ILLUSTRATED BY Gregory Orloff, Helen Noel, and Brinton Turkle

DESIGNED BY Taylor Poore

PREFACE to the Single Volume Edition

The reception of *The Literature of the United States* in two volumes has been most gratifying. The critical appraisal of its pattern and contents encouraged us to stand on the publication in this first form alone. A considerable number of teachers, however, have indicated that the mechanics of the courses which they give would be better served if they could have the program within two covers. This Single Volume Edition is brought out to satisfy their needs.

The new form, which, understandably, is not intended to supplant the two volumes in the longer, more detailed survey courses, nevertheless embodies the principles and organization of the original work as far as possible. After much study, we have deleted those selections which we believe are *relatively* less essential to the student's understanding of the development of our literature. Our hope is that the selections which have been retained still make possible the introduction of the student to the varied literary achievements of our countrymen.

As we stated in the preface to the earlier publication, it is obvious in these unsettled times that, no matter what questions the future will pose, the young men and women who are passing through college classrooms are going to need all the strength of character, all the humility and tolerance and humor, all the intelligence which they can muster. We think that American literature can be of help. The literature of our country has been written by inhabitants of many different localities, representatives of many different levels of society, products of many different racial, religious, and occupational influences. American writers are not agreed on any one way to salvation, any one philosophy, any single explanation of this puzzling world. But they have told of finding life well worth the living in these United States. They have held pretty consistently that the world can be improved by tireless application of intelligence. We hope that something of this spirit will be absorbed from this book.

We realize that American literature may be taught, and taught well, in many different ways. Our guiding principle has been that although limited fields of study and specialized approaches are desirable in texts to be used in advanced courses, an introductory text fails unless it shows the great range of the riches of our literature and the several ways of appreciating these riches. Both in the selections and in the editorial apparatus, therefore, we have again tried to provide the material for different kinds of courses or a course with several emphases—the chronological survey, the careful analysis of the work of major authors, the study of literary types, and the examination of the development of significant ideas.

Hence *the selections* continue to be comprehensive. The writers included represent the whole range of American literary history, from the colonial period down to the present day. Major authors are given generous space, but the more interesting minor writers have not been neglected. Complete works have been given preference over unilluminating excerpts. Particular care has been taken to include folklore, humor, the drama, and the novel, all of which are often subordinated in anthologies to the more manageable essays, poems, and short stories. In addition to primarily artistic literary works, this book contains numerous examples of utilitarian types such as the sermon and the political tract. Throughout, we have tried to include only work likely to have lasting literary interest and value.

Hence, also, *the approaches* to these writings are varied. Introductory chapters on "Intellectual Currents" in the six periods of our plan are designed to indicate the intimate relationship between American literature and American history. Biographies of individual authors and occasional introductory notes suggest how a knowledge of the writer's life can often add to the interest and understanding of a particular selection. Sections on "Literary Trends" and numerous analytical notes emphasize the importance of the study of literary forms, techniques, and values.

Although we have consciously sought to emphasize variety, we have not ignored the desirability of coher-

ence. By frequent conferences and by correspondence we have sought ways and means of integrating the history of ideas, the history of forms, the biographies, the selections, and the notes.

We are jointly responsible for the plan of the book as a whole, and for what we hope will be found a satisfactory unification of enormously varied materials. To indicate our individual responsibility, however, we have initialed the introductory chapters, and we are individually responsible for the biographies, introductions, texts, and notes as follows:

W. B. (Walter Blair): John Smith, William Byrd, Singers of the Revolution, Edgar Allan Poe, Henry Wadsworth Longfellow, Oliver Wendell Holmes, James Russell Lowell, Seba Smith, Singers of the West, Civil War Singers, Abraham Lincoln, "I Hear America Singing," David Crockett, George Washington Harris, Thomas Bangs Thorpe, Charles Farrar Browne, Henry Wheeler Shaw, John Greenleaf Whittier (regional poetry), Bret Harte, Samuel Clemens, Frank Norris, Emily Dickinson, Finley Peter Dunne, Henry Adams, Henry Louis Mencken, Robert Frost, Vachel Lindsay, Carl Sandburg, Ernest Hemingway, Irving Babbitt.

T. H. (Theodore Hornberger): William Bartram, Roger Williams, Cotton Mather, Jonathan Edwards, Benjamin Franklin, Michel Guillaume St. Jean de Crèvecoeur, John Woolman, Thomas Paine, Thomas Jefferson, Alexander Hamilton, Philip Freneau, Joel Barlow, William Cullen Bryant, Washington Irving, James Fenimore Cooper, William J. Grayson, Hamlin Garland, William Vaughn Moody, Edward Bellamy, Sinclair Lewis, William Faulkner, Willa Cather, John Steinbeck.

R. S. (Randall Stewart): William Bradford, Samuel Sewall, Edward Taylor, Ralph Waldo Emerson, Henry David Thoreau, Nathaniel Hawthorne, Herman Melville, John Pendleton Kennedy, William Gilmore Simms, John Greenleaf Whittier (abolitionist poetry), Henry Timrod, Walt Whitman, George Washington Cable, Joel Chandler Harris, Sarah Orne Jewett, William Sydney Porter, William Dean Howells, Henry James, Stephen Crane, Theodore Dreiser, Sidney Lanier, Edwin Arlington Robinson, Thomas Stearns Eliot, Allen Tate, Eugene O'Neill, John Dos Passos, Thomas Wolfe.

The illustrative material is intended to aid in showing students how captivating our literature has been throughout its history. A detailed consideration of the sources of the illustrations and the work of the artists follows this preface.

Some of our many debts to the work of scholars in the field of American literature are acknowledged in the introductions and notes Since we have avoided burdening the student with too large a mass of scholarly citations, we add here our general appreciation of the large contribution to our interpretations and criticism by our fellow-workers. American literary scholarship is relatively new, but it is growing rapidly and already bulks large in the preparation of any such book as this Here and there, we trust our work has added to its store of facts and generalizations.

The Literature of the United States is thus offered in an alternate form with a retention of its fundamental features We shall be pleased if this new version results in an extension of the usefulness of a work which attempts to represent so much of the cumulative development and study of American literature.

ILLUSTRATIONS

Lives and Times in Pictures

The literature of the United States has been created by men and women living in a real world—a world of nature, of towns and cities, of homes. To apprehend this fact is very important if the student is really to know and to appreciate American literature. Yet the earliest authors and even some of our contemporaries may easily become remote from the student's understanding. To bring closer to the reader the men and women who wrote and the times in which they have lived, we have adopted a program involving the extensive use of interpretative illustrations.

Realizing that these illustrations would be worthless if they were not authentic, we have spent hours in research and the careful study of detail, to assure their accuracy. The artists, sharing our zeal for accuracy, have been equally careful: at times they have made extensive revisions in order to include only authentic materials and in order to keep the drawings consistent with the book as a whole. In addition, they have shown great skill, we believe, in working these many details into compositions distinguished for their artistry.

The illustrations designed and created especially for *The Literature of the United States* are of three types. The lives and times of the major authors included in the book have been illustrated in "panels" by GREGORY ORLOFF ("G. O."). The material in these drawings has its source in authentic historical documents, portraits, views of landscapes, of settlements, towns, and cities, and (now and then) illustrations from early editions of works. Other panels are devoted not to single authors but to the schools that have been recognized in the organization of this book—the groups of men and women whose writing seemed to have a common background, regional or stylistic, or a common moral, political, or artistic purpose.

The smaller drawings falling within the body of the selections are the work of HELEN NOEL ("H. N.") and were planned to point up details and to give a feeling for the life of the various periods. Particular emphasis has been placed on the homes and surroundings of the authors, the places about which they wrote, the particulars of the background of their everyday lives

Each chapter is introduced by a two-page panorama which we hope will give a general picture of America's development in the span of years covered in the chapter. These two-page drawings have been done by BRINTON TURKLE ("B. T."). In them are found illustrations of the architecture, the costume, the military tactics, the political life, the transportation, and the industrial and territorial expansion of each period

In striving further for authentic pictorial material heightening the interest of the literature, we have supplemented the work of our present-day artists with direct reproductions of contemporaneous illustrations of certain American writings. Such illustrations as those by Felix O. C. Darley for Irving's "The Legend of Sleepy Hollow" and Cooper's *The Pioneers,* which have long enhanced the reader's understanding and enjoyment of the literature, appear here.

A complete catalogue of the illustrations follows.

(A description of the details in each of the biographical and school panels is given in a footnote on the page where the panel appears. Contemporary sources have been used throughout, and are indicated in detail wherever they are of unusual interest.)

The English Colonies—Historical spread (B.T.). Reading counterclockwise: Colonial forces in the French and Indian War • Map of the principal colonial settlements • Colonial costume • Benjamin Franklin in England • Independence Hall • Stagecoach • Settler's cabin, typical of the earliest colonial architecture 1

The English Colonies

Chapter 1

The English Colonies 1588 • 1765

TO TREAD AND PLANT THAT GROUND. "Who can desire more content that hath small meanes; or but only his merit to advance his fortunes, then to tread and plant that ground he hath purchased by the hazard of his life. . . ."

— John Smith

I. Intellectual Currents

THE PATTERN of COLONIAL CULTURE

The story of the colonial period of what is now the United States is familiar, in its main outlines, to all of us. It extends roughly from that first voyage of Columbus in 1492 to the Stamp Act in 1765, which brought to scattered and disunited English settlements the realization of their common interests and strength

Columbus, seeking a new way of access to the riches of the Orient, found instead a New World and loosed upon it the expansive forces of the western European nations, already restlessly groping toward a new phase of their civilization. In the ensuing struggle for power, England was only gradually and belatedly involved. John and Sebastian Cabot had given her a claim to the northern continent of the new hemisphere, but it was nearly a century before men like Walter Raleigh sought to make good that claim by actual occupation. When it became clear that North America could offer little comparable to the easily won gold of Peru and the silver of Mexico, most Englishmen refused to grow excited over colonies, and many were openly scornful of such costly failures as that at Roanoke Island in 1585. Ultimately, however, their patriotism—a curious blend of nationalism and Protestantism—their renewed awareness of their rôle as a seafaring people, and their longing for wealth accounted for the tenuous successes of permanent settlements at Jamestown in Virginia in 1607 and at Plymouth in Massachusetts in 1620.

Thereafter the shape of things to come was perceptible to shrewd and well-informed men. From the Puritan Migration of 1628-1640 New England acquired a population of perhaps twenty-five thousand persons, enough to give her a long-enduring economic and cultural leadership in British America. From the difficulties of administering a colony at a distance of three thousand miles there developed representative assemblies (the first of them in Virginia) comparable to the lower house of the English Parliament. From the absorption of the Dutch of New Amsterdam and the Swedes along the Delaware, the pattern of colonial life acquired variety and color. The religious motives of the Catholic Lords Baltimore and the Quaker William Penn lent distinction to the settlement of Maryland and Pennsylvania.

Up and down the Atlantic coastline, villages and farms and plantations proliferated, and everywhere men

sought to build that life which seemed to them desirable, compromising always with the hard facts of their environment and the often conflicting ambitions of their neighbors. By 1700 the colonists numbered more than a quarter of a million; by 1765, approximately a million and three quarters. They had been fortunate in being left pretty much to their own devices, or being interfered with only sporadically and unsystematically For all their differences—and they had many—they agreed, in the mass, upon one thing they wanted to control their own affairs. We know now, as Americans in 1765 could not know, that the road from such an agreement to Lexington and Bunker Hill and Independence Hall was inevitable, that the essential truth of their situation lay in Thomas Jefferson's epochal words "When, in the course of human events, it becomes necessary for *one people. . . .*"

One people! Such the colonists in British America eventually became. Why and how they did so are still puzzling questions, despite the many words which have been written to explain the Revolution. The disintegrative forces of the colonial period were seemingly as powerful as those which operated for cohesion and unity. Intercolonial travel by land was difficult and uncommon. Personal and commercial connections between one colony and England were often closer than those between colony and colony. Marked religious differences prevailed, from Congregational New England to the Anglican establishments in Maryland, Virginia, and the Carolinas. Outside of New England there was little homogeneity of background, for by 1765 one out of every three Pennsylvanians was German, every other North Carolinian was of Scotch-Irish ancestry, Negro slaves made up almost half the population of Virginia, and in South Carolina and Georgia the whites were actually outnumbered. Nevertheless all were Americans, with characteristic political and social institutions and with a literature of their own, which tells much of what they thought and argued and dreamed about.

Language, folklore, learning, the arts, literary tastes and types, legal, political, and educational institutions—everything except the land itself and a few skills acquired from the Indians—had been brought across the Atlantic Ocean. The process of transplantation had been by fits and starts and by devious routes; it had never been smoothly regular, almost never simple. Always involved in it had been change, adaptation, modification to meet the peculiar circumstances of the new environment. The old ways never worked quite perfectly under the new conditions. Men came who knew how to build houses, but they had to work with the building materials they found—lime for plaster, for example, was hard to come by—and they had to meet the exigencies of climates unlike those to which they had been accustomed. Physicians arrived, their minds stored with botanical medicine, only to discover that America had a flora of its own, whose medicinal use had to be discovered by experiment or learned from the aborigines. Traditions lingered, but necessity forced the quicker-witted to depend upon first-hand knowledge, and there was a sufficient variety of problems in the lands from Maine to Georgia to call forth all the ingenuity that experience could develop. Decade after decade the processes of transplantation and adaptation were repeated, with infinite minor variations. New men and women came from Europe, bringing new tools and talents and opinions and adapting them as best they could to what they found Frontier succeeded frontier as immigrants pushed up the streams toward the mountains to find new farms and found new villages. In the growth of the colonies there were few breathing-spaces; stability was short-lived, change incessant.

Nor was Europe static. In almost every field of human thought the period was tumultuous, full of conflict and revolutionary change. In economics, the feudal system was giving way to modern capitalism. In politics, the theory of the divine right of kings was dying under the blows of constitutional and contractual concepts. In religion, the schisms and sectarian rivalries which were the aftermath of the Protestant Reformation were hardly yet softened by the principle of toleration, which was eventually to bring a measure of amity. In science, revolution was continuous as Copernicus, Galileo, Bacon, Descartes, Boyle, Newton, and their associates and disciples changed both the world-view of western man and his method of advancing his exact knowledge of the world in which he lived. In literature and the arts, the creative outpouring of the Renaissance was succeeded by the more orderly but by no means barren reign of Neoclassicism.

The colonial era of the United States coincided, in short, with the germinal period of what we call the modern world. Europe, of necessity the chief constant factor to the people who settled in America, was itself becoming a new world. The more intelligent colonists,

get that they were participants in affairs of mighty moment, in the rebuilding of an old as well as in the creation of a new society.

Colonial literature was consequently written as often for European readers as for American. It was produced out of necessity rather than leisure, by men and women who wrote because they had some immediate pressing purpose, economic, religious, or political, which could be furthered by writing Our first concern must be to understand those purposes

THE ECONOMIC PROMISE

The first and the greatest promise which the New World held out to Europeans was freedom from want. To landless men whose ancestors had been bound for centuries to the soil, America offered room to raise food and clothing, to attain the security of well-stocked barnyards and overflowing granaries. As Captain John Smith put it, "Who can desire more content that hath small meanes, or but only his merit to advance his fortunes, then to tread and plant that ground he hath purchased by the hazard of his life." If Americans have always wished to live well—too well, according to those critics who count materialism our foremost national sin—they have come by their desire for an ever higher standard of living quite naturally. Few Europeans came to America without expecting to improve their economic status.

Colonial literature is therefore rich in accounts of the economic resources of the New World. The prospective immigrant wanted to know, in as much detail as possible, about his chances to earn a living He did not always find accurate information, because the books about the colonies were often written by promoters whose evaluations were rosily optimistic rather than sober or cautious. From the explorers, travelers, and settlers, however, as well as from the promoters, there came in the course of time an enormous body of information on the topography, soils, plants, animals, and minerals of British America. These writings told what would and would not grow. They paid particular attention to timber, because England needed ship supplies and her great forests were playing out. They commented in detail on game and fur-bearing animals, on fisheries, on the probabilities of mines.

The first selection in the present chapter is from one of the earliest English surveys of what is now a *New England* (1616). Smith named this region, described it with surprising accuracy, and enumerated the ways in which a living might be made in the New World. What he wrote was read carefully by men who were considering emigrating. His *Map of Virginia* (1612) and Thomas Hariot's *Briefe and True Report of the New Found Land of Virginia* (1588) were similarly aimed at informing prospective settlers. No colony, indeed, was without a "Description" or "Map" or "True Report" of economic possibilities, followed by a local literature of promotion which was in turn succeeded by reports of progress. Of the many other books that might be named, the most important are Francis Higginson's *New England's Plantation* (1630), William Wood's *New England's Prospect* (1634), Thomas Morton's *New English Canaan* (1637), John Hammond's *Leah and Rachel; or, The Two Fruitful Sisters, Virginia and Mary-Land* (1656), Daniel Denton's *Brief Description of New-York* (1670), William Penn's *Some Account of the Province of Pensilvania* (1681), Thomas Ashe's *Carolina* (1688), and Gabriel Thomas' *Historical and Geographical Account of the Province and Country of Pensilvania* (1698). These books made it clear that the fundamental needs of food, clothing, and shelter could be satisfied rather more easily in America than in Europe, and they suggested that industry and ingenuity could produce surplus and wealth beyond anything of which the common man in Europe dared to dream.

From the first discovery, indeed, the New World seemed to many a land of marvels, of limitless economic opportunity. The state of mind it created had been germinating over many centuries. The ancients had harbored traditions of wonderful western lands: the Elysian Fields, where happy souls went after death; the Islands of the Hesperides, where golden apples grew; Atlantis, that island continent swallowed up by earthquakes long before the time of Plato. In medieval times men had written of fabulously wealthy islands—Antillia and O'Brazil—somewhere in the western ocean, and the news had slowly circulated that the Norsemen had found a new, rich western continent called Vinland. These stories, combined with the ineradicable conviction that America was close to the legendary treasures of India, China, and the Spice Islands, had prepared the European mind for wonders, and it was duly delighted with the strange new plants and animals and humans

of which the explorers wrote. Anything could happen in this New World.

There were only a few skeptics. Samuel Purchas, for example, in *Purchas His Pilgrimes* (1613), expressed the conviction that America was not so wonderful as some people seemed to think. "For what haue they," he wrote, "to oppose to our Elephants, Rhinocerotes, Camels, Horses, Kine, &c. Neither are the naturall fruits of America comparable to those of our World. Whence are their Spices, and best Fruits, but from hence, by transportation or transplantation? As for Arts, States, Literature, Diuine and Humane, multitudes of Cities, Lawes, and other Excellencies, our World enjoyeth still the priuiledge of the First-borne. America is a younger brother, and hath in these things almost no inheritance at all, till it bought somewhat hereof of the Spaniards, with the price of her Freedome." In the eighteenth century there were like-minded men, such as the Comte de Buffon and the Abbé Raynal, who were convinced that the American climate was enervating so that men and beasts degenerated there. Jefferson devoted much effort to refuting them by compiling tables of the comparative weights of European and American animals and by assembling for Buffon, in his apartments in Paris, the skeleton of an American mastodon.

Most Europeans, however, were more than willing to look to America with unbounded optimism, especially when, as often happened, they grew impatient with the state of things in their own civilization. The prevailing temper was that of the English philosopher George Berkeley, who pictured a Muse disgusted with Europe, waiting a better time.

> In happy climes, where from the genial sun
> And virgin earth such scenes ensue,
> The force of art by nature seems outdone,
> And fancied beauties by the true.

Man was to be better treated by Nature in the western hemisphere. He was, in fact, to rise to new heights, far more impressive than mere economic abundance could attain.

> Westward the course of empire takes its way,
> The four first Acts already past,
> The fifth shall close the Drama with the day;
> Time's noblest offspring is the last.

Only the presence of a savage people stood in the way of New World greatness. The Indians, it is true, were not very numerous and, with some exceptions, not very dangerous. Some observers saw the hand of God in the plague which had decimated the New England tribes just prior to the English settlement in that region; others argued that a few heathens should not be allowed to stand in the way of living-room for good, civilized Christians. The prospective settler wanted, of course, to know about the Indians. They were an economic fact to be reckoned with—a possible source of wealth, through trade or conquest, and a probable source of danger, if they resented, as they easily might, the invasion of their hunting grounds by land-hungry Europeans. The Indians therefore have a large place in almost every book which surveyed New World resources. Their persons and customs were described in great detail, their military strength carefully estimated. It cannot be said that the English always dealt justly with the aborigines; Roger Williams and William Penn were exceptional in their concern about obtaining land by purchase and treaty. Most of the settlers proceeded upon the expedient conviction that the Indians who stood in their path were treacherous and inferior animals to be eliminated with as little compunction as the rattlesnakes, the wolves, and the bears. The story of the gradual dispossession of the Indians is one of the blackest chapters in colonial annals.

Other than economic considerations appear in the literature about the Indians. Their novelty, the unsettled problem of their origin (were they, for instance, descendants of the lost Ten Tribes of Israel?), their uncanny skill in woodcraft, their strange social and political organization, their stoic endurance of pain and their sadistic pleasure in torture, their heathen faith—all created an interest which amounted to fascination. The Pocahontas legend, whether or not Smith invented it out of whole cloth (see p. 25), epitomizes the tendency to create a "noble savage." There developed in connection with the Indians the attitude known as primitivism, the glorification of the unspoiled simplicity of the "uncivilized." Primitivism was in the main based upon objection to the complexities and maladjustments of European life. In the colonial period it is more common in the books of Europeans than in those written by persons who had actually been in contact with the savages, although Morton's *New English Canaan* is a notable exception. Later, in the eighteenth century, primitivism appeared in the

poems of Freneau (p. 202), the essays of Crèvecoeur (p. 149), and the *Travels* of William Bartram (p. 54). It continued well into the nineteenth century and is an essential part of the philosophical background of Cooper's Leather-Stocking tales (see p. 268) and Longfellow's *Hiawatha.*

Colonial literature also records the economic processes by which simple home industries were gradually supplanted by a more specialized industrial life The references to mining and ironworks in the writings of Col. William Byrd of Westover in Virginia (see p. 50) suggest something of the beginnings of industrialization, which was not to become general, of course, until many years after political independence had been achieved

Most of us will agree that the New World fulfilled its economic promise. Like the man in the folk tale whose three wishes were fulfilled, but never quite as he expected them to be, the first Americans did not attain freedom from want as effortlessly as some of them had expected. They had to learn patience and thrift and the most efficient use of their vast new environment, and, as we shall see in a later chapter, they had to adjust themselves to other than merely local circumstances But attain it they did, in good measure, and colonial literature reveals both the nature and the realization of their desires.

THE RELIGIOUS LIFE

Next to getting a living, the chief concern of great numbers of the colonists was religion. Some of them, indeed, regarded the saving of souls—their own and those of other people—as the most pressing matter of existence To understand the men and women who established the pattern of American life we need to know with some precision their religious and theological background and its reflection in literature.

The first thing to remember is that most of the colonists, whatever their church, were keenly aware of the Reformation. The Bible had been in the hands of Englishmen, in their own language, only since 1535, and to most of them it was a fresh and inexhaustible revelation of the will of God The persecutions of the reign of Queen Mary, the fear of a Spanish invasion (which it was believed would have been swiftly followed by an Inquisition in England), the memory of the Gunpowder Plot of Guy Fawkes, the vexed problem of the royal succession, and the endless series of debates about church government and ritual—all were as close to the English in the early seventeenth century as the events of the period since 1865 are to present-day Americans.

The earliest attempts to colonize reflect the rivalry between Catholics and Protestants Smith, for example, emphasized the heathenism of the Indians, implying that it was the sacred duty of the English to convert them to the true faith, that is, to Anglicanism, before they could be led astray by the Catholic Spaniards or French. Obviously, however, the settlers who came to America with any such altruistic intentions were few and far between

Six English colonies—Plymouth, Massachusetts Bay, Maryland, Rhode Island, New Haven, and Pennsylvania —were nonetheless founded by religious groups or leaders to whom economic considerations were clearly secondary. Why this was the case can be understood only by reference to the peculiar circumstances of the Reformation in England.

Between Henry VIII's break with the Pope and the end of the reign of Queen Elizabeth, the Church of England had arrived at a *status quo* justly described as moderate Protestantism. The break with Rome was complete The ruler was the acknowledged head of the English Church, monastic orders had been abolished and most of the lands accumulated over the centuries by the Church had been nationalized, church services were held in English rather than in Latin; and the people had been provided with the English Bible and the English *Book of Common Prayer.* On the other hand, much that seemed "papist" to the more extreme Protestants remained—the hierarchy of parish priests, bishops, and archbishops, intimately connected with the structure of the civil state, richly ornamented churches and vestments; and set forms of prayer and worship

English dissent consisted of innumerable groups and individuals who believed that the Reformation had not gone far enough. Some wanted to remove all vestiges of Catholic practices and rituals, placing more emphasis upon the sermon and the Bible as the chief means of bringing souls to Christ—these were ordinarily called Puritans Others desired to substitute a measure of lay control for the system of benefices, bishops, and archbishops—they were the Presbyterians Still others wished each congregation to decide for themselves what form of worship they were to follow—these were the Separatists, Independents, or Congregationalists, also sometimes called Brownists, after their first spokesman, Robert

Browne (1550?-1633?). In addition, there were many shades of opinion regarding the proper forms of worship and the most desirable form of church government. With the passage of time differences of opinion about these matters multiplied rather than diminished.

The Anglican leaders sought continuously to enforce conformity to the *status quo*. As early as 1604, James I, speaking of the Puritans, announced, "I shall make them conform themselves or I will harry them out of the land, or else do worse." With the accession of Charles I in 1625 the more militant bishops had the support of a king with absolutist leanings, and unremitting efforts to insure conformity began. Under William Laud, Bishop of London from 1628 until 1633, and thereafter Archbishop of Canterbury, Primate of England, until his execution in 1645, clergymen who failed to follow the prescribed forms of worship were brought into church courts, tried, and punished, most often by being forbidden to exercise any clerical functions. Among them were many of the men who became the leaders of the New England colonies.

The Pilgrims who came to Plymouth were Separatists. Some of them had emigrated to Holland, found the atmosphere there too "foreign" for their taste, and determined to settle in America. They were poor and would not have been able to make the voyage in the *Mayflower* had not the necessary capital been provided by a group of "merchant adventurers" of London. William Bradford (p. 29) was the mainstay of the settlement and church which they founded in Massachusetts. In 1692 Plymouth became a part of the Province of Massachusetts Bay.

The Puritans of the Massachusetts Bay Company came to New England only when it became clear that reform within the English Church was impossible. They took care to bring their charter with them, and they intended to establish a state in which the kind of church they wanted might thrive. In contrast to the Pilgrims, they were wealthy and well-educated, many of them being substantial property-owners or professional men, university-trained as was their governor, John Winthrop. Furthermore, they were numerous; between 1628 and 1640 there was a constant stream of immigrants. Not all of them were as earnest in their religion as Winthrop and the ministers, but Bay Colony leadership was shrewd. Social, political, and educational institutions were so securely established that no study of the genesis of American life can ignore the Puritan tradition. Before the Puritans had been long in New England, they agreed upon a form of church government which was partly Congregational, partly Presbyterian—the *Cambridge Platform* of 1649 By that time the Westminster Assembly had effected changes not wholly dissimilar within the Church of England, although they were to be largely annulled by the Restoration in 1660.

Puritanism, however, was more than an attitude toward forms of worship and church government. It was then, as it is now, a word used to describe a strait-laced way of life, a concern with moral conduct so great as to lead some individuals to attempt what we now think of as unwarranted control of the personal lives of their neighbors, a rigid repression of sins and fashions that are now thought venial Such was Puritanism at its worst At its best it provided men with a sense of social responsibility, an earnestness about life which had in it both intellectual conviction and intense, sometimes even mystic, piety.

Underlying Puritan earnestness was Calvinism, a stern and legalistic theology constructed by the Genevan reformer, John Calvin (1509-1564). Calvinism portrayed God as a sovereign whom man, in the person of Adam, had disobeyed, thereby breaking an inexpressibly sacred and solemn covenant. Upon Adam and all his race retribution had justly fallen. Through Christ, however, man had been given a second chance, although that chance was extended only to those men whom God had "elected" to be saved. Most men were predestined to damnation, as they deserved. Although one could never be wholly sure of being among the fortunate few for whom salvation was foreordained, life was to be lived in a search for the divine will, as it might be expressed in one's own struggle for serenity, through one's spiritual growth, or as it might be interpreted from events in the external world. To walk uprightly in the sight of God, and to seek to follow His will—these were the aims of the Calvinist and the origin, as has often been remarked, of the "New England conscience."

Calvinism was the dominant theology of the entire colonial period, and it survives to some extent in the formal creeds of most Protestant churches other than the Lutheran. Non-Calvinists have always found it "harsh," chiefly because of its humiliating picture of human nature as utterly corrupt, regenerable only by the grace of God. In its defense two things may be said: it is not

difficult for anyone except the blindest optimist to observe unpalatable depths of cussedness in human beings, and it is evident that to some individuals the Calvinistic glorification of God gave an exhilaration and a direction to life which few faiths rival.

From the first Calvinism had its opponents. Of the many that might be described, four are so important to the student of literature that their description is a necessity These four—Antinomianism, Arminianism, Quakerism, and Deism—had one thing in common. they granted human nature a more dignified place than the Calvinists were willing to grant it. Otherwise they were most dissimilar. Antinomianism and Arminianism were merely theological positions, not necessarily connected with a particular church any more than was Calvinism itself. Quakerism was and is the doctrine of a religious society, the Friends, theologically not very far removed from Calvinism. Deism was neither theology nor a church, but a philosophical position, a state of mind

Antinomianism has approximately the place in religion that anarchy has in politics, that is to say, it is the denial of any authority beyond the individual The Antinomian controversy which shook the Bay Colony to its foundations in 1636 and 1637 ended with the banishment of Anne Hutchinson for spreading, among other heresies, the doctrine that God revealed Himself directly to individuals, so that one could know whether or not one was of the "elect." Such thinking challenged both the Calvinistic concept of the Bible as God's final revelation and the social control which was basic in the thought of such leaders as Winthrop

Arminianism takes its name from the Dutch theologian, Jacobus Arminius (1560-1609), who held that one could achieve salvation in part through "good works," that is to say, through living a moral and upright life, but it was regarded by the Calvinists as derogatory to the sovereignty of God However, when the evangelical preachers of the eighteenth century took religion to the masses of the people, "good works" formed a far more concrete appeal than more abstruse theology, and the Methodist movement particularly became deeply tinged with Arminian thought.

Quakerism is the only one of the many radical Protestant opinions of the seventeenth century which has continued in its original form to be influential to the present day. The folk who first called themselves "Children of Light" and, later, the Society of Friends, organized under the leadership of George Fox (1624-1691) in the late 1640's. Their popular name was given them in jest, after Fox had asserted that even magistrates would come to "tremble before the word of the Lord." The Friends believed that the duty of man is to follow the Bible and the "inner light," that "pure wisdom" which comes from above. With a quietistic listening for the "openings" from God they combined the social control of "speaking out" in meeting, by which the promptings of the inner light were communicated to and passed upon by other Friends—a control which preserved them from the Antinomian lawlessness. They believed that all men are brethren, that all violence (and especially war) is evil, that worldly distinctions of class and dress are meaningless, that the taking of oaths is blasphemous They had no professional clergy, and they tended to distrust higher learning. Bitterly persecuted in New England as late as 1677, they established themselves in New Jersey and Pennsylvania, where they became a powerful force for the abolition of slavery and for social reform of many varieties. They produced relatively few writers (for the greatest of them, John Woolman, see p 155), but their equalitarianism and humanitarianism have always been influential in American life. Whittier was their chief spokesman in nineteenth-century American literature. but the Quaker influence may easily be discerned in the work of Walt Whitman and many lesser figures.

Deism is ordinarily dated from the writings of the English philosopher Lord Herbert of Cherbury (1583-1648). Herbert approached the problem of religion from a purely rational point of view, similar to what we would now call the comparative method. He found that in all ages and in all times, whether pagan or Christian, men had agreed on five axioms (1) that there is a God, (2) that He ought to be worshiped; (3) that piety and virtue are the essentials of worship; (4) that man ought to repent his sins; and (5) that there are rewards and punishments in a future life Veneration of the Bible as the revelation of God is wholly absent from this rational conclusion, and it is the rejection of revelation which is the distinguishing mark of Deistic thought. In the latter part of the seventeenth century, rationalism spread rapidly, in part as a result of the scientific advance, and there was widespread acceptance of the Deistic view that religious truth could be obtained by the use of reason. Although the Deistic controversy was primarily an English affair, Increase and Cotton

Mather were attacking the Deists before the end of the century, and Edwards' *Divine and Supernatural Light* (p. 83) would scarcely have been written had it not seemed important to refute the Deistic emphasis upon the place of reason in religion. The best-known Deistic work by a colonial American is Benjamin Franklin's *Dissertation on Liberty and Necessity, Pleasure and Pain* (1725), which its author accounted an "erratum" (see p. 118). No reader of Franklin's writings will be long in doubt, however, of his fundamental agreement with Lord Herbert of Cherbury. The Deistic principles of many of the leaders of the Revolution, including Washington, Jefferson, Hamilton, and Ethan Allen, lend credibility to the picture of an American "cult of reason" in the late eighteenth century; but that, together with the mare's nest stirred up by Thomas Paine's *Age of Reason* (1792), must await discussion in another chapter.

Toleration and revivalism, perhaps the most characteristic features of American religious life, also have their origins in the colonial period. Both are still, after all these years, matters for the thoughtful concern of every American.

Roger Williams (p. 63) founded Rhode Island in 1636 as a tiny island of refuge for "heretics" like Anne Hutchinson and the Quakers. He was far ahead of his time, for not until the chartering of Pennsylvania in 1681 was there a second colony ready to receive all victims of religious persecution. Maryland, to be sure, passed a Toleration Act in 1649 as a protection for the Roman Catholics, but Jews and Unitarians were not desired. Maryland was to be a "Christian" settlement, not a refuge for unbelievers who might cause disturbance. The American colonies, some of them none too willingly, bowed to the provisions of the Toleration Act passed by Parliament in 1689, and thereafter the principle of religious freedom was given at least lip service. Nonconformists to the dominant pattern of religious life were by no means safe, however, although in later years anti-Catholic, anti-Semitic, and anti-this-and-that feeling is usually explainable in part by economic competition

Revivalism, while not wholly native, has probably never flourished elsewhere so consistently as in America. Its origins are to be sought in the religious situations of colonies founded by earnest and pious folk who saw their children slipping away from the faith as life became easier and more secular. This situation developed in New England shortly after 1650 and was signalized by the adoption of the Half-Way Covenant of 1662, which admitted the children of church members to church membership (although not to communion) without the previously required confession of "religious experience." For most of the sixty years thereafter New England clergymen seized upon every possible opportunity to expound the decadence of religion, the necessity of a return to the ways of the founders, the dangers of apostasy, and the innumerable evidences of divine disfavor in comets, witchcrafts, earthquakes, fires, and storms. The trends and fashions of the times were often viewed with alarm in Samuel Sewall's *Diary* (see p. 37) and in innumerable writings by the Mathers. Cotton Mather's *Magnalia Christi Americana* is the best-known complaint of the decline of religion and the diminishing influence of the clergy.

After 1720, however, religion was reinvigorated by what is known as the "Great Awakening," widespread revivals which reached the younger folk and the lower classes in all the colonies. Through the awakening, religion found new leaders and a somewhat broader base; it became perceptibly less intellectual and more emotional. The revivals are believed to have begun with certain Dutch Reformed churches of New Jersey in the 1720's; they soon afterward appeared in the Scotch-Irish Presbyterian churches of Pennsylvania; by the 1730's they had arrived in New England, where Edwards was soon absorbed in their strange phenomena. Six times between 1729 and 1770 the colonies felt the impulse of the preaching of George Whitefield (1714-1770), an English evangelist who had been associated with the Wesleys in the development of Methodism. Whitefield, who had the advantage of Calvinistic convictions, preached to vast crowds, often out of doors, and invariably aroused great enthusiasm. The Baptists and the Methodists also extended their ranks through highly successful revivals, particularly in the Southern colonies, in the decades just before the Revolution.

The literature relating to revivalism is enormous; one scholar estimates that there are more than thirty-five thousand separate pieces which refer to the awakening. Best known, probably, is Edwards' *Some Thoughts concerning the Present Revival of Religion in New England* (1742) and Charles Chauncy's answer thereto.

The effect of revivalism was to make religion more the personal concern of the common man than it had been before, and it is not an accident that its develop-

ment coincided in time with the spread of a humanitarian concern for the poor and the unfortunate. It has remained characteristic of American Protestantism, although often frowned upon by settled clergymen and the higher economic levels of society. Conservatives are still objecting to camp meetings, tent revivals, and the thousand and one varieties of missions and tabernacles which dot the streets of the larger American cities. The value of revivalism is a debatable question which each individual must answer for himself. Doubtless it has tended to divide churches and has lent itself to the self-seeking of unscrupulous evangelists. On the other hand it has kept its appeal through recognition of the importance of emotional release. Religion does not appeal to the rational mind alone.

COMMONWEALTH-BUILDING

A third great concern of the colonists and another theme of colonial literature, intimately connected with the economic and the religious, is the political "new deal" which the New World promised. Americans were thinking, from the first, of the possibility of a new kind of state.

John Smith was not alone in observing a parallel between Europe in his time and the declining years of the Roman empire (see p 23). Although England had become a great and strong nation under Queen Elizabeth, there seemed to be more distressing poverty, more selfish wealth, more injustice and social unrest than there had ever been before. We can now see that feudalism was disintegrating slowly, that hereditary and class privileges had survived longer than serfdom, and that capitalism had not provided men with sufficient social responsibility. Smith is clear enough in his conviction that "rich men for the most part are growne to that dotage, through their pride in their wealth, as though there were no accident could end it, or their life." In America, a land of greater plenty, he believed that merit and industry might find their fair rewards and that all men might work together for the common weal.

Smith's frequent use of the word "commonwealth" is significant, for to his generation a commonwealth was a state in which all citizens—not merely a few—had an interest in the government. This is not to say that Smith was a democrat, for he was not He vaguely expressed the general dissatisfaction of his time with the political *status quo*. The Renaissance was the age in which American political philosophy was born. Men were dreaming of an ideal commonwealth, as they had not been dreaming since Plato in the fourth century B.C.

The political climate of opinion of the age of geographical discovery is suggested by More's *Utopia* (1515-1516) and Bacon's *New Atlantis* (*c.* 1617). Their dreams of a new society were paralleled by the nostalgia of the primitivists, who looked back to a Golden Age in which men lived in amity, untroubled by such bickerings as those produced by the Reformation and the new national rivalries. Talk of a "brave new world" was in the air, and it was not silenced by American experience So many folk were thinking of a better state that Shakespeare, in *The Tempest* (*c.* 1610), created an "honest old counsellor," Gonzalo, whose satirical remarks are worth recalling:

I' th' commonwealth I would by contraries
Execute all things; for no kind of traffic
Would I admit; no name of magistrate;
Letters should not be known; riches, poverty,
And use of service, none; . . .
All things in common nature should produce
Without sweat or endeavour; treason, felony,
Sword, pike, knife, gun, or need of any engine,
Would I not have, all foison, all abundance,
To feed my innocent people. . . .
I would with such perfection govern, sir,
T' excel the golden age

At least eight American colonies—Plymouth, Massachusetts Bay, Maryland, Rhode Island, New Haven, Carolina, Pennsylvania, and Georgia—show traces of their founders' thinking in terms of an ideal commonwealth. In most of them religious and economic motives were also involved, but these, too, have their place in the history of political experimentation. The communistic beginnings of the Pilgrims (see p. 32), the theocracy of Massachusetts Bay and New Haven, the toleration principles of Rhode Island, Maryland, and Pennsylvania, John Locke's "ideal" constitution for Carolina, and James Oglethorpe's notion of a refuge for debtors in Georgia—all had political implications. The most discussed experiment is that of Massachusetts Bay

The full story of the transformation of the dream of an ideal commonwealth into the workaday institutions of British America, not ideal but on the whole far less aristocratic than those of Europe, is highly involved

We should remember, however, that colonial literature reflects at least three processes or developments. (1) the familiar pattern of transplantation and adaptation, in this case of English political and legal institutions; (2) the relative freedom from interference which was the result of unsettled problems of political authority in the mother country; and (3) the growth of democracy and local control, usually attributed to the influence of Separatism, which trained humble folk to share in church government.

All are well illustrated in the early stages of a long-continued conflict between aristocracy and democracy in the Bay Colony. The aim of John Winthrop and his companions was to found a theocracy, a state of which the head should be God, the fundamental law His word, the Bible. They wished a Bible commonwealth in which civil authority should contribute in every possible way to the welfare of the Puritan church. As John Eliot said, in *The Christian Commonwealth* (1659), "there is undoubtedly a form of Civil Government, instituted by God himself in the holy Scriptures"—a conviction which, rather than any statutory provision, accounts for the leadership of the clergy in the seventeenth century. The magistrates consulted the "elders," that is, the ministers, in every important debate on policy. But Winthrop had too much of the lawyer's respect for statute and for precedent to throw overboard the common law and the example of England, and it was not long before Massachusetts had a bicameral legislature and a legal code drawn, not from the Bible, but from experience. Because the Bay Company founders had the foresight to bring their charter with them, their government survived the chaotic conditions of the Civil War in England. The independent attitude of New England towns demonstrates the early strength of the ideal of local autonomy in an era which had adopted a modified form of Separatism.

Bradford and Williams reveal in their writings much the same background. From Plymouth, the original Separatist community, we have the *Mayflower Compact* (see p. 32), earliest of American written constitutions and one of the first political reflections of the development of Calvinism which is called "Covenant" or "Federal" theology. In it the Pilgrims agreed to "solemnly and mutually in the presence of God, and one of another, covenant and combine our selves togeather into a civill body politick, . . . and by vertue hearof to enacte . . . such just and equall lawes . . . as shall be thought most meete and convient for the generall good of the Colonie, unto which we promise all due submission and obedience." The *Compact* has a well-deserved distinction, and every American will do well to review occasionally its significant phrases. It was Separatism, too, which led Williams to assert his doctrine that the power of the civil state must not serve the purposes of a single church (p. 65). Other colonies copied the idea of a social compact, and other colonies came gradually to recognize the value of toleration.

The conflict between the ideal of government by the few and the ideal of government by the many runs throughout American literature. In the colonial time it is to be seen in a vast body of writings relating to the theocracy in Massachusetts and the various attempts of men like Cotton Mather to return to the "New England Way." The belief of the ruling classes that things were not going well may be felt in Sewall's *Diary,* which intimates that the common people were often rowdy and obstreperous. William Byrd felt much the same way about the North Carolinians (p 47). Occasionally the common man found a defender, of whom the most notable was John Wise (1652-1725). In his *Churches' Quarrel Espoused* (1710) and *Vindication of the Government of the New-England Churches* (1717) he blasted a Mather-sponsored effort to give the clergy greater power. Wise's works had important political implications and were widely quoted when the Revolution called forth all the ammunition that could be collected.

The colonies did not achieve the ideal commonwealth, but they present a consistent picture of an effort to serve the common interest of all, according to the lights of the men who led them. "Their Cheif Red Letter day," one traveler wrote of the inhabitants of Connecticut, "is St. Election, which is annually Observed according to Charter, to choose their Governor, a blessing they can never be thankfull enough for, as they will find, if ever it be their hard fortune to loose it."

SUPERSTITION and SCIENCE

The reader of colonial literature cannot fail to notice that most writing of the era is punctuated with "It pleased God" and "a special providence of God appeared"—recognitions of the immediate concern of the Deity for His universe and His people. Although most conspicuous in the historical works and diaries of the

Puritans, these expressions may easily be found in the reports of such hard-bitten gentlemen of fortune as John Smith.

In Bradford, Winthrop, Sewall, and Mather, however, such references are often accounted superstitious by latter-day readers, who live in a world wherein the uninterrupted order of nature is taken for granted and a scientific world-view prevails. We need to reflect briefly, therefore, upon the place of science in the thought of colonial Americans, especially when we encounter Sewall's comment (see p. 39) on Mather's pulpit exposition of the Copernican hypothesis. "I think it inconvenient to assert such Problems."

The age unquestionably accepted the providential order of nature, a world in which the Lord intervened not merely to mark the sparrow's fall but to reward and punish in accordance with His inscrutable ends. Before scorning this acceptance as sheer superstition, we should consider how often we moderns fall back upon "luck" or "fate" or "accident" to account for the puzzling and inexplicable turns of events which we all encounter. Things happen to all of us which no amount of foresight or care can help us avoid. Belief in divine intervention had the advantage of giving direction to men's lives, however much we may question the results of the Puritans' incessant search for an understanding of the divine will.

What we must not conclude too easily is that the seventeenth and eighteenth centuries were deliberately unscientific. On the contrary, they were the age of Bacon, Boyle, Descartes, Newton, Laplace, and many other first-rank scientists, whose search for truth was emulated, although not of course with such brilliant success, on this side of the Atlantic. Benjamin Franklin was not the first American to study natural phenomena.

Colonial literature shows both a persistent scientific curiosity and the universal economic motive for the investigation of nature. Early visitors impressed the Indians with mathematical instruments, the lodestone, and spring clocks, and Smith fascinated Opechakanough with his sign-language exposition of astronomy and geography (see p. 26). Smith, moreover, classified and described natural phenomena in accordance with the best methods at his command, as did his innumerable successors among the travel writers and promoters. Bartram was a skilled botanist. Bradford, as likely as anyone to perceive the hand of God in all events, found room to "leave it to naturallists to judge" the value of his hypothesis of the results of earthquakes, and did not find his view of providence inconsistent with the search for natural causes for the immoralities of 1642 (p. 35). Byrd's journals abound in medicinal, botanical, and zoölogical observations; both he and Cotton Mather were members of the Royal Society of London and contributed to its *Philosophical Transactions,* the foremost scientific periodical of the age.

There is abundant evidence, in short, that the sense of the nearness of God and the operation of His providence did not outlaw the study of nature. Sewall's "inconvenient" was probably not the expression of opposition to scientific knowledge, but the not uncommon feeling that science and religion ought not to be mixed. Despite the dominance of theology, actual distrust of science is rarely encountered in the colonial era.

THE FINE ARTS

Painting, sculpture, music, and architecture, which now lend much to the richness of life and literature, were of relatively little interest to the colonists and are mentioned only seldom in their writings. We need not review the details of their beginning, but we should remember that they existed and that they manifested both the invariable pattern of transplantation and adaptation and the dominance of religion in the daily life of the people.

Painting was devoted almost exclusively to the portraiture of much-loved clergymen or the members of well-to-do families There were portraits painted in New England as early as 1641; one of the best known is that of Samuel Sewall made by a native amateur sometime before 1730. The first portrait engraving known to have been made in the British colonies was a woodcut of Richard Mather dating from 1670; the first line engraving on copper, a portrait of Increase Mather made about 1701; the first mezzotint for framing, a portrait of Cotton Mather made in 1727.

