.

pre'mium [L. *præmium*, profit; *præ*, before, + *emere*, to buy.] The amount payable annually, semiannually, or quarterly by the insured in order to keep a policy in force. **gross p.,** the sum of the net p. and the loading, constituting the actual premium paid by the insured. **level p.,** a p. which remains the same so long as the policy continues in force. **nat'ural p.,** a p. representing the actual current cost of the policy, and therefore increasing in amount each year as the insured advances in age; insurance under this plan is called *step-rate* insurance and the policy is equivalent to a yearly *renewable term policy.** **net p.,** the annual payment on a life insurance policy which, if invested at a predetermined rate of interest, will be necessary exactly to equal the amount of the policy at the expiration of the life expectancy of the insured; see *loading*.

premo'lar. 1. In front of a molar tooth. 2. A bicuspid tooth. 3. A molar tooth in the first dentition.

premon'itory [L. *præmonere*, to forewarn.] Forewarning, foreboding, giving an indication of what is to follow.

premunition (pre-mu-nĭ'shun) [Fr.] Immunity to tuberculosis and other diseases conferred by preventive vaccination.

premunitive (pre-mu'nĭ-tiv). Relating to or resulting from preventive vaccination.

premycot'ic. Prebacillary.

prenaris, pl. *prena'res* (pre-na'ris). One of the anterior nares, the anterior opening of a nasal fossa, nostril.

prena'tal [L. *præ*, before, + *natus*, birth.] Preceding birth, antenatal.

preoblonga'ta. The anterior area of the medulla oblongata, the pyramis.

preoper'culum. The frontal operculum lying between the two anterior limbs of the Sylvian fissure, pars triangularis.

preop'tic. In front of the optic lobes, or anterior quadrigeminal bodies

preop'ticus. Pregeminum

preo'ral [L. *præ*, before, + *os(or-)*, mouth.] In front of the mouth.

prepal'atal. Relating to the anterior part of the palate, or in front of the palate bone.

prepallium (pre-pal'ĭ-um) [L. *præ*, before.] The cerebral cortex anterior to the sulcus centralis, or fissure of Rolando.

prepara'tion [L. *præparatio; præ*, before, + *parare*, to get ready.] 1. A getting ready. 2. Something made ready, as a medicinal or other mixture, or a histological specimen.

prepar'ative. Immune body.

prep'arator. Müller's term for amboceptor, or immune body.

prepatell'ar. In front of the patella.

prepe'duncle. The anterior cerebellar peduncle.

preperfora'tum. Anterior perforated space, substantia* perforata anterior.

prephthisis (pre-ti'(te')sis). The pretuberculous stage of phthisis.

prephyson (pre-fi'son) [L. *præ*, before, + G. *hypophysis*.] A hormone from the anterior lobe of the hypophysis cerebri, which acts as a stimulant to metabolism.

preplacen'tal. Prior to the formation of a placenta.

prepontile (pre-pon'til). Anterior, or superior, to the pons Varolii.

prepo'tency [L. *præ*, before, + *potentia*, power.] The ability or power possessed by one parent in greater degree than the other, of transmitting hereditable characteristics to the offspring.

prepo'tent. Possessing prepotency.

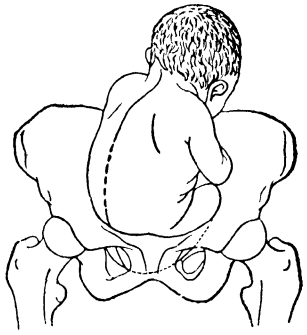
prepubescent (pre-pu-bes'ent). Prior to the period of puberty.

prepuce (pre'pūs). Præputium, foreskin, acrobystia, posthe.

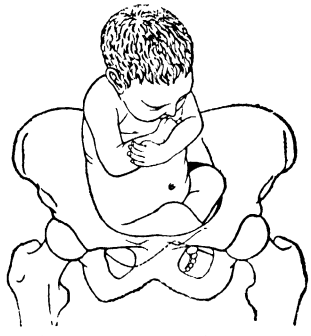
absence, aposthia. **calculus,** postholith, acrobystio lith. **inflammation,** acrobystitis, acroposthitis, posthitis, posthobalanitis. **narrowing of orifice,** phimosis; see also *paraphimosis*. **pain,** posthalgia.. **plastic surgery,** posthioplasty. **removal,** circumcision, peritomy, posthectomy, posthetomy.

preputial (pre-pu'shyal). Relating to the prepuce.

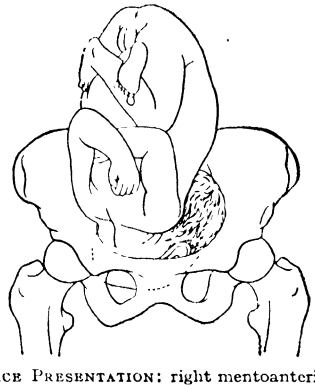
prepylor'ic. Anterior to or preceding the pylorus, noting a temporary constriction of the wall of the stomach separating the fundus from the antrum during digestion—the prepyloric sphincter.



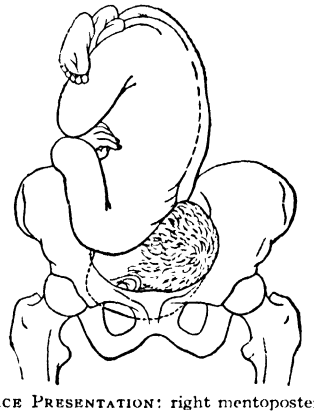
BREECH PRESENTATION: right sacroanterior.



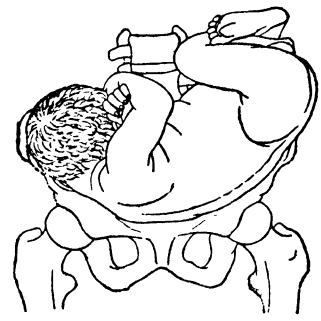
BREECH PRESENTATION: right sacroposterior.



FACE PRESENTATION: right mentoanterior.

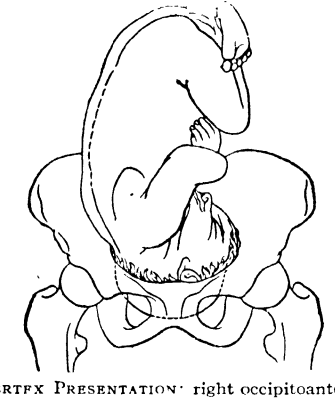


FACE PRESENTATION: right mentoposterior.

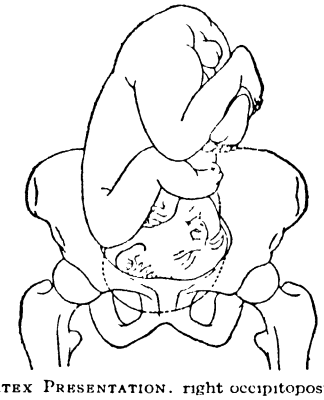


TRANSVERSE (SHOULDER) PRESENTATION: right scapuloanterior

TRANSVERSE (SHOULDER) PRESENTATION: right scapuloposterior



VERTEX PRESENTATION: right occipitoanterior.



VERTEX PRESENTATION. right occipitoposterior.

prepyram'idal. Anterior to the pyramids of the medulla oblongata; relating to the pyramid of the cerebellum.

prera'mus. The anterior portion or branch of the central white substance of the cerebellum as seen in sagittal section.

prerec'tal. In front of the rectum.

prereduc'tion phase. Premeiotic* phase.

prere'nal [L. *præ*, before, + *ren*, kidney.] In front of either kidney.

prereproduc'tive. Noting the period of life before puberty.

presbyacousia, presbyacusia (prez-bĭ-ă-koo'sĭ-ah) [G. *presbys*, old, + *akousis*, hearing.] Diminished acuteness of hearing occurring in old age.

pres'byope. A long-sighted, presbyopic person.

presbyophrenia (prez-bĭ-o-fre'nĭ-ah) [G. *presbys*, old, + *phrēn*, mind.] Wernicke's syndrome, one of the mental disorders of old age marked by loss of memory, disorientation, and confabulation, with, however, a relative integrity of judgment.

presbyopia (prez-bĭ-o'pĭ-ah) [G. *presbys*, old, + *ōps*, eye.] The physiological change in accommodation power in the eyes in advancing age, said to begin when the near point has receded beyond 22 cm. (9 inches).

presbyop'ic. Relating to or suffering from presbyopia.

presbysphacelus (prez-bĭ-sfas'el-us) [G. *presbys*, old, + *sphakelos*, gangrene.] Senile gangrene.

presbytia (prez-bish'ĭ-ah). Presbyopia.

presbytiatrics (prez-bĭ-tĭ-at'riks) [G. *presbytēs*, an old man, + *iatreia*, medical treatment.] Medical science in its relation to disease in the aged.

presbytism (prez'bĭ-tizm). Presbytia.

prescribe (pre-skrīb') [L. *præ*, before, + *scribere*, to write.] To give directions, either orally or in writing, for the preparation and administration of a remedy to be used in the treatment of any disease.

prescrip'tion. 1. A written formula for the preparation and administration of any remedy. 2 A medicinal preparation compounded according to the directions formulated in a prescription (1). In the classical description of a prescription it is said to consist of four parts: (1) the *superscription*, consisting of the word *recipe*, take, or its sign, ℞; (2) the *inscription*, or main part of the p., containing the names and amounts of the drugs ordered; (3) the *subscription*, or directions for mixing the ingredients and designation of the form (pill, powder, solution, etc.) in which the drug is to be made; this usually begins with the word, *misce*, mix, or its abbreviation M.; and finally the *signature*, or directions to the patient regarding the dose and times of taking the remedy; this is preceded by the word *signa*, designate, or its abbreviation S. **p. car'bons, p. elec'trodes,** impregnated electrodes, variously filled according to the physicians directions, to meet definite therapeutic indications. **shotgun p.,** a prescription containing many ingredients.

presecre'tion [Lat. *præ*, before.] Hormone.

presenile (pre-se'nīl) [L. *præ*, before, + *senilis*, old.] Prematurely old; marked by the physical and mental characteristics of old age, though not old in years.

presenil'ity. Premature old age.

present' [L. *præsentare*.] To precede or appear first at the os uteri, said of the part of the fetus which is felt by the examining finger of the accoucheur.

presentation (pre-zen-ta'shun). The part of the body of the fetus which is in advance during birth. Any part may present, so that there may be an arm, hand, shoulder, foot, leg, etc., **presentation,** but a **normal presentation** is one of either pole—the vertex or the breech. **breech p.,** p. of any part of the pelvic extremity of the fetus—the nates, knees or feet; more properly only of the nates. **cephal'ic p.,** head p., the p. of any part of the fetal head—vertex, brow face, parietal eminence, ear, or greater fontanelle. **footling p.,** foot p., the descent of the fetus feet first. **pelvic p.,** a p. of the breech or any part of one or both lower extremities. **polar p.,** the p. of either pole of the fetal oval—cephalic or breech p. **placen'tal p.** placenta prævia. **transverse' p.,** cross-birth, a p. in which some part of the trunk appears at the os uteri, the fetus lying crosswise in the uterus. **vertex p.,** the normal cephalic p., p. of the upper and back part of the fetal head.

presphe'noid bone. The anterior portion of the body of the sphenoid bone.

presphyg'mic [L. *præ*, before, + G. *sphygmos*, pulse.] Preceding the pulse beat; noting a brief interval following the filling of the ventricles with blood before the contraction of their walls forces open the semilunar valves.

prespi'nal. Anterior to the spine.

pres'sor. Exciting to vasomotor activity, producing increased blood-pressure, noting afferent nerve-fibers which, when stimulated, excite the vasoconstrictor center. **p. base,** one of several products of intestinal putrefaction probably derived from leucine, tyrosine, and choline, which are found in normal urine, and which cause a rise of blood-pressure when injected into animals; the retention of these in the body is supposed to be a common cause of high blood-pressure. **p. sub'stance,** p. base. **pres'sor X.** An extract from various animal tissues and organs which causes a marked rise in blood pressure with acceleration of the heart-rate and diminution in kidney excretion, resembling in this respect epinephrine, but differing from the latter in its action on the intestine, uterus, and blood sugar.

press'ure. A stress or force acting in any direction against resistance. **blood p.,** see under *blood*. **osmot'ic p.,** see under *osmotic*. **p. palsy,** paralysis due to pressure on a nerve-trunk or on the spinal cord. **p. point,** see *point*. **pulse p.,** see under *pulse*. **p. sore,** bedsore.

prester'num [L. *præ*, before, + *sternum*.] Manubrium sterni.

Pres'ton's salt. Ammonium carbonate.

presupp'urative. Noting an early stage in an inflammation prior to the formation of pus.

presyl'vian. Noting the anterior horizontal ramus of the Sylvian fissure, or fissura cerebri lateralis.

presystole (pre-sis'to-le). The interval in the cardiac rhythm preceding the systole.

presystol'ic. Relating to the beginning of the systole of the heart or to the interval immediately preceding it.

pretar'sal. Noting the anterior, or inferior, portion of the tarsus.

prethy'roid, prethyroid'eal, prethyroid'ean. In front of the thyroid gland or the thyroid cartilage.

pretib'ial. Relating to the anterior portion of the leg, noting especially certain muscles.

pretuber'culous. Noting a state in which tuberculosis seems to threaten, but in which as yet no tuberculous lesions are present.

pretympan'ic. Anterior to the drum of the ear.

preurethritis (pre-u-re-thri'(thre')tis). Inflammation of the mucous membrane of the vestibule of the vagina.

preven'tive [*præ*, before, + *venire*, to come.] 1. Warding off disease, prophylactic 2. A prophylactic, or anything which arrests the threatened onset of disease. **p. med'icine,** the science of the prevention of disease, prophylaxis.

preventorium (pre-ven-to'rĭ-um) [*prevent*, formed on the model of sanatorium.] An institution for the care of persons, especially children, of poor physique who are believed to be in danger of acquiring tuberculosis.

prever'mis. 1. The central lobule of the cerebellum. 2. The superior surface of the vermis of the cerebellum.

prever'tebral. In front of the body of a vertebra or of the vertebral column.

prevertiginous (pre-vur-tig'in-us) [L. *præ*, before, forward, + *vertigo*.] Noting a condition of vertigo or dizziness in which the subject tends to fall forward.

preves'ical [L. *præ*, before, + *vesica*, bladder.] Anterior to the bladder.

Prévost's law (pra-vo') [Jean Louis *Prévost*, Swiss physician, 1838–1927.] Vulpian-Prevost law; in case of a unilateral cerebral lesion, the head is turned to the side of the lesion; see *Landouzy*-Grasset law.*

pre'zone [L *præ*, before] Prozone.

prezy'mogen. Prozymogen.

pri'apism [*Priapos*, the god of procreation.] Persistent erection of the penis, especially when due to disease and not provoked by sexual desire.

priapitis (pri-ă-pi'(pe')tis). Inflammation of the penis.

pri'apus [see *priapism*.] The penis

prick'le-cell. See under *cell*. **p.-c. lay'er,** the outer layer of the stratum mucosum of the epidermis.

prick'ly heat. Miliaria rubra.

pride-weed. Erigeron.

Priessnitz ban'dage (prees'nits) [Vincent *Priessnitz*, a German peasant and "native healer," 1790–1851.] A cold wet compress.

Priest'ley's mass [Joseph *Priestly*, English Unitarian clergyman and naturalist, 1733–1804] 1. A greenish slimy growth of algæ and infusoria on stones and moist earth. 2. Occasionally also the greenish tartar seen on the backs of the lower incisor teeth.

primæ viæ (pri'me vi'e) [L. *primus*, first, + *via*, a way; the first passages.] The digestive tract; see under *via*.

pri'mary [L. *primus*, first.] 1. First, principal. 2. The first manifestation of syphilis, or the chancre.

primate (pri'măt). An individual of the order *Primates*.

Primates (pri-ma'tēz) [L. *primas*(*primat*-), chief.] The highest order of mammals, including man, monkeys, and lemurs embraced in the two suborders: *Anthropoidea* and *Lemuroidea*, or *Prosimiæ*.

pri'merite [L. *primus*, first, + *G. meris*, part.] The anterior portion of an attached cephalont, separated by an ectoplasmic septum from the posterior part, or deutomerite.

primigravida (pri-mĭ-grav'ĭ-dah) [L *primus*, first, + *gravida*, pregnant] A woman who is pregnant for the first time.

pri'mine [L. *primus*, first.] In botany the outer coat of an ovule when two are present

primipara (pri-mip'ah-rah) [L. *primus*, first, + *parere*, to bring forth.] A woman in her first childbed.

primipar'ity. The condition of being a primipara.

primip'arous. Noting a primipara.

pri'mite. Primerite.

prim'itive [L. *primitivus; primus*, first.] Primary, early in the course of development, rudimentary. **p. streak,** a keel-like thickening of the ectoderm at the smaller end of the oval germinal layer in the young embryo, called also *p. groove*, *p. trace*, *germinal streak*.

primor'dial [L. *primordium*, origin; *primus*, first, + *ordiri*, to begin.] Primitive.

primor'dium [L. beginning.] Anlage, proton, a collection of cells in the impregnated ovum indicating the first trace of an organ or other structure.

prim'ula. The rhizome and roots of a number of species of *Primula*, primrose or cowslip; radix arthritica, radix paralysans; in some sensitive persons contact with the plant causes a rash; the drug is employed as a diuretic, nervine, and anthelmintic in doses of gr. 3–5 (0.2–0.3). The flowers are also used in hysteria in doses of gr. 5–10 (0.3–0.6).

prin'ceps [L. chief.] A term used to distinguish several arteries. **p. cervi'cis,** chief of the neck, ramus descendens of the occipital artery, supplying the complexus muscle. **p. hal'lucis,** chief of the great toe, the plantar digital artery, arising from the termination of the dorsalis pedis in the sole of the foot and supplying the adjacent sides of the first and second toes. **p. pol'licis,** chief of the thumb, see under *arteria*.

principle (prin'sĭ-pl) [L. *principium; princeps*, chief] 1. A continuously acting power or force. 2. The essential ingredient in a drug or chemical compound. **active p.,** a constituent of a drug, usually an alkaloid or glucoside, upon the presence of which the characteristic therapeutic action of the substance largely depends. **organ'ic p.,** proximate p. **prox'imate p.,** in chemistry an organic compound which may exist already formed as a part of some other more complex substance; various sugars, starches, and albumins belong to this class of substances. **ul'timate p.,** one of the chemical elements.

Pringle's disease (pring'gl) [John James *Pringle*, English dermatologist, 1855–1922.] An eruption of dark reddish yellow nodules (adenoma sebaceum) on the face, usually of weak-minded children.

pri'nos. Black alder, fever-bush, the bark of *Ilex verticillata*, a tree of eastern North America; employed as a bitter tonic and antiperiodic in doses of gr. 20–30 (1.3–2.0).

print'ers' pal'sy. Chronic antimonial poisoning marked by a papulopustular eruption, pain in the pubic region, and neuritis with paresis.

Pri'or-Fink'ler vib'rio. *Vibrio proteus*, Finkler*-Prior spirillum.

prism [G. *prisma*.] A solid whose sides are parallelograms and whose transverse section is a triangle or other plane figure; a triangular p. (one whose cross section is a triangle) deflects the ray of light toward the base of the triangle and splits it up into its primary colors; it is used in spectacles to correct high degrees of imbalance of the extrinsic ocular muscles. **enam'el p.,** prisma adamantinum, one of the calcified hexagonal microscopic prisms, radiating from the surface of the dentine, forming the substance of the enamel of a tooth. **Nicol p.,** see *Nicol*. **p. diop'ter,** the unit of measurement of the deviation of light in passing through a prism, being a deflection of one centimeter at a distance of one meter.

pris'ma, pl. *pris'mata* [G. something sawn.] Prism. **p. adamanti'num,** pl. *pris'mata adamanti'na* BNA], enamel prism.*

prismat'ic. Relating to or resembling a prism

pris'moid [G. *prisma*, prism, + *eidos*, resemblance] Resembling a prism, prismatic.

prismoptom'eter [G. *prisma*, prism, + *optos*, seen, + *metron*, measure] An instrument for testing the strength of the extrinsic eye muscles by means of a prism.

pris'mosphere. A combined spherical lens and prism.

pri'vates [L. *privatus; privare*, to separate.] The external genitals.

p. r. n. Abbreviation of L. *pro re nata*, according to the condition arising, according to circumstances; a direction sometimes occurring in the signature of a prescription.*

pro- [L. and G. *pro*, before.] A prefix denoting before or forward.

proagglutinoid (pro-ag-glu'tin-oyd). A modified agglutinin which has a stronger affinity for agglutinogen than has agglutinin.

pro'al [G. *pro*, before.] Relating to a forward movement

proam'nion. The primitive amnion, that part of the amnion at the cephalic extremity which at first has no mesoderm.

proatlas (pro-at'las) [L. *pro*, before, + *atlas*.] A vertebral element intercalated between the atlas and occipital bone in *Crocodilia*, traces of which are sometimes seen as an anomaly on the under surface of the occipital bone in man.

pro'bang. A slender flexible rod, tipped with a globular piece of sponge or some other material, used chiefly for making applications or removing obstructions in the larynx or esophagus. **bristle p., horsehair p.,** a form of p., the extremity of which, made of horse hair, is pushed past a foreign body in the esophagus and then is expanded and withdrawn, bringing the foreign body with it

probe [L. *probare*, to test.] A slender rod of silver or other flexible metal, with blunt bulbous tip, used for exploring sinuses, fistulas, or other cavities, or wounds. **Anel's p., Nélaton's p.,** etc., see the proper names. **elec'tric p.,** Lilienthal's* p. **meer'schaum p.,** a bullet probe with meerschaum tip, which coming in contact with a leaden bullet will receive a mark. **ver'tebrated p.,** a p. made up of a series of short bits of metal hinged together, which readily accommodates itself to all the sinuosities of a fistula or other tract. **telephon'ic p.,** Girdner's* p.

probi'lin. Trade name for a preparation containing salicylic acid, oleate of sodium, stearate of sodium, phenolphthalein, and menthol camphor; said to have cholagogue properties.

procainæ hydrochloridum (pro-kah-e'na hi-dro-klor'idum) (U.S., Br.). Procaine hydrochloride, novocaine, para-aminobenzoyl-diethylaminoethanol hydrochloride, $NH_2(C_6H_4CO)OC_2H_4N(C_2H_5)_2.HCl$; occurs as small colorless crystals or a white crystalline powder, odorless, soluble in 0.6 parts of water or 30 parts of alcohol; employed as a local anesthetic.

procaine (pro'kah-ēn) [L. *pro*, instead of, + (*co*)*caine*.] The base of the official procainæ hydrochloridum (U.S.), usually called novocaine.

pro'carp [G. *pro*, before, + *karpos*, flower.] In botany, the female sexual organ in *Ascomycetes*, consisting of the trichogyne and the carpogonium.

procatarc'tic [G. *prokatarktikos*, immediate.] Noting the exciting cause of a disease.

procatarxis (pro-kă-tarks'is) [G. a beginning beforehand.] 1. Exciting cause. 2. The beginning of a disease under the influence of the exciting cause, a predisposition already existing.

proce'lous, procœ'lous [G. *pro*, before, + *koilos*, hollow.] Concave anteriorly.

procephal'ic [G. *pro*, before, + *kephalē*, head.] Relating to the anterior part of the head.

proce'rus [L. long, stretched out.] Pyramidalis muscle; see *musculus procerus*.

process (pros'es) [L. *processus; procedere*, to advance.] 1. A method or mode of action employed in the attainment of a certain result. 2. An advance or progress, as of a disease, a pathological process. 3. A projection or outgrowth; see *processus*. **acro'mion p.,** the broad external free extremity of the spine of the scapula, acromion.* **ap'ical p.,** the process extending from the ape of a pyramidal cell of the cerebral cortex toward the surface. **artic'ular p.,** one of the small flat projections on the upper and lower surfaces of the arches of the vertebræ, on either side, at the point where the pedicles and laminæ join, forming the vertebral joint surfaces, zygapophysis [BNA]. **au'ditory p.,** the roughened edge of the tympanic plate giving attachment to the cartilaginous portion of the auditory meatus. **axis-cyl'inder p.,** axon, neuraxon. **bas'ilar p.,** pars basilaris [BNA], the portion of the occipital bone in front of the foramen magnum. **belem'noid p.,** processus styloidea. **cla'vate p.,** clava. **cli'noid p.,** one of three pairs of bony projections from the sphenoid bone: the *anterior* is the recurved posterior angle of the lesser wing; the *middle* is a little spur of bone toward the outer extremity on either side of the tuberculum sellæ, or olivary eminence; the *posterior* is a spur of bone at each superior angle of the dorsum sellæ. **conoid p.,** the tuberosity of the clavicle. **dendrit'ic p.,** dendrite. **dental p.,** processus alveolaris. **en'siform p.,** ensiform or xiphoid cartilage of the sternum. **funic'ular p.,** the tunica vaginalis surrounding the spermatic cord. **ham'ular p.,** (1) hamulus pterygoideus [BNA], a hook shaped process terminating the internal pterygoid plate (2) a flat slightly curved process on the palmar surface of the unciform bone, unciform process; (3) a hook-shaped process of the lacrymal bone terminating the posterior lacrymal crest. **long p.,** (1) processus gracilis mallei, processus anterior mallei [BNA]; (2) crus longum [BNA]. **malar p.,** processus zygomaticus. **mastoid p.,** the nipple-like projection of the mastoid portion of the temporal bone. **nasal p.,** processus frontalis [BNA]. **odon'toid p.,** dens [BNA], the tooth-like process projecting from the body of the epistropheus, or axis, around which the atlas rotates. **olec'ranon p.,** olecranon. **ol'ivary p.,** a slight oval projection behind the optic groove of the sphenoid bone. **protoplas'mic p.,** dendrite. **short p.,** (1) processus* lateralis mallei; (2) crus breve incudis. **spinous p.,** (1) spina angularis [BNA], a process extending backward from the ala magna or large wing of the sphenoid bone, (2) processus spinosus [BNA], a process extending backward from the center of the arch of a vertebra, forming with those of the other vertebræ, the spine or ridge of the back; (3) spina iliaca [BNA], iliac spine; (4) eminentia* intercondyloidea [BNA] of the tibia. **ver'miform p.,** (1) appendix vermiformis, processus* vermiformis; (2) vermis of the cerebellum.

processoma'nia. A mania for litigation.

proces'sus, pl. *processus* [L. a projection.] A process.

p. accesso'rius [BNA], accessory process or tubercle, a small apophysis at the back part of the base of the transverse process of each of the lumbar vertebræ.

p. ala'ris [BNA], alar process; a bony process projecting from the crista galli of the ethmoid bone on either side.

p. alveola'ris [BNA], alveolar process; the projecting ridge on the under surface of the body of the maxilla containing the tooth-sockets; the term is sometimes applied also to the upper border of the body of the mandible, containing the tooth-sockets of the lower jaw.

p. an'gulus exter'nus, external angular process, processus zygomaticus [BNA], of the frontal bone, articulating on either side with the malar bone and forming the upper outer margin of the orbit.

p. an'gulus inter'nus, the internal angular process of the frontal bone, articulating on either side with the lacrymal bone, forming the upper inner margin of the orbit.

p. ante'rior mal'lei [BNA], anterior process of the malleus, p. gracilis, Folian process, a slender spur running forward from the neck of the malleus toward the Glaserian fissure.

p. articula'ris [BNA], an articular process of a vertebra, zygapophysis.

p. bre'vis mal'lei, short process of the malleus, p. lateralis [BNA].

p. cauda'tus [BNA], a narrow band of hepatic tissue connecting the caudate and right lobes of the liver, dividing the right sagittal fissure into two.

p. cilia'ris [BNA], one of the radiating pigmented ridges, usually seventy in number, on the inner surface of the ciliary body, increasing in thickness as they advance from the orbiculus to the external border of the iris; these, together with the folds (plicæ) in the furrows between them, constitute the corona ciliaris.

p. clinoid'eus ante'rior [BNA], a sharp point terminating the posterior margin of the lesser wing of the sphenoid bone.

p. clinoid'eus me'dius [BNA], an inconstant protuberance from the margin of the tuberculum sellæ of the sphenoid bone.

p. clinoid'eus poste'rior [BNA], an angular projection forming a corner of the dorsum sellæ of the sphenoid bone.

p. cochlearifor'mis [BNA], cochleariform process; (1) a bony angular process above the anterior end of the vestibular window, forming a pulley over which the tendon of the tensor tympani muscle plays; (2) septum tubæ, a bony septum dividing the canalis musculotubarius into two parts.

p. condyloid'eus [BNA], (1) condyloid process or condyle; (2) capitulum mandibulæ [BNA], the posterior or articular process of the ramus of the mandible.

p. coracoid'eus [BNA], coracoid process, a long curved projection from the head of the scapula overhanging the glenoid cavity; it gives attachment to the short head of the biceps, the coracobrachialis, and the pectoralis minor muscles, and the conoid and coracoacromial ligaments.

p. coronoid'eus mandib'ulæ [BNA], the triangular anterior process of the mandibular notch, giving attachment to the temporal muscle.

p. coronoid'eus ul'næ [BNA], a bracket-like projection from the anterior portion of the upper extremity of the ulna; its anterior surface gives attachment to the brachialis anticus, its upper surface enters into the formation of the greater sigmoid cavity.

p. costa'rius [BNA], costal process, an apophysis extending laterally from the transverse process of a lumbar vertebra; it is the homologue of the rib.

p. ensifor'mis, the ensiform process or xiphoid process [BNA] of the sternum.

p. ethmoida'lis [BNA], ethmoidal process of the inferior turbinated bone, situated behind the lacrymal process and articulating with the uncinate process of the ethmoid.

p. falcifor'mis [BNA], falciform process, falciform ligament, a continuation of the inner border of the great sacrosciatic ligament upward and forward on the inner aspect of the ramus of the ischium.

p. Ferrei'ni, pyramid of Ferrein, medullary ray, pars radiata [BNA] of a cortical lobule of the kidney; a pyramidal prolongation of medullary substance into the cortex of the kidney.

p. fronta'lis [BNA], frontal process, nasal process; the upward extension from the body of the maxilla, which forms part of the side of the nose and of the margin of the orbit.

p. frontosphenoida'lis [BNA], frontosphenoidal process, frontal process of the malar bone, the ascending process of the malar bone articulating with the external angular process of the frontal.

p. gra'cilis mal'lei, slender process of the malleus, p. anterior mallei [BNA].

p. infundib'uli, Collina's term for the posterior or neural lobe of the hypophysis cerebri; see *hypophysis*.

p. intrajugula'ris [BNA], intrajugular process, a small pointed process of bone extending from the middle of the jugular notch in both the occipital and the temporal bones, the two being joined by a ligament and dividing the jugular foramen into two portions.

p. jugula'ris [BNA], jugular process, a short process jutting out from the posterior part of the condyle of the occipital bone, its anterior border forming the posterior boundary of the jugular foramen.

p. lacrima'lis [BNA], lacrymal process of the inferior turbinated bone; a projection from the anterior edge of this bone which articulates with the lower border of the lacrymal bone and the edge of the nasal groove of the superior maxilla, forming a portion of the wall of the nasal duct.

p. latera'lis mal'lei [BNA], lateral process of the malleus. p. brevis, a short projection from the base of the manubrium of the malleus, attached firmly to the drum membrane.

p. lenticula'ris [BNA], a knob at the tip of the long limb of the incus which articulates with the stapes.

p. mamilla'ris [BNA], mammillary process, mammary tubercle, a small apophysis or tubercle on the upper surface of the transverse process of each of the lumbar vertebræ and usually of the twelfth thoracic vertebra.

p. mastoid'eus [BNA], mastoid process, the nipple-like projection of the mastoid portion of the temporal bone.

p. maxilla'ris [BNA], maxillary process of the inferior turbinated bone; a thin plate of irregular form projecting from the middle of the upper border, articulating with the superior maxillary bone and partly closing the orifice of the antrum of Highmore.

p. menta'lis, protuberantia mentalis.

p. orbicula'ris, p. lenticularis.

p. orbita'lis, (1) orbital process of the malar bone, a curved elevated crest from the mesial aspect of this bone, continuous with its orbital margin; (2) [BNA] orbital process of the palate bone; the anterior and larger of the two processes at the upper extremity of the vertical plate of this bone, articulating with the maxilla, ethmoid and sphenoid bones.

p. palati'nus [BNA], palatine or palatal process, the horizontal plate of the maxilla, forming with its fellow the anterior portion of the roof of the mouth.

p. papilla'ris [BNA], papillary process, the left lower angle of the caudate lobe of the liver, opposite the caudate process.

p. poste'rior ta'li [BNA], a process on the posterior aspect of the astragalus, Stieda's process.

p. pterygoid'eus [BNA], pterygoid process, (1) a long process extending downward from the junction of the body and great wing of the sphenoid bone on either side; it is formed of two plates (*lamina lateralis* and *lamina medialis*), united anteriorly but separated below to form the pterygoid notch (*fissura pterygoidea*), the pterygoid fossa is formed by the divergence of these two plates posteriorly; (2) p. pyramidalis [BNA].

p. pterygospino'sus [BNA], pterygospinous process, Civinini's process, a sharp projection from the posterior edge of the external pterygoid plate of the sphenoid bone.

p. pyramida'lis [BNA], pyramidal process, tuberosity or pterygoid process of the palate bone; the portion of that bone passing outward and backward from the angle formed by the vertical and horizontal plates.

p. Ra'vii, Rau's process, p. gracilis of the malleus.

p. sphenoida'lis [BNA], sphenoidal process of the palate bone; the posterior and smaller of the two processes at the extremity of the vertical plate of this bone.

p. spino'sus [BNA], spinous process, the bony process which extends backward from the center of the arch of a vertebra.

p. styloid'eus [BNA], styloid process, (1) a slender pointed projection running downward and slightly forward from the base of the inferior surface of the petrous portion of the temporal bone where it joins the tympanic portion; it gives attachment to the styloglossus, stylohyoid, and stylopharyngeus muscles and the stylohyoid and stylomandibular ligaments; (2) styloid process of the radius, a thick pointed projection on the outer side of the lower extremity of the radius; (3) a cylindrical pointed projection from the inner and posterior aspect of the head of the ulna, to the tip of which is attached the external lateral ligament of the wrist; (4) a pointed projection from the back of the base (carpal end) of the third metacarpal bone on the outer (radial) side; it sometimes exists as a separate ossicle; (5) apex capituli fibulæ [BNA], a blunt-pointed upward projection from the head of the fibula.

p. tempora'lis [BNA], (1) temporal process, zygomatic process, of the malar bone, articulating with the zygomatic process of the temporal bone to form the zygomatic arch; (2) an extension of gray matter from the lenticular nucleus to the tail of the caudate nucleus.

p. transver'sus [BNA], the transverse process, projecting on either side of the arch of a vertebra.

p. trochlea'ris [BNA], trochlear process, peroneal spine; a projection from the outer side of the os calcis giving attachment to fibers of the external annular ligament.

p. uncina'tus [BNA], uncinate process, unciform process; (1) a sickle-shaped process of bone on the inner wall of the ethmoidal labyrinth below the middle turbinated bone; it articulates with the ethmoidal process of the inferior turbinated bone and partly closes the orifice of the maxillary sinus; (2) lesser pancreas, pancreas of Winslow: a portion of the head of the pancreas sometimes found detached from the main part of the gland.

p. vagina'lis, vagina processus styloidei.

p. vagina'lis peritone'i [BNA], canal of Nuck; a small peritoneal diverticulum accompanying the round ligament of the uterus through the abdominal wall

p. vagina'lis tes'tis, a diverticulum of the peritoneum enveloping the testis in its descent into the scrotum.

p. vermifor'mis BNA], appendix vermiformis, appendix, vermiform process, a worm-like tubular outgrowth, usually between 3 and 4 inches in length, from the inner and back part of the cecum; it contains large masses of lymphoid tissue in the submucous coat.

p. voca'lis [BNA], the lower end of the anterior margin of the arytenoid cartilage to which the vocal cord is attached.

p. xiphoid'eus [BNA], **xiphoid process, ensiform process or cartilage at the lower end of the sternum.**

p. zygomat'icus, zygomatic process: (1) [BNA], a large bony process arising from the squamous portion of the temporal bone, passing forward and outward, articulating with the temporal process of the malar bone; (2) [BNA], external angular process of the frontal bone, articulating with the frontal process of the malar; (3) [BNA], malar process of the maxilla, articulating with the malar; (4) p. temporalis (1) [BNA], temporal process of the malar, articulating with the zygomatic process of the temporal.

prochondral (pro-kon'dral). Noting a developmental stage prior to the formation of cartilage.

prochordal (pro-kor'dal). Anterior to the notochord, prechordal.

prochoresis (pro-ko-re'sis) [G. *prochōrēsis; prochōreō*, I advance.] The discharge of partly digested food through the pylorus into the intestine.

