dineric (di-ner'ik) [G. dinē, an eddy, whirlpool.] Eddying or whirling, noting the movement of a liquid. **d. in'terspace,** the surface between two liquid phases.

dineuric (di-nu'rik) [G. *di-*, two, + *neuron*, nerve. Having two axis-cylinder processes, noting a neuron or nerve-cell.

din'ical [G. *dinos*, dizziness.] 1. Relating to, or relieving vertigo.

Dinifer'ida. An order of *Dinoflagellata* in which the flagella lie in furrows.

dini'trate. A salt having two molecules of nitric acid

dinitrocellulose (di ni-tro-sel'u-lōz). Pyroxylin.

din'ner pad. A pad of moderate thickness placed over the pit of the stomach before the application of a plaster jacket; after the plaster has set the pad is removed, leaving space for varying conditions of abdominal distention.

din'ner pill. Pilula ad prandium; a laxative pill, containing aloes, to be taken after eating; the several dinner pills are known as Chapman's, Cole's, Hall's, and Lady Webster's, and all contain about 1 grain of aloes, Cole's having jalap, blue mass, and tartar emetic as well.

Dinoflagella'ta [G. *dinos*, a whirling.] A subclass of *Phytomastigophora*, comprising organisms with a cellulose envelope, containing yellow or brown pigment, and with two or more flagella, transverse and longitudinal, by the action of which the cell rotates as it advances.

dinormocytosis (di-nor''mo-si-to'sis) [G. *di-*, two, + normocytosis.] Normonormocytosis, isonormocytosis.*

diocaine (di''o-kah-ēn'). Trade name of para-diallyl-oxyethyl-diphenyl-diamidine; a colorless powder soluble in water and alcohol, employed as a local anesthetic in ophthalmology.

Dioctophyme (di-ok-to-fi'me). A genus of nematode worms of very large size, more commonly called **D. rena'le,** *Eustron'gylus gi'gas,* or *E. visceral'is;* the only species, is normally found in the pelvis of the kidney and peritoneal cavity of the dog, but occasionally in other mammals and man.

Di'odon [G. *di-*, two, + *odous(odont-)*, tooth.] A genus of globe-fishes, some species of which are poisonous.

dioe'cious. Diecious.

dioesoph'agus [G. *di-*, two, + *oisophagos*, esophagus.] A congenital reduplication, complete or partial of the esophagus.

dioestrum (di-es'trum). Diestrum

diomor'phine. A mixture of dionin and morphine.

di'onine. Æthylmorphinæ hydrochloridum (U.S.).

diopsim'eter [G. *dia*, through, + *opsis*, vision, + *metron*, measure.] An instrument for determining the limits of the field of vision.

diop'ter [G. *dioptra*, a leveling instrument.] A dioptric, the unit of refracting power of lenses, noting a lens whose principal focus is at a distance of 1 meter (39.3 inches). **prism d.,** see under *prism.*

dioptom'eter. Dioptrometer.

dioptom'etry. Dioptrometry.

dioptos'copy. Dioptroscopy.

diop'tric. 1. Diopter. 2. Refractive.

dop'trics. The branch of optics which deals with the refraction of light.

dioptrometer (di-op-trom'e-tur) [*diopter* + G. *metron*, measure.] An instrument for measuring refraction.

dioptrometry (di-op-trom'e-trĭ) [*diopter* + G. *metron*, measure.] Measurement of the degree of accommodation and refractive power of the eye.

dioptros'copy [*diopter* + G. *skopeō*, I examine.] Determination of the degree of refraction by means of the ophthalmoscope.

dioptry (di-op'trĭ). Diopter, a dioptric.

diortho'sis [G. a making straight.] Diaplasis.

diosco'rea [after *Dioscorides* Pedacius or Pedanius, a Greek physician and botanist, probably of the first century B.C. or A.D.] (N.F.) Colic-root, rheumatism-root, wild yam; the rhizome of *Dioscorea villosa;* expectorant and diaphoretic; has been used in the treatment of rheumatism and bilious colic, in dose of ʒ1 (4.0) of the N.F. fluidextract.

dioscorein (di-os-kor'e-in). A resinoid from *Dioscorea villosa;* a brownish bitter powder, employed as a diaphoretic and antispasmodic in doses of gr. 1–3 (0.06–0.2).

Dioscorides' gra'nule (di-os-kor'ĭ-dēz) [*Dioscorides* Pedacius, the younger, Greek writer on materia medica, first century A.D.] A granule of milk sugar and gum arabic containing gr. $\frac{1}{60}$ (0.001) of arsenous acid.

diose (di'ōz). Glycol aldehyde, $C_2H_4O_2$, chemically the simplest sugar.

dios'mal. Trade name of a buchu preparation, employed for the same purposes as buchu in doses of gr. 1–2 (0.06–0.13).

diosmosis (di-oz-mo'sis) [G. *dia*, through, + *ōsmos*, a pushing.] The transudation of a fluid through a membrane.

dios'pyros [G. *Dios pyros*, Jupiter's wheat.] Persimmon, the unripe fruit of *Diospyros virginiana*; astringent, tonic, and antiperiodic in doses of ʒ½–1 (15.0–30.0) of the infusion.

diox'ide. A chemical compound containing two atoms of oxygen to one of the metallic element.

dioxydiamido-arsenobenzol (di-ok"sĭ-di-am'i-do-ar"-sen-o-ben'zol). Salvarsan, arsphenamine.

diox'ygen. A preparation of hydrogen peroxide.

dioxy ol'uene. Orcin.

dipen'tene. Diamylene, cinene, cajeputene, caoutchin, $C_{10}H_{16}$, a substance present in several ethereal oils, said to be one of the constituents of terpinol.

dipeptid (di-pep'tid) [G. *di-*, two, + *peptid*.] A peptid consisting of a combination of two amino-acids.

dipha'sic [G. *di-*, two, + *phasis*, appearance.] Occurring in or referring to, two phases or stages.

diphen (di'fen). Trade name of an antiseptic liquid, claimed to be of great potency.

diphenylamine (di-fen-il-am'ēn). A crystalline substance used as a test for nitrous and nitric acids.

diphenylchlorarsine (di-fen"il-klor-ar'sēn). Sternutator, sneezing gas, a gas used in warfare, inhalation of which causes violent sneezing, cough, salivation, headache, and retrosternal pain.

dipho'nia [G. *di-*, two, + *phōnē*, voice.] Double voice, the simultaneous production of two distinct tones during phonation.

diphosgene (di-fos'jēn). Trichlormethylchloroformate, ClCOOCCl$_3$, one of the poison gases used in the World War.

diphtheria (dif-the'rĭ-ah) [G. *diphthera*, leather.] A specific infectious disease due to the Klebs-Loeffler bacillus, marked by inflammation, with formation of a fibrinous exudate, of the mucous membrane of the throat or nose, and by more or less pronounced symptoms of toxemia. **false d.**, diphtheroid; croupous tonsillitis. **sur'gical d.**, the formation of a false membrane on the surface of a wound.

diphthe'rial. Relating to diphtheria.

diphtheriaphor (dif-the'rĭ-ah-for) [*diphtheria* + G. *phoreō*, I carry.] A diphtheria bacilli carrier, or vector.

diph'therin. The toxin of diphtheria, diphtherotoxin.

diphtheriolysin (dif-the"rĭ-ol'i-sin). An antibody destructive to the diphtheria bacillus.

diphtherit'ic. Relating in any way to diphtheria.

diphtheritis (dif-ther-i'(e')tis). Diphtheria.

diph'theroid [G. *eidos*, resemblance.] Pseudodiphtheria, false diphtheria; one of a group of local infections, suggesting diphtheria, with occasional symptoms of toxemia, caused by various microorganisms other than the diphtheria bacillus.

diph"therotox'in. The toxin of diphtheria.

diphthon'gia [G. *di-*, two, + *phthongos*, the voice.] Diphonia.

Diphyllobothrium (di-fil-lo-both'rĭ-um) [G. *di-*, two, + *phyllon*, leaf, + *bothrion*, little ditch.] *Bothriocephalus*, *Dibothriocephalus*, a genus of *Cestodes*, or tapeworms, containing three species found in man. **D. corda'tum,** a species found in dogs, sea mammals, and occasionally man, in Greenland. **D. la'tum,** *Tænia lata*, a large tapeworm infesting man in many parts of the world; it sometimes has many thousand segments broader than long; the head has no sucking discs, but a deep groove or sucker on each side. **D. linguloi'des** or **D. man'soni,** a species, of which the adult form has been very seldom found in man; see *Sparganum*.

diphyodont (dif'ĭ-o-dont) [G. *di-*, two, + *phyō*, I produce, + *odous(odont-)*, tooth.] Having two sets of teeth, as man and most mammals.

Diplacan'thus na'nus [G. *diplous*, double, + *akantha*, spine; L. *nanus*, dwarf.] Hymenolepis nana.

diplacusis (dip-lă-ku'sis) [G. *diplous*, double, + *akousis*, hearing.] A difference of perception of sound by the two ears, either in time or in pitch, so that one sound is heard as two. **d. binaura'lis,** a condition in which the same sound is heard differently by the two ears. **d. monaura'lis,** a condition in which one sound is perceived as two in the same ear.

diplegia (di-ple'jĭ-ah) [G. *di-*, two, + *plēgē*, a stroke.] Double hemiplegia; paralysis of corresponding parts on both sides of the body. **fa'cial d.,** double facial paralysis. **in'fantile d.,** birth-palsy.* **mas'ticatory d.,** paralysis of all the muscles of mastication (temporals, pterygoids, and masseters). **spas'tic d.,** Little's disease.

dip"loalbuminu'ria [G. *diplous*, double.] The coexistence of nephritic, or pathological, and non-nephritic, or physiological, albuminuria.

diplobacillus (dip-lo-bă-sil'us) [G. *diplous*, double.] A double bacillus, two bacilli linked end to end

diplobacte'ria [G. *diplous*, double.] Bacteria occurring in pairs linked together.

diploblas'tic [G. *diplous*, double, + *blastos*, germ.] Formed of two germ layers.

diplocar'dia [G. *diplous*, double, + *kardia*, heart.] A condition in which the two lateral halves of the heart are more or less separated by a central fissure.

diplococcemia, diplococcæmia (dip-lo-kok-se'mĭ-ah) [*diplococcus* + G *haima*, blood.] The presence of diplococci in the blood.

diplococ'coid [*diplococcus* + G. *eidos*, resemblance.] Resembling a diplococcus

Diplococ'cus [G. *diplous*, double, + *kokkos*, berry.] A genus of the family *Coccaceæ*, occurring usually in encapsulated pairs, though sometimes in chains. Some of the species were formerly, and still are by some authorities, included in the genus *Streptococcus*. **D. cras'sus,** an organism occasionally found with *Neisseria intracellularis* in epidemic meningitis. **D. gonorrhœ'æ,** *Neisseria gonorrhœæ*,[0] gonococcus. **D. intracellula'ris meningit'idis,** *Neisseria intracellularis*,[0] meningococcus. **D. lanceola'tus,** *D. pneumoniæ*. **D. muco'sus,** a species sometimes found in the nasopharynx in cases of epidemic meningitis. **D. plu'ton,** *B. pluton*, the cause of "foulbrood" in bees. **D. pneumo'niæ,**[0] *Str. pneumoniæ*, *Bact. pneumoniæ*, *Micrococcus lanceolatus*, pneumococcus, gram-positive, ovoid or lance-shaped organisms occurring singly, in short chains, or more often in pairs, always encapsulated, non-motile, spore-less, the pathogenic microorganism of croupous pneumonia. Four principal types of the pneumococcus are recognized, called respectively Type I, II, III, IV; Type III, called also *D. mucosus*, is distinguished quite sharply from the others by morphological and cultural differences; Type

IV contains a number of independent strains differing more or less from each other; pneumococci of this type are the ones usually found in the mouth, they are responsible for about 20 per cent. of cases of pneumonia and are the least virulent; Type III, sometimes called *Str. mucosus*, gives the lowest incidence in disease of all the types, but is the most virulent; Types I and II are responsible for about 60 per cent. of all cases of pneumonia, Type I causing the greater number. **D. scarlati'næ**, *Str. scarlatinæ*⁰(?), *Micrococcus scarlatinosus*(?), an organism found by Class in the throat secretions in cases of scarlatina and believed by him to be the pathogen of that disease.

diploco'ria [G. *diplous*, double, + *korē*, pupil.] The presence of a double pupil in the eye.

diploë (dip'lo-e) [G. *diploë*, fem. of *diplous*, double.] The central layer of spongy bone between the two layers of compact bone, outer and inner plates or tables of the flat cranial bones.

diplogenesis (dip-lo-jen'e-sis) [G. *diplous*, double, + *genesis*, generation.] The production of a double monster or of one with some parts doubled.

Diplogonop'orus [G. *diplous*, double, + *gonos*, seed, + *poros*, pore.] A genus of tapeworms found in Japan (*D. gran'dis*) and probably also in Roumania (*D. braun'i*).

diplo'ic, diploet'ic. Relating to the diploe.

diploid (dip'loyd) [G. *diplous*, double, + *eidos*, resemblance.] The full number of chromosomes in the fertilized ovum and in all cells, except the mature germ cells, derived from this.

diplomelituria (dip-lo-mel-I-tu'rĭ-ah) [G. *diplous*, double, + *meli*, honey, + *ouron*, urine.] The occurrence of diabetic and non-diabetic glycosuria in the same individual.

diplomyelia (dip-lo-mi-e'lĭ-ah) [G. *diplous*, double, + *myelon*, marrow.] The presence of a fissure in the spinal cord, the two lateral halves being more or less distinct.

diploneural (dip-lo-nu'ral) [G. *diplous*, double, + *neuron*, nerve.] Supplied by two nerves from different sources, said of certain muscles.

diplopho'nia [G. *diplous*, double, + *phōnē*, voice.] Diphonia.

diplopia (dĭ-plo'pĭ-ah) [G. *diplous*, double, + *ōps*, eye.] Double vision, due to paralysis of the ocular muscles in consequence of which the image of an object falls upon non-corresponding portions of the two retinæ. **binoc'ular d.**, double vision caused by muscular imbalance, the visual axes not being fixed on the same point. **crossed d.**, heteronymous d. **direct' d.**, homonymous d. **heteron'ymous d.**, crossed d., d. in which the false image is on the same side as the sound eye; d. due to divergent squint or paralysis of the internal rectus. **homon'ymous d.**, simple d., direct d., d. in which the false image is on the same side as the affected eye; d. due to convergent squint or paralysis of the external rectus. **monoc'ular d.**, a form in which two objects are seen with the same eye, due to incomplete cataract, double pupil, etc. **sim'ple d.**, homonymous d.

diplopiometer (dip-lo-pĭ-om'e-tur) [G. *metron*, measure.] An instrument for determining the presence and the degree of diplopia.

dip'losal. Trade name of salicyl salicylic acid.

diploscope (dip'lo-skōp) [G. *diplous*, double, + *skopeō*, I examine.] An instrument for the study of binocular vision and of its anomalies.

diplosome (dip'lo-sōm) [G. *diplous*, double, + *sōma*, body.] 1. One of the allosomes which are paired in the spermatogonium. 2. A double centrosome.

diploso'mia [G. *diplous*, double, + *sōma*, body.] A condition in which twins, seemingly ndependent in all their parts, are ioined at one or more points.

diplostemonous (dip-lo-ste'mo-nus) G. *diplous*, double + *stēmōn*, stamen.] In botany, having twice as many stamens as sepals or petals. **d. andre'cium,** noting a flower in which the stamens are arranged in two alternating whorls.

diploteratol'ogy. The division of teratology dealing with double monstrosities.

Diplozoa (dip-lo-zo'ah) [G. *diplous*, double, + *zōon*, animal.] A suborder of *Protomonadina* with more or less bilateral symmetry; it contains the genus *Giardia* or *Lamblia*.

dipotassium phosphate. Potassium phosphate, K_2HPO_4.

Dip'pel's an'imal oil [Johann Konrad *Dippel*, German alchemist, 1673–1734.] Oleum animale æthereum.

diprosopus (di-pro-so'pus) [G. *di-*, two, + *prosōpon*, face.] A monster with duplication of the face or any of its parts; see cut under *opodymus*.

Dipsaca'ceæ [G. *dipsakos*, teasle.] An order of gamopetalous, dicotyledonous plants, the inflorescence of which is a capitulum, the fruit an achene.

dipsoma'nia [G. *dipsa*, thirst, + *mania*, madness.] A recurring psychosis in which the patient from time to time is driven by an imperative compulsion to drink to excess of alcoholic beverages.

dipso'sis [G. *dipsa*, thirst.] Excessive thirst, or a longing for certain unusual forms of drink.

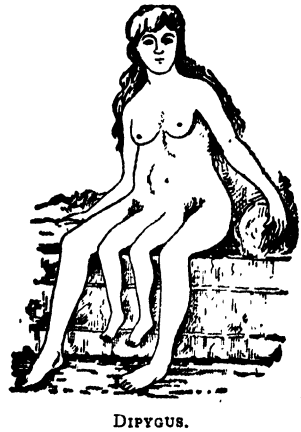
dipsother'apy [G. *dipsa*, thirst, + *therapeia*, treatment.] Treatment of certain diseases by abstention, as far as possible, from liquids.

Dip'tera [G. *di-*, two, + *pteron*, wing.] An order of two-winged insects, including flies and mosquitos.

Dipterocar'pus [G. *dipteros*, with two wings, + *karpos*, fruit.] A genus of trees, some East Indian species of which furnish gurjun balsam.

dipterous (dip'ter-us). Two-winged, noting flies, mosquitos, and other insects belonging to the order *Diptera*.

dip'teryx [G. *di-*, two, + *pteryx*, wing.] Tonka, tonka bean; the prepared seed of *Dipteryx* (*Coumarouna*) *odorata* or *appositifolia;* antispasmodic and narcotic in doses of ℥5–10 (0.3–0.6) of a fluidextract. See *cumarin*.



DIPYGUS.

dipygus (di-pi'gus) [G. *di-*, two, + *pygē*, buttocks.] A monster with duplication of the lower part of

the spinal column and the pelvis. **d. parasit'icus,** see cut under *gastrothoracopagus*.

Dipylid'ium cani'num [G. *dipylos*, with two entrances.] A species of dog tapeworm, the larvæ of which are harbored by the flea; the worm may also infest man.

Dirck's fi'brils. Oblique fibrils of elastic tissue holding together the several concentric layers of elastic fibers in the tunica media of an artery.

direct' [L. *dirigere*, to set in a straight line.] Straight, not deviating to either side.

direc'tor. An instrument, usually in the form of a grooved probe or sound, designed for guiding the knife of the operator, in slitting up a sinus for example, or in the operation of external urethrotomy; called also a guide.

dir'igomo'tor. Directing muscular movement.

Dirofilaria (di-ro-fĭ-la'rĭ-ah). A genus of the family *Filariidæ*, parasitic in the circulatory and respiratory organs of various mammals. **D. magalha'esi,** a species found once in the heart of a child in Rio de Janeiro.

dirt-eating. Geophagia, geophagism, geophagy.

dis- [L. an inseparable preposition denoting separation, taking apart, sundering, in two.] A prefix having the same force as the original Latin preposition.

disaccharide (di-sak'kar-id) [G. *di-*, two, + *sakcharis*, sugar.] A carbohydrate containing two saccharid groups plus a molecule of water; such are sucrose, lactose, and maltose.

disaggregation (dis-ag"gre-ga'shun) [L. *dis-*, separating, + *aggregare*, to assemble.] 1. A breaking up into the component parts. 2. In psychology, an inability to coordinate the various sensations and failure to observe their mutual relations.

disam'idize [*dis-*, asunder, + *amide* + *-ize*, suffix denoting action.] Deamidize.

disarticula'tion [L. *dis-*, apart, + *articulus*, joint.] Amputation of a limb through a joint, without cutting of bone.

disassimila'tion. Destructive or retrograde metabolism.

disc [L. *discus*; G. *diskos*, a dish.] 1. In anatomy any approximately flat circular surface. See *discus*. 2. In dentistry a disc-shaped piece of thin paper or other material, coated with emery or other abrasive substance, used for cutting and polishing fillings. **blastoder'mic d.,** the germinal d. of an ovum after segmentation of the vitellus. **blood d.,** platelet. **choked d.,** papillitis, papilledema, intraocular neuritis; inflammation of the retinal portion of the optic nerve, marked by swelling of the optic disc which is of a grayish white color. **ger'minal d.,** the point in an ovum where the embryo begins to be formed. **op'tic d.,** discus opticus, papilla nervi optici, a white spot in the retina, the point of entrance of the optic nerve. **prolig'erous d.,** cumulus oophorus. **stenope'ic d.,** a metallic or other opaque disc with a narrow slit through which one looks, used as a test for astigmatism. **straboscop'ic d.,** a lens which distorts the object looked at. **tac'tile d.,** the expansion of the terminal fiber of a nerve of sensation. **transverse' d.,** one of the dark transverse lines seen on examining a muscular fiber under the miscroscope.

discharge'. 1. To set free; to remove the contents or load. 2. The escape or flowing away of a charge of electricity or of the contents of a cavity, either normal or pathological. 3. The matter which is discharged. **disruptive d.,** a d. of electricity accompanied by noise, light, heat, and other physical effects.

dis'charger. An instrument for setting free the electricity in a condenser or Leyden jar.

dischronation (dis-kro-na'shun) [L. *dis-*, apart, + G. *chronos*, time.] A dislocation or displacement, in a figurative sense, in the time series; a function of consciousness, the term being analogous to dislocation in the spatial series.

discission (dis-sish-un) [L. *discindere*, to split.] Incision or cutting through a part; specifically needling, splitting the capsule and breaking up the substance of the crystalline lens with a knife-needle, in cases of soft cataract. **d. of the cer'vix,** division of the cervix uteri on either side for the relief of stenosis. **d. of the pleu'ra,** Ransohoff's operation. **poste'rior d.,** incision of a membranous cataract from behind by a knife passed through the sclera.

discitis (dis-ki'(ke')tis). Inflammation of any disc, especially of an interarticular cartilage; meniscitis.

discoblas'tic. Relating to a discoidal segmentation of the yolk in an impregnated ovum.

dis'cocarp [G. *diskos*, disc, + *karpos*, fruit.] 1. Apothecium, an ascocarp in which the hymenium is exposed during the development of the asci. 2. An arrangement of separate achenes within a hollow receptacle.

dis'coid [G. *diskos*, disc, + *eidos*, appearance.] 1. Resembling a disc. 2. In dentistry a disc-shaped excavator.

Discomyces (dis-ko-mi'sēz) [G. *diskos*, disc, + *mykēs*, fungus.] Actinomyces.

discoplacen'ta. A placenta of discoid shape.

dis'coplasm [G. *diskos*, a disc, + *plasma*, something formed.] That portion of the cytoplasm which possesses vital properties

disco'ria [G. *dis*, double, + *korē*, pupil.] The presence of a double pupil.

dis'costro"ma. The stroma of a red blood cell

discrete' [L. *discretus; discernere*, to separate.] Separate, distinct, not joined to or incorporated with another; noting especially certain lesions of the skin and other parts.

dis'cus [L.] Disc. **d. articula'ris** [BNA], articular disc, interarticular fibrocartilage; a plate or ring of fibrocartilage attached to the joint capsule and separating the articular surfaces of the bones for a varying distance, sometimes completely; it serves to adapt two articular surfaces which are not entirely congruent. **d. interpu'bicus,** lamina fibrocartilaginea interpubica. **d. intervertebra'lis,** intervertebral disc, cartilago* intervertebralis. **d. lentifor'mis,** nucleus hypothalamicus. **d. ner'vi op'tici, d. op'ticus,** disc of the optic nerve, optic disc, papilla* nervi optici [BNA]. **d. prolig'erus,** cumulus oophorus.

discuss' [L. *discutere*, to shake apart.] To disperse, to cause to disappear or be absorbed

discuss'ive. Discutient.

discutient (dis-ku'shent) [L. *discutere*, to shake apart.] 1. Scattering or dispersing a pathological accumulation. 2. An agent which causes the dispersal of a tumor or pathological collection of any sort.

disdiaclast (dis-di'ah-klast) [G. *dis*, twice, + *dia*, through, + *clastos*, broken.] A doubly refractive element in striated muscular tissue.

disease (diz-ēz') [Eng. *dis-* priv. + *ease*.] Morbus, illness, sickness; an interruption or perversion of function of any of the organs; a morbid change in any of the tissues, or an abnormal state of the

body as a whole, continuing for a longer or shorter period. [In the following the eponymic terms are not given, they will be found under the proper names; see also *morbus*.] **acute' d.**, an abnormal condition of the body or any of its parts, manifested by symptoms of a more or less violent character, and terminating, after a comparatively brief period, in recovery or death. **al'kali d.**, tularemia. **bad d.**, a popular name for syphilis. **barom'eter-maker's d.**, chronic mercurial poisoning caused by the inhalation of mercurial fumes. **blue d.**, morbus cæruleus. **Borna d.**, see *Borna*. **bronzed d.**, Addison's* d. **caiss'on d.**, see *caisson*. **carapa'ta d.**, Central African relapsing fever. **chron'ic d.**, one of long continuance, marked usually by no very violent symptoms, sometimes ending in recovery, or else in death through cachexia or an intercurrent attack of acute disease. **commu'nicable d.**, any d. which is transmissible by infection or contagion directly or through the agency of a vector. **com'plicating d.**, a secondary or independent d. supervening in the course of an already existent affection. **congen'ital d.**, one that is present in the infant at birth. **constitu'tional d.**, one associated with or marked by a disturbance of metabolism, a blood d. or dyscrasia. **conta'gious d.**, an infectious d. transmissible by mediate or immediate contact. **defic'iency d.**, one arising from defective metabolism caused by a lack of vitamins in the diet; beriberi, scurvy, and probably pellagra belong to this class. **diffuse' d.**, one which involves several or all of the spinal cord tracts; opposed to system d. **dynam'ic d.**, functional d. **endem'ic d.**, one which prevails continuously or recurrently in a special locality. **epidem'ic d.**, one which attacks simultaneously a large number of persons living in a particular locality. **fifth d.**, erythema infectiosum. **fish'skin d.**, ichthyosis. **foot-and-mouth d.**, aphthæ epizooticæ, epidemic stomatitis, aphthous fever; an infectious disease of cattle characterized by a vesicular eruption in the mouth and pharynx, chill, fever, and marked prostration; the disease is communicable to man. **fourth d.**, Dukes' d., Filatoff's d., scarlatinoid, scarlatinella, an exanthematous affection of childhood bearing a resemblance to scarlatina analogous to that of German measles to measles; it runs a mild course. **func'tional d.**, a d. in which there is no obvious anatomical lesion to account for the symptoms present. **grind'er's d.**, pneumonoconiosis. **hered'itary d.**, one that is habitually transmitted by the parents to the offspring. **hook'worm d.**, ancylostomiasis. **idiopath'ic d.**, one for which no cause is apparent. **infec'tious d.**, **infec'tive d.**, one due to the presence and vital activity of a unicellular microscopic animal or vegetable parasite. **inher'ited d.**, one that is derived from the progenitors; in many cases it is only a weakness of constitution, which predisposes to any disease, that is inherited. **insuffic'iency d.**, deficiency d. **intercurr'ent d.**, complicating d. **intersti'tial d.**, one affecting chiefly the connective-tissue framework of an organ, the parenchyma suffering secondarily. **lo'cal d.**, one in which the morbid changes are confined to a single part or organ, usually without marked constitutional disturbance. **mian'ch d.**, Persian relapsing fever. **occupa'tion d.**, one arising from causes incidental to the occupation of the sufferer. **organ'ic d.**, one in which there is evident anatomical change in some of the tissues or organs of the body **pandem'ic d.**, one which prevails more or less over the entire world. **parasit'ic d.**, one due to the presence and vital activity of animal or vegetable parasites; when the parasites are unicellular and microscopic the d. is called *infectious* or *infective*. **paroxys'mal d.**, one characterized by explosive seizures, as epilepsy. **pearl-worker's d.**, inflammatory hypertrophy of the bones affecting grinders of mother of pearl. **period'ic d.**, one in which the symptoms recur at certain definite intervals. **pink d.**, erythredema **plaster-of-Paris d.**, atrophy of bone in a limb which has been encased for some time in a plaster-of-Paris splint. **rag-sorter's d.**, anthrax, malignant pustule. **Scyth'ian d.**, atrophy of the external genitals with impotence, due to excessive and unnatural venery. **specif'ic d.**, one produced by the action of a special pathogenic microorganism; a term formerly applied especially to syphilis. **sporad'ic d.**, one occurring in isolated cases in a locality where it is neither endemic nor epidemic. **subacute' d.**, a middle state between acute and chronic d., marked by less active symptoms than the former, but of shorter duration than the latter and more prone to recovery. **subchron'ic d.**, a subacute d., but one with more of the characteristics of a chronic affection. **sys'tem d.**, a spinal-cord d. affecting a special tract or nerve-fiber system. **vag'abond's d.**, see *vagabond*. **vene'real d.**, syphilis, gonorrhea, chancroid, or other disease acquired in general through sexual intercourse. **wool-sorter's d** anthrax. **zymot'ic d.**, infectious d., one due t the action of a living ferment.

disengagement (dis-en-gāj'ment) [Fr.] The act of setting free or extricating; specifically the emergence of the head from the vulva during childbirth.

disequilib'rium. A lack of equilibrium in any sense; specifically a lack of proper adjustment between the moral and intellectual faculties.

disinfect'. To destroy pathogenic microorganisms in or on any substance or to inhibit their growth and vital activity.

disinfec'tant. 1. Destroying the germs of putrefaction or disease, or inhibiting their activity. 2. An agent which possesses this property. **complete d.**, one which kills both vegetative forms and spores. **incomplete d.**, one which kills only the vegetative forms, leaving the spores uninjured.

disinfection (dis-in-fek'shun). The destruction of pathogenic microorganisms or their toxins or vectors.

disinsertion (dis-īn-sur'shun) [L. *dis-*, apart, + *insertio*, insertion.] Rupture of a tendon at its point of insertion into a bone.

disintegra'tion. Disaggregation or separation of the component parts of a substance, such a occurs in catabolism or caries.

disintoxica'tion. Detoxication.

disinvagina'tion. Relieving an invagination.*

disk. Disc.

dis'locate [L. *dis-*, apart, + *locare*, to place.] T luxate, to put out of joint.

dislocatio (dēs-lo-kah'te-o, dis-lo-ka'shyo). Dis location, luxation. **d. erec'ta**, a subglenoi dislocation of the shoulder in which the arm is held vertically with the hand on top of the head.

disloca'tion [L. *dis-*, apart, + *locus*, place.] Displacement of an organ or any part; specifically a disturbance or disarrangement of the normal relation of the bones entering into the formation of a joint; luxation. **com'pound d.**, one com-

plicated by a wound opening from the surface down to the affected joint. **simple d.**, one not complicated by an external wound.

disocclude (dis-ŏ-klūd') [L. *dis-*, apart, + *occludere*, to close up.] To level off the occlusal surface of a tooth so that it cannot, by any movement, be made to touch its fellow in the other jaw.

disodic (di-so'dik). Noting a chemical compound containing two sodium atoms in each molecule.

disorganiza'tion. Destruction of an organ or tissue with consequent loss of function.

disorientation (dis-o-ri-en-ta'shun) [*dis-* priv. + *orient*, the east.] Loss of the sense of familiarity with one's surroundings; loss of one's bearings.

isparate (dis'par-āt) [L. *disparare*, to separate.] Unequal, not alike.

ispen'sary [L. *dispensare*, to weigh out, to distribute.] 1. A physician's office, especially the office of one who dispenses his own medicines. 2. The office of a hospital apothecary, where medicines are given out on the physicians' orders. 3. (*a*) An out-patient department of a hospital; (*b*) a public institution where the sick poor receive gratuitous treatment.

)ispen'satory [L. *dispensator*, one who dispenses (drugs).] A work originally intended as a commentary on the Pharmacopeia, but now rather a supplement to that work. It contains an account of the sources, mode of preparation, physiological action, and therapeutic uses of most of the agents, official and non-official, employed in the treatment of disease.

ispense'. To give out medicine and other necessities to the sick.

lispermin (di-spur'min). Piperazin.

isperse (dis-purs') [L. *dispersus; dispergere*, to scatter about.] To discuss, to cause to disappear, noting a tumor.

isperse (dis'purs) The aggregate of finely divided suspended particles in a colloidal solution; called also *dispersed phase*.

isper'sion. 1. The act of dispersing or of being dispersed. 2. The more or less intimate incorporation of the particles of one substance into the mass of another, including solutions, suspensions, and colloidal dispersions. 3. Specifically, what is usually called, less correctly, a colloidal solution. **coarse d.**, mechanical suspension. **colloid'al d.**, colloid solution.* **d. coll'oid,** dispersoid. **d. me'dium,** the liquid containing the disperse in a colloid solution. **molec'ular d.**, a true solution.

ispersoid (dis-pur'soyd) [*disperse* + G. *eidos*, resemblance.] A colloid solution in which the molecules of the solute can be brought closer together at the bottom of the tube by centrifugalization; called also molecular disperse solution.

spert (dis'purt). A collective term for a group of medicinal agents consisting of the aggregate therapeutic principles of vegetable drugs and endocrine glands extracted in the cold and rapidly reduced to a dry, soluble, concentrated form; it is claimed that thereby the destructive influences of heat, light, oxygenation, and time are eliminated.

ispi'ra [G. *di-*, double, + *speira*, a coil.] Dispirem.

lispirem, dispireme (di-spi'rem, di-spi'rēm) [G. *di-*, twice, + *speirēma*, wreath.] The double chromatin skein in mitosis.

lisplacement (dis-plās'ment). 1. The adding to a fluid in an open vessel one of greater density whereby the first is expelled. 2. A substitution in a dream or concept of an abstract idea by a concrete one.

Dispo'rea [G. *di-*, double, + *sporos*, seed.] A suborder of *Myxosporidia*, in which each sporozoite produces a pansporoblast containing two spores; the latter are wider than long.

disrup'tive [L. *dis-* apart, + *ruptus*, broken.] Shattering, bursting asunder.

dissect' [L. *dis-*, apart, + *secare*, to cut.] 1. To cut apart or separate the tissues of the body in the study of anatomy. 2. In an operation, to separate the different structures along natural lines by cutting or tearing the connective-tissue framework, instead of making a wide incision.

dissec'tion. The act of dissecting.

dissem'inated [L. *dis-*, apart, + *seminare*, to sow.] Widely scattered throughout an organ or tissue or the entire body.

dissep'iment [L *dis-*, apart, + *sepire*, to fence. Partition.

dissimilation (dis-sim-ĭ-la'shun). Disassimilation

dissociation (dis-so-shĭ-a'shun) [L. *dissociare*, to separate.] 1. Disassociation, separation, dissolution of relations. 2. The change of a complex into a more simple chemical compound by the action of heat. **d. symp'tom,** the loss of the pain and the thermal sense with preservation of tactile sensibility.

dissolu'tion [L. *dissolvere*, to dissolve.] 1. Dissolving. 2. Death.

dissolve (dĭ-zolv') To change or cause to change from the solid to the liquid form by immersion in a fluid of suitable character

dissol'vent. Solvent.

dis'tad. Toward the periphery, in a distal direction.

dis'tal [L. *distalis*, distant.] Farthest from the center or the median line; farthest from the trunk, referring to the segments of the extremities; opposed to proximal.

dis'tance [L. *distantia*.] The measure of space between two objects. **fo'cal d.,** the distance from the center of a lens to its focus. **in'finite d.,** infinity, the inner limit of distant vision, the rays entering the eyes from an object at that point being practically parallel; the distance is about twenty feet.

distem'per [L. *dis-* priv. + *temperare*, to regulate.] Disease, especially a disease of any of the lower animals; specifically a catarrhal disease of dogs or other domestic animals which resembles in many respects human influenza. **colt d.,** strangles.

distensibil'ity. The possibility or capability of being distended or stretched.

distichia, distichiasis (dis-tik'ĭ-ah; dis-tĭ-ki'a-sis) [G. *di-*, double, + *stichos*, row.] The presence of two rows of eyelashes on one lid.

distichous (dis'tĭ-kus) [G. *di-*, double, + *stichos*, a row. In botany, arranged in two alternating rows, above and below, on opposite sides of the stem.

distil', distill' [L. *de*, down, + *stillare*, to drop.] 1. To practise distillation; to subject a liquid to the process of distillation. 2. To extract the essence or active principle of a substance.

dis'tillate. The product of distillation.

distilla'tion. The volatilization of a liquid by heat and the subsequent condensation of the vapor, a means of separating the volatile from the nonvolatile, or the more volatile from the less volatile, part of a liquid. **destruc'tive d.,** dry d. of an organic substance with the object of effecting its decomposition with the giving off of its volatile constituents and the formation of new substances. **dry d.,** the submission of an organic substance to heat in a closed retort. **frac'tional d.,** the d. of

a compound liquid at varying degrees of heat whereby the components of different boiling points are collected separately.

distinctor (dis-tink'tor). Palpatorium.

distobucc'al. Relating to the distal and buccal surfaces of a tooth, noting the angle formed by their junction.

distobucco-occlusal (dis"to-bŭ"ko-ŏ-klu'zal). Relating to the distal, buccal, and occlusal surfaces of a bicuspid or molar tooth, noting especially the angle formed by the junction of these surfaces.

distoclusion (dis-to-klu'zhun). Abbreviated form of disto-occlusion or distal occlusion.

distola'bial. Relating to the distal and labial surfaces of a tooth, noting the angle formed by their junction.

distolingual (dis-to-ling'gwal). Relating to the distal and lingual surfaces of a tooth, noting the angle formed by their junction.

distolin'guo-occlusal (dis"to-ling"gwo-ŏ-klu'zal). Relating to the distal, lingual, and occlusal surfaces of a bicuspid or molar tooth, noting especially the angle formed by the junction of these surfaces.

Dis'toma, Dis'tomum [G. *di-*, two, + *stoma*, mouth.] A genus of trematode worms or flukes, the members of which are now usually referred to other genera, as *Fasciola, Fasciolopsis, Paragonimus, Opisthorchis, Cotylogonimus, Chlonorchis, Dicrocelium,* and *Schistosoma.* **D. bus'ki,** *Fasciolopsis buski.* **D. conjunc'tum,** *Opisthorchis noverca.* **D. co'nus,** *Opisthorchis felineus.* **D. cras'sum,** *Fasciolopsis buski.* **D. hepat'icum,** *Fasciola hepatica.* **D. heteroph'yes,** *Cotylogonimus heterophyes.* **D. japon'icum,** *Opisthorchis sinensis.* **D. lanceola'tum,** *Dicrocelium lanceatum.* **D. mag'num,** *Fasciola magna.* **D. pulmona'le, D. pulmo'nis,** *Paragonimus westermanni.* **D. rathoui'si,** *Fasciolopsis rathouisi.* **D. ring'eri,** *Paragonimus westermanni.* **D. sibir'icum,** *Opisthorchis felineus.* **D. sinen'se,** *Opisthorchis sinensis.* **D. spatula'tum,** *Opisthorchis sinensis.* **D. westermann'i,** *Paragonimus westermanni.*

distomatosis, distomiasis (dis-to-mah-to'sis, dis-to-mi'a-sis). The presence in any of the organs or tissues of a worm of the genus *Distoma* or *Distomum,* or in general of any parasitic trematode or fluke. **pul'monary d.,** the disease caused by the presence of the lung fluke, *Paragonimus westermanni.*

disto-occlusal (dis"to-ŏ-klu'zal). Relating to the distal and occlusal surfaces of the bicuspid and molar teeth, noting especially the angle of junction of these two surfaces.

disto-occlusion (dis-to-ŏ-klu'zhun). A condition in which the occlusal surface of one or more teeth in the lower jaw is displaced backward in relation to the corresponding tooth or teeth in the upper jaw.

distor'tor o'ris [L. distorter of the mouth.] The musculus zygomaticus and musculus zygomaticus minor considered as one in their action of raising the corners of the mouth in laughter.

distrac'tion [L. *distractus; distrahere,* to pull in different directions.] 1. Mental confusion, impossibility of concentration or fixation of the mind. 2. Extension on a limb made in a direction to draw apart the joint surfaces.

distribu'tion [L. *distribuere,* to distribute] 1. The passage of the branches of arteries or nerves to the several tissues and organs. 2. The area in which terminate the branches of an artery or a nerve, or the area supplied by such artery or nerve.

districhiasis (dis-trĭ-ki'a-sis) [G. *dis,* double, + *thrix* (*trich-*), hair.] Growth of two hairs in a single follicle.

dis'trix [G. *dis,* twice, + *thrix,* hair.] An affection marked by the splitting of the hairs at their ends.

disulphate (di-sul'fāt). Acid sulphate, a salt of sulphuric acid in which there is an atom of hydrogen replaceable by a base.

disul'phide. A compound with two sulphur atoms and one of the base.

disuse-atrophy (dis-ūs'ă"tro-fĭ). Atrophy of a part from long disuse, as that of the muscles of a fractured limb.

disvolu'tion. Involution, degeneration.

dita bark (de'tah). Alstonia.

ditaine (dĭ'tah-ēn). An alkaloid, $C_{22}H_{28}N_2O_4$, from alstonia, echitamine; its action is like that of curare.

dit'amine. An alkaloid, $C_{16}H_{19}NO_2$, from alstonia.

dith'ion. Sodium dithiosalicylate, a mixture of two salts of sodium with isomeric dithiosalicylic acids, or preferably one salt only, the other being precipitated out by means of sodium chloride; a grayish yellow powder soluble in water; has been employed as a substitute for sodium salicylate in doses of gr. 8–15 (0.5–1.0), but is used chiefly externally in foot-and-mouth diseases of cattle.

Ditropeno'tus aureovir'idis. A mite parasitic on the wheat-straw worm, or larva of *Isosoma tritici* which infests the straw of mattresses; it is believed to be the cause of straw-itch.

Dittrich's plugs (dit'trikh) [Franz *Dittrich,* German physician, 1815–1859.] Minute, dirty grayish, ill-smelling masses of bacteria and fatty acid crystals in the sputum in pulmonary gangrene and fetid bronchitis. **D.'s steno'sis,** narrowing of the conus arteriosus of the heart.

diu'razin. A urinary antiseptic containing salicylic acid, formaldehyde, and theobromine; dose, gr. 5 (0.3).

diure'sis [G. *dia,* intensive, + *ourēsis,* urination] Abnormally great excretion of urine.

diuret'ic. 1. Promoting the excretion of urine. 2. An agent which increases the amount of urine. **direct' d.,** stimulant d. **indirect' d.,** one which acts by strengthening the heart or relieving renal congestion. **stim'ulant d.,** one which acts by irritating the kidneys.

diuret'in. Theobrominæ sodio-salicylas (U.S.).

diur'nule [L. *diurnus,* daily.] A pill, tablet, or capsule containing the maximum daily dose of a drug

div. Abbreviation, used in prescriptions, of Lat *div'ide,* divide, or *divide'tur,* let it be divided.

divergence (di-vur'jens) [L. *di-,* apart, + *vergere* to incline.] A moving or spreading apart or in different directions.

diver'gent. Moving in different directions, radiating.

di'ver's paral'ysis. Caisson* disease.

divertic'ular. Relating to a diverticulum.

diverticulitis (di-ver-tik-u-li'(le')tis). Inflammation of any diverticulum.

diverticulosis (di-vur-tik-u-lo'sis) [*diverticulum* + *-osis.*] The presence of a number of diverticula of the intestine.

diverticulum (di-vur-tik'u-lum) [L. a by-road.] A pouch or sac opening out from a tubular organ; an offshooting cul-de-sac. **d. duode'ni,** papilla duodeni. **Meckel's d.,** see *Meckel.* **Nuck's d.,** see *Nuck.* **pitu'itary d.,** an upward projection from the pharynx in the embryo, forming part of the pituitary gland. **pul'sion d.,** a d. formed by pressure from within. **trac'tion d.,** a d. formed by

the pulling force of contracting bands of adhesion; occurring mainly in the esophagus. **Vater's d.,** papilla duodeni.

div'idend [L. *dividere*, to divide.] In life insurance, the amount of the profits of the company apportioned to the policy-holders yearly or at the end of any stipulated period; see *tontine, semitontine, contribution,* and *deferred distribution.*

dividivi (div-ĭ-div'ĭ). The pods of several species of *Cæsalpinia* South American plants, containing much tannin; employed as an astringent in diarrhea.

divinyl (di-vi'nil). Vinyl ethylene, an unsaturated gaseous hydrocarbon. **d. ox'ide,** a gas possessing great anesthetic power when inhaled.

divulse' [L. *divulsus; divellere*, to pull apart.] To tear away or apart.

divulsion (di-vul'shun). The removal of a part by tearing instead of by cutting or dissection. 2 The forcing apart of the walls of a cavity or canal: forcible dilatation.

divul'sor. An instrument for forcible dilatation of the urethra or other canal or cavity.

Dix'on Mann's sign. See *Mann's* sign.*

diz'ziness [A.S. *dyzig*, foolish.] Vertigo, giddiness.

dizz'y. Giddy, suffering from vertigo.

D.M.D. Abbreviation of Doctor of Dental Medicine.

D.N.B. Abbreviation for dinitrobenzene.

D.O. Abbreviation of Doctor of Osteopathy.

Dobell's' en'ema [Henry Benge *Dobell*, English physician, 1828–1917.] A modification of v. Leube's nutrient enema, consisting of scraped boiled meat, boiled arrowroot, pancreas emulsion, pepsin, and pancreatin. **D.'s solu'tion,** Liquor sodii boratis compositus (N.F.).

bie's glob'ule [William Murray *Dobie*, English anatomist, 1828–1915.] A minute spherical body (the nodal point of a sarcostyle), sometimes seen in the light band in a striated muscle fiber. **D.'s lay'er, D.'s line,** the dark line in the center of the light band of a muscle fiber, marking the limits of the sarcomere; Krause's membrane.

Duroz ez's antitox'in or **s*'rum** (do'sha) [Alphonse *zier* ymond *Dochez*, American physician, *1882.] ster carlatina antitoxin obtained by immunizing dou ses against the hemolytic streptotoccus.

whe niasis (dok-mi'a-sis). Uncinariasis.

case mius (dok'me-us) [G. *dochmios*, aslant.] **Dusar** *ncinaria.*

ph ma'sia, docimasy (dos'ĭ-ma-sĭ) [G. *dokimazō*, I ph xamine.] An assay, analysis.

lust cimas'tic. Relating to an assay or analysis.

ock. The rump of a horse.

us c'tor [L. a teacher.] 1. A title conferred by a university on one who has followed a prescribed course of study, or given as a mark of distinction; as doctor of medicine, doctor of laws, etc. 2. A physician, especially one upon whom has been conferred the degree of M. D. by a university or medical school. 3. To treat medically.

dodecadactylitis (do"dek-ah-dak"tĭ-li'(le')tis) [G. *dōdekadaktylon* + *-itis.*] Inflammation of the duodenum.

dodecadactylon (do"dek-ah-dak'tĭ-lon) [G. *dōdeka*, twelve, + *daktylos*, finger.] Duodenum.

Doe's meth'od [Orlando Witherspoon *Doe*, American physician, 1843–1890.] For resuscitation of a stillborn infant; the child is enclosed in an air-tight box with only the mouth and nose exposed, inspiration is then produced by exhausting the air in the box, expiration by forcing in warm air

Doederlein's bacill'us (dē'der-līn) [Albert *Doederlein*, Munich obstetrician, 1860–1919.] A bacillus found by D. in the vaginal secretions; thought by some to be identical with *Lactobacillus acidophilus.*

Doehle's inclu'sions (de'leh) [P. *Doehle*, German histologist and pathologist, 1855–1928.] Multiple bodies, staining less darkly than the nuclei, found by Doehle in the cytoplasm of the neutrophilic multinuclear leucocytes in cases of scarlet fever. Other investigators claim to have found these same bodies in many other febrile and even non-febrile affections.

Doellinger's ten'dinous ring (dĕ'ling-er) [Johann Ignaz Josef *Doellinger*, German physician, 1770–1841.] A thickening of Descemet's membrane, forming an elastic ring around the circumference of the cornea.

dog-grass. Triticum.

dog-nose. Goundou.

dog's-bane. Apocynum.

dog'wood. Cornus.

Doléris' meth'od (dŏ-la-re') [Jacques Amédée *Doléris*, French gynecologist, *1852.] Shortening of the round ligaments and fixation on either side by a buttonhole in the rectus muscle just above the spine of the ilium, for retrodeviation of the uterus.

doliariin (do-lĭ-ar'ĭ-in). A vermifuge, laxative, and digestant drug obtained from the juice of the wild fig-tree, *Ficus doliaria.*

dolichocephalic (dol-ĭ-ko-sef-al'ik) [G. *dolichos*, long, + *kephalē*, head.] Having a disproportionately long head. Noting a skull with a cephalic index below 75, or an individual with such a skull. Among the dolichocephalic races are the Eskimo, Kaffirs, Zulus, Australians, and Fijians.

dolichocephalism, dolichocephaly (dol-ĭ-ko-sef'al-izm, dol-ĭ-ko-sef'al-ĭ). The condition of being dolichocephalic.

dolichocephalous (dol-ĭ-ko-sef'al-us). Dolichocephalic.

dolichocolon (dol-ĭ-ko-ko'lon) [G. *dolichos*, long, + *colon.*] An excessively long colon.

dolichofacial (dol-ĭ-ko-fa'shal). Dolichoprosopic.

dolichopellic (dol-ĭ-ko-pel'ik) [G. *dolichos*, long, + *pellis*, bowl(pelvis).] Having a disproportionately long pelvis.

dolichoprosopic, dolichoprosopous (dol-ĭ-ko-pros-o'pik, dol-ĭ-ko-pros'o-pus) [G. *dolichos*, long, + *prosōpikos*, facial.] Having a disproportionally long face.

dolichouranic (dol-ĭ-ko-u-ran'ik) [G. *dolichos*, long, + *ouranos*, vault of the palate.] Having a palatal index below 110.

dolichuran'ic. Dolichouranic.

doll's eye sign (dolz ī sīn). Dissociation between the movements of the eyes and those of the head, the eyes being lowered as the head is raised, and the reverse (Cantelli); protrusion of the eyeballs and sluggish movements of the eyes and lids (Widowitz). Both signs are offered as diagnostic in diphtheria.

do'lomol. A white powder, composed chiefly of magnesium stearate, employed as a dusting powder.

dolor (do'lor) [L.] Pain, one of the classical signs of inflammation. **d. cap'itis,** headache, especially pain due to changes in the scalp or bones rather than in the intracranial structures.

domatophobia (do-mă-to-fo'bĭ-ah) [G. *dōma*, house, + *phobos*, fear.] A morbid fear of being in a house; a form of claustrophobia.

dome-cells. The large cells forming the outer layer of the epidermis (epitrichium) in the embryo.

dom'inant [L. *dominans*, ruling.] Noting a character possessed by one of the parents of a hybrid which appears in the latter to the exclusion of a contrasted character (the recessive) from the other parent; see *Mendel's law*.

Dominici tube (dŭ-min-e-se') [Henri *Dominici*, French physician, contemporary.] A silver tube for the application of radium, allowing the passage of only the beta and gamma rays.

Don'aldson's test. For sugar in the urine; to the urine is added a solution of sodium carbonate 75 gr., potassic hydrate 75 gr., potassium bitartrate 90 gr., copper sulphate 60 gr., in water 1 ounce; the presence of sugar is indicated by a greenish yellow color.

Don'ders' glauco'ma [Franz Cornelius *Donders*, Dutch ophthalmologist, 1818–1889.] Simple atrophic glaucoma. **D.'s law,** (1) the age at which asthenopia begins corresponds nearly to the denominator of the fraction which expresses the degree of hypermetropia; (2) the rotation of the eyeball is determined by the distance of the object from the median plane and the line of the horizon. **D.'s pres'sure,** an increase of about 6 mm. of mercury shown by a manometer connected with the trachea when the thorax of the dead body is opened; it is caused by the collapse of the lungs when air is admitted to the thorax. **D.'s rings,** the colored rings seen in glaucoma. **D.'s test,** a test for color vision by means of lanterns with colored glass sides.

Donné's cor'puscles (don-na') [Alfred *Donné*, French physician, 1801–1878.] Leucocytes containing fat droplets, found in colostrum. **D.'s test,** if urine containing pus is mixed with a 10 per cent. solution of potassium hydrate and strongly shaken, a lumpy hyaline mass is formed through which air-bubbles rise very slowly; also called *Donné-Mueller* test [Edward *Mueller*].

do'nor [L. **donare,** to donate, to give.] A person from whom the blood is drawn in the operation of transfusion.

Don'ovan's solu'tion [Edward *Donovan*, English pharmacist, 1798–1837.] Liquor arseni et hydrargyri iodidi.

dope (dōp) [Dutch *doop*, sauce.] 1. Any drug, either stimulating or stupefying (*a*) administered to man or animal for its temporary effect, or (*b*) taken habitually. 2. To administer dope (*1a*). **d.-fiend,** one who is addicted to some drug, drug-addict. Slang in all senses.

Dopp'ler's phenom'enon [Christian *Doppler*, Austrian mathematician, 1803–1853.] The pitch of a whistle on a locomotive or other rapidly moving body is higher when the machine is approaching the listener; the principle is the same in regard to light as to sound.

dorsphobia (do-rah-fo'bĭ-ah) [G. *dora*, hide, + *phobos*, fear.] A morbid fear of touching the skin or fur of animals.

Dorel'lo's canal'. A bony canal sometimes found at the tip of the temporal bone enclosing the abducens nerve.

Dorendorf's sign (dor'en-dorf) [H. *Dorendorf*, German physician, *1866.] Fulness of one supraclavicular groove in case of aneurysm of the aortic arch.

dormigene (dor'mĭ-jēn) [L. *dormire*, to sleep, + G. *gennaō*, I produce.] Trade name of a British make of bromural.

dor'miol. Chloralamylene hydrate.

dorsabdom'inal. Relating to the back and the abdomen.

dor'sad [L. *dorsum*, back, + *ad*, to.] Toward or in the direction of the back.

dor'sal [L. *dorsalis*.] Relating to the back, [NK] posterior.

dorsal'gia [L. *dorsum*, back, + G. *algos*, pain.] Notalgia, rachialgia, pain in the back.

Dor'set's cul'ture me'dium. For the tubercle bacillus: one egg (white and yolk mixed) to which is added 25 per cent. by volume of physiological salt solution. **D.'s stain** for the tubercle bacillus. Sudan red III, a fat stain.

dorsicor'nu [L. *dorsum*, back, + *cornu*, horn.] The posterior, or dorsal, cornu, or horn, of the spinal cord.

dor'siduct [L. *dorsum*, back, + *ducere*, to draw.] To draw backward or toward the back.

dorsiflexion (dor-sĭ-flek'shun). Bending toward the back; noting flexion of the foot, the dorsum approaching the leg, which, by analogy with the hand, would be called extension.

dorsim'esal. Relating to the dorsimeson.

dorsimes'on [L. *dorsum*, back, + G. *mesos*, middle.] The dorsal border of the meson, or median plane of the body.

dorsiscapular (dor''sĭ-skap'u-lar). Relating to the dorsal surface of the scapula.

dorsispinal (dor''sĭ-spi'nal). Relating to the spinal column, especially to its dorsal aspect. **d. veins,** veins forming a plexus around the arches and processes of the vertebræ.

dorsoanterior (dor-so-an-te'rĭ-or). With the back directed forward, noting a position of the fetus *in utero* with its back directed toward the anteric abdominal wall of the mother.

dorsoceph'alad [L. *dorsum*, back, + G. *kepha* head, + L. *ad*, to.] Toward the occiput, back of the head.

dorsodynia (dor-so-din'ĭ-ah) [L. *dorsum*, back, G. *odynē*, pain.] Notalgia, muscular rheumatism of the upper part of the back.

dorsolat'eral. Relating to the back and the sid

dorsoposterior (dor-so-pōs-te'rĭ-or). Having back directed backward, noting the positic the fetus *in utero*, with its back toward the ba the mother.

dorsoven'trad [L. *dorsum*, back, + *venter*, belly. a direction from the dorsal to the ventral as

dor'sum, gen. *dorsi*, pl. *dorsa* [L. back.] 1 back. 2. The upper or posterior surface, o back, of any part. **d. ephip'ii,** d. sellæ. **ma'nus,** the back of the hand. **d. na'si,** ridge of the nose, looking forward and upwa **d. pe'dis,** the back, or upper surface, of the fo **d. pe'nis,** the aspect of the penis opposite to th of the urethra. **d. scap'ulæ,** the posterior surfa of the scapula. **d. sell'æ,** a square portion of bon on the body of the sphenoid posterior to the sella turcica, or fossa hypophyseos.

dosage (do'sej). 1. The giving of medicine or other therapeutic agent in prescribed amounts 2. The determination of the proper dose of a remedy.

dose [G. *dosis*.] The quantity of a drug or other remedy to be taken or applied all at one time or in fractional amounts within a given period. In homeopathy, the dilution or attenuation of the remedy, and the number of times the remedy is to be given. **dai'ly d.,** the total amount of a remedy which is to be taken within twenty-four hours. **divi'ded do'ses,** fractional amounts, given at intervals, of the entire dose of a remedy. **epila'tion d.,** see *erythema*. **erythe'ma d.,** see *erythema*. **le'thal d.,** one likely to cause death. **max'imum d.,** the largest amount of a drug

which an adult can take with safety. **min'imum d.,** the smallest amount of a drug which will produce a physiological effect in an adult. **op'timum d.,** the dose of a drug or roentgen or other radiation, which will produce the desired effect without any untoward symptoms.

dosimet'ric. Relating to dosimetry. **d. sys'tem,** a system of medical practice in which the remedies used are for the most part alkaloids, made into granules of definite minimum dose, to be given at short and regular intervals.

dosim'etry [G. *dosis*, dose, + *metron*, measure.] Practice of medicine by the dosimetric* system.

do'sis [G. a giving.] Dose; the amount of a medicine or other therapeutic agent which is to be taken at one time or within a stated period. **d. curati'va,** the smallest dose of a specific remedy which will effect a cure. **d. refrac'ta,** broken dose, divided dose, fractional dose; a definite fraction of a full dose of a remedy; it is given repeatedly at short intervals, so that the full dose is taken within a specified period. **d. tolera'ta,** the largest dose of a remedy which the animal organism will accept without the production of injurious symptoms.

dossier (dos'ĭ-a) [Fr. a bundle of papers relating to a case in court.] An envelope containing the data relating to the case history of a patient—the various symptoms, pulse, temperature, etc.

do'tage, do'tardness. The mental weakness of extreme old age.

dothienenteria (do"the-en-en-te'rĭ-ah) [G. *dothiēn*, a boil, + *enteron*, intestine.] Dothienenteritis, dothinenteria, dothinenteritis, typhoid* fever.

'oub'let. A combination of two lenses designed to correct the chromatic and spherical aberration **Woll'aston d.,** a d. in the eyepiece of a microscope.

)uche (doosh) [Fr. *doucher*, to pour.] 1. A current of water, gas, or vapor directed against the surface or projected into a cavity. 2. An instrument for iving a douche. 3. To apply a douche. **Scotch .,** a d. of hot and cold water alternately applied. **iv'oli d.,** the application of a hot d. to the abdo- :n of one lying in a bath of cooler water.

:'las's cul-de-sac [James *Douglas*, English anat- ist, 1675–1742.] Excavatio rectouterina NA]. **D.'s fold,** plica rectouterina [BNA]. **D.'s , linea semicircularis [BNA]. D.'s pouch.** ; cul-de-sac. **D.'s sep'tum,** the junction of thke's folds in the fetus, forming the rectum.

las's mech'anism [John C. *Douglas*, Irish obtrician, 1777–1850.] A mode of spontaneous :sion sometimes occurring in cases of trans- :rse presentation.

glasitis (dug-las-i'(e')tis). Inflammation of the vagina limited more or less strictly to Douglas's cul-de-sac.

)unda'ke bark. Dundaki bark.

.ourine (doo'rēn) [Fr.] Mal de coit; a trypanosomiasis of horses, conveyed by the sexual act; it is caused by *Trypanosoma equiperdum*, and is characterized by inflammation of the genitals, glandular swelling, and paralysis of the hind quarters.

Do'ver's pow'der [Thomas *Dover*, English physician and navigator, 1660–1742.] Pulvis ipecacuanhæ compositus (Br.), pulvis ipecacuanhæ et opii (U.S.); the original formula was opium and ipecac of each 10, niter and potassium sulphate of each 40. **syr'up of D.'s p.,** syrupus ipecacuanhæ et opii (N.F.).

dow'el. A pin for fastening together two pieces of stone or wood; in dentistry a peg for fastening an artificial crown to the natural root of a tooth.

Downes sep'arate-u'rine sy'phon [Andrew J. *Downes*, American physician, contemporary.] An instrument for obtaining the urine from each ureter separately; it consists of a lever in the rectum which is pressed against the bladder making a central ridge; on each side of this ridge is a perforated curved beak attached to a catheter through which the urine on that side is syphoned away as soon as it enters the bladder.

Dow'sing bath. A luminous electric hot-air bath given at a very high temperature.

Doyen's opera'tion (dwă-yahn') [Eugene Louis *Doyen*, Paris surgeon, 1859–1916.] Eversion of the sac in the treatment of hydrocele. **D.'s se'rum,** a serum alleged to be curative of cancer.

Doyère's em'inence or **hil'lock** (dwă-yair') [Louis *Doyère*, French physiologist, 1811–1863.] A slight elevation at the point where a nerve-fiber enters muscle; the type of a motor-nerve ending in insects; called also *D.'s papilla* or *tuft*.

D.P. Abbreviation of Doctor of Pharmacy.

D.P.H. Abbreviation of Doctor or Diploma of Public Health.

dr. Abbreviation of drachm, or dram.

D.R. Abbreviation of reaction of degeneration.

drachm (dram) [G. *drachmē*, an ancient Greek weight equivalent to about 66½ grains.] Dram.

dracontiasis (dra-kon-ti'a-sis). Infestation with the guinea-worm.

dracontium (dra-kon'-shyum) [G. *drakōn*, dragon.] Skunk-cabbage, stinking hellebore, collard; the rhizome and roots of *Spathyema fœtida* (*Symplocarpus fœtidus*, *Dracontium fœtidum*), a common plant in the swamps of North America; said to be a sialogogue, antispasmodic, and narcotic, in doses of gr. 10–20 (0.6–1.3).

Dracun'culus (L. dim. of *draco*, serpent.] A genus of *Nematoda*, formerly included in *Filaria*. **D. lo'a,** *Filaria loa*. **D. medinen'sis** [L. of Medina] **D. persa'rum** [L. of the Persians], *Filaria medinensis* **D. oc'uli,** *Filaria loa*.

draft. Draught. 1. A current of air in a confined space. 2. A quantity of liquid medicine, greater than can be taken in one swallow, ordered as a single dose. **black d.,** infusum sennæ compositum. **d. of Rive'rius,** liquor sodii citratis.

dragée (dră-zha') [Fr.] A sugar-coated pill or capsule.

Drag'endorff's test [Johann Georg Noel *Dragendorff*, German physician and pharmaceutical chemist, 1836–1898.] For bile: a play of colors is produced by adding a drop of nitric acid to white filter paper or unglazed porcelain, moistened with a fluid containing bile pigments.

drag'on's blood. Resina draconis.

drain (drān) [A. S. *drehnian*, to draw off.] 1. To draw off the fluid from a cavity, especially to provide for its exit immediately it is formed. 2. An arrangement, in the shape of a tube or wick, for removing the fluid as it collects in a cavity, especially a wound cavity. **cigarette' d.,** a wick of gauze wrapped in rubber tissue, providing capillary drainage.* **Mik'ulicz d.,** see *Mikulicz*. **stab d.,** a d. passed into the cavity through a puncture made at a dependent part away from the wound of operation, designed to prevent infection of the wound.

drainage (dra'nej). The continuous withdrawal of pus and other fluids from a wound or other cavity. **cap'illary d.,** d. by means of a wick of gauze, horsehair, or other material. **through d.,** d. obtained by the passage of a perforated tube, open at both extremities, through a cavity; in addition to providing for the escape of fluids, this allows for the

washing out of the cavity by the forcing of water through the tube.

drainage-tube. A tube of rubber or glass passed into a wound or cavity of the body to allow the escape of pus or blood.

dram [see *drachm.*] Drachm, a unit of weight; $\frac{1}{8}$ ounce, 60 grains, apothecaries' weight; $\frac{1}{16}$ ounce, 27.34 grains, avoirdupois weight.

drapetomania (drăp-pĕ-to-ma'nĭ-ah) [G. *drapetēs*, a runaway, + *mania*, frenzy.] Vagabondage, dromomania; an uncontrollable or insane impulsion to wander.

drastic (dras'tik) [G. *drastikos*, active.] 1. Acting powerfully. 2. A powerful purgative.

draught. Draft.

draw-sheet. A narrow sheet placed crosswise on the bed under the patient's buttocks, with a rubber sheet of the same width beneath it; when soiled that part is drawn from under the patient, leaving the next dry section for him to lie upon.

dread. To fear greatly, to apprehend. 2. An extreme fear or apprehension.

dream (drēm). A series of fantastic, more or less coordinate ideas or images, formed in the mind during sleep.

dream-pain. Hypnalgia.

dream-work. The process by which the change from latent to manifest content of a dream is effected.

Drech'sel's test [Edmund *Drechsel*, Swiss chemist 1843–1897.] For bile: the suspected fluid is heated with a mixture of sugar and phosphoric acid, whereupon a reddish brown color is produced if bile is present.

drench. In veterinary practice, a draught of medicine forced down the throat of an animal.

drench'ing-horn. A horn-shaped receptacle used for giving a drench.

drepanid'ium [G. *drepanē*, a sickle.] A young, sickle-shaped or crescentic form of a gregarine.

drepanocyte (drĕ-pan'o-sīt) [G. *drepanē*, sickle, + *kytos*, cell.] Crescent cell, sickle cell.

drepanocytemia (drĕ-pan-o-si-te'mĭ-ŭ). Crescent-cell anemia.

drepanocytic (drĕ-pan-o-sit'ik). Relating to, or resembling, a sickle cell.

dres'ser. In Great Britain, a surgical externe or interne, one whose duty it is to dress wounds, etc.

dress'ing. The material applied to a wound for the purpose of excluding the air, stimulating repair, etc. **antisep'tic d.,** a. d. of gauze impregnated with bichloride of mercury, carbolic acid, or other antiseptic. **fixed d.,** a bandage stiffened with sodium silicate, plaster of Paris, or starch in order to secure immobilization when it dries. **occlu'sive d.,** one which hermetically seals a wound. **wa'ter d.,** an application of gauze, cotton, or other material which is kept wet with sterilized water.

Dress'ler's disease'. Paroxysmal hemoglobinuria.

Dreuw's method (droiv) [*Dreuw*, German dermatologist, contemporary.] A method of treatment of lupus by freezing the part and then rubbing in hydrochloric acid.

drib'ble. To drool, slaver, drivel. To fall in drops, as the urine from a distended bladder.

Drigalski-Conradi agar (dre-gahl'ske-kōn-rah'de a'gar) [W. v. *Drigalski*, German bacteriologist, *1871; Heinrich *Conradi*, German bacteriologist.] See under *agar.*

drill. 1. To make a hole in bone or other hard substance. 2. An instrument for making or enlarging a hole in bone or in a tooth.

Drinker respirator (dring'kur res'pi-ra-tor) [Philip *Drinker*, American public health engineer, *1893.] A metal tank in which the patient lies with his head outside; artificial respiration is effected by alternate negative and positive air pressure within the tank.

drip. 1. To fall a drop at a time. 2. Falling in drops. **Mur'phy d.,** see under *Murphy's* method.*

drip-sheet. A cool, wet sheet wrapped around the body, the patient standing in a basin of warm water.

dri'ver's thigh. Neuralgia or neuritis of the sciatic nerve, due to pressure on the nerve produced by the long continued use of the accelerater pedal in driving a motor car.

dro'mograph [G. *dromos*, a running, + *graphō*, I record.] An instrument for recording the rapidity of the blood circulation.

dromomania (drom-o-ma'nĭ-ah) [G. *dromos*, a running, + *mania*, frenzy.] Drapetomania, vagabondage.

dromotrop'ic [G. *dromos*, a running, + *tropikos*, relating to a turn.] Influencing the conductivity of nerves. **neg'atively d.,** diminishing, and **pos'itively d.,** increasing nerve conductivity.

drop [A.S. *droppan.*] 1. To fall in globules. 2. To pour liquid from a container in separate globules, not in a continuous stream. 3. A globule of liquid that falls from a container. 4. The smallest coherent mass of a liquid that falls from a container, regarded as a unit of measure; equivalent in the case of water to about 1 minim. 5. A liquid medicine dosed in drops (see *drops*). 6. A solid confection in globular form, usually directed to be allowed to dissolve in the mouth. **a'gue d** liquor potassii arsenitis. **black d.,** acetum op' **d. serene',** gutta serena, amaurosis. **hang'ing d** a drop of liquid on the under surface of the o ject glass for examination under the microsco see *drop culture.** **hon'est drops,** drops of bl which exude and fall spontaneously (with pressure or suction) from the congested fin tip when pricked; a term employed by o nists.

drop-cul'ture. Hanging drop culture.*

drop-finger. Flexion of the terminal phalan finger, with loss of the power of extension to rupture of the extensor tendon near its tion into the base of the distal phalanx, paralysis of the extensor muscle.

drop-foot. Paralysis of the dorsal flexor m of the foot, as a consequence of which th falls, the toes dragging on the ground in wa dangle foot.

drop-jaw. The paralytic stage of rabies in the (dumb-madness or sullen rabies), so called fi one of its most characteristic symptoms.

drop-hand. Wrist-drop.

drop-heart. Cardioptosis.

drop-phalangette (fal-an-jet'). Drop-finger.

dropp'ing. Limping of a horse with elbow-disease.

drops. A popular term for a medicine taken in doses measured by drops, usually a tincture, or applied by dropping, as a collyrium. **eye d.,** collyrium. **hot d.,** tinctura capsici et myrrhæ (N.F.). **pec'toral d.,** tinctura pectoralis. **stom'ach d.,** a stomachic tonic, usually tincture of gentian, alone or with other stomachics.

drop'sical. Relating to or suffering from dropsy.

dropsy (drop'sĭ) [G. *hydrōps.*] Hydrops; an excessive accumulation of clear watery fluid in any of the tissues or cavities of the body; variously called, according to its character and location, edema, anasarca, ascites, hydrothorax, hydropericardium, etc. **car'diac d.,** (1) hydropericar-

dium; (2) dropsy consequent upon heart disease. **cuta'neous d.,** edema. **epidem'ic d.,** a disease which has been observed in epidemic outbreaks in India and Mauritius; it is marked by dropsy, anemia, and a mild fever; the mortality in the observed epidemics varied from 2 to 8 per cent. **re'nal d.,** dropsy consequent upon kidney disease. **sleep'ing d.,** sleeping-sickness. **subcuta'neous d.,** anasarca, edema. **wet d.,** beriberi.

abdomen, ascites, hydroperitoneum, hydrocelia. **amnion,** hydramnios. **brain** and **membranes,** hydrocephalus, hydrencephalus, hydromeninx, hydrocranium, wet-brain. **chest,** hydrothorax. **conjunctiva,** chemosis. **ear,** hydrotis, hydrotympanum, hydromyringa, hydromyrinx, otohydrops, othydrops **eye,** hydrophthalmia, hydrophthalmus. **eyelid,** blepharedema. **Fallopian tube,** hydrosalpinx. **fingers,** dactyledema. **foot,** podedema. **gall-bladder,** hydrocholecystis. **general,** anasarca, hydroncus, hydrosarca **heart,** hydropericardium, hydrocardia. **joints,** hydrarthrosis. **kidney,** hydronephrosis, nephredema. **larynx,** edema glottidis. **lungs,** pneumonedema. **ovary,** hydroarium, hydrovarium. **pericardium,** hydropericardium. **peritoneum,** hydroperitoneum, ascites. **scrotum,** hydroscheocele **skin,** edema, hyroderma, hygroderma. **spermatic cord,** hydrocele. **spinal cord,** hydrorrhachis hydromyelia. **thorax,** hydrothorax. **toes,** dactyledema. **tunica vaginalis,** hydrocele, hydrorchis **tympanum,** hydrotympanum. **ureter,** hydroureter **uterus,** hydrometra. **uvula,** staphyledema **vagina,** hydrocolpocele.

dros'era [G. *droseros,* dewy.] (N.F.) Sundew, youth-wort. The dried plant, *Drosera rotundifolia, D. intermedia,* or *D. longifolia,* employed in the treatment of chronic bronchitis and other respiratory affections, in doses of ℥ 1 (4 0) of the fluidextract.

Drouot's plas'ter (droo-o') [Theophile *Drouot,* French oculist, *1803] A mixture of cantharides, mezereon, and resin.

ow'siness [A.S. *drusan,* to become sluggish.] leepiness, somnolence.

v'sy. Sleepy, somnolent.

ɡ. 1. Any substance employed as a medicine the treatment of disease. 2. To give medicine, ually with the sense of giving medicine in necessarily large quantities. 3. To narcotize. **de d.,** an unrefined drug, the whole drug with its ingredients, in distinction from an extract, ture, or other preparation or from its alkaloids other active principles. **d. addic'tion,** ituation to the use of a drug, the deprivation which gives rise to symptoms of distress, stinence or withdrawal symptoms, and an esistible impulsion to take the drug again; armacopsychosis. **d. disease',** (1) morbid ymptoms caused by a drug and not by the isease for the cure of which that drug is given. (2) in homeopathy the aggregate of symptoms noted in the proving of a drug, which symptoms, when caused by a natural disease, are indications for the administration of small doses or high potencies of the same drug. **d. erup'tion,** dermatitis medicamentosa. **d.-fast,** noting microorganisms which are resistant to the action of any medicament, such as mercury or quinine, present in the circulating blood. **d. treat'ment,** pharmacotherapy, the use of drugs, as distinguished from water, air, heat, electricity, and other natural forces, exercise, diet, etc., in the treatment of disease.

drum. The tympanum of the ear.

drum'head, drum-mem'brane. Membrana tympani.

Drum'mond's sign [Sir David *Drummond,* English physician, 1852–1932.] A puffing sound, synchronous with the cardiac systole, heard from the nostrils, the mouth being closed, in certain cases of aortic aneurysm.

Drum'mond-Mor'ison opera'tion [David *Drummond;* Rutherford *Morison,* English surgeon, *1853.] An operation to establish anastomoses between the systemic and portal venous system to relieve ascites; it consists in opening the abdominal cavity, scrubbing with a sponge the peritoneum of the liver and spleen and the corresponding portions of the parietal peritoneum, and suturing the omentum across the abdominal wall.

drum'stick-bacill'us. 1. The tetanus bacillus, which has a spore at one end, giving it a fancied resemblance to a drumstick; also *B. putrificus,* which is a similar spore-bearing bacillus.

drum'stick-fingers. Hippocratic fingers.

drunk'enness. Alcoholic intoxication.

drupe [G. *drypepēs,* overripe.] A succulent indehiscent fruit, in which the pericarp is fleshy and the endocarp indurated, containing the seed within, such as a cherry.

Drys'dale's cor'puscles [Thomas Murray *Drysdale,* Philadelphia gynecologist, 1831–1904.] Certain formed elements in the fluid of an ovarian cyst, alleged to be pathognomonic.

D.t. Abbreviation for duration tetany.*

DTN. Abbreviation for diphtheria toxin normal.

DTN^{1}M^{250}. [*D,* diphtheria, + *T,* toxin, + *N*^{1}, normal solution, + *M*^{250}, *Meerschweinchen,* guinea-pig, weighing 250 grams.] Behring's formula of a normal toxin solution, or a toxin-bouillon containing 100 diphtheria toxin units in a cubic centimeter.

D.T.P. Abbreviation for distal tingling on percussion, Tinel's* sign.

du'alism [L. *dualis,* relating to two.] 1. In chemistry the theory that every compound, no matter how many elements enter into it, is composed of two parts, one electrically negative, the other positive. 2. The doctrine, now universally accepted, that the hard and the soft chancre are two distinct affections, and not two different manifestations of the same disease.

Duane's test (doo-ān') [Alexander *Duane,* New York oculist, 1858–1926.] A screen is held for a moment between the light and the eye to be examined and then is suddenly shifted in front of the other eye; if there is imbalance of the muscles of the first eye the image of the light will be displaced.

dubhium (dub'ĭ-um). Ytterbium.

Dubini's disease' (doo-be'ne) [Angelo *Dubini,* Milan physician, 1813–1902.] Electric chorea* (1).

Dubois's ab'scess or **disease'** (du-bwah') [Paul *Dubois,* Parisian obstetrician, 1795–1871.] 1. A cavity with softened contents due to the breaking down of a gumma in the thymus, occurring in children with congenital syphilis. 2. A cyst of the thymus caused by the growth of thymic tissue into Hassall's corpuscles. **D.'s shears,** strong shears used for decapitation of the fetus.

Dubois's meth'od (dü-bwah') [Paul *Dubois,* Swiss psychotherapist, contemporary.] A form of psychotherapy in which the nature of the disease is carefully explained to the patient, the aim of the treatment is outlined, and the patient is induced to lend his aid to the physician.

DuBois-Reymond coil (dü-bwah-ra'mond) [Emil *DuBois-Reymond,* Berlin physiologist, 1818–1896.] An induction coil in which the secondary coil is movable. **DuB.-R.'s law,** it is the variation in intensity of an electrical current, and not its absolute intensity, that stimulates a muscle or a motor nerve.

duboi'sea. The leaves of *Duboisea myoporoides*, corkwood elm, a tree of Australia, having properties similar to those of belladonna and hyoscyamus.

duboisine (du-boy'sēn). An alkaloid obtained from duboisea. The sulphate is the salt usually employed as a hypnotic and in the treatment of paralysis agitans in doses of gr. $\frac{1}{80}$–$\frac{1}{40}$ (0.0008–0.0015); it is also used as a mydriatic.

Duboscq's colorim'eter (dü-bosk') [Jules *Duboscq*, Paris optician.] An apparatus for measuring the depth of tint in a fluid by comparing it with a standard fluid; glass cylinders are immersed in each of two cups containing, one the standard fluid, the other the fluid to be tested; on looking through the cylinders the tints are equalized by raising or lowering the cylinder in one cup, and the extent of this raising or lowering registers the exact difference in tint.

Dubreuil-Chambardel syn'drome (du-brë-e-sham-bar-del'). Simultaneous caries of the upper incisor teeth occurring in youths of either sex between the ages of 14 and 17; after an interval of varying length the other teeth are also attacked.

Duchenne's disease' (dü-shen') [Guillaume Benjamin Amant *Duchenne*, commonly called Duchenne de Boulogne, French neurologist, 1806–1875.] 1. Tabes dorsalis. 2. Bulbar paralysis. **D.'s paral'ysis,** pseudohypertrophic muscular paralysis. **D.'s symp'tom,** falling in of the epigastrium during inspiration in paralysis of the diaphragm. **D.'s syn'drome,** subacute or chronic anterior spinal paralysis combined with multiple neuritis

Duchenne'-Aran's disease' (ar-oń') [François Amilcar *Aran*, French physician, 1817–1861.] Progressive muscular atrophy beginning in the upper extremity. **D.-A. type,** muscular atrophy beginning in the hand, causing the *main en griffe* or griffin-claw.

Duchenne'-Erb's paral'ysis [see *Erb.*] Paralysis of the deltoid, biceps, anterior brachial, and long supinator muscles, called *muscles of the D.-E. group*

Duchenne-Landouzy type. See *Landouzy.*

duck'bill spec'ulum. A bivalve vaginal speculum, the blades of which are broad and flattened, resembling a duck's bill.

Duck'worth's phenom'enon [Sir Dyce *Duckworth*, London physician, 1840–1927.] Arrest of the respiration before stoppage of the heart in certain cases of fatal brain disease.

Ducrey's bacil'lus (doo-kra'e) [Augusto *Ducrey*, Italian physician, *1860.] A streptobacillus described as the specific cause of chancroid.

duct [L. *ductus; ducere*, to lead.] 1. To turn, to vert, noting the revolving movement of a limb or other part. 2. To lead, to draw from or to a fixed point. 3. A tubular structure giving exit to the secretion of a gland, or conducting any fluid. [For the anatomical names of the ducts, see *ductulus* and *ductus;* and for ducts bearing the names of the discoverers (*Botal's d., Gartner's d.*, etc.), see the proper names.] **acous'tic d.,** meatus acusticus externus. **alimen'tary d.,** ductus thoracicus. **alve'olar d.,** a terminal bronchiole. **bile d.,** gall d. **canalic'ular d.,** one of the branches of the milk ducts. **clo'acal d.,** Reichel's d. **def'inite d.,** one of the milk ducts in the nipple. **excre'tory d.,** ductus excretorius. **galactoph'orous d.,** ductus lactiferus. **gall d.,** see *ductus biliferi, ductus choledochus, ductus cysticus.* **gutt'ural d.,** Eustachian tube, tuba* auditiva. **mamm'ary d., mamm'illary d.,** see *ductus lactiferus.* **mesoneph'ric d.,** a duct in the embryo developing, in the male, into the vas deferens. **metaneph'ric d.,** a ureter developing from the metanephron. **om"phalomesenter'ic d.,** umbilical d. **proneph'ric d.,** a duct of the pronephros in the embryo. **sal'ivary d.,** see under *Bartholin, Rivinus* (the sublingual ducts), *Stensen* (the parotid d.), and *Wharton* (the submaxillary d.). **segmen'tal d.,** one of two ducts in the embryo leading into the cloaca. **umbil'ical d.,** a canal in the embryo connecting the umbilical vesicle and the intestine. **urogen'ital d.,** see *Müller's d.* and *Wolffian d.* **vi'telline d.,** umbilical d.

duct'less. Having no duct, noting certain glands having only an internal secretion.

duc'tule. Ductulus, a small duct

duc'tulus [L. dim. of *ductus*, duct.] A minute duct. **d. aber'rans,** vas aberrans. **d. alveola'ris,** a terminal bronchiole. **d. ef'ferens tes'tis** (pl. *duc'tuli efferen'tes*), one of a number (12 to 14) of small seminal ducts leading from the testis to the globus major of the epididymis.

duc'tus, gen. and pl. *ductus* [L.] Duct.

d. aber'rans, vas aberrans.

d. Aran'tii, d. venosus.

d. arterio'sus [BNA], d. Botalli, a vessel of communication between the pulmonary artery and the arch of the aorta in the fetus; it becomes transformed after birth into a fibrous cord, the ligamentum arteriosum.

d. bilif'eri [BNA], biliary canaliculi: the excretory ducts of the liver originating within the hepatic lobules and running between the hepatic cells to discharge into the interlobular ducts.

d. Botal'li, d. arteriosus.

d. choled'ochus [BNA], common bile-duct, formed by the union of the hepatic and cystic ducts; it passes from the mouth of the portal fissure (porta hepatis) to the duodenum into which it discharges through common orifice with the pancreatic duct.

d. cochlea'ris [BNA], cochlear duct, membranous cochlea, scala media; a spirally arranged membranous tube suspended within the cochlea, occupying the lower portion of the vestibular scala; it begins by a blind extremity, *cæcum vestibulare*, in the recessus cochlearis of the vestibule, terminating in another blind extremity, *cæcum cupulare* or *lagena*, at the cupola of the cochlea; it contains endolymph and communicates with the sacculus by the ductus reuniens.

d. commu'nis choled'ochus, d. choledochus.

d. cys'ticus [BNA], the duct leading from the bladder; it joins the hepatic duct to form the ductus choledochus.

d. def'erens [BNA], vas deferens, the excretory duct of the testicle, running from the epididymis which it is the continuation, to the prostatic urethra where it terminates as the ductus ejaculatorius.

d. dorsopancreat'icus, duct of Santorini.*

d. ejaculato'rius [BNA], the duct formed by union of the vas deferens and the excretory duct of the seminal vesicle, which opens into the prostatic urethra.

d. endolymphat'icus [BNA], endolymphatic duct, a small membranous canal, connecting with both sacculus and utricle of the membranous labyrinth, passing through the aquæductus vestibuli, and terminating in a dilated blind extremity, *saccus endolymphaticus*, on the posterior surface of the petrous portion of the temporal bone beneath the dura mater.

d. epididym'idis [BNA], canal or duct of the epididymis, a convoluted tube into which the vasa efferentia open and which itself terminates in the ductus deferens.

d. epoöph'ori longitudina'lis, Gartner's duct, one of the tubules of the epoophoron, placed at right angles to the other tubules and parallel to the Fallopian tube; it is the remains of the anterior portion of the Wolffian duct and the analogue of the canal of the epididymis in the male.

d. excreto'rius, a duct carrying the secretion from a gland or a fluid from any reservoir.

d. galactoph'orus, d. lactiferus.

d. hemithorac'icus, an accessory thoracic duct, usually emptying into the thoracic duct, but some-

times discharging independently into the right subclavian vein.

d. hepat'icus [BNA], a duct for the transmission of bile received from the interlobular ducts; it arises at the bottom of the porta hepatis and outside this fissure joins the cystic duct to form the ductus choledochus.

d. hep"atopancreat'icus, duct of Wirsung.

d. incisi'vus [BNA], duct of Stensen, a rudimentary duct, or protrusion of the mucous membrane into the incisive canal, on either side of the anterior extremity of the nasal crest.

d. interlobula'res [BNA], ducts for the transmission of bile received from the ductus biliferi; they run between the lobules of the liver and empty into the ductus hepaticus.

d. lacrima'lis [BNA], lacrymal duct, a curved canal beginning at the punctum lacrimale in the margin of each eyelid near the medial commissure and running transversely inward to empty with its fellow into the lacrymal sac.

d. lactif'erus [BNA], milk-duct, one of the ducts conveying the milk secreted in each lobe of the mamma and opening at the nipple.

d. lingua'lis [BNA], a pit on the upper surface of the tongue at the apex of the sulcus terminalis; it is the remains of a tubular structure (ductus thyreoglossus) in embryonic life, from which is developed the isthmus of the thyroid gland.

d. lymphat'icus dex'ter [BNA], right lymphatic duct, one of the two terminal lymph vessels, a short trunk somewhat less than an inch in length, formed by the union of the right jugular lymphatic vessel and vessels from the lymph nodes of the right upper extremity, thoracic wall, and viscera; it lies on the right side of the root of the neck and empties into the right vena anonyma.

d. nasa'lis, nasal duct, d. nasolacrimalis [BNA].

d. nasolacrima'lis [BNA], nasolacrymal duct, nasal duct, a canal leading downward from the lacrymal sac on each side to the anterior portion of the inferior meatus of the nose, through which the tears are conducted into the nasal cavity.

d. om"phalomesenter'icus, vitelline or omphalomesenteric* duct.

d. pancreat'icus [BNA], duct of Wirsung, the excretory duct of the pancreas running through the center of the gland and discharging with the common bile duct through a common orifice at the bile papilla of the duodenum.

pancreat'icus accesso'rius [BNA], Bernard's canal, Santorini's duct, the excretory duct of the head of the pancreas, one branch of which joins the pancreatic duct, the other opening independently into the duodenum.

pancreat'icus az'ygos, d. pancreaticus accessorius [BNA].

paraurethra'les [BNA], paraurethral ducts, the ducts of Skene's (paraurethral) glands, opening in the vestibule of the vagina on either side of the urethral orifice.

d. parotide'us [BNA], Steno's or Stensen's duct, Stenonian duct, the duct of the parotid gland opening from the cheek into the vestibule of the mouth opposite the second molar tooth.

d. perilymphat'icus [BNA], perilymphatic duct aqueduct of the cochlea, a fine canal connecting the perilymphatic space of the cochlea with the subarachnoid space.

d. prostat'ici [BNA], prostatic ducts, about twenty minute canals which receive the prostatic secretion from the glandular tubules and discharge it through openings on either side of the crista urethralis in the posterior wall of the urethra.

d. reu'niens [BNA], uniting duct, canalis reuniens, a short membranous tube passing from the lower end of the sacculus to the ductus cochlearis of the membranous labyrinth.

d. semicircula'ris [BNA], semicircular duct, one of three membranous tubes, superior, lateral, and posterior, contained in, but only partly filling, the three semicircular canals.

d. sublingua'lis ma'jor [BNA], duct of Bartholin, a duct of the sublingual gland, opening with or near Wharton's duct on the sublingual papilla.

d. sublingua'lis mi'nor [BNA], one of the ducts of Rivinus or Rivini, ducts of the sublingual salivary glands, Walther's* ducts.

d. submaxilla'ris [BNA], Wharton's duct, the duct of the submaxillary salivary gland, opening at the sublingual caruncle.

d. sudorif'erus [BNA], sweat duct, the superficial portion of the sweat gland which passes through the corium and epidermis, opening on the surface by the porus sudoriferus.

d. thorac'icus [BNA], thoracic duct, the largest lymph vessel in the body, beginning at the cisterna chyli at about the level of the umbilicus, passing upward through the aortic opening of the diaphragm and the posterior mediastinum, crossing from the right to the left of the vertebral column at the level of the fifth thoracic vertebra, and discharging into the left vena anonyma at the inner border of the scalenus muscle.

d. thyreogloss'us [BNA], an embryonic tubular structure, growing down from the middle portion of the sinus arcuatus, which forms the isthmus of the thyroid gland; its beginning persists in the adult as the foramen* cæcum linguæ.

d. utriculosaccula'ris [BNA], utriculosaccular duct, one of the branches of origin of the endolymphatic duct, arising from the inner aspect of the utricle.

d. veno'sus Aran'tii [BNA], venous duct of Arantius, the continuation, in the fetus, of the umbilical vein to the vena cava inferior; at birth it becomes obliterated, forming the ligamentum ductus venosi.

d. Wolff'i [BNA], Wolffian* duct.

Dud'dell's mem'brane [Benedict *Duddell*, English oculist, eighteenth century.] Descemet's membrane, lamina elastica posterior.

Dud'ley's opera'tion [Emilius Clark *Dudley*, Chicago gynecologist, *1850.] 1. Desmopyknosis; shortening of the round ligaments by attaching them by loops to the anterior wall of the uterus, for the relief of a retrodisplacement. 2. Splitting the cervix uteri for the relief of obstructive dysmenorrhea.

Duehr'ssen's meth'od [Alfred *Duehrssen*, German obstetrician, *1862.] From 3 to 5 deep incisions into the cervix uteri as far as the vaginal junction to hasten dilatation in delivery. **D.'s oper'a'tion,** vaginal fixation of the uterus. **D.'s tam'pon,** filling of the vagina with iodoform gauze in case of uterine hemorrhage.

Dugas's test [Louis Alexander *Dugas*, American physician, 1806–1884.] In the case of an injured shoulder, if the elbow cannot be made to touch the chest while the hand rests on the opposite shoulder the injury is a dislocation and not a fracture of the humerus.

Duh'ring's disease' [Louis Adolphus *Duhring*, Philadelphia dermatologist, 1845–1913.] Dermatitis herpetiformis.

duipara (doo-ip'ah-rah) [L. *duo*, two, + *parere*, to bear] A woman who has borne two children in two pregnancies, secundipara.

Dukes' disease' [Clement *Dukes*, English physician, 1845–1925.] Fourth disease.*

dulcamara (dul"kah-mah'rah) [L. *dulcis*, sweet, + *amarus*, bitter. (N.F.) Bittersweet, poisonberry, wolf-grape; the dried young branches of *Solanum dulcamara*, a climbing plant of the north temperate zone; diuretic, diaphoretic, sedative, and narcotic in doses of ℥ ½–1 (2.0–4.0), or ℥1 (4.0) of the fluidextract; employed in eclectic practice in the treatment of cutaneous diseases with sluggish circulation.

dulcam'arin. A glucoside, $C_{32}H_{54}O_{16}$, obtained from dulcamara, called also dulcarin, picroglycion.

dul'carin. Dulcamarin.

dul'cin. 1. Dulcite. 2. Sucrol.

dul'cite [L. *dulcis*, sweet.] Dulcin, dulcitol, dulcose, euonymite, melampyrite; a sugar, $C_6H_{14}O_6$, obtained from several species of *Euonymus* and of *Melampyrum;* it is similar to mannite.

dull. Not sharp or acute, in any sense; qualifying a surgical instrument, the action of the mind, pain, a sound, especially the percussion note, etc.

dull'ness, dul'ness. The character of the sound obtained by percussing over a solid part which is incapable of vibrating.

Dulong-Petit law (du-lawn'pĕ-te') [Pierre Louis *Dulong*, French chemist, 1785–1838.] The specific heat of the atoms of all simple solid bodies is the same.

dumb [A.S.] Mute, speechless, unable to speak. **d. a'gue,** an irregular malarial attack in which the stage of chill is absent.

dumb-bell. 1. A crystal of ammonium urate or of calcium carbonate, having a dumb-bell shape. 2. A microscopic body of dumb-bell shape seen in striated muscular tissue.

dumb'-madness. The paralytic form of rabies in the dog; drop-jaw; sullen rabies.

dumb'ness. Muteness, inability to speak.

Dum'dum fe'ver [*Dum Dum*, a town near Calcutta in India.] A disease occurring in India which resembles dysentery in its general symptoms, supposed to be due to infection with a piroplasma or a trypanosome.

dumminess (dum'ĭ-nes). Mental dulness and apathy occurring as a sequel of acute encephalitis in the horse.

dumm'y. 1. One who is silent. 2. Something fictitious. 3. In dentistry, pontic, an artificial tooth in a bridge.

Dumontpallier's pes'sary (dŭ-mawn-pal-ya') [Alphonse *Dumontpallier*, French physician, 1826–1898.] Mayer's pessary, an elastic ring pessary **D.'s test,** for bile: over the suspected liquid in a test-tube a little tincture of iodine is very carefully poured, whereupon a green color appears at the plane of contact of the two fluids if bile is present.

Dun'bar's se'rum [William Philipps *Dunbar*, a physician of American birth, late director of the Hygienic Institute of Hamburg,* Germany, 1863–1922.] Pollantin.

Dun'can's folds [James Matthews *Duncan*, English gynecologist, 1826–1890.] The folds on the peritoneal surface of the uterus immediately after delivery. **D.'s mech'anism,** the passage of the placenta from the uterus with the lower edge in advance. **D.'s ven'tricle,** fifth ventricle, cavum septi pellucidi.

Dun'can's meth'od [Charles H. *Duncan*, New York physician, *1880.] Autotherapy (4).

dundaki bark (doon-dah'ke). The bitter bark of *Sarcocephalus esculentus*, a shrub of West Africa, chewed by the natives; it is tonic and febrifuge in doses of gr. 1–3 (0.06–0.2) of an extract.

dun'dakine. An alkaloid of *Sarcocephalus esculentus;* in poisonous doses it arrests respiration.

Dunfermline scale (dun-furm'lin skāl) [*Dunfermline*, a city in Scotland where the system was developed.] A scale of classification of children according to their condition of nutrition, as (1) superior, (2) passable, (3) requiring supervision, and (4) requiring medical care.

Dunham's peptone water. A solution of peptone 1, and sodium chloride 0.5, a medium in which cholera vibrios grow more rapidly than other intestinal bacteria.

duod'enal. Relating to the duodenum.

duodenec'tomy [*duodenum* + G. *ektomē*, excision.] Exsection of the duodenum.

duodenitis (du-o-de-ni'(ne')tis). Dodecadactylitis, inflammation of the duodenum.

duodenocholangitis (du-o-de"no-ko-lan-ji'(je')tis) [L. *duodenum* + G. *cholē*, bile, + *angeion*, vessel, + *-itis*.] Inflammation of the duodenum and choledoch duct.

duodenocholecystostomy (du-o-de"no-ko-le-sis-tos'-to-mĭ) [L. *duodenum* + G. *cholē*, bile, + *kystis*, bladder, + *stoma*, mouth.] The operative formation of a fistula between the duodenum and the gall-bladder

duodenocholedochotomy (du-o-de"no-ko-led-o-kot'-o-mĭ). Incision into the common bile-duct and the adjacent portion of the duodenum.

duodenocystos'tomy. Duodenocholecystostomy.

duodenoenterostomy (du-o-de"no-en-ter-os'to-mĭ) [L. *duodenum* + G. *enteron*, intestine, + *stoma*, mouth.] The operative establishment of a communication between the duodenum and another part of the intestinal tract.

duodenos'tomy [L. *duodenum* + G. *stoma*, mouth.] The operative establishment of a fistula into the duodenum.

duodenot'omy [L. *duodenum* + G. *tomē*, incision.] A cutting into the duodenum.

duodenum (du-o-de'num) [L. *duodeni*, twelve.] Dodecadactylon; the first division of the small intestine, about 11 inches, or 12 finger-breadths (hence the name) in length, extending from the pylorus to the junction with the jejunum at the level of the first or second lumbar vertebra on the left side. **met'a-d.,** that portion of the d which is below the papilla duodeni (Vater's p it is derived from the midgut. **pro'to-d.,** the fir part of the d. extending from the pylorus as far Vater's papilla; it is derived from the foreg has no valvulæ conniventes, and is the sea Brunner's glands.

duotal (du'o-tal). Guaiacolis carbonas (U.S.)

duoto'nol. Trade name for a special prepar of calcium and sodium glycerophosphate *tonol.*

Duplay's bursi'tis (du-pla'e) [Simon *D* French surgeon, 1836–1924.] Subdelto subacromial bursitis.

duplicitas (du-plis'ĭ-tas) [L.] Duplicity **d. rior,** a monstrosity with duplication of th and upper part of the body. **d. poste'rior,** strosity with duplication of the pelvic ext.

duplicity (du-plis'ĭ-tĭ) [L. *duo*, two, + *plic* fold.] A congenital malformation mark duplication of one or more parts; double m

Dupré's bursi'tis (dū-pra'). Inflammation bursæ about the shoulder joint.

Dupré's disease' (du-pra') [Ernest *Dupré*, F physician, 1862–1921.] Emotional psych rosis, marked by an earnest desire and e on the subject's part at self control, thus tinguished from hysteria and other psychone roses. **D.'s syn'drome,** meningism.

Dupuytren's contrac'tion (dü-püe-trahn') [Gu laume *Dupuytren*, French surgeon, 1777–1835 Contraction of the palmar fascia causing perma nent flexion of one or more fingers. **D.'s frac'tur** Pott's fracture. **D.'s hy'drocele,** bilocular hydro cele in which the sac fills the scrotum and also extends into the abdominal cavity beneath the peritoneum. **D.'s paste,** a caustic compound of 1 part arsenic to 10 or 15 parts calomel. **D.'s sign,** (1) free up and down movement of the head of the femur, upon intermittent traction, in cases of congenital dislocation; (2) a crackling sensation on pressure over the bone in certain cases of sarcoma. **D.'s splint,** (1) a splint for D.'s fracture

of the fibula; (2) a splint for fracture of the wrist. **D.'s su'ture,** a continuous Lembert* suture (2); see cut under *suture*. **D.'s tour'niquet,** an instrument for making compression on the abdominal aorta.

du'ra [L. fem. of *durus*, hard.] Dura mater.

du'ral. Relating to the dura mater. **d. sheath,** the sheath of the optic nerve, an extension of the dura mater.

dural'umin. An alloy of aluminum slightly heavier than this metal but nearly as strong as steel and non-corrodible; used in the manufacture of surgical and orthopedic appliances.

du'ra ma'ter [L. hard mother.] A tough, fibrous membrane, forming the outer envelope of the brain (*d. m. enceph'ali* [BNA] or *cer'ebri*) and of the spinal cord (*d.m. spina'lis* [BNA]). **inflamma'tion of the d. m.,** pachymeningitis, perimeningitis, duritis.

durama'tral. Dural.

dura'men [L. hardness.] The heart-wood of an exogenous tree.

Durande's rem'edy (du-rahnd') [Jean François *Durande*, French physician, †1794.] Essence of turpentine 10, sulphuric ether 15, employed in the treatment of gallstones.

Durante's meth'od (doo-rahn'ta) [Francesco *Durante*, Italian surgeon, contemporary.] Injection of iodine into the focus or around it in cases of surgical tuberculosis.

duraplasty (du'rah-plas-tĭ) [*dura* mater + G. *plassō*, I form.] A plastic or reconstructive operation on the dura mater.

Duret's lesions (du-ra'). Small effusions of blood in the neighborhood of the fourth ventricle, following slight trauma, which often result fatally.

Dur'ham's tube [Arthur Edward *Durham*, English surgeon, 1834–1895.] A jointed tracheotomy tube.

duritis (du-ri'(re')tis). Pachymeningitis, inflammation of the dura mater.

duroarachnitis (du-ro-ăr-rak-ni'(ne')tis). Inflammation of the dura mater and arachnoid membrane.

Duroziez's disease' (dü-ro ze-a') [Paul Louis *Duroziez*, Paris physician, 1826–1897.] Congenital stenosis of the mitral valve. **D.'s symp'tom,** a double murmur heard over the femoral artery, when lightly compressed by the stethoscope, in cases of aortic insufficiency.

Dusart's syr'up (du-sar') [Lucien O. *Dusart*, French physician, nineteenth century.] A syrup of lactophosphate of lime; dose, ℥2–4 (8.0–16.0).

dust-ball. A mass sometimes found in the stomach or intestine of an animal fed on mill-cleanings.

dust-disease'. Pneumonoconiosis or any disease caused by the action of dust.

dust'ing-pow'der. Talcum or other fine powder used to sprinkle over the skin to absorb moisture, prevent friction, etc.

Dutch liq'uid. Ethylene bichloride.

Dut'ton's disease' or **D.'s relap'sing fe'ver** [J. Everett *Dutton*, English physician, 1877–1905.] West African tick fever caused by *Spiroschaudinnia duttoni* and spread by a tick, *Ornithodoros moubata*.

Duttonella (dut-on-el'ă) [J. Everett *Dutton*.] A genus of trypanosomes; several of the species are pathogenic to cattle, sheep, and goats.

Duval's nu'cleus (dü-val') [Mathias Marie *Duval*, French anatomist, 1844–1915.] A collection of large ganglion cells near the hypoglossal nucleus.

Duverney's gland (dü-ver-na') [Joseph Guichard *Duverney*, French anatomist, 1648–1730.] Bartholin's gland, glandula* vestibularis major. **D.'s fora'men,** Winslow's foramen, foramen* epiploicum. **D.'s frac'ture,** fracture of the tip of the ilium just below the anterior superior spine.

D.V.M. Abbreviation for Doctor of Veterinary Medicine.

D.V.M.S. Abbreviation for Doctor of Veterinary Medicine and Surgery.

D.V.S. Abbreviation for Doctor of Veterinary Surgery or Doctor of Veterinary Science.

dwarf (dwawrf) [A. S. *dweorh*.] A markedly undersized person, nanus, pigmy. **asex'ual d.,** an adult subject of infantilism with deficient sexual development; a permanent child. **in'fantile d.,** a subject of infantilism. **micromel'ic d.,** one whose limbs are unduly small. **nor'mal d.,** physiological d. **phocomel'ic d.,** one in whom the diaphyses of the long bones are extremely short, or in whom the intermediate parts of the limbs are absent. **physiolog'ical d.,** an undersized person, not deformed, whose development has been symmetrical and at a normal rate, but less in extent than that of members of other races, members of other families, or other members of the same family. **primor'dial d.,** a well developed but abnormally small person. **sex'ual d.,** an adult primordial d. with perfect sexual development. **true d.,** nanosome; either a primordial or sexual d., or an infantile or asexual d.

dwarfishness (dwawrf'ish-nes). Nanism, abnormal smallness, the condition of being undersized.

dwarfism (dwawrf'izm). Dwarfishness.

Dy. Chemical symbol of the element *dysprosium*.

dy'ad [G. *dyas*, the number two, duality.] 1. A pair. 2. In chemistry, a bivalent element.

dye (di) [A. S. *deah*, *deag*.] A stain, coloring matter. Used in histology for staining tissues and microorganisms, and clinically as antiseptics and germicides, and some as stimulants of epithelial growth. **ac'ridine dyes,** yellow dyes obtained from coal tar, which possess marked antiseptic properties; see *acriflavine* and *proflavine*. **az'o-dyes,** azo-compounds combined with betanaphthol, used in medicine to promote epithelial growth in the treatment of sluggish ulcers, burns and other wounds; also used in histology as fat stains; see *scarlet red*. **fluores'cein dyes,** formed of fluorescein or one of its compounds; fluorescein is employed chiefly in ophthalmology for the diagnosis of corneal lesions; fluorescein tetrabrom is the dye, eosin; the sodium salt of its combination with one molecule of mercury is flumerin,* from which is formed mercurochrome* 200 by the replacement of two hydrogen atoms by two bromine atoms. **phenolphthal'ein dyes,** these are employed as diagnostic agents; see *phenolphthalein*, *phenolsulphonphthalein*, and *phenoltetrachlorphthalein*. **rosan'iline dyes,** derivatives of triphenylmethane and tolyldiphenylmethane which form rosaniline and pararosaniline by the addition of amino groups; the further insertion of methyl groups produces gentian, crystal, and methyl violet. **triphenylmeth'ane dyes,** rosaniline dyes.

dy'mal. Trade name of a preparation of didymium salicylate, employed as a dusting-powder or in 10 per cent. ointment in bedsores, hyperidrosis, ulcers, and other affections of the skin.

-dymus [G. *didymos*, twin.] A termination denoting a twin monster, the first element of the word

denoting usually the point of attachment; practically the same as *-pagus*.

dynamic (di-nam'ik) [G. *dynamis*, power.] Relating to power or force; causal, kinetic. **d. electric'ity,** flowing or current electricity, in distinction from static electricity. **d. mur'mur,** a heart murmur due to anemia or to any other cause than a valvular lesion. **d. school,** a group of theorists founded by Stahl who professed the belief that all vital action is the result of an internal force independent of anything external to the body.

dynam'ics. The branch of physical science which treats of forces and their laws; it embraces statics and kinetics.

dynamization (di-nam-i-za'shun). In homeopathy, the increase of potency of a medicine by trituration or by dilution in water with succussion; see *potency* (3).

dy'namize. To increase the potency of a medicine by trituration or by succussion in water.

dy'namo [G. *dynamis*, force.] A machine for producing current electricity by means of magnetic induction.

dynamogen'esis [G. *dynamis*, force, + *genesis*, production.] The production of force, especially of muscular or nervous energy.

dynamogen'ic [G. *dynamis*, force, + *gennaō*, I produce.] Producing power or force, especially nervous or muscular power or activity.

dynamogeny (di-nam-oj'en-ĭ). Dynamogenesis

dynam'ograph [G. *dynamis*, force, + *graphō*, I write.] An instrument for recording the degree of muscular power.

dynamom'eter [G. *dynamis*, force, + *metron*, measure.] An instrument for measuring the degree of muscular power.

dynamoneure (di-nam'o-nūr) [G. *dynamis*, force, + *neuron*, nerve.] A spinal motor nerve-cell.

dynam'oscope [G. *dynamis*, force, + *skopeo*, I examine.] A modified stethoscope for auscultation of the muscles.

dynamos'copy. Auscultation of a contracting muscle.

dyne (dīn) [G. *dynamis*, force.] A unit of force, the force which propels a weight of one gram a distance of one centimeter in one second.

dys- [G.] A prefix conveying the idea of bad or difficult.

dysacousia, dysacusia (dis-ă-koo'sĭ-ah, dis-ă-ku'sĭ-ah) [G. *dys-*, painful, + *akousis*, hearing.] A condition in which all noises produce a sensation of discomfort.

dysæsthe'sia. Dysesthesia.

dysantigraph'ia [G. *dys-*, bad, + *antigraphō*, I write back.] A form of agraphia in which the subject is unable to copy writing or print.

dysaphia (dis-af'ĭ-ah) [G. *dys-*, bad, + *haphē*, touch.] An impairment in the sense of touch.

dysaph'ic. Relating to impaired tactile sensibility.

dysarteriotony (dis-ar-te-rĭ-ot'o-nĭ) [G. *dys-*, bad, + *artēria*, artery, + *tonos*, tension.] Abnormal blood pressure, either too high or too low.

dysar'thria [G. *dys-*, bad, + *arthron*, articulation.] Dyslalia, difficulty in articulation. **d. litera'lis,** stammering. **d. syllaba'ris spasmod'ica,** stuttering.

dysar'thric. Relating to difficulty in articulating

dysarthro'sis [G. *dys-*, bad, + *arthrōsis*, joint.] 1. Dysarthria. 2. Malformation of a joint. 3 A false joint.

dysbasia (dis-ba'sĭ-ah) [G. *dys-*, difficult, + *basis* a step.] Difficulty of any kind in walking. **d. angiosclerot'ica, d. angiospas'tica,** intermittent limping.* **d. intermit'tens,** intermittent limping.* **d. lordot'ica progressi'va,** torsion neurosis, an affection characterized by lordoscoliosis of the lower portion of the vertebral column, occurring when the patient stands or walks and usually disappearing when he lies down. **d. neurasthen'ica intermitt'ens,** a form of intermittent limping, occurring in the neurasthenic, not dependent upon vascular trouble.

dysbolism (dis'bo-lizm) [G. *dys-*, difficult, + (meta-bolism.] Perverted, but not necessarily morbid, metabolism, as in alcaptonuria.

dysbu'lia [G. *dys-*, bad, + *boulē*, will.] Weakness and uncertainty of will-power.

dysbu'lic. Relating to dysbulia.

dyscheiria. See *dyschiria*.

dyschezia (dis-ke'zĭ-ah) [G. *dys-*, difficult, + *chezō*, I defecate.] Difficulty in defecation.

dyschiria (dis-ki'rĭ-ah) [G. *dys-*, difficult, + *cheir*, hand.] A disorder of sensibility in which, although there is no apparent loss of sensation, the patient is unable to tell which side of the body has been touched (*achiria*), or refers it to the wrong side (*allochiria*), or to both sides (*synchiria*).

dyschiric (dis-ki'ric). Relating to dyschiria.

dyscho'lia (dis-ko'lĭ-ah) [G. *dys-*, bad, + *cholē*, bile.] A morbid state of the bile.

dyschondroplasia (dis-kon-dro-pla'zĭ-ah) [G. *dys-*, bad, + *chondros*, cartilage, + *plasis*, a forming.] Chondrodystrophy, achondroplasia, aclasis.

dyschroia, dyschroa (dis-kroy'ah, dis-kro'ah) [G. *dys-*, bad, + *chroia, chroa*, complexion.] A bad complexion, discoloration of the skin.

dyschromatopsia (dis-kro-mă-top'sĭ-ah) [G. *dys-*, bad, + *chrōma(chrōmat-)*, color, + *opsis*, vision.] Partial color-blindness.

dyschro'mia (dis-kro'mĭ-ah) [G. *dys-*, bad, + *chrōma*, color.] Any abnormality in the color of the skin.

dyscine'sia. Dyskinesia.

dyscrasia (dis-kra'sĭ-ah) [G. bad temperament.] A morbid general state resulting from the presence of toxic matters in the blood.

dyscra'sic, dyscrat'ic. Relating to or suffering from a dyscrasia.

dyscrinism (dis-kri'nizm) [G. *dys-*, bad, + *krinō*, I separate, secrete.] A condition resulting from an altered or perverted secretion of any of the glands, especially of the endocrines.

dysdiadochocinesia (dis-dĭ-ad"o-ko-sin-e'sĭ-ah) [G. *dys-*, difficult, + *diadochocinesia*.] Impairment of the power of alternately moving a limb in opposite directions, as of flexion and extension.

dysdiemorrhysis (dis-dĭ-em-or'i-sis) [G. *dys-*, difficult, + *dia*, through, + *haima* blood, + *rysis*, a flowing.] Sluggishness of the capillary circulation.

dysembryoplasia (dis-em"brĭ-o-pla'zĭ-ă) [G. *dys-*, bad, + *embryon*, fetus, + *plasis*, a moulding.] Prenatal malformation.

dyse'mia, dysæ'mia [G. *dys-*, bad, + *haima*, blood.] Any disease of the blood.

dysendocrinia (dis-en-do-krin'ĭ-ah). Dysendocrinism.

dysendocriniasis (dis-en-do-krin-ĭ'a-sis). Dysendocrinism.

dysendocrinism (dis-en-dok'rin-izm) [G. *dys-*, difficult, + *endocrine* + *-ism*.] Faulty or deficient action of the endocrine glands, and the disorders resulting therefrom.

dysente'ria. Dysentery.

dysenter'ic. Relating to or suffering from dysentery.

dysentery (dis'en-ter-ĭ) [G. *dys-*, bad, + *entera*, bowels.] A disease marked clinically by frequent small stools, chiefly of blood and mucus, accompanied by pain and tenesmus; it may be

acute or chronic, sporadic or epidemic, and is due to the action of a specific bacillus or of a specific ameba. **ame'bic d.**, an ulcerative inflammation of the mucous membrane of the large intestine, caused by the presence of *Entamœba dysenteriæ*, marked by the usual symptoms of d., and sometimes by extreme prostration. **bac'illary d.**, a catarrhal, membranous, or necrotic inflammation of the mucous membrane of the large intestine, due to the presence of *Bacillus dysenteriæ*, marked by the usual symptoms of d. **cil'iar d.**, a form of dysentery caused by infection with *Balantidium coli*, a protozoan parasite of the class of *Ciliata*. **spirill'ar d.**, a form of dysentery or diarrhea, described as occurring in the south of France, believed to be caused by a spirillum present in great numbers in the intestinal epithelia.

dyserethism (dis-er'e-thizm) [G. *dys-*, bad, + *erethismos*, irritation.] A condition of slow response to stimuli.

dysergasia (dis-ur-ga'sĭ-ah) [G. *dys-*, bad, + *ergasia*, work.] Neurasthenia.

dysergia (dis-ur'jĭ-ah) [G. *dys-*, bad, + *ergon*, work.] A lack of harmonious action between the muscles concerned in executing any definite voluntary movement, due to irregularity of the efferent nerve impulses

dysesthesia, dysæsthesia (dis-es-the'zĭ-ah) [G. *dys-*, hard, difficult, + *aisthēsis*, sensation.] 1. Impairment of sensation short of anesthesia. 2. A condition in which a disagreeable sensation is produced by the ordinary touch

dysfunction (dis-fung'shun) [G. *dys-*, difficult, bad.] Abnormal or incomplete functioning of an organ

dysgen'esis [G. *dys-*, bad, + *genesis*, generation.] Sterility.

dysgeusia (dis-ju'sĭ-ah) [G. *dys-*, bad, + *geusis*, taste.] Impairment or perversion of the gustatory sense.

dysglandular (dis-glan'du-lar). Relating to abnormal functioning of the glands, specifically to a deficiency or excess of the internal secretions of one or more glands **d. syn'drome**, the aggregate of symptoms dependent upon an excess or deficiency of any internal secretion.

dysgnosia [G. *dys-*, bad, + *gnōsis*, knowledge.] Any intellectual anomaly; cf. *dysthymia*.

dysgon'ic [G. *dys-*, bad, + *gonikos*, relating to the seed or offspring.] Noting a bacterial culture of sparse growth

dysgraph'ia [G. *dys-*, bad, + *graphē*, writing.] 1. Difficulty in writing, a mild degree of agraphia. 2. Writer's cramp.

dyshematopoiesia (dis-hem"ă-to-poy-e'sĭ-ah) [G. *dys-*, bad, + *haima(haimat-)*, blood, + *poiēsis*, making.] Imperfect blood-making.

dyshepatia (dis-he-pă'tĭ-u) [G. *dys-*, difficult, + *hēpar* (*hēpat-*), liver.] Abnormal or incomplete functioning of the liver.

dyshidria (dis-hid'rĭ-ah). Dyshidrosis.

dysinsulinism (dis-in'su-lin-izm) [G. *dys*, bad, + *insuline*.] An imperfect secretion (insufficient or excessive) of insuline by the pancreas.

dyshidrosis, dysidrosis (dis-i-dro'sis) [G. *dys-*, difficult, + *hidrōs*, sweat.] 1. Retention of fluid in the sweat-follicles, giving rise to vesicles; miliaria, hydrocystoma, and possibly pompholyx. 2. Slight or abnormal sweating.

dyshormonism (dis-hor'mo-nizm). Deficiency in any of the internal secretions, or hormones.

dyshypophysia (dis-hi-po-fiz'ĭ-ah). Perverted action of the anterior lobe of the hypophysis cerebri, and the symptoms resulting therefrom.

dyshypophysism (dis-hi-pof'i-sizm). Dyshypophysia.

dysidria (dis-id'rĭ-ah). Dyshidrosis.

dysinsulinism (dis-in'-su-lin-ism) [G. *dys*, bad, + *insuline* + *-ism*.] A condition of disordered secretion of insuline, resulting in irregular attacks of hyperglycemia and hypoglycemia, due to disease of the pancreas involving the islands of Langerhans.

dyskerato'sis. Same as *keratosis* (1).

dyskinesia (dis-kin-e'sĭ-ah) [G. *dys-*, bad, + *kinēsis*, movement.] Difficulty in performing voluntary movements. **d. al'gera**, an hysterical condition in which active movement causes pain, but gentle movements are still possible. **d. intermitt'ens**, intermittent limping.

dyskoimesis (dis-koy-me'sis) [G. *dys-*, difficult, + *koimēsis*, a sleeping. A form of insomnia marked by difficulty or delay in falling asleep.

dyslalia (dis-lal'ĭ-ah) [G. *dys-*, bad, + *lalia*, talking.] Dysarthria; difficulty of speech due to abnormality in the tongue or other accessory organs of speech.

dyslex'ia [G. *dys-*, bad, + *lexis*, word, phrase.] Incomplete alexia, inability to read more than a few lines with understanding.

dyslochia (dis-lo'kĭ-ah) [G. *dys-*, difficult, + *lochia*.] Premature cessation of the lochia.

dyslogia (dis-lo'jĭ-ah) [G. *dys-*, bad, + *logos*, speaking, reason.] 1. Impairment in the power of speech in consequence of a central lesion. 2. Impairment of the reasoning faculty.

dysmasesis (dis-mă-se'sis) [G. *dys-*, difficult, + *masēsis*, chewing.] Difficulty in mastication.

dysmenorrhea, dysmenorrhœa (dis-men-or-re'ah) [G. *dys-*, difficult, + *mēn*, month, + *rhoia*, a flow.] Difficult and painful menstruation. **mechan'ical d.**, d. due to an obstruction to the escape of the menstrual blood. **mem'branous d.**, d. accompanied by an exfoliation of the menstrual decidua **obstruc'tive d.**, mechanical d. **ova'rian d.**, d. due to disease of an ovary. **spasmod'ic d.**, d. accompanied by painful contractions of the uterus. **tu'bal d.**, d. due to stenosis or other abnormal condition of the Fallopian tubes. **u'terine d.**, d. resulting from disease of the uterus. **vag'inal d.**, d. due to obstruction or other abnormal condition in the vagina.

dysmet'ria [G. *dys-*, bad, + *metron*, measure.] A form of dysergia in which the subject is unable to arrest a muscular movement at the desired point or, sometimes, to prevent an involuntary reverse movement.

dysmim'ia [G. *dys-*, bad, + *mimeomai*, I mimic.] 1. Impairment of the power of expression by gestures. 2. Imperfect power of imitation.

dysmnesia (dis-ne'sĭ-ah) [G. *dys-*, difficult, + *mnēmē* (in compounds *mnēsi-*), memory.] A naturally poor or an impaired memory.

dysmorphism (dis-mor'fizm) [G. *dysmorphia*, badness of form.] Allomorphism.

dysmorphophobia (dis-mor-fo-fo'bĭ-ah) [G. *dys-*, bad, + *morphē*, form, + *phobos*, fear.] An insane fear or dread of deformity.

dysneu'ria [G. *dys-*, bad, + *neuron*, nerve.] Impaired nerve function.

dysnystaxis (dis-nis-taks'is) [G. *dys-*, difficult, + *nystaxis*, drowsiness.] Light sleep, a condition of half sleep.

dysodontiasis (dis-o-don-ti'a-sis) [G. *dys-*, difficult, bad, + *odous(odont-)*, tooth.] Difficulty or irregularity in the eruption of the teeth.

dysontogenesis (G. *dys-*, bad, + *ontogenesis*.] Defective development of the individual.

dyso'pia, dysop'sia [G. *dys-*, bad, + *opsis*, vision.] Impaired sight.

dysorexia (dis-o-rek'sĭ-ah) [G. *dys-*, bad, + *orexis*, appetite.] Diminished or perverted appetite.

dysosmia (dis-oz'mĭ-ah) [G. *dys-*, difficult, + *osmē*, smell.] Impaired sense of smell.

dysosteogenesis (dis-os-te-o-jen'e-sis) [G. *dys-*, difficult, + *osteon*, bone, + *genesis*, production.] Defective bone formation, osteogenesis imperfecta, dysostosis.

dysostosis (dis-os-to'sis). Dysosteogenesis.

dysovarism (dis-o'var-ism) [G. *dys-*, bad, difficult.] Imperfect internal ovarian secretion.

dysox'idative. Caused by difficult or deficient oxidation.

dysoxidi'zable. Not readily oxidized.

dyspancreatism (dis-pan'kre-ă-tizm) [G. *dys-*, bad, + *pancreas*.] A condition of disturbed functioning of the pancreas.

dyspareunia (dis-pă-ru'nĭ-ah) [*dys-*, bad, + *pareunos*, lying beside.] The occurrence of pain in the sexual act.

dyspep'sia [G. *dys-*, bad, + *pepsis*, digestion.] Indigestion. **acid d.**, d. associated with undue gastric acidity. **adhe'sion d.**, pain, dyspepsia, and other symptoms due to perigastric adhesions following ulcer or gallstone disease. **aton'ic d.**, d. with impaired tone in the muscular walls of the stomach. **d. urina'ria**, dyspeptic symptoms accompanying renal infection caused by back pressure from a distended bladder—in prostatic enlargement, for example. **fermen'tative d.**, d. accompanied with fermentation of the contents of the stomach, usually occurring in gastric dilatation. **flat'ulent d.**, d. attended with frequent eructations of gas, due to chronic gastritis. **func'tional d.**, (1) atonic d.; (2) nervous d. **gas'tric d.**, impairment of gastric digestion. **intes'tinal d.**, impairment of the digestive power of the intestinal secretions. **ner'vous d.**, d. resulting from defective innervation of the stomach. **re'flex d.**, nervous d. excited by reflex irritation from disease in some other part.

dyspep'tic. Relating to or suffering from dyspepsia.

dyspep'tone. A product of digestion resembling peptone, but insoluble and consequently useless in metabolism.

dysperistal'sis. Impaired peristalsis.

dysper'matism, dysper'mia. Dysspermatism.

dysphagia, dysphagy (dis-fa'jĭ-ah, dis-fa'jĭ) [G. *dys-*, difficult, + *phagō*, I eat.] Difficulty in swallowing. **d. luso'ria** [L *lusorius*, deceitful], d. said to be due to compression by the right subclavian artery arising abnormally from the thoracic aorta and passing behind or in front of the esophagus. **d. nervo'sa**, nervous d., esophagism.

dysphasia (dis-fa'zĭ-ah) [G. *dys-*, difficult, + *phasis*, speaking.] Difficulty in speaking, due to a brain lesion, but without any marked mental impairment.

dysphe'mia [G. *dys-*, bad, + *phēmē*, speech.] Stammering, stuttering.

dyspho'nia [G. *dys-*, difficult, bad, + *phōnē*, voice.] Hoarseness; difficulty or pain in speaking. **d. clerico'rum**, clergyman's sore throat. **d. pu'berum**, the breaking of the voice in boys at puberty. **d. spas'tica**, phonic spasm, a spasmodic contraction of the adductor muscles of the larynx excited by attempted phonation, occurring chiefly in public speakers and analogous seemingly to writer's cramp.

dyspho'ria [G. *dys-*, bad, + *phoros*, bearing.] Restlessness, a feeling of being ill at ease.

dysphrasia (dis-fra'zĭ-ah) [G. *dys-*, bad, + *phrasis*, speaking.] Dysphasia.

dysphylaxia (dis-fi-laks'ĭ-ah) [G. *dys-*, difficult, + *phylaxis*, watching.] A form of insomnia marked by too early awakening.

dyspinealism (dis-pin'e-al-izm) [G. *dys-*, difficult.] The syndrome supposed to result from deficiency the of pineal gland secretion.

dyspituitarism (dis-pit-u'ĭ-tar-izm). The complex of phenomena due to a perverted secretion, either excessive or deficient, of the pituitary body (hypophysis cerebri).

dysplasia (dis-pla'zĭ-ah) [G. *dys-*, bad, + *plasis*, a moulding.] Alloplasia, heteroplasia, abnormal tissue development. **hered'itary ectoder'mal d.**, a condition marked by absence of perspiration, defects of dermal structures in hair, teeth, and skin, heat intolerance, laryngitis, and rhinopharyngitis.

dyspne'a, dyspnœ'a [G. *dys-*, bad, + *pnoē*, breathing.] Shortness of breath; difficult respiration.

dyspne'ic, dysp'neal. Relating to or suffering from dyspnea.

dyspragia (dis-pra'jĭ-ah) [G. lack of success.] Dyspraxia. **d. intermit'tens**, intermittent limping.*

dyspra'xia [G. *dys-*, bad, + *praxis*, a doing.] Impaired or painful functioning in any organ.

dysprosium (dis-pro'sĭ-um). A very rare element, symbol Dy, atomic weight 162.5.

dysproteose (dis-pro'te-ōz). An altered form of heteroproteose, from which it differs in solubility, obtained by prolonged contact with water.

dysrhythmia (dis-ridh'mĭ-ah) [G. *dys-*, bad, + *rhythmos*, rhythm.] Defective rhythm.

dysspermatism, dysspermia (dis-spur'mă-tizm, dis-spur'mĭ-ah) [G. *dys-*, bad, + *sperma*, seed.] The occurrence of pain or discomfort in the discharge of the seminal fluid.

dysstatic (dis-stat'ik) [G. *dys-*, difficult, + *statikos*, causing to stand.] Marked by difficulty in standing.

dyssyllabia (dis-sil-la'bĭ-ah) [G. *dys-*, difficult, + *syllabē*, syllable.] Syllable-*stumbling.

dyssynergia (dis-sin-ur'jĭ-ah) [G. *dys-*, difficult, + *syn*, with, + *ergon*, work.] A failure to work in unison or harmony, ataxia. **d. cerebella'ris myoclon'ica**, an affection with symptoms similar to d. c. progressiva with the addition of myoclonus and epilepsy, due to a lesion of the cells of the corpus dentatum of the cerebellum. **d. cerebellar'is progressi'va**, Hunt's syndrome (1).

dyssystole (dis-sis'to-lē) [G. *dys-*, difficult, + *systole*.] Cardiac insufficiency with dilatation; asystole.

dystax'ia [G. *dys-*, bad, + *taxis*, order.] A mild degree of ataxia.

dystherapeutic (dis''ther-ă-pu'tik) [G. *dys-*, bad, difficult.] Inferior in curative properties.

dysthymia (dis-thi'mĭ-ah) [G. *dys-*, bad, + *thymos*, mind, emotion, thymus gland.] 1. Any mental anomaly; cf. *dysgnosia*. 2. Shell shock, war neurosis. 3. Any functional nervous disorder. 4. The condition resulting from increased or diminished thymus secretion in childhood.

dysthyreo'sis. Dysthyroidea.

dysthyroidea, dysthyroidism (dis-thi-ro-id'e-ah, dis-thi'roy-dizm) [G. *dys-*, difficult.] Irregular functional activity of the thyroid, the secretion being at times deficient, at times in excess.

dystocia (dis-to'sĭ-ah) [G. *dystokia*.] Difficult childbirth. It is called *fetal* or *maternal* according as the cause is in some abnormality of the fetus or in uterine inertia or some obstruction in the parturient canal. **placen'tal d.**, retention or difficult delivery of the placenta.

dystonia (dis-to'nĭ-ah) [G. *dys-*, difficult, bad, + *tonos*, tension.] A state of abnormal (either hypo- or hyper-) tonicity in any of the tissues. **d. musculo'rum defor'mans,** Ziehen-Oppenheim disease, an affection, occurring especially in children, marked by muscular contractions producing most peculiar distortions of the spine and hips; the musculature is hypertonic when in action, hypotonic when at rest; progressive torsion spasm of childhood.

dystopia (dis-to'pĭ-ah) [G. *dys-*, bad, + *topos*, place.] Malposition.

dystopic (dis-top'ik) [G. *dys-*, bad, + *topikos*, relating to place.] Malplaced, out of place.

dystro'phia. Dystrophy. **d. adipo"sogenita'lis,** typus Froehlich, hypophysis syndrome; a condition caused by hypopituitarism, or partial loss of the anterior lobe of the hypophysis cerebri; it is marked by increase in fat, loss of sexual power, atrophy of the external genitals, and loss of hair.

dystroph'ic. Relating to dystrophy.

dystrophoneurosis (dis-trof"o-nu-ro'sis) [G *dys-*, bad, + *trophē*, nourishment, + *neuron*, nerve, + *-ōsis*.] Any nervous disease associated with faulty nutrition.

dys'trophy [G. *dys-*, difficult, + *trophē*, nourishment.] Defective nutrition. **progres'sive mus'cular d.,** Erb's atrophy, a form of progressive muscular atrophy in which the disease begins in the muscular terminals of the motor nerves and not in the spinal centers.

dystryp'sia. Impaired pancreatic (tryptic) secretion.

dysuria (dis-u'rĭ-ah) [G. *dys-*, difficult, + *ouron*, urine.] Difficulty or pain in urination.

dysuric (dis-u'rik). Relating to or suffering from dysuria.

dysury (dis-u'rĭ). Dysuria.

E

E. Abbreviation for emmetropia or emmetropic; the chemical symbol of erbium; symbol for electromotive force or voltage.

Eales's disease (ēlz) [Henry *Eales*, English physician, contemporary.] Recurrent retinal or intravitreous hemorrhages in young adults.

ear [A.S. *eáre*.] 1. The organ of hearing: composed of the *external ear* which includes the auricle and the external acoustic, or auditory, meatus; the *middle ear*, or the tympanum with its ossicles; and the *internal ear*, which includes the semicircular canals, vestibule, and cochlea. 2. The pinna, or auricle.* **Az'tec e.**, an auricle with the lobule absent. **Blainville e., Cagot e., Darwin e., Morel e., Stahl e., Wildermuth e.**, see the proper names. **insane' e.**, hematoma auris, othematoma.*

anatomy, ototomy, otography. **bleeding,** othemorrhagia, othemorrhea, otorrhagia. **blood-tumor,** othematoma. **calculus,** otolith. **closure,** otocleisis, ankylotia. **discharge,** otorrhea, otopyorrhea, otopyosis, otoblennorrhea. **disease,** otopathy. **dropsy,** hydrotis, hydrotympanum, otohydrops, othydrops, hydromyringa, hydromyrinx. **excision of ossicles,** otectomy, ossiculectomy, otonecrectomy. **fungous growth,** otomycosis, myringomycosis. **hypertrophy,** macrotia. **incision of drum,** myringotomy, paracentesis tympani **inflammation,** otitis, myringitis, tympanitis, labyrinthitis, panotitis, otophlegmon. **multiple,** polyotia. **noises,** tinnitus, susurrus aurium. **pain,** otalgia, otodynia. **plastic surgery,** otoplasty, myringoplasty. **specialist in diseases of,** aurist, otologist, aural surgeon. **specialty of diseases of,** otology, otiatria, otiatrics. **ulceration,** othelcosis. **wax obstruction,** ceruminosis.

earache (ēr'āk). Pain in the ear, otalgia.

ear-bone. Ossicle.

ear-drops. A medicated liquid (water or oil) used for local application by dropping into the external auditory meatus.

ear-drum. Tympanum.

ear-dust. Otoconia, otoliths.

ear-faint. Vertigo with faintness occurring in disease of the middle or internal ear.

ear-lobe. The lower fleshy part of the auricle, or pinna.

ear-sign. Milian's* sign.

ear-sponge. A rounded bit of sponge at the extremity of a small stick or cylinder, used for cleansing the external auditory meatus.

ear-trum'pet. An instrument with a trumpet-shaped expansion at one extremity and an earpiece at the other, used to collect the sound waves and conduct them to the auditory apparatus.

ear-wax. Cerumen.

earth (urth) [A.S. *eorthe*.] 1. The globe, world. 2. Soil, dirt, the loose material on the surface of the earth. 3. An insoluble oxide of aluminum or of certain other elements **al'kaline e.**, lime, magnesia, baryta, and certain other partly soluble oxides having an alkaline reaction. **full'er's e.**, a refined clay sometimes used as a dusting powder or applied moistened with water as a form of poultice.

earth'-eater. Geophagist.

earth'-eating. Geophagia, geophagism, geophagy.

Eas'ton's syr'up [J. A. E. *Easton*, British physician 1807–1865.] Syrupus ferri phosphatis cum quinina et strychnina (Br.).

eat [A.E. *etan*.] 1. To take solid food. 2. To chew and swallow any substance as one would food. 3. To corrode.

ebb. The gradual decline in the opsonic index at the end of the positive phase.

Ebbinghaus test (eb'ing-hows) [Hermann *Ebbinghaus*, German psychologist, 1850–1909.] For mental disease; the patient is asked to complete certain sentences from which several words have been left out.

Eberth's bacill'us (a'bairt) [Karl Joseph *Eberth*, German physician, 1835–1926.] *Eberthella typhi*. **E.'s lines,** lines appearing between the cells of the myocardium when stained with silver nitrate. **E.'s perithe'lium,** an incomplete layer of connective-tissue cells encasing the blood capillaries.

Eberthella (a-ber-tel'lah) [after Karl Joseph *Eberth*, see above.] A genus of the family *Bacteriaceæ* including gram-negative, motile (with possibly one exception) flagellated rod-shaped organisms, found mainly in the intestine in various diseases associated with inflammation of that canal. The dysentery bacilli were formerly included in this genus, but have recently (1930) been placed, by the committee of the Society of American Bacteriologists, in a separate genus (*Shigella*). Many bacteriologists do not recognize either of these two genera, placing all the organisms in the coli-typhoid group of *Bacteria*. **E. belfastien'sis,**⁰ an organism morphologically resembling *E. typhi*, though non-motile, found in cases of a fever in Belfast with symptoms recalling those of typhoid fever. **E. bentoten'sis,**⁰ a species morphologically resembling *E. typhi*, but usually regarded as non-pathogenic, though occasionally the apparent cause of symptoms resembling those of typhoid fever. **E. enter'ica,**⁰ medium-sized motile organisms, occurring singly or in chains, found in the intestinal discharges, but of doubtful pathogenicity. **E. pyog'enes,**⁰ *E. pyogenes fœtidus*, medium sized, motile, flagellated organisms, found in a case of rectal abscess. **E. talaven'sis,**⁰ medium-sized gram-negative, motile, rod-shaped organisms with peritrichous flagella, found in the intestinal discharges in some cases of typhoid fever, and a possible cause of that disease. **E. ty'phi,**⁰ *B. typhi*, *B. typhosus*, *Bact. typhosum*, Eberth's bacillus, motile, gram-negative, flagellated rods of medium size, the specific cause of typhoid fever.

Eberthus (e-bur'thus) [Karl Joseph *Eberth*.] A genus of schizomycetes, in the classification of Castellani and Chalmers, which includes the typhoid bacillus, *Eberthella typhi*.

Eb'ner's fi'bris [Victor *Ebner*, Viennese histologist, 1842–1925.] Fine, thread-like lines in the homogeneous surface of the dentine; also similar structures in the cement substance of the teeth. **E.'s glands,** mucous glands of the tongue opening around the circumvallate papillæ, the function of which is believed to be to bathe the gustatory hairs. **E.'s retic'ulum,** a network of nucleated cells in the seminiferous tubules.

ebonation (e-bo-na'shun) [L. *e*. out, + *bone*.] Removal of loose fragments of bone from a wound.

ebrac'teate. Having no bracts.

ebri'etas [L.] Ebriety, inebriety, drunkenness.

Ebstein's disease' (eb'stīn) [Wilhelm *Ebstein*, Göttingen physician, 1836–1912.] Coagulation-necrosis of the epithelium of the convoluted tubules in diabetes mellitus. **E.'s leuce'mia,** a leucemia of very rapid course. **E.'s meth'od,** dietetic treatment of obesity in which a moderate amount of albuminous food is allowed, very little carbohydrate, but a comparatively large quantity of fats.

ebullition (eb-u-lish'un) [L. *ebullire*, to boil.] Boiling.

ebur (e'bur) [L. ivory.] A tissue resembling ivory in outward appearance or structure. **e. den'tis,** dentin, substantia eburnea [BNA].

eburnation (e-bur-na'shun) [L. *eburneus*, of ivory.] A form of degeneration of bone in which it is converted into a dense hard substance like ivory.

eburneous (e-bur'ne-us) [L. *eburneus*, of ivory.] Resembling ivory, especially in color.

écarteur (a-kar-ter') [Fr. *écarter*, to separate.] A retractor.

ecaudate (e-kaw'dāt) [L. *e-* priv. + *cauda*, tail.] Tailless.

Ecball'ium [G. *ekballō*, I throw out.] A genus of plants with the single species *E. elaterium;* see *elaterium.*

ecbol'ic [G. *ekbolos*, abortive.] 1. Accelerating childbirth, oxytocic; producing abortion. 2. An agent which hastens delivery or produces abortion.

ecboline (ek'bŏ-lēn) [G. *ekbolos*, abortive.] An alkaloid obtained from ergot, thought by some to be identical with cornutine.

eccentric (ek-sen'trik) [G. *ek*, out, + *kentron*, center.] 1. Abnormal or peculiar in ideas, actions, or speech. 2. Proceeding from a center. 3. Peripheral. [In the second and third meanings often written excentric.]

eccentropiesis (ek-sen-tro-pi'e-sis) [G *ek*, out, + *kentron*, center, + *piesis*, pressure.] Pressure exerted from within outward.

eccephalosis (ek"sef-al-o'sis) [G. *ek*, out, + *kephalē*, head.] Excerebration; removal of the contents of the cranium in embryotomy.

ecchondroma, pl. *ecchon'dro'mata* (ek-kon-dro'mah) [G. *ek*, from, + *chondros*, cartilage, + *-ōma.*] 1. A cartilaginous tumor arising as an overgrowth from normally situated cartilage, distinguished from *enchondroma*, or chondroma proper, which occurs in places where cartilage does not normally exist. 2. An enchrondroma which has burst through the shaft of a bone and become pedunculated.

ecchondrosis (ek-kon-dro'sis). Ecchondroma **e. physalifor'mis,** chondroma.

ecchondrotome (ek-kon'dro-tōm) [G. *ek*, out, + *chondros*, cartilage, + *tomē*, incision.] Chondrotome.

ecchymoma (ek-e-mo'mah). A slight hematoma following a bruise.

ecchymosed (ek'e-mōzd). Marked by or affected with ecchymosis.

ecchymosis, pl. *ecchymo'ses* (ek-e-mo'sis) [G. *ekchymōsis; ek*, out, + *chymos*, juice.] A purplish patch caused by extravasation of blood into the skin; black-and-blue spot; ecchymoses differ from petechiæ only in size.

ecchymotic (ek-e-mot'ik). Relating to an ecchymosis.

eccoprotic (ek-o-prot'ik) [G. *ek*, out, + *copros*, dung.] Laxative, cathartic.

eccrinology (ĕ-krin-ol'o-jĭ) [G. *ekkrinō*, I secrete, + *-logia.*] The branch of physiology and of anatomy which treats of the secretions and the secreting glands.

ec'crisis [G. separation.] 1. The removal of waste products. 2. Any waste product, excrement.

eccrit'ic. 1. Promoting the expulsion of waste matters. 2. An agent which promotes excretion.

eccyesis (ek-si-e'sis) [G. *ek*, out, + *kyēsis*, pregnancy.] Ectopic gestation, extrauterine pregnancy.*

ecdem'ic [G. *ekdēmos*, foreign, from home.] Noting a disease brought into a region from without, not epidemic or endemic.

ecdemomania (ek-de-mo-ma'nĭ-ah) [G. *ekdēmos*, from home, + *mania*, frenzy.] Vagabondage, dromomania, drapetomania.

ecderon (ek'dĕ-ron) [G. *ek*, out, + *deros*, skin.] The outer portion of the general integument, as distinguished from *enderon.*

ecdysis (ek'di-sis) [G. ekdyō, I strip off.] Desquamation; sloughing.

ec'gonine [G. *ekgonos*, sprung from, a child.] An alkaloid, $C_9H_{15}NO_3$, chiefly derived from cocaine and present to some extent in coca leaves.

echidnin (ĕ-kid'nĭn) [L. *echidna*, viper.] Serpent-venom.

echidnotoxin (ĕ-kid-no-toks'in). A poisonous protein in serpent-venom.

echinacea (ĕ-kin-a'se-ah) [G. *echinos*, a hedgehog.] (N.F.) The rhizome and roots of *Brauneria pallida* (*Echinacea angustifolia*), the cone-flower, a plant of the order *Compositæ* found in the central plains of North America; employed in the treatment of boils and septicemia in doses of ♏10–30 (0.6–2.0) of the N F fluidextract. In homeopathic practice the tincture from the fresh root is employed in septic conditions in doses of ♏5–10 (0.3–0.6) of the mother tincture. In eclectic practice it is employed as an alterative and in septic conditions in doses of ♏5–30 (0.3–2.0) of the specific preparation.

echinate (ek'ĭ-nāt) [L. *echinus*, hedgehog.] Echinulate.

Echinochasmus (ĕ-kin-o-kaz'mus) [G. *echinos*, hedgehog, + *chasmos*, open mouth.] A genus of flukes of the family *Echinostomatidæ.* **E. perfolia'tus** var. **japon'icus,** infests the intestine of man in Japan.

echinococcosis (ĕ-kin-o-kok-ko'sis). Infestation with echinococcus.

Echinococcus (e-kin-o-kok'us) [G. *echinos*, hedgehog, + *kokkos*, a berry.] A genus of tapeworms of small size occurring, in the adult form, in the *Carnivora.* **E. granulo'sus,** a species infesting the dog and cat; it is the only species, the larval (cystic) form of which is known to occur in man, giving rise to hydatid tumor in the liver and other organs and tissues; see *Mother-cyst.*

Echinorhynchus (ĕ-kin-o-ring'kus) [G. *echinos*, hedgehog, + *rhynchos*, snout.] A genus of worms parasitic in the intestines in vertebrates; the sexual form is found in vertebrates, the non-sexual in a non-vertebrate host; some of the species, especially *E. gigas*, are occasionally found in man. **E. hom'inis,** a species found in the small intestine of a Bohemian boy; it was possibly the same as *Macracanthorhynchus hirudinaceus.*

echinosis (ĕ-kin-o'sis) [G. *echinos*, hedgehog.] Condition in which the blood-corpuscles have lost their smooth outlines, resembling an echinus or sea-urchin.

Echinostoma (ĕ-kin-os'to-mah) [G. *echinos*, hedgehog, + *stoma*, mouth.] A genus of flukes of the family *Echinostomatidæ*, infesting the intestine of man in the Philippines.

echinulate (ĕ-kin'u-lāt) [L. *echinulus*, dim. of *echinus*, hedgehog.] Noting a bacterial growth along the line of inoculation, having lateral spinous projections; see cut under *culture*, B, 3.

echitone (ek'ĭ-tōn). Trade name of a compound of iris, viola, and echinacea, recommended in eczema.

echo (ek'o) [G.] A reverberating sound sometimes heard in auscultation of the chest.

echoacousia (ek"o-ă-koo'sĭ-ah). A subjective disturbance of hearing in which a sound heard appears to be repeated.

echographia (ek"o-graf'ĭ-ah). A form of agraphia in which one can write from dictation or copy but cannot do original writing.

echokinesia (ek-o-kin-e'sĭ-ah) [G. *ēchō*, echo, + *kinēsis*, movement.] The involuntary repetition of a gesture made by another person.

echolalia (ek"o-la'lĭ-ah) [G. *ēchō*, echo, + *lalia*, a form of speech.] The involuntary repetition of a word or sentence just spoken by another person.

echomatism (ĕ-ko'mă-tizm) [G. *ēchō*, echo, + *matizō*, I strive to do.] The automatic imitation of any act.

echomimia (ĕ-ko-mim'ĭ-ah) [G. *ēchō*, echo, + *mimēsis*, imitation.] Echopathy.

echomotism (ĕ-ko-mo'tizm) [G. *ēchō*, echo, + L. *motio*, motion.] Echomatism, echopraxia; imitation of movements rather than of words.

echopathy (ĕ-kop'ă-thĭ) [G. *ēchō*, echo, + *pathos*, suffering.] A neurosis in which the words or actions of another are imitated and repeated by the patient.

echophonia, echophony (ĕ-ko-fo'nĭ-ah, ĕ-kof'o-nĭ) [G. *ēchō*, echo, + *phōnē*, voice.] A duplication of the voice sound occasionally heard in auscultation of the chest.

echophrasia (ĕ-ko-fra'zĭ-ah) [G. *ēchō*, echo, + *phrasis*, speech.] Echolalia.

echopraxia (ĕ-ko-praks'ĭ-ah) [G. *ēchō*, echo, + *praxis*, action.] The involuntary imitation of movements made by another; echomatism.

echo-speech (ek'o-spēch). Echolalia.

ecioma'nia, œcioma'nia [G. *oikeios* domestic, + *mania*, frenzy.] Ecomania.

Eck fis'tula exper'iment [Nikolai Vladimirovich *Eck*. Russian physiologist, *1847.] Shutting off the liver of an experiment animal from the portal circulation by making an anastomosis between the vena cava and portal vein and then ligating the latter close to the liver.

Eck'er's convolu'tion [Alexander *Ecker*, Freiburg anatomist, 1816–1887.] Posterior occipital convolution. **E.'s cor'puscles,** Hassall's* corpuscles. **E.'s fis'sure,** occipital fissure. **E.'s plug,** an ingrowth of yolk-cells, in the gastrula stage of meroblastic ova, projecting into the primitive mouth.

eclabium (ek-la'bĭ-um) [G. *ek*, out, + L. *labium*, lip.] Eversion of a lip.

eclampsia (ĕ-klamp'sĭ-ah) [G. *eklampsis*, a shining forth.] Convulsions, especially of an epileptoid character. **e. nu'tans,** nodding spasm.* **in'fantile e.,** reflex convulsions in infancy. **puer'peral e.,** convulsions, of uremic or other origin, occurring in the latter part of pregnancy or during labor.

eclampsism (ĕ-klamp'sizm). A state in which the general signs point to the early occurrence of puerperal eclampsia, but convulsions do not take place.

eclamp'tic. Relating to eclampsia.

eclamptogenic, eclamptogenetic (ek-lamp-to-jen'-ik, ek-lamp-to-jen-et'ik) [G. *gennaō*, *eklampsis* + I produce.] Eclamptogenous.

eclamptogenous (ek-lamp-toj'en-us) [G. *eklampsis* + *gennaō*, I produce, cause.] Causing convulsions, convulsant, convulsive, eclamptogenic, eclamptogenetic.

eclec'tic [G. *eklektikos*, selecting.] Picking out from different sources what appears to be the best. **e. med'icine, e. prac'tice, e. school,** a school or association of medical practitioners in America, employing largely preparations of indigenous plants, or "specific remedies," *i.e.* remedies given according to definite indications furnished by the symptoms present in an individual case.

eclec'ticism. Eclectic practice.

ec'lysis [G.] A mild degree of syncope.

ecmne'sia (ek-ne'sĭ-ah) [G. *ek*, out, + *mnēsios*, relating to memory.] Loss of memory for recent events.

e'coid [G. *oikos*, house, + *eidos*, resemblance.] Œcoid, the framework of a red blood-corpuscle.

ecol'ogy [G. *oikos*, household affairs, family, + *-logia*.] Œcology, the branch of physiology which deals with the mutual relations of living organisms and their environments; the science of the relations of organisms to each other.

ecomania (e-ko-ma'nĭ-ah) [G. *oikos*, house, + *mania*, frenzy.] Œcomania, a form of mental derangement characterized by perversity or uncontrolled ill-temper in one's domestic relations.

econom'ic cure. A partial cure of a chronic disease, such as phthisis, enabling the patient to resume the occupation by which he earns his living.

Economo's disease (a-kon'-o-mōz diz-ēz') [Constantin v. *Economo*, Austrian physician, 1876–1931.] Encephalitis lethargica or epidemica.

econ'omy [G. *oikonomia*, management of the house.] The system, the body regarded as an aggregate of functioning organs.

ecopar'asite, œcopar'asite. Ecosite.

ecophobia (e-ko-fo'bĭ-ah) [G. *oikos*, house, + *phobos*, fear.] Morbid repugnance to the home surroundings; œcophobia, oikophobia.

ecosite, œcosite (e'ko-sīt) [G. *oikos*, house, + *sitos*, food.] A microparasite to which its host is immune under normal conditions; also called ecoparasite.

ecphyadectomy (ek-fi-ă-dek'to-mĭ) [G. *ekphyas*, an appendix, + *ektomē*, excision.] Removal of the vermiform appendix, appendicectomy.

ecphyaditis (ek-fi-ă-di'(de')tis) [G. *ekphyas*, an appendage, + *-itis*.] Appendicitis.

ecphylactic (ek-fi-lak'tik). Relating to ecphylaxis or diminished or abolished bacteriotropic action. **e. re'gion,** a focus of infection impregnable to the action of the defensive fluids, by reason of the virulence of the infection and the quantity of radiating toxins.

ecphylaxis (ek-fi-laks'is) [G. *ek*, out of, + *phylaxis*, protection.] A condition in which the antibodies or phylactic agents in the blood have been rendered impotent or are excluded from the focus of infection.

ecphy'ma [G. a pimply eruption.] A warty growth or protuberance. **e. glob'ulus,** button scurvy, a contagious skin disease resembling yaws, formerly prevalent in Ireland.

écraseur (a-krah-zèr') [Fr. *écraser*, to crush.] A snare, especially one of great strength for cutting through the base or pedicle of a tumor.

ec'stasis. Ecstasy.

ecstasy (ek'sta-sĭ) [G. *ekstasis*.] A nervous affection resembling catalepsy, in which there is mental exaltation, with more or less sensory anesthesia and a rapturous expression.

ecstat'ic. Relating to or marked by ecstasy.
ecstrophe (ek'stro-fe). Exstrophy; ectropion.
ectaco'lia [G. *ektasis*, a stretching, + *kōlon*, colon.] Dilatation of the colon.
ec'tad [G. *ektos*, without + L. *ad*, to.] Outward.
ec'tal [G. *ektos*, without.] Outer, external.
ectasia, ectasis (ek-ta'sĭ-ah, ek'ta-sĭs) [G. extension.] Dilatation of a tubular structure. **diffuse' arte'rial e.,** spontaneous enlargement with dilatation of the vessels in a circumscribed area; cirsoid aneurysm. **e. ventric'uli paradox'a,** hourglass stomach. **hypostat'ic e.,** dilatation of a blood-vessel, usually a vein, in a dependent portion of the body as in varicose veins of the leg. **pap'illary e.,** an elevated red spot caused by a circumscribed capillary dilatation.
ectat'ic. Relating to or marked by ectasis; distended, dilated.
ecten'tal [G. *ektos*, without, + *entos*, within] Relating to both ectoderm and entoderm, noting the line where these two layers join in the gastrula.
ecterograph (ek'ter-o-graf) [G. *ekklos*, outside, + *graphō*, I write. A modified pneumatograph employed in making graphic records of the movements of the intestine.
ectethmoid (ekt-eth'moyd) [G. *ektos*, without.] One of the lateral masses of the ethmoid bone, ectoethmoid.
ec'thol. Trade name for a fluid preparation said to contain extracts of thuja and echinacea; employed in septic conditions in doses of ʒi (4.0), and applied locally to suppurating wounds.
ecthy'ma [G. a pustule.] A dermatosis marked by the occurrence of ulcerating pustules due to infection; the lesion may be single but usually there are multiple ulcers of varying size. **e. gangræno'sum,** dermatitis gangrænosa infantum
ecthymat'iform, ecthy'miform. Resembling ecthyma.
ecthyreosis (ek-thi-re-o'sis). Removal of the thyroid gland and the symptoms resulting therefrom
ecti'ris [G. *ektos*, outside, + *iris*.] The outer layer of the iris
ecto- [G. *ektos*, outside.] A prefix denoting outer, on the outside.
ectoantigen (ek-to-an'tĭ-jen) [G. *ektos*, outside, + antigen.] Exoantigen, any toxin or other exciter of antibody formation, separate or separable from its source.
ec'toblast [G *ektos*, outside, + *blastos*, germ.] 1. The thickened outer layer or wall of a cell. 2. The ectoderm or epiblast.
ectocar'dia [G. *ektos*, outside, + *kardia*, heart] Congenital misplacement of the heart.
ectochorioidea (ek-to-ko-re-o-id'e-ah) [G *ektos*, outside.] The outer layer of the chorioid coat of the eye.
ectocinerea (ek-to-sin-e're-ah) [G. *ektos*, outside, + L. *cinereus*, ashen.] The cortex or outer gray matter of the brain.
ectocine'real. Relating to the cerebral cortex.
ectocolos'tomy [G. *ektos*, outside, + *kōlon*, colon, + *stoma*, mouth.] The formation of an opening into the colon through the abdominal wall.
ectocor'nea [G. *ektos*, outside.] The outer layer of the cornea.
ectocuneiform bone (ek-to-ku'ne-ĭ-form bōn). The external or third cuneiform bone of the tarsus.
ec'tocyst. The outer layer of an hydatid cyst.
ectoderm (ek'to-durm) [G. *ektos*, outside, + *derma*, skin.] The outer layer of cells formed from the inner cell-mass in the blastocyst.
ectoder'mal, ectoder'mic. Relating to the ectoderm.
ectoentad (ek-to-en'tad). From without inward.
ectoental (ek-to-en'tal). Ectental
ectoethmoid bone (ek-to-eth'moyd bōn). Ectethmoid, one of the two lateral portions of the ethmoid bone forming distinct elements at birth.
ectogenous (ek-toj'en-us) [G. *ektos*, without, + *gennaō*, I produce.] Originating outside of the organism; noting an infectious disease, a parasite, etc.
ectoglia (ek-tog'lĭ-ah) [G. *ektos*, outside, + *glia*, glue.] The thin, superficial non-nucleated layer in commencing stratification of the medullary tube in the embryo.
ectoglob'ular [G. *ektos*, outside, + *globule*.] Not within a globular body, specifically not within a blood-corpuscle.
ectoglute'us, ectoglutæ'us. The outer gluteal muscle, or gluteus maximus.
ectokelos'tomy [G. *ektos*, outside, + *kēlē*, hernia, + *stoma*, mouth.] The formation of an external opening into the hernial sac, preparatory to a radical operation.
ectoloph (ek'to-lof) [G. *ektos*, outside, + *lophos*, crust] The external ridge on an upper molar tooth in the horse.
ectomere (ek'to-mēr) [G. *ektos*, outside, + *meros*, part.] One of the blastomeres forming the ectoderm.
ectop'agus [G. *ektos*, without, + *pagos*, fixed.] A twin monster joined along the side of the chest.
ectopar'asite [G. *ektos*, outside, + *parasitos*.] A parasite which lives on the surface of the body.
ectopectora'lis. The outer pectoral muscle, pectoralis major.
ectoperitonitis (ek"to-per-ĭ-ton-ĭ'(e')tis) [G. *ektos*, outside.] Inflammation beginning in the deeper layer of the peritoneum which is next the viscera or the abdominal wall.
ectophyte (ek'to-fīt) [G. *ektos*, outside, + *phyton*, plant.] A vegetable parasite of the skin.
ecto'pia, ec'topy [G. *ektopos*, out of place.] Congenital displacement of any organ or other part of the body.
ectop'ic [G. *ek*, out of, + *topos*, place.] 1. Out of place; said of an organ which is not in its proper position, or of a pregnancy (*ectopic gestation*) occurring elsewhere than in the cavity of the uterus. 2. In cardiography, noting a heart beat which has its origin in some abnormal focus.
ectoplasm (ek'to-plazm) [*ektos*, outside, + *plasma* something formed] A membrane-like condensation of the cytoplasm at the periphery of a cell.
ectoplasmat'ic. Relating to the ectoplasm.
ectoplas'tic [G. *ektos*, outside, + *plassō*, I form.] Ectoplasmic, formed at the periphery.
ectopterygoid (ek"to-ter'ĭ-goyd). Musculus pterygoideus externus.
ectoret'ina [G. *ektos*, outside.] The outer layer of the retina.
ec'tosarc [G. *ektos*, outside, + *sarx*(*sark*-), flesh.] The outer membrane, or ectoplasm, of a protozoon.
ectoscopy (ek-tos'kŏ-pĭ) [G. *ektos*, outside, + *skopeō*, I examine.] A method of diagnosis of disease of any of the internal organs by a study of movements of the abdominal wall or thorax caused by phonation.
ectosphe'noid [G. *ektos*, outside, + *sphenoeidēs*, wedge-shaped.] Ectocuneiform.
ectosteal (ekt-os'te-al) [G. *ektos*, outside, + *osteon*, bone.] Relating to the external surface of a bone
ectostosis (ekt-os-to'sis) [G. *ektos*, outside, + *osteon*, bone.] Ossification in cartilage beneath the perichondrium, or the formation of bone beneath the periosteum.

ec'tothrix [G. *ektos*, outside, + *thrix*, hair.] A trichophyton causing ringworm.

ectotox'in [G. *ektos*, outside, + *toxin*. Exotoxin.

ectotri'ceps. The outer head of the triceps muscle.

Ectotrichophyton (ek-to-tri-kof'ĭ-ton) [G. *ektos*, outside, + *thrix* (*trich-*), hair, + *phyton*, plant.] A genus of *Ascomycetes*, fungi attacking the hairs and hair-follicles.

ectozo'on [G. *ektos*, outside, + *zōon*, animal.] An animal parasite on the surface of the body.

ectrodactyl'ia, ectrodact'ylism [G. *ektrōsis*, miscarriage, + *daktylos*, finger.] Congenital absence of one or more fingers or toes.

ectrogen'ic. Relating to ectrogeny.

ectrogeny (ek-troj'en-ĭ) [G. *ektrōsis*, miscarriage, + *gennaō*, I produce.] Congenital absence of any part.

ectromelia (ek-tro-me'lĭ-ah) [See *ectromelus*.] A congenital lack of one or more of the limbs.

ectromel'ic. Relating to an ectromelus.

ectrom'elus [G. *ektrōsis*, miscarriage, + *melos*, limb] A monster with one or more limbs absent or malformed.

ectro'pion, ectro'pium [G. *ek*, out, + *tropē*, a turning.] A rolling outward of the margin of an eyelid.

ectrosyndactyly (ek-tro-sin-dak'tĭ-lĭ) [G. ektrōsis, miscarriage, + *syn*, together, + *daktylos*, finger.] A congenital deformity marked by the absence of one or more fingers and the fusion into one of the others.

ectrotic (ek-trot'ik) [G. *ektrōtikos*, relating to abortion.] Abortive; preventing or arresting the development of a disease.

ec'zema [G. *ekzeō*, I boil over.] Salt rheum, tetter; an inflammation of the skin, of acute or chronic nature, presenting multiform lesions, moist or dry, and often accompanied with itching, burning, and various paresthesias. **e. crusto'sum,** a variety in which crusts form over the lesions. **e. epizoot'icum,** foot-and-mouth disease.* **e. erythemato'sum,** a dry form of e. marked by more or less extensive areas of redness with scaly desquamation. **e. fis'sum,** a form in which the skin is cracked and fissured. **e. hypertroph'icum,** e. marked by papillary hypertrophy of the skin. **e. infan'tile,** a form of e. affecting chiefly the cheeks and forehead, occurring in infants. **e. intertri'go,** see *intertrigo*. **e. mad'idans** [L. *madidus*, moist], weeping e., e. vesiculosum. **e. margina'tum,** tinea cruris. **e. neurit'icum,** a form due to inflammation of the trophic nerves and limited to the area supplied by the affected nerves. **e. papulo'sum,** a dermatitis marked by an eruption of discrete or aggregated reddish papules which soon become excoriated. **e. pustulo'sum,** a later stage of vesicular e., in which the vesicles become purulent, rupture, and discharge a sticky, crusting seropurulent fluid. **e. ru'brum,** a stage of vesicular e., presenting red, excoriated, weeping areas. **e. sclero'sum,** keratosis. **e. seborrhœ'icum, e. seborrho'icum,** dermatitis seborrhœica. **e. sola're,** prickly heat. **e. squamo'sum,** a form of dry scaly e. **e. tubercula'tum,** mycosis fungoides. **e. vesiculo'sum,** dermatitis marked by an eruption of vesicles upon erythematous patches, which rupture and exude a sticky serum.

eczematization (ek"ze-mat-i-za'shun). 1. The formation of a condition of the skin resembling eczema. 2. The occurrence of eczema secondary to a preexisting dermatosis.

eczemato'sis. The occurrence of an extensive eczema.

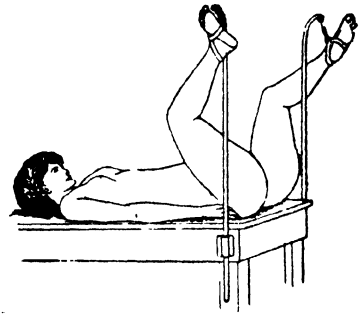
eczem'atous. Marked by or resembling eczema.

Eddowes' syn'drome (ed'ōz) [Alfred *Eddowes*, English physician, contemporary.] The hereditary occurrence of blue sclerotics and fragility of the bones.

Eddyism (ed'ĭ-izm) [Mary Baker G. *Eddy*, American founder of the cult, 1821–1910.] Christian* Science.

ede'a, ædœ'a [G. *aidoia*, genitals.] The external genitals.

Edebohls' operation (ed'e-bōlz) [George Michael *Edebohls*, New York surgeon, 1853–1908.] Decortication, or decapsulation, of the kidney, in order to provide a more abundant blood-supply and thereby increase the functional activity of the organ in cases of chronic nephritis. **E.'s posi'tion,** for vaginal operations; the patient lies on her back, at the edge of the table, with hips and knees partly flexed, the feet being held up and apart by supports attached to the table.



EDEBOHLS' POSITION.

edeitis, ædœitis (e-de-i'(e') tis) [G *aidoia*, genitals? + *-itis*.] Vulvitis; balanitis.

ede'ma, œde'ma [G. *oidēma*, a swelling.] An abnormal accumulation of clear watery fluid in the lymph spaces of the tissues; dropsy, hydrops. **angioneurot'ic e.,** urticaria gigans, a disorder in which tense, circumscribed, edematous swellings appear suddenly, usually on the face or upper extremities, and last from two or three hours to as many days; the affection is a vasomotor disturbance, due probably to a toxemia. **blue e.,** e. occurring in hysteria in which the skin of the part is cyanotic. **brown e.,** e. of the lungs associated with the congestive induration of chronic valvular disease of the heart. **bul'lous e.,** a reddened, swollen appearance of the uretéral orifice in the bladder wall, frequently observed in tuberculosis of the ureter. **cachec'tic e.,** e. occurring in diseases characterized by hydremia. **cir'cumscribed e.,** angioneurotic e. **collat'eral e.,** e. occurring in the functioning one of two paired organs when the other is diseased or inactive. **e. ex vac'uo,** an increase of fluid in a cavity with unyielding walls, such as the skull or spinal canal, when part of the contents has become atrophied. **e. frig'idum,** non-inflammatory e. **e. neonato'rum,** a diffuse, firm e. occurring in the newborn; it begins usually in the legs and spreads upward, and is commonly fatal. **gas'eous e.,** subcutaneous emphysema. **hydre'mic e.,** e. occurring in states marked by pronounced hydremia. **inflam'matory e.,** (1) a swelling due to effusion of fluid in the soft parts surrounding a focus of inflammation; (2) an abortive inflammation of the brain or spinal cord, marked by lymphatic stagnation or con-

gestion. **lymphat'ic e.**, e. due to stasis in the lymph channels. **malig'nant e.**, a form of anthrax* in which the eyelids, lips, and other parts of the face, the neck, and the upper extremities are the seats of marked edema, with an eruption of vesicles and bullæ, which is prone to become gangrenous; the constitutional symptoms are those characteristic of extreme sepsis. **maran'tic e.**, cachectic e. **non-inflamm'atory e.**, simple e., due to mechanical or other causes, not marked by inflammation or congestion. **solid e.**, infiltration of the subcutaneous tissues by mucoid material, as in myxedema.

edematization (e-dem-at-i-za'shun). Making edematous.

edem'atous. Dropsical, hydropic, marked by edema.

edentulous (e-den'tu-lus) [L. *e*, out, + *dens(dent-)* tooth.] Toothless.

edeology, ædœology (e-de-ol'o-jĭ) [G. *aidoia*, external genitals, + *-logia*.] The branch of science which deals with the genital organs, their anatomy, physiology, diseases, etc.

edes'tin. A globulin derived from the castor-oil bean, hemp-seed, and other seeds, soluble in neutral solutions but insoluble in water; it is utilized as a test for cancer of the stomach, the degree of its digestion indicating the amount of peptolytic ferment present in the gastric juice.

edible (ed'i-bl) [L. *edere*, to eat] Fit for food; that can be eaten.

Edinger's law (ed'ing-er) [Ludwig *Edinger*, German anatomist, 1855–1918.] The normal and moderate functioning of a neuron favors growth, but excessive function results in atrophy. **E.'s nu'cleus**, the dorsal acoustic nucleus, tuberculum* acusticum.

Ed'inger-Westphal nu'cleus (ed'ing-er-vest'afhl) [Karl Friedrich Otto *Westphal*, German neurologist, 1833–1890.] An accessory bulbar nucleus of the motor oculi or third nerve.

ed'ipism [*Œdipus*, King of Thebes, who unwittingly killed his father and afterward tore out his eyes because they had betrayed him in not revealing his father before he slew him] Self-infliction of injury to the eyes, usually an attempt at evulsion.

Ed'lefsen's rea'gent [Gustav Julius Friedrich Ferdinand *Edlefsen*, German physician, *1842.] An alkaline permanganate solution used in the determination of sugar in the urine.

Ed'ridge-Green the'ory of color blindness [F. W. *Edridge-Green*, English ophthalmologist, contemporary.] The ray of light decomposes the visual purple which forms a photograph and chemically stimulates the cones whereby a visual impulse is set up and conveyed to the brain; the defect in color sense is situated in the brain centers which are not sufficiently developed to appreciate the differences in wave length (color) of the rays of light.

Ed'sall's disease' [David Linn *Edsall*, Boston physician, *1869.] Heat cramp.

ed'ucated [L. *educare*, to educate.] So modified as to be insusceptible to the poison of a specific infection, denoting the condition of the phagocytes in cases of acquired immunity.

e'duct. An extract.

edulcorant (e-dul'ko-rant) [see *edulcorate*.] 1. Sweetening, rendering less acrid. 2. A drug which has this action upon the fluids of the body.

edulcorate (e-dul'co-rāt) [L. *dulcedo*, sweetness; *edulcorare* (?), to sweeten.] 1. To sweeten or render less acrid. 2. In chemistry to purify by washing out salts or acids.

effect' [L. *effectus; efficere*, to accomplish.] The result or consequence of an action. **con'trary e.**, Hata's* phenomenon.

effector (ĕ-fek'tor). Sherrington's term for one of the nerve-endings within the muscles, glands, etc., distinguished from *receptor*.

effemination (ef-fem-ĭ-na'shun) [L. *ex*, out + *femina*, woman.] Eviration(2).

eff'erent [L. *effere*, to bring out.] 1. Conducting (fluid or a nerve impulse) outward or centrifugally. An efferent nerve, vessel, or duct.

effervesce (ef-ur-ves') [L. *effervescere*, to boil up.] To boil up or form bubbles rising to the surface of a fluid in large numbers.

effervescent (ef-ur-ves'ent). 1. Boiling, bubbling, effervescing. 2. Causing to effervesce, as an e. powder. 3. Tending to effervesce when freed from pressure, as an e. solution.

effleurage (ef-flĕr-azh') [Fr. *effleurer*, to touch lightly.] A stroking movement in massage.

effloresce (ef-flor-es') [L. *efflorescere*, to blossom.] To become powdery by losing the water of crystallization on exposure to a dry atmosphere.

efflores'cence. The process of efflorescing.

efflores'cent. Noting a crystalline body which gradually changes to a powder by losing its water of crystallization when exposed to the air.

efflu'vium [L. a flowing out.] An exhalation, especially one of bad odor or injurious influence.

effort syndrome (ef'fort sin'drōm). Palpitation, dizziness, short breath, fatigue, and precordial pain following moderate exertion in the subjects of irritable heart.

effuse (ĕ-fūs') [L. *effusus; effundere*, to pour out.] Thin and widely spread, noting the surface character of a bacterial culture.

effusion (ĕ-fu'zhun) [L. *effusus; effundere*, to pour out.] 1. The escape of fluid from the blood-vessels or lymphatics into the tissues or a cavity. 2. The fluid effused.

egesta (e-jes'tah) [L *egestus; egerere*, to cast out.] Excreta, dejecta.

egg [A.S. *æg*.] The female sexual cell; especially that of birds and certain reptiles which is developed outside the body of the parent and which is provided with a protective shell and a mass of albuminous and fatty material designed for the nourishment of the embryo. The naked egg of mammals, developing within the body of the mother, is usually called ovum. **holoblas'tic e.**, one the whole of the yolk of which undergoes segmentation and enters directly into the formation of the embryo. **meroblas'tic e.**, one the yolk of which consists largely of nutrient material which does not enter directly into the formation of the embryo.

egg-albu'min. The albumin occurring in the white of egg, resembling in many respects serum-albumin.

egg-ball. One of the clumps of germinal cells, containing the primitive ova, resulting from the breaking up of the egg-tubes, and later developing into the folliculus oophorus primarius.

Eggleston meth'od (eg'l-stun). Rapid digitalization by means of large doses of the drug frequently repeated.

egg-nest. Egg-ball.

egg'shell. The calcareous envelope of a bird's egg; testa ovi.

egg-tubes. Pflüger's* tubes (1).

egilops, ægilops (e'jĭ-lops) [G. *aigilōps*, a lacrymal fistula.] A swelling, abscess, or fistula at the inner canthus of the eye.

eglan'dulous. Without glands.

Egli's glands (eg'lĭ). Mucous glands of the ureter.

eg'mol. Trade name of an emulsion of olive oil with egg and brandy.

egobronchophony (e"go-bron-kof'o-nĭ) [G. , *aix* (*aig-*), goat, + *bronchos*, bronchus, + *phōnē*, voice.] Egophony with bronchophony.

egocentric (eg"o-sen'trik) [G. *ego*, I, + *kentron*, center.] Marked by extreme concentration of attention upon oneself.

egocentricity (eg-o-sen-tris'i-te). The condition of being egocentric.

e'gols. A class of stable mercurial parasulphonates in combination with cresol, phenol, or thymol; they occur in the form of reddish-brown powders, odorless, tasteless, and non-irritant, possessing marked bactericidal properties; *cresegol* is the cresol compound, *phenegol** the phenol compound, and *thymegol* the thymol compound.

egoma'nia. An insane, or extreme degree of, self-appreciation.

egophonic (e-go-fon'ik). Relating to egophony, as egophonic resonance.

egoph'ony, ægoph'ony [G. *aix*(*aig-*), goat, + *phōnē*, voice.] Tragophony, a peculiar broken quality of the voice sounds, like the bleating of a goat, heard about the upper level of the fluid in cases of pleurisy with effusion.

Egyp'tian chloro'sis. Ankylostomiasis. **E. hematu'ria,** bilharziasis. **E. ophthal'mia,** trachoma.

Eh'renritter's ganglion [Johann *Ehrenritter*, Austrian anatomist, †1790.] Ganglion jugulare.

Eh'ret's disease' [Heinrich *Ehret*, German physician, *1870.] Paralysis, supposed to be functional, of the peronei muscles accompanied usually by contraction of their antagonists. **E.'s phenom'enon,** a sudden throb felt by the finger on the brachial artery, as the pressure in the cuff falls after a blood-pressure estimation; said to indicate fairly accurately the diastolic pressure.

Ehrlich's ane'mia (air'likh) [Paul *Ehrlich*, German bacteriologist, 1854–1915.] Aplastic anemia.* **E.'s aniline-oil stains,** Koch*-Ehrlich stains. **E.'s cells,** eosinophile* cells. **E.'s hematox'ylin,** hematoxylin, 2; glacial acetic acid, 10; alum, 35; glycerin, absolute alcohol, and water, 100 of each. **E.'s inn'er bod'y,** a round oxyphile body found in the red blood cell in case of hemocytolysis due to a specific blood poison. **E.'s phenom'enon,** the difference between the amount of diphtheria toxin which will exactly neutralize one unit of antitoxin and that which, added to one unit of antitoxin, will leave one lethal dose free is greater than one lethal dose of toxin; in other words, it is necessary to add more than one lethal dose of toxin to a neutral mixture of toxin and antitoxin to make the mixture lethal. **E.'s prepara'tion,** salvarsan. **E.'s reac'tion,** diazo* reaction. **E.'s side-chain the'ory,** see under *chain*. **E.'s stain,** a solution of 11 per cent. fuchsin, genanti violet, or methylene blue in aniline water. **E.'s the'orem,** every specific microorganism has a specific chemical affinity which, when found and injected intravenously or intramuscularly into the infected host, will cure the disease caused by the microorganism. **E.'s the'ory,** side-chain* theory. **E.'s triac'id stain,** a mixture of indulin, nigrosin, and aurantia. **E.'s trip'le stain,** a mixture of saturated solutions of orange G, rubin S, and methyl-green OO, a differential leucocytic stain.

Ehrlich-Hata prepara'tion (hah'tah) [Paul *Ehrlich*; S. *Hata*, Japanese physician and chemist, contemporary.] Salvarsan, No. 606.

Ehrmann's test (air'mahn) [Rudolph *Ehrmann*, German clinician, *1879.] Palmin* test.

Eichhorst's cor'puscles (īkh'horst) [H. *Eichhorst*, Swiss physician of Zurich, 1849–1921.] One of the globular forms sometimes seen in the poikilocytosis of pernicious anemia. **E.'s neuri'tis,** interstitial neuritis. **E.'s type,** femorotibial type of progressive muscular atrophy with contracture of the toes.

Eichstedt's disease' (ikh'stet) [Karl Ferdinand *Eichstedt*, German physician, 1816–1893.] Pityriasis versicolor.

Eicken's meth'od (i'ken) [Karl von *Eicken*, German laryngologist, *1873.] Facilitation of hypopharyngoscopy by means of forward traction on the cricoid cartilage by a laryngeal probe.

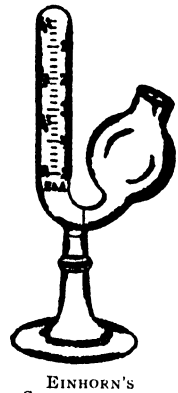
eiconom'eter, eikonom'eter (i-ko-nom'e-ter) [G. *eikon*, image, + *metron*, measure.] An instrument for determining the magnifying power of a microscope, or the size of a microscopic object.

eidetic (i-det'ĭk) [G. *eidō*, I see]. 1. Relating to the power of visualization of objects previously seen or imagined. 2. A person possessing this power in high degree.

eidoptom'etry (i-dop-tom'e-trĭ) [G. *eidos*, form, + *optikos*, referring to vision, + *metron*, measure.] Measurement of the visual powers as regards the perception of form.

eighth nerve. Portio mollis, auditory nerve, nervus* acusticus.

ei'gon, eigone (i'gon, i'gōn). Name of a group of iodine or bromine albuminates; these are severally alpha-eigone, an iodine compound; alpha-eigone sodium, a sodium salt of the preceding; and beta-eigone, a bromine compound; their action is similar to that of the iodides or bromides, but somewhat slower and more prolonged.



EINHORN'S SACCHARIMETER.

eiloid (i'loyd) [G. *eilō*, I roll up, + *eidos*, appearance.] Resembling a coil or roll

Eime'ria. A supposed genus of protozoan organisms, really coccidia in the asexual or schizogonic cycle, often therefore called the *Eimerian cycle*.

Einhorn's saccharim'eter (īn'horn) [Max *Einhorn*, New York gastrologist of Russian birth, *1862.] An instrument for carrying out the fermentation test for sugar in the urine. **E.'s disease,** erosion of the gastric mucous membrane. **E.'s test,** a measure of gastric and intestinal digestion; beads with various food substances attached are swallowed, and are recovered from the feces; the time of the discharge of the beads and the degree of digestion of the attached food substances furnish indications of the functional condition of the digestive organs.

Einthoven's string galvanom'eter (īnt'ho-fen) [W. *Einthoven*, Prof. of Physiology, University of Leyden, 1860–1927.] See *electrocardiograph*.

eisanthema (īs-an-the'mah) [G. *eis*, in, + *anthēma antheō*, I bloom.] Enanthema.

Eisenlohr's symp'tom-com'plex (i'zen-lor) [Carl *Eisenlohr*, German physician, 1847–1896.] Numbness and weakness in the extremities, paralysis of the lips, tongue, and palate, and dysarthria.

Eisenmenger complex (i'zen-meng"er kom'pleks). Interventricular septal defect with dextroposition of the aorta and dilatation of the pulmonary artery; see Fallot's* tetralogy.

eisod'ic. Isodic.

Eitelberg's test (i'tel-berg) [Abraham *Eitelberg*, Austrian physician, *1847.] For determining the integrity of the sound-conducting apparatus of the ear: a tuning-fork is held near the ear for a few seconds at intervals of two or three minutes; if the sound-conducting function is impaired, the perception of the sound grows fainter at each application

eiweissmilch (i'vīs-milkh) [Ger. egg-albumin milk.] A special milk preparation containing an extra proportion of casein with calcium oxide and a reduced amount of lactose, employed in digestive and nutritional disturbances in infants.

ejacula'tio [L.] Ejaculation. **e. præ'cox,** premature ejaculation, rapid termination of the sexual act on the part of the male.

ejacula'tion [L. *ejaculari*, to throw out.] The emission of the seminal fluid.

ejac'ulatory. Relating to an ejaculation.

ejec'ta [L. *ejicere*, to throw out.] Egesta, dejecta.

ekatantalum (ek-ah-tan'tă-lum) [Sansk. *eka*, one, + *tantalum*.] Protoactinium.

elabora'tion [L. *elaborare*, to work out.] The change in a substance fitting it for assimilation. **secondary e.,** in a dream analysis the bringing into orderly arrangement of the bizarre elements and inconsistencies of the dream content.

elæomyenchysis (el"e-o-mi-en'ki-sis) [G. *elaion*, oil, + *mys*, muscle, + *enchysis*, a pouring in.] Injection of oil into the muscles for the relief of spasm.

elæop'tene. Eleoptene.

elæosaccharum (el-e-o-sak'ar-um), pl. *elæosacchara* [G. *elaion*, oil, + *sakcharon*, sugar.] (P.G.) Oleosaccharum (N.F.).

elaiopathia (el-a-o-path'ĭ-ah) [G. *elaion*, oil, + *pathos*, suffering.] Eleopathy.

elarson (el-ar'son). Trade name of strontium chlorarsenobehenolate, a white insoluble tasteless powder recommended in the treatment of anemia, chlorosis, chorea, and various diseases of the skin, in doses of gr ½ (0.008) three or four times a day.

elas'tic [G. *elastikos*.] Having the property of returning to the original shape after being compressed, bent, or otherwise distorted.

elas'tica. 1. India rubber, rubber, caoutchouc (Br.), the inspissated juice of several species of *Hevea*, rubber-tree, called in commerce pure Para rubber; employed in the manufacture of bandages, plasters, etc. 2. (sc. *tunica*, coat.) The elastic membrane in the wall of an artery.

elas'ticin. Elastin.

elasticity (e-las-tis'ĭ-tĭ). The property of being elastic, or of resuming the original shape upon the cessation of any distorting force.

elas'tin. An albuminoid, or scleroprotein, present especially in yellow elastic fibrous tissue.

elastinase (e-las'tĭ-nāz). A ferment acting upon elastin.

elas'toid degenera'tion. Hyaline degeneration of the elastic tissue of the arterial wall, seen during involution of the uterus.

elastoma (e-las-to'mŭ). Pseudoxanthoma.

elastom'eter [G *metron*, measure.] A device for measuring the elasticity of any body or of the animal tissues.

elastoplast (el-as'to-plast). A modified Unna's* paste spread on an elastic bandage.

elastose (e-las'tōz). The product of the digestion of elastin.

el'ater [G. *elatēr*, one who hurls.] 1. In botany, one of the dead fusiform cells of *Hepaticæ* which loosen the spore masses as they escape from the capsule. 2. One of the four hygroscopic bands in *Equisetaceæ*, which disperse the spores while keeping them together in small groups.

elateri'num (U.S. and Br.). Elaterin, a neutral principle, $C_{20}H_{28}O_5$, obtained from elaterium, employed for the same purposes as elaterium, in doses of gr. $\frac{1}{30}$–$\frac{1}{20}$ (0.002–0.003).

elaterium (el-ă-te'rĭ-um) [G. *elatērios*, driving.] (Br.) The dried sediment from the juice of the fruit of *Ecballium elaterium*, squirting cucumber; it is a hydragogue cathartic, used especially in renal dropsy, in doses of gr. ¼ (0.01).

el'bow [A.S. *elnboga*.] 1. The joint between the arm and the forearm, **cubitus** [BNA]. 2. An angular body resembling a flexed elbow; knee. **bend of the e.,** chelidon, cubital fossa. **capped e.,** a serous cyst in the connective tissue of the elbow of the horse caused by the animal's lying upon his foot or the heel of his shoe. **inflammation of the e.,** anconitis, olecranarthritis, olecranarthrocace, oleocranarthropathy. **point of the e.,** olecranon.

el'bow-bone. Ulna.

elbowed (el'bōd). Angular, kneed.

el'bow-jerk. Triceps reflex.*

el'bow-joint. Articulatio cubiti [BNA], the articulation between the humerus and the ulna.

elbow-lameness (el'bo-lām"nes). Lameness in the horse most commonly due to disease of the joint, sprain of the lateral ligaments, or rupture of the triceps muscle.

el'der. Sambucus,* the dried flowers o *Sambucus canadensis.*

elecampane (el-e-kam-pān'). Inula, the root of *Inula helenium.*

elect. Abbreviation of L. *electuarium*, electuary.

Elec'tra-com'plex [*Elektra*, daughter of Agamemnon, whose love for her murdered father led her to connive at the assassination of her mother by whom the father had been killed.] Father complex, a complex of hysterical symptoms thought to be due to the suppressed sexual love of a young woman for her own father; opposite of Œdipus* complex.

electrargol (e-lek-trar'gol). Trade name of a suspension of colloidal silver prepared by electrolysis.

elec'tric, elec'trical. Relating to electricity.

electricity (e-lek-tris'ĭ-tĭ) [L. *electrum*, G. *elektron*, amber, friction of which produces electricity.] A form of energy, of unknown nature, the cause of manifold "electrical" phenomena—light, heat, attraction, repulsion, etc. Two forms are distinguished—*resting* or *static e.*, and *flowing, current, kinetic,* or *dynamic e.;* it is produced by friction, chemical action, or induction. Electricity is *positive* or *vitreous*, that produced by rubbing glass with silk, the e. of the glass being positive, that of the silk negative; or *negative* or *resinous*, produced by rubbing sealing-wax or amber with flannel or silk, the e. of the amber or sealing-wax being negative, that of the flannel positive. *Static e.* (see *franklinism*), is produced by friction; *galvanic e.* (see *galvanism*), by chemical action; *faradic e.* (see *faradism*), by electrical induction; *magnetic e.*, by magnetic induction (see *dynamo*).

chemical, galvanism, voltaism. **decomposition by,** electrolysis. **element freed by,** ion, anion, cation. **execution by,** electrocution. **fear of,** electrophobia. **frictional,** franklinism, static electricity. **induced** faradism. **introduction of remedies by,** cataphoresis. **units of measurement,** ampère, coulomb, dyne, erg, farad, joule, milliampère, ohm, volt, watt, weber.

elec'trify. To charge with electricity.

electriza'tion. 1. The act of electrifying. 2. Treatment by means of electricity.

electro-. A prefix denoting electric or electricity.

electroanesthesia (e-lek"tro-an-es-the'zĭ-ah). Anesthesia produced by the LeDuc current.

electrobiol'ogy [*electro-* + G. *bios*, life, + *-logia*.] Science in relation to electrical phenomena in the living organism.

elec"trobios'copy [*electro-* + G. *bios*, life, + *skopeō*, I examine.] The employment of electricity as a means of determining whether life is extinct or not.

electrocar'diagram. Electrocardiogram.

electrocar'diogram [*electro-* + G. *kardia*, heart, + *gramma*, a drawing.] A graphic representation of the varying somatic electric currents depending upon the cardiac pulsations. See complex (4).

elec"trocar'diograph [*electro-* + G. *kardia*, heart, + *graphō*, I write.] An instrument for recording the electrical changes caused by contraction of the heart muscle; it consists of a strong magnet with the poles near together, and suspended between them a fine platinum or silvered quartz thread; this thread deviates whenever a current passes through it, and the shadow of its movements is magnified by a series of lenses and projected by an electric light on a photographic plate. **e. of am'plifier type,** one in which the current is increased by a radio amplifying tube and then recorded.

electrocardiog'raphy [*electro-* + G. *kardia*, heart, + *graphō*, I write.] A method of recording electrical currents set free in the heart muscle just previous to each heart beat; the machine employed is an *electrocardiograph*, and the result obtained an *electrocardiogram*.

electrocardiophonog'raphy [*electro-* + G. *kardia*, heart, + *phōnē*, sound, + *graphō*, I write.] A method of recording the heart sounds, the record being an *electrocardiophonogram*, or, more simply, an *electrophonogram*.

electrocatal'ysis. Catalysis, or chemical decomposition, produced by electricity.

electrocauterization (e-lek"tro-caw"ter-i-za'shun). Cauterization by means of a platinum wire heated by the passage of a current of electricity.

electrocautery (e-lek"tro-caw'ter-ĭ). An instrument in which a platinum wire is heated by passing an electric current through it, used for cauterizing the tissues.

electrochemical (e-lek-tro-kem'ĭ-kal). Relating to electrochemistry.

electrochemistry (e-lek-tro-kem'is-trĭ). Chemical reaction effected by means of electricity.

electrocoagulation (e-lek"tro-ko-ag-u-la'shun). The hardening of tumors and diseased tissues by the passage through them of high-frequency currents; diathermy.

electrocontractil'ity. The power of contraction of muscular tissue in response to an electrical stimulus

electrocute (e-lek'tro-kūt) [*electricity* + *execute*.] To put to death by means of an electrical current.

electrocu'tion. The carrying out of the death penalty by means of a powerful electrical current; the legal method of execution of murderers in several States of the Union.

electrocystoscope (e-lek"tro-sis'to-skōp). A cystoscope provided with a minute electric light for illuminating the interior of the bladder.

electrode (e-lek'trōd) [*electro-* + G. *odos*, way.] One of the two extremities of an electric circuit; one of the two poles of an electric battery or of the ends of the conductors connected therewith. **ac'tive e.,** therapeutic e. **disper'sing e.,** indifferent e., silent e. **exci'ting e.,** therapeutic e. **impreg'nated e.,** an e. formed of a hollow carbon shell filled with various metals or metallic salts. **indiff'erent e.,** silent e., the e. employed simply to complete the circuit, which exerts no therapeutic effect. **lo'calizing e.,** therapeutic e. **neg'ative e.,** cathode. **pos'itive e.,** anode. **si'lent e.,** indifferent e. **therapeu'tic e.,** the e. by means of which the therapeutic action of the electricity is obtained.

electrodiagno'sis. Determination of the nature of a disease through observation of changes in electrical irritability.

electrodiaph'any. Diaphanoscopy.

elec"trodynamom'eter [*electro-* + G. *dynamis*, force, + *metron*, measure.] A device for determining the strength of an electrical current.

electroencephalography (e-lek"tro-en-sef-al-og'ra-fi) [electricity + G. *encephalon*, brain, + *graphō*, I write.] The registration of the electrical currents set up in the cerebral cortex by brain action; the record as made is called an *electroencephalogram*.

electrogen'esis [G. *genesis*, production.] The production of electricity.

elec"trohemos'tasis [*electro-* + G. *haima*, blood, + *stasis*, halt.] The arrest of hemorrhage by means of the electrocautery.

elec'trolepsy. Bergeron's chorea, electric chorea(2).

electrolithotrity (e-lek"tro-lĭ-thot'rĭ-tĭ) [*electro-* + G. *lithos*, stone, + L. *tritus; terere*, to rub.] Electrolysis of a vesical calculus.

electrol'ogy. Science in relation to electricity.

electrol'ysis [*electricity* + G. *lysis*, solution.] Decomposition of a salt or other chemical compound or of certain of the body tissues by means of electricity.

electrolyte (e-lek'tro-līt) [G. *ēlektron*, amber (electricity), + *lytos*, dissolved.] Any compound which, in solution, conducts a current of electricity and is decomposed by it. **amphoter'ic e.,** an e. which is decomposed into both hydrogen and hydroxyl ions, ampholyte.

electrolyt'ic. Referring to or caused by electrolysis.

electrolyzable (e-lek"tro-lī'za-bl). The condition of an electrolyte capable of being decomposed by means of an electric current.

elec'trolyze. To decompose chemically by means of an electric current.

elec'trolyzer. An apparatus for the treatment of strictures, fibromata, etc., by electrolysis.

electromag'net. A bar of soft iron rendered magnetic by an electric current encircling it.

electromassage (e-lek"tro-mas-sazh'). Massage combined with the application of electricity.

electrom'eter [G. *metron*, measure.] An instrument for measuring the strength of an electrical current.

electromo'tive. Relating to the passage of electricity in a circuit, or to motion produced by the electric current. **e. force,** same as potential, tension, or voltage

elec"tromus'cular sensibil'ity. Sensibility of muscular tissue to stimulation by electricity.

electromy'ogram [*electro-* + *mys*, muscle, + *gramma*, a drawing.] A graphic representation of the somatic electric currents by muscular action.

electromyog'raphy [*electro-* + *mys*, muscle, + *graphō*, I write.] A method of recording the somatic electric currents induced by muscular action.

elec'tron. One of the negatively electrified corpuscles or particles of ether which, revolving around the positive proton, constitute the atom; when emitted from the atom of a radioactive substance the electrons form the beta rays; in size they are estimated to be $\frac{1}{2000}$ that of the hydrogen atom **emis'sion e.**, one of the electrons concerned in the radioactivity of the atom. **free e.**, one of the electrons existing between the atoms of a metal to the presence of which the electrical conductivity of the metal is due. **va'lency e.**, one of the electrons which take part in the chemical reaction of the atom.

electronation (e-lek-tro-na'shun). Electronization.

electroneg'ative. Relating to or charged with negative electricity.

electronization (e-lek-tron-i-za'shun). Reduction (3).

electropathol'ogy. The study of pathological conditions in their relation to electrical reactions.

electrop'athy. Electrotherapeutics; especially the employment of electricity by charlatans.

electrophore (e-lek'tro-fōr) [*electricity* + G. *phoros*, a bearer.] 1. An appliance for obtaining electricity by induction, an electrophorus. 2 An electrode.

electrophoresis (e-lek-tro-fo-re'sis) [*electro-* + G. phorēsis, a carrying in.] 1. Iontophoresis. 2. Diathermy.

electroph'orus. Electrophore.

elec"tropho"tother'apy. Phototherapy in which the source of the rays is the electric light.

electrophysiol'ogy. The branch of science which treats of physiological processes in relation to the production of electrical phenomena

electropositive (e-lek"tro-poz'ĭ-tiv). Relating to or charged with positive electricity.

electroprogno'sis. The prognosis in certain cases of disease, determined by the electrical reactions.

electropunc'ture. The passage of an electrical current through needle electrodes piercing the tissues

electroradiometer (e-lek"tro-ra-dĭ-om'e-tur) [*electric* + L. *radius*, ray, + G. *metron*, measure.] A modified electroscope designed for the differentiation of radiant energy.

electroscission (e-lek'tro-sĭ-shun). Division of the tissues by means of an electrocautery knife.

elec'troscope [G. *skopeō*, I examine.] An apparatus for detecting the presence of electricity in the tissues or elsewhere.

elec'trosol. Colloidal metal.*

electrostat'ic. Relating to static electricity.

electrostat'ics. The branch of electrical science dealing with static electricity.

electrosur'gery. The use of electricity in surgery.

electrosyn'thesis [G. *elektron*, amber (whence electricity), + *synthesis*, compounding.] Forming a compound by means of electrical action.

electrotax'is [*electricity* + G. *taxis*, orderly arrangement.] Reaction of plant or animal protoplasm to one or the other electric pole; *positive* electrotaxis is that in which the living body is attracted toward the cathode or repelled from the anode, *negative* electrotaxis is the reverse of this.

electrothana'sia [*electra-* + G. *thanatos*, death.] Death caused by electricity.

electrotherapeutics, electrotherapy (e-lek"tro-ther-ă-pu'tiks, e-lek-tro-ther'ă-pĭ) [*electro-* + *therapeia*, treatment.] The employment of electricity in the treatment of disease.

elec'trotherm [G. *thermē*, heat.] A flexible sheet of resistance coils, covered with felt, used for applying heat to the surface of the body.

electroton'ic. Relating to electrotonus

electrot'onus [*electro-* + G. *tonos*, tension.] The condition of tonus in a muscle or nerve caused by the passage through it of an electrical current.

electrotropism (e-lek-trot'ro-pizm) [*electro-* + G *tropē*, a turning.] Electrotaxis.

elec'trozone. A disinfectant solution of ozone generated by the electrolysis of sea-water.

electuary (e-lek'chu-a-rĭ) [G. *ekleiktos*, licked up.] Confection.

eleidin (ĕ-le'ĭ-din) [G. *elaia*, oil.] A deeply staining substance (possibly hyalin) forming the granules of the stratum granulosum of the epidermis.

el'ement [L. *elementum*, a rudiment, beginning.] 1. An aggregation of atoms of one kind only, which therefore cannot be decomposed into two or more substances and can lose its identity only by union with some other element. (See the Appendix.) 2. A cell or other indivisible anatomical structure. 3. Earth, air, fire, or water, formerly regarded as the principles of which all matter was composed. **acid'ulous e.**, an e. whose oxides unit with water to form acids only, never bases. **amphoter'ic e.**, an e. one or more of whose oxides unite with water to form acids, others to form bases. **anatom'ical e.**, any anatomical unit, such as a cell. **bas'ylous e.**, an e whose oxides unite with water to form bases only, never acids. **electroneg'ative e.**, the element in an electrolyte which is attracted to the anode or positive pole. **electropos'itive e.**, the element in an electrolyte which is attracted to the cathode or negative pole. **galvan'ic e.**, galvanic* cell. **morpholog'ical e.**, anatomical e. **sar'cous e.**, one of the plasmodia, or cell-syncitia, constituting the unit of muscular tissue.

elemen'tary. 1. Relating to an element, simple, not compounded. 2. Rudimentary.

elemi (el'e-mi). Manila elemi, a fragrant resinous exudation from *Canarium commune*, employed in the preparation of stimulating plasters.

eleoma (el-e-o'mă) [G. *elaion*, oil, + *-ōma*.] Oil tumor, a neoplasm sometimes following injection of oil into the tissues.

eleom'eter [G. *elaion*, oil, + *metron*, measure.] An instrument for determining the specific gravity of oils.

eleomyenchysis (el"e-o-mi-en'ki-sis). Elæomyenchysis, injection of oil into the muscles.

eleopathic (el-e-o-path'ik). Relating to or marked by eleopathy.

eleopathy (el-e-op'ă-thĭ). Elaiopathia, a boggy swelling of the joints said to be due to a fatty deposit following contusion; or possibly a condition resulting from the injection of paraffin oil as a form of malingering.

eleoptene (el-e-op'tēn) [G. *elaion*, oil, + *ptēnos*, fleeting.] The fluid or volatile portion of a volatile oil, as distinguished from its crystallizable portion, or stearoptene.

eleosaccharum (el"e-o-sak'ă-rum). Oleosaccharum.

eleotherapy (el-e-o-ther'ă-pĭ) [G. *elaion*, oil, + *therapeia*, treatment.] Treatment of disease by oil given internally or applied externally.

eleothorax (el-e-o-tho'raks) [G. *elaion*, oil, + *thorax*.] The injection of oil into a pleural cavity in order to compress a tuberculous lung.

elephan'tiac. Relating to elephantiasis.

elephantiasis (el-e-fan-ti'a-sis) [G. *elephas*, elephant.] Barbados leg, pachydermia, hypertrophy of the skin and subcutaneous tissues due to obstructed

circulation in the blood or lymphatic vessels, often by the presence of filaria; called also *e. Ar'abum, e. in'dica.* **congen'ital e.,** congenital enlargement of one or more of the limbs or other parts, due to dilatation of the lymphatics. **e. asturien'sis,** pellagra. **e. chirur'gica,** swelling of a part due to obliteration, following a surgical operation, of the lymphatics draining it. **e. Græco'rum,** leprosy. **e. ital'ica,** pellagra. **e. mol'lis,** dermatolysis. **e. telangiecto'des,** hypertrophy of the skin and subcutaneous tissues accompanied by and dependent upon dilatation of the blood-vessels.

el'evator [L. *elevare*, to lift.] 1. An instrument for prying up a sunken part, as the depressed fragment of bone in fracture of the skull. 2. A dental instrument for extracting the root of a tooth. **perios'teum e.,** a strong steel instrument used for prying up periosteum from the bone. **screw e.,** a dental instrument with a threaded extremity used for extracting the root of a broken tooth.

el'evator disease'. A form of pneumonoconiosis occurring in workers in grain elevators.

eliminant (e-lim'i-nant) [L *eliminans, eliminare*, to turn out of doors.] 1. Evacuant promoting excretion or the removal of waste. 2. An agent which increases excretion.

elimina'tion [L. *eliminare*, to turn out.] Expulsion; removal of waste material from the body; the getting rid of anything.

elinguation (e-ling-gwa'shun) [L. *e*, out, + *lingua*, tongue.] The operation of removal of the tongue.

elix'ir, pl. *elixir'ia* (e-lik'sur) [Ar. *el iksīr*, the philosopher's stone.] A sweetened, aromatic, alcoholic liquid containing usually some active medicinal substance or serving as a vehicle for such in extemporaneous prescriptions. Three elixirs are official in the U.S.P., none in the B.P., but the N.F. contains eighty-eight.

e. ac'idi salicyl'ici, e. of salicylic acid; each dose of ʒi (4.0) contains gr. 5 (0.3) of salicylic acid with potasium citrate in equal parts of glycerin and aromatic elixir; employed in rheumatism.

e. ad'juvans, adjuvant elixir, e. glycyrrhizæ (U.S.); employed as a vehicle to disguise the taste of saline or bitter remedies.

e. alet'ridis compos'itum (N.F.), compound elixir of aletris; fluid extracts of aletris, mitchella, helonias, and caulophyllum, of each 65.50, fluidextract of viburnum opulus 32.75, compound spirit of orange 10.00, alcohol 125.00, syrup 300, distilled water to make 1000; dose ʒi(4.0).

e. ama'rum, bitter elixir; contains extract of absinth 2, oil-sugar of peppermint 1, water 5, bitter tincture and aromatic tincture of each 1; employed as a bitter tonic.

e. ammo'nii bro'midi (N.F.), e. of ammonium bromide; each dose of ʒi (4.0) contains gr. 5 (0.3) of ammonium bromide; nerve sedative and antispasmodic.

e. ammo'nii valera'tis (N.F.), e. of ammonium valerate; each dose of ʒi (4.0) contains ammonium valerate gr. 2 (0.13) and chloroform ♏ ¼ (0.0052), in aromatic elixir flavored with vanilla and colored red with compound tincture of cudbear; it is employed as a nerve sedative.

e. ammo'nii valera'tis et quini'næ, e. of ammonium valerate and quinine; each dose of ʒi (4.0) contains quinine hydrochloride gr. ¼ (0.015) in e. of ammonium valerate; nerve sedative.

e. amyg'dalæ compos'itum (N.F.), compound elixir of almond; composed of oil of bitter almond 0.5, vanillin 1.0, stronger orange-flower water 150, alcohol 50, syrup 20, distilled water to make 1000.

e. ani'si (N.F.), e. of anise; contains anethol, oil of bitter almond, and oil of fennel in a mixture of alcohol 25, syrup 62.5, and water 12.5; employed as a vehicle and as a carminative for infants in doses of ♏15 (1.0).

e. a'pii graveolen'tis compos'itum, compound e. of celery; each dose of ʒi (4.0) contains fluidextract of celery seed, coca, kola, and viburnum prunifolium, of each ♏¾ (0.24), in a mixture of alcohol 12.5 and aromatic elixir 87.5; nerve tonic.

e. aromat'icum (U.S.), aromatic elixir, simple elixir; contains compound spirit of orange, syrup, alcohol, and water; employed as a vehicle.

e. aromat'icum ru'brum (N.F.), red aromatic elixir, e. aromaticum (U.S.) colored with cudbear.

e. auran'tii ama'ri (N.F.), e. of bitter orange, prepared to displace e. curassao; oil of bitter orange 4, tincture of bitter orange peel 20, alcohol 300, stronger orange-flower water 20, syrup 400, distilled water to make 1000.

e. auran'tii compos'itum, compound elixir of orange, vinum aurantii compositum (N.F.); contains bitter orange peel, cassia, extracts of gentian, cascarilla, absinth, and menyanthes in sherry; used as a vehicle and as a tonic bitter.

e. bismu'thi (N.F.), e. of bismuth; each dose of ʒi (4.0) contains bismuth and sodium tartrate, of each gr. 2 (0.13), in aromatic elixir diluted with glycerin and water; employed as a stomachic.

e. bromido'rum quin'que (N.F.), elixir of five bromides; sodium bromide 87.5, potassium bromide 70.0, calcium bromide 52.5, lithium bromide 35.0, ammonium bromide 17.5, fluidglycerate of glycyrrhiza 80.0, syrup of raspberry 150.0, syrup 150.0, aromatic elixir 200, distilled water to make 1000; dose ʒi(4.0).

e. bromido'rum tri'um (N.F.), e. of three bromides, composed of the bromides of ammonium, potassium, and sodium, of each 80; cudbear 2; in compound e. of almond to make 1000; dose, ʒi (4.0).

e. bu'chu (N.F.), e. of buchu; each dose of ʒi (4.0) contains fluidextract of buchu ♏7½ (0.5) in aromatic elixir diluted with alcohol and syrup; employed in catarrh of the urinary passages.

e. bu'chu compos'itum (N.F.), compound e. of buchu; each dose of ʒi (4.0) contains compound fluidextract of buchu (N.F.), ♏15 (1.0), in aromatic elixir, alcohol, and syrup, used in catarrh of the urinary passages.

e. bu'chu et potas'sii aceta'tis (N.F.), e. of buchu and potassium acetate; each dose of ʒi (4.0) contains potassium acetate gr. 5 (0.3) in elixir of buchu; used in catarrh of the bladder and as a diuretic.

e. bu'chu, junip'eri et potas'sii aceta'tis (N.F.), elixir of buchu, juniper, and potassium acetate; fluidextract of buchu 150, fluidextract of juniper 75, potassium acetate 50, alcohol 50, aromatic elixir to make 1000; dose, ʒi (4.0).

e. caffei'næ, e. of caffeine; each dose of ʒi (4.0) contains caffeine gr. 1 (0.06), and diluted hydrobromic acid ♏½ (0.015), in aromatic elixir flavored with syrup of coffee; employed in headache and as a nerve stimulant.

e. cal'cii bro'midi, e. of calcium bromide; each dose of ʒi (4.0) contains calcium bromide gr. 5 (0.3), and diluted hydrobromic acid ♏½ (0.015), in aromatic elixir; nerve sedative.

e. cal'cii et so'dii glycerophospha'tum (N.F.), e. of glycerophosphates; each dose of ʒi (4.0) contains sodium glycerophosphate gr. 1 (0.06), calcium glycerophosphate gr. ½ (0.03), phosphoric acid gr. ½ (0.03), in aromatic elixir with 30 per cent. glycerin; nerve tonic.

e. cal'cii hypophosphi'tis, e. of calcium hypophosphite; each dose of ʒ 2 (8.0) contains calcium hypophosphite gr. 4 (0.26), and hypophosphorous acid ♏½ (0.03), in aromatic elixir; alterative.

e. cal'cii lactophospha'tis (N.F.), e. of calcium lactophosphate; each dose of ʒ 2 (8.0) contains calcium lactate gr. 2 (0.13), and phosphoric acid ♏1 (0.06), in aromatic elixir, syrup, and water; alterative and nutrient.

e. cardamo'mi compos'itum (N.F.), compound elixir of cardamom, composed of compound syrup of cardamom 10, alcohol 90, syrup 400, distilled water sufficient to make 1000.

e. car'nis et fer'ri (N.F.), elixir of beef and iron, replacing vinum carnis et ferri (N.F. IV); extract of beef 35.00, iron and ammonium citrate 8.75, alcohol

200.00, compound spirit of orange 5.00, syrup 100.00, distilled water to make 1000; dose ℥2 (8.0).

e cas'caræ sagra'dæ (Br., N.F.), e. of cascara sagrada; each dose of ℥1 (4 0) contains aromatic fluidextract of cascara sagrada ♏30 (2.0) in aromatice.; laxative.

e. cas'caræ sagra'dæ compos'itum (N.F.), compound e. of cascara sagrada, laxative e.; each dose of ℥1 (4 0) contains aromatic fluidextract of cascara sagrada ♏7½ (0.5), fluidextract of senna ♏5 (0.3), and fluidextract of juglans ♏4 (0.26) in aromatic e.; laxative.

e. cata'riæ et fœnic'uli (N.F.), elixir of catnip and fennel; fluidextract of catnip 100.0, sodium bicarbonate 17.5, oil of fennel 2.0, oil of spearmint 1.0, alcohol 150.0, syrup 200.0, distilled water to make 1000; dose for infants ♏8 (0.5).

e. cathar'ticum compos'itum (N.F.), compound cathartic e.; each dose of ℥1 (4.0) contains fluidextract of frangula, ♏7½ (0.5), fluidextract of senna, ♏6 (0.4), fluidextract of rhubarb, ♏4 (0.26), in aromatic elixir flavored with peppermint and saccharin; laxative.

e. chlorido'rum (N.F.), elixir of chlorides, elixir of four chlorides; corrosive mercuric chloride 0.275, solution of arsenous acid 16.500, tincture of ferric chloride, 83.000, diluted hydrochloric acid 83.000, compound spirit of orange 10.000, syrup 250.000, alcohol 200.000, distilled water to make 1000. Dose ℥1 (4.0).

e. chlorofor'mi compos'itum, compound e. of chloroform; each dose of ♏ℨ (2.0) contains laudanum, chloroform, spirit of camphor, and aromatic spirit of ammonia, each ♏5½ (0.33) in alcohol flavored with oil of cinnamon; anodyne, antispasmodic, and carminative.

e. cincho'næ alkaloido'rum (N.F.), e. of cinchona alkaloids, e. of calisaya, compound e. of quinine; each dose of ʒ2 (8.0) contains quinine sulphate gr.¼ (0 015), cinchonine sulphate and cinchonidine sulphate each gr. ¼ (0 008), in aromatic elixir colored red with tincture of cudbear; bitter tonic.

e. cincho'næ alkaloido'rum et fer'ri (N.F.), e. of cinchona alkaloids and iron, ferrated e. of calisaya; each dose of ʒ2 (8 0) contains soluble ferric phosphate gr. 4 (0 26) in elixir of cinchona alkaloids; bitter tonic in anemic conditions.

e. cincho'næ alkaloido'rum et hypophosphi'tum, e. of cinchona alkaloids and hypophosphites, e. of calisaya and of the hypophosphites; each dose of ʒ2 (8 0) contains calcium and sodium hypophosphite each gr. 2 (0.13), and hypophosphorous acid ♏½ (0 03) in elixir of cinchona alkaloids and water; tonic and alterative.

e. cincho'næ alkaloido'rum, fer'ri, bismu'thi, et strychni'næ (N.F.), e. of cinchona alkaloids, iron, bismuth, and strychnine; each dose of ℥1 (4 0) contains strychnine sulphate gr. 1/60 (0 0006) in e. of cinchona alkaloids, iron, and bismuth; nerve tonic in anemia.

e. cincho'næ alkaloido'rum, fer'ri, et bismu'thi (N.F.), e. of cinchona alkaloids, iron, and bismuth; each dose of ʒ2 (8.0) contains bismuth gr. 2 (0.13), sodium tartrate gr. 2 (0 13), and soluble ferric tartrate gr. 3½ (0.23) in e. of cinchona alkaloids; stomachic tonic in anemic conditions.

e. cincho'næ alkaloido'rum, fer'ri, et cal'cii lactophospha'tis, e. of cinchona alkaloids, iron, and calcium lactophosphate; each dose of ʒ2 (8.0) contains calciuml actate gr. 1 (0.06), phosphoric acid ♏½ (0.03), and soluble ferric phosphate gr. 4 (0 26), in e. of cinchona alkaloids; alterative and hematinic.

e. cincho'næ alkaloido'rum, fer'ri, et pepsi'ni, e. of cinchona alkaloids, iron, and pepsin; each dose of ʒ2 (8.0) contains soluble ferric phosphate gr. 3 (0 2) and pepsin gr. 2 (0.13), in e. of cinchona alkaloids; digestive and hematinic.

e. cincho'næ alkaloido'rum, fer'ri, et strychni'næ (N.F.), e. of cinchona alkaloids, iron, and strychnine; each dose of ℥1 (4.0) contains strychnine sulphate gr. 1/60 (0.0006) in e. of cinchona alkaloids and iron; nerve tonic in anemia.

e. cincho'næ alkaloido'rum, pepsi'ni, et strychni'næ, e. of cinchona alkaloids, pepsin, and strychnine; each dose of ℥1 (4.0) contains strychnine sulphate gr. 1/60 (0.0006), and pepsin gr. 1 (0.06), in e. of cinchona alkaloids; stomachic.

e. co'cæ, e. of coca, e. of erythroxylon; each dose of ℥1 (4.0) contains fluidextract of coca, ♏7½ (0.5), in aromatic elixir diluted with alcohol and syrup and flavored with vanilla; stimulant in muscular fatigue.

e. co'cæ et guara'næ, e. of coca and guarana, e. of erythroxylon and guarana; each dose of ℥1 (4.0) contains fluidextract of coca and of guarana each ♏7½ (0.5) in compound elixir of taraxacum; employed in headache and as a stimulant.

e. cor'rigens, e. eriodictyi aromaticum.

e. coryd'alis compos'itum (N.F.), compound e. of corydalis; each dose of ℥1 (4.0) contains potassium iodide gr. 3 (0.2), fluidextract of xanthoxylum ♏2 (0.13), fluidextract of corydalis and of stillingia, each ♏3¾ (0.24), fluidextract of iron ♏5½ (0.33), in aromatic elixir with 12½ per cent. alcohol; alterative and tonic.

e. curassa'o, e. of curaçao, now replaced in the N.F. by e. aurantii amari; each dose of ʒ4 (16 0) contains spirit of curaçao ♏4 (0 25), with orris root and citric acid, in alcohol 25 per cent., aromatic elixir 25 per cent., and syrup 50 per cent.; it has no medicinal virtues.

e. digesti'vum compos'itum, compound digestive e., compound e. of pepsin; each dose of ʒ2 (8 0) contains pepsin gr. 1½ (0 075), pancreatin and diastase each gr. ⅛ (0 008), with lactic and hydrochloric acids, in aromatic elixir with glycerin 25 per cent., colored red with cudbear; a digestive of doubtful virtues.

e. eriodic'tyi aromat'icum (N.F.), aromatic e. of eriodictyon, or yerba santa; each dose of ℥1 (4.0) contains fluidextract of eriodictyon ♏3¾ (0.24), in equal parts of syrup and compound elixir of taraxacum; used as a vehicle for quinine and other bitter remedies.

e. eucalyp'ti, e. of eucalyptus; each dose of ℥1 (4.0) contains fluidextract of eucalyptus ♏7½ (0 5) in a mixture of compound elixir of taraxacum, alcohol, and syrup of coffee; tonic and antiperiodic.

e. euon'ymi, e. of euonymus or wahoo; each dose of ℥1 (4 0) contains fluidextract of euonymus ♏10 (0 6) in compound elixir of taraxacum, syrup of coffee, and water; diuretic and cholagogue.

e. euphor'biæ compos'itum (N.F.), compound elixir of euphorbia, antiasthmatic elixir; fluidextract of euphorbia 52.50, fluidextract of lobelia 7.00, sodium bromide 35.00, sodium iodide 35.00, spirit of glyceryl trinitrate 8.75, compound tincture of cardamon 50.00, oil of peppermint 1.00, glycerin 125.00, alcohol 200.00, water to make 1000; dose ℥1 (4.0).

e. eupne'in, is said to contain heroine gr. 1/8, terpin hydrate gr. 1, creosote gr. 2½, and alcohol ♏20 in each teaspoonful; employed as a stimulant expectorant in doses of ℥1–3 (4.0–12.0).

e. fer'ri hypophosphi'tis, e. of hypophosphite of iron; each dose of ℥1 (4.0) contains hypophosphite of iron gr. 1 (0.06) in aromatic elixir; used in anemia.

e. fer'ri lacta'tis, e. of lactate of iron; each dose of ℥1 (4.0) contains lactate of iron gr. 1 (0.06), potassium citrate gr. 3 (0.2) in aromatic elixir; used in anemia.

e. fer'ri phospha'tis, e. of phosphate of iron; each dose of ℥1 (4.0) contains soluble ferric phosphate gr. 2 (0.13) in aromatic elixir; used in anemia and neurasthenia.

e. fer'ri pyrophospha'tis, e. of pyrophosphate of iron; each dose of ℥1 (4.0) contains soluble ferric pyrophosphate gr. 2 (0.13) in aromatic elixir.

e. fer'ri pyrophospha'tis, quini'næ, et strychni'næ (N.F.), e. of pyrophosphate of iron, quinine, and strychnine; each dose of ℥1 (4.0) contains ferric pyrophosphate gr. 2 (0.13), quinine sulphate gr. ½ (0.03), and strychnine gr. 1/58 (0.0005), with citric acid and oil of orange in alconol, syrup, and water; tonic.

e. fer'ri, quini'næ, et strychni'næ (N.F.), e. of iron, quinine, and strychnine; each dose of ℥1 (4.0) contains tincture of citrochloride of iron ♏7½ (0.5), quinine hydrochloride gr. ½ (0.03), and strychnine sulphate gr. 1/60 (0.0006) in aromatic elixir, tonic.

e. fer'ri, quini'næ, et strychni'næ phospha'tum (U.S.), elixir of the phosphates of iron, quinine, and strychnine; each dose of ℥1 (4.0) contains ferric phosphate gr. 1, quinine gr. ½, and strychnine gr. 1/30; dose ʒ½–2 (2.0–8.0).

e. forma'tum, elixir of formates, composed of potassium carbonate 41, monohydrated sodium car-

bonate 36, formic acid 225, aromatic elixir to make 1000; dose, ℥2 (8.0).

e. forma'tum compos'itum, compound elixir of formates; composed of monohydrated sodium carbonate 23, magnesium carbonate 20, strontium carbonate 25, lithium carbonate 8, quinine 7.7, formic acid 200, compound spirit of cardamom 5, acetic ether 2, alcohol 100, glycerin 300, distilled water to make 1000; dose, ℥2 (8 0).

e. fran'gulæ, e. of frangula or buckhorn; each dose of ℥1 (4.0) contains fluidextract of frangula ♏15 (1 0) in compound elixir of taraxacum 1 part, aromatic elixir 3 parts; laxative.

e. gentia'næ (N.F.), e. of gentian; each dose of ℥1 (4.0) contains fluidextract of gentian ♏2 (0.13) in aromatic elixir flavored with cardamom.

e. gentia'næ et fer'ri (N.F.), e. of gentian and iron; each dose of ℥1 (4 0) contains tincture of citrochloride of iron ♏6 (0.4) in elixir of gentian.

e. gentia'næ et fer'ri phospha'tis (N.F.), e. of gentian and phosphate of iron, ferrated e. of gentian, ferrophosphated e. of gentian; each dose of ℥1 (4.0) contains soluble ferric phosphate gr. 1 (0.06) in elixir of gentian.

e. gentia'næ ferra'tum, ferrated e. of gentian, e. gentianæ et ferri phosphatis (N.F.).

e. gentia'næ glycerina'tum (N.F.), glycerinated e of gentian; each dose of ℥2 (8.0) contains fluidextract of gentian ♏1½ (0 08), fluidextract of taraxacum ♏1½ (0.12), phosphoric acid gr. 1 (0.06) in sherry with 40 per cent. of glycerin flavored with orange peel, cardamom, and sugar.

e. glycyrrhi'zæ (U.S.), e. of licorice, e. adjuvans; fluidextract of licorice 125, aromatic elixir 825; dose, ℥2 (8 0), used as a vehicle.

e. glycyrrhi'zæ aquo'sum (N.F.), aqueous elixir of licorice, composed of fluidextract of licorice 150, compound spirit of cardamom 5, stronger orange-flower water 200, glycerin 150, syrup 150, distilled water to make 1000; dose, ℥2 (8 0).

e. glycyrrhi'zæ aroma'ticum, aromatic e. of licorice; same as the U. S. elixir flavored with oils of cinnamon, cloves, fennel, and nutmeg; used as a vehicle.

e. glycerophospha'tum compos'itum (N.F.), compound elixir of glycerophosphates 40, calcium glycerophosphate 16, ferric glycerophosphate 3, soluble manganese glycerophosphate 2; quinine glycerophosphate 1, strychnine glycerophosphate 0 15, lactic acid 10, compound spirit of cardamom 2, alcohol 125, glycerin 350, distilled water to make 1000; dose, ℥2 (8 0).

e grinde'liæ, e. of grindelia; each dose of ℥2 (8 0) contains fluidextract of grindelia ♏7½ (0 5) in compound elixir of taraxacum; antispasmodic.

e. guara'næ (N F), e. of guarana; each dose of ℥1 (4.0) contains fluidextract of guarana ♏12 (0.8) in a mixture of aromatic e. and compound e. of taraxacum; employed in the treatment of headache and neuralgia.

e. guar'anæ et a'pii (N.F.), elixir of guarana and celery; fluid extracts of guarana and of celery fruit of each 150, fluidglycerate of glycyrrhiza 30, glycerine 60, aromatic elixir to make 1000; dose ℥2 (8.0).

e. heloni'adis compos'itum (N.F.), compound elixir of helonias; fluidextracts of helonias, caulophyllum, and viburnum opulus, of each 32, fluidextract of mitchella 125, compound spirit of orange 10, alcohol 125, syrup 300, distilled water to make 1000; dose ℥1 (4.0).

e. hu'muli, e. of hops; each dose of ℥2 (8.0) contains fluidextract of hops ♏15 (1.0) in a mixture of aromatic e. and compound e. of taraxacum; sedative and diaphoretic.

e. hydran'geæ et lith'ii (N.F.), elixir of hydrangea and lithium; hydrangea 400, lithium benzoate and lithium salicylate, of each 26, compound spirit of orange 4, sucrose 50, alcohol and water to make 1000; dose ℥1 (4.0).

e. hydras'tis compos'itum (N.F.), compound elixir of hydrastis, alkaline elixir; fluidextracts of hydrastis, oat, and xanthoxylum, of each 17.50, fluid extracts of gentian and ginger, of each 8.75, sodium bicarbonate 8.75, aromatic elixir to make 1000; dose ℥1 (4.0).

e. hypophosphi'tum, e. of hypophosphites; each dose of ℥2 (8.0) contains calcium hypophosphite gr. 6 (0.4), sodium and potassium hypophosphites each gr. 2 (0.13), hypophosphorous acid ♏½ (0.03) in aromatic elixir with glycerin and cardamom; alterative.

e. hypophosphi'tum et fer'ri, e. of hypophosphites and iron; each dose of ℥2 (8.0) contains ferrous and potassium hypophosphites each gr. 1 (0.06), calcium and sodium hypophosphites each gr. 2 (0.13), hypophosphorous acid ♏½ (0.03) in aromatic elixir, syrup, and water; alterative and hematinic.

e. laxati'vum, laxative e., e. cascaræ sagradæ compositum (N.F.).

e. lith'ii bro'midi, e. of lithium bromide; each dose of ℥2 (8.0) contains gr. 10 (0.6) of this salt in aromatic e.; nerve sedative.

e. lith'ii citra'tis, e. of lithium citrate; each dose of ℥1½ (6.0) contains gr. 7½ (0.5) of this salt in aromatic elixir; used in rheumatism and gout.

e. lith'ii salicyla'tis, e. of lithium salicylate; each dose of ℥2 (8.0) contains gr. 10 (0.6) of this salt in aromatic e.; employed in rheumatism and as a diaphoretic.

e. mal'ti et fer'ri, e. of malt and iron; each dose of ℥½ (15.0) contains extract of malt ℥1 (4 0), soluble ferric phosphate gr. 4 (0.26), in aromatic e.; tonic in anemia.

e. man'acæ compositum (N.F.), compound elixir of manaca; fluidextract of manaca 165.0, sodium salicylate 140.0 lithium salicylate 17.5, potassium bicarbonate 39.7, salicylic acid 55.0, honey 125.0, spirit of spearmint 15.0; aromatic elixir to make 1000; dose, ℥1 (4.0).

e. of vit'riol, acidum sulphuricum aromaticum.

e. paraldehy' di, e. of paraldehyde; each dose of ℥2 (8 0) contains paraldehyde ♏30 (2 0), in a mixture of alcohol, glycerin, and aromatic elixir flavored with cinnamon, cardamom, and orange; hypnotic.

e. paregor'ic, tinctura camphoræ composita (Br.) tinctura opii camphorata (U.S.).

e. pepsi'ni (N.F.), e. of pepsin; each dose of ℥2 (8.0) contains pepsin gr. 2 (0.13), hydrochloric acid ♏½ (0.048) in aromatic e. with 20 per cent. glycerin; digestive.

e. pepsi'ni, bismu'thi, etstrychni'næ (N.F), e. of pepsin, bismuth, and strychnine, each dose of ℥1 (4.0) contains pepsin gr. ½ (0.03), bismuth and sodium tartrate gr. 2 (0.13), and strychnine gr. $\frac{1}{100}$ (0.0006) in aromatic elixir; tonic in dyspeptic conditions

e. pepsi'ni compos'itum (N.F.), compound elixir of pepsin, compound digestive elixir; pepsin 17.5, lactic acid 1.0, glycerin 250.0, alcohol 200.0, oil of orange 2.0, cudbear 1, distilled water to make 1000; dose, ℥2 (8.0).

e. pepsi'ni et bismu'thi (N.F.), e. of pepsin and bismuth; each dose of ℥2 (8.0) contains pepsin gr. 1 (0.06), bismuth and sodium tartrate gr. 4 (0.26), in aromatic elixir; gastric sedative.

e. pepsi'ni et fer'ri, e. of pepsin and iron; each dose of ℥2 (8.0) contains pepsin gr. 2 (0.13) and tincture of citrochloride of iron ♏10 (0.6) in aromatic elixir; in anemia with dyspeptic symptoms.

e. pepsi'ni et renni'ni compositum (N.F.), compound elixir of pepsin and rennin, formerly called essence of pepsin; pepsin 22.5, rennin 16 5, lactic acid 2, tincture of sweet orange peel 15, glycerin 250, alcohol 200, oil of myristica 0 1, distilled water to make 1000; employed in indigestion in doses of ℥2 (8 0).

e. phos'phori (N F.), e. of phosphorus; each dose of ℥1 (4.0) contains phosphorus gr. $\frac{1}{60}$ (0.001) in a mixture of glycerin and aromatic elixir flavored with oil of anise; nerve tonic.

e. phos'phori et nu'cis vom'icæ (N.F.), e. of phosphorus and nux vomica; each dose of ℥1 (4.0) contains phosphorus gr. $\frac{1}{60}$ (0.001) and tincture of nux vomica ♏2 (0.13); nerve tonic.

e. pi'cis compos'itum, compound e. of tar; each dose of ℥1 (4 0) contains syrup of tolu and syrup of wild cherry each ♏12 (0.8), and morphine sulphate gr. $\frac{1}{4}$ (0 0014) in wine of tar; expectorant.

e. pilocar'pi (N.F.), e. of pilocarpus or jaborandi; each dose of ℥2 (8.0) contains fluidextract of pilocarpus ♏8 (0.52) in compound e. of taraxacum flavored with syrup of coffee and tincture of vanilla; diaphoretic, diuretic, and sialogogue.

e. potas'sii aceta'tis, e. of potassium acetate; each dose of ʒ½ (16.0) contains potassium acetate gr. 20 (1.3) in aromatic e: diuretic and antacid.

e. potas'sii aceta'tis et junip'eri, e. of potassium acetate and juniper; each dose of ʒ½ (16.0) contains fluidextract of juniper ♏30 (2.0) and potassium acetate gr. 20 (1.3) in aromatic e.; diuretic.

e. potas'sii bro'midi (N.F.), e. of potassium bromide; each dose of ʒ2 (8.0) contains potassium bromide gr. 20 (1.3) in aromatic e. colored red with compound tincture of cudbear; nerve sedative.

e. pro, e. proprieta'tis Paracel'si, Paracelsus' e. of propriety (*i.e.* in propriety with the human constitution), tinctura aloes et myrrhæ.

e. quini'næ et phospha'tum compos'itum, compound e. of quinine and phosphates; each dose of ʒ2 (8.0) contains quinine sulphate gr. ½ (0.03), soluble ferric phosphate and potassium citrate each gr. 2 (0.13), and syrup of calcium lactophosphate ♏30 (2.0) in aromatic e.; tonic.

e. quini'næ valera'tis et strychni'næ, e. of quinine valerate and strychnine; each dose of ʒ1 (4.0) contains quinine valerate gr. 1 (0.06) and strychnine sulphate gr. 1/60 (0.0006) in aromatic e., colored red with compound tincture of cudbear; nerve tonic.

e. rhe'i, e. of rhubarb; each dose of ʒ2 (8.0) contains sweet tincture of rhubarb ʒ1 (4.0) with alcohol, glycerin, syrup, and water; stomachic laxative.

e. rhe'i et magne'sii aceta'tis, e. of rhubarb and magnesium acetate; each dose of ʒ1 (4.0) contains fluidextract of rhubarb ♏7½ (0.5), and magnesium acetate gr. 4 (0.25) in aromatic e.; laxative refrigerant.

e. ru'bi compos'itum, compound e. of blackberry; each dose of ʒ½ (16.0) contains blackberry root, galls and cinnamon each gr. 4 (0.25), cloves gr. 1 (0.06), mace and ginger each gr. ½ (0.03) in a mixture of blackberry juice, glycerin, syrup, and alcohol; employed in diarrhea.

e. sa'bal et san'tali compos'itum (N.F.), compound elixir of sabal and sandalwood, compound elixir of saw palmetto and sandalwood; sabal and triticum, of each 260, fluidextract of zea, 260; fluidextract of sandalwood 65, compound spirit of orange 5, glycerin 150, alcohol and distilled water to make 1000; dose, ʒ1 (4.0).

e. so'dii bro'midi (N.F.), e. of sodium bromide; each dose of ʒ2 (8.0) contains gr. 20 (1.3) of this salt in aromatic e.; nerve sedative.

e. so'dii hypophosphi'tis, e. of sodium hypophosphite; each dose of ʒ1 (4.0) contains sodium hypophosphite gr. 2 (0.13) and hypophosphorous acid ♏½ (0.015) in aromatic e., tonic.

e. so'dii salicyla'tis (N.F.), e. of sodium salicylate, each dose of ʒ1 (4.0) contains gr. 5 (0.3) of this salt in aromatic e.; employed in rheumatism.

e. so'dii salicyla'tis compos'itum (N.F.), compound elixir of sodium salicylate; contains sodium salicylate 80, fluidextract of cimicifuga 32, fluidextract of gelsemium 16, potassium iodide 15, in aromatic elixir, sufficient to make 1000; dose, ʒ1 (4 0).

e. stillin'giæ compos'itum, compound e. of stillingia; each dose of ʒ1 (4 0) contains compound fluidextract of stillingia ♏15 (1 0) in aromatic e.; alterative.

e. strychni'næ valera'tis, e. of strychnine valerate; each dose of ʒ1 (4 0) contains gr. 1/60 (0.0006) of this salt in aromatic e. colored red with cudbear and flavored with vanilla; nerve tonic.

e. tarax'aci compos'itum (N.F.), compound e. of taraxacum; each dose of ʒ2 (8.0) contains fluidextract of taraxacum ♏4 (0.26), fluidextract of wild cherry ♏2½ (0.16) fluidextract of licorice and tincture of sweet orange peel each ♏7½ (0.5), tincture of cinnamon and compound tincture of cardamom each ♏3¾ (0.24) in aromatic e.; bitter tonic and cholagogue, and used as a vehicle for bitter drugs.

e. terpi'ni hydra'tis (N.F.), e. of terpin hydrate; each dose of ʒ1 (4.0) contains gr. 1 (0.06) of terpin hydrate in a mixture of alcohol, glycerin, and syrup flavored with tincture of sweet orange and saccharin, used for the relief of cough.

e. terpi'ni hydra'tis et codei'næ (N.F.), e. of terpin hydrate and codeine; each dose of ʒ1 (4 0) contains codein gr. ½ (0.008) added to the preceding; used for the relief of cough.

e. terpi'ni hydrat'is et creoso'ti compos'itum (N.F.), compound elixir of terpin hydrate and creosote; terpin hydrate and creosote, of each 4.40, calcium and sodium glycerophosphates, of each 8.75, chloroform 2.20, lactic acid 6.00, glycerin 320.00, alcohol 200.00, glusıde 0.20, acetic ether 2.00, compound spirit of orange 10.00, distilled water to make 1000; dose, ʒ1 (4.0).

e. terpi'ni hydra'tis et diacetylmorphi'næ (N.F.), e. of terpin hydrate and heroine; each dose of ʒ1 (4 0) contains heroine gr. 3/4 (0.0027) in e. of terpin hydrate; used for the relief of cough.

e. ton'gæ et salicyla'tum (N.F.), elixir of tonga and salicylates; tonga 140, cimicifuga 35, sodium salicylate 70, pilocarpine nitrate 0.175, colchicine 0.035, compound spirit of orange 12, sucrose 325, glycerin 60, alcohol and water to make 1000; dose ʒ1 (4.0).

e. tri'um bromido'rum, e. bromidorum trium.

e. tur'neræ, e. of turnera or damiana; each dose of ʒ1 (4 0) contains fluidextract of turnera ♏10 (0.6) in alcohol, glycerin, and aromatic e.; aphrodisiac.

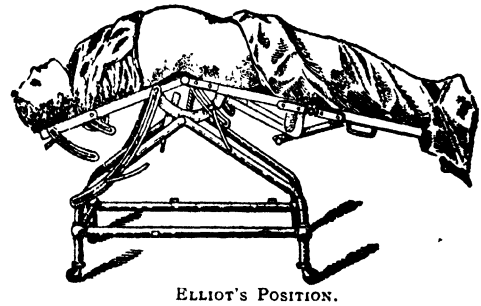
e. vanilli'ni compos'itum (N.F.), compound e. of vanillin, contains compound spirit of vanillin 20, alcohol 80, glycerin 25, syrup 300, tincture of caramel 20, distilled water to make 1000.

e. vibur'ni op'uli compos'itum (N.F.), compound e. of viburnum opulus or crampbark; each dose of ʒ1 (4.0) contains the fluidextracts of viburnum opulus and aletris each ♏5 (0.3), and fluidextract of trillium ♏10 (0.6) in compound e. of taraxacum; nerve sedative.

e. vibur'ni prunifo'lii (N.F.), e. of viburnum prunifolium or black haw; each dose of ʒ1 (4.0) contains ♏7½ (0.5) of the fluidextract of this drug with compound tincture of cardamom, in aromatic elixir; uterine sedative.

e. zin'ci valera'tis, e. of zinc valerate; each dose of ʒ1 (4 0) contains zinc valerate gr. 1 (0.06) and stronger solution of ammonium citrate ♏6 (0.4) in alcohol and aromatic elixir, reddened with cudbear and flavored with bitter almond; nerve sedative.

Ellermann-Erlandsen meth'od (el'air-mahn; air'-lahnd-sen) [V. *Ellerman.* A. *Erlandsen,* Copenhagen physicians, contemporary.] 1. Simultaneous inoculation with a series of tuberculin dilutions of known strength in order to determine the weakest dilution to which the patient will react, this being calculated by measurement of the size of the resulting papules. 2. A method of examination of tuberculous sputum by treating it with sodium carbonate and caustic soda.



ELLIOT'S POSITION.

E'lliot's operation [Robert Henry *Elliot,* British military surgeon in India, *1864.] Trephining of the eyeball, at the corneoscleral margin, to relieve tension in glaucoma.

El'liot's position [John Wheelock *Elliot,* Boston surgeon, *1852.] A position to facilitate abdominal section, the patient resting upon a double inclined plane or on a single inclined plane with a cushion under the back at the level of the liver; see illustration.

El'liot's sign [George T. *Elliot*, New York dermatologist, 1855–1931.] Induration or infiltration of the border of a syphilitic skin lesion.

Ell'iott's law. Adrenalin acts by stimulating the endings of the true sympathetic nerve.

El'lis's curve or **line** [Calvin *Ellis*, American physician, 1826–1883.] Damoiseau's curve.

elm [A.S.] Ulmus.

Els'berg's solu'tion of i'odine. A 20 per cent. solution of iodine in alcohol and ether.

Els'ner's asth'ma [Christophorus Fredericus *Elsner*, German physician, 1749–1820.] Angina pectoris.

Els'ner's me'dium [Ottomar *Elsner*, German histologist, *1869.] A culture medium of potato juice, gelatin, and 1 per cent. potassium iodide; employed chiefly in the cultivation of the typhoid and the colon bacilli.

El Tor vibrio. A microorganism isolated from pilgrims dying with symptoms of dysentery or gangrene of the colon, thought at first to be an atypical Pfeiffer bacillus, but later proved to be a true cholera vibrio.

eluate (el'u-āt). An anti-serum alleged to be protein-free and to contain antibodies free from all allergic agents.

elutriation (e-lu-trī-a'shun) [L. *elutriare*, to decant.] The separation of a coarse insoluble powder from a finer one by suspending them in water and pouring off the finer powder from the upper part of the fluid, the coarser one sinking first to the bottom.

elytritis (el-e-trī'(tre')tis) [G. *elytron*, vagina, + *-itis*.] Colpitis; inflammation of the vagina.

elytrocele (el'e-tro-sēl) [G. *elytron*, vagina, + *kēlē*, tumor] Colpocele; a hernia or other tumor projecting into the vagina.

elytroclasia (el"e-tro-kla'sĭ-ah) [G. *elytron*, vagina, + *klasis*, a breaking.] Rupture of the vagina.

elytrocleisis (el"ĭ-tro-kli'sis) [G. *elytron*, vagina, + *kleisis*, a closure.] Adhesion of the vaginal walls; obliteration of the vaginal canal.

e'lytroplasty [G. *elytron*, vagina, + *plassō*, I form] Colpoplasty; a plastic operation for the repair of a defect in the vagina.

elytropto'sia [G. *elytron*, vagina, + *ptōsis*, a falling.] Colpoptosia; prolapse of the vaginal walls.

elytrorrhaphy (el-e-tror'ră-fĭ) [G. *elytron*, vagina, + *rhaphē* a sewing.] Colporrhaphy; repair of a rupture of the vagina by freshening and suture of the torn edges.

elytrosteno'sis [G. *elytron*, vagina, + *stenōsis*, a narrowing.] Stricture or a general contraction of the vagina, colpostenosis.

elytrot'omy [G. *elytron*, vagina, + *tomē*, incision] Colpotomy; an incision into the wall of the vagina.

Elzholz's bod'ies (elts'holts) [A. *Elzholz*, Vienna psychiatist, 1863–1925.] Small bodies seen in degenerating medullated nerve-fibers. **E.'s mix'ture,** a solution of eosin in glycerin and water, used in the quantitative estimation of leucocytes.

emaciation (e-ma-sĭ-a'shun) [L. *emaciare*, to grow thin.] Extreme loss of flesh, a growing lean.

emacula'tion [L. *e*, out, + *macula*, spot.] The removal of spots or other blemishes from the skin.

emailloblast (e-mīl'o-blast) [Fr. *émail*, enamel, + G. *blastos*, sprout.] Ameloblast, adamantoblast.*

emailloid (em'i-loyd or e-mīl'oyd) [Fr. *émail*, enamel, + G. *eidos*, resemblance.] A tumor arising from the enamel of a tooth.

emanation (em-ă-na'shun) [L. *emanare*, to flow out.] Exhalation, effluvium; the active gaseous disintegration product of a radioactive element. **actin'ium e.,** actinon, an emanation derived from actinium X (*q.v.*). **ra'dium e.,** radon, a radioactive gas given off from slightly acidulated solutions of radium salts; it imparts temporary radioactivity to other substances upon which it seems to settle like an infinitely fine powder; in time, as shown by the spectrum, it is converted into helium; dissolved in water it generates neon; it also generates argon and contains the inert gaseous element niton; its alpha-ray activity has a half period of 15 minutes, but its gamma-ray activity has a half period of one hour. **tho'rium e.,** thoron.

emanatorium (e-man-a-to'-rĭ-um). An institution where treatment is applied by radioactive waters and the inhalation of radium emanations.

eman'sio men'sium [L.] Failure of the menstrual function to become established.

emarginate (e-mar'jin-āt) [L. *e*, out, + *margo*, edge.] Nicked, with broken margin.

emascula'tion. Castration.

Embadomonas (em-bă-dom'o-nas) [G. *embadon*, surface, + *monas*, unit, monad.] A genus of Mastigophora, one species of which, *E. intestinalis*, is parasitic in the human intestine.

embalm (em-bahm') [L. *in*, in, + *balsamum*, balsam.] To treat a dead body with balsams or antiseptics to preserve it from decay.

embarras gastrique (oṅ-bă-rah' gah-strēk') [Fr.] A "bilious" attack, acute indigestion.

embed'. Imbed, to surround a pathological or histological specimen with a firm but not hard medium, such as paraffin or wax, in order to make possible the cutting of thin sections for microscopical examination.

em'belate. A salt of embelic acid.

embe'lia (B.A.). The dried fruit of *Embelia ribes* and *E. robusta*, small trees of India, anthelmintic in doses of ʒ 1–4 (4.0–16.0).

embelic acid (em-be'lik as'id). A yellow crystalline powder, $C_{18}H_{28}O_4$, soluble in alcohol, obtained from embelia; the ammonium salt has been given as a teniafuge in doses of gr. 3–6 (0.2–0.4) preceded and followed by castor oil.

embola'lia. Embololalia.

embole (em'bo-le) [G. *embolē*, insertion.] 1. An operation for the reduction of a dislocation. 2. Formation of the gastrula by invagination. 3. Enarthrosis.

embolectomy (em-bo-lek'to-mĭ) [G. *embolos*, plug, embolus, + *ektomē*, excision.] Excision of an embolus.

embole'mia, embolæ'mia [G. *embolos*, a plug, + *haima*, blood.] The presence of septic emboli in the circulating blood, leading to the formation of pyemic abscesses.

embo'lia. Embole.

embol'ic. Relating to an embolus or to embolism.

embol'iform [L. *embolus* + *forma*, form.] 1. Like an embolus. 2. Wedge shaped; noting the nucleus* emboliformis.

embolism (em'bo-lizm) [G. *embolisma*, a piece or patch.] Obstruction or occlusion of a vessel by a transported clot or vegetation, a mass of bacteria, or other foreign material. **air e.,** the presence of bubbles of air in the heart or vessels, most commonly in the veins near the heart, the right auricle (atrium) or ventricle, or in the pulmonary capillaries; usually the result of a wound of one of the large veins of the neck. **bland e.,** simple, nonseptic e. **crossed e.,** paradoxical e. **direct' e.,** e. occurring in the direction of the blood-current. **fat-e.,** the occurrence of fat or oil globules in the capillaries, usually the pulmonary capillaries. **gas-e.,** air-e. **hematog'enous e.,** e. occurring in a

blood-vessel. **infec'tive e.,** pyemic e. **lymph-e., lymphog'enous e.,** e. occurring in a lymphatic vessel. **mil'iary e.,** e. occurring simultaneously in a number of capillaries. **mul'tiple e.,** (1) miliary e.; (2) e. caused by the arrest of a number of small emboli. **oil-e.,** fat e. **paradox'ical e.,** plugging of a systemic artery by a mass transported from a vein through an open foramen ovale, without passing through the pulmonary circulation. **pye'mic e.,** plugging of an artery by an embolus detached from an infective suppurating thrombus. **ret'inal e.,** e. of the arteria centralis retinæ. **ret'rograde e.,** the plugging of a vein by a mass carried in a direction contrary to that of the normal blood-current. **ve'nous e.,** retrograde e.

embolola'lia [G. *embolos*, thrown in, + *lalia*, speaking.] The interjection of meaningless words in the sentence when speaking.

embolomycotic (em"bo-lo-mi-kot'ik) [G. *embolos*, a plug, + *mykēs*, fungus.] Relating to or caused by an infectious embolus.

embolophasia (em"bol-o-fa'zĭ-ah) [G. *embolos*, thrown in, + *phasis*, a saying.] Embololalia.

embolophrasia (em"bol-o-fra'zĭ-ah) [G. *embolos*, thrown in, + *phrasis*, phrase.] Embololalia.

em'bolus [G. *embolos*, a wedge or stopper.] 1. A plug, composed of a detached clot, mass of bacteria or other foreign body, occluding a blood-vessel. 2. Nucleus emboliformis. **air-e.,** a bubble of air plugging a small vessel; see *air-embolism.** **bland e.,** a simple e., not septic in character. **cell'ular e.,** an e. composed of a mass of cells transported from disintegrating tissue. **fat-e.,** an e of oil or fatty matter. **ob'turating e.,** an e. completely closing the lumen of a vessel. **oil-e.,** fat-e. **ri'ding or stradd'ling e.,** an embolus arrested at the point of bifurcation of an artery and blocking more or less completely both branches of the vessel.

em'boly. Embole.

embrasure (em-bra'zhūr) [an opening in a wall for cannon.] In dentistry denoting an opening that widens outwardly or inwardly; that part of the interproximate space that spreads out toward the labial, lingual, or buccal aspect.

embroca'tion [G. *embrochē*, a fomentation.] 1. Liniment. 2. Fomentation, the application of a liniment.

embryectomy (em-bri-ek'to-mĭ) [G. *embryon*, embryo, + *ektomē*, excision.] The operative removal of the product of conception, especially in ectopic pregnancy.

embryo (em'bre-o, em'bri-o) [G. *embryon*.] 1. A rudiment. 2. The rudimentary plant in the seed. 3. The product of conception during its intrauterine existence; its first two weeks constitute the ovum stage, from the end of the 2d to the beginning of the 8th week is the embryonal stage, and from the beginning of the 3d month to the termination of gestation is the fetal stage.

embryocardia (em"bri-o-kar'dĭ-ah) [G. *embryon*, embryo, + *kardia*, heart.] A disturbance in rhythm, in which the heart sounds resemble those of the fetus, the first and second sounds becoming alike, the long pause being abbreviated; it is present sometimes in cases of cardiac dilatation. **ju'gular e.,** auricular flutter.

embryoc'tony [G. *embryon*, embryo, fetus, + *kteinō*, I destroy.] Feticide, taking the life of the product of conception any time before birth.

embryogen'ic, embryogenet'ic [G. *embryon*, embryo, + *gennaō*, I produce.] Producing an embryo; relating to the formation of an embryo.

embryogeny (em-bri-oj'en-ĭ) [G. *embryon*, embryo, + *gennaō*, I produce.] The origin and growth of the embryo.

embryog'raphy [G. *embryon*, embryo, + *graphē*, I write.] A treatise describing the formation and development of the embryo.

em'bryoid. Embryonoid.

embryol'ogist. One who makes a special study of embryology.

embryol'ogy [G. *embryon*, embryo, + *-logia*.] The science of the origin and development of the animal organism from the ovum to the period of extrauterine or extraovular existence.

embryo'ma. A tumor developed from embryonal structures or from a blighted ovum.

embryomorphous (em"bri-o-mor'fus) [G. *embryon*, embryo, + *morphē*, shape.] 1. Relating to the formation and structure of the embryo. 2. Noting structures or tissues in the body similar to those in the embryo, or embryonal rests.*

em'bryonal. Relating to an embryo.

em'bryonate. 1. Embryonal. 2. Impregnated.

embryon'ic. In the condition of an embryo, rudimentary.

embryoniform (em-bri-on'i-form) [G. *embryon*, embryo, + L. *forma*, form.] Embryonoid.

embryonization (em"bri-on-i-za'shun). Reversion of a cell or a tissue to an embryonic form.

embryonoid (em'bri-o noyd) [G. *embryon*, embryo, + *eidos*, appearance.] Resembling an embryo or a fetus.

embryoplas'tic [G. *embryon*, embryo, + *plassō*, I form.] Relating to the formation of an embryo.

em'bryoscope [G. *embryon*, embryo, + *skopeō*, I examine.] An instrument for extracting the embryos in hens' eggs at different stages of development, for the purpose of studying their development.

em"bryoto'cia [G *embryon*, embryo, + *tokos*, childbirth.] Abortion.

em'bryotome. Any instrument employed in embryotomy.

embryotomy (em-bri-ot'o-mĭ) [G. *embryon*, embryo, + *tomē*, cutting.] Any mutilating operation on the fetus to make possible its removal when delivery is impossible by natural means.

em"bryotox'on [*embryo* + G. *toxon*, bow.] A band of corneal opacity similar in appearance to the arcus senilis, sometimes seen in the newborn.

embryot'rophy [G. *embryon*, embryo, + *trophē*, nourishment.] The nutrition of the embryo.

embryulcia (em-bri-ul'sĭ-ah) [G. *embryoulkia*, extraction of the embryo.] Mechanical extraction of the embryo or fetus from the uterus.

embryul'cus. A hook-shaped instrument for use in extracting the dead embryo or fetus retained in the uterus, or in cases of abortion.

emed'ullate [L. *e*, from, + *medulla*, marrow.] To extract the marrow or pith of anything.

emergency (e-mur'jen-sĭ) [L. *emergere*, to rise up.] An unlooked-for contingency or happening; a sudden demand for action.

emergent (e-mur'jent). 1. Arising suddenly and unexpectedly and calling for quick judgment and prompt action. 2. Coming out, leaving a cavity or other part.

em'erods. Hemorrhoids.

em'esis [G.] Vomiting.

emet'ic. 1. Relating to or causing vomiting. 2. An agent which causes vomiting.

emeticol'ogy. Emetology.

emetina (em-ĕ-te'nah). Emetine, an alkaloid from ipecac, the emetic principle of the drug. **emeti'næ et bismu'thi iod'idum** (Br.), emetine and

bismuth iodide, containing between 25 and 28 per cent of emetine and 18 to 21 per cent of bismuth; dose, gr. ¼ (0.01). **emetinae hydrochlor'idum** (U.S. and Br.), emetine hydrochloride; hypodermic dose, gr. ⅓ (0.02).

emetocathartic (em"ĕ-to-kă-thar't k). 1. Both emetic and cathartic. 2. An agent which causes vomiting and purging.

emetol'ogy [G. *emetos*, nausea and vomiting, + *-logia*.] Study of vomiting in all its aspects.

emetophobia (em"-ĕ-to-fo'bĭ-ah) [G. *emesis*, vomiting, + *phobos*, fear.] Morbid dread of vomiting.

E.M.F. Abbreviation for electromotive force.

emic'tory [L.] Diuretic.

emigra'tion [L. *e*, out, + *migrare*, to move.] The passage of white blood-cells through the endothelium and walls of the small blood-vessels.

em'inence. Eminentia.

eminen'tia (em-i-nen'shĭ-ah) [L. prominence; *eminere*, to project.] Eminence, a circumscribed area raised above the general level of the surrounding surface. **e. abducen'tis**, e. facialis. **e. acus'tica**, a prominence in the floor of the fourth ventricle at the base of the trigonum vagi (ala cinerea) over which run the striæ acusticæ. **e. annula'ris**, pons Varolii. **e. arcua'ta** [BNA], arcuate eminence, a prominence on the superior (anterior) surface of the petrous portion of the temporal bone indicating the position of the superior semicircular canal. **e. articula'ris**, tuberculum articulare of the temporal bone. **e. car'pi radia'lis** [BNA], a rather large flat eminence on the radial (outer) side of the front of the wrist, due to the tuberosity of scaphoid and the ridge on the trapezium. **e. car'pi ulna'ris** [BNA], an eminence, smaller than the radial, as the ulnar (inner) side of the front of the wrist, due to presence of the pisiform bone. **e. collatera'lis** [BNA], collateral eminence, an elevation on the floor of the collateral trigone of the lateral ventricle of the brain, between the hippocampus and the calcar avis, caused by the proximity of the bottom of the mid-collateral fissure; called also the *posterior collateral eminence*. The *anterior collateral eminence* is an elevation occasionally present on the floor of the inferior horn of the lateral ventricle, caused by the proximity of the anterior portion of the collateral fissure when this is present. **e. con'chæ** [BNA], eminence of the concha, the prominence on the cranial surface of the auricle corresponding to the concha. **e. crucia'ta** [BNA], cruciate eminence, a figure on the internal surface of the occipital bone formed by ridges running forward and backward from the protuberance and by the margins of the groove for the lateral sinus on either side; it divides the surface of the bone into four fossæ, a cerebral and a cerebellar on each side. **e. facia'lis**, colliculus facialis, a thickening of the e. medialis above the medullary (acustic) striæ in the floor of the fourth ventricle, marking the location of the genu of the facial nerve. **e. fos'sæ triangula'ris** [BNA], eminence of the triangular fossa, the prominence on the cranial surface of the auricle corresponding to the fossa triangularis. **e. fronta'lis**, tuber frontale [BNA]. **e. gra'cilis**, funiculus gracilis. **e. hypoglos'si**, a prominence in the floor of the ourth ventricle marking the location of the hypoglossal nucleus. **e. iliopectin'ea** [BNA], iliopectineal eminence, a rounded elevation on the inner surface of the innominate bone at the junction of the ilium and pubis. **e. intercondyloid'ea** [BNA], intercondyloid eminence, spinous process of the tibia; an elevation on the upper surface of the shaft of the tibia between the two articular surfaces. **e. latera'lis** (1) the tubercle on the cricoid cartilage articulating with the inferior horn of the thyroid; (2) pes accessorius. **e. media'lis** [BNA], medial eminence, e. teres, funiculus teres; a small rounded elevation in the fovea superior of the floor of the fourth ventricle, bounding the median groove on either side, and marking the site of the fasciculus teres below. **e. parieta'lis,** tuber parietale [BNA]. **e. pyrami'da'lis** [BNA], pyramid of the tympanum, a conical projection behind the fenestra ovalis in the tympanum; it is hollow and contains the stapedius muscle. **e. restifor'mis,** a dorsolateral prominence on the medulla indicating the location of the inferior cerebellar peduncle. **e. sca'phæ** [BNA], eminence of the scapha, the prominence on the cranial surface of the auricle corresponding to the scapha. **e. sym'physis,** the projecting central portion of the chin. **e. te'res,** round eminence, e. medialis [BNA]. **e. triangula'ris,** a prominence on the posterior surface of the auricle corresponding to the fossa triangularis on the other side. **e. trigem'ini,** a slight prominence on the lateral aspect of the medulla marking the location of the descending root of the fifth (trifacial) nerve.

emissarium (em'ĭ'-sa'rĭ-um) [L. an outlet.] Emissary, an emissary vein. **e. condyloid'eum** [BNA], connecting the transverse sinus and the external vertebral venous plexuses. **e. mastoid'eum** [BNA], connecting the transverse sinus with the occipital vein or one of the radicles of the external jugular. **e. occipita'le** [BNA], an inconstant vessel connecting the diploic or occipital veins with the confluens sinuum. **e. parieta'le** [BNA], connecting the superior sagittal sinus with the extracranial veins.

em'issary [L. *emissarium*, outlet] One of the channels of communication between the venous sinuses of the dura mater and the veins of the diploe and the scalp.

emission (e-mish'un) [L. *emissio; e*, out, + *mittere*, to send.] A discharge; referring usually to a seminal discharge occurring during sleep.

Emman'uel move'ment. A system of treatment of functional nervous and psychic disorders by means of suggestion and moral uplift, developed and put into practice by clergymen of the Emmanuel Episcopal Church in Boston, Mass.

emmenagogic (em-en"ă-goj'ik). Relating to or acting as an emmenagogue; causing or increasing menstruation.

emmenagogue (em-en'ă-gog) [G. *emmênos*, monthly, + *agōgos*, leading.] 1. Promoting or increasing the menstrual flow. 2. An agent which induces or increases menstruation.

emme'nia [G *emmênos*, monthly.] Catamenia, the menstrual flow.

emme'nic. Relating to the menses.

emme"niop'athy [G. *emmênios*, monthly, + *pathos*, suffering.] A disorder of menstruation.

emmenology (em-e-nol'o-jĭ). The branch of medicine which has to do especially with the physiology and pathology of menstruation.

Emmerich's baci'llus (em'er-ikh) [Rudolf *Emmerich*, German bacteriologist, 1852–1914.] *Bacillus neapolitanus*.

Emmerich-Scholl se'rum. An anticancer serum obtained from the sheep inoculated with a culture of streptococci which have previously been passed through the rabbit.

Em'met's meth'od [Thomas Addis *Emmet*, New York gynecologist, 1828–1919.] An operative procedure for the repair of lacerated perineum. **E.'s nee'dle,** a strong needle with the eye in the point, having a wide curve, and set in a handle. **E.'s operation,** trachelorrhaphy.

emm'etrope (em'e-trōp). An emmetropic person, one with normally refracting eyes.

emmetro'pia [G. *emmetros*, according to measure, + *ōps*, eye.] The condition in which the refraction of the eye is normal, parallel rays, when the eye is at rest, being focussed exactly on the retina

em'odin. A crystalline body, $C_{14}H_4(CH_3)(OH)_3O_2$, found in rhubarb, senna, cascara sagrada, aloes, and other purgative drugs, but itself having but little cathartic action.

emollient (e-mol'yent) [L. *emolliens; emollire*, to soften.] 1. Soothing to skin or mucous membrane. 2. An agent which softens the skin or soothes irritation in skin or mucous membrane.

emo'tion [L. *emovere*, to agitate.] A strong feeling or aroused mental state, directed toward a definite object and giving rise to some more or less evident physical expression.

emo'tional. Relating to any of the emotions. **e. att'itudes,** passional* attitudes.

emotiovascular (ē-mo"shyo-vas'ku-lar). Relating to the vascular changes, such as pallor and blushing, caused by emotions of various kinds.

emp. Abbreviation of L. *emplastrum*, plaster.

em'pasm, empas'ma [G. *empassō*, I sprinkle on.] A dusting powder.

empathic (em-path'ik). Relating to or marked by empathy. **e. in'dex,** the degree of empathy experienced by one in respect of another person, more particularly of a sufferer from some morbid mental or somatic condition.

empathize (em'pă-thīz). To feel empathy in relation to another person or thing; to enter into another's feelings, to put oneself in another's place; to read or feel oneself into another person or thing.

empathy (em'pă-thĭ) [G. *en(em)*, in, + *pathos*, feeling.] The reading or feeling oneself into another person, race, or thing; humanizing or anthropomorphizing objects and feeling oneself as in and part of them.

emphlysis (em'fli-sis) [G. *en*, in, + *phlysis*, an eruption.] A vesicular eruption, such as pemphigus.

emphrac'tic. Relating to emphraxis, closing the mouths of the coil glands in the skin.

emphrax'is [G. a stoppage.] 1. A clogging of the mouths of the sweat-glands. 2. An impaction.

emphysema (em-fi-se'mah) [G. *en*, in, + *physēma*, a blowing.] 1. The presence of air in the interstices of the connective tissue of a part. 2. Dilatation of the pulmonary air vesicles, usually through atrophy of the septa between the alveoli. **atroph'ic e.,** substantive e. **com'pensating** or **compen'satory e.,** increase in the air capacity of a portion of the lung when another portion is consolidated or unable to perform its respiratory function **cuta'neous e.,** subcutaneous e. **ectat'ic e.,** pulmonary e. in which the alveoli are dilated beyond their full normal capacity, yet without atrophy of their walls and blood-vessels. **interlob'ular e.,** interstitial e. in the connective-tissue septa between the pulmonary lobules. **intersti'tial e.,** (1) the presence of air in the pulmonary tissues consequent upon rupture of the air-cells; (2) the presence of air or gas in the connective tissue. **medias'tinal e.,** accumulation of air in the cellular tissue of the mediastinum. **pul'monary e.,** emphysema (2). **se'nile e.,** substantive e. consequent upon the physiological atrophy of old age. **subcuta'neous e.,** the presence of air or gas in the subcutaneous connective tissues. **sub'stantive e.,** increase in size of the pulmonary vesicles through atrophy of their walls and breaking down of the septa between adjacent air-cells. **sur'gical e.,** subcutaneous e. following traumatism or a surgical operation. **vesic'ular e.,** pulmonary e., emphysema (2), dilatation of the air-cells of the lungs.

emphysem'atous. Relating to or affected with emphysema.

empir'ic. 1. Empirical. 2. A charlatan, one who treats symptoms solely, knowing nothing of the nature of disease. 2. One of a school of ancient Greek physicians who contended that the practice of medicine should be based wholly on experience and not on theory.

empirical (em-pir'i-kl) [G. *empeirikos; empeiria*, experience.] 1. Founded on experience. 2. Relating to an empiric.

empir'icism. 1. A looking to experience as a guide to practice or to the therapeutic use of any remedy. 2. Quackery, charlatanism.

emplas'tic [G. *emplastikos*, clogging] 1. Adhesive, used as a plaster. 2. Constipating

emplas'trum, gen. *emplas'tri;* pl. *emplas'tra* [L.] Plaster; a solid preparation of such consistency that, when applied to the body, it does not run but softens sufficiently to be adhesive; plasters are used to protect raw surfaces and wounds, to keep the edges of a cut in apposition, to produce irritation or blistering of the skin, and sometimes to apply drugs with the expectation of absorption

e. adhæsi'vum (U.S.), adhesive plaster, e. elasticum (U.S. IX), rubber adhesive plaster, a mixture of rubber, resins, and waxes, with a filler of an absorbent powder, such as zinc oxide, orris root, or starch, mechanically mixed and spread upon cotton cloth; the adhesive plaster of the B.P. contains rosin and soap.

e. al'bum coc'tum, e. cerussæ.

e. ammoni'aci cum hydrar'gyro (Br.), ammoniac plaster with mercury, prepared by mixing, with trituration, ammoniac 12 ounces, mercury 3 ounces, olive oil 56 grains, sublimed sulphur 8 grains; alterative and irritant, applied to syphilitic joints and glands.

e. aromat'icum, aromatic plaster, spice plaster; cloves, cinnamon, and ginger, each 10, capsicum and camphor, each 5, cotton-seed oil 35, lead plaster 25; counterirritant and rubefacient. This preparation, formerly in the N.F. is now replaced by the pulvis aromaticus rubefaciens made into a poultice by moistening with hot diluted alcohol or vinegar.

e. belladon'næ (U.S. and Br.), belladonna plaster, made of extract of belladonna leaves 300, adhesive plaster 700 (U.S.), or of liquid extract of belladonna 4 fluidounces evaporated to 1 ounce, resin plaster 5 ounces (Br.); applied in neuralgia and rheumatism, palpitation of the heart, and beginning inflammation of the testes and mammæ.

e. calefa'ciens (Br.), warming plaster, made of cantharides, yellow wax, and rosin each 4 ounces, soap plaster 2 pounds, resin plaster 3½ pounds; employed as a counterirritant.

e. cantharidi'ni (Br.), cantharidin 2, acetone 100, castor oil 200, yellow beeswax 400, wool fat 398.

e. canthar'idis (U.S.), cantharides cerate spread upon rosin plaster, muslin, or paper, each square centimeter containing 0.1 Gm. of cantharides cerate.

e. cap'sici (U.S.), capsicum plaster, made by painting oleoresin of capsicum on adhesive plaster; counterirritant.

e. cerus'sæ, white lead plaster, made of lead carbonate 7, olive oil 2, lead plaster 12; soothing application to burns and other forms of dermatitis.

e. colopho'nii (Br.), e. resinæ (U.S.), resin plaster, adhesive plaster

e. elas'ticum (U.S. IX), rubber adhesive plaster, now official as e. adhæsivum.

e. fer'ri, e. roborans, strengthening plaster; ferric oxide 90, olive oil 50, Burgundy pitch 140, lead plaster 720.

e. fus'cum camphora'tum (N.F. and P.G.), camphorated brown plaster, camphorated mother plaster; red oxide of lead 30, olive oil 60, yellow wax 15, camphor 1; employed for the same purpose as lead plaster.

e. hydrar'gyri (Br.), mercurial plaster, made of mercury 3 ounces, sulphur 8 grains, and olive oil 56 grains, triturated together, and when the mercury is no longer visible it is mixed with 6 ounces of liquefied lead plaster; applied in the treatment of syphilides.

e. lithar'gyri compos'itum, compound lead plaster, compound galbanum plaster, contains ammoniac, galbanum, and turpentine mixed with lead plaster; used as a stimulant application to enlarged tuberculous glands.

e. ma'tris camphora'tum, camphorated mother plaster, e. fuscum camphoratum.

e. men'thol (Br.), menthol plaster, contains 15 per cent. menthol, used as a counterirritant in neuralgia.

e. mylab'ridis (B.A), mylabris plaster, prepared like cantharidal plaster and used for the same purposes.

e. mylab'ridis calefa'ciens (B A), warming mylabris plaster, employed like e. calefaciens (Br.).

e. o'pii (Br.), opium plaster, made of powdered opium 10 per cent.; employed to relieve superficial pain.

e. pi'cis (Br.), pitch plaster, composed of Burgundy pitch 26, frankincense 13, resin and yellow wax each 4½, olive oil and distilled water each 2; a mild counterirritant.

e. pi'cis cantharida'tum, warming plaster; cantharides cerate 80, Burgundy pitch 920.

e. pi'cis liq'uidæ compos'itum, compound tar plaster; podophyllum, phytolacca, and sanguinaria each 1, tar 4, rosin 5; counterirritant.

e. plum'bi (Br.), lead, litharge, or diachylon plaster, made by mixing solutions of lead acetate and soap; applied to varicose ulcers and as a protective; e.p. oleatis (U.S.).

e. plum'bi carbona'tis, e. cerussæ.

e. plum'bi iod'idi (Br.), lead iodide plaster, made of lead iodide and resin of each 2, and lead plaster 16; employed as an application to chronic inflammatory indurations.

e. plum'bi olea'tis (U.S.), lead oleate plaster, lead plaster, diachylon plaster, a mixture of lead monoxide, olive oil, and lard, equal parts.

e. resi'næ U.S., e. colophonii (Br.), rosin plaster, adhesive plaster; lead plaster 800, with an admixture of rosin 140, and yellow wax 60.

e. ro'borans, e. ferri.

e. sapo'nis (N.F. and Br.), soap plaster; made of soap 10, mixed with lead plaster 90 (N.F.), or soap 6, resin 1, and lead plaster 3 (Br.); employed as a discutient and protective.

e. sina'pis (U.S.), mustard plaster, formerly officially called charta sinapis· powdered black mustard mixed with a solution of rubber and spread on cloth or paper.

em'plet. Trade-name of an enteric coated endocrine gland product.

emprosthot'onos [G. *emprosthen*, forward, + *tonos*, tension.] A tetanic contraction of the flexor muscles, curving the back with concavity forward.

emptysis (emp'ti-sis) [G. a spitting.] Hemoptysis.