Sculpture was confined, prior to the nineteenth century, to the carving of angels, death's-heads, and other devices upon tombstones, and, if it is admitted as sculpture, to carving in wood. This is not so insignificant as it may sound, for the visitor to colonial graveyards often comes away with a clearer notion of our ancestors' surprising fearlessness of death.

a plain narrative, usually written by a plain man with few literary graces. Its organization was chronological, and the writer merely amplified, from memory, notes, or a journal, the events he had experienced, expanding whenever his own interests or those of his prospective readers seemed to demand it. The letter in which Columbus reported his first voyage of discovery is a good example; another is John Brereton's *Briefe and True Relation of the Discouerie of the North Part of Virginia* (1602), the earliest English account of the New England coast The type prevails in the great collections of voyages which were edited by Richard Hakluyt, Samuel Purchas, and John Harris (*Collection of Voyages and Travels,* 1705). Although written to provide information, the account of a voyage was seldom impersonal and sometimes achieved a sharpness of effect and a charm scarcely excelled by polished literary art.

The type could be adapted readily to a land journey, as in Byrd's "Progress to the Mines" and Bartram's *Travels.* Byrd's two versions of the *History of the Dividing Line* (pp 45 and 46) show how readily miscellaneous information could be inserted in the loose framework of a travel narrative

Travel literature forms one of the largest classes of American books. It is closely related to the economic motive in colonization, but it still lends itself readily to comment on social life and customs, on personalities, and even to sheer entertainment.

PROMOTION TRACTS

The writer of the promotion tract almost invariably had to struggle with a topical arrangement. He had to make some division of his material so that he could generalize attractively about the resources of the region he was describing He was not always familiar with his material; he could make only limited use of narrative, and he needed to appear judicious and relatively impersonal Promotion tracts therefore vary somewhat in structure, according to the different solutions of the problems.

Thomas Hariot wisely followed his main interest—economic resources—in his Virginia. First he described commodities already found or raised in Virginia in quantities sufficient to be marketable. useful plants, minerals, and furs. He then listed commodities known to be sufficient in quantity to sustain life: grains, vegetables, fruits, game animals, fowl, and fish. A third section listed miscellaneous commodities and included his account of the Indians.

Smith's *Description of New England* (p 22) and *Map of Virginia* (1612) employed a far more common structure. They begin with the general geographical features and then describe the climate, winds, soils, rivers, settled places, plants, animals, birds, fish, minerals, and Indians. The *Map* is the more consciously organized, in his *Description* Smith himself realized that his enthusiasm had carried him away, and at one point asks his readers to return a little with him, adding that he is not "sufficiently yet acquainted in those parts, to write fully the estate of the Sea, the Ayre, the Land, the Fruites, the Rocks, the People, the Gouernment, Religion, Territories and Limitations, Friends and Foes. but as I gathered from the niggardly relations in a broken language to my understanding, during the time I ranged those Countries." It will be noted that Smith had a list of topics, arranged in an order proceeding from the general to the particular. This systematic approach he probably derived from the geographical literature of the day, which in turn is a reflection of the almost invariable approach of the medieval schoolmen to the study of the external world.

When the works of Aristotle were the highest authority in science, they were studied according to a settled system. One began with the *Organon* and the *Physica,* which deal with logic and the general properties of natural bodies; next came the *De Caelo,* a description of the heavens; next the *De Generatione et Corruptione,* which treats the four elements—fire, water, earth, and air—and their various combinations and interactions; next the *Meteorologica,* which describes the various processes of change in the elements; next various discussions of "perfectly mixed" bodies and "imperfectly mixed" ones, inanimate (stones, metals, and minerals); and finally the *De Anima* and the *Historia Animalium,* descriptions of animate bodies (plants and animals). After that one came to the study of man.

Many promotion tracts besides Smith's were based ultimately upon this tradition, for it was the topical arrangement most familiar to educated men. Francis Higginson's *New England's Plantation* begins with the following statement: "And because the life and wel-fare of euerie

Bradford's book, had in it also the element of self-defense and a lawyer's respect for exact knowledge of precedents and experiments in institutional organization. Cotton Mather's many biographies in *Magnalia Christi Americana* exemplify his tendency to defend the "New England Way," as well as to emulate the didactic purposes of Bradford. Byrd's histories of the Dividing Line had axes to grind as well as information to convey.

Much colonial historical writing was tinged with the belief in a providential order of nature, and hence took on a distinctly theological quality. If events were to be interpreted as the working out of the divine plan, which man could never know in its entirety, a monstrous birth might be quite as significant to a reflective mind as a victory in battle or a great political or religious compromise. To the modern reader, Winthrop seems to jump readily from affairs of great moment to the most trivial events. This attitude tended to make history discontinuous except to the reader fascinated by the search for moral meanings in events. It is characteristic of most seventeenth-century writing, appearing most vividly in Edward Johnson's *History of New England* (1654) and reaching its culmination in Cotton Mather's *Magnalia Christi Americana.* For the providential theory the colonists had the example of the Book of Kings, the Roman historian Livy, and many ecclesiastical annalists from the time of St. Augustine.

More rationalistic tendencies may also be observed in colonial historiography. We have already noticed Bradford's analysis of possible causes of an outbreak of immorality in New England. Judicious and objective methods were foreshadowed in Thomas Prince's *Chronological History of New England,* the first volume of which appeared in 1730, in William Stith's *History of the First Discovery of Virginia* (1747), and most notably in Thomas Hutchinson's *History of the Province of Massachusetts Bay,* of which the first volume was published in 1764. These works likewise had European models, although Hutchinson's was the only one to show traces of the regard for institutional development which made Voltaire's *Age of Louis XIV* (1751) a landmark.

DIARIES and AUTOBIOGRAPHIES

An amazing number of colonists kept diaries or wrote autobiographies. Their purpose was sometimes practical —the desire to have a record of the weather, the planting and harvesting of crops, business transactions, and personal affairs. More often, perhaps, and almost always in the case of the autobiographies, the aim was fundamentally theological. Earnest Calvinists wished to study the state of their souls, and one of the best possible methods was to preserve a day-by-day or systematic account of temptations, struggles, and meditations, from which might be drawn some indication of their state of grace.

The best colonial example of a religious autobiography is probably Jonathan Edwards' "Personal Narrative." In its constant concern with the all-absorbing problem of man's relation to God, it is typical of numerous Puritan self-searchings. Other examples, almost as well known, are the autobiography and "Meditations and Spiritual Experiences" of Thomas Shepard, and the voluminous diary of Cotton Mather.

Those diaries which are most treasured by later generations, however, are the ones in which soul-searching is leavened by concern with temporal affairs. Winthrop's journal, Samuel Sewall's diary, the travel journal of Mrs. Knight, and the shorthand diaries from which William Byrd "wrote up" his histories of the Dividing Line and his "Progress to the Mines" are important because they preserve for us the customs, manners, and personalities of relatively worldly people. We learn from them of the food, the drink, the social life, the household appointments, the gardens, the crimes, the births, marriages, and deaths—the external life, in short, of seventeenth- and eighteenth-century Americans.

Sewall's *Diary* is perhaps the best. It does not compare with the great English diaries written at approximately the same period by John Evelyn and Samuel Pepys, for Sewall's world was more circumscribed than theirs. Like all great diarists, however, Sewall has the virtue of revealing himself as a human being, not much unlike you and me in being beset by frailties and inadequacies and little vanities (not big ones, of course, for we none of us are inordinately vain—to ourselves).

It is worth remembering that two of the greatest of early American books—Benjamin Franklin's *Autobiography* (p. 119) and John Woolman's *Journal* (p. 156) —are in the direct line of descent from one of the most popular of colonial literary types. Of these we shall have more to say later.

POEMS

More than one critic has hinted that the less said of American poetry prior to 1765 the better. Colonial production of verse, compared to that of England in the same period, was small in quantity and, with very few exceptions, vastly inferior in quality. No colonial poet reached the level of Herbert, Herrick, Cowley, Butler, Prior, Young, or Thomson, to say nothing of the front-rank poets, Donne, Milton, Dryden, and Pope. Moreover, the colonial versifiers displayed a deplorable tendency to imitate the poetic diction and verse forms of their transatlantic betters.

Early American verse can nevertheless add to our knowledge of the pattern of culture and of the place of the arts in colonial life. Some of it has a respectable originality in thought or subject matter, and some of it, notably that which expressed the religious faith of the most sensitive individuals, has genuine poetic merit.

The most utilitarian use of rhyme and meter is mnemonic; maxims and stories in verse are easier to remember verbatim than those in prose. Not a little colonial verse is based upon this fact, from the rhymed accounts of English Protestant history by the Rev. John Wilson (see *Handkerchiefs from Paul,* ed. K B. Murdock, 1927) down to the Rev. Michael Wigglesworth's famous summary of Calvinistic theology, *The Day of Doom* (1662). Even the compilers of the *Bay Psalm Book* (1640), although their main purpose was to translate the Hebrew with the greatest possible exactness, chose to put the psalms to be sung in the New England churches in English meter, which is to say in the ballad stanza of folk poetry·

> The Lord to mee a shepheard is,
> want therefore shall not I.
> Hee in the folds of tender-grasse,
> doth cause mee downe to lie
> To waters calme me gently leads
> Restore my soule doth hee.
> he doth in paths of righteousnes:
> for his names sake leade mee.

The use of the ballad stanza reveals the strength of popular tradition in the face of novel conditions—in this instance the Puritan respect for the Hebrew text of the Scriptures. Poetry as art suffered severely, but its basic elements survived.

Vaguely related to the mnemonic purpose, although essentially didactic in the same way as colonial historical writing, are the numerous historical poems of the colonial period. Bradford himself tried his hand at this type of writing, but the best-known examples are Benjamin Tompson's narratives of King Philip's War. *New Englands Crisis* (1676) and *New Englands Tears for Her Present Miseries* (1676). Both display the providential theory of history in an elaborate form. Relating to biographical writing, moreover, are the numerous funeral elegies, at which many New England clergymen tried their hands Most modern readers will be satisfied to know Benjamin Franklin's recipe for such an elegy, without reading many of the originals on which he based his conclusions:

"For the subject of your Elegy, Take one of your Neighbors who has lately departed this Life; it is no great matter of what Age the Party dy'd, but it will be best if he went away suddenly, being *Kill'd, Drown'd,* or *Frose to Death.*

"Having chose the Person, take all his Virtues, Excellencies, &c and if he have not enough, you may borrow some to make up a sufficient Quantity· To these add his last Words, dying Expressions, &c. if they are to be had, mix all these together, and be sure you strain them well. Then season all with a Handful or two of Melancholly Expressions, such as, *Dreadful, Deadly, cruel cold Death, unhappy Fate, weeping Eyes,* &c. . . . let them Ferment for the Space of a Fortnight, and by that Time they will be incorporated into a Body, which take out, and having prepared a sufficient Quantity of double Rhimes, such as *Power, Flower; Quiver, Shiver; Grieve us, Leave us; tell you, excel you; Expeditions, Physicians; Fatigue him, Intrigue him;* &c you must spread all upon Paper,and if you can procure a Scrap of Latin to put at the End, it will garnish it mightily; then having affixed your Name at the Bottom, with a *Mœstus Composuit,* you will have an Excellent Elegy."

The more sophisticated poetry of the colonial era was likely to have a classical flavor, understandable in an age and place where the higher education gave a central place to the learned languages Not a few colonists composed Latin verses, and translations and para-

phrases constituted a common exercise. The height of "highbrow" verse-making was *Pietas et Gratulatio,* published at Boston in 1761. A tribute to the new king, George III, it contained three poems in Greek, sixteen in Latin, and twelve in English, most of them by recent graduates or faculty members of Harvard College. Individuals trained in the classics were also interested in the work of the English Neoclassical school, and there were many colonial poems in the manner of the satires of Dryden and Pope, the mock-heroics of Butler, and the philosophical pieces of Thomson, Young, and Pomfret. These are often interesting for their content, although it is disconcerting to find colonial poets expressing boredom with court and city life when, as someone has said, five minutes' walking would have taken any one of them into a cow pasture. We may safely leave the works of Mather Byles, John Adams (the clergyman, not the statesman), George Webb, William Livingston, the younger Thomas Godfrey, Nathaniel Evans, Joseph Green, and other would-be "wits" to the specialist, remembering, however, that these gentlemen were the literati of their day and, whatever their deficiencies, cherished the tradition of belles-lettres in a world frequently too busy for art.

Religious poetry is another matter. It is represented in the present chapter by the work of Edward Taylor. Although Taylor was probably familiar with the verse of some of the English religious poets of the seventeenth century, he had the true poet's gift of conveying intensity of individual experience. His poems, consequently, are probably the finest literary expression of the inner life of American Puritanism and have the same interest as the best of the diaries and spiritual autobiographies. In many ways, indeed, they are superior as a revelation of the ecstasy of the religious life.

NOVELS

Fiction, which bulks large in later American literature, was almost nonexistent in the colonial period. It was distrusted by serious-minded persons, in England as well as in America, although it is not just to ascribe its absence entirely to Puritan influence.

The novel as a form had by no means reached its full maturity. The seriousness of the reading public left little time for the long romances, although a good many of them appear on colonial booklists, and the pleasure in swift-moving narrative was partly provided for by the accounts of voyages and travels, the somewhat lurid accounts of captivity among the Indians, and the other factual material such as reports of the experiences and final hours of pirates and murderers and the descriptions of remarkable providences and witchcrafts. Many works of fiction which supposedly portrayed life must have seemed dull in comparison to more direct reporting. Quite probably the prevalent attitude toward fiction was not far from that in one passage of Cotton Mather's *Manuductio ad Ministerium,* where he advises divinity students to enjoy the recreation of poetry but not to be so set upon it "as to be always poring on the *Passionate* and *Measured* Pages. Let not what should be *Sauce* rather than Food for you, Engross all your Application . . . Indeed, not merely for the *Impurities* which they convey, but also on some other Accounts, the *Powers of Darkness* have a *Library* among us, whereof the *Poets* have been the most *Numerous* as well as the most *Venemous* Authors. Most of the modern *Plays,* as well as the *Romances* and *Novels,* and *Fictions,* which are a sort of *Poems,* do belong to the Catalogue of this cursed Library." T. H

John Smith

1579 • 1631

Apparently the colonizers who sailed into Hampton Roads, Virginia, in May 1607 were lucky to have Captain John Smith as their leader on what turned out to be a heart-breaking although, in the long run, a successful venture—the establishment of the first permanent British colony on this continent. One must say "apparently," because what we know about Smith's ability and background he chiefly has told us, and the blustering soldier of fortune was not a man to underestimate his valor or to let literal truth spoil a good story. His account told how he had been born at Willoughby and educated in the free schools there, how he had broken family ties in his teens, had gone into military service in his twenties, and thereafter had slain Turks, Tartars, or Indians with equal aplomb.

During his stay in Virginia from May 1607 to October 1609, Smith, according to his account, efficiently led the colonists, set up relationships with the Indians, and explored the country. In addition, somehow, he found time to write his first book and to send it overseas for publication. In the fall of 1609 Smith went back to England, he remained there until 1614. That year, some six years before the settlement of Plymouth, he returned to America to explore New England minutely from the Penobscot River to Cape Cod. Believing that a territory of such extent deserved a name of its own, he christened it New England. At home he made an excellent map of the coast and dotted it with English names such as Cape Ann, Charles River, and Plymouth. In 1615 he sailed again for New England with a body of colonizers who traveled on two ships. This expedition, however, was cut short when French pirates stopped the vessels. Smith was captured and taken to Rochelle, but he shortly escaped and returned to his native country. His exploring days over, he remained there until his death in London, June 21, 1631.

Panel (l. to r.) View of Jamestown in 1622 • Captain John Smith • Colonists trading with Indians • View of Plymouth in 1622 • Samuel Sewall

Historians have pictured the mustachioed captain writing his first book in a sleazy wilderness tent by the light of a blazing pine-knot. However it was composed, *A True Relation* (1607) was a book wrought on the scene between clashes with redmen. It and books which followed it, notably *A Description of New England* (1616) and *The Generall Historie of Virginia, New England, and the Summer Isles* (1624), written to encourage and direct colonizing or to glorify Smith, reveal his gusto and his imaginativeness, combined with what seems to be vivid circumstantial detail. Thus the poetry and hardships of the colonizing adventure fuse in these accounts.

Smith's works are interesting for their characterization of the author, their picturing of happenings, and their style. The style is that of an educated—but not too educated—man, writing imaginatively about first-hand experiences. It has the varied rhythms, the homeliness fused with strangeness and stateliness, of prose in the age of the King James Bible. Callous-fisted soldier though he was, Smith produced several fine bits of prose like those which follow.

From • A Description of New England

Motives for Colonizing

The following selection from **A Description of New England** (1616) shows Smith as the advocate of the colonizing adventure. Eight years later the passage was reprinted in **The Generall Historie.** Like much of the writing of the period and like many other passages by Smith, this has as its purpose the attraction of settlers to the new colonies. The titles for this and the following selection were supplied by the editors.

Who can desire more content, that hath small meanes; or but only his merit to advance his fortunes, then to tread and plant that ground he hath purchased by the hazard of his life? If he have but the taste of virtue and magnanimity, what to such a minde can bee more pleasant, then planting and building a foundation for his Posteritie, gotte from the rude earth, by Gods blessing and his owne industry without prejudice to any? If hee have any graine of faith or zeale in Religion, what can hee doe lesse hurtfull to any. or more agreeable to God, then to seeke to convert those poore Salvages to know Christ, and humanitie, whose labours with discretion will triple requite thy charge and paines? What so truely su[i]tes with honour and honestie, as the discovering things unknowne? erecting Townes, peopling Countries, informing the ignorant, reforming things unjust, teaching virtue; and gaine to our Native mother-countrie; a kingdom to attend her: finde imployment for those that are idle, because they know not what to doe: so farre from wronging any, as to cause posterity to remember thee; and remembring thee, ever honour that remembrance with praise?

Consider· what were the beginnings and endings of the Monarkies of the *Chaldeans*, the *Syrians*, the *Grecians*, and *Romanes*, but this one rule; What was it they would not do for the good of their common weale, or their Mother-citie? For example: *Rome*, What made her such a Monarchesse, but onely the adventures of her youth, not in riots at home; but in dangers abroad? and the justice and judgement out of their experiences, when they grewe aged. What was their ruine and hurt but this; The excesse of idlenesse, the fondnesse of Parents, the want of experience in Magistrates, the admiration of their undeserved honours, the contempt of true merit, their unjust jealo[u]sies, their politike incredulities, their hypocriticall seeming goodnesse, and their deeds of secret lewdnesse? finally, in fine, growing onely formall temporists, all that their predecessors got in many yeeres they lost in a few daies Those by their pain and vertues became Lords of the world, they by their ease and vices became slaves to their servants. This is the difference

Text (for this and the following selection): **Captain John Smith, Works, 1608-1631, ed.** Edward Arber, The English Scholar's Library, No. 16, Birmingham, 1884

betwixt the use of Armes in the field, and on the monuments of stones; the golden age and the leaden age, prosperity and miserie, justice and corruption, substance and shadowes, words and deeds, experience and imagination, making Commonwealths, and marring Commonwealths, the fruits of virtue, and the conclusions of vice.

Then, who would live at home idly (or thinke in himselfe any worth to live) onely to eate, drink and sleepe, and so die? Or by consuming that carelesly, his friends got worthily? Or by using that miserably, that maintained vertue honestly? Or for being descended nobly, pine with the vaine vaunt of great kindred in penurie? Or (to maintaine a silly shew of bravery) toyle out thy heart, soule, and time, basely; by shifts, tricks, cards and dice? Or by relating newes of others actions, sharke here and there for a dinner, or supper; deceive thy friends, by faire promises and dissimulation, in borrowing where thou never intendest to pay; offend the lawes, surfeit with excesse, burden thy Country, abuse thy selfe, despaire in want, and then couzen thy kindred, yea even thy owne brother, and wish thy parents death (I will not say damnation) to have their estates? though thou seest what honours, and rewards, the world yet hath for them [who] will seeke them and worthily deserve them.

I would bee sor[r]y to offend, or that any should mistake my honest meaning. for I wish good to all, hurt to none. But rich men for the most part are growne to that dotage, through their pride in their wealth, as though there were no accident could end it, or their life.

And what hellish care do such take to make it their owne miserie and their Countries spoile, especially when there is most neede of their imployment? drawing by all manner of inventions, from the Prince and his honest subjects, even the vitall spirits of their powers and estates: as if their Bagges, or Bragges were so powerfull a defence, the malicious could not assault them; when they are the onely baite, to cause us not to bee onely assaulted; but betrayed and murdered in our owne security, ere wee well perceive it

May not the miserable ruine of *Constantinople,* their impregnable walles, riches, and pleasures [at] last taken by the *Turke* (which were then but a bit, in comparison of their mightines) now remember us of the effects of private covetousnesse? at which time the good *Emperour* held himselfe rich enough, to have such rich subjects, so formall in all excesse of vanity, all kinde of delicacie and prodigalitie. His povertie when the *Turke* besieged, the citizens (whose merchandizing thoughts were onely to get wealth, little conceiving the desperate resolution of a valiant expert enemy) left the Emp[erour] so long to his conclusions, having spent all he had to pay his young, raw, discontented Souldiers; that sodainly he, they, and their citie were all a prey to the devouring *Turke.* And what they would not spare for the maintenance of them who adventured their lives to defend them, did serve onely their enemies to torment them, their friends and countrey, and all Christendome to this present day. Let this lamentable example remember you that are rich (seeing there are such great theeves in the world to robbe you) not [to] grudge to lend some proportion, to breed them that have little, yet [are] willing to learne how to defend you. for, it is too late when the deed is a-doing.

The *Romanes* estate hath beene worse then this: for, the meere covetousnesse and extortion of a few of them, so moved the rest, that not having any imployment but contemplation, their great judgements grew to so great malice, as themselves were sufficient to destroy themselves by faction: Let this move you to imbrace imployment for those whose educations, spirits, and judgements want but your purses, not onely to prevent such accustomed dangers, but also to gaine more thereby then you have.

And you fathers, that are either so foolishly fond, or so miserably covetous, or so wilfully ignorant, or so negligently careless, as that you will rather maintaine your children in idle wantonness, till they grow your masters; or become so basely unkinde, as they wish nothing but your deaths; so that both sorts grow dissolute: and although you would wish them any where to escape the gallowes, and ease your cares; though they spend you here one, two or three hundred pound[s] a yeer, you would grudge to give halfe so much in adventure with them to obtaine an estate, which in a small time, but with a little assistance of your providence, might bee better then your owne. But if an Angell should tell you, [that] any place yet unknowne can afford such fortunes; you would not beleeve it, no more then *Columbus* was be-

40 **the miserable . . . Constantinople.** The fall of Constantinople, in 1453, followed a fierce forty-day siege. Historians agree with Smith that Constantine's inability to pay his troops contributed to their ineffectiveness, but they disagree with Smith's claim that the defending force was larger than the attacking force • 64 **The Romanes estate. . . .** This paragraph contains Smith's version of the causes for the fall of the Roman Empire

leeved there was any such Land as is now the well knowne abounding *America;* much lesse such large Regions as are yet unknowne, as well in *America,* as in *Affrica* and *Asia,* and *Terra incognita:* where were courses for gentlemen (and them that would be so reputed) more suiting their qualities, then begging from their Princes generous disposition, the labours of his subjects, and the very marrow of his maintenance.

I have not beene so ill bred, but I have tasted of *Plenty* and *Pleasure,* as well as *Want* and *Miserie:* nor doth necessitie yet, or occasion of discontent, force me to these endeavors: nor am I ignorant what small thanke[s] I shall have for my paines; or that many would have the Worlde imagine them to bee of great judgement, that can but blemish these my designes, by their witty objections and detractions: yet (I hope) my reasons with my deeds, will so prevaile with some, that I shall not want imployment in these affaires, to make the most blinde see his owne senselesnesse and incredulity; Hoping that gaine will make them affect that which Religion, Charity and the Common good cannot. It were but a poore device in me, To deceive my selfe; much more the King, State, my Friends and Countrey, with these inducements, which seeing his Majestie hath given permission, I wish all sorts of worthie, honest, industrious spirits, would understand: and if they desire any further satisfaction, I will doe my best to give it: Not to perswade them to goe onely; but goe with them: Not leave them there; but live with them there.

I will not say, but by ill providing and undue managing, such courses may bee taken [that] may make us miserable enough: But if I may have the execution of what I have projected; if they want to eate, let them eat or never digest Mee. If I performe what I say, I desire but that reward out of the gaines [which] may su[i]te my paines, quality, and condition. And if I abuse you with my tongue, take my head for satisfaction. If any dislike at the yeeres end, defraying their charge, by my consent they should freely returne. I feare not want of companie sufficient, were it but knowne what I know of these Countries; and by the proofe of that wealth I hope yeerely to returne, if God please to blesse me from such accidents, as are beyond my power in reason to prevent: For, I am not so simple to thinke, that ever any other motive then wealth, will ever erect there a Commonweale; or draw companie from their ease and humours at home, to stay in *New England* to effect my purposes.

And lest any should thinke the toile might be insupportable, though these things may bee had by labour, and diligence: I assure my selfe there are who delight extreamly in vaine pleasure, that take much more paines in *England* to enjoy it, then I should doe here [*New England*] to gaine wealth sufficient; and yet I thinke they should not have halfe such sweet content: for our pleasure here is still gaines, in *England* charges and losse. Heer nature and liberty affords us that freely, which in *England* we want, or it costeth us deerely. What pleasure can bee more, then (being tired with any occasion a-shore, in planting Vines, Fruits, or Hearbs, in contriving their owne grounds to the pleasure of their owne minds, their Fields, Gardens, Orchards, Buildings, Ships, and other workes, &c.) to recreate themselves before their owne doores in their owne boates upon the Sea; where man, woman and childe, with a small hooke and line, by angling, may take divers sorts of excellent fish, at their pleasures? And is it not pretty sport, to pull up two pence, six pence, and twelve pence, as fast as you can ha[u]le and veare a line? He is a very bad Fisher [that] cannot kill in one day with his hooke and line, one, two, or three hundred Cods: which dressed and dried, if they bee sold there for ten shillings a hundred, though in England they will give more then twentie, may not both the servant, the master and marchant, be well content with this gaine? If a man worke but three daies in seaven, he may get more then hee can spend unlesse he will be excessive. Now that Carpenter, Mason, Gardiner, Taylor, Smith, Sailer, Forgers, or what other, may they not make this a pretty recreation though they fish but an houre in a day, to take more then they can eat in a weeke? or if they will not eat it, because there is so much better choice; yet sell it, or change it, with the fishermen or marchants for any thing they want. And what sport doth yeeld a more pleasing content, and lesse hurt and charge then angling with a hooke; and crossing the sweet ayre from Ile to Ile, over the silent streames of a calme Sea? Wherein the most curious may finde pleasure, profit, and content.

Thus, though all men be not fishers: yet all men, whatsoever, may in other matters doe as well. For necessity doth in these cases so rule a Commonwealth, and each in their severall functions, as their labours in their

34 digest Mee, exploit me • 68 haule and veare, pull in and let out • 76 excessive, extravagant

qualities may be as profitable, because there is a necessary mutuall use of all.

For Gentlemen, what exercise should more delight them, then ranging dayly these unknowne parts, using fowling and fishing, for hunting and hawking? and yet you shall see the wilde-haukes give you some pleasure, in seeing them stoope (six or seven times after one another) an houre or two together, at the skuls of fish in the faire harbours, as those a-shore at a foule, and never trouble nor torment yourselves, with watching, mewing, feeding, and attending them: nor kill horse and man with running and crying, *See you not a hawk?* For hunting also: the woods, lakes and rivers affoord not onely chase sufficient, for any that delights in that kinde of toile or pleasure; but such beasts to hunt, that besides the delicacy of their bodies for food, their skins are so rich, as they will recompence thy daily labour with a Captains pay.

For labourers, if those that sowe hempe, rape, turnups, parsnips, carrats, cabidge, and such like; give 20, 30, 40, 50 shillings yearely for an acre of ground, and meat[,] drinke[,] and wages to use it, and yet grow rich; when better, or at least as good ground may be had and cost nothing but labour; it seems strange to me, any such should there grow poore.

My purpose is not to perswade children from their parents; men from their wives; nor servants from their masters: onely such as with free consent may be spared: But that each parish, or village, in Citie, or Countrey, that will but apparell their fatherlesse children of thirteene or foureteene years of age, or young maried people that have small wealth to live on, heere by their labour may live exceeding well: provided alwaies, that first there bee a sufficient power to command them, houses to receive them, meanes to defend them, and meet provisions necessarie for them; for any place may bee over-lain: and it is most necessarie to have a fortresse (ere this grow to practice) and sufficient masters, (as, Carpenters, Masons, Fishers, Fowlers, Gardiners, Husbandmen, Sawyers, Smiths, Spinsters, Taylors, Weavers, and such like) to take ten, twelve, or twentie, or as there is occasion, for Apprentises. The Masters by this may quicklie growe rich; these may learne their trades themselves, to doe the like; to a generall and an incredible benefit, for King, and Countrey, Master, and Servant.

From • The Generall Historie of Virginia

Pocahontas

The passage recounting Smith's captivity and his rescue by Pocahontas, from **The Generall Historie** (1624), gains in interest if it is placed alongside the account of the same events which had appeared in 1608 in his **A True Relation of Such Occurences and Accidents of Note as Hath Happened in Virginia.** Henry Adams notes that, according to the earlier version, Smith had shortly found that his captors were using him with kindness, but that in the later he constantly feared violence; that "eight guards, which had been sufficient in 1608, were multiplied to thirty or forty tall fellows in 1624," and so on. Such changes heightened the drama, making both the captain and his captors more formidable. The most notable changes added to the ferocity of Powhatan and showed Pocahontas in the act of rescuing the heroic captain. The modifications suggest that Smith was perhaps better qualified as a writer of historical fiction than as a sternly accurate historian. The passage, nevertheless, vividly re-creates the life of the colonists and reveals the character of its picturesque author. The zestful yet workaday style is typical.

The next voyage hee proceeded so farre that with much labour by cutting of trees insunder he made his passage; but when his Barge could passe no farther, he

1 **hee**, John Smith. The account is written in the third person

left her in a broad bay out of danger of shot, commanding none should goe a shore till his returne: himselfe with two English and two Salvages went up higher in a Canowe, but hee was not long absent, but his men went a shore, whose want of government, gave both occasion and opportunity to the Salvages to surprise one *George Cassen,* whom they slew, and much failed not to have cut of[f] the boat and all the rest.

Smith little dreaming of that accident, being got to the marshes at the rivers head, twentie myles in the desert, had his two men slaine (as is supposed) sleeping by the Canowe, whilst himselfe by fowling sought them victuall, who finding he was beset with 200. Salvages, two of them hee slew, still defending himselfe with the ayd of a Salvage his guid[e], whom he bound to his arme with his garters, and used him as a buckler, yet he was shot in his thigh a little, and had many arrowes that stucke in his cloathes but no great hurt, till at last they tooke him prisoner.

When this newes came to *James* towne, much was their sorrow for his losse, fewe expecting what ensued.

Sixe or seven weekes those Barbarians kept him prisoner, many strange triumphes and conjurations they made of him, yet hee so demeaned himselfe amongst them, as he not onely diverted them from surprising the Fort, but procured his owne libertie, and got himselfe and his company such estimation amongst them, that those Salvages admired him more then their owne *Quiyouckosucks.*

The manner how they used and delivered him, is as followeth.

The Salvages having drawne from *George Cassen* whether Captaine *Smith* was gone, prosecuting that opportunity they followed him with 300. bowmen, conducted by the King of *Pamaunkee,* who in divisions searching the turnings of the river, found Robinson and Emry by the fire side, those they shot full of arrowes and slew. Then finding the Captaine, as is said, that used the Salvage that was his guide as his shield (three of them being slaine and divers other so gauld) all the rest would not come neere him. Thinking thus to have returned to his boat, regarding them, as he marched, more then his way, [Smith] slipped up to the middle in an oasie creeke & his Salvage with him, yet durst they not come to him till being neere dead with cold, he threw away his armes. Then according to their composition they drew him forth and led him to the fire, where his men were slaine. Diligently they chafed his benummed limbs.

He demanding for their Captaine, they shewed him *Opechankanough,* King of Pamaunkee, to whom he gave a round Ivory double compass Dyall. Much they marvailed at the playing of the Fly and Needle, which they could see so plainely, and yet not touch it, because of the glasse that covered them. But when he demonstrated by that Globe-like Jewell, the roundness of the earth, and skies, the spheare of the Sunne, Moone, and Starres, and how the Sunne did chase the night round about the world continually; the greatnesse of the Land and Sea, the diversitie of Nations, varietie of complexions, and how we were to them Antipodes, and many other such like matters, they all stood as amazed with admiration.

Notwithstanding, within an houre after they tyed him to a tree, and as many as could stand about him prepared to shoot him, but the King holding up the Compass in his hand, they all laid downe their Bowes and Arrowes, and in a triumphant manner led him to Orapaks, where he was after their manner kindly feasted, and well used.

Their order in conducting him was thus; Drawing themselves all in fyle, the King in the middest had all their Peeces and Swords borne before him. Captaine *Smith* was led after him by three great Salvages, holding him fast by each arme: and on each side six went in fyle with their Arrowes nocked. But arriving at the Towne (which was but onely thirtie or fortie hunting houses made of Mats, which they remove as they please, as we our tents) all the women and children staring to behold him, the souldiers first all in fyle performed the forme of a Bissom so well as could be, and on each flanke, officers as Serjeants to see them keepe their orders A good time they continued this exercise, and then cast themselves in a ring, dauncing in such severall Postures, and singing and yelling out such hellish notes and screeches; being strangely painted, every one his quiver of Arrowes, and at his backe a club, on his arme

a Fox or an Otters skinne, or some such matter for his vambrace; their heads and shoulders painted red, with Oyle and *Pocones* mingled together, which Scarlet-like colour made an exceeding handsome shew; his Bow in his hand, and the skinne of a Bird with her wings abroad dryed, tyed on his head, a peece of copper, a white shell, a long feather, with a small rattle growing at the tayles of their snaks tyed to it, or some such like toy. All this while *Smith* and the King stood in the middest guarded, as before is said; and after three dances they all departed. *Smith* they conducted to a long house, where thirtie or fortie tall fellowes did guard him; and ere long more bread and venison was brought him then would have served twentie men, I thinke his stomacke at that time was not very good; what he left they put in baskets and tyed over his head. About midnight they set the meate againe before him, all this time not one of them would eate a bit with him, till the next morning they brought him as much more, and then did they eate all the old, & reserved the new as they had done the other, which made him thinke they would fat him to eat him. Yet in this desperate estate to defend him from the cold, one *Maocassater* brought him his gowne, in requitall of some beads and toyes Smith had given him at his first arrivall in Virginia.

Two dayes after, a man would have slaine him (but that the guard prevented it) for the death of his sonne, to whom they conducted him to recover the poore man then breathing his last. *Smith* told them that at *James* towne he had a water would doe it, if they would let him fetch it, but they would not permit that; but made all the preparations they could to assault *James* towne, craving his advice, and for recompence he should have life, libertie, land, and women. In part of a table booke he writ his minde to them at the Fort, what was intended, how they should follow that direction to affright the messengers, and without fayle send him such things as he writ for, and an inventory with them. The difficultie and danger he told the Salvages, of the Mines, great gunnes, and other Engins, exceedingly affrighted them; yet according to his request they went to James towne, in as bitter weather as could be of frost and snow, and within three dayes returned with an answer.

But when they came to *Jame[s]* towne, seeing men sally out as he had told them they would, they fled; yet in the night they came againe to the same place where he had told them they should receive an answer, and such things as he had promised them; which they found accordingly, and with which they returned with no small expedition, to the wonder of them all that heard it, that he could either divine, or the paper could speake.

Then they led him to the *Youthtanunds*, the *Mattapanients*, the *Payankatanks*, the *Nantaughtacunds*, and *Onawmanients* upon the rivers of *Rapahanock*, and *Patawomek*, over all those rivers, and backe againe by divers other severall Nations, to the Kings habitation at Pamaunkee, where they entertained him with most strange and fearefull Conjurations;

> As if neare led to hell,
> Amongst the Devils to dwell.

Not long after, early in a morning a great fire was made in a long house, and a mat spread on the one side, as on the other; on the one they caused him to sit, and all the guard went out of the house, and presently came skipping in a great grim fellow, all painted over with coale, mingled with oyle; and many Snakes and Wesels skins stuffed with mosse, and all their tayles tyed together, so as they met on the crowne of his head in a tassell; and round about the tassell was as a Coronet of feathers, the skins hanging round about his head, backe, and shoulders, and in a manner covered his face; with a hellish voyce, and a rattle in his hand. With most strange gestures and passions he began his invocation, and environed the fire with a circle of meale; which done, three more such like devils came rushing in with the like antique tricks, painted halfe blacke, halfe red: but all their eyes were painted white, and some red stroakes like Mutchato's along their cheekes. Round about him those fiends daunced a pretty while, and then came in three more as ugly as the rest, with red eyes, and white stroakes over their blacke faces. At last they all sat downe right against him, three of them on the one hand of the chiefe Priest, and three on the other. Then all with their rattles began a song, which ended, the chiefe Priest layd downe five wheat cornes, then strayning his armes and hands with such violence that he sweat, and his veynes swelled, he began a short Oration, at the conclusion they all gave a short groane, and then layd down three graines more. After that, began their song againe, and then another Oration, ever laying

---

2 vambrace, a leather guard worn on the forearm • 3 Pocones, bloodroot • 78 Mutchato's, mustachios

downe so many cornes as before, till they had twice incirculed the fire; that done, they tooke a bunch of little stickes prepared for that purpose, continuing still their devotion, and at the end of every song and Oration, they layd downe a sticke betwixt the divisions of Corne. Till night, neither he nor they did either eate or drinke; and then they feasted merrily, with the best provisions they could make. Three dayes they used this Ceremony; the meaning whereof, they told him, was to know if he intended them well or no. The circle of meale signified their Country, the circles of corne the bounds of the Sea, and the stickes his Country. They imagined the world to be flat and round, like a trencher, and they in the middest.

After this they brought him a bagge of gunpowder, which they carefully preserved till the next spring, to plant as they did their corne; because they would be acquainted with the nature of that seede.

Opitchapam the Kings brother, invited him to his house, where, with as many platters of bread, foule, and wild beasts as did environ him, he bid him wellcome; but not any of them would eate a bit with him, but put up all the remainder in Baskets.

At his return to Opechancanoughs, all the Kings women, and their children, flocked about him for their parts; as a due by Custome, to be merry with such fragments.

> But his waking mind in hydeous dreames did oft
> see wondrous shapes,
> Of bodies strange, and huge in growth, and of
> stupendious makes.

At last they brought him to *Meronocomoco,* where was *Powhatan,* their Emperor. Here more than two hundred of those grim Courtiers stood wondering at him, as he had beene a monster; till *Powhatan* and his trayne had put themselves in their greatest braveries. Before a fire upon a seat like a bedsted, he sat covered with a great robe, made of *Rarowcun* skinnes, and all the tayles hanging by. On either hand did sit a young wench of 16 or 18 yeares, and along on each side the house, two rowes of men, and behind them as many women, with all their heads and shoulders painted red; many of their heads bedecked with the white downe of Birds; but every one with something, and a great chayne of white beads about their necks.

At his entrance before the King, all the people gave a great shout. The Queene of *Appamatuck* was appointed to bring him water to wash his hands, and another brought him a bunch of feathers, in stead of a Towell, to dry them: having feasted him after their best barbarous manner they could, a long consultation was held; but the conclusion was, two great stones were brought before Powhatan: then as many as could layd hands on him, dragged him to them, and thereon laid his head, and being ready with their clubs, to beate out his braines, *Pocahontas,* the Kings dearest daughter, when no intreaty could prevaile, got his head in her armes, and laid her owne upon his to save him from death: whereat the Emperour was contented he should live to make him hatchets, and her bells, beads, and copper; for they thought him as well of all occupations as themselves. For the King himselfe will make his owne robes, shooes, bowes, arrowes, pots; plant, hunt, or doe any thing so well as the rest.

> They say he bore a pleasant shew,
> But sure his heart was sad.
> For who can pleasant be, and rest,
> That lives in feare and dread:
> And having life suspected, doth
> It still suspected lead.

Two days after, *Powhatan,* having disguised himselfe in the most fearefullest manner he could, caused Captain *Smith* to be brought forth to a great house in the woods, and there upon a mat by the fire to be left alone. Not long after, from behinde a mat that divided the house, was made the most dolefullest noyse he ever heard; then *Powhatan,* more like a devill then a man, with some two hundred more as blacke as himselfe, came unto him and told him now they were friends, and presently he should goe to *James* towne, to send him two great gunnes, and a gryndstone, for which he would give him the Country of *Capahowosick,* and for ever esteeme him as his sonne *Nantaquoud.*

So to *James* towne with 12 guides *Powhatan* sent him. That night they quarterd in the woods, he still expecting (as he had done all this long time of his imprisonment) every houre to be put to one death or other: for all their feasting. But almightie God (by his divine providence) had mollified the hearts of those sterne Barbarians with compassion. The next morning betimes they came to the

---

Fort; where *Smith,* having used the Salvages with what kindnesse he could, he shewed *Rawhunt, Powhatans* trusty servant, two demi-Culverings & a millstone to carry *Powhatan:* they found them somewhat too heavie; but when they did see him discharge them, being loaded with stones, among the boughs of a great tree loaded with Isickles, the yce and branches came so tumbling downe, that the poore Salvages ran away halfe dead with feare. But at last we regained some conference with them, and gave them such toyes; and sent to *Powhatan,* his women, and children such presents, as he gave them in generall full content.

Now in *James* Towne they were all in combustion, the strongest preparing once more to run away with the pinnace; which with the hazzard of his life, with Sakre falcon and musket shot, *Smith* forced now the third time to stay or sinke.

Some, no better then they should be, had plotted with the President, the next day to have put him to death by the Leviticall law, for the lives of *Robinson* and *Emry;* pretending the fault was his that had led them to their ends: but he quickly tooke such order with such Lawyers, that he layd them by the heeles till he sent some of them prisoners for *England.*

1623•1624

---

3 demi-Culverings, nine-pound cannons • 15 pinnace, a small sailing vessel • 15 Sakre falcon, a type of cannon • 20 Leviticall law, as set forth in Leviticus 24.17. "And he that killeth any man shall surely be put to death "

William Bradford

1590 · 1657

William Bradford came of a family of prosperous farmers in Yorkshire, England. While still a boy, he joined the Separatist group which met in the house of William Brewster at Scrooby, and in 1609 he accompanied the Separatists to Holland, where they remained eleven years. He sailed on the *Mayflower* in 1620. Following the landing at Plymouth in December of that year, Bradford, as his *History* records, took a leading part in the affairs of the colony. He was chosen governor in the annual elections no less than thirty times, serving continuously from 1622 to 1656, except for five years, when he was relieved at his own urgent request. The record shows him to have been worthy of such confidence.

The manuscript of Bradford's work was probably not intended for publication. At any rate, although it was freely drawn upon by numerous New England historians in the seventeenth and eighteenth centuries (among them, Thomas Hutchinson), it was not published until 1856, shortly after it had been discovered in the library of the Bishop of London. It may have been taken to London by Hutchinson, a Loyalist, or by a British soldier. The manuscript was returned to Massachusetts in 1897 and has since reposed in the Massachusetts State Library.

Bradford's book tells the story of Plymouth Plantation through 1646. "There is no other document upon New England history," says Moses Coit Tyler, "that can take precedence of this either in time or in authority." It is a vivid record of the colonists' triumph over difficulties of many kinds. One cannot help being impressed by Bradford's sincerity, his exalted aims, and his lifelong dedication to religious truth as he conceived it.

Although he was said by Cotton Mather to have mastered Latin and Greek and to have studied Hebrew ("because he would see with his own eyes the ancient oracles of God in their native beauty"), his study must have been predominantly in the English Bible, which he read in the Geneva version of 1560, for his style, like John Bunyan's, shows a strong Biblical influence. Whether his art was conscious or not, Bradford's prose is worthy of a distinguished place in the English tradition of his century.

The History of Plymouth Plantation

THE 9. CHAP.

Of their vioage, and how they passed the sea, and of their safe arrival at Cape Codd

Sept[r]: 6. [1620] These troubls being blowne over, and now all being compacte togeather in one shipe, they put to sea againe with a prosperus winde, which continued diverce days togeather, which was some incouragmente unto them; yet according to the usuall maner many were afflicted with sea-sicknes. And I may not omite hear a spetiall worke of Gods providence. Ther was a proud and very profane yonge man, one of the sea-men, of a lustie, able body, which made him the more hauty; he would allway be contemning the poore people in their sicknes, and cursing them dayly with greevous execrations, and did not let to tell them, that he hoped to help to cast halfe of them over board before they came to their jurneys end, and to make mery with what they had; and if he were by any gently reproved, he would curse and swear most bitterly. But it plased God before they came halfe seas over, to smite this yong man with a greeveous disease, of which he dyed in a desperate maner, and so was him selfe the first that was throwne overbord. Thus his curses light on his owne head; and it was an astonishmente to all his fellows, for they noted it to be the just hand of God upon him.

After they had injoyed faire winds and weather for a season, they were incountred many times with crosse winds, and mette with many feirce stormes, with which the shipe was shroudly shaken, and her upper works made very leakie; and one of the maine beames in the midd ships was bowed and cracked, which put them in some fear that the shipe could not be able to performe the vioage. So some of the cheefe of the company, perceiveing the mariners to feare the suffisiencie of the shipe, as appeared by their mutterings, they entred into serious consulltation with the m[r] and other officers of the ship, to consider in time of the danger; and rather to returne then to cast them selves into a desperate and inevitable perill. And truly ther was great distraction and differance of opinion amongst the mariners them selves; faine would they doe what could be done for their wages sake, (being now halfe the seas over,) and on the other hand they were loath to hazard their lives too desperately. But in examening of all opinions, the m[r] and others affirmed they knew the ship to be stronge and firme under water; and for the buckling of the maine beame, ther was a great iron scrue the passengers brought out of Holland, which would raise the beame into his place; the which being done, the carpenter and m[r] affirmed that with a post put under it, set firme in the lower deck, and otherways bounde, he would make it sufficiente. And as for the decks and uper workes they would calke them as well as they could, and though with the workeing of the ship they would not longe keepe stanch, yet ther would otherwise be no great danger, if they did not overpress her with sails. So they commited them selves to the will of God, and resolved to proseede.