Prochownick's diet (pro-khov'nik) [Ludwig *Prochownick*, German obstetrician, 1851–1923.] A reduced diet for a pregnant woman with narrow pelvis, with the object of obtaining a small child.

P.'s meth'od, artificial respiration by compression of the chest and suspension of the child with its head hanging backward and resting lightly on the table, for resuscitation of an asphyxiated newborn infant.

prochromatin (pro-kro'mă-tin). Paranuclein, the substance of the nucleolus of a cell.

procidentia (pros-i-den'shi-ah) [L. *procidere*, to fall forward.] A sinking down or prolapse of any organ or part, as of the uterus.

procœ'lia [G. *pro*, before, + *koilia*, a hollow.] A lateral ventricle of the brain; the hollow of the prosencephalon.

procœ'lous. Procelous.

procreate (pro'kre-āt) [L. *procreare; pro*, before, + *creare*, to create.] To beget, to produce by the sexual act, said usually of the male parent.

procreation (pro-kre-a'shun). The act of procreating or begetting.

procreative (pro'kre-a-tiv). Having the power to beget or procreate.

proctag'ra [G. *prōktos*, anus + *agra*, a seizure.] Pain in the anus.

proctal'gia [G. *prōktos*, anus, + *algos*, pain.] Pain at the anus, or in the rectum.

proctatre'sia [G. *prōktos*, anus, + *a-* priv. + *trēsis*, a boring. Imperforation of the anus, atretoproctia.

proctecta'sia [G. *prōktos*, anus, + *ektasis*, extension.] Dilatation of the anus or rectum.

proctec'tomy [G. *prōktos*, anus, + *ektomē*, excision.] Exsection of the rectum.

proctenclei'sis, proctencli'sia [G. *prōktos*, anus, + *enkleisis*, enclosure.] Stricture of the anus or rectum.

procteurynter (prok-tu-rin'tur) [G. *prōktos*, anus, + *eurynō*, I dilate.] A dilatable bag for dilating the rectum.

proctitis (prok-ti'(te')tis) [G *prōktos*, anus, + *-itis*.] Inflammation of the mucous membrane of the rectum. **epidem'ic gan'grenous p.,** a generally fatal disease affecting chiefly children in the tropics, characterized by gangrenous ulceration of the rectum and anus, accompanied by frequent watery stools and tenesmus.

procto- [G. *prōktos*, anus.] A combining form signifying *anus*, or more frequently *rectum*.

proctocele (prok'to-sēl) [G. *prōktos*, anus, + *kēlē*, tumor.] Prolapse of the rectum, forming a tumor at the anus.

proctoc'lysis, proctoclys'ia [G. *prōktos*, anus, + *klysis*, a washing out.] Irrigation of the rectum and sigmoid colon by large amounts of saline solution.

proctococcypexy (prok-to-kok'si-peks-i) [G. *prōktos*, anus, + *kokkyx*, coccyx, + *pēxis*, fixation.] Suture of a prolapsing rectum to the tissues anterior to the coccyx.

proctocolitis (prok-to-ko-li'(le')tis) [G. *prōktos*, anus, + *kōlon*, colon, + *-itis*.] Inflammation of the rectum and a certain extent of the colon.

proctocys'toplasty [G. *prōktos*, anus, + *kystis*, bladder, + *plassō*, I form.] Surgical closure of a rectovesical fistula.

proctocystot'omy [G. *prōktos*, anus, + *kystis*, bladder, + *tomē*, incision.] Incision into the bladder from the rectum

proctodæ'um, proctode'um [G. *prōktos*, anus, + *hodaios*, relating to a way.] The terminal portion of the rectum and anus, formed in the embryo by an invagination of the ectoderm.

proctodyn'ia [G. *prōktos*, anus, + *odynē*, pain.] Proctalgia.

proctoelytroplasty (prok-to-el'i-tro-plas-ti) [G. *prōktos*, anus, + *elytron*, sheath, vagina, + *plassō*, I form.] Surgical repair of a rectovaginal fistula.

proctological (prok-to-loj'i-kal). Relating to proctology.

proctol'ogist. A specialist in the diseases of the anus and rectum.

proctol'ogy [G. *prōktos*, anus, + *-logia*.] The branch of surgical science which deals with the anus and rectum and their diseases.

proctoparal'ysis [G. *prōktos*, anus, + *paralysis*.] Paralysis of the anus, leading to incontinence of feces.

proc'topexy [G. *prōktos*, anus, + *pēxis*, fixation]. Surgical fixation of a prolapsing rectum.

proctopho'bia [G. *prōktos*, anus, + *phobos*, fear.] A peculiar fear or apprehension, not uncommon in patients with rectal diseases.

proc'toplasty [G. *prōktos*, anus, + *plassō*, I form.] Reparative or plastic surgery of the anus or of the rectum.

proctople'gia [G. *prōktos*, anus, + *plēgē*, stroke.] Paralysis of the anus and rectum occurring with paraplegia.

proctopol'ypus [G. *prōktos*, anus.] Polypus of the rectum.

proctopto'ma [G. *prōktos*, anus, + *ptōma*, a fall.] Proctoptosia.

proctoptosia, proctoptosis (prok-top-to'sĭ-ah, prok-top-to'sis) [G. *prōktos*, anus, + *ptōsis*, a falling.] Prolapse of the rectum and anus.

proctorrhaphy (prok-tor'ă-fĭ) [G *prōktos*, anus, + *rhaphē*, suture.] Repair by suture of a lacerated rectum or anus.

proctorrhe'a, proctorrhœ'a [G. *prōktos*, anus, + *rhoia*, a flow.] A mucoserous discharge from the rectum.

proc'toscope [G. *prōktos*, anus, + *skopeō*, I view.] A rectal speculum.

proctos'copy. Examination of the rectum and anus.

proc"tosigmoidec'tomy [G. *prōktos*, anus, + *sigma*, the Greek S, + *eidos*, resemblance, + *ektomē*, excision.] Excision of the rectum and sigmoid colon.

proc'tospasm [G. *prōktos*, anus, + *spasmos*, spasm] 1. Spasmodic stricture of the anus. 2 Spasmodic contraction of the rectum.

proctosteno'sis [G. *prōktos*, anus, + *stenōsis*, a narrowing.] Stricture of the rectum or anus.

proctos'tomy [G. *prōktos*, anus, + *stoma*, mouth.] The formation of an artificial opening into the rectum.

proc'totome [G. *prōktos*, anus, + *tomos*, cutting.] An instrument for use in proctotomy.

proctot'omy [G. *prōktos*, anus, + *tomē*, incision.] An incision, for the relief of a stricture or for any other purpose, into the rectum.

proctotoreusia (prok-to-tŏ-ru'sĭ-ah) [G. *prōktos*, anus, + *toreuō*, I bore through.] Proctotresia.

proctotresia (prok-to-tre'sĭ-ah) [G. *prōktos*, anus, + *trēsis*, a boring.] Operation for the relief of an imperforate anus.

procum'bent [L. *procumbere*, to fall forward.] In botany, noting a stem which trails on the ground, but puts forth no roots.

procur'sive [L. *pro*, forward, + *currere*, to run.] Running forward. **p. ep'ilepsy,** a form of epilepsy in which the paroxysm takes the form of an aimless running.

procurva'tion [L. *pro*, forward, + *curvare*, to bend.] A bending forward.

prodigio'sin. A blood-red pigment formed by microorganisms of the genus *Serratia.*[0]

prodigiosus toxin (pro-dij-ĭ-o'sus toks'in). See *Coley's* fluid.*

pro'dromal. Prodromic.

prodro'mata. An incorrect term for prodromes, as if the plural of the assumed Greek *prodroma.*

pro'drome [G. *prodromos*, running before, premature.] An early or premonitory symptom of a disease.

prodrom'ic. Prodromal, relating to prodromes or to the initial stage of a disease.

prod'romous. Prodromal.

prod'romus, pl. *prod'romi.* Prodrome

prod'uct [L. *productus*, led forth.] Anything produced or made, either naturally or artificially. **clea'vage p.,** a substance resulting from the splitting up of a compound molecule into two or more simpler molecules.

produc'tive [L. *productus; producere*, to lead forth.] Producing or capable of producing, noting especially an inflammation leading to the production of new tissue with or without an exudate.

proembryo (pro-em'brĭ-o) [G. *pro*, before, + *embryon*, embryo.] In botany, the fertilized and growing ovum prior to the differentiation of the embryo.

proencephalon (pro-en-sef'ă-lon) [G. *pro*, before, + *enkephalos*, brain.] Prosencephalon.

proenceph'alus [G. *pro*, forward, + *enkephalos*, brain.] A monster with a large part of the brain protruding through a defect in the frontal region

proenzyme (pro-en'zīm). Zymogen.

proerythroblast (pro-er'ĭ-thro-blast). Erythrogonium, hematoblast.

proestrum, prœstrum (pro-es'trum) [G. *pro*, before, + *oistros*, a mad desire] The period immediately preceding heat in animals.

Proetz treatment (prots). Treatment of sinus infection (especially the ethmoid and sphenoid) by filling the sinuses with some radiopaque oil.

proferment (pro-fur'ment) [G. *pro*, before, + ferment.] Zymogen, a substance which, when activated by the appropriate kinase, becomes a ferment.

proferr'in [L. *ferrum*, iron.] Iron nucleoprotein, a reddish brown powder, employed in anemia in doses of gr. 5 (0.3).

profession (pro-fesh'un) [L. *professus; profiteri*, to declare publicly.] 1. A vocation or calling, the following of which demands special knowledge in some branch of science; specifically, in medicine, the medical profession. 2. The general body of medical practitioners.

profess'ional. Relating to or befitting any profession, specifically, in medicine. the medical profession; ethical.

Profeta's law (pro-fa'tah) [Giuseppe *Profeta*, Italian dermatologist, 1840–1910.] The subject of inherited syphilis is immune against the acquired disease.

Profichet's disease' (prō-fe-sha') [Georges Charles *Profichet*, French physician, *1873.] The presence of calcareous nodules in the subcutaneous tissues about the joints, with ulceration.

proflavine (pro-flā'vēn). Diamino-acridine sulphate, $C_{13}H_{11}N_3.H_2SO_4$, a compound closely allied to acriflavine,* having similar antiseptic properties.

profondometer (pro-fon-dom'e-tur) [Fr. ***profondeur***, depth, + G. *metron*, measure.] A device for fluoroscopically locating a foreign body by securing three lines of sight each of which passes through the foreign body.

profun'da. Feminine of L. *profundus*, deep; a term applied to several arteries the course of which lies deep in the tissues; see under *arteria.*

profun'dus [L.] Deep, profound.

progamous (prog'am-us) [G. *pro*, before, + *gamos*, marriage.] Noting the theory that the sex of the future individual is determined before the

fertilization of the ovum from which it is to develop; see *epigamous* and *syngamous*.

proganol (pro'gan-ol). Argento-proteinum forte (U.S.).

progas'ter [G. *pro*, before, + *gastēr*, belly.] Archenteron.

progastrine (pro-gas'trin). Unactivated gastrine.

progenitalis (pro-jen-ĭ-ta'lis) [L. *pro*, before.] Seated on any of the exposed surfaces of the genitalia.

progeria (pro-je'rĭ-ah) [G. *pro*, before, + *gēras*, old age.] A condition characterized by a mixture of infantilism and premature senility; the subject presenting the mental and physical characters of old age, with persistence of the milk teeth, absence of the hairy growth normal at puberty, and persistence of the thymus.

progestin (pro-jes'tin) [G. *pro*, in favor of, + *gestation*.] Oophorin, lutin, beta factor, a hormone of the corpus luteum, which causes changes in the endometrium adapting it for the reception of the fertilized ovum.

progloss'is [G. *pro*, before, + *glōssa*, tongue.] The anterior portion, or tip, of the tongue.

proglott'id. Proglottis.

proglott'is, pl. *proglott'ides* [G. *pro*, before, + *glōssa*, tongue.] One of the segments of a tapeworm, containing the reproductive organs.

prognath'ic [G. *pro*, in front of, + *gnathos*, jaw.] Having a projecting jaw; having a gnathic index above 103.

prog'nathism. The condition of being prognathic; abnormal projection forward of one or of both jaws.

prog'nathous. Prognathic.

prognose (prog-nōz'). To foretell the course of a disease, to give a prognosis, prognosticate

progno'sis [G. *prognōsis; pro*, before, + *gignōskō*, I know.] The foretelling of the probable course of a disease; a forecast of the outcome of a disease.

prognos'tic. 1. Relating to prognosis. 2. A symptom upon which a prognosis is based.

prognos'ticate. Prognose.

prognostician (prog-nos-tish'un). One skilled in prognosis.

prog'ress [L. *progressus; progredi*, to go forward.] Advance; course of a disease.

progress'. To advance, to go forward; said of a disease, especially, when unqualified, of one advancing toward a favorable termination.

progression (pro-gresh'on). 1. Advance. 2. The act of walking.

progress'ive [L. *progredi*, to advance.] Going forward, advancing; noting the course of a disease, especially, when unqualified, an unfavorable course, as *progressive paralysis*,* *progressive atrophy*.* **p. processes,** those which continue even after they no longer serve the needs of the organism.

proiosystole (pro-ĭ-o-sis'to-lĭ) [G. *prōios*, early, + *systolē*, a contracting.] A variety of extrasystole, a premature heart beat; see *hysterosystole*.

proiosystolia (pro-ĭ-o-sis-to'lĭ-ah). Condition in which proiosystoles, or extrasystoles, occur.

proiotia (pro-ĭ-o'shyah) [G. *prōi*, early.] Precocious sexual development.

projec'tion [L. *projectio; projicere*, to throw before.] 1. A pushing out. 2. A prominence. 3 The referring of a sensation to the object producing it. 4. The referring to another of a repressed complex in the individual, as when one reprobates in others faults to the commission of which he himself has a constant inclination. 5. The conception by the consciousness of a mental occurrence belonging to the ego as of external origin. **erro'neous p.,** a miscalculation as to the exact position of an object, owing to a misjudgment of the effort required to focus it resulting from weakness of the eye muscles. **p. sys'tem,** the system of white nerve-fibers connecting the spinal centers with certain tracts in the cerebral cortex.

prola'bium [L. *pro*, before, + *labium*, lip.] The vermilion border, or red margin, of the lip.

prolamine (pro-lam'ēn). A gliadin, a protein insoluble in water or absolute alcohol, but soluble in dilute alcohol.

prolan (pro'lan). An ovarian activating hormone derived from the anterior lobe of the pituitary body; it comprises *p. A* and *p. B*, the first stimulating the secretion of estrin, the second that of progestin.

prolapse (pro-laps') [L. *prolapsus; prolabi*, to fall forward.] 1. To fall or sink down, said of an organ or other part. 2. A falling down of an organ or other part, especially its appearance at a natural or artificial orifice; procidentia, ptosis.

prolep'tic [G. *prolēptikos*, anticipating.] Anticipating, noting a periodical disease, the recurring paroxysms of which come after progressively shorter intervals; subintrant.

proleucemia (pro-lu-se'mĭ-ah). Leucanemia.

proleucocyte (pro-lu'ko-sīt) [G. *pro*, before, + *leucocyte*.] Leucoblast, the parent cell of a leucocyte.

prolif'erate [L. *proles*, offspring, + *ferre*, to bear.] To grow by reproduction of similar forms.

prolifera'tion. Exuberant growth by reproduction of similar cells.

prolif'erative, prolif'erous. Reproductive, bearing similar forms.

prolif'ic [L. *proles*, offspring, + *facere*, to make.] Fruitful, bearing many children.

proligerous (pro-lij'er-us) [L. *proles*, offspring, + *gerere*, to bear.] Germinating, producing offspring. **p. disc,** discus proligerus, cumulus* oophorus [BNA].

proline (pro'lēn). A decomposition product of casein, gelatin, and the vegetable protein, hordein.

promegaloblast (pro-meg'al-o-blast). A cell intermediate between a lymphoidocyte and a megaloblast.

prominentia (prom-ĭ-nen'shĭ-ah) [L.] A prominence or projection. **p. laryngea** [BNA], the projection on the anterior portion of the neck formed by the thyroid cartilage of the larynx; laryngeal prominence, Adam's apple, pomum Adami. **p. malleola'ris** [BNA], malleolar prominence, a small prominence at the upper end of the stria malleolaris produced by the lateral process of the malleus. **p. spira'lis** [BNA], a projecting portion of the ligamentum spirale cochleæ, bounding the lower edge of the stria vascularis and containing within it a blood-vessel, the vas prominens. **p. styloid'ea** [BNA], a rounded eminence on the posterior wall (paries mastoidea) of the tympanic cavity.

promonto'rium [L. a headland.] [BNA] 1. Promontory of the sacrum, sacrovertebral angle. 2. A rounded eminence on the inner wall of the tympanum, caused by the first coil of the cochlea.

prom'ontory [L. *promontorium*.] An eminence or projection. **doub'le p.,** a deformity of the sacrum in which the second segment is bent backward, its body forming an external angle with that of the first segment; this second p. is called *false p.* **false p.,** see *double p.* **p. of the sacrum,** promontorium (1). **p. of the tym'panum,** promontorium (2).

promy'elocyte [G. *pro*, before, + *myelos*, marrow, + *kytos*, cell.] Granular leucoblast, a large uninuclear cell seen in the blood in cases of mixed-cell leucemia; it resembles a cell of lymphatic origin, but is really of myeloid descent.

pro'nate [L. *pronare*, to bend forward.] To rotate the forearm in such a way that the palm of the hand looks backward when the arm is in the anatomical position, or downward when the arm is extended at a right angle with the body.

prona'tion. The act of pronating; the condition of being pronated.

prona'tor. See under *musculus*

pronaus (pro'na-us) [G. *pro*, before, + *naos*, temple.] Vestibulum vaginæ.

prone [L. *pronus*, bent downward] Noting the hand when pronated; noting the body when lying face downward.

proneph'ron, proneph'ros [G. *pro*, before, + *nephros*, kidney.] Head- or fore-kidney; an embryonic structure consisting of a number of twisted tubules emptying into the duct of Muller.

prong (prawng) [Goth, *praggan*, to press.] Fang (3), the conical root of a tooth.

pronograde (pro'no-grād) [L. *pronus*, inclined forward, + *gradi*, to walk.] Walking or resting with the body horizontal, noting the posture of quadrupeds; opposed to *orthograde*.

pronom'eter. An instrument for indicating the degree of pronation or supination of the forearm

pronu'cleus. One of two nuclei undergoing fusion in caryogamy. In embryology the nucleus of the spermatozoon, *male p.*, or of the ovum, *female p.*, after impregnation of the ovum.

procs'trum. Proestrum.

proof-spir'it. Dilute alcohol of a specific gravity of 0.920, containing 49.5 per cent. by weight (57.27 per cent. by volume) of absolute alcohol. Originally in England it was the weakest alcohol which would permit ignition of gunpowder moistened with it.

prootic (pro-o'tik) [G. *pro*, before, + *ous(ōt-)*, ear.] In front of the ear.

propaesin (pro-pa'sin). Trade name of paramidobenzoic acid-propylester, a local anesthetic.

prop'agate [L. *propagare*, to continue.] To reproduce, to generate

propagation (prop-ă-ga'shun) Reproduction, generation

prop'agative. Relating to or concerned in propagation, noting the sexual part of an animal or plant as distinguished from the soma.

propal'inal [G. *pro*, before, + *palin*, backward.] Back and forth; noting a forward and backward movement.

pro'pane. One of the marsh-gas series of hydrocarbons, C_3H_8.

prop-cells. See *cell.*

pro'pene. Propylene.

prop'enyl. A substance derived from propene, isomeric with glyceryl. **p. al'cohol,** glycerin.

propep'sin. Pepsinogen.

propep'tone. Secondary proteose, deuteroalbumose, one of the intermediate products in the conversion of native protein into peptone.

propeptonu'ria [G. *ouron*, urine.] The excretion of propeptone in the urine.

properitone'al. In front of the peritoneum.

prophase (pro'fāz) [G. *prophasis*, from *prophainō*, I foreshadow.] The preliminary stage in mitosis, including all the phenomena prior to the division of the chromosomes.

prophylac'tic. Preventing disease, relating to prophylaxis.

prophylax'is [G. *pro*, before, + *phylassō*, I guard.] 1. The prevention of disease. 2. In dentistry, a surface cleaning of the teeth.

propion (pro'pī-ōn) [G. *pro*, before, + *piōn*, fat.] Diethylketone.

Propionibacteriæ[0] (pro-pĭ-on-ĭ-bak-te'rĭ-e-e). A tribe of the family *Bacteriaceæ*, with the single genus *Propionibacterium*.

Propionibacterium[0] (pro-pĭ-on-ĭ-bak-te'rĭ-um). A genus of bacteria of the family *Bacteriaceæ*, consisting of gram-positive, non-motile, aerobic, rod-shaped organisms forming propionic and acetic acids by fermentation of carbohydrates; the eight species are all found in Emmental cheese.

propion'ic acid. Methyl acetic acid, ethylcarbonic acid, $C_3H_6O_2$, a clear colorless liquid with an odor recalling that of butyric and of acetic acid, found in sweat.

proplex'us. The choroid plexus in the lateral ventricle of the brain.

pro'ponal. Dipropylmalonylurea, a white crystalline powder of slightly bitter taste, very slightly soluble in water; employed as an analgesic and hypnotic in doses of gr. 2–8 (0.13–0.5)

pro'pons. Ala* pontis, ponticulus.

pro'posote. Trade name of creosote* phenylpropionate.

proprioceptive (pro"prĭ-o-sep'tiv) [L. *proprius*, one's own, + *capere*, to take] Capable of receiving stimuli originating within the organism. **p. mech'anism,** the mechanism of sense of position and movement, by which we are able to adjust our muscular movements to a great degree of accuracy and to maintain our equilibrium.

proprioceptor (pro"prĭ-o-sep'tor). One of the peripheral end-organs of the afferent nerves in the deeper structures, such as the muscles, tendons, joints, etc.

propriospinal (pro"prĭ-o-spi'nal). Relating especially or wholly to the spine or spinal cord. **p. ner'vous sys'tem,** metameric* nervous system, paleencephalon.

proptom'eter [G. *pro*, forward, + *ptōsis*, a falling, + *metron*, measure.] An instrument for measuring the degree of exophthalmos

proptosis (prop-to'sis) [G. *pro*, forward, + *ptōsis*, falling.] A forward displacement of any organ; specifically, exophthalmos or protrusion of the eyeball

propul'sion [G *propulsus; propellere*, to drive forth.] The tendency to fall forward that causes the festination in paralysis agitans.

propylamine (pro-pil-am'ēn). A liquid of ammoniacal odor, isomeric with trimethylamine, obtained by heating propyl nitrate with alcohol and ammonia. It has been recommended as an antispasmodic in chorea in doses of gr. 30–60 (2.0–4.0), and in rheumatism and pneumonia.

prop'ylene. A gaseous hydrocarbon, C_3H_6.

pro re nata (pro-ra-nah'tah) [L.] As the occasion arises; employed sometimes in the signature of a prescription, abbreviated usually to *p.r.n.*

pror'sad [L. *prorsum*, forward, + *ad*, to.] In a forward direction, cephalad.

pror'sal. Toward the front, anterior.

prosco'lex [G. *pro*, before, + *skōlēx*, a worm.] The embryonic form of a tapeworm or other cestode.

prosecretine (pro-se-kre'tin). Unactivated secretine.

prosect' [L. *pro*, before, + *secare*, to cut.] To dissect a cadaver or any part, that it may serve for a demonstration of anatomy before a class.

prosec'tor. One who prosects, or prepares the material for a demonstration of anatomy before a class.

prosecto'rium. A dissecting room; a place in which anatomical preparations are made for demonstration or for preservation in a museum.

prosenceph'alon [G. *pros*, before, + *enkephalos*, brain.] The anterior primitive cerebral vesicle, the forebrain, dividing secondarily into telencephalon and diencephalon.

prosocele, prosocœle (pros'o-sēl) [G. *prosō*, forward, + *koilia*, hollow.] The cavity of the prosencephalon.

prosenchyma (pros-en'ki-mah) [G. *pros*, toward, + *enchyma*, something poured in.] The fibrous framework or skeleton of a plant, consisting of non-functioning, elongated, pointed cells of woody structure.

proserozyme (pro-se'ro-zīm). Unactivated serozyme which is activated by the action of calcium.

Prosim'iæ [L. *pro*, before, + *simia*, ape.] A suborder of *Primates*, the same as *Lemuroidea*.

prosodem'ic [G. *prosō*, forward, + *dēmos*, people.] Noting a disease which becomes epidemic by means of individual contagion, and not by general infection as through the milk or water supply.

prosogas'ter [G. *prosō*, forward, + *gastēr*, belly] The foregut.

prosop'agus [G *prosōpon*, face, + *pagos; pēgnymi* I fasten together] A twin monster in which the parasite, in the form of a tumor-like mass, is attached to the orbit or cheek of the autosite.

prosopal'gia [G. *prosōpon*, face, + *algos*, pain.] Tic douloureux.

prosopal'gic. Relating to or suffering from tic douloureux or facial neuralgia.

prosopantritis (pros-o-pan-tri'(tre')tis) [G. *prosōpon*, face, + *antron*, cavity, + *-itis*.] Inflammation of one or both frontal sinuses

prosopecta'sia [G *prosōpon*, face, + *ektasis*, extension.] Enlargement of the face, as in acromegaly.

prosoplasia (pros-o-pla'si-ah) [G. *prosō*, forward, + *plasis*, a moulding.] 1. Progressive transformation, such as the change of cells of the salivary ducts into secreting cells. 2 Differentiation exceeding the physiological limits for the kind of cell in question.

prosopodiplegia (pros"o-pod"i-ple'jĭ-ah) [G. *prosōpon*, face, + *pous(pod-)*, foot, + *plēgē*, stroke] Paralysis affecting the face and one lower extremity.

prosoponeural'gia. Prosopalgia.

prosopoplegia (pros"o-po-ple'jĭ-ah) [G. *prosōpon*, face, + *plēgē*, stroke.] Facial paralysis.

prosopoplegic (pros"o-po-ple'jik). Relating to, or suffering from, facial paralysis.

prosoposchisis (pros-o-pos'kĭ-sis) [G. *prosōpon*, face, + *schisis*, fissure] Harelip or other more extensive fissure of the face.

pros'opospasm [G. *prosōpon*, face, + *spasmos*, spasm.] Facial spasm.

prosoposternodymus (pros"o-po-stur"no-did'i-mus) [G. *prosōpon*, face, + L. *sternum* + G. *didymos*, twin.] Prosopothoracopagus.

prosopothoracop'agus [G. *prosōpon*, face, + *thorax* + *pagos*, fastened together] A twin monster attached by the face and chest; cephalothoracopagus

prosopoto'cia [G. *prosōpon*, face, + *tokos*, birth.] A face presentation in childbirth.

prospermia (pro-spur'mĭ-ŭ) [G. *pro*, before, + *sperma*, seed.] Ejaculatio præcox.

pros'taden. An extract made from the prostate gland of a bullock; suggested for use in prostatic hypertrophy.

prostata (pros'tah-tah) [L. from G. *prostatēs*, one standing before.] The prostate, a chestnut-shaped body, partly muscular and partly glandular, which surrounds the beginning of the urethra in the male; it consists of two lateral lobes, which are practically fused, and an anterior portion, isthmus or middle lobe. It secretes a milky fluid which is discharged into the urethra at the time of the emission of semen, mixing with this secretion.

prostatal'gia [*prostata* + G. *algos*, pain.] Prostatic neuralgia, pain in the prostate gland, prostatodynia.

prostatauxe (pros-tă-tawk'se) [*prostata* + G *auxē*, increase] Prostatic enlargement or swelling, prostatomegaly.

pros'tate. Prostata.

prostatec'tomy [*prostata* + G. *ektomē*, excision] Removal of a part or all of the prostate.

prostathelcosis (pros"tah-thel-ko'sis) [*prostata* + G. *helkōsis*, ulceration] Suppuration in the prostate gland.

prostat'ic. Relating to the prostate gland.

prostat"icoves'ical. Relating to the prostate gland and the bladder

pros'tatism. The general condition induced by hypertrophy or chronic disease of the prostate gland.

prostatit'ic. Relating to prostatitis

prostatitis (pros-ta-ti'(te')tis) [*prostata* + G *-itis*] Inflammation of the prostate gland.

prostatocystitis (pros"tă-to-sis-ti'(te')tis) [*prostata* + G. *kystis*, bladder, + *-itis*] Inflammation of the prostate and the bladder; cystitis by extension of inflammation from the prostatic urethra.

prostatocystot'omy [*prostata* + G. *kystis*, bladder, + *tomē*, incision] Incision through the prostate and bladder wall with drainage through the perineum.

pros"tatomeg'aly [*prostata* + G. *mega(megal-)*, large] Prostatic enlargement or hypertrophy, prostatauxe.

pros"tatodyn'ia [*prostata* + G. *odynē*, pain] Prostatalgia.

prostat'omy. Prostatotomy.

pros"tatomyomec'tomy [*prostata* + *myoma* + G. *ektomē*, excision.] Surgical removal of an hypertrophied, or myomatous prostate.

pros"tatorrhe'a, pros"tatorrhœ'a [*prostata* + G. *rhoia*, a flow.] An abnormal discharge of prostatic fluid.

pros"tatotox'in. A cytotoxin obtained by the injection of emulsion of the prostate gland.

prostatot'omy [*prostata* + G. *tomē*, incision] Incision through the middle lobe of the prostate, in order to bring the level of the prostatic urethra to that of the bladder, in cases of hypertrophy of this gland.