Empu'sa [G. *Empousa*, a polymorphous hobgoblin in Grecian mythology.] A genus of microscopic fungi parasitic on insects, and often fatal to them. Flies attacked by *E. mus'cæ* are often seen dead, surrounded by a white ring of this fungus.

empyema (em-pi-e'mah) [G *empyēma*, suppuration.] The presence of pus in any cavity; noting, when employed without qualification, an accumulation of pus in the pleural cavity, pyothorax. **e. benig'num,** latent e., chronic purulent sinusitis or pyothorax with mild or no constitutional symptoms. **e. necessita'tis,** a form of e. of the chest in which the pus burrows to the outside, producing a subcutaneous abscess which finally ruptures, resulting in spontaneous recovery without the necessity of operation. **e. of the chest,** pyothorax, pus in the pleural cavity. **e. of the pericar'dium,** purulent pericarditis, pyopericardium. **la'tent e.,** the presence of pus in a cavity, especially one of the accessory sinuses, unattended with subjective symptoms. **loc'ulated e.,** a condition in which numerous pleural adhesions have formed pockets in which pus collects. **pul'sating e.,** a large, tense collection of pus in the pleural cavity through which the heart movements are transmitted to the chest wall.

empye'ma-tube. A rubber drainage-tube (see *drain*, 2) piercing a sheet-rubber shield, passed through an opening in the chest wall in order to give exit to the pus as it is formed in a case of empyema.

empyemic (em-pi-e'mik). Relating to empyema.

empyesis (em-pi-e'sis) [G. suppuration.] A pustular eruption, such as that of smallpox.

empyocele (em'pi-o-sēl) [G. *en*, in, + *pyon*, pus, + *kēlē*, tumor] A suppurating hydrocele; a collection of pus in the scrotum

empyreuma (em-pi-ru'mah) [G. a banked fire.] The disagreeable odor of organic substances when subjected to destructive distillation.

empy'roform. Trade name of a product made by boiling birch tar with a solution of formaldehyde and pouring the hot liquid into hydrochloric acid; occurs as a grayish-brown powder, employed externally as an antipruritic and sedative.

emul. Abbreviation for L. *emulsum*, emulsion.

emul'gent [L. *emulgere*, to draw out.] 1. Draining out, extracting; noting especially the renal bloodvessels as if extracting the urine from the blood.

emul'sifier. An agent, such as gum arabic or the yolk of an egg, used to make an emulsion of a fixed oil.

emul'sify. To make in the form of an emulsion.

emul'sin [L. *emulgere*, to drain out.] An albuminous ferment in almonds, converting amygdalin into hydrocyanic acid and a volatile oil.

emul'sio, gen. *emulsio'nis*, pl. *emulsio'nes* [L.] Emulsion, emulsum.*

emulsion (e-mul'shun). The suspension of a fatty or resinous substance, divided into very fine particles, in a thin or watery fluid; it may occur naturally as in milk, or be produced artificially by agitation of a fat or resinous substance in a mucilaginous solution. See also *emulsum*. **bac'illary e.,** see under *tuberculin*.

emul'sive. 1. Noting a substance which can be made into an emulsion. 2. Noting a substance, such as a mucilage, by which a fat or resin can be emulsified. 3. Making soft or pliant. 4. Affording a fixed oil on pressure.

emulsoid (e-mul'soyd) [*emulsion* + G. *eidos*, resemblance. Emulsion colloid; a colloidal dispersion in which the disperse particles are more or less liquid and exert a certain attraction on and absorb a certain quantity of the fluid in which they are suspended.

emul'sum, gen. *emul'si*, pl. *emul'sa* [L. *emulsus; emulgere*, to milk out.] A liquid preparation in which an oil or resin is suspended in water by means of a mucilaginous admixture.

e. amyg'dalæ, emulsion of almond, mistura amygdalæ (Br.), sweet almond 60, acacia 10, sugar 30, water to make 1000; used as a demulcent and as a vehicle.

e. asafœt'idæ (U.S.), emulsion of asafetida, mixtura asafœtidæ, lac asafœtidæ, milk of asafetida, contains

4 per cent. of asafetida; employed as an enema in meteorism, and also used in hysteria in doses of ʒ 2–8 (8.0–30.0).

e. chloroform'i, emulsion of chloroform, mistura chloroformi, made with chloroform 40, expressed oil of almond 60, tragacanth 10, water to make 1000; employed as an antispasmodic and in the treatment of various nervous conditions in doses of ʒ 4–8 (15 0–30 0).

e. o'lei mor'rhuæ (U.S.), emulsion of cod-liver oil, made by mixing cod-liver oil 500, acacia 125, syrup 100, oil of wintergreen 4, in water to make 1000; dose, ʒ 1–4 (4.0–15.0).

e. o'lei mor'rhuæ cum cal'cii et so'dii phosphat'ibus, emulsion of cod-liver oil with calcium and sodium phosphates; each dose of ʒ ½ (16 0) contains gr. 3 (0 2) of each of these salts in a 50 per cent. flavored emulsion of cod-liver oil; alterative and nutrient.

e. o'lei mor'rhuæ cum cal'cii lactophospha'te (lak-to-fos-fa'te), emulsion of cod-liver oil with calcium lactophosphate; each dose of ʒ ½ (16.0) contains calcium lactate gr. 7½ (0.5) and phosphoric acid gr. 5 (0.3) in 50 per cent. flavored emulsion of cod-liver oil; alterative and nutrient

e. o'lei mor'rhuæ cum cal'cii phospha'te (fos-fa'te), emulsion of cod-liver oil with calcium phosphate; each dose of ʒ ½ (16.0) contains gr. 7½ (0.5) of the salt in a 50 per cent. flavored emulsion of cod-liver oil; alterative and nutrient.

e. o'lei mor'rhuæ cum hypophosphi'tibus (N.F.), emulsion of cod-liver oil with hypophosphites, contains calcium hypophosphite 10 potassium and sodium hypophosphites each 5, in 1000; dose, ʒ 1–4 (4 0–16 0).

e. o'lei mor'rhuæ cum pru'no virginia'na, emulsion of cod-liver oil with wild cherry; each dose of ʒ ½ (16 0) contains fluidextract of wild cherry, ♏15 (1.0), in a 50 per cent flavored emulsion of cod-liver oil; recommended in phthisis and chronic bronchitis with troublesome cough.

e. o'lei mor'rhuæ cum vitel'lo (N.F.), emulsion of cod-liver oil with egg; cod-liver oil 500, glycerite of yolk of egg 175, syrup of tolu 100, alcohol 120, flavoring and water to make 1000, dose, ʒ 4 (15 0).

e. o'lei ric'ini (ris'in-i) (N F.), emulsion of castor oil; a 33⅓ per cent emulsion flavored with syrup and vanilla; purgative in dose of ʒ 1½ (48.0).

e. o'lei terebin'thinæ (U S), emulsion of oil of turpentine, contains 15 per cent. rectified oil of turpentine; anthelmintic in doses of ʒ 1–4 (4.0–15.0).

e. o'lei terebin'thinæ for'tior, stronger emulsion of oil of turpentine Fo bes' emulsion of oil of turpentine; a 50 per cent. emulsion of oil of turpentine made by means of powdered acacia; dose, ♏30 (2.0).

e. petrola'ti (N.F.), emulsion of petrolatum; a 25 per cent. emulsion of expressed oil of almond with 5 per cent. of white petrolatum, flavored with syrup and tincture of lemon peel; employed as an intestinal lubricant.

e. phosphat'icum, phosphatic emulsion, phosphatic mixture; each dose of ʒ ½ (16 0) contains diluted phosphoric acid ♏12 (0 8) and Jamaica rum ʒ 1 (4 0) in a 25 per cent. flavored emulsion of cod-liver oil; nutrient.

emunc'tory [L. *emungere*, to blow the nose.] 1. Causing the removal of an excretion or other discharge. 2. An excretory duct.

emunda'tion [L. *emundare*, to clean out.] 1. Cleaning, disinfection. 2. Rectification, purification, especially of crude drugs.

enamel (ĕ-nam'el). The hard glistening substance covering the crown of a tooth, substantia* adamantina. **curled e.,** an e. in which the rods, or columns, are twisted, bent, and intertwined. **e. cap,** the enamel covering of the crown of a tooth. **e. cell,** ameloblast, adamantoblast, one of the epithelial cells lining the concavity of an e. germ. **e. col'umn,** one of a number of minute, parallel, hexagonal rods, running from the dentine to the surface of the enamel. **e. crypt,** a space bounded by the dental ledge on either side and the enamel organ at the bottom; it is filled by embryonic mesodermal tissue. **e. cu'ticle,** Nasmyth's membrane, an extremely thin membrane covering the enamel. **e. fi'ber,** e. column. **e. germ,** embryonal e. organ, one of a series of knob-like projections from the under surface of the dental lamina, later becoming bell-shaped and receiving in its hollow the papilla dentis. **e. groove,** dental* groove. **e. ledge,** dental shelf. **e. mem'brane,** the internal layer of the e. organ formed by the e. cells. **e. or'gan,** e. germ, the cap of enamel covering the dentine of the developing tooth. **e. prism,** e. column. **e. pulp,** a layer of stellate cells in the enamel organ. **e. rod,** e. column.

enanthem, enanthema, pl. *enanthem'ata* (en'anthem, en-an-the'mah) [G. *en.* in, + *anthēma*, an efflorescence.] A mucous-membrane eruption, especially one occurring in connection with one of the exanthemata.

enanthem'atous. Relating to an enanthem.

enanthe'sis [G. *en*, in, + *anthēsis*, blossom.] The skin eruption of a general disease, such as scarlatina or typhoid fever.

enanthrope (en'an-thrōp) [G. *en*, in, + *anthrōpos*, man.] A disease originating within the organism, an autoinfection.

enantiobiosis (en-an-tī-o-bi-o'sis) [G. *enantios*, opposite, + *bios*, life, + *-ōsis.*] Existence, in the same medium, of organisms which mutually restrict each other's development.

enantiomor'phic, enantiomor'phous. Characterized by enantiomorphism; of similar but contrasted form, as the right and left hands.

enantiomorphism (en-an-tī-o-mor'fizm) [G. *enantios*, opposite, + *morphē*, form.] The relation of two objects similar in form, but not superposable, as the two hands, or an object and its mirror-image.

enantiopath'ia. Enantiopathy.

enantiopath'ic. 1. Mutually antagonistic or antidotal, referring to morbid states. 2. Allopathic.

enantiop'athy [G. *enantios*, opposite, + *pathos*, suffering] 1. Antipathy, antidotal treatment, a method of treatment which consists in giving a remedy the physiological action of which is to produce symptoms which are the direct opposites of those of the disease in question. 2. Mutual antagonism of two morbid states.

enantiothamnosis (en-an''tī-o-tham-no'sis). A condition marked by the occurrence of variously sized nodules, having a central opening giving exit to pus, due to infection by a fungus *Enantiothamnus braulti.*

enarthro'dial. Relating to an enarthrosis. **e. joint,** a ball-and-socket joint.

enarthro'sis [G. *en*, in, + *arthrōsis*, joint.] Ball-and-socket or multiaxial joint, a spherical joint in which a more or less extensive sphere on the head of one bone fits into a rounded cavity on the other bone, as in the hip-joint. See illustration on page 344.

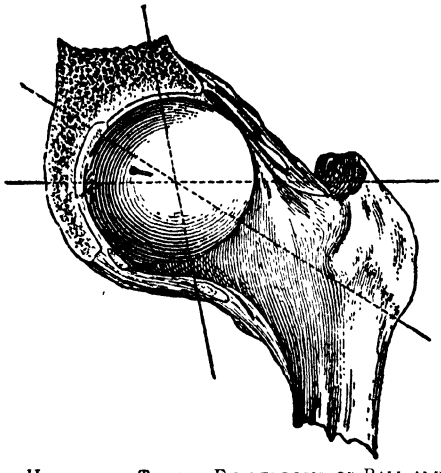
encan'this [G. *en*, in, + *kanthos*, canthus.] A minute tumor or excrescence at the inner angle of the eye.

encapsula'tion [L. *in*, in, + *capsula*, capsule.] Enclosure in a capsule or sheath.

Encapsulatus (en-kap-soo-la'tus) [L. encapsulated.] A genus of the family *Bacteriaceæ;* see *Klebsiella.*[0]

encapsuled (en-kap'sŭld). Inclosed in a sheath or capsule.

encarditis (en-kar-di'(de')tis). Endocarditis.



THE HIP-JOINT, A TYPICAL ENARTHROSIS, OR BALL-AND-SOCKET JOINT. The dotted lines and the pin indicate the principal axes of motion.

encatarrhaphy (en-kat-ar'ră-fĭ) [G *enkatarrhaptō*, I sew in.] The artificial implantation of an organ or tissue in a part where it does not naturally occur.

enceinte (oṅ-sant') [Fr.] Pregnant.

encelitis, enceliitis (en-se-li'(le')tis, en-se-le-i'(e')tis) [G. *en*, in, + *koilia*, belly.] Inflammation of any of the abdominal viscera.

encephalal'gia [G. *enkephalos*, brain, + *algos*, pain.] Cephalalgia, headache.

enceph"alasthe'nia [G. *enkephalos*, brain, + *asthe-neia*, weakness.] Psychasthenia, brain-tire.

encephalatroph'ic. Relating to encephalatrophy.

encephalat'rophy [G. *enkephalos*, brain, + *a-* priv. + *trophē*, nourishment.] Atrophy of the brain

encephalauxe (en-sef-al-awk'se) [G. *enkephalos*, brain, + *auxē*, increase.] Hypertrophy of the brain.

encephale'mia, encephalæ'mia [G. *enkephalos*, brain, + *haima*, blood.] Congestion of the brain.

encephal'ic. Relating to the brain, or to the structures within the cranium.

encephalit'ic. Relating to inflammation of the brain.

encephalitis (en-sef-al-ī'(e')tis) [G. *enkephalos*, brain, + *-itis*.] Inflammation of the brain. **e. cortical'is,** a chronic e. involving the cortex only, due usually, if not always, to arteriosclerosis. **e. epidem'ica,** e. lethargica, influenzal e., nona. **e. hæmorrhag'ica,** Struempell type, Leichtenstern type, e. of apoplectiform character due to blood extravasation. **e. hyperplas'tica,** Hayem type of acute non-suppurating e. **e. lethar'gica,** nona, a form occurring epidemically, often apparently in association with influenza, marked by apathy, somnolence, diplopia, and extreme muscular weakness. **e. neonato'rum,** encephalitis of the newborn, described by Virchow as marked by the presence of numbers of fat-laden cells in the brain. **e. periaxia'lis diffu'sa,** Schilder's disease, an affection occurring chiefly in children, marked by failure of hearing and spastic paraplegia followed by rapidly increasing speech defect and gradual loss of sight; death occurs rather suddenly a few hours after the onset of acute symptoms of cerebral inflammatory type; the white matter of the brain is degenerated, having a gelatinous appearance, but the cortex and meninges are not involved; the lesion is a destruction of the axis cylinder, demyelination. **e. pyogen'ica,** suppurative or purulent e., a form marked by the occurrence of numerous miliary abscesses and minute blood extravasations in the brain substance. **e. subcortical'is,** a chronic form affecting chiefly the subcortical structure, associated with arteriosclerosis. **influen'zal e.,** e. lethargica.

Encephalitozoon cuniculi (en-sef-al-it-o-zo'on ku-nik'u-li) [*encephalitis* + G. *zōon*, animal; L. *cuniculus* burrow, rabbit.] Name given to a supposed pathogenic agent of encephalitis lethargica. **E. rabie'i,** a Negri* body.

encephalocele (en-sef'al-o-sēl) [G. *enkephalos*, brain, + *kēlē*, tumor.] Protrusion of brain substance through a cleft in the skull.

encephalocœle (en-sef"al-o-se'le) [G. *enkephalos*, brain, + *koilos*, hollow.] 1. The cranial cavity. 2. The cerebral ventricles taken collectively.

enceph"alodial'ysis [G. *enkephalos*, brain, + *dia*, through, + *lysis*, loosening.] Softening of the brain.

encephalogram (en-sef'al-o-gram) [G. *enkephalos*, brain, + *gramma*, a drawing.] A roentgenogram of the contents of the skull.

encephalography (en-sef-al-og'ră-fĭ) [G. *enkephalos*, brain, + *graphō*, I write.] Roentgenography of the brain.

enceph'aloid [G. *enkephalos*, brain, + *eidos*, resemblance.] Resembling brain substance; noting a form of carcinoma of brain-like consistence.

enceph'alolith [G. *enkephalos*, brain, + *lithos*, stone.] A concretion in the brain or one of its ventricles, cerebral calculus.

encephalol'ogy [G. *enkephalos*, brain, + *-logia*.] Cerebrology; the branch of medicine dealing with the brain in all its relations

encephalo'ma. 1. A tumor of brain substance encephalocele. 2 An encephaloid carcinoma

enceph"alomala'cia [G *enkephalos*, brain, + *malakia*, softness.] Softening of the brain, encephalodialysis

encephalomeningitis (en-sef"al-o-men-in-ji'(je')tis) [G. *enkephalos*, brain, + *mēninx*, membrane, + *-itis*.] Meningoencephalitis, inflammation of the brain and its membranes

encephalomeningocele (en-sef"al-o-nĕ-nin'go-sēl) [G *enkephalos*, brain, + *mēninx*(*mēning-*), membrane, + *kēlē*, hernia.] Protrusion of brain substance, covered with the membranes, through a defect in the skull.

encephalomere (en-sef-al-o-mēr) [G. *enkephalos*, brain, + *meros*, a part.] One of the embryonal segments composing the primitive brain.

encephalom'eter [G. *enkephalos*, brain, + *metron*, measure.] An apparatus for indicating on the skull the location of the cortical centers.

encephalomyelic (en-sef"al-o-my-el'ik) [G. *enkephalos*, brain, + *myelon*, marrow.] Relating to both brain and spinal cord, cerebrospinal, encephalorrhachidian.

encephalomyelitis (en-sef-al-o-mi-el-i'(e')tis) [G. *enkephalos*, brain, + *myelon*, marrow, + *-itis*.] Inflammation of the brain and spinal cord.

enceph'alomyelop'athy [G. *enkephalos*, brain, + *myelon*, marrow, + *pathos*, suffering.] Any disease of both brain and spinal cord.

enceph'alon [G. *enkephalos*, brain.] The brain, that portion of the cerebrospinal axis contained within the cranium; it comprises the cerebrum, cerebellum, pons, and medulla oblongata.

encephalopath'ia, encephalop'athy [G. *enkephalos*, brain, + *pathos*, suffering.] Any disease of the

brain. **e. addiso'nia,** apathy, somnolence, or rarely psychic irritative symptoms, occurring in the course of Addison's disease, thought to be dependent upon a diffuse encephalitis in the frontal region. **lead e.,** epileptoid convulsions, delirium, hallucinations, and other cerebral symptoms due to chronic lead poisoning.

enceph"alonarco'sis [G. *enkephalos,* brain, + *narkē,* stupor.] Stupor or coma from brain disease.

enceph"alophy'ma [G. *enkephalos,* brain, + *phyma,* growth.] An intracranial tumor; a brain-tumor.

encephalopyosis (en-sef"al-o-pi-o'sis) [G. *enkephalos,* brain, + *pyōsis,* suppuration.] Purulent inflammation of the brain.

encephalorrhachidian (en-sef"al-o-rak-id'ĭ-an) [G. *enkephalos,* brain, + *rhachis,* spine.] Encephalomyelic, cerebrospinal.

enceph"alorrha'gia [G. *enkephalos,* brain, + *-rhagia.*] Cerebral hemorrhage, apoplexy.

enceph"alosclero'sis [G. *enkephalos,* brain, + *sklērōsis,* hardening.] A sclerosis, or hardening, of the brain.

enceph'aloscope [G. *enkephalos,* brain, + *skopeō,* I view.] An instrument shaped like an ear speculum, though larger, with a removable obturator; employed in examining the interior of a brain abscess or other cavity through an opening in the skull.

encephalos'copy. Examination of the brain or the cavity of a cerebral abscess by direct inspection.

enceph"alosep'sis [G. *enkephalos,* brain, + *sēpsis,* decay.] Septic inflammation of the brain.

encephalo'sis. Any organic disease of the brain.

encephalospi'nal. Cerebrospinal.

encephalothlipsis (en-sef"al-o-thlip'sis) [G. *enkephalos,* brain, + *thlipsis,* pressure.] Compression of the brain

enceph'alotome. An instrument for use in performing encephalotomy.

encephalot'omy [G. *enkephalos,* brain, + *tomē,* incision.] Dissection of the brain.

enchondroma, pl. *enchondro'mata* (en-kon-dro'mah) [G *en,* in, + *chondros,* cartilage, + *-ōma.*] Chondroma proper, a cartilaginous growth occurring in parts, such as the glands, lungs, bones, etc., where cartilage does not normally exist; or a cartilaginous tumor within a bone near the epiphyseal line which simply expands the diaphysis without breaking through, becoming then an ecchondroma.

enchondromatous (en-kon-dro'mă-tus). Relating to or having the elements of enchondroma.

enchondrosarcoma (en-kon-dro-sar-ko'ma). A mixed enchondroma and sarcoma.

enchondrosis (en-kon-dro'sis) [G. *en,* in, + *chondros,* cartilage, + *-ōsis.*] An homologous cartilaginous tumor.

enchylema (en-ki-le'ma) [G. *en,* in, + *chylos,* juice.] The semifluid, nearly transparent, and homogeneous matter forming the cell sap, or nuclear sap, supported by the linin network and constituting with it the cytoplasm or nucleoplasm.

enchyma (en'ki-mah) [G. an infusion.] The formative and reparative fluid of the cells and tissues, elaborated from the chyme.

enchymatous (en-ki'mă-tus). 1. Relating to the enchyma. 2. Distended with secretion, noting the functioning gland-cells.

enclave (oṅ-klav' or en-klāv') [Fr.] An enclosure, a detached mass of tissue enclosed in tissue of another kind; seen especially in the case of isolated masses of gland tissue detached from the main gland.

enclit'ic [G. *enklitikos,* leaning on.] Inclined, noting especially the relation of the planes of the fetal head to those of the pelvis of the mother.

encolpitis (en-kol-pi'(pe')tis). Endocolpitis.

encra'nial. Endocranial.

encra'nius [G. *en,* in, + *kranion,* skull.] A form of fetal inclusion in which the parasite lies partly or wholly within the cranial cavity of the autosite.

encyesis (en-si-e'sis) [G. *en,* in, + *kyēsīs,* pregnancy.] Pregnancy.

encyopyelitis (en-si'o-pi-el-i'(e')-tis) [G. *enkysis,* pregnancy, + *pyelitis.*] Pyelitis occurring during pregnancy.

encys'ted. Encapsuled surrounded by a closed membranous bag.

encyst'ment. 1. The condition of being encysted. 2. A becoming encysted.

endadel'phus [G. *en,* in, + *adelphos,* brother.] A double monster in which the parasite is within the body of the autosite.

Endamœba (en-dam-e'bah) [G. *endon,* within.] A genus of amebas not parasitic in the human; sometimes incorrectly used for Entamœba.*

endangeitis, endangitis (end-an-je-i'(e')tis, end-an-ji'(je')tis) [G. *endon,* within, + *angeion,* vessel, + *-itis.*] Inflammation of the intima or inner coat of a blood-vessel.

endan'gium [G. *endon,* within, + *angeion,* a vessel.] The intima or inner coat of a blood-vessel.

endaortitis (end-a-or-ti'(te')tis). Inflammation of the intima, or inner coat, of the aorta.

endarte'rial [G *endon,* within.] Within an artery; relating to the intima of an artery.

endarteritis (end-ar-te-ri'(re')tis) [G. *endon,* within, + *arteria* + *-itis.*] Inflammation of the inner coat of an artery. **e. defor'mans,** e. with atheromatous patches and calcareous deposits. **e. oblit'erans,** obliterating e., an extreme degree of e. proliferans closing the lumen of the artery. **e. prolif'erans,** chronic e. accompanied by a marked increase of fibrous tissue in the intima.

endarte'rium. The intima, or inner coat, of an artery.

endaxoneu'ron. An axoneuron which sends no process outside the spinal cord.

end'-body. Complement.

end-brain. Telencephalon.

end-brush. Telodendrion.

end-bulb. Corpusculum bulboideum.

ende'mia. An endemic disease.

ende'mial. Endemic (1).

endem'ic [G. *en,* in, + *dēmos,* the people.] 1. Present in a community, noting specifically a disease which prevails more or less continuously in a given region. 2. The constant prevalence of a disease in a community, as distinguished from an epidemic.

endemoepidemic (en-dem"o-ep-ĭ-dem'ik). Noting a temporary large increase in the number of cases of an endemic disease.

endepidermis (end-ep-ĭ-dur'mis) [G *endon,* within, + *epi,* upon. + *derma,* skin.] The inner layer of the epidermis, or stratum germinativum.

endermic, endermatic (en-dur'mik, en-dur-mat'ik) [G *en,* in, + *derma(dermat-),* skin.] In or through the skin, noting a form of medication, as by inunction, in which a remedy is applied to the surface of the skin and is absorbed, exerting thus its constitutional effects.

endermism (en-dur'mizm). Endermic medication

ender'mol. An ointment base composed of stearic-acid amide and various hydrocarbons of the paraffin series.

endermosis (en-dur-mo'sis). Any eruptive disease of the mucous membrane.

enderon (en'der-on) [G. *en*, in, + *deros*, skin.] The corium; the subepithelial layer of mucous membrane.

enderon'ic. Relating to the enderon.

end'gut. Hindgut, the large intestine and rectum

end-lobe. The occipital lobe of the brain.

endo- [G. *endon*, within.] A prefix denoting inner or within.

En'do's me'dium [S. *Endo*, Japanese physician, contemporary.] A culture medium of nutrient agar with the addition of 10 per cent. soda solution, milk sugar, alcohol-fuchsin solution, and 10 per cent. sodium sulphite solution; the colon bacillus on this medium gives intensely red colonies, the typhoid and paratyphoid bacilli colorless colonies

en"doabdom'inal. Within the abdomen.

endoaneurysmorrhaphy (en"do-an-u-rĭz - mor'ă - fĭ) [G. *endon*, within, *aneurysma*, aneurysm, + *raphē*, stitching.] The Matas operation for the cure of aneurysm. There are three forms of operation: (1) obliterative, (2) restorative, and (3) reconstructive. The first is applicable to fusiform aneurysms in which there are two or more orifices of supply and in which the parent artery is lost at the seat of aneurysm; in this case the openings into the sac are closed and the sac itself is folded together and sutured so as to secure union of the endothelial surfaces. The second is used in the case of a sacciform aneurysm; here the opening into the sac is closed by sutures without destroying the lumen of the artery, and the sac is then plicated and sutured so as to secure its obliteration. The third operation is applicable in the case of simple, fusiform dilatation of an artery; in this case a catheter is passed into the two openings and the lumen of the artery is reconstructed by suturing the sac around the catheter, the latter being withdrawn before the tying of the last sutures.

endoangiitis (en-do-an-jĭ-i'(e')tis) [G. *endon*, within, + *angeion*, vessel, + *-itis*.] Inflammation of the intima of a blood-vessel, endoarteritis, endophlebitis.

endoantitox'in. An antibody contained within a cell and normally not given up to the surrounding plasma during the life of the microorganism.

endo-aortitis (en"do-a-or-ti'(te')tis). Endaortitis, inflammation of the intima of the aorta.

endoappendicitis (en"do-ap-en-dĭ-si'(se')tis). Simple or catarrhal appendicitis, inflammation limited more or less strictly to the mucous membrane of the vermiform appendix.

endoarteritis (en"do-ar-ter-i'(e')tis). Endarteritis.

endoauscultation (en"do-aws-kul-ta'shun). Auscultation of the thoracic organs, especially the heart, by means of a stethoscopic tube passed into the esophagus.

en'doblast [G. *endon*, within, + *blastos*, germ] 1. Hypoblast, endoderm, the inner layer of the blastoderm. 2. The nucleus of a cell.

endoblas'tic. Relating to the endoblast, hypoblastic.

endobronchitis (en"do-brong-ki'(ke')tis). Simple catarrhal bronchitis.

endocar'diac, endocar'dial [G. *endon*, within, + *kardia*, heart] 1. Within the heart, intracordial. 2. Relating to the endocardium.

endocardit'ic. Relating to endocarditis.

endocarditis (en"do-kar-di'(de')tis) [G. *endon*, within, + *kardia*, heart, + *-itis*.] Inflammation of the endocardium, or lining membrane of the heart. It may involve only the membrane covering the valves, *valvular e.*, or the general lining of the chambers of the heart, *mural e.* **e. len'ta** [L. *lentus*, slow, calm], a mild form of e., with subfebrile temperature, enlarged spleen, and anemia, associated with the presence of *Streptococcus viridans*. **infec'tious e., infec'tive e.,** malignant e. **malig'nant e.,** a form of e., usually secondary to suppurative inflammation elsewhere, accompanied by ulceration or vegetations on the valves. **mu'ral e.,** inflammation of the endocardium not confined to the valve segments. **pol'ypous e.,** malignant e. with the formation of pedunculated masses of fibrin, or thrombi, attached to the ulcerated valves. **septic e.,** malignant e. **val'vular e.,** inflammation confined to the endocardium of the valve segments. **veg'etative e.,** e. associated with the presence of fibrinous clots forming on the ulcerated surfaces of the valves. **verr'ucous e.,** vegetative e

endocar'dium [G. *endon*, within, + *kardia*, heart.] [BNA]. The serous lining of the cavities of the heart.

en'docarp [G. *endon*, within, + *karpos*, fruit.] The indurated, membranous, or fleshy inner portion of the pericarp of a drupe, enclosing the seed.

endoceliac, endocœliac (en-do-se'lĭ-ak) [G. *endon*, within, + *koilia*, cavity, ventricle.] Within one of the body cavities; intracelial.

endocervical (en-do-sur'vi-kl) [G. *endon*, within, + L. *cervix*, neck.] Endotrachelous, endotrachelic, intracervical; within any cervix, specifically within the cervix uteri.

endocervicitis (en"do-ser-vĭ-si'(se')tis). Endotrachelitis, inflammation of the mucous membrane of the cervix uteri.

endochondral (en-do-kon'dral) [G. *endon*, within, + *chondros*, cartilage.] Within a cartilage or cartilaginous tissue.

endochorion (en-do-ko'rĭ-on). The vascular layer of the allantois on the inner surface of the chorion.

endocolitis (en-do-ko-li'(le')tis) [G. *endon*, within, + *kōlon*, colon, + *-itis*.] Simple catarrhal inflammation of the colon.

endocolpitis (en-do-kol-pi'(pe')tis) [G. *endon*, within, + *kolpos*, sinus(vagina), + *-itis*.] Inflammation of the vaginal mucous membrane.

endocom'plement. A complement present within the red blood-corpuscle which may combine with a free amboceptor to effect hemolysis.

endocra'nial [G. *endon*, within, + *kranion*, cranium.] 1. Within the cranium. 2. Relating to the endocranium, or dura mater of the brain.

endocranitis (en-do-kra-ni'(ne')tis). Inflammation of the endocranium; cerebral pachymeningitis.

endocra'nium [G. *endon*, within, + *kranion*, cranium.] The lining membrane of the cranium, or dura mater of the brain.

endocrinasthenia (en-do-krĭn-as-the'nĭ-ah). Neurasthenia caused by endocrine dysfunction.

endocrine (en'do-krĭn) [G. *endon*, within, + *krinō*, I separate.] 1. The internal secretion of a gland. 2. Noting a gland which furnishes an internal secretion. 3. Endocrinous.

endocrinism (en-dok'rin-izm) [*endocrine* + *-ism*.] Endocrinopathy.

endocrinodontia (en"do-kri-no-don'shyŭ) [G. *endon*, within, + *krinō*, I separate, + *odous*, tooth.] The relation of the internal secretions to the development and preservation of the teeth.

endocrinology (en"do-kri-nol'o-jĭ) [G. *endon*, within, + *krinō*, I separate, + *-ology*.] The science dealing with the internal secretions and their physiological and pathological relations.

endocrinopathic(en-do-kri-no-path'ik). 1. Relating to or suffering from an endocrinopathy.

2. One suffering from the results of abnormal internal secretion of one or more glands.

endocrinopathy (en"do-kri-nop'ă-thĭ) [*endocrine* + G. *pathos*, suffering.] Any disease due to abnormality of quantity or quality in one or more of the internal glandular secretions.

endocrinotherapy (en-dok"rĭ-no-ther'ă-pĭ). Treatment of disease by the administration of extracts of endocrinous glands.

endocrinous (en-dok'rin-us) [G. *endon*, within, + *krinō*, I separate.] Relating to any internal secretion. **e. glands,** glands which elaborate an internal secretion.

endocritic (en-do-krit'ik). Endocrinous

en'docyst. The inner layer of an hydatid cyst.

endocystitis (en"do-sis-ti'(te')tis) [G. *endon*, within, + *kystis*, bladder, + *-itis*.] Inflammation of the mucous membrane of the bladder.

endocyte (en'do-sīt) [G. *endon*, within, + *kytos*, a hollow, a cell.] Anything, not belonging to the cell itself, contained in a cell; a cell-inclusion.*

endoderm (en'do-durm) [G. *endon*, within, + *derma*, skin.] Endoblast, hypoblast.*

Endodermophyton (en-do-dur-mof'i-ton) [G. *endon*, within, + *derma*, skin, + *phyton*, plant.] A genus of fungi (Ascomycetes) several species of which cause forms of tinea in man; the fungus grows in the epidermis between the superficial and deep layers but does not attack the hairs or hair follicles.

endodermis (en-do-dur'mis) [G. *endon*, within, + *derma*, skin] In botany, the bundle-sheath enclosing the vascular bundles of stems and leaves.

endodontitis (en"do-don-ti'(te')tis) [G *endon*, within, + *odous* (*odont-*), tooth, + *-itis*.] Pulpitis.

endoenteritis (en"do-en-ter-i'(e')tis) [G. *endon*, within, + *enteron*, intestine, + *-itis*.] Inflammation of the intestinal mucous membrane.

endofar'adism. The application of faradic electricity to the interior of any cavity of the body.

endogal'vanism. The application of a galvanic current to the interior of any cavity of the body.

endogamy (en-dog'ă-mĭ) [*G. endon*, within, + *gamos*, marriage.] Reproduction by conjugation between sister cells, the descendants of one original cell; pedogamy.

endogas'tric. Within the stomach.

endogastritis (en"do-gas-tri'(tre')tis) [G. *endon*, within, + *gastēr*, stomach, + *-itis*.] Inflammation of the mucous membrane of the stomach.

endogenic (en-do-jen'ik). 1. Of inside origin-noting certain nerve fibers in the posterior columns of the spinal cord. 2. Endogenous.

endogenous (en-doj'en-us) [G. *endon*, within, + *gennaō*, I produce.] 1. Originating or produced within the organism or one of its parts. 2. Endogenic. **e. cy'cle,** non-sexual cycle of hemoprotozoa, occurring in the vertebrate host.

endoglo'bar. Endoglobular **e. bod'y,** archiplasm.

endoglob'ular [G. *endon*, within, + *globule*.] Within a globular body, specifically within a blood-corpuscle. **e. bod'y,** nucleoid.

endognathion (en-dog-nath'ĭ-on) [G. *endo*, within, + *gnathos*, jaw.] The inner of the two segments constituting the incisive bone; see *mesognathion*.

endogonid'ium. A gonidium formed within a receptacle or cell, as in the yeast-plant.

endointoxication (en"do-in-toks-i-ka'shun). Poisoning by an endogenous toxin.

endolabyrinthitis (en"do-lab-i-rin-thi'(the')tis) [G. *endon*, within, + *labyrinthos*, labyrinth, + *-itis*.] Inflammation of the membranous labyrinth.

endolaryn'geal. Within the larynx.

Endolimax (en-do-li'maks) [G. *endon*, within, + *leimax*, a meadow or garden. A genus of Rhizopoda, one species of which, *E. mana*, is parasitic in the human intestine, being the small ameba commonly found there.

en'dolymph, endolym'pha [BNA] [G. *endon*, within, + L. *lympha*, a clear fluid.] The fluid contained within the membranous labyrinth.

endolym'phic. Relating to the endolymph.

endolysin (en-dol'i-sin) [G. *endon*, within, + *lysin*] Leucin (2).

endomastoiditis (en"do-mas-toy-di'(de')tis). Inflammation of the mucous membrane lining the mastoid antrum and mastoid cells.

endometrec'tomy [G. *endon*, within, + *mētra*, uterus, + *ektomē*, excision.] Curettage of the mucous membrane of the uterus.

endome'trial. Relating to or composed of endometrium.

endometrio'ma. A tumor of the endometrium.

endometriosis (en-do-me-trĭ-o'sis) [*endometrium* + G. *-osis*.] The ectopic occurrence of endometrial tissue or its diffuse inplantation or infiltration in the myometrium.

endometritis (en-do-me-tri'(tre')tis) [G. *endon*, within, + *mētra*, womb, + *-itis*.] Inflammation of the lining membrane of the uterus. **decid'ual e.,** inflammation of the decidual mucous membrane of the gravid uterus. **diphtherit'ic e.,** inflammation of the uterine mucous membrane, with a dirty brownish exudate, not necessarily due to the presence of the Klebs-Loeffler bacillus. **e. dis'secans,** e. with ulceration and exfoliation of the mucous membrane.

endome'trium [G. *endon*, within, + *mētra*, uterus.] The mucous membrane lining the uterus.

endomyocarditis (en-do-mi-o-kar-di'(de')tis) [G *endon*, within, + *mys*(*myo-*), muscle, + *kardia*, heart, + *-itis*.] Inflammation of both endocardium and myocardium.

endomysium (en"do-miz'ĭ-um) [G. *endon*, within, + *mys*, muscle.] Loose connective tissue holding together the fibers which constitute one of the primary bundles of muscle.

endonephritis (en-do-nef-ri'(re')tis) [G. *endon*, within, + *nephros*, kidney, + *-itis*.] Pyelitis, inflammation of the pelvis and calyces of the kidney.

endoneuritis (en-do-nu-ri'(re')tis). Inflammation of the endoneurium.

endoneurium (en-do-nu'rĭ-um) [G. *endon*, within, + *neuron*, nerve.] Henle's sheath, the connective-tissue support of the individual nerve-fibers in a funiculus.

en"donucle'olus [G. *endon*, within.] A minute unstainable spot near the center of a nucleolus

endopar'asite [G. *endon*, within, + *parasitos*.] A parasite living within the body of its host.

endoperiarteritis (en"do-per"ĭ-ar-ter-i'(e')tis) [G. *endon*, within, + *peri*, around, + *artēria*, artery, + *-itis*.] Inflammation of the inner and outer (and all) the coats of an artery.

endopericarditis (en"do-per"ĭ-kar-di'(de')tis) [G. *endon*, within, + *peri*, around, + *kardia*, heart, + *-itis*.] Simultaneous inflammation of the inner and outer membranes of the heart.

endoperimyocarditis (en"do-per"ĭ-mi"o-kar-di'(de')-tis) [G. *endon*, within, + *peri*, around, + *mys* (*myo-*), muscle, + *kardia*, heart, + *itis*.] Simultaneous inflammation of the heart muscle and of its inner and outer membranes, or endocardium and pericardium.

endoperineuritis (en"do-per"ĭ-nu-ri'(re')tis). Inflammation of both endoneurium and perineurium

endoperitonitis (en″do-per″i-ton-i′(e′)tis) [G. *endon*, within, + *peritonaion*, peritoneum, + *-itis*] Superficial inflammation of the peritoneum.

endophlebitis (en″do-flĕ-bi′(be′)tis) [G. *endon*, within, + *phleps* (*phleb-*), vein, + *itis*.] Inflammation of the intima, or lining membrane of a vein.

endophthalmitis (en-dof-thal-mi′(me′)tis) [G. *endon*, within, + *ophthalmos*, eye, + *-itis*.] Inflammation of one or more of the tissues within the eyeball.

endophyte (en′do-fīt) [G. *endon*, within, + *phyton*, plant.] A plant growing within another plant or an animal.

en′doplasm [G. *endon*, within, + *plasma*, anything formed.] The cytoplasm, or mass of cell-substance, as distinguished from the enveloping ectoplasm.

en′doplast [G. *endon*, within, + *plastos*, formed.] The nucleus of an am ba or other protozoan.

endoplas′tic. Entoplastic.

end′-organ. The special structure containing the terminal of a nerve-fibril in muscular tissue, skin, mucous membrane, or glands.

endorrhachis (en-do-ra′kis) [G. *endon*, within, + *rhachis*, the spine.] Lining membrane of the spinal canal, spinal dura mater.

endorrhinitis (en″do-ri-ni′(ne′)tis) [G. *endon*, within, + *rhis*(*rhin-*), nose, + *-itis*.] Coryza, inflammation of the nasal mucous membrane.

endosalpingitis (en″do-sal-pin-ji′(je′)tis) [G. *endon*, within, + *salpinx*(*salping-*), tube, + *-itis*.] Inflammation of the lining membrane of the Eustachian or of the Fallopian tube.

en′dosarc [G. *endon*, within, + *sarx*(*sark-*), flesh.] The endoplasm of a protozoan, entosarc.

en′doscope [G. *endon*, within, + *skopeō*, I examine.] An instrument for the examination of the interior of a canal or hollow viscus.

endos′copy [G. *endon*, within, + *skopeō*, I examine. Examination of the interior of a canal or hollow viscus.

endosep′sis [G. *endon*, within, + *sēpsis*, decay.] Autosepticemia.

endoskel′eton [G. *endos*, within, + *skeleton*.] The internal bony framework of the body; the skeleton in its usual acceptation, as distinguished from exoskeleton.

endosmom′eter [*endosmosis* + G. *metron*, measure.] A device for determining the rapidity of endosmosis.

endosmosis (en-doz-mo′sis) [G. *endon*, within.] Osmosis in a direction toward the interior of a cavity.

endosmot′ic. Relating to endosmosis.

endoso′ma [G. *endon*, within, + *sōma*, body.] A hypothetical solution of hemoglobin filling the red blood-cell.

endosperm (en′do-spurm) [G. *endon*, within, + *sperma*, seed.] The albumin of a seed, serving for the nutrition of the embryo.

en′dospore [G. *endon*, within, + *sporos*, seed.] 1. A spore appearing as an oval or round, strongly refractile, glistening body within the substance of a bacterium. 2. Endosporium.

endospo′rium. Endospore; in botany, the innermost, cellulose, coat of a spore.

endosteitis, endostitis (en″dos-te-i′(e′)tis, en″dos-ti′(te′)tis) [G. *endon*, within, + *osteon*, bone, + *-itis*.] Inflammation of the endosteum or of the medullary cavity of a bone.

endosteo′ma [G. *endon*, within, + *osteon*, bone.] A neoplasm in the medullary cavity of a bone.

endostethoscope (en″do-steth′o-skōp) [G. *endon*, within, + *stēthos*, chest, + *skopeō*, I examine.] A tube for passage into the esophagus, used in endoauscultation.*

endos′teum [G. *endon*, within, + *osteon*, bone.] Internal periosteum, the membrane covering the surface of bone in the medullary cavity.

endosto′ma. Endosteoma.

endothecium (en″do-the′sĭ-um) [G. *endon*, within, + *thēkē*, box.] 1. In mosses the central cells in the early stages of formation of the capsule. 2. The substance, or inner portion, of the wall of the anther in a phanerogam.

endothe′lial. Relating to the endothelium.

endotheliocyte (en-do-the′lĭ-o-sīt) [*endothelium* + G. *kytos*, cell.] Splenocyte (2).

endothelioid (en-do-the′lĭ-oyd) [endothelium + G. *eidos*, resemblance.] Resembling endothelium.

e. hab′it, relative smallness of the nucleus as compared with the cytoplasm.

endotheliolysin (en-do-the-lĭ-ol′i-sin). Endotheliotoxin.

endothelio′ma, pl. *endothelio′mata, endothelio′mas*. A tumor originating from the endothelium, or lining cells, of a blood-vessel (*hemangioendothelioma*) or lymphatic (*lymphangioendothelioma*).

e. cap′itis, turban tumor, the occurrence of multiple, benign, alveolar endotheliomata or sarcomata, of the size of a nut or larger, on the scalp.

endotheliomyoma (en″do-the″-lĭ-o-mi-o′mah) [*endothelium* + G. *mys*, muscle.] A tumor composed of both endothelial and muscular elements.

endothe″liomyxo′ma. A myxoma with endothelial elements.

endotheliotox′in. A specific poison found in certain zootoxins which attacks especially the endothelium of the blood-vessels; endotheliolysin.

endothe′lium [G. *endon*, within + *thēlē*, nipple.] [BNA]. A layer of flat cells lining serous cavities, blood-vessels, and lymphatics.

endothermic (en-do-thur′mik) [G. *endon*, within, + *thermē*, heat] 1. Noting chemical compounds during the formation of which there is absorption of heat. 2. Noting the production of heat within an organism.

endothermy (en″do-thur′mĭ) [G. *endon*, within, + *thermē*, heat.] Diathermy.

endothrix (en′do-thriks). A trichophyton of the skin, the parasite causing tinea tonsurans.

endothyreopexy (en-do-thi′re-o-pek-sĭ). Operative dislocation of the thyroid gland and its fixation in the side of the neck.

en′dotin. A preparation obtained by treating Koch's original tuberculin with xylol, ether, chloroform, and alcohol to free it from admixture with any other bodies; said to have given good results in advanced tuberculosis.

endotoscope (end-o′to-skōp) [G. *endon*, within, + *ous*(*ōt-*), ear, + *skopeō*, I examine.] A form of ear speculum; otoscope.

endotoxicosis (en″do-toks″i-ko′sis). Poisoning by an endotoxin.

endotox′in [G. *endon*, within.] A toxin elaborated by a microorganism within its substance, and which becomes free only after destruction of the producing agent.

endotracheitis (en-do-tra-ke-i′(e′)tis). Inflammation of the mucous membrane of the trachea.

endotrachelic (en-do-trā-kel′ik) [G. *endon*, within, + *trachēlos*, neck.] Intracervical.

endotrachelitis (en″do-trak-el-i′(e′)tis) [G. *endon*, within, + *trachēlos*, neck, + *-itis*.] Inflammation of the mucous membrane of the cervix uteri, endocervicitis.

endotrachelous (en-do-trak′el-us). Endotrachelic intracervical.

endotryp'sin. A ferment, resembling trypsin in action, formed in yeasts.

endovaccination (en-do-vak-sin-a'shun) [G. *endon*, within.] Oral administration of vaccines.

endovasculitis (en"do-vas-ku-li'(le')tis) [G. *endon*, within, + L. *vasculum*, a small vessel, + G. *-itis*.] Endangeitis.

endove'nous [G. *endon*, within, + L. *venosus*, venous.] Intravenous.

end-plate. A series of flattened discs in which terminate the motor nerve-fibrils in muscular tissue.

en'dyma [G. a garment.] Ependyma.

en'ema, pl. *enem'ata* [G.] Clyster, rectal injection, lavement; a fluid injected into the rectum for the purpose of clearing out the bowel, or of administering drugs or food. **analep'tic e.,** an e. of a pint of lukewarm water with one-half teaspoonful of table salt. **blind e.,** the introduction into the rectum of a soft rubber tube to facilitate the expulsion of flatus. **fla'tus e.,** an e. of ℥ss of magnesium sulphate in ℥i of glycerin and ℥vi of warm water. **high e.,** an e. thrown up into the colon. **nu'trient e.,** a rectal injection of predigested food. **pancreat'ic e.,** see *Leube's* enema* and *Dobell's* enema*. **shock e.,** one given after an operation to prevent shock; it consists of 1 ounce of whiskey in 1 pint of 5 per cent bicarbonate of soda solution injected at a temperature of 110°F. **soapsuds e.,** an e. of ℥ii of shredded or powdered soap in a pint of warm water. **thirst e.,** analeptic e. **tur'pentine e.,** an e. of ℥i of turpentine and ℥ii of olive oil in 1 pint of soapsuds.

enemator (en-em'ă-tor). An appliance for use in giving an enema.

enepidermic (en"ep-i-dur'mik) [G. *en*, in, + *epi*, upon, + *derma*, skin.] On the surface of the skin, noting a mode of medication by plasters, ointments, and lotions.

energid (en'ur-jid) [G. *energeia*, energy, + *id.*] 1. The dynamic chromatin in the nucleus, that part which bears the formative, active properties as distinguished from that which transmits the instinctive and other noncreative characteristics. 2. A mass of cytoplasm with a nucleus which it surrounds, not constituting properly a cell, but found associated with similar masses in certain organisms, such as the ameba, *Pelomyxa palustris*.

energometer (en-ur-gom'e-tur) [*energy* + G. *metron*, measure.] A form of blood-pressure measuring apparatus.

energy (en'ur-jĭ) [G. *energeia; en*, in, + *ergon*, work.] Activity; the exertion of power, dynamic force. **conserva'tion of e.,** the principle that the total amount of energy remains always the same, none being lost or created in all the manifold physical processes or in the conversion of one kind of force into another. **e. of posi'tion,** potential e. **kinet'ic e.,** the e. of motion. **la'tent e.,** potential e. **nerve e.,** potential e. **poten'tial e.,** e. at rest, the e. existing in a body, which is not being exerted at the time. **to'tal e.,** the sum of the kinetic and potential energies.

enervation (en-ur-va'shun) [L. *enervare; e-* priv. + *nervus*, nerve.] Failure of nerve force; weakening.

en'esol. Mercury salicylarsenate, an amorphous white powder containing 38.46 per cent. of mercury and 14.4 per cent. of arsenic; employed hypodermically in the treatment of syphilis in doses of ℞15–30 (1.0–2.0) of a 3 per cent. solution.

engas'trius [G. *en*, in, + *gastĕr*, belly.] A double monster in which the parasite is wholly or partly within the abdomen of the autosite.

Eng'el's alkalim'etry [Rudolph Charles *Engel*, Alsatian biological chemist, 1850–1916.] To determine the alkalinity of the blood: a diluted specimen of blood is titrated with normal tartaric acid solution until the mixture reddens litmus paper, the degree of alkalinity being determined by the amount of tartaric acid solution necessary to overcome it.

Engelmann's discs (eng'el-mahn) [Theodor Wilhelm *Engelmann*, German physiologist, 1843–1909.] The light transverse bands in a muscle fiber, the *lateral discs*, and the dark line in the center of each, the *intermediate disc* or Krause's membrane.

English disease (ing"glish diz-ēz'). Rickets. **E. drops,** guttæ anglicanæ.

englobe' [L. *globus*, ball, sphere] To take in by a spherical body, said of the ingestion of bacteria and other foreign bodies by the phagocytes.

englobe'ment. The process of inclusion by a spherical body, such as a leucocyte.

Eng'man's disease' [Martin F. *Engman*, St. Louis dermatologist, *1868.] Dermatitis eczematodes infectiosa.

engorged'. Absolutely filled; distended with fluid; congested; hyperemic.

engorge'ment. Distention with fluid or other material; congestion.

en'gram [G. *en*, in, + *gramma*, mark.] See *mnemic* hypothesis*.

engraphia (en-graf'ĭ-ă). The formation of engrams.

enhem'atospore, enhæm'atospore [G. *en*, in, + *haima*(*haimat-*), blood, + *sporos*, seed.] Enhemospore, merozoite.

enhem'ospore, enhæm'ospore, [G. *en*, in, + *haima*, blood, + *sporos*, seed.] Merozoite.

enkatar'rhaphy. Encatarrhaphy.

enomania, œnomania (e"no-ma'nĭ-ah) [G. *oinos*, wine, + *mania*, frenzy.] A craving for alcohol.

enophthal'mos, enophthal'mus [G. *en*, in, + *ophthalmos*, eye.] Recession of the eyeball within the orbit.

enorgan'ic [G. *en*, in, + *organon*, organ.] Occurring as an innate characteristic of the organism.

enosimania (en-o-sĭ-ma'nĭ-ah) [G. *enosis*, shaking, + *mania*, frenzy. Extreme and irrational terror.

enosto'sis [G. *en*, in, + *osteon*, bone.] A bony tumor within a bone.

enoxidase (e noks'i-dāz) [G. *oinos*, wine.] An oxidase causing the souring of wines.

ensiform (en'sĭ-form) [L. *ensis*, sword, + *forma*, appearance.] Xiphoid, sword-shaped; noting the cartilaginous process shaped like a sword-tip, at the lower end of the sternum, the ensiform or xiphoid cartilage or process, metasternum.

ensisternum (en-sĭ-stur'num) [L. *ensis*, sword.] Ensiform or xiphoid appendix, metasternum.

ens morbi [L. the entity of a disease.] The actual nature, the essence or pathology of a disease.

ensom'phalus [G. *en*, in, + *sōma*, body, + *omphalos*, umbilicus.] A twin monster in which the individuals are practically vitally independent, but are united by bands in the abdominal region or side

enstrophe (en'stro-fe) [G. *en*, in, + *strophē*, a turning.] Inversion of a part; entropion.

en'tad [G. *entos*, within, + L. *ad*, to.] Toward the interior.

en'tal [G. *entos*, within.] Relating to the interior, inside.

entamebiasis (ent-ă-me-bi'-a-sis). Infestation with a species of *Entamœba;* loeschiasis, dysentery.

Entamœba (ent-ă-me'bah) [G. *entos*, within, + *amœba*.] A genus or sub-genus including the internal parasitic forms of amœbæ. **E. bucca'lis**, found in the mouth in cases of dental caries. **E. co'li**, inhabiting chiefly the upper part of the large intestine. **E. gingiva'lis**, *E. buccalis*. **E. histolyt'ica**, the pathogenic organism of tropical dysentery. **E. kartuli'si**, *E. buccalis*. **E. un'dulans**, an organism found in the intestine, consisting of an oval body with undulating membrane.

enta'sia, en'tasis [G. distention.] Tonic spasm.

entelechy (en-tel'e-kĭ) [G. *entelecheia*, actuality.] Complete development; full realization of any action.

enter'aden [G. *enteron*, intestine, + *adēn*, gland. An intestinal gland.

enteradenitis (en"ter-ad-en-i'(e')tis) [G. *enteron*, intestine, + *adēn*, gland, + *-itis*.] Inflammation of the intestinal glands.

enteral (en'ter-al). Within the intestine, as distinguished from parenteral.

enteral'gia [G. *enteron*, intestine, + *algos*, pain.] Cramps, colic; severe neuralgic pain in the intestine, accompanied often by spasmodic contraction of the muscular coat.

enterec'tomy [G. *enteron*, intestine, + *ektomē*, excision.] Resection of a segment of the intestine.

enterepiplocele (en"ter-ĕ-pip'lo-sēl) [G. *enteron*, intestine, + *epiploon*, omentum, + *kēlē*, hernia.] A hernia of the omentum as well as of the intestine.

enter'ic [G. *enterikos*, from *entera*, bowels.] Relating to the intestine. **e. fever**, typhoid fever. **e. pills**, pills which will not dissolve until they reach the intestine; such are usually coated with salol.

entericoid (en-ter'ĭ-koyd) [*enteric* (fever) + G. *eidos*, resemblance.] Resembling typhoid or enteric fever. **e. fe'ver**, a fever, neither paratyphoid nor typhoid, but resembling the latter; cf. *paraenteric*.

enteritis (en-ter-i'(e')tis) [G. *enteron*, intestine, + *-itis*.] Inflammation of the intestine. **e. colostra'lis**, diarrhea in the nursing infant caused by the persistence of colostrum corpuscles in the mother's milk. **mem'branous e., mucomem'branous e.**, mucous e. **mu'cous e.**, intestinal myxoneurosis; an affection of the intestinal mucous membrane characterized by constipation or diarrhea, sometimes alternating, colic, and the passage of pseudomembranous shreds or incomplete casts of the intestine. **phleg'monous e.**, severe acute inflammation of the intestine, with walls edematous and infiltrated with pus. **pseudomem'branous e.**, mucous e.

entero- [G. *enteron*, intestine.] A prefix denoting intestinal.

en"teroanastomo'sis. Intestinal anastomosis.*

enteroapocleisis (en"ter-o-ap"o-kli'sis) [G. *apokleisis*, exclusion.] The shutting out of a segment of the intestine by forming an anastomosis between the parts above and below.

Enterobius (en-ter-o'bĭ-us) [G. *enteron*, intestine, *bios*, life.] A genus of nematode worms, formerly called *Oxyuris* (q.v.). *E. vermicula'ris*, the pinworm, *Oxyuris vermicularis*.

enterobro'sia [G. *enteron*, intestine, + *brōsis*, corrosion.] Perforation of the intestine.

enterocele (en'ter-o-sēl) [G. *enteron*, intestine, + *kēlē*, hernia.] An intestinal hernia. **par'tial e.**, Richter's hernia, parietal hernia.*

enteroce'lia. Enterocœlia

en"terocente'sis [G. *enteron*, intestine, + *kentēsis*, puncture.] Puncture of the gut with a hollow needle in order to give exit to gas, or to withdraw fluids distending the bowel.

enterochirurgia (en"ter-o-ki-rur'jĭ-ah). Intestinal surgery.

enterocholecystostomy (en"ter-o-ko-le-sis-tos'to-mĭ). Cholecystenterostomy.

enterocholecystotomy (en"ter-o-ko"-le-sis-tot'o-mĭ). Cholecystenterotomy, incision of both intestine and gall-bladder.

enterocinesia (en"ter-o-sin-e'sĭ-ah) [G. *enteron*, intestine, + *kinēsis*, movement.] Peristalsis.

enterocinetic (en"ter-o-sin-et'ik). Relating to or promoting peristalsis.

enteroclysis (en-ter-ok'li-sis) [G. *enteron*, intestine, + *klysis*, a washing out.] A high enema.

Enterococc'us proteifor'mis. A microorganism found in the intestine in health and in disease, being possibly pathogenic; it is pathogenic for mice; it occurs in various forms, as a simple coccus, diplococcus, staphylococcus, tetrad, streptococcus, and bacillus.

enterocœle (en"ter-o-se'le). Enterocœlia.

enterocœlia (en-ter-o-se'lĭ-ah) [G. *enteron*, intestine, + *koilia*, hollow.] The abdominal cavity.

enterocolitis (en-ter-o-ko-li'(le')tis). Inflammation of the mucous membrane of a greater or lesser extent of both small and large intestines.

en"terocolos'tomy [G. *enteron*, intestine, + *kōlon*, colon, + *stoma*, mouth.] Operation for establishing an artificial opening between the small intestine and some portion of the colon.

en'terocyst (G. *enteron*, intestine, + *kystis*, bladder.] A cyst of the wall of the intestine.

enterocystocele (en"ter-o-sis'to-sēl) [G. *enteron*, intestine, + *kystis*, bladder, + *kēlē*, hernia.] A hernia of both intestine and bladder wall.

enterocysto'ma. Enterocyst.

enterodyn'ia [G. *enteron*, intestine, + *odynē*, pain.] Enteralgia.

en"teroenteros'tomy. The establishment of a communication between two non-continuous segments of intestine.

enteroepiplocele (en"ter-o-ĕ-pip'lo-sēl). Enterepiplocele.

enterogastritis (en"ter-o-gas-tri'(tre')tis). Gastroenteritis

enterogenous (en-ter-oj'en-us) [G. *enteron*, intestine, + *gennaō*, I produce.] Of intestinal origin.

enterograph (en'ter-o-graf) [G. *enteron*, intestine, + *graphō*, I write.] An instrument designed for making a graphic record of the intestinal movements.

enterog'raphy [G. *enteron*, intestine, + *graphō*, I write.] 1. A description of the intestines. 2. The making of a graphic curve delineating the intestinal movements.

enterohepatitis (en"ter-o-hep-ă-ti'(te')tis) [G. *enteron*, intestine, + *hēpar(hēpat-)*, liver, + *-itis*.] Inflammation of both the intestine and the liver.

enterohydrocele (en"ter-o-hi'dro-sēl). Hydrocele in which the sac contains also a loop of intestine.

enteroidea (en-ter-oyd'e-a). Intestinal fevers, the group of infection fevers caused by any of the intestinal bacteria; they include the enteric fevers (typhoid and paratyphoid A and B), and the parenteric fevers which, though clinically resembling those of the enteric group, are caused by other intestinal bacteria.

enterokinase (en"ter-o-kin'āz). An intestinal ferment which converts trypsinogen into trypsin.

enterokinesia (en"ter-o-kin-e'sĭ-ah). Enterocinesia

enterokinetic (en"ter-o-kin-et'ik). Enterocinetic.

en'terolith [G. *enteron*, intestine, + *lithos*, stone.] An intestinal calculus formed of layers of soaps

and earthy phosphates surrounding a nucleus of some hard body such as a fruit-stone or other indigestible substance swallowed.

enterolithi'asis. The presence of calculi in the intestine.

enterol'ogy [G. *enteron*, intestine, + *-logia*.] The branch of medical science dealing especially with the intestinal tract.

enteromega'lia, enteromeg'aly [G. *enteron*, intestine, + *megas* (*megal-*) great.] Megaloenteron

enteromere (en'ter-o-mēr) [G. *enteron*, intestine, + *meros*, a part.] A segment of the primitive intestine in the embryo.

enteromerocele (en"ter-o-me'ro-sēl) [G. *enteron*, intestine, + *mēros*, thigh, + *kēlē*, hernia.] Femoral hernia.

enterom'eter [G. *metron*, measure.] An instrument used in measuring the diameter of the intestine.

Enteromonas (en-ter-om'o-nas) [G. *enteron*, intestine, + *monas*, monad.] A genus of Mastigophora, one species of which, *E. hominis*, is said to be parasitic in the human intestine.

enteromyco'sis [G. *enteron*, intestine, + *mykēs*, fungus.] An intestinal disease of bacterial origin.

en'teron (G). The intestine.

enteroparesis (en-ter-o-par'e-sis) [G. *enteron*, intestine, + *paresis*, weakness.] A state of diminished or arrested peristalsis with flaccidity of the intestinal walls.

enterop'athy [G. *enteron*, intestine, + *pathos*, suffering.] An intestinal disease.

en'teropexy [G. *enteron*, intestine, + *pēxis*, fixation.] Fixation of a segment of the intestine to the abdominal wall.

en'teroplasty [G. *enteron*, intestine, + *plassō*, I mould.] Plastic surgery of the intestine, such as the closure of perforation, relief of constrictions, etc.

en'teroplex [G. *enteron*, intestine, + *plexis*, weaving.] An instrument for use in effecting union of the divided ends of the intestine.

en'teroplexy [G. *enteron*, intestine, + *plexis*, a weaving.] Joining of the divided ends of the intestine.

enteroproctia (en"ter-o-prok'shyah) [G. *enteron*, intestine, + *prōktos*, anus.] The presence of an artificial anus

enteropto'sia, enteropto'sis [G. *enteron*, intestine, + *ptōsis*, a falling.] The abnormal descent of the intestines in the abdominal cavity, usually associated with falling of the other viscera in Glénard's disease.

enteroptot'ic. Relating to or suffering from prolapse of the abdominal viscera. **e. hab'it**, habitus* enteroptoticus.

enterorrha'gia [G. *enteron*, intestine, + *-rhagia*.] Intestinal hemorrhage.

enteror'rhaphy [G. *enteron*, intestine, + *rhaphē*, sewing.] Suture of the intestine in case of perforation or in the operation of anastomosis.

en'teroscope [G. *enteron*, intestine, + *skopeō*, I examine.] A form of speculum for aid in inspecting the inside of the intestine in operative cases

enterosepsis (en-ter-o-sep'sis) [G. *enteron*, intestine, + *sēpsis*, decay.] Autointoxication from decomposition of the intestinal contents.

enterospasm (en'ter-o-spazm) [G. *enteron*, intestine, + *spasmos*, convulsion. Increased, irregular, and painful peristalsis.

enterostasis (en-ter-os'ta-sis) [G. *enteron*, intestine, + *stasis*, a standing.] Intestinal stasis, a retardation or arrest of the passage of the intestinal contents.

enterostax'is [G. *enteron*, intestine, + *staxis*, trickling.] Oozing of blood from the mucous membrane of the intestine.

enterostenosis (en"ter-o-stĕ-no'sis) [G. *enteron*, intestine, + *stenōsis*, narrowing.] Narrowing of the lumen of the intestine.

enterostomy (en-ter-os'to-mĭ) [G. *enteron*, intestine, + *stoma*, mouth.] The establishment of an artificial anus or fistula into the intestine through the abdominal wall.

enterotome (en'ter-o-tōm) [G. *enteron*, intestine, + *tomē*, a cutting.] An instrument for incising the intestine, especially in the operation for artificial anus.

enterot'omy. Incision into the intestine.

enterotoxication (en"ter-o-tok-sĭ-ka'shun) [G. *enteron*, intestine, + *toxikon*, poison.] Intestinal autointoxication.

enterotox'in. A cytotoxin specific for the cells of the mucous membrane of the intestine.

enterotox'ism. Autointoxication from intestinal decomposition, enterosepsis.

enterozo'ic. Relating to an enterozoon, or animal parasite inhabiting the lumen of the intestine.

enterozoon (en"ter-o-zo'on) [G. *enteron*, intestine, + *zōon*, animal.] An animal parasite in the intestine.

entheoma'nia [G. *entheos*, inspired, + *mania*, frenzy.] Religious insanity

en'thesis [G. *en*, in, + *thesis*, a deposit.] The insertion of metallic or other non-vital material to take the place of lost tissue.

enthet'ic. 1. Relating to enthesis 2. Exogenous.

en'thlasis [G. a dent.] Depressed fracture of the skull.

entire' [L. *integer*, whole.] Smooth and continuous, without indentations or projections; noting the margin of a leaf or of a bacterial colony.

entiris (ent-i'ris) [G. *entos*, inside, + *iris*.] The pigmentary layer of the iris

en'tity [L. *ens*, being; *esse*, to be.] An independent thing; that which contains in itself all the conditions essential to individuality; that which forms of itself a complete whole.

en'toblast [G. *entos*, within, + *blastos*, germ.] 1. Endoblast, hypoblast. 2. A nucleolus.

entocele (en'to-sēl) [G. *entos*, within, + *kēlē*, hernia.] Inward displacement of a part.

entochorioidea (en"to-ko-rĭ-o-id'e-ah) [G. *entos*, within, + *chorioeidēs*, chorioid.] The inner layer of the chorioid coat of the eye.

entocine'rea [G. *entos*, within, + L. *cinereus*, ashen.] The internal gray matter of the nerve-centers, especially of the brain.

entocone (en'to-kōn) [G. *entos*, within, + *kōnos*, cone.] The mesiolingual cusp of an upper molar tooth.

entoco'nid [G. *entos*, inside, + *kōnos*, cone.] The inner posterior cusp of a lower molar tooth.

entocor'nea [G. *entos*, within.] The inner or posterior lining membrane of the cornea, Descemet's membrane.

en"tocra'nial, en"tocra'nium. Endocranial, endocranium.

entocuneiform (en-to-ku'ne-i-form). The inner or first cuneiform bone of the tarsus.

entocyte (en'to-sīt) [G. *entos*, within, + *kytos*, hollow (cell).] The interior part of a cell, enclosed within the ectoplasm; endoplasm.

entoderm (en'to-durm) [G. *entos*, inside, + *derma*, skin.] The inner layer of cells split off from the inner cell-mass of the blastocyst, the hypoblast.

entoectad (en-to-ek'tad) [G. *entos*, within, + *ektos*, without, + L. *ad*, to.] From within outward.

entomion (ent-o'mĭ-on) [G. *entomē*, notch.] The tip of the mastoid angle of the parietal bone.

entomoph'ilous [G. *entomon*, insect, + *philos*, fond.] Noting flowers pollinated by the agency of bees and other insects.

entophyte (en'to-fīt) [G *entos*, within, + *phyton*, plant.] Endophyte.

entopic (en-top'ik) [G. *en*, within, + *topos*, place.] Occurring or situated in the normal place; opposed to ectopic.

en'toplasm [G. *entos*, within, + *plasma*.] The inner and more fluid portion of the cellular protoplasm.

entoplas'tic. 1. Relating to the entoplasm. 2 Possessing an internal formative power.

entop'tic [G. *entos*, within, + *optikos*, relating to vision] Within the eyeball.

entoptos'copy [G. *entos*, within, + *optos*, visible, + *skopeō*, I view.] 1. Examination of the interior of the eyeball. 2. Autoscopy of the eye, autoophthalmoscopy.

entoret'ina [G. *entos*, within.] The internal layer of the retina, Henle's nervous layer.

en'tosarc [G. *entos*, within, + *sarx(sark-)*, flesh.] Endosarc, the cytoplasm of a protozoan.

entos'thoblast [G. *entosthen*, from within, + *blastos*, germ.] Entoblast; the hypothetical nucleus of the nucleolus.

ento'tic [G. *entos*, within, + *ous(ōt-)*, ear] Within the ear.

entozo'on [G. *entos*, within, + *zōon*, animal] An animal parasite the habitat of which is any of the internal organs or tissues.

entro'pion, entro'pium [G. *en*, in, + *tropē*, a turning] An infolding of the margin of an eyelid.

entro'pionize. To invert a part.

entypy (en'ti-pĭ) [G. *entypos*, impressed] A drawing or pushing inward. **e. of the germ'inal a'rea,** a condition, occurring in the development of many mammals, in which the germinal layer is inverted and the cavity does not open on the surface of the blastocyst, but remains roofed in by the trophoblast.

enucleate (e-nu'kle-āt). 1. To remove entire, shell out like a nut. 2. To destroy or remove the nucleus (of a cell).

enucleation (e-nu-kle-a'shun) [L. *enucleare*, to remove the kernel of a nut.] 1. The removal of a tumor or other body (such as the eyeball) entire, without rupture, as one shells out the kernel of a nut. 2. The removal or destruction of the nucleus of a cell.

en'ule. Trade name of a special form of suppository, wrapped in tinfoil.

enure'sis. Involuntary passage of urine.

enzootic (en-zo-ot'ik) [G. *en*, in, + *zōon*, animal.] Noting a disease of animals which is indigenous to a certain locality, analogous to an endemic disease among men.

enzygot'ic [G. *eis(en)*, one, + *zygote*.] Derived from a single fertilized ovum, noting certain twins.

enzyme (en'zīm) [G. *en*, in, + *zymē*, leaven.] An organic substance of colloid structure, secreted by the body cells, which acts as a ferment, inducing chemical changes in other substances by catalysis, itself remaining apparently unchanged in the process. An effort has been made to introduce order in the nomenclature of the enzymes by calling each after the name of the body upon which it acts, adding the termination *-ase*. **autolyt'ic e.,** an e. formed in the tissues which is capable of transforming tissue constituents into characteristic cleavage products. **clott'ing e.,** coagulose. **deam'idizing e.,** one which decomposes the amino-acids into ammonia compou**nd**. **ec'to-e.,** an e. which is excreted externall**y**. **en'do-e.,** an e. which is not excreted externally but passes directly into the blood. **inhibitory e.,** anti-enzyme. **oxida'tion e.,** oxidase. **redu'cing e.,** one which has the property of withdrawing oxygen, as, for example, causing the production of hydrogen sulphide in the presence of sulphur and water; reductase.

enzym'ic. Relating to an enzyme.

enzy'mol. An extract prepared from the stomach of a freshly butchered animal; it occurs as a light straw-colored fluid and is recommended for application to sluggish ulcers and fo**r** the solution of necrosed bone.

enzymo'sis. The chemical changes in organic matter caused by the action of an enzyme.

eonism (e'on-izm). Transvestism.

e'osin [G. *ēōs*, dawn.] Tetrabromfluorescein, $C_{20}H_8Br_4O_5$, a coal-tar product employed as a dye, in the form of its potassium salt, *soluble eosin;* the latter is a bronze-colored powder, forming in water a red solution with green fluorescence.

e'osin-bod'y. A pink-staining (Giemsa) area, the seat of flagellum formation, in the body of *Herpetomonas donovani* in the bedbug cycle.

eosinoblast (e-o-sin'o-blast). Myeloblast.

eosinopenia (e-o-sin''o-pe'nĭ-ah) [eosino(phil) + G. *penia*, poverty.] The presence of eosinophil cells in abnormally small number in the peripheral blood stream.

eosinophil, eosinophile (e-o-sin'o-fil, e-o-sin'o-fīl) [*eosin* + G. *philos*, fond.] 1. Eosinophilic. 2. A cell or other element, especially a leucocyte, which stains readily with eosin.

eosinophil'ia. A form of relative leucocytosis in which the main increase is in the eosinophils.

eosinophil'ic, eosinoph'ilous. Eosinophil (1); staining readily with eosin dyes; oxyphilic, acidophilic (eosin being an acid dye).

eosinotactic (e-o-sin-o-tak'tik) [eosino(phile) + G. *taktikos*, in orderly arrangement.] Exerting a force of attraction or repulsion on eosinophile cells

eosote (e'o-sōt). Creosote valerianate

epac'tal [G. *epaktos*, imported, added to.] Supernumerary. **e. bones,** sutural or Wormian bones

eparsal'gia. Epersalgia.

eparseno (e-par'sĕ-no). Amino-arsenophenol, No. 132, stabilarsan, a solution of dioxydiamidoarsenobenzol, the base of 606, in glucose; its arsenical content is double that of neoarsphenamine.

eparte'rial [G. *epi*, upon, + *artēria*, artery.] Upon or over an artery, noting the first branch of the right bronchus which is placed above the right pulmonary artery.

epax'ial [G. *epi*, upon, + *axis*.] Above or behind any axis, such as the spinal axis or the axis of a limb.

epen'cephal. Epencephalon

epencephal'ic. Relating to the epencephalon; occipital.

epenceph'alon [G. *epi*, upon, + *enkephalos*, brain.] The metencephalon, the anterior division of the third cerebral vesicle or rhombencephalon; the cerebellum and pons Varolii, or these and the medulla, myelencephalon, as well.

ependyma (ep-en'di-mah) [G. *ependyma*, an outer garment.] The membrane lining the central canal of the spinal cord and the cerebral ventricles. **e. lay'er,** an inner layer of undifferentiated cells next to the cavity of the tube formed during

the stratification of the medullary tube, and persisting throughout life.

epen'dymal. Relating to the ependyma. **e. lay'er,** ependyma layer.

ependymitis (ep-en-de-mi'(me')tis). Inflammation of the lining membrane of the ventricles of the brain.

ependymoblast (ep-en'dĭ-mo-blast) [*ependyma* + G. *blastos*, germ.] An embryonic ependymocyte, or ependymal cell.

ependymocyte (ep-en'dĭ-mo-sīt) [*ependyma* + G. *kytos*, cell.] An ependymal cell.*

ependymo'ma. A cystic growth in a glioma or in the gray matter of the brain, arising from a fetal inclusion of ependymal tissue.

epersalgia (ep-ur-sal'jĭ-ah) [G. *epairō*, I lift up, + *algos*, pain.] Pain and soreness from over-use or unaccustomed use of a part, as a joint or muscle.

ephe'bic [G. *ephēbikos*, relating to youth.] Relating to the period of puberty or to a youth; pubertal.

ephebology (ĕ-fe-bol'o-jĭ) [G. *ephēbos*, puberty, + *-logia*.] The branch of science relating to the morphological and other changes incidental to puberty.

ephed (ef'ed). Trade name of a flexible gelatin capsule containing an oily solution of ephedrine, to be applied to the nasal mucous membrane for the relief of head colds or hay fever.

Eph'edra [G. *epi*, upon, + *hedra*, seat.] A genus of shrubs of the family *Gentianaceæ*. **E. antisyphilit'ica,** mountain rush, tepopote, teamster's tea, a shrub of the southwestern U. S. and Mexico, the stems of which enjoy a popular reputation in the treatment of venereal and urinary diseases in doses of ʒi–2 (4.0–8.0) of a fluidextract. **E. vulgaris,** var. **helve'tia,** a Chinese plant, the source of ephedrine.*

ephedrin (ef'e-drin) A glucosidal tannin, occurring in the form of a reddish powder, obtained from *Ephedra antisyphilitica*.

ephedrine (ef'e-drēn). An alkaloid from the leaves of *Ephedra vulgaris* var. *helvetia*, employed as a mydriatic by instillation of mxi–2(0.06–0.13) of a 10 per cent. aqueous solution; it raises the blood pressure and contracts the uterine, but relaxes the intestinal and bronchial musculature· locally its action is similar to that of epinephrine.

e. hydrochlo'ride, ephedrinæ hydrochloridum (Br.) recommended in the treatment of asthma and hay fever and obstetric shock and collapse; dose, gr. ½–2 (0.03–0.12).

ephe'lis, pl. *ephelides* (ef-e'li-dēz) [G.] Lentigo, a freckle.

ephemeral (ĕ-fem'er-al) [G. *epi*, upon, + *hēmera*, day.] Lasting a day, more or less; of brief duration. **e. fe'ver,** a mild fever of very brief duration.

ephetonine (ef-et'o-nēn). A compound of dextro- and levo-rotatory ephedrine, manufactured synthetically.

ephidrosis (ef"i-dro'sis) [G.] Moderate sweating; also (incorrectly) excessive or critical sweating, as in pneumonia.

ephippium (ĕ-fip'ĭ-um) [G. *epi*, upon, + *hippos*, horse.] Sella turcica.

ep'iblast [G. *epi*, upon, + *blastos*, germ.] The outer layer of the blastoderm, the ectoderm; from it are developed the common integument and the external parts of the special sense organs.

epiblas'tic. Relating to the epiblast.

epibole, epiboly (ĕ-pib'o-le). The inclusion of the hypoblast within the epiblast by reason of the more rapid growth of the latter, rather than by a process of invagination, or emboly.

epibul'bar. Upon a bulb of any kind, specifically upon the eyeball.

epican'thus [G. *epi*, upon, + *kanthos*, canthus.] A fold of skin extending from the root of the nose to the inner termination of the eyebrow, overlapping the inner canthus; its presence is normal in the Mongolian

epicardia (ep-ĭ-kar'dĭ-ah) [G. *epi*, upon, + *cardia*.] The lower portion of the esophagus from where it passes through the diaphragm to the stomach.

epicar'dium [G. *epi*, upon, + *kardia*, heart.] BNA]. The visceral layer of the pericardium, that immediately enveloping the heart.

epic'arin. Oxynaphthylortho-oxytoluylic acid; a colorless crystalline powder, employed as a parasiticide and in various skin diseases in the form of a 10 per cent. solution or 10 to 20 per cent. ointment.

ep'icarp [G. *epi*, upon, + *karpos*, fruit.] In botany, the enveloping layer of the pericarp of a fruit

ep'icele. Epicœlia.

epichlorhydrin (ep-ĭ-klor-hi'drin). A colorless liquid obtained by heating sodium hydroxide with 2 parts of dichlorhydrin; a solvent for resins used in the manufacture of lacquers.

epichordal (ep-ĭ-kor'dal). On the dorsal side of the notochord, especially its cranial extremity.

epicœ'lia [G. *epi*, upon, + *koilia*, ventricle] The fourth ventricle of the brain.

epic'omus [G. *epi*, upon, + *komē*, hair of the head] A twin monster joined at the occiput.

epicondylalgia (ep"ĭ-kon"di-lal'jĭ-ah) [G. *algos*, pain] Pain in an epicondyle of the humerus or in the tendons or muscles attached thereto.

epicondyle (ep-ĭ-kon'dīl) [G. *epi*, upon, + *kondylos*, condyle] A projection from a long bone near the articular extremity above or upon the condyle; see *epicondylus*.

epicondylian (ep-ĭ-kon-dil'ĭ-an). Epicondylic.

epicondylic (ep-ĭ-kon-dil'ik). Relating to an epicondyle or to the part above a condyle. **e. ridges,** the two borders separating the anterior and posterior surfaces of the humerus, running up from the condyles; the external (*margo lateralis*) gives attachment to the brachioradialis and extensor carpi radialis longior muscles, the internal (*margo medialis*), as well as the external, gives attachment to the intermuscular septa.

epicondylus (ep-ĭ-kon'dĭ-lus). Epicondyle. **e. latera'lis** [BNA], lateral epicondyle, (*a*) external condyle of the humerus; (*b*) outer tuberosity of the femur. **e. media'lis** [BNA], medial epicondyle, (*a*) internal condyle of the humerus; (*b*) inner tuberosity of the femur.

epicor'acoid. Upon or above the coracoid process.

epicra'nium [G. *epi*, upon, + *kranion*, skull.] The scalp, galea capitis; the muscle, aponeurosis, and skin covering the cranium.

epicra'nius. Musculus* epicranius.

epicrisis (ep-ĭ-kri'sis). A secondary crisis; a crisis terminating a recrudescence of morbid symptoms following a primary crisis.

epicrit'ic [G. *epikritikos*, pronouncing judgment upon.] Noting a set or system of sensory nerve-fibers, supplying the skin, by means of which one is enabled to appreciate the finer degrees of the sensations of touch, pain, and temperature and to localize the same; distinguished from *protopathic*.*

epicystitis (ep-ĭ-sis-ti'(te')tis). Inflammation of the cellular tissue above the bladder.

epicystot'omy [G. *epi*, on, + *kystis*, bladder, + *tomē*, incision.] Suprapubic cystotomy; opening

into the bladder through an incision above the symphysis pubis.

epicyte (ep'ĭ-sīt) [G. *epi*, upon, + *kytos*, cell.] 1. An epithelial cell. 2. A cell-membrane.

epicyto'ma [G. *epi*, upon, + *kytos*, cell, + *-ōma*.] Epithelial-cell carcinoma, malignant epithelioma.

epidem'ic [G. *epi*, upon, + *dēmos*, the people.] 1. Noting a disease attacking nearly simultaneously a large number of people in a community; it is distinguished from endemic in that the disease is not indigenous or continuously present but has been introduced from without. 2. The extensive prevalence in a community of a disease brought from without, or a temporary increase in number of cases of an endemic disease.

epidemicity (ep-ĭ-dem-is'ĭ-tĭ). The state of prevailing in epidemic form.

epidemiog'raphy [G. *epidēmios*, epidemic, + *graphē*, a writing.] A descriptive treatise of epidemic diseases or of any particular epidemic.

epidemiol'ogy [G. *epidēmios*, epidemic, + *-logia*.] The science of epidemics and epidemic diseases.

epiderm, epiderma (ep'ĭ-durm, ep-ĭ-dur'mah). Epidermis.

epidermal, epidermic (ep-ĭ-dur'mal, ep-ĭ-dur'mĭk). Relating to the epidermis. **e. meth'od,** the application of remedies to the surface of the skin in order to obtain their constitutional effects.

epidermatomycosis (ep-ĭ-dur''mă-to-mi-ko'sis). Dermatomycosis.

epidermatoplasty (ep-ĭ-dur'mat-o-plas-tĭ) [*epiderma* + G. *plassō*, I form.] Skin-grafting by means of strips (Thiersch's) or small patches (Reverdin's) of epidermis with the underlying outer layer of the corium.

epidermidiza'tion. Epidermization.

epidermido'sis. Epidermosis.

epider'min. 1. A protective used in surgical dressings in place of collodion, made of white wax, acacia, glycerin, and water. 2. An ointment base composed of difluorphenyl and fluorxylene.

epider'mis [G. *epi*, upon, + *derma*, skin.] [BNA]. Scarf-skin, cuticle, the outer epithelial portion of the skin; it consists of five layers or strata, called, from without inward, *stratum corneum* or horny layer, *stratum lucidum* or clear layer, *stratum granulosum* or granular layer, *stratum mucosum* or mucous layer, and *stratum germinativum* or germinative layer; by some histologists the last two layers are regarded as one, called either stratum germinativum [BNA] or stratum mucosum.

epidermitis (ep-ĭ-dur-mi' (e') tis). Inflammation of the epidermis or superficial layers of the skin.

epidermiza'tion. 1. Skin grafting. 2. The conversion of cells of the deeper, mucous or germinative, layer into those of the outer, horny, layer of the epidermis.

epider'moid [*epidermis* + G. *eidos*, appearance.] 1. Resembling epidermis. 2. A cholesteatoma or other tumor arising from aberrant epidermic cells.

epidermol'ysis [*epidermis* + *lysis*, loosening.] A condition in which the epidermis is loosely attached to the corium, readily exfoliating or forming blisters. **e. bullo'sa,** acantholysis bullosa, Goldscheider's disease; a condition of the skin, hereditary in origin, in which large bullæ are produced by slight mechanical irritation.

epidermomycosis (ep-ĭ-dur''mo-mi-ko'sis). Epidematomycosis, dermatomycosis.*

Epidermoph'yton [*epidermis* + G. *phyton*, plant.] A genus of fungi, separated by Sabouraud from *Trichophyton* on the ground that it never invades the hair-follicles; the cause of tinea cruris or dhobie itch.

epidermophytosis (ep-ĭ-dur-mo-fi-to'sis) [*epidermophyton* + *-osis*.] Dhobie itch, washerwoman's itch, tinea axillaris, tinea cruris, tinea inguinalis, tinea tropicalis, eczema marginatum, a pruritic affection of the skin of the perineum and inguinal region, sometimes of the axillæ and beneath the breasts in women, and frequently also of the toes and feet, due to infection with a species of epidermophyton.

epidermo'sis. A skin disease affecting chiefly or exclusively the epidermis.

epidid'ymal. Relating to the epididymis.

epididymec'tomy [G. *ektomē*, excision.] Operative removal of the epididymis.

epidid'ymis, gen. *epididym'idis* [G. *epi*, upon, + *didymos*, twin (testis).] The first, convoluted, portion of the excretory duct of the testis, passing from above downward along the posterior border of this gland; at the lower extremity of the testis it turns upward and gradually merges into the ductus deferens; the first portion is called the head (*caput*) or globus major, the lower end the tail (*cauda*) or globus minor.

epididymitis (ep-ĭ-did-ĭ-mi'(me')tis). Inflammation of the epididymis.

epididymo-orchitis (ep-ĭ-did-ĭ-mo-or-ki'(ke')tis). Simultaneous inflammation of both epididymis and testis.

epididymotomy (ep''ĭ-did-ĭ-mot'o-mĭ) [*epididymis* + G. *tome*, a cutting.] Incision into the epididymis, usually for the relief of pain and tension in epididymitis.

epididymovasostomy (ep-ĭ-did''ĭ-mo-vas-os'to-mĭ). The formation of an anastomosis between the epididymis and the vas deferens in case of an obstruction in the latter.

epidu'ral. Upon the dura mater.

epifascial (ep-ĭ-fash'al) [G. *epi*, upon, + *fascia*.] Upon the surface of a fascia, noting a method of injection of salvarsan, mercury, etc., in which the solution is deposited upon the fascia lata instead of into the substance of the gluteal muscle.

epifolliculitis (ep-ĭ-fol-ik-u-li'(le')tis) [G. *epi*, upon, + L. *folliculus*, follicle, + G. *-itis*.] Folliculitis.

epigæ'a [G. *epi*, upon, + *gaia, gē*, earth.] The leaves of *Epigæa repens* or trailing arbutus or mayflower; diuretic, like uva ursi, in doses of ʒ ½–1 (2.0–4.0) of a fluidextract, or 10–30 drops of the eclectic specific medicine.

epigamous (ĕ-pig'am-us) [G. *epi*, after, over and above, + *gamos*, marriage.] Noting the theory that the sex of the individual is determined by external factors acting upon the embryo during its period of development; see *progamous* and *syngamous*.

epigas'ter [G. *epi*, upon, + *gastēr*, belly.] The hind-gut, the primitive large intestine.

epigastral'gia [*epigastrium* + G. *algos*, pain.] Pain in the epigastric region.

epigas'tric. Relating to the epigastrium. **e. foss'a,** (1) urachal fossa;* (2) the depression at the epigastrium at the tip of the xiphoid cartilage of the sternum. **e. re'gion,** see under *abdominal*. **e. voice,** the delusion of a voice proceeding from the epigastrium.

epigas'trium [G. *epigastrion*.] The epigastric region, pit of the stomach, scrobiculus cordis; the upper central region of the abdomen, see cut under *abdominal*.

epigas'trius. A twin monster, the parasite being small and incomplete and attached to the autosite in the epigastric region.

epigastrocele (ep-ĭ-gas'tro-sēl) [G. *kēlē*, hernia.] A hernia in the epigastric region.

epigastror'rhaphy [G. *rhaphē*, stitching.] Suture of a wound of the abdominal wall in the epigastric region.

epigenesis (ep-ĭ-jen'e-sis) [G. *epi*, upon, + *genesis*, generation.] 1. The theory that the embryo is created by the parents jointly and is not developed from preexisting cells. 2. The Harveian theory that the embryo is built up gradually by the addition of one part after another in a definite sequence; opposed to the theory of *evolution*. 3. The growth and differentiation of a single ovum. 4. A new symptom, not antagonistic to those already present, developing in the course of a disease.

epigenetic (ep''ĭ-jen-et'ik). Relating to epigenesis in any sense.

epiglottid'ean. Relating to the epiglottis.

epiglottiditis (ep-ĭ-glot-id-i'(e')tis). Inflammation of the epiglottis, epiglottitis.

epiglot'tis [G. *epi*, upon, + *glōttis*, the opening into the larynx.] [BNA]. A saddle-shaped plate of cartilage, covered with mucous membrane, at the root of the tongue, which folds back over the aperture of the larynx, closing it, during the act of swallowing. **cush'ion of the e.**, tuberculum epiglotticum. **depres'sor of the e.**, fibers of the musculus thyreoepiglotticus attached to the epiglottis. **fre'num of the e.**, one of the glosso-epiglottic ligaments, or mucous-membrane folds passing from the tongue to the epiglottis.

epiglottitis (ep-ĭ-glot-i'(e')tis). Epiglottiditis.

epig'nathus [G. *epi*, upon, + *gnathos*, jaw.] An incomplete parasitic monster attached to the mandible of the autosite.

epiguanin (ĕp'ĭ-gwan-in). A purin body, $C_{10}H_{13}N_9O$, found sometimes in the urine; it resembles guanin in its properties.

epigynous (ĕ-pij'i-nus) [G. *epi*, upon, + *gynē*, woman.] Noting a flower the various parts of which are inserted on the top of the ovary.

epihyal (ep-ĭ-hi'al). Relating to the hyoid arch. **e. bone**, an ossified e. ligament. **e. lig'ament**, a ligament extending from the styloid process of the temporal bone to the lesser cornu of the hyoid bone.

epihy'oid. Upon the hyoid bone, noting certain accessory thyroid glands lying above the genihyoid muscle.

epilamell'ar. Upon or above a basement membrane.

epilate (ep'i-lāt) [L. *e*, out, + *pilus*, a hair.] To extract a hair; to remove the hair from a part by forcible extraction, electrolysis, or loosening at the root by chemical means; depilate.

epila'tion. Pulling out the hairs, depilation. **e. dose**, erythema* dose.

epil'atory. Depilatory.

epilem'ma [G. *epi*, upon, + *lemma*, husk.] The neurilemma of the terminal nerve fibrils.

epilepidoma (ep-ĭ-lep-ĭ-do'mah) [G. *epi*, upon, + *lepis(lepid-)*, rind, + *-ōma*.] A tumor due to hyperplasia of tissue derived from the true epiblast. **atyp'ical e.**, squamous epithelioma, dermal glandular carcinoma. **typ'ical e.**, dermal papilloma or adenoma.

epilep'sia [G.] Epilepsy. **e. gra'vior**, haut mal, typical epilepsy with well marked convulsions. **e. larva'ta**, latent epilepsy. **e. mit'ior**, petit mal, abortive epilepsy, latent epilepsy. **e. partial'is contin'ua**, a form of epilepsy marked by clonic muscular contractions in the intervals between the major convulsions. **e. tardi'va**, delayed epilepsy.

epilepsy (ep'ĭ-lep-sĭ) [G. *epilēpsia*.] A chronic functional nervous disorder, characterized by attacks of unconsciousness or convulsions or both, and usually associated in the later stages with mental disturbance. **abor'tive e.**, petit mal, a form in which the attacks are of very short duration, sometimes only three or four seconds. **accel'erative e.**, procursive e. **cor'tical e.**, Jacksonian e., focal e. **delayed e.**, e. coming on at puberty or later, even at the other extreme of sexual life. **fo'cal e.**, cortical e., Jacksonian e. **idiopath'ic e.**, typical e. occurring without any evident cause. **Jackso'nian e.**, cortical or focal symptomatic e. in which the convulsions are not general, but confined more or less strictly to certain groups of muscles. **laryn'geal e.**, laryngeal vertigo. **la'tent e.**, **masked e.**, petit mal, a form in which the attack is of short duration, with very slight convulsive movements. **matu'tinal e.**, a form in which the attack occurs in the morning when the patient awakes. **myoc'lonus e.**, a form associated with degenerative myoclonia. **noctur'nal e.**, a form in which the attacks occur during sleep, often unknown to the patient or made evident later only by the bitten tongue. **periph'eral e.**, reflex e. **pleu'ral e.**, convulsions following irrigation of the pleural cavity. **procur'sive e.**, a form in which a minor attack (petit mal) is marked by the patient turning around two or three times, or running a short distance. **psy'chic e.**, (1) the occurrence of attacks of maniacal excitement, coming on alone or following minor attacks (petit mal); (2) somnambulic e. (3) epileptoid convulsions of a purely mental origin—epilepsy due to suggestion or psychic contagion. **re'flex e.**, a form in which the attacks are excited by some peripheral irritation. **ret'inal e.**, a mild form in which the most striking symptom is a temporary blindness. **sen'sory e.**, thalamic e. **sleep e.**, narcolepsy. **somnam'bulic e.**, petit mal followed by a state resembling somnambulism in which the patient performs complicated acts naturally and well but of which he has no subsequent remembrance. **spi'nal e.**, convulsions occurring in the course of lateral spinal sclerosis. **symptomat'ic e.**, a form of e. due to obvious brain disease; Jacksonian e. **tar'dy e.**, delayed e. **tem'poral e.**, uncinate e. **thalam'ic e.**, sensory e., attacks of temporary mental disturbance marked by delusions of sensation. **un'cinate e.**, a form, associated usually with a lesion of the uncinate region of the temporal lobe, in which the aura is a dreamy state followed by hallucinations of smell and taste.

epilep'tic. 1. Relating to or suffering from epilepsy 2. A sufferer from epilepsy.

epilepticoccus (ep-ĭ-lep-tĭ-kok'us). The spore form of *Bacillus epilepticus*.

epilep'tiform [G. *epilēpsis*, epilepsy, + L. *forma*, form.] Epileptoid.

epileptogenic, epileptogenous (ep-ĭ-lep-to-jen'ik, ep-ĭ-lep-toj'en-us) [G. *epilēpsis*, epilepsy, + *gennaō*, I produce.] Causing epilepsy.

epileptoid (ep-ĭ-lep'toyd) [G. *epilēpsis*, epilepsy, + *eidos*, resemblance.] 1. Resembling epilepsy, epileptiform; noting certain convulsions, especially of hysterical nature. 2. An epileptic degenerate.

epilobium (ep-ĭ-lo'bĭ-um) [G. *epi*, upon, + *lobos*, lobe.] A plant employed in eclectic practice in the treatment of chronic diarrhea and dysentery, in dose of a teaspoonful of the specific medicine in water every two hours.

epiloia (ep-ĭ-loi'yah). Hypertrophic sclerosis of the cerebral cortex with nodular swellings on the floor of the lateral ventricles; it is associated with adenoma sebaceum and growths in the kidneys and sometimes also in the spleen and lungs; hypertrophic nodular gliosis, tuberose gliosis.

epimandib'ular [G. *epi*, upon, + L. *mandibulum*, mandible.] Upon the lower jaw.

epimemorrhagia (ep-ĭ-men-or-ra'jĭ-ŭ). Too profuse menstruation, occurring sometimes around the menopause.

epimenorrhea (ep-ĭ-men-or-re'ŭ). Too frequent, menstruation, occurring sometimes around the menopause.

epime'rite [G. *epi*, upon, + *meris*, part.] The attaching organ of a cephalont.

Epimys (ep'ĭ-mis) [G. *epi*, upon, + *mys*, mouse.] *Mus*, a genus of rats and mice of the family *Muridæ*. *E. norvegicus* (*Mus decumanus*) is the common ship or sewer rat; *E. rattus* is the plague rat of India.

epimysium (ep-ĭ-miz'ĭ-um) [G. *epi*, upon, + *mys*, muscle.] The fibrous envelope surrounding a secondary bundle of muscular tissue.

ep'inasty [G. *epi*, upon, + *nastos*, pressed close.] In botany, noting a condition of more vigorous growth on the upper than on the under surface, causing a downward curvature.

epinephrectomy (ep-ĭ-ne-frek'to-mē). Adrenalectomy.

epinephrina (ep-ĭ-nef-re'nŭ) (U.S.). Epinephrine, lævo-methylaminoethanol catechol, $C_9H_{13}O_3N$, a synthetic preparation chemically identical with the active principle of the suprarenal gland; a white or light brownish, microcrystalline, odorless powder, very slightly soluble in water or alcohol; employed locally, in 1:15,000 to 1:1,000 solutions, as a hemostatic, and hypodermically in shock in dose of gr. $\frac{1}{100}$ (0.0005).

epinephritis (ep-ĭ-nĕ-fri'(fre')tis) [G. *epi*, upon, + *nephros*, kidney, + *-itis*.] Inflammation of the suprarenal gland.

epinephro'ma [G. *epi*, upon, + *nephros*, kidney, + *-ōma*.] Hypernephroma.

epineph'ros [G. *epi*, upon, + *nephros*, kidney.] Suprarenal gland.

epineural (ep-ĭ-nu'ral). On a neural arch.

epineurial (ep-ĭ-nu'rĭ-al). Relating to the epineurium.

epineurium (ep-ĭ-nu'rĭ-um) [G. *epi*, upon, + *neuron*, nerve.] The connective tissue surrounding a nerve-trunk and binding together the funiculi; it contains the blood-vessels and lymphatics and usually more or less fat.

ep'inine. Trade name of a synthetic drug, dihydroxyphenylethylmethylamine, said to possess the physiological action of suprarenal extract.

epionychium (ep-ĭ-ŏ-nik'ĭ-um). Eponychium.

ep'iosin. A colorless crystalline powder, $C_{16}H_{12}N_2$; hypnotic in doses of gr. 1–1½ (0.06–0.1).

epio'tic [G. *epi*, upon, + *ous(ōt-)*, ear.] Above the ear, noting a bone in certain animals, and also a mastoid center of ossification.

epipas'tic [G. *epipassō*, I sprinkle over.] Noting a dusting powder.

epiphanin reaction or test (ĕ-pif'an-in re-ak'shun). For the serodiagnosis of syphilis; 0.1 c.c. of an alcoholic extract of syphilitic fetal liver is mixed with an equal quantity of a 10 % solution of the suspected serum in physiological salt solution, and to the mixture are added 1 c.c. of decinormal sulphuric acid and an equal amount of an equivalent solution of barium hydroxide; this mixture will turn red on the addition of a drop of phenolphthalein solution if the serum is from a syphilitic person.

epipharyngitis (ep-ĭ-far-in-ji'(je')tis). Rhinopharyngitis.

epiphar'ynx [G. *epi*, on, over, + *pharynx*.] Rhinopharynx.

epiphenom'enon [G. *epi*, upon, + *phainomenon*, phenomenon.] A symptom appearing during the course of a disease, which is not of usual occurrence and not necessarily associated with the disease.

epiph'ora [G. a defluxion.] Watery eye, an overflow of tears upon the cheek, due to narrowing of any part of the tear-conducting apparatus, or to an excessive secretion of tears.

epiphylaxis (ep-ĭ-fi-laks'is) [G. *epi*, upon, + *phylaxis*, protection.] Reinforcement of normal phylaxis; increase of the protective powers of the blood and other fluids.

epiphyseal, epiphysial (ep-ĭ-fiz'ĭ-al) Relating to an epiphysis. **e. line,** the plane (externally line) of junction between the epiphysis and diaphysis of a long bone where growth in length occurs.

epiphyseolysis (ep-ĭ-fiz-e-ol'i-sis) [G. *lysis*, loosening.] Loosening or separation of an epiphysis from the shaft of a bone.

epiphyseopathy (ep-ĭ-fiz-e-op'ă-thĭ) [G. *epiphysis* + *pathos*, suffering.] Any disorder of an epiphysis, either that of the long bones or of the cerebrum (the pineal gland).

epiph'ysis [G. *epi*, upon, + *physis*, growth.] 1. [BNA]. A part of a long bone developed from a center of ossification distinct from that of the shaft and separated at first from the latter by a layer of cartilage. 2. The pineal body or conarium, corpus* pineale [BNA]. **e. cer'ebri,** epiphysis (2).

epiphysitis (ep-ĭ"fĭ-si'(se')tis). Inflammation of an epiphysis.

epiphyte (ep'ĭ-fīt) [G. *epi*, upon, + *phyton*, plant]. 1. A plant growing upon another, but not parasitic, *i.e.* not nourished by the plant upon which it grows. 2. A parasitic fungus on the skin.

epipi'al. On the pia mater.

epiplocele (ĕ-pip'lo-sēl) [G. *epiploon*, omentum, + *kēlē*, hernia.] Hernia of the omentum.

epiplo'ic. Omental, relating to the epiploon, or omentum.

epiploitis (ep-ĭ-plo-i'(e')tis). Inflammation of the epiploon, or great omentum.

epiplomerocele (ep"ĭ-plo-me'ro-sēl) [G. *epiploon*, omentum, + *mēros*, thigh, + *kēlē*, hernia.] A femoral hernia containing omentum.

epiplomphalocele (ep-ĭ-plom'fal-o-sēl) [G. *epiploon* omentum, + *omphalos*, umbilicus + *kēlē*, hernia.] An umbilical hernia containing omentum.

epiploon (ep-ip'lo-on) [G.] Omentum, specifically great omentum.

epip'lopexy [G. *epiploon*, omentum, + *pēxis*, fixation.] Suture of the great omentum to the parietal peritoneum as a means of removing ascitic fluid, in cirrhosis of the liver, by establishing a collateral circulation; Talma's operation.

epiplor'rhaphy [G. *epiploon*, omentum, + *rhaphē* stitching.] Epiplopexy.

epiploscheocele (ep-ĭ-plos'ke-o-sēl) [G. *epiploon* omentum, + *oscheon*, scrotum, + *kēlē*, hernia.] Scrotal hernia containing omentum.

epipter'ic [G. *epi*, at, near, + *pterion*.] In the neighborhood of the pterion. **e. bones,** Wormian bones near the pterion.

epipy'gus [G. *epi*, upon, + *pygē*, buttocks.] A twin monster in which the incomplete parasite is attached to the buttock of the autosite.

episar'cin. A purin base having the formula, $C_4H_4N_3O$.

episcle'ra [G. *epi*, upon, + *sklēros*, hard.] The connective tissue between the sclera and the conjunctiva.

episcle'ral. 1. Upon the sclerotic coat of the eye. 2. Relating to the episclera.

episcleritis (ep-e-skle-ri'(re')tis) [G. *epi*, upon.] Inflammation of the episcleral or subconjunctival connective tissue.

episioclisia (ĕ-pis-ĭ-o-kli'sĭ-ah) [G. *episeion*, pudenda, + *kleisis*, closure.] Operative occlusion of the vulva.

episioelytrorrhaphy (ĕ-pis''ĭ-o-el-ĭ-tror'ra-fĭ) [G. *episeion*, pudenda, + *elytron*, vagina, + *rhaphē*, stitching.] Narrowing the vulva and vagina by suturing a longitudinal fold in the canal, in order to give better support to the uterus in cases of a tendency to prolapse.

episiohemato'ma, episiohæmato'ma [G. *episeion*, pudenda, + *haima(haimat-)*, blood, + *-ōma*.] An hematocele of the vulva.

epis''ioperineor'rhaphy [G. *episeion*, pudenda, + *perinaion*, perineum, + *rhaphē*, a stitching.] Repair of a ruptured perineum and lacerated vulva.

epis'ioplasty [G. *episeion*, pudenda, + *plassō*, I form.] Repair of a defect of the vulva by means of a plastic operation.

episiorrha'gia [G. *episeion*, pudenda, + *rhagia*.] Hemorrhage from the vulva.

episiorrhaphy (ĕ-pis-ĭ-or'ră-fĭ) [G. *episeion*, pudenda, + *rhaphē*, a stitching.] Repair of a lacerated vulva.

episiostenosis (ĕ-pis''ĭ-o-stĕ-no'sis) [G. *episeion*, pudenda, + *stenōsis*, narrowing.] Narrowing of the vulvar orifice.

episiotomy (ĕ-pis-ĭ-ot'o-mĭ) [G. *episeion*, pudenda, + *tomē*, incision.] Nicking the vulva on one side, when laceration of the perineum is imminent during labor, in order to direct the tear to the side.

epispadia (ep-ĭ-spad'ĭ-ă). Epispadias.

epispad'ial. Relating to an epispadias.

epispadias (ep-ĭ-spad'ĭ-as) [G. *epi*, upon, + *spadōn*, a rent.] A malformation of the penis in which the urethra opens on the dorsum.

epispas'tic [G. *epi*, upon, + *spaō*, I draw.] 1. Drawing (as a blister), vesicating. 2. An agent which blisters, or causes vesication.

epispi'nal [G. *epi*, upon, + *spine*.] Upon the spinal column or spinal cord, or upon any structure resembling a spine.

episplenitis (ep-ĭ-splen-i'(e')tis). Inflammation of the capsule of the spleen.

epis'tasis [G. scum.] Scum; a pellicle forming on the surface of urine after it has stood for a time; see *hypostasis*.

epistasy (ĕ-pis'ta-sĭ) [G. *epi*, upon, + *stasis*, position.] In Mendelian heredity the hiding of one character by another superposed upon it, the two not being allelomorphs.

epistatic (ep-ĭ-stat'ik) [G. *epi*, upon, + *statos*, standing.] In Mendelian heredity, noting one character which is superposed upon another, preventing or hiding its appearance, although the two are not allelomorphs.

epistax'is [G a dropping.] Nosebleed. **re'nal e.,** hematuria occurring without evidence of any lesion, angioneurotic hematuria, renal hemophilia.

epistemological (ep''is-te-mo-loj'ĭ-kal). Relating to epistemology.

epistemology (ep-is-te-mol'-o-jĭ) [G. *epistēmē*, knowledge, + *-ology*.] The theory of knowledge; the science dealing with knowledge as an entity.

epister'nal [G. *epi*, upon, + *sternon*, sternum.] Suprasternal, over or on the sternum; relating to the episternum.

epister'num [G. *epi*, upon, + *sternon*, sternum. The upper piece of the sternum, or manubrium; presternum.

epistropheus (ep-ĭ-stro'fe-us) [G. pivot.] [BNA.] Axis, the second cervical vertebra.

epite'la [G. *epi*, upon, + L. *tela*, web.] The tissue of the valve of Vieussens.

epitendineum (ep''ĭ-ten-din'e-um) [G.] *epi*, upon.] The white fibrous sheath surrounding a tendon.

epitenon (ĕ-pit'ĕ-non) [G. *epi*, upon, + *tenōn*, tendon.] Epitendineum.

epithal'amus [G. *epi*, upon, + *thalamos*, thalamus.] [BNA]. The portion of the thalamencephalon comprising the pineal body and the habenular region.

epithe'lia [pl. of *epithelium*.] 1. Epithelial cells 2. Epithelial layers.

epithe'lial. Relating to or consisting of epithelium. **e. body,** parathyroid. **e. cells, e. layers,** see *epithelium*. **e. in'lay,** filling of a defect by wrapping a Thiersch graft around an accurately fitted mould which is then inserted into the opening, the edges of which are approximated by sutures; at the end of ten days the mould is removed when the cavity is seen to be lined with granulations. **e. nests,** (1) e. pearls; (2) Brunn's* nests. **e. out'lay,** a procedure similar to e. inlay in which the edges of the cavity are not tightly closed, but have intervals of non-approximation through which the new epithelium grows out around the margins of the wound. **e. pearls,** small bodies formed of concentrically arranged, flattened, keratinized cells, found in epitheliomatous growths.

epithe'lioglan'dular. Relating to glandular epithelium.

epithelioid (ep-ĭ-the'lĭ-oyd) [G. *eidos*, resemblance.] Resembling epithelium.

epitheliolysin (ep-ĭ-the-lĭ-ol'ĭ-sin). A specific lysin in blood serum, acting upon epithelial cells; it destroys the cells of an animal of the same species as the one from which the epithelial cells, acting as antigen, were derived.

epitheliolyt'ic. Destructive to epithelium.

epithelio'ma, pl. *epithelio'mata, epithelio'mas* [L. *epithelium* + G. *-ōma*.] A cancerous growth originating from squamous epithelium. **ba'sal-cell e.,** rodent ulcer.* **e. adamanti'num,** adamantinoma. **e. adenoi'des cys'ticum,** spiradenoma. **e. contagio'sum,** fowl pox.* **e. mollus'cum,** molluscum epitheliale. **e. myxomato'des psammo'sum,** a myxoma of the brain containing granular matter. **mul'tiple benign' cys'tic e.,** spiradenoma.

epithelio'matous. Relating to epithelioma.

epitheliosis (ep-ĭ-the-lĭ-o'sis). A trachoma-like proliferation of the epithelium of the conjunctiva, noted in Paul's reaction. **e. desquamati'va,** Samoan eye disease; an e. occurring endemically in certain islands of the Pacific; trachoma granules do not develop, but atrophy of the conjunctiva occurs; the pathogenic organism is said to be *Lyozoon atrophicans*.

epithelium (ep-ĭ-the'lĭ-um) [G. *epi*, upon, + *thēlē*, nipple, a term applied originally to the thin skin covering the nipples and the papillary layer of the border of the lips.] [BNA]. The purely cellular, nonvascular layer covering all the free surfaces, cutaneous, mucous and serous, including the glands and other structures derived therefrom. **cil'iated e.**, e. of columna cells the free borders of which are surmounted by tapering filaments, or cilia; it is found in the air-passages. **colum'nar e.**, e. formed of prismatic cells set close together. **ger'minal e.**, a layer of epithelial cells on each side of the mesentery of the primitive intestinal tube, forming later the primitive sperm cells in the male, and in the female forming a layer of large cuboidal cells over the ovary. **lam'inated e.**, stratified e. **pave'ment e.**, simple e., consisting of a single layer of squamous or scaly cells; the e. of the pulmonary alveoli and the endothelium of serous membranes and of the blood-vessels are of this variety. **strat'ified e.**, e. occurring in the form of several superposed layers, the cells differing in shape in the different layers. **tess'ellated e.**, pavement e. with overlapping squamous cells. **transi'tional e.**, stratified e. of several layers, each of which is formed by a transformation of the cells from the layer below; it occurs in the kidney, ureter, and bladder.

epithelization (ep-ĭ-the-li-za'shun). The formation of epithelium over a denuded surface.

ep'ithem [G. *epithēma*, a cover.] An external application, such as a poultice, but not a plaster or ointment.

epitox'oid. A toxoid having a weaker affinity for an antitoxin than has the toxin; a toxon.

epitrichial (ep-ĭ-trik'ĭ-al). Relating to the epitrichium.

epitrichium (ep-ĭ-trik'ĭ-um) [G. *epi*, upon, + *trichion*, a small hair.] A membrane or outer layer of epidermis enveloping the embryo.

epitrochlea (ep-ĭ-trok'le-ah). The inner condyle (epicondylus medialis [BNA]) of the humerus.

epitrochlear (ep-ĭ-trok'le-ar) Relating to the epitrochlea.

epituberculosis (ep-ĭ-tu-bur-ku-lo'sis) [G. *epi*, upon]. The occurrence of glandular swelling and pulmonary infiltration in the neighborhood of a focus of pulmonary tuberculosis or of enlarged bronchial glands, simulating caseation but not always tuberculous in essence. The sputum often contains no bacilli, though the Pirquet test may be positive. The affection, which is usually apyretic, occur most often in the young. Recovery is the rule.

epitympan'ic. Above, or in the upper part of, the tympanum.

epitym'panum. The upper part of the tympanum or attic.

epityphlitis (ep-ĭ-tĭ-flī'(fle')tis) [G. *epi*, upon, + *typhlon*, cecum, + *-itis*.] Inflammation of the vermiform appendix, appendicitis; perityphlitis.

epityphlon (ep-ĭ-tĭ'flon)[G. *epi*, upon, + *typhlon* cecum.] Vermiform appendix, processus vermiformis [BNA].

epizo'ic. Living as a parasite on the surface of the body.

epizoology (ep-ĭ-zo-ol'o-jĭ) [G. *epi*, upon, + *zōon*, animal, + *-logia*.] The science which deals with epidemics of disease among the lower animals.

epizoon, pl. *epizoa* (ep-ĭ-zo'on, ep-ĭ-zo'ah) [G. *epi*, upon, + *zōon*, animal.] An animal parasite on the surface of the body.

epizootic (ep"i-zo-ot'ik) [G. *epi*, upon, + *zōon*, animal.] 1. Noting a disease attacking a large number of animals simultaneously. 2. The prevalence of a disease among animals, the same as an epidemic among men. **e. cerebrospi'nal meningi'tis,** a disease of horses and mules, occurring at times in epidemic form, of undetermined cause; it is marked by a staggering gait, difficulty in swallowing, certain muscular contractions, and delirium.

épluchage (a-plü-shazh') [F. picking, cleaning.] The removal of all contaminated tissue in infected wounds. Cf. *débridement*.

eponychium (ep-o-nik'ĭ-um) [G. *epi*, upon, + *onyx* (*onych-*), nail.] 1. The condensed epidermis preceding the formation of the nail in the embryo. 2. Quick of the nail. 3. The thin skin adherent to the nail at its root; nail-skin.

ep'onym [G. *epōnymos*, named after.] The name of a disease, anatomical structure, operation, etc., derived from the name of the person who discovered or first described it.

eponym'ic. 1. Relating to an eponym. 2. An eponym.

epon'ymous. Eponymic.

epo"ophorec'tomy [G. *epi*, upon, + *ōophoros*, bearing eggs, + *ektomē*, excision.] Removal of the parovarium.

epoophoron (ep-o-of'or-on) [G. *epi*, upon, + *ōophoros*, egg-bearing.] [BNA]. Parovarium, organ of Rosenmuller, a collection of rudimentary tubules in the mesosalpinx between the ovary and the Fallopian tube; it is the remains of the proximal portion of the Wolffian body and the analogue of the paradidymis in the male.

Ep'pendorf's bacil'lus. A bacillus at one time supposed to be the specific organism of whooping-cough.

Ep'som salt [*Epsom*, a town near London where is a mineral spring.] Magnesium sulphate, the chief mineral ingredient of the Epsom water.

Ep'stein's pearls [Alois *Epstein*, German pediatrist of Prague, *1849.] Little whitish epithelial masses on the palate of the newborn.

Epstein-Pihl disease' (ep'stīn-pēl). Leucemia with intermittent symptoms

epu'lis [G. *epoulis*, a gumboil.] A small tumor of the gum or of the periosteum of the jaw, usually either a fibrous tumor or a sarcoma.

ep'uloid [G. *epoulis*, gumboil, + *eidos*, resemblance.] 1. Resembling an epulis. 2 A tumor of the gum or jaw resembling an epulis.

epulo'sis [G. *epoulōsis*, a scarring over.] Cicatrization.

epulot'ic. 1. Cicatrizing. 2. An agent which promotes cicatrization

Epyris califor'nicus (ep'i-ris). A minute black hymenopterous insect which sometimes inflicts very painful stings on humans.

equation (e-kwa'zhun) [L. *æquare*, to make equal.] Equality; a statement expressing the equality of two things. **chem'ical e.**, a sentence in chemical language, a sequence of symbols and signs expressing a chemical action. **e.-divis'ion,** nuclear division in which each chromosome divides equally. **per'sonal e.**, a slight error in judgment or action, peculiar to the individual and so constant that it is usually possible to allow for it in accepting the person's statements or conclusions, thus arriving at approximate exactness.

equa'tor [L. *æquator*.] A line encircling a globular body, equidistant at all points from the two poles; the periphery of a plane cutting a sphere at the midpoint of, and at right angles to, its axis. **e. of the crys'talline lens,** the edge or periphery of the lens inserted between the two layers of the zonula ciliaris. **e. of the eyeball,** an imaginary line encircling the globe of the eye equidistant from the two poles.

equatorial (e-kwa-to'rĭ-al). Situated, like the earth's equator, equidistant from each end; midway.

equiax'ial. Having axes of equal length.

equil'ibrate. To maintain an equilibrium, to balance exactly.

equil'ibrating opera'tion. Tenotomy of the healthy antagonist of a paralyzed eye-muscle.

equilibra'tion [L. *æquus*, even, + *librare*, to balance.] Equilibrium; maintenance of equilibrium.

equilibrium (ek"wĭ-lib'rĭ-um) [L. *æquus*, equal, + *libra*, a balance.] Poise, the condition of being evenly balanced; in a state of repose between two or more antagonistic forces which exactly counteract each other. **col'loid e.,** the normal condition of the body colloids. **nitrog'enous e.,** a condition in which the amount of nitrogen excreted from the body equals that taken in with the food; nutritive e. so far as protein is concerned. **nu'tritive e.,** condition in which there is a perfect balance between intake and excretion of nutritive material, so that there is no increase or loss in weight. **physiolog'ical e.,** nutritive e.

equimolecular (ek-wĭ-mo-lek'u-lar) [L. *æquus*, equal, + *molecula*, a minute mass. Containing an equal number of molecules, referring for example to two or more solutions.

equina'tion [L. *equinus*, relating to *equus*, a horse.] Inoculation of man with the virus of horsepox, as a means of protection against smallpox.

equinia (ĕ-kwin'ĭ-ah) [L. *equinus*, relating to a horse.] An infectious disease of horses and related animals, affecting also man. It is characterized by a formation of infective granulomata in the mucous membrane and skin; when the process involves chiefly the nose, resulting in a profuse mucopurulent and sanguineous discharge, the disease is called *glanders;* when the lesions are mainly in the skin it is called *farcy*. In both cases the lesions suppurate and break down; the constitutional symptoms are severe, and death is the usual result.

equinovarus (ĕ-kwi-no-va'rus). The most common form of club-foot; see *talipes*.

equiseto'sis. A toxicosis in horses caused by eating equisetum.

equisetum (ek-wĭ-se'tum) [L. *equus*, horse, + *setum*, bristle.] Horsetail, jointed rush, used in eclectic practice as a diuretic and in dysuria and vesical tenesmus, in doses of 5 to 30 drops of the specific medicine in water every 2 to 6 hours.

equiv'alence, equiv'alency [L. *æquus*, equal, + *valentia*, strength.] 1. The property of an element or radical of combining with or displacing, in definite and fixed proportion, another element or radical in a compound. 2. Valence.

equiv'alent [L. *equus*, equal, + *valere*, to be worth.] 1. Equal in any respect. 2. Something which is equal in size, weight, force, or any other quality to something else. **chem'ical e.** of an element, the atomic weight of an element divided by its valence, or the weight of an element capable of combining with a unit weight of hydrogen. **epilep'tic e.,** a morbid symptom of any sort, other than convulsions, which takes the place of the latter in an epileptic attack. **e. weight,** chemical e. **Joule's e.,** see *Joule*. **psy'chic e.,** a transitory mental obscuration manifested by amnesia, or fugue, sleep-walking, or the like, taking the place of an ordinary epileptic or hysterical attack. **starch e.,** the amount of oxygen consumed in the combustion of a given weight of fat as compared with that consumed in the combustion of an equal weight of starch; the figure is about 2.38, that for starch being one. **tox'ic e.,** the amount of toxin or other poison per kilogram of weight necessary to kill an animal.

Er. The chemical symbol of erbium, also written simply E.

E.R. Abbreviation of external resistance, or the electrical resistance in the circuit outside the battery.

erasion (e-ra'zhun) [L. *eradere*, to erase.] The scraping away of tissue, especially of bone.

Erb's at'rophy [Wilhelm Heinrich *Erb*, German physician, 1840–1921.] Progressive muscular dystrophy.* **E.'s disease',** bulbar paralysis. **E.'s ju'venile type,** progressive muscular dystrophy of childhood, beginning in the scapulo-humeral region. **E.'s pal'sy** or **paral'ysis,** paralysis of the muscles of the upper arm (deltoid, biceps, brachialis anterior, etc.), due to a lesion of the brachial plexus or of the roots of the fifth and sixth cervical nerves **E.'s point,** a point on the side of the neck where pressure can be made on the brachial plexus, giving rise to E.'s paralysis. **E.'s sign,** (1) increased electric excitability of the muscles to the galvanic current, and frequently to the faradic, in tetany; (2) Westphal's sign, abolition of the patellar reflex in tabes. **E.'s spi'nal paral'ysis,** chronic myelitis of syphilitic origin.

Erb-Charcot disease' (erb-shar-ko'). Spastic spinal paralysis.

Erb-Gold'flam disease'. Myasthenia gravis.

Erb-West'phal sign. Abolition of the patellar tendon reflex, in tabes and certain other diseases of the spinal cord, and occasionally also in brain disease.

Er'ben's phenom'enon [Siegmund *Erben*, Viennese physician, *1863.] 1. In a case of neurasthenia, if the patient squats or stands bent far over, several slow heart-beats occur. 2. The local temperature of the knee on the painful side is reduced in sciatica. 3. Pain in sciatica is increased by hyperflexion of the sound leg.

er'bium. A rare metallic element, symbol E, or Er, atomic weight 167.4, found, usually as a silicate, with terbium and yttrium in gadolinite.

Erd'mann's rea'gent [H. *Erdmann*, German chemist, *1862.] A mixture of sulphuric and nitric acids, used in testing alkaloids.

erectile (e-rek'til) [L. *erigere*, to set up.] Capable of erection, noting a vascular tissue, found in the nasal cavities, the penis, and elsewhere, which, when filled with blood, becomes swollen and more or less rigid.

erection (e-rek'shun). The condition of erectile tissue when filled with blood, which then becomes hard and unyielding, noting especially this state of the external genital organs.

erec'tor [L.] One who or that which raises or makes erect, noting specifically certain muscles having such action; see under *musculus*.

eremacausis (e-rem-ă-kaw'sis) [G. *ĕrema*, by degrees, + *kausis*, a burning.] Slow combustion or oxidation.

eremiopho'bia [G. *ĕremia*, stillness, + *phobos*, fear.] Morbid fears aroused by stillness or absence of noise.

eremophobia (er″e-mo-fo′bĭ-ah) [G. *erēmos*, a wilderness, + *phobos*, fear.] Morbid fear of desert places or of solitude.

erep′sin [G. *ereptomai*, I feed upon.] An enzyme (protease) in the small intestine which converts peptones into simpler products.

erethism (er′e-thizm) [G. *erethismos*, irritation.] An abnormal state of excitement or irritation, either general or local.

erethis′mic, erethis′tic, erethit′ic. Marked by or causing erethism; excited, irritable. **e. shock,** a condition in which symptoms of irritation are combined with those of collapse.

ereuthophobia (er″u-tho-fo′bĭ-ah) [G. *ereuthos*, blushing, + *phobos*, fear.] A morbid fear of blushing.

erg (urg) [G. *ergon*, work.] The unit of work in the decimal system, the amount of work done by 1 dyne acting through 1 centimeter.

ergamine (ur′gam-ēn) [G. *ergon*, work, + *amine*.] Trade name of beta-iminazolylethylamine, a depressor substance prepared synthetically from histidin, recommended as a uterine tonic and hemostatic in metrorrhagia.

erga′sia [G. work.] Any form of activity, especially mental.

ergasiodermatosis (ur-gas″ĭ-o-dur-mă-to′sis). A dermatosis of industrial causation.

ergasiomania (ur-gas-ĭ-o-ma′nĭ-ah) [G. *ergasia*, labor, + *mania*, enthusiasm, frenzy.] A frenzy for work of any sort.

ergasiophobia (ur-gas-ĭ-o-fo′bĭ-ah) [G. *ergasia* labor, + *phobos*, fear.] 1. An aversion to work of any kind. 2. Morbid fear of a surgical operation.

ergasthenia (ur-gas-the′nĭ-ah) [G. *ergon*, work, + *astheneia*, weakness, disease.] Debility or any morbid symptoms due to overwork.

ergastoplasm, ergastoplasma (ur-gas′to-plazm, ur-gas-to-plaz′mah) [G. *ergastēr*, a workman, + *plasma*, plasm.] Cytoplasm permeated with extranuclear chromatin-staining material, credited with higher value or power than ordinary cell-plasma; superior protoplasm, kinoplasm.

ergin (ur′jin) [G. *ergō*, I do work.] A hypothetical substance in the blood or tissue fluids upon the union of which with the allergen of the infecting material, the phenomenon of allergy depends.

ergoap′iol. Trade name of a preparation said to contain ergot, apiol, savin, and aloin, recommended for menstrual disorders in doses of gr. 8–15 (0.5–1.0).

ergochrysin (ur-gok′ri-sin) [*ergot* + G. *chrysos*, gold.] A yellow substance obtained from ergot; without physiological action.

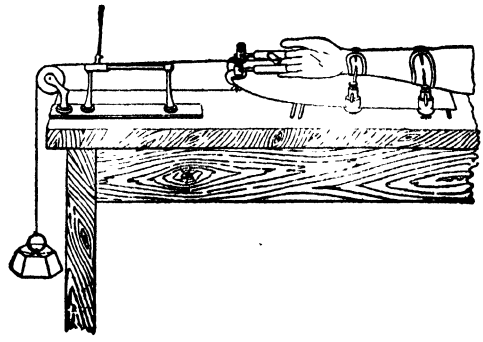
ergodynam′ograph [G. *ergon*, work, + *dynamis*, force, + *graphō*, I write.] An instrument for recording both the degree of muscular force and the value of the work accomplished by muscular contraction.

ergoesthesiograph (ur″go-es-the′zĭ-o-graf) [G. *ergon*, work, + *aisthēsis*, sensation, + *graphō*, I record.] An apparatus for recording graphically muscular aptness as shown in the ability to counterbalance variable resistances.

ergograph (ur″go-graf) [G. *ergon*, work, + *graphō*, I write.] An instrument for recording the value of work done by muscular contractions.

ergograph′ic. Relating to the ergograph and the record made by it.

ergomania (ur″go-ma′nĭ-ah) [G. *ergon*, labor, + *mania*, frenzy.] An uncontrollable impulsion to unremitting work; ergasiomania.



MOSSO'S ERGOGRAPH. The semiflexed forearm is fixed in a support, the hand being steadied by cylinders holding the second and fourth fingers; to the ring encircling the second phalanx of the middle finger is attached a weight; the rapidity and force of the finger flexion are recorded by the style shown near the pulley.

ergom′eter [G. *ergon*, work, + *metron*, measure.] Dynamometer.

er′gone. Trade name of a preparation of ergot.

ergophobia (ur-go-fo′bĭ-ah) [G. *ergon*, labor, + *phobos*, fear.] An abnormal aversion to work; ergasiophobia.

ergophore (ur′go-for) [G. *ergon*, work, + *phoreō*, I carry.] Noting the atom group of the antigen or antibody molecule upon which its specific action (toxic, lytic, etc.) depends; opposed to the *haptophore* or combining group.

er′gostat [G. *ergon*, work, + *statos*, standing, placed.] A form of machine for exercising the muscles.

ergos′terin. Ergosterol.

ergosterol (ur-gos′ter-ol) [*ergot* + *sterol*.] A sterol derived from ergot, yeast, mushrooms and other fungi, similar in composition to cholesterol and phytosterol. **irra′diated e.,** viosterol.

ergot (ur′got). 1. Ergota. 2. Calcar avis.

ergo′ta (U S. and Br.). Secale cornutum or clavatum, spurred rye, rye smut, the sclerotium of *Claviceps purpurea;* a horny, elongated, blackish-purple mass of peculiar disagreeable odor, which replaces the grain of rye (*Secale cereale*) attacked by this fungus; it causes contraction of the muscular coat of the arteries, raising blood pressure, and contraction of the uterine muscle. **e. præpara′ta** (Br.), prepared ergot, ergot which has been defatted and powdered; dose, gr. 5–15 (0.3–1.0).

ergotamine (ur-got′am-ēn). The principal alkaloid of ergot, having similar properties.

ergotaminine (ur-got-am′i-nēn). A crystalline isomer of ergotamine.

ergotherapy (ur-go-ther′ă-pi) [G. *ergon*, work, + *therapeia*, treatment.] Treatment of disease by muscular exercise.

ergot′ic acid. Ergotinic acid.

ergotin (ur′go-tin). 1. Extractum* ergotæ. 2. Ergotine (2).

ergotine (ur′go-tēn). 1. An alkaloid derived from ergot. 2. A name given to various extracts of ergot, some liquid, some dried.

ergotin′ic acid. Ergotic acid, a light brown amorphous powder, decomposed by the gastric juice, but actively hemostatic when given by hypodermic injection.

ergot′inine. A crystalline alkaloid, $C_{35}H_{40}N_4O_6$, obtained from ergot. **e. cit′rate,** the citric acid salt of ergotinine, a greyish white or slightly yellowish amorphous powder or acicular crys-

tals, slowly soluble in water; employed in place of ergot in hypodermic dose of gr. $\frac{1}{200}$ to $\frac{1}{100}$ (0.0003 to 0.0006).

ergot'inol. Trade name of a preparation of ergot with ammonia.

ergotism (ur'go-tizm). Poisoning by ergot or by meal made from spurred rye.

er'gotized. 1. Noting rye attacked by the clavi-ceps fungus. 2. Under the therapeutic or toxic influence of ergot.

er'gotol. Trade name of a preparation of ergot recommended for hypodermic use in doses of ♏5–15 (0.3–1.0).

ergotoxina (ur'-go-toks-e'nah), **ergotox'ine.** An alkaloid probably identical with cornutine, obtained from ergot, or produced during the catabolism of tyrosin. **ergotoxinæ æthanosul'-phonas** (Br.), dose, gr. $\frac{1}{120}$–$\frac{1}{60}$ (0.0005–0.001).

ergotropy (ur'go-tro-pĭ) [G. *ergon*, work, + *tropē*, a turning.] Energizing of the plasma and tissues of the body by the injection of nonspecific proteins, either animal or vegetable, so as to increase the power of resistance to pathogenic agents in general.

erg-second. A unit of action, energy or work multiplied by time, the amount of work done in moving a weight of one gram a distance of one centimeter in one second.

ergusia (ur-goo'sĭ-ă). A hypothetical substance which inhibits cell growth when found in excessive amount; assumed to be the same as vitamin A.

Erica'ceæ [G. *ereikē*, heather.] An order of gamopetalous, dicotyledonous plants, which includes the heaths and heathers.

Erichsen's disease' (er'ik-sen) [John Eric *Erichsen*, London surgeon of Danish birth, 1818–1896.] Railway* spine. **E.'s lig'ature,** a double ligature, used especially for transfixing and tying off nevi, in which one thread is white, the other black or colored, so that the corresponding ends may be recognized. **E.'s sign,** when sudden pressure is made approximating the iliac bones, pain is caused in the case of sacroiliac disease, but not in that of hip disease.

er'icin. Mesotan.

erigeron (er-ij'er-on) [G. *ērigerōn*, early old.] The dried leaves and flowering tops of *Leptilon canadense* (*Erigeron canadense*), fleabane, mare's-tail, cow's-tail, colt's-tail, pride-weed, butter-weed, horse-weed, scabious; diaphoretic and expectorant in doses of ℥½–1 (15.0–30.0) of a decoction (half-ounce to the pint), or 2 to 4 drops of the eclectic specific medicine in water every hour.

eriodictyon (er''ĭ-o-dik'tĭ-on) [G. *erion*, wool, + *diktyon*, net.] (U.S.) The dried leaves of *Eriodictyon californicum* (*E. glutinosum*), yerba santa, mountain balm, consumptive's weed, bear's weed, gum-bush, an evergreen shrub of the south-western states of the U.S.; has been employed as a bitter tonic and expectorant in doses of ♏½–1 (2.0–4.0) of the fluidextract.

Erlangen technique (air'lahng-en tek-nēk'). The treatment of deep-seated malignant disease by a single huge dose of *x*-rays at one sitting instead of small doses at repeated sittings.

Erlenmeyer's flask (air'len-mi-er) [Emil *Erlenmeyer*, German chemist, 1825–1909.] A glass flask with broad base and conical body, used in chemical operations.

Erlenmeyer's mix'ture (er'len-mi-er) [F. A. *Erlenmeyer*, German psychiatrist, 1849–1926.] A mixture of equal parts of sodium, potassium, and ammonium bromides.

ernutin (ur'nu-tin). Trade name of a solution of ergotoxine, tyramine, and ergamine, offered as a substitute for the galenical preparations of ergot, in doses of ♏30–60 (2.0–4.0) by mouth or ♏5–10 (0.3–0.6) hypodermically, after the child is born.

erode' [L. *erodere*, to gnaw away.] To wear away; corrode; to remove by ulceration.

ero'dium [G. *erōdios*, heron.] The plant, *Erodium cicutarium*, stork's-bill, pin-weed; employed as a diuretic and in uterine hemorrhage and menorrhea in doses of ♏30–40 (2.0–2.6) of a fluid-extract.

erogenous (er-oj'en-us). Erotogenic. **e. zone,** any part of the body, touching or stimulation of which excites the sexual feelings.

erose (e-rōs') [L. *erosus; erodere*, to gnaw away.] Irregularly notched or indented as if eaten away; noting the character of the margin of a leaf or a bacterial colony.

erosion (e-ro'zhun) [L. *e*, off, + *rodere* to gnaw.] A wearing away; a state of being worn away. In dentistry the wearing away of the surface of a tooth by chemical action.

ero'sive. 1. Having the property of eroding or wearing away. 2. An eroding agent.

erot'ic [G. *erōtikos*, relating to love.] Relating to sexual passion; lustful.

er'otism. A condition of sexual excitement.

erotogenic (er''o-to-jen'ik) [G. *erōs*(*erōt-*), love, + *gennaō*, I produce.] Causing sexual excitement.

erotomania (er''o-to-ma'nĭ-ah) [G. *erōs*(*erōt-*), love, + *mania*, frenzy.] 1. A mental disorder caused or characterized by excessive and irrational love 2. Insanity marked by erotism.

erotoma'niac. A sufferer from erotomania.

erot'opath. A subject of erotopathy.

erotop'athy [G. *erōs*(*erōt-*), love, + *pathos*, suffering.] Any abnormality of the sexual impulse.

erotophobia (er-o-to-fo'bĭ-ah) [G. *erōs*(*erōt-*), love, + *phobos*, fear.] A morbid aversion to the thought of sexual love and to its physical expression.

erotopsychic (er-o-to-si'kik) [G. *erōs*(*erōt-*) love, + *psychē*, the mind.] Erotopathic.

errat'ic [L. *errare*, to wander.] 1. Eccentric. 2. Noting pains or other symptoms which change their seat, wandering from one part of the body to another.

errhine (er'in) [G. *en*, in, + *rhis*(*rhin-*), nose.] 1. Causing a discharge from the nostrils. 2. A sternutatory, an agent which provokes a mucous discharge from the nose.

erubes'cence [L. *erubescere*, to redden.] A blush, or reddening of the skin.

erubes'cent. Noting a flushing or reddening of the skin.

eructa'tion [L. *eructare*, to belch.] Belching; the raising of gas or of a small quantity of acid fluid from the stomach.

erupt (e-rupt') [see *eruption*.] To pierce the gum or gum and alveolar process and take its place in the dental arch (said of a tooth).

eruption (e-rup'shun) [L. *eruptus; erumpere*, to break out.] 1. A breaking out, especially the appearance of lesions on the skin. 2. Redness, spotting, or other visible phenomena on the skin or mucous membranes, especially when appearing as a local manifestation of a general disease, such as typhoid fever or one of the exanthemata. An eruption is characterized, according to the nature of the lesion, as bullous, erythematous

macular, papular, etc. 3. The passage of a tooth through the alveolar process and gum (permanent) or the gum only (deciduous) to the open, cutting of a tooth. **creep'ing e.,** dermamyiasis linearis migrans œstrosa, the occurrence of a progressive pinkish elevated line in the skin, supposed to be due to the subcutaneous wandering of the larva of a bot fly. **drug e.,** any skin lesion caused by the action of a drug, such as the iodides, taken internally; dermatitis medicamentosa. **medic'inal e.,** drug e. **se'rum e.,** one caused by the injection of a serum, such as diphtheria antitoxin.

erup'tive. Relating to an eruption.

Erwineæ (ur-win'ĭ-e). A tribe of the family *Bacteriaceæ*, containing the genera *Erwinia* and *Phytomonas*.

Erwinia[0] (ur-win'ĭ-ah) [*Erwin* F. Smith, American bacteriologist 1854–1927.] A genus of the family *Bacteriaceæ*, the species of which are not pathogenic for man but cause "soft rot" or "black log" in melons, cabbage, cauliflower, turnips, potatoes, and other vegetables, also "blight" in pear and apple trees and "wilt" in tobacco plants.

Ery. Abbreviation for *Erysipelothrix*.

eryngium (er-in'jĭ-um) [G. *ēryngion*, a plant resembling the thistle.] A plant (*Eryngium aquaticum*, water eryngo) employed in eclectic practice in the treatment of irritable bladder conditions, in doses of 2 drops of the specific medicine in water every hour.

erysimum (ĕ-ris'ĭ-mum). The seeds of *Erysimum aureum* or *Sysimbrium officinale*, employed as a heart tonic and in cases of local congestion, especially of the larynx and upper air passages.

erysipelas (er-ĭ-sip'e-las) [G. from *erythros*, red, + *pella*, skin.] Rose, St. Anthony's fire; an acute spreading inflammation of the skin and subcutaneous tissues due to infection of the lymph spaces of the corium and underlying parts by a streptococcus (*Streptococcus erysipelatos*) or possibly a staphylococcus; it is attended by more or less severe constitutional symptoms. **am'bulant e.,** e. migrans. **e. inter'num,** an erysipelatous eruption in the vagina, occurring in some cases of puerperal toxemia. **e. mi'grans,** ambulant e., wandering e., a widely spreading form involving the entire face, or even the surface of the body. **e. per'stans facie'i,** persistent e. of the face; an eruption resembling e. of the face, chronic in character, accompanied by fever and typhoid symptoms. **idiopath'ic e.,** e. occurring without any evident wound of the skin. **Lom'bardy e.,** pellagra. **necrot'ic e.,** erysipeloid. **phleg'monous e.,** a form marked by invasion of the subcutaneous tissues, with the formation of deep-seated abscesses. **sur'gical e.,** e. caused by infection of the wound following a surgical operation. **wan'dering e.,** e. migrans. **white e.,** an edematous swelling of the skin with tenderness on pressure, but no redness, accompanied by fever. **zootic e.** (zo-ot'ik), erysipeloid

erysipel'atous. Relating to erysipelas.

erysip"elococc'us. *Streptococcus erysipelatos*.

erysip'eloid [G. *erysipelas* + *eidos*, resemblance. Erythema migrans or serpens, a mild dermatitis or erythema caused by infection from dead animal matter; it occurs in butchers, those who handle fish, and students in the dissecting room.

Erysipelothrix (er-ĭ-sĭ-pel'o-thriks) [*erysipelas* + G. *thrix*, hair.] A genus of the family *Actinomycetaceæ*, containing non-motile, microaerophilic, sporeless, rods or branching filaments pathogenic for some of the lower animals. **Ery. murisep'tiæ,** minute, non-motile rods, causing septicemia in some species of mice, but not in all. **Ery. rhusiopath'iæ**[0] *B. erysipelatos suis*, short slender rods occurring singly or in chains, the cause of swine erysipelas, pathogenic for man by inoculation.

eryisp"elotox'in. The toxin produced by *Streptococcus erysipelatos*, the bacterial cause of erysipelas.

erythema (er-ĭ-the'mah) [G. *erythēma*, flush.] Redness of the skin; rose-rash. **desquam'ative exfo'liative e.,** scarlatiniform e. **endem'ic e.,** pellagra. **e. ab ig'ne** [L. *ignis*, fire], a dermatitis occurring in bakers, stokers, and others exposed to radiant heat; it affects chiefly the shins. **e. annula're,** e. circinatum. **e. arthrit'icum epidem'icum,** an affection occurring in epidemic form, marked by multiple joint inflammation, a blotchy measles-like eruption involving especially the extremities, and general toxic symptoms with fever of an undulant type; erythredema, dermatopolyneuritis, acrodynia,* Swift's disease. **e. centrif'ugum,** lupus erythematodes. **e. dose,** the minimum amount of *x*-rays or other form of radioactivity sufficient to produce an erythema in 10 days or 2 weeks after the application; it is regarded as the full dose that it is safe to give at one time, and is not to be repeated until the expiration of 3 weeks to 1 month; this dose is indicated by the Sabouraud meter as the B tint, the Holzknecht as 5(5H), the Hampson as 4, and the Kienbock as 10. **e. circina'tum,** e. multiforme in which the lesions are grouped in more or less circular shapes. **e. eleva'tum diu'tinum** [L. lasting], an eruption of flattened nodules, of a pinkish or purplish color, apparently of gouty or rheumatic nature. **e. endem'icum,** pellagra. **e. epidem'icum,** acrodynia. **e. fu'gax,** a diffuse e. of the face, trunk, and extremities occurring in erethistic persons during the excitement caused by a medical examination. **e. gangræno'sum,** neurotic gangrene. **e. gyra'tum,** e. circinatum in which the various rings overlap each other. **e. indura'tum,** hard subcutaneous nodules, which subsequently break down, forming necrotic ulcers, seated usually on the calves of the legs, less frequently on the thighs or arms. **e. infectio'sum,** Sticker's disease, an eruption resembling the exanthem of measles or roetheln without any other symptoms of either of these diseases. **e. intertri'go,** see *intertrigo*. **e. i'ris,** a variety of e. multiforme in which the lesions appear in the shape of concentric rings. **e. kerato'des,** keratodermia with an erythematous border. **e. margina'tum,** e multiforme occurring in the shape of patches healing in the center as they spread at the periphery. **e. mi'grans,** erysipeloid. **e. mi'grans lin'guæ,** geographical tongue.* **e. multifor'me,** Hebra's disease, an acute febrile disease with headache and joint pains, accompanied by an eruption of multiform appearance, nodules, papules, or macules arranged in various figures—rings, patches, and variously marginate plaques. **e. nodo'sum,** dermatitis contusiformis, a dermatosis marked by the formation of painful nodes, especially on the shins, lasting a few days to a few weeks. **e. papula'tum,** the papular form of e. multiforme. **e. per'stans** [L. enduring], a chronic form of e. multiforme in which the relapses recur so persistently that the eruption is practically permanent. **e. ser'pens,** erysipeloid. **e. sim'plex,** a transitory eruption of irregular patches of a more or less bright red

color, disappearing on pressure. **e. sola're** [L. *sol*, sun], sunburn. **e. tubercula'tum**, e. multiforme in which the papules are of large size. **hemorrhag'ic ex'udative e.**, Henoch's* purpura. **hypere'mic e.**, e. of a bright red color, occurring in patches of varying size, due to vasomotor disturbance. **mac'ular e.**, roseola. **scarlatin'iform e.**, e. scarlatiniforme, desquamative exfoliative e., a macular erythema accompanied by slight constitutional disturbance, and followed by desquamation.

erythem'atous. Relating to or marked by erythema

erythgen (er'ith-jen) [*erythrocyte* + G. *gennaō*, I produce.] Trade name of an extract of liver substance for the treatment of pernicious anemia.

Erythræ'a [G *erythraios*, red] A genus of plants of the natural order *Gentianaceæ*, one species of which, *E. centaureum*, furnishes the drug centaury.*

erythrasma (er-ĭ-thraz'mah) [G. *erythrainō*, I redden.] An eruption of reddish-brown patches, in the axillæ and groins especially, due to the presence of a fungus, *Microsporon* or *Microsporoides minutissimum*.

erythredema (er''ĭ-thre-de'mŭ) [G. *erythros*, red, + *oidēma*, swelling.] Acrodynia, dermatopolyneuritis, Swift's disease, erythema* arthriticum epidermicum.

erythremia, erythræmia (er''ĭ-thre'mĭ-ah) [G. *erythros*, red, + *haima*, blood.] Polycythemia rubra, a disease characterized by an increase of the blood-corpuscles, especially the red corpuscles, with cyanosis; Vaquez's disease.

er'ythrin. A chromogen obtained from *Roccella montagnei* and other lichens.

erythrism (er'ĭ-thrizm) [G. *erythros*, red.] Redness of the hair with a ruddy, freckled complexion.

erythristic (er-ĭ-thris'tik). Relating to or marked by erythrism; having a ruddy complexion and reddish hair; rufous.

erythritilis (er-e-thrit'il-is). Erythrite, erythrol. **e. tetrani'tas dilu'tus** (Br.), erythrol tetranitrate mixed with lactose (50 p.c.) tetranitrol,* vasodilator and antispasmodic; dose, gr. ½–2 (0.03–0.12).

Erythrobacillus (er-ĭ-thro-bă-sil'us). Serratia.[0] A genus of the family *Bacteriaceæ* formerly recognized by the Society of American Bacteriologists, but later discarded and replaced by the generic term *Serratia*.

erythroblast (er'ĭ-thro-blast) [G. *erythros*, red, + *blastos*, germ.] Small, colorless, nucleated cells in the bone marrow, thought to be primitive hematoblasts from which are derived the red blood-corpuscles.

erythroblastoma (er-ĭ-thro-blas-to'mah) [*erythroblast* + G. *-ōma*.] A myeloma in which the cells resemble megaloblasts

erythroblastosis (er''ĭ-thro-blas-to'sis) [*erythroblast* + *-osis*.] The presence in considerable number of erythroblasts in the blood.

erythrocatalysis (er''ĭ-thro-kat-al'ĭ-sis) [G. *erythros*, red (corpuscle), + *katalysis*, dissolution.] Phagocytosis of the red blood cells.

erythrochloropia (er''ĭ-thro-klo-ro'pĭ-ah) [G. *erythros*, red, + *chlōros*, green, + *ōps(ōp-)*, eye.] Partial color-blindness with ability to distinguish correctly only red and green.

erythrochlorop'sia [G. *erythros*, red, + *chlôros* green, + *opsis*, vision.] Erythrochloropia.

erythrochromia (er''ĭ-thro-kro'mĭ-ah) [G. *erythros*, red, + *chrōma*, color.] A red coloration or staining.

erythroclasis (er-ĭ-throk'la-sis) [G. *erythros*, red (cell), + *klasis*, a breaking.] Fragmentation of the red blood-cells.

erythroclastic (er-ĭ-thro-klas'tik). Relating to erythroclasis; destructive to red blood-cells.

erythrocyte (er'ĭ-thro-sīt) [G. *erythros* red, + *kytos* cell.] A red blood-corpuscle.

decrease in number, oligocythemia, aglobulia, hypoglobulia. **degeneration,** erythrolysis, erythrocytolysis erythrocytorrhexis, erythrocytoschisis, crenation. **increase in number,** polycythemia, hyperglobulia. **large** macrocyte, macroblast, megalocyte, megaloblast **misshapen,** poecilocyte, pœcilocyte, poikilocyte, crenated cell. **rudimentary,** erythroblast, hematoblast microblast. **small,** microcyte, microblast

erythrocythemia (er''ĭ-thro-si-the'mĭ-ah) [G. *erythros*, red, + *kytos*, cell, + *haima*, blood.] Abnormal increase in the number of red blood-cells; polycythemia, erythræmia

erythrocyt'ic. Relating to a red blood-corpuscle.

erythrocytoblast (er''ĭ-thro-si'to-blast) [G. *erythros* red, + *kytos*, cell, + *blastos*, germ.] Erythroblast,

erythrocytol'ysin. Hemolysin, anything capable of effecting erythrocytolysis.

erythrocytolysis (er''ĭ-thro-sĭ-tol'ĭ-sis) [G. *erythros*, red, + *kytos*, cell, + *lysis*, loosening.] Dissolution or destruction of the red blood-corpuscles, with escape of the hemoglobin into the blood-plasma; hemolysis

erythrocytom'eter [G. *erythros*, red, + *kytos*, cell, + *metron*, measure.] An instrument for counting the red blood-cells

erythrocytorrhexis (er''ĭ-thro-sĭ-to-reks'is) [G. *erythros*, red, + *kytos*, cell, + *rhēxis*, rupture.] Plasmorrhexis, a partial erythrocytolysis, in which particles of protoplasm escape from the cells which become crenated and deformed.

erythrocytoschisis (er-ĭ-thro-si-tos'kĭ-sis) [G. *erythros*, red, + *kytos*, cell, + *schisis*, a splitting.] Plasmoschisis, a breaking up of the red blood-corpuscles into small particles resembling platelets

erythrocyto'sis. Polycythemia, erythremia, an increase in the number of red blood-corpuscles, usually marked by more or less cyanosis.

er''ythrodegen'erative. Relating to or marked by a degeneration of the red blood-cells

erythroderm (er'ĭ-thro-durm) [G. *erythros*, red, + *derma*, skin.] A member of the Rajput, American Indian, or other of the red races.

erythroderma (er''ĭ-thro-dur'mah) [G *erythros*, red, + *derma*, skin] Erythema, erythrodermia. **e. squamo'sum,** parapsoriasis, an eruption of lichenform papules, grouped into patches and covered with thick scales **maculopap'ular e.,** an eruption of macules and papules of reddish color, with slightly adherent scales, grouped together in patches of varying form, because of the prevailing character of the lesions it has been variously called: dermatitis variegata, lichen variegatus, pityriasis lichenodes, etc.

erythrodermati'tis. Erythrodermia.

erythrodermia (er''ĭ-thro-dur'mĭ-ah) [G. *erythros*, red, + *derma*, skin] Erythema, dermatitis with a general redness of the skin.

erythrodex'trin. A modified dextrin which is turned red by iodine.

erythrogonium, pl. *erythrogo'nia* (er''ĭ-thro-go'nĭ-um) [*erythro(cyte)* + G. *gonē*, generation.] Proerythrocyte, hematoblast.*

erythrogran'ulose. A modified granulose which is reddened by the action of iodine.

er'ythrol. 1. Erythrite, eryglucin, a derivative of erythrin found in lichens. 2. Bismuth and

cinchonidine iodide; antiseptic. **e. tetrani'trate,** tetranitrol.

erythrol'ysin. Erythrocytolysin, hemolysin.

erythrol'ysis. Erythrocytolysis.

erythromelalgia (er"ĭ-thro-mel-al'jĭ-ah) [G. *erythros,* red, + *melos,* limb, + *algos,* pain.] A neurosis marked by a paroxysmal throbbing and burning pain in the skin, affecting chiefly one or both legs and feet, sometimes one or both hands, accompanied by a dusky mottled redness of the parts; it may be idiopathic or symptomatic of some organic nervous disease.

erythrome'lia [G. *erythros,* red, + *melos,* limb.] A painless erythema of the extensor surfaces of the extremities.

erythroneocytosis (er"ĭ-thro-ne"o-si-to'sis) [erythro-(cyte) + G. *neos,* new, + *kytos,* cell, + *-ōsis.*] Presence in the peripheral circulation of regenerative forms of red blood-cells.

erythrope'nia [G. *erythros,* red, + *penia,* poverty.] Deficiency in the number of red blood-corpuscles.

erythrophag, erythrophage (er'ĭ-thro-fag, er'ĭ-thro-fāj) [G. *erythros,* red, + *phagos,* an eater.] A phagocyte which englobes and destroys red blood-corpuscles.

erythroph'agous. Noting the destructive action of certain phagocytes on red blood-corpuscles.

erythrophil, erythrophile (er'ĭ thro-fil, er'ĭ-thro-fīl) [G. *erythros,* red, + *philos,* fond.] Fuchsinophil. 1. Readily staining with red dyes. 2. A cell or histological element which stains promptly with red dyes.

erythrophil'ic, erythroph'ilous. Erythrophil (1).

erythrophleine (er-ĭ-throf'le-in). An alkaloid extracted from the bark of *Erythrophlæum guineense*-dose, gr. $\frac{1}{60}$–$\frac{1}{30}$ (0.001–0.002).

erythrophleum, erythrophlœum (er"ĭ-thro-fle'um) [G. *erythros,* red, + *phloios,* bark.] The dried bark of *Erythrophlæum guineense* (*E. judiciale*), sassy bark, grigri, mancona bark, red-water tree bark; an African ordeal poison, employed as a cardiac tonic in doses of gr. $\frac{1}{6}$–$\frac{1}{3}$ (0.01–0.02).

erythropho'bia [G. *erythros,* red, + *phobos,* fear.] Intolerance of the color red, occurring sometimes after cataract extraction.

er'ythrophose. A red phose.*

erythro'pia [G. *erythros,* red, + *ōps*(*ōp-*), eye.] Red vision, a condition in which all objects appear to be tinged with red.

erythropoiesis (er-ĭ-thro-poy-e'sis) [G. *erythros,* red, + *poiēsis,* a making.] The formation of red blood-cells.

erythropoietic (er"ĭ-thro-poy-et'ik). Relating to erythropoiesis.

erythroprosopalgia (er"ĭ-thro-pros-o-pal'jĭ-ah) [G. *erythros,* red, + *prosōpon,* face, + *algos,* pain.] A neurosis similar to erythromelalgia, but with the pain and redness occurring in the face.

erythrop'sia [G. *erythros,* red, + *opsis,* vision.] Erythropia.

erythrop'sin. Visual purple, rhodopsin.*

erythropycnosis (er"ĭ-thro-pik-no'sis) [G. *erythros,* red(corpuscle), + *pyknos,* dense.] Alteration of the red blood cells to the condition called "brassy bodies," under the influence of the malarial parasite.

erythrorrhexis (er"ĭ-thro-rek'sis) [erythro(cyte) + G. *rhēxis* rupture.] Fragmentation of the red blood-cells.

er'ythrose. Tetrose.

erythrosis (er-ĭ-thro'sis) [G. *erythros,* **red.**] A dark reddish purple coloration of the **skin** and mucous membranes observed in cases **of** polycythemia or Vaquez's disease.

erythrox'yline. The name by which cocaine was called by its discoverer, Gaedeke, in 1855.

erythrox'ylon. Coca.

erythruria (er"ĭ-thru'rĭ-ah) [G. *erythros,* red, + *ouron,* urine.] The passage of urine of a red color.

Esbach's rea'gent (es'bakh) [Georges Hubert *Esbach,* Paris physician, 1843–1890.] Picric acid 1, citric acid 2, water 97; used as a test for albumin in urine.

es'calin. Proprietary name for a paste of powdered aluminum in glycerin, recommended in the treatment of ulcer of the stomach.

escaped' ventric'ular contrac'tion. Isolated ventricular contraction from an impulse formed in the auriculoventricular node; also called automatic contraction; see also under *contraction.*

Esch. Abbreviation for *Escherichia.*

eschar (es'kar) [G. *eschara,* scab.] A slough following a burn or cauterization of the skin. **neuropath'ic e.,** decubitus.

escharotic (es-kar-ot'ik). Caustic, corrosive.

Escherichia (esh-er-ik'ĭ-ah) [Theodor *Escherich,* German physician, 1857–1911.] A genus of *Bacteriaceæ,* most of the species of which—*acidi-lactici, alcales'cens, commu'nior, galactoph'ila, gas'trica, ili'aca, lep'oris, neapolita'na, plebei'a, pseudocoloi'des, schae'fferi, vekan'da*—are inhabitants of the intestinal canal of normal men and animals, and are apparently nonpathogenic. **E. co'li,**° *Bacillus coli communis, Bacterium coli commune,* colon bacillus, a motile, flagellated, gram-negative organism, normally present in the intestine; it is believed to be usually non-pathogenic, but readily becomes virulent and may invade the tissues outside of the intestine. (See also *Bacillus coli.*) **E. colofœtida,** *B. colofœtidus,* a motile, gram-negative, rod-shaped organism, isolated from the tonsils in cases of fetor oris, or halitosis. **E. fœtida,**° *Coccobacillus fœtidus, Salmonella fœtida,* the Perez bacillus, an organism found in the secretions in ozæna or chronic rhinitis; not the same as *B. ozœnæ* (*q.v.*). **E. grünthal'i,**° an organism isolated in some cases of food-poisoning. **E. neapolita'na,**° *Bact. neapolitanum,* B. *neapolitanus* (q.v.). **E. paragrünthal'i,**° a form resembling *E. grünthali,* isolated in cases of food-poisonong. **E. pseudodysenter'iæ,**° an organism found in the intestinal dejections in cases of dysentery and also occasionally in healthy persons; pathogenic for laboratory animals.

eschrolalia, æschrolalia (es-kro-la'lĭ-ah) [G. *aischros,* shameful, + *lalia,* talking.] Coprolalia

es'corcin, æs'corcin. Escorcinol, a brown powder derived from esculetin by the action of sodium amalgam; used for the detection of defects in the cornea and conjunctiva which it marks by a red coloration.

Escudero's test (es-koo-da'ro). A test for gout; the patient has a meal containing an estimated amount of purines, and the amount eliminated within twenty-four to forty-eight hours is measured; if it exceeds 50 per cent of the amount ingested gout may be excluded, but if it is only from 35 to 50 per cent, any arthritic symptoms present are presumably gouty in origin.

Escula'pian. Æsculapian.

es'culent [L. *esculentus,* eatable.] Eatable, fit to be eaten.

escu'letin, æscu'letin. A decomposition product of esculin used in the manufacture of escorcin.

es'culin, æs'culin. A glucoside from horse-chestnut bark, occurring as white crystals of bitter taste;

employed as an antiperiodic in doses of gr 5–15 (0.3–1.0).

escutcheon (es-kuch'un) [L. *scutum*, shield.] The anal region of the ox, with reference especially to the direction of growth of the hair.

eseridine (es-er'ĭ-dēn). An alkaloid in the seed of physostigma or Calabar bean; an excitomotor used chiefly in veterinary practice.

es'erine. Physostigmine, an alkaloid of *Physostigma venenosum*, or Calabar bean, employed locally as a miotic; see *physostigmina*.

Esmarch's ban'dage (es'markh) [Johann Friedrich August von *Esmarch*, German surgeon, 1823–1908.] A rubber bandage which is wound tightly about a limb from the periphery toward the center in order to exsanguinate the member and offer a bloodless field for operation, the return of the blood after removal of the bandage being prevented by a strong elastic ligature around the proximal end of the extremity. **E. dish,** a small glass dish about 7 cm. in diameter with a rim 1 cm. high used in bacteriological work. **E. mask,** a metal frame with strips of gauze stretched across the center and a rubber cover on the outside, formerly used for giving chloroform or ether by inhalation. **E.'s paste,** a caustic of arsenic 1, morphine sulphate 1, calomel 8, gum arabic 48. **E. roll tube,** a modification of the plate culture, a seeded gelatin culture being placed in a test-tube and the latter rolled horizontally in cold water or on a block of ice until the gelatin solidifies evenly around the interior of the tube.

esod'ic [G. *es*, *eis*, into, + *hodos*, way.] Centripetal or afferent, noting sensory nerves conducting impulses toward the spinal cord and brain.

esoethmoiditis (es-o-eth-moy-dī'(de')tis) [G *esō*, within.] Inflammation of the lining membrane of the ethmoid cells.

esogastritis (es-o-gas-trī'(tre')tis) [G. *esō*, within, + *gastēr* (*gastr-*), stomach, + *-itis*.] Catarrhal inflammation of the mucous membrane of the stomach.

esophagal'gia, œsophagal'gia [G *algos*, pain.] Pain in the esophagus.

esophageal, œsophageal (e-so-faj'e-al). Relating to the esophagus.

esophagectasia, œsophagectasia (e-sof-ă-jek-ta'sĭ-ah) [G. *oisophagos*, esophagus, + *ekiasis*, extension.] Dilatation of the esophagus.

esophagectasis, œsophagectasis (e-sof-ă-jek'ta-sis). Esophagectasia.

esophagec'tomy, œsophagec'tomy [G. *ektomē*, excision.] Excision of more or less of the esophagus.

esoph'agism, œsophagis'mus. Spasmodic stricture of the esophagus.

esophagitis, œsophagitis (e-sof-a-jī'(je')tis). Inflammation of the esophagus.

esophagocele (e-sof'a-go-sēl) [G. *kēlē*, hernia.] Protrusion of the mucous membrane of the esophagus through a rent in the muscular coat.

esophagodynia, œsophagodynia (e-soph"a-go-dinĭ-ah) [G. *odynē*, pain.] Pain in the esophagus.

esophagoenterostomy (e-sof"a-go-en-ter-os'to-mĭ) [G. *oisophagos*, esophagus, + *enteron*, intestine, + *stoma*, mouth.] The operative formation of a direct communication between the esophagus and intestine, the stomach being excised.

esophagogastrostomy (e-sof"ă-go-gas-tros'to-mĭ) [*esophagus* + G. *gastēr*, stomach, + *stoma*, mouth.] The establishment of an artificial opening between the esophagus and the stomach.

esophagomalacia, œsophagomalacia (e-sof"a-go-mă-la'sĭ-ah) [G. *malakia*, softness.] Softening of the walls of the esophagus.

esophagom'eter [G. *metron*, measure.] An instrument for obtaining the dimensions of the esophagus.

esophagomycosis (e-sof"a-go-mi-ko'sis) [G. *mykēs*, fungus.] Any bacterial or fungous disease of the esophagus.

esoph'agoplasty. Repair of a defect in the wall of the esophagus by a plastic operation.

esophagoplication (e-sof"ă-go-pli-ka'shun). Reduction in size of a dilated esophagus or of a pouch in the same by making longitudinal folds or tucks in its wall.

esophagopto'sia, œsophagopto'sia, esophagop'tosis [G. *oisophagos*, esophagus, + *ptōsis*, a falling.] Relaxation and downward displacement of the walls of the esophagus.

esophagosal'ivary. Noting an excessive secretion of saliva, occurring as a symptom of cancer of the esophagus.

esoph'agoscope [G. *skopeō*, I examine.] A form of endoscope for inspecting the esophagus.

esophagos'copy. Inspection of the interior of the esophagus.

esoph'agospasm. Spasm of the walls of the esophagus.

esophagostenosis, œsophagostenosis (e-sof"a-go-stĕ-no'sis) [G. *stenōsis*, a narrowing.] Stricture or a general narrowing of the esophagus.

esophagos'tomy, œsophagos'tomy [G. *stoma*, an opening, mouth.] The operative formation of an opening directly into the esophagus from without.

esoph'agotome. A knife adapted for cutting into the esophagus.

esophagot'omy, œsophagot'omy [G *tomē*, an incision.] An incision through the wall of the esophagus.

esophagus, œsophagus (e-sof'a-gus) [G. *oisō*, I shall carry, + *phagēton*, food.] The gullet, the swallow; the portion of the digestive canal between the pharynx and the stomach; it extends from the lower border of the cricoid cartilage, opposite the sixth cervical vertebra, to the cardiac orifice of the stomach opposite the eleventh dorsal vertebra, a distance of about 25 cm. (10 inches). **mouth of the e.,** the junction of the pharynx and esophagus at the level of the lower border of the cricoid cartilage.

esophoria (es-o-fo'rĭ-ah) [G. *esō*, inward, + *phora*, movement.] A tendency of one eye to deviate inward; convergent squint.

esophor'ic. Relating to or marked by esophoria.

esophylaxis (es"o-fi-laks'is) [G. *eso*, within, inside, + *phylaxis*, a guarding.] Protection against disease by the biological action of the cells and fluids of the body; see *exophylaxis*.

esosphenoiditis (es"o-sfen-oy-dī'(de')tis) [G *esō*, within]. Osteomyelitis of the sphenoid bone.

esoter'ic [G. *esōteros*, inner.] 1. Of internal origin arising within the organism. 2. Endoblastic.

esotro'pia [G. *esō*, in, + *tropē*, turn] A marked esophoria; a deviation inward of one eye, internal or convergent squint.

esotrop'ic. Relating to or marked by esotropia.

espno'ic, espnœ'ic (esp-no'ik, esp-ne'ik) [G. *es(eis)*, in, + *pnoē*, a blowing.] 1. Relating to the inhalation or injection of gases or vapors. 2. Noting the epidermic method of medication.

espundia (es-poon'dĭ-ah). Naso-oral leishmaniasis, bubas braziliana, Breda's disease, a chronic ulcerative affection of the nose and mouth, caused by *Leishmania tropica*.

esquillectomy (es-kil-ek'to-mĭ) [Fr. *esquille*, fragment, + G. *ektomē*, excision.] Operation for

the removal of detached bony fragments in cases of comminuted fracture.

es'sence [L. *essentia; esse*, to be.] 1. The true characteristic or substance of a body. 2. An element. 3. A fluidextract. 4. An alcoholic solution, or spirit, of the volatile oil of a plant; also an artificial product of similar odor and taste. **e. of ginger,** tinctura zingiberis fortis (Br.).

essentia (es-en'shĭ-ah). Essense. **e. pepsi'ni,** elixir pepsini et renini compositum.

essential (es-en'shyal). 1. Necessary; characteristic; inherent. 2. Idiopathic. **e. oil,** volatile oil.

Es'ser's opera'tion. Epithelial* inlay.

es'ter. Compound ether, a substance produced by the substitution of the hydrogen in an acid by a hydrocarbon radical; it is an alcohol "salt."

esterase (es'ter-āz). A ferment which causes a dissociation of esters in the serum or tissues.

esthe'sic [G. *aisthēsis*, sensation.] Relating to the mental perception of the existence of any part of the body

esthe'sioblast [G. *aisthēsis*, sensation, + *blastos*, germ.] An embryonic ganglion cell.

esthesiod'ic [G. *aisthēsis*, sensation, + *hodos*, way.] Sensory, conveying sensory impulses.

esthesiogen, æsthesiogen (es-the'zĭ-o-jen) [G. *aisthēsis*, sensation, + *gennaō*, I produce.] A substance assumed to produce a nervous erethism in hysterical subjects, when brought near the body.

esthesiogenesis (es-the"zĭ-o-jen'e-sis) [G. *aisthēsis*, sensation, + *genesis*, generation.] The production of sensation, especially of nervous erethism.

esthesiogen'ic. 1. Relating to an esthesiogen. 2. Producing a sensation.

esthesiog'raphy [G. *aisthēsis*, sensation, + *graphē* a writing.] 1. A description of the organs of sense and of the mechanism of sensation. 2. Mapping out on the skin the areas of tactile and other forms of sensibility

esthesiol'ogy [G. *aisthēsis*, sensation, + *-logia*.] Science in relation to sensory phenomena.

esthesioma'nia [G. *aisthēsis*, sensation, + *mania*, frenzy.] Insanity with sensory hallucinations.

esthesiometer, æsthesiometer (es-the-zĭ-om'e-tur) [G. *aisthēsis*, sensation, + *metron*, measure.] An instrument for determining the state of tactile and other forms of sensibility.

esthesiometry (es-the-zĭ-om'e-trĭ). Measurement of the degree of tactile or other sensibility.

esthesioneure (es-the'sĭ-o-nūr) [G. *aisthēsis*, sensation, + *neuron*, nerve.] A sensory nerve-cell.

esthe"sioneuro'sis. Any sensory neurosis, such as anesthesia, hyperesthesia, paresthesia, etc.

esthesion'osus, æsthesion'osus [G. *aisthēsis*, sensation, + *nosos*, disease.] Esthesioneurosis.

esthe"siophysiol'ogy, æsthe"siophysiol'ogy. The physiology of sensation and the sense organs.

esthesioscopy (es-the-zĭ-os'ko-pĭ) [G. *aisthēsis*, sensation, + *skopeō*, I look at.] Examination into the degree and extent of tactile and other forms of sensibility.

esthet'ic. Relating to sensation, either mental or bodily.

esthiomenus (es-the-om'e-nus) [G. *esthiomenos*, eating.] Lupus; specifically lupus of the external genital organs.

esthiom'enous [G. *esthiomenos*, eating.] Corroding, ulcerating, phagedenic.

es'tival, æs'tival [L. *æstivus*, summer.] Relating to or occurring in the summer.

estiva'tion [L. *æstas*, summer.] The grouping of floral leaves in the bud.

estivoautumnal, æstivoautumnal (es"tĭ-vo-aw-tum'-nal) [L. *æstivus*, summer, + *autumnalis*, autumnal.] Relating to or occurring in summer and autumn. **e. fe'ver,** tropical malaria, a severe remittent form of acute malaria, due to the sporulation, and invasion of new red blood-corpuscles, by a protozoan blood parasite, *Plasmodium præcox;* the paroxysms (at first perhaps tertian) recur at progressively shorter intervals until the disease becomes remittent, a second attack beginning before the first has spent its course.

Est'lander's opera'tion [Jakob August *Estlander*, Finnish surgeon, 1831–1881.] Resection of a part of one or more ribs and excision of the affected pleura in chronic empyema.

es'ton. Aluminum acetate, an insoluble powder, used as a dusting powder.

es'toral. Boric-acid menthol ester, a colorless crystalline powder, employed as an errhine in chronic nasal catarrh

estrin (es'trin). The estrus-producing hormone.

estrogenic (es-tro-jen'ik). Causing estrus in animals.

estrual, œstrual (es'tru-al) [G. *oistros*, mad desire Relating to heat or rut in animals.

estrua'tion. The period of heat in animals.

es'trum. Estrus.

es'trus, œs'trus [G. *oistros*, mad desire.] Heat; the period of sexual excitement in the female of the lower animals.

estua'rium [L. *æstus*, heat.] Vapor bath.

état mamelonné (a-tă' mă-mĕ-lŏ-na') [Fr. knobby, tubercular state.] The condition of the gastric mucous membrane in chronic inflammation, when it presents numbers of nodular projections.

ethanediamine (eth"ăn-di'am-ēn). Ethylenediamine

ethanesal (eth'ān-sal). A mixture of certain ketones with carbon dioxide and ethylone occurring in sulphuric ether, upon which the latter's anesthetic action is said to depend.

ethanol (eth'ān-ol). Ethyl alcohol, grain alcohol.

eth'ene chlo'ride. Ethylene bichloride.

etheogen'esis [G. *ētheos*, bachelor, + *genesis*, production] Reproduction by the male gamete without sexual union; a rare phenomenon and possible only in protozoans.

e'ther [G. *aithēr*, the pure upper air.] 1. A substance resulting from the action of an acid on an alcohol. 2. Ethyl or sulphuric ether $(C_2H_5)_2O$; see *æther*. 3. A gas of extreme tenuity which is assumed to pervade all space as well as all solids and liquids, and to be the transmitter of the rays of heat and of light. **ace'tic e.,** a colorless liquid, slightly soluble in water, miscible with alcohol, dissolving fats and resins; a general anesthetic. **chlo'ric e.,** spiritus chloroformi. **com'pound e.,** ester. **Cott'on proc'ess e.,** a modified sulphuric ether consisting of refined diethyl oxide containing approximately two volumes of ethylene, ½ volume of carbon dioxide, and 1 per cent by weight of ethyl alcohol. **hydriod'ic e.,** æthylis iodidum. **hydrobro'mic e.,** æthylis bromidum. **hydrochlo'ric e.,** æthylis chloridum. **meth'yl e., methyl'ic e.,** a colorless, inflammable gas $(CH_3)_2O$, prepared by distilling methyl alcohol 1, and sulphuric acid 4; produces anesthesia when inhaled. **meth'yl-eth'yl e.,** (1) a solution of methyl e. in sulphuric ether, used as an anesthetic; (2) a colorless liquid obtained by the action of ethyl iodide on sodium methylate; anesthetic. **ni'trous e.,** ethyl nitrite. **sulphu'ric e.,** ethyloxide, ether (2). **xylostyp'tic e.,** collodium stypticum.

ethereal (e-the're-al). Relating to or containing ether. **e. oil,** oleum æthereum. **e. tinc'ture,** a solution or extract of a medicinal substance made with ether.

etherifica'tion [L. *æther*, ether, + *facere*, to make.] Conversion of an alcohol into ether.

ether'ify. To convert into ether.

etherin (e'ther-in). Etherobacillin, a tuberculous toxin extracted by ether.

ethe'rion [G. *aitherios*, relating to ether] A supposed new element, a gas of extreme tenuity existing in the atmosphere and perhaps throughout space; said by some to be only watery vapor.

etherization (e"ther-i-za'shun). Bringing under the anesthetic influence of ether.

e'therize. To anesthetize by means of ether.

etherobacillin (e-ther-o-bas'il-in). Etherin.

etheroma'nia [G. *aithēr*, ether, + *mania*, frenzy] The habitual use of ether as an intoxicant.

etherometer (e-ther-om'e-tur) [*ether* + G. *metron*, measure.] A device for the mechanical administration of ether in the production of general anesthesia.

eth'ical. Relating to ethics; in conformity with the rules governing professional conduct.

eth'ics. The science of morality. In relation to medical practice, the principles of correct professional conduct with regard to the rights of the physician himself, his patients, and his fellow practitioners. **code of e.,** a set of rules established for the guidance of the medical practitioner in his professional conduct.

eth'idene. Ethylidene.

ethiopifica'tion [G. *aithiops*, a negro, + L *facere*, to make.] The production of argyria.*

e'thiops. Æthiops.

ethmocarditis (eth-mo-kar-di'(de')tis) [G. *ēthmos*, sieve, + *kardia*, heart, + *-itis*.] Cardiosclerosis, chronic inflammation and proliferation of the connective tissue of the heart-walls.

ethmoceph'alus [G. *ēthmos*, sieve, + *kephalē*, head.] A monster with imperfect and deformed features.

ethmocra'nial. Relating to the ethmoid bone and the cranium as a whole. **e. angle,** the angle made by the plane of the cribriform plate of the ethmoid bone extended to meet the basicranial axis.

ethmofrontal (eth-mo-frun'tal). Relating to the ethmoid and the frontal bones.

eth'moid [G. *ēthmos*, sieve, + *eidos*, resemblance.] 1. Resembling a sieve, cribriform. 2. Relating to the ethmoid bone 3. The ethmoid bone, os* ethmoidale.

ethmoid'al. Ethmoid (2).

ethmoiditis (eth-moy-di'(de')tis). Inflammation of the ethmoid bone.

ethmolac'rymal. Relating to the ethmoid and the lacrymal bones.

ethmomax'illary. Relating to the ethmoid and the maxillary bones.

ethmona'sal. Relating to the ethmoid and the nasal bones.

ethmopal'atal. Relating to the ethmoid and the palate bones.

ethmosphenoid (eth-mo-sfe'noyd). Relating to the ethmoid and sphenoid bones.

ethmotur'binals. The turbinated processes of the ethmoid bone; usually two in number, the superior and middle turbinals, but occasionally three or even more; see *concha nasalis*.

ethmovo'merine. Relating to the ethmoid bone and the vomer. **e. plate,** the central portion of the ethmoid bone, forming a distinct element at birth.

ethmyphitis (eth-mī-fi'(fe')tis) [G. *ēthmos*, sieve, + *hyphē*, web, + *-itis*.] Cellulitis.

ethnog'raphy [G. *ethnos*, race, + *graphē*, a writing.] A treatise on the different human races.

ethnol'ogy [G. *ethnos*, race, + *-logia*.] The branch of anthropology which deals with racial peculiarities and differences.

ethoxycaffeine (eth-ok-sĭ-kaf'e-ēn). A compound, $C_8H_9(OC_2H_5)N_4O_2$, occurring in the form of white silky crystals; used in neuralgia and migraine in doses of gr. 5–10 (0.3–0.6).

eth'yl [G. *aithēr*, ether, + *hylē*, stuff.] The hydrocarbon radical, C_2H_5, of ethyl alcohol. **e. ac'etate,** acetic ether, æther* aceticus. **e. al'cohol,** e. hydroxide, ordinary alcohol.* **e. aminoben'zoate,** see under *æthyl*. **e. bro'mide,** hydrobromic ether, a colorless liquid, inducing anesthesia when inhaled. **e. car'bamate,** urethane. **e. chaulmoograte,** see under *æthyl*. **e. chlo'ride,** hydrochloric ether, a colorless liquid employed as a local anesthetic, the spray causing congelation, and also by inhalation as a general anesthetic. **e. for'mate,** formic ether, a volatile liquid, anesthetic. **e. hy'drate,** e. hydroxide. **e. hydrocu'preine,** see *ethylhydrocupreine*. **e. hydrox'ide,** ethyl alcohol, grain alcohol, official alcohol. **e. i'odide,** hydriodic ether; employed in bronchitis and asthma, and externally as a means of introducing iodine into the system. **e. morphine,** see ethylmorphine. **e. ni'trite,** nitrous ether, a pale yellow fluid, with an apple odor, formed by a combination of ethyl and nitrous acid, having the formula $C_2H_5.NO_2$. **e. oxide,** sulphuric ether. **e. sal'icylate,** the salicylic acid ester of ethyl alcohol, a colorless volatile liquid of pleasant odor; it has the same action as oil of wintergreen (methyl salicylate) but is believed to be less irritating; dose ♏5 to 10 (0.3 to 0.6).

ethylamine (eth-il-am'ēn). A ptomaine found in decaying vegetable matter.

eth'ylate. A compound in which the hydrogen of the hydroxyl radical is replaced by a base.

eth'ylene. Ethene, olefiant gas, CH_2CH_2, the chief constituent of ordinary illuminating gas, sometimes employed by inhalation in the production of surgical anesthesia. **e. bichlo'ride,** ethene chloride, Dutch liquid, a liquid possessing local and general anesthetic properties. **e. bro'mide,** bromethylene, employed in epilepsy in doses of ♏2–5 (0.13–0.3). **e. peri'odide,** diiodoform **e. tetrai'odide,** diiodoform.

ethylenedi'amine. Diaminoethane, ethanediamine, $C_2H_4(NH_2)_2$; a volatile colorless liquid of ammoniacal odor and caustic taste; bactericidal in 8 per cent. solution.

ethylhydrocupreine (eth"il-hi-dro-ku'pre-in). Optochin, numoquin*, a synthetic drug, a derivative of quinine, $C_{19}H_{22}N_2OH.OC_2H_5$, or derived from cuprea bark, which has been recommended as a remedy in lobar pneumonia and in other pneumococcus infections. See *numoquin* and *optochin*.

ethyl'idene. Ethidene, a theoretical radical, C_2H_4, or CH_3CH, metameric with ethylene.

eth'ylism. Alcoholic addiction.

ethylmorphine (eth"il-mor-fēn'). An alkaloid derived from morphine by ethylation; the chloride is dionine, official under the title *æthylmorphinæ hydrochloridum* (q. v.).

ethylurethane (eth-il-u're-thān). Ethyl carbamate, urethane.*

e'tiolate [Fr. *étioler*, to blanch.] 1. To make pale by absence of light. 2. To become pale or of sickly hue from the absence of light or from long illness.

etiola'tion. Pallor from confinement in a dark place or from a long illness.

etiological (e-tĭ-o-loj'ĭ-kal). Relating to etiology.

etiology (e-tĭ-ol-o-gĭ) [G. *aitia*, cause, + *-ology*.] The doctrine of causes, specifically of the causes of disease; causation.

etiotropic (e-tĭ-o-trop'ik) [G. *aitia*, cause, + *tropē*, a turning.] Directed against the cause, noting a remedy which attenuates or destroys the causal factor of a disease; opposed to *nosotropic*.

etrohysterectomy (e"tro-his-ter-ek'to-mĭ) [G. *ētron*, hypogastrium, + *hystera*, womb, + *ektomē*, excision.] Abdominal hysterectomy, removal of the uterus through an incision in the hypogastric region.

etrotomy (e-trot'o-mĭ) [G. *ētron*, hypogastrium, + *tomē*, incision.] Suprapubic incision.

Eu. Chemical symbol of *europium*.

Eubacteriales (u-bak-te-rĭ-a'lēz) [G. *eu*, well, + *bacteria*.] An order of *Schizomycetes* embracing rod-shaped, spiral, spherical, or filamentous organisms, obligatory aerobes.

eubiotics (u-bi-ot'iks) [G. *eu*, well, + *biotikos*, relating to life.] The science of hygienic living.

eubolism (u'bo-lizm) [G. *eu*, well, + (meta-*bolism*.] Normal metabolism.

eucainæ hydrochloridum (u-kah-e'na hi-dro-klor'ĭ-dum) (U.S.). Eucaine hydrochloride, beta-eucaine hydrochloride, $C_6H_7N(CH_3)_3O(C_6H_5CO).HCl$, the hydrochloride salt of a synthetic preparation resembling cocaine in its local anesthetic properties but less toxic; it occurs as a white, odorless, crystalline powder, soluble in 30 parts of water or 35 of alcohol; it is usually employed in opththalmic practice in 2 per cent. solution.

eucaine (u'kah-ēn). See *eucainæ hydrochloridum*.

eucalyptene (u-kă-lip'tēn). A hydrocarbon, $C_{10}H_{16}$, obtained by distilling eucalyptol with phosphoric anhydride. **e. hydrochlo'ride,** eucalyptol, occurring in white crystalline scales, of bitter taste; employed in diarrhea and typhoid fever and to relieve the cough of phthisis, in doses of gr. 2–6 (0.13–0.4).

eucalyp'teol. Eucalyptene hydrochloride.

eucalyp'ti gum'mi (N.F.). Eucalyptus gum, kino eucalypti (Br), red gum, a dried gummy exudation from *Eucalyptus rostrata* and other species of *Eucalyptus* (fam. *Myrtaceæ*); it occurs as reddish-brown grains or angular masses, odor slight, taste very astringent; employed in the form of troches and gargles in cases of elongated uvula and relaxed conditions of the pharynx, and in the treatment of diarrhea in doses of gr. 10 (0.6).

eucalyp'tol (U.S., Br.). Cineol, cajuputol; a colorless liquid of camphoraceous odor and pungent taste, $C_{10}H_{18}O$, obtained from the volatile oil of *Eucalyptus globulus*, and other species of *E.*; stimulant expectorant in doses of ♏5–10 (0.3–0.6).

eucalyptoresorcin (u-kă-lip"to-re-zor'sin). A mixture of eucalyptol and resorcin employed as an antiseptic.

eucalyp'tus [G. *eu*, well, + *kalyptos*, covered, referring to the fact that the calyx is capped in the bud.] (U.S.) The dried leaves of *Eucalyptus globulus*, blue gum-tree, Australian fever-tree; employed in the treatment of malaria, bronchitis, asthma, and chronic gonorrhea, in doses of ♏10–20 (0.6–1.3) of the volatile oil.

eucapnia (u-kap'nĭ-ă) [G. *eu*, well + *kapnos*, vapor.] The presence of carbon dioxide in normal amount in the blood, the respiratory center being therefore neither overstimulated nor understimulated.

euca'sin. Ammonium caseinate, prepared by passing ammonia gas over finely powdered dry casein; occurs as a yellowish-white powder; added as a concentrated food to bouillon, chocolate, etc.

eucatropine (u-kat'ro-pēn). Euphthalmine, phenyl-glycolylmethylvinyl-diacetonalkamine hydrochloride, occurring as a white, granular, odorless powder, soluble in water or alcohol; mydriatic upon instillation of 2 or 3 drops of a 5 to 10 per cent. solution, producing no anesthesia, pain, or increased intraocular tension.

eucerin (u-se'rin) [G. *eu*, well, + L. *cera*, wax.] Trade name of an ointment base, odorless and of a slightly yellowish color, made from an extractive of wool-fat.

euchlorhydria (u"klor-hy'drĭ-ah) [G. *eu*, well.] Normal chlorhydria, a condition in which free hydrochloric acid exists in normal amount in the gastric juice.

eucholia (u-ko'lĭ-ah) [G. *eu*, well, + *cholē*, bile.] A normal state of the bile as regards quantity and quality.

eucodal (u'ko-dal). Dihydro-oxycodeinone chlorhydrate, $C_{18}H_{21}NO_4.HCl$; a white crystalline, soluble powder, proposed for use as a powerful analgesic in doses of 0.0025–0.01 gm. per os and 0.01–0.02 hypodermically.

eucrasia (u-kra'sĭ-ah) [G. *eu*, well, + *krasis*, temperament.] A condition of diminished susceptibility to the action of certain drugs, articles of diet, etc.; see *orthocrasia*, *idiosyncrasy*.

eucyclic (u-si'klik) [G. *eu*, well, + *kyklos*, circle.] In botany, noting an isomerous flower with the parts of consecutive whorls alternating.

eudermol (u-dur'mol). Trade name of nicotine salicylate, employed externally in the treatment of scabies.

eudiaphoresis (u"di-ah-fo-re'sis) [G. *eu*, well, + *dia*, through, + *phoreō*, I carry.] Normal, free sweating.

eudiemorrhysis (u"di-em-or'i-sis) [G. *eu*, well, + *dia*, through, + *haima*, blood, + *rhysis*, a flowing.] A free normal capillary circulation.

eud'om'eter [G. *eudios*, serene, + *metron*, measure.] A graduated glass vessel used to test the purity of air and in the volumetric analysis of gases.

eudox'in. The bismuth salt of nosophen, a reddish-brown powder employed in various gastric and intestinal affections in doses of gr. 3–8 (0.2–0.5).

eudrenin (ūd-ren'in). Trade name of a 0.25 per cent. solution of beta-eucaine hydrochloride in a 1:10,000 solution of adrenalin chloride in physiological salt solution.

euergasia (u-er-gă'sĭ-ă) [G. *eu*, well, + *ergasia*, work.] Good mentality.

Euflagella'ta [G. *eu*, well.] Same as *Flagellata*.

eufor'mol. Trade name of an antiseptic and deodorizer.

eugal'lol. Pyrogallol monoacetate, monacetylpyrogallol, a yellowish-brown syrupy liquid, employed in psoriasis and various scaly skin diseases in a 66 or 33 per cent. acetone solution.

Euge'nia [after Prince *Eugene* of Savoy.] A genus of trees of the order *Myrtaceæ*. *E. caryophylla'ta* furnishes cloves; *E. chek'en*, cheken; *E. jambola'na* jambul; *E. pimen'ta*, pimenta or allspice.

eugenic (u-jen'ik) [see *eugenics*.] Relating to the science of eugenics; tending to racial improvement by means of sexual selection. Cf. *euthenic*

eugen'ic acid. Eugenol.

eugenics (u-jen'iks) [G. *eugeneia*, nobility of birth. The science which deals with the influences

especially prenatal influences, that tend to better the innate qualities of man and to develop them to the highest degree. Cf. *euthenics.*

eugenism (u'jen-izm). "The aggregate of the most favorable conditions for healthy and happy existence," (Galton.)

eugen'oform. Eugenolcarbinol, a colorless crystalline powder, employed as an intestinal disinfectant in doses of gr. 7½–15 (0.5–1.0).

eu'genol (U.S.). Eugenic acid, an aromatic phenol, $C_{10}H_{12}O_2$, obtained from oil of cloves, a light yellow liquid having an odor of cloves and a spicy taste; it is a local anesthetic and antiseptic, employed chiefly in dentistry as a substitute for oil of cloves; internally the dose is ♏3–5 (0.2–0.3).

Eugle'na [G *eu*, well, + *glēnē*, eyeball.] A genus of infusorians, characterized by the presence of a minute spot of differentiated ectoplasm sensitive to light.

Euglen'ida [G. *eu*, well, + *glēnē*, eyeball.] An order of *Zoömastigophora*, embracing forms with contractile body, a mouth opening, one or two flagella, and chromatophores or "eyespots."

euglob'ulin. A protein forming, with pseudoglobulin, serum-globulin.

eugon'ic [G. *eu*, well, + *gonikos*, relating to the seed or offspring.] Noting a bacterial culture of luxuriant growth.

Eugregari'na [G. *eu*, well.] A suborder of *Gregarinida* reproducing only by spore formation.

eu'guform. Acetylized methylene diguaiacol, a grayish-white powder; employed as an antiseptic dressing in powder or ointment. **e. sol'uble,** a 50 per cent. solution of euguform in acetone.

eu'kodal. Eucodal.

eulatin (u'lă-tin). Proprietary name of a compound of amidobenzoic and bromobenzoic acids with antipyrine; a whitish powder of slightly acid taste, recommended in whooping-cough in daily doses of gr. 30 (2.0) for children of 6 years.

Eulenburg's disease' (oi'len-boorg) [Albert *Eulenburg*, German neurologist, *1840.] Congenital paramyotonia *

eulyp'tol. Trade name of an antiseptic mixture of eucalyptus oil, carbolic acid, and salicylic acid.

eu'menol. Trade name of a fluidextract of the root of a Chinese plant; it has been used in amenorrhea and dysmenorrhea in doses of ʒ½–1 (2.0–4.0).

eumetria (u-me'trĭ-ah) [G. moderation, goodness of meter.] Graduation of the strength of nerve impulses.

eumorphism (u-mor'fizm) [G. *eu* well, + *morphē*, shape.] Preservation of the natural form of a cell in spite of the occurrence of pathological changes.

eumyce'tes [G. *eu*, well, + *mykēs*, fungus.] Hyphomycetes.

eu'mydrine. Trade name of methylatropine nitrate, $C_{17}H_{22}(CH_3)NO_3.HNO_3$; a white soluble crystalline salt, employed as a mydriatic in 1 or 2 per cent. solution, and given internally to control the night-sweats of phthisis in doses of gr. $\frac{1}{60}$–$\frac{1}{24}$ (0.001–0.0025).

euna'trol. Sodium oleate.

eunoi'a [G. goodwill.] A normal mental state.

eunuch (u'nuk) [G. *eunouchos.*] One whose testicles have been removed.

eunuchism (u'nuk-izm). The symptom-complex caused by the absence of the testicles. **pitu'itary e.,** hypophysis* syndrome.

eunuchoid (u'nuk-oyd) [G. *eidos*, resembling.] Resembling, or having the general characteristics of, a cunuch. **u. state,** hypogenitalism.

eunuchoidism (u'nuk-oid-izm) [G. *eunouchos*, eunuch, + *eidos*, resemblance.] A condition marked by the symptom-complex of eunuchism, due to absence of the internal secretion of the testicles, the glands themselves, however, being present.

euon'ymin. Extractum euonymi siccum.

euonymus (u-on'i-mus) [G. *euōnymos*, from *eu*, well, + *onyma*, name, having a good name, lucky.] (N.F.) Euonymi cortex (Br.), the dried root bark of *Euonymus atropurpurea*, wahoo, burning-bush, arrow-wood; employed as an hepatic tonic and laxative in doses of gr. 3–10 (0.2–0.6).

euophthal'min. Euphthalmin.

eupad (u'pad). Equal parts of calcium chloride and boric acid, kept in separate papers, and dissolved together extemporaneously, in the proportion of 25 grams of the combined powders in 1 liter of water, to make eusol.*

eupancreatism (u-pan'kre-ă-tizm) [G. *eu*, well, + *pancreas.*] A condition in which the functions of the pancreas are normal.

euparal (u'par-al) A medium for mounting histological specimens, composed of camsal, sandarac, eucalyptol, and paraldehyde

Euparyphium (u-par-if'ĭ-um) [G. *eu*, well, + *paryphē*, a border.] A genus of flukes of the family *Echinostomatidæ*, three species of which are found in the intestine in man *E. malaya'num* and *E. suprar'tyfex*, in the Malay Peninsula; and *E. jassyen'se* in Roumania.

eupat'orin. A glucoside, occurring as a bitter white powder, obtained from several species of *Eupatorium;* diaphoretic and tonic in doses of gr. 1–3 (0.06–0.2).

Eupatorium (u-pă-to'rĭ-um) [G. *eupatōr* (having a noble father), king of Pontus.] A genus of composite herbs, several species of which are employed medicinally. **E. ageratoi'des,** *E. urticæfolium.* **E. aromat'icum,** smaller white snakeroot, employed in eclectic practice as a nervine and antispasmodic, and in the restlessness and wakefulness of pneumonia and continued fevers, in doses of 5–30 drops of the specific medicine every 2 to 6 hours. **E. perfolia'tum,** boneset, thoroughwort, sweating herb; the dried leaves and flowering tops are official in the N.F. under the title "cupatorium," the drug being employed as a bitter tonic; in eclectic medicine it is given for the relief of deep-seated muscular and bone pains, and in chronic malaria which does not respond to quinine or arsenic, in doses of 3–5 drops of the specific medicine every hour. **E. purpu'reum,** gravel* root. *E. urticæfo'lium, E. ageratoides,* white snakeroot.

eupepsia (u-pep'sĭ-ah) [G. *eu*, well, + *pepsis*, digestion.] Good digestion.

eupep'tic. Digesting well; having a good digestion.

eupeptone (u-pep'tōn). Trade name of an English make of Witte's peptone.

Euphorbia (u-for'bĭ-ă) [G. *euphorbion.*] A genus of plants (the spurges), mostly shrubs though some are bushes or trees, some species of which are employed in medicine. **E. corolla'ta,** a tree of Eastern North America, spurge, purging root, the root of which is employed, under the title euphorbia, in eclectic practice as a tonic for the mucous membrane of the digestive tract, allaying irritation and relieving constipation, in dose of 2 drops of the specific medicine (colloidum) every half to one hour. **E. hypericifo'lia,** spotted spurge. **E. ipecacuan'ha,** *E. corollata.* **E. pilulif'era,** pill-bearing spurge, cat's hair, Australian snakeweed, euphorbia, N.F. (v.

infra). **E. resinif'era**, a species from which is obtained the gum-resin euphorbium.*

euphor'bia (N.F.). The dried herb *Euphorbia hista* (fam. *Euphorbiaceæ*), *E. pilulifera* (N.F. IV); employed in asthma, coryza, and other respiratory affections, and also in angina pectoris, in doses of ℥30 (2.0) of the fluidextract.

euphor'bium. A gum resin from *Euphorbia resinifera;* sometimes used as an emetic and cathartic, but chiefly confined to veterinary practice.

euphoria (u-fo'rĭ-ah) [G. *eu*, well, + *pherō*, I bear.] A general state of well being.

eu'phorin. Phenylurethane, carbanilic ether; a white crystalline powder, antipyretic and analgesic in doses of gr. 3–6 (0.2–0.4).

euphrasia (u-fra'zĭ-ă) [G. delight.] An herb (*Euphrasia officinalis*, eyebright) employed in eclectic practice in the treatment of acute catarrhal conditions with profuse secretion and frontal sinus pain, in doses of 5 to 10 drops of the specific medicine in water every 2 or 3 hours; used as a collyrium in the strength of 4 drops to the ounce.

euphthal'mine. Eucatropine.

euplas'tic [G. *euplastos*, easily moulded; *eu*, well, + *plassō*, I form.] Healing readily and well.

eupne'a, eupnœ'a [G. *eu*, well, + *pnoia*, breath.] Easy, free respiration.

eupor'phine. Apomorphine methylbromide, used for the same purposes as apomorphine hydrochloride.

eupraxia (u-prak'sĭ-ah) [G. *eu*, well, + *praxis*, a doing.] Normal ability to perform coordinated movements.

Euproc'tis chrysorrhœ'a [G. *eu*, well, + *prōktos*, rump; *chrysos*, gold, + *rhoia*, flow.] The brown-tail moth, the hairs of the cocoon and caterpillar of which cause a troublesome dermatitis.

eupy'rine. Vanillin ethylcarbonate-paraphenetidin, $C_{19}H_{23}O_6N$; employed as an antipyretic in doses of gr. 15–30 (1.0–2.0).

euquinine (u-kwin-ēn', u-kwi'nīn). Euchinin, quininæ* æthylcarbonas (U.S.).

eu'resol. Trade name of resorcinol monacetate.

eu'robin. Chrysarobin triacetate, employed for the same purposes as chrysarobin, and said to be nonirritant and not to stain.

eu'rophen. Diisobutyl-orthocresol-iodide, a yellow amorphous powder insoluble in water; employed externally in powder or ointment in skin diseases, varicose ulcers, etc., and internally in syphilis in doses of gr. ½–2 (0.03–0.13).

europium (u-ro'pĭ-um) [L. *Europa*, Europe.] A very rare element, symbol Eu, atomic weight 152.

Eurotium (u-ro'shĭ-um). A genus of moulds. **E. malig'num,** a species sometimes causing inflammation by its presence in the external auditory meatus. **E. re'pens,** a common mould on stale bread and on jam.

eurygnathic (u-rig-nath'ik). Having a wide jaw.

eurygnathism (u-rig'na-thizm) [G. *eurys*, broad, + *gnathos*, jaw.] The condition of having a wide jaw.

eurygnathous (u-rig'na-thus). Eurygnathic.

euryon (u'ri-on) [G. *eurys*, broad.] The extremity, on either side, of the greatest transverse diameter of the head; a point used in craniometry.

eu'rythrol. Trade name of an aqueous extract of spleen substance, used in chlorosis and anemia.

eusapyl (u'să-pil) [G. *eu*, well, + *sapōn*, soap, + *hylē*, stuff.] Trade name of a watery solution of potassium ricinoleate and chlor-metacresol, recommended as a hand disinfectant.

eusco'pol. Trade name of scopolamine hydrobromide.

eusol (u'sol). A filtered solution of 25 grams of eupad* in 1 liter of distilled water, employed as an antiseptic in wound treatment; the solution contains calcium borate, calcium chloride, and hypochlorous acid.

Eustace Smith's disease or **sign.** See *Smith's disease* or *sign.*

Eustachian cath'eter (u-sta'kĭ-an) [Bartolommeo *Eustachio*, Italian anatomist, 1524–1574.] A delicate properly curved tube, used for insertion into the orifice of the E. tube in order to distend it by air pressure or to facilitate the introduction of medicated vapor into the tympanum. **E. cush'ion,** torus tubarius. **E. mus'cle,** laxator tympani muscle. **E. ton'sil,** a collection of lymphoid nodules within the E. tube, near its pharyngeal orifice. **E. tube,** tuba auditiva. **E. tu'ber,** a slight projection from the labyrinthine wall of the tympanum below the fenestra ovalis. **E. valve,** valvula venæ cavæ inferioris [BNA].

eustachitis (u-sta-ki'(ke')tis). Inflammation of the mucous membrane of the Eustachian tube.

eustachium (u-sta'kĭ-um). Eustachian tube.

eustomachous (u-stum'ă-kus) [G. *eu*, well, + *stomachos*, stomach.] Eupeptic.

Eustrongylus (u-stron'ji-lus) [G. *eu*, well, + *strongylos*, rounded.] A genus of *Nematoda* of the family *Strongylidæ*. **E. gi'gas,** a blood-red round worm, from 40 cm., 16 in., (male) to 100 cm., 39 in., (female) in length, 6 to 12 mm., ¼ to ½ in., in diameter, sometimes inhabiting the pelvis of the kidney; called also *Dioctophyme renale.* **E. viscera'lis,** *E. gigas.*

eusystole (u-sis'to-lĭ) [G. *eu*, well, + *systole.*] A condition in which the cardiac systole is normal in force and time.

eusystolic (u-sis-tol'ik). 1. Relating to eusystole. 2. One whose heart beats normally with not too great or too little force.

eutectic (u-tek'tik) [G. *eu*, well, + *tēktos*, capable of being melted.] Easily melted; noting specifically mixtures of certain chemical compounds which have a lower melting point than any of their ingredients; noting, for instance, a solid, such as menthol, which when triturated with another solid of the same class, such as camphor, unites with it to form a liquid, the mixture having a lower melting point than either of its components. **e. temperature,** the temperature at which an eutectic mixture becomes fluid.

eutelolecithal (u-tel-o-les'ĭ-thal) [G. *eu*, well, + *telos*, end, + *lekithos*, yolk.] Noting an ovum in which the deutoplasm of the yolk almost entirely displaces the cytoplasm from one pole.

eutexia (u-tek'sĭ-u) [G. eu, well, easily, + *tēxis*, a melting away, dissolution.] The union of two solids, such as camphor and menthol, forming a liquid.

euthanasia (u-than-a'zĭ-ah) [G. *eu*, well, + *thanatos*, death.] 1. A quiet, painless death. 2. A popular term for the alleged practice of putting an end to life by artificial means in cases of incurable and painful disease.

euthenic (u-then'ik) [see *euthenics.*] Tending to social improvement through good environmental influences. Cf. *eugenic.*

euthenics (u-then'iks) [G. *euthēnia*, well-being, weal.] The science which deals with the influences of environment and of sanitation that tend to improve the human race. Cf. *eugenics.*

eutherapeutic (u"ther-ă-pu'tik) [G. *eu-*, well, good.] Having excellent curative properties.

euthermic (u-thur'mik) [G. *eu*, well, + *thermos*, warm.] Promoting warmth.

euthy'mol. Trade name of an antiseptic mixture of eucalyptus oil and thymol.

euthyroidism (u-thi'roy-dizm) [G. *eu*, well.] A condition in which the thyroid gland is functioning normally, its secretion being of proper amount and constitution.

eutocia (u-to'sĭ-ah) [G. *eu*, well, + *tokos*, childbirth.] Easy, normal childbirth.

eutonon (u'to-non) [G. *eu*, well, + *tonos*, strain, force.] A liver extract (hormone?), suggested for the treatment of hyperpiesis, angiospastic conditions, and angina pectoris.

eutrichosis (u-trĭ-ko'sĭs) [G *eu*, well, + *thrix(trich-)*, hair.] A normal growth of healthy hair.

eutrophia (u-tro'fĭ-ah) [G. *eu*, well + *trophē*, nourishment.] A state of normal nourishment and growth.

eutroph'ic [G. *eu*, well, + *trophē*, nourishment.] Relating to or promoting eutrophia; well nourished.

eutrophy (u'tro-fĭ). Eutrophia.

evac'uant [L. *evacuare*, to empty.] 1. Promoting an excretion, especially of the bowels. 2. An agent which increases excretion, especially a cathartic.

evacua'tion. 1. Removal of waste material, especially from the bowels. 2. A discharge from the bowels, stool.

evac'uator. A mechanical evacuant, an instrument for the removal of impacted feces from the rectum.

evagination (e-vaj-ĭ-na'shun) [L. *e*, out, + *vagina*, sheath.] The protrusion of some part or organ from its normal position.

evanescent (ev-ă-nes'sent) [L. *e*, out, + *vanescere*, to vanish.] Of short duration, gradually disappearing.

evapora'tion [L. *e*, out, + *vaporare*, to emit vapor.] 1. A change from liquid to vapor form. 2. Loss of volume of a liquid by conversion into vapor.

evatmine (e-vat'mēn) An extract of the posterior lobe of the pituitary gland, with adrenin, in physiological salt solution; used in asthma.

evec'tics [G. *euektia*, a good state of health.] The art of acquiring bodily vigor.

eventra'tion [L. *e*, out, + *venter*, belly.] 1. Protrusion of the bowels through an opening in the abdominal wall. 2. Removal of the contents of the abdominal cavity.

eversion (e-vur'shun) [L. *evertere*, to twist about.] A turning outward, as of the eyelid.

evert' [L. *evertere*, to twist about.] To turn outward.

ever'tor. Outward rotator.

évidement (a-vēd-mon') [Fr. *évider*, to scoop out.] The scraping out of morbid tissue from a natural or pathological cavity.

eviration (e-vi-ra'shun) [L. *e*, out, + *vir*, man.] 1. Castration. 2. Loss or absence of the masculine, with acquirement of feminine, characteristics; effemination.

evisceration (e-vis-ur-a'shun) [L. *eviscerare*, to disembowel.] 1. Disembowelling. 2. Removal of the contents of the eyeball, leaving only the sclera. 3. Removal of the entire contents of the or bit 4. Protrusion of the abdominal viscera.

evis"ceroneurot'omy. Scleral evisceration of the eye with division of the optic nerve.

evolu'tion [L. *evolutus; evolvere*, to roll out.] 1. Development, the series of changes by which the impregnated ovum becomes an adult individual. 2 The doctrine that all forms of animal or plant life have been derived by gradual changes from simpler forms or from a single cell. **sponta'neous e.**, the unaided delivery of the fetus in a transverse presentation.

evul'sion [L. *evulsio; evellere*, to pluck out.] The forcible tearing away of a part or of a new growth.

Ewald's en'ema (a'vahlt) [Carl Anton *Ewald*, Berlin physician, 1845–1915.] A nutrient enema containing eggs well beaten up, wheat flour boiled in a 20 per cent. grape-sugar solution, and red wine. **E.'s test break'fast,** consists of two rolls or slices of dry bread and nine to twelve ounces of water or weak tea, taken fasting in the morning; the stomach contents are examined an hour and a half later.

Ewart's proce'dure (yoo'art) [William *Ewart* English physician, *1848.] Elevation of the larynx between the thumb and forefinger to elicit tracheal tugging. **E.'s sign,** elevation of the sternal end of the left clavicle with prominence of the head of the first rib in cases of extreme distention of the pericardium with fluid.

ewe-neck (u'nek). A forward curving of the neck with the head thrown back.

Ewing's sign (u'ingz sīn). 1. Dulness on percussion to the inner side of the angle of the left scapula, noting an accumulation of fluid in the pericardium behind the heart. 2. Tenderness at the upper inner angle of the orbit at the point of attachment of the pulley of the superior oblique muscle, denoting closure of the outlet of the frontal sinus; see *vacuum headache.**

Ewing's tumor (u'ingz tu'mor) [James *Ewing*, American pathologist, *1866.] Diffused sarcoma of the shaft of one of the long bones.

ex- [L. and G. out of.] A prefix denoting out of, from, away from.

exacerbation (eks-as-er-ba'shun) [L. *exacerbare*, to exasperate.] An increase in the severity of a disease or any of its symptoms.

exalbu'minous. Noting a seed without endosperm.

exal'gine [G. *ex*, out of, + *algos*, pain.] Methylacetanilide, a coal-tar derivative, employed as an analgesic and antipyretic in doses of gr. ½–2 (0.03–0.12).

exam'iner. One who examines. **med'ical e.,** (1) a physician who examines an applicant for insurance or other person, and reports upon his physical condition to the company or individual at whose request the examination was made. (2) in States where the office of coroner has been abolished, a medical man appointed to investigate all cases of sudden or violent death.

exan'them [G. *exanthēma*] 1. Exanthema (1). 2. A skin eruption occurring as a symptom of a general disease, such as scarlet fever or measles.

exanthe'ma, pl *exanthe'mata* [G.] A general disease accompanied by an eruption on the skin, such as measles; an eruptive fever. 2. Exanthem (2).

exanthem'atous. Relating to an exanthema. **e. disease,** exanthema (1).

exanthe'sis. 1. A rash or exanthem. 2. The coming out of a rash or eruption. **e. arthro'sia,** dengue.

exanthrope (eks-an'thrōp) [G. *ex*, out of, + *anthrōpos*, man.] An external cause of disease, one not originating in the body.

exanthrop'ic. Originating outside of the human body.

exarteritis (eks-ar-ter-i'(e')tis). Inflammation of the adventitia, or outer coat of an artery.

exarticula'tion [L. *ex*, out, + *articulus*, joint.] Amputation of a limb through one of the joints.

excavatio (eks-ka-va'shI-o) [L.] Excavation. **e. papil'læ ner'vi op'tici** [BNA], excavation of the papilla of the optic nerve, a pit or depression in the center of the optic papilla. **e. rectouteri'na** [BNA], rectouterine pouch, rectogenital pouch, cavum Douglasi, Douglas's cul-de-sac, Douglas's pouch, a pocket formed by the deflection of the peritoneum from the rectum to the uterus. **e. rectovesica'lis** [BNA], the fold of peritoneum dipping down between the rectum and the bladder in the male. **e. vesicouteri'na** [BNA], uterovesical or vesicouterine pouch, the fold of peritoneum dipping down between the bladder and the uterus.

excava'tion [L. *excavare*, to hollow out.] 1. The formation of a cavity, hollowing out. 2. A natural cavity or recess, excavatio. 3. A cavity formed artificially or as the result of a pathological process. **atroph'ic e.,** an exaggeration of the normal or physiological cupping of the optic disc (excavatio papillæ nervi optici) caused by atrophy of the optic nerve. **glauco'matous e.,** glaucomatous cup.* **physiolog'ical e.,** excavatio papillæ nervi optici.

ex'cavator. 1. An instrument like a large sharp spoon or scoop, employed in scraping out pathological tissue. 2. In dentistry a tool for cleaning out and shaping a carious cavity preparatory to filling.

excen'tric [G. *ex*, from, + *kentron*, center.] Away from the center; efferent.

excerebration (ek"ser-e-bra'shun). Removal of the brain in the operation of embryotomy

excern' [L. *excernere*, to sift out.] To excrete.

excernent (ek-sur'nent). 1. Excretory, excreting, promoting excretion. 2. An agent which promotes excretion or causes an evacuation.

excipient (ek-sip'I-ent) [L. *excipiens; excipere*, to take out.] A more or less inert substance added in a prescription as a diluent, or to give form or consistency when the remedy is given in pill form; simple syrup, aromatic powder, honey, and various elixirs are examples of excipients.

ex'ciple, excip'ulum [L. *excipere*, to take out, to receive.] In lichens, the rim formed around the mature sporocarp by the partial envelope produced by the thallus.

excision (ek-sI'zhun) [L. *excidere*, to cut out.] The operative removal of a portion of a limb, organ, or other part.

excitabil'ity. Irritability, capability of quick response to a stimulus.

exci'table. Irritable, capable of quick response to a stimulus.

exci'tant [L. *excitare*, to arouse.] 1. Stimulating 2. A stimulant.

excitation (ek-si-ta'shun). Stimulation, increasing the rapidity or intensity of the physical or mental processes. **e. wave,** a wave of altered electrical conditions which flows out a muscle preparatory to its contraction. (Lewis.) **law of e.,** a motor nerve replies, by contraction of its muscle, not to the absolute value, but to the alteration of value from moment to moment, of the electric current. **law of polar e.,** a given segment of a nerve is irritated by the development of catelectrotonus and the disappearance of anelectrotonus, but the reverse does not hold.

exci"toglan'dular. Increasing the secretory activity of a gland.

excitometabol'ic. Increasing the activity of the metabolic processes.

excitomo'tor. Causing or increasing the rapidity of motion.

excitomus'cular. Causing muscular activity.

exci'tor. That which excites to increased action, a stimulant. **e. nerve,** a nerve conducting impulses which stimulate to increased function.

excitosecretory (ek-si"to-se-kre'to-rI). Stimulating to secretion, excitoglandular.

excitovas'cular. Increasing the activity of the circulation.

exclave (eks-klāv') [L. *ex*, out, + *-clave* (see *enclave*).] An outlying, detached portion of a gland or other part, such as the thyroid or pancreas; an accessory gland.

exclu'sion [L. *excludere*, to shut out.] Shutting out, disconnecting from the main portion.

excochleation (eks-kok-le-a'shun). [L. *ex*, out, + *cochlea*, spoon.] Scraping out the contents of a cavity.

exco'riate. To scrape away or otherwise remove the epidermis, leaving a raw surface.

excoriation (ek-sko-rI-a'shun) [L. *ex*, out, + *corium*, skin.] 1. Removal of the superficial protective layer of the skin or mucous membrane. 2. A raw surface left after the scraping away of the epidermis.

ex'crement [L. *excernere*, to separate, take away.] Waste matter or any excretion cast out of the body; feces.

excrementitious (eks-kre-men-tI'shus). Relating to any cast out waste material.

excrescence (eks-kres'ens) [L. *excrescere*, to grow forth.] Any outgrowth from the surface, especially a pathological growth.

excreta (eks-kre'tah) [L. neut. pl. of *excretus; excernere*, to separate.] Excreted material, cast out waste matter.

excrete (eks-krēt'). To separate from the blood and cast out, noting the function of glands the product of whose activity is waste matter and not utilized in the body.

ex'cretin. A crystalline compound found in feces.

excretion (eks-kre'shun) [L. *excretus*, separated, sifted out.] 1. The process whereby the undigested residue of food and the waste products of metabolism are thrown out of the body. 2. The product of a gland which is waste material to be passed out of the body.

excre'tory. Relating to excretion.

excystation (eks"sis-ta'shun) [L. *ex*, out of, + *cyst*.] Removal from a cyst, noting the action of certain encysted organisms in escaping from their envelope.

exemia (eks-e'mI-ah) [G. *ek* (*ex*), out of, + *haima*, blood.] A condition in which a considerable portion of the blood is temporarily removed from the general circulating mass, as when the limbs are ligatured, or when, as in shock, there is a great accumulation within the abdomen.

exencepha'lia [G *ex*, out, + *enkephalos*, brain.] A condition in which the skull is defective, the brain being exposed or extruding.

exencephal'ic. Exencephalous.

exenceph'alous. Relating to exencephalia.

exenceph'alus. A monster with the brain more or less outside of the cranial cavity

EXENCEPHALUS.

exentera'tion [G. *ex*, out. + *enteron*, bowel.] Evisceration.

exenteri'tis (eks-en-ter-i'(e')tis) [G. *exō*, on the outside, + *enteritis*.] Inflammation of the peritoneal covering of the intestine.

exercise (eks'ur-sīz) [L. *exercitium*, training, especially of an army for combat.] The repeated performance of bodily or mental actions with a view to strengthening and perfecting these actions; see *conditioned reflex.** **pas'sive ex'ercises,** movements of the body and extremities made by mechanical apparatus or by another person without muscular effort on the part of the subject. **sett'ing-up ex'ercises,** methodical muscular movements practised at stated intervals to improve the stamina and breathing capacity.

ex'ercise bone. A bone resulting from ossification of a muscle or tendon in consequence of exercise; cavalry bone, rider's bone.

exeresis (eks-er'e-sis) [G. *ex*, out, +, *airesis*, a taking.] Excision, or surgical removal of any part or organ

exfeta'tion [L. *ex*, out, + *fetus*.] Extrauterine pregnancy, ectopic gestation

exfolia'tio [L.] Exfoliation. **e. area'ta lin'guæ,** geographical tongue.

exfolia'tion [L. *ex*, out, + *folia*, leaves.] Stripping off in layers or sheets, noting especially a form of desquamation.

exfoliative (eks-fo'lĭ-a-tiv) [L. *exfoliativus*.] Marked by exfoliation or desquamation.

exhalation (eks-ha-la'shun) [L. *exhalare*, to breath out.] 1. Expiration, breathing out. 2. The giving forth of gas or vapor. 3 Any exhaled or emitted gas or vapor, emanation.

exhale'. To breathe out, expire 2. To emit a gas or vapor or odor.

exhaustion (egz-aws'chun) [L. *exhaurire*, to drink up, empty.] 1. Extreme fatigue, inability to respond to stimuli. 2. Removal of contents; using up of a supply of anything. 3. Extraction of the virtues of a drug by treating with water, alcohol, or other solvent.

exhibit (eg-zib'it) [L. *exhibere*, to offer, to present.] 1. To show, present to view. 2. To administer or give a drug. 3. Anything or any collection of things, drugs, instruments, etc., exposed to view.

exhibition (eks-I-bi'shun). 1. A showing forth, exposure to view. 2. A collection of objects exposed to view. 3. The administration of a remedy.

exhibitionist (eks-I-bi'shun-ist). One who has an insane or neurotic compulsion to expose the genitals to a person of the opposite sex.

exhilarant (eg-zil'er-ant). Mentally stimulating.

exhumation (eks-hu-ma'shun) [L. *ex*, out of, + *humus*, earth.]. Disinterment.

exitus (ek'si-tus) [L.] 1. Exit, outlet. 2. Death **e. pel'vis** [NK], apertura pelvis minoris inferior.

Ex'ner's nerve [Siegmund *Exner*, Viennese physiologist, 1846–1926.] A nerve-twig coming from the pharyngeal plexus to the cricothyroid membranes. **E.'s plex'us,** a plexus formed by horizontal fibers (axis-cylinder terminals) in the superficial layer of the cerebral cortex.

exo- [G. *exō*, outside.] A prefix denoting exterior or external.

exoantigen (eks-o-an'tĭ-jen) [G. *exo*, outside, + *antigen*.] Ectoantigen.

exocar'dia [G. *exō*, outside, + *kardia*, heart.] Congenital displacement of the heart.

excoar'diac, exocar'dial. Relating to exocardia.

exocataphoria (eks-o-kat-ă-for'I-ah) [G. *exō*, outward. + *kata*, downward. + *phora*, motion.] A tendency of the eye to deviate outward and downward.

exoccipital bone (eks-ok-sip'ĭ-tal bōn). One of the two segments of the occipital bone bounding the foramen magnum laterally, each of which forms an independent bone in the infant.

exochorion (eks-o-ko'rĭ-on). The layer of the chorion derived from the ectoderm.

exocolitis (eks-o-ko-li'(le')tis). Inflammation of the peritoneal coat of the colon.

ex'ocrine [G. *exō*, out of, + *krinō*, I separate.] 1. External secretion of a gland. 2. Diacrinous, noting a gland the cells of which excrete only fluid without any loss of protoplasmic substance; opposed to *apocrine* or *ptyocrinous*.

exod'ic [G *exō*, out, + *hodos*, way.] Proceeding toward the periphery, efferent, centrifugal.

ex'odin. Trade name of a mixture of derivatives of rufigallic acid, recommended as a cathartic in doses of gr. 15–22 (1.0–1.5).

exodontia (eks-o-don'shyah) [G. *exō*, outwards, + *odous* (*odont-*), tooth.] 1. Tooth extraction. 2. Forward protrusion of the teeth.

exodontist (eks-o-don'tist). One who specializes in the extraction of teeth.

exog'amy [*exō* outside, + *gamos*, marriage.] Reproduction by conjugation of two unrelated cells.

exogastritis (eks-o-gas-tri'(tre')tis). Inflammation of the peritoneal coat of the stomach.

exogastrula (eks-o-gas'tru-lah) [G. *exō*, outward.] A gastrula in which the endoderm is turned out instead of in.

exogenet'ic [G *exō*, outside, + *genesis*, generation.] Exogenous

exogenous (ex-oj'en-us) [G *exō*, outside, + *gennaō*, I produce] Originating or produced outside **e. cy'cle,** sexual cycle of the hemoprotozoa occurring in the non-vertebrate host

exognathion (eks-og-nath'I-on) [G. *exō*, outside, + *gnathos*, jaw] The maxilla, exclusive of the os incisivum, or premaxillary bone.

exohysteropexy (eks-o-his'ter-o-peks-ĭ) [G. *exō*, on the outside, + *hystera*, uterus, + *pēxis*, fixation.] Fixation of the fundus of a prolapsed uterus outside of the peritoneum under the fascial layer.

exolever (eks'o-le''vur) [G. *exō*, outside, + L. *levare*, to raise.] A modified elevator for the extraction of tooth-roots.

exometritis (eks-o-me-tri'(tre')tis) [G *exō*, outside, + *mētra*, uterus, + *-itis*] Inflammation of the peritoneal coat of the uterus.

exomphalos (eks-om'fă-lus) [G. *ex*, out, + *omphalos*, umbilicus.] Exumbilication. 1. Protrusion of the umbilicus. 2. Umbilical hernia.

exopath'ic. Noting a disease whose origin is outside the body.

exop'athy [G. *exō*, outside, + *pthaos*, suffering] A disease produced by some cause outside the body.

exophoria (eks-o-fo'rĭ-ah) [G. *exō*, outward, + *phora*, movement.] A tendency of one eye to deviate outward, divergent squint.

exophor'ic. Relating to exophoria.

exophthalmic (eks-of-thal'mik). Relating to exophthalmos; marked by prominence of the eyeball. **exophthal'mic goi'ter,** a condition marked by prominence of the eyeballs, enlargement of the thyroid gland, tremor, and rapid heart action; Graves', Basedow's, Flajani's, Marsh's, Parson's, or Parry's disease.

exophthalmom'eter [*exophthalmos* + G. *metron*.] An instrument for measuring the amount of protrusion of the eyeball.

exophthal'mos, exophthal'mus [G. *ex*, out, + *ophthalmos*, eye.] A protrusion or prominence of the eyeball.

exophylaxis (eks"o-fi-laks'is) [G. *exo*, outside, + *phylaxis*, a guarding.] Protection against the entrance of disease into the body from without, such as afforded by the skin; see *esophylaxis*.

ex'oplasm [G. *exō*, on the outside.] Ectoplasm.

exorbitism (eks-or'bĭ-tizm) [L. *ex*, out, + *orbita*, orbit.] Exophthalmos.

exosep'sis. Sepsis of external origin.

exoskel'eton [G. *exō*, on the outside, + *skeleton*.] 1. All hard parts, such as hair, teeth, nails, feathers, dermal plates, scales, etc., developed from the ectoderm or mesoderm in vertebrates. 2. The outer chitinous envelope of an insect.

exosmose, exosmosis (eks'oz-mōs, eks-oz-mo'sis). Osmosis from within outward, as from the interior of a blood-vessel.

exosplen'opexy [G. *exō*, outside, + *splēn*, spleen, + *pēxis*, fastening.] Suturing the spleen to an opening in the abdominal wall.

exospore (eks'o-spōr) [G. *exō*, outside, + *sporos*, seed.] A spore which forms on the outside, usually at one or the other end, of a rod bacterium.

exospo'rium. The outer envelope of a spore.

exosto'sis [G. *ek*, *ex*, out from, + *osteon*, bone.] A bony tumor springing from the surface of a bone, most commonly in the form of ossification of muscular attachments. **den'tal e.**, a bone-like growth springing from the root of a tooth. **e. bursa'ta**, an e. springing from the joint surface of a bone and covered with cartilage and a synovial sac. **e. cartilagin'ea**, an e. springing from the epiphysis or joint surface of a bone; an ossified chondroma; sometimes a number of these exostoses exist, constituting the affection called hereditary deforming dyschondroplasia, or multiple cartilaginous exostoses. **i'vory e.**, a small, rounded, eburnated tumor springing from a bone, usually one of the cranial bones. **mul'tiple exosto'ses**, outgrowths of cartilaginous tumors at the diaphyses of the long bones, due to a lack of formation of the restraining periosteal ferrule in the process of ossification, diaphyseal aclasis, chondrodystrophy.

exoter'ic [G. *exōteros*, outer.] 1. Of external origin, arising outside the organism. 2. Ectoblastic.

exothermic (eks-o-thur'mik) [G. *exō*, outside, + *thermos*, warmth.] 1. Noting a chemical compound the formation of which is attended with the development of heat. 2. Relating to the external warmth of the body.

exothymopexy (eks-o-thi'mo-peks-ĭ). An operation similar to exothyreopexy performed on the enlarged thymus gland.

exothyreopexy (eks-o-thi're-o-peks-ĭ) [G. *exō*, outside, + *thyreos*, shield (thyroid), + *pēxis*, fastening.] Suture of the thyroid gland into an external wound for the purpose of inducing atrophy.

exo'tospore [G. *exō*, outside.] Sporozoite.

exotox'ic (eks-o-toks'ik). 1. Relating to an exotoxin. 2. Relating to the introduction of an exogenous poison or toxin.

exotox'in [G. *exō*, outside.] A toxin excreted by a microorganism, and which can be recovered by filtration from a culture without destruction of the producing agent.

exotro'pia [G *exō*, outward, + *tropē*, turn.] External squint.

expan'sion [L. *expandere*, to spread out.] 1 An increase in size. 2. The spreading out of any structure, as a tendon. 3. An expanse, a wide area.

expectancy (eks-pek'tan-sĭ) [L. *expectare*, to await.] Expectation. **life e.**, the number of years remaining to one at a given age if he is to reach the average length of life.

expec'tant. Waiting, looking for, **e. treat'ment**, management of a disease by giving little medication, but watching for the symptoms or indications and treating them as they arise.

expecta'tion of life. Life expectancy.*

expec'torant [L. *ex*, out, + *pectus*, chest.] 1. Promoting secretion from the mucous membrane of the air-passages or facilitating its expulsion. 2. An agent which increases bronchial secretion and facilitates its expulsion.

expectora'tion. 1. Sputum; mucus and other fluids formed in the air-passages and expelled by coughing. 2. Spitting; the expelling from the mouth of saliva, mucus, and other material from the air-passages. **prune-juice e.**, e. of a thin reddish fluid containing blood.

expel' [L. *expellere*.] To drive out.

expiration (ek-spi-ra'shun) [L. *exspirare*, to breathe out.] Exhalation (1), breathing out.

expi'ratory. Relating to expiration

expire'. 1. To breathe out, to exhale. 2. To die.

explant' [L. *ex*, out of, from.] To transfer from the body to an artificial medium for growth.

explode' [L. *explodere*, to drive away by clapping.] 1. To cause chemical changes or disintegration accompanied by noisy violence. 2. To burst 3. To break out suddenly, as an epidemic.

explora'tion [L. *explorare*, to explore.] Examination, investigation; a search for symptoms to aid in diagnosis.

explor'atory. Relating to or with a view to exploration. **e. incis'ion, e. opera'tion, e. punc'ture**, etc., an incision, operation, puncture, etc., made in order to ascertain the condition present.

explo'sion. A sudden discharge of nerve force

explo'sive. Capable of, or with a tendency to, explosion.

exponent (eks-po'nent) [L. *exponere*, to set forth.] In algebra a small figure or symbol placed at the right and above another figure or symbol to denote the number of times the latter is to be repeated in order to express the indicated result. **hy'drogen e.**, see under *hydrogen*.

express' [L. *expressus; expremere*, to press out.] To press or squeeze out.

expression (eks-presh'un). 1. Squeezing out, expelling by pressure. 2. Facies.

expul'sive [L. *expulsus; expellere*, to drive out.] Tending to expel. **e. pains**, effective labor pains, those associated with contraction of the uterine muscle.

expural'gin. Trade name of acetyl citrate of potassium and magnesium, offered as an analgesic in in dose of gr. 10 (0.6).

exsanguinate (ek-sang'gwin-āt) [L. *ex*, out, + *sanguis*, blood.] 1. To deprive of blood, to make bloodless. 2. Exsanguine.

exsanguina'tion. Depriving of blood, making exsanguine.

exsanguine (ek-sang'gwin). Bloodless, anemic.

exsect' [L. *exsectus; exsecare*, to cut out.] To excise, to cut out a portion of an organ, a bone, or any other part.

exsec'tion. Excision, the cutting out of a portion of bone, of an organ, or of any tissue or part.

exsic'cant [L. *exsiccare*, to dry out.] 1. Drying, absorbing a discharge. 2. A dusting or drying powder.

ex'siccate. To dry, absorb moisture from.

exsicca'tion. 1. The process of drying. 2. Dehydration, the driving off of the water of crystallization by heat.

exsicco'sis [L. *exsiccare*, to dry out, + G. *-osis*.] A condition resulting from water impoverishment in the tissues.

exsomatize (ek-so'mă-tiz) [G. *ek*, out of, + *sōma*, body.] To remove from the body.

ex'strophy [G. *ex*, out, + *strophē*, a turning. A congenital turning out or eversion of a hollow organ. **e. of the bladder,** a congenital absence of the anterior wall of the bladder and of the abdominal wall in front of it, the posterior wall of the bladder being exposed.

ext. Abbreviation for L. *extractum*, extract.

extempora'neous [L. *ex*, out of, + *tempus*, time.] Offhand, without preparation. **e. mixture,** one prepared at the time ordered, according to the directions of a prescription, as distinguished from a stock preparation.

extend' [L. *extendere*, to stretch out.] To straighten a limb, to diminish or extinguish the angle formed by flexion; to place the distal segment of a limb in such a position that its axis is continuous with that of the proximal segment.

extension (eks-ten'shun) [L. *extensio*.] 1. The act of extending a limb. 2. The position of a limb that is extended. 3. A pulling or dragging force exerted on a limb in a direction away from the body. **Buck's e.,** see *Buck*.

exten'sor. A muscle the contraction of which tends to straighten a limb; the antagonist of a flexor; see under *musculus*.

exte'rior [L.] Outside, external.

extern (ek'sturn) [F. *externe*, outside, a day scholar.] An advanced student or recent graduate who assists in the medical or surgical care of hospital patients, but who lives outside of the institution.

externe' [Fr.] Extern.

exter'nal [L. *externus*.] Exterior, on the outside; of two similar structures the one farther from the center of the body, lateral; opposed to internal, or medial.

exteroceptive (eks"ter-o-sep'tiv) [L. *exterus*, outside, + *capere*, to take.] Relating to the exteroceptors, noting the surface of the body containing the end-organs adapted to receive impressions or stimuli from without.

exteroceptor (eks"ter-o-sep'tor) [L. *exterus*, external, + *receptor*, receiver.] One of the peripheral end-organs of the afferent nerves in or immediately under the skin or external mucous membrane, which respond to stimulation by external agents.

ex'tima [L. fem. of *extimus*, outermost; sc. *tunica*, coat.] Adventitia, the outer coat of a blood-vessel.

extinc'tion [L. *extinctus; extinguere*, to quench.] The act of extinguishing or of being extinguished. **e. of mer'cury,** trituration of mercury with lard or other vehicle until all visible trace of the metal has disappeared.

ex'tine. The exosporium of a pollen grain.

extinguish (eks-ting'gwish) [L. *extinguere*, to abolish, to quench.] To quench, as a flame; to abolish; to cause loss of identity; to destroy.

extirpation (eks-tur-pa'shun) [L. *exstirpare*, to root out.] The entire removal of an organ or part or of a pathological structure.

extor'sion [L. *extorquere*, to twist out.] Outward rotation of a limb or of an organ such as the eye.

extortor (eks-tor'tur). Outward rotator.

extra-artic'ular. Outside of a joint.

extrabucc'al. Outside of the mouth.

extrabulbar (eks-trah-bul'bar). Outside of or unrelated to any bulb, such as the bulb of the urethra or the medulla oblongata.

ex"tracap'sular. Outside of the capsule of a joint.

extracar'pal. 1. Outside of, having no relation to, the carpus. 2. On the outer side of the carpus.

extracell'ular. Outside of the cells.

extracorporeal (ek"strah-kor-po're-al). Outside of, or unrelated to, the body or any anatomical "corpus."

extracorpus'cular. Outside of the corpuscles, especially the blood-corpuscles.

extracra'nial. Outside of the cranial cavity.

ex'tract. Extractum. **alcohol'ic e.,** a solid e. obtained by dissolving out in alcohol the principles of a drug soluble in this fluid. **a'queous e.,** a solid e. obtained by means of water as a menstruum. **equiv'alent e.,** valoid. **flu'id e.,** fluid extractum. **liq'uid e.,** fluid e. **hydroalcohol'ic e.,** a solid e. obtained by dissolving out the principles of the drug soluble in alcohol and water, and then evaporating the solution.

extrac'tion [L. *extractus; extrahere*, to draw out.] 1. The pulling out, as of a tooth. 2. The removal of the active portion of a drug, the making of an extract.

extrac'tive. A substance present in vegetable or animal tissue which can be separated by successive treatment with alcohol and water and then recovered by evaporation of the solution.

extrac'tor. An instrument for use in drawing or pulling out any natural part, as a tooth, or a foreign body.

extrac'tum, gen. *extrac'ti*, pl. *extrac'ta* [L. *ex*, out, + *trahere*, to draw.] Extract, solid extract; a class of pharmacopeial preparations obtained by the evaporation of alcoholic or aqueous solutions of the soluble principles of drugs, they are of soft pilular consistency or in the form of dry powder. Most of the extracts are four times the strength of the crude drug. Some extracts, especially of the B.P., are made of the inspissated juice of the fresh plant. **e. liq'uidum** the B.P. equivalent of U.S.P. fluidextractum.

e. acal'yphæ liq'uidum (B.A.), liquid extract of acalypha; dose ℥5–30 (0.3–2.0).

e. aconi'ti, extract of aconite, one part by weight representing approximately four parts of aconite root; dose gr. ¼ (0.01).

e. adhat'odæ liq'uidum (B.A.), liquid extract of adhatoda; dose ℥20–60 (1.3–4.0).

e. agrop'yri liq'uidum (B.A.), liquid extract of agropyrum, fluidextract of triticum (U.S.); dose ʒ1–2 (4.0–8.0).

e. al'oes, e. al'oes barbaden'sis (Br.), extract of aloes, a yellowish brown powder; dose, gr. 1–2 (0.06–0.13).

e. anthem'idis (Br.), extract of chamomile solid of a dark brown color; dose, gr. 2–

e. bel'æ liq'uidum (B.A.), liq
fruit; dose ʒ1–2 (4.0–8.0).

e. belladon'næ alcohol'ic
tract belladonna, a bro
cent. of the alkaloi

e. belladon'næ (

belladonna leaves;

e. belladon'næ
belladonna (root), c
loids; dose, ℥½–1 (0.

e. belladon'næ vir'i
donna, an inspissated
twigs; dose, gr. ½–1 (0.0

e. can'nabis (U.S.), **e. can'nabis in'dici** (Br.), extract of Indian cannabis or Indian hemp, a soft solid of blackish green color; dose, gr. ½-¼ (0.008–0.016).

e. car'nis (N.F.), extract of meat, usually made of beef though sometimes, especially in Australia, of mutton; it occurs in various forms, powder, semisolid, and liquid, containing the nitrogenous bases and variable proportions of albumoses; employed chiefly in the making and flavoring of soups and in fortifying other liquid foods, meat extracts contain very little nourishment and are mainly stimulants.

e. cas'caræ sagra'dæ (U.S.), **e. c. g. eiccum** (Br.), extract of cascara sagrada, a dry powder; dose, gr. 2–7½ (0.13–0.5).

e. cas'caræ sagra'dæ liq'uidum (Br.), fluid extract of cascara sagrada (U.S.), dose, ℥30–60 (2.0–4.0).

e. cimicif'ugæ, extract of cimicifuga or black cohosh, a brownish yellow powder, dose, gr. 2–8 (0.13–0 5).

e. cincho'næ (Br.), extract of cinchona, extract of calisaya bark, a dry extract of reddish brown color; dose, gr. 10–30 (0 6–2 0).

e. cincho'næ liq'uidum (Br.), fluidextract of cinchona (U.S.).

e. cissam'peli liq'uidum (B.A.), liquid extract of cissampelos; dose, ℥30–60 (2.0–4.0).

e. col'chici liq'uidum (Br.), fluid extract of colchicum (U.S.), the inspissated juice of fresh colchicum corms, a soft solid; dose, gr. ½–1 (0.016–0.06).

e. col'chici (U.S.), e. c. sic'cum (Br.), extract of colchicum corm made from the dried corms; an extract of pilular consistence; dose, gr. 2–3 (0.13–0.2).

e. colocyn'thidis (U.S.), extract of colocynth, a dry powder; dose, gr. 2–5 (0.13–0.3).

e. colocyn'thidis compos'itum (U.S. and Br.), compound extract of colocynth, containing colocynth, aloes, cardamom, and resin of ipomœa; a fine powder; dose, gr. 2–5 (0.13–0.3).

e. coni'i (N.F.), extract of conium; dose, gr. ½ (0 03).

e. digita'lis, extract of digitalis, a mass of pilular consistence; dose, gr. 1 (0 06).

e. ergo'tæ (Br.), extract of ergot, ergotin, a soft solid; dose, gr. 5–20 (0.3–1.3).

e. ergo'tæ aquo'sum (N.F.), aqueous extract of ergot; an extract made with alcohol and chloroform water, dose, gr. 3 (0 2).

e. ergo'tæ liq'uidum (Br.), fluid extract of ergot (U.S.).

e. euon'ymi (N.F.), extract of euonymus, a fine powder; dose, gr. 1–8 (0.06–0.5).

e. euon'ymi sic'cum (Br.), dry extract of euonymus, euonymin, a brown powder; dose, gr. 1–2 (0.06–0.13).

e. fell'is bo'vis (U.S.), **e. fellis bovini** (Br.), extract of oxgall, an alcoholic extract, dried and powdered with starch; dose gr. 1½ (0.1).

e. fer'ri poma'tum (N.F.), ferrated extract of apple, crude malate of iron; prepared by macerating iron wire in sour apple pulp; chalybeate tonic in dose of gr 10 (0.6).

e. fil'icis (Br.), extract of male fern; dose, ℥45-90 (3.0–6.0).

e. gelsem'ii, extract of gelsemium, an alcoholic extract, dried and powdered with magnesium oxide and starch; dose, gr. ½ (0 01).

gentian'æ (N.F. and Br.), extract of gentian, a
·ilular consistence; dose, gr. 1–8 (0.06–0.5).

·'zæ (U.S. and Br.), extract of licorice,
·isually found in the shops in the
·d chiefly as a flavor and to
·gs.

purified extract of lic-
·mmercial extract of
·ion.

uidextract of licorice;

liquid extract of cotton-
4.0).

extract of hematoxylon,
extract of sweetish and
·-10 (0.3–0.6).

e. hama'mel'idis liq'uidum (Br.), fluidextract of witch hazel.

e. hep'atis liq'uidum (Br.), liquid extract (fluid extract) of liver, an alcoholic extract of ox or sheep liver dissolved in a mixture of glycerin, alcohol, and distilled water; dose, fl. ʒii (30.0).

e. hep'atis sic'cum (Br.), extract of liver (ox or sheep liver), a light brown hygroscopic powder, of saltish and meatlike taste; dose, the contents of two tubes, equal to about half a pound of fresh liver.

e. hydras'tis (N.F.), extract of hydrastis, extract of golden seal, an alcoholic extract, dried and powdered with magnesium oxide and starch; dose, gr. 8 (0 5).

e. hyoscy'ami (U.S.), extract of hyoscyamus, extract of henbane; of pilular consistence obtained by evaporation of the fluidextract; dose, gr. 1–2 (0.06–0.13).

e. hyoscy'ami liq'uidum (Br.), fluid extract of hyoscyamus, the inspissated juice of fresh henbane; dose, gr. 2–8 (0.13–0.5).

e. hyoscy'ami sic'cum (Br.), dried extract of hyoscyamus; dose gr. ½–1 (0.016–0.06).

e. igna'tiæ (N.F.), extract of ignatia, an extract made with alcohol and water, and, after drying, powdered with starch in quantity sufficient to make the extract contain 6 per cent. of the combined alkaloids of ignatia; dose gr. ½ (0 03).

e. jala'pæ (Br.), extract of jalap, a firm solid; dose, gr. 5–15 (0.3–1.0).

e. ka'væ liq'uidum (B.A), liquid extract of kavæ rhizoma; diuretic in doses of ℥30–60 (2.0–4 0).

e. krame'riæ (N.F. and Br.), extract of krameria, or of rhatany, a dry extract; dose, gr. 5–20 (0.3–1.3).

e. leptan'dræ (N F.), extract of leptandra; a blackish brown powder; dose, gr. 2–5 (0.13–0.3).

e. liq'uidum, liquid extract, the B P. equivalent of the U.S P. fluidextractum or fluidextract. The B.P. preparations will be found in this list, under extractum [name of drug] liquidum; those of the U.S.P. under fluidextractum.

e. mal'ti (U.S.), extract of malt, a semisolid of the consistence of thick honey; used as a tonic in doses of ʒ2–4 (8.0–16.0), and as a vehicle.

e. mal'ti cum o'leo mor'rhuæ (Br.), extract of malt with codliver oil, contains about 15 per cent of codliver oil.

e. nu'cis vom'icæ (U.S. and Br.), extract of nux vomica, a dry powder of 5 per cent. strychnine strength; dose, gr. ½–½ (0.015–0.03).

e. o'pii (N.F. and Br.), extract of opium, a dry powder (N.F.) or mass of pilular consistence (Br.) of 20 per cent. morphine strength; dose, gr. ¼–½ (0.015–0.03).

e. o'pii liq'uidum (Br), liquid extract of opium, containing 0.75 per cent. morphine, being of the same strength as the tincture of the B.P.; dose, ℥5–30 (0.3–2.0).

e. physostig'matis (Br.), extract of physostigma, extract of Calabar bean, a powder containing 2 per cent. of the ether-soluble alkaloids, or a firm solid containing an indefinite amount, 2 to 5 per cent., of the alkaloids (Br.), dose. gr. 1/12–¼ (0.005–0.008); gr. ¼–1 (0.015–0.06) of the B P. extract.

e. picrorrhi'zæ liq'uidum (B.A), liquid extract of picrorrhiza, antiperiodic and tonic in doses of ℥10–30 (0.6–2.0).

e. pituita'rii liq'uidum (Br.), fluidextract of the posterior lobe of the pituitary, liquor pituitarii (U.S.) it contains 10 units per millilitre; dose, 2–5 units.

e. podophyl'li, extract of podophyllum, of pilular consistency; dose gr. ¼ (0.015).

e. quas'siæ, extract of quassia, a fine powder; dose, gr. 1–3 (0.06–0.2).

e. rham'ni purshia'næ, e. cascaræ sagradæ.

e. rhe'i (U.S. and Br.), extract of rhubarb, yellowish brown mass of pilular consistence; dose, gr. 5–10 (0.3–0.6).

e. sco'polæ (N.F.), extract of scopola, a powder containing 2 per cent. of mydriatic alkaloids; dose, gr. ½–¼ (0.008–0.015).

e. stramo'nii (U.S. and Br.), extract of stramonium, mass of pilular consistence made from the leaves (U.S.) or from the seed (Br.); the U.S. extract contains 1 per cent. of mydriatic alkaloids, dose, gr. ½–¼ (0.008–0.015); the Br. extract is weaker, dose, gr.

¼–1 (0.015–0.06); there is also a powdered extract in the U.S.P., given in average dose of gr. ¼ (0.001).

e. strophan'thi (Br.), extract of strophanthus, a powder diluted with milk sugar so as to represent one-half of its weight of strophanthus seed; dose, gr. ¼–½ (0.008–0.015).

e. sum'bul (N.F.), extract of sumbul, extract of muskroot, a yellowish brown mass of pilular consistence; dose, gr. 1–5 (0.06–0.3).

e. tarax'aci (N.F. and Br.), extract of taraxacum, extract of dandelion, a mass of pilular consistence (the B.P. extract is the inspissated juice of the fresh root); dose, gr. 5–20 (0.3–1.3).

e. tarax'aci liq'uidum (Br.); dose, ʒ1–2 (4.0–8.0).

e. theba'icum, e opii

e. vibur'ni liq'uidum (B.A.), liquid extract of viburnum; dose ʒ1–2 (4.0–8.0).

e. vibur'ni prunifo'lii, extract of viburnum prunifolium, a powdered extract one part by weight of which represents five parts of the crude drug; dose, gr. 8 (0.5).

extracystic (eks-trah-sis'tik). Outside of, or unrelated to, the gall-bladder or urinary bladder or any cystic tumor.

extradu'ral. 1. On the outer side of the dura mater. 2. Unconnected with the dura mater.

extraepiphyseal (ek"strah-ep-i-fiz'e-al). Not relating to, or connected with, an epiphysis.

ex"tragen'ital. Outside of, away from, or unrelated to, the genital organs.

extrahepat'ic. Outside of, or unrelated to, the liver.

ex"traligamen'tous. Outside of, or unconnected with, a ligament.

extramalle'olus. External or lateral malleolus.

extramastoiditis (ek'strah-mas-toy-di'(de')tis). Inflammation of the tissues contiguous to, but outside the mastoid process.

extramed'ullary. Outside or unrelated to any medulla, especially the medulla oblongata.

extramu'ral [L. *murus*, wall] Outside, not in the substance, of the wall of a part.

extraneous (eks-tra'ne-us) [L. *extraneus*.] Outside of the organism and not belonging to it.

extranuclear (ek"strah-nu'kle-ar). Outside of a nucleus.

extrapapillary (eks-trah-pap'i-la-ri). Unconnected with any papilla or papillary structure.

extraparenchymal (eks-trah-par-en'ki-mal). Unrelated to the parenchyma of an organ, belonging rather to the stroma.

extraperine'al. Not connected with the perineum.

extraperios'teal. Not connected with, or unrelated to, the periosteum.

extraperitoneal (eks-trah-per-i-to-ne'al). Outside of the peritoneal cavity.

extraphysiological (eks-trah-fiz-i-o-loj'i-kal). Outside of the domain of physiology; more than physiological, therefore pathological.

extraplacen'tal. Unrelated to the placenta.

extrapo'lar. Outside of, not between the poles of an electric battery.

extraprostat'ic. Outside of, or independent of the prostate gland.

extraprostati'tis (ek"strŭ-pros-tă-ti'(te')tis) [L. *extra*, outside, + G. *prostata*, prostate, + *-itis*.] Paraprostatitis.

extrapul'monary. Outside the lungs, having no relation to the lungs.

extrapyram'idal. Outside of the pyramidal tracts.

extrase'rous. Outside of a serous cavity.

extrasomatic (ek"strah-so-mat'ik). Outside of, or unrelated to, the body.

extrasystole (eks-trah-sis'to-le). The premature contraction of one or more chambers of the heart, the fundamental rhythm of the cardiac action being maintained. **auric'ular e.-s.,** premature contraction of an auricle. **infrano'dal e.-s.** ventricular e.-s. **inter'polated e.-s.,** a contraction occurring between two normal beats of the heart. **no'dal e.-s.,** a premature contraction of both chambers together of one side of the heart. **ventric'ular e.-s.,** premature contraction of the ventricle.

extratar'sal. 1. Outside of, having no relation to the tarsus 2. On the outer side of the tarsus

extratracheal (eks-trah-tra'ke-al). Outside of the trachea.

extratu'bal. Outside of any tube, specifically not in the Eustachian or Fallopian tube.

extrauterine (eks-trah-u'ter-in). Outside of the uterus. **e. preg'nancy,** ectopic gestation, arrest of the impregnated ovum and more or less complete development of the embryo in the ovary oviduct, or abdominal cavity.

extravaginal (eks-trah-vaj'i-nal). Outside of the vagina.

extrav'asate [L. *extra*, out of, + *vas*, vessel.] 1. To exude from or pass out of a vessel into the tissues said of blood, lymph, or serum. 2. As a noun the material so exuding; extravasation, exudate.

extravasation (ek-strav"a-sa'shun). 1. The act of escaping from a vessel into the tissues, said of blood, lymph, or serum 2. Material in the tissues which has escaped from a blood-vessel of lymphatic, exudate, extravasate.

extravas'cular. Outside of the blood-vessels or lymphatics or of any special blood-vessel.

extraventric'ular. Outside of any ventricle, especially of one of the ventricles of the heart.

extravisual (ek-strah-vizh'u-al). Outside the direct line of vision. **e. zone,** the zone outside the visual zone, in which there is a dispersal of rays not properly focussed.

extrem'ital. Relating to an extremity, distal

extremitas (ek-strem'i-tas) [L. from *extremus*, last outermost.] 1. Extremity, limb, one of the arms or legs. 2. One of the ends of an oval or elongated organ, such as the kidney or ovary.

extrem'ity. Extremitas. **lower e.,** the pelvic limb, the hip, thigh, leg, ankle, and foot. **upper e.,** the thoracic limb, the shoulder, arm, forearm wrist, and hand.

extrin'sic [L. *extrinsecus*] Originating outside of the part where found or upon which it acts noting especially a muscle.

extroversion (ek-stro-vur'shun). Turning inside out; eversion; exstrophy.

ex'tubate [L. *ex*, out, + *tuba*, tube.] To remove a tube, specifically to extract the tube after laryngeal intubation.

extuba'tion. The removal of a tube, specifically the removal of the tube after intubation of the larynx.

ex'udate [L. *ex*, out, + *sudare*, to sweat.] 1. To exude. 2. An exudation; a fluid, often coagulable, or formed elements of the blood, extravasated into the tissues or any cavity.

exuda'tion. 1. The act of exuding or oozing 2. A liquid or semisolid which is being discharged or has been discharged through the tissues to the surface or into a cavity.

ex'udative. Relating to the process of exudation or to an exudate.

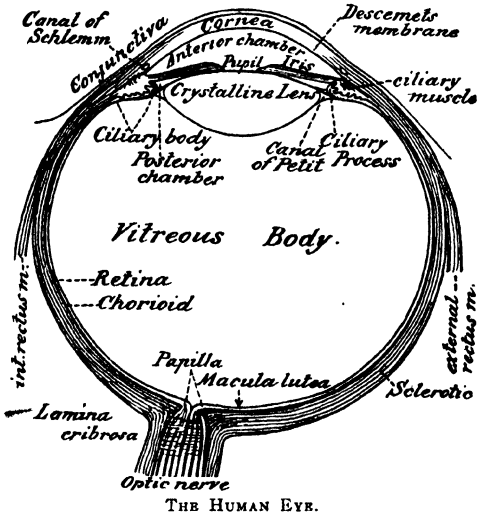
exude' [L. *ex*, out, + *sudare*, to sweat.] To ooze to pass out gradually through the tissues, said of a fluid or semisolid.

exulcerans (eks-ul'se-ranz) [L. *ex*, out, + *ulcus* ulcer.] Ulcerating.

exumbilica'tion [L. *ex*, out, + *umbilicus*, navel. Exomphalos.

exuviæ (ex-u've-e) [L. *exuere*, to strip off.] Any cast-off parts, as desquamated epidermis.

eye (i) [A.S. *ege*.] Oculus, ophthalmos, the organ of vision. It is a nearly spherical body with the segment of a smaller sphere (the *cornea*) set in at the anterior pole. It has three coats: an outer fibrous protective coat (the *sclera*), a middle vascular and pigmented coat (the *chorioid*), and an inner nervous coat (the *retina*); the anterior part of the sclera is wanting, its place being taken by the transparent *cornea;* the middle and inner coats are also wanting anteriorly. The interior of the eye contains the refracting media. Immediately behind the cornea is the anterior chamber, separated from the posterior chamber by a retractile diaphragm (the *iris*), with an aperture in its center (the *pupil*); the anterior and posterior chambers are filled with a clear fluid (the *aqueous humor*). The posterior chamber is bounded posteriorly by the most important refracting medium (the *crystalline lens*). The cavity of the eyeball behind the lens is filled with a gelatinous substance (the *vitreous humor* or *vitreous body*). At the periphery of the iris, connecting it with the chorioid coat, is the ciliary body, composed of the *orbiculus ciliaris* and the *ciliary processes*, similar in structure to the chorioid coat, and the *ciliary muscle*, composed of radial and circular unstriped fibers; the ciliary muscle is the muscle



THE HUMAN EYE.

of accommodation, acting on the crystalline lens to adjust it for the varying distances of near vision. The optic nerve enters the eyeball near the posterior pole and its fibers are distributed to the posterior part of the retina. The various muscles moving the eyeball are attached to the sclera externally. **amaurot'ic cat's e.**, a yellow reflex from the dilated pupil in cases of glioma of the retina. **artifi'cial e.**, a curved disc of opaque glass, with an imitation iris and pupil in the center, inserted beneath the eyelids and supported by the stump left after evisceration or enucleation; it may be a thin shell, or a "Snellen reform eye" which is thicker and hollow. **black-e.**, ecchymosis of the lids and their surroundings. **brassy e.**, conjunctivitis, occurring in brass-workers and often caused by brass dust or indirect contact by rubbing the eyes after handling objects made of brass. **fix'ing e.**, the eye, in cases of squint, which is directed toward the object looked at. **hot e.**, gouty conjunctivitis or episcleritis. **pink e.**, acute epidemic conjunctivitis. **squint'ing e.**, the eye, in cases of squint, which is not directed toward the object looked at. **wa'tery e.**, epiphora.

absence, anophthalmia, ophthalmosteresis. **adhesion to orbital tissues,** syncanthus. **angle,** canthus. **artificial,** hypoblepharon. **calculus,** ophthalmolith. **destruction,** ophthalmocace, ophthalmolyma, ophthalmophthisis. **disease,** ophthalmopathy. **disuse,** anopsia. **division of a muscle** or **tendon,** ophthalmomyotomy. **enlargement,** ophthalmacrosis, megalophthalmia. **examination,** ophthalmoscopy. **excision,** enucleation, ophthalmectomy. **fatigue,** asthenopia, copiopia, ophthalmocopia, eyestrain. **fissure,** coloboma. **hardening,** glaucoma. **hemorrhage from,** ophthalmorrhagia. **hemorrhage into,** hemophthalmia. **inability to close,** lagophthalmia **inflammation,** ophthalmia, ophthalmitis, entophthalmia, panophthalmia; see also under *conjunctiva* **measurement,** ophthalmometry. **oscillation,** nystagmus, ophthalmodonesis. **pain,** opthalmalgia, ophthalmodynia. **paralysis of muscles,** ophthalmoplegia, ophthalmoparalysis. **pigmentation,** ophthalmomelanosis. **position of axis,** *normal,* isophoria, mesoropter; *deviation up,* hyperphoria, hypertropia, *up and in,* hyperesophoria, *up and out,* hyperexophoria; *down,* hypophoria, hypotropia, *down and in,* hypoesophoria, *down and outward,* hypoexophoria; *in,* esophoria, esoptropia, convergent strabismus or squint; *out,* exophoria, exotropia, divergent strabismus or squint. **protrusion,** exophthalmus, ophthalmocele, ophthalmoptosis, exorbitism, procidentia oculi. **puncture,** ophthalmocentesis, paracentesis bulbi, paracentesis oculi **rupture,** ophthalmorrhexis. **shrinking,** microphthalmia. **sinking in,** enophthalmos. **softening,** ophthalmomalacia. **specialist in diseases of,** oculist, ophthalmologist, ophthalmiater. **specialty of diseases,** ophthalmology, ophthalmiatrics.

eye'ball. The globe of the eye, the eye proper without the appendages.*

eye'brow. 1. Supercilium, the crescentic line of hairs at the upper edge of the orbit. 2. The arch formed by the upper margin of the orbit.

eye-cup (i'kup). 1. A small oblong cup-like receptacle, fitting over the eye, intended to facilitate the application of a liquid medicament to the conjunctiva. 2. The optic cup.*

eye'lash. Cilium, one of the stiff hairs projecting from the tarsal margin of the eyelid. **e. sign,** see under *sign*.

eye'lid. One of the two movable folds of skin (upper and lower eyelids), lined with conjunctiva, continuous with the integument of the face, in front of the eyeball. The free edge of each eyelid is stiffened with a framework of fibrous connective tissue, the tarsus, between which and the conjunctiva are the Meibomian* glands. At the free margin of each eyelid is a row of stiff hairs, the cilia or eyelashes. The angle or junction of the eyelids at either side is called the canthus. **lower e.**, palpebra malaris [NK]. **upper e.**, palpebra frontalis [NK].

absence, ablepharon. **adhesion between,** ankyloblepharon, blepharosynechia, blepharosymphysi, blepharocleisis *congenital*, cryptophthalmus. **discoloration,** blepharomelasma, blepharochromidrosise, blepharodyschroia. **drooping of upper,** ptosis, blocpharoplegia, blepharoptosis. **edema,** blepharedesa. **eversion,** ectropion, ecstrophe. **fissure,** blepharocoloboma. **inability to close,** lagophthalmia. **incirion,** blepharotomy, tarsotomy. **inflammation,** blepharitis, blepharadenitis, blepharoblennorrhea, blepharopyorrhea. **inversion,** entropion, enstrophe. **large size,** macroblepharia. **narrow slit between,** blepharophimosis, blepharostenosis. **phlegmon,** sty, hordeolum. **plastic surgery,** blepharoplasty, tarsoplasty. **pouching of upper,** blepharochalasis. **sebaceous cyst,** chalazion, chalaza. **small size,** microblepharia, resulting in lagophthalmia. **suturing,** blepharorrhaphy, tarsorrhaphy. **thickening,** blepharopachynsis, pachyblepharon. **tumor,** blepharoncus, tarsophyma, blepharo-

phyma, pladaroma. **twitching,** blepharospasm, blepharism, blepharoclonus. **wide opening between,** blepharodiastasis.

eye-mem'ory. Memory chiefly of what is seen.

eyepiece (i'pēs). The compound lens at the end of the microscope-tube nearest the eye; it magnifies the image made by the lens at the other end, or the objective; see cut under *microscope*.

eye-spec'ulum. Blepharostat, an instrument for keeping the eyelids apart during inspection of or operation on the eye.

eye'spot. 1. The beginning of the eye in the embryo. 2. A colored spot or plastid (chromatophore) in a unicellular organism. 3. Ocellus.

eyestone (i'stōn). A small smooth shell or other object which is inserted beneath the eyelid for the purpose of removing a foreign body.

eyestrain (i'strān). Asthenopia, ophthalmocopia; tire of the ciliary muscle or of some of the extrinsic muscles of the eyeball, due to errors of refraction or to imbalance of the ocular muscles; the symptoms are, in different cases, pain in the eyes, lacrymation, sties, headache, vertigo, nausea, and various other reflex symptoms.

eyetooth (i-tooth'). One of the upper canine teeth.

eye-wash. Collyrium.

F

F. Abbreviation for field of vision, Fahrenheit; chemical symbol of fluorine. Abbreviation for filial generation, or the offspring resulting from a certain mating; the offspring from an initial mating are called the first filial generation (F_1), their offspring produced by intercrossing and self-fertilizing the F_1 are the second filial generation (F_2), etc. Abbreviation for *Fusiformis*.

fabel'la [L. dim. of *faba*, bean.] One of two small fibrocartilages or sesamoid bones in the tendons of the gastrocnemius muscle.

fabere sign (fab'ĕ-re) [flexion, abduction, external rotation, extension, these being the movements which elicit pain when the sign is positive.] Patrick's* test.

fabia'na [*Fabiano*, a Spanish botanist.] The dried leaves and twigs of *Fabiana imbricata*, pichi, a shrub of Chile; recommended in the treatment of vesical catarrh, renal calculi, and "biliousness," in doses of gr. 5–10 (0.3–0.6) of the extract.

fa'bism [L. *faba*, bean.] A disease occurring in Sicily and Southern Italy, caused by eating the unripe bean, *Vicia faba*, or inhaling the pollen of the flower. Cf. *lathyrism*.

F.A.C.D. Abbreviation for Fellow of the American College of Dentists.

face [L. *facies*.] The anterior portion of the head, containing the features.

facet, facette (fas'et, fă-set') [Fr. *facette*.] 1. A small smooth area on a bone or other firm structure. 2. A worn spot on a tooth.

facial (fa'shal). Relating to the face. **f. pal'sy, f. paral'ysis,** Bell's paralysis, a unilateral paralysis of the facial muscles supplied by the seventh nerve. **f. percep'tion,** the perception of objects, their situation and their character, through sensation in the skin of the face; sometimes felt in the dark by the seeing, but more commonly present in the blind. **f. spasm,** mimic tic. **f. sur'face,** the labial or buccal surface of a tooth; opposed to the lingual surface.

facies (fash'e-ēz) [L.] 1. Face, countenance. 2. Expression. 3. [BNA] Surface. **ad'enoid f.,** the open-mouthed and often stupid appearance in children with adenoid hypertrophy. **f. abdomina'lis,** a pinched expression of the face occurring in one suffering from disease of the abdominal viscera. **f. amab'ilis,** a facies characterized by an oval mobile face, with beautiful eyes, thick eyebrows, long lashes, and bluish sclerotics; formerly regarded as indicative of a predisposition to tuberculosis. **f. ante'rior** [BNA], the anterior or proximal contact surface of a premolar or molar tooth. **f. aor'tica,** the sallow complexion, bluish sclerotics, and sunken cheek of a person suffering from insufficiency of the aortic valve. **f. bucca'lis** [BNA,] the buccal surface of a premolar or molar tooth. **f. cerebra'lis,** the internal surface of a cranial bone. **f. contac'tus** [BNA], contact surface, that surface of a tooth which touches its neighbor in the same row; it is called the *proximal surface* (f. medialis of canine or incisor, f. anterior of premolar or molar) when it looks toward the preceding tooth in the row, the *distal surface* (f. lateralis of canine or incisor, f. posterior of premolar or molar) when it looks toward the succeeding tooth in the row. **f. contac'tus lobo'rum** [NK], the surfaces in the incisures separating the lobes of the lungs. **f. dista'lis,** f. lateralis. **f. hepat'ica,** a thin face, with sallow skin, yellowish conjunctivæ, and sunken eyeballs, noted in certain chronic affections of the liver. **f. hippocrat'ica,** Hippocratic* facies. **f. incisa'lis,** f. masticatoria. **f. labia'lis** [BNA], the anterior, or labial, surface of an incisor or canine tooth. **f. latera'lis** [BNA], the lateral or distal surface of an incisor or canine tooth, that contact surface which looks toward the following tooth in the row. **f. lingua'lis** [BNA] the lingual or inner surface of a tooth, that surface which looks toward the tongue. **f. masticato'ria** [BNA], the masticating, chewing, or grinding surface of a tooth. **f. media'lis** [BNA], the proximal surface of an incisor or canine tooth, that contact surface which looks toward the preceding tooth in the row. **f. mitra'lis,** the pink cheeks, cyanosis of the extremities, and visible capillaries of the person with mitral insufficiency. **f. morsa'lis,** f. masticatoria. **f. occlusa'lis,** f. masticatoria. **f. os'sea** [BNA], the bony skeleton of the face. **f. ovar'ica,** the pinched drawn face of a woman with ovarian tumor, Wells's facies. **f. poste'rior** [BNA], the posterior or distal contact surface of a premolar or molar tooth. **f. proxima'lis,** see under f. contactus. **f. symphy'eos,** symphyseal surface of the pubis. **Hutch'inson's f.,** see *Hutchinson*. **le'onine f.,** the large furrowed face, fancifully compared to that of a lion, seen in certain cases of tubercular leprosy. **myopath'ic f.,** a peculiar appearance caused by protrusion of the lips, due to muscular weakness, by drooping of the lids, and by general relaxation of the muscles of the face. **Par'kinson's f.,** see *Parkinson*. **f. planta'ris fib'ulæ, f. p. tib'iæ,** posterior surfaces of the fibula and tibia respectively. **ty'phoid f.,** the expression is dull and heavy, there is often a dusky hue, and the conjunctivæ are injected. **Wells's f.,** f. ovarica.

faciobrachial (fa-shyo-bra'kĭ-al). Relating to the face and the arm, noting a form of juvenile muscular dystrophy.

faciocervical (fa-shyo-sur'vĭ-kal). Relating to the face and the neck, noting a form of progressive dystrophy of the muscles of these regions.

faciolin'gual. Relating to the face and the tongue, noting a paralysis affecting these parts.

facioplegia (fa''si-o-ple'jĭ-ah) [L. *facies*, face. + G. *plēgē*, a stroke.] Prosopoplegia, facial palsy.

facioscapulohumeral (fa″shyo-skap″u-lo-hu'mur-al). Relating to the face, the scapula, and the upper arm, noting a form of muscular dystrophy, or infantile progressive muscular atrophy.

F.A.C.P. Abbreviation for Fellow of the American College of Physicians.

F.A.C.S. Abbreviation for Fellow of the American College of Surgeons.

factitious (fak-tish'us) [L. *factitius*, made by art.] Artificial, not natural; said especially of certain lesions of the skin.

factor (fak'tor) [L. maker, causer.] 1. One of the contributing causes in any action. 2. The last two figures in the specific gravity of a specimen of urine, multiplication of which by a definite

figure gives a formula for estimating the amount of solids present; see *Trapp-Haeser formula.* 3. Gene.

facultative (fak'ul-ta-tiv) [L. *facultas*, faculty.] Having the power to do a thing but not being obliged to do it. **f. a'erobe,** a bacterium which is normally anaerobic but which can adapt itself to aerobic conditions. **f. ana'erobe,** a bacterium which is normally aerobic but which is capable of growth in the absence of oxygen. **f. hypermetro'pia, f. hypero'pia,** that part of existing hypermetropia which can be corrected by an effort of the accommodation. **f. par'asite,** a microbe which is normally saprophytic but may on occasion become parasitic **f. sap'rophyte,** a microbe which is usually parasitic but which may, on occasion, live and grow as a saprophyte.

fac'ulty [L. *facultas; facilitas*, ease.] 1. Capability in some special direction. 2. The properly qualified members of some body or profession, as the medical faculty. 3. An organized collection of individuals authorized to teach in a university or in a special school of the university, and empowered in the name of the university to grant degrees.

faded-leaf' appear'ance. The peculiar speckled appearance noted in the fatty cardiac muscle in pernicious anemia.

fæ'ces. Feces.