Text: Bradford's History of Plymouth Plantation, ed W T. Davis, New York, 1908 • 2 shipe, the Mayflower • 12 let, forbear • 27 shroudly, severely • 34 m[r], master or captain

In sundrie of these stormes the winds were so feirce, and the seas so high, as they could not beare a knote of saile, but were forced to hull, for diverce days togither. And in one of them, as they thus lay at hull, in a mighty storme, a lustie yonge man (called John Howland) coming upon some occasion above the grattings, was, with a seele of the shipe throwne into [the] sea; but it pleased God that he caught hould of the top-saile halliards, which hunge over board, and rane out at length; yet he held his hould (though he was sundrie fadomes under water) till he was hald up by the same rope to the brime of the water, and then with a boat hooke and other means got into the shipe againe, and his life saved; and though he was something ill with it, yet he lived many years after, and became a profitable member both in church and commone wealthe. In all this viage ther died but one of the passengers, which was William Butten, a youth, servant to Samuell Fuller, when they drew near the coast. But to omite other things, (that I may be breefe,) after longe beating at sea they fell with that land which is called Cape Cod; the which being made and certainly knowne to be it, they were not a litle joyfull. After some deliberation had amongst them selves and with the m^{r} of the ship, they tacked aboute and resolved to stande for the southward (the wind and weather being faire) to finde some place aboute Hudsons river for their habitation. But after they had sailed that course aboute halfe the day, they fell amongst deangerous shoulds and roring breakers, and they were so farr intangled ther with as they conceived them selves in great danger, and the wind shrinking upon them withall, they resolved to bear up againe for the Cape, and thought them selves hapy to gett out of those dangers before night overtooke them, as by Gods providence they did. And the next day they gott into the Cape-harbor wher they ridd in saftie. A word or too by the way of this cape; it was thus first named by Capten Gosnole and his company, An^{o}. 1602, and after by Capten Smith was caled Cape James; but it retains the former name amongst seamen. Also that pointe which first shewed those dangerous shoulds unto them, they called Pointe Care, and Tuckers Terrour; but the French and Dutch to this day call it Malabarr, by reason of those perilous shoulds, and the losses they have suffered their.

Being thus arived in a good harbor and brought safe to land, they fell upon their knees and blessed the God of heaven, who had brought them over the vast and furious ocean, and delivered them from all the periles and miseries therof, againe to set their feete on the firme and stable earth, their proper elemente. And no marvell if they were thus joyefull, seeing wise Seneca was so affected with sailing a few miles on the coast of his owne Italy; as he affirmed, that he had rather remaine twentie years on his way by land, then pass by sea to any place in a short time; so tedious and dreadfull was the same unto him.

But hear I cannot but stay and make a pause, and stand half amased at this poore peoples presente condition; and so I thinke will the reader too, when he well considers the same. Being thus passed the vast ocean, and a sea of troubles before in their preparation (as may be remembred by that which wente before), they had now no freinds to wellcome them, nor inns to entertaine or refresh their weatherbeaten bodys, no houses or much less townes to repaire too, to seeke for succoure. It is recorded in scripture as a mercie to the apostle and his shipwraked company, that the barbarians shewed them no smale kindnes in refreshing them, but these savage barbarians, when they mette with them (as after will appeare) were readier to fill their sids full of arrows then otherwise. And for the season it was winter, and they that know the winters of that cuntrie know them to be sharp and violent, and subjecte to cruell and feirce stormes, deangerous to travill to known places, much more to serch an unknown coast. Besids, what could they see but a hidious and desolate wildernes, full of wild beasts and willd men? and what multituds ther might be of them they knew not. Nether could they, as it were, goe up to the tope of Pisgah, to vew from this willdernes a more goodly cuntrie to feed their hops; for which way soever they turnd their eys (save upward to the heavens) they could have litle solace or content in respecte of any outward objects. For summer being done, all things stand upon them with a wetherbeaten face; and the whole countrie, full of woods and thickets,

represented a wild and savage heiw. If they looked behind them, ther was the mighty ocean which they had passed, and was now as a maine barr and goulfe to seperate them from all the civill parts of the world. If it be said they had a ship to sucour them, it is trew; but what heard they daly from the m^r^ and company? but that with speede they should looke out a place with their shallop, wher they would be at some near distance; for the season was shuch as he would not stirr from thence till a safe harbor was discovered by them wher they would be, and he might goe without danger; and that victells consumed apace, but he must and would keepe sufficient for them selves and their returne. Yea, it was muttered by some, that if they gott not a place in time, they would turne them and their goods ashore and leave them. Let it also be considred what weake hopes of supply and succoure they left behinde them, that might bear up their minds in this sade condition and trialls they were under; and they could not but be very smale. It is true, indeed, the affections and love of their brethren at Leyden was cordiall and entire towards them, but they had litle power to help them, or them selves; and how the case stode betweene them and the marchants at their coming away, hath allready been declared. What could now sustaine them but the spirite of God and his grace? May not and ought not the children of these fathers rightly say: *Our faithers were Englishmen which came over this great ocean, and were ready to perish in this willdernes; but they cried unto the Lord, and he heard their voyce, and looked on their adversitie, etc. Let them therfore praise the Lord, because he is good, and his mercies endure for ever. Yea, let them which have been redeemed of the Lord, shew how he hath delivered them from the hand of the oppressour. When they wandered in the deserte willdernes out of the way, and found no citie to dwell in, both hungrie, and thirstie, their sowle was overwhelmed in them. Let them confess before the Lord his loving kindnes, and his wonderfull works before the sons of men. . . .*

The remainder of An°: 1620

I shall a litle returne backe and begine with a combination made by them before they came ashore, being the first foundation of their govermente in this place; occasioned partly by the discontented and mutinous speeches that some of the strangers amongst them had let fall from them in the ship—That when they came a shore they would use their owne libertie; for none had power to command them, the patente they had being for Virginia, and not for New-england, which belonged to an other Goverment, with which the Virginia Company had nothing to doe. And partly that shuch an acte by them done (this their condition considered) might be as firme as any patent, and in some respects more sure.

The forme was as followeth.

In the name of God, Amen. We whose names are under-writen, the loyall subjects of our dread soveraigne Lord, King James, by the grace of God, of Great Britaine, Franc, and Ireland king, defender of the faith, etc., haveing undertaken, for the glorie of God, and advancemente of the Christian faith, and honour of our king and countrie, a voyage to plant the first colonie in the Northerne parts of Virginia, doe by these presents solemnly and mutualy in the presence of God, and one of another, covenant and combine our selves togeather into a civill body politick, for our better ordering and preservation and furtherance of the ends aforesaid; and by vertue hearof to enacte, constitute, and frame such just and equall lawes, ordinances, acts, constitutions, and offices, from time to time, as shall be thought most meete and convenient for the generall good of the Colonie, unto which we promise all due submission and obedience. In witnes wherof we have hereunder subscribed our names at Cap-Codd the 11. of November, in the year of the raigne of our soveraigne lord, King James, of England, France, and Ireland the eighteenth, and of Scotland the fiftie fourth. An°: Dom. 1620.

After this they chose, or rather confirmed, Mr. John Carver (a man godly and well approved amongst them) their Governour for that year. And after they had provided a place for their goods, or comone store, (which were long in unlading for want of boats, foulnes of winter weather, and sicknes of diverce,) and begune some small cottages for their habitation, as time would admitte, they mette and consulted of lawes and orders,

21 Leyden, in Holland, whence the more devout members of the group had come • 27 Our . . . etc. The sentence paraphrases Deuteronomy 26 7 • 31 Let . . . men. The passage paraphrases Psalms 107 1-8 • 56 In . . . 1620. This document, known as the "Mayflower Compact," was an agreement signed by the Pilgrim Fathers to serve as a form of government because the Pilgrims had no charter

both for their civill and military Govermente, as the necessitie of their condition did require, still adding therunto as urgent occasion in severall times, and as cases did require.

In these hard and difficulte beginings they found some discontents and murmurings arise amongst some, and mutinous speeches and carriags in other; but they were soone quelled and overcome by the wisdome, patience, and just and equall carrage of things by the Govr and better part, which clave faithfully togeather in the maine. But that which was most sadd and lamentable was, that in 2. or 3. moneths time halfe of their company dyed, espetialy in Jan: and February, being the depth of winter, and wanting houses and other comforts; being infected with the scurvie and other diseases, which this long vioage and their in-acomodate condition had brought upon them; so as ther dyed some times 2. or 3. of a day, in the foresaid time; that of 100. and odd persons, scarce 50. remained And of these in the time of most distres, ther was but 6. or 7. sound persons, who, to their great comendations be it spoken, spared no pains, night nor day, but with abundance of toyle and hazard of their owne health, fetched them woode, made them fires, drest them meat, made their beads, washed their lothsome cloaths, cloathed and uncloathed them; in a word, did all the homly and necessarie offices for them which dainty and quesie stomacks cannot endure to hear named; and all this willingly and cherfully, without any grudging in the least, shewing herein their true love unto their freinds and bretheren. A rare example and worthy to be remembred. Tow of these 7. were Mr. William Brewster, ther reverend Elder, and Myles Standish, ther Captein and military comander, unto whom my selfe, and many others, were much beholden in our low and sicke condition. And yet the Lord so upheld these persons, as in this generall calamity they were not at all infected either with sicknes, or lamnes. And what I have said of these, I may say of many others who dyed in this generall vissitation, and others yet living, that whilst they had health, yea, or any strength continuing, they were not wanting to any that had need of them. And I doute not but their recompence is with the Lord. . . .

[1623] All this whille no supply was heard of, neither knew they when they might expecte any. So they begane to thinke how they might raise as much corne as they could, and obtaine a beter crope then they had done, that they might not still thus languish in miserie. At length, after much debate of things, the Govr (with the advise of the cheefest amongest them) gave way that they should set corne every man for his owne perticuler, and in that regard trust to them selves; in all other things to goe on in the generall way as before. And so assigned to every family a parcell of land, according to the proportion of their number for that end, only for present use (but made no devission for inheritance), and ranged all boys and youth under some familie. This had very good success; for it made all hands very industrious, so as much more corne was planted then other waise would have bene by any means the Govr or any other could use, and saved him a great deall of trouble, and gave farr better contente. The women now wente willingly into the feild, and tooke their litle-ons with them to set corne, which before would aledg weaknes, and inabilitie; whom to have compelled would have bene thought great tiranie and oppression.

The experience that was had in this commone course and condition, tried sundrie years, and that amongst godly and sober men, may well evince the vanitie of that conceite of Platos and other ancients, applauded by some of later times; — that the taking away of propertie, and bringing in communitie into a comone wealth, would make them happy and florishing; as if they were wiser then God. For this comunitie (so farr as it was) was found to breed much confusion and discontent, and retard much imployment that would have been to their benefite and comforte. For the yongmen that were most able and fitte for labour and service did repine that they should spend their time and streingth to worke for other mens wives and children, with out any recompence. The strong, or man of parts, had no more in devission of victails and cloaths, then he that was weake and not able to doe a quarter the other could; this was thought injuestice. The aged and graver men to be ranked and equalised in labours, and victails, cloaths, etc., with the meaner and yonger sorte, thought it some indignite and disrespect unto them.

---

10 Govr, Governor Bradford himself • 68 **commone course**, ownership in common. Thus ended the communistic experiment at Plymouth

And for mens wives to be commanded to doe servise for other men, as dresing their meate, washing their cloaths, etc., they deemd it a kind of slaverie, neither could many husbands well brooke it. Upon the poynte all being to have alike, and all to doe alike, they thought them selves in the like condition, and one as good as another; and so, if it did not cut of those relations that God hath set amongest men, yet it did at least much diminish and take of the mutuall respects that should be preserved amongst them. And would have bene worse if they had been men of another condition. Let none objecte this is men's corruption, and nothing to the course it selfe. I answer, seeing all men have this corruption in them, God in his wisdome saw another course fiter for them. . . .

[1628] Aboute some 3. or 4. years before this time, ther came over one Captaine Wolastone, (a man of pretie parts,) and with him 3. or 4. more of some eminencie, who brought with them a great many servants, with provissions and other implments for to begine a plantation; and pitched them selves in a place within the Massachusets, which they called, after their Captains name, Mount-Wollaston. Amongst whom was one Mr. Morton, who, it should seeme, had some small adventure (of his owne or other mens) amongst them, but had litle respecte amongst them, and was sleghted by the meanest servants. Haveing continued ther some time, and not finding things to answer their expectations, nor profite to arise as they looked for, Captaine Wollaston takes a great part of the sarvants, and transports them to Virginia, wher he puts them of at good rates, selling their time to other men; and writs back to one Mr. Rassdall, one of his cheefe partners, and accounted their marchant, to bring another parte of them to Verginia likewise, intending to put them of ther as he had done the rest. And he, with the consente of the said Rasdall, appoynted one Fitcher to be his Livetenante, and governe the remaines of the plantation, till he or Rasdall returned to take further order theraboute. But this Morton abovesaid, haveing more craft than honestie, (who had been a kind of petiefogger, of Furnefells Inne,) in the others absence, watches an oppertunitie, (commons being but hard amongst them,) and gott some strong drinck and other junkats, and made them a feast; and after they were merie, he begane to tell them, he would give them good counsell. You see (saith he) that many of your fellows are carried to Virginia; and if you stay till this Rasdall returne, you will also be carried away and sould for slaves with the rest. Therfore I would advise you to thruste out this Levetenant Fitcher; and I, having a parte in the plantation, will receive you as my partners and consociats; so may you be free from service, and we will converse, trad, plante, and live togeather as equalls, and supporte and protecte one another, or to like effecte. This counsell was easily received; so they tooke oppertunitie, and thrust Levetenante Fitcher out a dores, and would suffer him to come no more amongst them, but forct him to seeke bread to eate, and other releefe from his neigbours, till he could gett passage for England. After this they fell to great licenciousnes, and led a dissolute life, powering out them selves into all profanenes. And Morton became lord of misrule, and maintained (as it were) a schoole of Athisme And after they had gott some good into their hands, and gott much by trading with the Indeans, they spent it as vainly, in quaffing and drinking both wine and strong waters in great exsess, and, as some reported, 10*li.* worth in a morning. They allso set up a May-pole, drinking and dancing aboute it many days togeather, inviting the Indean women, for their consorts, dancing and frisking togither, (like so many fairies, or furies rather,) and worse practises. As if they had anew revived and celebrated the feasts of the Roman Goddes Flora, or the beasly practieses of the madd Bacchinalians. Morton likwise (to shew his poetrie) composed sundry rimes and verses, some tending to lasciviousnes, and others to the detraction and scandall of some persons, which he affixed to this idle or idoll May-polle. They chainged allso the name of their place, and in stead of calling it Mounte Wollaston, they called it Merriemounte, as if this joylity would have lasted ever. But this continued not long, for after Morton was sent for England, (as follows to be declared,) shortly after came over that worthy gentlman, Mr. John Indecott, who brought

---

7 **of**, off, as often in Bradford • 23 **Mr. Morton**, Thomas Morton, whose amusing and very different account in the **New English Canaan** (London, 1637) should be compared with Bradford's • 41 **petiefogger**, pettifogger, an inferior lawyer • 42 **Furnefells Inne**, Furnival's Inn, one of the Inns of Court in London occupied by "students and practicers" of the law • 43 **commons**, food • 62 **powering**, pouring • 69 **li**, pounds • 85 **Indecott**, John Endicott

over a patent under the broad seall, for the govermente of the Massachusets, who visiting those parts caused that May-polle to be cutt downe, and rebuked them for their profannes, and admonished them to looke ther should be better walking; so they now, or others, changed the name of their place again, and called it Mounte-Dagon. . . .

[1633] Mr. Roger Williams (a man godly and zealous, having many precious parts, but very unsettled in judgmente) came over first to the Massachusets, but upon some discontente left that place, and came hither, (wher he was friendly entertained, according to their poore abilitie,) and exercised his gifts amongst them, and after some time was admitted a member of the church; and his teaching well approoved, for the benefite wherof I still blese God, and am thankfull to him, even for his sharpest admonitions and reproufs, so farr as they agreed with truth. He this year begane to fall into some strang oppinions, and from opinion to practise; which caused some controversie betweene the church and him, and in the end some discontente on his parte, by occasion whereof he left them some thing abruptly. Yet after wards sued for his dismission to the church of Salem, which was granted, with some caution to them concerning him, and what care they ought to have of him. But he soone fell into more things ther, both to their and the goverments troble and disturbance. I shall not need to name perticulers, they are too well knowen now to all, though for a time the church here wente under some hard censure by his occasion, from some that afterwards smarted them selves. But he is to be pitied, and prayed for, and so I shall leave the matter, and desire the Lord to shew him his errors, and reduse him into the way of truth, and give him a setled judgment and constancie in the same; for I hope he belongs to the Lord, and that he will shew him mercie. . . .

[1638] This year, aboute the 1. or 2. of June, was a great and fearfull earthquake; it was in this place heard before it was felte. It came with a rumbling noyse, or low murmure, like unto remoate thunder; it came from the norward, and pased southward. As the noyse aproched nerer, they earth begane to shake, and came at length with that violence as caused platters, dishes, and such like things as stoode upon shelves, to clatter and fall downe; yea, persons were afraid of the houses themselves. It so fell oute that at the same time diverse of the cheefe of this towne were mett together at one house, conferring with some of their freinds that were upon their removall from the place, (as if the Lord would herby shew the signes of his displeasure, in their shaking a peeces and removalls one from an other.) How ever it was very terrible for the time, and as the men were set talking in the house, some women and others were without the dores, and the earth shooke with that violence as they could not stand without catching hould of the posts and pails that stood next them; but the violence lasted not long. And about halfe an hower, or less, came an other noyse and shaking, but nether so loud nor strong as the former, but quickly passed over; and so it ceased. It was not only on the sea coast, but the Indeans felt it within land; and some ships that were upon the coast were shaken by it. So powerfull is the mighty hand of the Lord, as to make both the earth and sea to shake, and the mountaines to tremble before him, when he pleases; and who can stay his hand? It was observed that the sommers, for divers years togeather after this earthquake, were not so hotte and seasonable for the ripning of corne and other fruits as formerly; but more could and moyst, and subjecte to erly and untimly frosts, by which, many times, much Indean corne came not to maturitie; but whether this was any cause, I leave it to naturallists to judge. . . .

Anno Dom: 1642

Marvilous it may be to see and consider how some kind of wickednes did grow and breake forth here, in a land wher the same was so much witnesed against, and so narrowly looked unto, and severly punished when it was knowne; as in no place more, or so much, that I have known or heard of; insomuch as they have been somewhat censured, even by moderate and good men, for their severitie in punishments. And yet all this could not suppress the breaking out of sundrie notorious sins, (as this year, besids other, gives us too many sad presidents and instances,) espetially drunkennes and unclainnes; not only incontinencie betweene persons unmaried, for which many both men and women have been punished sharply enough, but some maried persons allso.

---

34 **the . . . truth.** Banished from the Massachusetts Bay Colony in 1635, Roger Williams (see p. 63) migrated to the Narragansett country, where he founded Providence, Rhode Island • **83 presidents,** precedents

but that which is worse, even sodomie and bugerie, (things fearfull to name,) have broak forth in this land, oftener then once. I say it may justly be marveled at, and cause us to fear and tremble at the consideration of our corrupte natures, which are so hardly bridled, subdued, and mortified, nay, cannot by any other means but the powerfull worke and grace of Gods spirite But (besids this) one reason may be, that the Divell may carrie a greater spite against the churches of Christ and the gospell hear, by how much the more they indeaour to preserve holynes and puritie amongst them, and strictly punisheth the contrary when it ariseth either in church or comone wealth, that he might cast a blemishe and staine upon them in the eyes of [the] world, who use to be rash in judgmente. I would rather thinke thus, then that Satane hath more power in these heathen lands, as som have thought, then in more Christian nations, espetially over Gods servants in them.

2. An other reason may be, that it may be in this case as it is with waters when their streames are stopped or dammed up, when they gett passage they flow with more violence, and make more noys and disturbance, then when they are suffered to rune quietly in their owne chanels. So wikednes being here more stopped by strict laws, and the same more nerly looked unto, so as it cannot rune in a comone road of liberty as it would, and is inclined, it searches every wher, and at last breaks out wher it getts vente.

3. A third reason may be, hear (as I am verily perswaded) is not more evills in this kind, nor nothing nere so many by proportion, as in other places, but they are here more discoverd and seen, and made publick by due serch, inquisition, and due punishment; for the churches looke narrowly to their members, and the magistrats over all, more strictly then in other places. Besids, here the people are but few in comparison of other places, which are full and populous, and lye hid, as it were, in a wood or thickett, and many horrible evills by that means are never seen nor knowne, wheras hear, they are, as it were, brought into the light, and set in the plaine feeld, or rather on a hill, made conspicuous to the veiw of all. . . .

1630-1657 • 1856

Samuel Sewall

1652 • 1730

Samuel Sewall was born at Bishopstoke, England, but migrated to Boston when he was nine years old and spent the rest of his life there. For nearly sixty years following his graduation from Harvard in 1671, he was active in business and politics. For a period (1681-1684) he managed the colony's printing press, he spent a year in England (1688-1689), engaged in private business and assisting Increase Mather in his unsuccessful efforts to bring about the restoration of the colony's charter, he was captain, in 1701, of the Ancient and Honorable Artillery Company; and from 1718 to 1728 he was Chief Justice of the Superior Court of Massachusetts.

James Truslow Adams (in the *Dictionary of American Biography*) calls Sewall a "competent jurist of more than average liberality" His most famous, or infamous, juridical rôle was played at Salem in 1692 as one of three commissioners appointed to try the cases of witchcraft. Nineteen persons were sentenced to death Sewall was the only one of the three judges ever to admit publicly that the court had been guilty of a tragic error (see selection).

Sewall has been called unattractive names by more than one recent writer on colonial New England Adams says that he was "mercenary", Parrington speaks of his "tradesman's conception of religion", socially minded historians have pointed to Sewall as an example of the unholy alliance between Puritanism and capitalism. It is true that Sewall was not the man to underestimate

the value of a dollar honestly earned. At the same time, it is hardly possible for the careful reader of the *Diary* to question the sincerity of Sewall's religious convictions.

Sewall was the author of several lesser works (among them, *The Selling of Joseph,* perhaps the earliest protest in this country against Negro slavery); but his fame rests upon the *Diary,* which remained unpublished until 1878 Begun in 1673 and continued through 1729, the *Diary* affords a rich and vivid picture of life in and around Boston for a period of about fifty-seven years It is remarkably concise and suggestive. Indeed, its distinctive literary virtue lies in the writer's ability to suggest an unforgettable picture in a few words: the picture, for example, of a New England meeting house in winter, "This day so cold that the Sacramental Bread is frozen pretty hard, and rattles sadly as broken into the Plates." After these two hundred years and more, Sewall's *Diary,* in Parrington's words, "is still quick with life."

Samuel Sewall, **Diary, Massachusetts Historical Society Collections,** Series 5, Vols V-VII, 1878-1882 • **Samuel Sewall's Diary (abridged),** ed Mark Van Doren, New York, 1927 • V L Parrington, "Samuel Sewall, Yankee," **The Colonial Mind,** New York, 1927

From the

Diary

July 8, 1677. New Meeting House *Mane:* In Sermon time there came in a female Quaker, in a Canvas Frock, her hair disshevelled and loose like a Periwigg, her face as black as ink, led by two other Quakers, and two other followed. It occasioned the greatest and most amazing uproar that I ever saw. . . .

[Nov. 12, 1685] . . . the Ministers of this Town Come to the Court and complain against a Dancing Master who seeks to set up here and hath mixt Dances, and his time of Meeting is Lecture-Day, and 'tis reported he should say that by one Play he could teach more Divinity than Mr. Willard or the Old Testament Mr. Moodey said 'twas not a time for N[ew] E[ngland] to dance. Mr. Mather struck at the Root, speaking against mixt Dances. . . .

Sabbath, Jan^{y} 24 [1686]. Friday night and Satterday were extream cold, so that the Harbour frozen up, and to the Castle. This day so cold that the Sacramental Bread is frozen pretty hard, and rattles sadly as broken into the Plates. . . .

Tuesday, Dec^{r} 21 [1686] There is a meeting at Mr. Allen's, of the Ministers and four of each Congregation, to consider what answer to give the Governour; and 'twas agreed that could not with a good conscience consent that our Meeting-Houses should be made use of for the Common-Prayer Worship. . . .

[January 14, 1697] Copy of the Bill I put up on the Fast day, giving it to Mr. Willard as he pass'd by, and standing up at the reading of it, and bowing when finished, in the Afternoon.

Samuel Sewall, sensible of the reiterated strokes of God upon himself and family, and being sensible, that as to the Guilt contracted upon the opening of the late Commission of Oyer and Terminer at Salem (to which the order for this Day relates) he is, upon many accounts, more concerned than any that he knows of, Desires to take the Blame and shame of it, Asking pardon of men, And especially desiring prayers that God, who has an Unlimited Authority, would pardon that sin and all other his sins; personal and Relative: And according to his infinite Benignity, and Sovereignty, Not Visit the sin of him, or of any other, upon himself or any of his, nor upon the Land: But that He would powerfully defend him against all Temptations to Sin, for the future, and vouchsafe him the efficacious,

---

1 **Mane,** in the morning • 3 **Periwigg.** Sewall had a particular aversion to periwigs • 10 **Lecture-Day,** every Thursday, when a sermon or "lecture" was delivered • 11 **one Play.** The theater, of course, was not permitted in colonial Boston • 14 **Mr. Mather,** the Rev Increase Mather, father of Cotton Mather • 26 **Common Prayer Worship,** the form of worship used by the Established Church of England. "I would not set up," Sewall wrote in his Diary, "that which the people of New England came over to avoid " Thus rebuffed, Sir Edmund Andros, the Royal Governor, and his Anglican associates founded King's Chapel, although the building was not completed until after Andros' expulsion from the colony in 1689 • 27 **the Bill.** The document is Sewall's public confession of error as one of the judges of the witchcraft cases in Salem in 1692 • 34 **Oyer and Terminer,** literally, to hear and determine, used of a writ or commission giving authority to judges

saving Conduct of his Word and Spirit. . . .

Lord's Day, June 10, 1705. The Learned and pious Mr. Michael Wigglesworth dies at Malden about 9 m. Had been sick about 10 days of a Fever, 73 years and 8 moneths old. He was the Author of the Poem entituled The Day of Doom, which has been so often printed: and was very useful as a Physician. . . .

Feb^{y} 9. 1708. The Apointment of a Judge for the Super. Court being to be made upon next Fifth day, Febr. 12, I pray'd God to Accept me in keeping a private day of Prayer with Fasting for That and other Important Matters: I kept it upon the Third day Febr. 10. 1708 in the uper Chamber at the North-East end of the House, fastening the Shutters next the Street.— Perfect what is lacking in my Faith, and in the faith of my dear Yokefellow. Convert my children; especially Samuel and Hanah; Provide Rest and Settlement for Hanah: Recover Mary, Save Judith, Elisabeth and Joseph: Requite the Labour of Love of my Kinswoman Jane Tappin, Give her health, find out Rest for her. Make David a man after thy own heart, Let Susan live and be baptised with the Holy Ghost, and with fire. Relations. Steer the Government in this difficult time, when the Governour and many others are at so much Variance: Direct, incline, overrule on the Council-day fifth-day, Febr. 12. as to the special Work of it in filling the Super. Court with Justices, or any other thing of like nature. . . . Bless the Company for propagation of the Gospel, especiall Gov^{r} Ashurst &c. Revive the Business of Religion at Natick, and accept and bless John Neesnumin who went thither last week for that end. Mr. Rawson at Nantucket Bless the South Church in preserving and spiriting our Pastor, in directing unto suitable Supply, and making the Church unanimous: Save the Town, College; Province from Invasion of Enemies, open, Secret, and from false Brethren: Defend the Purity of Worship Save Connecticut, bless their New Governour: Save the Reformation under N. York Governm^{t}. Reform all the European Plantations in America; Spanish, Portuguese, English, French, Dutch; Save this New World, that where Sin hath abounded, Grace may Superabound; that CHRIST who is stronger, would bind the strong man and spoil his house; and order the Word to be given, Babylon is fallen.——— Save our Queen, lengthen out her Life and Reign. Save France, make the Proud helper stoop, Save all Europe; Save Asia, Africa, Europe and America. These were gen^{l} heads of my Meditation and prayer; and through the bounteous Grace of GOD, I had a very Comfortable day of it. . . .

Aug^{t} 25 [1709]. Mr. Cotton Mather, Mr. Pemberton and wife, and others dine with us after Lecture. In the even I invited the Gov^{r} and Council to drink a Glass of Wine with me; About 20 came; viz. Gov^{r} Winthrop, Hathorne. . . . Gave them variety of good Drink, and at going away a large piece of Cake Wrap'd in Paper. They very heartily wish'd me Joy of my daughter's Marriage. . . .

April 3 [1711]. I dine with the Court at Pullin's Mr. Attorney treats us at his house with excellent Pipins, Anchovas, Olives, Nuts. I said I should be able to make no Judgment on the Pipins without a Review, which made the Company Laugh. Spake much of Negroes; I mention'd the problem, whether should be white after the Resurrection. Mr. Bolt took it up as absurd, because the body should be void of all Colour, spake as if it should be a Spirit. I objected what Christ said to his Disciples after the Resurrection. He said twas not so after his Ascension. . . .

Seventh Day [Saturday] Feb^{y} 6 [1714] [Queen Anne's birthday]. . . . My neighbour Colson knocks at our door at about 9 or past to tell of the Disorders at the Tavern at the South-end in Mr. Addington's house, kept by John Wallis. He desired me that I would accompany Mr. Bromfield and Constable Howell thither It was 35 Minutes past Nine at Night before Mr Bromfield came; then we went. I took Aeneas Salter with me. Found much Company. They refus'd to go away. Said were there to drink the Queen's Health, and they had many other Healths to drink Call'd for more Drink: drank to me, I took notice of the Affront to them Said must and would stay upon that Solemn occasion. Mr John Netmaker drank the Queen's health to me. I told him I drank none; upon that he ceas'd Mr. Brinley put on his Hat to affront me I made him take it off. I threaten'd to send some of them to prison; that did not

---

6 **The Day of Doom,** first published in 1662, was the most popular poem written in colonial New England • 35 **College,** Harvard College • 41 **where . . . Superabound.** Compare Romans 5 20. "But where sin abounded, grace did much more abound" Sewall's language is often Biblical • 43 **bind . . . house,** a paraphrase of Matthew 12 29 • 45 **Queen,** Anne, Queen of England, 1702-1714 • 46 **Proud . . . stoop,** a paraphrase of Job 9 13 • 55 **Hathorne,** John Hathorne, one of the "witch judges" and an ancestor of Nathaniel Hawthorne

move them. They said they could but pay their Fine, and doing that they might stay. I told them if they had not a care, they would be guilty of a Riot. Mr. Bromfield spake of raising a number of Men to Quell them, and was in some heat, ready to run into Street. But I did not like that. Not having Pen and Ink, I went to take their Names with my Pensil, and not knowing how to Spell their Names, they themselves of their own accord writ them. Mr. Netmaker, reproaching the Province, said they had not made one good Law.

At last I address'd myself to Mr. Banister. I told him he had been longest an Inhabitant and Freeholder, I expected he should set a good Example in departing thence. Upon this he invited them to his own House, and away they went; and we, after them, went away. The Clock in the room struck a pretty while before they departed. I went directly home, and found it 25 Minutes past Ten at Night when I entred my own House. . . .

Dec^{r} 23 [1714]. Dr. C. Mather preaches excellently from Ps. 37. Trust in the Lord &c. only spake of the Sun being in the centre of our System. I think it inconvenient to assert such Problems. . . .

Octob^{r} 3. [1720]. Waited on Madam Winthrop again; 'twas a little while before she came in. Her daughter Noyes being there alone with me, I said, I hoped my Waiting on her Mother would not be disagreeable to her. She answer'd she should not be against that that might be for her Comfort. I Saluted her, and told her I perceiv'd I must shortly wish her a good Time; (her mother had told me, she was with Child, and within a Moneth or two of her time). By and by in came Mr. Airs, Chaplain of the Castle, and hang'd up his Hat, which I was a little startled at, it seeming as if he was to lodge there. At last Madam Winthrop came in too. After a considerable time, I went up to her and said, if it might not be inconvenient I desired to speak with her. She assented, and spake of going into another Room; but Mr. Airs and Mrs. Noyes presently rose up, and went out, leaving us there alone. Then I usher'd in Discourse from the names in the Fore-seat; at last I pray'd that Katharine might be the person assign'd for me. She instantly took it up in the way of Denyal, as if she had catch'd at an Opportunity to do it, saying she could not do it before she was asked. Said that was her mind unless she should Change it, which she believed she should not; could not leave her Children. I express'd my Sorrow that she should do it so Speedily, pray'd her Consideration, and ask'd her when I should wait on her agen. She setting no time, I mention'd that day Sennight. Gave her Mr. Willard's Fountain open'd with the little print and verses; saying, I hop'd if we did well read that book, we should meet together hereafter, if we did not now. She took the Book, and put it in her Pocket. Took Leave.

8^{r} 5. Midweek, I din'd with the Court; from thence went and visited Cousin Jonathon's wife, Lying in with her little Betty. Gave the Nurse 2^{s}. Although I had apointed to wait upon her, M^{rs} Winthrop, next Monday, yet I went from my Cousin Sewall's thither about 3. p. m. The Nurse told me Madam dined abroad at her daughter Noyes's, they were to go out together. I ask'd for the Maid, who was not within. Gave Katee a peny and a Kiss and came away. Accompanyed my Son and dâter Cooper in their Remove to their New House. . . .

8^{r} 6th. . . . A little after 6. p. m. I went to Madam Winthrop's. She was not within. I gave Sarah Chickering the Maid 2^{s}, Juno, who brought in wood, 1^{s}. Afterward the Nurse came in, I gave her 18^{d}, having no other small Bill. After awhile Dr. Noyes came in with his Mother; and quickly after his wife came in: They sat talking, I think, till eight a-clock. I said I fear'd I might be some Interruption to their Business: Dr. Noyes reply'd pleasantly: He fear'd they might be an Interruption to me, and went away. Madam seem'd to harp upon the same string. Must take care of her Children; could not leave that House and Neighbourhood where she had dwelt so long. I told her she might doe her children as much or more good by bestowing what she laid out in Hous-keeping, upon them. Said her Son

---

1 **Fine.** A law of the colony "for the better observation and keeping of the Lord's Day" imposed a fine of five shillings on every person remaining in a public house, "drinking, or idly spending his time on Saturday night, after the sun is set, or on the Lord's Day, or the evening following" • **23 Waited . . . again.** Sewall's second wife had died May 26, 1720 Sewall at this time was 68; Madam Winthrop was 56. Twice a widow, she did not marry again • **32 Castle,** Castle Island, which was fortified, and where soldiers were stationed • **40 names . . . Fore-seat,** eligible widows, mentioned in a previous entry • **41 Katharine,** Madam Winthrop • **50 Sennight,** a week • **50 Fountain open'd,** Samuel Willard, "The Fountain Opened, or the Great Gospel Privilege of having Christ exhibited to Sinful Men . . .," Boston, 1700 • **55 8^{r},** October

Madam Winthrop's Wedding Room

would be of age the 7th of August. I said it might be inconvenient for her to dwell with her Daughter-in-Law, who must be Mistress of the House. I gave her a piece of Mr. Belcher's Cake and Ginger-Bread wrapped up in a clean sheet of Paper; told her of her Father's kindness to me when Treasurer, and I Constable. My Daughter Judith was gon from me and I was more lonesom—might help to forward one another in our Journey to Canaan.—Mr. Eyre came within the door; I saluted him, ask'd how Mr. Clark did, and he went away. I took leave about 9 aclock. I told [her] I came now to refresh her Memory as to Monday-night; said she had not forgot it. In discourse with her, I ask'd leave to speak with her Sister; I meant to gain Madm Mico's favour to persuade her Sister. She seem'd surpris'd and displeas'd, and said she was in the same condition! . . .

8r 10th. . . . In the Evening I visited Madam Winthrop, who treated me with a great deal of Curtesy; Wine, Marmalade. I gave her a News-Letter about the Thanksgiving Proposals, for sake of the verses for David Jeffries. She tells me Dr. Increase Mather visited her this day, in Mr. Hutchinson's Coach. . . .

8r 11th I writ a few Lines to Madam Winthrop to this purpose: "Madam, These wait on you with Mr. Mayhew's Sermon, and Account of the state of the Indians on Martha's Vinyard. I thank you for your Unmerited Favours of yesterday; and hope to have the Hapiness of Waiting on you tomorrow before Eight a-clock after Noon. I pray GOD to keep you, and give you a joyfull entrance upon the Two Hundred and twenty ninth year of Christopher Columbus his Discovery; and take Leave, who am, Madam, your humble Servt.

S. S.

Sent this by Deacon Green, who deliver'd it to Sarah Chickering, her Mistress not being at home.

8r 12. . . . Mrs. Anne Cotton came to door (twas before 8.) said Madam Winthrop was within, directed me into the little Room, where she was full of work behind a Stand; Mrs. Cotton came in and stood. Madam Winthrop pointed to her to set me a Chair. Madam Winthrop's Countenance was much changed from what 'twas on Monday, look'd dark and lowering. At last, the work, (black stuff or Silk) was taken away, I got my Chair in place, had some Converse, but very Cold and indifferent to what 'twas before. Ask'd her to acquit me of Rudeness if I drew off her Glove. Enquiring the reason, I told her twas great odds between handling a dead Goat, and a living Lady. Got it off. I told her I had one Petition to ask of her, that was, that she would take off the Negative she laid on me the third of October; She readily answer'd she could not, and enlarg'd upon it; She told me of it so soon as she could; could not leave her house, children, neighbours, business. I told her she might do som Good to help and suport me. Mentioning Mrs. Gookin, Nath, the widow Weld was spoken of; said I had visited Mrs. Denison. I told her Yes! Afterward I said, If after a first and second Vagary she would Accept of me returning, Her Victorious Kindness and Good Will would be very Obliging. She thank'd me for my Book, (Mr. Mayhew's Sermon), But said not a word of the Letter. When she insisted on the Negative, I pray'd there might be no more Thunder and Lightening, I should not sleep all night. I gave her Dr. Preston, The Church's Marriage and the Church's Carriage, which cost me 6s at the Sale. The door standing open, Mr. Airs came in, hung up his Hat, and sat down. After awhile, Madam Winthrop moving, he went out. Jno Eyre look'd in, I said How do ye, or,

19 **News-Letter.** The Boston **News-Letter**, founded in 1704, was the first newspaper in the colonies. The issue of October 3-10, 1720, contained "A Proclamation for a General Thanksgiving" issued by Governor Samuel Shute, calling for the observance of Thursday, October 27, and "forbidding all Servile Labour and Recreation" on that day • 20 **Proposals**, an unidentified broadside, presumably • 64 **Dr. Preston**, John Preston (1587-1628), English Puritan divine, much read by the early Puritans of New England

your servant Mr. Eyre: but heard no word from him. Sarah fill'd a Glass of Wine, she drank to me, I to her, She sent Juno home with me with a good Lantern, I gave her 6[d] and bid her thank her Mistress. In some of our Discourse, I told her I had rather go to the Stone-House adjoining to her, than to come to her against her mind. Told her the reason why I came every other night was lest I should drink too deep draughts of Pleasure. She had talk'd of Canary, her Kisses were to me better than the best Canary. Explain'd the expression Concerning Columbus. . . .

8[r] 15. I dine on Fish and Oyle at Mr. Stoddard's. Capt. Hill wish'd me Joy of my proceedings i. e. with M— Winthrop; Sister Cooper aplauded it, spake of Visiting her: I said her Complaisance of her Visit would be obliging to me.

8[r] 16. L. Day, I upbraided my self that could be so solicitous about Earthly things; and so cold and indifferent as to the Love of Christ, who is altogether Lovely....

8[r] 17. . . . In the Evening I visited Madam Winthrop, who Treated me Courteously, but not in Clean Linen as sometimes. She said, she did not know whether I would come again, or no. I ask'd her how she could so impute inconstancy to me. (I had not visited her since Wednesday night being unable to get over the Indisposition received by the Treatment received that night, and I *must* in it seem'd to sound like a made piece of Formality.) Gave her this day's Gazett. . . .

8[r] 18. Visited Madam Mico, who came to me in a splendid Dress. I said, It may be you have heard of my Visiting Madam Winthrop, her Sister. She answered, Her Sister had told her of it. I ask'd her good Will in the Affair. She answer'd, If her Sister were for it, she should not hinder it. I gave her Mr. Homes's Sermon. She gave me a Glass of Canary, entertain'd me with good Discourse, and a Respectfull Remembrance of my first Wife. I took Leave.

8[r] 19. Midweek, Visited Madam Winthrop; Sarah told me she was at Mr. Walley's, would not come home till late. I gave her Hanah 3 oranges with her Duty, not knowing whether I should find her or no. Was ready to go home: but said if I knew she was there, I would go thither. Sarah seem'd to speak with pretty good Courage, She would be there. I went and found her there, with Mr. Walley and his wife in the little Room below. At 7 a-clock I mentioned going home; at 8. I put on my Coat, and quickly waited on her home. She found occasion to speak loud to the servant, as if she had a mind to be known. Was Courteous to me; but took occasion to speak pretty earnestly about my keeping a Coach: I said 'twould cost £100. per anum: she said twould cost but £40. Spake much against John Winthrop, his false-heartedness. Mr. Eyre came in and sat awhile; I offer'd him Dr. Incr. Mather's Sermons, whereof Mr. Apleton's Ordination Sermon was one; said he had them already. I said I would give him another. Exit. Came away somewhat late.

8[r] 20. . . . Madam Winthrop not being at Lecture, I went thither first; found her very Serene with her dâter Noyes, Mrs. Dering, and the widow Shipreev sitting at a little Table, she in her arm'd Chair. She drank to me, and I to Mrs. Noyes. After awhile pray'd the favour to speak with her. She took one of the Candles, and went into the best Room, clos'd the shutters, sat down upon the Couch. She told me Madam Usher had been there, and said the Coach must be set on Wheels, and not by Rusting. She spake somthing of my needing a Wigg. Ask'd me what her Sister said to me. I told her, She said, If her Sister were for it, She would not hinder it. But I told her, she did say she would be glad to have me for her Brother. Said, I shall keep you in the Cold, and asked her if she would be within to morrow night, for we had had but a running Feat. She said she could not tell whether she should, or no. I took Leave. As were drinking at the Governour's, he said: In England the Ladies minded little more than that they might have Money, and Coaches to ride in. I said, And New-England brooks its Name. At which Mr. Dudley smiled. Gov[r] said they were not quite so bad here.

8[r] 21. Friday, My Son, the Minister, came to me p. m. by apointment and we pray one for another in the Old Chamber; more especially respecting my Courtship. About 6. a-clock I go to Madam Winthrop's; Sarah told me her Mistress was gon out, but did not tell me whither she went. She presently order'd me a Fire; so I went in, having Dr. Sibb's Bowels with me to read. I read the

3 Juno, an Indian servant • 5 Stone-House, the prison near by • 17 L., Lord's • 28 Gazett, the Boston Gazette, founded in 1719 • 87 Dr. Sibb's Bowels, Richard Sibbes, "Bowels Opened; or Discovery of the neere and deere Love between Christ and the Church," 1639. An English Puritan, Sibbes was much read by the New England Puritans

two first Sermons, still no body came in: at last about 9. a-clock Mr. Jn° Eyre came in; I took the oportunity to say to him as I had done to Mrs. Noyes before, that I hoped my Visiting his Mother would not be disagreeable to him; He answered me with much Respect. When twas after 9. a-clock He of himself said he would go and call her, she was but at one of his Brothers: A while after I heard Madam Winthrop's voice, enquiring somthing about John. After a good while and Claping the Garden door twice or thrice, she came in. I mention'd somthing of the lateness; she banter'd me, and said I was later. She receiv'd me Courteously. I ask'd when our proceedings should be made publick: She said They were like to be no more publick than they were already. Offer'd me no Wine that I remember. I rose up at 11 a-clock to come away, saying I would put on my Coat. She offer'd not to help me. I pray'd her that Juno might light me home, she open'd the Shutter, and said twas pretty light abroad; Juno was weary and gon to bed. So I came hom by Star-light as well as I could. At my first coming in, I gave Sarah five Shillings. I writ Mr. Eyre his Name in his book with the date Octob[r] 21. 1720. It cost me 8[s]. Jehovah jireh! Madam told me she had visited M. Mico, Wendell, and W[m] Clark of the South [Church].

Octob[r] 22. Dâter Cooper visited me before my going out of Town, staid till about Sun set. I brought her going near as far as the Orange Tree. Coming back, near Leg's Corner, Little David Jeffries saw me, and looking upon me very lovingly, ask'd me if I was going to see his Grandmother? I said, Not to-night. Gave him a peny, and bid him present my Service to his Grandmother.

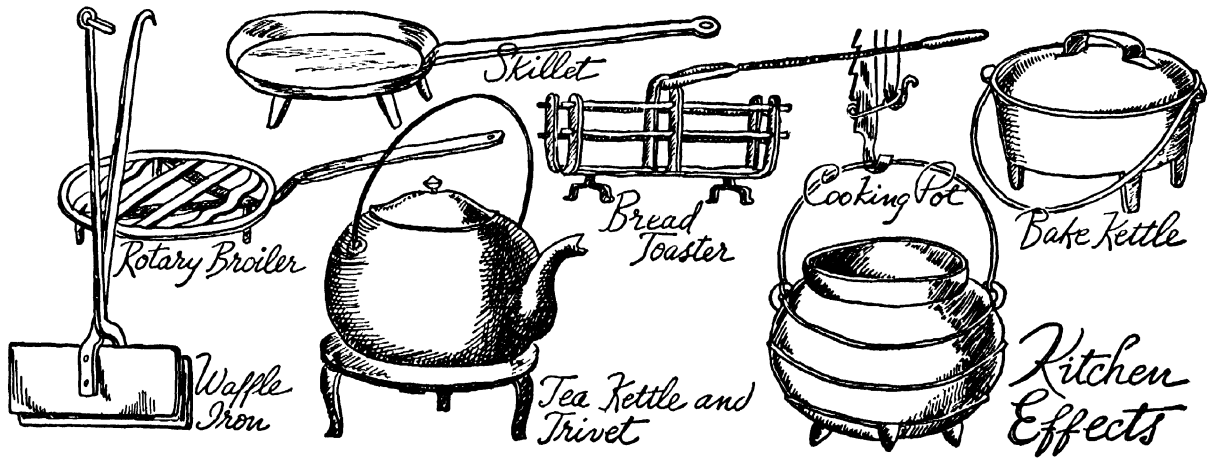
Octob[r] 24. I went in the Hackny Coach through the Comon, stop'd at Madam Winthrop's (had told her I would take my departure from thence). Sarah came to the door with Katee in her Arms: but I did not think to take notice of the Child. Call'd her Mistress. I told her, being encourag'd by David Jeffries loving eyes, and sweet Words, I was come to enquire whether she could find in her heart to leave that House and Neighbourhood, and go and dwell with me at the South-end; I think she said softly, Not yet. I told her It did not ly in my Lands to keep a Coach. If I should, I should be in danger to be brought to keep company with her Neighbour Brooker, (he was a little before sent to prison for Debt). Told her I had an Antipathy against those who would pretend to give themselves; but nothing of their Estate. I would a proportion of my Estate with my self. And I supos'd she would do so. As to a Perriwig, My best and greatest Friend, I could not possibly have a greater, began to find me with Hair before I was born, and had continued to do so ever since; and I could not find in my heart to go to another. She comended the book I gave her, Dr. Preston, the Church Marriage; quoted him saying 'twas inconvenient keeping out of a Fashion comonly used. I said the Time and Tide did circumscribe my Visit. She gave me a Dram of Black-Cherry Brandy, and gave me a lump of the Sugar that was in it. She wish'd me a good Journy. I pray'd God to keep her, and came away. Had a very pleasant Journy to Salem. . . .