prostatovesiculitis (pros"tă-to-ves-ik"u-li'(le')tis) [*prostata* + L. *vesicula*, vesicle, + G. *-itis*.] Inflammation of the prostate gland and seminal vesicles.

pros'theon. Prosthion, alveolar point.*

pros'thesis [G. an addition.] Prothesis, the supplying of a lost leg, eye, tooth, or other part by an artificial one.

prosthet'ic. Relating to prosthesis or to an artificial limb or other part.

prosthet'ics. The act of making and adjusting artificial parts.

prosthetist (pros'the-tist). 1. One who makes artificial limbs. 2. In dentistry one who specializes in the construction of artificial dentures.

pros'thion [G. *prosthios*, foremost.] The alveolar point.*

prostitu'tion [L. *prostituere*, to expose publicly.] The yielding of one's body to promiscuous sexual use for pay.

prostokvash'a [Rus.] Spontaneously soured and curdled milk largely consumed in Russia.

prostra'tion [*prostratus; prosternere*, to overthrow.] A marked loss of strength, exhaustion.

pro'tagon [G. *prōtos*, first, + *agōn*, leading.] A crystalline fatty substance containing phosphorus, found chiefly in the white matter of the brain.

pro'tal [G. *prōtos*, first.] Existing from the first; dating from prenatal life.

protal'bumose. One of the intermediate products of protein digestion, derived from hemialbumose; it is soluble in water and not coagulable by heat, but precipitated by ammonium sulphate, cupric sulphate, and sodium chloride.

protamine (pro-tam'ēn) [G. *prōtos*, first, + *amine*.] A simple protein of basic properties forming salts with mineral acids; it is not coagulable by heat, is soluble in water, and precipitates aqueous solutions of other proteins; it is one of a group of the less complex forms of protein found in fish-sperm; they differ in the different fishes and have received names derived from the name of the fish from whose spermatozoa they have been obtained—salmin, sturin, scombrin, etc.

pro'tan. Tannin nucleoprotein, a combination of albumin and tannin; a light brown tasteless powder insoluble in water, employed as an astringent in diarrhea in doses of gr. 10–30 (0.6–2 0).

protan'dry [G. *prōtos*, first, + *anēr(andr-)*, man] The condition in which the male elements in an hermaphrodite flower mature before the female; opposed to protogyny.

protanopia (pro-tan-o'pĭ-ah) [G. *prōtos*, first, + *anopia*.] Red-blindness red being the first of the primary colors; see *deuteranopia* and *tritanopia*.

protargen'tum. Trade name of a silver preparation of the argentoproteinum* forte type.

protargin (pro-tar'jin). Trade name of a special make of colloidal silver; **mild p.**, argentoproteinum* mite (U.S.). **strong p.**, argentoproteinum* forte (U.S.).

protar'gol [*protein* + L. *argentum*, silver, + *oleum*, oil.] A trade name for a make of silver protein. **mild p.**, argento-proteinum mite (U.S.). **strong p.**, argento-proteinum forte (U.S.).

proteal (pro'te-al) [*protein*.] A vegetable protein prepared for therapeutic use by hypodermic administration.

protean (pro'te-an) [G. *Prōteus*, a god having the power to change his form.] 1. Changeable in form, having the power to change form like the ameba; ameboid. 2. An insoluble primary derivative of protein formed by the action of dilute acids or enzymes on soluble protein.

proteantigen (pro-te-an'tĭ-jen) [*protein* + *antigen*.] A protein, whether animal or vegetable, employed as a therapeutic antigen.

protease (pro'te-āz) [*protein* + *-ase*.] A protein-splitting or proteolytic enzyme, causing a hydrolytic cleavage of the protein molecule.

protec'tin. 1. A substance, developing in blood-serum on standing *in vitro*, the action of which is to protect red blood-corpuscles against the action of a hemolytic serum; it resembles complementoid, but is more absorbable by non-sensitized cells 2. Trade name of a protective made of paper coated with rubber plaster.

protec'tive [L. *protegere*, to cover over, to defend.] 1. Prophylactic, preventing infection, conferring immunity. 2. A thin oil-silk tissue used in surgical dressings.

proteid (pro'te-id) [G. *prōtos*, first.] Protein.

proteil (pro'te-il) [*protein*.] An animal protein prepared for use as a therapeutic antigen.

protein (pro'te-in) [G. *prōtos*, first.] One of a group of substances constituting the greater part of animal and vegetable tissues; they are formed chiefly by plants. They are of very complex constitution, all containing carbon, hydrogen, nitrogen, and oxygen, and some containing in addition iron, phosphorus, or sulphur; chemically they are regarded as peptides (polypeptides) or combinations of aminoacids and their derivatives. They are colorless, odorless, in general tasteless, and of varying degrees of solubility; they are putrefiable and readily undergo chemical change, hydrolysis, under the influence of ferments and on boiling with dilute acids or alkalies. **al'cohol-sol'uble p.**, gliadin, a simple protein, found in grain, soluble in 70 to 80 per cent alcohol and in dilute acids and alkalies, but not in absolute alcohol or neutral solvents. **autol'ogous p.**, any p. found normally in the fluids or tissues of the body. **coag'ulated p.**, an insoluble product formed by the action of heat on p.; hard-boiled white of egg is an example. **com'pound p.**, conjugated p. **con'jugated p.**, a substance which contains the protein molecule united to some other molecule or molecules otherwise than as a salt; the group contains the nucleoproteins, glycoproteins, phosphoproteins, lecithoproteins, and chromoproteins or hemoglobins. **defen'sive p.**, an antibody, alexin, phylaxin. **derived p.**, a derivative of the protein molecule effected by hydrolysis; in the *primary* protein derivatives (metaproteins, acid and alkali proteins or albumins) there has been only a slight change in the protein molecule; the *secondary* protein derivatives (proteoses, peptones) are the products of more extensive cleavage of the protein molecule through hydrolysis. **floating p.**, one present in the body fluids but not entering into the formation of the tissues. **for'eign p.**, one which differs from any contained in the blood, lymph, or tissues of the body. **heterol'ogous p.**, foreign p. **immune p.**, antitoxin. **na'tive p.**, p. in the form in which it exists in animal or vegetable foods. **protect'ive p.**, defensive p. **pyocyan'ic p.**, a remedy used in certain forms of suppuration, obtained by treating cultures of *Bacillus pyocyaneus* with potassa. **simple p.**, one which yields only α-aminoacids or their derivatives by hydrolysis; the group contains albumins, globulins, glutelins, alcohol soluble proteins, albuminoids, histones, and protamines.

protein-fat (pro'te-in-fat). Soap-albumin.

protein-granules (pro'te-in gran'ūlz). Aleurone.

proteinochromogen (pro"te-in-o-kro'mo-jen) [*protein* + G. *chrōma*, color, + *gennaō*, I produce.] Tryptophan.

protein-therapy (pro"te-in-ther'ah-pĭ) [*protein* + *therapy*.] Treatment of disease by the parenteral administration of a foreign protein.

proteinuria (pro"te-in-u'rĭ-ah). The excretion of any protein in the urine, albuminuria.

proteogen (pro'te-o-jen). Trade name of a series of preparations of plant proteins employed hypodermically.

pro'teol. Trade name for a powder made by the action of formic aldehyde on casein, employed as an antiseptic dressing.

proteol'ysis [*protein* + G. *lysis*, loosening.] Protein hydrolysis, the decomposition of protein.

proteolyt'ic. Relating to or effecting proteolysis.

proteometabolic (pro-te-o-mĕ-tă-bo'lik). Relating to proteometabolism.

proteometabolis (pro-tem-o-mĕ-tab'o-lizm) [*protein* + *metabolism*.] The process of utilization of protein in nutrition.

proteomorphic theory (pro-te-o-mor'fik the'o-rĭ) [*protein* + G. *morphē*, shape.] The theory that the mechanism of immunity against bacterial disease resides in the hematopoietic system, and secondarily in all the cells of the body, the liver being the excretory organ for the waste products resulting from the immunizing process.

Proteomyx'a [G *Prōteus*, a sea-god of the Greeks, who could assume numerous shapes, + *myxa*, mucus.] A subclass of *Rhizopoda* having soft pseudopodia which adhere on contact, the individual cells sometimes uniting to form plasmodia.

proteopec'tic, proteopex'ic. Relating to proteopexis.

proteopepsis (pro-te-o-pep'sis) [*protein* + G. *pepsis*, digestion.] The digestion of protein.

proteopexis (pro-te-o-pek'sis) [*protein* + G. *pēxis*, fixation.] The fixation of protein in the tissues.

proteose (pro'te-ōz). A secondary protein derivative resulting from further cleavage of the metaprotein molecule, one of the intermediate products of proteolysis between protein and peptone. **pri'mary p.,** the first result of hydrolysis of metaprotein; it occurs in two forms, *protoproteose* and *heteroproteose*. **sec'ondary p.,** derived from primary p. by further hydrolysis.

Proteoso'ma [*Prōteus** + G. *sōma*, body.] A genus of protozoans comprising the malarial parasites of birds.

proteosotherapy (pro-te-o''so-ther'ah-pĭ). Treatment of disease by the parenteral administration of a proteose.

proteosu'ria [*proteose* + G. *ouron*, urine.] Albumosuria, the excretion of proteose in the urine.

proteotoxin (pro''te-o-tok'sin) [*protein* + *toxin*.] A toxic protein split-product resulting from the reaction between a bacterial protein and the serum of the host; endotoxin.

Proteus (pro'te-us) [G. *Prōteus*, a sea-god who had the power to change his form. 1. A genus of protozoans now called *Amœba*. 2. A genus of the family *Bacteriaceæ*, containing pleomorphic, motile, gram-negative, aerobic, rod-like organisms, arranged often in pairs or chains, several species occurring in putrefying protein materials. **P. america'nus,**[0] a motile, gram-negative, aerobic organism isolated from cases of liver abscess in South America. **P. asiat'icus,**[0] *B. asiaticus, Bact. asiaticum*, an actively motile organism isolated in cases of typhoid-like infection in India and other tropical Asiatic countries. **P. hom'inis capsula'tus,** *Klebsiella pneumoniæ*.[0] **P. hydroph'ilus**[0] flagellated rods causing septicemia in fish and pathogenic also for many laboratory animals. **P. pseudovalerie'i,**[0] short or long aerobic rods isolated in cases of a typhoid-like fever. **P. valerie'i,**[0] a motile, single or paired, rod-shaped organism isolated in certain cases of fever of the paratyphoid group. **P. vulgar'is,** *B. proteus, Bact. vulgare*,[0] a motile, flagellated, aerobic, rod-shaped organism, occurring often in pairs or chains; it causes putrefaction in protein containing substances. **P. X 19,** a short gram-negative, slightly motile aerobic bacillus, once regarded as the specific organism in typhus fever. **P. zenk'eri,** *Kurthia zenkeri*.[0]

proth'esis [G. a putting before.] Prosthesis.

prothrom'base. Prothrombin

prothrom'bin [G. *pro*, before.] A nucleoprotein derived from the blood-platelets or white corpuscles, which in conjunction with the calcium salts in the blood forms thrombin or fibrin ferment; thrombogen.

prothyl, prothyle (pro'thil, pro-thi'le) [G. *prōtos*, first, + *hylē*, matter, stuff.] Protyle*, the primitive substance from which it is believed by many that all matter has been evolved.

prothy'mia [G. *pro*, before, + *thymos*, mind] Mental alertness.

prothyrin (pro-thi'rin). An extract of the thyroid gland recommended in the treatment of hypothyroidism; see *thyractin*.

protiodide (pro-ti'o-dīd, or did) The first of a series of compounds of iodine with a base, the one which contains the fewest iodine atoms.

Protis'ta [G. *prōtista*, the first of all] 1. Haeckel's term for a proposed third kingdom of living things to include the lowest orders of the animal and vegetable kingdoms, the *Protozoa* and the *Protophyta*. 2. Filtrable viruses.

protistologist (pro-tis-tol'o-jist). One versed in protistology, a microbiologist.

protistology (pro-tis-tol'o-jĭ) [*Protista* + *-ology*.] Microbiology, the science dealing with all microorganisms, both protozoa and bacteria.

proto- [G. *prōtos*, first] A prefix in words derived from Greek roots, denoting the first in a series or the highest in rank.

protoactinium (pro''to-ak-tin'ĭ-um) [G. *prōtos*, first.] Ekatantalum, the parent of actinium; probably a product of uranium-*Y*, and isotopic with uranium-*X*$_2$ or brevium.

protoalbumose (pro-to-al'bu-mōz). Protalbumose.

protobe (pro'tōb) [G. *protos*, first, + *bios*, life] d'Herelle's term for the bacteriophage.*

protobiology (pro-to-bi-ol'o-jĭ). Bacteriophagology.

Protobios bacteriophagus (pro-to'bĭ-os bak-te-rĭ-of'a-gus). *Bacteriophagum intestinale* bacteriophage.*

pro'toblast [G. *prōtos*, first, + *blastos*, germ] A naked cell, one without a condensed ectoplasm; an embryonic cell.

protoblas'tic. Relating to a protoblast; holoblastic.

protobrochal (pro-to-bro'kal) [G. *prōtos*, first, + *brochos*, mesh] Noting the first stage in the development of the ova in which the cortex of the ovary is formed of a layer of epithelial cells with nuclei elongated at right angles to the surface, the oogonia.

protocaryon (pro-to-kar'ĭ-on) [G. *prōtos*, first, + *karyon*, nut, kernel.] A nucleus consisting of a single caryosome lying in a delicate network of linin immersed in the enchylema.

protochloride (pro-to-klo'rīd, or rid). The first of a series of chlorine compounds, the one containing the fewest chlorine atoms.

pro'tocol [G. *prōtokollon*, from *prōtos*, first, + *kollaō*, I paste; a label or sheet pasted on the outside of a roll of manuscript, serving as a title-page or indication of the contents.] 1. The official minutes or report of a meeting. 2 The description of the steps of an experiment. 3 A clinical report.

protocone (pro'to-kōn) [G. *prōtos*, first, + *kōnos*, cone.] The mesiobuccal cusp of an upper premolar tooth in a mammal.

protoconid (pro'to-kon'id). The mesiobuccal cusp of a lower premolar tooth in a mammal.

protoconidium (pro-to-kŏ-nid'ĭ-um) [G. *prōtos*, first, + *conidium*.] The spore-like element in a *Hemispore* which is formed from the thallus but remains behind while the thallus grows and perhaps forms other protoconidia; eventually the protoconidium produces secondary conidia, or deuteroconidia, which constitute the non-sexual reproductive element.

protocurarine (pro-to-ku-rah'rēn). An alkaloid, said to be extracted from curare, exhibiting the poisoning qualities of the drug in very active form.

protoelastose (pro-to-e-las'tōz). Hemielastin.

protoerythrocyte (pro-to-er'ĭ-thro-sīt) [G. *prōtos*, first, + *erythrocyte*.] A primitive erythroblast with trachychromatic nucleus.

protofluorine (pro-to-flu'o-rēn). One of Nicholson's protyles.

protogala (pro-tog'ă-lah) [G. *prōtos*, first, + *gala*, milk.] Colostrum.

protogas'ter [G. *prōtos*, first, + *gastēr*, belly.] Prosogaster, foregut.

pro'togen. A yellow powder obtained by the action of formaldehyde upon egg albumin; recommended as a concentrated food product.

protoglob'ulose. A product of the hydrolysis or digestion of a globulin.

protogon'ocyte [G. *prōtos*, first, + E. *gonocyte*.] The stem-cell, one of the two cells formed by division of the impregnated ovum.

protogon'oplasm [G. *prōtos*, first, + *gonos*, seed, + *plasma*, a thing formed.] A differentiated mass of cytoplasm in a protozoon, which forms the substance of later developing gemmules.

protogyny (pro-toj'ĭ-nĭ) [G. *prōtos*, first, + *gynē*, woman.] Maturity of the female elements in an hermaphrodite flower before the male elements.

protoiodide (pro-to-ī'o-dīd, or did). Protiodide.

pro'tolac. Trade name of a make of calcium caseinate.

protoleucocyte (pro-to-lu'ko-sīt) [G. *prōtos*, first, + *leukos*, white, + *kytos*, cell.] A primitive leucocyte; a lymphocyte of the bone-marrow.

protomerite (pro-tom'er-īt) [G. *prōtos*, first, + *meros*, part.] The anterior portion of a cephalont by which it is attached to its host.

protometrocyte (pro-to-me'tro-sīt) [G. *prōtos* first, + *mētēr*, mother, + *kytos*, cell.] The mother cell of the protoleucocyte and protoerythrocyte, or of the cells of the leucocyte and hemoglobin series.

Protominobacter[0] (pro-tom''ĭ-no-bak'tur). A genus of the family *Bacteriaceæ*, consisting of several species of water and soil bacteria.

Protominobacteriæ[0] (pro-tom''ĭ-no-bak-te'rĭ-e-e). A bacterial tribe of the family *Bacteriaceæ*.

protomyosinose (pro-to-mi'o-sin-ōz). Au albumose formed in the digestion of muscular tissue.

pro'ton [G. *prōtos*, first.] 1. The first trace of the formation of any part or organ in the embryo; anlage, primordium. 2. The unit of positive electricity constituting the nucleus of an atom around which the negative electrons revolve.

protoneph'ron, protoneph'ros [G. *prōtos*, first, + *nephros*, kidney.] The primitive embryonic kidney, Wolffian body.

protonuclein (pro-to-nu'kle-in). Trade name of a nuclein preparation derived from lymphoid tissue.

protopath'ic [G. *prōtos*, first, + *pathos*, suffering.] Noting a set or system of peripheral sensory nerve-fibers furnishing a low degree of sensibility, enabling one to appreciate pain and temperature to a not very delicate extent, and not definitely localized; distinguished from *epicritic*.*

Protoph'yta [G. *prōtos*, first, + *phyton*, plant.] A group of the lowest orders of the vegetable kingdom, including the bacteria.

protophyte (pro'to-fīt). One of the *Protophyta*.

pro'topine [G. *prōtos*, first, + *opion*, opium.] An alkaloid obtained in minute quantities from the mother liquor of morphine, $C_{20}H_{17}NO_5$, a white crystalline powder.

pro'toplasm [G. *prōtos*, first, + *plasma*, thing formed.] Living matter, the substance of which animal and vegetable tissues are formed. Undifferentiated protoplasm is a clear, viscid, colloidal fluid, of a specific gravity of about 1.250, resembling the white of egg, composed of carbon, nitrogen, oxygen, and hydrogen, and a number of other elements, in complex and unstable combination. It is subject to change, or differentiation, of the most varied sorts, forming epithelium, bone, muscle, nervous structures, glands, etc. It contains always 12 and sometimes more elements; the 12 essential elements are: calcium, carbon, chlorine, hydrogen, iron, magnesium, nitrogen, oxygen, phosphorus, potassium, sodium, and sulphur. Other names for protoplasm are sarcode, bioplasm, biogen, cytoplasm. **superior p.**, ergastoplasma. **totipoten'tial p.**, plasson, living matter with the least recognizable differentiation of structure but with the greatest potential, all cell-organs being formable by it.

protoplasmat'ic, protoplas'mic. Relating to protoplasm.

pro'toplast [G. *prōtos*, first, + *plastos*, formed.] 1. The first individual of a type or race. 2. A protozoon or unicellular organism. 3. A differentiated area of cytoplasm, supposed to have a special function such as digestion.

protoproteose (pro-to-pro'tē-ōz) [G. *prōtos*, first.] Primary proteose, soluble in water, resembling native protein more nearly than peptone.

protosalt (pro'to-sawlt). The first of a series of compounds of an acid and a base, the one containing the largest number of acid molecules relatively to the base; a salt of an acid with a metallic protoxide.

pro'tose. Trade name of a food preparation.

protospasm (pro'to-spazm) [G. *prōtos*, first, + *spasmos*, spasm.] A spasm beginning in one limb or one muscle and gradually becoming more general.

protosul'phate. A compound of sulphuric acid with a protoxide of the metal.

protosyphilis (pro-to-sif'ĭ-lis) [G. prōtos, first.] Primary syphilis.

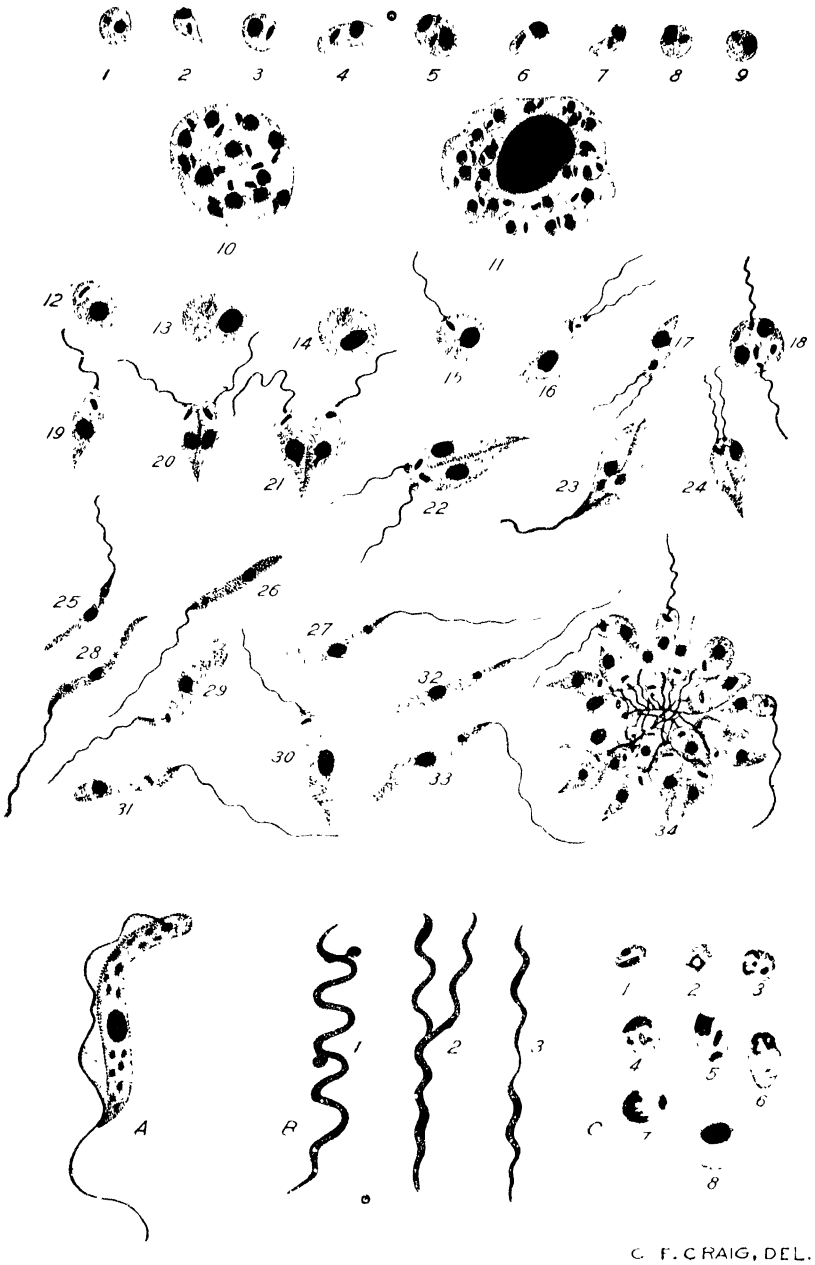
prototox'in. A hypothetical form of toxin in bacterial cultures possessing lethal properties and a very strong affinity for antitoxin.

prototox'oid, protox'oid [G. *prōtos*, first.] A hypothetical substance in a bacterial culture, non-poisonous, but with a stronger affinity than toxin for antitoxin.

prototroph'ic [G. *prōtos*, first, + *trophē*, nourishment.] Deriving sustenance from inorganic materials; most plants are prototrophic; see *metatrophic*, *paratrophic*.

pro'totype [G. *prōtos*, first, + *typos*, type.] The primitive form, the first form to which subsequent individuals of the class or species conform.

protover'tebra. A primitive vertebra or segment in the notochord; somite, metamere.



C. F. CRAIG, DEL.

PROTOZOAN PARASITES

Leishmania donovani. Leishman-Donovan Bodies. Stained with Wright's Stain
1 to 10. Various forms of *Leishmania donovani*, the protoplasm stained blue, the chromatin, red
10. Matrix containing several *Leishmania donovani*
11. Large endothelial cell containing many *Leishmania donovani*
12 to 34. Various cultural forms of *Leishmania donovani*. Many of the e forms show division into two parasites
34. A so-called "rosette" formed by cultural forms of *Leishmania donovani*
FIG. A. *Trypanosoma gambiense*, stained with Wright's stain
FIG. B. *Spirochaeta duttoni*, stained with Wright's stain
1. Spirochaeta showing peculiar out-growths containing chromatin along its course
2. Spirochaeta undergoing longitudinal division
3. Spirochaeta undergoing transverse division
FIG. C. Various forms of *Histoplasma capsulatum*. (After Darling.)
In all of these figures the red equals chromatin and the blue, protoplasm

protover'tebral. Relating to a protovertebra, as a *p. somite* or *p. segment*, meaning the same as protovertebra.

protox'ide. The first of a series of oxides, the one containing the fewest oxygen atoms.

protox'oid. Prototoxoid.

Protozoa (pro-to-zo'ah) [G. *prōtos*, first, + *zōon*, animal.] A subkingdom of animals, including all the unicellular animal organisms. They consist of a single cell or of an aggregation of non-differentiated cells, loosely held together and not forming tissues; distinguished from the *Metazoa* which include all other animals. The Protozoa are divided into four classes: *Sarcodina*, *Mastigophora*, *Sporozoa*, and *Infusoria*.

protozoacide (pro-to-zo'ă-sid) [*protozoon* + L. *cædere*, to kill.] 1. Causing destruction of protozoal organisms. 2. An agent used to kill protozoa.

protozo'al. Relating to *Protozoa*.

protozo'an. 1. Protozoal. 2. A protozoon.

protozoologist (pro-to-zo-ol'o-jist). One versed in protozoology.

protozoology (pro-to-zo-ol'o-jĭ) [G. *prōtos*, first, + *zōon*, animal, + *-logia*.] The science which treats of the *Protozoa*.

protozoon (pro-to-zo'on). An individual of the *Protozoa*, a unicellular animal, protozoan.

protozoophag, protozoophage (pro-to-zo'o-fag, or fāj) [*protozoon* + *phag(ocyte)*.] A phagocyte which ingests protozoa.

protrac'tor [L. *protrahere*, to draw forth.] 1. An instrument for extracting a bullet from a wound. 2. A muscle drawing a part forward, as antagonistic to a *retractor*.

protrude (pro-trūd') [L. *protrudere*, to push forward, to thrust out.] To project, to push outward or forward.

protrusion (pro-tru'zhun) [L. *protrudere*, pp. *protrusus*, to push forward.] 1. Pushing forward or out. 2. A projection.

protryp'sin. Trypsinogen.

protu'berance [L. *protuberare*, to swell out.] An outgrowth, a swelling, a knob.

protuberantia (pro-tu-ber-an'shĭ-ah) [L.] Protuberance, prominence, projection. **p. laryngea**, prominentia laryngea [BNA], Adam's apple. **p. menta'lis** [BNA], mental protuberance, mental prominence or process, a rough triangular prominence at the lower portion of the symphysis or central ridge of the mandible. **p. occipita'lis exter'na** [BNA], external occipital protuberance, a prominence about the center of the outer surface of the squamous portion of the occipital bone, giving attachment to the ligamentum nuchæ. **p. occipita'lis inter'na** [BNA], internal occipital protuberance, a projection from about the center of the inner surface of the occipital bone.

protyle (pro-ti'le) [G. *prōtos*, first, + *hylē*, stuff.] Original or primitive matter; the hypothetical substance from which all matter is ultimately derived, archyle, psychoplasm. Nicholson assumes that all the elements are built up from four protyles—coronium, hydrogen, nebulium, and protofluorine.

pro'tylin. Trade name of a phosphorus-containing albuminous preparation, used in the treatment of goiter.

proud flesh. Exuberant granulations; a fungous growth from a granulating surface which shows no tendency toward cicatrization

prove. In homeopathy, to test the action of a drug upon a healthy person in order to obtain the therapeutic range of the same.

provertebra (pro-vur'te-brah) [L. *pro*, in front, + *vertebra*.] Protovertebra, metamere.

proving (proo'ving). In homeopathy, a test of the action of a drug upon the healthy body; a record of all the unusual sensations, or deviations from normal health, experienced by one taking the drug.

provisional (pro-vizh'un-al) [L. *providere;* to provide.] Temporary, providing for the present only. **p. callus**, the callus formed around a bone, and sometimes in the medullary cavity, after a fracture, which is absorbed after union has occurred.

Prowazek's bod'ies (pro-vat'sek) [Stanislas Josef Mathias von *Prowazek*, German protozoologist, 1876–1915.] Oblong formations, usually consisting of two corpuscles, found in the cells of the smallpox eruption and in Guarnieri's bodies.

Prowazek-Greef bod'y (pro-vaht'sek-grāf) [S. J. M v. *Prowazek;* Carl Richard *Greef*, German ophthalmologist, *1862.] Trachoma* body.

Prowazekia (pro-vă-ze'kĭ-ah) [see *Prowazek's bodies*.] A genus of flagellate protozoans, formerly included under the term *Bodo;* the organisms are parasitic but not, so far as known, pathogenic.

prox'imad [L. *proximus*, next, + *ad*, to.] In a direction toward a proximal part, or toward the center, not distad.

prox'imal [L. *proximalis*.] 1. Nearest the trunk or the point of origin, said of part of an extremity, of an artery or a nerve, etc., so situated; in dentistry, mesial; opposed to distal. 2. In dental anatomy, noting the surface of a tooth in relation with its neighbor, whether mesial or distal.

prox'imate. 1. Immediate, next, proximal (2). **p. con'tact.** touching of the adjacent surfaces of two teeth. **p, prin'ciples,** organic substances entering into the formation of living matter; those of the animal body are various proteins, albuminoids, fats, and carbohydrates, which, in conjunction with each other and with certain minerals, inorganic salts, and water, constitute the various tissues.

proximoataxia (prok''sĭ-mo-ă-tak'sĭ-ah) [L. *proximus*, nearest + G. *ataxia*.] Ataxia or lack of muscular coordination in the proximal portions of the extremities—arms and forearms, thighs and legs; opposed to *acroataxia*.*

proximobucc'al. Relating to the proximal and buccal surfaces of a tooth, noting the angle formed by their junction.

proximola'bial. Relating to the proximal and labial surfaces of a tooth, noting the angle formed by their junction.

proximolin'gual. Relating to the proximal and lingual surfaces of a tooth, noting the angle formed by their junction.

prozo'nal. Anterior to a sclerozone.

prozone (pro'zōn) [L. *pro*, before, in front.] In the phenomenon of agglutination, the layer of concentrated serum, in which agglutination is absent, preceding that of more dilute serum in which the action takes place.

prozygosis (pro-zi-go'sis) [G. *pro*, before, + *zygōsis*, a yoking.] Syncephaly.

prozy'mogen. A granular substance within the nucleus which, upon discharge into the cytoplasm, becomes converted into zymogen.

prune [L. *prunum*, a plum.] A dried plum prunum.*

prune-juice expectora'tion. A dark reddish purple fluid matter expectorated in certain cases of pneumonia.

prune'lla. The herb, *Prunella vulgaris*, heal-all, a plant of the *Labiatæ*, or mint-family, having slightly astringent and tonic properties; it is employed in eclectic practice as an astringent in diarrhea and in chronic cystitis in doses of 5 to 60 drops of the specific medicine in water every two to four hours, and as a gargle in sore throat.

pru'ni virginia'næ cor'tex (Br.). Wild cherry bark, prunus virginiana (U.S.).

pru'nin. A substance made by evaporation from the tincture of *Prunus serotina*, wild cherry; employed in eclectic practice in the treatment of bronchial affections and in palpitation of the heart in doses of gr. 2–8 (0.13–0.5).

pru'noids. Trade name of a laxative preparation, in tablet form, composed of phenolphthalein, cascara sagrada, de-emetinized ipecac, and prunes

pru'num [L.] (N.F., Br.) Prune the dried ripe fruit of *Prunus domestica*, a tree cultivated in warm temperate regions; employed as a food, having laxative properties, and used in medicine in preparing the confection of senna

Pru'nus. A genus of trees of the order *Rosaceæ*. **P. amyg'dalus**, almond. **P. cer'asus**, cherry. **P. domes'tica**, plum. **P. laurocer'asa**, cherry-laurel. **P. per'sica**, peach. **P. serot'ina** (Br.), wild cherry, prunus* virginiana. **P. spino'sa**, aloe or blackthorn. **p. virginia'na** (U.S.), wild cherry bark, pruni virginianæ cortex (Br.), the bark of *Prunus serotina;* employed as a tonic and in cough mixtures as a bronchial sedative, in doses of gr. 20–30 (1.3–2.0).

pruriginous (pru-rij'in-us) [L. *pruriginosus*, having the itch.] Relating to or suffering from prurigo.

pruri'go [L. *prurire*, to itch.] A chronic disease of the skin marked by a persistent eruption of papules which itch intensely. **p. æstiva'lis** [L. *æstivus*, relating to summer], summer p., a form recurring each summer, and very severe as long as the hot weather continues; pruritus æstivalis. **p. a'gria** [G. *agrios*, wild], a very severe form of p. with intense itching, resulting in the addition of deep scratch marks to the papular lesions. **p. fe'rox** [L. wild, cruel], p. agria. **p. infan'tilis**, Hutchinson's prurigo, p. of dentition, occurring in children during the eruption of the milk teeth. **p. mitis**, a mild form of p. **p. nodula'ris**, Hyde's disease, an eruption of hard nodules in the skin, accompanied by intense itching. **p. simplex**, a mild form having a pronounced tendency to relapse.

prurit'ic. Itching; relating to pruritus.

pruri'tus [L. an itching, *prurire*, to itch.] Itching. **bath p.**, itching produced by contact with cold water. **essen'tial p.**, itching not dependent upon any apparent lesion of the skin. **p. æstiva'lis**, summer itch, pruritus occurring during hot weather; usually associated with prickly heat, then called prurigo æstivalis. **p. a'ni**, more or less intense itching at the anus, occurring in paroxysms and unassociated with apparent lesions other than those produced by scratching. **p. hiema'lis**, winter itch; pruritus, occurring without other lesions, during the cold months. **p. seni'lis**, senile pruritus, itching associated with degenerative changes in the skin in the aged. **p. vul'væ**, an essential p. of the external female genital organs. **symptomat'ic p.**, itching occurring as a symptom of some general disorder such as gout or rheumatism, jaundice, gastroenteric disturbances, etc.