Fagara flava (fă-gah'rah flah'vah). West Indian satinwood.

Faget's sign (fă-zha') [Jean Charles *Faget*, French physician, *1818.] A falling pulse with a rising or horizontal temperature curve, claimed to be pathognomonic of yellow fever.

fagop'yrism, fagopyris'mus [L. *fagus*, beech, + *pyros*, wheat] Poisoning by buckwheat, an idiosyncrasy marked by nausea and vomiting, urticaria, and irritation of the conjunctiva and nasal mucous membrane.

Fahrenheit scale (fahr'en-hīt skāl) [Gabriel Daniel *Fahrenheit*, German physicist, 1686–1736.] The degree markings on the F. thermometer, in which the freezing point is 32°, the point of boiling water 212°, the zero indicating the lowest temperature F. could obtain by a mixture of ice and salt. A degree F. is $\frac{5}{9}$ of a degree Celsius,* $\frac{4}{9}$ of a degree Réaumur.* (See the Appendix.)

faint (fānt). 1. Extremely weak, threatened with syncope. 2. An attack of syncope.

faith-cure. The system of treatment of disease by the suggestion that a return to health will certainly occur.

fal'cate, fal'ciform [L. *falx*, sickle, + *forma*, form.] Sickle-shaped, crescentic.

falcial (fal'shal). Relating to the falx cerebelli or falx cerebri.

fal'cula [L. dim. of *falx*.] Falx cerebelli.

fal'cular. 1. Relating to the falx cerebelli. 2. Crescentic, sickle-shaped.

fallec'tomy. Salpingectomy.

fall'ing of the womb. Prolapsus uteri, procidentia uteri, metroptosia, hysteroptosia.

fall'ing-sickness. Epilepsy.

Fallo'pian aq'ueduct [Gabriele *Fallopio*, or Falloppio, Italian anatomist, 1523–1562.] Aquæductus Fallopii, facial canal, a minute opening giving passage to the facial nerve through the petrous portion of the temporal bone. **F. arch,** F. ligament. **F. canal',** F. aqueduct. **F. hia'tus,** an opening on the cerebral side of the petrous bone giving passage to the great superficial petrosal nerve, the motor branch of the Vidian. **F. lig'ament,** Poupart's ligament, ligamentum* inguinale. **F. neuri'tis,** a perineuritis of the facial nerve in the F. canal, producing pressure on the nerve and consequent facial paralysis. **F. tube,** oviduct, tuba*uterina.

fallos'tomy. Salpingostomy.

Fallot's tetrad (fal-lōz' tet'rad). Interventricular septal defect with dextroposition of the aorta, stenosis of the pulmonary artery and hypertrophy of the right ventricle, all congenital defects carried into adult life; see *Eisenmenger's* complex.

fallot'omy. Salpingotomy.

false. Artificial, not real; in composition, *pseudo-*.

falx [L. sickle.] One of two sickle-shaped partitions of dura mater between the cerebral and cerebellar hemispheres. **f. aponeurot'ica,** f. inguinalis. **f. cerebel'li** [BNA], a short process of dura mater projecting forward from the internal occipital crest below the tentorium; it occupies the posterior cerebellar notch and the vallecula, and bifurcates below into two diverging limbs passing to either side of the foramen magnum. **f. cer'ebri** [BNA], the double fold of dura mater in the great longitudinal fissure between the two cerebral hemispheres; it is attached anteriorly to the crista galli of the ethmoid and behind to the upper surface of the tentorium. **f. inguina'lis** [BNA], conjoined or conjoint tendon; common tendon of insertion of the transversus and obliquus internus muscles into the crest and spine of the pubis and iliopectineal line. **f. ligamento'sa,** falciform ligament, the broad ligament of the liver.

fa'mes [L.] Hunger. **f. cani'na, f. bovi'na,** bulimia.

famil'ial [L. *familia*, family.] Family-; affecting several members of the same family, noting especially certain nervous diseases.

fam'ily [L. *familia*, household.] 1. A group of blood relatives, or, more strictly, the parents and their children. 2. In biological classification a division between the *order* and the *tribe* or *genus*.

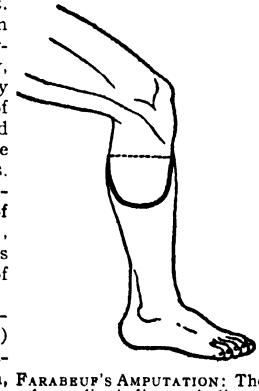
fam'ine-fe'ver. Relapsing* fever.

fang [A.S. *fōhan*, to seize] 1. A long tooth or tusk. 2. The hollow tooth of a snake through which the venom is ejected. 3. The root of a tooth, especially one of the two or three tapering or flattened projections forming the root of a molar tooth.

fang'hole. The infundibulum, or mark, in an incisor tooth of the horse.

fango (fang'go) [It. mud.] Mud from the Battaglio thermal springs in Italy, applied externally in the treatment of rheumatism and other diseases of the joints and muscles. **f. ther'apy, f. treat'ment,** treatment of rheumatic, gouty, and other diseases by applications of f. or other muds.

Farabeuf's amputa'tion (far-ă-bēf') [Louis Hubert *Farabeuf*, Paris surgeon, 1841–1910.] Amputation of the leg, the flap being large and on the external side. **F.'s opera'tion** ischiopubiotomy. **F.'s saw,** a saw with the blade so set in the frame that it can be inclined at any angle and there fixed.



FARABEUF'S AMPUTATION: The heavy line indicates the line of incision for the external flap; the dotted line, the incision on the inner side of the leg.

far'ad [*Faraday.*] A practical unit of electrical capacity, being the capacity of a condenser having a charge of one coulomb under an electromotive force of one volt.

farada'ic. Faradic.

Faraday's laws (făr'ăda) [Michael *Faraday*, English physicist, 1791–1867.] 1. The amount of an electrolyte decomposed by a galvanic current is proportional to the strength of the current. 2. When the same current is passed through several electrolytes, the amounts of the different substances decomposed are proportional to their chemical equivalents. **F. space,** a dark space between the positive column and the negative glow when a current is passed through a partially exhausted tube.

farad'ic. Relating to induced electricity.

farad"ipun'cture. The application of faradic electricity by means of needle electrodes thrust into the tissues.

far'adism. Faradic (induction) electricity. **Sur'ging f.,** a current of gradually increasing and decreasing amplitude obtained by interposing a rhythmic resistance to the alternating current produced by the induction coil.

faradiza'tion. The therapeutic application of the faradic, or induced, electrical current.

far'adize. To treat by means of an induced or faradic electrical current.

faradocontractility (făr"ă-do-kon-trak-tĭl'i-tĭ). The contractility of the muscles under the stimulus of a faradic current.

faradomuscular (far"ă-do-mus'ku-lar). Noting the effect of applying a faradic current directly to a muscle.

faradonervous (far"ă-do-nur'vus). Noting the effect of faradization of a nerve trunk.

faradotherapy (făr"ă-do-ther'ă-pĭ). Treatment of disease or paralysis by means of the faradic or induced electrical current.

farastan (făr'as-tan). Trade name of monoiodocinchophen, offered for the treatment of arthritis, and associated rheumatoid and neuritic conditions, in doses of gr. 7½ (0.5) three times a day.

farcin du bœuf (far-saṅ'dŭ-bef') [Fr. cattle farcy.] A cattle disease in Guadaloupe, characterized by suppurative lymphadenitis and lymphangitis, the glands discharging a creamy pus containing *Actinomyces farcinicus.*

farcino'ma. Farcy-bud.

far'cy [L. *farcire,* to stuff.] A form of equinia in which the cutaneous lesions predominate. **f. bud, f. butt'on,** farcinoma, one of a number of nodules formed along the course of the subcutaneous lymphatics in cases of equinia. **f. oil,** the yellowish, viscid discharge from f.-buds. **f. pipe,** a hard cord in the skin in chronic glanders, resulting from induration of a lymphatic vessel.

far'del-bound [Fr. *fardeau,* a package, load.] Retention of food in the third stomach of a ruminant.

farfara (far'far-ah) [L. *farfarus,* coltsfoot.] (N.F.) Coltsfoot leaves, tussilago leaves, the dried leaves of *Tussilago farfara;* employed chiefly in domestic practice in the treatment of bronchitis in dose of ʒi (4.0), or in infusion, or as candy.

fari'na [L.] Flour, meal. **f. ave'næ,** oatmeal, prepared from the grain of *Avena sativa,* official in the U.S.P. of 1870; in the form of gruel it is employed as a laxative article of diet and also externally as a poultice. **f. trit'ici** (Br.), wheaten flour, the ground and sifted grain of *Triticum sativum,* wheat; an article of diet, sometimes employed externally, moistened with hot milk or water, as a poultice.

farina'ceous. 1. Relating to farina or flour. 2 Starchy.

far-point. Punctum remotum, the distance at which an object must be upon which the eyes can be focussed without an effort of accommodation; about twenty feet.

Far'rant's flu'id. A fluid containing gum arabic, glycerin, and arsenic, for the preservation of delicate anatomical specimens.

Farre's line (far) [Frederick John *Farre,* English gynecologist, 1804–1886.] A whitish line marking the insertion of the mesovarium on the ovary.

Farre's tu'bercles (far) [John Richard *Farre,* English physician, 1775–1862.] Nodules of cancerous tissue on the surface of the liver.

far-sight. Hypermetropia, hyperopia, presbyopia.

farsight'edness. The condition of having far-sight.

fascia (fash'yŭ), pl. *fasciæ* [L. a band or fillet.] 1. A sheet of fibrous tissue enveloping the body beneath the skin, and also enclosing the muscles and groups of muscles and separating their several layers or groups. 2. Same as fascia dentata. 3. In surgery, a bandage. **bicip'ital f.,** lacertus fibrosus [BNA]. **deep f.,** a thin fibrous membrane, devoid of fat, which invests the muscles, separating the several groups and the individual muscles, forms sheaths for the nerves and vessels, becomes specialized around the joints to form or strengthen ligaments, envelops various organs and glands, and binds all the structures together into a firm, compact mass. **f. bul'bi** [BNA], capsula bulbi [NK], f. of the eyeball, Tenon's capsule, a hemispherical connective-tissue bag enclosing the posterior portion of the eyeball, ending anteriorly at the conjunctival fornix; it is pierced by the optic nerve and the tendons of the ocular muscles along which it sends prolongations. **f. cine'rea** [L. *cinereus,* ashen], a band-like structure passing from each lateral stria of the corpus callosum below the germ to the dentate f. **f. cremaster'ica,** Cooper's f., one of the coverings of the spermatic cord, formed of delicate connective tissue and of muscular fibers derived from the internal oblique muscle. **f. cribro'sa** [BNA], cribriform f., the part of the superficial fascia of the thigh which covers the oval fossa, or saphenous opening. **f. denta'ta hippocam'pi** [BNA], dentate fascia of the hippocampus, gyrus dentatus, a rudimentary gyrus of the temporal lobe continuous with the f. cinerea; it is a toothed band of gray matter between the upper surface of the gyrus hippocampi and the fimbria, being partly covered by the latter from which it is separated by the sulcus fimbriodentatus. **f. diaphrag'matis pel'vis infe'rior** [BNA], anal or ischiorectal f., covering the outer surface of the pelvic diaphragm. **f. diaphrag'matis pel'vis supe'rior** [BNA], rectovesical fascia, the layer of f. covering the upper surface of the pelvic diaphragm and forming the inner sheath of the levator ani muscle. **f. diaphrag'matis urogenita'lis infe'rior** [BNA], superficial or perineal layer of the triangular ligament. **f. diaphrag'matis urogenita'lis supe'rior** [BNA], deep or pelvic layer of the triangular ligament. **f. la'ta** [BNA], broad fascia, the strong fascia enveloping the muscles of the thigh. **f. obturato'ria** [BNA], the portion of the pelvic f. which passes across and closes, except for the obturator canal, the obturator foramen. **f. palma'ris,** aponeurosis palmaris [BNA]. **f. planta'ris,** aponeurosis plantaris [BNA]. **f. transversa'lis,** the lining fascia of the abdominal cavity, between the inner surface of the abdomi-

nal musculature and the peritoneum. **f. triangula'ris abdom'inis,** Colles's reflex ligament, ligamentum* inguinale reflexum. **intercolumnar f.,** fibræ intercolumnares. fibræ intercrurales [BNA]. **semilu'nar f.,** lacertus fibrosus [BNA]. **superfic'ial f.,** a loose fibrous envelope beneath the skin, containing more or less fat in its meshes (panniculus adiposus) or fasciculi of muscular tissue (panniculus carnosus); it contains the cutaneous vessels and nerves and is in relation by its under surface with the deep fascia.

fascial (fash'yal). Relating to any fascia.

fascicle (fas'ĭ-kl) [L. *fasciculus*, a small bundle.] In botany, a cymose inflorescence formed of a number of flowers on pedicels of equal length.

fascicled (fas'ĭ-kld). Fasciculated; in botany growing in a tuft or bundle.

fascic'ular. Relating to a fasciculus; arranged in the form of a bundle or collection of rods.

fascic'ulate, fascic'ulated. Fascicular.

fasciculat'ion (fă-sik-u-la'shun). An arrangement in the form of fasciculi.

fasciculus, gen. and pl. *fasciculi* (fă-sik'u-lus) [L. dim. of *fascis*, bundle.] Fascicle; a small band or bundle of fibers, usually of muscle- or nerve-fibers.

atrioventric'ular or **auriculoventric'ular f.,** His's band or bundle, atrioventricular bundle.*

dorsolat'eral f., f cuneatus.

f. ante'rior pro'prius [BNA], proper anterior fasciculus, anterior ground or basis bundle, Flechsig's fasciculus; a subdivision of the anterior funiculus or white column of the spinal. cord, containing fibers from the cells of the cord itself.

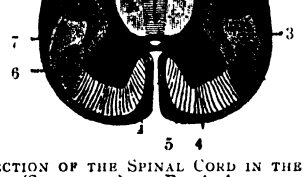
f. anterolatera'lis superficia'lis [BNA], superficial anterolateral fasciculus, Gowers' tract; a tract of ascending fibers on the lateral surface of the spinal cord anterior to the cerebellospinal fasciculus.

f. arcua'tus, f. longitudinalis superior.

f. a'trioventricula'ris [NK], atrioventricular bundle.*

f. cerebellospina'lis [BNA], cerebellospinal fasciculus direct cerebellar tract of Flechsig; a band-like tract of ascending white fibers on the posterolateral surface of the spinal cord immediately in front of the line of entrance of the posterior nerve-roots.

f. cerebrospina'lis ante'rior [BNA], anterior cerebrospinal or pyramidal fasciculus, Tuerck's column, direct pyramidal tract, a subdivision of the anterior funiculus, or white column, of the spinal cord.



CROSS SECTION OF THE SPINAL CORD IN THE CERVICAL REGION (SCHEMATIC): 1, Fasciculus cuneatus, Burdach's column; 2, fasciculus cerebrospinalis lateralis, crossed pyramidal tract; 3, fasciculus lateralis proprius, lateral ground bundle; 4, fasciculus anterior proprius, Flechsig's fasciculus, anterior ground bundle; 5, fasciculus cerebrospinalis ventralis, direct pyramidal tract, Tuerck's fasciculus; 6, fasciculus intermedius; 7, fasciculus anterolateralis superficialis, Gowers' tract; 8, fasciculus cerebellospinalis, Flechsig's direct cerebellar tract; 9, fasciculus marginalis. Spitzka's, or Lissauer's, marginal tract; 10, fasciculus gracilis, Goll's tract or column. (*Landousy and Jayle.*)

f. cerebrospina'lis latera'lis [BNA], lateral cerebrospinal or pyramidal fasciculus, crossed pyramidal tract; a tract of descending fibers in the spinal cord just anterior to the cerebellospinal fasciculus and to the outer side of the posterior column or horn of gray matter

f. cunea'tus [BNA], wedge-shaped fasciculus, column or tract of Burdach, the outer tract of the posterior funiculus, or white column, of the spinal cord, containing many fibers from the posterior nerve-roots.

f. ex'ilis, a small bundle of muscle-fibers arising from the medial epicondyle of the humerus or the coronoid process of the ulnar, and joining the flexor longus pollicis muscle.

f. grac'ilis [BNA], slender fasciculus, column or tract of Goll; the inner division of the posterior funiculus, or white column, of the spinal cord, containing ascending sensory fibers.

f. interme'dius, the rubrospinal, cerebellospinal, lateral vestibulospinal, and olivospinal tracts collectively.

f. latera'lis pro'prius [BNA], proper lateral fasciculus, Flechsig's lateral fasciculus, lateral ground or basis bundle; a tract constituting the inner portion of the lateral funiculus or white column of the spinal cord. containing association fibers from cells of the cord itself.

f. longitudina'lis infe'rior, inferior longitudinal f., a well marked bundle of long association fibers running the whole length of the occipital and temporal lobes of the cerebrum, in part parallel with the inferior horn of the lateral ventricle.

f. longitudina'lis media'lis [BNA], medial longitudinal fasciculus, posterior longitudinal bundle, a longitudinal bundle of fibers running from the mesencephalon to the spinal cord through the tegmentum of the cerebral peduncle, between the central gray stratum and the red nucleus, just beneath the floor of the fourth ventricle.

f. longitudina'lis supe'rior, superior longitudinal f., a bundle of long association fibers in the lateral portion of the centrum ovale of the cerebral hemisphere, connecting the frontal, occipital, and temporal lobes; the fibers pass from the frontal lobe through the operculum to the posterior end of the Sylvian fissure, where many fibers radiate into the occipital lobe and others turn downward and forward around the putamen and pass to the anterior portion of the temporal lobe.

f. macula'ris, the collection of fibers in the optic nerve directly connected with the macula lutea.

f. margina'lis, Spitzka's* marginal tract.

f. obli'quus pon'tis [BNA], oblique bundle of the pons, a bundle of fibers in the ventral surface of the pons running from the anterior mesial portion outward and backward.

f. occipitofronta'lis, occipitofrontal fasciculus, a bundle of fibers running from the frontal to the occipital lobes of the cerebrum, close to the lateral ventricle, and believed by some anatomists to constitute the greater part of the tapetum.

f. ova'lis, median root zone, a collection of special nerve-fibers in the posterior funiculus, or white column, of the spinal cord near the posterior septum.

f. pedun"culomamilla'ris [BNA], pedunculomammillary f. or bundle, pedunculus corporis mamillaris, a fiber tract running from the corpus mamillare to the tegmentum and base of the cerebral peduncle.

f. pro'prius, ground-bundle, see f. lateralis proprius.

f. pyramida'lis ante'rior, f. cerebrospinalis anterior.

f. pyramida'lis latera'lis, f. cerebrospinalis lateralis.

f. retroflex'us [BNA], retroflex fasciculus, Meynert's retroflex bundle, a small band of fibers coming from the nucleus habenulæ running downward and forward in the tegmentum to the interpeduncular ganglion.

f. rotun'dus, f. solitarius.

f. senso'rius secunda'rius, lemniscus spinalis.

f. solita'rius, solitary f., a bundle of longitudinal fibers beginning at the upper part of the medulla and running down, on the outer side of the vagus nucleus, to the level of the fourth cervical nerve; most of its fibers belong to the glossopharyngeal nerve.

f. subcallo'sus, a bundle of association fibers running beneath the corpus callosum from the frontal to the occipital lobes.

f. te'res, a bundle of nerve-fibers in the floor of the fourth ventricle on either side of the central groove, between it and the fovea superior; its surface indication is the eminentia teres.

f. thal"amomamilla'ris [BNA], thalamomammillary bundle, bundle of Vicq d'Azyr, a thick bundle of fibers

which passes upward from the corpus mamillare on either side to terminate in the anterior nucleus of the thalamus.

f. uncina'tus [BNA], uncinate, uciform, or hooked f., a band of long association fibers connecting the frontal and temporal lobes of the cerebrum, running backward in the orbital portion of the frontal lobe, arching over the Sylvian fissure, and then passing forward toward the temporal pole.

fasciodesis (fash-yod'es-is) [*fascia* + G. *desis*, a binding together.] The operative attachment of a fascia to another fascia or a tendon.

Fasciola (fă-se'o-lah) [L. dim. of *fascia*.] A genus of *Trematoda* or flukes. **F. america'na,** *F. magna, Distomum magnum,* a fluke found in the lungs and liver of cattle in North America; it is not known to infest man. **F. hepat'ica, F. huma'na,** *Distomum hepaticum,* the ordinary liver fluke, inhabiting the bileducts of man and many of the lower animals; the intermediate host is a snail (*Limneus truncatulus, L. humilis, L. viator*) from which the cercaria escape and become encysted on watercress, lettuce, and other vegetables by means of which they gain access to the intestinal canal. **F. lanceola'ta,** *Dicrocelium lanceatum.* **F. mag'na,** *F. americana.*

fasciola (fă-se'o-lah) [L. dim. of *fascia*, band, fillet.] A small band or group of fibers. **f. cine'rea** [L. *cinereus*, ashen], a band-like structure arising from the lateral stria of the corpus callosum, which passes down to terminate below the splenium in the fascia dentata of the hippocampus.

fasci'olar. Relating to the fasciola cinerea.

Fasciolop'sis [*Fasciola* + G. *opsis*, form, appearance.] A genus of *Trematoda* or flukes. **F. bus'ki,** *Distomum buski, D. crassum,* a species found in the intestine of man in Eastern and Southern Asia. **F. rathoui'si,** *Distomum rathouisi,* found in only a few recorded cases in the intestine or liver in Chinese.

fasciorrhaphy (fash-ĭ-or'ră-fĭ) [L. *fascia* + G. *raphē*, a stitching.] Aponeurorrhaphy, suture of a fascia or aponeurosis.

fasciotomy [fash-ĭ-ot'o-mĭ] [L. *fascia* + G. *tomē*, incision.] Incision through a fascia.

fascitis (fas-si'(se')tis). Inflammation of a fascia.

fastiga'tum [L. *fastigatus*, sloping down.] Nucleus fastigii, or roof nucleus, in the white substance of the vermis of the cerebellum.

fastigium (fas-tij'ĭ-um) [L. the ridge of a roof.] 1. [BNA] Summit of the roof of the fourth ventricle of the brain, an angle formed by the union of the anterior and posterior medullary vela pushing up into the substance of the vermis. 2. The acme or height of a fever or any acute disease; the period of full development of an infectious disease.

fat [A.S. *fæt.*] 1. Obese, adipose, corpulent. 2. Oily, greasy. 3. A greasy, soft-solid material, found in animal tissues and many plants, composed of palmitin, stearin, and olein (or a compound of glycerin with palmitic, stearic, and oleic acids) in varying proportions. **neu'tral f.,** a compound of one of the fatty acids (oleic, palmitic, or stearic) and glycerin; same as fat (3).

fat-em'bolism. Plugging of a blood-vessel by oil-globules.

fa'tal [L. *fatum*, something spoken and therefore unchangeable.] 1. Inevitable. 2. Mortal, causing death.

fat'igable [L. *fatigare*, to tire, + *habilis*, apt.] Tiring on very slight exertion.

fatigabil'ity [L. *fatigare*, to tire, + *habilitas*, aptitude.] Condition in which fatigue is easily induced.

fatigue (fă-tēg') [Fr.] A state of tire, weariness, lassitude following exertion. **f. antitox'in,** see under fatigue toxin.* **f. disease',** professional neurosis.* **f. fe'ver,** see under *fever.* **f. poi'son.** f. toxin.* **f. reac'tion,** elevation of temperature following muscular exertion in sufferers from active tuberculosis. **f. tox'in,** see under *toxin.*

fat'ness. The condition of being fat; obesity, corpulence, adiposity.

fat-pad. Sucking pad, corpus adiposum buccæ [BNA].

fat-soluble A. A term proposed by McCollum and Kennedy for a class of substances in foods which are essential for growth and maintenance; they are vitamins, contained especially in butter and other animal fats, but little if at all in vegetable oils.

fat-splitting (fat'split-ing). Lipoclastic, lipolytic.

fat'ty. Relating in any sense to fat. **f. acid,** any acid, especially oleic, palmaric, or stearic, which in combination with glycerin forms fat. **f. degenera'tion, infiltra'tion,** etc., see the nouns.

fauces, gen. *fau'cium* (faw'sēz) [L. the throat.] The space between the cavity of the mouth and the pharynx. **ante'rior pill'ar of the f.,** arcus glossopalatinus [BNA]. **isth'mus of the f.,** isthmus faucium, the constricted opening forming the posterior opening of the cavity of the mouth, bounded laterally by the anterior pillars of the fauces, above by the velum pendulum palati, and below by the epiglottis. **pill'ars of the f.,** two mucous folds on either side of the fauces enclosing the tonsil. **poste'rior pill'ar of the f.,** arcus pharyngopalatinus [BNA].

Fauchard's disease' (fo-shar') [Pierre *Fauchard* Parisian dentist, 1680–1761.] Alveolar periostitis, pyorrhea alveolaris, Riggs's disease.

faucial (faw'shal). Relating to the fauces.

faucitis (faw-si'(se')tis). Inflammation of the fauces.

Fauvel's gran'ules (fo-vel') [Sulpice Antoine *Fauvel*, French physician, 1813–1884.] Peribronchitic abscesses.

fave'olate. Pitted.

fave'olus [L. dim. of *favus*, honeycomb.] A small pit or depression.

favus (fah'vus) [L. honeycomb.] Tinea favosa, t. lupinosa, porrigo favosa, honeycombed ringworm; a skin disease of childhood, marked by the formation of yellow saucer-shaped crusts around the hair-follicles on the body; it is due to the presence of a fungus, *Achorion schönleinii.* **f. herpet'icus,** a form characterized by an eruption of vesicles capped with yellow points. **f. herpetiform'is,** f. mu'rium, mouse favus, a fatal form of favus, caused by *Achorion quinckeanum,* attacking mice, sometimes seen in mild form in man. **f. mu'rium,** mouse f., f. herpetiformis. **f. of the nails,** onychomycosis favosa.

fear [A.S. *fær.*] Apprehension, dread, alarm. **mor'bid f.,** phobia,* an abnormal timidity or abject fear in relation to a certain object, place, action, etc.; such as fear of being in a closed room (*claustrophobia*) or in an open space (*agoraphobia*), etc.; for a list of these words see under *phobia.*

featural sur'gery (fe'chu-ral). Plastic surgery of the face, having for its object the correction of congenital defects in the nose and other features.

features (fe'churz) [L. *factura; facere*, to do.] The various parts of the face—forehead, eyes, nose, mouth, chin, cheeks, and ears, which give to it its individuality and character.

feb'ricant. Febrific, febrifacient, producing fever.

feb'ricide [L. *febris*, fever, + *cædere*, to kill.] Febrifuge, antipyretic.

febricity (fĕ-bris'ĭ-tĭ) Feverishness.

febric'ula [L. dim. of *febris*, fever.] Simple continued fever; a mild fever of short duration, of indefinite origin, and without any distinctive pathology.

febrifa'cient [L. *febris*, fever, + *facere*, to make.] 1. Causing fever, febrific. 2. Anything which produces fever.

febrif'ic. Febrifacient.

febrif'ugal. Febrifuge (1).

febrifuge (feb'rĭ-fūj) [L. *febris*, fever, + *fugare*, to put to flight.] 1. Febrifugal, febricidal, antipyretic, reducing fever. 2. A remedy for fever. 3. A mixture of cinchona alkaloids, of uncertain composition, prepared at the cinchona plantations in the East Indies.

febrile (feb'rĭl, fe'brĭl). Relating to fever, feverish, pyretic.

febriphobia (feb-rĭ-fo'bĭ-ă) [L. *febris*, fever, + G. *phobos*, fear.] Pyrexeophobia.

fe'bris [L.] Fever. **f. acmas'tica** [G. *akmastikos*, in full bloom], continued fever.* **f. bilio'sa æsta'tis**, pernicious remittent fever. **f. bilio'sa remittens,** (1) malarial hemoglobinuria;* (2) undulant* fever. **f. bullo'sa,** pemphigus acutus. **f. car'nis** [L. *caro*, gen. *carnis*, flesh], meat fever, an elevation of temperature occurring sometimes during convalescence from typhoid or other continued fever, when the patient returns to a meat diet. **f. colomben'sis,** Colombo fever.* **f. comita'ta,** pernicious intermittent or remittent fever. **f. co nplica'ta,** un ulant* fever. **f. contin'ua,** continued fever, f. monoleptica. **f. endem'ica cum rose'ola,** dengue. **f. epacmas'tica** [G. *epakmastikos*, coming to a height], a fever increasing steadily until its acme is reached, then declining by crisis or lysis. **f. flava,** yellow* fever. **f. glandula'ris,** glandular fever.* **f herpet'ica,** an ephemeral fever accompanied with an herpetic eruption on the face. **f. lac'tea,** milk fever*(1). **f. larva'ta,** dumb ague, masked intermittent fever. **f. milia'ris,** (1) miliary* fever (1), sweating sickness; (2) f. sudoralis, undulant* fever. **f. monolep'tica** [G. *monos*, single, + *lēptikos*, relating to an attack of disease], noting a fever having but one seizure, a continued fever; distinguished from f. polyleptica. **f. nervo'sa,** nervous fever, typhoid* fever **f. nosocomia'lis,** typhus* fever. **f. parameliten'sis,** paramalta fever.* **f. petechia'lis,** typhus* fever. **f. polylep'tica** [G. *polys*, many, + *lēptikos*, relating to an attack of disease], noting a fever occurring in two or more paroxysms, as smallpox, relapsing fever, or intermittent fever; distinguished from *f. monoleptica*. **f. quintana,** trench fever.* **f. recidi'va,** relapsing* fever. **f. recur'rens,** relapsing* fever. **f. ru'bra,** scarlatina. **f. sudora'lis,** undulant* fever. **f. tritæ'a** [*tritaios*, on the third day], tertian intermittent fever. **f. un'dulans,** undulant* fever. **f. urethra'lis,** catheter fever, urinary fever.* **f. vesicato'ria,** f. bullosa. **f. volhyn'ica,** Volhynia fever.*

fe'cal. Relating to feces.

fe'calith [L. *fæces* + G. *lithos*, stone.] Coprolith, a fecal concretion.

fe'caloid [L. *fæces* + G. *eidos*, resemblance.] Resembling feces.

fecaloma (fē-kă-lo'mă). Scatoma,* coproma, stercoroma.

feces, fæces (fe'sēz) [L. *fæx* (*fæc-*), dregs.] Excrement, the matter discharged from the bowel during defecation, consisting of the undigested residue of the food, epithelium, the intestinal mucus, bacteria, and waste material from the blood. **f. cruen'tæ,** bloody stools, melena.

Fechner's law (fekh'ner) [Gustav Theodor *Fechner*, German physicist, 1801–1887.] A sensory perception increases in equal measure when the strength of the stimulus increases in like proportion; the difference in light perception, for example, between 10 and 11 candle-power is the same as that between 100 and 110 candle-power. Expressed in other words, the intensity of the sensation is approximately proportional to the logarithm of the strength of the stimulus.

$Fe(C_3H_5O_3)_2$ Ferrous lactate, lactate of iron.

$Fe(C_6H_5O_7)$. Citrate of iron.

$FeCl_2$. Ferrous chloride

Fe_2Cl_6. Ferric chloride, sesquichloride, or perchloride, of iron.

$FeCO_3$. Ferrous carbonate, carbonate of iron.

fec'ula [L. *fæcula*, tartar, dim. of *fæx*, dregs.] Starch

fec'ulent. Excrementitious, fecal, foul.

fe'cundate [L. *fecundare; fecundus*, fruitful.] To impregnate, to fertilize.

fecunda'tion. Impregnation; rendering fertile.

fecundity (fe-kun'di-tĭ). Pronounced fertility; capability of repeated fecundation.

Fede's disease' (fa'da) [Francesco *Fede*, Italian physician, 1832–1913.] Sublingual papilloma in young infants; Riga's disease.

Federici's sign (fa-da-re'che) [Cesare *Federici*, Italian physician, 1838–1892.] In perforation of the intestine with gas in the peritoneal cavity, the heart sounds can be heard on auscultating the abdomen.

feeble-mindedness (fe"bl-mind'ed-nes). 1. Mental deficiency due to arrested mental development; it includes the three grades of idiocy, imbecility, and morosis. 2. The highest grade of mental deficiency, morosis; this use of the word is being gradually abandoned.

feeding. Giving food or nourishment. **forced f., for'cible f.,** giving liquid through a tube passed through the mouth or nostril into the stomach.

feel'ing. 1. The mental perception of a stimulus of the sensory nerves, apart from those of sight, hearing, taste, and smell. 2. A quality of any mental state, whereby it is recognized as pleasurable or the reverse. **ambiv'alent feel'ings,** see *ambivalent*. **f. tone,** the mental state—pleasure, repugnance, etc.—which accompanies every act or thought.

Feer's disease (fare) [Emil *Feer*, Swiss pediatrist, *1864.] An affection marked by recurrent sweating, cyanosis of the extremities, motor weakness, tremor, rapid pulse, and insomnia.

feet. Plural of *foot*.

Fehleisen's streptococ'cus (fāl'i-zen) [Friedrich *Fehleisen*, San Francisco surgeon, 1854–1924.] *Streptococcus erysipelatos*.

Fehling's rea'gent or solu'tion (fa'ling) [Hermann von *Fehling*, German chemist, 1812–1885.] (*a*) Crystallized copper sulphate 40, distilled water 160; (*b*) caustic soda 130, neutral potassium tartrate 160, distilled water 600; **mix** the two solutions at the time of using. When added to saccharine urine and heated, a brick-red precipitate of copper oxide is thrown down; 5 cg. of glucose will reduce 10 c.c. of the solution.

$Fe_2H_6O_6$. Ferric hydrate, hydroxide of iron.

Feiss line (fīs līn). A line running from the internal malleolus to the plantar aspect of the first metatarsophalangeal joint.

fel, gen. *fel'lis* [L.] Bile. **f. bovi'num,** f. bovis. **f. bovi'num purifica'tum** [Br.], f. bovis purificatum. **f. bo'vis** (U.S.), f. tauri, oxgall, the fresh bile of the ox, *Bos taurus*. **f. bo'vis purifica'tum,** purified oxgall, employed in atonic dyspepsia, constipation, and "biliousness;" dose, gr. v–x (0.3–0.6).

fellatio (fel-a'shyo). Fellatorism.

fella'tor [L.] One who takes the buccal part in fellatorism.

fellatorism (fel-a'tor-izm). A form of sexual perversion in which the penis is introduced into the mouth of another person; irrumation.

fellatrice (fel-a-trēs'). A female who takes the buccal part in fellatorism.

Fell-O'Dwy'er meth'od [George E. *Fell*, Buffalo physician, *1850; Joseph *O'Dwyer*, New York physician, 1841–1898.] Artificial respiration effected by forcing air, by means of a bellows, through an intubation tube into the lungs; expiration occurs as a result of the natural elasticity of the chest-walls, or is facilitated by compression of the thorax.

fel'on [M.E. *feloun*, malignant.] Panaris, paronychia, whitlow.

felt'work. 1. Fibrous network. 2. A close plexus of nerve-fibrils, neuropilem.

Felty's syn'drome [A. R. *Felty*, American physician *1895.] An affection marked by chronic arthritis, splenomegaly, and leucopenia.

female (fe'māl). 1. In zoology, noting the sex to which those belong that bear the young or the sexual cell which, when impregnated by union with the male cell, develops into a new organism. 2. In botany, pistillate, having pistils but not stamens.

feminism (fem'in-izm) [L. *femina*, woman.] Possession of feminine characteristics by the male.

fem'inonu'cleus [L. *femina*, woman, + *nucleus*.] Thelyblast, the nucleus of the impregnated ovum as distinguished from that of the spermatozoon, called the masculonucleus or arsenoblast.

fem'oral. Relating to the femur or thigh; crural **f. canal',** canalis femoralis. **f. fos'sa,** fovea femoralis. **f. her'nia,** protrusion of a loop of intestine through the femoral canal. **f. mus'cle,** cruræus, musculus* vastus intermedius. **f. ring,** annulus femoralis. **f. sheath,** crural or infundibuliform sheath, a fascial reflexion extending down 1½ inches below Poupart's ligament, formed by the fascia transversalis anteriorly and the fascia iliaca posteriorly; two septa divide the sheath into three compartments, the outer of which contains the femoral artery and a branch of the genitocrural nerve, the middle the femoral vein, and the inner is the femoral canal. **f. vess'els,** arteria femoralis, vena femoralis.

femorotib'ial. Relating to the femur and the tibia.

fe'mur, gen. *fem'oris*, pl. *fem'ora* [L. thigh.] [BNA] 1. Thigh-bone; the long bone of the thigh, articulating with the innominate bone above and the tibia and patella below. 2. The thigh.

fenes'tra, pl. *fenes'træ* [L. window.] 1. An anatomical aperture, often closed by a membrane. 2. An opening left in a plaster-of-Paris or other form of fixed dressing in order to permit of access to a wound or of inspection of the part. 3. The opening in one of the blades of a forceps. **f. coch'leæ** [BNA], fenestra of the cochlea, cochlear window, **f. rotunda,** an opening on the inner wall of the tympanum leading into the cochlea, closed in life by the membrana tympani secundaria. **f. ova'lis,** oval window, f. vestibuli [BNA]. **f. rotun'da,** round window, f. cochleæ [BNA]. **f. vestib'uli** [BNA], fenestra of the vestibule, vestibular window, f. ovalis; an oval opening on the inner wall of the tympanic cavity leading into the vestibule, closed in life by the foot of the stapes.

fenes'trated. Having fenestræ or window-like openings.

fenestra'tion. 1. The presence of openings or fenestræ in a part. 2. Making openings in a dressing to allow of inspection of the parts.

fen'nel. Fœniculum.

Fen'ner's guai'ac mix'ture [B *Fenner*, American physician.] Tinctura antacida (N.F.).

fen'ugreek. Fœnum græcum.

Fen'wick's disease' [Samuel *Fenwick*, English physician, *1821] Idiopathic gastric atrophy.

Fe_2O_3. Ferric oxide, sesquioxide, or peroxide, of iron.

$Fe(OH)_3$. Hydrated oxide of iron.

$Fe(P_2O_3)_3$. Hypophosphite of iron.

$Fe_3(PO_4)_2$. $FePO_4.12H_2O$. Phosphate of iron, ferrosoferric phosphate.

$Fe_3(PO_4)_2+4H_2O$. Ferric phosphate, white phosphate of iron.

fe'ral [L. *fera*, wild beast.] Wild, savage, deadly, malignant.

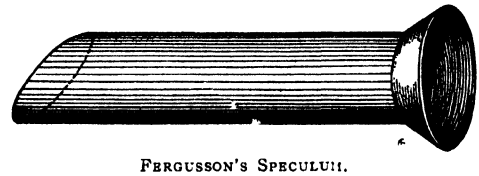
Féréol's nodes (fa-ra-ol') [Louis Henri Félix *Féréol*, Parisian physician, 1825–1891.] Ephemeral cutaneous nodules in acute articular rheumatism.

Féréol-Graux pal'sy (fa-ra-ol-gro'). Paralysis, of nuclear origin, of the external rectus muscle of one eye and the internal rectus of the other

Fer'gusson's operation [William *Fergusson*, Scotch surgeon, 1808–1877.] An operation for removal of the maxilla. **F.'s spec'ulum, a** cylindrical vaginal speculum of silvered glass with a coating of caoutchouc.

ferment (fur-ment') [L. *fermentum*, leaven.] To cause or to undergo fermentation.

ferment (fur'ment) [L. *fermentum*, leaven.] A substance which, in small amount, is capable of causing the decomposition of large quantities of an organic compound, itself often undergoing no apparent change. **amylolyt'ic f.,** one which hydrolyzes starch with the formation of sugar. **autolyt'ic f.,** one developed in the tissues, causing softening and disintegration of these tissues after death. **chem'ical f.,** an unorganized f., enzyme. **con'form f.,** an autolytic enzyme. **diastat'ic f.,** amylolytic f. **fi'brin f.,** the substance in the blood which converts fibrinogen into fibrin. **het'eroform f.,** one effecting lysis of the microorganisms which produce it and of other bacteria as well. **inver'ting f.,** invertin, a ferment which converts cane-sugar into dextrose and levulose **liv'ing f.,** organized f. **metal'lic f.,** colloidal metal.* **or'ganized f.,** a living unicellular organism, from the activity of which in solutions of carbohydrates fermentation results. **protec'tive f.,** a specific proteolytic f., analogous to an antibody, formed in the blood in the presence of a foreign protein



FERGUSSON'S SPECULUM.

which it is designed to split up; the detection of this f. specific for chorionic cells or cancer tissue is the object of the Abderhalden* test for pregnancy and for cancer respectively. **proteolyt'ic f.,** one which reduces a protein to a peptone or other substance of more simple constitution. **sol'uble f.,** unorganized f., chemical f., enzyme. **unor'ganized f.,** enzyme.

fermen'tal. Relating to a ferment.

fermenta'tion. A chemical change induced in a complex organic compound by the action of a ferment, either chemical or living, whereby the substance is split up into more simple compounds. The process is designated according to the product, acetous, alcoholic, butyric, lactic, vinous, etc. **f. test,** for sugar in the urine, see under *test.*

fermen'tum. Yeast. **cerevi'siæ f.,** beer-yeast, brewer's yeast; see cerevisiæ* fermentum.

Fermi's treatment of rabies. A vaccine is prepared by exposing a 5 per cent. suspension of fixed living virus to 1 per cent. phenol for 1 to 10 days; by immunization of horses with this vaccine a serum is obtained; injections of a mixture of the serum and the vaccine in varying proportions are made twice daily.

fern [A.S. fearn.] A cryptogamous(flowerless) plant of the order *Filices.* **male f.,** filix mas, aspidium.* **sweet f.,** comptonia, the leaves of *Myrica (Comptonia) asplenifolia,* given in colic and diarrhea and externally as a poultice.

ferral'bumose. An albuminate of iron made by treating albumose with ferric chloride; it contains 10 per cent*. of iron.

ferra'lium. A chalybeate.

Ferrata's cell (fer-rah'tah). Hematohistioblast.

fer'ratin. 1. An organic iron compound stored in the tissues of the body. 2. An artificially prepared albuminate of iron said to be identical with the iron of the tissues; a reddish brown powder; recommended especially in acute anemia in doses of gr. 5–10 (0.3–0.6).

ferratogen (fer'ă-to-jen). An organic iron salt obtained by growing yeast in a medium containing iron; a grayish yellow powder, used in anemia and chlorosis in doses of gr. 5 (0.3).

Ferrein's canal' (fer-ran', usually fer-rīn') [Antoine *Ferrein,* Parisian anatomist, 1693–1769.] Rivus lacrimalis. **F.'s cords,** the true vocal cords. **F.'s fora'men,** hiatus of Fallopius. **F.'s lig'ament,** the external thickened portion of the capsule of the temporomaxillary articulation. **F.'s pyr'amid,** processus* Ferreini, pars radiata [BNA] of a cortical lobule of the kidney. **F.'s tubes,** convoluted tubules of the kidney.

ferri. Gen. of *ferrum**, iron.

ferr'ic. 1. Relating to iron, ferruginous. 2. Noting a salt containing iron in its higher (triad) valence.

ferricyanide (fer"ĭ-si'an-īd). A salt of hydroferricyanic acid.

ferricyanogen (fer"ĭ-si-an'o-jen). A sexivalent radicle, $Fe_2(CN)_{12}$, a compound of cyanogen and iron in the ferric state.

Ferrier's method (fĕ-re-a') [P. *Ferrier,* French physician, contemporary.] Recalcification; the treatment of tuberculosis by the administration of lime salts, as in the following formula: Calcium carbonate 0.30, calcium phosphate 0.50, sodium chloride 0.15, calcined magnesia 0.10.

ferr'inol. Trade name of a nucleinate of iron, employed in anemia in doses of gr. 3–5 (0.2–0.3).

ferripyrine (fer-ĭ-pi'rēn). An orange-red powder obtained by mixing ferric chloride and antipyrine in solution; recommended locally as a hemostatic, and internally in doses of gr. 5–10 (0.3–0.6) in the treatment of anemic neuralgia and headache.

ferroalu'men. Ferri et ammonii sulphas.

ferrocyanide (fer-o-si'an-īd). A salt of hydroferrocyanic acid.

ferrocyan'ogen. A quadrivalent radicle, $Fe(CN)_6$, a compound of cyanogen and iron in the ferrous state.

ferrom'eter [L. *ferrum,* iron, + G. *metron,* measure.] A device for estimating the proportion of iron in the blood.

ferropyrine (fer-o-pi'rēn). Ferripyrine.

ferro-sajodin (fer'ro-sah-yo'din). Ferioben, basic ferric iodobehenate, containing about 5 per cent. of iron and 24 per cent. of iodine; employed as a substitute for ferrous iodide, having none of the undesirable effects of this salt.

ferrosil'icon. An alloy of iron and silicon.

ferro"sofer'ric. Relating to a combination of a ferrous with a ferric compound.

ferroso'matose. A mixture of somatose and iron; given in anemia and chlorosis in doses of ʒ½–1 (2.0–4.0).

ferrostyp'tin. An iron-formaldehyde preparation, a yellowish crystalline powder, employed locally as a styptic, especially in dentistry.

ferrother'apy [L. *ferrum,* iron, + G. *therapeia,* treatment.] The therapeutic employment of chalybeates.

ferr'ous. 1. Relating to iron, ferruginous. 2. Noting a salt containing iron in its lowest valence.

ferruginous (fĕ-ru'jin-us) [L. *ferrugo,* iron-rust.] Relating to or containing iron; chalybeate.

ferrule (fer'il) [L. *viriola,* a small bracelet.] In dentistry a metal cap or band covering or encircling the crown or root of a tooth.

fer'rum [L.] (U.S., Br.) Iron; the pharmacopeial form is fine, bright, nonelastic wire. The iron salts are in two series, ferrous and ferric, the former being for the most part bluish green in color, or white when anhydrous, the latter brownish yellow to reddish brown, or white when anhydrous.

f. albumina'tum (N.F.), albuminized iron, iron albuminate, a compound of iron oxide and albumin, rendered soluble by the presence of sodium citrate; occurs as reddish brown, lustrous granules, odorless or nearly so; employed in anemia in the average dose of gr. 8 (0.5).

f. alcoholisa'tum, f. pulveratum.

ferri ar'senas (Br.), iron arsenate, ferrous arsenate, $Fe_3(AsO_4)_2.6H_2O$, with some admixture of ferric arsenate and iron oxide; employed as a tonic and antiperiodic in doses of gr. $\frac{1}{10}$–¼ (0.003–0.015).

fer'ri benzo'as, ferric benzoate, obtained by the interaction of ferric chloride and ammonium benzoate; a brownish-red insoluble powder containing about 17 per cent. of iron.

f. benzo'icum, ferri benzoas.

f. broma'tum, ferri bromidum.

fer'ri bro'midum, ferrous bromide, bromide of iron, occurring in pale green plates.

fer'ri carbo'nas, ferrous carbonate, carbonate of iron, $FeCO_3$ a white crystalline salt, unstable, being readily convertible into ferric carbonate; employed in medicine in the form of massa ferri carbonatis and ferri carbonas saccharatus.

fer'ri carbo'nas sacchara'tus (U.S., Br.), saccharated ferrous carbonate, saccharated carbonate of iron, contains 15 per cent. (U.S.) or 33 per cent. (Br.) of ferrous carbonate; employed in the treatment of anemia in doses of gr. 5–20 (0.3–1.3).

fer'ri case'nas, iron caseinate, iron nucleoalbuminate; a pinkish insoluble powder, containing 2.5 per cent. of iron; dose, gr. 5–15 (0.3–1.0).

f. caseina'tum, ferri caseinas.

fer'ri chlo'ridum (U.S.), ferric chloride, chloride (perchloride, sesquichloride) of iron, muriate of iron, $FeCl_3.6H_2O$ astringent and styptic, employed in tincture or solution; see under *liquor* and *tinctura*.

fer'ri ci'tras (U.S.), ferric citrate, citrate of iron, $Fe(C_6H_5O_7)$, occurring in the form of garnet-red scales or a reddish brown powder, employed in the treatment of anemia in doses of gr. 3–10 (0.2–0.6).

f. dialysa'tum, dialyzed iron, liquor* ferri dialysatus.

fer'ri et ammo'nii ci'tras (U.S., Br.), iron and ammonium citrate, ammoniocitrate of iron, soluble citrate of iron; used as a substitute for iron citrate than which it is more soluble, dose, gr. 2–5 (0.13–0.3).

fer'ri et ammo'nii sul'phas, ferric ammonium sulphate, ammonioferric sulphate, ammonioferric alum, iron alum, ferric alum; occurring in crystals like those of alum, of an acid astringent taste; employed internally as an astringent in doses of gr. 5–10 (0.3–0.6), and locally as a styptic.

fer'ri et ammo'nii tar'tras, iron and ammonium tartrate, ammonioferric tartrate, ammoniotartrate of iron; occurs in garnet-red scales or as a rusty or reddish brown powder; employed in anemia in doses of gr. 10–20 (0.6–1.3).

fer'ri et potas'sii tar'tras, ferrum tartaratum (Br.), iron and potassium tartrate, potassioferric tartrate, tartarized or tartarated iron, ferrotartrate of potassium; used in anemia when an astringent chalybeate is undesirable, in doses of gr. 5–10 (0.3–0.6).

fer'ri et quini'næ ci'tras (Br.), iron and quinine citrate, occurs in scales of a greenish to golden yellow color; the preparation of the B.P. is greenish yellow in color; employed as a tonic in convalescence and in anemia in doses of gr. 5–7½ (0.3–0.5).

fer'ri et strychni'næ ci'tras, iron and strychnine citrate, occurs in scales resembling the ammoniocitrate of iron in appearance but has a very bitter taste; employed as a tonic in convalescence in doses of gr. 3–5 (0.2–0.3).

fer'ri ferrocyan'idum, ferric ferrocyanide, Prussian blue, Berlin blue, ferrum cyanatum, ferrum borus is cum, is not employed in medicine.

fer'ri glycerophos'phas (N.F.), iron glycerophosphate, occurs in yellow scales soluble in water; employed as a tonic in doses of gr. 5–10 (0.3–0.6).

fer'ri hydrox'idum, ferric hydroxide, hydrated oxide of iron; employed, when freshly prepared, as an antidote to arsenic poisoning.

fer'ri hydrox'idum cum magne'sii ox'ido (U.S.), ferric hydroxide with magnesium oxide; employed, when freshly prepared, as an antidote in arsenic poisoning.

fer'ri hypophos'phis (N.F.), ferric hypophosphite, hypophosphite of iron, $Fe(P_2O_2)_3$, a grayish white powder; used as a nerve tonic in anemic conditions, in doses of gr. 5–10 (0.3–0.6).

fer'ri io'didum, ferrous iodide, iodide of iron, a grayish white powder dose, gr. 3–5 (0.2–0.3).

f. ioda'tum, ferri iodidum

fer'ri lac'tas (N.F.), ferrous lactate, lactate of iron-$Fe(C_3H_5O_3)_2.3H_2O$, occurring as a pale green or yellowish powder or small acicular crystals; employed when a non-astringent chalybeate is indicated, in doses of gr. 1–10 (0.06–0.6)

fer'ri ma'las, ferrous malate, made by the action of the juice of sour apples on iron filings, it is of a dark green color and contains about 8 per cent of iron.

fer'ri ma'las cru'dus, crude malate of iron, extractum ferri pomatum (N.F.).

fer'ri ox'alas, ferrous oxalate, a pale yellow, nearly insoluble powder, used as a developer in photography.

fer'ri ox'idum magnet'icum, magnetic oxide of iron, black oxide of iron, ferrosoferric oxide.

fer'ri ox'idum ru'brum, red oxide of iron, ferric oxide, colcothar; a brown-red powder used as a pigment, but no longer employed in medicine.

fer'ri ox'idum saccha'rum (N.F.), saccharated ferric oxide, saccharated iron, saccharated oxide of iron, a reddish brown powder; employed in anemia in doses of gr. 2–5 (0.13–0.3), and as an antidote to arsenic.

f. peptona'tum (N.F.), peptonized iron, ferri peptonas, peptonate of iron, a compound of iron oxide and peptone, rendered soluble by the presence of sodium citrate; occurs as dark brown, lustrous granules, having a slight characteristic odor; employed in chlorosis in doses of gr. 3–10 (0.2–0.6).

fer'ri phos'phas (Br.), ferric phosphate, phosphate of iron, sodioferric citrophosphate, occurring in the form of green scales; employed in the treatment of anemia and its associated menstrual disorders, in doses of gr. 5–10 (0.3–0.6).

fer'ri phos'phas al'bus, ferric phosphate, white phosphate of iron, occurring as a faintly yellow powder.

fer'ri phos'phas solu'bilis (U.S.), soluble ferric phosphate, ferric phosphate with sodium citrate, ferric phosphate (Br.), occurs as thin, bright green, transparent scales or granules, odorless, with an acidulous, slightly saline taste, freely soluble in water, insoluble in alcohol; employed for the same purposes and in the same dose as ferri phosphas (Br.); the two preparations are practically identical.

f. porphyrisa'tum, f. pulveratum.

f. pulvera'tum, pulverized iron, made from cast iron; dose as a chalybeate, gr. 1–3 (0.06–0.2).

fer'ri pyrophos'phas (N.F.), ferric pyrophosphate, sodioferric citropyrophosphate, pyrophosphate of iron with sodium citrate; occurs in light green scales; employed in anemia in doses of gr. 2–5 (0.13–0.3).

f. redac'tum (Br.), **f. reduc'tum** (U.S.), iron reduced by hydrogen, iron by hydrogen, Quevenne's iron, a fine, grayish black, tasteless, and insoluble powder, made by heating ferric hydroxide in a current of hydrogen; employed in anemia in doses of gr. 1–3 (0.06–0.2).

fer'ri salicy'las, ferric salicylate, an amorphous dark brown mass or powder; tonic in convalescence from rheumatism, in doses of gr. 3–10 (0.2–0.6).

f. salicyl'icum, ferri salicylas.

fer'ri subcarbo'nas, subcarbonate of iron, a reddish brown powder resembling iron-rust; employed to meet the same indications as the saccharated ferrous carbonate in doses of gr. 2–5 (0.13–0.3).

fer'ri suc'cinas, ferric succinate, basic succinate of iron, occurring as a dark yellow powder; employed in anemia and in obstructive jaundice in doses of gr. 3–5 (0.2–0.3).

fer'ri sul'phas (U.S., Br.), ferrous sulphate sulphate of iron, copperas, $FeSO_4$, occurring as bluish green crystals of a styptic taste; employed in solution as a deodorant and disinfectant.

fer'ri sul'phas exsicca'tus (U.S., Br.), dried ferrous sulphate, dried or exsiccated sulphate of iron, occurring as a grayish white powder, dose, gr. ½–2 (0.03–0.13).

fer'ri sul'phas granula'tus (U.S.), granulated ferrous sulphate, precipitated sulphate of iron, occurring in the form of a granular crystallized powder of bluish green color and astringent taste, dose, gr. 1–3 (0.06–0.2).

fer'ri sul'phidum, ferrous sulphide, ferrum sulphuratum, occurs in yellowish black masses, used to generate hydrogen sulphide.

f. sulphura'tum, ferri sulphidum.

fer'ri tan'nas, ferric tannate, ferrum tannicum, a black powder; dose, gr. 5–10 (0.3–0.6).

f. tan'nicum, ferri tannas.

f. tartara'tum (Br.), ferri ret potassii tatras (U.S.).

fer'ri valeria'nas, ferric valerianate, valerianate of iron, ferrum valerianicum, a dark red powder; employed in anemia in hysterical subjects in doses of gr. 1–3 (0.06–0.2).

f. valerian'icum, ferri valerianas.

Ferry se'rum (fer'ĭ) [Newell S. *Ferry*, Detroit physician, *1876.] A serum, claimed to be prophylactic and curative of measles, obtained from cultures of a green streptococcus found in the blood in measles. (See *Tunnicliff serum.*)

F. tox'in, a toxin produced by an assumed pathogenic organism of measles, offered for use as a diagnostic skin test.

fertile (fur'til) [L. *fertilis; ferre*, to bear.] 1. Fruitful; capable of conceiving and bearing young. 2. Impregnated, fertilized

fertilizin (fur'til-i-zin). A hypothetical substance supposed by Lillie to be the active agent in

fertilization; having two side chains, one reacting with the sperm, the other with the ovum.

fertiliza'tion. Fecundation.

Fer'ula. A genus of plants of the order *Umbelliferæ;* of the various species *F. narthex* and *F. scorodosma* furnish asafetida; *F. galbaniflua* and *F. rubricaulis,* galbanum; and *F. sumbul* furnishes sumbul.

fervescence (fur-ves'ens) [L. *fervescere,* to begin to grow hot.] An increase of fever. **stage of f.,** pyretogenic stage, the stage of a continued fever in which the fever is gradually rising and the characteristic symptoms are declaring themselves.

FeS. Ferrous sulphide.

$FeSO_4$. Ferrous sulphate, sulphate of iron, copperas.

$Fe_2(SO_4)_3$. Ferric sulphate, tersulphate of iron.

fes'ter [L. *fistula.*] 1. To ulcerate. 2. An ulcer.

festina'tion [L. *festinare,* to hasten.] The peculiar acceleration of gait noted in paralysis agitans and some other nervous affections.

fest'oform. Trade name of a preparation of formaldehyde in hard soap.

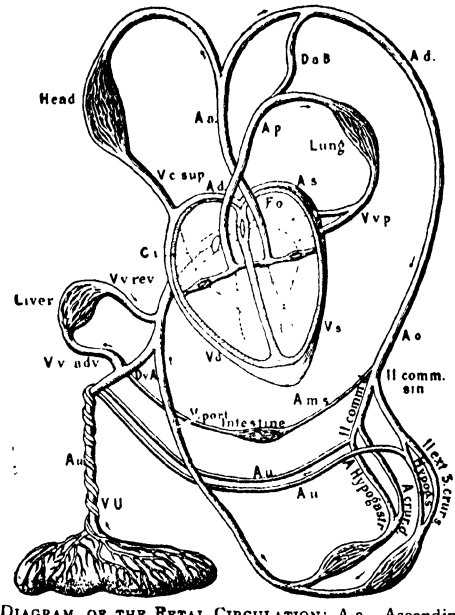


DIAGRAM OF THE FETAL CIRCULATION: A.a., Ascending aorta; A.crur.d., right crural (femoral) artery; A.d., right atrium, also descending aorta; A.Hypogastr., right hypogastric artery; A.m.s., superior mesenteric artery; A.o., abdominal aorta; A.p., pulmonary artery; A.s., left atrium; A.u., umbilical arteries; C.i., inferior vena cava; D.a.B., ductus arteriosus Botalli, D.v.A., ductus venosus Aranti; F.o., foramen ovale; Hypog.s., left hypogastric artery; Il comm.d., right common iliac artery; Il comm.sin., left common iliac artery; Il.ext. & crur.s, external iliac and left crural (femoral) artery; V.c.sup., superior vena cava; V.d., right ventricle; V.port, portal vein; V.s, left ventricle; V.u., umbilical vein; Vv.adv., afferent hepatic veins; Vv.p., pulmonary veins; Vv.rev., efferent hepatic veins.

festoon' [L. *festum,* festival, hence festive decorations.] 1. A swelling of the interproximal gum in the embrasures on the buccal or lingual surface, usually the former. 2. To shape the gums around the necks of the teeth in an artificial denture

fe'tal. Relating to a fetus. **f. circula'tion,** the course of the blood current in the fetus, differing in several respects from that in post-natal life, see page 377. **diam'eters of f. skull,** see p. 377.

fe'talism. The presence of certain fetal structures or characteristics in the body after birth.

feta'tion. Pregnancy, gestation. **ectop'ic f., extrau'terine f.,** ectopic gestation, extrauterine pregnancy. **mul'tiple f.,** the state of bearing two or more fetuses simultaneously.

fetichism (fe'tish-izm). Fetishism.

feticide (fe'tĭ-sīd) [L. *fetus* + *cædere,* to kill] The destruction of the embryo or fetus in the uterus; induced abortion.

fet'id [L. *fœtidus*] Foul-smelling, having a rank odor.

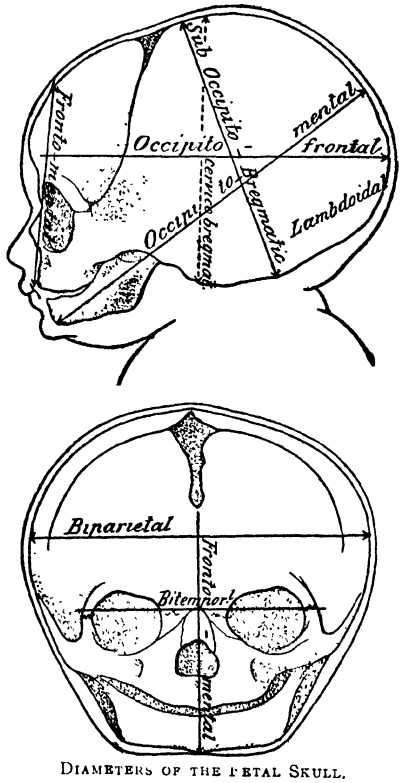
fetishism (fe'tish-izm) [Portug. *feitiço,* charm. A form of sexual perversion in which pleasure is taken in the possession of articles of dress used by persons of the opposite sex.

fetog'raphy [L. *fetus* + G. *graphē,* a writing.] Embryography.

fetom'etry [L. *fetus* + G. *metron,* measure.] Estimation of the size of the fetus, especially of its head, prior to delivery.

fe'toplacen'tal. Relating to the fetus and its placenta.

fe'tor [L. *fetere,* to stink.] A very offensive odor, **f. ex o're** [L. from the mouth], an offensive breath, halitosis.



DIAMETERS OF THE FETAL SKULL.

fe'tus [L. offspring.] The unborn young of an animal after it has taken form in the uterus; in man, the product of conception from the end of the third month to the moment of birth. **f. in fe'tu,** a double monster in which the small imperfectly formed parasite is contained within the autosite. **f. papyra'ceus,** one of twin fetuses which has died

and been pressed flat against the uterine wall by the growth of the living fetus. **f. sanguinolen'tus,** a dark colored, partly macerated f. **har'lequin f.,** a newborn infant with ichthyosis congenita.

fe'ver [A.S. *fefer.*] 1. Pyrexia, a bodily temperature above the normal of 98.6° F. (37° C.). 2 Febris, a disease in which there is an elevation of the body temperature above the normal.

absence, apyrexia. **causing,** febrifacient, febriferous, pyretogenic, pyretogenous. **continued,** synocha, synochus, acmastic fever, febris continua. **decline,** defervescence. **description,** pyretography. **excessive,** hyperpyrexia. **free from,** apyretic, non-febrile. **low,** asthenopyra. **reducing,** febrifuge, antipyretic. **science,** pyretology. **short,** febricula, ephemeral fever. **stages:** *increase,* stadium augmenti, stadium incrementi; *height,* stadium acmes; *decline,* stadium decrementi. **sthenic,** sthenopyra.

[For special fevers not defined under the following, see the qualifying word.]

absorp'tion f., an elevation of temperature often occurring, without other untoward symptoms, shortly after childbirth, assumed to be due to the absorption of the discharges through abrasions of the vaginal wall.

accli'mating f., a slight malaise with elevation of temperature from which persons sometimes suffer on first taking up their residence in tropical countries.

African east-coast f., anemia and hemoglobinuria in cattle caused by infection with *Piroplasma parvum (Theileria parva).*

Af'rican tick f., African relapsing* f.

al'gid perni'cious f., a pernicious malarial paroxysm marked by symptoms of collapse—cold and cyanotic extremities, livid nails, clammy skin, pinched face, and thready pulse.

aph'thous f., foot-and-mouth disease.*

Ar'chibald's f., a septicemia occurring in the Anglo-Egyptian Sudan, caused by a microorganism of the *B. cloacæ* type; the symptoms resemble those of the second week of typhoid, with high fever but without diarrhea or tympanites, and the disease is often protracted, assuming a remittent type.

autumn f., seven day f., (1) a f. resembling dengue affectin Europeans and Americans at the end of the summer in India; 2 a fever, occurring in Japan in the autumn, it resembles Weil's disease and is caused by *Lepto. hebdomadis.*

autum'nal f., typhoid* f.

bil'ious f., an ephemeral f. attended with symptoms of gastric catarrh and excessive secretion of bile.

bil'ious remitt'ent f., (1) undulant* f.; (2) blackwater f., malarial hemoglobinuria.*

black f., tick* f. (1).

black'water f., malarial hemoglobinuria.*

brain f., cerebral meningitis.

break'bone f., dengue.

cachec'tic f., kala azar.

camp f., typhus* f.

carbohy'drate f., food* f.

catar'rhal f., (1) febricula; herpetic f. (2) an old term for the group embracing the common cold, influenza, and lobular and lobar pneumonia.

cath'eter f., a sharp elevation of temperature sometimes following the introduction of a catheter into the urethra; urinary f.

Cavité f., see *Cavité.*

cerebrospi'nal f., see under *cerebrospinal.*

cess'pool f., typhoid* f.

child'bed f., puerperal* f.

Colom'bo f., a continued f. of mild type resembling paratyphoid, occasionally with several relapses resembling undulant f.; it has been observed in Ceylon and also in Serbia and is associated with the presence of a specific germ, *B. colombensis.*

contin'ued f., a f. of some duration in which there are no intermissions or marked remissions in the temperature curve.

dan'dy f., dengue.

deer-fly f., tularemia.

dehydra'tion f., thirst f

diges'tive f., a slight rise of body temperature occurring during the period of digestion.

Dum-dum f., kala azar.

Dut'ton's f., Dutton's* relapsing f.

elephan'toid f., an elevation of temperature marking the beginning of endemic elephantiasis.

enter'ic f., (1) typhoid* f. (2) a term suggested by Castellani and Chalmers to denote the group of typhoid and paratyphoid A and B fevers; distinguished from parenteric f.

ephem'eral f., a febricula lasting no more than a day or two.

erup'tive f., exanthema.

exsicca'tion f., thirst f.

fam'ine f., relapsing* f.

fatigue' f., an elevation of the body temperature, lasting sometimes several days, following excessive and long-continued muscular exertion.

f. and a'gue, malaria.

f. in the feet, laminitis in the horse.

five-day f., (1) van der Scheer's f. dengue (?); (2) Werner-His disease, Volhynia fever.

For'rest's f., a febrile affection lasting from three to fifteen days, having a temperature curve resembling a parabola, the fever seldom exceeding 104°.

gaol f., typhus* f.

gas'tric f., catarrhal gastritis.

gas'tric remitt'ent f., undulant* f.

Gibral'tar f., undulant* fever.

glan'dular f., lymphoblastosis, infectious mononucleosis, an infectious disease of childhood, characterized chiefly by fever, swelling of the cervical lymph-nodes, lymphocytosis and enlargement of the liver and spleen; it lasts usually two or three weeks; its prognosis is favorable.

hay f., see *hay-fever.*

hematu'ric bil'ious f., hematuria due to renal lesions caused by the malarial hematozoon.

hemoglobinu'ric f., malarial hemoglobinuria.*

hepat'ic f., catarrhal angiocholitis.

hepat'ic intermitt'ent f., ague-like paroxysms occurring in cases of calculus in the common bile-duct.

herpet'ic f., a disease, apparently infectious, marked by chills, nausea, elevation of temperature, sore throat, and an herpetic eruption on the face and other parts; it is of short duration, three or four days, and so far as known never fatal.

hyster'ical f., f. of an irregular course and duration, sometimes running very high, occurring without obvious cause, and unaccompanied with general symptoms, in hysterical subjects.

inani'tion f., thirst f.

intermitt'ent f., a malarial fever, usually of the tertian or quartan type, in which there is complete apyrexia, with absence of the other symptoms, in the intervals between the paroxysms.

intermen'strual f., an elevation of temperature sometimes observed in tuberculous women between the menstrual periods.

jail f., typhus* f.

Japanese' riv'er f., see under *Japanese.*

jun'gle f., malaria.

Lent f., typhoid f.

low f., one associated with a depressed state of the nervous system.

lung f., croupous pneumonia.

mala'rial f., acute malaria.*

malig'nant purpu'ric f., cerebrospinal* f.

Mal'ta f., undulant* f.

Manchu'rian f., a f. closely resembling typhus which prevails from September to December in South Manchuria; the probable pathogen is *Rickettsia manchuriæ.*

Mediterra'nean f., undulant* f.

Mediterra'nean exanthem'atous f., an affection occurring sporadically in the Mediterranean littoral marked by a severe chill with abrupt rise of temperature, pains in the joints, tonsillitis, diarrhea, and vomiting; on the 3d to 5th day a rash of elevated non-confluent macules beginning on the thighs and spreading to the entire body; the disease lasts from ten days to a fortnight and then disappears by rapid lysis without desquamation.

Mediterranean yellow f., Weil's disease.

met'al fume f., brass*-founder's ague, zinc hills.
mil'iary f., see under *miliary* and also *miliaria*.
milk f., (1) a slight elevation of temperature following childbirth, said to be due to the establishment of the secretion of milk, but probably the same as absorption f.; (2) milk sickness.
Moss'man f., a disease affecting almost exclusively sugar-cane cutters, marked by mild fever and enlargement of the posterior or subscapular group of axillary glands.
moun'tain f., mountain-sickness.
mud f., erythema in the horse.
mu'ma f., myositis purulenta tropica.
nak'ra or **nash'a f.**, a disease observed in Bengal during the hot season, marked by fever of three to five days duration, and accompanied by swelling of the nasal mucosa with pains in the head, neck, shoulders, and small of the back.
Neapol'itan f., undulant* fever.
ner'vous f., typhoid* f.
no'dal f., erythema nodosum.
Oro'ya f., Carrion's disease, verruca* peruviana.
pal'udal f., malaria.
pappata'ci f., see *pappataci*.
pap'ular f., an affection characterized by mild fever, rheumatoid pains, and a maculopapular eruption.
paramal'ta f., febris paremelitensis, a disease resembling Malta fever but in which the pathogenic organism of the latter cannot be found.
paraty'phoid f., see *paratyphoid*.
paraun'dulant f., paramalta f.
parenter'ic f., one of a group of fevers clinically resembling typhoid and paratyphoid A and B, but caused by bacteria differing specifically from those of either of these diseases.
peach f., a form of hay* fever due apparently to irritation from the down of peaches.
pete'chial f., cerebrospinal* f.
Pfeiffer's f., glandular f.
phlebot'omus f., pappataci* f.
pneumon'ic f., croupous pneumonia.*
por'celain f., urticaria.
pul'monary f., croupous pneumonia.
pu'trid f., epizootic* cerebrospinal meningitis.
pythogen'ic f., typhoid fever.
rab'bit f., tularemia.
Rangoon' f., Forrest's f
rat-bite f., see under *rat-bite*.
recur'rent f., relapsing f.
red'water f., Texas* cattle fever.
relap'sing f., see under *relapsing*.
remitt'ent f., a malarial fever, usually of the severer estivoautumnal type, in which the temperature falls more or less but not to the normal in the interval between two pronounced paroxysms.
rheumat'ic f., rheumatism (1).
Rift Valley f. [*Rift Valley* in Kenya, British East Africa], enzootic hepatitis, a fatal endemic disease of sheep, the ultramicroscopic virus of which is pathogenic also for man and for cattle.
rock f., undulant* f.
Rocky Moun'tain spott'ed f., tick* f. (4).
Ro'man f., estivoautumnal* f., prevalent in the Roman Campagna and formerly in the city of Rome.
saku'shu f., autumn f. (2).
salt f., elevated temperature in an infant, following a rectal injection of a salt solution; see *thirst f.*
Saloni'ca f., see *Salonica*.
sand'fly f., pappataci* f.
seven-day f., autumn f.
ship f., typhus* f.
sim'ple contin'ued f., febricula.
slow f., a continued f. of long duration.
solar f., (1) dengue; (2) sunstroke.
splen'ic f., anthrax.
spott'ed f., (1) cerebrospinal* f.; (2) typhus* f., (3) tick* f. (1).
swamp f., (1) malaria; (2) see *Swamp-fever*.
symptomat'ic f., elevation of temperature following an injury, traumatic f.
Tex'as cattle f., see under *Texas*.
ther'mic f., (1) heatstroke: (2) calentura, a continued fever observed in hot countries.
thirst f., an elevation of temperature in an infant, following the withdrawal of fluids from the diet; possibly due to concentration of salt in the tissues; see *salt f.*
three days' f., (1) dengue; (2) pappataci f.
tick f., see *tick*.
traumat'ic f., symptomatic f.
trench f., an alleged specific infectious fever of a relapsing type observed among the troops in the great European war; it is transmissible by intravenous injection of whole blood, but not of the serum alone; punctate basophilia of the red blood cells is present.
trypan'osome f., the febrile stage of sleeping sickness.
tsutsugamu'shi f., see *tsutsugamushi*.
ty'phoid f., see *typhoid*.
ty'phus f., see *typhus*.
un'dulant f., Malta f. see *undulant*.
ure'thral f., catheter f., urinary f.
u'rinary f., an elevation of temperature, usually slight and transitory, following aseptic catheterization of the urethra, or the passage of blood-clots, gravel, or a calculus.
urtica'rial f., Asiatic schistosomiasis.*
u'veo-parot'id f., chronic enlargement of the parotid glands and inflammation of the uveal tract accompanied by a long continued fever of low degree.
van der Scheer's f., five-day f., a disease beginning suddenly with headache and backache, high fever, and an eruption of red macules and papules of pinhead size; it is usually of five day's duration and resembles, if it is not identical with, dengue.
vesic'ular f., (1) a febrile affection marked by the occurrence of a localized pain followed by a vesicular eruption which soon becomes general; it resembles at first chicken-pox and later smallpox, but is distinct from either; (2) pemphigus.
Volhyn'ia f., five-day f., Werner-Hiss disease, an affection resembling malaria or relapsing fever, or perhaps the same as trench f., occurring in two or more febrile paroxysms of one day's duration, separated by an interval of four to six days; the fever is accompanied by intense pains in the legs and back and a feeling of extreme malaise; it is said by some to be caused by an involution form of Obermeier's spirillum, *Borrelia recurrentis*.
Whit'more's f., see *Whitmore*.
wound f., symptomatic f.

fe'ver-blis'ter. Herpes simplex, herpes labialis.
fe'veret. Febricula.
fe'verfew [L. *febrifuga*, febrifuge.] 1. Agrimony. 2. Wild camomile, *Chrysanthemum parthenium*.
fe'ver-tree. Eucalyptus.
fi'ant. Plural of *fiat*, let there be made.
fi'at [L. 3 pers. sing. pres. subj. (used in the sense of the imperative) of *fieri*, to be made.] A term used in prescription writing, meaning, "let there be made."
fiber, fibre (fi'bur) [L. *fibra*.] A slender thread or filament. In anatomy, a filamentous element, an elongated and tenuous cell or cell-process. See *fibra* and *fibræ*. **accel'erator fibers,** nerve-fibers from the second and third spinal motor roots, which convey impulses increasing the rapidity and force of the cardiac pulsations. **anastomo'sing fibers, anastomot'ic fibers,** individual fibers passing from one nerve-trunk or muscle bundle to another. **ar'cuate fibers,** nervous or tendinous fibers passing in the form of an arch from one part to another; see *fibræ arcuatæ* and *fibræ intercolumnares*. **associa'tion fibers,** nerve-fibers connecting different portions of the cerebral cortex in the same hemisphere; the *short* association fibers, fibræ arcuatæ, are those connecting neighboring convolutions, the *long* association fibers connect widely separated regions of the cortex, and are arranged in bundles. **augmen'tor fibers,** accelerator fibers. **commissu'ral fibers,** nerve-fibers uniting portions of the cortex of opposite cerebral hemispheres, they are arranged in three groups: the corpus callosum, the anterior commissure, and the

hippocampal commissure. **cor'onal fibers,** projection fibers, the majority of which belong to the corona radiata. **den'tal fibers, den'tinal fibers,** processes from the odontoblasts, or cells at the periphery of the tooth pulp, which fill the dentinal canals. **enam'el fibers,** minute hexagonal rods, *prismata adamantina,* passing from the dentine to the periphery of the enamel of the tooth and forming the substance of that structure. **endog'enous fibers,** short nerve-fibers of the spinal cord originating in cells of the cord, forming the intersegmentary or association tracts connecting different levels of the posterior horns. **exog'enous fibers,** nerve-fibers in the spinal cord originating in cells lying outside of the cord. **inhib'itory fibers,** nerve-fibers from the vagus which convey impulses slowing the action of the heart. **lens fibers,** the elongated cells of ectodermic origin forming the substance of the crystalline lens of the eye. **projec'tion fibers,** nerve-fibers connecting the cerebral cortex with other centers in the brain or spinal cord. **sustentac'ular fibers,** fibers binding together and supporting the nerve structures of the retina.

fi'bra [L.] Fiber. **f. auric'ulæ,** th lobe of the ear. **f. nasi,** ala nasi. **f. primiti'va,** primitive fiber, the axis-cylinder of a neuron. **f. san'guis,** fibrin.

fib'ræ [L. pl. of *fibra.*] Fibers, whether nervous, muscular, or tendinous. **f. ansa'tæ** [L. *ansa,* a handle or loop], nerve-fibers which pass forward from the lamina terminalis over the upper surface of the optic chiasm and back beneath the under surface to the tuberculum cinereum. **f. arcifor'mes,** f. arcuatæ. **f. arcua'tæ cer'ebri,** arcuate fibers of the cerebrum, short association fibers uniting neighboring convolutions of the cerebral cortex, Arnold's fibers. **f. arcua'tæ exter'næ** [BNA], external or superficial arcuate fibers, nerve-fibers on the surface of the medulla entering into the composition of the restiform bodies; they curve around the lower surface of the olive and the pyramid, separated from the surface of the latter by the arcuate nuclei. **f. arcua'tæ inter'næ** [BNA], internal arcuate fibers, deep arcuate fibers, the fibers which take part in the decussation of the fillet; they are derived from the gracile and cuneate nuclei. **f. atrior'um,** the muscular fibers of the atria of the heart. **f. cerebell'o-oliva'res** [BNA] olivo-cerebellar fibers, a mass of white fibers passing from the oliva of one side, along the restis, to the cerebellum of the opposite side. **f. circula'res** [BNA], the circular fibers of the ciliary muscle, Mueller's muscle. **f. heterodesmot'icæ** [G. *heteros,* other, + *desmoō,* I bind], white fibers connecting dissimilar gray masses of the central nervous system, as the central ganglia with the peripheral end-organs. **f. homodesmot'icæ** [G. *homos,* similar, + *desmoō,* I bind], white nerve-fibers connecting similar gray masses of the central nervous system, as those connecting the two anterior horns of gray matter in the spinal cord. **f. intercolumna'res, f. intercrura'les** [BNA], arcuate fibers connecting the superior and inferior crura of the external abdominal ring. **f. meridiona'les** [BNA], the radiating fibers of the ciliary muscle, Bruecke's muscle. **f. pall'idæ,** the ciliary processes. **f. pro'priæ cer'ebri,** f. arcuatæ cerebri. **f. transversa'les pon'tis,** the transverse fibers of the pons Varolii. **f. ventriculo'rum,** the muscular fibers of the cardiac ventricles. **f. zonula'res** [BNA], the fibrils of the zonula* ciliaris.

fibralbu'min. Globulin.

fibre. Fiber.

fibremia, fibræmia (fi-bre'mĭ-ah) [*fibrin* + G. *haima,* blood.] Inosemia; presence of formed fibrin in the blood, causing thrombosis or embolism.

fi'bril [L. *fibrilla.*] A minute fiber. **mus'cular f.,** one of the ultimate subdivisions of a muscular fiber, an elongated muscle-cell. **nerve f.,** axis-cylinder.

fibril'la [L. dim. of *fibra,* fiber.] Fibril.

fibrill'ar, fi'brillary. Relating to a fibril.

fi'brillate. 1. To make or to become fibrillar. 2. Fibrillated. 3. To be in a state of fibrillation. (3).

fi'brillated. Fibrillar, fibrous, composed of fibrils.

fibrillation (fi-bril-la'shun). 1. The condition of being fibrillated. 2. The formation of fibrils. 3. Exceedingly rapid action or tremor of the myocardium of one of the cavities of the heart. **auric'ular f.,** a condition in which the systole of the cardiac auricle is replaced by rapid twitchings of the muscular wall, the impulse normally originating from the sinoauricular node being absent and impulses arising at multiple auricular foci taking its place. **ventric'ular f.,** delirium cordis due to irregular fibrillary contractions of the wall of the cardiac ventricle.

fi'brin [L. *fibra,* fiber.] An elastic filamentous protein derived from fibrinogen by the action of thrombin; the active agent in coagulation of the blood. **glu'ten f.,** a protein resembling animal f., found in various grains. **Hen'le's f.,** a substance resembling the f. of the blood, precipitated from the seminal fluid on the addition of water. **veg'etable f.,** gluten f.

fibrina'tion. 1. The formation of fibrin 2. The capability of forming fibrin in abnormally great amount in the process of coagulation, or in an exudate, noting a state of the blood in certain inflammatory conditions; fibrosis.

fibrine'mia, fibrinæ'mia. Fibremia, inosemia.

fi'brin-fer'ment. Thrombin, thrombosin, a ferment, derived possibly from the edges of wounded blood-vessels, which converts fibrinogen, in the presence of a calcium salt into fibrin.

fi'brin-glob'ulin. Fibrinoglobulin.

fibrinocel'lular. Composed of fibrin and cells, noting certain exudates.

fibrin'ogen [*fibrin* + G. *gennaō,* I produce] A globulin of the blood-plasma which is converted into the coagulated protein, *fibrin,* by the action of fibrin-ferment in the presence of a salt of calcium; it is this change which produces coagulation of the blood.

fibrinogen'ic, fibrinogenous (fi-brin-oj'en-us). Relating to fibrinogen; producing fibrin.

fi"brinoglob'ulin. A substance formed in small amount by the conjunction of fibrinogen and thrombin.

fi'brinoid [*fibrin* + G. *eidos,* appearance.] Resembling fibrin.

fibrinol'ysis [*fibrin* + G. *lysis,* solution.] The hydrolysis of fibrin under the influence of an enzyme.

fi"brinoplas'tic [*fibrin* + G *plassō,* I form.] Relating to or of the nature of fibrinoplastin.

fi"brinoplas'tin. Paraglobulin, serumglobulin, fibroplastin, a protein (globulin) in the blood and connective tissues, possibly derived from the disintegration of the leucocytes.

fibrinos'copy. Inoscopy, the chemical and physical examination of the fibrin of exudates, blood-clots, etc.

fibrino'sis. Fibrination (2)

fi'brinous. Relating to or composed of fibrin.

fibrinu'ria [*fibrin* + G. *ouron*, urine.] The passage of urine containing fibrin elements.

fibroadenia (fi-bro-ă-de'nĭ-ah) [L. *fibra*, fiber, + G. *adēn*, gland.] Fibrous degeneration of gland tissue.

fibroadenoma, pl. *fibroadeno'mata* (fi"bro-ad-e-no'-ma). A gland tumor permeated with fibrous new formation forming a dense stroma.

fibroadipose (fi"bro-ad'i-pōz) Fibrofatty, relating to or containing both fibrous and fatty structures.

fibroareolar (fi"bro-a-re'o-lar). Noting connective tissue which is both fibrous and areolar in character.

fi'broblast [L. *fibra*, fiber, + G. *blastos*, germ] A cell, produced by proliferation of the fixed connective-tissue elements, concerned in the formation of new fibrous tissue.

fibroblas'tic. Relating to fibroblasts.

fibrocarcino'ma. A carcinoma containing an unusual amount of fibrous tissue.

fibrocar'tilage. A variety of cartilage, the basement substance of which is fibrillated, the bundles of fibers interlacing in all directions. **circumferen'tial f.,** a ring of f. around the articular end of a bone, serving to deepen the joint cavity. **elas'tic f.,** fibroelastic cartilage.* **interartic'ular f.,** discus articularis. **semilu'nar f.,** one of two fibrocartilages forming an incomplete circumferential f. on the head of the tibia. **strat'iform f.,** a layer of f in the bottom of a groove in a bone through which a tendon runs. See also *fibrocartilago*.

fibrocartilaginous (fi"bro-kar-til-aj'ĭn-us) Relating to or composed of fibrocartilage.

fibrocartila'go. Fibrocartilage. **f. basa'lis** [BNA], cartilago basilaris, the cartilage which fills the foramen lacerum of the skull. **f. interarticula'ris,** discus articularis [BNA]. **f. intervertebra'lis** [BNA], intervertebral fibrocartilage or disc; a disc of fibrocartilage with a gelatinous center (nucleus pulposus), attached to each of two opposing vertebral bodies.

fibrocell'ular. Both fibrous and cellular.

fibrochondritis (fi-bro-kon-dri'(dre')tis). Inochondritis

fibrochondroma (fi"bro-kon-dro'mah). Inochondroma, a mixed fibroma and chondroma

fi'brocyst. Fibrocystoma, a fibroma containing cysts.

fibrocys'tic. Relating to a fibrocystoma; noting a new growth which is both fibrous and cystic.

fibrocysto'ma. Inocystoma, a fibrocyst.

fibrocyte (fi'bro-sīt) [L. *fibra*, fiber, + *kytos*, a hollow (a cell)] Inocyte.

fibroenchondroma (fi"bro-en-kon-dro'mah). A mixed fibroma and enchondroma.

fibrofatt'y. Fibroadipose, both fibrous and fatty.

fibroglia (fi-brog'le-ah) [L. *fibra*, fiber, + G. *glia*, glue.] Inoglia, the basement substance of connective tissue; it is either homogeneous or fibrillar

fibroglio'ma. Inoglioma, a mixed fibroma and glioma.

fibroid (fi'broyd) [L. *fibra*, fiber, + G. *eidos*, appearance.] 1. Resembling or composed of fibers or fibrous tissue; fibrous. 2. Fibroma; fibromyoma. **f. tu'mor,** fibroma.

fibroidec'tomy [*fibroid* + G *ektomē*, excision] The removal of a fibroid tumor.

fibroin (fi'bro-in). A white insoluble protein substance forming the main portion of cobweb and silk.

fibrolipo'ma. A mixed fibroma and lipoma, a fibrofatty tumor

fibrolipo'matous. Relating to or of the nature of a fibrolipoma.

fibrolysin (fi-brol'i-sin) [L. *fibra*, fiber, + G. *lysis*, solution.] Trade name of a solution of thiosinamine and sodium salicylate; employed hypodermically, in doses of ♏35 (2.3), to soften and promote the absorption of indurated cicatricial tissue.

fibroma (fi-bro'mah) [L. *fibra*, fiber, + G. *-ōma*.] An encapsulated tumor composed mainly of fibrous connective tissue; fibroid tumor, inoma. **concen'tric f.,** a fibroid tumor occupying the entire circumference of the wall of the uterus. **f. fungoi'des,** mycosis fungoides. **f. lipomato'des,** xanthoma. **f. mollus'cum,** molluscum simplex, the occurrence of one or several large or small prominent connective-tissue tumors. **f. mollus'cum gravida'rum,** the occurrence of numerous, small, sessile or pedunculated, colorless or pigmented fibrous tumors of the skin, forming during pregnancy and disappearing spontaneously at its termination. **f. mucino'sum,** a f. which is undergoing mucoid degeneration. **f. myxomato'des,** a f. containing areas of mucoid tissue, myxofibroma. **f. pen'dulum,** a large pendulous fibrous tumor of the skin. **f. sarcomato'sum,** fibrosarcoma. **telangiectat'ic f.,** a new growth formed of dilated capillaries with marked increase of the connective-tissue framework; angiofibroma. **mul'tiple f.,** a condition in which there are many, sometimes very many, fibrous tumors of the skin, varying in size from a pinhead to an orange, sessile or pedunculated.

fibromatoid (fi-bro'mă-toyd) [*fibroma* + G. *eidos*, appearance.] Resembling a fibroma; noting a growth, with incomplete or absent capsule, composed mainly of fibrous tissue.

fibromato'sis. A condition characterized by the occurrence of fibromata.

fibro'matous. Relating to, or of the nature of, a fibroma.

fibromus'cular. Both fibrous and muscular, relating to both fibrous and muscular tissues.

fibromyitis (fi-bro-mi-i'(e')tis). Fibromyositis.

fibromyoma, pl. *fibromyo'mata*, (fi"bro-mi-o'-mah). Inomyoma, a myoma containing a considerable admixture of fibrous tissue.

fibromyositis (fi"bro-mi"o-si'(se')tis) [L. *fibra*, fiber, + G. *mys*(*myo*-), muscle, + *-itis*.] Inomyositis.

fibromyxo'ma. Inomyxoma, a mixed inoma, or fibroma, and myxoma.

fibroneuroma (fi"bro-nu-ro'mah). Inoneuroma; a mixed fibroma and neuroma.

fibro-osteo'ma. Osteofibroma, osteoinoma.

fibropapilloma (fi"bro-păp-ĭ-lo'mah). A mixed fibroma and papilloma; a form of tumor occasionally occurring in the bladder.

fibroplas'tic [L. *fibra*, fiber, + G. *plassō*, I form.] 1, Producing fibrous tissue. 2. Fibrinoplastic.

fibroplas'tin. Fibrinoplastin, paraglobulin.

fi'broplate. An interarticular disc of fibrocartilage

fibropolypus (fi-bro-pol'ĭ-pus). A polypus composed chiefly of fibrous tissue.

fibropsammoma (fi"bro-sam-mo'mah). A mixed fibroma and psammoma.

fibropu'rulent. Consisting of pus containing flakes of fibrin.

fibroretic'ulate. Relating to or consisting of a network of fibrous tissue.

fibrosarcoma, pl. *fibrosarco'mata* (fi"bro-sar-ko'-mah). A mixed fibroma and sarcoma; a fibrous tumor containing many imperfectly differentiated, vegetative, or embryonic cells-

fibroblasts, or spindle cells, indicating a transition to sarcoma; fibroma sarcomatosum.

fibrose'. 1. To form fibrous tissue. 2. Fibrous.

fibrose'rous. Composed of fibrous tissue with a serous surface, noting any serous membrane.

fibrosis (fi-bro'sis). The pathological formation of fibrous tissue. **arteriocap'illary f.,** arteriosclerosis involving the walls of the smaller arteries and the capillaries, diffuse arteriosclerosis. **replace'ment f.,** the formation of fibrous tissue taking the place of atrophied structures of a higher order.

fibrositis (fi-bro-si'(se')tis) [L. *fibra*, fiber, + *-itis*.] Inositis, inflammatory hyperplasia of white fibrous tissue, as in chronic rheumatism and muscular rheumatism; interstitial myositis.

fibrot'ic. Relating to or marked by fibrosis.

fi'brous. Fibrose, composed of fibers. **f. tis'sue,** connective tissue.

fib'ula, gen. and pl. *fib'ulæ* [L. a brooch.] [BNA] Calf-bone, peroneal bone; external and smaller of the two bones of the leg; it articulates with the tibia above and the tibia and astragalus below.

fib'ular. Relating to the fibula.

fibula'ris [L.] Fibular; relating to the fibula or to any structures named from it.

fibulocalcaneal (fib"u-lo-kal-ka'ne-al). Relating to the fibula and the calcaneus, or os calcis.

fi'ci [L. *ficus*, fig.] Grease in horses.

Fick's bacil'lus [Rudolph Armin *Fick*, German physician, *1866.] *Bacillus proteus vulgaris.*

Fick'er's diagnos'ticum [Philip Martin *Ficker*, German bacteriologist, *1868.] An emulsion of killed typhoid bacillus culture for the convenient carrying out of the Widal-Gruber test.

fico'sis [L. *ficus*, fig.] Sycosis.

fi'cus [L.] (N.F., Br.) Fig, the partially dried fruit of *Ficus carica;* is employed, especially in domestic medicine, as a laxative.

fiducinales (fi-du-sĭ-na'lēz) [L *fiducinalis*, relating to *fides*, a lyre.] Fiddle muscles, lumbricales of the fingers.

Fiedler's disease' (fēd'ler) [Carl Ludwig Alfred *Fiedler*, German physician, 1835–1921.] Acute infectious jaundice, Weil's* disease.

field (fēld) [A.S. *feld.*] A definite area or plane surface, considered in relation to some specific object. **au'ditory f.,** the space included within the limits of hearing of a definite sound, as of a tuning-fork. **Cohn'heim's f.,** Cohnheim's* area. **Kroe'nig's f.,** Kroenig's* area. **magnet'ic f.,** the sphere of influence of a magnet. **mi'croscope f.,** the area within which objects are visible under a microscope. **sur'plus f.,** part of the visual field in cases of non-total hemianopsia which passes beyond the point of fixation, thus encroaching upon the blind area. **vis'ual f.,** the area within which objects are more or less distinctly seen by the eye in a fixed position.

Field'ing's mem'brane [George Hunsley *Fielding*, English anatomist, 1801–1871.] Membrana versicolor, tapetum.*

fifth disease'. Erythema infectiosum. **f. nerve,** nervus* trigeminus. **f. ven'tricle,** cavum septi pellucidi.

fig [A.S. *fic.*] Ficus,* the fruit of *Ficus carica.*

Figari's hemoantitox'in (fe-gah're). An antituberculosis serum which is administered per os instead of hypodermically.

figuratus (fig-u-ra'tus). Figured, a term descriptive of certain skin lesions.

Figueira's syn'drome (fe-ga'e-rah) [Fernandes *Figueira*, pediatrist in Rio de Janeiro, contemporary.] Weakness of the neck muscles with slight spasticity of the muscles of the lower extremities and increased tendon reflexes; supposed to be an attenuated sporadic form of acute poliomyelitis.

fig-wart. Condyloma acuminatum.

fila (fi'lah). Plural of *filum*, (*q.v.*).

fila'ceous [L. *filum*, a thread.] Filamentous.

fil'ament [L. *filum*, a thread.] 1. A fibril, a fine fiber, or thread-like structure. 2. In botany the stalk of a stamen. 3. In bacteriology, a fine thread-like form, unsegmented or segmented without constrictions. **ax'ial f.,** the central fibril of the flagellum of a spermatozoon. **spermat'ic f.,** a spermatozoon, especially the tail of a spermatozoon.

filamentous (fil-ă-men'tus). Fibrillar, filar; in bacteriology, noting a colony composed of long, interwoven, irregularly disposed threads; see cut under *colony*, 1, E.

filar (fi'lar) [L. *filum*, a thread.] Fibrillar, filamentous, reticular. **f. mass, f. sub'stance,** reticular substance.*

Fila'ria [L. *filum*, a thread.] A genus of *Nematoda* the members of which live parasitically in the subcutaneous connective tissue and in the serous cavities. **F. ban'crofti,** *F. sanguinis hominis, F. nocturna,* a nematode worm, the adult of which inhabits the lymphatic vessels; the larvæ are found in the peripheral blood-vessels during the night but not during the day; the parasite is transmitted by the mosquito; chyluria, hematuria, lymph-scrotum, elephantiasis, and other symptoms may be caused by the worm. **F. conjuncti'væ,** a parasite of the connective tissue of the horse and only rarely of man. **F. demarquay'i,** a blood parasite in natives of the Windward Islands in the West Indies. **F. diur'na,** a blood-parasite, resembling *F. bancrofti,* the larvæ of which appear in the blood during the daytime only. **F. equi'na,** a species parasitic in the peritoneal cavity of the horse and allied species. **F. extra-ocula'ris,** a species found in a fibrous tumor of the eye of a Caucasian girl. **F. hom'inis o'ris,** a species found once in the mouth of a child. **F. immi'tis** [L. rough], a species inhabiting the veins and right cavities of the heart in the dog; it is transmitted by the mosquito, either *Anopheles* or *Culex.* **F. iner'mis,** *F. conjunctivæ.* **F. labia'lis,** a species one specimen of which was extracted from a pustule of the lip. **F. len'tis,** *F. oculi humani.* **F. lo'a,** *Dracunculus oculi,* a species inhabiting the subconjunctival connective tissue. **F. magalhā'esi,** a species resembling F. *bancrofti* found in the left ventricle at an autopsy on a Brazilian. **F. medinen'sis,** *Dracunculus medinensis, D. persarum,* Guinea worm, Medina worm; a worm inhabiting the cellular tissue; the female, in order to liberate her young, bores a hole through the skin, usually at the ankle, where an ulcer forms; the young are freed by rupture of the uterus and then the worm escapes from the body; it is common in the neighborhood of the Red Sea, and is believed to have been the "fiery serpent" that tormented the Israelites. **F. noctur'na,** *F. bancrofti.* **F. oc'uli,** *F. loa.* **F. oc'uli huma'ni,** a nematode which has been found very rarely in the crystalline lens. **F. oz'zardi,** a blood parasite, present both day and night, found in Carib Indians of Guiana. **F. peritone'i hom'inis,** *F. conjunctivæ.* **F. per'stans** [L. enduring], a blood parasite, resembling *F. bancrofti,* but present in the blood both day and night; it causes no symptoms so far as known. **F. philippinen'sis,** an apparently distinct species of *F.* found in man

in the Philippine Islands. **F. restifor'mis,** a form obtained once from the urethra of a young man. **F. san'guinis hom'inis** [L. of the blood of man], *F. bancrofti, F. nocturna, F. diurna, F. perstans.* **F. tanigu'chii,** a species recovered from a lymphatic gland in a Japanese. **F. vol'vulus,** a parasite found in subcutaneous tumors, the size of a pea to that of a pigeon's egg, in natives of the west coast of Africa.

fila'rial. Relating to a filaria or to filariæ.

filari'asis. A disease caused by the presence of filariæ in the tissues of the body; it occurs in tropical and subtropical regions. Elephantiasis, lymph-scrotum, and chyluria are manifestations of the disease

filaricide (fi-lar'ĭ-sīd) [L. *cædere,* to kill.] Fatal to filariæ; an agent which kills filariæ.

filariform (fi-lar'i-form) [*filaria* + L. *forma,* form] Resembling filaria or nematode worms.

Filatov's disease' (fe-lah'tawf) [A. N. *Filatov,* Russian physician, contemporary.] Dukes' disease, fourth disease*. **F.'s spots,** Koplik's* spots.

filicic acid (fil-is'ik as'id). A white amorphous powder, the anthelmintic principle in male fern, or aspidium; dose, gr. 6–15 (0.4–1.0.) **f. anhy'dride,** filicin.

fil'icin. Filicic anhydride, an inert yellowish powder from the rhizome of male fern, filix mas.

fil'iform [L. *filum,* thread, + *forma,* form.] Filamentous, hair-like, thread-like; in bacteriology, noting an even growth along the line of inoculation, either stroke or stab; see cut under *culture,* B, 1. **f. bougie',** a very slender bougie of firm but yielding structure. **f. pulse,** a thready pulse, one occurring in a contracted artery and barely perceptible.

fil'igree implanta'tion. The burying of a filigree, or network, of silver in the abdominal wall in order to close a large abdominal hernia.

Filipowicz's symp'tom (fe-le'po-vich) Casimir *Filipowicz,* Polish physician, contemporary.] A peculiar yellow staining of the palms and soles with subsequent desquamation, in certain pyretic conditions, such as articular rheumatism, typhoid fever, and tuberculosis.

filipuncture (fil"i-punk'chūr) [L. *filum,* thread, + *punctum,* puncture.] Treatment of an aneurysm by the insertion of a coil of slender wire to induce coagulation.

fi'lix [L.] Fern. **f. fem'ina,** female fern, spleenwort. **f. mas** (Br.) male fern, aspidium* (U.S.).

fill'et [Fr. *filet,* a band.] 1. Lemniscus,* a band of nerve-fibers. 2. A skein or loop of soft tissue passed around the presenting part of the fetus, used for making traction.

fill'ing. Plug, stopping, any substance, such as gold, amalgam, etc., used for closing a cavity in a tooth. **combina'tion f.,** a tooth-filling of two or more materials applied in layers.

fil'mogen [*film* + G. *gennaō,* to produce.] Liquor adhesivus, trade name of what is said to be a solution of pyroxylin in acetone with the addition of a little fixed oil; employed for the same purposes as collodion.

filopo'dium, pl. *filopo'dia* [L. *filum,* thread, + (*pseudo*)*podium.*] A slender, filamentous pseudopodium.

fi'lopressure [L. *filum,* thread.] Temporary pressure on a blood-vessel by a ligature, which is removed when the flow of blood has ceased.

filovarico'sis [L. *filum,* thread, + *varix,* dilatation of a vein.] A series of swellings along the course of the axis-cylinder of a nerve-fibril

fil'ter [L. *filtrare,* to strain through *filtrum,* felt.] 1. To pass a fluid through a porous substance which arrests all suspended solid particles except those of extreme minuteness. See *percolate.* 2. An apparatus provided with a porous substance through which a fluid is passed in order to separate it from any solids it may contain. 3. A screen of varying composition, used in actinotherapy, which permits the passage of certain rays and inhibits that of others. **Ber'kefeld f., Cham'berland f.,** etc., see the proper names.

fil'trable. Capable of passing through a filter, especially one of porcelain or diatomacean earths, through which minute organisms, such as bacteria or microscopic protozoa, cannot pass.

fil'trate. The liquid which has been passed through a filter.

filtration (fil-tra'shun). The process of passing a liquid through a filter.

fil'trum [L.] A filter. **f. ventric'uli,** Merkel's filtrum, a groove between the two prominences, in each lateral wall of the vestibule of the larynx, formed by the cuneiform and the arytenoid cartilages.

fi'lum [L. thread.] A structure of filamentous or thread-like appearance. **f. du'ræ ma'tris spina'lis** [BNA], the termination of the spinal dura mater, surrounding the filum terminale of the cord, and attached to the periosteum of the coccyx. **f. radicula're,** pl. *fi'la radicula'ria* [BNA], one of the filaments issuing from the dorsolateral fissure of the spinal cord which forms the dorsal root (radix posterior) of a spinal nerve. **f. termina'le** [BNA], terminal thread nervus impar, a long slender filament extending from the extremity of the conus medullaris to the termination of the spinal canal.

fimbria, pl. *fimbriæ* (fim'brĭ-ah) [L. *fimbriæ,* fringe. Any fringe-like structure. **f. hippocam'pi** [BNA], a narrow band of white substance, continuous with the alveus, attached to the medial concave border of the hippocampus. **f. ova'rica** [BNA], one (the largest) of the fimbriæ of the Fallopian tube connected with the tubal pole of the ovary. **fim'briæ tu'bæ uteri'næ** [BNA], the irregularly branched or fringed processes surrounding the abdominal opening of the Fallopian tube.

fim'briate, fim'briated. Having fimbriæ, fringed, in bacteriology, noting a colony with border fringed with projections larger and thicker than cilia; see cut under *colony,* 3, g.

fimbria'tum. Corpus fimbriatum; (1) the outer or ovarian end of the oviduct; (2) a white band on the edge of the cornu inferius of the lateral ventricle of the brain.

fimbriocele (fim'brĭ-o-sēl) [G. *kēlē,* hernia.] A hernia of the corpus fimbriatum of the oviduct.

Finckh test. [Johann *Finckh,* German psychiatrist, *1873.] For mental disease; the patient is asked to explain certain proverbial expressions, such as "burn the candle at both ends," "the early bird catches the worm," etc.

finger (fing'ger) [A.S.] One of the digits of the hand; digitus. **clubbed f.,** Hippocratic* f. **dead f.,** see *digiti mortui.* **drop f.,** hammer f. **fifth f.,** little f. **first f.,** thumb, pollex. **fore f.,** second f., index, digitus demonstrativus. **fourth f.,** ring f. **ham'mer f.,** flexion at the proximal interphalangeal joint of a finger, usually the little finger. **in'dex f.,** second f., fore f., digitus demonstrativus. **little f.,** fifth f., digitus auricularis, digitus minimus. **lock f.,** trigger f. **mall'et**

f., hammer f. **med'ical f.,** ring f. **middle f.,** third f., digitus medius. **Morse f.,** telegrapher's cramp, spasmodic contractions of the index finger in attempting to work a telegraph key. **ring f.,** fourth f., digitus annularis, digitus medicus, digitus medicinalis. **sec'ond f.,** fore f. **snap f.,** trigger f. **spi'der f.,** arachnodactyly. **spring f.,** trigger f. **third f.,** middle f. **trigg'er f.,** an affection in which the movement of the finger is arrested for a moment in flexion or extension and then continues with a jerk. **wax'y fingers,** dead fingers. **webbed fingers,** two or more fingers united and enclosed in a common sheath of skin.

absence, adactylia, ectodactylia, adactylism, ectodactylism. **adhesion,** syndactylism, dactylosymphysis. **bone,** phalanx. **clubbed,** Hippocratic fingers **communicating by means of,** dactylology. **contraction,** dactylogryposis, dactylocampsodynia, dactylospasm. **curvature,** chirodactylia, chirodactylism. **deviation,** digitus extensus, d. flexus, d. varus, d. valgus. **dropsy of,** dactyledema **gout in,** dactylagra. **having an even number,** artiodactylous. **having an odd number,** perissodactylous. **having fingers of even length,** isodactylous. **having five,** pentadactylous, quinquedigitate. **having four,** tetradactylous, quadridigitate. **having more than five,** hyperdactylous, polydactylous. **having one,** monodactylous, unidigitate. **having six,** hexadactylous, sedigitate, sexdigitate **having three,** tridactylous, tridigitate **having two,** didactylous, bidigitate. **impeded contraction,** spring finger, trigger finger. **inflammation,** dactylitis, dactylarthritis, pararitium, panaris, paronychia, felon, whitlow. **joint,** knuckle. **large,** macrodactyl, megadactyl **largeness,** dactylomegaly, megalodactylism, macrodactylism **long,** macrodactyl. **painful contraction,** dactylocampsodynia. **pain in,** dactylalgia dactylodynia. **permanent flexure,** dactylogryposis, Dupuytren's contraction dactylocampsis. **rheumatism** dactylarthritis. **short,** brachydactyl. **slender,** leptodactyl. **small,** microdactyl. **spasmodic contraction,** dactylospasm. **spontaneous amputation,** dactylolysis, ainhum. **supernumerary,** polydactylism **thick,** pachydactyl. **webbed,** dactylia, dactylium, dactylosymphysis, syndactylism, palmature.

finger-and-toe disease (fing'ger-and-to diz-ēz'). A plant disease, an infection by *Plasmodiophora brassicæ*, following exposure to manure treated with sulphurous acid, supposed to be analogous to certain cancers occurring in workmen exposed to sulphur fumes; stump-root.

finger-phenomenon (fing'ger-fe-nom'e-non). A sign of organic hemiplegia; the patient's arm resting with the elbow on a table, the examiner grasps the wrist and makes pressure with his thumb on the radial side of the pisiform bone; if the hemiplegia is organic, some or all of the patient's fingers become extended and spread out in a fan-like form.

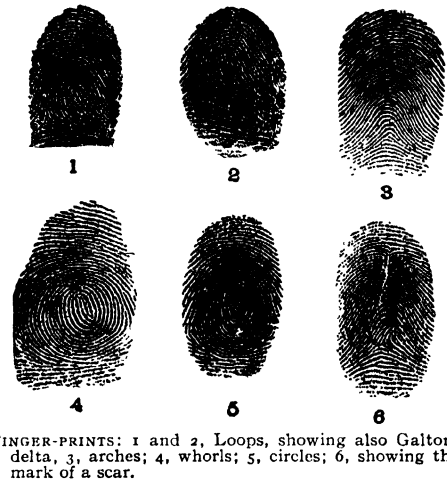
finger-print. An impression of the inked bulb of the distal phalanx of a finger, showing the configuration of the ridges, employed as a means of identification; see *Galton's* system*.

Finikoff's method (fe'nĭ-kof). Treatment of tuberculosis of bone, by intramuscular injections of peanut oil, with the addition of tincture of iodine, every five to eight days and 10 per cent. calcium chloride solution intravenously three times a week.

Fink'ler-Prior spiril'lum [Ditmar *Finkler*, German bacteriologist, 1852–1912; *Prior*, German bacteriologist, contemporary.] *Vibrio proteus*, an organism resembling the comma bacillus, found in the feces in cholera nostras.

Fin'ney's opera'tion [John Miller Turpin *Finney*, Baltimore surgeon, *1863.] A form of gastroduodenostomy in which a large opening is formed, ensuring free drainage from the stomach.

Fin'sen light [Niels Ryberg *Finsen*, Copenhagen physician, 1860–1904.] The violet and ultraviolet rays of the spectrum filtered out of the sunlight by a hollow planoconvex lens filled with an ammoniacal solution of copper sulphate; usually, instead of the filtered sunlight, the electric arc light is used, the rays being made parallel by two planoconvex lenses. The light is used in the treatment of lupus and other affections of the skin. **F. meth'od,** (1) treatment of skin diseases by the F. light; (2) prevention of pitting in smallpox by keeping the patient in a red-lighted room, the chemical rays at the other end of the spectrum being excluded.



FINGER-PRINTS: 1 and 2, Loops, showing also Galton. delta, 3, arches; 4, whorls; 5, circles; 6, showing the mark of a scar.

Fioc'ca's stain for spores. Immerse about 10 minutes in a 10 per cent. ammonia solution, 20 c.c., to which is added an alcoholic aniline solution, 15 drops; after differentiating in sulphuric acid and washing, counterstain with a dilute aqueous aniline solution

fir. Abies.

firedamp (fīr'damp). Marsh gas, or light carbureted hydrogen, forming an explosive mixture with the oxygen of the air.

first-aid. Immediate assistance given in the case of injury or sudden illness by a bystander or other lay-person, before the arrival of the physician.

first nerve (furst nurv). Nervus* olfactorius.

Fisch'er's cer'ebral mur'mur [Louis *Fischer*, New York physician, born in Austria, 1864.] A murmur synchronous with the cardiac systole heard over the anterior fontanelle in rachitic infants. **F.'s symp'tom,** a presystolic non-valvular murmur audible in cases of pericardial adhesions.

Fisch'er's meth'od [Georg *Fischer*, German surgeon, *1836.] Gradual formation of a gastric fistula. The stomach is first attached to the abdominal wall, and after four days, when the adhesions are sufficiently firm, a hypodermic needle is passed obliquely into the stomach and one or two ounces of milk are injected; following this, needles of gradually increasing size are passed daily at the same point and finally a trocar of sufficient size for the ready administration of liquid food.

Fisch'er's nee'dle. An instrument used in the operation for artificial pneumothorax.

Fisch'er's sign. In a case of tuberculosis of the bronchial glands, if one bends the child's head as far back as possible, auscultation over the manubrium sterni will sometimes reveal a continuous loud murmur caused by the pressure of the enlarged glands on the vena anonyma.

isch'er's solu'tion [Martin Henry *Fischer*, American physician,* 1879.] Sodium carbonate, 10–15; sodium chloride, 14; water, 1000; employed in the treatment of nephritis, or of uremia resulting thereform.

isch'er's test [Emil *Fischer*, German chemist, 1852–1919.] On boiling urine with phenylhydrazine and sodium acetate, yellow acicular crystals of phenylglucosazone will be formed if glucose is present; Kowarsky's and v. Jaksch's tests depend upon the same reaction, differing only in some details of manipulation.

sh'skin disease'. Ichthyosis.

ssion (fish'-un) [L. *fissio; findere*, to cleave.] Division of a cell or its nucleus. **bi'nary f.,** simple f. in which the two new cells are approximately equal in size. **mul'tiple f.,** sporulation, division of the nucleus, simultaneously or successively, into a number of daughter nuclei, followed by division of the cell-body into an equal number of parts, each containing a nucleus. **sim'ple f.,** division of the nucleus and then the cell-body into two parts.

ss'ion-fungus. Schizomycete, bacterium

ssiparity (fis"i-par'i-ti) [L. *findere*, to split, + *parere*, to bring forth.] Scissiparity, schizogenesis.

ssip'arous [L *fissus; findere*, to cleave, + *parere*, to produce.] Reproducing or propagating by fission.

'issipe'dia [L. *fissus*, cloven, + *pes(ped)*, foot.] A suborder of the carnivora having the toes separated and suited to walking.

ssu'ra, pl. *fissuræ* [L. from *findere* to cleave.] Fissure, cleft, sulcus.

f. antitragohelici'na [BNA], antitragohelicine fissure, a fissure in the auricular cartilage between the caudahelicis and the antitragus.

f. auricula'ris, f. tympanomastoidea.

f. calcari'na [BNA], calcarine fissure, a deep fissure running in an arched form backward from the isthmus of the fornicate gyrus to the occipital pole, bounding the upper border of the lingual gyrus

f. cer'ebri latera'lis [BNA], lateral cerebral fissure, fissure of Sylvius, the largest of the cerebral fissures, arising from the substantia perforata anterior and passing upward and backward, separating the temporal from the frontal and parietal lobes; it usually divides into three branches on the convex surface of the hemisphere.

f. collatera'lis [BNA], collateral fissure, a long sagittal fissure bounding the under surface of the temporal lobe on its medial aspect, separating the fusiform gyrus from the hippocampal and lingual gyri.

f. denta'ta, dentate fissure, f. hippocampi [BNA].

f. hippocam'pi [BNA], hippocampal fissure, dentate fissure, a fissure bounding the medial surface of the gyrus hippocampi, extending from the sulcus corporis callosi forward, between the fascia dentata and the hippocampal convolution, its anterior extremity being capped by the uncus.

f longitudina'lis cer'ebri [BNA], longitudinal fissure of the cerebrum, great longitudinal fissure, a deep cleft separating the two hemispheres of the cerebrum.

f. media'na ante'rior [BNA], anterior median fissure, a deep fissure in the median line of the anterior surface of the spinal cord and of the medulla oblongata.

f. media'na poste'rior (1) [BNA], the posterior median fissure of the medulla oblongata occupying the lower half of the medulla and terminating at the lower point of the fossa rhomboidalis; (2) sulcus medianus posterior [BNA].

f. orbita'lis infe'rior [BNA], inferior orbital fissure, sphenomaxillary fissure; a cleft between the greater wing of the sphenoid and the orbital plate of the maxilla, through which pass the superior maxillary division of the fifth nerve, the orbital branch of the same, fibers from Meckel's ganglion, and the infraorbital vessels.

f. orbita'lis supe'rior [BNA], superior orbital fissure, sphenoidal fissure, foramen lacerum anterius; a cleft between the greater and the lesser wing of the sphenoid establishing a channel of communication between the middle cranial fossa and the orbit, through which pass the third, fourth, ophthalmic division of the fifth, and the sixth cranial nerves, and the ophthalmic veins.

f. palpebra'rum, the opening between the margins of the eyelids.

f. pari"etooccipita'lis [BNA], parieto-occipital fissure, a fissure on the mesial surface of each cerebral hemisphere, extending upward from the calcarine fissure from just behind the splenium of the corpus callosum; it marks the boundary between the cuneus and precuneus, or between the occipital and the parietal lobes.

f. perpendicula'ris exter'na, external perpendicular fissure, a temporary infolding in the wall of the cerebral hemisphere in the human fetus, corresponding to a permanent fissure in the adult ape, the "Affenspalte" or ape-fissure.

f. petrooccipita'lis [BNA], occipital fissure, a fissure passing backward from the foramen lacerum between the outer side of the basioccipital and the posterior and inner border of the petrous portion of the temporal bone.

f. petrosquamo'sa [BNA], a shallow fissure indicating externally the line of fusion of the petrous and squamous portions of the temporal bone.

f. petrotympan'ica [BNA], petrotympanic fissure, Glaserian fissure, a fissure between the tympanic and squamous portions of the temporal bone; it transmits the chorda tympani nerve (through the canal of Huguier).

f. pterygoid'ea [BNA], pterygoid notch, a cleft between the two pterygoid plates, lamina lateralis and lamina medialis of the sphenoid bone, into which fits the pterygoid process or tuberosity of the palate bone.

f. puden'di, rima pudendi.

f. Sil'vii, f. cerebri lateralis.

f. sphe"nopetro'sa [BNA], a narrow fissure between the under surface of the great wing of the sphenoid and the petrous portion of the temporal bone.

f. transver'sa cerebel'li, transverse fissure of the cerebellum, a depression or cleft between the cerebellar peduncles on either side and the anterior portion, or nodule, of the vermis.

f. transver'sa cer'ebri, transverse fissure of the cerebrum, a cleft intervening between the corpus callosum and fornix above and the diencephalon below, through which passes a double lamina of pia mater, the tela chorioidea which roofs over the third ventricle.

f. tympanomastoid'ea [BNA], tympano.nastoid or auricular fissure, a fissure separating the tympanic posteriorly from the mastoid and squamous portions of the temporal bone; it transmits the auricular branch of the vagus nerve.

fis'sural. Relating to a fissure.

fissure (fish'ūr) [L. *fissura.*] 1. A furrow, cleft, or slit; for the normal anatomical fissures see *fissura*, and for most of the brain fissures, *sulcus.* 2. In dentistry a break or fault in the enamel of a tooth. **a'nal f.,** a crack or slit in the mucous membrane of the anus, very painful and difficult to heal. **sphenopetro'sal f.,** apertura cerebralis canaliculi nervi petrosi superficialis minoris [NK].

fissured (fish'ūrd). Marked by or containing fissures, cracks, or clefts.

fis'tula [L. a pipe, a tube.] 1. A pathological sinus or abnormal passage leading from an abscess cavity or a hollow organ to the surface, or from one abscess cavity or organ to another. 2. A natural canal, such as the esophagus or trachea (obsolete).

abdom'inal f., a tract leading from one of the abdominal viscera to the external surface.

ae'rial f., a tract leading from the trachea or other part of the air passages to the surface of the neck.

amphibol'ic f., amphib'olous f., a complete f., an anal f. opening both externally and internally.

a'nal f., a f. opening at or near the anus, usually, but not always, opening into the rectum above the internal sphincter.

bil'iary f., a f. leading to the gall-bladder or other portion of the biliary tract.

blind f., one that ends in a cul-de-sac, being open at one extremity only.

bran'chial f., a congenital fistula in the neck due to incomplete closure of a branchial cleft.

cer'vical f., (1) an aërial or a branchial f.; (2) a fistula of the cervix uteri.

coccyg'eal f., a fistulous opening of a dermoid cyst in the coccygeal region.

complete' f., one which is open at both ends.

den'tal f., a f. leading down to the cavity of an alveolar abscess.

enterovag'inal f., a fistulous passage connecting some portion of the intestine and the vagina.

enteroves'ical f., a f. connecting the intestine and the bladder.

fe'cal f., an intestinal f.

f. au'ris congen'ita, a congenital f. resulting from a defect in the formation of the auricle.

f. bellinia'na, Bellini's fistula, a urinary tubule.

f. bimuco'sa, (1) a complete anal fistula, both ends of which open on the mucous surface; (2) perforation into two neighboring intestinal coils in certain cases of peritonitis.

f. cer"vicovagina'lis laquea'ta [L. *laqueatus*, paneled], a fistulous communication between the uterine cervical canal and the vagina.

f. ciba'lis, the esophagus.

f. col'li congen'ita, a congenital f. of the neck leading to the pharynx or the air passage.

f. cor'neæ, a f. resulting from an unhealed wound in the cornea, the external opening being usually covered with conjunctiva.

f. cru'ris, the fibula.

f. gingiva'lis, dental f.

f. lacrima'lis, a f. opening into a tear duct or the lacrymal sac.

f. lymphat'ica, a congenital f. in the neck connecting with a lymphatic vessel and giving exit to lymph.

f. nervo'rum, the nervilemma.

f. test, see under *test*.

f. urina'ria, a f. of any part of the urinary tract.

gas'tric f., a fistulous tract leading from the abdominal wall into the stomach.

gastrocol'ic f., a fistulous communication between the stomach and the colon.

gastroduod'enal f., an abnormal opening between the stomach and the duodenum.

gastrointes'tinal f., a fistulous tract connecting the stomach with any portion of the intestine.

genitou'rinary f., a fistulous opening into any portion of the urogenital tract.

hepat'ic f., a f. leading to the liver, biliary f.

horse'shoe f., an anal f. encircling the anus and opening at both extremities on the cutaneous surface.

incomplete' f., blind f.

inter'nal f., a f., usually a blind f., communicating only with the intestine or other internal organ.

intestina'l f., a tract leading into the intestine from the exterior, usually formed by operation; artificial anus.

lac'teal f., mammary f., a fistulous opening into one of the lacteal ducts.

me"troperitone'al f., a fistulous tract through the uterine wall opening into the peritoneal cavity.

pari'etal f., a f., either blind or complete, opening on the wall of the thorax or abdomen.

perineovag'inal f., a f. through the perineum, opening into the vagina.

pharyn'geal f., a form of f. colli congenita.

pul'monary f., a parietal f. communicating with the lung.

rectola'bial f., one opening into the rectum and on the surface of a labium majus.

rectoure'thral f., one connecting the rectum and the female urethra.

rectovag'inal f., a fistulous opening between the rectum and the vagina.

rectoves'ical f., a fistulous communication between the rectum and the bladder.

rectovul'var f., **rectolabial f.**

sal'ivary f., a f. leading into a salivary duct.

spermat'ic f., a f. communicating with the testicle or any of the seminal passages.

ster'coral f., fecal f.

thorac'ic f., parietal f.

tra'cheal f., aërial f.; a form of f. colli congenita.

u'rachal f., a f. connecting the urachus with the rectum or other hollow organ.

u'rinary f., f. urinaria.

urogen'ital f., genitourinary f.

fistula'tion, fistuliza'tion. Formation of fistulas in a part; becoming fistulous.

fis'tulatome [G. *tomē*, a cutting.] A long, thin-bladed, probe-pointed knife for slitting up a fistula.

fistuloenterostomy (fis"tu-lo-en-ter-os'to-mi). The operative closure of an external biliary fistula and formation of a new tract for passage of the bile into the intestine.

fis'tulous. Relating to or containing a fistula.

fit [A.S. *fitt.*] 1 An attack of an acute disease, or the sudden appearance of some symptom, such as coughing. 2. A convulsion.

Fitz's syn'drome [Reginald Heber *Fitz*, Boston physician, 1843–1913.] Severe epigastric pain, vomiting, and collapse, appearing suddenly, and followed within twenty-four hours by tympanites or a circumscribed epigastric swelling; indicative of acute pancreatitis.

FitzGer'ald's meth'od [William H. *FitzGerald*, American physician,* 1872.] Zone therapy.

fixateur (fĕks-ă-ter'). Metchnikoff's term for amboceptor.

fixa'tion [L. *fixus; figere*, to fasten.] 1. The condition of being fixed or firmly attached or set. 2. The art of fixing or making firm. 3. In histology, the rapid killing of tissue elements and their hardening, so that they are preserved in the same relations they had in the living body. 4. In chemistry, the solidification of a gas on uniting with a solid. **f. of com'plement**, see under *complement*. **point of f.**, the point on the retina at which the rays coming from an object regarded directly are focussed. **re'nal f.**, an approach to uniformity in the rate of excretion and in the specific gravity of the urine, and delay or failure to respond by increased excretion to the ingestion of food.

fix'ative. 1. Serving to fix or make firm. 2. A substance used in the hardening and preservation of pathological and histological specimens 3 Amboceptor.

fix'ator. Amboceptor.

fix'ing. See fixation (3).

fix'ity. Noting the stage, early in labor, when the fetal head becomes engaged in the pelvis.

flabel'lum [L. a fan.] A fan-shaped bundle of white fibers in the corpus striatum.

flaccid (flak'sid) [L. *flaccidus*.] Relaxed, flabby, without bone.

flacherie (flă-sher-e') [Fr.] A microparasitic disease of silkworms.

flag. Calamus.

Flagella'ta. *Euflagellata*, a subclass of *Mastigophora*, including parasitic forms in this class, such as the trypanosomata and the spirochætæ.

flagellate (flaj'el-ăt). 1. Having one or more flagella. 2 A protozoon provided with one or more flagella one of the *Mastigophora*. **coll'ared f.**, one of the *Choanoflagellata*.

flagellated (flaj'el-a-ted). Flagellate (1). **f. bod'y**, the malarial gametocyte or any similar form in other protozoa.

lagellosis (flă-jel-lo'sis) [*flagellum* + *-osis.*] Infection with flagellate microorganisms in the intestine.

lagel'lospore. Flagellula.

lagel'lula [dim. of *flagellum.*] A flagellated swarmspore, flagellospore. Contrasted with *amœbula.*

lagellum, pl. *flagella* (flă-jel'um) [L. a whip.] A long hair-like process, or cilium, attached to an extremity of a protozoon or bacterium; there may be one or more flagella at each extremity.

laginac reaction (flaj'in-ak re-ak'shun). The indication of the presence of *Bacillus coli* in water; there are: *fl* = fluorescence in glucose neutral red broth, *ag* = acid and gas with lactose, *in* = indol in broth, *ac* = acid and clot in milk.

lail-joint. A joint with abnormal mobility, especially in the direction of extension.

Flajani's disease' (flah-yah'ne) [Giuseppe *Flajani,* Italian surgeon, 1741–1808.] Exophthalmic goiter.

lame-spots. Large hemorrhagic areas in the eyegrounds such as may sometimes be seen in cases of advanced pernicious anemia.

lank. The side of the body between the pelvis and the ribs, latus [BNA].

lank-bone. Os ilium.

lann'el-rash. Pityriasis or dermatitis seborrhoica of the chest and back.

lap. A tongue or lip of tissue, cut away from the underlying parts but attached at one end; used in plastic surgery for filling a defect in a neighboring region, or to cover the sawn end of the bone after amputation.

laps. A disease of the horse marked by swelling of the lips.

flare (flair). A diffuse redness of the skin extending beyond the local reaction to the application of a strong irritant; it is due to a relaxation of the larger arterioles.

flarim'eter. A modified spirometer by means of which one is able to make observations on the relative values of and comparisons between vital capacity, breath-holding ability, systolic and diastolic blood pressures, the heart rate and stroke volume.

flash. A sudden and brief burst of light. **f. method,** sterilization of milk by raising it rapidly to a temperature of 178° F., and then after holding it there for a short time, reducing it rapidly to 40° F.

flask. A small receptacle of glass, leather, or metal used for holding liquids, powder, or gases. **Er'lenmeyer f.,** one with a conical body and broad base and a narrow neck. **mould'ing f.,** a metal case for holding the plaster-of-paris in which the plate holding false teeth is vulcanized.

flat. 1 Of even plane surface. 2. Without resonance and of low pitch, said of a percussion note. 3. Insipid, without flavor; not effervescent.

Flatau's law (flă'tow) [Edward *Flatau,* Warsaw neurologist *1869.] The excentric position of the long spinal tracts, the greater the distance the nerve-fibers run lengthwise in the cord, the more they tend toward its periphery.

flat-foot. Pes planus, a foot with sunken arch, so that the entire sole is in contact with the ground; usually associated with pes valgus.

flat'ness. The quality of being flat.

flat'ulence [L. *flatulentus; flatus,* a blowing.] The presence of an excessive amount of gas in the stomach and intestines.

flat'ulent. Relating to or suffering from flatulence.

fla'tus [L a blowing.] 1. Expired air. 2. Gas in the stomach or intestine. 3. Eructation. **f. vagina'lis,** expulsion of gas from the vagina.

flave'do [L. *flavus,* yellow.] Yellowness of the skin, jaundice, sallowness.

flavescent (flă-ves'sent) [L. *flavescere,* to become yellow.] Yellowish.

flavine (fla'vēn) [L. *flavus,* yellow.] 1. A vegetable dye of yellow color. 2. A yellow acridine dye, preparations of which are employed as surgical antiseptics; see *acriflavine* and *proflavine.*

Flavobacterium[0] (fla-vo-bak-te'rĭ-um) [L. *flavus,* yellow.] A genus of the family *Bacteriaceæ,* the several species of which are rod-shaped organisms found chiefly in water or soil, and forming an orange-yellow pigment in cultures; non-pathogenic, except the following. **F. morbificans,**[0] *B. bovis morbificans,* a motile, gram-negative, aerobic, rod-shaped organism, found in bovine septicemia. **F. pseudomal'lei,**[0] the pathogenic agent of melioidosis; called also *B. pseudomallei, B. whitmori,* and *Pf. whitmori* (q. v.).

fla'vor. 1 The quality affecting the taste or odor of any substance. 2. A therapeutically inert substance added to a prescription to give an agreeable taste to the mixture.

flax [A S. *fleax.*] Linum **f. lily,** phormium, New Zealand flax, a decoction of the rhizome of which has been used in checking inflammation and suppuration.

flax'seed. Linseed, linum.*

flea. An insect of the genus *Pulex.* The common f which attacks man is *Pulex irritans.* **rat f.,** a f parasitic on the rat and instrumental in transmitting the plague; the most common forms are *Pulex fasciatus, P. pallidus, Typhlopsylla musculi* and *Xenopsylla cheopis.*

flea'bane. Erigeron

fleam. A lancet, especially one for phlebotomy or a gum-lancet.

Flechsig's a'reas (flekh'zig) [Paul Emil *Flechsig,* German neurologist, 1847–1929.] Three divisions of each lateral half of the medulla as seen on section, marked off by the root fibers of the hypoglossal and vagus nerves; the areas are called anterior, lateral, and posterior. **F.'s cutic'ulum,** a layer of flat cells on the outer surface of the neuroglia; **F.'s fascic'ulus,** (1) fasciculus* anterior proprius. (2) fasciculus* lateralis proprius. **F.'s tract,** fasciculus* cerebellospinalis. **F.'s treat'ment,** the treatment of epilepsy by opium or morphine in increasing doses followed by the bromides.

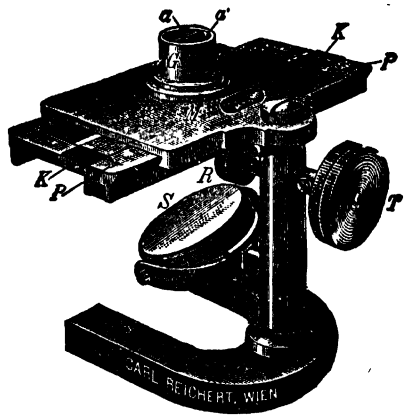
flec'tion [L. *flectere,* to bend.] Flexion.

Fleischl's hemom'eter (flish'l) [Ernst von *Fleischl* von Marxow, Viennese physiologist, 1846–1891.] An instrument for estimating the hemoglobin percentage of the blood, by comparing a definite dilution of a drop of blood with a wedge-shaped piece of ruby glass under water. See illustration on page 400.

Fleischmann's bur'sa (flish'mahn) [Godfried *Fleischmann,* German anatomist, 1777–1853.] An inconstant serous bursa at the level of the frenum linguæ, between the surface of the genioglossus muscle and the mucous membrane of the floor of the mouth. **F.'s hygro'ma,** inflammation or distention of F.'s bursa.

Fleitmann's test (flīt'mahn) [Th. *Fleitmann,* German chemist. nineteenth century.] For arsenic; hydrogen is generated in a test-tube containing the suspected fluid, the fluid is heated and a piece of filter paper moistened with silver nitrate solution

is held over the top; if arsenic is present the moistened paper is blackened.



FLEISCHL'S HEMOMETER: *a*, Compartment into which blood is put; *a'*, compartment into which water is put; *G*, mixing cell; *K,K*, slip of ruby glass of graduated thickness, adjoining the scale marked on the metal frame, *P, P*; *R*, cogged wheel for sliding the frame containing the glass slip; *T*, screw by which *R* is moved; *S*, reflector; *M*, opening in stage through which the scale markings are read.

Flem'ing's tinc'ture of ac'onite [Alexander *Fleming*, British physician, 1824–1875] Tinctura aconiti, Fleming (N.F.).

Flemming's fi'brillary mass [Walther *Flemming*, German anatomist, 1843–1906.] Spongioplasm. **F.'s fluid,** a hardening fluid of glacial acetic acid 3, 2 per cent. solution of osmic acid 12, 1 per cent solution of chromic acid 50 **F.'s germ centers,** aggregations of leucocytes in lymphoid tissue. **F.'s interfi'brillary sub'stance,** paramitome. **F.'s solu'tion,** liquor acidi chromo-aceto-osmici. **F.'s trip'le stain,** fix section in acetic alcohol, stain 1 hour in saturated aqueous safranin solution, wash and stain ½ hour in saturated aqueous methyl violet solution; wash and flood with orange-acetone.

flesh [A.S. *flæsc*] 1. The meat of animals used for food. 2 Muscular tissue 3. Adiposity, stoutness. **proud f.,** exuberant granulations from a wounded surface or ulcer

Fletch'erism [Horace *Fletcher*, American author, 1849–1919.] A dietary system advocated by Horace Fletcher, consisting in most complete mastication, carried to the point where all taste of the food is lost, and in abstention from food until driven thereto by hunger.

Fletch'erize. To practise Fletcherism.*

flex [*flexus; flectere*, to bend.] To bend, to move a joint in such a direction as to approximate the two parts which it connects.

flexibil'itas ce'rea [L. waxy flexibility.] The peculiar rigidity of catalepsy which may be overcome by slight external force, but returns at once, holding the limb firmly in the new position.

flexibil'ity. The capability of being bent, pliability.

flexible, flexile (fleks'i-bl, fleks'il). Pliant, capable of being bent without breaking.

fleximeter (fleks-im'e-tur) [*flexion* + G. *metron*, measure.] An instrument for measuring the degree of flexion possible in a joint.

flexion (flek'shun). 1. Flection, bending; bending of a joint so as to approximate the parts it connects, bending of the spine so that the concavity of the curve looks forward. 2 In dentistry the displacement of a formative organ, resulting in malposition of the developed tooth.

Flex'ner's bacil'lus [Simon *Flexner*, New York bacteriologist, *1863.] A variety of the dysentery bacillus. **F.'s se'rum,** an antimeningococcus serum, curative of epidemic cerebrospinal fever.

flex'or. A muscle the action of which is to flex a joint; see under *musculus*

flexu'ra [L. a bending.] 1. Flexion. 2. A bend 3. The knee, or radiocarpal articulation, of a horse or animal of similar anatomical structure. **f. duode'nojejuna'lis** [BNA], an abrupt bend in the small intestine at the junction of the duodenum and jejunum. **f. perinea'lis rec'ti** [BNA], anal canal, the lower or prostatic portion of the rectum, forming an anteroposterior curve with convexity forward, behind the prostate in the male. **f. sacra'lis rec'ti** [BNA], the upper or sacrococcygeal portion of the rectum, forming an anteroposterior curve with convexity backward. **f. sigmoid'ea,** colon sigmoideum.

flexure (fleks'ūr) [L. *flexura*.] Flexura, flexion; a bend. **cau'dal f.,** the bend at the lower, caudal or aboral, extremity of the embryo. **cephal'ic f.,** the bend at the upper or cephalic extremity of the embryo **cer'vical f.,** a bend at the juncture of the primitive brain and spinal cord in the embryo. **cra'nial f.,** cephalic f. **dor'sal f.,** a f. in the mid-dorsal region in the embryo; in very early stages the f. is with concavity looking backward but later the concavity becomes a convexity. **he'mal f.,** cephalic f. **hepat'ic f.,** the bend of transition from the ascending to the transverse colon **pon'tine f.,** a curve with concavity directed dorsally, caused by a bending of the hind-brain upon itself in the embryo. **sig'moid f.,** pelvic colon, colon sigmoideum [BNA], S romanum, the loop formed by the lower end of the descending colon as it joins the rectum **splen'ic f.,** the bend at the junction of the transverse with the descending colon. **sa'cral f.,** caudal f.

Fliess' zone therapy (flēs) [Wilhelm *Fliess*, German physician, 1858–1928.] In dysmenorrhea the abdominal and sacral pains are stilled by anesthetization of the lower turbinated body. Similarly nervous gastric pains are dissipated by anesthetization of the anterior half of the left middle turbinate.

Flindt's spots [N. *Flindt*, Danish physician, contemporary.] Koplik's* spots.

flint-disease'. Chalicosis.

Flint's arcade' [Austin *Flint*, American physiologist (son of the following), 1836–1915.] A series of vascular arches at the bases of the pyramids of the kidney.

Flint's mur'mur [Austin *Flint*, American physician, 1812–1886.] A peculiar sound, described as a more or less distinct rumbling, echoing in quality, heard at the apex of the heart in the middle of diastole or more distinctly presystolic; it occurs frequently in cases of aortic incompetency.

flip. A burn occurring on one side only of the wound of entrance in a pistol wound of the soft parts.

floating (flōt'ing). 1. Free, unattached, noting the lower ribs the cartilages of which are not articulated directly with the sternum. 2. Out of the normal position, unduly movable, wandering noting an occasional abnormal condition of certain organs, as the kidneys, liver, spleen, etc.

floccilegium (flok-sĭ-le'jĭ-um) [L. *flocculus*, tuft, + *legere*, to gather together.] Floccillation, crocidismus, carphologia.*

floccillation (flok-sĭ-la'shun) [L. *flocculus*.] Carphologia, an aimless plucking at the bedclothes, as if one were picking off threads or tufts of cotton, occurring in the low delirium of a fever.

floccose (flok'ōs) [L. *floccus*, a flock of wool.] In bacteriology, noting a growth of short curving filaments or chains, closely but irregularly disposed.

flocc'ular. Relating to a flocculus of any sort, specifically to the flocculus of the cerebellum.

flo'cculent. Resembling tufts of cotton or wool; noting a fluid, such as the urine, containing numerous shreds of whitish mucus or other material, or, in bacteriology, a fluid culture in which there are numerous colonies either floating in the fluid medium or loosely deposited at the bottom.

floc'culus [L. tuft] 1. A tuft or shred of cotton or wool or anything resembling it. 2. A small lobe of the cerebellum at the posterior border of the brachium pontis anterior to the lobulus biventer; it corresponds to the nodule of the vermis. **access'ory f.**, an occasional small lobule of the cerebellum in the immediate neighborhood of the flocculus.

flood (flud) [A.S. *flōd*.] 1. To bleed profusely from the uterus, as after childbirth or in cases of menorrhagia 2 A profuse menstrual discharge

Flood's lig'ament [Valentine *Flood*, Irish surgeon, 1800–1847.] A band of the ligamentum* coracohumerale, attached to the lower part of the lesser tuberosity of the humerus.

flood'ing. 1. Bleeding profusely from the uterus, especially after childbirth or in severe cases of menorrhagia 2. A profuse uterine hemorrhage

floor-plate. The thin lower or ventral portion of the medullary tube in the embryo

Flo'ra's myasthen'ic reac'tion or **sign.** Defective tetanic response to prolonged faradic stimulation of the muscles in cases of traumatic neurasthenia.

Flor'ence's reac'tion [Albert *Florence*, French physician of Lyons, *1851.] For testing stains suspected to be of spermatic fluid A drop of the washings of the suspected spot is placed on an object glass alongside of a drop of Lugol's solution; at the point where the two touch brownish, rhombic crystals are formed (*F.'s crystals*).

Florentium (flo-ren'shyum). Illinium.

flo'res [L. pl. of *flos*, flower.] Blossoms, flowers, blooms. **f. benzoin'i,** benzoic acid. **f. sul'phuris,** flowers of sulphur, sulphur* sublimatum.

flo'ret [dim. of L. *flos*, flower.] 1. One of the small units making up a composite flower. 2. A very small flower.

flor'id [L *floridus*, flowery] Of a bright red color, noting certain cutaneous lesions.

Florschütz's formula (flor'shŭts) [Georg *Florschütz*, German professor, *1859.] Indicating the correct relation of height to the abdominal circumference—L: (2B–L) L representing the individual's height, and B is the circumference of the abdomen; the correct figure so determined would be 5, and any below that would indicate an increase in adiposity.

Flourens's the'ory (floo-rahń') [Jean Pierre Marie *Flourens*, Parisian physiologist, 1794–1867.] The theory that thought is a process depending upon the action of the entire cerebrum. **F.'s vi'tal node** (*nœud vital*), a point corresponding to the nucleus of origin of the vagus at the end of the rhomboid fossa in the fourth ventricle, destruction of which causes death by respiratory failure.

flow [A.S *flōwan*.] 1. To bleed from the uterus less profusely than in flooding. 2. The menstrual discharge. 3. The rise in the opsonic index at the beginning of the positive phase.

flow'er [L. *flos(flor-)*.] The sexual organs of a phanerogamous plant, with the floral envelopes, or perianth, the sexual organs are the stamens (male) and pistils (female); the perianth consists of corolla with its petals (the inner envelope) and calyx with its sepals (the outer envelope); the male or female organs may be absent (unisexual flower) and there may be but one perianth **complete' f.,** one which has all the parts of a flower—calyx, corolla, stamens, and pistil. **cy'clic f.,** one the leaves of which are arranged in whorls. **fe'male f.,** one which has no stamens, or male elements. **hermaph'rodite f.,** one which has both male and female elements, or both stamens and pistil. **irreg'ular f.,** one the parts of the floral envelope of which are unequal in size. **male f.,** one which has stamens only, but no pistil. **reg'ular f.,** one the parts of the floral envelope of which are equal in size **unisex'ual f.,** one which has but one sexual element, either the male (stamens) or the female (pistil) **zygomor'phous f.,** an irregular f which is divisible into similar halves by a vertical plane.

Flow'er's den'tal in'dex [Sir William Henry *Flower*, English physician, 1831–1899] See under *index*.

flow'ers. 1 Flores. 2. The menstrual discharge. 3. A mineral substance in a powdery state after sublimation **f. of ben'zoin,** benzoic acid. **f. of sul'phur,** sulphur sublimatum.

fluc'tuate. To move in waves, noting the motion of fluid in a cavity such as the abdomen.

fluctua'tion [L. *fluctuare*, to flow in waves.] 1. A wave-like motion felt on palpating a cavity with non-rigid walls, like the abdomen when containing fluid. 2. In the science of heredity any variation which is not inherited.

Fluh'rer's probe [William Francis *Fluhrer*, New York physician, contemporary] An aluminum probe employed in examining gunshot wounds of the brain, being allowed to sink into the track of the ball under the influence of gravity only.

fluid [L *fluidus*] 1. Flowing, liquid, gaseous 2 A non-solid substance, liquid or gas **amniot'ic f.,** liquor amnii **cerebrospi'nal f.,** the f contained in the ventricles of the brain, the central canal of the spinal cord, and the subarachnoid space.

fluid acet-extract. A fluidextract made with an acetic acid menstruum instead of alcohol.

fluidex'tract. Fluidextractum.

fluidextrac'tum, gen *fluidextracti*, pl. *fluidextracta* (flu"id-ek-strak'tum) [L. *fluidus*, fluid, + *extractum*, extract.] Fluidextract, a pharmacopeial preparation (termed *extractum liquidum* in the B.P.) consisting of a concentrated solution in alcohol, or alcohol and water, of the vegetable principles of a drug, of such strength that 1 c.c. of fluidextract represents in therapeutic value 1 gm of the crude drug; the exceptions to this rule are the extracts of certain drugs which are standardized to a definite alkaloidal strength. There are 26 fluidextracts in the U.S.P. X. and 104 in the N.F. 5th Edition. [For the liquid extracts of the B.P. see under *extractum*.]

f. aconi'ti (N. F.), fluidextract of aconite, used in liniments; internal dose, ℥½–1 (0.03–0.06).

f. adon'idis (N.F.), fluidextract of adonis; cardiac stimulant and diuretic in doses of ℥1–3 (0.06–0.2).

f. alet'ridis (N.F.), fluidextract of aletris; emmenagogue in doses of ℥20–40 (1.3–2.6).

f. angel'icæ radi'cis (N.F.), fluidextract of angelica root; stimulant and carminative in doses of ℥20–40 (1.3–2.6).

f. a'pii fruc'tus (N.F.), fluidextract of celery; diuretic and nerve sedative in doses of ℥20–40 (1 3–2.6).

f. apo'cyni (N.F.), fluidextract of apocynum or Canadian hemp; dose, ℥3–5 (0.2–0.3).

f. ara'liæ (N.F.), fluidextract of aralia or spikenard; alterative and diaphoretic in doses of ♏20–40 (1.3–2.6).

f. ar'nicæ (N.F.), fluidextract of arnica flowers; alterative and diuretic in doses of ♏1–2 (0.06–0.13).

f. aromat'icum, aromatic fluidextract, an alcoholic extract of pulvis aromaticus; used to disguise the odor or taste of various drugs, a brown liquid of aromatic taste; dose, ♏10–30 (0.6–2.0).

f. asclepi'adis (N.F.), fluidextract of asclepias or pleurisy root; dose ♏30 (2.0).

f. aspidosper'matis, fluidextract of aspidosperma or quebracho in a menstruum of alcohol, glycerin, and water; dose, ℥1 (4.0).

f. auran'tii ama'ri, fluidextract of bitter orange peel, prepared only from the glandular epidermal layer of orange-peel; a liquid of reddish brown color and aromatic odor and taste; dose, ℥½–1 (2.0–4.0).

f. ave'næ sati'væ (N.F.), fluidextract of oat, prepared by using a menstruum of two volumes of alcohol and three volumes of water; average dose, ℥1 (4.0).

f. baptis'iæ (N.F.), fluidextract of baptisia, or wild indigo; dose, ♏15 (1 0).

f. belladon'næ folio'rum (U.S.), fluidextract of belladonna leaves, prepared by using a menstruum of three volumes of alcohol and one volume of water; it contains from 0.27 to 0.33 gm. of the total alkaloids of belladonna leaves in each 100 c.c.; dose, ♏ 1–2 (0.06–0.13).

f. belladon'næ radi'cis (U.S.), fluidextract of belladonna root, a liquid of a reddish brown color; it contains from 0.405 to 0.495 gm. of the total alkaloids of belladonna root in each 100 c.c.; dose, ♏1–2 (0.06–0.13).

f. berber'idis (N.F.), fluidextract of berberis or barberry; dose, ♏2–5 (0 13–0 3).

f. bol'di (N.F.), fluidextract of boldo; alterative and tonic in doses of ♏5–10 (0.3–0.6).

f. bu'chu (U.S.), fluidextract of buchu; dose, ℥½–1 (2.0–4.0) largely diluted.

f. bu'chu compos'itum (N.F.), compound fluidextract of buchu; buchu, 62.5, juniper, uva ursi, and cubeb, each 12.5; employed in catarrh of the urinary tract in doses of ♏20–40 (1.3–2.6).

f. cal'ami (U.S.), fluidextract of calamus; dose, ♏5–20 (0.3–1.3).

f. calen'dulæ (N.F.), fluidextract of calendula; alterative and stimulant in doses of ♏10–20 (0.6–1.3), and externally for bruises and sprains.

f. calum'bæ (N.F.), fluidextract of calumba or colombo, a fluid of an orange-brown color; employed as a bitter tonic with iron, as it contains no tannin, in doses of ♏10–60 (0.6–4.0).

f. camel'liæ, fluidextract of camellia (tea); made from black tea, "Formosa oolong;" nerve stimulant in doses of ♏20–40 (1 3–2.6).

f. can'nabis (U.S.), fluidextract of cannabis or Indian hemp; dose ♏½–1 (0.03–0.06).

f. cap'sici (U.S.), fluidextract of capsicum or red pepper, a fluid of brown-red color and hot burning taste; dose, ♏1–2 (0.06–0.13).

f. cas'caræ sagra'dæ (U.S.), fluidextract of cascara sagrada, a dark reddish brown liquid of very bitter taste; dose, ♏15–30 (1 0–2.0).

f. cas'caræ sagra'dæ aromat'icum (U.S.), aromatic fluidextract of cascara sagrada, prepared with the addition of licorice, benzosulphinide, oils of anise, cinnamon, and coriander, and methyl salicylate by means of which the bitter taste is covered; a dark reddish brown liquid of sweetish aromatic taste; dose, ♏15–30 (1.0–2.0).

f. casta'neæ (N.F.), fluidextract of chestnut leaves; dose ℥1 (4.0).

f. cata'riæ (N.F.), fluidextract of cataria or catnip; dose, ℥1 (4 0).

f. caulophyl'li (N.F.) fluidextract of caulophyllum, antispasmodic and emmenagogue in doses of ♏5–10 (0.3–0.6).

f. chimaph'ilæ (N.F.), fluidextract of chimaphila or pipsissewa, dose, ♏30–60 (2.0–4.0).

f. chionan'thi (N.F.), fluidextract of chionanthus, or fringe-tree bark; dose, ♏30 (2.0).

f. chira'tæ (N.F.), fluidextract of chirata, a reddish brown fluid of bitter taste; dose, ♏15–30 (1.0–2.0).

f. cimicif'ugæ (U.S.), fluidextract of cimicifuga, or black snakeroot, or black cohosh; dose, ♏15 (1.0).

f. cincho'næ (U.S.), fluidextract of cinchona, a liquid of a reddish brown color; dose ♏15 (1.0).

f. cincho'næ aquo'sum, aqueous fluidextract of cinchona, made with hydrochloric acid, glycerin, alcohol, and water; dose, ♏15 (1.0).

f. co'cæ, fluidextract of coca or of erythroxylon; dose, ℥½–1 (2 0–4 0).

f. cocilla'næ (N.F.), fluidextract of cocillana, the dried bark of *Guarea rusbyi;* dose, ♏15 (1 0).

f. cof'feæ (N.F.), fluidextract of coffee; stimulant and tonic in doses of ♏20–40 (1 3–2.6).

f. col'chici (U.S.), fluidextract of colchicum seed, each 100 c.c. should contain 0.5 gm. of colchicine; dose, ♏2–5 (0.13–0.3).

f. col'chici cor'mi (N.F.), fluidextract of colchicum corm, formerly called colchicum root; dose, ♏3 (0.2).

f. conduran'go (N.F.), fluidextract of condurango, a liquid of a brown color; dose, ℥1–2 (4.0–8.0).

f. coni'i, fluidextract of conium or hemlock, a liquid of a reddish green color; dose, ♏2–5 (0.13–0 3).

f. convalla'riæ flo'rum, fluidextract of convallaria flowers; diuretic and cardiac tonic in doses of ♏5–10 (0.3–0.6).

f. convalla'riæ radi'cis (N.F.), fluidextract of convallaria or lily of the valley, prepared from the rhizome or rootlets; dose, ♏4–8 (0 25–0.5).

f. cop'tis (N.F.), fluidextract of coptis or goldthread; stimulant and tonic in doses of ♏20–40 (1.3–2.6).

f. cor'ni (N.F.), fluidextract of cornus or dogwood; astringent and antiperiodic in doses of ♏20–40 (1.3–2.6).

f. coryd'alis (N.F.), fluidextract of corydalis, turkey corn; alterative and diuretic in doses of ♏8–15 (0.5–1.0).

f. co'to, f. paracoto (N.F.).

f. cube'bæ (U.S.), fluidextract of cubeb, a liquid of a dark green color; dose, ♏15–30 (1.0–2.0).

f. cypripe'dii (U.S.), fluidextract of cypripedium or ladies' slipper, a liquid of a reddish brown color; dose, ♏5–15 (0.3–1.0).

f. damia'næ (N.F.), fluidextract of damiana; dose ♏30 (2 0).

f. digita'lis (N.F.), fluidextract of digitalis, a liquid of a brownish green color; dose, ♏1–2 (0.06–0.13).

f. diosco'reæ (N.F.), fluidextract of dioscorea or wild yam root; dose, ℥1 (4 0).

f. dros'eræ (N.F.), fluidextract of drosera or sundew; dose, ℥1 (4 0).

f. dulcama'ræ (N.F.), fluidextract of dulcamara, or bittersweet; dose, ℥1 (4 0).

f. echina'ceæ (N.F.), fluidextract of echinacea; dose, ♏15 (1 0).

f. ergo'tæ (U.S.), fluidextract of ergot, a liquid of reddish brown color; dose, ℥½–2 (2.0–8.0).

f. eriodic'tyi (U.S.), fluidextract of eriodictyon or yerba santa, a liquid of dark greenish brown color; dose ℥½–1 (2.0–4.0).

f. eucalyp'ti (U.S.), fluidextract of eucalyptus; dose, ♏30 (2.0).

f. euon'ymi (N.F.), fluidextract of euonymus or wahoo, a brown liquid of bitter taste; dose, ♏8 (0 5), repeated with caution until the patient's tolerance is ascertained.

f. eupato'rii (U.S.), fluidextract of eupatorium or boneset, a liquid of a brownish color, dose, ℥½–1 (2.0–4.0).

f. euphor'biæ (N.F.), fluidextract of euphorbia; dose, ♏30 (2.0).

f. fran'gulæ (N.F.), fluidextract of frangula, or buckthorn bark, a liquid of reddish brown color and bitterish taste; dose, ♏10–30 (0.6–2 0).

f. fu'ci (N.F.), fluidextract of fucus, bladder-wrack; has been recommended for obesity in doses of ♏8–15 (0.5–1.0).

f. gale'gæ (N.F.), fluidextract of galega, or European goat's rue; dose, ℥1 (4.0).

f. gelsem'ii (N.F.), fluidextract of gelsemium, a liquid of reddish brown color; dose, ♏½–1 (0 03–0 06).

f. gentia'næ (N.F.), fluidextract of gentian; dose, ♏10–30 (0.6–2.0),

f. gera'nii (N.F.), fluidextract of geranium, a reddish-brown liquid of astringent taste; dose, ʒ½–1 (2.0–4.0).

f. glycyrrhi'zæ (U.S.), fluidextract of glycyrrhiza or licorice, a yellowish brown liquid; dose, ʒ1–2 (4.0–8.0).

f. gossyp'ii cor'ticis (N.F.), fluidextract of cottonroot bark; dose, ♏30 (2.0).

f. grana'ti (U.S.), fluidextract of granatum or pomegranate, a brownish green liquid of mildly astringent taste; dose, ♏20–30 (1.3–2.0).

f. grinde'liæ (N.F.), fluidextract of grindelia, a brownish green liquid; dose ʒ½–1 (2.0–4.0).

f. guara'næ (N.F.), fluidextract of guarana, a reddish brown liquid of bitter astringent taste; dose, ʒ½–1 (2.0–4.0).

f. hamamel'idis folio'rum (N.F), fluidextract of hamamelis leaves, or of witch-hazel, a liquid of light brown color and bitter taste; dose, ♏10–30 (0.6–2.0).

f. helian'themi, fluidextract of helianthemum, frost-wort; astringent and alterative in doses of ʒ1 (4.0).

f. helonia'dis (N.F.), fluid extract of helonias, or false unicorn; dose, ♏30 (2 0).

f. hu'muli (N F.), fluidextract of hops; tonic and nerve sedative in doses of ♏20–40 (1.3–2.6)

f. hydran'geæ (N.F.), fluidextract of hydrangea or seven-barks; diuretic and antirheumatic in doses of ♏20–40 (1.3–2.6).

f. hydras'tis (U.S.), fluidextract of hydrastis or golden seal, a liquid of dark yellowish brown color and bitter taste; dose, ♏30 (2 0).

f. hyoscy'ami (U.S.), fluidextract of hyoscyamus or henbane, a greenish brown liquid; dose, ♏5–6 (0.3–0.4).

f. ipecacuan'hæ (U.S.), fluidextract of ipecacuanha or ipecac, a dark brownish red liquid of acrid taste; dose, as an expectorant, ♏1–2 (0 06–0 13), as an emetic, ♏10–30 (0 6–2 0).

f. ir'idis versicolo'ris (N.F.), fluidextract of blue flag; dose, ♏30 (2 0).

f. jala'pæ (N.F.), fluidextract of jalap; hydragogue cathartic in doses of ♏10–20 (0.6–1.3).

f. juglan'dis (N.F.), fluidextract of juglans, butternut; alterative and antiperiodic in doses of ʒ1 (4.0).

f. junip'eri (N F.), fluidextract of juniper; diaphoretic and diuretic in dose of ʒ1 (4.0).

f. ka'væ (N.F.), fluidextract of kava or methysticum; alterative and anticatarrhal in doses of ♏10–20 (0.6–1.3).

f. ko'læ (N.F.), fluidextract of cola or sterculia; dose, ʒ1 (4 0).

f. krame'riæ (N.F.), fluidextract of krameria or rhatany, a liquid of a dark reddish brown color and astringent taste; dose ♏20–40 (1.3–2.5).

f. lap'pæ (N.F.), fluidextract of lappa or burdock; dose, ♏30–60 (2.0–4.0).

f. leptan'dræ (N.F.), fluidextract of leptandra, a reddish brown liquid of a bitter disagreeable taste; dose, ♏10–60 (0.6–4.0).

f. lobe'liæ (N.F.), fluidextract of lobelia or Indian tobacco, a liquid of brownish green color and acrid taste; dose, ♏1–5 (0.06–0.3).

f. lupuli'ni (N.F.), fluidextract of lupulin, a brownish red liquid; dose ♏30–60 (2.0–4.0).

f. mal'ti (N.F.), fluidextract of malt; tonic in dose of ʒ2 (8.0).

f. man'acæ (N.F.), fluidextract of manaca, prepared by using a menstruum of three volumes of alcohol and one volume of water; average dose, ♏15 (1 0).

f. mati'co (N.F.), fluidextract of matico, a very dark green liquid of bitter taste and aromatic odor; dose ♏10–60 (0.6–4.0).

f. menyan'this, fluidextract of menyanthes, buckbean; alterative in doses of ♏10–20 (0 6–1 3).

f. meze'rei (N.F.), fluidextract of mezereum or mezereon, a green liquid of acrid taste; dose, ♏5–10 (0.3–0.6).

f. mitchel'læ (N.F.), fluidextract of mitchella, prepared by using a menstruum of diluted alcohol; average dose, ♏30 (2.0).

f. nu'cis vom'icæ (N.F.), fluidextract of nux vomica; dose, ♏1–5 (0.06–0.3).

f. paraco'to, fluidextract of paracoto, formerly fluidextract of coto; astringent in doses of ♏3–6 (0.2–0 4).

f. pare'iræ (N.F.), fluidextract of pareira, a brown liquid of bitter taste; dose, ʒ1–2 (4.0–8.0).

f. petroseli'ni radi'cis fluidextract of parsley root; emmenagogue and diuretic in doses of ♏20–40 (1.3–2.6).

f. phytolac'cæ (N.F.), fluidextract of phytolacca or pokeroot; dose, as an alterative, ♏2–5 (0.13–0.3), as an emetic, ♏10–30 (0.6–2.0).

f. pilocar'pi, fluidextract of pilocarpus or jaborandi, a liquid of reddish green color; dose, ♏10–30 (0.6–2.0),

f. podophyl'li, fluidextract of podophyllum or may-apple, a dark reddish brown liquid; dose, ♏5–20 (0.3–1.3),

f. pru'ni virgi'niæ (N.F.), fluidextract of wild cherry, a dark brownish red liquid of the odor of peach-kernels; dose, ♏15–30 (1.0–2.0).

f. quas'siæ (N.F.), fluidextract of quassia, a liquid of yellowish brown color and bitter taste; dose, ♏15–30 (1.0–2.0).

f. quer'cus (N.F.), fluidextract of quercus or white-oak bark, a liquid of reddish brown color and astringent taste; dose, ♏15–30 (1.0–2.0).

f. quilla'jæ (U S.), fluidextract of quillaja or soap-bark, a brownish liquid of acrid taste; dose, ♏1–3 (0.06–0 2).

f. rham'ni cathar'ticæ (N.F), fluidextract of rhamnus catharticus, or buckthorn berries; dose, ♏15 (1 0).

f. rham'ni purshia'næ, f. cascaræ sagradæ (U S.).

f. rham'ni purshia'næ aromat'icum, f. cascaræ sagradæ aromaticum (U.S.).

f. rhe'i (U S), fluidextract of rhubarb, a liquid of dark reddish brown color, dose, ♏15–30 (1.0–2 0).

f. rho'is gla'bræ (U.S.), fluidextract of rhus glabra or sumach berries, a deep red liquid of astringent, slightly acid taste; dose, ♏15–30 (1.0–2.0)

f. ro'sæ (U.S), fluidextract of rose, a liquid of deep rose-red color, slightly astringent taste, and an odor of roses; dose, ʒ1–2 (4.0–8.0).

f. ru'bi (N.F.), fluidextract of rubus, or blackberry bark, a dark brown liquid of astringent taste; dose, ʒ½–2 (2.0–8.0).

f. ru'micis (N.F.), fluidextract of rumex, or yellow dock; dose, ʒ1 (4 0).

f. sa'bal (N.F.), fluidextract of sabal or saw palmetto; dose, ♏10–30 (0 6–2.0).

f. sabi'næ, fluidextract of savine, a greenish brown liquid, usually employed externally; internal dose, ♏5–10 (0 3–0 6).

f. sanguina'riæ (N.F.), fluidextract of sanguinaria or bloodroot, a deep red liquid of acidulous acrid taste; dose, ♏1–2 (0 06–0.13).

f. san'tali al'bi (N.F.), fluidextract of sandalwood, prepared by using alcohol as a menstruum; average dose ʒ1 (4.0).

f. sarsapari'læ (U. S.), fluidextract of sarsaparilla, a dark brown liquid; dose, ♏30–60 (2.0–4.0).

f. sarsapari'læ compos'itum (N.F.), compound fluidextract of sarsaparilla, made from sarsaparilla, licorice, sassafras, and mezereon; dose, ♏30–60 (2.0–4.0).

f. scil'læ (U.S.), fluidextract of squill, a liquid of yellowish color and sour, bitter taste; dose, ♏2–3 (0.13–0.2).

f. scopa'rii (N.F.), fluidextract of scoparius, or broom tops; dose, ♏15 (1.0).

f. sco'polæ, fluidextract of scopola; dose, ♏1–5 (0 06–0 3).

f. scutella'riæ (N.F.), fluidextract of scutellaria or skullcap, a greenish brown liquid; dose, ♏30–60 (2.0–4.0).

f. senecio'nis (N.F.), fluidextract of senecio, prepared in a menstruum of one volume of water to two volumes of alcohol; dose, ʒ1 (4 0).

f. sen'egæ (U.S.), fluidextract of senega, a dark brown liquid of acrid taste; dose ♏2–10 (0.13–0 6).

f. sen'næ (U.S.), fluidextract of senna, a liquid of dark brown color; dose, ʒ½–1 (2.0–4.0).

f. serpenta'riæ (N.F.), fluidextract of serpentaria or snakeroot, a reddish brown liquid of bitter taste; dose, ♏15–30 (1.0–2.0).

f. sola'ni (N.F.), fluidextract of solanum, or horsenettle berries; dose ʒi (4.0).

f. spige'liæ, fluidextract of spigelia, a dark brown liquid; dose, ʒ½–1 (2.0–4.0).

f. staphisa'griæ, fluidextract of staphisagria or stavesacre, a light greenish fluid; employed externally only as a parasiticide.

f. stercu'liæ, f. kolæ (N.F.).

f. stillin'giæ (N.F.), fluidextract of stillingia, a reddish brown liquid with a pungent bitter taste; dose, ♏15–30 (1.0–2.0).

f. stillin'giæ compos'itum (N.F.), compound fluidextract of stillingia; made from stillingia and corydalis each 25, iris, sambucus, and chinophila each 12.5, coriander and xanthoxylum berries, each 6.25; alterative and resolvent in doses of ♏20–40 (1.3–2.6).

f. stramo'nii (N.F.), fluidextract of stramonium, made from the leaves, a dark greenish brown fluid; dose, ♏1–2 (0.06–0.13).

f. sum'bul, fluidextract of sumbul or muskroot, a yellowish brown liquid with an odor of musk; dose, ♏15–45 (1.0–3.0).

f. tarax'ici (N.F.), fluidextract of taraxacum or dandelion root, a reddish brown liquid with a slightly bitter sweetish taste; dose, ♏30–60 (2.0–4.0).

f. thu'jæ (N.F.), fluidextract of thuya, or arbor vitæ; dose, ♏30 (2 0).

f. thy'mi (N.F. , fluidextract of thyme; dose, ʒi (4.0).

f. ton'gæ (N.F.), fluidextract of tonga, prepared by using a menstruum of one volume of alcohol and three volumes of water, average dose, ♏30 (2.0).

f. trifo'lii (N.F.), fluidextract of trifolium, or red clover; dose, ʒi (4 0).

f. trifo'lii compos'itum (N.F.), compound fluidextract of trifolium, compound fluidextract of red clover; trifolium and glycyrrhiza, of each 215, berberis, cascara amarga, lappa, phytolacca, and stillingia, of each 108, xanthoxylum 30, using a menstruum of one volume of alcohol and three volumes of water to make 1000 c.c ; average dose, ʒi (4.0).

f. tril'lii (N.F.), fluidextract of trillium, birthroot, tonic expectorant in doses of ♏20–40 (1.3–2.6).

f. trit'ici (N.F.), fluidextract of triticum or couchgrass, a brownish liquid of a sweetish taste; dose, ʒ2–3 (8.0–12.0).

f. tur'neræ, f. damianæ (N.F.).

f. urti'cæ (N.F.), fluidextract of urtica or nettle; astringent diuretic, in doses of ♏10–20 (0.6–1.3)

f. u'væ ur'si (U.S.), fluidextract of uva ursi, a liquid of dark brown color and astringent bitter taste; dose, ♏30–60 (2.0–4.0).

f. valeria'næ (N F.), fluidextract of valerian, a fluid of reddish brown color; dose, ♏30–60 (2.0–4.0).

f. vera'tri vir'idis, fluidextract of veratrum viride, or green hellebore; dose, ♏1–2 (0.06–0.13).

f. verbas'ci fo'liæ (N.F.), fluidextract of verbascum or mullein leaves; demulcent and anticatarrhal in does of ʒi (4 0).

f. verbe'næ, fluidextract of verbena, vervain; tonic in doses of ♏10–20 (0.6–1.3).

f. vibur'ni op'uli (N.F.), fluidextract of viburnum opulus or crampbark, a reddish brown liquid of slightly astringent taste; dose, ♏15–60 (1.0–4.0).

f. vibur'ni prunifo'lii (N.F.), fluidextract of viburnum prunifolium or black haw bark, a dark brownish red liquid, of astringent and bitterish taste; dose, ♏30–60 (2.0–4.0).

f. xanthox'yli (N.F.), fluidextract of xanthoxylum or prickly ash, a liquid of reddish brown color and acrid taste; dose, ♏30–60 (2.0–4.0).

f. ze'æ (N.F.), fluidextract of zea or cornsilk; diuretic in dose of ʒi (4.0).

f. zingib'eris (U.S), fluidextract of ginger, a brownish red liquid of pungent spicy taste; dose, ♏5–20 (0.3–1.3).

fluidglyceratum (flu"id-glis-er-a'tum). Fluidglycerate, one of a class of pharmaceutical preparations in the National Formulary, containing approximately 50 per cent. by volume of glycerin but no alcohol, and of the same drug strength as fluidextracts. **f. cas'caræ sagra'dæ** (N.F.), fluidglycerate of cascara sagrada; dose ♏10–20 (0.6–1.3). **f. cas'caræ sagra'dæ aromat'icum** (N.F.), aromatic fluidglycerate of cascara sagrada, flavored with licorice and the oils of fennel, clove, and cinnamon; dose, ♏10–20 (0.6–1.3). **f. glycyrrhi'zæ**, fluidglycerate of licorice, employed as a flavor in doses of ♏30 (2.0). **f. krame'riæ** (N.F.), fluidglycerate of krameria or rhatany; dose, ♏15 (1.0). **f. rhe'i** (N.F.), fluidglycerate of rhubarb; dose, ♏10–20 (0 6–1.3).

fluidism (flu'i-dizm). Humoralism.

fluidounce (flu"id-owns'). A measure of capacity containing eight fluidrams. The British fluidounce is a measure containing one avoirdupois ounce, 437.5 grains, of distilled water; the U.S. fluidounce is $\frac{1}{128}$ gallon and contains 456.033 grains of distilled water. The British fluidounce equals 28.4 c.c., the U.S. fluidounce equals 29.57 c.c.

fluidrachm, fluidram (flu"i-dram'). A measure of capacity, ⅛ of a fluidounce, a teaspoonful. The British fluidram contains 54.8 grains of distilled water, and is equal to 3.55 c.c.; the U.S. fluidram contains 57.1 grains of distilled water and equals 3.70 c.c.

fluke (flook) [A.S. *flōc*, flatfish.] One of a number of varieties of trematode worms, parasitic in the intestine, liver, lungs, kidneys, blood, and other regions of man and the lower animals **blood f.**, *Schistosomum hæmatobium*. **bron'chial f.**, *Paragonimus westermanni*. **Egyp'tian intes'tinal f.**, *Cotylogonimus heterophyes*. **Japanese' liv'er f.**, *Opisthorchis sinensis*. **lan'cet f.**, *Dicrocelium lanceolatum*. **liv'er f.**, *Fasciola hepatica*. **lung f.**, *P ragonimus westermanni*.

flumerin (flu'mer-in). The disodium salt of hydroxymercurifluorescein, recommended in the treatment of syphilis in doses of not greater than 3 to 5 mg. per kilogram weight of the patient, given intravenously every other day following an earlier course of arsphenamine.

flu'mina pilo'rum [L pl. of *flumen*, river; gen. pl. of *pilus*, hair.] [BNA] Hair streams, the curved lines along which the hairs are arranged on the head and various parts of the body, especially noticeable in the fetus.

flu'or al'bus [L white flow] Leucorrhea.

fluorescein, fluoresceine (flu-or-es'se-in). Resorcinol-phth lein, made by heating resorcinol and phthalic anhydride; an orange-red crystalline powder giving a bright green fluorescence in solution, empl yed in the diagnosis of corneal lesions, the denuded parts taking a green color.

fluoresceinum solubile (flu''or-es-se-in'um sol-u'bĭle) (Br.) The disodium salt of fluorescein.* Used in the treatment of growths in the pharynx and larynx.

fluorescence (flu-or-es'ens) [*fluor*-spar, which possesses this property.] The property of rendering visible the ultraviolet or actinic rays of the spectrum or of becoming self-luminous when exposed to the light or to other rays.

fluorescent (flu-or-es'ent). Possessing the quality of fluorescence.

fluorescin (flu-or-es'sin). Resorcinol-phthalin, a derivative of fluorescein; a bright yellow powder employed, like fluorescein, in the diagnosis of corneal lesions in applications of 1 drop of a 2 per cent. solution.

flu'oride. A compound of fluorine with another element. **cal'cium f.**, fluor-spar. **so'dium f.**, fluorol, see under *sodium*.

fluorine (flu'or-ēn). A gaseous chemical element, symbol F, atomic weight, 19.

fluoroform (flu-or'o-form). A gas, CHF_3, resembling chloroform vapor somewhat. **f. water,** fluoroformol.

fluorofor'mol. Fluoryl, fluoroform water, a 2 8 per cent. solution of fluoroform, CHF_3, in water a colorless, odorless, and practically tasteless fluid; has been employed in tuberculosis in doses of ʒ½ (15.0)

flu'orol. Sodium fluoride.

fluorom'eter. A device for interpreting the shadows in an *x*-ray projection on the screen.

fluoroscope (flu-or'o-skop) [*fluorescence* + G. *skopeō*, I examine.] An apparatus for rendering visible the shadows of the *x*-rays which, after passing through the body examined, are projected on a fluorescent screen of calcium tungstate.

fluoroscopic (flu"or-o-skop'ik). Relating to or effected by means of fluoroscopy.

fluoroscopy (flu-or-os'ko-pĭ). Examination of the inner parts of the body by means of the fluoroscope.

fluorphen'etol. A compound of fluorine with phenetol.

fluorrheumin (flu-or-ru'min). An ointment containing 1 per cent. each of fluorphenetol and difluordiphenyl in lanolin, employed in rheumatism and grippal neuralgia.

flu'or-spar [L. *fluor*, a flowing.] Calcium fluoride a mineral, found often in silver and cobalt mines; it is phosphorescent when heated, and is often fluorescent and beautifully tinted.

flush. 1. To wash out a wound or a cavity with a full stream of water. 2. Blush; redness, usually temporary, of the skin. **hec'tic f.,** a redness of the face accompanying the rise of temperature in tuberculosis and certain other chronic affections.

flutter (flut'ur) [A.S. *flotorian*, to float about.] Agitation, tremulousness. **auric'ular f.,** a condition in which the cardiac auricle, or atrium, contracts very rapidly but rhythmically, thereby differing from auricular fibrillation in which the contractions are irregular.

flux [L. *fluxus*, a flow.] 1. The discharge of more or less fluid material in large amount from a cavity or surface of the body; a diarrhea. 2. Material discharged from the bowels. **al'vine f.,** simple diarrhea. **blood'y f.,** dysentery. **month'ly f.,** the menses. **seba'ceous f.,** steatorrhea. **white f.,** sprue (2)

fly [A.S. *fleóge*.] A dipterous, or two-winged, insect of the family *Muscidæ*. **black f.,** buffalo gnat, a species of *Simulium*. **blow f.,** see *blow-fly*. **house f.,** *Musca domestica*.

fly-blister. A cantharidal blister.

fo'cal. Relating to a focus. **f. infec'tion,** an infection confined ordinarily to a distinct location, such as the tonsils or tooth-sockets, from which at times microorganisms or their toxins escape to infect other regions or the general system.

Fochier's ab'scess (fŏ-shĭ-a') [Alphonse *Fochier*, French gynecologist, 1845–1903.] Fixation abscess.*

focile (fo'sil-e) [L. from *fusillus*, a small spindle.] One of the bones of the forearm or leg. **f. ma'jus antibra'chii,** ulna. **f. ma'jus cru'ris,** tibia. **f. mi'nus antibra'chii,** radius. **f. mi'nus cru'ris,** fibula.

fo'cus, pl *foci* [L. the hearth.] 1 The point at which the light rays meet after passing through a convex lens, such as the crystalline lens of the eye. 2. The center, or the starting-point, of a disease process. **con'jugate foci,** two points in relation to two lenses or concave mirrors, so in relation to each other that the rays from a light at one point are focussed at the other, and *vice versa*. **prin'cipal f.,** the meeting-point of rays passing into a lens parallel to its axis. **real f.,** the point of meeting of convergent rays. **vir'tual f.,** the point from which divergent rays seem to proceed, or that at which they would meet if prolonged backward.

Fodéré's sign (fŏ-da-ra'). Swelling of the lower eyelids in cases of retention of chlorides and urea, even in the absence of albuminuria.

fœnic'ulum, gen. *fœnic'uli* [dim. of *fœnum*, hay.] (Br., N.F.) Fœniculi fructus, fennel, fennel fruit, fennel seed, the dried nearly ripe fruit of *Fœniculum vulgare*, an herb of southern Europe and eastern Asia; diaphoretic, diuretic, and carminative, in doses of gr. 10–30 (0.6–2.0)

fœnum græcum (fe'num gre'kum) [L. *fœnum*, hay, *græcum*, Greek.] Fenugreek, the dried ripe fruit of *Trigonella fœnum-græcum*, an herb of southern Europe and western Asia; employed externally as an emollient in ointment and poultice.

Foerster's opera'tion (fer'ster) [Otfried *Foerster*, German neurologist, *1873.] A modification of Dana's operation, resection of the posterior spinal nerve-roots in spastic paralysis.

Foerster's shift'ing type (fēr'ster) [R *Foerster*, ophthalmologist of Breslau, 1825–1902.] A limitation of the primary normal visual field; an object brought gradually from without toward the fixed point is seen sooner than normal, whereas the perception of one moved from the center toward the periphery is lost sooner than normal; the visual field is therefore greater in the first case than in the second, which is the reverse of the normal; the phenomenon occurs in neurasthenia **F.'s photom'eter,** an instrument for measuring the visual power by determining the least amount of light that will render an object visible to the person tested

fœ'tus. An incorrect spelling of *fetus*.

fogg'ing. Dimness of vision, nephalopia.

fold (fōld). Plica, a ridge; a margin apparently formed by the doubling back of a lamina. For the various folds, not here defined, see *plica*. **gen'ital f.,** one of two integumentary folds on either side of the genital tubercle in the embryo, from which are developed the labia minora or the walls of the urethra in the male **hypoblas'tic f.,** a folding over of the hypoblast giving origin to the notochord. **neu'ral f.,** one of the upgrowths of ectoderm forming the neural canal. **oper'cular f.,** tissue forming an adhesion between the tonsil and the anterior pillar of the fauces **rec'tal f.,** rectal valve plica* transversalis recti [BNA]. **rectoves'ical f.,** excavatio rectovesicalis [BNA]. **ventric'ular f.,** false vocal cord, plica* ventricularis [BNA]. **vestig'ial f.,** ligamentum venæ cavæ sinistræ.

fo'lia. Plural of *folium*.

foliaceous (fo-lĭ-a'shus) [L. *foliaceus*.] Relating to or resembling a leaf or leaves.

Fo'lian proc'ess [Cæcilius *Folius* or *Folli* Venetian anatomist, 1615–1650.] Processus anterior mallei.

fo'liar gap. In ferns, one of the meshes in the vascular network of the stem, from the margin of which a branch bundle passes out to the leaf.

foliate papillæ (fo'lĭ-āt pă-pil'e). Papillæ vallatæ [BNA].

folie (fŭ-le') [Fr. from L *follis*, bellows.] Insanity **f. à deux** (ă-dė') [Fr. *deux*, two], imposed insanity, insanity affecting two individuals who are or have been intimately associated. **f. du doute** (doot), doubting mania. **f. de pourquoi** (poor-kwă') [Fr. *pourquoi*, why], the constant asking

(by an adult) of questions, a symptom noted sometimes in the psychasthemic. **f. gémellaire** (zhamel-air') [Fr relating to twins], a psychosis appearing simultaneously, or nearly so in twins, who are not necessarily living together or intimately associated at the time. **f. musculaire'**, severe chorea. **f. raisonnante** (ra-zŭ-nahnt'), delusional insanity, paranoia.

Fol'in's test [Otto K. O. *Folin*, American biological chemist, born in Sweden, *1867.] 1. A quantitative est for uric acid; the uric acid is precipitated with ammonia, forming ammonium urate; it is then oxidized with potassium permanganate, and the amount is measured. 2. A quantitative test for urea; the urea is decomposed by boiling with magnesium chloride, and the freed ammonia is measured

fo'lium, pl. *fo'lia* [L. a leaf] A broad, thin, leaflike structure. **f. cacu'minis** [L. *cacumen*, tip, end], f. vermis [BNA]. **f. ver'mis** [BNA], f. cacuminis, the posterior subdivision of the superior vermis of the cerebellum.

follicle (fol'i-kl) [L. *folliculus*.] 1. A simple tubular gland. 2. A crypt or minute cul-de-sac or lacuna, such as the depression in the skin from which the hair emerges. 3. A minute circumscribed mass of lymphoid cells in the mucous membrane 4. One of the vesicular bodies in the ovary, containing the ova, Graafian follicle. 5. In botany, a dry pod-like fruit, splitting by the ventral suture. **den'tal f.,** the dental sac with its contents, the embryonic tooth. **gas'tric f.,** (1) one of the masses of lymphoid cells in the mucous membrane of the stomach; (2) one of the tubular glands of the stomach secreting the gastric juice. **hair f.,** folliculus pili. **intes'tinal f.,** Lieberkuehn's f., one of the numerous tubular glands in the mucous membrane of the intestine, glandula* intestinalis. **lentic'ular f.,** gastric f. (1). **seba'ceous f.,** glandula sebacea, one of the sebaceous glands of the skin opening into the hair-follicles. **sol'itary f.,** one of a number of isolated masses of lymphoid cells in the intestinal wall.

folliclis (fol-e-klēs') [Fr.] Sebaceous folliculitis, an eruption resembling acne agminata, located on the extremities.

follic'ular. Relating to a follicle or follicles.

follic'ulin. One of the internal secretions of the ovary which, with lutein and ovulin, constitutes the hormone oophorin.

folliculitis (fŏ-lik-u-li'(le')tis). An inflammation of any follicles, specifically of the sebaceous follicles folliclis, acne agminata. **ag'minate f.,** hypertrophic ringworm, granuloma* trichophyticum **f. bar'bæ,** sycosis **f. decal'vans** [L. *decalvare*, to make bald], alopecia follicularis.

folliculo'ma. A cystic enlargement of a Graafian follicle.

folliculo'sis. The presence of lymph-follicles in abnormally great numbers.

folliculus, pl. *follic'uli* (fŏ-lik'u-lus) [L. dim. of *follis*, bag.] Follicle. **f. oöph'orus prima'rius,** a spherical body consisting of a single layer of flattened cuboid cells, surrounding the undeveloped ovum in the cortex of the ovary; it may become later a Graafian follicle. **f. oöph'orus vesiculo'sus** [BNA], Graafian follicle, a spherical body or vesicle, containing the matured ovum, in the cortex of the ovary. **f. pi'li** [BNA], hair-follicle, a deep, narrow pit, formed by an invagination of the epidermis and corium; it contains the root of the hair and into it the ducts of the sebaceous glands open; the follicle is lined by a fibrous sheath derived from the corium, and by the outer and inner root-sheaths derived from the epidermis. **f. solita'rius,** solitary follicle, nodulus* lymphaticus solitarius.

follutein (fol-lu'te-in). Trade name of a preparation of the sex-stimulating hormones of the anterior pituitary gland.

fomenta'tion [L. *fomentare*, to apply a poultice.] 1. A warm application, poultice, stupe. 2. The application of warmth and moisture in the treatment of disease, poulticing.

fo'mes, pl. *fo'mites* [L. tinder.] A substance, such as clothing, capable of absorbing and transmitting the contagium of disease; usually employed in the plural.

fontactoscope (fon-tak'to-skōp). An electroscope for estimating the radioactivity of waters and gases.

Fontana's canal' (fon-tah'nah) [Felice *Fontana*, Italian anatomist 1730–1805.] Canal of Schlemm or of Lauth, sinus* venosus sclerae. **F.'s mark,** a transverse fold seen on a nerve-trunk where it has been cut. **F.'s spa'ces,** spatia anguli iridis

Fontana's stain (fon-tah'nah) [Arturo *Fontana*, Italian dermatologist, *1873.] For spirochetes: after fixing in glacial acetic acid 1, formalin 20, and water 100, the films are stained in 1 per cent. aqueous phenol solution containing tannic acid 5 per cent., and then covered with a 0.25 per cent. aqueous solution of silver nitrate to which a dilute ammonium hydrate solution has been added drop by drop until a slight turbidity occurs.

fontanel, fontanelle (fon-tan-el') [Fr. dim. of *fontaine*, fountain, spring.] Membranous intervals at the angles of the cranial bones in the infant. There are normally six, corresponding to the pterion and asterion, on either side, and to the bregma and lambda, in the middle line, in the adult. **ante'rior f.,** frontal f. **anterolat'eral f.,** sphenoidal f. **bregmat'ic f.,** frontal f. **Cas'ser's f., Casse'rio's f.,** mastoid f **front'al f.,** anterior f., bregmatic-f, a diamond-shaped membranous interval at the crossing of the coronal and the sagittal and metopic sutures, where the anterior superior angles of the parietal bones meet the two ununited halves of the frontal. **Gerdy's f.,** sagittal f. **mas'toid f.,** posterolateral f, an interval on either side between the adjacent margins of the parietal, occipital, and mastoid portion of the temporal bones **occip'ital f.,** posterior f., a triangular interval at the union of the lambdoid and sagittal sutures, where the posterior superior angles of the parietal bones meet the occipital. **poste'rior f.,** occipital f **posterolat'eral f.,** mastoid f. **sag'ittal f.,** an occasional fontanel-like defect in the sagittal suture in the newborn. **sphenoid'al f.,** anterolateral f., an irregularly shaped interval on either side, where the frontal, parietal, squamous portion of the temporal, and greater wing of the sphenoid bones meet.

fontic'ulus [L. dim. of *fons*, fountain, spring.] Fontanel.

food [A.S. *fōda*.] Aliment, nourishment, what is eaten to supply the necessary nutritive elements **chem'ical f.,** syrupus phosphatum compositus (N.F.).

abstinence from, fasting, dieting, nestia, nestis, abrosia, **desire for,** appetite, hunger. **distaste for,** anorexia, sitiophobia, fastidium cibi. **excessive appetite for,** bulimia, cynorexia, hyperorexia, polyphagia, acoria. **fatty,** hydrocarbon. **nitrogenous,** protein. **poisoning,** bromatotoxism, allantiasis, botulism (sausage), tyrotoxism (milk, ice-cream, cheese), creatotoxism (meat),

ichthyotoxism (fish), myt lotoxism (mussels), ostreotoxism (oysters), collotoxism (clams), mycetism, muscarinism (mushrooms). **saccharine,** carbohydrate. **starchy,** carbohydrate. **treatment by abstinence from,** hunger cure, starvation cure, nestiatria, limotherapy, nestitherapy. **treatment by an excess of,** superalimentation, suralimentation, gavage.

food-ball. Phytobezoar.

food-fe'ver. A disorder of childhood consisting of a sudden rise of temperature accompanied by more or less marked digestive disturbances, continued for a few days to several weeks; believed to be due to intestinal autointoxication.

food-pois'oning. Poisoning by tainted food, or by some substance naturally poisonous, such as some mushrooms; sitotoxism, bromatotoxism; forms of f.-p. are botulism, mycotoxism, mytilotoxism, ptomainotoxism, tyrotoxism.

foot (A S. *fōt*) 1. Pes, the lower, pedal, extremity of the leg 2. A unit of length, containing 12 inches, equal to 30.48 cm. **arches of the f.,** see *arch.* **ath'lete's f.,** see under *athlete.* **ball of the f.,** the padded portion of the sole at the anterior extremity of the metatarsus, upon which the weight rests when the heel is raised. **broad f.,** spread f. **chauffeur's f.,** numbness of the right foot, often associated with cramps in the calf muscle. **claw f.,** atrophy of the foot with contractures of the toes. **cleft f.,** a congenital deformity in which the division between the toes, especially the third and fourth, extends more or less into the metatarsal region. **club f.,** talipes, pes contortus. **dang'le f.,** drop-foot, a dragging of the f. in walking in consequence of paralysis of the anterior leg muscles. **flat f.,** see *flat.* **fun'gous f.,** mycetoma. **holl'ow f.,** pes cavus. **Madu'ra f.,** mycetoma. **march f.,** swelling and pain in the middle portion of the foot marking a metatarsal fracture. **Mor'ton's f.,** metatarsalgia. **moss'y f.,** a chronic disease characterized by a thick growth of vascular painful warts on the feet; it is said to be common along the Amazon. **reel f.,** club-foot. **roof of the f.,** tarsus. **sole of the f.,** planta. **spread f.,** metatarsus latus. **weak f.,** an incipient flat f.

absence, apodia. **amputations of,** Chopart's, Hey's, Lisfranc's, Mackenzie's, Pirogoff's, Syme's. **animal with four,** quadruped **animal with two,** biped **bath for,** pediluvium **burning pain,** causalgia, erythromelalgia **callosity on,** corn, clavus. **care of,** pedicure, chiropody. **club,** talipes, pes contortus. **condition of having but one,** monopodia, sympodia. **dropsy,** podedema. **fetid perspiration,** podobromidrosis, bromidrosis pedum **flat,** pes planus, tarsoptosia. **fungous,** podarthrocace, podelcoma, mycetoma, Madura foot **fusion of,** sympodia. **gout,** podagra. **having long,** longipedate. **having short,** brevipedate. **inflammation,** podarthritis. **large size,** macropodia, mega opodia **lower surface,** sole, planta, thenar, pedion. **pain in,** podalgia, pododynia, erythromelalgia, causalgia, metatarsalgia, pedialgia, pedionalgia, pedioneuralgia. **perforating ulcer,** dermosynovitis. **rheumatism,** podarthritis **slender,** leptopodia **small size,** micropodia **sole,** planta. **spasm,** podospasm, podospasmus, podismus **thick,** pachypodia **ulcer,** podelcoma, dermosynovitis **upper surface,** dorsum, instep.

foot-and-mouth disease'. See under *disease*

foot-bone. Os pedis, coffin* bone in the horse.

foot-cells. Sertoli's* cells

foot-phenom'enon. Ankle clonus.*

foot-plate. The base of the stapes, an ossicle of the tympanum.

foot-pound. The energy or force necessary to raise a weight of 1 pound to a height of 1 foot.

foot-rot. A contagious disease, in sheep, characterized by chronic inflammation of the foot, ulceration, softening of the hoof, discharge of a fetid odor, and lameness

forage (for-azh') [F. boring.] The operation of cutting a channel by surgical diathermy through an enlarged prostate.

foramen, pl. *foramina* (fo-ra'men, fo-ram'i-nah) [L. an aperture.] An aperture or perforation through a bone or a membranous structure. See also *foramina.*

ante'rior con'dyloid f., hypoglossal canal [BNA] of the occipital bone, giving passage to the hypoglossal nerve and occasionally a meningeal branch of the ascending pharyngeal artery.

aor'tic f., hiatus aorticus, the posterior opening in the diaphragm through which the aorta passes.

ap'ical f., the opening at the apex of the root of a tooth which gives passage to the nerve and blood-vessels.

arach'noid f., f. of Magendie.

con'jugate f., a f. formed by the notches of two bones in apposition.

exter'nal au'ditory f., external auditory meatus.

f. alveola're, one of the foramina* alveolaria.

f. cæcum, blind foramen; (1) [BNA], a foramen in the suture between the forepart of the ethmoid bone and the frontal, sometimes transmitting a small vein from the nose to the longitudinal sinus; (2) [BNA], the upper termination of the anterior median fissure of the medulla oblongata where it meets the transvere groove between the medulla and the pons; (3) [BNA], the opening of the ductus* linguales at the apex of the sulcus* terminalis on the dorsum of the tongue; (4) a small pit on the posterior wall of the pharynx in the middle line.

f. carot'icum, carotid foramen, the opening at each extremity of the carotid canal in the petrous portion of the temporal bone; the external carotid foramen is on the inferior surface of the pyramid, the internal is at the apex.

f. costotransversa'rium [BNA], costotransverse f., an opening between the anterior and posterior costotransverse ligaments, connecting the neck of a rib with the transverse process of a vertebra, through which passes the intercostal branch of the spinal nerve.

f. diaphrag'matis sel'læ [BNA], a hole in the center of the diaphragm of the sella giving passage to the infundibulum.

f. epiplo'icum [BNA], f. of Winslow, the passage, below and behind the portal fissure of the liver, connecting the two sacs of the peritoneum.

f. ethmoida'le [BNA], ethmoidal foramen, one of two foramina, *f. e. anterius* and *f. e. posterius,* formed by grooves on either edge of the ethmoidal notch of the frontal bone, and completed by similar grooves on the ethmoid bone; the anterior transmits the internal branch of the nasal nerve and the anterior ethmoidal vessels, the posterior the posterior ethmoidal vessels

f. fronta'le [BNA], frontal foramen; the incisura frontalis, or supraorbital notch, when, as occasionally happens, it is bridged over to form a canal

f. incisi'vum [BNA], incisive or incisor f., f. of Stenson; a Y-shaped canal at the anterior part of the intermaxillary suture, having one opening below just behind the central incisor teeth, and two above, one on either side of the incisor crest; the upper arms contain the remains of Jacobson's organs.

f. infraorbita'le [BNA], infraorbital foramen; the external opening of the infraorbital canal, on the anterior surface of the body of the maxilla.

f. interventricula're [BNA], interventricular f., f. of Monroe, a communication between the third and the lateral ventricles on either side, passing from the upper and anterior part of the lateral wall of the third ventricle outward and upward between the anterior pillars of the fornix and the anterior tubercles of the thalami.

f. interervertab'le, one of a number of openings into the spinal canal bounded by the pedicles of adjoining vertebræ above and below, the vertebral bodies anteriorly, and the articular processes behind.

f. ischiad'icum, one of two foramina, *f. i. majus* and *f. i. minus,* formed by the great and small sacrosciatic ligaments crossing the sciatic notches in the innominate bone.

f. jugula're [BNA], f. lacerum posterius.

f. lac'erum [BNA], lacerated f., f. lacerum medium.

f. lac'erum ante'rius, fissura orbitalis superior [BNA].

f. lac'erum me'dium, an irregular aperture between the apex of the petrous portion of the temporal bone and the body of the sphenoid, transmitting the cartoid artery and its veins, the large superficial petrosal nerve, and sympathetic filaments.

f. lac'erum poster'ius, jugular* foramen.

f. mag'num, f. occipitale magnum [BNA].

f. mandibula're [BNA], mandibular f., inferior dental f.; the opening, on the inner surface of the ramus of the mandible, of the inferior dental canal.

f. mastoid'eum [BNA], mastoid foramen; an opening at the posterior portion of the mastoid process, transmitting a small artery to the dura and a vein to the lateral sinus.

f. menta'le [BNA], mental foramen; the anterior opening of the inferior dental canal on the body of the mandible external to and above the mental tubercle.

f. nervo'sum, one of the foramina* nervosa.

f. nutric'ium [BNA], nutrient f., the opening through which the nutrient artery passes into the medullary cavity of a bone.

f. obtura'tum [BNA], obturator or thyroid f., a large, oval or irregularly triangular aperture in the lower part of the innominate bone, the margins of which are formed by the pubis above and in front and the ischium below and behind; it is closed in the natural state by the obturator or thyroid membrane, except for a small opening for the passage of the obturator vessels and nerve.

f. occipita'le mag'num [BNA], the large oval opening in the occipital bone giving passage to the lower part of the medulla oblongata, the two vertebral arteries and spinal accessory nerves, and the blood-vessels of the upper portion of the spinal meninges.

f. of Magen'die, median aperture of the fourth ventricle, an opening in the roof communicating with the subarachnoid space.

f. of Wins'low, f. epiploicum [BNA].

f. op'ticum [BNA], the opening at the back of the orbit, giving passage to the optic nerve and ophthalmic vessels.

f. ova'le [BNA], (1) the opening in the fetal heart between the two auricles, or atria; (2) a large opening in the greater wing of the sphenoid bone, behind the f. rotundum, transmitting the third portion of the trigeminal nerve, and the small meningeal artery.

f. palati'num ma'jus [BNA], larger palatine of; the opening near the posteroexternal angle of the palate bone of the pterygopalatine canal.

f. palati'num mi'nus, one of the foramina* palatina minora.

f. palati'num poste'rius, an opening at the posterior angle of the hard palate on either side for the transmission of the great descending palatine nerve and the posterior palatine vessels.

f. parieta'le [BNA], parietal foramen, a foramen near the upper border, posteriorly, of the parietal bone; it transmits a minute artery and vein.

f. quadra'tum, f. venæ cavæ [BNA].

f. rotun'dum, an opening in the great wing of the sphenoid bone, transmitting the maxillary nerve.

f. sacra'le, one of the foramina* sacralia.

f. singula're [BNA], a foramen in the internal auditory meatus, behind the area cochlearis, which transmits the nerves to the saccule.

f. sphenopalati'num (1) f. palatinum majus; (2) [BNA], the foramen formed from the sphenopalatine incisure of the palate bone when closed in by articulation with the under surface of the sphenoid bone.

f. spino'sum [BNA], an opening in the great wing of the sphenoid bone, transmitting the middle meningeal artery.

f. supraorbita'le, supraorbital foramen, the supraorbital groove when, as is not infrequent, it is bridged over and converted into a canal.

f. thyreoid'eum (1) [BNA], an opening occasionally existing in one or both of the plates of the thyroid cartilage; (2) f. obturatum.

f. transversa'rium [BNA], transverse, costotransverse, or vertebrarterial foramen; the foramen in the transverse process of a cervical vertebra for the passage of the vertebral artery and vein and sympathetic nerve plexus.

f. ve'næ ca'væ [BNA], f. quadratum, an opening in the right lobe of the central tendon of the diaphragm which transmits the inferior vena cava and branches of the right phrenic nerve.

f. ve'næ min'imæ, one of the foramina* venarum minimarum.

f. vertebra'le, (1) f. transversarium; (2) [BNA], the foramen formed by the union of the vertebral arch with the body.

f. zygomat''icofacia'le [BNA], zygomaticofacial f., malar f., the opening, on the outer surface of the malar bone beneath the orbital margin, of the malar canal transmitting the ramus subcutaneus malæ.

f. zygomat''icoorbita'le [BNA], zygomatico-orbital f., the common opening on the orbital surface of the malar bone of the malar and the temporomalar canals; sometimes these canals have each a separate opening on the orbital surface.

f. zygomat''icotempora'le [BNA], zygomaticotemporal f., the opening, on the temporal surface of the malar bone, of the temporomalar canal, transmitting the temporal branch of the orbital nerve.

inter'nal au'ditory f., porus acusticus internus, the opening of the internal auditory meatus on the posterior surface of the petrous portion of the temporal bone.

ma'lar f., f. zygomaticofaciale.

olfac'tory f., one of the openings in the cribriform plate of the ethmoid bone, transmitting the olfactory nerves.

poste'rior con'dyloid f., condyloid canal [BNA] of the occipital bone, giving passage to a vein emptying into the transverse (lateral) sinus.

stylomas'toid f., an opening on the inferior surface of the petrous portion of the temporal bone, between the styloid and mastoid processes; it transmits the facial nerve and stylomastoid artery.

vertebrarte'rial f., f. transversarium.

foramina (fo-ram'i-nah). Plural of *foramen*. **f. alveola'ria,** alveolar foramina, openings of the posterior dental canals on the posteroexternal surface of the body of the maxilla. **f. cartilaginis meatus** [NK], incisuræ cartilaginis meatus acustici externi [BNA]. **f. nasa'lia,** vascular foramina opening on the outer surface of each nasal bone. **f. nervo'sa** [BNA], habenula perforata, the perforations along the tympanic lip of the lamina spiralis giving passage to the cochlear nerves. **f. palati'na mino'ra** [BNA], smaller palatine formina, external accessory palatine canals, passing vertically through the tuberosity of the palate bone and transmitting the smaller palatine nerves and vessels. **f. papilla'ria re'nis** [BNA], numerous minute openings, the apertures of the secreting tubules, in the summit of each renal papilla. **f. sacra'lia** [BNA], the openings between the fused sacral vertebræ transmitting the sacral nerves. **f. vena'rum minima'rum** [BNA], foramina of the smallest veins, Thebesian foramina, a number of fossæ in the wall of the right auricle, or atrium, containing the openings of minute veins.

Foraminif'era [L. *foramen*, aperture, + *ferre*, to carry.] A subclass of *Rhizopoda* having anastomosing pseudopodia which form a network around the cell which sometimes develops into calcareous shell.

foraminif'erous. 1. Having openings or foramina. 2. Relating to the *Foraminifera*.

foraminulum (fo-ră-min'u-lum) [L. dim. of *foramen*.] A foramen, especially a very minute foramen. **f. caroticotympan'icum,** canaliculus caroticotympanicus. **f. luna'tum,** apertura lateralis ventriculi quarti.

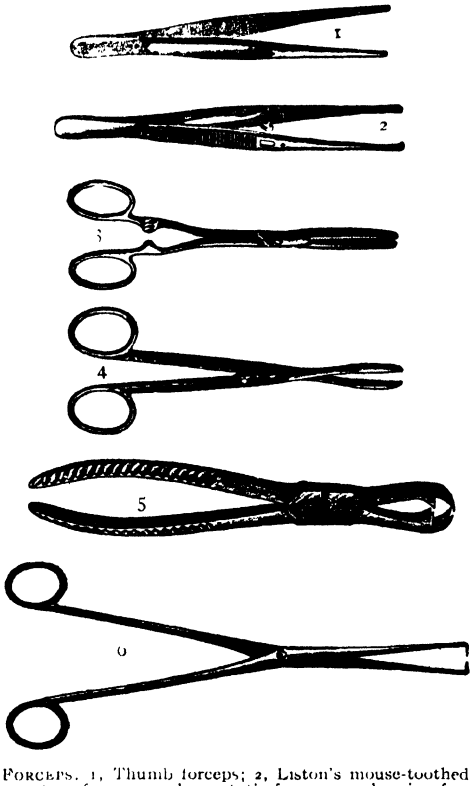
Forbes' amputa'tion. Amputation through the anterior part of the foot, disarticulating the

three cuneiform bones from the scaphoid and sawing through the cuboid.

Forbes' emul'sion of oil of tur'pentine [John *Forbes*, English physician, 1787–1861] Emulsum olei terebinthinæ fortior (N.F.).

force [L. *fortis*, strong.] Power, strength; that which tends to produce motion in a body. **an'imal f.**, muscular power. **nerve f., ner'vous f.**, the power in nerve-tissue of conduction of stimuli **reserve' f.**, the energy residing in the organism or any of its parts above that required for its normal functioning. **vi'tal f.**, see *vitalism*.

forced foot (forst fŏŏt). An acute painful swelling of the metatarsus due to fracture of the fourth metatarsal bone occurring in soldiers during forced marches



FORCEPS. 1, Thumb forceps; 2, Liston's mouse-toothed artery forceps, 3, hemostatic forceps; 4, dressing forceps; 5, lion-jaw bone-holding forceps (osteophore); 6, tenaculum forceps.

ALLIGATOR FORCEPS.

for'ceps, pl. *for'cipes* [L. a pair of tongs.] 1. An instrument for seizing anything and making compression or traction. 2. Bands of white fibers in the brain, f. major and f. minor. **ar'tery f.**, a locking f. with sloping blades for grasping the end of an artery while a ligature is being applied. **ax'is-trac'tion, f.**, obstetrical f. provided with a second handle so attached that traction can be made in the line in which the head must move. **bone f.**, a strong f. used for seizing and tearing away fragments of bone. **bullet f.**, f with thin curved blades with serrated graspin' surface, used for extracting a bullet from the tissues **cap'sule f.**, a fine, strong forceps used for removing the capsule of the lens in membranous cataract. **Cham'berlen f.**, the first obstetrical f ; see cut under *Chamberlen*. **dental f.**, forceps for extracting teeth. **dressing f.**, a f for general use in dressing wounds, removing fragments of necrosed tissue, small foreign bodies, etc **f. ante'rior**, f. minor. **f. ma'jor**, pars occipitalis [BNA], occipital part of the radiation of the corpus callosum, that part of the bundle of fibers forming the radiation of the corpus callosum which bends sharply backward into the occipital lobe of the cerebrum. **f. mi'nor**, pars frontalis [BNA], frontal part, of the radiation of the corpus callosum, that part of the bundle of fibers forming the radiation of the corpus callosum which bends forward toward the frontal lobe of the cerebrum. **f. poste'rior**, f. major. **hemostat'ic f.**, f. with a catch for locking the blades, used for seizing the cut end of an artery to control hemorrhage. **mouse-tooth f.**, f. with one or two fine points at the tip of each blade, fitting into hollows between the points on the opposite blade. **obstet'rical f.**, f. used for grasping and making traction on the fetal head in cases of dystocia; see cuts on p. 410 and also under *Chamberlen*. **roller f.**, a small forceps the blades of which are formed of rollers, employed to express trachomatous granulations on the palpebral conjunctiva, Knapp's trachoma forceps, see cut under *Knapp* **spec'ulum f.**, a slender forceps for use through a speculum, a form of tubular f. **tenac'ulum f.**, f with jaws armed each with a sharp, straight hook like a tenacul m. **thumb f.**, spring forceps used by compression with thumb and forefinger. **tracho'ma f.**, roller f. **tu'bular f.**, a long slender forceps intended for use through a cannula or other tubular instrument. **vuls·ll'a f., vulsell'um f.**, f. with vulsellum hooks at the tip of each blade; see cut under *vulsella*.

BULLET FORCEPS.

Forchheimer's sign (for'shi-mur) [Frederick *Forchheimer*, Cincinnati physician, 1853–1913.] The presence, in German measles, of a reddish maculo-papular eruption on the soft palate.

for'cipate [L. *forceps(forcip-)*, tongs, forceps.] Shaped like a forceps

forcipressure (for"sĭ-presh'ūr). A method of arresting hemorrhage by compressing the artery with forceps.

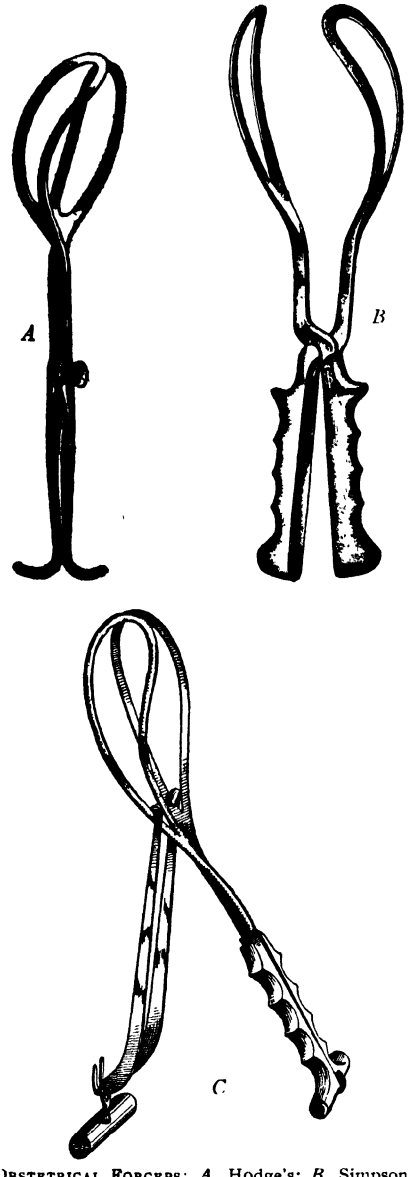
For'dyce's disease' [John Addison *Fordyce*, New York dermatologist, 1858–1925.] Pseudocolloid of the lips, a condition marked by the presence of numerous, small, yellowish white bodies or granules on the inner surface and vermilion border of the lips, thought to be hypertrophy of the sebaceous glands of the parts.

forearm (fōr'arm). The segment of the upper extremity between the elbow and the wrist; cubitus, antibrachium [BNA].

forebrain (fōr'brān). The anterior division of the brain, prosencephalon.

fore-conscious (for-kon'shus). Noting memories, not at present in the consciousness, which can be evoked from time to time; or an unconscious mental process which becomes conscious only on the fulfilment of certain conditions.

fore'finger. The second or index finger.



OBSTETRICAL FORCEPS: *A*, Hodge's; *B*, Simpson's; *C*, axis-traction.

fore'gut. Protogaster, the first portion of the primitive digestive tube in the embryo, forming the pharynx, esophagus, stomach, and small intestine to and including a part of the ileum and also the liver, pancreas, and lungs.

forehead (for'ed) The brow; the part of the face between the eyebrows and the hairy scalp; **frons, metopon. Olym'pian f.,** the abnormally prominent, high, and broad f. in hereditary syphilis.

fore'kidney. Pronephron.

Forel's' bod'y [Auguste *Forel*, Swiss neurologist, 1848–1931.] Luys' body, nucleus hypothalamicus [BNA], **F.'s com'missure,** white fibers uniting Luys' body with its fellow of the opposite side across the posterior prefrontal space. **F.'s decussa'tion,** the ventral portion of the fountain decussation.

fore'milk. Colostrum

foren'sic [L. *forensis*, relating to the *forum* or market-place] Relating to courts or legal procedures **f. med'icine,** legal medicine, medical jurisprudence; medical science in its relation to the law, especially to the determination of questions arising during a trial in court

fore'skin. Præputium, prepuce, acroposthion.

forestomach (for'stum-ak). Antrum cardiacum [BNA], peripheral dilatation of the esophagus just above the cardiac opening.

fore'waters. Hydrorrhea gravidarum.

Forlanini's meth'od (for-lah-ne'ne) [Carlo *Forlanini*, Italian physician, 1847–1918] Treatment of pulmonary tuberculosis by the establishment of an artificial pneumothorax.

For'mad's kid'ney [Henry F *Formad*, American physician, born in Russia, 1847–1892] An enlarged and somewhat misshapen kidney, often associated with chronic alcoholism.

for'mal. Methylal.

formaldehyde (for-mal'de-hīd). Formaldehydum.

formaldehydum (for-mal-de-hi'dum). Formic aldehyde, methyl aldehyde, a pungent gas, CH_2O, obtained by passing a vapor of methyl alcohol and air over heated platinum; antiseptic and disinfectant. **f. cresola'tum** (N.F.), cresolated formaldehyde; orthocresol 40, solution of formaldehyde 60. **solu'tion of f.,** formalin.

formal'dehyde-gel'atin. Glutoform

for'malin. Liquor formaldehydi (U.S.), a 37 per cent. solution of formaldehyde. **f. test,** see under *test.*

for'malith. A preparation of clay or diatomaceous earth impregnated with formalin.

formamide (for'mă-mid). Methanamide, prepared from ethyl formate by the action of ammonia; a colorless liquid combined with chloral to form chloralamide.

for'mamint. Trade name of a mixture of formaldehyde and milk-sugar, recommended in the treatment of infectious pharyngitis and stomatitis.

for'man. Chlormethylmenthyl ester, $C_{10}H_{19}O.CH_2Cl$, a clear oily liquid obtained by the action of hydrochloric acid and formaldehyde on menthol; has been employed by inhalation in the treatment of respiratory affections.

formanilid (for-man'i-lid). Phenylformamide; a derivative of acetanilid; employed as an analgesic and antipyretic in doses of gr. ij–v (0.13–0.3), and as a local anesthetic in 3 per cent. solution.

for'mate. A salt of formic acid.

formatio (for-ma'shyo) [L. from *formare*, to form.] A formation, a structure of definite shape or arrangement. **f. al'ba,** the mesal portion of the f. reticularis, in which the white fibers preponderate. **f. gris'ea,** the lateral portion of the f. reticularis in which the gray matter preponderates. **f. reticula'ris,** reticular formation, substantia reticularis; (1) a number of small groups of ganglion cells, interspersed with nerve-fibers, to the outer side of the several nuclei in the tegmentum of the pedunculus cerebri; (2) a network of gray matter enclosing small islands of white matter (as seen on cross section) in the angle between the anterior

and posterior gray columns or horns of the spinal cord.

for'mative [L. *formare*, to form.] 1. Relating to the process of development. 2. Forming, producing, originating.

forme fruste (form frust) [Fr. from L. *frustra*, without effect] An aborted form of a disease, one that is arrested before completing its typical course.

formes'ton. Aluminum acetoformate, a dusting powder similar to eston and subeston

for'mic [L. *formica*, ant.] Relating to ants. **f. acid,** acidum formicicum or formicum, a colorless irritant fluid, $HCHO_2$, present in the red ant, *Formica rufa*, and some other insects, in various animal secretions, and in the stinging hairs of the nettle; employed locally as a counterirritant, and, diluted, in the treatment of rheumatic pains and in the prevention of bedsores; internally it has been given as a diffusible stimulant in doses of ♏20–40 (1.3–2.5) of the spiritus formicarum (P. G.). **f. al'dehyde,** formaldehyde. **f. e'ther,** ethyl formate, a thin, colorless liquid, inducing anesthesia when inhaled.

formica'tion [L. *formica*, ant.] A form of paresthesia in which there is a sensation as of ants running over the skin.

for'micin. Formaldehyde acetamide, a colorless, syrupy liquid, antiseptic and disinfectant in 1 to 5 per cent solutions.

for'midin. Methylene disalicylic acid iodide; a reddish-yellow powder employed as a substitute for iodoform.

for'min. Hexamethylenamine

for'misol. Trade name of an alcoholic soap solution containing formaldehyde.

for'mitrol. Trade name of a mixture of formaldehyde, menthol, citric acid, and milk-sugar, recommended in infectious stomatitis and pharyngitis

for'mol. Formalin, liquor* formaldehydi

for'mol-Mueller flu'id (mu'ler) Muller's solution containing 2 per cent. of commercial formalin.

formopyrine (for-mo-pi'rēn). Methylene diantipyrine, a crystalline substance decomposable by heat into formaldehyde and antipyrine, and employed in therapeutics to produce the antiseptic and antipyretic effects of these two constituents.

formula (for'mu-lah) [L. dim. of *forma*, form.] 1. A recipe or prescription containing directions for the compounding of a medicinal preparation. 2. In chemistry a symbol or collection of symbols expressing the number of atoms of the element or elements forming one molecule of a substance. **constitu'tional f.,** structural or graphic f. **decomposi'tion f.,** a chemical f. showing the reactions occurring in the splitting up of a compound. **den'tal f.,** see under *dental*. **elec'trical f.,** a graphic representation by means of symbols of the reaction of a muscle to an electrical stimulus. **empir'ical f.,** in chemistry, a f. indicating the kind and number of atoms in the molecules of a substance, or its composition, but not the relation of the atoms to each other or the intimate structure of the molecule, *i.e.* its constitution. **glyp'tic f.** [G. *glyptos*, carved], structural f. **graph'ic f.,** in chemistry, a f. showing the relations of all the atoms, thus indicating fully the constitution of a substance. **magistral f.** (maj'is-tral), a prescription for preparing an extemporaneous* mixture. **molec'ular f.,** one which indicates definitely the number of atoms of each element composing the molecule. **official f.** (of-fish'al), a f. contained in the pharmacopeia. **ra'tional f.,** in chemistry, a f. which indicates more or less completely the constitution as well as the composition of a substance. **stereochem'ical f.,** structural f. **struc'tural f.,** one in which the relative positions of the atoms and groups of atoms, as well as their kind and number, are indicated; graphic f. **typ'ical f.,** in chemistry, a f. constructed after that of one of the three types, hydrogen, water, and ammonia, and indicating partially the constitution of a substance **ver'tebral f.,** see under *vertebral*.

formulary (for'mu-la-rĭ). A collection of formulas for the compounding of medicinal preparations. **National Formulary,** a collection of formulas, issued by the American Pharmaceutical Association, for the compounding of a number of preparations in more or less common use but not officially recognized by the U. S. Pharmacopeia

for'myl. The hypothetical radical, CHO, of formic acid. **f. teri'odide,** iodoform

Fornet's reac'tion (for-net') [Walter *Fornet*, German army surgeon, contemporary.] The demonstration of precipitinogens on the addition to the patient's serum of serum of a convalescent from typhoid fever or of a syphilitic, in the diagnosis of typhoid fever, or of tabes or paresis.

for'nicate. 1. [L. *fornix*, an arch] Vaulted, arched 2. [L. *fornix*, a brothel.] To have illicit sexual intercourse.

for'nicolumn. The anterior pillar of the cerebral fornix.

fornicommissure (for-nĭ-kom'is-ūr). The commissure or body of the cerebral fornix.

for'nix, gen. *for'nicis* [L. arch, vault.] 1. A paired structure of the brain, made up chiefly of longitudinally directed white fibers, lying beneath the corpus callosum and just above the tela chorioidea of the third ventricle; the striæ of the two sides are fused in the middle portion to form the triangular body which is also adherent to the corpus callosum above; the paired portion anterior to the body is called the columna (anterior pillar), the posterior paired portion the crus (posterior pillar). 2. A vault-like space. **f. conjuncti'væ** [BNA], the space formed by the junction of the bulbar and palpebral portions of the conjunctiva. **f. pharyn'gis** [BNA], vault of the pharynx, the upper end of the nasopharynx roofed over by the posterior wall arching forward to join the borders of the posterior nares. **f. u'teri,** one of the two spaces, anterior and posterior, between the cervix uteri and the vaginal wall. **f. vagi'næ** [BNA], the recess at the fundus of the vagina in front of (*f. anterior*) or behind (*f. posterior*) the cervix uteri. **transverse' f.,** commissura hippocampi.

For'rest's fe'ver. A fever occurring in Rangoon, lasting three days to two weeks with a parabolic temperature curve reaching a maximum of 104°.

For'ssell's sinus [Gasta-*Forssell*, Swedish radiologist, contemporary.] A smooth area in the stomach wall, hemmed in by folds of the mucosa, shown by *x*-ray examination.

fortifica'tion-spec'trum. Teichopsia, scintillating scotoma.*

fortoin (for'to-in). Methylenedicotoin, cotoin formaldehyde, $CH_2(C_{14}H_{11}O_4)_2$; made by the action of formaldehyde on cotoin, occurring as yellow acicular crystals; has been recommended in the treatment of diarrhea in doses of gr. 2–5 (0.13–0.3).

fos'sa, gen. and pl. *fossæ* [L. a trench or ditch] 1. A depression usually more or less longitudinal in shape below the level of the surface of a part.

2. In dentistry, the concave lingual surface of an incisor or canine tooth, or the depression in the grinding (occlusal) surface of a premolar or molar.

amyg'daloid f., the hollow between the pillars of the fauces, containing the tonsil, on either side.

ax'illary f., the armpit; the hollow beneath the shoulder.

cru'ral f., fovea femoralis.

cu'bital f., bend of the elbow, chelidon.

digital f., of the fibula, the lower portion of the lateral malleolus giving attachment to the posterior talofibular and the transverse tibiofibular ligaments.

fem'oral f., fovea femoralis.

floc'cular f., f. subarcuata.

f. acetab'uli [BNA], a roughened area in the floor of the acetabulum by the cotyloid notch.

f. anthel'icis [BNA], f. of the antihelix, f. triangularis.

f. axilla'ris [BNA], axillary f., the armpit, the hollow beneath the shoulder.

f. cani'na [BNA], canine fossa; a depression on the anterior surface of the maxilla, below the infraorbital foramen, the site of origin of the levator anguli oris muscle.

f. carot'ica [BNA], a space bounded by the infrahyoid muscles, anterior border of the sternocleidomastoid, posterior belly of the digastric, and lateral wall of the pharynx, containing the common carotid artery, internal jugular vein, and vagus nerve.

f. cer'ebri latera'lis [BNA], lateral f. of the brain, f. of Sylvius, a depressed area on the lateral surface of each cerebral hemisphere, in the fetus, at the bottom of which is the insula; it is closed in later by the growth of the operculum, the approximation of the divisions of which forms the fissure of Sylvius.

f. coronoi'dea [BNA], the coronoid fossa, a hollow on the anterior surface of the lower end of the humerus, just above the trochlea, in which the coronoid process of the ulna rests when the elbow is flexed.

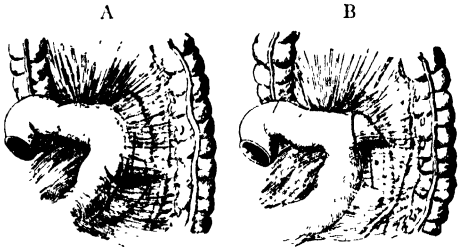
f. cra'nii, one of three hollows (*f. anterior, f. media,* and *f. posterior*) on the upper surface of the base of the skull which lodge the cerebrum (anterior and middle fossæ) and the cerebellum (posterior fossa).

f. digas'trica [BNA], digastric fossa, a hollow on the posterior surface of the base of the mandible, on either side of the symphysis, giving attachment to the anterior belly of the digastric muscle.

f. duc'tus veno'si [BNA], fissure on the under surface of the liver posteriorly, between the Spigelian, or caudate, and the left lobes, lodging a fibrous band, the remains of the ductus venosus of the fetus.

f. duodena'lis infe'rior, a peritoneal recess extending downward for a distance of an inch to an inch and a half alongside the lower and external part of the ascending portion of the duodenum.

f. duodena'lis supe'rior, a peritoneal recess extending upward a short distance alongside the upper and external part of the ascending portion of the duodenum.



FOSSA DUODENALIS: A, Inferior; B, superior. (*Landouzy and Jayle.*)

f. duodenojejuna'lis, Jonnesco's* fossa.

f. glan'dulæ lacrima'lis [BNA], fossa of the lacrymal gland, lacrymal fossa; a hollow in the orbital plate of the frontal bone, formed by the overhanging margin and external angular process, lodging the lacrymal gland.

f. hyaloi'dea [BNA], hyaloid f., patellar f., a depression on the anterior surface of the vitreous body in which lies the crystalline lens.

f. hypophys'eos [BNA], hypophyseal fossa, pituitary fossa of the sphenoid bone.

f. ili'aca, iliac f., the smooth inner surface of the ilium above the iliopectineal line, giving attachment to the iliacus muscle

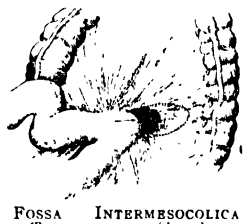
f. ili"acosubfascia'lis, a depression on the inner surface of the abdomen between the psoas muscle and the crest of the ilium.

f. iliopectin'ea [BNA], a hollow between the iliopsoas and pectineus muscles in the center of Scarpa's triangle, lodging the femoral vessels and nerve.

f. infraclavicula'ris, trigonum deltoideopectorale.

f. infraduodena'lis a peritoneal recess sometimes found extending laterally a distance of ¾–1 inch below the third portion of the duodenum.

FOSSA INFRADUODENALIS. (*Landouzy and Jayle.*)



FOSSA INTERMESOCOLICA TRANSVERSA. (*Landouzy and Jayle.*)

f. infraspina'ta [BNA], the hollow on the dorsal aspect of the scapula below the spine, giving attachment chiefly to the infraspinatus muscle.

f. infratempora'lis [BNA], infratemporal or zygomatic fossa, the cavity on the side of the skull bounded externally by the zygoma and ramus of the mandible, internally by the external pterygoid plate, anteriorly by the zygomatic process of the maxilla, posteriorly by the tuberculum articulare of the temporal bone and the posterior border of the external pterygoid plate, and above by the squama of the temporal bone and the pterygoid ridge on the greater wing of the sphenoid bone.

f. inguina'lis, fovea inguinalis.

f. innomina'ta, a shallow depression between the false vocal cord and the arytenoepiglottic fold on either side

f. intercondyloi'dea [BNA], intercondyloid or intercondylic f., one of two irregular V-shaped hollows, anterior and posterior, on the upper part of the shaft of the tibia between the condyles.

f. intermesocol'ica transver'sa, a fossa occupying the position of the f. duodenjejunalis, extending transversely from right to left for about the length of a finger.

f. interpeduncula'ris [BNA], interpeduncular f., f. of Tarini, a depression on the inferior surface of the mesencephalon, in the angle between the two cerebral peduncles, the floor of which is formed by the posterior perforated substance.

f. jugula'ris, jugular fossa; (1) [BNA], an oval depression near the posterior border of the petrous portion of the temporal bone, to the inner side of the styloid process, in which lies the beginning of the internal jugular vein; (2) the hollow above the sternal notch.

f. malle'oli fib'ulæ [NK], digital fossa of the fibula.

f. mandibula'ris [BNA], mandibular fossa, glenoid fossa or cavity, a deep hollow in the squamous portion of the temporal bone at the root of the zygoma, in which rests the condyle of the inferior maxilla, forming the temporomaxillary or temporomandibular joint.

f. mastoi'dea, mastoid fossa, a depression on the mastoid portion of the temporal bone, behind the suprameatal spine; its floor is marked by numerous small openings for blood-vessels.

f. mesenter"icoparieta'lis, f. parajejunalis.

f. navicula'ris auric'ulæ, f. triangularis auriculæ [BNA].

f. navicula'ris au'ris, scapha [BNA].

f. navicula'ris Cruveilhier, fossa scaphoidea ossis sphenoidalis [BNA].

f. navicula'ris ure'thræ [BNA], f. of Morgagni, the terminal dilated portion of the urethra in the glans penis.

f. navicula'ris vestib'uli vagi'næ [BNA], the portion of the vestibule of the vagina between the fourchette and the posterior commissure of the vulva.

f. occipita'lis cerebella'ris [NK] f. cerebelli.

f. occipita'lis cerebra'lis [NK], f. cerebri lateralis.

f. olec'rani [BNA], olecranon fossa, a hollow on the back of the lower end of the humerus, just above the trochlea, in which the olecranon process of the ulna rests when the elbow is extended.

Fossa Paraduodenalis. (*Landouzy and Jayle.*)

f. ova'lis (1) [BNA], saphenous opening in the thigh, just below Poupart's ligament, giving passage to the great (internal) saphenous vein; (2) a shallow depression in the left wall of the right atrium (auricle) of the heart marking the site of the fetal foramen ovale.

f. paraduodena'lis, a fossa in the peritoneum to the left of the terminal portion of the duodenum, on the inner side of a ridge caused by the inferior mesenteric vein, and above a special fold in the peritoneum in that region.

f. parajejuna'lis, f. mesentericoparietalis, a peritoneal fossa which has been seen in a few cases in which the jejunum has no free mesentery but is attached to the posterior parietal peritoneum; the fossa begins at the point where the mesentery ends, and is seen on raising up the knuckle of free intestine.

f. patella'ris, patellar f., f. hyaloidea [BNA].

f. petro'sa, petrosal f., fossula petrosa [BNA].

f. poplit'ea [BNA], the hollow at the back of the knee.

f. provesica'lis, Hartmann's* pouch.

f. pterygoid'ea [BNA], pterygoid fossa, formed by the divergence posteriorly of the plates of the pterygoid process of the sphenoid bone; it lodges the internal pterygoid and the tensor palati muscles.

f. pterygopalati'na [BNA], a small depression between the front of the root of the pterygoid process of the sphenoid bone and the back of the maxilla.

f. radia'lis [BNA], radial fossa, a shallow depression above the capitellum of the humerus in front, in which the margin of the head of the radius rests when the elbow is in extreme flexion.

Fossa Parajejunalis. 1, Fourth portion of the duodenum; 2, first part of the jejunum deprived of mesentery. (*Landouzy and Jayle.*)

f. retroduodena'lis, a peritoneal fossa sometimes present below and behind the third portion of the duodenum, between it and the aorta.

f. retromandibula'ris [BNA], the depression beneath the auricle behind the angle of the jaw.

f. rhomboid'ea [BNA], rhomboid fossa, the floor of the fourth ventricle of the brain, formed by the dorsal surfaces of the medulla and pons Varolii.

f. sac'ci lacrima'lis, fossa of the lacrymal sac; a fossa formed by the lacrymal grooves of the lacrymal bone and of the frontal process of the superior maxilla, lodging the lacrymal sac.

f. sagitta'lis dex'tra, the combined f. vesicæ felleæ in front, and f. venæ cavæ behind, separated by the processus caudatus

f. sagitta'lis sinis'tra, the combined f. venæ umbilicalis, in front, and f. ductus venosi, behind.

Fossa Retroduodenalis. (*Landouzy and Jayle.*)

f. scaphoid'ea, (1) scapha [BNA]. **f. scaphoid'ae auric'ulæ,** f. triangularis (auriculæ) [BNA].

f. scaphoid'ea os'sis sphenoida'lis [BNA], a hollow on the posterior surface of the internal plate of the pterygoid process; it gives origin to the tensor palati muscle.

f. Scar'pæ ma'jor [BNA], Scarpa's triangle, trigonum* femorale.

f. subarcua'ta [BNA], subarcuate fossa, floccular fossa, an irregular depression on the posterior surface of the petrous portion of the temporal bone, above and a little external to the porus acusticus internus; it is most distinct in the infant's skull; it lodges a process of the dura mater.

f. subinguina'lis [BNA], the depression on the anterior surface of the thigh beneath the groin.

f. sublingua'lis, fovea sublingualis.

f. submaxilla'ris, fovea submaxillaris.

f. subscapula'ris, BNA], the concave ventral aspect (facies costalis) of the body of the scapula, giving attachment to the subscapularis muscle.

f. supraclavicula'ris ma'jor [BNA], the greater supraclavicular fossa, the depressed area on the side of the neck above the clavicle.

f. supraclavicula'ris mi'nor, Zang's space, triangular space between the two heads of origin of the sternocleidomastoid muscle.

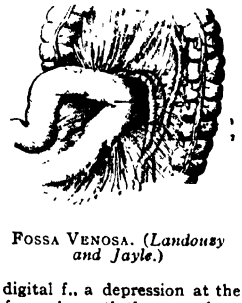
f. supramastoid'ea, a small fossa at the junction of the posterior and superior margins of the external auditory canal.

f. supraspina'ta [BNA], the hollow on the dorsal aspect of the scapula above the spine, lodging the supraspinatus muscle.

f. supratonsilla'ris [BNA], the interval between the anterior and posterior pillars of the fauces above the tonsil.

f. tempora'lis [BNA], temporal fossa, the space on the side of the cranium bounded by the temporal lines and terminating below at the level of the zygomatic arch.

f. triangula'ris auric'ulæ [BNA], triangular f. of the auricle the depression at the upper part of the auricle between the two crura of the antihelix.



Fossa Venosa. (*Landouzy and Jayle.*)

f. trochanter'ica [BNA], trochanteric f., digital f., a depression at the root of the neck of the femur beneath the curved tip of the great trochanter; it gives insertion to the tendon of the obturator externus.

f. trochlea'ris, fovea trochlearis [BNA].

f. ve'næ ca'væ [BNA], a groove on the lower surface of the liver, between the Spigelian and right lobes, in which lies the inferior vena cava.

f. ve'næ umbilica'lis [BNA], umbilical fissure of the liver, a depression on the under surface anteriorly between the quadrate and left lobes, lodging the round ligament, or remains of the umbilical vein of the fetus.

f. veno'sa, a peritoneal fossa apparently formed by the union of the inferior and superior duodenal fossæ; it is situated usually at the duodenojejunal angle, the opening being bounded by a fold of the descending mesocolon around the superior mesenteric vein. See illustration on page 413.

f. vesi'cæ fel'leæ [BNA], a depression on the under surface of the liver anteriorly, between the quadrate and the right lobes, lodging the gall-bladder.

Grue'ber-Land'zert f., see *Grueber* Landzert.*

Jonnes'co's f., f. duodenojejunalis, see *Jonnesco.*

Land'zert's f., see *Landzert.*

pitu'itary f., f. hypophyseos [BNA], of the sphenoid bone, in which rests the pituitary body.

Syl'vian f., f. cerebri lateralis.

Treitz's f., see *Treitz.*

u'rachal f., prevesical space, an interval between the rectus abdominis muscle and the transversalis fascia just above the symphysis pubis.

Wal'deyer's f., see *Waldeyer.*

fossette (fŏ-set') [Fr. dim. of *fosse*, a ditch.] 1. A small fossa. 2. A small but deep corneal ulcer.

fos'sula [L. dim. of *fossa*, ditch.] 1. A fossette, a small fossa. 2. A minor fissure or slight depression on the surface of the cerebrum. **f. fenes'træ coch'leæ** [BNA], little fossa of the fenestra of the cochlea; a depression on the inner wall of the tympanum at the bottom of which is the fenestra rotunda or cochlear window. **f. fenes'træ vestib'uli** [BNA], little fossa of the fenestra of the vestibule, a depression on the inner wall of the tympanum at the bottom of which is the fenestra ovalis or vestibular window. **f. petro'sa** [BNA], petrosal fossa, a small and often but faintly marked depression on the inferior surface of the petrous portion of the temporal bone, between the jugular fossa and the external carotid foramen; here opens the canaliculus tympanicus transmitting the tympanic nerve. **f. rotun'da,** a dark recess in the lower and posterior part of the tympanum leading to the fenestra rotunda.

foss'ulate. Containing a fossula or small fossa; grooved, hollowed out.

Foth'ergill's disease' [John *Fothergill*, English physician, 1712–1780.] 1. Tic douloureux. 2. Scarlatina anginosa. **F.'s neural'gia,** F.'s disease (1).

fouadin (foo'ad-ēn) [after King Fouad of Egypt.] A trivalent compound of antimony and sodium used in the treatment of granuloma inguinale.

foudroyant (foo-droy'ant) [Fr. *foudroyer*, to strike by lightning.] Occurring with great suddenness and violence, fulminant.

foulage (foo-lazh') [Fr. impression.] Kneading and pressure of the muscles, constituting a form of massage.

founder (fown'dur). Laminitis in the horse. **chest f.,** stiffness and atrophy of the muscles of the chest and shoulders in the horse, often due to the unnatural gait resulting from navicular disease or laminitis.

found'ling. An infant which has been abandoned by its parents.

foun'tain-decussa'tion. Decussatio fontinalis.

foun'tain-syr'inge. An apparatus consisting of a reservoir for holding fluid, to the bottom of which is attached a tube armed with a suitable nozzle; used for vaginal or rectal injections, irrigating wounds, etc., the force of the flow being regulated by the height of the reservoir above the point of discharge.

fourchette (foor-shet') [Fr. fork.] Frenulum labiorum pudendi, a crescentic fold of mucous membrane a little in front of the posterior commissure of the vulva from which it is separated by the fossa navicularis.

Fournier's disease' (foor-ne-a') [Jean Alfred *Fournier*, Paris syphilographer, 1832–1914.] Fulminating gangrene of the genitals. **F.'s sign,** the sharp limitation of a syphilitic skin lesion as contrasted with the numerous small islets of disease found outlying an eczematous patch.

fourth disease (forth diz-ēz'). See under *disease.* **f. nerve,** nervus* trochlearis. **f. venereal disease,** benign lymphogranulomatosis.

fovea (fo've-ah) [L. a pit.] A cup-shaped depression or pit. **f. ante'rior,** a slight hollow in the floor of the fourth ventricle. **f. cap'itis fem'oris** [BNA], pit of the head of the femur, a depression on the extremity of the head of the femur where is attached the ligamentum teres. **f. cardi'aca,** the opening of the foregut posteriorly into the general archenteric space in the embryo. **f. centra'lis ret'inæ** [BNA], central pit, a central depression in the macula lutea of the retina. **f. costa'lis infe'rior** [BNA], costal pit, demifacet on the lower edge of the body of a vertebra articulating with the head of a rib. **f. costa'lis supe'rior** [BNA], a demifacet on the upper edge of the body of a vertebra articulating with the head of a rib; a single rib articulates with the f. c. inferior and f. c. superior of the adjacent vertebræ. **f. costa'lis transversa'lis** [BNA], costal pit of the transverse process, a facet on the transverse process of a vertebra for articulation with the tubercle of a rib. **f. den'tis atlan'tis,** a circular facet on the posterior (inner) surface of the anterior arch of the atlas which articulates with the odontoid process, or dens, of the axis or epistropheus. **f. ellip'tica,** recessus ellipticus [BNA]. **f. femora'lis** [BNA], femoral or crural fossa, a depression on the peritoneal surface of the abdominal wall, below Poupart's ligament, corresponding to the situation of the femoral ring. **f. hemiellip'tica,** hemielliptical pit, recessus ellipticus [BNA]. **f. hemisphæ'rica,** hemispherical pit, recessus sphæricus [BNA]. **f. infe'rior,** a triangular area on either side of the rhomboidal fossa below the striæ medullares **f. inguina'lis inter'na,** f. supravesicalis. **f. inguina'lis latera'lis** [BNA], external inguinal fossa, a depression on the peritoneal surface of the anterior abdominal wall external to the ridge formed by the deep epigastric artery; it corresponds to the position of the internal abdominal ring. **f. inguina'lis media'lis** [BNA], middle inguinal fossa, a depression on the peritoneal surface of the anterior abdominal wall between the ridges formed by the deep epigastric and the obliterated hypogastric arteries. **f. oblon'ga cartilag'inis arytænoid'eæ** [BNA], a broad shallow depression on the external surface of the arytenoid cartilage, separated from the f. triangularis above by the crista arcuata. **f. pterygoid'ea** [BNA], pterygoid pit; a depression on the inner side of the neck of the condyloid process of the lower jaw, giving attachment to the external pterygoid muscle. **f. sphæ'rica,** recessus sphæricus [BNA]. **f. sublingua'lis** [BNA], sublingual pit; a shallow depression on either side of the mental spine, on the inner surface of the body of the mandible, lodging the sublingual gland. **f. submaxilla'ris** [BNA], submaxillary pit, submaxillary fossa; a hollow below the mylohyoid ridge, on the inner surface of the body of the mandible, lodging the submaxillary gland. **f. supe'rior** [BNA], a slight

depression on either side of the rhomboidal fossa, above the striæ medullares, corresponding to the dorsal surface of the pons. **f. supravesica'lis** [BNA], fovea inguinalis interna, internal inguinal fossa, a depression on the peritoneal surface of the anterior abdominal wall between the ridges formed by the obliterated epigastric artery and the urachus. **f. triangular'is cartilag'inis arytænoid'eæ** [BNA], a deep depression in the upper portion of the external or anterior surface of the arytenoid cartilage, separated from the f. oblonga below by a ridge, the crista arcuata. **f. trochlea'ris** [BNA], trochlear pit; a shallow depression on the orbital plate of the frontal bone, just within the margin and midway between the internal angular process and the supraorbital notch

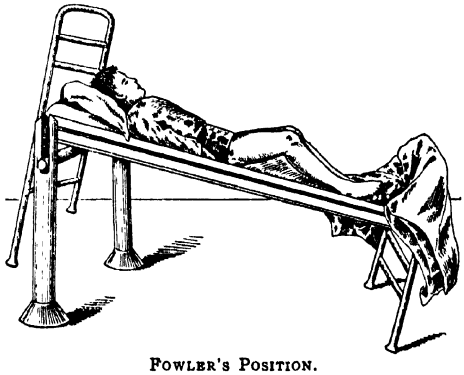
foveate, foveated (fo've-āt, fo've-a-ted). Pitted, having foveæ or depressions on the surface.

foveation (fo-ve-a'shun) [L. *fovea*, a pit.] Pitting, such as occurs in smallpox, chickenpox, or vaccina.

foveola (fo-ve'o-lah) [L. dim. of *fovea* pit] A minute fovea or pit. **f. coccyge'a** [BNA], a depression over the coccyx. **f. gas'trica** [BNA], one of the numerous small pits in the mucous membrane of the stomach at the bottom of which are the mouths of the gastric glands. **f. granula'ris** [BNA], granular pit, one of the Pacchionian depressions or pits on the inner surface of the skull, along the course of the superior longitudinal sinus, in which are lodged the Pacchionian bodies, or granulationes* arachnoideales. **f. papilla'ris,** the minute depression sometimes seen at the apex of a papilla of the kidney where the excretory tubes open into a calyx.

Foville's tract (fo-vēl') [Achille Louis *Foville*, French neurologist, 1799–1878.] Flechsig's tract, fasciculus* cerebellospinalis. **F.'s syn'drome** or **type,** alternating hemiplegia; abducens paralysis on one side, paralysis of the extremities on this other.

Fow'ler's opera'tion [George Ryerson *Fowler*, New York surgeon, 1848–1906.] Pleurectomy, removal of the thickened pleura for the cure of empyema. **F.'s posi'tion,** an inclined position obtained by raising the head of the bed from 2 to 2½ feet in order to ensure better drainage after an abdominal operation.



FOWLER'S POSITION.

Fow'ler's solu'tion [Thomas *Fowler*, English physician, 1736–1801.] Liquor potassii arsenitis.

Fow'ler-Mur'phy meth'od [George R. *Fowler;* John B. *Murphy*, Chicago surgeon, 1857–1916.] Treatment of diffuse suppurative peritonitis by elevation of the head of the bed so as to favor drainage by a tube passed through an incision in the right iliac fossa, and by continuous irrigation of the rectum with a physiological salt solution.

Fox's impeti'go [William Tilbury *Fox*, English dermatologist, 1836–1879.] Impetigo contagiosa.

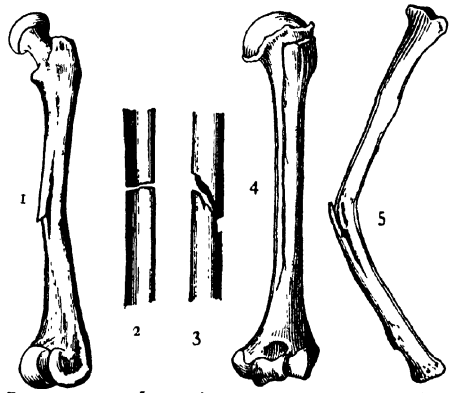
Fox-For'dyce disease' [George Henry *Fox*, New York dermatologist, *1846; John Addison *Fordyce.**] A neurodermite of the axilla, marked by a pruritic papular eruption.

fox-glove. Digitalis.

Fox'ia. A genus of fungi identified as the cause of tinea nigra.

fractional (frak'shun-al) [L. *fractus; frangere*, to break] Relating to a fraction; done a part at a time or in successive stages. **f. cultiva'tion, f. distilla'tion,** see the nouns.

fracture (frak'tūr) [L. *fractura*, a break.] 1. To break. 2. A break, especially the breaking of a bone or cartilage. **artic'ular f.,** one involving the joint surface of a bone **Bar'ton's f., Benn'et's f.,** etc, see the proper names **bent f.,** green-stick f. **butt'erfly f.,** a comminuted fracture in which there are two doubly wedge-shaped lateral fragments split off, one from each of the main fragments.



FRACTURES: 1, Incomplete, 2, transverse, 3, oblique 4, fissured; 5, green-stick.

butt'onhole f., perforation of a bone with loss of substance, as in a gunshot wound. **cap'illary f.,** a f. without separation of the fragments, the line of break being hair-like, as seen sometimes in the skull. **chauffeur's' f.,** a fracture of the lower end of the radius caused by a blow from the crank handle of an automobile, suddenly revolving when a back fire occurs during cranking. **comm'inuted f.,** periclasis, the bone is broken into a number of small pieces. **compos'ite f.,** multiple f. **com'pound f.,** one in which there is an open wound of the soft parts leading down to the seat of fracture. **den'tate f.,** one in which the opposing surfaces are rough with toothed or serrate projections fitting into corresponding indentations. **depressed' f.,** a f. of the skull with sinking inward of the fragments. **direct' f.,** a f., especially of the skull, occurring at the point of injury. **doub'le f.,** the occurrence of two fractures in different bones at the same time, or in two parts of the same bone. **epiphys'eal f.,** separation of the epiphysis of a long bone, caused by traumatism. **extracap'sular f.,** a f. at the articular extremity of a bone, but outside of the line of attachment of the capsular ligament of the joint. **fis'sured f.,** linear f. **green-stick f.,** the bending of a bone with incomplete fracture involving the convex side of the curve only

gutt'er f., a long, narrow, depressed fracture of the skull. **hair f.**, trichismus. **hick'ory-stick f.**, green-stick f. **impac'ted f.**, one in which one of the fragments is driven into the cancellar tissue of the other fragment. **incomplete f.**, one in which the line of fracture does not include the entire bone. **indirect' f.**, a f., especially of the skull, which occurs at some point more or less distant from the seat of injury. **intra-artic'ular f.**, articular f. **intracap'sular f.**, one at the articular extremity of a bone within the line of insertion of the capsular ligament of the joint. **intraperios'teal f.**, a f. in which the periosteum is not ruptured. **intrau'terine f.**, fetal f., a f. of one or more bones of a fetus occurring before birth. **lin'ear f.**, a fracture running parallel with the long axis of the bone. **longitu'dinal f.**, one involving the bone in the line of its axis. **mul'tiple f.**, a f. of several bones occurring simultaneously or one involving several different parts of the same bone. **oblique' f.**, one the line of which runs obliquely to the axis of the bone. **o'pen f.**, compound f. **par'tial f.**, incomplete f. **per'forating f.**, button-hole f. **rad'ish f.**, one which is transverse at the surface but not inside, the fracture looking like the broken surface of a radish. **sec'ondary f.**, one occurring as a consequence of necrosis or some other disease of the bone. **silver-fork f.**, a Colles'* f. of the wrist in which the deformity has the appearance of a fork in profile. **sim'ple f.**, an uncomplicated, not compound f. **spi'ral f.**, one in which the line of break runs obliquely up one side of the bone. **splin'tered f.**, a comminuted f. in which the fragments are long and sharp-pointed. **sponta'neous f.**, one occurring without any external injury **sprain f.**, strain f. **stell'ate f.**, one in which the lines of break radiate from a central point. **strain f.**, the tearing off of a piece of bone by the strain upon a tendon or ligament. **subcap'ital f.**, intracapsular f., f. of a bone, such as the femur, just below its head. **subcuta'neous f.**, a simple, not compound f. **troph'ic f.**, one due to disturbance of nutrition of the bone. **tor'sion f.**, one resulting from twisting of the limb. **transverse' f.**, one the line of which forms a right angle with the axis of the bone. **ununi'ted f.**, one in which union fails to occur, the ends of the bone becoming rounded and more or less eburnated, a false joint resulting. **will'ow f.**, green-stick f.

IMPACTED FRACTURE.

astragalus, Shepherd's. **by contrecoup, or counter-stroke,** contrafissura. **fibula,** Dupuytren's, Pott's. **malleolus,** Wagstaffe's. **material of repair,** callus, *deficiency,* hypop rosis; *excess,* hyperporosis. **operative,** osteoclasis, osteopalncl sis. **predisposing condition,** osteopsathyrosis, fragilitas ossium. **radius,** Barton's, Colles's, Moore's, Smith's. **science of,** agmatology. **setting,** diaplasis, diorthosis. **thumb,** Bennett's. **tibia,** Gosselin's, Wagstaffe's. **wedge-shaped,** Gosselin's.

fracture-bed. A narrow bed with supports under the mattress to prevent sagging, for a patient under treatment for fracture.

Fraenkel's pneumococ'cus (freng'kel) [Albert *Fraenkel,* Berlin physician, 1848–1916.] *Diplococcus pneumoniæ.*

Fraenkel's speculum (freng'kel) [Bernhard *Fraenkel,* Berlin laryngologist, 1837–1911.] A nasal speculum, sometimes fenestrated. **F.'s test,** the patient's head is bent forward between his knees and rotated so that the suspected side is uppermost: the nasal cavity is then examined and if pus is found in the middle meatus it affords evidence of suppuration in some of the anterior group of accessory sinuses.

Fraenk'el-Gabb'et meth'od. [Carl *Fraenkel,* German bacteriologist, 1861–1915; Henry Singer *Gabbet,* English physician, contemporary.] Staining tubercle bacilli with carbolic fuchsin, the contrast color being obtained by immersing in an acidulated solution of methylene blue.

Fraenkel-Weichselbaum pneumococcus (freng'kel-vīkh'zel-bowm nu-mo-kok'us). [Albert *Fraenkel,* German clinician, 1848–1916, Anthony *Weichselbaum,* Austrian pathologist, 1845–1920.] *Diplococcus pneumoniæ.*

fræ'nulum, fræ'num. Frenulum, frenum.

fragilitas (fră-jil'ĭ-tas) [L.] Fragility, brittleness. **f. crin'ium** [L. gen. pl. of *crinis,* hair], brittleness of the hair, a condition in which the hair of the head or face tends to split or break off. **f. oss'ium** [L. gen. pl. of *os,* bone], brittleness of the bones, a pathological condition in which the bones break readily. **f. san'guinis,** fragility* of the blood.

fragility (fră-jil'i-tĭ) [L. *fragilitas.*] Brittleness, liability to break or disintegrate; see *fragilitas.* **f. of the blood,** increased susceptibility of the blood cells to break down when the proportion of the saline content of the fluid is altered.

fragmenta'tion. A breaking up into fragments or small parts.

fraise (fraze) [Fr. strawberry.] An instrument in the shape of a hemispherical button with cutting edges, used to enlarge a trephine opening in the skull or to cut osteoplastic flaps; the smooth convexity of the button prevents injury to the dura.

frambe'sia, frambœ'sia [Fr. *framboise,* raspberry] Yaws

frambesioma (fram-be-zĭ-o'mŭ) [*frambesia* + *-ōma.*] Yaw, the primary individual lesion of frambesia or yaws.

Fran'cis's disease' [Edward *Francis,* Surgeon U.S.P.H.S. *1872.] Tularemia.

Fran'cis's tri'plex pill [John Wakefield *Francis,* American physician, 1789–1861.] Pilula triplex, Francis (N.F.).

francis'cea. Manaca, brunfelsia, the dried root and stem of *Brunfelsia hopeana* (*Franciscea uniflora*); employed in the treatment of rheumatism and of syphilis, in doses of ℥10–40 (0.6–2.6) of a fluid-extract.

Francke's needle (frahng'keh) [Karl Ernst Hugo Theodor *Francke,* German physician, 1859–1920.] A small lancet-shaped needle, operated by a spring, used to evacuate a small effusion of blood. **F.'s sign,** deep tenderness over the apex of the lung posteriorly. **F.'s symp'tom,** circumscribed streaked redness of the gums, a short distance from the border, in influenza.

frangula (frang'gu-lah) (N.F.) The bark of *Rhamnus frangula* (*Frangula vulgaris*), employed as a laxative or cathartic in doses of gr. 5–15 (0.3–1.0).

fran'gulin. Rhamnoxanthin, $C_{21}H_{20}O_9$, a bitter principle from frangula; has been given as a purgative in doses of gr. 1–3 (0.06–0.2).

Frank's opera'tion [Fritz *Frank,* German gynecologist, 1856–1923.] Subcutaneous symphysectomy.

Franke's operation (frahng'keh) [Walther *Franke*, German surgeon, *1862.] Tearing out the intercostal nerves in place of section of the posterior spinal nerve roots for the relief of the visceral crises of tabes dorsalis.

Frankenhaeuser's gang'lion (frahng'ken-hoy-zer) [Ferdinand *Frankenhaeuser*, German gynecologist, †1894.] A nervous ganglion sometimes found in the lateral walls of the cervix uteri.

frank'incense [L. *francum incensum*, pure incense.] Olibanum.

Frank'lin glass'es [Benjamin *Franklin*, American physicist and statesman, 1706–1790.] Bifocal glasses, in which the lower half lens is for near, the upper half for distant vision.

franklin'ic. Noting static or frictional electricity

frank'linism [Benjamin *Franklin*.] Static or frictional electricity.

frankliniza'tion. The therapeutic employment of static electricity.

Fra'sera [John *Fraser*, English botanist, 1750–1817.] A genus of plants of the natural order *Gentianaceæ*. **F. carolinen'sis, F. wal'teri,** American calumba, Indian lettuce; the root has been used as a bitter tonic in doses of 3½–1 (2.0–4.0) of a fluidextract, and for the relief of chronic constipation in doses of ℥5–30 (0.3–2.0) of the eclectic specific preparation.

fra'serin. An eclectic preparation from the root of *Frasera carolinensis, F. walteri;* a brown powder employed as a bitter tonic and for the relief of atonic constipation in doses of gr. 1–3 (0.06–0.2).

Fraunhofer's lines (frown'ho-fer) [Joseph von *Fraunhofer*, German optician, 1787–1826.] A number of the most prominent of the absorption* lines of the solar spectrum.

frax'inus [L.] Ash, the bark of the trunk or root of *Fraxinus americana*, white American ash, or *F. excelsior*, European ash; employed as a tonic and astringent and in the treatment of gout and rheumatism in dose of gr. 30 (2.0), or of 3i (4.0) of the N.F. vinum fraxini. The bark of *F. americana* is also used for the relief of dysmenorrhea

F.R.C.P. Abbreviation for Fellow of the Royal College of Physicians.

F.R.C.P.E. Abbreviation for Fellow of the Royal College of Physicians of Edinburgh.

F.R.C.P.I. Abbreviation for Fellow of the Royal College of Physicians in Ireland.

F.R.C.S. Abbreviation for Fellow of the Royal College of Surgeons.

F.R.C.S.E. Abbreviation for Fellow of the Royal College of Surgeons of Edinburgh.

F.R.C.S.I. Abbreviation for Fellow of the Royal College of Surgeons in Ireland.

freckle (frek'l) [O. Eng. *freken*.] Lentigo, ephelis, one of a number of yellowish or brownish spots on the exposed parts of the skin, occurring especially in young persons of sandy complexion; they may be hereditary but are increased in number on exposure to the sun. **cold f.,** an eruption of freckles on parts not exposed to the sun's rays.

Frédéricq's sign (fra-da-rēk') [Louis Auguste *Frédéricq*, Belgian physician, 1815–1853.] The presence of a red line on the gums in certain pulmonary affections, especially tuberculosis.

Fredet-Ramstedt operation (frĕ-da'-rahm'stet op-er-a'shun) [Pierre *Fredet*, French surgeon, contemporary; Conrad *Ramstedt*, German surgeon, *1867.] Longitudinal incision of the thickened serosa and muscularis down to, but not through the mucosa, in cases of congenital stenosis of the pylorus.

Frei's bubo (fri). Lymphogranulomatosis inguinalis. **F.'s disease,** Nicolas-Favre disease. **F.'s test,** for inguinal lymphogranulomatosis by the intracutaneous injection of sterile pus; a negative reaction rules out all other buboes

fremitus (frem'ī-tus) [L. a clashing.] A vibration imparted to the hand resting on the chest or other part of the body. **bron'chial f.,** bronchial rales appreciable by the hand resting on the chest, as well as by the ear. **hydat'id f.,** hydatid thrill.* **pericar'dial f.,** vibration in the chest wall produced by the friction of opposing roughened surfaces of the pericardium. **pleu'ral f.,** vibration in the chest wall produced by the rubbing together of the roughened opposing surfaces of the pleura. **subjec'tive f.,** vibration felt within the chest by the patient himself, when humming with the mouth closed. **tus'sive f.,** a form of f. similar to the vocal, produced by a cough. **vo'cal f.,** the vibration in the chest wall, felt on palpation, produced by the spoken voice

fre'nal. Relating to any frenum.

Frenk'el's meth'od [Heinrich *Frenkel*, Swiss neurologist, 1860–1931.] Treatment of the ataxia of tabes dorsalis by means of systematic exercises intended to reeducate the patient in the power of coordination. **F.'s symp'tom,** lowered muscular tonus in tabes dorsalis.

frenotomy, frænotomy (fren-ot'o-mī) [L. *frænum*, frenum, + G. *tomē*, a cutting.] Division of any frenum, especially of the frenum linguæ for the relief of tongue-tie.

fren'ulum, fræn'ulum [L. dim. of *frenum*.] 1. Any small frenum. 2. Specifically, a narrow strip of white matter running along the upper surface of the anterior medullary velum to the quadrigeminal plate. 3. The [BNA] term for frenum. **f. cerebell'i,** f. veli. **f. clitor'idis** [BNA], frenum of the clitoris, the line of union of the inner portions of the labia minora on the under surface of the glans clitoridis. **f. epiglot'tidis,** a fold of mucous membrane extending from the posterior portion of the dorsum of the tongue to the front of the epiglottis, middle glossoepiglottic fold, plica* glossoepiglottica mediana [BNA]. **f. of Giacomi'ni,** a slender band, the continuation of the dentate gyrus, crossing transversely the surface of the recurved part of the uncus **f. la'bii inferior'is, f. la'bii superior'is** [BNA], the folds of mucous membrane extending from the gum to the middle line of the lower and upper lips, respectively. **f. labior'um puden'di** [BNA], f. labiorum minorum, the fold connecting posteriorly the two labia minora, f. pudendi, the fourchette. **f. lin'guæ** [BNA], a fold of mucous membrane extending from the floor of the mouth to the midline of the under surface of the tongue. **f. lin'gulæ,** a continuation of the lamina of the lingula of the cerebellum over the peduncles. **f. of Macdow'el,** tendinous fasciculi passing from the tendon of insertion of the pectoralis major muscle across the bicipital groove. **f. of Morga'gni,** f. valvulæ coli. **f. prepu'tii clitor'idis,** f. clitoridis. **f. prepu'tii pe'nis** [BNA], a fold of mucous membrane passing from the under surface of the glans penis to the deep surface of the prepuce. **f. puden'di,** f. labiorum pudendi. **f. val'vulæ co'li** [BNA], a fold running from the junction of the two segments of the ileocecal valve on either side along the inner wall of the colon. **f. ve'li, f. ve'li medulla'ris**

anterior'is [BNA], a band of white fibers passing from the longitudinal groove between the corpora quadrigemina on to the valve of Vieussens. **f. synovia'le,** one of the bands stretching between a tendon and its sheath.

fre'num, fræ'num [L. a check-rein.] Frenulum [BNA]. 1. A narrow reflection or fold of mucous membrane passing from a more fixed to a movable part, as from the gum to the deep surface of the lip, serving in a measure to check undue movement of the part. 2. An anatomical structure resembling such a fold.

fren'zy [G. *phrenitis*, inflammation of the brain.] Violent delirium, mania.

frequency (fre'kwen-sĭ) [L. *frequens*, repeated, often, constant.] 1. The number of regular recurrencies in a given time. 2. The rate of oscillation in an alternating electrical current.

Frère Cosme's, or Côme's, paste (frair kōm) [Brother *Cosmus*, the religious name of Jean Baseilhac, a French surgeon, 1703–1781.] A caustic of arsenic 1, red sulphide of mercury 5, burnt sponge 2, made into a paste with water.

Frerichs' the'ory (fra'rikhs) [Friedrich Theodor *Frerichs*, German physician, 1819–1885.] Uremia is poisoning by ammonia, a ferment in the blood causing urea to be transformed into ammonium carbonate.

fre'tum Hal'leri [L. *fretum*, a strait] See *Haller*.

Freudian (froy'dĭ-an). Having reference to Sigmund Freud,* noting especially his theories regarding the underlying cause of certain nervous or psychic impediments—phobias, tics, etc.—namely that they are based upon the existence in the psyche of certain unconscious (*i.e.*, repressed) sexual affects, and that their cure is to be effected by bringing these affects into the consciousness through a methodical examination termed psychoanalysis;* and further noting the theory that dreams are the partial emergence under veiled forms and through symbolism of these repressed sexual affects.

Freud's the'ory (froyd) [Sigmund *Freud*, Viennese neurologist, *1856.] An hysterical attack is due to a psychic trauma which was not adequately reacted to at the time it was received, and persists as an affect-memory. See *Freudian* and *psychoanalysis*.

Freund's anom'aly (froynt) [Wilhelm Alexander *Freund*, German gynecologist, 1833–1918.] A narrowing of the upper aperture of the thorax by shortening of the first rib and its cartilage, resulting in defective expansion of the apex of the lung and consequent predisposition to tuberculosis. **F.'s law** ovarian tumors, while intrapelvic, lie behind the uterus, but when they grow out of the pelvis, they lie above and in front of the uterus. **F.'s opera'tion,** (1) total abdominal hysterectomy for uterine cancer; (2) chondrotomy to relieve F.'s anomaly.

Freund-Kaminer reaction [Ernst *Freund*, German medical chemist, *1863; Gisa *Kaminer*, Austrian physician, *1887.] Lysis of cancer-cells by the serum of non-cancerous subjects.

Frey's irrita'tion hairs (fri) [Max von *Frey*, German physician, *1852.] Short hairs of varying degrees of stiffness, set at right angles into the end of a light wooden handle; used for determining the presence and degree of irritability of pressure points in the skin.

Freyer's opera'tion (fri'er) [P. Johnston *Freyer*, Lieut. Col. Bengal Medical Service, 1851–1921.] Suprapubic excision of the prostate gland.

fri'able [L. *friabilis: friare*, to crumble.] 1. Easily reduced to powder. 2. In bacteriology noting a dry and brittle culture, falling into powder when touched or shaken.

fri'ars' bal'sam. Balsamum traumaticum.

Fricke's bandage (frik'eh) [Johann Karl *Fricke*, German surgeon, 1790–1841.] Enveloping the scrotum with adhesive plaster strips in inflammation of the testicles and epididymis.

friction (frik'shun) [L. *fricare*, to rub.] 1. Rubbing. 2. The resistance to movement between two bodies in contact with each other. **f. sound,** the sound, heard on auscultation, made by the rubbing of two opposed serous surfaces roughened by an inflammatory exudate.

Fridenberg's stigmomet'ric card test (fre'den-berg) [Percy *Fridenberg*, New York ophthalmologist, *1868.] See stigmometric* card.

Friedlaender's bacil'lus (frēd'len-der) [Carl *Friedlaender*, Berlin histologist, 1847–1887.] *Klebsiella pneumoniæ*. **F.'s stain for capsules,** (1) treat the film fixed on cover-glass with 1 per cent. acetic acid solution, stain with aniline-water gentian-violet solution; (2) for sections, immerse for 24 hours in acetic acid, 10 parts, concentrated alcoholic gentian-violet solution, 50 parts, distilled water, 100 parts, differentiate in 1 per cent. acetic acid solution.

Friedlaender's disease' (frēd'len-der) [Max *Friedlænder*, German physician, *1841.] Endarteritis obliterans.

Friedman test [Meyer Henry *Friedman*, American physician, *1903.] A modification of the Zondek-Aschheim test for pregnancy; the urine of a woman suspected of pregnancy is injected in 4 c.c. doses intravenously twice daily for two days into an unmated mature female rabbit; if at the end of this time the ovaries of the rabbit contain fresh corpora lutea or hemorrhagic corpora the test is positive.

Friedman-Lapham test [M. H. *Friedman*; Anna Ross *Lapham*, American physician, *1869.] Same as the Friedman test.

Friedmann's disease' (frēd'mahn) [Max *Friedmann*, German neurologist, 1858–1925.] Relapsing infantile spastic spinal paralysis.

Friedmann's treatment (frēd'mahn) [Franz *Friedmann*, German physician, *1876.] Treatment of tuberculosis by the injection of living tubercle bacilli rendered avirulent by many passages through the turtle.

Friedreich's atax'ia (frēd'rīkh) [Nicholas *Friedreich*, Heidelberg physician, 1825–1882.] Hereditary spinal ataxia.* **F.'s disease',** paramyoclonus multiplex. **F.'s foot,** a form of pes cavus occurring in F.'s disease. **F.'s phenom'enon,** the tympanitic percussion sound over a pulmonary cavity is slightly raised in pitch on deep inspiration. **F.'s sign,** sudden collapse of the previously distended veins of the neck at each diastole of the heart; it occurs in cases of adherent pericardium.

frigid (frij'id) [L. *frigidus*, cold.] 1. Cold. 2. Temperamentally, especially sexually, cold or irresponsive.

frigidity (frĭ-jid'i-tĭ). Sexual coldness.

frigolabile (fri-go-la'bl) [L. *frigus*, cold, + *labilis* perishable.] Subject to destruction by cold.

frigorific (frig-ŏ-rif'ik) [L. *frigus(frigor-)*, cold, + *facere*, to make.] Producing cold.

frigorism (frig'or-izm) [L. *frigus* (*frigor-*), cold.] A pathological condition resulting from the action of extreme cold upon the body.

frigostabile, frigostable (fri-go-sta'bl) [L. *frigus*, cold, + *stabilis*, stable, firm. Not subject to destruction by a low temperature.

frigotherapy (frig-o-ther'a-pi) [L. *frigus*, cold, + G. *therapeia*, treatment.] Crymotherapy.*

Frisch's bacil'lus (Anton *Frisch*, Vienna surgeon; 1849–1917.] A microorganism said to be the cause of rhinoscleroma.

frit [Fr. *frit*. fried.] 1. The material from which glass or the glaze on pottery is made. 2. In dentistry, (*a*) the material from which the glaze for artificial teeth is made; (*b*) a powdered pigment material used in coloring the porcelain of artificial teeth. **gum f.**, a colored material from which the gum in an artificial denture is made.

Fritsch's cath'eter [Heinrich *Fritsch*, German gynecologist, 1844–1915.] Bozeman*-Fritsch catheter.

Froeh'de's rea'gent. Sodium molybdate 1, in strong sulphuric acid 1000; gives various color reactions with alkaloids.

Froehlich's syn'drome or **type** (fre'likh) [Alfred *Froehlich*, Viennese neurologist, contemporary.] Typus Froehlich, dystrophia* adiposogenitalis.

Froeschel's symptom (frosh-el) [Alfred *Froeschel*, Austrian otologist, *1883.] When a child which is ticklish in other parts of the body, does not react to efforts to tickle the external auditory meatus, it is probably deaf in that ear.

frog (etymology unknown). 1. An animal of the family *Ranidæ*, order *Batrachia*. 2. The elastic horny substance in the middle of the sole of the horse's hoof; it is V-shaped, the two branches extending toward the heel. **f. in the throat,** a collection of mucus in the larynx causing hoarseness and an inclination to hawk. **salt f.,** a living frog whose blood has been drained away and replaced by a salt solution.

frog-belly. The slightly distended belly in rickets.

frog-face. The appearance caused by broadening of the nose which occurs in certain cases of polypus.

frog-stay. The bar* in a horse's hoof.

frog-tongue. Ranula.