31. . . . At night I visited Madam Winthrop about 6. p. m. They told me she was gon to Madam Mico's. I went thither and found she was gon; so return'd to her house, read the Epistles to the Galatians, Ephesians in Mr. Eyre's Latin Bible. After the Clock struck 8. I began to read the 103. Psalm. Mr. Wendell came in from his Warehouse. Ask'd me if I were alone? Spake very kindly to me, offer'd me to call Madam Winthrop. I told him, She would be angry, had been at Mrs. Mico's; he help'd me on with my Coat and I came home: left the Gazett in the Bible, which told Sarah of, bid her present my Service to Mrs. Winthrop, and tell her I had been to wait on her if she had been at home.

Nov[r] 1. I was so taken up that I could not go if I would.

Nov[r] 2. Midweek, went again, and found Mrs. Alden there, who quickly went out. Gave her about ½ pound of Sugar Almonds, cost 3[s] per £. Carried them on Monday. She seem'd pleas'd with them, ask'd what they cost. Spake of giving her a Hundred pounds per añum if I dy'd before her. Ask'd what sum she would give me, if she should dy first? Said I would give her time to Consider of it. She said she heard as if I had given all to my Children by Deeds of Gift. I told her 'twas a mistake, Point-Judith was mine &c. That in England, I own'd, my Father's desire was that it should go to my eldest Son; 'twas 20£ per añum; she thought 'twas forty.

---



23 **Jehovah jireh,** the name which Abraham gave to the place where he found the ram and offered it up in Isaac's stead (see Genesis 22:14). The meaning is "God will provide"

I think when I seem'd to excuse pressing this, she seem'd to think twas best to speak of it; a long winter was coming on. Gave me a Glass or two of Canary.

Novr 4th. Friday, Went again about 7. a-clock; found there Mr. John Walley and his wife: sat discoursing pleasantly. I shew'd them Isaac Moses's Writing. Madam W. serv'd Comfeits to us. After a-while a Table was spread, and Super was set. I urg'd Mr. Walley to Crave a Blessing; but he put it upon me. About 9. they went away. I ask'd Madam what fashioned Neck-lace I should present her with, She said, None at all. I ask'd her Whereabout we left off last time; mention'd what I had offer'd to give her; Ask'd her what she would give me; She said she could not Change her Condition: She had said so from the beginning; could not be so far from her Children, the Lecture. Quoted the Apostle Paul affirming that a single Life was better than a Married. I answer'd That was for the present Distress. Said she had not pleasure in things of that nature as formerly: I said, you are the fitter to make me a Wife. If she held in that mind, I must go home and bewail my Rashness in making more haste than good Speed. However, considering the Super, I desired her to be within next Monday night, if we liv'd so long. Assented. She charg'd me with saying, that she must put away Juno, if she came to me: I utterly deny'd it, it never came into my heart; yet she insisted upon it; saying it came in upon Discourse about the Indian woman that obtained her Freedom this Court. About 10. I said I would not disturb the good orders of her House, and came away. She not seeming pleas'd with my Coming away. Spake to her about David Jeffries, had not seen him.

Monday, Novr 7th. My Son pray'd in the Old Chamber. Our time had been taken up by Son and Daughter Cooper's Visit; so that I only read the 130th and 143. Psalm. Twas on the Account of my Courtship. I went to Mad. Winthrop; found her rocking her little Katee in the Cradle. I excus'd my Coming so late (near Eight). She set me an arm'd Chair and Cusheon; and so the Cradle was between her arm'd Chair and mine. Gave her the remnant of my Almonds; She did not eat of them as before; but laid them away; I said I came to enquire whether she had alter'd her mind since Friday, or remained of the same mind still. She said, Thereabouts. I told her I loved her, and was so fond as to think that she loved me: She said had a great respect for me. I told her, I had made her an offer, without asking any advice; she had so many to advise with, that twas a hindrance. The Fire was come to one short Brand besides the Block, which Brand was set up in end; at last it fell to pieces, and no Recruit was made: She gave me a Glass of Wine. I think I repeated again that I would go home and bewail my Rashness in making more haste than good Speed. I would endeavor to contain myself, and not go on to sollicit her to do that which she could not Consent to. Took leave of her. As came down the steps she bid me have a Care. Treated me Courteously. Told her she had enter'd the 4th year of her Widowhood. I had given her the News-Letter before: I did not bid her draw off her glove as sometime I had done. Her dress was not so clean as sometime it had been. Jehovah jireh!

1677-1720·1878-1882

William Byrd

1674 • 1744

Gentleman, scholar, and wit, William Byrd II, Esquire, of Westover Plantation, Virginia, vividly exemplifies colonial Southern aristocracy Although Byrd's birthplace was a tidewater plantation, he was educated in England and on the Continent. His training in business and the law prepared him to engage in what he called "projects for improving our infant colony" and to administer his properties. His training in the social graces and in classical and Neoclassical literature prepared him to live as an aristocrat and to write amusing literature.

Shortly after his return from England to America in 1692, Byrd assumed his place as a member of the ruling circle of Virginia. He served in the House of Burgesses; on various occasions he represented the colony in England; he was appointed a member of the Council and held that dignified position the rest of his life In addition to these political duties, Byrd had the task of running a vast plantation tended by numerous slaves and of supervising extensive scattered properties. (He had title to 179,440 acres of land at the time of his death.)

Byrd's numerous tasks, however, did not keep him from living as he felt a gentleman should. His handsome brick mansion, with its fine gardens and its wide lawn sloping to the river, was a show place. He thought of himself as a social leader, and his hospitality was lavish.

But Byrd's idea of aristocratic living included pleasures in addition to those afforded by dancing, dining, and fox hunting. Thinking well of scholarship, for years he corresponded with the Royal Society, of which he was a member; and almost daily he took from the shelves of his admirable library some Latin, Greek, or Hebrew classic to read and enjoy. And in his correspondence through the years with his British friends he tried to give his phrases the sparkle, the wit, and the grace of some of the urbane classical authors whom he admired.

Panel (l. to r.)· Byrd as a surveyor • Byrd's drawing-room • Westover • Byrd at the age of 30 • Byrd coat-of-arms • Dancing the minuet at Westover

Such were the attitudes, such was the way of life that shaped the writings for which Byrd is best remembered: *The Secret History, The History of the Dividing Line, A Progress to the Mines,* and *A Journey to the Land of Eden.* The first two are accounts of a surveying trip Byrd led in 1728 to determine the Virginia boundary The latter two works record journeys he made in 1732 and 1733 to inspect his frontier properties. None of these works was published until 1841, long after his death.

These writings show the ability to record in well-turned phrases the witty perceptions of an author who knew and admired such sophisticated British writers of the period as Wycherley, Swift, and Pope. They also show the personality of their author—a businessman, keenly observant of industry, commerce, and commercial possibilities; a Virginia aristocrat, given to taking sly digs at people of other social strata or other parts of the country; a charming and urbane man of the world.

From

The Secret History of the Line

The following entries in Byrd's secret journal tell of a part of the survey in 1728 to determine the line between Virginia and North Carolina. At the time the passage begins, the surveyors were going through the Dismal Swamp, and the commissioners, who had gone around the swamp, were awaiting their return. The passage, with its handling of a rather racy situation in the manner of an author of Restoration comedy, is typical of a good deal of Byrd's writing. It is noteworthy that Byrd gives his companions names generally used in the comedy of the period.

March] 25, [1728] The Air was chill'd with a N. Wester which favour'd our Dismalites who enter'd the Desert very early. It was not so kind to Meanwell who unreasonably kick't off the Bed Clothes, & catch't An Ague. We killed the Time, by that great help to disagreeable Society, a Pack of Cards. Our Landlord had not the Good Fortune to please Firebrand with our Dinner, but surely when People do their best, a reasonable Man wou'd be satisfy'd. But he endeavour'd to mend his Entertainment by making hot Love to Ruth, who wou'd by no means be charm'd either with his Perswasion, or his Person. While the Master was employ'd in making Love to one Sister, the man made his Passion known to the other, Only he was more boisterous, & employ'd force, when he cou'd not succeed by fair means Tho' one of the men rescu'd the poor Girl from this violent Lover; but was so much his Friend as to keep the shamefull Secret from those, whose Duty it wou'd have been to punish such Violations of Hospitality. Nor was this the only one this disorderly fellow was guilty of, for he broke upon a House where our Landlord kept the Fodder for his own use, upon the belief that it was better than what he allow'd us. This was in compliment to his Master's Horses I hope, & not in blind obedience to any order he receiv'd from him.

[March] 26. I persuaded Meanwell to take a Vomit of Ipocoacana which workt very kindly; I took all the care of him I cou'd, tho' Firebrand was so unfriendly as not to step once up Stairs to visit him. I also gave a Vomit to a poor Shoemaker that belong'd to my Landlord, by which he reap't great benefit Puzzlecause made a Journey to Edenton, & took our Chaplain with him to preach the Gospel to the Infidels of that Town, & to baptize some of their Children. I began to entertain with my Chocolate, which every body commended, but

2 **Dismalites,** the surveyors in the Dismal Swamp • 3 **Meanwell,** identified by Professor Boyd as William Dandridge, a Virginia commissioner • 7 **Firebrand,** Richard Fitz-William, another Virginia commissioner • 28 **Ipocoacana,** technical name for ipecac, the root of which is emetic • 32 **Puzzlecause,** fictitious name for Edward Moseley, a North Carolina commissioner

only he that commends nothing that don't belong to himself. In the Evening I took a Solitary walk, that I might have Leizure to think on my absent Friends, which I now grew impatient to see. Orion stuck as close to his Patron Firebrand, as the Itch does to the Fingers of many of his Country Folks.

[March] 27. Tho' it threaten'd Rain both Yesterday & today, yet Heaven was so kind to our Friends in the Dismal as to keep it from Falling. I perswaded Meanwell to take the Bark, which He did with good Effect, tho' he continued very faint & low-Spirited. He took Firebrand's Neglect in great Dudgeon, and amidst all his good Nature cou'd not forbear a great deal of Resentment; but I won his Heart entirely by the tender Care I took of him in his illness. I also gain'd the Men's Affection by dressing their wounds, & giving them little Remedys for their complaints. Nor was I less in my Landlords Books, for acting the Doctor in his Family. Tho' I observ'd some Distempers in it, that were past my Skill to cure. For his Wife & Heir Apparent were so enclin'd to a cheerfull Cup, that our Liquor was very unsafe in their keeping. I had a long time observed that they made themselves happy every day, before the Sun had run one third of his course, which no doubt gave some uneasiness to the Old Gentleman: but Custome that reconciles most Evils, made him bear it with Christian Patience.

As to the Young Gentleman, he seem'd to be as worthless as any homebred Squire I had ever met with, & much the worse for having a good Opinion of himself. His good Father intended him for the Mathematicks, but he never cou'd rise higher in that Study than to gage a Rum Cask. His Sisters are very sensible Industrious Damsels, who tho' they see Gentlemen but Seldom, have the Grace to resist their Importunitys, & tho' they are innocently free, will indulge them in no dangerous Libertys. However their cautious Father having some Notion of Female Frailty, from what he observed in their Mother, never suffers them to lie out of his own Chamber.

1728-1929

From • The History of the Dividing Line

An Aristocrat Describes Lubberland

Byrd's account, in The History of the Dividing Line, of three of the days covered in the previous selection offers an interesting comparison with the less polite Secret History. Although in each passage the author has his eye on amusing literary effects, the second version, intended for publication, is less libelous and more polished. The second version, too, shows more of Byrd's prejudices—against infidels and New Englanders, for instance. The satirical description of the poor whites in the entry for March 27, the best-known passage in the diary, is an interesting early example of a kind of humor which later was to be widespread in America—humor which made sport of the people of this class.

March 24, 1728] This being Sunday, we had a Numerous congregation, which flocked to our Quarters from all the adjacent Country. The News that our Surveyors were come out of the Dismal, increas'd the Number very much, because it wou'd give them an Opportunity of guessing, at least, whereabouts the Line wou'd cut, whereby they might form Some Judgment whether they belong'd to Virginia or Carolina. Those who had taken up Land within the Disputed Bounds were in great pain lest it should be found to ly in Virginia; because this being done contrary to an Express

2 Numerous congregation, ironic reference to the people of the district, gathered not for Sunday worship but to find where the line was to fall

Order of that government, the Patentees had great reason to fear they should in that case have lost their land. But their Apprehensions were now at an end, when they understood that all the Territory which had been controverted was like to be left in Carolina. In the afternoon, those who were to re-enter the Dismal were furnished with the Necessary provisions, and Order'd to repair the Over-Night to their Landlord, Peter Brinkley's, that they might be ready to begin their Business early on Monday Morning. Mr. Irvin was excused from the fatigue, in compliment to his Lungs; but Mr. Mayo and Mr. Swan were Robust enough to return upon that painful Service, and, to do them Justice, they went with great Alacrity. The Truth was, they now knew the worst of it; and cou'd guess pretty near at the time when they might hope to return to Land again.

[March] 25th. The Air was chill'd this Morning with a Smart North-west Wind, which favour'd the Dismalites in their Dirty March. They return'd by the Path they had made in coming out, and with great Industry arriv'd in the Evening at the Spot where the Line had been discontinued. After so long and laborious a Journey, they were glad to repose themselves on their couches of Cypress-bark, where their sleep was as sweet as it wou'd have been on a Bed of Finland Down In the mean time, we who stay'd behind had nothing to do, but to make the best observations we cou'd upon that Part of the Country. The Soil of our Landlord's Plantation, though none of the best, seemed more fertile than any thereabouts, where the Ground is near as Sandy as the Desarts of Affrica, and consequently barren. The Road leading from thence to Edenton, being in distance about 27 Miles, lies upon a ridge call'd Sandy-Ridge, which is so wretchedly Poor that it will not bring Potatoes.

The Pines in this part of the country are of a different Species from those that grow in Virginia· their bearded Leaves are much longer and their Cones much larger. Each Cell contains a Seed of the Size and Figure of a black-ey'd Pea, which, Shedding in November, is a very good Mast for Hogs, and fattens them in a Short time. The smallest of these Pines are full of Cones, which are 8 or 9 Inches long, and each affords commonly 60 or 70 Seeds. This Kind of Mast has the Advantage of all other, by being more constant, and less liable to be nippt by the Frost, or eaten by the Caterpillars. The Trees also abound more with Turpentine, and consequently yield more Tarr, than either the Yellow or the White Pine; and for the same reason make more durable Timber for building. The Inhabitants hereabouts pick up Knots of Lightwood in abundance, which they burn into tar, and then carry it to Norfolk or Nansemond for a Market. The Tar made in this method is the less Valuable, because it is said to burn the Cordage, tho' it is full as good for all other uses, as that made in Sweden and Muscovy.

Surely there is no place in the World where the Inhabitants live with less Labour than in N Carolina. It approaches nearer to the Description of Lubberland than any other, by the great felicity of the Climate, the easiness of raising Provisions, and the Slothfulness of the People.

Indian corn is of so great increase, that a little Pains will Subsist a very large Family with Bread, and then they may have meat without any pains at all, by the Help of the Low Grounds, and the great Variety of Mast that grows on the High-land. The Men, for their Parts, just like the Indians, impose all the Work upon the poor Women. They make their Wives rise out of their Beds early in the Morning, at the same time that they lye and Snore, till the Sun has risen one-third of his course, and disperst all the unwholesome Damps. Then, after Stretching and Yawning for half an Hour, they light their Pipes, and, under the protection of a cloud of Smoak, venture out into the open Air; tho', if it happens to be never so little cold, they quickly return Shivering into the Chimney corner. When the Weather is mild, they stand leaning with both their arms upon the cornfield fence, and gravely consider whether they had best go and take a Small Heat at the Hough but generally find reasons to put it off till another time.

Thus they loiter away their Lives, like Solomon's Sluggard, with their Arms across, and at the Winding up of the Year Scarcely have Bread to Eat. To speak the Truth, tis a thorough Aversion to Labor that makes People file off to N Carolina, where Plenty and a Warm Sun confirm them in their disposition to Laziness for their whole Lives.

---

1 **Patentees,** holders of grants of land • 28 **Landlord's Plantation,** the Speight plantation • 50 **Lightwood,** resinous pine • 58 **Lubberland,** imaginary country where people live in idleness • 78 **Hough,** hoe • 80 **Solomon's Sluggard.** See Proverbs 6.9: "How long wilt thou sleep, O sluggard?"

this place, till the People return'd out of the Dismal, twas agreed that our Chaplain might Safely take a turn to Edenton, to preach the Gospel to the Infidels there, and Christen their Children. He was accompany'd thither by Mr. Little, One of the Carolina Commissioners, who, to shew his regard for the Church, offered to treat Him on the Road with a Fricassee of Rum. They fry'd half a Dozen Rashers of very fat Bacon in a Pint of Rum, both which being disht up together, serv'd the company at once both for meat and Drink. Most of the Rum they get in this country comes from New England, and is so bad and unwholesome, that it is not improperly called "Kill-Devil." It is distilled there from forreign molosses, which, if Skilfully manag'd, yields near Gallon for Gallon. Their molosses comes from the same country, and has the name of "Long Sugar" in Carolina, I suppose from the Ropiness of it, and Serves all the purposes of Sugar, both in their Eating and Drinking.

When they entertain their Friends bountifully, they fail not to set before them a Capacious Bowl of Bombo, so call'd from the Admiral of that name. This is a Compound of Rum and Water in Equal Parts, made palatable with the said long Sugar. As good humour begins to flow, and the Bowl to Ebb, they take Care to replenish it with Shear rum, of which there always is a Reserve under the Table. But such Generous doings happen only when that Balsam of life is plenty, for they have often such Melancholy times, that neither Land-graves nor Cassicks can procure one drop for their Wives, when they ly in, or are troubled with the Colick or Vapours. Very few in this Country have the Industry to plant Orchards, which, in a Dearth of Rum, might supply them with much better Liquor. The Truth is, there is one Inconvenience that easily discourages lazy People from making This improvement: very often, in Autumn, when the Apples begin to ripen, they are visited with Numerous Flights of paraqueets, that bite all the Fruit to Pieces in a moment, for the sake of the Kernels. The Havock they make is sometimes so great, that whole orchards are laid waste in Spite of all the Noises that can be made, or Mawkins that can be dresst up, to fright 'em away. These Ravenous Birds visit North Carolina only during the warm Season, and so soon as the Cold begins to come on, retire back towards except in a very hot Summer, when they visit the most Southern Parts of it. They are very Beautiful; but like some other pretty Creatures, are apt to be loud and mischievous.

[March] 27. Betwixt this and Edenton there are many thuckleberry Slashes, which afford a convenient Harbour for Wolves and Foxes. The first of these wild Beasts is not so large and fierce as they are in other countries more Northerly. He will not attack a Man in the Keenest of his Hunger, but run away from him as from an Animal more mischievous than himself. The Foxes are much bolder, and will Sometimes not only make a Stand, but likewise assault any one that would balk them of their Prey. The Inhabitants hereabouts take the trouble to dig abundance of Wolf-Pits, so deep and perpendicular, that when a Wolf is once tempted into them, he can no more Scramble out again, than a Husband who has taken the leap can Scramble out of Matrimony. Most of the Houses in this part of the country are Log-houses, covered with Pine or Cypress shingles, 3 feet long, and one broad. They are hung upon Laths with Peggs, and their doors too turn upon Wooden Hinges, and have wooden Locks to Secure them, so that the Building is finisht without Nails or other Iron-Work. They also set up their Pales without Nails at all, and indeed more Securely than those that are nailed. There are 3 Rails mortis'd into the Posts, the lowest of which serves as a Sill with a Groove in the Middle, big enough to receive the End of the Pales. the middle Part of the pale rests against the Inside of the Next Rail, and the Top of it is brought forward to the outside of the uppermost. Such Wreathing of the Pales in and out makes them stand firm, and much harder to unfix than when nail'd in the Ordinary way.

Within 3 or 4 miles of Edenton, the Soil appears to be a little more fertile, tho' it is much cut with Slashes, which seem all to have a tendency towards the Dismal. This Towne is Situate on the North side of Albemarle Sound, which is thereabout 5 miles over. A Dirty Slash

---

31 **Land-graves nor Cassicks,** high officials provided for in John Locke's "The Fundamental Constitutions of Carolina" (1669). Byrd is here gibing at some of the stuffy titles suggested by Locke • 43 **Mawkins,** scarecrows • 53 **thuckleberry,** huckleberry • 53 **Slashes,** swamps which, as Byrd goes on to say, drain into the Dismal Swamp • 72 **Pales,** fence poles

runs all along the Back of it, which in the Summer is a foul annoyance, and furnishes abundance of that Carolina plague, musquetas. There may be 40 or 50 Houses, most of them Small, and built without Expense. A Citizen here is counted Extravagant, if he has Ambition enough to aspire to a Brick-chimney. Justice herself is but indifferently Lodged, the Court-House having much of the Air of a common Tobacco-House. I believe this is the only Metropolis in the Christian or Mahometan World, where there is neither Church, Chappel, Mosque, Synagogue, or any other Place of Publick Worship of any Sect or Religion whatsoever. What little Devotion there may happen to be is much more private than their vices. The People seem easy without a Minister, as long as they are exempted from paying Him. Sometimes the Society for propagating the Gospel has had the Charity to send over Missionaries to this Country; but unfortunately the Priest has been too Lewd for the people, or, which oftener happens, they too lewd for the Priest. For these Reasons these Reverend Gentlemen have always left their Flocks as arrant Heathen as they found them. Thus much however may be said for the Inhabitants of Edenton, that not a Soul has the least taint of Hypocrisy, or Superstition, acting very Frankly and aboveboard in all their Excesses.

Provisions here are extremely cheap, and extremely good, so that People may live plentifully at a triffleing expense. Nothing is dear but Law, Physick, and Strong Drink, which are all bad in their Kind, and the last they get with so much Difficulty, that they are never guilty of the Sin of Suffering it to Sour upon their Hands. Their Vanity generally lies not so much in having a handsome Dining-Room, as a Handsome House of Office: in this Kind of Structure they are really extravagant. They are rarely guilty of Flattering or making Court to their governors, but treat them with all the Excesses of Freedom and Familiarity. They are of Opinion their rulers wou'd be apt to grow insolent, if they grew Rich, and for that reason take care to keep them poorer, and more dependent, if possible, than the Saints in New England used to do their Governors. They have very little corn, so they are forced to carry on their Home-Traffick with Paper-Money. This is the only Cash that will tarry in the Country, and for that reason the Discount goes on increasing between that and real Money, and will do so to the End of the Chapter.

[March] 28. Our Time passt heavily in our Quarters, where we were quite cloy'd with the Carolina Felicity of having nothing to do. It was really more insupportable than the greatest Fatigue, and made us even envy the Drudgery of our Friends in the Dismal. Besides, tho' the Men we had with us were kept in Exact Discipline, and behav'd without Reproach, yet our Landlord began to be tired of them, fearing they would breed a Famine in his Family. Indeed, so many keen Stomachs made great Havock amongst the Beef and Bacon which he had laid in for his Summer Provision, nor cou'd he easily purchase More at that time of the Year, with the Money we paid him, because the People having no certain Market seldom provide any more of these Commodities than will barely supply their own Occasions. Besides the Weather was now grown too warm to lay in a fresh Stock so late in the Spring. These Considerations abated somewhat of that chearfulness with which he bidd us Welcome in the Beginning, and made him think the time quite as long as we did until the Surveyors return'd. While we were thus all Hands uneasy, we were comforted with the News that this Afternoon the Line was finisht through the Dismal. The Messenger told us it had been the hard work of three days to measure the Length of only 5 miles, and mark the Trees as they passt along, and by the most exact Survey they found the Breadth of the Dismal in this Place to be completely 15 miles. How wide it may be in other Parts, we can give no Account, but believe it grows narrower towards the North; possibly towards Albemarle Sound it may be something broader, where so many Rivers issue out of it. All we know for certain is, that from the Place where the line enter'd the Dismal, to where it came out, we found the Road round that Portion of it belongs to Virginia to be about 65 Miles. How great the Distance may be from Each of those Points, round that Part that falls within the Bounds of Carolina, we had no certain Information: Tho' tis conjectur'd it cannot be so little as 30 Miles. At which rate the whole Circuit must be about an Hundred. What a Mass of Mud and Dirt is treasur'd up within this filthy circumference, and what a Quantity of Water must perpetually drain into it from the riseing ground that Surrounds it on every

41 Saints in New England, a gibe at New England Puritanism • 53 behav'd without Reproach. Compare The Secret History

Side? Without taking the Exact level of the Dismal, we may be sure that it declines towards the Places where the Several Rivers take their Rise, in order to carry off the constant Supplies of Water. Were it not for such Discharges, the whole Swamp would long Since have been converted into a Lake. On the other Side this Declension must be very gentle, else it would be laid perfectly dry by so many continual drains; Whereas, on the contrary, the Ground seems everywhere to be thoroughly drenched even in the dryest Season of the Year. The Surveyors concluded this day's Work with running 25 chains up into the Firm Land, where they waited further Orders from the Commissioners.

12 chains, surveyor's chains, sixty feet long, for measuring

From

A Progress to the Mines

In September and October 1732 Byrd took a trip to inspect some of his mining properties and to collect what data he could on the cost of manufacturing iron. Along the way he stopped to inspect properties of his or to visit with various prosperous planters. This excerpt tells of the first two stops. He halted first at his father's old place near the falls of the James River, where he supervised some drilling and talked with the miller, the weaver, the overseer's wife, and the overseer. His second stop was at Colonel Randolph's home at Tuckahoe. There with Mrs. Fleming, another friend of the Randolph's, he was delayed for a time by rainy weather.

1732, Sept. 18. For the pleasure of the good company of Mrs. Byrd, and her little Governuor, my Son, I went about half way to the Falls in the Chariot. There we halted, not far from a purling Stream, and upon the Stump of a propagate Oak picket the Bones of a Piece of Roast Beef. By the Spirit which that gave me, I was the better able to part with the dear Companions of my Travels, and to perform the rest of my Journey on Horseback by myself. I reached Shaccoa's before 2 o'clock, and crost the River to the Mills. I had the Grief to find them both stand as still, for the want of Water, as a dead Woman's Tongue, for want of Breath. It had rain'd so little for many Weeks above the Falls, that the Naides had hardly Water enough left to wash their Faces. However, as we ought to turn all our Misfortunes to the best Advantage, I directed Mr. Booker, my first Minister there, to make use of the lowness of the water for blowing up the Rocks at the Mouth of the Canal. For that purpose I order'd Iron Drills to be made about 2 foot long, pointed with Steel, Chizzel fashion, in order to make holes, into which we put our Cartridges of Powder, containing each about 3 Ounces. There wanted Skill among my Engineers to chuse the best parts of the Stone for boring, that we might blow to the most advantage. They made all their Holes quite perpendicular, whereas they should have humour'd the Grain of the Stone for the more effectual Execution. I order'd the points of the Drills to be made Chizzel way, rather than the Diamond, that they might need to be Seldomer repair'd, tho' in Stone the Diamond points would make the most despatch. The Water now flow'd out of the River so slowly, that the Miller was oblig'd to pond it up in the Canal, by setting open the Floodgates at the Mouth, and shutting those close at the Mill. By this contrivance, he was able at any time to grind two or three Bushels, either for his choice Customers, or for the use of my Plantations. Then I walkt to the place where they broke the Flax, which is wrought with much greater ease than the Hemp, and is much better for Spinning. From thence I paid a Visit to the Weaver, who needed a little of Minerva's Inspiration to make the most of a piece of fine Cloth. Then I lookt in upon my Caledonian Spinster, who was mended more in her looks than in her

14 Naides, naiads • 41 Minerva, the goddess of spinning and weaving • 42 Caledonian Spinster, the wife of the overseer

Humour. However, she promised much, tho' at the same time intended to perform little. She is too high-Spirited for Mr. Booker, who hates to have his sweet Temper ruffled, and will rather suffer matters to go a little wrong sometimes, than give his righteous Spirit any uneasiness. He is very honest, and would make an admirable Overseer where Servants will do as they are bid. But Eye-Servants, who want abundance of over-looking, are not so proper to be committed to his Care. I found myself out of order, and for that reason retir'd Early; yet with all this precaution had a gentle feaver in the Night, but towards morning Nature set open all her Gates, and drove it out in a plentiful perspiration.

[Sept.] 19. The worst of this fever was, that it put me to the Necessity of taking another Ounce of Bark. I moisten'd every dose with a little Brandy, and fill'd the Glass up with Water, which is the least Nauseous way of taking this Popish Medicine, and besides hinders it from Purging. After I had swallow'd a few Poacht Eggs, we rode down to the Mouth of the Canal, and from thence crost over to the broad Rock Island in a Canoe. Our errand was to view some Iron Ore, which we dug up in two places. That on the surface seemed very spongy and poor, which gave us no great Encouragement to search deeper, nor did the Quantity appear to be very great. However, for my greater Satisfaction, I order'd a hand to dig there for some time this Winter. We walkt from one End of the Island to the other, being about half a Mile in length, and found the Soil very good, and too high for any Flood, less than that of Deucalion, to do the least damage. There is a very wild prospect both upward and downward, the River being full of Rocks, over which the Stream tumbled with a Murmur, loud enough to drown the Notes of a Scolding Wife. This Island would make an agreeable Hermitage for any good Christian, who had a mind to retire from the World. Mr. Booker told me how Dr. Ireton had cured him once of a Looseness, which had been upon him two whole years. He order'd him a Dose of Rhubarb, with directions to take 25 Drops of Laudanum so Soon as he had had 2 Physical Stools. Then he rested one day, and the next order'd him another Dose of the same Quantity of Laudanum to be taken, also after the 2d Stool. When this was done, he finisht the Cure by giving him 20 drops of Laudanum every night for five Nights running. The Doctor insisted upon the necessity of Stopping the Operation of the Rhubarb before it workt quite off, that what remained behind might strengthen the Bowels. I was punctual in Swallowing my Bark, and that I might use exercise upon it, rode to Prince's Folly, and my Lord's Islands, where I saw very fine Corn. In the meantime Vulcan came in Order to make the drills for boring the Rocks, And gave me his Parole he wou'd, by the grace of God, attend the works till they were finisht, which he perform'd as lamely as if he had been to labour for a dead Horse, and not for ready Money. I made a North Carolina dinner upon Fresh Pork, though we had a plate of Green Peas after it, by way of Desert, for the Safety of our Noses. Then my first minister and I had some serious Conversation about my affairs, and I find nothing disturb'd his peaceable Spirit so much as the misbehavior of the Spinster above-mention'd. I told him I cou'd not pity a Man, who had it always in his Power to do himself and her Justice, and wou'd not. If she were a Drunkard, a Scold, a Thief, or a Slanderer, we had wholesome Laws, that would make her Back Smart for the diversion of her other Members, and it was his Fault he had not put those wholesome Severities in Execution. I retired in decent time to my own Apartment, and Slept very comfortably upon my Bark, forgetting all the little crosses arising from Overseers and Negroes.

[Sept.] 20. I continued the Bark, and then tost down my Poacht Eggs, with as much ease as some good Breeders Slip Children into the World. About Nine I left the Prudentest Orders I could think of with my Visier, and then crost the River to Shacc's. I made a running Visit to 3 of my Quarters, where, besides finding all the People well, I had the Pleasure to see better Crops than usual both of Corn and Tobacco. I parted there with my Intendant, and pursued my Journey to Mr. Randolph's, at Tuckahoe, without meeting with any Adventure by the way. Here I found Mrs. Fleming, who was packing up her Baggage with design to follow her Husband the next day, who was gone to a new Settlement in Goochland. Both he and She have been about Seaven Years persuading themselves to remove to that retired part of

---

31 **Deucalion**, son of Prometheus. When Jupiter punished the race of men with a vast flood, Deucalion and his wife Pyrrha alone survived by finding refuge on towering Parnassus • 52 **Vulcan**, god of fire, hence of the glow of the forge. Here, of course, the name is humorously applied to a very un-Vulcan-like worker • 76 **Visier**, vizier

the Country, tho' they had the two strong Arguments of Health and Interest for doing so. The Widow smiled graciously upon me, and entertain'd me very handsomely. Here I learnt all the tragical Story of her Daughter's humble Marriage with her Uncle's Overseer. Besides the meanness of this mortal's Aspect, the Man has not one visible Qualification, except Impudence, to recommend him to a Female's Inclinations. But there is sometimes such a Charm in that Hibernian Endowment, that frail Woman cannot withstand it, tho' it stand alone without any other Recommendation. Had she run away with a Gentleman or a pretty Fellow, there might have been some Excuse for her, tho' he were of inferior Fortune: but to stoop to a dirty Plebeian, without any kind of merit, is the lowest Prostitution. I found the Family justly enraged at it; and tho' I had more good Nature than to join in her Condemnation, yet I cou'd devise no Excuse for so senceless a Prank as this young Gentlewoman had play'd. Here good Drink was more Scarce than good Victuals, the Family being reduc'd to the last Bottle of Wine, which was therefore husbanded very carefully. But the Water was excellent. The Heir of the Family did not come home till late in the Evening. He is a pretty Young Man, but had the misfortune to become his own master too soon. This puts young Fellows upon wrong pursuits, before they have Sence to Judge rightly for themselves. Tho' at the same time they have a strange conceit of their own Sufficiency, when they grow near 20 Years old, especially if they happen to have a small Smattering of Learning. Tis then they fancy themselves wiser than all their Tutors and Governors, which makes them headstrong to all advice, and above all Reproof and Admonition.

[Sept.] 21. I was sorry in the morning to find myself stopt in my Career by bad Weather brought upon us by a North-East Wind. This drives a World of Raw unkindly Vapours upon us from Newfoundland, laden with Blite, Coughs, and Pleurisys. However, I complain'd not, lest I might be suspected to be tir'd of the good Company. Tho' Mrs. Fleming was not so much upon her Guard, but mutiny'd strongly at the Rain, that hinder'd her from pursuing her dear Husband. I said what I cou'd to comfort a Gentlewoman under so sad a Disappointment. I told her a husband, that staid so much at Home as her's did, cou'd be no such violent Rarity, as for a Woman to venture her precious Health, to go daggling thro' the Rain after him, or to be miserable if she happen'd to be prevented. That it was prudent for marry'd people to fast Sometimes from one another, that they might come together again with the better Stomach. That the best things in this World, if constantly us'd, are apt to be cloying, which a little absence and Abstinence wou'd prevent. This was Strange Doctrine to a fond Female, who fancys People shou'd love with as little Reason after Marriage as before. In the afternoon Monsieur Marij, the Minister of the Parish, came to make me a Visit. He had been a Romish Priest, but found Reasons, either Spiritual or temporal, to quit that gay Religion. The fault of this new Convert is, that he looks for as much Respect from his Protestant Flock, as is paid to the Popish Clergy, which our ill-bred Hugonots dont understand. Madam Marij, had so much Curiosity as to want to come too; but another Horse was wanting, and she believ'd it would have too Vulgar an Air to ride behind her Husband. This Woman was of the true Exchange Breed, full of Discourse, but void of Discretion, and marry'd a Parson, with the Idle hopes he might some time or other come to be his Grace of Canterbury. The Gray Mare is the better Horse in that Family, and the poor man Submits to her wild Vagarys for Peace' Sake. She has just enough of the fine Lady, to run in debt, and be of no signification in her Household. And the only thing that can prevent her from undoing her loving Husband will be, that nobody will trust them beyond the 16000, which is soon run out in a Goochland store. The way of Dealing there is, for some small Merchant or Pedler to buy a Scots Pennyworth of Goods, and clap 150 per cent upon that. At this Rate the Parson cant be paid much more for his preaching than tis worth. No sooner was our Visitor retired, but the facetious Widow was so kind as to let me into all this Secret History, but was at the same time exceedingly Sorry that the Woman should be so indiscreet, and the man so tame as to be govern'd by an unprofitable and fantastical Wife.

[Sept.] 22. We had another wet day, to try both Mrs. Fleming's Patience and my good Breeding. The N E Wind commonly sticks by us 3 or 4 days, filling the Atmosphere with damps, injurious both to man and

75 16000. Sixteen thousand pounds of tobacco was the legal salary of a minister

Beast. The worst of it was, we had no good Liquor to warm our Blood, and fortify our Spirits against so strong a Malignity. However, I was cheerful under all these Misfortunes, and expresst no Concern but a decent Fear lest my long visit might be troublesome. Since I was like to have thus much Leizure, I endeavour'd to find out what Subject a dull marry'd man cou'd introduce that might best bring the Widow to the Use of her Tongue. At length, I discover'd she was a notable Quack, and therefore paid that regard to her Knowledge, as to put some Questions to her about the bad distemper that raged then in the Country. I mean the Bloody Flux, that was brought us in the Negro-ship consigned to Colo. Braxton. She told me she made use of very Simple remedys in that Case, with very good Success. She did the Business either with Hartshorn Drink, that had Plantain Leaves boil'd in it, or else with a Strong decoction of St. Andrew's Cross, in New milk instead of Water. I agreed with her that those remedys might be very good, but would be more effectual after a dose or two of Indian Physick. But for fear this Conversation might be too grave for a Widow, I turn'd the discourse, and began to talk of Plays, & finding her Taste lay most towards Comedy, I offer'd my Service to read one to Her, which she kindly accepted. She produced the 2d part of the Beggar's Opera, which had diverted the Town for 40 nights successively, and gain'd four thousand pounds to the Author. This was not owing altogether to the Wit or Humour that Sparkled in it, but to some Political Reflections, that seem'd to hit the Ministry. But the great Advantage of the Author was, that his Interest was solicited by the Dutchess of Queensbury, which no man could refuse who had but half an Eye in his head, or half a Guinea in his Pocket. Her Grace, like Death, spared nobody, but even took my Lord Selkirk in for 2 Guineas, to repair which Extravagance he liv'd upon Scots Herrings 2 Months afterwards. But the best Story was, she made a very Smart Officer in his Majesty's Guards give her a Guinea, who Swearing at the same time twas all he had in the world, she sent him 50 for it the next day, to reward his Obedience. After having acquainted my Company with the History of the Play, I read 3 Acts of it, and left Mrs. Fleming and Mr. Randolph to finish it, who read as well as most Actors do at a Rehearsal Thus we kill'd the time, and triumpht over the bad Weather.

William Bartram

1739 • 1823

William Bartram could draw and color pictures of Pennsylvania turtles well enough to have them published in the *Gentleman's Magazine* in London, but he was not anxious to be apprenticed to an engraver. He failed to make his living either as a trader or as a farmer. Wandering with his father into the back country, collecting seeds and plants to send to wealthy gardening enthusiasts in England, he had learned a great many things, none of them especially profitable.

In another environment, perhaps, Bartram's meticulous observations might have made him a great botanist, ornithologist, geologist, or anthropologist, but he would not have been happy. In his time the study of nature was relatively unspecialized, and it was still possible to

see a plant, a bird, a landscape, or an Indian as an individual rather than as a specimen. Nature to Bartram was animistic, sublime, unspoiled, and beautiful; his Seminoles and Cherokees were, except when corrupted by the white man, unblemished in their nobility, as became nature's children. The great adventure of his life was as much poetic as scientific—a series of excursions into the deep South between 1773 and 1777, when he walked and sailed and paddled through enchanting country, taking notes for a book wherein poetry is modestly hidden behind a prosaic title *Travels Through North & South Carolina, Georgia, East & West Florida, the Cherokee Country, the Extensive Territories of the Muscogules, or Creek Confederacy, and the Country of the Chactaws; Containing an Account of the Soil and Natural Productions of Those Regions, Together with Observations on the Manners of the Indians* (Philadelphia, 1791).

The *Travels* was reprinted in London editions in 1792 and 1794, in a Dublin edition in 1793, and translations were soon available in German (1793), Dutch (1794-1797), and French (1799-1801). It has twice been reprinted in recent years (1928, 1940).

Because Bartram was able to communicate his delight in the world with disarming and attractive freshness, one can readily understand why he was a favorite among many leading writers of the Romantic period.

Travels

Part I of the Travels describes a sea trip from Philadelphia to Savannah, with a stop at Charleston, and several excursions into what is now the interior of Georgia Part II, the longest and most popular section, covers travels in northern Florida. Part III is an account of a trip from Charleston across South Carolina and northern Georgia into Alabama and Louisiana. Part IV is "An Account of the Persons, Manners, Customs and Government of the Muscogules or Creeks, &c. Aborigines of the Continent of North America."

The first selection printed here is the first quarter of Chapter 5, Part II; it is an example both of Bartram's attitude toward nature and of his narrative skill The second selection, from Chapter 3, Part III, illustrates Bartram's acquaintance with the traditions of pastoral literature.

Being desirous of continuing my travels and observations, higher up the river, and having an invitation from a gentleman who was agent for, and resident at a large plantation, the property of an English gentleman, about sixty miles higher up, I resolved to pursue my researches to that place; and having engaged in my service a young Indian, nephew to the White Captain, he agreed to assist me in working my vessel up as high as a certain bluff, where I was, by agreement, to land him, on the West or Indian shore, whence he designed to go in quest of the camp of the White Trader, his relation.

Provisions and all necessaries being procured, and the morning pleasant, we went on board and stood up the river. We passed for several miles on the left, by islands of high swamp land, exceedingly fertile, their banks for a good distance from the water, much higher than the interior part, and sufficiently so to build upon, and be out of the reach of inundations They consist of a loose black mould, with a mixture of sand, shells and dissolved vegetables The opposite Indian coast is a perpendicular bluff, ten or twelve feet high, consisting of a black sandy earth, mixed with a large proportion of shells, chiefly various species of fresh water Cochlea and Mytuli. Near the river, on this high shore, grew Corypha palma, Magnolia grandiflora, Live Oak, Callicarpa, Myrica cerifera, Hybiscus spinifex, and the beautiful evergreen shrub called Wild lime or Tallow nut. This last shrub grows six or eight feet high, many erect stems rising from a root; the leaves are lanciolate and intire, two or three

2 the river, the St John's River in northeastern Florida • 7 the White Captain, a Seminole chief, mentioned in the preceding chapter • 23 Cochlea . . . Tallow nut Here, as elsewhere, Bartram's scientific terms are a curious mixture of the technical, the popular, the obsolete, and the current His generic names ordinarily follow the classification of Linnaeus (Carl von Linné, 1707-1778), Swedish dictator of eighteenth-century natural history • 29 lanciolate, lanceolate, spearlike

inches in length and one in breadth, of a deep green colour, and polished, at the foot of each leaf grows a stiff, sharp thorn, the flowers are small and in clusters, of a greenish yellow colour, and sweet scented; they are succeeded by a large oval fruit, of the shape and size of an ordinary plumb, of a fine yellow colour when ripe, a soft sweet pulp covers a nut which has a thin shell, enclosing a white kernel somewhat of the consistence and taste of the sweet Almond, but more oily and very much like hard tallow, which induced my father when he first observed it, to call it the Tallow nut.

At the upper end of this bluff is a fine Orange grove Here my Indian companion requested me to set him on shore, being already tired of rowing under a fervid sun, and having for some time intimated a dislike to his situation, I readily complied with his desire, knowing the impossibility of compelling an Indian against his own inclinations, or even prevailing upon him by reasonable arguments, when labour is in the question, before my vessel reached the shore, he sprang out of her and landed, when uttering a shrill and terrible whoop, he bounded off like a roebuck, and I lost sight of him I at first apprehended that as he took his gun with him, he intended to hunt for some game and return to me in the evening The day being excessively hot and sultry, I concluded to take up my quarters here until next morning

The Indian not returning this morning, I sat sail alone The coasts on each side had much the same appearance as already described. The Palm trees here seem to be of a different species from the Cabbage tree, their strait trunks are sixty, eighty or ninety feet high, with a beautiful taper of a bright ash colour, until within six or seven feet of the top, where it is a fine green colour, crowned with an orb of rich green plumed leaves I have measured the stem of these plumes fifteen feet in length, besides the plume, which is nearly of the same length.

The little lake, which is an expansion of the river, now appeared in view; on the East side are extensive marshes, and on the other high forests and Orange groves, and then a bay, lined with vast Cypress swamps, both coasts gradually approaching each other, to the opening of the river again, which is in this place about three hundred yards wide; evening now drawing on, I was anxious to reach some high bank of the river, where I intended to lodge, and agreeably to my wishes, I soon after discovered on the West shore, a little promontory, at the turning of the river, contracting it here to about one hundred and fifty yards in width. This promontory is a peninsula, containing about three acres of high ground, and is one entire Orange grove, with a few Live Oaks, Magnolias and Palms. Upon doubling the point, I arrived at the landing, which is a circular harbour, at the foot of the bluff, the top of which is about twelve feet high; and back of it is a large Cypress swamp, that spreads each way, the right wing forming the West coast of the little lake, and the left stretching up the river many miles, and encompassing a vast space of low grassy marshes From this promontory, looking Eastward across the river, we behold a landscape of low country, u[n]paralleled as I think; on the left is the East coast of the little lake, which I had just passed, and from the Orange bluff at the lower end, the high forests begin, and increase in breadth from the shore of the lake, making a circular sweep to the right, and contain many hundred thousand acres of meadow, and this grand sweep of high forests encircles, as I apprehend, at least twenty miles of these green fields, interspersed with hommocks or islets of evergreen trees, where the sovereign Magnolia and lordly Palm stand conspicuous. The islets are high shelly knolls, on the sides of creeks or branches of the river, which wind about and drain off the super-abundant waters that cover these meadows, during the winter season.

The evening was temperately cool and calm. The crocodiles began to roar and appear in uncommon numbers along the shores and in the river. I fixed my camp in an open plain, near the utmost projection of the promontory, under the shelter of a large Live Oak, which stood on the highest part of the ground and but a few yards from my boat From this open, high situation, I had a free prospect of the river, which was a matter of no trivial consideration to me, having good reason to dread the subtle attacks of the alligators, who were crouding about my harbour. Having collected a good quantity of wood for the purpose of keeping up a light and smoke during the night, I began to think of preparing my supper, when, upon examining my stores, I found but a scanty provision, I thereupon determined, as the most expeditious way of supplying my necessities,

---

10 my father. Bartram was retracing a route he had followed with his father in 1765 John Bartram's journal of that expedition, which has been called "a kind of first draft of the **Travels**," was printed in the third edition (1769) of William Stork's **Description of East Florida**

John Bartram's House

to take my bob and try for some trout. About one hundred yards above my harbour, began a cove or bay of the river, out of which opened a large lagoon. The mouth or entrance from the river to it was narrow, but the waters soon after spread and formed a little lake, extending into the marches, its entrance and shores within I observed to be verged with floating lawns of the Pistia and Nymphea and other aquatic plants; these I knew were excellent haunts for trout.