Prus'sak's fi'bers [Alexander *Prussak*, Russian otologist, 1839–1897.] Elastic and connective-tissue fibers bounding Shrapnell's membrane. **P.'s pouch** or **space**, a recess in the mucous membrane on the tympanic surface of the drum membrane, between the membrana flaccida and the neck of the malleus; recessus membranæ tympani superior [BNA].

Pruss'ian-blue. Ferri ferrocyanidum.

pruss'iate. A ferricyanide or ferrocyanide.

prussic acid (pru'sik as'id) [referring to *Prussian* blue.] Hydrocyanic acid, see under *acidum*.

Ps. Abbreviation of *Pseudomonas*.

psalis (sa'lis) [G. an arch.] Fornix cerebri.

psalterial (sal-te'rĭ-al). Relating to the psalterium.

psalterium (sahl-ta'rĭ-oom) [G. *psallērion*, harp.] 1. Lyra, commissura* hippocampi [BNA]. 2. Omasum, manyplies.*

psammocarcinoma (sam"o-kar-sĭ-no'mah) [G. *psammos*, sand.] A carcinoma containing areas of calcareous degeneration.

psammoma, pl. *psammo'mata* (sam-mo'mah) [*psammos*, sand, + *-ōma*.] A small endothelioma of the cerebral meninges, often multiple, which has undergone calcareous degeneration.

psam"mosarco'ma. A sarcoma-like growth with a center of calcareous degeneration.

psammother'apy (sam"o-ther'ă-pĭ) [G. *psammos*, sand, + *therapeia*, treatment.] The use of the sand bath in the treatment of certain rheumatic and other diseases, ammotherapy.

psammous (sam'us) [G. *psammos*, sand.] Sandy.

pselaphesia (se-lă-fe'sĭ-ah) [G. *psēlaphēsis*, a touching.] The higher tactile sense, including the muscle sense.

pselaphesis (se-lă-fe'sis). Pselaphesia.

psellism (sel'ızm) [G. *psellismos*, a stammering.] Stammering, mispronunciation or substitution of letter sounds.

pseud-. See *pseudo-*.

pseudaconitine (su-dă-kon'ĭ-tēn). An alkaloid, $C_{36}H_{49}NO_{12}$, from *Aconitum ferox*, called also British or Nepaul aconitine; a yellowish amorphous powder, exceedingly poisonous, dose gr $\frac{1}{2000}$–$\frac{1}{600}$ (0.00005–0.0001).

pseudacousma (su-dă-kooz'mah) [G *pseudēs*, false, + *akousma*, something heard.] Pseudacusis.

pseudacromegaly (su-dak-ro-meg'al-ĭ) Enlargement of the extremities and face, not associated with disease of the hypophysis cerebri.

pseudactinomycosis (su-dak"tĭ-no-mi-ko'sis). Pulmonary tuberculosis in which the sputum contains forms resembling actinomyces.

pseudacusis (su-dă-ku'sis) [G. *pseudēs*, false, + *akousis*, a hearing.] Incorrect hearing, a hearing of sounds as if they were altered in pitch.

pseudæsthesia (su-des-the'zĭ-ah). Pseudesthesia.

pseudagraphia (su-dă-graf'ĭ-ah) [G. *pseudēs*, false, + *a-* priv. + *graphē*, a writing.] Partial agraphia in which one can do no original writing, but can copy correctly.

pseudalbuminuria (su-dal-bu-min-u'rĭ-ah). Cyclic albuminuria.

Pseudamphistomum (su-dam-fis'to-mum) [G. *pseudes*, false, resembling, + *amphistomum*.] A genus of *Opisthorchidæ* or flukes. **P. trunca'tum**, a species infesting the bile-ducts of the dog and cat, and occasionally of man, in Europe and India.

pseudangina (su-dan'ji-nah) [G. *pseudēs*, false, + L. *angina*, a strangling.] Angina vasomotoria.

pseudankylosis (su-dan-kĭ-lo'sis). False ankylosis fibrous ankylosis.

pseudaphia (su-daf'ĭ-ah) [G. *pseudēs*, false, + *haphē*, a touch] Paraphia, incorrect perception of touch.

pseudarthritis (su-dar-thri'(thre')tis) [G. *pseudēs* false, + *arthron*, joint, + *-itis*.] Hysterical or neuromimetic disease of the joints.

pseudarthrosis (su-dar-thro'sis) [G. *pseudēs*, false, + *arthrōsis*, a jointing.] A false joint, motion in the shaft of a long bone between the two ends, following an ununited fracture.

pseudelminth (su-del'minth) [G. *pseudēs*, false, + *helmins(helminth-)*, worm.] Anything having the appearance of an intestinal worm.

pseudencephalus (su-den-sef'ă-lus) [G. *pseudēs*, false, + *enkephalos*, brain.] A monster with fissured skull and spinal column in which the brain is absent, the cranium being filled with a vascular fleshy tumor of the meninges.

pseudesthesia, pseudæsthesia (su-des-the'zĭ-ah) [G *pseudēs*, false, + *aisthēsis*, sensation.] 1. Pseudaphia. 2 A subjective sensation not arising from an external stimulus. 3. A sensation referred, after an amputation, to the absent member.

pseudiater (su-dī-a'ter) [G. *pseudēs*, false, + *iatros*, physician] A charlatan, a quack.

pseudinoma (su-di-no'mah) [G. *pseudēs*, false, + *is(in)*, fiber, + *-ōma*] 1. An indurated swelling resembling a fibroma. 2. A scirrhous tumor.

pseudo- (su'do) [G. *pseudēs*, false.] A prefix denoting a resemblance, often deceptive, to the thing indicated by the second element of the compound. Before a vowel it is usually contracted to *pseud-*.

pseudoaconitine (su-do-ă-kon'ĭ-tēn). Pseudaconitine.

pseudoactinomycosis (su"do-ak-ti-no-mi-ko'sis) [G. *pseudēs*, false.] A nocardiosis caused by any species of *Nocardia* not producing grains in the pus.

pseudoalbuminuria (su-do-al-bu-min-u'rĭ-ah). Pseudalbuminuria.

pseu"doalope'cia area'ta. A form of alopecia follicularis in which the inflammatory manifestations are confined to a slight swelling of a pinkish hue at the mouths of the affected hair-follicles

pseudoalveolar (su-do-al-ve'o-lar) Resembling alveolar tissue.

pseudo-anaphylactic (su'do-an-ŭ-fi-lak'tik). Relating to pseudo-anaphylaxis; anaphylactoid.

pseudo-anaphylaxis (su'do-an-ŭ-fi-lak'sis). A condition resembling anaphylaxis, caused by the action of serum modified by the addition of agar, starch, or certain other substances, or by colloidoclasis.

pseudoanemia, pseudoanæmia (su-do-ă-ne'mĭ-ah) [G. *pseudēs*, false.] Pallor of the skin and mucous membranes without the blood signs of anemia.

pseudoangina (su-do-an'ji-nah). Pseudangina.

pseudoanorexia (su-do-an-o-rek'sĭ-ah) [G. *pseudēs*, false, + *an-* priv. + *orexis*, appetite.] Refusal to eat because of pain in swallowing or indigestion

pseudoapoplexy (su-do-ap'o-plex-sĭ). Serous apoplexy or other condition simulating apoplexy, not due to cerebral hemorrhage.

pseudoappendicitis (su-do-ă-pen-dĭ-si'(se')tis). A symptom-complex simulating appendicitis without inflammation of the appendix.

pseudoapraxia (su-do-ă-prak'sĭ-ah). A condition of exaggerated awkwardness in which the person makes wrong use of objects.

pseudoasthma (su-do-as'mah). Dyspnea.

pseudoataxia (su"do-ă-tak'sĭ-ah). A conditon of ataxia not due to tabes dorsalis.

pseudobacillus (su-do-bă-sil'us). Any microscopic object, such as a pecilocyte, resembling a bacillus.

pseudobacterium (su-do-bak-te'rĭ-um). Any microscopic object resembling a bacillus or other bacterial form.

pseudoblepsia, pseudoblepsis (su-do-blep'sĭ-ah, su-do-blep'sis) [G. *pseudēs*, false, + *blepsis*, vision.] Parablepsia, pseudopsia; perverted vision, false vision.

pseudobulbar (su-do-bul'bar). Noting a paralysis of seemingly, but not actually, bulbar origin.

pseudocartilaginous (su-do-kar-tĭ-laj'in-us). Composed of a substance resembling cartilage in texture.

pseudocele (su'do-sēl) [G. *pseudēs*, false, + *koilia*, cavity.] The fifth ventricle of the brain, cavum septi pellucidi [BNA].

pseudochalazion (su-do-kal-a'zĭ-on). A small tumor of the eyelid resembling a chalazion.

pseudochancre (su-do-shang'ker). A non-specific indurated sore on the penis resembling a chancre.

pseudochorea (su-do-ko-re'ah). A spasmodic affection or extensive tic resembling chorea.

pseudochromesthesia, pseudochromæsthesia (su-do-krōm-es-the'sĭ-ah) [G. *pseudēs*, false, + *chrōma*, color, + *aisthēsis*, sensation.] An anomaly in which each vowel in the printed word is seen as colored.

pseudochromhidrosis (su-do-kro-mi-dro'sis) [G. *pseudēs*, false, + *chrōma*, color, + *hidrōs*, sweat.] The presence of pigment on the skin in association with sweating, but due to the local action of pigment-forming bacteria and not to the excretion of colored sweat

pseudochromosome (su-do-kro'mo-some) [G. *pseudēs*, false, + *chrōma*, color, + *sōma*, body] One of the rods of mitochondria formed during the process of maturation of the oocyte

pseudochylous (su-do-ki'lus). Resembling chyle.

pseudocirrhosis (su-do-sĭ-ro'sis). A condition simulating cirrhosis of the liver, cardiac liver.

pseudocodeine (su-do-ko'de-ēn). A substance formed by the action of dilute sulphuric acid on codeine.

pseudocœle (su'do-sēl). Pseudocele

pseudocolloid (su-do-kol'oyd). A colloid-like or mucoid substance found in ovarian cysts, in the lips in Fordyce's* disease, and elsewhere.

pseudocoloboma (su-do-kol-o-bo'mah). An apparent coloboma, due to heterochromia of the iris.

pseudocoxalgia (su"do-koks-al'jĭ-ă) [G. *pseudes*, false.] Osteochondritis* deformans juvenilis, coxa plana, Perthes-Legg disease, quiet hip disease.

pseudocrisis (su-do-kri'sis). A temporary fall of the temperature in pneumonia or other disease usually ending by crisis.

pseudocroup (su-do-kroop') Catarrhal croup; laryngismus stridulus.

pseudocurarin (su-do-ku'ră-rin). A glucoside, resembling digitalin, obtained from oleander.

pseudocyesis (su-do-si-e'sis) [G. *pseudēs*, false, + *kyēsis*, pregnancy.] False or spurious pregnancy; a condition in which some of the signs of pregnancy are present although no conception has taken place.

pseudocylindroid (su"do-sil'in-droyd). A shred of mucus or other substance in the urine resembling a renal cast.

pseudocyst (su'do-sist) [G. *pseudēs*, false, + *kystis*, bladder.] A false cyst, a fluid accumulation simulating a cyst, but without a capsule.

pseudodementia (su-do-de-men'shĭ-ah) A condition of exaggerated indifference to one's surroundings without actual mental impairment.

pseudodiastolic (su-do-di-as-tol'ik). Seemingly associated with the cardiac diastole.

pseudodiphtheria (su"do-dif-the'rĭ-ah). Diphtheroid.

Pseudodiscus (su-do-dis'kus) [G. *pseudēs*, false, + *diskos*, disc.] A genus of flukes of the family *Paramphistomidæ* a species of which, *P. wat'soni*, infests the small intestine of man in Africa.

pseudodysentery (su-do-dis'en-ter-ĭ). The occurrence of symptoms indistinguishable from those of bacillary dysentery, caused by dietetic errors, a chill, intestinal worms, or other causes other than the presence of the specific microorganisms.

pseudoedema, pseudoœdema (su"do-e-de'ma) [G. *pseudēs*, false, + *oidēma*, a swelling.] A puffiness of the skin not due to a fluid accumulation.

pseudoerysipelas (su-do-er-ĭ-sip'e-las) Erysipeloid

pseudoesthesia, pseudoæsthesia (su-do-es-the'zĭ-ah). Pseudesthesia.

pseudofibrin (su-do-fi'brin). A substance obtained by the precipitation of fibrinogen by sodium chloride, parafibrinogen.

pseudofluctuation (su-do-fluk-chu-a'shon). A wave-like sensation, resembling fluctuation, obtained by tapping muscular tissue.

pseudofracture (su-do-frak'chur) Spontaneous fracture.

pseudoganglion (su-do-gang'glĭ-on). A localized thickening of a nerve-trunk having the appearance of a ganglion.

pseudogeusesthesia, pseudogeusæsthesia (su"do-jus-es-the'zĭ-ah) [G. *pseudēs*, false, + *geusis*, taste, + *aisthēsis*, sensation.] A form of synesthesia in which a subjective sensation of light or color is produced by stimulation of the sense of taste.

pseudogeusia (su-do-ju'sĭ-ah). A subjective taste sensation not produced by an external stimulus

pseudoglioma (su-do-gli-o'mah). A form of iridochorioiditis in which changes occur in the vitreous producing a resemblance to retinal glioma.

pseudoglobulin (su-do-glob'u-lin). The portion of globulin which remains in solution after as much as possible has been precipitated by dialysis.

pseudoglucosazone (su-do-glu-ko'să-zōn). A substance sometimes present in normal urine which gives a reaction in the phenylhydrazine test.

pseudogonococcus (su-do-gon-o-kok'us). A diplococcus, resembling morphologically the gonococcus, found in the normal urethra and in non-specific discharges.

pseudogonorrhea, pseudogonorrhœa (su-do-gon-o-re'ah). Catarrhal urethritis.

pseudohemoglobin (su"do-hem-o-glo'bin). A combination of oxygen and hemoglobin, intermediate between hemoglobin and oxyhemoglobin.

pseudohemoptysis (su-do-hem-op'tĭ-sis). Spitting of blood which does not come from the lungs or bronchial tubes.

pseudohermaphroditism (su-do-her-măf-rod'it-izm). The usual form of so-called hermaphroditism in which the individual is distinctly of one sex though having superficial characteristics of both.

pseudohernia (su-do-her'nĭ-ah). Inflammation of the scrotal tissues or of an inguinal gland, simulating a strangulated hernia.

pseudoheterotopia (su-do-het-er-o-to'pĭ-ah) [G. *pseudēs*, false, + *heteros*, other, + *topos*, place.] A seeming displacement of certain tissues seen at autopsy; it is really an artefact.

pseudohydronephrosis (su-do-hi"dro-ne-fro'sis). The presence of a cyst near the kidney simulating hydronephrosis

pseudohydrophobia (su-do-hi-dro-fo'bĭ-ah). Lyssophobia.

pseudohyoscyamine (su-do-hi-ŏ-si'am-ēn). An alkaloid, $C_{17}H_{23}NO_3$, occurring along with hyoscyamine and hyoscine in duboisia, the leaf of *Duboisia myoporoides*, a tree of Australia.

pseudohypertrophic (su-do-hi-per-trof'ik). Relating to or marked by pseudohypertrophy.

pseudohypertrophy (su"do-hi-per'trof-ĭ) [G. *pseudēs*, false, + *hyper*, over, + *trophē*, nourishment.] False hypertrophy; increase in size of an organ or a part, due not to increase in size or number of the specific functional elements but to that of some other tissue, fatty or fibrous.

pseudoicterus (su-do-ik'ter-us). Discoloration of the skin not due to the bile pigments, as in Addison's disease.

pseudoileus (su-do-il'e-us). Absolute obstipation, simulating ileus, due to paralysis of the intestinal wall.

pseudoinfluenza (su-do-in-flu-en'zah). An epidemic catarrh simulating influenza, but less severe

pseudoisochromatic (su"do-i"so-kro-mat'ik). Apparently of the same color; noting certain charts containing colored spots mixed with figures printed in confusion colors; used in testing for color blindness.

pseudojaundice (su-do-jawn'dis). Pseudoicterus.

pseudoleucemia, pseudoleucæmia (su-do-ul-se'mĭ-ah) [G. *pseudēs*, false, + *leucemia*.] A disease marked by enlargement of the spleen and of the lymph nodes, the most prominent characteristic of which is a progressive pernicious anemia; it is believed by many to be usually of tuberculous origin; Hodgkin's disease, pseudoleukemia, aleucemia. **in'fantile p.**, Jaksch's* disease. **lymphat'ic p.**, p. without apparent participation of the spleen in the morbid process. **myelog'enous p.**, myelomatosis. **p. cu'tis,** the occurrence of lesions of various forms of the skin in cases of pseudoleucemia.

pseudoleucocythemia, pseudoleucocythæmia (su-do-lu"ko-si-the'mĭ-ah). Pseudoleucemia.

pseudoleukemia, pseudoleukæmia (su-do-lu-ke'mĭ-ah). Hodgkin's disease, pseudoleucemia.

pseudolipoma (su-do-li-po'mah) Any circumscribed yielding swelling resembling a fatty tumor.

pseudologia phantastica (su-do-lo'jĭ-ah fan-tas'tĭ-kah). The writing of anonymous letters to oneself, to persons of prominence, etc., by sufferers from pronounced hysteria.

pseudolupus (su-do-lu'pus). A dermatomycosis, resembling lupus but not of tuberculous origin.

pseudolymphocyte (su-do-lim'fo-sīt). A small neutrophile leucocyte.

pseudolyssa (su"do-lis'sah). Lyssophobia.

pseudomalaria (su-do-mal-a'rĭ-ah). A disease marked by recurring chills, fever, and sweats, of septic or other non-malarial origin.

pseudomamma (su-do-mam'ah). A glandular structure resembling the mammary gland, occurring in dermoid cysts.

pseudomania (su-do-ma'nĭ-ah). Pretended insanity

pseudomelanosis (su-do-mel-an-o'sis) [G. *pseudēs*, false, + *melas*, black, + *-ōsis*.] A dark greenish or blackish post-mortem discoloration of the surface of the abdominal viscera, due to the action of sulphureted hydrogen upon the iron of disintegrated hemoglobin.

pseudomembrane (su-do-mem'brān) [G *pseudēs*, false.] False membrane, a fibrinous exudate forming a tough felt-like membrane on the surface of the skin or a mucous membrane.

pseudomembranous (su-do-mem'bran-us). Relating to or marked by the presence of a false membrane. **p. enteri'tis,** mucomembranous or mucous enteritis.*

pseudomeningitis (su-do-men-in-ji'(je')tis). Meningism.

pseudometaplasia (su-do-met-ă-pla'sĭ-ah) [G. *pseudēs*, false, + *metaplasia*.] Histological accommodation.*

pseudomnesia (su-dom-ne'zĭ-ah) [G. *pseudēs*, false, + *mnēsis*, memory.] False memory, a subjective impression of memory of events that have not occurred.

Pseudomonas (su-dom'o-nas) [G. *pseudes*, false, + *monas*, single (a unicellular organism).] A genus of bacteria of the family *Bacteriaceæ*, containing chiefly water and soil organisms. **Ps. aerugino'sa,**[0] *B. pyocyaneus*, blue-pus bacillus, a pathogenic species found sometimes in the intestinal dejecta, sinuses, and suppurating wounds. **Ps. denitrif'icans,**[0] *B. denitrificans fluorescens*, a motile, acrobic, gram-negative, rod-shaped organism, occurring in the soil, which reduces nitrates. **Ps. pyocyan'ea,** *Ps. aeruginosa*.[0] **Ps. smarag'dina,**[0] *B. emaragdinus, fœtidus*, a species found in the nasal discharges in ozena. **Ps. syncyan'ea,**[0] *B. syncyaneus, B. cyanogenes, Vibrio syncyaneus*, motile, gram-negative, rod-shaped organisms with polar flagella, occurring singly or in chains, the cause of epidemics of blue milk.

pseudomorph (su'do-morf) [G. *pseudēs*, false, + *morphē*, form.] A mineral found crystallized in a form which is not proper to it but to some other mineral.

pseudomorphine (su-do-mor'fēn) [G *pseudēs*, false] Phormine, oxydimorphine, dehydromorphine, a derivative of morphine; a non-toxic principle having a chemical reaction practically the same as that of morphine.

pseudomucin (su-do-mu'sin) [G. *pseudēs*, false, + *mucin*] A glycoprotein, allied to mucin, found in certain cysts, especially of the ovary; unlike mucin, it is freely soluble in water.

pseudomus'cular hyper'trophy. See under *hypertrophy*.

pseudomycosis sarcinica (su-do-mi-ko'sis sar-sin'ĭ-ka). A chronic non-tuberculous pulmonary affection.

pseudomyxoma (su-do-miks-o'mah). A tumor containing mucoid or colloid matter introduced accidentally by the rupture of a neighboring mucous cyst **p. peritone'i,** the presence of colloid matter, from a ruptured ovarian cyst, in the peritoneal cavity.

pseudonarcotic (su-do-nar-kot'ik). Inducing sleep by reason of a sedative effect, but not directly narcotic.

pseudonarcotism (su-do-nar'ko-tizm). Stupor of hysterical nature, not induced by drugs.

pseudonavicella (su-do-nav-ĭ-sel'ah) [G. *pseudēs*, false, + L. *navicella*, dim. of *navis*, ship] The spore of a gregarine, so called because of its resemblance to a diatom of the genus *Navicella*.

pseudoneoplasm (su-do-ne'o-plazm) [G. *pseudēs*, false, + *neos*, new, + *plasma*, a thing formed.] An enlargement of non-neoplastic character which clinically resembles a true neoplasm so closely as often to be mistaken for such. 1. Phantom tumor. 2. A circumscribed fibrous exudate of inflammatory origin, temporary in character

pseudoneuroma (su-do-nu-ro'ma). A tumor on a nerve-trunk which contains no nerve substance, false neuroma.

pseudonuclein (su-do-nu'kle-in). A conjugated protein yielding, on hydrolysis, a protein and orthophosphoric acid.

pseudonucleolus (su"-do-nu-kle'o-lus) [G. *pseudēs*, false, + *nucleolus*.] One of the points of intersection of the chromatin network.

pseudonystagmus (su"do-nis-tag'mus). Symptomatic nystagmus, occurring in various diseases of the nervous system.

pseudoosteomalacia (su-do-os"te-o-mal-a'sĭ-ah) Rachitic softening of bone.

pseudoosteomalacic (su-do-os'te-o-mal-a'sik) Marked by pseudoosteomalacia. **p. pelvis,** a deformed pelvis similar to that produced by osteomalacia, but actually of rachitic causation.

pseudoparalysis (su-do-par-al'ĭ-sis). Apparent paralysis due to voluntary inhibition of motion because of pain, to incoordination, or other cause, but without actual paralysis. **arthrit'ic gen'eral p.,** a disease, occurring in arthritic subjects, having symptoms resembling those of general paresis,* the lesions of which consist of diffuse changes of a degenerative and non-inflammatory character due to intracranial atheroma. **congen'ital aton'ic p.,** amyotonia congenita.

pseudoparaplegia (su"do-păr-ă-ple'jĭ-ah). Apparent paralysis in the lower extremities, in which the tendon and skin reflexes and the electrical reactions are normal; the condition is sometimes observed in rickets.

pseudoparasite (su-do-par'ă-sīt) A commensal

pseudoparesis (su-do-par'e-sis). 1. Pseudoparalysis. 2. A condition marked by the papillary changes, tremors, and speech disturbances suggestive of early paresis, in which however, the serological tests are negative.

pseudopelletierine (su"do-pel-et'ĕr-ēn). An alkaloid, $C_9H_{15}NO\ 2H_2O$, contained in pomegranate bark granatonine, pseudopunicine.

pseudopeptone (su-do-pep'tōn) A mucoid substance in white of egg.

pseudopericardial (su-do-per-ĭ-kar'dĭ-al). Wrongly appearing to be related to the pericardium.

pseudoperitonitis (su-do-per-ĭ-ton-i'(e')tis). Peritonism.

pseudophlegmon (su-do-fleg'mon). A non-inflammatory circumscribed redness of the skin, due to a lesion of the nerves supplying the part.

pseudophotesthesia, pseudophotæsthesia (su-do-fotes-the'sĭ-ah) [G. *psuedēs*, false, + *phōs*(*phōt*-), light, + *aisthēsis*, sensation. Photism, a form of synesthesia in which a subjective sensation of light is produced by a stimulus to one of the other sense organs, such as taste, hearing, etc.

pseudophthisis (su-do-ti'(te')sis). A disease resembling pulmonary tuberculosis, but not such.

pseudoplasm (su'do-plazm). Phantom tumor.

pseudoplegia (su-do-ple'jĭ-ah) [G. *pseudēs*, false, + *plēgē*, a stroke.] Pseudoapoplexy.

pseudopneumococcus (su-do-nu-mo-kok'us). A diplococcus resembling somewhat the pneumococcus, but larger.

pseudopneumonia (su-do-nu-mo'nĭ-ah) [G. *pseudēs*, false.] A condition in which many of the symptoms of pneumonia—pleuritic pains, blood-streaked sputum, fever, rapid breathing—are present without the pulmonary lesions. **pericardit'ic p.,** a condition associated with pericarditis with effusion, in which dulness on percussion, bronchial breathing, and broncho-

phony over portions of the left lung suggest the presence of pneumonia.

pseudopod (su'do-pod). Pseudopodium.

pseudopodiospore (su-do-po'dĭ-o-spōr). Amœbula.

pseudopodium (su-do-po'dĭ-um) [G. *pseudēs*, false. + *pous(pod-)*, foot.] A temporary protoplasmic process, put forth by a protozoan for purposes of locomotion or for the prehension of food.

pseudoporencephalia (su-do-pōr-en-sĕ-fa'lĭ-ah). The presence of the lesions of porencephalia without marked symptoms.

pseudopsia (su-dop'sĭ-ah). Pseudoblepsia.

pseudopterygium (su-do-ter-ij'ĭ-um). Scar-pterygium, a pterygium of irregular shape following diphtheria, a burn, or other injury of the conjunctiva; pterygoid (2).

pseudoptosis (su-do-to'sĭs). Blepharochalasis.

pseudopunicine (su-do-pu'nĭ-sēn). Pseudopelletierine, see also *punicine*.

pseudorabies (su-do-ra'bĭ-ēz). Lyssophobia.

pseudoreaction (su-do-re-ak'shun). A false reaction, one not due to specific causes in a given test.

pseudorrheumatism (su-do-ru'mă-tizm). Rheumatoid arthritis, or other similar condition.

pseudoscarlatina (su-do-skar-lă-te'nah). Erythema with fever, due to food poisoning or sepsis.

pseudosclerosis (su"do-skle-ro'sis) [G. *psuedēs*, false + *sklērōsis*, hardening.] 1. Inflammatory induration or fatty or other infiltration simulating fibrous thickening. 2. Westphal's neurosis, hysteria characterized by the symptoms, except nystagmus, of multiple spinal sclerosis.

pseudosmia (su-doz'mĭ-ah). A subjective sensation of an odor that is not present.

pseudostoma (su-dos'to-mah) [G. *pseudēs*, false, + *stoma*, mouth] An apparent opening in a cell, membrane, or other tissue, due to a defect in staining or other cause.

pseudostructure (su"do-struk'chūr) [G. *pseudēs*, false.] Reticular substance (1)*.

pseudotabes (su-do-ta'bēz). Pseudataxia.

pseudotrichiniasis (su-do-trĭ-kin-ı'-a-sis) [G *pseudēs*, false.] Multiple myositis *

pseudotrichinosis (su-do-trĭ-kin-o'sis) Pseudotrichiniasis

pseudotropine (su-do-tro'pēn). 1. An isomer of tropine. 2. Oscine.

pseudotuberculosis (su"do-tu-ber-ku-lo'sis) [G. *pseudēs*, false.] A disease characterized anatomically by the production of tubercles, but not due to the presence of *Bacillus tuberculosis*.

pseudotumor (su-do-tu'mor). Pseudoneoplasm.

pseudotyphoid (su"do-ti'foyd) One of the various diseases, such as paratyphoid, resembling typhoid fever, but not due to *Bacillus typhosus*.

pseudovacuole (su-do-vak'u-ōl). An apparent vacuole in a cell, either an artefact or an intracellular parasite.

pseudoventricle (su-do-ven'trĭ-kl). Fifth ventricle of the brain, cavum septi pellucidi [BNA].

pseudovomiting (su-do-vom'ıt-ing) [G. *pseudēs*, false.] Regurgitation of matter from the esophagus or stomach without expulsive effort.

pseudoxanthine (su-do-zan'thin). A leucomaine from muscular tissue, $C_4H_6N_6O$.

pseudoxanthoma (su"do-zan-tho'mah). A degenerative disease of the skin, marked by the occurrence of slightly elevated yellowish patches on the abdomen, neck, and other parts of the surface, containing degenerated elastic fibers.

pseudozooglœa (su"do-zo-og-le'ah) [G. *pseudēs*, false, + *zōon*, animal, + *gloia*, glue.] A clump of bacteria, resembling externally a zooglœa mass, but wanting its compactness and gelatinous binding material.

psilosis (si-lo'sis) [G. a stripping.] 1. Sprue (2). 2. Falling of the hair.

psilothin (sil'o-thin). A depilatory plaster applied warm to a hairy surface, and torn off when cool, bringing with it the hairs.

psilothron (sil'o-thron) [G.] A depilatory.

psilotic (si-lot'ik). 1. Relating to psilosis. 2. Depilatory.

psittacosis (sit-ă-ko'sis) [G. *psittakos*, a parrot.] An infectious disease of birds, especially parrots; it is characterized by diarrhea, loss of appetite, wasting, and ruffling of feathers; it is sometimes transmitted to man in whom the symptoms are headache, nausea, epistaxis, constipation, and fever preceded by a chill, and usually with added symptoms of bronchopneumonia. The causal agent is as yet unknown: the claim to pathogenicity of *Salmonella psittacosis* has apparently been disproved, as have those of various other organisms.

psoas (so'as) [G. *psoa*, the loins.] See under *musculus*. **p. abscess**, a cold or gravity abscess in the sheath of the psoas major muscle, the pus coming usually from tuberculous disease of the vertebra and pointing finally in the anterior and inner side of the thigh.

psodymus (sod'ĭ-mus) [G. *psoa*, loins, + *didymos*, twin.] A twin monster, single from the lumbar region downward, having therefore but two legs with occasionally a rudimentary third one.

psoitis (so-i'(e')tis). Inflammation of the psoas major muscle, usually the result of a psoas abscess

psomophagia, psomophagy (so-mo-fa'jĭ-ah, so-mof'a-jĭ) [G. *psōmos*, morsel, bit, + *phagō*, I eat.] The practice of swallowing the food without thorough mastication; bolting the food. The opposite of *poltophagy*.

psora (so'rah) [G.] 1. Scabies. 2 Psoriasis. 3. Hahnemann's term for the "itch dyscrasia," defined as the parent of all chronic diseases—skin diseases, neoplasms, insanity, etc.; it was similar to, though of more extended application than, the "herpetic diathesis" of French writers. **p. leproʻsa**, psoriasis.

psorelcosis (so-rel-ko'sis) [G. *psōra* itch, + *helkōsis* ulceration.] Ulceration resulting from scabies.

psorenteria (so-ren-ter'ĭ-ah) [G. *psōra*, scabies, + *enteron*, intestine.] Inflammatory swelling of the solitary follicles of the intestine, in typhoid fever, cholera, and other affections.

psorenteritis (so-ren-ter-i'(e')tis). Psorenteria.

psoriasic (so-rĭ-as'ik). Psoriatic.

psoriasiform (so-rĭ-as'ĭ-form) [G *psōriasis* + L. *forma*, form.] Resembling psoriasis.

psoriasis (so-ri'a-sis) [G. *psōriasis; psōra*, the itch.] A skin disease consisting in an eruption of circumscribed rounded patches of a red color covered with adherent white scales, occurring chiefly on the extensor surfaces of the elbows and knees, the scalp, and the back. **p. annulaʻris, p. annulaʻta,** p circinata. **p. buccaʻlis,** leucoplakia. **p. circinaʻta,** p. in which healing is taking place at the center while the process continues at the periphery, producing a ring-shaped lesion. **p. diffuʻsa,** diffused p., a form with more or less coalescence of the lesions. **p. guttaʻta** [L. *gutta*, drop], p. occurring in round patches of small size, giving the appearance of a rain-bespattered surface. **p. gyraʻta,** p. circinata in which there is a coalescence of the rings giving rise to figures of various outlines. **p. invetaraʻta,** a form in which the lesions are confluent, the affected skin being

thickened, indurated, and scaly. **p. lin'guæ,** leucoplakia. **p. nummula'ris,** p. with flat elevated lesions the size of a quarter or of a half-dollar. **p. orbicula'ris,** p. circinata. **p. puncta'ta,** p. in which the individual lesions are papules, each red in color, and tipped with a single white scale. **p. rupioid'es,** a form in which crusts resembling rupia are formed on the skin. **p. universa'lis,** generalized p.

psoriatic (so-rĭ-at'ik). Relating to psoriasis.

psoric (so'rik). Relating to scabies, psorous.

psorinum (so-rī'num). A homeopathic nosode prepared from the contents of the itch vesicle; it is employed in cases marked by profuse sweating, an offensive odor from the body, or headache with hunger.

psoroid (so'royd) [G. *psōra*, scabies, + *eidos*, resemblance] Resembling scabies.

psorophthalmia (so-rof-thal'mĭ-ah). A pruritic ulcerative inflammation of the margins of the eyelids.

psorosperm (so'ro-sperm) [G. *psōros*, scabby, + *sperma*, seed.] A term loosely applied to parasitic sporozoa other than those infecting the blood-corpuscles; one of the psorospermiæ.

psorospermiæ (so-ro-sper'mĭ-e) [G. *psōros*, scabby, + *sperma*, seed] Coccidia-like protozoan organisms.

psorospermial, psorospermic (so-ro-sper'mĭ-al, so-ro-sper'mik). Relating to psorospermiæ.

psorospermosis (so-ro-sper-mo'sis) [G. *psōra*, itch, + *sperma*, seed.] Infection with sporozoa other than the hæmosporidia, with the so-called "psorosperms." **p. follicularis,** keratosis follicularis contagiosa, Brooke's disease, a contagious form of Darier's disease. **p. follicula'ris veg'etans,** keratosis follicularis, ichthyosis follicularis, Darier's disease.

psorous (so'rus). Psoric.