Frohn's rea'gent [Damianus *Frohn*, German physician, *1843.] Bismuth subnitrate 1.5, water 20.0; raise to the boil and add hydrochloric acid 10.0, and potassium iodide 7.0; a test for alkaloids and for sugar.

Froin syn'drome (fro-an') [Georges *Froin*, French physician, *1874.] Loculation syndrome; an alteration in the cerebrospinal fluid, which is yellowish in hue and coagulates spontaneously in a few seconds after withdrawal, owing to its greatly increased protein (albumin and globulin) content; it indicates that communication between the ventricles and the lumbar theca is cut off.

frolement (frol-mon'). 1. Light friction with the palm of the hand, massage. 2. A rustling sound heard in auscultation.

From'mann's stri'æ [Carl *Frommann*, German anatomist, 1831–1892.] Transverse lines in the axis-cylinder of a nerve-fiber near Ranvier's crosses, made visible by intense staining with nitrate of silver.

From'mel's opera'tion [Richard *Frommel*, German gynecologist, 1854–1912.] Shortening of the utero-sacral ligaments by the abdominal route for retrodeviation.

From'mer's dila'tor. A modification of Bossi's cervical dilator.

frond [L. *frons*, a green bough.] The leaf of a fern or a palm

fron'dose. Thalloid.

frons, gen. *fron'tis* [L.] The forehead.

fron'tad. Toward the front.

frontal (frun'tal). 1. In front, relating to the anterior part of a body. 2. Relating to the forehead. **f. angle,** anterior superior angle of the parietal bone.

fronta'lis. See under *musculus*.

fron'tier sore. Oriental boil.*

frontoma'lar. Relating to the frontal and the malar bones.

fron"tomax'illary. Relating to the frontal and the maxillary bones.

frontona'sal. Relating to the frontal and the nasal bones.

fronto-occip'ital. Relating to the frontal and the occipital bones, or to the forehead and the occiput.

frontoparietal (frun"to-pă-ri'e-tal) Relating to the frontal and the parietal bones.

fron"totem'poral. Relating to the frontal and the temporal bones.

front-tap contrac'tion. Contraction of the calf muscles when the anterior surface of the leg is struck.

Froriep's gan'glion (fro'rēp) [August *Froriep*, German anatomist, *1849.] A temporary collection of nerve-cells on the dorsal aspect of the hypoglossal nerve in the embryo; it represents a rudimentary dorsal ganglionic root. **F.'s indura'tion,** myositis fibrosa.

frost-bite. Congelation; a local condition resulting from freezing of the part.

frost'ed liver, etc. Icing* liver, etc.

frost-itch. Pruritus hiemalis.

Frost-Lang opera'tion. Insertion of a gold ball after the enucleation of the eyeball, then uniting the superior and inferior recti muscles by a suture including the overlying conjunctiva.

fruc'tose. Fruit-sugar, levulose.*

fructosuria (fruk"to-su'ri-ah) [*fructose* + G. *ouron*, urine] The passage of urine containing fructose.

fruit (froot) [L. *fructus*.] 1. An edible product of a plant, which contains the seeds. 2. The matured ovary of a plant with the seed and its envelopes, whether edible or not.

fruita'rian. One who lives chiefly on fruits, with milk usually and nuts.

fruit-sugar. Fructose, levulose.*

frus'trate [L. *frustrari*, to deceive; *frustra*, in vain.] Ineffectual.

fru'ticose. Noting a shrub-like lichen.

Ft. Chemical symbol of *florentium*.

ft. An abbreviation of the Latin *fiat* (sing.), *fiant* (pl.), meaning, "let there be made"; a term employed in prescription writing.

Fuchs' colobo'ma (fookhs) [Ernst *Fuchs*, German ophthalmologist, 1851–1930.] A congenital defect in the chorioid at the lower edge of the optic disc.

fuchsin (fook'sin) [from *fuchsia*, after Leonhard *Fuchs*, German botanist, 1501–1566.] Rosaniline monohydrochloride, employed as a red stain in histology and bacteriology; chemically pure fuchsin (arsenic-free) has been employed in albuminuria and anasarca in doses of gr. ½–3 (0.03–0.2). **f. bod'ies,** Russell's* bodies, hyaline bodies.

fuchsinophil, fuchsinophile (fook-sin'o-fil or fil) [*fuchsin*, + G. *philos*, fond.] Erythrophil. 1. Staining readily with fuchsin dyes. 2. A cell or histological element which stains readily with fuchsin. **f. reac'tion,** the property possessed by certain elements, when stained in an aniline-water solution of acid fuchsin, of retaining the stain when treated with picric acid alcohol.

fuchsinophilous (fook-sin-of'il-us). Fuchsinophil(1).

Fu'cus [G. *phykos*, seaweed.] A genus of seaweeds, natural order *Fucaceæ*. **F. cris'pus,** Irish moss, chondrus.* **F. siliquo'sus,** a species resembling *f. vesiculosus* and sometimes substituted for it. **F. vesiculo'sus,** *Quercus marina*, bladder-wrack, kelp, a seaweed of the northern Atlantic and Pacific coasts; the dried thallus, official in the N.F. as *fucus*, has been employed in the treatment of obesity and of enlarged glands in doses of gr. 10–15 (0.6–1.0), or ♏10 (0.6) of the N.F. fluidextract.

fu'el val'ue. Potential energy of the oxidizable portion of food.

Fuerbringer's hand-disinfec'tion (für'bring-er) [Paul F. *Fuerbringer*, Berlin clinician, 1849–1930.] Brushing the hands and arms with warm soap and water for 3 minutes; the same repeated after cleaning the nails; rubbing with 70 per cent. alcohol, 2 minutes; brushing with a 2 per cent. lysol solution, 2 minutes. **F.'s sign,** a needle thrust into a collection of pus below the diaphragm will move with the respiratory movements, whereas if the pus is in the pleural cavity the needle will remain stationary, or nearly so. **F.'s test,** the presence of albumin in the urine is indicated by a cloud surrounding a capsule containing sodium chloride, corrosive sublimate, and citric acid.

Fuerstner's disease' (fürst'ner) [C. *Fuerstner*, German psychiatrist, *1848.] Pseudospastic paralysis with tremor

fugitive (fu'jĭ-tiv) [L. *fugitivus: fugere*, to flee.] 1. Temporary, transient. 2. Wandering, flying; noting certain inconstant symptoms.

fugue (fūg) [L. *fuga*, flight.] Flight, ambulatory automatism; a wandering away from home under an hysterical impulsion, often with loss of memory of one's name, residence, occupation, etc.

fugu-poison (foo'goo-poy"zun) [Jap. *fugu*, a poisonous fish.] Fish poison, a poison in the roe and other parts of various species of *Diodon*, *Triodon*, and *Tetradon*, fishes of eastern Asiatic waters.

Fukala's opera'tion (foo-kah'lah) [Vincent *Fukala*, Bohemian physician, †1913.] Removal of the lens for the relief of very pronounced myopia.

ful'gurant [L. *fulgurare*, to lighten.] Sudden, like a flash of lightning; fulminant, foudroyant.

ful'gurating. 1. Fulgurant. 2. Relating to fulguration (2).

fulguration (ful-gu-ra'shun) [L. *fulgur*, lightning stroke. 2. Treatment of malignant tumors by means of sparks from a d'Arsonval current.

fuliginous (fu-lij'in-us) [L. *fuligo*, soot.] Sooty, of the color of soot.

full'ers' earth. Aluminum silicate, porcelain clay, kaolinum.*

füllkörper (fül'ker-per) [Ger. fill-bodies.] Degenerated glia cells.

ful'minant [L. *fulminare*, to lighten.] Fulgurant, foudroyant, occurring with lightning-like rapidity; noting certain pains, as those of tabes dorsalis.

ful'minating. Fulgurating.

fu'migate [L. *fumigare; fumus*, smoke, + *agere*, to drive.] To expose to the action of smoke or of fumes of any kind, as of sulphur, as a means of disinfection.

fumiga'tion. Exposure to the fumes of sulphur or to the action of a disinfectant gas.

fu'ming [L. *fumus*, smoke.] Giving forth a visible vapor, a property of strong nitric, sulphuric, and hydrochloric acids, and certain other substances.

function (funk'shun) [L. *functus; fungi*, to perform.] 1. The special action or physiological property of an organ or other part of the body. 2. The general properties of any substance, depending upon its chemical character and relation to other substances, according to which it may be grouped among the acids, bases, alcohols, or esters, etc. 3. To perform its special work or office, said of an organ or other part of the body; to functionate. **allomer'ic f.,** the combined function of the several segments of the spinal cord and medulla, communicating with each other by means of the white matter. **isomer'ic f.,** the individual function of an isolated segment of the spinal cord.

functional (funk'shun-al). Relating to a function or the functions. **f. disease',** a disease manifested by disorder in the functions of the several organs or tissues, but in which no lesion or change in structure can be determined.

func'tionating. Performing its normal function, said of an organ or other part.

fun'dal. Relating to a fundus.

fun'dament [L. *fundamentum*, foundation.] 1. A foundation. 2. The anus.

fundamen'tal. 1. Essential. 2. Elementary. **f. tis'sue,** in botany, the tissue of the body of a plant, not the epidermis or a vascular bundle.

fundic (fun'dik). Fundal.

fun'diform [L. *funda*, a sling, + *forma*, shape.] Looped; sling-shaped.

fun'dus [L. bottom.] 1. The bottom or lowest part of a sac or hollow organ, that farthest removed from the opening. 2. The cardiac end of the stomach, the main reservoir for the reception of food and its peptic digestion, partly shut off, during digestion, from the antrum, or pyloric end, by the prepyloric sphincter **f. mea'tus acus'tici inter'ni** [BNA], fundus of the internal acoustic (auditory) meatus, lies at the base of the modiolus of the cochlea and is separated by a thin plate of bone from the vestibule; it is divided by the *crista transversa*, transverse crest, into the *fossula superior* and *fossula inferior;* the former is pierced by the aqueduct of Fallopius and foramina for nerves to the utricle and ampullæ of the superior and lateral semicircular canals; the latter by the *canalis centralis* and *tractus spiralis foraminosus*, giving passage to the cochlear nerves, by foramina for nerve-fibers to the vestibule, and by the *foramen singulare* for nerves to the ampulla of the posterior semicircular canal. **f. oc'uli,** the portion of the interior of the eyeball around the posterior pole; the part exposed to view through the ophthalmoscope. **f. pyramidis,** facies tympani pyramidis [NK]. **f. tigré** (te-gra'), the appearance presented by the fundus of the eye, supposedly after slight hemorrhage or in retinitis pigmentosa; the retina is marked by a number of reddish-brown striæ lying beneath the vessels; leopard retina, tigroid retina. **f. tym'pani,** floor of the tympanic cavity, paries jugularis tympani [BNA]. **f. u'teri** [BNA], the upper rounded extremity of the uterus above the openings of the Fallopian tubes. **f. ventric'uli** [BNA], the cardiac or esophageal end of the stomach; see *fundus* (2). **f. vesi'cæ urina'riæ** [BNA], the base of the bladder. **f. vesi'cæ fell'eæ** [BNA], the wide closed end of the gall-bladder situated at the inferior border of the liver.

fungal (fung'gal). Relating to a fungus; fungoid, fungous.

fungate (fung-gāt). To grow exuberantly like a fungus or spongy growth.

fungicidal (fun-jĭ-si'dal) [*fungus*, + L. *cædere*, to kill.] Destructive of fungi.

fungoid (fung'goyd) [L. *fungus* + G. *eidos*, resemblance.] Fungous, resembling a fungus, noting an exuberant morbid growth on the surface of the body.

fungosity (fung-gos'ĭ-tĭ) 1. A fungoid growth. 2. The state of being fungous.

fungous (fung'gus). Relating to a fungus; of the appearance of a fungus, fungoid.

fungus (fung'gus) [L.] 1. A cellular vegetable organism feeding on organic matter; such are mushrooms, moulds, and bacteria. 2. A morbid excrescence on the surface of the body, soft and succulent, bearing a fancied resemblance to a mushroom; an exuberant overgrowth of granulation tissue, proud flesh. **al'pha f.**, term applied by Quincke to the fungus of favus herpetiformis, now usually called *Achorion arloingi* or *A. quinckeanum*. **be'ta f.**, term applied by Quincke to a strain of *Achorion schoenleinii*, the favus fungus. **budd'ing f.**, yeast f. **cuta'neous f.**, dermatomyces, dermatophyte. **fis'sion f.**, a schizomycete. **gam'ma f.**, term applied by Quincke to a strain of *Achorion schoenleinii*, the favus fungus. **f. hæmato'des**, a soft, easily bleeding, malignant fungoid growth. **f. of the brain**, hernia cerebri. **mould f.**, mucorinus. **ray f.**, actinomyces. **slime f.**, mycetozoa. **umbil'ical f.**, a mass of granulation tissue on the stump of the umbilical cord in the newborn. **yeast f.**, saccharomyces.

fun'gus-foot. Mycetoma.

fu'nic. Relating to the funis, or umbilical cord.

fu'nicle. Funiculus.

funic'ular. 1. Relating to a funiculus. 2. Funic.

funiculitis (fu-nik-u-li'(le')tis) [*funiculus* + G. *-itis*] 1. Inflammation of a funiculus, especially of the spermatic cord. 2. Inflammation of that portion of a spinal nerve root which lies within the intervertebral canal. **endem'ic f.**, cellulitis of the spermatic cord occurring endemically in Ceylon and Egypt, and probably elsewhere in the East.

funic'ulus [L. dim. of *funis*, cord.] A small, cord-like structure, such as (1) one of the bundles of nerve-fibers the aggregate of which compose the nerve-trunk; (2) the spermatic cord; (3) the umbilical cord; (4) in botany, the stalk of the ovule. **f. am'nii**, amniotic cord. **f. ante'rior**, anterior bundle, anterior column of the spinal cord, a column or bundle of white matter on either side of the anterior median fissure, between that and the anterolateral sulcus. **f. cunea'tus** [BNA], the upward prolongation of the fasciculus cuneatus, or Burdach's tract, in the medulla. **f. gra'cilis** [BNA], the upward prolongation of the fasciculus gracilis, or Goll's tract, in the medulla. **f. latera'lis** [BNA], the lateral white column of the spinal cord between the lines of exit and entrance of the anterior and posterior nerve-roots; it contains four tracts or fasciculi: the lateral cerebrospinal or crossed pyramidal, the cerebellospinal or direct cerebellar, the superficial anterolateral or Gowers' tract, and the proper lateral fasciculus or lateral ground or basis bundle; also the lateral white column of the medulla oblongata. **f. medull'æ spina'lis** [BNA], any one of the columns of the spinal cord, the chief of which are the posterior (*f. posterior*) and the anterolateral (*f. anterior* and *f. lateralis*) of each lateral half of the cord; in the cervical portion of the cord the posterior column divides into an outer part (*f. cuneatus*) and an inner part (*f. gracilis*). **f. poste'rior** [BNA], posterior funiculus or white column of the spinal cord lying between the posterior gray column or horn and the posterior median sulcus; it is composed of two tracts: the *fasciculus gracilis*, or Goll's tract, and the *fasciculus cuneatus*, or Burdach's tract; also the posterior white column of the medulla oblongata. **f. sep'arans**, an oblique ridge in the floor of the fourth ventricle of the brain, separating the area postrema from the ala cinerea, or trigonum vagi. **f. sil'iquæ**, one of the bundles of fibers on the surface of the nucleus olivaris inferior. **f. solita'rius**, fasciculus solitarius. **f. spermat'icus** [BNA], spermatic cord. **f. te'res**, eminentia teres, eminentia medialis [BNA]. **f. umbilica'lis** [BNA], umbilical cord, a cord of fibromucoid substance (Wharton's jelly), containing the umbilical vein and the umbilical arteries, which connects the fetus with the placenta.

fu'nis [L. cord.] 1. The umbilical cord. 2 A cord-like structure **f. argen'teus**, the spinal cord. **f. bra'chii**, the median cephalic vein of the arm. **f. Hippoc'ratis**, tendo Achillis.

funn'el. 1. A hollow conical vessel with a tube of variable length proceeding from its apex, used in pouring fluids from one container to another, in filtering, etc. 2. In anatomy, infundibulum. **pi'al f.**, a loose adventitia, continued from the pia mater, which invests any one of the blood-vessels in the nervous substance of the brain or spinal cord.

fur. 1. The coat of soft, fine hair of certain animals, especially those inhabiting cold regions. 2. A layer of epithelium and mucus frequently seen on the dorsum of the tongue, especially in disorders involving the alimentary tract.

fur'cal [L. *furca*, fork.] Forked.

furcocercous (fur-ko-ser'kus) [L. *furca*, fork, + G. *kerkos*, tail.] Having a forked or bifid tail.

fur'fur, pl. *fur'fures* [L. bran.] Dandruff; porrigo; any epidermal scale.

furfuraceous (fur-fu-ra'shyus) [L. *furfur*, bran.] Branny, scaly, scurfy; composed of small scales, noting a form of desquamation.

furfural, furfurol (fur'fu-ral, fur'fu-rol). A colorless aromatic fluid obtained in the distillation of bran with dilute sulphuric acid.

fu'ror [L.] Rage, madness, fury. **f. epilep'ticus,** attacks of anger to which epileptics are occasionally subject, occurring without provocation and without disturbance of consciousness. **f. secan'di,** tomomania. **f. uteri'nus,** nymphomania.

furrow (fur'o) [A.S. *furh*.] A groove or sulcus. **dig'ital f.,** one of the grooves on the palmar surface of a finger, at the level of an interphalangeal joint. **gen'ital f.,** a groove on the genital tubercle in the embryo. **glu'teal f.,** the groove or sulcus between the nates or buttocks. **prim'itive f.,** a groove on the dorsal surface of the embryo which becomes converted into a tube, the primitive cerebrospinal axis.

furrow-keratitis (fur"o-ker-ă-ti'(te')tis). Elongated branching ulcers of the cornea, keratitis dendritica.

furuncle (fu'rung-kl). Furunculus, boil.

furuncular (fu-rung'ku-lar). Relating to a boil or furuncle, furunculous.

furunculoid (fu-rung'ku-loyd) [*furunculus* + G. *eidos*, resemblance.] Resembling a boil.

furunculo'sis. A condition marked by the presence of furuncles or boils. **f. orienta'lis,** oriental boil.*

furunculous (fu-rung'ku-lus). Furuncular, relating to a boil; marked by the presence of furuncles

furun'culus, pl. *furun'culi* [L. dim. of *fur*, a thief. Furuncle, boil, an inflammation of the tissue surrounding a cutaneous follicle, resulting in suppuration and necrosis of the central portion (the *core*).

Fusarium (fu-za'rĭ-um) [L. *fusus* spindle.] A genuf of fungi. **F. equi'num,** a species suspected os causing a mange in horses.

fuscin (fus'in) [L. *fuscus*, dusky.] The pigment of the retina.

fu'sel oil [Ger. *fusel*, inferior brandy.] Grain oil, a mixture of amyl alcohol and other homologous products formed during alcoholic fermentation.

fusible (fu'zĭ-bl). Capable of being melted. **f. cal'culus,** a urinary calculus composed of triple phosphate and calcium phosphate.

fusiform (fu'zĭ-form) [L. *fusus*, a spindle, + *forma*, form.] Spindle-shaped, tapering at both ends.

Fusiformis (fu-zĭ-for'mis) [L. spindle-shaped.] A genus of *Mycobacteriaceæ*, containing spindle-shaped anaerobic or microaerophilic, non-motile organisms. **F. acnes,** *Corynebacterium acnes.*[0] **F. dentium,**[0] *F. fusiformis, B. fusiformis,* rather long spindle-shaped organisms found in the oval cavity in association with *Borrelia vincenti* in ulcerative stomatitis. **F. fragilis,** *B. fragilis, Bacteroides fragilis*[0](?), a non-motile, gram negative, anaerobe, found frequently in appendicitis. **F. furco'sus,** a small rod with one end forked, non-motile, gram-negative, anaerobic, found at times in appendicitis. **F. fusifor'mis,** *F. dentium.*[0] **F. necroph'orus** *Actinomyces necrophorus.*[0] **F. nuclea'tus,**[0] a species whose habitat is the mouth. **F. polymor'phus,**[0] a species found in the mouth. **F. ramo'sus,** an organism inhabiting the intestinal canal and not infrequently found in cases of appendicitis. **F. ser'pens,** a large slightly motile, gram negative organism, with rounded ends, possibly feebly pathogenic, isolated from a case of mastoiditis.

fusion (fu'zhun) [*fundere*, to melt, to pour.] 1. Liquefaction by heat, melting. 2. Uniting, joining together. 3 The blending of the images seen by the two eyes into one perfect image, producing binocular vision. 4. The growth together, as one, of two or more teeth in consequence of the abnormal union of their formative organs. **f. fac'ulty,** the power of perceiving the two images seen by the two eyes, as one.

Fusobacterium (fu-zo-bak-te'rĭ-um) [L. *fusus*, a spindle.] Knorr's term for certain species of *Fusiformis.*

fu"socell'ular. Spindle-celled.

fustiga'tion [L. *justigare*, to beat with a cudgel *fustis.*] A form of massage consisting in beating the surface with light rods.

fus'tin. A yellow dye from fustic, *Rhus cotinus*, or Venetian sumach.

G

G. Chemical symbol for the element glucinum.

g. Abbreviation for gram.

Ga. Chemical symbol for the element gallium.

Gabb'ett's method [Henry Singer *Gabbett*, English physician, contemporary.] For staining acid-fast bacilli, including *B. tuberculosis;* The cover-glass preparation, fixed by heat, is dipped in Ziehl's* solution and warmed until vapor arises, then washed and immersed for 2 to 4 minutes in Gabbett's solution. **G.'s solution, G.'s stain,** methylene blue 1, sulphuric acid 25, water 75.

gab'ianol [*Gabian*, a village in France where there is an oil well, + L. *oleum*, oil.] A refined preparation of a mineral oil, used in phthisis in doses of ♏3–5 (0.2–0.3).

Gaboon' ul'cer [*Gaboon*, the region in Africa now known as the French Congo.] A form of tropical ulcer affecting the natives of this region; it resembles a syphilitic ulcer, especially in the appearance of its scar.

Gad'berry's mixture. Mistura splenetica.

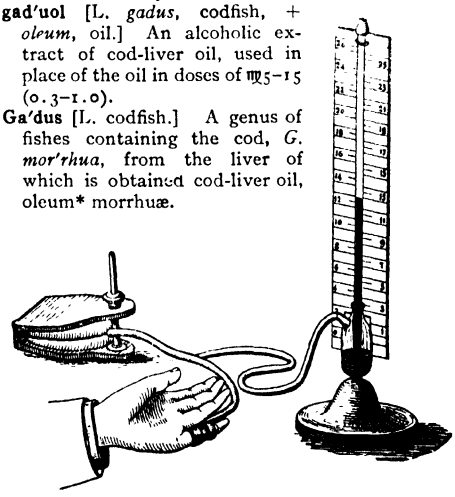
gadinine (gad'ĭ-nēn) [*Gadinæ*, a family of fishes to which the cod belongs.] A ptomaine, $C_7H_{16}NO_2$, obtained from decomposing fish.

gad'olinite [Johan *Gadolin*, Finnish chemist, 1760–1852.] A mineral containing the rare elements yttrium and beryllium.

gadolinium (gad-o-lin'ĭ-um) [see gadolinite.] A very rare element, symbol Gd, atomic weight 157.3.

gad'uol [L. *gadus*, codfish, + *oleum*, oil.] An alcoholic extract of cod-liver oil, used in place of the oil in doses of ♏5–15 (0.3–1.0).

Ga'dus [L. codfish.] A genus of fishes containing the cod, *G. mor'rhua*, from the liver of which is obtained cod-liver oil, oleum* morrhuæ.



GAERTNER'S TONOMETER.

Gaertner's bacil'lus (gairt'ner) [August *Gaertner*, German physician, *1848.] *Salmonella enteritidis.*[0]

Gaert'ner's canal' or **duct.** Incorrect spelling for *Gartner.*

Gaert'ner's tonom'eter [G. *Gaertner*, Viennese physician, 1855–1921.] An apparatus for estimating the blood-pressure by noting the force, expressed by the height of a column of mercury, needed to arrest pulsation in a finger encircled by a compressing ring. **G.'s vein phenom'enon,** varying fulness of the veins of the arm as the limb is raised to different heights, affording an index to the amount of pressure in the right auricle.

Gaff'ky scale or **ta'ble** [Georg Theodor August *Gaffky*, German hygienist, 1859–1918.] A formula for the classification of cases of tuberculosis according to the number of tubercle bacilli in the sputum. The following is the table as modified by Lawrason Brown: (1) One to four bacilli in whole preparation; (2) one on an average in many fields; (3) one on an average in each field; (4) two to three on an average in each field; (5) four to six on an average in each field; (6) seven to twelve on an average in each field; (7) thirteen to twenty-five on an average in each field; (8) fifty on an average in each field; (9) one hundred on an average in each field.

Gaffkya (gaf'kĭ-ah) [see above.] A genus of the family *Coccaceæ*, the only species of which of importance to man being **G. tetrag'ena,**[0] formerly called *Micrococcus tetragenus;* it is an encapsulated coccus usually arranged in tetrads, or groups of four; it is often found associated with the tubercle bacillus, and is believed to be sometimes the cause of a pseudomembranous angina.

gag. 1. To retch; to cause to retch or heave. 2. An instrument adjusted between the teeth to keep the mouth from closing during operations on the tongue or in the throat.

Gaird'ner's disease [Sir William Tennant *Gairdner*, Scotch physician, *1824.] Angor pectoris, attacks of cardiac distress associated with mental apprehension. **G's test,** bell-metal resonance.*

gait (gāt). Manner of stepping.

galactagogue (gal-ak'tă-gog) [G. *gala(galakt-)*, milk, + *agōgos*, leading.] 1. Increasing the secretion of milk. 2. An agent which promotes the secretion and flow of milk.

galactidrosis (gal-ak"ti-dro'sis). [G *gala(galakt-)* milk, + *hidrōs*, sweat.] Sweating of a milky fluid.

galactischia (gal-ak-tis'kĭ-ah) [G. *gala(galakt-)*, milk, + *ischō*, I check.] Galactoschesia.

galac'toblast [G. *gala(galakt-)*, milk, + *blastos*, germ.] A colostrum* corpuscle.

galactocele (gal-ak'to-sēl) [G. *gala(galakt-)*, milk, + *kēlē*, tumor.] A retention tumor caused by occlusion of a lactiferous duct.

galac"tochlo'ral. Galactochloralose, an hypnotic compound of chloral and galactose; dose, gr. 3–10 (0.2–0.6).

galactococcus (gal-ak'to-kok-us) [G. *gala(galakt-)*, milk.] A microorganism, believed to be pathogenic, found in certain cases of udder disease in the cow.

galactometas'tasis (gal-ak"to-mĕ-tas'ta-sis) [G. *gala (galakt-)*, milk, + *metastasis.*] The supposed metastasis of milk, or its secretion elsewhere than by the mammary glands.

galactom'eter [G. *gala(galakt-)*, milk, + *metron*, measure.] A form of hydrometer for determining the specific gravity of milk as an indication of its richness; lactometer.

galactop'athy [G. *gala(galakt-)*, milk, + *pathos*, suffering.] Galactotherapy.

galactoph'agous [G. *gala(galakt-)*, milk, + *phagō*, I eat.] Subsisting on milk.

galactophlysis (gal-ak-tof'li-sis) [G. *gala(galakt-)*, milk, + *phlysis*, eruption.] 1. Crusta lactea. 2. A vesicular eruption in which the vesicles contain a milky fluid.

galac'tophore [G. *gala(galakt-)*, milk, + *phoros*, a bearer.] A milk duct.

galactophoritis (gal-ak-to-for-i'(e')tis). Inflammation of the milk ducts.

galactophorous (gal-ak-tof'o-rus). Conveying milk.

galactophthisis (gal-ak"tof-thi'(the')sis) [G. *gala(galakt-)*, milk, + *phthisis*, wasting.] A loss of flesh and strength assumed to be caused by unduly prolonged lactation.

galactoph'ygous [G. *gala(galakt-)*, milk, + *phygē*, banishment.] Diminishing or arresting the secretion of milk, lactifugal.

galactopla'nia [G. *gala(galakt-)*, milk, + *planē*, wandering.] Galactometastasis.

galactopoietic, galactopoetic (gal-ak"to-poy-et'ik, gal-ak"to-po-et'ik) [G. *gala(galakt-)*, milk, + *poiō*, I make.] Galactagogue. 1. Increasing the secretion of milk. 2. An agent which promotes the secretion of milk.

galactorrhe'a, galactorrhœ'a [G. *gala(galakt-)*, milk, + *rhoia*, flow.] A continued discharge of milk from the breasts in the intervals of nursing or after the child has been weaned.

galactoschesia, galactoschesis (gal-ak-to-ske'sĭ-ah, gal-ak-tos'ke-sis) [G. *gala(galakt-)*, milk, + *schesis*, a checking.] A checking of the secretion of milk.

alac'toscope [G. *gala(galakt-)*, milk, + *skopeō*, I examine.] An instrument for judging of the richness and purity of milk by the translucency of a thin layer.

galactose (gal-ak'tōz) [G. *gala(galakt-)*, milk.] A dextrorotatory monosaccharide (hexose) occurring as one of the products, with dextrose, of the hydrolysis of lactose.

galactosta'sia, galactos'tasis [G. *gala(galakt-)*, milk, + *stasis*, a standing.] Galactoschesia.

galactosu'ria [*galactose* + G. *ouron*, urine.] The passage of urine containing galactose.

galactother'apy [G. *gala(galakt-)*, milk, + *therapeia* treatment.] 1. Treatment of disease by means of an exclusive or nearly exclusive milk diet; milk cure. 2. Medicinal treatment of a nursing infant by giving to the mother a drug which is excreted in part by the milk.

galactotox'icon [G. *gala(galakt-)*, milk, + *toxikon*, poison.] A toxic substance of unknown composition found in poisonous milk.

galactotox'in. A poison in stale milk, probably different from galactotoxicon.

galactotox'ism [G. *gala(galakt-)*, milk, + *toxikon*, poison.] Poisoning by impure or spoiled milk.

galactozymase (gal-ak"to-zi'māz) [G. *gala(galakt-)*, milk, + *zymē*, leaven.] A starch-hydrolyzing ferment in milk.

galactu'ria [G. *gala(galakt-)*, milk, + *ouron*, urine.] The passage of milky urine; chyluria.

gal'alith [G. *gala*, milk, + *lithos*, stone.] Paracasein hardened by formalin, employed in the manufacture of absorbable intestinal anastomosis buttons, and for other purposes.

galangal (gal-ang'gal) (N.F.). Galanga, galingal, Chinese ginger, the rhizome of *Alpinia officinarum*, an aromatic stimulant and carminative in doses of gr. 10–20 (0.6–1.3).

gal'banum (Br.). A gum resin from *Ferula galbaniflua*, a plant of western Asia; locally a counterirritant, internally an expectorant and antispasmodic in doses of gr. 10–20 (0.6–1.3).

Galbiati's opera'tion (gahl-be-ah'te) [Gennaro *Galbiati*, Italian obstetrician, 1776–1844.] Bilateral pelvitomy or ischiopubiotomy, through the rami forming the obturator foramina, with symphyseotomy.

gal'ea [L. a helmet.] 1. A form of bandage covering the head. 2. The caul. 3. Galea aponeurotica. **g. aponeurot'ica** [BNA], epicranial aponeurosis, the aponeurosis connecting the frontalis and occipitalis muscles to form the epicranius. **g. cap'itis,** galea (1) and (3).

Galeati's glands (gah-la-ah'te) [Bologna physician, 1686–1775.] Lieberkuhn's crypts.

gale'ga (N.F.). Goats' rue, the herb *Galega officinalis* of the Mediterranean region, reputed to have galactagogue properties in dose of ʒi (4.0), or of ʒi (4.0) of the fluidextract.

Ga'len's ampul'la [Claudius *Galenus*, Greek physician in Rome, 130–201.] A circumscribed dilatation of G.'s vein in Bichat's* fissure. **G.'s anastomo'sis,** a nerve at the posterior surface of the larynx connecting the superior and inferior laryngeal nerves, supplying sensory fibers to the latter. **G.'s ban'dage,** a head bandage consisting of a broad piece of cloth split into three tails at each of the two ends; these strips or tails are tied together over the forehead, under the chin, and at the nucha. **G.'s innom'inate gland,** the orbital portion of the lacrymal gland. **G.'s nerve,** G.'s anastomosis. **G.'s vein,** vena cerebri magna **G.'s veins,** venæ cerebri internæ.

Galen'ic. Relating to Galen or to his theories

galenicals (ga-len'ĭ-kalz) 1. Herbs and other vegetable drugs, as distinguished from the mineral or chemical remedies 2. Crude drugs and the tinctures, decoctions, and other preparations made from them, as distinguished from the alkaloids and other active principles. 3. Remedies prepared according to an official formula.

galeophilia (gal-e-o-fil'ĭ-ŭ) [G. *galē*, cat, + *philia*, affection.] Fondness for cats; gatophilia, ailourophilia.

galeophobia (gal-e-o-fo'bĭ-ah) [G. *galē*, cat, + *phobos*, fear.] Gatophobia, ailourophobia.

galeropia (gal-er-o'pĭ-ah) [G *galeros*, cheerful, + *ōps*, eye.] Abnormal acuteness of vision.

galeropsia (gal-er-op'sĭ-ah) [G. *galeros*, cheerful, + *opsis*, vision.] Galeropia.

galium (gal'ĭ-um) [G. *galion* from *gala*, milk, which the plant curdles.] A plant belonging to the genus of the same name, one species of which *G. aparine*, is employed in eclectic practice in cases of irritation of the urinary tract, strangury, and suppression of urine in doses of ½ to 1 dram of the specific medicine in water four times a day.

gall (gawl) [A.S. *gealla*.] 1. The bile. 2. An excoriation on the skin. 3. Nutgall, galla.*

Gall's craniol'ogy [Franz Joseph *Gall*, German anatomist, 1758–1828.] Phrenology.

gal'la [L.] (U.S., Br.) Nutgall, oak apple, an excrescence on the oak, *Quercus lusitanica*, caused by the deposit of the ova of a fly, *Cynips gallæ tinctoriæ*; astringent and styptic, by virtue of the tannin it contains, in doses of gr. 5–10 (0.3–0.6).

gallacetophenone (gal-as"e-to-fe'nōn). A yellowish brown powder, parasiticide and antiseptic; employed externally in psoriasis and other skin diseases.

gall'al. Aluminum gallate, employed externally as an astringent and styptic.

gallanilide (gal-an'i-lid). Gallanol, gallinol; a derivative of acetanilide, employed locally in skin diseases as a substitute for chrysarobin.

gall'anol. Gallanilide.

gallate (gal'āt). A salt of gallic acid.

gall-bladder (gawl'blad-ur). Vesica fellea, a pear-shaped sac, containing bile, on the under surface of the liver. **sand'paper g.-b.,** a roughened condition of the mucous membrane of the g.-b., due to the deposit of cholesterin crystals, associated usually with the presence of gallstones. **straw'-berry g. b.,** one with uneven mucous-membrane lining, due to a deposit of cholesterin particles; usually synonymous with sandpaper g. b.

artificial fistula, cholecystostomy (external), cholecysto-enteroanastomosis, cholecystenterostomy (with intestine), cholecystocolostomy (with colon), cholecysto-duodenostomy (with duodenum), cholecystogastrostomy (with stomach), cholecystojejunostomy (with jejunum), cholecystoileostomy (with ileum). **calculus,** cholelith. **crushing calculus in,** cholecystolithotripsy, cholelithotrity. **dilatation,** cholecystectasia. **dropsy,** hydrocholecystis. **excision,** cholecystectomy. **hernia,** cholecystocele. **incision,** cholecystotomy. **inflammation,** cholecystitis. **pain,** cholecystalgia. **removing calculus,** cholelithotomy, cholecystendysis **suture,** cholecystorrhaphy, cholecystenterorrhaphy (to intestine) cholecystopexy (to abdominal wall). **tumor,** cholecystoncus, cholcele.

gall-duct (gawl'dukt). Bile-duct, one of the tubes conveying bile. **common g.-d.,** ductus choledochus **cystic g.-d.,** ductus cysticus.

artificial opening into, choledochostomy. **artificial union with intestine,** choledochoenterostomy, choledochoduodenostomy (with duodenum). **calculus formation in,** choledocholithiasis. **crushing calculus in,** choledocholithotripsy, choledocholithotrity **excision,** choledochectomy, cystectomy **incision,** cholangiotomy, choledochotomy, cysticotomy, choledochendysis **inflammation,** angiocholitis, cholangitis, choledochitis **removal of calculus,** choledocholithotomy, cholelithotomy. **stenosis,** choledochiarctia

gallein (gal'e-in). Pyrogallophthalein, $C_{20}H_{10}O_7$, an indicator of the reaction of a fluid, its alcoholic solution being turned rose-red in an alkaline fluid, and yellowish brown in neutral solutions

gallic acid (gal'ik as'id) Acidum* gallicum.

gall'icin. Methyl gallate, gallic-acid methyl ester; a grayish white crystalline powder, employed as an astringent antiseptic in conjunctivitis and keratitis

gall'inol. Gallanilide.

gallium (gal'ĭ-um) [L. *Gallia*, France.] A rare metal, symbol *Ga*, atomic weight 69.9, fluid at a temperature of 30° C. (86° F.); obtained from zinc-blende in the Pyrenees.

gallobro'mol. Dibromogallic acid, occurs in whitish crystals soluble in 10 parts of water; used internally as a nervous sedative in doses of gr. 5–15 (0.3–1.0), and as an astringent and antiseptic injection in gonorrhea.

gallofor'min. A crystalline substance obtained from gallic acid and hexamethylenamine; employed as an internal and external antiseptic.

gal'logen. Benzoarie or ellagic acid, $C_{14}H_6O_8$, obtained from the pods of *Cæsalpina coriari* or divi-divi; a yellowish powder employed in the treatment of diarrhea in doses of gr. 5–15 (0.3–1.0).

gall'on. A measure of liquid capacity containing 4 quarts, 231 cubic inches, or 8.3389 pounds of distilled water; it is the equivalent of 3.7853 liters. The British imperial gallon contains 277.274 cubic inches

gallotann'ic acid. Tannin, acidum* tannicum.

gall-sickness (gawl'sik-nes). Galziekte, a disease of cattle in South Africa caused by *Trypanosoma theileri*.

gallstone (gawl'stōn). A concretion, chiefly of cholesterin, formed in the gall-bladder or a bile-duct.

Galton's delta (gawl'tun) [Francis *Galton*, English scientist, 1822–1911.] 1. A more or less well marked triangle, in a finger-print, on either side where the straight ridges, near the joint of the distal phalanx, are succeeded by arches, loops, or whorls (see cut under *finger-prints*). 2. Triradius. **G.'s law,** the law of ancestral inheritance; each parent contributes on an average one-quarter, or $(\frac{1}{4})^2$, each grandparent one-sixteenth, or $(\frac{1}{4})^3$, and so on; the occupier of each ancestral place in the *n*th degree, whatever may be the value of *n*, contributes $(\frac{1}{4})^{2n}$ of the heritage. **G.'s system of classification,** a system of classification of finger-prints according to the variations in the patterns of the ridges, which are grouped into arches, loops, and whorls, called the A L W., or arch-loop-whorl system. "Arches are formed when the ridges run from one side to the other of the bulb of the digit, without making any backward turn or twist. Loops, when there is a single backward turn, but no twist. Whorls, when there is a turn through at least one complete circle; they are also considered to include all duplex spirals." The abbreviations used in making a record of finger-prints are: *a*, arch, *l* loop, *w*, whorl, *i*, loop with an inner (thumb side) slope, *o*, loop with an outer (little-finger side) slope The ten digits are registered in four groups as follows, distinguished by capital letters A, the fore, middle, and ring fingers of the right hand; B, the fore, middle, and ring fingers of the left hand, C, the thumb and little finger of the right hand; D, the thumb and little finger of the left hand. **G.'s whistle,** a cylindrical whistle, attached to a compressible bulb, with a screw attachment by which the note can be changed, it is used to test the hearing.

galvanic (gal-van'ik). Voltaic, relating to galvanism **g. batt'ery,** a collection of cells or elements in which an electric current is generated by chemical action. **g. cau'tery,** galvanocautery. **g. cell, g. el'ement,** a single unit of a g. battery, consisting usually of two plates of different metals immersed in a liquid (usually an acid) which acts upon one of the plates, or each plate may be immersed in a different liquid, the two being separated by a porous partition **g. cur'rent,** galvanism.

galvanism (gal'van-izm) [Luigi *Galvani*, Italian anatomist, 1737–1798.] Constant current electricity produced by chemical action.

galvaniza'tion. The application of the constant current, or galvanic electricity.

galvanocautery (gal"van-o-kaw'ter-i) An actual cautery made by heating a wire by a galvanic current.

gal"vanocontractil'ity. The capability of a muscle of contracting under the stimulus of a galvanic current.

gal"vanofar"adiza'tion. The simultaneous application of a galvanic and a faradic current.

galvanol'ysis. Electrolysis.

galvanom'eter [G. *metron*, measure.] An instrument for measuring the strength of a galvanic current. **Eint'hoven's g., string g., thread g.,** see *electrocardiograph*.

galvanomuscular (gal"van-o-mus'ku-lar). Noting the effect of the application of a galvanic current directly to a muscle.

galvanonervous (gal"van-o-nur'vus). Noting the effect of the application of the constant current to a nerve trunk.

galvanopalpation (gal-van-o-pal-pa'shun). Esthesiometry by means of a sharp-pointed electrode through which a feeble current passes to the cathode applied to an indifferent part.

galvanopuncture (gal″van-o-punk′tūr). The application of galvanism by means of needle electrodes passed into the body.

gal'vanoscope [G. *skopeō*, I view.] An instrument for detecting the presence of a galvanic current.

galvanotax'is. Electrotaxis* with relation to galvanism.

galvanotherapy (gal″van-o-ther′a-pĭ) [G. *therapeia*, treatment.] Treatment of disease by applications of the galvanic current.

galvanot'onus. Tonic muscular contraction in response to a galvanic stimulus.

galvanot'ropism. Galvanotaxis.

galyl (gal'il). An arsenical preparation, tetraoxydiphosphamino-diarsenobenzol, a yellow powder employed by intravenous injection in the treatment of syphilis in doses of 8 milligrams per kilogram of the patient's weight.

galziekte (gahl'zēk-teh) [D. *gal*, bile, + *ziekte*, sickness—bilious fever] A trypanosomiasis of cattle in South Africa, caused by the presence of *Tr. theileri*.

Gamaleia's spiril'lum (gam-ah-la'yah) [N. *Gamaleia*, Russian bacteriologist, *1859] *Vibrio metchnikovi*.

Gam'bian fe'ver [*Gambia*, a British colony on the West Coast of Africa.] An irregular relapsing fever, lasting one to four days with intermissions of two to five days, marked by enlargement of the spleen, frequent pulse, and rapid breathing; due to the presence in the blood of *Trypanosoma gambiense*, the pathogenic microorganism of sleeping sickness.

gam'bir (U.S.). Catechu (Br.), an extract from the leaves of *Ourouparia gambier*, pale catechu; employed in diarrhea in doses of gr. 7½–15 (0.5–1.0).

gamboge (gam-bōj′). Cambogia.

gamete (gam'ēt) [G. *gametēs*, husband, *gametē*, wife.] 1. One of two cells undergoing caryogamy or true conjugation. 2. In heredity any germ-cell, whether ovum, spermatozoon, or pollen-cell.

gametoblast (gam'e-to-blast) [G. *gametē*, wife, *gametēs*, husband, + *blastos*, offspring.] Sporozoite.

gametocide (gam'et-o-sīd) [*gamete* + L. *cædere*, to kill] An agent that is destructive to gametes, specifically the malarial gametocytes.

gametocyte (gam'e-to-sīt) [G. *gametēs*, husband, + *kytos*, a hollow vessel (cell).] A sexually differentiated sporont, the mother cell of a gamete.

gam'etoid the'ory [*gamete* + G. *eidos*, resemblance.] The theory that the malignancy of a tumor is due to the fact that the cells have assumed sexual characteristics and live as parasites upon the organism.

gametophagia (gam-ĕ-to-fa′jĭ-ah) [G. *gametēs*, husband, or *gametē*, wife, + *phagō*, I eat.] The disappearance of the male or female element in zygosis or true conjugation.

Gamgee tissue (gam'je tish'u) [Sampson *Gamgee*, British Surgeon, 1828–1886.] A material consisting of a thick layer of absorbent cotton between two layers of absorbent gauze, employed in surgical dressings.

gamma rays (gam'ah rāz). See under *ray*.

gamm'acism [G. *gamma*, Γ, γ, the equivalent of the letter g.] Inability to pronounce correctly syllables containing the letter g.

Gamna's disease' (gam'nah). Splenogranulomatosis siderotica. **G.'s nod'ules,** brownish iron-stained nodules found in the spleen in G.'s disease.

gam'ont [G. *gamos*, marriage, + *ōn(ont-)*, being.] One of the sexual forms occurring in the life-cycle of certain protozoans.

gamopet'alous [G. *gamos*, marriage, + *petalon*, petal.] Monopelatous, sympetalous, noting a flower the petals of which are united.

gamophagia (gam-o-fa′jĭ-ah) [G. *gamos*, marriage, + *phagō*, I eat.] Gametophagia.

gamophyll'ous [G. *gamos*, marriage, + *phyllon*, leaf] Noting a flower, all the parts of the perianth of which are united.

gamosep'alous [G. *gamos*, marriage, + L. *sepalum*, sepal.] Monosepalous, synsepalous, noting a flower, the sepals of which are united.

Gangi's reaction (gan'je). The suspected fluid (4 or 5 c.c.) is poured into a test-tube containing 3 or 4 c.c. of hydrochloric acid; if the fluid is an exudate a white caseous ring forms at the plane of contact and the serous fluid is gradually converted into a thick shiny white or greenish mass; in the case of a transudate (non-inflammatory) only a thin white disc forms at the plane of contact.

ganglia (gang'gle-ah). Plural of *ganglion*.

ganglial (gang'glĭ-al). Ganglionic, relating to a ganglion.

gangliate, gangliated (gang'glĭ-āt, gang'glĭ-a-ted). Ganglionated, having ganglia.

gangliec'tomy [G. *ganglion* + *ektomē*, excision.] Excision of a ganglion.

gangliform (gang'glĭ-form). Having the form or appearance of a ganglion, ganglioform.

gangliitis (gang-glĭ-i′(e′)tis). Ganglionitis.

ganglioblast (gang'glĭ-o-blast) [G. *ganglion* + *blastos*, germ.] Esthesioblast, an embryonic cell of the ganglionic nervous system.

gangliocyte (gang'glĭ-o-sīt) Nerve cell *

ganglioform (gang'glĭ-o-form). Gangliform, shaped like a ganglion.

ganglioma (gang-glĭ-o'mah). Tumor of a lymphatic gland.

ganglion, pl. *ganglia, ganglions* (gang'glĭ-on) [G. a subcutaneous tumor.] 1. An aggregation of nerve-cells within the brain, along the course of a sensory cranial nerve, on the posterior (sensory) root of a spinal nerve, in one of the organs of special sense, or forming one of the units of the sympathetic nervous system. 2. A lymph-node. 3. A circumscribed cystic swelling connected with a tendon sheath, due to the shutting off of a hernial protrusion of the synovial lining of the sheath.

ce'liac g., g. cœliacum [BNA].

com'pound g., an hourglass-shaped ganglion (3) caused by compression of the sheath of a tendon by the annular ligament at the wrist.

diffuse' g., a cystic swelling due to inflammatory effusion into one or several adjacent tendon sheaths.

gan'glia plex'uum sympathico'rum, gangliа of the sympathetic plexuses, see *systema nervorum sympathicum*.

g. aber'rans, aberrant g., one of the collections of nerve-cells sometimes found on a posterior spinal nerve-root between the spinal ganglion and the spinal cord.

g. acousticofacia'le, a g. in the embryo, the primitive g. geniculi.

g. aor″ticorena'le, aorticorenal g., a semidetached portion of the lower end of the celiac or semilunar g.

g. auricula're, g. oticum.

g. cardi'acum [BNA], cardiac g., g. of Wrisberg, a g. of the cardiac plexus lying between the arch of the aorta and the bifurcation of the pulmonary artery.

g. carot'icum, a small ganglionic swelling on filaments from the interna carotid plexus, lying on the under surface of the carotid artery.

g. cervica'le infe'rius [BNA], inferior cervical g., a sympathetic trunk g., lying behind the subclavian artery near the origin of the vertebral, at the level of the seventh cervical vertebra, close to the first thoracic g. with which it is sometimes blended.

g. cervica'le me'dium [BNA], middle cervical g., a sympathetic g., of small size and sometimes absent, at the level of the sixth or seventh cervical vertebra over the inferior thyroid artery where it crosses behind the carotid sheath.

g. cervica'le supe'rius [BNA], superior cervical ganglion, the uppermost and largest of the ganglia of the sympathetic trunk, lying near the base of the skull between the internal carotid artery and the internal jugular vein; it gives off the jugular, internal and external carotid, and superior cardiac nerves, rami communicantes to the first three or four cervical nerves and to the hypoglossal, and laryngopharyngeal rami to the pharyngeal plexus.

g. cilia're [BNA], ciliary g., lenticular or ophthalmic g., a small g in the orbit between the optic nerve and the external rectus muscle, having three roots: a long root (sensory) from the nasociliaris, a short root (motor) from the inferior ramus of the oculomotor, and a sympathetic root; it gives origin to the short ciliary nerves which supply the coats of the eyeball, the ciliary muscles, and the iris.

g. coccyge'um, coccygeal g., g. impar, the lower terminal, unpaired g. of the sympathetic trunk; it is not always present.

g. cœli'acum [BNA], celiac g., semilunar g., solar g., one of two large sympathetic ganglia lying on either side of the aorta at the level of origin of the celiac artery.

g. extracrania'le [NK], g. petrosum, g. of Andersch.

g. Gass'eri, g. semilunare.

g. genic'uli [BNA], g. of the knee of the facial nerve; geniculate g., intumescentia ganglioformis, an oval swelling on the facial nerve at the geniculum where it is joined by fibers from the vestibular trunk of the auditory nerve; from it arise the greater superficial petrosal nerve which forms the motor root of the sphenopalatine ganglion, and a minute branch which joins the tympanic branch of the glossopharyngeal to form the smaller superficial petrosal nerve.

g. haben'ulæ, nucleus habenulæ.

g. hepat'icum, a nerve g. encircling the hepatic artery.

g. im'par [L. unpaired], g. coccygeum

g. interpeduncula're [BNA], interpeduncular g., a small collection of cells on the ventral aspect of the tegmentum in the lower part of the substantia perforata posterior.

g. intervertebra'le, g. spinale.

g. intracraniale [NK] g. jugulase or g. superius. g. of Elarenritter.

g. jugula're [BNA], jugular g., g. of the root of the vagus, a small enlargement on the vagus in the jugular foramen, from which arise two branches, meningeal and auricular; the g. jugulare of the older nomenclature is g. superius [BNA]. g. intracraniale [NK].

g. lenticula're lenticular g., g. ciliare [BNA].

g. lumba'le [BNA], lumbar g., one of four or more ganglia on the inner border of the psoas major muscle on either side, forming with the sacral and coccygeal ganglia, and their connecting cords, the abdominopelvic sympathetic trunk.

g. maxilla're, g. submaxillare.

g. mesenter'icum supe'rius [BNA], superior mesenteric g., an unpaired sympathetic g., lying at the point of origin of the superior mesenteric artery, entering into the formation of the celiac plexus.

g. nasa'le, g. sphenopalatinum.

g. nodo'sum [BNA], nodose (knotty) g., g of the trunk of the vagus, a large g. of the vagus, just below the g. jugulare, at the level of the transverse processes of the first and second cervical vertebræ; it gives out a pharyngeal branch and the superior laryngeal nerve.

g. ophthal'micum, ophthalmic g., g. ciliare [BNA].

g. o'ticum [BNA], otic g., g of Arnold, a g. situated just below the foramen ovale beneath the mandibular nerve; its motor root comes from the pterygoideus internus, its sensory is the lesser superficial petrosal nerve, and its sympathetic comes from the plexus on the middle meningeal artery, it gives off three communicating branches to the Vidian, auriculotemporal, and chorda tympani nerves, and motor nerves to the tensor tympani and the tensor palati muscles.

g. petro'sum [BNA], petrous g., petrosal g., g. of Andersch, a small enlargement on the glossopharyngeal nerve in the jugular foramen below the g. superius; its chief branch is the tympanic of Jacobson's nerve.

g. phren'icum [BNA], phrenic g., one of several small ganglia contained in the phrenic plexuses of the sympathetic.

g. plex'uum sympathico'rum [BNA], ganglia of the sympathetic plexuses; see *systema nervorum sympathicum*.

g. sacra'le [BNA], sacral g., one of three or four ganglia on either side constituting, with the g. impar and the connecting cords, the pelvic portion of the sympathetic trunk.

g. semiluna're, (1) [BNA] semilunar g., Gasserian g., a flat expansion on the sensory root of the trigeminal nerve, at the apex of the petrous portion of the temporal bone; from it proceed the ophthalmic, maxillary, and mandibular branches of the trigeminal nerve; (2) g cœliacum [BNA].

g. sola're, g cœliacum.

g. sphenopalati'num [BNA], sphenopalatine g., Meckel's g , a small ganglion in the upper part of the pterygopalatine (sphenomaxillary) fossa; its sensory roots are the sphenopalatine nerves from the maxillary, its motor and sympathetic roots are joined together in the Vidian nerve; the ganglion gives off nerves to the nose, palate, and orbit.

g. spina'le [BNA], spinal g., a collection of unipolar nerve-cells on the posterior (sensory) root of each of the spinal nerves.

g. spira'le coch'leæ [BNA], spiral ganglion of the cochlea, ganglion of Corti, an elongated ganglion on the cochlear branch of the auditory nerve in the spiral canal of the modiolus; from it fibers pass out between the layers of the lamina spiralis ossea to the organ of Corti

g. splanch'nicum [BNA], splanchnic g., a ganglion not infrequently present in the course of the greater splanchnic nerve.

g. stella'tum, stellate g , the first g. thoracale.

g. submaxilla're [BNA], submaxillary g., a small g. on the hyoglossus muscle suspended from the lingual nerve; its sensory root is derived from the lingual, its motor root from the chorda tympani, and its sympathetic root from the plexus on the facial artery; branches go to the submaxillary and sublingual glands and the submaxillary (Wharton's) duct.

g. supe'rius [BNA], upper g , jugular g., an enlargement of small size on the glossopharyngeal nerve in the jugular foramen, it is not constant and may be fused with the petrous g , it gives off no branches.

g. thoraca'le [BNA], thoracic g., one of eleven or twelve ganglia on either side, at the level of the head of each rib, constituting with the connecting nerve-cords the thoracic portion of the sympathetic trunk.

g. thorac'icum pri'mum, g. cervicale inferius.

g. trun'ci sympath'ici [BNA], ganglion of the sympathetic trunk, see *systema nervorum sympathicum*.

g. vestibula're [BNA], vestibular g., a collection of nerve-cells forming a swelling on the nervus vestibuli in the internal acoustic meatus.

perios'teal g., serous abscess. *

periph'eral g., a collection of nerve cells in a sensory end-organ.

sim'ple g., a circumscribed collection of fluid in a tendon sheath, frequently located on the dorsal surface of the wrist.

sympathet'ic g., g. trunci sympathici.

ganglionated (gang'gli-on-a-ted). Gangliate.

ganglion-cell. Nerve-cell.*

ganglion-corpuscle (gang"gli-on-kor'pus-l). Nerve-cell.*

ganglionec'tomy. Excision of a ganglion.

ganglionervous system (gang"gli-o-nur'vus sis'tem). Sympathetic nervous system.

ganglioneure (gang'glĭ-o-nūr) [G. *ganglion* + *neuron*, nerve.] A cell of a nerve-ganglion.

ganglioneuroma, pl. *ganglioneuro'mata, ganglioneuro'mas* (gang-glĭ-o-nu-ro'mah). A true neuroma composed in part of, or containing numerous, nerve-cells of the type found in the sympathetic ganglia.

ganglionic (gang-glĭ-on'ik). Relating to a ganglion in any sense.

ganglionitis (gang-glĭ-on-i'(e')tis). 1. Inflammation of a lymphatic ganglion, lymphadenitis. 2 Inflammation of a nerve-ganglion.

gasnglionostomy (gan''glion-os'to-mĭ) [G. *stoma*, mouth.] Making an opening into a ganglion (3).

Gangolphe's sign (gahn-golf') [Louis *Gangolphe*, French surgeon, contemporary.] In internal strangulation of the intestine, there is a serosanguinolent effusion, shown by flatness on percussion in the loins or felt on rectal examination.

gango'sa [Sp. *gangoso*, snuffling; fem. to agree with *enfermedad*, disease.] Rhinopharyngitis mutilans.

gangrene (gang'grēn) [G. *gangraina*.] A form of necrosis combined with putrefaction; mortification. **angioneurot'ic g.,** neurotic g. **angiosclerot'ic g.,** dry g due to sclerotic changes in the vessels, as seen conspicuously in senile g. **cold g.,** dry g., neurotic g., or any form not preceded by inflammation. **decu'bital g.,** bedsore. **diabet'ic g.,** moist g. occurring in cases of advanced diabetes. **dissem'inated cuta'neous g.,** rupia escharotica. **dry g.,** a form of gangrene in which the necrosed part is dried up and shrivelled; mummification. **embol'ic g.,** g. occurring in consequence of the plugging of the main artery of the part. **emphysem'atous g.,** gas-gangrene. **gas g.,** see *gas-gangrene*. **glyce'mic g., glyke'mic g.,** emphysematous g. **glyce'mic g., glyke'mic g.,** diabetic g. **hos'pital g.,** moist g., due to infection of a wound with putrefactive bacteria, at one time common in ill-kept and crowded hospitals; sloughing phagedena. **hot g.,** g. following inflammation of the part. **hyster'ical g.,** neurotic g. **moist g.,** a form in which the necrosed part is moist and soft, decomposition occurring through the action of putrefactive bacteria. **mul'tiple g.,** the occurrence of many points of cutaneous g., as in gangrenous herpes. **neurot'ic g.,** spontaneous g. occurring in hysterical and neurotic subjects. **nosoco'mial g.,** hospital g. **prese'nile sponta'neous g.,** g. occurring in middle life as a result of thromboangiitis obliterans. **pri'mary g.,** g. caused by the direct action of bacteria in not previously necrotic tissues. **pul'py g.,** hospital g. **sec'ondary g.,** a condition in which putrefactive changes occur consequent upon necrosis due to arterial obstruction or other cause. **se'nile g.,** dry gangrene occurring in the aged in consequence of occlusion of the nutrient artery of the part; it affects especially the extremities. **sponta'neous g.,** neurotic g. **stat'ic g.,** venous g., moist g. due to obstruction in the return circulation. **symmet'rical g.,** g. of corresponding parts on the two sides of the body; it occurs most commonly in Raynaud's* disease. **thrombot'ic g.,** g. due to plugging of the main artery by a thrombus. **troph'ic g.,** g. due to disorder of the trophic nerves of the part; neurotic g. **ve'nous g.,** static g. **white g.,** death of a part accompanied by the formation of grayish white sloughs. **bone,** necrosteon, necrosteosis. **cheek,** noma, cancer aquaticus, cancrum oris **dry,** mummification, leuconecrosis, necrosis ustilaginea (from ergot). **hospital,** phagedena nosocomialis, phagedena gangrænosa **liver,** hepatocace, hepatonecrosis. **lung,** necropneumonia, pneumocace, pneumonocace. **moist,** sphacelus. **mouth,** noma, cancer aquaticus, cancrum oris, ulitis septica. **skin,** necrodermatitis, necrodermitis, sphaceloderma, dermatitis gangrænosa, decubitus (bed-sore), ecthyma gangrænosum. **spreading,** phagedena. **symmetrical,** Raynaud's disease. **tendency to,** necropathy. **vulva,** noma. **white,** leuconecrosis.

gan'grenous. Relating to or affected with gangrene; mortified.

Gan'ser's symp'tom [Sigbert Joseph Maria *Ganser*, German psychiatrist, 1853–1931.] Symptom of approximate answers; while the answers are apparently incorrect, yet analysis will show that they really have some relation to the matter embraced in the question. **G.'s syn'drome,** acute hallucinatory mania, a symptom complex, usually hysterical in origin, of amnesia, disturbances of consciousness, hallucinations, and physical disorders of various kinds.

gaol-fever (jāl'fe-vur). Jail-fever, typhus* fever.

gar'antose. Saccharin

Garcin'ia [Laurent *Garcin*, French botanist, *1752.] A genus of trees, of the natural order *Guttiferæ*, a species of which, *G. hanbu'rii*, furnishes gambogia.*

Garde'nia [Alexander *Garden*, English botanist, born in South Carolina, 1730–1791.] A genus of shrubs of the order *Rubiaceæ*. The fruits of *G. flori'da*, *G. grandiflo'ra*, and *G. radi'cans* are demulcent and refrigerant, and furnish also a yellow dye.

Gar'diner-Brown's test [Alfred *Gardiner-Brown*, English otologist.] If the vibrations of a tuning-fork applied to the mastoid process are heard longer than they can be felt by the fingers (positive test) there is disease of the middle ear; if they cease to be heard by the patient while they can still be felt by the examiner (negative test) there is disease of the middle ear; normally they cease to be heard and to be felt at the same time

Garel's' sign [Jean *Garel*, French physician, *1852.] 1. When an electric bulb is placed in the mouth the light is not perceived by the eye on the same side as an empyema or tumor of the antrum of Highmore. 2. Dysphagia located in the tonsils and posterior fauces, if persistent for more than three weeks, is usually of syphilitic origin.

gargareon (gar-gar'ĭ-on) [G.] Uvula.

gar'garism [G. *gargarisma*.] A gargle.

gargarisma (gar-gar-iz'ma) [G.] Gargarism, gargle. **g. guai'aci compos'itum** (N.F.), compound gargle of guaiac, compounded of ammoniated tincture of guaiac 100, compound tincture of cinchona 100, clarified honey 200, potassium chlorate 40, oil of peppermint 2, water to make 1000.

garget (gahr'get). 1. A swelling in the throat in cattle. 2. An inflammation of the udder of a cow, due to injury or to distention with milk.

gargle (gahr'gl) [L. *gargulio*, the throat.] 1. To rinse the fauces by taking fluid in the mouth and forcing the expired breath through it while the head is held far back. 2. A medicated fluid used for gargling; a throat-wash.

Gariel's pes'sary (gă-re-el') [Maurice *Gariel*, Paris physician, 1812–1878.] A hollow rubber pessary which can be inflated, occurring in the form of (1) a ring or (2) a pear.

Gar'land's curve [George Minott *Garland*, American physician, 1848–1926.] Damoiseau's* curve.

gar'lic. Allium.

Gar'rod's finger-pads [Sir Alfred Baring *Garrod*, London physician, 1819–1907.] Split-pea sized swellings on the interphalangeal knuckles, occurring in the early stages of Dupuytren's* contracture. **G.'s test,** two or three threads are placed in a vessel containing blood-serum acidulated with acetic acid, and the vessel is put aside in a cool place where decomposition will not set in, and allowed to evaporate to about half its volume; the threads are then washed in water to remove any phosphate deposit and examined under the microscope; in the case of gouty serum and in some other conditions, crystals of uric acid will be seen.

garr'ot [Fr. *garroter*, to tie fast.] A form of tourniquet for arresting the flow of blood in a limb by compression with a tight bandage.

garrulity (gă-ru'li-tĭ) [L. *garrulitas*.] Loquacity, talkativeness. **g. of the vul'va,** the noisy expulsion of gas from the vagina.

Garr'ya [*Garry*, an employee of the Hudson Bay Company, nineteenth century.] A genus of evergreen shrubs. **G. fremont'ii,** fever bush, a shrub of California the leaves of which have tonic and antiperiodic properties; dose ♏10–30 (0.6–2.0) of a fluidextract.

Gart'ner's cyst [Herman Treschow *Gartner*, Danish anatomist, 1785–1827.] A cystic tumor arising from G.'s duct. **G.'s duct,** one of the tubules of the epoophoron running parallel with the Fallopian tube, ductus* epoophori longitudinalis.

gas [a word coined by Van Helmont, a Belgian chemist of the seventeenth century.] 1. A thin fluid, like air, capable of indefinite expansion, but often convertible by compression and cold into a liquid. 2. To submit to the action of an injurious gas; see below. **asphyx'iating g.,** carbon monoxide employed as a poisonous gas in warfare. **hemolyt'ic g.,** a poisonous gas (arsine) used in warfare, inhalation of which causes hemolysis with hemoglobinuria, jaundice, gastroenteritis, and nephritis. **laughing g.** [so called because its inhalation sometimes excites an hilarious delirium preceding insensibility], nitrous oxide, nitrogenii monoxidum, nitrogen* monoxide. **marsh g.,** methane. **mus'tard g.,** dichlorethyl sulphide, a poisonous gas first used by the Germans in the world war; it causes intense irritation of the eyes, air passages, and skin, followed by blistering and sloughing of the skin and bronchopneumonia. **olef'iant g.,** ethylene. **sew'er g.,** the emanation from a sewer. **snee'zing g.,** sternutator, diphenylchlorarsine, a gas used in warfare which causes explosive cough and sneezing, salivation, retrosternal pain, and headache. **suff'ocating g.,** a gas employed in warfare which causes intense irritation of the bronchial tubes and lungs, resulting in pulmonary edema; among gases so employed are chlorine, phosgen, diphosgen, and oxychlorcarbon. **tear g.,** acetone, benzene bromide, xylol, a gas used in warfare which causes irritation of the conjunctiva and profuse lacrymation; called also lacrymator. **vesi'cating g.,** mustard g.

gas-em'bolism. Air-embolism.

gas'eous. Of the nature of gas.

gas-gangrene (gas-gan-grēn'). Gangrene occurring in a wound infected with various bacterial forms, especially of the genus *Clostridium*, such as *Cl. welchii*[0] (*B. perfringens*) and *Cl. œdematiens*;[0] there is emphysema of the surrounding tissues with constitutional septic symptoms. See *gas-phlegmon*.

gas'iform. Gaseous.

Gasis' stain. For acid-fast bacteria; add a small quantity of crystalline mercuric chloride to a 5 per cent. solution of eosin, and cover the fixed preparation and heat gently for 2 or 3 minutes, wash, decolorize in a 5 per cent. aqueous solution of potassium iodide, and wash again in 1 per cent. aqueous solution of methylene-blue.

Gas'kell's bridge [Walter Holbrook *Gaskell*, English physiologist, 1847–1914.] Atrioventricular bundle.*

gas'kin. The thigh of the horse; the part between the stifle and hock joints.

gasometric (gas-o-met'rik). Relating to gasometry **g. anal'ysis,** the determination of the nature and relative proportion of the gases in a mixture.

gasom'etry [G. *metron*, measure.] The measurement of gases; the determination of the relative proportion of gases in a mixture.

gas-phleg'mon. A cellulitis in which there is a formation of gas in the subcutaneous tissues, gangrenous emphysema; see also *gas-gangrene* and *phlegmon*.

gasserec'tomy [*Gasserian* ganglion, + G. *ektomē*, excision.] Excision of the Gasserian ganglion, or ganglion* semilunare.

Gasse'rian. Relating to Johann Laurentius *Gasser*, Austrian anatomist, (1505–1577), noting the *G. ganglion*, ganglion* semilunare.

gassing. Poisoning by irrespirable or otherwise noxious gases.

gasteran"giemphrax'is [G. *gastēr*, belly (stomach), + *angeion*, vessel, + *emphraxis*, obstruction] Obstruction to the circulation in the blood-vessels of the stomach.

gasterhysterot'omy [G. *gastēr*, belly, + *hystera*, uterus, + *tomē*, incision.] Cesarean* section.

gastradenitis (gas-trăd-en-ī'(e')tis) [G. *gastēr*, stomach, + *adēn*, gland, + *-itis*.] Inflammation of the glands of the stomach.

gastral'gia [G. *gastēr(gastr-)*, belly (stomach), + *algos*, pain.] Gastrodynia, stomachache.

gastralgocenosis (gas-tral"go-sen-o'sis) [G. *gastēr-(gastr-)*, belly, + *algos*, pain, + *kenōsis*, emptiness.] Pain in the stomach, occurring when the organ is empty and relieved by taking food.

gastraneuria (gas-tran-u'rĭ-ah) [G. *gastēr(gastr-)*, stomach, + *a-* priv. + *neuron*, nerve.] A loss of energy in the nerve-supply of the stomach.

gastrasthe'nia [G. *gastēr(gastr-)*, belly (stomach), + *astheneia*, weakness.] Weakness of the muscular coat or of the digestive function of the stomach.

gastrecta'sia, gastrec'tasis [G. *gastēr*, belly (stomach), + *ektasis*, extension.] Dilatation of the stomach.

gastrec'tomy [G. *gastēr(gastr-)*, stomach, + *ektomē*, excision.] Excision of a part or all of the stomach

gas'tric. Relating to the stomach. **g. fe'ver,** acute gastritis. **g. juice,** the digestive fluid secreted by the glands of the stomach; it is a thin, colorless liquid of acid reaction, containing chlorides, phosphates, hydrochloric acid, rennet, and a proteolytic enzyme, *pepsin*.

gastricism (gas'trĭ-sizm). Any gastric disorder.

gas'trin. A hormone formed at the pyloric extremity of the stomach, the action of which is to excite secretion of the glands at the cardiac end of this organ.

gastritis (gas-trī'(tre')tis) [G. *gastēr(gastr-)*, belly, + *-itis*.] Inflammation of the stomach. **atroph'ic g.,** chronic g. with atrophy of the mucous membrane and more or less destruction of the peptic glands. **catar'rhal g.,** g. with excessive secretion

of mucus. **hypertroph'ic g.,** chronic g. with thickening of the mucous membrane and hyperplasia of the peptic glands. **phleg'monous g.,** severe inflammation, chiefly of the submucous coat, with purulent infiltration of the wall of the stomach. **pol'ypous g.,** a form of chronic g., in which there is irregular atrophy of the mucous membrane with cystic degeneration giving rise to a knobby or polypous appearance of the surface. **sclerot'ic g.,** a fibrous thickening of the walls of the stomach with diminution in the capacity of the organ.

gastroadynamic (gas″tro-ad-i-nam'ik). Noting a weakness of the gastric function; relating to gastrasthenia.

gastroanastomosis (gas″tro-an-as-to-mo'sis). The formation of an artificial communication between the cardiac and pyloric extremities of the stomach, in cases of nearly impermeable hour-glass contraction of that organ.

gastrobro'sia [G. *gastēr(gastr-)*, stomach, + *brōsis*, corrosion.] Perforation of the stomach.

gastrocardiac (gas″tro-kar'dĭ-ak). Relating to both the stomach and heart. **g. syn'drome,** disturbances of the heart's action due to faulty action of the digestive system especially of the stomach.

gastrocele (gas'tro-sēl) [G. *gastēr(gastr-)*, belly, (stomach), + *kēlē*, hernia.] Hernia of a portion of the stomach.

gastrochronorrhea (gas″tro-kron-or-re'ah) [G. *gastēr*, stomach, *chronos*, time (chronic), *rhoia*, a flow.] Reichmann's disease.

gastrocnemius (gas-trok-ne'mĭ-us) [G. *gastēr-(gastr-)*, belly, + *knēmē*, leg.] One of the calf muscles; see under *musculus*.

gastrocol'ic. Relating to the stomach and the colon. **g. omen'tum, the** epiploon, or omentum* majus.

gastrocolitis (gas-tro-ko-li'(le')tis). Inflammation of both stomach and colon.

gastrocolos'tomy [G. *gastēr*, stomach, + *kōlon*, colon, + *stoma*, mouth.] The formation of a communication between stomach and colon.

gastrocolot'omy [G. *gastēr*, stomach, + *kōlon*, colon, + *tomē*, incision.] Incision into stomach and colon; gastrocolostomy.

gastrocolpot'omy [G *gastēr*, belly, + *kolpos*, sinus (vagina).] Gastroelytrotomy.

gastrocys'tis [L. *gastēr*, belly, + *kystis*, bladder.] Blastodermic vesicle, blastocyst.*

gastrodiaphane (gas-tro-di'ah-fān) [G. *gastēr*, stomach, + *dia*, through, + *phanē*, a light.] A small electric-light bulb passed through an esophageal tube into the stomach.

gas″trodiaphanos'copy [G. *gastēr*, stomach, + *dia*, through, + *phanē*, light, + *skopeō*, I view.] Gastrodiaphany.

gastrodiaphany (gas-tro-di-af'a-nĭ) [G. *gastēr*, stomach, + *dia*, through, + *phanē*, light.] Examination of the anterior wall of the stomach by means of the lights and shadows cast by a gastrodiaphane.

gastrodidymus (gas-tro-did'i-mus) [G. *gastēr*, belly, + *didymos*, twin.] A twin monster united at the abdomen which is common to both twins.

gas'trodisc. Germinal* disc.

Gastrodis'cus hom'inis [G. *gastēr*, stomach, + *diskos*, disc; L. *homo*, gen. *hominis*, man.] *Amphistomum hominis*, an intestinal fluke, rarely found in man, of uncertain pathogenicity.

gastroduodenal (gas-tro-du-od'e-nal). Relating to the stomach and duodenum.

gastroduodenitis (gas-tro-du-o-de-ni'(ne')tis). Inflammation of the stomach and duodenum.

gastroduodenostomy (gas″tro-du″o-de-nos'to-mĭ) [G. *gastēr(gastr-)*, stomach, + L. *duodenum* + G. *stoma*, mouth.] Operative establishment of a communication, other than the natural one, between the stomach and the duodenum.

gastrodynia (gas-tro-din'ĭ-ah) [G. *gastēr(gastr-)*, belly (stomach), + *odynē*, pain.] Gastralgia, stomachache.

gastroelytrotomy (gas-tro-el-e-trot'o-mĭ) [G. *gastēr (gastr-)*, stomach, + *elytron*, vagina, + *tomē*, incision.] Gastrocolpotomy, incision through the abdominal wall into the vagina.

gas″troenter'ic [G. *gastēr*, stomach, + *enteron*, intestine.] Relating to both stomach and intestine.

gastroenteritis (gas-tro-en-ter-i'(e')tis) [G. *gastēr*, belly (stomach), + *enteron*, intestine, + *-itis*. Inflammation of the mucous membrane of both stomach and intestine.

gastroenteroanastomosis (gas″tro-en″ter-o-an-as-to-mo'sis). An artificial opening between the stomach and some non-continuous portion of the intestine.

gas″troen″terocolos'tomy. The operative formation of direct communication between the stomach and the large and small intestines.

gastroenterol'ogist. A specialist in diseases of the stomach and intestine.

gastroenterology (gas-tro-en-ter-ol'o-jĭ) [G. *gastēr] (gastr-)*, stomach, + *enteron*, intestine, + *-logia*.] The branch of medical science which has to do with the stomach and intestine and their diseases.

gastroenteroplasty (gas-tro-en'ter-o-plas-tĭ) [G. *gastēr*, stomach, + *enteron*, intestine, + *plassō*, I form.] Operative repair of defects in the stomach and intestine.

gas″troenteropto'sia [G. *gastēr*, stomach, + *enteron*, intestine, + *ptōsis*, a falling.] Downward displacement of the stomach and a portion of the intestine.

gastroenterostomy (gas-tro-en-ter-os'to-mĭ) [G. *gastēr*, stomach, + *enteron*, intestine, + *stoma*, mouth.] Establishment of an artificial opening between the stomach and the intestine.

gastroenterotomy (gas-tro-en-ter-ot'o-mĭ) [G. *gastēr*, stomach, + *enteron*, intestine, + *tomē*, incision.] Section into both stomach and intestine; gastroenterostomy.

gas″troepiplo'ic. Relating to the stomach and the greater omentum.

gastroesophageal (gas tro-e-sŏ-faj'e-al). Relating to both stomach and esophagus.

gastrofaradization (gas-tro-făr-ă-di-za'shun). The application of a faradic current to the abdomen, or to the stomach.

gastrogalvaniza'tion. The application of a galvanic current to the abdomen, or to the stomach.

gas″trogastros'tomy [G. *gastēr*, stomach, + *stoma*, mouth.] Gastroanastomosis.

gastrogavage (gas-tro-gă-vazh') [*gastrostomy* + *gavage*.] Artificial feeding through an opening in the wall of the stomach.

gas'trograph [G. *gastēr(gastr-)*, stomach, + *graphē*, a writing.] An instrument for recording graphically the movements of the stomach.

gastrohelco'sis [G. *gastēr(gastr-)*, stomach, + *helkōsis*, ulceration.] Ulceration of the stomach.

gas″trohepat'ic [G. *gastēr(gastr-)*, stomach, + *hēpar (hēpat-)*, liver.] Relating to the stomach and the liver. **g. omen'tum,** omentum* minus.

gastrohydrorrhea (gas″tro-hi″dro-re'ah) [G. *gastēr*, stomach, + *hydōr*, water, + *rhoia*, a flow.] An excretion into the stomach of a large amount of

watery fluid containing neither hydrochloric acid nor rennet nor pepsin ferments.

gas"trohysterec'tomy [G. *gastēr(gastr-)*, belly, + *hystera*, uterus, + *ektomē*, excision.] Removal of the uterus through an incision in the abdominal wall; abdominohysterectomy, laparohysterectomy, celiohysterectomy.

gastrohys'teropexy [G. *gastēr*, belly, + *hystera*, uterus, + *pēxis*, fixation.] Ventrofixation of the uterus, laparohysteropexy.

gas"trohys"teror'rhaphy [G. *gastēr(gastr-)*, stomach, + *hystera*, uterus, + *rhaphē*, a stitching.] Gastrohysteropexy.

gastrohysterot'omy [G. *gastēr(gastr-)*, belly, + *hystera*, uterus, + *tomē*, incision] Incision into the uterus through the abdominal wall, as in cesarean section; abdominohysterotomy, celiohysterotomy, laparohysterotomy.

gastrointestinal (gas"tro-in-tes'ti-nal) [G. *gastēr (gastr-)*, stomach, + L. *intestinum*] Gastroenteric.

gastrojejunostomy (gas"tro-je-ju-nos'to-mĭ) [G. *stoma*, mouth.] Gastronesteostomy, establishment of a direct communication between the stomach and the jejunum.

gastrokinesograph (gas"tro-ki-nes'o-graf) [G. *gastēr (gastr-)*, stomach, + *kinēsis*, motion, + *graphē*, a writing] Gastrograph.

gastrolavage (gas-tro-lă-vazh'). Lavage of the stomach

gastrolienal (gas-tro-li'e-nal) [G. *gastēr*, stomach, + L. *lien*, spleen.] Gastrosplenic. **g. lig'ament,** see under *ligament.*

gas'trolth [G. *gastēr (gastr)*, stomach, + *lithos*, stone.] A concretion in the stomach, a gastric calculus.

gastrolithi'asis. The presence of one or more calculi in the stomach, with the symptoms associated therewith.

gastrol'ogist. A specialist in diseases of the stomach.

gastrol'ogy. The branch of medical science which has to do with the stomach and its diseases.

gastrol'ysis [G. *gastēr(gastr-)*, stomach, + *lysis*, loosening.] Separation of perigastric adhesions.

gastromalacia (gas-tro-mal-a'sĭ-ah) [G. *gastēr(gastr-)*, stomach, + *malakia*, softness.] Softening of the walls of the stomach.

gastromeg'aly [G. *gastēr(gastr-)* belly, (stomach), + *megas(megal-)*, large.] 1. Enlargement of the abdomen. 2. Enlargement of the stomach

gastrom'elus [G. *gastēr*, belly, + *melos*, a limb.] A monster having a supernumerary limb attached to the abdomen.

gastrome'nia [G. *gastēr*, stomach, + *mēn*, month.] Gastric hemorrhage occurring as a form of vicarious menstruation.

gastromyco'sis [G. *gastēr*, stomach, + *mykēs*, fungus.] A fungous growth in the stomach.

gastromyxorrhea (gas"tro-miks-or-re'ah) [G. *gastēr*, stomach, + *myxa*, mucus, + *rhoia*, a flow.] Excessive secretion of mucus in the stomach.

gas'tron. An extract from a pig's stomach recommended for the treatment of gastric disorders in doses of drams 1 to 2 (4 to 8 c.c.).

gastronesteostomy (gas"tro-ne-ste-os'to-mĭ) [G. *gastēr*, stomach, + *nēstis*, jejunum, + *stoma*, mouth.] Establishment of a direct communication between the stomach and jejunum; gastrojejunostomy.

gastroparal'ysis. Paralysis of the muscular coat of the stomach.

gas"troparasi'tus [G. *gastēr*, belly, + *parasitos*, parasite.] A twin monster in which the incomplete parasite is attached to, or within, the abdomen of the autosite.

gastroparesis (gas-tro-par'e-sis) [G. *gastēr*, stomach, + *paresis*, weakness.] A slight degree of gastroparalysis.

gastropath'ic. Relating to a disease of the stomach.

gastrop'athy [G. *gastēr*, stomach, + *pathos*, suffering.] Any disease of the stomach.

gastroperiodynia (gas"tro-per-ĭ-o-din'ĭ-ah) [G. *gastēr*, stomach, + *periodos*, period, + *odynē*, pain.] Periodically recurring pain in the stomach.

gas'tropexy [G. *gastēr*, stomach, + *pēxis*, fixation.] Attachment of the stomach to the abdominal wall.

gastrophore (gas'tro-for) [G. *gastēr*, stomach, + *phoros*, a bearer.] An appliance for holding the stomach during an operation upon that organ.

gastrophotor (gas-tro-fo'tor). An apparatus for photographing the interior of the stomach.

gas"trophren'ic [G. *gastēr*, stomach, + *phrēn*, diaphragm.] Relating to the stomach and the diaphragm. **g. lig'ament,** a peritoneal fold between the diaphragm and the cardiac end of the stomach.

gastrophthisis (gas trof-thi'(the')sis) [G. *gastēr*, belly + *phthisis*, a wasting disease.] Emaciation and weakness due to an abdominal disorder.

gas'troplasty [G. *gastēr*, stomach, + *plassō*, I form] Operative treatment of a defect of any kind in the stomach, such as an hourglass contraction.

gastrople'gia [G. *gastēr*, belly (stomach), + *plēgē*, stroke.] Acute dilatation of the stomach.

gastroplica'tion [G. *gastēr(gastr-)*, stomach, + L. *plicare*, to fold.] Gastroptyxis.

gastropneumonic (gas"tro-nu-mon'ik) [G. *gastēr*, stomach, + *pneumōn*, lungs.] Relating to the stomach and the lungs.

gastropto'sia, gastropto'sis [G. *gastēr*, stomach, + *ptosis*, a falling.] Downward displacement of the stomach.

gastroptyxis (gas-trop-tiks'is) [G. *gastēr*, stomach, + *ptyxis*, a fold.] An operation for reducing the size of the stomach by making a longitudinal fold with the peritoneal surfaces in apposition; gastroplication, gastrorrhaphy, stomach-reefing.

gastropul'monary [G. *gastēr*, stomach, + L. *pulmo*, lung.] Gastropneumonic, pneumogastric.

gas'tropylorec'tomy. Pylorectomy.

gastropyloric (gas"tro-pi-lor'ik). Relating to the stomach as a whole and to the pylorus.

gastrorrha'gia [G. *gastēr(gastr-)*, belly, + *-rhagia.*] Hemorrhage from the stomach.

gastror'rhaphy [G. *gastēr*, belly, stomach, + *rhaphē*, a stitching.] 1. Suture of a perforation of the stomach. 2. Gastroptyxis, gastroplication. 3. Suture of a wound in the abdominal wall.

gastrorrhea, gastrorrhœa (gas-tror-re'ah) [G. *gastēr*, stomach, + *rhoia*, a flow.] Excessive secretion of gastric juice, *gastrosuccorrhea*, or of mucus, *gastromyxorrhea*, by the stomach.

gas"trosalpingot'omy [G. *gastēr*, belly, + *salpinx*, trumpet, + *tomē*, incision.] Incision into the Fallopian tube after an abdominal section.

gas'trosan. Trade name of a white insoluble powder said to be the bisalicylate of bismuth; recommended in cases of atony of the stomach with hypersecretion, in doses of gr. 12 (0.8).

gastroschisis (gas-tros'kĭ-sis) [G. *gastēr*, belly, + *schisis*, a fissure.] A congenital fissure in the abdominal wall, usually with protrusion of the viscera.

gas'troscope [G. *gastēr*, belly, stomach, + *skopēo*, I examine.] A device for inspecting the interior of the stomach.

gastroscop'ic. Relating to gastroscopy.

gastros'copy. Examination of the abdomen or of the stomach.

gastro'sis. A disorder of the stomach, gastropathy.

gas'trospasm. Spasmodic contraction of the walls of the stomach.

gastrosplen'ic [G. *gastĕr*, stomach + *splēn*, spleen.] Relating to the stomach and the spleen. **g. lig'ament, g. omen'tum,** ligamentum gastrolienale [BNA].

gastrostax'is [G. *gastĕr*, stomach, + *staxis*, trickling.] Oozing of blood from the mucous membrane of the stomach.

gastrostenosis (gas"tro-sten-o'sis) [*gastĕr*, stomach, + *stenosis*, narrowing.] Diminution in size of the cavity of the stomach.

gastrostogavage (gas-tros"to-gă-vazh') [*gastrostomy* + *gavage*.] Gastrogavage.

gastros'tomize. To establish a gastric fistula.

gastrostomo'sis. Gastrostomy.

gastrostomy (gas-tros'to-mĭ) [G. *gastĕr*, stomach, + *stoma*, mouth.] The establishment of an artificial opening into the stomach.

gastrosuccorrhea, gastrosuccorrhœa (gas"tro-suk-or-re'ah) [G. *gastĕr*, stomach, + L. *succus*, juice, + G. *rhoia*, a flow.] Excessive secretion of the gastric juice. **g. continua chronica,** Reichmann's disease, a chronic nonintermittent secreting gastric juice. **g. c. periodica,** gastroxynsis, a continuous secretion of gastric juice with acute exacerbations. **g. muco'sa** gastromyxorrhea. **intermittent g.,** gastroxynsis, gastrosuccorrhea continua periodica.

gastrothoracodymus (gas"tro-tho-ră-kod'i-mus) [G *gastĕr*, belly, + *thorax*, chest, + *didymos*, twin.] Gastrothoracopagus.

gastrothoracopagus (gas"tro-tho-ră-kop'a-gus) [G. *gastĕr*, belly, + *thorax*, chest, + *pagos*, joined.] A twin monster joined at thorax and abdomen. **g. dipy'gus,** an unequal twin monster, the parasite, consisting of pelvis and lower extremities only, or occasionally arms as well, being attached to the lower part of the thorax and abdomen of the autosite; dipygus parasiticus.

GASTROTHORACOPAGUS DIPYGUS, DIPYGUS PARASITICUS.

gas'trotome [G. *gastĕr*, stomach, + *tomē*, incision.] A knife for incising the stomach.

gastrot'omy [G. *gastĕr*, stomach, + *tomē*, incision.] Incision into the stomach.

gastrotonometer (gas-tro-to-nom'e-tur) An apparatus used in gastrotonometry.

gastrotonometry (gas-tro-to-nom'e-trĭ) [G. *gastĕr*, stomach, + *tonos*, tension, + *metron*, measure.] The measurement of intragastric tension by insufflation through a stomach-tube of air or carbonic acid gas.

gastrotox'ic. Poisonous or toxic in relation to the mucous membrane of the stomach. **g. serum,** a serum prepared by injecting an emulsion of the gastric cells of one animal into another animal, the blood-serum of the injected animal becoming poisonous to the gastric mucous membrane of the species of animal from which the cells were obtained.

gastrotox'in. A cytotoxin specific for the cells of the mucous membrane of the stomach.

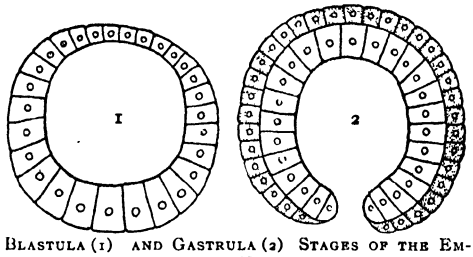
gastrotrachelotomy (gas-tro-trak-el-ot'o-mĭ) [G. *gastĕr*, belly, + *trachēlos*, neck, + *tomē*, incision.] Abdominal section with incision into the cervical portion of the pregnant uterus; a method of cesarean section.

gastrotubotomy (gas"tro-tu-bot'o-mĭ) [G. *gastĕr*, belly, + L. *tuba*, trumpet, + G. *tomē*, incision.] Gastrosalpingotomy.

gastrotympanites (gas-tro-tim-pan-i'(e')tēz) [G. *gastĕr*, stomach, + L. *tympanum*, drum, + G *-itēs*.] Distention of the stomach with gas.

gastroxia (gas-troks'ĭ-ah) [G. *gastĕr*, stomach, + *oxys*, acid.] Excessive acidity of the gastric juice, gastroxynsis.

gastroxynsis (gas-trok-sin'sis) [G. *gastĕr(gastr-)*, stomach, + *oxynō*, I make acid.] Intermittent gastrosuccorrhea.



BLASTULA (1) AND GASTRULA (2) STAGES OF THE EMBRYO.

gas'trula [L. dim. of G. *gastĕr*, belly.] The embryo in the stage of development following the blastula, consisting of a sac with double wall, *endoderm* and *ectoderm*, the cavity being the *archenteron*.

gastrula'tion. The invagination of the blastula wall, forming the gastrula.

Gatesius (gāt'sĭ-us). *Sparganum*.

gath'er. To suppurate, come to a head; said of a boil when maturating.

gath'ering. 1. The formation of pus in a boil or abscess. 2. A circumscribed collection of pus, a boil, carbuncle, or abscess.

gat'ism [Fr. *gâtisme*.] Incontinence of urine or feces.

gatophilia (gă-to-fil'ĭ-ah) [G. *gatos*, cat, + *philia*, affection.] Fondness for cats; ailourophilia.

gatopho'bia [G. *gatos*, cat, + *phobos*, fear.] A morbid dislike or fear of cats; galeophobia, ailourophobia.

Gaucher's disease' (go-sha') [Philippe Charles Ernest *Gaucher*, French physician, *1854.] A form of splenomegaly in which a cross-section of the organ presents a reddish gray appearance with numerous scattered whitish streaks and points composed of epithelial or endothelial cells; the symptoms are those of splenic anemia.

gaultheria (gawl-the'rĭ-ah). Wintergreen, partridge berry, the dried leaves of *Gaultheria procumbens;* it yields the official methylis salicylas. It is employed in eclectic practice in dysuria and

irritation of the bladder, prostate, or urethra, and as an anaphrodisiac in doses of 4 to 10 drops of the specific medicine in water every hour.

gaul'therin. A glucoside, $C_{14}H_{18}O_8+H_2O$, from the bark of several species of *Betula*, birch; it occurs in colorless soluble needles, yielding methyl salicylate on decomposition.

gaulther'olin. Synthetic methyl salicylate, or oil of wintergreen.

gauss (gows) [Karl F. *Gauss*, German physicist, 1777–1855.] A unit of intensity of a magnetic field.

Gauss's method (gows) [C. J. *Gauss*, German gynecologist, *1875.] Twilight sleep.

gauze (gawz) [Fr. *gaze*.] A thin, loose-meshed cloth, employed in bandages or wound dressings, when sterilized or impregnated with antiseptics.

gavage (gă-vazh') [Fr. *gaver*, to gorge fowls.] Feeding by the stomach-tube.

Gavard's muscle (gă-var') [Hyacinthe *Gavard*, French anatomist, 1753–1802.] Oblique fibers in the muscular coat of the stomach.

Gawalowski's test (gav-al-ov'ske). For sugar in the urine: the presence of sugar is indicated by a blue color on adding ammonium molybdate to the urine and heating to the boiling point.

Gayet's disease' (ga-ya') [Prudent *Gayet*, French army surgeon, contemporary.] A disease very similar to the sleeping sickness.

gayle (gāl). 1. Puerperal septicemia in sheep. 2. A skin lesion of the hand, one-half to one inch in diameter, of a grayish blue color surrounded by a reddish areola, accompanied by swelling of the hand and enlargement of the axillary glands; it occurs in those who have handled the bodies of sheep dead of gayle. The specific microorganism of g. has been called by Klein, *Staphylococcus hæmorrhagicus*.

Gay-Lussac's law (ga-lu-sak') [Louis Joseph *Gay-Lussac*, Parisian chemist, 1778–1850.] All gases expand equally on heating, namely for every degree centigrade $\frac{1}{267}$ of their volume at 0°, and they contract in the same measure on cooling.

Gd. Chemical symbol of *gadolinium*.

Ge. Chemical symbol of *germanium*.

Gee's disease (je.) Intestinal infantilism* of the Herter type.

Gegenbauer's cells (ga'gen-bow-er) [Carl *Gegenbauer*, German anatomist, 1826–1903.] Osteoblasts.

Geigel's reflex (gi'gel) [Richard *Geigel*, German physician, *1859.] On gently stroking the inner side of the thigh there is a contraction of the muscular fibers at the upper edge of Poupart's ligament, the analogue in woman of the cremasteric reflex.

Geissler test (gīs'ler) [Ernst *Geissler*, German physician, nineteenth century.] For albumin in the urine: two bits of filter paper, impregnated, respectively, with citric acid and with a mixture of corrosive sublimate and potassium iodide, are dropped into the urine; albumin, if present, will be precipitated.

Geissler tubes (gīs'ler) [Heinrich *Geissler*, German mechanician, 1814–1879.] Tubes of various shapes, made of thin glass and filled with very attenuated gases, with two platinum electrodes sealed into the glass; see *Crookes** *tube*.

Geissler-Pluecker tubes (gīs'ler-plük'er). Geissler tubes.

gel (jel) [abbr. of *gelatinized* colloid.] 1. The coagulum of a sol, as when alum or mercuric chloride is added to a gelatine hydrosol. 2. A solidified jelly-like colloid; a system of solid dispersion medium and liquid dispersed phase, *i.e.* a jelly.

gelanth, gelanthum (jel'anth, jel-an'thum). A mixture of gelatin, tragacanth, thymol, and glycerin, employed as a vehicle for the application of drugs to the skin.

gelatin, gelatine (jel'a-tin) [L. *gelatus*, congealed.] Gelatinum, a derived protein formed from the collagen of the tissues by boiling in water. Glue, size, and isinglass are forms of gelatin. It swells up when put in cold water, but dissolves only in hot water. It has been employed hypodermically as a hemostatic and to promote coagulation in the treatment of aneurysms. **glyc'erinated g.**, gelatinum glycerinatum. **Japanese' g.**, agar-agar. **nu'trient g.**, a culture medium consisting of bouillon with 10 per cent. of gelatin added. **veg'etable g.**, a substance similar to or identical with gelatin, obtained from gluten. **Wharton's g.**, Wharton's jelly, the mucoid tissue of the umbilical cord.

gelatinif'erous [*gelatin* + L. *ferre*, to bear.] Producing or containing gelatin.

gelatiniza'tion. Conversion into gelatin or a substance resembling it.

gelatinize (jel'a-tin-īz). 1. To convert into gelatin. 2. To become gelatinous.

gelat'inoid [*gelatin* + G. *eidos*, resemblance.] 1. Resembling gelatin. 2. Gelatinous.

gelatinosa (jel-at"ĭ-no'sah). Substantia* gelatinosa, Rolando's substance.

gelat'inous. 1. Relating to gelatin. 2. Jelly-like.

gelati'num [L. *gelatus*, frozen.] (U.S., Br.) Gelatin prepared by the action of boiling water on various animal tissues, such as bones, ligaments, hoofs, horns, etc.; used in pharmacy for coating pills, making plasters, troches, capsules, etc.; employed in medicine as a hemostatic, locally applied or given hypodermically, and also in the treatment of aneurysm. **g. chon'dri**, Irish moss gelatin, extracted from Irish moss, used to make the mucilage of Irish moss which is employed as a substitute for gum arabic in making emulsions. **g. glycerina'tum** (U.S.), glycerinated gelatin, glycerogelatin, glycerin jelly, made of equal parts of gelatin and glycerin, a firm mass liquefying at gentle heat; employed as a vehicle for suppositories and urethral bougies and for the glycerogelatina of the N.F. **g. zinci** (Br.), Unna's paste, pasta* zinci mollis.

gelation (jel-a'shun). In colloidal chemistry, the transformation of a sol into a gel.

gel'atol. Trade name of a mixture of gelatin, glycerin, oil, and water, used as a base for medicated ointments.

gel'atose. A hydrolytic product of gelatin.

Gellé test (zhel-a') [Marie-Ernst *Gellé*, Paris aurist, 1834–1923.] A vibrating tuning-fork is applied over the mastoid process; if it is heard, the air in the external auditory canal is compressed, thereby fixing the stapes in the oval window, and the sound ceases to be heard, but is again perceived if the air pressure is removed; a test of the mobility of the ossicles.

gel'ose. The gelatinous constituent of agar-agar.

gelother'apy [G. *gelōs*, laughter, + *therapeia*, treatment.] Treatment of certain morbid states by inducing hilarity.

gelsemine (jel'sĕ-mēn). A crystallizable alkaloid derived from gelsemium; it has been employed as a mydriatic in a solution of gr. 8 in ℥i.

gelseminine (jel-sem'ĭ-nēn). An amorphous alkaloid derived from gelsemium.

gelsemium (jel-se'mĭ-um, gel-sem'ĭ-um). (N.F.) The rhizome and roots of *Gelsemium sempervirens*, yellow jasmine; employed as a sedative and antispasmodic in congestive headache and facial neuralgia in doses of gr. ½–1 (0.03–0.06).

gelse'miumism. Chronic gelsemium poisoning.

gelsem'perin. A concentration product from *Gelsemium sempervirens*, used in cerebral congestion and in the delirium of fever, in doses of gr. ¼–1 (0.015–0.06).

Gély's su'ture (zha-le') [Jules Aristide *Gély*, French surgeon, 1806–1861.] A cobbler's suture employed in closing intestinal wounds.

gemell'us [L. dim. of *geminus*, a twin.] See under *musculus*.

geminate (jem'i-nāt) [L. *geminatus*, double, paired.] Occurring in pairs, paired.

gemina'tion [L. *geminus*, twin.] The development of two teeth in a single sac, the follicle containing twin germs. **diphyodon'tic g.,** the fusion of two teeth, one of the deciduous, the other of the permanent set.

gem'inous. Relating to gemination, noting the growth of two teeth, separate or fused, where normally but one would develop.

gemma (jem'ah) [L. bud.] Any bud-like or bulb-like body, especially a taste-bud or end-bulb.

gemmation (jem-ma'shun) [L. *gemma*, a bud.] Budding, a form of fission in which the parent cell does not divide, but puts out a bud-like process (daughter cell) of small size, containing its proportion of chromatin, which then separates and begins an independent existence.

gemmule (jem'ūl) [L. *gemmula*, dim. of *gemma*, bud.] 1. Micella. 2. A small bud which projects from the parent cell, and finally becomes detached forming a cell of a new generation. 3. One of a number of minute spherical enlargements sometimes present on the dendrites of a nerve-cell. 4. Determinant

gen (jen) [G. *gennaō*, I produce.] The agent of hereditary transmission of characteristics; gene.

gena (je'nah) [L.] Cheek, the side of the face.

genal (je'nal). Relating to the gena, or cheek.

genatosan (jen'ă-to-san). Trade name of a British make of sanatogen.

gene (jēn) [G. *gennaō*, I produce.] The factor in one or both of the gametes which determines a certain character in the resulting zygote; gen.

geneogenous (je-ne-oj'en-us) [G. *genea*, birth, + *gennaō*, I produce.] Of parental origin, noting an infection acquired by the fetus in utero from the mother; congenital.

gen'era. Plural of *genus*.

gen'eral [L. *genus*(*gener-*), race, family.] Universal, relating to a genus or large class; relating to the entire body, not local.

gen'eralize. To render or to become general; to become systemic, noting a primarily local disease.

gen'erate [L. *generare*, to beget.] 1. To produce. 2. To procreate.

genera'tion [L. *generare*, to beget.] 1. Procreation, reproduction. 2. Offspring. **alter'nate g.,** a succession of generations of individuals like and unlike the original parents, or an alternation of sexual and non-sexual generations. **asex'ual g., non-sex'ual g.,** reproduction by fission, gemmation, or in any other way without union of the male and female cell, or conjugation; parthenogenesis. **sex'ual g.,** reproduction by conjugation, or the union of male and female cells. **sponta'neous g.,** the assumed origin of living matter *de novo*, or from the vitalization of non-living matter.

gen'erative. Relating to generation.

gener'ic. 1. Relating to a genus. 2. General. 3. Characteristic or distinictve.

generin (jen'er-in). A supposed hormone which induces menstruation.

gene'sial. Relating to generation.

genesiology (jen-e-sĭ-ol'o-jĭ) [G. *genesis*, generation, + *-logia*.] The branch of science which has to do with generation or reproduction.

gen'esis [G.] Generation, procreation, production, origin.

genet'ic. Relating to genesis, origin, or generation.

genetics (je-net'iks). The branch of science which deals with natural development, as distinguhised from *eugenics*, or the science of development through artificial selection.

Gene'va Conven'tion. An international agreement formed at meetings in Geneva, Switzerland, in 1864 and 1906, relating to the safeguarding of the wounded in battle, of those having the care of them, and of the buildings in which they are being treated. The direct outcome of the first of these meetings was the establishment of the Red* Cross Society.

Gengou's phenom'enon or **reac'tion** (zhon-goo') [O *Gengou*, French bacteriologist, contemporary. Fixation of complement; the removal of all alexin, or complement, from fresh serum by the addition of a compound of a precipitin with its antigen; see Bordet*-Gengou phenomenon.

Gengou-Moreschi phenom'enon (zhoń-goo' mores'ke) [Carlo *Moreschi*, Italian pathologist, contemporary.] Bordet-Gengou phenomenon.

ge'nial [G. *geneion*, chin.] Relating to the chin. **g. tu'bercle,** a small nodule on the posterior surface of the arch of the mandible on either side of the symphysis, spina mentalis [BNA]

ge'nian. Genial.

geniculate, geniculated (jen-ik'u-lāt, jen-ik'u-la-ted) [L. *geniculare*, to bend the knee.] 1. Kneed, bent like a knee. 2. Referring to the geniculum of the facial nerve, noting the ganglion there present. **g. neural'gia,** tic douloureux of the sensory system of the facial nerve. **g. otal'gia,** idiopathic otalgia, neuralgic pain in the ear from the sensory system of the facial nerve.

genic'ulum [L. dim. of *genu*, knee] 1. A small genu or angular knee-like structure 2. A knot-like structure. **g. cana'lis facia'lis** [BNA], the bend in the facial canal corresponding to the g. nervi facialis. **g. ner'vi facia'lis** [BNA], external knee of the facial nerve, a rectanguar bend of the facial nerve in the facial canal where it turns backward on the inner side of the tympanum.

ge"niohyogloss'us [G. *geneion*, chin, + *hyoeidēs*, y-shaped, hyoid, + *glōssa*, tongue.] See under *musculus*.

geniohyoideus (je"nĭ-o-hi-o-id'e-us) [G. *geneion*, chin, + *hyoeidēs*, y-shaped, hyoid.] See under *musculus*.

genion (je'nĭ-on) [G. *geneion*, chin.] The tip of the spina mentalis, a point in craniometry.

ge'nioplasty [G. *geneion*, chin, cheek, + *plassō*, I form.] Genyplasty. 1. Reparative, or plastic, surgery of the chin. 2. Plastic surgery of the cheek.

genista (jen-is'tah). Broom, the whole plant *Genista tinctoria*, employed as a diuretic in cardiac and renal dropsy in doses of ʒ 2–5 (8 0–20.0) of a fluid-extract, and externally in erysipelas.

gen'ital. Relating to reproduction, or generation.

genita'lia [L. neut. pl. of *genitalis*, genital.] The genitals.

gen'itals. The organs of generation, the reproductive organs,

gen"itocru'ral. Genitofemoral, noting the nervus genitocruralis, or nervus genitofemoralis [BNA]-

genitofem'oral. Genitocrural, relating to the genitalia and the thigh, noting the nervus genito. femoralis.

genitourinary (jen-ĭ-to-u'rĭ-na-rĭ) Urogenital, relating to reproduction and to urination, noting the organs concerned in these functions.

ge'nius epidem'icus. The influence, atmospheric, telluric, or cosmic, or the combination of any two or three, anciently regarded as the cause of epidemic and endemic diseases.

Gennari's band [jen-nah're) [Francesco *Gennari*, Italian anatomist, eighteenth century.] The outer reinforced portion of Baillarger's band especially in the region of the cuneus; same as Vicq-d'Azyr's band. **G.'s stri'a,** G.'s band.

genoblast (jen'o-blast) [G. *gennaō*, I produce, + *blastos*, germ.] The nucleus of an impregnated ovum.

genotype (jen'o-tīp) [G. *genos*, race, generation, + *typos*, type.] Biotype, the fundamental constitution of an organism with all its hereditary peculiarities; the germinal make-up of an individual, composed of the complex of gens.

Gensoul's disease (zhahn-sool') [Joseph *Gensoul*, French surgeon, 1797–1858.] Ludwig's * angina.

gentian (jen'shyun). See *gentiana*. **g. an'iline wa'ter,** g. violet with saturated aniline water, a more effective stain than simple g. violet. **g. vi'olet,** a purple aniline dye, used as a bacterial stain and bactericide.

gentiana (jen-shĭ-ah'nah). (U.S., Br.) Gentian, gentianæ radix, gentian root, the dried rhizome and roots of *Gentiana lutea*, an herb of southern and central Europe; a simple bitter, employed in loss of appetite and dyspepsia in doses of gr. 10–30 (0.6–2.0).

gentianic acid (jen-shyan'ik as'id). Gentisin.

gentianophil, gentianophile (jen shĭ-an'o-fil, jen-shĭ-an'o-fīl) [*gentian* + G. *philos*, fond.] Staining readily with gentian violet.

gentianoph'ilous. Gentianophil.

gentianophobic (jen"shĭ-an-o-fo'bik) [*gentian* + G. *phobos*, fear.] Not taking a gentian violet stain, or taking it poorly.

gentianophobous (jen-shĭ-an-of'o-bus). Gentianophobic.

gentiopicrin (jen"shyo-pik'rin) A glucoside, $C_{20}H_{30}O_{12}$, obtained from gentian.

gentisic acid (jen-tiz'ik as'id). Gentisin.

gen'tisin. Gentianin, gentianic acid, gentisic acid, $C_{14}H_{10}O_5$, a pale yellow powder obtained from gentian.

ge'nu, gen. *ge'nus*, pl. *gen'ua* [L.] 1. The knee. 2. Any structure of angular shape resembling a flexed knee. **g. cap'sulæ inter'næ** [BNA], genu, or knee, of the internal capsule, the obtuse angle, opening laterally in the horizontal plane, formed by the union of the two limbs, pars frontalis and pars occipitalis, of the internal capsule. **g. cor'poris callo'si** [BNA], knee of the corpus callosum, the anter or extremity of the corpus callosum which here folds downward and backward on itself, terminating in the rostrum. **g. extror'sum,** g. varum. **g. impres'sum,** a deformity marked by bending of the knee to the right with dragging of the patella away from its femoral contact, a flattening of the superficial strata of the cartilage, and consequent resistance to the motion of the joint. **g. inter'num radi'cis ner'vi facia'lis** [BNA], genu, or internal knee, of the root of the facial nerve, the fibers of the root of the facial nerve curving around the abducens nucleus in the pons. **g. recurva'tum,** a condition of superextension of the knee, the lower extremity making a curve with concavity looking forward. **g. val'gum,** knock-knee, in-knee; a deformity marked by abduction of the leg in relation to the thigh, the knee forming an angle with outer surface looking toward its fellow. **g. va'rum,** bowleg, g. extrorsum, an outward bowing of the legs.

genuclast (je'nu-klast) [L. *genu*, knee, + G. *klastos*, broken.] An instrument for breaking up adhesions in ankylosis of the knee-joint.

ge'nucu'bital [L. *genu* knee, + *cubitum*, elbow.] Relating to the knees and the elbows, noting the knee-elbow position.*

genupectoral (je-nu-pek'to-ral) [G. *genu*, knee + *pectus*(*pector*-), breast, sternum.] Relating to the knees and the chest, noting the knee-chest position *

ge'nus [L. race] In natural history classification, the division between the *family*, or *tribe*, and the *species*

genyantralgia (jen-e-an-tral'jĭ-ah) [G. *genys*, cheek, + *antron*, cave, + *algos*, pain.] Pain in the antrum of Highmore.

genyantritis (jen-e-an-tri'(tre')tis) [G. *genys*, cheek, + *antron*, cave, + *-itis*] Inflammation of the antrum of Highmore.

genyantrum (jen-e-an'trum) [G *genys*, cheek, + *antron*, cave] Antrum of Highmore, maxillary sinus.

genychiloplasty (jen-ĭ-ki'lo-plas-tĭ) [G. *genys*, cheek, + *cheilos*, lip + *plassō*, I form] Reparative surgery of the cheek and lip.

gen'yplasty [G. *genys*, jaw cheek, + *plassō*, I form.] Genioplasty. 1. Reparative, or plastic, surgery of the cheek. 2 Plastic surgery of the lower jaw.

geode (je'ōd) [a hollow pebble containing quartz crystals] A lymph space, or cavity connected with the general lymphatic system.

ge'oform. Creoform, kreoform, a colorless insoluble powder obtained by the action of formaldehyde upon guaiacol; employed as an antiseptic dusting powder

geophagia (je-o-fa'jĭ-ah) [G. *gē*, earth, + *phagō*, I eat.] The practice of eating dirt or clay; earth-eating, dirt-eating, chthonophagia, geotragia.

geophagist (je-of'a-jist) [G. *gē*, earth, + *phagō*, I eat.] An earth-eater, dirt-eater.

geophagy (je-of'a-ji). Geophagia.

geosote (je'o-sōt). Guaiacol valerianate.

geotax'is [G. *gē*, earth, + *taxis*, orderly arrangement.] A form of positive barotaxis in which there is a tendency to growth or movement toward or into the earth; geotropism.

geotragia (je-o-tra'jĭ-ah) [G. *gē*, earth, + *trōgō* (aor. inf. *tragein*), I munch.] Earth-eating, geophagia, chthonophagia.

geot'ropism [G *gē*, earth, + *tropē*, a turning.] Geotaxis.

gephyrophobia (jef"i-ro-fo'bĭ-ah) [G. *gephyra*, bridge, dyke.] 1. Fear of crossing a bridge. 2. Fear of walking along a dyke or a river bank.

Geraghty's test (ger'ah-te) [John T. *Geraghty*, American physician, 1876–1924.] Rowntree and Geraghty's test, phenolsulphonphthalein * test.

geraniin (jer-a'nĭ-In). An eclectic concentration from the rhizome of *Geranium maculatum;* a brown powder employed in the treatment of diarrhea and dysentery in doses of gr. 1–3 (0.06–0.2).

Gera'nium [G. *geranion*, a crane's bill.] A genus of herbs of the natural order *Geraniaceæ*. **G. macula'tum,** geranium (N.F.). **G. robertia'num,** mountain geranium, herb Robert, fox geranium;

the entire herb is used in decoction, in domestic medicine, as a gargle in catarrhal sore-throat, and as a rectal injection in diarrhea and mucous colitis. Locally the oil of geranium is employed in the treatment of tonsillitis and pharyngitis.

geranium (je-ra'nĭ-um) (N.F.). The dried rhizome of *Geranium maculatum*, spotted cranesbill; astringent, employed internally and as an injection; dose, gr. 15 (1.0), or of the fluidextract ♏15 (1.0).

Gerdy's fi'bers (zher-de') [Pierre Nicolas *Gerdy*, Parisian surgeon, 1797–1856.] A thin fibrous band stretching across the roots of the palmar surface of the four fingers, the superficial transverse ligament of the fingers. **G.'s fontanel'**, sagittal fontanel.* **G.'s hy'oid fos'sa**, trigonum caroticum. **G.'s interauric'ular loop**, a muscular fasciculus in the interauricular septum of the heart, passing backward from the auriculoventricular groove. **G.'s lig'ament**, an aponeurotic band bounding the anterior fold of the axilla. **G's. tu'bercle**, a tubercle on the outer side of the upper end of the tibia giving attachment to the femoral aponeurosis and some fibers of the tibialis anterior muscle.

gereology, geræology (je-re-ol'o-jĭ) [G. *gēraios*, old, + *-logia*.] The specialty dealing with the physiology and pathology of old age; gerontology.

Gerhardt's test (zher-hart') [Charles Frédéric *Gerhardt*, Parisian chemist, 1816–1856.] For urobilin in the urine; the urobilin is extracted with chloroform and then treated with iodine and potassic hydrate, a fluorescent green color being produced.

Gerhardt's disease' (ger'hart) [C. J. *Gerhardt*; Berlin physician, 1833–1902.] Erythromelalgia. **C.'s reac'tion**, on the addition of a few drops of a solution of perchloride of iron to urine containing diacetic acid, a burgundy-red color is produced. **G.'s sign.** (1) the tympanitic resonance on percussion over a pulmonary cavity, the long diameter of which is from before backward, is of lower pitch when the patient sits than when he lies; if the long diameter is from above downward, the reverse is the case. (2) immobility of the larynx in dyspnea due to aortic aneurysm.

Ger'hardt-Se'mon law [C. J. *Gerhardt*; Sir Felix *Semon*.] In cases of slight lesion of the recurrent laryngeal nerve, the vocal cord lies in a position between abduction and adduction.

geriatrics (je-rĭ-at'riks) [G. *gerōn*, an old man, + *iatrikē*, medical treatment.] The branch of medical science which treats of the aged in their physiological and pathological relations; the specialty of the diseases of old age.

Gerlach's net'work (ger'lahkh) [Joseph von *Gerlach*, German anatomist, 1820–1896.] A network formed by the apparent anastomosis of the dendrites of the spinal cord cells. **G.'s ton'sil**, Eustachian tonsil.* **G.'s valve**, a fold of mucous membrane, simulating a valve, sometimes found at the origin of the vermiform appendix.

Gerlach's val'vula (ger'lahkh) [Andreas Christian *Gerlach*, German veterinary surgeon, 1811–1877.] Ligmentum pectinatum iridis.

Gerlier's disease' (zher-le-a') [Felix *Gerlier*, Swiss physician, 1840–1914.] Paralyzing vertigo, kubisagari; an affection, observed by Geslier among Swiss cowherds, and by Miura in Japan, marked by pains in the head and neck, disturbances of vision, with ptosis, vertigo, and weakness or paresis of the neck muscles and extremities.

germ (jurm) [L. *germen*, a sprig.] 1. A rudiment, the earliest trace of an embryo. 2. A microbe.

germa'nium [L. *Germania*, Germany.] A grayish white metallic element, symbol Ge, atomic weight 27.5. The dioxide is said to have an erythropoietic action.

germ-cell. Ovum.

germ-disc. Germinal* disc.

germ-disease. Any disease due to a microorganism.

germici'dal. Destructive to germs

germicide (jur'mĭ-sīd) [L. *germen*, germ, + *cædere*, to kill.] 1. Germicidal. 2. An agent which is destructive to germs or microbes.

germicul'ture [L *germen*, germ, + *cultura*, cultivation.] The cultivation of microbes.

germifuge (jur'mĭ-fūj) [L. *germen*, germ, + *fugare*, to chase away.] Driving away germs, germicide.

germinal (jur'mĭ-nal). Relating to a germ or to germination. **g. disc**, germ-disc, gastrodisc, a little heap of cells of the endoderm adherent to the interior of the ectoderm in a gastrocystis. **g. rod**, sporozoite. **g. u'nits**, portions of the germ cells which are assumed to have certain specific functions in development. **g. ves'icle**, Purkinje's vesicle, the nucleus of a mammalian ovum.

germination (jur-mĭ-na'shun) [L. *germinare*, to bud, sprout]. 1. The formation of an embryo from an impregnated ovum. 2. The sprouting of the seed of a plant.

ger'minative. Relating to germination.

germ-plasm (jurm'plazm). The substance in the nuclei of the germinal cells of the ovary and testicle resulting from the *duplicative* division of the cells of the ovum; by this is meant a division whereby each segment is made up of equal and similar determinants and is thus possessed of the same character and capacity as the ovum itself; the id or part of a germ-cell containing the hereditary principle, idioplasm.

germ-track. The cell-lineage of the ovum in a developing animal.

germ-ves'icle. Gastrocystis, blastodermic vesicle.*

gerocomia (jĕ-ro-ko'mĭ-ah) [G. *gerōn*, an old man, + *komeō*, I take care of.] The hygiene of old age.

geroderma (jĕ-ro-dur'mah) [G. *gerōn*, an old man, + *derma*, skin.] 1. The atrophic skin of the aged. 2. A cutaneous dystrophy in which the skin is thinned and wrinkled like that in old age.

geromarasmus (jĕ-ro-mar-az'mus) [G. *gerōn*, an old man, + *marasmos*, a wasting] Senile atrophy or wasting.

geromorphism (jĕ-ro-mor'fizm) [G. *gerōn*, an old man, + *morphē*, form.] A condition of premature senility.

gerontal (jĕ-ron'tal) [G. *gerōn*, old man.] Relating to an old man, senile.

gerontol'ogy [G. *gerōn*(*geront-*), an old man, + *-logia*.] The science of the physiological and pathological changes incident to old age.

gerontopia (jĕ-ron-to'pĭ-ŭ) [G. *gerōn* (*geront-*), old man, + *ōps*, eye.] Senopia, second sight.*

gerontoxon (jĕ-ron-tok'son) [G. *gerōn*, an old man, + *toxon*, bow.] Arcus senilis.

Gerota's cap'sule (ga-ro'tah) [*Gerota*, Berlin anatomist, contemporary.] The perirenal fascia. **G.'s meth'od**, injection of the lymphatics with a dye which is soluble in chloroform or ether but not in water; alkanin, red sulphide of mercury, and Prussian blue are said to be suitable for this purpose.

Gerson-Sauerbruch method (gair'zon-zow'er-brookh). [Max *Gerson*, German physician, *1881.] The dietetic treatment of tuberculosis, the main factor of which is the elimination of

table salt and the flooding of the organisms with other minerals contained in a preparation called mineralogen.*

Gersuny's meth'od (gair-zoo'ne) Robert *Gersuny*, Austrian surgeon, 1884–1924.] The cosmetic injection of paraffin.

gestation (jes-ta'shun) [L. *gestatio*, from *gestare*, to bear.] Pregnancy, fetation. **ectop'ic g.,** development of the impregnated ovum at some point outside of the uterine cavity; for the varieties of ectopic g., see under *pregnancy*.

Ges'velst's network. A reticulation of the medullary sheath of a nerve-fiber, probably an artefact.

Getting's bacillus. A dysentery organism resembling the Flexner bacillus culturally, but differing from it serologically.

Ghat'ti gum [East Indian] Gummi indicum.

Ghilarducci's reac'tion (ge-lar-doot'che) [Francesco *Ghilarducci*, Italian physician, contemporary.] Contraction of the muscles of a limb when the active electrode is placed at a distance from them (as at the wrist in the case of the forearm); it persists after the other reactions have been lost.

Ghon's pri'mary le'sion. A sharply defined bean-sized shadow in the roentgenoscopic picture of the lung, seen in certain cases of pulmonary tuberculosis in children.

Giacomini's band (jah-ko-me'ne) [Carlo *Giacomini*, Italian anatomist, 1841–1898] A grayish band of gelatinous appearance forming the anterior extremity of the fascia dentata hippocampi.

Giannuzzi's cells, G.'s cres'cents, G.'s dem'ilunes (jahn-noot'tse) *Giannuzzi*, Italian anatomist, nineteenth century, Marginal corpuscles, Heidenhain's demilunes, small flattened granular cells lying between the basement membrane and the secreting cells of a mucous gland

gi'ant [G. *gigas*, pl. *gigantes*.] 1. A person of abnormally large size. 2. Noting anything of disproportionately large size

gi'ant-cell. A cell of large size, often with many nuclei; a syncytium.

gi'ant-co'lon. Excessive dilatation of the colon; Hirschsprung's disease, megacolon.

gi'antism. Gigantism, a condition of abnormal size, or overgrowth, of the entire body or of any of its parts

Giardia (jĭ-ar'dĭ-ah). Lamblia, Megastoma, a genus of Octomitidæ with one anterior, one posterior, and two mesial pairs of flagella, and two nuclei. **G. intestina'lis,** *Lamblia intestinalis*. *Megastoma entericum*, a parasite found in the small intestine of man and a number of the lower animals; believed to be a cause of diarrhea.

giardiasis (jĭ-ar-di'ă-sis). Lambliasis, infection with *Giardia intestinalis*, giving rise to diarrheic or dysenteric symptoms.

Gib'bon's her'nia or **hy'drocele** [Quinton V. *Gibbon*, American surgeon, 1813–1894] Hydrocele complicated with a voluminous hernia.

gibbos'ity (gib-os'ĭ-tĭ) [L. *gibbosus*, humped.] 1. A hump or gibbus 2. The state of being humped or hump-backed.

gibbous (gib'us) [L. *gibbosus*] Humped, hump-backed.

Gibbs' the'orem [Josiah Willard *Gibbs*, English physicist, 1834–1903.] "Substances which lower the surface tension of the pure dispersion medium, tend to collect in its surface."

gibbus (gib'us) [L] A hump, a hunch; the projection in angular deformity of the spine; the deformity of Pott's* disease.

Gibert's disease' (zhe-bair') [Camille Melchior *Gibert*, Parisian physician 1797–1866.] Pityriasis rosea.

Gibney's disease (gib'nĭ) [Virgil P. *Gibney*, American orthopedist, 1847–1927.] Perispondylitis. **G.'s fixation bandage,** herring-bone strapping of the foot and leg for sprain of the ankle.

Gibral'tar fe'ver. Undulant fever.

Gib'son's ban'dage [Kasson C. *Gibson*, New York dentist, contemporary.] A bandage, resembling Barton's bandage, for retaining the bone in fracture of the lower jaw.

Gib'son's rule. If the systolic blood pressure, expressed in millimeters of mercury, does not fall below the pulse rate, expressed in beats per minute, the prognosis in pneumonia is good; if it does fall below the pulse rate the prognosis is unfavorable.

gid (giddy). Staggers, or sturdy, in sheep.

gid'diness. Vertigo.

gid'dy. Dizzy, suffering from vertigo.

Giemsa stain (gēm'zah) [G *Giemsa*, Hamburg bacteriologist, contemporary.] A stain for demonstrating Negri bodies, the malarial organisms, spirochetes, and other protozoans; compound of azur II-eosin, 30; azur II, 0.8; chemically pure glycerin and chemically pure methyl alcohol, each 250.0.

Gierke's cor'puscles (gēr'keh) [Hans Paul Bernhard *Gierke*, German anatomist, 1847–1886.] Hassall's* concentric corpuscles **G.'s respi'ratory bun'dle,** tractus solitarius

Gif'ford's re'flex [Harold *Gifford*, American ophthalmologist, 1858–1929.] Contraction of the pupils when an attempt is made to close the eyes while the lids are held open **G.'s sign,** difficulty in everting the upper eyelid in the early stages of Graves' disease.

gigantism (ji-gan'tizm). Giantism, abnormal greatness of size.

gigan'toblast [G *gigas*, giant, + *blastos*, germ.] A large erythroblast, or nucleated red blood-corpuscle.

gigantochromoblast (ji-gan"to-kro'mo-blast) [G. *gigas*, giant, + *chrōma*, color, + *blastos*, germ.] Gigantoblast.

gigantocyte (ji-gan'to-sīt) [G. *gigas*, giant, + *kytos*, cell] 1. A giant cell. 2. An abnormally large erythrocyte

Gigantorhynchus (ji-gan"to-rinḡ'kus) [G. *gigantas*, gigantic, + *rhynchos*, snout.] A genus of *Acanthocephala*. **G. gi'gas,** a species parasitic in the intestine of the pig. **G. monilifor'mis** [beadlike], a species infesting the rat. Both these species are occasionally found in man.

gigantosoma (ji-gan-to-so'mah) [G. *gigas*(*gigant*-) giant, + *sōma*, body.] Giantism, gigantism.

Gigli's opera'tion (jēl'ye) [L. *Gigli*, Italian gynecologist, 1863–1908] Hebotomy. **G.'s saw,** a chain saw for use in hebotomy.

Gila monster (he'lah) [*Gila*, a river in Arizona] A large poisonous lizard, *Heloderma suspectum* and *H. horridum*, of New Mexico, Arizona, and northern Mexico.

Gilbert's sign (zhēl-bair') [Augustin *Gilbert*, French physician, 1858–1927.] Opsiuria, indicating cirrhosis of the liver.

Gil'bert's meth'od. Autoserotherapy.

Gil'christ's myco'sis [Thomas Casper *Gilchrist*, American physician, *1862.] Blastomycosis.

Gill's ta'ble [Charles *Gill*, actuary of the N. Y. Mutual Life Insurance Company, 1805–1855.] The first American life table, now superseded by the American Experience Table.*

gill-cleft. A branchial* cleft.

gillenia (jĭ-le'nĭ-ah) [Arnold *Gill*, a German botanist.] False ipecac, Indian physic, Bowman's root; the

rhizome and roots of *Porteranthus trifoliatus* and *P. stipulatus*, an herb of the eastern slope of the Allegheny mountains; expectorant and tonic in doses of gr. 2–5 (0.13–0.3), and emetic in doses of gr. 20–30 (1.3–2.0).

gillenin (jil'e-nin). A bitter principle from gillenia, possessing emetic properties.

Gilles de la Tourette's disease' (zhēl-de-lă-too-ret'). [Georges *Gilles de la Tourette*, Parisian physician, 1857–1904. A form of tic; motor incoordination with echolalia and coprolalia.

Gillies' opera'tion (gil'lēs) Correction of ectropion by epithelial outlay, the skin of the eyelid being made thereby.

Gill-Wy'lie's opera'tion (gil-wi'le). See *Wylie*.

Gim'bernat's lig'ament [Antonio de *Gimbernat*, Spanish surgeon, 1742–1790.] Ligamentum lacunare.

gin [*geneva*, juniper.] A spirit flavored with juniper-berries, spiritus* juniperi compositus.

gin'-drinkers' liver. Hob-nailed liver, atrophic cirrhosis of the liver in a drunkard.

gin'ger [L. *zingiber*.] Zingiber. **Chinese g.**, galanga.

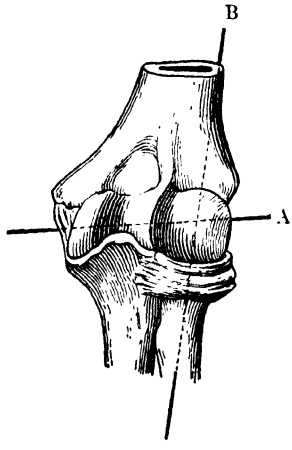
gingiva, gen. and pl. *gingi'væ* (jin-ji'vah) [L.] The gum, the dense fibrous tissue, covered by mucous membrane, which envelops the alveolar processes of the upper and lower jaws and surrounds the necks of the teeth.

gin'gival. Relating to the gums.

gingivally (jin-ji'val-ĭ). Toward the gums.

gingivectomy (jin'ji-vek'to-mĭ) [L. *gingiva*, gum, + G. *ektome*, excision.] Ulectomy(2).

gingivitis (jin-ji-vi'(ve')tis) [L. *gingiva*, the gum, + G. *-itis*.] Ulitis.



Hinge-joint: Ginglymus, with axis of rotation at A; B, axis of rotation of trochoid, or lateral ginglymus.

gingivoglossitis (jin"ji-vo-glos-si'(se')tis) [L. *gingiva* gum, + G. *glōssa*, tongue, + *-itis*.] Uloglossitis inflammation of both tongue and gums; stomatitis.

ginglyform (ging'(jing')gli-form) [G. *ginglymos*, a hinge-joint, + L. *forma*, form.] Ginglymoid.

gin"glymo-arthro'dial. Noting a joint having the form of both ginglymus and arthrodia, or hinge-joint and sliding-joint.

ginglymoid (ging'(jing')gli-moyd) [G. *ginglymos*, a hinge-joint, + *eidos*, resembling.] Relating to or resembling a hinge-joint.

ginglymus (ging'(jing')gli-mus) [G. *ginglymos*. Hinge-joint, a uniaxial joint in which a broad, transversely cylindrical convexity on one bone fits into a corresponding concavity on the other, allowing of motion in one plane only, as in the elbow (see cut). **hel'icoid g., lat'eral g.,** one in which there is a slight lateral movement during flexion; rotary or trochoid joint.

ginseng (jin'seng) [Ch.] The roots of several species of *Panax*, esteemed as of great medicinal virtue by the Chinese, but not employed in western medicine.

Giovannini's disease' (jo-vahn-ne'ne) [Sebastiano *Giovannini*, Italian dermatologist, contemporary.] A fungous form of monilithrix.

Giraldès' or'gan (zhir-al-dās') [Cardozo Cazado Joachim Albin *Giraldès*, Parisian surgeon of Portuguese birth, 1808–1875.] Paradidymis.

giraffe' [in derision of the stiff and extended neck of a sufferer from the disease.] Dengue.

Girard's method (Zhe-rar') [Charles *Girard*, Swiss surgeon, 1850–1916.] Radical cure of inguinal hernia by reduplication of the fascia without displacement of the spermatic cord.

girdle (gur'dl) [A.S. *gyrdel*.] 1. A belt, a zone. 2. Cingulum [BNA], see pelvic g. and shoulder g. **Nep'tune's g.,** a wet pack applied around the abdomen. **pel'vic g.,** cingulum extremitatis inferioris, the bony ring, formed of the two innominate bones and the sacrum, which articulates with the two femurs. **shoul'der g., thorac'ic g.,** cingulum extremitatis superioris, the bony ring, incomplete behind, serving for the attachment and support of the upper extremities; it is formed of the manubrium sterni and the two clavicles anteriorly and the scapulæ posteriorly. **Venus's g.,** balteum venereum, a mercurial plaster spread on linen or leather, employed in the treatment of syphilis by inunction.

gir'dle-sensa'tion. Strangalesthesia, zonesthesia.*

gir'dle-test, see under *test*.

Gird'ner's probe [John Harvey *Girdner*, New York physician, contemporary.] Telephonic probe; one of the wires of a telephone receiver is attached to a metal probe, the other to a metal plate; the latter is moistened and placed on the patient's body, with the receiver at the surgeon's ear; if the probe touches a bullet or piece of metal a click is heard.

girth. The measure around the body of a horse a little behind the forelegs.

githagism (gith'a-jism). A disease similar to lathyrism, believed to be due to poisoning by seeds of the corn-cockle, *Lychnis githago*.

gitter cell (git'er sel) [Ger. *gitter*, lattice, wire net]. See under *cell*.

Giuffrida-Ruggera stig'ma (joof-fre'dah-rood-jer'ah) [Vincenzo *Giuffrida-Ruggera*, Italian anthropologist, contemporary.] Extreme shallowness of the glenoid fossa.

gizz'ard. The second or muscular stomach of a graminivorous bird.

Gl. Chemical symbol of *glucinum*.

glabel'la, glabel'lum [L. *glaber*, smooth.] A smooth prominence, most marked in the male, on the frontal bone above the root of the nose about on the level of the upper orbital margins.

glabel'lad [L. *ad*, to.] Toward the glabella.

gla'brate. Glabrous.

glabrif'icin [L. *glaber*, smooth, + *facere*, to make.] A variety of antibody which is assumed to cause disintegration of the envelope of a capsulated bacterium, exposing it to the action of lysin.

gla'brous [L. *glaber*, smooth.] Smooth; without excrescences or prominences; bald.

glacial (gla'shal) [L. *glacialis*, icy.] Glassy, resembling ice. **g. ace'tic acid,** nearly pure

acetic acid, acidum* aceticum' glaciale. **g. phosphor'ic acid, HPO_3,** monobasic phosphoric acid.

glad'iate [L. *gladius*, a sword.] Sword-shaped, ensiform, xiphoid.

gladi'olus [L. dim. of *gladius*, a sword.] Corpus sterni or body of the sternum, mesosternum, the middle and largest division of the sternum.

Glaesser bacillus (gla'sur). *Bacterium glaesser.*

glair'in [*glair*, white of egg, from L. *clarus*, clear.] A gelatinous substance in the water of certain sulphur springs.

glair'y. Mucoid, viscous, resembling the white of egg.

gland [L. *glans*, acorn.] A secreting organ. The secretion may be poured out upon the surface or into a cavity, or it may be at once taken into the blood without appearing externally; it may be of service to the economy, in digestion, as a lubricant, etc., or it may be purely excrementitious, removing waste and poisonous material from the body. For the glands not defined here, see under *glandula* or under the proper name (Brunner, Vater, etc.) **absor'bent g.,** lymphatic g. **access'ory g.,** a small mass of glandular structure, detached from but lying near another and larger gland, to which it is similar in structure and probably in function. **acid g.,** one of the gastric glands secreting the acid of the gastric juice. **acinotu'bular g.,** tubuloalveolar g., one which is both acinous and tubular in structure. **acinous g.** (as'in-us), racemose g., alveolar g., a g. formed of a number of sac-like pouches arranged in groups opening into a common duct; or there may be only one such pouch. **ag'gregate g.,** agminated g., a collection of lymph follicles, such as Peyer's patches in the intestine. **ag'minated g.,** aggregate g. **albu'minous g.,** one which secretes a watery fluid containing albumin. **alve'olar g.,** acinous g. **a'nal g.,** one of a number of large sudoriparous glands in the mucous membrane of the anus. **anom'alous g.,** ductless g. **anteprostat'ic g.,** (1) Cowper's g.; (2) a small g. anterior to the prostate. **ap'ical g.,** anterior lingual g., glandula* lingualis anterior [BNA]. **apo'ric g.,** ductless g. **arte'rial g.,** glomus. **aryt'enoid g.,** one of a number of mucous glands in the aryepiglottic fold, anterior to the arytenoid cartilage. **ax'illary g.,** one of a number of lymph-glands in the axilla. **blind g.,** ductless g. **blood g.,** ductless g. **bra'chial g.,** one of the lymph-glands of the arm and forearm. **bron'chial g.,** one of ten or twelve lymph-glands at the bifurcation of the trachea, lymphoglandula bronchialis. **bucc'al g.,** glandula buccalis. **car'diac g.,** glandula cardiaca. **carot'id g.,** (1) lymphoglandula cervicalis profunda, deep cervical gland, one of a chain of lymph-nodes in the deeper parts of the neck; (2) glomus* caroticum. **ce'liac g.,** one of several lymph-glands anterior to the abdominal aorta. **ceru'minous g.,** one of the glands in the auditory meatus which secrete the cerumen. **cer'vical g.,** one of the lymph-glands in the neck. **circuma'nal g.,** anal g. **closed g.,** ductless g. **coccyg'eal g.,** Luschka' g., glomus* coccygeum. **cœ'liac g.,** celiac g **coil g.,** a sweat gland, glandula* glomiformis. **com'pound g.,** one composed of several acini grouped around a common duct. **conglo'bate g.,** a lymphatic g. **conglom'erate g.,** an aggregation of glands, racemose g. **con'voluted g.,** coil g **dental g.,** Serres' g., one of the white points on the gum preceding the eruption of the teeth, a projection of the epithelial layer of the enamel organ. **ductless g.,** glandula clausa [BNA], one which has no duct, its secretion being absorbed directly into the blood. **endoc'rinous g.,** ductless g., the main activity of which is the production of an internal secretion. **excre'tory g.,** a gland separating excrementitious or waste material from the blood. **follic'ular g.,** follicle. **fundus g.,** one of the true gastric glands secreting the gastric juice. **gastric g.,** glandula gastrica. **genal g.,** glandula buccalis. **gen'ital g.,** (1) testicle; (2) ovary. **gin'gival g.,** an infolding of the epithelium of the gum, occurring as masses in the gums of an infant. **globate g.,** lymph-gland. **glom'erate g.,** conglomerate g. **gutt'ural g.,** one of the racemose mucous glands of the pharynx. **he'mal g.,** hemolymph g. **hematopoiet'ic g.,** a blood-forming gland, such as the spleen. **hem'olymph g.,** a lymphadenoid structure resembling a lymph-gland, but possessing blood sinuses instead of lymph sinuses; the glands vary in number and position, but for the most part lie embedded in fat tissue and in number are in the proportion of from 1:20 to 1:50 of ordinary lymph-glands; they are of the size of a small pea; they are of two types; called by Warthin *splenolymph* and *marrow-lymph* glands. **hi'bernating g.,** the mass of fat which collects between the kidneys in hibernating animals, toward the end of summer. **in'guinal g.,** one of the lymph-glands of the groin. **intersti'tial g.,** one of Leydig's cells, secreting cells in the interstitial substance in the testicle, supposed to furnish the hormone which presides over the development of the male characteristics. **ju'gular g.,** Virchow's* g. **lentic'ular g.,** see *glandula gastrica.* **lymph g.,** lymphnode. **marrow-lymph g.,** a type of hemolymph g., resembling the bone marrow in structure and probable function. **mesenter'ic g.,** one of the lymph-glands of the mesentery. **mil'iary g.,** sweat gland. **mixed g.,** a gland secreting both mucus and saliva. **molar g.,** one of four or five large buccal glands in the neighborhood of the last molar tooth. **mucilag'inous g.,** one of the synovial villi, supposed by Havers to secrete the synovia. **mucip'arous g., mucous g.,** a gland secreting mucus. **odorif'erous g.,** a gland, such as Tyson's* g., the secretion of which has a strong odor. **oil g.,** sebaceous g. **oxyn'tic g.,** acid gland, see *glandula gastrica.* **pal'atine g.,** one of the mucous glands in the roof of the mouth. **pal'pebral g.,** glandula tarsalis [BNA]. **pec'toral g.,** one of the lymph-glands lying along the course of the long thoracic artery. **peptic g.,** a pepsin-secreting g., see *glandula gastrica* **perspi'ratory g.,** sweat g., coil g. **pharyn'geal g.,** guttural g. **pi'lous g.,** a sebaceous g. emptying into the hair-follicle. **pin'eal g.,** corpus pineale [BNA]. **pitu'itary g.,** hypophysis cerebri [BNA]. **prepu'tial g.,** Tyson's* g. **prostate g.,** see *prostate.* **pylor'ic g.,** one of the gastric glands situated in the neighborhood of the pylorus. **rac'emose g.,** one, like the parotid, formed of a number of branching ducts terminating in acini. **sacc'ular g.,** a single acinous g. **seba'ceous g., sebif'erous g.,** a g. which secretes an oily matter. **sen'tinel g.,** a single enlarged gland in the omentum which may be an indication of an ulcer opposite to it in the greater or lesser curvature of the stomach. **serous g.,** a salivary gland, such as the parotid, which secretes a thin, watery fluid. **sex'ual g.,** genital g. **sol'itary g.,** one of the follicular glands of the intestine. **sple'nolymph g.,** a type of hemolymph g. resembling the spleen in structure and probable function. **staph'-**

yline g., palatine g. **sublin'gual g.,** glandula sublingualis. **submax'illary g.,** glandula submaxillaris **sudorif'erous g., sudorip'arous g.,** coil g., one of the glands of the skin secreting the sweat. **suprare'nal g.,** glandula suprarenalis [BNA]. **sweat g.,** sudoriferous g. **tarsal g., tarsoconjunc'tival g.,** Meibomian g., glandula* tarsalis [BNA]. **tracho'ma g.,** one of a number of lymphoid glands in the palpebral conjunctiva, Bruch's glands. **tu'bular g.,** one composed of one or more tubules ending in a blind extremity. **tympan'ic g.,** glandula tympanica **ure'thral g.,** glandula urethralis. **u'terine g.,** one of a number of tubular glands in the uterine mucous membrane. **vag'inal g.,** one of the mucous glands in the mucous membrane of the vagina. **vas'cular g.,** (1) glomus; (2) hemolymph g. **vestib'ular g.,** (1) glandula vestibularis major; (2) glandula vestibularis minor. **vulvovag'inal g.,** Bartholin's g.

absence, anadenia. **cells forming,** adenoblasts. **deficient activity,** adenasthenia. **description of,** adenography. **destruction,** adenolysis. **disease of,** adenopathy, adenosis. **dislocation,** adenectopia, adenodiastasis. **dissection,** adenotomy. **excision of,** adenectomy. **formation of,** adenogenesis. **hardening,** adenosclerosis. **incision,** adenotomy. **increased activity,** adenohypersthenia. **inflammation,** adenitis, bubo, adenocellulitis, adenophlegmon. **nerve-cell regulating,** adenoneure. **obstruction,** adenemphraxis. **pain,** adenalgia, adenodynia. **resembling,** glanduliform, adenoid, adeniform **science of,** adenology. **separation of lobes,** adenodiastasis. **softening,** adenomalacia. **treatise on,** adenography, adenology. **tumor,** adenoncus, adenoncosis, adenoma, adenophyma, adenocele, adenocyst; *tumor containing gland structure*, denoted by the prefix adeno-, as adenomyoma, adenochondroma, etc.

glandebalæ (glan-deb'ă-le) [L.] The axillary hairs, hirci.

glanderous (glan'dur-us). Relating to glanders.

glanders (glan'durz) [L. *glandula*, gland] The form of equinia in which the mucous membrane of the nose is chiefly involved. **g. bacil'lus,** *B. mallei.*

glandilem'ma [L. *glandula*, gland, + G. *lemma*, sheath.] The capsule of a gland

glandula (glan'du-lah) [L. dim. of *glans*, an acorn (a gland).] A gland; a glandule or small gland.

g. angula'ris, g. submaxillaris.

g. areola'ris [BNA], areolar gland, Montgomery's gland, one of a number of cutaneous glands forming small, rounded projections from the surface of the areola of the mamma.

g. atrabilia'ris, g. suprarenalis.

g. basila'ris, pituitary gland, hypophysis [BNA].

g. bronchia'lis [BNA], one of the numerous mucous glands in the tunica mucosa of the bronchi.

g. bucca'lis [BNA], one of numerous racemose glands in the submucous tissue of the cheeks.

g. bulbourethra'lis [BNA], one of two small compound racemose glands, lying side by side at the posterior portion of the membranous urethra at the level of the apex of the prostate just above the bulb of the corpus spongiosum; they discharge through a minute duct into the spongy portion of the urethra.

g. cardi'aca, one of the branched tubular glands of the stomach, most numerous near the esophageal opening, which secrete mucus.

g. carot'ica, (1) glomus caroticum; (2) lymphoglandula cervicalis profunda.

g. cerumino'sa [BNA], ceruminous gland, one of the modified sudo parous glands in the external auditory meatus secreting the cerumen or ear-wax.

g. cilia'ris [BNA], ciliary gland, gland of Moll, one of a number of modified sudoriparous glands in the eyelids, opening on the edges between the eyelashes.

g. circumana'lis [BNA], one of the large sweat glands surrounding the anus.

g. clau'sa [BNA], closed gland, ductless gland.

g. col'li, faucial tonsil.

g. concre'ta, the upper or orbital portion of the lacrymal gland, g. lacrimalis superior.

g. cu'tis [BNA], any one of the glands of the skin.

g. duodena'lis [BNA], one of the duodenal glands or glands of Brunner, small acinotubular glands resembling the pyloric glands of the stomach, present only in the protoduodenum.

g. foram'inis obturato'rii, a lymph-gland on the inner-side of the obturator membrane.

g. gas'trica [BNA], one of the secreting glands of the stomach; these are of three kinds: the *true gastric* glands or *fundus* glands, the *cardiac*, and the *pyloric* glands; the true gastric glands (peptic and oxyntic) secrete the gastric juice; the pyloric and cardiac secrete mucus; there are also collections of lymphoid tissue, resembling the solitary glands of the intestine, called *lenticular* glands.

g. glomifor'mis [L. *glomus*, a knot or skein, + *forma*, shape, form], coil gland; a tubular gland of the skin, the blind extremity of which, the secretory part, *glomerulus*, is coiled in the form of a ball of worsted; the sweat glands are coil glands.

g. inci'siva, a small gland in the floor of the month back of the incisor teeth, obstruction of the duct of which sometimes causes ranula.

g. innomina'ta, (1) caruncula myrtiformis; (2) the lower or palpebral portion of the lacrymal gland, g. lacrimalis inferior.

g. intercarot'ica, glomus caroticum.

g. intestina'lis [BNA], one of the intestinal glands, follicles, or crypts of Lieberkuhn; tubular glands in the mucous membrane of the small and large intestines.

g. labia'lis [BNA], one of a number of glands, labial glands, forming a layer in the submucous tissue of the lips.

g. lacrima'lis [BNA], lacyrmal gland, one of two glands, *superior* and *inferior*, lying in the outer angle of the orbit, which secrete the tears; the superior gland is much the larger of the two.

g. lacrima'lis accesso'ria [BNA], accessory lacrymal gland, one of a number of minute mucous glands in the conjunctiva and the lids, secreting a watery fluid.

g. lactif'era, mamma.

g. larynge'a, one of the large number of muciparous glands in the mucous membrane of the larynx; they are called, according to their situation, *glandulæ laryngeæ anteriores, gl. l. mediæ* and *gl. l. posteriores.*

g. lingua'lis, g. sublingualis.

g. lingua'lis ante'rior [BNA], gland of Blandin, gland of Nuhn, apical gland; one of a number of small racemose glands in the muscular tissue of the under surface of the tongue, near the tip.

g. maxilla'ris, g. submaxillaris.

g. mola'ris, one of four or five mucous glands in the subcutaneous connective tissue of the cheek near the termination of Stenson's duct.

g. muco'sa [BNA], Krause's gland, one of the mucous glands of the conjunctiva.

g. nasa'lis [BNA], any one of the glands, mucous or olfactory, in the nasal mucous membrane.

g. œsophage'a [BNA], esophageal gland, one of a number of mucous glands in the mucous membrane of the esophagus.

g. olfacto'ria [BNA], one of numerous tubular and sometimes branched glands (Bowman's glands), in the mucous membrane of the olfactory region of the nasal fossæ.

g. orbita'ria, g. lacrimalis.

g. palati'na [BNA], one of a number of racemose glands in the posterior half of the submucous tissue covering the hard palate.

glandulæ parathyreoid'eæ several, usually four, small pea-sized glands, two on each side of the thyroid gland but having a very different function from that, being essential to life, their destruction leading to tetany and death; the upper pair are called g. p. craniales, the lower, g. p. caudales according to the [NK].

g. paraurethra'lis [NK], one of a number of mucous glands (Skene's glands) in the wall of the female urethra.

g. paro'tis [BNA], parotid gland, the largest of the salivary glands; one of two glands situated below and in front of the ear, on either side, extending from the angle of the jaw to the zygoma and backward to the sternocleidomastoid muscle; it discharges through Steno's, or Stenson's, duct, ductus parotideus.

g. paro'tis accesso'ria [BNA], accessory parotid gland, g. socia parotidis, an occasional islet of parotid-gland tissue separate from the mass of the gland, lying anteriorly just above the commencement of the parotid duct.

g. pharynge'a [BNA], one of the racemose mucous glands beneath the mucous membrane of the pharynx.

g. pinea'lis, pineal gland, corpus* pineale [BNA].

g. præhyoid'ea, an accessory thyroid gland sometimes found anterior to the hyoid bone.

g. præputia'lis [BNA], Tyson's gland, one of the sebaceous glands of the corona glandis and inner surface of the prepuce.

g. pros'tata ante'rior, anteprostate gland.

g. pros'tata mulieb'ris, spongy tissue at the orifice of the meatus urinarius in the female, corpus glandulosum.

g. pylor'ica [BNA], one of the branched tubular glands of the stomach, most numerous near the pylorus, secreting mucus.

g. saliva'lis abdom'inis, pancreas.

g. saliva'lis exter'na, g. parotis.

g. saliva'lis inter'na, g. sublingualis and g. submaxillaris regarded as one.

g. seba'cea [BNA], sebaceous gland, one of a large number of glands in the corium, which open into the hair follicles and secrete an oily, semifluid substance, *sebum cutaneum*.

g. so'cia parot'idis, g. parotis accessoria [BNA].

g. sublingua'lis [BNA], one of two salivary glands in the floor of the mouth beneath the tongue, discharging through the ducts of Rivinus, or Rivini, *ductus sublinguales minores*.

g. submaxilla'ris [BNA], one of two salivary glands in the neck, in the submaxillary region in the space between the two bellies of the digastric muscle and the angle of the jaw; it discharges through the duct of Wharton, ductus submaxillaris.

g. sudorif'era [BNA], sudoriferous gland, sweat gland, g. sudoripara, one of the coil glands of the skin secreting sweat.

g. sudorip'ara, sudoriparous gland, sweat gland, g. sudorifera [BNA].

glandulæ sudorif'eræ axilla'res [NK], the axillary sweat glands, many of which differ from those of the suface of the body generally in undergoing enlargement at puberty.

g. suprahyoid'ea, g. præhyoidea.

g. suprarena'lis [BNA], adrenal body or gland, suprarenal body, capsule, or gland, a flattened, roughly triangular body resting upon the upper end of each kidney; it is one of the ductless glands furnishing an internal secretion, one effect of which is an increase in blood-pressure.

g. suprarena'lis accesso'ria, accessory suprarenal gland, one of a number of isolated, often minute, masses of suprarenal tissue sometimes found near the main gland or in the broad ligament or the epididymis.

glan'dulæ suprarena'les sic'cæ, suprarenalum siccum (U.S. P. IX), dried suprarenals, desiccated suprarenal glands, dried and powdered suprarenal glands of such animals as are used for food by man; given in doses of gr. 3–5 (0.2–0.3) in capsules. See *epinephrina*.

g. tarsa'lis [BNA], tarsal gland, Meibomian gland, one of a number of sebaceous glands between the tarsus and conjunctiva of each eyelid, discharging at the edge of the lid near the posterior border.

g. tartar'ica, one of numerous little masses of concentrically arranged epithelial cells in the gums of the newborn.

g. thyreoid'ea [BNA], thyreoid or thyroid gland or body; a ductless gland lying in front and to the sides of the upper part of the trachea. It is of horseshoe shape, consisting of two lateral lobes joined by a narrow central portion, the *isthmus*, occasionally an elongated offshoot, the *pyramidal lobe*, passes upward from the isthmus in front of the trachea. It is supplied by branches from the external carotid and subclavian arteries, and its nerves are derived from the middle and infer or cervical ganglia of the sympathetic. See also *thyroid* gland*.

g. thyroid'ea accesso'ria [BNA], an isolated mass, or one of several such masses, of thyroid tissue, sometimes present in the side of the neck, or just above the hyoid bone (*g. t. a. suprahyoidea*), or even as low down as the arch of the aorta.

glan'dulæ thyroid'eæ sic'cæ, thryoideum (U.S.).

g. tympan'ica (1) [BNA], one of the mucous glands in the mucosa of the tympanum; (2) a small reddish, ganglionic mass lying on Jacobson's nerve in the tympanic canal, regarded by Krause as a ductless gland.

g. urethra'lis [BNA], one of numerous mucous glands (glands of Littré) in the wall of the pars cavernosa urethræ.

g. uteri'na [BNA], uterine gland, one of a number of tubular glands in the uterine mucosa.

g. vascula'ris [BNA], the lymphatic and lymphoid glands, including the spleen, tonsils, thymus, hemolymph, and lymph glands.

g. vesica'lis [BNA], one of a number of mucous follicles, not true glands, in the mucous membrane near the neck of the bladder.

g. vestibula'ris major [BNA], Bartholin's gland, Tiedemann's gland, Duverney's gland, one of two glands on either side of the lower part of the vagina, the equivalent of Cowper's glands in the male.

g. vestibula'ris mi'nor [BNA], one of a number of minute mucous glands opening on the surface of the vestibule between the orifices of the vagina and urethra.

glan'dular. Relating to a gland.

glan'dule. A small gland.

glan'dulous. Glandular.

glans [L. acorn] 1. A gland. 2. Goiter. 3. In botany, a nut. 4. See the subtitles. **g. clitor'idis,** a small mass of erectile tissue capping the body of the clitoris. **g. pe'nis,** the conical expansion of the corpus cavernosum urethræ (corpus spongiosum) which forms the head of the penis.

Glase'rian ar'tery [Jean Henri *Glaser*, Swiss anatomist, 1629–1675.] Tympanic artery. **G. fis'sure,** fissura petrotympanica.

Glas'gow's sign. A systolic murmur heard over the brachial artery in aneurysm of the aorta.

glass [A.S. *glæs*.] A transparent brittle substance, a compound of silica with various bases. **crown g.,** a compound of lime, potash, alumina, and silica. **flint g.,** contains lead oxide in place of lime and is more refractive than crown g; both crown and flint g. are used in lenses. **sol'uble g., water g.,** a silicate of potassium or sodium, soluble in hot water but solid at ordinary temperatures; used for fixed dressings.

glass-bod'y. The transparent portion of the demilune* body.

glasses. Spectacles; lenses of various diameters for correcting refractive errors in the eyes. See *lens*.

glass-pox. Alastrim.

glass'y. Vitreous, hyaline; smooth and shining.

Glau'ber's salt [Johann Rudolph *Glauber*, Dutch chemist, 1603–1668.] Sodium sulphate.

glaucoma (glaw-ko'mah) [G. *glaukos*, greenish gray.] A disease due to increase of the fluids of the eyeball, raising intraocular pressure. **ab'solute g.,** the final stage of blindness in g. **congen'ital g.,** buphthalmos. **g. ful'minans,** a form in which the symptoms develop with great rapidity, blindness sometimes ensuing in less than a day. **sec'ondary g.,** g. occurring as a complication or sequel of some other ocular disease or injury. **sim'ple g.,** occurs without inflammatory symptoms.

glaucomatous (glaw-ko'mă-tus). Relating to glaucoma.

glaucosuria (glaw"ko-su'rĭ-ah) [G. *glaukos*, bluish green, + *ouron*, urine.] Indicanuria, so called because of the bluish green color of the urine.

gleet. A slight chronic discharge of thin mucopus from the urethra, following gonorrhea. **nasal g.,** see under *nasal*.

gleety (gle'tĭ). Relating to gleet.

Glegg's mixture [Wilfred *Glegg*, English physician.] A mixture of three parts of liquid paraffin and one part of white vaseline with the addition of ½ grain

of menthol per ounce, or of some indifferent flavoring such as rose water; used as an application to the nasal mucous membrane in catarrhal rhinitis.

Glénard's disease' (gla-nar') [Frantz *Glénard*, French physician, 1848–1920.] Enteroptosis. **G.'s test,** girdle test.*

glenohumeral (gle-no-hu'mur-al). Relating to the glenoid cavity and the humerus.

gle'noid [G. *glēnē*, a socket, + *eidos*, appearance.] Resembling a socket, noting two articular depressions entering into the formation of the shoulder-joint and the articulation of the jaw. **g. cav'ity, g. fos'sa,** (1) a hollow formed by the g. surface of the external angle or head of the scapula and the g. ligament, which receives the head of the humerus; (2) fossa mandibularis of the temporal bone which receives the condyle of the mandible. **g. lig'ament,** (1) a ring of dense fibrous tissue attached to the margin of the glenoid surface of the scapula, forming with the latter the g. fossa or cavity, labrum glenoidale [BNA]; (2) Cruveilhier's ligament, on the plantar surface of each metatarsophalangeal articulation. **g. sur'face,** a slightly concave oval surface on the head of the scapula, forming with the g. ligament the g. fossa.

Glenospora (gle-nos'po-rah) [G. *glēnē*, honeycomb, + *sporos*, seed.] A genus of polymorphous fungi, one species of which, *G. graphii*, has been found in cases of otomycosis.

glenosporosis (gle-no-spo-ro'sis). An affection caused by the presence of a species of fungus of the genus *Glenospora*.

Gley's cells (gla) [Emil *Gley*, French physiologist, 1857–1930.] Cells in the interstitial tissue of the testicle. **G.'s glands,** parathyroids.

gli'a [G. glue.] Neuroglia.

gli'acyte [G. *kytos*, cell.] A neuroglia cell.

gli'adin, gli'adine [G. *glia*, glue.] 1. Glutin, a protein separable from wheat-gluten. 2. A member of a group of simple proteins insoluble in water, absolute alcohol, and neutral solvents, but soluble in 70 to 80 per cent. alcohol; so called after the most conspicuous member of the group.

gliobacte'ria. Bacilli in a zooglea mass.

gliococc'us. A micrococcus in a zooglea mass.

glio'ma, pl. *glio'mata, glio'mas* [G. *glia*, glue, + *-ōma*.] 1. A tumor formed of neuroglia cells. 2. A sarcoma springing from neuroglia, especially a sarcoma of the retina. **g. endoph'ytum,** a g. of the retina starting from the inner layers. **g. exoph'ytum,** a g. of the retina starting from the outer layers. **g. sarcomato'sum,** gliosarcoma. **g. telangiecto'des,** a g. containing a great number of dilated blood-vessels.

gliomatosis (gli-o-mah-to'sis). Hyperplasia of neuroglia elements.

glio'matous. Relating to a glioma.

gliomyxo'ma. A mixed glioma and myxoma.

glioneuro'ma. A mixed tumor partaking of the characters of both glioma and neuroma.

glio'sa [G. *glia*, glue.] The gray substance of the spinal cord capping the head of the dorsal horn and encircling the central canal.

gliosarco'ma. A mixed glioma and sarcoma; a tumor of neuroglia tissue containing numerous imperfectly differentiated, vegetative, or embryonic cells; glioma sarcomatosum.

glio'sis. A condition marked by the occurrence of overgrowth or tumors of the neuroglia. **hypertroph'ic nod'ular,** epiloia. **spinal g.,** syringomyelia. **tu'berose g.,** epiloia.

gliosome (gli'o-sōm) [*glia* + G. *soma*, body.] One of a number of small rounded bodies contained in the neurolgia cells.

glischrin (glis'krin) [G. *glischros*, gluey.] A mucin like substance formed by the *Bacillus glischrogenes*.

glischruria (glis-kru'rĭ-ah) [*glischrin* + G. *ouron* urine.] The presence of glischrin in the urine.

Glis'son's cap'sule [Francis *Glisson*, English physician, 1596–1677.] Capsula fibrosa hepatis. **G.'s cirrho'sis,** perihepatitis.

glissonitis (glis-on-i'(e')tis). Inflammation of Glisson's capsule, or the connective tissue surrounding the portal vein and the hepatic artery and bile-ducts.

glo'bin. A histone obtained from hemoglobin.

globinometer (glo-bin-om'e-tur) [G. *metron*, measure.] An instrument for determining the relative proportions of hemoglobin.

globoid (glo'boyd) [L. *globus*, globe, + G. *eidos*, resemblance.] Resembling a globe, globose, spheroid. **g. bod'ies,** extremely minute, filtrable, ultramicroscopic microorganisms, such as the alleged pathogen of poliomyelitis or of cancer.

glo'bon. A nutrient preparation of albumin from nuclein.

glob'ular. Spherical, globe-shaped.

globular'etin. A decomposition product, C_6H_6O, of globularin.

glob'ularin. An amorphous bitter principle, a glucoside, $C_{15}N_{20}O_8$, from *Globularia alypum*, a shrub of southern Europe; it is employed with globularetin, under the trade name prasoid, in the treatment of gout and rheumatism.

globule (glob'ūl) [L. *globulus*, dim. of *globus*, a ball] 1. A small spherical body of any kind. 2 A small pill or granule, usually containing an alkaloid; or one of sugar of milk impregnated with a homeopathic remedy. 3. A cell of the blood or lymph. 4. A fat droplet in milk. **direct'ing g., extru'sion g., po'lar g.,** polar body.

globulicidal (glob"u-lĭ-si'dal) [L. *globulus* + *cædere*, to kill.] Destructive to the blood-corpuscles, especially the erythrocytes; hemolytic.

globulicide (glob'u-lĭ-sīd). 1. Globulicidal. 2. An agent which is destructive to the blood corpuscles.

globulif'erous [L. *globulus*, globule, + *ferre*, to bear] Containing globules or corpuscles, especially red blood-corpuscles.

globulim'eter [L. *globulus*, globule, + G. *metron*, measure] Cytometer.

glob'ulin [L. *globulus*, globule.] A simple protein insoluble in pure water, but soluble in a 0.5 to 1 per cent. solution of a neutral salt, and coagulable by heat; varieties of g. are present in blood, milk, and muscle.

globulinuria (glob"u-lin-u'rĭ-ah). The excretion of globulin in the urine, usually, if not always, in connection with serum-albumin.

globulol'ysis [L. *globulus*, globule, + G. *lysis*, solution.] Hemocytolysis.

glob'ulus [L.] Globule. **g. medulla'ris,** nucleus globosus [BNA].

glo'bus [L.] A round body, sphere, ball, globe. **g. hyster'icus,** a sensation as of a ball in the throat or as if the throat were compressed, occurring in the emotional attacks of major hysteria, and also in minor hysterical conditions. **g. ma'jor,** caput epididymidis, the upper and larger extremity of the epididymis. **g. mi'nor,** cauda epididymidis, the lower and smaller extremity of the epididymis. **g. pal'lidus** [BNA], pale globe, one of the two inner, smaller, and lighter gray, of the three portions into which the lenti-

form or lenticular nucleus is divided by laminæ of white substance.

glome. 1. Glomus. 2. The prominent rounded part of the frog of a horse's hoof on either side of the cleft.

glom'erate [L. *glomerare*, to wind into a ball.] Conglomerate; noting the usual gland-structure, consisting of a mass of capillaries surrounding the secreting cells, as distinguished from the conglobate, or lymph glands.

glomer'ular. Relating to a glomerulus; clustered, glomerulate.

glomerule (glom'er-ūl). Glomerulus.

glomerulitis (glom-er-u-li'(le')tis). Inflammation of a glomerulus, specifically of the renal glomeruli, glomerulonephritis.

glomerulonephritis (glom-er"u-lo-ne-fri'(fre')tis). Parenchymatous nephritis with pronounced lesions in the glomeruli.

glomerulose (glom-er'u-lōs). Glomerular, glomerulate.

glomer'ulus, pl. *glomer'uli* [L. dim. of *glomus*, a skein.] 1. A plexus of capillaries. 2. A tuft formed of capillary loops at the beginning of each uriniferous tubule in the kidney; this tuft with its capsule (Bowman's capsule) constitutes the Malpighian body. 3. The twisted secretory portion of a sweat gland.

glo'mus [L. a skin, a ball.] A conglomeration or plexus of minute arteries or veins. **g. carot'icum, g. carotid'eum,** carotid gland, nodulus intercaroticus, glandula carotica; a small oval structure, about 5 mm. in length, lying in the bifurcation of the common carotid artery; it is formed of a number of lobules each composed of several glomeruli formed of tufts of capillaries which unite to make an efferent vein; the capillaries are surrounded by epithelioid cells; the function of the gland is unknown. **g. chorioïd'eum,** choroid skein, a marked enlargement of the choroid plexus of the lateral ventricle at the junction of the central part with the inferior horn. **g. coccyge'um,** coccygeal gland, Luschka's gland, a structure similar to the g caroticum, situated at the termination of the sacral artery near the tip of the coccyx.

glonoin (glo'no-in). Trinitroglycerol, $C_3H_5(NO_3)_3$, nitroglycerin *

glonoinism (glo'no-in-izm). Poisoning by nitroglycerin, or glonoin.

glossa (glos'ah) [G.] Lingua, tongue.

glossag'ra [G. *glōssa*, tongue, + *agra*, a seizure.] Glossalgia of gouty origin.

gloss'al. Relating to the tongue.

glossal'gia [G *glōssa*, tongue, + *algos*, pain] Glossodynia, pain in the tongue.

glossan'thrax [G. *glōssa*, tongue, + *anthrax*, a live coal.] Carbuncle of the tongue.

glossec'tomy [G. *glōssa*, tongue, + *ektomē*, excision Elinguation, excision or amputation of the tongue.

Glossi'na [G. *glōssa*, tongue.] A genus of biting flies, tsetse flies **G. mor'sitans,** the agent in the transmission of *Trypanosoma brucei*, the parasite of nagana, a fatal cattle disease of South Africa, and of *T. rhodesiense*, one of the pathogenic agents of sleeping sickness. **G. pallid'ipes,** a species which, like *G. morsitans*, also transmits the parasite of nagana. **G. palpa'lis,** a species of *G.* which transmits *Trypanosoma gambiense*, one of the pathogenic parasites of sleeping sickness.

glossitis (glos-si'(se')tis) [G. *glōssa*, tongue, + *-itis*.] Inflammation of the tongue. **g. area'ta exfoliati'va,** geographical tongue. **g. desic'cans,** a painful affection of the tongue, of unknown origin, in which the surface becomes raw and fissured. **g. parasit'ica,** glossophytia, black tongue.*

glossocele (glos'o-sēl) [G. *glōssa*, tongue, + *kēlē*, tumor, hernia.] Protrusion of the tongue from the mouth owing to its excessive size.

glossocinesthetic, glossocinæsthetic (glos"o-sin-es-thet'ik) [G. *glōssa*, tongue, + *kinēsis*, movement, + *aisthētikos*, perceptive.] Noting the subjective sensation of the movements of the tongue.

gloss"odynamom'eter [G. *glōssa*, tongue, + *dynamis*, power, + *metron*, measure.] An apparatus for estimating the contractile force of the tongue muscles.

glossodyn'ia [G. *glōssa*, tongue, + *odynē*, pain] Glossalgia, pain in the tongue.

glossoepiglottic, glossoepiglottidean (glos"o-ep-i-glot'-ik, glos"o-ep-i-glŏ-tid'e-an). Relating to the tongue and the epiglottis. **g. folds,** three folds of mucous membrane, *plicæ epiglotticæ*, passing from the base of the tongue to the epiglottis. **g. lig'ament,** an elastic ligamentous band passing from the base of the tongue to the epiglottis in the middle g. fold

gloss'ograph [G. *glōssa*, tongue, + *graphō*, I write.] An instrument for recording the movements of the tongue in speaking.

glossohyal (glos-o-hi'al). Relating to the tongue and the hyoid bone, hyoglossal.

gloss'okinesthet'ic, glossokinæsthet'ic. Glossocinesthetic.

glossology (glos-ol'o-jĭ) [G. *glōssa*, tongue, + *-logia*.] Glottology. 1. The branch of medical science dealing with the tongue and its diseases. 2. The definition of the terms of any science, the science of nomenclature, onomatology.

glossolysis (glos-ol'i-sis) [G. *glōssa*, tongue, + *lysis*, a loosing.] Paralysis of the tongue, glossoplegia.

glossopalati'nus. See under *musculus*.

glossop'athy [G. *glōssa*, tongue, + *pathos*, suffering] A disease of the tongue.

glossopharyngeal (glos"o-far-in'je-al). Relating to the tongue and the pharynx.

gloss"opharynge'us. See under *musculus*

glossophytia (glos"o-fi'tĭ-ah) [G. *glōssa*, tongue, + *phyton*, plant] Black tongue,* nigrities linguæ

glossophyton (glos"o-fi'ton) [G. *glōssa*, tongue, + *phyton*, plant] A fungus found in the epithelial débris in cases of nigrities linguæ or black tongue *

gloss'oplasty [G. *glōssa*, tongue, + *plassō*, I form] Reparative or plastic surgery of the tongue.

glossoplegia (glos"o-ple'jĭ-ah) [G. *glōssa*, tongue, + *plēgē*, stroke.] Paralysis of the tongue, glossolysis

glossorrhaphy (glos-sor'ă-fĭ) [G. *glōssa*, tongue, + *rhaphē*, seam] Suture of a wound of the tongue

glossospasm (glos'o-spazm) [G. *glōssa*, tongue, + *spasmos*, spasm.] Spasmodic contraction of the tongue.

gloss'otilt [G. *glōssa*, tongue, + *tillō*, I pull.] An instrument for making traction on the tongue.

glossot'omy [G. *glōssa*, tongue, + *tomē*, incision Any cutting operation on the tongue.

glossotrichia (glos-o-trik'ĭ-ah) [G. *glōssa*, tongue, + *thrix(trich-)*, hair.] A condition in which the papillæ of the tongue are greatly elongated, hairy tongue.

glott'ic. Relating to (1) the tongue or (2) the glottis

glottis (glot'is) [G. *glōttis*, **aperture of the larynx**] The vocal apparatus of the larynx, consisting of the *labia vocalia*, or folds of mucous membrane investing the vocal ligament and vocal muscle on each side, the free edges of which are the vocal cords, and of a median fissure, the ***rima***

glottidis. **false g.,** g. spuria. **g. respirato'ria,** pars intercartilaginea [BNA], the posterior portion of the rima glottidis between the arytenoid cartilages. **g. spu'ria,** false glottis, rima vestibuli, the interval between the false vocal cords. **g. ve'ra,** true glottis, rima glottidis, the interval between the true vocal cords. **g. voca'lis,** pars intermembranacea [BNA], the anterior portion of the rima glottidis between the vocal cords. **true g.,** g vera.

glottitis (glŏ-tī'(te')tis). Glossitis.

glottol'ogy [G. *glōssa, glōtta,* tongue, + *-logia*] Glossology.

glu'case. A ferment converting starch into glucose.

glucide (gloo-sīd). A term suggested by the International Union of Pure and Applied Chemistry to embrace the carbohydrates and the glucosides.

glu'cin. Trade name of sodium amidotriazinsulphonate, a sweetening substance similar to saccharin.

glusi'num [G. *glykys,* sweet] A chemical element, symbol Gl, atomic weight 9.1; a white metal belonging to the alkaline earths; now called *beryllium.*

glucohe'mia, glucohæ'mia. Glycosemia.

glucokinin (glu-ko-kin'in) [*glucose* + G. *kineō,* I move.] Plant insulin, a plant and yeast derivative having an action similar to that of insulin.

glucol'ysis. Glycolysis.

glucon'ic acid. An acid resulting from the oxidation of glucose, occurring in the form of white crystals.

glucoprotein (glu"-ko-pro'te-in). Glycoprotein.

gluco'samine. Glycosamine.

glu'cosan. Term applied to a group of substances obtained by splitting off a certain amount of intramolecular water from various edible sugars, whereby they are made utilizable by diabetics without increasing the hyperglycemia.

gluco'sazone. See *phenylgluçosazone.*

glucose (glu'kōs) [G. *gleukos,* sweet new wine.] Grape sugar, dextrose.* The glucose of the U.S.P. (glucosum) is defined as a thick syrupy liquid obtained by the incomplete hydrolysis of starch, composed mainly of dextrose and various dextrins.

glucoside (glu'ko-sīd). The name of a class of substances in plants, often forming the active therapeutic principle, which can be resolved into glucose and an acid.

glu'cosin. Trade name of a non-saccharine substitute for sugar.

gluco'sum (U.S.) **gluco'sum liq'uidum** (Br.). [G. *gleukos,* sweet new wine.] Glucose.

glucosu'ria. Glycosuria.

glu'cusimide. Glusidum.

Gluge's cor'puscles (gloo'geh) [Gottlieb *Gluge,* Belgian histologist, 1812–1898.] Large pus cells containing fat droplets, products of degeneration of red blood-cells, bacteria, etc.

glukhorment (glook-hor'ment). Trade name of a German preparation said to be derived from the pancreas, proposed as an antidiabetic remedy.

glu'lol. Trade name for formalin-gelatin, a whitish granular powder prepared by the action of formic aldehyde on gelatin; used as an antiseptic dressing.

glume [L. *gluma,* husk.] The bract of any of the grasses.

glu'side. Glusidum.

glusidum (glu'si-dum) (U.S. and Br.). Glucusimide, gluside, benzosulphinidum, saccharin, $C_6H_4.CO.SO_2.NH$ 1:2, the anhydride of orthosulphomide-benzoic acid, a sweet imide derived from toluene, employed as a substitute for sugar in cases of diabetes mellitus and obesity. **g. solu'bile** (U.S.), soluble gluside, sodii benzosulphinidum, occurs as colorless crystals or a white crystalline powder, soluble in water, odorless, or having a faint aromatic odor, and an intensely sweet taste; gr. ½ (0.03) is the equivalent in sweetening properties of the ordinary lump of sugar.

glutæ'us, glute'us. See under *musculus.*

glutamic acid (glu-tam'ik as'id). An amino-acid occurring as a decomposition product of protein. $COOH.CH.NH_2.CH_2.CH_2.COOH$.

glutan'nin. Trade name of a compound of tannin and vegetable albumin, recommended as an astringent in diarrhea in doses of gr. 10–15 (0.6–1.0) three or four times a day.

glutathion (glu-tŭ-thi'ōn) [*glutamic* acid + G. *theion,* sulphur.] A dipeptide compound of glutamic acid and cystein, acting as a catalytic in the oxidation especially of the fatty acids.

gluteal (glu'te-al) [G. *gloutos,* buttock.] Relating to the buttocks. **g. ar'tery,** arteria glutæa. **g. crest,** crista glutæa. **g. fold,** gluteofemoral crease, the crease between the buttock and the thigh. **g. line,** linea glutæa. **g. muscles,** see under *musculus.* **g. nerve,** nervus glutæus. **g. region,** the region of the buttocks. **g. ridge,** crista glutæa. **g. tuberos'ity,** tuberositas glutæa. **g. vein,** vena comes of the g. artery.

glu'telin. One of a class of simple proteins occurring in the seeds of grain, soluble in dilute acids and alkalies, but not in neutral solutions

glu'ten [L. glue.] Wheat-gum; the insoluble protein constituent of wheat and other grains, a compound of mucedin, gliadin, gluten-fibrin, gluten-casein, and possibly other proteins.

gluten-casein (glu'ten-ka'se-in). A protein resembling casein, present in gluten.

glu'ten-fi'brin. A yellowish protein resembling fibrin, present in gluten.

gluteofem'oral. Relating to the buttocks and the thigh. **g. crease,** gluteal* fold.

gluteo-in'guinal. Relating to the buttock and the groin.

glute'us. Glutæus; see under *musculus*

glu'tin. Gliadin (1).

glu'tinous. Adhesive, stickv.

glutitis (glu-ti'(te')tis). Inflammation of the muscles of the buttock.

glu'toform. Collaform, glutol, formaldehyde-gelatin; a white insoluble powder, made by adding formaldehyde to a solution of gelatin; recommended as an antiseptic dusting powder.

glu'toid. A substance composed of a mixture of formaldehyde and gelatin, used for making capsules or coating pills, when it is desired to act especially on the intestinal mucous membrane; the substance dissolves in the intestinal juices but is insoluble in the stomach.

glu'tol. Glutoform.

glu'tolin. An albuminoid body found in small quantity with the paraglobulin precipitated from the blood-plasma by magnesium sulphate.

Gluzin'ski's test [Anton *Gluzinski,* Lemberg physician, contemporary.] For bile: the suspected fluid is boiled in a test-tube with formalin; when a green color appears hydrochloric acid is added, the color then changing to violet if bile-pigments are present.

glycase (glī'kāz). An enzyme acting on maltose to convert it into dextrose.

glyceleum (glĭ-sel-e'um) [*glycerin* + G. *elaion,* oil.] A mixture of olive oil 6, glycerin 2, and almond meal 1; used as a base for ointments.

glyce'mia, glycæ'mia. Glycosemia.

glycerid, glyceride (glis'er-id, -īd). An ester, or "salt" of glycerol.

glycerin (glis'er-in). Glycerinum. **g. jell'y**, a mixture of glycerin, gelatin, and zinc oxide, used externally in the treatment of certain skin diseases.

glycerinum (glis-er-e'num) [G. *glykeros*, sweet.] (U.S., Br.) Glycerin, glycerol. 1. A sweet oily fluid, $C_3H_5(OH)_3$, obtained by the saponification of fats and fixed oils; employed as a solvent, as an application to roughened and chapped skin, and by injection or in the form of suppository for constipation. 2. Same as glyceritum. **g. ac'idi bo'rici** (Br.), glyceritum boroglycerini (U.S.). **g. ac'idi carbol'ici** (Br.), glyceritum phenolis (U.S.).

glycerite (glis'er-īt). Glyceritum.

glyceritum, gen. *glyceri'ti*, pl. *glyceri'ta* (glis-er-i'tum). Glycerinum (2), glycerite, glycerol, a pharmaceutical preparation made by triturating the active substance with glycerin.

g. ac'idi tan'nici (U.S.), glycerinum acidi tannici (Br.), glycerite, or glycerin, of tannic acid or of tannin; employed externally and internally to meet the indications of tannin; dose, ♏10–30 (0.6–2.0).

g. alu'minis, glycerinum aluminis (Br.), glycerite or glycerin of alum; employed externally as an astringent.

g. am'yli (U.S.), glycerinum amyli (Br.), glycerite or glycerin of starch; employed as an emollient application.

g. bismu'thi (N.F.), glycerite of bismuth; each fluidram (4.0) contains bismuth and sodium tartrate gr. 15 (1.0) in equal parts of glycerin and water; employed as an astringent in gastric and intestinal diseases in doses of ♏8–15 (0.5–1.0).

g. bora'cis, glycerinum boracis (Br.), glycerite or glycerin of borax, employed locally in the treatment of aphthæ and other forms of stomatitis.

g. boroglyceri'ni (U.S.), glycerinum acidi borici (Br.), glycerite of boroglycerin or of glyceryl borate, glycerin of boric acid; used locally in otorrhea and in uterine congestion.

g. fer'ri, quini'næ et strychni'næ phospha'tum, glycerite of the phosphates of iron, quinine, and strychnine; employed to make the syrup or given in place of the syrup as a tonic in doses of ♏15–60 (1.0–4.0).

g. gual'aci, glycerite of guaiac; each dose of ♏30 (2.0) contains guaiac gr. 2½ (0.17) and solution of potassium hydroxide ♏2 (0.13) in a solution of glycerin 65 and water 35; alterative and emmenagogue.

g. hydras'tis, glycerite of hydrastis; astringent and antiphlogistic locally and internally in doses of ♏15–30 (1.0–2.0).

g. pepsi'ni (N.F.), glycerite of pepsin, glycerinum pepsini (Br.); each fluidram (4.0) contains pepsin gr. 5 (0.3) and hydrochloric acid ♏¾ (0.04) in equal parts of glycerin and water; digestive in doses of ʒ½–1 (2.0–4.0).

g. pheno'lis (U.S.), glycerinum acidi carbolici (Br.), glycerite of phenol, glycerin of carbolic acid; employed locally as an antipruritic and internally as an antiseptic in dose of ♏5 (0.3).

g. pi'cis pi'ni (N.F.), glycerite of tar; each dose of ʒ1 (4.0) contains gr. 4 (0.25) of tar in a mixture of alcohol 12.5, glycerin 25, and water 62.5; expectorant, and used externally in dermatology.

g. plum'bi subaceta'tis, glycerinum plumbi subacetatis (Br.), glycerite or glycerin of lead subacetate; employed externally as a substitute for Goulard's extract.

g. tragacan'thæ (N.F.), glycerite of tragacanth, glycerinum tragacanthæ (Br.); a paste of tragacanth, glycerin, and water, used as a pill mass.

glycerogelatinum, pl. *glycerogelati'na* (glis"er-o-jel-a-ti'num) (N.F.). Glycerogelatin, gelatinum* glycerinatum. **g. ac'idi salicyl'ici** (N.F.), salicylic acid glycerogelatin; salicylic acid 10, glycerin and water each 35, glycerinated gelatin 20. **g. iodofor'mi** (N.F.), iodoform glycerogelatin; iodoform 10, glycerin 15, water 65, glycerinated gelatin 10. **g. zin'ci du'rum** (N.F.), firm zinc glycerogelatin; zinc oxide 10, glycerin 25, water 35, glycerinated gelatin 30. **g. zin'ci mol'le** (N.F.), soft zinc glycerogelatin; zinc oxide 10, glycerin 35, water 35, glycerinated gelatin 20.

glycerol (glis'er-ol). Glycerin, glycerite.

glycerophosphates (glis"er-o-fos'fāts). Salts of various metals, metallic earths, and alkaloids with glycerophosphoric acid; they are used in depressed states of nutrition of the nervous system.

glycerose (glis'er-ōz) A sugar formed by the oxidation of glycerin.

glyceryl (glis'er-il) [*glycerin* + G. *hylē*, stuff.] The trivalent radicle, C_3H_5, of glycerol, or glycerin. **g. bu'tyrate,** $C_3H_5(C_4H_7O_2)_3$, butter-fat.

g. ni'trate, nitroglycerin.

gly'cin. Acidum amido-aceticum.

glycobac'ter [G. *glykys*, sweet, + *bakterion*, bacterium.] A microorganism, found in the intestine of the dog, which converts protein into sugar.

glycocholate (gli-ko-kol'āt). A salt of glycocholic acid.

glycocholic acid (gli-ko-kol'ik as'id) [G. *glykys*, sweet, + *cholē*, bile.] The chief acid of the bile, occurring in combination with alkalies.

gly'cocin. Glycocoll, acidum* amidoaceticum.

gly'cocoll. 1. Any one of the fatty amino-acids. 2. Acidum aminoaceticum. **trimeth'yl g.,** betaine.

glycofor'mal. A disinfectant solution of glycerin and formaldehyde in water.

glycogel'atin. A mixture of glycerin and gelatin, used as a base for ointments.

glycogen (gli'ko-jen) [G. *glykys*, sweet, + *gennaō*, I produce.] A carbohydrate ($C_6H_{10}O_5$) found in most of the actively functioning cells of the body, especially those of the liver and muscular tissue; it is readily converted into glucose; animal starch.

glycogenal (gli-koj'en-al). An animal preparation resembling glycogen; employed as a tonic and bactericide; dose gr. ½–⅔ (0.02–0.04).

glycogenesis (gli-ko-jen'e-sis) [G. *glykys*, sweet, + *genesis*, production.] The formation of glucose or of glycogen.

glycogenet'ic, glycogen'ic. Relating to glycogenesis, or the function of glucose formation.

glycogenolysis (gli-ko-jen-ol'i-sis) [*glycogen* + G. *lysis*, solution] The hydrolysis of glycogen, and its conversion into glucose.

glycogenous (gli-koj'en-us). Glycogenetic.

glycogeny (gli-koj'en-e). Glycogenesis.

glycohe'mia, glycohæ'mia [G. *glykys*, sweet, + *haima*, blood.] Glycosemia, the abnormal presence of sugar, glucose, in the circulating blood.

glycol (gli'kol). 1. One of a group of bivalent alcohols which can form two series of esters with monobasic acids. 2. Ethylene glycol, $CH_2.OH.CH_2OH$. **g. al'dehyde,** diose, the simplest possible sugar, $C_2H_4O_2$ or $CH_2OH.COH$.

glycolu'ric acid. Uramidoacetic acid, hydantoic* acid.

glycol'ysis [G. *glykys*, sweet, + *lysis*, a loosening.] The hydrolysis of sugar in the body.

glycolyt'ic. Relating to glycolysis; hydrolyzing sugar.

glycometabolic (gli-ko-mĕ-tă-bol'ik). Saccharometabolic.

glycometabolism (gli-ko-mĕ-tab'o-lizm) [G. *glykys*, sweet, + metabolism.] Saccharometabolism.

glyconda (gli-kon'dŭ). Trade name of an eclectic preparation containing rhubarb, potassium bicarbonate, hydrastis, cinnamon, peppermint, and glycerin; recommended as a stomachic

tonic and for the relief of diarrhea, in doses of one or two teaspoonfuls every hour.

glyconeogenesis (gli″ko-ne-o-jen′e-sis) [G. *glykys*, sweet, + *neos*, new, + *genesis*, origin.] The formation of carbohydrates, especially of grape sugar, from substances which are themselves not carbohydrates, such as protein or fat.

glycopec′tic, glycopex′ic. Relating to glycopexis.

glycopexis (gli-ko-pek′sis) [G. *glykys*, sweet, + *pēxis*, fixation.] The storing of glycogen in the liver.

glycophe′nol. Saccharin

glycophilia (gli-ko-fil′ĭ-ah) [G. *glykys*, sweet, + *philia*, fondness.] A condition in which there is a marked tendency to hyperglycemia, this resulting from the ingestion of a very small amount of glucose.

glycopolyuria (gli″ko-pol-ĭ-u′rĭ-ah) [G. *glykys*, sweet, + *polys*, much, + *ouron*, urine.] Diabetes mellitus in which the polyuria is more marked than the glycosuria.

glycoprotein (gli″-ko-pro′te-in) Glucoprotein, one of a group of protein-carbohydrate compounds (conjugated proteins), among which the most important are the mucins, mucoid, and amyloid.

glycoptyalism (gli-ko-ti′al-izm) [G. *glykys*, sweet, + *ptyalon*, saliva.] The excretion of glucose in the saliva.

glycorrhachia (gli-kŏ-rak′ĭ-ah) [G. *glykys*, sweet, + *rhachis*, spine.] The presence of sugar in the cerebrospinal fluid.

glycorrhea, glycorrhœa (gli-kor-re′ah) [G. *glykys*, sweet, + *rhoia*, flow.] A discharge of sugar from the body; glycosuria.

gly′cosal. Trade name for monosalicylic glycerin-ester, employed as a urinary antiseptic in doses of gr. 5–15 (0.3–1.0), and externally in eczema, sciatica, and rheumatism.

glycosamine (gli-kōs-am′ēn). A derivative of glucose, $C_6H_{13}NO_5$, obtained by the decomposition of chitin.

glycosecretory (gli″ko-se-kre′to-rĭ). Determining the secretion of glycogen.

glycose′mia glycosæ′mia [G. *glykys*, sweet, + *haima*, blood.] Glucemia, glucohemia, glukemia, glycemia, glycohemia, glykemia, the abnormal presence of sugar in the circulating blood.

glycosialia (gli″ko-si-al′ĭ-ŭ) [G. *glykys*, sweet, + *sialon*, saliva.] The presence of sugar in the saliva.

glycosialorrhea, glycosialorrhœa (gli″ko-si-al-or-re′ŭ) [G. *glykys*, sweet, + *sialon*, saliva, + *rhoia*, a flow.] An excessive secretion of saliva containing sugar.

gly′coside. Glucoside.

glycosom′eter [G *glykys*, sweet, + *metron*, measure.] An instrument for determining the proportion of sugar in the urine in glycosuria.

glycosuria (gli-ko-su′rĭ-ah) [*glycose*, glucose, + G. *ouron*, urine.] The excretion of sugar (glucose) in the urine. **alimen′tary g.**, g appearing after the ingestion of a moderate amount of sugar, which normally is disposed of without symptoms. **neg′ligible g.**, diabetes* innocens. **normoglyce′mic g.**, the excretion of sugar in the urine when the amount in the blood is not in excess of normal; **renal g.** **patholog′ical g.**, excretion in the urine of large amounts of sugar, extending over a considerable period. **phlor′idzin** or **phlor′izin g.**, the presence of sugar in the urine after the experimental administration of phloridzin. **re′nal g.**, diabetes* innocens; abnormal excretion of sugar normally present in the blood.

glycotauro (gli-ko-taw′ro). Trade name of a preparation of bile salts, containing 50 per cent. of the mixture of sodium glycocholate and sodium taurocholate in the proportion existing in bile, used as a stimulant of the secretion of bile.

glycothy′molin. Trade name of a solution of various antiseptics, used as a wash in catarrhal troubles of the mucous membranes, and for other purposes.

glycuresis (gli-ku-re′sis) [G. *glykys*, sweet, + *ourēsis*, urination.] Glycosuria, especially if pathological.

glycuronic acid (gli-ku-ron′ik as′id). An acid ($C_6H_{10}O_7$) sometimes present in the urine after the ingestion of camphor, chloral, various quinine derivatives, and aromatic substances.

glycuronu′ria. The presence of glycuronic acid in the urine.

glycyltryptophan (gli″sil-trip′to-fan). A synthetic protein (dipeptid) containing the molecular radicals of glycin and tryptophan, employed as a test for cancer of the stomach; it is mixed with the suspected stomach contents and incubated for twenty-four hours, at the end of which time, if a peptidolytic enzyme is present (indicating cancer), tryptophan will have been formed.

glycyrrhiza (glis-ĭ-ri′zah) [G. *glykys*, sweet, + *rhiza*, root.] (U.S., Br.) Glycyrrhizæ radix, licorice-root or liquorice-root; the dried rhizome and root of *Glycyrrhiza glabra* and allied species; demulcent, slightly laxative, and expectorant, and also employed to disguise the taste of other remedies; dose, gr. 15–60 (1.0–4.0).

glycyrrhi′zic acid. A brown gelatinous substance of a bitter-sweet taste, obtained from licorice-root.

glycyrrhizin (glis ir′ĭ-zin). Glycyrrhizinum, a sweet principle, $C_{44}H_{62}NO_{18}$, the ammonium salt of glycyrrhizic acid, precipitated from a hot solution as a jelly; dried, it occurs as a yellow powder having a bitter-sweet taste.

glycyrrhizi′num ammonia′tum. Ammoniated glycyrrhizin, occurs in reddish brown scales of sweet taste; employed for the same purposes as other licorice preparations in doses of gr. 5–15 (0.3–1.0).

glyke′mia, glykæ′mia Glycosemia

glyoxylic acid (gli-oks-il′ik as′id). Dihydroxyacetic acid (HCO.COOH), a crystalline substance obtained by reducing oxalic acid with powdered magnesium or sodium amalgam; employed as a reagent in the Hopkins-Cole test for tryptophane.

glysal (gli′sal). Spirosal.

gm. Abbreviation for gram, or gramme

Gmel′in's test [Leopold *Gmelin*, German physiologist, 1788–1853.] To the suspected liquid in a test-tube nitric acid containing a little nitrous acid is very cautiously added, and if bile (bilirubin) is present, at the line of contact of the two liquids are seen a number of colored discs formed by the varying degrees of oxidation of the bilirubin; the colors being, from the line of contact outward, yellow, red, violet, blue, green; the green and violet are essential to the vilidity of the test.

gnat (nat) [A. S. *gnæt*.] A mosquito, a midge. **buff′alo g.**, *Simulium*.

gnathalgia (nath-al′jĭ-ah) [G. *gnathos*, jaw, + *algos*, pain.] Pain in the jaw, gnathodynia.

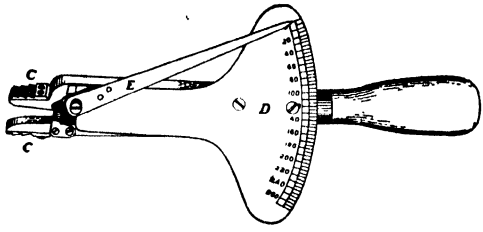
gnathic (nath′ik) [G. *gnathos*, jaw.] Relating to the jaw or alveolar process. **g. in′dex**, see under *index*.

gnathion (nath′ĭ-on) [G. *gnathos*, jaw.] A craniometric point, being the lowest part of the middle line of the mandible.

gnathitis (nath-i'(e')tis) [G. *gnathos*, the lower jaw, + *-itis*.] Inflammation of the jaw.

gnathocephalus (natn-o-sef'al-us). A monster with little of the head parts except the lower jaw.

gnathodynamometer (nath"o-di"nă-mom'e-tur) [G. *gnathos*, jaw, + *dynamis*, force, + *metron*, measure.] An instrument used in measuring the force exerted in closing the jaws. See cut.



THE GNATHODYNAMOMETER, designed for measuring the strength of the bite. C and C are rubber pads, which are placed between the teeth, and the pressure exerted is registered in pounds by the pointer, E, moving along the scale, D.

gnathodynia (nath-o-din'ĭ-ah) [G. *gnathos*, jaw, + *odynē*, pain] Pain in the jaw, gnathalgia.

gnathoplasty (nath'o-plas-tĭ) [G. *gnathos*, jaw, + *plassō*, I form.] Reparative surgery of the jaw.

Gnathostoma (nă-thos'to-mah) [G. *gnathos*, jaw, + *stoma*, mouth.] A genus of nematoid worms, formerly called *Chiracanthus;* several species are parasitic in the cat tribe, cattle, and swine. **G. siamen'se**, a species found in a tumor of the skin in a Siamese. **G. spinig'erum**, a fatal parasite of cats, has occasionally been found in man in the Far East.

G. N. C. Initials of General Nursing Council.

gnoscopine (nos'ko-pēn). An alkaloid $C_{22}H_{23}NO_7$, isolated from the mother liquor of narceine, occurring in the form of acicular crystals.

gnosia (no'sĭ-ah) [G. *gnōsis*, knowledge.] The perceptive faculty enabling one to recognize the form and the nature of persons and things.

Go'a pow'der [*Goa*, a Portuguese possession on the Malabar Coast of India, to which the drug was brought from Brazil.] Araroba, crude chrysarobin.

gob'let-cell. See under *cell.*

Godélier's law (go-da-le-a') [Charles Pierre *Godélier* French physician, 1813–1877.] Tuberculosis of the peritoneum is always associated with tuberculosis of the pleura on one or both sides.

God'fr-y's cor'dial. Mistura sassafras et opii (N.F.).

godovnik boil (gŏd-dov'nēk) [R. *godovoy*, annual.] Oriental boil.*

Goetsch's skin reac'tion (goch) [Emil *Goetsch*, American physician, *1883.] A test for hyperthyroidism: following the subcutaneous injection into the arm of 1 c.c. of a 1–2000 solution of epinephrin a white area surrounded by a red areola is formed; in about 30 minutes the white area takes on a bluish gray to lavender tint lasting from 60 to 90 minutes; the red areola then assumes this color which disappears from the center; the lavender areola persists for 2 to 2½ hours, or 4 hours after the injection; this reaction is indicative of hyperthyroidism and may be accompanied by rapid pulse, palpitation, and an increase in the nervous symptoms.

Goffe's opera'tion (gof) [J. Riddle *Goffe*, American gynecologist, 1851–1931.] An operation for the relief of vaginal cystocele, by freeing the bladder from the vaginal wall, rotating it on its transverse axis and stitching the base to the face of the uterus; the bladder is then attached to the broad ligament on either side.

Goggia's sign (god-jyah). The fibrillation of the biceps muscle, when pinched and tapped, is confined to a limited area in cases of debilitating disease, whereas in health it is general.

goiter, goitre (goy'ter) [Fr. from L. *guttur*, throat.] Bronchocele, struma; a chronic enlargement of the thyroid gland, not due to a neoplasm, occurring endemically in certain localities, especially mountainous regions, and sporadically elsewhere. **aber'rant g.**, enlargement of a supernumerary thyroid gland. **acute' g.**, one that develops very rapidly. **adeno'matous g.**, an enlargement of the thyroid gland due to the growth of encapsulated adenomata within its substance. **Basedow'ified g.**, toxic g. **coll'oid g.**, a form in which the contents of the follicles increase greatly, causing pressure atrophy of the epithelium so that the gelatinous matter predominates in the tumor. **cys'tic g.**, bronchocele, an enlargement in the thyroid region due to the presence of one or more cysts within the gland. **di'ver g.**, wandering g., a freely movable g. which is sometimes above and sometimes below the sternal notch. **exophthal'mic g.**, Graves' disease, Basedow's, Begbie's, Marsh's, Parry's, Parson's, or Flajani's disease; a disease marked by the enlargement of the thyroid gland, prominence of the eyeballs, rapid action of the heart, muscular tremor, and nervous irritability. **follic'ular g.**, parenchymatous g. **lin'gual g.**, a swelling at the posterior portion of the dorsum of the tongue, due to hyperplasia of the remains of the upper portion of the thyroglossal* duct. **parenchy'matous g.**, a form in which there is a great increase in the follicles with proliferation of the epithelium. **subster'nal g.**, enlargement of the thyroid gland confined chiefly to the lower part of the isthmus. **suf'focative g.**, one that by pressure causes extreme dyspnea. **tox'ic g.**, one which forms toxic material or an excessive secretion, giving rise to toxemic symptoms. **wan'dering g.**, diver g.

gold. The metallic element, aurum.* **g. cure**, Keeley cure. **g. equiv'alent**, a unit of power of the protective colloids; the number of milligrams of protective colloid which is just insufficient to prevent the precipitation of 10 c.c. of a 0.0053–0.0058 per cent. gold solution by the action of 1 c.c. of a 10 per cent. sodium chloride solution. **g. sol test**, Lange's* test.

golden seal. Hydrastis.

Goldflam's disease' (gōlt'flahm) [S. *Goldflam*, Polish physician, contemporary.] Erb-Goldflam's disease, myasthenia gravis.

Gold'horn's stain. A modified Romanowsky stain; a solution is made of lithium carbonate, 2 gm., in water 200 c.c., to which is added methylene blue, 2 gm.; this is heated and made nearly neutral by acetic acid and then a 1 per cent. eosin solution is added to make a pale blue, slightly fluorescent solution; this is allowed to stand a day and is then filtered; the precipitate is dried and dissolved in wood alcohol to make the stain.

Goldscheider's disease' (gōlt'shi-der) [J.K.A.E.A. *Goldscheider*, German neurologist, *1858.] Epidermolysis bullosa. **G.'s meth'od**, orthopercussion. **G.'s test**, determination of the temperature sense by touching the skin with a sharp-pointed metallic rod, heated to varying degrees.

Goldstein's disease [Hyman I. *Goldstein*, American physician, *1887.] Heredofamilial hemorrhagic angiomatosis.

gold'thread. Coptis.

golf'er's foot. A painful condition of the foot resulting from a breaking down of the anterior arch, or anterior metatarsal curved area, occurring in golfers and others.

golf-hole ure'teral or'ifice. A retracted funnel-shaped condition of the ureteral orifice in the wall of the bladder, due often to tuberculosis or a secondary sclerosis of the ureter.

Gol'gi's cell (gol'je) [Camillo *Golgi*. Italian anatomist, 1844–1926.] Axiramificate cell, a nerve-cell in the cerebral cortex and posterior columns of the cord, with a short axon breaking up into numerous branches but not emerging from the gray matter; its office appears to be to bring neighboring cells into relation with each other. **G.'s cor'puscles** or **fun'nels,** G.'s organs. **G.'s law,** the number of parasites determines the severity of the malarial attack. **G.'s meth'od** of staining nerve-cells and their processes, nerve-fibers, and the neuroglia cells: (*a*) rapid method (for embryonic specimens)—place in G.'s osmiobichromate solution, wash in distilled water, and dip in a 75 per cent. solution of silver nitrate; (*b*) mixed method—place in Müller's fluid for 4 or 5 days, then in G.'s osmiobichromate solution for 24 hours, and finally in a 75 per cent. solution of silver nitrate; (*c*) slow method—harden in Muller's fluid for 5 or 6 weeks, then stain with (1) a 0.5 per cent. solution of silver nitrate, and (2) a 0.75 per cent. solution of silver nitrate soaking indefinitely in the latter. **G's. net'work** or **retic'ulum,** a network of very fine fibrils around the ganglion cells and dendrites. **G.'s or'gans,** neurotendinous spindles; the beginnings of sensory nerve-fibrils in tendons as **rings,** spirals, or ramifying branches on the surface of the tendon-fibers; they are located at the junctions of the muscular and tendinous fibers. **G.'s os″miobichro'mate solu'tion,** 1 per cent osmic acid solution, 2 parts, 8 per cent. potassium bichromate solution, 1 part. **G.'s the'ory,** the neurons do not anastomose by the dendrites, but are brought into relation with each other by the arborizations of the neuraxons of G.'s cells and the collaterals of the neuraxons of Deiters' cells.

Goll's col'umn [Friedrich *Goll*, Swiss anatomist, 1829–1903.] Fasciculus gracilis [BNA]. **G.'s fi'bers,** nerve-fibers running from G.'s nucleus to the vermis. **G.'s nu'cleus,** a collection of ganglion cells at the proximal extremity of G.'s column in the region of the clava.

Gol'onbov's sign. Tenderness on percussion over the epiphyses of the long bones, especially the tibia, in chlorosis.

Goltz's exper'iment [Friedrich Leopold *Goltz*, German physician, 1834–1902.] Stoppage of the heart in the frog by blows on the abdomen.

go'menol [*Gomen*, a locality in New Caledonia, + L. *oleum*, oil.] An ethereal oil obtained from a plant, *Melaleuca viridiflora;* it is said to have powerful germicidal action and to be free from irritating properties when locally applied

Gom'pertz's hypoth'esis [Benjamin *Gompertz*, English actuary, 1779–1865.] A theory that the force of mortality increases in geometrical progression; being based on the assumption that the average exhaustion of a man's power to avoid death is such that at the end of equal infinitely small intervals of time he loses equal proportions of the power to oppose destruction which he had at the commencement of each of these intervals.

gomphi'asis [G. *gomphios*, a molar tooth.] Looseness of the teeth, especially of the molars.

gompho'sis [G. *gomphos*, bolt, nail, + *-ōsis*.] Socket articulation; a form of synarthrosis (syndesmosis) in which a peg-like process fits into a hole, as the root of a tooth into the socket in the alveolus.

gonacratia (gon-ă-kra'shyah) [G. *gonē*, semen, + *akrateia*, incontinence] Spermatorrhea.

gon'ad, pl. *gon'ades* [G. *gonē*, seed.] A germ-gland, sexual gland. **fe'male g.,** ovary. **male g.,** testicle.

gonadal (gon'ă-dal). Relating to a gonad.

gonadotrope (go-nad'o-trope). One who has the gonadal type of endocrine constitution.

gonadotropic (go-nad-o-trop'ik). Relating to gonadotropism.

gonadotropism (go-nad-ot'ro-pizm) [*gonad* + G. *tropos*, a turning.] A type of endocrine constitution in which the gonadal secretion exercises a dominating influence.

gon'aduct. 1. Seminal duct. 2. Oviduct.

gonag'ra [G. *gony*, the knee, + *agra*, a seizure] Gout in the knee.

gonal'gia [G. *gony*, knee, + *algos*, pain.] Pain in the knee.

gonangiectomy (gon-an-ji-ek'to mĭ) [G *gonē*, seed, + *angeion*, vessel, + *ektomē*, excision.] Excision of a portion of the vas deferens, vasectomy.

gonarthritis (gon-ar-thri'(thre')tis) [G. *gony*, knee, + *arthron*, joint, + *-itis*.] Inflammation of the knee-joint.

gonarthrocace (gon-ar-throk'ă-se) [G. *gony*, knee, + *arthron*, joint, + *kakē*, vice] White swelling tuberculosis of the knee-joint.

gonarthromeningitis (gon-ar″thro-men-in-ji'(je')tis) [G. *gony*, knee, + *arthron*, joint, + *mēninx*, membrane, + *-itis*] Synovitis of the knee.

gonarthrot'omy [G. *gony*, knee, + *arthron*, joint, + *tomē*, incision.] Incision into the knee-joint.

gonatag'ra [G. *gony(gonat-)*, knee, + *agra*, seizure] Gout in the knee.

gonatocele (gon-at'o-sēl) [G. *gony(gonat-)*, knee, + *kēlē*, tumor.] White swelling; tumor of the knee.

gonecyst, gonecystis (gon'e-sist, gon-e-sis'tis) [G. *gonē*, semen, + *kystis*, bladder] Seminal vesicle.

gonecystitis (gon-e-sis-tı'(te')tis) [G. *gonē*, semen, + *kystis*, bladder, + *-itis*.] Inflammation of a seminal vesicle, seminal vesiculitis.

gonecystolith (gon-e-sis'to-lith) [G *gonē*, semen, + *kystis*, bladder, + *lithos*, stone.] A concretion or calculus in a seminal vesicle.

gonepoiesis (gon-e-poy-e'sis) [G. *gonē*, semen, + *poiēsis*, a producing.] The production or secretion of semen, spermatogenesis.

gonepoietic (gon-e-poy-et'ik). Relating to gonepoiesis, spermatogenic.

Gongylonema (gon-jĭ-lo-ne'mah) [G. *gongylos*, round, + *nēma*, thread.] A genus of nematode worms, the usual habitat of which is the esophagus of various animals, wild and domesticated. **G. pulchrum,** *Filaria labialis*, a species occasionally found in man.

gonidium, pl. *gonidia* (gŏ-nid'ĭ-um, gŏ-nid'ĭ-ah) [dim. of G. *gonē*, seed.] 1. A chlorophyl-containing cell of a lichen. 2. Conidium.

Gonin operation (go-nan') [Jules *Gonin*, Swiss ophthalmologist, *1870.] Closure of a laceration in the retina through cauterization, in the treatment of detachment of the retina.

go″niocraniom'etry [G. *gōnia*, angle, + *kranion*, skull, + *metron*, measure.] Measurement of the angles of the cranium.

goniometer (go-nĭ-om'e-ter) [G. *gōnia*, angle, + *metron*, measure.] 1. An instrument for measuring angles, as of crystals. 2. An appliance for the static test of labyrinthine disease; it consists of a plank, one end of which may be raised to any desired height; the patient stands upon the plank as one end is gradually raised, and the point is noted at which he can no longer preserve his balance.

go'nion [G. *gōnia*, an angle.] The point of the angle of the mandible.

gonitis (gon-i'(e')tis) [G. *gony*, knee, + *-itis*.] Inflammation of the knee.

gonoblennorrhea (gon"o-blen-o-re'ah). Gonorrhea.

gonochorism, gonochorismus (gon-ok'o-rizm, gon-ok-o-riz'mus) [G. *gonos*, seed, sex, + *chōrizō*, I separate.] Sexual differentiation.

gon'ocide [*gonococcus* + L. *cædere*, to kill.] 1. Destructive to the gonococcus. 2. An agent which kills the gonococcus.

gonococc'al. Relating to the gonococcus, gonococcic.

gonococcemia, gonococcæmia (gon-o-kok-se'mĭ-ah) [*gonococcus* + G. *haima*, blood.] The presence of gonococci in the circulating blood.

gonococ'cic. Relating to the gonococcus, gonococcal.

gonococcicide (gon-o-kok'sĭ-sīd) [*gonococcus* + L. *cædere*, to kill.] Gonocide. 1. Destructive to gonococci. 2. An agent which kills the gonococcus.

gonococcin (gon-o-kok'sin). A glycerin extract of gonococci, used in the cutireaction test for gonorrheal infection.

gonococcus, pl. *gonococ'ci* (gon-o-kok'us) [*gonorrhea* + G. *kokkos*, berry.] *Neisseria gonorrhœæ*

gonocyte (gon'o-sīt) [G. *gonos*, seed, + *kytos*, hollow (cell).] 1. A primitive reproductive cell. 2. Lymphoidocyte, myeloblast.*

gonohe'mia, gonohæ'mia. Gonococcemia.

gono-op'sonin. A specific gonococcal opsonin.*

gon'ophage. A gonocidal bacteriophage.*

gon'ophore, gonoph'orus [G. *gonos*, seed, + *phoros*, bearer.] 1. Any structure serving to store up or conduct the sexual cells; oviduct, spermatic duct, uterus, or seminal vesicle. 2. In botany, a stalk supporting both male and female organs in an hermaphrodite flower.

gonorrhe'a, gonorrhœ'a [G. *gonos*, semen, + *rhoia*, a flow.] A specific inflammation of the mucous membrane of the genital tract, acquired usually through impure sexual intercourse, and due to the presence of the gonococcus.

gonorrhe'al, gonorrhœ'al. Relating to gonorrhea.

gon'osan [*gonorrhea* + L. *sanare*, to heal.] Trade name for a preparation said to be a solution of kava resin (methysticum) in sandalwood oil; recommended in the treatment of gonorrhea.

gonotome (gon'o-tōm) [*gonad* + *G. tomē*, section.] A special region of the mesoderm where, according to Van Wijhe, the gonads originate.

gonotoxe'mia, gonotoxæ'mia. Gonorrheal toxemia, the presence of the gonococcal toxin in the blood.

gonotox'in. The toxin produced by the gonococcus.

gonycamp'sis [G. *gony*, knee, + *kampsis*, a bending or curving.] Ankylosis or any abnormal curvature of the knee.

gonycrote'sis [G. *gony*, knee, + *krotēsis*, striking.] Knock-knee.

gonyectyposis (gon"ĭ-ek-ti-po'sis) [G. *gony*, knee, + *ektypōsis*, modelling in relief.] Genu varum.

gonyocele (gon'e-o-sēl) [G. *gony*, knee, + *kēlē*, tumor.] White swelling, tuberculous synovitis of the knee.

gonyoncus (gon"ĭ-on'kus) [G. *gony*, knee, + *onkos*, tumor.] Tumor of the knee; white swelling.

Goodpasture's polychrome stain (gŏŏd'pas-tūr) [Ernest William *Goodpasture*, American pathologist, *1886.] Methylene-blue and potassium carbonate, of each 1 gm., in distilled water 400 c.c.; boil for 5 minutes and when cool add glacial acetic acid, 3 c.c.; simmer down to 200 c.c. **G.'s stain for Gram-negative bacteria,** basic fuchsin, 0.59, aniline and phenol crystals, of each 1.0, 50 per cent. alcohol, 100.

goose. A venereal bubo.

goose-flesh. Cutis* anserina, horripilation.

Gordius (gor'dĭ-us) [The *Gordian* knot, in reference to the twisting of the worm into a complex tangle.] An old name for the genus *Dracunculus*.

Gor'don re'flex [Alfred *Gordon*, Philadelphia neurologist, *1869.] Dorsal flexion of the great toe produced by firm lateral pressure on the calf muscles. **G. sign,** finger* phenomenon. **G.'s symp'tom,** tonic reflex, the foot does not immediately fall back after the patellar tendon reflex has been elicited.

Gor'don's sign [William *Gordon*, English physician, 1863–1929.] Cardiac* sign.

gorge. Throat, guttur, gullet.

gor'get. A director or guide with wide groove for use in lithotomy. **probe g.,** a g. with a probe-pointed tip.

Goriaew's ru'ling (gor'ĭ-ah-yef). A ruling of a blood-counting field by which it is marked off in a series of squares some of which are again subdivided into sixteen smaller ones.

gor'it. Trade name of a special make of calcium peroxide.

goron'dou. Goundou.

Gosselin's frac'ture (gos-laṅ) [Léon Athanase *Gosselin*, French surgeon, 1815–1887.] A conical fracture of the lower part of the tibia.

gossyp'iin. A concentration product of the bark of the root of *Gossypium herbaceum* or cotton; employed as a diuretic and emmenagogue in doses of gr. 2–4 (0.13–0.25).

Gossyp'ium. A genus of herbaceous plants or shrubs yielding cotton. **gossyp'ii cor'tex** (N.F.), cottonroot bark, the dried bark of the root of *Gossypium herbaceum* or other allied species, emmenagogue and oxytocic in doses of gr. 15–30 (1.0–2.0) or of ℥30 (2.0) of the N.F. fluidextract. **gossyp'ii radi'cis cor'tex** (B. A.) cottonroot bark, gossypii cortex (N.F.). **g. purifica'tum** (U.S.), purified cotton, absorbent cotton, the hairs of the seed of *Gossypium herbaceum* and other allied species, freed from impurities and oil; employed in surgical dressings, for tampons, etc. **g. styp'ticum** (N.F.), styptic cotton; absorbent cotton wet with a dilute solution of ferric chloride, and then dried; applied locally as a hemostatic.

Goth'ic arch. A dental arch pointed anteriorly and narrowed laterally.

Gottschalk's opera'tion (got'shahlk) [Sigmund *Gottschalk*, German surgeon, *1860.] Shortening of the uterosacral ligaments by the vaginal route.

Gottstein's pro'cess (got'stĭn) [Jacob *Gottstein*, German physician, 1832–1895.] A very fine extension of one of the outer hair cells of Corti's organ to the basilar membrane.

gouge (gowj). A strong longitudinally curved chisel used in operation on bone.

Goulard's ce'rate (goo-lar') [Thomas *Goulard*, French physician, 1697–1784.] Ceratum plumbi subacetatis. **G.'s extract,** liquor plumbi subacetatis. **G.'s lotion, G.'s water,** liquor plumbi subacetatis dilutus.

Gould's sign [George Milbry *Gould*, American ophthalmologist, 1848–1922.] Bowing of the head in order to obtain better vision in cases of retinitis pigmentosa.

Gould's su'ture [Sir Alfred Pearce *Gould*, English surgeon, *1852.] An intestinal mattress suture in which each loop is invaginated in such a way that the tissue at the loop is bulged out, becoming convex instead of concave; see cut under *suture*.

goundou (goon'doo) [native name.] Henpuye, anakhre; a disease, endemic in West Africa, characterized by exostoses from the nasal processes of the maxillary bones producing a symmetrical swelling on each side of the nose.

Gouraud's disease' (goo-ro') [Vincent Ollivier *Gouraud*, French surgeon, 1772–1848.] Inguinal hernia.

gout (gowt) [L. *gutta*, drop.] A disease of metabolism characterized by recurrent attacks of arthritis, particularly in the metatarsophalangeal joint of the great toe, though any joint may be attacked, by deposits of sodium biuret in and around the affected joints, and by inflammation of fibrous structures elsewhere. **abartic'ular g.,** g involving other structures than the joints, **artic'ular g.,** the usual form of g. attacking one or more of the joints. **irreg'ular g.,** abarticular g. **la'tent g.,** goutiness, the so-called uric-acid diathesis, a condition marked by gouty symptoms —scaly skin, skin eruptions, occasional twinges in the joints, etc., without a frank involvement of the great toe or other articulation. **lead g.,** saturnine g. **masked g.,** latent g. **misplaced' g.,** retrocedent g. **poor-man's g.,** g. occurring in persons subject to exposure and privation and distinctly not attributable to dietetic errors on the side of excess. **reg'ular g.,** articular g. **rheumat'ic g.,** an ill-defined condition in which symptoms of chronic rheumatism are associated with uratic deposits in and around the joints. **retroce'dent g.,** the occurrence of severe gastric, cardiac, or cerebral symptoms during an attack of gout, especially when the joint symptoms at the same time suddenly subside. **sat'urnine g.,** g. occurring in a subject of lead poisoning. **topha'ceous g.,** g. in which uratic deposits in and about the joints are marked.

goutiness (gowt'ĭ-nes). Gouty diathesis, latent gout; a state in which one is prone to suffer from various scaly skin diseases, gastric disturbances, arteriosclerosis, and acute inflammations of the ocular structures, which are attributable to a disturbance of metabolism, allied to gout, occurring in families in which there is a history of articular or regular gout.

gouty (gow'tĭ). Relating to gout.

Gow'ers' col'umn [Sir William Richard *Gowers*, London neurologist, 1845–1915.] Gowers' tract. **G.'s disease',** (1) saltatory spasm; (2) pseudohypertrophic paralysis. **G.'s symp'tom, irregularity** of the pupillary light reflex, the contraction occurring by jerks and in an oscillating way, sometimes noted in tabes dorsalis. **G's. tract,** funiculus anterolateralis superficialis [BNA].

Goyrand's her'nia (gwă-rahn') [Jean Gaspard Blaise *Goyrand*, French surgeon, 1803–1866.] Incomplete inguinal hernia, not descending into the scrotum

gr. Abbreviation for gram, a measure of weight

Graafian fol'licle (grah'fĭ-an) [Reijnier de *Graaf* Dutch anatomist, 1641–1073.] Folliculus oophorus vesiculosus [BNA]. **G. ves'icle,** G. follicle. **G. ves'sels,** ductuli efferentes testis.

gracile (gras'il) [L. *gracilis*.] Slight, slender.

gracilis (gras'il-is) [L.] See under *musculus*.

grada'tim [L.] Gradually, by degrees.

Gradenigo's syn'drome (grah-den-e'go) [Giuseppe *Gradenigo*, Italian physician, 1859–1926.] Suppurative otitis media with abducens paralysis and pain in the temporal region.

graduate (grad'u-āt) [L. *graduare: gradus*, a degree.] 1. To dismiss honorably from a university or special school with the degree appropriate to the course of studies successfully followed. 2. One who has been graduated and has received a degree from a university or special school. 3. A vessel, usually of glass, suitably marked, used for measuring liquids.

grad'uated. 1. Dismissed from a university or special school after receiving a degree indicating that certain studies have been successfully followed. 2. Marked by lines or in other ways to denote capacity, degrees, percentages, etc.; noting a thermometer, barometer, graduate, etc.

Graefe's knife (gra'feh) [Albrecht von *Graefe*, German ophthalmologist, 1828–1870.] A narrow-bladed knife used in making a section of the cornea. **G.'s sign,** G.'s symptom. **G.'s spots,** small areas over the vertebræ or near the supraorbital foramen, pressure upon which causes relaxation of blepharofacial spasm. **G.'s symptom,** in exophthalmic goiter the upper eyelid does not follow promptly and evenly the movement of the eyeball downward, but halts or moves jerkily. **G.'s test** for heterophoria, a prism of 10° is held base up or down before one eye; this produces two images of the object looked at; in orthophoria one image is directly above the other, in lateral heterophoria there is also a lateral displacement of one image. **pseudo-G. sign,** tardy descent of the upper lid as one looks down and hasty ascent when the gaze is directed upward, occurring in other conditions than exophthalmic goiter.

Graeupner's meth'od (groyp'ner) [Salo Ch. *Graeupner*, German physician, contemporary.] A test of the sufficiency of the heart muscle. If a normal subject takes a measured amount of exercise, the pulse rate rises, and after it has begun to fall the systolic blood-pressure begins to rise, reaching its maximum a few minutes after the pulse rate; in the case of a weakened heart the blood-pressure reaction is delayed and diminished in amount; in seriously weakened hearts there is no rise, but rather a fall in blood-pressure.

graft [A.S. *græf*.] Anything inserted into something else so as to become an integral part of the latter; specifically a bit of epidermis, strip of skin, piece of bone, tooth, etc., inserted into a part in order to supply a defect. **an'imal g.,** zoöplastic g. **autoplas'tic g.,** a g. taken from another part of the same person. **heteroplas'tic g.,** a g. taken from another individual. **homoplas'tic g.,** autoplastic g. **sponge g.,** a thin bit of sponge laid on an ulcerated surface with the object of stimulating the growth of epidermis. **zoöplas'tic g.,** a g. taken from one of the lower animals.

gra'ham bread [Silvester *Graham*, English dietitian, 1794–1851.] Bread made from unbolted wheat flour.

Gra'ham's law [Thomas *Graham*, English chemist, 1805–1869.] The relative rapidity of diffusion of

two gases varies inversely as the square root of their densities.

Graham Steelle's mur'mur (gra'am stēl). A diastolic pulmonic murmur which comes and goes with the varying degree of pressure within the pulmonary artery; it is ascribed to congestion of the lungs secondary to mitral stenosis.

grain (grān) [L. *granum*.] 1. Cereal plants, corn, wheat, rye, etc. 2. A seed of one of the cereal plants. 3. A minute, hard particle of any substance, as of sand. 4. A unit of weight, $\frac{1}{60}$ dram, $\frac{1}{480}$ ounce, $\frac{1}{5760}$ pound; the equivalent of 0.066 gram. **grains of Par'adise, Guin'ea grains,** meleguete pepper, the seeds of *Amomum melegueta*, a plant of West Africa, having diuretic properties. **g. foun'der,** indigestion, gastric impaction, or gorged stomach, in the horse, caused usually by overeating; there are loss of appetite, a desire to eat dirt and filth, rough skin, possibly a dry cough, and colicky pains an hour or so after eating. **g. itch,** an urticarioid eruption, sometimes noted in farmers and grain handlers due to the action of a mite, *Pediculoides ventricosus* or *Ditropenotus aureoviridis*.

gram, gramme. A unit of weight in the metric or centesimal system, the equivalent of 15.432 grains.

Gram's meth'od [Hans Christian Joachin *Gram*, Danish bacteriologist, *1853.] A differential method of staining bacteria; the specimen is first placed in aniline-water gentian violet or carbolic gentian violet, then rinsed in water and immersed in G.'s solution of iodine, again rinsed in water and placed for a few minutes in strong alcohol, washed again, and dipped in dilute eosin solution. The bacteria that are stained a deep violet by this method are called *gram-positive;* those that are decolorized and take on the contrast stain are *gram-negative*. **G.'s solu'tion,** iodine 1, potassium iodide 2, water 300.

grammeter (gram-me'tur). A unit of energy; the force required to raise a weight of one gram (15 grains) to a height of one meter (39 inches)

gram-mol'ecule. A weight of a substance expressed by a number of grams equivalent to its molecular weight; thus a g.-m. of hydrogen weighs 2 grams; of water 18 grams, the 2 H atoms having a molecular weight of 2 and the O atom one of 16.

granat'onine. Pseudopelletierine, $C_9H_{15}NO.2H_2O$, an alkaloid from the bark of the root of *Punica granatum*, pomegranate; see *granatum*.

grana'tum (U.S.). Granati cortex (Br.), pomegranate, pomegranate bark, the bark of the root and stem of *Punica granatum;* anthelmintic in doses of gr. 15–30 (1.0–2.0).

Grancher's disease' (grahn-sha') [Jacques Joseph *Grancher*, Parisian physician, 1843–1907.] Massive pneumonia or splenopneumonia, Desnos's disease. **G.'s syn'drome, G.'s tri'ad,** increased vocal fremitus, diminished vesicular murmur, and Skodaic resonance, in incipient tuberculosis.

granddaughter-cyst (grand'daw-ter-sist). A tertiary cyst sometimes developed within a daughter-cyst of an echinococcus.

grand mal (grahn mal') [Fr. great evil.] The typical epileptic attack, with convulsions, followed or not by coma.

Grandry's cor'puscles (grahn-dre') [*Grandry*, French anatomist, nineteenth century.] Taste corpuscles in the beak and tongue of birds; they consist of a number of cells, enclosed in a capsule, and between the cells run medullated nerve-fibers.

granoplasma (gran-o-plaz'mah). 1. Granular protoplasm. 2. The portion of the cytoplasm which has a granular appearance, but is without true granules.

gran'ular. Composed of or resembling granules or granulations. **g. conjunctivi'tis,** trachoma. **g. lids,** trachoma.

granulase (gran'u-lāz). A ferment hydrolyzing starch into sugars.

granula'tion. 1. Formation into grains or granules; the state of being granular. 2. A granular mass in or on the surface of any organ or membrane; or one of the individual granules forming the mass. 3. The formation of minute, rounded, fleshy projections on the surface of a wound in the process of healing; one of the fleshy granules composing this surface. 4. In pharmacy, the formation of crystals by constant agitation of a supersaturated solution of a salt.

granulatio'nes [L. pl. of *granula'tio*.] Granulations. **g. arachnoideales** (gran-u-la-shī-o'nēz ă-rak"-no-id"e-a'lēz) [BNA], arachnoidal granulations, Pacchionian bodies, a number of bulbous outgrowths or hernial protrusions of the arachnoidea; they are found especially on either side of the sagittal sinus, into the lumen of which they project, but also occur near the transverse sinus over the cerebellum and elsewhere; they sometimes form depressions, foveolæ granulares, on the under surface of the vault of the cranium.

granula'tion-tube. A tube used in the larynx when the formation of granulation tissue has resulted from the irritation of a previous intubation. It has a large head which rides over the granulations and induces their resorption by pressure.

gran'ule [L. *granulum*, dim. of *granum*, grain] 1. A grain, a granulation; a minute discrete mass. 2. A very small pill, usually gelatin-coated or sugar-coated, containing a drug to be given in small dose. **acid'ophile g.,** alpha g. **alpha g.,** eosinophile, acidophile, or oxyphile g., one of the cell granules which take up an acid stain from any mixture; seen in the coarsely granular oxyphile leucocyte. **am'phophile g.,** beta g. **azu'rophile g.,** kappa g., hyperchromatin g., one which stains readily with an azure dye. **ba'sal g.,** blepharoplast, the origin of a flagellum in a protozoon. **bas'ophile g.,** delta g., gamma g. **be'ta g.,** amphophile g., one of the cell granules staining with both basic and acid dyes. **chro'mophile g.,** any granule of readily stainable material in the cells or tissues. **cone g.,** nucleus of a retinal cell connecting with one of the cones, **delta g.,** small basophile g., one of the granules, staining only with basic dyes, found in the uninuclear plasma cells. **elemen'tary g.,** a particle of blood-dust, or hemoconia. **eosin'ophile g.,** alpha g. **ep'silon g.,** neutrophile g., one of the granules, taking a neutral stain, found in the finely granular polymorphonuclear leucocytes. **female g.,** one of the numerous segments into which the protonucleus of the ovum splits after union with the sperm cell. **fuchsin'ophile g.,** Altmann's* g. **gamma g.,** basophile g., one of the granules, staining with basic dyes, seen in the basophile connective-tissue cells. **hyperchro'matin g.,** azurophile g., kappa g. **infec'tive g.,** Balfour's infective g., a minute granular body observed in the blood in trypanosomiasis and spirochetosis, shown to be infective and to give rise to young forms of the parasites upon inoculation. **iod'ophile g.,** one of the granules, taking on a brown stain with iodine, found in many of

the polymorphonuclear leucocytes in pneumonia, erysipelas, scarlet fever, and various other acute diseases. **kap'pa g.**, an azurophile g. **Leish'man g.**, see *Leishman*. **male g.**, one of the several minute segments into which the head of the sperm cell splits after union with the ovum. **metachromat'ic g.**, metachromatic* body. **neu'trophile g.**, epsilon g. **ox'yphile g.**, alpha g. **rod g.**, the nucleus of a retinal cell connecting with one of the rods. **sem'inal g.**, one of the minute granular bodies present in the spermatic fluid. **thread g.**, cytomicrosome. **zy'mogen g.**, a term applied to various granules in the cells of ferment-secreting glands, such as salivary glands and pancreas, which are supposed to be the source of the zymogenic substance.

granulitis (gran-u-li'(le')tis). Acute miliary tuberculosis

granuloblast (gran'u-lo-blast) [G. *blastos*, germ.] The mother cell of a granulocyte, myeloblast.*

granulocyte (gran'u-lo-sīt) [L. *granulum*, granule, + G. *kytos*, cell.] A granular leucocyte.

granulocytopenia (gran-u-lo-si-to-pe'nĭ-ă) [*granulocyte* + G. *penia*, poverty.] A reduction below normal of the number of granular leucocytes in the blood; granulopenia.

granulogen (gran'u-lo-jen) [*granulations* + G. *gennaō*, I produce.] Trade name of a mixture of paraffins, melting at 115° F., containing also chloretone, 5 per cent., and neko, 0.5 per cent.; employed as a protective dressing to burns and certain skin lesions.

granulo'ma, p. *granulo'mata* [L. *granulum*, granule.] A circumscribed collection of epithelioid cells and leucocytes, resembling granulation tissue, surrounding a central point of irritation. **coccidioid'al g.**, oidiomycosis. **den'tal g.**, a small collection of granulation tissue with more or less bacterial colonization (usually *Streptococcus viridans*), but with little suppuration, occurring at the root of a tooth. **g. annula're**, an affection characterized by hard, reddish nodules arranged roughly in a circle, which gradually enlarge and coalesce forming a ring. **g. cryptogenet'icum, g. cryptogen'icum**, Hodgkin's disease, pseudoleucemia. **g. endem'icum**, oriental boil.* dermal leishmaniasis. **g. fungoi'des**, mycosis fungoides. **g. inguina'le trop'icum**, groin ulcer, an elongated ulcer, with elevated papillary edges, sometimes occurring in the groin in persons in the tropics. **g. malig'num**, lymphogranulomatosis. **g. pyogen'icum**, a small growth of granulation tissue, painful to the touch and bleeding readily, occupying usually the site of an abrasion or incised wound. **g. sarcomato'des**, mycosis fungoides. **g. trichophyt'icum**, inflammatory ringworm of the body, attended with edema and dilated follicles discharging pus. **g. trop'icum**, yaws. **g. vene'reum**, g. inguinale. **infec'tious g.**, a g. formed round a center consisting of the pathogenic microorganisms of certain chronic diseases, such as syphilis, leprosy, tuberculosis, actinomycosis, and farcy. **lip'oid g.**, a g. in which are scattered about many lipoid (foam or xanthoma) cells. **ul'cerating g. of the puden'da**, a specific form of ulcerating g. affecting chiefly the dark-skinned races; it is thought to be caused by a special micro-organism, *Calymmatobacterium granulomatis*, and is regarded by some authorities as a venereal affection.

granulopenia (gran-u-lo-pe'nī-ă). Granulocytopenia.

gran'uloplasm. The inner substance of an ameba, or other unicellular organism, within the ectosarc and surrounding the nucleus.

granuloplas'tic. Forming granules.

granulopo'tent. Potentially granuloplastic.

granulosarcoid (gran-u-lo-sar'koyd) [L *granulum*, granule, + G. *sarx(sark-)*, flesh, + *eidos*, resemblance.] An anomalous form of sarcoma, mycosis* fungoides, Alibert's disease.

granulosarco'ma. Granulosarcoid mycosis* fungoides.

granulose (gran'u-lōz). The soluble portion of starch which is convertible by hydrolysis into sugar, as distinguished from the cellulose, or insoluble portion.

granulosis, granulosity (gran-u-lo'sis,gran-u-los'ĭ-tĭ). A mass of minute granules of any character. **g. ru'bra na'si**, a disease of the skin of the nose, characterized by a moist erythematous patch dotted with numerous macules and slightly elevated papules, due to an inflammatory infiltration surrounding the dilated sweat glands.

gra'num [L.] Grain.

Gran'ville's counterirr'itant or **lo'tion** [Augustus Bozzi *Granville*, English physician, 1783–1871.] A mixture of spirit of rosemary, spirit of camphor, and stronger water of ammonia.

Gran'ville's hamm'er [Joseph Mortimer *Granville*, English physician, 1833–1900.] An instrument used for making rhythmical vibrations by rapid tapping (vibratory massage) in the treatment of neuralgia.

grape [O. Fr. *grappe*, a cluster.] The fruit of *Vitis vinifera*.

grape-cure. Botryotherapy, the treatment of certain morbid conditions, especially abdominal plethora, by an exclusive diet of grapes.

grape-fruit. Shaddock, pomelo, the fruit of *Citrus decumana*.

grapes. 1. Bovine tuberculosis. 2. Granulations occurring in aggravated cases of grease-heel in the horse. **Cars'well's g.**, see *Carswell*.

grape-sugar. Dextrose.

graph (graf) [G. *graphō*, I write.] An irregular curved line or tracing noting varying values of commodities, temperatures, urinary output, etc.

graph'ite. Plumbago, black lead, a crystallizable, soft black form of carbon.

graphology (gră-fol'o-jĭ) [G. *graphē*, a writing, + *-logia*.] The study of the handwriting as an indication of temperament or character, and as an aid in the diagnosis of nervous and mental diseases.

graphomo'tor [G. *graphō*, I write, + L. *motus; movere*, to move.] Relating to the movements concerned in writing.

graphospasm (graf'o-spazm) [G *graphō*, I write, + *spasmos*, spasm] Writers' cramp.

Graser's diverticula (grah'zer) [Ernst *Graser*, German surgeon, 1860–1929.] Multiple minute protrusions of the mucous membrane of the colon.

Grasset's law (grah-sa') [Joseph *Grasset*, French physician, 1849–1918.] Landouzy*-Grasset law. **G.'s phenomenon**, in organic paralysis of the lower extremity, the patient, lying on his back, can raise either limb separately, but not both together. **G.'s sign**, contraction of the sternocleidomastoid muscle on the paralyzed side in cases of cerebral hemorrhage.

Grasset-Gaussel phenom'enon (grah-sa'go-sel') [A. *Gaussel*, Montpellier physician, contemporary]. Grasset's phenomenon.

grass-fire. An eczematous disease of the ox; stalk disease.

grass-sick'ness. Belyando spew, gastric spirochetosis, an affection characterized by vomiting, without nausea, occurring suddenly after meals; it has been observed in Queensland, Western Australia, and certain parts of Brazil; in certain cases a spirochete has been found in the vomit.

Grati'ola officina'lis. The hedge-hyssop, a plant with diuretic, emetic, and purgative properties; it has been employed therapeutically in doses of gr. 10–30 (0.6–2.0).

Gratiolet's fi'bers (grăs-e-o-la') [Louis Pierre *Gratiolet*, Parisian anatomist, 1815–1865.] G.'s radiation. **G.'s laws,** (1) synostosis of the cranial bones occurs earlier in the inferior than in the superior races; (2) ossification in the bones of the skull proceeds from behind forward in the higher races of man, from before backward in the lower races; these laws are not absolute. **G.'s radia'tion,** optic radiation, radiatio* occipitothalamica [BNA].

gratiolin (grăt-ti'o-lin). An amorphous glucoside, $C_{20}H_{34}O_7$, obtained from the hedge-hyssop, *Gratiola officinalis*.

grattage (grăt-tazh') [Fr. scraping] The scraping or brushing of an ulcer or surface with sluggish granulations, to stimulate the healing process.

Gräupner's method. See *Graeupner*.

grave [L. *gravis*] Noting symptoms of a serious or dangerous character.

gravedo (gra-ve'do) [L. nasal catarrh.] Frontal sinusitis.

grav'el. The formation in the kidney and passage through the ureter of numerous very small concretions, usually of uric acid, calcium oxalate, or phosphates.

gravel-root. The root of *Eupatorium purpureum*, employed as a diuretic and for the relief of irritation of the urinary passages, in doses of 6–8 drops of the eclectic specific medicine every hour.

Graves' disease' [Robert James *Graves*, Dublin physician, 1797–1853.] Exophthalmic goiter *

grave-wax. Adipocere.

grav'id [L. *gravida* from *gravis*, heavy] Pregnant.

gravida (grav'ĭ-dah) [L. pregnant.] A pregnant woman.

gravid'ic. Relating to pregnancy or a pregnant woman.

grav'idin. A scum on the surface of standing urine, formerly regarded as one of the signs of pregnancy; kyestein.

grav'idism. Pregnancy.

gravid'ity. Pregnancy.

gravim'eter [L. *gravis*, heavy, + G. *metron*, measure.] Hydrometer, an instrument for determining the specific gravity of a liquid.

gravimet'ric. Relating to or determined by weight.

gravistat'ic [L. *gravis*, heavy, + G. *histēmi*, I stand.] Hypostatic.

gravitation (grav-i-ta'shun) [L. *gravitas*, weight.] The mutual attraction between all bodies, tending to draw them to each other.

grav'ity [L. *gravitas*] Weight. **specif'ic g.,** the weight of any body compared with that of another body of equal volume regarded as the unit; the weight or density of a liquid compared with that of distilled water

Grawitz's basophil'ia (grah'vits) [Paul *Grawitz*, German pathologist, *1850.] Basophilia (2), **G.'s cachex'ia,** a fatal cachexia, resembling pernicious anemia but with no degenerative changes in the red blood cells, occurring especially in the aged. **G.'s slum'bering cells,** cells in the body tissue which do not take any stain and hence are invisible, but which, in certain inflammatory states, suddenly increase in size and become visible. **G.'s tu'mors,** small hypernephromata, containing lipoid droplets, resembling lipomata.

gray. 1. Of a shade between black and white, ash-color. 2. Having hair which is turning white. **g. oil,** a mixture of metallic mercury 39, mercurial ointment 2, liquid paraffin 59, used by subcutaneous injection, in doses of gr. 1–2 (0.06–0.13) in syphilis. **g. powder,** hydrargyrum cum creta

Gray's glyc'erin ton'ic [after a formula of John Purdue *Gray*, American alienist, 1825–1886.] Trade name of a preparation said to contain gentian, taraxacum, phosphoric acid and carminatives in a mixture of glycerin and sherry.

grease-heel (grēs'hēl). A form of eczema resulting from inflammation of the sebaceous glands of the skin in or about the heel of the horse; in aggravated cases, granulations called "grapes" are formed accompanied by much general swelling of the leg.

green. Of the color of grass or leaves, a color between blue and yellow in the spectrum. **g. day,** one of the days in a course of dietetic treatment of diabetes, on which the patient is allowed eggs, bacon, tomato, green vegetables, and butter. **g. sick'ness,** chlorosis. **g.-stick fracture,** an incomplete fracture in which the bone on the side of the concavity is still continuous.

Green'how's disease' [Edward Headlam *Greenhow*, English physician, 1814–1888] Vagabond's* disease.

green-stain. See under *stain*.

greff'otome [Fr. *greffe*, graft, + G. *tomē*, incision.] An instrument for slicing off bits of epidermis to use in grafting.

greg'aloid [L. *grex*(*greg*-), a flock.] Noting a colony of protozoa formed by the chance union of independent cells.

Gregari'na. A genus of protozoa, or unicellular animal organisms.

greg'arine. A unicellular organism of the genus *Gregarina*.

Gregarin'ida [L. *gregarius*, gregarious.] An order of *Telosporidia* in which reproduction is usually by sporulation only.

gregarino'sis. A disease due to the presence of gregarines.

Greg'ory's pow'der [James *Gregory*, Scotch physician, 1753–1821.] Pulvis rhei compositus.

Grenz ray (grents) [Ger. borderline, boundary.] Long wave length *x*-ray, borderline ray.*

gression (gre'shun) [L. *gradi*, to walk.] Displacement of a tooth backward.

grey. Gray.

Griesinger's disease' (gre'zing-er) [Wilhelm *Griesinger*, German neurologist, 1817–1868.] Ankylostomiasis. **G.'s symp'tom,** edema of the superficial tissues at the tip of the mastoid process in cases of thrombosis of the sigmoid sinus.

grif'fin-claw. Main en griffe, atrophy of the interosseous muscle of the hand with extension of the wrist and flexion of the fingers.

Grif'fith's mix'ture [Robert Eglesfeld *Griffith*, American physician, 1798–1850.] Mistura ferri composita.

grigri (gre'gre). Sassybark, erythrophleum.*

grindelia (grin-de'lĭ-ah) [Hieronymus *Grindel*, Russian botanist, 1776–1836.] (N.F., B.A.) The dried leaves and flowering tops of *Grindelia robusta*, California gum-plant; stomachic, expectorant, and cardiac tonic, in dose of gr. 15–30 (1.0–2.0). The fluidextract is used externally in the treatment of rhus poisoning.

grindeline (grin'de-lēn). An alkaloid from grindelia.

grinder (grīn'der). A molar tooth, dens* molaris

grind'ers' asth'ma. Siderosis.

grip, grippe [Fr. *gripper*, to seize.] Influenza. **devil's g.**, epidemic pleurodynia.

gripe [A.S. *grīpan*, to seize.] A sharp pain in the bowels, colic, tormina.

gripp'al. Influenzal.

grippotox'in. The toxin of the influenza bacillus.

gris'erin. Trade name of a soluble combination of loretin* with alkalies; an intestinal antiseptic and bactericide in doses of gr. 5–15 (0.03–1.0).

Grisolle's sign (gre-zol') [Augustin *Grisolle*, French physician, 1811–1869.] The initial eruption of smallpox is papular and thus can always be differentiated by the touch from that of any of the other exanthemata.

gristle (gris'l) [A.S.] Cartilage.

Gritti's opera'tion (grēt'te) [Rocco *Gritti*, Italian surgeon, 1828–1920.] Supracondylar amputation of the femur, the patella being preserved and applied to the end of the bone, its articular cartilage being removed so as to obtain union. See cut under *amputation*.

grm. Abbreviation for gram, gramme.

groats (grōts) [A.S. grātan.] The hulled grain of wheat or oats.

Groc'co's sign [Pietro *Grocco*, Italian clinician, 1856–1916.] 1. Acute dilatation of the heart following a muscular effort, noted in the early stages of exophthalmic goiter. 2. Extension of the liver dullness several centimeters to the left of the midspinal line in cases of enlargement of that organ. **G.'s tri'angle,** paravertebral triangle, a triangular patch of dullness at the base of the chest alongside the spinal column, on the side opposite a pleural effusion.

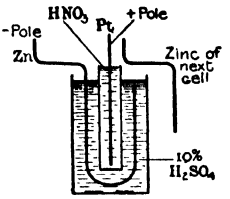
groin. The inguinal region, inguen, the crease at the junction of the thigh with the trunk.

groove. Furrow, sulcus, a narrow, elongated depression on any surface. **ante'rior parame'dian g.,** sulcus intermedius anterior [BNA]. **anterolat'eral g.,** a furrow on the side of the medulla oblongata along which emerge the efferent rootbundles of the hypoglossal nerve. **anterome'dian g.,** fissura mediana anterior. **bicip'ital g.,** a g. on the anterior aspect of the humerus in which lies the tendon of the long head of the biceps muscle. **cav'ernous g.,** carotid sulcus, sulcus caroticus [BNA], the groove on the upper surface of the sphenoid bone supporting the cavernous sinus and the carotid artery. **developmen'tal g.,** one of the lines or grooves on the surface of the enamel of a tooth, marking its primitive divisions as formed. **med'ullary g.,** vertebral g. (2). **mylohy'oid g.,** sulcus mylohyoideus, a groove on the inner surface of the ramus of the mandible lodging the mylohyoid artery and nerve. **nasopal'atine g.,** a g. on the vomer lodging the nasopalatine nerve. **nasopharyn'geal g.,** an indistinct line marking the boundary between the nasal cavities and the rhinopharynx. **neu'ral g.,** vertebral g. (2). **olfac'tory g.,** a shallow depression on the cribriform plate of the ethmoid bone on either side of the crista galli, lodging the olfactory lobe of the cerebrum. **op'tic g.,** sulcus chiasmatis [BNA], a groove on the upper surface of the sphenoid bone in which rests the optic commissure. **poste'rior parame'dian g.,** sulcus intermedius posterior [BNA]. **posterolat'eral g.,** a line on the surface of the medulla where are the rootbundles of the spinal accessory, vagus, and glossopharyngeal nerves. **prim'itive g.,** primitive* streak. **subcla'vian g.,** a shallow g. on the clavicle lodging the subclavius muscle. **subcos'tal g.,** sulcus costalis, a groove on the inner surface of the lower border of each rib. **supplemen'tal g.,** a long shallow depression in the surface of a tooth, usually having a smoothly rounded base; the difference between a supplemental and a developmental g. is that the former does not mark the junction of lobes. **ver'tebral g.** (1) a surface depression on each side of the line of the spinal processes of the vertebræ; (2) an embryonic sulcus developed from the primitive groove, forming later the medullary tube or primitive spinal cord; medullary g.

gross (grōs) [F. *gros*.] Large, coarse, macroscopic. **g. anat'omy,** the anatomy of the parts which can be distinguished without the aid of the microscope. **g. le'sion,** one that is plainly visible to the naked eye.

Gross's antineural'gic pill [Samuel D. *Gross*, American surgeon, 1805–1884.] (N.F.) Quinine sulphate gr. 2 (0.13), strychnine gr. $\frac{1}{30}$ (0.002), morphine sulphate and arsenic trioxide each gr. $\frac{1}{20}$ (0.003), extract of aconite leaves (U.S. 1870) gr. ½ (0.03).

Grossich's meth'od (grōs-sik) [Antonio *Grossich*, Fiume surgeon, 1849–1926.] The antiseptic employment of tincture of iodine in surgical operations.



GROVE CELL.

Grossman's sign (grōs'man) [Max *Grossman*, American physician,* 1881.] Dilatation of the heart in early stages of apical pulmonary tuberculosis.

ground'-bundle. Fasciculus* proprius, one of the association tracts of the spinal cord.

ground-itch. Water-itch.

ground-sub'stance. Caryolymph.

group-reac'tion. A reaction with an agglutinin or other antibody which is common (though usually in varying doses) to an entire group of related bacteria, *e.g.* the coli group.

grouping (groop'ing). Classifying, arranging in definite categories according to the manifestation of certain related characteristics. **blood g.,** the classification prior to transfusion of samples of blood according to their agglutinating and hemolyzing characters; there are four such classes, called groups I, II, III, and IV, and the blood of the donor and that of the patient must belong to compatible groups. If the donor's blood belongs to group I, it can be given only to a patient with blood of the same group; group II can be given to a patient showing group I or II; III to I or III; but group IV of the donor may be given to a patient with any of the 4 groups.

Grove cell or **el'ement** [Sir William Robert *Grove*, English physicist, 1811–1896.] A galvanic cell composed of zinc in diluted sulphuric acid and of platinum in concentrated nitric acid, the liquids being separated by a porous partition.

growth. The increase in size of a living being or any of its parts occurring in the process of development. **new g.,** neoplasm, tumor.*

Gru'ber's cul-de-sac [Wenceslaus Leopold *Gruber*, Russian anatomist, 1814–1890.] A lateral diverticulum in the suprasternal space beside the inner extremity of the clavicle behind the sternal fasciculus of the sternocleidomastoid muscle

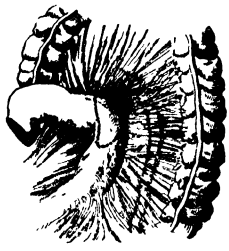
Gru'ber's meth'od [Josef *Gruber*, Viennese aurist, 1827–1900.] A modification of the Politzer method in which the patient does not swallow, but says "hoc" at the instant of compression of the bag. **G.'s spec'ulum,** see under *ear speculum.**

Gru'ber's reac'tion [Max von *Gruber*, Munich hygienist, 1859–1927.] Widal reaction.

Gru'by's disease' [David *Gruby*, Parisian physician of Hungarian birth, 1810–1898.] Microsporia, a form of alopecia caused by *Microsporon audouini*.

Grueber-Landzert foss'a (grü'ber lant'tsert). A peritoneal recess occupying the position of Jonnesco's fossa, prolonged downward behind the duodenojejunal angle for a distance of 1 to 2 inches.

gru'el [L. *grutum*, meal.] A semiliquid food of oatmeal or other cereal boiled in water; porridge.



GRUEBER-LANDZERT FOSSA. (*Landouzy and Jayle.*)

Gruenbaum's test (grün'bowm) [Albert S. *Gruenbaum*, German physician, contemporary.] The administration of suprarenal extract does not increase arterial tension in Addison's disease.

Gruenbaum-Widal test (grün'bowm-ve-dal') [Albert S. *Gruenbaum;* Fernand *Widal*.] Widal's* reaction.

Gruenfelder's toe reflex (grun'fel-der). Dorsal flexion of the great toe with a fan-wise spreading of the other toes elicited by pressure upon an area of the skull at the intersection of the lambdoid, mastoid, and panitomastoid sutures in children under five years of age; it is indicative of inflammation of the middle ear.

grumose, grumous (grōō'mōs, grōō'mus) [L. *grumus*, a little heap] Clotted, lumpy, appearing as if clotted, noting the surface character of a bacterial culture; see cut under *colony*, 2, D.

grunt'ing. A laryngeal sound sometimes made by a horse when struck or moved suddenly; it may be due to distention of the belly by bulky food, and is not infrequently noted in horses, long in dealers' hands, which have been repeatedly examined as to wind.

gru'tum [L. *grit*] 1. Milium. 2. Oaten grits.

Gryn'feltt's tri'angle [J. G. *Grynfeltt*, French surgeon †1913.] A triangular space bounded above by the end of the last rib and the serratus posterior inferior muscle, anteriorly by the obliquus internus, and posteriorly by the quadratus lumborum; lumbar hernia occurs in this space.

g yochrome (gri'o-krōm) [G. *gry*, a minute particle, + *chrōma*, color.] A term applied by Nissl to nerve-cells in which the stainable portion is present in the form of minute granules without definite arrangement.

grypo'sis [G. *grypos*, hooked.] An abnormal curvature of the nails.

G. S. W. Abbreviation of gunshot wound.

gt. Abbreviation of L. *gutta*, drop.

gtt. Abbreviation of L. *guttæ*, drops.

guacamphol (gwah-kam'fol). White acicular crystals, prepared by the action of camphoric acid chloride on sodium guaiacol; employed in the night sweats of phthisis in dose of gr. 7½ (0.5).

guacetin (gwas'et-in). Guaiacetin.

guacin (gwah'sin). A resinous extractive from guaco.

guaco (gwah'ko). A brazilian plant, *Mikania guaco*, employed as an antidote to snake-venom and in the treatment of rheumatism and diarrhea in doses of gr. 15–60 (1.0–4.0).

guæthol (gweth'ol). Guaiacol ethyl.

guaiac (gwi'ak). Guaiacum.

guaiacetin (gwi-as'et-in). Guacetin, sodium pyrocatechin-monoacetate; a white powder recommended in tuberculosis in dose of gr. 7½ (0.5).

guai'aci lig'num (gwi'a-si lig'num) (Br.). Guaiacum wood, lignum vitæ, lignum benedictum, lignum sanctum, the heart-wood of *Guaiacum officinale* or of *G. sanctum*, a small tree of the West Indies and the Caribbean coast of South America; alterative and stimulant in dose of ʒi (4.0). **g. resi'na** (Br.), guaiacum.

guai'acin. A brownish amorphous powder obtained from guaiac wood; employed as a reagent for oxydases with which it gives a blue color.

guaiacol (gwi'ă-kol). (U S., Br.) Methyl-orthodioxybenzene, methyl-pyrocatechin, catechol-monomethyl ether, $C_7H_8O_2$, obtained from creosote or prepared synthetically from pyrocatechin; a colorless liquid or crystallized; employed as an expectorant and intestinal disinfectant in doses of ♏2–7½ (0.13–0.5), and locally to the skin as an anesthetic and antipyretic. **g. ben'zoate,** benzosol, benzoyl-guaiacol; a colorless, tasteless powder, insoluble in water, recommended in the diarrhea of phthisis in doses of gr 4–8 (0.25–0 5). **g. bisul'phonate of quinine',** guaiaquin, quinine guaiacol-bisulphonate. **g. cac'odylate,** occurs in light reddish crystals, recommended for hypodermic use, in oily mixture, in phthisis. **g. cam'phorate,** guacamphol. **g. car'bonate,** guaiacolis carbonas. **g. carbon'ic ac'id,** methoxysalicylic acid, a white crystalline powder of bitter taste, nearly insoluble in water; recommended as an antipyretic and antirheumatic similar to salicylic acid. **g. cin'namate,** cinnamyl-guaiacol styracol, occurs in colorless acicular crystals insoluble in water; employed in tuberculosis and in chronic catarrhs of the digestive and urinary mucous membranes. **g. eth'yl,** guthol, guæthol, pyrocatechin-monoethyl ester, a colorless liquid of aromatic odor, employed in tuberculosis in doses of gr. 4–8 (0.25–0.5). **g. glyc'eryl-es'ter,** guaiamar. **g. methylglycocho'late,** monotal, a colorless liquid of faintly aromatic odor; has been recommended as an analgesic in phlebitis and the chest pains of phthisis, ʒ½–1 (2.0–4.0) being painted over the painful area. **g. phos'phate,** phosphoric guaiacyl ether, a white crystalline powder insoluble in water; employed as an intestinal antiseptic and in hectic fever in doses of gr. 2–4 (0.13–0.25). **g. phos'phite,** phosphoguaiacol, guaiacyl-ether phosphite, guaiacophosphal, a white crystalline powder, soluble in water, employed in tuberculosis in doses of gr. 5–10 (0.3–0.6). **g. sal'icylate, guai'acol-sal'ol,** a white crystalline powder, insoluble in water, employed like salol as an intestinal antiseptic and antirheumatic in doses of gr. 10–15 (0.6–1.0) **g. suc'cinate,** occurs in the form of fine white needles, insoluble in water, employed in phthisis in doses of gr 2–3 (0.13–0.2). **g. sul'phonate,** thiocol. **g. val'erate, g. vale'rianate,** geosote, a faintly yellowish liquid, slightly soluble in water, employed in pulmonary tuberculosis in doses of gr. 3–8 (0.2–0.5).

guaiaco'lis carbo'nas (U.S.). Guaiacol carbonate, duotal, a white crystalline powder insoluble in water, employed for the same purposes as guaiacol in doses of gr 2–10 (0.13–0.6).

guaiaconic acid (gwi-ak-on'ik as'id). A brown amorphous powder obtained from guaiac; it turns blue in the presence of oxidizing agents.

guaiacophosphal (gwi″ă-ko-fos'fal). Guaiacol phosphite.

guaiacose (gwi'ă-kōz). Trade name of a preparation containing calcium guaiacol-sulphonate and somatose, recommended in convalescence and in wasting diseases.

guaiacum (gwi'ă-kum) [Sp. *guayaco*, imitating the native Carib name.] (N.F.) Guaiac, guaiaci resina (Br.); the resin of the wood of *Guaiacum officinale* or *G. sanctum*, a tree of the West Indies and shores of the Caribbean Sea; diaphoretic, stimulant, and alterative in doses of gr. 10–30 (0.6–2.0). It is employed in rheumatic tonsillitis, pharyngitis, and laryngitis, in doses of 2 to 4 drops of the eclectic specific medicine in sweetened water every hour.

guaiacyl (gwi'as-il). Calcium guaiacol-monosulphonate, calcium orthoguaiacol-sulphonate, a light bluish powder, soluble in 20 parts of water; employed as a local anesthetic in dentistry and minor surgery in hypodermic doses of ♏7½–15 (0.5–1.0) of a 5 per cent. solution.

guaiaform (gwi'ă-form). A combination of guaiacol and formaldehyde, a brownish yellow powder, employed as an antiseptic.

guaialin (gwi'al-in). Methylene diguaiacol benzoic ester, a green powder containing guaiacol, formaldehyde, and benzoic acid, employed in the hectic fever of tuberculosis in doses of gr. 7½–15 (0.5–1.0).

guaiamar (gwi'am-ar). Guaiacol-glyceryl-ester, a white crystalline powder of bitter taste, soluble in 20 parts of water; employed as an intestinal antiseptic in doses of gr. 5–15 (0.3–1.0).

guaiaperol (gwi-ap'er-ol). Piperidine guaiacolate; occurs in the form of colorless acicular or prismatic crystals, soluble in 30 parts of water, employed in phthisis in doses of gr. 5–10 (0.3–0.6).

guaiaquin (gwi'ă-kwin). Trade name of guaiacol-quinine bisulphonate, or quinine guaiacol bisulphonate; recommended in glandular enlargements and hypertrophy of lymphoid tissue in children, in doses of gr. 1 (0.06).

guaiaquinol (gwi'ă-kwin-ol). Quinine dihydrobromo-guaiacolate, occurs in the form of yellow crystals soluble in 20 parts of water; employed in tuberculosis in doses of gr. 7½–15 (0.5–1.0).

guaiaret'ic acid. A substance occurring in the form of needle-shaped crystals, obtained from guaiac.

guaiarsine (gwi'ar-sin). Trade name [Fr. *gaïarsine*] of a white crystalline salt, soluble in alcohol, glycerin, oil, and water (5 per cent.), said to be a cacodylate of arsenic; recommended in the treatment of tuberculosis and influenza in doses of 1 gr. (0.06) once or twice a day.

guaiasanol (gwi-ă-san'ol). Diethylglycocoll-guaiacol hydrochloride ($C_{13}H_{19}O_3HCl$); a white crystalline salt readily soluble in water, antiseptic, anesthetic, and deodorant; employed externally and internally as a substitute for guaiacol; dose for internal administration, gr. 15–30 (1.0–2.0).

guai'asotol. Trade name for a preparation said to be a syrup of guaiacol; employed for the same purposes as guaiacol in doses of ʒ1–4 (4.0–15.0).

guanase (gwah'nāz). A deamidizing enzyme of the pancreas, adrenals, and thymus which converts guanin into xanthin.

guanidine (gwan'id-ēn). Carbotriamine, a crystalline solid first obtained by the oxidation of guanin, a poisonous product of putrefaction.

guanine (gwah'nēn). A leucomaine, $C_5H_5N_5O$, occurring as a product of decomposition, and found as a deposit in a disease resembling gout in swine.

guarana (gwah-rah-nah') [Native Brazilian word.] (N.F.). A dried paste of the crushed seeds of *Paullinia cupana*, a vine extensively cultivated in Brazil; it contains guaranine, saponin, a volatile oil, and paullinitannic acid; employed for the relief of headache in doses of ʒ1–2 (4.0–8.0).

guar'anine. An alkaloid, resembling caffeine, obtained from guarana; used in the treatment of headache in doses of gr. 1–2 (0.06–0.13).

Guarnieri bod'ies (gwar-ne-er'e) [Giuseppi *Guarnieri*, Italian physician, 1856–1918.] *Cytoryctes vacci'næ*, vaccine bodies found in the cornea of rabbits inoculated with vaccine lymph; it is thought they may possibly be composed of masses of Paschen bodies. **G. gel'atin-a'gar,** see under *agar*.

guathol (gwath'ol). Trade name of a disinfectant preparation of pyrocatechin ethyl ether.

gubernac'ulum [L. a helm.] A fibrous cord connecting two structures. **g. den'tis,** a connective-tissue band uniting the tooth-sac with the gum. **g. tes'tis,** a cord-like structure (in the fetus and infant), formed of a peritoneal fold containing fibrous and muscular tissue, attached to the lower end of the testis and to the abdominal wall near the inguinal region; it is concerned in the descent of the testis. **Hun'ter's g.,** g testis.

Gubler's hemiple'gia (goob'ler or gub-lair') [Adolphe *Gubler* (his true name was Goblet), Parisian physician, 1821–1879.] G.'s paralysis. **G.'s ic'terus,** a form of hematogenous jaundice assumed by G. to be due to such rapid hemolysis that the liver is unable to dispose of the hemoglobin set free. **G.'s line,** the level of the superficial origin of the trigeminus on the pons, a lesion below which causes G.'s paralysis. **G.'s paral'ysis,** hemiplegia alternans. **G.'s syn'drome,** Millard-Gubler syndrome, same as G.'s paralysis. **G.'s tu'mor,** a fusiform swelling on the wrist in lead palsy.

Gud'den's com'missure [Bernhard Aloys v. *Gudden*, German alienist, 1824–1886.] Commissura inferior. **G.'s gan'glion,** ganglion interpedunculare.

Guéneau de Mussy's point (ga-no″dĕ-mu-se') [Noel François Odon *Guéneau de Mussy*, Parisian physician, 1813–1885.] A point, painful on pressure, at the junction of a line prolonging the left border of the sternum and a horizontal line at the level of end of the bony portion of the tenth rib; it is present in cases of diaphragmatic pleurisy.

Guenther's opera'tion (gun'ter) [Gustav B. *Guenther*, 1801–1866.] A modified Pirogoff's* amputation.

Guenther's stain. For spirochetes: cover the film, dried with gentle heat (not flamed), with a 5 per cent. acetic acid solution for 30 seconds, then expose to ammonia fumes for a few seconds, and, after washing, stain with Ehrlich's aniline gentian-violet for 8 or 10 minutes.

Guenz's lig'ament (günts) [Justus Gottfried *Guenz*, German anatomist, 1714–1784.] A few fibers of the obturator membrane forming the upper boundary of the obturator canal.

Guenzburg's rea'gent (günts'boorg) [Alfred *Guenzburg*, German physician, *1861.] A solution of phloroglucin 2, vanillin 1, in absolute alcohol 30; when a few drops of this solution are heated in a porcelain dish with an equal amount of gastric

juice, if the latter contains free hydrochloric acid a beautiful carmine red color is produced.

Guérin's fold (ga-rañ') [Alphonse *Guérin*, Parisian surgeon, 1816–1895.] Valvula fossæ navicularis. **G.'s glands,** Skene's glands. **G.'s si'nus,** a cul-de-sac or diverticulum behind G.'s fold. **G.'s valve,** G.'s fold.

Guidi's canal' (gwe'de) [Guido *Guidi*, better known as Vidus Vidius, Italian physician, died 1569] Vidian canal.

guill'otine (gil'o-tēn) [Fr. an instrument for the decapitation of condemned criminals.] An instrument in the shape of a metal ring through which runs a sliding knife-blade, used in cutting off an enlarged tonsil.

Guinard's meth'od (ge-nar') [Aimé *Guinard*, Parisian surgeon, 1856–1911.] Treatment of ulcerating, cancerous tumors by application of calcium carbide.

Guin'ea-worm. *Filaria medinensis.*

Guinon's disease' (ge-nawń') [Georges *Guinon*, Parisian physician, *1859.] Gilles* de la Tourette's disease.

guipsine (gip'sēn) [Fr. *gui*, mistletoe.] A drug prepared from fresh mistletoe, having apressor properties; recommended in doses of gr. 1 (0.05) in cases of high blood-pressure.

guja (goo'hah). Epidemic bronchial asthma of Guam; a disease defined by F. E. McCullough, U.S.N., as a septicemia, apparently peculiar to the Ladrone, Carolina, and Bonin islands; it occurs as an epidemic and is characterized by hemorrhagic infarction of the lungs, intestinal ulceration, cloudy swelling of the parenchymatous organs, and enlargement of the mesenteric and mediastinal lymph nodes. Clinically the disease is marked by a spasmodic attack of dyspnea or a severe diarrhea with bronze-green stools, constituting two sharply defined types of the disease, rarely the pneumonic and enteric types occur simultaneously.

gu'la, gen. *gu'læ* [L.] Throat, gullet.

gulancha (goo-lan'chah) [East Indian] Tinospora (B.A.), a bitter tonic and stomachic.

gul'let [L. *gula*, throat] Pharynx and esophagus, the swallow.

Gull's disease' [Sir William Withey *Gull*, London physician, 1816–1890] Myxedema of adults.

Gull-Sut'ton disease' [Sir William Withey *Gull*; John Bland *Sutton*, English surgeon, contemporary] Arteriocapillary fibrosis.*

Gullstrand's slit-lamp (gool'strahnd) [Allvar *Gullstrand*, Upsala oculist, 1862–1930.] A diaphragm with a narrow slit through which a thin beam of light is projected; used in examination of the eye.

gum. 1. [L. *gummi.*] The dried exuded sap from a number of trees and shrubs, forming an amorphous brittle mass; it forms usually a mucilaginous solution in water. 2. [A.S. *gōma*, jaw.] Gingiva, the fibrous tissue covering the alveolar processes of the jaws; see *gums*. 3. An acneiform eruption in the infant. **ac'aroid g.,** acaroid resin. **an'imal g.,** a gum-like hydrocarbon derived from mucin. **Basso'ra g.,** a g. resembling tragacanth, acacia, and the gummy exudate of cherry and plum trees; it comes from Persia and Turkey, and is sometimes used, like agar, in the treatment of costiveness. **black-boy g.,** acaroid resin.* **blue g.,** *Eucalyptus globulus.* **Bot'any Bay g.,** acaroid resin.* **Brit'ish g.,** dextrin. **Cape g.,** a g. resembling g. arabic from *Acacia horrida* of South Africa. **Califor'nia g.,** *grindelia robusta.* **doc'tor g.,** a g. from *Rhus metopium*, a South American tree. **g. ar'abic,** acacia. **g. ben'jamin,** benzoin. **g. guai'acum,** guaiaci resina, guaiacum.* **g. thus,** American frankincense, an exudate from *Pinus sylvestris.* **g. trag'acanth,** tragacantha. **Hogg g.,** doctor g. **red g.,** strophulus. **Sen'egal g.,** the g. of *Acacia senegal.* **watt'le g.,** a g. resembling gum arabic, from a species of *Acacia* growing in Australia. **white g.,** miliaria alba in infants.

gum'boil. Parulis, a small abscess of the gum.

gum-bush. Eriodictyon

gum-solution. A 6 per cent solution of gum acacia in a 0.9 per cent solution of sodium chloride; used by slow intravenous injection of one pint in the treatment of shock after a surgical operation.

gumma, pl. *gum'mata* (gum'mah) [L. *gummi*, gum.] An infectious granuloma, the characteristic lesion of late, or tertiary, syphilis, occurring in any of the organs or tissues; in time it undergoes fatty and caseous degeneration, its center breaking down into a peculiar gummy material. **tuber'culous g.,** a subcutaneous nodule, the size of a marble or larger, tuberculous in nature, which breaks down into a sluggish ulcer.

gum'mate. Arabate, a salt of arabic acid.

gum'matous. Relating to gummata.

gum'mi [L.] Gum (1). **g. in'dicum** (B.A.), Indian gum ghatti gum, a gummy exudation from the wood of *Anogeissus latifolia;* demulcent, similar in properties to gum arabic.

gummose (gum'ōz). A sugar derived from animal gum.

gummy. 1. Viscous, mucilaginous, resembling a gum. 2. Relating to or resembling a gumma.

gum-plant. Grindelia

gum-res'in. The dry exudate from a number of plants, consisting of a mixture of a gum and a resin, the former soluble in water but not alcohol, the latter soluble in alcohol but not water.

gums. [Plural of *gum.*] Gingivæ, gum (2).

bleeding from, ulorrhea (slight), ulorrhagia, ulemorrhagia (profuse). **inflammation,** ulitis, gingivitis-gumboil, parulis. **pain,** ulalgia, ulodynia, ulaganac. tesis, gingivalgia. **receding of,** ulatrophia, ulatrophy. **relating to,** gingival, uletic **tumor,** uloncus, epulis parulis, parodontis. **ulceration,** ulocace, gingival stomatocace.

gun-cotton. Pyroxylin, a solution of which in ether constitutes collodium.*

Gunning's reac'tion [Jan Willem *Gunning*, Dutch chemist, 1827–1901.] If one adds to a solution of acetone a mixture of tincture of iodine and ammoniac a precipitate of iodoform will result.