The verges and islets of the lagoon were elegantly embellished with flowering plants and shrubs; the laughing coots with wings half spread were tripping over the little coves and hiding themselves in the tufts of grass; young broods of the painted summer teal, skimming the still surface of the waters, and following the watchful parent unconscious of danger, were frequently surprised by the voracious trout, and he in turn, as often by the subtle, greedy alligator. Behold him rushing forth from the flags and reeds. His enormous body swells. His plaited tail brandished high, floats upon the lake. The waters like a cataract descend from his opening jaws. Clouds of smoke issue from his dilated nostrils. The earth trembles with his thunder. When immediately from the opposite coast of the lagoon, emerges from the deep his rival champion. They suddenly dart upon each other. The boiling surface of the lake marks their rapid course, and a terrific conflict commences. They now sink to the bottom folded together in horrid wreaths. The water becomes thick and discoloured. Again they rise, their jaws clap together, re-echoing through the deep surrounding forests. Again they sink, when the contest ends at the muddy bottom of the lake, and the vanquished makes a hazardous escape, hiding himself in the muddy turbulent waters and sedge on a distant shore. The proud victor exulting returns to the place of action. The shores and forests resound his dreadful roar, together with the triumphing shouts of the plaited tribes around, witnesses of the horrid combat.

My apprehensions were highly alarmed after being a spectator of so dreadful a battle; it was obvious that every delay would but tend to encrease my dangers and difficulties, as the sun was near setting, and the alligators gathered around my harbour from all quarters; from these considerations I concluded to be expeditious in my trip to the lagoon, in order to take some fish. Not thinking it prudent to take my fusee with me, lest I might lose it overboard in case of a battle, which I had every reason to dread before my return, I therefore furnished myself with a club for my defence, went on board, and penetrating the first line of those which surrounded my harbour, they gave way; but being pursued by several very large ones, I kept strictly on the watch, and paddled with all my might towards the entrance of the lagoon, hoping to be sheltered there from the multitude of my assailants; but ere I had half-way reached the place, I was attacked on all sides, several endeavouring to overset the canoe. My situation now became precarious to the last degree: two very large ones attacked me closely, at the same instant, rushing up with their heads and part of their bodies above the water, roaring terribly and belching floods of water over me. They struck their jaws together so close to my ears, as almost to stun me, and I expected every moment to be dragged out of the boat and instantly devoured, but I applied my weapons so effectually about me, though at random, that I was so successful as to beat them off a little; when, finding that they designed to renew the battle, I made for the shore, as the only means left me for my preservation, for,

---

46 fusee, a light musket or firelock

by keeping close to it, I should have my enemies on one side of me only, whereas I was before surrounded by them, and there was a probability, if pushed to the last extremity, of saving myself, by jumping out of the canoe on shore, as it is easy to outwalk them on land, although comparatively as swift as lightning in the water. I found this last expedient alone could fully answer my expectations, for as soon as I gained the shore they drew off and kept aloof. This was a happy relief, as my confidence was, in some degree, recovered by it. On recollecting myself, I discovered that I had almost reached the entrance of the lagoon, and determined to venture in, if possible to take a few fish and then return to my harbour, while day-light continued; for I could now, with caution and resolution, make my way with safety along shore, and indeed there was no other way to regain my camp, without leaving my boat and making my retreat through the marshes and reeds, which, if I could even effect, would have been in a manner throwing myself away, for then there would have been no hopes of ever recovering my bark, and returning in safety to any settlements of men. I accordingly proceeded and made good my entrance into the lagoon, though not without opposition from the alligators, who formed a line across the entrance, but did not pursue me into it, nor was I molested by any there, though there were some very large ones in a cove at the upper end. I soon caught more trout than I had present occasion for, and the air was too hot and sultry to admit of their being kept for many hours, even though salted or barbecued. I now prepared for my return to camp, which I succeeded in with but little trouble, by keeping close to the shore, yet I was opposed upon re-entering the river out of the lagoon, and pursued near to my landing (though not closely attacked) particularly by an old daring one, about twelve feet in length, who kept close after me, and when I stepped on shore and turned about, in order to draw up my canoe, he rushed up near my feet and lay there for some time, looking me in the face, his head and shoulders out of water; I resolved he should pay for his temerity, and having a heavy load in my fusee, I ran to my camp, and returning with my piece, found him with his foot on the gunwale of the boat, in search of fish, on my coming up he withdrew sullenly and slowly into the water, but soon returned and placed himself in his former position, looking at me and seeming neither fearful or any way disturbed. I soon dispatched him by lodging the contents of my gun in his head, and then proceeded to cleanse and prepare my fish for supper, and accordingly took them out of the boat, laid them down on the sand close to the water, and began to scale them, when, raising my head, I saw before me, through the clear water, the head and shoulders of a very large alligator, moving slowly towards me; I instantly stepped back, when, with a sweep of his tail, he brushed off several of my fish. It was certainly most providential that I looked up at that instant, as the monster would probably, in less than a minute, have seized and dragged me into the river. This incredible boldness of the animal disturbed me greatly, supposing there could now be no reasonable safety for me during the night, but by keeping continually on the watch; I therefore, as soon as I had prepared the fish, proceeded to secure myself and effects in the best manner I could: in the first place, I hauled my bark upon the shore, almost clear out of the water, to prevent their oversetting or sinking her, after this every moveable was taken out and carried to my camp, which was but a few yards off; then ranging some dry wood in such order as was the most convenient, cleared the ground round about it, that there might be no impediment in my way, in case of an attack in the night, either from the water or the land; for I discovered by this time, that this small isthmus, from its remote situation and fruitfulness, was resorted to by bears and wolves. Having prepared myself in the best manner I could, I charged my gun and proceeded to reconnoitre my camp and the adjacent grounds; when I discovered that the peninsula and grove, at the distance of about two hundred yards from my encampment, on the land side, were invested by a Cypress swamp, covered with water, which below was joined to the shore of the little lake, and above to the marshes surrounding the lagoon, so that I was confined to an islet exceedingly circumscribed, and I found there was no other retreat for me, in case of an attack, but by either ascending one of the large Oaks, or pushing off with my boat.

It was by this time dusk, and the alligators had nearly ceased their roar, when I was again alarmed by a tumultuous noise that seemed to be in my harbour, and therefore engaged my immediate attention. Returning to my

camp I found it undisturbed, and then continued on to the extreme point of the promontory, where I saw a scene, new and surprising, which at first threw my senses into such a tumult, that it was some time before I could comprehend what was the matter; however, I soon accounted for the prodigious assemblage of crocodiles at this place, which exceeded every thing of the kind I had ever heard of.

How shall I express myself so as to convey an adequate idea of it to the reader, and at the same time avoid raising suspicions of my want of veracity. Should I say, that the river (in this place) from shore to shore, and perhaps near half a mile above and below me, appeared to be one solid bank of fish, of various kinds, pushing through this narrow pass of St. Juans into the little lake, on their return down the river, and that the alligators were in such incredible numbers, and so close together from shore to shore, that it would have been easy to have walked across on their heads, had the animals been harmless. What expressions can sufficiently declare the shocking scene that for some minutes continued, whilst this mighty army of fish were forcing the pass? During this attempt, thousands, I may say hundreds of thousands of them were caught and swallowed by the devouring alligators. I have seen an alligator take up out of the water several great fish at a time, and just squeeze them betwixt his jaws, while the tails of the great trout flapped about his eyes and lips, ere he had swallowed them. The horrid noise of their closing jaws, their plunging amidst the broken banks of fish, and rising with their prey some feet upright above the water, the floods of water and blood rushing out of their mouths, and the clouds of vapour issuing from their wide nostrils, were truly frightful. This scene continued at intervals during the night, as the fish came to the pass. After this sight, shocking and tremendous as it was, I found myself somewhat easier and more reconciled to my situation, being convinced that their extraordinary assemblage here, was owing to this annual feast of fish, and that they were so well employed in their own element, that I had little occasion to fear their paying me a visit.

It being now almost night, I returned to my camp, where I had left my fish broiling, and my kettle of rice stewing, and having with me, oil, pepper and salt, and excellent oranges hanging in abundance over my head (a valuable substitute for vinegar) I sat down and regaled myself chearfully; having finished my repast, I re-kindled my fire for light, and whilst I was revising the notes of my past day's journey, I was suddenly roused with a noise behind me toward the main land; I sprang up on my feet, and listning, I distinctly heard some creature wading in the water of the isthmus; I seized my gun and went cautiously from my camp, directing my steps towards the noise; when I had advanced about thirty yards, I halted behind a coppice of Orange trees, and soon perceived two very large bears, which had made their way through the water, and had landed in the grove, about one hundred yards distance from me, and were advancing towards me. I waited until they were within thirty yards of me, they there began to snuff and look towards my camp, I snapped my piece, but it flashed, on which they both turned about and galloped off, plunging through the water and swamp, never halting as I suppose, until they reached fast land, as I could hear them leaping and plunging a long time; they did not presume to return again, nor was I molested by any other creature, except being occasionally awakened by the whooping of owls, screaming of bitterns, or the wood-rats running amongst the leaves.

The wood-rat is a very curious animal, they are not half the size of the domestic rat; of a dark brown or black colour; their tail slender and shorter in proportion, and covered thinly with short hair; they are singular with respect to their ingenuity and great labour in the construction of their habitations, which are conical pyramids about three or four feet high, constructed with dry branches, which they collect with great labour and perseverance, and pile up without any apparent order, yet they are so interwoven with one another, that it would take a bear or wild-cat some time to pull one of these castles to pieces, and allow the animals sufficient time to secure a retreat with their young.

The noise of the crocodiles kept me awake the greater part of the night, but when I arose in the morning, contrary to my expectations, there was perfect peace; very few of them to be seen, and those were asleep on the shore, yet I was not able to suppress my fears and apprehensions of being attacked by them in future; and indeed yesterday's combat with them, notwithstanding

I came off in a manner victorious, or at least made a safe retreat, had left sufficient impression on my mind to damp my courage, and it seemed too much for one of my strength, being alone in a very small boat to encounter such collected danger. To pursue my voyage up the river, and be obliged every evening to pass such dangerous defiles, appeared to me as perilous as running the gauntlet betwixt two rows of Indians armed with knives and fire brands; I however resolved to continue my voyage one day longer, if I possibly could with safety, and then return down the river, should I find the like difficulties to oppose. Accordingly I got every thing on board, charged my gun, and set sail cautiously along shore; as I passed by Battle lagoon, I began to tremble and keep a good look out, when suddenly a huge alligator rushed out of the reeds, and with a tremendous roar, came up, and darted as swift as an arrow under my boat, emerging upright on my lea quarter, with open jaws, and belching water and smoke that fell upon me like rain in a hurricane; I laid soundly about his head with my club and beat him off, and after plunging and darting about my boat, he went off on a strait line through the water, seemingly with the rapidity of lightning, and entered the cape of the lagoon; I now employed my time to the very best advantage in paddling close along shore, but could not forbear looking now and then behind me, and presently perceived one of them coming up again; the water of the river hereabouts, was shoal and very clear, the monster came up with the usual roar and menaces, and passed close by the side of my boat, when I could distinctly see a young brood of alligators to the number of one hundred or more, following after her in a long train, they kept close together in a column without straggling off to the one side or the other, the young appeared to be of an equal size, about fifteen inches in length, almost black, with pale yellow transverse waved clouds or blotches, much like rattle snakes in colour. I now lost sight of my enemy again.

Still keeping close along shore; on turning a point or projection of the river bank, at once I beheld a great number of hillocks or small pyramids, resembling hay cocks, ranged like an encampment along the banks, they stood fifteen or twenty yards distant from the water, on a high marsh, about four feet perpendicular above the

water, I knew them to be the nests of the crocodile, having had a description of them before, and now expected a furious and general attack, as I saw several large crocodiles swimming abreast of these buildings. These nests being so great a curiosity to me, I was determined at all events immediately to land and examine them. Accordingly I ran my bark on shore at one of their landing places, which was a sort of nick or little dock, from which ascended a sloping path or road up to the edge of the meadow, where their nests were, most of them were deserted, and the great thick whitish egg-shells lay broken and scattered upon the ground round about them.

The nests or hillocks are of the form of an obtuse cone, four feet high and four or five feet in diameter at their bases; they are constructed with mud, grass and herbage: at first they lay a floor of this kind of tempered mortar upon the ground, upon which they deposit a layer of eggs, and upon this a stratum of mortar seven or eight inches in thickness, and then another layer of eggs, and in this manner one stratum upon another, nearly to the top: I believe they commonly lay from one to two hundred eggs in a nest: these are hatched I suppose by the heat of the sun, and perhaps the vegetable substances mixed with the earth, being acted upon by

the sun, may cause a small degree of fermentation, and so increase the heat in those hillocks. The ground for several acres about these nests shewed evident marks of a continual resort of alligators; the grass was every where beaten down, hardly a blade or straw was left standing; whereas, all about, at a distance, it was five or six feet high, and as thick as it could grow together. The female, as I imagine, carefully watches her own nest of eggs until they are all hatched, or perhaps while she is attending her own brood, she takes under her care and protection, as many as she can get at one time, either from her own particular nest or others: but certain it is, that the young are not left to shift for themselves, having had frequent opportunities of seeing the female alligator, leading about the shores her train of young ones, just like a hen does her chickens, and she is equally assiduous and courageous in defending the young, which are under their care, and providing for their subsistence; and when she is basking upon the warm banks, with her brood around her, you may hear the young ones continually whining and barking, like young puppies. I believe but few of the brood live to the years of full growth and magnitude, as the old feed on the young as long as they can make prey of them.

The alligator when full grown is a very large and terrible creature, and of prodigious strength, activity and swiftness in the water. I have seen them twenty feet in length, and some are supposed to be twenty-two or twenty-three feet; their body is as large as that of a horse; their shape exactly resembles that of a lizard, except their tail, which is flat or cuniform, being compressed on each side, and gradually diminishing from the abdomen to the extremity, which, with the whole body is covered with horny plates or squammae, impenetrable when on the body of the live animal, even to a rifle ball, except about their head and just behind their fore-legs or arms, where it is said they are only vulnerable. The head of a full grown one is about three feet, and the mouth opens nearly the same length, the eys are small in proportion and seem sunk deep in the head, by means of the prominency of the brows; the nostrils are large, inflated and prominent on the top, so that the head in the water, resembles, at a distance, a great chunk of wood floating about. Only the upper jaw moves, which they raise almost perpendicular, so as to form a right angle with the lower one. In the fore part of the upper jaw, on each side, just under the nostrils, are two very large, thick, strong teeth or tusks, not very sharp, but rather the shape of a cone, these are as white as the finest polished ivory, and are not covered by any skin or lips, and always in sight, which gives the creature a frightful appearance; in the lower jaw are hols opposite to these teeth, to receive them; when they clap their jaws together it causes a surprising noise, like that which is made by forcing a heavy plank with violence upon the ground, and may be heard at a great distance.

But what is yet more surprising to a stranger, is the incredible loud and terrifying roar, which they are capable of making, especially in the spring season, their breeding time; it most resembles very heavy distant thunder, not only shaking the air and waters, but causing the earth to tremble; and when hundreds and thousands are roaring at the same time, you can scarcely be persuaded, but that the whole globe is violently and dangerously agitated.

An old champion, who is perhaps absolute sovereign of a little lake or lagoon (when fifty less than himself are obliged to content themselves with swelling and roaring in little coves round about) darts forth from the reedy coverts all at once, on the surface of the waters, in a right line; at first seemingly as swift as lightning, but gradually more slowly until he arrives at the center of the lake, when he stops; he now swells himself by drawing in wind and water through his mouth, which causes a loud sonorous rattling in the throat for near a minute, but it is immediately forced out again through his mouth and nostrils, with a loud noise, brandishing his tail in the air, and the vapour ascending from his nostrils like smoke. At other times, when swolen to an extent ready to burst, his head and tail lifted up, he spins or twirls round on the surface of the water. He acts his part like an Indian chief, when rehearsing his feats of war, and then retiring, the exhibition is continued by others who dare to step forth, and strive to excel each other, to gain the attention of the favorite female.

Having gratified my curiosity at this general breeding place and nursery of crocodiles, I continued my voyage up the river without being greatly disturbed by them: in my way I observed islets or floating fields of the bright green Pistia, decorated with other amphibious

plants, as Senecio Jacobea, Persicaria amphibia, Coreopsis bidens, Hydrocotile fluitans, and many others of less note. . . .

I arrived at Cowe about noon; this settlement is esteemed the capital town; it is situated on the bases of the hills on both sides of the river, near to its bank, and here terminates the great vale of Cowe, exhibiting one of the most charming natural mountainous landscapes perhaps any where to be seen; ridges of hills rising grand and sublimely one above and beyond another, some boldly and majestically advancing into the verdant plains, their feet bathed with the silver flood of the Tanase, whilst others far distant, veiled in blue mists, sublimely mount aloft, with yet greater majesty lift up their pompous crests and overlook vast regions. . . .

Next day after my arrival I crossed the river in a canoe, on a visit to a trader who resided amongst the habitations on the other shore.

After dinner, on his mentioning some curious scenes amongst the hills, some miles distance from the river, we agreed to spend the afternoon in observations on the mountains.

After riding near two miles through Indian plantations of Corn, which was well cultivated, kept clean of weeds and was well advanced, being near eighteen inches in height, and the Beans planted at the Corn-hills were above ground; we leave the fields on our right, turning towards the mountains and ascending through a delightful green vale or lawn, which conducted us in amongst the pyramidal hills and crossing a brisk flowing creek, meandering through the meads which continued near two miles, dividing and branching in amongst the hills; we then mounted their steep ascents, rising gradually by ridges or steps one above another, frequently crossing narrow, fertile dales as we ascended; the air feels cool and animating, being charged with the fragrant breath of the mountain beauties, the blooming mountain cluster Rose, blushing Rhododendron and fair Lilly of the valley: having now attained the summit of this very elevated ridge, we enjoyed a fine prospect indeed; the enchanting Vale of Keowe, perhaps as celebrated for fertility, fruitfulness and beautiful prospects as the Fields of Pharsalia or the Vale of Tempe: the town, the elevated peaks of the Jore mountains, a very distant prospect of the Jore village in a beautiful lawn, lifted up many thousand feet higher than our present situation, besides a view of many other villages and settlements on the sides of the mountains, at various distances and elevations; the silver rivulets gliding by them and snow white cataracts glimmering on the sides of the lofty hills; the bold promontories of the Jore mountain stepping into the Tanase river, whilst his foaming waters rushed between them.

After viewing this very entertaining scene we began to descend the mountain on the other side, which exhibited the same order of gradations of ridges and vales as on our ascent, and at length rested on a very expansive, fertile plain, amidst the towering hills, over which we rode a long time, through magnificent high forests, extensive green fields, meadows and lawns. Here had formerly been a very flourishing settlement, but the Indians deserted it in search of fresh planting land, which they soon found in a rich vale but a few miles distance over a ridge of hills. Soon after entering on these charming, sequestered, prolific fields, we came to a fine little river, which crossing, and riding over fruitful strawberry beds and green lawns, on the sides of a circular ridge of hills in front of us, and going around the bases of this promontory, came to a fine meadow on an arm of the vale, through which meandered a brook, its humid vapours bedewing the fragrant strawberries which hung in heavy red clusters over the grassy verge; we crossed the rivulet, then rising a sloping, green, turfy ascent, alighted on the borders of a grand forest of stately trees, which we penetrated on foot a little distance to a horse-stamp, where was a large squadron of those useful creatures, belonging to my friend and companion, the trader, on the sight of whom they assembled together from all quarters; some at a distance saluted him with shrill neighings of gratitude, or came prancing up to lick the salt out of his hand; whilst the younger and

4 **Cowe,** a Cherokee town, in what is now Oconee County, South Carolina, bordering northern Georgia • 13 **Tanase,** Tennessee • 41 **Vale of Keowe.** The Keowee River forms the present boundary between Oconee and Pickens Counties • 43 **Pharsalia,** the central plain of Thessaly, renowned for Pompey's defeat there by Caesar (48 B.C.) • 43 **Tempe,** a valley in the north of Thessaly, between Mounts Olympus and Ossa, renowned for its beauty • 44 **Jore mountains,** apparently the southern extremity of the Blue Ridge • 76 **horse-stamp,** an enclosure or habitual standing-place for horses

more timorous came galloping onward, but coyly wheeled off, and fetching a circuit stood aloof, but as soon as their lord and master strewed the chrystaline salty bait on the hard beaten ground, they all, old and young, docile and timorous, soon formed themselves in ranks and fell to licking up the delicious morsel.

It was a fine sight; more beautiful creatures I never saw; there were of them of all colours, sizes and dispositions. Every year as they become of age he sends off a troop of them down to Charleston, where they are sold to the highest bidder.

Having paid our attention to this usefull part of the creation, who, if they are under our dominion, have consequently a right to our protection and favour. We returned to our trusty servants that were regaling themselves in the exuberant sweet pastures and strawberry fields in sight, and mounted again; proceeding on our return to town, continued through part of this high forest skirting on the meadows; began to ascend the hills of a ridge which we were under the necessity of crossing, and having gained its summit, enjoyed a most enchanting view, a vast expanse of green meadows and strawberry fields; a meandering river gliding through, saluting in its various turnings the swelling, green, turfy knolls, embellished with parterres of flowers and fruitful strawberry beds; flocks of turkies strolling about them; herds of deer prancing in the meads or bounding over the hills; companies of young, innocent Cherokee virgins, some busily gathering the rich fragrant fruit, others having already filled their baskets, lay reclined under the shade of floriferous and fragrant native bowers of Magnolia, Azalea, Philadelphus, perfumed Calycanthus, sweet Yellow Jessamine and cerulian Glycine frutescens, disclosing their beauties to the fluttering breeze, and bathing their limbs in the cool fleeting streams; whilst other parties, more gay and libertine, were yet collecting strawberries or wantonly chasing their companions, tantalizing them, staining their lips and cheeks with the rich fruit.

This sylvan scene of primitive innocence was enchanting, and perhaps too enticing for hearty young men long to continue as idle spectators.

In fine, nature prevailing over reason, we wished at least to have a more active part in their delicious sports. Thus precipitately resolving, we cautiously made our approaches, yet undiscovered, almost to the joyous scene of action. Now, although we meant no other than an innocent frolic with this gay assembly of hamadryades, we shall leave it to the person of feeling and sensibility to form an idea to what lengths our passions might have hurried us, thus warmed and excited, had it not been for the vigilance and care of some envious matrons who lay in ambush, and espying us gave the alarm, time enough for the nymphs to rally and assemble together; we however pursued and gained ground on a group of them, who had incautiously strolled to a greater distance from their guardians, and finding their retreat now like to be cut off, took shelter under cover of a little grove, but on perceiving themselves to be discovered by us, kept their station, peeping through the bushes; when observing our approaches, they confidently discovered themselves and decently advanced to meet us, half unveiling their blooming faces, incarnated with the modest maiden blush, and with native innocence and cheerfulness, presented their little baskets, merrily telling us their fruit was ripe and sound.

We accepted a basket, sat down and regaled ourselves on the delicious fruit, encircled by the whole assembly of the innocently jocose sylvan nymphs; by this time the several parties under the conduct of the elder matrons, had disposed themselves in companies on the green, turfy banks.

My young companion, the trader, by concessions and suitable apologies for the bold intrusion, having compromised the matter with them, engaged them to bring their collections to his house at a stipulated price, we parted friendly.

And now taking leave of these Elysian fields, we again mounted the hills, which we crossed, and traversing obliquely their flowery beds, arrived in town in the cool of the evening.

1774?-1776?-1791

28 **companies . . . virgins.** One stanza from Wordsworth's "Ruth," composed in 1799, will illustrate the use which the English romantics made of Bartram's book. The Youth who broke Ruth's heart was from Georgia, and

> He told of girls—a happy rout!
> Who quit their folds with dance and shout,
> Their pleasant Indian towns,
> To gather strawberries all day long;
> Returning with a choral song
> When daylight is gone down.

Roger Williams

1603? • 1683

Roger Williams has an honored place in American history as the first vigorous proponent of the principles which stand first in the Bill of Rights: "Congress shall make no law respecting the establishment of religion, or prohibiting the free exercise thereof." The separation of church from state and the complete toleration of religious opinions, whatever they may be, are so basic to American democracy that it is easy to forget how rare they once were, and how bitter and long-continued a battle was necessary to achieve their general acceptance. As Nazi Germany revealed, the struggle is not merely a historical episode. Religious freedom is not even yet secure the world over. Roger Williams, whose central conviction was that the power of the civil state must not

Panel (l to r) Roger Williams teaching the Indians • Early meetinghouses, Sandown, New Hampshire, and Deerfield, Massachusetts • A New England preacher • Pulpit of St Botolph's Church, Boston, England

be used to enforce a specious uniformity of religious belief, speaks of a matter still crucial in the tangled affairs of humanity.

The exact date of Williams' birth is unknown because of the destruction of records in the Great Fire of London in 1666. He was born between 1603 and 1606 in London, the son of a moderately prosperous merchant. Sometime in his teens he learned shorthand and became the protégé of one of England's greatest lawyers, Sir Edward Coke (1552-1634). Through Coke's influence he entered Charterhouse School in 1621 and there did so well that he won a scholarship. With it and other rewards for his distinction as a student, he was able to take his B.A. degree in 1627 as a member of Pembroke Hall, Cambridge, subscribing, as was required, to the authority of the King, the *Book of Common Prayer*, and the Thirty-Nine Articles (the accepted body of divinity) in the Church of England.

It is probable that Williams went to the university with the intention of preparing for the law. After taking his degree, however, he continued at Cambridge as a student of divinity. Already Puritan in his sympathies, he was unable to accept the prospect presented by the ecclesiastical measures and appointments of Charles I, who obviously planned to suppress all nonconformity. In the winter of 1628-1629, therefore, Williams left the university to become the household chaplain of an Essex country gentleman who had connections with a number of the leading promoters of the Massachusetts Bay Colony. By May of 1629 he was considering migration to New England, and in December of 1630 he sailed for Massachusetts. Meanwhile he had suffered the humiliation of having his proposal of marriage to a young lady rejected by her aunt on the ground of his low social rank, and had married a lady's maid—on the rebound but, as it turned out, very happily. By 1630 he had arrived at Separatist convictions; he believed, that is to say, that the individual congregation should be the ultimate authority in church government and that the civil state should not be permitted to enforce uniformity.

Williams' religious and political convictions did not become apparent, however, until he arrived in New England. There, chosen teacher of the church in Boston, he refused the post because that congregation still wished to regard themselves as Anglicans. Chosen teacher at Salem, where the church was Separatist, he was unable to take the post after John Winthrop and other officials remonstrated with the Salem people. He then spent some two years at Plymouth, working as a laborer and acquainting himself with the language and customs of the Indians—a missionary work for which all New England had cause to be thankful later. In the latter part of 1633 he returned to Salem; here followed the series of events which brought Williams into conflict with the ruling oligarchy of the Bay Colony and eventually resulted in his banishment. Much has been written about these events, which are intricately bound up with the political development of Massachusetts; it is sufficient here to note that the main points at issue were two: the validity of the royal charter upon which were based all titles to land in the colony, and the power of the civil magistrates to enforce religious conformity. Williams, through his acquaintance with the customs of the Indians, had come to believe that their land had been unjustly taken from them, and he had strenuously denied the right of the General Court to make laws regulating the churches. His congregation at Salem supported him until the civil authorities, in close consultation with the more conservative clergy, exerted strong economic pressure upon Salem. Finally, in 1635, he was banished, to find refuge with friendly Indians in what is now Rhode Island.

The remainder of Williams' life is a complicated story of religious and political events in a frontier colony. He left Separatism to join the first Baptist church to be organized in America; but a few months later he decided that he could belong to no church and became a Seeker, acknowledging no authority but the Bible and the works of God and waiting for the light of revelation. At the same time, he devoted himself to organizing a new colony where all churches should be free from civil control. Circumstances favored him. To lands purchased from the Indians there came settlers, many of them exiles like himself from the more authoritarian colonies. In 1644 Williams visited England, where he found the temper of the Puritans in power more akin to his own than to that of the Bay Colony; he was able to obtain a charter granting full self-government to the Providence Plantations. Later charters in 1655 and 1663 confirmed the first, and despite many internal and external difficulties a colony which separated church from state succeeded and eventually became the model for a nation.

Roger Williams the man is much better remembered

than Roger Williams the writer. *A Key into the Language of America* (London, 1643) is, however, one of the most readable of the seventeenth-century books about the Indians. He was also the author of a lengthy tract against the doctrines of the founder of the Society of Friends, *George Fox Digg'd out of His Burrowes* (Boston, 1676). His chief activity as a writer was connected with two periods of residence in London, on behalf of his fellow settlers in Rhode Island. He was there in 1643-1644, at the time of the meeting of the Westminster Assembly of Divines, and again in 1652-1654, when the Puritan Commonwealth became a Protectorate under Oliver Cromwell. His associates in London included many famous men, among them John Milton; and the situation there called forth his most sustained literary work, a series of pamphlets in which he debated the subject of persecution for cause of conscience (as we would say now, freedom of thought) with John Cotton, one of the ministers who had been responsible for his banishment from Massachusetts.

From

The Bloudy Tenent

Of Persecution, for Cause of Conscience, Discussed, in a Conference Between Truth and Peace

The debate between John Cotton and Roger Williams on religious liberty began with the appearance of **A Letter of Mr. John Cotton to Mr. Williams**, published in London in the fall of 1643, at a time when the Westminster Assembly was debating the reorganization of the Church of England. In it Cotton defended the Bay Colony for banishing Williams and incidentally argued in favor of enforced uniformity of religion. Williams countered in January with **Mr. Cottons Letter Lately Printed, Examined and Answered**, following it the next month with **Queries of Highest Consideration**, in which he advocated separation of church and state. In July, moreover, he published **The Bloudy Tenent of Persecution for Cause of Conscience.** He was then in London and so sympathetic with the Levellers, one of the most democratic of the extreme Puritan parties, that he asserted in **The Bloudy Tenent** that the foundation of the civil power lies in the people and "that such Governments as are by them erected and established, have no more power, nor for no longer time, than the civill power or people consenting and agreeing shall betrust them with." Parliament decided that such remarks were dangerous enough to justify an order that the book be burned by the public hangman. It was perhaps fortunate for Williams that he published it anonymously.

Cotton remained in Boston but the debate went on. **His Keyes of the Kingdom of Heaven and Power Thereof**, an argument for a Congregational establishment, was published in 1644, and another work, **The Controversies Concerning Liberty of Conscience in Matters of Religion Truly Stated**, appeared in 1646. He answered Williams specifically in 1647 with **The Bloudy Tenent Washed, and Made White in the Bloud of the Lambe** and **A Reply to Mr. Williams His Examination, and Answer of the Letter Sent to Him by John Cotton.** The discussion was concluded five years later, in 1652, with Williams' **The Bloudy Tenent Yet More Bloody: By Mr. Cottons Endevour to Wash It White in the Blood of the Lambe.**

Since all these books are interdependent, each being organized in terms of its predecessor, they are difficult to represent adequately in short space. The selection which follows consists of the introduction and the first two chapters of **The Bloudy Tenent of Persecution for Cause of Conscience.** Only a part of Williams' argument is included, but the humanity of his position, the dialogue method which he used, and the occasional eloquence of his style are sufficiently evident.

tions, Kingdomes, Cities, Townes, to finde out precious *Truth?*

Truth. The like enquiries in my flights and travells have I made for *Peace,* and still am told, she hath left the *Earth,* and fled to *Heaven.*

Peace. Deare *Truth,* What is the *Earth* but a *dungeon of darknesse,* where *Truth* is not?

Truth. And what's the *Peace* thereof but a fleeting *dreame,* thine *Ape* and *Counterfeit?*

Peace. O where's the Promise of the *God* of *Heaven,* that *Righteousnes* and *Peace* shall *kisse* each other?

Truth. Patience (sweet *Peace*) these *Heavens* and *Earth* are growing *Old,* and shall be changed like a *Garment,* Psal. 102. They shall melt away, and be burnt up with all the *Works* that are therein; and the most high *Eternall Creatour,* shall gloriously create *New Heavens* and *New Earth,* wherein dwells *Righteousnesse,* 2 Pet. 3. Our *kisses* then shall have their *endlesse* date of pure and sweetest ioyes? till then both *Thou* and *I* must hope, and wait, and beare the furie of the *Dragons* wrath, whose *monstrous Lies* and *Furies* shall with himselfe be cast into the *lake* of *Fire,* the *second death,* Revel. 20.

Peace. Most precious Truth, thou knowest we are both pursued and laid for: Mine *heart* is full of sighes, mine *eyes* with teares: Where can I better vent my full oppressed *bosome,* then into *thine,* whose faithfull *lips* may for these few houres revive my drooping wandring *spirits,* and here begin to *wipe Teares* from mine eyes, and the eyes of my dearest *Children?*

Truth. Sweet daughter of the *God* of *Peace,* begin; powre out thy *sorrowes,* vent thy *complaints:* how joyfull am I to improve these precious Minutes to revive our *Hearts,* both thine and mine, and the hearts of all that *love* the *Truth* and *Peace,* Zach. 8.

Peace. Deare Truth, I know thy *birth,* thy *nature,* thy *delight.* They that know thee, will *prize* thee farre above themselves and lives, and *sell themselves* to *buy thee.* Well spake that famous *Elizabeth* to her famous *attorney* Sir *Edward Coke:* Mr. *Attourney,* goe on as thou hast begun, and still plead, not *pro Domina Regina,* but *pro Domina Veritate.*

Truth. 'Tis true, my *Crowne* is high, my *Scepter's* strong to breake down *strongest holds,* to throw down highest *Crownes* of all that plead (though but in thought) against me. Some few there are, but oh how few are valiant for the *Truth,* and dare to *plead* my *Cause,* as my *Witnesses* in sack-cloth, Revel. 11. While all men's *Tongues* are bent like *Bowes* to shoot out lying words against Me!

Peace. O how could I spend *eternall dayes* and *endlesse dates* at thy holy feet, in listning to the precious Oracles of thy mouth! All the Words of thy mouth are *Truth,* and there is no *iniquity* in them; Thy *lips* drop as the hony-combe. But oh! since we must part anon, let us (as thou saidst) improve our *Minutes,* and (according as thou promisedst) revive me with thy words, which are sweeter then the honey and the honey-combe.

Chapter II

Deare *Truth,* I have two sad *Complaints:*

Great complaints of Peace.

First, the most sober of thy *Witnesses,* that dare to *plead* thy *Cause,* how are they charged to be *mine Enemies, contentious, turbulent, seditious?*

Secondly, Thine *Enemies,* though they speake and raile against thee, though they outragiously *pursue, imprison, banish, kill* thy faithfull *Witnesses,* yet how is all vermillion'd o're for *Justice* 'gainst the *Heretieks?* Yea, if they kindle coales, and blow the flames of *devouring Warres,* that leave neither *Spirituall* nor *Civill State,* but burns up *Branch* and *Root,* yet how doe all pretend an *holy War?* He that *kills,* and hee that's *killed,* they both cry out, It is for *God,* and for their *conscience.*

Persecutors seldom plead Christ, but Moses for their Author.

Tis true, nor one nor other seldome dare to plead the mighty Prince *Christ Jesus* for their *Authour,* yet both (both *Protestant* and *Papist*) pretend they have spoke with *Moses* and the *Prophets,* who all, say they (before *Christ* came) allowed such *holy persecutions, holy Warres* against the enemies of holy *Church.*

Truth. Deare Peace (to ease thy first *complaint*) tis true, thy dearest *Sons,* most like their mother, *Peace-keeping, Peace-making* Sons of *God,* have borne and still must beare the *blurs* of *troublers* of *Israel,* and

21 Dragons wrath, Satan's wrath. Revelation 20 2 "And he laid hold on the dragon, that old serpent, which is the Devil, and Satan. . . ." There are many echoes of the Book of Revelation in this chapter • 41 pro . . . Veritate, not for Mistress Queen, but for Mistress Truth

turners of the *World* upside downe. And tis true againe, what *Salomon* once spake: The *beginning* of *strife* is as when one letteth out *Water*, therefore (saith he) leave off *contention* before it be medled with. This *Caveat* should keepe the *bankes* and *sluces* firme and strong, that *strife*, like a *breach of waters*, breake not in upon the sons of men.

Yet *strife* must be distinguished: It is *necessary* or *unnecessary*, *godly* or *ungodly*, *Christian* or *unchristian*, &c. **Strife distinguished.**

It is *unnecessary*, *unlawfull*, *dishonourable*, *ungodly*, *unchristian*, in most cases in the world, for there is a *possibility* of keeping *sweet Peace* in most cases, and if it be *possible*, it is the expresse command of *God* that *Peace* be kept, *Rom.* 13. **1. Ungodly strife.**

Againe, it is *necessary*, *honourable*, *godly*, &c. with *civill* and earthly *weapons* to *defend* the *innocent*, and to *rescue* the oppressed from the violent *pawes* and *jawes* of oppressing persecuting *Nimrods*, Psal. 73. Job 29. **2. Godly strife.**

It is as *necessary*, yea more *honourable*, *godly*, and *Christian*, to *fight* the *fight* of *faith*, with *religious* and *spirituall Artillery*, and to *contend earnestly* for the *faith* of *Jesus*, *once* delivered to the *Saints* against all *opposers*, and the *gates* of *earth* and *hell*, *men* or *devils*, yea against *Paul* himselfe, or an *Angell* from *heaven*, if he bring any other *faith* or *doctrine*, *Jude* vers. 4. *Gal.* 1. 8.

Peace. With the *clashing* of such *Armes* am I never *wakened*. Speake once againe (deare Truth) to my second *complaint* of bloody *persecution*, and devouring *wars*, marching under the colours of upright *Justice*, and holy *Zeale*, &c. **A threefold dolefull cry. Christs worship is his bed, Cant. 1. 16.**

Truth. Mine eares have long beene filled with a threefold dolefull *Outcry*.

First, of one hundred forty Foure thousand *Virgins* (*Rev.* 14.) forc'd and ravisht by *Emperours*, *Kings* and *Governours* to their beds of *worship* and *Religion*, set up (like *Absaloms*) on high in their severall *States* and *Countries* **False worship therefore is a false bed.**

Secondly, the cry of those precious *soules* under the *Altar* (*Rev.* 6.) the *soules* of such as have beene persecuted and slaine for the testimony and *witnesse* of *Jesus*, whose *bloud* hath beene spilt like *water* upon the *earth*, and that because they have held fast the *truth* and *witnesse* of *Jesus*, against the *worship* of the *States* and *Times*, compelling to an *uniformity* of *State Religion*. **The cry of the soules under the Altar.**

These *cries* of *murthered Virgins* who can sit still and *heare?* Who can but run with zeale inflamed to prevent the *deflowring* of *chaste soules*, and spilling of the *bloud* of the *innocent? Humanity* stirs up and prompts the *Sonnes* of men to draw *materiall swords* for a *Virgins chastity* and *life*, against a *ravishing murtherer?* And *Piety* and *Christianity* must needs awaken the *Sons* of *God* to draw the *spirituall sword* (the Word of God) to preserve the *chastity* and *life* of *spirituall Virgins*, who abhorre the spirituall *defilements* of *false worship*, *Rev.* 14.

Thirdly, the *cry* of the *whole earth*, made *drunke* with the *bloud* of its *inhabitants*, slaughtering each other in their *blinded zeale*, for *Conscience*, for *Religion*, against the *Catholickes*, against the *Lutherans*, &c. **A cry of the whole earth.**

What fearfull *cries* within these twenty years of hundred *thousands* men, women, children, fathers, mothers, husbands, wives, brethren, sisters, old and young, high and low, *plundred*, *ravished*, *slaughtered*, *murthered*, *famished?* And hence these cries, that men fling away the *spirituall sword* and *spirituall artillery* (in *spirituall* and *religious* causes) and rather trust for the suppressing of each others *God*, *Conscience*, and *Religion* (as they suppose) to an *arme* of *flesh*, and *sword* of *steele?*

Truth. Sweet Peace, what hast thou there?

Peace. Arguments against *persecution* for cause of *Conscience.*

Truth. And what there?

Peace. An *Answer* to such *Arguments*, contrarily maintaining such *persecution* for cause of *Conscience.*

Truth. These *Arguments* against such persecution, and the *Answer* pleading for it, written (as *Love* hopes) from godly *intentions*, *hearts*, and *hands*, yet in a marvellous different *stile* and *manner*. The *Arguments* against *persecution* in *milke*, the *Answer* for it (as I may say) in *bloud*. **The wonderfull providéce of God in the writing of the Arguments against persecution in Milke.**

The *Authour* of these *Arguments* (against *persecution*) (as I have beene informed) being committed by

8 way . . . fire, that is, by heating paper so that the writing appears

Cotton Mather

1663 · 1728

Pedant, neurotic, megalomaniac, reactionary, benighted witch hunter—so has Cotton Mather come to be known to later generations, who have accepted him as the best example of New England Puritanism gone to seed. There is truth in the judgment, or enough so that no one is likely to grow fond of either the man or the writer; and yet to understand Cotton Mather is possibly a sure way to explore the intellectual labyrinth of provincial America in the period between 1680 and 1728.

Mather's outward life was uneventful. He was born in Boston in 1663, the son of the Rev. Increase Mather and the grandson of the Rev. John Cotton. Of his boyhood, if it can be called that, we know very little except that he was incredibly pious and industrious and that he suffered from an impediment in his speech. Writing of his early life, for the benefit of his son, he lamented "early Ebullitions of *Original Sin,*" but confessed that at the age of seven or eight he was composing forms of prayer for his schoolmates and rebuking them for "their wicked *words* and *ways.*" "And sometimes," he added, "I suffered from them, the persecution of not only *Scoffs* but Blows also for my Rebukes." At eleven, according to the same account, he wrote and spoke Latin with great facility, had gone through most of the New Testament in Greek, and had begun his Hebrew grammar. When he received his B.A. degree from Harvard College in 1678, he was fourteen, the youngest graduate then on record. His stammering relieved (convincing evidence to him of God's special favor), he put aside his plan of becoming a physician to

follow his family's calling, the ministry. After taking his M A in 1681, he continued to assist his father at the Second, or Old North, Church, where he was installed as co-minister in 1685. There he remained all his life, marrying three times, burying most of his fifteen children, preaching literally thousands of sermons, and writing untiringly. He published 444 separate items, and great quantities of material are still extant in manuscript.

Outside of his personal idiosyncrasies, which were many and, at this distance, unpleasant, Mather was handicapped chiefly by nostalgia. He suffered from a lifelong yearning for the good old days when a New England clergyman wielded virtually sovereign power and regarded himself, quite rightly, as playing a leading rôle in a world-wide drama. Doubtless the good old days were never quite what Cotton Mather thought they were, and the Puritan Revolution not as all-important as it seemed. So intent was Mather upon preserving the "old New England way" that he was in many ways backward-looking, committed to a delaying action against new forces. Although he was never such a popular leader as his father, he was so prolific a writer that he has come to represent to many people the whole story of American Puritanism, a result which he himself would have regarded as unfortunate.

His most famous books, and indeed the bulk of his works, are best interpreted as efforts to strengthen the position of the church in a society which was growing steadily more worldly. *The Wonders of the Invisible World* (1693), the classic account of the tragedy of Salem witchcraft, is a monument to credulity, but it is also the result of a conviction, which Cotton Mather shared with pious and intelligent men on both sides of the Atlantic, that to give up a belief in spirits was to sell out to materialism. The vast *Magnalia Christi Americana* (1702) was designed to bind New Englanders to the religion of their forefathers by arousing pride in their spiritual inheritance. *The Christian Philosopher* (1721) sought to demonstrate that science was "no *Enemy,* but a mightly and wondrous *Incentive to Religion.*" And the *Manuductio ad Ministerium* (1726), which Moses Coit Tyler regarded as the most vigorous and entertaining of Mather's books, was his mature advice to prospective candidates for the ministry.

For all his efforts, Mather did not reinvigorate religion, as Jonathan Edwards was soon to do. He wrote too much and thought too little for that. His inveterate habit of paraphrasing freely from the books of others, on the theory that he could thereby edify his provincial audience, kept him almost always upon the surface of the world of ideas. There, however, he ranged widely, and often modified or shifted his intellectual position. *The Christian Philosopher, Manuductio ad Ministerium,* and *Bonifacius* (1710), better known as *Essays to Do*

Panel (l. to r.)· Boston's first Town House • Cotton Mather at 65; from the Pelham portrait • Harvard in 1726 • Title page of Mather's Magnalia Christi Americana • Old State House, Boston

Good, show an amazing adjustment to scientific, humanitarian, and philanthropic movements which were, in the end, to build a new kind of society. Mather did not always understand their implications, but he was so anxious to be well-informed and informative about all branches of knowledge that his books are a mirror of their age.

Sermons, biographies, theological treatises, essays, handbooks for his parishioners, letters, poems, and various other types of writing flowed steadily from his pen. He also kept one of the fullest and most self-revealing of Puritan diaries. He cultivated and defended an elaborate, allusion-studded style which modern readers are likely to find pedantic and antiquated. Both his literary forms and his style, however, were intimately related to provincial Boston, seeking to preserve its traditions and to maintain its place in the sun.

From

The Wonders of the Invisible World

The Salem "witchcraft episode" began at Salem Village, now Danvers, Massachusetts, during the winter of 1691-1692, with the nine-year-old daughter, the eleven-year-old niece, and the West Indian servant, half Indian, half Negro, of the Rev. Samuel Parris. The children became "afflicted"; that is, they flew into fits and complained of being pricked, bitten, pinched, or choked by invisible hands, of being tormented by apparitions. When a gathering of ministers examined them and decided they were bewitched, they named, after much urging, three tormentors: an obvious neurotic, a miserable old woman, and Tituba, the West Indian servant. In March, publicly examined by Salem magistrates, Tituba confessed to the practice of witchcraft, naming the other two women as her accomplices. Soon there were more accusations, more examinations, more commitments to jail, and by May about one hundred persons were confined, awaiting trial, partly because the community was rural and disunited, full of bitterness among neighbors and relatives.

To meet this situation the new governor, Sir William Phips, appointed a special court of oyer and terminer, to investigate and to try the witchcraft cases. On evidence such as appears in this selection, the seven magistrates sent Bridget Bishop to the gallows in June. In July five others were hanged; in August, six; in September, fourteen. One eighty-year-old man was pressed to death beneath heavy stones because, fearing that his conviction would forfeit the property he hoped to leave his family, he refused to plead either guilty or not guilty. Forty-five individuals confessed themselves witches and thus escaped death; all those who were executed maintained their innocence to the end. Altogether, more than two hundred persons were accused or suspected. At length the accusations became so numerous and so absurd that the prosecutions were abandoned, the confessed witches freed, and before many years Samuel Sewall was publicly asking forgiveness for his share in the judicial decisions (see p. 37).