P.S.P. Abbreviations, chiefly used in laboratory reports, for the *p*henolsulphon *p*hthalein test.

psychalgalia (si-kal-ga'lĭ-ah) [G. *psychē* mind, + *algos*, pain] Psychalgia, algopsychalia.

psychalgia (si-kal'jĭ-ah) [G *psychē*, mind, + *algos*, pain] Mind-pain, soul-pain; distress attending a mental effort, noted especially in melancholia.

psychanal'ysis (si-kan-al'i-sis.) Psychoanalysis.

psychasthenia (si-kas-the'nĭ-ah; si-kas-the-ni'ah) [G. *psychē*, mind, + *astheneia*, weakness.] A mild psychosis or psychoneurosis marked especially by lack of self-control, in consequence of which the patient is dominated by morbid fears or doubts, impulsions to unreasoning and consciously wrong or foolish acts, fixed ideas, etc., and suffers from a sense of unusualness or unreality in himself and his surroundings.

psychataxia (si-kă-tak'sĭ-ah) [G. *psychē*, mind, + *ataxia*, confusion.] Mental confusion, inability to fix the attention or to make any continued mental effort.

psyche (si'ke) [G. mind, soul.] 1. The cerebrospinal nervous system. 2. The mind.

psycheclampsia (si-kĕ-klamp'sĭ-ah) [G. *psychē*, mind, + *eklampsis*, a flashing out.] A mental convulsion, acute mania.

psycheism (si'ke-izm) [G. *psychē*, soul.] Animal magnetism, hypnotism.

psychiater (si-kī-a'ter) [G. *psychē*, mind. + *iatros*, physician.] Psychiatrist.

psychiatria (si-kī-a'trĭ-ah). Psychiatry.

psychiatric (si-kĭ-at'rik). Relating to psychiatry.

psychiatrics (si-kĭ-at'riks). Psychiatry.

psychiatrist (si-ki'ă-trist). An alienist, a specialist in diseases of the mind, one who practises psychiatry.

psychiatry (si-ki'ă-trĭ) [G. *psychē*, mind, + *iatreia*, medical treatment.] The recognition and treatment of diseases of the mind.

psychic (si'kik) [G. *psychikos*, relating to the mind.] 1. Relating to the mind or soul, mental. 2. A person who is supposed to be endowed with the power of communicating with spirits, a spiritualistic medium. **p. force,** mental power, a force generated by thought or mental action, apart from energy or physical force.

psychical (si'kĭ-kal). Psychic (1).

psychics (si'kiks). Psychology.

psychinosis (si-kĭ-no'sis) [G. *psychē*, mind, + *nosos*, disease.] A functional nervous disease; psychonosis.

psychism (si'kism) [G. *psychē*, soul] The theory of a principle of life pervading all nature

psychlampsia (si-klamp'sĭ-ah) Psycheclampsia.

psychoanalysis (si-ko-an-al'i-sis) [G. *psychē*, soul, mind, + *analysis*.] Psychanalysis, an examination into the mental condition by means of a careful analysis and comparison of the symptoms both subjective and objective.

psychoauditory (si"ko-aw'dĭ-to-rĭ) [G. *psychē*, mind + L. *auditorius; audire*, to hear.] Relating to the mental perception and interpretation of sounds.

psychobiology (si"ko-bi-ol'o-jĭ) [G. *psychē*, mind, + *bios*, life, + *logia*.] "The science of personality-formation and personality-function."

psychochrome (si'ko-krōm) [G. *psychē*, mind, + *chrōma*, color.] A certain color mentally conceived in response to a sense impression; see *psychochromesthesia*.

psychochromesthesia, psychochromæsthesia (si"ko-krōm-es-the'sĭ-ah) [G. *psychē*, mind, + *chrōma*, color, + *aisthēsis*, sensation.] A form of synesthesia in which a certain stimulus to one of the special organs of sense produces the mental image of a color. See *pseudophotesthesia*.

psychocinesia (si"ko-sin-e'sĭ-ah) [G. *psychē*, mind, + *kinēsis*, movement.] Impulsive insanity.

psychocortical (si"ko-kor'tĭ-kal) [G. *psychē*, mind, + L. *cortex*, rind, bark] Relating to the cortex of the brain as the seat of the mind. **p. center,** psychomotor* center.

psychodometry (si-ko-dom'e-trĭ) [G. *psychē*, mind, + *hodos*, way, + *metron*, measure] The measurement of the rapidity of mental action.

psychodynamics (si-ko-di-nam'iks) [G. *psychē*, soul, + *dynamis*, power.] The science of mental force or action.

psychoepilepsy (si"ko-ep'i-lep-sĭ). Psychic lepiepsy.*

psychogenesis (si-ko-jen'e-sis) [G. *psychē*, soul, spirit, + *genesis*, origin.] The development of the mind or of the mental faculties.

psychogenet'ic, psychogen'ic [G. *psychē*, mind, + *gennaō*, I produce] 1 Of mental origin or causation. 2. Relating to mental development, or psychogenesis.

psychogeny (si-koj'en-ĭ). Psychogenesis

psychognosis (si-kog-no'sis) [G. *psychē*, soul, mind, + *gnōsis*, knowledge.] Diagnosis of the mental or psychic state, both conscious and unconscious.

psychognostic (si-kog-nos'tik). Relating to psychognosis.

psychogram (si'ko-gram) [G *psychē*, soul, + *gramma*, a writing.] The visualization of a mental concept, the thing thought of being subjectively seen.

psychographic (si-ko-graf'ik) [G. *psychē*, mind, soul, *graphikos*, from *graphē*, a writing.] Relat-

ing to a psychogram. **p. distur'bances,** the employment of a bombastic and inflated style as a symptom of a psychoneurosis.

psychokinesis (si-ko-kin-e'sis). Psychocinesia

psycholagny (si-ko-lag'nĭ) [G. *psychē*, mind, + *lagneia*, lewdness.] Sexual excitement and satisfaction from mental imagery.

psycholepsy (si'ko-lep-sĭ) [G. *psychē*, mind, + *lēpsis*, an attack, a seizure.] 1. A slight seizure, such as of temporary confusion, tachycardia, temporary blindness, in psychasthenic or hysterical subjects; paralepsy. 2. Psychic epilepsy.*

psychological (si-ko-loj'ĭ-kal). Relating to psychology, relating to the mind and its processes.

psychologist (si-kol'o-jist). One making a special study of, or versed in, psychology.

psychology (si-kol'o-jĭ) [G. *psychē*, mind, + *-logia*.] The science which deals with the mind and mental processes—consciousness, sensation, ideation, memory, etc. **compar'ative p.,** the study of instinct and of mental action in the lower animals. **crim'inal p.,** the study of the mind and its workings in relation to crime. **experimen'tal p.,** the study of mental action by means of various tests and experiments. **genet'ic p.,** a science dealing with the evolution of mind and the relation to each other of the different types of mental activity. **objec'tive p.,** p. as studied by observation of the mental workings in others than the observer. **subjec'tive p.,** the study of one's own mind and its various modes of action as a basis for psychological deductions.

psychomathematics (si'ko-mă-the-mat'iks) [G. *psychē*, mind, + *mathēmatikos*, relating to the sciences.] The use of certain formulas in working out variations of human character and capabilities.

psychometry (si-kom'ĕ-trĭ) [G. *psychē*, mind, + *metron*, measure.] Measurement of the duration and force of mental processes.

psychomotor (si-ko-mo'tor). Relating to the mental origin of muscular movement, to the production of voluntary movements. **p. center,** the part of the cerebral cortex around the central fissure, embracing the centers of voluntary muscular movement, psychocortical center.

psychoneurosis (si-ko-nu-ro'sis) [G. *psychē*, mind, + *neuron*, nerve.] One of a group of minor diseases of the mind which are not actually insanities. **defense p.,** Freud's term for hysteria and various neuroses and psychoses caused by some idea or sensation so painful that the sufferer endeavors to dismiss it from the mind; at times, instead of being absolutely forgotten, the thought sinks down into the subconsciousness and acts as the hidden cause of the psychoneurotic disturbances. **p. maid'ica,** pellagra.

psychonomy (si-kon'o-mĭ) [G. *psychē*, mind, + *nomos*, law.] The branch of psychology treating of the laws of mental action.

psychonosema (si-ko-no-se'ma) [G. *psychē*, mind, + *nosēma*, a disease.] Any mental disease.

psychonosis (si-kŏ-no'sis) [G. *psychē*, mind, + *nosos*, disease.] Psychonosema, psychopathy.

psychoparesis (si-ko-par'e-sis) [G. *psychē*, mind, + *paresis*, weakness.] Mental weakness.

psychopath (si'-ko-path). The subject of a psychosis or psychoneurosis; especially one who is of apparently sound mind in the ordinary or extraordinary affairs of life, but who is dominated by some abnormal sexual, criminal or passional instinct.

psychopathia (si-ko-path'ĭ-ah) [G. *psychē*, mind, + *pathos*, suffering.] Psychopathy. **p. martial'is,** shell-shock.

psychopathic (si-ko-path'ik). 1. Relating to mental disease. 2. Relating to psychotherapy. 3. A delirious or an insane person. **p. ward,** a ward in a general hospital for the reception and temporary treatment of the insane.

psychopathist (si-kop'ă-thist). Psychiatrist, alienist.

psychopathologist (si-ko-pă-thol'o-jist). A person who devotes special attention to a study of the morbid changes occurring in mental diseases.

psychopathology (si-ko-pă-thol'o-jĭ) [G. *psychē*, mind, + *pathos*, suffering, + *-logia*.] The pathology of diseases of the mind.

psychopathy (si-kop'ă-thĭ) [G. *psychē*, mind, + *pathos*, suffering.] 1. Psychopathia, psychonosema, psychonosis, psychosis, any disorder of the mind, congenital or acquired. 2. Psychotherapy.

psychophysical (si-ko-fiz'ĭ-kal) [G. *psychē*, mind, + *physikos*, physical.] Relating to the mental perception of physical stimuli.

psychophysics (si-ko-fiz'iks). The science of the relation between mental action and physical phenomena.

psychophysiology (si-ko-fiz-ĭ-ol'o-jĭ) [G. *psychē*, mind, + *physis*, nature, + *-logia*.] Physiology in relation to the mind and its processes.

psychoplasm (si'ko-plazm) [G. *psychē*, mind, soul, + *plasma*, thing formed.] Archyle,* protyle.

psychoplegia (si-ko-ple'jĭ-ah) [G. *psychē*, mind, + *plēgē*, stroke.] Mental weakness or dementia of sudden onset.

psychoplegic (si-ko-ple'jik). 1. Relating to psychoplegia. 2. An agent which benumbs mental action.

psychoreaction (si-ko-re-ak'shun) Much*-Holzmann reaction

psychorrhagia (si-ko-ra'jĭ-ah) [G. *psychē*, mind, + *rhēgnymi*, I break forth.] The death agony.

psychorrhythmia (si-ko-rith'mĭ-ah) [G. *psychē*, mind, + *rhythmos*, rhythm.] Involuntary repetition by the mind of its formerly volitional action.

psychosensorial (si-ko-sen-so'rĭ-al) Psychosensory

psychosensory (si-ko-sen'so-rĭ). 1. Noting the mental perception and interpretation of sensory stimuli. 2. Noting an hallucination which the mind by an effort is able to distinguish from an actuality.

psychosis (si-ko'sis) [G. an animating.] 1. Any mental state or condition. 2. A disorder of the mind, insanity. **anxi'ety p.,** a functional mental disturbance marked by anxiety, restlessness, and depression. **exhaus'tion p.,** a confusional insanity following a surgical operation, profuse hemorrhage, or other depressing event. **feb'rile p.,** infection-exhaustion p. **infec'tion-exhaus'tion p.,** confusional insanity, a p. following an acute infection, shock, or chronic intoxication; it begins as delirium followed by pronounced mental confusion with hallucinations and unsystematized delusions and sometimes stupor; recovery is frequent. **involu'tional p.,** mental disturbance occurring at the menopause or, in either sex, in the senescent or senile period. **man'ic-depres'sive p.,** one marked by alternations of excitement and depression, with or without intervals of apparent mental health; see *circular insanity** and *insanity** *of double form*. **polyneurit'ic p.,** Korsakoff's* psychosis. **sen'ile p.,** mental disturbance occurring in old age and due to degen-

erative cerebral processes. **situa'tion p.,** a transitory mental disorder caused in a predisposed person by a seemingly unbearable situation. **tox'ic p.,** confusional insanity due to the action of some exogenous poison or to autotoxemia.

psychotechnics (si-ko-tek'niks) [G. *psychē*, mind, + *technē*, art, skill.] The practical application of psychological methods in the study of economics, sociology, and other problems.

psychotherapeutics (si"ko-ther-ă-pu'tiks) [G. *psychē*, soul, spirit, + *therapeuō*, I heal.] Psychotherapy.

psychotherapy (si"ko-ther'ă-pĭ) [G. *psychē*, soul, spirit, + *therapeia*, healing.] 1. Treatment of disease by suggestion. 2. Treatment of mental disorders, psychiatry.

psychotic (si-kot'ik). Relating to a mental disorder.

psychotrine (si'ko-trēn) [*Psychotria*, a genus of gamopetalous plants to which belongs ipecac.] An alkaloid present in small amount in ipecac; it possesses low toxicity and poor amebicidal properties.

psychroalgia (si-kro-al'jĭ-ah) [G. *psychros*, cold, + *algos*, pain.] A painful sensation of cold.

psychroesthesia, psychroæsthesia (si-kro-es-the'zĭ-ah) [G. *psychros*, cold, + *aisthēsis*, sensation.] 1. The form of sensation which perceives cold. 2. A sensation of cold although the body is warm; a chill.

psychrometer (si-krom'e-ter) [G. *psychros*, cold, + *metron*, measure.] A form of hygrometer, in which the relative humidity of the atmosphere is determined by a comparison of the readings of two thermometers, one of which is a wet-bulb thermometer.

psychrophilic (si-kro-fil'ic) [G. *psychros*, cold, + *phileō*, I love.] Preferring cold; thriving best at a low temperature, said of bacteria developing between the extremes of 0° and 30° C. (32° and 86° F.), with an optimum of 15° to 20° C. (59° to 68° F.).

psychrophobia (si-kro-fo'bĭ-ah) [G. *psychros*, cold, + *phobos*, fear] Extreme sensitiveness to cold, a morbid dread of cold.

psychrophore (si'kro-fōr) [G. *psychros*, cold, + *phoros*, bearing.] An instrument in the form of a double catheter through which cold water is made to circulate in order to apply cold to the urethra or other canal or cavity.

psychrotherapy (si-kro-ther'ă-pĭ) [G. *psychros*, cold, + *therapeia*, treatment.] Treatment of disease by the application of cold in any form.

psylla (sil'lă). Trade name of a preparation of psyllium* seed, used for the relief of constipation.

psyllium (sil'lĭ-um). The seeds of *Plantago psyllium*, a plant native to Asia Minor and Greece. The seed contains an abundance of mucilaginous material which, when ingested, takes up water, forming a soft coherent gelatinous mass in the intestine; used like agar, bran, and other roughage to give bulk to the intestinal contents in cases of sluggish action.

ptarmic (tar'mik) [G. *ptarmikos*, causing to sneeze.] 1. Causing sneezing. 2. An agent which provokes sneezing, a sternutatory.

ptarmus (tar'mus) [G. *ptarmos*, sneezing.] Sneezing.

ptelea (tel'e-ah) [G. *ptelea*, elm.] The bark of *Ptelea trifoliata*, shrubby trefoil, hop-tree, wingseed; it contains an alkaloid resembling, if not identical with, berberine; employed as a tonic and appetizer in doses of ℞15–30(1.0–2.0) of a fluidextract; employed in eclectic practice as a bitter tonic in disorders of the stomach and intestine, and in asthma with a sense of constriction in the chest, in doses of ℞1–20 (0.06–1.3) of the specific preparation.

ptelein (tel'e-in). An alcoholic extract of ptelea, tonic in doses of gr. 1–3 (0.06–0.2).

ptelia (tel'ĭ-ah). Ptelea.

pterion (te'ri-on) [G. *pteron*, wing.] A craniometric point in the region of the anterolateral, or sphenoid, fontanelle, at the junction of the great wing of the sphenoid, the squamous temporal, the frontal, and the parietal bones.

pternal'gia (ter-nal'jĭ-ah) [G. *pterna*, heel, + *algos*, pain.] Pain in the heel.

pterygium (ter-ij'ĭ-um) [G. *pterygion*, dim. of *pteryx*, wing.] 1. A triangular patch of hypertrophied bulbar conjunctiva and subconjunctival tissue, extending usually from the inner canthus to the border of the cornea or beyond, with apex pointing toward the pupil. 2. A forward growth of the eponychium with adherence to the surface of the nail.

pterygoid (ter'ĭ-goyd) [G. *pteryx(pteryg-)*, wing, + *eidos*, resemblance.] 1. Wing-shaped, alate; a term applied to various anatomical parts in the neighborhood of the sphenoid bone. 2. False or cicatricial pterygium, pseudopterygium. **p. artery,** see under *arteria*. **p. canal,** Vidian canal, canalis* pterygoideus. **p. chest,** phthinoid* chest. **p. depression,** fovea pterygoidea. **p. fissure,** see under *fissura*. **p. fossa,** see under *fossa*. **p. muscle,** see under *musculus*. **p. nerve,** see under *nervus*. **p. notch,** fissura pterygoidea. **p. pit,** fovea pterygoidea. **p. plates,** lamina lateralis, and lamina medialis. **p. plexus,** see under *plexus*. **p. proc'esses,** processus pterygoideus, and processus pyramidalis. **p. tu'bercle,** a slight prominence on the posterior surface of the lamina medialis of the sphenoid bone, below and to the inner side of the Vidian canal.

pterygomandibular (ter-ĭ-go-man-dib'u-lar). Relating to the pterygoid process and the mandible. **p. lig'ament,** raphe pterygomandibularis.

pterygomaxillary (ter-ĭ-go-maks'il-a-ri). Relating to the pterygoid process and the maxilla. **p. fossa,** fossa pterygopalatina. **p. lig'ament,** raphe pterygomandibularis.

pterygopalatine (ter"ĭ-go-pal'ă-tin). Relating to the pterygoid process and the palate bone. **p. fossa,** see under *fossa*. **p. groove,** sulcus pterygopalatinus.

pterygophore (ter'e-go-for) [G. *pteryx(pteryg-)*, wing, + *phoros*, bearing.] One of the cartilaginous processes extending into the lateral fold of skin constituting the most primitive form of limb; actinophore.

pterygospinous (ter-ĭ-go-spi'nus). Noting a process of the pterygoid plate of the sphenoid bone. Civinini's process, processus* pterygospinosus. **p. mus'cle,** a muscular slip occasionally arising from the spine of the sphenoid bone and inserted into the hinder margin of the outer pterygoid plate.

ptilosis (til-o'sis) [G.] Loss of the eyelashes.

ptisan (tiz'an) [G. *ptisanē*.] A decoction or "tea" of pleasant taste and little medicinal virtue.

P.T.O. [Ger. *Perlsucht-tuberculin original*.] A tuberculin prepared, in the same way as Koch's original tuberculin (T.O.A.), from bovine tubercle bacilli; Klemperer's tuberculin.

ptomaine (to'mah-ēn) [G. *ptōma*, a corpse.] A substance, resembling in properties an alkaloid, formed during the decomposition of dead animal or vegetable matter; it is an amine, a late degradation protein product. Some ptomaines are extremely toxic, some raise the blood pressure,

some are apparently innocuous; called also cadaveric alkaloid. See *Leucomaine.*

ptomainemia, ptomainæmia (to″mah-in-e′mĭ-ah) [G. *haima*, blood.] A condition resulting from the presence of a ptomaine in the circulating blood.

ptomainotoxism (to″mah-ēn-o-toks′izm) [*ptomaine* + *toxism.*] Poisoning by any ptomaine.

ptomatine (to′mah-tēn). Ptomaine.

ptomatopsy (to′mă-top-sĭ) [G. *ptōma*, corpse, + *opsis*, vision.] Inspection of a dead body; autopsy.

ptomatropine (to-mat′ro-pēn). A ptomaine having poisonous properties similar to those of atropine, found in the tissues of those dead of typhoid fever.

ptosis (to′sis) [G. *ptōsis*, a falling.] 1. A falling or sinking down of any organ. 2. Specifically a drooping of the upper eyelid, due to a fault of development, to paralysis of the levator palpebræ muscle, to a weighting of the lid by a tumor, or to recession of the supporting eyeball. **false p.,** pseudoptosis, blepharochalasis.* **morn′ing p., wa′king p.,** a functional paralysis of the upper lid, occurring temporarily in the anemic or neurotic on awaking. **p. adipo′sa,** blepharochalasis. **p. sympathet′ica,** Horner's symptom-complex. **vis′ceral p.,** splanchnoptosia.

ptotic (tot′ik). Relating to or marked by ptosis.

P.T.R. [Ger. *Perlsucht-tuberculin rest.*] A tuberculin prepared, in the same way as Koch's new tuberculin (T.R.), from bovine tubercle bacilli.

ptyalagogue (ti-al′o-gog) [G. *ptyalon*, saliva, + *agōgos*, leading.] 1. Producing a flow of saliva, sialagogue. 2. An agent which increases the flow of saliva.

ptyalin (ti′al-in) [G. *ptyalon*, saliva.] A diastatic enzyme in saliva, which converts starch into maltose.

ptyalinogen (ti-al-in′o-jen) [*ptyalin* + G. *gennaō*, I produce.] A substance assumed to exist in the secreting cells of the salivary glands, from which ptyalin is formed.

ptyalism (ti′al-izm) [G. *ptyalismos*, much spitting.] Salivation, sialism: sialorrhea, an excessive secretion of saliva.

ptyalize (ti′al-īz) [G. *ptyalizō*, I spit much.] To salivate, to increase the secretion of saliva.

ptyalocele (ti′al-o-sēl) [G. *ptyalon*, saliva, + *kēlē*, tumor.] A salivary cyst; cystic dilatation of a salivary duct. **sublin′gual p.,** ranula

ptyalogenic (ti-al-o-jen′ik) [G. *ptyalon*, saliva, + *gennaō*, I produce.] Formed from saliva; of salivary origin.

ptyalography (ti-al-og′ră-fĭ) [G. *ptyalon*, saliva, + *graphō*, I write.] Sialography.

ptyalolith (ti′ă-lo-lith) [G. *ptyalon*, saliva, + *lithos*, stone.] A salivary* calculus.

ptyalolithi′asis. The formation or the presence of a salivary* calculus.

ptychodont (tĭ′ko-dont) [G. *ptychōdēs*, in folds, + *odous*(*odont-*), tooth.] Noting an animal in which the crowns of the molar teeth are folded.

ptyocrinous (ti-ok′rĭ-nus) [G. *ptyo*, I spit out, + *krinō*, I separate.] Apocrine, secreting by discharge of the contents of the cell, as in the mucous cells; opposed to diacrinous or exocrine (2).

pu′beral. Relating to puberty.

pu′berty [L. *pubertas; puber*, grown up] The age at which the reproductive organs become developed, 13 to 16 years in boys, 12 to 14 in girls; in law the ages of presumptive puberty are 12 years in girls and 14 years in boys.

pubes (pu′bēz) [L. the hair on the genitals.] 1. The mons Veneris, the pubic region. 2. The pubic hairs. 3. Os pubis, the pubic bone; also, as if plural of *pubis*, both pubic bones.

pubescence (pu-bes′ens). The coming to the age of sexual maturity.

pubes′cent [L. *pubescere*, to be reaching the virile age.] Just coming to the age of puberty.

pu′bic. Relating to the os pubis. **p. angle,** the angle formed by the crest of the pubis and the symphyseal border. **p. arch,** the arch formed by the diverging descending rami of the p. bones. **p. body,** the portion of the p. bone at the junction of the ascending and descending rami. **p. bone,** os pubis. **p. crest,** the upper edge of the p. body between the tubercle and symphysis. **p. lig′aments,** four ligaments at the symphysis; *anterior, posterior, superior,* and *inferior* or *subpubic* (ligamentum arcuatum pubis). **p. ramus,** one of the two branches of the body of the pubis. the *ascending* ramus, ramus superior [BNA], extending from the body to the point of junction with the ilium; the *descending* ramus, ramus inferior [BNA], passing outward and downward from the body to join the ramus of the ischium. **p. spine,** tuberculum pubicum [BNA]. **p. sym′physis,** the immovable joint between the two pubic bones. **p. tu′bercle,** tuberculum pubicum.

pubiot′omy [L. *pubes* + G. *tomē*, a cutting Hebotomy.

pu′bis. 1. Os pubis. 2. [BNA] One of the pubic hairs, the hair of the pubic region just above the external genitals.

pubocap′sular. Relating to the pubis and the capsule of the hip-joint, noting the *ligamentum pubocapsulare* passing from the superior ramus of the pubis to the capsule of the hip-joint.

pubococcygeal (pu-bo-kok sij′e-al). Relating to the pubis and the coccyx, noting a muscle, musculus* pubococcygeus.

pubofem′oral. Relating to the os pubis and the femur, noting a ligament, ligamentum pubocapsulare, passing from the superior ramus of the pubis to the capsule of the hip-joint.

puboprostat′ic. Relating to the pubic bone and the prostate gland, noting the *p. ligament* passing from either side of the symphysis pubis to the neck of the bladder over the anterior surface of the prostate.

pubotib′ial. Relating to the os pubis and the tibia noting the short adductor muscle of the leg

puboves′ical. Relating to the pubic bone and the bladder. **p. lig′ament,** puboprostatic* ligament. **p. muscle,** see under *musculus.*

puden′da. Plural of *pudendum.*

puden′dal. Relating to the pudenda, pudic.

puden′dum, pl. *pudenda* [L. *pudere*, to be ashamed.] The external genitals, especially the female genitals, the vulva. Used also in the plural. **p. mulieb′re** [BNA], vulva, the external genital organs of the female, the rima pudendi and the labia majora bounding it.

pu′dic [L. *pudicus*, modest.] Pudendal.

puericulture (pu-er′ĭ-kul-chur) [L. *puer*, boy, child, + *cultura*, culture.] 1. The care and training of children. 2. The antenatal care of the child by attention to the hygiene, mental and physical, of the pregnant woman.

puerile (pu′ĕ-ril). Relating to a child, childish, childlike. **p. respira′tion,** the type of respiration as heard in auscultation of children, possessing less of the vesicular character of the adult respiratory sound.

puerilism (pu′ur-il-izm) [L. *puer*, child.] Second childhood, childishness.

puerpera (pu-ur′pĕ-rah) [L. *puer*, child, + *parere*, to bring forth.] A parturient woman, one who is giving, or has recently given, birth to a child

puerperal (pu-ur'pĕ-ral). Relating to childbirth. **p. convul'sions, p. eclamp'sia,** convulsions, usually uremic in character, occurring in a parturient woman. **p. fever,** septicemia occurring after childbirth. **p. insan'ity,** mania or other mental disorder occurring during the puerperal period. **p. pe'riod,** the first week or ten days following childbirth. **p. sepsis, p. septice'mia,** p. fever. **p. state,** puerperium. **p. woman,** puerpera.

puerperalism (pu-ur'pĕ-ral-izm). Any disorder consequent upon childbirth.

puer'perant. 1. Relating to the puerperium, puerperal. 2. A puerpera.

puerperium (pu-ur-pe'rĭ-um) [L.] The puerperal state, the period from the termination of labor to complete involution of the uterus.

puerperous (pu-ur'pĕ-rus). Puerperal.

puff. A whiff, a short blowing sound heard on auscultation. **veiled p.,** a faint pulmonary murmur, simulating the muffled flapping of a cloth in the wind.

puff-ball. Lycoperdon.

pugill'us [L.] A handful, a rough measure of quantity sometimes used in directions for making an infusion or decoction of an innocuous drug

Pukall filter (poo'kal) [Wilhelm *Pukall*, German chemist, *1860.] A filter in which the fluid is sucked through a thick layer of incinerated kaolin.

puke-weed. Lobelia.