Gur'vitch rays (goor'vitch) [Alexander *Gurvitch*, Russian histologist, *1874.] Short wave ultraviolet rays (mitogenetic) given out by growing plants, and said to emanate also from yeast, onions, and even the human fingers.

gurgulio (goor-goo'lī-o) [L. gullet, windpipe.] Uvula.

gur'jun bal'sam. Oleoresina dipterocarpi.

gu'ru-nut. Kola.

Gussenbauer's clamp (goos'en-bow-er) [Carl *Gussenbauer*, German surgeon, 1842–1903.] A metal bar with two nails which are driven, one into each fragment, in the treatment of ununited fracture. **G.'s opera'tion,** for stricture of the esophagus, a tenotome being introduced through an opening into the canal above the seat of obstruction **G.'s su'ture,** a figure-of-8 suture for the intestine resembling the Czerny-Lembert but not including the mucous membrane.

gusta'tion [L. *gustare*, to taste.] The act of tasting; the sense of taste.

gus'tatory. Relating to gustation, or taste. **g. bud, calyculus gustatorius** [BNA].

gut [A.S.] The intestine. **fore-g.,** the upper part of the primitive alimentary tract, developing into the pharynx to the duodenum inclusive. **head-g.** fore-g. **hind-g.,** the lower part of the primitive alimentary tract, developing into the colon **mid-g.,** the middle part of the primitive alimentary tract, developing into the jejunum and ileum; mesogaster. **tail-g.,** a diverticulum of the primitive alimentary tract passing into the caudal part of the embryo.

Guth'rie's mus'cle [George James *Guthrie*, London surgeon, 1785–1856] Musculus sphincter urethræ membranaceæ.

Guthzeit's test (goot'tsīt) [Max G. Guthzeit, German chemist, 1847–1915.] For arsenic: a piece of zinc and a little sulphuric acid are added to the suspected liquid which is then boiled; a bit of filter paper with a silver nitrate solution is held in the vapor and will turn yellow if arsenic is present.

gutta (gut'tah) [L.] A drop, roughly a minim of water, but varying greatly according to the nature of the liquid and the form of the vessel from which it falls. See *drops*. **gut'tæ anglica'næ,** English drops; a preparation made by mixing oil of lavender 1 part, alcohol 8 parts, and spirit of hartshorn 32 parts, and distilling; used as a stimulant. **g. rosa'cea,** rosacea, acne* rosacea. **g. sere'na,** amaurosis.

guttadiaphot test (gut-ă-di'ă-fōt) [L. *gutta*, drop, + G. *dia*, through, + phōs, light.] A test for the detection of disease of the blood by examination of the latter by transmitted light. Two drops of blood are let fall on each of three papers colored red, green, and blue respectively. When the blood is dry it presents a characteristic picture if viewed by transmitted light; in healthy blood the discs present a smooth outline, sometimes surrounded by a corona, ranging in color according to the color of the paper; in pathological blood the sharp outline of the disc may be broken or there may be no distinct contour whatever, or there may be a bright red corona without any distinct contour.

gutta-percha (gut'ah-pur'chah) [Malay, *gutah*, gum, + *percha*, the name of a tree.] The dried milky juice of *Palaquium gutta* (*Isonandra gutta*); employed in the manufacture of splints and for various other purposes; a solution of gutta-percha is used as a substitute for collodion as a protective and to seal incised wounds.

gutt'ate. Of the shape of, or resembling, a drop, characterizing certain cutaneous lesions.

gutta'tim [L.] Drop by drop.

gut-tie (gut'ti). Ileus in the horse or in cattle.

Guttmann's sign (goot'mahn) [Paul *Guttmann*, Berlin physician, 1834–1893] A thrill over the thyroid in exophthalmic goiter.

gut'tur [L.] Throat.

gutt'ural. Relating to the throat, throaty.

gutturotet'any. Laryngeal spasm causing a temporary stutter.

Guy's pill (gī) [so called because largely used at *Guy's* Hospital, London.] A pill suggested for use in mitral incompetence with hepatic congestion and ascites; composed of 1 grain each of digitalis, squill, extract of hyoscyamus, and blue mass; it is similar to the pilulæ digitalis, scillæ et hydrargyri (N.F.).

Guy de Chauliac (gēd-sho-le-ak'). A French surgeon of the fourteenth century, practising at Avignon. He wrote a celebrated treatise on surgery, entitled "Chirurgia magna," published in 1363, which was regarded as an authority for three centuries.

Guyon's amputa'tion (gu-yawn') [Felix Jean Casimir *Guyon*, Parisian surgeon, 1831–1920.] Amputation above the malleoli, a modification of Syme's* operation. **G.'s isth'mus,** isthmus* uteri. **G.'s meth'od,** treatment of ingrowing toenail by the excision of a wedge-shaped piece from the side of the great toe. **G.'s sign,** (1) ballottement of the kidney in cases of nephroptosia, especially when there is also a renal tumor; (2) the hypoglossal nerve lies directly upon the external carotid artery, whereby this vessel may be distinguished from the internal carotid when ligation is necessary.

Gymnamœbida (jim-nă-me'bi-dah) [G. *gymnos*, naked, + *amoibē*, change (ameba).] An order of *Amœbea* in which there is no shell though there may be an enveloping layer of condensed ectoplasm; the genus *Amœba* is in this order.

gymnastics (jim-nas'tiks) [G. *gymnos*, naked.] Muscular exercise, performed indoors, as distinguished from *athletics*, and usually by means of special apparatus. **Swe'dish g.,** Swedish movements, a form of cinesitherapy, certain systematized movements of the body and limbs regulated by resistance made by an attendant.

gymne'ma [G *gymnos*, naked, + *nēma*, thread] The leaves of *Gymnema sylvestre*, a tree of tropical Africa, order *Asclepiadaceæ;* used to disguise the taste of bitter medicines.

gymne'mic acid. An acid, $C_{32}H_{56}O_{12}$, derived from the leaves of *Gymnema sylvestre*, or *Asclepias geminata*.

gym"nobacte'ria [G. *gymnos*, naked] Non-capsulated and non-flagellated bacteria

gymnocarpous (jim-no-kar'pus) [G *gymnos*, naked + *karpos*, fruit.] Noting certain fungi in which the hymenium is exposed while the spores are forming.

gymnocyte (jim'no-sīt) [G. *gymnos*, naked, + *kytos*, cell] A naked cell, a cell without limiting membrane.

gymnophobia (jim-no-fo'bi-ah) [G. *gymnos*, naked, + *phobos*, fear.] Morbid dread and intolerance of the sight of a naked person, or of an uncovered part of the body.

gymnospermous (jim-no-spur'mus) [G. *gymnos*, naked, + *sperma*, seed.] In botany, noting a plant in which the ovules are not inclosed in an ovary.

gymnospore (jim'no-spōr) [G. *gymnos*, naked.] A nonsexual spore not protected by a chitinous envelope.

Gym"nosporid'ia. An order of *Hæmosporidia* infesting the blood-corpuscles of vertebrates, passing the sexual cycle in an invertebrate host.

Gymnostomi'na [G. *gymnos*, naked, + *stoma*, mouth.] A suborder of *Holotrichida* in which there is no undulating membrane about the mouth opening.

gynæcol'ogist. Gynecologist.

gynæcol'ogy. Gynecology.

gynæcoph'orus. Bilharzia.

gy'nandrism (jī'nan-drizm) [G. *gynē*, woman, + *anēr*(*andr*-), man.] Hermaphroditism.

gynandroid (jī-nan'droyd) [G. *gynē*, woman, + *anēr*(*andr*-), man, + *eidos*, resemblance.] A woman with hermaphroditic sexual characteristics who is mistaken for a man.

gynandromorphism (jĭ-nan-dro-mor'fizm) [G. *gynē*, woman, + *anēr*(*andr*-), man, + *morphē*, form.] A combination of male and female characteristics.

gynan"dromor'phous. Having both male and female characteristics.

gynan'drous [G. *gynē*, woman, + *anēr*(*andr*-), man. Noting a flower, as an orchid, in which the stamens are adherent to the pistil.

gynase (jĭ'nāz) [G. *gynē*, woman, + *-ase*.] A hypothetical substance determining femaleness in heredity; opposed to andrase.*

gynatresia (jĭ-nă-tre'zĭ-ah) [G. *gynē*, woman, + *a-* priv. + *trēsis*, a hole.] Occlusion of the vagina by a more or less thick membrane.

gynecium, gynœcium (jĭ-ne'sĭ-um) [G. *gynē*, woman, + *oikion*, house.] The female portion of a flower, the carpel or pistil.

gynecological (jĭ-ne-ko-loj'ĭ-kal) Relating to gynecology.

gynecologist (jĭ-ne-kol'o-jist). A specialist in the treatment of diseases peculiar to women.

gynecology (jĭ-ne-kol'o-jĭ) [G. *gynē*(*gynaik*-), woman, + *-logia*.] The branch of medicine which has to do with the diseases peculiar to women.

gynecomastia, gynecomasty (jĭ-ne-ko-mas'tĭ-ah, ji-ne-ko-mas'tĭ) [G. *gynē*(*gynaik*-), woman, + *mastos*, breast.] The presence in the male of large mammary glands, sometimes secreting milk.

gy"necoma'zia [G. *gynē*(*gynaik*-), woman, + *mazos*, breast.] Gynecomastia.

gynephobia (jĭ-ne-fo'bĭ-ah) [G. *gynē*, woman, + *phobos*, fear.] A morbid aversion to the society of women.

gynergen (jin'ur-jen) [G. *gynē*, woman, + *ergon*, work.] Ergotamine tartrate, employed as an oxytocic and suggested also as a remedy in exophthalmic goiter.

gynesic, gynæsic (jĭ-ne'sik). Relating to the diseases peculiar to women.

gyniatrics (jĭ-nĭ-at'rĭks) [G. *gynē*, woman, + *iatrikos*, medicine or surgery.] Treatment of the diseases of women.

gyniatry (jĭ-nĭ-at'rĭ) [G. *gynē*, woman, + *iatreia*, healing.] Gyniatrics

gynocardate (ji-no-kar''dāt). A salt of the fatty acid derived from the oil obtained from *gynocardia odorata*, chaulmoogra oil.

Gynocardia (jin-o-kar'dĭ-ă) [G. *gynē*, woman, + *kardia*, heart.] A genus of trees from one species of which, *G. odorata*, chaulmoogra oil is said to be derived, though some authorities assert that this product is false chaulmoogra oil.

gynodyne (jĭ'no-dīn) [G. *gynē*, woman, + *odynē*, pain.] Trade name of a preparation of acetylparaminophenyl-acetylsalicylate, recommended for the relief of the after-pains of childbirth in doses of gr. 18 (1.2) at 3 or 4 hour intervals.

gynopathy (jin-op'ă-thĭ) [*gynē*, woman, + *pathos*, suffering.] Any disease peculiar to women.

gynophore (jin'o-for) [G. *gynē*, woman, + *phoros*, bearer.] In botany, the stalk supporting the female organ of a flower.

gynoplastics (jin-o-plas'tiks) [G. *gynē*, woman, + *plassō*, I form.] Reparative or plastic surgery of the female genital organs.

gynoval (jĭ'no-val). Trade name of the isoborneol-ester of isovalerianic acid, recommended in functional nervous disorders.

gyp'sum [L.] Calcium sulphate. **dried g.,** calcii sulphas exsiccatus, plaster of Paris.

gyrate (jĭ'rāt) [L. *gyratus*, turned round.] 1. Of convoluted or ring shape. 2. To revolve.

gyra'tion. 1. Revolution, circular motion. 2. Arrangement of convolutions or gyri in the brain

gyre (jīr). Gyrus, convolution.

gyrochrome (ji'ro-krōm) [G. *gyros*, a ring, circle, + *chrōma*, a color.] Noting a nerve-cell in which the tigroid mass or stainable material, is arranged roughly in rings.

gyromele (ji'ro-mēl) [G. *gyros*, circle, + *mēlē*, a probe.] An instrument used for cleansing the stomach; it consists of a sponge at the end of a revolving rod, which is passed through a stomach-tube

gyro'sa. Sham-movement vertigo.*

gyrose (ji'rōs) [L. *gyrus*, a circle.] Marked by irregular curved lines like the surface of a cerebral hemisphere; noting a form of marking of a bacterial colony, see cut under *colony* 2, I.

gyrospasm (ji'ro-spazm) [G. *gyros*, circle, + *spasmos*, spasm.] Spasmodic rotary movements of the head.

gyrus, gen. and pl *gy'ri* (ji'rus) [G. *gyros*, circle.] Convolution, one of the prominent rounded elevations on the surface of the hemispheres of the brain; they are separated from each other by more or less deep furrows, the fissures or sulci.

g. angula'ris [BNA], angular convolution, a folded convolution in the inferior parietal lobule formed by the united ends of the superior and middle temporal gyri bending round the posterior upturned extremity of the superior temporal sulcus.

g. annec'tens [L. *annectere*, to join on], annectent g., g. transitivus [BNA].

gy'ri bre'ves in'sulæ [BNA], preinsular gyri, several radiating gyri converging toward the insular pole, making up the preinsula.

g. callo'sus, callosal convolution, g. cinguli [BNA]

g. centra'lis ante'rior [BNA], anterior central convolution, ascending frontal convolution, the posterior convolution of the frontal lobe bounded posteriorly by the fissure of Rolando and anteriorly by the precentral sulcus.

g. centra'lis poste'rior [BNA], posterior central convolution, ascending parietal convolution, the anterior convolution of the parietal lobe, bounded in front by the fissure of Rolando and posteriorly by the interparietal sulcus

g. cin'guli [BNA], convolution of the cingulum, callosal convolution, g. fornicatus (of the older nomenclature), a long, curved convolution arching over the corpus callosum, from which it is separated by the sulcus corporis callosi; on its upper surface it is bounded by the sulcus cinguli and (posteriorly) by the sulcus subparietalis; it forms the upper part of the limbic lobe, or g. fornicatus [BNA].

g. denta'tus, dentate gyrus, fascia dentata hippocampi [BNA].

g. fornica'tus [BNA], fornicate convolution, limbic lobe, falciform lobe, a long, ring-like convolution on the mesial aspect of the hemisphere, encircling the corpus callosum; its various parts are called g. cinguli, isthmus, g. hippocampi, and uncus. (The [BNA] term for gyrus fornicatus of the older nomenclature is gyrus cinguli.)

g. fronta'lis ascen'dens, ascending frontal convolution, g. centralis anterior [BNA].

g. fronta'lis infe'rior [BNA], inferior frontal convolution, a broad convolution on the outer surface of the frontal lobe of the cerebrum between the inferior frontal sulcus and the fissure of Sylvius; it is divided by branches of the Sylvian fissure into three parts: pars basilaris (opercularis [BNA]), pars triangularis, and pars orbitalis; the first two constitute a portion of the operculum

g. fronta'lis me'dius [BNA], middle frontal convolution, a convolution on the convex surface of each frontal lobe of the cerebrum running in an anteroposterior direction between the superior and inferior frontal sulci; it is divided into an upper and a lower portion by the middle frontal sulcus.

g. fronta'lis supe'rior [BNA], superior frontal convolution, marginal g., a broad convolution running in an anteroposterior direction on the inner edge of the convex surface and on the mesial surface of each

frontal lobe· it is continued on the inferior concave surface of this lobe as the g rectus.

g. fusifor'mis [BNA], fusiform convolution, occipitotemporal convolution, a long wide convolution on the under surface of the temporal and occipital lobes, between the inferior temporal (occipitotemporal) and collateral fissures.

g. hippocam'pi [BNA], hippocampal convolution, a convolution lying to the inner side of each temporal lobe of the cerebrum from which it is separated by the collateral fissure; it is connected with the g. cinguli posteriorly through the isthmus and forms the lower portion of the g. fornicatus (limbic lobe).

g. in'sulæ [BNA], see *gyri breves insulæ* and *g. longus insulæ*.

g. lingua'lis [BNA], lingual convolution, a g. on the tentorial surface of each hemisphere, forming, the posterior continuation of the hippocampal convolution, between the calcarine and the collateral fissures; it is variously regarded as a convolution of the temporal or of the occipital lobe.

g. lon'gus in'sulæ [BNA], a single long gyre composing the postinsula.

g. margina'lis, marginal g., g. frontalis superior [BNA].

g. occipita'lis latera'lis [BNA], lateral occipital convolution, one of several small and variable convolutions on the lateral surface of the occipital lobe of the cerebral hemisphere.

g. occipita'lis supe'rior [BNA], superior occipital convolution, one of several variable convolutions on the superior convex surface of the occipital lobe of the cerebrum.

g. occipitotempora'lis, occipitotemporal convolution, g. fusiformis [BNA].

g. orbita'lis [BNA], orbital gyrus, one of a number of small, irregular convolutions occupying the concave inferior surface of each frontal lobe of the cerebrum.

g. parieta'lis ascen'dens, ascending parietal convolution, g. centralis posterior [BNA].

g. parieta'lis supe'rior, superior parietal g., lobulus parietalis superior [BNA].

g. parieta'lis infe'rior, inferior parietal g., lobulus parietalis inferior [BNA].

g. postcentra'lis, posterior central or ascending parietal convolution, g. centralis posterior [BNA].

g. præcentra'lis, precentral, anterior central, or ascending frontal convolution, g. centralis anterior [BNA].

gy'ri profun'di cer'ebri [BNA], deep cerebral convolutions.

g. rec'tus [BNA], straight convolution, a longitudinal convolution on the under surface of each frontal lobe of the cerebrum between the longitudinal fissure and the olfactory sulcus.

g. subcallo'sus [BNA], subcallosal convolution, Zuckerkandl's convolution, peduncle of the corpus callosum, a rather ill-defined, narrow convolution between the rostral lamina of the corpus callosum and the parolfactory area, being separated from the latter by the sulcus parolfactorius posterior.

g. supracallo'sus, supracallosal g., the thin coating of gray matter covering the surface of the corpus collosum.

g. supramargina'lis [BNA], supramarginal convolution, a folded convolution in the inferior parietal gobule, capping the posterior extremity of the lateral (Sylvian) fissure.

g. tempora'lis infe'rior [BNA], inferior temporal convolution, third temporal convolution, a sagittal convolution on the inferolateral border of the temporal lobe of the cerebrum, bounded by the middle and inferior temporal sulci.

g. tempora'lis me'dius [BNA], middle temporal convolution, second temporal convolution, a longitudinal gyrus on the lateral surface of the temporal lobe, between the superior and middle temporal fissures; posteriorly it curves around the extremity of the superior temporal sulcus to join the superior temporal convolution, forming the angular gyrus.

g. tempora'lis supe'rior [BNA], supertemporal convolution, superior temporal convolution, first temporal convolution, a longitudinal gyrus on the lateral surface of the temporal lobe between the lateral (Sylvian) fissure and the superior temporal sulcus.

g. tempora'lis transver'sus [BNA], transverse temporal convolution, one of two or three convolutions running transversely on the surface of the temporal lobe bordering on the lateral (Sylvian) fissure, separated from each otherby the transverse temporal sulci.

g. transiti'vus [BNA], transition g., annectent g., a small convolution connecting two lobes or two main gyri, especially such a small gyrus found crossing the bottom of the fissure of Rolando.

g. uncina'tus, uncinate g., uncus gyri hippocampi [BNA], the anterior hook-shaped portion of the g. hippocampi.

H

H. Abbreviation for hyperopia or hyperopic; horizontal; *Haemophilus;* Holzknecht unit. Symbol for hydrogen.

H^+. Abbreviation, or symbol, for hydrogen ion.

Haab's mag'net (hahb) [O. *Haab*, Zurich ophthalmologist, 1850–1931.] A very powerful electric magnet used for drawing out chips of iron or steel which have become imbedded in the eyeball. **H.'s re'flex,** cortical pupillary reflex; contraction of the pupil when, in a dark room, the subject's attention is directed to a light placed to one side of him, the eyes, however, not being turned toward it.

habe'na [L. rein.] 1. A frenum or restricting fibrous band. 2. Habenula (2). 3. A restraining bandage.

hab'enal, hab'enar. Relating to an habena.

haben'ula [L. strap.] 1. A frenulum, a restraining band. 2. [BNA] Peduncle or stalk of the pineal body, a hollow structure attached to the pineal body; its dorsal part is continuous on either side with the stria medullaris of the thalamus, its ventral part is curved around the posterior commissure of the cerebrum. **h. perfora'ta,** foramina nervosa [BNA]. **h. urethra'lis,** one of two fine, whitish lines running from the meatus urethræ to the clitoris in girls and young women; they are the vestiges of the anterior part of the corpus spongiosum.

haben'ular. Relating to an habenula, especially the stalk of the pineal body. **h. tri'gone,** a triangular plate, formed by the continuations of the medullary striæ of the thalamus, at the dorsal part of the habenula (2).

hab'it [L. *habitus; habere,* to have.] 1. A practice or custom established by frequent repetition of the same act. 2. Habitus. **drug h.,** drug* addiction, pharmacopsychosis. **h. of body,** habitus.

hab'itat [L. *habitare,* to dwell.] The place where a species of animal or plant is found in nature.

hab'itus [L. habit.] The general characteristic appearance of the body indicating a constitutional tendency to some disease or metabolic fault. **h. apoplec'ticus,** the appearance of one who is thick-set and corpulent with short neck, red face, and tortuous temporal arteries. **h. enteroptot'cus,** the physical state significant of enteroptosia, characterized by a long, narrow abdomen and a thorax with a costal angle below 90°.

habroma'nia [G. *habros,* cheerful, + *mania.*] A form of delusional insanity in which the imaginings assume a cheerful or joyous character; amenomania.

hachement (ash-mon') [Fr. chopping.] The hacking stroke in massage.

Hackenbruch's expe'rience (hah'ken-brookh) [Peter Theodor *Hackenbruch,* Wiesbaden surgeon, 1865–1924.] The area of anesthesia following the injection of cocaine or one of its substitutes is rhombic in shape.

hack'ing. A chopping stroke made with the edge of the hand in massage.

Haeck'el's law [Ernst Heinrich *Haeckel,* German naturalist, 1834–1919.] The individual organism, in its development from the ovum, passes through the same changes as did the species in developing from the lower to the higher forms of animal life; "ontogeny is a recapitulation of phylogeny." **H.'s mone'ra,** a doubtful genus of *Protozoa* in which division occurs without any well-defined nucleus.

hæm-, for words not here found, look under *hem-.*

hæm (hem). $C_{34}H_{35}O_3N_4Fe$, a group found in hemoglobin and other blood and cellular pigments.

Hæmamœba (hem-ă-me'bah). 1. A genus of ameboid parasites in the blood. 2. Plasmodium, a protozoan organism parasitic in the red blood-cells of warm-blooded animals.

hæmatoxylon (hem-ă-tok'sĭ-lon) [G. *haima* (*haimat-*), blood, + *xylon,* wood.] (N.F.) Hæmatoxyli lignum (Br.), hematoxylon, logwood, the heart-wood of *Hæmatoxylon campechianum,* a tree of Central America; astringent and tonic, employed occasionally in diarrhea in doses of gr. 10–30 (0.6–2 0), but chiefly used as a dye and as a stain in histology and bacteriology.

Hæmatozoon (hem''ă-to-zo'on) [G. *haima,* blood, + *zōon,* animal.] A microscopic animal parasite living in the blood. **H. mala'riæ,** a blood-parasite in malaria.

hæmocœl (hem'o-sēl) [G. *haima,* blood, + *koilōma,* cavity.] The system of blood-containing spaces pervading the body in molluscs and arthropods.

hæmocœ'lom [G. *haima,* blood, + *koilōma,* a hollow.] The body cavity of the embryo containing the primitive heart.

Hæmogregari'na. A genus of protozoan organisms, of the order *Hæmosporidia,* parasitic usually in the blood-cells of cold-blooded animals.

hæmonodus lymphaceus (hem-o-no'dus lim-fa'se-us) [NK]. Hemolymph gland.*

Hæmophileæ (hem-o-fil'e-e) [G. *haima,* blood, + *philos,* fond.] A tribe of the family *Bacteriaceæ,* containing the genera *Hæmophilus* and *Dialister.*

Hæmophilus (hem-of'ĭ-lus) [G. *haima,* blood, + *philos,* fond.] A genus of *Bacteriaceæ* containing small rod-shaped organisms, non-motile, pleomorphous, growing best in cultures containing hemoglobin. **H. ca'nis,**° small, non-motile rod-forms, occurring singly or in chains, occurring in the preputial smegma of dogs; nonpathogenic. **H. conjunctivit'idis,**° Koch-Weeks bacillus, short, non-motile rod-shaped organisms, occurring singly; the cause of "pink eye," acute infectious conjunctivitis. **H. ducrey'ii,**° short, non-motile rods, occurring singly or in chains, the pathogenic agent of chancroid. **H. hæmolyt'icus,**° short, non-motile rod-shaped organisms, occurring singly or in chains, in the respiratory tract; non-pathogenic. **H. influen'zæ,**° Pfeiffer's bacillus, minute, rod-shaped, non-motile organisms, found in the respiratory tract in cases of influenza, though their causal agency in that disease is not proven. **H. lacuna'tus**° diplobacillus of Morax-Axenfeld, a short, non-motile, rod-shaped organism, occurring singly or paired, the cause of mild (angular) conjunctivitis. **H. melaninogen'icus**° non-motile, gram-negative, rod-shaped organisms, found on the genitalia and in the oral cavity; pathogenicity not known. **H. pertus'sis,**° Bordet-Gengou bacillus, a short, thick, non-motile

rod-shaped organism, occurring singly or paired, the possible cause of whooping-cough.

Hæmopro'teus. Halteridium.

hæmorrhagia (hem-or-ra'jĭ-ah) [G. *haima*, blood, + *-rhagia*.] Hemorrhage. **h. per rhex'in,** hemorrhage due to rupture of a blood-vessel.

Hæmospo'rea. A suborder of *Hæmosporidia*, most of the members of which are parasitic in the blood-corpuscles of cold-blooded animals.

Hæmosporid'ia. An order of *Telosporidia* parasitic in the blood of various animals; it includes *Plasmodium*, *Halteridium*, and *Hæmogregarina*.

Hæmozo'on. Hæmatozoon.

Haën's pills (hah'en) [Anton de *Haën*, Dutch physician practising in Vienna, 1704–1776.] Aloes, 10, resin of scammony and resin of jalap, of each 3, powdered ginger, 4, soap, 10; to make 100 pills.

Haenel's symptoms (ha'nel) [Heinrich Georg *Haenel*, German neurologist, *1874.] Absence of sensation on pressure of the eyeball in tabes.

Haeser's for'mula (ha'zer) [Heinrich *Haeser*, German physician, 1811–1884.] Trapp*-Haeser formula.

Haff disease (hahf) [*Haff*, an arm of the Baltic Sea in East Prussia.] A disease marked by hemoglobinuria, muscular weakness, and pains in the limbs, affecting persons living on the banks or in the vicinity of this inlet; it was caused by poisoning with a resin acid in the waste of a celluloid factory.

Haff'kine's se'rum [Waldemar M. Wolff *Haffkine*, Russian physician, 1860–1930.] 1. A dead culture of the cholera spirillum employed as a prophylactic; there are two vaccines, weak and strong, the latter being a culture the virulence of which has been increased by growth in the peritoneal cavity of a guinea-pig; an injection of the weak serum is first given and is followed in 3 or 4 days by one of the stronger cultures. 2. A dead culture of the plague bacillus given by injection as a prophylactic.

haffkinize (haf'kin-īz) [W. M. W. *Haffkine*.] To immunize with the Haffkine cholera or plague serum against one or the other disease.

hafnium (haf'nĭ-um) [L. *Hafniæ*, Copenhagen.] A rare chemical element, symbol Hf, atomic weight, 178.6; called also *celtium*.

hafussi baths (hah-foos'e) [Ger. *hand*, hand, + *juss*, foot.] A modification of the Nauheim baths, the hands and feet only of the patient being immersed in hot water impregnated with carbon dioxide gas.

Hagedorn nee'dle (hah'geh-dorn) [Werner *Hagedorn*, German surgeon, 1831–1894.] A curved surgical needle flattened on the sides.

hagiother'apy [G. *hagios*, saint, + *therapeia*, treatment.] Treatment of the sick by means of contact with relics of the saints, visits to shrines, and other religious observances.

Hag'ner opera'tion [Francis R. *Hagner*, American surgeon, *1873.] The establishment of drainage by means of an incision into the epididymis in cases of gonorrheal epididymitis.

Hahnemannian (hah-nĕ-mahn'ĭ-an) [Samuel Christian Frederic *Hahnemann*, German physician, the founder of the doctrine of homeopathy, 1755–1843.] Relating to Hahnemann or to the doctrine he taught.

Haidinger's brush'es (hi'ding-er). An appearance produced when polarized light from an evenly illuminated surface falls upon the eye; it consists of a dark yellowish brush or tuft, narrowest in its center, which separates from each other two lighter bluish tufts, placed vertically to the first.

Haines's for'mula [Walter Stanley *Haines*, American chemist and toxicologist, 1850–1923.] The last two figures of the specific gravity of a specimen of urine multiplied by 1.1 indicates the number of grains of solids in each fluid ounce. **H.'s rea'gent,** copper sulphate 2, caustic potash 7.5, glycerin 15, distilled water 150; employed in Trommer's test.

hair [A.S. hær.] 1. Pilus, one of the fine, long flexible appendages of the skin, covering the entire body except on the palms and soles and other flexor surfaces. See *pilus* and *scapus*. The hairs of the various parts of the body have received special names (see below). 2. One of the fine, hair-like processes of the auditory cells of the labyrinth, of the taste-bulbs, and of other sensory cells, called auditory hairs, gustatory hairs, sensory hairs, etc. **bead'ed h.,** monilithrix. **monil'iform h.,** monilithrix. **ringed h.,** a condition in which the hair shows alternate pigmented and white segments, trichonosus versicolor.

beaded, monilethrix, moniliform hair. **brittleness,** trichorrhexis, trichoclasis, clastothrix, fragilitas crinium. **bulb,** bulbus pili. **care of,** capilliculture. **disease,** trichopathy, cacotrichia, trichosis, trichonosis, trichonosus. **downy,** lanugo. **dryness,** xerasia. **erection of,** horripilation, goose-flesh, hystricism. **excessive growth,** hypertrichosis, hirsuties **falling of,** defluxio capillarum, denuvium, defluxion, psilosis, trichatrophy, trichorrhea **fineness,** leptotrichia **follicle,** follicu us pili. **fungous disease,** lepothrix, trichomycosis, trichomycetosis, Beiger's disease, chignon, piedra, tinea nodosa, trichophyiosis. **grayness,** canities, poliosis, achromatosis. **yaving black,** melanocomous, melanotrichous. **having straight,** liotrichous, lissotrichous. **having white,** leuco ichous. **loss of,** calvities, baldness, acomia, alopecia. tiasis (encircling head). **matting of,** trichiasis coacta pica, trichomatosis, trichoma. **of the axilla** hircus (pl. hirci). **of the ears,** tragus (pl. tragi). **of the eyebrows,** supercilium (pl. supercilia). **of the eyelids,** cilum (pl. cilia), eyelash. **of the face,** barba. **of the genitals,** pubis (pl. pubes). **of the head,** capillus (pl. capilli). **of the nostrils,** vibrissa (pl. vibrissæ). **removal of,** depilation, rapillurgy. **ringed,** trichonosus versicolor. **root,** radix pili. **science relating to,** trichology. **shaft,** scapus pili. **splitting of,** distrix, schizotrichia, scissura pilorum. **stiffness,** hystricism, hystriciasis. **treatise on,** trichology. **woolly,** lanugo.

hair-ball (hār'bawl). Trichobezo r.

hair-bulb. Bulbus pili.

hair-follicle (hār-fol'i-kl). Folliculus pili; a cylindrical pit dipping down through the corium into the subcutaneous connective tissue; it contains the root of the hair. The outer or dermic coat consists of three layers: an outer longitudinal, a middle transverse, and an inner vitreous or homogeneous; the internal or epidermic coat is formed of the mucous layer of the epidermis; the root-sheath has two layers—of Henle and of Huxley, and finally the follicle is lined with a thin layer of cells, the cuticle of the root-sheath.

hairless (hār'les). Glabrous.

hair-matrix (hār-ma'triks). The internal or epidermic root of the hair-follicle.

hair-root. Radix pili.

hair-shaft. Scapus pili.

hair-streams. Flumina pilorum.

halation (hă-la'shun) [*halo*.] Blurring of the visual image by a strong light coming from the wrong direction.

halazone (hal'a-zōn). Trade name of a chlorine preparation, in tablet form, p-sulphondichloraminobenzoic acid ($Cl_2N.O_2S.C_6H_4.COOH$), employed for the sterilization of water in concentration of 1:300,000.

Hales' piezometer (pi-ĕ-zom'e-tur) [Stephen *Hales*, English physiologist, 1677–1761.] A glass tube inserted into an artery at right angles to its axis

the pressure being shown by the height to which the blood ascends in the tube.

halisteresis (hal-ĭ-stĕ-re'sis) [G. *hals*, salt, + *sterēsis*, privation.] A deficiency of lime salts in the bones, osteomalacia, malacosteon. **h. ce'rea,** waxy softening of the bones.

halisteret'ic. Relating to or marked by halisteresis.

halito'sis [L. *halitus*, breath, + *-ōsis*.] Bad breath.

halituous (hal-it'u-us) [L. *halitus*, breath.] Vaporous; covered with moisture. **h. bruit,** Wahl's sign.

hal'itus [L.] 1. Breath. 2. Exhalation, warm vapor.

haliver oil (hă'liv-ur). An oil extracted from the liver of the halibut (*Hippoglossus hippoglossus*) said to be exceptionally rich in vitamins A and D.

Hall's dinn'er pill. (N.F.) Purified aloes, extract of licorice, powdered soap, and molasses each gr. 1 (0.06).

Hall's disease, H.'s meth'od. See *Marshall Hall.*

Hall's solu'tion of strych'nine. Liquor strychninæ acetatis (N.F.).

Hallé's point (ă-la') [Adrien Joseph Marie Noel *Hallé*, Parisian physician, *1859.] A point at the intersection of a horizontal line touching the anterior superior spine of the ilium and a perpendicular line drawn from the spine of the pubes; here the ureter can be most readily palpated.

Hal'ler's acid elix'ir [Albrecht von *Haller*, Swiss anatomist and botanist, 1708–1777.] Mistura sulphurica acida (N.F.). **H.'s ansa,** a curving branch of the facial nerve below the stylomastoid foramen. **H.'s arches,** the internal and external arcuate ligaments of the diaphragm; see arcus lumbocostalis. **H.'s circle,** (1) arteries encircling the optic nerve in the sclerotic coat, circulus arteriosus Halleri; (2) veins in the areola encircling the nipple, circulus venosus Halleri; (3) the fibrocartilaginous ring in each side of the heart supporting the mitral and tricuspid valves respectively, circulus callosus or fibrosus Halleri. **H.'s colic omen'tum,** an adhesive band sometimes connecting the omentum and the testis in the fetus and descending with the testis into the scrotum. **H.'s cones,** coni vasculosi, conical masses formed by the convolutions of the vasa efferentia of the testis passing to the globus major of the epididymis. **H.'s fretum,** a constricted space between the ventricle and the atrium or arterial bulb in the fetal heart. **H.'s haben'ula,** the cord-like remains of the processus vaginalis peritonæi. **H.'s isthmus,** H.'s fretum. **H.'s line,** linea splendens, a fibrous line in the spinal pia mater. **H.'s plexus,** a nervous plexus of sympathetic filaments and branches of the external laryngeal nerve on the surface of the inferior constrictor muscle of the larynx. **H.'s re'te,** rete* testis. **H.'s tripod,** celiac axis. **H.'s tu'nica vasculo'sa,** the vascular layer of the chorioid coat of the eye. **H.'s un'guis,** hippocampus minor, calcar avis [BNA]. **H.'s vas aber'rans,** a diverticulum of the epididymis extending upward in the angle between the epididymis and the vas deferens.

hal'lex, pl. *hal'lices* [L.] Hallux.

Hallion's law (al-yawn') [L. *Hallion*, French physician, contemporary.] Extracts of an organ exert on the same organ a stimulating influence, increasing its secretion when deficient and favoring its restoration when injured. **H.'s test,** Tuffier's test; when the main artery and vein of a limb are compressed, in a case of aneurysm, swelling of the veins of the hand or foot will take place only when the collateral circulation is free.

Hallopeau's disease' (ă-lŏ-po') [Henri *Hallopeau*, Parisian dermatologist, 1842–1919.] Pustular dermatitis.

hall'ucal. Relating to the great toe.

hallucina'tion [L. *alucinari*, to wander in mind.] A subjective perception of what does not exist.

hallucino'sis. A psychosis marked especially by more or less persistent hallucinations.

hal'lus. Hallux.

hal'lux, pl. *hal'luces* [L.] [BNA]. The great toe, the first digit of the foot. **h. doloro'sus,** painful toe, a condition, usually associated with flatfoot, in which walking causes severe pain in the metatarsophalangeal joint of the great toe. **h. flex'us,** hammer-toe. **h. rig'idus,** stiff toe, a condition in which walking is painful on account of stiffness in the metatarsophalangeal joint of the great toe. **h. valgus,** a deviation of the great toe toward the outer or lateral side of the foot. **h. varus,** deviation of the great toe to the inner side of the foot away from its neighbor.

halmatogenesis (hal"mă-to-jen'e-sis) [G. *halma*, a spring, leap, + *genesis*, production, generation.] Saltatory variation, a sudden change of type from one generation to the other.

ha'lo [G. *halōs*, a circular threshing floor.] 1. A reddish yellow ring surrounding the optic disc, due to a widening out of the scleral ring permitting the deeper structures to show through. 2. An areola. **glauco'matous h.,** glaucomatous ring.*

halogen (hal'o-jen) [G. *hals*, salt, + *gennaō*, I produce.] One of the chlorine group (bromine, chlorine, fluorine, iodine) of metalloids, all univalent elements; they form monobasic acids with hydrogen, and their hydroxides (fluorine forms none) are also monobasic acids.

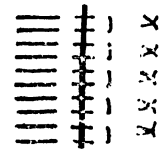
hal'oid [G. *hals*, salt, + *eidos*, resemblance] 1. Resembling common salt; noting a salt composed of a base and a halogen, such as sodium chloride.

halometer (ha'lo-me-tur) [*halo* + G. *metron*, measure.] (1) An instrument used to measure the diffraction halo of a red blood cell. (It is claimed that the halo of the large erythrocyte of pernicious anemia is smaller than that of the normal cell; the hazy colorless halo of normal size is characteristic of secondary anemia.) (2) An instrument for measuring the halo surrounding the optic disc.

halostere'sis. Halisteresis.

HALSTED'S SUBCUTICULAR SUTURE.

Hal'sted's meth'od [William Stewart *Halsted*, Baltimore surgeon, 1852–1922.] 1. An operation for the radical cure of inguinal hernia. 2. Amputation of the breast for carcinoma with removal of the muscular and lymphatic structures over a wide area. **H.'s su'ture,** (1) an interrupted intestinal suture, similar to the Lembert suture, but doubled; see cuts here and under *suture;* (2) subcuticular suture, one passing back and forth through the corium, but not including the epidermis.



HALSTED'S INTESTINAL SUTURE: A, Ready for tying; B, tied.

Halstern's disease' (hahl'stern). Endemic syphilis.

Halterid'ium [G. *haltēres*, weights held in the hand in leaping.] *Hæmoproteus*, a genus of protozoan organisms, order *Hæmosporidia*, parasitic in the red blood-cells of birds; its sexual cycle is passed in the body of the culex mosquito.

ham [A.S. hamm] 1. The popliteal space. 2. The buttock and back part of the thigh.

hamame'lin, hamamel'idin. A powdered extract of hamamelis, employed internally as a tonic astringent in doses of gr. ½–2 (0.03–0.13), and in suppository in the treatment of hemorrhoids.

hamamelis, gen. *hamamel'idis* (ham"ah-me'lis) [G. *hama*, together with, + *mēlon*, apple.] Witch-hazel, spotted hazel, a shrub or small tree, *Hamamelis virginiana*, growing in damp, rocky soil in the eastern and central parts of North America; the leaves and bark are official in the U.S.P. and the leaves in the B.P. **hamamel'idis cor'tex** (N.F.) witch-hazel bark; employed for the same purpose as the leaves. **hamamel'idis fo'lia** (N.F.) witch-hazel leaves, the cried leaves collected in the autumn; occasionally employed internally in slight bleeding from the digestive or urogenital tract, and externally as an application to contusions and other injuries, in headache and for the cure of noninflammatory hemorrhoids; the official preparations are the fluidextract (U.S.) and the solution (Br.); the aqua or water, popularly known as "extract of witch-hazel," made from the bark, is official in the U.S.P.

hamarthritis (ham-ar-thri'(thre')tis) [G. *hama*, together.] Polyarthritis.

hamartia (ham-ar'shyah) [G. *hamartion*, a bodily defect.] An error of development marked by defects in tissue-combination.

hamartoblastoma (ham-ar"to-blast-to'mah) [*hamartoma* + *blastoma*.] An autonomous neoplastic growth starting from a hamartoma.

hamartoma (ham-ar-to'mah) [G. *hamartioa*, a bodily defect, + *-ōma*.] 1. A tumor due to a new growth of blood-vessels, as distinguished from hemangioma formed by the dilatation of preexisting vessels. 2. A tumor-like malformation due to some defect in tissue-combination.

hama'tum [L. neut. of *hamatus*, hooked] Unciform bone, os* hamatum.

Ham'berger's law or interchange [H. J. *Hamberger*, Dutch physiologist, 1860–1924.] When acid is added to blood, albumins and phosphates pass from the red corpuscles to the serum and chlorides pass from the serum to the cells; the reverse takes place when the blood is rendered alkaline or is oxygenated; in the living blood it is this action which preserves the alkalinity of the fluid, and it is therefore called the secondary buffer.

Hamberger's schema (hahm'ber-gerz ske'mah) [Georg Erhard *Hamberger*, Jena physician, 1697–1755.] The external intercostal and the intercartilaginous are inspiratory muscles, the internal intercostal are expiratory muscles.

Hamburger's test (hahm'boor-ger). The injection of 0.1 c.c. of a 1 : 10,000 dilution of tuberculin just beneath the skin of the forearm or back is followed, when positive, by a subcutaneous infiltration within twenty-four hours.

Ham'ilton's meth'od [David James *Hamilton*, Scotch pathologist, 1849–1909.] Sponge-grafting.

Hamilton's pill, incorrectly used as a synonym of pilula colocynthidis et hyoscyami (Br.); contains compound extract of colocynth instead of compound pill of colocynth.

Ham'ilton's pseudophleg'mon [Frank Hastings *Hamilton*, American surgeon, 1813–1875.] A trophic affection of the subcutaneous connective tissue, marked by a circumscribed swelling which may become indurated and red, but never suppurates. **H.'s test,** in axillary dislocation of the shoulder a rod will touch both the acromion process and the outer condyle of the humerus.

Ham'marsten's rea'gent [Olof *Hammarsten*, Swedish physiological chemist, *1841.] A mixture of 1 part of a 25 per cent. solution of nitric acid and 19 parts of a 25 per cent. solution of hydrochloric acid; the addition of a few drops to a mixture of 1 part of this reagent and 4 parts of alcohol will give a green color if bile is present.

hamm'er-finger. A condition of flexion of the middle upon the proximal phalanx of the little finger; it is frequently hereditary and sometimes congenital, and is due apparently in many cases to an abnormality in development of the component parts of the affected articulation; more rarely it is an acquired affection.

hammer-nose (ham'mur-nōz). Rhinophyma.

hammer palsy (ham'ur pawl'zĭ). Hephestic* hemiplegia.

Hammerschlag's method (hahm'er-shlahg) [Albert *Hammerschlag*, Austrian physician, *1863.] A hydrometric method of determining the specific gravity of the blood after the addition of chloroform and benzene.

hamm'er-toe. A condition of permanent flexion at the mid-phalangeal joint of one or more of the toes, hallux flexus.

Ham'mond's disease' [William Alexander *Hammond*, American neurologist, 1828–1900.] Athetosis.

Hamp'son u'nit. A unit of *x*-ray measurement, equal to ½ erythema dose.

ham'string. 1. One of the tendons bounding the popliteal space on either side; the *inner h.* comprises the tendons of the semimembranosus, semitendinosus, gracilis, and sartorius muscles; the *outer h.* is the tendon of the biceps femoris. 2. In the horse and other quadripeds, the tendo Achillis or great tendon of the gastrocnemius muscle, at the back of the hock or so-called knee of the hind leg. **h. muscles,** the muscles at the back of the thigh, comprising the biceps, the semitendinosus, and the semimembranosus.

ham'ular [L. *hamulus*.] Hook-shaped, unciform **h. process,** hamulus (2).

ham'ulus, gen. and pl. *ham'uli* [L. dim. of *hamus*, hook.] 1. Any hook-like structure. 2. The hamular process, a hook-like process on the distal and inner part of the anterior or palmar surface of the unciform bone. **h. coch'leæ,** a sickle-shaped process at the tip of the lamina spiralis of the cochlea, bounding in part the helicotrema. **h. lacrima'lis** [BNA], lacrymal hamulus, hamular process of the lacrymal bone; the hook-like lower end of the lacrymal crest, curving between the frontal process and orbital surface of the superior maxilla to form the upper aperture of the bony portion of the nasal duct. **h. lam'inæ spira'lis,** [BNA], hook of the spiral lamina, the upper hook-like termination of the lamina spiralis ossea of the cochlea. **h. ossis hama'ti** [BNA], hamular process, hamulus (2). **h. pterygoïd'eus** [BNA], pterygoid hamulus, hamular process of the sphenoid bone, the inferior extremity of the internal plate of the processus pterygoideus.

hand [A.S.] Manus, the terminal portion of the upper extremity below the forearm, comprising the carpus, metacarpus, and phalanges **ape h.,**

a deformity marked by extension of the thumb at nearly a right angle with the axis of the hand. **claw h.**, a deformity resulting from atrophy of the interosseous muscles, the wrist being extended and the fingers flexed at the interphalangeal articulation. **cleft h.**, a congenital deformity in which the division between the fingers, especially between the third and fourth, extends into the metacarpal region. **obstet'rical h.**, a deformity of the hand caused by a muscular dystrophy in which the thumb is flexed, the fingers being drawn together in the form of a cone. **spade h.**, the coarse, thick, square hand of acromegaly or myxedema. **trident h.**, a hand in which the fingers are of nearly equal length and deflected at the first interphalangeal joint, so as to give a fork-like shape; seen in achondroplasia and other conditions; see cut under *trident*.

absence, achiria. **bath for,** maniluvium. **care of,** manicure. **club,** talipomanus. **enlargement,** macrochiria, chiromegaly. **gout in,** chiragra, chirarthritis. **inflammation of the joints,** chirarthrocace, chirarthritis, chirorrheuma. **pain,** chiralgia. **rheumatism,** chirarthritis, chirorrheuma. **smallness of,** microchiria **spasm,** chirospasm, chirism; writer's cramp, telegrapher's cramp, etc.

hand-ra'tio. The ratio of the length of the hand (measured on the dorsum from the styloid process of the ulna to the tip of the third finger) to the width across the knuckles.

Handley's meth'od (hand'la) [William Sampson *Handley*, English surgeon, *1872.] Introduction of long sterile silk threads under the skin to effect drainage in elephantiasis.

hang'nail. A tearing up of a strip of epidermis at the side of the nail; agnail.

Hanot's cirrho'sis or **disease'** (ă-no') [Victor Charles *Hanot*, Parisian physician, 1844–1896.] Hypertrophic cirrhosis of the liver with chronic jaundice.

Han'sen's bacil'lus [Gerhard Armauer *Hansen*, Norwegian physician, 1841–1912.] *Mycobacterium lepræ*.[0]

Hanson unit. [Adolph M. *Hanson*, American physician,* 1888.] One one-hundredth of the amount of parathyroid extract solution necessary to increase by 1 mg. the amount of calcium in the blood-serum of a parathyroidectomized dog weighing 15 kilograms.

hapalonychia (hap-al-o-nik'ĭ-ah) [G. *hapalos*, soft, + *onyx(onych-)*, nail.] Absence of rigidity of the nails, onychomalacia.

haphalgesia (haf-al-je'zĭ-ah) [G. *haphē*, a touching, + *algēsis*, sense of pain.] Pain, or an extremely disagreeable sensation approaching it, caused by the merest touch.

haphephobia (haf-e-fo'bĭ-ah) [G. *haphē*, touch, + *phobos*, fear.] A morbid dislike or fear of being touched.

Hapke's phenom'enon (hahp'keh) [Franz *Hapke*, German physician, contemporary.] An abnormally prominent presentation of the parietal bone of the head of the first of twins, lying deep in the pelvis.

haplodermatitis (hap-lo-der-mă-ti'(te')tis) [G *haplous*, simple, + *derma(dermat-)*, skin, + *-itis*.] Simple inflammation of the skin.

haplodermitis (hap-lo-der-mi'(me')tis). Haplodermatitis.

hap'lodont [G. *haplous*, simple, plain, + *odous (odont-)*, tooth.] Having molar teeth with simple crowns, *i.e.* without ridges or tubercles.

Haplographiaceæ (hap-lo-graf-ĭ-a'se-e) [G. *haplous*, single, + *grapheion*, pencil, stilus.] A family of blastosporic fungi with hyphæ distinct from the conidia, the latter being in chains or, when parasitic in man, in grape-like masses.

haploid (hap'loyd) [G. *haplous*, simple, + *eidos*, resemblance.] The reduced number of chromosomes in the gamete.

haplopia (hap-lo'pĭ-ah) [G. *haplous*, single, + *ōps(ōp-)*, eye.] Single, normal vision, as distinguished from diplopia.

haploscope (hap'lo-skōp) [G. *haplous*, single, + *skopeō*, I view.] An instrument used in measuring the inclination of the visual axes.

haploscopic (hap-lo-skop'ik). Relating to a haploscope, stereoscopic. **h. vis'ion,** the perception of two images as one by means of a mental process fusing the impressions on the two retinæ; stereoscopic vision.

Haplosporid'ia [G *haplous*, simple, + *sporos* seed] An order of *Neosporidia*, in general of undetermined life histories; the spore are simple, with a single nucleus and no polar capsule.

hap'ten, hap'tene. 1. That part of an antigen which contains the chemical grouping on which the specificity of the antigen depends. 2. Haptin.

hap'tin [G. *haptō*, I fasten, bind.] 1 According to the side-chain theory, a cast-off receptor.* The haptins are of three orders: (1) antitoxin or antiferment; (2) agglutinin, coagulin, precipitin; (3) cytolysin, hemolysin, bacteriolysin; the haptins of the first and second orders are uniceptors, those of the third order amboceptors. 2. Hapten.

haptophil, haptophile (hap'to-fil, hap'to-fil). Noting the atom group of a receptor which unites with the haptophore group of a toxin.

hap'tophore [G *haptō*, I bind, + *phoreō*, I carry.] The atom group of an antigen or antibody molecule by means of which the molecule can combine with a cell or with its corresponding antibody or antigen, respectively.

haptophor'ic, haptoph'orous. Relating to or noting the action of a haptophore.

hard'ening. The process of condensing a histological or pathological specimen and making it firm and compact so that it can be cut into thin sections for examination under the microscope.

Har'der's gland [Johann Jacob *Harder*, Swiss anatomist, 1656–1711.] An acinous mucous gland in the nictitating membrane of birds and some mammals, and sometimes present in rudimentary form on the lacrymal caruncle of man.

Hardy's lo'tion (ar-de') [Louis Philippe Alfred *Hardy*, Parisian physician, 1811–1893.] A lotion for freckles, composed of corrosive sublimate 1, alcohol enough to make a solution, sulphate of zinc and acetate of lead, each 4, distilled water, 250.

harelip (hăr-lip'). A congenital fissure in the upper lip, often combined with cleft palate; it may be single or there may be one on either side of the median line corresponding to the borders of the intermaxillary bone.

hare's-eye. Lagophthalmia.

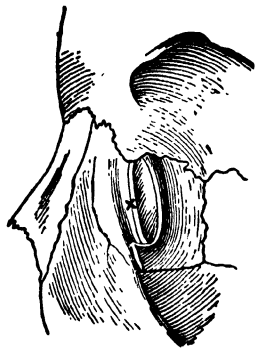
harlequin fetus (har'lĕ-kwin (har'le-kin) fe'tus). Hyperkeratosis congenitalis, a newborn infant with ichthyosis congenita.

Har'ley's disease' [George *Harley*, English physician, 1829–1896.] Paroxysmal hemoglobinuria.

har'maline. $C_{13}H_{14}N_2O$, the dehydride of the alkaloid harmine, employed as a tonic and anthelmintic.

harmine (har'mēn). An alkaloid obtained from the seeds of the wild rose (*Peganum harmala*), possibly the same as banisterine, suggested as a remedy in the treatment of cerebral paralysis and of encephalitis lethargica.

harmo'nia [L. and G. a joining.] Harmonic suture, the simple, firm apposition of two smooth surfaces of bone, as seen in the lacrymomaxillary junction.



LACRYMOMAXILLARY JUNCTION (AT X): A joint by apposition, or harmonia.

harmozone (har'mo-zōn) [G. *harmozō*, I govern.] One of the class of internal secretions which influence the growth and nutrition of special organs or of the body in general; they act as catalysts, but do not contain any principle which builds up protoplasm.

harpoon'. A small, sharp-pointed instrument with a barbed head used for extracting bits of muscular and other tissue for microscopical examination.

Har'rington's solu'tion [Charles *Harrington*, Boston physician 1856–1908.] Corrosive sublimate 0.8, hydrochloric acid 60, water 300, commercial alcohol 640; used for hand sterilization and as a wash for infected wounds and abscess cavities.

Harris sep'arator or **seg'regator** [Malcolm La Salle *Harris*, American surgeon, *1862.] A double catheter the beaks of which are separated when in the bladder, a ridge being formed between the two by a sound in the rectum making upward pressure; the urine from each kidney thus collects in its own pouch and is aspirated out through the catheter on that side.

Harr'ison's groove [Edward *Harrison*, English physician, 1766–1838.] A depression along the lower border of the thorax, due seemingly to the tug of the diaphragm, observed in cases of adenoids and other conditions of impeded respiration and in rickets.

Harrower's hypoth'esis (hăr'o-ur) [Henry R. *Harrower*, American physician, *1883.] Hormone* hunger. **H.'s test,** for hyperthyroidism; four ½-grain doses of thyroid extract are given the 1st day, four 1-grain doses the 2d day, and four 2-grain doses the third day, a careful record being kept of the pulse rate as a measure of the degree of hyperthyroidism, if any, present.

Hartel technique [F. *Hartel*, German surgeon contemporary.] A method of reaching the Gasserian ganglion by passing the needle from the mouth, inserting it about the level of the upper midmolar tooth and passing it inward until the point reaches the bone in front and to the outer side of the foramen ovale enabling an alcohol injection being made for the relief of trigeminal neuralgia.

Hart'mann's curette' [Arthur *Hartmann*, Berlin laryngologist, 1849–1931.] A curette, cutting on the side, for the removal of adenoids.

Hart'mann's pouch [Robert *Hartmann*, German anatomist, *1831.] A spheroid or conical pouch at the point of exit of the gall-bladder into the cystic duct; called also pelvis of the gall-bladder and fossa provesicalis.

Hart'mann's solu'tion [Alexis F. *Hartmann*, St. Louis physician, *1898.] Buffer salts solution, containing sodium chloride, sodium lactate, potassium and calcium phosphates, given by injection for relief of either acidosis or alkalosis.

hart'shorn. Aqua ammoniæ; any volatile ammonium salt, such as the carbonate.

Har'vey. William *Harvey*, English physician, 1578–1657, th discoverer of the circulation of the blood. The book announcing this discovery was entitled "Anatomical Exercise on the Motion of the Heart and Blood in Animals," published in Frankfort in 1628.

hash'eesh, hash'ish [Arabic, hay.] An intoxicant from the tops and sprouts of *Cannabis indica*

Has'ner's fold or **valve** [Joseph *Hasner*, Ritter von Artha, Prague oculist, 1819–1892.] Plica lacrimalis.

H_3AsO_4. Arsenic acid.

Has'sall's concen'tric cor'puscles [Arthur Hill *Hassall*, English physician, 1817–1894.] Small bodies of flattened epithelial cells arranged around a granular nucleated corpuscle, found in the medulla of the follicles of the thymus.

Hasting's stain (hās'ting). [Thomas Wood *Hastings*, New York physician, *1873.] A modified Romanowsky stain.

Hata prepara'tion (hah'tah) [Sahachiro *Hata*, Japanese physician, *1873.] Ehrlich-Hata preparation, **H.'s phenom'enon,** contrary effect, exacerbation of an infectious disease when, in chemotherapy, a small dose is given of a remedy which is but little parasitotropic, such as methylene blue.

Haudek's niche (how'deks nich) [Martin *Haudek*, Vienna roentgenologist, 1880–1931.] An apparent projection from the wall of the stomach sometimes seen in roentgenograms of gastric ulcer, due actually to the filling of the cavity of the ulcer with bismuth.

haunch-bone (hawnch'bōn). 1. Os coxæ. 2. The innominate bone in the pelvis of the horse, huckle bone.

Hauser's stain for spores. Stain with 10 c.c. aqueous solution of fuchsin, passing the coverglass repeatedly through the flame and renewing the stain from time to time.

haustorium, pl. *hausto'ria* (haw-sto'rĭ-um) [L. *haustus*, drinking.] 1. An organ for the absorption of nutriment. 2. In botany, the root or special organ of attachment and nourishment of a parasite.

haustral (haw'stral). Relating to a haustrum. **h. churn'ing,** the agitation or to-and-fro movements of the contents of the colon caused by the rhythmic contraction of the haustra.

haustrum, pl. *haus'tra* (haw'strum) [L. a machine for dipping up water from a cistern or well.] One of the sacculations of the colon, caused by the fact that the tæniæ, or longitudinal bands, are slightly shorter than the gut so that the latter is thrown into tucks or pouches; called also *haustrum coli.*

haustus (haw'stus) [L. a drink, draft.] A potion or medicinal draft. **h. ni'ger,** black draft, infusum* sennæ compositum.

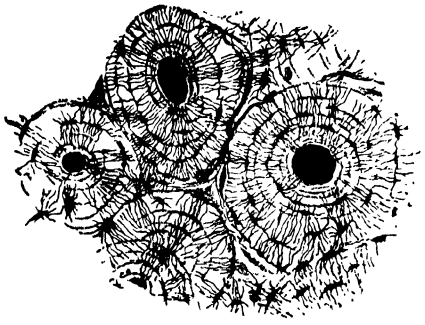
haut-mal (o-mal') [Fr. high evil.] Grand mal.

Hav'erhill fe'ver [*Haverhill*, Mass., where an epidemic of the affection occurred in 1926.] Erythema arthriticum epidemicum, an infection marked by initial chills and high fever, gradually subsiding, by arthritis usually in the larger joints and spine, and by a rash occurring chiefly over

the joints and on the extensor surfaces of the extremities; the duration of the disease was from two to three weeks.

Haverhil'lia multifor'mis. A genus of organisms belonging to the family *Mycobacteriaceæ*, found in cases of Haverhill* fever.

Hav'ers's canals' [Clopton *Havers*, English anatomist, 1650–1702.] Vascular canals in osseous tissue. **H.'s glands,** collections of adipose tissue in the hip, knee, and other joints, covered by synovial membrane, thought by H. to be glands secreting the synovia. **H.'s lamel'læ,** concentric layers of bone surrounding H.'s canals. **H.'s spa'ces,** spaces in bone formed by the enlargement of H.'s canals. **H.'s sys'tem,** one of H.'s canals with the lamellæ surrounding it.



HAVERSIAN SYSTEM OF BONE.

Haver'sian. Relating to Clopton Havers and the various osseous structures described by him; see *Havers*.

haw. 1. The third eyelid, or nictitating membrane,* of the horse. 2. Any growth on the conjunctiva or eyelid.

hawk. An explosive expiration made to clear the throat of mucus.

haws. Any disease of the nictitating membrane of the horse.

Hay's cho'lagogue meth'od [Matthew *Hay*, Scotch physician, 1855–1932.] In the morning, after a night without food or drink, the patient takes ¾ ounce of magnesium sulphate in two tablespoonfuls of water. **H's test** for bile in the urine: a pinch of sublimed sulphur is dropped on the urine to be tested; if bile acids are present the sulphur sinks to the bottom, if they are absent the sulphur floats.

hay-asth'ma. A severe form of hay-fever in which asthma is one of the distressing symptoms of the later stage.

hay-bacil'lus. *Bacillus subtilis.*

Hayem's disease' (a-yahn') [Georges *Hayem*, Paris physician, *1841.] Myelitis apoplectiformis. **H.'s hem'atoblast,** blood-platelet.* **H.'s se'rum,** an artificial serum composed of sodium chloride 5, sodium sulphate 10, boiled water 1000. **H.'s solu'tion,** composed of mercuric chloride 0 5, sodium chloride 1, sodium sulphate 5, distilled water 200; it is used in blood-examinations. **H.'s type,** acute nonsuppurative encephalitis, hyperplastic encephalitis.

hay-fe'ver. Autumnal catarrh; an acute irritative inflammation of the mucous membranes of the eyes and upper respiratory passages accompanied by itching and profuse watery secretion, followed later usually by bronchitis and asthma; the individual attack recurs annually at the same or nearly the same time of the year, either spring, summer, or late summer and autumn, caused by the pollen of trees, grasses, and flowering shrubs, respectively.

Hay'garth's nodes or **nodos'ities** [John *Haygarth*, English physician, 1740–1827.] Exostoses from the margins of the articular surfaces and from the periosteum and bone in the neighborhood of the joints of the fingers, leading to ankylosis and associated with lateral deflection of the fingers toward the ulnar side; they occur in arthritis deformans.

Haynes's opera'tion (hānz) [Irving S. *Haynes*, New York surgeon, *1861.] Drainage of the cisterna magna in the treatment of acute suppurative meningitis.

Ha'zen's the'orem [Allen *Hazen*, American civil engineer, *1869.] For every typhoid-fever death avoided by the purification of public water supplies, two or three deaths from other causes are also and at the same time prevented. See *Mills-Reincke phenomenon*.

hb. Abbreviation for hemoglobin.

H_3BO_3. Boric acid.

HBr. Hydrobromic acid.

H.CHO. Formaldehyde

$HC_2H_3O_2$. Acetic acid.

HCl. Hydrochloric acid

HCN. Hydrocyanic acid

H_2CrO_4. Chromic acid.

H.D. Abbreviation for hearing distance.

He. Chemical symbol of helium.

head [A.S. *hēafod*.] 1. Caput, the upper or anterior extremity of the animal body, containing the brain and the organs of sight, hearing, taste, and smell. 2. The upper, anterior, or larger extremity of any body or structure. 3 The proximal extremity of a bone, that which is nearer the cerebrospinal axis. 4 That end of a muscle which is attached to the more fixed part of the skeleton. **black h.,** comedo. **scald h.,** any crusted or markedly scaly affection of the scalp. **swelled h.,** osteoporosis of the skull.

abscess, cephalopyosis **absence,** acephalia, acephalism **back,** occiput **bandage for,** capitium, galea. **bath for,** capitiluvium **blood-tumor of,** cephalematoma. **congestion,** cephalemia **crushing the,** cephalotripsy. **description of,** cephalography. **disease of,** cephalopathy **dropsy,** cephaledema, cephalhydrocele. caput succedaneum (of fetus). **enlargement,** cephalonia, macrocephalia, macrocephaly, cephalomegaly. **front,** forehead, frons, metopon **having a boat-shaped,** cymbocephalic, scaphocephalic, cymbocephalous, scaphocephalous **having a broad,** brachycephalic, eurycephalic, bradycephalous, eurycephalous. **having a conical,** acrocephalic, acrocephalous **having a distorted,** plagiocephalic, plagiocephalous. **having a large,** macrocephalic, megalocephalic, macrocephalous, megalocephalous **having a long,** dolichocephalous, dolichocephalic. **having a narrow,** stenocephalic, stenocephalous **having a short,** brachycephalic, brachycephalous **having a small,** microcephalic, nanocephalic, microcephalous, nanocephalous. **having a thick,** pachycephalic, pachycephalous **inflammation of muscles,** cephalomyitis **measurement of,** cephalometry. **pain,** cephalagra, cephalalgia, migraine, clavus, monopegia, cephalodynia, headache, cephaloponia, hemicrania, megrim, metopodynia **puncture of the,** cephalocentesis **smallness,** microcephaly, nanocephaly **top,** sinciput **treatise on,** cephalography, cephalology. **trephining,** cephalotrypesis. **tumor,** cephaloncus, cephalophyma

Head's lines and zones [Henry *Head*, English physician, *1861.] Areas of cutaneous hyperesthesia occurring in cases of acute or subacute visceral inflammation.

headache (hed'āk). Cephalalgia, a diffuse pain in various parts of the head, not confined to the area of distribution of any nerve. **bil'ious h.,** sick h., migraine. **blind h.,** migraine. **dy'namite h.,**

powder-head, an intense, throbbing h., affecting workmen and others handling high explosives. **hel'met h.,** pressure pain felt in the upper half of the head, occurring especially in neurasthenia. **in'durative h.,** nodular h. **nod'ular h.,** radiating pain in the head accompanied by nodular swellings in the splenius, frontalis, trapezius, and other muscles. **organ'ic h.,** h. due to disease of the brain or its membranes. **re'flex h.,** h. due to disease or abnormality in some organ more or less distant from the brain; one due to eyestrain, for example. **sick h.,** migraine. **symptomat'ic h.** reflex h. **vac'uum h.,** h. due to closure of the frontal sinus without nasal symptoms of obstruction or secretion, but made worse by use of the eyes; see *Ewing's sign*(2).

headgrit (hed'grit). An epizootic in sheep, sheep cholera; called also jaundice, yellows, and plocach.

head'-kidney. Forekidney, pronephros, the anterior portion of the Wolffian body.

head-lock. The catching of the chins in twin labor, in which the first born is by the breech, the second presenting by the head.

head-louse (hed'lows). *Pediculus capitis.*

heal (hēl) [A S. *healan*] 1. To restore to health, especially to cause an ulcer or wound to cicatrize or unite. 2. To become well, to be cured; to cicatrize or close, said of an ulcer or wound.

heal-all. Prunella.

heal'er. 1. One who heals or cures, a physician. 2. One who claims to cure by Christian Science, mental healing, new thought, or other form of suggestion.

heal'ing. 1. Curing, restoring to health, promoting the closure of wounds and ulcers. 2. The process of a return to health, the closing of a wound. **h. by first intention,** etc., see *union* by first intention,* etc.

health (helth) [A S *hælth*] Absence of disease, a condition of body and mind in which all the functions are normally performed. **bill of h.,** a certificate issued by a public health official stating that the passengers on a ship or other public conveyance are free from any infectious disease and may be admitted to the city or country without detention in quarantine. **Board of H.,** a committee, appointed by the public authority, whose duty it is to formulate rules for the guidance of the public health officials. **Department of H.,** the division of a municipal or state government which executes measures for the protection of the health of the community. **health vis'itor,** a woman, usually a public health nurse,* whose duty it is to visit the homes in her district and instruct the inmates in the elements of hygiene and health preservation. **public h. nurse,** see under *nurse.* **Public H. Service,** a bureau of the Treasury Department of the U. S. federal government, served by a corps of medical officers presided over by a surgeon general; the health work of the Service consists in scientific research, domestic and insular quarantine, care of the marine hospitals, publication of sanitary reports and statistics; associated with it is the Hygienic Laboratory, among the duties of which is the inspection of all vaccines and therapeutic or diagnostic sera offered for sale in the market.

health'y. Well, in a state of normal functioning, free from disease.

heaped-up (hēpt'up). Noting a bacterial colony having coarse irregular processes projecting considerably above the level of the rest of the growth.

hear (hēr) [A.S. *hēran.*] To perceive sounds; noting the function of the ear.

hear'ing. Audition, the perception of sounds; the auditory sense, the function of the ears. **color h.,** pseudochromesthesia, a subjective color sensation being produced by certain sounds.

heart (hart) [A.S. *heorte*] A hollow muscular organ which receives the blood from the veins and propels it into the arteries. It is divided by a musculo-membranous septum into two halves—right or venous and left or arterial, each of which consists of a receiving chamber (auricle or atrium) and an ejecting chamber (ventricle); the orifices through which the blood enters and leaves the ventricles are provided with valves, the mitral and the aortic for the left ventricle, the tricuspid and the pulmonary for the right ventricle. **ar'mored h.,** calcareous deposits in the pericardium occurring in subacute or chronic inflammation. **bo'ny h.,** the presence of more or less extensive calcareous patches in the pericardium and walls of the heart. **fatty h.,** (1) fatty degeneration of the myocardium; (2) an overaccumulation of adipose tissue on the external surface of the heart with sometimes an infiltration of fat between the muscle bundles of the heart wall; cor adiposum. **fi'broid h.,** chronic inflammation of the myocardium, with overgrowth of the connective tissue. **hairy h.,** pericarditis in which the heart is seen post mortem to be covered with a shaggy, fibrinous exudate; cor hirsutum, cor tomentosum, trichocardia, shaggy pericardium. **i'cing h.,** pericarditis in which the heart is seen post mortem covered with a thick, white coat like the icing of cake. **ir'ritable h.,** soldier's heart, D.A.H., neurocirculatory asthenia, a cardiac neurosis due to overstrain, marked by rapid pulse, dyspnea, and various neurotic symptoms, associated with an increased susceptibility to fatigue, observed especially in soldiers in active war service but noted occasionally also in civil life. **left h.,** systemic h. **lux'us h.,** a German term for combined dilatation and hypertrophy of the heart, of the left ventricle chiefly. **pul'monary h.,** the right auricle (atrium) and ventricle, receiving the venous blood and propelling it to the lungs. **right h.,** pulmonary h. **skin h.,** the peripheral blood-vessels. **soldier's h.,** irritable h. **system'ic h.,** the left auricle (atrium) and ventricle, receiving the aerated blood from the lungs and propelling it throughout the body. **tiger h.,** a fatty degenerated heart in which the fat is disposed in the form of broken stripes. **tobac'co h.,** cardiac irritability marked by irregular action, palpitation, and sometimes pain, occurring as a result of the excessive use of tobacco.

absence, acardia. **atrophy,** acardiatrophia, cardiatrophy, atrophia cordis **calculus,** cardiolith. **causing contraction,** cardiocinetic, cardiokinetic **clot in,** cardiohemothrombus, cardiothrombus **contraction,** cardiostenosis, cardiarctia, systole (normal rhythmical contraction). **deficient nervous control,** acardionervia, cardianeuria **dilatation,** cardiectasia, ectasis cordis, cardieurysma, **cardianeurysma,** cardioncus, auxocardia, diastole (**normal** rhythmical dilatation). **disease,** cardiopathy, **malum cordis. displacement,** cardiectopia, ectocardia, ectopia cordis; cardioptosia, bathycardia (downward); dextrocardia, dexicardia, dexiocardia, cardianastrophe (to the right side) **dissection,** cardiotomy. **engorgement,** cardioplethora, cardiopolyemia **enveloping membrane,** pericardium, capsula cordis. **fatty,** cor adiposum, adipos's cardiaca. **fatty degeneration,** adiposicardia, steatosis cordis, cardiomyoliposia, cardioliposia, cardiodemia, cardioethmoliposia **gout,** cardiagra, **hardening,** cardiosclerosis **hastening action,** cardioaccelerator **hernia through diaphragm,** cardiocele **hypertrophy,** cor bovinum, cor taurinum, hypercardia, cardiauxe,

megacardia macrocardia **incomplete development,** cardiatelia, atelocardia, atelosis cordis **inflammation,** carditis; myocarditis (of wall), cardiovalvulitis, cardiovalvulitis, dichditis (of the valves), endocarditis (of lining membrane); pericarditis (of enveloping membrane); angiocarditis (of heart and great vessels); pancarditis, endoperimyocarditis (of all parts). **irregular action,** arrhythmia cordis, cardiataxia, cardiospasm. **lack of blood in,** acardiohemia, cardianemia, cardioanemia **large size,** megalocardia, macrocardia, cardiauxe, cor bovinum, cor taurinum, hypercardia, hypercardiotrophy **lining membrane,** endocardium. **malformation,** cardiamorphia, cardioparaplasia. **membranes,** pericardium (external), endocardium (internal). **movable,** cor mobile cor pendulum **muscle,** myocardium **pain,** cardiodynia, cardialgia, cardiagra, neuralgia cordis. cardioneuralgia, angina pectoris. **palpitation,** cardiopalmus, cardiotromus, tremor cordis, trepidatio cordis, palpitatio cordis, cardiobolus, cardiogmus **paralysis,** cardioplegia **puncture,** cardiocentesis, cardicentesis, cardiopuncture **rapid action,** tachycardia, heart-hurry **rheumatism,** cardiorheuma **rupture,** cardiorrhexis. cardioclasia **science of,** cardiology **slow action,** bradycardia, brachycardia, spaniocardia **slowing action,** cardiomhibitory **smallness,** microcardia. **softening,** cardiomalacia **spasm,** angina pectoris **suture of,** cardiorrhaphy **systolic recoil,** basculation **treatise on,** cardiagraphy, cardiography, cardiology **tuberculosis,** cardiophymia **ulceration,** cardielcosis **weakness,** cardiasthenia

heart-block. A condition in which the ventricular systole does not always follow the auricular; every other beat may be lost, or every third, or the failure of the ventricular contraction may be irregular, it is due to inability of the auriculoventricular bundle of His to transmit the systolic impulse regularly.

heart'burn. Pyrosis

heart-failure (hart'fāl-yur). Inability of the heart muscle to maintain the circulation, its embarrassment and exhaustion being due to some disturbance in the normal balance between the propulsive force and the resistance to be overcome.

heart-hurry (hart'hur-rĭ). Rapid action of the heart, due to mental or physical causes and of brief duration; tachycardia.

heart-sac. Pericardium.

heart-stroke. 1. Impact of the apex of the heart against the wall of the chest 2 Angina pectoris

heart'-water. Hydropericardium in sheep caused by *Bacillus ovis* which is carried by a tick of the genus *Eurhipicephalus* in Europe or *Amblyomma* in South Africa.

heat [A S. *hæte*] 1. The opposite of cold, a high temperature; the sensation produced by proximity to fire or an incandescent object 2. Sexual excitement in the lower animals or the period during which such excitement exists; estrus, œstrus **atom'ic h.,** the amount of heat required to raise an atom of the substance in question from 0° to 1° C **conduc'tive h.,** h. transmitted by direct contact as by an electric pad or hot-water bottle. **convec'tive h.,** h. conveyed by a warm medium in motion from its source. **conver'sive h.,** h. produced in a body by the absorption of waves which are not in themselves hot, such as the sun's rays or infrared radiation. **la'tent h.,** the amount of heat which a substance may absorb without an increase in apparent temperature, opposed to sensible h. **molec'ular h.,** the product of the specific heat of a body multiplied by its atomic weight **prickly h.,** miliaria rubra. **ra'diant h.,** the h. which is given off from any body and passes through the air in the form of waves, similar to the light waves, but of greater wavelength. **sen'sible h.,** the heat which, when absorbed by a substance, causes a rise in temperature; opposed to latent h. **specif'ic h.,** the heat required to raise any substance through 1° of temperature, compared as a standard with that raising the same volume of water one degree.

heat-ap'oplexy. Heat-stroke.

heat-cramps. Muscular spasms occurring in those who work hard in intense heat, such as laborers in iron mills, stokers, etc ; the spasms are accompanied by severe pain, dilated pupils, and a weak but not rapid pulse.

heat-exhaustion (hēt-egz-aws'chun). A form of heatstroke marked by symptoms of extreme prostration, a subnormal temperature and collapse.

Hea'ton's opera'tion [George *Heaton*, American surgeon of Boston, 1808–1879] An operation for the radical cure of inguinal hernia.

heat-prostra'tion. Heat-exhaustion.

heat-rash. Prickly heat, miliaria* rubra.

heat-ri'gor point. The degree of elevated temperature at which coagulation of protoplasm occurs with death of the cell.

heatstroke (hēt-strōk). A condition produced by exposure to an excessively high temperature, either atmospheric or artificial. The symptoms of a mild attack are headache, vertigo, sometimes slight delirium, and a temperature of 101° to 102°. In severe cases there is marked prostration with high fever, rapid pulse, sighing or stertorous respiration, hot and dry skin, and unconsciousness. In the form due to exposure to the direct rays of the sun there may be absence of fever or even a subnormal temperature.

heat-u'nit. The amount of heat required to raise a given quantity of water through 1° C. of temperature

heaves (hēvz) Pulmonary emphysema in the horse, marked by difficult expiration and sometimes a cough, broken wind, asthma

hebeosteot'omy [G *hēbē*, pubes, + *osteon*, bone, + *tomē*, incision] Division of the os pubis to favor delivery; hebotomy, pubiotomy.

hebephrenia (he-be-fre'ne-ah) [G *hēbē*, puberty, + *phrēn*, the mind] Adolescent insanity; a mental disorder occurring about the time of puberty, marked usually by melancholia and self-absorption and terminating not infrequently in dementia

Heb'erden's asth'ma [William *Heberden*, English physician, 1710–1801] Angina pectoris. **H.'s disease',** arthritis deformans. **H.'s nodes** or **nodos'ities,** hard nodules (exostoses) about the size of a pea or smaller, found on the terminal phalanges of the fingers in osteoarthritis; they are enlargements of the tubercles at the articular extremity of the distal phalanges.

hebetude (heb'e-tūd) [L *hebetudo; hebere*, to be dull] Dullness; lethargy.

he'bin [G. *hēbē*, puberty.] A hormone secreted by the anterior lobe of the hypophysis, which stimulates the sex glands. **u'rinary h.,** h found in the urine of a pregnant woman.

heboidophrenia (hĕ-boy"do-fre'nĭ-ah) [*hebephrenia* with the insertion of G. *eidos*, resemblance.] Kahlbaum's term for the simple dementia form of dementia precox.

heb'oid-par'anoid. A term characterizing the group of mental diseases embracing the juvenile insanities, dementia precox, and paranoia.

hebosteot'omy [G. *hēbē*, pubes, + *osteon*, bone, + *tomē*, a cutting] Hebotomy.

hebot'omy [G. *hēbē*, pubes, + *tomē*, cutting.] Section of the pubic bone near the symphysis in order to enlarge the pelvic diameters; hebosteotomy, pubiotomy.

Hebra's disease' (ha'brah) [Ferdinand von *Hebra*, Viennese dermatologist, 1816–1880.] Erythema multiforme. **H.'s i'odine caus'tic,** iodine and potassium iodide each 1 part, glycerin 2 parts. **H.'s itch oint'ment,** unguentum sulphuris compositum (N.F.). **H.'s lead oint'ment,** unguentum diachylon. **H.'s pityri'asis,** pityriasis rubra. **H.'s pruri'go,** true prurigo.

hecateromer'ic [G. *hekateros*, each of two, + *meros*, part.] Noting a spinal neuron which gives off processes going to both sides of the cord; usually the same as a *heteromeric* neuron.

hecatom'eral. Hecateromeric.

Hecht's test [Hugo *Hecht*, Prague physician, contemporary.] A modification of the Wassermann* test for syphilis, based on the fact that human serum is normally capable of hemolyzing ten times its volume of a 2 per cent. solution of sheep's blood; for the test are needed only an active serum, a 2 per cent. solution of sheep's blood, and an antigen.

Hecker's law (hek'er) [Karl v. *Hecker*, Munich obstetrician, 1827–1882.] In every successive childbirth the weight of the child is usually greater than that of its predecessor by from 150 to 200 grams.

hectargyre (hek'tar-jīr). One of a group of phenylsulphonic derivatives of mercury, employed in the treatment of syphilis, in conjunction with hectine, in hypodermic dose of gr. 1½–3 (0.1–0.2) every other day, alternating with hectine.

hec'tic [G. *hektikos*, habitual.] 1. Constitutional. 2. Relating to the daily rise of temperature in active tuberculosis. 3. An afternoon rise of temperature, accompanied by a flush on the cheeks, occurring in active tuberculosis. 4. The flush accompanying hectic fever. **h. fe'ver,** hectic (3). **h. flush,** hectic (4).

hec'tine. One of a group of phenylsulphonic derivatives of arsenic, recommended in the treatment of syphilis, in hypodermic doses of gr. 1½ (0.1) daily for ten to twenty days.

hec'togram [G. *hekaton*, one hundred, + *gramma*, a mark.] One hundred grams, the equivalent of 1543.7 grains.

hectoliter (hek'to-le-tur) [G. *hekaton*, one hundred, + *litra*, pound.] One hundred liters, the equivalent of 105.6 quarts or 26.4 American (22 imperial) gallons.

hectometer (hek'to-me-tur) [G. *hekaton*, one hundred, + *metron*, measure.] One hundred meters, the equivalent of 328 ft. 1 in.

hedeoma (he-de-o'mah). American pennyroyal, squawmint, the dried leaves and tops of *Hedeoma pulegioides*, a shrub of North America; an aromatic stimulant and emmenagogue in doses of ʒ1–2 (4.0–8.0) in infusion.

hed'onal [G. *hēdonē*, delight] Methyl-propyl-carbinol urethane, $C_6H_{12}O_2N$, a crystalline powder of aromatic taste and smell, employed as an hypnotic in doses of gr. 15–30 (1.0–2.0).

hed'onism [G. *hēdonē*, pleasure.] The pursuit of pleasure as an end in itself, without regard to moral or ethical considerations.

hedrocele (hed'ro-sēl) [G. *hedra*, anus, + *kēlē*, hernia.] Prolapse of the intestine through the anus, proctocele.

heel [A.S. *hēla*.] 1. Calx [BNA], the posterior, rounded extremity of the foot. 2. Talon, a posterior small cusp of a tooth. **h. bone,** os calcis, calcaneum, calcaneus [BNA]. **pain'ful h.,** a condition in which bearing the weight on the heel causes more or less severe pain; it is frequently gonorrheal in origin, and in most cases is due to a bony growth on the plantar surface of the os calcis, to a bursitis beneath the os calsis, or to an Achilles tenosynovitis. **prom'inent h.,** a condition marked by a tender swelling on the os calcis due to a thickening of the periosteum or fibrous tissue covering the back of the os calcis.

heel-fly (hēl'fli). Hypoderma bovis.

heel-jar. The patient standing on tip-toe feels pain, on suddenly bringing the heels to the ground; (1) in the spine in the case of Pott's disease; (2) in one lumbar region in case of renal calculus.

Hegar's dila'tors (ha'gar) [Alfred *Hegar*, German gynecologist, 1830–1914.] A series of cylindrical bougies of graduated sizes used to dilate the os uteri. **H.'s meth'od,** treatment of sciatica by stretching the nerve-trunk, the thigh being forcibly flexed on the abdomen while the knee is maintained in extension. **H.'s sign,** softening and compressibility of the lower segment of the uterus in early pregnancy (about the seventh week); on bimanual examination it feels to the finger in the vagina as though the neck and body of the uterus were separated, or connected by only a thin band of tissue.

heg'onon. A silver protein compound obtained by treating albumose with an ammoniacal solution of silver nitrate; a light brown powder soluble in water, employed externally in gonorrhea and other diseases in which the organic silver preparations are indicated.

Heichelheim's test (hi'khel-hīm) [Siegmund *Heichelheim*, German physician, contemporary.] Iodipin test* of the motility of the stomach.

Heidenhain's cells (hi'den-hīn) [Rudolf *Heidenhain*, German physiologist in Breslau, 1834–1897.] Certain cells in the gastric glands, see *adelomorphous* and *delomorphous cells*.* **H.'s cres'cents** or **demilunes',** Gianuzzi's* cells. **H.'s law,** glandular secretion is always accompanied by an alteration in the structure of the gland. **H.'s rods,** columnar cells in the uriniferous tubules. **H.'s stain,** H.'s iron-hematoxylin: I, iron alum 2, distilled water 100; II, hematoxylin crystals 1, 95 per cent. alcohol 10, distilled water 90.

Heilbronner's thigh (hil'bron-ner) [Karl *Heilbronner*, German physician, 1869–1914.] Flattening and broadening of the thigh, when the patient lies supine on a hard mattress, in cases of organic paralysis; absent in hysterical paralysis.

Heim's pills [Ernst Ludwig *Heim*, Berlin physician, 1747–1834.] 1. Pills of ipecac gr. ¼ (0.015), digitalis gr. ¼ (0.05), opium gr. ¼ (0.015), and extract of helenium q.s., for cough and the pyrexia of phthisis. 2. Hydragogue pills of camboge, digitalis, squill, antimony, and extract of pimpinella.

Heim-Kreysig sign (hīm-kri'zig) [see *Heim* and *Kreysig*.] A sinking in of the intercostal spaces, synchronous with the cardiac systole, in cases of adherent pericardium.

Heine's opera'tion (hi'neh) [Leopold *Heine*, German ophthalmologist, *1870.] Cyclodialysis performed for the purpose of establishing an artificial communication between the anterior chamber and the suprachorioidal space in glaucoma.

Hei'ne-Med'in disease' [Jakob *Heine*, German physician, 1800–1879; O. *Medin*, Swedish physician, 1847–1927.] A group of paralyses, including infantile spinal, Landry's, bulbar, pontine, cerebral, ataxic, neuritic, and meningitic forms, assumed to be different localizations of action by the same infectious agent; now used as a synonym for anterior poliomyelitis only.

Heineke-Mikulicz opera'tion (hi'nek-eh-mik'oo-lits) [Walter Hermann *Heinecke*, German surgeon, *1834–1901; Johann von *Mikulicz*-Radecki, Breslau surgeon, 1850–1905.] Pyloroplasty.

Heinz bod'ies (hints) [R. *Heinz*, German pharmacologist, 1865–1924.] Minute bodies sometimes seen in erythrocytes by the dark-ground illumination method, after staining with azur I, regarded by Heinz as particles of dead cytoplasm, by others as composed of cholesterin-olein; called also *β*-substance and sustantia metachromatisogranularis.

Heisrath's opera'tion (hīs'raht). An operation for trachoma, consisting of excision of the tarsal folds.

Heister's divertic'ulum (hi'ster) [Lorenz *Heister*, German anatomist, 1683–1758.] Sinus jugularis externæ or bulbus venæ jugularis superior. **H.'s valves,** crescentic folds of the mucous membrane of the cystic bile-duct, disposed obliquely in a spiral manner around the inner wall; valves of Amussat.

helcoid (hel'koyd) [G. *helkos*, ulcer, + *eidos*, resemblance.] Resembling an ulcer; ulcerous.

helcol'ogy [G. *helkos*, ulcer, + *ogia*.] The special study of the cause, prevention, and treatment of ulcers.

helcoplasty (hel'ko-plas-tĭ) [G. *helkos*, ulcer, + *plassō*, I mould.] The reparative or plastic surgery of ulcers; skin-grafting for the cure of ulcers.

helco'sis [G.] Ulceration.

hel'cosol [G. *helkos*, ulcer, + L. *solari*, to relieve.] Bismuth pyrogallate, a yellow amorphous powder; employed internally as an intestinal antiseptic in doses of gr. 5–15 (0.3–1.0), and externally in the treatment of ulcers and various skin diseases.

Helcoso'ma trop'icum [G. *helkos*, a sore, + *sōma*, body.] A name proposed by Wright for the protozoan parasite of oriental sore, apparently generically identical with the parasite of kala-azar; *Leishmania tropica*(?).

hel'enin. A stearoptene, occurring in white, acicular crystals, of aromatic taste, obtained from elecampane, *Inula helenium;* antiseptic, used externally in ozena and internally for diarrhea and bronchorrhea, in doses of gr. ½–1 (0.03–0.06).

helianthemum (hel-ĭ-an'the-mum) [G. *hēlios*, sun, + *anthemon*, flower.] The herb *Helianthemum canadense*, Canadian rock-rose, frostwort; an aromatic bitter, astringent, and alterative in dose of ℥1 (4.0); or of ℥1 (4.0) of the fluidextract.

helianthin (he-lĭ-an'thin). Methyl orange, dimethylaniline orange, gold orange, tropeolin, Poirrier's orange; an indicator, alkalies turning its solution red, acids yellow.

hel'icine [G. *helix*, a coil.] Relating to a helix; spiral.

hel'icoid [G. *helix*, a coil, + *eidos*, resemblance.] Resembling a helix; spiral.

helicopep'sin [G. *helikē*, snail-shell.] A peptic ferment extracted from snails.

helicopodia (hel'ĭ-ko-po'dĭ-ah) [G. *helix* (*helik-*), a coil, + *pous* (*pod-*), a foot.] A gait in which the foot drags and describes a partial curve.

helicotrema (hel-ĭ-ko-tre'mah) [*helix*, a spiral, + *trēma*, a hole.] A semilunar opening between the free curved edge of the lamina of the modiolus and the hamulus of the lamina spiralis ossea, through which the scala vestibuli and the scala tympani of the cochlea communicate with one another.

heliencephalitis (he-lĭ-en-sef-al-ĭ'(e')tis) [G. *hēlios*, sun, + *enkephalos*, brain, + *-itis*.] Inflammation of the brain following sunstroke.

he'liophobe [G. *helios*, sun, + *phobos*, fear.] 1: A subject of heliophobia. 2. One who is extremely sensitive to the sun's rays.

he"liopho'bia [G. *hēlios*, sun, + *phobos*, fear.] A morbid fear of exposure to the sun's rays.

helio'sis [G. *hēlios*, sun.] Sunstroke.

heliotaxis (he-lĭ-o-tak'sis) [G. *hēlios*, sun, + *taxis*, orderly arrangement] A form of phototaxis, and perhaps of thermotaxis, in which there is a tendency to growth or movement toward (*positive h.*) or away from (*negative h.*) the sun or the sunlight; heliotropism.

heliotherapy (he-lĭ-o-ther'a-pĭ) [G. *hēlios*, sun, + *therapeia*, treatment.] Treatment of disease by exposure to the direct rays of the sun.

heliot'ropin. Piperonal, a methylene derivative of protocatechuic aldehyde, used as a perfume.

heliotropism (he-lĭ-ot'ro-pizm) [G. *hēlios*, sun, + *tropē*, a turning.] Heliotaxis.

Heliozo'a [G. *hēlios*, sun, + *zōon*, animal.] Sun-animals, a subclass of *Actinopoda* in which there is no chitinous capsule dividing the endoplasm from the ectoplasm; chiefly fresh-water forms.

he'lium. A gaseous element, symbol He, atomic weight 4, first discovered in the sun; it is given forth, in the form of the alpha rays, from radium and radium emanation.

he'lix, gen. *heli'cis* [G. coil.] The margin of the auricle, a folded rim of cartilage forming the upper part of the anterior, the superior, and the greater part of the posterior edges of the auricle.

Hellat's sign (hel'at) [Piotr *Hellat*, Petrograd otologist, 1857–1912.] In cases of mastoid suppuration, a tuning fork applied to the diseased part is heard for a shorter time than when applied at any other part of the skull.

hellebore (hel'e-bor). A plant of the genus *Helleborus*, especially *H. niger*, and of other similar genera **Amer'ican h.,** veratrum viride. **black h.,** helleborus. **false h.,** American h **fet'id h.,** stinking h. **green h.,** (1) the rhizome and roots of *Helleborus viridis*, used for the same purposes as black h.; (2) American h. **stink'ing h.,** the rhizome of *Helleborus fœtidus*, employed for the same purposes as black h. **swamp h.,** **white h.,** veratrum viride **win'ter h.,** *Enanthis hiemalis*, a plant closely allied to *Helleborus*.

helleborein (hel-e-bor'e-in). A glucoside from black hellebore; a local anesthetic, used in the eye; and a heart stimulant in doses of gr. ⅛–½ (0.01–0.02)

helleb'orin. A glucoside from green hellebore narcotic, but exceedingly poisonous.

helleborism (hel'e-bor-izm). 1. A condition resulting from poisoning by veratrum. 2. Treatment of insanity by hellebore.

helleb'orus [G. *helleboros*.] Black hellebore, Christmas (or New Year) rose, the dried rhizome and roots of *Helleborus niger*, cardiac and arterial tonic, diuretic, and in large doses cathartic.

Hel'ler's test [Johann Florenz *Heller*, Vienna pathologist, 1813–1871.] 1. For albumin: nitric acid is poured very carefully down the side of a test-tube containing urine; the fluids do not mix, but at the place where they touch a white disc appears if albumin is present. 2. For blood: a strong solution of caustic potash is added to the suspected urine and heated; a precipitate of earthy phosphates is thrown down which is of a red or reddish brown color if blood is present. 3. For sugar: Moore's* test.

Hell'in's law. Twins occur once in 80 pregnancies, triplets once in 80 × 80, or 6,400 pregnancies; quadruplets once in 80 × 80 × 80, or 512,000 pregancies.

Helm'holtz's ax'is lig'ament [Hermann Ludwig Ferdinand von *Helmholtz*, German physiologist, 1821–1894.] A ligament forming the axis about which the malleus rotates; it consists of two portions extending from the anterior and the posterior border, respectively, of the notch of Rivinus to the malleus. **H.'s the'ory** of color-blindness, see *Young*-Helmholtz.*

hel'minth [G. *helmins(helminth-)*, a worm.] An intestinal vermiform parasite.

helminthagogue (hel-minth'ă-gog) [G. *helmins(helminth-)*, worm, + *agōgos*, leading] Anthelmintic, vermifuge.

helminthemesis (hel-min-them'e-sis) [G. *helmins (helminth-)*, a worm, + *emesis* vomiting.] The vomiting or expulsion through the mouth of intestinal worms.

helminthiasis (hel-min-thi'a-sis). The condition of having intestinal vermiform parasites.

helmin'thic. Anthelmintic, helminthagogue, vermifuge.

hel'minthism. Helminthiasis.

helminthochorton (hel-min-tho-kor'ton) [G. *helmins*, worm, + *chorton*, herb.] Corsican moss, *Sphærococcus helminthochorton*, a marine plant employed as an antipyretic and vermifuge in doses of 4 ounces (125.0) of a decoction of 4 drams to the pint.

helmin'thoid [G. *helmins(helminth-)*, worm, + *eidos*, resemblance.] Worm-like.

helminthology (hel-min-thol'o-jĭ) [G. *helmins(helminth-)*, worm, + *-logia*.] The branch of science which treats of worms; especially the branch of zoology and of medicine which has to do with intestinal vermiform parasites.

helminthophobia (hel-min-tho-fo'bĭ-ah) [G. *helmins (helminth-)*, worm, + *phobos*, fear.] A morbid dread or delusion of infestation with intestinal worms.

hel'mitol. Hexamethylene tetramine anhydromethylene citrate, $C_7H_6O_7.(CH_2)_6N_4$; colorless crystals, soluble in 10 parts of water; a urinary antiseptic in doses of 10–15 grains (0.6–1.0).

Heloder'ma [G. *hēlos*, nail, + *derma* skin] A genus of poisonous lizards, the Gila monster. It is so named because of the tubercular scales which cover its body.

heloma (he-lo'mah) [G. *hēlos*, a nail.] Clavus, a corn, a callosity on the hand or foot. **h. du'rum**, hard corn. **h. milia're**, seed corn. **h. moll'e**, soft corn.

Helonias (hĕ-lo'nĭ-as) [G. *helos*, a marsh.] A genus of plants of the family *Liliaceæ*, the rhizome and roots of one species of which, **H. dioi'ca**, or *Chamælirium luteum*, false unicorn root (helonias, N.F.), are employed in medicine as a vermifuge in dose of gr. 30 (2.0); a fluidextract is official in the N.F. In eclectic practice the drug is used as a uterine tonic, in habitual abortion, leucorrhea, and dysmenorrhea in dose of 1–4 drops of the specific medicine in water every two hours.

hel'onin. An extractive of *Helonias dioica*, employed as a vermifuge in doses of gr. 2–4 (0.13–0.25).

helot'omy [*heloma* + G. *tomē*, cutting.] Cutting a corn. The surgical treatment of corns.

Helweg's bun'dle (hel'veg) [Hans Kristian Saxtorph *Helweg*, Danish physician, *1847.] A slender bundle of nerve-fibers in the lateral fasciculus proprius of the spinal cord, connected above with the olivary nucleus; olivospinal tract.

hemabarometer (hem"ah-bar-om'e-tur) [G. *haima*, blood, + *baros*, weight, + *metron*, measure.] An instrument for determining the specific gravity of the blood.

hemachromatosis (hem-ah-kro-mă-to'sis). Hemochromatosis.

hemachrome (hem'ah-krōm) [G. *haima*, blood, + *chrōma*, color.] The coloring matter of the blood, hemoglobin.

hemachrosis (hem-ah-kro'sis) [G. *haima*, blood, + *chrōsis*, coloration.] An intensified redness of the blood.

hemacytom'eter [G. *haima*, blood, + *kytos*, cell, + *metron*, measure.] An appliance for counting the blood-cells; hemocytometer, hematometer, hemometer.

hemacytozo'on [G. *haima*, blood, + *kytos*, hollow (a cell), + *zōon*, animal] A protozoan parasite of the red blood-corpuscles.

he'mad [G. *haima*, blood, + L. *ad*, to.] Toward the ventral or hemal (as opposed to the dorsal or neural) aspect of the body.

hemaden (hem'ă-den) [G. *haima*, blood, + *adēn*, gland.] Literally blood-gland, a term which has been applied to denote a ductless gland.

hemadenology (hem"ă-de-nol'o-jĭ) [G. *haima*, blood, + *adēn*, gland, + *-ology*. Endocrinology, the science relating to the internal secretions and their relation to general diseases.

hemadosteno'sis, hæmadosteno'sis [G. *haimas(haimad-)*, a stream of blood, + *stenōsis*, narrowing.] Contraction of the arteries

hemadromograph (hem-ah-drom'o-graf) [G. *haima*, blood, + *dromos*, a course, + *graphō*, I record.] An instrument for recording the rapidity of the blood-current

hemadromom'eter [G. *haima*, blood, + *dromos*, a course, + *metron*, measure.] An instrument for determining the rapidity of the blood-current.

hemadynamometer (hem"ah-di-nă-mom'e-tur) [G *haima*, blood, + *dynamis*, force, + *metron*, measure] An instrument for determining the degree of blood-pressure.

hemadynamom'etry [G. *haima*, blood, + *dynamis*, force, + *metron*, measure] Measurement of the blood-pressure.

hemafa'cient [G. *haima*, blood, + L. *facere*, to make.] Hematopoietic.

hemagglu'tinin, hæmagglu'tinin. A specific serum constituent (antibody) which causes agglutination or clumping of red blood-corpuscles.

hemagglutination (hem-ag-glu-tĭ-na'shun) The clumping of red blood-cells.

hemagogic (hem-ă-goj'ik). Hemagogue (1).

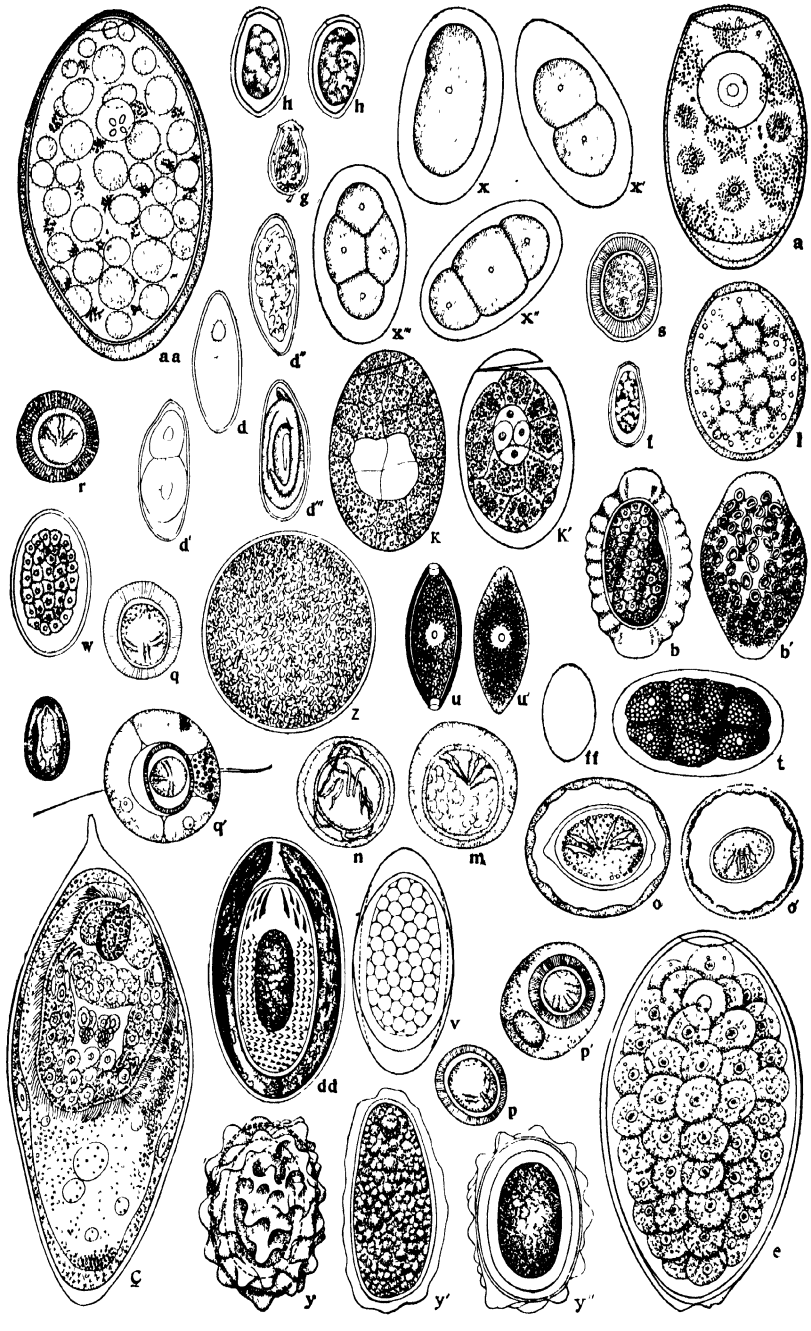
hemagogue (hem'ă-gog) [L *haima*, blood, + *agōgos*, leading] 1. Promoting a flow of blood, emmenagogue 2. An agent which promotes a discharge of blood, especially the menstrual flow.

he'mal, hæ'mal [G. *haima*, blood] 1. Relating to the blood or blood-vessels. 2. Referring to the ventral side of the spinal axis where the heart and great vessels are located; opposed to neural. **h. arch**, the ring of the typical vertebra anterior to the central axis, enclosing the heart and other viscera; it is formed in man by the ribs and sternum. **h. cav'ity**, the cavity anterior to the cerebrospinal axis, containing the thoracic and abdominal viscera. **h. spine**, the anterior portion of the typical vertebra, represented in man by the sternal segments.

hemalbu'min. One of several therapeutic preparations of the albuminoids of the blood.

hemal'um. A mixture of hematoxylin and alum, used as a stain in histology.

Hemame'ba, Hæmamœ'ba. 1. A genus of ameboid parasites of the blood. 2. A leucocyte. **h.**



EGGS OF HUMAN PARASITES: *a*, Paragonimus westermani; *aa*, Fasciola magna, *b*, *b'*, Dicotophyme renale; *c*, Schistosoma hematobium· *d*, *d'*, *d''*, *d'''*, Oxyuris vermicularis; *dd*, Gigantorhynchus gigas, *e*, Fasciola hepatica; *f*, Opisthorchis felineus; *g*, Opisthorchis sinensis; *i*, Cotylogonimus heterophyes, *k*, *k'*, Dibothriocephalus latus; *n*, Hymenolepis nana; *o*, *o*, Hymenolepis diminuta; *p*, *p'*, Tenia solium, *q*, *q'*, Tenia saginata; *u*, *u'*, Trichocephalus trichiuris; *w*, Uncinaria duodenalis, *x*, *x'*, *x''*, *x'''*, Uncinaria americana; *y*, *y'*, Ascaris lumbricoides, *z*, Ascaris canis.

leucæ'miæ mag'na, a leucocyte asserted to be pathogenic of myelogenous leucemia. **H. leucæ'miæ par'va,** a leucocyte asserted to be pathogenic of lymphatic leucemia.

hemamebi'asis. Any infection with ameboid blood-cell parasites, as in malaria.

hemanal'ysis [G. *haima*, blood.] Analysis of the blood, a blood-examination.

hemangiectasia (hem-an-jĭ-ek-ta'sĭ-ŭ) [G. *haima*, blood, + *angeion*, vessel, + *ektasis*, dilatation.] Dilatation of blood vessels.

hemangiectasis (hem-an-jĭ-ek'ta-sis). Hemangiectasia.

hemangioendothelioblastoma (hem-an'''jĭ-o-en-do-the'''lĭ-o-blas-to'mah) [G. *haima*, blood, + *angeion*, vessel, + *endothelium* + *blastos*, germ, + *-ōma.*] A new growth of endothelial cells lining the blood-vessels, derived from the mesenchyma.

hemangioendothelioma (hem-an''jĭ-o-en-do-the-lĭ-o'-mah) [G. *haima*, blood, + *angeion*, vessel, + *endothelium* + *-ōma*] A tumor of variable size, often located on the cerebral meninges, formed of an overgrowth of the endothelium of the minute blood-vessels arranged in concentric whorls embedded in a cellular stroma. **h. tubero'sum mul'tiplex,** an eruption of papules and nodules resembling spiradenoma, but pinkish in color, due to hyperplasia of the endothelium of the cutaneous blood-vessels.

hemangioma, pl. *hemangio'mata* (hem-an-jĭ-o'mah) [G. *haima*, blood, + *angeion*, vessel, + *-ōma*] A tumor composed chiefly of multiplied and dilated blood-vessels.

heman''giosarco'ma. A mixed hemangioma and sarcoma.

hemapheic (hem-ă-fe'ik). Relating to hemaphein.

hemaphe'in [G. *haima*, blood, + *phaios*, dusky.] A pathological pigment derived from incompletely elaborated hemoglobin; it is said to be a mixture of indican and urobilin.

hemaphe'ism. The presence of hemaphein in the blood-serum.

hemapophysis, hæmapophysis (hem-ah-pof'i-sis). The element next the hemal spine in the typical vertebra, represented in man by any one of the costal cartilages.

hemarthro'sis [G. *haima*, blood, + *ar'hron*, joint.] Effusion of blood into the cavity of a joint.

hemastrontium (hem-ă-stron'shyum). A stain used in histology, made by adding strontium chloride to a solution of hematein and aluminum chloride in citric acid and alcohol.

hematachometer, hæmatachometer (hem-ă-tă-kom'-e-ter) [G. *haima*, blood, + *tachys*, swift, + *metron*, measure] An instrument for determining the rapidity of the blood-current.

hematapos'tasis [G *haima*, blood, + *apostasis*, departure.] Hematoplania.

hemataposte'ma (hem''at-ă-pos-te'mah) [G. *haima(haimat-)*, blood, + *apostēma*, abscess.] An abscess into which blood has been effused.

hemat'ein. An oxidation product of hematoxylin.

hematemesis, hæmatemesis (hem-ah-tem'e-sis) [G. *haima*, blood, + *emesis*, vomiting.] Vomiting of blood.

hematenceph'alon [G. *haima*, blood, + *enkephalos*, brain.] Cerebral hemorrhage.

hemather'apy. Hematotherapy

hemathermal, hæmathermal (hem-ah-ther'mal) [G. *haima*, blood, + *thermos*, warm.] Warm blooded, noting a mammal or bird whose blood is of a constant temperature.

hemather'mous, hæmather'mous. Hemathermal.

hematho'rax. Hemothorax.

hemat'ic. 1. Relating to blood, hemic. 2. A remedy for anemia or other morbid states of the blood.

hem'atid, hæm'atid [G. *haima(haimat-)*, + *idios*, individual.] A red blood-cell.

hematidrosis, hæmathidrosis (hem''at-i-dro'sis) [G. *haima*, blood, + *hidrōs*, sweat.] The excretion of sweat stained with blood or blood-pigment.

hematim'eter. Hematometer, hematocytometer.

hem'atin. A brownish blood-pigment, the acid radicle which unites with globin to form hemoglobin, its composition is given as $C_{34}H_{34}N_4FeO_5$.

hematinemia (hem-ă-tin-e'mĭ-ah) [*hematin* + G. *haima*, blood] The presence of hematin in the circulating blood; it has been noted in a case of acute chromium poisoning.

hematin'ic. 1. Improving the condition of the blood. 2. Hematic(2).

hematinom'eter [G. *metron*, measure.] A device for determining the amount of coloring matter in the blood, hemoglobinometer.

hematinu'ria, hæmatinu'ria [G. *ouron*, urine] The presence of hematin in the urine, hemoglobinuria.

hematischesis (hem-ă-tis'ke-sis) [G. *haima(haimat-)*, blood, + *schesis*, a checking.] The arrest of hemorrhage.

hematischetic (hem-ă-tis-ket'ik). Styptic, checking hemorrhage

hemato-. For words not formed under this prefix see *hemo-*.

hematoaërometer (hem''ă-to-a-e-rom'e-tur) G *haima*, blood, + *aër*, air, + *metron*, measure] An instrument for estimating the pressure of the gases in the blood.

hemato'bium, hæmato'bium [G. *haima*, blood, + *bios*, life] A blood parasite, hematozoon.

hem'atoblast, hæm'atoblast [G. *haima*, blood, + *blastos*, germ.] Platelet.

hematocathar'sis, hæmatocathar'sis [G. *haima*, blood, + *catharsis*, cleansing.] Purification of the blood; lavage of the blood.

hematocele, hæmatocele (hem'ă-to-sēl) [G. *haima*, blood, + *kēlē*, tumor] 1. A blood-cyst. 2. An effusion of blood into a canal or a cavity of the body, hæmatocœlia 3. A swelling due to effusion of blood into the tunica vaginalis testis. **pel'vic h.,** an intraperitoneal effusion of blood into the pelvis. **puden'dal h.,** an effusion of blood into the labium majus.

hematocelia, hæmatocœlia (hem-ă-to-se'lĭ-ah) [G *haima(haimat-)*, blood, + *koilia*, cavity.] An effusion of blood into the peritoneal cavity.

hematoceph'alus, hæmatoceph'alus [G. *haima*, blood, + *kephalē*, head] A fetus with a large intracranial effusion of blood.

hematochezia, hæmatochezia (hem-ă-to-ke'zĭ-ah) [G. *haima(haimat-)*, blood, + *chezō*, I go to stool.] The passage of bloody stools.

hematochlo'rin. A green coloring matter obtained from the placenta.

hematochromato'sis. Hemochromatosis.

hematochyluria, hæmatochyluria (hem''ă-to-ki-lu'-rĭ-ah) [G. *haima*, blood, + *chylos*, juice, + *ouron*, urine.] The presence of both blood and chyle in the urine.

hematocol'pos, hæmatokol'pos [G. *haima(haimat-)*, blood, + *kolpos*, vagina] An accumulation of menstrual blood in the vagina in consequence of imperforate hymen or other obstruction.

hem'atocrit [G. *haima(haimat-)*, blood, + *krinō*, I separate.] A centrifuge for separating the solid elements of the blood from the plasma.

hematocryal, hæmatocryal (hem-ă-tok'rĭ-al) [G. *haima(haimat-)*, blood, + *kryos*, cold.] Cold blooded, noting reptiles and fishes whose blood

is approximately that of the surrounding medium.

hematocrys'tallin. Hemoglobin

hem'atocyst, hæm'atocyst [G *haima(haimat-)*, blood, + *kystis*, bladder.] A blood-cyst, an effusion of blood enclosed in a membranous sac.

hematocys'tis, hæmatocys'tis. An effusion of blood into the bladder.

hem'atocyte [G. *haima*, blood, + *kytos*, cell.] A blood-corpuscle.

hematocytoblast (hem"ă-to-si'to-blast) [G. *haima*, blood, + *kytos*, cell, + *blastos*, germ.] Granuloblast, leucoblast, lymphoidocyte, myeloblast.*

hematocytolysis, hæmatocytolysis (hem"ă-to-si-tol'i-sis) [G. *haima(haimat-)*, blood, + *kytos*, cell, + *lysis*, solution.] Hemolysis, destruction of the red blood-corpuscles with setting free of the contained hemoglobin.

hematocytom'eter, hæmatocytom'eter. Hemocytometer; see cut under *Thoma-Zeiss*.

hematocytozoon, hæmatocytozoon (hem"ă-to-si-to-zo'on) [G. *haima(haimat-)*, blood, + *kytos*, cell, + *zōon*, animal.] A protozoan parasite of the red blood-corpuscles.

hematocyturia, hæmatocyturia (hem"ă-to-si-tu'rĭ-ah) [G. *haima(haimat-)*, blood, + *kytos*, cell, + *ouron*, urine.] The presence of red blood-corpuscles in the urine; true hematuria as distinguished from hemoglobinuria.

hem"atodynamom'eter. Hemodynamometer.

hematodystrophy (hem"ă-to-dis'tro-fĭ) [G. *haima (haimat-)*, blood, + *dys-*, difficult, + *trophē*, nourishment.] A depraved blood condition, such as anemia or oligocythemia.

hematoerythroidin (hem-ă-to-er-ĭ-throy'din) [G. *haima*, blood, + *erythros*, red (corpuscles).] A preparation made from the blood of an animal whose thyroid gland has been removed, intended for use in the treatment of Graves' disease and of other conditions of hyperthyroidism.

hem'atogen. One of several proprietary remedies containing iron.

hematogen'esis, hæmatogen'esis [G. *haima(haimat-)*, blood, + *genesis*, production] The formation of blood, hematopoiesis.

hematogenic, hematogenous (hem-ă-to-jen'ik, hem-ă-toj'en-us). Forming blood, hematopoietic.

hematoglo'bin, hematoglob'ulin. Hemoglobin.

hematogonia (hem"ă-to-go'nĭ-ah) [G. *haima(haimat)*, blood, + *gonē*, generation] Lymphoidocyte, myeloblast.*

hem"atohidro'sis. Hematidrosis.

hematohistioblast (hem"ă-to-his'tĭ-o-blast) [G. *haima*, blood, + *histion*, cloth, tissue, + *blastos*, germ.] Hemohistioblast, an indifferent polymorphous white blood cell (granular leucocyte, lymphocyte, or monocyte) of large size and irregular shape, having a single round or oval nucleus with a characteristic reticulated internal structure likened to that of a sponge; it has distinct nucleoli and basophilic cytoplasm in varying amount, with or without granules.

hem"atohis'ton. Globin, a protein derivation of hemoglobin.

hem'atoid, hæm'atoid [G. *haima(haimat-)*, blood, + *eidos*, resemblance.] Sanguineous, bloody; resembling blood.

hematoidin (hem-ă-toy'din) [*hematin* + G. *eidos*, appearance.] An iron-free substance resulting from the splitting up of hematin in the phagocytic digestion of the effete erythrocytes; it is apparently identical in chemical composition with bilirubin; it may be formed independently of cell-activity and is found in the remains of old blood extravasations and clots.

hem'atolith, hæm'atolith. Hemolith.

hematol'ogist. One versed in hematology, one skilled in making blood examinations.

hematol'ogy, hæmatol'ogy [G. *haima(haimat-)*, blood, + *-logia*.] The branch of medicine which has to do with the blood in all its relations—anatomy, physiology, pathology, semiology, and therapeutics.

hematolymphangioma, hæmatolymphangioma (hem"ă-to-limf"an-ji-o'mah) [G. *haima(haimat-)*, blood, + L. *lympha*, lymph, + G. *angeion*, vessel, + *-ōma*.] A tumor composed of dilated blood-vessels and lymphatics.

hematol'ysis, hæmatol'ysis. Hemolysis.

hematolyt'ic. Hemolytic.

hemato'ma, hæmato'ma [G. *haima(haimat-)*, blood, + *-ōma*.] A blood-cyst, hematocyst; a tumor containing effused blood. **h. au'ris,** othematoma.

hematomancy, hæmatomantia (hem'ă-to-man-sĭ, hem'ă-to-man'shyah) [G. *haima(haimat-)*, blood, + *manteia*, divination.] Diagnosis by means of blood examinations.

hem"atomediasti'num (hem"ă-to-me-dĭ-ah-sti'num) An effusion of blood into the mediastinum.

hematometer (hem-ă-tom'e-tur) [G. *haima (haimat-)*, blood, + *metron*, measure.] 1. Hemocytometer. 2. Hemodynamometer.

hematometra, hæmatometra (hem"ă-to-me'trah) [G. *haima(haimat-)*, blood, + *mētra*, uterus.] Retention of blood within the cavity of the uterus.

hematom'etry, hæmatom'etry [G. *haima*, blood, + *metron*, measure.] Examination of the blood to determine the number and varieties of the blood-cells and the percentage of hemoglobin.

hematomphalocele, hæmatomphalocele (hem"at-om, fal-o-sēl) [G. *haima(haimat-)*, blood, + *omphalos*, umbilicus, + *kēlē*, hernia.] An umbilical hernia into which an effusion of blood has taken place.

hematomyelia, hæmatomyelia (hem"ă-to-mi-e'lĭ-ah) [G. *haima(haimat-)*, blood, + *myelos*, marrow.] An effusion of blood into the substance of the spinal cord; see *hematorrhachis*.

hematomyelitis, hæmatomyelitis (hem-ă-to-mi-el-il-(e')tis). Hemorrhagic inflammation of the spinal cord.

hematomy'elopore, hæmatomy'elopore [G. *haima (haimat-)*, blood, + *myelos*, marrow, + *poros*, a pore.] The formation of porosities in the spinal cord as a result of hemorrhages.

hematonephro'sis [G. *haima*, blood, + *nephros*, kidney, + *-ōsis*.] Distention of the pelvis of the kidney with blood.

hematon'ic. Blood tonic, a remedy which tends to raise the hemoglobin percentage.

hematopathol'ogy [G. *haima*, blood, + *pathology*.] The science dealing with morbid states of the blood.

hematopericar'dium. An effusion of blood into the pericardial sac.

hematoperitone'um. Hemoperitoneum.

hematopex'in [G. *haima(haimat-)*, blood, + *pēxis*, fixation.] Hemopexin.

hematophagia, hæmatophagia (hem"ă-to-fa'jĭ-ah) [G. *haima(haimat-)*, blood, + *phagō*, I eat.] 1. Living on the blood of another animal. 2. The drinking of blood as a therapeutic measure. 3. Destruction of red blood cells by phagocytes.

hematophagocyte (hem"ă-to-fag'o-sīt) [G. *haima*, blood, + *phagō*, I eat, + *kytos*, cell.] Hemophagocyte, a leucocyte which destroys the red blood cells.

hematoph'agous [G. *haima(haimat-)*, blood, + *phagō*, I eat.] Subsisting on blood.

hematophagus (hem-ăt-tof'a-gus) [G. *haima (haimat-)*, blood, + *phagō*, I eat.] A blood eater; referring especially to blood-sucking insects.

hematophil'ia. Hemophilia.

hematopho'bia [G. *haima (haimat-)*, blood, + *phobos*, fear.] Hemaphobia.

hematophyte (hem'ă-to-fīt) [G. *haima(haimat-)*, blood, + *phyton*, plant.] A vegetable organism, or bacterium, in the blood.

hematopla'nia, hæmatopla'nia [G. *haima(haimat-)*, blood, + *planē*, wandering.] Vicarious menstruation.

hematoplas'tic [G. *haima(haimat-)*, blood, + *plassō*, I form.] Relating to blood formation; hematopoietic.

hematopoiesis, hæmatopoiesis (hem″ă-to-poy-e'sis) [G. *haima(haimat-)*, blood, + *poieō*, I make.] The formation of blood.

hematopoietic (hem″ă-to-poy-et'ĭk). Relating to hematopoiesis; hematogenic, hematoplastic.

hematopoietin (hem-ă-to-poy'ĕ-tĭn). A hypothetical substance of the nature of a hormone, causing regeneration of the red blood cells; its action is said to be inhibited by removal of the thymus and thyroid glands, but then reactivated by removal of the spleen.

hematopor'phyrin [G. *haima(haimat-)*, blood, + *porphyra*, purple.] A purple substance resulting from the decomposition of hemoglobin; its composition is that of hematin without the iron.

hematoporphyrinuria (hem″ă-to-por″fi-rin-u'rĭ-ah) [*hematoporphyrin* + G. *ouron*, urine] The excretion of hematoporphyrin in the urine, occurring as a result of the decomposition of hemoglobin; it occurs sometimes after the administration of sulphonal, trional, and tetronal, and in other conditions

hematopo'sia (hem″ă-to-po'sĭ-ah) [G. *haima (haimat-)*, blood, + *posis*, a drinking.] Hematophagia (2).

hematorrhachis, hæmatorrhachis (hem-ă-tor'ă-kis) [G *haima*, blood, + *rhachis*, spine.] Spinal apoplexy, hemorrhage (1) into the spinal canal external to the cord, either within or outside the dura (*h. exter'na*); or (2) into the substance of the cord (*h. inter'na, hematomyelia*).

hematorrhea, hæmatorrhœa (hem″ă-tor-re'ah) [G. *haima(haimat-)*, blood, + *rhoia*, flow.] Profuse hemorrhage.

hematosal'pinx, hæmatosal'pinx [G. *haima(haimat-)*, blood, + *salpinx*, a trumpet] A retention of blood in the Fallopian tube.

hematoscheocele, hæmatoscheocele (hem-ă-tos'ke-o-sēl) [G. *haima(haimat-)*, blood, + *oscheon*, scrotum, + *kēlē*, hernia, tumor.] An accumulation of blood in the scrotal cavity

hem'atoscope [G. *haima(haimat-)*, blood, + *skopeō*, I examine.] 1. An instrument for spectroscopic examination of the blood. 2. Hemoglobinometer

hematos'copy. The ocular examination of the blood by the spectroscope or the hemoglobinometer.

hematosep'sis [G. *haima(haimat-)*, blood, + *sēpsis*, putrefaction.] Septicemia.

hem'atosin. Hematin.

hemato'sis. 1. Hematopoiesis. 2. Oxygenation of the venous blood in the lungs.

hematospec'troscope. A spectroscope especially adapted to examination of the blood.

hematospectros'copy. Examination of the blood by means of the spectroscope.

hematospermatocele (hem″ă-to-spur-mat'o-sēl) [G. *haima*, blood, + *sperma*, seed, + *kēlē*, tumor.] A spermatocele containing blood.

hematospermia (hem'ă-to-spur'mĭ-ah). Discharge of blood-tinged semen.

hematostat'ic. 1. Hemostatic. 2. Due to stagnation or arrest of blood in the vessels of the part.

hematos'teon [G. *haima*, blood, + *osteon*, bone] Bleeding in the medullary cavity of a bone.

hematother'apy, hæmatother'apy [G. *haima*, blood, + *therapeia*, treatment.] The treatment of disease by the administration of fresh blood or of some preparation from blood.

hematother'mal. Hemathermal

hematotho'rax. The presence of blood in the chest; hemothorax.

hematotox'ic. Relating to toxemia.

hematotox'in. Hematoxin, hemolysin.

hematotrachelos, hæmatotrachelos (hem-ă-to-trăke'los) [G. *haima(haimat-)*, blood, + *trachēlos*, neck] Distention of the cervix uteri with accumulated blood.

hematotym'panum. Accumulation of blood in the tympanum, or middle ear.

hematox'ic. Hematotoxic, relating to toxemia.

hematox'in. A specific blood poison, hemolysin.

hematox'ylin. A yellowish crystalline compound, $C_{16}H_{14}O_6$, containing the coloring matter of hematoxylon or logwood; used as a dye in histology.

hematox'ylon. Hæmatoxylon* (N.F.), hæmatoxyli ligni (Br.), logwood.

hematozo'ic, hæmatozo'ic [G. *haima*, blood, + *zōon*, animal] Parasitic in the blood of vertebrates, noting certain protozoa

hematozo'on, hæmatozo'on [G. *haima(haimat-)*, blood, + *zōon*, animal.] An animal parasite of the blood.

hematu'ria, hæmatu'ria [G. *haima(haimat-)*, blood, + *ouron*, urine.] The passage of blood in the urine. **angioneurot'ic h.,** renal epistaxis.*

hemautograph (hem-aw'to-graf) [G. *haima*, blood, + *autos*, self, + *graphō*, I write.] A tracing made on a moving strip of paper by a minute spurt from a punctured artery.

hemelytrometra, hæmelytrometra (hem-el″ĭ-tro-me'trah) [G. *haima*, blood, + *elytron*, vagina, + *mētra*, uterus] An accumulation of blood in both uterus and vagina in cases of imperforate hymen.

hemen″dothelio'ma. A tumor due to proliferation of the endothelium of the blood-vessels.

hemeralopia (hem″er-al-o'pĭ-ah) [G. *hēmera*, day, + *alaos*, obscure, + *ōps*, eye.] 1. Day-blindness, inability to see as distinctly in a bright light as in a dim one. 2. Often incorrectly used to denote night-blindness, or nyctalopia.

hemesia (hem-e'sĭ-ah). Trade name of a preparation of quinine and urea hydrochloride, employed as a local anesthetic.

hemi- [G.] A prefix signifying one-half.

hemiablepsia (hem″ĭ-ă-blep'sĭ-ah) [G. *hēmi-*, half + *a-* priv. + *blepō*, I see.] Hemianopsia.

hemiacar'dius [G. *hēmi-*, half, + *a-* priv + *kardia*, heart.] One of twin fetuses, in which only a part of the circulation is effected by its own heart, the rest being moved by the heart of the other twin.

hemiachromatopsia (hem″ĭ-ă-kro-mă-top'sĭ-ah) [G. *hēmi-*, half, + *a-* priv. + *chrōma*, color, + *opsis*, vision.] Loss of color perception in the half of each visual field, color hemianopsia.

hemiageusia, hemiaguestia (hem-e-ă-gu'sĭ-ah, hem-e-a-gŭs'tĭ-ah) [G. *hēmi-*, half, + *a-* priv. + *geusis*, taste.] Loss of the sense of taste on one lateral half of the tongue.

hemialbu'min. Hemiprotein.

hemialbumose (hem-ĭ-al'bu-mōz). Propeptone, a crystalline albuminoid product of the digestion of certain proteins with pepsin or trypsin; it occurs also in the bone-marrow.

hemialbumosu'ria. The presence of hemialbumose in the urine.

hemialgia (hem-ĭ-al'jĭ-ah) [G. *hēmi-*, half, + *algso*, pain.] Pain affecting one entire half of the body.

hemiamblyo'pia. Amblyopia affecting one-half of the visual field.

hemiamyosthenia (hem″ĭ-am″i-o-sthe'nĭ-ah) [G. *hēmi-*, half, + *a-* priv. + *mys* (*myo-*), muscle, + *stheneia*, strength.] Hemiparesis, muscular weakness involving one side of the body.

hemianacu'sia [G *hēmi-*, half, + *an-* priv. + *akousis*, hearing] Deafness in one ear.

hemianalge'sia. Analgesia, or loss of sensibility to pain, affecting one side of the body

hemianesthesia, hemianæsthesia (hem″ĭ-an-es-the'zĭ-ah). Anesthesia, or loss of tactile sensibility, on one side of the body. **alter'nate h.,** h. affecting the head on one side and the body and extremities on the other side **crossed h.,** alternate h.

hemiano'pia [G. *hēmi-*, half, + *an-* priv. + *ōps*, eye.] Hemianopsia.

hemianop'sia [G. *hēmi-*, half, + *an-* priv. + *opsis*, vision.] Loss of vision for one-half of the visual field. **ab'solute h.,** h. as regards color, h ht, and form. **bilat'eral h.,** h. affecting both eyes **bina'sal h.,** crossed h. **binoc'ular h.,** bilateral h. **bitem'poral h.,** crossed h. **complete' h.,** h. involving the entire half of each eye **crossed h.,** heteronymous h., loss of sight in the inner (*binasal h.*) or the outer (*bitemporal h.*) half of the visual field of each eye. **equilat'eral h.,** homonymous h. **heteron'ymous h.,** crossed h. **homon'ymous h.,** lateral or equilateral h., loss of sight in the corresponding (right or left) lateral halves of the eyes. **incomplete' h.,** h involving less than half the visual field of each eye. **lat'eral h.,** homonymous h. **quadran'tic h.,** tetartanopia **rel'ative h.,** h. regarding only the color sense or form sense or both, the light sense remaining **unilat'eral h., unioc'ular h.,** loss of sight in half the visual field of one eye only.

hemianosmia (hem″ĭ-an-oz'mĭ-ah) [G. *hēmi-*, half, + *an-* priv. + *osmē*, smell.] Loss of smell on one side.

hemiapraxia (hem″ĭ-ă-prak'sĭ-ah) [G. *hemi-*, half, + *apraxia*.] Apraxia affecting one side of the body.

hemiasynergia (hem-ĭ-as-in-ur'jĭ-ah) [G. *hēmi-*, half, + *a-* priv. + *syn*, with, + *ergon*, work.] Asynergia affecting one lateral half of the body.

hemiatax'ia. Ataxia affecting one side of the body.

hemiathetosis (hem″ĭ-ă-the-to'sis). Athetosis affecting one hand, or one hand and foot, only.

hemiatrophy (hem-ĭ-at'ro-fĭ). Atrophy of one lateral half of a part or of an organ, as the face or tongue. **fa'cial h.,** atrophy, usually progressive, affecting the muscles of one side of the face. **progres'sive lin'gual h.,** atrophy of one lateral half of the tongue.

hemiautotrophic (hem-ĭ-aw-to-trof'ik) [G. *hemi-*, half, + *autos*, self, + *trophē*, nourishment.] Semiautotrophic, partly self-nourishing, noting microphytes which are able to form protein from inorganic nitrogen but can utilize only organic carbon; see *autotrophic* and *heterotrophic*.

hemiballism (hem″ĭ-bal'izm) [G. *hēmi-*, half, + *ballismos*, jumping about.] Hemichorea; lively shaking or jerking movements involving one side of the body.

he'mic, hæ'mic. Hemal, relating to the blood

hemicar'dia [G. *hēmi-*, half, + *kardia*, heart.] One lateral half, including atrium and ventricle, of the heart. **h. dex'tra,** the right heart. **h. sinis'tra,** the left heart.

hem'icarp [G. *hēmi-*, half, + *karpos*, fruit.] The achene of a bilocular fruit.

hemicell'ulose. Any woody cellulose insoluble in water but soluble in a dilute mineral acid.

hemicen'trum [G. *hēmi-*, half, + *kentron*, center.] One of the two lateral halves of the body of the vertebra.

hemicepha'lia. Congenital absence of one side of the head

hemiceph'alus [G. *hemi-*, half, + *kephalē*, head.] A monster with one-half of the head absent

hemicer'ebrum. A cerebral hemisphere.

hemichorea (hem-e-ko-re'ah). Chorea involving the muscles on one side only.

hemichromatopsia (hem″ĭ-krōm-ă-top'sĭ-ah) [G. *hemi-*, half, + *chrōma*, color, + *opsis*, vision] Color-blindness affecting one-half the visual field.

hemichromosome (hem″ĭ-kro'mo-sōm). A lateral half of a chromosome

hemicoll'in [G. *hēmi-*, half, + *kolla*, glue] A derivative of gelatin soluble in alcohol

hemicrania (hem-ĭ-kra'nĭ-ah). [G. *hēmi-*, hal, + *kranion*, skull.] 1. Migraine. 2. Hemicephalia.

hemicraniec'tomy [G. *hēmi-*, half, + *kranion*, skull, + *ektomē*, excision] Hemicraniotomy

hemicra'nin. Trade name of a powder said to consist of acetphenetidin and caffeine citrate, dose as an antineuralgic, gr 7½–15 (0 5–1.0).

hemicranio'sis [G *hēmi-*, half, + *kranion*, skull] Enlargement of one side of the cranium

hemicraniot'omy [G *hēmi-*, half, + *kranion*, skull, + *tomē*, cut] Separation and reflection of the greater part or all of one-half of the cranium, as a preliminary to an operation upon the brain.

hemicyclic (hem-ĭ-si'klik) [G *hēmi-*, half, + *kyklos*, circle] In botany, noting a flower in which the parts are disposed, some in whorls, others in spirals.

hemides'mus [G. *hēmi-*, half, + *desmos*, band, noting the appearance of raveled fibers] Indian sarsaparilla, the dried root (*hemides'mi ra'dix*, B P) of *Hemidesmus indicans*, a twining plant of India; employed as an antisyphilitic and in Bright's disease in doses of gr 15–30 (1 0–2.0) in a 1–10 infusion

hemidiaphoresis (hem″ĭ-di-ă-fo-re'sis). Diaphoresis, or sweating, on one side of the body.

hemidrosis (hem-i-dro'sis). 1. Hematidrosis. 2 Hemihidrosis.

hemidysesthesia, hemidysæsthesia (hem″ĭ-dis-es-the'zĭ-ah). Dysesthesia, or impairment of the sense of touch, affecting one lateral half of the body.

hemidystrophy (hem-ĭ-dis'tro-fĭ) [G. *hēmi-*, half, + *dys-*, difficult, + *trophē*, nourishment.] A condition of inequality in development of the two sides of the body.

hemielastin (hem-ĭ-e-las'tin). The product of the hydrolysis or digestion of elastin.

hemienceph'alus [G *hēmi-*, half, + *enkephalos*, brain.] A monster with but one cerebral hemisphere.

hemiep'ilepsy. One-sided epilepsy, the convulsions occurring on one side of the body only.

hemigastrectomy (hem-ĭ-gas-trec'to-mĭ) [G. *hēmi-*, half.] Excision of the pyloric end of a bilocular stomach.

hemigeusia (hem-ĭ-ju'sĭ-ah) [G. *hēmi-*, half, + *geusis*, taste.] Loss of the sense of taste in one lateral half of the tongue

hemigloss'al. Hemilingual.

hemiglossitis (hem-ĭ-glos-ī'(e')tĭs) [G. *hēmi-*, half, + *glōssa*, tongue, + *-itis*.] A vesicular eruption on one side of the tongue and the corresponding inner surface of the cheek, probably herpetic.

hemihidro'sis. Hemidiaphoresis.

hemihypalgesia (hem"ĭ-hi-pal-je'zĭ-ah). A partial loss of sensibility to pain, or hypalgesia, affecting, one lateral half of the body.

hemihyperesthesia (hem"ĭ-hi"per-es-the'zi-ah) [G. *hēmi-*, half, + *hyper*, over, + *aisthēsis*, sensation.] Hyperesthesia, or increased tactile and painful sensibility, affecting one side of the body.

hemihyperidrosis (hem"ĭ-hi-per-i-dro'sis) [G. *hēmi-*, half, + *hyper*, over, + *hidrōsis*, sweating] Increased sweating confined to one side of the body.

hemihyperto'nia [G. *hēmi-*, half, + *hyper*, over, + *tonos*, tone] Exaggerated muscular tonicity on one lateral half of the body

hemihyper'trophy. Muscular hypertrophy of one side of the face or body.

hemihypesthesia (hem-ĭ-hi-pes-the'zĭ-ah) [G. *hēmi-*, half, + *hypo*, under, + *aisthēsis*, sensation.] Diminished sensibility in one lateral halt of the body.

hemihypoesthesia (hem-ĭ-hi-po-es-the'zĭ-ah). Hemihypesthesia.

hemihypoto'nia [G. *hēmi-*, half, + *hypo*, under, + *tonos*, tone.] A partial loss of muscular tonicity on one side of the body

hemilaryngectomy (hem-ĭ-lar-in-jek'to-mĭ) [G. *hēmi-*, half, + *larynx(laryng-)*, larynx, + *ektomē*, excision] Excision of one lateral half of the larynx.

hemilat'eral. Relating to one lateral half

hemilesion (hem-ĭ-le'zhun) [G. *hēmi-*, half] Unilateral lesion.

hemilin'gual [G. *hēmi-*, half, + L. *lingua*, tongue] Relating to one lateral half of the tongue

hemimelia (hem"ĭ-me'lĭ-ah) [see *hemimelus*] A monstrosity marked by defects in the limbs

hemim'elus [G. *hēmi-*, half, + *melos*, limb] A monster with imperfect extremities

he'min, hæ'min. Hematin hydrochloride, a brownish red crystalline substance composing Teichmann's* crystals

hemiopal'gia [G. *hēmi-*, half, + *ōps*, eye, + *algos*, pain] Pain in one eye, usually accompanied with hemicrania

hemiopia (hem-ĭ-o'pĭ-ah). [G. *hēmi-*, half, + *ōps*, eye.] Hemianopsia.

hemiop'ic. Relating to hemiopia.

hemip'agus [G. *hēmi-*, half, + *pagos*, fastened] A twin monster joined at the thorax

hemiparanesthe'sia, hemiparanæsthe'sia [G. *hēmi-*, half, + *para*, beyond, + *anaisthēsia*, insensibility] Anesthesia of one lower extremity, or of the lower part of one side of the body

hemiparaplegia (hem"ĭ-par-ah-ple'jĭ-ah) Paraplegia on one side only, paralysis of one leg

hemipar'esis. Slight paralysis affecting one side only.

hemipep'tone [G. *hēmi-*, half.] One of the two compounds resulting from the splitting of amphopeptone; upon further digestion it forms tyrosin, leucin, amidoacids, etc.

hemiplegia (hem"ĭ-ple'jĭ-ah) [G. *hēmi-*, half, + *plēgē*, a stroke.] Paralysis of one side of the body. **alter'nate h.,** paralysis of facial muscles on one side and of the extremities on the other, due to a unilateral lesion of the pons; Gubler's paralysis. **ascend'ing h.,** ascending paralysis* affecting one lateral half of the body. **contralateral h.,** paralysis occurring on the side opposite to the causal central lesion. **crossed h.,** alternate h. **fa'cial h.,** paralysis of one side of the face, the muscles of the extremities being unaffected. **hephes'tic h.,** spasmodic h. affecting smiths; see the adjective. **hered'itary h.,** h. with atrophy, present at birth **in'fantile h.,** birth palsy.*

hemiplegic (hem-ĭ-ple'jik). Relating to hemiplegia.

hemiprotein (hem-ĭ-pro'te-in). A protein containing only the molecular group which is digested by trypsin.

Hemiptera (hem-ip'tĕ-rah) [G. *hēmi-*, half, + *pteron*, wing.] An order of the *Insecta*, mostly suctorial and parasitic.

hemiscoto'sis [G. *hēmi*, half, + *skotōsis*, a darkening] Hemianopsia.

hemisep'tum. A lateral half of any septum

hemiso'mus [G. *hēmi-*, half, + *sōma*, body] A monster with half the body very imperfectly developed.

hem'ispasm. A spasm affecting one or more muscles of one side of the face or body only.

hemisphærium (hem"ĭ-sfe'rĭ-um) [G. *hēmi-*, half, + *sphaira*, sphere] Hemisphere, the lateral half of the cerebrum or cerebellum. **h. bul'bi urethræ** [BNA], one of the lateral halves of the bulb of the urethra which are separated by a median groove on the posterior part of the under surface.

hemisphere (hem'ĭ-sfēr). Hemisphærium.

hemispore (hem'ĭ-spōr) [G. *hēmi-*, half, + *sporos*, seed.] A spore-like element (protoconidium) in a fungus, which is formed from the thallus and eventually produces secondary spores or deuteroconidia, which constitute the reproductive element.

hemisporosis (hem"ĭ-spo-ro'sis). Infection with a fungus, *Hemispora stellata*, marked by gummalike swellings in bone and other tissues, which may ulcerate in the later stages.

hemistrumectomy (hem"ĭ-stru-mek'to-mĭ) [G. hēmi-, half, + *strumectomy*.] Excision of approximately one-half of a goitrous tumor.

hemisystole (hem"ĭ-sis'to-le) Contraction of the left ventricle following every second auricular contraction only, so that there is but one pulse beat to every two heart beats

hemiterata (hem-ĭ-ter'ah-tah) [G. *hēmi-*, half, + *terata*, pl. of *teras*, a monster] Persons with congenital malformations which are not so marked or so disabling as to merit the term monster for their possessors

hemiterat'ic. Relating to hemiterata.

hemithermoanesthesia, hemithermoanæsthesia (hem"ĭ-thur'mo-an-es-the'zĭ-ah). Loss of sensibility to heat and cold affecting one side of the body.

hemito'mias [G. *hēmi-*, half, + *tomias*, eunuch] A man with but one testis.

hemito'nia. Hemihypertonia.

hemitox'in [G. *hēmi-*, half, + *toxin*] A toxin of half the normal strength.

hemitre'mor. Tremor affecting the muscles of one side of the body.

hem'lock. Conium.

hemo-, hæmo- [G. *haima*, blood] A prefix signifying blood.

hemoalkalimeter (hem"o-al-kă-lim'e-tur) [G. *metron*, measure] A device for determining the degree of alkalinity of the blood.

hem'oblast. 1. Hematoblast, platelet. 2. Erythroblast.

hemoce'lom. Hæmocœlom.

hemochromatosis, hæmochromatosis (hem-o-kromă-to'sis) [G. *haima*, blood, + *chrōma*, color.] Hematochromatosis, a disease characterized by extensive pigmentation of the skin and

tissues, accompanied by atrophic or cirrhotic changes in the pancreas or liver.

hemochromogen, hæmochromogen (hem-o-kro'mo-jen) [G. *haima*, blood, + *chrōma*, color, + *gennaō*, I produce.] A crystalline pigment derived from hemoglobin.

hemochromometer (hem"o-kro-mom'e-tur) [G. *haima*, blood, + *chrōma*, color, + *metron*, measure.] An apparatus for determining the percentage of hemoglobin in the blood.

hem"ochromom'etry. The determination of the percentage of hemoglobin in the blood.

hemocla'sia, hemoc'lasis, hæmoc'lasis [G. *haima*, blood, + *klasis*, a breaking.] Hemolysis, lysis or breaking up of the red blood-corpuscles.

hemoclas'tic. Hemolytic.

hemococcidium, hæmococcidium (hem"o-kok-sid'ĭ-um). Plasmodium.

hemoco'nia, hæmoco'nia [G. *haima*, blood, + *konis*, dust.] Blood-dust.

hemoconiosis (hem"o-ko-nĭ-o'sis). A condition in which there is an abnormal amount of blood-dust, or hemoconia, in the blood.

hemocryoscopy, hæmocryoscopy (hem"o-kri-os'-ko-pĭ) [G. *haima*, blood, + *kryos*, cold, + *skopeō*, I examine.] Determination of the freezing point of blood.

hemocrys'tallin. Hemoglobin.

hemocyte, hæmocyte (hem'o-sīt) [G. *haima*, blood, + *kytos*, cell.] A blood-corpuscle, hematocyte.

hemocytol'ysis. Hematocytolysis, hemolysis.

hemocytometer, hæmocytometer (hem-o-si-tom'e-tur) [G. *haima*, blood, + *kytos*, cell, + *metron*, measure.] An apparatus for estimating the number of corpuscles in a given quantity (cubic millimeter) of blood.

hem"ocytotrip'sis [G. *haima*, blood, + *kytos*, cell, + *tripsis*, a grinding.] The fragmentation of red blood-corpuscles.

hemocytozoon, hæmocytozoon (hem-o-si-to-zo'on) [G. *haima*, blood, + *kytos*, cell, + *zōon*, animal.] An animal parasite of the red blood-corpuscles, hematobium.

hemodiagnosis (hem"o-di-ag-no'sis). Diagnosis by means of examination of the blood.

hemodi'astase. An amylolytic ferment in the blood.

hemodromograph, hæmodromograph (hem"o-drom'-o-graf) [G. *haima*, blood, + *dromos*, course, + *graphō*, I record.] An instrument for recording the rapidity of the blood-current, hemadromograph.

hemodromometer, hæmodromometer (hem"o-drŏ-mom'e-ter) [G. *haima*, blood, + *dromos*, course, + *metron*, measure.] An instrument for measuring the rapidity of the blood circulation, hemadromometer.

hemodynamic (hem-o-di-nam'ik). Relating to the blood circulation.

hemodynam'ics [G. *haima*, blood, + *dynamis*, power.] The study of the blood-pressure.

hemodynamom'eter [G. *haima*, blood, + *dynamis*, force, + *metron*, measure.] An instrument for determining the blood-pressure, hemadynamometer.

hemodystrophy (hem-o-dis'tro-fĭ). Hematodystrophy.

hemofer'rum [G. *haima*, blood, + L. *ferrum*, iron.] The iron content of hemoglobin.

hemoflagellate (hem-o-flaj'el-ate). A protozoan organism of the class *Flagellata*, occurring as a parasite in the blood of vertebrates.

hemofus'cin [G. *haima*, blood, + L. *fuscus*, brown.] A brown pigment derived from hemoglobin.

hemogall'ol. A reddish brown powder, obtained from hemoglobin by deoxidation by means of pyrogallol; employed in anemic conditions in doses of gr. 4–8 (0.25–0.5).

hemogen'esis. Hematogenesis.

hemogen'ic. Hematogenic.

hemoglo'bin, hæmoglo'bin [G. *haima*, blood, + L. *globus*, globe.] The coloring matter of the blood, a conjugated protein, yielding a simple protein and hematin on hydrolysis. Its approximate formula is $C_{758}H_{1203}N_{195}O_{218}FeS_3$ (Mann). It absorbs gases readily, the combination with oxygen being called oxyhemoglobin. **reduced' h.**, the h. remaining after oxyhemoglobin has yielded up its oxygen to the tissues.

hemoglobine'mia. The presence of free hemoglobin in the blood-plasma, as in laked blood.

hemoglobinocholia (hem-o-glo"bin-o-ko'lĭ-ah) [G. *cholē*, bile.] The presence of hemoglobin in the bile.

hemoglobinolysis (hem-o-glo-bin-ol'ĭ-sis) [*hemoglobin* + G. *lysis*, solution.] Destruction of hemoglobin.

hemoglobinom'eter [*hemoglobin* + G. *metron*, measure.] An instrument for estimating the amount of hemoglobin in the blood, indicated in percentages of the normal.

hemoglobinopepsia (hem-o-glo"bin-o-pep'sĭ-ah) [*hemoglobin* + G. *pepsis*, digestion.] Hemoglobinolysis.

hemoglobinuria (hem-o-glo-bin-u'rĭ-ah) [*hemoglobin* + G. *ouron*, urine.] The presence of hemoglobin in the urine as voided, giving to it a dark reddish color. **bo'vine h.**, redwater fever, Texas* cattle fever. **epidem'ic h.**, Winckel's* disease. **mala'rial h.**, blackwater fever, bilious remittent fever, hemoglobinuric fever; a disease associated with malaria, marked, in severe cases, by fever, bilious vomiting, tympanites, jaundice, and the passage of dark colored urine containing hemoglobin; the disease is believed to be of malarial origin, and often appears to be excited by the administration of quinine, though this is questionable. **paroxys'mal h.**, a form occurring usually in adult males at irregular intervals, often after exertion or exposure to cold. **tox'ic h.**, h. occurring after the ingestion of various poisons, in certain blood diseases, and in certain infections.

hemoglobinu'ric. Relating to or marked by hemoglobinuria **h. fever,** malarial hemoglobinuria.

hemoglob'ulin. Hemoglobin.

hemogo'nia. Hematogonia.

Hemogregarina (hem"o-greg-ă-re'nah). A genus of gregarines parasitic in the red blood-corpuscles of certain cold-blooded animals.

hemohistioblast (hem"o-his'tĭ-o-blast). Hematohistioblast.

he'mol. A dark brown powder prepared by reducing hemoglobin with zinc; employed in the treatment of anemia and chlorosis in doses of gr. 2–8 (0.13–0.5).

hemoleucocyte (hem-o-lu'ko-sīt). A white blood-corpuscle.

hemolipase (hem-o-li'pāz). A fat-splitting ferment in the blood.

hem'olith, hæm'olith [G. *haima*, blood, + *lithos*, stone.] A concretion in the wall of a blood-vessel.

hemol'ogy, hæmol'ogy. Hematology.

hem'olymph, hæm'olymph [G. *haima*, blood, + L. *lympha*, lymph.] 1. Relating to the blood and the lymph. 2. The nutrient fluid of certain invertebrates. **h. gland,** see under *gland*.

hemol'ysin. The substance in a specific serum which effects the destruction of the erythrocytes.

hemolysinogen (hem-o-li-sin'o-jen) [*hemolysin* + G. *gennaō*, I produce.] A substance which activates the hymolysin in the blood-serum.

hemolysis, hæmolysis (hem-ol'ĭ-sis) [G. *haima*, blood, + *lysis*, solution.] Destruction of the red blood-cells. In cultures on blood-agar plates there are two sorts of hemolysis, viz., **alpha. h.**, in which the colonies are surrounded by a greenish ring; and **beta-h.**, in which the colonies are surrounded by a transparent area of clearing.

hemolysoid (hem-ol'ĭ-soyd) [*hemolysin* + G. *eidos*, resemblance.] An hemolysin which has lost its toxophore group while retaining the haptophore group, capable therefore of uniting with the blood-cell, but not of destroying it.

hemolyt'ic. Destructive to blood-cells.

hemolyza'tion. The production of hemolysis

hemolyze (hem'o-līz). To produce hemolysis or destruction of the red blood-corpuscles.

hemomanometer (hem-o-man-om'e-tur). Hematomanometer.

hemomediastinum, (hem"o-medĭ-ah-sti'num). An effusion of blood into the mediastinum.

hemom'eter. Hematometer.

hemome'tra. Hematometra, an accumulation of blood in the cavity of the uterus.

hemom'etry. Hematometry.

hemonephro'sis [G. *haima*, blood, + *nephros*, kidney.] An accumulation of blood in the pelvis of the kidney.

hem"onor'moblast. Erythroblast.

hemopathology (hem-o-pă-thol'o-jĭ). Hematopathology.

hemopathy (hem-op'ă-thĭ) [G. *haima*, blood, + *pathos*, suffering.] A blood disease.

hemopericar'dium, hæmopericar'dium [G. *haima*, blood.] An effusion of blood into the pericardial sac.

hemoperitone'um. Effusion of blood into the peritoneal cavity.

hemopex'in [G *haima*, blood, + *pēxis*, fixation.] An agent causing coagulation of the blood.

hemophagocyte (hem-o-fag'o-sīt). A phagocytic leucocyte.

hemophil, hemophile (hem'o-fil, hem'o-fīl) [G. *haima*, blood, + *philos*, fond.] Noting microorganisms growing preferably in media containing blood.

hemophilia, hæmophilia (hem-o-fil'ĭ-ah) [G. *haima*, blood, + *phileō*, I like.] A disorder marked by a permanent tendency to profuse hemorrhages, spontaneous or traumatic, due to a defect in the coagulating power of the blood **re'nal h.,** renal epistaxis.*

hemophil'iac. 1. Relating to hemophilia. 2. A person suffering from hemophilia, a bleeder.

Hemophilus (he-mof'ĭ-lus) [G. *haima*, blood, + *philos*, fond.] A genus of Bacillaceæ, the members of which grow best on blood-media. In this genus are contained the organisms more commonly known as the Bordet-Gengou, Ducrey, Koch-Weeks, Morax-Axenfeld, and Pfeiffer bacilli, which see under the proper names. **H. influen'zæ,** the influenza bacillus, Pfeiffer's bacillus. **H. lacuna'tus,** Morax-Axenfeld bacillus.* **H. pertus'sis,** Bordet-Gengou bacillus.*

hemopho'bia [G. *haima*, blood, + *phobos*, fear.] 1. A morbid aversion to the sight of blood. 2. A morbid fear of bleeding.

hemophthal'mia, hæmophthal'mia [G. *haima*, blood, + *ophthalmos*, eye.] An effusion of blood into the eyeball.

hemophthal'mus. Hemophthalmia.

hemophthisis, hæmophthisis (hem-of-thi'(the')sis) [G. *haima*, blood, + *phthisis*, consumption.] Anemia due to the destruction, or deficient formation, of the red blood-cells.

hemoplas'tic [G. *haima*, blood, + *plassō*, I form.] Hematoplastic, hematopoietic.

hemoplas'tin. Trade name of a serum preparation said to be composed chiefly of prothrombin and anti-antithrombin; a clear amber-colored fluid, employed by intravenous injection as a hemostatic in hemophilia, purpura, hemoptysis, and other hemorrhages.

hemopleuropneumonic syndrome (hem"o-plu"ro-nu-mon'ik sin'drōm). Hemoptysis, sudden dyspnea, moderate tachycardia, and a fever, with tubular breathing over the middle zone of the chest and dullness at the base, indicating a pneumonia combined with hemothorax in cases of punctured wounds of the chest.

hemopneumothorax, hæmopneumothorax (hem"o-nu"mo-tho'raks) [G *haima*, blood, + *pneuma*, air, + *thorax*.] Accumulation of air and blood in the pleural cavity.

hemopoie'sis. Hematopoiesis

hemopoietin (hem-o-poy'ĕ-tin). Hematopoietin.

hemoporphyrin (hem"o-por'phi-rin). A product of the decomposition of hematin.

hemoprecip'itin. A precipitin acting upon the red blood-corpuscles

Hemoproteus, Hæmoproteus (hem-o-pro'te-us) [G. *haima*, blood, + *Proteus*, a sea-god who had the power of assuming different shapes.] *Laverania danilevsky:* a subgenus of *Plasmodium*, the protozoan parasite of bird malaria; the sexual cycle is completed in the body of a mosquito of the genus *Culex* (or *Stegomyia*?).

hemop'sonin, hæmop'sonin. An opsonin which activates the phagocytes in relation to red blood-corpuscles, erythrocytopsonin, hemotropin.

hemoptysis, hæmoptysis (hem-op'ti-sis) [G. *haima*, blood, + *ptysis*, a spitting.] Bleeding from the lungs or bronchial tubes. **parasit'ic h.,** caused by the presence in the lungs of the lung fluke, *Paragonimus westermanni*.

hemoquinine (hem-o-kwi'nīn, hem-o-kwin-ēn', hem-o-kwin'in). Trade name of a liquid preparation said to contain the peptonates of iron, manganese, and quinine, and sodium arsenate; dose, ʒ1–2 (4 0–8.0).

hemore'nal salt index. See under *index*

hemorrhage, hæmorrhage (hem'ŏ-rej) [G. *haima*, blood, + *-rhagia*.] Bleeding, a flow of blood, especially if it is very profuse. **acciden'tal h.,** h. occurring during labor from detachment of a normally situated placenta, distinguished from the *unavoidable h.* of placenta prævia. **bron'chial h.,** hemoptysis. **cer'ebral h.,** apoplexy. **concealed' h.,** internal h. **gas'tric h.,** hematemesis. **h. per rhex'in,** h. due to the rupture of a blood-vessel. **interme'diate h.,** h. which had ceased when the person fainted, recurring with returning consciousness. **inter'nal h.,** bleeding into one of the organs or cavities of the body. **intes'tinal h.,** enterorrhagia, melena. **intrapar'tum h.,** h occurring during childbirth. **na'sal h.,** epistaxis. **parenchy'matous h.,** an escape of blood into the substance of an organ. **pete'chial h.,** capillary h. into the skin, forming petechiæ. **postpar'tum h.,** h. occurring during the third stage of labor or within the first twenty-four hours of the puerperium. **pri'mary h.,** h. occurring immediately upon receipt of the injury, distinguished from intermediate or secondary h. **pul'monary h.,** hemoptysis.

re'nal h., hematuria. **sec'ondary h.,** h. occurring at a more or less considerable interval after an injury or an operation. **se'rous h.,** profuse transudation of plasma through the walls of the capillaries, as in serous diarrhea. **unavoid'able h.,** h. occurring during labor in cases of placenta prævia, distinguished from *accidental h.*

arrest of, hemostasia, hemostasis. **causing,** hemorrhagenic, hemorrhagiparous. **checking,** styptic, hemostatic, anthemorrhagic, epistatic, hematischetic, staltic. **fear of,** hemaphobia. **from bladder,** cystorrhagia. **from bowels,** melena, enterorrhagia, hematochezia, hematodiarrhea. **from breast,** mastorrhagia. **from bronchi,** bronchorrhagia, hemoptysis **from ear,** otorrhagia **from Fallopian tube,** salpingorrhagia. **from fauces,** hematismus, isthmorrhagia **from gums,** stomatorrhagia gingivarum, ulorrhagia, ulorrhea. **from kidney,** nephremorrhagia, nephrorrhagia **from liver,** hepatorrhagia **from lungs,** pneumorrhagia, hemoptysis **from mouth,** stomatorrhagia, hæmorrhagia oris **from nose,** epistaxis, hemorrhinia, nosebleed, rhinorrhagia, hæmorrhagia narium, stalaxis narium **from penis,** stymatorrhagia, stymatosis, urethrorrhagia, phallorrhagia. **from rectum,** hæmorrhagia proctica. **from skin,** hematidrosis, hematopedesis, hemodiapedesis, diapedesis **from stomach,** gastrorrhagia, hematemesis, black vomit **from ureter,** ureterorrhagia. **from urethra,** urethrorrhagia **from uterus,** metrorrhagia, menorrhagia. hematysteria **from vagina,** colporrhagia **from vulva,** episiorrhagia **into abdomen,** hematocelia, hemoperitoneum **into brain,** encephalorrhagia, hematencephalon, cerebral apoplexy **into eye,** hematopsia, hemophthalmia **into joint,** hemarthrosis. **into mediastinum,** hemomediastinum **into medullary cavity of bone,** hematosteon. **into pericardium,** hemopericardium **into peritoneal cavity,** hematocelia, hematocele hemoperitoneum. **into pleural cavity,** hemothorax **into scrotum,** hematoscheocele **into seminal passages,** hematospermia. **into skin,** petechia, vibex (pl vibices) ecchymosis, purpura **into spinal canal,** hematorrhachis **into spinal cord,** hematomyelia, hæmorrhagia spinalis, spinal apoplexy, myelapoplexia hematorrhachis interna. **into tympanum,** hematotympanum **into urinary passages,** hematuria, hematuresis **into uterus,** hematometra, hemotelytrometra, hemometrectasia, hematotrachelos (cervix uteri) **into vagina,** hematocolpos **slight,** stillicidium sanguinis, hyporrhagia, hematozemia, hemorrhea. **tendency to,** hemophilia, hemorrhagic diathesis.

hemorrhagenic (hem-ŏ-răj-jen'ik) [G. *haimorrhagia,* hemorrhage, + *genesis,* production] Causing hemorrhage.

hemorrhagic (hem-ŏ-raj'ik) Relating to or marked by hemorrhage **h. disease' of the newborn',** a tendency to spontaneous hemorrhages from the umbilicus or mucous membranes or into the skin occurring as a temporary condition in the newborn.

hemor'rhagin. A cytotoxin occurring in the venom of the rattlesnake and certain other serpents which causes hemorrhages and extravasation of blood by its solvent action upon the capillary endothelium

hemorrhagiparous (hem-ŏ-ră-jip'ă-rus) [G. *haimorrhagia,* hemorrhage, + L. *parere,* to produce.] Hemorrhagenic.

hem"orrhaphil'ia, hæm"orrhaphil'ia. Hemophilia

hemorrhe'a, hæmorrhœ'a [G. *haima,* blood, + *rhoia,* a flow] Hemorrhage.

hem'orrhoid, hæm'orrhoid [G. *haima,* blood, + *rhoos,* a flux] One of the tumors or varices constituting piles or hemorrhoids *

hemorrhoidal (hem-or-roy'dal). 1. Relating to hemorrhoids. 2. Noting certain arteries supplying the region of the anus; see *arteria hemorrhoidalis.*

hemorrhoidectomy ((hem"or-roy-dek'to-mĭ) [G. *ektomē,* excision.] A cutting operation for hemorrhoids.

hemorrhoids, hæmorrhoids (hem'ŏ-roydz). Piles, a varicose condition of the external hemorrhoidal veins causing painful swellings at the anus. When the dilated veins form tumors to the outer side of the external sphincter, the condition is called *external hemorrhoids;* when the swollen veins are beneath the mucous membrane within the sphincter it is *internal hemorrhoids.*

hemosal'pinx, hæmosal'pinx. Hematosalpinx, an accumulation of blood in a Fallopian tube.

hem'oscope. Hematoscope.

hemosid'erin [G. *haima,* blood, + *sidēros,* iron] An iron-containing substance resulting from the splitting-up of hematin during the phagocytic digestion of the effete erythrocytes; it is probably composed of hydrated ferrous oxide in combination with protein

hemosidero'sis. Hemochromatosis, the deposit of hemosiderin in the liver and in other organs and tissues

hemoso'zic. Relating to a hemosozin; protective of the red blood-corpuscles.

hemoso'zin [G. *haima,* blood + *sōzō,* I preserve] Antihemolysin; an antiserum which prevents hemolysis

hemospa'sia, hæmospa'sia [G. *haima,* blood, + *spasis,* a pulling] 1 Blood derivation as effected by Junod's boots, Bier's hyperemic method, or cupping 2 Leeching, blood-letting.

hem'ospast. An appliance for cupping.

hemospas'tic. Relating to the drawing of blood by cupping, or leeching

hemospermia (hem-o-spur'mĭ-ah) [G. *haima,* blood, + *sperma,* seed] The presence of blood in the seminal fluid It is called *h. spuria* when the admixture with blood occurs in the prostatic urethra; *h. vera* when the bleeding is from the seminal vesicles

Hemospo'rea. Hæmosporea

Hemosporid'ia. Hæmosporidia

hemosporid'ium. Plasmodium, a blood-parasite of the order *Hæmosporidia*

hemosta'sia, hæmosta'sia [G. *haima,* blood, + *stasis,* a standing] 1 The arrest of bleeding 2 The arrest of the circulation in the blood-vessels of a part 3. Stagnation of blood

hemos'tasin. Trade name of a suprarenal extract.

hemos'tasis. Hemostasia

hem'ostat. 1 Any agent which arrests, chemically or mechanically, the flow of blood from an open vessel 2 An instrument for arresting hemorrhage by compression of the bleeding vessel

hemostat'ic. 1 Arresting the flow of blood within the vessels 2 Arresting hemorrhage, styptic.

hemos'tatin. Trade name of tribromphenate of bismuth, or bismuth tribromphenol, employed as a hemostatic and in the treatment of cholera, in doses of gr. ss–8 (0.03–0.5)

hemostyp'tic [G. *haima,* blood, + *styptikos,* astringent] Noting an agent which stops bleeding by reason of its astringent properties; chemically hemostatic

hemotachometer (hem-o-tak-om'e-ter) [G. *haima,* blood, + *tachos,* swiftness, + *metron,* measure.] Vierordt's* h., an instrument for measuring the rapidity of the flow of blood in the arteries.

hemotherapeutics (hem"o-ther-ah-pu'tiks) [G. *haima,* blood, + *therapeutikē,* medical practice.] The use of blood (either transfusion from a human or drinking the blood of animals) in the treatment of disease.

hemotho'rax, hæmotho'rax [G. *haima,* blood, + *thorax*] An effusion of blood into the pleural cavity.

hemothy'mia [G. *haima,* blood, + *thymos,* desire, anger.] An insane impulse to murder

hemotonia, hæmotonia (hem-o-to'nĭ-ah) [G. *haima*, blood, + *tonos*, strain, tension.] The tension of the formed elements of the blood.

hemotox'ic, hæmotox'ic. 1. Causing blood-poisoning. 2. Hemolytic.

hemotox'in [G. *haima*, blood, + *toxin*.] Hemolysin.

hemotrop'ic [G. *haima*, blood, + *tropos*, a turning.] Noting the process of the attraction of phagocytes toward foreign erythrocytes, and also hemotropin, the substance effecting this action.

hemot'ropin [G. *haima*, blood, + *tropos*, a turn, direction.] Hemopsonin, erythrocytopsonin

hemotym'panum. The presence of blood in the middle ear

hemozo'in. The black pigment, occurring in the form of minute granules, in the cytoplasm of the hemoprotozoa.

hemozo'on, hæmozo'on [G. *haima*, blood, + *zōon*, animal.] Hematozoon

hemp [A.S. *henep*.] An herbaceous plant of the genus *Cannabis*. **American h.,** *Cannabis sativa*. **Cana'dian h.,** apocynum. **In'dian h.,** *Cannabis indica*. **white Indian h.,** *Asclepias incarnata*.

hemp'seed. Fructus cannabis, an oily seed, similar in some respects to linseed, and sometimes used, like the latter, in poultices.

hen'bane. Hyoscyamus

Hen'derson's test [Yandell *Henderson*, American physiologist, *1873.] Stange's test, a normal person can hold the breath, without a preliminary deep inspiration, for 30 seconds or more; the inability to hold it for more than 15 or 20 seconds, in one free from cardiorenal or pulmonary disease, would indicate the presence of acidosis.

Hen'ke's space [Wilhelm *Henke*, German anatomist, 1834–1896.] A space, filled with connective tissue, between the vertebral column and the pharynx and esophagus **H.'s tri'gone,** a triangular space above and external to the pubic spine, formed by the outer edge of the rectus abdominis muscle and the inguinal furrow.

Hen'le's ampul'la [Friedrich Gustav Jakob *Henle*, German anatomist, 1809–1885.] A dilatation of the vas deferens a short distance above the ejaculatory duct **H.'s band,** fibers of the anterior aponeurosis of the transversalis abdominis which sometimes pass behind the rectus below the semilunar fold of Douglas. **H.'s cells,** large granular cells with small nuclei in the tubuli seminiferi. **H.'s fenes'trated mem'brane,** the layer of elastic fibers of the tunica intima of an artery. **H.'s fi'brin,** fibrin formed in the spermatic fluid on admixture with water **H.'s fis'sures,** minute spaces filled with connective tissue between the muscular fasciculi of the heart **H.'s glands,** tubular glands in the palpebral conjunctiva **H.'s layer,** the outer layer of cells of the inner root-sheath of the hair-follicle **H.'s lig'ament,** the inner portion of the conjoined tendon in cases in which this structure is divisible into two parts **H.'s loop,** the reversal of direction of the uriniferous tubule near the apex of a medullary pyramid of the kidney. **H.'s mem'brane,** Bruch's membrane, lamina* basalis. **H.'s ner'vous lay'er,** the internal layer of the retina. **H.'s reac'tion,** dark brown staining of the medullary cells of the adrenal bodies when treated with the salts of chromium, the cortical cells remaining unstained. **H.'s sheath,** endoneurium. **H.'s spine,** spina supra meatum, a small bony prominence anterior to the supramastoid fossa, at the upper and posterior border of the bony meatus auditorius. **H.'s tu'bules,** the straight portions of the uriniferous tubules which form H.'s loop, distinguished as the *descending* and *ascending* tubules of Henle.

hen'na. The leaves of Egyptian privet, *Lawsonia inermis*, used as a cosmetic and hair-dye

Hennebert's sign (en-bair') [*Hennebert*, Belgian otologist, contemporary.] Pneumatic sign; in cases of heredosyphilitic labyrinthitis, compression of the air in the external auditory canal causes a slow horizontal movement of the eyes to the side of the lesion, while rarefaction of the air in this canal causes a movement to the side opposite the lesion.

Hen'och's pur'pura [Eduard *Henoch*, Berlin pediatrist, 1820–1910.] An infectious disease of childhood, marked by erythema, urticaria, purpura, gastroenteric disturbances, and sometimes arthritis

henpu'ye [native term on the Gold Coast meaning "dog-nose"] Goundou.

hen'ry [after Joseph *Henry*, American physicist, 1797–1878.] A unit denoting the self-induction in a circuit when the inducing current varies at the rate of 1 ampère a second the electromotive force induced being 1 volt; symbol, L.

Hen'ry's law [William *Henry*, English manufacturer and chemist, 1774–1836.] The amount of gas which can be dissolved in a given quantity of water varies with the pressure; by doubling the pressure twice as much gas passes into solution.

Hen'sen's canal' [Victor *Hensen*, German physiologist, 1835–1924.] Ductus reuniens, a vertical canal joining the first part of the cochlear canal with the saccule. **H.'s cell,** one of the supporting cells in the organ of Corti, immediately to the outer side of the cells of Deiters. **H.'s disc,** H.'s line **H.'s duct,** ductus reuniens, H.'s canal. **H.'s knot,** a knob-like thickening, the first part to appear, of the primitive streak. **H.'s line,** the light line in the middle of the dark band of a sarcomere. **H.'s stripe,** a band of apparently differentiated structure on the under surface of the membrana tectoria of the organ of Corti

Hen'sing's lig'ament [Friedrich Wilhelm *Hensing*, German anatomist, 1719–1745.] The left superior colic ligament, a small serous horizontal or oblique fold sometimes found extending between the upper end of the descending colon and the abdominal wall

he'par, gen. *he'patis* [G.] 1. The liver 2. An old term for a brown or liver-colored compound of sulphur with a metal. **h. sul'phuris,** potassa sulphurata **h. sul'phuris cal'careum,** impure calcium sulphide (calx* sulphurata) triturated with sugar of milk, employed in homeopathic therapeutics in boils, pustular eruptions, quinsy, etc., in the 6th to 30th potency.

heparin (he'par-in) [G. *hēpar*, liver.] A phosphatide which has an inhibiting effect on the coagulation of the blood; it is produced mainly in the liver.

hepatal'gia [G. *hēpar* (*hēpat-*), liver, + *algos*, pain.] Pain in the liver, hepatodynia.

hepatargy (hep'ă-tar-ji) [G. *hēpar*(*hēpat-*), liver, + *argia*, laziness.] Hepatargia, hepatic insufficiency.

hepatatrophia, hepatatrophy (he-pat-ă-tro'fĭ-ah, hep-ă-tat'ro-fi) [G. *hēpar*(*hēpat-*), liver, + *atrophia*, atrophy.] Atrophy of the liver.

hepatauxe (hep"at-awk'se) [G. *hēpar*(*hēpat-*), liver, + *auxē*, enlargement.] Hypertrophy or enlargement of the liver

hepatec'tomy [G. *hēpar(hēpat-)*, liver, + *ektomē*, excision.] Surgical removal of part of the liver.

hepat'ic [G. *hēpatikos*.] Relating to the liver.

hepatica (he-pat'ĭ-kŭ) [G. *hepatikos*, relating to the liver.] Liverwort, a plant employed to relieve irritation of the mucous membranes, especially of the air passages, but of the digestive tract as well, in doses of 10–30 drops of the eclectic specific medicine in water every hour.

hepaticodochotomy (he-pat"ĭ-ko-do-kot'o-mĭ). Combined choledochotomy and hepaticotomy.

hepaticoduodenostomy (he-pat"i-ko-du"o-de-nos'to-mĭ) [G. *hēpatikos*, hepatic, + L. *duodenum* + G. *stoma*, mouth.] The establishment of artificial communication between the hepatic duct and the duodenum.

hepaticoenterostomy (he-pat"i-ko-en-ter-os'to-mĭ) [G. *hēpatikos*, hepatic, + *enteron*, intestine, + *stoma*, mouth.] Establishment of an artificial communication between the hepatic duct and the intestine.

Hepaticola (he-păk'o-lah) [G. *hēpar (hēpat-)*, liver, + L. *colere*, to inhabit.] A genus of nematodes of the family *Trichinellidæ*. The species *H. hepat'ica* occurs usually in the liver of rats, but has been found also in that of man.

hepaticolithotripsy (he-pat"i-ko-lith'o-trip-sĭ) [G. *hēpatikos*, hepatic, + *lithos*, stone, + *tripsis*, a rubbing] The crushing of a biliary calculus in the hepatic duct.

hepat"icopul'monary. Hepatopulmonary, hepatopneumonic.*

hepaticos'tomy [G. *hēpatikos*, hepatic, + *stoma*, mouth.] The operative establishment of a permanent opening into the hepatic duct.

hepaticotomy (hĕ-păk-tĭ-kot'o-mĭ) [*hepatic(duct)* + G. *tomē*, incision] Incision into the hepatic duct.

hep'atin. Glycogen.

hep'atism [G. *hēpar(hēpat-)*, liver.] The constitutional effects of chronic liver disorder.

hepatitis (hep-ă-tī'(te')tis). Inflammation of the liver **acute' parenchy'matous h.,** acute yellow atrophy of the liver.* **chron'ic intersti'tial h.,** cirrhosis of the liver. **h. exter'na,** perihepatitis.

hepatization (he-pat-i-za'shun) [G. *hēpar(hēpat-)*, liver.] The conversion of a loose tissue into a firm mass like the substance of the liver; noting especially such a change in the lungs in the consolidation of pneumonia. **gray h.,** the second stage of h. in pneumonia, when the exudate is beginning to degenerate prior to breaking down, the color is a yellowish gray or mottled. **red h.,** the first stage of h. in which the exudate is blood-stained. **yel'low h.,** the final stage of h. in which the exudate is becoming purulent.

hep'atized. Changed in consistence to that of the liver, noting specifically the consolidated lung tissue in pneumonia.

hepato- [G. *hēpar(hēpat-)*, liver.] A prefix denoting liver.

hepatocele (he-pat'o-sēl) [G. *hēpar(hēpat-)*, liver, + *kēlē*, hernia] Hernia of the liver, protrusion of part of the liver through the abdominal wall or the diaphragm.

hepatocholangio-enterostomy (hep"ă-to-ko-lan"jĭ-o-en-ter-os'to-mĭ) [G. *hēpar(hēpat-)*, liver, + *cholē*, bile, + *angeion*, vessel, + *enteron*, intestine, + *stoma*, mouth.] Hepaticoenterostomy.

hepatocirrhosis (hep"ă-to-sĭ-ro'sis) [G. *hēpar(hēpat-)*, liver.] Cirrhosis of the liver.

hepatocys'tic [G. *hēpar(hēpat-)*, liver, + *kystis*, bladder.] Relating to the gall-bladder. or to both liver and gall-bladder.

hep"atoduodenos'tomy. Hepaticoduodenostomy

hepatodyn'ia [G. *hēpar(hēpat-)*, liver, + *odynē*, pain.] Hepatalgia, pain in the liver.

hepatoenteric (hep"ă-to-en-ter'ĭk) [G. *hēpar(hēpat-)*, liver, + *enteron*, intestine.] Relating to the liver and the intestine.

hep"atogas'tric [G. *hēpar(hēpat-)*, liver, + *gastēr (gastr-)*, stomach.] Relating to the liver and the stomach.

hepatogenic, hepatogenous (hep-ă-to-jen'ik, hep-ă-toj'en-us) [G. *hēpar(hēpat-)*, liver, + *gennaō*, I produce.] Of hepatic origin; formed in the liver.

hepatog'raphy [G. *hēpar(hēpat-)*, liver, + *graphē*, a writing.] A treatise on the liver.

hepatohemia (hep"ă-to-he'mĭ-ah) [G. *hēpar (hēpat-)*, liver, + *haima*, blood.] Congestion of the liver.

hepatolenticular degeneration (hep'ă-to-len-tik'u-lar de-jen-er-a'shun). Wilson's (S. A. Kinnear W.) disease.

hep'atolith [G. *hēpar(hēpat-)*, liver, + *lithos*, stone.] A biliary calculus; concretion in the liver.

hep"atolithec'tomy [G. *hēpar(hēpat-)*, liver, + *lithos*, stone, + *ektomē*, excision.] Operative removal of a calculus from the liver.

hepatolithiasis (hep-ă-to-lith-i'a-sis) [G. *hēpar (hēpat-)*, liver, + *lithiasis*, presence of a calculus.] The presence of calculi in the liver.

hepatol'ogist. One skilled in a knowledge of the diseases of the liver.

hepatol'ogy [G. *hēpar(hēpat-)*, liver, + *-logia*.] The branch of medical science treating especially of the liver.

hepatolysin (hep-ă-tol'i-sin). A cytolysin specific for the cells of the liver.

hepatoma (hep-ă-to'mah) [G. *hēpar(hēpat-)*, liver, + *-ōma*] A tumor, especially one of beginning malignancy, of the liver.

hepatomalacia (hep"ă-to-mal-a'shĭ-ah) [G. *hēpar (hēpat-)*, liver, + *malakia*, softness.] Softening of the liver.

hepatomegalia, hepatomegaly (hĕ"pă-to-mĕ-gah'lĭ-ah, hĕ"pă-to-meg'ă-lĭ) [G. *hepar(hepat-)*, liver, + *megas(megal-)*, large.] Enlargement of the liver, megalohepatia.

hep"atomelano'sis [G. *hēpar(hēpat-)*, liver, + *melas* black] Deep pigmentation of the liver.

hepatoneph'ric [G *hēpar(hēpat-)*, liver, + *nephros*, kidney.] Relating to the liver and the kidney.

hepatop'athy [G. *hēpar(hēpat-)*, liver, + *pathos*, suffering.] A disease of the liver.

hepatoperitonitis (hep"ă-to-per"ĭ-to-ni'(ne')tis). Perihepatitis.

hep'atopexy [G. *hēpar(hēpat-)*, liver, + *pēxis*, fixation.] The anchoring of a movable liver to the abdominal wall.

hepatophag, hepatophage (hep'ă-to-fag, hep'ă-to-fāj) [G. *hēpar(hēpat-)*, liver, + *phagō*, I eat.] A phagocyte which attacks the cells of the liver.

hep"atophlebot'omy [G. *hēpar(hēpat-)*, liver, + *phleps(phleb-)*, vein, + *tomē*, incision.] Withdrawal of blood by aspiration from the liver.

hep"atophy'ma [G. *hēpar(hēpat-)*, liver, + *phyma*, a boil.] Abscess of the liver.

hepatopneumonic (hep"ă-to-nu-mon'ik) [G. *hēpar (hēpat-)*, liver, + *pneumonikos*, pulmonary.] Relating to the liver and the lungs.

hep"atopor'tal [G. *hēpar(hēpat-)*, liver.] Relating to the portal system of the liver.

hep"atopto'sia, hepatopto'sis [G. *hēpar(hēpat-)*, liver, + *ptōsis*, a falling.] Downward displacement of the liver.

hepatopul'monary [G. *hēpar(hēpat-)*, liver, + L. *pulmo*, lung.] Hepaticopulmonary, hepatipneumonic.*

hepatore'nal [G. *hēpar(hēpat-)*, liver, + L. *renalis*, renal.] Hepatonephric

hepator'rhaphy [G. *hēpar(hēpat-)*, liver, + *rhaphē*, a suture.] Suture of a wound of the liver.

hep"atorrhe'a, hep"atorrhœ'a [G. *hēpar(hēpat-)*, liver, + *rhoia*, a flow.] Cholorrhea.

hep"atorrhex'is [G. *hēpar(hēpat-)*, liver, + *rhēxis*, rupture.] Rupture of the liver.

hepatos'copy [G. *hēpar(hēpat-)*, liver, + *skopeō*, I examine.] Examination of the liver.

hepatos'tomy [G. *hēpar (hēpat-)*, liver, + *stoma*, mouth.] The establishment of a fissure into the liver.

hep"atother'apy [G. *hēpar (hēpat-)*, liver, + *therapeia*, treatment.] 1. Treatment of disease of the liver. 2. The therapeutic use of liver extract or of the raw substance of the liver.

hepatothrombin (hep"ă-to-throm'bin). Leucothrombin derived from the liver.

hepatot'omy [G. *hēpar(hēpat-)*, liver, + *tomē*, incision.] Incision into the liver substance.

hepatotoxemia, hepatotoxæmia (hep"ă-to-toks-e'mĭ-ah) [G. *hēpar(hēpat-)*, liver, + *toxikon*, poison, + *haima*, blood.] Autointoxication assumed to be due to improper functioning of the liver.

hep"atotox'in. A cytotoxin specific for the liver cells.

Hepatozo'on pernicio'sum. A protozoan parasite belonging to the *Hæmogregarina*, which multiplies in the liver cells of rats and causes a rapidly fatal disease.

hephestic, hephæstic (he-fes'tik) [G. *Hēphaistos*, the God of fire, Vulcan of the Romans.] Relating to a blacksmith, noting especially **h. hemiple'gia**, smith's spasm, an occupation neurosis, marked by paresis of the arm muscles, in pen-makers, file-forgers, and others whose occupation compels the making of rapid strokes with a hammer throughout the working hours.

Hepp'tine [Maurice *Hepp*, Parisian physician, contemporary.] Trade name of gastric juice obtained from the living hog; recommended in dyspepsia.

heptachromic (hep"tah-kro'mik) [G. *hepta*, seven, + *chrōma*, color.] Able to distinguish the seven colors of the spectrum; having normal color vision.

hep'tad [G. *hepta*, seven] A septivalent chemical element or radical.

heptagonus (hep-tag'o-nus) [G. *hepta*, seven, + *gōnia*, angle.] Heptagon, a seven-cornered figure. **h. Willis'ii**, circle of Willis, circulus arteriosus [BNA].

heptane (hep'tān) [G. *hepta*, seven.] A paraffine having seven atoms of carbon, C_7H_{16}; a mobile, colorless liquid obtained from petroleum and from pine resin.

heptatomic (hep"tă-tom'ik) [G. *hepta*, seven, + *atomos*, atom.] Septivalent.

heptavalent (hep-tav'a-lent) [G. *hepta*, seven, + L. *valere*, to have power.] Heptatomic, septivalent.*

heptylresorcinol (hep-til-re-zor'si-nol). A colorless crystalline powder soluble in water, employed like hexylresorcinol as an antiseptic and especially as a vermicide.

herb (urb, hurb) [L. *herba*.] A plant the stem of which does not become woody like that of a shrub or tree.

herbaceous (hur-ba'shyus) [L. *herba*, grass.] Noting a plant which has no woody stem or trunk and which dies completely, or down to the roots, at the end of each season.

her'bage. 1. Vegetation. 2. The succulent parts, the leaves and smaller stems, of a plant.

Her'bert's opera'tion [J. Frederick *Herbert*, Philadelphia oculist, *1860.] An operation for obtaining a filtering cicatrix in glaucoma by cutting and displacing, without removing, a wedge-shaped scleral flap.

herbivorous (hur-biv'o-rus) [L. *herba*, herb, + *vorare*, to eat.] Feeding on herbs or vegetables, vegetarian.

Herbst's cor'puscles (hairpst) [Ernst Friedrich Gustav *Herbst*, German anatomist, 1803–1893.] Tactile corpuscles, resembling Pacinian corpuscles, but much smaller, found in birds.

hered'itary [L. *hereditarius; heres(hered-)*, an heir.] Transmitted from parent to offspring.

heredita'tion. The influence of heredity.

hered'ity [L. *hereditas; heres(hered-)*, an heir.] The transmission of characters from parent to offspring. **cross h.**, the occurrence of one disease in a parent and of a different, but allied, disease in the child, as epilepsy in one generation and migraine in the other. **knight's-move form of h.**, the inheritance of sex-limited diseases which affect only one sex but are transmitted by the other sex; as hemophilia, attacking only the sons but inherited through the mothers.

heredo- [L. *heres*, an heir.] A prefix noting heredity.

her"edoatax'ia. Friedreich's ataxia.

heredoimmunity (her"e-do-im-mu'nĭ-tĭ). Hereditary immunity

heredolues (her"e-do-lu'ēs). Heredosyphilis.

heredoluetic (her"e-do-lu-et'ik). Hereditarily syphilitic.

her"edosyph'ilis. Syphilis acquired in utero.

heredosyphilitic (her"e-do-sif-il-it'ik). Hereditarily or congenitally syphilitic.

her"edotuberculo'sis. Tuberculosis which is assumed to be inherited.

d'Herelle phenom'enon (dĕ-rel') [F. d'*Herelle*, Canadian physician, *1873.] When a broth culture of Shiga's bacillus is added to a filtered bouillon emulsion of the stool of a convalescent from dysentery, lysis of the bacilli occurs in a few hours; bacterophagia. This phenomenon is reproducible in series and appears in cultures of various other microorganisms when inoculated with the specific substance obtained from previous bacteriophage cultures. See *bacteriophage* and *Twort* phenomenon.*

Her'ing's phenom'enon [H. E. *Hering*, Austrian physician, *1866.] A faint continuous murmur heard, for a short time after death, when the stethoscope is placed over the lower end of the sternum; thought to be due to the blood-current caused by the contracting arteries.

Her'ing's test [Ewald *Hering*, German physicist, 1834–1918.] One looks through an apparatus having at the farther end a thread and a little ball; if binocular vision is present the observer is able to tell whether the ball is in front of or behind the thread, with monocular vision this is not possible. **H.'s the'ory** of color-blindness: there are three visual substances in the retina—blue-yellow, red-green, and white-black, by the chemical reactions of which color-perception is effected; the absence of one of these substances results in inability to perceive the colors or shades by the reaction of which they are sensed.

Hering-Semon hypoth'esis (ha'ring-za'mon) [see *Semon-Hering*.] Mnemic* hypothesis.

heritage (her'ĭ-tej) [old F. see *heredity*.] The total of all the inherited characters.

Hermann's fluid (her'mahn) [Friedrich *Hermann*, German anatomist, *1859.] A hardening fluid of glacial acetic acid 4, 2 per cent. aqueous solution of osmic acid 8, 1 per cent. aqueous solution of platinum chloride 60.

hermaph'rodism. Hermaphroditism.

hermaphrodite (hur-maf'ro-dīt) [G. *Hermaphroditos*, the son of *Hermēs*, Mercury, + *Aphroditē*, Venus.] Androgyne, a person whose genital organs have the characters of both male and female in greater or less degree.

hermaphrod'itism. The condition of being an hermaphrodite; the seeming occurrence of both male and female generative organs in the same individual. **dimid'iate h.,** lateral h. **fe'male h.,** h. in which the female characters predominate. **lat'eral h.,** a form in which male organs are apparently present on one side and female organs on the other. **male h.,** h. in which the male characteristics predominate. **transverse' h.,** a form in which the external organs are apparently male and the internal female, or *vice versa*. **unilat'eral h.,** h. in which the doubling of sex characteristics occurs only on one side.

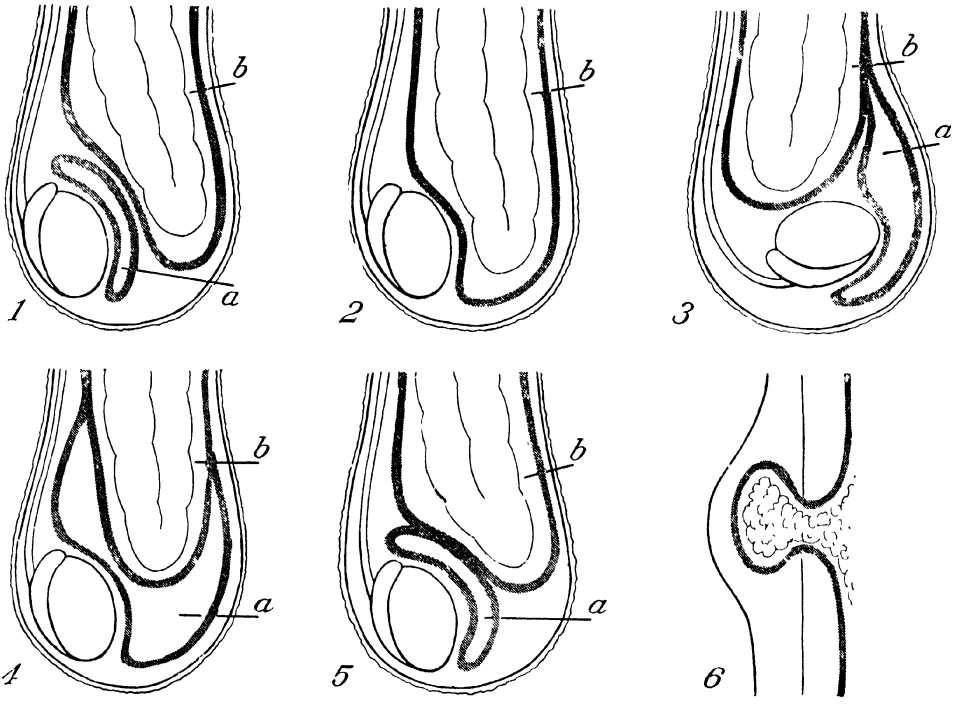
hermetic (hur-met'ik) [G. *Hermēs*, Mercury, also Thoth, the Egyptian god, revealer of esoteric doctrines.] Air-tight. **H. art,** alchemy, chemistry. **H. med'icine,** alchemical, iatrochemical,* spagiric, or Paracelsian medicine.

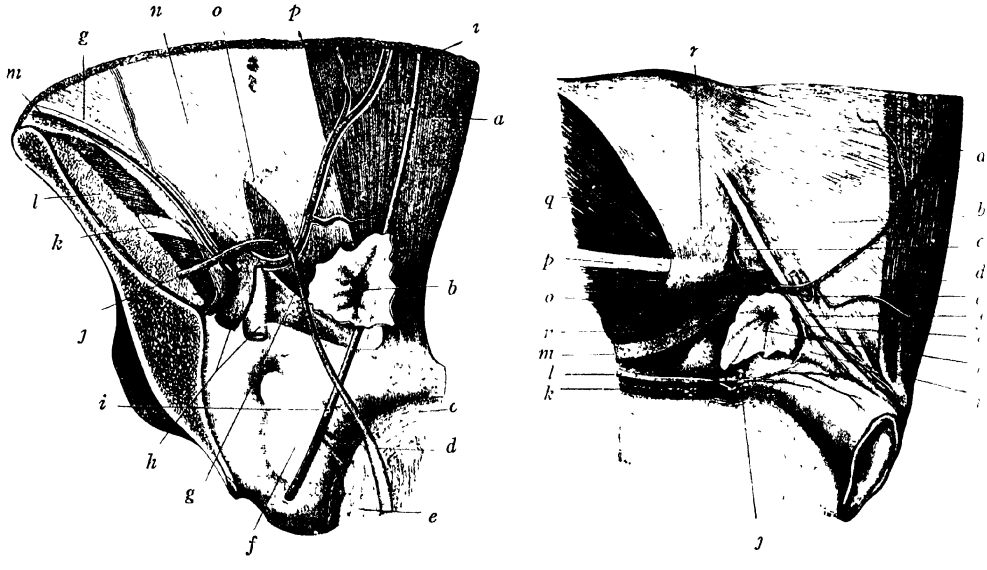
hermet'ically. In an air-tight manner, noting a vessel closed or sealed in such a way that air can neither enter it nor issue from it.

hermophen'yl. Mercuriosodium phenoldisulphonate; a white powder, recommended as a bactericide and in the treatment of syphilis, in hypodermic doses of gr. ½ (0.02).

hernia (hur'nĭ-ah) [L. rupture.] Rupture; the protrusion of an organ or part of an organ or other structure through the wall of the cavity normally containing it. A hernia is qualified by the name of the protruding part, as *cerebral h.*, *vesical h.*, etc.; of the cavity from which it escapes, as *abdominal h.*; of the structure or part through which it passes, as *diaphragmatic h.*, *inguinal h.*; and finally sometimes of another cavity which receives it, as *scrotal h.* or *labial h.* **Barth's h., Béclard's h., Burkett's h.,** etc., see the proper names. **cer'ebral h.,** h. cerebri, the escape of brain substance through an artificial opening in the skull. **cru'ral h.,** femoral h. **diaphragmat'ic h.,** the passage of a loop of intestine through the diaphragm; it is called a *true* h., when there is a sac of peritoneum and pleura, *false* when the intestine passes through a defect in the diaphragm and lies free in the thoracic cavity; diaphragmatocele. **epigas'tric h.,** the escape of a loop of intestine through a muscular rent in the upper portion of the abdomen. **fem'oral h.,** the escape of a knuckle of intestine through the femoral canal. **glu'teal h.,** sciatic h. **h. antevesica'lis,** a h. in the subperitoneal tissues, projecting inward from the internal inguinal ring. **h. duode"nojejuna'lis,** a h. in the fossa lying between the duodenojejunal flexure and a crescentic fold of peritoneum. **h. en bissac',** properitoneal inguinal h. **h. ili'acosubfascia'lis,** a h. the sac of which passes through the iliac fascia and lies in the iliac fossa in contact with the iliacus muscle. **h. inter'na vagina'lis testic'uli,** a h. the pouch of which is subperitoneal, the testicle and vaginal pouch not having descended through the inguinal canal. **h. intersigmoid'ea,** one into the intersigmoid fossa on the under surface of the root of the mesosigmoid near the inner border of the psoas magnus muscle. **h. intraepiplo'ica,** a coil of intestine incarcerated in an omental sac. **h. intraili'aca,** a h. in the subperitoneal tissues projecting outward from the internal inguinal ring. **h. intrapel'vica,** one projecting downward, in the subperitoneal tissues, from the internal inguinal ring. **h. ligamen'ti u'teri la'ti,** a coil of intestine contained in a pouch projecting into the substance of the broad ligament. **h. retropu'bica,** a h. projecting downward, in the subperitoneal tissues, from the internal inguinal ring. **hia'tus h.,** protrusion of a loop of intestine through the esophageal hiatus in the diaphragm. **incar'cerated h.,** obstructed h., one in which the passage of feces through the protruding loop of intestine is arrested, the blood current in its walls being, however, maintained. **in'fantile h.,** a form in which an intestinal loop descends behind the tunica vaginalis, having, therefore, three peritoneal layers in front of it. **in'guinal h.,** h. of the intestine at the inguinal region; a *direct inguinal h.* passes directly through the abdominal wall at the location of the internal abdominal ring; an *indirect inguinal h.* passes through the inguinal canal. **in"guinocru'ral h., in"guinofem'oral h.,** a bilocular or double hernia, both inguinal and (more or less completely) femoral. **in"guinoproperitone'al h.,** properitoneal inguinal h. **intersti'tial h.,** one in which the knuckle of intestine is between any two of the layers of the abdominal wall. **irredu'cible h.,** one in which adhesions have formed preventing reduction of the intestinal loop without operation. **ob'turator h.,** gluteal h., protrusion of a loop of bowel through the obturator canal. **paraperitone'al h.,** a vesical h., in which only a part of the protruded organ is covered by the peritoneum of the sac **pari'etal h.,** Richter's h., one in which only a portion of the wall of the intestine is engaged. **properitone'al in'guinal h.,** h. en bissac, a complicated h. having a double sac, one part in the inguinal canal, the other projecting from the internal inguinal ring in the subperitoneal tissues **ret'rograde h.,** w-hernia the central loop of which lies in the abdominal cavity. **retroperitone'al h.,** h. duodenojejunalis. **sciat'ic h.,** gluteal h., ischiocele, enterischiocele, protrusion of intestine through the great sacrosciatic foramen. **sli'ding h., slipped h.,** a h. of the cecum or sigmoid in which a portion of the bowel is outside the femoral or inguinal sac. **stran'gulated h.,** one which is both irreducible and incarcerated and in which the blood circulation is also arrested, gangrene occurring unless speedy relief is afforded. **umbil'ical h.,** one in which bowel or omentum protrudes through the abdominal wall under the skin at the umbilicus. **ven'tral h.,** escape of a loop of intestine through the abdominal wall at any point other than the normal rings or canals or umbilicus. **w-her'nia,** double-loop hernia, the presence of two loops of intestine in a hernial sac.

abdominal, laparocele, epigastrocele (upper part), hypogastrocele (lower part), paromphalocele (central part). **anal,** hedrocele. **bladder,** cystocele, hernia cystica. **cerebral,** hernia cerebri, hernia cephalica, exencephalocele, cephalocele, fungus cerebri. **diaphragmatic,** diaphragmatocele. **esophagus,** pharyngocele. **fatty,** lipocele, steatocele, hernia adiposa. **femoral,** femorocele, merocele. **heart,** cardiocele, hernia cordis. **incomplete inguinal,** bubonocele. **intestine,** enterocele. **kidney,** nephrocele. **liver,** hepatocele. **lung,** pneumonocele. **membranes of brain or spinal cord,** meningocele. **obturator,** oodecocele. **omentum,** epiplocele, hernia epiploica. **operation,** herniotomy, celotomy, kelotomy. **perineal,** mesocelocele, perineocele. **pleural,** pleurocele. **pudendal,** episiocele. **rectum,** proctocele, hedrocele. **sciatic,** ischiocele, enterischiocele. **science of,** herniography, herniology, kelology, celology. **scrotal,** oscheocele, hernioschoncus. **splenic,** lienocele, splenocele, hernia lienalis. **stomach,** gastrocele. **testicle,** orchiocele. **umbilical,** omphalocele, omphalexoche, exomphalos, exomphalocele. **uterus,** hysterocele, metrocele.





VARIETIES OF HERNIA

1 to 5. Relations of Scrotal Hernia to the Testicle and Tunica Vaginalis; 1, funicular; 2, congenital; 3, infantile; 4, encysted; 5, acquired; *a*, tunica vaginalis, *b*, hernial sac. (In Fig. 2, the tunica vaginalis and the hernial sac are the same.)

6. Omental Hernia.

7. Rear View of Internal Inguinal Hernia. (Joessel.) *a*, Rectus; *b*, sac of internal inguinal hernia; *c*, bladder; *d*, vas deferens; *e*, seminal vesicle; *f*, obturator foramen; *g*, Poupart's ligament; *h*, external iliac artery and vein; *i*, obliterated umbilical artery; *j*, spermatic vessels; *k*, crural nerve; *l*, iliac muscle; *m*, deep circumflex iliac vessels; *n*, transversalis fascia, *o*, internal abdominal ring; *p*, deep epigastric vessels.

8. Rear View of Femoral Hernia, Showing Normal Obturator Artery. (Joessel.) *a*, Rectus muscle; *b*, transversalis fascia; *c*, deep circumflex iliac artery; *d*, deep epigastric artery, *e*, cremasteric artery; *f*, Poupart's ligament; *g*, pubic branch of deep epigastric; *h*, hernial sac; *i*, Gimbernat's ligament, *j*, pubic branch of obturator artery; *k*, abnormal obturator artery; *l*, obturator nerve; *m*, external iliac vein; *n*, external iliac artery; *o*, psoas muscle; *p*, anterior crural nerve; *q*, iliac muscle; *r*, iliac fascia.

her'nia-knife. Herniotome, a slender-bladed knife, with short cutting edge, for dividing the constricting tissues at the mouth of the hernial sac.

her'nial. Relating to hernia.

her'niated. Suffering from hernia.

herniation (hur-nĭ-a'shun). The process of formation of a protrusion.

hernioenterotomy (hur"nĭ-o-en-ter-ot'o-mĭ). Opening of the intestine following the reduction of a hernia.

her'n:**oid**[G. *eidos*, resemblance] Resembling hernia.

herniolaparotomy, (hur"nĭ-o-lap-ă-rot'o-mĭ). Opening of the abdominal cavity following the reduction of a hernia, in order to relieve a persisting strangulation of the intestine.

herniol'ogy. The branch of surgery treating especially of hernia.

her'nioplasty [L. *hernia* + G. *plassō*, I form.] The radical operation for hernia.

herniopuncture (hur-nĭ-o-punk'chŭr). Insertion of a hollow needle into a hernia in order to reduce the size of the tumor by withdrawing gas or liquid.

herniotome (hur'nĭ-o-tōm). Hernia-knife.

herniotomy (hur-nĭ-ot'o-mĭ). Operation for the relief of hernia; celotomy, kelotomy.

hero'ic [G. *hērōikos*, relating to a hero] Bold, daring, noting treatment which if it does not relieve may increase the danger.

heroine (her'o-ēn). Diacetyl-morphine, an artificial alkaloid prepared by heating morphine with acetyl chloride; the hydrochloride is employed in medicine, see *diacetylmorphina*.

Herophilus's wine-press [*Herophilus*, Greek physician of Alexandria, 335–280 B.C.] Torcular Herophili, confluens* sinuum.

herpes (hur'pēz) [G. *herpēs; herpō*, I creep.] An eruption of deep-seated vesicles on an erythematous base; the term embraces two distinct affections: *h. simplex* and *h. zoster*. **h. circina'tus bullo'sus,** dermatitis herpetiformis. **h. cor'neæ,** herpetic keratitis.* **h. des'quamans,** tinea imbricata. **h. facia'lis,** see h. simplex. **h. farino'sus,** tinea imbricata. **h. febri'lis,** cold sore, h. simplex of the lips, occurring often in pneumonia and other fevers. **h. genita'lis,** h. simplex of the penis or vulva. **h. gestatio'nis,** a pemphigoid eruption, usually associated with neurotic symptoms, occurring sometimes in pregnancy and disappearing spontaneously during the puerperium. **h. i'ris,** erythema iris. **h. labia'lis,** h. of the lips, cold sore, fever blister, the usual localization of h. facialis. **h. phlyctæno'des,** dermatitis herpetiformis. **h. preputia'lis,** h. simplex of the prepuce. **h. progenita'lis,** h. simplex of the genitals. **h. sim'plex,** an affection marked by the occurrence of one or more deep vesicles on the vermilion border of the lips or at the external nares (*h. facialis*), or on the glans, prepuce, or vulva (*h. progenitalis*). **h. ton'surans,** tinea tonsurans. **h. veg'etans,** pemphigus vegetans. **h. zos'ter** [G. *zōstēr*, girdle], zona, zoster, shingles, an affection marked by an eruption of herpetic vesicles on one half of the body along the line of distribution of a cutaneous nerve; it occurs usually on the chest but may appear on the face or elsewhere; burning, tingling, or severe neuralgic pains may accompany the eruption.

herpetic (hur-pet' ik). Relating to or suffering from herpes.

herpet'iform [*herpes* + L. *forma*, appearance.] Resembling herpes.

herpetism (hur'pe-tizm). A supposed diathesis, described chiefly by French writers, regarded now as the same as arthritism.

Herpetom'onas [G. *herpeton*, a reptile, + *monas* unit (one of the *Monadidæ*).] A genus of flagellated infusorians some species of which are blood parasites and believed to be pathogenic. The distinction between Herpetomonas and Leishmania is not yet clearly drawn. **H. donova'ni,** *Leishmania donovani*, the pathogenic protozoan parasite of kala-azar, transmitted from man to man through a bedbug (*Cimex rotundatus*). **H. infan'tum,** the supposed pathogenic organism of infantile splenomegaly. **H. mus'cæ domes'ticæ,** the type species of *H.*, found in the common house-fly. **H. sarcoph'agæ,** a species found in the flesh-fly, *Sarcophaga hæmorrhoidalis*. **H. trop'ica,** the supposed parasite of oriental sore.

Herrmannsdorfer diet (hār'mahns-dor-fer) [Adolf *Herrmannsdorfer*, German surgeon, *1889.] An acidulous albumin and fat-rich diet to promote the healing of wounds.

hersage (air-sazh') [Fr. (from L. *hirpex*), a harrowing.] Separating the individual fibers of a nerve trunk.

Herter's type of infan'tilism (hur'tur) [Christian Archibald *Herter*, American pathologist and physiological chemist, 1865–1910] Intestinal infantilism.*

Hertwig's sheath (hert'vig). An epithelial layer continuous with the epithelium of the enamel organ which is supposed to shape the roots of the teeth; it usually atrophies after dental histogenesis is complete, but when any of the cells persist they receive the name of Malassez's epithelial rests.

Hertz'ian exper'iments [Heinrich *Hertz*, German physicist, 1857–1894.] Experiments demonstrating that electromagnetic induction is propagated in waves, analogous to waves of light but not affecting the retina. **H. rays,** ether rays, electrically excited, of extremely slow lateral movement; they are utilized in wireless telegraphy and telephony.

Herxheimer's fibers (herks'hi-mer) [Karl *Herxheimer*, German dermatologist, *1861] Minute spiral fibrils described by H in the stratum mucosum of the skin. **H.'s reaction,** an inflammatory reaction in syphilitic tissues (skin, mucous membrane, nervous system, or viscera) induced in certain cases by specific treatment with salvarsan, mercury, or cacodylates; believed to be due to irritation of the treponema by an insufficient dose of the remedy, hence to be indicative of a failure to cure.

Her'yng's sign [Théodor *Heryng*, Warsaw laryngologist, *1847.] Absence of illumination of the orbit when an electric light is placed in the mouth, in case of empyema or tumor of the antrum of Highmore.

Heschl's gy'rus (hesh'l) [Richard *Heschl*, Austrian pathologist, 1824–1881.] Gyrus temporalis transversus.

hesperanopia (hes"per-an-o'pĭ-ah) [G. *hespera* evening, + *a-* privative, + *ōps*, eye.] Night-blindness, nyctalopia.

hesperidium (hes-per-id'ĭ-um) [the golden apple of *Hesperides*.] In botany a many-celled berry with thick wall, such as the orange.

Hesselbach's her'nia (hes'el-bahkh) [Franz Kaspar *Hesselbach*, German surgeon, 1750–1816.] Femoral hernia with diverticula through the cribriform fascia, presenting a lobular outline. **H.'s lig'ament,** ligamentum interfoveale, a band of

fibers extending from the transversalis fascia to the pubic spine at the insertion of Gimbernat's ligament. **H.'s tri'angle,** a triangular area on the posterior surface of the anterior abdominal wall, bounded by Poupart's ligament, the epigastric artery, and the border of the rectus abdominis muscle; direct inguinal hernia occurs at this point.

heteradel'phus [G. *heteros*, other, + *adelphos*, brother.] A twin monster in which the very incomplete parasite is attached to the ventral aspect of the autosite.

heteradenia (het"er-ă-de'nĭ-ah) [G. *heteros*, other, + *adēn*, gland.] A condition in which a gland is abnormally located.

heterade'nic. Relating to heteradenia.

hetera'lius [G. *heteros*, other, + *halios*, useless.] A twin monster in which the parasite is so undeveloped as to be scarcely recognizable as such, and to exist as little more than an excrescence on the ventral surface of the autosite.

heterax'ial [G. *heteros*, different, + *axis*.] Having mutually perpendicular axes of unequal length.

heterecious heterœcious (het-er-e'shyus) [G. *heteros*, different, + *oikion*, house.] Having more than one host, said of a parasite passing different stages of its existence in different animals.

heterecism, heterœcism (het'er-e-sizm) [G. *heteros*, another, + *oikion*, house.] The occurrence, in a parasite, of two cycles of existence, passed in two different hosts.

heteresthesia (het-er-es-the'zĭ-ah) [G. *heteros*, other, + *aisthēsis*, sensation.] A change occurring in the degree (either plus or minus) of the sensory response to a cutaneous stimulus as the latter crosses a certain line on the surface.

heteroagglu'tinin. An agglutinin formed as the result of the injection of an antigen derived from an animal of a different species; distinguished from *isoagglutinin*.

heteroalbumose (het"er-o-al'bu-mōz). An albumose insoluble in water, but soluble in acid, alkaline, and saline solutions.

heteroalbumosu'ria [G. *ouron*, urine] The excretion of heteroalbumose in the urine.

heteroblas'tic [G. *heteros*, other, + *blastos*, germ.] Originating from tissue of another kind; distinguished from *homoblastic*.

heterocell'ular. Formed of cells of different kinds

heterocen'tric [G. *heteros*, different, + *kentron*, center.] Having different centers, noting rays which do not meet at a common focus.

heterochiral (het-er-o-ki'ral) [G. *heteros*, other, + *cheir*, hand] Relating to or referred to the other hand.

heterochromia (het-er-o-kro'mĭ-ah) [G. *heteros*, other, + *chrōma*, color.] A difference in coloration in two structures or two parts of the same structure which are normally alike in color.

heterochromosome (het"er-o-kro'mo-sōm) [G. *heteros*, other, + *chrōma*, color, + *sōma*, body.] Allosome.

heterochromous (het-er-ok'ro-mus). Having an abnormal difference in coloration.

heterochronia (het-er-o-kro'nĭ-ah) [G. *heteros*, different, + *chronos*, time.] The origin or development of tissues or organs at an unusual time or out of the regular sequence, as the development of embryonal tissue after birth; opposed to *synchronia*.

heterochronic (het"er-o-kron'ik). Heterochronous.

heterochronous (het-er-ok'ro-nus). Heterochronic, relating to heterochronia; referring especially to **teratomata** composed of tissue occurring in a given locality at a time when it should not normally be found there.

heterochylia (het-er-o-ki'lĭ-ah) [G. *heteros*, different, + *chylos*, juice.] An apparently idiopathic change in the character of the gastric juice.

heterocinesia (het-er-o-sin-e'sĭ-ah) [G. *heteros*, other, + *kinēsis*, movement.] Executing movements the reverse of those the patient is told to make.

heteroclad'ic [G. *heteros*, different, + *kladoš*, a twig.] Noting an anastomosis between branches of different arterial trunks, as distinguished from *homocladic*.

heterocri'sis [G. *heteros*, different.] An irregular crisis, one occurring at an abnormal time or with unusual symptoms.

heterocyclic (het"er-o-si'klik) [G. *heteros*, other, + *kyklos*, circle.] Noting a closed-chain* compound in which the ring contains atoms of more than one element; see *carbocyclic* and *isocyclic*.

Heterodera radicicola (het-ĕ-rod'er-ah rad-ĭ-sĭ'ko-lah). A species of worm parasitic on the roots of certain plants. See *Oxyuris incognita*.

heterodermic (het-er-o-dur'mik) [G. *heteros*, other, + *derma*, skin.] Noting the method of skin grafting in which the grafts are taken from the skin of another person, dermatoheteroplasty.

het'erodont [G. *heteros*, different, + *odous(odont-)*, tooth] Having teeth of varying shapes, such as those of man and the majority of mammals; opposed to *homodont*

heterod'ymus [G. *heteros*, different, + *didymos*, twin] A twin monster in which the incomplete parasite, consisting only of head and neck, is attached to the anterior surface of the autosite.

heteroganglion'ic. Relating to, connecting, or associated with, ganglia in different locations.

heterogeneous (het"er-o-je'ne-us). Composed of elements or parts of various and dissimilar characteristics or nature.

heterogenesis (het-er-o-jen'e-sis) [G. *heteros*, different, + *genesis*, production.] 1. The production of offspring unlike the parents. 2. Spontaneous generation, abiogenesis.

heterogenet'ic. Relating to heterogenesis.

heterogenous (het-er-oj'en-us) [G. *hetēros*, other, + *genos*, family, kind.] Having a different or dissimilar origin.

heterog'onous. Marked by heterogony.

heterog'ony [G. *heteros*, other, + *gonos*, generation.] In botany, the condition in which different individuals of the same species have styles and stamens of different lengths, the stigma being in some cases above the tops of the anthers, in others below them

heterograft (het'er-o-graft) [G. *heteros*, another,] A graft taken from an animal—not from another person, *isograft*, or from another part of the same individual, *autograft*.

heteroinfection (het"er-o-in-fek'shun). Infection by a virus originating outside the body, as distinguished from *autoinfection*.

heteroinoculation (het"er-o-in-ok-u-la'shun). Inoculation with virus originating outside the body; distinguished from *autoinoculation*.

heterointoxica'tion. Poisoning by a substance introduced from without the body, as distinguished from *autointoxication*.

het"erola'lia [G. *heteros*, different, + *lalia*, speech.] The habitual substitution of meaningless or inappropriate words for those intended; a form of aphasia.

heterolat'eral [G. *heteros*, other, + L. *latus*, side.] On, or relating to, the opposite side

heterolit'eral [G. *heteros*, different, + L. *litera*, letter.] Relating to stammering or the substitution of one letter for another in the pronunciation of certain words.

heterol'ogous [G. *heteros*, different, + *logos*, relation.] 1. Composed of tissue or cells not normal to the part, said of certain new growths. 2. Der.ved from an animal of another species, said of sera.

heterol ogy. A departure from the normal in structure, arrangement, or mode or time of development.

heterol'ysin. Any lysin formed in response to the introduction of an antigen derived from an animal of another species; distinguished from *homolysin* and *autolysin*

heterolysis (het-er-ol'i-sis) [G. *heteros*, other, + *lysis*, a loosening.] Digestion of one kind of cell or of protein derived from it by the enzyme of another cell, usually a leucocyte.

heterolyt'ic. Relating to heterolysis or a heterolysin

Heteromastigida (het-er-o-mas-tij'i-dah) [G. *heteros*, different, + *mastix*(*mastig*-), whip.] An order of *Zoömastigophora*, embracing those forms which have two or more differentiated flagella, an anterior one used for locomotion, and one or more posterior ones used for other purposes.

heteromastigote (het-er-o-mas'ti-gōt) [G. *heteros*, different.] A mastigote having two flagella, one anterior and one posterior.

heteromer'ic [G. *heteros*, different, + *meros*, part.] 1. Having a different chemical composition. 2 Noting spinal neurons which have processes passing over to the opposite side of the cord

heterom'eral. Heteromeric (2).

heterom'erous. Heteromeric.

heterometaplasia (het"er-o-met-ă-pla'zi-ah) [G. *heteros*, different, + *metaplasia*.] Tissue transformation resulting in the production of a tissue foreign to the part where produced.

heterometro'pia. A condition in which the degree of refraction is unlike in the two eyes.

heteromorpho'sis [G. *heteros*, different, + *morphōsis*, a moulding.] The development of one tissue from a tissue of another kind or type.

heteromor'phous [G. *heteros*, different, + *morphē*, shape.] Differing from the normal type.

heteronomous (het-er-on'o-mus) [G. *heteros*, different, + *nomos*, law.] Different from the type; abnormal.

heteronymous (het-er-on'i-mus) [G. *heterōnymos*, having a different name.] Having different names or expressed in different terms. **h. diplo'pia**, see diplopia.

heterop'agus [G. *heteros*, different, + *pagos*, fixed.] A twin monster in which the imperfectly developed parasite, having, however, a head and rudimentary extremities, is attached to the ventral portion of the autosite.

heteropancreatism (het"er-o-pan'kre-ă-tizm) [G. *heteros*, other, + *pancreatism*.] A condition in which the functioning of the pancreas is irregular, the pressure and amounts of the several ferments showing no constancy.

heterop'athy [G. *heteros*, other, + *pathos*, suffering] Allopathy.

heterophasia (het-er-o-fa'zi-ah) [G. *heteros*, other, + *phasis*, speech.] Heterolalia.

heterophemia, heterophemy (het-er-o-fe'mi-ah, het-er-of'e-mi) [G. *heteros*, other, + *phēmē*, a speech.] Heterolalia.

heteropho'nia [G. *heteros*, different, + *phōnē*, voice.] 1. The change of voice at puberty. 2. Any abnormality in the voice-sounds.

heteropho'ria [G. *heteros*, different, + *phora*, movement.] A tendency of one eye to deviate in one or another direction in consequence of imperfect balance of the ocular muscles; dynamic, latent, or suppressed squint.

heterophthal'mus [G. *heteros*, other, + *ophthalmos* eye.] A difference in the appearance of the two eyes, usually due to heterochromia of one or both of the irides.

heterophthongia (het-er-of-thon'ji-ah) [G. *heteros* different, + *phthongos*, the voice.] Heterophonia.

Heterophyes (het-er-ŏ'fi-ēs) [G. *heteros*, other, + *phyē*, stature, form.] A genus of the family *Heterophyidæ*, or flukes of small size. **H. heterophyes**, a species infesting the small intestine and cecum in man and house animals in Egypt and the Far East. **H. katsura'dai**, a species somewhat smaller than the preceding, found in Japan.

heterophyll'ous [G. *heteros*, other, + *phyllon*, leaf.] In botany, noting a plant with foliage leaves of different forms.

heteroplasia (het-er-o-pla'si-ah) [G. *heteros*, other, + *plasis*, a forming.] The production of an organ or tissue where it does not normally belong.

heteroplas'tic. 1. Relating to heteroplasia. 2 Relating to heteroplasty.

heteroplas'tid. The graft in heteroplasty.

heteroplasty (het'er-o-plas-ti) [G. *heteros*, different, + *plassō*, I form.] Surgical grafting with tissue derived from another individual or from one of the lower animals.

heteroproteose (het-er-o-pro'te-ōz). A primary proteose insoluble in water, but soluble in a 0.5 to 1.0 per cent. solution of some neutral salt; it resembles native protein more than peptone.

heteropsia (het-er-op'si-ah) [G. *heteros*, different, + *opsis*, vision.] Inequality of vision in the two eyes.

heteropsychological (het"er-o-si-ko-loj'i-kal) [G *heteros*, other, + *psychē*, soul, + *-logia*.] Relating to ideas developed from without or derived from another's consciousness.

heterop'tics [G. *heteros*, different, + *optikos*, optic.] Seeing things that are not, or the misinterpretation of what is seen; perverted vision.

het'eroscope [G. *heteros*, different, + *skopeō*, I see] An apparatus for determining the range of vision of a strabismic eye.

heteros'copy. The determination of the range of vision of the eyes in strabismus.

heterosexuality (het"er-o-seks-u-al'i-ti). Erotic attraction toward one of the opposite sex.

heteros'porous [G. *heteros*, other, + *sporos*, seed.] Having two kinds of asexually produced spores, microspores and macrospores.

heterosuggestion (het"er-o-sug-jes'chun) [G. *heteros*, other, + *suggestion*.] Suggestion, especially with reference to the subject; opposed to autosuggestion.*

heterotax'ia [G. *heteros*, different, + *taxis*, arrangement.] Abnormal arrangement of organs or parts of the body in relation to each other.

heterotax'ic. Abnormally placed or arranged.

heterotax'is, het'erotaxy. Heterotaxia.

heterother'apy [G. *heteros*, different, + *therapeia*, treatment.] Treatment of a disease by remedies the action of which is antagonistic to the most prominent symptoms of that disorder.

heteroto'nia [G. *heteros*, different, + *tonos*, tension.] Abnormality or variation in tension or tonus.

heteroto'pia [G. *heteros*, other, + *topos*, place.] A displacement of parts, local heterology; specifically (1) the occurrence of masses of gray matter of the brain or spinal cord in abnormal

situations, or (2) the presence of any cell in a part from which it is normally absent.

heterotop'ic. Relating to heterotopia, misplaced.

heterotopous *(het-er-ot'o-pus). Heterotopic, referring especially to teratomata composed of tissues which are out of place in the region where found.

heterotox'ic. Relating to heterotoxis or a heterotoxin.

heterotox'in. A toxin introduced into the body from without.

heterotox'is. Heterointoxication.

Heterotrichida (het"er-o-trik'i-dah) [G. *heteros*, different, + *thrix(trich-)*, hair] An order of *Ciliata* in which there is an adoral zone of membranelles formed of fused cilia

heterotrichosis (het"er-o-tri-ko'sis) [G. *heteros*, other, + *trichōsis*, growth of hair.] Variegation in the hair of the scalp or other parts of the body.

heterotrophia (het"er-o-tro'fi-ah) [G. *heteros*, different, + *trophē*, nourishment] 1. An unusual or abnormal mode of obtaining nourishment. 2. Perverted nutrition.

heterotroph'ic [G. *heteros*, another, + *trophikos*, nourishing.] Noting bacteria and other low forms of plant life which are unable to form protein and carbohydrates, as the green plants are, from inorganic carbon and nitrogen; distinguished from *autotrophic*.*

heterot'rophy. Heterotrophia

heterotro'pia, heterot'ropy [G. *heteros*, different, + *tropē*, turn] Strabismus

heterotyp'ic, heterotyp'ical [G. *heteros*, other, + *typos*, form] Of a different or unusual type or form. **h. divis'ion,** the first of the two divisions of a maturing sex-cell during which reduction of the chromosomes occurs

heteroxanthine (het"er-o-zan'thin). Methyl-xanthine, $C_6H_6N_4O_2$, one of the alloxuric bases found in the urine in gout.

heterozoic (het-er-o-zo'ik) [G. *heteros*, other, + *zōikos*, relating to an animal.] Relating to another animal or another species of animal.

heterozygosis (het"er-o-zi-go'sis). The production of hybrids by the union of unlike gametes; cross-breeding.

heterozygote (het-er-o-zi'gōt) [G. *heteros*, other, + *zygotos*, yoked.] 1. An individual containing both allelomorphs and producing germ-cells bearing one and the other respectively, being, therefore, hybrid in respect of that pair of allelomorphic characters. 2. A zygote produced by the union of two dissimilar gametes of different stock.

heterozygous (het"er-o-zi'gus). Relating to heterozygosis; produced by unlike gametes; hybrid. H. individuals generally resemble those homozygous for the dominant character, but they transmit the recessive to half of their offspring.

hetocre'sol. Metacresol cinnamate, cinnamylmetacresol, a white crystalline powder, insoluble in water; recommended for local use in tuberculosis of the bladder, in the form of 1 or 2 per cent. suspension in saline solution.

he'toform. Bismuth cinnamate, used like hetol in the treatment of tuberculosis.

he'tol. Sodii cinnamas.

het'ralin. Hexamethylene tetramine resorcinol.

hettocyrtosis (het-o-sur-to'sis) [G. *hēttōn*, less, + *kyrtōsis*, curvature.] A minor degree of curvature of the spine or of one of the long bones.

Heubner's disease' (hoyb'ner) [Johann Otto Leonhardt *Heubner*, Berlin pediatrist, 1843–1926.] Syphilitic endarteritis obliterans of the cerebral vessels.

heurteloup (hert-loo') [after the inventor M. *Heurteloup*, French surgeon, 1793–1864.] Artificial leech.

Hewlett's stain for capsules. Dip in a solution of carbolfuchsin and distilled water, equal parts, then stain for 15 seconds in a 0.1 per cent. solution of gentian violet.

hexaba'sic [G. *hex*, six, + *basis*, base.] Noting an acid having six replaceable hydrogen atoms.

hexabromdioxydiphenylcarbinol (heks'ă-brom-di-oks'i-di-fen'il-kar'bin-ol). A compound of cresols with halogens introduced as a disinfectant by Ehrlich; it is said to be non-poisonous but 250 times more powerful as a germicide than phenol.

hex'ad [G. *hexas*, the number six.] A sexivalent element or radical

hexadactylism (heks"ah-dak'ti-lizm) [G. *hex*, six, + *daktylos*, finger] The presence of six fingers or six toes on one or both hands or feet.

hexalet (heks'ă-let) Trade name of sulphosalicylic hexamethylene tetramine, recommended as a urinary antiseptic in doses of 15 grains three or four times a day.

hexam'ecol. Trade name of a compound of guaiacol and hexamethylene-tetramine, recommended as an external application for the relief of the pains of dry pleurisy and in pruritus

hexamethylenamina (heks-am-eth"il-ēn-ah-me'nah). Hexamethylenamine, methenamina (U.S.)

hexamethylenamine (heks-ă-meth"il-e-nam'ēn). Hexamethylenamina. **h. brometh'ylate, h. meth"ylenecit'rate, h. sal'icylate,** etc., see under *hexamethylene tetramine*.

hexameth"ylene diam'ine. A ptomaine from putrefying flesh

hexameth'ylene tetram'ine. Methenamina (U.S.). **h. t. brometh'ylate,** bromalin, bromalium, bromoformin, bromethylformin, a colorless crystalline powder or scales, a substitute for potassium bromide in dose of gr. 30–60 (2.0–4.0) **h. t. cam'phorate,** amphotropin, a light, white, crystalline powder, soluble in ten parts of water, employed in bacteriuria, cystitis, pyelitis, and nephritis in doses of gr. 7½–15 (0.5–1.0) three times a day **h. t. iod'oform,** iodoformin, a fine whitish powder turning yellowish on exposure to the air, decomposed by water, liberating iodoform **h. t. meth"ylenecit'rate,** helmitol, citramine urotropin new, a white crystalline powder soluble in 10 parts of water, urinary antiseptic in doses of gr. 5–15 (0.3–1.0) **h. t. resor'cinol,** hetralin occurs in white needles soluble in 14 parts of water, recommended in gonorrheal cystitis in doses of gr. 5–10 (0.3–0.6) **h. t. sal'icylate,** salihexamin, urotropin salicylate, a colorless crystalline powder, soluble in water; uric-acid solvent and urinary antiseptic in doses of gr. 5–30 (0.3–2.0). **h. t. tan'nin,** tannon, tannopin, a brownish, tasteless powder insoluble in water, employed in diarrhea in doses of gr. 5–15 (0.3–1.0)

hexamina (heks-ah-me'nah). (Br.) Methenamina* (U.S.).

hexane (heks'ān). A liquid hydrocarbon, C_6H_{14}, of the paraffine series.

Hexapoda (hex-ap'o-dah) [G. *hex*, six, + *pous* (*pod-*), foot.] Insects, animals with six feet, or three pairs of legs.

hexatom'ic [G. *hex*, six, + *atomos*, atom.] 1. Noting a chemical compound having six atoms. 2. Noting a compound having six replaceable hydrogen or univalent atoms.

hexav'alent [G. *hex*, six, + *L. valere*, to have power] Sexivalent.

hex'etone. Homocamfin, cyclosal.

hex'one ba'ses. Histidine, arginine, lysine, and other nitrogen-containing amino-acids resulting from the hydrolysis of protamines; they all contain six carbon atoms; called also *histone bases.*

hexose (heks'ōz) [G. *hex*, six] A monosaccharide containing six carbon atoms in the molecule ($C_6H_{12}O_6$); dextrose and levulose are the two principal hexoses.

hex'yl [G. *hex*, six, + *hylē*, stuff] A hypothetical radical, C_6H_{13}, occurring in a number of alcohols and other organic compounds.

hexylam'ine. A ptomaine, C_6H_5N, found sometimes in cod-liver oil.

hexylresorcinol (heks"il-re-zor'si-nol). Caprokol, $C_6H_3(OH)_2(C_6H_{13})$ or $CH_3(CH_2)_5C_6H_3(OH)_2$, a heavy viscous pale yellow liquid, readily soluble in alcohol and vegetable oils but almost insoluble in water, having a pungent odor and an astringent taste followed by numbness of the tongue; employed in the treatment of bacteriuria, in doses of ♏2½-10 (0.15-0.6) three times a day, given in olive-oil solution in gelatin capsules, each capsule containing ♏2½ (0.15) of the remedy.

Hey's her'nia (ha) [William *Hey*, English surgeon at Leeds, 1736-1819] Bilocular femoral hernia, one sac being in the canal, the other passing through a defect in the superficial fascia and lying beneath the skin. **H.'s inter'nal derange'ment,** dislocation of the semilunar cartilages of the knee-joint. **H.'s lig'ament,** the upper border, or superior cornu, of the saphenous opening, immediately below Poupart's ligament in front of the anterior wall of the femoral sheath. **H.'s opera'tion,** amputation of the foot immediately in front of the tarsometatarsal joint. **H.'s saw,** a narrow saw for use in bone operation.

Heynsius's test (hīn'se-oos) [Adrian *Heynsius*, Dutch physician, 1831-1885.] For albumin in the urine; the urine is acidulated with acetic acid and then boiled with the addition of common salt, if albumin is present a white cloud will form.

Hf. 1. Hydrofluoric acid 2. Symbol of *hafnium.*

Hg. Chemical symbol of hydrargyrum, mercury

$HgCl_2$. Mercuric chloride, corrosive chloride, perchloride, or bichloride, of mercury; corrosive sublimate.

Hg_2Cl_2. Mercurous chloride, mild chloride of mercury, calomel.

$Hg.(HgO)_2.SO_4$. Basic mercuric sulphate, yellow mercuric subsulphate, turpeth mineral.

HgI_2. Mercuric iodide, red iodide, or biniodide, of mercury.

Hg_2I_2. Mercurous iodide, yellow iodide of mercury.

$Hg(NO_3)_2$. Mercuric nitrate, pernitrate of mercury.

HgO. Mercuric oxide, precipitated oxide of mercury, red oxide, or peroxide, of mercury, red precipitate

Hg_2O. Mercurous oxide.

HgS. Sulphide of mercury, cinnabar; vermilion

$HgSO_4$. Normal mercuric sulphate.

HI. Hydriodic acid.

hiatus (hi-a'tus) [L. an aperture.] 1. An aperture or fissure. 2. A foramen. 3. Vulva. **h. aor'ticus** [BNA], aortic opening; the opening in the diaphragm bounded by the two crura, the vertebral column, and the middle arcuate ligament, through which pass the aorta, vena azygos major, and thoracic duct. **h. cana'lis facia'lis** [BNA], h. of facial canal, a slit-like opening in the superior (anterior) surface of the petrous portion of the temporal bone leading into the facial or Fallopian canal. **h. Fallo'pii,** h. of Fallopius, h. canalis facialis [BNA]. **h. maxilla'ris** [BNA], maxillary hiatus, the opening into the antrum of Highmore on the nasal surface of the superior maxilla. **h. œsophage'us** [BNA], esophageal opening; the opening in the diaphragm, between the central tendon and the hiatus aorticus, through which pass the esophagus and the two pneumogastric nerves. **h. sacra'lis** [BNA], a gap at the lower end of the sacrum, exposing the spinal canal, due to failure of the laminæ of the last sacral segment to coalesce. **h. semiluna'ris** [BNA], semilunar hiatus, a deep, narrow groove in the external wall of the middle meatus of the nasal fossa, into which the antrum of Highmore and the middle ethmoid cells open. **h. subarcua'tus** [NK], fossa subarcuata. **h. tendin'eus** [BNA], the anterior opening of Hunter's canal. **h. tendin'eus adducto'rius** [BNA], femoral opening, an aperture in the tendon of insertion of the adductor minimus through which pass the superficial femoral vessels

Hibbs's opera'tion [Russell A. *Hibbs*, American orthopedic surgeon, 1869-1932.] Ankylosis of the spine in Pott's disease; the spinous processes and laminæ are denuded of periosteum, the processes are "green-stick" fractured at the bases and turned down so that their tips rest against the broken bases of the processes below; then a sliver of bone is raised from the lower edge of each lamina and turned down so as to unite with the lamina below; finally the periosteum and split supraspinous ligament are reunited over the spine.

hiberna'tion [L. *hibernus*, relating to winter] A torpid condition in which certain animals pass the cold months.

hiccup, hiccough (hik'up) A diaphragmatic spasm causing a sudden inhalation which is interrupted by a spasmodic closure of the glottis. **epidemic h.,** a persistent h. occurring as a complication of influenza.

Hicks' sign [John Braxton *Hicks*, English gynecologist, 1825-1897.] A sign of pregnancy or of an intrauterine tumor, consisting in rhythmical contractions of the uterus.

hide'bound disease'. Diffuse symmetrical scleroderma.*

hidradenitis (hi-drad-en-i'(e')tis) [G. *hidrōs*, sweat, + *adēn*, gland, + *-itis*] Inflammation of the sweat-glands

hidradenoma (hi-drad-e-no'mah) [G. *hidrōs*, sweat] Adenoma of the sweat-glands.

hidroa (hi-dro'ah) [G. *hidrōa.*] Sudamina, miliaria.

hidrocystoma (hi"dro-sis-to'mah) [G. *hidrōs*, sweat, + *kystis*, bladder, + *-ōma.*] A cystic tumor developed from a sweat-gland.

hidromancy (hi'dro-man-sī) [G. *hidrōs*, sweat, + *manteia*, foretelling.] Prognosis founded upon the amount and character of the perspiration.

hidropoiesis (hi-dro-poy-e'sis) [G. *hidrōs*, sweat, + *poiēsis*, formation.] The formation of sweat.

hidropoiet'ic. Sudorific

hidrorrhea (hi-dro-re'ah). Profuse sweating.

hidrosadenitis (hi"drōs-ad-en-i'(e')tis) Hidradenitis.

hidroschesis (hi-dros'kes-is) [G. *hidrōs*, sweat, + *schesis*, retention] Suppression of sweating.

hidro'sis [G. *hidrōs*, sweat.] Excessive sweating.

hidrot'ic. Relating to or causing hidrosis, sudorific

hiemalis (hi-ĕ-ma'lis) [L. *hiems*, winter.] Relating to or occurring in winter.

hieralgia (hi-er-al'jĭ-ah) [G. *hieron*. sacrum, + *algos*, pain.] Pain in the sacral region.

hi'era pic'ra [G. sacred bitters.] Pulvis aloes et canellæ (N.F.). This powder made into an electuary with honey was formerly called *hiera logadii*.

hieromania (hi-er-o-ma'nĭ-ah) [G. *hieros*, holy, + *mania*, frenzy.] Religious insanity.

hierophobia (hi"er-o-fo'bĭ-ah) [G. *hieros*, sacred, + *phobos*, fear.] Morbid fear or awe of sacred things.

hierother'apy [G. *hieros*, holy, + *therapeia*, treatment.] Treatment of disease by prayer and religious practices.

high-blow'ing. A sound produced by the flapping of the nostrils of a horse when breathing rapidly; the larger, thinner, and more delicate the horse's nostrils, the more easily can he make this noise which is apparently voluntary; the sound, rarely heard except at the canter or gallop, is generally considered a sign of good wind and good breeding.

High'more's an'trum [Nathaniel *Highmore*, English anatomist, 1613–1685.] Sinus maxillaris. **H.'s bod'y,** mediastinum* testis.

highmoritis (hi"-mŏr-i'(e')tis). Inflammation of the maxillary sinus, antritis, sinuitis maxillaris.

hik'ry pik'ry. Hiera picra.

Hil'denbrand's disease' [Johann Valentin *Hildenbrand*, Viennese physician, 1763–1818.] Typhus fever.

hilitis (hi-li'(e')tis). Inflammation of the lining membrane of any hilum (or hilus).

Hillhousia[0] (hil'hows-ĭ-ah). A genus of bacteria of the family *Achromatiaceæ;* very large motile organisms, flagellated, found in rotting material.

Hil'liard's lu'pus. Lupus marginatus.

hil'lock. In anatomy, any small elevation or prominence. **ax'on h.,** implantation cone. **Doyère's' h.,** the slight prominence where a nerve-fiber enters muscle. **sem'inal h.,** colliculus seminalis [BNA].

Hil'ton's law [John *Hilton*, English surgeon, 1804–1878.] The nerve supplying a joint supplies also the muscles which move the joint and the skin covering the articular insertion of those muscles. **H.'s meth'od,** division of the nerves supplying the part, for the relief of pain in ulcers. **H.'s muscle,** compressor sacculi laryngis muscle. **H.'s sac,** sacculus laryngis.

hi'lum [L. a small bit or trifle.] 1. Hilus. 2. In botany, the scar on a seed where it has broken off from its placenta or stalk. 3. The pedicle of the flap in a plastic operation.

hi'lus [a variant of *hilum*.] [BNA]. 1. The part of an organ where the nerves and vessels enter and leave. 2. A depression or slit, resembling a hilus, in the olivary nucleus of the brain. **h. li'enis** [BNA], a fissure on the gastric surface of the spleen, giving passage to the vessels and nerves of this gland. **h. nu'clei denta'ti,** the mouth of the flask-like dentate nucleus of the cerebellum, directed upward and inward, and giving exit to many fibers which pass to the brachium conjunctivum (superior cerebellar peduncle). **h. nu'clei oliva'ris** [BNA], h. of the olivary nucleus, the mesial extremity of the inferior olivary nucleus. **h. pulmo'nis** [BNA], a wedge-shaped depression on the mediastinal surface of each lung, where the bronchus, blood-vessels, nerves, and lymphatics enter or leave the viscus. **h. rena'lis** [BNA], the opening on the concave border of the kidney through which pass the vessels and nerves and which contains the apex of the renal pelvis.

hind-brain. Metencephalon,* epencephalon.

Hindenlang's test (hin'den-lahng) [Karl *Hindenlang*, German physician, 1854–1884.] For albumin in the urine: a precipitate is formed on the addition of metaphosphoric acid if albumin is present

hindgut (hīnd'gut). Endgut, the last portion of the primitive digestive tube in the embryo, forming a large part of the ileum and the large intestine.

hind-kid'ney. Metanephros

hinge-joint. Ginglymus.

Hin'ton test [William A. *Hinton*, American physician *1883.] An agglutination test for syphilis depending on the reaction between syphilitic serum and an antigen consisting of a mixture of glycerol, cholesterol, and an extract of beef muscle.

HIO_3. Iodic acid.

hip [A.S. *hype*.] Coxa, the lateral prominence of the pelvis from the waist to the thigh; more strictly the hip-joint. **h. disease',** morbus coxarius, coxitis, any disease, especially chronic tuberculosis, of the hip-joint. **quiet h.-d.,** Legg's disease, Perthes' disease, osteochondritis deformans juvenilis of the hip. **h. flex'ion phenom'enon,** see under *phenomenon*. **h. phenom'enon,** Joffroy's reflex.

hip-bone. Os coxæ.

hip-joint. Articulatio coxæ, coxa, articulation between the femur and the innominate bone.

hipped. In farriery, noting a horse with fracture at the point of the hip, caused by violence.

Hip'pel's disease' [Eugen v. *Hippel*, German ophthalmologist, *1866.] Angiogliomatosis of the retina, the occurrence in the retina of areas of proliferating capillaries and neuroglia.

hippiater (hip-ĭ-a'tur) [G. *hippos*, horse, + *iatros*, physician.] One who treats the disorders of the horse or other domestic animals, veterinarian; a farrier.

hippiatria, hippiatrics (hip-ĭ-at'rĭ-ah, hip-ĭ-at'riks) [G. *hippos*, horse, + *iatreia*, medical treatment.] Veterinary medicine; specifically that branch dealing with the diseases of the horse.

hippiat'ric. Veterinary.

hippiat'ry [G. *hippos*, horse, + *iatreia*, medical treatment.] Veterinary surgery.

hip'po. 1. A Spanish name of ipecac. 2. An African arrow-poison, probably some species of *Strychnos*. **wild h.,** white purslane, emetic root, the root of *Euphorbia corollata*, formerly employed as an emetic in doses of gr. 15–20 (1.0–1.3).

hip'pocamp. Hippocampus.

hippocam'pal. Relating to the hippocampus.

hippocampus (hip-po-kam'pus) [G. *hippocampus*, sea-horse.] [BNA] Hippocampus major, cornu Ammonis, an elevation on the floor of the inferior horn of the lateral ventricle of the brain; it presents a long curve with convexity outward, terminating anteriorly in a thickened extremity, slightly notched on its surface—pes or digitationes hippocampi; the elevation corresponds to the bottom of the dentate fissure (fissura hippocampi). **h. ma'jor,** larger h., hippocampus [BNA]. **h. mi'nor,** smaller h. calcar avis [BNA].

hippocas'tanum [G. *hippos*, horse, + *kastanon*, chestnut.] Horse-chestnut, the bark and seed of *Æsculus hippocastanum;* has been employed in malaria in doses of ʒ ½ (16.0) in decoction. The specific medicine, made from the ripe fruit, is

employed in eclectic practice for the relief of hemorrhoids in doses of 1–4 drops in water every two or three hours.

Hippocrates's cap (hip-pok'ra-tēz) [*Hippocrates*, Greek physician, called the "Father of Medicine," born in the island of Cos about 460 B.C., died in Larissa, Thessaly, about 377 B.C.] A roller bandage for the head. **H.'s cord,** tendo Achillis. **H.'s sleeve,** a long, sleeve-like bag of flannel, used formerly by chemists and pharmacists as a filter or strainer.

Hippocrat'ic. Relating to Hippocrates. **H. face** or **fa'cies,** a pinched expression of the face, with sunken eyes, hollow cheeks and temples, relaxed lips, and leaden complexion, observed in one dying of cholera or after a long, exhausting illness. **H. fin'gers,** a bulbous enlargement of the terminal phalanges, with coarse, longitudinally curved nails, seen in heart disease, phthisis, and other affections in which there is defective hematosis. **H. nails,** the coarse, curved nails capping the H. fingers. **H. oath,** an oath demanded of the young physician about to enter upon the practice of his profession, the composition of which is attributed to Hippocrates; in it the neophyte swears to esteem his preceptor as a parent and to share with him his livelihood, if necessary; to give no deadly drug and not to commit abortion, to keep inviolate the professional secret, not to seduce any member of a household where he is called to visit the sick, and not to cut for the stone, leaving such work to the surgeon. **H. succus'sion,** a splashing sound heard on auscultation of the chest, in a case of hydropneumothorax or pyopneumothorax, when the patient's body is shaken.

hippoc'ratism. The imitation of Nature's efforts in the therapeutic management of disease.

hip'pol. Methylene-hippuric acid, occurring in the form of colorless crystals; recommended as a urinary antiseptic in doses of gr. 10–20 (0.6–1.3).

hip'polith [G. *hippos*, horse, + *lithos*, stone] A concretion in the stomach of the horse.

hippology (hip-pol'o-jĭ) [G. *hippos*, horse, + *-ology*.] Science relating to the horse; the veterinary specialty of diseases of the horse.

Hippomane (hip-om'ă-ne) [G. *hippos*, horse, + *mania*, frenzy.] A genus of plants of the order *Euphorbiaceæ*. **H. mancinell'a,** a West Indian tree furnishing a poisonous resin, manchineel.

hipp'urate. A salt of hippuric acid.

hippu'ria. The presence of a large amount of hippuric acid in the urine, as occurs sometimes in diabetes mellitus.

hippu'ric [G. *hippos*, horse, + *ouron*, urine.] Relating to the urine of horses; noting **h. acid,** an acid, $C_9H_9NO_3$, occurring normally in the urine of the horse and other herbivorous animals; it is found in human urine sometimes, especially in cases of diabetes mellitus.

hip'pus [G. *hippos*, horse, from a fancied suggestion of galloping movements.] Spasmodic movements of the iris, iridodonesis. **respi'ratory h.,** dilatation of the pupils occurring during inspiration, and contraction during expiration; it is often associated with pulsus paradoxus.

hip-shot. A term applied to a horse that is deformed from fracture of the haunch.

hip-sick'ness. Mal de caderas.

hirathiol (hi-răth'i-ol). Trade name of a synthetic sulphoichthyolate of ammonium, a brownish-black syrupy liquid with a characteristic empyreumatic odor.

hircismus (hur-siz'mus) [L. *hircus*, goat.] Offensive odor of the axillæ.

hir'cus, gen. and pl. *hir'ci* [L. he-goat.] 1. The odor of the axillæ. 2. [BNA] One of the hairs growing in the axillæ. 3. Tragus.

Hirsch'berg's fe'brile reac'tion [Leonard Keene *Hirschberg*, Baltimore physician, *1877.] An infectious, febrile disease, suggesting atypical typhoid fever, but not due to *Bacillus typhosus*, *B. coli*, or *B. paratyphosus*. The fever lasts about three weeks, recovery being the rule; there are no rose spots, no hemorrhages, no splenomegaly, no relapses, and no diarrhea unless milk is freely taken. **H.'s re'flex,** tickling the sole of the foot at the base of the great toe is followed by adduction of the foot.

Hirschberg's meth'od (hĕrsh'berg) [Julius *Hirschberg*, German oculist, 1843–1925.] A method of measuring the amount of deviation of a strabismic eye, by observing the reflection of a candle from the cornea.

Hirschfeld's bacillus (hirsh'felt) [Felix *Hirschfeld*, German physician, *1860.] *Bacterium hirschfeld.* **H.'s disease,** acute diabetes mellitus.

Hirsch'felder's tuber'culin [Joseph Oakland *Hirschfelder*, American pathologist, *1854.] See under *Tuberculin.*

Hirsch'sprung's disease' [Harold *Hirschsprung*, Copenhagen physician, 1830–1916.] Habitual constipation of young children due to enormous congenital hypertrophy and dilatation of the lower portion of the colon.

hirsute (hur-sūt') [L. *hirsutus*, shaggy.] Hairy, having coarse, long hairs.

hirsuties (hur-su'te-ēz). The presence of an unusual amount of hair, or of hair in unusual locations.

hir'udin [L. *hirudo*, leech.] A substance extracted from the salivary glands of the leech which has the property of preventing coagulation of the blood.

hirudo (hi-roo'do) [L. *leech.*] Leech, sanguisuga; a blood-sucking aquatic worm, employed in medicine for the local abstraction of blood from the capillaries.

Hiru'do. A genus of *Hirudinea*, or leeches, fam. *Gnathobdellidæ*. The species most commonly used in medicine are: *H. austra'lis*, Australian leech; *H. deco'ra*, American leech; *H. interrup'ta* or *H. trocti'na*, a leech of Northern Africa; *H. medicina'lis*, speckled, Swedish, or German leech, the species in most general use; *H. officina'lis*, a variety of the preceding; *H. provincia'lis*, the green or Hungarian leech. *H. quinquestria'ta* five-striped leech.

His's band or bun'dle [Wilhelm *His*, Jr., German clinician, *1863.] Atrioventricular bundle.* **H.'s spin'dle,** a fusiform dilatation of the aorta immediately beyond the isthmus.

His's canal' or **duct** [Wilhelm *His*, German anatomist, 1831–1904.] Ductus thyreoglossus. **H.'s isth'mus,** isthmus rhombencephali. **H.'s retrolob'ular tubercle,** a slight projection on the postero-inferior portion of the pinna. **H.'s rule,** the duration of pregnancy is to be reckoned from the first day of the first omitted menstrual period. **H.'s spa'ces,** the perivascular lymph-spaces in the pal mater. **H.'s zones,** longitudinal bands developing from the lateral portions of the medullary tube in the embryo.

Hiss's methods [Philip Hanson *Hiss*, New York bacteriologist, 1868–1913.] For demonstrating the capsules of microorganisms: 1. A saturated alcoholic solution of fuchsin or gentian violet, 5. in water, 95, is poured on the dried cover-glass preparation and heated, and is then

washed off with a 20 per cent. solution of copper sulphate. 2. The fixed specimen is covered for a few seconds with gentian-violet solution and then washed off with a 0.25 per cent. solution of potassium carbonate.

histaffine (his'tă-fēn) [G. *histos*, tissue, + L. *affinis*, related.] A hypothetical substance in the blood in trypanosomiasis and in syphilis, which is assumed to bind up certain constituents of the normal and specifically pathological tissues.

histamine (his'tam-ēn). Beta-iminazolylethylamine, a depressor substance formed during the catabolism of histidine, and found in ergot; it is a powerful uterine stimulant; *h. hydrochloride* has the same action and is more soluble.

his'tenzyme. Histozyme.

his'tidine. One of the hexone bases produced by the hydrolysis of proteins, $C_6H_9N_3O_2$.

his'tiocyte. Histocyte.

histiocyto'sis. Histocytosis.

histiogenic (his"tĭ-o-jen'ik). Histogenous.

histioid (his'tĭ-oyd) [G. *histion*, tissue, + *eidos*, appearance.] Histoid.

histioirritative (his"tĭ-o-ir'ĭ-ta-tiv). Irritative to connective tissue.

histio'ma [G. *histion*, tissue, + *-ōma*] Histoma

histion'ic [G *histion*, tissue.] Relating to any tissue

his'toblast [G. *histas*, tissue, + *blastos*, germ.] A tissue cell.

histochemistry (his-to-kem'is-trĭ) [G. *histos*, tissue] Chemistry of the tissues.

histocyte (his'to-sīt) [G. *histos*, tissue, + *kytos*, cell.] A tissue cell.

histocyto'sis. The occurrence of histocytes in the blood. **lip'oid h.,** Niemann-Pick disease, a disease of infancy marked by h. and fatty deposits in the spleen.

histodial'ysis [G. *histos*, tissue, + *dialysis*, a breaking up.] Disintegration of the tissues; histolysis.

histofluorescence (his-to-flu-or-es'ens) [G. *histos*, tissue.] Fluorescence of the tissues under exposure to the *x*-rays following the injection of a solution of quinine or other fluorescent substance.

histogen'esis [G. *histos*, tissue, + *genesis*, origin.] The origin of a tissue; the formation and development of the tissues of the body; histogeny.

histogenet'ic. Relating to histogenesis

histogenous (his-toj'en-us) [G. *histos*, tissue, + *-genēs*, producing.] Formed by the tissues, as the histogenous cells in an exudate arising from proliferation of the fixed tissue cells.

histogeny (his-toj'en-e). Histogenesis.

histohem'atin, histohæm'atin. A pigment, related to hemoglobin, found in various tissues.

histohematogenous (his"to-hem-ă-toj'en-us). Arising both from the tissues and from the blood, noting certain cells in the inflammatory exudate which may partly migrate from the blood-vessels and partly arise from proliferation of the fixed tissue elements.

his'toid [G. *histos*, tissue, + *eidos*, appearance] 1. Resembling in structure one of the tissues of the body. 2. Composed of, or developed from, a single tissue and not a complex structure; noting certain tumors such as fibroma and myoma. See *organoid* (2).

histologist (his-tol-o-jist). One skilled in the science of histology.

histol'ogy [G. *histos*, tissue, + *-logia*.] Microscopical anatomy; the branch of anatomy which deals with the cells and the minute structure of the tissues and organs.

histol'ysis [G. *histos*, tissue, + *lysis*, solution.] Disintegration of tissue.

histo'ma [G. *histos*, tumor, + *-ōma*.] Histioma, tissue-tumor, a neoplasm formed of one or other variety of tissue atypically arranged.

histometaplastic (his"to-met-ah-plas'tik). Exciting tissue metaplasia.

histomorphol'ogy [G. *histos*, tissue, + *morphē*, shape, + *-logia*.] Histology.

his'ton, his'tone [G. *histos*, web, tissue] A simple protein, derived from the decomposition of white blood-corpuscles, the action of which retards coagulation; it yields on hydrolysis a number of (chiefly basic) amidoacids, the *histone bases*, or *hexone* bases*

histoneurology (his-to-nu-rol'o-jĭ). Neurohistology.

histon'omy [G *histos*, tissue, + *nomos*, law.] The law of the development and structure of the tissues of the body.

histonu'ria. The excretion of histone in the urine occurring in certain fevers and in leucemia.

histopathol'ogy. Pathological histology, the histology of altered or diseased tissues

histophysiology (his"to-fiz-ĭ-ol'o-jĭ). The physiology or study of the functions of the cells and tissues in health.

Histoplas'ma [G *histos*, tissue, + *plasma*, a thing formed] A genus of protozoan parasites; so far as known, it contains only one species, *H. capsulatum*, found at autopsy in the endothelial cells of the lung, spleen, liver, and bone-marrow, in patients dying after symptoms of splenomegaly, leucopenia, emaciation, and an irregular, remittent temperature

histoplasmo'sis. A disease resembling kala-azar, characterized by irregular fever, emaciation, splenomegaly, and leucopenia, it is due to infection by a flagellate protozoan parasite, *Histoplasma capsulatum*

historrhexis (his-tor-rek'sis) [G. *histos*, tissue, + *rhēxis*, rupture, tearing.] Neurolysis by some agency other than infection.

his'tosan. Trade name of a compound of guaiacol and albumin, a brownish powder insoluble in the gastric juice but soluble in the intestine, used, like guaiacol, in tuberculosis and catarrhal affections in doses of gr. 4–8 (0.25–0.5).

Histosporid'ium carcinomato'sum. An intracellular sporozoon regarded by Feinberg as pathogenic for cancer

histother'apy [G. *histos*, tissue, + *therapeia*, treatment] The employment of animal tissues in therapeutics, organotherapy, cytotherapy

histothrombin (his-to-throm'bin) A thrombin derived from connective tissue.

his'totome [G. *histos*, tissue, + *tomē*, cut] Microtome.

histot'omy. Section cutting, microtomy

histotroph'ic [G. *histos*, tissue, + *trophē*, a bringing up.] Relating to or favoring the formation of tissue.

histotrop'ic [G. *histos*, tissue, + *tropikos*, turning.] Attracted toward the tissues, noting certain parasites, stains, and chemical compounds.

histozo'ic [G *histos*, tissue, + *zōikos*, relating to an animal] Living in the tissues outside of a cell body, noting certain parasitic protozoa.

histozyme (his'to-zīm) [G. *histos*, tissue, + *zymos*, ferment.] An enzyme occurring in renal tissue which hydrolyzes hippuric acid into benzoic acid and glycocol

histrion'ic [L. *histrio*, an actor.] Dramatic, theatrical. **h. ma'nia,** insanity characterized by the occurrence of dramatic gestures, speech, and facial expressions. **h. spasm,** facial spasm.

his'trionism. Histrionic mania.

Hittorf tube (hit'orf) [Johann Wilhelm *Hittorf*, German physicist, 1824–1914.] Crookes' tube.

Hitzig's girdle (hit'tsig) [Eduard *Hitzig*, German psychiatrist, 1868–1907.] An analgetic zone at the level of the mammæ, in the region supplied by the third to sixth dorsal nerves, observed in beginning tables dorsalis.

hives. Urticaria. The term has also been popularly applied to various other skin diseases, as the red-gum of infants, to diarrhea, and to laryngitis.

Hl. Abbreviation for latent hyperopia.

Hm. Abbreviation for manifest hyperopia.

HNO_2. Nitrous acid.

HNO_3. Nitric acid.

Ho. Chemical symbol of *holmium*.

H_2O. Water, or hydrone, the fundamental unit of water.

H_2O_2. Hydrogen peroxide.

hoangnan (ho-ang-nan') [Chinese.] The bark of *Strychnos malaccenis* or *S. galthieriana;* it contains both the alkaloids of nux vomica; has been employed in the treatment of leprosy and scrofula in doses of gr. 2–5 (0.13–0.3).

hoar'hound [A.S. *hār hūne.*] Horehound, marrubium.*

hoarse [A.S. *hās.*] Having a rough, harsh voice.

hoarseness (hors'nes). An unnaturally deep and harsh quality of the voice.

Hochsinger's phenom'enon (hōkh'zing-er) [Karl *Hochsinger*, Viennese pediatrist, *1860.] Pressure to the inner side of the biceps muscle causes closure of the fist in tetany.

hock [see *hough*.] 1. The ham, the posterior aspect of the knee. 2. The tarsus in the horse and other quadrupeds, the joint of the hind leg between the knee and the fetlock; see cut under *horse*. **capped h.,** (1) *synovial c. h.*, a fluctuating swelling on both sides of the hock in the horse, it causes lameness and sometimes results in caries of the os calcis; (2) *serous c. h.*, an inflamed and distended bursa over the gastrocnemius internus tendon in the horse. **cur'by h.,** curb. **spring h.,** see *spring*-hock*.

Hodara's disease' (ho-dah'rah) [Menahem *Hodara*, Constantinople physician, contemporary.] Trichorrhexis nodosa.

hodegetics (hod-e-jet'iks) [G. *hodēgētikos*, suitable for guiding. Ethics, etiquette.

Hodge's for'ceps [Hugh Lenox *Hodge*, Philadelphia gynecologist, 1796–1873.] A form of obstetrical forceps (see cut under *forceps*). **H.'s pess'ary,** a double-curve oblong pessary employed for the correction of retrodeviations of the uterus.

Hodgen's splint (hod'jen). A retention splint for fracture of the femur below the upper third.

Hodgkin's disease' (hoj'kin) [Thomas *Hodgkin*, English physician, 1797–1866.] A disease marked by chronic inflammatory enlargement of the lymph nodes, first the cervical and then the axillary, inguinal, mediastinal, mesenteric, etc. together with enlargement of the spleen, and often of the liver and kidneys, with lymphoid infiltration along the blood-vessels; there is no pronounced leucocytosis. Called also pseudoleucemia, anemia lymphatica, lymphosarcoma, lymphadenoma, and malignant lymphoma.

Hodgson's disease' (hoj'son) [Joseph *Hodgson*, English physician, 1788–1869.] Dilatation of the arch of the aorta associated with insufficiency of the aortic valve.

hodi-potsy (ho-di-pot'sĭ). A dermatosis encountered in Madagascar resembling tinea flava.

hodoneuromere (ho-do-nu'ro-mēr) [G. *hodos*, path, + *neuron*, nerve, + *meros*, part.] In embryology, a segment of the trunk with its pair of nerves and their branches.

Hofacker-Sadler laws (hof'ak-ur sad'lur) [J. D. *Hofacker*, German obstetrician, 1788–1828; M. T. *Sadler*, English obstetrician, 1834-1923.] Laws alleged to be operative in regard to sex determination: (1) When the woman is younger than the man the ratio of male to female births is 113:100; (2) when the woman is older, the ratio is 88.2:100; (3) when the parents are of the same age the ratio is 93.5:100.

Hoff's law. See *Van't Hoff*.

Hof'fa's opera'tion [Albert *Hoffa*, German orthopedic surgeon, 1859–1907.] Hollowing out the acetabulum and reduction of the head of the femur after severing the muscles inserted into the upper portion of the bone, in cases of congenital dislocation of the hip.

Hoff'man's sign. Flexion of the terminal phalanx of the thumb and of the second and third phalanges of one or more of the fingers when the nail of the index, middle, or ring finger is suddenly nipped.

Hoff'mann's an'odyne [Friedrich *Hoffmann*, German physician, 1660–1742.] Spiritus ætheris compositus. **H.'s drops,** spiritus ætheris (N.F.).

Hoff'mann's bacil'lus [Georg von *Hoffmann*-Wellenhof, Austrian bacteriologist.] *Bacillus pseudodiphthericus*.

Hoff'mann's duct [Moritz *Hoffmann*, German anatomist and botanist, 1622–1698.] Duct of Wirsung, ductus pancreaticus [BNA].

Hoff'mann's mus'cular at'rophy [Johann *Hoffmann*, German neurologist, 1857–1919.] Progressive spinal muscular atrophy, of familial form, occurring in early childhood. **H.'s phenom'enon or sign,** excessive irritability of the sensory nerves to electrical or mechanical stimuli in tetany.

Hoffmann-Werdnig syn'drome (hawf'mahn-verd'nig). Hoffmann's muscular atrophy.

Hofmann's reaction (hof'mahn) [H. *Hofmann*, German obstetrician contemporary.] A pregnancy reaction, similar to Brown's except that a much larger amount of serum (as much as 13 c.c.) is used.

hog-cholera (hog"kol'er-ah) An infectious disease of swine marked by hemorrhagic inflammation of the lymphatic glands, lungs, intestine, liver, and kidney. The disease is now believed not to be caused by the *Bacillus choleræ suis* or *B. suipestifer*, but to be due to some ultramicroscopic organism, possibly protozoan.

Högyes' treatment of rabies (hed'yesh). The subcutaneous injection of dilution of $\frac{1}{100}$ to $\frac{1}{10000}$ of a 1 per cent. suspension of fixed virus of full virulence.

ho'ladin [G. *holos*, entire, + *adēn*, gland.] Trade name of a preparation said to contain all the active principles of the pancreas; occurs as a grayish white powder furnished in 3-grain capsules.

holagogue (hōl'ă-gog) [G. *holos*, entire, + *agōgos*, leading.] A hypothetical remedy capable of expelling all morbid humors.

holarthritic (ho-lar-thrit'ik). Relating to universal arthritis, or holarthritis.

holarthritis (ho-lar-thri'(thre')tis) [G. *holos*, all, + *arthron*, joint, + *-itis*.] Inflammation of all or a great number of the joints.

Hol'den's line [Luther *Holden*, English anatomist, 1816–1905.] An indistinct furrow or wrinkle in the groin, passing outward between the anterior superior spine of the ilium and the great trochanter, indicating the position of the capsule of the hip-joint.

hol'gin. Trade name of an antiseptic solution of menthol and formaldehyde in alcohol.

holl'ow-back. Lordosis.

holl'ow-horn. A general disease in cattle, marked by leanness, scurvy coat, coarse hair, irregular appetite, and general debility.

Holm'grén's test [Alarik Frithiof *Holmgrén*, Swedish physiologist in Upsala, 1831–1897.] A test for color-blindness by having the subject pick out and match variously colored skeins of worsted.

Holmgrén-Golgi canals (holm'grān-gol'je). A system of channels in the cytoplasm of nerve and other cells.

holmium (hol'mĭ-ŭm) [after G. *Holm*, a Swedish geologist.] A very rare element, symbol Ho, atomic weight 163.5.

holoacardius (ho"lo-ă-kar'dĭ-us) [G. *holos*, complete, + *a-* priv. + *kardia*, heart.] 1. A monster having no trace of a heart. 2. One of twin fetuses in which a heart may be present, yet the circulation is effected entirely by the other twin.

holoblastic (hol'o-blas'tĭk) [G. *holos*, whole, + *blastos*, germ.] Denoting the involvement of the entire (alecithal or moderately telolecithal) ovum in segmentation.

holocaine hydrochlo'ride (hol'o-kah-ēn). Phenacaine, a synthetic alkaloid, the hydrochloride of paradiethoxyethenyl-diphenylamidin, occurring in small, colorless, shining crystals; used as a local anesthetic in ophthalmic practice.

holocephal'ic [G. *holos*, entire, + *kephalē*, head.] A monster deficient in certain parts, but with the head complete.

holocrine (hol'o-krin) [G. *holos*, all, + *krinō*, I separate.] Noting a gland (1) whose function is purely secretory, or (2) the secretion of which consists of altered cells of the gland itself, such as a sebaceous gland; opposed to *merocrine*.

hol"odiastol'ic [G. *holos*, entire.] Relating to the entire diastole.

holomas'tigote [G. *holos*, all, + *mastix*(*mastig-*), whip.] Having flagella all over the surface.

holophytic (hol-o-fit'ĭk) [G. *holos*, whole, + *phytikos*, vegetable.] Exactly like a plant in metabolism or mode of obtaining nourishment; noting certain protozoans.

holopon (hol'o-pon) [G. *holos*, whole, + *opos*, juice.] A preparation similar to pantopon,* said to contain all the alkaloids of opium.

holorrhachischisis (hol-o-rā-kis'kĭ-sis) [G. *holos*, complete, + *rhachis*, spine, + *schisis*, fissure.] Complete spina bifida.

holoschisis (hol-os'kĭ-sis) [G. *holos*, complete, + *schisis*, fission.] Simple cleavage of the cell, amitosis.

hol"osystol'ic [G. *holos*, entire.] Relating to the entire systole.

holothrichous (hol-ot'rĭ-kus) [G. *holos*, entire, + *thrix*(*trich-*), hair.] Having cilia over the entire surface.

Holotrichida (hol-o-trik'ĭ-dah) [G. *holos*, entire, + *thrix*(*trich-*), hair.] An order of *Ciliata* in which cilia are distributed over the entire body

holozoic (hol-o-zo'ik) [G. *holos*, whole, + *zōikos*, animal.] Resembling exactly an animal in its metabolism or mode of obtaining nourishment; noting certain protozoans in distinction to others which are *holophytic*.*

Holt'house's hernia [Carsten *Holthouse*, English surgeon, 1810–1901.] Inguinal hernia with extension of the loop of intestine along Poupart's ligament

Holtz machine' [Wilhelm *Holtz*, German physicist, 1836–1913.] A machine with a large revolving glass disc, for generating frictional electricity.

hol'vi glass. A form of glass more transparent to ultraviolet rays than ordinary glass.

hol'zin. Trade name of a solution of menthol and formaldehyde in alcohol, used by inhalation in tuberculosis.

hol'zinol. Trade name of a preparation similar to holzin.