Scholars have disagreed violently about the extent to which Increase and Cotton Mather should be held responsible for this amazing episode. Their apologists point out (1) that the vast majority of educated men of the day, whatever their religious affiliations, believed in witchcraft; (2) that Increase Mather, who returned from England in the midst of the mania, urged the utmost caution in weighing the evidence; and (3) that Cotton Mather wrote his account of the trials out of friendship for the magistrates involved. Against these facts one must weigh the intangible effects of Increase Mather's **Essay for the Recording of Illustrious Providences** (1684) and Cotton Mather's **Memorable Providences, Relating to Witchcrafts and Possessions** (1689). Both books collected accounts of Satan's activities against New England, with the intention of combating materialism and religious indifference. Although the

Mathers were following in the footsteps of such English writers as Joseph Glanvill, Henry More, and Richard Baxter, it is possible that their stories of supernatural phenomena contributed to the state of mind which lay behind the explosion at Salem Village.

The Wonders of the Invisible World, for which many generations have condemned Cotton Mather as benighted and superstitious, was written in September and October 1692. Two Boston imprints appeared in 1693, and there were three London editions in the same year. More recently it has been several times reprinted, together with Robert Calef's **More Wonders of the Invisible World** (London, 1700), a rationalist's attack upon the procedure and the principals of the Salem outbreak.

THE TRIAL OF BRIDGET BISHOP, ALIAS, OLIVER AT THE COURT OF OYER AND TERMINER HELD AT SALEM, JUNE 2, 1692

I

She was Indicted for Bewitching of several persons in the Neighbourhood, the Indictment being drawn up, according to the *Form* in such Cases usual And pleading, *Not Guilty,* there were brought in several persons, who had long undergone many kinds of Miseries, which were preternaturally Inflicted, and generally ascribed unto an horrible *Witchcraft.* There was little Occasion to prove the *Witchcraft;* it being Evident and Notorious to all Beholders. Now to fix the *Witchraft* on the Prisoner at the Bar, the first thing used, was, the Testimony of the *Bewitched;* whereof, several Testify'd That the *Shape* of the Prisoner did oftentimes very grievously Pinch them, choak them, Bite them, & Afflict them; urging them to write their Names in a *Book,* which the said Spectre called, *Ours.* One of them did further Testify, that it was the *Shape* of this Prisoner, with another, which one Day took her from her Wheel, and carrying her to the River side, threatned there to Drown her, if she did not Sign to the Book mentioned: which yet she refused. Others of them did also Testify, that the said *Shape* did in her Threats brag to them that she had been the Death of sundry persons, then by her Named; that she had *Ridden* a man, then likewise Named. Another Testify'd, the Apparition of *Ghosts* unto the Spectre of *Bishop,* crying out, *You Murdered us!* About the Truth whereof, there was in the matter of Fact, but too much Suspicion.

II. It was Testify'd, That at the Examination of the Prisoner, before the Magistrates, the Bewitched were extreamly Tortured If she did but cast her Eyes on them, they were presently struck down; and this in such a manner as there could be no Collusion in the Business. But upon the Touch of her Hand upon them, when they lay in their Swoons, they would immediately Revive; and not upon the Touch of any ones else. Moreover, upon some Special Actions of her Body, as the shaking of her Head, or the Turning of her Eyes, they presently and painfully fell into the like postures. And many of the like Accidents now fell out, while she was at the Bar. One at the same time testifying, That she said, *She could not be Troubled to see the Afflicted thus Tormented.*

III. There was Testimony likewise brought in, that a man striking once at the place, where a Bewitched person said, the *Shape* of this *Bishop* stood, the bewitched cryed out, that he had Tore her Coat, in the place then particularly specify'd; and the Womans Coat, was found to be Torn in that very place.

IV. One *Deliverance Hobbs,* who had Confessed her being a Witch, was now Tormented by the Spectres, for her Confession. And she now Testify'd, That this *Bishop,* tempted her to Sign the *Book* again, and to Deny what she had Confess'd. She affirmed, that it was the Shape of this Prisoner, which whipped her with Iron Rods, to compel her thereunto. And she affirmed, that

---

Text. the first Boston edition, 1693 • **Bridget Bishop,** previously married to a man named Oliver, had long had a bad reputation in Salem Village and had once before been accused of witchcraft. She was the first to be tried and hanged • 3 **the Form . . . usual,** based upon procedures of the English common law, developed during frequent prosecutions for witchcraft under statutes adopted in 1563 and 1604 and not repealed until 1736 • 12 **Shape . . . Prisoner.** The crucial point in the prosecutions was "spectral evidence." The magistrates acted on the assumption that evil spirits could not assume the shape of innocent persons. This meant that if an accuser testified under oath to seeing the apparition of his tormentor, and identified it, his very accusation was accepted as proof of guilt • 14 **Book,** the large black book in which a witch inscribed his name to seal his contract with Satan The signature was ordinarily made with the blood of the signer, as in the Faust legend • 17 **Wheel,** spinning wheel • 23 **Ridden a man,** an allusion to the folk belief in incubi, from which the term "nightmare" is derived • 30 **cast her Eyes,** an instance of the "evil eye," upon which the Salem judges pondered at some length

this *Bishop* was at a General Meeting of the Witches, in a Field at *Salem*-Village and there partook of a Diabolical Sacrament, in Bread and Wine then Administred!

V. To render it further Unquestionable, that the prisoner at the Bar, was the Person truly charged in THIS *Witchcraft,* there were produced many Evidences of OTHER *Witchcrafts,* by her perpetrated. For Instance, *John Cook* testify'd, that about five or six years ago, One morning, about Sun-Rise, he was in his Chamber assaulted by the *Shape* of this prisoner: which Look'd on him, grin'd at him, and very much hurt him, with a Blow on the side of the Head: and that on the same day, about Noon, the same *Shape* walked in the Room where he was, and an Apple strangely flew out of his Hand, into the Lap of his mother, six or eight foot from him.

VI. *Samuel Gray,* testify'd, That about fourteen years ago, he wak'd on a Night, & saw the Room where he lay, full of Light; & that he then saw plainly a Woman between the Cradle, and the Bed-side, which look'd upon him. He Rose, and it vanished; tho' he found the Doors all fast. Looking out at the Entry-Door he saw the same Woman, in the same Garb again; and said, *In Gods Name, what do you come for?* He went to Bed, and had the same Woman again assaulting him. The Child in the Cradle gave a great schreech, and the Woman Disappeared. It was long before the Child could be quieted; and tho' it were a very likely thriving Child, yet from this time it pined away, and after divers months dy'd in a sad Condition. He knew not *Bishop,* nor her Name; but when he saw her after this, he knew by her Countenance, and Apparrel, and all Circumstances, that it was the Apparition of this *Bishop,* which had thus troubled him.

VII. *John Bly* and his wife, testify'd, that he bought a sow of *Edward Bishop,* the Husband of the prisoner; and was to pay the price agreed, unto another person. This Prisoner being Angry that she was thus hindred from fingring the money, Quarrell'd with *Bly.* Soon after which the Sow, was taken with strange Fits; Jumping, Leaping, and Knocking her head against the Fence; she seem'd Blind and Deaf, and would neither eat nor be suck'd. Whereupon a neighbour said, she believed the Creature was *Over-Looked;* & sundry other circumstances concurred, which made the Deponents Belive that *Bishop* had Bewitched it.

VIII. *Richard Coman* testify'd, that eight years ago, as he lay Awake in his Bed, with a Light Burning in the Room, he was annoy'd with the Apparition of this *Bishop,* and of two more that were strangers to him; who came and oppressed him so that he could neither stir himself, nor wake any one else; and that he was the night after, molested again in the like manner; the said *Bishop* taking him by the Throat, and pulling him almost out of the Bed. His Kinsman offered for this cause to lodge with him; and that Night, as they were Awake, Discoursing together: this *Coman* was once more visited, by the Guests which had formerly been so troublesome; his kinsman being at the same time strook speechless and unable to move Hand or Foot. He had laid his sword by him; which these unhappy spectres, did strive much to wrest from him; only he held too fast for them. He then grew able to call the People of his house; but altho' they heard him, yet they had not power to speak or stirr, until at last, one of the people crying out, *what's the matter!* the spectres all vanished.

IX. *Samuel Shattock* testify'd, That in the Year 1680, this *Bridget Bishop,* often came to his house upon such frivolous and foolish errands, that they suspected she came indeed with a purpose of mischief. Presently whereupon his eldest child, which was of as promising Health & Sense, as any child of its Age, began to droop exceedingly, & the oftener that *Bishop* came to the House, the worse grew the Child. As the Child would be standing at the Door, he would be thrown and bruised against the Stones, by an Invisible Hand, and in like sort knock his Face against the sides of the House, and bruise it after a miserable manner. Afterwards this *Bishop* would bring him things to Dy, whereof he could not Imagine any use, and when she paid him a piece of Money, the Purse and Money were unaccountably conveyed out of a Lock'd box, and never seen more. The Child was immediately hereupon taken with terrible fits, whereof his Friends thought he would have dyed: indeed he did almost nothing but cry and Sleep for several Months together: and at length his understanding

---

1 **General . . . Witches,** the Sabbat, the sacrilegious and obscene parody of the mass and other sacraments which constituted a central feature of the folklore of witchcraft. Goethe used it skillfully in **Faust,** Hawthorne in **Young Goodman Brown;** it survives in the Hallowe'en figures of witches on broomsticks, on which they were supposed to ride to such meetings • **16 Samuel Gray,** who, according to Calef, repented his "wholly groundless" accusation on his deathbed

was utterly taken away. Among other Symptoms of an Inchantment upon him, one was, that there was a Board in the Garden, whereon he would walk; and all the invitations in the world could never fetch him off. About Seventeen or Eighteen years after, there came a Stranger to Shattocks House, who seeing the Child, said, *This poor Child is Bewitched; and you have a Neighbour living not far off, who is a Witch.* He added, *Your Neighbour has had a falling out with your Wife; and she said in her Heart, your Wife is a proud Woman, and she would bring down her Pride in this Child:* He then Remembred, that *Bishop* had parted from his Wife in muttering and menacing Terms, a little before the Child was taken Ill. The abovesaid Stranger would needs carry the Bewitched Boy with him, to *Bishops* House, on pretence of buying a pot of Cyder. The Woman Entertained him in furious manner; and flew also upon the Boy, scratching his Face till the Blood came, and saying, *Thou Rogue, what? dost thou bring this Fellow here to plague me?* Now it seems the man had said before he went, that he would fetch Blood of *her.* Even after the Boy was follow'd with grievous Fits, which the Doctors themselves generally ascribed unto *Witchcraft;* and wherein he would be thrown still into the *Fire* or the *Water,* if he were not constantly look'd after; and it was verily believed that *Bishop* was the cause of it.

X. *John Louder* testify'd, that upon some little controversy with *Bishop* about her fowles, going well to Bed, he did awake in the Night by moonlight, and did see clearly the likeness of this woman grievously oppressing him; in which miserable condition she held him unable to help him self, till near Day. He told *Bishop* of this; but she deny'd it, and threatned him, very much. Quickly after this, being at home on a Lords Day, with the doors shutt about him, he saw a Black Pig approach him; at which he going to kick, it vanished away. Immediately after, sitting down, he saw a Black Thing Jump in at the Window, & come & stand before him. The Body, was like that of a Monkey, the Feet like a Cocks, but the Face much like a mans. He being so extreemly affrighted, that he could not speak; this Monster spoke to him, and said, *I am a Messenger sent unto you, for I understand that you are in some Trouble of Mind, and if you will be ruled by me, you shall want for nothing in this world.* Whereupon he endeavoured to clap his hands upon it; but he could feel no substance, and it jumped out of the window again; but immediately came in by the Porch, though the Doors were shut, and said, *You had better take my Counsel!* He then struck at it with a stick, but struck only the Ground-sel, and broke the Stick. The Arm with which he struck was presently Disenabled, and it vanished away. He presently went out at the Back-Door, and spyed, this *Bishop,* in her Orchard, going toward her House; but he had not power to set one foot forward unto her. Whereupon returning into the House, he was immediately accosted by the Monster he had seen before; which Goblin was now going to Fly at him. whereat he cry'd out, *The whole Armour of God, be between me and you!* So it sprang back, and flew over the Apple Tree; shaking many Apples off the Tree, in its flying over. At its Leap, it flung Dirt with its Feet, against the Stomack of the man; whereon he was then struck Dumb, and so continued for three Days together. Upon the producing of this Testimony, *Bishop* deny'd that she knew this Deponent· yet their two Orchards joined, and they had often had their Little Quarrels for some years together.

XI. *William Stacy, Testifyed,* That receiving Money of this *Bishop* for work done by him, he was gone but a matter of Three Rods from her, and looking for his money, found it unaccountably gone from him. Some time after, *Bishop* asked him whether his Father would grind her grist for her? He demanded why? She Reply'd, *Because Folks count me a witch.* He answered, *No Question, but he will grind it for you.* Being then gone about six Rods from her, with a small Load in his Cart, suddenly the Off-wheel slump't and sunk down into an Hole, upon plain ground, so that the Deponent, was forced to get help for the Recovering of the wheel. But stepping Back to look for the Hole which might give him this disaster, there was none at all to be found. Some time after, he was waked in the Night; but it seem'd as Light as Day, and he perfectly saw the shape of this *Bishop,* in the Room, Troubling of him; but upon her going out, all was Dark again. He charg'd *Bishop*

---

27 **some little controversy,** suggestion that neighborhood quarrels and malice formed part of the explanation for the witchcraft episode • 35 **Black Pig,** evidently the animal "familiar" of the witch, supposedly nourished by blood or by the supernatural teat mentioned in Section XIII • 38 **Black Thing,** the Devil • 51 **Ground-sel,** threshold • 59 **The whole . . . God,** an allusion to the traditional protection from witchcraft the name of God, the Bible, a crucifix or some other sacred object

afterwards with it: and she deny'd it not; but was very angry. Quickly after, this Deponent having been threatned by *Bishop,* as he was in a dark Night going to the Barn, he was very suddenly taken or lifted from the ground, and thrown against a stone wall; After that, he was again hoisted up and thrown down a Bank, at the end of his House. After this again, passing by this *Bishop,* his Horse with a small load, striving to Draw, all his Gears flew to pieces, and the Cart fell down; and this deponent going then to lift a Bag of corn, of about two Bushels; could not budge it, with all his might.

Many other pranks of this *Bishops,* this deponent was Ready to testify. He also testify'd, that he verily Believed, the said *Bishop,* was the Instrument of his Daughter, *Priscilla's* Death; of which suspicion, pregnant Reasons were assigned.

XII. To Crown all, *John Bly,* and *William Bly,* Testify'd, That being Employ'd by *Bridget Bishop,* to help take down the Cellar-wall of the old House, wherein she formerly Lived, they did in Holes of the said old Wall, find several *Poppets,* made up of Rags, and Hogs Brussels, with Headless Pins in them, the points being outward. Whereof she could now give no Account unto the Court, that was Reasonable or Tolerable.

XIII. One thing that made against the Prisoner was, her being evidently convicted of *Gross Lying* in the Court, several Times, while she was making her Plea. But besides this, a Jury of Women, found a preternatural Teat upon her Body; but upon a second search, within three or four Hours, there was no such thing to be seen. There was also an account of other people whom this woman had afflicted. And there might have been many more, if they had been, enquired for. But there was no need of them.

XIV. There was one very strange thing more, with which the Court was newly Entertained. As this Woman was under a Guard, passing by the Great and Spacious Meeting-House of *Salem,* she gave a Look towards the House And immediately a *Daemon* Invisibly Entring the Meeting-house, Tore down a part of it, so that tho' there were no person to be seen there, yet the people at the Noise running in, found a Board, which was strongly fastned with several Nails, transported unto another quarter of the House.

1692·1693

21 **Poppets,** images. The practice described is commonplace in primitive magic and survives in voodooism

From

Curiosa Americana

Cotton Mather's curiosity about science won him election as Fellow of the Royal Society of London in 1713. Between 1712 and 1724 he sent to that organization over eighty letters on more or less scientific subjects. Professor Murdock has shown that Mather's facts were drawn from an account sent him by John Winthrop (1681-1747), a descendant of the famous governor of that name, on September 12, 1717.

10 d. X m. 1717

S$_r$

Tho' we gott so far onward at the Beginning of another Winter, yett we have not forgott the Last: which at the Latter End whereof, we were Entertained & overwhelmed with a *Snow,* which was attended with some Things that were uncommon enough, to afford matter for a letter from us The *Winter* was not so bad as that wherein *Tacitus* tells us that *Corbulo* made his Expedition against the *Parthians.* Nor like that which proved so fatal to the Beasts & Birds, in the Days of the Emperour *Justinian* [nor?] that wherein the very Fishes were killed under the Freezing Sea, when *Phocas* did as

Text. from **Selections from Cotton Mather,** ed K B Murdock • 1 **10d.** X m. 1717, December 10 Prior to 1752, March rather than January was accounted the first month of the year • 9 Tacitus (55?-117?), Roman historian Corbulo, a famous general under Claudius and Nero, was executed at the latter's orders in 67 A D In all probability, Mather's allusions in his first paragraph were derived from some dictionary or classical encyclopedia which listed the great snows of antiquity • 12 Justinian (483-565), Emperor of the eastern Roman empire • 13 Phocas, usurper of the empire of Constantinople, 602-610, and a notoriously cruel tyrant

much to the men whom Tyrants treat like the Fishes of the Sea. But the Conclusion of our *Winter* was hard enough, & was too formidable to be easily forgotten: and of a peece with what you had in *Europe*, a year before. The *Snow* was the Chief Thing that made it so. For tho' rarely does a *Winter* pass us, wherein we may not say with *Pliny, Ingens Hyeme Nivis apud nos copia;* yett the Last *Winter* brought with it a *Snow* that Excelled them all. A *Snow* tis true, not equal to that which once fell and Lay Twenty Cubits high, about the Beginning of *October,* in the parts about the *Euxine Sea.* Nor to that, which the French Annals tell us, kept falling for twenty Nine weeks together. Nor to several mentioned by *Boethius,* wherein vast Numbers of people, and of Cattel, perished; Not to those that *Strabo* finds upon *Caucasus* and *Rhodiginus* in *Armenia.* But yett such an one, and attended with such Circumstances, as may deserve to be Remembred.

On the Twentieth of the Last *February,* there came on a *Snow,* which being added unto what had covered the ground a few Days before, made a Thicker Mantle for our Mother than what was usual: And the Storm with it, was for the following Day so violent, as to make all communication between the Neighbours every where to cease. People for some Hours could not pass from one side of a Street unto another, and the poor Women, who happened at this critical time to fall into Travail, were putt into Hardships which anon produced many odd Stories for us. But on the Twenty-fourth Day of the Month comes *Pelion* upon *Ossa.* Another *Snow* came on, which almost buried the Memory of the former: With a Storm so furious, that Heaven laid an Interdict on the Religious Assemblies throughout the countrey on this Lords-day, the like whereunto had never been seen before. The Indians near an hundred years old, affirm, that their Fathers never told them of any thing that equall'd it. Vast Numbers of Cattel were destroy'd in this Calamity; Whereof some that were of the Stronger Sort, were found standing Dead on their Legs, as if they had been alive, many weeks after, when the Snow melted away. And others had their Eyes glazed over the Ice at such a rate, that being not far from the Sea, they went out of their way, and drowned them there.

One Gentleman, on whose Farms, there were now Lost above eleven hundred *Sheep,* which with other cattel were Interred (Shall I Say, or Inniv'd) in the Snow; writes me That there were Two *Sheep* very singularly circumstanced. For no Less than Eight & Twenty Days after the Storm, the people pulling out the Ruines of above an hundred Sheep, out of a Snow-bank, which Lay sixteen foot high drifted over them, there were Two found alive, which had been there all this time, & kept themselves alive by Eating the Wool of their Dead Companions. When they were taken out, they shed their own Fleeces, but soon gott into good Case again.

Sheep were not the only creatures that Lived unaccountably for whole weeks without their usual Sustenance, entirely buried in the *Snow-drifts.* The *Swine* had a share with the *Sheep* in Strange Survivals. A man had a couple of Young *Hogs,* which he gave over for Dead; But on the twenty-seventh day after their Burial, they made their way out of a *Snow-bank,* at the bottom of which they had found a Little Tansy to feed upon.

The *Poultry* as unaccountably survived as these. *Hens* were found alive, after *Seven Days; Turkeys* were found alive, after *five & Twenty Days;* Buried in the *Snow,* and at a Distance from the Ground; and altogether destitute of any thing to feed them.

The Number of Creatures, that kept a *Rigid Fast,* shutt up in *Snow,* for several weeks together, & were found alive after all, have yielded surprizing stories to us.

The Wild Creaturss of the Woods, (the *Outgoings of the Evening*) made their Descent as well as they could in this Time of Scarcity for them, towards the Sea-side. A vast multitude of Deer for the Same Cause taking the Same Couse, & the Deep Snow Spoiling them of their only Defence: which is, *To Run,* they became such a prey to those Devourers, that it is thought, not one in Twenty Escaped.

But here again occurr'd a Curiosity.

These carniverous Sharpers, and especially the *Foxes,* would make their *Nocturnal Visits,* to the Pens, where

---

7 **Ingens . . . copia.** We have had uncommonly heavy snows this winter • 10 **Twenty Cubits,** thirty or more feet The ancient cubit varied from eighteen to twenty-two inches • 11 **Euxine Sea,** Black Sea • 14 **Boethius** (475?-525?), Roman philosopher • 15 **Strabo** (60 B C.?-24 A D ?), Greek geographer • 16 **Rhodiginus** (1450?-1525), Italian philologist, author of **Antiquae Lectiones** (1516) • 30 **Pelion upon Ossa.** Both are mountains in Thessaly. The giants, at war with the gods, supposedly tried to pile one mountain upon the other, in order to reach the heavens. The expression, of course, means one great thing on top of another • 46 **Inniv'd.** Mather is playing with the Latin **terra** (earth) and **nix** (snow)

the people had their Sheep defended from them. The poor Ewes big with young were so terrified with the frequent Approaches of the *Foxes*, & the Terror had such Impression on them, that most of the *Lambs* brought forth in the Spring following, were of Monsieur *Reinard's* complexion, when the Dams were all either White or Black.

It was remarkable, that immediately after the Fall of the Snow, an infinite multitude of Sparrows, made their Appearance; but then after a short continuance all disappeared.

It is incredible, how much Damage was done to the *Orchards;* For the Snow freezing to a Crust, as high as the Boughs of the Trees, anon Splitt them to peeces. The Cattle also, walking on the Crusted Snow, a dozen foot from the Ground, so fed upon the Trees as very much to damnify them.

The Ocean was in a prodigious Ferment, and after it was over, Vast Heaps of Little Shells were driven ashore, where they were never seen before. Mighty Shoals of Porpoises, also kept a Playday in the Disturbed waves of our Harbours.

The odd Accidents befalling many poor people, whose Cottages were totally covered with the Snow, & the very tops of their Chimneys to be seen, would afford a Story; But there not being any Relacion to philosophy in them, I forbear them. And now, *I am* Satis Terris Nivis.—And here is enough of my Winter-tale. If it serve to no other purpose, yett it will give me an opportunity to tell you, That Nine months ago, I did a thousand times wish myself with you in *Gresham-Colledge*, which is never so horribly Snow'd upon. But instead of so great a satisfaction, all I can attain to, is the pleasure of talking with you in this Epistolary way, and subscribing myself,

Syr, Yours with an Affection that knows no Winter

[Cotton Mather]

D^r^ Woodward

1717•1926

27 **Satis Terris Nivis,** weary of the snow-covered ground • 31 **Gresham-College,** an institution founded with funds left by Sir Thomas Gresham (1519-1579). It was the meeting-place of the Royal Society of London

Manuductio ad Ministerium

The Manuductio ad Ministerium, or Directions for a Candidate of the Ministry (Boston, 1726), has been reprinted three times—in 1781, 1789, and by the Facsimile Text Society in 1938. It describes the proper studies for the prospective clergyman, evaluating all the arts and sciences. Professor Perry Miller has recently pointed out that it represents both a "mature tradition of Puritan scholarship in America" and certain striking departures from the seventeenth-century positions. Particularly forward-looking are Mather's emphasis on practical conduct, his minimizing of logic, his enthusiasm for science, and his failure to insist upon the traditional "doctrine-reasons-uses" pattern of the sermon. His comments on style, however, are a defense of the method and conviction of his own work, akin neither to the "plain style" of his predecessors nor to the fashions of the age of Addison and Steele. The passage is a digression in the course of Mather's comments on literature.

There has been a deal of a do about a STYLE; So much, that I must offer you my Sentiments upon it. There is a *Way of Writing*, wherein the Author endeavours, that the Reader may have *something to the Purpose* in every Paragraph. There is not only a *Vigour* sensible in

Text. the Boston edition of 1726 • 1 **a deal . . . do,** particularly by the enthusiasts for the New Science of Francis Bacon, Robert Boyle, and the Royal Society

every *Sentence,* but the Paragraph is embellished with *Profitable References,* even to something beyond what is *directly spoken.* Formal and Painful *Quotations* are not studied, yet all that could be learnt from them is insinuated The Writer pretends not unto *Reading,* yet he could not have writ as he does if he had not *Read* very much in his Time; and his Composures are not only a *Cloth of Gold,* but also stuck with as many *Jewels,* as the Gown of a Russian Embassador. This *Way of Writing* has been decried by many, and is at this Day more than ever so, for the same Reason, that in the old Story, the *Grapes* were decried, *That they were not Ripe.* A Lazy, Ignorant, Conceited Sett of Authors, would perswade the whole Tribe, to lay aside that *Way of Writing,* for the same Reason that one would have perswaded his Brethren to part with the Encumbrance of their *Bushy Tails.* But however *Fashion* and *Humour* may prevail, they must not think that the Club at their *Coffee-House* is, *All the World;* but there will always be those, who will in this Case be governed by *Indisputable Reason;* And who will think, that the real Excellency of a Book will never ly in *saying of little;* That the less one has for his Money in a Book, 'tis really the more Valuable for it, and that the less one is instructed in a Book, and the more of Superfluous *Margin,* and Superficial *Harangue,* and the less of *Substantial Matter* one has in it, the more tis to be accounted of. And if a more Massy *Way of Writing* be never so much disgusted at This Day, a *Better Gust* will come on, as will some other Thing, *quæ jam Cecidere.* In the mean time, Nothing appears to me more Impertinent and Ridiculous than the *Modern Way,* [I cannot say, *Rule;* For they have *None!*] of *Criticising.* The Blades that set up for *Criticks,* I know not who constituted or commission'd 'em!—they appear to me, for the most part as *Contemptible,* as they are a *Supercilious* Generation. For indeed no Two of them have the same *Style;* and they are as intollerably Cross-grain'd and severe in their Censures upon one another, as they are upon the rest of Mankind. But while each of them, conceitedly enough, sets up for the *Standard of Perfection,* we are entirely at a Loss which *Fine* to follow. Nor can you easily find any one thing wherein they agree for their *Style,* except perhaps a perpetual Care to give us Jejune and Empty Pages, without such *Touches of Erudition* (to speak in the *Style* of an Ingenious Traveller) as may make the Discourses less *Tedious,* and more *Enriching,* to the Mind of him that peruses them. There is much Talk of a *Florid Style,* obtaining among the Pens, that are most in Vogue, but how often would it puzzle one, even with the best Glasses to find the *Flowres!* And if they were to be Chastized for it, it would be with as much of Justice, as *Jerom* was, for being a *Ciceronian.* After all, Every Man will have his own *Style,* which will distinguish him as much as his *Gate:* And if you can attain to that which I have newly described, but always writing so as to give an *Easy Conveyance* unto your *Idea's,* I would not have you by any *Scourging* be driven out of your *Gate,* but if you must confess a *Fault* in it, make a Confession like that of the Lad, unto his Father while he was beating him for his *Versifying.*

However, since every Man will have his own Style, I would pray, that we may learn to treat one another with mutual *Civilities,* and *Condescensions,* and handsomely *indulge* one another in this, as *Gentlemen* do in other Matters.

I wonder what ails People, that they can't let *Cicero* write in the *Style* of *Cicero,* and *Seneca* write in the (much other!) *Style* of *Seneca;* and own that Both may please in their *several Ways.*—But I will freely tell you; what has made me consider the *Humouristr* that set up for *Criticks upon Style,* as the most *Unregardable Set of*

---

11 **the old Story,** of the fox and the grapes, in Aesop's **Fables,** a book which apparently was one of Mather's favorites In 1692 he wrote and circulated in manuscript a number of "Political Fables" • 29 **Gust,** taste • 30 **quæ jam Cecidere,** which now to cut short, i e , so much for that • 53 **Jerom,** St Jerome (331?-420), famous as a stylist The remark is attributed to Erasmus • 68 **Seneca,** Lucius Annaeus Seneca (4 B C ?-65 A D), noted for his short, epigrammatic sentences and the rhetorical ornament, in marked contrast to the long sentences of Cicero

Mortals in the World, is This! Far more Illustrious *Criticks* than any of those to whom I am now bidding Defiance, and no less Men than your *Erasmus's,* and your *Grotius's,* have taxed the *Greek Style* of the *New Testament,* with I know not what *Solæcisms* and *Barbarisms;* And, how many *learned Folks* have Obsequiously run away with the Notion! Whereas 'tis an Ignorant and an Insolent *Whimsey;* which they have been guilty of. It may be (and particularly by an Ingenious *Blackwal,* it has been) Demonstrated, That the Gentlemen are mistaken in every one of their pretended Instances; All the Unquestionable *Classicks,* may be brought in, to convince them of their Mistakes. Those Glorious Oracles are as *pure Greek* as ever was written in the World; and so Correct; so Noble, so Sublime is their *Style,* that never any thing under the Cope of Heaven, but the Old Testament, has equall'd it.

1726

3 **Erasmus's . . . Grotius's,** Desiderius Erasmus (1467?-1536) and Hugo de Groot (1583-1645) Erasmus edited the New Testament in Greek, with a Latin translation, Grotius was the author of a commentary or "annotations" on the Bible • 10 **Blackwal,** Anthony Blackwall (1674-1730), author of **The Sacred Classicks Defended** (1725)

Jonathan Edwards

1703 • 1758

To most Americans Jonathan Edwards is either the founder of the family which has compared so favorably with the ill-fated Jukes that it provides the stock argument for the importance of heredity and education or, and perhaps more commonly, the most sulphurous hellfire preacher of the colonial period To the specialists, however, Edwards is the greatest theologian that America has yet produced, unquestionably one of the most original minds in our country's history. By uniting a passionate love for God and His authority with a genius for logic and system, he made himself the foremost reinterpreter of Calvinism in America; and he has remained, down to the present day, a great bulwark of religion through his powerful affirmation of faith in the reality and the primacy of spiritual experience. Something of his stature is suggested by the fact that he has been compared with such church fathers as Tertullian, St. Augustine, and Calvin; with the philosophers Spinoza, Leibnitz, Berkeley, and Kant, and, for his synthesis of the attitudes of an age, with such widely separated figures as Dante and Emerson.

Edwards was born in 1703 at East Windsor, Connecticut, where his father was minister. Surrounded by sisters (he was the fifth child and the only son in a family of eleven), he received his early education at home. He entered Yale College when that institution was wandering from one little Connecticut town to another, and was graduated before he was seventeen. He spent two additional years at Yale in the study of theology and, after an interval of eight months during which he preached in a Presbyterian church in New York City, three more years as a tutor. Early in 1727 he joined his grandfather, the Rev. Solomon Stoddard, in the church at Northampton, Massachusetts, married,

and became full minister there upon Stoddard's death in 1729.

As a clergyman Edwards developed an absorbing interest in what we would now call the psychology of religion. He welcomed the "awakenings" which came periodically in his church, and eventually announced that he could not conscientiously admit to communion those persons who had made no public relation of religious experience. His congregation, influenced as much, perhaps, by personal as by doctrinal considerations, were unwilling to accept this return to the stricter ways of the first generation in New England, and in 1750 Edwards was dismissed. From 1751 until 1757 he was pastor at Stockbridge, Massachusetts, at that time an Indian mission village on the frontier. He then accepted a call to the presidency of the College of New Jersey (now Princeton University), where he died of smallpox three months after his installation.

The rise of Edwards to leadership as a preacher and theologian is to be traced chiefly in his writings. His precocity as a thinker is demonstrated by a considerable body of philosophical papers written during his residence at Yale and published piecemeal after his death "Of Insects," "Of Being," "Colours," and "Notes on the Mind" have often been cited as evidence of his genius for logical analysis. They show that he developed, independently of George Berkeley, the English philosopher, that philosophical position known as "subjective idealism," which holds that matter has reality only in terms of the perceiving mind. Although this position was fundamental to Edwards' entire intellectual life, he did not publish his conclusions and therefore had no genuine influence upon the philosophical thought of his age.

Soon after his settlement at Northampton, however, he began to publish sermons and case histories which show his absorption in the phenomena of conversion. *A Divine and Supernatural Light* (1734) carefully expounds his belief that a mystical faith is likewise the most logical. *A Faithful Narrative* (1737) describes the first great revival in his church. *Some Thoughts Concerning the Present Revival of Religion in New England* (1742) supports the activities of George Whitefield, an English Methodist who had preached with great effect throughout the colonies, in the face of ridicule by the leading ministers of Boston. These works merit comparison with a famous book of the twentieth century William James' *The Varieties of Religious Experience* (1902) Despite occasional overseriousness, notably in the description of the emotional antics of very young children, Edwards must not be dismissed as a ranting revivalist, playing upon unstable individuals and reveling in the physical contortions of repenting sinners. He could be as skeptical of mass emotion as anyone, but he did believe thoroughly in the possibility and the supreme importance of true conversion He had experienced it himself; he thought he could distinguish between the genuinely "awakened" and the momentarily excited He lent his support, therefore, to those who sought to arouse men to the insuffi-

Secondly, IT evidences his Blessedness also, as it intimates that this Knowlege is above any that *Flesh and Blood* can *reveal.* "This is such Knowlege as my *Father* "*which is in heaven* only can give: It is too high and "excellent to be communicated by such Means as other "Knowlege is. Thou art *blessed,* that thou knowest "that which GOD alone can teach thee.

THE Original of this Knowlege is here declared; both negatively and positively. *Positively,* as GOD is here declared the Author of it. *Negatively,* as 'tis declared that *Flesh and Blood* had *not revealed it.* GOD is the Author of all Knowlege and Understanding whatsoever: He is the Author of the Knowlege, that is obtained by human Learning: He is the Author of all moral Prudence, and of the Knowlege and Skill that Men have in their secular Business. Thus it is said of all in *Israel* that were *wise-hearted,* and skill'd in Embroidering, that GOD had *fill'd* them *with the spirit of Wisdom.* Exod. 28. 3.

GOD is the Author of such Knowlege; but yet not so but that *Flesh and Blood reveals it.* Mortal Men are capable of imparting the Knowlege of human Arts and Sciences, and Skill in temporal Affairs. GOD is the Author of such Knowlege by those Means: *Flesh and Blood* is made use of by GOD as the *mediate* or *second* Cause of it; He conveys it by the Power and Influence of natural Means. But this spiritual Knowlege, spoken of in the Text, is what *God* is the Author of, and none else: He *reveals it* and *Flesh and Blood reveals it not.* He imparts this Knowlege immediately, not making use of any intermediate natural Causes, as he does in other Knowlege.

What had passed in the preceding Discourse naturally occasioned CHRIST to observe this; because the Disciples had been telling, how others did not know him, but were generally mistaken about him, and divided and confounded in their Opinions of him; but *Peter* had declared his assured Faith that he was the *Son of GOD.* Now it was natural to observe, how it was not *Flesh and Blood* that had *revealed it to* him, but GOD; for if this knowlege were dependent on natural Causes or Means, how came it to pass that they, a Company of poor Fishermen, illiterate Men, and Persons of low Education, attain'd to the knowlege of the Truth; while the Scribes and Pharisees, Men of vastly higher advantages, and greater knowlege and sagacity in other matters, remain'd in Ignorance? This could be owing only to the gracious distinguishing Influence and Revelation of the SPIRIT of GOD. Hence, what I would make the Subject of my present Discourse from these Words, is this

DOCTRINE, VIZ.

That there is such a thing, as A SPIRITUAL *and* DIVINE LIGHT, *immediately imparted to the Soul by* GOD, *of a different Nature from any that is obtain'd by natural Means.*

IN what I say on this Subject at this Time, I would

I. SHOW what this *divine Light* is.

II. HOW it is given *Immediately by* GOD, and not *obtain'd by natural Means.*

III. SHOW the Truth of the Doctrine.

AND then conclude with a brief Improvement.

I. I would show *what this* spiritual and divine Light *is.* And in order to it would show,

First, IN a few things *what it is not.* And here,

1. THOSE *Convictions that natural Men may have of their Sin and Misery* is not *this* spiritual and divine Light. Men in a natural Condition may have Convictions of the Guilt that lies upon them, and of the anger of GOD, and their Danger of divine Vengeance. Such Convictions are from *Light* or Sensibleness of Truth: That some Sinners have a greater Conviction of their Guilt and Misery than others, is because some have more *Light,* or more of an Apprehension of Truth than others. And this *Light* and Conviction may be from the Spirit of GOD; *the* SPIRIT *convinces* Men *of Sin:* but yet nature is much more concern'd in it than in the Communication of that *spiritual and divine Light* that is spoken of in the *Doctrine;* 'tis from the Spirit of GOD only as assisting *natural Principles,* and not as infusing any new *Principles. Common Grace* differs from *special,* in that it influences only by assisting of *Nature;* and not by imparting *Grace,* or bestowing any thing *above* Nature. The *Light* that is obtain'd, is wholly *natural,* or of no superiour *Kind* to what meer *Nature* attains to; tho' more of *that kind* be obtained, than would be obtained if Men were left wholly to themselves. Or *in other Words, Common Grace* only assists the Faculties of the Soul to do that more fully, which they do by *Nature;* as *natural* Conscience, or Reason, will by meer *Nature* make a Man sensible of Guilt, and will accuse and condemn him when he has done amiss. Conscience is a

Principle natural to Men; and the Work that it doth *naturally*, or of itself, is to give an Apprehension of *right* and *wrong;* and to suggest to the Mind the Relation that there is between right and wrong, and a Retribution. The Spirit of GOD, in those Convictions which unregenerate Men sometimes have, assists Conscience to do this Work in a further Degree, than it would do if they were left to themselves: He helps it against those Things that tend to stupify it, and obstruct its Exercise. But in the *renewing* and *sanctifying* work of the HOLY GHOST, those things are wrought in the Soul that are *above* Nature; and of which there is nothing of the like kind in the Soul *by* Nature; and they are caused to exist in the Soul habitually, & according to such a stated Constitution or Law, that lays such a Foundation for Exercises in a continued Course, as is called a *Principle* of nature. Not only are remaining *Principles* assisted to do their work more freely and fully, but those *Principles* are restored that were utterly destroyed by the Fall; and the mind thence-forward habitually exerts those acts that the Dominion of Sin had made it as wholly destitute of, as a dead Body is of vital Acts.

THE Spirit of GOD acts in a very different manner in the one Case, from what he doth in the other. He may indeed act *upon* the Mind of a natural Man; but he acts *in* the Mind of a Saint as an *indwelling vital Principle.* He acts upon the Mind of an unregenerate Person as an *extrinsick occasional Agent;* for in acting upon them he doth not unite himself to them; for notwithstanding all his Influences that they may be the Subjects of, they are still *sensual having not the Spirit. Jude* 19. But he unites himself with the Mind of a Saint, takes him for his Temple, actuates and influences him as a new, *supernatural Principle* of Life and Action. There is this Difference; that the Spirit of GOD in acting in the Soul of a Godly Man, exerts and communicates himself there in his own proper Nature. Holiness is the proper Nature of the Spirit of GOD. The HOLY SPIRIT operates in the Minds of the Godly, by uniting himself to them, and living in them, and exerting his own Nature in the Exercise of their Faculties. The Spirit of GOD may act upon a Creature, and yet not, in acting communicate himself. The Spirit of GOD may act upon inanimate Creatures; as the *Spirit moved upon the Face of the Waters,* in the Beginning of the Creation: So the Spirit of GOD may act upon the minds of Men, many ways, and communicate himself no more than when he acts upon an inanimate Creature. *For Instance.* He may excite Thoughts in them, may assist their natural Reason and Understanding, or may assist other natural Principles, and this without any Union with the Soul, but may act, as it were, as upon an external Object. But as he acts in his holy Influences, and spiritual Operations, he acts in a way of peculiar Communication of himself; so that the Subject is thence denominated *Spiritual.*

2. THIS spiritual and divine Light *don't consist in any Impression made upon the Imagination.* 'Tis no *Impression* upon the Mind, as tho' one saw any thing with the bodily Eyes: 'Tis no *Imagination* or *Idea* of an outward *Light* or Glory, or any Beauty of Form or Countenance, or a visible Lustre or Brightness of any Object. The *Imagination* may be strongly impress'd with such things; but this is not *spiritual Light.* Indeed when the Mind has a lively Discovery of spiritual things, and is greatly affected by the Power of divine Light, it may, and probably very commonly doth, much affect the *Imagination:* So that *Impressions* of an outward Beauty or Brightness, may accompany those spiritual Discoveries. But *spiritual Light* is not that *Impression upon the Imagination,* but an exceeding different thing from it. Natural Men may have lively *Impressions* on their *Imaginations;* and we cant determine but that the Devil, *who transforms himself into an Angel of Light,* may cause *Imaginations* of an outward Beauty, or visible Glory, and of Sounds and Speeches, and other such Things; but these are Things of a vastly inferiour Nature to *Spiritual Light.*

3. THIS spiritual Light *is not the suggesting of any new Truths, or Propositions not contain'd in the Word of* GOD. This suggesting of new Truths or Doctrines to the Mind, independent of any antecedent Revelation of those Propositions, either in Word or Writing, is Inspiration; such as the Prophets and Apostles had, and such as some Enthusiasts pretend to. But this *spiritual Light* that I am speaking of, is quite a different thing from Inspiration: It reveals no new Doctrine, it suggests no new Proposition to the Mind, it teaches no new thing of GOD, or CHRIST, or another World, not taught in the Bible; but only gives a due Apprehension of those things that are taught in the word of GOD.

4. *'Tis not every affecting View that Men have of the Things of Religion, that is this* spiritual and divine

Light. Men by meer Principles of Nature are capable of being *affected* with Things that have a special Relation to Religion, as well as other Things. A Person by meer Nature, for Instance, may be liable to be *affected* with the Story of JESUS CHRIST, and the sufferings he underwent, as well as by any other tragical Story: He may be the more *affected* with it from the Interest he conceives Mankind to have in it: Yea he may be *affected* with it without believing it; as well as a Man may be *affected* with what he reads in a Romance, or see's acted in a Stage Play. He may be *affected* with a lively and eloquent description of many pleasant things that attend the state of the Blessed in Heaven; as well as his Imagination be entertain'd by a romantick description of the pleasantness of Fairy Land, or the like. And that common belief of the truth of *the things of Religion,* that Persons may have from Education, or otherwise, may help forward their *affection.* We read in Scripture of many that were greatly *affected* with things of a religious nature, who yet are there represented as wholly graceless, and many of them very ill Men. A Person therefore may have *affecting views of the things of Religion,* and yet be very destitute of *spiritual Light. Flesh* and *Blood* may be the Author of this: One Man may give another an *affecting view* of divine things with but common assistance; but GOD alone can give a *spiritual* Discovery of them.

BUT I proceed to show,

Secondly, Positively, WHAT *this* spiritual and divine Light *is.*

AND it may be thus described, *A true sense of the divine Excellency of the things revealed in the Word of* GOD, *and a conviction of the truth and reality of them, thence arising.*

THIS *spiritual Light* primarily consists in the former of these, *viz.* a real sense and apprehension of the divine Excellency of things revealed in the Word of GOD. A spiritual and saving Conviction of the truth and reality of these things, arises from such a sight of their divine Excellency and Glory; so that this Conviction of their truth is an effect and natural consequence of this sight of their divine Glory. There is therefore in this *spiritual Light,*

1. *A true sense of the divine and superlative excellency of the things of Religion;* a real sense of the excellency of GOD and JESUS CHRIST, and of the work of Redemption, and the ways and works of GOD revealed in the Gospel. There is a *divine* and *superlative* Glory in these things; an Excellency that is of a vastly higher Kind, and more sublime Nature, than in other things; a Glory greatly distinguishing them from all that is earthly and temporal. He that is spiritually *enlightened* truly apprehends and sees it, or has a sense of it. He don't meerly rationally believe that GOD is Glorious, but he has a sense of the Gloriousness of GOD in his Heart. There is not only a rational belief that GOD is holy, and that Holiness is a good thing; but there is a sense of the Loveliness of GOD's Holiness. There is not only a speculatively judging that GOD is gracious, but a sense how amiable GOD is upon that Account; or a sense of the Beauty of this divine Attribute.

THERE is a twofold Understanding or Knowledge of Good that GOD has made the Mind of Man capable of. The *First,* that which is meerly *speculative* and *notional:* As when a Person only speculatively judges, that any thing is, which by the Agreement of Mankind, is called Good or Excellent, *viz.* that which is most to general Advantage, and between which and a Reward there is a suitableness; and the like. And the *other* is that which consists in the sense of the Heart: As when there is a sense of the Beauty, Amiableness, or Sweetness of a thing; so that the Heart is sensible of Pleasure and Delight in the presence of the *Idea* of it. In the *former* is exercised meerly the speculative Faculty, or the Understanding strictly so called, or as spoken of in Distinction from the Will or Disposition of the Soul. In the *latter* the Will, or Inclination, or Heart, are mainly concern'd.

THUS there is a Difference between *having an Opinion* that GOD is holy and gracious, and *having a sense* of the Loveliness and Beauty of that Holiness and Grace. There is a Difference between *having a rational Judgment* that Honey is sweet, and *having a sense* of its sweetness. A Man may have the *Former,* that knows not how honey tasts; but a Man can't have the Latter unless he has an *Idea* of the tast of Honey in his Mind. So there is a difference between *believing* that a Person is Beautiful, and *having a* sense of his Beauty. The *Former* may be obtain'd by hear-say, but the *Latter* only by seeing the Countenance. There is a wide difference between meer *speculative, rational Judging* any thing to be excellent, and *having* a sense of its Sweetness, and Beauty. The *Former* rests only in the Head, Speculation only is concern'd in it; but the Heart is concern'd in

the *Latter.* When the Heart is sensible of the Beauty and Amiableness of a Thing, it necessarily feels Pleasure in the Apprehension. It is implied in a Persons being heartily sensible of the Loveliness of a thing, that the *Idea* of it is sweet and pleasant to his Soul; which is a far different thing from having a rational Opinion that it is excellent.