Pu'lex [L. flea.] A genus of insects, of the family *Pulicidæ*. **P. cheopis** (ke'o-pis), the rat flea, believed to be the active agent in the dissemination of plague. **P. fascia'tus,** the rat flea which may also attack man. **P. irr'itans,** the common flea which infests man. **P. pal'lipes,** a flea found on rats and occasionally attacking man. **P. pen'etrans,** *Sarcopsylla penetrans, Dermatophilus penetrans,* chigoe, jigger. **P. serrat'iceps,** the dog flea, infesting dogs and cats, and often man; said to be a carrier of *Leishmania infantum*.

pulicicide, pulicide (pu-lis'ĭ-sīd, pu'lĭ-sīd) [L. *pulex*, flea, + *cædere*, to kill.] Any agent destructive to fleas.

pullulate (pul'u-lāt) [L. *pullulare*, to sprout forth.] To germinate.

pullulation (pul-u-la'shun). The act of germinating

pul'mo, gen. *pulmo'nis*, pl. *pulmo'nes* [L.] Lung.

pulmoaortic (pul"mo-a-or'tik). Relating to the pulmonary artery and the aorta

pulmom'eter [L. *pulmo*, lung, + G. *metron*, measure.] Pneumatometer, spirometer

pulmom'etry. Spirometry, pneumatometry, the measurement of the respiratory capacity of the lungs.

pulmonary (pul'mŏ-na-rĭ). Relating to the lungs, to the pulmonary artery, or to the aperture leading from the right ventricle into the pulmonary artery. **p. a'rea,** the region of the chest at the second left intercostal space, where sounds produced at the pulmonary orifice of the right ventricle are heard most distinctly. **p. incom'petency, p. insuffi'ciency,** deficient closure of the p. valve. **p. steno'sis,** narrowing of the opening into the p. artery from the right ventricle.

pulmonec'tomy [L. *pulmo(pulmon-)*, lung, + G. *ektomē*, excision.] Pneumonectomy

pulmon'ic. 1. Pulmonary. 2. A sufferer from disease of the lungs 3. A remedy for diseases of the lungs.

pul'monin. Trade name of an extract from the lungs of calves, recommended in diseases of the respiratory organs.

pulmonitis (pul-mo-ni'(ne')tis) [G. *pulmo(pulmon-)*, lung, + G. *-itis*.] Pneumonitis.

pul'motor. An apparatus for supplying oxygen to the lungs and inducing artificial respiration in cases of asphyxiation by illuminating gas, drowning, etc.; oxygen under pressure is forced into the lungs and when the lungs are distended the action is automatically reversed and air is sucked out of the chest; the process is continued until natural respiration is established.

pulp [L. *pulpa*, flesh.] 1. A soft moist coherent solid. 2. The vascular tissue in the center of a tooth. 3. Chyme. **dental p., den'tinal p.,** pulp (2). **dig'ital p.,** p. of the finger. **mum'mified p.,** dental p. in a state of dry gangrene. **p. canal',** that portion of the p. cavity which is contained in the root of a tooth. **p. cav'ity,** the central hollow of a tooth filled with vascular tissue or pulp. **p. cham'ber,** that portion of the p. cavity which is contained in the crown or body of the tooth. **p. nod'ule,** a nodule of dentine projecting into or lying free in the p. cavity of a tooth. **p. of the finger,** the fleshy mass at the extremity of the finger. **p. stone,** p. nodule. **splenic p.,** the soft substance of the spleen. **ver'tebral p.,** the soft substance forming the central portion of an intervertebral disc.

pulpa (pul'pah) [L. soft, fleshy part of a body.] Pulp. **p. den'tis** [BNA], tooth pulp.

pul'pal. Pulpar.

pul'par. Relating to pulp, in any sense. **p. cell,** see under *cell*.

pulpa'tion. The act of reducing to a pulpy state

pulpifac'tion. The act of reducing to a pulpy condition, pulpation.

pul'piform [L *pulpa*, pulp, + *forma*, form.] Resembling pulp, pulpy.

pul'pify. To reduce to a pulpy state.

pulpitis (pul-pi'(pe')tis) [L. *pulpa*, pulp, + G. *-itis*.] Inflammation of the pulp of a tooth, odontitis.

pul'py. In the condition of a soft moist solid, pulpiform

pulque (pool'ka) [Sp.] A fermented drink from the juice of *Agave americana;* diuretic.

pul'sate [L. *pulsare*, to beat] To throb or beat rhythmically, said of the heart or an artery.

pulsatile (pul'să-til) [L *pulsare*, to beat] Throbbing, beating

pulsatil'la [L. dim. of *pulsatus*, beaten.] (N.F.) Pasque flower, Easter flower, the herb *Anemone pulsatilla* and *A. pratensis*, collected soon after flowering It has been employed in gonorrhea, rheumatism, and syphilis in doses of gr. 2–5 (0.13–0.3).

pulsa'tion. A throbbing or rhythmical beating, as of the pulse or the heart.

pulse [L. *pulsus*, stroke.] The rhythmical dilatation of an artery, produced by the increased volume of blood thrown into the vessel by the contraction of the heart. A pulse may also at times occur in a vein or a vascular organ, as the liver. **alert' p.,** the p. of one who is awake. **anacrot'ic p., anadicrot'ic p.,** see under *pulsus*. **bigem'inal p.,** pulsus bigeminus. **bulbar p.,** Bamberger's p., a jugular p. supposed to indicate tricuspid insufficiency. **cannon-ball p.,** water-hammer p. **cap'illary p.,** the alternate rhythmical reddening and blanching of a capillary area, well seen under the nails; it is one of the signs of aortic insufficiency. **catacrot'ic p., catadicrot'ic p.,** see under *pulsus*. **convul'sive p.,** one unequal in rhythm and force. **cordy p.,** tense p. **coup'led p.,** pulsus bigeminus. **dicrot'ic p.,** pulsus dicrotus. **entop'tic p.,** an intermittent phose synchronous with the pulse. **fil'-**

iform p., thready p. **gas'eous p.**, a soft, full, but feeble p. **gutt'ural p.**, a pulsation felt in the throat. **hard p.**, one which strikes forcibly against the tip of the finger and is with difficulty compressed. **long p.**, one in which the impact is felt longer than usual. **monocrot'ic p.**, pulsus monocrotus. **mousetail p.**, pulsus myurus. **movable p.**, the lateral movement of a strongly pulsating tortuous artery **nail p.**, a capillary p. seen through the nail. **paradox'ical p.**, Kussmaul's p., pulsus* paradoxus. **piston p.**, water-hammer p. **pul'monary p.**, variation in intensity of the pulmonary second sound according to the tension in the pulmonary artery. **p. pres'sure**, the variation in blood pressure occurring in an artery during the cardiac cycle; it is the difference between the systolic or maximum and diastolic or minimum pressures and varies normally between 25 and 40 mm. of mercury. **p. wave**, the progressive expansion of the arteries from the aorta to the capillaries, occurring with each contraction of the left ventricle of the heart. **soft p.**, one which is readily extinguished by pressure with the finger. **tense p.**, a hard full pulse but without very wide excursions, resembling the vibration of a thick cord. **thready p.**, a small fine p., feeling like a small cord or thread under the finger. **trip'-hammer p.**, water-hammer p. **un'dulating p.**, pulsus undulosus. **ve'nous p.**, a pulsatory movement occurring in the veins, especially the internal jugular. **wa'ter-hammer p.**, Corrigan's p., one with forcible impulse but immediate collapse, characteristic of aortic incompetency. **wiry p.**, a small, fine, incompressible p.

pulsell'um [L. dim. of *pulsus*, a stroking.] A posterior flagellum constituting the organ of locomotion in certain protozoan organisms.

pulsim'eter, pulsom'eter [L. *pulsus*, pulse, + G. *metron*, measure.] An instrument for measuring the force and rapidity of the pulse.

pul'sus [L. a stroke.] Pulse. **p. abdomina'lis**, the soft, compressible, but usually regular pulse occurring in certain abdominal disorders. **p. alter'nans**, a variation in size or force of the alternate pulse-beats, the rhythm being unaltered. **p. anac'rotus**, a pulse, in the ascending limb of the tracing of which there is a notch indicating a momentary recoil of the wave. **p. anadic'rotus**, one, in the ascending limb of the tracing of which there are two notches. **p. bigem'inus**, a pulse in which every second beat is an extra-systole occurring nearer to the preceding than to the succeeding normal beat; *i.e.*, two beats occur, then a pause, then two beats again, etc. **p. bisfer'iens**, one in which the systole is marked by a double beat, the second being stronger than the first. **p. cap'risans** [L. capering], a bounding leaping pulse, irregular in both force and rhythm. **p. catac'rotus**, a pulse in which there is an upward notch interrupting the descending limb of the sphygmogram. **p. catadic'rotus**, a p. catacrotus in which there are two interrupting upward notches. **p. celer**, a rapid pulse. **p. celer'imus**, water-hammer pulse.* **p. cordis**, the apex beat of the heart. **p. deb'ilis**, a weak pulse. **p. diff'erens**, a condition in which the pulses in the two radial arteries differ in strength. **p. dic'rotus**, a pulse in which the systole is marked by a double beat, the second being weaker than the first. **p. du'plex**, p. dicrotus. **p. durus**, a hard incompressible pulse. **p. filifor'mis**, a thready pulse. **p. flu'ens**, undulating pulse, p. undulosus. **p. formi'cans** [L. *formica*, ant], formicant p., a very small, nearly imperceptible pulse, the impression it gives to the finger being compared to formication. **p. fortis**, a full strong pulse. **p. fre'quens**, a rapid pulse. **p. heterochron'icus**, an arrhythmic pulse. **p. inæqua'lis**, a pulse irregular in rhythm and force. **p. infre'quens**, a slow pulse. **p. inter'cidens**, an intermittent pulse. **p. intercurr'ens**, an occasional strong dicrotic pulse-wave giving the impression of an intercurrent ventricular contraction. **p. irregular'is perpet'uus**, permanently irregular pulse; a name formerly given to the condition now called auricular fibrillation of which such pulse is characteristic. **p. magnus**, a large full pulse. **p. mollis**, a soft easily compressible pulse. **p. monoc'rotus**, a pulse without any perceptible dicrotism. **p. myu'rus** [G. *mys*, mouse, + *ouros*, tail], a pulse marked by a wave, the apex of which is reached suddenly and which then subsides very gradually. **p. oppres'sus**, a pulse which seems to be pushed against the walls of a contracted artery. **p. paradox'us**, Kussmaul's p., one which becomes weaker or disappears during deep inspiration, occurring in cases of adherent pericardium. **p. parvus**, a small pulse. **p. rarus**, p. tardus. **p. respiratio'ne intermit'tens**, p. paradoxus. **p. tardus**, a slow pulse. **p. trem'ulus**, a feeble fluttering pulse. **p. trigem'inus**, one in which there is a longer or shorter interval after each three beats, owing to the fact that the third beat is an extra-systole. **p. undulo'sus**, a toneless pulse in which there is a succession of waves without character or force. **p. vac'uus**, a very weak pulse hardly distending the arterial wall. **p. veno'sus**, a venous pulse.

pulta'ceous [G. *poltos*, porridge] Macerated, pulpy, pap-like.

pulv. Abbreviation of L. *pulvis*, powder.

pulveriza'tion. Reduction to powder.

pul'verize [L. *pulverare*.] To reduce to a powder.

pulver'ulent. In a state of powder, powdery, dusty.

pulvi'nar [L. pillow.] The posterior extremity of the thalamus which forms a cushion-like prominence overhanging the brachia of the corpora quadrigemina.

pul'vinate [L. *pulvinus*, cushion.] Raised or convex, noting a form of surface elevation of a bacterial culture; see cut under *culture*, A, 4.

pul'vis, gen. *pul'veris*, pl. *pul'veres* [L.] Powder, a pharmacopeial preparation consisting of a drug or a combination of drugs in powdered form. When the active drug is small in bulk it is generally diluted with some more or less inert substance, such as aromatic powder, licorice root, sugar of milk, cane sugar, starch, acacia, etc.

p. aca'ciæ compos'itus, compound powder of acacia, p. gummosus (P.G.); acacia 50, licorice 34, sugar 16.

p. acetanili'di compos'itus (N.F.), compound acetanilide powder; acetanilide 70, caffeine 10, sodium bicarbonate 20; dose, gr. 2–10 (0.13–0.6).

p. al'oes et canel'læ (N.F.), powder of aloes and canella, hiera picra, hikry-pikry; purified aloes 80, canella 20; laxative and emmenagogue in dose of gr. 15 (1.0).

p. amyg'dalæ compos'itus (Br.), compound powder of almonds; sweet almonds 8, powdered sugar 4, powdered gum acacia 1; employed to make the official mistura by mixing with 8 parts of water.

p. ani'si compos'itus, compound anise powder, p. rhei et magnesiæ anisatus (N.F.).

p. anticatarrha'lis, anticatarrh powder, catarrh snuff; bismuth subnitrate 75, powdered acacia 25, morphine hydrochloride 0.41; for insufflation in coryza.

p. antimonia'lis (N.F., Br.), antimonial powder, James's powder; oxide of antimony 1, calcium phosphate 2; diaphoretic in doses of gr. 2–8 (0.13–0.5).

p. antisep'ticus (N.F.), antiseptic powder; eucalyptol, menthol, phenol, and thymol each 0.1, salicylic acid 0.5, zinc sulphate 12.5, boric acid 86.6, employed as a dusting powder, or as a lotion in 5 per cent solution.

p. aromat'icus (N.F.), aromatic powder, p. cinnamomi compositus (Br.), compound powder of cinnamon; Saigon cinnamon 35, ginger 35, cardamom 15, nutmeg 15; dose as a carminative, gr. 5–15 (0.3–1.0).

p. aromat'icus rubefa'ciens (N.F.), rubefacient spice powder, replacing emplastrum aromaticum of the previous edition of the N.F.; clove and cinnamon each 30, Jamaica ginger and capsicum each 20.

p. bu'teæ sem'inum (B.A.), powder of butea seeds, made from the dried kernel; anthelmintic in doses of gr. 10–20 (0.6–1.3).

p. cat'echu compos'itus (Br.), compound powder of catechu; catechu 4, kino and rhatany of each 2, cinnamon and nutmeg of each 1; dose, gr. 10–60 (0.6–4.0) in diarrhea.

p. cathar'ticus, cathartic powder, p. jalapæ compositus.

p. cinnamo'mi compos'itus (Br.), compound powder of cinnamon, resembles pulvis aromaticus (U.S.); made of equal parts of finely powdered cinnamon, ginger, and cardamom; dose, gr. 10–30 (0.6–2.0).

p. comitis'sæ [L. *comitissa*, countess, with reference to the Countess of Chinchon (see *Cinchona*)], Peruvian bark, or cinchona in powder form.

p. cre'tæ aromat'icus (Br., N.F.), aromatic chalk powder; cinnamon 8, saffron and nutmeg each 6, cloves 3, cardamom 2, prepared chalk 23, sugar 52; employed as an antacid and in diarrhea in dose of gr. 30 (2.0).

p. cre'tæ aromat'icus cum o'pio (Br.), **p. cre'tæ et o'pii aromat'icus** (N.F.), aromatic powder of chalk and opium; aromatic powder of chalk 97.5, powdered opium 2.5; dose gr. 10–20 (0.6–1.3).

p. cre'tæ compos'itus (U.S.), compound chalk powder; prepared chalk 30, acacia 20, sugar 50; dose, gr. 20–60 (1.3–4.0).

p. digesti'vus, digestive powder, p. pepsini compositus.

p. efferves'cens, pl. *pul'veres effervescen'tes*, effervescent powder; the N.F. formerly gave directions for the manufacture of two kinds, viz., fine powders and granular powders; the *fine powder* is made with the medicinal agent 50 parts, saccharated sodium bicarbonate and saccharated tartaric acid each 475 parts; the granular powder is made with the medicinal agent 50 parts, saccharated sodium bicarbonate 475 parts, saccharated tartaric acid and saccharated citric acid each 237½ parts.

p. efferves'cens compos'itus (U.S., Br.), compound effervescing powder, p. sodæ tartaratæ effervescens (Br.), Seidlitz powder; sodium bicarbonate 31, potassium and sodium tartrate 93, divide into 12 powders and enclose in blue paper; tartaric acid 27, divide into 12 powders and enclose in white paper, the two are dissolved separately, the solutions being then mixed and drunk while effervescing.

p. elateri'ni compos'itus (Br.), compound powder of elaterin; elaterin 5, sugar of milk 195; same as trituration of elaterin (U.S.), but only one-fourth the strength; dose, gr. ½–5 (0.03–0.3).

p. fer'ri et quini'næ citra'tis efferves'cens, effervescent powder of citrate of iron and quinine; chalybeate tonic in dose of a heaping teaspoonful, gr. 90 (6.0).

p. fer'ri phospha'tis efferves'cens, effervescent powder of ferric phosphate; chalybeate in dose of a heaping teaspoonful, gr. 90 (6.0).

p. gam'bir compos'itus, compound powder of gambir, formerly compound powder of catechu; gambir 40, kino and krameria each 20, Saigon cinnamon and myristica each 10; dose, gr. 20 (1.3).

p. glycyrrhi'zæ compos'itus (U.S., Br.), compound powder of licorice; senna 180, licorice 236, washed sulphur 80, oil of fennel 4, sugar 500 (U.S.); senna 2, licorice 2, fennel 1, washed sulphur 1, sugar 6 (Br.); laxative in doses of ʒ½–2 (2.0–8.0).

p. gummo'sus, gum powder, mucilaginous powder, official in the German Pharmacopeia; acacia 50, licorice-root 30, sugar 20; employed in making mixtures and **as an excipient** for pills; p. acaciæ compositus (N.F.).

p. hydrar'gyri chlo'ridi mi'tis et jala'pæ (N.F.), powder of calomel and jalap, calomel 34, jalap 66. hydragogue cathartic in doses of gr. 10–15 (0.6–1.0);

p. insectici'dus, insect powder, pyrethri* flores.

p. iodofor'mi compos'itus, compound iodoform powder, naphthalin iodoform; iodoform 20, boric acid 30, naphthalene 50, oil of bergamot 2½; antiseptic.

p. ipecacuan'hæ compos'itus (Br.), **p. ipecacuan'hæ et o'pii** (U.S.), compound ipecac powder, powder of ipecac and opium, Dover's powder; ipecac 10, opium 10, sugar of milk 80 (U.S.); ipecac 10, opium 10, potassium sulphate 80 (Br.); anodyne in doses of gr. 3–5 (0.2–0.3) and diaphoretic in doses of gr. 10–15 (0.6–1.0).

p. jala'pæ compos'itus (U.S., Br.), compound powder of jalap, p. catharticus, p. purgans; jalap 35, potassium bitartrate 65 (U.S.); jalap 5, acid potassium tartrate 9, ginger 1 (Br.); dose, gr. 10–30 (0.6–2.0).

p. kalada'næ compos'itus (B.A.), compound powder of kaladana; kaladana 5, acid potassium tartrate 9, ginger 1; resembles p. jalapæ compositus; dose, gr. 20–60 (1.3–4.0).

p. ki'no compos'itus, p. ki'no et o'pii compos'itus, compound powder of kino and opium; kino 75, opium 5, cinnamon 20; astringent and anodyne in doses of gr. 5–20 (0.3–1.3).

p. morphi'næ compos'itus, compound powder of morphine, Tully's powder; morphine sulphate 1.5, camphor 32, licorice 33, precipitated chalk 33.5, alcohol q.s.; dose, gr. 5–10 (0.3–0.6).

p. myri'cæ compos'itus (N.F.), compound powder of bayberry, composition powder; bark of bayberry root 60, ginger 30, capsicum and clove each 5; carminative in doses of gr. 10–20 (0.6–1.3).

p. o'pii, opium pulveratum (U.S.).

p. o'pii compos'itus, compound powder of opium; opium 3, black pepper 4, ginger 10, caraway 12, tragacanth 1; dose, gr. 2–5 (0.13–0.3).

p. pancreati'ni compos'itus (N.F.), compound pancreatin powder, peptonizing powder; pancreatin (U.S.) 20, sodium bicarbonate 80; digestive; 25 grains will peptonize 1 pint of milk.

p. pepsi'ni compos'itus, compound pepsin powder, p. digestivus; saccharated pepsin and pancreatin each 15, diastase and lactic acid each 1, hydrochloric acid 2, sugar of milk to make 100; digestive in doses of gr. 10–20 (0.6–1.3).

p. potas'sii bro'midi efferves'cens, effervescent powder of potassium bromide; potassium bromide mixed with saccharated sodium bicarbonate and saccharated tartaric acid; dose heaping teaspoonful, gr. 90 (6.0) representing gr. 10 (0.6) of potassium bromide.

p. potas'sii bro'midi efferves'cens cum caffei'na, effervescent powder of potassium bromide with caffeine; potassium bromide and caffeine with saccharated sodium bicarbonate and saccharated tartaric acid; dose, heaping teaspoonful, gr. 90 (6.0), containing potassium bromide gr. 10 (0.6) and caffeine gr. 1 (0.06).

p. pro lac'te humanisa'to, powder for humanized milk; compound pancreatic powder 3.5, sugar of milk 96.5; used to prepare lac* humanisatum.

p. pur'gans, purgative powder, p. jalapæ compositus.

p. rhe'i compos'itus (U.S., Br.), compound powder of rhubarb, Gregory's powder; rhubarb 25, magnesium oxide 65, ginger 10 (U.S.); rhubarb 2, light magnesia 6, ginger 1 (Br.); dose, gr. 10–30 (0.6–2.0).

p. rhe'i et magne'siæ anisa'tus (N.F.), anisated powder of rhubarb and magnesia, compound anise powder; rhubarb 3.5, heavy calcined magnesia 6.5, oil of anise 0.8; antacid and laxative for infants in dose of gr. 5 (0.3).

p. sa'lis caroli'ni facti'tii efferves'cens, effervescent artificial Carlsbad salt; sal carolinum factitium (N.F.) mixed with saccharated sodium carbonate and saccharated tartaric acid; a heaping teaspoonful, gr. 90 (6.0), in a glass of water (ʒ6, or 200.0) represents a glass of Carlsbad (Sprudel) salt.

p. sa'lis kissingen'sis facti'tii efferves'cens, effervescent artificial Kissingen salt; sal kissingense factitium (N.F.) mixed with saccharated sodium carbonate and saccharated tartaric acid; a heaping teaspoonful, gr.

90 (6.0), in a glass of water (℥6, or 200 0) represents a glass of Kissingen (Rakoczy) water.

p. sa'lis vichya'ni facti'tii efferves'cens, effervescent artificial Vichy salt; sal vichyanum factitium (N.F.) mixed with saccharated sodium carbonate and saccharated tartaric acid; a heaping teaspoonful, gr. 90 (6 0), in a glass of water (℥6, or 200.0) represents a glass of Vichy (Grande Grille) water.

p. sa'lis vichya'ni facti'tii efferves'cens cum lith'io, effervescent artificial Vichy salt with lithium; same as the preceding with the addition of lithium citrate gr. 5 (0 3) in each dose.

p. scammo'nii compos'itus (Br.), compound powder of scammony; resin of scammony 4, jalap 3, ginger 1; dose, gr. 10–20 (0.6–1.3).

p. tal'ci compositus (N.F.), salicylated talcum powder; salicylic acid 3, boric acid 10, talc 87; antiseptic dusting powder.

p. tragacan'thæ compos'itus (Br), compound powder of tragacanth; tragacanth, acacia, starch, of each 1, sugar 3; employed as an excipient for pills and for making mixtures.

pulvule. Trade name of a capsule containing a definite dose of a powdered drug.

pumex (poo'meks) [L. foam.] Pumice, rotten stone, scoria, volcanic cinders; occasionally used in powdered form, in dentistry, for polishing.

pump. An apparatus for forcing a fluid, either gas or liquid, from or to any part. **breast p.,** a suction instrument for withdrawing milk from the breast. **dental p.,** a contrivance for preventing an accumulation of saliva in the mouth during operations on the teeth. **stomach p.,** an apparatus for removing the contents of the stomach by means of suction.

pump'kin-seed. Pepo.

punch (L. *pungere,* to stick, to punch.] 1. An instrument for making a hole or indentation in some solid material or for driving out a foreign body inserted in a hole in such material. 2. An instrument for extracting the root of a tooth. **pin-p.,** an instrument for perforating the metal plate to receive the pins for fastening an artificial tooth. **plate p.** an instrument for cutting out portions of the artificial tooth plate.

punc'ta. Plural of *punctum.*

punc'tate [L. *punctare,* to dot.] 1. Marked with points or dots differentiated from the surrounding surface by color, elevation, or texture. 2. The matter withdrawn for examination by means of an exploratory puncture.

punctiform (punk'tĭ-form) [L. *punctum,* a point, + *forma,* shape.] Very small but not microscopic, having a diameter of less than 1 mm.

punc'tio. The act of pricking or dotting.

punc'tum, gen *punc'ti* pl. *punc'ta* [L.] A point; the tip of a sharp process; a minute round spot differing in color or otherwise in appearance from the surrounding tissues. **p. cæcum,** the blind spot on the retina where the optic nerve enters the eyeball. **p. coxa'le,** the highest point of the crest of the ilium. **p. doloro'sum,** painful point, see *Valleix's points.* **p. ischiad'icum,** the lower part of the tuberosity of the ischium. **p. lacrima'le** [BNA], lacrymal punctum or opening, the minute circular opening of the lacrymal duct, on the margin of each eyelid near the inner commissure. **p. lu'teum,** macula lutea. **p. nasa'le infe'rius,** rhinion. **p. prox'imum,** near point.* **p. remo'tum,** far point.* **p. vasculo'sum,** one of the minute dots seen on section of the brain, due to small drops of blood at the cut extremities of the arteries. **p. sa'liens,** the circumscribed expansion of the blood-vessel which is the primitive heart in the embryo.

punctu'ra [L.] Puncture. **p. explorato'ria,** exploratory puncture.

punctura'tio. The act of puncturing.

puncture (punk'chūr) [L. *punctura; pungere,* to prick.] 1. To make a hole with a small pointed object, such as a needle. 2. A prick or small hole made with a pointed instrument. **cister'nal p.,** passage of a hollow needle through the atlanto-occipital ligament into the cisterna cerebellomedullaris. **diabet'ic p.,** Bernard's p., a puncture at a point in the floor of the fourth ventricle of the brain, which is followed by glycosuria. **explor'atory p.,** p. of a cavity or tumor with a hollow needle to determine the presence or absence of fluid or gas, and its nature, if present. **lumbar p.,** Corning's p., Quincke's p., insertion of a hollow needle through the spinal membranes between the third and fourth lumbar vertebræ in order to withdraw cerebrospinal fluid from the subarachnoid space. **spinal p.,** lumbar p.

punc'tured. Pierced, pricked **p. wound,** a wound made with a sharp-pointed cylindrical object.

pungent (pun'jent) [L. *pungere,* to penetrate.] Sharp, acrid; said of the taste or odor of a substance.

pu'nica. Granatum.

pu'nicin. Granatin, mannite from the bark of the pomegranate.

pu'nicine. Pelletierine, one of four alkaloids (*punicine, isopunicine, methylpunicine,* and *pseudopunicine*) from the bark of the pomegranate (see *granatum*), a mixture of the tannates of which constitutes the official pelletierinæ tannas.

P.U.O. Abbreviation for pyrexia of unknown (or uncertain) origin, a term applied to various febrile conditions, including trench fever, observed among troops at the front in the world war.

pu'pa [L. a doll] A stage in the development of an insect between the larva and the imago; when quiescent, as in the moth, the pupa is sometimes called *chrysalis;* when active, as in the mosquito, it is called *nymph.*

pu'pil [L. *pupilla,* dim. of *pupa,* a girl or doll.] The circular orifice in the center of the iris through which the light rays enter the eye **Ar'gyll-Rob'ertson p.,** one in which the accommodation reflex persists while the light reflex is lost. **artifi'cial p.,** an opening made by excision of a portion of the iris in order to improve the vision in cases of central opacity of the cornea or lens, etc. **bound'ing p.,** anisocoria in which there is a rapid dilatation of the pupil alternating with contraction. **cat's-eye p.,** a distorted pupil elongated in the vertical axis. **exclu'sion of the p.,** the condition resulting from posterior annular synechia, in which the iris is bound down throughout the entire pupillary margin, but the pupil is not occluded. **key'hole p.,** a p. with an artificial coloboma on one side of the pupillary margin. **occlu'sion of the p.,** the presence of an opaque membrane closing the pupillary area. **pinhole p.,** an extremely contracted pupil. **seclu'sion of the p.,** exclusion of the p. **stiff p.,** Argyll-Robertson p.

absence, acorea, atretopsia. **contraction,** miosis, myosis. corephthisis, coreclisis, stenocoriasis, stenocoria, **dilatation,** corediastasis, corectasis, mydriasis, platycoria. **double,** diplocoria. **equality in size of the two,** isocoria. **examination,** pupilloscopy, coroscopy. **imperforation,** atretopsia. **inequality in size of the two,** anisocoria. **instrument for measuring,** coreometer, pupillometer. **irregularity in shape,** dyscoria, coremetamorphosis. **making an artificial,** see under *iris.* **malposition,** corectopia. **measurement of,** coreometry, pupillometry. **multiple,** polycoria. **obliteration,** coreclisis, synizesis pupillæ.

pupil'la [L.] Pupil of the eye, the circular opening in the center of the iris.

pu'pillary, pu'pilary. Relating to the pupil.

pupillom'eter [L. *pupilla*, pupil, + G. *metron*, measure.] Corometer, coreometer.

pupillos'copy [L. *pupilla*, pupil, + *skopeō*, I view.] Coroscopy, skiascopy.*

pu"pillostatom'eter [L. *pupilla*, pupil, + G. *statos*, placed, + *metron*, measure.] An instrument for measuring the distance between the centers of the pupils.

pu'ral. Trade name of a mixture of menthol, phenol, benzoic acid, and charcoal, used for fumigation.

Pur'dy's meth'od [Charles Wesley *Purdy*, American physician, 1846–1901.] Determination of the amounts of chlorides, sulphates, and other salts, and of albumin in the urine by centrifugation. **P.'s solu'tion,** a modified Fehling's solution, consisting of copper sulphate 4.752, potassium hydrate 23.5, stronger ammonia water 350, glycerin 38, distilled water to make 1000.

pure [L. *purus*] Unadulterated, free from admixture with any extraneous matter.

pur'gatin, pur'gatol. Anthrapurpurin diacetate, a yellow, tasteless powder, insoluble in water; purgative in doses of gr. 8–30 (0.5–2.0).

purga'tion. A purging, causing an evacuation of the bowels by cathartics, catharsis.

pur'gative. Cathartic.

purge (purj) [L. *purgare*, to cleanse.] 1. To cause a copious evacuation of the bowels. 2. A cathartic remedy.

pur'gen [Lat. *purgare*, to purge.] Proprietary name of a preparation of phenolphthalein, employed as a laxative in doses of 1 to 5 grains (0.06 to 0.33).

purging (pur'jing). Causing a free evacuation of the bowels. **p. agar'ic,** agaricus. **p. buckthorn,** rhamnus cathartica. **p. cassia,** cassia fistula. **p. nut,** curcas purgans. **p. root,** the root of *Euphorbia** *corollata*, a tree of eastern North America.

pu'riform [L. *pus(pur-)*, pus, + *forma*, form.] Resembling pus.

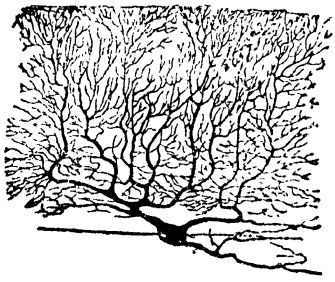
purine (pu'rin) [L. *purus*, pure, + *urina*, urine.] The mother substance, $C_5H_4N_4$, of the uric-acid group of bodies; it is not known to exist as such in the body; there are three purine groups, viz., *oxypurines*, hypoxanthine, xanthine, and uric acid; *aminopurines*, adenine and guanine; and *methyl purines*, caffeine, theophylline, and theobromine. **p. ba'ses, p. bod'ies,** adenine, hypoxanthine, guanine, xanthine, paraxanthine, heteroxanthine, theophylline, theobromine, caffeine; see also alloxur* bases, nuclein* bases, pyrimidine* bases, xanthine* bases.

purine'mia, purinæ'mia [*purin* + G. *haima*, blood.] The presence of purine or xanthine bases in the blood.

purine'mic. Relating to or suffering from purinemia.

purinom'eter [*purin* + G. *metron*, measure.] A device for determining the amount of purine or xanthine bases in the urine.

Purkinje's cells or **cor'puscles (poor-kin'zheh)** [Johannes Evangelista von *Purkinje*, Bohemian anatomist, 1787–1869.] Large piriform nerve-cells, with many branches, between the molecular and granular layers of the cerebellar cortex. **P.'s fi'bers,** interlacing fibers formed of large muscle-cells with central granulated protoplasm, containing one or two nuclei and a transversely striated peripheral portion; they are found beneath the endocardium in the heart-muscle; see *cardionector*. **P.'s figures,** shadows of the retinal vessels, seen as dark lines on a yellowish field when a candle is held to the side of the eye in a dark room. **P.'s im'ages,** three reflections of an image, noted by one looking at the pupil of another person, formed by the anterior surface of the cornea and the two surfaces of the crystalline lens; the first two are upright and virtual images that from the posterior surface of the crystalline is inverted and real; called also *Purkinje-Sanson mirror images*. **P.'s net'work,** the network formed by P.'s fibers beneath the endocardium. **P.'s phenom'enon,** a blue object which, in a strong light, seems of equal brightness with a red one, appears to be brighter than the red one when the light is dimmer **P.'s ves'icle,** the nucleus of the mammalian ovum.



PURKINJE CELL.

Purkinje-Sanson images. Purkinje images.

Pur'mann's meth'od [Matthaeus Gottfried *Purmann*, German surgeon, 1648-1721.] Treatment of aneurysm by extirpation of the sac;

purohepatitis (pu"ro-hep-ă-ti'(te')tis). Suppurative inflammation of the liver, hepatic abscess.

puromu'cous. Mucopurulent, containing both pus and mucus.

purple (pur'pl) [L. *purpura*.] A color formed by a mixture of blue and red. **Stew'art's p.,** see under *Stewart*. **vis'ual p.,** rhodopsin.

purpura (pur'pu-rah) [L from G. *porphyreos*, purple. An affection characterized by hemorrhage into the skin, the color being at first red, becoming gradually darker, then purple, fading to a brownish yellow, and finally, in the course of two or three weeks, disappearing; it may result in a permanent pigmentation; extravasations occur also into the mucous membranes and internal organs. **Hen'och's p.,** an infectious disease of childhood, similar to p. rheumatica; see *Henoch*. **malig'nant p.,** cerebrospinal fever. **p. angioneurot'ica,** a disease marked by angioneurotic edema, petechiæ, and hyperesthesia of the skin and gastric mucous membrane, the latter expressed in the form of gastric crises. **p. annula'ris telangiecto'des,** Majocchi's disease, an eruption of punctate or larger purpuric spots, often grouped in ring form, associated with more or less pronounced telangiectasia. **p. bullo'sa,** pemphigus hæmorrhagicus **p. ful'minans,** a severe and rapidly fatal form of p. hæmorrhagica, occurring especially in children; Henoch's* p. **p. hæmorrhag'ica,** land scurvy, morbus maculosus Werlhoffii; a disease, probably infectious, characterized by extensive ecchymoses, hemorrhages from the mucous membranes, and prostration of a typhoidal nature; it lasts from a few weeks to several months, and may terminate fatally. **p. iod'ica,** iodic p., an eruption of discrete miliary petechiæ, usually confined to the lower extremities, appear

ing in rare instances during the administration of any of the iodides. **p. nau'tica,** p. scorbutica **p. nervo'sa,** Henoch's* p. **p. papillo'sa,** lichen lividus. **p. pu'licans, p. pulico'sa,** petechiæ caused by the bites of insects and animal parasites. **p. rheumat'ica,** peliosis rheumatica, Schönlein's disease; p. associated with erythema multiforme, occurring with acute rheumatic arthritis. **p. scorbu'tica,** scorbutus, scurvy. **p. seni'lis,** the occurrence of petechiæ and ecchymoses on the legs in aged and debilitated subjects. **p. sim'plex,** a hemorrhagic eruption in the form of petechiæ or larger ecchymoses, usually unaccompanied by constitutional symptoms. **p. symptomat'ica,** a petechial eruption in scarlet fever and other exanthemata. **p. urti'cans,** p. simplex accompanied by an urticarial eruption.

purpu'ric. Relating to or affected with purpura.

purpurif'erous [L. *purpura*, a purple dye, + *ferre*, to bear.] Forming a purple pigment; forming the visual purple.

purpurigenous (pur-pu-rij'en-us) [L. *purpura*, a purple dye, + G. *gennaō*, I produce.] Purpuriferous.

pur'purin. 1. Uroerythrin. 2. A violet stain derived from madder.

purpurinu'ria [*purpurin* + G. *ouron*, urine.] Porphyrinuria, the excretion of purpurin, or uroerythrin, in the urine.

purpurip'arous [L. *purpura*, a purple dye, + *parere*, to bring forth.] Purpuriferous.

purr. A low vibratory murmur, like the sound of contentment made by a cat; purring thrill.

purr'ing frem'itus or **thrill.** A vibratory fremitus felt on palpation over the heart in certain cases of valvular disease, or over an aneurysm.

pursi'anin. A laxative glucoside from cascara sagrada.

