GENERAL INTRODUCTION

NATIONAL REGISTER OF SCIENTIFIC AND TECHNICAL PERSONNEL IN INDIA

The increasing recognition of the role of science in the promotion of national welfare, and the two wars which utilized in an abundant measure and in a spectacular manner a large variety of scientific talent and skill, have spotlighted the scientist who was hitherto content to work in comparative obscurity, and brought him into the public view. It is now realised that the application of science on the scale necessary for social and economic development demands large number of workers, and not only should all the trained personnel available be efficiently and effectively utilised, but talented young men and women should be sought out wherever they exist, and trained to undertake the many tasks awaiting attention.

It is the appreciation of this position that has led to a stock taking of scientific personnel in various countries all over the world as an essential pre-requisite for assessing qualitatively and quantitatively the available man-power resources in each country and for formulating plans of training the personnel required for research and development. Thus in the United Kingdom, the collection of data relating to numbers and qualifications of scientists and technologists was undertaken under the supervision of the Royal Society of London in 1939. In the following year, the compilation of a National Register of Scientists was undertaken in the United States of America. In India, the demand for taking stock of the man-power resources was voiced by the delegates attending the 1947 session of the Indian Science Congress (Delhi). In August 1947, the Government of India appointed the Scientific Man-power Committee with Dr. Shanti Swarup Bhatnagar as Chairman, and included among the terms of reference to the Committee, "The maintenance of a register of scientific and technical personnel to facilitate their utilization to the best advantage". The work of compiling the register was later entrusted to the Council of Scientific and Industrial Research.

The National Register, which will be periodically revised and brought up-to-date, will provide a continuous census of the scientific man-power of the nation. It will be of assistance in : (*a*) the effective utilization of scientific talent, (*b*) assessing the gaps in the growth of science and technology, (*c*) supplying service personnel to industry, (*d*) finding alternative personnel in the prosecution of team work, (*e*) provision of personnel for educational and research institutions, and (*f*) keeping check on the drift of technical personnel to administrative departments. For fulfilling these purposes, it is necessary that the Register should be complete and comprehensive.

Appeals have been frequently issued in the past, requesting the scientists and technicians of the nation to co-operate in the compilation of the Register. The Hon'ble Shri Jawaharlal Nehru recently said :

> *The Government of India have at present under consideration the report of the Scientific Man-Power Committee appointed in April 1947, to advise on the best method of utilizing and augmenting the scientific man-power resources of the country. A basic recommendation of the Committee, which the Government have accepted, is that immediate steps should be taken to prepare a roster of scientific talent that is now available. The necessity of such a roster is obvious ....I appeal to all persons in India possessing degrees or diplomas in Science to send complete information about themselves such as age, permanent and present addresses, their scientific qualifications, research and industrial experience, their present occupations, the nature of the research work, if any, they are engaged upon, etc.*

So far, the response to the appeal has not been as satisfactory as it should have been. The efforts to collect the information, however, continue, and the Council have undertaken the responsibility of publishing the data as collected in a series of volumes. It is earnestly hoped that scientists and technicians would respond to the call of the Prime Minister and supply the needed information so that this national undertaking in which the Council is now engaged, may be completed satisfactorily and expeditiously.

INTRODUCTION

The present publication completes the series of three parts of the National Register Vol. I—Engineers ; all the parts taken together, the volume presents in compact form, comprehensive information relating to qualifications and experiences of engineering personnel in this country.

The need for a volume such as the present one, devoted to the technical sketches of civil, electrical, mechanical, chemical, mining, marine, automobile, aeronautical and communication engineers, has long been recognized and it is believed that the information brought together would be found useful to engineering and manufacturing industries and skilled trades interested in utilizing the talents available in the country.

The information contained in this volume was collected over a period of two years and although every entry has been carefully checked, it is not claimed that the information is up-to-date in all respects. It is hoped that the shortcomings in this publication will be treated with indulgence. Those who consult the volume are invited to notify errors and omissions which may come to their notice, so that the next edition may be freed from all errors of omission. A work of this type is likely to become out-of-date soon, and it is proposed to bring out revised editions at regular intervals.

I desire to express my gratitude to Dr. Shanti Swarup Bhatnagar for giving me an opportunity to participate in this national undertaking. Appreciation is hereby expressed to the staff, particularly the technical persons, namely, Messrs. B.M. Subramanian, Nanak Chand Budhraja, Sat Pal Gujral and B.R. Saxena, who assisted me in this laborious task of collecting and arranging the information. Thanks to their efforts the compilation has attained the status of a reference volume.

NOTE TO THE READER

1. Names are arranged alphabetically according to surnames, and under identical surnames according to first names. If both the surname and the first name are identical, names are arranged according to the second name.

2. The information given in the Register has been carefully abstracted from replies to the questionnaire furnished by the individuals themselves. The Council of Scientific and Industrial Research assumes no responsibility for the correctness of statements published.

3. The information holds good up to the date of the replies furnished by individuals.

4. Information relating to incomes and remuneration has been withheld at the request of a large majority of persons listed.

5. In arranging the information, the requirements of Government departments, institutions, industry and other employers have been taken into consideration. The compilation provides information on the qualifications and careers of qualified personnel.

6. The names of technical personnel listed in this volume have been classified according to categories in which the persons consider themselves to be specialists. The same name may appear in more than one category if qualifications and experiences warrant multiple entries.

7. Volume I of the National Register—Engineers Parts I, II & III, contains the names of *all* those who completed the questionnaire issued by the Council of Scientific & Industrial Research in connection with the registration of names of technical personnel in the National Register. The Council can accept no responsibility for the non-inclusion of those who have not responded to repeated requests made through the press and the radio for registration.