2. THERE *arises from this* sense of divine Excellency of Things contain'd in the Word of GOD, *a Conviction of the Truth and Reality of them: and that either* directly, *or* indirectly.

First, *Indirectly,* and that two ways.

1. AS *the Prejudices that are in the Heart, against* the truth of divine things, *are hereby removed; so that the Mind becomes susceptive of the due Force of rational Arguments for their Truth.* The Mind of Man is naturally full of *Prejudices against the Truth of divine Things:* It is full of Enmity against the Doctrines of the Gospel; which is a disadvantage to those *Arguments* that prove their *Truth,* and causes them to lose their Force upon the Mind. But when a Person has discovered to him the divine excellency of Christian Doctrines, this destroys the Enmity, removes those *Prejudices,* and sanctifys the Reason, and causes it to lie open to the *Force of Arguments for their Truth.*

HENCE was the different Effect that CHRIST'S Miracles had to convince the Disciples, from what they had to convince the Scribes and Pharisees. Not that they had a stronger Reason, or had their Reason more improved; but their Reason was sanctified, and those blinding *Prejudices,* that the Scribes and Pharisees were under, were removed by the sense they had of the Excellency of CHRIST, and his Doctrine.

2. IT *not only removes the Hinderances of Reason, but positively helps Reason.* It makes even the speculative Notions the more lively. It engages the attention of the Mind, with the more Fixedness and Intenseness to that Kind of Objects; which causes it to have a clearer View of them, and enables it more clearly to see their mutual Relations, and occasions it to take more Notice of them. The *Ideas* themselves that otherwise are dim, and obscure, are by this Means impress'd with the greater Strength, and have a Light cast upon them; so that the Mind can better judge of them. As he that beholds the Objects on the Face of the Earth, when the Light of the Sun is cast upon them, is under greater Advantage to discern them in their true Forms, and mutual Relations, than he that sees them in a dim Star-light or Twilight.

The Mind having a sensibleness of the Excellency of divine Objects, dwells upon them with Delight; and the Powers of the Soul are more awaken'd and enliven'd to employ themselves in the Contemplation of them, and exert themselves more fully and much more to the Purpose. The Beauty and Sweetness of the Objects draws on the Faculties, and draws forth their Exercises: So that Reason it self is under far greater Advantages for its proper and free Exercises, and to attain its proper End, free of Darkness and Delusion. But,

SECONDLY, A true sense of the divine Excellency of the Things of GOD'S Word doth more *directly* and *immediately* convince of the Truth of them; And that because the Excellency of these things is so superlative. There is a Beauty in them that is so divine and Godlike, that is greatly and evidently distinguishing of them from things meerly human, or that Men are the Inventors and Authors of; a Glory that is so high and great, that when clearly seen, commands Assent to their Divinity and Reality. When there is an actual and lively Discovery of this Beauty and Excellency, it won't allow of any such Thought as that it is an Human work, or the Fruit of Mens Invention. This Evidence that they, that are spiritually *enlightned,* have of the Truth of the things of Religion, is a Kind of *intuitive* and *immediate* Evidence. They believe the Doctrines of GOD'S Word to be divine, because they see Divinity in them, i.e. They see a divine, and transcendent, and most evidently distinguishing Glory in them; such a Glory as, if clearly seen, don't leave Room to doubt of their being of GOD, and not of Men.

SUCH a Conviction of the Truth of Religion as this, arising, these Ways, from a sense of the divine Excellency of them, is that true spiritual Conviction, that there is in saving Faith. And this Original of it, is that by which it is most essentially distinguished from that common assent, which unregenerate Men are capable of.

II. I Proceed now to the second Thing proposed, *viz.* To show *how this Light is Immediately given by* GOD, *and not obtain'd by natural Means.* And here,

1. *'Tis not intended that the natural Faculties are not made Use of in it.* The *natural Faculties* are the Subject of this Light: And they are the Subject in such a Manner, that they are not meerly pasive, but active in it; the Acts and Exercises of Man's Understanding are con-

cern'd and made use of in it. GOD in letting in this *Light* into the Soul, deals with Man according to his Nature, or as a rational Creature; and makes Use of his human *Faculties.* But yet this *Light* is not the less *immediately* from GOD for that; tho' the *Faculties are made Use of,* 'tis as the Subject and not as the Cause; and that acting of the *Faculties* in it, is not the Cause, but is either implied in the Thing it self, (in the *Light* that is imparted) or is the Consequence of it. As the Use that we make of our Eyes in beholding various Objects, when the Sun arises, is not the Cause of the Light that discovers those Objects to us.

2. *'Tis not intended that outward Means have no Concern in this Affair.* As I have observed already, 'tis not in this Affair, as it is in Inspiration, where new Truths are suggested: for here is by this *Light* only given a due Apprehension of the same Truths that are revealed in the Word of GOD; and therefore it is not given without the Word. The Gospel is made Use of in this Affair: This *Light* is the *Light of the Glorious Gospel of* CHRIST 2. *Cor.* iv. 4. The Gospel is as a Glass, by which this *Light* is conveyed to us. 1 *Cor.* xiii. 12. *Now we see through a Glass*—But,

3. WHEN it is said that this *Light* is given immediately by GOD, and not obtained by natural Means, *hereby is intended, that 'tis given by* GOD *without making Use of any Means that operate by their own Power, or a natural Force.* GOD makes Use of Means; but 'tis not as mediate Causes to produce this Effect. There are not truly any second Causes of it; but it is produced by GOD *immediately.* The Word of GOD is no proper Cause of this Effect: It don't operate by any *natural Force* in it. The Word of GOD is only made Use of to convey to the Mind the Subject matter of this saving Instruction: And this indeed it doth convey to us by *natural Force* or Influence. It conveys to our Minds these and those Doctrines; it is the Cause of the Notion of them in our Heads, but not of the sense of the divine Excellency of them in our Hearts. Indeed a Person can't have *spiritual Light* without the Word. But that don't argue, that the Word properly causes that *Light.* The Mind can't see the Excellency of any Doctrine, unless that Doctrine be first in the Mind; but the seeing the Excellency of the Doctrine may be immediately from the Spirit of GOD; tho' the conveying of the Doctrine or Proposition it self may be by the Word. So that the Notions that are the Subject matter of this *Light,* are conveyed to the Mind by the Word of GOD; but that due sense of the Heart, wherein this *Light* formally consists, is immediately by the Spirit of GOD. *As for Instance,* that Notion that there is a CHRIST and that CHRIST is holy and gracious, is conveyed to the Mind by the Word of GOD: But the sense of the Excellency of CHRIST by reason of that Holiness and Grace, is nevertheless immediately the Work of the HOLY SPIRIT. I come now,

III. To show *the Truth of the Doctrine;* that is to show *that there is such a Thing as that spiritual Light that has been described, thus immediately let into the Mind by* GOD. And here I would shew briefly, that this Doctrine is both *scriptural,* and *rational.*

First, 'TIS SCRIPTURAL. My Text is not only full to the Purpose, but 'tis a Doctrine that the Scripture abounds in. We are there abundantly taught, that the Saints differ from the Ungodly in this, that they have the Knowlege of GOD, and a sight of GOD, and of JESUS CHRIST. I shall mention but few Texts of many; 1 John 3. 6. *Whosoever sinneth hath not seen him, nor known him.* 3 John 11. *He that doth Good,* is of God; *but he that doth Evil, hath not seen* GOD. John 14. 19. *The world seeth me no more; but ye see me.* John 17.

3. *And this is Eternal Life, that they might know thee, the only true* GOD, *and* JESUS CHRIST *whom thou hast sent.* This Knowlege, or sight of GOD and CHRIST, can't be a meer speculative Knowlege; because it is spoken of as a seeing and knowing, wherein they differ from the Ungodly. And by these Scriptures it must not only be a different Knowlege in Degree and Circumstances, and different in its Effects; but it must be entirely different in Nature and Kind.

AND this Light and Knowlege is always spoken of as immediately given of GOD Mat. 11. 25, 26, 27. *At that time* JESUS *answered and said, I thank thee O Father Lord of Heaven and Earth, because thou hast hid these things from the wise and prudent, and hast revealed them unto Babes; even so Father, for so it seemed good in thy sight. All things are delivered unto me of my Father; and no Man knoweth the Son but the Father; neither knoweth any Man the Father, save the Son, and he to whomsoever the Son will reveal him.* Here this Effect is ascribed alone to the arbitrary Operation, and Gift of GOD, bestowing this Knowlege on whom he will, and distinguishing those with it, that have the least natural Advantage or Means for Knowlege, even

Babes, when it is denied to the *Wise* and *Prudent.* And the imparting of the Knowlege of GOD is here appropriated to the Son of GOD, as his sole Prerogative. And again, 2 Cor. 4. 6. *For* GOD *who commanded the Light to shine out of Darkness, hath shined in our Hearts, to give the Light of the Knowlege of the Glory of* GOD *in the Face of* JESUS CHRIST. This plainly shows, that there is such a thing as a discovery of the divine superlative Glory and Excellency of GOD and CHRIST; and that peculiar to the Saints: and also that 'tis as immediately from GOD, as Light from the Sun: and that 'tis the immediate Effect of his Power and Will; for 'tis compared to GOD'S creating the Light by his powerful Word in the beginning of the Creation; and is said to be by the Spirit of the LORD, in the 18th verse of the preceding Chapter. GOD is spoken of as giving the Knowlege of CHRIST in Conversion, as of what before was hidden and unseen in that Gal. 1. 15, 16. *But when it pleased* GOD, *who separated me from my Mothers Womb, and called me by his Grace, to reveal his Son in me*—. This Scripture also speaks plainly of such a Knowlege of the Word of GOD, as has been described, as the immediate gift of GOD. Psal. 119. 18. *Open thou mine Eyes, that I may behold wondrous things out of thy Law.* What could the Psalmist mean, when he begged of GOD to *open* his *Eyes?* Was he ever blind? Might he not have Resort to the Law and see every Word and Sentence in it when he pleased? And what could he mean by those *wondrous Things?* Was it the wonderful Stories of the Creation, and Deluge, and Israel's passing thro' the red Sea, and the like? were not his Eyes open to read these strange things when he would? Doubtless by *wondrous Things in* GOD'S *Law,* he had Respect to those distinguishing and wonderful Excellencies, and marvellous Manifestations of the divine Perfections, and Glory, that there was in the Commands and Doctrines of the Word, and those Works and Counsels of GOD that were there revealed. So the Scripture speaks of a Knowlege of GOD'S Dispensation, and Covenant of Mercy, and Way of Grace towards his People, as peculiar to the Saints, and given only by GOD, Psal. 25. 14. *The Secret of the* LORD *is with them that fear him; and he will shew them his Covenant.*

AND that a true and saving Belief of the Truth of Religion is that which arises from such a Discovery, is also what the Scripture teaches. As John 6, 40. *And this is the will of him that sent me, that every one which* SEETH *the Son, and* BELIEVETH *on him, may have everlasting Life.* Where it is plain that a true Faith is what arises from a spiritual sight of CHRIST. And John 17. 6, 7, 8. *I have manifested thy Name unto the Men which thou gavest me out of the World*——. *Now they have known that all things whatsoever thou hast given me, are of thee; for I have given unto them the words which thou gavest me, and they have received them, and have known surely that I came out from thee, and they have believed that thou didst send me.* Where CHRIST'S *manifesting* GOD'S *Name* to the Disciples, or giving them the Knowlege of God, was that whereby they knew that CHRIST'S Doctrine was *of* GOD, and that CHRIST himself was *of* him, proceeded *from* him, and was *sent* by him. Again John 12. 44, 45, 46. JESUS *cried and said, He that* believeth *on me,* believeth *not on me, but on him that sent me; And he that* seeth *me* seeth *him that sent me. I am come a* Light *into the World, that whosoever* Believeth *on me should not abide in* Darkness. Their Believing in CHRIST, and spiritually Seeing him, are spoken of as running parallel.

CHRIST condemns the Jews, that they did not know that he was the MESSIAH, and that his Doctrine was true, from an inward distinguishing Tast and Relish of what was divine, in *Luke* 12. 56, 57. He having there blamed the Jews, that though they could *discern the Face of the Sky and of the Earth,* and Signs of the Weather, that yet they could not *discern* those *Times;* or as tis expressed in *Matthew, the Signs of* those *Times;* He adds, *yea and why even of your own selves, judge ye not what is right?* i. e. without extrinsick *Signs.* "Why have ye not that sense of true Excellency, "whereby ye may distinguish that which is holy and "divine? Why have ye not that savour of the things of "GOD, by which you may see the distinguishing Glory, "and evident Divinity of me and my Doctrine?

THE Apostle *Peter* mentions it as what gave them (the Apostles) good and well grounded Assurance of the Truth of the Gospel, that they had seen the divine Glory of CHRIST. 2. *Pet.* 1. 16. *For we have not followed cunningly devised Fables, when we made known unto you, the Power and Coming of our Lord* JESUS CHRIST, *but were Eye-witnesses of his Majesty.* The Apostle has Respect to that visible Glory of CHRIST which they saw in his Transfiguration: That Glory was

semblance of divine Holiness, Majesty, and Grace, that it evidently denoted him to be a divine Person. But if a sight of CHRIST's outward Glory might give a rational Assurance of his Divinity, why may not an Apprehension of his spiritual Glory do so too. Doubtless CHRIST'S spiritual Glory is in itself as distinguishing, and as plainly shewing his Divinity, as his outward Glory; and a great deal more: for his spiritual Glory is that wherein his Divinity consists; and the outward Glory of his Transfiguration shew'd him to be divine, only as it was a Remarkable Image or Representation of that spiritual Glory. Doubtless therefore he that has had a clear sight of the spiritual Glory of CHRIST, may say, *I have not followed cunningly devised Fables, but* have been an *Eye-witness of his Majesty,* upon as good Grounds as the Apostle, when he had Respect to the outward Glory of Christ, that he had seen.

But this brings me to what was proposed next *viz.* to show that,

Secondly, THIS Doctrine is RATIONAL.

1. 'TIS rational *to suppose that there is really such an Excellency in divine things, that is so transcendent and exceedingly different from what is in other things, that if it were seen would most evidently distinguish them.* We can't *rationally* doubt but that Things that are *divine,* that appertain to the supreme Being, are vastly different from Things that are *human;* that there is that God-like, high, and glorious Excellency in them, that does most remarkably difference them from the things that are of Men; insomuch that if the difference were but seen, it would have a convincing, satisfying influence upon any one, that they are what they are, viz. *divine.* What Reason can be offered against it? Unless we would argue that GOD is not remarkably distinguished in Glory from Men.

IF CHRIST should now appear to any One as he did on the Mount at his Transfiguration; or if he should appear to the World in the Glory that he now appears in Heaven, as he will do at the Day of Judgment; without doubt, the Glory and Majesty that he would appear in, would be such as would satisfy every One, that he was a divine Person, and that Religion was true: And it would be a most reasonable, and well grounded Conviction too. And why may there not be that Stamp of Divinity, or divine Glory on the word of GOD, on the Scheme and Doctrine of the Gospel, that may be in provided it be but seen? 'Tis rational to suppose, that when GOD speaks to the World, there should be something in his Word or Speech vastly different from MEN'S Word. Supposing that GOD never had spoken to the World, but we had Noticed that He was about to do it; that he was about to Reveal himself from Heaven, and speak to us immediately himself, in divine Speeches or Discourses, as it were from his own Mouth; or that he should give us a Book of his own inditing; after what manner should we expect that he would speak? Would it not be *rational* to suppose, that his Speech would be exceeding different from Men's Speech, that he should speak like a GOD; that is, that there should be such an Excellency and sublimity in his Speech or Word, such a Stamp of Wisdom, Holiness, Majesty, and other divine Perfections, that the word of Men, yea of the wisest of Men, should appear mean and base in Comparison of it? Doubtless it would be thought *rational* to expect this, and *unreasonable* to think otherwise. When a wise Man speaks in the Exercise of his Wisdom, there is something in every thing he says, that is very distinguishable from the Talk of a little Child. So, without doubt, and much more, is the Speech of GOD, (if there be any such Thing as the Speech of GOD,) to be distinguished from that of the wisest of Men; agreably to *Jer.* 23. 28, 29. GOD having there been reproving the false Prophets that prophesied in his Name, and pretended that what they spake was his Word, when indeed it was their own Word, says, *The Prophet that hath a Dream, let him tell a Dream; and he that hath my Word, let him speak my Word faithfully:* WHAT IS THE CHAFF TO THE WHEAT? *Saith the* LORD. *Is not my Word like as a Fire, saith the* LORD, *and like a Hammer that breaketh the Rock in Pieces?*

2. *IF there be such a distinguishing Excellency in divine things; 'tis* rational *to suppose that there may be such a thing as seeing it.* What should hinder but that it may be seen? 'Tis no Argument that there is no such Thing as such a distinguishing Excellency, or that, if there be, that it can't be seen, that some don't see it, tho' they may be discerning Men in temporal Matters. It is not *rational* to suppose, if there be any such Excellency in divine Things, that wicked Men should see it. 'Tis not *rational* to suppose, that those whose Minds are full of spiritual Pollution, and under the Power of filthy Lusts, should have any Relish or Sense of divine Beauty,

or Excellency; or that their Minds should be susceptive of that *Light* that is in its own Nature so pure and heavenly. It need not seem at all strange, that Sin should so blind the Mind, seeing that Mens particular natural Tempers and Dispositions will so much blind them in secular Matters; as when Mens natural Temper is melancholly, jealous, fearful, proud, or the like.

3. 'Tis rational *to suppose that this Knowlege should be given immediately by* God, *and not be obtain'd by natural means.* Upon what account should it seem *unreasonable,* that there should be any *immediate* Communication between God and the Creature? 'Tis strange that Men should make any matter of difficulty of it. Why should not He that made all things, still have something *immediately* to do with the Things that he has made? Where lies the great difficulty, if we own the Being of a God, and that he created all things out of Nothing, of allowing some immediate Influence of God on the Creation still. And if it be *reasonable* to suppose it with Respect to any Part of the Creation, 'tis Especially so with Respect to reasonable intelligent Creatures; who are next to God in the Gradation of the different Orders of Beings, and whose Business is most *immediately* with God; who were made on Purpose for those Exercises that do respect God, and wherein they have *nextly* to do with God: for *Reason* teaches that Man was made to serve and glorify his Creator. And if it be *rational* to suppose that God immediately communicates himself to Man in any Affair, it is in this. 'Tis *rational* to suppose that God would reserve that Knowlege and Wisdom, that is of such a divine and excellent Nature, to be bestowed *immediately* by himself, and that it should not be left in the Power of second Causes. Spiritual Wisdom and Grace is the highest and most *excellent* Gift that ever God bestows on any Creature: In this the highest Excellency and Perfection of a rational Creature consists. 'Tis also immensely the most *important* of all divine Gifts: 'Tis that wherein Mans Happiness consists, and on which his everlasting Welfare depends. How *rational* is it to suppose that God, however he has left meaner Goods and lower Gifts to second Causes, and in some sort in their Power, yet should reserve this most excellent, divine, and important of all divine Communications, in his own Hands, to be bestowed *immediately* by himself, as a thing too great for second Causes to be concern'd in? 'Tis *rational* to suppose that this Blessing should be *immediately* from God; for there is no Gift or Benefit that is in it self so nearly related to the divine Nature, there is nothing the Creature receives that is so much *of* God, *of* his Nature, so much a Participation of the Deity: 'Tis a Kind of Emanation of God's Beauty, and is related to God as the Light is to the Sun. 'Tis therefore congruous and fit, that when it is given of God, it should be nextly from himself, and by himself, according to his own Sovereign Will.

'Tis *rational* to suppose, that it should be beyond a Man's Power to obtain this Knowlege, and *Light,* by the meer Strength of natural Reason; for 'tis not a Thing that belongs to Reason, to see the Beauty and Loveliness of spiritual things; it is not a speculative thing, but depends on the Sense of the Heart. Reason indeed is necessary in order to it, as 'tis by Reason only that we are become the Subjects of the means of it; which means I have already shown to be necessary in order to it, though they have no proper causal Influence in the Affair. 'Tis by Reason that we become possessed of a notion of those Doctrines that are the Subject Matter of this *divine Light;* and Reason may many ways be indirectly, and remotely an Advantage to it. And Reason has also to do in the Acts that are immediately consequent on this Discovery: A seeing the Truth of Religion from hence, is by Reason; though it be but by one step, and the Inference be immediate. So Reason has to do in that accepting of, and trusting in Christ, that is consequent on it. But if we take Reason strictly, not for the Faculty of mental Perception in general, but for Ratiocination, or a Power of Inferring by Arguments; I say if we take Reason thus, the perceiving of spiritual Beauty and Excellency no more belongs to Reason, than it belongs to the Sense of feeling to perceive Colors, or to the Power of seeing to perceive the Sweetness of Food. It is out of Reason's province to perceive the Beauty or Loveliness of any thing: Such a Perception don't belong to that Faculty. Reason's Work is to perceive Truth and not Excellency. 'Tis not Ratiocination that gives Men the Perception of the Beauty and Amiableness of a Countenance; tho' it may be many ways indirectly an advantage to it; yet 'tis no more Reason that immediately perceives it, than it is Reason that perceives the Sweetness of Honey: It depends on the Sense of the Heart. Reason may determine that a

that Honey is sweet to others; but it will never give me a Perception of its Sweetness.

I will conclude with a very brief *Improvement* of what has been said.

FIRST. THIS Doctrine may lead us *to reflect* on the Goodness of GOD, that has so ordered it, that a saving Evidence of the Truth of the Gospel is such, as is attainable by Persons of mean Capacities, and Advantages, as well as those that are of the greatest Parts and Learning. If the Evidence of the Gospel depended only on History, and such Reasonings as learned Men only are capable of, it would be above the Reach of far the greatest part of Mankind. But Persons, with but an ordinary Degree of Knowlege, are capable without a long and subtil Train of Reasoning, to see the divine Excellency of the things of Religion: They are capable of being taught by the Spirit of GOD, as well as learned Men. The Evidence that is this Way obtained, is vastly better and more satisfying, than all that can be obtain'd by the Arguings of those that are most Learned, and greatest Masters of Reason. And Babes are as capable of knowing these things, as [are] the wise and prudent; and they are often hid from these, when they are revealed to those. 1 Cor. 1. 26, 27. *For ye see your Calling Brethren, how that not many wise Men, after the Flesh, not many mighty, not many noble are called. But* GOD *hath chosen the foolish things of the World—.*

Secondly. THIS Doctrine may well put us upon *examining* ourselves, whether we have ever had his *divine Light,* that has been described, let into our Souls. If there be such a thing indeed, and it ben't only a Notion or Whimsy of Persons of weak and distempered Brains, then doubtless 'tis a thing of great Importance, whether we have thus been taught by the Spirit of GOD; whether *the Light of the Glorious Gospel of* CHRIST, *who is the Image of* GOD *hath shined into us, giving us the Light of the Knowlege of the Glory of* GOD *in the Face of* JESUS CHRIST, whether we have *seen the Son, and believed on him,* or have that Faith of Gospel Doctrines that arises from a spiritual Sight of CHRIST.

Thirdly. ALL may hence be *exhorted,* earnestly *to seek* this *spiritual Light.* To influence and move to it, the following things may be consider'd.

1. THIS is the most *excellent and divine* Wisdom, that any Creature is capable of. 'Tis more excellent all the Knowlege of the greatest Philosophers or Statesmen. Yea the least Glimpse of *the Glory of* GOD *in the Face of* CHRIST doth more exalt and enoble the Soul, than all the Knowlege of those that have the greatest speculative Understanding in Divinity, without grace. This Knowlege has the most noble Object that is, or can be, *viz.* the divine Glory and Excellency of GOD, and CHRIST. The Knowlege of these Objects is that wherein consists the most excellent Knowlege of the Angels, yea, of GOD himself,

2. THIS Knowlege is that which is above all others *Sweet and Joyful.* Men have a great deal of Pleasure in human Knowlege, in Studies of natural things; but this is nothing to that Joy which arises from this *divine Light* shining into the Soul. This *Light* gives a View of those things that are immensely the most exquisitely Beautiful, and capable of delighting the Eye of the Understanding. This *spiritual Light* is the dawning of the Light of Glory in the Heart. There is nothing so powerful as this to support Persons in Affliction, and to give the Mind Peace and Brightness, in this stormy and dark World.

3. THIS Light is such as *effectually influences the Inclination, and Changes the Nature of the Soul.* It assimilates the Nature to the divine Nature, and changes the Soul into an Image of the same Glory that is beheld. 2 Cor. 3. 18. *But we all with open Face beholding as in a Glass the Glory of the Lord, are changed into the same Image, from Glory to Glory, even as by the Spirit of the Lord.* This Knowlege will wean from the World, and raise the Inclination to heavenly things. It will turn the Heart to GOD as the Fountain of Good, and to choose him for the only Portion. This *Light,* and this only, will bring the Soul to a saving Close with CHRIST. It conforms the Heart to the Gospel, mortifies its Enmity and Opposition against the Scheme of Salvation therein revealed: It causes the Heart to embrace the joyful Tidings, and entirely to adhere to, and acquiesce in the Revelation of CHRIST as our Saviour: It causes the whole Soul to accord and Symphonize with it, admitting it with entire Credit and Respect, cleaving to it with full Inclination and Affection. And it effectually disposes the Soul to give up it self entirely to CHRIST.

4. THIS Light and this only *has its Fruit in a uni-*

versal Holiness of Life. No meerly notional or speculative Understanding of the Doctrines of Religion, will ever bring to this. But this *Light* as it reaches the bottom of the Heart, and changes the Nature, so it will effectually dispose to an universal Obedience. It shews GOD'S worthiness to be obeyed and served. It draws forth the Heart in a sincere Love to GOD, which is the only Principle of a true, gracious and universal Obedience. And it convinces of the Reality of those glorious Rewards that GOD has promised to them that obey him.

1733•1734

A PURITAN POET: Taylor

Edward Taylor

c. 1645 • 1729

Very few biographical facts concerning Edward Taylor are known. He was born in Coventry, England. In 1668, at the age of twenty-two or twenty-three, he left England, presumably for liberty of conscience, and came to Boston, where he was cordially received by Increase Mather. He was admitted to Harvard College and was graduated in the Class of 1671. A lifelong friendship with Samuel Sewall, of the same class, dated from his college years. Following his graduation, Taylor became pastor of the church at Westfield, Massachusetts. He lived quietly at Westfield during the remaining fifty-eight years of his life, serving the community for that long period both as minister and as physician. Twice married, he had seven children by his first wife and six by his second. Ezra Stiles, his grandson (President of Yale, 1778-1795), described him as "a man of small stature but firm: of quick Passions—yet serious and grave."

Taylor did not write his poems for publication. They must have been read by very few during the poet's lifetime, and for more than two centuries after his death their existence was almost completely forgotten. The recent publication of a small portion of Taylor's manuscripts has greatly enriched our poetical heritage from colonial times. Indeed, Taylor's poetry takes rank as one of the classics of New England literature.

Taylor wrote in the "metaphysical" tradition, the tradition of Donne, Crashaw, and Herbert, and he must have been influenced by their poetry, particularly by Herbert's. His structure follows the "metaphysical" pattern; that is, to borrow T. S. Eliot's description, "the elaboration of a figure of speech to the farthest stage to which ingenuity can carry it" and "a development by rapid association of thought." The thought and emotion are elaborated in homely metaphors drawn straight from the poet's own experience. The weaving of cloth affords the metaphorical vehicle in one poem; the making of bread, in another; the cultivation of flowers, in a third. Music and musical instruments are a rich source of figurative language—the many musical references help to refute the popular notion that the early Puritans were hostile to music.

Taylor's poems help to refute also the notion that Puritans were, without exception, grim and strenuously unhappy. Taylor celebrates the joys of the Christian

life; to him the Christian experience was something quite delightful. His saints, unlike Bunyan's plodding pilgrim, are "encoached for Heaven," and they sing as they ride. The Christian life is a rich banquet with music. The water of life is "beer"; the bread of life, "Heaven's Sugar Cake." He experiences a mystical union with the divine. He describes in brilliant, ardent verses Christ's ascent into Heaven and longs for wings to follow after.

From • God's Determinations

The Glory of and Grace in the Church Set Out

Come now behold
Within this Knot What Flowers do grow
Spanglde like gold:
Whence Wreaths of all Perfumes do flow.
Most Curious Colours of all Sorts you shall
With all Sweet Spirits scent. Yet that's not all.

Oh! Look, and finde
These Choicest Flowers most richly Sweet
Are Disciplinde
With Artificiall Angells meet.
An heap of Pearls is precious: but they Shall
When Set by Art Excell. Yet that's not all.

Christ's Spirit showers
Down in his Word, and Sacraments
Upon these Flowers
The Clouds of Grace Divine Contents.
Such things of Wealthy Blessings on them fall
As make them sweetly thrive. Yet that's not all.

Yet Still behold!
All flourish not at once. We see
While Some Unfold
Their blushing Leaves, some buds there bee.
Here's Faith, Hope, Charity in flower, which call
On yonders in the Bud. Yet that's not all.

But as they stand
Like Beauties reeching in perfume
A Divine Hand
Doth hand them up to Glories room:
Where Each in sweet'ned Songs all Praises shall
Sing all ore Heaven for aye And that's but all

1939

The Joy of Church Fellowship Rightly Attended

In Heaven soaring up, I dropt an Eare
On Earth: and oh! sweet Melody:
And listening found it was the Saints who were
Encoacht for Heaven that sang for Joy
For in Christs Coach they sweetly sing,
As they to Glory ride therein.

Oh! joyous hearts! Enfir'de with holy Flame!
Is Speech thus tassled with praise?
Will not your inward fire of Joy contain;
That it in open flames doth blaze?
For in Christs Coach Saints sweetly sing,
As they to Glory ride therein.

And if a string do slip, by Chance, they soon
Do screw it up again: whereby
They set it in a more melodious Tune
And a Diviner Harmony.
For in Christs Coach they sweetly sing
As they to Glory ride therein.

The Glory . . . Out • 26 **reeching**, reeking. Obviously, the word does not have the unpleasant connotation of modern usage

The Joy . . . Attended • 8 **tassled**, tasseled, adorned

In all their Acts, publick and private, nay,
And secret too, they praise impart.
But in their Acts Divine and Worship, they
With Hymns do offer up their Heart.
Thus in Christs Coach they sweetly sing
As they to Glory ride therein.

Some few not in; and some whose Time and Place
Block up this Coaches way do goe
As Travellers afoot: and so do trace
The Road that gives them right thereto;
While in this Coach these sweetly sing
As they to Glory ride therein.

1939

Huswifery

The poem is a good example of Taylor's ingenious elaboration of a single metaphor.

Make me, O Lord, thy Spinning Wheele compleat.
Thy Holy Worde my Distaff make for mee.
Make mine Affections thy Swift Flyers neate
And make my Soule thy holy Spoole to bee
My Conversation make to be thy Reele
And reele the yarn thereon Spun of thy Wheele.

Make me thy Loome then, knit therein this Twine:
And make thy Holy Spirit, Lord, winde quills.
Then weave the Web thyselfe. The yarn is fine.
Thine Ordinances make my Fulling Mills.
Then dy the Same in Heavenly Colours Choice,
All pinkt with Varnisht Flowers of Paradise.

Then cloath therewith mine Understanding, Will,
Affections, Judgment, Conscience, Memory;
My Words, and Actions, that their shine may fill
My wayes with glory and thee glorify.
Then mine apparell shall display before yee
That I am Cloathd in Holy robes for glory.

1939

From • Sacramental Meditations

The Experience

The poem seems to express an authentic mystical experience, the union of the soul with God, and should be compared with an even more notable account of such an experience in Jonathan Edwards' "Personal Narrative."

Oh! that I alwayes breath'd in such an aire,
As I suckt in, feeding on sweet Content!
Disht up unto my Soul ev'n in that pray're
Pour'de out to God over last Sacrament.
What Beam of Light wrapt up my Sight to finde
Me neerer God than ere Came in my minde?

Most Strange it was! But yet more Strange that shine
Which filld my Soul then to the brim to spy
My nature with thy Nature all Divine
Together joynd in Him thats Thou, and I.
Flesh of my Flesh, Bone of my Bone: there's run
Thy Godhead, and my Manhood in thy Son.

Oh! that that Flame which thou didst on me Cast
Might me enflame, and Lighten everywhere.
Then Heaven to me would be less at last,
So much of heaven I should have while here.
Oh! Sweet though Short! I'le not forget the same.
My neerness, Lord, to thee did me Enflame.

I'le Claim my Right: Give place, ye Angells Bright.
Ye further from the Godhead stande than I.
My Nature is your Lord; and doth Unite
Better than Yours unto the Deity.
Gods Throne is first and mine is next; to you
Onely the place of Waiting-men is due.

Huswifery, housewifery • 3 **Flyers**, the pair of arms in a spinning wheel which revolve around the bobbin to twist the yarn • 8 **quills**, spindles or spools • 10 **Fulling Mills**, a mill for cleaning, shrinking, and thickening cloth. This is an especially happy analogy, since the ordinances of the church may be supposed to have a similarly purifying and fortifying effect

Oh! that my Heart thy Golden Harp might bee
Well tun'd by Glorious Grace, that ev'ry string
Screw'd to the highest pitch, might unto thee
All Praises wrapt in sweetest Musick bring.
I praise thee, Lord, and better praise thee would
If what I had, my heart might ever hold. 30
1939

Meditation Eight

I kening through Astronomy Divine
The Worlds bright Battlement, wherein I spy
A Golden Path my Pensill cannot line
From that bright Throne unto my Threshold ly.
And while my puzzled thoughts about it pore
I finde the Bread of Life in't at my doore.

When that this Bird of Paradise put in
This Wicker Cage (my Corps) to tweedle praise
Had peckt the Fruite forbid: and so did fling
Away its Food: and lost its golden dayes, 10
It fell into Celestiall Famine sore:
And never could attain a morsell more.

Alas! alas! Poore Bird, what wilt thou doe?
This Creatures field no food for Souls e're gave.
And if thou knock at Angells dores they show
An Empty Barrell: they no Soul bread have.
Alas! Poore Bird, the Worlds White Loafe is done.
And cannot yield thee here the smallest Crumb.

In this sad state, Gods Tender Bowells run
Out Streams of Grace: And he to end all strife 20
The Purest Wheate in Heaven, his deare-dear Son
Grinds, and kneads up into this Bread of Life.
Which Bread of Life from Heaven down came and stands
Disht on thy Table up by Angells Hands.

Did God mould up this Bread in Heaven, and bake,
Which from his Table came, and to thine goeth?
Doth he bespeake thee thus, This Soule Bread take;
Come, Eate thy fill of this, thy Gods White Loafe?
Its Food too fine for Angells, yet come, take
And Eate thy fill. Its Heavens Sugar Cake. 30

What Grace is this knead in this Loafe? This thing
Souls are but petty things it to admire.
Yee Angells, help: This fill would to the brim
Heav'ns whelm'd-down Chrystall meele Bowle, yea and higher.
This Bread of Life dropt in thy mouth doth Cry:
Eate, Eate me, Soul, and thou shalt never dy.
1939

Meditation Twenty

The poem describes Christ's ascension to Heaven.

View, all ye eyes above, this sight which flings
Seraphick Phancies in Chill Raptures high:
A Turffe of Clay, and yet bright Glories King:
From dust to Glory Angell-like to fly.
A Mortall Clod immortaliz'de, behold,
Flyes through the skies swifter than Angells could.

Upon the Wings he of the Winde rode in
His Bright Sedan, through all the Silver Skies,
And made the Azure Cloud, his Charriot, bring
Him to the Mountain of Celestiall joyes. 10
The Prince o'th'Aire durst not an Arrow spend,
While through his Realm his Charriot did ascend.

He did not in a Fiery Charriot's shine,
And Whirlewinde, like Elias upward goe.

The Experience • 27 **highest pitch.** The tightening of the strings of musical instruments is a favorite figure with Taylor • 30 **ever,** always, constantly, thus repeating the thought of the first line

Meditation Eight • 6 **Bread of Life.** John 6.35. "And Jesus said unto them, I am the bread of life . . ." • 7 **Bird of Paradise,** the soul • 8 **tweedle,** sing • 11 **Celestiall Famine,** a lack of spiritual food • 14 **Creatures field,** the world • 19 **Bowells,** the seat of pity; hence, compassion • 34 **whelm'd-down,** filled to overflowing

Meditation Twenty • 11 **Prince . . . Aire,** Satan, who is described in Ephesians 2 2 as "the prince of the power of the air" • 14 **Elias,** Elijah, whose ascent to heaven is described in II Kings 2:11

But th' golden Ladders Jasper rounds did climbe
Unto the Heavens high from Earth below.
Each step had on a Golden Stepping Stone
Of Deity unto his very Throne.

Methinks I see Heavens sparkling Courtiers fly,
In flakes of Glory down him to attend;
And heare Heart Cramping notes of Melody
Surround his Charriot as it did ascend:
Mixing their Musick, making e'ry string
More to inravish, as they this tune sing.

God is Gone up with a triumphant shout:
The Lord with sounding Trumpets melodies:
Sing Praise, sing Praise, sing Praise, sing Praises out,
Unto our King sing praise seraphick-wise!
Lift up your Heads, ye lasting Doors, they sing.
And let the King of Glory Enter in.

Art thou ascended up on high, my Lord,
And must I be without thee here below?
Art thou the sweetest joy the Heavens afford?
Oh! that I with thee was! what shall I do?
Should I pluck Feathers from an Angells Wing,
They could not waft me up to thee my King.

Lend me thy Wings, my Lord, I'st fly apace,
My Soules Arms stud with thy strong Quills, true Faith;
My Quills then Feather with thy Saving Grace,
My Wings will take the Winde thy Word displai'th.
Then I shall fly up to thy glorious Throne
With my strong Wings whose Feathers are thine own.

1939

Meditation Sixty, Second Series

This poem, whose theme is the "water of life," may be regarded as a companion piece to "Meditation Eight," whose theme is the "bread of life."

Ye Angells bright, pluck from your Wings a Quill;
Make me a pen thereof that best will write:
Lende me your fancy and Angellick skill
To treate this Theme, more rich than Rubies bright.
My muddy Inke and Cloudy fancy dark
Will dull its glory, lacking highest Art.

An Eye at Centre righter may describe
The Worlds Circumferentiall glory vast,
As in its nutshell bed it snugs fast ti'de,
Than any angells pen can glory Cast
Upon this Drink drawn from the Rock, tapt by
The Rod of God, in Horeb, typickly.

Sea water strain'd through Minerall, Rocks, and Sands,
Well Clarifi'de by Sunbeams, Dulcifi'de,
Insipid, Sordid, Swill, Dishwater stands.
But here's a Rock of Aqua-Vitae tri'de!
When once God broacht it, out a River came
To bath and bibble in, for Israels train.

Some rocks have sweat. Some Pillars bled out tears,
But here's a River in a Rock up tunn'd,
Not of Sea Water nor of Swill. It's beere!
No Nectar like it! Yet it once unbungd,
A River down out runs through ages all,
A Fountain opte, to wash off Sin and Fall.

Christ is this Horebs Rock, the streames that slide
A River is of Aqua Vitae Deare,
Yet costs us nothing, gushing from his side:
Celestiall Wine our sinsunk souls to cleare.

Meditation Twenty • 29 Lift . . . in, based upon Psalms 24:7 • 37 I'st, I wouldst

Meditation Sixty • 11 Rock . . . Horeb, an allusion to the smiting of the rock by Moses, recorded in Numbers 20:11 • 12 typickly. The rock from which the water flowed typified, or prefigured, Christ. Compare I Corinthians 10:4: "And did all drink the same spiritual drink: for they drank of that spiritual Rock that followed them: and that Rock was Christ" • 16 Aqua-Vitae, brandy • 21 beere. Good Puritans had no aversion to alcoholic beverages, if moderately used. (Compare Sewall's Diary, August 25, 1709.) One is nevertheless astonished at the audacity of the poet in using beer as an emblem of the "spiritual drink" • 24 opte, opened

This Rock and Water, Sacramentall Cup
Are made, Lords Supper Wine for us to sup.

This Rock's the Grape that Zions Vineyard bore,
Which Moses Rod did smiting pound, and press,
Untill its blood, the brooke of Life, run ore:
All Glorious Grace, and Gracious Righteousness.
We in this brook must bath: and with faiths quill
Suck Grace and Life out of this Rock our fill.

Lord, oynt me with this Petro oyle I'm sick.
Make me drink Water of the Rock I'm dry.
Me in this fountain wash: my filth is thick.
I'm faint: give Aqua Vitae or I dy
If in this stream thou cleanse and Chearish mee,
My Heart thy Hallelujahs Pipe shall be

1939

Meditation One Hundred and Ten, Second Series

The Angells sung a Carole at thy Birth,
My Lord, and thou thyselfe didst sweetly sing
An Epinicioum at thy Death on Earth.
And order'st thine, in memory of this thing,
Thy Holy Supper, closing it at last
Up with an Hymn, and Choakst the foe thou hast.

This Feast thou madst in memory of thy death:
Which is disht up most graciously: and towers
Of reeching vapours from thy Grave (Sweet breath)
Aromatize the Skies That sweetest Showers,
Richly perfumed by the Holy Ghost,
Are rained thence upon the Churches Coast.

Thy Grave beares flowers to dress thy Church withall,
In which thou dost thy Table dress for thine.
With Gospell Carpet, Chargers, Festivall
And Spirituall Venison, White Bread and Wine·
Being the Fruits thy Grave brings forth and hands
Upon thy Table where thou waiting standst.

Dainties most rich, all spiced o're with Grace,
That grow out of thy Grave do deck thy Table.
To entertain thy Guests, thou callst, and place
Allowst, with welcome. (and this is no Fable),
And with these Guests I am invited to't,
And this rich banquet makes me thus a Poet.

Thy Cross planted within thy Coffin beares
Sweet Blossoms and rich Fruits, whose steams do rise
Out of thy Sepulcher and purge the aire
Of all Sins damps and fogs that Choake the Skies.
This Fume perfumes Saints hearts as it out peeps,
Ascending up to bury thee in th'reechs.

Joy stands on tiptoes all the while thy Guests
Sit at thy Table, ready forth to sing
Its Hallilujahs in sweet musicks dress,
Waiting for Organs to imploy herein.
Here matter is allowd to all, rich, high,
My Lord, to tune thee Hymns melodiously.

Oh! make my heart thy Pipe: the Holy Ghost
The Breath that fills the same and Spiritually.
Then play on mee, thy pipe, that is almost
Worn out with piping tunes of Vanity.
Winde musick is the best, if thou delight
To play the same thyselfe, upon my pipe.

Hence make me, Lord, thy Golden Trumpet Choice,
And trumpet thou thyselfe upon the same
Thy heart enravishing Hymns with Sweetest Voice.
When thou thy Trumpet soundst, thy tunes will flame.

Meditation Sixty • 37 **Petro, of the rock**

Meditation One Hundred and Ten • 3 **Epinicioum,** epinicion, a song of triumph • 9 **reeching,** the "reeking" atmosphere, a cloud of incense • 31 **Joy . . . tiptoes.** Taylor's editor suggests that the phrase owes something to George Herbert's "The Church Militant": "Religion stands on tip-toe in our land Readie to pass to the American strand"

My heart shall then sing forth thy praises sweet,
When sounded thus with thy Sepulcher reech.

Make too my Soul thy Cittern, and its wyers
Make my affections: and rub off their rust
With thy bright Grace: and screw my Strings up higher,
And tune the same to tunes thy praise most Just.

Ile close thy Supper then with Hymns most sweet,
Burr'ing thy Grave in thy Sepulcher's reech.

Chapter Two

The New Republic

Chapter 2

The New Republic

1765 • 1829

TO SECURE THE BLESSINGS OF LIBERTY. "We, the people of the United States, in order to form a more perfect union, establish justice, insure domestic tranquillity, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity, do ordain and establish this constitution for the United States of America."

—U. S. Constitution

I. Intellectual Currents

A NEW and a PROUD NATION

The most distinctive aspects of the second great stage of American development were the stabilization of independent political institutions and the corresponding cultural nationalism which pervaded almost every phase of American thought. The stage is often called the early national period. Although various other dates might be given, it is justifiably described as beginning with the Stamp Act Congress of 1765, wherein the united political power of Americans was first demonstrated, and as ending in 1829 with the inauguration of Andrew Jackson as seventh President of the United States, an event which was a triumph for the common man.

These sixty-four years present a picture of world-shaking change. This was the age of the American Revolution, the ratification of the Constitution, and the development of the two-party system of government. It was the age of George Washington and John Paul Jones, of Shays' Rebellion and the Whiskey Insurrection, of the Louisiana Purchase and the Lewis and Clark Expedition, of the War of 1812, of Henry Clay and Daniel Webster and John C. Calhoun, of the Missouri Compromise and the Monroe Doctrine. In Europe it was the age of the French Revolution and of the rise and fall of Napoleon, of the romantic revival and the industrial revolution in England.

Like all periods of rapid change, this one was inexpressibly complex, but it was marked by the general collapse of anachronistic institutions and philosophies. The "haves" were ranged against the "have nots," aristocratic and landed classes against those less fortunate, proponents of centralized control against those who wished more local autonomy, absolutists and authoritarians against all colors of individualists and democrats. Western civilization painfully sought new compromises in these perennial conflicts, and those it arrived at, while not wholly satisfactory and far from the last full measure of democracy, were considerably more democratic than the world had known before.

No explanation as simple as this can be entirely satisfactory. The familiar clashes of the era—Mercantilism *vs.* Free Trade, Imperialism *vs.* Home Rule, Tory *vs.* Whig, and Federalist *vs.* Republican—existed in some form long before 1766 and, under other names, are with us still. In the realm of human affairs few basic differences are ever decisively and finally settled.

As an illustration, consider the Revolutionary ideals of liberty and equality, in which most Americans profess belief. Practically regarded, these two concepts have incompatible elements; for liberty, followed to its logical extreme, is antisocial, and social and economic equality can only be obtained by severe limitation of individual freedom. Nevertheless, reconciliation of the two is one of the central problems of a democratic society. Neither can be absolute; the best that can be hoped for is that under favorable conditions a people may have a relatively large degree of freedom and a relatively large degree of equality.

Because the most magnificent promise of the American way of life is the fullest possible development of the individual within a society providing equal and exact justice for all, the literature of the early national period has extraordinary interest. The problems faced by the generations who lived between 1765 and 1829 are essentially today's problems.

American nationalism was based upon both the geographical isolation of the English colonies and the political, economic, and social controversies which resulted in revolution. The debate over the Stamp Act divided the colonists into two parties: conservatives and radicals, or, to give them the names more common at the time, Tories and Whigs, Loyalists and Patriots. The lines of cleavage varied from colony to colony, but the radical leaders came mainly from the middle classes, whose distrust of British control was often mingled with antipathy to the ruling aristocracy. Anti-British feeling was combined from the first with a glorification of the common man and his place in the world. The victorious party consisted of those Americans least aware and least desirous of commercial, social, religious, and cultural ties with Great Britain. Aggressive and self-confident, men "on the make," to use a phrase of a later age, they had nevertheless a self-conscious anxiety to show themselves "just as good" as the Tories they had so effectually chased out.