Purtscher's disease (pōōr'cher) [Otmar *Purtscher*, German ophthalmologist, 1852–1927.] Retinal angiopathy.

puru (poo'roo). The Malay term for yaws.

pu'rulence, pu'rulency [L. *purulentus*, festering.] Suppuration; the condition of containing or producing pus.

pu'rulent [G. *purulentus*, festering.] Suppurative suppurating, containing or forming pus.

puruloid (pu'ru-loyd) [L. *pus*(*pur-*), pus, + G. *eidos*, resemblance.] Puriform.

pus [L.] A fluid product of inflammation, consisting of a liquid (*liquor puris*) containing leucocytes (*pus-corpuscles*) and the débris of dead cells and tissue elements liquefied by the proteolytic and histolytic ferments which are elaborated by the pus-organisms or leucocytes. **blue p.,** p. tinged with pyocyanin, a product of *Bacillus pyocyaneus*. **cheesy p.,** a very thick almost solid pus resulting from the absorption of the liquor puris. **curdy p.,** pus containing flakes of caseous matter. **ichorous p.** (i'kor-us), thin pus containing shreds of sloughing tissue, and sometimes of a fetid odor; ichor. **green p.,** blue p. when, as sometimes happens, it has more of a green hue. **laud'able p.,** typical creamy yellow pus. **p. bo'num et laudab'ile,** good and laudable p., the old term for typical pus of thick creamy consistence and yellowish color, thought to indicate a healthy inflammatory process tending to recovery. **sa'nious p.,** ichorous p. stained with blood.

pus-basin. A receptacle curved so as to fit closely the surface to which it is applied, used to receive the pus from a wound during its cleansing and redressing.

pus-cor'puscle. One of the cells, chiefly polymorphonuclear leucocytes, constituting the formed elements in pus, pyocyte.

pus-or'ganisms. Bacteria causing suppurative inflammation, chiefly staphylococci and streptococci, though other forms of bacteria, as gonococci and pneumococci, also excite suppuration.

pus-tube (pus'tūb). Pyosalpinx.

pus'tula [L.] Pustule.

pus'tulant [L. *pustulare*, to cause pustules, to blister.] 1. Causing a pustular eruption. 2 An agent producing pustules.

pus'tular. Relating to or marked by pustules.

pustula'tion. The formation or the presence of pustules.

pustule (pus'tūl) [L. *pustula*, blister, pustule.] A small circumscribed elevation on the skin, containing pus. **malig'nant p.,** cutaneous anthrax, form of anthrax* in which the characteristic lesion begins as a papule which soon becomes a vesicle and breaks, discharging a bloody serum; the seat of this vesicle, in about 36 hours, becomes a bluish black necrotic mass; the constitutional symptoms are severe—high fever, vomiting, profuse sweating, and extreme prostration; the affection is often fatal in its termination. **post-mortem p.,** an ulcer, on the knuckle usually, resulting from infection during a dissection or the making of an autopsy.

pus'tuliform [L. *pustula*, pustule, + *forma*, form.] Having the appearance of a pustule.

pus"tulocrusta'ceous. Marked by pustules crusted with dry pus.

puta'men [L. paring.] [BNA]. The outer, larger, and darker gray of the three portions into which the lenticular nucleus is divided by laminæ of white fibers; it is connected by intervening bands of gray substance with the caudate nucleus.

Put'nam's type [James Jackson *Putnam*, Boston neurologist, *1846.] Combined spinal sclerosis (involving both posterior and lateral columns) complicating pernicious anemia and cachectic states.

putrefac'tion [L. *putrefacere*, to putrefy.] Decomposition, the cleavage or splitting up of the molecules of a protein, resulting in the formation of other substances of less complex constitution with the evolution of ammonia or its derivatives and sulphureted hydrogen.

putrefac'tive [L. *puter*(*putr-*), rotten, + *facere*, to make.] Relating to or causing putrefaction.

pu'trefy [L. *puter*(*putr-*), rotten, + *facere*, to make.] 1. To cause to become putrid. 2. To become putrid, to rot.

pu'trefying. Undergoing putrefaction, rotting.

putrescence (pu-tres'ens). Decay, rottenness, putridity.

putrescent (pu-tres'ent) [L. *putrescere*, to decay.] Putrefying, becoming rotten.

putrescible (pu-tres'ĭ-bl). Subject to decay.

putrescine (pu-tres'ēn). A poisonous ptomaine, tetramethylenediamine, $C_4H_{12}N_2$, isolated by Brieger from putrid flesh and from cultures of the cholera bacillus.

pu'trid [L. *putridus*.] Decayed, rotten.

pu'trilage. Rottenness, putrid substance.

Puzos' meth'od (pü-zo') [Nicolas *Puzos*, Parisian accoucheur, 1686–1753.] Early rupture of the membranes in placenta prævia.

pyæ'mia. Pyemia.

pyarthrosis (pi-ar-thro'sis) [G. *pyon*, pus, + *arthrōsis*, a jointing.] The presence of pus in the cavity of a joint.

Pycnan'themum [G. *pyknos*, thick, + *anthemon*, blossom.] Mountain mint, a genus of plants, having aromatic and carminative properties.

pycne'mia, pycnæ'mia [G. *pyknos*, thick, + *haima*, blood.] Pycnohemia, inspissation of the blood.

pycnid'ium [G. *pyknos*, dense.] In botany, the receptacle, in *Ascomycetes*, in which the gonidia, or stylospores, are produced.

pycnocar'dia [G. *pyknos*, frequent, + *kardia*, heart. Tachycardia.

pycnoepilepsy (pik-no-ep'ĭ-lep-sĭ) [G. *pyknos*, thick, dense, + *epilepsy*.] Repeated slight epileptic seizures.

pycnohe'mia, pycnohæ'mia. Pycnemia.

pycnolepsy (pik'no-lep-sĭ). Pycnocpilepsy.

pycnom'eter [G. *pyknos*, thick, + *metron*, measure.] An instrument for determining the specific gravity of any substance.

pycnomor'phous [G. *pyknos*, thick, + *morphē*, form, shape.] Noting a cell or tissue which stains deeply owing to the fact that the stainable material is closely packed.

pycnophra'sia [G. *pyknos*, thick, + *phrasis*, speech.] Thickness of utterance.

pycnoplasson (pik'no-plas''son). The original unexpanded form of plasson, as seen in the nucleus, contrasted with *chasmatoplasson*.*

pycno'sis [G. *pyknos*, dense] Thickening, condensation; specifically a condensation and reduction in size of the cell or its nucleus, usually associated with hyperchromatosis.

pycnosphyg'mia [G. *pyknos*, frequent, + *sphygmos*, pulse.] Rapidity of the pulse, tachycardia.

pycnot'ic. Relating to or characterized by pycnosis.

pyecchysis (pi-ek'ĭ-sis) [G. *pyon*, pus, + *ek*, out, + *chysis*, a pouring.] A discharge of pus.

pyelectasia (pi-el-ek-ta'sĭ-ah) [G. *pyelos*, pelvis, + *ektasis*, extension.] Dilatation of the pelvis of the kidney, nephrectasia.

pyelit'ic. Relating to pyelitis.

pyelitis (pi-ĕ-li'(le')tis) [G. *pyelos*, a pan (pelvis), + *-itis*.] Pyelonephritis.

pyelocystitis (pi-ĕ-lo-sis-ti'(te')tis) [G. *pyelos*, a pan (pelvis), + *kystis*, bladder, + *-itis*.] Inflammation of the renal pelvis and the bladder.

pyelogram (pi'ĕ-lo-gram). A roentgenogram of the renal pelvis and ureter.

pyelography (pi-el-og'ră-fĭ) [G. *pyelos*, pan (pelvis), + *graphō*, I write.] Radiography of the ureter and pelvis of the kidney; pelviureterography, ureteropyelography.

pyelolithot'omy [G. *pyelos*, a pan (pelvis), + *lithos*, stone, + *tomē*, incision.] Incision into the pelvis of the kidney for the removal of a calculus.

pyelom'eter [G. *pyelos*, a pan (pelvis), + *metron*, measure.] An instrument for measuring the diameters of the pelvis in the living woman; pelvimeter

pyelonephritis (pi''el-o-nĕ-fri'(fre')tis) [G. *pyelos*, pan (pelvis), + *nephros*, kidney, + *-itis*.] Inflammation of the kidney with special involvement of the renal pelvis.

py''elonephro'sis [G. *pyelos*, a pan (pelvis), + *nephros*, kidney, + *-ōsis*.] Any disease of the pelvis of the kidney.

pyelopathy (pi-el-op'ă-thĭ) [G. *pyelos*, pelvis, + *pathos*, suffering.] Pyelonephrosis.

pyeloplication (pi''el-o-pli-ka'shun) [G. *pyelos*, a pan (pelvis), + L. *plicare*, to fold.] Operation of taking tucks in the wall of the renal pelvis when unduly dilated by a hydronephrosis.

pyeloscopy (pi-ĕ-los'ko-pĭ) [G. *pyelos*, pelvis, + *skopeō*, I view.] Fluoroscopic observation of the pelvis and calyces of the kidney after the injection through the ureter of an opaque solution.

pyelot'omy [G. *pyelos*, a pan (pelvis), + *tomē*, incision.] Incision into the pelvis of the kidney.

pyemia, pyæmia (pi-e'mĭ-ah) [G. *pyon*, pus, + *haima*, blood.] The presence of pus in the blood; a form of septicemia in which the invading organism gives rise to foci of suppuration manifested by multiple abscesses, phlebitis, etc. **cryptogen'ic p.**, one the source of which is not evident, the focus being concealed in the deeper tissues. **por'tal p.**, suppurative pylephlebitis.

pyemic (pi-e'mĭk). Relating to or suffering from pyemia.

pyemesis (pi-em'e-sis) [G. *pyon*, pus, + *emesis*, vomiting.] The vomiting of pus.

pyencephalus (pi-en-sef'al-us) [G. *pyon*, pus, + *enkephalos*, brain.] Abscess of the brain, pyocephalus.

pyesis (pi-e'sis). Pyosis.

py'gal [G. *pygē*, buttocks.] Relating to the buttocks.

pygal'gia [G. *pygē*, buttocks, + *algos*, pain.] Pain in the buttocks.

pygmy, pigmy (pig'mĭ) [G. *pygmaios*, dwarfish.] A physiological dwarf, especially one of a race of similar beings, such as the pygmies of Central Africa.

pygodidymus (pi''go-did'ĭmus) [G. *pygē*, buttocks, + *didymos*, twin.] A twin monster joined above but with the buttocks and parts below doubled.

pygom'elus [G. *pygē*, buttocks, + *melos*, part.] A double monster in which the parasite is represented by a fleshy mass, or rarely a more fully developed limb, attached to the sacral or coccygeal region of the autosite.

pygop'agus [G. *pygē*, buttocks, + *pagos*, fastened together] A double monster, the two developed individuals being joined at the buttocks, usually back to back.

Pygopagus with Fused Sacrum and Coccyx. The fetus on the left is also a *Notencephalus*.

py'ic. Relating to pus, purulent.

py'in [G *pyon*, pus.] A nucleoalbumin constituting the chief albuminous constituent of the pus-corpuscles.

pykno-. For words so beginning, see under *pycno-*

py'la [G. *pylē*, gate.] The orifice of communication between the paraqueduct and aqueduct of Sylvius (aquæductus cerebri).

py'lar. Relating to the pyla.

pylemphrax'is [G *pylē*, gate, + *emphraxis*, a dam.] Obstruction in some portion of the portal vein

py''lephlebecta'sia [G. *pylē*, gate, + *phleps(phleb-)*, vein, + *ektasis*, extension.] Dilatation of the portal vein.

pylephlebitis (pi-le-flĕ-bi'-(be')tis [G. *pylē*, a gate, + *phleps(phleb-)*, vein, + *-itis*.] Inflammation of the portal vein or any of its branches. **adhe'sive p.**, pylephlebitis leading to thrombosis.

pylethrombophlebitis (pi"le-throm"bo-phlĕ-bi'(be')-tis) [G. *pylē*, gate, + *thrombos*, a clot, + *phleps* (*phleb-*), vein, + *-itis*.] Inflammation of the portal vein with the formation of a thrombus.

pylethrombo'sis [G. *pylē*, gate, + *thrombos*, clot.] Thrombosis of the portal vein or any of its branches.

py'lic. Portal, relating to the vena portæ.

pylon (pi'lon) [G. *pylōn*, a gateway?] A temporary artificial leg (possibly mistaken for *pillion*, a woman's saddle or cushion for an extra rider).

pyloral'gia [G. *pylōros*, pylorus, + *algos*, pain.] Pain in the pyloric region of the stomach.

pylorec'tomy [G *pylōros*, pylorus, + *ektomē*, excision.] Excision of the pylorus.

pylor'ic. Relating to the pylorus.

pyloristenosis (pi-lor-ĭ-sten-o'sis) [G. *pylōros*, pylorus, + *stenōsis*, a narrowing.] Stricture or narrowing of the orifice of the pylorus.

pyloritis (pi-lo-ri'(re')tis) [G. *pylōros*, pylorus, + *-itis*.] Inflammation of the pyloric end of the stomach.

pylorodio'sis [G *pylōros*, pylorus, + *diōsis*, pushing apart.] Operative dilatation of the pylorus.

pylorogastrectomy (pi-lo-ro-gas-trek'to-mĭ) [*pylorus* + *gastrectomy*.] Resection of the pyloric end of the stomach; hemigastrectomy.

pylo'roplasty [G. *pylōros*, pylorus, + *plassō*, I form] Reparative surgery of the pylorus.

pyloroptosia (pi-lor-op-to'sĭ-ah) [G. *pylōros*, pylorus, + *ptōsis*, a falling] Downward displacement of the pyloric end of the stomach.

pylo'rospasm. Spasmodic contraction of the pylorus.

pyloros'tomy [G. *pylōros*, pylorus, + *stoma*, mouth.] Establishment of a fistula leading from the abdominal surface into the stomach near the pylorus

pylo'rus [G. *pylōros*, a gatekeeper.] [BNA] Pyloric orifice; the aperture between the stomach and small intestine (duodenum).

pyo- [G *pyon*, pus.] A prefix denoting suppuration or an accumulation of pus.

pyocele (pi'o-sēl) [G. *pyon*, pus, + *kēlē*. tumor, hernia] An accumulation of pus in the scrotum.

pyoce'lia, pyocœ'lia [G. *pyon*, pus, + *koilia*, a cavity.] Pus in the abdominal cavity, pyoperitoneum.

pyoceph'alus [G. *pyon*, pus, + *kephalē*, head.] A purulent effusion within the cranium. **cir'cumscribed p.**, abscess of the brain. **exter'nal p.**, meningeal suppuration. **inter'nal p.**, the presence of pus in the cerebrospinal fluid.

pyochezia (pi-o-ke'zĭ-ah) [G. *pyon*, pus, + *chezō*, I defecate] A discharge of pus from the bowel.

pyococ'cus. One of the micrococci causing suppuration, especially *Streptococcus pyogenes;* see *pus-organisms*.

pyocolpocele (pi-o-kol'po-sēl) [G. *pyon*, pus, + *kolpos*, sinus (vagina), + *kēlē*, tumor, hernia.] Pyocolpos.

pyocolpos (pi-o-kol'pos) [G. *pyon*, pus, + *kolpos*, sinus (vagina).] An accumulation of pus in the vagina.

pyoc'tanin. See *pyoktanin*.

pyoculture (pi'o-kul-chur) [G. *pyon*, pus.] Peptonized bouillon is inoculated with a few drops of pus and, after 24 hours in the incubator, the culture is compared with the rest of the pus as a control; if the growth is less pronounced in the bouillon than in the unsown pus, the culture is said to be positive, the indication being that the organism is having a hard struggle to repress the bacterial invasion.

pyocyanase (pi-o-si'an-āz). A bacteriolytic enzyme formed in cultures of *Bacillus pyocyaneus* it is alleged to dissolve a number of pathogenic bacteria, especially those of anthrax, diphtheria, plague, and typhoid fever, but not *B. tuberculosis*.

pyocyan'ic. Relating to blue pus or the bacillus of blue pus, *B. pyocyaneus*.

pyocyanin (pi-o-si'an-in). The blue pigment formed by *Bacillus pyocyaneus*.

py"ocyanogen'ic [G. *pyon*, pus, + *kyanos*, blue, + *gennaō*, I produce.] Pyocyanic, causing blue pus, producing pyocyanin

pyocyanol'ysin. An hemolysin formed by *Bacillus pyocyaneus*.

py'ocyst [G. *pyon*, pus, + *kystis*, bladder.] A cyst with purulent contents.

pyocyte (pi'o-sīt) [G. *pyon*, pus, + *kytos*, cell] Pus-corpuscle.

pyodermatitis (pi-o-dur-mă-ti'(te')tis) [G. *pyon*, pus, + *derma(dermat-)*, skin, + *-itis*.] Suppurative inflammation of the skin, pyodermia.

pyodermatosis (pi"o-dur-mă-to'sis) [G. *pyon*, pus, + *derma*, skin, + *-osis*.] Pyodermia.

pyoder'mia. Any pustular or other form of suppurative disease of the skin.

pyodermitis (pi-o-dur-mi'(me')tis) Pyodermatitis.

pyogen'esis [G. *pyon*, pus, + *genesis*, origin.] The formation of pus.

pyogen'ic, pyogenet'ic [G. *pyon*, pus, + *gennaō*, I produce.] Pus-forming; relating to pus formation. **p. fever,** pyemia.

pyogenous (pi-oj'en-us). Pyogenic; caused by pus or suppuration.

pyohemia, pyohæmia (pi-o-he'mĭ-ah). Pyemia.

py"ohemotho'rax, py"ohæmotho'rax [G. *pyon*, pus, + *haima*, blood, + *thorax*] The presence of pus and blood in the pleural cavity.

py'oid [G. *pyon*, pus, + *eidos*, resemblance] Resembling pus, puriform.

pyok'tanin blue [G. *pyon*, pus, + *ktantēs*, a murderer] Trade name for methyl violet, an oxidation product of dimethylaniline; a purple crystalline powder, soluble in 75 parts of water; antiseptic, analgesic, employed in diseases of the mucous membranes, ulcers, wounds, syphilis, and cancer. **p. yel'low,** apyonin, a yellow powder; antiseptic, employed in ophthalmic practice.

pyolabyrinthitis (pi-o-lab-ĭ-rin-thi'(the')tis) [G. *pyon*, pus, + *labyrinthos*, labyrinth, + *-itis*.] Suppurative inflammation of the labyrinth of the ear.

pyometra (pi-o-me'trah) [G. *pyon*, pus, + *mētra*, uterus.] An accumulation of pus in the uterine cavity.

pyonephritis (pi-o-nĕ-fri'(fre')tis) [G. *pyon*, pus, + *nephros*, kidney, + *-itis*] Suppurative inflammation of the kidney.

pyonephro'sis [G. *pyon*, pus, + *nephros*, kidney, + *-ōsis*.] The distention of the pelvis and calyces of the kidney with pus.

py'onex [G. *pyon*, pus, + *ex*, out.] Acupuncture, Baunscheidtism; also the instrument, composed of a number of needles set in the extremity of a cylinder, used for performing acupuncture.

pyoovarium (pi"o-o-va'rĭ-um) [G. *pyon*, pus, + L. *ovarium*, ovary.] The presence of pus in the ovary, an ovarian abscess.

pyopericarditis (pi"o-pĕr-ĭ-kar-di'(de')tis). Suppurative inflammation of the pericardium.

py"opericar'dium [G. *pyon*, pus.] An accumulation of pus in the pericardial sac.

pyoperitonitis (pi"o-pĕr-ĭ-tŏ-ni'(ne')tis) [G. *pyon*, pus, + *peritonaion*, peritoneum, + *-itis*.] Suppurative inflammation of the peritoneum.

py"operitone'um [G. *pyon*, pus.] An accumulation of pus in the peritoneal cavity, pyocœlia.

py"ophthal'mia, pyophthalmitis (pi"of-thal-mi'(me')-tis) [G. *pyon*, pus, + *ophthalmos*, eye, + *-itis*.] Suppurative inflammation of the eye.

py"ophylac'tic [G. *pyon*, pus, + *phylaktikos*, guarding.] Protecting against purulent infection or pus-absorption; noting a membrane lining the wall of an abscess.

py"ophysome'tra [G. *pyon*, pus, + *physa*, air, + *mētra*, uterus.] The presence of pus and gas in the uterine cavity.

pyopneumopericardium (pi"o-nu'mo-pĕr-ĭ-kar'dĭ-um) [G. *pyon*, pus, + *pneuma*, air.] The presence of pus and gas in the pericardial sac.

pyopneumoperitoneum (pi"o-nu"mo-pĕr-ĭ-tŏ-ne'um) [G. *pyon*, pus, + *pneuma*, air.] The presence of pus and gas in the peritoneal cavity.

pyopneumothorax (pi"o-nu"mo-tho'raks) [G. *pyon*, pus, + *pneuma*, air.] The presence of gas together with a purulent effusion in the pleural cavity. **subdiaphragmat'ic p., subphren'ic p.,** subphrenic abscess associated with perforation of one of the hollow viscera, with resultant escape of gas into the abscess cavity.

pyopoiesis (pi"o-poy-e'sis) [G. *pyon*, pus, + *poiēsis*, a making.] Pyogenesis, pyosis, suppuration.

pyoptysis (pi-op'tĭ-sis) [G. *pyon*, pus, + *ptysis*, a spitting.] Purulent expectoration, spitting of pus.

pyorrhea, pyorrhœa (pi-o-re'ah) [G. *pyon*, pus, + *rhoia*, a flow.] A purulent discharge. **p. alveola'ris,** Riggs's disease, Fauchard's disease, a suppurative inflammation of the periosteum lining the tooth-sockets, marked by shrinkage of the gums and loosening of the teeth. **p. saliva'ris,** a discharge of pus from a salivary duct.

pyosalpingitis (pi-o-sal-pin-ji'(je')tis) [G. *pyon*, pus, + *salpinx(salping-)*, trumpet, + *-itis*.] Suppurative inflammation of the Fallopian tube.

pyosalpingo-oophoritis (pi-o"o-sal"ping-go-o-ŏ-for-i'-(e')tis). Pyosalpingo-oothecitis.

pyosalpingo-oothecitis (pi"o-sal'ping-go-o-ŏ-the-si'-(se')tis) [G. *pyon*, pus, + *salpinx(salping-)*, trumpet, + *ōothēkē*, ovary, + *-itis*.] Suppurative inflammation of the Fallopian tube and the ovary.

pyosalpinx (pi-o-sal'pinks) [G. *pyon*, pus, + *salpinx*, trumpet (oviduct).] Pus-tube, distention of a Fallopian tube with pus.

pyosapremia, pyosapræmia (pi"o-să-pre'mi-ah) [G. *pyon*, pus, + *sapros*, putrid, + *haima*, blood.] Purulent infection of the blood, pyemia.

pyosepticemia, pyosepticæmia (pi"o-sep-tĭ-se'mi-ah) [G. *pyon*, pus, + *sēptikos*, putrefying, + *haima*, blood.] Infection of the blood with several forms of bacteria, both pyogenic and non-pyogenic.

pyosis (pi-o'sis) [G.] Suppuration. **p. Corlett'i,** Corlett's* pyosis. **p. Man'soni,** Manson's* pyosis. **p. palma'ris,** an affection observed in children in the East Indies, characterized by the presence of numerous discrete pustules on the palms. **p. trop'ica,** Kurunegala ulcers, an affection observed by Castellani in Ceylon, marked by the presence of dirty yellowish or blackish lesions, covered with a crust, the removal of which leaves a shallow granulating ulcer.

pyostatic (pi-o-stat'ik) [G. *pyon*, pus, + *statikos*, causing to stand.] 1. Arresting the formation of pus. 2. An agent which arrests the formation of pus.

pyotho'rax [G. *pyon*, pus.] Empyema.

pyoureter (pi-o-u-re'ter) [G. *pyon*, pus, + *ourētēr*, ureter.] Distention of a ureter with pus.

pyoxan'thin [G. *pyon*, pus, + *xanthos*, yellow.] A reddish yellow pigment obtained from blue pus by oxidation.

pyoxan'those. A yellowish pigment obtained from blue pus by oxidation.

pyracetosal'yl. A compound of aspirin and antipyrine; antipyretic and analgesic in doses of 10 grains (0.6).

pyral'oxin. An oxidation product of pyrogallol obtained by the action of the vapor of ammonia and of oxygen, occurring as a brown powder; recommended in the form of a 10 per cent. ointment with vaseline and lanolin in the treatment of eczema and psoriasis.

pyr'amid [G. *pyramis*.] A term applied to a number of anatomical structures having a more or less pyramidal shape. Specifically the petrous portion of the temporal bone. **ante'rior p.** (of the medulla), pyramis (2). **cerebell'ar p.,** pyramis vermis. **pe'trous p.,** the petrous portion of the temporal bone containing the internal ear. **poste'rior p.** (of the medulla), funiculus gracilis. **p. of light,** a triangular area at the anterior inferior part of the drum membrane, running from the umbo to the periphery, where there is seen a bright reflection of light. **p. of the thyroid,** median lobe of the thyroid gland, Lalonette's* p. **p. of the tym'panum,** eminentia pyramidalis [BNA]. **p. of the ves'tibule,** pyramis vestibuli. **p. sign,** any of the symptoms indicating a morbid condition of any of the pyramidal tracts, such as the Babinsky or Gordon sign, spastic paralysis, foot clonus, etc. **renal p.,** pyramis renalis.

pyram'idal. 1. Of the shape of a pyramid. 2. Relating to any anatomical structure called pyramid. **p. bone,** cuneiform bone of the carpus, os* triquetrum [BNA].

pyramidale (pi-ram-i-da'le). Os pyramidale, os triquetrum [BNA].

pyramida'lis. See under *musculus*.

pyram'idon. Amidopyrina* (U.S.). **p. cam'phorate,** used in night sweats of phthisis in doses of gr. 7½–15 (0.5–1.0). **p. sal'icylate,** antirheumatic and antineuralgic in doses of gr. 8–10 (0.5–0.6)

pyramis (pir'ă-mis) [G.] Pyramid. 1. The petrous portion of the temporal bone. 2. Pyramid of the medulla oblongata, a bundle of motor nerve-fibers on the anterior surface of the medulla oblongata on either side of the anterior median fissure between that and the anterior lateral sulcus. **p. medul'læ oblonga'tæ** [BNA], (1) *anterior*, pyramis (2); (2) *posterior*, funiculus gracilis. **p. rena'lis** [BNA], Malpighian pyramid, medullary pyramid, one of a number of pyramidal masses seen on longitudinal section of the kidney; they contain the secreting apparatus and the tubules. **p. tym'pani,** eminentia pyramidalis. **p. ver'mis** [BNA], a subdivision of the inferior vermis of the cerebellum anterior to the tuber, between it and the uvula. **p. vestib'uli** [BNA], pyramid of the vestibule, the anterior triangular extremity of the crista vestibuli.

pyr'an. Pyranum.

pyran'tin. Paraethoxyphenylsuccinimide, colorless acicular crystals, nearly insoluble in water; antipyretic in doses of gr. 5–15 (0.3–1.0).

pyr'anum. Pyrenol, a mixture of salicylic acid, benzoic acid, and thymol, a white crystalline powder of sweetish taste and aromatic odor; employed in rheumatism, neuralgia, and bronchitis in doses of gr. 10–15 (0.6–1.0).

pyrazine (pi'ra-zēn). Antipyrine. **p. hexahy'dride,** piperazine.

py'razol. A derivative of pyrrhol, $C_3H_4N_2$; its compounds are said to be antispasmodic

pyraz'oline. Antipyrine.

pyrec'tic [G. *pyrektikos.*] Feverish, febrile, pyretic.

pyrenemia, pyrenæmia (pi-re-ne'mĭ-ah) [G. *pyrēn*, the pit of a fruit, + *haima*, blood.] A condition marked by the presence of nucleated blood-corpuscles.

pyrenin (pi're-nin) [G. *pyrēn*, pit of a fruit.] A nuclein in the plasmosome, or nucleolus.

pyrenoid (pi're-noyd) [G. *pyrēn*, pit of a fruit, + *eidos*, resemblance.] One of the minute luminous bodies seen in certain protozoan chromatophores.

pyr'enol. Pyranum.

pyrethrum (pir'eth-rum) [G. *pyrethron*, feverfew.] Pyrethri radix (Br.), pellitory, Spanish chamomile, the root of *Anacyclus pyrethrum*, a shrub native of Morocco; increases the flow of saliva and is employed in atonic pharyngitis and elongated uvula as a masticatory in doses of gr. 30–60 (2.0–4.0). **Ger'man p.,** the root of *Anacyclus officinarum*, cultivated chiefly in Germany; employed as a substitute for the official pyrethrum. **pyr'ethri flo'res,** Persian insect powder, pulvis insecticidus; the dried and powdered partly expanded flower heads of *Chrysanthemum roseum* and of *C. cinerariifolium*, yielding the Persian and the Dalmation insect powder, respectively. **pyr'ethri ra'dix** (Br.), pellitory root, pyrethrum (U.S.).

pyret'ic [G. *pyrektikos; pyretos*, fever.] Feverish, febrile; relating to fever.

pyretico'sis. Any fever.

py'retin. Trade name of an antipyretic and analgesic compound, recommended in doses of gr. 5–8 (0.3–0.5).

pyretogen (pi-ret'o-jen) [G. *pyretos*, fever, + *gennaō*, I produce.] Any agent that excites fever.

pyretogenesis (pi"rĕ-to-jen'e-sis) [G. *pyretos*, fever, + *genesis*, origin.] The origin and mode of production of fever.

pyretogenet'ic, pyretogen'ic [G. *pyretos*, fever, + *-genēs*, producing.] Causing fever. **p. bacte'ria,** pathogenic bacteria, infection with which causes fever. **p. stage,** stage of fervescence.*

pyretogenin (pi-rĕ-toj'en-in). A product of various pyretogenic bacteria, injection of which causes an elevation of body temperature

pyretogenous (pi-rĕ-toj'en-us) [G. *pyretos*, fever, + *gennaō*, I produce.] 1. Caused by fever 2. Causing fever, pyretogenetic.

pyretog'raphy [G. *pyretos*, fever, + *graphē*, a description.] A treatise on fevers.

pyretol'ogy [G. *pyretos*, fever, + *-logia*.] The branch of medical science treating of the production and varieties of fever.

pyretolysis (pi-rĕ-tol'i-sis) [G. *pyretos*, fever, + *lysis*, loosening, solution.] 1. Reduction of fever. 2. The acceleration of lytic processes (see *lysis*, 2) by an elevation of body temperature.

pyretotherapy (pi"re-to-ther'ă-pĭ) [G. *pyretos*, fever, + *therapeia*, treatment.] 1. Treatment of disease by raising the temperature of the body intermittently, either by diathermy or by inoculation of malarial organisms. 2. Treatment of fever.

py"retotypho'sis [G. *pyretos*, fever, + *typhōsis*, crazy vanity; *typhos*, stupid.] 1. Febrile delirium. 2. Febrile stupor.

pyrex'ia [G. *pyrexis*, feverishness.] Fever. **lo'cal p.,** acute inflammation.

pyrex'ial. Relating to fever; febrile pyretic, feverish.

pyrexeophobia (pi-rek-se-o-fo'bĭ-ă) [G. *pyrexis*, feverishness, + *phobos*, fear.] Abnormal dread of catching a fever.