Holzknecht's chromoradiometer (holts'knekhts kromo-ra-dĭ-om'e-tur) [Guido *Holzknecht*, Austrian radiologist, 1872–1931.] A capsule containing a reagent which changes color under the influence of the *x*-rays; placed near the part subjected to the action of the rays, its change in color is compared with a graduated color scale (the markings on which, numbered from 3 to 24, are called *H.'s units*) and thus the intensity of the rays is measured. **H. u'nit**, a unit of *x*-ray measurement (abbreviation H), equal to $\frac{1}{3}$ erythema dose.

homaloceph'alous [G. *homalos*, level, + *kephalē*, head.] Having a flattened head.

Homalomy'ia [G. *homalos*, even, + *myia*, a fly.] A genus of flies, the larvæ of which, naturally present in decayed fruit and vegetables, sometimes infest animals.

homatropi'na [G. *homos*, the same.] Homatropine, oxytoluyl-tropeine, made by passing hydrochloric acid gas through a mixture of tropine and mandelic acid; it occurs in white granular crystals; strongly mydriatic **homatropi'næ hydrobro'midum** (U.S. and Br.), a white crystalline powder or small prismatic crystals; employed in 1 per cent. solution as a cycloplegic. **homatropinæ hydrochlor'idum**, occurs as small white crystals soluble in water or alcohol, employed in 1 per cent. solution for the same purposes as the hydrobromide salt.

homatropine (ho-mat'ro-pēn). Homatropina.

homaxial (ho-maks'ĭ-al) [G. *homos*, the same, + *axis*] Homaxonic.

homaxon'ic [G. *homos*, the same, + *axōn*, axle.] Homaxial, having all the axes alike, noting a sphere

Home's lobe [Sir Everard *Home* English surgeon, 1763–1832] The enlarged middle lobe of the prostate gland.

homeocyte, homœocyte (ho'me-o-sīt) [G. *homoios*, like, + *kytos*, cell.] Lymphocyte.

homeomerous, homœomerous (ho-me-om'er-us) [G. *homoios*, like, + *meros*, part.] Noting lichens in which the gonidia and hyphæ are evenly distributed in the thallus.

homeomor'phous, homœmor'phous [G. *homoios*, like, + *morphē*, shape.] Of similar shape, but not necessarily of the same composition.

ho'meopath, ho'mœopath. Homeopathist.

homeopathic, homœopathic (ho"me-o-path'ik). Relating to homeopathy.

homeop'athist, homœop'athist. A medical practitioner of the homeopathic school.

homeopathy, homœopathy (ho-me-op'ă-thĭ) [G. *homoios*, like, similar, + *pathos*, suffering(disease).] A system of therapeutics founded or developed by Samuel Hahnemann,* based upon the observation that certain drugs, when given in large doses in health, will produce certain conditions similar to those relieved, when occurring as symptoms of disease, by the same drug in small doses. This is called the law of similia, from the aphorism, *similia similibus curantur*, like things are cured by like things. Included

in the homeopathic doctrine is the theory of dynamization, which is that by repeated trituration, or dilution with agitation, the potency or power of a drug is enormously increased, certain substances, such as lycopodium and common salt, which are inert in appreciable doses, even acquiring therapeutic properties when so treated.

homeoplasia, homœoplasia (ho-me-o-pla'sĭ-ah) [G. *homoios*, like, + *plasis*, a moulding.] The formation of new tissue of the same character as that already existing in the part.

homeoplas'tic, homœoplas'tic. Relating to or characterized by homeoplasia.

homeostasis (ho-me-os'ta-sis) [G. *homoios*, similar, + *stasis*, a standing still.] The condition of bodily equilibrium as regards temperature, chemical reaction, fluid content, etc.

homeotherapeu'tic, homœotherapeu'tic. 1. Homeopathic. 2. Relating to homeotherapy.

homeotherapeutics, homœotherapeutics (ho″me-o-ther-a-pu'tiks). 1. Homeopathy. 2. Homeotherapy.

homeother'apy, homœother'apy [G. *homoios*, like, + *therapeia*, treatment] Treatment or prevention of a disease by means of a product similar to, but not identical with, the active causal agent, as in Jennerian vaccination.

homeothermal, homœothermal (ho-me-o-thur'mal) [G. *homoios*, similar, + *thermē*, heat.] Same as homothermal, noting warm-blooded animals.

homeotypical (ho″me-o-tip'ĭ-kal) [G. *homoios*, like, + *typos*, form.] Of or resembling the usual type.

homergy (hom'ur-jĭ) [G. *homos*, same, + *ergon*, work.] Normal metabolism and its results.

homesickness (hōm'sik-ness). Nostalgia.

homicide (hom'ĭ-sīd) [L. *homo*, man, + *cædere*, to kill.] 1. The killing of a human being, murder. 2. One who kills another, a murderer.

hom'iculture [L. *homo*, man, + *cultura*, culture.] Human stirpiculture, eugenics.

ho'migrade thermom'eter. A thermometer with a special scale, 100° indicating the normal temperature of man (98.5° F., 37° C.), zero the freezing point, 270° the boiling point (212° F., 100° C.).

hom'inal [L. *hom(homin-)*, man.] Relating to mankind.

homoarecoline (ho-mo-ă-rek'o-lēn). Arecaidinethylester, a colorless liquid possessing properties similar to those of arecoline. **h. hydrobro'mide,** occurs in colorless crystals; anthelmintic in doses of gr. $\frac{1}{15}$–$\frac{1}{10}$ (0.004–0.006).

homocamfin (ho-mo-kam'fin). Cyclosal, hexetone, methylisopropylcyclohexenone dissolved in an aqueous solution of sodium salicylate; a substance said to have a stimulant action similar to but more potent than that of camphor.

homocen'tric [G. *homos*, same, + *kentron*, center.] Having the same center, concentric; noting rays which meet at a common focus; opposed to *heterocentric*.

homochronous (ho-mok'ron-us) [G. *homos*, same, + *chronos*, time.] 1. Occurring at the same time, synchronous. 2 Occurring at the same age in each generation.

homoclad'ic [G. *homos*, same, + *klados*, a twig.] Noting an anastomosis between branches of the same arterial trunk; opposed to *heterocladic*.

ho'modont [G. *homos*, the same, + *odous(odont-)*, tooth] Having teeth all alike in form, as those of the lower vertebrates; opposed to *heterodont*.

homoeroticism (ho-mo-ĕ-rot'ĭ-sizm) [G. *homos*, same, + *eroticism*.] Homosexuality.

homœo-. For words so beginning, see *homeo-*.

homog'amy [G. *homos*, the same, + *gamos*, marriage.] Simultaneous maturity of the stamens and pistil of an hermaphrodite flower.

homogeneous (ho-mo-je'ne-us) [G. *homos*, same, + *genos*, race.] Of uniform structure or composition throughout.

homogenesis, homogeny (ho-mo-jen'e-sis ho-moj'en-ĭ) [G. *homos*, same, + *genesis*, production.] Reproduction in which the offspring is similar to the parents; opposed to *heterogenesis*.

homogenous (ho-moj'en-us) [G. *homos*, same, + *genos*, family, kind.] Of similar or the same origin.

ho″mogentis'ic acid. Alkapton, an acid occurring, together with uroleucic acid, in the urine in alkaptonuria; it is the result of the incomplete oxidation of tyrosin, due probably to the diminution or absence of a specific intracellular oxidase.

homog'ony [G. *homos*, the same, + *gonos*, offspring.] A condition in which the relative heights of the stamens and pistils in flowers of the same species remain the same; homostyly.

homograft (ho'mo-graft). Homotransplant.

homografting (ho'mo-graft-ing). Homotransplantation, the insertion of a graft or piece of tissue removed from the same individual.

homoioplasia (ho-moy-o-pla'sĭ-ah). Homeoplasia.

homoiothermal (ho-moy-o-thur'mal). Homeothermal.*

homolat'eral [G. *homos*, the same, + L. *latus*, side.] On or relating to the same side; ipsolateral.

Homolle's digitalin (ho-mol'). French digitalin* (1).

homol'ogous. Noting a homologue; having a general definite relation to others in a series; in zoology, having a correspondence in position or development, though not in function, with a part in another animal, noting, for example, the wing of a bird, the fore-leg of a quadruped, and the arm of man. **h. se'ries,** in chemistry, a series of compounds which differ from each other by containing more or less of the same group of atoms; in the case of the paraffin series this group is CH_2.

homologue (hom'o-log). 1. Any part or organ of similar structure or composition to another one 2. Any part or organ of one animal which corresponds in some way to one of another; thus the wing of a bird is the homologue of the arm of a man.

homol'ogy. Correspondence in function, relation or origin.

homol'ysin. A lysin produced by the injection of an antigen derived from an animal of the same species, isolysin; distinguished from *heterolysin* and *autolysin*.

homolysis (ho-mol'ĭ-sis). Isolysis.

homomorphic (ho-mo-mor'fic) [G. *homos*, alike, + *morphē*, shape, appearance.] Noting two or more structures of similar size and shape.

homon'omous [G. *homos*, same, + *nomos*, law.] Noting parts, having similar form and structure, arranged in a series, as the fingers or toes.

homon'omy. The condition of being homonomous.

homon'ymous [G. *homōnymos*, of the same name.] Having the same name, or expressed in the same terms. **h. diplo'pia,** see diplopia.

homoplas'tic. 1. Similar in form and structure, but not in origin. 2. Noting a graft of similar

structure, as one of bone to replace a bone defect.

homorgan'ic [G. *homos*, same, + *organon*, organ.] Produced by the same organs.

homosexual (ho"mo-seks'u-al) [G. *homos*, the same, + L. *sexus*, sex.] Relating to or possessing erotic attraction toward a person of the same sex. 2. A person attracted sexually to others of the same sex. an invert.

homosexuality (ho"mo-seks-u-al'i-tĭ). A form of sexual perversion in which attraction exists for one of the same sex.

homos'porous [G. *homos*, the same, + *sporos*, seed.] Having but one kind of asexually produced spores.

homostimulant (ho-mo-stim'u-lant) [G. *homos*, the same.] Noting the action of an organic extract upon a gland or organ of the same kind as that from which the extract was derived; see *Hallion's* law.*

homostimulation (ho-mo-stim-u-la'shun). Increasing the action of a gland by the administration of an extract of the same gland from an animal.

homosty'ly. Homogony.

homothermal (ho"mo-thur'mal) [G. *homos*, the same, + *thermē*, heat.] Homothermic, homothermous; having always the same temperature, noting the warm-blooded animals. See *homeothermal.*

homoton'ic [G. *homos*, same, + *tonos*, tonus.] Of uniform tension or tonus.

homotransplant (ho'mo-tranz"plant) [G. *homos*, the same.] Homograft, a graft or piece of tissue removed from one part and transferred to another part of the same individual.

homotransplantation. Homografting, the insertion of a graft taken from the same individual.

homotype (ho'mo-tīp) [G. *homos*, same, + *typos*, type.] Any part or organ of the same structure or function as another, especially as one on the opposite side of the body.

homotyp'ic, homotyp'ical [G. *homos*, the same, + *typos*, form.] Of the same type or form; corresponding to the other one of two paired organs or parts. **h. divis'ion,** the second of the two divisions of a maturing sex-cell during which reduction of the chromos mes occurs.

homozoic (ho-mo-zo'ik) [G. *homos*, the same, + *zōikos*, relating to an animal.] Relating to the same animal or the same species of animal.

homozygosis (ho"-mo-zi-go'sis). The formation of a zygote by like gametes.

homozygote (ho-mo-zi'gōt) [G. *homos* same, + *zygōtos*, yoked.] 1. An individual containing but one of the two allelomorphs, each of the two germ-cells, by the union of which it was formed, containing the same member of the allelomorphic pair. 2. A zygote produced by the union of two similar gametes of the same strain.

homozygous (ho-mo-zi'gus). Pure bred; relating to homozygosis; produced by the union of similar gametes. 2. An organism is said to be homozygous for a given character when all the germ cells transmit identical genes for this character.

hondziekte (hond-zēk'ta) [D. *hond*, dog, + *ziekte*, sickness.] Canine babesiasis.*

honey (hun'ĭ) [A.S. *hunig*.] Mel.

honeycomb-lung (hun'ĭ-kōm-lung). A condition marked by the presence of numerous small pus-containing cavities in the lung; it is due to bronchiolectasis following bronchopneumonia in children.

honorarium (hon-o-ra'rĭ-um) [L. *honorarius*, honorary.] A fee for professional services.

hon'thin. Trade name of a preparation, said to be albumin tannate; employed in diarrhea in doses of gr. 10–20 (0.6–1.3).

hoof [A.S. *hōf*.] The horny covering of the ends of the digits or feet in many animals, it consists, like nails and horns, of thickened and modified epidermis or cuticle. **false h.,** the hoof of an unused digit, as one of the two above and behind the functioning hoofs of the ox, pig, and other animals.

hoof-and-mouth disease. Foot-and-mouth disease.*

hoof-bound. A condition of dryness and contraction of the hoof of a horse, which results in pain and lameness.

hook [A.S. *hōk*.] An instrument curved or bent near its tip, used for fixation of a part or traction. **blunt h.,** a strong, hook-shaped iron bar which is passed between abdomen and thigh to make traction in cases of difficult breech presentation.

hooked bone. Os hamatum [BNA], unciform bone

hook'worm. A worm of the genus *Ancylostoma* or *Uncinaria*. **dog h.,** *Uncinaria stenocephala*. **new-world h.,** *U. americana*. **old-world h.,** *U. duodenalis*.

hook'worm-disease'. Uncinariasis, ancylostomiasis.

Hoop'er's pills [John *Hooper*, apothecary in Reading, England, 18th century.] Pillulæ aloes et myrrhæ.

hoop'ing-cough. Whooping-cough, pertussis

Hoorne's duct or **canal.** See *Van Hoorne.*

hoose, hooze (hoos, hooz). Verminous bronchitis in calves marked by cough, roughness of coat, and wasting.

hooven (ho'ven). Hoven.

Hoo'ver's sign [Charles F. *Hoover*, American physician, *1865.] 1. A person lying supine on a couch, when asked to raise one leg, involuntarily makes counterpressure with the heel of the other leg; if this leg is paralyzed whatever muscular power is preserved in it will be exerted in this way; or if the patient attempts to lift the paralyzed limb, counterpressure will be made with the other heel, whether any movement occurs in the paralyzed leg or not. 2. A modification in the movement of the costal margins during respiration, caused by a flattening of the diaphragm; it is suggestive of empyema or other intrathoracic condition causing a change in the contour of the diaphragm.

Hope's mix'ture [John *Hope*, English physician 1725–1886.] Mistura camphoræ acida (N.F.).

Hopkins-Cole test. For tryptophane: to the solution to be tested an equal volume of glyoxylic acid is added and then strong sulphuric acid is poured carefully down the side of the tube; where the two fluids meet a violet color appears if tryptophane is present.

hop'ogan. Magnesium peroxide, an internal antiseptic.

Hop'pe-Gold'flam disease' [Johann Ignaz *Hoppe*, Swiss physiologist, 1811–1891; S. *Goldflam*.] Myasthenia gravis.

Hoppe-Seyler's test (hŏ-pa-zi'ler) [Ernst Felix Immanuel *Hoppe-Seyler*, German physiological chemist, 1825–1895.] For carbon monoxide in the blood: on adding to the blood twice the volume of sodium hydrate solution (1.3 sp. gr.) the red color of blood is preserved if carbon monoxide is present; normal blood is colored a greenish brown.

hops. The strobiles of the hop plant; see *humulus*.

hordein (hor'de-in). A gliadin derived from barley.

hordenine (hor'dĕ-nēn) [L. *hordeum*, barley.] An alkaloid, $C_{10}H_{15}NO$, developed in barley during

the process of germination, occurring in prismatic crystals. **h. sul'phate,** employed as a heart tonic in place of digitalis.

horde'olum [L. dim. of *hordeum*, barley.] A sty, an inflammation of a sebaceous gland of the eyelid. **h. inter'num, h. meibomia'num,** suppurative inflammation of one of the Meibomian glands.

hor'deum. Barley, the seeds of *H. distichon*. **h. decortica'tum,** hulled barley, pearl barley, is employed in decoction as a demulcent.

horehound (hōr'hownd) [A.S. *hār hūnd.*] Hoarhound, marrubium.*

horismascope (hor-iz'mah-skōp) [G. *horisma*, a boundary, + *skopeō*, I examine.] A U-shaped test-tube, used in the acid test for albumin in the urine; one arm of the tube has a black background against which a faint cloud of albumin may be readily seen in the line between acid and urine.

horizocardia (ho-ri"zo-kar'dĭ-ah) [G. *horizōn*, horizon, + *kardia*, heart.] A horizontal position of the heart on the diaphragm, due to marked excentric hypertrophy or to dilatation of both ventricles.

hor'mion [G. dim. of *hormos*, cord, chain, necklace.] The point of junction of the posterior border of the vomer with the sphenoid bone.

Hormodendrum (hor-mo-den'drum) [G. *hormos*, chain, + *dendron*, tree.] A genus of fungi of the family *Haplographiaceæ*. **H. fontoynon'ti,** a species found in the scales of hodi-potsy, a dermatosis resembling tinea flava observed in Madagascar.

hormon'adin. Trade name of a preparation said to be the internal secretion of the pancreas

hor'monal. 1. Trade name of a preparation obtained from the spleen of animals killed during the height of digestion, said to be a peristaltic hormone. 2. Hormonic, internuntial.

hormonax (hor'mo-naks). A 50 per cent. dilution of normal sheep serum, suggested in the treatment of typhoid fever, influenza, and other systemic infections, in doses of 7 to 14 c.c. four times a day.

hor'mone [G *hormōn*, pres. part of *hormaō*, I rouse or set in motion.] A chemical substance, formed in one organ or part of the body and carried in the blood to another organ or part which it stimulates to functional activity or secretion; a number of the secretions of the ductless glands are regarded as hormones; so is secretin, so is carbon dioxide formed in muscle during contraction, which incites the respiratory center to increased activity; opposed to *chalone*; see also *autacoid*. **h. hunger,** a condition in which a certain organ fails to receive the needed amount of a special hormone upon which its proper functional activity depends. **h. test for pregnancy,** see *Friedman, Siddall,* and *Zondek-Aschheim*. **Langerhan'sian h.,** insuline, an internal secretion of the pancreas, elaborated in the islands of Langerhans, which controls sugar metabolism. **parathy'roid h.-Squibb,** trade name of an aqueous solution of the active principles of bovine parathyroid glands, each c.c. of which contains 20 Collip units; recommended in the treatment of tetany in subcutaneous doses of 1.0–1.5 c.c.

hormonic (hor-mon'ik). Relating to or acting as a hormone; hormonal, internuntial.

hormonin (hor'mo-nin). Hormonax.

hormonogenesis (hor"mon-o-jen'e-sis) [*hormone* + G. *genesis*, production.] Hormonopoiesis.

hormonogenic (hor-mon-o-jen'ik). Hormonopoietic.

hormonopoiesis (hor"mo-no-poy-e'sis) [*hormone* + G. *poiēsis*, production.] The production of a hormone or an internal secretion.

hormonopoietic (hor"mo-no-poy-et'ik). Relating to homonopoiesis.

hormopoiesis (hor-mo-poy-e'sis). **Hormonopoiesis.**

hormopoietic (hor-mo-poy-et'ik). **Hormonopoietic.**

hormotone (hor'mo-tōn). Trade name of a mixture of extracts of thyroid, pituitary, ovary, and testis, used in disturbances at the menopause.

horn [A.S.] Cornu. 1. An excrescence from the skin, of the shape or structure of a horn. 2. A curved, pointed structure resembling a horn. 3. A hard, thickened, epidermal tissue, such as that of the nails. 4. The coronal prolongation of the dental pulp. **Ammon's h.,** cornu Ammonis **burnt h.,** cornu ustum. **cuta'neous h.,** cornu cutaneum, a hornlike outgrowth from the epidermis.

Hor'ner's muscle [William Edmund *Horner*, Philadelphia anatomist, 1793–1853.] Tensor tarsi, pars lacrimalis of the orbicularis oculi [BNA.]

Hor'ner's symp'tom-com'plex [Johann Friedrich *Horner*, Zurich ophthalmologist, 1831–1886.] Ptosis, miosis, anidrosis, and enophthalmos due to paralysis of the cervical sympathetic.

horn-sil'ver. Native chloride of silver.

hor'ny. Corneous, of the nature or structure of horn

horopter (hor-op'tur) [G. *horos*, limit, + *optēr*, one who sees.] The sum of all the points in the binocular field of vision, in any fixed position of the eyes, rays from which fall upon corresponding points in the two retinas, the image therefore appearing single. The horopter may be a straight line or a plane, a curved line or a curved surface.

horripilation (hor-ĭ-pi-la'shun) [L. *horrere*, to bristle, + *pilus*, hair.] Goose-flesh, cutis anserina, the standing up of the small hairs over the body.

Hor'rocks' maieu'tic [Peter *Horrocks*, London obstetrician, contemporary] See *maieutic*.

horse [A.S. *hors*] A perissodactyl (odd-toed), solidungulate (single-hoofed), quadrupedal mammal *Equus caballus*, having a long and coarse-haired mane and tail, with short-haired coat, and corneous patches on the inner side of the legs between the knee and hock. See cuts on page 498.

horse-chestnut. Hippocastanum.* castanea equina.

horse-power. A work-unit, equal to 33,000 pounds lifted one foot in one minute.

horsepox (hors'poks). A disease in horses similar to cowpox in cattle.

horse-rad'ish. Cochlearia.

horse-sickness (hors'sik-nes). A disease of horses and mules in South Africa, supposed to be due to an ultra-microscopic protozoan transmitted by the anopheles mosquito; it is characterized chiefly by dropsical effusions into the thoracic and abdominal cavities.

horse-tail. Equisetum.

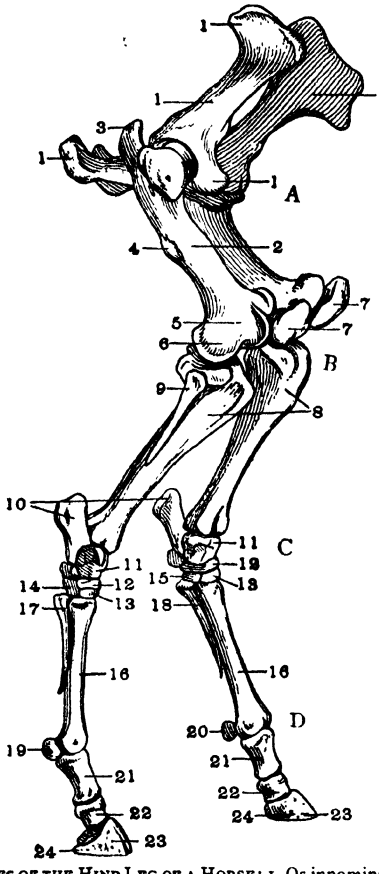
horse-weed. Erigeron.

Hors'ley's putty [Sir Victor Alexander Haden *Horsley*, London surgeon, *1857–1916.] A compound of carbolic acid 1, oil 2, and wax 7, used to plug the vessels of the diploë in case of hemorrhage in trephining **H.'s test,** for sugar in the urine, the presence of which is indicated when a green color is produced by boiling with potassic hydrate and potassium chromate. **H.'s trephine',** a trephine made of several pieces which can be taken apart to facilitate asepsis.

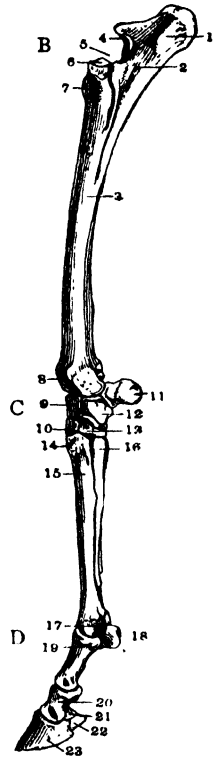
H_2OsO_4. Osmic acid.

hos'pital [L. *hospitalis*, for a guest.] Nosocomium, an institution for the protection and treatment of the sick or wounded. **camp h.,** see station h.

closed h., one in which no practitioner, not a member of the attending or consulting staff, is permitted to treat any patient, even though one previously under his personal care. **cottage h.**, a small h. with a very small nursing staff and usually no resident physician. **evacua'tion h.**, a mobile h. of the U. S. Army which receives patients from hospital stations and cares for them until they can be evacuated to a general h. **field h.**, an aid station.* **general h.**, a large h. (1000 beds) of the U. S. Army, with fixed location, receiving patients from an evacuation h. or any other general h. **governmen'tal h.**, one controlled by officials of the city, county, state, or nation. **group h.**, a private h., organized and controlled by a group of physicians for the reception and care of their own patients only. **isolation h.**, one for the care of cases of contagious diseases. **maternity h.**, a special h. (public or private) for the care of women in childbirth. **municipal h.**, a governmental h. established and controlled by city officials. **open h.**, any h. in which reputable practitioners, not members of the regular staff, are permitted to send their own patients, retaining control of their treatment. **philanthrop'ic h.**, voluntary h. **private h.**, the same as group h. except that it is under the control of a single practitioner or by him and the associates in his office. **propri'etary h.**, private h. **public h.**, governmental h. **special h.**, one for the medical or surgical care of sufferers from special diseases (of the ear, nose, throat, eyes, etc.). **State h.**, an institution established by the State and under the control of its appointees for the reception and treatment of the insane; a State controlled insane asylum. **sta'tion h.**, a small h. (250 beds) of the U. S. Army with a fixed location, serving the local needs of a camp or permanent military post. **sur'gical h.**, a mobile h. of the U. S. Army for immediate surgical aid to the more serious casualties; it is located close to a hospital station, but is not a part of the division which it serves. **vol'untary h.**, a h. (often a closed h.) supported by voluntary contributions and under the control of (a usually self-appointed) board of managers.



BONES OF THE HIND LEG OF A HORSE: 1, Os innominatum; 2, femur; 3, trochanter major; 4, subtrochanterian crest; 5, trochlea; 6, external condyle; 7, patella; 8, tibia; 9, fibula; 10, os calcis; 11, astragalus; 12, 13, 14, 15, tarsal bones; 16, large metatarsal or cannon bone; 17, 18, small metatarsal, or splint bones; 19, 20, sesamoid bones; 21, os suffraginis or large pastern; 22, os coronæ or small pastern; 23, os pedis; 24, wing of the os pedis; A, hip-joint; B, stifle-joint, corresponding to the knee in man; C, hock-joint, corresponding to the ankle in man; D, fetlock-joint.



BONES OF THE FORELEG OF A HORSE, FROM THE ELBOW JOINT, THE HUMERUS NOT BEING SHOWN: 1, Olecranon process; 2, body of the ulna; 3, body of the radius; 4, articulating surface of the ulna; 5, semicircular fossa formed by radius and ulna for reception of the humerus; 6, articulating surface of the radius; 7, radial tubercle; 8, lower articular surface of the radius; 9, os lunare; 10, os magnum; 11, os pisiforme; 12, os cuneiforme; 13, os unciforme; 14, 15, 17, metacarpus or cannon bone; 16, small metacarpal or splint bone; 17, articular end of the large metacarpal bone; 18, sesamoid bone; 19, os suffraginis or large pastern; 20, os coronæ or small pastern; 21, os naviculare; 22, wing of os pedis; 23, os pedis. B, elbow-joint; C, knee, corresponding to the wrist in man. D, fetlock-joint.

hospitalism (hos'pĭ-tal-izm). A neurasthenic or "run-down" condition affecting nurses and others living constantly in a hospital.

host (hōst) [L. *hospes*, an entertainer.] The organism at the expense of which a parasite lives. **defin'itive h.**, the vertebrate host of a hematozoic protozoan, in which the non-sexual cycle occurs; primary h. **interme'diary** or **interme'diate h.**, an invertebrate animal in which a hematozoic protozoan parasite of a vertebrate undergoes its sexual cycle; secondary h. **primary h.**, definitive h., the one in which the mature parasite resides when it has two or more stages of existence in different animals. **sec'ondary h.**, intermediate h., the one in which a parasite lives before reaching its mature state, when it has two or more stages in different animals.

hot-cross-bun head. The head with depressed sutures seen in hereditary syphilis.

Hotch'kiss' opera'tion [Lucius Wales *Hotchkiss*, New York surgeon, 1859–1926.] An operation for epithelioma of the cheek; it includes resection of a lateral half of the mandible and, if necessary, of a portion of the maxilla and palate, the defect in the cheek being closed by the side of the tongue and a flap drawn up from the side of the neck.

Hott'entot apron. An exaggerated hypertrophy of the labia minora, common in the native women of southern Africa. **H. bustle,** an excessive enlargement of the buttocks, steatopyga, common in the native women of southern Africa. **H. tea,** buchu

hott'entotism. A form of stammering.

hough (hok) [A.S *hōh*, heel.] Hock.

Houghton's test (how'ton) [E. M. *Houghton*, American physician, *1867.] When ergot is given in a definite dose to a white leghorn cock, the comb is darkened if the drug is of standard strength.

hound's-tongue. Cynoglossum.

hour-glass contrac'tion. A central constriction of a hollow organ, such as the stomach or the uterus. **h.-g. head,** the skull with depressed coronal suture in hereditary syphilis.

housemaid's knee (hows"mādz-ne'), Prepatellar bursitis, inflammation and swelling of the bursa anterior to the patella, due to traumatism in those who are much on their knees.

house-physician (hows-fĭ-zish'un). The senior interne in a hospital who acts in place of the attending physician during his absence and is responsible for the execution of the latter's orders.

house-prev'alence. The occurrence of a number of cases of a supposedly non-contagious disease in the same house.

house-staff. The junior physicians and surgeons attached to a hospital who care for the patients under the direction of the attending staff; the internes and externes collectively.

house-surgeon (hows-sur'jun). The senior member of the house-staff on the surgical side, who is responsible for the execution of the orders of the attending surgeon and who acts in his place when the latter is absent.

Hous'ton's muscle [John *Houston*, Dublin physician, 1802–1845.] The anterior portion of the musculus bulbocavernosus **H.'s folds** or **valves,** rectal valves, see plica* transversalis recti.

ho'ven. Bloating in cattle, due to the accumulation of gas, and marked by the distention of the paunch or rumen, pain, and difficult breathing, it is believed to be due to the overeating of fresh green food.

How'ard's meth'od [Benjamin Douglas *Howard*, New York physician of English birth, 1840–1900.] A method of artificial respiration; the patient being on the back with a cushion so arranged as to have the head lower than the abdomen, and with the hands under the head, the physician makes rhythmical pressure upward and inward with his hands against the lower lateral parts of the chest.

Howell-Jolly bod'ies (how'el-zhŏ-le') [William Henry *Howell*, American physiologist, *1860.] Jolly* bodies.

How'ship's fove'olæ or **lacu'næ** [John *Howship*, London surgeon, †1841.] Little pits on the surface of bone which is undergoing resorption: they contain numerous multinuclear giant cells (osteoclasts). **H.'s symp'tom,** pain or paresthesia on the inner side of the thigh in cases of obturator hernia.

HPO_3. Metaphosphoric acid.

H_3PO_2. Hypophosphorous acid.

H_3PO_3. Phosphorous acid.

H_3PO_4. Phosphoric acid.

$H_4P_2O_6$. Hypophosphoric acid.

$H_4P_2O_7$. Pyrophosphoric acid.

H.S. Abbreviation for house surgeon.

H_2S. Hydrogen sulphide, sulphureted hydrogen.

H-shaped ecchymo'sis. The ecchymosis observed in cases of rupture of the tendo Achillis.

H_4SiO_4. Silicic acid.

H_2SO_3. Sulphurous acid.

H_2SO_4. Sulphuric acid.

H-substance, released substance.*

Ht. Abbreviation for total hyperopia.

H-tetanase (āch-tet'an-āz)[*h*-hemolytic.] v. Behring's term for the hemolytic constituent of tetanus toxin.

Huchard's disease' (u-shar') [Henri *Huchard*, Paris physician, 1844–1910.] A condition of continued arterial hypertension believed by H. to be the main cause of arteriosclerosis. **H.'s se'rum,** an inorganic serum composed of sodium sulphate 2.5, sodium chloride 5, and sodium phosphate 10, in water 100. **H.'s symp'tom,** paradoxical resonance on percussion in edema of the lung.

huckle-bone (huk'l-bōn). 1. Ankle-bone, talus.* 2. The innominate bone in the pelvis of the horse. 3. The astragalus in the knee of the horse.

Hueck's ligament (huk) [Alexander Friedrich *Hueck*, German anatomist, 1802–1842.] Ligamentum pectinatum iridis.

Hueter's maneu'ver [Karl *Hueter*, German surgeon 1838–1882.] In passing a stomach tube one presses the patient's tongue downward and forward with the left forefinger. **H.'s sign,** when the soft parts intervene, in a case of fracture, the vibration, on tapping the bone, is not transmitted.

Hufeland's powder (hoo'fa-lahnt) [Christoph Wilhelm *Hufeland*, Berlin physician, 1762–1836.] Magnesium carbonate 50, rhubarb 15, sugar with fennel-seed oil 35.

Hugh'lings Jack'son's sign. See *Jackson*.

Hugier's canal' (ü-ghe-a') [Pierre Charles *Huguier*, Parisian surgeon, 1804–1874.] Iter chordæ anterius; a canal in the Glaserian fissure near its posterior edge, through which the chorda tympani nerve emerges from the skull. **H.'s circle,** anastomosis around the isthmus of the uterus (junction of the cervix with the body) between the right and left uterine arteries. **H.'s disease',** (1) lupus of the vulva; (2) fibroma of the uterus. **H.'s si'nus,** a small fossa in the tympanum between the fenestra ovalis and the fenestra rotunda. **H.'s the'ory,** in the great majority of cases prolapse of the uterus is

due to a primary elongation of the supravaginal portion of the cervix.

Huguenin's ede'ma (ü-gĕ-nañ') [Gustave *Huguenin*, Swiss psychiatrist, 1841–1920.] Acute congestive edema of the brain.

humectation (hu-mek-ta'shun) [L. *humectare*, to moisten.] 1. The therapeutic application of moisture. 2. Serous infiltration of the tissues. 3. The soaking of a crude drug in water preparatory to the making of an extract.

hu'meral. Relating to the humerus. **h. ar'tery,** arteria brachialis [BNA].

hu"merora'dial. Relating to both humerus and radius, noting especially the ratio of length of one to the other.

hu"meroscap'ular. Relating to both humerus and scapula.

hu"mero-ul'nar. Relating to both humerus and ulna, noting especially the ratio of length of one to the other.

hu'merus, gen. *hu'meri* [L. shoulder.] The bone of the upper arm, articulating with the scapula above and the radius and ulna below.

humidity (hu-mid'ĭ-tĭ) [L. *humidus*, moist.] Moisture, dampness. **ab'solute h.,** the amount of vapor in the atmosphere expressed in grains per cubic foot. **rel'ative h.,** the percentage of moisture in the air, the amount necessary for saturation, or the greatest amount which the atmosphere can contain in the form of vapor, being taken as 100.

hu'mor, gen. *humo'ris* [L. fluid.] 1. The uncombined fluids of the body—blood and lymph. 2. Any clear fluid or semifluid hyaline anatomical substance. 3. A chronic moist skin disease. **a'queous h.,** hydatoid, the watery fluid filling the anterior and posterior chambers of the eye. **crys'talline h.,** the substance composing the crystalline lens of the eye. **oc'ular h.,** any one of the three humors of the eye—aqueous, crystalline, and vitreous. **vit'reous h.,** h. corporis vitrei [NK], the watery fluid filling the meshes of the stroma of the vitreous body of the eye.

hu'moral. Relating to a humor in any sense, especially to humor (1).

humoralism (hu'mor-al-ism). The old doctrine that all disease is due to a change in constitution or to displacement of the humors.

humorism (hu'mor-izm). Humoralism.

hump'back. Hunchback. 1. A deformed spine, Pott's curvature, angular curvature, kyphosis; lateral curvature, scoliosis. 2. A sufferer from angular or lateral curvature of the spine.

hu'mulin. Lupulin.

humulus (hu'mu-lus) (N F.). Hops, the dried fruits (strobiles) of *Humulus lupulus*, a climbing herb of central and northern Asia, Europe, and North America; tonic, sedative, and diuretic in doses of ʒi–2 (30.0–60.0) of an infusion of ʒi½(16.0) to the pint (480.0); a hop poultice is applied in cases of superficial inflammation.

hu'mus [L. earth, soil.] Vegetable mould, formed of decayed leaves and other vegetable matter.

hunch'back. Humpback.

hunger (hung'ger) [A.S.] A strong desire for food. **air h.,** breathlessness, dyspnea; distress occasioned by the attempt to hold the breath. **h.-cure,** treatment of disease by fasting or a restricted diet; nestiatria, nestitherapy. **h. day,** one of the days in a course of dietetic treatment of diabetes, on which the patient is allowed practically nothing but broths.

hunger-evil (hung'ger-e-vil). A disease, resembling epilepsy, marked by bulimia in the horse.

Hunt's at'rophy [James Ramsay *Hunt*, New York neurologist, *1872.] Neural atrophy of the small muscles of the hand without sensory disturbances; two types are recognized: *thenar*, from compression neuritis of the thenar branch of the median nerve; *hypothenar*, from compression neuritis of the deep palmar branch of the ulnar nerve **H.'s neural'gia,** geniculate neuralgia.* **H.'s paradox'ical phenom'enon,** in dystonia musculorum deformans, if an attempt is made at plantar flexion of the foot when the foot is in dorsal spasm the only response is an increase of the extensor, or dorsal, spasm; if, however, the patient is told to extend the foot which is already in a state of strong dorsal flexion there will be a sudden movement of plantar flexion; the same phenomenon, mutatis mutandis, is observed when there is a condition of strong plantar flexion. **H.'s syn'drome,** (1) progressive cerebellar tremor; an intention tremor beginning in one extremity, gradually increasing in intensity, and subsequently involving other parts of the body one after the other; (2) facial paralysis, otalgia, and aural herpes, due to disease of both motor and sensory fibers of the seventh cranial nerve; (3) a form of juvenile paralysis agitans associated with primary atrophy of the pallidal system; paleostriatal syndrome.

Hun'ter's canal' [John *Hunter*, London surgeon, born in Scotland, 1728–1793.] Canalis adductorius [BNA]; H. tied the superficial femoral artery in this part, for popliteal aneurysm, in 1785. **H.'s chan'cre,** indurated or syphilitic chancre. **H.'s indura'tion,** H.'s chancre. **H.'s opera'tion,** ligation of the artery on the proximal side and at some distance from the sac, for the cure of aneurysm; see cut under *aneurysm*.

Hun'ter's lig'ament [William *Hunter*, English anatomist, born in Scotland, 1718–1783.] Round ligament of the uterus. **H.'s gubernac'ulum,** gubernaculum* testis. **H.'s line,** linea alba. **H.'s mem'brane,** decidua.

Hunte'rian chan'cre [John *Hunter*.*] Indurated chancre.

Hun'tington's chorea (ko-re'ah) [George *Huntington*, American physician, 1850–1916.] Hereditary chorea.

Huntoon's stain for capsules. Emulsify in a solution of nutrose, 3 gm., 2 per cent. aqueous phenol solution, 5 c.c., in distilled water, 100 c.c.; after drying stain the films for 30 seconds in a solution of 1 per cent. acetic acid, old carbolfuchsin, and saturated alcoholic solution of basic fuchsin, of each 1 c.c., concentrated lactic acid, 0.5 c.c., in 2 per cent. aqueous phenol solution, 100 c.c.; wash in water and examine in oil.

Huppert's disease' (hoop'pert) [Hugo *Huppert*, Bohemian physician, 1832–1904.] Kahler's* disease.

Husch'ke's au'ditory teeth [Emil *Huschke*, German anatomist, 1797–1858.] A row of minute, tooth-like projections at the free margin of the labium vestibulare of the cochlea. **H.'s car'tilages,** two irregularly formed horizontal cartilaginous rods at the edge of the cartilaginous septum of the nose. **H.'s fora'men,** an opening in the floor of the bony meatus acusticus, usually closed in the adult. **H.'s lig'ament,** a peritoneal fold extending from the upper portion of the smaller curvature of the stomach to the anterior surface of the pancreas, a little to the right of the median line. **H.'s valve,** plica lacrimalis.

Hutch'inson's crescen'tic notch [Sir Jonathan *Hutchinson*, English surgeon, 1828–1913.] The semilunar notch on the neural surface of the upper middle incisors in H.'s teeth, seen also occasionally in the upper lateral incisors, the lower incisors, and exceptionally the cuspids. **H.'s disease'**, (1) chorioidiits guttata, (2) angioma serpiginosum. **H.'s fa'cies,** the peculiar facial expression produced by the drooping lids and motionless eyeballs of ophthalmoplegia. **H.'s mask,** the sensation in tabes dorsalis as if the face were covered with a mask or with cobwebs. **H.'s pruri'go,** prurigo infantilis. **H.'s pu'pil,** dilatation of the pupil on the side of the lesion, with contraction of the other pupil, occurring in meningeal hemorrhage compressing the third nerve at the base of the brain. **H.'s teeth,** the upper middle incisor teeth having a crescentic notch on the cutting edge, occurring in hereditary syphilis. **H.'s tri'ad,** parenchymatous keratitis, labyrinthine disease, and H.'s teeth, significant of hereditary syphilis.

Hutinel's disease' (u-te-nel') [Victor *Hutinel*, Parisian pediatrist, 1849-1933.] Cardiotuberculous cirrhosis of children, marked by enlarged liver with ascites, edema, and cyanosis, preceded usually by bronchitis or pleurisy. **H.'s erythe'ma,** an erythema, occurring in pneumonia, typhoid, and other infections.

Huxham's tinc'ture (huks'am) [John *Huxham*, English physician, 1692–1768.] Tinctura* cinchonæ composita.

Hux'ley's lay'er [Thomas Henry *Huxley*, English biologist, 1825–1895.] The inner layer of cells of the inner root-sheath of the hair-follicle; also called *H.'s membrane* and *H.'s sheath*.

Huygens' oc'ular (hi'gens) [Christian *Huygens*, Dutch physicist, 1629–1695.] The compound ocular of a microscope, composed of two plano-convex lenses so arranged that the plane side of each is uppermost.

hyalin (hi'al-in) [G. *hyalos*, glass.] 1. Hyaloplasm. 2. The homogeneous basement substance of hyaline cartilage. 3. A clear homogeneous substance occurring in amyloid, colloid, or hyaloid degeneration.

hyaline (hi'al-īn, hi'al-ēn) [G. *hyalos*, glass.] Of a glassy, homogeneous, translucent appearance. **h. bod'ies,** minute collections of a clear homogeneous material found in degenerating cells, the result of colloid degeneration of the cytoplasm or the remains of cell-inclusions. **h. car'tilage,** see *cartilage*. **h. degenera'tion,** see *degeneration*. **h. fi'broid,** the fibrous substance found in a cirrhotic kidney. **h. mem'brane,** (1) the thin, transparent membrane beneath the epithelium of mucous membranes; (2) the membrane contiguous to the outer root-sheath of a hair-follicle.

hyalino'sis. Hyaline degeneration.

hyalinu'ria. The presence of hyaline casts in the urine.

hyalitis (hi-al-i'(e')tis). Inflammation of the vitreous humor. **h. puncta'ta,** a condition in which minute opacities are present in the vitreous humor.

hy'aloid [G. *hyalos*, glass, + *eidos*, resemblance.] Glassy in appearance; hyaline. **h. membrane,** the thin, homogeneous, transparent membrane enveloping the vitreous humor.

hyaloiditis (hi-al-oy-di'(de')tis). 1. Hyalitis. 2. Inflammation of the hyaloid membrane.

hyal'ogen. A protein found in the vitreous humor of certain animals, and also in cartilage.

hyalo'ma [G. *hyalos*, glass, + *-ōma*.] Colloid milium, colloid degeneration of the skin; the occurrence of yellow semitranslucent papules in the skin usually of the cheeks and forehead.

hyalomitome (hi-al-om'i-tōm) [G. *hyalos*, glass, + *mitos*, thread.] Hyaloplasm, hyalotome.

Hyalomma (hi-ă-lom'mah) [G. *hyalos*, glass, + *omma*, eye.] A genus of ticks with eyes, long rostrum, valvate palpi and semicircular anal groove. **H. ægyp'ticum,** a species found in India, Africa and southern Europe, which attacks cattle and sometimes man.

hyalomu'coid. A mucoid present in the vitreous humor

hy"alonyx'is [G. *hyalos*, glass, + *nyxis*, puncture.] Puncture of the vitreous humor.

hyalophobia (hi"al-o-fo'bĭ-ah) [G. *hyalos*, glass, + *phobos*, fear.] Fear of touching glass.

hy'aloplasm [G *hyalos*, glass, + *plasma*, thing formed.] The fluid portion of protoplasm supported in the meshes of the spongioplasm; hyalomitome, hyalin. **nu'clear h.,** caryolymph.

hyaloserositis (hi"al-o-se-ro-si'(se')tis) [G. *hyalos*, glass + L. *serosa*, serous membrane, + G. *-itis*.] Inflammation of a serous membrane with a fibrinous exudate which undergoes hyaline transformation, assuming an appearance of porcelain when localized over a viscus, such as the liver or the heart, it produces the condition called icing liver, frosted liver, sugar-coated liver, or heart, etc. **mul'tiple progress'ive h.,** polyorrhomeningitis.

hy'alotome. Hyaloplasm.

hy'brid [L. *hybrida*, offspring of a tame sow and a wild boar.] Mongrel, half-breed; an animal or plant resulting from the union of male and female elements of different species.

hychlorite (hi-klor'it). Trade name of a solution of chlorinated soda, employed for the irrigation of wounds in dilution of 1 part to 7 of water.

Hyd. Abbreviation of *Hydrogenomonas*.

hydanto'ic acid. Uramidoacetic acid, glycoluric acid, $C_3H_6N_2O_3$, a derivative of hydantoin.

hydan'toin. Glycocollyl-urea, a colorless crystalline substance, $C_3H_4N_2O_2$, derived from urea or from allantoin.

hydat'id [G. *hydatis*, a drop of water.] 1. An echinococcus cyst 2. A vesicular structure resembling an echinococcus cyst. **h. of Morgagni,** (1) appendix testis; (2) appendix vesiculosis. **nonpedun'culated h.,** appendix testis. **pedun'culated h.,** appendix epididymidis. **sessile h.,** appendix testis. **stalked h.,** appendix vesiculosus.

hydatid'iform. Having the form or appearance of an hydatid.

hydatidocele (hi-dă-tid'o-sēl) [G. *kēlē*, tumor.] An hydatid cyst of the testicle or scrotum.

hydatido'ma. A tumor formed of hydatids.

hydatidosis (hi-dat-ĭ-do'sis) [*hydatid* + *-ōsis*.] The morbid state caused by the presence of hydatid cysts.

hydatidostomy (hi-dat-id-os'to-mĭ) [G. *stoma*, mouth.] The surgical evacuation of an hydatid cyst.

hydatoid (hi'dă-toyd) [G. *hydōr*(*hydat-*), water, + *eidos*, resemblance.] 1. The aqueous humor. 2. The hyaloid membrane. 3. Relating to the aqueous humor.

Hyde's disease' [James Nevin *Hyde*, American dermatologist, 1840–1910.] Prurigo nodularis.

hydnocarpate (hid-no-kar'pāt). A salt of the fatty acid derived from the oil (chaulmoogra oil) obtained from a species of *Hydnocarpus*.

Hydnocar'pus. A genus of trees of India and Burmah. **H. kurz'ii** or **wightian'a,** *Taractogenes kursii*, a species, the ripe seed of which is the source of chaulmoogra.

hydracetin (hi-dras'et-in). Pyrodin, acetylphenylhydrazine; a colorless crystalline powder; internally antipyretic in doses of gr. ½–2 (0.03–0.13); used externally in psoriasis and other skin diseases.

hydracid (hi-dras'id) [*hydr(ogen)* + *acid.*] An acid containing only hydrogen and no oxygen atoms.

hydradenitis (hi-drad-en-i'(e')tis) [G *hydōr*, water, + *adēn*, gland, + *-itis.*] Inflammation of a sweat-gland. **h. des'truens suppurati'va**, a furuncle from infection through a sweat-gland instead of (as more usual) a hair-follicle.

hydradēno'ma [G *hydōr*, water, + *adēn*, gland, + *-ōma.*] A small tumor arising from a sweat-gland.

hydræmia. Hydremia.

hydraëroperitone'um [G. *hydōr*, water, + *aēr*, air.] Hydropneumoperitoneum.

hydragogue (hi'drah-gog) [G. *hydōr*, water, + *agōgos*, drawing forth.] Producing a discharge of watery fluid; noting a class of cathartics which cause a serous flux into the intestine.

hydram'nion, hydram'nios [G. *hydōr*, water.] The presence of an excessive amount of amniotic fluid; dropsy of the amnion.

hy'dramyl. Pentane.

hydranencephaly (hi"dran-en-sef'ă-lĭ). Internal hydrocephalus, distention of the ventricles of the brain by an accumulation of fluid.

hydran'gea [G. *hydōr*, water, + *angeion*, vessel] (N.F.) Seven-barks, the dried root of *Hydrangea arborescens*, a shrub common in the Ohio Valley; diuretic and popularly regarded as antilithic; a fluidextract is the usual form in which the drug is used; dose, ♏30 (2.0).

hydran'gin. A glucoside $C_{34}H_{28}O_{11}$, derived from hydrangea, or seven-barks; like the crude drug it is diuretic and narcotic.

hydrargyri (hi-drar'ji-ri) Gen. of hydrargyrum, mercury.

h. ace'tas, (1) mercurous acetate, CH_3COOHg, occurring as white scaly crystals, soluble in 330 parts of water; employed in syphilis in doses of gr. ¼–½ (0.01–0.03), and also externally in skin diseases; (2) mercuric acetate, $(CH_3COO)_2Hg$, occurring as colorless plates soluble in 4 parts of water; employed like the mercurous acetate in the same doses.

h. albu'minas, albuminate of mercury, made by adding mercuric chloride to egg albumin; employed as a powder in antiseptic surgical dressings.

h. am'ido-ace'tas, h. glycocoll.

h. amidopropio'nas, mercuric amidopropionate, mercuric alanate, alanin-mercury, occurring as colorless acicular crystals soluble in water; employed subcutaneously in the treatment of syphilis.

h. amidosuccin'amas, mercuric amidosuccinamate, asparagin-mercury, made by adding mercuric oxide to a solution of asparagin; employed hypodermically in syphilis.

h. ben'zoas, mercuric benzoate, colorless acicular crystals only slightly soluble in water; employed in hypodermic injection for syphilis.

h. bro'midum corrosi'vum, corrosive mercuric bromide, a white crystalline powder, having properties similar to those of corrosive sublimate.

h. bro'midum mi'te, mild mercurous bromide, resembles calomel in physical and therapeutic properties.

h. car'bolas, mercuric carbolate, hydrargyri phenas.

h. chlo'ridi carbam'idum, mercuric chloride-urea, a solution of 1 part mercuric chloride and 5 parts urea in 100 of water; employed hypodermically, in daily doses of ♏15 (1.0) for syphilis.

h. chlo'ridum corrosi'vum (U.S.), corrosive chloride of mercury, hydrargyri perchloridum (Br.), perchloride of mercury, bichloride of mercury, corrosive sublimate, mercuric chloride, $HgCl_2$; occurs in white crystalline masses soluble in 13 parts of water; antiseptic, parasiticide, alterative, and antisyphilitic; dose, gr. $\frac{1}{60}$–$\frac{1}{15}$ (0.001–0.003).

h. chlo'ridum mi'te (U.S.), mild chloride of mercury, hydrargyri subchloridum (Br.), subchloride of mercury, mercurous chloride, calomel, HgCl; a fine white powder insoluble in water; intestinal antiseptic, laxative, cholagogue, alterative, and antisyphilitic in doses of gr. $\frac{1}{10}$–2 (0.006–0.13).

h. cyan'idum, cyanide of mercury, cyanuret of mercury, mercuric cyanide, $Hg(CN)_2$; occurs in colorless prismatic crystals of bitter metallic taste; alterative and antisyphilitic in doses of gr. $\frac{1}{12}$ (0.005).

h. et zin'ci cyan'idum, cyanide of mecury and zinc; mercuric and zinc cyanide, Lister's double salt, employed on gauze as an antiseptic, non-irritant surgical dressing.

h. formam'idum, mercuric formamide, mercury formamidate, a solution of mercuric oxide in formamide; employed hypodermically in dose of ♏15 (1.0) every second day for syphilis.

h. gal'las, mercuric gallate, prepared by mixing equal quantities of mercuric oxide and gallic acid; a greenish black insoluble powder, employed in syphilis in doses of gr. ½–1 (0.03–0.06).

h. io'das, mercuric iodate, a white amorphous powder, soluble in water containing potassium iodide or sodium chloride; employed hypodermically in syphilis in doses of gr. ¼–½ (0.01–0.015) every second day.

h. io'didum fla'vum (U.S.), yellow mercurous iodide, protiodide of mercury, yellow, or green, iodide of mercury, HgI; a bright yellow powder without odor or taste; employed especially in the treatment of the secondary stage of syphilis in doses of gr. ¼–1 (0.015–0.06).

h. io'didum ru'brum (U.S., Br.), red mercuric iodide, biniodide of mercury, deutoiodide of mercury, HgI_2; occurs as bright red crystals or powder, very slightly soluble in water; employed in syphilis in doses of gr. $\frac{1}{18}$ (0.004).

h. io'didum vir'ide (U.S., 1880), green iodide of mercury, hydrargyri iodidum flavum.

h. lac'tas, mercurous lactate, a white crystalline powder, slightly soluble in water; employed in syphilis hypodermically in doses of ♏15 (1.0) of a 1 per cent. solution.

h. naphtholace'tas, mercuric naphthol-acetate, occurring in the form of a yellowish powder or acicular crystals; employed for the same purposes as the naphtholate.

h. naphtho'las, mercuric naphtholate, mercury beta-naphthol, a grayish or yellowish white powder employed as an intestinal antiseptic in doses of gr. ½–1 (0.03–0.06) and hypodermically in syphilis in doses of gr ¼–½ (0.01–0.02).

h. ni'tras, nitrate of mercury, (1) mercurous nitrate, a yellow crystalline powder sometimes employed in syphilis and as an antiseptic in doses of gr. ¼ (0.01); (2) mercuric nitrate, a white powder soluble in water; employed as an alterative and antisyphilitic in doses of gr. $\frac{1}{16}$–¼ (0.004–0.008), and locally as a caustic.

h. o'leas, hydrargyrum oleatum (Br.), oleate of mercury, oleatum hydrargyri (U.S.); hard soap 16, oleic acid 1, dissolve in boiling water 88, add mercuric chloride 8 dissolved in water 80; boil, decant, and wash the precipitated oleate free from chlorides.

h. ox'idum fla'vum (U.S., Br.), yellow mercuric oxide, precipitated oxide of mecury, HgO; a yellow amorphous powder, employed locally in ointment as an application to sore eyelids, sties, and conjunctivitis, in the strength of gr. 2 (0.13) to the ounce (30.0) of ointment.

h. ox'idum ru'brum (N.F., Br.), red mercuric oxide, peroxide of mercury, red oxide of mercury, red precipitate, HgO; a brownish or yellowish red powder, almost insoluble in water; used diluted as a dusting powder and in the form of ointment to syphilitic lesions.

h. oxycyan'idum (Br.), mercuric oxycyanide, a white crystalline powder; has been employed by injection in the treatment of syphilis.

h. paraphenolsulpho'nas, mercuric paraphenolsulphonate, hydrargyrol, occurs in reddish brown scaly crystals, soluble in water: employed as an antiseptic in place of corrosive sublimate.

h. pep'tonas, mercuric peptonate, a solution containing the product of 1 part mercuric chloride, 3 parts

peptone, in 100 parts water; dose, ♏15 (1.0) hypodermically in syphilis.

h. perchlo'ridum (Br.), perchloride of mercury, hydrargyri chloridum corrosivum (U.S.).

h. phe'nas, mercuric phenate, mercuric phenolate, mercuric phenylate, mercuric carbolate, a grayish white crystalline powder; employed in syphilis in doses of gr. ½–½ (0.02–0.03).

h. pyrobo'ras, mercuric pyroborate, mercuric borate, made by mixing solutions of borax and mercuric chloride and evaporating; a brownish insoluble powder, employed as a dusting powder for wounded surfaces.

h. salicyl'as (U.S.), mercuric salicylate, a white amorphous powder, insoluble in water; used in syphilis in doses of gr. ¼–1 (0.008–0.06).

h. sozoiod'olas, mercuric sozoiodolate, a yellow powder soluble in saline solution; employed subcutaneously in 1 per cent. solution, and locally in the form of a 1 per cent. ointment, in syphilis.

h. subchlo'ridum (Br.), subchloride of mercury, calomel, hydrargyri chloridum mite (U.S.).

h. subsul'phas fla'vus, yellow subsulphate of mercury, yellow mercuric sulphate, basic mercuric sulphate, turpeth mineral a lemon-yellow powder; emetic and alterative, dose, gr. 2–4 (0.13–0.25).

h. succinimi'dum, mercuric succinimide, a white crystalline powder soluble in water; employed in dose of gr. ⅛ (0.012) intramuscularly every other day in tuberculosis and other diseases of bacterial origin.

h. sul'phas, mercuric sulphate, normal mercuric sulphate, a white crystalline powder—the basic mercuric sulphate is yellow; employed in the manufacture of other mercurials.

h. sul'phidum ni'grum, black sulphide of mercury, æthiops mineral; is not now employed in medicine.

h. sul'phidum ru'brum, red sulphide of mercury, red mercuric sulphide, cinnabar, Paris red, vermilion; the ore from which metallic mercury is obtained.

h. tan'nas, mercurous tannate, occurs in brownish green scales employed in syphilis in doses of gr. 1–2 (0.06–0.13).

h. thymolace'tas, mercuric thymolacetate, a white crystalline powder practically insoluble in water; employed in syphilis in doses of gr. ½–1 (0.03–0.06), and also subcutaneously in suspension in liquid paraffin.

hydrargyria (hi-drar-jir'I-ah) [L. *hydrargyrum*, mercury.] Mercurial poisoning, mercurialism, hydrargyrism; marked by ptyalism, tremors, etc

hydrargyrism (hi-drar-ji-rizm). Hydrargyria.

hydrar'gyrol. Hydrargyri paraphenolsulphonas.

hydrargyrorelapsing (hi-drar''jĭ-ro-re-laps'ing). Noting a case of syphilis in which the symptoms recur after an apparent cure by mercurials.

hydrargyrum, gen. *hydrar'gyri* (hi-drar'ji-rum) [G. *hydōr*, water, + *argyros*, silver.] (U.S., Br.). Mercury, quicksilver; a heavy, silvery, liquid metal, symbol Hg, atomic weight, 200; employed in thermometers, barometers, manometers, and other scientific instruments; many of its salts are employed in medicine as antiseptics, parasiticides, alteratives, and antisyphilitics. [For the salts of mercury, see under *hydrargyri*.] **h. ammonia'tum** (U.S., Br.), ammoniated mercury, mercuric ammonium chloride, white precipitate, a white amorphous powder; employed externally in ointment in the treatment of skin diseases. **h. colloida'le,** colloidal mercury, hyrgol, a nearly black, tasteless powder; has been employed by inunction in hereditary syphilis, also internally in doses of ♏3–10 (0.2–0.6) of a 1 per cent. aqueous solution. **h. cum cre'ta** (U.S., Br.), mercury with chalk, gray powder, æthiops cretaceus, a gray powder composed of 38 parts metallic mercury and 57 parts prepared chalk; employed in the treatment of infantile syphilis and of bowel disturbances in children, in doses of gr. 1–5 (0.06–0.3). **h. gly'cocoll,** amidoacetate of mercury, employed in 1 per cent. solution by injection. **h. olea'tum** (Br.), oleated mercury; yellow mercuric oxide 200, liquid paraffin 50, oleic acid 750; used by inunction in syphilis.

hydrarthrosis (hi-drar-thro'sis) [G. *hydōr*, water, + *arthron*, joint.] Articular dropsy; effusion of a serous fluid into a joint cavity. **intermitt'ent h.,** an affection characterized by a periodically recurring serous effusion into the cavity of a joint; the articulation may be the seat of rheumatoid arthritis or other acute or chronic disease, or it may be apparently normal in the intervals of the attacks.

hydrar'thrus. Hydrarthrosis.

hydrastina (hi-dras-te'nah) (U.S.). Hydrastine, the alkaloid of hydrastis, occurring in colorless prisms practically insoluble in water; employed locally in the treatment of catarrhal inflammation of the mucous membranes, and also internally in doses of gr. ¼–½ (0.015–0.03). **hydrasti'næ hydrochlo'ridum** (N.F.), hydrastine hydrochloride, occurs as a hygroscopic, creamy-white, odorless powder, soluble in water and alcohol; dose, gr. ⅙–⅓ (0.01–0.02).

hydrastinina (hi-dras-tin-e'nah). An artificial alkaloid prepared by treating hydrastine with oxidizing agents in acid solution. **hydrastini'næ hydrochlo'ridum,** hydrastinine hydrochloride occurs as a yellowish crystalline powder; employed in uterine hemorrhage and as an oxytocic in hypodermic doses of gr. ½–1 (0.03–0.06).

hydras'tis [G. *hydrastina*, wild hemp.] (U.S.) The dried rhizome of *Hydrastis canadensis*, a native of the eastern United States, golden seal, yellow root, Indian turmeric, jaundice-root; employed in the treatment of chronic catarrhal states of the mucous membranes and in metrorrhagia, in doses of gr. 10–30 (0.6–2.0).

hy'drate [G. *hydōr*, water.] A compound containing water in chemical union; an aqueous solvate*; hydroxide.

hy'drated. Combined with water, forming a hydrate.

hydra'tion. The chemical union of a substance with water.

hydraulics (hi-draw'liks) [G. *hydōr*, water, + *aulos*, a pipe.] The science which treats of water in its kinetic relations.

hydrazine (hi'drā-zēn). Diamine, any member of the group H_2N-NH_2, from which phenylhydrazine and similar reduction products are derived.

hydrazone (hi'drā-zōn). A substance derived from aldehydes and ketones by reaction with phenylhydrazine.

hydre'mia, hydræ'mia [G. *hydōr*, water, + *haima*, blood.] A condition in which there is an excess of the fluid portion of the blood.

hydrencephalocele (hi"dren-sef'al-o-sēl) [G. *hydōr*, water, + *enkephalos*, brain, + *kēlē*, tumor.] Protrusion, through a cleft in the skull, of brain substance expanded into a sac containing fluid.

hydrenceph'alus [G. *hydōr*, water, + *enkephalos*, brain.] Hydranencephaly, internal hydrocephalus.

hydriatic (hi-drī-at'ik) [G. *hydōr*, water, + *iatikos*, healing.] Hydriatric, hydrotherapeutic.

hydriat'ric [G. *hydōr*, water, + *iatrikos*, relating to medicine.] Hydrotherapeutic, relating to the use of water in the treatment of disease.

hy'dric. Relating to hydrogen in chemical combination.

hydride (hi'drid, hi'drīd). A compound of hydrogen with another element or a radical.

hyd'riodate. A salt of hydriodic acid.

hydriod'ic acid. See under *acidum*.

hydro'a [G. *hydōr*, water.] Any bullous eruption. **h. æstiva'le** [L. *æstivus*, summer], h. vacciniforme. **h. febri'le,** herpes simplex. **h. herpetifor'me,** dermatitis herpetiformis. **h. puero'rum** [L. of boys], h. vacciniforem. **h. vaccinifor'me,** an eruption of vesicles, occurring in hot weather, in children; it leaves permanent scars.

hydroappendix (hi"dro-ă-pen'diks). Distention of the vermiform appendix with a serous fluid.

hydrobilirubin (hi"dro-bil-ĭ-ru'bin). A substance, thought to be a dérivative of bilirubin, found sometimes in the urine in cases of fever.

hydrobro'mate. A salt of hydrobromic acid.

hydrobro'mic acid. See under *acidum*.

hydrocar'bon. A compound containing only hydrogen and carbon. **sat'urated h.,** a h. which contains the greatest possible number of hydrogen atoms, leaving no free valencies.

hydrocele (hi'dro-sēl; as a Latin word, hi-dro-se'le) [G. *hydōr*, water, + *kēlē*, hernia.] A collection of serous fluid in a sacculated cavity; specifically, such a collection in the tunica vaginalis testis. **cer'vical h.,** h. colli, a cyst formed by secretion into a persistent duct or fissure of the neck. **congen'ital h.,** a collection of fluid in the open tube leading from the abdominal cavity to the investing sac of the testis. **funic'ular h.,** fluid in a portion of the tunica vaginalis shut off from both testis and abdominal cavity. **h. coll'i,** cervical h. **h. fem'inæ,** an accumulation of serous fluid in the labium majus or in the canal of Nuck. **h. mulie'bris,** h. feminæ. **h. spina'lis,** spina bifida.

hydrocenosis (hi"dro-sen-o'sis) [G. *hydōr(hydr-)*, water, + *kenōsis*, an emptying.] Removal of a dropsical fluid by operation or medicinal means.

hydrocephal'ic. Relating to or suffering from hydrocephalus.

hydrocephalocele (hi-dro-sef'al-o-sēl). Hydrencephalocele.

hydroceph'aloid [G. *eidos*, resemblance.] 1. Resembling hydrocephalus. 2. A condition in infants suffering from diarrhea or other exhausting disease, in which there are general symptoms resembling those of hydrocephalus without, however, any abnormal accumulation of cerebrospinal fluid.

hydroceph'alus [G. *hydōr*, water, + *kephalē*, head.] A condition, usually congenital, marked by an extensive effusion of serum into the cerebral ventricles, dilating these cavities, thinning the brain, and causing a separation of the cranial bones; there may also be an accumulation of fluid in the subarachnoid space. **acute' h.,** basilar (tuberculous) meningitis. **chron'ic h.,** a gradual accumulation of fluid in the ventricles of the brain, occurring in infancy, causing enlargement of the head and signs of mental deficiency. **exter'nal h.,** an accumulation of fluid in the subarachnoid spaces of the brain. **inter'nal h.,** h. in which the accumulation of fluid is confined to the ventricles, Whytt's disease, hydranencephaly. **pri'mary h.,** chronic h. **sec'ondary h.,** an accumulation of fluid in the cranial cavity, due to meningitis or obstruction to the venous flow.

hydrochinone (hi-dro-kin'ōn). Hydroquinone.

hydrochlo'rate. A salt of hydrochloric acid.

hydrochlo'ric acid. See under *acidum*.

hydrocholecystis (hi-dro-ko-le-sis'tis) [G. *hydōr*, water, + *cholē*, bile, + *kystis*, bladder.] An effusion of serous fluid into the gall-bladder.

hydrocinnam'ic acid. Beta-phenyl-propionic acid, recommended in the treatment of tuberculosis.

hydrocirsocele (hi-dro-sur'so-sēl). Hydrocele complicated with variocele.

hydrocol'pos [G. *hydōr*, water, + *kolpos*, sinus (vagina).] An accumulation of mucus or other non-sanguineous fluid in the vagina.

hydrocotar'nine. An alkaloidal principle derived from narcotine by the action of nascent hydrogen, occurring in the form of colorless prisms.

Hydrocotyle (hi-dro-kot'i-le) [G. *hydōr*, water, + *kotylē*, cup.] A genus of plants of the order *Umbelliferæ*. **H. asiat'ica,** shilling-grass, Indian pennywort, a shrub growing in wet places in tropical regions, employed as an alterative in doses of gr. 8–15 (0.5–1.0). **H. contel'la,** South African pennywort, used in dysentery.

hydrocyan'ic acid. See under *acidum*.

hy'drocyst [G. *hydōr*, water, + *kystis*, bladder.] A cyst with limpid contents.

hydrocysto'ma [G. *hydōr*, water, + *kystis*, bladder, + *-ōma*.] An eruption of deeply seated vesicles, due to retention of fluid in the sweat-follicles; properly written *hidrocystoma*.

hydrodynamics (hi-dro-di-nam'iks) [G. *hydōr*, water, + *dynamis*, force.] The branch of physics which treats of the force of liquids.

hydroelectric (hi-dro-e-lek'trik). Relating to a combination of electricity and water, as the electric bath.

hydroenceph'alocele [G. *hydōr*, water, + *enkephalos*, brain, + *kēlē*, hernia.] Hydrencephalocele.

hydroferricyan'ic acid. A hexabasic acid, $H_6Fe_2(CN)_{12}$, forming a ferricyanide with a base.

hydroferrocyan'ic acid. A tetrabasic acid, $H_4Fe(CN)_6$, forming a ferrocyanide with a base.

hydrogel (hi'dro-jel) [G. *hydōr*, water, + L. *gelare*, to congeal.] A colloid which solidifies in gelatinous form with a large content of water.

hydrogen (hi'dro-jen) [G. *hydōr*, water, + *gennaō*, I produce.] An odorless, colorless, tasteless element, gaseous at ordinary temperatures and pressure; symbol H, atomic weight 1. It is the lightest known substance, and the weight of one of its atoms is the unit of atomic weights. It is readily replaceable in many compounds by other elements or radicals, and this substitution of the hydrogen atoms in an acid forms a salt. **car'bureted h., h. car'bide,** a compound of carbon and hydrogen. **h. diox'ide,** h. peroxide, oxygenated water, golden liquid; a colorless, syrupy liquid, H_2O_2, a powerful oxidizing agent, used as a disinfectant in aqueous solutions. **h. expo'nent,** a figure denoting the h. ion concentration in the blood or other fluid; its symbol is P^H or P_H. **h. i'on,** the hydrogen atom, in a solution, which is charged with positive electricity appearing therefore at the negative pole. **h. i'on concentration,** the relative proportion of positively charged hydrogen atoms in a solution, the figure thereof serving as an index of the acidity of the solution; its determination in the blood is employed as a measure of the degree of acidosis. **h. monox'ide,** water. **h. perox'ide,** h. dioxide. **sul'phureted h.,** h. sulphide, H_2S, a colorless, inflammable gas of fetid odor, formed in the decomposition of organic matter containing sulphur.

hydrogenoid constitution (hi'dro-jen-oyd kon-stĭ-tu'shun). In homeopathy one of von Grauvogel's three constitutional groups, the one in which there is too great an amount of fluid in the blood and tissues; hydremia. See *oxygenoid constitution* and *carbonitrogen constitution*.

Hydrogenomonas (hi-dro-jen-om'o-nas). A genus of soil bacteria of the family *Nitrobacteriaceæ*, containing short monotrichic rods, which in their growth cause the oxidation of hydrogen, forming water. The type species is **Hyd. pantot'ropha**[0] which in its growth causes the formation of formaldehyde.

hydroglos'sa [G. *hydōr(hydr-)*, water, + *glōssa*, tongue.] Ranula.

hydrohematonephrosis (hi-dro-hem-ă-to-ne-fro'-sis) [G. *hydōr*, water, + *haima*, blood, + *nephros*, kidney, + *-osis*.] The presence of blood and urine in the dilated pelvis and calyces of the kidney.

hydrohymenitis (hi-dro-hi-men-i'(e')tis) [G. *hydōr*, water, + *hymēn*, membrane, + *-itis*.] Inflammation of a serous membrane.

hydrokinet'ics [G. *hydōr*, water, + *kinēsis*, motion.] Hydraulics; hydrodynamics.

hydrolability (hi-dro-lă-bil'ĭ-tĭ) [G. *hydōr*, water, + L. *labilitas*, changefulness.] State in which the fluid in the tissues readily changes in amount.

hydrolase (hi'dro-lāz). Hydrolyst.

hydrolein (hi-dro'le-in). Trade name of an emulsion of cod-liver oil.

hydrol'ogy [G. *hydōr*, water, + *-logia*.] The science which treats of water in all its solutions.

hy'drolymph. The circulating fluid in many of the invertebrates.

hydrol'ysis [G. *hydōr*, water, + *lysis*, setting free.] A chemical process whereby a compound takes up oxygen and hydrogen in the proportion forming water and is thereupon resolved into other compounds; the result is called splitting ("fat-splitting," "starch-splitting," etc.) when it is induced in the animal or vegetable body through the action of enzymes.

hy'drolyst. A ferment which induces hydrolysis.

hydrolyt'ic. Referring to or causing hydrolysis.

hy'drolyze. To subject to hydrolysis.

hydro'ma [G. *hydōr*, water, + *-oma*.] Hygroma.

hy'dromel [G. *hydōr*, water, + *meli*, honey.] A mixture of honey and water, used as an excipient.

hydromeningitis (hi-dro-men-in-ji'(je')tis) [G. *hydōr*, water, + *mēninx*, membrane, + *-itis*.] 1. Hydrocephalus internus. 2. Cyclitis. 3. Meningitis with profuse serous effusion.

hydromeningocele (hi-dro-men-in'go-sēl) [G. *hydōr*, water, + *mēninx*, membrane, + *kēlē*, hernia.] Protrusion of the meninges of brain or spinal cord through a defect in the bony wall, the sac so formed containing fluid.

hydrom'eter [G. *hydōr*, water, + *mētron*, measure.] An instrument for determining the specific gravity of a liquid.

hydrome'tra [G. *hydōr*, water, + *mētra*, uterus.] An accumulation of thin mucus or other watery fluid in the cavity of the uterus.

hydromet'ric. Relating to hydrometry or the hydrometer.

hydrom'etry. The determination of the specific gravity of a fluid by means of an hydrometer.

hydrom'phalus [G. *hydōr*, water, + *omphalos*, umbilicus.] A cystic tumor at the umbilicus.

hydromyelia (hi-dro-mi-e'lĭ-ah) [G. *hydōr*, water, + *myelos*, marrow.] An increase of fluid in the dilated central canal of the spinal cord, or in congenital cavities elsewhere in the cord substance; hydrorrhachis interna.

hydromyelocele (hi-dro-mi'el-o-sēl) [G. *hydōr*, water, + *myelos*, marrow, + *kēlē*, tumor, hernia.] The protrusion of a portion of cord, thinned out into a sac distended with cerebrospinal fluid, through a spina bifida.

hydromyo'ma. A myoma containing cysts.

hy'dronal. Viferral, a white, slowly soluble powder, obtained by the reaction of chloral and pyridin, hypnotic in doses of gr. 10–15 (0.6–1.0).

hydrone (hi'drōn) [G. *hydōr*, water, + *ōn*, being.] The fundamental unit, or simplest constituent, of water, which latter is regarded as a mixture of two or more of these units, of varying molecular complexity according to its state as solid, liquid, or gaseous.

hydronephro'sis [G *hydōr*, water, + *nephros*, kidney.] Dilatation of the pelvis and calyces of one or both kidneys in consequence of obstruction to the flow of urine.

hy"dronephrot'ic. Relating to hydronephrosis.

hydroparasal'pinx [G. *hydōr*, water, + *para*, beside, + *salpinx*, trumpet.] An accumulation of serous fluid in the accessory tubes of the Fallopian tube.

hydropath'ic. 1. Relating to hydropathy. 2. Hydrotherapeutic. 3. In England, a half sanatorium, half boarding-house, located at a watering-place.

hydropathy (hi-drop'ă-thĭ) [G. *hydōr*, water, + *pathos*, suffering.] The use of water in the treatment of disease; frequently, the unscientific use of water, as distinguished from hydrotherapy.

hydropericarditis (hi-dro-per-ĭ-kar-di'(de')tis) [G. *hydōr*, water.] Pericarditis with a large serous effusion.

hydropericar'dium. A non-inflammatory accumulation of serum in the pericardial sac.

hydroperinephrosis (hi"-dro-per-ĭ-ne-fro,sis) [G. *hydōr*, water, + *peri*, around, + *nephros*, kidney.] Anascarca of the connective tissue surrounding the kidney, in addition frequently to an accumulation of urine within the pelvis and calyces.

hydroper'ion [G. *hydōr*, water, + *peri*, about, + *ōon*, egg.] A fluid thought to be present, in the early stages of embryonic development, between the decidua vera and decidua reflexa.

hydroperitone'um, hydroperito'nia [G *hydōr(hydr-)*, water, + *peritonaion*, peritoneum.] Ascites.

hydrophagocyto'sis [G. *hydōr*, water, + *phagocyte* + *-osis*.] Cervis phenomenon, the englobing of droplets of plasma by the macrophages.

hy'drophil, hydrophil'ic. Hydrophilous.

hydrophilous (hi-drof'ĭ-lus) [G. *hydōr(hydr-)*, water, + *philos*, fond.] 1. Bibulous, readily taking up moisture. 2. In botany, pollinated by the agency of water. 3. Lyophilic, lyophilous.

hydrophobia (hi-dro-fo'bĭ-ah) [G. *hydōr*, water, + *phobos*, fear.] Lyssa, rabies in man.

hydropho'bic 1. Relating to or suffering from hydrophobia. 2. Lyophobic.

hydropho'bin. Lyssin the virus of rabies or hydrophobia.

hydrophobi'num. A homeopathic nosode prepared from the virus of rabies.

hydropho"bopho'bia. Lyssophobia.

hydrophorograph (hi-dro-fo'ro-graf) [G. *hydrophoros*, carrying water, + *graphō*, I record.] An instrument for recording the flow of urine through the ureter or of the spinal fluid in a lumbar puncture.

hydrophthal'mos, hydrophthal'mus [G. *hydōr*, water + *ophthalmos*, eye.] Buphthalmos.

hydrophysometra (hi"dro-fi"-so-me'trah) [G. *hydōr* water, + *physa*, gas, + *mētra*, uterus.] The presence of fluid and gas in the uterine cavity

hydrop'ic. Dropsical; relating to dropsy.

hydropigenous (hi-drŏ-pij'en-us) [G. *hydrōps*, dropsy, + *gennaō*, I produce.] Causing dropsy, noting forms of renal and cardiac disease.

hydropitherapy (hi"drop-ĭ-ther'a-pĭ) [G. *hydrōps*, dropsy, + *therapeia*, treatment.] 1. Treatment of dropsy. 2. Treatment of disease, such as cancer, by the injection of dropsical, especially ascitic, fluid taken from a person undergoing spontaneous cure of the disease.

hydroplasma (hi-dro-plaz'mah) [G. *hydōr*, water, + *plasma*, thing formed.] The fluid part of protoplasm.

hydropneumatosis (hi-dro-nu-mă-to'sis) [G. *hydōr*, water, + *pneuma*, breath, spirit.] Combined emphysema and edema, the presence of liquid and gas in the tissues.

hydropneumopericardium (hi-dro-nu"mo-per-ĭ-kar'dĭ-um) [G. *hydōr*, water, + *pneuma*, breath, spirit.] The presence of a serous effusion and of gas in the pericardial sac.

hydropneumoperitoneum (hi-dro-nu"mo-per-ĭ-to-ne'um) [G. *hydōr*, water, + *pneuma* breath, spirit.] The presence of gas and serous fluid in the peritoneal cavity.

hydropneumothorax (hi"dro-nu"-mo-tho'raks) [G. *hydōr*, water, + *pneuma*, air.] The presence of both gas and a serous effusion in the pleural cavity.

hy'drops. [G. *hydrōps*.] Dropsy, hydropsy. **h. abdom'inis**, abdominal dropsy, hydroperitonia, ascites.* **h. ad mat'ulam** [L. *matula*, urinal], polyuria, diabetes. **h. an'tri**, a serous effusion in the antrum of Highmore. **h. artic'uli**, hydrarthrosis. **h. asthmat'icus**, beriberi. **h. follic'uli**, accumulation of fluid in a Graafian follicle. **h. hypos'trophos**, angioneurotic edema. **h. tu'bæ**, hydrosalpinx. **h. tu'bæ pro'fluens**, a discharge of watery fluid from the oviduct; intermittent hydrosalpinx. **h. vesi'cæ fel'leæ**, dropsy of the gall-bladder, distention of the gall-bladder with fluid.

hydropyonephrosis (hi"dro-pi"o-ne-fro'sis) [G. *hydōr*, water, + *pyon*, pus, + *nephros*, kidney.] The presence of purulent urine in the pelvis and calyces of the kidney following obstruction in the ureter.

hydropyrine (hi-dro-pi'rin). Trade name of a lithium salt of acetyl-salicylic acid; a light crystalline powder of a pleasant acid taste; recommended as a substitute for sodium salicylate in rheumatism and neuralgia.

hydroquinol (hi-dro-kwin'ol, hi-dro-kin'ol). Hydroquinone.

hydroquinone (hi-dro-kwin'ōn, hi-dro-kin'ōn) Hydroquinol, hydrochinone, quinol, an isomer of resorcinol; a reduction product of quinone by sulphurous acid; occurs in colorless crystals soluble in 17 parts of water; has been employed as an antipyretic in doses of gr. 5–10 (0.3–0.6), and also externally as an antiseptic; used in photography as a developer.

hydrorrhachis (hi-dror'ă-kis) [G. *hydōr*(*hydr*-), water, + *rhachis*, spine.] Dropsy of the spinal cord, an increase in the cerebrospinal fluid between the membranes and the cord (*h. exter'na*) or in the central canal or cavities formed in the cord substance (*h. inter'na*).

hydrorrhachitis (hi-dror-ă-ki'(ke')tis) [G. *hydōr*, water, + *rhachis*, spine, + *-itis*.] Inflammation of the spinal cord or its membranes, with a marked serous effusion.

hydrorrhea, hydrorrhœa (hi-dror-re'ah) [G. *hydōr* (*hydr*-), water, + *rhoia*, flow.] A profuse discharge of watery fluid from any part. **h. grav'idæ, h. gravida'rum,** discharge of a watery fluid from the vagina during pregnancy. **na'sal h.**, rhinorrhea, a profuse discharge of watery fluid from the nasal mucous membrane.

hydrosal'pinx [G. *hydōr*, water, + *salpinx*, trumpet.] An accumulation of serous fluid in the Fallopian tube.

hydrosarcocele (hi-dro-sar'ko-sēl) [G. *hydōr*, water, + *sarx*(*sark*-), flesh, + *kēlē*, tumor.] A chronic swelling of the testis complicated with hydrocele.

hydroscheocele (hi-dros'ke-o-sēl) [G *hydōr*, water, + *oscheon*, scrotum, + *kēlē*, hernia.] A scrotal hernia complicated with a serous effusion in the sac.

hy'drosol [G. *h dōr*, water, + L *solubilis*, soluble.] A colloidal dispersion in which water is the dispersion means; a permanent suspension in water of a solid in an extremely minute state of subdivision, as it were only one step removed from a solution.

hydrosphygmograph (hi-dro-sfig'mo-graf) [G. *hydōr*, water.] A sphygmograph in which the pulse beat is transmitted to the recorder through a column of water.

hydrospirom'eter [G *hydōr*, water.] A spirometer in which the force of the expired air is indicated by the rise of a column of water.

hydrostat'ic. Relating to the pressure of fluids or to their properties when in equilibrium. **h. test**, see *test*.

hydrostat'ics [G. *hydōr*, water, + *statos*, standing.] Science relating to the physical properties of liquids in a state of equilibrium.

hydrosudopathy (hi"dro-su-dop'a-thĭ) [G. *hydōr* (*hydr*-), water, + L. *sudor*, sweat, + G. *pathos*, suffering.] Hydrosudotherapy.

hydrosudotherapy (hi"dro-su"do-ther'a-pĭ) [G. *hydōr* (*hydr*-), water, + L. *sudor*, sweat, + G. *therapeuō*, I heal.] Hydrotherapy combined with induced sweating, as in the Turkish bath.

hydrosyringomyelia (hi"dro-sir-in"go-mi-e'-lĭ-ah) [G. *hydōr*, water, + *syrinx*, a tube, + *myelos*, marrow.] The presence of abnormal spaces in the spinal cord with distention of the central canal by the cerebrospinal fluid.

hydrotherapeut'ics [G. *hydōr*, water, + *therapeuō*, I treat disease.] Hydrotherapy.

hydrother'apy [G. *hydōr*, water, + *therapeia*, treatment.] Treatment of disease by means of water applied in various ways; the scientific use of water in therapeutics, as distinguished from hydropathy, or its empirical application.

hydrothionemia, hydrothionæmia (hi-dro-thi-o-ne'mĭ-ah) [G. *hydōr*, water, + *theion*, sulphur, + *haima*, blood.] The presence of sulphureted hydrogen in the blood.

hydrothionuria (hi-dro-thi-o-nu'rĭ-ah) [G. *hydōr*, water, + *theion*, sulphur, + *ouron*, urine.] The excretion of sulphureted hydrogen in the urine.

hydrotho'rax [G. *hydōr*, water.] A non-inflammatory effusion of serous fluid in the pleural cavity

hydro'tis [G. *hydōr*, water, + *ous*(*ōt*-), ear.] A serous effusion in the tympanum or internal ear.

hydrot'omy. Tearing apart the tissue elements in histology, by means of water.

hydrotropism (hi-drot'ro-pizm) [G. *hydōr*, water, + *tropos*, a turning.] The property in growing organisms of turning toward a moist surface (*positive h.*) or away from a moist surface (*negative h.*).

hydrotym'panum [G. *hydōr*, water.] A serous effusion in the tympanum.

hydro-ureter (hi"dro-u-re'ter) [G. *hydōr*, water.] Distention of the ureter with urine, due to stricture or a calculus or newgrowth

hydrova'rium [G. *hydōr*, water] The presence of an ovarian cyst.

hydrox'ide. Hydrate, a compound containing hydroxyl.

hydroxyacetone (hi-droks-ĭ-as'e-tōn). Acetol, a ketone alcohol isomeric with lactic aldehyde.

hydroxybenzene (hi-drok-sĭ-ben'zēn). Phenol.

hydroxycholine (hi-drok-sĭ-ko'lēn). Muscarine.

hydrox'yl. The atom group or univalent radical HO, resulting from the removal of an atom of hydrogen from the molecule of water; when this atom is replaced by another element or radical the compound is an hydroxide.

hydroxylamine (hi-droks-il-am'in). Oxyammonium, a compound of the radical group HO, with the ammonium radical NH_2. **h. hydrochlo'ride,** oxyammonium hydrochloride, NH_2OH_2-HCl, occurring in the form of colorless crystals soluble in alcohol and water.

hy'drozone. Trade name of an aqueous solution of hydrogen peroxide.

hydru'ria [G. *hydōr(hydr-)*, water, + *ouron*, urine.] Polyuria; the excretion of a greatly increased amount of watery urine without a proportionate increase in the solids

hydru'ric. Relating to hydruria.

hyetometry (hi-ĕ-tom'e-trĭ) [G. *hyetos*, rain, + *metron*, measure.] The measurement of the amount of rainfall.

hygiastic (hi-jĭ-as'tik) [G. *hygiastos*, to be healed] Hygienic, sanitary.

hygias'tics. The science of hygiene.

hygieinism (hi'je-in-izm) [G. *hygieia*, health] A tendency to the extreme observance of hygienic laws.

hygieinization (hi-je-in-i-za'shun). Rendering hygienic.

hygieiolatry (hi-je-yol'ă-trĭ) [G. *hygieia*, health, + *latreia*, worship] An extreme observance of the laws of health.

hygieiology (hi-je-yol'o-jĭ) [G. *hygieia*, health + *-ology*.] 1. The science of hygiene. 2. The sum of all measures for the spread and popularization of public health knowledge.

hygieist (hi'je-ist) [G. *hygieia*, health.] One who gives special study to the laws of health.

hygiene (hi'je-ēn) [G. *hygieinos* healthful] The science of health. **social h.,** a popular term for the prevention and care of venereal diseases.

hygienic (hi-je-en'ik). Healthful; relating to hygiene; tending to preserve health.

Hygienic Laboratory coefficient (hi-jĭ-en'ik lab'o-ra-to-rĭ ko-ĕ-fish'ent) [Referring to the Hygienic Laboratory of the U.S. Public Health Service, Washington.] See *coefficient*.

hygienist (hi'je-en-ist). One who is skilled in the science of health; hygieist. **den'tal h.,** a person, usually a woman, who, having served a year in acquiring the art of dental prophylaxis, practises the same, cleans and polishes teeth, and gives advice regarding their preservation.

hy'gric [G. *hygros*, moist.] Relating to moisture.

hy'grine. A substance said to be an alkaloid derived from coca leaves.

hygrobleph'aric [G. *hygros*, moist, + *blepharon*, eyelid.] Moistening the eyelids, noting the ducts of the lacrymal glands.

hy'grol. Hydrargyrum colloidale.

hygro'ma, pl. *hygro'mata* [G. *hygros*, fluid, + *-ōma*.] A cystic swelling containing a serous fluid, such as a cystic lymphangioma, housemaid's knee, etc.

hygromed (hi'gro-med). An instrument for measuring the amount of vapor given off from the skin

hygromedry (hi-grom'ĕ-drĭ) [G. *hygros*, moist.] Determination of the amount of vapor given off from a certain area of the skin.

hygrom'eter [G. *hygros*, moist, + *metron*, measure.] An instrument for determining the amount of moisture in the atmosphere. **hair-h.,** a device in which the degree of dampness in the atmosphere is indicated by the elongation or shortening of a hair.

hygromet'ric. 1. Hydrophilous, hygroscopic. 2. Relating to hygrometry

hygrom'etry. The determination of the amount of moisture in the atmosphere.

hygroph'ila [G. *hygros*, moist, + *phileō*, I love.] (B.A.) The dried herb, *Hygrophila spinosa*, a plant of tropical Asia; diuretic and demulcent in doses of ʒ1–2 (30.0–60.0) of a decoction, 1 in 10.

hygropho'bia [G. *hygros*, moist, + *phobos*, fear.] A morbid fear of moisture or dampness.

hy'groscope [G. *hygros*, moist, + *skopeō*, I view.] An instrument for indicating the amount of moisture in the atmosphere.

hygroscop'ic. 1. Relating to a hygroscope. 2. Bibulous, hydrophilous.

hygroscopy (hi-gros'ko-pĭ). The determination of the amount of moisture in the atmosphere

hygrosto'mia [G. *hygros*, moist, + *stoma*, mouth.] Salivation

hy'la. Paraqueduct.

hy'lic [G. *hylē*, stuff, raw material.] Relating to the pulp tissues, the neuroblast, mesenchyme, striated muscle, and the notochord. **h. tis'sues,** primitive-pulp tissues, or "organs and tissues in which the special characteristic is that the specific cells lie in, and are separated by, a definite stroma, homogeneous or fibrillar, in which there may or may not be blood- and lymph-vessels." (Adami.) **h. tu'mor,** pulp tumor, hyloma.*

hylo'ma [G. *hylē*, stuff, crude matter, + *-oma*.] A hylic or pulp tumor, one due to hyperplasia of tissues derived from the embryonic pulp of epiblastic origin. **atyp'ical h.,** ghosarcoma. **mesen'chymal h.,** a tumor of tissue derived from the mesoblastic pulp or mesenchyme. **mesothe'lial h.,** a tumor derived from tissue of mesothelial origin. **typ'ical h.,** glioma, neuroma.

hylop'athism [G. *hylē*, matter, + *pathos*, feeling.] 1. The theory that inanimate matter is endowed with sensation. 2. The theory that disease depends upon a disarrangement of animal matter.

hylotropic (hi-lo-trop'ik) [G. *hylē*, matter, + *tropos*, a turning.] Noting a change of form or condition, such as evaporation or freezing, which occurs without change in composition of the substance in question.

hylozo'ism [G. *hylē*, matter, + *zōon*, animal.] The theory that everything in nature, including the earth itself, possesses life.

hy'men [G. *hymēn*, membrane.] A thin crescentic or annular fold partly closing the vaginal opening in the virgin. **h. bifenestra'tus, h. bifo'ris,** one in which there are two openings separated by a wide septum; see *h. septus*. **h. cribrifor'mis,** one with a number of small perforations. **h. denticula'tus,** one with markedly serrated edges. **h. imperfora'tus,** one in which there is no opening, the membrane completely occluding the vagina, **h. infundibulifor'mis,** a projecting h. with a central opening with sloping edges. **h. sculpta'tus** one with markedly uneven and ragged edges. **h. sep'tus,** one in which there are two openings, separated by a narrow band of tissue; see *h bifenestratus*. **h. subsep'tus,** one in which the

opening is partly closed by a thin band of apparently adventitious tissue.

VARIOUS FORMS OF THE HYMEN: 1, Falciform or semilunar; 2, fimbriated; 3, bilabiate; 4, biperforate; 5, cribriform.

hy'menal. Relating to the hymen.

hymenitis (hi-men-i'(e')tis). Inflammation of the hymen.

hyme'nium [G. *hymenion*, dim. of *hymēn*, membrane.] In botany, a layer of the terminating portions of hyphæ in fungi, forming the mother cells of spores.

Hymenol'epis [G *hymēn*, membrane, + *lepis*, rind] A genus of *Cestoda* or tapeworms. **H. diminu'ta,** a tapeworm of rats and mice, seldom found in man; its larvæ are harbored by beetles and caterpillars. **H. lanceola'ta,** a tapeworm of aquatic birds, found very exceptionally in man. **H. muri'na, H. na'na,** *Tænia nana*, a very small tapeworm of man, sometimes found in great numbers in the intestine; the cysticercus is not known, but it is believed the worm may develop through all its stages in a single host.

hymenol'ogy [G. *hymēn*, membrane, + *-logia*.] The branch of anatomy and physiology dealing with the membranes of the body.

hymenorrhaphy (hi-men-or'ră-fi) [G. *hymēn*, membrane, + *rhaphē*, a suture.] Suture of a membrane.

hymenotome (hi-men'o-tōm). A knife used in dividing the hymen or other membranes.

hymenot'omy [G. *hymēn*, membrane, + *tomē*, incision.] 1. Division of an imperforate hymen. 2. Anatomy of the membranes.

hyobas"ioglos'sus. The fasciculus of the hyoglossus muscle which arises from the body of the hyoid bone.

hyoepiglottic (hi"o-ep-i-glot'ik). Relating to the hyoid bone and the epiglottis, noting the elastic *h. ligament* connecting the two structures.

hyoepiglottidean (hi"o-ep-i-glŏ-tid'e-an). Hyoepiglottic.

hyoglos'sal [G. *hyoeidēs*, hyoid, + *glōssa*, tongue.] Relating to the hyoid bone and the tongue, noting the *h. membrane*, an aponeurosis connecting these two structures, and the *h. muscle.*

hyoglos'sus. See under *musculus.*

hy'oid [G. *hyoeidēs*, like the letter ypsilon, Υ or *υ*.] Y-shaped or U-shaped, noting the tongue bone, os* hyoideum.

hy"opharynge'us. Musculus* constrictor pharyngis medius [BNA].

hyosci'na. Hyoscine, an alkaloid isomeric, if not identical, with scopolamine, obtained from hyoscyamus and stramonium. **hyosci'næ hydrobro'midum** (Br.), scopolaminæ hydrobromidum (U.S.), occurs in the form of colorless rhombic crystals, soluble in water, without odor, but with an acrid bitter taste; employed in the treatment of mania and as an hypnotic in doses of gr. $\frac{1}{150}$–$\frac{1}{100}$ (0.0004–0.0006).

hyoscyamina (hi-os-si-ah-me'nah). Hyoscyamine, an alkaloid found in hyoscyamus, belladonna, and stramonium, an isomer of atropine; occurs in the form of acicular crystals or of an amorphous powder of an acrid taste; employed as an antispasmodic, analgesic, and sedative in doses of gr. $\frac{1}{150}$–$\frac{1}{75}$ (0.0004–0.0008). **hyoscyami'næ hydrobro'midum** (U.S.), hyoscyamine hydrobromide, in white prismatic crystals of an acrid bitter taste, readily soluble in water; employed for the same purposes and in the same dose as the alkaloid. **hyoscyami'næ sul'phas,** hyoscyamine sulphate, occurs as a white crystalline powder, of an acrid bitter taste, readily soluble in water; employed as an antispasmodic, hypnotic, and sedative in doses of gr. $\frac{1}{150}$–$\frac{1}{75}$ (0.0004–0.0008).

hyoscyamus (hi-os-si'-ă-mus) [G. *hyoskyamos*, henbane.] (U.S., Br.) Hyoscy'ami fo'lia, hyoscyamus leaves; the leaves and flowering tops of *Hyoscyamus niger*, henbane, insane root, poison tobacco, stinking nightshade; it contains a very powerful alkaloid hyoscyamine, and hyoscine, or scopolamine; anodyne and antispasmodic in doses of gr. 4–8 (0.25–0.5).

hyothy'roid. Relating to the hyoid bone and thyroid cartilage, noting a membrane stretching between the two, membrana* hyothyreoidea.

hypacid'ity. Subacidity.

hypacu'sia, hypacu'sis [G. *hypo*, under, + *akousis*, hearing.] Impaired hearing in consequence of lessened irritability of the acoustic nerve.

hypalbumino'sis [G. *hypo*, under.] The presence of a deficient amount of albumin in the fluids of the body.

hypalgesia (hi-pal-je'zi-ah) [G. *hypo*, under, + *algos*, pain.] Lessened sensibility to pain.

hypalge'sic, hypalget'ic. Relating to hypalgesia, having diminished sensitiveness to pain.

hypal'gia. Hypalgesia.

hypam'nion, hypam'nios [G. *hypo*, under.] The presence of an abnormally small amount of amniotic fluid.

hypanacinesia, hypanacinesis (hi-pan"ă-sin-e'si-ah, hi-pan"-ă-sin-e'sis) [G. *hypo*, under, + *anakinēsis*, a to-and-fro movement.] A diminution in the normal gastric or intestinal movements.

hypanakine'sia. Hypanacinesia.

hyparte'rial [G. *hypo*, beneath, + *artēria*, artery.] Below or beneath an artery, noting the bronchi which pass below the pulmonary arteries.

hypasthe'nia [G. *hypo*, under, + *astheneia*, weakness.] Slight asthenia.

hypax'ial [G. *hypo*, beneath, + *axis*.] Below, *i.e.* anterior to the cerebrospinal axis.

hypazoturia (hip"az-o-tu'ri-ah). Hypoazoturia.

hypenceph'alon [G. *hypo*, under, + *enkephalos*, brain.] The corpora quadrigemina, pons, and medulla taken together.

hypendocrisia (hip-en-do-kriz'i-ah). Hypoendocrinism.

hypeosinophil, hypeosinophile (hip-e-o-sin'o-fil) [G. *hypo*, under.] 1. Taking an eosin dye with difficulty, or readily parting with it. 2. Any histological element which does not readily stain with eosin or which is easily decolorized, noting especially certain leucocyte granules

hyper- [G. *hyper*, above, over.] A prefix noting excessive, above the normal.

hyperacid (hi-per-as'id). Superacid, excessively acid.

hyperacidaminuria (hi"per-as"id-am"in-u'ri-ah). Acidaminuria, the passage of an excess of amino-acids in the urine.

hyperacid'ity [G. *hyper*, overmuch.] An abnormal degree of acidity, hyperchlorhydria, for example.

hyperac'tion. Overaction.

hyperactiv'ity. Superactivity, overactivity.

hyperacu'sia, hyperacu'sis [G. *hyper*, above, + *akousis*, hearing.] Abnormal acuteness of hearing, auditory hyperesthesia, due to increased irritability of the acoustic nerve.

hyperacute'. Superacute.

hyperadeno'sis [G. *hyper*, above, + *adēn*, gland, + *-ōsis*.] Glandular enlargement, especially enlargement of the lymphatic glands.

hyperadipo'sis, hyperadipos'ity [G. *hyper*, over, + *adiposis*.] An extreme degree of adiposis or fatness.

hyperadrenalemia (hi"pur-ad-re-nal-e'mĭ-ah) [G. *hyper*, over, + *adrenal* secretion + G. *haima*, blood.] Hyperadrenia, a condition in which the adrenal secretion is present in undue proportion in the blood.

hyperadrenia (hi"pur-ad-re'nĭ-ah) [G. *hyper*, over, + *adrenal* secretion.] The presence of symptoms due to the action of the adrenal secretion, either because of increased activity of the gland or as a result of a diminished amount of antagonistic secretion, as of the pancreas for example.

hyperæ'mia. Hyperemia.

hyperæmiza'tion, hyperemiza'tion. Production of hyperemia.

hyperæsthe'sia. Hyperesthesia.

hyperalbumino'sis. The occurrence of an abnormally great amount of albumin in the fluids of the body.

hyperalgesia (hi-per-al-je'zĭ-ah) [G. *hyper*, overmuch, + *algos*, pain] Extreme sensitiveness to painful stimuli.

hyperalge'sic, hyperalget'ic. Relating to hyperalgesia, having an extreme sensitiveness to pain.

hyperal'gia. Hyperalgesia.

hyperalimenta'tion. Superalimentation.

hyperalimento'sis [G. *hyper*, over, + L. *alimentum*, food, + G. *-ōsis*.] Any disease due to gluttony or excessive eating.

hyperalkales'cence. Superalkalinity.

hyperanacinesia, hyperanacinesis (hi"per-an"ă-sin-e'zĭ-ah, hi"per-an"ă-sin-e'sis) [G. *hyper*, over, + *anakinēsis*, to-and-fro movement.] Excessive to-and-fro movement, of the stomach or intestine for example.

hyperanakine'sia. Hyperanacinesia.

hyperaph'ia [G. *hyper*, over, + *haphē*, touch.] Extreme sensitiveness to touch.

hyperaph'ic. Marked by hyperaphia, or extreme tactile sensibility.

hyperazotu'ria [G. *hyper*, over, + Fr. *azote*, nitrogen, + G. *ouron*, urine.] The excretion of an excessive amount of urea.

hyperbrachycephaly (hi"per-brak-ĭ-sef'al-ĭ) [G. *hyper*, over, + *brachys*, short, + *kephalē*, head.] An extreme degree of brachycephaly, with a cephalic index of over 85.

hyperbu'lia [G. *hyper*, over, + *boulē*, will.] Excessive wilfulness.

hypercalce'mia. An excess of calcium in the blood.

hypercap'nia [G. *hyper*, above, in excess, + *kapnos*, smoke, vapor.] The presence of carbon dioxide in excess in the blood, resulting in overstimulation of the respiratory center.

hypercar'dia [G. *hyper*, over, + *kardia*, heart.] Hypertrophy of the heart.

hypercathar'sis [G. *hyper*, above, + *katharsis*, a cleansing.] Excessive movements of the bowels.

hypercathar'tic. 1. Causing excessive purgation. 2. An agent having an excessive purgative action.

hy"percemento'sis [G. *hyper*, over, + L. *cementum*, cement, + G. *-ōsis*.] Overgrowth of the cementum of the teeth.

hyperchlorhydria (hi"per-klor-hid'rĭ-ah) [G. *hyper*, overmuch, + *chlorhydric*(acid).] The presence of an abnormal amount of hydrochloric acid in the stomach, hyperhydrochloria.

hyperchlo'ride. Perchloride, superchloride.

hypercholestere'mia. Hypercholesterolemia.

hypercholesterine'mia. Hypercholesterolemia.

hypercholesterolemia (hi"pur-ko-les"ter-ol-e'mĭ-ah) [G. *hyper*, above, + *cholesterol* + G. *haima*, blood.] The presence of an excessive amount of cholesterol in the blood.

hypercholia (hi-per-ko'lĭ-ah) [G. *hyper*, overmuch, + *cholē*, bile.] Excessive secretion of bile.

hyperchromasia (hi"per-kro-ma'zĭ-ah). Hyperchromatism.

hyperchromat'ic. Abnormally high colored or overpigmented. **h. cell,** a cell resulting from asymmetrical mitosis which contains too many chromosomes.

hyperchromatin (hi-per-kro'mă-tin). The azurophil portion of the chromatin

hyperchromatism (hi"per-kro'mă-tizm) [G. *hyper*, overmuch, + *chrōma*, color.] 1. Excessive pigmentation. 2. Hyperchromatosis.

hyperchromato'sis. An increased staining capacity of any structure; h. of a cell-nucleus is a characteristic feature in cell-degeneration.

hyperchromemia (hi"per-kro-me'mĭ-ah) [G. *hyper*, above, + chrōma, color, + *haima*, blood.] Presence of a high color index of the blood.

hyperchro'mia. Hyperchromatism. **macrocy'tar h.,** hyperchromatic macrocythemia.*

hyperchylia (hi-per-ki'lĭ-ah) [G *hyper*, excessive, + *chylos*, juice.] An excessive secretion of gastric juice.

hypercinesia (hi-per-sin-e'zĭ-ah) [G. *hyper*, overmuch, + *kinēsis*, motion.] Excessive motility, supermotility. **profess'ional h.,** occupation neurosis.*

hypercrinism (hi-per-kri'nizm) [G. *hyper*, over, + *krinō*, I separate, secrete.] A condition resulting from an excessive secretion of any of the glands, especially of the endocrine glands.

hypercryæsthe'sia. Hypercryesthesia.

hypercryalgesia (hi"per-kri-al-je'zĭ-ah) [G. *hyper*, over, + *kryos*, cold, + *algēsis*, the sense of pain.] Hypercryesthesia.

hypercryesthe'sia [G. *hyper*, over, + *kryos*, cold, + *aisthēsis*, sensation.] Extreme sensibility to cold.

hypercyanotic (hi-pur-si-an-ot'ik) [G. *hyper*, above.] Marked by extreme cyanosis.

hypercyesia, hypercyesis (hi-per-si-e'zĭ-ah, hi-per-si-e'sis) [G. *hyper*, over, + *kyēsis*, pregnancy.] The presence of two embryos of different ages, not twins, in the uterus; superfetation.

hypercythe'mia, hypercythæ'mia [G. *hyper*, overmuch, + *kytos*, cell, + *haima*, blood.] The presence of an excessive number of red blood-corpuscles.

hypercytochromia (hi"per-si"to-kro'mĭ-ah) [G. *hyper*, above, + *kytos*, cell, + *chrōma*, color.] Hyperchromatosis of a blood-cell.

hypercyto'sis [G. *hyper*, above, + *kytos*, cell, + *-ōsis*.] Hyperleucocytosis.

hyperdactyl'ia, hyperdac'tylism [G. *hyper*, overmuch + *daktylos*, finger or toe.] The presence of supernumerary fingers or toes.

hyperdiastole (hi-per-di-as'to-le). Extreme cardiac diastole.

hyperdicrot'ic. Very pronouncedly dicrotic; superdicrotic.

hyperdic'rotism [G. *hyper*, over, + *di-*, two, + *krotos*, beat.] Extreme dicrotism.

hyperdiemorrhysis (hi"per-di-em-or'i-sis) [G. *hyper*, above, + *dia*, through, + *haima*, blood, + *rhysis*, a flowing.] Capillary hyperemia.

hyperdisten'tion. Superdistention.

hyperdiure'sis [G. *hyper*, overmuch.] Extreme diuresis, polyuria.

hyperdynam'ia [G. *hyper*, overmuch, + *dynamis*, force.] Extreme violence or muscular restlessness. **h. u'teri,** excessive uterine contractions in childbirth.

hyperdynam'ic. Marked by hyperdynamia.

hyperem'esis [G. *hyper*, above, + *emesis*, vomiting.] Excessive vomiting. **h. gravida'rum,** the uncontrollable vomiting of pregnancy. **h. lacten'tium,** the vomiting of nurslings with pyloric stenosis.

hyperemet'ic. Marked by excessive vomiting.

hypere'mia, hyperæ'mia [G. *hyper*, over, + *haima*, blood.] The presence of an increased amount of blood in a part; congestion. **ac'tive h.,** h. due to an increased afflux of arterial blood in the dilated capillaries. **arte'rial h.,** active h. **Bier's h.,** see *Bier's* method.* **flux'ionary h.,** active h. **pas'sive h.,** h due to an obstruction in the flow of blood from the affected part, the venous radicles being distended. **ve'nous h.,** passive h.

hyperenceph'alus [G. *hyper*, above, + *enkephalos*, brain.] A monster with the vault of the cranium deficient, the brain being exposed.

hyperendocrinism (hi"per-en-dok'rĭ-nizm) [G. *hyper*, over, + *endon*, within, + *krinō*, I separate.] Abnormal increase in any of the internal secretions

hyperendocrisia (hi"per-en-dŏ-kriz'ĭ-ah). Hyperendocrinism.

hypereosinophil'ia. Excessive eosinophilia.

hyperephidrosia, hyperephidrosis (hi"per-ef-i-dro'sĭ-ah, hi"per-ef-i-dro'sis) [G. *hyper*, over, + *ephidrōsis* perspiration.] Excessive sweating.

hyperepinephria (hi"per-ep"i-nef'ri-ah) [G. *hyper*, over, + *epinephros*, adrenal body. The clinical signs of excessive secretion of the adrenal bodies, essentially increased arterial tension.

hyperequilib rium [G. *hyper*, overmuch.] A tendency to vertigo on slight rotary movement.

hyperergasia (hi-per-er-ga'sĭ-ah) [G. *hyper*, over, + *ergasia*, work.] Increased or excessive functional activity.

hypererythrocythemia, hypererythrocythæmia hi"per-er"ĭ-thro-si-the'mĭ-ah) [G. *hyper*, over, + *erythros*, red, + *kytos*, cell, + *haima*, blood.] An excess in the number of red blood-corpuscles, hypercythemia.

hyperesophoria (hi"per-es"-o-fo'rĭ-ah) [G. *hyper*, above, + *esō*, inward, + *phora*, movement.] A tendency of one eye to deviate upward and inward in consequence of muscular insufficiency.

hyperesthesia, hyperæsthesia (hi"per-es-the'zĭ-ah) [G. *hyper*, overmuch, + *aisthēsis*, sensation.] Excessive sensibility to touch, pain, or other sensory stimuli. **au'ditory h.,** h. acustica. **cer'ebral h.,** h. due to some central lesion in the brain. **gus'tatory h.,** hypergeusia. **h. acus'tica,** extreme and painful sensitiveness to certain sounds, acoustic h., hyperacusia. **h. olfacto'ria,** olfactory h., hyperosmia. **h. op'tica,** extreme sensitiveness of the eyes to light. **mus'cular h.,** sensitiveness of the muscles to pressure, hypermyesthesia. **tac'tile h.,** hyperaphia, hyperpselaphesia.

hyperesthet'ic. Marked by hyperesthesia.

hyperexopho'ria [G. *hyper*, above, + *exō*, outward, + *phora*, movement.] A tendency of one eye to deviate upward and outward, due to muscular insufficiency.

hyperexten'sion. Superextension.

hypergalactosia (hi-pur-gal-ak-to'sĭ-ŭ). Excessive secretion of milk, galactorrhea.

hypergasia (hi-per-ga'sĭ-ah) [G. *hypo*, under, + *ergasia*, work.] Diminished functional activity, hypoergasia.

hypergen'esis [G. *hyper*, over, + *egnesis*, production.] Overproduction; hyperplasia.

hypergenet'ic. Relating to hypergenesis.

hypereusia (hi-per-ju'sĭ-ah) [G. *hyper*, over, + *geusis*, taste.] Gustatory hyperesthesia. excessive acuteness of th sense of taste.

hypergigantosoma (hi"per-ji-gan"to-so'mah). [G. *hyper*, over, + *gigas*, giant, + *sōma*, body.] Excessive bodily development, gigantism.

hyperglobu'lia, hyperglob'ulism [G. *hyper*, over, + L. *globulus*, globule.] Hypercythemia, polycythemia.

hyperglyce'mia, hyperglycæ'mia [G. *hyper*, over, + *glykys*, sweet, + *haima*, blood.] Hyperglycosemia, hyperglykemia, an excess of sugar in the blood.

hyperglycogenolysis (hi-per-gli-ko-jen-ol'i-sis). An excessive glycogenolysis.

hyperglycorrhachia (hi"pur-gli-kor-rak'ĭ-ah) [G. *hyper*, above, + *glykys*, sweet, + *rhachis*, spine.] An excessive amount of sugar in the cerebrospinal fluid.

hyperglycose'mia, hyperglycosæ'mia. Hyperglycemia, hyperglykemia.

hyperglycosuria (hi"pur-gli-ko-su'rĭ-ah) [G. *hyper*, above, + *glycosuria*.] Glycosuria of extreme degree.

hyperglyke'mia, hyperglykæ'mia. Hyperglycemia.

hypergonadism (hi"per-go'nad-izm) [G. *hyper*, over.] Abnormally great internal secretion of the gonads, or sexual glands—testes or ovaries.

hyperhedo'nia [G. *hyper*, over, + *hēdonē*, pleasure.] Hyperhedonism

hyperhedonism (hi"per-hed'on-izm) [G. *hyper*, over, + *hēdonē*, pleasure.] 1. The feeling of an abnormally great pleasure in any act or from any happening. 2. Sexual erethism.

hy"perhem"oglobine'mia, hy"perhæm"oglobinæ'mia. An excessive degree of hemoglobinemia.

hyperhepatia (hi-per-he-pă'tĭ-ah) [G. *hyper*, over, + *hēpar* (*hēpat-*), liver.] Overfunctioning of the liver.

hyperhidrosis, hyperidrosis (hi"per-hi-dro'sis, hi"per-i-dro'sis) [G. *hyper*, over, + *hidros*, sweat.] Excessive sweating. **h. oleo'sa,** seborrhea.

hyperhydrochlo'ria. Hyperchlorhydria.

hyperhypercytosis (hi"per-hi"per-si-to'sis). Hyperleucocytosis with a relative increase of neutrophils.

hyperhypocytosis (hi"per-hi"po-si-to'sis) [G. *hyper*, above, + *hypo*, under, + *kytos*, cell, + *-ōsis*.] Leucopenia with a relative increase of neutrophils.

hyper'icum. Rosin rose, St. John's wort, touch and heal, the herb *Hypericum perforatum*, employed locally as a vulnerary and astringent, and internally as an emmenagogue and diuretic.

hyperinges'tion. Overeating or overdrinking.

hyperinosemia, hyperinosæmia (hi"per-i"no-se'mĭ-ah) [G. *hyper*, over + *is(in-)*, fiber, + *haima*, blood.] An excessive coagulability of the blood; an excess of fibrinogen in the blood.

hyperino'sis. Hyperinosemia.

hyperinsulinism (hi-pur-in'su-lin-izm) [G. *hyper*, above.] A condition resulting from an excessive secretion of the islands of Langerhans in the

pancreas, resulting in hypoglycemia, or deficient amount of sugar in the blood; the symptoms are those of insulin shock though more chronic in character.

hyperinvolu'tion. [G. *hyper*, over + L. *involvere*, envelop.] Superinvolution.

hyperisoton'ic [G *hyper*, above, + *isos*, equal, + *tonikos*, tonic.] Hypertonic.

hyperkerato'sis. Hypertrophy of the horny layer of the epidermis, keratodermia, keratosis. **h. congenita'lis,** ichthyosis congenita; the condition present in the co-called harlequin* fetus. **h. lin'guæ,** black tongue.* **h. subungua'lis,** h. affecting the nail beds of the hands or feet.

hyperkine'sia, hyper ine'sis. Hypercinesia.

hyperlacta'tion [G. *hyper*, beyond, + L. *lactare*, to suckle.] Superlactation.

hyperle'thal [G. *hyper*, over, + L. *letalis*, lethal.] Superlethal.

hyperleucocyto'sis. Leucocytosis.

hyperlipemia (hi"per-li-pe'mĭ-ah) [G. *hyper*, over, + *lipos*, fat, + *haima*, blood.] An excessive degree of lipemia, or fat droplets in the blood.

hyperlipo'sis [G. *hyper*, over, + *lipos*, fat] 1. Excessive adiposity. 2. An extreme degree of fatty degeneration.

hyperlithuria (hi"per-lĭ-thu'rĭ-ah) [G. *hyper*, over, + *lithos*, stone, + *ouron*, urine.] An excessive excretion of uric (lithic) acid in the urine.

hypermas'tia [G. *hyper*, above, excessive, + *mastos*, breast.] Polymastia, polymazia.

hypermature'. Overmature, beyond maturity.

hypermegaso'ma [G. *hyper*, over, + *megas*, great, + *sōma*, body] Excessive bodily development, gigantism.

hypermenorrhea (hi-pur-men-or-re'ă). Excessive menstruation.

hy"p rmet"amorpho'sis [G. *hyper*, over, + *metamorphōsis*, transformation.] Excessive change; specifically rapid change of ideas occurring in mental disord r.

hypermetaplasia (hi"per-met-ah-pla'sĭ-ah). An excessive or exaggerated metaplasia.

hypermetrope (hi-per-met'rōp). One suffering from hypermetro ia, hyperope.

hypermetro'pia [G. *hyper*, over, beyond, + *metron*, measure, + *ōps*, eye.] Hyperopia.

hypermi"croso'ma [G *hyper*, over, + *mikros*, small, + *sōma*, body.] Extreme smallness of body dw rfism, nanism.

hypermnesia (hi-perm-ne'zĭ-ah) [G. *hyper*, over, + *mnēmē*, memory.] Extreme power of memory.

hy'permorph [G. *hyper*, above, + *morphē*, form.] One whose sitting height is low in proportion to the standing height, owing to great length of limb. See *hypomorph* and *mesomorph*.

hypermotil'ity [G. *hyper*, over, + L *motus*, motion.] Supermotility, excessive motility.

hypermy"esthe'sia, hypermy"æsthe'sia [G. *hyper*, over, + *mys(myo-)*, muscle, + *aist ēsis*, feeling.] Muscular hyperesthesia.

hypermyotonia (hi-per-mi-o-oto'nĭ-ah) [G. *hyper*, over, + *mys(myo-)*, muscle, + *tonos*, tension.] Extreme muscular tonus.

hypermyotrophy (hi-per-mi-ot'ro-fĭ) [G. *hyper*, over. + *mys(myo-)*, muscle, + *trophē*, nourishment,] Muscular hypertrophy.

hyperne'a. Hypernoia.

hyperneocytosis (hi"per-ne"o-si-to'sis) [G. *hyper*, above, + *neos*, new, + *kytos*, cell, + *-ōsis*.] Hyperskeocytosis, hyperleucocytosis with the presence of many immature forms, *i.e.* with deviation* to the left.

hyperneph'roid [G. *hyper*, above, + *nephros*, kidney, + *eidos*, ppearance.] Resembling or of the type of the adrenal body.

hypernephro'ma [G. *hyper*, above + *nephros*, kidney, + *-ōma*.] A tumor composed of hypernephroid or adrenal tissue.

hypernoia (hi-pur-noi'yŭ) [G. *hyper*, over, + *noeō*, I think.] Hypernea, hyperpsychosis; (1) great rapidity of thought; (2) excessive mental activity or imagination.

hypernomic (hi-per-nom'ik) [G. *hyper*, above, + *nomos*, law.] Uncontrolled on the side of excess.

hypernor'mal [G. *hyper*, above, + L. *norma*, rule, norm.] Supernormal.

hypernormocytosis (hi"per-nor"mo-si-to'sis) [G. *hyper*, above, + L. *norma*, rule, + G. *kytos*, cell, + *-ōsis*.] The presence of a relatively increased number of neutrophile white blood cells.

hypernutrition (hi-per-nu-trish'un) [G. *hyper*, over, + L. *nutrire*, to nourish.] Supernutrition.

hyperontomorph (hi-pur-on'to-morf) [G. *hyper*. over, + *on*, being, + *morphē*, form.] An individual of the thin epithelial type; with a tendency to hyperthyroidism.

hyperonychia (hi-per-o-nik'ĭ-ah) [G. *hyper*, over, + *onyx(onych-)*, nail.] Hypertrophy of the nails.

hyperope (hi'per-ōp). One suffering from hyperopia, hypermetrope.

hypero'pia [G. *hyper*, over, beyond, + *ōps*, eye.] Hypermetropia, long-sightedness; a condition in which, in consequence of an error in refraction or flattening of the globe of the eye, parallel rays are focussed behind the retina. **ab'solute h.,** manifest h. which cannot be overcome by an effort of accommodation. **ax'ial h.,** h. due to shortening of the anteroposterior diameter of the globe of the eye. **fac'ultative h.,** manifest h. which can be overcome by an effort of accommodation. **h. of cur'vature,** h. due to diminution of convexity of the refracting media of the eye. **la'tent h.,** the difference between total and manifest h. **man'ifest h.,** the h. which can be measured by convex lenses without the use of a cycloplegic. **to'tal h.,** that which can be determined after complete paralysis of accommodation by means of a cycloplegic.

hyperorex'ia [G. *hyper*, overmuch + *orexis*, appetite.] Bulimia, an insatiable appetite.

hyperorthocytosis (hi"per-or'tho-si-to'sis) [G. *hyper*, above, + *orthos*, correct, + *kytos*, cell, + *-ōsis*.] Hyperleucocytosis in which the relative percentages of the different forms are normal and no immature forms are present.

hyperosmia (hi-per-oz'mĭ-ah) [G. *hyper*, overmuch, + *osmē*, sense of smell.] An exaggerated sense of smell, hyperosphresia.

hyperosmo''ic. Relating to increased osmosis.

hyperosphresia, hyperosphresis (hi"per-os-fre'zĭ-ah hi"per-os-fre'sis) [G. *hyper*, over, + *osphrēsis*, smell.] Hyperosmia.

hyperosto'sis [G. *hyper*, over, + *osteon*, bone, + *-ōsis*.] 1. Hypertrophy of bone 2. Exostosis. **flowing h., streak h.,** rheostosis.

hyperova'ria [G. *hyper*, over, + L. *ovarium*, ovary.] A condition of sexual precocity in young girls, due to overdevelopment of the ovaries with the formation of ovarian secretion in excess.

hyperovarianism (hi"pur-o-va'rĭ-an-izm). Hyperovaria.

hyperoxida'tion. Excessive oxidation

hyperpancreatism (hi"per-pan'kre-ă-tizm) [G. *hyper*, above, + *pancreatism*.] A condition of

increased activity of the pancreas, trypsin being in excess among the ferments.

hyperpar'asite. A secondary parasite inimical to the development or life of a previously existing parasite.

hyperpar'asitism. A condition in which a secondary parasite destroys, or nullifies the pathogenic action of, a previously existing parasite.

hyperparathyroidism (hi"per-par-ah-thi'roy-dizm). A condition due to an increase in the secretion of the parathyroids, causing generalized osteitis fibrosa cystica, elevated serum-calcium, decreased serum-phosphorus, and increased excretion of both calcium and phosphorus.

hyperpep'sia [G. *hyper*, over, + *pepsis*, digestion 1. Abnormally rapid digestion. 2. Impaired digestion with hyperchlorhydria.

hyperpepsinia (hi-pur-pep-sin'ĭ-ah) [G. *hyper*, over.] An excess of pepsin in the gastric juice.

hyperperistal'sis. Hyperprochoresis.

hyperphalangism (hi-pur-fal-an'jizm) [G. *hyper*, over, + *phalanx*.] Polyphalangism; the presence of a supernumerary phalanx in a finger or toe.

hyperpho'nia [G. *hyper*, over, + *phōnē*, sound, voice.] Stammering or stuttering resulting from excessive innervation of the vocal muscles.

hyperpho'ria [G. *hyper*, above, + *phora*, motion.] A tendency of the visual axis of one eye to rise above that of its normal fellow.

hyperphrenia (hi-pur-fre'nĭ-ah) [G. *hyper*, above, + *-phrenia*.] 1. Excessive intellectual activity. 2. A high degree of intellect; genius.

hyperpiesis (hi-pur-pi'e-sis) [G. *hyper*, over, + *piesis*, pressure.] Overpressure, especially of the blood within the vessels; very high blood pressure.

hyperpietic (hi-per-pi-et'ik). Relating to or marked by extremely high blood pressure.

hy"perpigmenta'tion [G. *hyper*, over, + L. *pigmentum*, paint.] Superpigmentation.

hyperpinealism (hi-pur-pin'e-al-izm). Excessive secretory activity of the pineal gland.

hyperpituitarism (hi-pur-pit-u'ĭ-tar-izm) [G. *hyper*, overmuch.] A condition due to overactivity of the hypophysis cerebri, at least of its anterior lobe, marked by acromegaly and hypertrichosis.

hyperpla'sia [G. *hyper*, above, + *plasis*, a moulding.] An increase in number of the individual tissue elements, excluding tumor formation, whereby the bulk of the part or organ is increased. By some restricted to denote proliferative changes in a tissue not occurring to meet a demand for increased functional activity. See *hypertrophy*. **po'lar h.**, an excess of development at one or other extremity of the embryo, resulting in the formation of a dicephalus (cephalic extremity) or of a monster with three or more lower limbs (podalic extremity).

hyperplasmia (hi-per-plaz'mĭ-ah) [G. *hyper*, above, + *plasma*.] 1. An excessive production of white cells within certain organs without their appearance in the blood, aleucemia. 2. An increase in the size of the red blood-cells through imbibition.

hyperplas'tic. Relating to hyperplasia.

hyperpnea, hyperpnœa (hi-purp-ne'ah) [G. *hyper*, overmuch, + *pnoē*, breathing.] A condition in which the respiration is deeper and more rapid than normal.

hyperporo'sis [G. *hyper*, over, + *pōros*, callus, + *-ōsis*.] Excessive formation of callus after fracture of a bone.

hyperprax'ia [G. *hyper*, over, + *praxis* action.] Excessive activity

hyperprochoresis (hi"pur-pro-ko-re'sis) [G. *hyper*, over, + *prochōreō*, I go forward.] Excessive rapidity of the passage of food through the stomach and intestine; hyperperistalsis, peristaltic unrest, hyperanacinesia, tormina nervosa.

hyperproteinemia (hi-pur-pro-te-in-e'mĭ-ă) [G. *hyper*, above, + *protein* + *haima*, blood.] An excess of protein in the blood plasma, often associated with so-called rheumatic conditions.

hyperproteosis (hi-pur-pro-te-o'sis). The condition due to an excessive amount of protein in the diet.

hyperpselaphesia (hi"purp-sel-ă-fe'sĭ-ah) [G. *hyper* over, + *psēlaphēsis*, touching.] Hyperaphia, tactile hyperesthesia, excessive development of the sense of touch.

hyperpsychosis (hi-per-si-ko'sis) [G. *hyper*, over, + *psychōsis*, mental activity.] Hypernoia.

hyperpyremia (hi"pur-pi-re'mĭ-ah) [G. *hyper*, over, + *pyreia*, fuel, + *haima*, blood.] The presence in the blood of an excess of heat-producing and energy-producing material derived from the fats and carbohydrates of the food.

hyperpyretic (hi-pur-pi-ret'ik) [G. *hyper*, over, + *pyretos*, fever.] Having a very high temperature, suffering from excessive fever.

hyperpyrex'ia [G. *hyper*, over, + *pyrexis*, feverishness.] Extremely high fever.

hyperpyrex'ial. Relating to hyperpyrexia, hyperpyretic.

hyperreflexia (hi"pur-re-fleks'-ĭ-ah) [G. *hyper*, above, + *reflex*.] A condition in which the various reflexes are exaggerated.

hyperres'onance. An extreme degree of resonance.

hypersecre'tion [G. *hyper*, overmuch, + L. *secernere*, to separate] Supersecretion.

hypersensitiveness (hi-pur-sen'sĭ-tiv-nes). Abnormal sensitiveness or sensitivity; a condition in which the response to a stimulus is unusually prompt or excessive in degree, or one in which there is little power of resistance to the pathogenic action of microorganic or other poisons.

hyperskeocytosis (hi"per-ske"o-si-to'sis) [G. *hyper*, above, + *skaios*, left, + *kytos*, cell, + *-ōsis*.] Hyperneocytosis.

hypersom'nia [G. *hyper*, over, + L. *somnus*, sleep.] A condition, probably toxic, in which one sleeps for an excessively long time, but is normal in the intervals; it is distinguished from somnolence in which one is always inclined to sleep.

hypersphyxia (hi-pur-sfik'sĭ-ah) [G. *hyper*, over, + *sphyxis*, pulse.] A condition of high blood pressure and increased circulatory activity.

hypersplenism (hi"pur-sple'nizm) [G. *hyper*, over, + *splēn*, spleen.] A condition in which the hemolytic action of the spleen is greatly increased.

hyperstereoroentgenography (hi''pur-ster-e-o-rōntgen-og'ră-fĭ). Hyperstereoskiagraphy.

hyperstereoskiagraphy (hi"pur-ster-e-o-ski-ag'ră-fĭ). Stereoskiagraphy with the two positions from which the rays are projected rather widely separated.

hypersthe'nia [G. *hyper*, overmuch, + *sthenos*, strength.] Excessive tension or strength.

hypersthenuria (hi"pur-sthen-u'rĭ-ah) [G. *hyper*, over, + *sthenos*, strength, + *ouron*, urine.] A dilute condition of the urine, with consequently an elevation of the freezing point.

hypersusceptibility (hi"pur-sus-sep"ti-bil'ĭ-tĭ) [G. *hyper*, over, + L. *suscipere*, to take, + *habilis*, apt, fit.] 1 Extreme vulnerability to infection. 2. Anaphylaxis.

hypersystole (hi-pur-sis'to-le) [G. *hyper*, overmuch] Abnormal force or duration of the cardiac systole.

hypersystolic (hi"pur-sis-tol'ik). 1. Relating to or marked by hypersystole. 2. One whose heart contracts with undue force.

hypertarachia (hi"pur-tă-rak'ĭ-ah) [G. *hyper*, over, + *tarachē*, disorder, confusion.] Exaggerated irritability of the nervous system, regarded as the underlying cause of tetanus.

hypertelorism (hi-per-tel'or-izm) [G. *hyper*, over, + *tēle*, far away, + *orizō*, I separate.] A condition of abnormal distance between two parts, referring especially to unusual width between the eye-sockets.

hyperten'sion [G. *hyper*, over, + L. *tendere*, to stretch.] Supertension. Incorrectly used as a synonym of high blood pressure, or hyperpiesis.

hyperten'sive. Marked by an increased blood-pressure. According to the classification of Huchard, the *h. diseases* are the noninfectious diseases, in which the blood-pressure is increased.

hyperthelesia (hi-pur-thel-e'zĭ-ah) [G. *hyper*, above, + *thelēsis*, will.] Excessive wilfulness; hysteria.

hyperthe'li [G. *hyper*, above, excessive, + *thēlē*, nipple.] The presence of supernumerary nipples, the number of breasts being two only.

hyperthermalgesia (hi-pur-thur"mal-je'zĭ-ah) [*hyper*, over, + *thermē*, heat, + *algos*, pain.] Extreme sensitiveness to heat, a slight degree causing pain.

hyperther'mia [G. *hyper*, over, + *thermē*, heat.] Hyperpyrexia; unusually high fever.

hyperthermoesthesia, hyperthermoæsthesia (hi-pur-thur'mo-es-the'zĭ-ah) [G. *hyper*, over, + *thermē*, heat, + *aisthēsis*, feeling.] Extreme sensitiveness to heat.

hyperthymia (hi-pur-thi'mĭ-ah) [G. *hyper*, above, + *-thymia*.] Excessive emotivity.

hyperthymism (hi-pur-thi'mizm). Charged with an excess of secretion of the thymus gland, noting a supposed condition of the blood in status lymphaticus.

hyperthymization (hi-pur-thi-mi-za'shun). Hyperthymism.

hyperthyrea, hyperthyreoidea (hi-pur-thi're-ah, hi-per-thi-re-o-id'e-ah) [G. *hyper*, over, *thyreoeides*, thyroid.] A condition in which there is excessive secretion of the thyroid gland, as in exophthalmic goiter.

hyperthyreo'sis, hyperthyroida'tion. Hyperthyrea.

hyperthy'roidism. Symptoms produced by excessive activity of the thyroid gland or by an overdose of thyroid extract.

hyperto'nia [G. *hyper*, over, + *tonos*, tension] Extreme tension of the muscles or arteries. **h. polycythæ'mica,** a form of polycythemia without marked splenomegaly, but with increased blood-pressure.

hyperton'ic [G. *hyper*, over, + *tonos*, tension.] Having a greater degree of tension, noting that one of two solutions which possesses the greater osmotic pressure. **h. salt solu'tion, h. sea-water,** a solution of sodium chloride or sea-water of such strength as to have a greater osmotic pressure than the blood.

hypertonicity (hi-pur-to-nis'ĭ-tĭ). Hypertonia.

hypertox'ic [G. *hyper*, overmuch.] Very poisonous.

hypertoxicity (hi"per-toks-is'ĭ-tĭ). The quality of being extremely poisonous.

hypertrichiasis (hi-pur-trĭ-ki'ă-sis) [G. *hyper*, over, + *thrix* (*trich-*), hair.] Hypertrichosis.

hypertrichosis (hi-pur-tri-ko'sis) [G. *hyper*, overmuch, + *trichōsis*, being hairy.] A growth of hair in excess of that normal for the situation, as on the face in women or the back in men or women.

hypertrophia (hi-pur-trof'ĭ-ah). Hypertrophy.

hypertroph'ic. Relating to or characterized by hypertrophy.

hyper'trophy [G. *hyper*, above, + *trophē*, nourishment.] Overgrowth; general increase in bulk of a part or organ, not due to tumor formation. By some restricted to denote greater bulk through increase in size, but not in number, of the individual tissue elements; by others employed to denote an increase in size in order to meet a demand for increased functional activity. See *hyperplasia*. **adap'tive h.,** thickening of the walls of a hollow organ, like the urinary bladder, when there is obstruction to outflow. **compen'satory h.,** increase in size of an organ or part of an organ or tissue, when called upon to do the work of a disabled or destroyed synergist. **compen'satory h. of the heart,** thickening of the walls of the heart in cases of valvular disease, either obstruction or insufficiency. **complemen'tary h.,** increase in size or expansion of part of an organ or tissue to fill the space left by the destruction of another portion of the same organ or tissue. **concen'tric h.,** thickening of the walls of the heart or any cavity with apparent diminution of the capacity of the cavity. **excen'tric h.,** thickening of the wall of the heart or other cavity, with dilatation. **false h.,** pseudohypertrophy, increase in bulk of a part, as of a muscle, due to overgrowth of the fibrous stroma and not of the tissue proper. **func'tional h.,** physiological h. **numer'ical h.,** h. of a tissue with increase in the number, as well as in the size, of its elements, hyperplasia. **physiolog'ical h.,** temporary increase in size of an organ or part to provide for a natural increase of function such as occurs in the walls of the uterus and in the mamma during pregnancy. **pseudomus'cular h.,** pseudohypertrophic paralysis.* **quan'titative h.,** hyperplasia. **simple h.,** numerical h. **sim'ulated h.,** increased size of a part due to continued growth unrestrained by attrition, as is seen in the case of the teeth of certain animals when the opposing teeth have been destroyed. **true h.,** an increase in size involving all the different tissues composing the part. **vica'rious h.,** h. of an organ in case of failure of another organ of different order though apparently allied function; enlargement of the pituitary gland, after destruction of the thyroid, is an example.

hypertro'pia [G. *hyper*, above, + *tropē*, turn.] Vertical squint, with upward deviation of the visual axis of an eye.

hypervaccina'tion. Repeated inoculation of a person or animal already immunized; done in the case of an animal in order to obtain a potent antitoxin.

hypervas'cular [G. *hyper*, above, + L. *vasculum*, vessel.] Abnormally vascular, containing an excessive number of blood-vessels.

hypervole'mia [G. *hyper*, over, + L. *volumen*, volume, + G. *haima*, blood.] Plethora (1).

hypesthesia, hypæsthesia (hi-pes-the'zĭ-ah) [G. *hypo*, under, + *aisthēsis*, feeling.] Diminished sensibility.

hy'pha [G. *hyphē*, a web.] One of the filaments composing the substance of a fungus.

hyphedonia (hip-he-do'nĭ-ŭ) [G. *hypo*, under, + *hēdonē*, pleasure.] An habitually slight degree of pleasure caused by occurrences that should normally give great pleasure.

hyphe'mia, hyphæ'mia [G. *hypo*, below + *haima*, blood.] 1. Hemorrhage into the anterior chamber of the eye. 2. Anemia, oligemia. **intertrop'ical** or **trop'ical h.**, uncinariasis.

hyphidrosis (hip-hi-dro'sis) [G. *hypo*, under, + *hidrōsis*, sweating.] Diminished perspiration.

Hyphomycetes (hi-fo-mi-se'tēz) [G. *hyphē*, web, + *mykēs*, fungus.] Filamentous fungi composed of branched or unbranched threads, moulds.

hyphomyce'tic. Relating to, or caused by, the presence of filamentous fungi, or *Hyphomycetes*.

hypino'sis [G. *hypo*, under, + *is(in-)*, fiber.] Diminished coagulability of the blood, its fibrin content being reduced below the physiological mean of 2.2 per cent.

hypinot'ic. Marked by hypinosis.

hypnacetin (hip-nas'et-in). Hypnoacetin.

hypnagogic (hip-nă-goj'ik) [G. *hypnos*, sleep, + *agōgos*, leading.] 1. Noting a transitional state, related to the hypnoidal, preceding the oncome of sleep; noting also various delusions which may manifest themselves at that time. 2. Inducing sleep, hypnotic.

hyp'nal. Monochlorantipyrine, chloral-antipyrine, a compound of chloral and antipyrine; sedative and hypnotic, employed in the hacking cough of phthisis in doses of gr. 10–15 (0.6–1.0).

hypnal'gia [G. *hypnos*, sleep, + *algos*, pain.] Dreampain, pain occurring during sleep.

hypnapagogic (hip-năp-ă-goj'ik) [G. *hypnos*, sleep, + *apo*, from, + *agōgos*, leading.] 1. Noting a state similar to the hypnagogic, through which the mind passes in coming out of sleep; noting also certain delusions experienced at such time. 2. Causing wakefulness, preventing sleep.

hypnesthe'sia, hypnæsthe'sia [G. *hypnos*, sleep, + *ai thēsis*, sensation.] Drowsiness.

hyp'nic [G. *hypnikos*, relating to sleep.] 1. Relating to sleep. 2. Causing sleep, somnifacient, somniferous.

hypnoacetin (hip-no-as'et-in). Acetophenonacetylpara-amidophenol ester; hypnotic in doses of gr. 2–4 (0.13–0.25).

hyp'nocyst [G. *hypnos*, sleep, + *kystis*, bladder (cyst).] A quiescent or "sleeping" cyst; an encysted protozoon the reproductive activity of which is in abeyance.

hyp'nody [G. *hypnōdēs*, of a sleepy nature.] A state observed in insects and their larvæ resembling the hibernation of certain vertebrates.

hypnogen'esis [G. *hypnos*, sleep, + *genesis*, production.] The induction of sleep or of the hypnotic state.

hypnogen'ic. Relating to hypogenesis.

hypnogenous (hip-noj'en-us) [G. *hypnos*, sleep, + *gennaō*, I produce.] Causing sleep or the hypnotic state.

hypnoidal (hip-noy'dal) [G. *hypnos*, sleep, + *eidos*, resemblance.] Resembling sleep, noting a mental condition intermediate between sleeping and waking, the subwaking state.

hypnoidiza'tion. Induction of the hypnoidal state.

hyp'nolepsy [G. *hypnos*, sleep, + *lēpsis*, a seizing.] Uncontrollable sleepiness; narcolepsy.

hypnol'ogist. 1. A student of hypnology. 2. Hypnotist.

hypnol'ogy [G. *hypnos*, sleep, + *-logia*.] The branch of scientific inquiry regarding sleep and its phenomena

hyp'none. Acetphenone.

hypnopom'pic [G. *hypnos*, sleep, + *pompē*, procession.] Noting the persistence of dreams during the hypnagogic state.

hypnopyrine (hip-no-pi'rēn). A synthetic antipyretic, analgesic, and hypnotic, obtained by the action of chlorine on quinine: dose, gr. 2–4 (0.13–0.25).

hypno'sis [G. *hypnos*, sleep.] 1. Somnus, the state of normal sleep. 2. Hypnotism. 3. Sleeping-sickness.

hypnother'apy [G. *hypnos*, sleep, + *therapeia*, treatment.] 1. The treatment of disease by inducing prolonged sleep 2 Treatment by means of hypnotism.

hypnot'ic [G. *hypnōtikos*, causing one to sleep.] 1. Causing sleep. 2. A remedy having this property. 3. Relating to hypnotism. 4. One who is under the influence of hypnotism, or who is readily hypnotized. **h. state**, hypnotism.

hypnotism (hip'no-tizm) [G. *hypnos*, sleep.] Braidism, mesmerism, trance; an induced condition resembling somnambulism, in which the subject is seemingly asleep yet strongly under the influence of suggestion; the subject's attention is intensely concentrated upon the suggested idea, but he is oblivious to all else. **lethar'gic h.**, trance-coma, the deep sleep following major h. **ma'jor h.**, a state of extreme suggestibility in h. in which the subject is insensible to all outside impressions except the commands or suggestions of the operator. **mi'nor h.**, an induced state resembling normal sleep in which, however, the subject is obedient to suggestion though not to the extent of catalepsy or somnambulism.

hyp'notist. One who practices hypnotism.

hypnotiza'tion. The induction of the hypnotic state.

hyp'notize. To bring one into the hypnotic state.

hypo- [G. *hypo*, under] A prefix, equivalent to *sub-*, denoting (1) a location beneath something else; (2) a diminution or deficiency; (3) the lowest, or weakest in oxygen, of a series of chemical compounds.

hy'po. 1. A hypochondriac. 2. An abbreviation of sodium hyposulphite, used as a fixative in photography.

hypoacidity (hi-po-as-id'ĭ-tĭ) [G. *hypo*, under, + L. *cidus*, acid.] Subacidity.

hypoactiv'ity. Lessened activity.

hypoadrenalinemia (hi-po-ad-ren"al-in-e'mĭ-ah) [G. *hypo*, below, + *adrenal*, secretion + G. *haima*, blood.] Hypoadrenia, a condition in which the adrenal secretion is present in unduly small proportion in the blood.

hypoadre'nia [G. *hypo*, under, + *adrenal*, secretion.] Adrenal insufficiency, especially a form occurring late in the course of a febrile disease as a result of exhausting secretory activity. See also *Addison's disease*.

hypoalimentation (hi"po-al-i-men-ta'shun) [G. *hypo*, under, + *alimentation*.] Subalimentation, a condition of insufficient nourishment.

hypoazoturia (hi-po-az-o-tu'rĭ-ah) [G. *hypo*, under, + Fr. *azote*, nitrogen, + G. *ouron*, urine.] A deficient excretion of urea in the urine.

hypobaropathy (hi"po-bar-op'ă-thĭ) [G. *hypo*, under, + *baros*, weight, + *pathos*, suffering.] Aviators' sickness, mountain sickness; the syndrome caused by greatly diminished air-pressure.

hy'poblast [G. *hypo*, under, + *blastos*, germ.] The inner layer of cells in the embryo, forming the endoderm; from it is derived the epithelium of the respiratory and alimentary systems.

hypoblas'tic. Relating to or derived from the hypoblast

hypobro'mite. A salt of hypobromous acid.

hypobro'mous acid. An acid, HBrO, the aqueous solution of which possesses oxidizing and bleaching properties.

hypobu'lia [G. *hypo*, under, + *boulē*, will.] Deficient will-power.

hypocalcemia, hypocalcæmia(hi-po-kal-se'mĭ-ŭ) [G. *hypo*, under, + *calcium*, + G. *haima*, blood.] A deficiency of calcium in the blood.

hypocapnia (hi-po-kap'nĭ-ah) [G. *hypo*, under, + *kapnos*, smoke.] A diminution in the amount of carbon dioxide in the blood; a slight degree of acapnia.

hypoce'lom. Hypocœlom.

hypochlorhydria (hi"po-klor-hid'rĭ-ah) [G. *hypo*, below, + *chlorhydric* (acid).] The presence of an abnormally small amount of hydrochloric acid in the stomach, below 0.14 per cent.

hypochlo'rite. A salt of hypochlorous acid.

hypochlo'riza'tion [G. *hypo*, under.] Treatment of Bright's disease and other disorders by a reduction in the amount of sodium chloride ingested.

hypochlo'rous acid. An acid, HClO, having oxidizing and bleaching properties.

hypochloru'ria [G. *hypo*, under, + E. *chloride*, + G. *ouron*, urine.] A deficient excretion of chlorides in the urine.

hypocholestere'mia, hypocholesterine'mia, hypocholesterole'mia. The presence of a deficient amount of cholesterol in the blood.

hypochondria (hi-po-kon"drĭ-ah). Hypochondriasis.

hypochondriac (hi-po-kon'drĭ-ak) [see *hypochondrium*.] 1. Hypochondriacal. 2. A victim of hypochondriasis. 3. Beneath the ribs, relating to the hypochondrium. **h. region,** the hypochondrium.

hypochondriacal (hi-po-kon-drĭ'ă-kal). Relating to, or suffering from, hypochondriasis.

hypochondriasis (hi-po-kon-drĭ'a-sis) [G. *hypochondrion*, hypochondrium, because the imaginary disease is often referred to the liver.] A morbid concern about the health and exaggerated attention to any unusual bodily or mental sensations; an unfounded belief that one is suffering from some disease.

hypochondrium (hi-po-kon'drĭ-um) [G. *hypo*, under, + *chondros*, cartilage.] The upper lateral region of the abdomen, beneath the floating ribs on either side. See cut under *abdominal*.

hypochor'dal [G. *hypo*, beneath, + *chordē*, cord.] On the ventral side of the spinal cord.

hypochromatic (hi-po-kro-mat'ik) [G. *hypo*, under, + *chrōma*, color.] Containing a small amount of pigment, or less than the normal amount for the individual tissue. Specifically noting mitoses which contain a smaller number of chromosomes than normal. **h. cell,** a cell resulting from asymmetrical mitosis, the nucleus of which contains too few chromosomes.

hypochromatism (hi-po-kro'mă-tizm). The condition of being hypochromatic, hypochromia.

hypochromatosis (hi-po-kro-mă-to'sis). Nuclear solution, chromatolysis; the disappearance of chromatin, or of the nucleus, in a cell.

hypochromemia (hi-po-kro-me'mĭ-ah) [G. *hypo*, under, + *chrōma*, color, + *haima*, blood.] Anemia with a color index below unity.

hypochromia (hi-po-kro'mĭ-ah) [G. *hypo*, under, + *chrōma*, color.] Hypochromatism.

hypochrosis (hi-po-kro'sis) [G. *hypo*, under, + *chrōsis*, a tinting.] Paleness of the blood due to low hemoglobin percentage.

hypochylia (hi-po ki'lĭ-ah) [G. *hypo*, under, + *chylos*, juice.] Deficiency of the gastric juice

hypocine'sia [G. *hypo*, under, + *kinēsis*, movement.] Diminished power of movement, paresis.

hy'pocist, hypocis'tis. The inspissated juice of *Cytinus hypocistis*, a plant of Southern Europe; employed as an astringent in dysentery and diarrhea, and also as a styptic.

hypocœ'lom [G. *hypo*, under, + *koilos*, hollow.] The ventral portion of the cœlom, or body cavity, of the embryo.

hypocolasia (hi-po-ko-la'zĭ-ŭ) [G. *hypo*, under, + *kolasis*, checking.] A nervous affection characterized by early fatigue or other functional weakness of the inhibiting mechanism.

hypocone (hi'po-kōn) [G. *hypo*, beneath, + *kōnos*, cone.] The distolingual cusp of an upper molar tooth.

hypoconid (hi"po-kon'id). The distobuccal cusp of a lower molar tooth.

hypoconule (hi"po-kon'ūl) [G. *hypo*, below, + L. dim. of *conus*, cone.] The distal, fifth, cusp of an upper molar tooth.

hypoconulid (hi"po-kon'u-lid) [G. *hypo*, below, + L. dim. of *conus*, cone.] The distal, fifth, cusp of a lower molar tooth.

hypocotyl (hi'po-kot-il). In botany, the portion of the stem of an embryo below the cotyledons.

hypocotyled'onary hypocotyled'onous. In botany, below the cotyledons in an embryo.

hypocrinism (hi-po-kri'nizm) [G. *hypo*, under, + *krinō*, I separate, secrete.] A condition resulting from a deficient secretion of any of the glands, especially of the endocrine glands.

hypocystot'omy [G. *hypo*, under, + *kystis*, bladder + *tomē*, incision.] Perineal cystotomy.

hypocyto'sis [G. *hypo*, under, + *kytos*, cell.] Cytopenia, oligocythemia, poverty of the blood in cellular elements.

hypoderm (hi'po-durm) [G. *hypo*, under, + *derma*, skin.] The subcutaneous connective tissue.

Hypoder'ma bo'vis [G. *hypo*, under, + *derma*, skin, L. *bous*(*bovis*), ox.] Ox-bot, heel-fly, a fly which oviposits in the hair above the hoof in cattle.

hy"podermat'ic [G. *hypo*, under, + *derma*(*dermat-*) skin.] Hypodermic.

hypodermatoclysis (hi-po-dur-mă-tok'li-sis). Hypodermoclysis.

hypodermat'omy [G. *hypo*, under, + *derma*, skin, + *tomē*, incision.] Subcutaneous division of a tendon or other structure.

hypodermic (hi-po-dur'mik) [G. *hypo*, under, + *derma*, skin.] 1. Subcutaneous, beneath the skin 2. (*a*) Hypodermic injection; (*b*) hypodermic syringe. **h. infu'sion,** hypodermoclysis. **h. injec'tion,** the administration of a remedy in liquid form by injection into the subcutaneous connective tissues. **h. syr'inge,** a small syringe, armed with a hollow needle in place of a nozzle, for use in giving remedies by the subcutaneous method.

hypodermoclysis (hi"po-dur-mok'li-sis) [G. *hypo* under + *derma*, skin, + *klysis*, a washing out. The subcutaneous injection of a large quantity of saline solution.

hypoendocrinism (hi"po-en-dok'rĭ-nizm) [G. *hypo* under, + *endon*, within, + *krinō*, I separate.] Insufficiency of internal secretion in one or more glands.

hypoendocrisia (hi"po-en-do-kriz'ĭ-ah). Hypoendocrinism.

hypoeosinophilia (hi-po-e"o-sin-o-fil'ĭ-ah). A diminished number of eosinophile leucocytes in the blood.

hypoepinephria (hi-po-ep-ĭ-nef'rĭ-ah) [G. *hypo* under, + *epinephros*, adrenal body.] Adrena

inadequacy, a deficient function of the adrenal bodies, and the clinical symptoms caused thereby.

hypoequilib'rium (hi-po-e'kwĭ-lib-rĭ-um) [G. *hypo*, below, + *æquus*, equal, + *libra*, scales.] Absence of a tendency to vertigo after long continued rotary movements.

hypoesophoria (hi-po-es-o-fo'rĭ-ah). Combined downward and inward deviation of the eyeball.

hypoexophoria (hi-po-eks-o-fo'rĭ-ah). Combined outward and downward deviation of the eyeball.

hypogas'tric. Relating to the hypogastrium. **h. artery,** see under *arteria.*

hypogas'trium [G. *hypo*, under, + *gastĕr*, belly.] The lower middle region of the abdomen; see cut under *abdominal.*

hypogen'esis [G. *hypo*, under, + *genesis*, production.] Cessation of development, ateliosis. **polar h.,** cessation of development at one or the other extremity of the embryo, resulting in cyclopia (at the cephalic extremity) or sirenomelia (podalic extremity).

hypogenitalism (hi-po-jen'ĭ-tal-izm) [G. *hypo*, under.] The complex of symptoms due to partial loss of the internal secretion of the ovaries or testicles; the eunuchoid state.

hypogenous (hi-poj'en-us) [G. *hypo*, under, + *-genēs.*] In botany: 1. Noting a flower the other parts of which are inserted on the torus below the gynecium. 2. Noting fungi growing on the under surface of a leaf.

hypogeusia (hi-po-ju'sĭ-ah) [G. *hypo*, under, + *geusis*, taste.] A blunting of the sense of taste.

hypoglobu'lia [G *hypo*, under, + L. *globulus*, globule.] Hypocytosis.

hypoglos'sal [G. *hypo*, beneath, + *glōssa*, tongue.] Sublingual, beneath the tongue. **h. nerve,** the twelfth (formerly the ninth) cranial nerve; see under *nervus.*

hypoglos'sis. Hypoglottis.

hypoglos'sus. See under *nervus*

hypoglott'is [G. *hypo*, under, + *glōssa*, tongue.] 1 The under surface of the tongue. 2. Ranula.

hypoglycemia, hypoglycæmia (hi-po-gli-se'mĭ-ŭ). A reduced amount of sugar in the blood.

hypoglycogenolysis (hi-po-gli-ko-jen-ol'i-sis). Deficient glycogenolysis.

hypog'nathous [G. *hypo*, under, + *gnathos*, jaw.] Having a projecting lower jaw, or mandible.

hypog'nathus. A twin monster in which a rudimentary parasite is attached to the mandible of the autosite.

hypogonadia (hi"po-go-nad'ĭ-ŭ). Hypogonadism.

hypogonadism (hi"po-go'nad-izm) [G. *hypo*, under.] Deficient internal secretion of the gonads.

hypogranulocytosis (hi-po-gran-u-lo-si-to'sis). Granulocytopenia.

hypohe'mia, hypohæ'mia [G. *hypo*, under, + *haima*, blood.] Anemia.

hypohepatia (hi-po-he-pā'tĭ-ŭ) [G. *hypo*, under, + *hēpar*, liver.] Underfunctioning of the liver.

hypohidrosis (hi"po-hi-dro'sis) [G. *hypo*, under, + *hidrōsis*, sweating.] Diminished perspiration

hypohydrochlo'ria. Hypochlorhydria.

hypohylo'ma. A tumor due to hyperplasia of tissue derived from the embryonic pulp of hypoblastic origin.

hypohypnot'ic [G. *hypo*, under, + *hypnos*, sleep.] Noting incomplete or light slumber.

hypoidrosis (hi"po-i-dro'sis). Hypohidrosis.

hypoinsulinism (hi-po-in'su-lin-izm) [G. *hypo*, below.] A condition resulting from a defective secretion of insuline by the islands of Langerhans in the pancreas; the symptoms are those of diabetes.

hypoisoton'ic [G. *hypo*, under, + *isos*, equal, + *tonos*, tension.] Hypotonic.

hypokine'sia. Hypocinesia.

hypolepido'ma [G. *hypo*, beneath, + *lepis*(*lepid-*), rind, + *-ōma.*] A tumor due to hyperplasia of one of the tissues derived from the hypoblast. **atyp'ical h.,** carcinoma, papilloma, or adenoma of the digestive or respiratory tract.

hypoleucemia, hypoleucæmia (hi"po-lu-se'mĭ-ah) [G. *hypo*,under, + *leukos*, white, + *haima*, blood.] 1 Hypoleukemia, hypoleucocytosis.* 2. A condition between leucemia and aleucemia in which the outpour of abnormal cells into the circulation is less than their production.

hypoleucocytosis (hi-po-lu"ko-si-to'sis) [G. *hypo*, under, + *leukos*, white, + *kytos*, cell, + *-ōsis.*] Leucopenia, hypoleucemia, hypoleukemia; a decrease in the number of leucocytes in the circulating blood.

hypoleuke'mia, hypoleukæ'mia. Hypoleucemia, hypoleucocytosis.*

hypolipo'sis [G. *hypo*, under, + *lipos*, fat.] The presence of an abnormally small amount of fat in the tissues.

hypoloid (hi'po-loyd). Trade name of a soluble tablet containing a drug for hypodermic administration.

hypolymphemia [G. *hypo*, under, + *lymph* (*cells*) + G. *haima*, blood.] Sublymphemia.

hypoma'nia. A mild degree of mania

hypomas'tia [G. *hypo*, under, + *mastos*, breast.] Atrophy or congenital smallness of the breasts.

hypoma'zia [G. *hypo*, under, + *mazos*, breast.] Hypomastia

hypomelancholia (hi"po mel-an-ko'lĭ-ah). A mild degree of mental depression.

hypomenorrhea (hi-po-men-or-re'ŭ). Deficient menstruation.

hypomicron, hypomicrone (hi-po-mi'kron or krōn) [G. *hypo*, under, + *microne.*] Submicrone, a colloid particle recognizable in the ultra-microscope, but not under the ordinary microscope; distinguished from microne and amicrone.

hypomne'sia [G. *hypo*, under, + *mnēmē*, memory.] Impaired memory.

hypomorph [G. *hypo*, under, + *morphē*, form.] A person whose standing height is short in proportion to the sitting height, owing to shortness of limb. See *hypermorph* and *mesomorph.*

hypomotil'ity [G. *hypo*, under, + L. *motus*, movement.] Hypocinesia.

hypomyotonia (hi-po-mi-o-to'nĭ-ah) [G. *hypo*, under, + *mys*(*myo-*), muscle, + *tonos*, tension.] A condition of diminished muscular tonus.

hypomyxia (hi-po-mik'sĭ-ŭ) [G. *hypo*, under, + *myxa*, mucus.] A condition in which the secretion of mucus is diminished.

hyponanosoma (hi-po-nan-o-so'mah) [G. *hypo*, under, + *nanos*, dwarf, + *sōma*, body.] Extreme dwarfishness.

hy'ponasty [G. *hypo*, under + *nastos*, pressed close.] In botany, noting a condition of more vigorous growth on the under than on the upper surface, causing an upward curvature.

hyponea (hi-po-ne'ŭ). Hyponoia.

hyponeocytosis (hi"po-ne"o-si-to'sis) [G. *hypo*, under, + *neos*, new, + *kytos*, cell, + *-ōsis.*] Hyposkeocytosis, leucopenia with the presence of immature cells, *i.e.* with deviation* to the left.

hyponoia (hi-po-noi'yŭ) [G. *hypo*, under, + *noeō*, I think.] Hypopsychosis, deficient or sluggish mental activity or imagination.

hyponychial (hy-po-nik'ĭ-al) [G. *hypo*, beneath, + *onyx*(*onych*-), nail.] Beneath the (finger or toe) nail; subungual; relating to the hyponychium.

hyponychium [G. *hypo*, under, + *onyx*(*onych*-), nail.] Matrix unguis, nail-bed.

hypon'ychon [G. *hypo*, beneath, + *onyx*(*onych*-) nail.] A subungual ecchymosis.

hypoorthocytosis (hi"po-or"tho-si-to'sis) [G. *hypo*, under, + *orthos*, correct, + *kytos*, cell, + *-ōsis*.] Leucopenia, the relative percentages of the different forms remaining normal and no immature forms being present.

hypoovaria (hi"po-o-va'rĭ-ŭ). Hypovaria.

hypopancreatism (hi"po-pan'kre-ă-tizm) [G. *hypo*, under, + *pancreatism*.] A condition of diminished activity of the pancreas.

hypoparathyreosis (hi"po-par"ă-thi-re-o'sis). Hypoparathyroidism.

hypoparathyroidism (hi"po-par-ah-thi'roy-dizm). A condition due to diminution or absence of the secretion of the parathyroid glands, hypoparathyreosis.

hypopep'sia [G. *hypo*, under, + *pepsis*, digestion.] Impaired digestion, especially that due to a deficiency of pepsin.

hypopepsinia (hi-po-pep-sin'ĭ-ah) [G. *hypo*, under.] A deficiency of pepsin in the gastric juice.

hypophalangism (hi-po-fal-an'jizm) [G. *hypo*, under, + *phalanx*.] Congenital absence of one or more of the phalanges of a finger or toe.

hypoph'amin. The active principles of the secretion of the posterior lobe of the hypophysis cerebri. **al'pha h.**, oxytocin, the pituitary hormone which causes uterine contractions. **be'ta h.**, the blood pressure-raising post-pituitary hormone.

hypopharyngoscope (hi-po-far-ing'go-skōp). An apparatus devised for bringing the lower part of the pharynx, or hypopharynx, into view.

hypopharyngos'copy [*hypo*, under, + *pharynx* + *skopeō*, I examine.] Inspection of the hypopharynx.

hypophar'ynx [G. *hypo*, below, + *pharynx*.] That part of the pharynx which lies below the aperture of the larynx.

hypopho'nia [G. *hypo*, under, + *phōnē*, voice.] A speech defect due to incoordination of the muscles concerned in vocalization.

hypopho'ria [G. *hypo*, below, + *phora*, motion.] A tendency of the visual axis of one eye to sink below that of its normal fellow.

hypophos'phite. A salt of hypophosphorous acid.

hypophosphorous acid (hi"po-fos'for-us as'id). An acid, H_3PO_2, occurring in both solid and liquid form, salts of which are used to some extent in rickets and tuberculosis and also as a general tonic.

hypophrenia (hi-po-fre'nĭ-ah) [G. *hypo*, below, + *phrenia*.] A condition of subnormal mentality, feeblemindedness.

hypophrenic (hi-po-fren'ik). 1. Relating to hypophrenia, feebleminded. 2. A feebleminded person.

hypophrenosis (hi-po-fre-no'sis). A mental state belonging to the group of hypophrenia or feeblemindedness.

hypophyseal, hypophysial (hi-po-fiz'e-al). Relating to an hypophysis.

hypophysec'tomize. To remove the hypophysis cerebri.

hypophysectomy (hi-pŏ-fĭ-sek'to-mĭ) [*hypophysis* + G. *ektomē*, excision.] Surgical removal of the hypophysis cerebri

hypophyseoprivic (hi-po-fiz"e-o-priv'ik). Hypophyseoprivus.

hypophyseoprivus (hi-po-fiz"e-o-pre'vus) [*hypophysis* + L. *privus*, deprived of.] Noting the condition resulting from a deficiency in the internal secretion of the hypophysis cerebri, or dyspituitarism; hypophyseoprivic, hypophyseoprivous.

hypoph'ysin. Pituitrin.

hypophysis (hi-pof'i-sis) [G. an undergrowth.] 1 [BNA] Pituitary body, a small two-lobed body at the base of the brain lying in the pituitary fossa of the sphenoid bone. The smaller posterior lobe is developed from the brain to which it is attached by the infundibulum; it contains little or no brain substance but is composed chiefly of connective tissue and blood-vessels; it furnishes a secretion which stimulates contraction of unstriped muscular tissue, raises blood pressure, and is oxytocic. The larger anterior lobe is developed from the buccal cavity; it consists of tubules lined with epithelium and surrounded by a capillary network; it is a closed gland, resembling the thyroid, and furnishes an internal secretion which has to do with growth, hypersecretion causing gigantism or acromegaly and hyposecretion causing dystrophia* adiposogenitalis. 2. In botany, the cell in the undifferentiated embryo body of an angiosperm from which the primary root is developed. **h. sic'ca**, desiccated hypophysis, pituitarium (U.S.). **h. syn'drome**, dystrophia adiposogenitalis, adiposogenital syndrome; a great increase of adipose tissue, genital atrophy with loss of the sexual appetite, loss of hair, and symptoms of intracranial pressure, associated with a tumor of the hypophysis cerebri. **li'quor h.**, liquor pituitarii (U.S.). **pharyn'geal h.**, a mass of tissue resembling in structure the anterior lobe of the hypophysis cerebri, present in the wall of the pharynx.

hypophysoprivus) hi-pof"ĭ-so-pre'vus). Hypophyseoprivus.

hypopi'esis [G. *hypo*, under, + *piesis*, pressure.] Subnormal arterial tension.

hypopinealism (hi-po-pin'e-al-izm). Diminished secretory activity of the pineal gland.

hypopituitarism (hi-po-pit-u'ĭ-tar-izm) [G. *hypo*, under.] A condition due to diminished activity or loss of a part of the anterior lobe of the hypophysis cerebri, marked by the hypophysis syndrome, or dystrophia* adiposogenitalis.

hypopla'sia [G. *hypo*, under, + *plasis*, a moulding.] 1. Defective formation, incomplete development of a part. 2. Atrophy due to destruction of some of the elements and not merely to their general reduction in size.

hypoporosis (hi-po-po-ro'sis) [G. *hypo*, under, + *pōros*, callus, + *-ōsis*.] Deficient formation of callus after fracture of a bone.

hypoproteinemia (hi-po-pro-te-in-e'mĭ-ŭ) [G. *hypo*, under, + *protein* + *haima*, blood.] A decrease in the amount of protein in the blood plasma, occurring especially in cases of nephrosis, but also due to deficiency of protein in the diet.

hypopselaphesia (hi"pop-se-lă-fe'sĭ-ah) [G. *hypo*, under, + *psēlaphēsis*, touch.] Diminished tactile sensibility, tactile hypesthesia.

hypopsychosis (hi-po-si-ko'sis) [G. *hypo*, under, + *psychōsis*, mental activity.] Hyponoia.

hypo'pyon [G. *hypo*, beneath, + *pyon*, pus.] The presence of a pus-like fluid or pultaceous mass in the anterior chamber of the eye. **h. kerati'tis**, suppurative inflammation of the cornea complicated with hypopyon. **h. kerato-iri'tis**, suppura-

tive inflammation of the cornea and iris complicated with hypopyon.

hypo'pyum. Hypopyon.

hyporeflexia (hi"po-re-fleks'ĭ-ah) [G. *hypo*, under, + *reflex*.] A condition in which the reflexes are weakened.

hypos (hi'pōz). Hypochondriasis.

hyposar'ca [G. *hypo*, under, + *sarx*(*sark*-), flesh.] Extreme anasarca or dropsy of the subcutaneous connective tissue.

hyposcheotomy (hi-pos-ke-ot'o-mĭ) [G. *hypo*, under, + *oscheon*, scrotum, + *tomē*, incision.] Incision or puncture into a hydrocele at its most dependent point.

hyposcle'ral [G. *hypo*, beneath, + *sclera*.] Beneath the sclerotic coat of the eyeball.

hyposecre'tion. Diminished secretion.

hyposialadenitis (hi"po-si"al ad-en-i'(e')tis) [G. *hypo*, under, + *sialon*, saliva, + *adēn*, gland, + *-itis*.] Inflammation of the submaxillary salivary glands.

hyposkeocytosis (hi"po-ske"o-si-to'sis) [G. *hypo*, under, + *skaios*, left, + *kytos*, cell, + *-ōsis*.] Hyponeocytosis.

hyposmia (hi-poz'mĭ-ah) [G. *hypo*, under, + *osmē*, smell.] Hyposphresia, diminished sense of smell, olfactory hypesthesia.

hypospa'dia. Hypospadias.

hypospa'diac. 1. Relating to hypospadia. 2. A sufferer from hypospadia.

hypospadias (hi-po-spa'dĭ-as) [G. *hypospaō*, I draw away from under.] Hypospadia, a defect in the wall of the urethra so that the canal is open for a greater or lesser distance on the under surface of the penis; also a similar defect in the female urethra.

hyposphresia (hi-po-sfre'zĭ-ah) [G. *hypo*, under, + *osphrēsis*, smell.] Hyposmia.

hyposphyxia (hi-po-sfik'sĭ-ah) [G. *hypo*, under, + *sphyxis*, pulse] Abnormally low blood pressure with sluggishness of the circulation.

hypos'tasis [G. *hypo*, under, + *stasis*, a standing.] 1. A sediment; the matter rising to the surface, instead of sinking, is called *epistasis*. 2. Hypostatic congestion.

hypostat'ic. 1. Sedimentary; resulting from a dependent position. 2. In Mendelian heredity, denoting a character which is hidden by another superposed upon it, the two not being allelomorphic. **h. conges'tion,** stagnation of the blood in the capillaries or larger vessels due to gravitation; met with in the lungs of a person long in bed with an exhausting disease, and in the veins of the leg in those who stand much.

hyposthe'nia [G. *hypo*, under, + *sthenos*, strength] Weakness.

hyposthe'niant [G. *hypo*, below, + *sthenos*, strength] 1. Depressing the vital forces 2. An agent which reduces strength.

hyposthenuria (hi-pos-then-u'rĭ-ah) [G. *hypo*, under, + *sthenos*, strength, + *ouron*, urine.] Secretion of urine of low specific gravity, due to inability of the kidneys to concentrate the excretion; it occurs chiefly in chronic nephritis.

hypostyle (hi'po-stīl) [G. *hypo*, beneath, + *stylos*, a column.] A cusp between the hypocone and metacone of a molar tooth.

hypostyp'tic. Mildly styptic or astringent.

hyposul'phite. A salt of hyposulphurous or thiosulphuric acid.

hyposulphurous acid (hi-po-sul'fu-rus as'id). Thiosulphuric acid, an acid, $H_2S_2O_3$, forming hyposulphites with bases.

hyposystole (hi-po-sis'to-le) [G. *hypo*, under.] A weak or incomplete cardiac systole.

hyyotax'ia [G *hypo*, under + *taxis*, order.] A condition of weak or imperfect coordination.

hypoten'sive. Marked by low blood-pressure. According to the classification of Huchard, the *h. diseases* are the infectious diseases, in which, he holds, there is a fall of blood-pressure.

hypothal'amus [G. *hypo*, below, + *thalamos*, thalamus.] [BNA] Subthalamic region, divided into the pars mamillaris, comprising the corpus mamillare, and the pars optica, comprising the tuber cinereum, infundibulum, hypophysis (pituitary body), and the lamina cinerea.

hypothe'cium [G. *hypo*, under, + *thēkē*, box.] In botany, the subhymenial layer, or layer of hyphal tissue, in fungi, beneath the hymenium.

hypothelesia (hi-po-thel-e'zĭ-ah) [G. *hypo*, under, + *thelēsis*, will.] Weakness of will; hypochondriasis

hypoth'enar [G. *hypo*, under, + *thenar*, the palm] 1. The fleshy mass at the inner (little-finger) side of the palm. 2. Noting any structure in relation with this part. **h. em'inence, h. prom'inence,** hypothenar(1).

hypother'mal [G. *hypo*, under, + *thermos*, hot.] 1. Noting a subnormal bodily temperature, one below 98.6° F. (37° C.). 2. Tepid.

hypother'mia [G. *hypo*, under, + *thermē*, heat.] A body temperature below 98.6° F. (37° C.).

hypothesis (hi-poth'e-sis) [G. supposition, *hypo*, under, + *thesis*, a placing.] A supposition, a theory.

hypothymia (hi-po-thi'mĭ-ah) [G. *hypo*, below, + *-thymia*.] Depression of spirits, the "blues."

hypothyrea, hypothyreoidea, hypothyreosis (hi-po-thi're-ah, hi-po-thi-re-o-id'e-ah, hi-po-thi-re-o'sis) [G. *hypo*, under, + *thyreoeidēs*, thyroid.] 1 Diminished secretion of the thyroid gland, thyroid insufficiency. 2. A condition resulting from the lack of thyroid secretion, as myxedema.

hypothyroida'tion [G. *hypo*, under, + E. *thyroid*.] The induction of hypothyrea.

hypothyroidea, hypothy'roidism (hi-po-thi-ro-id'e-ah). Thyroid insufficiency, hypothyrea.

hypoto'nia [G. *hypo*, under, + *tonos*, tone.] 1. Reduced tension in any part, as in the eyeball. 2. Relaxation of the arteries. 3 A condition in which there is a diminution or loss of muscular tonicity, in consequence of which the muscles may be stretched beyond their normal limits.

hypoton'ic [G. *hypo*, under, + *tonos*, tension.] Having a lesser degree of tension noting that one of two solutions which possesses the lesser osmotic pressure. **h. salt solu'tion,** one having a lesser osmotic pressure than the blood.

hypoto'nus, hypot'ony. Hypotonia.

hypotoxicity (hi-po-toks-is'ĭ-tĭ). Reduced toxicity; the quality of being only slightly poisonous.

Hypotrichida (hi-po-trik'ĭ-dah) [G. *hypo*, below, + *thrix*(*trich*-), hair.] An order of *Ciliata* in which the cilia are confined to the under surface of a flattened cell and sometimes fuse to form membranelles and cirri.

hypotrichosis (hi-po-tri-ko'sis) [G. *hypo*, under, + *trichōsis*, hairiness.] Abnormally slight hairiness; a deficiency of hair on the head and body.

hypot'rophy [G. *hypo*, under, + *trophē*, nourishment.] A condition of progressive degeneration and loss of function of certain cells and tissues.

hypotro'pia [G. *hypo*, under, + *tropē*, turn.] Vertical squint, in which the axis of one eye deviates downward.

hypovaria (hi-po-va'rĭ-ă) [G. *hypo*, under, + L. *ovarium*, ovary.] Retarded puberty in girls owing to deficiency in the internal ovarian secretion.

hypovitaminosis (hi"po-vi-tam-ĭn-o'sis). A morbid state due to insufficiency or absence of some essential vitamin.

hypovolemia (hi-po-vo-le'mĭ-ŭ) [G. *hypo*, under, + L. *volumen*, volume, + G. *haima*, blood.] Oligohemia.

hypoxanthine (hi-pok-san'thin). Sarcine, a leucomaine, $C_5H_4N_4O$, present in the muscles and other tissues and formed during the decomposition of protein, occurring in one of the stages of the formation of urea and uric acid.

hypsibrachycephalic (hi-sĭ-brak"ĭ-sĕ-fal'ik) [G. *hypsi*, on high, + *brachys*, broad, + *kephalē*, head.] Having a high broad head, such as that of a Malay.

hypsicephalic (hip"si-sĕ-fal'ik) [G. *hypsi*, aloft, on high, + *kephalē*, head.] Having a high, peaked head. Noting a skull with a vertical index above 75. Similar to acrocephalic.*

hypsiceph'aly [G. *hypsi*, on high, + *kephalē*, head.] Condition in which the skull is elevated, having a cranial index of over 75.

hypsiconchous (hip-sĭ-kong'kus) [G. *hypsi*, on high, + *konchē*, shell.] Having a high orbit, with an orbital index above 85.

hyp'siloid [G. *hypsilon*, the Greek y or u, + *eidos*, resemblance.] Shaped like the Greek letter Υ or υ; Y-shaped, U-shaped, hypsiliform. **h. angle,** y-angle. **h. cartilage,** y-cartilage. **h. ligament,** ligamentum iliofemorale.

hypsistaphylia (hip"sĭ-stă-fil'ĭ-ah) [G. *hypsi*, on high, + *staphylē*, uvula.] A condition in which the palate is high and narrow.

hypsistenocephalic (hip-si-sten"o-sĕ-fal'ik) [G. *hypsi*, on high, + *stenos*, narrow, + *kephalē*, head.] Having a high, narrow head, such as that of an Abyssinian.

hypsocephaly. Hypsicephaly.

hyposodont (hip'so-dont) [G. *hypsi*, on high, + *odous* (*odont-*), tooth.] Having long teeth.

hyp'sophyll [G. *hypsi*, on high, + *phyllon*, leaf.] Bract.

hypurgia (hi-pur'jĭ-ah) [G. *hypourgia*, help, service.] Any of the minor factors modifying the course of a disease either for good or for ill, especially the former.

hy'rax [G. a mouse.] Hyraceum, the dried excrement of an animal, resembling a badger, of Africa and Syria; employed like musk.

hyr'gol. Trade name of colloidal mercury, hydrargyrum* colloidale.

Hyrtl's anastomo'sis or **loop** (hĕr'tl) [Joseph *Hyrtl*, Viennese anatomist, 1811–1894.] An anastomotic loop between the right and left hypoglossal nerves, lying between the geniohyoid and genio-glossus muscles or in the substance of the geniohyoid; it is found about once in ten times. **H.'s epitympan'ic recess',** aditus ad antrum. **H.'s rhinc'ter,** a band, generally incomplete, of circular muscular fibers in the rectum about 4 inches above the anus.

hyssop (his'up) [G. *hvss pos.*] The tops of *Hyssopus officinalis*, an herbaceous plant of Southern Europe, cultivated in America; an aromatic stimulant and diaphoretic, employed in dyspepsia, amenorrhea, muscular rheumatism, and senile bronchitis, in doses of ʒ1–2 (4.0–8.0) of a fluidextract.

hysteral'gia [G. *hystera*, uterus, + *algos*, pain.] Hysterodynia metralgia, metrodynia; neuralgic pain in the uterus.

hysterectomy (his-ter-ek'to-mĭ) [G. *hystera*, uterus, + *ektomē*, excision.] Removal of the uterus. **abdom'inal h.,** celiohysterectomy, laparohysterectomy, removal of the uterus through an incision in the abdominal wall. **paravag'inal h.,** removal of the uterus through a perineal incision involving only the lower two-thirds of the vaginal wall; Schuchardt's operation. **vag'inal h.,** colpohysterectomy, removal of the uterus through the vagina without incising the wall of the abdomen.

hystere'sis [G. *hysterēsis*, a coming too late.] Failure of either one of two related phenomena to keep pace with the other.

hystereurynter (his"ter-u-rin'ter). Metreurynter, an instrument, such as Barnes's bag, for dilating the os uteri.

hystereurysis (his"ter-u'rĭ-sis) [G. *hystera*, the womb, + *eurynō*, I dilate.] Dilatation of the os uteri.

hysteria (his-te'rĭ-ah) [G. *hystera*, womb, because formerly thought to be of uterine causation.] A chronic neurosis, or psychoneurosis, characterized by disorders of the will, perversion of the inhibitory powers of consciousness, and partial cessation or exaltation of the individual functions of the brain. It is marked by symptoms of the most varied character, from simple nervous instability and attacks of emotional excitement, with causeless crying or laughing, to convulsions, muscular contractures, vasomotor, trophic, and psychic disorders. **ma'jor h.,** form of h. in which there may be permanent paralysis, anesthesia, or contractures with well marked stigmata, and in which convulsive or violent emotional attacks may occur; hysteroepilepsy. **mi'nor h.,** a mild form of h. characterized chiefly by subjective pains, nervousness, undue sensitiveness, and sometimes attacks of emotional excitement, but without permanent paralysis or other stigmata.

hyste'riac. An hysterical person.

hyster'ic. 1. Hysterical. 2. An hysterical person.

hysterical (his-ter'ĭ-kal). Relating to or suffering from hysteria. **h. fe'ver, h. pyrex'ia,** see *fever*. **h. joint,** articular or arthral neuromimesis, a simulation of joint disease, with symptoms of pain, possibly swelling, and impairment of motion, of nervous origin not dependent upon actual lesion.

hyster'icism. A tendency or predisposition to hysteria.

hystericoneuralgic (his-ter"i-ko-nu-ral'jik). Relating to neuralgic pains of hysterical origin.

hyster'ics. An emotional explosion accompanied often by crying, laughing, and screaming.

hysteritis (his-ter-i'(e')tis). Metritis, inflammation of the uterus.

hystero- 1. [G. *hystera*, uterus.] A prefix denoting (1) the uterus, or (2) hysteria. 2. [G. *hysteros*, later.] A prefix denoting late or following.

hysterobubono'cele (his"ter-o-bu-bon'o-sēl) [G. *hystera*, uterus, + *boubōn*, groin, + *kēlē*, hernia.] An inguinal hernia containing the uterus.

hysterocat'alepsy. Major hysteria with cataleptic manifestations.

hysterocataphraxis (his"ter-o-kat-ah-frak'sis) [G. *hystera*, uterus, + *kataphrassō*, I cover with mail.] Supporting a displaced uterus by loops of wire passed through the abdominal wall and encircling the uterus.

hysterocele (his'ter-o-sēl) [G. *hystera*, uterus, + *kēlē* hernia.] Hernia of the uterus.

hysterocervicot'omy [G. *hystera*, uterus, + L. *cervix*, neck, + G. *tomē* incision.] Hysterotrachelotomy.

hysterocleisis (his"ter-o-kli'sis) [G. *hystera*, uterus, + *kleiō*, I close.] Operative occlusion of the uterus.

hysterocystocleisis (his"ter-o-sis"to-kli'sis) [G. *hystera*, uterus, + *kystis*, bladder, + *kleiō*, I shut in.]

Bozeman's* operation of fastening the cervix uteri in the wall of the bladder.

hys"terocys'topexy [G. *hystera*, uterus, + *kystis*, bladder, + *pēxis*, fixation.] Attachment of both uterus and bladder to the abdominal wall for the cure of prolapse.

hysterodynia (his"ter-o-din'i-ah) [G. *hystera*, uterus, + *odynē*, pain. Hysteralgia, uterine pain.

hysteroepilepsy (his"ter-o-ep'i-lep-sĭ). Major hysteria, a form of hysteria in which there are nervous explosions of a violent character. The attack begins usually with an aura, followed by epileptoid convulsions; these are succeeded by a stage of contortions in which the tonic and slowly clonic spasms embrace the entire body or one or more extremities; the next stage is one of emotional attitudes in which the patient gives dramatic expression to feelings of anger, disgust, surprise, joy, or other intense emotion; the final stage is one of delirium. The complete attack lasts from 5 or 10 minutes to half an hour.

hys"teroepilep"togen'ic, hysteroepileptogenous (his-"ter-o-ep-i-lep-toj'en-us). Causing hysteroepilepsy.

hysteroerotic (his"ter-o-e-rot'ik). Characterized by erotism of hysterical origin.

hysterofrenatory (his"ter-o-fren'a-to-rĭ). [See *hysterofrenic.*] Hysterofrenic.

hysterofrenic (his"ter-o-fren'ik) [*hysteria* + L. *frenare*, to curb.] Arresting an hysterical attack, noting certain areas pressure upon which has this effect.

hysterogenic, hysterogenous (his-ter-o-jen'ik, his-ter-oj'en-us) [*hysteria* + G. *gennaō*, I produce.] Causing hysteria. **h. a'reas, po nts, or zones,** various circumscribed areas of the skin, pressure upon which excites a paroxysm of major hysteria.

hys'teroid [*hysteria* + G. *eidos*, resemblance.] Resembling or simulating hysteria. **h. convul'sion,** major hysteria, hysteroepilepsy.

hysterolaparot'omy. Laparohysterotomy, celiohysterotomy.*

hys'terolith [G. *hystera*, uterus, + *lithos*, stone] Uterine calculus, a concretion within the uterus.

hysterol'ogy [G. *hystera*, uterus, + *-logia.*] The branch of medical science treating of the uterus in all its relations.

hysterolox'ia [G. *hystera*, uterus, + *loxos*, slanting.] Oblique version or flexion of the uterus.

hysteroma'nia [G. *hystera*, uterus, + *mania*, frenzy.] 1. Nymphomania,* metromania. 2. Hysterical mania

hysterom'eter [G. *hystera*, uterus, + *metron*, measure.] A graduated sound for measuring the depth of the uterine cavity.

hysteromyoma (his"ter-o-mi-o'mah) [G. *hystera*, uterus, + *mys(myo-)*, muscle, + *-ōma.*] A myoma of the uterus.

hysteromyomectomy (his"ter-o-mi-o-mek'to-mĭ) [*hysteromyoma* + G. *ektomē*, excision.] Operative removal of a uterine myoma.

hysteronar'colepsy. Narcolepsy of hysterical origin.

hysteroneurasthenia (his"ter-o-nu-ras-the'nĭ-ah). Neurasthenia in an hysterical subject.

hysteroneuro'sis. A neurosis caused by uterine disease.

hys"tero-o"ophorec'tomy [G *hystera* uterus, + *ōon*, ovum, + *phoros*, bearer, + *ektomē*, excision.] Hystero-oothecectomy.

hystero-o"othecec'tomy [G. *hystera*, uterus, + *ōothēke*, ovary, + *ektomē*, excision.] Surgical removal of the uterus and ovaries.

hysterop'athy [G. *hystera*, uterus, + *pathos*, suffering.] Any disease of the uterus.

hys'teropexy [G. *hystera*, uterus, + *pēxis*, fixation.] The fixation of a misplaced or abnormally movable uterus. **abdom'inal h.,** ventrofixation, laparohysteropexy, attachment of the uterus to the anterior abdominal wall. **vag'inal h.,** vaginofixation, colpohysteropexy, attachment of the uterus to the peritoneal covering of the vagina.

hysterophore (his'ter-o-for) [G. *hystera*, uterus, + *phoros*, bearing.] A pessary or other support for a prolapsed or displaced uterus.

hystero'pia [G. *ōps(ōp-)*, eye.] An hysterical visual defect.

hysteropsychosis (his"ter-o-si-ko'sis). 1. A mental disorder caused by uterine disease. 2. A psychosis of hysterical nature.

hysteropto'sia, hysteropto'sis [G. *hystera*, uterus, + *ptōsis*, a falling.] Metroptosia, prolapse of the uterus, falling of the womb; a downward displacement of the uterus.

hysteror'rhaphy [G. *hystera*, womb, + *rhaphē*, suture.] 1. Hysteropexy. 2. Repair of a lacerated cervix uteri.

hys"terorrhex'is [G. *hystera*, uterus, + *rhēxis*, rupture.] Rupture of the pregnant uterus.

hys"terosal'pingo-o"ophorec'tomy [G. *hystera*, uterus, + *salpinx*, trumpet, + *ōon*, ovum, + *phoros*, bearing, + *ektomē*, excision.] Hysterosalpingo-oothecectomy.

hys"terosal"pingo-o"othecec'tomy [G. *hystera*, uterus, + *salpinx*, trumpet, + *ōothēkē*, ovary, + *ektomē*, excision.] Surgical removal of the uterus, oviduct, and ovaries.

hysterosalpingostomy (his"ter-o-sal-ping-gos'to-mĭ) [G. *hystera*, uterus, + *salpinx*, trumpet, + *stoma*, mouth.] The operative establishment of a communication between the uterus and the pervious portion of a partially occluded Fallopian tube.

hysteroscope (his'ter-o-skōp) [G. *hystera*, uterus, + *skopeō*, I view.] A modified speculum or cystoscope for examination of the cavity of the uterus.

hys"terostomat'omy, hys"terostomatot'omy [G. *hystera*, uterus, + *stoma*, mouth, + *tomē*, incision.] Incision of the os or cervix uteri, hysterotomy.

hysterosyph'ilis. Hysteria seemingly of syphilitic causation.

hysterosystole (his-ter-o-sis'to-lĭ) [G. *hysteros*, following, after, + *systolē*, a contracting.] A delayed contraction of the heart coming after its normal time; opposed to *proiosystole* or so-called *extra systole.*

hys'terotome. An instrument for incising the cervix uteri.

hysterot'omy [G. *hystera*, uterus, + *tomē*, incision.] 1. Metrotomy, incision of the uterus, cesarean section. 2. Hysterostomatomy.

hysterotrachelorrhaphy (his"ter-o-trak-ĕ-lor'ă-fĭ) [G. *hystera*, uterus + *trachēlos*, neck, + *rhaphē*, a seam.] Hysterorrhaphy (2), repair of a lacerated cervix uteri.

hysterotrachelotomy (his"ter-o-trak-ĕ-lot'o-mĭ) [G. *hystera*, uterus, + *trachēlos*, neck, + *tomē*, incision.] Incision of the cervix uteri.

hys"terotraumat'ic. Relating to hysterotraumatism

hysterotraumatism (his"ter-o-traw'mă-tizm) [G. *trauma*, injury.] Traumatic hysteria; hysteria following the shock of a severe injury.

hysterotris'mus. 1. Hysterical lockjaw. 2. Uterine spasm

hystriciasis (his″trĭ-si′a-sis). Hystricism, ichthyosis* hystrix.

hystricism (his′trĭ-sizm) [G. *hystrix*, hedgehog.] Ichthyosis* hystrix, nystriciasis.

hys′trix. Ichthyosis hystrix.

hyther (hī′thur) [G. *hy(dōr)* water, + *ther(mē)*, heat.] A word coined by W. F. Tyler, F. R. Met. Soc., to indicate the combined effect upon the organism of the humidity and the temperature of the atmosphere.

I

I. 1. Chemical symbol of iodine. 2. [*ions.*] Symbol of ampere.

i. Abbreviation for optically inactive.

-iasis [G]. A termination noting a condition or state expressed by a verb terminating in -aō or -iaō, as *psoriasis* from *psōriaō* I have the itch or mange. In medical neologisms it has the same value as, and is sometimes interchangeable with, *-osis,** as *trichiniasis* or *trichinosis.*

iatralip'tic (i-ă-tră-lip'tik) [G. *iatros,* physician, + *aleiptēs,* an annointer.] Noting treatment by inunction, or the epidermic method.

iatralip'tics. Method of treatment by inunction.

iat'ric [G. *iatros,* physician.] Medical.

iatrochemical (i-at''ro-kem'ĭ-kal). Noting a school of medicine of the seventeenth century which attributed all physiological and pathological as well as therapeutic phenomena to chemical action.

iatrochemist (i-at''ro-kem'ist). A member of the iatrochemical school.

i'atrol. Oxindolmethylanilide, a grayish white, odorless powder obtained by the action of nascent iodine on coal-tar derivatives; employed as a substitute for iodoform.

iatrol'ogy [G. *iatros,* physician, + *logia.*] Medical science.

iatromathemat'ical. Iatrophysical.

iatromechanical (i-at''ro-me-kan'ĭ-kal). Iatrophysical.

iatrophysical (i-at-ro-fiz'ĭ-kal) [G. *iatros,* physician, + *physikos,* physical.] Noting a school of medicine in the seventeenth century, which explained all physiological and pathological phenomena by the laws of physics; opposed to the iatrochemical school.

iatrophys'icist. A member of the iatrophysical school.

iatrotechnics (i-at-ro-tek'niks). Iatrotechnique.

iatrotechnique (i-at''ro-tek-nēk') [G. *iatros,* physician, + *technē,* art.] Medical and surgical art; the technique or mode of application of medical science.

i'bit. Bismuth oxyiodotannate, a grayish, odorless, tasteless powder; employed as a substitute for iodoform.

-ic. A suffix denoting that the element to the name of which it is attached is in combination in one of its higher valencies.

ice. Water congealed by a temperature below 32° F. (0° C.). **i. bag,** a rubber bag in which cracked ice is put; employed as a means for the local application of cold. **i. cap,** an i. bag made of such a shape as to be readily fitted over the head. **i. coil,** rubber tubing formed into a coil through which water of any desired temperature, but usually ice-cold, is made to flow.

Ice'land moss. Cetraria. **I. spar,** crystallized calcium carbonate used in the manufacture of Nicol* prisms.

ichnogram (ik'no-gram) [G. *ichnos,* footstep, + *gramma,* a drawing.] Imprint of the soles of the feet, taken standing.

ichor (i'-kor) [G. *ichōr,* serum.] A thin watery discharge from an ulcer or unhealthy wound.

ichore'mia, ichorœ'mia. Ichorrhemia.

ichoroid (i'kŏ-royd) [G. *ichōr* + *eidos,* resemblance.] Noting a thin purulent discharge.

ichorous (i'kor-us). Relating to or resembling ichor, serous.

ichorrhea, ichorrhœa (i-kor-re'ah) [G. *ichōr* + *rhoia,* a flow.] A profuse ichorous discharge.

ichorrhemia, ichorrhæmia (i''kŏ-re'mĭ-ah) [G. *ichōr* ab *haima,* blood.] Blood-poisoning from the + sorption of an ichorous discharge.

ichthalbin (ik-thal'bin). Trade name of a preparation made by the action of ichthyolsulphonic acid on albumin, ichthyol albuminate; a grayish powder insoluble in water, employed as an alterative and intestinal antiseptic in doses of gr. 10–30 (0.6–2 0).

ichthammol (ik'tham-ol) (Br.) Ammonium ichthyosulphonate, ichthosulphol, ammonium*-ichthol, ichthyol.

ichthargan (ik-thar'gan). Trade name of silver ichthyolate, silver sulphichthyolate, a combination of silver nitrate and ichthyol sulphonic acid; a dark brown powder, soluble in water, containing about 30 per cent. of silver; employed as an astringent and antiseptic injection in gonorrhea, in solutions of 1–3000 up to 1–500.

ichthargol (ik-thar'gol). Trade name for an insoluble silver ichthyolate containing 12 per cent. of metallic silver.

ichthermol (ik-ther'mol). Mercury ichthyolate or sulphichthyolate; a blackish powder containing 24 per cent. metallic mercury.

ichthoform (ik'tho-form). Ichthyolformaldehyde, a blackish brown insoluble powder, employed as an intestinal antiseptic in doses of gr. 15–30 (1.0–2.0), and externally as an antiseptic powder for wounds, ulcers, etc.

ichthydin, ichthyn, ichthulin (ik'thi-din, ik'thin, ik'thoo-lin) [G. *ichthys,* fish.] Albuminoid substances from the yolks of fish-eggs.

ichthyism (ik'thi-izm) [G. *ichthys,* fish.] Poisoning by eating stale or otherwise unfit fish.

ichthynat (ik'thi-nat). Ammonium ichthynatum, trade name of a solution of ammonium compounds derived from a tarry distillate of certain bituminous shales.

ichthyocolla (ik-thĭ-o-kol'ah) [G. *ichthys,* fish, + *kolla,* glue.] Fish glue, isinglass; the dried air-bladders or sounds of *Acipenser huso* and other species of sturgeons and of hake; is used for making court plaster and in culinary processes.

ichthyodin (ik-thi'o-din). Isarol, ammonium sulphonate, a thick, dark brown liquid having properties similar to those of ichthyol.

ichthyoform (ik'thĭ-o-form). Ichthoform.

ichthyoid (ik'thĭ-oyd) [G. *ichthys,* fish, + *eidos,* resemblance.] Fish-shaped.

ichthyol (ik'thĭ-ol). Ichthyolum;* ammonium-ichthyol. **i. albu'minate,** ichthalbin. **i. formal'dehyde,** ichthoform. **i. lith'ium,** lithium ichthyo-sulphonate. **i. oil,** see *ichthyolum.* **i. sil'ver,** ichthargan.

ichthyolsulphonic acid (ik''thĭ-ol-sul-fon'ik as'id). Sulphoichthyolic or sulphichthyolic acid, prepared by mixing crude ichthyol oil with an excess of concentrated sulphuric acid; it forms ichthyol-sulphonates with many organic and inorganic bases; the ammonium salt is called ichthyol, the other salts being distinguished by the addition of the name of the base.

ichthyolum (ik-thĭ-o'lum) [G. *ichthys*, fish, + L. *oleum*, oil.] Ichthyol, a brownish oil obtained by the destructive distillation of a bituminous rock, or shale, imbedded in gallenstein, a rock which also contains fossil imprints of fish. The term is usually applied to the form employed in medicine, ammonium-ichthyol (*q.v.*). See also sodium-ichthyol and ichthoform.

ichthyophagous (ik-thĭ-of'ă-gus) [G. *ichthys*, fish, + *phagō*, I eat.] Fish-eating, subsisting on fish.

ichthyophagy (ik-thĭ-of'ă-jĭ) The habit of fish-eating.

ichthyophobia (ik-thĭ-o-fo'bĭ-ah) [G. *ichthys*, fish, + *phobos*, fear.] An aversion to fish

ichthyosis (ik-thĭ-o'sis) [G. *ichthys*, fish.] Fishskin disease, xeroderma, a rough skin due to hypertrophy of the horny layer of the epidermis with diminished sweat and sebaceous secretion. **i. congen'ita**, hyperkeratosis congenita, the condition present in a harlequin* fetus. **i. follicula'ris**, keratosis follicularis. **i. hys'trix** [G. *hystrix*, hedgehog], i. of extreme degree, occurring in circumscribed elevated patches; hystricism. **i. intrauteri'na**, i. congenita. **i. linea'ris**, linear i., a condition marked by bands showing the lesions of ichthyosis, which follow in general the course of certain cutaneous nerves; called also linear nævus, linear papilloma, nævus papillaris, or papilloma neuroticum. **i. lin'guæ** i. of the tongue, leucoplakia. **i. palma'ris**, keratosis palmaris. **i. palma'ris et planta'ris**, keratodermia symmetrica. **i. planta'ris**, keratosis plantaris. **i. sauroder'ma** [G. *sauros*, lizard, + *derma*, skin], crocodile skin; an extreme degree of ichthyosis in which the surface is covered with thick plates marked like the hide of a crocodile. **i. scutula'ta** [L. *scutulatus*, lozenge-shaped, checkered], i. marked by diamond-shaped or shield-shaped lesions. **i. seba'cea**, the presence of an unusual amount of vernix caseosa. **i. seba'cea cor'nea**, keratosis follicularis. **i. serpenti'na**, i. of marked degree in which the horny plates present the appearance seen on a serpent's skin. **i. sim'plex**, ordinary i., xeroderma. **i. spino'sa**, i. hystrix. **i. u'teri**, a cornification of the epithelium of the uterine mucous membrane.

ichthyotic (ik-thĭ-ot'ik). Relating to ichthyosis.

ichthyotoxicon (ik-thĭ-o-tok'sĭ-kon) [G. *ichthys*, fish, + *toxikon*, poison.] Fish-poison, a toxic principle in certain fishes.

ichthyotoxin (ik-thĭ-o-toks'in). The hemolytic active principle of eel serum.

ichthyotox'ism [G. *ichthys*, fish, + *toxikon*, poison.] Poisoning by fish.

icing heart, liver, etc. (is'ing). Sugar-coated heart, frosted heart, etc.; see *hyaloserositis*.

I. C. N. International Council of Nurses.

iconolagny (i-kon-o-lag'nĭ) [G. *eikōn*, image, + *lagneia*, lewdness. Sexual excitement aroused by the sight of suggestive pictures or sculptures.

ICT. Abbreviation, used in some army medical reports for inflammation of connective tissue, applied to ecthyma, boils, cellulitis, and whatnot, and especially to tropical ulcer as seen in Gallipoli, Mesopotamia, and Egypt.

icter'ic [G *ikterikos*, jaundiced.] Relating to or marked by jaundice. **i. fe'ver**, pernicious malaria* with jaundice as a prominent symptom.

icteritious (ik-ter-ish'us). Yellowish, of a jaundiced appearance, icteroid.

icteroane'mia, icteroanæ'mia. Jaundice combined with the blood changes of anemia. **acquired' hemolyt'ic i.**, Widal's* syndrome.

ic'terode [G. *ikterōdes*, jaundiced.] Icteroid.

icterogen (ik'ter-o-jen) [G. *ikteros*, jaundice, + *gennaō*, I produce.] An arsenic preparation of the salvarsan series, which has a selective action on the liver cells, causing degeneration of the same with the production of jaundice. It has been used experimentally in the treatment of mouse tumors upon which it appears to have a curative effect.

icterogen'ic [G. *ikteros*, jaundice, + *gennaō*, I produce] Causing jaundice.

icterohematu'ric. Noting jaundice, together with the passage of blood in the urine.

icterohemoglobinu'ria. Noting jaundice, together with the passage of the blood-coloring matter in the urine.

icterohepatitis (ik"ter-o-hep-ă-ti'(te')tis) [G. *ikteros*, jaundice, + *hēpar(hēpat-)*, liver, + *-itis*.] Inflammation of the liver with jaundice as a prominent symptom.

ic'teroid [G. *ikteros*, jaundice + *eidos*, resemblance.] Yellow-hued, seemingly jaundiced, icteritious.

ic'terus [G. *ikteros*.] Jaundice. **i. castren'sis gra'vis** [L. *castrensis*, relating to a camp], grave camp jaundice, Weil's disease. **i. castren'sis levis**, mild camp jaundice, a simple jaundice occurring among troops in camp; it is apparently of catarrhal nature and not due to any spirochetal organism. **cythemolyt'ic i.**, i. resulting from absorption of bile produced in excess through stimulation by free hemoglobin resulting from the destruction of red blood-corpuscles. **i. febri'lis**, Weil's* disease. **i. gra'vis**, jaundice associated with high fever and delirium seen in acute yellow atrophy and other destructive diseases of the liver. **i. me'las**, black jaundice, a form in which the skin assumes a dirty dark brown color. **i. neonato'rum**, Buhl's disease, Winckel's disease, jaundice of the newborn, pedicterus; it is either of a mild form and temporary, physiological jaundice, or of severe and usually fatal form, due to congenital occlusion of the common bile-duct, congenital syphilitic cirrhosis of the liver, or septic pylephlebitis. **i. præ'cox**, jaundice occurring in secondary syphilis. **i. typhoid'es**, acute yellow atrophy of the liver. **infec'tious i.**, Weil's* disease.

ictom'eter [L. *ictus*, stroke, + G. *metron*, measure.] An apparatus for determining the force of the apex beat of the heart.

ic'tus [L.] 1. A stroke, a beat 2. An attack. **i. cor'dis**, heart beat. **i. immunisato'rius**, the production of a great mass of antibodies by the injection of large amounts of the antagonistic blood-cells, or bacteria or their toxins, at one time. **i. epilep'ticus**, an epileptic convulsion. **i. paralyt'icus**, a stroke of paralysis. **i. san'guinis**, apoplexy. **i. so'lis**, sunstroke.

id [G. *idios*, peculiar, separate, one's own.] One of the complex groups which form the idioplasm chromomere; it is supposed to be the bearer of the hereditary qualities.

id'ant. Weismann's term for one of the nuclear rods or chromosomes in the fertilized ovum, containing an aggregate of the ids, or all kinds of biophores of the organism.

-ide. A suffix denoting a binary chemical compound; formerly denoted by the qualification, -ureted; as hydrogen sulphide, or sulphureted hydrogen.

ide'a [G. semblance.] A mental image or concept of something not present in space. **dom'inant i.**, one which governs all the actions and thoughts of the individual. **fixed i.**, an exaggerated notion or delusion which dominates the mind; a per-

manent dominant i. **i. of ref'erence,** see under *reference.*

ide'al. Relating to an idea; imaginative; not real; expressing perfection.

ideation (i-de-a'shun). The formation of ideas.

idea'tional. Relating to ideation, or the formation of ideas.

identification (i-den"tĭ-fi-ka'shun) [L. *identicus*, the same, + *facere*, to make.] An exaggerated introjection* in which there is a definite, though usually unconscious, sense of oneness or psychic continuity with another person.

ideoglandular (i-de-o-glan'du-lar). Relating to secretion or glandular activity aroused by a mental image, as in the "watering of the mouth" excited by the thought of savory food.

ideometabolism (i-de-o-mĕ-tab'o-lizm). Metabolism as influenced by the mental processes.

ideomotion (i-de-o-mo'shun). Muscular movement executed under the influence of a dominant idea, being practically automatic and not volitional.

ideomo'tor. Relating to ideomotion.

ideomus'cular. Ideomotor.

ideoplastia (i-de-o-plas'tĭ-ah) [G. *idea*, + *plassō*, I form.] The receptive condition in a hypnotized person in which he is completely open to suggestion.

ideovascular (i-de-o-vas'ku-lar). Relating to circulatory changes excited by a mental image or idea.

idioagglutinin (id"ĭ-o-ă-glu'tin-in) [G. *idios*, one's own.] An agglutinin normally present in the blood and not formed in response to the injection of an antigen.

idioblast (id'ĭ-o-blast) [G. *idios*, peculiar, individual, + *blastos*, germ.] 1. One of the ultimate elements of the idioplasm formed of atom-groups or molecule-groups. 2. One of the cells in a plant which differ from the surrounding parenchyma and which contain pigment, oil, gum, or other special product.

idiochromatin (id'ĭ-o-kro'mă-tin) [G. *idios*, one's own, peculiar.] The chromatin which has to do with reproduction and heredity, as distinguished from the vegetative chromatin.

idiochromidia (id"ĭ-o-kro-mid'ĭ-ah) [G. *idios*, one's own, peculiar, + *chromidia*.] The germinal chromidia, or distributed chromatin, in certain protozoa.

idiochromosome (id"ĭ-o-kro'mo-sōm) [G. *idios*, one's own, + *chromosome*.] One of the chromosomes forming the distinctive differential between the male-producing and the female-producing spermatozoa. They are divided into x-elements and y-elements, and it is assumed that when an ovum is fertilized by a spermatozoon containing the x-element a female results,

idioc'rasy [G. *idios*, individual, + *krasis*, a mixture, temperament.] Idiosyncrasy; peculiarity or individuality of temperament.

idiocrat'ic. Relating to idiocrasy.

idiocy (id'ĭ-o-sĭ) [G. *idiōteia*, awkwardness, uncouthness.] Congenital mental deficiency of extreme degree; exaggerated imbecility. **amaurot'ic fam'ily i.,** a condition marked by mental impairment leading to idiocy, by paralysis, impaired vision leading to blindness, associated with changes in the macula lutea and optic nerve atrophy, by marasmus, and finally death; the disease appears in infancy, often affecting several children in the same family, and usually terminates fatally about the end of the second year. **Az'tec i.,** microcephalic i., marked by receding forehead and chin, the profile having a triangular form. **cret'inoid i.,** cretinism. **diple'gic i.,** paralytic i. in which the paralysis affects all four extremities. **epilep'tic i.,** i. associated with epilepsy. **gen'etous i.,** congenital i. of obscure causation. **hemiple'gic i.,** paralytic i. in which the paralysis has the form of hemiplegia. **hydrocephal'ic i.,** i. associated with chronic hydrocephalus. **intraso'cial i.,** a condition in which the mental state permits the exercise of some calling; imbecility. **microcephal'ic i.,** i. occurring in a child with small skull and brain, without paralysis or other signs of a focal lesion. **Mongo'lian** or **mon'goloid i.,** i. marked by cheerfulness of disposition, vivaciousness, and imitativeness, abnormal shortness of the thumbs and little fingers, a flattened skull, and the slanting eye-slits of the eastern Asiatic. **paralyt'ic i.,** i. due to cerebral lesions occurring in infancy and causing spastic or other forms of paralysis. **paraple'gic i.,** paralytic i. in which the muscular affection has the form of a paraplegia. **senso'rial i.,** mental deficiency dependent upon the loss in infancy, or congenital absence, of one or more of the special senses. **traumat'ic i.,** mental deficiency assumed to be due to a fall, a blow, or other injury received in infancy or early childhood.

idiogamist (id-ĭ-og'am-ist) [G. *idios*, individual, + *gamos*, marriage.] One who is capable of sexual union with only one or a few individuals of the opposite sex, being impotent in the presence of any others.

idiogen'esis [G. *idios*, self, + *genesis*, production.] Origin without evident cause, noting especially that of a so-called idiopathic disease.

idioglos'sia [G. *idios*, one's own, + *glōssa*, tongue, speech.] An extreme form of lalling or vowel or consonant substitution, by which the speech of a child may be made unintelligible and appear to be another language to one who has not the key to the literal changes.

idioglott'ic. Relating to idioglossia.

idioheteroagglutinin (id"ĭ-o-het"er-o-ă-glu'tin-in) [G. *idios*, one's own, + *heteros*, another.] An idioagglutinin present in normal blood, active in respect of the cells of another species.

idioheterolysin (id-ĭ-o-het-er-ol'i-sin) [G. *idios*, one's own, + *heteros*, other.] An hemolysin (idiolysin) present in normal blood, active against the cells of an animal of a different species.

idiohypnotism (id-ĭ-o-hip'no-tizm) [G. *idios*, one's own.] Self-induced hypnotism.

idioisoagglutinin (id"ĭ-o-i"so-ă-glu'tin-in) [G. *idios*, one's own, + *isos*, equal.] An idioagglutinin active in respect of cells of animals of the same species.

idioisolysin (id"ĭ-o-i-sol'i-sin) [G. *idios*, one's own, + *isos*, equal.] An hemolysin present in normal blood, active against the cells of an individual of the same species.

idiolysin (id-ĭ-ol'-i-sin) [G. *idios*, one's own.] A lysin normally present in the blood and not formed in response to the injection of an antigen.

idiometritis (id-ĭ-o-me-tri'(tre')tis) [G. *idios*, individual.] Inflammation of the uterine musculature, uterine myositis

idiomuscular (id"ĭ-o-mus'ku-lar) [G. *idios*, individual.] Relating to the muscles alone, independent of the nervous control.

idioneurosis (id"ĭ-o-nu-ro'sis) [G. *idios*, individual] A functional neurosis, one arising without apparent extrinsic cause.

idiopathet'ic. Idiopathic.

idiopath'ic [G. *idios*, individual, + *pathos*, suffering.] Noting a primary disease, one originating without apparent extrinsic cause.

idiop'athy [G. *idios*, individual, + *pathos*, suffering.] A primary disease, one arising without apparent extrinsic cause.

idiophren'ic [G. *idios*, individual, + *phrēn*, mind.] Relating to, or originating in, the mind or brain alone, not reflex or secondary.

idioplasm (id'ĭ-o-plazm) [G. *idios*, one's own, + *plasma*, something formed.] 1. A term applied by Nägeli to a special modification of the living substance or protoplasm of the individual cell which determines its special characteristics and which is transmitted to all other cells derived from the first. 2. The chromatin substance of the nucleus which, in the sexual cell, transmits hereditary characteristics; germplasm. 3. The specific inheritable substance in the protozoan cell.

idiopsychological (id"ĭ-o-si-ko-loj'ĭ-kal) [G. *idios*, self, + *psychē*, soul, + *-logia*.] Relating to ideas developed within one's own mind, independent of suggestion from without.

idioreflex (id-ĭ-o-re'fleks) [G. *idios*, one's own.] A reflex due to a stimulus or irritation originating in the organ or part in which the reflex occurs.

idiosome (id'ĭ-o-sōm) [G. *idios*, one's own, + *sōma*, body.] 1. The attraction-sphere of a spermatid or of an oocyte. 2. The indivisible element of living matter.

idiosyncrasy (id"ĭ-o-sin'kra-sĭ) [G. *idios*, one's own, + *synkrasis*, a mixing together.] Idiocrasy, an individual mental or physical characteristic or peculiarity. A susceptibility, peculiar to the individual, to the action of certain drugs, articles of diet, etc.

idiosyncrat'ic. Relating to or marked by an idiosyncrasy, idiocratic.

id'iot [G. *idiōtēs*, an ignorant, uncouth person.] A person congenitally without understanding or ordinary mental capacity, one who does not advance beyond the Binet* age of 3 years; distinguished from a *lunatic* whose mental defect is of post-natal origin, and from an *imbecile* who is more or less observant and capable of some mental and physical education. See also *moron*.

idiovariation (id-ĭ-o-va-rĭ-a'shun) [G. *idios*, self.] Mutation (2), transformation in the constitution of the germ-plasm, taking place under the influence of unknown factors.

idioventricular (id-ĭ-o-ven-trik'u-lar) [G. *idios*, individual. Pertaining to or associated with the cardiac ventricle alone, when dissociated from the auricle.

id'organ [G. *idea* + *organon*.] A plastid or unicellular organism, theoretically capable of development into a metazoan.

idro'sis [G. *hidrōs*, sweat.] Hidrosis.

ignatia (ig-na'shyah) [*St. Ignatius*, a martyr under Trajan, †107. (N.F.) Ignatia amara; St. Ignatius' bean, the dried ripe seed of *Strychnos ignatii*. It is similar in its properties to nux vomica; dose: extract, gr. ¼–½ (0.015–0.03); fluidextract, ♏ 2–5 (0.13–0.3); tincture, ♏ 2–8 (0.13–0.5); powder, gr. 1 (0.06).

igni-operation (ig'ne-op-ur-a"shun) [L. *ignis*, fire.] An operation performed by means of knives at a red heat.

ignipedites (ig-ne-pĕ-di'tēz) [L. *ignis*, fire, + *pes* (*ped-*), foot, + G. *-ītēs*.] Hot-foot, burning pain in the soles of the feet, due to multiple neuritis; it occurs chiefly in tropical countries

ignipuncture (ig-nĭ-punk'chur) [L. *ignis*, fire, + *punctura*.] Cauterization by means of hot needles thrust into the tissues.

ig'nis [L.] Fire; actual cautery, hot iron, moxa. **i. sa'cer**, sacred fire, herpes zoster. **i. Sanc'ti Anto'nii**, St. Anthony's fire, erysipelas.

IK [Ger. *immun-körper*.] Spengler's tuberculin.* Also a preparation, on the same principle as the tuberculin, for use in epidemic influenza.

IKI solu'tion [*I*, iodine; *KI*, potassium iodide.] Liquor iodi compositus

iko'ta. A neurosis, similar to latah, affecting married women among the Samoyeds of Siberia.

il'eac. Relating to ileus. **i. passion**, ileus.

ileadel'phus. Iliadelphus.

ileectomy (il-e-ek'to-mĭ) [L. *ileum* + G. *ektomē*, excision.] Removal of the ileum.

ileitis (il-e-i'(e')tis) [L. *ileum* + G. *-itis*.] Inflammation of the ileum.

il"eoce'cal. Relating to both ileum and cecum, noting the valve at the junction of the large and small intestine, valvula* coli [BNA].

ileocecum, ileocæcum (il-e-o-se'kum). The combined ileum and cecum.

il"eocol'ic. Relating to the ileum and the colon.

ileocolitis (il-e-o-ko-li'(le')tis). Inflammation of the mucous membrane of a greater or lesser extent of both ileum and colon

ileocolon'ic. Ileocolic.

ileocolos'tomy [L. *ileum* + G *kōlon*, colon, + *stoma*, mouth.] The establishment of a communication between the ileum and the colon.

ileocolot'omy [L. *ileum* + G. *kōlon*, colon, + *tomē*, incision.] Ileocolostomy.

ileoileostomy (il-e-o-il-e-os'to-mĭ) [L. *ileum* + *ileum* + G. *stoma*, mouth.] Establishment of a communication between two non-continuous portions of the ileum.

il"eoproctos'tomy [L. *ileum* + G. *prōktos*, anus (rectum), + *stoma*, mouth.] Establishment of a communication between the ileum and the rectum.

il"eorectos'tomy [L. *ileum* + *rectum* + G. *stoma*, mouth.] Ileoproctostomy.

ileosigmoidos'tomy [L. *ileum* + G. *sigmoidēs*, sigmoid, + *stoma*, mouth.] Establishment of a communication between the ileum and the sigmoid colon.

ileos'tomy [L. *ileum* + G. *stoma*, mouth.] The establishment of a fistula leading from without into the ileum.

ileot'omy [L. *ileum* + G. *tomē*, incision.] Cutting into the ileum; ileostomy.

iletin (i'lĕ-tin) [*island* of Langerhans.] Trade name of a special make of insulin.

il'eum [G. *eileō*, I roll up, twist.] The third portion of the small intestine, about 12 feet in length, extending from the junction with the jejunum to the ileocecal valve.

ileus (il'e-us) [G. *eileos*, intestinal colic, from *eilō*, I roll up tight.] Obstruction of the bowel attended with severe colicky pain.

I'lex [L.] Holly, a genus of trees and shrubs containing about 150 species, some of which have been used in medicine, the leaves being said to have antirheumatic and antiperiodic properties.

il'iac. Relating to the ilium. **i. bursa**, a bursa at the insertion of the iliopsoas muscle into the lesser trochanter. **i. crest**, crista iliaca. **i. fascia**, a continuation of the transversalis fascia covering the anterior surface of the iliopsoas muscle above the inguinal ligament. **i. fossa**, fossa iliaca. **i. muscle**, musculus iliacus. **i. region**, inguinal region, the lower lateral abdominal* region on either side of the hypogastrium. **i. roll**, a

sausage-shaped, often painful, non-fluctuating mass, with convexity to the right, palpable in the left iliac fossa, due to induration of the walls of the sigmoid flexure; sausage-shaped roll, sigmoid sausage. **i. spine,** spina iliaca. **i. tuberos'ity,** tuberositas iliaca.

ili'acus. Musculus iliacus.

iliadel'phus [L. *ilium* + G. *adelphos*, brother.] A monster single above but double from the pelvis down.

iliocapsula'ris muscle. Iliacus minor muscle, the external fibers of the iliacus muscle, inserted into the capsule of the hip-joint; they are often distinctly separate from the rest of the muscle.

iliococcygeal (il″ĭ-o-kok-sij'e-al). Relating to the ilium and the coccyx, noting the musculus iliococcygeus, composed of fibers of the levator ani attached to the coccyx

iliocolot'omy [L. *ilium* + G. *kōlon*, colon, + *tomē*, incision.] The operation of opening into the colon in the iliac, or inguinal, region.

iliocos'tal. Relating to the ilium and the ribs, noting muscles passing between the two parts.

iliocosta'lis. Iliocostal; see *musculus iliocostalis*.

iliofem'oral. Relating to the ilium and the femur. **i. lig'ament,** see under *ligamentum*.

il″iohypogas'tric. Relating to the iliac and the hypogastric regions. **i. nerve,** nervus iliohypogastricus.

ilioinguinal (il″ĭ-o-ing'gwĭ-nal). Relating to the iliac region and the groin. **i. nerve,** nervus ilioinguinalis.

iliolumbar (il-ĭ-o-lum'bar). Relating to the iliac and the lumbar regions. **i. ar'tery,** arteria iliolumbalis. **i. lig'ament,** ligamentum iliolumbale, the thickened anterior edge of the lumbar fascia, extending from the tip of the transverse process of the last lumbar vertebra to the inner lip of the iliac crest.

iliopectineal (il″ĭ-o-pek-tin'e-al) [L. *ilium* + *pecten*, comb (crest of the pubes).] Relating to the ilium and the pubes. **i. em'inence,** a low, rounded elevation on the inner surface of the junction of the bodies of the pubes and ilium. **i. fas'cia,** a fascia formed by the union of the iliac and the pectineal fasciæ covering the floor of the i. fossa. **i. fos'sa,** a deep depression between the iliacus and pectineus muscles in the thigh. **i. lig'ament,** the attachment of the iliac fascia to the i. eminence. **i. line,** terminal line, the line on the inner surface of the ilium forming the dividing line between the true and the false pelvis.

iliopel'vic. Relating to the iliac region and the cavity of the pelvis.

iliopsoas muscle (il″ĭ-o-so'as). The compound muscle formed by the iliacus and the psoas magnus, and sometimes the psoas parvus; the muscles occupy the posterior wall of the abdomen and that of the false pelvis.

iliosa'cral. Relating to the ilium and the sacrum, noting the musculus iliosacralis, composed of fibers of the levator ani muscle attached to the sacrum.

iliosciatic (il″-ĭ-o-si-at'ik). Relating to the ilium and the ischium. **i. notch,** the great sciatic notch, incisura* ischiadica major.

iliospi'nal. Relating to the ilium and the spinal column.

iliothoracopagus (il″ĭ-o-tho-ră-kop'a-gus) [L. *ilium* + G. *thorax*, chest, + *pagos*, fixed.] A double monster in which union occurs through the ilia on one side and the sterna.

iliotib'ial. Relating to the ilium and the tibia. **i. band,** a wide, thick, fascial layer stretching from the iliac crest to the capsule of the knee-joint and the outer tuberosity of the tibia.

iliotrochanteric (il″ĭ-o-tro-kan-ter'ik). Relating to the ilium and the great trochanter of the femur. **i. lig'ament,** a thickening of the capsule of the hip-joint in the shape of a band extending from the anterior part of the dorsum of the acetabulum to the neck of the femur near the anterior end of the inner surface of the great trochanter.

il'ium [L. flank.] 1. The flank. 2. Os ilium or flank-bone.

ill. 1. Sick, unwell. 2. A disease, a sickness.

illaqueation (il″ă-kwe-a'shun) [L. *illaqueare*, to ensnare.] Pulling away an inverted eyelash by passing a loop of thread behind it.

illicium (il-lis'e-um) [L. *illicere*, to allure, charm.] Chinese or star anise, the dried fruit of *Illicium verum* (not *I. anisatum*), an evergreen shrub or small tree of southern China; stimulant carminative in doses of gr 10–20 (0.6–1.3)

illinition (il-in-ish'un) [L. *illinire*, to anoint.] Friction of the surface made after the application of an ointment, to facilitate absorption.

illinium (il-lin'ĭ-um) [after the University of *Illinois*.] Florentium, an element discovered in 1926 by B. S. Hopkins; atomic number 61, atomic weight, 146.

ill'ness. Disease.

illumina'tion [L. *illuminare*, to light up.] 1. The lighting up of a cavity or surface for diagnostic purposes; the lighting of the object under a microscope. 2. The amount of light thrown upon a body, especially upon the object being examined under a microscope. **ax'ial i.,** i of an object by rays of light in the direction of the axis of the microscope. **direct' i.,** the i. of an object under the microscope by light falling upon its upper surface. **lat'eral i., oblique' i.,** the i. of an object under the microscope by light thrown from one side.

illusion (il-lu'zhun) [L. *illudere*, to mock.] A false perception, the mistaking of something for what it is not. When this illusion is fixed and cannot be removed by evidence to the contrary it becomes a delusion.

illu'sional. Relating to or of the nature of an illusion.

Il'osvay rea'gent. Sulphanilic acid, 0.5, dissolved in dilute acetic acid, 150, is mixed with naphthylamine, 1 dissolved in boiling water, 20; the blue sediment which forms is dissolved in dilute acetic acid, 150; a few drops of this reagent added to water, saliva, or other fluid to be tested will produce a red color if nitrites are present.

im'age [L. *imago*, likeness.] 1. The representation or picture of an object made by the rays of light emanating or reflected from it 2. A picture of an object not present, produced in the mind by memory or imagination. **acciden'tal i., after-i., after-i.,** the i. that persists in the retina after the object is no longer visible. **direct i.,** virtual i. **false i.,** the i. in the deviating eye in squint. **invert'ed i.,** real i. **mental i.,** image(2). **neg'ative i.,** after-i. **op'tical i.,** image (1). **real i.,** one formed by the convergence of the actual rays of light from an object. **ret'inal i.,** a real i formed on the retina. **vir'tual i.,** a picture formed by the projection of the rays on a mirror; it is perceptible to the eye but the rays have not been focussed and so the image cannot be thrown on a screen.

imagina'tion. The power of the mind to form images.

ima'go [L. image.] The last stage of an insect after it has completed all its metamorphoses through the egg, larva, and pupa.

imbal'ance [L. *in-* neg. + *bilanx*, balance.] Lack of equality in power between opposing forces, noting specifically this lack in the ocular muscles, giving rise to strabismus or heterophoria. **autonom'ic i.**, autonomic ataxia, a lack of coordination between the sympathetic and parasympathetic (autonomic) nervous systems, especially in relation to the vasomotor phenomena. **sympathet'ic i.**, vagotonia. **vasomo'tor i.**, autonomic i.

imbecile (im'be-sil) [L *imbecillus*, weak, silly.] 1. Mentally deficient. 2. One who is congenitally weak-minded, yet not wholly incapable of education; a mental defective not advancing beyond the Binet* age of 7 years; see *idiot* and *moron*. **moral i.**, amoralis, a person with pronounced mental defect who has strong vicious or criminal propensities little or not at all affected by punishment.

imbecil'ity. Weak-mindedness.

imbed'. To surround by firm material, such as wax or paraffin; noting the treatment of an histological or pathological specimen preparatory to making sections of it for microscopical examination.

imbibition (im"bi-bish'un) [L. *imbibere*, to drink in.] The absorption of fluid by a solid body without resultant chemical change in either.

imbricate, imbricated (im'bri-kāt, im'bri-ka-ted) [L. *imbricare*, to cover with tiles.] Overlapping like shingles.

imbrica'tion. The operative overlapping of layers of tissue in the closure of wounds or the repair of defects

imide (im'id). A chemical compound derived from a dicarboxylic acid by the substitution of NH for 2OH, or one in which two hydrogen atoms of the ammonia molecule are replaced by a divalent acid radicle.

imido-. A prefix denoting a compound containing the bivalent atom group (NH).

Imlach's plug (im'lak) [Francis *Imlach*, Scotch physician, nineteenth century.] A lump of fatty tissue at the inner side of the external abdominal ring.

immature (im-a-tūr') [L. *in-* neg. + *maturus*, ripe.] Not fully developed.

imme'diate. Direct, acting from cause to effect without any intervening steps in the process.

immedicable (im-med'i-ka-bl) [L. *in-* neg. + *medicabilis*, curable.] Incurable, beyond the reach of remedies.

immer'sion [L. *immergere*, to dip in.] 1. The placing of a body under water or other liquid. 2. Specifically, in microscopy, the use of an immersion-lens. **homoge'neous i.**, the use of a fluid having the same refractive power as the immersion-lens. **oil i., water i.**, see *immersion-system*.

immer'sion-lens. The objective of a microscope, which is separated from the object-glass by a thin layer of liquid, either oil or water.

immer'sion-sys'tem. The employment in microscopy of a layer of liquid, either oil or water, between the object lens and the object to be examined, thereby correcting the dispersion and increasing the working distance.

immiscible (im-mis'i-bl). Incapable of mixing, as oil and water, for example

immobil'ity. Chronic hydrocephalus in cattle.

immo'bilize [L. *in-* neg. + *mobilis*, movable.] To render fixed or incapable of moving.

immobiliza'tion. The act of making immovable.

immune (im-mūn') [L. *immunis*, free from service.] 1. Free from the possibility of infection. 2. One who is exempt from an infectious disease by reason either of having already had the disease or of being protected by an inoculation of the virus in minute dose or attenuated form. **i. bod'y**, a specific antibody which combines with the bacterium or animal cell acting as antigen rendering it amenable to the lytic action of alexin or complement; amboceptor,* intermediary body, desmon, copula, preparator, substance sensibilatrice, fixator, philocytase, interbody, immunisin. **i. sys'tem**, a combination of antigen or cells with amboceptor and complement.

immunisa'cient [L. *immunis*, exempt, + *faciens*, making.] Making immune, said of a semelincident disease or of a prophylactic serum or vaccine.

immu'nisin. Immune* body, amboceptor.

immu'nitas [L.] Immunity. **i. non sterili'sans**, a condition in which there is immunity, natural or acquired, against a certain toxin although the organisms producing it continue in the body, as in the case of bacilli carriers.

immu'nity [L. *immunitas*.] A state, natural or acquired, in which the body is resistant to disease. **acquired' i.**, i. obtained by an individual in consequence of having suffered an attack of a pathogenic organism of normal or modified virulence, or of its toxin, and having overcome it (*active i.*), or as a result of the injection of the serum of an animal which has acquired an active immunity against the organism in question (*passive i.*); *mixed i.* is a succession of passive and active i. obtained by serovaccination.* **ac'tive i.**, see *acquired i.* **ac'tual i.**, active i. **group** or **herd i.**, resistance to the spread of infectious disease in a herd or group, irrespective as to whether there is or not a high degree of individual i. in the members of that herd or group. **inhe'rent-i.**, i. possessed by the individual through a natural or inborn power of resistance to any or all infectious diseases; autarcesis. **lo'cal i.**, a natural or acquired i. of certain regions, organs, or tissues, as of the muscles against tuberculosis. **mixed i.**, see *acquired i.* **nat'ural i.**, i possessed by all the individuals of a class, by reason of age, racial peculiarity, or other general characteristic. **pas'sive i.**, see *acquired i.* **rel'ative i.**, an i, which may be due to a reduction of avidity of the body-cells for the specific poison, or to a deviation or loss of complement in the blood.

immuniza'tion. The process of rendering immune. **active i.**, the production of active immunity.* **passive i.**, the production of passive immunity.*

immunochemistry (im-mu"no-kem'is-tri). The chemistry of immunization; the chemical reactions following the injection of foreign substances, such as proteins and ferments, into the blood.

immu'nogen [L. *immunitas*, immunity, + G. *gennaō*, I produce.] Trade name of one of a group of vaccines containing only the exotoxins of the specific microorganism; **ectoantigen**, **exoantigen**.

immunol'ogy. The science which has to do with the phenomena of immunity.

immunoprotein (im-u-no-pro'te-in). 1. Immunotoxin. 2. A bacteriolytic protein formed by the injection of attenuated bacterial cultures.

immunotox'in. Antitoxin.

immunotransfusion (im-mu-no-trans-fu'zhun). Indirect transfusion, in which the donor is first immunized by an autogenous vaccine from the patient, and then, a few hours later, the donor's blood is taken, defibrinated by shaking and transfused into the patient, carrying with it the nonspecific antibodies produced by the injected vaccine.

impact' [L. *impactus; impingere*, to strike on.] To press closely together so as to render immovable.

im'pact. The forcible striking of one body against another.

impac'ted. 1. Pressed closely together so as to be immovable, noting a fracture in which the jagged ends of the broken bone are wedged together; also noting a tooth which is so placed in the alveolus as to be incapable of eruption. 2. Noting a fetus which, because of its large size or narrowing of the pelvic canal, has become wedged and incapable of spontaneous advance or recession.

impac'tion. The process or condition of being impacted. **dental i.**, confinement of a tooth in the alveolus and prevention of its eruption.

impalpable (im-pal'pa-bl) [L. *im-*, neg. + *palpabilis*, that can be felt.] That cannot be felt, noting a powder so fine as to be free from the slightest grittiness, or a pulse that cannot be detected by the finger pressing on the radial artery.

impal'udism [L. *in*, in, + *palus*, a marsh.] Paludism.

im'par [L.] Unpaired, azygous.

imparidigitate (im-par-ĭ-dij'ĭ-tāt) [L. *impar*, unequal, + *digitus*, finger.] Having an unequal number of fingers or toes, as man; perissodactylous.

imparipinn'ate [L. *impar*, unequal, + *pinnatus*, feathered.] In botany, noting a compound pinnate leaf, tipped with a single leaflet

imper'ative [L. *imperare*, to command.] Obligatory, involuntary, not controllable by the will. **i. con'cept,** an idea or thought, usually of doubt or fear, which dominates one and governs his actions.

imperato'ria. Oreoselinum.

imperception (im-pur-sep'shun) [L. *in-*, not, + *percipere*, to perceive.] Inability to form a mental picture of an object by combining the sensations arising therefrom; lack of perception.

imper'forate [L. *im-* neg. + *per*, through, + *forus*, a gangway.] Without an opening, closed.

imperfora'tion. The condition of being occluded or closed; indicated in compounds by the prefix *atseto-* or the suffix *-atresia*.

impe'rial drink. Potus imperialis.

imper'meable [L. *im-* neg. + *permeare*, to pass through.] Impenetrable, impervious to fluids.

imper'vious [L *im-* neg. + *per*, through, + *via*, way.] Impenetrable, impassable.

impetiginization (im-pe-tij"in-i-za'shun). The occurrence of impetigo lesions upon an area of some preexisting dermatosis.

impetiginous (im-pe tij'in-us). Relating to impetigo.

impetigo (im-pe-ti'go) [L. *impetere*, to attack.] Scrum-pox, an eruption of pustules, which soon rupture or become crusted, occurring chiefly on the face around the mouth and nostrils, caused by infection with pus microorganisms; it is variously qualified as *simplex, contagiosa, vulgaris, streptogenes, staphylogenes*, or, according to the shape of the patches caused by grouping of the lesions, *circinata, gyrata*, or *figurata*. **follic'ular i.**, Bockhart's* i. **i. bullo'sa,** i. with lesions of large size, forming bullæ. **i. contagio'sa,** an eruption of flattish vesicles becoming pustules, contagious in character. **i. contagio'sa bullo'sa,** Corlett's* pyosis. **i. eczemato'des,** eczema pustulosum. **i. herpetifor'mis,** an eruption of small, closely aggregated pustules, developing upon an inflammatory base, accompanied by severe general symptoms, and terminating fatally as a rule. **i. prima'rum via'rum,** sprue (2). **i. syphilit'ica,** a pustular syphilide. **i. variolo'sa,** a pustular eruption sometimes seen late in the course of the small-pox exanthem. **staphylococ'cic i.,** Bockhart's* i.

impf-malaria (imph-mă-la'rĭ-ă) [Germ. *impfen*, to vaccinate.] Malaria induced by injection, as distinguished from anopheles-conveyed malaria.

implant' [L. *im-*, in, + *plantare*, to plant.] To graft, to insert.

implanta'tion. The insertion of a natural tooth into an artificially constructed alveolus.

impon'derable [L. *im-* neg. + *pondus*, weight.] Very light, having little or no weight.

im'potence, im'potency [L. *im-* neg. + *potentia*, power.] Weakness, lack of power; specifically, lack of power, in the male, to copulate.

impotentia (im-po-ten'shĭ-ah). Impotence. **i. coeun'di,** inability of the male to perform the sexual act. **i. erigen'di,** impotence due to absence of the power of erection.

impreg'nate [L. *im-*, in, + *prægnans*, with child. 1. To fecundate, to cause to conceive. 2. To saturate, to permeate with another substance.

impregna'tion. 1. Fecundation, the act of making pregnant. 2. Saturation.

impres'sio [L.] Impression; a mark seemingly made by pressure of one body on another. **i. cardi'aca** [BNA], a depression on the superior area of the parietal surface of the liver corresponding to the position of the heart. **i. col'ica** [BNA], a hollow on the under surface of the right lobe of the liver anteriorly, corresponding to the situation of the hepatic flexure and beginning of the transverse colon. **i. deltoid'ea,** tuberositas* deltoidea. **i. digita'ta** [BNA], digitate impression.* **i. duodena'lis** [BNA], a hollow on the under surface of the right lobe of the liver alongside the gall-bladder, marking the situation of the duodenum. **i. gas'trica** [BNA], a hollow on the under surface of the left lobe of the liver corresponding to the location of the stomach. **i. œsophage'a** [BNA], esophageal groove, the marking of the esophagus on the back part of the left lobe of the liver. **i. petro'sa pall'ii** [BNA], a shallow impression on the inferior surface of the cerebral hemisphere made by the superior angle of the pyramid. **i. rena'lis** [BNA], a hollow on the under surface of the right lobe of the liver, in which lies the right kidney. **i. suprarena'lis** [BNA], a hollow on the under surface of the right lobe of the liver, adjoining the fossa venæ cavæ, in which lies the right suprarenal body. **i. trigem'ini** [BNA], trigeminal impression, a depression on the anterior surface of the petrous portion of the temporal bone, near the apex, lodging the semilunar (Gasserian) ganglion of the trigeminal nerve.

impres'sion [L. *impressio; imprimere*, to press in] 1. A mark seemingly made by pressure of one structure or organ upon another; see *impressio*. 2. An effect produced upon the mind by some external object acting through the organs of sense. 3. An imprint of the jaw, teeth (if present), and roof of the mouth, made in wax or other plastic material, used as a mould for a plaster cast of the mouth. **dig'itate i.,** one of the depressions on the upper surface of the orbital plates of the frontal bone, in the anterior cranial fossa, alternating with elevations, the juga cerebralia. **mater'nal i.,** a strong emotion or shock, experienced by a pregnant woman, supposed to be the cause of a malformation or surface marking of the fetus; also this lesion or malformation supposed to result from the mental impression of the mother.

impres'sion-cup, impres'sion-tray. A receptacle for holding the wax or other material used in taking an impression of the mouth parts.

im'pulse [L. *impellere*, to push on.] 1. A sudden pushing or driving force. 2. A sudden, often unreasoning, determination to perform some act. **mor'bid i.,** one which drives a person to commit some act, notwithstanding his efforts to restrain himself.

impul'sive. Relating to or actuated by an impulse, rather than controlled by reason. **i. act,** one which is done consciously, but under the influence of a morbid impulse which one is unable to resist.

I. M. S. Abbreviation for India Medical Service.

In. Chemical symbol of indium.

in- [L.] 1. A prefix conveying a sense of negation. un-, not. 2. A prefix denoting in, within, inside; 3. A prefix denoting an intensive action. 4. [G. *is* (*in-*), fiber.] A prefix denoting fibrous tissue or fibrin.

inac'tion. Inactivity, rest; lack of response to a stimulus.

inactivate (in-ak'tĭ-vāt). To render inactive, said of a serum when its contained complement is being destroyed.

inactiva'tion. Rendering inactive or nert, noting, for example, the loss of activity of serum containing both ambocepter and complement when it is heated to about 55° C. (131° F.) for half an hour.

inactose (in-ak'tōz). A sugar having no polarizing action in either direction; it is found in certain plants.

inadequacy (in-ad'e-kwa-sĭ) [L. *in-* neg. + *adæquare*, to be equal.] Insufficiency, the condition of being unequal to the performance of the work demanded; incompetence. **hepatic i., renal i., valvular i.,** etc., see under *insufficiency.*

inalimen'tal. Innutritious, unfit for food.

inan'imate. 1. Not animate, not alive. 2. Dull, lifeless.

inanition (in-an-ish'un) [L. *inanis*, empty.] Exhaustion from lack of food or defect in assimilation.

inapp'etence [L. *in-* neg. + *appetere*, to long for.] Lack of desire or of craving.

inartic'ulate. Not in the form of intelligible speech, not articulate; speechless.

in artic'ulo mor'tis [L. *articulus*, moment; *mors*, death.] At the moment of death.

inassim'ilable. Not assimilable, not capable of being appropriated for the nutrition of the body.

inax'on [G. *is*(*in-*), fiber, + *axōn*, axis.] An axis-cylinder process which gives off no dendrites for a long distance after leaving the neuron.

in'born. Innate, implanted during development in utero, referring to certain anomalies of development, mental traits, or constitutional peculiarities; distinguished from *congenital.*

in'breeding. Breeding from animals of the same parentage or of the same near ancestry.

incandescent (in-kan-des'ent) [L. *incandescere*, to begin to glow.] White hot.

incarcerated (in-kar'sur-a-ted) [L. *in*, in, + *carcer*, jail.] Confined, imprisoned, noting, for example, an irreducible hernia.

incarcera'tion. Imprisonment, confinement.

inca'rial bone. Os incæ.

incar'nant [L. *incarnare*, to make flesh.] Promoting or accelerating the granulation of a wound.

incar'native. Incarnant.

in'cident [L. *incidere*, to fall into, to meet with.] 1. Occurring, happening with. 2. Falling or impinging upon. 3. Going toward, afferent.

inciden'tal. 1. Of the nature of an incident or happening, not occurring regularly. 2. Afferent. **i. color,** a color the impression of which remains fixed on the retina after the object causing it is no longer present. **i. image,** an image the impression of which remains on the retina after the object has been removed.

incinera'tion [L. *incinerare*, to burn to ashes.] Cremation, complete destruction of all organic matter by fire.

incip'ient [L. *incipere*, to begin.] Just beginning.

incisal (in-si'zal) [L. *incidere*, to cut into.] Relating to the cutting edges of the incisor and cuspid teeth.

incise' [L. *incidere*, to cut into.] To cut with a knife.

incision (in-sizh'un). A cut, a division of the soft parts made with a knife. **Bar's i., Bergmann's i., Bevan's i., McBurney's i., Wilde's i.,** etc., see under the proper names.

inci'sive. 1. Cutting, having the power to cut. 2. Relating to the incisor teeth.

inci'sor [L. *incidere*, to cut into.] One of the cutting teeth, or *incisor teeth*, four in number in each jaw at the apex of the dental arch.

incisu'ra [L. a cutting into.] 1. Incision. 2. Notch.

i. acetab'uli [BNA], acetabular notch, cotyloid notch; a gap at the lower part of the margin of the acetabulum opposite the obturator foramen.

i. angula'ris, sulcus angularis, a sharp angular depression in the lesser curvature of the stomach at the junction of the body with the pyloric canal.

i. ante'rior au'ris, anterior notch of the ear, a notch between the tuberculum supratragicum and the spina helicis.

i. ap'icis cor'dis [BNA], an angular notch in the lower part of the anterior border of the left lung.

i. cardi'aca [BNA], 1. the cardiac notch on the anterior border of the lower part of the upper lobe of the left lung, giving space for the pericardium. 2. a deep notch in the outer wall of the stomach marking the junction of the esophagus with the fundus.

i. cartilag'inis mea'tus acus'tici exter'ni [BNA], foramen cartilaginis meatus [NK], notch in the cartilage of the external acoustic meatus. i. Santorini, one of (usually) two vertical fissures in the anterior portion of the cartilage of the external auditory meatus, filled by fibrous tissue.

i. cerebel'li ante'rior [BNA], anterior notch of the cerebellum, semilunar notch, a wide, shallow notch on the anterior surface of the cerebellum occupied by the brachia conjunctiva and the inferior quadrigeminal bodies.

i. cerebel'li poste'rior [BNA], posterior notch of the cerebellum, marsupial notch, a narrow notch between the cerebellar hemispheres posteriorly, occupied by the falx cerebelli.

i. clavicula'ris [BNA], the clavicular notch or facet, a hollow at either side of the upper surface of the manubrium sterni articulating with the clavicle.

i. costa'lis [BNA], one of the notches or facets on the lateral edge of the sternum for articulation with a rib.

i. ethmoida'lis [BNA], ethmoidal notch, an oblong space between the orbital parts of the frontal bone in which the ethmoid bone is lodged.

i. fibula'ris [BNA], fibular notch, a hollow on the outer surface of the lower end of the tibia, in which the lower end of the fibula rests.

i. fronta'lis [BNA], frontal notch; (1) a small notch on the orbital margin of the frontal bone, to the inner side of the supraorbital notch; (2) nasal notch (1).

i. interarytænoid'ea [BNA], the posterior portion of the aditus laryngis between the two arytenoid cartilages.

i. intertrag'ica [BNA], intertragic notch, the deep notch at the lower part of the auricle between the tragus and the antitragus.

i. ischiad'ica ma'jor [BNA], great sciatic notch, iliosciatic notch, a deep indentation on the posterior

border of the innominate bone at the point of union of the ilium and ischium.

i. ischiad'ica mi'nor [BNA], lesser sciatic notch, sacrosciatic notch; an indentation on the posterior border of the ischium just below the sciatic spine.

i. jugula'ris [BNA], (1) a deep notch in front of the jugular process of the occipital bone, forming part of the foramen lacerum posterius; (2) the notch on the upper border of the sternum between the clavicular notches, presternal notch.

i. lacrima'lis [BNA], lacrymal notch, the notch on the internal margin of the orbital surface of the maxilla which receives the lacrymal bone.

i. mandib'ulæ [BNA], sigmoid notch; a deep notch on the upper edge of the ramus of the mandible between the condyle and the coronoid process.

i. mastoid'ea [BNA], mastoid notch, digastric fossa or groove.

i. nasa'lis (1) [BNA] nasal notch, the large defect in the anterior border of the maxilla which, with its fellow, forms the apertura pyriformis or anterior opening of the nasal fossæ; (2) nasal border, margo nasalis [BNA], the articular surface between the two internal angular processes of the frontal bone, which articulates with the nasal and superior maxillary bones.

i. pancre'atis [BNA], a notch separating the left half of the head of the pancreas from the neck.

i. parieta'lis [BNA], parietal notch, an angle between the squamous and mastoid portions of the temporal bone.

i. radia'lis [BNA], radial notch, lesser or small sigmoid cavity of the ulna; a concavity on the outer side of the coronoid process, articulating with the rim of the head of the radius.

i. Rivi'ni, notch of Rivinus, i. tympanica.

i. Santori'ni, incisura cartilaginis meatus acustici externi.

i. scap'ulæ [BNA], scapular or suprascapular notch, a notch, occasionally a foramen, on the upper border of the scapula, transmitting the suprascapular nerve.

i. semiluna'ris [BNA], semilunar notch, greater sigmoid cavity; a large semicircular notch at the upper extremity of the ulna, formed by the olecranon and coronoid processes, which articulates with the trochlea of the humerus.

i. sphenoplalati'na [BNA], sphenopalatine notch, a deep notch between the orbital and sphenoidal processes of the palate bone, which is converted into the foramen of the same name by the under surface of the sphenoid.

i. supraorbita'lis [BNA], supraorbital notch; a groove in the orbital margin of the frontal bone, about the junction of the inner and middle thirds, through which pass the supraorbital nerve and artery.

i. tento'rii [BNA], notch of the tentorium, Pacchionian foramen, a notch on the anterior border of the tentorium in which lie the pons and the quadrigeminal plate of the cerebrum.

i. termina'lis au'ris [BNA], terminal notch of the auricle, a deep notch separating the lamina tragica and cartilage of the external auditory meatus from the main auricular cartilage, the two being connected below by the isthmus.

i. thyreoid'ea infe'rior [BNA], a shallow notch at the lower part of the anterior border of the thyroid cartilage.

i. thyreoid'ea supe'rior [BNA], a deep notch in the upper portion of the anterior border of the thyroid cartilage.

i. trag'ica, i. intertragica.

i. tympan'ica [BNA], tympanic notch, i. Rivini, the defect in the upper portion of the long tympanic ring, between the greater and lesser tympanic spines; it is filled in by Shrapnell's membrane.

i. ulna'ris [BNA], u nar notch, sigmoid cavity of the radius, a concave surface on the inner side of the lower extremity of the radius articulating with the head of the ulna.

i. umbilica'lis [BNA], umbilical notch, a notch in the lower border of the liver, corresponding to the lower attachment of the falciform ligament and noting the beginning of the fossa venæ umbilicalis.

i. vertebra'lis [BNA], vertebral or intervertebral notch, one of the four concavities above (*i.v. superior* or *minor*) and below (*i.v. inferior* or *major*) the root of the pedicle of the vertebra on either side; the notches of the two adjacent vertebræ form a foramen through which pass the spinal nerve-roots.

incisure (in-si'zhūr) [L. *incisura.*] An incision or notch; see *incisura.*

inclina'tion. In dentistry the deviation of the long axis of a tooth from the perpendicular.

inclinom'eter [L. *inclinare,* to incline, + G. *metron,* measure.] An instrument for determining the direction of the ocular axes.

inclu'sion [L. *inclusus; includere,* to inclose.] 1. Any foreign or heterogenous substance contained in a cell or in any tissue or organ, not introduced as a result of trauma. 2. The process by which a foreign or heterogenous structure is misplaced in another tissue. **cell i.,** a foreign body or substance contained within a cell. **fe'tal i.,** a twin monstrosity in which the incompletely developed parasite is wholly inclosed within the autosite. **i. blennorrhe'a,** ophthalmia neonatorum caused by the presence of *Chlamydozoa.** **i. bodies,** nucleoids, peculiar bodies, of as yet uncertain nature, seen in the nucleus or cytoplasm of cells in the specific lesion in cases of infection by filtrable viruses; the bodies are variously shaped and granular or hyaline, homogeneous or enclosing one or more corpuscles, and acidophilic or basophilic in their staining reactions; they are believed to be pathognomonic of filtrable-virus infection.

incoercible (in-ko-ur'sĭ-bl) [L. *in-* neg. + *coercere,* to restrain] Impossible to control, to restrain, or to stop

incohe'rent [L. *in-* neg. + *cohærere,* to stick together.] Not coherent, disjointed, confused

incompat'ible [L. *in-* neg. + *con-,* with, + *pati,* to suffer] Not capable of being mixed without undergoing destructive chemical change or acting antagonistically, said of the elements in a wrongly constructed pharmaceutical mixture.

incompatibil'ity. The quality of being incompatible. **chem'ical i.,** a form in which the substances, when mixed, combine to form a new chemical compound. **physiolog'ical i.,** a form in which the substances in the mixture exert opposing physiological actions. **therapeu'tic i.,** physiological i.

incompensa'tion. Lack of compensation.

incom'petence, incom'petency [L. *in-* neg. + *competere,* to suit.] Insufficiency, inadequacy, the quality of being incompetent or incapable of performing the task allotted. **mus'cular i.,** imperfect closure of an anatomically normal cardiac valve, in consequence of defective action of the papillary muscles. **pylor'ic i.,** a patulous state or want of tone of the pylorus which allows of the passage of food into the intestine before gastric digestion is completed. **rel'ative i.,** imperfect closure of a cardiac valve, in consequence of excessive dilatation of the corresponding cavity of the heart. **val'vular i.,** a leaky state of one or more of the cardiac valves, the valve not closing tightly and blood therefore regurgitating when the chamber contracts.

incompress'ible. Incapable of being compressed into smaller bulk.

incon'tinence [L. *in-* neg. + *continere,* to contain, to stop.] 1. Inability to prevent the discharge of any of the excretions, especially of urine or feces. 2. Lack of restraint of the appetites, especially of the sexual appetite. **active i.,** a discharge of urine or feces in the normal way at intervals, but involuntarily. **i. of milk,** galactorrhea. **i. of**

urine, enuresis. **passive i.**, dribbling of urine by reason of inability of the bladder to empty itself and of consequent overdistention

incoordination (in-ko-or-di-na'shun). Lack of coordination, or of harmonious working together of the various muscles concerned in the execution of more or less complicated movements.

incor'porate [L. *in*, into, + *corpus*, body.] To combine two or more substances into a homogeneous mass.

incorpora'tion [L. *in*, into, + *corpus*, body.] The act of incorporating or the condition of being incorporated.

in'crement [L. *incrementum; increscere*, to increase.] 1. The act of increasing. 2. An increase, an addition.

incretion (in-kre'shun) [L. *incretus* (pp. of *incernere*), sifted in; see *excretion* and *secretion*.] Internal secretion. 1. The functional activity of an endocrine gland. 2. The product of the activity of an endocrine gland; hormone or chalone.

incretory (in'kre-to-rĭ). Relating to the process of incretion or to its products.

incrusta'tion [L. *in*, on, + *crusta*, crust.] 1. The formation of a crust or a scab. 2. A coating of some adventitious material or an exudate, a scab.

incubation (in-ku-ba'shun) [L. *incubare*, to lie in or on.] 1. The keeping of bacterial or protozoan cultures in an incubator to favor their development. 2. The maintenance of a premature or marantic infant in a couveuse. 3. The development of an infectious disease from the period of infection to that of the appearance of the first symptoms. 4. The passing of the night in a temple, church, shrine, etc., as a means of obtaining a cure of disease. **pe'riod** or **stage of i.**, the latent or silent stage of an infectious disease intervening between the moment of infection and the appearance of the prodromal symptoms.

in'cubator. 1. A cabinet in which a uniform temperature of any desired degree can be maintained, used for keeping bacterial cultures. 2. A box-like construction with glass sides, with a ventilating apparatus for the supply of an abundance of pure air at body temperature, designed for the protection of prematurely born infants.

in'cubus [L. *incubare*, to sit or lie upon.] Nightmare.

in'cudal. Relating to the incus. **i. fold**, a fold of mucous membrane in the tympanum passing from the long limb of the incus to the posterior wall of the cavity. **i. fossa**, a shallow groove in the posterior wall of the tympanic cavity in which the short limb of the incus is fastened.

incudec'tomy [L. *incus*, anvil, + G. *ekstomē*, excision.] Removal of the incus of the tympanum.

incudiform (in'ku-dĭ-form) [L. *incus* (*incud-*), anvil, + *forma*, form.] Shaped like an anvil.

incu'dius. Laxator tympani.

incu"domall'eal. Relating to the incus and the malleus, noting the articulation between the anvil and the hammer in the tympanum.

incu"dostape'dial. Relating to the incus and the stapes, noting the articulation between the anvil and the stirrup in the tympanum.

incurable (in-ku'ră-bl). Not curable, immedicable.

incurva'tion. An inward curvature; a bending inward.

in'cus, gen. *incu'dis* [L.] Anvil, the middle of the three ossicles in the tympanum, comparable in shape to a bicuspid tooth; it has a body (*corpus incudis*) and two limbs or processes (*crus longum* and *crus breve*); at the tip of the long limb is a small knob, *processus lenticularis*, which articulates with the head of the stapes.

indagation (in-da-ga'shun) [L. *indagare*, to search.] An examination or investigation; specifically, the determination of the condition of the genital parts at the termination of the puerperium preliminary to the discharge of the patient.

indehiscent (in-de-his'ent). In botany, noting a fruit or seed-pod which does not split open naturally to discharge the seeds.

indenization (in-den-i-za'shun) [*in* + *denizen*.] Innidiation.

indenta'tion. 1. The act of notching or pitting. 2 A notch 3. A state of being notched.

in'dex, gen. *in'dicis*, pl. *in'dices* [L. an indicator.] 1 The second finger (the thumb being counted as the first), forefinger, or pointing finger 2. A number denoting the relation, in respect of size, capacity, or function, of one part or thing to another, the latter being usually taken as 1 or 100. 3. A list of subjects, with page references, treated of in a book.

alve'olar i., gnathic i.; basilar i

antitryp'tic i., see *antitryptic*.

auric'ular i., relation of the width to the height of the auricle or pinna, or $\frac{\text{width of pinna} \times 100}{\text{length of pinna}}$.

bas'ilar i., ratio between the basialveolar line and the maximum length of the cranium, according to the formula $\frac{\text{basialveolar line} \times 100}{\text{length of cranium}}$; alveolar i.

cal'cium i., see under *Bell's* method*.

cephal'ic i., the ratio of the maximum breadth to the maximum length of the skull, obtained by the formula $\frac{\text{breadth} \times 100}{\text{length}}$.

cephalo-or'bital i., the ratio of the cubic content of the two orbits to that of the cranial cavity multiplied by 100.

cer'ebral i., an i. obtained by the same formula as the cephalic i., the measurements being taken between the inner surfaces of the cranium.

col'or i., a figure indicating the amount of hemoglobin per erythrocyte; blood quotient.

den'tal i., relation of the dental length (distance from the anterior surface of the first premolar to the posterior surface of the third molar) to the basinasial (basion to nasion) length = $\frac{\text{dental length} \times 100}{\text{basinasial length}}$.

empath'ic i., see *empathic*.

endem'ic i., the percentage of children infected with malaria or other endemic disease, in any given locality

fa'cial i., relation of the length of the face to its maximum width between the malar prominences; to get the *superior facial i.*, the length is measured from the nasion or ophryon to the alveolar point = $\frac{\text{ophryo-alveolar (nasialveolar) length} \times 100}{\text{bizygomatic width}}$; for the *total facial i.*, the mandible is included in the length, measured from the nasion or ophryon to the mental tubercle, = $\frac{\text{ophryomental (nasimental) length} \times 100}{\text{bizygomatic width}}$.

gnath'ic i., relation between the basialveolar (basion to alveolar point) and basinasial (basion to nasion) lengths, the latter being taken as 100 = $\frac{\text{basialveolar length} \times 100}{\text{basinasal length}}$; the result indicates the degree of projection of the upper jaw; alveolar i.

height-length i., vertical i.

hemore'nal salt i., the ratio of the quantity of inorganic salts in the urine to that of the inorganic salts in the blood; a figure obtained by dividing the electrical resistance of the blood by that of the urine; it varies from 3 to 5 in health.

ic'terus i., the varying proportion of bilirubin in the blood as an indication of normal or abnormal function of the liver.

iron i., a figure obtained by dividing the figure for the average iron content of normal blood (42.74 mg.) by the

red cell count in millions; it normally varies between 8 and 9, in pernicious anemia it is above 10, but is about normal in chronic secondary anemia.

length-breadth i., cephalic i.

length-height i., vertical i.

na'sal i., relation of the greatest width of the nasal aperture to the length of a line from the nasion to the lower border of the nasal aperture, the former being regarded as 100; $= \frac{\text{nasal width} \times 100}{\text{nasal height}}$.

opson'ic i., see *opsonic*.

or'bital i., relation of the height of the orbit to its width $= \frac{\text{orbital height} \times 100}{\text{orbital width}}$.

pal'atal or pal'atine i., palatomaxillary i.

pal"atomax'illary i., relation of the palatomaxillary width, measured between the outer borders of the alveolar arch just above the middle of the second molar tooth, and the palatomaxillary length, measured from the alveolar point to the middle of a transverse line touching the posterior borders of the two maxillæ $= \frac{\text{palatomaxillary width} \times 100}{\text{palatomaxillary length}}$; it notes the varying forms of the dentary arcade and palate.

phagocyt'ic i., see *phagocytic*.

pel'vic i., the ratio of the conjugate to the transverse diameter of the pelvis.

refrac'tive i., the ratio of refractive power of any medium to that of the air, the latter being taken as unity, or 1.

sa'cral i., a ratio obtained by multiplying the breadth of the sacrum by 100 and dividing by the length.

thorac'ic i., the ratio of the anteroposterior to the transverse diameter of the thorax.

tibiofem'oral i., the ratio of the length of the tibia to that of the femur

ure'a i., Ambard's* constant.

ventila'tion i., the figure obtained by the formula $\frac{\text{ventilation test}}{\text{vital capacity}}$.

ver'tical i., the relation of the height to the length of the skull, the latter being represented by $100 = \frac{\text{height} \times 100}{\text{length}}$.

vol'ume i., the relation between the number and the volume of the red cells.

zygomat"icoauric'ular i., the ratio between the zygomatic and the auricular diameters of the skull.

In'dian hemp. Cannabis indica. **I. meth'od,** (1) a method of extraction of a cataract in the capsule by expression, devised by Lt. Col. Henry Smith of Jellundur, Punjab, India; (2) rhinoplasty by means of a skin flap taken from the forehead. **I. sick'ness,** epidemic gangrenous proctitis. **I. tobac'co,** lobelia.

in'dia-rubb'er. Caoutchouc.

in'dican. 1. The mother substance of indigo-blue, a yellowish or colorless syrupy glucoside, $C_{26}H_{31}NO_{17}$. 2. The sodium or potassium salt of indoxyl sulphate, $C_8H_6NSO_2OH$, a substance found in the sweat and in variable amount in the urine, indicative, when in quantity, of protein putrefaction; see *Jaffe's* test*.

indicanidrosis (in"dĭ-kan-i-dro'sis) [G. *hidrōs*, sweat.] Excretion of indican in the sweat.

in'dicant [L. *indicare*, to point out.] 1. Pointing out, indicating. 2. An indication; especially a symptom indicating the proper line of treatment.

indicanuria (in"dĭ-kan-u'rĭ-ah). The presence in the urine of an excess of indican, derived from indole produced in protein putrefaction in the intestine and in putrefactive changes elsewhere.

indicarminum (in-dĭ-kar-me'num) (Br.) Sodu* indigotindisulphonas (U. S.), indigo carmine.

indica'tio [L.] Indication. **i. causa'lis,** causal indication, one afforded by a knowledge of the cause of the disease. **i. mor'bi,** disease indication, specific indication, that afforded by the diagnosis, as the indication for the administration of quinine furnished by the diagnosis of malaria. **i. symptomat'ica,** symptomatic indication, that furnished by the symptoms of the disease.

indica'tion [L. *indicatio; indicare*, to point out.] A suggestion or pointer as to the proper treatment of a disease; it may be furnished by a knowledge of the cause (*causal i.*), by the symptoms present (*symptomatic i.*), or by the nature of the disease (*specific i.*), see *indicatio*.

in'dicator [L. *indicare*, to show.] In chemical analysis a substance which renders visible the completion of a reaction; the color change in litmus, for example, denotes the formation of an acid or alkali or the neutralization of a solution. **com'plex i.,** in psychoanalysis, anything or any occurrence that reveals the working of a complex. **i. muscle,** musculus* extensor indicis proprius.

indicophose (in'dĭ-ko-fōz) [G. *indikon*, indigo, + *phōs*, light.] A phose of blue color.