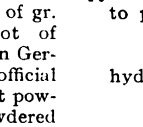
pyr'idine, pyridi'na. A colorless volatile liquid of empyreumatic odor and burning taste, C_5H_5N, resulting from the dry distillation of organic matter containing nitrogen, and has also been made synthetically; it is employed as a respiratory sedative in asthma and dyspnea, and in angina pectoris in doses of ♏2–8 (0.13–0.5), also by injection in gonorrhea.

pyridium (pi-rid'ĭ-um). A colloidal condensation product of phenylazo-diamino-pyridine hydrochloride, recommended in the treatment of gonorrhea and other diplococcic infections in doses of gr. 1½ (0.1 Gm.) twice a day.

pyr'iform (L. *pyrum(pirum)*, pear + *forma*, form.] Piriform.

pyrifor'mis. Piriformis, see under *musculus*.

pyrimidine (pi-rim'ĭ-dēn). A body closely related to purine, composed of carbon, nitrogen, and hydrogen, forming a ring,



p. ba'ses, the derivatives of the p. ring, such as cytosine, thymine, and uracile. **p. ba'ses,** cleavage products of the nucleic acids which are pyrimidine derivatives.

pyro- [G. *pyr*, fire.] A prefix denoting fire or prepared by fire.

pyroacetic spirit (pi-ro-ă-se'tik spir'it). Acetone.

pyroarsenic acid (pi"ro-ar-sen'ik as'id). A crystalline acid, $H_4As_2O_7$, obtained by heating arsenic acid to 180° C. (356° F.).

pyrobo'rate. A salt of pyroboric acid.

pyrobo'ric acid. Tetraboric acid, $H_2B_4O_7$, obtained by heating boric acid.

pyrocatechin (pi-ro-kat'e-kin). Orthodioxybenzene, catechol, an isomer of resorcinol, occurring in acicular needles soluble in water; employed externally as an antiseptic to meet the same indications as resorcinol.

pyrocatechinuria (pi-ro-kat"e-kin-u'rĭ-ah) [G. *ouuro* urine.] The presence of pyrocatechin in the urine.

pyrocit'ric acid. Citraconic acid.

pyrodex'trin. A tasteless substance formed by heating starch.

pyr'odin. Acetyl phenylhydrazine, a crystalline powder obtained by treating phenylhydrazine with acetic anhydride; employed internally as an antipyretic in doses of gr. ½–2 (0.03–0.13), and externally in parasitic skin diseases in 10 per cent. ointment.

pyr'oform. A grayish powder, obtained by the interaction of bismuth oxyiodide and oxidized pyrogallol, employed in the treatment of skin diseases as a substitute for pyrogallol.

pyrogal'lic acid. Pyrogallol.

pyrogal'lol [G. *pyr*, fire, + L. (*acidum*) *gallicum* + *oleum*, oil.] (U.S.) Pyrogallic acid, $C_6H_3(OH)_3$, a substance obtained from gallic acid by the action of heat, occurring as white shining plates or needles, of bitter taste, soluble in water; employed externally in the treatment of psoriasis, ringworm, and other skin affections, and internally for hemoptysis in doses of gr. ½–1 (0.03–0.06). **ox'idized p.,** pyraloxin. **p. monac'etate,** eugallol. **p. sal'icylate,** saligallol. **p. triac'etate,** lenigallol.

pyrogen (pi'ro-jen). [G. *pyr*, fire, + *gennaō*, I produce.] Pyretogen, any fever-producing substance.

pyrogen'ic [G. *pyr*, fire, + *-genēs*, producing] Pyretogenic.

pyrola (pir'o-lah) [L. *pyrus(pirus)*, pear-tree.] Round-leaved or false wintergreen, the plant *Pyrola rotundifolia*, an herb of Europe and North America; employed in epilepsy, uterine diseases, and gravel, and in general as an antispasmodic in doses of gr. 5–30 (0.3–2.0).

pyroligneous (pi-ro-lig'ne-us) [G. *pyr*, fire, + L. *lignum*, wood.] Relating to or produced by the dry distillation of wood. **p. acid**, wood-vinegar.* **p. al'cohol**, methyl alcohol, wood-alcohol. **p. vin'egar**, wood-vinegar.

pyrolu'site [G. *pyr*, fire, + *lousis*, a washing.] Manganese dioxide or binoxide, black oxide of manganese, mangani dioxidum.

pyromania (pi-ro-ma'nĭ-ah) [G. *pyr*, fire, + *mania*, frenzy.] An insane impulse to incendiarism.

pyrom'eter [G. *pyr*, fire, + *metron*, measure.] An instrument for measuring very high degrees of heat, beyond the capacity of a mercurial thermometer.

py'ronin. A basic dye, the chloride of tetramethyl- (pyronin G) or tetraethyl- (pyronin B) diamidodiphenylcarbide trioxide.

pyronyx'is [G. *pyr*, fire, + *nyxis*, a pricking.] Ignipuncture.

pyropho'bia [G. *pyr*, fire, + *phobos*, fear.] An insane dread of fire.

pyrophos'phate. A salt of pyrophosphoric acid; see *ferri pyrophosphas*.

py"rophosphor'ic acid. An acid, $H_4P_2O_7$, obtained by heating phosphoric acid to 213° C. (415° F.), it forms pyrophosphates with bases.

Pyroplas'ma [L. *pyrum(pirum)*, pear, + G. *plasma*, a thing formed.] *Piroplasma, Babesia.**

pyropunc'ture [G. *pyr*, fire.] Ignipuncture.

py'rosal. Antipyrine salicylacetate.

pyrosis (pi-ro'sis) [G. a burning.] The raising of small quantities of acid liquid from the stomach; heartburn.

Pyroso'ma [L. *pyrum(pirum)*, pear, + G. *sōma*, body.] *Babesia.*

pyrot'ic. 1. Relating to pyrosis. 2. Caustic.

pyrotox'in. Any toxic albumin produced in the tissues during the progress of a fever.

pyrox'ylin, pyroxyli'num [G. *pyr*, fire, + *xylon*, wood.] (U.S., Br.) Soluble gun-cotton, obtained by the action of nitric and sulphuric acids on cotton; employed in the preparation of collodion.

py'rozone. Trade name of a preparation of hydrogen peroxide.

pyrrhol, pyrrol, pyrroline (pir'ol, pir'o-lēn). A tarry liquid obtained by the destructive distillation of bone, and found also in coal-tar; employed in the manufacture of iodol. **p. cell**, a white cell which gives the pyrrhol reaction with paraminobenzaldehyde and hydrochloric acid; perithelial cell, Marchand's wandering cell. **p. reaction**, a pink color changing to red, produced by the action of p. vapor on wood aldehyde in the presence of hydrochloric acid.

pythogen'esis [G. *pythō*, I decay, + *genesis*, origin.] 1. Origination from decaying matter. 2. The causation of decay.

pythogen'ic [see *pythogenesis*.] Originating from filth or putrescence. **p. the'ory** of typhoid fever, a theory that typhoid fever is caused by an increased virulence of the colon bacillus or its transformation into the Eberth bacillus.

pythogenous (pi-thoj'en-us) [G. *pythō*, I decay, + *gennaō*, I produce.] Pythogenic.

pyuria (pi-u'rĭ-ah) [G. *pyon*, pus, + *ouron*, urine.] The presence of pus in the urine when voided.

pyxid'ium [G. *pyxidion*, dim. of *pyxis*, a box.] In botany, a capsule fruit with transverse dehiscence the top separating like a lid.

pyx'is [G. a box.] Pyxidium.

pyxol (piks'ol). Trade name of an antiseptic said to be somewhat similar to the compound solution of cresol (U.S.P.).

Q

Q [quantity.] Symbol for coulomb.

q.d. Abbreviation for L. *quater die*, four times a day.

q.h. Abbreviation of L. *quaque hora*, every hour, q.2 h., *quaque secunda hora*, every second hour; q.3 h., *quaque tertia hora*, every third hour.

q.i.d. Abbreviation for L. *quater in die*, four times a day.

q.l. Abbreviation of L. *quantum libet*, as much as is desired.

q. P. Abbreviation of quanti-Pirquet.

q. s. Abbreviation of *quantum sufficit*, as much as is needed; or *quantum sufficiat*, as much as may be needed.

quack. A charlatan; one who pretends to a knowledge of medicine which he does not possess.

quack'ery. Charlatanry; a false claim to medical knowledge, treating the sick without knowledge of medicine or authority to practise.

quader (kwa'der) [Ger square.] The precuneus or quadrate lobe of the cerebrum.

quadran'gular [L. *quadri-*, four, + *angulus*, angle] Noting a figure having four angles

quadrantanopsia (kwad-rant-an-op'sĭ-ah) [*quadrant* + *anopsia*.] Loss of vision in a part, approximately a quarter, of the visual field

quad'rate [L. *quadratus*, square] Having four equal sides, square

quadra"tiprona'tor. Musculus pronator quadratus.

quadra'tus [L *square*] A name given to several muscles which are more or less square in shape; see under *musculus*.

quadribasic (kwad-ri-ba'sic). Noting an acid having four hydrogen atoms which are replaceable by atoms or radicals of a basic character.

quad'riceps [L. *quadri-*, four, + *caput*, head] Having four heads, noting a muscle of the thigh, *musculus q. femoris*, and one of the calf, *musculus q. suræ*, or the combined gastrocnemius (with two heads), soleus, and plantaris, more commonly called musculus triceps suræ the plantaris being counted as a separate muscle. **q. ar'tery of the fe'mur,** the descending branch of the lateral circumflex artery of the thigh.

quadrigemina (kwad-rĭ-jem'ĭ-nah). Corpora quadrigemina; see *colliculus inferior* and *colliculus superior*.

quadrigem'inal [L. *quadri-*, four, + *geminus*, twin] Four-fold, noting the corpora quadrigemina

quadrigem'inum. One of the corpora quadrigemina

quadrigem'inus. Quadruplet

quadrilat'eral [L. *quadri-*, four, + *latus*, side] Having four sides.

quadrip'ara [L. *quadri-*, four, + *parere*, to bear] A woman who has given birth to four children, or who is giving birth to the fourth child

quadrip'arous. Noting a quadripara.

quadriplegia (kwod-rĭ-ple'jĭ-ah) [L. *quadri-*, four, + G. *plēgē*, stroke.] Tetraplegia.

quad'risect [L. *quadri-*, four, + *secare*, to cut] To divide into four parts.

quadritubercular (kwod"rĭ-tu-bur'ku-lar) [L. *quadri-*, four, + *tuberculum*, tubercle.] Having four tubercles or cusps, as a molar tooth.

quadriurate (kwad-rĭ-u'rāt). The urate forming the solid urine of birds and reptiles; the acid urate of human urine.

quadriv'alent [L. *quadri-(quattuor)*, four, + *valere*, to have power.] Having the combining power of four atoms of hydrogen.

quadroon'. A child of a white person and a mulatto.

Quadru'mana [L. *quattuor*, four, + *manus*, hand. An order of *Mammalia*, now generally abandoned which included monkeys, apes, and lemurs; it embraced all now included in the order of *Primates*, except man.

quad'ruped [L. *quattuor*, four + *pes(ped-)*, foot.] A four-footed animal.

quad'ruplet [L. *quadruplus*, fourfold] Quadrigeminus, one of four children born at one birth.

qualimeter (kwol-im'e-tur) [L. *qualis*, of what kind, + G. *metron*, measure.] A device for estimating the degree of hardness of the *x*-rays.

qual'itative. Relating to quality and not quantity. **q. anal'ysis,** an analysis to determine the nature of the substances present without regard to their respective amounts.

Quant's sign (kvahnt). A T-shaped depression in the occipital bone occurring in many cases of rickets.

quanta (kwahn'tah). Plural of quantum.

quantimeter (kwon-tim'e-tur) [L. *quantus*, how much, + G. *metron*, measure.] A device for determining the quantity of *x*-rays generated by a Crookes or Coolidge tube.

quanti-Pirquet (kwahn'te-pēr'ket) Quantitative cutaneous test; measurement of the amount of sensitiveness to tuberculin by the use of graduated dilutions in the Pirquet* test; see *Ellermann*-Erlandsen method.*

quan'titative. Relating to quantity **q. anal'ysis** an analysis made to determine the actual amount of each substance present.

quantiv'alence [L *quantus*, how much, + *valere*, to have power] Valence

quantum (kwahn'tum) [L. how much.] 1. A unit of radiant energy (ϵ) varying according to the frequency (ν) of the radiation. 2. A certain definite amount. **q. libet,** as much as is desired; abbreviated to *q.l.* **q. suff'icit, q. suffic'iat,** as much as suffices, as much as may be needed; abbreviated in prescription writing to *q.s.* or *quant. suff.* **q. the'ory,** radiation is not a continuous action but an intermittent emission or absorption of energy in varying multiples of the quanta.

quarantine (kwar'an-tēn) [It. *quarantina; quaranta*, forty] 1. A period (originally forty days) of detention of ships and their passengers comine from a port where smallpox, yellow fever, or some infectious disease prevails. 2. To detain ships and their passengers when the former have come from an infected port, or any of the latter are ill of an infectious disease. 3. A place where passengers coming by ship from an infected port are detained until the incubation period of the disease in question has passed. 4. The isolation of a person sick with a contagious disease. **land q.** the establishment of a q. against persons approaching a city by land from an infected district. **shotgun q.,** the enforcing of a land q. by means of soldiers or an armed guard.

quart. 1 A measure of fluid capacity, the fourth part of a gallon, the equivalent of 0.9468 liter.

2. A dry measure holding a little more than the fluid measure. **impe'rial q.**, a liquid measure containing about 20 per cent. more than the ordinary quart, or 1.1359 liters.

quartan, quartan fe'ver (kwawr'tan) [L. *quartanus*, relating to a fourth (thing)] A malarial fever the paroxysms of which recur every third day (every fourth day, reckoning the day of the paroxysm as the first), due to the sporulation and invasion of new red blood-corpuscles by a protozoan blood-parasite, *Plasmodium malariæ*. **double q.**, infection with two independent groups of quartan parasites, so that paroxysms occur on two successive days followed by one day without fever **q. par'asite,** *Plasmodium malariæ* **triple q.**, infection with three independent groups of quartan parasites, so that a paroxysm occurs every day, resembling a double tertian or a quotidian fever.

quar'ter [L. *quartus*, fourth.] The lateral part of the wall of the hoof in the horse. **false q.**, in the horse, a separation in the crust below the seat, in the coronary band, of an injury severe enough to prevent the secretion of horny substance; it occurs usually at the inner quarter and is due to the horse treading on his coronet

quar'ter-crack. Sand-crack

quar'ter-evil. Symptomatic anthrax.

quarter'nary [L. *quarternarius*, of four.] 1 Noting a chemical compound containing four elements. 2. Fourth in a series. **q. syph'ilis,** parasyphilis.

quartipara (kwawr-tip'ah-rah) [L. *quartus*, fourth, + *parere*, to bear.] Quadripara.

quar'tisect [L. *quartus*, fourth, + *secare*, to cut] Quadrisect.

quartisternal (kwawr-tĭ-stur'nal) Relating to the segment of the sternum opposite the fourth intercostal space; the fourth sternebra, counting from the upper end of the sternum.

quarto'nol. Trade name of a mixture of glycerophosphates in the proportions of calcium and sodium each 2¼ grains, quinine ½ gram, and strychnine $\frac{1}{100}$; see *tonol*.

quartz'light lamp. A mercury quartz lamp, consisting of a vacuum tube of quartz at the extremities of which are small U-tubes containing mercury, serving as the positive and negative electrodes

quassa'tion [L. *quassare*, to shatter.] The breaking up of crude drug materials, such as bark and woody stems, into small pieces to facilitate extraction and other treatment.

quassia (kwash'yah) [named from a Negro in Surinam who employed it as a tonic.] (U.S., Br.) Quassiæ lignum bitterwood, the wood of *Picrasma excelsa* (*Picræna excelsa*), or of *Quassia amara;* it is marketed as Jamaica q. and Surinam q. It is employed as a bitter tonic in doses of gr. 5–30 (0.3–2.0). The infusion is used as an injection for the destruction of thread worms. **q. cup,** a cup made of q. wood in which water is allowed to stand over night, acquiring thus the tonic properties of the wood.

quas'sin. The bitter principle of Surinam quassia, an amaroid employed as a tonic in doses of gr. ¼–½ (0.015–0.03).

quas'siin. The neutral bitter principle of Jamaica quassia; employed as a tonic in doses of gr. ¼–½ (0.015–0.03).

Quatrefages's an'gle (kă-tr-fazh') [Jean Louis Armand de *Quatrefages* de Bréau, French naturalist, 1810–1892.] Parietal angle.*

quebrachamine (ke-brah'chah-mēn). An alkaloid of quebracho, resembling quebrachine, but melting at a lower temperature and more soluble.

quebrachine (ke-brah'chēn). An alkaloid, $C_{21}H_{26}N_2O_3$, from quebracho; employed in cardiac dyspnea in doses of gr. 1–2 (0.06–0.13). **q. hydrochlo'ride,** a salt employed like the alkaloid in doses of gr. ¾–1½ (0.05–0.1).

quebracho (ke-brah'cho) [Port. *quebrahacho; quebrar*, to break, + *hacha*, axe, referring to the hardness of the wood.] Aspidosperma. **q. blanco,** white q. **q. colora'do,** red q. **red q.,** the bark of *Loxopterygium lorenzii* and other species of *L.*, used as a substitute for cinchona. **white q.,** aspidosperma.

queen of the meadow. Eupatorium.

queen's delight, queen's root. Stillingia.

Quénu's tho'racoplas'ty (ka-nu') [E. *Quénu* Parisian surgeon, *1852.] Resection of the ribs to allow of retraction of the thorax in the treatment of empyema.

Quénu-Mayo opera'tion (ka-nü'-ma'o) [E. *Quénu;* William J. *Mayo*, American surgeon, *1861.] Excision of the rectum with removal of the neighboring lymph-glands, for cancer.

Quénu-Muret sign (ka-nu'mu-ra') [E. *Quénu.*] In a case of aneurysm the main artery of the limb is compressed and then a puncture is made at the periphery; if blood issues it is assumed that the collateral circulation is well maintained.

quercin (kwur'sin). A crystalline carbohydrate, $C_6H_6(OH)_6$, of bitter taste, contained in acorns and oak-bark.

quercitann'ic acid. An acid like tannic acid obtained from oak-bark.

quercitann'in. Quercitannic acid.

quercitann'oform. A preparation, similar in its uses to tannoform, prepared from quercitannic acid and formaldehyde.

quer'cite. A sweet crystalline substance, $C_6H_7(OH)_5$, obtained from acorns.

quercitrin (kwur'sit-rin). A glucoside, $C_{36}H_{38}O_{20}$, obtained from the bark of *Quercus tinctoria*, occurring in the form of a yellow crystalline powder; it has tonic astringent properties.

quercitrin'ic acid. Quercitrin.

quer'cus [L. oak.] (N.F.) The bark of *Quercus alba*, white oak, stone oak; employed as an astringent in diarrhea in doses of gr. 10–15 (0.6–1.0), and externally in the form of infusion in chronic pharyngitis and tonsillitis

querulent (kwer'u-lent). One who is ever suspicious, always opposing any suggestion, complaining of ill treatment and of being slighted or misunderstood, easily enraged, and dissatisfied with whatever is; the condition is a psychosis of hysterical or paranoiac type.

Query's serum (kwēr'iz se'rum). A syphilitic antiserum prepared by inoculating monkeys with filtered cultures of the *Treponema pallidum* in bouillon.

Quevenne's i'ron (kĕ-ven') [Théodore Auguste *Quevenne*, French physician, 1805–1855] Ferrum reductum

quick [A.S. *cwic*, living] 1 Pregnant with a child the movement of which is felt. 2. A sensitive part, painful to touch 3 Eponychium.

quickening (kwik'ning) [A.S. *cwic*, living.] The signs of life felt by the mother as a result of the fetal movements, usually noted first in the fourth or fifth month of pregnancy.

quick'lime. Unslaked lime, calcium oxide

quick'silver [*quick*, living, + *silver*] Mercury hydrargyrum.*

quilla'ia (Br.). Quillaja.

quillaiæ cor'tex (kwĭlla'ye) (Br. '14.) Soap bark, quillaja (N.F.).

quillaja (kwil-lah'yah). (N.F.) Quillaiæ cortex, soap bark, Panama bark; the inner bark of *Quillaja saponaria*, a large tree of Chile; sometimes employed as s sternutatory in chronic rhinitis and as a shampoo.

quina (ke'nah, kwe'nah) [Sp.] Cinchona bark.

quinacetine (kwin-as'ĕ-tēn). A synthetic alkaloid the sulphate of which has been employed as an analgesic and antipyretic in doses of gr. 5–10 (0.3–0.6).

quinal'gen. Analgen.

quinam'icine. An artificial alkaloid made from quinamine.

quinam'idine. An artificial alkaloid isomeric with quinamicine, made from quinamine.

quinamine (kwin-am'ēn). An alkaloid, $C_{19}H_{24}N_2O_2$, obtained from cinchona bark.

quinaphenin (kwin-ă-fen'in). A compound of quinine and phenetidin, employed to meet the same indications as quinine.

quinaph'thol. Chinaphthol.

quinasep'tol. Diaphthol, ortho-oxyquinoline-meta-sulphonic acid; light yellowish crystals, very slightly soluble in cold water, antiseptic in 1 per cent. solution; recommended also internally as a urinary antiseptic

quinaquina (ke'nah-ke'nah, kwin'ah-kwin'ah) [a reduplication of *quina*.] Cinchona bark.

quin'ate. A salt of quinic acid.

quince. A tree, *Cydonia vulgaris*, of the order *Rosaceæ*, yielding a fruit from the seed of which a mucilage is prepared; see *cydonium*.

quince-seed. Cydonium.

Quincke's disease', Quincke's ede'ma (kving'keh) [Heinrich Irenæus *Quincke*, German physician, 1842–1922.) Bannister's disease, angioneurotic edema of the skin. **Q.'s pulse,** capillary pulse, as shown by a momentary reddening of the nail-bed, blanched by pressure of the finger, with each systole; a sign of aortic insufficiency with cardiac hypertrophy. **Q.'s punc'ture,** lumbar puncture for removal of a portion of the cerebrospinal fluid or to determine the tension of the same. **Q.'s set,** a trocar, cannula, and manometer for use in making Q.'s puncture. **Q.'s sign,** Q.'s pulse.

quin'etine. A mixture of cinchona alkaloids in imitation of a similar product, called *febrifuge*, made at the cinchona plantations in the East Indies.

quinhydrone (kwin-hi'drōn). A reaction product of aqueous solutions of quinone and hydroquinone.

quinia (kwin'ĭ-ah). Quinine.

quin'ic acid. Kinic acid, a crystalline acid, $C_7H_{12}O_6$, obtained from the cinchona barks; it yields quinone on treating with sulphuric acid and manganese peroxide, and is converted into benzoic acid on heating with hydriodic acid.

quin'icine. An amorphous alkaloid isomeric with quinine and quinidine.

quinid'amine. One of the cinchona alkaloids.

quinidina (kwin-ĭ-de'nah). Quinidine, conquinine, beta-quinine; one of the alkaloids of cinchona, isomeric with quinine, occurring in colorless shining prismatic crystals, of bitter taste, almost insoluble in water. It is employed as a substitute for quinine and in the treatment of auricular fibrillation in doses of gr. 3–6 (0.2–0.4).

quinidinæ sulphas (kwin-ĭ-de'na sul'fas) (U.S., Br.), quinidine sulphate, $(C_{20}H_{24}O_2N_2)_2 \cdot H_2SO_4 \cdot 2H_2O$, occurs in fine needle-like white crystals, frequently cohering in masses, odorless and of a very bitter taste; it is the salt of quinidina commonly employed hypodermically in the treatment of auricular fibrillation, in doses of gr. 3–5 (0.2–0.3).

quinina (kwĭ-ne'nah). (U.S.) Quinine, the most important of the alkaloids derived from cinchona, $C_{20}H_{24}N_2O_2 + 3H_2O$, occurring as a white, flaky, odorless, bitter powder, very slightly soluble in water; employed as a tonic and antiperiodic, being specific in malaria both as a curative and as a preventive remedy. The uncombined alkaloid is seldom employed, its more soluble salts being used instead; dose, gr. 2–15 (0.13–1.0).

quini'næ [L.] Genitive of quinina, of quinine.

q. ace'tas, quinine acetate, a fine white crystalline powder soluble in 7 parts of water; dose, gr. 1–10 (0.06–0.6).

q. æthylcarbo'nas (U.S.), quinine ethylcarbonate, euquinine, the quinine ester of ethyl carbonic acid; occurs in white, fine, soft needles, usually matted together in fleecy masses, odorless and practically tasteless, slightly soluble in water, but soluble in 2 parts of alcohol; dose: tonic, gr. 1½–3 (0.1–0.2); antimalarial, gr. 15 (1.0).

q. albu'minas, quinine albuminate, light yellowish scales, soluble in water, employed as a tonic in doses of gr. 2–15 (0.13–1.0).

q. arse'nas, quinine arsenate, white prismatic crystals, nearly insoluble in cold, but freely soluble in hot, water; antiperiodic and tonic in doses of gr. $\frac{1}{4}$–$\frac{1}{6}$ (0.005–0.01).

q. arse'nis, quinine arsenite, a white powder or acicular needles, slightly soluble in water, antiperiodic in doses of gr. ½–1 (0.03–0.06)

q. ben'zoas, quinine benzoate, white prismatic crystals soluble in 350 parts of water; dose gr. 2–20 (0.13–1.3).

q. bisul'phas (U.S., Br.), quinine bisulphate, acid quinine sulphate, colorless, translucent acicular crystals, of bitter taste, very soluble in water; dose gr. 2–15 (0.13–1.0).

q. bo'ras, quinine borate, white crystalline powder soluble in water; dose, gr. 3–30 (0.2–2.0).

q. bro'mas, quinine bromate, white crystalline mass soluble in 250 parts of water; dose gr. 3–30 (0.2–2.0)

q. campho'ras, quinine camphorate, white powder insoluble in water; doses, gr. 3–30 (0.2–2.0).

q. car'bolas, quinine carbolate, quinine phenate, quinine phenolate, white acicular crystals soluble in 400 parts of water; dose gr. 2–20 (0.13–1.3).

q. carbo'nas, quinine carbonate, colorless needle-shaped crystals, soluble in water, dose gr. 1–10 (0.06–0.6).

q. chlo'ras, quinine chlorate, white needle-shaped crystals soluble in water; dose gr. 1–5 (0.06–0.3).

q. chlorhydrophos'phas, quinine chlorhydrophosphate, or hydrochlorphosphate, or phosphochloride; a yellow crystalline powder soluble in water; employed in nervous and malarial headaches in doses of gr 3–10 (0.2–0.6).

q. chlorhydrosul'phas, quinine chlorhydrosulphate, or hydrochlorsulphate, or sulphochloride; white acicular crystals, very soluble in water; employed hypodermically in pernicious malaria in doses of ℥10–15 (0.6–1.0) of a 20 per cent. solution.

q. ci'tras, quinine citrate, white needle-shaped crystals, very slightly soluble in water; antiperiodic in doses of gr. 2–20 (0.13–1.3).

q. dihydrochlo'ridum (U.S., Br.), quininæ hydrochloridum acidum quinine dihydrochloride, occurring as a white odorless, bitter powder, soluble in 0.6 part of water or 12 parts of alcohol; dose, gr. 1½–15 (0.1–1.0).

q. eo'solas, quinine eosolate, a quinine salt of trisulphoacetylguaiacol, a yellow powder of bitter taste, slightly soluble in water, employed in influenza and malaria in doses of gr. 5–10 (0.3–0.6).

q. et æth'ylis carbo'nas (Br.), quinine ethyl carbonate, occurs as fine, white, soft, matted needles, odorless, almost tasteless; dose, gr. 1½–15 (0.1–1.0).

q. et ure'æ hydrochlo'ridum (U.S.), quinine and urea hydrochloride, q. hydrochlorocarbamidum, $C_{20}H_{24}N_2 \cdot HClCO(NH_2)_2 \cdot HCl + 5H_2O$, occurs in small prismatic crystals, soluble in water, containing not less than 58

per cent. of anhydrous quinine; has been used in cholera in doses of gr. 10–15 (0.6–1.0) hypodermically, but is chiefly employed as a local anesthetic in place of cocaine, in subcutaneous injections of a 1 per cent. solution.

q. for'mas, quinine formate, quinoform, chinoform, occurring in soluble crystals, containing 87 per cent. of quinine; employed hypodermically in doses of gr. 1–3 (0.06–0.2) in malaria, per os in doses of gr. 1–5 (0.06–0.3) as a general tonic, and in solution (1 to 50) as a collyrium in asthenopia.

q. glycerophos'phas, quinine glycerophosphate, white acicular needles or crystalline powder of a bitter taste, soluble in 100 parts of water; employed in nervous exhaustion in doses of gr. 3–8 (0.2–0.5).

q. hydrio'didum, quinine hydriodide, quinine iodide, a yellowish powder, slightly soluble in water. employed as an alterative in doses of gr. 2–8 (0.13–0.5);

q. hydrobro'midum (U.S.), quinine hydrobromide, white silky needle-shaped crystals, of bitter taste, soluble in 40 parts of water; dose, gr. 3–15 (0.2–1.0).

q. hydrochlo'ridum (U.S., Br.), quinine hydrochloride, quinine muriate, white silky needle-shaped crystals, of bitter taste, soluble in 18 parts of water; dose, gr. 3–15 (0.2–1.0).

q. hydrochlo'ridum ac'idum (Br., '14), acid quinine hydrochloride, quinine dihydrochloride. quinine bimuriate.

q. hydrochlorocarbam'idum, q. et ureæ hydrochloridum.

q. hydrochlorphos'phas, quininæ chlorhydrophosphas.

q. hydrochlorsul'phas, quininæ chlorhydrosulphas

q. hypophos'phis, quinine hypophosphite, a white crystalline powder, soluble in water; employed, usually in combination with other hypophosphites, in doses of gr. 1–5 (0.06–0.3).

q. lac'tas, quinine lactate, white needle-shaped crystals soluble in water; dose, gr. 5–10 (0.3–0.6).

q. lygo'sinas, quinine lygosinate, a quinine salt of diorthocumarketone or of dioxydibenzylacetone; an orange-yellow powder of bitter taste and faintly aromatic odor, but slightly soluble in water; styptic and antiseptic, employed in surgical dressings.

q. phe'nas, quinine phenate, quininæ carbolas.

q. salicyl'as, quinine salicylate, colorless or pinkish needle-shaped crystals of bitter taste, soluble in 77 parts of water; employed in rheumatism in doses of gr. 3–10 (0.2–0.6).

q. sul'phas (U.S., Br.), quinine sulphate, white, lustrous, silky, needle-shaped crystals of bitter taste, soluble in about 700 parts of cold water; the most frequently prescribed salt of quinine; dose, gr 1–3 (0.06–0.2) as a tonic, gr. 5–15 (0.3–1.0) as an antiperiodic.

q. tan'nas (U.S., Br.), quinine tannate, a yellowish white, odorless, and almost tasteless powder, soluble in 800 parts of water, a compound of quinine and tannin, containing from 30 to 35 per cent. of anhydrous quinine; dose, gr. 3–5 (0.2–0.3); it is sometimes given in preference to the sulphate, especially to children, on account of its slight taste.

q. val'eras, quinine valerate, quinine valerianate, occurring in the form of colorless plates or needles with a faint odor and taste of valerian; has been recommended in neuralgia and nervous headache in doses of gr. 1–5 (0.06–0.3).

quinine (kwin-ēn', kin-ēn', kwi'nīn) [Peruvian, *kina*, cinchona bark.] Quinina.* **q. and ure'a hydrochlor'ide,** quininæ hydrochlorocarbamidum. **q. choc'olate,** a mixture of quinine hydrochloride and chocolate in which the intense bitter of the quinine is partly concealed. **q. dihy"drobromoguai'acolate,** guaiaquinol. **q. guaiacol-bisul'phonate,** guaiaquin, a yellowish powder of acid bitter taste, employed as an intestinal antiseptic and antiperiodic in doses of gr. 5–10 (0.3–0.6). **q. u'rethane,** a mixture of urethane and quinine hydrochloride; solvochin; recommended in the treatment of pneumonia, as less likely to affect the eyes than optochin.

quininephytin (kwin-in-ef'i-tin). Quinine anhydro-oxymethylenediphosphate, a yellowish crystalline powder, of bitter taste, soluble in water; employed as an antiperiodic and tonic in doses of gr. 5–8(0.3–0.5).

quin'inism. Cinchonism.

quiniobine (kwin-i'o-bēn). Trade name of a mixture of quinine, iodine, and bismuth in olive oil; proposed for the treatment of syphilis in doses of ♏ 15–30 (1.0–2.0) intramuscularly twice a week.

quinisal (kwin'ĭ-sal) [*quinine* + *salicylic* acid.] Trade name of quinine bisalicylosalicylate, recommended in the treatment of coryza and influenza in doses of 4 to 8 grains (0.25 to 0.5) every two hours for 4 to 6 times.

quinisan (kwin'ĭ-san). Trade name of quinine bisalicylo-salicylate, a white, odorless, crystalline powder, insoluble in water, offered for the treatment of coryza, tonsillitis, and influenza in dose of gr. 4 every 6 hours.

Quin'lan's test. For bile: when a thin layer of bile is examined through a spectroscope, absorption lines appear in the violet.

quinochlo'ral. A compound of quinine and chloral, antipyretic in doses of gr. 2–8 (0.13–0.5).