Indiella (in-dĭ-el'lah). A genus of fungi, secreting no pigment, several species of which are causative of a non-pigmented form of mycetoma, the so-called white mycetoma; the several species are *I. man'soni, I. rey'nieri,* and *I. somalien'sis*.

indiff'erent [L. *in-* neg. + *differre*, to differ.] 1. Tending in neither direction, having no particular affinity, neutral. 2 Undifferentiated. **i. cells, i. tissue,** undifferentiated, non-specialized, embryonic cells or tissue.

indigenous (in-dij'en-us) [L. *indigenus*, born in.] Native, natural to the country where found.

indiges'tible. Not digestible.

indigestion (in-di-jes'chun) [L. *in-* neg.] Failure of proper elaboration of the food in the alimentary tract. **gas'tric i.,** dyspepsia.

indigitation (in-dij-i-ta'shun) [L. *in*, in, + *digitus*, finger.] 1. The mode of union of tendon or aponeurosis with muscle by the mutual interlocking of fibers. 2. Invagination. 3. Intussusception.

in'digo [G. *indikon*, Indian] A blue dye-stuff obtained from *Indigofera tinctoria*, and other species of *I.*; was formerly employed in the treatment of nervous and menstrual disorders in doses of gr. 5–15 (0.3–1.0). **i. car'mine,** sodium indigotindisulphonate (U.S.), employed as a test for sugar in the urine, as a test of renal permeability, and as a stain in microscopy.

indigouria, indiguria (in"di-go-u'rĭ-ah, in-dĭ-gu'rĭ-ah) The presence of indigo in the urine.

indirect'. Not direct, not immediate.

indiscrim'inate [L. *in-* neg. + *discrimen*, separation, distinction.] Confused, promiscuous, having relation to various unrelated parts.

indisposition (in-dis-po-zish'un). A slight illness, malaise.

in'dium [*indigo*, because it gives a blue line in the spectrum.] A metallic element, symbol In, atomic weight 114.8; it is malleable and of a silvery white color.

in'doform. Trade name of a preparation said to be a mixture of formaldehyde with salicylic acid and acetyl salicylic acid.

in'dol, in'dole. Ketol, a crystalline substance, C_8H_7N, derivable from indigo; it is formed in the intestine during protein putrefaction and also occurs during the pancreatic digestion of proteins.

indolaceturia (in-dol-as-ĕ-tu'rĭ-ah). The excretion of an appreciable amount of indolacetic acid in the urine.

in'dolent [L. *in-* neg. + *dolere*, to feel pain.] Inactive, sluggish; painless or nearly so.

indologenous (in-dol-oj'en-us) [*indol* + G. *gennaō*, I produce.] Producing or causing the production of indol.

indox'yl. An oily liquid, C_8H_7NO, found sometimes in the urine in apparent health. **i. sul'phate,** indican.

indoxyluria (in-doks-il-u'rĭ-ah). The excretion of indoxyl, especially indoxyl sulphate, in the urine; indicanuria.

induce (in-dūs') [L. *inducere*, to lead in.] 1. To produce, to cause 2. To produce by electric or magnetic induction. **induced' cur'rent,** faradic* current.

inductance (in-duk'tans). The coefficient of electromagnetic induction. The unit of inductance is the *henry*, symbol L.

induction (in-duk'shun). 1. Production or causation. 2. The production of an electric current or magnet in a body by electricity or magnetism in another body in close proximity to it. 3. A modification imposed upon the offspring by the action of environment on the germ cells of one or both parents. 4. Therapeutic suggestion,* neuroinduction. **i. coil,** an apparatus for the induction of a secondary electrical current; it consists of a coil of comparatively few turns of copper wire, outside of which is (insulated from it) a coil of many turns of a very fine wire; through the inner coil is passed an interrupted current and every time the current opens or closes an induction current is generated in the outer coil.

in'dulin. A coal-tar dye used as a stain in histology and bacteriology.

indulinophil, indulinophile (in-du-lin'o-fil, in-du-lin'o-fīl) [*indulin* + G. *philos*, fond.] Taking an indulin stain readily.

in'durated [L. *in-* intensive + *durus*, hard.] Hardened.

induration. 1. The process or act of hardening. 2. A spot or area of hardened tissue. **brown i.,** proliferation of the fibrous tissue of the lungs with increased pigmentation, in certain cases of valvular disease of the heart. **cyanot'ic i.,** hardening of an organ due to chronic venous congestion with fibrous thickening of the venous walls. **fi'broid i.,** cirrhosis. **gran'ular i.,** cirrhosis. **gray i.,** non-pigmented hardening of the lung after pneumonia. **lam'inate i.,** a very thin sheet of round-cell infiltration of the corium forming the basis of a chancre. **parch'ment i.,** the same as laminate i., but somewhat thicker. **red i.,** congestion of the lungs.

in'durative. Relating to, causing, or marked by induration or hardening.

indusium, pl. *indu'sia* (in-du'zĭ-um) [L. a tunic.] 1. The amnion. 2. In botany, the epidermis or outgrowth of the leaf covering the sporangium in ferns. **i. gris'eum,** a thin layer of gray matter on the upper surface of the corpus callosum.

inebriant (in-e'brĭ-ant) [L. *inebriare*, to intoxicate.] 1. Making drunk, intoxicating. 2. An intoxicant.

inebria'tion. Intoxication, the state of being drunk.

inebriety (in-e-bri'e-tĭ) [L. *in-* intensive + *ebrietas*, drunkenness.] The habitual indulgence in alcoholic beverages in poisonous amount.

ineffec'tual. Inefficient, inadequate, not producing the desired result.

ineffica'cious. Inefficient, ineffectual.

inefficient (in-ĕ-fish'ent) [L. *in-* neg. + *facere*, to make.] Ineffectual, powerless to produce the desired effect, inefficacious.

inemia, inæmia (in-e'mĭ-ah) [G. *is(in)-*, fiber, + *haima*, blood.] The presence of fibrin in the blood, causing thrombosis and embolism; inosemia, fibremia, fibrinemia.

inert (in-urt') [L. *iners*, unskilful, sluggish.] 1. Slow in action, sluggish. 2. Having no therapeutic action, noting a drug.

inertia (in-ur'shyah) 1. The property of matter of remaining at rest or of continuing indefinitely in the motion imparted to it, unless acted upon by some impelling or retarding force. 2. Inactivity or lack of force, noting especially feebleness of the uterine contractions in labor, *inertia uteri*.

in extre'mis [L. *extremus*, last.] At the point of death.

in'fancy. 1. The earliest period of extrauterine life, babyhood; roughly, the first two years of life 2. In law, minority, the period prior to the twenty-first birthday. **nat'ural i.,** the period of legal irresponsibility, embracing the first seven years of life.

in'fant [L. *infans*, not speaking.] 1. A child during the first two years of life, a babe. 2. In law, a minor, a person under twenty-one years of age.

infan'ticide (L. *infans(infant-)*, infant, + *cædere*, to kill.] 1. The killing of an infant. 2. One who murders an infant.

infantile (in'fan-tīl). Relating to an infant. **i. li'ver,** biliary cirrhosis* of children. **i. paral'ysis,** acute anterior poliomyelitis.* **i. tet'anus,** trismus nascentium, trismus neonatorum.

infantilism (in-fan'tĭl-izm) [L. *infan'ilis*, infantile] A state marked by extremely slow development of mind and body. **anangioplas'tic i.,** a type of idiopathic i., supposedly due to defective development of the general vascular system. **cachec'tic i.,** a form of i., due apparently to chronic infection (malaria, tuberculosis, etc.), autointoxication, or chronic drug poisoning. **dysthyroi'dal i.,** i. due to imperfect metabolism consequent upon defective secretion of the thyroid gland. **hepat'ic i.,** a form associated with cirrhosis of the liver **idiopath'ic i.,** Lorraine's syndrome, a type of arrested physical development, due to hyposecretion of the anterior lobe of the pituitary gland, differing from Froelich's syndrome in the absence of obesity. **intes'tinal i.,** Herter type of i., a form associated with chronic intestinal trouble and possibly due to autointoxication; the bodily development is arrested with slight mental retardation, the abdomen is distended, there are frequent attacks of diarrhea, and fatigue, both bodily and mental, is induced by slight exertion. **lymphat'ic i.,** Paltauf's nanism, a form associated with lymphatism. **myxedem'atous i.,** Brissaud type of i., infantile myxedema, cretinism. **pancreat'ic i.,** a form associated with deficiency or absence of the pancreatic secretion. **par'tial i.,** arrested development affecting a special tissue or organ, such as cryptorchism, a patent foramen ovale, etc. **symptomat'ic i.,** symptomatic nanism * **toxe'mic i.,** intestinal i. **univer'sal i.,** Lorain type of i., a form in which the stature is dwarfed, but the physical development is otherwise normal except for the absence of the secondary sexual characteristics—change of voice, hairy development, etc.

infarct (in'farkt) [L. *infarcire*, to stuff.] An area of coagulation necrosis resulting from the arrest of circulation in the artery supplying the part. **ane'mic i.,** pale i. **calca'reous i.,** a deposit of calcium salts in the connective tissue. **hemorrhag'ic i.,** red i. **pale i.,** an i. caused by arrest of circulation in the terminal artery, or resulting from decolorization of a hemorrhagic i.

red i., an area, red in color and swollen, the seat of hemorrhagic infiltration. **uric-acid i.**, a plugging of the renal tubules in the newborn with crystals of uric acid.

infarction (in-fark'shun). 1. Changes produced by embolic obstruction of an end-artery in an organ. 2. The area so affected, infarct.

infect' [L. *inficere.*] To cause infection.

infection (in-fek'shun). Invasion by living pathogenic microorganisms of a part of the body where the conditions are favorable to their growth and whence their toxins may gain access to, and act injuriously upon, the tissues. See *contagion.* **drop'let i.**, infection acquired through the inhalation of droplets of virus-containing saliva or sputum expelled during sneezing, coughing, laughing, or talking by a patient or a "carrier." **endog'enous i.**, i. caused by normally non-pathogenic bacteria in the intestinal tract which have assumed a pathogenic character. **fo'cal i.**, a localized infection in the tonsils, tooth-sockets, or elsewhere, from which the microorganisms or their toxins are from time to time carried to other regions to produce other local or general systemic infections. **mass i.**, infection resulting from the entrance of a large number of pathogens into the circulation or tissues. **mixed i.**, i. by more than one variety of pathogenic microorganisms. **sec'ondary i.**, an i., usually septic, occurring in a person or animal already suffering from an i. of another nature. **ter'minal i.**, an acute infection, commonly pneumonic or septic, occurring toward the end of any disease (usually a chronic disease), and often the cause of death.

infectiosity (in-fek-shĭ-os'ĭ-tĭ). Infectiousness.

infectious (in-fek'shus). 1. Capable of being transmitted by infection, with or without actual contact (see *contagious*). 2. Producing an infection, infective. 3. Noting a disease due to the action of a microorganism, either animal or vegetable.

infec'tive. Relating to an infection, infectious

infecun'dity. Sterility in woman, barrenness.

inferior (in-fe'rĭ-or) [L. lower.] 1. Lower, below in relation to another structure, caudal [NK]. 2. Of less value or utility.

infest' [L. *infestare*, to attack.] To infect by macroscopic parasites; to invade parasitically.

infesta'tion. Invasion by macroparasites, such as helminths.

infibulation (in-fib-u-la'shun) [L. *in*, in, + *fibula*, a clasp.] Stitching together the lips of the vulva or of the prepuce in order to prevent copulation.

infiltrate (in-fil'trāt). 1. To percolate, to enter or cause to enter the pores of a substance, noting a liquid. 2. Material which has permeated or infiltrated into the tissues. **infraclavic'ular i.**, Assmann's early tuberculous i., an incipient lesion of tuberculous infection.

infiltra'tion. 1. The act of passing into or interpenetrating a substance, cell, or tissue, said of gases, fluids, or matters held in solution. 2. The gas, fluid, or dissolved matter, which has entered any substance, cell, or tissue. **ad'ipose i.**, fatty i. **cell'ular i.**, permeation of the tissues with round cells. **fat'ty i.**, the deposit, in abnormal quantity, in the cytoplasm, of fat globules or granules not formed within the cell itself (which would be fatty degeneration). **gelat'inous i.**, gray i. **gray i.**, a grayish infiltration filling the alveoli of the lung in the neighborhood of tubercles.

infin'ity [L *in-* neg. + *finis*, end.] Infinite distance *

infirm (in-furm') [L. *in-* neg. + *firmus*, strong.] Weak or feeble in consequence of old age or disease

infirmary (in-fur'ma-rĭ). A small hospital.

infirmity (in-fur'mĭ-tĭ). An abnormal, more or less disabling, condition of mind or body.

inflamma'tion [L. *inflammare; in*, in, + *flamma*, flame.] A morbid change or series of reactions produced in the tissues by an irritant; it is marked by an afflux of blood with exudation of plasma and leucocytes. The sensible phenomena indicating inflammation are mainly redness, heat, pain, and swelling—*rubor, calor, dolor, et tumor* of the older writers—none of which, however, is an essential sign of this condition; the redness and heat are phenomena of congestion, the pain and swelling are the result of congestion combined usually with exudation. **adhe'sive i.**, the slight phenomena of reaction occurring when a wound heals by first intention. **atroph'ic i.**, a chronic i. attended with an exudate of fibrinous material, the subsequent contraction of which leads to compression and atrophy of the tissues and cells. **catarrh'al i.**, inflammation, chiefly of the mucous membranes, characterized by proliferation, degeneration, and desquamation of the epithelial elements, with an increased watery and mucous secretion. **croupous i.**, acute i. attended with an exudation of fibrinous matter which spreads out into a tough, adherent membrane, or forms a mass of granular material. **ex'udative i.**, i. accompanied by the presence of an exudate consisting of serum, fibrin, and pus. **fi'brinous i.**, croupous i. **fibroid i.**, atrophic i. **hyperplast'ic i.**, productive i. **interstĭ'tial i.**, i. characterized by hyperplasia of the supporting fibrous tissue of the part. **necrot'ic i.**, i. accompanied by the death of more or less of the involved tissues. **parenchy'matous i.**, i., largely degenerative in character, affecting the special functioning cells of an organ. **produc'tive i.**, i. accompanied by the formation of new tissue, with or without an exudate. **serous i.**, an i. of the serous membranes, accompanied by a profuse exudation of serous fluid.

inflamm'atory. Relating to, marked by, or the result of inflammation.

infla'tion [L. *in*, in, + *flare*, to blow.] Distention of a part by a liquid or a gas.

inflec'tion, inflex'ion [L. *in*, in, + *flectere*, to bend.] 1. An inward bending, diffraction. 2. A change of tone or pitch in the voice.

inflorescence (in"flor-es'ens) [L. *inflorescere*, to begin to blossom.] The structure of a flower-cluster, including the presence or absence of flower-stalks, and, when present, their relative lengths and relation to each other. **def'inite i.**, cymose i., one in which the oldest flower is in the center, its axis ceasing to grow, while the younger flowers grow up around it. **indef'inite i.**, racemose i., one in which the youngest flowers are in the center, overtopping the older lateral branches.

influenza (in-flu-en'zah) [It. influence.] The grip; an acute infectious disease possibly caused by Pfeiffer's bacillus, characterized by fever, catarrhal inflammation of the respiratory or gastroenteric tract, or profound nervous disturbances marked by headache, insomnia, convulsions, delirium, neuritis, or mental depression. Three chief types are recognized: respiratory, gastroenteric, and nervous, according as the symptoms referable to one or another of these systems predominate; serious affection of the circulatory system is also a frequent complication or sequel. It occurs in

extensive epidemics or pandemics at intervals of years. **endem'ic i.**, i. nostras, acute catarrhal fever, winter grip, a disease resembling in its general features pandemic influenza, but usually of less severe type, occurring with more or less regularity during the cold season, especially in the larger cities of the world. **i. nos'tras,** endemic i.

influen'zal. Relating to, marked by, or resulting from, influenza.

infold'. To inclose within a fold, as in the operation of "infolding" an ulcer of the stomach, in which the walls of the organ on either side of the lesion are brought together and sutured.

in'footed. Pigeon-toed, standing or walking with the toes turned in.

infra- [L. below.] A prefix denoting a position below the part denoted by the word to which it is joined.

infraaxillary (in"frah-aks'il-a-rĭ). 1. Below the axilla. 2. In botany, below the axil of the leaf.

infraclavic'ular. Below the clavicle.

infraconstric'tor. The inferior constrictor muscle of the pharynx.

infracor'tical. Beneath the cortex of the brain or kidney; subcortical

infracos'tal. Below a rib or the ribs.

infracot'yloid. Below the acetabulum or cotyloid cavity.

infrac'tion [L. *infractus; infringere,* to break.] A fracture, especially one without displacement.

infracture (in-frak'chūr). Infraction.

infradiaphragmatic (in"frah-di"ah-frag-mat'ik). Subdiaphragmatic, below the diaphragm.

infraglenoid (in"frah-gle-noyd). Below the glenoid fossa of the temporal bone or the glenoid surface or cavity of the scapula. **i. impres'sion,** tuberositas infraglenoidalis.

infraglott'ic. Below the glottis, subglottic.

infrahyoid (in"frah-hi'oyd). Below the hyoid bone, noting especially a group of muscles: the sternohyoideus, sternothyreoideus, thyreoideus, and omohyoideus.

inframamm'ary. Below the mammary gland.

inframandib'ular. Beneath the mandible or lower jaw.

inframar'ginal. Below any margin or edge.

inframax'illary. Submaxillary, inframandibular.

infraorbital (in"frah-or'bĭ-tal). Beneath the orbit or in the floor of the orbit.

infrapatell'ar. Below the patella, noting especially a bursa and a pad of fat, the ligamentum mucosum, or plica* synovialis patellaris.

infra-red. Beyond the red end of the spectrum, noting certain invisible heat-rays of wave lengths from 7,700 A. u. upward.

infrascap'ular. Below the scapula. **i. ar'tery,** a small branch of the arteria circumflexa scapulæ.

infraspina'tus. See under *musculus.*

infraspi'nous. Below a spine or spinous process; specifically below the spine of the scapula, noting the *i. fossa,* forming the greater part of the posterior surface of the scapula.

infraster'nal. Below the sternum.

infratem'poral. Below the temporal fossa. **i. crest,** pterygoid ridge, a rough line on the external surface of the great wing of the sphenoid, separating the temporal from the zygomatic fossa. **i. fossa,** zygomatic fossa.

infrathoracic (in-frah-tho-ras'ik). Below or at the lower portion of the thorax.

infraton'sillar. Below the faucial tonsil

infratrochlear (in"frah-trok'le-ar). Below the trochlea or pulley of the obliquus superior muscle of the eye.

infraumbilical (in"frah-um-bil'ĭ-kal). Below the umbilicus.

infric'tion. The application of liniments or ointments combined with friction.

infundib'ular. Relating to an infundibulum. **i. ex'tract,** an extract of the infundibular portion of the hypophysis* cerebri.

infundibuliform (in-fun-dib'u-lĭ-form) [L. *infundibulum,* funnel, + *forma,* form.] Funnel-shaped. **i. fas'cia,** the reflection of the transversalis fascia over the structures entering the inguinal canal at the internal abdominal ring.

infundibulin (in-fun-dib'u-lin). A 20 per cent. solution of an extract of the posterior lobe of the hypophysis cerebri.

infundib"ulo-ova'rian. Relating to the fimbriated extremity of a Fallopian tube and the ovary. **i. lig'ament,** fimbria ovarica.

infundib"ulopel'vic. Relating to any two structures called infundibulum and pelvis, such as the expanded portion of a calyx and the pelvis of the kidney, or the fimbriated extremity of the Fallopian tube and the pelvis. **i. lig'ament,** a part of the broad ligament of the uterus, called also the suspensory of the ovary, which descends from the false pelvis and contains the ovarian vessels and nerves.

infundib'ulum, pl. *infundib'ula* [L. a funnel.] A funnel or funnel-shaped structure or passage. Specifically, (1) free cephalic extremity of the Mullerian duct; (2) expanding portion of a calyx as it opens into the pelvis of the kidney; (3) the narrowing of the right ventricle toward the origin of the pulmonary artery, the conus arteriosus; (4) termination of a bronchiole in the alveolus; (5) termination of the cochlear canal beneath the cupola; (6) the hollow in an incisor tooth of a horse, see *mark.* **i. ethmoida'le oss'is ethmoida'lis** [BNA], a passage from the middle meatus of the nose communicating with the anterior ethmoidal cells. **i. ethmoida'le ca'vi na'si** [BNA], a passage leading from the nose to the frontal sinus on the inner side of the upper portion of the lacrymal bone. **i. hypothala'mium** [BNA], the apical portion of the tuber cinereum forming the stalk of the hypophysis. **i. tu'bæ uteri'næ** [BNA], the funnel-like expansion of the abdominal extremity of the Fallopian tube.

infun'din. Trade name of an extract of the posterior lobe and infundibulum of the hypophysis cerebri.

infusible (in-fu'zi-bl). 1. Incapable of being melted or fused. 2. Capable of being made into an infusion.

infusion (in-fu'zhun) [L. *in,* into, + *fundere,* to pour.] 1. The process of steeping a substance in water, either cold or hot but below the boiling point, in order to extract its soluble principles; distinguished from decoction, which is effected with boiling water. 2. A medicinal preparation obtained by steeping the crude drug in water; for the official infusions see *infusum.*

infusodecoction (in-fu"zo-de-kok'shun). 1. Infusion followed by decoction. 2. A medicinal preparation made by steeping the crude drug first in cold water and then in boiling water.

Infuso'ria [L. *infusum,* infusion, the term being originally applied to all animalcules found in infusions or stagnant waters.] Ciliophora; a subphylum (or class) of *Protozoa,* the members

of which have a generative micronucleus and a vegetative macronucleus, and are provided with cilia, either free or fused into membranes; the cilia may be permanent or present only in the early stages.

infu'sum, gen. *infu'si,* pl. *infu'sa* [L. neut. of *infusus; infundere,* to pour in.] Infusion, tea, a class of pharmacopeial preparations made by pouring water (hot or cold, according to directions) over vegetable substances, allowing it to stand for some time, and then straining, the general formula for infusions is 50.0 of the vegetable substance, coarsely comminuted, to 1000.0 of water, usually boiling. There is one infusion in the U.S., 3 in the N.F., and 23 in the Br.

i. a'bri, 2 parts of powder of jequirity seeds in 25 of water at 120° F., employed externally in the treatment of granular lids.

i. alsto'niæ (B.A.), dita or alstonia bark 1, water 20; dose, ʒ½–1 (15.0–30.0).

i. andrograph'idis (B.A.), infusion of andrographis; 1 part boiled for 15 minutes in 20 parts of water; dose, ʒ½–1 (15.0–30.0).

i. auran'tii, infusion of orange peel; cut-up orange peel 1 ounce, water 20 fluidounces; tonic and stomachic in doses of ʒ 1–2 (30.0–60.0).

i. auran'tii compos'itum, compound infusion of orange peel; orange peel ½ ounce, lemon peel ¼ ounce, bruised cloves 55 grains, distilled water 20 fluidounces; stomachic and carminative in doses of ʒ 1–2 (30.0–60.0).

i. aurantii concentra'tum (Br.), concentrated infusion of orange peel, made by macerating dried bitter orange peel in 25 per cent alcohol; is seven times stronger than the fresh infusion.

i. auran'tii recens (Br.), fresh infusion of orange peel made by macerating dried bitter orange peel in distilled water; should be used within twelve hours after its preparation.

i. azadirach'tæ (B.A.), infusion of azadirachta, 1 part in 100 of cold water; dose, ʒ½–1 (15.0–30.0).

i. buchu (bu'ku) **concentra'tum** (Br.), concentrated infusion of buchu, buchu, 400, in alcohol 1000; dose ♏60–120 (4–8).

i. bu'chu re'cens (Br.), fresh infusion of buchu, buchu, 50, in distilled water 1000; dose fl. ʒi–ii (30.0–60.0).

i. calum'bæ concentra'tum (Br.), concentrated infusion of calumba, calumba, 400, in 1000 alcohol and water; dose ♏30–60 (2.0–4.0).

i. calum'bæ re'cens (Br.), fresh infusion of calumba, calumba, 50, distilled water 1000; dose fl. ʒ½–1 (15.0–30.0).

i. caryophyll'i concentra'tum (Br.), concentrated infusion of clove; clove 200, alcohol, 25 per cent, 1100; dose ♏30–60 (2.0–4.0).

i. caryophyll'i re'cens (Br.), fresh infusion of clove; clove, 25, boiling distilled water, 1000; dose fl. ʒ½–1 (15.0–30.0).

i. cascaril'læ (Br.), infusion of cascarilla; powdered cascarilla bark 1 ounce, boiling water 20 fluidounces; dose, ʒ1–2 (30.0–60.0).

i. chira'tæ (Br.). infusion of chiretta; chiretta 1 ounce, water 20 ounces; simple bitter in doses of ʒ1–2 (30.0–60.0)

i. cincho'næ, infusion of cinchona; cinchona 60, sulphuric acid, 10, water to make 1000 c.c.; bitter tonic, in doses of ʒ10–15 (40.0–60.0).

i. cincho'næ ac'idum (Br.), acid infusion of cinchona; powdered red cinchona bark 1 ounce, aromatic sulphuric acid 2 fluidrachms, boiling water 20 fluidounces; bitter tonic in doses of ʒ1–2 (30.0–60.0).

i. concentra'tum, concentrated infusion, a preparation made of such a strength that the addition of 7 volumes of water will be of approximately the strength of the official (B.P.) infusion.

i. coscin'ii (B.A), infusion of coscinium; 1 part in 20 of boiling water; dose, ʒ½–1 (15.0–30.0).

i. cuspa'riæ (Br.), infusion of cusparia or angustura; powdered cusparia back 1 ounce, boiling water 20 fluidounces; employed in atonic dyspepsia in doses of ʒ1–2 (30.0–60.0).

i. digita'lis (U.S.), infusion of digitalis; powdered digitalis leaves 15.0, cinnamon water 150.0, alcohol 100.0, water to make 1000.0; dose, ʒ2–4 (8.0–16.0).

i. digita'lis re'cens (Br.), fresh infusion of digitalis; powdered digitalis, 5, boiling distilled water, 1000; dose ♏ 90–300 (6.0–20.0).

i. ergo'tæ (Br.), infusion of ergot; powdered ergot ½ ounce, boiling water 10 fluidounces; dose, ʒ1–2 (30.0–60.0).

i. **gentia'næ compos'itum** (N.F.), compound infusion of gentian; gentian root and bitter orange peel each 55 grains, lemon peel ¼ ounce, boiling water 10 fluidounces; tonic in doses of ʒ½–1 (15.0–30.0); the N.F. prescribes: gentian 30, coriander and bitter orange peel, each 8, diluted alcohol and water, of each enough to make 1000; dose ʒ4 (15.0).

i. gentian'æ compos'itum concentra'tum (Br.), concentrated compound infusion of gentian; gentian 100, orange peel 100, lemon peel 200, alcohol 1200; dose, ♏ 30–60 (2.0–4.0).

i. gentia'næ compos'itum for'tius, stronger compound infusion of gentian; gentian 50, coriander 13, bitter orange peel 13, alcohol to make 400; tonic in doses of ʒ½–1 (2.0–4.0).

i. gentian'æ compos'itum re'cens (Br.), fresh compound infusion of gentian, gentian 12.5, orange peel 12.5, lemon peel 25, boiling distilled water 1000; dose, fl. ʒ½–1 (15.0–30.0).

i. hu'muli, i lupuli

i. krame'riæ (Br.), infusion of krameria or rhatany; krameria root 1 ounce, boiling water 20 fluidounces; given in diarrhea in doses of ʒ1–2 (30.0–60.0).

i. lu'puli (Br), infusion of hops, hops 1 ounce, boiling water 20 fluidounces, mild hypnotic and sedative in doses of ʒ1–2 (30.0–60.0)

i. pru'ni virginia'næ, infusion of wild cherry; powdered wild cherry bark 40.0, glycerin 50.0, cold water to make 1000.0; employed for the relief of a hacking cough in doses of ʒ1–3 (30.0–90.0).

i. quas'siæ concentra'tum (Br.), concentrated infusion of quassia; quassia 80, alcohol and water 1000; dose, ♏ 30–60 (2.0–4.0).

i. quas'siæ recens (Br.), fresh infusion of quassia, quassia 10, distilled water 1000; dose, fl. ʒ ½–1 (15.0–30.0).

i. rhe'i (Br), infusion of rhubarb; sliced rhubarb root 1 ounce, boiling distilled water 20 fluidounces; laxative in doses of ʒ1–2 (30.0–60.0)

i. ro'sæ ac'idum (Br), acid infusion of rose, red rose petals ½ ounce, dilute sulphuric acid 2 fluidrachms, boiling distilled water to make 20 fluidounces; employed in stomatitis, pharyngitis, and the night sweats of phthisis in doses of ʒ1–3 (30.0–90.0).

i. ro'sæ compos'itum (N.F.), compound infusion of rose; red rose petals 13, dilute sulphuric acid 9, sugar 40, boiling water to 1000; used as a vehicle to disguise the taste of bitter drugs, in doses of ʒ2–4 (8.0–16.0).

i. scopa'riæ (Br.), infusion of broom; broom tops 2 ounces, boiling water 20 fluidounces; diuretic in doses of ʒ½–1 (15.0–30.0).

i. sen'egæ (Br.), infusion of senega; powdered senega root 1 ounce, boiling water 20 fluidrachms; expectorant in doses of ʒ1–2 (30.0–60.0).

i. sen'egæ concentra'tum (Br.), concentrated infusion of senega; senega 400, dilute solution of ammonia and alcohol 1000; dose, ♏30–60 (2.0–4.0).

i. sen'egæ re'cens (Br.), fresh infusion of senega; senega 50, boiling distilled water 1000; dose, fl. ʒ ½–1 (15.0–30.0).

i. sen'næ compos'itum (N.F.), compound infusion of senna, black draught; senna 60.0, manna 120.0, magnesium sulphate 120.0, fennel 20.0, boiling water 800.0, steep for half an hour and add cold water 200.0; purgative in doses of ʒ2–4 (60.0–120.0).

i. sen'næ concentra'tum (Br.), concentrated infusion of senna; senna 800, strong tincture of ginger 80, alcohol to make 1000; dose, ♏30–60 (2.0–4.0).

i. sen'næ re'cens (Br.), fresh infusion of senna; senna 100, ginger 5, boiling distilled water, 1000; dose, fl. ʒ ½–2 (15.0–60.0).

i. serpenta'riæ (Br.), infusion of serpentary; powdered serpentaria 1 ounce, boiling water 20 ounces; employed in chronic dyspepsia in doses of ʒ1–2 (30.0–60.0).

i. tinos'poræ (B.A.), infusion of tinospora or of gulancha, 1 part in 10 of cold water; dose, ʒ½–1 (15.0–30.0).

i. todda'liæ (B.A.), infusion of toddalia or of lopez-root; 1 part to 10 of boiling water; employed, like infusion of cusparia, as a stomachic tonic in doses of ʒ1–2 (30.0–60.0)

i. u'væ ur'si (Br.), infusion of bearberry; uva ursi leaves 1 ounce, boiling water 20 fluidounces; diuretic in doses of ʒ1–2 (30.0–60.0).

ingesta (in-jes'tah) [pl of L. *ingestum, ingerere*, to carry in.] Food taken into the body.

ingestion (in-jes'chun). The introduction of food and drink into the stomach

inges'tive. Relating to ingestion.

ingluvies (in-glu'vĭ-ez) [L.] The crop of a bird.

in'gluvin. A digestive substance resembling pepsin, obtained from the gizzards of fowls; employed as a digestant and to relieve the vomiting of pregnancy, in doses of gr. 5–15 (0.3–1.0).

Ingras'sia's or **Ingras'sias's apoph'yses** or **wings** [Giovanni Filippo *Ingrassia*, Italian anatomist, 1510–1580.] The lesser wings of the sphenoid bone

ingravescent (in″grăv-ves'ent) [L. *ingravescere*, to grow heavier.] Increasing in severity

in'guen, gen. *in'guinis* [L.] The groin.

inguinal (in'gwi-nal). Relating to the groin **i. canal',** the canal in the lower part of the abdominal wall, transmitting the spermatic cord in the male and the round ligament in the female. **i. fos'sa,** fovea inguinalis **i. lig'ament,** Poupart's ligament, ligamentum* inguinale. **i. re'gion,** iliac region, the lowest lateral abdominal* region on either side of the hypogastric or pubic region. **i. tri'gone,** (1) Henke's* trigone; (2) Scarpa's* triangle.

inguinocru'ral. See under *hernia*

inguinodynia (in″gwi-no-din'ĭ-ah) [L. *inguen(inguin-)*, groin, + G. *odynē*, pain.] Pain in the groin.

inguinola'bial. Relating to the inguinal canal and the labium majus on the same side, noting an inguinal hernia descending into the labium.

in″guinoproperitone'al. See under *hernia*

inguinoscro'tal. Relating to the inguinal canal and the scrotum, noting an inguinal hernia descending into the scrotum alongside the tunica vaginalis testis.

inha'lant. That which is inhaled; a remedy given by inhalation.

inhalation (in-hă-la'shun) [L. *in,* in, + *halare,* to breathe.] 1. Inspiration, drawing in the breath. 2. Drawing a medicated vapor in with the breath. 3. A medicated liquid intended for inhalation in the form of vapor.

inhale (in-hāl'). To draw in the breath, to inspire.

inha'ler. 1. A mask-like apparatus over the nose and mouth, through which to breathe when the air is cold and raw or laden with dust or noxious vapors. 2. An apparatus for administering remedies by inhalation.

inhe'rent [L. *in,* in, + *hærere,* to stick.] Intrinsic, forming a necessary part.

inheritance (in-her'ĭ-tans) [L. *hereditare,* to inherit.] That which is inherited, the act of inheriting. **alter'native i.,** (1) Mendelian inheritance; (2) Galton's term for an assumed form in which all the characters are derived from one parent. **blend'ing i.,** Galton's term for that form in which the maternal and paternal characters appear to blend in the offspring. **collat'eral i.,** the appearance of characters in collateral members of a family group, as when an uncle and a niece show the same character inherited from a common ancestor; it occurs with recessive characters appearing irregularly in contrast to dominant characters transmitted directly from one generation to the next. **criss-cross i.,** Morgan's term for the transmission of the maternal characters to the sons and the paternal characters to the daughters. **partic'ulate i.,** Mendelian i., that in which some characters are derived from one parent, others from the other.

inhibition (in-hĭ-bish'on) [L. *inhibere,* to restrain.] The diminution or arrest of function in an organ. Interference in the cerebral pathways between an afferent impulse and the direct motor response.

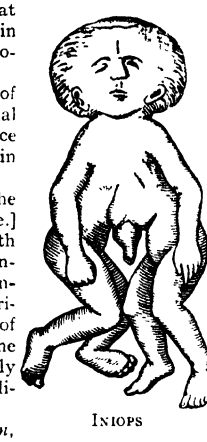
inhib'itor. 1. An agent which restrains or retards physiological action. 2. A nerve, stimulation of which represses the activity of the part supplied by it

inhib'itory. Restraining, preventing **i. nerve,** inhibitor (2).

in'iac, in'ial. Relating to the inion.

in'iad [L. *ad,* to] In a direction toward the inion, or occiput.

iniencephalus (in″ĭ-en-sef'a-lus) [G. *inion,* back of the head, + *enkephalos,* brain.] A monster with a cranial defect at the occiput, the brain being exposed or protruding.



INIOPS

inion (in'ĭ-on) [G. nape of the neck.] The external occipital protuberance used as a fixed point in craniometry.

in'iops [G. *inion,* back of the head, + *ōps,* eye, face.] A double monster with a single head which anteriorly presents a complete face, but posteriorly only a portion of one, as, for example, one eye, the body is usually single above the umbilicus, double below.

initial (in-ish'al) [L. *initium,* beginning.] Incipient, relating to a beginning.

initis (in-i'(e')tis) [G. *is(in-),* fiber + *-itis.*] 1. Inflammation of fibrous tissue. 2. Myositis

inject' [L. *injicere,* to throw in] To introduce into the body, noting a fluid thrown into one of the cavities, beneath the skin, or into a blood-vessel; see *injection.*

inject'able. 1. Capable of being injected into anything. 2 Capable of receiving an injection.

injec'ted. 1 Noting a fluid introduced into the body. 2. Having the blood-vessels visibly distended with blood; congested.

injectio, gen. *injectio'nis,* pl. *injectio'nes* (in-jek'shyo) [L. *injicere,* to throw in.] Injection **i. apomorphi'næ hypoder'mica** (Br. '14), hypodormic injection of apomorphine; apomorphine hydrochloride gr. i, diluted hydrochloric acid ♏ i; boiled distilled water ♏ 110; dose, ♏ 2-8 (0.13-0.5. **i. bis'muthi** (Br.), injection of bismuth; bismuth, in very fine powder, 20, dextrose 5, cresol 0.5, distilled water 100; dose, ♏ 8–15 (0.5–1.0) intramuscularly. **i. bis'muthi salicyla'tis** (Br.), injection of bismuth salicylate; bismuth salicylate, in very fine powder, 10, camphor 1, phenol 1, olive oil 100; dose, ♏ 10–20 (0.6–1.2) intramuscularly. **i. cocain'æ hypoder'mica** (Br. '14), hypodermic injection of cocaine; cocaine hydro-

chloride gr. 33, salicylic acid gr. ½, boiled distilled water ʒ 6; dose, ♏ 2–5 (0.13–0.3). **i. ergo'tæ hypoder'mica** (Br. '14), hypodermic injection of ergot; extract of ergot gr. 100, phenol gr. 3, boiled distilled water to make ♏ 330; dose, ♏ 5–10 (0.3–0.6). **i. fer'ri** (Br.), injection of iron; solution of ferric chloride 7, citric acid 2, dilute solution of ammonia, of each a sufficient quantity, sterilized water to produce 100; dose, ♏ 15–30 (1.0–2.0) intramuscularly **i. hydrar'gyri** (Br.), injection of mercury; mercury 10, wool fat 50, camphor 10, creosote 10, olive oil 23; dose, ♏ 5–10 (0.3–0.6) intramuscularly. **i. hydrar'gyri subchlor'idi** (Br.), injection of mercurous chloride; calomel, in very fine powder, 5, wool fat 50, camphor 10, creosote 10, olive oil 23; dose, ♏ 10–20 (0.6–1.2) intramuscularly. **i. hypoder'mica,** a class of preparations of the B.P. '14, suitable for hypodermic injection; four only were official. In the United States the *injectiones hypodermicæ* are prepared extemporaneously by means of soluble tablets each containing one dose of the remedy. **i. morphi'næ hypoder'mica** (Br. '14), hypodermic injection of morphine; morphine tartrate gr. 50, boiled distilled water ♏ 1100; dose, ♏ 1–5 (0.06–0.3). **i. so'dii chlor'idi et acaciæ** (Br.), injection of sodium chloride and acacia; sodium chlorid 9, acacia 60, distilled water 1000.

injection (in-jek'shun) [L. *injectio.*] The introduction of a medicinal substance or nutrient material, in fluid form, into the subcutaneous cellular tissue (*subcutaneous* or *hypodermic*), the muscular tissue (*intramuscular*), a vein (*intravenous*), the rectum (*rectal i., clyster,* or *enema*), the vagina (*vaginal i.,* or *douche*), the urethra, or other canals or cavities of the body.

in'jure. To wound, to hurt.

in'jury [L. *injuria; in-* neg. + *jus(jur-)*, right.] Damage, wound, trauma.

in'lay. In dentistry, a solid filling, made the shape of a cavity, and then inserted and secured with cement.

in'let. A passage leading into a cavity. **pelvic i.,** apertura* pelvis superior [BNA], the upper opening into the pelvis the circumference of which is the brim of the pelvis.

In'man's disease' [Thomas *Inman,* English physician, 1820–1876.] Myalgia.

innate' [L. *in,* in, + *natus,* born.] Inborn.

innerva'tion. 1. Distribution of the nerves in a part. 2. The degree of nerve stimulation of a part. **recip'rocal i.,** contraction in a muscle is accompanied by a loss of tone or relaxation in its antagonistic muscle.

innidiation (in-nid-i-a'shun) [L. *in,* in, + *nidus,* nest.] The arrest and multiplication of cells in a new part of the body to which they have been carried; metastasis, colonization, indenization.

in'nocent [L. *in-* neg. + *nocere,* to injure.] Benign.

Innoc'ua. The non-poisonous serpents; see *Venenosa.*

innoc'uous [L *innocuus.*] Harmless, innoxious.

innominatal (in-nom'i-na-tal). Relating to the innominate bone.

innominate (in-nom'i-nāt) [L. *in-* neg. + *nomen,* name.] Nameless. **i. ar'tery,** see under *arteria.* **i. bone,** haunch bone, hip bone, os* coxæ.

innoxious (in-nok'shus) [L. *innoxius.*] Harmless.

innutrition (in-nu-trish'un). Lack of nutrition.

in'oblast [G. *is(in-),* fiber, + *blastos,* germ.] An embryonic connective-tissue cell.

inochondritis (in"o-kon-dri'(dre')tis) [G. *is(in-),* fiber, + *chondros,* cartilage, + *-itis.*] Inflammation of a fibrocartilage.

inochondroma (in"o-kon-dro'mah) [G. *is(in-),* fiber, + *chondros,* cartilage, + *-ōma.*] A chondroma containing much fibrous tissue; a tumor composed of fibrocartilaginous elements; fibrochondroma.

inoculabil'ity. The quality of being inoculable.

inoc'ulable. 1. Transmissible by inoculation. 2. Susceptible to a disease transmissible by inoculation.

inoc'ulate [L. *inoculare; in,* in, + *oculus,* eye.] To introduce the virus of a disease into the subcutaneous tissue or a blood-vessel or through an abraded or absorbing surface.

inocula'tion. Introduction of the virus of a disease into the body.

inoculum (in-ok'u-lum). The virus or other material introduced by inoculation.

in"ocysto'ma [G. *is(in-),* fiber, + *kystis,* cyst, + *ōma.*] A fibrous tumor undergoing cystic degeneration.

inocyte (in'o-sīt) [G. *is(in-),* fiber, + *kytos,* a hollow (a cell).] A fiber-cell, an elongated cell of fibrous tissue.

inoepithelioma (in"o-ep-i-the-li-o'mah). An epithelioma mixed with fibrous tissue.

inogen (in'o-jen) [G. *is(in-),* muscle, + *gennaō,* I produce.] A hypothetical substance in muscular tissue, which is supposed to be decomposed during contraction and to be reformed during rest of the muscle.

inogenesis (in-o-jen'e-sis) [G. *is(in-),* sinew, muscle, + *genesis,* production.] Formation of fibrous or muscular tissue.

inoglia (in-og'li-ah) [G. *is(in-),* fiber, + *glia,* glue.] Fibroglia.

inohymenitis (in-o-hi-men-i'(e')tis) [G. *is(in-),* fiber, + *hymēn,* membrane, + *-itis.*] Inflammation of an aponeurosis or other fibrous membrane.

inoliomyoma (in"o-li"o mi-o'mah) [G. *is(in-),* fiber, + *leios,* smooth, + *mys(myo-),* muscle, + *-ōma.*] A tumor of smooth muscular tissue.

in'olith [G. *is(in-),* fiber, + *lithos,* stone.] A concretion formed from or in fibrous tissue.

ino'ma [G. *is(in-),* fiber, + *-ōma.*] A fibroid tumor, fibroma.

inomyoma (in-o-mi-o'mah) [G. *is(in-),* fiber, + *mys(myo-),* muscle, + *-ōma.*] A myoma containing much fibrous tissue; fibromyoma.

inomyositis (in-o-mi-o-si'(se')tis) [G. *is(in-),* fiber, + *mys(myo-),* muscle, + *-itis.*] Chronic inflammation of a muscle with an overgrowth, or hyperplasia, of the connective tissue.

inomyxo'ma [G. *is(in-),* fiber, + *myxa,* mucus, + *-ōma.*] A mixed fibroma and myxoma.

inoneuroma (in"o-nu-ro'mah) [G. *is(in-),* fiber, + *neuron,* nerve, + *-ōma.*] A mixed inoma and neuroma.

inopec'tic. Relating to inopexia. **i. diath'esis,** a state of body marked by a tendency to coagulation of fibrin resulting in thrombosis or embolism.

inop'erable. That cannot be operated upon or that cannot be relieved by operation.

inopex'ia [G. *is(in-),* fiber, + *pēxis,* fixation.] Coagulation of the blood in the vessels during life.

inophragma (i-no-frag'mă) [G. *inos.* fiber, + *phragma,* fence.] Telophragma.

inorgan'ic. Not organic, not relating to living organisms. **i. chem'istry,** the chemistry of substances not containing carbon.

inosclero'sis [G. *is(in-),* fiber, + *sklērōsis,* hardness.] 1. Sclerosis by increase of fibrous tissue. 2. Increased density of fibrous tissue.

inos'copy [G. *is(in-),* fiber, + *skopeō,* I look at.] Examination of fibrinous deposits in fluids

usually to determine the presence or absence of microorganisms

inos'culate [L. *in*, in, + *osculum*, dim. of *os*, mouth.] Anastomose.

inoscula'tion. Anastomosis.

in'ose. Inosite.

inosemia, inosæmia (in-o-se'mĭ-ah) [*inose* + G. *haima*, blood.] The presence of inosite, or muscle-sugar, in the blood.

in'osite [G. *is(in-)*, muscle.] Muscle-sugar, inose, a sugar, $C_6H_{12}O_6+2H_2O$, found in the cardiac muscle, the brain, kidneys, and other organs.

inositis (in-o-si'(se')tis) [G. *is(in-)* fiber, + *-itis*.] Inflammation of fibrous tissue.

inosituria (in″o-si-tu'rĭ-ah) [*inosite* + G. *ouron*, urine.] The presence of inosite in the urine.

inosteatoma (in-os″te-ă-to'mah) [G. *is(in-)*, fiber, + *stear(steat-)*, fat, + *-ōma*.] A fibrofatty tumor.

inosu'ria. Inosituria.

inotag'ma [G. *is(in-)*, muscle, + *tagma*, an order, arrangement.] A contractile element in the protoplasm.

inotropic (in-o-trop'ik) [G. *is(in-)*, *muscle*, + *tropos*, a turning, influencing.] Influencing the contractility of muscular tissue. **neg'atively i.,** weakening, and **pos'itively i.,** strengthening muscular action.

inquest (in'kwest) [L. *in*, in, + *quærere*, to seek.] A legal inquiry into the cause of a sudden or violent death.

inquiline (in'kwi-lin) [L. *incolus*, an inhabitant.] A variety of parasite which lives in the shelter provided by the other (as an oyster-crab within the shell of the oyster), but does not necessarily derive its food from its host, being often a commensal.*

insal'ivate [L. *in* + *saliva*.] To mix the food with saliva during mastication.

insaliva'tion. The mixing of the food with saliva.

insalubrious (in″să-lu'brĭ-us) [L. *in-* neg. + *saluber*, healthful.] Unwholesome, unhealthful, insanitary.

insane' [L. *in-* neg. + *sanus*, sound, sane.] 1. Of unsound mind, deranged, crazy, non compos mentis, lunatic. 2. Relating to insanity. **i. asy'lum,** an institution for the care of the insane. **i. ear,** othematoma.

insan'itary [L. *in-* neg. + *sanus*, sound.] Unhealthful, insalubrious, injurious to health, not sanitary.

insan'ity [L. *insanitas; in-* neg. + *sanus*, sound, sane.] A more or less permanent unsoundness of mind, mental disease; a condition marked by abnormality of the reasoning faculty, delusions, illusions, or hallucinations, with irresponsibility and a lack of understanding of the nature of one's speech and actions; lunacy, craziness. It is an acquired condition and so distinguished from idiocy or imbecility, and is chronic, thus distinguished from the delirium of fever or shock. **alcohol'ic i.,** a form of toxic i., due to the immoderate indulgence in alcoholic beverages. **al'ternating i.,** a form of manic-depressive i. having the sequence—mania, interval, depression. **chore'ic i.,** an infectious psychosis sometimes associated with chorea, which usually assumes a confusional form. **cir'cular i.,** that form of the manic-depressive psychosis in which the manic and depressive attacks follow one another without lucid intervals. **climacter'ic i.,** any form of mental disease occurring about or at the close of middle life. **commu'nicated i.,** a form of folie à deux in which the delusional ideas of one person are accepted by the second, by a species of mental contagion, but only after prolonged resistance, this period of resistance distinguishing it from imposed i. **compul'sive i.,** a mental state marked by an obsession or fixed idea which often compels to acts against the will and despite the anxious resistance of the patient. **confu'sional i.,** infection-exhaustion psychosis.* **cy'clic i.,** circular i. **degen'erative i.,** phrenasthenia or psychasthenia occurring in the degenerative period of life. **delu'sional i.,** paranoia. **drug i.,** a toxic i. due to the use of some drug such as opium or cocaine. **hyster'ical i.,** an exaggerated form of psychasthenia with emotional crises of hysterical nature. **imposed' i.,** folie à deux, a psychosis, often of paranoid form, affecting two persons who are intimately associated; the one on whom the mental disturbance has been imposed may recover if removed from the original sufferer. **impul'sive i.,** a condition in which a sudden morbid impulse arises and drives the patient at once, without reflection or attempt at resistance, to the commission of some act. **induced' i.,** communicated i. **i. of doub'le form,** a form of manic-depressive psychosis having the sequence—mania, depression, interval, or the reverse. **manic-depress'ive i.,** an alternation of mania and melancholia. **mor'al i.,** an irresistible impulse to commit wrong or immoral acts, pathomania. **puer'peral i.,** any form of mental disease, usually either confusional i. or manic-depressive i., sometimes occurring in women during the early puerperal period. **se'nile i.,** degenerative i. occurring in the aged. **simulta'neous i.,** a form of folie à deux, in which the same psychosis appears at the same time in two intimately associated and mentally predisposed individuals. **tox'ic i.,** a psychosis, usually confusional i., due to the action of some poison, such as alcohol, opium, etc., or to autotoxemia. **volit'ional i.,** i. marked especially by perversion of the will power.

alcoholic, mania a potu, delirium tremens, alcoholomania, enomania, œnomania, dipsomania. **congenital,** idiocy, imbecility, cretinism. **degenerative,** psychasthenia, phrenasthenia. **delusional,** paranoia. **doubting,** see under *phobia*. **emotional,** pathomania. **erotic,** nymphomania, satyriasis. **fatuous,** moria. **furious,** acromania, acriothymia. **grandiose,** megalomania. **homicidal,** androphonomania. **hysterical,** hysteromania. **imposed,** folie à deux. **inquisitive,** paratereseomania. **loquacious,** moria. **marked by terror,** enosimania. **moral,** pathomania, esthesiomania. **neurasthenic,** psychasthenia, phrenasthenia. **on a few subjects,** oligomania. **on one subject,** monomania. **paralytic,** paresis. **polyneuritic,** Korsakoff's syndrome. **pubertal,** hebephrenia, dementia præcox. **puerperal,** maiensiomania, tocomania. **religious,** entheomania, demonomania, heromania. **senile,** dementia, presbyophrenia, dotardness. **specialist in,** psychiatrist, psychiater, alienist, "mad-doctor." **stuporous,** narcomania, catatonia. **suicidal,** misozoia. **treatise on,** manicography, manigraphy. **voluble,** logomania. **with cruel impulses,** diastrephia. **with exaltation,** mania, hyperphrenia. **with incendiary impulses,** pyromania. **with loss of mental faculties,** dementia, amentia. **with loss of will power,** abulomania. **with mental depression,** melancholia, lypemania. **with morbid fears,** see under *phobia*. **with one idea,** monomania. **with pleasing delusions,** habromania, amenomania. **with thieving impulses,** cleptomania.

inscriptio (in-skrip'shyo) [L. *in*, in, + *scribere*, to write.] Inscription. **i. tendin'ea** [BNA], tendinous inscription, a tendinous band or partition running across a muscle.

inscrip'tion [L. *inscriptio*.] The main part of a prescription, that which indicates the drugs and the quantity of each to be used in the mixture

in'sect [L. *insectum; in*, in, + *secare*, to cut.] An invertebrate creature, with many legs, and usually with fully developed or rudimentary wings, the body of which is divided into segments

comprising head, thorax, and abdomen; the term is loosely applied to legged terrestrial invertebrates of many kinds, whether segmented or not.

insect'icide [L. *insectum*, insect, + *cædere*, to kill.] 1. Causing the destruction of insects in the widest sense of the term. 2. An agent which kills insects.

insemina'tion. 1. The deposit of semen in the vagina during coitus. 2. The first contact of the spermatozoon with the ovum.

insen'sible [L. *in-* neg. + *sensibilis*, sensible.] 1 Unconscious. 2. Not appreciable by the senses.

insertion (in-sur'shun) [L. *in.* in, + *serere*, to plant.] 1. A putting in. 2. The attachment of a muscle to the more movable part of the skeleton, as distinguished from *origin*. **velamen'tous i.,** a form of insertion of the fetal blood-vessels into the placenta, in which they separate before reaching that structure and make their way to it in a fold of amnion.

insheathed (in-shēdhd'). Enclosed in a sheath or capsule; encysted.

insid'ious [L. *insidiosus*, cunning] Treacherous, stealthy; noting a disease which progresses with few or no symptoms to indicate its gravity.

in si'tu [L. *situs*, site.] In position

insola'tion [L. *insolare*, to place in the sun] Sunstroke.

insol'uble. Not soluble.

insom'nia [L. *in-* priv. + *somnus*, sleep.] Anhypnosis, wakefulness; inability to sleep, in the absence of external impediments, such as noise, a bright light, etc., during the period when hypnosis should normally occur; it may vary in degree from restlessness or disturbed slumber to a curtailment of the normal length of sleep or to absolute wakefulness.

inspect' [L. *inspicere*, to examine.] To examine by means of the sight.

insper'sion [L. *inspergere*, to scatter upon] Sprinkling with a fluid or a powder.

inspira'tion [L. *in*, in, + *spirare*, to breathe] The act of breathing in, inhalation.

in'spirator. 1. Inhaler 2 Respirator.

inspi'ratory. Relating to an inspiration

inspire'. To breathe in, to take a breath, to inhale.

inspirom'eter [L. *inspirare*, to breathe in, + G. *metron*, measure.] An instrument for measuring the force, frequency, or volume of the inspirations.

inspis'sated [L. *in-* intensive + *spissare*, to thicken.] Thickened by evaporation or absorption of fluid.

inspissa'tion. 1. The act of thickening by evaporation or by the absorption of fluid. 2 An increased thickness or diminished fluidity.

in'step. The arch, or highest part of the dorsum of the foot.

instilla'tion [L. *instillare*, to pour in by drops.] The dropping of a liquid on or in a part.

in'stillator. A dropper.

in'stinct [L. *instinctus*, impulse.] The unreasoning impulse to perform some purposive action without an immediate consciousness of the end to which that action will lead.

instinc'tive. Relating to instinct.

institute (in'stĭ-tūt) [L. *instituere*, to set up.] 1. An association of persons for a definite purpose, especially for the performance of literary or scientific work or teaching. 2. An institution.

institu'tion. A building or establishment for the promotion of some literary, educational, scientific, or philanthropic purpose.

in'strument [L. *instrumentum*, tool.] A tool or implement.

instrumen'tal. Done by the aid of mechanical appliances.

insucca'tion [L. *insucare*, to soak in.] Maceration soaking, especially of a crude drug to prepare it for further pharmaceutical operation.

insufficiency (in-sŭ-fish'en-sĭ). Lack of completeness of function or of power, inadequacy; incompetency (noting defective closure of a cardiac valve). **hepat'ic i.,** defective functional activity of the liver cells. **i. disease,** deficiency disease, one arising from defective metabolism caused by a lack of vitamins in the diet. **i. of the eyelids,** a condition in which the eyelids are closed only by conscious effort, and remain open during sleep. **mus'cular i.,** failure of any muscle to contract with its normal force, especially such failure of any of the eye muscles. **renal i.,** defective functional activity of the kidneys whereby some of the waste products of the body are retained. **thyroid** i., hypothyroidism. **uterine i.,** atony of the uterine musculature. **val'vular i.,** failure of the cardiac valves to close perfectly, regurgitation of blood being the result.

insuf'flate [L. *in*, in, + *sub*, under, + *flare*, to blow.] To blow into; to fill the lungs of an asphyxiated newborn infant by blowing into the mouth and nose, or to blow a medicated powder into a cavity.

insuffla'tion. The act or process of insufflating.

in'sufflator. An instrument for blowing a powder into the nose or other cavity

insula, gen. and pl *in'sulæ* (in'su-lah) [L island.] 1. [BNA] Island, island of Reil, central lobe of the cerebrum, a cerebral lobe or group of convolutions in the depth of the fissure of Sylvius. 2. Any circumscribed body or a patch on the skin. **i. lac'tea,** macula albida. **i. tendin'ea,** macula albida **Langerhans' i.,** Langerhans'* islands.

in'sular. Relating to any insula, especially the island of Reil. **i. hypoth'esis,** the theory of the dependence of diabetes upon destruction or loss of function of the islands of Langerhans in the pancreas.

insulate (in'su-lāt) [L. *insulare*, to make like an island.] To prevent the passage of electricity to the earth, by the interposition of a non-conducting substance such as glass or rubber.

insulation (in-su-la'shun). 1. The act of insulating. 2. The non-conducting substance by which electricity is prevented from escaping. 3. The state of being insulated.

in'sulator. A non-conducting material by means of which insulation is effected.

insulinemia (in-su-lin-e'mĭ-ŭ). The presence of an undue amount of insulin in the blood.

insulinum (in-su-le'num) (Br.), **insulin** (in'su-lin) [L. *insula*, island.] A preparation made from the pancreas of the pig or ox, representing the activity of the islands of Langerhans; used in the treatment of diabetes; by its action the sugar content of the blood and urine is reduced to normal, the ability of the organism to reduce carbohydrate being increased. See *iletin* and *insuline.* **i. shock,** a phenomenon sometimes noted during the administration of insulin intravenously when the amount of blood sugar is reduced too suddenly; the chief symptoms are sweating, tremor, anxiety, vertigo, hunger, and diplopia, followed by loss of emotional control, delirium, convulsions, and collapse.

insuloma [L. *insula*, island, + *-oma.*] A tumor of the island of Reil or of the islands of Langerhans.

in'sult [L. *insultus.*] 1. An injury or trauma 2 See *insultus.*

insul'tus [L. *insultare*, to leap upon.] Attack, as *i. apoplectiform'is*, *i. epileptiform'is*, *i. syncopa'lis* (fainting), etc.

insu'rable in'terest. A condition existing between the beneficiary and the holder of a life-insurance policy according to which the former naturally desires that the latter shall live. Such a condition holds in the case of husband and wife or those of near kindred, of employer and employee, of partners in business, etc. A beneficiary who has no insurable interest in the life of the insured, cannot recover the amount of the policy in case of the death of the latter. In Canada the law provides that if the insured pays the premiums the beneficiary can recover the amount of the policy, even if he have no insurable interest.

insu'rance [O. Fr. *enseurer;* L. *in*, in, + *securus*, sure, secure.] The agreement by one party to pay a definite sum to another party in the event of illness, accident, death, or pecuniary loss of one kind or another. **ac'cident i.**, the guarantee by a company to pay to the insured a definite sum, either in one payment or weekly during the period of disablement, in case of accident. **health i.**, i. of the same character as accident 1, the stated sum being guaranteed in case of illness not due to accident. **indus'trial i.**, a form of life insurance in which policies of small amounts are issued, the premium being paid in weekly or monthly installments **life i.**, see *life*-insurance*. **step-rate i.**, see *natural premium*.* **term i.**, see *term policy*.*

insusceptibility (in"sus-sep"ti-bil'ĭ-tĭ) Lack or absence of susceptibility, immunity.

intarvin (in-tar'vin). Glyceryl margarate, $(C_{17}H_{33}O_2)_3$. An artificial fat made from fatty acids having an odd number of carbon atoms, mixed with petrolatum. It is recommended for use in glycosuria on the theory that fatty acids having an odd number of carbon atoms do not cause acidosis by yielding ketone bodies on oxidation; its caloric value is 120 per heaping tablespoonful.

integra'tion [L. *integrare; integer* whole] Building up by accretion, anabolism.

integ'ument [L. *integumentum*, covering.] 1. The enveloping membrane of the body, integumentum* commune. 2. The rind, capsule, or covering of any body or part

integumentary (in-teg-u-men'ta-rĭ). Relating to the integument, cutaneous, dermal.

integumen'tum [L.] Integument. **i. commu'ne** [BNA], the common integument, cutis, derma, skin; the membrane covering the body and continuous, at the various orifices with the mucous membrane of the alimentary, respiratory, and urogenital tracts; it is composed of two strata: the superficial epidermis and the deep dermis or corium, and contains the sweat and sebaceous glands, the hair-follicles, and the touch corpuscles.

in'tellect [L. *intelligere*, to understand.] The understanding, mind.

intem'perance [L. *intemperantia*.] Lack of moderation, excess in the indulgence of any of the appetites, especially in eating and drinking.

intem'perant. 1. One who indulges to excess in the use of alcoholic beverages. 2. Intemperate.

intem'perate [L. *in-* neg + *temperare*, to moderate.] Immoderate in any indulgence, especially addicted to the misuse of alcoholic beverages.

inten'sity [L. *intensus*, tight, stretched.] Marked tension; great activity.

inten'sive. Relating to or marked by intensity; noting a form of treatment by means of very large doses or of substances possessing great strength or activity.

intention (in-ten'shun) [L. *intendere*, to stretch out, exert.] In surgery, a process or operation. **healing or union by first i.**, the immediate healing of a wound without suppuration or the formation of granulations. **healing or union by second i.**, union of two granulating surfaces accompanied by more or less suppuration. **healing by third i.**, the filling of a wound cavity or ulcer by granulations, with subsequent cicatrization.

inter- [L. *inter*, between.] A prefix conveying the meaning of between, among.

interacinar (in-tur-as'ĭ-nar). Interacinous

interacinous (in-tur-as'ĭn-us) [L. *inter*, between, + *acini*.] Between the acini of a gland.

interalve'olar [L. *inter*, between.] Between any alveoli, especially the alveoli of the lungs.

interann'ular [L. *inter*, between, + *annulus*, ring.] Between any two ring-like structures or constrictions.

interartic'ular [L. *inter*, between, + *articulus*, joint.] 1. Between two joints. 2. Between two joint surfaces, *i.e.* within the joint.

interarytenoid (in"tur-ăr-rit'en-oyd). Between the arytenoid cartilages.

interaster'ic. Between the two asteria; see *asterion*.

interatrial (in-tur-a'trĭ-al) [L. *inter*, between, + *atrium*.] Between the atria of the heart.

interauricular (in"tur-aw-rik'u-lar). 1. Interatrial. 2. Between the auricles or pinnæ.

in'terbody. The substance in normal serum which binds the complement to the blood-cells or bacteria, corresponding to the immune body or amboceptor of a specific serum.

in'terbrain. 'Tween-brain, diencephalon, thalamencephalon *

intercadence (in-tur-ka'dens) [L. *inter*, between, + *cadere*, to fall] The occurrence of an extra beat between the two regular pulse beats; extreme dicrotism, interpolated extra-systole.

intercal'ary [L. *intercalare*, to insert.] Occurring between two others; noting, in a pulse tracing, an up-stroke interposed between two normal pulse beats.

inter'calated. Interposed, inserted between two others.

intercala'tum. Substantia nigra of the brain.

intercanalic'ular. Between canaliculi in any sense.

intercap'illary. Between or among capillary vessels.

intercarot'ic. Intercarotid.

intercarot'id. Between the internal and external carotid arteries. **i. body,** glomus caroticum.

intercar'pal. Between the carpal bones.

intercartilaginous (in"tur-kar-tĭ-laj'in-us) [L. *inter*, between, + *cartilago*, cartilage] Between or connecting cartilages.

intercavernous (in"tur-kav'ur-nus). Between two cavities. **i. si'nuses,** two cerebral sinuses, anterior and posterior i sinuses, connecting the cavernous sinuses and thus forming the circular sinus surrounding the hypophysis.

intercell'ular. Between or among cells.

intercen'tral. Connecting or lying between two or more centers.

intercer'ebral. Between the hemispheres of the brain

interchondral (in-tur-kon'dral) [L. *inter*, between, + G. *chondros*, cartilage.] Intercartilaginous.

intercil'ium [L. *inter*, between, + *cilium*, eyelid.] Glabella.

interclavic'ular. Between or connecting the clavicles.

intercoccygeal (in″tur-kok-sij′ĭ-al). Situated between unfused segments of the coccyx.

intercolumnar (in-tur-kŏ-lum′nar). Between any two columns, as the columns or crura of the annulus inguinalis subcutaneus. **i. fi′bers,** intercrural* fibers.

intercon′dylar. Intercondylic.

intercondyl′ic, intercon′dyloid. Between two condyles.

intercos′tal [L. *inter*, between, + *costa*, rib.] Between the ribs.

intercostohumeral (in″tur-kos″to-hu′mer-al). Relating to an intercostal space and the arm, noting certain branches of the intercostal nerves supplying the skin of the arm.

intercos″tohumera′lis. See under *nervus*.

intercris′tal. Between two crests, as between the crests of the ilia, noting one of the pelvic measurements.

intercru′ral. Between two crura in any sense, those of the jaw, the brain, the external abdominal ring, etc.; interfemoral. **i. fi′bers,** fibræ intercrurales [BNA], intercolumnar fibers, horizontal arched fibers passing from Poupart's ligament across the opening of the external abdominal ring.

intercurr′ent [L. *inter*, between, + *currere*, to run.] Intervening, said of a disease attacking a person already ill of another malady.

intercusping (in-tur-kus′ping) [L. *inter*, among, mutually, + *cusp.*] The normal fitting together of the occlusal surfaces of two opposing teeth.

intercuta″neomu′cous. Between skin and mucous membrane, as in the cheek or lip or at the mucocutaneous border of the lips or anus.

interdeferential (in-tur-def-er-en′shal). Between the vasa deferentia.

interden′tal [L. *inter*, between, + *dens(dent-)* tooth.] Between the teeth.

interdentium (in-tur-den′shĭ-um) [L. *inter*, between, + *dens* (*dent-*), tooth.] The interval between any two contiguous teeth.

interdigit (in tur-dij′it). That part of the sloping extremity of the hand or foot lying between any two adjacent fingers or toes.

interdigital (in-tur-dij′ĭ-tal). Between the fingers or toes.

interdigitation (in-tur-dij-ĭ-ta′shun) [L. *inter*, between, + *digitus*, finger.] 1. The mutual interlocking of toothed or tongue-like processes. 2. The processes thus interlocked. 3. In dentistry, noting the method by which two different, noncohesive metals are wedged together in a filling.

interfascic′ular. Between fasciculi.

interfem′oral. Between the thighs.

interference (in-tur-fēr′ens) [L. *inter*, between, + *ferire*, to strike.] 1. The coming together of waves in various media in such a way that the crests of one series correspond to the hollows of the other, the two thus neutralizing each other; or so that the crests of the two series correspond, thus increasing the excursions of the waves. 2. Brushing, in the horse.

interfering (in-tur-fēr′ing). Brushing.

interferometer (in-tur-fēr-om′e-tur). An instrument for measuring minute distances or movements through the interference* of light waves thereby produced.

interferometry (in-tur-fēr-om′ĕ-trĭ). Measurement of minute distances or movements by the resulting interaction of light rays.

interfibrill′ar, interfi′brillary. Between fibrils.

interfi′brous. Between fibers.

interfilamen′tous. Between filaments.

interfrontal (in-tur-frun′tal). Between the unfused halves of the frontal bone, noting a suture there present.

interganglion′ic. Between or among or connecting ganglia.

intergemmal (in″tur-jem′al) [L. *inter*, between, + *gemma*, *bud.*] Between any two or more bud-like or bulb-like bodies, noting especially a nerve termination between two end-bulbs.

interglob′ular. Between globules. **i. spaces,** Czermak's* spaces.

intergluteal (in-tur-glu′te-al) [L. *inter*, between, + *glutæus*, buttock.] Between the buttocks.

intergo′nial [L. *inter*, between, + G. *gōnia*, angle.] Between the two gonia; see *gonion*.

intergyral (in-tur-ji′ral). Between the gyri or convolutions of the brain.

interhemicer′ebral. Intercerebral, between the cerebral hemispheres.

inte′rior. Relating to the inside, situated within.

interischiadic (in-tur-is-kĭ-ad′ic). Between the two ischia especially between the two tuberosities of the ischia.

interlamell′ar. Between lamellæ.

interlo′bar. Between the lobes of an organ or other structure.

interlobitis (in″tur-lo-bi′(be′) tis). Inflammation of the pleura separating two pulmonary lobes.

interlob′ular. Between the lobules of an organ.

intermalle′olar. Between the malleoli

intermam′mary [L. *inter*, between, + *mamma*, breast.] Between the breasts.

intermam′millary [L. *inter*, between, + *mammilla*, breast, nipple.] Between the breasts; between the nipples, noting a line drawn between the two nipples.

intermaxill′a. Premaxilla, os* incisivum.

intermax′illary. Between the maxillæ, or upper jaw-bones. **i. bone,** os incisivum.

interme′diary [L. *intermedius*, lying between.] Occurring between. **i. body,** immune body. **i. nerve,** nerve of Wrisberg. **i. systems,** the osseous tissue in the interspaces between the Haversian systems.

interme′diate [L. *intermediare*, to come between.] 1. Between two extremes, interposed, intervening. 2. In dentistry, a non-conducting material employed as a capping under a metallic filling. 3. One of the deciduous incisor teeth of a horse, external to the pincers.

intermediolat′eral. Intermediate, but to one side, not central, noting a tract of the spinal cord.

intermedius (in-tur-me′dĭ-us) [L. *inter*, between, + *medius*, middle.] Intermediate.

intermem′branous. Between membranes.

intermeningeal (in-tur-men-in′je-al). Between the meninges.

intermen′strual. Between two consecutive menstrual periods. **i. fe′ver, i. pain,** see these words.

intermetacar′pal. Between the metacarpal bones.

intermetamer′ic. Between two metameres noting especially the intervertebral discs.

intermetatar′sal. Between the metatarsal bones.

intermetatar′seum. See under *os*.

intermission (in-tur-mish′un). 1. A temporary cessation of symptoms or of any action. 2. An interval between two paroxysms of a disease, such as malaria.

intermit′ [L. *intermittere*, to leave off.] To cease for a time.

intermitt′ence, intermitt′ency. 1. A condition marked by intermissions or interruptions in the course of a disease or other process or state or in any continued action; noting especially a loss of

one or more pulse beats. 2. The complete cessation of symptoms between two periods of activity of a disease.

intermitt'ent. 1. Marked by intervals of complete quietude between two periods of activity. 2. Intermittent fever.*

intermus'cular. Between the muscles.

intern, interne (in'turn or in-turn')[F. *interne*, inside.] An advanced student or recent graduate who assists in the medical or surgical care of hospital patients and who resides within the institution.

inter'nal [L. *internus*.] Interior, away from the surface. **i. med'icine,** the branch of medicine which has to do with diseases not amenable to surgical treatment; medicine as opposed to surgery.

interna'rial. Between the nares or nostrils, internasal.

interna'sal [L. *inter*, between, + *nasus*, nose.] Internarial, between the nasal fossæ or the nasal bones.

internist (in-tur'nist). One who treats internal diseases; a physician as distinguished from a surgeon.

interno'dal. Between two nodes; relating to an internode.

internode (in'tur-nōd). That portion of the medullary substance of a nerve-fiber which lies between two nodes of Ranvier; each internode contains a nerve-corpuscle, or nerve-nucleus, lying beneath the neurilemma in a depression in the medullary substance.

internuclear (in-tur-nu'kle-ar). 1. Between nuclei. 2. Between the nuclear layers of the retina.

internuncial (in-tur-nun'sĭ-al) [L. *inter*, between, + *nuncius*, a messenger.] Acting as a medium of communication between two organs (hormonal (2), hormonic) or nerve centers.

inter'nus [L.] Internal.

interoceptive (in"ter-o-sep'tiv) [L. *inter*, within, + *capere*, to take.] Relating to the apparatus within the organism capable of receiving stimuli.

interoceptor (in"ter-o-sep'tor) [L. *inter*, within.] One of the peripheral end-organs of the afferent nerves, which respond to stimulation by internal (chiefly visceral) processes. **gen'eral i.,** one of the end-organs mediating the sensations of hunger, thirst, nausea, respiratory, circulatory, and sexual sensations, visceral pain, etc. **spec'ial i.,** one of the end-organs for taste and smell.

in'terol. Trade name of a mineral oil preparation employed as an intestinal lubricant.

interol'ivary. Between the olivary bodies.

interor'bital. Between the orbits.

inteross'eal. Interosseous.

interossei (in-tur-os'e-i). Plural of interosseus, which see under *musculus*.

inteross'eous [L. *inter*, between, + *os*, bone.] Lying between or connecting bones, noting certain muscles and ligaments.

inteross'eus. See under *musculus*.

interparietal (in"tur-pă-ri'e-tal) [L. *inter*, between, + *paries*(*pariet-*), wall.] Between the walls of a part, or between the parietal bones. **i. bone,** os interparietale.

interparoxys'mal. Occurring between successive paroxysms of a disease.

interpedunc'ular. Between any two peduncles.

interphalangeal (in"tur-fal-an'je-al). Between two phalanges, noting the finger or toe joints.

interphyletic (in-tur-fi-let'ik) [L. *inter*, between, + *phyletic*.] Noting the transitional forms between two kinds of cells during the course of metaplasia.

interpi'al. In the pia mater.

interpo'lar. Connecting or lying between the two poles, as of a galvanic battery.

interpositum (in-tur-poz'i-tum). See under *velum*.

interproximal (in-tur-proks'ĭ-mal). In dentistry, between the adjoining surfaces of two teeth, interproximate. **i. space,** the triangular space between two adjacent teeth, divided into the buccal and lingual embrasures and the septal space (normally filled with the gingival septum).

interprox'imate. Interproximal.

interpu'bic. Between the two pubic bones.

interra'dial. Situated between radii or rays.

interre'nal. Between the two kidneys. **i. bod'y,** the cortical portion of the adrenal gland in certain fishes in which it is anatomically distinct from the medullary portion. **i. sys'tem,** the cortical portion of the adrenal gland in man.

interre'nalism. Hyperadrenia.

interrupt (in-ter-rupt') [L. *inter*, between, + *rumpere*, to break.] To break the continuity of anything, as of an electric current.

interrup'ted. Intermittent, not continuous.

interrup'ter. An appliance for repeatedly breaking a galvanic current.

intersæp'tum, intersep'tum [L.] The diaphragm

interscapil'ium [L.] Interscapulum.

interscap'ular. Between the scapulæ.

interscap'ulum. The part of the back between the shoulders, or that between the scapulæ.

intersciatic (in"tur-si-at'ik). Interischiadic.

intersegmen'tal. Between two segments, such as metameres or myotomes.

intersep'tal. Lying between two septa.

intersex (in'tur-seks). Sex-intergrade.

in'terspace [L. *inter*, between, + *spatium*, space.] Any space between two similar objects, such as a costal interspace or interval between two ribs. **diner'ic i.,** the surface separating two liquid phases.*

interspi'nal. Between two spines, such as the spinous processes of the vertebræ, interspinous.

interspina'lis. See under *musculus*.

interspi'nous. Interspinal.

inter'stice [L. interstitium] A small space, gap, or hole in the substance of an organ or tissue.

interstitial (in-tur-stish'al). Relating to spaces or interstices in any structure. **i. cells,** the cells of the connective tissue of the seminiferous tubules and of the septa of the testis (Leydig's cells), or of the connective tissue of the ovary, which are believed to elaborate the internal secretion of these glands. **i. tissue,** connective tissue.

intersystole (in"tur-sis'to-le). Intersystolic period, the a.-c. interval,* the period intervening between the systole of the atrium and that of the ventricle of the heart.

intertar'sal. Between the tarsal bones.

intertinctus (in-tur-tink'tus) [L. *inter*, between, + *tinctus*, tinged.] Differentially colored, noting certain skin lesions.

intertransversa'lis. Intertransversarius [BNA]; see under *musculus*.

intertransverse (in"tur-tranz-vurs'). Between the transverse processes of the vertebræ.

intertrigo (in-tur-tri'go) [L. *inter*, between, *terere*, to rub.] Dermatitis occurring between two folds of the skin, as between the buttocks, between the scrotum and the thigh, etc.

intertrochanteric (in"tur-tro-kan-ter'ik). Between the two trochanters of the femur.

intertu'bular. Between or among tubules.

interure'teral. Between the two ureters.

interureter'ic. Interureteral

in'terval [L. *inter*, between, + *vallum*, wall.] A time or space between two periods or objects; a break in a current or the course of a disease; a period of rest between two of activity. **a.-c. i., auriculocarot'id i., atriocarot'id i.,** the time between the beginning of the auricular and that of the carotid waves in a tracing of the jugular pulse, the intersystolic period. **c.-a. i., cardioarte'rial i.,** the time between the apex beat of the heart and the radial pulse beat. **passive i.,** the period of rest of the heart. **presphyg'mic i.** [L. *præ*, before, + G. *sphygmos*, pulse], the brief period at the beginning of the ventricular systole during which the pressure is rising before the semilunar valves open.

interventric'ular. Between the ventricles.

intervertebral (in-tur-vur'te-bral). Between two vertebræ. **i. disc,** cartilago intervertebralis. **i. foram'ina,** passages formed by the coincidence of two notches of contiguous vertebræ.

intervill'ous. Between or among villi

intestinal (in-tes'tĭ-nal). Relating to the intestine. **i. juice,** succus entericus, an alkaline straw-colored fluid secreted by the crypts of Lieberkuhn and the simple follicles; its function is to complete the hydrolysis of carbohydrates and change them into invert sugar by means of the contained invertase and maltase, and to complete the hydrolysis of protein by means of erepsin; it contains also enterokinase which is believed to convert the trypsinogen of the pancreatic juice into trypsin

intestine (in-tes'tin) [L. *intestinum.*] The digestive tube passing from the stomach to the anus. It is divided primarily into the *small i* (intestinum tenue) and the *large i.* (intestinum crassum); the small i. is further divided arbitrarily into duodenum, jejunum, and ileum; the large i is divided into cecum and appendix, ascending, transverse, descending, and sigmoid colon, and rectum. The duodenum is separated from the stomach by the pylorus or pyloric valve, and the ileum is separated from the cecum by the ileocecal valve, valvula* coli [BNA].

artificial opening into, enteroproctia artificial anus, enterostomy, colostomy. **attachment to abdominal wall,** enteropexy. **calculus,** enterolith, enterolite, coprolith, coprolite, bezoar. **congestion,** enteremia **dilatation,** enterectasia. **disease,** enteropathy, enterosis **downward displacement,** enteroptosia, splanchnoptosia, visceroptosia **gaseous distention,** enteropneumatosis, **tympanites,** meteorism, flatulence, physocelia. **gout,** enteragra. **hemor hage,** entero hemorrhage, **enterorrhagia,** enteromenia (vicarious menstruation), melena, apoplexia intestinalis. **hernias** enterocele, enteroepiplocele (with omentum), enterocystocele (with bladder), enteromerocele (femoral). **incision into,** enterotomy, duodenotomy, jejunotomy, ileotomy, appendicotomy, cecotomy or typhlotomy, colotomy, rectotomy or proctotomy. **inflammation,** enteritis, esoenteritis, duodenitis, jejunitis, ileitis, typhlitis, cecitis, appendicitis, colitis, sigmoiditis, proctitis, rectitis, enteromycodermitis, enteromucitis, enteroperitonitis. **invagination,** intussusception. **joining two parts,** enteroanastomosis, enteroplexy, enterorrhaphy. **movements of,** peristalsis; *reversed*, antiperistalsis; *absence*, aperistalsis; *normal*, euperistalsis; *abnormal*, dysperistalsis, enterospasm. **noise in,** borborygmus, bombus, vagitus. **obstruction,** enteremphraxis, enterocleisis, enteroperistole, ileus, volvulus. **pain,** colic, enteralgia, enterodynia, tormina. **paralysis,** enteroparalysis, enteroparesis, enteroplegia **parasite in,** enterozoon, helminth, enterohelminth (animal), enteromyces (vegetable). **perforation,** enterobrosia. **plastic operation,** enteroplasty. **pouch of,** diverticulum. **prolapse,** hedrocele, proctocele. **puncture,** enterocentesis **removal of,** devisceration, exenteration. **softening,** enteromalacia. **stricture,** enterostenosis. **traumatic division,** enterodialysis. **tumor,** enteroncus. **ulceration,** enterelcosis, enterohelcosis. **vicarious menstruation by,** enteromenia.

intestinotox'in. Enterotoxin.

intesti'num, pl. *intesti'na*, gen. *intestino'rum* [L. entrail.] 1. Intestine 2. [Neuter of *intestinus.*] Inward, inner. **i. cæ'cum** [BNA], blind gut; see *cecum.* **i. cras'sum** [L. *crassus*, thick] [BNA], the large intestine, the portion of the digestive tube extending from the ileocecal valve to the anus, it comprises the cecum, colon, sigmoid colon, and rectum. **i. il'eum** [BNA], twisted intestine, see *ileum.* **i. jeju'num** [BNA], empty intestine, see *jejunum.* **i. rec'tum** [BNA], straight intestine, see *rectum.* **i. ten'ue** [BNA], small intestine, the portion of the digestive tube between the stomach and the cecum or beginning of the large intestine, it consists of three portions, duodenum, jejunum, and ileum. **i. ten'ue mesenteria'le** [BNA], the freely movable portion of the small intestine supplied with a mesentery, comprising the jejunum and ileum.

intima (in'tĭ-mah) [L. fem. of *intimus*, inmost.] The tunica intima, or inner coat of a blood-vessel.

in'timal. Relating to the intima or inner coat of a blood-vessel.

intimitis (in-tĭ-mi'(me')tis). Inflammation of an intima, endoangiitis (endoarteritis, endophlebitis)

intine (in'tīn) [L. *intus*, within.] In botany, the endosporium or inner coat of a pollen grain.

in'toe. Hallux valgus.

intol'erance [L. *in-* neg. + *tolerare*, to bear.] Incapacity for bearing or enduring.

intortor (in-tor'tur). Internal rotator.

intortion (in-tor'shun) [L. *intortus; in*, in, + *torquere*, to twist.] A turning or deviating inward.

intoxation (in-toks-a'shun). Poisoning, especially by the toxic products of bacteria or poisonous animals, other than alcohol.

intoxica'tion [L. *in*, in, + G. *toxicon*, poison.] 1. Poisoning. 2. Acute alcoholism, drunkenness. **acid i.,** poisoning by acid products (beta-oxybutyric acid, diacetic acid, or acetone), formed in the organism as a result of faulty metabolism, or by acids introduced from without; it is marked by epigastric pain, headache, loss of appetite, constipation, restlessness, odor of acetone in the breath, followed by air-hunger, coma, and collapse. **alkaline i.,** alkalosis, a condition of undue alkalinity of the blood, marked by slow pulse, dizziness, and a jerky state of the muscles.

intra- [L. within.] A prefix denoting within, inside.

intra-abdom'inal. Within the abdomen.

intra-acinous (in-trah-as'in-us). Within an acinus.

intra-arachnoid (in-trah-ar-ak'noyd). Within or enclosed by the arachnoid membrane.

intra-arte'rial. Within an artery or the arteries.

intra-artic'ular [L. *intra*, within, + *articulus*, joint.] Within the cavity of a joint.

intra-a'trial. Within one of the atria of the heart, intra-auricular.

intra-aural (in"trah-aw'ral). Within the ear.

intra-auric'ular. Within one of the auricles of the heart, intra-atrial.

intrabronchial (in-trah-bron'kĭ-al). Within the bronchi or bronchial tubes.

intrabucc'al [L. *intra*, within, + *bucca*, cheek.] Within the mouth; in the substance of the cheek.

intracanalic'ular. Within a canaliculus or canaliculi.

intracap'sular. Within a capsule, especially the capsule of a joint. **i. fracture,** fracture of the neck of the femur within the capsule of the hip-joint.

intracar'diac [L. *intra*, within, + G. *kardia*, heart] Endocardiac, intracordial.

intracar'pal. Within the carpus, among the carpal bones. 2. On the inner side of the carpus.

intracartilaginous (in"trah-kar-tĭ-laj'in-us). Within a cartilage or cartilaginous tissue.

intrace'lial, intracœ'lial [L. *intra*, within, + G. *koilia*, cavity.] Within any of the body cavities, especially within one of the ventricles of the brain; endoceliac.

intracell'ular. Within a cell or cells.

in"tracerebell'ar. Within the cerebellum.

intracer'ebra . Within the cerebrum.

intracer'vical. Within any cervix or cervical canal, as of the uterus.

intracol'ic. Within the colon.

intracor'dial [L. *intra*, within, + *cor(cord-)*, heart.] Endocardiac, within one of the chambers of the heart.

intracorporeal (in"trah-kor-por'e-al). 1. Within the body. 2. Within any structure anatomically styled a corpus.

intracorpus'cular. Within a corpuscle, especially a red blood-corpuscle.

intracos'tal. On the inner surface of the ribs, noting an internal intercostal muscle.

intracra'nial. Within the skull.

intracruræus, intracrureus (in-trah-kru-re'us). The inner part of the crureus muscle, musculus* vastus intermedius.

intracuta'neous. Within the substance of the skin. **i. reac'tion,** a tuberculous cutireaction following the injection into the substance of the skin of a very minute quantity of tuberculin.

intracys'tic. Within a cyst or a bladder.

in'trad. Toward the inner part.

intrader'mal, intrader'mic [L. *intra*, within, + G. *derma*, skin] Intracutaneous.

intradu'ral. Within or enclosed by the dura mater

intraepiphyseal (in"trah-ep-I-fiz'e-al). Within the epiphysis of a long bone.

intraepithelial (in"trah-ep-I-the'lI-al). Within or among the epithelial cells, interepithelial.

intrafaradiza'tion. The application of a faradic current to the inner surface of a cavity or hollow organ.

intrafascic'ular. Within the fasciculi of a tissue or structure.

intrafebrile (in-trah-fe'brīl, in-trah-feb'ril). During the febrile stage of a disease, intrapyretic.

intrafi'lar [*intra*, within, + *filum*, thread] Lying within the meshes of a network.

intragalvaniza'tion. The application of a galvanic current to the interior of a cavity or hollow organ.

intragas'tric. Within the stomach.

intragemmal (in"trah-jem'al) [L. *intra*, within, + *gemma*, bud.] Within any bud-like or bulb-like body, noting especially a nerve termination within an end-bulb.

intraglan'dular. Within a gland or glandular tissue.

intraglob'ular [L *intra*, within, + *globulus*, globule.] Within a globule in any sense; specifically intracorpuscular, within a red blood-corpuscle.

intragyral (in"trah-ji'ral). Within a gryus or convolution of the brain.

intrahepat'ic. Within the liver.

intrahyoid (in-trah-hi'oyd). Within the hyoid bone, noting certain accessory thyroid glands which lie in the hollow or within the substance of the hyoid bone.

intralaryn'geal. Within the larynx.

intraligamen'tous. Within a ligament, especially the broad ligament of the uterus.

intral 'bar. Within a lobe of any organ or other structure.

intralob'ular. Within a lobule, noting especially the veins within the lobules of the liver.

intraloc'ular. Within the loculi of any structure or part.

intramastoiditis (in"trah-mas"toy-di'(de')tis). Endomastoiditis.

intramed'ullary. Within the bone marrow; within the spinal cord; within the medulla oblongata.

intramem'branous. Within, or between the layers of, a membrane.

intrameningeal (in"trah-men-in'je-al). Within or enclosed by the meninges of the brain or spinal cord.

intramine (in-tram'ēn). Trade name of a synthetic preparation, diortho-diamino-thiobenzene, an organic preparation of sulphur, used in the treatment of syphilis, instead of arsphenamine.

intramu'ral. Within the wall of any cavity or hollow organ.

intramus'cular. Within the substance of a muscle.

intramyocar'dial. Within the myocardium or wall of the heart.

intrana'sal. Within the nasal cavity.

intrana'tal [L. *intra*, within, + *natalis*, relating to birth.] During or at the time of birth.

intraneural (in-trah-nu'ral) [L. *intra*, within, + G. *neuron*, nerve.] Within a nerve.

intranuclear (in"trah-nu'kle-ar) Within the nucleus of a cell.

intraoc'ular. Within the eyeball.

intrao'ral [L. *os(or-)*, mouth] Within the mouth.

intraor'bital. Within the orbit.

intraosseous (in-trah-os'se-us) [L. *intra*, within, + *os*, bone.] Within the substance of a bone.

intraos'teal [L. *intra*, within, + G. *osteon*, bone.] Endosteal, intraosseous.

intraova'rian. Within the ovary.

intraparietal (in-trah-pă-ri'e-tal) [L. *intra*, within, + *paries(pariet-)*, wall.] 1. Intramural. 2. Within the parietal lobe of the cerebrum.

intrapar'tum [L. *partus*, childbirth.] During delivery or childbirth.

intrapel'vic. Within the pelvis.

intrapericar'diac, intrapericar'dial. Endopericardiac.

in"traperitone'al. Within the peritoneal cavity.

intraphyletic (in-trah-fi-let'ik) [L. *intra*, within, + *phyletic*.] Noting morphological changes occurring during the growth and development of a cell.

intrapi'al [L. *intra*, within, + *pia(mater)*] Within the pia mater.

intrapleural (in-trah-plu'ral). Within the pleura.

intrapo'lar. Interpolar.

intrapon'tine. Within the pons Varolii.

intraprostat'ic. Within the prostate gland.

in"traprotoplas'mic. Within the protoplasm of a cell.

intrapul'monary. Within the lungs.

intrapyret'ic [L. *intra*, within, + *pyretos*, feverish.] Intrafebrile, during the febrile stage of a disease.

intrarec'tal. Within the rectum.

intrare'nal [L. *intra*, within, + *ren*, kidney.] Within the kidney.

intraret'inal. Within the retina

intrarrhachidian (in"trah-rā-kid'I-an) [L. *intra*, within, + G. *rhachis*, spine.] Intraspinal.

intrascro'tal. Within the scrotum.

intraspi'nal. Within the spinal canal or spinal cord.

intrastro'mal. Within the stroma or foundation substance of any organ or part.

intrasynovial (in-trah-si-no'vI-al) Within the synovial sac of a joint.

intratar'sal. 1. Within the tarsus, among the tarsal bones. 2. On the inner side of the tarsus.

intrathe'cal. Within a sheath, ensheathed.

intrath 'nar. Between the thenar and hypothenar eminences, noting the depression there.

intrathoracic (in"trah-tho-ras'ik). Within the cavity of the chest.

intraton'sillar. Within the substance of a tonsil

intratu'bal. Within any tube.

intratu'bular. Within any tubule.

intratympan'ic. Within the tympanum, or middle ear.

intrauterine (in"trah-u'ter-in). Within the uterus.

intravas'cular. Within the blood-vessels or lymphatics.

intrave'nous. Within a vein or veins.

intraventric'ular. Within a ventricle of the brain or heart.

intraves'ical. Within the bladder, especially the urinary bladder.

intravital (in-trah-vi'tal). During life.

intra vi'tam [L. *vita*, life.] During life.

intravitelline (in"trah-vi'tel-in). Within the vitellus or yolk of an ovum.

intravit'reous. Within the vitreous humor.

intrin'sic [L. *intrinsecus*, on the inside.] Inherent; belonging entirely to a part, noting those muscles of the extremities whose origin and insertion are both in the same limb, distinguished from the extrinsic muscles which have their origin in some part of the trunk outside of the pelvic or shoulder girdle; noting also the ciliary muscle as distinguished from the recti and other orbital muscles which are on the eyeball.

intro- [L. *intro*, into.] A prefix noting in or into.

introdu'cer [L. *intro*, into, + *ducere*, to lead.] Intubator, an instrument for introducing the tube in the operation of intubation of the larynx.

introgas'tric [L *intro*, into, + G. *gastēr*, belly, stomach.] Leading or passed into the stomach.

introflec'tion, introflex'ion [L. *intro*, in, + *flectere*, to bend.] A bending inward.

intro'itus [L. entrance.] The entrance into a canal or hollow organ, as the vagina. **i. esoph'agi,** the gastric extremity of the esophagus

introjection (in-tro-jek'shun) [L. *intro*, into, + *jacere*, to throw.] The appropriation of an external happening and its assimilation by the personality, making it a part of the self.

intromission (in-tro-mish'un). Insertion.

intromitt'ent [L. *intro*, into, + *mittere*, to send.] Conveying or sending into a body or cavity. **i. organ,** the male sexual organ which conveys the seminal fluid into the body of the female; penis.

introspec'tion [L. *intro*, into, + *spicere*, to look.] Looking inward, contemplating one's own mental processes.

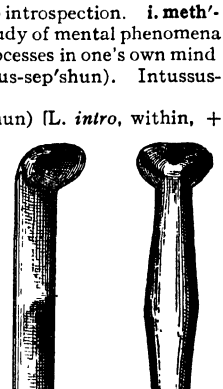
introspec'tive. Relating to introspection. **i. meth'od,** in psychology, the study of mental phenomena by contemplating the processes in one's own mind

introsusception (in-tro-sus-sep'shun). Intussusception.

introversion (in-tro-vur'shun) [L. *intro*, within, + *vertere*, to turn.] 1. The turning of one part within another, invagination. 2. The withdrawal of interest from the outer world and its concentration upon the inner self and one's own thoughts.

introvert'. To invaginate, to pass one part within another.

intubate (in-tu-bāt) [L. *in*, in, + *tuba*, tube.] To insert a tube into any part, specifically to perform intubation of the larynx.



O'Dwyer's Tubes for Intubation of the Larynx.

intubation (in-tu-ba'shun). The insertion of a tube into any canal or other part. Specifically, O'Dwyer's method, Bouchut's method, the passage of a specially constructed tube between the vocal cords to relieve stenosis due to the formation of a diphtheritic membrane, to edema, or to cicatricial contraction.

intuba'tionist. One who is skilled in the performance of intubation of the larynx.

in'tubator. An instrument for use in introducing a tube into the larynx, introducer.

intumesce (in-tu-mes') [L. *intumescere*, to swell up.] To swell up, enlarge.

intumescence (in"tu-mes'ens) [L. *intumescentia*.] 1. A swelling, a prominence. 2. The process of enlarging or swelling.

intumescent (in-tu-mes'ent). Enlarging, swelling; becoming enlarged or swollen.

intumescentia (in-tu-mes-sen'shyah) [L.] Intumescence, swelling, enlargement. **i. cervica'lis** [BNA], cervical enlargement (of the spinal cord), a spindle-shaped swelling of the spinal cord extending from the medulla to the second thoracic vertebra, with maximum thickness opposite the fifth or sixth cervical vertebra. **i. gangliofor'mis,** ganglion geniculi [BNA]. **i. lumba'lis** [BNA], lumbar enlargement (of the spinal cord), a spindle-shaped swelling of the cord beginning at the level of the tenth thoracic vertebra and tapering into the conus medullaris, with maximum thickness opposite the last thoracic vertebra. **i. tympan'ica** [BNA], tympanic intumescence, a swelling, not ganglionic, on the tympanic branch of the glossopharyngeus nerve; it is regarded as possibly similar to the carotid glomus.

intussusception (in"tus-sus-sep'shun) [L. *intus*, within, + *suscipere*, to take up.] Invagination; the infolding of one segment of the intestine within another segment. **colic i.,** the ensheathing of one portion of the colon into another. **il'eal i.,** a form in which one portion of the ileum is ensheathed in another portion of the same division of the bowel. **ileoce'cal i.,** a form in which the lower segment of the ileum passes through the valve of the colon into the cecum. **ileocol'ic,** a form in which the lower portion of the ileum with the valve of the colon passes into the ascending colon. **ret'rograde i.,** the invagination of a lower segment of the bowel into one just above.

intussusceptum (in"tus-sus-sep'tum). The inner segment in an intussusception, that part of the bowel which is received within the other part.

intussuscipiens (in"tus-sus-sip'i-enz). The portion of the bowel, in intussusception, which receives the other portion.

in'ula (N.F.). Elecampane, elf-dock, wild sunflower, the root of *Inula helenium*; diuretic, diaphoretic, expectorant, emmenagogue in doses of gr. 10–30 (0.6–2.0).

inulain (in-u'lah-in) A dry preparation from inula, employed in doses of gr. 2–5 (0.13–0.3).

in'ulase. A ferment acting upon inulin changing it into levulose.

in'ulin. A polysaccharide, obtained as a tasteless, white, hygroscopic powder from the tubers and roots of inu'a, or elecampane, and a number of other plants; alantin.

in'ulol. Alantol.

inunc'tion [L. *in*, in, + *ungere*, to smear.] Anointing, the administration of a drug in ointment form applied with rubbing.

inunctum (in-unk'tum) [L. *inungere*, to anoint.] Inunction, an ointment with lanolin as a menstruum, to be applied with the purpose of causing absorption of the active ingredient. **i. mentho'-**

lis (N.F.), menthol inunction, contains menthol, 5, hydrous wool fat, 95. **i. mentho'lis compos'itum** (N.F.), compound menthol inunction, contains menthol, 5, methyl salicylate, 10, and hydrous wool fat, 85.

inus'tion [L. *in*, in, + *urere*, to burn.] The application of the actual cautery.

in u'tero. Within the womb; not yet born.

invaccina'tion. Accidental inoculation of some disease, such as syphilis, during vaccination.

invaginate (in-vaj'in-āt) [L. *in*, in, + *vagina*, a sheath.] To ensheathe, introvert, insert one part within another part of the same thing.

invagina'tion. The process of invaginating or of passing one part within another part of the same thing, or the state of being invaginated; intussusception.

in'valid [L. *in-* neg. + *validus* strong.] 1. Weak, sick. 2. An infirm or sickly person; one sufferin ; from a chronic but not wholly disabling ailment.

inva'sion [L. *invadere*, to attack.] The beginning or incursion of a disease.

invermina'tion [L. *in*, in, + *vermis*, worm.] Helminthiasis.

inversion (in-vur'shun) [L. *invertere*, to turn about.] 1. A turning inward, upside down, or in any direction contrary to the existing one. 2. The conversion of a disaccharide or polysaccharide by hydrolysis into a monosaccharide. 3. Homosexuality.

in'vert. A homosexual person.

invertase (in'vur-tāz). A sugar-splitting enzyme in the small intestine which converts cane-sugar into dextrose and levulose (invert-sugar).

invertebra'ta. One of the divisions of the animal kingdom containing all those without a spinal column.

inver'tebrate [L *in-* neg.] 1. Not possessed of a spinal, or vertebral, column. 2. An animal of the division *Invertebrata*.

in'vertin. A ferment produced by yeast which converts cane-sugar into invert-sugar.

invert'or. 1. A muscle which turns a part, such as the foot, inward; inward rotator. 2. Commutator(1).

in'vertose. Invert-sugar.

in'vert-sugar. A supposed mixture of dextrose and levulose, a levorotatory saccharine substance forming the chief part of honey.

invet'erate [L. *inveterare*, to become old.] Chronic, long-seated, firmly established; said of a disease or of confirmed habits.

inviscation (in-vis-ka-shun) [L. *in*, in, on, + *viscum*, bird-lime.] 1. Smearing with mucilaginous matter. 2. The mixing of the food, during mastication, with the buccal secretions.

in vit'ro [L. in glass.] In the test-tube, referring to chemical reactions, fermentation, etc., occurring therein.

in vi'vo [L. in the living being] In the living body, referring to vital chemical processes, etc., as distinguished from those occurring in th test-tube.

invol'ucel [L. *involucellum*, dim. of *involucrum*.] A secondary involucre surrounding the base of each flower in an involucrate flower cluster.

involu'crate. In botany, noting a flower which has an involucre.

involucre (in'vo-lu-ker) [L. *involucrum; involvere*, to roll up.] 1. An enveloping membrane, a sheath or sac. 2. A whorl of leafy bracts subtending a flower cluster.

involu'crum [L. *involvere*, to wrap up.] Involucre.

invol'untary [L. *in-* neg. + *voluntas*, will.] 1. Independent of the will, not volitional. 2. Contrary to the will **i. muscles,** muscles not under control of the will; except in the case of the heart, they are non-striated muscles.

involu'tion [L. *involvere*, to roll up.] 1. The return of an enlarged organ, as the puerperal uterus, to normal size. 2. The retrograde vital processes incident to old age. 3. The turning inward of the edges of a part. **i. of the uterus,** the process of reduction of the uterus to its normal non-pregnant size following childbirth. **senile i.,** the shrinking of the organs and tissues occurring normally in old age.

involu'tion-form. The abnormal development assumed at times by a microorganism cultivated under unfavorable surroundings.

iocamfen (i-o-kam'fen) [*iodine* + *camphor* + *phenol*.] Trade name of a reddish brown trituration product of iodine, camphor, and phenol, containing 10 per cent. of iodine.

iodacetanilid (i-o-das-ĕ-tan'i-lid). Iodantifebrin, obtained by the action of iodine chloride on acetanilid; said to be analgesic and antipyretic.

iodalbacide (i-o-dal'ba-sid). A yellowish powder containing 10 per cent. of iodine; employed as an alterative and antisyphilitic in doses of gr. 15 (1.0).

iodal'bin. Trade name of a compound of iodine and albumin, employed as a substitute for the iodides in doses of gr. 5–7½ (0.3–0.5).

i'odalose. A combination of iodine and peptone, employed as a substitute for the iodides.

Iodamœba (i-od-ă-me'bah) [*iodine* + *amœba*.] A genus of Rhizopoda, one species of which, *I. butschlii*, is parasitic in the human intestine; its cysts stain deeply with iodine; *Entamœba bütschlii*.

i'odan. Trade name of a solution of iodine in goose-grease, employed as a substitute for the iodides.

iodan'isol. Anisol orthoiodide, employed as an antiseptic and counterirritant.

iodantifeb'rin. Iodacetanilide.

iodantipy'rine. Iodopyrine.

i'odate. A salt of iodic acid.

iodcasein (i-od-ka'se-in). A yellowish insoluble powder, a compound of iodine and casein, employed as a substitute for iodoform.

iodeikon (i-od-i'kon) [*iodine* + G. *eikōn*, image.] A make of tetraiodophthalein* sodium.

iodeol (i'o-de-ol). Trade name of a preparation of colloidal iodine for internal and intramuscular use.

iodglidine (i-od-gli'dēn). Iodoglidine.

iod'ic. Relating to, or caused by, iodine or an iodide, as *iodic acne*. **i. acid,** acidum iodicum, HIO_3, sometimes employed as a substitute for potassium iodide; an injection of ♏30 (2.0) of a 2 per cent. solution is used in goiter and glandular swellings.

i'odide. A compound of iodine with another element; specifically a compound with potassium or sodium, the two being called collectively *the iodides*.

iodim'etry [L. *iodum*, iodine, + G. *metron*, measure.] The determination of the amount of iodine in any compound.

i'odine (i'o-dīn, i'o-din) [G. *iōdēs*, violet-like.] Iodum. **i. bro'mide, i. chlor'ide,** see under *iodum*. **i. erup'tion,** an acneform or other eruption caused by the action of iodine taken internally, a form of drug eruption; iododerma. **i. num'ber,** the percentage of iodine which a given amount of fat will absorb, serving as an indication of the proportion of fatty acids in the fat. **i. pentabro'mide, i. trichlor'ide,** see under *iodum*.

iodinophil, iodinophile (i-o-din'o-fil, i-o-din'o-fīl) [*iodine* + G. *philos*, fond.] 1. Staining readily with iodine. 2. Any histological element which stains readily with iodine.

iodinoph'ilous. Iodinophil(1).

iodip'alin. Trade name of a mixture of iodine and a fixed oil, employed as a substitute for the iodides.

iod'ipin. Trade name of a preparation obtained by the action of iodine chloride on sesame oil, employed as a substitute for the iodides in syphilis and glandular tuberculosis; it is a yellow oily liquid occurring in two strengths, containing 10 and 25 per cent. of iodine; dose of the former ʒ 1–3 (4.0–12.0), of the latter (hypodermically) ʒ ½–1½ (2.0–6.0). A solid form of iodipin, of 10 per cent. strength, is also employed in doses of gr. 30–45 (2.0–3.0). In 40 per cent. strength it is employed as a contrast medium for *x*-ray examination of the kidneys, spinal cord, or ureters. **i. test,** see under *test*.

i'odism. Poisoning by iodine, a condition marked by severe coryza, an acneform eruption, weakness, salivation, and a foul breath, caused by the continuous administration of iodine or one of the iodides.

iod'ival. Trade name of a compound of iodine with urea and valerianic acid, employed as a substitute for the iodides.

i'odize. 1. To treat with iodine. 2. To impregnate with iodine.

i"odoalbu'min. A compound of an albumin and iodine, employed in goiter and glandular enlargements.

iodoam'ylum. Iodamylum

iodocaffeine (i-o-do-kaf'e-ēn). Caffeine-sodium iodide, a white powder employed in the treatment of valvular diseases of the heart in doses of gr. 5–8 (0.3–0.5).

iodocasein (i-o-do-ka'se-in). A yellowish compound of casein and iodine, employed as a dusting powder in place of iodoform

iodochlorhydroxyquinoline (i"o-do-klor"hi-drok-sĭ-kwin'o-lēn). Vioform.

iod'ocol. A compound of guaiacol and iodine recommended in tuberculosis.

iodocre'sol. Traumatol.

iod'ocrol. Carvacrol iodide.

iododer'ma. Any iodine* eruption.

io'dofan. A reddish-yellow powder, an addition product of formaldehyde and iododioxybenzene, employed as a substitute for iodoform.

io'doform. Iodoformum. **i. albu'minate,** iodoformogen. **naph'thalin i.,** pulvis iodoformi compositus (N.F.).

iodofor'magen. Iodoformogen.

iodofor'mal. Trade name of a yellowish powder obtained by the action of ethyl iodide on iodoformin; employed as a substitute for iodoform.

io"doformalbu'min. Iodoformogen.

iodofor'min. Hexamethylene tetramine iodoform.

io'doformism. Poisoning by iodoform.

io'doformize. 1. To treat with iodoform. 2. To impregnate with iodoform.

iodoform'ogen. Iodoform albuminate, trade name of a mixture of iodoform and albumin, occurring as a fine yellow powder; employed as a dusting powder for wounds, in contact with which it gradually liberates iodoform.

iodofor'mum [*iodine* + *formyl.*] (U.S., Br.) Iodoform, triiodomethane, formyl teriodide, CHI_3; a lemon-yellow crystalline powder of strong disagreeable odor, obtained by the action of iodine upon various alcohols and other substances in the presence of an alkaline solution; employed as an antiseptic dusting powder to wounds and syphilitic sores and as a local alterative in uterine affections, and internally in gastric catarrh in doses of gr. 1–3 (0.06–0.2). **i. aromatisa'tum,** aromatized or deodorized iodoform; cumarin 4, iodoform 96. **i. bitumina'tum,** a mixture of iodoform and tar, the latter being added to mask the odor.

iodogal'licin. Bismuth oxyiodo-methyl-gallol, a dark gray powder employed as a substitute for iodoform.

iodogenol (i-o-doj'en-ol). Trade name of a compound of iodine and peptone, employed as a substitute for the iodides.

iodogli'dine. Trade name of a compound of iodine with a vegetable albumin, employed as a substitute for the iodides.

iodohe'mol. A compound of hemol with iodine, occurring as a brown powder; employed in syphilis and other conditions in which an iodine effect is desired, in doses of gr. 3–5 (0.2–0.3).

iodohy'dric. Hydriodic.

i'odol, iodo'lum. Tetraiodopyrrol, pyrrol tetraiodide, C_4I_4NH; a substitution derivative of pyrrol, a light grayish brown powder, insoluble in water, employed as a substitute for iodoform, and given internally in the treatment of syphilis and diabetes in doses of gr. 2–5 (0.13–0.3).

io'dolen. Trade name of a compound of iodine and albumin, used as a substitute for iodoform.

io'dolin. 1. Iodolen. 2. An iodine compound of quinoline, employed as a substitute for iodoform.

iodomaizin (i-o-do-ma'zin). Trade name of a compound of iodine with a gluten from maize, employed as a substitute for the iodides.

iodomethane (i-o-do-meth'ān). Methyl iodide.

i'odomuth. Trade name of an iodine compound of bismuth; antiseptic and alterative in doses of gr. 5–10 (0.3–0.6).

iodonaph'thol. Naphthol-aristol, a yellowish green, tasteless, odorless powder; used, like aristol, as a substitute for iodoform.

iodone (i'o-dōn). Commercial name of the periodide of phthalic acid anhydride, a preparation which liberates iodine slowly, acting as an antiseptic like iodoform.

iodonu'cleoid. A compound of iodine and nuclein, a brownish powder used in syphilis.

io'dophen. Nosophen.

iodophenacetin (i"o-do-fen-as'et-in). A brownish crystalline powder, antiseptic; employed internally in rheumatism in doses of gr. 5–8 (0.3–0.5).

iodophe'nin. Iodophenacetin.

iodophe'nol. A compound of iodine and phenol in glycerin; employed as an antiseptic.

iodophilia (i"o-do-fil'i-ah) [L. *iodum*, iodine, + G. *phileō*, I love.] Glycogenic reaction of the leucocytes; a brownish or brownish red reaction of the multinuclear leucocytes when treated with iodine. The reaction occurs in acute infections and various other conditions. **extracel'lular i.,** the staining of small round or oval masses, resembling platelets, in the plasma. **intracel'lular i.,** the glycogenic reaction of granules within the multinuclear leucocytes.

iodophthaleinum (i"o-dof-thal-e-e'num) (Br.) Iodophthalein, tetraiodophthalein* sodium, the disodium salt of tetraiodophenolphthalein which may be prepared by the iodination of phenolphthalein; employed as an indicator in *x*-ray examination of the gall-bladder; dose, gr. ½–1 (0.02–0.03) per pound of body-weight up to 75 grains, by intravenous injection.

iodopy'rine. A substance obtained by mixing iodine and antipyrine in alcoholic solution, occurs in prismatic crystals; recommended in asthma and tertiary syphilis in doses of gr. 10–20 (0.6–1.3).

iodo-ray (i'o-do-ra''). Tetraiodophthalein-sodium, iodophthaleinum (Br.).

i''odose'rum. Trade name of a preparation of iodine with blood-serum, employed as a substitute for the iodides.

iodostarine (i-o-dos'tar-ēn). Diiodotariric acid, an iodine addition product of tariric acid, containing 47.5 per cent. of iodine; employed as a substitute for the inorganic iodides and in the same dosage.

i'odosyl. A red powder employed as a substitute for iodoform in powder or ointment.

iodotan'nic acid. Iodotannin.

iodotan'nin. Iodotannic acid, prepared by adding iodine to an alcoholic solution of tannin; a dark brown liquid which has been employed as an injection in gonorrhea in 1 to 2 per cent. solution.

iodotan'nol. Trade name of a mixture of iodine and tannin recommended as a substitute for iodoform.

iodoter'pin. A compound of iodine and terpin, a dark brown liquid employed as a substitute for tincture of iodine and, dried with kaolin, as a dusting-powder in place of iodoform.

iodotheine (i''o-do-the'ēn). A compound of iodine and theine; similar in action and uses to iodocaffeine.

iodotheobro'mine. A compound of iodine and theobromine, similar in action and uses to iodocaffeine.

iodothy'moform. A yellow, insoluble powder obtained by the action of iodine on thymoform; a substitute for iodoform.

iodothy'mol. Thymolis* iodidum.

iodothy'rin. Thyroiodine; a light yellowish powder prepared by triturating sugar of milk with an extract of the thyroid gland; dose, gr. 5–30 (0.3–2.0) according to age.

iodotone (i'o-do-tōn). Trade name of a liquid iodine preparation, recommended when iodine is indicated, in doses of ʒi–ii (4.0–8.0).

i'odoval. Trade name of a preparation of iodine, alpha-mono-iodisovalerylurea, employed as a substitute for the iodides.

iodoxybenzoic acid (i-od-ox''ĭ-ben-zo'ik as'id). See *orthoiodoxybenzoic acid.*

iodter'pin. Iodoterpin.

io'dum, gen. *io'di* [G. *iōdēs,* like a violet.] (U.S., Br.) Iodine, a non-metallic chemical element, symbol I, atomic weight 126 92, occurs in lustrous, scaly, bluish black crystals soluble in 60 parts glycerin but only in 5000 parts distilled water. Employed externally as a counterirritant and internally as an alterative, usually in the form of a tincture or of one of its salts. **io'di bro'midum** or **pentabro'midum,** iodine pentabromide, bromide of iodine, IBr_5; a dark reddish brown liquid which has been employed locally in diphtheria. **io'di chlo'ridum** or **trichlor'idum,** iodine trichloride, chloride of iodine, ICl_3; an orange-yellow liquid soluble in water, employed as an alterative in dose of gr. $\frac{1}{12}$–$\frac{1}{4}$ (0.005–0.01).

iod'urase. Trade name of a preparation of iodine with yeast, employed as a substitute for the iodides.

io'dylin. Trade name of bismuth iodosalicylate, a yellowish powder employed as a substitute for iodoform.

iodyl'oform. Trade name of an iodine and gelatin compound, used as a substitute for iodoform.

i'on [G. *iōn,* going.] A group of atoms or parts of molecules carrying a charge of electricity and constituting one of the elements of an electrolyte. The ions charged with negative electricity which are evolved at the positive pole (anode) are called anions; those charged with positive electricity, at the negative pole (cathode), cations

ion'ic. Relating to an ion or ions. **i. medica'tion,** electrochemical therapeutics, such as the employment of electrolysis and cataphoresis.

io'nium [G. *iōn,* going.] A radioactive element emitting both alpha and beta radiations, but producing no emanation; it is thought to be a disintegration product of uranium and possibly the parent of radium.

ionization. 1. Dissociation into ions, occurring when an electrolyte is dissolved. 2. Iontophoresis.

i'onize. To separate into ions; to break molecules into subatomic particles, charging the larger with positive, the smaller with negative, electricity.

ion'ophose [G. *ion,* violet, + *phōs,* light.] A purple phose.

ionotherapy (i-on-o-ther'ă-pĭ) [G. *ion,* violet, + *therapeia,* medical treatment.] 1. Treatment of disease by exposure to the violet rays. 2. Iontotherapy.

iontophoresis (i-on-to-fo-re'sis) [*ion* + G. *phorēsis,* a carrying in] The introduction of ions into the body by means of a current of electricity; cataphoresis of metallic or other substances.

iontoquantimeter (i-on''to-kwon-tim'e-tur) [*ion* + L. *quantus,* how much, + G. *metron,* measure.] A device for determining the quantity of *x*-rays by measuring the resulting ionization.

iontotherapy (i-on-to-ther'ă-pĭ) [*ion* + G. *therapeia,* medical treatment.] Treatment of disease by cataphoresis or the forcing of ions into the body by means of the electric current, iontophoresis.

iopax (i'o-paks). Uroselectan.

iopho'bia [G. *ios,* poison, iron rust, + *phobos,* fear.] 1. Toxicophobia, a fear of being poisoned. 2. Fear of touching rusty metallic objects.

iopropane (i-o-pro'pān). Iothion.

io'tacism [G. *iōta,* the letter i.] A speech defect marked by the frequent substitution of an ē sound (that of the Greek iota) for other vowels.

ioter'pin. Iodoterpin.

iothi'on. Diiodohydroxypropane, a thick, yellowish, oily liquid obtained by the action of potassium iodide on dichlorhydrin; employed as a substitute for the iodides, applied by inunction in a 25–50 per cent. ointment with lanolin and petrolatum.

iothionol (i-o-thi'on-ol). A 25 per cent. oily solution of iothion, employed in veterinary practice.

ip'ecac, ipecacuanha (ip-e-kak-u-an'ah) [a native Brazilian word.] (U.S., Br.) Ipecacuanhæ radix, the dried root of *Cephaëlis ipecacuanha,* a shrub of Brazil and other parts of South America; has expectorant, emetic, and antidysenteric properties; dose, gr. ½–1 (0.03–0.06), as an emetic gr 20 (1.3). **deëm'etinized i.,** i. from which the emetic principle has been extracted, said to retain its antidysenteric properties. **false i.,** gillenia. **i. pulvera'ta** (Br.), powdered ipecac; dose, gr. ½–2 (0.03–0.12), emetic dose, gr. 15–20 (1.0–2.0).

ipomœa (i-po-me'ă) (U.S., Br.). Ipomea, Orizaba jalap root, Mexican scammony root, the dried root of *Ipomœa orizabensis* Ledenois (fam. *Convolvulaceæ*); the resin is cathartic in doses of gr. 3–4 (0.2–0.26).

ipral (i'pral). The calcium salt of ethylisopropylmalonyl urea, employed as a hypnotic and

nerve sedative in doses of gr. 2–4 (0.12–0.24) followed by a cup of some warm drink.

ipralidon (i-pral'ĭ-don). Trade name of a mixture of 2 grains of ethyl-iso-propyl-barbituric acid and 2.33 grains of amidopyrine, recommended in the treatment of neurotic conditions with mental distress and restlessness.

ipsilateral (ip-sĭ-lat'ur-al) [L. *ipse*, same, + *latus*, side.] On the same side, noting especially paralytic or other symptoms occurring on the same side as the brain lesion causing them.

ipsolateral (ip-so-lat'ur-al). Ipsilateral.

Ir. Chemical symbol of iridium.

ir. Abbreviation for internal resistance.

iral'gia. Iridalgia.

iridæ'mia. Iridemia.

i'ridal. Relating to the iris, iridic, iridial, iridian.

iridal'gia [G. *iris(irid-)* + *algos*, pain.] Pain referred to the iris.

iridauxesis (ir-ĭ-dawk-se'sis) [G. *iris(irid-)* + *auxēsis*, enlargement.] Thickening of the iris following plastic iritis; iridoncus.

iridectome (ir-ĭ-dek'tōm). A slender knife used in performing iridectomy.

iridectomesodialysis (ir-ĭ-dek-to-mes"o-di-al'i-sis) [G. *iris(irid-)* + *ektomē*, excision, + *mesos*, middle, + *dialysis*, loosening.] Formation of an artificial pupil by combined excision and separation of the adhesions around the inner margin of the iris.

iridec'tomize. To subject to the operation of iridectomy.

iridec'tomy [G. *iris(irid-)* + *ektomē*, excision.] Excision of a portion of the iris. **op'tical i.**, an i. performed for the purpose of improving the vision by making an artificial pupil, in cases of central opacity of the cornea or lens, keratoconus, etc. **prepar'atory i.**, one done as a preparatory measure to a cataract operation. **therapeu'tic i.**, one performed for the prevention or cure of disease in the eye, glaucoma, for example.

iridectro'pium [G. *iris(irid-)* + *ektropion*, eversion.] Eversion of part of the iris.

iride'mia, iridæ'mia [G. *iris(irid-)* + *haima*, blood.] Bleeding from the iris.

iridencleisis (ir"id-en-kli'sis) [G. *iris(irid-)*, iris, + *enkleiō*, I shut in.] The incarceration of a portion of the iris in a wound of the cornea, either accidentally or as an operative measure to effect a displacement of the pupil.

iridentro'pium [G. *iris(irid-)* + *entropion*, inversion.] Inversion of part of the iris.

iridere'mia [G. *iris(irid-)* + *erēmia*, absence.] Absence of a part or the whole of the iris.

iridescent (ir-ĭ-des'ent) [G. *iris*, rainbow.] Presenting a changeable metallic luster like mother of pearl or the plumage of certain birds; nacreous.

iridesis (i-rid'ĕ-sis) [G. *iris(irid-)*, iris, + *desis*, a binding together.] Ligature of a portion of the iris brought out through an incision in the cornea.

iridiagnosis (i-rĭ-di-ag-no'sis). Diagnosis of systemic disease by inspection of the iris.

irid'ial, irid'ian. Iridal.

irid'ic. 1. Iridal, relating to the iris. 2. Relating to iris, the drug. **i. acid,** an acid, $C_{16}H_{12}O_8$, obtained from orris root or Florentine iris

ir'idin. 1. A glucoside, $C_{24}H_{26}O_{13}$, from orris root, *Iris florentina*. 2. Irisin, a resinoid from blue flag, *Iris versicolor;* cholagogue and cathartic in doses of gr. 1–3 (0.06–0.2).

irid'ium [G. *iris*, rainbow, because of the different colors of salts of the metal.] A white silvery metallic element, symbol Ir, atomic weight 193.1.

iridiza'tion. The halo appearance surrounding a light observed by sufferers from glaucoma.

iridoavulsion (ir"ĭ-do-a-vul'shun). Avulsion, or tearing away, of the iris.

iridocapsulitis (ir-id-o-kap-su-li'(le')tis). Iritis with accompanying inflammation of the capsule of the crystalline lens.

iridocele (ir'ĭ-do-sēl) [G. *iris(irid-)* + *kēlē*, hernia.] Protrusion of a portion of the iris through a corneal defect.

iridochorioiditis, iridochoroiditis (ir-ĭ-do-ko-rĭ-oy-di'(de')tis, ir-ĭ-do-ko-roy-di'(de')tis). Inflammation of both iris and chorioid.

iridocine'sia, iridocine'sis [G. *iris(irid)* + *kinēsis*, movement.] The movement of the iris in contracting and dilating the pupil.

iridocinet'ic. Relating to the movements of the iris.

ir"idocolobo'ma [G. *iris(irid-)* + *kolobōma*, the part removed in mutilation.] A coloboma, or congenital defect of the iris.

iridoconstric'tor. Causing contraction of the pupil, noting the circular muscular fibers of the iris.

iridocyclec'tomy [G. *iris(irid-)* + *kyklos*, circle (ciliary body), + *ektomē*, excision.] Removal of the iris and ciliary body.

iridocyclitis (ir"id-o-si-kli'(kle')tis) [G. *iris(irid-)* + *kyklos*, circle (ciliary body), + *-itis*.] Inflammation of both iris and ciliary body.

ir"idocystec'tomy [G. *iris* + *kystis*, a bag (capsule), + *ektomē*, excision.] An operation for making an artificial pupil after loss of the lens with posterior synechia; the border of the iris and a portion of the capsule of the lens are drawn out through an incision in the cornea and cut off.

iridod'esis. Iridesis.

iridodiagnosis (ir"ĭ-do-di-ag-no'sis). Diagnosis of systemic affections through observation of changes in form and color of the iris.

iridodial'ysis [G. *iris* + *dialysis*, a separating.] Separation of the outer border of the iris from its ciliary attachment.

iridodila'tor. Causing dilatation of the pupil, noting the radiating muscular fibers of the iris.

iridodone'sis [G. *iris(irid-)* + *doneō*, I shake to and fro.] Hippus, a tremulousness of the iris.

iridology (i-rĭ-dol'o-jĭ) [*iris* + *-ology*.] A study of the markings, changes in color, etc., said to occur in the iris during the course of systemic diseases.

iridomala'cia [G. *iris(irid-)* + *malakia*, softness.] Degenerative softening of the iris.

iridome"sodial'ysis [G. *iris(irid-)* + *mesos*, middle, + *dialysis*, loosening.] Separation of adhesions around the inner margin of the iris.

iridomo'tor. Iridocinetic.

iridon'cus [G. *iris(irid)* + *onkos*, swelling.] Tumefaction of the iris.

iridoparal'ysis. Iridoplegia.

iridoperiphakitis (ir"ĭ-do-per"ĭ-fă-ki'(ke')tis) [G. *iris(irid-)* + *peri*, around, + *phakos*, lens.] Inflammation of the iris and the anterior portion of the capsule of the lens.

ir"idople'gia [G. *iris(irid-)* + *plēgē*, stroke.] Paralysis of the sphincter of the iris **accommoda'tion i.**, absence of pupillary contraction during efforts at accommodation. **re'flex i.**, Argyll-Robertson pupil.

iridorrhex'is [G. *iris(irid-)* + *rhēxis*, rupture.] Tearing the iris from its peripheral attachment, in order to increase the breadth of a coloboma.

iridoschisma (ir-id-o-skiz'mah) [G. *iris(irid-)* + *schisma*, cleft.] Coloboma of the iris.

iridosclerot'omy [G. *tomē*, incision.] An incision involving both sclera and iris.

iridosteresis (ir"ĭ-do-stĕ-re'sis) [G. *iris(irid-)* + *sterēsis*, a loss.] Irideremia.

iridot'asis [G. *iris(irid-)* + *tasis*, a stretching.] Borthen's operation, stretching the iris as a substitute for iridotomy in glaucoma.

iridot'omy [G. *iris(irid-)* + *tomē*, incision.] Transverse division of some of the fibers of the iris, forming an artificial pupil.

i'ris [G. rainbow.] 1. The anterior division of the vascular tunic of the eye, a disc-like diaphragm, perforated in the center (the pupil), attached marginally to the ciliary body; it is composed in large part of muscular tissue by which the size of the pupil is regulated. 2. Blue flag, flag lily, iris versicolor (N.F.), the dried rhizome and roots of *Iris versicolor;* occasionally employed as a cathartic and hepatic stimulant like podophyllum, in doses of gr. 10–20 (0.6–1.3); it is employed in eclectic practice both externally and internally in cases of enlargement of the thyroid gland, and also in the treatment of chronic scaly skin diseases, in doses of 2–4 drops of the specific medicine in water every three hours. 3. (N.F.) Orris root, the rhizome of *Iris florentina, I. germanica,* or *I. pallida;* employed in the manufacture of various toilet articles. 4. Occurring in concentric rings, noting certain skin lesions, such as erythema* iris. **i. bombé** (e-rēs' bawn-ba') [Fr. bulging], a condition occurring in posterior annular synechia, in which an increase of fluid in the posterior chamber causes a forward bulging of the non-adherent portion of the iris. **i. versic'olor** (N.F.), iris (2). **pil'lars of the i.,** ligamentum pectinatum iridis [BNA]. **trem'ulous i.,** iridodonesis, hippus.

absence, aniridia, irideremia. **eversion,** iridectropium, iridectropy. **excision of part,** iridectomy, corectomy. **fissure,** coloboma iridis, iridoschisis, iridocoloboma, **hemorrhage,** iridemia, iridæmia. **incision,** iridotomy, iritomy. **inflammation,** iritis; iridochorioiditis (involving chorioid); iridocyclitis (involving ciliary body). iridoperiphacitis (involving capsule of lens); iridocyclochorioiditis (involving both ciliary body and chorioid). **inversion,** iridentropium, iridentropy. **making artificial pupil through,** iridectomy, iridotomy, iritomy-iridesis, iridodesis, iridodialysis, iridencleisis, iridectomedialysis, corectomy, coretomy coredialysis, coremorphosis, corencleisis, coreplasty. **movements,** iridocinesis, iridocinesia. **pain,** iralgia, iridalgia. **paralysis,** iridoparalysis, iridoparesis, iridoplegia. **prolapse,** iridoptosia, ptosis iridis. **protrusion,** myiocephalon, iridocele **removal,** iridavulsion, iridoavulsion, iridectomy. **rupture,** iridorrhexis. **separating from attachments,** iridodialysis **softening,** iridomalacia. **thickening,** iridauxesis, iridoncus, iridoncos s. **tremor,** iridodonesis, iridoplania, iridotromos, hippus. **ulceration,** iridelcosis.

Iris. A genus of plants of the natural order *Irideæ.* **I. florenti'na,** Florentine orris, orris root, the rhizome of *Iris florentina, I. germanica,* or *I. pallida;* employed now chiefly as an ingredient of tooth powders. **I. versic'olor,** iris (2).

I'rish moss. Chondrus.

i'risin. Iridin.

irit'ic. Relating to iritis.

iritis (i-ri'(re')tis). Inflammation of the iris. **i. catamenia'lis,** i. recurring at the menstrual periods. **plas'tic i.,** i. with a fibrinous exudation, the contraction of which deforms the iris. **spon'gy i.,** i. with a fibrinous coagulum in the anterior chamber of the eye. **sympathet'ic i.,** i. consecutive to a similar condition in the other eye.

irit'omy. Iridotomy.

iron (i'ern) [A.S. *iren.*] Ferrum, a metallic element, symbol Fe, atomic weight, 55.85. It occurs in the chlorophyl of plants and in the hemoglobin of the red blood-corpuscles of animals, is stored in the tissues in the form of ferratin, a loose organic compound, and is excreted in the bile A great many iron salts are employed in medicine, chiefly in the treatment of anemia and conditions associated with it; see *ferrum.* **dl'alyzed i.,** ferrum dialysatum. **i. group,** the three amphoteric elements, chromium, manganese, and iron **i. plaster,** strengthening plaster, emplastrum* ferri. **i. pyri'tes** [G. *pyritēs,* flint, from *pyr,* fire], native sulphide of iron. **pow'dered i., pul'verized i.,** ferrum pulveratum. **Quevenne's' i.,** ferrum reductum. **reduced i.,** ferrum reductum.

irot'omy. Iridotomy.

irradia'tion [L. *irradiare,* to illumine.] 1. The apparent enlargement of a bright object seen against a dark background. 2. Subjection to the action of rays (as of heat, light, radium, etc.) for diagnostic or therapeutic purposes. 3. Subjection of a substance (such as ergosterol) to the action of certain rays (such as the ultraviolet) in order to impart to it, or to increase its already existing, therapeutic efficacy.

irredu'cible. Not reducible; incapable of being made smaller or, in chemistry, simpler, or of being replaced. **i. hernia,** one that cannot be replaced by taxis.

irreg'ular. Not regular.

irrespirable (ir-rĕ-spi'ra-bl). Incapable of being breathed; unfit for respiration, noting a poisonous gas or one containing oxygen in insufficient amount.

irresus'citable. Incapable of being revived.

irr'igate [L. *in,* on, + *rigare,* to water.] To wash out a cavity with water or a medicated fluid.

irriga'tion. The washing out of a cavity or wounded surface with a stream of fluid.

irr'igator. An appliance used in irrigation, consisting of a reservoir with a flexible outlet tube.

irritabil'ity [L *irritare,* to excite, + *habilis,* proper, fit.] The property inherent in protoplasm of reacting to a stimulus. **elec'tric i.,** the response of a nerve or muscle to the passage of a current of electricity; in cases of degeneration in nerve or muscle this i. is altered or lost; see modal, qualitative, and quantitative alteration.*

irr'itable. Capable of reacting to a stimulus, or tending to react immoderately to a stimulus. **i. heart,** disordered action of the heart (D.A.H.), a syndrome of nervous and cardiocirculatory disturbances associated with an increased susceptibility to fatigue, observed espec ally in soldiers on active war service (fighting or marching), but noted occasionally also in civil life. **i. joint,** a condition sometimes following a sprain, in which there are recurrent attacks of acute or subacute inflammation, often without apparent exciting cause.

irr'itant. 1. Irritating, causing irritation. 2. An irritating agent; a stimulus.

irr'itate [L. *irritare,* to excite.] To cause irritation.

irrita'tion [L. *irritatio.*] 1. Extreme reaction of the tissues to an insult or injury, incipient inflammation. 2. The normal response of nerve or muscle to a stimulus. 3. The provocation of a normal or exaggerated reaction in the tissues by the application of a stimulus.

irr'itative. Causing irritation.

irrumation (ir-ru-ma'shun) [L. *irrumare,* to give suck.] Fellatorism, fellatio.

isacen (i'să-sen). Trade name of diacetyl-dioxyphenyl-isatin; laxative in doses of gr. $\frac{1}{8}$ (0.005).

Isambert's disease' (e-zahn-bair') [Émile *Isambert,* Parisian physician, 1827–1876.] Ulceration, usually tuberculous, of the mucous membrane of the mouth and fauces.

i'sarol. Ichthyodin. **i-Ciba,** trade name of a preparation complying with the standards of bitumen* sulphonatum (N.F.)

isat'ophan. Trade name of a methoxy derivative of atophan, occurring in lemon-yellow crystals, recommended as a substitute for atophan because of its tastelessness.

ischemia, ischæmia (is-ke'mĭ-ah) [G. *ischō*, I keep back, + *haima*, blood.] Local anemia due to mechanical obstruction (mainly arterial contraction) to the blood-supply.

ischemic (is-ke'mik) Relating to or affected by ischemia.

ischesis (is-ke'sis) [G. *ischō*, I hold back.] Suppression of any discharge, especially of a normal one.

ischia (is'kĭ-ah). Plural of *ischium*.

ischiadelphus (is-kĭ-ăd-del'fus) [G. *ischion*, hip, + *adelphos*, brother.] Ischiodidymus,

ischiadic (is-kĭ-ad'ik). Ischiatic.

ischial'gia [G. *ischion*, hip, + *algos*, pain.] Ischias, ischioneuralgia. 1. Pain in the hip-joint, coxalgia. 2. Sciatica.

ischias (is'kĭ-as). Ischialgia

ischiatic (is-kĭ-at'ik). Sciatic, relating to the ischium or hip bone.

ischiatitis (is-kĭ-ă-ti'(te')tis). Inflammation of the sciatic nerve.

ischidrosis (is-ki-dro'sis) [G. *ischō*, I hold back, + *hidrōsis*, perspiration.] Anhidrosis, suppression of the perspiration.

ischioanal (is-ki-o-a'nal) Relating to the ischium and the anus.

ischiobulbar (is-kĭ-o-bul'bar). Relating to the ischium and the bulb of the urethra

ischiocapsular (is-kĭ-o-kap'su-lar). Relating to the ischium and the capsule of the hip-joint, noting that part of the capsule which is attached to the ischium.

ischiocavernosus (is"kĭ-o-kav-er-no'sus) See under *musculus*.

ischiocavernous (is-kĭ-o-kav'er-nus) Relating to the ischium and the corpus cavernosum.

ischiocele (is'kĭ-o-sēl) [G. *ischion*, hip, + *kēlē*, hernia.] A hernia through the sciatic notch.

ischiococcygeal (is-kĭ-o-kok-sij'ĭ-al). Relating to the ischium and the coccyx.

ischiococcygeus (is-kĭ-o-kok-sĭ-je'us). Musculus coccygeus.

ischiodidymus (is-kĭ-o-did'ĭ-mus). A twin monster joined at the pelvis; ischiopagus, ischiadelphus.

ischiofemoral (is-kĭ-o-fem'or-al). Relating to the ischium, or hip-bone, and the femur, or thigh-bone.

ischiohebotomy (is-kĭ-o-he-bot'o-mĭ) [G. *ischion*, ischium, + *hēbē*, pubes, + *tomē*, incision.] Division of the ischiopubic ramus and the ascending ramus of the pubes.

ischioneuralgia (is-kĭ-o-nu-ral'jĭ-ah). Ischialgia.

ischiop'agus (is-kĭ-op'ă-gus) [G. *ischion*, hip, + *pagos*, fixed.] Ischiodidymus.

ischioperineal (is-kĭ-o-per-ĭ-ne'al). Relating to the is hium and the perineum.

ischiofibular (is-kĭ-o-fib'u-lar). Relating to or connecting the ischium and the fibula.

ischiopubic (is-kĭ-o-pu'bik). Relating to both ischium and pubes. **i. ra'mus,** the descending ramus of the os pubis and the ramus of the ischium continuous with it.

ischiopubiotomy (is-kĭ-o-pu-bĭ-ot'o-mĭ) [G. *ischion* + L. *pubes* + G. *tomē*, incision.] Ischiohebotomy.

ischiorectal (is-kĭ-o-rek'tal). Relating to the ischium and the rectum.

ischiosacral (is-kĭ-o-sa'kral). Relating to the ischium and the sacrum.

ischiotibial (is-kĭ-o-tib'ĭ-al). Relating to or connecting the ischium and the tibia.

ischiovaginal (is-kĭ-o-vaj'in-al). Relating to the ischium and the vagina.

ischiovertebral (is-kĭ-o-ver'te-bral). Relating to the ischium and the spinal column.

ischium, gen. *ischii*, pl. *ischia* (is'kĭ-um) [L. from G *ischion*, hip] Os ischii.

ischochymia (is-ko-ki'mĭ-ah) [G. *ischō*, I keep back, + *chymos*, juice.] Retention of food in the stomach in cases of dilatation of that organ.

ischogalactic (is-ko-gal-ak'tik) [G. *ischō*, I keep back + *gala(galakt-)*, milk] Antigalactic, lactifuge. 1. Causing a suppression of the breast-milk. 2. An agent which arrests the secretion of milk.

ischomenia (is-ko-me'nĭ-ah) [G. *ischō*, I keep back, + *mēn*, month] Suppression of the menses.

ischuretic (is-ku-ret'ik). 1. Relating to or relieving ischuria. 2. An agent which relieves retention or suppression of urine.

ischuria (is-ku'rĭ-ah) [G. *ischō*, I keep back, + *ouron*, urine.] Retention or suppression of urine.

isinglass (i'zing-glas) [Old Ger *huysenblas*, sturgeon's bladder.] Ichthyocolla, the dried sounds or swimming bladders of the sturgeon or hake.

island (i'land) [A. S. *īgland*] In anatomy, any isolated part, separated from the surrounding tissues by a groove, or marked by difference in structure; insula.* **i. disease',** Japanese* river fever. **i. of Langerhans, i. of Pander, i. of Reil,** see the proper names.

islet tissue (i'let-tish'u). Langerhans' islands in the pancreas.

-ism [G. *-ismos*, a substantive termination] A termination denoting a theory, principle, method, or condition relating to the word to which it is added.

isoagglutinin (i"so-ă-glu'tin-in). A hemagglutinin which causes clumping of the red corpuscles of animals of the same species, though not of the animal producing it.

isoamylamine (i-so-am-il-am'ēn). Amylamine.

isoam'ylene. Betaisoamylene, pental *

isobar (i'so-bar) [G. *isos*, equal, + *baros*, weight.] A term applied to one of two or more chemical bodies having the same atomic weight, which may have similar or unlike, chemical properties.

i'sobody [G. *isos*, equal] An antibody affecting the cells of animals of the same species as the one in which it is produced

isobu'tyl ni'trite. A liquid contained in commercial amyl nitrite, and possessing similar antispasmodic and vasodilator properties.

isocaine (i'so-kah-ēn). A local anesthetic resembling procaine in its action, but much more toxic; chemically it is said to be para-aminobenzoyl-diisopropylaminoethanol hydrochloride.

isocell'ular [G. *isos*, equal, + L. *cellula*, cell.] Composed of cells of equal size or of similar character.

isocholesterin (i-so-ko-les'ter-in). An isomer of chlolesterin found in lanolin.

isochromatic (i-so-kro-mat'ik) [G. *isos*, equal, + *chrōma*, color.] 1. Of uniform color, isochroous. 2. Noting two objects of the same color.

isochromatophil, isochromatophile (i"so-kro-mat'o-fil, or fīl) [G. *isos*, equal, + *chrōma*, color, + *philos*, fond.] Having an equal affinity for the same dye; said of two or more cells or tissues.

isochronal (i-sok'ro-nal) [G. *isos*, equal, + *chronos*, time.] Occurring at regular intervals or performed in uniform time.

isochronic (i-so-kron'ik). Isochronal.

isochronous (i-sok'ro-nus). Isochronal

isochroous (i-sok'ro-us) [G. *isos*, equal, + *chroa*, color.] Isochromatic(1).

isococaine (i-so-ko'-kah-ēn) [G *isos*, equal.] Trade name of a synthetic preparation, having a local anesthetic action similar to that of cocaine.

isocolloid (i-so-kol'oyd) [G. *isos*, same.] A colloid liquid showing the same analytical composition with every hylotropic transformation.

isoco'ria [G. *isos*, equal, + *korē*, pupil] Equality in the size of the two pupils.

isocyclic (i"so-si'klik) [G. *isos*, equal, + *kyklos*, circle.] Noting a closed-chain* compound in which the atoms are all of the same element; carbocyclic.

isocytolysin (i"so-si-tol'i-sin) [G. *isos*, like.] A cytolysin acting upon the cells of another animal of the same species as that in which it is formed.

isodactylism (i-so-dak'til-izm) [G. *isos*, equal, + *daktylos*, finger.] A condition in which the fingers or toes are approximately of equal length.

isodiamet'ric [G. *isos*, equal, + *diametros*, diameter. Having diameters of equal length.

isodispersoid (i-so-dis-pur'soyd). Isocolloid.

isodul'cit. Rhamnose, a crystalline sugar, $C_6H_{12}O_5 + H_2O$, derived from various glucosides.

isodynam'ic [G. *isos*, equal, + *dynamis*, force] Of equal force or strength.

isodynamogen'ic [G. *isos*, equal, + *dynamis*, power, + *gennaō*, I produce.] 1. Isoenergetic. 2. Producing equal nerve-force.

isoenergetic (i-so-en-ur-jet'ik) [G. *isos*, equal, + *energētikos*, active.] Exerting equal force, equally active

i'soform. Paraiodoxyanisol, a colorless powder, employed as a dusting powder, mixed with equal weight of calcium phosphate, also internally as an alterative in doses of gr. 4–8 (0.25–0.5).

isogamete (i-so-gam'ēt) [G. *isos*. equal, + *gametēs* or *gametē*, husband or wife.] One of two or more similar cells by the conjugation or fusion of which, with subsequent division, reproduction occurs.

isog'amous [G. *isos*, equal, + *gamos*, marriage] In botany and protozoology, noting a form of conjugation in which the coalescing parts are similar

isog'amy [G. *isos*, equal, + *gamos*, marriage.] Conjugation between two equal gametes, or two individual cells alike in all respects.

isogenesis (i-so-jen'e-sis) [G. *isos*, equal, + *genesis*, production] Identity of morphological development.

isognathous (i-sog'na-thus) [G. *isos*, equal, + *gnathos*, jaw.] Having jaws of approximately the same width.

isograft (i'so-graft) [G. *isos*, equal.] A graft taken from another person—not from the same individual, *autograft*, or from an animal, *heterograft*.

isohemagglu'tinin. Isoagglutinin

isohemol'ysin. Isolysin.

isohemol'ysis [G. *isos*, like, + *haima*, blood, + *lysis*, solution] Isolysis, dissolution of the red blood-corpuscles in one animal, effected by the injection of serum from another animal of the same species; the substance causing this destruction of corpuscles is called *isohemolysin*.

isohypercytosis (i-so-hi-pur-si-to'sis) [G. *isos*, equal, + *hyper*, above, + *kytos*, cell.] A blood state in which the number of leucocytes is increased, the relative proportion of the different varieties remaining unchanged

isohypocytosis (i-so-hi-po-si-to'sis) [G. *isos*, equal, + *hypo*, beneath, + *kytos*, cell.] A blood state in which the leucocytes are decreased in number, the relative proportion between the different varieties remaining unchanged.

iso-iodeikon (i"so-i-od-i'kon). Trade name of a special make of phentetiothalein sodium.

isoktylhydrocuprein (i-sok-til-hi-dro-ku'pre-in). Vucin, a substance employed by infiltration of a 1:1000 solution in the antiseptic treatment of wounds.

i'solate [It. *isolare*; L. *insulare*, insulate.] 1. To separate, to set apart by oneself. 2. To free from chemical combination.

isola'tion. Separation from others. **i. ward,** a ward in a hospital or institution, usually a separate pavilion, where inmates suspected of coming down with a contagious disease, or actually ill, are kept apart from the others.

isoleucine (i-so-lu'sēn). An amino-acid formed during the hydrolysis of fibrin and other proteins; an isomer of leucine.

isol'ysin [G. *isos*, like.] An hemolysin in the serum of an animal, which will dissolve the red corpuscles of another animal of the same species.

isol'ysis. Isohemolysis.

isolyt'ic. Relating to isolysis or an isolysin.

isomastigote (i-so-mas'ti-gōt) [G. *isos*, equal, + *mastix*(*mastig-*), whip.] Noting a protozoan organism having two or four flagella of equal length at one extremity.

i'somer. One of two or more isomeric substances.

isomer'ic [G. *isos*, equal, + *meros*, part.] Noting substances having the same percentage composition, but differing in their physical properties, this difference being due to different arrangement of the atoms in the molecule. **i. func'tion,** see under *function*.

isom'erism. The existence of a chemical compound in two or more forms, differing in physical properties but identical in chemical composition.

isom'erous. Isomeric.

isomet'ric [G. *isos*, equal, + *metron*, measure] 1. Of equal dimensions. 2. Isodiametric. 3. In physiology, opposed to *isotonic*.*

isometro'pia [G. *isos*, equal, + *metron*, measure, + *ōps*(*ōp-*), eye.] Equality in kind and degree of refraction in the two eyes.

isomor'phic. Isomorphous.

isomor'phism [G. *isos*, equal, + *morphē*, shape] Similarity of form between two or more organisms or parts of the body.

is.mor'phous. Having the same form or shape, morphologically equal.

isonaph'thol. Betanaphthol.

isonormocytosis (i-so-nor"mo-si-to'sis) [G. *isos*, equal, + L. *norma*, rule, + G. *kytos*, cell.] A blood state in which the number, both actual and relative, of leucocytes in the blood is normal.

isop'athy [G. *isos*, equal, + *pathos*, suffering] The treatment of disease by means of the causal agent or a product of the same disease; also of the treatment of a diseased organ by an extract of the same organ from a healthy animal.

isopelletierine (i-so-pel-et'ēr-ēn). An alkaloid derived from granatum; it has the same composition and anthelmintic properties as pelletierine, but is optically inactive; dose, gr. 10 (0.6).

isophagy (i-sof'ă-jĭ) [G. *isos*, the same, + *phagō*, I eat.] Autolysis.

isopho'ria [G. *isos*, equal, + *phoros*, bearing.] Absence of either hypophoria or hyperphoria, the two eyes lying in the same horizontal plane.

iso'pia [G. *isos*, equal, + *ōps*(*ōp-*), eye.] Equality in all respects of the two eyes, and of vision.

isoplassonts (i-so-plas'onts) [G. *isos*, equal, + *plasson*, forming.] Like-formed entities, beings in both the animate and the inanimate worlds which have certain features in common.

i'sopral. Trichlorisopropyl-alcohol, occurring in the form of prismatic crystals of biting taste and camphoraceous odor, soluble in 35 parts of water; hypnotic in doses of gr. 5–20 (0.3–1.3).

isoprecipitin (i-so-pre-sip'it-in) [G. *isos*, alike.] A precipitin formed in the blood of an animal treated by injections of serum from another animal of the same species.

isop'ter [G. *isos*, equal, + *optēr*, observer.] A curve in the visual field drawn through points of equal acuity of vision.

isoserum treatment (i'so-se-rum trēt'ment). Therapeutic employment of serum taken from a person having or having had the same disease as the patient under treatment.

isosmotic (i-soz-mot'ik) [G. *isos*, equal, + *osmotic*.] Noting two or more substances having an equal rate of osmosis.

Isospora (i-sos'po-rah) [G. *isos*, equal, + *sporos*, seed.] A genus of Telosporidia, one species of which, *I. hom'inis*, is found not infrequently in the human intestine, but is believed to be non-pathogenic.

isostem'onous [G. *isos*, equal, + *stēmōn*, stamen.] In botany, noting a flower in which the stamens are equal in number to the sepals and petals.

isotamieutic (i"so-tam-ĭ-u'tik) [G. *isos*, equal, + *tamieuō*, I save, store up.] Equally sparing.

isother'apy [G *isos*, equal, + *therapeia*, treatment] Treatment of a disease by means of its active causal agent, as in the preventive inoculations against rabies or in the use of bacterial vaccines.

isothermal (i-so-thur'mal) [G. *isos*, equal, + *thermē*, heat.] Having the same temperature.

isoto'nia [G. *isos*, equal, + *tonos*, tension.] Tonic equality, a condition in which tension in two substances or solutions is the same.

isoton'ic [G. *isos*, equal, + *tonos*, tension.] 1. Relating to isotonia. 2. Having equal tension. noting solutions possessing the same osmotic pressure. 3. In physiology, noting the condition of contraction of a muscle when one end is attached to a light weight which is lifted when the muscle shortens, opposed to *isometric*, which notes the condition when the two ends are fixed so that the effort of contraction does not shorten the muscle.

isotonicity (i-so-to-nis'ĭ-tĭ). The quality of possessing and maintaining a uniform tone or tension.

isotope (i'so-tōp) [G. *isos*, equal, + *topos*, part, place.] A term applied to either of two bodies which are chemically identical yet differ slightly in atomic weight, such as ordinary lead and the end-product of radium disintegration.

isotopic (i-so-top'ik). Of identical chemical composition but differing in some physical property, such as atomic weight.

isotox'in [G. *isos*, alike.] A toxin in the blood active against an animal of the same species

isotrop'ic, isot'ropous [G. *isos*, equal, + *tropē*, a turn.] Equal in refracting power.

isotypical (i-so-tip'ĭ-kal) [G. *isos*, equal, + *typikos* typical.] Belonging to the same type.

ispaghu'la [East Indian.] (B.A.) The seeds of *Plantago ovata*, a plant of southwestern India; demulcent, having properties similar to those of linseed; dose, ʒ1–3 (4.0–12.0).

Israel's method. For staining actinomyces; immerse in a strong solution of orcein in dilute acetic acid for several hours, then wash and treat with absolute alcohol for a few seconds.

Issayeff's meth'od (e-sah'yef). The intraperitoneal injection of a saline solution twenty-four hours before an abdominal operation, in order to excite a local leucocytosis as a prophylactic of infection

issue (ish'u) [Fr. a going out.] 1. Progeny. 2. A suppurating sore, acting as a counterirritant, maintained by the presence of a foreign body in the tissues; it was formerly regarded as a means of escape for peccant humors. **i. pea,** a pea-shaped body kept in an issue to prevent healing.

-ist [G. *-istēs*, a termination added to verbal roots, forming verbs with the termination *-izō*, denoting the agent.] A termination affixed properly to words derived from Greek verbs ending in *izō* but added by analogy to other roots even of non-hellenic origin, denoting an agent or doer of the action indicated.

isthmectomy (is-mek'to-mĭ) [G. *isthmos*, isthmus, + *ektomē*, excision.] Median strumectomy.*

isthmian (is'mĭ-an). Relating to an anatomical isthmus.

isthmitis (is-mi'(me')tis). Inflammation of the isthmus of the fauces, or of the throat; faucitis sore-throat, faucial catarrh.

isthmoparalysis (is"mo-par-al'i-sis). Paralysis of the velum pendulum palati and the muscles forming the anterior pillars of the fauces, isthmoplegia.

isthmoplegia (is"mo-ple'jĭ-ah) [G. *isthmos*, isthmus + *plēgē*, stroke.] Faucial paralysis.

isthmospasm (is'mo-spazm). Spasm of any anatomical isthmus, as of the fauces or of the Fallopian tube.

isthmus (is'mus) [G. *isthmos*.] 1. A constriction connecting two larger parts of an organ or other anatomical structure. 2. A narrow passage connecting two larger cavities. **Guyon's i.,** i. uteri **Haller's i.,** Haller's* fretum. **His's i.,** i. rhombencephali. **i. aor'tæ** [BNA], a constriction of the arch of the aorta just beyond the origin of the subclavian artery. **i. cartilag'inis au'ris** [BNA], a narrow bridge connecting the cartilage of the external auditory meatus and the lamina tragica with the main portion of the cartilage of the auricle. **i. fau'cium** [BNA], fauces. **i. glan'dulæ thyreoid'eæ** [BNA], i. of the thyroid, the central part of the thyroid gland joining the two lateral lobes, **i. gy'ri fornica'ti** [BNA], i. of the fornicate, gyrus, i. of the limbic lobe, the narrow posterior portion of the gyrus cinguli, behind and below the splenium of the corpus callosum, which joins the hippocampal gyrus. **i. mea'tus acus'tici exter'ni,** isthmus of the external auditory meatus, the narrowest portion of this canal near its inner termination. **i. pharyngonasa'lis,** pharyngeal i., the aperture between the oral pharynx and the nasopharynx, bounded by the posterior palatine arches and the soft palate. **i. prosta'tæ** [BNA], the anterior portion of the base of the prostate gland. **i. rhombenceph'ali** [BNA], rhombencephalic i.; (1) a constriction in the embryonic neural canal separating the mesencephalon from the rhombencephalon, or metencephalon; (2) the anterior portion of the rhombencephalon connecting with the mesencephalon; it consists of the brachia conjunctiva, the trigone of the lemniscus, the anterior medullary velum, and the anterior portion of the rhomboidal fossa. **i. tu'bæ auditi'væ** [BNA], isthmus of the auditory (Eustachian) tube, the narrowest portion of the Eustachian tube at the junction of the cartilaginous and bony portions. **i. tu'bæ uteri'næ** [BNA], the narrow portion of the Fallopian tube adjoining the u'terus. **i. u'teri** [NK], Guyon's i., an elongated constriction at the internal os uteri. **Kroe'ing's i.,** see under *Kroenig*.

isu'ria [G. *isos*, equal, + *ouron*, urine.] Excretion of urine at an unvarying rate, as measured from hour to hour.

i'sutan. Bismutan.

Ital'ian meth'od. Tagliacotian* method.

Itard's cath'eter (e-tar') [Jean Marie Gaspard *Itard*, Parisian otologist, 1774–1838.] A form of Eustachian catheter.

Itard-Cholewa sign (e-tar' kho-la'vah) [see above; Erasmus Rudolph *Cholewa*, German physician, *1845.] Anesthesia of the membrana tympani in otosclerosis.

itch [A.S. *gikkan*.] 1. To be the seat of a peculiar, indescribable sensation which produces an impulse to scratch the part. 2. Scabies. 3. In general, any cutaneous affection, without specific lesion, marked by intense itching or pruritus. **baker's i.**, a pruritus affecting the hands and arms of bakers who mix the dough by hand. **bar'ber's i.**, sycosis vulgaris **bath i.**, pruritus excited by contact with cold water. **coo'lie i.**, ground i. **co'pra i.**, a dermatitis occurring in workers in copra mills, caused by the presence of a mite, *Tyroglyphus longior*. **Cuban i.**, alastrium. **dhobie i.**, tinea cruris. **grain i.**, an affection similar to or identical with straw i. **gro'cers' i.**, an affection of the same character as copra i., caused by a species of *Tyroglyphus*.* **ground i.**, coolie i., swamp i., water i., water-sore, uncinariasis cutis; a vesicular dermatitis attacking the feet of coolies working during the rainy season in the tea gardens of Assam, characterized by swelling and itching, followed by an eruption of reddish macules or papules soon becoming vesicular; the affection has been observed in other parts of the tropics and sub-tropics in Asia and America; the generally accepted theory of its production is that it is caused by the entrance of embryos of *Ancylostoma* or *Necator*. **jock i.**, tinea cruris. **lum'berman's i.**, winter i., pruritus* hiemalis. **Malabar' i.**, tinea imbricata. **prairie i.**, a pruritus of indefinite, and probably varied, origin, affecting farm laborers. **straw i., straw-bed i.**, an urticarioid eruption caused by a minute mite, variously described as *Pediculoides ventricosus* and *Ditropenotus aureoviridis*, which infests the straw of mattresses and attacks persons sleeping thereon. **summer i.**, pruritus æstivalis. **swamp i.**, ground i. **toe i.**, uncinariasis cutis, ground i. **wash'erwoman's i.**, an eczematous eruption of the hands and arms of washerwomen, dish-washers, and others whose hands are constantly immersed in soap-suds. **water i.**, ground i. **winter i.**, pruritus hiemalis.

itch'ing. Pruritus, an indescribable sensation of irritation of the skin or accessible mucous membranes impelling to scratching or rubbing of the affected parts.

itch-mite. Sarcoptes scabiei.

-ite [G. *-ītēs*, fem. *-ītis*.] 1. A suffix denoting "of the nature of," "resembling," the thing to the name of which it is added. 2. In chemistry, denoting a salt of an acid which has the termination *-ous*. 3. In comparative anatomy, denoting an essential portion of the part to the name of which it is attached.

i'ter [L. a way.] A passage leading from one anatomical part to another. **i. a ter'tio ad quar'tum ventric'ulum** [L. way from the third to the fourth ventricle], aquæductus cerebri [BNA]. **i. chord'æ ante'rius**, Huguier's canal, a canal in the Glaserian or petrotympanic fissure, near its posterior edge, through which the chorda tympani nerve issues from the skull. **i. chor'dæ poste'rius**, canaliculus chordæ tympani [BNA], a canal passing from the aqueduct of Fallopius to the tympanum, through which the chorda tympani nerve enters this cavity. **i. den'tis, i. den'tium**, the route or routes by which one or more teeth erupt.

i'teral. Relating to an iter.

-ites [G. *-ītēs*, m. or *-ītes*, n.] An adjectival suffix to nouns, corresponding to Latin *-alis*, *-ale*, or *-inus*, *-inum*, or English *-y*, *-like*, or the hyphenated nouns. The adjective so formed is employed without the qualified noun; thus *ascites* is the short form of *ho askitēs hydrōps*, abdominal dropsy. The feminine form, *-itis* (agreeing with *nosos*, disease), is so often associated with inflammatory disease, that it has acquired in most cases the significance of inflammation. *Tympanites* is *to tympanites oidēma*, the drum-like swelling or tumor, but *tympanitis* is *hē tympanitis nosos*, the tympanic disease or inflammation of the tympanum, or drum of the ear. See also *-ite*.

ithycyphosis, ithykyphosis (ith''ĭ-si-(ki)-fo'sis) [G. *ithys*, straight, + *kyphos*, a hump.] Pure kyphosis without lateral displacement of the spine.

ithylordo'sis (ith''ĭ-lor-do'sis) [G. *ithys*, straight, + *lordōsis*, a bending forward.] A pure lordosis without lateral curvature of the spine.

-itis [G. fem. of *-ites*.] See *-ites*.

it'rol. A trade name for silver citrate, $C_6H_5O_7Ag_3$; a white powder soluble in 3800 parts of water, employed as a dusting powder in wounds and skin diseases, and for irrigation in solution of 1–4000 or 1–5000.

IU. Abbreviation for immunizing unit.*

i'vory [L. ebur.] The hard dentine of the tusks of elephants and certain other animals. **hard as i.**, eburnated.

ivyol (i'vĭ-ol). Trade name of a solution in olive oil of an oil extracted from the fresh leaves of *Rhus toxicodendron*, recommended for the relief of poison ivy dermatitis in four or more daily doses of 0.2–0.35 c.c., intramuscularly injected.

Ixo'des [G. *ixodes*, sticky, like bird-lime.] A genus of ticks of the family *Ixōdidæ*, or acarids, many of the species of which are parasitic on man and animals.

ixodiasis (iks-o-di'a-sis). 1. Skin lesions caused by the bites of certain ticks; in some cases the tick burrows under the skin causing more or less severe irritation, but in most cases an urticarioid eruption is the only result. 2. Any disease, such as Rocky Mountain fever, which is transmitted through the agency of ticks.

ixod'ic. Relating to or caused by ticks.

Ixod'idæ [G. *ixōdēs*, sticky.] A family of *Acarina* which includes the ticks.

Ixodoidea (iks-o-do-id'e-ah) [G. *ixōdēs*, sticky.] A superfamily of *Arthropoda*, the ticks.

ixomyelitis (iks-o-mi-ĕ-li'(le')tis) [G. *ixys*, small of the back.] Inflammation of the lumbar spinal cord.

i'zal. Trade name of an antiseptic, belonging to the same class as creolin, derived from cresol.

J

J. Symbol for the joule* and for the mechanical equivalent of heat, or Joule's* equivalent.

jaboran'di, jaboran'di fo'lia [A native Brazilian name.] (Br.) Pilocarpus (U S.).

jab'orine. An alkaloid, $C_{22}H_{32}N_4O_4$, obtained from jaborandi or by heating pilocarpine; a white amorphous powder, resembling atropine in its action.

Jaboulay's butt'on (zhab-oo-la') [Mathieu *Jaboulay*, French surgeon, 1860–1913.] An apparatus consisting of two cylinders which are screwed together in effecting lateral intestinal anastomosis. **J.'s meth'od,** suture of arteries by splitting up the cut ends a short distance and then suturing the flaps together, applying intima to intima; called also the broad marginal confrontation method. **J.'s opera'tion,** interpelviabdominal amputation.*

Jaboulay-Brian meth'od (zhă-boo-la'bre-oń') Same as Jaboulay's* method

jacaran'da. Caroba.

Jaccoud's sign (zhă-koo') [Sigismond *Jaccoud*, Parisian physician, 1830–1913.] 1. Visible movement of a portion of the chest wall in adherent pericardium. 2. A slow and irregular pulse with elevated temperature in tuberculous meningitis in adults.

jack'et. A fixed bandage applied around the body in order to immobilize the spine and prevent further deformity in Pott's disease; it is made usually of plaster of Paris; called also Sayre's* jacket.

Jack'son's ep'ilepsy [John Hughlings *Jackson*, English physician, 1834–1911.] Jacksonian* epilepsy. **J.'s rule,** after an epileptic attack, simple and quasiautomatic nervous processes are less affected and more rapidly recovered than the more complex ones. **J.'s sign,** during quiet respiration the movement of the paralyzed side of the chest may be greater than that of the opposite side, while in forced respiration the paralyzed side moves less than the other. **J.'s syn'drome,** unilateral paralysis of the larynx, velum palati, and tongue.

Jack'son's mem'brane or **veil** [Jabez North *Jackson*, American surgeon, *1868.] A thin vascular membrane or veil-like adhesion, covering the anterior surface of the ascending colon from the cecum to the hepatic flexure; it may cause obstruction by kinking of the bowel.

Jack'son's pec'toral syr'up. Syrupus pectoralis (N.F.).

Jack'son's sign [Chevalier Q. *Jackson*, American laryngologist, *1865.] Asthmoid wheeze, a puffing sound heard on listening before the patient's open mouth in a case of foreign body in the trachea or a bronchus.

Jack'son's sign [James *Jackson*, Jr., American physician, 1810–1854.] A lack of synchronism between the heart beat and the pulse in some cases of cardiac failure.

Jackso'nian ep'ilepsy [John Hughlings *Jackson*.] Epilepsy, usually symptomatic, in which the convulsions are confined to certain groups of muscles.

Ja'cob's mem'brane [Arthur *Jacob*, Dublin physician, 1790–1874.] The layer of rods and cones of the retina. **J.'s ul'cer,** rodent ulcer of the face. **J.'s wound,** chancroidal ulcer.

Ja'cobson's canal' [Ludwig Levin *Jacobson*, Danish anatomist, 1783–1843.] Canaliculus tympanicus. **J.'s car'tilage,** cartilago vomeronasalis. **J.'s nerve,** nervus tympanicus. **J.'s or'gan,** organon vomeronasale. **J.'s plex'us,** plexus tympanicus.

Ja'cobson's re'flex. When the patient's arm is supported, with the hand midway between pronation and supination, the fingers being extended, flexion follows a tap on the lower end of the radius if paralysis is present.

Ja'cobson's retini'tis [Julius *Jacobson*, German ophthalmologist, 1828–1889.] Syphilitic retinitis.

Jacquemier's sign (zhak-me-a') [Jean Marie *Jacquemier*, Parisian obstetrician, 1806–1876.] Kluge's sign, Chadwick's sign; dark bluish or purplish discoloration of the vaginal mucous membrane indicating pregnancy.

Jacquemin's test (zhak-mañ'). For carbolic acid; to the suspected fluid an equal amount of aniline is added, and, after thorough admixture, a little solution of sodium hypochlorite; if phenol is present the fluid becomes of a blue color.

Jacquet's disease' (zhă-ka') [L. *Jacquet*, French dermatologist, 1860–1913.] Reflex alopecia, the association of baldness with dental anomalies.

jacta'tion [L. *jactare*, to toss.] Jactitation.

jactita'tion [L. *jactitare*, to toss about.] Extreme restlessness or tossing about from one side to the other in the bed.

jaculiferous (jak"u-lif'er-us) [L. *jaculum*, a dart, + *ferre*, to carry.] Prickly, covered with sharp points.

Jadassohn's disease' (yah'dah-sōn) [Josef *Jadassohn*, Breslau dermatologist, *1853.] Maculopapular erythrodermia.*

Jadelot's fur'rows or **lines** (zhad-lo') [Jean François Nicolas *Jadelot*, Parisian physician, †1830.] Three facial lines or furrows, said to be characteristic of certain diseases in children: 1. The *ocular* line, from the inner canthus of the eye toward the glenoid fossa; seen in cerebral disease. 2. The *nasal* line, from the lower border of the ala nasi curving around to the outer side of the orbicularis oris muscle; in abdominal disorders. 3. The *labial line*, extending downward from the corner of the mouth; in diseases of the respiratory organs.

Jaeger's diplococ'cus (ya'ger). *Diplococcus crassus.*

Jaeger's test types (ya'ger) [Edward *Jaeger* von Jastthal, Viennese ophthalmologist, 1818–1884.] Lines of type of different sizes, printed on a card, used for testing the acuteness of near vision.

Jaffe's test (yah'feh) [Max *Jaffe*, German biological chemist, 1841–1911.] For indican: To 10 c.c. of urine an equal amount of hydrochloric acid is added; after shaking, one adds 1 to 2 c.c. of a weak solution of calcium chloride and 3 or 4 c.c. of chloroform; if the urine contains indican the droplets of chloroform which sink to the bottom of the tube have a blue or purplish color.

jail-fe'ver. Typhus* fever.

Jaksch's ane'mia or **disease'** (yaksh) [Rudolf von *Jaksch*, Ritter von Wartenhorst, Austrian physician in Prague, *1855.] Infantile pseudoleucemia;

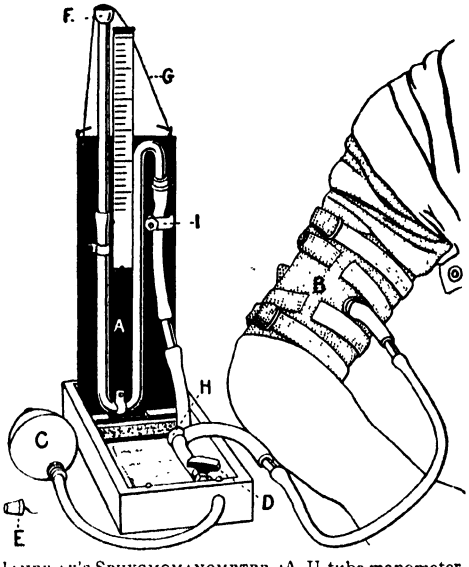
anemia in infants, accompanied by some lymphatic enlargement and splenic changes, but by slight hyperleucocytosis. **J.'s test,** (1) for hydrochloric acid in the gastric juice, the presence of which imparts a violet to deep blue color to filter paper impregnated with benzopurpurin B; (2) for uric acid, heating with bromine water produces a red color, which becomes purplish on the addition of ammonia; (3) see *Fisher's* test.*

jalapa (jal-ah'pah), **jal'ap** [*Jalapa* or *Xalapa*, a Mexican city whence the drug was exported.] (U.S., Br.) The tuberous root of *Exogonium purga* or *Ipomœa purga*; hydragogue cathartic in doses of gr. 15 (1.0), purgative in one-third this dose. **In'dian j.,** turpeth. **j. pulrera'ta** (Br.), powdered jalap; dose, gr. 5–20 (0.3–1.2). **wild j.,** man-root, wild scammony, the root of *Ipomœa pandurata*, containing a resin having purgative properties.

jal'apin. 1. A resinous glucoside, $C_{34}H_{56}O_{16}$, derived from jalap and other convolvulaceous plants. 2. A purgative preparation of varying composition, according to the make, consisting largely of convolvulin; dose, gr. 1–5 (0.06–0.3).

jam'bul. The bark of the root of *Eugenia jambolana*, rose apple, a tree of the West Indies, possessing astringent properties; a decoction has been used in the treatment of gonorrhea, leucorrhea and diarrhea.

James's pow'der [Robert *James*, English physician 1705–1776] Pulvis antimonialis; antimonious



JANEWAY'S SPHYGMOMANOMETER A, U-tube manometer, with upper part (F) jointed; B, compressing armlet, a hollow rubber bag with outer leather cuff; C, inflator; D, stopcock with needle-valve; E, cork for closing manometer when disjointed; F, upper part of manometer; G, rubber band to hold F in place; H, joint; I, clip for closing manometer tube during transportation.

oxide 1, calcium phosphate 2; diaphoretic in doses of gr. 3–6 (0.2–0.4).

James'town weed. Stramonium.

Janet's disease' (zhă-na') [Pierre *Janet*, French physician, *1859.] Psychasthenia. **J.'s test,** the patient is told to say "yes" or "no" according as he feels or does not feel the touch of the examiner's finger; in the case of functional anesthesia he may say "no" when an anesthetic area is touched (the eyes being closed), but will say nothing, being unaware that he is touched, in case of organic anesthesia.

Jane'way's pill [Edward Gamaliel *Janeway*, New York physician, 1841–1911.] Pilula* aloes et podophylli composita (N.F.).

Jane'way's sphygmomanom'eter [Theodore C. *Janeway*, American physician, 1872–1917.] A portable apparatus for determining the blood-pressure; see illustration.

jan'iceps [L. *Janus*, an ancient Italic deity having two faces, + *caput*, head.] A monster having two heads fused together, the faces looking in opposite directions. **j. asym'metrus,** a j. with one very small and imperfectly developed face.

Jansen's opera'tion (yahn'zen) [Albert *Jansen*, German otologist, contemporary.] An operation for frontal sinus disease, the lower wall and lower portion of the anterior wall being removed and the mucous membrane curetted away.

Ja'nus green. A dye employed as a stain in bacteriology and histology.

japaconitine (jap-ă-kon'i-tēn). An alkaloid obtained from Japanese aconite, *Aconitum fischeri.*

Japanese' riv'er fe'ver. Tsutsugamushi, shimamushi, akamushi disease, kedani disease, flood fever, island fever; an acute infectious disease, transmitted by a tick, attacking the harvesters of hemp in some parts of Japan. It is characterized by fever, painful swelling of the lymphatic glands, a small blackish scab on the genitals, neck, or axilla, and an eruption of large dark red papules; it is often fatal, but in favorable cases lasts about two weeks.

Japon'ic acid. An oxidation product of catechu or catechutannic acid.

jar'gon [Fr. gibberish] Paraphasia. **j. apha'sia,** paraphasia, see *aphasia.*

Jarisch's oint'ment (yah'rish). [Adolf *Jarisch*, Austrian dermatologist, 1850–1902.] Pyrogallic acid 1, lard 8; used in psoriasis.

Jarisch-Herxheimer reaction (yah'rish-herks'hi-mer) [Adolf *Jarisch*, Karl *Herxheimer*.] Herxheimer* reaction.

Jarjavay's mus'cle (zhar-zhă-va') [Jean François *Jarjavay*, French physician, 1815–1868] Depressor urethræ muscle.

Jar'vis's snare [William Chapman *Jarvis*, New York laryngologist, 1855–1895.] A wire snare, tightened by a screw in the handle, used for the cutting off of polypi and other sessile growths in the nose and other accessible cavities.

jas'mine. Gelsemium.

Jat'ropha [G. *iatros*, physician, + *trophē*, nourishment.] A genus of plants of the order *Euphorbiaceæ.* **J. curcas,** Barbados nut, physic-nut, a plant the seed of which furnishes an oil similar in its purgative properties to croton oil. **J. urens,** a species of South America, the macerated fresh leaves of which are applied as a rubefacient and stimulating poultice, and the seeds furnish a purgative oil.

jaundice (jawn'dis) [Fr. *jaune*, yellow.] Icterus, a yellowish staining of the integuments and deeper tissues and the excretions with bile pigments. **acathec'tic j.,** a form due to a loss by the liver cells of the faculty of preventing the passage into the blood and lymph of the bile secreted by them. **acute infec'tious j.,** Weil's* disease. **acholu'ric j.,** urobilin j. **black j.,** (1) Winckel's* disease; (2) icterus melas. **famil'ial acholu'ric j.,** a disease, affecting usually several numbers of a family, resembling in its symptoms Hanot's cirrhosis, without hepatic cirrhosis, but with enlargement of the liver and spleen. **febrile j.,** Weil's*

disease. **hematog'enous j.**, toxemic j. **hemolytic j.**, a familial type of j. accompanied by enlargement of the spleen, anemia, and increased bile secretion; it occurs in attacks of a few weeks' duration, marked by chills and fever; splenectomy is sometimes resorted to in treatment. **hemohepatog'enous j.** toxemic j. **hepatog'enous j.**, j. resulting from disease of the liver, as distinguished from that supposedly due to blood changes. **infec'tious j.**, Weil's disease, **inogenous j.**, icterus neonatorum, theoretically due to bile pigment, resulting from the transformation of the hemoglobin in the tissues, erythematous skin, and areas of minute capillary blood extravasation. **j. of the newborn**, icterus neonatorum. **malig'nant j.**, icterus gravis, acute yellow atrophy of the liver. **obstruc'tive j.**, hepatogenous j, resulting from interference with the flow of bile in the bile-ducts. **occult' j.**, the presence of bile in the blood in such small amount as to produce no symptoms. **physiolog'ical j.**, the mild form of icterus neonatorum, due to stagnation of bile in the ducts or possibly to a rapid destruction of red blood-corpuscles during the first few days after birth. **reten'tion j.**, obstructive j. **toxe'mic j.**, hematogenous j., hemohepatogenous j., resulting from hemolysis caused by some toxic substance in the blood causing hemoclasia; it is often associated with infectious diseases such as malaria, yellow fever, relapsing fever, etc.; it is due to an overloading of the liver with the broken-down red cells, resulting in inspissation of the bile and consequent blocking of the smallest bile-ducts. **urobi'lin j.**, a yellowish discoloration of the skin and conjunctivæ associated with urobilinuria.

jaun'dice-root. Hydrastis.

Javal's opthalmom'eter (zhă-val') [Louis Emile *Javal*, French ophthalmologist, 1839-1907.] See *ophthalmometer*.

Javelle wa'ter (zhă-vel') [*Javelle*, a town in the Department of the Seine, France] Liquor potassæ chlorinatæ (N.F.); the solution by this name used in France at the present time is usually one of sodium hypochlorite.

javellization (zhă-vel-i-za'shun). Purification of the water supply by adding sodium or potassium hypochlorite, or Javelle water.

jaw [A.S. *ceōwan*, to chew] One of the two bony structures, in which the teeth are set, forming the framework of the mouth. **big j.**, actinomycosis, **indiarubb'er j.**, a peculiar condition of the jaw caused by the destruction of the bony tissue and its substitution by a dense whitish cancerous growth. **lock-j.**, trismus. **lower j.**, inferior maxilla, mandible, mandibula [BNA]. **lump'y j.**, actinomycosis. **phossy j.** [*phosphorus*], necrosis of the alveolar process of a jaw caused by phosphorus poisoning. **upper j.**, superior maxilla, maxilla [BNA].

absence, agnathia. **ankylosis,** gnathankylosis. **cleft,** gnathoschisis. **having a large,** macrognathic, megagnathic. **having a protruding,** prognathic, prognathous. **having a small,** micrognathic, brachygnathic. **having a straight or upright,** orthognathic, orthognathous. **inflammation,** gnathitis. **pain in,** gnathalgia, gnathoneuralgia. **plastic surgery of,** gnathoplasty, genyplasty. **spasmodic closure,** trismus, gnathospasmus, lockjaw.

jaw-bone. Jaw

jaw jerk. Jaw reflex.*

jaw joint. Articulatio mandibularis, articulation between the mandible or inferior maxilla and the temporal bone.

Jaworski's bod'ies (yah-vor'ske) [Valery *Jaworski*, Polish physician, *1849.] Mucous shreds in the gastric contents in hyperchlorhydria. **J.'s test,** in case of hourglass contraction of the stomach, a splashing sound may be obtained on succussion of the pyloric half, after syphonage of the organ.

jaw-wink'ing phenom'enon. Elevation of the upper eyelid whenever the lower jaw is depressed; when the mouth is closed there is a slight ptosis of the eyelid; the significance of the phenomenon is not determined.

Jeanselme's nod'ules (zhan-selm') [Edouard Jeanselme, French physician, *1858.] A form of nocardia marked by the occurrence of nodules on the arms and legs, situated usually near the joints; Steiner's tumors, juxta-articular nodules.

jec'oral [L. *jecur*, liver.] Relating to the liver, hepatic.

jecorin (jek'or-in) [L. *jecur, jecoris*, liver.] A substance found first in the liver, afterward in the spleen, muscles, blood, and brain; it contains sulphur and phosphorus.

jecorize (jek'or-īz) [L. *jecur*, liver.] To give to any food substance the therapeutic value of cod-liver oil, as in the ultraviolet raying of milk.

jec'ur gen. *jec'oris* [L.] The liver.

Jed'dah ulcer [*Jeddah*, or Jiddah, an Arabian town on the Red Sea.] Oriental boil.*

jefferso'nia [Thomas *Jefferson*, American statesman, 1734-1826] The root of *Jeffersonia diphylla*, twinleaf, rheumatism root; employed in rheumatism, bronchitis and various nervous affections in doses of ℥½-1 (2.0-4.0) of a fluid-extract.

jej'unal. Relating to the jejunum.

jejunectomy (jĕ-ju-nek'to-mĭ) [*jejunum* + G. *ektomē*, excision.] Exsection of all or a part of the jejunum.

jejunitis (jĕ-ju-ni'(ne')tis). Inflammation of the jejunum.

jeju"nocolos'tomy [L *jejunum* + G. *kōlon*, colon, + *stoma*, mouth] Establishment of a communication between the jejunum and the colon.

jejunoileitis (jĕ-ju"no-il-e-i'(e')tis). Inflammation of jejunum and ileum.

jejunoileostomy (jĕ-ju"no-il-e-os'to-mĭ) [G. *stoma*, mouth.] Establishment of a communication between the jejunum and a non-continuous part of the ileum.

jejunos'tomy [G. *stoma*, mouth.] The operative establishment of a fissure through the wall of the abdomen into the jejunum.

jejunot'omy [G. *tomē*, incision] Incision into the jejunum.

jeju'num [L. *jejunus*, empty.] Intestinum jejunum [BNA], the portion of small intestine, about 8 feet in length, between the duodenum and the ileum.

Jellinek's sign (yel'e-nek) [Samuel *Jellinek*, Viennese physician, contemporary.] A brownish pigmentation of the eyelids, especially the upper, in exophthalmic goiter.

jell'y [Fr. *gelée;* L *gelare*, to freeze.] A semisolid tremulous compound, containing usually some form of gelatin in solution. **Wharton's j.**, the gelatinous connective tissue surrounding the blood-vessels in the umbilical cord.

Jendrassik's maneu'ver (yen-drah'shik) [Ernst *Jendrassik*, Hungarian physician, 1858-1922.] A method of emphasizing the patellar reflex: the subject hooks his hands together by the flexed fingers and pulls against them with all his strength, thereby withdrawing his attention from the leg muscles and preventing voluntary tension of them

Jenn'er's stain [Louis *Jenner*, English physician, 1866–1904.] A 1.2 per cent. aqueous solution of eosin is mixed with equal parts of a 1 per cent. aqueous solution of methylene blue; at the end of 24 hours the precipitate is filtered out and washed with water; to make the stain 0.5 gram of the dry precipitate is dissolved in 100 c.c. methyl alcohol.

Jenne'rian. Relating to Edward *Jenner*, English physician, 1749–1823, the introducer, in 1796, of vaccination against smallpox. **J. vaccina'tion,** arm-to-arm vaccination.

jenneriza'tion. The operation of jennerizing.

jen'nerize [Edward *Jenner*.] To produce immunity against a disease by inoculation with the attenuated pathogenic organisms of the same affection.

Jensen's classifica'tion of bacte'ria (yen'sen) [Orla *Jensen*, Danish physiological chemist, contemporary.] See under *bacterium*.

Jeph'son's pow'der. Precipitated sulphur 2, guaiac resin 1, used in tonsillitis or acne with constipation in doses of gr. 30–60 (2.0–4.0).

jequiritin (jĕ-kwir'it in). Abrin.

jequir'itol. An active principle of jequirity in 50 per cent. sterile glycerin solution.

jequirity (jĕ-kwir'ĭ-tĭ). Prayer-beads, jumble-beads, crab's-eyes, chicken-eyes, love-peas; the seeds of *Abrus precutorius;* employed in 0.5 per cent. infusion in the treatment of trachoma and pannus.

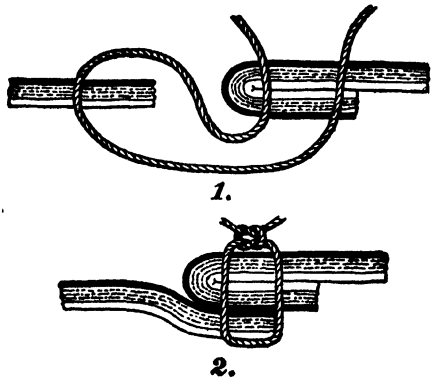
jerk. 1. A sudden pull. 2. A sharp muscular contraction following a tap on the muscle or its tendon; muscular or tendon reflex, deep reflex. **chin j.,** jaw j. **crossed j.,** MacCormac's reflex, a muscular contraction on one side following a tap on muscle or tendon on the other side. **jaw j.,** a spasmodic contraction of the temporal muscles following a downward tap on the loosely hanging mandible. **knee j.,** patellar tendon reflex.

jerk-fing'er. Trigger-finger.

jerks (pl.). Chorea or any form of tic.

jer'vic acid. An acid, $C_{14}H_{10}O_{12} + 2H_2O$, derived from veratrum or hellebore.

jervine (jur'vēn). An alkaloid, $C_{26}H_{37}NO_3$, derived from veratrum or hellebore; a vasomotor depressant.



JOBERT DE LAMBALLE'S INTESTINAL SUTURE.
1. passed; 2. tied.

jess'amine. Jasmin, gelsemium.

Jes'uit's bal'sam. Friars' balsam. **J.'s** bark, cinchona. **J.'s drops,** friars' balsam. **J.'s powder,** powdered cinchona bark.

jigg'er [*chigoe*.] Sand-flea, *Dermatophilus penetrans*, a penetrating flea, smaller than the common flea; the pregnant female bores into the skin of warm blooded animals and there causes considerable irritation and sometimes inflammation.

jim'son weed. Jamestown weed, stramonium.*

Jobert de Lamballe's fos'sa (zhŏ-bair' dē lahn-bal') [Antoine Joseph *Jobert de Lamballe*, Parisian surgeon, 1799–1867.] The hollow in the upper part of the popliteal region. **J. de L.'s opera'tion,** closure of a vesicovaginal fissure by autoplasty. **J. de L.'s suture,** an interrupted intestinal suture, used for invaginating the margins of the intestines in circular enterorrhaphy.

Joffroy's re'flex (zhof-roă') [Alexis *Joffroy*, Parisian physician, 1844–1908.] Hip-phenomenon, twitching of the glutei muscles when firm pressure is made on the nates, in cases of spastic paralysis. **J.'s sign,** (1) immobility of the facial muscles when the eyeballs are rolled upward, in exophthalmic goiter; (2) disorder of the arithmetical faculty (the person being unable to do simple sums in addition or multiplication) in the early stages of general paralysis.

joha (yo'hah). A suspension of salvarsan in iodipin and anhydrous lanolin.

Johne's bacil'lus (yo'neh) [Albert *Johne*, German physician.] *Mycobacterium paratuberculosis,*° the pathogenic microrganism of dysentery in cattle. **J.'s disease',** dysentery in cattle, associated with spasm of the lower portion of the ileum. **J.'s stain for capsules,** immerse for a couple of minutes in a warm 2 per cent. aqueous solution of gentian-violet or methyl violet, then decolorize in 2 per cent. acetic acid solution and examine in water.

johnin (yo'nin). A vaccine against pseudotuberculous enteritis in cattle, prepared by growing Johne's bacillus in a broth medium containing dead timothy hay bacillus (*Mycophlei*).

John'son's test [Sir George *Johnson*, English physician, 1818–1896.] A strong solution of picric acid is poured gently upon the surface of urine in a test-tube; the presence of albumin, albumose or peptone is indicated by a white cloud at the junction of the two fluids; if the precipitate is albumin it is increased on heating, if albumose or peptone it is dissolved by heat.

joint [L. *junctura; jungere*, to join.] Articulatio, articulation, the place of union, usually more or less movable between two or more bones. **amphidiarthro'dial j.,** a combined gliding and hinge j., amphidiarthrosis. **ankle j.,** articulatio talocruralis [BNA]. **arthro'dial j.,** gliding j., arthrodia. **ball-and-sock'et j.,** enarthrosis. **biax'ial j.,** one in which there are two principal axes of movement situated at right angles to each other; the condyloid and the saddle joints are biaxial. **biloc'ular j.,** one in which the interarticular cartilage is complete, dividing the j. into two distinct cavities. **Chopart's j.,** articulatio tarsi transversa [BNA]. **coch'lear j.,** a variety of hinge joint in which the elevation and degression, respectively, on the opposing articular surfaces form part of a spiral, flexion being then accompanied by a certain amount of lateral deviation. **com'pound j.,** one formed of three or more bones or in which the socket is in part composed of connective tissue. **con'dyloid j.,** ellipsoidal j. **diathro'dial j.,** a freely movable j., diarthrosis. **elbow j.,** articulatio cubiti [BNA]. **ellipsoid'al j.,** a joint in which there are two axes of motion at right angles to each other, but both passing through the same bone; distinguished from a saddle j. **enarthro'dial j.,** ball-and-

socket j., multiaxial j., enarthrosis. **false j.,** pseudarthrosis, the result of non-union between the fragments of a broken bone, an unnatural motility at a point where there should be solid bone. **finger joints,** articulationes digitorum manus [BNA]. **gin'glymoid j.,** hinge j., ginglymus. **gli'ding j.,** arthrodial j., arthrodia. **hinge j.,** ginglymus, a uniaxial joint in which the axis of movement corresponds with the transverse axis of the joint. **hip j.,** articulatio coxæ [BNA]. **immov'able j.,** synarthrosis. **ir'ritable j.,** a condition in which acute or subacute inflammatory attacks occur from time to time, often without any apparent exciting cause. **jaw j.,** articulatio mandibularis [BNA]. **knee j.,** articulatio genu [BNA]. **mixed j.,** amphidiarthrosis. **mor'tise j.,** ankle j., articulatio talocruralis [BNA]. **mov'able j.,** amphiarthrosis, or slightly movable or freely movable diarthrosis. **multiax'ial j.,** one in which movement occurs in a number of axes, enarthodial j., ball-and-socket j. **o'pen j.,** in veterinary practice, inflammation of any joint with sloughing of the superficial tissues exposing the articular surfaces. **piv'ot j.,** trochoid j., rotary j. **polyax'ial j.,** multiaxial j. **ro'tary j., ro'tatory j.,** lateral ginglymus, pivot j., trochoid j.; a uniaxial joint, in which the axis of movement corresponds with that of the longitudinal axis of the joint, one bone rotating on the other; the superuior radioulnar and the median atloaxoid articlations are examples. **sadd'le j.,** a biaxial, j., in which two saddle-shaped surfaces, one on each bone, are opposed to each other at right angles the two axes of motion being therefore situated in different bones; distinguished from an ellipsoidal j. **shoul'der j.,** articulatio humeri [BNA]. **sim'ple j.,** one composed of only two bones. **sphe'roid j.,** a multiaxial j. with more or less spherical surfaces; the gliding j. and the ball-and-socket j. are both of this class. **spi'ral j.,** cochlear j. **synarthro'dial j.,** immovable j., synarthrosis, synarthrodia. **toe joints,** articulationes digitorum pedis [BNA]. **tro'choid j.,** pivot j., rotary j. **uniax'ial j.,** one in which movement is around one axis only; when this axis corresponds with the longitudinal axis of the limb, the joint is called a lateral ginglymus or rotary joint, when the axis of movement corresponds with the transverse axis of the joint the joint is a ginglymus or hinge joint. **uniloc'ul r j.,** one in which the interarticular cartilage is incomplete or absent, the joint having but a single cavity. **wrist j.,** articulatio radiocarpea [BNA].

absence, anarthria. **air in,** pneumarthrosis. **anatomy,** arthrology, syndesmology, arthrography. **blood in,** hemarthrosis, hemarthron, hemarthrus. **breaking up adhes ons,** arthroclasia. **concretion,** arthritolith, arthrolith, arthremphyte, tophus. **contracture,** ankylosis, arthrogryposis. **curettage,** arthroxesis. **deformity,** loxarthron, dysarthrosis. **disease of,** arthropathy, osteoarthropathy. **dislocation,** luxation, exarthroma, exarthrosis, abarthrosis, abarticulation. **dropsy,** hydrarthrosis, hydrarthron, hydrarthrus **exsection,** arthrectomy. **false,** nearthrosis, pseudarthrosis. **fistula of,** arthrosyrinx. **immobility,** ankylosis, arthrosymphysis, acampsia; arthrocleisis arthrodesis (operative). **incision into,** arthrotomy. **inflammation,** arthritis, arthrophlogosis, arthrosia, chondroarthritis, arthrochondritis, osteoarthritis, arthrosteitis, synovitis, arthromeningitis, arthrocace, arthrempyesis, arthropyosis, pyarthrosis, white swelling; acroarthritis (joints of hands or feet); monarthritis (one joint), amarthritis, hamarthritis, polyarthritis (several joints), panarthritis (very many or all the joints). **pain,** arthralgia arthrodynia, arthroneuralgia. **plastic surgery,** arthroplasty. **pus in,** arthrempyesis, arthropyosis, pyarthrosis. **stiffness,** ankylosis, arthrosymphysis, acampsia; arthrocleisis, arthrodesis (operative). **supernumerary,** arthroperissia. **tumor,** arthrocele, arthroncus, arthrophyma.

joint-cap'sule. Capsular ligament of a joint.

joint-e'vil. 1. Anesthetic leprosy. 2. Joint-ill.

joint-ill (joynt-il). A chronic suppurative inflammation of the joints of foals and other newly born animals, due to umbilical infection with *Shigella viscosa*[0] (*Bact. viscosum*).

joint-mouse. Loose cartilage, or other body, in a joint.

joint-muscle. A muscle which causes motion at a joint.

Jolles's test (yol'lās) [Adolf *Jolles*, Austrian chemist, *1862.] For bile: a precipitate is obtained by agitation with chloroform, a solution of barium chloride, and hydrochloric acid; the precipitate is removed and the addition of a drop or two of sulphuric acid will produce a play of color if bile-pigments are present.

Jolly bod'ies (zhŏ-le') [J. *Jolly*, French histologist, *1870.] Howell-Jolly bodies, nuclear nests sometimes seen in red blood cells, constituting an intermediate stage of chromatinolysis of the nucleus of the erythroblast.

Jolly's reac'tion (yol'le) [Friedrich *Jolly*, German neurologist, *1844.] Rapid loss of response to faradic stimulation of a muscle, the galvanic response and the power of voluntary contraction being retained.

Jonas' symptom (yo'nahs) [Siegfried *Jonas*, Austrian physician, *1874.] Pyloric spasm in infants.

Jones, Bence. See *Bence-Jones*.

Jones's position (jōn'zez po-zĭ'shun) [John *Jones*, American surgeon, 1729–1791.] Supination and acute flexion of the forearm in the treatment of injuries of the elbow except fracture of the olecranon. **J.'s splint,** a splint used in fracture of the nasal bones.

Jonnesco's fossa (yon-nes'ko) Thomas *Jonnesco* (Toma Ionnescu), Bucharest surgeon, 1851–1926.] Fossa duodenojejunalis, a peritoneal recess occupying the duodenojejunal angle, extending upward a distance of 2½ to 3 inches. **J.'s method,** the induction of general anesthesia by spinal arachnoid injections of a mixture of strychnine and stovaine, or other of the cocaine substitutes; for operations below the diaphragm the injection is made between the last thoracic and first lumbar vertebræ, for those on the head or upper part of the body it is made between the first and second thoracic vertebræ. **J.'s operation,** removal of the sympathetic ganglion on both sides of the neck in the treatment of ex ophthalmic goiter.

JONNESCO'S FOSSA. (*Landouzy and Jayle.*)

Jorissenne's sign (zhor-is-sen') [Gustave *Jorissenne*, Belgian physician.] The pulse rate is not quickened on rising from the recumbent position, in the early months of pregnancy.

joule (jowl) [James Prescott *Joule*, English physicist 1818–1889.] A unit expressing the amount of work done in one second by an electric curren of 1 ampere against a resistance of 1 ohm.

Joule's equiv'alent [J. P. *Joule*.] The dynamic equivalent of heat, the amount of work which, if converted into heat, will raise the temperature of 1 pound of water 1° F.

Jourdain's disease' (zhoor-dañ') [Anselme Louis Bernard *Jourdain*, French surgeon, 1734–1816.]

Suppurative inflammation involving both the gums and the alveolar process.

Juengling's disease (yŭng'ling) [Otto *Juengling*, German surgeon, *1884.] Osteitis tuberculosa multiplex cystica.

ju'gal [L *jugum*, yoke.] 1. Connecting, yoked. 2. Relating to the malar, or zygomatic, bone. **j. bone,** malar bone. **j. lig'ament,** ligamentum corniculopharyngeum. **j. point,** jugale.

juga'le. Jugal point, a craniometric point corresponding to the angle between the vertical border and the margin of the zygomatic process of the malar bone.

jugged. Noting a horse with intermittent swellings in glanders

juglan'dic acid. An acid from the bark of the butternut tree, *Juglans cinerea.*

ju'glans, gen. *juglan'dis.* (N.F.) Butternut bark, the root bark of *Juglans cinerea*, a forest tree of eastern North America; employed as an hepatic stimulant and cathartic in doses of ʒ1 (4.0) of the N.F. fluidextract.

jugomax'illary. Relating to the malar bone, or zygomatic process, and the maxilla.

jugular (ju'gu-lar) [L. *jugulum*, throat.] 1. Relating to the throat or neck. 2. Relating to the jugular veins. 3 A jugular vein. **j. fora'men,** a passage between the petrous portion of the temporal bone and the jugular process of the occipital, sometimes divided into two by the intrajugular processes; it contains the internal jugular vein inferior petrosal sinus, the glossopharyngeal, pneumogastric, and spinal accessory nerves, and meningeal branches of the ascending pharyngeal and occipital arteries. **j. fossa,** (1) an oval depression near the posterior border of the petrous portion of the temporal bone, to the inner side of the styloid process, ending at the jugular notch; in it lies the beginning of the internal jugular vein; (2) the hollow in the neck just above the sternal notch. **j. notch,** (1) incisura jugularis [BNA], presternal, suprasternal, or interclavicular notch, the slightly concave upper margin of the manubrium sterni between the clavicular facets; (2) the groove in front of the jugular process of the occipital bone; (3) a groove on the posterior border of the petrous portion of the temporal bone; the j. foramen is formed by the apposition of (2) and (3). **j. process,** a bony prominence projecting from the posterior half of the lateral portion of the occipital bone in the direction of the temporal, its anterior border forming the posterior boundary of the jugular foramen **j. tu'bercle,** an oval elevation on the cerebral surface of the lateral part of the occipital bone, on either side of the foramen magnum. **j. veins,** see under *vena.*

jugula'tion [L. *jugulare*, to cut the throat.] The abortion or sudden arrest of a disease by medicinal or other measures.

ju'gulum [L.] Neck or throat.

ju'gum, pl. *ju'ga* [L. a yoke.] A ridge or furrow connecting two points. **j. alveola're** [BNA], pl. *ju'ga alveola'ria,* alveolar yoke; one of the hollows on the anterior surface of the alveolar processes between the ridges formed by the roots of the incisor teeth. **j. cerebra'le** [BNA], pl. *ju'ga cerebra'lia,* cerebral projection; one of the elevations on the upper surface of the orbital plates of the frontal bone, in the anterior cranial fossa, alternating with depressions, the *digitate impressions.* **j. penis,** a forceps used for temporary compression of the penis. **j. sphenoida'le,** a plane surface on the sphenoid bone, in front of the sella turcica, connecting the two lesser wings, and forming part of the anterior cranial fossa.

juice (jūs) [L. *jus.*] 1. The tissue-fluid of a plant or animal. 2. A digestive secretion. **cancer j.,** the liquid exuding from the cut surface of a cancerous growth. **gas'tric j., intes'tinal j., pancreat'ic j.,** etc., see the qualifying words.

jum'ble-beads. Jequirity.

jum'bo-soap. A hard, strongly alkaline soap, containing pumice, used in scrubbing the skin of the patient before operation.

jum'bul. Jambul

jum'per. The subject of a nervous disorder manifested by a sudden jump or other violent movement when the person is touched or suddenly addressed in a loud tone.

jumps (pl.). 1. Nervous twitching, jerks; chorea. 2. Delirium tremens.

junctu'ra, pl. *junctura* [L. a joining.] 1 Articulation, joint. 2. Juncture; point, line, or surface of union of two parts. **j. os'sium extremita'tis pelvi'næ** [NK], one of the synathroses of the bones of the pelvis. **j. ra''dioulna'ris** [NK], articulatio radioulnaris distalis [BNA]. **j. tib''iofibula'ris** [NK], syndesmosis tibiofibularis. **junctu'ræ ten'dinum,** slender fasciculi or bands running obliquely between the tendons of insertion of the extensor digitorum communis on the dorsum of the hand.

June cold. Rose-cold.

Jung's mus'cle (yoong) [Karl Gustav *Jung* Swiss anatomist, 1794–1864.] Musculus pyramidalis auriculæ.

Jungbluth's va'sa pro'pria (yoong'bloot) [Hermann *Jungbluth*, German physician, contemporary.] Embryonic blood-vessels beneath the amnion

jungle-plant (jung'gl). *Combretum sundiacum,* a climbing plant of southeastern Asia, the leaves and bark of which are reputed to be curative of the opium-smoking habit

junip'erus (N.F.). Juniper berries, the dried ripe fruit of *Juniperus communis;* diuretic and stimulant, employed in cystitis, chronic gonorrhea, and Bright's disease in the form of an infusion; dose, ʒ1 (4.0) of the N.F. fluidextract.

Junod's arm or **boot** (zhu-no') [Victor Théodore *Junod*, Parisian physician, 1809–1881.] An air-tight case into which the arm or leg is inserted and the air is then exhausted; used to remove a portion of the blood temporarily from the circulation.

jurispru'dence [L. *jus*, gen. *juris*, law + *prudentia, providentia*, provision.] The science of law. **medical j.,** medicolegal science, forensic medicine, the practical interrelation of law and medicine; the application of medical science to the determination of legal questions; the law in its bearing on the practice of medicine.

jury-mast. An upright bar, of which the lower extremity is fixed in a plaster-of-Paris jacket or spinal support, and the upper recurving extremity carries a sling in which the chin and occiput rest; used as a support to the head in cases of Pott's disease of the cervical vertebræ.

Jussieuan sys'tem (jus-e-u'an) [Antoine Laurent de *Jussieu*, French botanist, 1699–1776.] The *natural* system of botanical classification, as distinguished from the *artificial* or Linnean* system. According to this all plants are grouped under three main divisions: Acotyledones (Cryptogamia of Linné), Monocotyledones, and Dicot-

yledones, the latter being further divided into apetalous, monopetalous, and polypetalous.

jus'to ma'jor [L. larger than normal.] Noting a pelvis the diameters of which are greater than the average. **j. mi'nor** [L. smaller than normal], noting a pelvis the diameters of which are below the average.

Jus'tus's test [J. *Justus*, Hungarian dermatologist contemporary.] A test for syphilis determined by the change in the hemoglobin average following a single dose of mercury, preferably by inunction: in secondary or tertiary or congenital syphilis the hemoglobin average falls during the first twenty hours following the administration of mercury and then rises higher than it was before the drug was given.

jute (jūt) [Bengali name.] Fiber from the inner bark of the plants *Corchorus capsularis* and *C. olitorius* natives of Asia; used in surgical dressings.

juvan'tia [L. aids; *juvare*, to assist, help.] Adjuvants, remedies or appliances which assist or intensify the action of others.

ju'venile [L. *juvenis*, young.] Young, characteristic of youth, relating to a child.

juxta- [L. near to.] A prefix denoting close proximity to the part denoted by the word to which it is joined, as *juxta-articular* near a joint, *juxtapyloric*, adjoining the pylorus, etc.

juxtaposition (juks-tah-po-zish'un). A position side by side, apposition, contiguity.

K

(For words not found under initial K, see under C.)

K. Chem'cal symbol for potassium (L. *kalium*).

Ka. Ca, abbreviation for cathode or cathodal.

kabure (kah-boo'ra). Katayama disease, Asiatic schistosomiasis,* with special reference to the cutaneous symptoms.

kacyan (ka'si-an). Trade name of potassium sulphocyanate, claimed to be useful in the treatment of high blood pressure in doses of gr. 1–2 (0.06–0.13) 2 or 3 times a day.

Kader-Senn opera'tion (kah'der) [Bronislaw *Kader*, Polish surgeon, contemporary; Nicholas *Senn*, American surgeon, 1844–1908.] An operation for the establishment of a gastric fistula. A cone of the cardiac end of the stomach is brought out through a small incision; into the apex of this cone a glass tube is inserted and then pushed in so as to invaginate the cone, which is retained by a purse-string suture.

Kaffir pox (kaf'fēr-poks). Kaffir smallpox, amaas, alastrim.*

Kah'ler's disease' [Otto *Kahler*, Vienna physician, 1849–1893.] Myelopathic albumosuria, multiple myeloma; a destructive disease of the marrow of the bones forming the thoracic cage; the symptoms consist in pains in the affected bones and spontaneous fractures, pernicious anemia, emaciation, debility, and the excretion by the kidneys of heteralbumose.

Kahn test [R. L. *Kahn*, American bacteriologist, *1887.] Diluted antigen (0.05) is added to inactivated serum (0.3), and after thorough shaking the mixture is kept at blood heat for 12 hours; the presence of a precipitate at the termination of this incubation is a + sign of syphilis.

kainite (ki'nīt) [G. *kainos*, new.] A mineral earth consisting of potassium chloride and magnesium sulphate, of value as a fertilizer.

kai'rin. Oxyquinoline-ethyltetrahydride hydrochloride; a light grayish crystalline powder, of saline bitterish taste, soluble in water. Antipyretic in doses of gr. 5–10 (0.3–0.6).

kairolin (ki'ro-lin). Chinolin-methyl hydrate, $C_{10}H_{15}N$, possessing antipyretic properties.

Kaiserling's meth'od (ki'zer-ling) [Karl *Kaiserling*, German pathologist, *1869.] A method of preserving histological and pathological specimens without altering the color: the specimens are immersed in a solution of potassium nitrate 10, potassium acetate 30, formalin 750, distilled water to make 1000.

kakergasia (kak-er-gas'ĭ-ŭ). Cacergasia.

kakesthesia (kak-es-the'zĭ-ah). Cacesthesia.

kakidro'sis [G. *kakos*, bad, + *hidrōsis*, perspiration.] Cacidrosis.

kakke (kak'ka) [Jap.] Beriberi.

kakos'mia. Cacosmia.

kala azar (kah"lah-ah'zar) [Hind. *kala*, black, + *azar*, poison.] Tropical splenomegaly, Dumdum fever; a chronic, usually fatal disease occurring in India, Assam, and other parts of tropical Asia, characterized by an irregular fever, enlargement of the spleen, hemorrhages, dropsy, and extreme emaciation. The cause is a protozoan parasite the Leishman Donovan body, or *Leishmania donovani*, present in the spleen, liver, and other parts of the body.

kalada'na (B.A.). Pharbitis nil, the dried seeds of *Ipomœa hederacea;* purgative and anthelmintic in doses of gr. 30–50 (2.0–3.3) **kalada'næ resi'na** (B.A.), pharbitisin, prepared in the same way as resin of jalap; purgative in doses of gr. 2–8 (0.13–0.5).

ka'li [Ger.] Potassium.

kalim'eter. Alkalimeter.

ka'lium [L.] Potassium.

kallak' [Eskimo word meaning skin disease.] A peculiar pustular dermatitis observed among the Eskimos of the Labrador coast; it is possibly a deficiency disease, due to lack of fat-soluble vitamines.

kalmerid (kal'mĕ-rid). Trade name of an antiseptic preparation of potassium mercuric iodide, employed in the sterilization of catgut.

kalmia (kal'mĭ-ă) [after Peter *Kalm*, a Swedish botanist, 1715–1779.] A genus of shrubs and bushes embracing the American laurel; one species is employed in eclectic practice in the treatment of syphilis and of atonic chronic inflammatory disorders in dose of one drop of the specific medicine in water four times a day.

Kal'muk type [*Kalmuk*, a Mongolian race in Asia and southern Russia.] Mongolian idiocy*.

kama'la, kame'la. Rottlera, the hairs and glands from the capsules of *Mallotus philippensis*, a small evergreen tree of India, Africa, and Australia, occurring in the form of a reddish granular powder; purgative and anthelmintic in doses of 3ı–3 (4.0–12.0).

kangaroo'-ten'don. A tendon from the tail of the kangaroo-rat or wallaby, fibers of which are used as a ligature material

kan'gri burn cancer. A squamous-celled epithelioma of the abdomen or thighs, occurring in natives of Kashmir; it is apparently localized by irritation from the kangri, a portable fire basket which the people carry under their clothes to keep themselves warm.

kaoli'num (N.F. and Br.) [Ch. *kao lin*, High Ridge, name of a locality in China where the substance is found in abundance.] Kaolin, fuller's earth, porcelain clay, aluminum silicate, powdered and freed from gritty particles by elutriation; employed occasionally as a dusting powder, but chiefly in the form of a poultice with glycerin.

A KANGRI, OR INDIAN FIRE BASKET.

kaolino'sis. Pneumonoconiosis caused by the inhalation of clay dust.

Kap'lan's test [David M. *Kaplan*, New York physician, *1860.] For globulin; 0.5 c.c. of cerebrospinal fluid is heated in a test-tube until it boils up twice, then 3 drops of a 5 per cent. solution of butyric acid in physiological saline solution are

added and followed immediately with 0.5 c.c. of a supersaturated ammonium sulphate solution; an excess of globulin shows itself by the appearance in 20 minutes of a thick granular ring.

Kaposi's disease' (kah'-po-she) [Moriz Kohn *Kaposi*, Vienna dermatologist, 1837–1902.] Xeroderma* pigmentosum.

Karell cure (kah'rel) [Philip J. *Karell*, Russian physician, 1806–1886.] Treatment of cardiac weakness, renal insufficiency, and high blood-pressure by means of rest in bed and a restricted milk diet (not over a quart a day sipped in small quantities), continued for five or six days.

karyenchyma (kar-I-en'ki-mah). Caryenchyma.

karyo-. For words so beginning (referring to the nucleus of a cell) see *caryo-*.

kata-. For words so beginning (katabolism, katalepsy, etc.) see *cata-*.

katayama disease (kah-tah-yah'mah diz-ēz') [Jap. *Katayama*, Mountainside, a town in Japan where the disease is common.] A disease marked by painful enlargement of the liver and spleen, dropsy, anemia, and dysenteric symptoms, with or without fever; it is caused by infestation with *Schistosoma japonicum*.

kathisophobia (kath"I-so-fo'bI-ah) [G. *kathisis*, a sitting, + *phobos*, fear.] An inability to sit still.

kath'odal, kath'ode. Cathodal, cathode.

Kathrein's test (kaht'rīn). A 1 per cent. alcoholic solution of iodine is poured gently over urine in a test-tube; if bile pigment is present an emerald green color appears at the line of contact; same as Maréchal's, Smith's, or Trousseau's test.

kat'ion. Cation.

katopho'ria. Catophoria.

Kaufmann's meth'od (kowf'mahn) [Fritz *Kaufmann*, German neurologist, *1875.] Treatment of psychogenic motor disturbances in soldiers by (1) suggestion, (2) the application of electricity causing marked sensory impressions, and (3) active exercises initiated by sharp military commands, the three procedures being carried out at one séance.

Kaufmann's stain for capsules. Stain for several hours in Loeffler's methylene blue at 37° C., wash in alkaline water, treat with 0.5 per cent. silver nitrate solution for 2 minutes, wash in alkaline water, stain with 5 per cent. aqueous solution of alcoholic fuchsin for 30 seconds.

kava (kah'vah) [Hawaiian name. (N.F.) Kava-kava, methysticum, the decorticated and dried rhizome of *Piper methysticum*; stimulant diuretic, in doses of gr. 5–10 (0.3–0.6) of the extract, and of ♏10–15 (0.6–1.0) of the N.F. fluidextract.

kavæ rhizoma (kah've-ri-zo'mah). (B.A.) Kava, methysticum.

kavaine (kah'vah-ēn). Methysticine, an alkaloid from the kava-root; employed in cystitis, gout, and gonorrhea.

kavatel oil (kah'vah-tel). An oil expressed from the seeds of *Hydrocarpus wightiana*, a tree of the Malabar Coast, used as a substitute for chaulmoogra oil.

kayak ver'tigo (kă-yak') [Esquimo, *kayak*, a small fishing canoe.] A sudden fear which sometimes seizes an Esquimo fisherman when alone in his canoe (kayak) far from land; it is not always associated with dizziness and is really a phobia* rather than vertigo.

kaylene (ka'lēn). Trade name of colloidal aluminum silicate claimed to possess the power of adsorption of toxins; recommended in the treatment of food poisoning, autointoxication, and various enteric diseases.

Kayser's disease' (ki'zer). An affection marked by an intention tremor, a greenish discoloration of the cornea, and a general pigmentation of the body, associated with cirrhosis of the liver, splenomegaly, and diabetes.

KBr. Potassium bromide.

$KC_2H_3O_2$. Potassium acetate.

KCl. Potassium chloride.

KClO. Potassium hypochlorite, the solute of Javelle water.

$KClO_3$. Potassium chlorate.

K_2CO_3. Potassium carbonate, pearl-ash.

Kea'ting-Hart's meth'od [Walter Valentine de *Keating-Hart*, French physician, 1870–1922.] Fulguration in the treatment of external cancer or of the field of operation after the removal of a malignant growth.

keda'ni disease' [Jap. *kedani*, head-louse.] Japanese* river fever, caused by the bite of a red tick.

Kee'ley cure [Leslie E. *Keeley*, American physician, 1832–1900.] A secret method of treatment of alcoholism, said to be by the administration of strychnine and of gold chloride.

Keen's sign [William Williams *Keen*, Philadelphia surgeon, 1837–1932.] Increased width at the malleoli in Pott's fracture.

kefir, kefyr. Kephir.

Kehr's opera'tion. [Hans *Kehr*, German surgeon, 1862–1916.] Extirpation of the gall-bladder and cystic duct, followed by drainage of the hepatic duct. **K.'s sign,** violent pain in the left shoulder in a case of rupture of the spleen.

keirospasm (ki'ro-spazm) [G. *keirō*, I shear.] Shaving cramp, xyrospasm.

Keith's bun'dle [Arthur *Keith*, London anatomist *1861.] Sinoatrial bundle.* **K.'s node,** sinoatrial node.*

Keith and Flack's node [Arthur *Keith*; Martin *Flack*, English physiologist, 1882–1931.] Sinoatrial, or sinoauricular, node.*

kelectome (ke'lek-tōm) [G. *kēlē*, tumor, + *ektomē*, excision] An instrument employed, like the harpoon, to remove a specimen of tumor-substance for examination.

kelene (ke'lēn) [G. *kēleō*, I charm, beguile.] A trade name for ethyl chloride.

ke'lis [G. a stain, spot, blemish.] 1 Morphea. 2. Cheloid.

Kell'ing's test [Georg *Kelling*, German physician, *1886.] 1. For lactic acid: the addition of a drop or two of a 5 per cent. solution of chloride of iron to the diluted stomach contents will produce a greenish-yellow color if lactic acid is present. 2. For malignant disease: the serum of a person with suspected cancer is mixed with a suspension of washed red blood corpuscles from a hen; hemolysis of the hen's corpuscles indicates a positive reaction.

Kell'ock's sign. For the differentiation of a pleural effusion from pneumonia, vibration of the ribs occurring, when percussed, in the former condition but not in the latter.

Kelly's rec'tal spec'ulum [Howard A. *Kelly*, Baltimore surgeon, *1858.] A tubular speculum, with obturator, for rectal examination.

ke'loid [G. *kēlē*, a tumor (or *kēlis*, a spot). + *eidos* appearance.] 1. Morphea. 2. Cheloid. **ac'ne k.,** sycosis nuchæ necrotizans **Ad'dison's k.,** morphea. **Al'ibert's k.,** cheloid.

ke'los. Keloid.

keloso'mia, keloso'mus. Celosomia, celosomus

kelot'omy [G. *kēlē*, hernia, + *tomē*, incision.] Herniotomy, division of the constricting neck of the sac for the relief of strangulated hernia

kel'vin [Lord *Kelvin* (William Thompson), British physicist, *1824.] A commercial unit of electricity of 1000 volt hours.

kenopho'bia. Cenophobia.

kenotoxin (ken-o-tok'sin) [G. *kenos*, empty, exhausted.] Fatigue toxin.*

Kent's bun'dle [A.F.S. *Kent*, British physician, contemporary.] A muscular structure bridging the auriculo-ventricular groove at the right lateral border of the heart, below the node of Tawara; it is thought to conduct impulses from auricle to ventricle in many mammals, but is inconstant in man.

Kent-His bun'dle [Stanley *Kent*, English physician and physiologist, contemporary; W. *His*, Jr.] His's bundle, atrioventricular bundle.*

kentrokine'sia. Centrocinesia.

kephal'dol [G. *kephalē*, head, + L. *dolor*, pain. Trade name of citrophenetidin-chininasodium citrate, a brown powder of bitter taste; antipyretic and analgesic in doses of gr. 10–15 (0.6–1.0).

keph'alin. Cephalin

kephir, kephyr (kef'ēr) [Caucasian name.] A curdled milk obtained by the addition of a ferment containing a lactic-acid bacillus and a yeast plant. **k. grains,** little masses or grains of the dried ferment used in preparing kephyr.

keracele (ker'ă-sēl). Ceratocele.

ker'akote. Trade name of a keratin preparation used for coating pills and capsules to prevent the release of their contents in the stomach.

Kerandel's symp'tom (ker-an-del') [Jean François *Kerandel*, French colonial physician, *1873.] Deep-seated hyperesthesia observed in cases of sleeping sickness.

keraphyllocele (ker-ă-fil'o-sēl) [G. *keras*, horn, + *phyllon*, leaf, + *kēlē*, hernia, tumor.] A horn tumor on the internal face of the wall of a horse's foot.

ker'asin. Cerasin.

keratalgia (ker-ă-tal'jĭ-ah) [G. *keras*, horn, + *algos*, pain.] Ceratalgia, pain in the cornea.

keratectasia (ker-ă-tek-ta'sĭ-ah) [G. *keras*, horn, + *ektasis*, extrusion.] Keratoconus, staphyloma, protrusion of the cornea.

keratec'tomy [G. *keras*(*kerat-*), horn, + *ektomē*, excision.] Excision of a greater or lesser portion of the cornea.

kerat'ic [G. *keras*(*kerat-*), horn.] Horny, corneous.

ker'atin [G *keras*, horn.] Ceratin, epidermose; a scleroprotein or albuminoid present largely in cuticular structures such as hair, nails, horns, etc.; it contains a relatively large amount of sulphur. It is insoluble in the gastric juices and it is for this reason sometimes used for coating pills which are intended to be dissolved only in the intestine.

ker'atinize. To become horny.

ker'atinoid. Trade name of a keratin-coated pill or tabloid.

kerat'inous. Relating to keratin.

keratitis (ker-ă-ti'(te')tis) [G. *keras*, horn, + *-itis*.] Inflammation of the cornea; ceratitis. **deep k.,** parenchymatous k. **den'driform k., dendrit'ic k.,** inflammation of the cornea marked by a branching linear ulcer. **fascic'ular k.,** a phlyctenular k. followed by the formation of a band or fascicle of blood-vessels extending from the margin toward the center. **herpet'ic k.,** inflammation of the cornea accompanying zoster. **hypo'pyon k.,** purulent k. with perforating ulcer resulting in the presence of pus in the anterior chamber **interstit'ial k.,** parenchymatous k. **k. bullo'sa,** inflammation of the cornea with the formation of bullæ. **k. profun'da,** deep k., a deep-seated inflammation of the cornea, accompanied with more or less opacity, of benign course. **lagophthal'mic k.,** inflammation of the cornea from irritation caused by inability to close the eyelids. **mar'ginal k.,** phlyctenular conjunctivitis occurring at the sclerocorneal junction. **neuroparalyt'ic k.,** ulceration of the cornea occurring with trigeminal paralysis. **parenchy'matous k.,** interstitial k., a chronic inflammation, with cellular infiltration of the middle and posterior layers of the cornea. **phlycten'ular k.,** an inflammation of the corneal conjunctiva with the formation of small red nodules of lymphoid tissue (phlyctenulæ). **punc'tate k.,** k. punctata, descemetitis: the occurrence of small opaque spots on the posterior surface of the cornea, occurring in inflammation of the uveal tract. **reap'ers' k.,** traumatic k. due to a wound by a spicule of rye or other grain inflicted while harvesting. **rib'bon-shaped k.,** the presence of a grayish white band laterally across the cornea in the aged. **sclero'sing k.,** inflammation of the cornea complicating scleritis. **superfi'cial punc'tate k.,** the occurrence of numerous small grayish spots in the superficial layers of the cornea with radiating lines and some fogging. **tracho'matous k.,** vascular k. **vas'cular k.,** superficial infiltration of the cornea and roughness of the epithelial layer accompanied with a development of blood-vessels between Bowman's membrane and the epithelial layer; when pronounced it gives rise to pannus. **vasculoneb'ulous k.,** pannus. **vesic'ular k.,** inflammation of the cornea with the formation of numerous small vesicles on the surface. **xerot'ic k.,** keratomalacia.

kerato- [G. *keras*, horn.] A prefix denoting the cornea or horny tissue or cells. Also, and correctly, written *cerato-*, under which see those words not found here.

keratoangio'ma [G. *keras*, horn, + *angeion*, vessel, + *-ōma*.] Angiokeratoma.

ker'atocele. Ceratocele.

keratocente'sis. Ceratocentesis.

keratoconjunctivitis (ker"ă-to-kon-junk-tĭ-vi' (ve')-tis). Inflammation of the conjunctiva at the border of the cornea.

keratoco'nus [G. *keras* (*kerat-*), horn, + *kōnos*, cone.] Conical cornea, a conical protrusion of the center of the cornea due to non-inflammatory thinning of the membrane

keratocri'coid. Ceratocricoid.

keratoderma (ker-ă-to-dur'mă). 1. Keratodermia. 2. The cornea. 3. Any horny superficial growth.

keratodermatitis (ker"ă-to-dur-mă-ti'(te')tis) [G. *keras*, horn, + *derma*, skin, + *-itis*.] Inflammation with proliferation of the horny layer of the skin, ceratodermatitis.

keratodermia (ker"ă-to-dur'mĭ-ah) [G. *keras*(*kerat-*), horn, + *derma*, skin.] A more or less generalized hypertrophy of the horny layer of the epidermis ceratodermia. **k. eccen'trica,** porokeratosis, the occurrence of patches of hypertrophy of the horny layer with a wart-like elevated border. **k. palma'ris et planta'ris, k. symmet'rica,** the occurrence of symmetrical patches of hypertrophy of the horny layer of the epidermis, of trophic origin, on the palms and soles.

keratogen'esis [G. *keras*, horn, + *genesis*, production.] The production or origin of horny cells or tissue.

keratogenet'ic. Relating to keratogenesis.

keratogenous (ker-ă-toj'en-us). Causing a growth of horny tissue, ceratogenous.

keratoglo'bus [G. *keras*(*kerat-*), horn, + L. *globus*, ball.] Buphthalmos.

keratogloss'us. Ceratoglossus.

keratohelco'sis [G. *keras*, horn(cornea), + *helkōsis*, ulceration.] Ulceration of the cornea.

ker"atohy'alin. Eleidin.

ker'atoid [G. *keras*, horn, + *eidos*, resemblance.] Horny, corneous; resembling corneal tissue.

keratoiditis (ker-ă-toy-di'(de')tis). Keratitis.

keratoiridoscope (ker-ă-to-i-rid'o-skōp) [G. *keras* (*kerat-*), horn(cornea), + *iris*(*irid-*) + *skopeō*, I examine.] A lens or double lens used in the inspection of the cornea and iris.

keratoiritis (ker-ă-to-i-ri'(re')tis) [G. *keras*(*kerat-*), horn(cornea), + *iris* + *-itis*.] Inflammation of both cornea and iris.

keratoleptynsis (ker-ă-to-lep-tin'sis) [G. *keras*, horn (cornea), + *leptynsis*, a making thin.] An operation for removing the surface of the cornea to permit adhesion to the bulbar conjunctiva.

keratoleucoma(ker"ă-to-lu-ko'mah)[G. *keras*(*kerat-*) cornea, + *leukos*, white, + *-ōma*.] A white corneal opacity.

keratol'ysis [G. *keras*(*kerat-*), horn, + *lysis*, solution.] 1. Separation or loosening of the horny layer of the epidermis. 2 Specifically a disease characterized by a shedding of the epidermis recurring at more or less regular intervals; deciduous skin.

keratolyt'ic. Relating to keratolysis; desquamative.

kerato'ma, pl. *kerato'mata* [G. *keras*, horn.] 1. Callosity, keratosis(2). 2. A horny tumor. **k. diffu'sum,** ichthyosis congenita. **k. planta're sulca'tum,** marked thickening of the epidermis of the soles of the feet, seamed with numerous deep furrows. **k. seni'le,** senile k., one of the lesions in keratosis senilis.

keratomalacia (ker"ă-to-mal-a'sĭ-ah) [G. *keras*, horn, + *malakia*, softness.] Xerotic keratitis, dryness with ulceration and perforation of the cornea occurring in cachectic children.

ker'atome. Keratotome.

keratometer (ker-ă-tom'e-tur) [G. *keras*(*kerat-*), horn(cornea), + *metron*, measure.] An instrument for measuring the curvatures of the corneal surface.

keratom'etry. Measurement of the degrees of corneal curvature.

keratomycosis (ker-ă-to-mi-ko'sis) [G. *keras*(*kerat-*), horn(cornea), + *mykēs*, fungus.] Disease of the cornea due to the presence of a fungous growth.

keratono'sis [G. *keras*, horn.] Any abnormal non-inflammatory, usually hypertrophic, affection of the horny layer of the skin.

keraton'osus [G. *keras*, horn, + *nosos*, disease.] Any disease of the cornea, ceratonosus.

keratonyxis (ker"ă-to-niks'is) [G. *keras*(*kerat-*), horn, (cornea), + *nyxis*, a pricking.] Puncture of the cornea; specifically, operative puncture with a view to couching or needling the lens in cataract; keratocentesis.

ker'atoplasty [G. *keras*(*kerat-*), horn(cornea), + *plassō*, I form.] Trephining of the cornea; removal of a portion of the cornea containing an opacity and the insertion in place of it of a piece of the same size and shape removed from the eye of an animal; corneal grafting. **op'tic k.,** transplantation of transparent corneal tissue to replace a leucoma or a scar which obstructs vision. **tecton'ic k.,** grafting of corneal material on a part where it has been lost, without attempt to restore the transparency.

keratoscleritis (ker"ă-to-skle-ri'(re')tis) [G. *keras* (*kerat-*), horn(cornea), + E. *sclera* + G *-itis*.] Inflammation of both cornea and sclera.

ker'atoscope [G. *keras*, horn, + *skopeō*, I examine.] An instrument marked with lines or circles by means of which the corneal reflex can be observed; Placido's disc.

keratos'copy [G. *keras*(*kerat-*), horn(cornea) + *skopia*, an examining.] 1. Examination of the reflections from the anterior surface of the cornea in order to determine the character and amount of corneal astigmatism. 2. A term first applied by Cuignet to his method of retinoscopy* on the theory that the phenomenon was a corneal reflex.

keratose (ker'ă-tōs). Horny; relating to or marked by keratosis.

kerato'sic. Relating to or marked by keratosis. **k. cones,** horny pointed or rounded elevations on the hands and feet, occasionally observed in cases of gonorrheal rheumatism.

kerato'sis [G. *keras*(*kerat-*), horn.] 1. Any disease of the epidermis, especially one marked by the presence of circumscribed overgrowths of the horny layer. 2. An individual lesion of this nature, more properly called *keratoma*. **k. follicula'ris,** Darier's disease, ichthyosis follicularis, psorospermosis, an overgrowth of the horny layer of the epidermis spreading out from the openings of the hair-follicles. **k. follicula'ris contagio'sa.** Brooke's disease, psorospermosis, an apparently contagious form of the preceding. **k. ni'gricans,** acanthosis nigricans, an affection marked by particles of pigmented, wartlike overgrowths, chiefly on the skin of the face, neck, and hands, in cases of visceral cancer. **k. obtu'rans,** laminated epithelial plug, an accretion of epithelia in the external auditory canal. **k. pila'ris,** pityriasis pilaris, lichen pilaris, roughening of the skin of the thighs and arms, especially in cold weather, by the formation of plugs of horny epithelium in the openings of the hair-follicles. **k. seborrhœ'ica, k. seborrho'ica,** k. senilis. **k. seni'lis,** verruca senilis, senile warts, a growth of one or more patches of corneous hypertrophy on the face in old age. **k. suprafollicula'ris,** k. pilaris.

ker'atotome. Keratome, a knife used for incising the cornea.

keratot'omy [G. *keras*(*kerat-*), horn(cornea), + *tomē* incision.] Incision through the cornea.

keraunoneurosis (kĕ-raw"no-nu-ro'sis) [G. *keraunos*, thunderbolt, + *neuron*, nerve.] A neurosis excited by a stroke of lightning or resulting from fright caused by a thunder storm.

keraunophobia (kĕ-raw"no-fo'bĭ-ah) [G. *keraunos*, thunder and lightning, + *phobos*, fear.] Extreme fear of thunder and lightning.

kerec'tomy. Keratectomy.

ke'rion [G. honeycomb.] A single hypertrophic lesion of tinea tonsurans, similar to granuloma trichophyticum.

keritherapy (ke-rĭ-ther'ă-pĭ). Kerotherapy.

Kerk'ring's folds [Theodor *Kerkring*, Dutch anatomist, 1640–1693.] K.'s valves. **K.'s nod'ule,** nodulus valvulæ semilunaris. **K.'s oss'icle,** an occasional independent center of ossification in the occipital bone, in the middle of the posterior border of the foramen magnum. **K.'s valves,** transverse folds of mucous membrane in the small intestine, plicæ* circulares, valvulæ conniventes

kermes-mineral (kur'mēz-min'er-al) [*kermes*, a red dye.] Antimonium sulphuratum.

Ker'nig's sign [Waldemar *Kernig*, Russian physician, 1840–1917.] When the subject lies upon the back and the thigh is flexed to a right angle with the axis of the trunk, complete extension of

the leg on the thigh is impossible; present in various forms of meningitis.

kern-plas'ma rela'tion the'ory [Ger. *kern*, kernel, nucleus.] A theory enunciated by Hertwig (1903) that a definite relation as to size normally exists in every cell between the mass of nuclear material and that of the protoplasm.

kerocaine (ker'o-kah-ēn). Trade name of novocaine of English manufacture.

ker'oid [G. *keroeidēs*, horn-like.] Keratoid.

ke'rol. Trade name of an antiseptic, of a claimed carbolic-acid coefficient of 18 to 20; employed in capsules as an intestinal disinfectant.

kerotherapy (ke-ro-ther'ă-pĭ) [G. *kēros*, wax, + *therapeia*, treatment.] Treatment of burns and denuded surfaces by ambrine or similar wax or paraffin preparations.

ketogenesis (ke-to-jen'e-sis) [*ketone* + G. *genessi*, production.] Production of the acetone substances, or ketone bodies.

ketogenic (ke-to-jen'ik) [*ketone*(acetone) + *gennaō*, I produce.] Producing acetone. **k.-antiketogen'ic ra'tio.** The proportion between substances that form glucose and those that form fatty acids in the body.

ke'tol, ke'tole. Indol.

ketolytic (ke-to-lit'ik) [*ketone* + G. *lytikos*, dissolving.] Causing the dissolution of ketone or acetone substances, referring usually to oxidation products of glucose and allied substances.

ke'tone [from *acetone*?] A substance, with the characterizing atom group (CO) linking two hydrocarbon groups; there are a number of ketones, the most important in medicine being dimethylketone, or acetone.

ketonemia (ke-tōn-e'mĭ-ă) [G. *haima*, blood.] Acidosis, the presence of acetone bodies in the blood.

ketonuria (ke-tōn-u'rĭ-ah). The excretion of ketone bodies, or acetone substances, in the urine.

ketoplas'tic [*ketone*(acetone) + *plassō*, I form.] causing the formation of acetone, or its excretion in the urine and breath.

ketoreductase (ke-to-re-ḍuk'tāz). A reducing enzyme which acts upon diacetic acid, converting it into beta-oxybutyric acid.

ke'tose. A carbohydrate containing the characterizing group of the ketones (CO).

ketosis (ke-to'sis) [*ketone* + *-osis*.] A condition in which acetone substances, or ketone bodies, are found in the body.

keynote (ke'nōt). In homeopathy, one of the characteristic symptoms of a drug, serving as a guide for the exhibition of the remedy when a similar symptom occurs in disease.

Key-Ret'zius cor'puscles [Ernst Axel Henrik *Key*, Swedish physician, 1832–1901; Magnus Gustaf *Retzius*, Swedish histologist, 1842–1919.] Tactile corpuscles, resembling those of Pacini, found in the beak of certain aquatic birds. **K.-R. foram'ina**, openings in the pia mater transmitting the choroid plexus to the fourth ventricle.

kharsivan (kar'sĭ-van). Trade name of an English made substitute for salvarsan.

khat. An Abyssinian drink from *Catha* edulis*.

$KHCO_3$. Potassium bicarbonate.

$KHSO_4$. Acid potassium sulphate.

KI. Potassium iodide.

kibe (kīb). A chap, a chilblain.

kid'ney [A. S. *cwith*, womb, belly, + *neere*, kidney.] One of the two organs (L. ren, G. nephros) which excrete the urine. The kidneys are bean-shaped organs, about 4½ in. in length, 2 in. in width, and 1¼ in. in thickness lying on either side of the spinal column, behind the peritoneum, about opposite the twelfth thoracic and first three lumbar vertebræ. At the inner edge of each kidney is a concave depression, the *hylus*, where the vessels and nerves enter and leave the organs and where the ureter emerges; the hylus leads into the *renal sinus*, a hollow containing the pelvis and calyces and the branching blood-vessels. The kidney is enclosed in a fibrous envelope, the *capsule*, which dips into the sinus at the hilus. The substance of the organ is divided into *cortex* and *medulla;* the former is darker colored and more granular in appearance than the latter; it contains the Malpighian corpuscles and most of the convoluted tubules; the medulla is lighter in color and striated and contains the majority of the straight tubules; it is formed of the pyramids whose bases rest in the cortex and whose apices are the renal papillæ at which point the central collecting tubule opens into a *calyx*, this in turn emptying into the pelvis of the kidney from which the water passes into the ureter and so reaches the urinary bladder. The pyramids are made up of *tubules;* each tubule begins at the *glomerulus*, or Malpighian corpuscle, in the cortex; it is first convoluted, then enters the pyramid, passing down toward the papilla, near which it turns back on itself, the turn being called Henle's loop, it then ascends to the cortex, where it is again convoluted (being called the irregular tubule), and returns to the pyramid in the center of which it empties into the straight collecting tube, which terminates, usually after uniting with others, at the apex of the papilla. Projections of masses of tubules pass up into the cortex, being known as *medullary rays*, while the cortical substance often passes down between the pyramids, forming the so-called *columns of Bertin;* the cortical substance between the medullary rays is also called the *labyrinth* **am'yloid k.,** amyloid degeneration of the kidneys, associated usually with a similar process in the spleen and liver, caused frequently by prolonged suppuration; the kidneys are large, firm, and pale, the cortex being especially thickened and having a glistening appearance on section; the infiltration of amyloid material affects first the glomeruli and later the tubules as well. **arteriosclerot'ic k.,** granular k. **cicatric'ial k.,** the irregularly contracted and deformed k. resulting from suppurative pyelonephritis. **cirrhot'ic k.,** granular k. **contrac'ted k.,** granular k., small white k. **cyanot'ic k.,** passive congestion of the k. **cys'tic k.,** one which contains one or more cysts filled with a clear or brownish serous fluid or colloid matter. **diaphragmat'ic lig'ament of the k.,** that segment of the mesorchium which extends to the diaphragm. **fat'ty k.,** large white k., soapy k. **float'ing k.,** the abnormally mobile kidney in nephroptosia. **gout'y k.,** granular k. **gran'ular k.,** chronic interstitial nephritis; an affection of the k. characterized by hyperplasia and contraction of the interstitial connective tissue, with induration of the organ; usually associated with arteriosclerosis. **heart k.,** the small granular k., due to sclerosis, occurring in certain cases of valvular heart disease. **horse'shoe k.,** union of the lower extremities of the two kidneys by a band of tissue extending across the vertebral column. **in'guinal lig'ament of the k.,** the segment of the mesorchium extending to the inguinal region. **k. of preg'nancy,** a pathological change in the kidneys said to occur in about 80 per cent. of all cases of pregnancy, consisting in anemia with fatty infiltration of the epithelia, without inflammation;

the urinary symptoms are albuminuria and sometimes granular and hyaline casts with fatty renal epithelia. **larda'ceous k.,** amyloid k. **large white k.,** the enlarged kidney with smooth or nodular surface, thin non-adherent capsule, thick white cortex, and large red pyramids, occurring in certain cases of chronic parenchymatous nephritis; the principal change is a fatty degeneration of the epithelium and glomeruli, the convoluted tubules are filled with casts composed of desquamated fatty epithelium. **mov'able k.,** floating k. **pal'pable k.,** a slight degree of nephroptosia. **sclerot'ic k.,** granular k. **small white k.,** a form of chronic parenchymatous nephritis in which the organ is little if at all increased in size; the capsule is thickened and moderately adherent and there is some proliferation and contraction of the interstitial connective tissue; there is fatty degeneration of the epithelium and glomeruli **soap'y k.,** the large white k., which is said to contain myelins, consisting of fatty acids in combination with potassium and sodium, and not simple fats. **sur'gical k.,** suppurative pyelonephritis, resulting from extension of disease from the lower urinary passages. **wan'dering k.,** floating k. **wax'y k.,** amyloid k.

abscess, nephrapostasis, nephropyosis, pyonephrosis. **calculus,** nephrolith. **calculous formation,** nephrolithiasis, lithonephria. **capsule division or excision,** decapsulation, renipuncture, nephrocapsectomy, renal capsulotomy, nephrotomy, Edebohl's operation. **congestion,** nephremia, nephrohemia. **contraction,** nephrarctia, nephromiosis, nephrostenosis. **cystic formation,** nephrocytosis. **description,** nephrography. **dilatation of the pelvis,** nephrectasia, pyelectasia. **disease,** nephropathy, nephresia, nephrism, Bright's disease. **downward displacement,** nephroptosia. **dropsy,** nephredema, nephydrops, hydronephrosis. **enlargement,** nephrectasia, nephrauxe, nephromegaly, nephrohypertrophy, nephroncus. **excision,** nephrectomy. **fixation of wandering,** nephropexy, nephrofixation, renifixation, nephrorrhaphy, renisuture. **floating,** nephroptosia, ren mobile, ectopia renis, nephrospasis. **hardening,** nephrosclerosis. **hemorrhage from,** nephrorrhagia. **hemorrhage into,** nephrapoplexy. **hernia,** nephrocele. **inactivity,** nephrapragmonia, nephranuria, nephratony, nephroparalysis, nephroplegia. **incision,** nephrotomy. **inflammation,** nephritis, nephrophlegmasia, pyelonephritis, nephropyeitis, pyelitis, glomerulitis, glomerulonephritis, chalazonephritis, nephrochalazosis, nephrococcosis, nephria, Bright's disease, nephrapostasis. **pain,** nephralgia, nephrodynia, nephrocolica, renal colic, colica renalis, nephrodysneuria, dolor nephriticus. **pus in,** pyonephrosis, nephropyosis, nephrapostasis. **removal of a calculus,** nephrolithotomy, pyelolithotomy, pelvilithotomy. **science relating to,** nephrology. **small,** renculus, reniculus, renulus. **softening,** nephromalacia. **ulceration,** nephrelcosis. **urinary retention,** hydronephrosis, nephrydrosis, nephrydrops.

Kieffer's stain. For acid-fast bacteria: steam for 30 to 45 seconds with a mixture of carbol-fuchsin and carbol methyl-violet, wash, and treat with tincture of iodine; then decolorize with concentrated hydrochloric acid 10, acetone 40, and alcohol 50; again wash and counterstain with methylene-blue.

Kienboeck disease (kēn'bĕk) [Robert *Kienboeck*, Austrian radiologist, *1871.] Traumatic osteoporosis of one or more of the carpal bones. **K. unit,** a unit of *x*-ray measurement (abbreviation X), equal to $\frac{1}{10}$ erythema dose.

Kier'nan's space [Francis *Kiernan*, English physician, 1800–1874.] Interlobular space in the liver.

Kiesselbach's a'rea (ke'sel-bahkh) [W. *Kiesselbach*, German laryngologist, 1839–1902.] An area on the anterior portion of the nasal septum above the intermaxillary bone, where there is a network of large capillaries, which is often the seat of epistaxis.

kifus'sa. Sleeping-sickness

Kil'ian's line [Hermann Friedrich *Kilian*, German obstetrician, 1800–1863.] A transverse line marking the promontory of the sacrum. **K.'s pel'vis,** pelvis spinosa.

Kill'ian opera'tion [Gustav *Killian* German laryngologist and rhinologist, 1860–1921.] For frontal sinus disease: A skin incision is made from the inner third of the edge of the orbit to the root of the nose, the periosteal incision being a little higher up; the entire anterior wall is removed and the mucous membrane is curetted away; the ethmoid cells are scraped out through an opening in the nasal process of the maxillary bone, and the upper wall of the orbit is removed as well.

kil'ogram, kil'ogramme [Fr. *kilogramme;* G. *chilioi*, one thousand, + *gramma*, mark.] In the metric system, a weight of 1000 grams, or 1 cubic decimeter of water; equivalent to 15,432.35 grains, or about 2.2 lbs. avoirdupois, or 2.7 lbs. troy.

kilogrammeter (kil'o-gram-me"tur). The energy or force necessary to raise a weight of 1 kilogram to a height of 1 meter; it is the equivalent of 7.24 foot-pounds.

kiloliter, kilolitre (kil'o-le-ter) [G. *chilioi*, one thousand] A measure of 1000 liters, equivalent to about 1056 quarts.

kil'ometer kil'ometre [G *chilioi*, one thousand.] A measure of 1000 meters, equivalent to 3280.8 ft., or 0.621 mile; roughly, 8 kilometers equal 5 miles

kilonem (kil'o-nem) [*kilogram*, or liter, + G. *nemō*, I feed upon.] A unit of nutritive value, the equivalent of 667 calories, furnished by one liter of milk.

kilowatt (ki'lo-wot) [G. *khilioi*, one thousand, + *watt*.] A unit of electrical power equal to 1000 watts. **k-hour,** an electrical unit of work done by one k. in one hour

kilurane (kil'u-rān) A unit of radioactivity equivalent to 1000 uranium units.

kin-, kine- [G *kinēsis*, movement.] A prefix denoting movement. Words so beginning are also written *cin-, cine-*.

kinæsthe'sia. Kinesthesia.

kinanesthesia, kinanæsthesia (kin-an-es-the'zĭ-ah) [G. *kinēsis*, motion. + *an-* priv. + *atsthēsis*, sensation.] A disturbance of deep sensibility in which there is inability to perceive either direction or extent of movement, the result being ataxia.

kinase (kin'āz) [G. *kinēsis*, movement, + *-ase*.] A colloidal substance formed in certain organs, as the intestine, which activates the enzymes with which it comes in contact.

kinectine (ki-nek'tēn) [*kinine* (quinine) + *hectine*.] Trade name of a mixture or compound of quinine hydrochloride and hectine, said to be quinine benzosulphone-para-aminophenylarsenate; recommended in rhinitis, hay-fever, influenza, and malaria.

kinemat'ics [G. *kinēma*(*kinēmat-*), motion.] The science of motion.

kinesal'gia [G. *kinēsis*, motion, + *algos*, pain.] Pain caused by muscular movement.

kine'sia [G. *kinēsis*, movement.] The symptom complex caused by unwonted motion; seasickness, car-sickness, swing-sickness, etc

kinesial'gia. Kinesalgia.

kinesiatrics (ki-ne-sĭ-at'riks) [G. *kinēsis*, movement, + *iatrikos*, relating to medicine.] The therapeutic employment of movements, either active or passive, kinesitherapy, movement-cure.

kinesiesthesiometer, kinesiæsthesiometer (kin-es"e-es-the-zĭ-om'e-ter) [G. *kinēsis*, movement, +

aisthēsis, sensation, + *metron*, measure.] An instrument for determining the muscular sense.

kinesim'eter [G *kinēsis*, movement, + *metron*, measure.] An instrument for measuring the extent of a movement.

kinesiod'ic [G. *kinēsis*, motion, + *hodos*, way.] Relating to the paths by which motor impulses travel.

kinesiol'ogy [G. *kinēsis*, movement, + *-logia*.] The science of movement, especially of the therapeutic use of movements; kinematics, kinesiatrics, kinesitherapy.

kinesiom'eter. Kinesimeter.

kinesioneurosis (ki-ne"sĭ-o-nu-ro'sis) [G. *kinēsis*, movement, + *neuron*, nerve, + *-ōsis*.] A neurosis, or functional nervous disease, marked by tics, spasms, or other motor disorders. **vas'cular k.,** angioneurosis.

kinesip'athist. A non-medical person who treats disease by movements of various kinds, a movement-curist.

kinesipathy (ki-ne-sip'a-thĭ) [G. *kinēsis*, movement, + *pathos*, suffering.] 1. An affection marked by motor disturbances. 2. Kinesitherapy.

kinesiphony (ki-nes'ĭ-fo-nĭ) [G. *kinēsis*, movement, + *phōnē*, sound.] Reeducation of the auditory function by means of a buzzer.

kinesitherapy (ki-ne-sĭ-ther'a-pĭ) [G. *kinēsis*, movement, + *therapeia*, treatment.] Kinesiatrics.

kinesthesia, kinæsthesia (ki-nes-the'zĭ-ah) [G. *kinēsis*, motion, + *aisthēsis*, sensation.] 1. The sense perception of movement; the muscular sense. 2. An illusion of moving in space.

kinesthesiometer, kinæsthesiometer (ki-nes-the-zĭ-om'e-tur) [G. *metron*, measure.] An instrument for determining the degree of muscular sensation.

kinesthet'ic, kinæsthet'ic. Relating to kinesthesia.

kinet'ic [G. *kinētikos*.] 1. Relating to motion or muscular movements. 2. A hypothetical substance supposed to excite ameboid movement in leucocytes. **k. drive,** excessive excitation of the k. system. **k. sys'tem** (1) a term proposed by Crile to denote the chain of organs through which latent energy is transformed into motion and heat: it includes the brain, the thyroid, the adrenals, the liver, the pancreas, and the muscles; (2) that part of the neuromuscular system whereby active movements are effected; distinguished from the static* system.

kinetics (ki-net'iks) [G. *kinētikos*, movable.] The branch of mechanics which has to do with matter in motion and the forces which propel it.

kinetocyte (ki-ne'to-sit) [G. *kinētos*, movable, + *kytos*, cell.] Cinetocyte.

kinetograph'ic [G. *kinētos*, movable, + *graphikos*, recording.] Relating to a graphic record of movements.

kinetonucleus (ki-ne-to-nu'kle-us) [G. *kinētēs*, one that sets in motion.] An aggregation within the protozoan cell of the assumed specific material upon which the motor activities of the animal depend; division center, motion nucleus.

kinetoplasm, kinetoplasma (ki-ne'to-plazm, ki-ne-to-plaz'mah) [G. *kinētēs*, an originator, mover, + *plasma*, a thing formed.] The chromophile substance, or tigroid masses, in the nerve-cells, so called because it is present only when the cells begin to perform their proper function.

kinetosis (ki-ne-to'sis) [G. *kinētikos*, kinetic, + *-ōsis*.] Kinesia.

king's e'vil. Scrofula, which was formerly thought to be curable by the touch of a king

ki'no (U.S., Br.). The inspissated juice of *Pterocarpus marsupium*, a forest tree of India and Ceylon, occurring in the form of dark red, shining, brittle masses of an astringent taste, slightly soluble in water; employed in diarrhea and dysentery and in diabetes in doses of gr. 10–20 (0.6–1.3). **k. eucalyp'ti** (Br), eucalyptus kino, Botany Bay kino, eucalyptus gum, red gum, eucalypti gummi (N.F.), an exudation from the stem of various species of *Eucalyptus;* astringent; dose, gr. 5–20 (0.3–1.3).

kinocentrum (ki-no-sen'trum) [G. *kineō*, I move, + *kentron*, center.] Zimmermann's term for centrosome.

kinol'ogy. Kinesology

kinom'eter. Kinesimeter.

kin'one. Quinone.

ki'noplasm [G. *kineō*, I move, + *plasma*, a thing formed.] The portion of the protoplasm of a cell upon which its motor activity depends; kinetoplasm.

kinoplas'tic. Relating to the formation of kinoplasm, or to the laying down of the anlage or primitive trace of muscular tissue.

kinotoxin (ki-no-tok'sin) [G. *kineō*, I move.] Ponogen, fatigue toxin.*

kin'ovin. Quinovin, a glucoside, $C_{30}H_{48}O_8$, obtained from cinchona.

kionectomy, kionitis, etc. See *cionectomy, cionitis,* etc.

Kirmisson's meth'od (kēr-me-sawn') [Edouard *Kirmisson*, French surgeon, 1848–1927.] Transplantation of the tendo Achillis to the peroneus longus muscle, complementary to the Phelps operation for club-foot.

kirrhonosis (kir-ron-o'sis) [G. *kirrhos*, tawny, + *-ōsis*.] Cirrhonosus.

Kirstein's meth'od (kēr'stīn) [Alfred *Kirstein*, German physician, 1863–1923.] A method of inspection of the larynx without a laryngoscope, by inclining the head far back and depressing the tongue; autoscopy.

Kiss'ingen salt. See under *sal kissingense*.

Kitasato's bacillus (kit-ă-sah'tōz bă-sil'lus) [Shibasaburo *Kitasato*, Japanese bacteriologist, 1859–1932.] *Pasteurella pestis.*[0] **K.'s fil'ter,** an unglazed porcelain tube through which fluid is drawn by suction. **K.'s se'rum,** a serum for the treatment of cholera.

Kitt'el's meth'od [M J. *Kittel*, German physician, contemporary.] Dispersion of the uratic deposits in gouty joints by massage and manipulation.

Kjeldahl's meth'od (kyel'dahl) [J. *Kjeldahl*, Danish chemist, 1849–1900.] A method for determining the amount of nitrogen in any organic compound; the substance is treated with hot concentrated sulphuric acid and the reaction product is distilled with an excess of caustic soda or potassa; the quantity of ammonia in the distillate is then determined and from this the nitrogen content is ascertained.

Kjelland's forceps (kyāl'ahnd) [Christian *Kjelland*, Norwegian obstetrician, *1871. A short-handled obstetric forceps with a sliding articulation to allow movement of one blade over the other.

Kl. Abbreviation for *klang*.

klang (klahng) [Ger. sound.] Term used in reaction formulæ (usually abbreviated to *Kl*) to indicate a response of the auditory nerve to an electrical stimulus.

Klapp's meth'od [Rudolph *Klapp*, Berlin surgeon, *1873.] Treatment of scoliosis by a series of systematic crawling movements whereby the spine is bent laterally and made more flexible

K.'s suc'tion cups, cupping glasses of special shapes to fit various portions of the body, used to induce hyperemia in Bier's* method.

Klausner's reac'tion or test (klows'ner) [E. *Klausner*, Prague physician, contemporary.] The serum of a person suspected of syphilis is covered, in a test-tube, with distilled water; if syphilis is present a turbidity, due to precipitating globulin, is noted at the plane of contact.

Klebs' tuber'culins. See under *tuberculin*

Klebsiella (kleb-sĭ-el'ah) [after Edwin *Klebs*.] A genus, also called *Encapsulatus*, of the family *Bacteriaceae* containing several species causing affections of the respiratory tract in man and some of the lower animals. **K. capsula'tus,**[0] plump rods of moderate length, encapsulated, occurring singly or in chains, found with other organisms in catarrhal inflammations of the respiratory tract. **K. granulo'matis,**[0] non-motile, gram negative, encapsulated thick rods, occurring singly, found in granuloma inguinale. **K. ozæ'næ,**[0] *Bacillus mucosus ozænæ*, thick, non-motile, encapsulated rods, occurring singly, causing ozena. **K. pneumo'niæ,**[0] *B.* or *Bact. pneumoniæ*, Friedlander's bacillus, short, thick, non-motile, encapsulated rod-shaped organisms, occurring singly or in pairs; found in certain cases of pneumonia but not regarded as pathogenic in that disease. **K. rhinosclero'matis,**[0] plump, encapsulated, non-motile rods, occurring singly and in pairs; the cause of rhinoscleroma.

Klebsielleæ (kleb-sĭ-el'-e-e). A tribe of the family *Bacteriaceaeae*, containing the genus *Klebsiella*. The tribe was formerly called *Encapsulateæ*.

Klebs-Loeff'ler bacil'lus [Edwin *Klebs*, German physician, 1834–1913; Friedrich August Johannes *Loeffler*, German physician, *1852.] *Bacillus diphtheriæ*.

Klein's stain for spores. Add a solution of carbol fuchsin to an equal quantity of an emulsion of the spore-containing solution; spread the mixture on a cover-glass and fix in the flame; decolorize with 1 per cent. sulphuric acid, and then stain in dilute methylene-blue solution.

Klein-Gumprecht shad'ow nu'clei (klīn-goom'-prekht). Shadow-nuclei in degenerating lymphoidocytes and macrolymphocytes in leucemia.

Klem'perer's tuber'culin [Georg (*1865) and Felix (*1866) *Klemperer*, German physicians.] See under *tuberculin*.

kleptoma'nia. Cleptomania.

Klieg eye (klēg ī) [*Kliegel* Brothers, manufacturers of a powerful electric lamp.] Cinema eye, conjunctivitis, marked by a sensation of heat, photophobia, lacrymation, and conjunctival injection, resulting from exposure to the intense light, produced by lamps used in obtaining cinema pictures of interiors.

Kline-Young test [Benjamin S. *Kline*,* 1886; Anna May Young,* 1898, Cleveland physicians.] A microscopic slide precipitation test for syphilis.

Klippel's' disease' [Maurice *Klippel*, French neurologist, *1858.] Arthritic general pseudoparalysis.*

Klippel-Feil syndrome (klĭ-pel'-fāl sin'drōm). Short neck, low implantation of hair, and limitation of the movements of the head in cases of suboccipital Potts' disease.

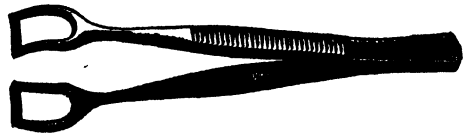
kliseom'eter. Cliseometer.

Klu'ge's meth'od [Karl Alexander Ferdinand *Kluge*, German obstetrician, 1782–1844.] The induction of premature labor by dilatation of the cervix with specially prepared sponges; a modification of Bruenninghausen's method. **K.'s sign,** Jacquemier's* sign.

Klumpke's paral'ysis (kloomp'keh) [Madame Déjerine-*Klumpke*, French neurologist, 1859–1927.] Atrophic paralysis of the forearm with paresthesia and irregularity of the pupils.

$KMnO_4$. Potassium permanganate.

$K_2Mn_2O_8$. Potassium permanganate



KNAPP'S TRACHOMIA FORCEPS, OR ROLLER FORCEPS.

Knapp's for'ceps [Herman *Knapp*, New York ophthalmologist of German birth, 1832–1911.] A small forceps, the blades of which are formed of rollers, employed to express trachomatous granulations on the palpebral conjunctiva. **K.'s streaks** or **striæ,** pigmented lines, resembling blood-vessels, seen sometimes in the retina after a hemorrhage there.

Knapp's test. For sugar in the urine: upon heating with a mixture of mercuric cyanide and sodic hydrate, metallic mercury is precipitated if sugar is present

knee [A.S. *cneōw*.] 1. The articulation between the femur and the tibia, covered anteriorly by the patella. 2. In the horse the collective carpal joints. 3. In anatomy, any recurved structure resembling a semiflexed knee, genu. **Brodie's k.,** white swelling, chronic fungoid synovitis of the knee. **broken k.,** any injury of the knee in the horse, varying in severity from a superficial wound to a fractured bone, and due to violence, usually a fall **capped k.,** swelling of the bursa of the extensor metacarpi magnus muscle in cattle, usually caused by injury to the knees in getting up and down on hard floors or by the entrance of thorns into the knee; the condition is marked by stiffness and pain in the knee with heat and swelling. **hooped k.,** the knee of a horse marked by the presence of exostoses. **house'maid's k.,** inflammation of, with serous effusion into, the prepatellar bursa. **inter'nal derange'ment of the k.,** see *Hey*.

deformity, gonycampsis; genu valgum, genu introrsum, knock-knee, in-knee, gonycrotesis; genu varum, genu extrorsum, out-knee, bow legs, gonyectyposis, genu recurvatum **excision,** gonarthrectomy. **forcible correct on of deformity,** gony asty, genuclasty. **gout,** gonagra, gony gra gonatagra. **incision,** gonarthrotomy. **inflammat on,** gonarthritis, gonarthromeningitis, gonitis gonocace, gonarthrocace, gonyocele, white swelling, meniscitis (of semilunar cartilages). **pain,** gonalg a gonyalgia, gonatalgia. **swelling,** gonocace, gonarthrocace, hydrarthrus genu, white swelling, gonyocele, gonocele, gonyoncus, gonatocele.

knee-cap. Patella.

knee-jerk. Patellar reflex.* **crossed adduc'tor k.-j.,** MacCormac's* reflex.

knee-joint. Articulatio genu, articulation between the femur and the tibia capped by the patella.

knee-pan. Patella.

knee-re'flex. Knee-jerk, patellar reflex.*

knee-sprung. Noting a horse having knees more or less flexed in consequence of traction of the tendons at the back of the leg.

Kneipp meth'od (knīp) [Sebastian *Kneipp*, German empiric, a priest at Wörrishofen, 1821–1897.] The treatment of disease by hydrotherapy in various forms—douches, wet packs, full and

local baths, compresses, vapor baths walking barefoot in the dew of early morning, etc.; especially cold effusions, the body being allowed to dry by evaporation.

Kneippism (knīp'izm) Kneipp* method.

knife (nīf) [A.S. *cnīf.*] An instrument for cutting, consisting of a blade sharpened on one or both edges set in a handle

HAYS' KNIFE-NEEDLE FOR CATARACT DISCISSION.

knife-nee'dle. A very narrow, needle-pointed knife used in the operation of discission of a cataract.

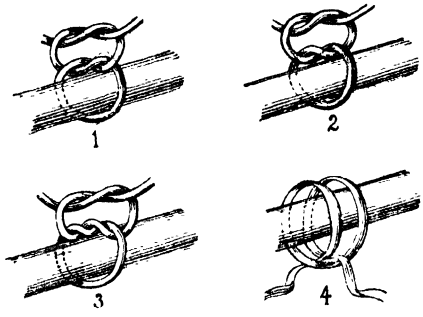
knitt'ing. The process of union of the fragments of a broken bone.

KNO_3. Potassium nitrate, niter, saltpeter.

knock-knee. In-knee, genu valgum.

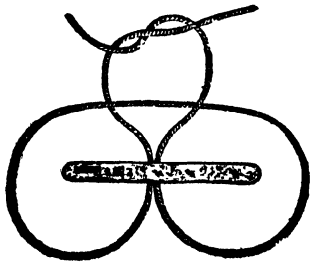
knock-out drops. A popular name for chloral alcoholate given with criminal intent to produce rapid coma in the intended victim, it is formed by adding chloral hydrate to beer or some stronger alcoholic liquor.

knot (not) [A.S. *cnotta*] 1. An intertwining of the ends of two cords, tapes, or other elongated flexible bodies in such a way that they cannot be



KNOTS: 1, Granny knot; 2, square knot; 3, surgeons' knot; 4, clove hitch.

separated; or a similar twining or infolding of a cord in its continuity. 2. In anatomy or pathology, a node, ganglion, or circumscribed swelling suggestive of a knot. **double k.,** (1) one like the square k., in which, after the single k. is made, the ends are turned back and tied again in the same way; (2) friction k. **friction k.,** one in which the ends of the cord are passed twice around each other before being pulled taut. **granny k.,** a double k. in which the two stretches of cord do



STAFFORDSHIRE, OR TAIT'S KNOT.

not pass together under the loop but are separated by it. **Hensen's k.,** protochordal k., see *Hensen.* **protochord'al k.,** Hensen's* knot **reef k.,** square k. **square k.,** a double k. in which the two stretches of cord pass under the loop in contact with each other. **Staff'ordshire k.,** Tait's k. **stay k.,** two ligatures are passed around an artery side by side and a single knot is tied in each, then the two ends on each side are treated as one and tied together to complete the double knot. **surgeon's k.,** a friction k. made double by recrossing the ends and tying a simple k. over the first. **Tait's k.,** a double ligature is passed through the substance of the pedicle of an ovarian tumor; the loop is then reversed over the end of the pedicle and placed between the two free ends of the ligature which are tied over it. **vi'tal k.,** vital center, the respiratory center in the medulla.

Knox's pow'der. Calx chlorinata.

knuckle (nuk'l). 1. A finger joint. 2. The loop of intestine in a hernia.

knuckling (nuk'ling). Talipes in the horse, caused by a contraction of the posterior fetlock tendons.

Ko'belt's cysts [Georg L. *Kobelt,* German physician, 1804–1857.] Cystic dilatation of portion of the parovarium. **K.'s tubes,** tubes proceeding from the paroophoron, not connecting with the Wolffian body and ovary.

Ko'bert's test [Eduard Rudolf *Kobert,* German physiological chemist, 1854–1919.] For hemoglobin: this is precipitated by zinc, and the precipitate turns red on the addition of an alkali.

KOC. Abbreviation for cathodal opening contraction; also written COC.

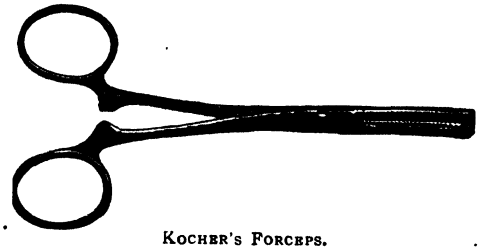
Koch's bacil'lus (kōkh) [Robert *Koch,* German bacteriologist, 1843–1910.] 1. *Bacillus tuberculosis* 2. *Spirillum choleræ asiaticæ.* **K.'s law,** to establish the specificity of a microorganism, it must be present in all cases of the disease, inoculations of its pure cultures must produce the same disease in animals (when it is transmitted to such), and from these it must be again obtained and be propagated in pure cultures. **K.'s lymph,** tuberculin. **K.'s phenom'enon,** the reaction, or rise of temperature and increase of the local lesion, in a tuberculous subject following an injection of tuberculin.

Koch's node (kōkh) [Walter *Koch,* German army surgeon, *1880.] Tawara's* node, Aschoff's node.

Koch-Ehrlich stain (kōkh-er'likh). Add 2 c.c. of aniline oil to 98 c.c of distilled water, shake, and filter; then add to 75 c.c. of this filtrate 25 c.c. of a concentrated alcoholic solution of fuchsin, gentian violet, or methylene blue.

Koch-Weeks bacil'lus [Robert *Koch;* John Elmer *Weeks,* New York ophthalmologist, *1853.] *Hæmophilus conjunctivitidis,*° the cause of pink-eye or acute contagious conjunctivitis.

Kocher's forceps (ko'kher) [Theodor *Kocher,* Swiss surgeon, 1841–1917.] A forceps for grasping the tissues in a surgical operation or for making compression of bleeding structures. **K.'s operation,** resection of the wrist by means of an incision on the ulnar side of the dorsum **K.'s**



KOCHER'S FORCEPS.

symp'tom, in exophthalmic goiter, if the examiner's hand is placed on a level with the patient's eyes and then suddenly raised higher, the upper lids move upward more rapidly than the eye-balls.

Kocks' opera'tion [Joseph *Kocks*, German surgeon, *1846.] Shortening of the base of the broad ligament, through the vagina, for prolapse or retroversion of the uterus.

Koeberlé's for'ceps (kë-ber-la') [Eugene *Koeberlé*, French surgeon, 1828–1915.] Hemostatic forceps.

Koebner's disease' (köb'ner) [Heinrich *Koebner*, Breslau dermatologist, *1838.] Epidermolysis bullosa.

Koehler's disease' (kē'ler) [Alban *Koehler*, German roentgenologist, *1874.] A dystrophy of the scaphoid bone of the tarsus occurring in children from 5 to 10 years old; the symptoms are pain on walking, tenderness over the navicular bone, and sometimes redness and swelling; complete spontaneous recovery is the rule.

Koelliker's cells (ke'lĭ-ker) [Rudolf Albert *Koelliker*, German anatomist, 1817–1905.] 1. Spermatoblasts. 2. Osteoblasts. **K.'s glands,** Bowman's* glands. **K.'s lay'er,** the layer of connective tissue in the iris. **K.'s retic'ulum,** neuroglia.

Koenig's opera'tion (ke'nig) [Franz *Koenig*, German surgeon, 1832–1910.] In congenital dislocation of the hip, reduction of the dislocation and formation of a lip to the upper edge of the acetabulum by an osteoperiosteal strip cut from the surface of the ilium. **K.'s syn'drome,** alternating attacks of constipation and diarrhea, with colic, meteorism, and gurgling in the right iliac fossa, said to be symptomatic of cecal tuberculosis.

Koenig's rods (kē'nig) [Charles Joseph *Koenig* German otologist, *1868.] A series of steel cylinders, of graduated lengths, suspended by threads; used in testing the upper limit of hearing, the cylinders being tapped by a steel hammer.

Koerte-Ball'ance opera'tion (kër'teh) [Werner *Koerte*, German surgeon, *1853; Charles Alfred *Ballance*, London surgeon, contemporary. Operative anastomosis of the facial and hypoglossal nerves for the relief of facial paralysis.

Koester's nod'ule (kë'ster) [Karl *Koester*, German pathologist, *1843.] A tubercle formed of a single giant cell surrounded by a double layer of epithelioid and embryonal cells.

KOH. Potassium hydroxide, caustic potassa.

Kohl'rausch's valves [Otto Ludwig Bernhard *Kohlrausch*, German physician, 1811–1854.] Rectal valves, plicæ* transversales recti.

koilonychia (koy-lo-nik'ĭ-ah) [G. *koilos*, hollow, + *onyx(onych-)*, nail.] Spoon-nail; a malformation of the nails in which the outer surface is concave.

koktigen (kok'tĭ-jen) [L. *coctus*, cooked, + G. *gennaō*, I produce.] A vaccine of heat-killed pathogens, prepared by boiling a salt-solution emulsion of the specific organisms for 30 minutes at a temperature of 100° C. (212° F.).

ko'la (N.F.). Cola.

Kolle's se'rum (kol'eh) [Wilhelm *Kolle*, German bacteriologist, *1868.] A bacteriolytic serum used in the treatment of cerebrospinal meningitis.

Kol'mer's test [John A. *Kolmer*, American physician, *1880.] 1. One of a number of complement fixation tests for various infectious diseases. 2. A modified Wassermann test.

ko'lynos [G. *kōlyō*, I prevent, + *nosos*, disease.] A dental paste said to contain thymol, saccharin, peppermint oil, eucalyptus oil, benzoic acid, glycerin, alcohol, precipitated chalk, and soap.

kolyone (ko'lĭ-ōn). Colyone.

kolypep'tic. Colypeptic.

kolysep'tic. Colyseptic.

Kondo'leon opera'tion [Emmanuel *Kondoleon*, Athenian surgeon, contemporary.] Excision of strips of subcutaneous connective tissue for the relief of elephantiasis.

koniol'ogy. Coniology.

konseal (kon'sēl). Trade name of a special make of cachet.

koo'so. Cusso.

Kop'lik's spots [Henry *Koplik*, New York physician, 1858–1927.] Filatov's spots; small red spots on the buccal mucous membrane, in the center of each of which may be seen, in a strong light, a minute bluish white speck; they occur early in measles, before the skin eruption, and are regarded as a pathognomonic sign of the disease. **K.'s stig'ma of degen'eration,** a prominence over the pisiform bone observed in certain cases of sporadic cretinism.

Kopp's asth'ma [Johann Heinrich *Kopp*, German physician, 1777–1858.] Spasm of the glottis occurring in young infants up to two years of age; laryngismus stridulus.

Korányi's method (ko-rahn'ye) [Baron F. von *Korányi*, Hungarian physician, *1829.] A method of percussion, usually auscultatory percussion; a finger of the examiner's left hand is held vertically against the chest wall while percussion is made by the finger of the right hand tapping its second phalanx. **K.'s sign,** Grocco's triangle.

koro'nion. Coronion.

Korotkow's test (ko-rot'kawf). In a case of aneurysm, while the artery above is compressed, the blood pressure in the peripheral circulation is estimated; if it is fairly high the collateral circulation is good.

Korsakoff's psycho'sis or **syn'drome** (kor-sah'kawf) [Sergei Sergeyevich *Korsakoff*, Russian neurologist, 1853–1900.] Polyneuritic psychosis; a psychosis associated with polyneuritis, characterized by failure of memory, imaginary reminiscences, and sometimes marked hallucinations with agitation.

Koshev'nikoff's disease'. [Alexiei Jakovlevich *Koshevnikoff*, Russian neurologist, 1836–1902] An incomplete or mild form of epilepsy.

kou'miss. See *kumyss*.

kou'sin, kouss'in. The active principle, glucoside, of cusso, employed as a teniacide in doses of gr 20–40 (1.3–2.6).

kouss'o. Cusso.

Kovalev'ski's canal' [Pavel Ivanovich *Kovalevski*, Russian embryologist, *1845.] Neurenteric or blastoporic canal, connecting the medullary tube with the archenteron in the embryo.

Kowarsky's test (ko-var'ske) [A. *Kowarsky*, Berlin physician, contemporary.] A modified Fischer's* test for sugar in the urine.

Koy'ter's mus'cle [Volcherus *Koyter*, Dutch anatomist, 1534–1600.] Musculus* corrugator supercilii

Kr. Chemical symbol of *krypton*.

K-radia'tion. A very penetrating form of radiation excited by *x*-rays impinging upon a metal anticathode; it is about 300 times harder than the L-radiation.

kra-kra. Craw-craw.

krame'ria [J. G. H. *Kramer*, Austrian physician and botanist, eighteenth century.] (U.S.). Rhatany, the dried root of *Krameria triandra*, or *K. argentea*, shrubs of Peru and of other parts of South America; tonic and astringent, employed in chronic diarrhea in doses of gr. 10–30 (0.6–

2.0), and locally in leucorrhea and uterine hemorrhage.

Kraske's opera'tion (krahs'keh) [Paul *Kraske*, German surgeon, 1851–1930.] Removal of the coccyx and excision of the left wing of the sacrum in order to afford approach for resection of the rectum for cancer or stenosis.

kraurosis, kraurosis vulvæ (kraw-ro'sis vul've) [G. *krauros*, dry, brittle.] Breisky's disease, atrophy of the skin of the female genital organs.

Kraus's reac'tion. The formation of a precipitate when the filtrate of an old broth culture (of typhoid bacilli, for example), called *K.'s fluid*, is added to a strong immune serum.

Krause's cor'puscles or **end-bulbs** (krow'zeh) [Wilhelm *Krause*, German anatomist, son of K. F. T. Krause, 1833–1910.] Corpuscula bulboidea, tactile corpuscles on the nerve terminals in the lips, glans penis, and elsewhere. **K.'s mem'brane,** Dobie's layer or line, telophragma, a dark disc, seen as a line on longitudinal section, limiting the sarcomere in striated muscle. **K.'s respi'ratory bun'dle,** tractus solitarius.

Krause's glands (krow'zeh) [Karl Friedrich Theodor *Krause*, German anatomist, father of Wilhelm K., 1797–1868.] Mucous glands ot the conjunctiva. **K.'s me'dian puboprostat'ic lig'ament,** ligamentum transversum pelvis. **K.'s valve,** valve of Béraud, a fold of mucous membrane where the lacrymal sac narrows into the nasal duct.

Krause's meth'od (krow'zeh) [Fedor *Krause*, German surgeon, of Altona, *1857.] Skin grafting by means of large strips the entire thickness of the skin but without any of the subcutaneous fat; an application of Wolfe's* method to general surgery. **K.'s opera'tion,** extradural operation for the removal of the Gasserian ganglion in trigeminal neuralgia

kre'los. Compound solution of cresol and phenol, a solution of cresols or higher phenol homologues with rosin soap; antiseptic and germicide.

kre'oform. Geoform.

kre'osol. Creosol

kre'osote. Creosote.

kreotox'ism. Creotoxism

kres'amine. An aqueous solution of tricresol and ethylenediamine, each 25 per cent.; bactericidal

kre'sol. Cresol.

kre'solin. Trade name of a cresol-containing disinfectant.

Kretzschmann's space (krech'mahn). A slight depression in the tympanic attic below Prussak's space.

Kreysig's sign (kri'zig) [Friedrich Ludwig *Kreysig*, Dresden physician, 1770–1839.] Heim-Kreysig sign.

Krishaber's disease' (krēs-ă-bair') [Maurice *Krishaber*, Parisian physician, born in Hungary, 1836–1883.] Cerebrocardiac neuropathy; a neurosis characterized by a feeling of emptiness in the head, vertigo, sleeplessness, syncope, and cardiac palpitation.

Krisov'ski's sign. Wrinkles radiating from the corners of the mouth in congenital syphilis.

Kristeller technique (kris'tel-er tek-nēk'). Expression of the child by force applied to the fundus uteri through the abdominal wall, the fingers of the two hands being behind and the thumbs in front, and the force being exerted during a uterine contraction.

Kroenig's a'rea (krē'nig) [Georg *Kroenig*, Berlin physician, 1856–1911.] A resonant field over the apex of the lung anteriorly and posteriorly. **K.'s field,** K.'s area. **K.'s isth'mus,** the narrow strap-like portion of the resonant fie'd which extends over the shoulder, connecting the larger areas of resonance over the pulmonary apex in front and behind. **K.'s steps,** step-like extension of the lower part of the right border of absolute cardiac dullness in hypertrophy of the right heart.

Kroenig's meth'od (krö'nig) [Bernhard *Kroenig*, German gynecologist, *1863.] Sterilization of catgut by heating for an hour in cumol (a fluid hydrocarbon) at 165° C.

Kroenlein's her'nia (kren'lin) [Rudolf Ulrich *Kroenlein*, Zurich surgeon, 1847–1910.] Hernia en bissac, properitoneal inguinal hernia.* **K.'s opera'tion,** temporary resection of the outer border of the orbit in order to afford access to a retrobulbar orbital tumor.

Kromayer's lamp (kro-mi'er) [Ernst *Kromayer*, German dermatologist, contemporary.] A U-shaped quartz lamp of mercury vapor, giving out actinic rays, used in the treatment of skin diseases.

Krompecher's tu'mor (krōm'pekh-er) [Edmund *Krompecher*, Budapest pathologist, 1870–1926.] Rodent ulcer.*

Kronecker's cen'ter (krōn'ek-er) [Hugo *Kronecker*, Swiss physiologist, 1839–1914.] The inhibitory cardiac center. **K.'s punc'ture,** experimental puncture, by means of a needle, of K.'s center. **K.'s solu'tion,** a 5 per cent. sodium chloride solution rendered faintly alkaline with sodium carbonate, for use in the examination of fresh tissues under the microscope.

Krukenberg tu'mor (kroo'ken-berg) [Georg Peter Heinrich *Krukenberg*, German gynecologist, 1856–1899.] Fibrosarcoma mucocellulare (carcinomatodes) ovarii; a fibrosarcoma of the ovary which has undergone myxomatous degeneration involving both ground substance and cells, the former showing large loose meshes, the latter becoming swollen, pale, and faintly granular, with a deeply staining crescentic peripheral nucleus—presenting the so called "seal-ring" form.

Kru'se's brush [Walther *Kruse*, German bacteriologist, *1864.] A bunch of fine platinum wires attached to a holder, used in bacteriological work to spread infected material over the surface of a culture medium.

krymother'apy. Crymotherapy.

kry'ofine. Trade name of methoxyacetphenetidin, a condensation product of paraphenetidin; anodyne and antipyretic in doses of gr. 5–15 (0.3–1.0)

kryogenin (kri-oj'en-in). Cryogenin.

kryos'copy. Cryoscopy.

kryptok (krip'tok) [G. *kryptos*, concealed.] A bifocal lens made of a flint glass inset fused into a crown glass blank.

kryp'ton [G. *kryptos*, concealed.] A gaseous element, present in small amount in the atmosphere, symbol Kr, atomic weight 83.

krysolgan (kri-sol'gan). Trade name of a complex product containing gold, said to be of value in the treatment of tuberculosis.

K_2SO_4. Potassium sulphate, dipotassic sulphate

kubisagari, kubisagaru (koo-bī-sah-gah'rī, koo-bī-sah-gah'roo) [Jap. *kubi*, head, neck, + *sagaru*, to hang down.] Gerlier's disease, endemic paralytic vertigo, an affection characterized by diplopia, dimness of vision, blepharoptosia, and paralysis of the neck muscles resulting in head-drop.

Kuehne's fi'ber (kü'neh) [Willy *Kuehne*, German histologist, 1837–1900.] Artificial muscular

fiber made by filling the intestine of an insect with a growth of myxomycetes, used to demonstrate the contractility of protoplasm. **K.'s mus'cle-spin'dle,** neuromuscular spindle; the beginning of a sensory nerve-fibril on the surface of the muscular fiber; these fibrils form rings or spirals around the fibers or ramify on their surface. **K.'s phenom'enon,** waves in the sarcous substance of muscle, in a direction from the anode to the cathode, when a galvanic current is passed through muscular tissue. **K.'s spin'dle,** K.'s muscle-spindle. **K.'s ter'minal plates,** the motor end-plates of nerves in the muscular spindles.

Kuehne's meth'ylene blue (kü'neh) [Heinrich *Kuehne*, German histologist.] Methylene blue, 1.5; absolute alcohol, 10; 5 per cent. phenol solution, 100.

Kuelz's cyl'inders (külts) [Rudolph Eduard *Kuelz*, German physician, 1845–1895.] Coma-casts; renal casts of strongly refracting granules said to be found in beginning diabetic coma. **K.'s test,** after the fermentation of the sugar in diabetic urine, if the urine turns the plane of polarization to the right, beta-oxybutyric acid is present.

Kuemmell's disease' (kum'el) [Hermann *Kuemmell*, Hamburg surgeon, *1852.] Traumatic spondylopathy; rarefying ostitis of the vertebra, following an injury, marked by pain, stiffness of the back, sometimes kyphosis, and symptoms of compression of the cord. **K.'s spondyli'tis,** a form of traumatic spondylitis in which the disabling symptoms do not make their appearance until some time after the receipt of the injury.

Kuemmell-Verneuil disease (küm'el, vair-noĭ) [Herman *Kuemmell;* Aristide Auguste *Verneuil.*] Same as Kuemmell's disease.

Kuess' exper'iments (kus) [Emil *Kuess*, Strasburg physiologist, 1815–1871.] To show that the epithelium of the bladder is impermeable; vesical injections of solution of belladonna or of opium are followed by no symptoms of poisoning

Kuester's opera'tion (kus'ter) [Emil Georg Ferdinand *Kuester*, German surgeon, *1839.] The pinna and posterior wall of the cartilaginous auditory canal are divided from their attachments and turned forward; then the posterior bony wall of the auditory canal is cut away, along with the superior and external walls of the attic, thus exposing the antrum, attic, and tympanum, and giving exit to the pus in mastoiditis.

Kuestner's sign (kust'ner) [Otto Ernst *Kuestner*, German gynecologist, 1849–1931.] Dermoid cysts of the ovary are found anterior to the uterus, contrary to the usual position of ovarian cysts.

Kuhn's mask (kōōn) [Philalethes *Kuhn*, Strassbourg physician, contemporary.] A celluloid mask with adjustable openings allowing for progressive obstruction to the respiration and so inducing pulmonary hyperemia.

Kuhnt's opera'tion (koont) [Hermann *Kuhnt*, German ophthalmologist, 1850–1925.] An operation for frontal sinus disease. A horizontal skin incision is made along the supraorbital margin with a vertical incision through the periosteum at right angles; then the entire anterior wall of the sinus is removed with chisel and rongeur, and the mucous membrane is curetted away. **K.'s spaces,** shallow diverticula or recesses from the anterior portion of the lateral chamber of the eye.

ku'myss [Tartar word.] Fermented mare's or cow's milk.

Kupffer's cells (koop'fer) [Karl Wilhelm von *Kupffer*, German anatomist, 1829–1902.] Stellate cells in the walls of the sinusoids of the liver; actually, normal but swollen endothelial cells.

Kupres'soff's cen'ter [J. *Kupressoff*, Russian physician, nineteenth century.] Medullary center of the vesical sphincter, at the level of the third to the fifth lumbar vertebra.

Kurloff's bod'ies (koor'lawf) [Mikhail Georgiyevitch *Kurloff*, Russian physician, *1859.] Cell-inclusions found in the large mononuclear lymphocytes of the guinea-pig; supposed by some to be an intracellular phase in the life cycle of a flagellate, *Lymphocytozoon cobayæ*, by others said not to be of protozoan nature.

Kurthia (koor'tĭ-ah). A genus of the family *Bacteriaceæ*, containing long, motile, gram-positive, rod-shaped organisms arranged in chains. The name of this genus supercedes *Zopfius* by which it was previously known. **K. zop'fii,**[0] *Bact. zop'fii*, and **K. zen'keri,**[0] *Proteus zenkeri*, are the two non-pathogenic species, both of which are found in rotting matter.

Kurthieæ (koor-tĭ-e'e). A tribe of the family *Bacteriaceæ* containing one genus. The name supercedes *Zopfieæ* by which the tribe was formerly called.

Kurunegala ulcers (koo-roo-na-gah'lah ul'surz) [*Kurunegala*, a district in Ceylon.] Pyosis tropica.

Kussmaul's co'ma (koos'mowl) [Adolf *Kussmaul*, German physician, 1822–1902.] Diabetic coma. **K.'s disease',** periarteritis nodosa. **K.'s paradox'ical pulse,** the pulse of cardiac symphysis, marked by a diminution of strength or even absence, during deep inspiration. **K.'s respira'tion,** the dyspnea of diabetic coma. **K.'s symp'tom,** filling of the veins of the neck during inspiration in cases of cardiac symphysis.

Kussmaul-Kien respiration (koos'mowl-kēn) [Adolf *Kussmaul;* Alphonse Marie Joseph *Kien*, German physician, contemporary.] Kussmaul's* respiration.

Kussmaul-Landry paral'ysis. Landry's* paralysis.

kuth root (kōōt rōōt). *Saussurea lappa*, an Indian shrub, used for the relief of an asthmatic spasm, in doses of ʒss-ii (2.0–8.0) of a fluid extract.

KW. Abbreviation for kilowatt.

kyanop'sia. Cyanopsia.

kyestein, kyesthein (ki-es'te-in, ki-es'the-in) [G. *kyēsis*, pregnancy, + *esthēs*, garment (?).] A scum or pellicle occasionally observed on the surface of the standing urine from a pregnant woman, formerly regarded as one of the signs of pregnancy.

kyllo'sis [G. *kyllōsis*, a crippling.] Clubfoot.

kymbocephal'ic, kymboceph'aly. Cymbocephalic cymbocephaly

kymogram (ki'mo-gram). The graphic curve made by a kymograph.

kymograph (ki'mo-graf) [G. *kyma*, wave, + *graphō*, I record.] An instrument for recording wave-like motions, or modulations; especially for recording variations in blood-pressure.

kymoscope (ki'mo-skōp) [G. *kyma*, wave, + *skopeō*, I regard.] An apparatus for measuring the pulse-waves, or the variations in blood-pressure.

kyneplastic amputation (ki-ne-plas'tik am-pu-ta'shun) [G. *kinēsis*, motion, + *plassō*, I form.] A method of amputation of the upper extremity whereby the muscles and tendons are so arranged in the stump that they are able to execute independent movements and to communicate motion to a specially constructed arm and hand

kynoceph'alus. Cynocephalus

kynopho'bia. Cynophobia

kyphoscolio'sis. A combined angular and lateral curvature of the spine.

kyphosis (ki-fo'sis) [G. *kyphōsis*, hump-back.] Angular curvature of the spine, hump-back, hunch-back, Pott's curvature; an abnormal curvature of the spine, with convexity backward, due to caries and destruction of the bodies of the affected vertebræ.

kyphot'ic. Relating to or suffering from kyphosis.

ky'rin. One of a class of proteins resistant to tryptic digestion, yielding amino-acids on treatment with an acid.

kysthitis (kis-thi'(the')tis) [G. *kysthos*, sinus (vagina), + *-itis*.] Colpitis, inflammation of the vagina.

kysthopto'sia (kis-thop-to'sĭ-ah) [G. *kysthos*, sinus (vagina), + *ptōsis*, a falling.] Colpoptosia.

kyto- [G. *kytos*, a hollow, a cell.] A prefix denoting a cell; for words so beginning see the usual and correct form of the prefix *cyto*.

L

L. 1. Abbreviation for left, left eye. 2. Symbol for henry, the unit of inductance. 3. Abbreviation for Latin *limes*, boundary, limit; used in an equation noting the reaction of toxin and antitoxin. L_0, denotes the number of doses of toxic bouillon, fatal to a guinea-pig weighing 250 grams, which will exactly neutralize one antitoxin unit $L+$, denotes the number of doses of toxic bouillon, fatal to a guinea-pig weighing 250 grams, which are necessary, when mixed with one antitoxin unit, to kill the animal within five days, one lethal dose being left uncombined. 4. Abbreviation for *Lactobacillus*.

La. Chemical symbol for lanthanum.

lab [Ger.] A rennet ferment coagulating milk.

Labarraque's solu'tion (lab-ar-ak') [Antoine Germain *Labarraque*, Parisian chemist, 1777–1850.] A solution of chlorinated soda, usually regarded as the same as the official liquor sodæ chlorinatæ, but it is said to be of only about ½ the strength of the latter.

Labassère, France (lă-bah-sĕr'). See *Baguères de Bigorre*.

Labbé's tri'angle (lă-ba') [Léon *Labbé*, French surgeon, 1832–1916.] An area bounded below by a horizontal line touching the lower edge of the cartilage of the ninth rib, externally by the line of the false ribs, and to the right side by the liver; here the stomach is normally in contact with the abdominal wall. **L.'s vein,** an inconstant anastomotic vein connecting the superior longitudinal with the lateral sinus.

lab'danum. Ladanum.

labell'um. In botany, the irregularly shaped petal of an orchid.

la'bia. Plural of labium, lip.

la'bial. 1. Relating to the lips or any labium. 2. One of the letters, p,b,m,f,v, and w, formed by means of the lips.

la'bialism. A form of stammering in which there is confusion in the use of the labial consonants.

labially (la'bĭ-al-ĭ). Toward the lips.

la'biate. In botany, two-lipped.

labidom'eter [G. *labis(labid-)*, forceps, + *metron*, measure.] An attachment to the obstetrical forceps for measuring the size and curvature of the fetal head.

labile (lab'il) [L. *labilis*, liable to slip.] Unsteady, not fixed; noting (1) certain constituents of serum which are readily destroyed by keeping, by subjecting to slight degrees of heat, etc., and (2) an electrode which is kept moving over the surface during the passage of an electric current. **l. el'ements,** tissue cells, as of epithelium, connective tissue, etc., which continue to multiply by mitosis during the life of the individual.

labil'ity. Instability, changefulness.

labim'eter. Labidometer.

lab"iocer'vical [L. *labium*, lip, + *cervix*, neck.] Relating to a lip and a neck, noting specifically the labial or buccal surface of the neck of a tooth.

labiochorea (la-bĭ-o-ko-re'ah) [L. *labium*, lip.] A chronic spasm of the lips interfering more or less with speech.

labiodental (la-bĭ-o-den'tal) [L. *labium*, lip, + *dens (dent-)*, tooth.] Relating to the lips and the teeth, noting certain letters (f, v) the sound of which is formed by both lips and teeth.

labioglossolaryngeal (la"bĭ-o-glos"o-lar-in'je-al) [F. *labium*, lip, + G. *glōssa*, tongue, + *larynx*.] Relating to the lips, tongue, and larynx, noting bulbar paralysis in which these parts are involved.

labioglossopharyngeal (la"bĭ-o-glos"o-far-in'je-al) [L. *labium*, lip, + G. *glōssa*, tongue, + *pharynx*.] Relating to the lips, tongue, and pharynx, noting bulbar paralysis involving these parts.

la'biograph [L. *labium*, lip, + G. *graphō*, I record.] An instrument for recording the movements of the lips in speaking.

la"biomen'tal [L. *labium*, lip, + *mentum*, chin.] Relating to the lower lip and the chin.

labiomyco'sis [L. *labium*, lip, + G. *mykēs*, fungus.] Any disease of the lips due to the presence of a fungus.

la"biona'sal [L. *labium*, lip, + *nasus*, nose.] Relating to the upper lip and the nose, or to both lips and the nose; noting a letter (m) which is both labial and nasal in the production of its sound.

labiopalatine (la"bĭ-o-pal'a-tīn) [L. *labium*, lip, + *palatum*, palate.] Relating to the lips and the palate.

labioplasty (la'bĭ-o-plas-tĭ) [L. *labium*, lip, + G. *plassō*, I form.] Chiloplasty.

la"biotenac'ulum. A tenaculum for holding any lip, especially of the os uteri, during an operation

lab'itome [G *labis*, pincers, + *tomē*, an incision.] Cutting forceps, a forceps with sharp blades.

la'bium, gen. *la'bii*, pl. *la'bia* [L.] 1. A lip. 2. Any lip-shaped structure. 3. In entomology, the lower lip of an insect (see *labrum*). **l. cer'ebri,** the inner border of each cerebral hemisphere overlapping the corpus callosum. **l. infe'rius o'ris** [BNA], l. mandibulare [NK], the lower lip. **l. ma'jus puden'di** (pl. *la'bia majo'ra*) [BNA], one of two rounded folds of integument forming the lateral boundaries of the rima pudendi. **l. mi'nus puden'di** (pl. *la'bia mino'ra*) [BNA], nympha; one of two narrow longitudinal folds enclosed in the cleft within the labia majora; posteriorly they gradually merge into the labia majora and join to form the fourchette, or frenulum labiorum pudendi; anteriorly each labium divides into two portions which unite with those of the opposite side in front of the glans clitoridis to form the prepuce, and behind to form the frenulum. l. **o'ris** [BNA], one of the lips bounding the cavity of the mouth. **l. supe'rius o'ris** [BNA], l. maxillare [NK], the upper lip. **l. tympan'icum** [BNA], tympanic lip, the free border of the lamina spiralis ossea of the cochlea. **l. ure'thræ,** one of the two lateral margins of the meatus urnarius. **l. u'teri,** the thick margin of the external os uteri constituting the vaginal portion of the cervix; the lips are spoken of as anterior and posterior, though there is no true line of demarcation between them. **l. vestibula're** [BNA], vestibular lip, an edge of thickened periosteum projecting into the ductus cochlearis just above the l. tympanicum. **l. voca'le** (pl. *la'bia voca'lia*) [BNA], the projection at either side of the rima glottidis, formed of mucous membrane covering the vocal ligament

and vocal muscle; its free margin forms the true vocal cord.

la'bor [L. *laborare*, to work.] Delivery, childbirth; the process of expulsion of a fetus from the uterus at the normal termination of pregnancy. **first stage of l.**, the period of dilatation of the os uteri. **missed l.**, the occurrence of a few labor pains at the normal term followed by their cessation and the retention of the fetus for an indefinite period **premature' l.**, the expulsion of a viable fetus prior to the normal end of pregnancy, *i.e.* from the seventh to the ninth month **sec'ond stage of l.**, the descent and expulsion of the fetus. **third stage of l.**, the period following the birth of the child until the expulsion of the placenta and membranes or after-birth

accelerating, oxytocic, ocyodinic, odinagogue, parturifacient, maieutic. **after end of tenth month,** partus serotinus. **at term,** partus maturus. **before fifth month,** abortion. **breech presentation,** partus agrippinus. **difficult,** dystocia, mogitocia, partus difficilis. **discharge following,** lochia. **dry,** partus siccus, xerotocia **easy,** eutocia. **face presentation,** prosopotocia. **foot presentation,** partus aggrip nus. **from end of seventh until end of tenth month,** partus præmaturus. **from fifth to end of seventh month,** miscarriage, partus immaturus. **insanity following,** tocomania, maieusiomania, puerperal insanity. **normal,** eutocia. **science of,** obstetrics, tocology, maieutics. **softening,** halisteresis **spontaneous expulsion in transverse presentation,** partus conduplicato corpore.

laboratorian (lab"or-a-to'rĭ-an). One who works in a laboratory, specifically one who makes examinations for diagnostic purposes of the blood and other fluids and excretions; opposed to clinician.

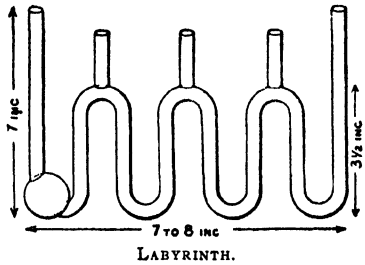
lab'oratory [L. *laboratorium*, a work-place.] A room fitted up with apparatus for conducting experiments (chemical, physiological, and the like), making analyses, manufacturing drugs, etc.

Laborde's for'ceps (lă-bord') [Jean Baptiste Vincent *Laborde*, French physician, 1830–1903.] Forceps with flat crescentic blades, used for grasping the tongue in making traction. **L.'s meth'od,** rhythmical tractions on the tongue, grasped by the thumb and finger or L.'s forceps, made from fifteen to seventeen times a minute, in order to stimulate the respiratory center in cases of asphyxiation and apparent death.

labor'din [after J. B. V. *Laborde*.*] Analgen.

labrocyte (lab'ro-sīt) [G. *labros*, gluttonous.] Mast-cell.

la'brum, pl. *la'bra* [L.] 1. A lip. 2. A lip-shaped structure. 3. In entomology, the upper lip of an insect (see *labium*). **l. glenoida'le** [BNA], glenoidal lip, articular margin; a ring or segment of a ring, of fibrocartilage or fibrous connective tissue, attached to the margin of the bony socket of a joint to increase its depth.



LABYRINTH.

labyrinth (lab'ir-inth) [G. *labyrinthos*, a maze.] 1. The internal ear, comprising the semicircular canals, vestibule, and cochlea; see *labyrinthus*. 2. Any group of communicating cavities, as in each lateral mass of the ethmoid bone, *labyrinthus ethmoidalis*. 3. Pars convoluta [BNA] of a cortical lobule of the kidney; the portion of kidney cortex intervening between the pyramids of Ferrein; it contains the Malpighian corpuscles and convoluted tubules. 4. A group of upright test-tubes terminating below in a base of communicating, alternately Ω- and U-shaped tubes, used for isolating motile from non-motile organisms in culture, or a motile from a less motile organism (as the typhoid from the colon bacillus) the former travelling faster and farther through the tubes than the latter (see cut). **bony l.**, labyrinthus osseus. **ethmoid'al l.**, labyrinthus ethmoidalis. **Ludwig's l.**, renal l. **mem'branous l.**, labyrinthus membranaceus. **osseous l.**, labyrinthus osseus. **renal l.**, labyrinth(3).

labyrinthine (lab-I-rin'thin). 1. Relating to any labyrinth. 2. Perplexing, intricate, involved.

labyrinthitis (lab-ir-in-thi'(the')tis). Inflammation of a labyrinth, especially of the internal ear, otitis interna.

labyrin'thus [G. *labyrinthos*, a maze, an intricate system of intercommunicating passages.] Labyrinth. A term applied to several anatomical structures with numerous intercommunicating cells or canals; noting specifically the internal ear, comprising the semicircular canals, vestibule, and cochlea. **l. ethmoida'lis** [BNA], ethmoidal labyrinth, lateral mass of the ethmoid bone; a mass of air-cells with thin bony walls dependent on either side from the horizontal plate; the cells are arranged in three groups, anterior, middle, and posterior, and are closed in externally by the lamina papyracea, or os planum, which forms part of the wall of the orbit. **l. membrana'ceus,** [BNA], membranous labyrinth, an arrangement of communicating membranous sacs, filled with endolymph and surrounded by perilymph, lying within the cavity of the osseous labyrinth; its chief divisions are: sacculus, utriculus, ductus cochlearis, and ductus semicirculares. **l. os'seus** [BNA], osseous labyrinth, bony labyrinth, a series of cavities (cochlea, vestibule, and semicircular canals) in the petrous portion of the temporal bone which lodge the membranous labyrinth with its terminal auditory apparatus. **l. pu'bicus im'par, l. pudenda'lis,** plexus pudendalis.

lac, gen. *lactis* [L.] 1. Milk. 2. Any whitish, milky looking liquid. 3. An exudate of a scale insect. 4. The exuded sap of certain trees, used as a varnish. **l. ammoni'aci,** mistura ammoniaci. **l. argen'ti,** precipitated chloride of silver. **l. asafœt'idæ,** emulsum asafœtidæ. **l. fermenta'tum** (N.F.), fermented milk; cow's milk fermented with yeast and sugar, resembling kumyss. **l. ferri,** freshly precipitated ferric phosphate in water. **l. humanisa'tum,** humanized milk; prepared by triturating humanizing milk powder (pulvis pro lacte humanisato, N.F.) gr. 100 (6.5) with water ℥2 (60.0), and adding to a bottle containing fresh cow's milk ℥2 (60.0) and fresh cream ℥½ (15.0), heating to 100° F. (38° C.) for fifteen minutes, then quickly bringing to a boil and at once cooling; it should be prepared just before use. **l. plumbi,** liquor plumbi lactatis. **l. sul'phuris,** milk of sulphur, sulphur præcipitatum. **l. vacci'num** (N.F.), cow's milk. **l. virgina'le,** a wash consisting chiefly of lead water, like the liquor plumbi lactatis.

lacar'nol [L. *lac*, milk, + *caro*, flesh.] Myorgal, an extract of the muscular tissue of warm blooded animals, a clear, faintly yellow liquid, recommended to improve the circulation in the vessels of the heart, to reduce high blood pressure and to prevent attacks of angina pectoris, in doses of 10–25 drops one to three times a day.

lac-bismo (lak-biz'mo). Trade name of a suspension of bismuth hydroxide and bismuth subcarbonate in water; dose, gr. 2 (8.0).

lacerable (las'ur-a-bl) [L. *lacerare*, to tear.] Capable of being, or liable to be, torn.

lacerated (las'ur-a-ted) [L. *lacerare*, to tear.] Torn, rent.

laceration (las-ur-a'shun). 1. A tear or torn wound. 2. The process or act of tearing the tissues.

lacer'tus (lă-sur'tus) [L.] 1. The muscular part of the arm. 2. Any muscular or fibrous band. **l. cor'dis,** one of the trabeculæ carneæ. **l. fibro'sus** [BNA], bicipital or semilunar fascia, radiating fibers from the tendon of insertion of the biceps passing obliquely over the hollow of the elbow to the ulnar side and becoming merged into the deep fascia of the forearm. **l. me'dius,** ligamentum longitudinale anterius.

lachesis (lak'e-sis) [G. *lachesis*, destiny, fate.] The venom of *Lachesis mutus*, the bushmaster snake of South America; employed in homeopathic practice in the treatment of septicemia, varicose veins, diphtheria with great prostration, and peritonitis, in doses from the 6th to the 30th potency.

lachrymal (lak'rĭ-mal). Lacrymal.

lacinia (lă-sin'ĭ-ah) [L. fringe.] Fimbria. **lacin'iæ tu'bæ,** fimbriæ tubæ uterinæ.

lac'moid. Trade name of a purplish dye made from resorcin, resorcinol-blue; employed as an indicator, being turned blue by alkalies and red by acids. **l. paper,** blotting paper saturated with a solution of lacmoid and dried, employed as an indicator of acidity or alkalinity in a fluid.

lac'mus [D. *lak*, lac, + *moes*, pulp.] Litmus.

lac'rima, pl. *lac'rimæ* [L.] A tear.

lac'rimal. Lacrymal.

lacrima'lis [L.] Lacrymal.

lac'rymal [L. *lacrima*, a tear.] Relating to the tears or to weeping. **l. bay,** a slight recess at the internal angle of the eye in which are the puncta lacrimalia, or openings into the lacrymal ducts. **l. bone, l. canal, l. duct,** etc., see the nouns.

lacryma'tion. The secretion of tears, especially in excess.

lacrymator (lak'rĭ-ma-tur) [L. *lacrima*, tear.] Tear gas,* benzene bromide, acetone, or xylol.

lacrymotome (lak'ri-mo-tōm). A fine bladed knife for use in lacrymotomy.

lacrymot'omy [L. *lacrima*, tear, + G. *tomē*, incision.] The operation of incising the lacrymal duct or sac.

lactacidemia (lakt-as-id-e'mĭ-ŭ). The presence of lactic acid in the blood.

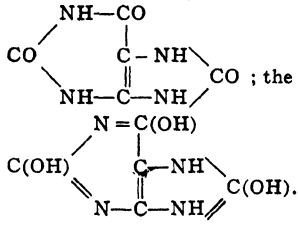
lactacidogen (lak-tă-sid'o-jen) [*lactic acid* + G. *gennaō*, I produce.] The assumed precursor, or mother substance, of lactic acid as found in the muscles.

lac'tagogue [L. *lac*, milk, + G. *agōgos*, leading.] Galactagogue

lac'tagol. Trade name of a galactagogue remedy prepared from cotton-seed.

lactalbu'min. Milk-albumin, the special form of albumin contained in milk.

lac'tam. A term denoting the more unstable of the tautomeric forms of a urate, its formula being:



; the lactim* formula is:

lactase (lak'tāz) [*lact(ose)* + *-ase.*] A sugar-splitting enzyme in the small intestine which converts milk-sugar, or lactose, into dextrose and galactose.

lacta'tion [L. *lactare*, to suckle.] 1. The production of milk. 2. The period following childbirth during which milk is formed in the breasts.

lacta'tional. Relating to lactation.

lac'teal. 1. Relating to or resembling milk, milky. 2. One of the lymphatic vessels in the mesentery, conveying chyle from the intestine.

lactescence (lak-tes'ens) [L. *lactescere*, to become milky.] Milkiness, the quality of becoming milky or of resembling milk.

lac'tic [L. *lac(lact-)*, milk.] Relating to milk. **l. acid,** acidum lacticum. **l. acid bacill'us,** one of several forms which cause l. acid fermentation in milk. **l. acid fermenta'tion,** the production of l. acid in milk caused by the presence of any one of a number of l. acid bacilli.

lactif'erous [L. *lac(lact-)*, milk, + *ferre*, to carry.] Conveying milk, galactophorous.

lactifuge (lak'tĭ-fūj) [L. *lac(lact-)*, milk, + *fugare*, to drive away.] 1. Causing the arrest of the secretion of milk. 2. An agent which arrests the secretion of milk.

lactigenous (lak-tij'en-us) [L. *lac(lact-)*, milk, + *gennaō*, I produce.] Galactopoietic; producing milk.

lactigerous (lak-tij'er-us) [L. *lac(lact-)*, milk, + *gerere*, to carry.] Lactiferous, galactophorous.

lac'tim. A term denoting the more stable of the tautomeric forms of a urate; see *lactam.*

lactimorbus (lak"tĭ-mor'bus) [L. *lac(lact-)*, milk, + *morbus*, disease.] Milk-sickness.

lac'tin. Lactose, milk-sugar.

lac'tinated. Prepared with or containing milk-sugar.

lactiv'orous [L. *lac(lact-)*, milk, + *vorare*, to devour.] Living on milk.

Lactobacilleæ.[0] A tribe of the family *Bacteriaceæ*, containing the genus *Lactobacillus.*

lactobacilline (lac-to-bas'il-ēn). A preparation in powder or tablet form, containing lactobacilli; employed to arrest intestinal putrefaction, or added to milk to cause lactic acid fermentation.

Lactobacillus (lak-to-bă-sil'us) [L. *lac* (*lact-*), milk; or *lactic* acid.] A genus of *Bacteriaceæ*, containing many species of rather long rod-shaped organisms, producing acid in milk and other substances; isolated from pickles, sour mash, milk and milk products, and the intestinal contents. **L. acid'ophil-aerog'enes,**[0] an organism forming lactic acid in milk and carbohydrates, and having its habitat in the intestinal canal. **L. acidoph'ilus,**[0] acidophilus bacillus, a lactic-acid forming organism, occurring as rods, sometimes united in short chains; found in the intestinal contents of young infants; there are four types distinguished by slight differences in carbohydrate fermentation. **L. bo'as-op'pleri,**[0] non-motile, gram-positive rods, found in the gastric contents especially in cases of cancer of the stomach; formerly called *B.*

gastrophilus. **L. bulgar'icus,**[0] *B. acetogenes*, Bulgarian bacillus, produces lactic acid in milk, used to make yoghurt. **L. caucas'icus,**[0] the ferment producing kephir. **L. helvet'icus,**[0] *B. casei*, an organism found in Swiss cheese. **L. odontolyt'icus**, *B. acidophilus odontolyticus*, two closely allied species, called I and II, believed to be a cause of dental caries. **L. pan'is,**[0] a species found in sour dough.

lactobutyrometer (lak-to-bu-tĭ-rom'e-tur) [L. *lac* (*lact-*), milk, + G. *boutyron*, butter, + *metron*, measure.] A form of lactocrit.

lactocele (lak'to-sēl) [L. *lac*(*lact-*), milk, + G. *kēlē*, tumor.] Galactocele.

lac'tocrit, lac'tocrite [L. *lac*(*lact-*), milk, + *kritēs*, judge.] An instrument for use in the estimation of the amount of butter-fat in milk.

lactodensim'eter [L. *lac*(*lact-*), milk, + *densus*, thick, + G. *metron*, measure.] A form of galactometer, an instrument for determining the specific gravity of milk.

lactoglob'ulin. Milk-globulin, the form of globulin present in milk

lac'tol. 1. Trade name of betanaphthol lactate, employed as an intestinal antiseptic in doses of gr. 4–8 (0.25–0.5). 2. Actol.

lac'tolin. Evaporated milk.

lactom'eter [L. *lac*(*lact-*), milk, + G. *metron*, measure.] Galactometer.

lactonaph'thol. Lactol(1).

lactone (lak'tōn). 1. An organic anhydride formed from an hydroxyacid by the loss of water. 2. A volatile liquid, $C_{10}H_8O_4$, obtained by the dry distillation of lactic acid. 3. Trade name of a culture of a lactic acid bacillus preserved in sugar of milk.

lactopep'tin. Trade name of a mixture of pancreatin, peptone, lactic acid, hydrochloric acid, diastase and milk-sugar; recommended in indigestion in doses of gr 5–15 (0.3–1.0).

lactophen'in. Lactyl-phenetidin, a white crystalline powder; antipyretic, analgesic, hypnotic, in doses of gr. 5–15 (0.3–1.0).

lactophos'phate. A compound salt of lactic and phosphoric acids.

lactoprotein (lak-to-pro'te-in). A protein normally present in milk; lactalbumin, lactoglobulin, etc.

lactorrhea, lactorrhœa (lak-tor-re'ah) [L. *lac*(*lact-*), milk, + G. *rhoia*, a flow.] Galactorrhea.

lac'toscope [L. *lac*(*lact-*), milk, + G. *skopeō*, I view.] Galactoscope.

lacto'sum (U.S., Br.). **lactose** (lak'tōz) [L. *lac*(*lact-*), milk.] Sugar of milk, a dextrorotatory disaccharide found ordinarily only in milk.

lactose'rum. 1. Whey. 2. A specific serum which precipitates the casein from milk; it is obtained as the result of injecting milk into an animal, whereby a precipitin specific for casein is formed.

lactosomatose (lak"to-so'mă-tōz). Milk-somatose, described as a preparation of "casein albumoses with 5 per cent. tannic acid in organic combination," an odorless and nearly tasteless yellowish powder; recommended as a medicinal food in diarrhea in daily dose of 1 to 2 teaspoonfuls for children, 3 to 4 teaspoonfuls for adults.

lacto'sum (U.S.). Saccharum lactis (U.S. IX.), milk sugar, lactose; a sugar ($C_{12}H_{22}O_{11}.H_2O$) obtained from cow's milk, occurring in white, hard crystalline masses, or a white powder, producing a gritty sensation on the tongue, odorless, having a faintly sweet taste; soluble in 4.9 parts of water; diuretic and laxative in amounts of ʒi–6 (30.0–180.0), and is also employed in pharmacy in the making of triturations and other preparations.

lactosu'ria [*lactose* + G. *ouron*, urine.] The excretion of milk-sugar in the urine.

lactovegetarian (lak"to-vej'-e-ta'ri-an). One who lives on a mixed diet of milk and milk products, eggs, and vegetables, but eschews meat.

Lactu'ca [L. lettuce] A genus of plants of the order *Compositæ*. **L. viro'sa,** lactucarium. **L. sati'va,** the ordinary garden lettuce, the inspissated juice of which is sometimes employed as a sedative and soporific.

lactuca'rium [L. *lactuca*, lettuce.] Lettuce-opium, the dried milk-juice of *Lactuca virosa*, the wild lettuce of southern and western Europe; employed for nervous cough and as a sedative in doses of gr. ½–2 (0.03–0.13).

lac'tucin. A bitter principle, not a glucoside, obtained from lactucarium.

lactulum unguis (lak'tu-lum ung'gwis) [L. dim. of *lac*, milk.] Matrix unguis.

lactyltropeine nitrate (lak-til-tro'pe-ēn ni'trāt). The nitric acid salt of a substance derived from tropeine and lactic acid, employed as a cardiac tonic

lacuna (lă-ku'nah) pl. *lacu'næ* [L. a pit, dim. of *lacus*, a hollow.] 1. A small depression. 2. A gap or defect. **How'ship's l.,** one of the spaces beneath the periosteum. **intervill'ous l.,** one of the blood-spaces in the placenta. **l. cer'ebri,** (1) a small circumscribed loss of brain-tissue surrounding one of the small arteries; rupture of the vessel is apt to occur into the cavity so produced; (2) the infundibulum cerebri. **l. latera'lis,** parasinoidal sinus, one of a number of irregular spaces or pockets in the dura mater communicating by a narrow aperture with a blood-sinus. **l. mag'na,** a recess on the roof of the fossa navicularis of the penis, formed by a fold of mucous membrane, called Guérin's fold, or the valve of the navicular fossa. **l. musculo'rum** [BNA], the outer compartment beneath the inguinal (Poupart's) ligament, for the passage of the iliopsoas muscle and femoral nerve; it is separated by the iliopectineal ligament from the l. vasorum. **l. pharyn'gis,** a depression near the pharyngeal opening of the Eustachian tube. **l. urethra'lis** [BNA], one of a number of little recesses in the mucous membrane of the pars cavernosa urethræ into which empty the ducts of the urethral glands. **l. vaso'rum** [BNA], the inner compartment beneath the inguinal ligament, separated from the l. musculorum by the iliopectineal ligament; it gives passage to the femoral vessels. **Morgagni's l.,** l. urethralis. **oss'eous l.,** one of the spaces between the lamellæ of the Haversian system, in which the bone-corpuscles are lodged.

lacu'nar. Relating to a lacuna; noting hiatus or temporary lack of manifestation in a symptom. **l. amne'sia,** see the main title. **l. lig'ament,** Gimbernat's ligament.

lacunule (lă-ku'nūl) [L. *lacunula*, dim. of *lacuna*.] A very small lacuna.

la'cus [L. lake.] A small collection of fluid. **l. lacrima'lis** [BNA], lacrymal lake, the small cistern-like area of the conjunctiva at the inner angle of the eye, in which the tears collect after bathing the anterior surface of the eyeball and the conjunctival sac. **l. semina'lis,** the vault of the vagina after insemination.

lad'anum. A resinous exudation from a shrub of Southern Europe, *Cistus adaniferus*, and *C creticus*, formerly employed as a stomachic and in

the treatment of dysentery, and by fumigation in bronchitis.

Ladendorff's test (lah'den-dorf) [August *Ladendorff*, German physician, nineteenth century.] For blood: upon adding tincture of guaiac and oil of eucalyptus to the suspected fluid and allowing the mixture to stand, the presence of blood will be indicated by a blue coloration below and a purplish one above.

La'din's sign [Louis Julius *Ladin*, New York obstetrician,* 1862.] An area of elasticity, felt on palpation through the vagina as early as the fifth or sixth week of uterine pregnancy; it is on the anterior face of the uterus just above the cervix; the area grows larger as pregnancy progresses.

la'dy's slip'per. Cypripedium.

La'dy Web'ster's din'ner pills. Pilulæ aloës et mastiches.

Laënnec's cirrho'sis (lă-en-ek') [René Théophile Hyacinthe *Laënnec*, French physician, inventor of the stethoscope, 1781–1826.] Atrophic cirrhosis of the liver. **L.'s pearls,** small round gelatinous bodies in the sputum in asthma, which when floated in water stretch out and are seen to be formed of Curschmann's spirals. **L.'s suf'focative catarrh',** capillary bronchitis. **L.'s throm'bus** an ante-mortem heart clot.

læotrop'ic. Leotropic.

læv-. For words so beginning see *lev-*

lævo- [L. *lævus*, left.] A prefix denoting left toward or on the left side; see *levo-*.

lævulo'sum (Br.). See *levulose*.

Lafayette' mix'ture. Mistura copaibæ (N.F.); solution of potassium hydroxide 3.2, copaiba, compound tincture of lavender, and spirit of nitrous ether each 12.5, syrup 30, mucilage of acacia to make 100; employed in gonorrhea in doses of ʒ2 (8.0).

lage'na [L. flask.] Cæcum cupulare or upper blind extremity of the ductus cochlearis.

lag'ging. Retarded or diminished movement of the affected side of the chest in pulmonary tuberculosis.

lagne'sis, lagno'sis [G. *lagneia*, lewdness; *lagnos*, lewd.] Nymphomania; satyriasis.

lagophthal'mos, lagophthal'mus [G. *lagōs*, hare, + *ophthalmos*, eye.] A condition in which the eyelids cannot be completely closed.

Lago'ria's sign. Relaxation of the extensor muscles and of the fascia lata in fracture of the neck of the femur.

Lagochilascaris (lag-o-ki-las'kar-is) [G. *lagos*, hare, + *cheilos*, lip, + *ascaris*.] A genus of *Nematoda*, one species of which, *L. mi'nor*, has been found in Trinidad and neighboring regions in man, though whether it is a human parasite is doubtful.

lag phase (lag fāz). 1. The interval between the application of a stimulus and the response. 2. In bacterial cultivation, the initial period, lasting an hour or two, in which growth is slow or barely perceptible.

Lagrange's opera'tion (lă-grahńzh') [Felix *Lagrange*, French physician, contemporary.] A combined iridectomy and sclerectomy performed in glaucoma for the purpose of forming a filtering cicatrix

La grippe (lă-grip') [Fr. the grip.] Influenza

laiose (la'ōz). A substance resembling levulose but not fermentable with yeast.

laity (la'ĭ-tĭ) [G. *laos*, the people.] Non-professional people, in relation to the special profession—whether theology, law, or medicine—to which reference is made.

lake. 1. [A.S. *lacu*.] A small collection of fluid, lacus. 2. [Fr. *lague*.] A pigment made by combining an animal or vegetable coloring matter with a metallic oxide. 3. To cause blood-serum to assume a clear red color as a result of hemolysis. **lac'rymal l.,** lacus lacrimalis. **sem'inal l.,** lacus seminalis.

la'ky. Resembling a lake(2), noting the transparent red appearance of the blood-serum after hemolysis, or dissolution of the red blood-corpuscles, the stroma of the red cells settling to the bottom and the hemoglobin becoming diffused.

lalla'tion [L. *lallere*, to sing lullaby.] 1. Lambdacism, a form of stammering in which r is pronounced as l. 2. Lalling.

Lallemand's bod'ies (lal-mahń') [Claude François *Lallemand*, French surgeon, 1790–1853.] Small concretions, of gelatinous appearance, in the seminal vesicles.

lall'ing [G. *laleō*, I chatter.] A form of stammering in which the speech is almost unintelligible.

laloneurosis (lal"o-nu-ro'sis) [G. *laleō*, I chatter.] A neurosis marked by incoherence or other form of speech defect.

lalopathy (lă-lop'a-thĭ) [G. *lalia*, speech, + *pathos*, suffering.] Any form of speech defect.

lalophobia (lal-o-fo'bĭ-ah) [G. *lalia*, speaking, + *phobos*, fear.] A morbid reluctance to speak, through fear of committing errors in pronunciation or grammar or of stuttering.

lalople'gia [*laleō*, I talk, + *plēgē*, a stroke.] Paralysis of the muscles concerned in the mechanism of speech.

Lalouette's pyramid (lă-loo-et') [Pierre *Lalouette*, Parisian physician, 1711–1742]. Pyramidal or median lobe of the thyroid gland; an inconstant structure arising from the upper border of the isthmus, to the left of the median line, and ascending as far as the hyoid bone.

Lamarckian theory (lă-mark'ĭ-an) [Jean Baptiste Pierre Antoine de Monet de *Lamarck*, French naturalist, 1744–1829.] The theory that acquired characteristics may be transmitted to the descendants.

lamb'da [G. letter L, Λ.] The craniometric point at the junction of the sagittal and lambdoid sutures.

lambdacism (lam'dah-sizm) [G. *lambda*, the letter l.] 1. A form of stammering in which the letter l is mispronounced. 2. Lallation (1).

lamb'doid [G. *lambda*, Λ, the letter L, + *eidos*, resemblance.] Resembling the Greek letter Λ **l. lig'ament,** ligamentum fundiforme pedis. **l. su'ture,** the suture between the occipital and the parietal bones of the cranium.

Lam'blia intestina'lis. *Giardia* or *Cercomonas intestinalis*, *Megastoma entericum*, a flagellate protozoan found in the healthy duodenum and jejunum, apparently not pathogenic.

lambliasis (lam-bli'ă-sis). Giardiasis, infection with *Lamblia intestinalis*, sometimes marked by diarrheic or dysenteric symptoms.

Lambotte's meth'od (lahń-but') [Albin *Lambotte*, Belgian surgeon, 1856–1912.] Treatment of fractures of the extremities by means of an apparatus, called a *fixateur*, which consists of an extensible steel frame fastened to the bone by pegs inserted above and below the seat of fracture.

lamella, pl. *lamel'læ* (lă-mel'ah) [L dim. of *lamina*, plate, leaf.] A thin sheet or scale, lamina; one of the plates forming the Haversian system of bone 2. Disc, a preparation of the B.P in the form of a medicated gelatin disc, employed as a means of making local applications to the conjunctiva in

place of solutions. **concen'tric l.,** one of the curved plates of bone surrounding the central canal in the Haversian* system. **interme'diate l.,** one of the plates of bone in the intervals between the Haversian systems. **l. atropi'næ** (Br.), disc of atropine, contains gr. $\frac{1}{5000}$ (0.00013) of atropine sulphate. **l. cocai'næ** (Br.), disc of cocaine, contains gr. $\frac{1}{10}$ (0.013) of cocaine hydrochloride. **l. homatropi'næ** (Br.), disc of homatropine, contains gr. $\frac{1}{100}$ (0.0006) of homatropine hydrobromide. **l. physostigmi'næ** (Br.), disc of physostigmine, contains gr. $\frac{1}{1000}$ (0.00006) of physostigmine sulphate. **trian'gular l.,** velum interpositum. **vit'reous l.,** lamina basalis.

lamellæ (la-mel'e) (Br.). See *lamella* (2).

lamellar (lam'el-ar). Scaly, arranged in thin plates or scales; relating to lamellæ

lam'ina, pl. *lam'inæ* [L.] 1. A thin plate or flat layer. 2. The neurapophysis, or flattened portion of either side of a vertebral arch. 3. One of the folds, about 500 in number, of the horses, hoof, forming the matrix from which the horn, or crust, of the hoof is developed. 4. In botany the expanded portion of a leaf.

l. affix'a [L. *affixus*, attached, fastened] [BNA], a thin plate in the floor of the pars centralis of the lateral ventricle, adherent to the superior surface of the thalamus.

l. basa'lis [BNA], basal layer, l. vitrea, Bruch's membrane, Henle's membrane, the transparent, nearly structureless inner layer of the choroid in contact with the pigmented layer of the retina.

l. basila'ris [BNA], the basal lamina of the neural tube, a broad strip on the ventral surface.

l. choriocapilla'ris [BNA], choriocapillary layer, Ruysch's membrane, the middle layer of the chorioid, composed of a very close capillary network.

l. chorioid'ea, chorioid lamina, the epithelial wall of a cerebral ventricle.

l. chorioid'ea epithelia'lis [BNA], epithelial chorioid layer, the thin epithelial layer lining the roof of the third and also of the fourth ventricle.

l. cine'rea, l. terminalis [BNA].

l. cribro'sa [BNA], cribriform plate of the ethmoid bone; a horizontal lamina from which are suspended the lateral mass, or labyrinth, on either side and the lamina perpendicularis in the center; it fits into the ethmoidal notch of the frontal bone and supports the olfactory lobes of the cerebrum, being pierced with numerous openings for the passage of the olfactory nerves.

l. cribro'sa scle'ræ, perforated layer of the sclera, the portion of the sclera through which pass the fibers of the optic nerve.

l. denta'lis, a band of thickening of the mouth epithelium along the margin of the gum, in the embryo, from which the enamel organ is developed.

l. denta'ta, dentate plate, crista spiralis, the firmly serrated edge of the lamina spiralis ossea.

l. du'ra, the hard layer lining the dental alveoli.

l. elas'tica ante'rior [BNA], anterior elastic layer, Bowman's membrane, a thin stratum of the cornea lying immediately beneath the outer layer of stratified epithelium between it and the substantia propria.

l. elas'tica poste'rior [BNA], posterior elastic layer, Descemet's membrane, membrane of Demours, a thin structureless membrane between the substantia propria and the endothelial layer of the cornea.

l. exter'na [BNA], the outer table of the skull, the outer compact layer of the cranial bones.

l. fibrocartilagin'ea interpu'bica [BNA], discus interpubicus, the cartilaginous layer (usually ossified) at the symphysis pubis.

l. fus'ca [L. *fuscus*, brown] [BNA], brown layer, a thin layer of loose, pigmented connective tissue on the inner surface of the sclera, connecting it with the chorioid.

l. inter'na [BNA], inner table of the skull, the inner compact layer of the cranial bones.

l. latera'lis, l. media'lis, proces'sus pterygoid'ei [BNA], the external and internal pterygoid plates, two bony plates extending downward from the point of union of the body and greater wing of the sphenoid bone on either side.

lam'inæ medulla'res [BNA], (1) layers of white substance seen on section of the cerebellum; (2) layers of white substance seen on section of the thalamus, the external being between the internal capsule and the outer surface, the internal between the lateral and mesial nuclei

lam'inæ medulla'res thal'ami, the medullary layer of the thalamus, sheets of white fibers, covering the surface and separating the nuclei of the thalamus, formed by the fibers of the thalamic radiation.

l. modi'oli [BNA], plate of the modiolus, a bony plate, the continuation of the modiolus and of the septum between the convolutions of the spiral canal of the cochlea extending upward toward the cupola, forming with the hamulus the helicotrema.

l. papyra'cea [BNA], paper plate or papyrus, orbital plate of the ethmoid bone, os planum; a thin plate of bone bounding externally the ethmoidal labyrinth on either side and forming a portion of the inner wall of the orbit.

l. perpendicula'ris [BNA], perpendicular or vertical plate of the ethmoid bone; a thin plate of bone, projecting above the horizontal plate to form the crista galli and depending from it between the two lateral masses; it articulates with the crest of the sphenoid, the vomer, the cartilaginous nasal septum, the nasal spine of the frontal, and the nasal bones.

l. quadrigem'ina [BNA], quadrigeminal layer, a layer formed by the quadrigeminal bodies, resting on the stratum griseum centrale, and separating it from the surface of the mesencephalon; a crucial fissure marks off the four eminences on the surface called corpora quadrigemina.

l. reticula'ris, reticular plate, membrana reticularis.

l. rostra'lis [BNA], rostral lamina or layer, the thin terminal portion of the rostrum of the corpus callosum passing down in front of the anterior commissure to the anterior perforated substance and the subcallosa gyrus.

l. spira'lis os'sea [BNA], osseous spiral lamina, a double plate of bone winding spirally around the modiolus dividing the spiral canal of the cochlea incompletely into two, *scala tympani* and *scala vestibuli*; between the two plates of this lamina the fibers of the cochlear nerve reach the organ of Corti.

l. spira'lis secunda'ria, secondary spiral plate, a ridge on the outer wall of the first turn of the cochlea opposite the lamina spiralis.

l. suprachorioid'ea [BNA], suprachorioid layer, a layer of loose, pigmented connective tissue on the outer surface of the choroid, resembling and attached to the lamina fusca of the sclera.

l. supraneuropor'ica, the part of the membranous roof of the diencephalon covering the foramen of Monro.

l. termina'lis [BNA], terminal plate, l. cinerea, a thin plate passing upward in front of the optic chiasm and forming the anterior wall of the third ventricle.

l. tra'gi [BNA], l. of the tragus, a longitudinal curved lamina of cartilage, the beginning of the cartilaginous portion of the external auditory meatus.

l. vasculo'sa [BNA], vascular layer, the outer portion of the choroid containing the largest blood-vessels.

l. vit'rea [L. *vitreus*, glassy], Bruch's membrane, the inner layer of the chorioid, l. basalis.

lam'inar. Arranged in plates or laminæ; relating to any lamina.

laminaria (lam-i-na'ri-ah). The base of the thallus of *Laminaria cloustoni*, seagirdle, seastaff, a seaweed of the coasts of North America and of western Europe; formerly employed, when dried, as a tent for dilating the canal of the cervix uteri and sinuses.

lam'inated. Laminar.

lamina'tion. 1. An arrangement in the form of plates or laminæ. 2. Embryotomy by removing the head in slices.

la'mine. An alkaloid from *Lamium album*, the white-flowered dead-nettle, the salts of which are said to be hemostatic when taken internally or by hypodermic injection.

laminec'tomy [L. *lamina* + G. *ektomē*, excision.] Removal of one or more laminæ of the vertebræ.

laminitis (lam-in-i'(e')tis). 1. Inflammation of any lamina. 2. Founder in horses, inflammation of the laminæ of the hoof.

lamnec'tomy. Laminectomy.

Lamotte's' drops. Tinctura ferri chloridi (N.F.).

lam'pas [Fr.] A slight inflammation and swelling of the fleshy ridges on the roof of the mouth of the horse.

lamp'black. A fine soot, obtained from burning resin or oil.

Lamprocysteæ[0] (lam-pro-sis'te-e) [see below.] A tribe of the family *Rhodobacteriaceæ*, containing the genus *Lamprocystis*.

Lamprocys'tis[0] (lam-pro-sis'tis) [G. *lampros*, brilliant, + *kystis*, bladder.] A genus of the family *Rhodobacteriaceæ* consisting of water organisms of a violet color and containing sulphur granules.

Lampropedia[0] (lam-pro-pe'dĭ-ah) [G. *lampros*, bright, + *paidia*, young children.] A genus of spherical cells, grouped in tetrads of the family *Rhodobacteriaceæ*, found in stagnant water.

lamprophonia (lam-pro-fo'nĭ-ah) [G. *lampros*, clear, bright, + *phōnē*, voice.] Marked clearness or distinctness of voice.

lamprophon'ic. Clear voiced.

Lamus (la'mus). A genus of bugs of the family *Reduviidæ*, resembling *Conorhinus;* see *Triatoma*

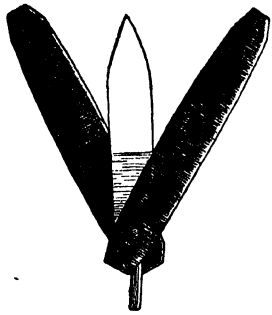
lamziekte (lahm'zēk-teh) [D. *lam*, lame, + *ziekte*, sickness.] A disease of cattle in South Africa, marked by a waddling gait, arching of the back, and paralysis of the muscles of deglutition; in chronic forms the animal loses weight; there are no characteristic postmortem appearances.

lanain (lan'ah-in). Trade name of a prepared lanolin.

lana kerol (lah'nah ke'rol). Trade name of a bactericidal preparation, said to be an oxidized diphenyl compound, used in the treatment of skin diseases.

lance [L. *lancea*, a slender spear.] 1. To incise a part, as an abscess or boil. 2. A lancet.

Lancereaux's diabe'tes (lahn-sĕ-ro') [Etienne *Lancereaux*, Parisian physician, 1829–1910.] Diabetes mellitus accompanied with extreme emaciation, often associated with pancreatic disease. **L.'s meth'od,** treatment of internal aneurysm by subcutaneous injections of gelatin. **L.'s nephri'tis,** rheumatic interstitial nephritis.



THUMB-LANCET.

lan'cet [Fr. *lancette*.] A surgical knife with a short, wide, sharp-pointed, two-edged blade. **gum l.,** a l. used for incising the gum over the crown of an erupting tooth. **spring l.,** one the blade of which is set in the handle with a spring. **thumb l.,** a l. with short flat blade which folds back, when closed, between two plates of the handle.

Lancet coefficient (lan'set ko-ĕ- sh'ent) [*Lancet*, an English medical journal which created the commission that determined the coefficient.] See under *coefficient.*

lan'cinating [L. *lancinare*, to tear.] Noting a sharp cutting or tearing pain.

Lancisi's nerves or **stri'æ** (lahn-che'ze) [Giovanni Maria *Lancisi*, Italian physician, 1654–1720.] Striæ* longitudinales lateralis et medialis.

Landau test (lahn'dow) [Leopold *Landau*, German surgeon, 1848–1920.] A color test for syphilis: into a test-tube 12 mm. in diameter, containing 0.2 c.c. of the suspected serum, there is poured 0.1 c.c. of a 1 per cent. solution of iodine in tetrachlormethane. After four hours there is added 0.2 c.c. of a solution of ammonia. If the test is positive the solution is clear and transparent. If negative the solution is milk-white.

Landerer's meth'od (lahn'der-er) [Albert Siegmund *Landerer*, German surgeon, 1854–1904.] Treatment of tuberculosis with injections of cinnamic acid.

Land'mann's tuber'culin. See under *tuberculin.*

Landolfi's caustic (lahn-dol'fe) [Nicola *Landolfi*, Neapolitan surgeon, nineteenth century.] A caustic made of equal parts of the chlorides of zinc, gold, antimony, and bromine.

Landolt's' bod'ies [Edmond *Landolt*, Parisian oculist, 1846–1926.] Small bodies of unknown nature found between the rods and cones of the retina.

Landouzy's disease' (lahn-doo-ze') [Louis *Landouzy*, Parisian physician, 1845–1917.] Weil's* disease. **L.'s type,** progressive atrophic myopathy of infancy, beginning in the muscles of the face, shoulder, and arm.

Landouzy-Déjérine type (lahn-doo-ze' da-zha-rēn'). Landouzy's type.

Landouzy-Grasset law (lahn-doo-ze' grah-sa'). In lesions of one hemisphere, the patient's head is turned to the side of the affected muscles if there is spasticity, to that of the cerebral lesion if there is paralysis.

Landry's paraly'sis (lan'dre—Fr. lahn-dre') [Jean Baptiste Octave *Landry*, French physician, 1826–1865.] Acute ascending paralysis.*

land'-scurvy. Purpura hæmorrhagica.

Landström's muscle (lahnd'stremz mus'l) [John *Landstrom*, Swedish surgeon, 1869–1910.] Miscropic muscle fibers in the fascia behind and about the eyeball, attached anteriorly to the lids and anterior orbital fascia; its action is to draw the eyeball forward and the lids backward resisting the pull of the four orbital muscles.

Landzert's fos'sa (lahn'-tsairt). A fossa formed by two peritoneal folds, enclosing the left colic artery and the inferior mesentric vein, respectively, at the side of the duodenum; it is smaller than the fossa paraduodenalis which is sometimes found in the same region.

LANDZERT'S FOSSA. (*Landouzy and Jayle.*)

Lane's kinks [Sir W. Arbuthnot *Lane*, English surgeon, contemporary.] Abrupt bends in the intestine occurring at various points, as at the junction of the duodenum and jejunum, at the hepatic and splenic flexures of the colon, and elsewhere, due apparently to the upright position

of the body. **L.'s opera'tion,** short circuiting the colon, for chronic constipation, by anastomosing the lower end of the ileum into the rectum. **L.'s plates,** flattened narrow vanadium steel bars of various shapes and sizes, perforated for screws, employed to hold the fragments of a fractured bone in apposition.

Lane-Lannelongue opera'tion (lān-lan'ĕ-long-g) [W. Arbuthnot *Lane;* Odilon *Lannelongue.*] A decompression operation consisting in removal of segments of bone from the roof of the skull.

lan'esin. Trade name of a preparation of lanolin.

Lange's solu'tion (lahng'eh) [C. *Lange,* German biochemist, contemporary.] Colloidal gold solution: to 500 c.c. hot distilled water add 5 c.c. of a 1 per cent. solution of gold chloride and 5 c.c. of a 2 per cent. solution of potassium carbonate, and then heat rapidly to the boiling point; then add 5 c.c. of a 1 per cent. dilution of formalin and shake until the solution is of a clear red color. **L.'s test,** gold sol test, to determine the presence of reducing bodies in the spinal fluid: 12 test-tubes are prepared containing from 1–10 to 1–20,000 dilution of spinal fluid in 0.4 per cent. sodium chloride solution; to each of the tubes 5 c.c. of L.'s solution is added and allowed to stand 24 hours; the gold is precipitated to a varying extent in the different dilutions, the greatest precipitation in syphilitic and parasyphilitic cases being in the 1–10 dilution.

Langenbach's incision (lahng'en-bahkhs in-sizh'un). An incision through the linea semilunaris made in order to expose the spleen or tail of the pancreas.

Langenbeck's tri'angle (lahng'en-bek) [Bernhard Rudolf Konrad von *Langenbeck,* German surgeon, 1810–1887.] A triangle formed by lines drawn from the anterior superior spine of the ilium to the outer surface of the great trochanter and to the surgical neck of the femur; a penetrating wound in this area probably involves the joint.

Lang'er's muscle [Carl Ritter von Edenberg von *Langer,* German anatomist, 1819–1887.] Tendinomuscular fibers passing from the insertion of the pectoralis major muscle across the bicipital groove to the insertion of the latissimus dorsi.

Langerhans' cells (lahng'er-hahns) [Paul *Langerhans,* German anatomist, 1847–1888.] Star-shaped cells in the deeper part of the stratum germinativum of the epidermis, possibly pigmented leucocytes. 2. Centroacinar cells, spindle-shaped cells occupying the lumina of the acini of the pancreas. **L.'s islands,** small, cellular masses lying in the interstitial tissue of the pancreas; they elaborate an internal secretion, insuline, and their destruction appears to stand in causal relation with hyperglycemia and diabetes. **L.'s lay'er,** stratum granulosum cutis.

Langhans' cells (lahng'hahns) [Theodor *Langhans,* German pathologist, 1839–1915.] 1. Giant cells in tubercle. 2. The nucleated polygonal cells forming L.'s layer. **L.'s lay'er,** a cellular membrane covering the placental villi beneath the syncytium; it disappears in the later months of pregnancy.

lanichol (lan'i-kol). Trade name of a preparation of lanolin.

lan'iol. Trade name of a preparation of lanolin.

Lannelongue's meth'od (lan-ĕ-long'g) [Odilon *Lannelongue,* Parisian surgeon, 1841–1911.] Injection of zinc chloride into the tissues in order to stimulate the growth of fibrous tissue. **L.'s tib'ia,** a tibia affected with syphilis.

lan'oform. Trade name of a 1 per cent. solution of formaldehyde in lanolin.

lan'olin [L. *lana,* wool, + *oleum,* oil.] Adeps lanæ hydrosus.

Lanta'na. A genus of plants of the order *Verbenaceæ,* several species of which have antiperiodic and tonic properties.

lantanine (lan'tah-nēn). An alkaloid from various species of *Lantana,* having antiperiodic properties similar to, but feebler than, those of quinine.

Lantermann's inci'sures (lahn'ter-mahn). Schmidt-Lantermann incisures. **L.'s seg'ments,** the divisions of the nerve-fiber between the Schmidt-Lantermann incisures.

lanthanum (lan'tha-num) [G. *lanthanō,* I escape notice.] A metallic element of leaden gray color, symbol La, atomic weight 139.

lan'thopine. An alkaloid obtained from the mother liquor of morphine, $C_{23}H_{25}NO_4$; a white, crystalline, tasteless powder.

lanuginous (lan-oo'jin-us). Covered with lanugo.

lanugo (lan-oo'go) [L. down, wooliness, from *lana,* wool.] [BNA]. The fine hair covering most of the body, except the palms and soles, and where the hair grows long, as on the head.

la'num [L. *lana,* wool.] Lanolin.

Lanz's operation (lahnts) [Otto *Lanz,* Amsterdam surgeon, *1865.] For the relief of elephantiasis of the lower extremity; incisions are made in the thigh down to the femur, the latter is trephined, and strips of the fascia lata are inserted into the opening in the bone and attached thereto. **L.'s point,** a point on a line drawn between the two anterior superior iliac spines, one-third of the distance from the right spine, indicating the location of the origin of the vermiform appendix.

lapac'tic [G. lapaktikos] Purgative, laxative.

laparectomy (lap″ar-ek'to-mĭ) [G. *lapara,* flank, + *ektomē,* excision.] Excision of strips or gores in the abdominal wall and suture of the edges of the wound, in cases of abnormal laxity of the abdominal muscles.

laparo- [G. *lapara,* flank, loins.] A prefix denoting the loins or, less properly, the abdomen in general.

laparocholecystotomy (lap″ar-o-ko-le-sis-tot'o-mĭ). Cholecystotomy.

lap″arocolos'tomy [G *lapara,* loins, + *kōlon,* colon, + *stoma,* mouth.] Formation of an artificial anus, by opening into the colon from the side.

laparocolot'omy. Colotomy

lap″arocolpot'omy [G *lapara,* loins, + *kolpos,* sinus (vagina), + *tomē,* incision.] Celioelytrotomy.

laparocystectomy (lap″ar-o-sis-tek'to-mi) [G. *lapara,* loins, + *kystis,* cyst, + *ektome,* excision.] Removal of an ovarian or other cystic tumor through an incision in the abdominal wall.

laparocystidotomy (lap-ăr-o-sis-tĭ-dot'o-mĭ). Laparocystotomy.

laparocystotomy (lap″ar-o-sis-tot'o-mĭ) [G. *lapara,* loins, + *kystis,* cyst, + *tomē,* incision.] 1. Evacuation of the contents of an ovarian or other cystic tumor through an incision in the abdominal wall. 2. Suprapubic* cystotomy.

laparoelytrotomy (lap″ar-o-el-i-trot'o-mĭ) [G. *lapara,* loins, + *elytron,* sheath (vagina), + *tomē,* incision.] Celioelytrotomy.

laparoenterostomy (lap″ar-o-en-ter-os'to-mĭ) [G. *lapara,* flank, + *enteron,* intestine, + *stoma,* mouth.] Formation of an artificial anus in the loin.

laparoenterotomy (lap″ar-o-en-ter-ot'o-mĭ) [G. *lapara,* flank, + *enteron,* intestine, + *tome,* incision.] Opening into the intestine through an incision in the loin, or through the abdominal wall in any locality; celioenterotomy is the correct term for the latter operation.

lap″arogastros'tomy [G. *lapara,* flank, + *gastĕr,* stomach, + *stoma,* mouth.] Celiogastrostomy.

lap"arogastrot'omy [G. *lapara*, loins, + *gastĕr*, stomach, + *tomē*, incision.] · Celiogastrotomy.

lap"arohepatot'omy [G. *lapara*, flank, + *hēpar* (*hēpat-*), liver, + *tomē*, incision.] Incision into the liver from the side.

laparohysterec'tomy. Celiohysterectomy.

laparohystero-oophorectomy (lap"ar-o-his"ter-o-o-o-for-ek'to-mĭ) [G. *lapara*, loins, + *hystera*, uterus, + *ōon*, ovum, + *phoros*, bearer, + *ektomē*, excision.] Removal of the uterus and ovaries through an incision in the abdominal wall; more properly, celiohystero-oothecectomy.

lap"arohys'teropexy [G. *lapara*, loins, + *hystera*, uterus, + *pēxis*, fixation.] Celiohysteropexy, hysteropexy.*

lap"arohys"terosal"pingo-o"ophorec'tomy. Removal of uterus and adnexa through an abdominal incision; more properly, celiohysterosalpingo-oothecectomy.

laparohysterot'omy. Celiohysterotomy.

laparomonodid'ymus [G. *lapara*, loins, + *monos*, single, + *didymos*, twin.] A monster, double above but single from the pelvis down.

laparomyositis (lap"ar-o-mi-o-si'(se')tis) [G. *lapara*, flank, + *mys(myo-)*, muscle, + *-itis*.] Inflammation of the lateral abdominal muscles.

laparomyomec'tomy. Celiomyectomy.

laparomyomot'omy. Celiomyomotomy.

laparonephrec'tomy [G. *lapara*, flank, + *nephros*, kidney, + *ektomē*, excision.] Removal of the kidney through an incision in the loin.

laparor'rhaphy. Celiorrhaphy.

lap"arosalpingec'tomy. Celiosalpingectomy.

laparosalpingo-oophorectomy (lap"ar-o-sal"pin-go-o-o-for-ek'to-mĭ). Celiosalpingo-oothecectomy.

lap"arosalpingot'omy. Celiosalpingotomy.

laparos'copy. Celioscopy.

laparosplenectomy (lap"ar-o-sple-nek'to-mĭ) [G. *lapara*, flank, + *splēn*, spleen, + *ektomē*, excision.] Removal of the spleen through an incision in the abdominal wall.

lap"arosplenot'omy [G. *lapara*, flank, + *splēn*, spleen, + *tomē*, incision.] Incision through the abdominal wall into the spleen.

laparot'omize. To subject to laparotomy

laparotomy (lă-par-ot'o-mĭ) [G. *lapara*, flank, + *tome*, *incision*] 1. Incision into the loin. 2. Incision through any part of the abdominal wall, celiotomy, abdominal section.

laparotyphlotomy (lap"ar-o-ti-flot'o-mĭ). Typhlotomy through a lateral abdominal incision.

laparouterotomy (lap"ar-o-u"ter-ot'o-mĭ) [G. *lapara*, flank, + L. *uterus* + G. *tomē*, incision] Celiohysterotomy.

la'pis [L.] A stone. **l. calamina'ris præpara'ta,** calamina præparata, formerly in the B.P., native zinc carbonate. **l. caus'ticus chirurgo'rum,** caustic potassa, potassii hydroxidum. **l. divi'nus,** aluminated copper, cuprum aluminatum **l. imperia'lis,** l. infernalis. **l. inferna'lis,** lunar caustic, argenti nitras. **l. luna'ris,** l infernalis. **l. ophthal'micus,** l. divinus.

lappa (lap'pah) [L. a burr.] (N F) Burdock, beggars' buttons, the dried root of *Arctium lappa*, an herb of the north temperate zone; employed as an alterative and diuretic, given in decoction or in the official (U.S.P.) fluidextractum.*

lapse [L. *lapsare*, to fall, slip.] 1. To cease payment of the premium on a policy and therefore to forfeit the policy. 2. To be cancelled in consequence of the non-payment of premiums said of a policy of insurance.

laqueus (lak'we-us) [L. noose.] A band, cord, or fillet. **l. cer'ebri, l. pedun'culi,** lemniscus. **l. umbilica'lis,** umbilical cord

Larat's meth'od (lă-rā') [Jules-Louis-François-Adrien *Larat*, French physician, *1857.] Faradic treatment of diphtheritic paralysis of the palate by means of an electrode in a basin of water in which the child immerses its hands, the other electrode being applied to the nape of the neck.

lar'bish. Œrbiss, a form of creeping eruption observed in Senegal, apparently not due to the presence of a dipterous larva.

larch. Larix.

lard [L. *lardum*.] Adeps.

lardacein (lar-da'se-in). An albuminoid substance (protein), allied to keratin and elastin, said by Kekulé to be the material of waxy or amyloid degeneration.

larda'ceous. Resembling lard or bacon. **l. disease, l. degenera'tion,** amyloid degeneration.*

Lardennois' meth'od (lar-den-wah') [Henri *Lardennois*, French surgeon, *1872.] The establishment of an anastomosis between any part of the intestine, especially the colon, and the rectum by means of a button similar to Murphy's* button.

lar'gin. A trade name for a combination of silver and paranucleo-protein, silver albuminate or protalbinate; a gray powder, soluble in 9 parts of water and containing 11 parts of metallic silver; said to be relatively non-irritating and of high penetrating power.

lar'icis cor'tex. Bark of the larch, larix.

la'rix. The bark of the European larch, *Larix europœa;* astringent and hemostatic, employed in bronchitis, hemoptysis, and chronic cystitis in doses of ʒ½–1 (2.0–4.0) of a tincture, or gr. 3–5 (0.2–0.3) of an extract.

lark'spur. Delphinium.

larosan (lah-ro'zahn). A compound of casein and calcium oxide employed in cases of digestive and nutritional disturbances in children.

Laroyenne's opera'tion (lăr-wă-yen') [Lucien *Laroyenne*, French surgeon, *1876.] Puncture of Douglas's cul-de-sac to evacuate the pus and to secure drainage in cases of pelvic suppuration.

Larrey's cleft (lă-ra') [Jean Dominique *Larrey*, surgeon in chief of Napoleon's army, 1766–1842.] Trigonum sternocostale. **L.'s liga'tion,** ligation of the femoral artery immediately below Poupart's ligament.

Larrey-Weil disease (lă-ra-vīl' diz-ēz'). Weil's disease, spirochetosis icterohemorrhagica.

lar'va [L. a mask.] 1. The worm-like form of an insect on issuing from the egg, a grub, maggot, or caterpillar. 2. The young of any animal differing in form from its parent. **l. mi'grans,** creeping eruption, a progressing circumscribed line of dermatitis caused by the burrowing in the skin of the minute larva of a species of *Gastrophilus* or bot-fly

larva'ceous, lar'val. Larvate.

lar'vate, lar'vated [L. *larva*, mask.] Masked or concealed, noting a disease with absent or atypical symptoms.

lar'vicide [L. *larva* + *cædere*, to kill.] 1. Destructive to larvæ—grubs, caterpillars, etc. 2. An agent that kills larvæ.

lar'vin. Proprietary name of an extract of blow-fly maggots suggested as an application to infected wounds, osteomyelitis, etc., in place of the live maggots.

laryn'geal. Relating in any way to the larynx.

laryngec'tomy [G. *larynx* + *ektomē*, excision] Excision of the larynx

laryngismus (lar-in-jiz'mus). A spasmodic narrowing or closure of the rima glottidis. **l. paralyt'icus,** "roaring" in horses, due to paralysis of the recurrent laryngeal nerve. **l. strid'ulus** [L. *stridulus,* noisy], crowing convulsions, Kopp's asthma, Millar's asthma, Weichmann's asthma; a spasmodic closure of the glottis, lasting a few seconds, followed by a noisy inspiration; cf. *laryngitis stridulosa.*

laryngit'ic. Relating to or caused by laryngitis.

laryngitis (lar-in-ji'(je')tis) [G. *larynx* + *-itis.*] Inflammation of the mucous membrane of the larynx. **atroph'ic l.,** l. sicca. **l. sic'ca,** Tuerck's trachoma, chronic l. leading to atrophy of the glands of the mucous membrane and diminished secretion. **l. stridulo'sa,** false croup, spasmodic l., catarrhal inflammation of the larynx in children, accompanied by night attacks of spasmodic closure of the glottis, causing inspiratory stridor. **mem'branous l.,** a form in which there is a pseudomembranous exudate on the vocal cords. **relap'sing ul'cerative l.,** a form of superficial syphilitic ulceration of the vocal cords. **subglott'ic l.,** chorditis vocalis inferior, inflammation of the under surface of the vocal cords and adjacent parts.

laryngocele (lar-ing'go-sēl) [G. *larynx* + *kēlē,* hernia] 1. Dilatation of the larynx. 2. Prolapse of a portion of the mucous membrane of the larynx.

laryn"gocente'sis [G. *larynx(laryng-)* + *kentēsis,* puncture.] Puncture or short incision into the larynx for the removal of a small tumor.

laryngofission (lar-ing"go-fish'un). Laryngofissure.

laryngofissure (lar-ing"go-fish'ur). Laryngofission, laryngotomy; an incision into the middle line of the larynx through the thyroid cartilage.

laryn'gograph [G. *larynx(laryng-)* + *graphō,* I record.] An instrument for making a tracing of the movements of the larynx

laryngol'ogy [G. *larynx(laryng-)* + *-logia.*] The branch of medical science which has to do with the larynx; the specialty of diseases of the larynx.

laryn"goparal'ysis. Paralysis of the laryngeal muscles

laryngop'athy [G. *larynx(laryng-)* + *pathos* suffering.] Any disease of the larynx

laryn"gophan'tom [G *phantasma,* image.] A model of the larynx for use in the study of the anatomy or for practice in laryngoscopy.

laryn"gopharyn'geal. Relating to both larynx and pharynx (noting the musculus laryngopharyngeus) or to the laryngopharynx.

laryn"gopharynge'us. See under *musculus.*

laryn"gophar'ynx. The lower portion of the pharynx, extending from the vestibule of the larynx to the esophagus at the lower border of the cricoid cartilage

laryngoph'ony [G. *phōnē,* voice.] The voice sounds heard in ausculation of the larynx.

laryngophthisis (lar-ing"go-ti'(te')sis). Tuberculosis of the larynx.

laryn'goplasty [G. *plassō,* I form.] Reparative or plastic surgery of the larynx.

laryngoplegia (lă-ring"go-ple'jĭ-ah) [G. *plēgē,* stroke.] Laryngoparalysis, paralysis of the larynx.

laryn"gorhinol'ogy [G. *larynx(laryng-)* + *rhis (rhin),* nose, + *-logia.*] The branch of medical science which has to do with affections of the larynx and of the nose.

laryn"gorrhe'a, laryn"gorrhœ'a [G. *rhoia,* a flow.] Blennorrhea, or excessive mucous discharge, from the larynx.

laryn'gosclero'ma. The occurrence of an indurated patch, or scleroma, of the larynx.

laryn'goscope [G. *larynx(laryng-)* + *skopeō,* I inspect.] A small round mirror, attached at an angle to a rod-like handle, used to obtain a view of the interior of the larynx.

laryn"goscop'ic. Relating to laryngoscopy.

laryngos'copist. A person skilled in the use of the laryngoscope.

laryngos'copy. Inspection of the larynx by means of the laryngoscope.

laryn'gospasm. Spasm of the muscles of the larynx.

laryngos'tasis [G. *larynx* + *stasis,* a stoppage] Croup; laryngeal asthma.

laryngostenosis (lar-ing"go-stĕ-no'sis) [G. *stenōsis,* a narrowing] Stricture or narrowing of the lumen of the larynx.

laryngos'tomy [G. *larynx(laryng-)* + *stoma,* mouth.] The establishment of a permanent opening from the neck into the larynx.

laryngotome (lar-ing'go-tōm). An instrument for use in laryngotomy or for dividing strictures or bands in the larynx. **dila'ting l.,** an instrument with almond-shaped extremity, in which is concealed a knife, used for the intralaryngeal division of strictures and cicatricial bands

laryngot'omy [G. *tomē,* incision] An incision into the larynx, usually below the vocal cords, to give relief in dyspnea or for the removal of a new growth. **infe'rior l.,** incision through the cricothyroid membrane **me'dian l.,** laryngofissure. **supe'rior l.,** incision through the thyrohyoid membrane.

laryngotracheal (lar-ing'go-tra'ke-al). Relating to both larynx and trachea.

laryngotracheitis (lar-ing"go-tra-ke-i'(e')tis). Inflammation of both larynx and trachea.

laryngotracheotomy (lar-ing"go-tra-ke-ot'o-mĭ) [G. *tomē,* incision] An incision through the cricoid cartilage and the upper tracheal rings.

laryngoxerosis (lar-ing"go-ze-ro'sis) [G. *xērōsis,* a drying up] An abnormal dryness of the laryngeal mucous membrane.

lar'ynx [G.] The organ of voice production; the upper part of the respiratory tract between the pharynx and the trachea it lies in front of the bodies of the fourth to sixth cervical vertebræ, its walls are formed by nine cartilages connected by fibrous membranes, and the vocal cords, enveloped in folds of mucous membrane attached to the sides, pass in an anteroposterior direction across its lumen. The cartilages are nine in number, three single—thyroid, cricoid, and epiglottis, and three paired—arytenoid, cornicula laryngis; and cuneiform.

disease, laryngopathy. **dryness,** laryngoxerosis, ozena laryngis **examination,** laryngoscopy. **excessive secretion,** laryngorrhea. **excision,** laryngectomy, glottidectomy **fistula,** laryngosyrinx. **hemorrhage,** laryngorrhagia. **incision,** laryngocentesis, laryngotomy, laryngofission, thyrotomy. **inflammation,** laryngitis glottiditis, glottitis, ozena laryngis, laryngocatarrh, laryngocace, croup. **measurement,** laryngometry. **obstruction,** laryngemphraxis, laryngostenosis **pain,** laryngalgia, laryngodynia. **paralysis,** laryngoparalysis laryngoplegia **plastic surgery,** laryngoplasty. **spasm,** laryngismus, laryngospasm, glottidospasmus. **specialty of diseases,** laryngology. **tuberculosis,** laryngophthisis.

lasciv'ia [L. *lascivire,* to be wanton.] Satyriasis, nymphomania.

Lasègue's disease' (lă-seg') [Ernest Charles *Lasègue,* Parisian physician, 1816–1883.] Mania of persecution. **L.'s sign,** extreme sensitiveness to stretching of the nerve-trunk in cases of peripheral neuritis. **L.'s syn'drome,** inability to move the

anesthetic limb, except under control of the sight, in hysteria.

lash. 1. An eyelash. 2. A flagellum.

Lass'ar's paste [Oskar *Lassar*, Berlin dermatologist, 1849–1907.] 1. Pasta betanaphtholis (N.F.). 2. Pasta resorcinolis fortis (N.F.). 3. Pasta resorcinolis mitis (N.F.). 4. Pasta zinci (N.F.).

lassitude (las'ĭ-tūd) [L. *lassitudo; lassus;* weary.] A sense of weariness.

latah (lah'tah) [Malay, ticklish.] A nervous affection of the natives of the Malay Peninsula and Archipelago, characterized by an exaggerated physical response to suggestion, the subjects involuntarily uttering cries or executing movements in response to command or in imitation of what they hear or see in others. It is analogous to myriachit and to the affection from which the "jumpers" of Maine suffer.

la'tent [L. *latere*, to be concealed.] Not manifest; concealed; noting the period of incubation of an infectious disease before the appearance of the prodromal symptoms. **l. zone,** see *zone*.

lat'erad [L. *latus*, side, + *ad*, to.] Toward the side.

lat'eral [L. *latus*, side.] On the side; on the outer side, as distinguished from *medial;* [BNA], external; [NK], farther from the median or midsagittal plane. **l. chain,** side chain.*

latericeous, lateritious (lă-ter-ish'us) [L. *later*, brick.] Resembling brick dust.

lateriflec'tion, lateriflex'ion. Lateroflection.

lateroabdominal (lat"er-o-ab-dom'ĭ-nal). Relating to the sides of the abdomen, to the loins or flanks.

laterodevia'tion [L. *latus(later-)*, side, + *deviare*, to turn aside.] A bending or a displacement to one side.

lateroduc'tion [L. *latus(later-)*, side, + *ducere*, to lead.] A drawing to one side, noting a movement of a limb or of the eyeball.

lateroflec'tion, lateroflex'ion [L. *latus(later-)*, side, + *flectere*, to bend.] A bending or curvature to one side.

lateropul'sion [L. *latus(later-)*, side, + *pulsio*, a pushing.] An involuntary sidewise movement occurring in certain nervous affections.

lat"erotor'sion [L. *latus(later-)*, side, + *torquere*, to twist.] Twisting to one side, noting the turning of the eyeball around its anteroposterior axis.

lateroversion (lat"er-o-vur'shun) [L. *latus(later-)*, side, + *vertere*, to turn.] Turning to one side or the other, noting especially a malposition of the uterus.

La'tham's cir'cle [Peter Mere *Latham*, English physician, 1789–1875.] A circle 2 inches in diameter around a point midway between the left nipple and the lower end of the sternum, corresponding to the area of pericardial dulness.

lathyrism (lath'ĭ-rizm) [G. *lathyros*, vetch.] Lupinosis; formerly thought to be a poisoning by flour adulterated with chick-pea (*Lathyrus sativus* or *L. cicera*), but now regarded as possibly a deficiency* disease. The symptoms are nervous in character, tremors, spastic paraplegia, and paresthesias of various forms.

latis'simus [L. superlative of *latus*, broad.] Broadest, a term applied to certain broad flat muscles. **l. col'li,** musculus platysma. **l. dor'si,** see under *musculus*.

Lat'ta's se'rum. An inorganic serum, composed of sodium carbonate 1, sodium chloride 2, water 2.

la'tus, gen. *lat'eris*, pl. *lat'era* [L.] The side, the flank; a side.

la'tus, f. *la'ta*, n. *la'tum* [L.] Broad.

laudable (law'da-bl) [L. *laudabilis*, praisworthy.] A term formerly applied to thick creamy pus (*pus bonum et laudabile*), which was thought to imply a healthy condition of the wound.

lau'danine. An alkaloid derived from the mother liquor of morphine, $C_{20}H_{25}NO_4$; it causes tetanoid convulsions, acting like strychnine.

laudanosine (law'dan-o-sēn). An alkaloid obtained from the mother liquor of morphine, $C_{21}H_{27}NO_4$; it causes tetanic convulsions.

laudanum (law'dan-um) [G. *lēdanon*, a resinous gum.] Tinctura opii. **Syd'enham's l.,** vinum opii.

laughing-gas (lahf'ing-gas). Nitrous-oxide gas.

laughing sickness (lahf'ing sik'nes). Pseudobulbar paralysis, in which a common symptom is spasmodic mirthless laughter.

Laugier's her'nia (lo-zhe-a') [Stanislas *Laugier*, Parisian surgeon, 1799–1872.] A hernia passing through an opening in Gimbernat's ligament. **L.'s sign,** in fracture of the lower portion of the radius, the styloid processes of the radius and of the ulna are on the same level.

Laumonier's gan'glion (lo-mŭ-ne-a') [Jean Baptiste *Laumonier*, French surgeon, 1749–1818.] Ganglion caroticum.

Laurence-Biedl syn'drome (law'rens-be'dl) [J. Z. *Laurence*, British ophthalmologist; A. Biedl, German physician; contemporaries.] The familial form of Froelich's dystrophy (without hypophyseal disorder) associated with other hereditary and congenital defects, such as atrophy of the optic nerve, retinitis pigmentosa, polydactylism, and mental defects. Also called Laurence-Moon-Biedl syndrome.

Laurer's canal (low'rurz kă-nal'). A minute canal passing from the ovarian duct to the dorsal surface in Trematoda. **L.'s nu'cleus,** Deiters'* nucleus.

laurel (law'rel). Laurus. **cherry l.,** laurocerasus.

laurocer'asi fo'lia (Br.). Cherry laurel leaves, the leaves of *Prunus laurocerasus*, containing hydrocyanic acid; employed as a bronchial and nerve sedative in the official (B.P.), aqua laurocerasi.

laurocerasus (law-ro-ser'a-sus) [L. *laurus*, laurel, + *cerasus*, cherry.] Cherry laurel.

laurotet'anine. An alkaloid from *Tethrantus citrata*, an occasional adulterant of cubeb.

lau'rus. Laurel, bay, sweet bay, the leaves and the fruit of *Laurus nobilis;* not used in medicine.

Lauth's canal' (lowt) [Ernst Alexander *Lauth*, Strassbourg physiologist, 1803–1837.] Canal of Schlemm or of Fontana, sinus* venosus scleræ. **L.'s lig'ament,** ligamentum transversum atlantis.

Lauth's vi'olet (lawth) [Charles *Lauth*, English chemist, 1836–1913.] Thionin, a green histological stain.

Lautier test (lo-tya') [*Lautier*, French physician, contemporary.] Two or three drops of a 1 per cent. solution of old tuberculin are placed on the skin of the arm, covered with a pledget of cotton and a guttapercha shield for forty-eight hours; a positive reaction indicating tuberculosis is shown by the appearance of vesicles containing a colorless fluid set on raised reddened papules.

lavage (lă-vazh') [Fr. from L. *lavare*, to wash.] The washing out of a hollow organ, as the stomach or lower bowel, by copious injections and rejections of water. **l. of the blood, system'ic l.,** intravenous injection of physiological salt solution with induced diaphoresis and diuresis.

lavan'dula. Lavender, the dried flowers of *Lavandula angustifolia*, a shrub of southern Europe; employed as a perfume, and sometimes as a poultice for the relief of colic and neuralgia.

lavatio ori (lă-vah'tĭ-o o'ri) (N.F.). Mouth wash, a collutorium composed of granulated soap 60, gluside 2, basic fuchsin 0.02, oil of cinnamon 5, oil of peppermint 5, oil of clove 10, alcohol 750, water to make 1000 c.c.

Lavdov'sky's nu'cleoid. Attraction sphere.

lav'ender. Lavandula.

la'ver. A seaweed of the genus *Porphyra*, used occasionally as food, and popularly in the treatment of scrofulous manifestations.

Lavera'nia danilev'sky [Charles *Laveran*, French physician, 1845–1922.] Hemoproteus. L. **mala'riæ**, *Plasmodium falciparum*.

Laveran's stain (lav-er-an'). 1. For gram-negative bacteria; After immersion in 0.5 per cent. aqueous solution of eosin for one minute, the film is exposed for thirty seconds to a saturated aqueous solution of methylene-blue. 2. For hematozoa; Borrel's blue 1, one per cent. solution of eosin 5, distilled water 4.

law [A.S. *lagu.*] A principle or rule; a formula expressing a fact or number of facts common to a group of processes or actions. **all-or-none l.,** the heart muscle when stimulated contracts to the maximal degree or not at all. **Aran's l.,** etc., see the proper names. **biogenet'ic l.,** l. of recapitulation. **l. of av'alanche,** the multiplication of sensations in the brain resulting from a single simple sensation at the periphery; a theoretical law assumed by Ramon y Cajal to account for the many aches and pains of the neurotic or hypochondriac. **l. of av'erage localization,** visceral pain is most accurately localized in the least mobile viscera, and conversely. **l. of def'inite propor'tions,** the relative weights of the several elements forming a chemical compound are invariable. **l. of mul'tiple propor'tions,** when more than one compound is formed by the chemical union of two elements, the weight of one of the elements remains constant while that of the other element varies in the different compounds as a simple multiple of the amount in the lowest of the series. **l. of mul'tiple va'riants,** where there is any deviation from the normal in the bones of the hand or foot, the variation is always multiple, involving more than one bone. **l. of recapitula'tion,** biogenetic law; in embryology, the ontogeny recapitulates the phylogeny, or in the development of the individual there is a recapitulation of the various stages of development of the race. **l. of recip'rocal propor'tions,** the relative weights in which two substances form a chemical union singly with a third are the same as, or simple multiples of, those in which they unite with each other. **l. of refrac'tion,** rays of light passing from a denser into a rarer medium are reflected away from a perpendicular to the surface, those passing from a rarer into a denser medium are reflected toward the perpendicular. **l. of segrega'tion,** the Mendelian theory of inheritance according to which in each generation the ratio of pure dominants, dominants producing descendants in the proportion of three dominants to one recessive, and pure recessives is as 1:2:1. **l. of sim'ilars,** see *similia similibus curantur.* **l. of the heart,** all or none l. **l. of the intestine,** stimulation of any part of the intestine leads to contraction above and relaxation below; *i.e.* under normal conditions, the myenteric reflex* is active.

lawn-tenn'is arm. A dislocation of the pronator teres muscle caused by certain sudden movements of the arm made in tennis.

lax'ans. Trade name of a preparation of phenolphthalein.

lax'aphen. Trade name of a preparation of phenolphthalein flavored with chocolate.

lax'atin. Trade name of a preparation of phenolphthalein.

laxative (laks'a-tiv) [L. *laxativus; laxare*, to loosen.] 1. Having the action of loosening the bowels, aperient, mildly cathartic. 2 A mild cathartic, a remedy that moves the bowels slightly without pain or violent action.

lax'atol. Trade name of a preparation of phenolphthalein.

laxa'tor tym'pani. One of two supposed muscles, probably ligamentous, attached to the malleus, the *l. t. major* to the neck, the *l. t. minor* to the handle.

laxicon'fect. Trade name of a preparation of phenolphthalein.

lax'ol. Trade name of a palatable preparation of castor-oil.

lax'ophen. Laxaphen.

layer (la'er). Stratum,* a sheet of some substance lying upon another, distinguished therefrom by a difference in texture or color or simply not continuous with it. **ambig'uous l.,** the layer next below the outer layer of the cerebral cortex. **animal-germ l.,** epiblast. **bac'illar l.,** the layer of rods and cones of the retina. **basement l.,** membrana propria. **blastoder'mic l.,** one of the germ layers: epiblast, mesoblast, or hypoblast. **central gray l.,** stratum griseum centrale. **claustral l.,** the layer of gray matter between the external capsule and the insula. **colum'nar l.,** bacillar l., mantle l. **cor'neal l.,** stratum corneum [BNA]. **dentate l.,** stratum dentatum. **dermal l.,** epiblast. **fillet l.,** stratum lemnisci. **ganglion'ic l.,** (1), a layer of large cells in the cerebral cortex; (2) stratum ganglionare. **germ l.,** blastodermic l. **ger'minative l.,** Malpighian l., stratum* germinativum [BNA]. **gran'ular l.,** stratum granulosum. **horny l.,** stratum corneum. **latticed l.,** a cortical-cell layer in the hippocampus. **mantle l.,** the nuclear zone of the myelospongium. **molec'ular l.,** stratum moleculare. **mucous l.,** stratum mucosum. **neuroder'mal l.,** epiblast. **nu'clear l.,** stratum nucleare. **optic l.,** stratum opticum **osteogenet'ic l.,** the inner bone-forming layer of the periosteum. **pap'illary l.,** corpus papillare [BNA]. **plasma l.,** still l. **plex'iform l.,** stratum moleculare. **prickle-cell l.,** stratum spinosum, stratum* germinativum [BNA]. **prim'itive l.,** the embryonic epiblast and hypoblast. **retic'ular l.,** the deeper layer of the corium, tunica* propria [BNA]. **sluggish l.,** still l. **still l.,** the layer of the blood stream, in the capillary vessels, next to the wall of the vessel; here the current is slow and the white blood-cells are seen rolling lazily along the side of the tube, the center of the stream running rapidly and carrying with it the red blood-cells. **subpap'illary l.,** the vascular layer of the corium. **superpap'illary l.,** stratum mucosum. **troph'ic l.,** hypoblast. **veg'etative l.,** hypoblast. **zon'ular l.,** stratum zonale.

lay'ering. An arrangement of layers.

layman (la'man) [G. *laikos*, belonging to the people, + *man.*] One of the laity, a non-professional man in reference to the profession of theology, law, or medicine, as the case may be.

lazaretto (laz-ă-ret'o) [It. *lazzaretto; lazzaro*, a leper]. 1. A leper hospital. 2. A hospital for the treatment of contagious diseases, a pest-house. 3. A place of detention for persons in quarantine.

lb. An abbreviation for pound, Latin *libra*.

L.D. Abbreviation for light difference, *i.e.* the difference in the perception of light between the two eyes.

L.D.A. Abbreviation for left dorsoanterior, noting the position of the fetus in utero with its back toward the left side of the anterior abdominal wall of the mother.

L.D.P. Abbreviation for left dorsoposterior, noting the position of the fetus with its back toward the left side of the back of the mother.

L.E. Abbreviation for left eye.

leaching (le'ching) [A.S. *leccan*, to wet.] Lixiviation.

lead (led) [A.S. *leád*.] A metallic element, symbol Pb, atomic weight 207. 1; see *plumbum*. **l. cure**, plumbotherapy, Bell's method. **l. pois'oning**, acute or chronic intoxication by lead or any of its salts. The symptoms of *acute* poisoning are usually those of acute gastroenteritis. *Chronic* poisoning is manifested chiefly by anemia, constipation, abdominal pain, paralysis, especially of the extensor muscles of the forearm, arteriosclerosis, and convulsions or delirium. **red l.**, plumbi oxidum rubrum. **su'gar of l.**, plumbi acetas. **white l.**, plumbi carbonas.

lead (lēd). One of the records, usually three in number, taken by means of the electrocardiograph; in lead I the current is from the right arm and left arm; in lead II, from the right arm and left leg; in lead III, from the left arm and left leg.

leaf (lēf) [A.S. *leáf*.] A plant organ, commonly a flat expansion of a vascular bundle enclosed in a parenchyma containing chlorophyll. **connate' l.**, one of two sessile leaves, the lobes of which are united around the stem. **sim'ple l.**, one having a single undivided blade. **com'pound l.**, a leaf the blade of which is divided into leaflets by divisions extending down to the mid-rib.

leaf'let. One of the separate portions of a compound leaf.

leap'ing-ill. Louping-ill, thorter-ill a disease of sheep in which they leap up and down as they walk; it is caused by the presence of a parasite, *Cœnurus cerebralis* in the spinal cord.

le'ben. A soured and curdled milk food used in Egypt.

Leber's disease' (la'ber) [Theodor *Leber*, German ophthalmologist, 1840–1917.] Hereditary atrophy of the optic nerve. **L.'s plex'us**, a small venous plexus in the eye between the canal of Schlemm and the spaces of Fontana.

Lecat's' gulf [Claude Nicolas *Lecat*, French surgeon, 1700–1768.] The bulbous urethra.

lech'erous. Given to promiscuous sexual indulgence, lewd, sensual.

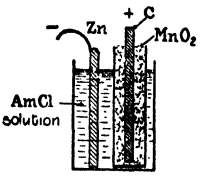
lech'ery [Fr. *lecherie; lecher*, to lick.] Sensuality, lewdness.

lecithin (les'i-thin) [G. *lekythos*, yolk of egg.] One of a number of complex bodies, compounds of choline with glycerophosphoric acid and fatty acids, found in nervous tissue, blood, milk, yolk of egg, and other animal structures, as well as in vegetable organisms; vegetable lecithin is said to contain betaine instead of choline. Lecithin, as used in medicine, is prepared from the yolk of egg by abstracting with alcohol; it occurs as a brownish yellow substance of waxy consistency, insoluble in water, but soluble in absolute alcohol and fatty oils. Employed in cases of faulty nutrition in doses of gr. ½–2 (0.03–0.13).

lecithinose (les'i-thin-ōz). Trade name of a preparation of lecithin made from yolk of eggs.

lecithoprotein (les"i-tho-pro'te-in). A conjugated protein, compounded of protein and a lecithin.

Leclanché cell (lē-klahn-sha') [Georges *Leclanché*, French chemist, 1839–1882.] A galvanic cell, consisting of a carbon plate in a porous cylinder filled with a mixture of manganese dioxide and carbon, and a zinc plate in sal ammoniac solution.



LECLANCHÉ CELL.

lectulum (lek'tu-lum) [L. dim. of *lectus*, bed.] Matrix unguis.

Led'erer's ane'mia [Max *Lederer*, American pathologist,* 1885.] Acute hemolytic anemia.*

Leduc cur'rent (le-duk') [Stéphane Armand Nicolas *Leduc*, French physicist of Nantes, contemporary.] A direct electric current, interrupted a given number of times by means of the *L. interrupter* (110 times a second as an average), the time of passage of the current being to that of interruption as 1 to 9, the current thus flowing but $\frac{1}{10}$ of the entire time; used in the production of electric anesthesia or electric sleep.

Lee's gan'glion [Robert *Lee*, English physician, 1793–1877.] Cervical ganglion; found in the uterovaginal plexus derived from the third and fourth sacral nerves and the hypogastric and ovarian sympathetic plexuses.

leech [A.S. *læce*, a physician; a leech, because of its therapeutic use.] 1. A physician (obsolete or poetical). 2 Hirudo,* a blood-sucking aquatic anelid of the order *Hirudinea*, employed in medicine for the local abstraction of blood. 3. To treat medically. 4. To apply leeches. **Amer'ican l.**, *Hirudo decora*. **Austra'lian l.**, *Hirudo australis*. **Five-striped l.**, *Hirudo quinquestriata*. **Ger'man l.**, *Hirudo medicinalis*. **green l.**, *Hirudo provincialis*. **Hunga'rian l.**, *Hirudo provincialis* **speck'led l.**, *Hirudo medicinalis*. **Swe'dish l.**, *Hirudo medicinalis*.

leech'ery. Medical science or practice.

leech-fing'er. The ring finger.

Le Fort's amputa'tion (le-for') [Léon Clément *Le Fort*, Parisian surgeon, 1829–1893.] A modification of Pirogoff's amputation; the calcaneus is sawn through horizontally instead of vertically, so that the patient steps on the same part of the heel as before.

lefthand'ed. Noting a person who uses the left hand for writing and other operations for which the right hand is commonly employed.

lefthand'edness. The state of being lefthanded, mancinism.

leg. The lower extremity; specifically the segment of the lower extremity between the knee and the ankle. **Barba'dos l.**, elephantiasis of the leg. **bandy l.**, bowleg, genu varum. **bayonet' l.**, incomplete backward dislocation of the bones of the leg with ankylosis of the knee. **black l.**, symptomatic anthrax. **boom'erang l.**, platycnemia with sharp and curved anterior edge of the tibia. **milk l.**, phlegmasia alba dolens. **scissor-legs**, extreme adduction of both femurs, following hip-disease, the two legs crossing each other as the person walks. **x-legs**, scissor-legs.

absence, amelia. **curvature,** scelocambosis, cnemoscoliosis, cnemolordosis, rheboscelia, bowlegs, genu varum. **fusion of the two,** ankylomele. **gout,** scelagra, melagra. **having but one,** monos.elous. **having more than two,**

polyscelous. **inequality in length,** anisomelia. **inflammation,** cnemitis, bucnemia, phlegmasia alba dolens. **large size,** macroscelia, elephantiasis, megalomelia. **pain,** scelalgia, melosalgia. **small size,** micromelia. **spastic paralysis,** scelotyrbe. **tumor,** sceloncus.

Legal's disease' (la'gahl) [Emmo *Legal*, German physician, 1859–1922.] Cephalalgia pharyngotympanica. **L.'s test,** for acetone; the urine is rendered alkaline by a few drops of a solution of caustic potassa, and to this are added two or three drops of a freshly prepared 10 per cent. solution of sodium nitroprusside; it is colored red then yellow; then a few drops of acetic acid are trickled down the side of the test-tube and at the line of junction of the two fluids is formed a carmine or purple ring.

Legendre's nodes (lè-zhahn'dr). Enlarged phalangeal joints, especially the second, of the fingers occurring in chronic gastric disorder. **L.'s sign,** in facial hemiplegia of cerebral origin, when the examiner raises the lids of the actively closed eyes the resistance is less on the affected side.

Legg's disease' [Arthur T. *Legg*, American orthopedic surgeon, *1874.] Perthes' disease, quiet hip disease, arthritis, or osteochondritis, deformans juvenilis of the hip. **L.'s operation,** transplantation of the tensor fascia into the femur in cases of weakness of the gluteus medius muscle.

leg-ill. An inflammation of the hoof, affecting especially the interdigital spaces, in the sheep.

legion (le'jun) [L. *legio*, army.] In biological classification an occasional division placed usually between the *class* (or *subclass*) and the *order*.

legitimacy (le-jit'i-ma-sĭ) [L. *legitimus*, lawful.] Legality, normality, the condition of being legitimate.

legit'imate [L. *legitimus*.] 1. Normal, lawful, natural. 2. Born in lawful wedlock.

legume (le-gūm') [L. *legumen*.] The fruit-pod of a leguminous plant which dehisces on both ventral and dorsal surfaces, as the pea, bean, and other vegetables of that class.

legu'min. A protein contained in peas, beans, and other legumes; it resembles casein and is called vegetable casein.

Leichtenstern's phenom'enon or **sign** (likh'tenstairn) [Michael Ludwig *Leichtenstern*, German physician, 1845–1900.] Tapping gently one of the bones of the extremities causes the patient to draw back violently, sometimes with a loud cry; noted in cases of cerebrospinal meningitis. **L. type,** Struempell type, encephalitis* hæmorrhagica.

Leiner's disease (li'ner) [Karl *Leiner*, Austrian pediatrist, 1871–1930.] Erythrodermia desquamativa in infants. **L.'s test,** a bit of fecal matter is fixed by heat in a slide and stained with an alcoholic solution of acid fuchsine and methyl green; if casein or paracasein is present the color produced is a violet or pale blue.

leio-. For words so beginning see *lio-*.

leipo-. For words so beginning see *lipo-*

Leishman's chrome-cells (lēsh'man) [Sir William B. *Leishman*, British Army surgeon, 1865–1926.] Basophile granular leucocytes found in blackwater fever. **L.'s gran'ules,** coccoid bodies found in ticks infected with spirochetosis. **L.'s meth'od,** a method of obtaining the phagocytic index; a suspension of the pathogenic microorganisms is added to a leucocytic cream obtained from the patient's blood, the mixture is then incubated for a time, and the number of microbes within the phagocytes is computed. **L.'s stain,** an eosine-methylene blue stain used in the examination of blood films.

Leish'man-Don'ovan bod'y [Sir William B. *Leishman;* C. *Donovan*, surgeon Indian Medical Service, contemporary.] The intracellular form of *Herpetomonas* (*Leishmania*) *donovani*.

Leishmania (lēsh-man'ĭ-ah) [Sir William B. *Leishman.*] A genus of protozoans of the family *Herpetomonidæ;* found as small oval protoplasmic masses, with trophonuclei and kinetonuclei, in the endothelial cells, leucocytes, and blood of mammals, developing into flagellate organisms in cultures. **L. donova'ni,** Leishman-Donovan body; a minute oval or pisiform body in one stage, elongated and flagellated in another, found in the endothelial cells of the capillaries of the liver, spleen, lymphatic glands, bone marrow, and intestinal mucosa, and more rarely in the blood, in cases of kala-azar. **L. furunculo'sa,** *L. tropica.* **L. infan'tum,** a species morphologically indistinguishable from *L. donovani*, found in the liver, spleen, bone marrow, and peripheral blood in dogs and in children suffering from canine and infantile kala-azar respectively. **L. trop'ica,** *L. furunculo'sa, Helcosoma tropicum,* a species morphologically very similar to *L. donovani*, the cause of oriental sore. **L. trop'ica** var. *america'na,* a variety with flattened nucleus, found in cases of espundia. (See Plate VIII.)

leishmaniasis, leishmaniosis (lēsh-man-i'a-sis, lēsh-man-ĭ-o'sis). Infection with a species of *Leishmania.* **der'mal l.,** oriental boil.* **na'so-o'ral l.,** espundia. **orona'sal l.,** espundia. **oropharyn'geal l.,** a condition marked by intractable ulceration of the pharynx and soft palate, scrapings from the ulcers showing the presence of an organism similar to, if not identical with, *Leishmania tropica.*

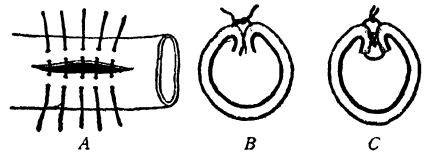
leishmanoid (lēsh'mă-noyd) [*leishmaniasis* + G. *eidos*, resemblance.] Resembling leishmaniasis, noting especially **dermal l.,** an eruption of whitish patches, interspersed with papules and nodules, occurring as a late sequel to cured or partially cured kala azar; *Leishmania donovani* is found in the lesions.

leistungskern (li'stoongs-kern.) [Ger.] Ehrlich's term for the active center or functional portion of a cell or one of its molecules.

Leiter's coil (li'ter) [Joseph *Leiter*, Vienna instrument maker, †1892.] A flexible tube, coiled into shape to fit the surface to which it is applied, through which cold or hot water flows continuously.

Le'laps echidni'nus. A mite parasitic on rats, the intermediate host of *Hepatozoon perniciosum* which causes a fatal disease in these animals.

Leloir's disease' (lel-war') [Henri Camille *Leloir*, French dermatologist, 1855–1896.] Lupus vulgaris erythematoides.



A *B* *C*

INTESTINAL SUTURES: *A*, *B*, Lembert; *C*, Czerny-Lembert.

lema (le'mah) [G. *lēmē*, a humor, gum.] Sebum palpebrale, the secretion of the Meibomian glands.

Lem'bert su'ture (Fr. lahn-bair') [Antoine *Lembert*, Parisian surgeon, 1802–1851.] 1. A suture for the stomach and intestine; the needle is passed in and out through the serous and muscular coats only, avoiding the mucosa, on one side of the wound and then in the same way on the other side, so that when the sutures are tightened the lips of the wound are invaginated, the serous surfaces being in apposition. 2. A continuous suture passed in the same way as the interrupted suture. See cut under *suture*, and page 589.

lem'co. Trade name of a German preparation of Liebig's extract of meat; used in culture media.

lememia (le-me'mĭ-ah) [G. *loimos*, plague, + *haima*, blood.] Pesticemia: 1. The presence of plague bacilli in the peripheral blood stream, with or without grave constitutional symptoms. 2. Septicemic plague.

le'mic [G. *loimos*, plague.] Relating to the plague or any epidemic disease.

lemmocyte (lem'o-sit) [neuri*lemma* + G. *kytos*, cell.] One of the cells of the neurilemma.

lemnis'cus [G. *lēmniskos*, fillet.] Fillet, laqueus, a band of longitudinal fibers running up, from the decussation, on either side of the median raphé in the medulla and pons, and passing along the outer surface of the brachium conjunctivum (superior cerebellar peduncle). **l. latera'lis** [BNA], lateral fillet, a band of longitudinal fibers arising in the lower portion of the pons from the corpus trapezoideum and passing upward, near the lateral surface of the pons, to the nucleus of the inferior quadrigeminal body and the gray substance of the corpus geniculatum internum. **l. latera'lis (acus'ticus)** [BNA], lateral (acoustic) fillet, a band of longitudinal fibers in the central portion of the pons to the outer s de of the medial fillet. **l. media'lis** [BNA], medial or mesial fillet, ribbon of Reil, a band of white fibers taking origin from the gracile and cuneate nuclei and crossing to the opposite side of the decussatio lemniscorum in the lower part of the medulla; thence it passes upward through the center of the medulla, close to the median raphé, and on reaching the pons spreads out laterally between the ventral and dorsal portions; in the mesencephalon it is followed as a flattened band on the ventral aspect of the decussating superior cerebral peduncles, and is seen finally to enter the optic thalamus. **l. media'lis (sensiti'vus)** [BNA], medial (sensory) fillet, a ribbon-like band of longitudinal fibers running through the center of the pons on either side of the median raphé. **l. oliva'ris,** a fasciculus of nerve-fibers surrounding the oliva. **l. spina'lis,** the lateral and ventral spinothalamic faciculi considered as one l; it conveys the ascending sensory fibers of pain, touch, and temperature.

lemography (le-mog'ra-fĭ) [G. *loimos*, plague, + *graphē*, a description.] A treatise on the plague or any epidemic disease.

lemol'ogy [G. *loimos*, plague, + *-logia*.] Medical science in its relation to the plague or other epidemic diseases.

lem'on [L. *limo*.] The fruit of *Citrus limonum;* see *limo*. **salt of l.,** sal limonis.

lemonade'. Lemon juice, limonis succus, largely diluted with water and sweetened; employed as a beverage and as an agreeable refrigerant in fever.

lem'on-balm. Melissa.

lemoparalysis, læmoparalysis (le-mo-par-al'i-sis) [G. *laimos*, throat.] Paralysis of the faucial muscles.

Lemuroidea (le-mu-ro-id'e-ah) [L. *lemures*, ghosts, + *eidos*, resemblance.] A suborder of Primates, including the small monkey-like animals, the lemurs; same as *Prosimiæ*.

Lenard rays (lē-nar'). Roentgen rays, discovered but not applied by Lenard in 1893.

Len'hartz meth'od [Hermann Albert Dietrich *Lenhartz*, Hamburg physician, 1854–1910.] Treatment of gastric ulcer by rest in bed, application of an ice-bag, administration of bismuth; the diet is at first a concentrated albuminous one (especially eggs), and is rapidly increased in as nourishing form as possible; fluids are restricted to avoid dilatation of the stomach.

lenigal'lol [L. *lenis*, mild.] Pyrogallol triacetate triacetylpyrogallol, a white insoluble crystalline powder, employed in ointment for eczema and psoriasis.

len'iol. Trade name of a preparation of cod-liver oil.

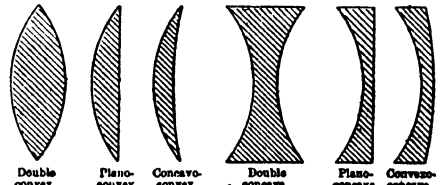
lenir'obin. A yellow powder, chrysarobin tetracetate; employed, like chrysarobin, in the treatment of various skin diseases.

lenitive (len'ĭ-tiv) [L. *lenitus; lenire*, to soften.] 1. Soothing, relieving discomfort or pain. 2. An agent which soothes or relieves irritation; a demulcent.

len'itol. Trade name of a preparation of petroleum combined with flavoring agents, employed in the treatment of constipation.

Lenn'hoff's in'dex [Rudolf *Lennhoff*, Berlin physician, *1866.] A figure obtained by dividing the distance between the sternal notch and the symphysis pubis by the greatest circumference of the abdomen, and multiplying the quotient by 100; the average index is 75; a higher figure indicates an atonic habitus. **L.'s sign,** a depression between the tumor and the ribs is noted on full inspiration, in cases of echinococcus cyst of the liver.

lens [L. a lentil.] A piece of glass, quartz, or other transparent substance with one or both surfaces curved, either concave or convex; used for acting upon the rays of light in the way of convergence or dispersal. **collec'tive l.,** field l. **crys'talline l.,** l. crystallina. **cylin'drical l.,** one which is a segment of a cylinder parallel to its axis; see *cylindrical*. **eye l.,** ocular l., the upper of the two planoconvex lenses of Huygens' ocular. **field l.,** collective l., the lower of the two planoconvex lenses of Huygens' ocular. **l. crystalli'na** [BNA], crystalline l., a transparent biconvex body lying between the iris and the vitreous, the principal refracting medium of the eye; it consists of a soft outer part (*cortical substance*) with a denser central part (*nucleus*), surrounded by a fine membrane (*capsule*). **mi'nus l.,** a concave or reducing l. **oc'ular l.,** eye l. **plus l.,** a convex or magnifying l. **spher'ical l.,** one the curved surfaces of which are segments



LENSES.

of spheres, see *spherical*. **spherocylin'drical l.,** see *spherocylinder*. **to'ric l.,** a curved lens corresponding in shape to the surface of a torus.

len'ticel [Fr. *lenticelle;* L. *lenticula.*] A lenticular gland, especially one of the follicles at the base of the tongue.

lenticonus (len-tĭ-ko'nus) [L. *lens(lent-)* + *conus,* cone.] A conical projection of the anterior or posterior surface of the crystalline lens of the eye.

lenticula (len-tik'u-lah) [L. dim. of *lens.*] 1. Nucleus lentiformis. 2. Ephelis.

lentic'ular [L. *lenticula,* a lentil.] 1. Relating to or resembling a lens of any kind. 2. Of the shape of a lentil. 3. noting a bacterial colony, shaped like a lentil, within the substance of the medium, or a bacterial colony, of the shape of a planoconvex lens, on the surface of the medium. **l. bone,** processus lenticularis [BNA]. **l. glands of the stomach,** minute collections of lymphoid tissue in the stomach walls, similar to the noduli lymphatici of the intestine. **l. in'strument, l. knife,** a scraper resembling a sharp spoon. **l. nu'cleus,** nucleus lentiformis.

lentic"ulo-op'tic. Relating to the nucleus lentiformis and the thalamus opticus.

lentic"ulostri'ate. Relating to the nucleus lentiformis and the corpus striatum.

len'tiform [L. *lens(lent-)* + *forma,* shape.] Lens-shaped, lenticular. **l. bone,** pisiform bone, os* pisiforme [BNA].

lenti'go, pl. *lentig'ines* [L.] A freckle, ephelis, lenticula. **malig'nant l.,** an ulcerating or crusting blue-black mole.

lentitis (len-ti'(te')tis). Inflammation of the crystalline lens, phakitis.

Leo's test (la'o) [Hans *Leo,* German physician, *1854.] For free hydrochloric acid in the stomach contents: the addition of calcium carbonate will make the reaction less acid or neutral if free hydrochloric acid is present, otherwise not.

leontiasis (le-on-ti'a-sis) [L. *leo,* lion.] The enlarged bosselated face sometimes seen in tubercular leprosy. **l. os'sea,** an overgrowth of the bones of the face, and sometimes of the cranium, causing a general enlargement of all the features.

leon'todin. An extract from the root of the dandelion, *Taraxacum officinalis;* tonic aperient, employed in the treatment of diseases of the liver.

Leon'todon tarax'acum. Dandelion, taraxacum.

leopard's growl (lep'ardz growl). A deep hoarse rhoncus in cases of tracheal stenosis.

Le'opold's law [Christian Gerhard *Leopold,* German physician, 1846–1911.] In anterior insertion of the placenta, the Fallopian tubes project backward; in posterior insertion, they are directed forward.

leotropic (le-o-trop'ik) [G. *laios,* left, + *tropikos; tropos,* a turning.] Left-wound, running in a spiral from right to left; opposed to dexiotropic.

lep'er. One who suffers from leprosy.

lepid'ic [G. *lepis(lepid-),* rind.] Relating to a lining membrane of the embryo, referring to the ectodermic, entodermic, and mesothelial structures. **l. tis'sues,** lining-membrane tissues, those "in which the blood-vessels do not penetrate the groups of specific cells, and in which there is an absence of definite stroma between the individual cells, although such stroma, of mesenchymatous origin, may be present between the groups of cells." (Adami.) **l. tu'mor,** rind tumor, *lepidoma.*

lep'idine [G. *lepis,* scale.] 1. Scaly. 2. An oily liquid obtained from cinchonine, methylquinoline.

lepidoma (lep-ĭ-do'mah) [G. *lepis(lepid-),* rind, + *ōma.*] Rind tumor, a neoplasm originating from one of the lepidic tissues. **endothe'lial l.,** a rind tumor originating from the endothelium of the blood-vessels or lymphatics. **l. of the first or'der,** primary l., a rind tumor of epiblastic or hypoblastic origin. **l. of the sec'ond or'der,** secondary l., transitional l., a rind tumor of mesothelial or endothelial origin.

lepidophyton (lep-ĭ-dof'i-ton) [G. *lepis(lepid-),* scale + *phyton,* plant.] A fungus, the supposed cause of tinea imbricata, or Tokelau ringworm.

lepido'sis [G. *lepis(lepid-),* scale.] Any scaly or desquamating eruption.

lepocyte (lep'o-sīt) [G. *lepos,* rind, + *kytos,* cell.] A cell with a distinct envelope.

lep'othrix [G. *lepos,* scale, + *thrix,* hair.] Trichomycosis nodosa.

lep'ra [G.] 1. Leprosy. 2. Psoriasis. **l. al'ba,** macular leprosy with unpigmented spots. **l. al'phos,** psoriasis. **l. anæsthet'ica,** anesthetic leprosy.* **l. Ar'abum,** tubercular leprosy. **l. borea'lis,** l. septentrionalis. **l. cells,** structures found in leprous tissue, consisting either of giant cells filled with the specific bacilli or of zooglœa masses of bacilli. **l. cuta'nea,** tubercular leprosy. **l. Græco'rum,** psoriasis. **l. maculo'sa,** macular leprosy.* **l. mu'tilans,** the later stage of anesthetic leprosy. **l. nervo'rum, l. nervo'sa,** anesthetic leprosy. **l. orienta'lis,** elephantiasis. **l. septentriona'lis,** radesyge, spedalskhed. **l. tubercula'tum,** tubercular leprosy.*

leprapho'bia [G. *phobos,* fear.] An unreasoning fear of leprosy.

lepride (lep'rēd). A cutaneous lesion of leprous origin.

lep'rolin. A glycerin extract of cultures of the lepra bacillus, analogous to tuberculin, employed by Rost in the treatment of leprosy.

leprologist (lĕ-prol'o-jist). One who makes a special study of leprosy in all its relations.

leprol'ogy [G. *lepra,* leprosy, + *-logia.*] The special study of leprosy in all its relations, and the knowledge derived therefrom.

lepro'ma. A leprous nodule or tubercle.

lepro'matous. Relating to leprous tubercles.

lep'romin. A substance analogous to tuberculin, obtained from Hansen's bacillus and suggested for use in the diagnosis of leprosy.

lepropho'bia. Lepraphobia.

lep'rose. 1. Leprous. 2. In botany, lepidate or scale-like.

leprosery (lĕ-pro'ser-ĭ). A leper home or colony.

lep'rosy [G. *leprōsis,* from *lepros,* scaly.] 1. A disease of Biblical times the nature of which is uncertain, but which might have been psoriasis or a leucoderma. 2. Elephantiasis Græcorum, a chronic endemic disease believed to be caused by *Mycobacterium leprœ* or Hansen's bacillus. It occurs in two principal forms: *tubercular l.,* affecting the skin and subcutaneous tissues, and *anesthetic l.,* affecting mainly the nerves. **anesthet'ic l.,** a form affecting the nerves chiefly, marked by hyperesthesia succeeded by anesthesia, by paralysis, ulceration, and various trophic disturbances, terminating in gangrene and mutilation. **artic'ular l.,** mutilating l., a late stage of anesthetic l. **Astu'rian l.,** pellagra **black l.,** see macular l. **cuta'neous l.,** tubercular l. **dry l.,** anesthetic l. **Eastern l.,** elephantiasis Arabum. **Ital'ian l., Lom'bardy l.,** pellagra. **mac'ular l.,** anesthetic l. marked by the presence of spots on the skin, either pigmented (*black l.*) or lighter than normal (*white l.*). **Mal'abar l.,** elephantiasis Arabum. **nod'ular l.,** tubercular l. **scabby l.,** psoriasis. **smooth l.,** macular l. **trophoneurot'ic l.,** anesthetic l. **tuber'cular l.,** a form affecting chiefly the skin and subcutaneous connective tissues, marked by the occurrence of

nodules or tubercles, especially on the face and hands, which eventually ulcerate, as a rule. **white l.**, see macular l.

leprotic (lĕ-prot'ik). Leprous, relating to leprosy.

lep'rous. Relating to or suffering from leprosy.

leptan'dra [G. *leptos*, slender, + *anēr(andr-)*, man (stamen).] (N.F.) The rhizome and roots of *Veronica* (*Leptandra*) *virginica*, Culver's root, black-root, an herb of eastern North America; employed as an hepatic stimulant in intestinal indigestion and constipation in doses of gr. 5–20 (0.3–1.3).

leptan'drin. A bitter glucoside, the supposed active principle of leptandra; dose, gr. ½–2 (0.03–0.13).

Lepto. Abbreviation of *Leptospira*.

leptoceph'alous. Having a small head.

leptoceph'alus [G. *leptos*, slender, + *kephalē*, head.] A monster with very small head.

leptochromatic (lep-to-kro-mat'ik) [G. *leptos*, delicate, + *chromatin*.] Having a very fine chromatin reticulum.

leptodermic (lep-to-dur'mik) [G. *leptos*, thin, + *derma*, skin.] Thin-skinned.

leptomeninges (lep-to-mĕ-nin'jēz) [G. *leptos*, delicate, + *mēninx*, pl. *mēninges*, membrane.] Arachnopia, piarachnoid, the pia mater and arachnoid considered as one membrane.

leptomeningitis (lep"to-men-in-ji'(je')tis) [G *leptos*, thin, delicate + *mēninx(mēning-)*, membrane, + *-itis*.] Inflammation of the pia mater and arachnoid of the brain or spinal cord. **l. exter'na**, inflammation of the arachnoid, arachnitis. **l. inter'na**, inflammation of the pia mater.

leptomere (lep'to-mēr) [G. *leptos*, thin, + *meros*, part.] A very minute particle of living matter, of the aggregation of vast numbers of which Asclepiades believed the body was formed.

leptopel'lic [G. *leptos* narrow, + *pellis*, a bowl (the pelvis).] Having an abnormally narrow pelvis.

leptopho'nia [G. *leptos*, weak, + *phōnē*, sound, voice.] Weakness of voice.

leptophon'ic. Weak-voiced.

leptoprosope (lep'to-pros-ōp) [G. *leptos*, slender, + *prosōpon*, face.] A person with a narrow face and elongated cranium.

leptoprosopia (lep-to-pros-o'pĭ-ah). Narrowness of the face.

leptoproso'pic [G. *leptos*, thin, + *prosōpikos*, facial.] Having a thin narrow face.

leptorrhine (lep'to-rin) [G. *leptos*, thin, + *rhis*, nose.] Having a thin nose. Noting a skull with a nasal index below 47 (Frankfort agreement) or 48 (Broca).

Leptospira (lep-to-spi'rah) [G. *leptos*, fine, + *speira*, a coil.] A genus of the family *Spirochætaceæ*, thin, spiral organisms, flagellated at the extremities one or both of which are bent back like a hook. **L. hebdom'adis,**[0] a species composed of organisms morphologically similar to *L. icterohæmorrhagiæ*, found in cases of the seven day fever of Japan. **L. icterohæmorrha'giæ,**[0] spiral organisms of moderate length, some, however, quite long, the cause of Weil's disease, acute febrile jaundice. **L. icteroi'des,**[0] a species of organisms morphologically resembling *L. icterohæmorrhagiæ*, but somewhat shorter, found in certain cases of yellow fever in America, though not in Africa, and at one time thought to be the cause of that disease. **L. inter'rogans**, an organism found by Stimson in 1908 and provisionally named *Spirochæta interrogans;* probably the same as *L. icteroides* of Noguchi.

leptospirosis (lep-to-spi-ro'sis). Infection with some species of *Leptospira*.

leptothricosis (lep-to-thri-ko'sis). Any disease caused by a species of Leptothrix. **l. conjuncti'væ**, Parinaud's conjunctivitis.

Leptothrix (lep-to-thriks) [G. *leptos*, thin, + *thrix*, *hair*.] A genus of the family *Chlamydobacteriaceæ*, the species of which are slender, straight, and mostly ensheathed; they are all water organisms, non-pathogenic. **L. bucca'lis,** *Leptotrichia buccalis*.

Leptotrichia (lep-to-trik'ĭ-ah) [G. *leptos*, fine, + *trichia*, small hairs.] A genus of the family *Actinomycetaceæ* containing rather thick curved or straight filamentous rods of medium length, non-branching. **L. bucca'lis,**[0] *Leptothrix buccalis*, non-motile forms, often in long chains, facultative anaerobes, inhabiting the buccal cavity.

Lep'tus autumna'lis [G. *leptos*, delicate.] Harvest-mite, red bug; a name applied to larvæ of mites found at the end of summer in bushes and grass; they often attack man causing an itching erythema and sometimes an eruption of flat wheals.

leresis (le-re'sis) [G. *lērēsis*, silly talk.] Mental weakness marked by garrulity.

Leriche's operation (lĕ-rēsh') [René *Leriche*, French surgeon, *1879.] Arterial decortication, periarterial sympathectomy.

Lermoyez's syndrome (ler-moy'āz sin'drōm). Increasing deafness, interrupted by a sudden attack of dizziness, after which the hearing improves.

Leroux's meth'od (le-roo') [Laurent Charles Pierre *Leroux*, French accoucheur, of Dijon, 1730–1792.] Management of placenta prævia, when labor has begun, by a firm tamponade of the vagina.

Lesage's bacill'us (lĕ-sazh') [Adolphe Auguste *Lesage*, Parisian physician, *1862.] A chromogenic bacillus, giving a greenish color to the stools.

Les'bian love [G *lesbios*, relating to the Island of Lesbos.] Unnatural sexual practices between women, sapphism.

lesbianism (lez'bĭ-an-izm). Lesbian love.

Lesieur-Privey sign (le-sĭ-ĕr'pre-va'ĭ) [C. *Lesieur*, Paul *Privey*, French physicians, contemporary.] Albumoptysis, tuberculous albumin reaction; the presence of albumin in the sputum in a chronic respiratory affection points to tuberculosis.

le'sion (le'zhun) [L. *læsus; lædere*, to injure.] 1. A wound or injury. 2. A more or less circumscribed pathological change in the tissues. 3. One of the individual points or patches of a disease of the skin.

Les'ser's tri'angle. The space between the bellies of the digastric muscle and the hypoglossal nerve.

Less'haft's tri'angle [Pyotr Frantsovich *Lesshaft*, Russian physician, 1839–1909.] Grynfelt's* triangle.

le'thal [L. *letalis; letum*, death.] Fatal, mortal, causing death.

lethal'ity. Mortality.

lethar'gus [G. *lethargos*, lethargic.] Sleeping-sickness.

lethargy (leth'ar-jĭ) [G. *lēthargia*, drowsiness.] A state of deep and prolonged unconsciousness, resembling profound slumber, from which the person can be aroused but into which he immediately relapses; the condition may last from a few hours to several years. **Af'rican l.**, sleeping-sickness. **induced' l.**, hypnosis. **ne'gro l.**, sleeping-sickness.

le'the [G. *lēthē*, forgetfulness.] Loss of memory, amnesia.

lettuce (let'is). Lactuca. **l. o'pium**, lactucarium.

Leube's en'ema (loi'beh) [see *Leube-Riegel.*] Pancreati enema; finely divided boiled meat, pancreas, and fat.

Leube-Riegel test dinn'er (loy'beh-re'gel) [Wilhelm Olivier von *Leube*, German physician, 1842–1922; Franz *Riegel*, German physician, 1843–1904.] Consists of 12 to 14 ounces of soup, 3 to 6 ounces of minced steak; 2 ounces of white bread, and 6 ounces of water, the contents of the stomach are examined four hours later.

leucæthiope (lu-se'thī-ōp) [G. *leukos*, white, + *Aithiops*, an Ethiopian.] An albino.

leucane'mia, leucanæ'mia [*leucemia* + *anemia.*] Leucemia associated with enlargement of the spleen and liver, a rapid fall in the hemoglobin percentage and in the number of red cells, fever, hemorrhages, increasing pallor, and progressive muscular weakness; the changes in the leucocytes resemble those seen in leucemia, and in the erythrocytes such as are seen in pernicious anemia.

leucas'mus [G. *leukasmos*, a growing white.] Vitiligo.

leucemia, leucæmia (lu-se'mī-ah) [G. *leukos*, white, + *haima*, blood.] Leukemia, leuchæmia, leucocythemia; a disease of the blood marked by persistent leucocytosis associated with changes in the spleen and bone-marrow or in the lymphatic glands. **aleuce'mic l.,** pseudoleucemia. **amyg'daline l.,** a form assumed to be due to infection through the tonsils. **aplas'tic l.,** a form of l. in which there is a diminution of both red and white blood cells, only the relative increase of large atypical leucocytes substantiating the diagnosis. **hepat'ic l.,** a form supposed to be due to disease of the liver. **intes'tinal l.,** a form thought to be due to autointoxication of intestinal origin. **l. cu'tis,** the occurrence of lesions of various forms upon the skin in cases of leucemia. **li"enomyelog'enous l.,** splenomyelogenous l. **lymphat'ic l.,** a variety in which the lymphatic glands are chiefly affected; in the *acute* form the large lymphocytes are numerous, the neutrophiles and eosinophiles being comparatively few; in the *chronic* form the small uninuclear leucocytes are very numerous, the polymorphonuclear neutrophiles are reduced in number, eosinophiles and myelocytes are seldom found. **med'ullary l.,** myelogenous l. **mixed l.,** myelogenous l. **myelocyt'ic l.,** mixed-cell l., a form of l. in which white cells of both myeloid and lymphadenoid origin are present in great numbers. **myelog'enous l.,** l. associated with the presence in the blood of large numbers of myelocytes and often normoblasts, with hyperplasia of the bone-marrow, and with enlargement of the spleen. **my'eloid l.,** (1) myelocytic l. (2) myelogenous l. **polymorphocyt'ic l.,** myelogenous l. **splen'ic l.,** a form associated with marked enlargement of the spleen. **splenomed'ullary l., splenomyelog'enous l.,** the commonest form of l., in which the spleen is greatly enlarged and changes are present in the bone-marrow; leucocytosis is very marked, large uni-nuclear eosinophile myelocytes predominating, but neutrophile myelocytes are also present as well as numbers of normoblasts, and occasionally megaloblasts. **symptomat'ic l.,** leucocytosis.

leuce'mic. Relating to leucemia.

leuchemia, leuchæmia (lu-ke'me-ah). Leucemia.

leucine (lu'sin) [G. *leukos*, white.] 1. Alpha-amino-isobutylacetic acid, $(CH_3)_2.CH.CH_2.CH.NH_2COOH$, a protein cleavage product; it is found with tyrosine in the intestine and occurs in many cells; in a pure state it is crystallizable in the form of white glistening crystals. 2. A bactericidal substance in leucocyte extract, endolysin.

leucinosis (lu-sin-o'sis). A condition in which leucine is present in excess in the organism.

leucinu'ria [G. *ouron*, urine.] The excretion of leucine in the urine.

leucitis (lu-si'(se')tis). Scleritis.

leu'coblast [*leukos*, white + *blastos*, germ.] Myeloblast.

leucoceratosis (lu-ko-ser-ă-to'sis) [G. *leukos*, white, + *keras(kerat-)*, horn.] Leucokeratosis, leucoplakia.

leucocidin (lu-kos'ī-din) [*leuco(cyte)* + L. *cædere*, to kill.] A specific serum-constituent destructive to white blood-corpuscles, leucolysin.

leuco'cytal. Leucocytic.

leucocyte (lu'ko-sīt) [G. *leukos*, white, + *kytos*, cell.] 1. A white blood-corpuscle. 2. Specifically one of the markedly ameboid cells found in the blood or the lymph or in pus or as wandering connective-tissue cells in the tissues of the body. The following are the varieties of leucocytes found in the blood (white blood-corpuscles): *uninuclear* (mononuclear); non-granular—small lymphocyte, containing a large nucleus and small cell-body; large lymphocyte, containing a larger amount of cytoplasm; transitional leucocyte, containing a horseshoe-shaped nucleus and occasionally a few basophil granules; large uninuclear (mononuclear) leucocyte with an oval excentric nucleus and a large amount of cytoplasm; granular—myelocytes (occurring only in pathological conditions), large cells with a large oval, round, or slightly indented nucleus with a reticulated cytoplasm containing granules having a neutrophil, eosinophil (oxyphil), or basophil reaction; *multinuclear* (polynuclear, polymorphonuclear); these contain a nucleus of irregular shape, or several nuclei apparently connected only by fine chromatin threads, and a finely granular cell-body; the granules in the cytoplasm may be neutrophil, eosinophil (oxyphil), or basophil, the latter being also called mast-cells. **al'pha l.,** one which undergoes lysis during coagulation of the blood. **hy'aline l.,** one of the large mononucleated cells, resembling the large lymphocytes, normally present in small numbers but increased in certain pathological states, such as malaria; the macrophage of Metchnikoff. **lym'phoid l.,** (1) monocyte; (2) myeloblast.

decrease in number, oligoleucocythemia, leucocytopenia, leucopenia, aleucocytosis, aleucemia, hypoleucocytosis hypoleucemia. **increase in number,** leucocytosis, hyperleucocytosis.

leucocythemia, leucocythæmia (lu-ko-si-the'mī-ah) [G. *leukos*, white, + *kytos*, cell, + *haima*, blood.] Leucemia.

leucocyt'ic. Relating to a leucocyte or leucocytes.

leucocytoblast (lu-ko-si'to-blast) [G. *leukos*, white, + *kytos*, cell, + *blastos* germ.] The mother cell of a leucocyte

leucocytogenesis (lu"ko-si"to-jen'e-sis) [G. *genesis* production.] The formation of leucocytes.

leucocytoid (lu'ko-si-toyd) [*leucocyte* + G. *eidos*, resemblance.] Resembling a leucocyte. **l. hab'it,** a condition in which there exists an abundance of cytoplasm, through which the ratio of nucleus to protoplasm is made small.

leucocytol'ysin. Leucocidin, an antibody destructive to the white blood-cells.

leucocytolysis (lu-ko-si-tol'ī-sis) [G. *leukos*, white, + *kytos*, cell, + *lysis*, solution.] Destruction of leucocytes.

leucocytolyt'ic. 1. Destructive to leucocytes. 2. Relating to leucocytolysis.

leucocyto'ma. A tumor composed mainly of round cells resembling leucocytes.

leucocytom'eter [G. *metron*, measure.] A device for estimating the relative numbers of leucocytes.

leucocytope'nia. Leucopenia.

leucocytopla'nia [G. *planē*, a wandering.] Ths wandering of leucocytes out of the blood-vessels or through the tissues.

leucocytosis (lu-ko-si-to'sis) [*leucocyte* + *-ōsis.*] Strictly, the presence of leucocytes in the blood, but usually employed in the sense of *hyperleucocytosis*. an increase in the number of leucocytes in the blood beyond that which is normal for the individual, in general above 10,000 per c.mm. **ab'solute l.**, an increase in the total number of white corpuscles in the peripheral circulation. **ag'onal l.**, terminal l. **digestive l.**, l. occurring normally after a meal. **rel'ative l.**, an increase in the percentage of any variety of leucocytes in the peripheral blood-stream, with or without an actual increase in the total number of white blood-cells. **ter'minal l.**, that which occurs just before death.

leucocytotac'tic. Relating to or marked by leucocytotaxia.

leucocytotaxia (lu-ko-si-to-tak'sĭ-ah) [G. *leukos*, white, + *kytos*, cell, + *taxis*, arrangement.] Leucotaxia, the movement of leucocytes, either attraction (*positive l.*) or repulsion (*negative l.*), in relation to each other.

leucocytox'in. Leucolysin, a toxin destructive to the leucocytes.

leucocytozoon (lu-ko-si"to-zo'on) [G. *zōon*, animal.] A supposed protozoan parasite of the white blood-cells. **L. syphil'idis,** *Coccidium syphilidis.*

leucocytu'ria [*leucocyte* + G. *ouron*, urine.] The presence of leucocytes in the urine when voided.

leucoderm (lu'ko-durm) [G. *leukos*, white, + *derma*, skin.] A member of one of the white races.

leucoderma (lu-ko-dur'mah) [G. *leukos*, white, + *derma*, skin.] Leucopathia, achroma, leucasmus, an absence of pigment, partial or total, in the skin. **acquired l.**, vitiligo. **congen'ital l.**, albinism. **syphilit'ic l.**, pigmentary syphilide with central white patches

leucoder'matous. Relating to or resembling leucoderma.

leucodiagnosis (lu"ko-di-ag-no'sis) [*leucocyte* + *diagnosis.*] Diagnosis determined by the number, varieties, or reactions of the leucocytes.

leucoe'thiope. Leucæthiope, albino.

leucofer'mantin. Trade name of a preparation of normal blood serum, the antiferment property of which has been increased, used in the treatment of suppurative inflammatory processes.

leucokeratosis (lu-ko-ker-ă-to'sis) [G. *leukos*, white. + *keras*, horn.] Leucoplakia.

leucol'ysin. Leucotoxin, leucocytolysin.

leucol'ysis [G. *leukos*, white, + *lysis*, solution.] Leucocytolysis.

leucolyt'ic. Relating to leucocytolysis, leucocytolytic.

leuco'ma [G. *leukos*, white.] 1. A dense, opaque, white opacity of the cornea, albugo. 2. Lymphoma. **adhe'rent l.**, anterior synechia causing a dense white cicatrix of the cornea.

leucomaine (lu'ko-mīn) [G. *leukōma*, whiteness. A subtance, resembling an alkaloid, formed in living tissues by retrograde metamorphosis.

leucomainemia, leucomainæmia (lu"ko-mīn-e'-mĭ-ah) [*leucomaine* + G. *haima*, blood.] An excess of leucomaines, or excrementitious products, in the blood.

leucomainic (lu-ko-mīn'ik). Relating to leucomaines.

leuco'matous. Relating to or suffering from leucoma.

leucomonocyte (lu-ko-mo'no-sīt) [G. *leukos*, white, + *monos*, single, + *kytos*, cell.] Lymphocyte (1).

leucomyelitis (lu-ko-mi-el-i'(e')tis) [G. *leukos*, white, + *myelos*, marrow, + *-itis.*] Inflammation of the white conducting tracts of the spinal cord.

leucomyelopathy (lu-ko-mi-el-op'a-thĭ) [G. *leukos*, white, + *myelos*, marrow, + *pathos*, suffering.] Any system disease involving the white substance or conducting tracts of the spinal cord.

leucomyoma (lu"ko-mi-o'mah) [G. *leukos*, white, + *myoma.*] Lipomyoma.

leuconecro'sis [G. *leukos*, white, + *nekrōsis*, deadness.] White gangrene.

leu'conid, leu'conoid. Any microphyte of the genus or group *Leuconostoc.*

Leuconostoc (lu-kon-os'tok) [G. *leukos*, white, + *Nostoc*, a genus of algæ.] A saprophytic genus of the family *Coccaceæ*, occurring in pairs or chains enclosed in a tough gelatinous envelope; found in sugar factories in the juice of sugar cane or beet-root. The type species is *Leuconostoc mesenterioides.*[0]

leuconuclein (lu-ko-nu'kle-in). A nucleoprotein formed by decomposition of another nucleoprotein from the white corpuscles and blood-plates; its presence favors coagulation of the blood.

leuconychia (lu-ko-nik'ĭ-ah) [G. *leukos*, white, + *onyx*(*onych-*), nail.] The occurrence of white spots or patches under the nails, due to the presence of air bubbles between the nail and its bed; leucopathia unguium, canities unguium. The decoloration may be total or in the form of lines (*striate l.*) or dots (*punctate l.*).

leucopath'ia, leucop'athy [G. *leukos*, white, + *pathos*, disease.] Leucoderma, leucasma, achroma, a partial or complete absence of pigment in the skin. **acquired l.**, vitiligo. **congen'ital l.**, albinism. **l. un'guium,** leuconychia.

leucopedesis (lu-ko-pe-de'sis) [*leucocyte* + G. *pēdēsis*, a leaping.] Emigration of white cells from the blood vessels.

leucope'nia [*leuco*(*cyte*) + G. *penia*, poverty.] Hypoleucocytosis, a condition in which the number of leucocytes in the circulating blood is reduced below the normal for the individual, in general below 5,000 per c.mm. **malig'nant l.**, agranulocytic angina, agranulocytosis; an acute infection marked by high fever, nausea, necrotic inflammation of the floor of the mouth, gums, tonsils, and fauces, and sometimes of the vagina, with extreme leucopenia especially of the polymorphonuclear leucocytes; it affects women chiefly or exclusively and is usually fatal.

leucophlegmasia (lu-ko-fleg-ma'sĭ-ah) [G. *leukos*, white, + *plegma*, inflammation.] Hard edema, lymphatic edema. **l. do'lens,** phlegmasia alba dolens.

leucoplakia(lu-ko-pla'kĭ-ah) [L. *leukos*, white, + *plax*, a plaque.] Leucoplacia; irregular white patches on the mucous membrane of the tongue (*l. lingua'lis*) or tongue and cheek (*l. bucca'lis*); there is thickening of the epithelium and the papillæ may be hypertrophied; smoker's tongue, buccal or lingual psoriasis, ichthyosis linguæ.

leucoplas'tid [G. *leukos*, white, + *plastis*, fem. of *plastēs*, a former.] Amyloplast.

leucopoiesis (lu-ko-poy-e'sis) [G. *leukos*, white, + *poiēsis*, a making.] The production of leucocytes and white cells in general.

leucopoietic (lu-ko-poy-et'ik). Producing or relating to the production of leucocytes.

leucoprotease (lu-ko-pro'te-āz). A proteolytic enzyme or ferment, formed in an area of inflammation, which causes liquefaction of dead tissue; it is a product of the polynuclear leucocytes.

leucop'sin [G. *leukos*, white, + *opsis*, vision.] Visual white, the exhausted or decolorized rhodopsin.

leucorrha'gia [G. *leukos*, white, + *-rhagia*.] Leucorrhea.

leucorrhe'a, leucorrhœ'a [G. *leukos*, white, + *rhoia*, flow.] A discharge from the vagina of a white, more or less viscid fluid, containing mucus and pus cells. **men'strual l.**, an intermittent l. recurring at or just before each menstrual period.

leucorrhe'al. Relating to or characterized by leucorrhea.

leucosarco'ma. A non-pigmented sarcoma.

leucosarcomatosis (lu-ko-sar-ko-mă-to'sis). The occurrence of multiple sarcomata formed by the proliferation of lymphoid leucocytes or myeloblasts.

leucoscope (lu'ko-skōp) [G. *leukos*, white, + *skopeō*, I view.] A device for testing color vision.

leucosis (lu-ko'sis). Leucemia, leucocythemia.

leucotac'tic. Relating to or marked by leucotaxia.

leucotax'ia. Leucocytotaxia.

leucothrombin (lu-ko-throm'bin). A substance derived from leucocytes which forms thrombin with thrombokinase.

leucotox'in. A cytotoxin specific for white blood-cells, leucolysin, leucocidin.

leucotrichia (lu-ko-trik'ĭ-ah) [G. *leukos*, white, + *thrix(trich-)*, hair.] Whiteness of the hair. **l. annula'ris**, ringed hair.

Leudet's tinni'tus (lē-da') [Théodore Emile *Leudet*, French physician, of Rouen, 1825–1887.] A dry spasmodic click, audible also through the otoscope, heard in catarrhal inflammation of the Eustachian tube; caused by reflex spasm of the tensor palati muscle.

leuk-. For words so beginning, see *leuc-*.

Levaditi meth'od (la-vah-de'te) [Constantin *Levaditi*, Parisian physician, *1874.] The employment of Cajal's method of staining nerve fibrils for the staining of *Treponema pallidum* in sections; thus stained they appear black.

leva'tor [L. one who or that which lifts.] A surgical instrument for prying up the depressed part in a fracture of the skull. One of several muscles the action of which is to raise the part into which it is inserted; see under *musculus*.

levicellularis, neuter, *levicellular'e* (lev"i-sel"u-lar'is) [L. *levis*, smooth, + *cellula*, cell.] Smooth-celled, noting non-striated tissue.

leviga'tion [L. *levigare*, to make smooth.] Reduction of a substance to an impalpable powder by rubbing.

levis'ticum [G. *ligystikon*.] Lovage, sea parsley, the rhizome and root of *Levisticum officinale*, an herb of southern Europe; employed as a diuretic, emmenagogue, and carminative, in doses of ʒ 2–4 (8.0–16.0 of an infusion of 1 ounce to the pint.

levocardiogram (lev-o-kar'dĭ-o-gram) [L. *lævus*, left.] That part of the bicardiogram, or normal curve, which is the effect of the left ventricle.

levoduction (le-vo-duk'shun) [L. *lævus*, left, + *ducere*, to lead.] A drawing toward the left, noting especially a rotation of one or both eyes to the left.

levoglu'cose. Levulose.

levogyrate (le-vo-ji'rāt) [L. *lævus*, left, + *gyrare*, to turn.] Levorotatory.

levogy'rous. Levogyrate; levorotatory.

levophobia (le-vo-fo'bĭ-ah) [L. *lævus*, left, + G. *phobos*, fear.] Fear of objects on the left side of the body.

levorotation (lev-o-ro-ta'shun) [L. *lævus*, left, + *rotare*, to turn.] Sinistrogyration, sinistrotorsion, levotorsion, sinistrorotation, a turning or twisting to the left.

levoro'tatory [L. *lævus*, left, + *rotare* to turn.] Turning the plane of polarized light to the left, noting a property of fruit-sugar, or levulose, as distinguished from grape-sugar, glucose or dextrose.

levotor'sion [L. *lævus*, left, + *torsio; torquere*, to twist.] A twisting to the left.

levoversion (le-vo-vur'shun) [L. *lævus*, left, + *vertere*, to turn.] A turning toward the left side.

Levret's for'ceps (lĕ-vra') [André *Levret* French accoucheur, 1703–1780.] A modification of the Chamberlen forceps in which it is curved to correspond to the curve of the parturient passage. **L.'s law,** in cases of placenta prævia the insertion of the cord is marginal. **L.'s maneu'ver,** Deutsch's* maneuver; see also Mauriceau *-Levret maneuver.

levulargyre [lev'u-lar-jīr). A compound of mercury and nucleoprotein, obtained from yeast cultures grown in the presence of increasing amounts of bichloride of mercury; used in syphilis in doses of ʒ ½ (2.0) of a 1 per cent. solution.

lev'ulin. A substance, $C_6H_{10}O_5$, resembling starch, present in certain tubers; it is readily changed into levulose.

levulin'ic. Relating to levulin. **l. acid,** a crystalline acid, $C_5H_8O_3$, formed by the action of dilute acids on levulose and other substances.

lev'ulosan. A decomposition product of cane-sugar.

levulose (lev'u-lōs) **lævulose, lævulosum** (Br.) [L. *lævus*, left.] Fructose, fruit-sugar, levoglucose; a levorotatory monosaccharide (hexose) occurring in many plants in company with dextrose.

levulose'mia, lævulosæ'mia [G. *haima*, blood.] The presence of levulose in the peripheral blood.

levulosu'ria [G. *ouron*, urine] The excretion of levulose in the urine.

lev'urin. Trade name of a preparation of yeast for internal use in furunculosis, acne, etc., in doses of ʒ 1 (4.0).

Lewis phenom'enon (lu'is). The englobing of droplets of plasma by the macrophages, hydrophagocytosis.

Lewisonella (lu-ĭ-son-el'lah). A genus of non-pathogenic mammalian trypanosomes.

Leyden jar (lī'den) [described by van Musschenbroek in *Leyden*, Holland, in 1746.] An apparatus for the collecting of static electricity; a glass jar covered inside and outside with tinfoil for about two-thirds of its height; the tinfoil on the inside is connected with a brass rod passing up through the neck of the jar and terminating in a ball; the jar is charged by connecting the central rod with the conductor of a static machine, the outer coating of the jar being connected with the earth

Leyden's atax'ia (lī'den) [Ernst Victor von *Leyden*, Berlin physician, 1832–1910.] Pseudotabes. **L.'s crys'tals.** Charcot*-Leyden crystals. **L.'s dis-ease',** periodical vomiting; attacks of nausea and vomiting recurring at regular intervals of weeks or months, lasting for a few hours or several days, the intervals being free from any gastric symptoms whatever. **L.'s duct,** mesonephric duct.* **L.'s neuri'tis,** fatty degeneration of the fibers of the affected nerve.

Leyden-Moebius type (li'den-mĕ'be-oos). Hereditary progressive muscular dystrophy, clinically identical with pseudomuscular hypertrophy, beginning in the muscles of the pelvic girdle.

Leyde'nia gemmip'ara [Ernst Victor von *Leyden*.] A supposed protozoan parasite found in the fluid of carcinomatous ascites.

Leydig's cells (li'dig) [Franz von *Leydig*, German anatomist, 1821–1908.] Cells in the interstitial tissue of the testicle which are believed to furnish the internal secretion of that gland. **L.'s duct,** Wolffian* duct. **L.'s prim'itive cyl'inders,** bundles of muscular fibers separated by protoplasmic partitions.

L.F.A. Abbreviation for left frontoanterior, noting a presentation of the fetus with forehead directed toward the left acetabulum of the mother.

L.F.P. Abbreviation for left frontoposterior, noting a presentation of the fetus with forehead directed to the left sacroiliac articulation of the mother.

Li. Chemical symbol of lithium.

Lian's point (le-ahn'). A point at the junction of the outer and middle thirds of a line passing from the umbilicus to the anterior superior spine of the ilium, where the trocar may safely be introduced in paracentesis.

lian'trol. A blackish brown soft mass prepared from coal-tar; employed externally in eczema.

lib'anol. Trade name of a preparation of satinwood oil; used in gonorrhea and non-specific inflammations of the mucous membranes in doses of ♏5–10 (0.3–0.6).

liberomotor (lib"er-o-mo'tor) [L. *liber*, free, + *motor*, mover.] Relating to voluntary movements.

libid'inous [L *libidinosus*.] Lascivious.

libido (li-bi'(be')do) [L. lust.] Conscious or unconscious sexual desire; creative energy, *élan vital;* any passionate interest or form of life force.

Libo'rius meth'od. A method of making cultures of anaerobic bacteria; a stab culture is made in glucose agar or other medium and then more of the same medium is liquefied and poured into the test-tube on top of the stab culture, effectually sealing it from the air.

LiBr. Lithium bromide.

li'bra [L. balance.] A pound; abbreviation *lb*.

li'bradol [L. *liber*, free, + *dolor*, pain.] An eclectic remedy employed externally for the relief of pain and inflammation; it is composed of lobelia, tobacco, sanguinaria, ipecac, dracontium, capsicum, melaleuca, and laurel-camphor.

lice. Plural of louse.

lichen (li'ken) [G. *leichēn*, a tetter-like eruption.] 1. A cryptogamic moss-like plant, forming patches on rocks, tree-trunks, etc.; thought to be algæ with parasitic fungi. (The word in this sense is sometimes pronounced lich'en.) 2. A general term denoting any papular eruption of the skin, now noting usually l. planus. **l. acumina'tus,** a form with acuminate papular lesions, l. ruber. **l. a'grius,** acute papular eczema of severe type. **l. annula'ris,** granuloma annulare, an affection marked by the occurrence of annular lesions, ½–1 inch in diameter, on the dorsal and lateral aspects of the fingers. **l. annula'tus,** l. circinatus. **l. circina'tus,** seborrheic dermatitis with annular lesions. **l. hæmorrhag'icus,** a papular eruption due to hemorrhage into the hair-follicles. **l. infan'tum,** strophulus. **l. i'ris,** ringworm with concentric rings of erythematous papules. **l. liv'idus,** l. scrofulosus with extravasation of blood into the papules, purpura papillosa. **l. nit'idus,** Pinkus's disease, an eruption of small, very slightly elevated macules of a brownish yellow or reddish color. **l. obtu'sus,** a form in which the papules are large and rounded instead of flattened. **l. pila'ris,** keratosis pilaris. **l. pla'nus,** an eruption of flattened papules, of a reddish color and shining surface, occurring singly or grouped in patches of varying sizes and shapes; the eruption occurs chiefly on the flexor surfaces of the extremities; but may involve the trunk or the mucous membranes. **l. pla'nus annula'ris,** a form in which the papules are grouped in ring figures. **l. pla'nus hypertroph'icus,** l. obtusus. **l. pla'nus verruco'sus,** a form in which the papules coalesce, forming wart-like patches. **l. psori'asis,** (1) pityriasis rubra pilaris; (2) l. planus. **l. ru'ber,** **l. ru'ber acumina'tus,** pityriasis rubra pilaris. **l. ru'ber monilifor'mis,** an eruption of obtuse papules arranged along raised lines on the extremities, following the general direction of their axes. **l. ru'ber pla'nus,** l. planus. **l. scrofulo'sus, l. scrofuloso'rum,** an eruption of reddish papules, single or aggregated in patches of varying size, occurring in scrofulous subjects. **l. sim'plex,** papular eczema. **l. spinulo'sus,** a particularly rough form of l. pilaris. **l. strophulo'sus,** miliaria rubra. **l. syphilit'icus,** follicular syphilide. **l. trop'icus,** miliaria rubra. **l. urtica'tus,** chronic urticaria. **l. variega'tus,** maculopapular erythrodermia.

licheniasis (li-ken-i'a-sis). The formation of the lesions of lichen.

lichenification (li-ken"i-fi-ka'shun) [*lichen* + L. *facere*, to make.] Leathery induration; an induration and thickening of the skin due to a subacute inflammation caused by scratching or long-continued irritation.

lichenin (li'ken-in). Moss-starch, a variety of starch obtained from Iceland moss, used as a demulcent

licheniza'tion (li-ken-i-za'shun) 1 The formation of the lesions of lichen. 2 Lichenification.

lichenoid (li'ken-oyd) [*lichen* + G. *eidos*, appearance] 1. Resembling lichen; lichenous. 2. A white patchy eruption on the tongue occurring in infants.

Lichtheim's sign (likht'hīm) [Ludwig *Lichtheim*, German physician, *1845.] In subcortical aphasia, the patient can indicate by his fingers the number of syllables of the word he has in mind but cannot speak.

Li_2CO_3. Lithium carbonate.

lic'orice. Glycyrrhiza.

lid [A.S. *hlid*.] 1. A movable cover. 2. An eyelid. **gran'ular lids,** granular conjunctivitis, trachoma.

Lieben's test (le'ben) [Adolf *Lieben*, Viennese chemist, 1836–1914.] For acetone: distill the urine, mix with an iodo-iodic solution and add caustic soda or potassa until the fluid is decolorized; if acetone is present a yellow precipitate of iodoform easily recognizable by its odor, is thrown down.

lieberkuehn (le'ber-kūn) [after J. N. *Lieberkuehn*, see the following title.] A concave reflector around the objective of a microscope for lighting the field.

Lieberkuehn's ampull'a (le'ber-kūn) [Johann Nathaniel *Lieberkuehn*, German anatomist, 1711–1756.] The blind end of a lacteal in an intestinal villus. **L.'s crypts, foll'icles,** or **glands,** intestinal glands; see under *glandula*.

Liebermann's test (le'ber-mahn) [Leo von Szentlörincz *Liebermann*, Hungarian physician, 1852–1926.] For albumin in the urine: an alcoholic precipitate from the urine is washed with ether and heated with hydrochloric acid; if the precipitate is a protein a violet color will appear.

Liebermann-Burchard test (le'ber-mahn-boor'-khart) [C. *Liebermann*, H. *Burchard*, German

biological chemists.] Acetic acid anhydride is added to a solution of the suspected substance in chloroform; then concentrated sulphuric acid is added drop by drop, and if cholesterin is present the mixture becomes first rose color, then blue, and finally a vivid green.

Liebermeister's rule (le'ber-mīs-ter) [Carl von *Liebermeister*, German physician, 1833–1901.] In febrile tachycardia in the adult, about eight pulse beats correspond to an increase of one degree Centigrade

Liebig's ex'tract (le'big) [Baron Justus von *Liebig*, German chemist, 1803–1873.] A watery extract of beef evaporated down to the consistence of a soft solid. **L.'s test,** for cystin: on boiling with sodic or potassic hydrate and lead sulphide a black precipitate will be thrown down if cystin is present. **L.'s the'ory,** the hydrocarbons which oxidize readily and burn are aliments which produce especially animal heat.

li'en [L.] [BNA] Spleen. **l. accesso'rius** [BNA], one of the small globular masses of splenic tissue occasionally found in the neighborhood of the spleen. **l. succenturia'tus,** l. accessorius.

lienadin (li-en'ă-din). Trade name of a splenic extract, recommended in leucemia.

lienal (li'en-al). Relating to the spleen, splenic.

lienculus (li en'ku-lus) [L. dim. of *lien*, spleen.] Lien accessorius.

lienitis (li-en-ī'(e')tis). Splenitis

lienocele (li'en-o-sēl) [L. *lien*, spleen, + G. *kēlē*, hernia] Splenocele.

li"enomala'cia [L. *lien*, spleen, + G. *malakia*, softness.] Splenomalacia.

li"enomed'ullary [L. *lien*, spleen, + *medulla*, marrow] Relating to the spleen and the bone-marrow

lienomyelogenous (li"en-o-mi-el-oj'en-us) [L. *lien*, spleen, + G. *myelos*, marrow, + *gennaō*, I produce] Splenomyelogenous.

lienomyelomalacia (li"en-o-mi"el-o-mal-a'sī-ah) [L. *lien*, spleen, + G. *myelos*, marrow, + *malakia*, softness] Splenomyelomalacia

li"enopancreat'ic [L. *lien*, spleen, + *pancreas*] Splenopancreatic

lienopathy (li-en-op'a-thy) [L. *lien*, spleen, + G. *pathos*, suffering.] Splenopathy, any disease of the spleen.

li"enore'nal [L. *lien*, spleen, + *ren* kidney] Relating to the spleen and the kidney, splenonephric

lienotox'in [L. *lien*, spleen] Splenotoxin

lienteric (li-en ter'ik). Relating to, or marked by, lientery.

li'entery [G. *leienteria*, *leios*, smooth, + *enteron*, intestine] The passage of undigested food in the stools.

lienun'culus [L. dim. of *lien*, spleen.] Lien accessorius.

Lieutaud's body (le-ē-to') [Joseph *Lieutaud*, French physician, 1703–1780.] Trigone of the bladder. **L.'s sinus,** a connecting channel between the lateral sinus and the inferior longitudinal sinus. **L.'s tri'angle,** L.'s body. **L.'s u'vula,** a small median ridge in the trigone of the bladder.

life [A.S. *līf*.] 1. Vitality, the essential condition of existence of animals and plants; the state of existence characterized by metabolism. 2. The period of utility of any object, as of an electric battery, for example. **av'erage future l.,** expectation of life. **expecta'tion of l.,** the average length of time that a number of persons at a given age are presumed to live, according to the mortality table. **l. expec'tancy,** expectation of l. **limit of l.,** in life insurance the age at which, according to the mortality table, the last man is presumed to die; in the American Experience Table,* this age is ninety-six years. **prob'able l.,** in life insurance, the period at the end of which one-half of the number of persons of a given age at the beginning of the period will still be living. **veg'etative l.,** the simple metabolic and reproductive activity of man or animals, apart from the exercise of conscious mental or psychic processes.

life'-insu"rance. A contractual obligation assumed by a company or association of individuals to pay to the beneficiary or estate of a person, called the *insured*, a specified sum of money in the event of his death, on condition that the insured pay to the company either a certain amount yearly (a *premium*) or such sums as the company or association may from time to time call upon him to pay (*assessments*). See *policy* and *premium*. **l.-i. com'pany,** an association formed for the accumulation of a fund out of which to pay a specified sum to the heirs of any of the members who die; an *assessment company* is one the members of which are called upon, whenever one of their number dies, for a sum which will in the aggregate, after deducting expenses, pay the amount of the deceased's policy; a *mutual company* is one every member of which has theoretically a voice in its management and has an interest in the accumulated funds of the association in proportion to the amount he has contributed in premiums; a *stock company* is one controlled by a limited number of persons, the stockholders, who receive the profits of the business; a *mixed company* is a stock company the policy-holders of which share with the stockholders in the profits; an *old-line company* is one the premium rates of whose policies are fixed and are not subject to decrease or increase during the continuance of the policy; a *legal reserve company* is the same as an old-line company, such a company being required under the law to maintain a reserve in cash or approved securities not less in amount than the net value of all its policies in force; *fraternal, cooperative*, and *stipulated-premium companies* provide for the payment of death claims either by assessment or by a premium which is subject to change according to circumstances.

lig'ament [L. *ligamentum*, a band, bandage] 1. A band or sheet of fibrous tissue connecting two or more bones, cartilages, or other structures, or serving as support for fasciæ or muscles. 2. A fold of thickened peritoneum supporting any of the abdominal viscera. 3. Any structure resembling a ligament though not performing the function of such. 4. The remains of a fetal artery or other structure. [For the titles not given in the following list see under *ligamentum* or the eponymic term.] **cap'sular l.,** the sac-like membrane enclosing a joint more or less completely. **car'dinal l.,** one of several fibrous bands running through the base of the broad ligament of the uterus beside the vessels and nerves. **check l.,** ligamentum alare. **cil'iary l.,** musculus* ciliaris. **cot'yloid l.,** a fibrocartilaginous ring which deepens the cavity of the acetabulum, labrum* glenoidale. **cricosantorin'ian l.,** ligamentum corniculopharyngeum. **cru'ciform l.,** ligamentum transversum atlantis. **den'tal l.,** the part of the peridental membrane which surrounds the neck of a tooth. **interfove'olar l.,** ligamentum interfoveale. **lamb'doid l.,** ligamentum fundiforme pedis. **odon'toid l.,** ligamentum alare. **round l.,** ligamentum teres. **stell'ate l.,** ligamentum radiatum. **vesicoumbil'ical l.,** urachus.

ligamentopexis (lig"ă-men-to-pek'sis) [L. *ligamentum* + G. *pēxis*, fixation.] Alexander-Adams operation of shortening the round ligaments of the uterus.

ligamen'tous. Relating to or of the form or structure of a ligament.

ligamen'tum, pl. *ligamen'ta* [L. *ligare*, to bind.] Ligament.

l. acro"mioclavicula're [BNA], a fibrous band extending from the acromion process of the scapula to the clavicle.

l. adipo'sum, a fold of the synovial membrane of the knee-joint, containing more or less fat.

l. ala're, (1) [BNA] alar ligament, odontoid or check ligament, one of two short stout bands between the side of the odontoid process of the axis and the tubercle on the inner aspect of the condylar portion of the occipital bone; (2) plica alaris [BNA].

l. annula're, annular ligament, orbicular ligament, one of a number of ligaments encircling various parts; the principal annular ligaments in the [BNA] nomenclature are: *l. a. baseos stapedis*, *l. a. digitorum manus*, *l. a. digitorum pedis*, *l. a. radii*, *l. a. tracheale*

l. annula're bul'bi, l. pectinatum iridis [BNA].

l. annula're ra'dii [BNA], annular ligament of the radius, orbicular ligament encircling the head of the radius.

l. ap'icis den'tis [BNA], ligament of the apex of the tooth, suspensory ligament, middle odontoid ligament, running from the apex of the odontoid process to the anterior margin of the foramen magnum

l. arcua'tum exter'num, arcus lumbocostalis lateralis [BNA].

l. arcua'tum inter'num, arcus lumbocostalis medialis [BNA].

l. arcua'tum me'dium, a fibrous arch connecting the crura of the diaphragm and forming the anterior boundary of the hiatus aorticus.

l. arcua'tum pu'bis [BNA], l. pubicum inferius, the arcuate, inferior, or subpubic ligament; it is attached to the adjacent sides of the descending rami of the pubis and occupies the arch of the pubis, entering into the formation of the pelvic outlet.

l. arterio'sum [BNA], the remains of the ductus arteriosus.

ligamen'ta auricula'ria, auricular ligaments, ligaments of Valsalva, consisting of two sets the *extrinsic* which connect the auricle with the side of the head, and the *intrinsic* which unite the various portions of the auricular cartilage.

ligamen'ta ba'sium [BNA], ligaments of the bases of the metacarpal and metatarsal bones; transverse fibrous bands connecting the dorsal, palmar, and interosseous areas of these parts, called respectively *l. b. dorsalia*, *l. b. volaria*, and *l. b. interossea*.

l. bifurca'tum [BNA], bifurcated ligament, the internal or interosseous calcaneocuboid and the superior or external calcaneonavicular ligaments considered as one.

l. calca"neocuboid'eum [BNA], calcaneocuboid ligament, one of two fibrous bands (*l. c. dorsale* and *l. c. plantare*) connecting the two bones on their dorsal and plantar aspects; the *l.c. internum* or *interosseum* is the pars calcaneocuboidea [BNA] of the l. bifurcatum; the *l. c. longum* is the l. plantare longum (BNA].

l. calcaneofibula're [BNA], calcaneofibular ligament, middle fasciculus of the external lateral ligament of the ankle-joint.

l. calcaneonavicula're dorsa'le [BNA], dorsal or superior calcaneonavicular ligament, connecting the two bones on the dorsal aspect.

l. calcaneonavicula're exter'num or **supe'rius,** external or superior calcaneonavicular ligament, pass calcaneonavicularis [BNA] of the l. bifurcatum.

l. calcaneonavicula're planta're [BNA], plantar calcaneonavicular ligament, inferior calcaneonavicular ligament.

l. calca"neotibia'le [BNA], a section of the internal lateral ligament (l. deltoideum) which extends from the tip of the internal malleolus to the inner side of the astragalus.

l. capit'uli cos'tæ interarticula're [BNA], transverse fibers extending within the capsule from the ridge between the two facets on the head of the rib to the intervertebral disc.

l. capit'uli cos'tæ radia'tum [BNA], radiate, stellate, or anterior costovertebral ligament connecting the head of each rib to the bodies of the two vertebræ with which it articulates.

ligamen'ta capit'uli fib'ulæ [BNA], anterosuperior and posterosuperior tibiofibular ligaments, connecting the upper extremities of the tibia and fibula.

ligamen'ta capitulo'rum transver'sa [BNA], transverse metacarpal (or metatarsal) ligaments, binding together the heads of the metacarpal (or metatarsal) bones.

l. capsula're, capsula articularis [BNA].

l. car'pi radia'tum [BNA], the collective term for the ligaments on the floor of the carpal canal which connect the individual carpal bones, radiating toward the capitatum (os magnum).

ligamen'ta carpometacarpe'a [BNA], carpometacarpal ligaments, uniting the metacarpal and carpal bones; they are of two sets—dorsal (*l. c. dorsalia*) and palmar (*l. c. volaria*).

l. cauda'le [BNA], caudal ligament, one of several fibrous bands attaching the skin to the coccyx.

l. centra'le, filum terminale.

l. ceratocricoid'eum [BNA], one of three ligaments (*anterius*, *posterius*, and *laterale*) reinforcing the capsule of the cricothyroid articulation on either side.

ligamen'ta cin'guli extremita'tis inferio'ris [BNA], ligaments of the pelvic girdle.

ligamen'ta cin'guli extremita'tis superio'ris [BNA], ligaments of the shoulder girdle.

l. collatera'le car'pi radia'le [BNA], external lateral ligament of the wrist, connecting the scaphoid (os naviculare) and trapezium (os multangulum majus) on their radial aspects.

l. collatera'le car'pi ulna're [BNA], internal lateral ligament of the wrist, connecting the cuneiform (os triquetrum) and unciform (os hamatum) on their ulnar surfaces.

l. collatera'le fibula're [BNA], fibular collateral ligament, long external lateral ligament of the knee-joint.

l. collatera'le radia'le [BNA], radial collateral ligament, external lateral ligament of the elbow.

l. collatera'le tibia'le [BNA], tibial collateral ligament, internal lateral ligament of the knee-joint.

l. collatera'le ulna're [BNA], ulnar collateral ligament, internal lateral ligament of the elbow.

ligamen'ta collatera'lia BNA], internal and external lateral ligaments of the metacarpophalangeal (or metatarsophalangeal) and interphalangeal articulations.

l. coll'i cos'tæ [BNA], middle costotransverse ligament, a fibrous band extending from the back part of the neck of the rib backward and inward to the front of the transverse process of the vertebra and to the back part of the inferior articular process of the vertebra above.

l. conoid'eum [BNA], conoid ligament, connecting the coracoid process of the scapula with the conoid tubercle of the clavicle.

l. cor"acoclavicula're [BNA], a strong fibrous band connecting the acromial end of the clavicle with the coracoid process of the scapula.

l. coracohumera'le [BNA], coracohumeral ligament, accessory ligament of the shoulder, passing between the external border of the root of the coracoid process and the neck of the humerus close to the great tuberosity.

l. corniculopharynge'um [BNA], corniculopharyngeal ligament, l. jugale, cricosantorinian ligament, an elastic band connecting the tip of the corniculate (Santorini's) cartilage and the lamina of the cricoid cartilage, which is attached also to the wall of the pharynx.

l. corona'rium hep'atis [BNA], coronary ligament of the liver, consists of folds of peritoneum extending from the liver to the diaphragm at the margins of the uncovered area of the right lobe.

ligamen'ta coruscan'tia, ligamenta intercostalia externa.

l. costoclavicula're [BNA], costoclavicular ligament, rhomboid ligament, connecting the first rib with the clavicle, near their sternal articulations.

l. costocol'icum, l. phrenicocolicum [BNA].

l. costotransversa'rium ante'rius [BNA], anterior, or superior, costotransverse ligament, a strong fibrous band extending from the upper border of the neck of the rib upward and outward to the transverse process of the vertebra and the capsular ligament of the costotransverse articulation above.

l. costotransversa'rium poste'rius [BNA], a band of fibers strengthening the capsule, extending from the tubercle of the rib to the tip of the transverse process of the vertebra.

l. costoxiphoid'eum [BNA], costoxiphoid ligament, chondroxiphoid ligament, connecting the xiphoid process and the seventh, and sometimes sixth, costal cartilage.

l. cotyloid'eum, labrum glenoidale of the hip.

l. cricoarytænoid'eum posterius [BNA], posterior cricoarytenoid ligament, a strong elastic band, reinforcing posteriorly the capsule of the cricoarytenoid articulation, passing between the external surface of the arytenoid cartilage to the upper margin of the lamina of the cricoid.

l. cricopharynge'um [BNA], the lower part of the jugal ligament (l. corniculopharyngeum) attached to the lamina of the cricoid cartilage.

l. cricothyreoid'eum [BNA], the strong, tense, middle portion of the cricothyroid membrane.

l. cricotrachea'le [BNA], a fibrous band connecting the cricoid cartilage with the first ring of the trachea.

ligamen'ta crucia'ta digito'rum [BNA], the distal portions of the vaginal ligaments, or synovial sheaths of the fingers and toes, where they become thin and interrupted, the fasciculi crossing each other.

ligamen'ta crucia'ta ge'nu [BNA], crucial ligaments of the knee, two ligaments, anterior and posterior (*l. c. g. ante'rius* and *l. c. g. poste'rius*), within the capsule of the knee-joint; they extend from the nonarticular surface of the head of the tibia to the sides of the intercondyloid notch of the femur.

l. crucia'tum atlan'tis [BNA], a threefold ligament consisting of a transverse limb formed by the superficial fibers of the transverse ligament of the atlas, a lower part whose fibers run longitudinally from the posterior surface of the body of the axis to the transverse limb, and an upper part with longitudinal fibers running from the transverse limb to the occipital bone.

l. crucia'tum cru'ris [BNA], cruciate ligament of the leg, lower part of the anterior annular ligament of the ankle.

l. cuboid''eonavicula're [BNA], **l. cubonaviculare** [NK], scaphocuboid ligament, one of two ligaments, *l. c. dorsale* and *l. c. plantare*, uniting the cuboid and navicular bones of the tarsus.

l. cu"neocuboid'eum [BNA], one of three ligaments, *l. c. dorsale*, *l. c. interosseum*, and *l. c. plantare*, uniting the cuneiform and cuboid bones of the tarsus.

l. deltoid'eum [BNA], deltoid ligament, combined internal lateral ligament of the ankle-joint and anterior and posterior tibiotarsal ligaments.

l. denticula'tum [BNA], denticulate ligament, the suspensory ligament of the spinal cord in its dura mater sheath, a fibrous band, extending from the spinal pia mater on either side, which presents on its outer or free edge from twenty to twenty-three or more triangular projections, the tips of which, together with the arachnoid covering them, are attached to the inner surface of the dura mater in the intervals between the nerve-roots.

l. duc'tus veno'si, the remains of the ductus venosus which is obliterated at birth.

l. duode"norena'le [BNA], a fold of peritoneum occasionally passing from the termination of the hepatoduodenal ligament to the front of the right kidney.

l. epididym'idis [BNA], one of two folds of the tunica vaginalis above (*l. e. superius*) and below (*l. e. inferius*) the digital fossa (sinus epididymidis), supporting the epididymis.

l. falcifor'me, processus falciformis [BNA].

l. falcifor'me hep'atis [BNA], a crescentic fold of peritoneum attached to the parietal surface of the liver and to the diaphragm and anterior abdominal wall; also called broad ligament and suspensory ligament.

ligamen'ta fla'va [BNA], yellow ligaments, ligamenta subflava, ligaments, of yellow elastic fibrous tissue, which bind together the laminæ of adjoining vertebræ.

l. fundifor'me pe'dis, l. Retzii, lambdoid ligament an extension of the anterior annular ligament of th ankle over the extensor tendons of the dorsum of th foot

l. fundifor'me pe'nis [BNA], a band of elastic fiber running from the linea alba, about 2 inches above th symphysis, to the dorsal surface of the fascia of th penis.

l. gastrocol'icum [BNA], the gastrocolic or grea omentum.

l. gastroliena'le [BNA], gastrosplenic omentum, reflection of peritoneum from the fundus of the stomac to the hilum and gastric surface of the spleen.

l. gastrophren'icum, a small peritoneal fold runnin up along the left side of the esophagus from the stom ach to the diaphragm.

l. glenoida'le, labrum glenoidale of the shoulder.

l. hep"atocol'icum [BNA], an inconstant extension the l. hepatoduodenale to the transverse colon.

l. hep"atoduodena'le [BNA], the portion of lesse omentum connecting the duodenum and liver.

l. hep"atogas'tricum [BNA], the portion of th lesser omentum connecting the stomach and the liver.

l. hepatorena'le [BNA], the combined hepatoduo denal and duodenorenal ligaments.

l. hyoepiglot'icum [BNA], hyoepiglottic or hyo epiglottidean ligament, a short elastic band connectin the anterior face of the epiglottis to the upper borde of the hyoid bone.

l. hyothy"reoid'eum latera'le [BNA], the posteri border of the hyothyroid membrane.

l. hyothy"reoid'eum me'dium [BNA], middle thy rohyoid ligament, the central thickened portion of th hyothyroid membrane.

l. iliofemora'le [BNA], iliofemoral ligament, Y shaped ligament of Bigelow; a triangular ligamen attached above, by its apex, to the anterior inferi spine of the ilium and rim of the acetabulum and belo to the anterior intertrochanteric line of the femur.

l. in'cudis [BNA], one of two ligaments of th incus: *l. i. posterius*, attaching the short process of th incus to the fossa incudis; and *l. i. superius*, a fold mucous membrane with a little fibrous tissue runnir from the incus to the roof of the recessus epitympanicu

l. inguina'le [BNA], inguinal ligament, Poupart ligament, a fibrous band extending from the anteri superior spine of the ilium to the spine of the pubis.

l. inguina'le reflex'um [BNA], reflex inguinal lig ment, Colles's ligament, triangular fascia of the abd men, a triangular fibrous band passing from the ap neurosis of the obliquus externus abdominis to th spine and crest of the pubis of the opposite side.

ligamen'ta intercarpe'a [BNA], three sets of sho fibrous bands, binding together the bases of each ro of carpal articulations; according to their location the are named *l. i. dorsalia*, *l. i. interossea*, and *l. i. volaria*.

l. interclavicula're [BNA], a strong fiborus bar passing between the sternal ends of the clavicles di ping down into the sternal notch and attached to th sternum there.

ligamen'ta intercosta'lia [BNA], intercostal lig ments in two sets, *l. i. exter'na* and *l. i. inter'na*: th former are tendinous fibers running in the same dire tion and replacing the fibers of the external intercost muscles in the spaces between the costal cartilage the latter replace the fibers of the internal intercost muscles between the posterior extremities of the ribs

ligamen'ta intercu"neifor'mia [BNA], intercuneifor ligaments, stout fibrous bands uniting the cuneifor bones of the tarsus; they are of two sets *l. i. inteross* and *l. i. plantaria*.

l. interfoveola're [BNA], Hesselbach's ligament, t outer portion of the conjoined tendon (when th structure is divisible into two parts) crossing Hess bach's triangle.

ligamen'ta interspina'lia [BNA], interspinous lig ments, bands of interlacing fibers passing oblique from the under surface of the spinous process of o vertebra downward and backward to the upper surfa of the spinous process of the vertebra below.

ligamen'ta intertrans"versa'ria [BNA], fibrous ban extending from the posteroinferior portion of the trar verse process of one vertebra to the upper part of th of the vertebra below.

l. is"chiocapsula're [BNA], a broad band of longitudinal fibers extending from the ischium between the small sciatic notch and the obturator foramen to the orbicular zone of the capsule of the hip-joint.

l. juga'le, l. corniculopharyngeum [BNA].

l. lacinia'tum [BNA], fringed ligament, internal annular ligament, a wide band passing from the internal malleolus to the inner and upper border of the os calcis and to the plantar surface as far as the naviculas bone; it holds in place the sheaths of the tibialis posterior, flexor digitorum longus, and flexor hallucis longus.

l. lacuna're [BNA], lacunar ligament, Gimbernat's ligament, a triangular fibrous band passing horizontally backward from the l. inguinale to the iliopectineal line; its outer edge bounds the crural ring internally.

l. latera'le, l. collaterale [BNA].

l. la'tum pulmo'nis, a fold formed of the two layers of pleura below the root of the lung, stretching between the pericardium and the lung

l. la'tum u'teri, broad ligament of the uterus, the peritoneal fold passing from the lateral margin of the uterus to the wall of the pelvis on either side.

l. longitudina'le [BNA], longitudinal ligament, common ligament of the spine; the *anterior* is a wide band attached to the anterior surface of the bodies of the vertebræ and the intervertebral discs from the axis to the upper segment of the sacrum; the *posterior*, within the spinal canal, is attached to the posterior surface of the bodies of the vertebræ and intervertebral discs from the axis to the sacrum.

l. lumbocosta'le [BNA], lumbocostal ligament, external arcuate ligament, the upper margin of the anterior layer of the lumbodorsal fascia, forming a tendinous band which passes between the transverse process of the first lumbar vertebra and the twelfth rib.

l. mall'ei ante'rius [BNA], consists of two portions: Meckel's band, passing from the base of the long process to the spine of the sphenoid through the Glaserian fissure; and the anterior ligament of Helmholtz, extending from the anterior aspect of the malleus above the base of the long process to the anterior boundary of the notch of Rivinus.

l. mall'ei latera'le [BNA], external ligament of the malleus, a short fan-shaped ligament, the fibers converging from the posterior half of the notch of Rivinus to the crista mallei.

l. mall'ei supe'rius [BNA], a ligament extending from the head of the malleus to the roof of the epitympanic recess.

l. malle'oli latera'lis [BNA] lateral or external malleolar ligament, one of two ligaments, *l. m. l. anterius* and *l. m. l. posterius*, passing obliquely between tibia and fibula upon the anterior and posterior surfaces respectively of the lower ends of the two bones.

l. menis'ci latera'lis, Wrisberg's ligament, a bundle of fibers passing from the lateral meniscus to the posterior cruciate ligament of the knee-joint.

l. muco'sum, plica synovialis patellaris [BNA].

l. natato'rium, thickened transverse fascial fibers in the webs of the fingers.

ligamen'ta navicula"ricuneifor'mia [BNA], scaphocuneiform ligaments, dorsal and plantar bands strengthening the capsule of the cuneonavicular articulation.

l. nu'chæ [BNA], the strong ligamentous band at the back of the neck, formed of thickened supraspinous vertebral ligaments, attached above to the occipital crest from the external occipital protuberance to the posterior border of the foramen magnum.

l. orbicula're ra'dii, orbicular ligament of the radius, l. annulare radii [BNA].

l. ova'rii pro'prium [BNA], a cord-like bundle of smooth muscular fibers passing to the side of the uterus from the lower end of the ovary, between the folds of the broad ligament.

l. palpebra'le exter'num, raphe palpebralis lateralis [BNA].

l. palpebra'le media'le [BNA], medial palpebral ligament, internal tarsal ligament, a strong fibrous band attached to the nasal process of the maxillary bone and to the margins of the upper and lower tarsi.

l. patell'æ [BNA], the anterior ligament of the knee-joint, a strong flattened fibrous band passing from the apex and adjoining margins of the patella to anterior tuberosity at the upper end of the shaft of the tibia.

l. pectina'tum ir'idis [BNA], pectinate ligament of the iris, pillars of the iris, radiating fibers from the posterior layer of the lamina elastica posterior of the cornea which pass into the substance of the iris.

l. phrenicocol'icum [BNA], l. phrenocolicum, l. costocolicum, sustentaculum lienis; a triangular fold of peritoneum attached to the splenic flexure of the colon and to the diaphragm.

l. phrenicolie'na'le [BNA], phrenicosplenic, or lienophrenic ligament, a continuation of the l. gastrolienale passing to the diaphragm.

l. pisohama'tum [BNA], pisiunciform ligament, a strong fibrous band extending from the lower and inner aspect of the pisiform bone to the hook of the unciform bone.

l. pisometacarpe'um [BNA], the pisimetacarpal ligament, a strong fibrous band extending from the lower and inner aspect of the pisiform bone to the base of the fifth metacarpal bone.

l. planta're lon'gum [BNA], long plantar ligament long calcaneocuboid ligament.

l. poplite'um arcua'tum [BNA], arcuate popliteal ligament passing in a curved manner (with concavity directed upward) above the tendon of the popliteus muscle, reinforcing the posterior wall of the capsular ligament of the knee-joint.

l. poplite'um obli'quum, [BNA], oblique popliteal ligament, posterior ligament of the knee-joint.

l. pterygospino'sum [BNA], a membranous ligament extending from the spinous process of the sphenoid to the upper part of the posterior free margin of the external pterygoid plate.

l. pu'bicum supe'rius [BNA], superior pubic ligament, consisting of a few transverse fibers passing between the two pubic crests.

l. pubocapsula're [BNA], pubocapsular ligament, pubofemoral ligament, pubocapsular band, ligamentous bands extending from the iliopectineal eminence and obturator crest to the capsule of the hip-joint and, a few fibers, to the inferior aspect of the neck of the femur.

l. pubofemora'le, l. pubocapsulare.

l. puboprostat'icum (pubovesica'le) latera'le [BNA], lateral true ligament of the bladder; a process of pelvic fascia on either side, extending from the bladder to the side wall of the pelvis.

l. puboprostat'icum (pubovesica'le) me'dium [BNA], anterior true ligament of the bladder, a process of pelvic fascia extending from the pubis to the bladder.

l. pulmona'le [BNA], l. latum pulmonis, a fold of two layers of pleura prolonged downward between the pericardium and lower part of the inner surface of the lung.

l. radia'tum, radiate ligament, stellate or anterior costovertebral ligament, connecting the head of each rib to the bodies of two vertebræ.

l. radiocarpe'um dorsa'le [BNA], dorsal radiocarpal ligament, posterior ligament of the wrist-joint.

l. radiocarpe'um vola're [BNA], volar radiocarpal ligament, anterior ligament of the wrist-joint.

l. Ret'zii, l. fundiforme pedis.

l. rhomboida'le, (1) a l. connecting the clavicle and cartilage of the first rib; (2) a l. connecting the lower end of the radius with the cuneiform and unciform bones.

l. sacrococcyge'um [BNA], one of four ligaments of the sacrococcygeal articulation; they are *l. s. anterius*, *l. s. laterale*, *l. s. posterius profundum*, and *l. s. posterius superficiale*.

l. sacrodura'le, fibrous filaments running from the middle line of the spinal dura to the posterior ligament of the sacral spine.

ligamen'ta sacroili'aca anterior'a [BNA], anterior sacroiliac ligaments passing between the ala of the sacrum and the iliac fossa of the innominate bone.

ligamen'ta sacroili'aca interos'sea [BNA], short oblique fibers filling the hollow of the posterior portion of the sacroiliac articulation, covered by the posterior sacroiliac ligament.

l. sacrospino'sum [BNA], sacrospinous ligament, anterior or small sacrosciatic ligament, extending from the fourth and fifth segments of the sacrum and first segment of the coccyx to the tip and upper surface of the spine of the ischium.

l. sacrotubero'sum [BNA], sacrotuberous ligament, posterior or great sacrosciatic ligament, extending between the posterior inferior spine of the ilium, the third, fourth, and fifth segments of the sacrum and the first segment of the coccyx, and the tuberosity of the ischium immediately below the lesser sciatic notch.

l. sacroili'acum poste'rius [BNA], one of two ligaments, short (breve) and long (longum), passing between the ilium and the transverse tubercles of the sacrum.

l. sero'sum [BNA], serous band or ligament, a supporting band, composed chiefly of a fold of peritoneum, attaching certain of the viscera to the abdominal wall or to each other

l. sphenomandibula're [BNA], sphenomandibular ligament, internal lateral ligament of the jaw.

l. spira'le coch'leæ [BNA], spiral ligament of the cochlea, the thickened periosteal lining of the bony cochlea, forming the outer wall of the ductus cochlearis.

l. sternocosta'le [BNA], one of the chondrosternal ligaments, connecting the rib cartilage and the sternum; either the interarticular, or the anterior or posterior (radiate [BNA]) ligaments.

l. ster"noclavicula're [BNA], one of two ligaments, anterior and posterior, forming thickened parts of the capsule of the sternoclavicular articulation.

ligamen'ta sternoper"icardi'aca [BNA], sternopericardial ligaments attaching the anterior surface of the fibrous pericardium to the sternum.

l. sty"lohyoid'eum [BNA], a ligament passing down from the extremity of the styloid process of the temporal bone to the lesser cornu of the hyoid bone; it is occasionally ossified

l. stylomandibula're [BNA], stylomandibular ligament, stylomaxillary ligament, a condensation of the deep cervical fascia extending from the tip of the styloid process of the temporal bone to the posterior border of the angle of the jaw.

l. subfla'vum, yellowish ligament, l flavum [BNA].

ligamen'ta supraspina'lia [BNA], supraspinous ligaments, longitudinal fibrous bands attached to the tips of the spinous processes of the vertebræ; in the cervical region they are thickened and form the l. nuchæ

l. suspenso'rium clitor'idis [BNA], a triangular fibrous band passing from the symphysis pubis to the fibrous envelope of the body of the clitoris.

l. suspenso'rium ova'rii [BNA], a triangular fold of peritoneum passing upward from the upper pole of the ovary; it is part of the l. latum uteri.

l. suspenso'rium pe'nis [BNA], a triangular band of fibrous tissue extending from the front of the symphysis pubis to the fibrous capsule of the penis.

l. talocalca'neum [BNA], one of five ligaments uniting the astragalus and os calcis; they form a capsule and are named: *l. t. anterius*, *l. t. laterale*, *l. t. mediale*, *l. t. posterius*, and *l. t. interosseum*.

l. talofibula're ante'rius [BNA], anterior talofibular ligament, anterior fasciculus of the external lateral ligament of the ankle-joint.

l. talofibula're poste'rius [BNA], posterior talofibular ligament, posterior fasciculus of the external lateral ligament of the ankle-joint.

l. talonavicula're dorsa'le [BNA], dorsal talonavicular ligament, superior astragalonavicular ligament.

l. talotibia'le ante'rius [BNA], a division of the internal lateral (deltoid) ligament of the ankle extending from the front of the internal malleolus to the neck of the astragalus.

l. talotibia'le poste'rius [BNA], a band strengthening the internal lateral (deltoid) ligament of the ankle which extends from the back of the inner malleolus to the posterointernal surface of the astragalus

l. tarsa'le exter'num, external tarsal ligament, raphe palpebralis lateralis [BNA]

l. tarsa'le inter'num, internal tarsal ligament, ligamentum palpebrale mediale [BNA].

ligamen'ta tarsometatarse'a [BNA], tarsometatarsal ligaments, uniting the metatarsal and tarsal bones; they are of two sets: dorsal (*l. t. dorsalia*) and plantar (*l. t. plantaria*).

l. temporomandibula're [BNA], temporomandibular ligament, external lateral ligament of the jaw.

l. te'res fem'oris [BNA], round ligament of the femur, a flattened band of fibrous tissue extending from the borders of the acetabular notch to a depression in the head of the femur; it carries the nutrient vessels to the intracapsular portion of the femur.

l. te'res hep'atis [BNA], round ligament of the liver, a fibrous cord, lying in the umbilical fossa or fissure, the remains of the umbilical vein of the fetus.

l. te'res u'teri [BNA], round ligament of the uterus, a fibromuscular band attached to the uterus on either side, in front of and below the opening of the Fallopian tube, and passing down through the inguinal canal to end in the labium majus.

l. thyreoarytæno'eum infe'rius, inferior thyroarytenoid ligament, l. vocale [BNA]

l. thyreoarytæno'eum supe'rius, superior thyroarytenoid ligament, l. ventriculare [BNA].

l. thyreoepiglot'icum [BNA], thyroepiglottic or thyroepiglottidean ligament, a thick elastic band passing from the lower extremity of the epiglottis to the angle between the alæ of the thyroid cartilage just below the superior notch.

l. tibiofibula're me'dium, interosseous membrane of leg, membrana interossea cruris [BNA].

l. tibionavicula're [BNA], a section of the internal lateral ligament of the ankle extending from the tip of the inner malleolus to the inner side of the navicular (scaphoid) bone.

l. transver'sum acetab'uli [BNA], a fibrous band which bridges the acetabular notch, being attached to both of its margins.

l. transver'sum atlan'tis, transverse ligament of the atlas, Lauth's ligament, a strong band arching across the ring of the atlas behind the odontoid process

l. transver'sum cru'ris [BNA], transverse ligament of the leg, upper, broad part of the anterior annular ligament of the ankle.

l. transver'sum ge'nu [BNA], transverse ligament of the knee, a rounded fibrous band passing from one to the other convex margin of the two semilunar cartilages.

l. transver'sum pel'vis [BNA], transverse ligament of the pelvis, median puboprostatic ligament of Krause, the truncated apex of the urogenital diaphragm or triangular ligament of the pelvis

l. transver'sum scap'ulæ infe'rius [BNA], inferior transverse scapular ligament, spinoglenoid ligament, fibers passing from the external border of the spine of the scapula to the posterior aspect of the head of that bone

l. transver'sum scap'ulæ supe'rius [BNA], superior transverse ligament of the scapula, suprascapular ligament, a flat fibrous band crossing the suprascapular notch

l. transver'sum superficia'le, l natatorium

l. trapezoid'eum, trapezoid ligament, connecting the coracoid process of the scapula and the under surface of the acromial end of the clavicle.

l. triangula're, diaphragma urogenitale [BNA]; deep layer, fascia diaphragmatis urogenitalis superior [BNA], superficial layer, fascia diaphragmatis urogenitalis inferior [BNA].

l. triangula're dex'trum [BNA], right triangular ligament, the divergent right extremity of the coronary ligament of the liver.

l. triangula're hep'atis, triangular ligament of the liver, a triangular peritoneal fold reflected from the upper surface of the left lobe of the liver to the diaphragm.

l. triangula're sinis'trum [BNA], left triangular ligament, the divergent left extremity of the coronary ligament of the liver

l. tuber'culi cos'tæ [BNA], ligament of the costal tubercle posterior costotransverse ligament, a short quadrangular ligament, reinforcing the capsule of the costotransverse articulation, which passes outward and slightly upward from the tip of the transverse process of the rib to the posteri or surface of the neck of the articulating rib

l. umbilica'le latera'le [BNA], lateral umbilical ligament, the obliterated umbilical artery between the vertex of the bladder and the umbilicus.

l. umbilica'le me'dium [BNA], middle umbilical ligament, a cord passing from the apex of the bladder along

the posterior surface of the anterior abdominal wall to the umbilicus, the remains of the urachus.

l. vagina'le, (1) [BNA] vaginal or sheath ligament, a fibrous band, or fascia-like expansion which maintains a tendon-sheath in position; (2) a fibrous band, occasionally found in the adult, passing through the inguinal canal, representing the obliterated portion of the processus vaginalis.

ligamen'ta vagina'lia digito'rum [BNA], see l. vaginale (1).

l. ve'næ ca'væ sinis'træ [BNA], ligament of the left vena cava, vestigial fold of Marshall, a pericardial fold between the left branch of the pulmonary artery and the left superior pulmonary vein.

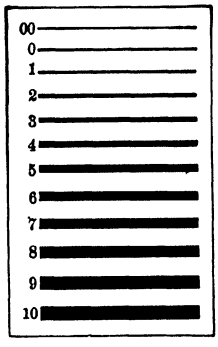
l. veno'sum [BNA], ligament of Arantius, a thin fibrous cord, lying in the fossa ductus venosi, the remains of the ductus venosus of the fetus.

l. ventricula're [BNA], ventricular ligament, l. thyreoarytænoideum superius, supports the false vocal cord; it runs between the thyroid and arytenoid cartilages above the l. vocale.

l. vesicouteri'num, vesico-uterine ligament, a peritoneal fold extending from the uterus to the posterior portion of the bladder.

l. voca'le [BNA], l. thyreoarytænoideum inferius, supports the true vocal cord; it forms the upper edge of the lateral part of the cricothyroid membrane, being attached anteriorly to the middle of the angular depression formed by the junction of the alæ of the thyroid cartilage, posteriorly to the process vocalis of the arytenoid cartilage.

Lig'at's test [David *Ligat*, English surgeon, contemporary.] A test for cutaneous hyperesthesia in cases of disease of the abdominal organs; the sensitiveness of the skin is tested by taking a pinch of the skin between the thumb and forefinger and lifting it up from the deeper parts.



Sizes of Ligatures.

li'gate [L. *ligare*, to bind.] To apply a ligature; to constrict a blood-vessel or the pedicle of a tumor by means of a tightly tied thread or fillet.

liga'tion. The application of a ligature.

li'gator. An instrument employed in the ligation of vessels in deep and nearly inaccessible parts.

ligature (lig'a-chūr) [L. *ligatura; ligare*, to tie.] 1. A thread, wire, fillet, or the like, tied tightly around a blood-vessel, the pedicle of a tumor, or other structure in order to constrict it. 2. Ligation. **elas'tic l.,** one of india-rubber which slowly cuts through the part by reason of its contractility. **provis'ional l.,** one applied to an artery in continuity at the beginning of an operation to prevent hemorrhage, but removed when the operation is completed. **sol'uble l.,** a l. of catgut or other animal material, which eventually is absorbed or becomes organized.

light (lit) [A.S. *leōht.*] Ethereal waves to which the retina is sensitive and which thus render visible the object whence they proceed. **intrin'sic l.,** a very faint glow seen on looking at the retina in the dark. **l. treat'ment,** phototherapy, Finsen method. **l. waves,** the undulations in the ether to which the retina is sensitive. **po'larized l.,** l. in which, as a result of reflection or transmission through certain media, the vibrations are all in one plane, transverse to the ray, instead of in all planes.

light-touch palpa'tion. A method of determining the outlines of the thoracic and abdominal organs by lightly palpating the surface with the tip of a finger.

Lignières' test (lēn-yeair') [J. *Lignières*, French physician in Buenos-Aires, contemporary.] Cutituberculin* reaction.

lig'nin [L. *lignum*, wood.] A substance, $C_{18}H_{18}O_9$, resembling cellulose, present in vegetable fiber and wood-cells.

lig'num [L.] Wood. **l. benedic'tum, l. sanc'tum, l. vi'tæ** [L. blessed wood, holy wood, wood of life] guaiaci lignum.

lig'ula [L. strap.] 1. A lamina of white nerve-substance forming the lateral boundary of the floor of the fourth ventricle of the brain; it passes from the clava upward over the cuneate tubercle to the restiform body. 2. An appendage projecting from the base of a leaf blade above the insertion of the leaf. 3. The blade of the corolla in composite flowers.

ligule (lig'ūl). Ligula.

ligus'ticum. Levisticum,* lovage.

Lil'ienthal's probe [Howard *Lilienthal*, New York surgeon, *1861.] Electric probe; two wires are attached to the tip of a probe composed of two or four pieces of metal insulated from the shank; these wires run to two plates, one of zinc and one of copper, placed above and below the examiner's tongue; if the probe touches a bullet or other piece of metal there will be a metallic taste produced in the mouth.

lil'y of the vall'ey. Convallaria.

lil'y-rash. A form of dermatitis affecting flower-pickers, especially those handling daffodils and narcissus; it is a papular, vesicular, or pustular eruption on an erythematous base.

li'man cure [Rus. *liman*, estuary.] Mud cure practised in the salt marshes near Odessa, Russia.

li'manol. A preparation of the mud used in the liman cure at Odessa.

limatu'ra, li'mature [L. *lima*, a file.] Filings; specifically, **l. ferri,** iron filings.

limb [A.S. *lim.*] 1. An extremity, a member, an arm or leg. 2. A segment of any jointed structure. **pel'vic l.,** a lower extremity. **thorac'ic l.,** an upper extremity.

limber-neck (lim'bur-nek). A disease of chickens marked by inertness, muscular weakness, especially of the neck which makes eating impossible, and results in death in a few days; it is due to eating the larvæ of the green fly, *Lucilia cæsar*, infected with *Clostridium luciliæ.*[0]

lim'bic. Relating to a limbus. **l. lobe,** gyrus fornicatus.

lim'bus [L. a border.] The edge, border, or fringe of a part. **l. alveola'ris** [BNA] the free margin of the alveolar process of the maxilla or mandible. **l. angula'ris,** the oblique line on the side of the thyroid cartilage. **l. cor'neæ** [BNA], the margin of the cornea where it is overlapped by the sclera. **l. fos'sæ ova'lis** [BNA], annulus ovalis, a muscular ring surrounding the fossa ovalis in the wall of the right auricle (atrium) of the heart. **l. lam'inæ spira'lis,** the border of the spiral lamina, the thickened periosteum covering the upper plate of the lamina spiralis ossea of the cochlea. **l. lu'teus,** macula lutea. **lim'bi palpebra'les** [BNA], the anterior and posterior edges, l. p. cutaneus [NK] and l. p. conjunctivalis [NK] margins of the eyelids.

lime. 1. Fruit of the lime-tree, *Citrus medica*, the juice of which is employed to make an acidulous

drink. 2. Calcium oxide, CaO, *quick lime;* on the addition of water this is converted into calcium hydrate, $Ca(OH)_2$, *slaked lime; air-slaked lime* is formed from quick lime on exposure to air and is a mixture of calcium hydrate and calcium carbonate; lime is official in U.S.P. and B.P. under the name *calx.** **l. juice,** succus citri (N.F.).

li'men, gen *lim'inis,* pl *lim'ina* [L.] Threshold; edge. **l. in'sulæ** [BNA], threshold of the island of Reil, the band of transition between the anterior portion of the gray matter of the insula and the anterior perforated substance. **l. na'si** [BNA], a ridge marking the boundary between the nasal cavity proper and the vestibule.

lim'inal. Relating to the threshold* of consciousness or perception

lim'itans [L. *limitare,* to limit] Limiting, see *membrana limitans.*

limitroph'ic [L. *limes,* limit, + G. *trophē,* nourishment.] Controlling nutrition, noting the sympathetic nervous system.

limne'mia, limnæ'mia [G. *limnē,* marsh, + *haima,* blood.] Chronic malaria, malarial cachexia.

limne'mic. Suffering from malarial cachexia.

li'mo, gen. *limo'nis* [L.] Lemon. **limo'nis cor'tex** (U.S., Br.), lemon peel, the fresh outer rind of the ripe lemon, the fruit of *Citrus limonum;* stomachic in doses of gr. 1–5 (0.06–0.3), but employed chiefly as a flavor in pharmaceutical preparations. **limo'nis cor'tex sicca'tus,** dried lemon peel. **limo'nis suc'cus,** succus limonis (Br.), lemon juice, the freshly expressed juice of the ripe lemon, the fruit of *Citrus limonum;* employed as a preventive and curative agent in scurvy, and as a refrigerant diuretic in fever, in the form of lemonade

limophthisis (li-mof'the(thi)sis) [G. *limos,* hunger, + *phthisis,* wasting.] Emaciation from lack of sufficient nourishment.

limo'sis [G. *limos,* hunger.] Hunger, especially abnormal or inordinate hunger.

limother'apy [G. *limos,* hunger, + *therapeia,* treatment] Hunger-cure; treatment of disease by a restricted diet or absolute fasting.

limp ing. Walking lame, with a yielding step, claudication. **intermitt'ent l.,** (1) a disease in the horse in which the animal goes lame suddenly, but temporarily, after a period of exercise; (2) a similar condition noted occasionally in man, of temporary weakness and pain, localized in one or more muscles in one of the limbs or trunk, due to disturbance of nutrition resulting from sclerosis in the arterial supply; dysbasia angiospastica, dysbasia angiosclerotica intermittens, myasthenia angiosclerotica, angina cruris, dyspragia intermittens.

lina'ria. Toad-flax, butter and eggs, snap-dragon; the plant *Linaria vulgaris;* diuretic and laxative, has been used in hemorrhoids.

linc'ture, linc'tus [L. *lingere,* to lick.] Electuary, confection, originally a medical preparation taken by licking.

Lindau's disease (lin'dow) [Arnold *Lindau,* Swedish physician, 20th century.] Hemangioblastoma of the cerebellum or medulla oblongata, associated with renal hypenephroma and usually retinal angioma, occurring as a familial affection; Hippel's disease.

lin'den-flow'ers. Tilia, the dried flowers of *Tilia europæa* and *T. sylvestris,* the linden, lime, or basswood tree; employed in domestic medicine, in the form of an infusion, or tea, ʒi (4.0) to the pint (480.0), for the relief of nervous headache and hysterical manifestations.

Lin'dera benzo'in. The spicebush, a North American shrub, the bark of which is diaphoretic, stimulant, and antipyretic in doses of ʒ½–2 (2.0–8.0) of a fluidextract.

line [L. *linea.*] 1. A long narrow mark, strip, or streak, distinguished, in anatomy, from the adjacent tissues by color, texture, or elevation. 2. An obsolete unit of measure, $\frac{1}{12}$ inch. (For the anatomical lines, see under *linea.*) **absorp'tion l.,** see under *absorption.* **alve'olona'sal l.,** a line connecting the alveolar point and the nasion. **ax'illary l.,** one of three perpendicular lines used as guides in physical diagnosis; the *anterior* passes through the anterior fold, and the *posterior* through the posterior fold, while the *midaxillary* line passes through the center of the axillary space **basina'sal l.,** a line connecting the basion and the nasion. **blue l.,** a bluish discoloration along the dental edges of the gums, seen in cases of chronic lead poisoning. **base l.,** a line corresponding to the base of the skull, passing from the infraorbital ridge to the midline of the occiput, cutting the external auditory meatus. **costoclavic'ular l.,** parasternal l. **ecten'tal l.,** the line between the ectoderm and entoderm in the embryo. **gin'gival l.,** the line of junction of the cementum and enamel of a tooth; the line on the neck of the tooth where the gum is attached. **incremen'tal l.,** Salter's l., one of the lines, due to imperfect calcification, seen passing through the dentine in the crown. **infracos'tal l.,** a horizontal line joining the lower borders of the tenth costal cartilages; it separates the epigastric from the umbilical regions, and the subcostal from the mesogastric zones; see illustration of abdominal regions. **interspi'nal l.,** a horizontal line drawn between the two anterior superior spines of the ilia. **intertuber'cular l.,** an imaginary transverse line, drawn at the level of the iliac crests, at a point corresponding to the tubercle about 2 inches back of the anterior superior spine on either side; it divides the umbilical from the hypogastric zones of the abdomen. **la'bial l.,** one of Jadelot's* lines. **mamm'ary l.,** a transverse line drawn between the two nipples. **mam'millary l.,** a perpendicular line passing through the nipple on either side. **midax'illary l.,** a perpendicular l. passing through the center of the axilla. **midclavic'ular l.,** same as mammillary l. **milk l.,** in embryology, ridges of thickened epithelium extending from the dorsal surface, near the forelimbs, ventrally to end in the inguinal region, along which the mammary glands are developed. **na'sal l.,** one of Jadelot's* lines. **nasobas'iliar l.,** basinasal l. **nipp'le l.,** mammillary l. **oc'ular l.,** one of Jadelot's* lines. **paraster'nal l.,** a perpendicular line, nearly continuous with the Poupart l., running midway between the nipple and the outer border of the sternum. **oblique' l.,** (1) linea* obliqua; (2) Sylvian l., a line on the head corresponding to the fissure of Sylvius. **Pou'part's l.,** a perpendicular line passing through the center of Poupart's ligament on either side; it marks off the hypochondriac, lumbar, and iliac from the epigastric, umbilical, and hypogastric regions, respectively; see cut under abdominal* regions. **precen'tral l.,** a line on the head, running from the midpoint on the vertex between the glabella and the inion, downward and forward; it corresponds to the superior and inferior precentral sulci. **scap'ular l.,** a line passing

vertically downward from the inferior angle of the scapula. **semilu'nar l.,** linea* semilunaris. **side-ster'nal l.,** a vertical line along the border of the sternum on either side. **ster'nal l.,** the midline of the sternum. **subcos'tal l.,** an imaginary transverse line, drawn at the level of the lower border of the tenth costal cartilage; it divides the epigastric from the umbilical zones of the abdomen. **white l.,** a pale streak appearing in thirty to sixty seconds after scratching the skin and lasting for several minutes, regarded as a sign of diminished arterial tension.

lin'ea, gen. and pl. *lin'eæ* [L.] A line.

l. al'ba [white line], [BNA] a fibrous band running vertically the entire length of the center of the anterior abdominal wall, receiving the attachments of the oblique and transverse abdominal muscles.

l. al'bicans, pl. *lin'eæ albican'tes,* one of the atrophic lines or streaks seen in the skin of the abdomen after extreme stretching by pregnancy, dropsy, or a tumor.

l. arcua'ta [BNA], arcuate line, iliac portion of l. iliopectinea.

l. as'pera [rough line] [BNA], **crista femoris** [NK] a rough ridge with two pronounced lips running down the posterior surface of the shaft of the femur; the outer lip (labium laterale) is a continuation of the crista glutea, the inner lip (labium mediale) of the linea spiralis; it affords attachment to the vastus internus, adductor longus, adductor magnus, adductor brevis, the short head of the biceps, and the vastus externus muscles.

l. glutæ'a [BNA], glutea line, one of three rough curved lines on the outer surface of the ala of the ilium, named anterior or middle, inferior, and posterior; the two areas bounded by these give attachment to the gluteus minimus muscle below and gluteus medius above.

l. iliopectine'a, l. terminalis.

l. intercondyloid'ea [BNA], intercondyloid line, a faint transverse ridge separating the floor of the intercondyloid notch from the popliteal surface of the femur; it affords attachment to the posterior portion of the capsular ligament of the knee.

l. interme'dia cris'tæ ili'acæ [BNA], the intermediate surface of the crest of the ilium between the outer and inner lips.

l. intertrochanter'ica, intertrochanteric line: (1) [BNA], l. spiralis, a rough line passing over the anterior surface of the femur from the great trochanter obliquely downward, just beneath the lesser trochanter, to merge into the inner lip of the l. aspera; (2) crista intertrochanterica [BNA].

l. mylohyoid'ea [BNA], mylohyoid line, internal oblique line; a ridge on the inner surface of the mandible running from the base of the symphysis upward and backward to the ascending ramus behind the last molar tooth; it gives attachment to the mylohyoid muscle and superior constrictor of the pharynx.

l. ni'gra, black line, the l. alba in pregnancy, which becomes pigmented then.

l. nu'chæ infe'rior [BNA], inferior nuchal or curved line of the occipital bone, running outward and forward from the external occipital crest, through about the middle of the nuchal plane.

l. nu'chæ supe'rior [BNA], superior nuchal or curved line of the occipital bone, running from the external occipital protuberance toward the external angle, below, and roughly parallel to, the supreme nuchal line, giving attachment to the trapezius, occipitalis, sternomastoid, and splenius capitis muscles.

l. nu'chæ supre'ma [BNA], supreme or highest nuchal or curved line of the occipital bone, a line running from the external occipital protuberance toward the external angle, giving attachment to the epicranial aponeurosis.

l. obli'qua [BNA], (1) oblique line, external oblique line; a faint ridge running on the external surface of the body of the mandible from the mental tubercle to the anterior border of the ascending ramus on either side; (2) Sylvian line, a line on the head corresponding to the posterior limb of the Sylvian fissure.

l. pectine'a, (1) continuation of the iliopectineal line on the pubis; (2) a line running down the posterior surface of the shaft of the femur from the small trochanter, giving attachment to the pectineus muscle.

l. poplite'a [BNA], popliteal or oblique line, a line running from the fibular facet downward and inward across the posterior surface of the tibia to the inner border of the bone at the junction of its upper and middle thirds; it gives attachment to fibers of the popliteus muscle.

l. semicircula'ris [BNA], Douglas's line, a crescentic line marking the termination of the posterior sheath of the rectus abdominis muscle just below the level of the iliac crest.

l. semiluna'ris [BNA], line of Spigelius, the line of junction of the muscular fibers and aponeurosis of the transversus abdominis, marking in a general way the outer border of the sheath of the rectus abdominis; (2) fold of Douglas, l. semicircularis [BNA].

l. spira'lis, spiral line, l intertrochanterica [BNA]

l. tempora'lis, temporal line, ridge, or crest; a ridge extending upward, from the external angular process, on each side of the frontal bone, giving attachment to the temporal fascia and marking the limit of attachment of the temporal muscle

l. tempora'lis infe'rior [BNA], inferior temporal line temporal ridge, a curved line on the convex surface of the parietal bone marking the limit of attachment of the temporal muscle.

l. tempora'lis supe'rior [BNA], *l. t. fascialis* [NK], superior temporal line, a curved line on the external surface of the parietal bone, above and parallel to the inferior temporal line, serving for the attachment of the temporal fascia.

l. termina'lis [BNA] iliopectineal line, an oblique ridge on the inner surface of the ilium and continued on the pubis, which forms the lower boundary of the iliac fossa; it separates the true from the false pelvis.

l. transver'sa, one of a number of transverse lines on the abdomen running outward on either side of the linea alba.

ling'ism. Ling's* method.

Ling's meth'od [Pier Henrik *Ling,* Swedish poet and hygienist, 1776–1839] Swedish gymnastics, gymnastic exercises without the use of apparatus.

lingua, gen. *lin'guæ* (ling'gwah) [L.] Tongue. 1. A mobile mass of muscular tissue covered with mucous membrane, occupying the cavity of the mouth and forming part of its floor, constituting also by its posterior portion the anterior wall of the pharynx. The mucous membrane of its upper surface (*dorsum*), is marked by numerous projections or papillæ (see *papilla*). The anterior extremity (*apex* or *tip*) is free, the posterior portion is attached to the hyoid bone. It is the organ of taste and assists in mastication, deglutition, and articulation. 2. One of a number of tongue-like anatomical structures. 3. Language **l. cerebel'li,** lingula cerebelli. **l. fræna'ta,** a tongue with a very short frenum, constituting tongue-tie. **l. geograph'ica,** geographical tongue. **l. ni'gra,** black tongue. **l. plica'ta,** furrowed tongue.

lingual (ling'gwal). 1. Glossal, relating to the tongue or any tongue-like part. 2. One of the letters, *t, d,* the sound of which is made with the tip of the tongue. **l. sur'face,** the inner surface of a tooth, that which looks toward the tongue; opposed in this sense to buccal.*

lingually (ling'gwal-ĭ). Toward the tongue.

Linguatula (ling-gwat'u-lah) [L. *linguatus,* tongued.] Pentastoma.

lingula (ling'gu-lah) [L. dim. of *lingua,* tongue.] A term applied to several tongue-shaped processes, denoting usually, when not qualified, the lingula cerebelli. **l. cerebel'li** [BNA], lingua cerebelli, tongue of the cerebellum, the anterior portion of the superior vermis of the cerebellum prolonged forward on the upper surface of the superior

medullary velum. **l. mandib'ulæ** [BNA], mandibular tongue; a pointed tongue of bone overlapping the inferior dental foramen, giving attachment to the internal lateral ligament of the jaw. **l. pulmo'nis,** l. p. sinistri [NK], a projection from the lower part of the upper lobe of the left lung, on the costal surface just beneath the incisura cardiaca. **l. sphenoida'lis** [BNA], a ridge between the body and ala magna of the sphenoid bone, on either side, forming an independent element at birth.

linguodistal (ling-gwo-dis'tal). In dentistry, noting the inclination of a tooth, usually a lower bicuspid, distally and toward the tongue.

linguogingival (ling-gwo-jin'jĭ-val). Relating to the tongue and the gums. **l. fiss'ure,** a fissure sometimes occurring on the lingual surface of one of the upper incisors and extending into the cementum. **l. ridge,** a ridge occurring on the lingual surface, near the gum, of the incisor and cuspid teeth.

lin'iment. Embrocation, linimentum.* **dry'ing l.,** a solution of a medicament in mucilage of tragacanth, dextrin, or starch, with white of egg, which, when applied to the skin, dries leaving a permanent film. **an'odyne l.,** linimentum opii. **mercu'rial l.,** l. hydrargyri. **St. John Long's l.,** see *St. John Long* **Stokes' l.,** a liniment very similar to the linimentum terebinthinæ aceticum (N.F.).

linimen'tum, gen. *linimen'ti,* pl *linimen'ta* [L. *linere,* to smear.] Liniment, embrocation; a pharmacopeial preparation, consisting of a solution of a medicament in alcohol, oil, or water applied by friction to the skin.

l. aconi'ti (Br.), aconite liniment, powdered aconite root, 20 ounces, camphor, 1 ounce, percolated with alcohol to make 30 ounces; employed externally in neuralgia

l. aconi'ti et chlorofor'mi (N.F.), liniment of aconite and chloroform; fluidextract of aconite 4.5, alcohol 8, chloroform 12.5, soap liniment 75; anodyne application.

l. æru'ginis, verdigris liniment, a decoction of verdigris, vinegar, and honey, used in veterinary practice as an application to ulcers and sluggish sores.

l. al'bum, l. terebinthinæ aceticum (N.F.).

l. ammo'niæ (N.F., Br.), ammonia liniment, volatile liniment; ammonia water 350, alcohol 50, oleic acid 30, cotton-seed oil 370 (U.S.); solution of ammonia 1, almond oil 1, olive oil 2 (Br); rubefacient and counterirritant.

l. ammo'nii iod'idi, liniment of ammonium iodide, contains about 5 per cent. ammonium iodide with camphor, oil of lavender, and oil of rosemary; discutient.

l. belladon'næ (N.F., Br.), belladonna liniment; camphor 50, fluidextract of belladonna root to make 1000 (U.S.); liquid extract of belladonna 10, camphor 1, distilled water 2, alcohol to make 20 (Br.); used for neuralgia and rheumatic pains.

l. calami'næ (N.F.), calamine liniment; prepared calamine 80, zinc oxide 80, olive oil 500, solution of calcium hydroxide to make 1000 c.c.; used in eczema and various other skin diseases.

l. cal'cis (U.S., Br.), lime liniment, Carron oil; solution of lime and linseed oil (olive oil, B.P.), equal parts; used for burns and scalds.

l. campho'ræ (U.S., Br.), camphor liniment, camphorated oil; camphor 200, cotton-seed oil 800 (U.S.); camphor 1, olive oil 4 (Br.); a mild counterirritant.

l. campho'ræ ammonia'tum (Br.), ammoniated liniment of camphor, compound camphor liniment; camphor 2½, oil of lavender 1, strong solution of ammonia 5, alcohol to make 20; rubefacient and anodyne.

l. chlorofor'mi (U.S., Br.), chloroform liniment; chloroform 300, soap liniment 700 (U.S.); chloroform and liniment of camphor, each 2 fluidounces (Br.); anodyne and, when evaporation is prevented, rubefacient.

l. croto'nis (Br.), liniment of croton oil, linimentum tiglii; croton oil 1, oil of cajuput 3½, alcohol, 90 per cent., 3½; counterirritant, causing pustulation when repeated.

l. hydrar'gyri (Br.), l. mercuriale, liniment of mercury; ointment of mercury 1 ounce, strong solution of ammonia 160 minims, liniment of camphor enough to make 1½ fluidounces; applied to syphilitic joints and swellings.

l. io'di, iodine liniment; iodine 12.5, potassium iodide 5, glycerin 3.5, water 6.5, alcohol to make 100; discutient.

l. o'pii (Br.), liniment of opium, anodyne liniment-tincture of opium and soap liniment, of each 2 fluid. ounces; used for rheumatic pains, neuralgia, and sprains.

l. o'pii compos'itum (N.F.), compound liniment of opium, Canada liniment; contains tincture of opium 10, camphor 1.75, oil of peppermint 2.5, ammonia water 37.5, alcohol 25, turpentine to make 100; anodyne.

l. mercuria'le, l. hydrargyri.

l. potas'sii iod'idi cum sapo'ne (Br.), liniment of potassium iodide and soap; curd soap 2 ounces, potassium iodide 1½ ounces, glycerin 1 fluidounce, oil of lemon 1 fluidrachm, distilled water 10 fluidounces; used externally to obtain the systemic effects of potassium iodide.

l. sapona"tocamphora'tum (N.F.), camphorated soap liniment, solid opodeldoc; a mixture of white castile soap, camphor, oil of thyme, and oil of rosemary in stronger ammonia water and alcohol; anodyne and discutient.

l. sapo'nis (U.S., Br.), soap liniment, camphorated tincture of soap, liquid opodeldoc; soap 60, camphor 45, oil of rosemary 10, alcohol 725, water to make 1000 (U.S.); soft soap 2 ounces, camphor 1 ounce, oil of rosemary 3 fluidrachms, alcohol 16 fluidounces, water 4 fluidounces (Br.); employed chiefly as a base for other liniments.

l. sapo'nis mol'lis (U.S.), liniment of soft soap, tincture of green soap; soft soap 650, oil of lavender 20, alcohol to make 1000, employed in the treatment of certain skin diseases and as a shampoo.

l. sina'pis (Br.), liniment of mustard; volatile oil of mustard 1½ fluidrachms, camphor 120 grains, castor oil 5 fluidrachms, alcohol 4 fluidounces; counterirritant.

l. sina'pis compos'itum, (N.F.), compound mustard liniment, camphor 60, fluidextract of mezereum 200, volatile oil of mustard 30, menthol 20, castor oil 150, alcohol to make 1000; counterirritant.

l. terebin'thinæ (N.F., Br.), turpentine liniment; rosin cerate 650, oil of turpentine 350 (U.S.); oil of turpentine 26, camphor 2, soft soap 3, distilled water to make 40 (Br); employed as a soothing application.

l. terebin'thinæ ace'ticum (N.F., Br.), liniment of turpentine and acetic acid, acetic turpentine liniment, Stokes' or St. John Long's liniment, l. album; oil of turpentine 4, glacial acetic acid 1, liniment of camphor 4 (Br.); oil of turpentine 100, oil of lemon 4, acetic acid 20, 1 egg; counterirritant.

l. tig'lii, liniment of croton oil, l. crotonis (B.P.).

l. tig'lii compos'itum, compound croton oil liniment; croton oil, oil of sassafras, oil of turpentine, of each 20, olive oil 40.

li'nin [L. *linum,* flax.] 1. A bitter glucoside obtained from *Linum catharticum.* 2. The thread-like non-staining (achromatic) substance forming the network of the cell-nucleus, containing in it, meshes the nucleoplasm.

linitis (li-ni'(ne')tis) [G. *linon,* cloth, + *-itis.*] Inflammation of cellular tissue, specifically of the perivascular tissue of the stomach. **l. plas'tica,** Brinton's disease, chronic sclerosing gastritis.

link'age [*link,* to join together.] 1. The holding together of the multivalent atoms constituting a chain. 2. Association of genes in inheritance, due to the fact that they are in the same chromosomes.

Linne'an sys'tem [Carolus *Linnæus*, or Karl von *Linné*, Swedish physician and naturalist, 1707–1778.] A system of botanical classification, in which plants are divided into *Cryptogamia* and *Phanerogamia*, according as they are without or with stamens and pistils; the latter are divided into 23 classes according to the number and various peculiarities of their stamens. The system is called the *artificial* system as distinguished from the *natural* or Jussieuan* system.

lin'seed. Flaxseed, linum.*

lint [L. *linteum*, made of linen.] Charpie, a soft absorbent material used in surgical dressings; it was formerly made by scraping or raveling old linen cloths, now usually in the form of a thick, loosely woven material, *sheet lint* or *patent lint*.

lin'tin. A form of sheet lint made from absorbent cotton.

li'num [L.; G. *linon*, flax.] (U.S.,Br.) Flaxseed, linseed; the ripe seed of *Linum usitatissimum*, a plant cultivated chiefly in Germany, Holland, Ireland, and Russia, the fiber of which is used in the manufacture of linen; the chief source of flaxseed is Russia. An infusion of flaxseed is employed as a demulcent in catarrhal affections of the respiratory and urogenital tracts, and the ground seeds are used in making poultices. **l. contu'sum** (Br.), crushed linseed, coarsely powdered linseed for making poultices.

Li_2O. Lithium oxide, lithia.

lioder'mia [G. *leios*, smooth, + *derma*, skin.] Glossy skin.

LiOH. Lithium hydroxide.

liomyofibro'ma. A mixed lioma, myoma, and fibroma.

liomyoma, pl *liomyo'mata, liomyo'mas* (li-o-mi-o'-mah) [G. *leios*, smooth, + *mys*, muscle, + *-ōma*.] A tumor composed of smooth unstriated muscle fibers. **l. sarcomato'sum,** liomyosarcoma.

liomyosarcoma (li″o-mi″o-sar-ko'mah). A mixed liomyoma and sarcoma; a tumor of smooth muscle fibers containing imperfectly differentiated, vegetative, or embryonic cells; liomyoma sarcomatosum.

Liouville's ic'terus (le-oo-vĕl') [Henri *Liouville*, French physician, 1837–1887.] Icterus neonatorum.

lip [A.S. *lippa*.] 1. One of the two muscular folds which bound the mouth anteriorly. 2. Any lip-like structure bounding a cavity or groove; margin. **hare-l.,** see *harelip*. **pseudocoll'oid of the l.,** Fordyce's* disease.

absence, achilia. **adhesion of the two,** ankylochilia, symphysis labiorum. **bleeding,** chilorrhagia. **cleft,** chiloschisis, chilodieresis, harelip, chilognathus, lagochilus, labium leporinum. **eversion,** chilectropion, eclabium. **groove in the upper,** philtrum. **hardness,** chilocace. **hypertrophy,** macrochilia, megachilia. **inflammation,** chilitis. **pain,** chilalgia, chilodynia. **plastic surgery,** chiloplasty, labioplasty. **small,** microchilia. **spasm,** chilospasmus labiochorea.

lipacide'mia, lipacidæ'mia [G. *lipos*, fat, + L. *acidum*, acid, + G. *haima*, blood.] The presence of a fatty acid in the blood.

lipacidu'ria [G. *lipos*, fat, + L. *acidum*, acid + G. *ouron*, urine.] The presence of fatty acids in the urine.

lip'anin. Trade name of a mixture of olive oil, 94 per cent, and oleic acid, 6 per cent.; recommended as a substitute for olive oil in doses of ʒ½-2 (15.0–60.0).

liparocele (lip'ar-o-sēl) [G. *liparos*, fatty, + *kēlē*, tumor, hernia.] 1. A fatty tumor of the scrotum. 2. An omental hernia.

liparom'phalus [G. *liparos*, fatty, + *omphalos*, umbilicus. A fatty tumor at the umbilicus.

lipase (lĭ'pāz) [G. *lipos*, fat, + *-ase*.] A fat-splitting or lipolytic enzyme in the blood, pancreatic secretion, and tissues, causing a hydrolytic cleavage of the fat molecule; steapsin.

lipemia, lipæmia (lĭ-pe'mĭ-ah) [G. *lipos*, fat, + *haima*, blood.] The presence of oil or fat droplets in the blood.

liphemia, liphæmia. Lipemia.

lipide (lip'ēd) [G. *lipos*, fat.] Lipin, a comprehensive term including lipoids, soaps, neutral fats, and fatty acids.

lipin (lip'in). Lipide.

lipiodine (lĭ-pi'o-dīn) [G. *lipos*, fat, + *iodine*.] The solid form of iodipin (*q.v.*).

lipiodol (lĭ-pi'o-dol) [G. *lipos*, fat, + L. *iodum*, iodine + *oleum*, oil.] A 40 per cent. solution of iodine in poppy oil (oleum papaveris), used for its shadow effect in radiodiagnosis.

lipoarthritis (lip-o-ar-thri(thre)'tis) [G. *lipos*, fat.] Inflammation of the periarticular fatty tissues of the knee.

lipoblast (lĭ'po-blast) [G. *lipos*, fat. + *blastos*, germ.] An embryonic fat cell.

lipoblastoma (lĭ-po-blast-to'mă) [*lipoblast* + *-oma*.] Lipoma.

lipocar'diac [G *lipos*, fat, + *kardia* heart.] 1. Relating to fatty heart. 2. One suffering from fatty degeneration of the heart.

lipocele (lĭ'po-sēl) [G. *lipos*, fat, + *kēlē*, tumor.] The presence of fatty tissue, without intestine, in a hernial sac; adipocele.

lipoceratous (lĭ-po-ser'ă-tus). Adipoceratous.

lipocere (lĭ'po-sēr) [G. *lipos*, fat, + *L. cera*, wax.] Adipocere.

lipochrome (lĭ'po-krome) [G. *lipos*, fat, + *chroma*, color.] A pigmented fatty body, such as lutein or carotin, the yellowish masses occurring in xanthoma, and also the pigment produced by certain bacteria

lipoclasis (lĭ-pok'lă-sĭs) [G. *lipos*, fat, + *klasis*, a breaking.] A splitting up of fat; lipolysis, lipodieresis.

lipoclastic (lĭ-po-klas'tik) [G. *lipos*, fat. + *klaō*, I break.] Lipolytic, fat-splitting.*

lipodier'esis (lĭ-po-di-er'e-sis) [G. *lipos*, fat, + *diairesis*, division.] Lipoclasis, lipolysis.

lipodystrophia (lĭ-po-dis-tro'fĭ-ah) [G. *lipos*, fat, + *dys-*, bad, difficult, + *trophē*, nourishment.] Lipodystrophy, defective fat metabolism. **l. intestina'lis,** a disease marked by multiple arthritis, diarrhea (the stools consisting chiefly of fats and fatty acids), and loss of weight and strength; characterized anatomically by deposits of fat and fatty acids in the intestinal and mesenteric lymphatic tissue. **l. progressi'va supe'rior,** a condition characterized by a more or less complete loss of the subcutaneous fat of the upper part of the torso, the arms, neck, and face, sometimes with an increase of fat in the tissues about and below the pelvis.

lipodystrophy (lĭ-po-dis'tro-fĭ). Lipodystrophia, defective fat metabolism.

lipoferous (lĭ-pof'er-us) [G. *lipos*, fat, + L. *ferre*, to carry.] 1. Fat-carrying. 2. Sudanophil.

lip″ofibro'ma. A mixed fibrous and fatty tumor.

lipogen'esis [G. *lipos*, fat, + *genesis*, production.] The production of fat, either fatty degeneration or fatty infiltration.

lipogen'ic. Relating to lipogenesis.

lipogenin (lip-oj'en-in). Trade name of a fatty base for ointments

lipogenous (lip-oj'en-us) [G. *lipos*, fat, + *gennaō*, I produce.] Lipogenic, producing fat.

lipohe'mia, lipohæ'mia. Lipemia.

lipoid (lip'oyd) [G *lipos*, fat, + *eidos*, form, appearance.] 1. Resembling fat. 2. A fat-like substance which is chemically, however, not necessarily related to the fats, and does not form soaps with alkalies; lecithin and cholesterin are lipoids. **anisotrop'ic l.**, a l. in the form of doubly refractive droplets. **brain l.**, impure cephalin, possessing marked hemostatic action when locally applied. **isotrop'ic l.**, a l. occurring in the form of singly refractive droplets.

lip"oide'mia. The presence of lipoids in the blood.

lipoidosis (lĭp-poy-do'sis). The presence of anisotropic lipoids in the cells. **l. cor'neæ**, arcus senilis.

lipoiodine (lĭp"po-i'o-dĭn or -din). Lipiodine. **L-Ciba**, the ethyl ester of diiodobrassidic acid, containing 41 per cent. of iodine; employed as a substitute for the inorganic iodides and in the same dosage.

lipolipoidosis (lĭp"po-lĭp-poy-do'sis). Fatty infiltration, both neutral fats and anisotropic lipoids being present in the cells.

lipol'ysis [G. *lipos*, fat, + *lysis*, solution.] The splitting up, or chemical decomposition of fat.

lipolyt'ic. Relating to or causing lipolysis.

lipo'ma, pl. *lipo'mata* [G. *lipos*, fat, + *-ōma*.] A tumor composed of fatty tissue; adipoma. **l. arbores'cens,** a diffuse subserous fatty accumulation in the synovial membrane with hyperplasia of the villous fringes. **l. caverno'sum,** a fatty tumor containing blood spaces resembling those in erectile tissue. **l. du'rum,** steatoma. **l. fibro'sum,** a fatty tumor with an abundant connective-tissue framework. **l. myxomato'des,** a l. containing an admixture of mucoid tissue, myxolipoma. **l. ossif'icans,** a fatty tumor in which bone formation has occurred. **l. petrif'icans,** a calcifying or calcified l. **l. sarcomato'des, l. sarcomato'sum,** liposarcoma. **telangiectat'ic l.,** one in which there is an overdevelopment, with dilatation, of the blood-vessels.

lipo'matoid [G. *lipoma* + *eidos*, appearance.] Resembling a fatty tumor.

lipomato'sis. Liposis, an overgrowth of fatty tissue, either local or general. **l. neurot'ica,** adiposis dolorosa.

lipo'matous. Relating to a lipoma.

li"pome'ria [G. *leipō*, I am lacking, + *meros*, a part.] The congenital absence of a limb or other part.

lipometabolic (lĭp-po-mĕ-tă-bol'ik). Relating to lipometabolism.

lipometabolism (li-po-mĕ-tab'o-lizm) [G. *lipos*, fat, + *metabolism*.] The process of utilization of fat in nutrition.

lipomyoma, pl. *lipomyo'mata*, *lipomyo'mas* (lĭp-po-mi-o'mah) [G. *lipos*, fat, + *mys*(*myo-*) muscle, + *-ōma*.] Leucomyoma, a tumor composed of unstriated muscle fibers containing fat-globules.

lip"omyxo'ma. A tumor having the characters of both a lipoma and a myxoma.

Liponyssus (lĭ-po-nis'us) [G. *lipos*, fat, + *nyssō*, I prick.] A genus of mites. *L. baco'ti*, a species, infesting rats, found in the tropics, a possible vector of endemic typhus.

lipopec'tic. Marked by lipopexia.

lipopeptid (lĭ-po-pep'tid). A compound of fatty acids and amino-acids similar in its properties to the invisible fat in the cells.

lipopexia (lĭ-po-peks'ĭ-ă) [G. *lipos*, fat, + *pēxis*, fixation.] The accumulation of fat in the body, adipopexia.

lipophagic (lĭ-po-fa'jik). Fat-eating, fat-consuming, fat-destroying, lipolytic.

lipophagy (lĭ-pof-a-jĭ) [G. *lipos*, fat, + *phagō*, I eat.] 1. Fat-eating. 2. Lipolysis.

lipophil (lĭ'po-fil) [G. *lipos*, fat, + *philos*, fond of.] Capable of dissolving or absorbing fats.

lip"ophre'nia [G. *leipō*, I am lacking, + *phrēn*, mind.] Mental failure.

lipoprotein (lĭ-po-pro'te-in). A hypothetical compound of protein with a fatty acid.

liposarcoma, pl. *liposarco'mata*, *liposarco'mas* (lĭ"po-sar-ko'mah) [G. *lipos*, fat, + *sarx*, flesh, + *-ōma*.] A mixed lipoma and sarcoma; a fatty tumor in which many of the cells have been replaced by imperfectly differentiated, vegetative, or embryonic cells; lipoma sarcomatosum.

lipo'sis [G. *lipos*, fat.] 1. Lipomatosis, adiposis; abnormal accumulation of fat in any part. 2. Fatty infiltration, the presence of neutral fats in the cells; see *lipolipoidosis*. **general l.,** obesity.

lipos'tomy [G. *leipō*, I lack, + *stoma*, mouth.] Congenital absence or smallness of the mouth.

lipothym'ia [G. a swoon.] Syncope, fainting.

lipothym'ial. Syncopal.

lipotrop'ic. Relating to or affected by lipotropy.

lipot'ropy [G. *lipos*, fat, + *tropē*, turning.] Affinity of basic dyes for fatty tissue.

lipovaccine (lĭ-po-vak'sēn) [G. *lipos*, fat.] A vaccine having a vegetable oil, such as olive or almond, as a menstruum; it is claimed that much larger doses can thus be given with less local reaction than when an aqueous vaccine is used.

lipox'eny (li-pok'se-ni) [G. *leipo*, I leave, + *xenos*, host.] Desertion of the host by a parasite when the development of the latter is complete.

lipp'ing. The formation of a lip-like structure.

lipp'itude, lippitu'do [L. *lippus*, blear-eyed.] Blepharitis with a gummy secretion causing adhesion of the tarsal margins; blear-eye.

lip-re'flex. A pouting movement of the lips provoked in young infants by tapping near the angle of the mouth.

Lipschuetz' disease' (lip'shŭts). Ulcus vulvæ acutum of nonvenereal origin, caused possibly by *B. crassus*, or Doederlein's bacillus.

lipu'ria [G. *lipos*, fat, + *ouron*, urine.] The excretion of fat in the urine

liquefacient (lik"we-fa'shent) [L. *liquere*, to be fluid, + *facere*, to make.] 1. Making liquid, causing a solid to become liquid. 2. Noting an agent supposed to cause the resolution of a solid tumor by liquefying its contents; resolvent.

liquefaction (lik-we-fak'shun). The act of becoming liquid; change from a solid to a liquid form.

liquefac'tive. Relating to liquefaction, liquefacient.

liquescent (lĭ-kwes'ent) [L. *liquescere*, to become liquid.] Becoming or tending to become liquid, deliquescent

liqueur (lĭ-kèr') [Fr.] A cordial; a spirit containing sugar and aromatics.

liquid (lik'wid) [L. *liquidus*.] 1. Flowing. 2. An inelastic fluid, like water, which is neither solid nor gaseous. **l. air,** air which, by means of cold and pressure has been reduced to a liquid form. **l. ex'tract,** the Br. equivalent of U.S. fluidextract; see also under *extract*.

Liquidam'bar. A genus of trees of the witch-hazel family, *Hamamelidaceæ*. **L. orienta'lis,** the source of storax, or gum storax. **L. styraciflu'a,** the source of sweet-gum or liquidambar.

liquiritia (lik-wir-ish'yah) [a corruption of *glycyrrhiza*.] Licorice.

liquor (lik'er). Any liquid or fluid, especially a preserving fluid such as brine, or a distilled alcoholic beverage, such as brandy, gin, or whiskey. **malt l.,** a beverage brewed from malt, such as beer or ale. **spir'ituous l.,** a strong alcoholic liquor obtained by distillation, such as whiskey. **Villate's' l.,** mistura adstringens et escharotica. **vi'nous l.,** wine.

liquor, gen. *liquo'ris*, pl. *liquo'res* (li'kwor) [L.] 1. Solution, the pharmacopeial term for any aqueous solution (not a decoction or infusion) of a nonvolatile substance; the B. P. includes aqueous solutions of gases among the liquores. 2. Any liquid or fluid. **l. am'nii,** the fluid within the amniotic sac in which the fetus is bathed, the contents of the bag of waters. **l. cho'rii,** the liquid between the amnion and chorion in the early part of pregnancy, the false waters. **l. cor'neæ,** the fluid in the corneal lymph spaces. **l. Cotun'nii,** perilymph. **l. enter'icus,** the intestinal juice. **l. follic'uli,** fluid in the Graafian follicle between the two cellular layers surrounding the ovum. **l. gas'tricus,** the gastric juice. **l. Morgagn'ii,** the thin layer of fluid between the crystalline lens and its capsule. **l. pancreat'icus,** the digestive fluid of the pancreas. **l. pericar'dii,** the serous fluid in the pericardial sac. **l. pu'ris,** the serous portion of pus. **l. san'guinis,** the blood-plasma. **l. Scar'pæ,** the endolymph. **l. sem'inis,** the serous portion of the seminal fluid.

l. acidi arseno'si (U.S.), solution of arsenous acid, l. arsenici hydrochloricus (Br.), hydrochloric solution of arsenic; arsenic trioxide 10, dilute hydrochloric acid 50 (strong hydrochloric acid 12½, B P.), distilled water to make 1000; dose, ♏2–5 (0.13–0.5).

l. acidi chro'mici (Br.), a solution of approximately chromic acid, 1, in water, 3; employed as an escharotic in condylomata and lupus, and well diluted as a wash in bromidrosis

l. acidi chro'mo-ace'to-os'mici, Fleming's solution. a mixture of glacial acetic acid 100 and osmic acid 8 in water 400, with chromic acid 15 in water 1500; used in histology for fixing specimens and as an injection in cancerous growths.

l. adhesi'vus, filmogen.

l. adrenali'næ hydrochlor'idi (Br.), solution of adrenaline hydrochloride; adrenaline 1, chlorbutol 5, sodium chloride 9, dilute hydrochloric acid 3, distilled water to make 1000; dose, ♏ 2–8 (0.12–0.5).

l. alu'mini aceta'tis (N.F.), solution of aluminum acetate, liquor Burowii, Burow's solution; lead acetate, 150, aluminum sulphate, 85, are dissolved each in water 500, then mixed, and the clear solution siphoned off.

l. alu'mini subaceta'tis (N.F.), solution of aluminum subacetate; contains about 8 per cent. of basic aluminum acetate; astringent and antiseptic, employed externally.

l. alu'mini ace"ticotartra'tus (N.F.), solution of aluminum aceticotartrate, contains about 50 per cent. of this substance; astringent and antiseptic, employed externally.

l. ammo'niæ (Br.), solution of ammonia, aqua ammoniæ (U.S.).

l. ammo'niæ dilu'tus (Br.), dilute solution of ammonia; strong solution of ammonia 333, distilled water to produce 1000; dose ♏ 10–20 (0.6–1.2).

l. ammo'niæ for'tis (Br.) strong solution of ammonia, contains 32.5 per cent. by weight of ammonia; **aqua ammoniæ fortior** (U.S.).

l. ammo'nii aceta'tis (U.S.), solution of ammonium acetate, spirit of Mindererus; ammonium carbonate 5, diluted acetic acid 100, contains 7 per cent. of ammonium acetate, diaphoretic, diuretic, and refrigerant, in doses of ℥1–4 (4.0–16.0).

l. ammo'nii aceta'tis concentra'tus, concentrated solution of ammonium acetate, about three times the strength of the U.S.P. solution; diaphoretic, diuretic, and refrigerant, in dose of ℥1 (4 0).

l. ammo'nii aceta'tis dilu'tus (Br.), dilute solution of ammonium acetate (Br.), strong solution of ammonium acetate 125, distilled water to produce 1000; dose fl. ʒ½–1 (8.0–30.0).

l. ammo'nii aceta'tis for'tis (Br.) strong solution of ammonium acetate, glacial acetic acid, 453, ammonium carbonate 330, strong solution of ammonia 100, distilled water to produce 1000; dose, ♏ 15–60 (1.0–4.0).

l. ammo'nii anisa'tus, anisated solution of ammonia, a preparation of the German pharmacopeia; anethol (the active principle of oil of anise) 1, ammonia water 5, alcohol 24; carminative and nerve sedative in doses of ♏15–60 (1.0–4.0).

l. ammo'nii citra'tis (Br.), solution of ammonium citrate; ammonium carbonate 87.5, citric acid 125, distilled water to make 1000; diuretic and diaphoretic in doses of ʒ4–8 (15 0–30 0).

l. ammo'nii citra'tis for'tior, stronger solution of ammonium citrate; contains ammonium citrate gr. 40 (2 6) to the fluidrachm (4 0); refrigerant and diuretic in doses of ♏15–30 (1 0–2 0).

l. am'nii, amniotic fluid; a liquid secreted by the amniotic membrane, which surrounds the fetus and protects it from injury.

l. andrograph'idis concentra'tus (B.A), concentrated solution of andrographis; andrographis 1, 20 per cent. alcohol 2; dose ʒ½–1 (2.0–4.0).

l. antigermina'rius, germicide solution; contains thymol 1 6 per cent., oil of eucalyptus and oil of lavender each 6 per cent., in a hydroalcoholic solution.

l. antisep'ticus (N.F.), antiseptic solution; boric acid 25, thymol 1, eucalyptol 5, methyl salicylate 1 2, oil of thyme 0 3, menthol 1, alcohol 300, water to make 1000; employed as a mouth wash, as a douche in uterine and vaginal diseases, and internally in gastric fermentation in doses of ʒ½–2 (2 0–8 0).

l. antisep'ticus alkali'nus, alkaline antiseptic solution, l. aromaticus alkalinus.

l. aristolo'chiæ concentra'tus (B A.), concentrated solution of aristolochia; 1 part in 2 of 20 per cent. alcohol; dose ʒ½–2 (2.0–8.0).

l. aromat'icus alkalin'us (N.F.), alkaline aromatic solution; contains potassium bicarbonate 20, sodium borate 20, thymol 0.5, eucalyptol 1, methyl salicylate 0 4, cudear 2, alcohol 60, glycerin 150, magnesium carbonate 10, water to make 1000.

l. arse'ni bro'midi, l. arsenicalis, Clemens:

l. arse'ni et hydrar'gyri io'didi (U.S., Br.), l. arsenii, etc. Donovan's solution, contains arsenous iodide and red mercuric iodide, 1 per cent. each; employed in the treatment of syphilides in dose of ♏1–3 (0.06–0.2).

l. arsenica'lis (Br.), l. potassii arsenitis (U.S.).

l. arsenica'lis, Clem'ens, solution of potassium arsenate and bromide, solution of bromide of arsenic, Clemens' solution; a solution containing the equivalent of 1 per cent. arsenic trioxide (arsenous acid) and ½ per cent. bromine; alterative and antidiabetic in doses of ♏2–4 (0 13–0 26).

l. arsen'ici broma'tus, l. arseni bromatus, Clemen's solution of arsenic bromide or of bromine arsenite, a solution of potassium arsenate and potassium bromide, employed in diabetes mellitus and epilepsy, in doses of ♏1–5 (0.06–0.3).

l. arsen'ici hydrochlo'ricus (Br), hydrochloric solution of arsenic, l. acidi arsenosi (U S.).

l. atropi'næ sulpha'tis (Br.), solution of atropine sulphate; atropine sulphate 17½ grains, salicylic acid 2 grains, distilled water 4 fluidounces; dose, ♏1–2 (0.06–0.13).

l. au'ri bro'midi et arse'ni (N.F.), solution of bromide of gold and arsenic; one ounce (30.0) contains gold tribromide gr. 1½ (0.1) and the equivalent of gr. 4 (0.25) of arsenic tribromide; antisyphilitic and antidiabetic in doses of ♏2–4 (0.13–0.25).

l. bismu'thi (N.F.), solution of bismuth, liquid bismuth; one ounce (30.0) contains bismuth and sodium tartrate gr. 15 (1.0), dissolved in glycerin, alcohol, and water; gastric sedative in dose of ʒ1 (4.0),

l. bismu'thi et ammo'nii citra'tis (Br.), solution of bismuth and ammonium citrate, liquid bismuth; bismuth oxynitrate, 613 grains, potassium citrate 613

grains, potassium carbonate 175 grains, nitric acid 1 fluidounce, solution of ammonia and distilled water equal parts to make 1 pint; contains 5 grains of bismuth citrate (= 3 grains bismuth oxide) to the fluidrachm; employed in diarrhea in doses of ʒ½–1 (2.0–4.0).

l. **bro'mi,** Smith's solution of bromine; contains bromine 25, and potassium bromide 12.5, in water 100; employed externally as an antiseptic, and as a test reagent.

l. **Burowii** (boo-ro'vi-i), l. alumini acetatis.

l. **cal'cii hydrox'idi** (U.S., Br.) l. calcis solution of calcium hydroxide, lime water; an aqueous solution containing in each 100 c.c. not less than 0.14 gm. of $Ca(OH)_2$; a clear, colorless, odorless liquid with an alkaline taste; antacid in doses of ʒ4–6 (15.0–30.0).

l. **cal'cis chlorina'tæ** solution of chlorinated lime, chlorinated lime 1 pound, distilled water 1 gallon, shake and filter; deodorizer, recommended internally as an antidote to hydrocyanic acid in doses of ʒ½–1 (2.0–4.0).

l. **cal'cis sacchara'tus,** saccharated lime water, calcium hydroxide 1, distilled water 19, syrup 3; used for the same purposes as l. calcis in doses of ♏20–60 (1.3–4.0)

l. **cal'cis sulphura'tæ** (N.F.), solution of sulphurated lime, Vleminckx's lotion or solution; prepared by boiling together freshly slaked lime and sublimed sulphur in water, employed externally in skin diseases

l. **calum'bæ concentra'tus** (Br.), concentrated solution of calumba, coarsely powdered calumba root 10 ounces, alcohol 4½ fluidounces, water 20 fluidounces, dose, ʒ½–1 (2.0–4.0)

l. **caou'tchouc** (Br.), a solution of rubber 1 ounce, in carbon disulphide and benzene each 10 fluidounces; used to form rubber skin as a protection to the surgeon's hand in examining pus cavities and at autopsies, and as a substitute for collodion in abrasions of the skin.

l. **carbo'nis deter'gens,** trade name for an alcoholic preparation containing phenol

l. **carmi'næ** (N.F.), solution of carmine, contains about gr. 30 (2.0) in ʒi (32.0), used as a coloring agent.

l. **chira'tæ concentra'tus** (Br.), concentrated solution of chiretta, powdered chiretta 10, percolated with 20 per cent. alcohol 25, dose, ʒ½–1 (2.0–4.0)

l. **chlo'ri compos'itus** (N.F.), compound solution of chlorine, Davy's yellow fluid; potassium chlorate 3.5, hydrochloric acid 10, distilled water to make 1000; employed as a disinfectant gargle in diphtheria, etc., and internally in intestinal decomposition in doses of ʒ½–1 (2.0–4.0).

l. **coc'ci** (N.F.), cochineal solution, cochineal color; contains cochineal, alum, potassium carbonate, and potassium bitartrate in nearly equal parts of glycerin and water; used as a coloring agent.

l. **concentra'tus,** a preparation of the B.P. intended for use in making one of the official infusions and decoctions by diluting with nine parts of water.

l. **coscin'ii concentra'tus** (B.A.), concentrated solution of coscinium, dose, ♏30–60 (2.0–4.0).

l. **creso'lis compos'itus** (U.S.), compound solution of cresol, cresol 500, linseed oil 350, potassium hydroxide 80, water to make 1000; employed as an antiseptic and disinfectant application in uterine, vaginal, and vesical diseases and in surgical dressings

l. **creso'lis sapona'tus** (Br.), solution of cresol with soap, lysol; cresol 500, linseed oil 180, potassium hydroxide 42, distilled water to produce 1000; the synonym *lysol*, given in the B.P. is not the proprietary mixture of the same name.

l. **cuspa'riæ concentra'tus** (Br.), concentrated solution of cusparia, powdered cusparia 10, percolated with 20 per cent. alcohol 25; dose, ʒ½–1 (2.0–4.0).

l. **electropœ'icus,** battery fluid; there were formerly in the N.F. three of these fluids: two of different strengths, for the carbon and zinc battery, containing sodium dichromate and sulphuric acid; one for the Leclanché battery, containing ammonium chloride.

l. **epinephri'næ hydrochlor'idi** (U.S.), solution of epinephrine hydrochloride, containing in each 100 c.c. not less than 0.095 and not more than 0.105 gm. of $C_9H_{13}O_3N$; a nearly colorless slightly acid liquid; hypodermic dose, ♏8 (0.5).

l. **epispas'ticus** (Br.), blistering liquid, made by percolating powdered cantharides 1, with acetic ether q.s. to make 2.

l. **epispas'ticus mylab'ridis** (B.A.), blistering liquid of mylabris, prepared as the preceding, substituting mylabris for cantharides.

l. **ergostero'lis irradia'ti** (Br.), solution of irradiated ergosterol, "a solution in oil of the antirachitic principle, probably identical with the vitamin D contained in codliver oil," it contains in each gram 3000 units of antirachitic activity; prophylactic daily dose for an infant, ♏ 5–15 (0.3–1.0); curative daily dose for an infant ♏ 25–50 (1.5–3.0).

l. **eth'yl nitri'tis** (Br.), solution of ethyl nitrite, ethyl nitrite (obtained by the interaction of alcohol, sodium nitrite, and diluted sulphuric acid) 3, absolute alcohol 95, glycerin 3; employed as a substitute for spiritus ætheris nitrosi in doses of ♏20–60 (1.3–4.0).

l. **extrac'ti glycyrrhi'zæ,** solution of extract of licorice; a 25 per cent. solution in water containing alcohol and glycerin; a flavoring agent.

l. **fer'ri aceta'tis** (Br.), solution of ferric acetate; solution of ferric sulphate 2½ fluidounces, solution of ammonia 4 fluidounces, liquified glacial acetic acid 1½ fluidounces, distilled water to make 1 imperial pint, a red liquid of sour taste, employed as an astringent chalybeate in doses of ♏5–10 (0.3–0.6)

l. **fer'ri albumina'ti** (N.F.), solution of albuminate of iron; made by precipitating oxychloride of iron with egg albumin and sodium hydroxide solution and dissolving in water, alcohol, and aromatic elixir, hematinic in dose of ʒ2 (8.0) containing gr. ⅛ of iron.

l. **fer'ri chlo'ridi** (U.S.), solution of ferric chloride l ferri perchloridi fortis (Br.); iron wire 125, hydrochloric acid 680, nitric acid and distilled water, equal parts, to make 1000; local astringent and hemostatic, internal dose ♏1–3 (0.06–0.2)

l. **fer'ri citra'tis** (N.F.), solution of ferric citrate, prepared by adding citric acid to a solution of ferric sulphate; dose, ♏10 (0.6).

l. **fer'ri dialysa'tus,** dialyzed iron, solution of oxychloride of iron, made by saturating an aqueous solution of ferric chloride with ferric hydroxide, putting the solution in a dialyzer, and renewing the outside water until it no longer acquires an acid reaction, water is then added to the solution to make it one of 5 per cent. strength, dose, ♏10–30 (0.6–2.0).

l. **fer'ri et ammo'nii aceta'tis** (U.S.), solution of iron and ammonium acetate, Basham's mixture; tincture of ferric chloride 40, diluted acetic acid 60, solution of ammonium acetate 500, aromatic elixir 120, glycerin 120, water to make 1000, this is much stronger than the preparation of the same name in the U.S.P. 1890, chalybeate and diuretic, employed in the anemia of chronic Bright's disease, in doses of ʒ2–4 (8.0–16.0).

l. **fer'ri hypophosphi'tis,** solution of hypophosphite of iron; contains 16 per cent. ferric hypophosphite in glycerin and water; alterative and hematinic in doses of ♏10–20 (0.6–1.3).

l. **fer'ri io'didi,** solution of iodide of iron, contains 85 per cent. ferrous iodide; tonic and alterative in doses of ♏1–3 (0.06–0.2).

l. **fer'ri nitra'tis,** solution of ferric nitrate, prepared by adding nitric acid and ammonia water to a solution of ferric sulphate; dose, ♏5 (0.3).

l. **fer'ri oxychlo'ridi,** solution of ferric oxychloride of 3.5 per cent. strength; similar to dialyzed iron.

l. **fer'ri oxysulpha'tis,** solution of oxysulphate of iron; an aqueous solution of basic ferric sulphate, prepared by heating together nitric acid and ferrous sulphate.

l. **fer'ri peptona'ti** (N.F.), solution of peptonate of iron; contains the equivalent of 0.65 per cent. metallic iron in the form of peptonate in a flavored hydrochloric solution; employed in anemia in dose of ʒ2 (8.0).

l. **fer'ri peptona'ti et man'gani** (N.F.), solution of peptonate of iron with manganese; contains the equivalent of 0.4 per cent. metallic iron, and 0.2 per cent. metallic manganese; chalybeate tonic in dose of ʒ2 (8.0).

l. **fer'ri perchlo'ridi** (Br.), solution of perchloride of iron; one part of the strong solution to four parts of water; astringent chalybeate in doses of ♏5–15 (0.3–1.0).

l. **fer'ri perchlo'ridi for'tis,** strong solution of perchloride of iron, or of ferric chloride; practically the same as l. ferri chloridi (U.S.) though not quite so strong.

l. **fer'ri pernitra'tis,** solution of ferric nitrate; iron wire 1 ounce, nitric acid 4½ fluidounces, distilled water to make 30 fluidounces, employed as an astringent externally, and also internally in doses of ♏5–10 (0.3–0.6).

l. **fer'ri persulpha'tis,** solution of the persulphate of iron; ferrous sulphate 16, sulphuric acid 1½, nitric acid 1½, water to make 22; styptic.

l. **fer'ri protochlo'ridi,** solution of protochloride of iron; contains about 30 per cent. ferrous chloride; astringent chalybeate tonic in dose ♏8–15 (0.5–1.0).

l. **fer'ri salicyla'tus** (N.F.), solution of ferric salicylate, salicylated mixture of iron, composed of sodium salicylate 125, tincture of ferric citrochloride 125, ammonium carbonate 6 5, citric acid 8.5, methyl salicylate 2, glycerin 175, distilled water to make 1000; dose, ℥2 (8 0).

l. **fer'ri subsulpha'tis** (N.F.), solution of ferric subsulphate or of basic ferric sulphate, Monsel's solution; ferrous sulphate 675, sulphuric acid 65, nitric acid and distilled water, equal parts, to make 1000; styptic, employed locally; internal dose ♏5–10 (0.3–0.6).

l. **fer'ri tersulpha'tis** (U.S.), solution of ferric sulphate or of normal ferric sulphate; ferrous sulphate 500, sulphuric acid 96, nitric acid and distilled water, equal parts, to make 1000; somewhat stronger than the preparation of the same name in the U.S.P. 1890; used for the same purposes as the solution of ferric subsulphate, but is more irritating.

l. **formaldehy'di** (U.S., Br.), solution of formaldehyde, formol, formalin, a 37 per cent. aqueous solution of formaldehyde; employed as a preservative and antiseptic and in the form of vapor for disinfecting.

l. **glyceryl'lis trinitra'tis** (Br.), solution of glyceryl trinitrate, solution of nitroglycerin, spiritus* glycerylis nitratis (U.S.).

l. **gut'tæ per'chæ,** solution of gutta percha; gutta percha 15, in chloroform 100.

l. **hamamel'idis** (Br.), solution of witch hazel; fresh leaves 5, water 10, 90 per cent. alcohol 1, distilled one half; employed locally as a hemostatic and locally or by injection in hemorrhoids.

l. **hydrar'gyri et potas'sii io'didi,** solution of iodide of mercury and potassium, Channing's solution; red mercuric iodide 1, potassium iodide 0.8, distilled water 100; antisyphilitic and alterative in doses of ♏2–4 (0.13–0.26).

l. **hydrar'gyri nitra'tis,** solution of mercuric nitrate or of pernitrate of mercury, l. hydrargyri nitratis acidus (Br.), acid solution of nitrate of mercury; red mercuric oxide 40, nitric acid 45, distilled water 15; used as a caustic application in cancer, lupus, warts, etc.

l. **hydrar'gyri ni'trici oxydula'ti,** solution of mercurous nitrate; mercurous nitrate 100, nitric acid 15, distilled water 885.

l. **hydrar'gyri perchlo'ridi** (Br.), solution of mercuric chloride, or of corrosive sublimate; mercuric chloride 10 grains, distilled water 20 ounces; dose, ♏15–30 (1.0–2.0).

l. **hydrasti'næ compos'itus** (N.F.), compound solution of hydrastine, colorless hydrastine solution; hydrastine hydrochloride 3, aluminum chloride 3, calcium chloride 3, magnesium chloride 3, potassium chloride 1, glycerin 500, water to make 1000; dose, ℥1 (4 0).

l. **hydrogen'ii diox'idi** (U.S.), l. **hydrogenii peroxidi** (Br.), solution of hydrogen peroxide, or dioxide; a ten-volume solution, containing not less than 3 per cent by weight of hydrogen dioxide; formerly official under the title, *aqua hydrogenii dioxidi.*

l. **hypophosphi'tum,** solution of hypophosphites; each dose of ℥1 (4.0) contains calcium hypophosphite gr. 2 (0.13), sodium hypophosphite gr. 1¼ (0.08), potassium hypophosphite gr. 1 (0.06), with 0.6 per cent. of hypophosphorous acid; alterative and tonic.

l. **hypophosphi'tum compos'itus** (N.F.), compound solution of hypophosphites; each dose of ℥1 (4.0) contains calcium and potassium hypophosphites each gr. ½ (0.03), sodium, manganese, and quinine hypophosphites each gr. ¼ (0.008), iron hypophosphite gr. ½ (0.015), and strychnine gr. $\frac{1}{30}$ (0.00024); alterative and tonic.

l. **hypoph'ysis,** solution of the hypophysis cerebri or pituitary gland, l. pituitarii (U.S.).

l. **io'di caus'ticus,** caustic solution of iodine, Churchill's iodine caustic; iodine 25, potassium iodide 50, water 100; counterirritant and caustic.

l. **io'di compos'itus** (U.S.), compound solution of iodine, Lugol's solution; iodine 5, potassium iodide 10, distilled water to make 100; dose, ♏3–6 (0.2–0.4).

l. **io'di for'tis** (Br.), strong solution of iodine; iodine 100 potassium iodide 60, distilled water 100, 90 per cent. alcohol 36 to produce 1000.

l. **io'di et zin'ci phenolsulphona'tis** (N.F.), solution of iodine and zinc phenolsulphonate, pyorrhea astringent; potassium iodide 15, iodine 20, zinc phenolsulphonate 15, glycerin 25, distilled water to make 1000.

l. **io'di mi'tis** (Br.), weak solution of iodine, tinctura iodi, iodine 25, potassium iodide 15, distilled water 25, 90 per cent alcohol to produce 1000; dose ♏ 5–30 (0.3–2.0).

l. **io'di phenola'tus** (N.F.), carbolized solution of iodine, French mixture, Boulton's solution; a mixture of compound solution of iodine 1.5, solution of phenol 0.6, glycerin 16.0, water to make 100; employed externally as an antiseptic and counterirritant

l. **io'di sim'plex** (Br.), simple solution of iodine, contains approximately 10 per cent. of iodine; dose ♏ 3–15 (0.2–1.0).

l. **krame'riæ concentra'tus** (Br.), concentrated solution of krameria; powdered krameria 10, percolated with 20 per cent alcohol 25; dose, ℥½–1 (2.0–4.0).

l. **lymphæ,** the clear liquid portion of the lymph in which float the lymphocytes.

l. **magne'sii bicarbona'tis** (Br.), solution of magnesium carbonate, fluid magnesia; contains magnesium carbonate 10 grains in each fluidounce of carbonic-acid water; dose ℥1–2 (30 0–60 0).

l. **magne'sii bro'midi,** solution of magnesium bromide; each dose of ℥1 (4 0) contains gr. 7½ (0 5) of this salt flavored with orange syrup; cerebrospinal depressant.

l. **magne'sii citra'tis** (U.S.), solution of magnesium citrate, effervescent citrate of magnesia; magnesium carbonate 15, citric acid 33, syrup of citric acid 60, crystallized potassium bicarbonate 2.5, distilled water to make 360; dose 1 bottle or ℥12 (360.0).

l. **magne'sii sulpha'tis effer'ves'cens,** effervescent solution of magnesium sulphate; purgative in dose of ℥12 (360.0), or 1 bottle, containing ℥6 (25.0) of this salt.

l. **morphi'næ aceta'tis** (Br.), solution of morphine acetate, morphine acetate 17½ grains, diluted acetic acid 38 minims, 90 per cent. alcohol 1 fluidounce, distilled water to make 4 fluidounces; dose ♏15–30 (1.0–2.0)

l. **morphi'næ citra'tis,** solution of morphine citrate; containing gr. 15 (1 0) to ℥1 (30 0) in a solution colored with cochineal; dose, ♏5 (0 3).

l. **morphi'næ hydrochlo'ridi** (Br.), solution of morphine hydrochloride; morphine hydrochloride 17½ grains, diluted hydrochloric acid 38 minims, 90 per cent. alcohol 1 fluidounce, distilled water to make 4 fluidounces; dose, ♏15–30 (1.0–2.0).

l. **morphi'næ hypoder'micus,** hypodermic solution of morphine, Magendie's solution; morphine sulphate 3 3, salicylic acid 0 1, distilled water 100; dose, ♏5 (0 3).

l. **morphi'næ tartra'tis** (Br.), solution of morphine tartrate; morphine tartrate 17½ grains, 90 per cent. alcohol 1 fluidounce, distilled water to make 4 fluidounces; dose, ♏15–30 (1.0–2.0).