Self-consciousness was indeed characteristic of the entire period. The idea of inferiority, and particularly of inferiority to Britain, was unendurable. Patriotism often silenced intelligent objectivity; the person who expressed much skepticism regarding American character, institutions, or destiny found himself exceedingly unpopular. The first generations of citizens of the United States were extraordinarily sensitive to criticism.

The train of events, moreover, was propitious for the growth of nationalism. Of the elements contributing to unity, such diverse factors as the Revolution itself, the conservative reaction to the upheaval in France, the Napoleonic wars, and Westward expansion deserve recalling.

Many democratic tendencies were accentuated or set in motion by the Revolution. Large estates were confiscated and divided; small business and manufacturing were stimulated; church establishments were attacked; slavery, imprisonment for debt, and humiliating punishments were regarded with growing disfavor; the idea of universal education at state expense was voiced. Americans were far from being of one mind about these matters, but they recognized that such tendencies differentiated the United States from the nations of the Old World. They agreed, moreover, in insisting that they were now ready to arrange their own affairs, and in being sublimely confident that they could arrange them better than the English had arranged theirs. The Americans were a "new" people, as Crèvecoeur put it. They were ready to teach the rest of the world; they were weary of being taught.

The assertion of the rights of man by the revolutionists in France seemed at first a gratifying justification of the American example. European convulsions soon brought, however, a strong conservative reaction among Americans, already doubtful that they had wholly solved their political problems. The Federalists, who under the leadership of Hamilton controlled the government from the adoption of the Constitution until 1801, were perhaps not lovers of the common man, but they were still fervent nationalists. They planned and worked to create a strong federal union, able to withstand possible attack from abroad and to suppress internal disorder. Events proved that they were both wise and patriotic.

The Napoleonic wars, which disrupted commercial and diplomatic accord with Europe, made American iso-

lation much more a reality than it had been before. The United States was finally drawn into a second war with England, largely through the determination of the "War Hawks" of the back country, and the War of 1812 is generally credited with giving the nation that economic self-sufficiency which had long been talked about but never quite achieved. Textile and iron industries grew up quickly, and Americans faced the occupation of the West with full assurance that they had the means to fulfill their dreams of greatness.

The West, despite its individualism, was even more nationalistic than the older seaboard states. It looked to the central government for its lands and the means of access to them, and its local ties were new and weak. It was the West which was least respectful of Europe, most certain that the United States, if necessary, could lick the entire Old World.

From the perspective of the twentieth century it is clear that the bonds of Europe were not cut sharply, that the old pattern of transplantation and adaptation continued as immigrants like Albert Gallatin and P. S. Dupont de Nemours brought their talents to the service of American life. Nationalism, however, was peculiarly significant to literature, for it led Americans to attempt the impossible—the creation, overnight, of a tradition of belles-lettres.

To the nationalist the possession of a first-rate literature of politics and a highly reputable literature of religion was not enough; if poetry, fiction, and the drama were the marks of a great culture, America must have them. If, as Aristotle had asserted, epic poetry was the height of literary art, the United States must have epic poems comparable in grandeur to the North American continent and the superior political institutions of the Republic.

Such was the attitude which lay behind the work of Philip Freneau, Royall Tyler, the Connecticut Wits, William Cullen Bryant, Washington Irving, and James Fenimore Cooper. In Commencement and Fourth of July orations, in newly founded magazines with "United States" or "Columbian" or a state or city name conspicuous in their titles, in anthologies, and in books, Americans hammered at the theme of intellectual independence, the creation of a literary culture better than anything which had yet appeared or which was likely to appear in monarchical Europe. However, they did not succeed in creating such a culture before 1829.

National pride led to many pleas for more generous support of American writers and many elaborate defenses of America against the criticism of British editors and travelers. This material, most voluminous after the War of 1812, has been labeled the "Paper War" and is not of general interest, although both Cooper and Irving contributed to it. It had, however, one all-important effect—it focused the attention of American writers more sharply than ever before upon the native scene. What, they asked themselves, was unique in American life? In their attempt to answer that question they became deeply concerned with native types, dialects, manners, scenery, and institutions. Despite their frequent failure to solve the problem of finding fresh or appropriate forms in which to clothe their new literary materials, they left a body of writing notable both for its variety and for its interpretation of American life in all its phases.

POLITICAL THOUGHT

The literature of politics is represented in outline in the present chapter. It may best be summarized as it centers around four stages of American history: (1) the debate about self-government which extended from the Stamp Act to the Declaration of Independence; (2) the Revolution itself; (3) the struggle for stability and an acceptable balance of the opposing political philosophies of Hamilton and Jefferson; and (4) the continuing battle of the common man for his share of the responsibilities and rewards of political office.

(1) The philosophy and the events which lay behind the Revolution are readily gathered from John Dickinson's "Liberty Song," Benjamin Franklin's "Edict by the King of Prussia" (p. 145), Thomas Paine's *Common Sense* (p. 170), and the Declaration of Independence itself (p. 181). Franklin provides a description of the economic and political irritations enumerated also in the Declaration; the others give an impression of the emotions of the period, deeply rooted as they were in social and religious differences.

These writings are only a small part of the literary debate of 1765-1776. Pamphlets, speeches, sermons, and state papers appeared in profusion. Outstanding among the Whig pamphlets are those by Samuel Adams, James Otis, Daniel Dulany, John Dickinson, and the first works of Hamilton and Jefferson. The Tory position was maintained by such writers as Jonathan Boucher, Martin

Howard, Daniel Leonard, and Samuel Seabury. Patrick Henry's "Give me liberty or give me death" speech of March 1775 is a part of the full picture, as is Francis Hopkinson's allegory, *A Pretty Story* (1774). In a little more than a decade a large body of polemical prose appeared, presenting arguments based both upon specific legal or constitutional positions and upon abstract philosophies of government. Both types of argument are observable in the Declaration.

The legal position of the Patriots—denial of the authority of Parliament to levy "internal taxes" on the colonies, assertion of the doctrine of "no taxation without representation," and demands that the colonial legislatures be recognized as the only just means of obtaining "consent of the governed"—proved in the end less defensible than direct appeal to the right of revolution. For that and other "natural rights" specifically named in the Declaration, the Patriots had the precedents of the revolutions which had driven Charles I and James II from the English throne. They knew their history and their political philosophy; their writings show close study of the theories of Thomas Hobbes, Sir Robert Filmer, John Locke, and many other English and European thinkers. They had behind them, moreover, a solid tradition of theological disputation. It is impossible to read their presentations of the colonial case without increasing respect for the caliber of their minds and the clarity of their exposition.

(2) The "clash of resounding arms" at Lexington ended the constitutional debate and brought to the fore more emotional and persuasive writers—propagandists they would now be called. Their task was to unite and hold in line a Revolutionary party which was never perhaps more than a two-thirds majority of the population; their method was to appeal to the interests and the prejudices of as many different groups as they could. Master of them all was Paine, whose *Crisis* series ranks with the best propaganda ever written. Newspapers and magazines carried much similar material, including numerous poems such as Freneau's "Memorable Victory" (p. 207) and Hopkinson's "Battle of the Kegs" (p. 165). Popular songs, ballads, and hymns had their place in the literary war (see p. 163). There were also extensive verse satires, of which the most famous was John Trumbull's *M'Fingal* (Part I, 1775), an imitation of Samuel Butler's *Hudibras* (1663-1678), an English satire. The Loyalists, too, had their propagandists, of whom the best known were Joseph Stansbury and Jonathan Odell. They show clearly the social cleavage of the Revolution, for they almost invariably assumed a snobbish tone toward the "rabble." Few printing presses were available to the Loyalists, however, and their opinions must be sought in letters, diaries, parodies of Patriot songs, and such accounts of affairs as Boucher's *View,* published later in England. Neither party was averse to name-calling or scurrility, and it is perhaps no accident that the most good-natured of Revolutionary songs, "Yankee Doodle" (p. 163), is the only one which has remained on the lips of Americans to the present day.

(3) A rational and deliberative tone is again uppermost (although undertones of emotion are not lacking) in the literature of the years between the end of the war and the stabilization of the new government. Its great monument, outside of the Constitution itself, is *The Federalist,* in the main the work of Hamilton (p. 185). Washington's *Farewell Address,* in which Hamilton had a part, the inaugurals of Jefferson, and the political content of such pieces as Tyler's play, *The Contrast,* H. H. Brackenridge's *Modern Chivalry,* and Freneau's "Stanzas to an Alien" (p. 213) round out the picture of the political issues of the era. Fuller representation would include *The Anarchiad* (1786-1787) and numerous other works by the Connecticut Wits, most of whom were strongly Federalist in their convictions. Joel Barlow, author of *Advice to the Privileged Orders* (1791) and *The Conspiracy of Kings* (1792) was a notable exception (see p. 216).

Especially interesting here is the repetition, with variations, of the age-old conflicts. Centralized control and local autonomy, government by the few and government by the many—these were again among the alternatives. Woodrow Wilson and others have suggested that the Constitution was based upon a political philosophy derived ultimately from Newtonian physics, to the effect that opposing political forces can be balanced one against another, and the state, though constantly moving, preserved in equilibrium. John Adams was probably the chief American exponent of this philosophy, with his distrust of unlimited democracy and his theory that executive, aristocratic, and democratic elements must be preserved in any stable government by elaborate checks and balances. The French political philosopher Montesquieu, widely read in America, had much the same idea. Whatever its precise sources, the Constitution unques-

tionably reflects a conservative reaction to Revolutionary doctrines. It has proved flexible enough, however, to protect both majorities and minorities with reasonable success for over 150 years.

(4) The Federalists, however right they may have been, were not astute politicians. They did not disguise their belief that the masses counted for little, the *aristoi* for much, and they ignored local loyalties and conditions which they would have done well to study. The common people demanded respect throughout the period, and toward the end of it they received from most successful politicians the flattery which has ever since been theirs. They wanted their leaders "folksy," and they did not care whether or not words were meticulously pronounced and diplomatic protocol rigorously observed. They did not, in short, accept the aristocratic notion that those who handle the affairs of state should be informed on fundamental principles and skilled in public speaking. In 1828, at length, the common people came into their own and elected Andrew Jackson. They did not, of course, find thereby an immediate solution to the unending problems of democratic government.

Irving's satirical portrait of Jefferson in the *Knickerbocker History* gives some indication of the political temper of the last phase of the early national period, but the citizenry of Templeton as delineated in Cooper's *The Pioneers* (p. 268) are even better evidence. Special privileges had to go, even though their elimination might mean economic waste, ignorance enshrined in public office, and general irresponsibility. Cooper's own attitude, expressed far more irascibly elsewhere, was precisely that of the orderly man who surveys the litter in a public park on the morning after the Labor Day weekend. He doubted that the common people were yet prepared to take care of their heritage. The political spirit of the period was well expressed by Jackson himself in the peroration to his *Farewell Address*. Pride in the national accomplishment and assurance that there was no longer danger from abroad were combined with the recognition that "It is from within, among yourselves, from cupidity, from corruption, from disappointed ambition, and inordinate thirst for power, that factions will be formed and liberty endangered. It is against such designs, whatever disguise the actors may assume, that you have especially to guard yourselves." Who shall say that Jackson was not right?

ECONOMIC DEVELOPMENT

The problem of earning a living was not so frequently or so fully the concern of literature after 1765 as it had been before. Nevertheless, the later writing can be better understood with some knowledge of the economic thought and conflicts which distinguished American life in the early national period.

Fundamental, of course, was the desire of individuals to "get on" in the world. Simple living, thrift, and industry, the ideals preached by Poor Richard (see p. 138), were the ideals of most men. They were praised by writers as diverse as Crèvecoeur, Washington, Jefferson, Dwight, and Barlow. Americans were on their way to full acceptance of the gospel proclaimed in 1838 by Henry Wadsworth Longfellow (see "A Psalm of Life," p. 374).

> Let us, then, be up and doing
> With a heart for any fate;
> Still achieving, still pursuing,
> Learn to labor and to wait.

Most Americans probably felt that money was the chief thing to be up and doing about, and they did not question the validity of working for that end. John Woolman (p. 155) was an exception; like Thoreau in a later generation he wished to know the result of the pursuit of wealth. Far more averse to luxuries and pomp than many who cried out against them from higher places in the world, he reached a thought-provoking conclusion: "Wealth desired for its own sake Obstructs the increase of Virtue, and large possessions in the hands of selfish men have a bad tendency, for by their means too small a number of people are employed in things usefull, and therefore some of them are necessitated to labour too hard." A few other observers expressed a similar concern lest money-getting end in too wide a discrepancy between the very rich and the very poor (see, for example, Crèvecoeur), but Poor Richard's disciples would scarcely have admitted the possibility that men could labor too hard.

At what, then, did Americans labor? They were primarily an agricultural people in 1765 and they were still so in 1829, but in the interval the economy of the nation underwent great changes which had their due

effect upon literature. Three such changes may be mentioned: (1) the shift from a colonial to a national economy, although with continuing conflicts between those who wanted a centralized control of commerce, manufactures, finance, and transportation and those who wanted a large measure of local control; (2) the far-reaching development of industry and the factory system; and (3) the creation, through expansion to the West, of an enormous domestic market.

The colonies in 1766 were dependencies of a nation which, in so far as it had a colonial policy, had accepted the Mercantilist doctrine that overseas possessions should supply the home country with raw materials and serve as a market for manufactured products. The trade regulations based upon this theory caused much hard feeling, as may readily be seen in Franklin's "Edict" and "Rules"; they were, of course, one of the principal causes of the Revolution. Mercantilism was also partially responsible for the British desire to limit expansion to the West, where the control of markets would be more difficult. That attitude aroused as much antagonism, probably, as either the trade regulations or the taxation which was sought to help pay for the French and Indian War; the Virginians were particularly unwilling to give up the West to the Indians. As Paine's *Common Sense* shows, the Americans had arrived at the point where they thought in "continental" terms, and they were determined to control not merely their internal affairs but their economic life as well.

The success of the Revolution permitted the development of home manufactures and the West. The federal government gradually acquired title to the Western lands, and with the Constitution, internal tariff barriers were removed. Washington's *Farewell Address* provides a good view of the hope that the natural economic rivalries of the various sections might be minimized, a hope which was echoed by Jefferson and Jackson. Americans did not agree, however, on the extent to which the central government should aid the states in internal improvements or "protect" infant industries or control the financial structure of the nation. They never have agreed on these matters, but their disagreements were especially sharp in the age of Hamilton's *Report on Manufactures,* of the clamor of the West for roads and canals, and of Jackson's titanic struggle with the Second Bank of the United States.

Industrialization was forced upon the United States by the situation in Europe, where France and Great Britain were at war almost continuously from 1793 until 1815. The unprecedented development of American foreign trade involved the nation in its first attempt to make good its right to trade as a neutral with belligerent nations, in the face of Napoleon's Berlin and Milan Decrees and the British Orders in Council. The Embargo Act of 1807 and the War of 1812 are usually credited with effecting a large measure of self-sufficiency in manufactures, although the full effect of the factory system was not to be felt until several decades later. Irving's satire on governing by proclamation in the *Knickerbocker History* suggests the Federalist attitude toward Jefferson's theory of economic isolation to avoid embroilment in war. Bryant's "A Meditation on Rhode Island Coal" (p. 230) reflects the development of industrialization.

The occupation of the West began almost immediately after the Revolution, but it was enormously accelerated by the introduction of new means of transportation. The steamboat reached the Ohio River in 1811, only four years after Robert Fulton's first successful demonstration on the Hudson. Roads and canals followed swiftly; the Cumberland or National Road had reached Zanesville, Ohio, by 1825, the year in which the Erie Canal was completed. The railroad era was soon to come, for construction of the Baltimore and Ohio began in 1828. The West soon had its own literature, reflecting the turbulence of the period. Its development is also suggested by Cooper's *The Pioneers,* despite a slightly earlier setting, and by Bryant's "The Prairies" (p. 232). From the time of the *Western Review* (1819-1821) of Lexington, Kentucky, this Western section had periodicals of its own and a local literature.

RELIGION

Religion remained vastly important to Americans, but it did not occupy quite so central a position in the national life as it had previously. The disruption and damage of the Revolution perceptibly weakened the position of many churches; Congress was forbidden by the Constitution to make any laws leading to the establishment of a state church; and the Bill of Rights asserted the principle of complete religious freedom. Disestablishment in those states which had supported particular

churches followed, and the period as a whole displays that wide variety of religious thought to which Americans are now accustomed. Nationalistic tendencies may be discerned in various denominations and in the continued dominance of Protestantism, but they are of minor significance.

This is not to say that religious fervor lessened, or that sectarianism disappeared. The masses wanted churches; denominational rivalries were no less intense; and the literature of religion was still enormous.

Calvinism remained a powerful force through the influence of such followers of Edwards as Timothy Dwight, and it may be observed in a watered-down form in certain lines of Bryant's "Inscription for the Entrance to a Wood" (p. 226) and "To a Waterfowl" (p. 227). Revivalism flourished at intervals throughout the period, especially in the West. Quakerism, no longer noisily militant, found its finest American exponent in Woolman.

From the standpoint of literary history, however, the distinctive feature of the age is the emergence of the rationalistic and humanitarian doctrines of Deism and Unitarianism. Neither was new; neither was widely popular. The virulence with which they were both attacked gives us some hint of their effect upon the age, and from this distance it is clear that their common confidence in the powers of the human mind and their common tendency to present a man-centered rather than a God-centered world expressed something basic in the times.

Deism, which denied the revelation of God in the Bible, preferring to seek religious truth through human reason, regarded religious duties as primarily humanitarian. Franklin arrived at Deistic beliefs early in life and he seems never to have deserted them. After his *Dissertation on Liberty and Necessity* (1725), however, he never expounded them openly, evidently having reached the conclusion that the orthodox Christian churches operated as a desirable social control, doing more good than harm. Somewhat similar attitudes are to be seen in Crèvecoeur, Freneau, Jefferson, and even Washington. With the French Revolution, however, Deism became momentarily a proselyting faith, spread in Deistic newspapers, magazines, and societies, as well as in more or less formal treatises. Three of the last are worth mention: Ethan Allen's *Reason the Only Oracle of God* (1784), for which the Revolutionary hero of Vermont was largely indebted to a Dr. Thomas Young; Paine's *The Age of Reason* (1794-1795; see p. 194); and Elihu Palmer's *Principles of Nature* (1802). These works were the object of almost unbelievably violent attacks by such orthodox Christians as Dwight, who regarded Deism not only as the worst form of infidelity and materialism but also as the handmaid of political radicalism. Deism was effectually destroyed, for the masses were not willing to give up the authority of the Bible, whatever they thought of social and political controls.

Unitarianism, the denial of the doctrine of the Trinity and the divinity of Jesus Christ, developed under the leadership of William Ellery Channing. It had been common among the upper and more rationalistic classes in Boston and other large New England towns since the 1780's, and became a matter for violent debate only after 1805, when a Unitarian was appointed to the professorship of divinity in Harvard College. Differing from Deism in its acceptance of revelation, it is chiefly significant for its similar emphasis upon human nature and reason, and for its humanitarianism. The genesis of the succeeding age of reform, in so far as that reform was stimulated by Transcendentalism (see p. 350), has often been found in Unitarianism. Closely related to it is Universalism, organized as a formal sect in 1794 with the central doctrine that, since God is all-good, He could never have intended other than that all men shall be saved—a position which had been anticipated some years earlier by Charles Chauncy. These doctrines, although not widely popular, challenged the dominance of Calvinism throughout the nation.

SCIENCE and EDUCATION

When Benjamin Silliman founded the *American Journal of Science* in 1818 with the express purpose of raising science to "the elevation of our national character," he added one more link to the chain of nationalistic ambitions. The period abounded in new scientific associations, museums, libraries, and colleges. This aspect of the age is seldom apparent in literature because of the advance of specialization, but it is worth recalling to the reader of Franklin, Freneau, the Connecticut Wits, and even Cooper and Poe. Scientific rationalism was spreading rapidly, and it was finding institutional support.

Irving's satire on Jefferson's fondness for gadgets suggests that the advance of science was not universally appreciated, as does Poe's famous sonnet (p. 335). On the other hand, the absence of persistent appeals to a providential order of nature will be observed by every reader, and the scientific world-view may be regarded as generally accepted.

Neither the common schools nor the universities found much genuine state support before 1829; the democratization of education was to come somewhat later. The principle that the state should educate its citizens and exert itself for the diffusion of knowledge was, however, clearly enunciated by Washington and Jefferson (p. 175) and other of the founding fathers. The setting aside of public lands in the West for the maintenance of school systems had not succeeded, but the foundation had been laid. Timothy Dwight's prophecy of "new-born Oxfords" in the West and Cooper's account of the grandiose educational dreams of Templeton in *The Pioneers* show that Americans were thinking of education.

THE FINE ARTS

The fine arts, relatively unimportant in the colonial period, were especially susceptible to the later urgings of nationalism. Their connection with literature, moreover, was much more intimate than it had been before. While it cannot be said that they attained genuine distinction before 1829, their development was extraordinary and well worth attention.

The piety which had supported portraiture in the earlier age now became patriotic, and the founders of the Republic were given generously such immortality as paint could provide. The numerous portraits of Washington by Gilbert Stuart (1755-1828) are the best-known example of a demand which gave a livelihood to a dozen or more painters in the period. Most of them were trained abroad, many under Benjamin West (1738-1820), an expatriate from Pennsylvania who was President of the Royal Academy from 1792 until his death. Large historical paintings of incidents of the Revolution were also popular, although the most familiar, Emanuel Leutze's "Washington Crossing the Delaware," was painted somewhat later. Most interesting to students of literature, however, because it paralleled the literary search for new material, was the beginning of a landscape school with such painters as Thomas Cole (1801 1848), to whom Bryant addressed a highly characteristic sonnet (p. 231). Numerous galleries, art schools, and associations were founded, of which the most important was the National Academy of the Arts of Design, founded in 1826 and still in existence.

Sculpture was still in the future, although by 1825 a few Americans were settling in Italy to learn that art. They were soon to return to fill the halls of the Capitol at Washington with nationalistic statuary. The carving of ship figureheads was a folk form which later generations have much admired; the observant reader will notice Freneau's reference to the "girl at the head" in his "Lines by H. Salem" (p. 211).

Music became somewhat more popular in the period, with the organization of choral societies in the larger towns, even as far west as Cincinnati. There was much music in the cities, and in the 1820's opera was introduced. Immigrants continued to provide the most genuine music-lovers, and except for a few songs such as Samuel Woodworth's "The Old Oaken Bucket" not even lyrics were American. Dwight's "Columbia, Columbia, to Glory Arise" is an example of the patriotic songs which found places in the popular books of music. Francis Scott Key's "The Star-Spangled Banner" is the major contribution of the era, but many generations of Americans have lamented that its melody is neither native nor within the range of most American voices.

Perhaps the most fascinating survival of the cultural nationalism of the period is the classical revival in architecture, with which Cooper had so much fun in *The Pioneers.* Sponsored by Jefferson, who fell in love with the Roman remains at Nîmes in southern France (and with the Maison Carré in particular), classical forms dominated both public and domestic architecture from shortly after the Revolution until the 1840's. They were closely connected with the conviction that American tastes should be exemplary and republican; they disregarded, as Cooper so neatly demonstrated, the American climate and the American way of life. Colonial and Georgian styles survived, especially in the seaboard towns, and the great architect of the period is now acknowledged to have been Charles Bulfinch (1763-1844), designer of the State House at Boston. The period is memorable, moreover, for the first architectural competition for designs for the national capitol. T. H.

II. Literary Trends

THE CIRCUMSTANCES of LITERARY PUBLICATION

The literate American between 1765 and 1829 had great advantages over his colonial ancestors. He was the heir of an enormous expansion of printing, of the establishment of a periodical press scarcely equaled in vigor elsewhere in the world, and of the acceptance to a degree before unknown of the protection of literary property by copyright. None of these developments had reached its height by 1829, but their collective importance to literature can scarcely be overemphasized.

Almost all of the books represented in the present chapter were printed in America for American readers. The exceptions—certain pieces by Franklin, Crèvecœur's *Letters,* and Paine's *Age of Reason*—are those whose circumstances of publication were peculiar. Irving and Cooper were among the few authors who had audiences on both sides of the Atlantic, and they developed the custom of arranging for nearly simultaneous editions in London and New York.

The spread of printing can be suggested by statistics. In 1810 the census found 202 paper mills in the United States. Charles Evans, who sought in his *American Bibliography* to list all American imprints before 1820 (and did not complete the task), found 35,854 items before 1800, of which 25,634 were printed between 1766 and 1799 inclusive, as against 10,220 items between 1639 and 1765. He listed 329 imprints for 1765 and 784 for 1799. Nor was this steady increase centralized; it was, indeed, less so than would be the case today. The chief center of printing until the Revolution was Boston; Philadelphia then held the lead until the 1820's, when it went to New York. But there were presses in all the larger towns, including those in the West, and many of them published books as well as newspapers and magazines. All printing was still by hand, on flat-bed presses, but improvements and industrialization were in the offing. The Columbian Iron Press, developed about 1807, substituted the principle of the fulcrum for that of the screw. Steam and revolving cylinder presses were soon to be adopted, and one American, William Church (1778-1853), had patented in London in 1827 a type-casting and composing machine.

The stimulation to printing was primarily political, for this was the age of party journalism. Much of the political writing by Franklin, Adams, Paine, Jefferson, Hamilton, and Freneau first appeared in newspapers, which, despite paper shortages and military occupations, played a highly valuable part in the Revolution. The war over, newspapers multiplied; it is said that about two hundred were published simultaneously by 1801. Dailies appeared at Philadelphia and New York in 1783 and 1785, when those cities numbered about 25,000 persons. In the Hamilton-Jefferson period, party journalism swiftly came to maturity with the help of Freneau (see p. 203). Newspapers survived the Alien and Sedition Acts (see Freneau's "Stanzas to an Alien," p. 213); their place in political controversy is vividly revealed by Jefferson's attention to them in his *Second Inaugural.* Bryant, it will be remembered (see p. 224), made his fortune as editor and part owner of the New York *Evening Post,* founded by Hamilton in 1801. Throughout the period, in short, newspapers increased rapidly in numbers (by 1829 there were probably more than a thousand of them), in size, and in influence.

Magazines developed more slowly. F. L. Mott has estimated that about seventy-five were begun between 1783 and 1801, several hundred more during the first third of the nineteenth century. Most of them were short-lived, but they played a large part in the rise of belles-lettres. Among those in which material reprinted in the following pages first appeared were the *United States Magazine* (Philadelphia, 1779, edited by H. H. Brackenridge), the *New-York Magazine* (1790-1797), and the *North American Review* (Boston, 1815-1939). Other important literary outlets included the *Farmer's Weekly Museum* (Walpole, N H., 1793-1810, edited chiefly by Joseph Dennie), the *Columbian Magazine* (Philadelphia, 1786-1792), the *American Museum* (Philadelphia, 1787-1792), the *Massachusetts Magazine* (Boston, 1789-1796), and the *Port Folio* (Philadelphia, 1801-1827, edited by Dennie). These periodicals, and others like them all over the nation, provided a market for poems, essays, fiction, and literary criticism such as had never before been available. They were the background for the magazine world which supported Edgar Allan Poe in the next decade (see p. 306).

The American author, moreover, was favored after 1790 by a national copyright law protecting him from the unauthorized use of his work within the United States (but not, it will be noted, abroad) for a period of fourteen years, with the possibility of an extension

for another fourteen. This law, based upon the similar law passed in Great Britain in 1710, and upon legislation in Connecticut in 1783, was a great boon, although it did not protect American writers from the competition of pirated English books. International copyright was not achieved until 1891.

The book trade developed rapidly after the Revolution, and before the end of the period publishing, as now understood, was replacing older methods of bridging the gap between author and reader. Bookstores and printing establishments transformed themselves into publishers, and some of the familiar names of present-day publishing appeared. The firm of Wiley was founded by Charles Wiley in 1807, that of Harper by J. and J. Harper, printers, in 1817, that of Appleton by Daniel Appleton in 1825. Americans, nevertheless, were still largely dependent upon Great Britain; it has been estimated that American presses supplied only twenty per cent of current books in 1820, only thirty per cent in 1830.

NATIONALISM and ROMANTICISM

The content of American literature between 1765 and 1829 was, we have seen, largely determined by the peculiar circumstances of American life, and shows in large measure the dominant nationalistic pattern of thought of the period. When we turn, however, to problems of literary form, we are at once impressed by a quite dissimilar and even a conflicting factor—the continuing influence of European and especially English literary tradition. Our early national literature was written at approximately the same time as the so-called romantic revival, and its connections with that movement are so numerous that some scholars have preferred to describe it as American romanticism.

Romanticism is one of those tags of literary history which are useful as broad generalizations but impossible to define precisely. It was first used to serve as a contrast to classicism, in a description of the difference between the prevailing literary temper of the years between 1775 and 1837 and the prevailing literary temper of the century immediately preceding. The foremost English romanticists were Wordsworth, Coleridge, Scott, Byron, Shelley, and Keats, all of them except Scott primarily poets. Despite their wide divergences of temperament and literary production, they represented, taken together, something new in English literature.

The American romanticists included in the present chapter (it must be remembered that numerous later writers might be grouped with them) are Freneau, Bryant, Irving, Cooper, and Poe. Cooper wrote only prose, Irving only a poem or two, and Poe is quite as famous for his prose fiction and criticism as for his poetry. Nevertheless, these writers too, like their English contemporaries, represent something new. Their similarity may be readily demonstrated by brief consideration of five elements which are generally accepted as identifying marks of romanticism.

(1) The revolt against the literary forms and ideas of the period of classicism, evident in varying ways in the work of Wordsworth, Byron, and Shelley, has some parallel in the relatively new forms of fiction developed by Irving, Cooper, and Poe, and in the political poetry of Freneau and Bryant.

(2) The new emphasis upon the imaginative and emotional qualities of literature, apparent in all the English romanticists, is likewise observable in all the Americans It includes a liking for the picturesque, the exotic, the sensuous, the sensational, and the supernatural, and sometimes, as in the case of Poe, all of them together

(3) The strong tendency to exalt the individual and the common man, characteristic especially of Wordsworth, was in America almost a national religion, as we have seen.

(4) The fresh interest in external nature, for which Wordsworth is again most famous, may be felt in the poetry of Freneau and Bryant and in the novels of Cooper.

(5) The literary use of the more colorful aspects of the past, common in the work of Coleridge, Scott, and Keats, is also to be found in Freneau's use of the "ruins of empire" theme, in Bryant's fascination by the Mound Builders, in Irving's effort to exploit the legends of the Hudson River region, and in Cooper's long series of historical tales.

It is not surprising, therefore, that the Americans have often been compared with the English romanticists. Doubtless they were deeply influenced by the literary fashions of Great Britain and instances may be shown of direct imitation. Yet we must not too hastily dismiss all of their work as imitative, nor ignore their very great differences from the English. Americans contributed to romanticism as much, perhaps, as they derived from it. The interplay of forms and ideas was simply the con-

tinuation of a cultural bond with Europe which no degree of national pride could wholly sever. Always the American writers were drawn in two directions, on the one hand to their own land, which usually furnished them with the content for their writings, and on the other hand to that cosmopolitan tradition which ordinarily furnished them with the forms in which they shaped their ideas.

TYPES of DIMINISHING IMPORTANCE

A distinctive feature of the period is the rise to greater importance than ever before of poetry, the essay, and fiction—those belletristic forms in which the ideas of the writer are shaped within a fairly well defined aesthetic pattern. It cannot be said that Americans uniformly displayed, within these forms, that cultural independence which they thought so desirable. The rise of belles-lettres nevertheless indicates the appearance of a class of men who thought of themselves as literary artists, and of a reading public ready for literature other than the merely informational or utilitarian.

With the advent of more polished and more self-consciously literary writers, the distinctive ideas of the age were much more likely to find expression in belles-lettres than before. Accounts of voyages, promotion tracts, sermons, histories, and biographies continued to be written, but they no longer had a central place.

The only material in the following pages closely related to the accounts of voyages and the promotion tracts is Crèvecoeur's *Letters,* Bartram's *Travels* having been included in Chapter One. The most cursory examination of Crèvecoeur will show that his book is more like a series of familiar essays than like the writing of Bartram and his predecessors. The older types by no means disappeared, but they take a subordinate place, in such works as Jonathan Carver's *Travels* (1778), Jefferson's *Notes on the State of Virginia* (written about 1782), Flint's *Geography and History of the Mississippi Valley* (1827), and the travel books of Bryant, Cooper, and Irving. An especially interesting survival is Poe's extensive use of the "imaginary voyage" form in the *Narrative of Arthur Gordon Pym* and other minor works.

Sermons similarly became freer and more polished, under the influence of ideals of composition like those expressed by Channing. Dwight's sermons are probably more typical of the time than Channing's, but they and the hundreds of others published during the period are now seldom read. The methods of oral discourse developed in the pulpit had their influence upon political oratory, which, as we shall see, now came into favor.

As we should expect, the nationalistic temper of the period had an immediate effect upon history and biography. The events of the Revolution were recorded, its heroes immortalized by such works as John Marshall's *Life of Washington* (1804-1807), and there was a flood of local histories, headed by Jeremy Belknap's *History of New Hampshire* (1784-1792). Little of this work was objective, and Irving's burlesque of antiquarianism and local pedantry (see p. 239) was doubtless needed. Not for several decades was history of literary merit and sound scholarship to be popularized by Prescott, Motley, and Parkman. Cooper's history of the United States Navy and Irving's many biographies should not, however, be forgotten. Such writings were thoroughly characteristic of the period in which these men matured.

POLEMICAL TRACTS and TREATISES

The literature of persuasion was, of course, outstanding in an age of constant political discussion. It had a conspicuous place from the first, as we have seen; now it reached a very high level indeed in such examples as Franklin's "Edict" and "Rules," Adams' *Novanglus,* Paine's *Common Sense, American Crisis,* and *Age of Reason,* and *The Federalist.* Many other works might be named from the period, for the great bulk of political writings belongs to this class, as do many theological treatises. Closely related to the tract and treatise on the one hand, and to the sermon on the other, are the innumerable political addresses and orations, such as the farewell addresses of Washington and Jackson, and Jefferson's inaugurals.

As was the case in the colonial period, the structure of this material defies generalization. Certain new tendencies are, however, evident. The development of newspapers and magazines made place for short pieces like Franklin's, and for lengthy series of essays and letters such as those by Adams, Paine (in the *Crisis*), and Hamilton. The latter were quite evidently influenced by the rise to prominence of the English periodical essay.

Topical arrangement continued to dominate, with the nature of the controversy determining the pattern.

Of especial interest are the meticulous planning of *The Federalist,* described in the first number of that series, and the variety which was achieved by Paine, both in *Common Sense* and in the *Crisis* series.

The addresses and orations have remarkably similar structure, except that to the topical arrangement the speaker's invariable exordium (introduction) and peroration (conclusion) are added. The modest beginning and the highly dignified conclusion, often embodying an appeal to divine guidance, are still a part of the pattern of discourse expected of our national leaders.

The rhetorical height of the period was unquestionably the Declaration of Independence, which combines the topical structure of the tract with the tones and methods of oratory. The revisions of Jefferson's first draft (p. 181) provide an opportunity to study the standards of the Revolutionary period. The careful balance of emotion and reason makes the Declaration a model of its kind, and it is not surprising that its phrases have never lost their vividness. Paine's writings have a similar oratorical ring, as do Hamilton's (although less frequently); it is unfortunate that we have no authentic text of the speeches with which Patrick Henry and James Otis electrified their audiences, for they too were doubtless masterpieces of persuasion.

DIARIES and AUTOBIOGRAPHIES

Franklin's *Autobiography* (p. 119) and Woolman's *Journal* (p. 156) would be found upon any list of the great books of the period, and the enduring attraction of diaries and autobiographies is also attested by the inclusion herein of the effort in these forms by Jefferson (p. 177). All these men had a didactic purpose, ethical, religious, or political. The structure of such writings is ordinarily chronological, with success depending almost wholly upon the attractiveness of the personality self-revealed. Woolman is of course the fulfilment of the tradition of spiritual autobiography, Franklin the most striking evidence of the secularization of American life. More than one commentator has noted the thought-provoking contrast between the two men.

POEMS

Poetry had been cultivated from the first in America; it now began to bulk much larger. The present chapter contains examples of the work of three poets who would be included in any list of major American verse-makers: Freneau, Bryant, and Poe. Represented also are the poets of the Revolution, and one of the Connecticut Wits—Barlow.

The singers of the Revolution were more concerned with propaganda than with artistic finish, but the relative sophistication of their forms as compared with those of the *Bay Psalm Book* and *The Day of Doom* is immediately evident. Popular ballad meters were retained, together with such ballad devices as repetition and refrain, but both "Yankee Doodle" and "The Battle of the Kegs" consistently use feminine rhymes and "Nathan Hale," probably the finest of the anonymous ballads, has a subjectivity unusual in the type.

The Revolutionary songs are, in fact, somewhat more free and fresh in their forms than most of the poems of the Connecticut Wits, who regarded themselves as the "highbrows" of their time. The Wits had studied English literature and accepted the "rules" of classicism, including that respect for established types which is sometimes described as the "tyranny of the genres." Dwight thought so highly of Denham, Pope, Thomson, and Goldsmith that he incorporated whole lines of theirs in *Greenfield Hill* and deliberately imitated their forms and diction, even though he was dealing with American themes and problems. Barlow, least conservative of the Wits, felt most at home in the mock-heroic and the iambic pentameter couplet perfected (and worn out) by the predecessors and contemporaries of Pope. Nor are the examples here the most flagrant instances of the way in which a reverence for classical forms vitiated the sometimes original ideas of the Connecticut Wits. Their efforts at the epic—Dwight's *Conquest of Canaan* (1785) and Barlow's *Columbiad* (1807)— are the most familiar evidences of misguided nationalistic endeavor.

Freneau, Bryant, and Poe, taken together, show the steady progress of romanticism in America. Freneau's admiration for the classics, Milton, and Ossian identifies him as a precursor of the romantic revival as was the English poet Thomas Gray, whom he much resembles. Bryant, with his many similarities to Wordsworth, had deep roots in the English poetic theory of the eighteenth century; his concept of the imagination and his emphasis upon the moral quality of beauty sometimes were in conflict with his more romantic glorification of emotion. In Poe, finally, we may see the central conviction that

the business of the poet is simply the creation of beauty or, in other words, the achievement of an aesthetic effect with no relation to moral truth—an extreme romantic view. A similar progress in forms is evident, paralleling the change from established patterns to great variety which had taken place slightly earlier in English poetry. Freneau's regular verse forms give way to Bryant's experiments with anapestic substitutions in iambic meter and, eventually, to Poe's notion of organic form, which amounted in practice to such emphasis upon the musical and emotional effects of rhyme, alliteration, and assonance that sometimes, as in "Ulalume," sound became more important than sense.

Examination of the minor poetry written between 1765 and 1829 will corroborate this description of the trend, and may be conveniently accomplished by looking through some of the anthologies of the age. Elihu Hubbard Smith's *American Poems, Selected and Original* (1793), *The Columbian Muse* (1794), and Samuel Kettell's *Specimens of American Poetry* (1829) are particularly valuable. The transition was by no means over by 1829.

ESSAYS

Newspapers and magazines played their part in the increase of poetic production, but they were most fundamental, perhaps, to the American development of the literary essay. The essay form had firmly established itself in England with *The Spectator* (begun 1711) of Addison and Steele, and its prestige was much enhanced by Samuel Johnson, Oliver Goldsmith, and other later authors. Its brevity and variety, together with the ease with which it could be adapted to didactic purposes, made it very attractive to Americans, who had had nothing quite like it before except the squibs in the almanacs (see Franklin's "Way to Wealth," p. 138). As early as 1722 Franklin was imitating *The Spectator* in his brother's newspaper, over the signature of "Silence Dogood." Thereafter the newspaper or magazine which lacked its "Tomo Cheeki" (Freneau) or "Jonathan Old-style" (Irving) or "Oliver Oldschool" (Joseph Dennie) was a rarity. The attempt to maintain a dignified anonymity gave a sameness to these productions in a type which depends for its success upon the personality, even the idiosyncrasy, of the author. In Irving's *Sketch Book*, however, the essay achieved genuine distinction. Crèvecoeur, moreover, has some claim to being regarded as one of the earliest of nature essayists.

Newspaper and magazine requirements were likewise responsible for the beginnings of American literary criticism, in reviews and leading articles such as those by Poe (p. 307). Bryant's lectures on poetry, although prepared for oral delivery, might easily have taken the review form, as much of his other criticism did. The earliest American reviewers learned their trade from the British quarterlies, much as they deplored the strictures of those journals on American politics and culture.

NOVELS and SHORT STORIES

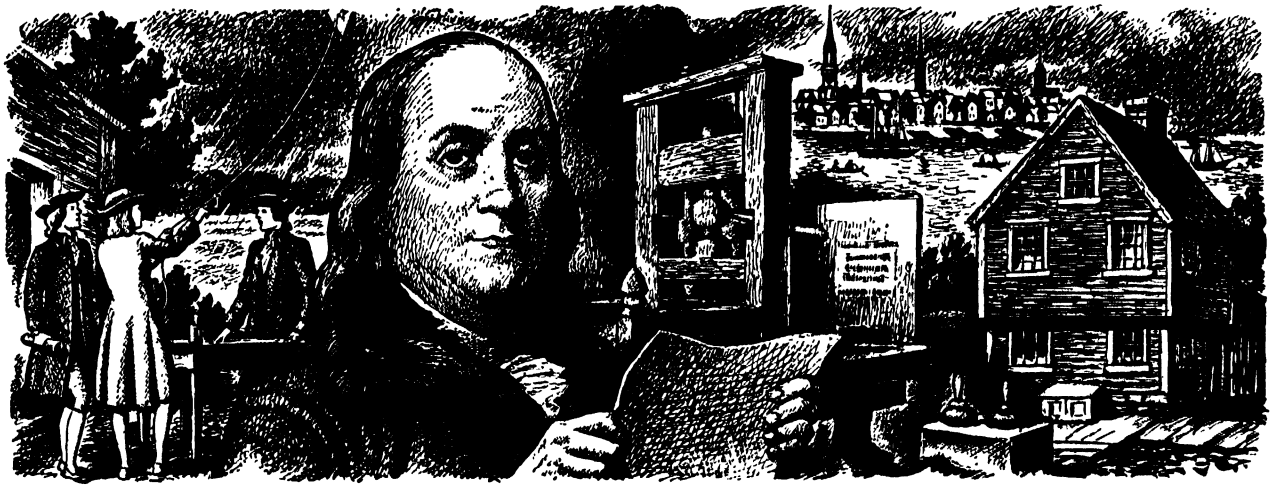
The prejudice against fiction which had marked the colonial period did not disappear in America until well after 1800 Jefferson, Dwight, and Noah Webster must be counted among the many who expressed belief that stories gave wholly false notions of life to impressionable youth. Nevertheless, fiction grew steadily more popular. In the late eighteenth century circulating libraries specializing in fiction prospered at the expense of the young ladies who demanded romance, and the new magazines, although expressing a suitable editorial concern about the possible moral effect of fiction, could not afford to bar it from their pages By the 1780's American authors were ready to help supply the market with native productions, often meeting the anticipated criticism by protestations that their tales were drawn from "real life," or pointing out that they invariably portrayed the awful consequences of sin and the fair rewards of virtue. That sin was made attractive was purely coincidental.

The prevailing nationalism was evident in the quest for American settings and characters, but the American novel in its first stages was heavily indebted to English models. Three distinct trends may be discerned, in an order which is roughly chronological. (1) The earliest American novels were adaptations of the fiction of sentiment and sensibility which had made the reputations of Samuel Richardson and Laurence Sterne; Mrs. Hannah Webster Foster's *The Coquette* (1797) is generally regarded as the best example of the type. (2) Americans next imitated the sensationalism of the so-called Gothic romance, as practiced in its later stages by Mrs. Ann Radcliffe, and the mystery-laden propaganda novel of which William Godwin's *Caleb Williams* (1794) is typical; this trend is illustrated by the work of Charles

Brockden Brown (1771-1810) and, so far as propaganda is concerned, by H. H. Brackenridge's *Modern Chivalry.* (3) Finally, the society or domestic novel for which Fanny Burney and Jane Austen were famous and the historical romance as developed by Sir Walter Scott became naturalized in the United States; in these forms James Fenimore Cooper led the way, achieving the first really striking success.

Sentiment and sensibility—alike in their release of the "tender" emotions but differing in that sentimentalism was didactic and moral, sensibility deliberately throat-filling and tear-jerking—can scarcely be separated in *The Power of Sympathy; or, The Triumph of Nature* (1789), written "to expose the dangerous Consequences of Seduction and to set forth the advantages of female Education." Usually accepted as the first American novel, it was long attributed to Mrs. Sarah Wentworth Morton, but is now claimed for William Hill Brown. Mrs. Susanna Haswell Rowson's *Charlotte Temple, a Tale of Truth* (1790) was more popular. Many other sentimental novels might be named, and seduction and suicide and floods of tears filled many pages of fiction far into the nineteenth century. For most readers, however, *The Coquette* will be sufficient introduction to the type. Its form—a series of letters—was derived from Richardson's *Pamela* and *Clarissa Harlowe* and, while not universal, was characteristic. The contemporary attitude toward such fiction may be gauged by Tyler's play, *The Contrast,* in which sentimentalism is vigorously attacked.

Charles Brockden Brown made use of the epistolary form in *Jane Talbot* (1801) and *Clara Howard* (1801), but he is better known for his "thrillers": *Wieland* (1798), *Ormond* (1799), *Arthur Mervyn* (1799-1800), and *Edgar Huntley* (1801). These are remarkable for their use of such mysteries as ventriloquism and sleepwalking, as well as for wonder-working heroes and deep-dyed villains. Brown's imitation of the Gothic romance and of Godwin is unmistakable but not slavish. His work shows traces also of social purpose. That theme, however, was best used by Brackenridge, whose models were *Don Quixote* and Henry Fielding. *Modern Chivalry* is a rambling book, partly a satirical tract on the times (for which it is now usually read) and partly a picaresque romance, with Teague O'Regan as its rogue hero.



The work of Cooper, weak as it is in some respects, was a clear improvement over earlier attempts in the form. His first effort, *Precaution* (1820), was an imitation of the Jane Austen type of English domestic fiction, and foreshadowed a lifelong concern with social distinctions. *The Spy* (1821) was doubtless suggested by the success of the then unidentified author of *Waverley* and *Ivanhoe* in combining history and fiction. Nationalism helped to make Cooper's work popular, but he must be credited with great skill in obtaining suspense in those parts of his novels in which physical action dominates, as well as with advances in the use of setting and in characterization. The escape-pursuit pattern, evident at intervals through *The Pioneers,* is the structure in which he excelled; unfortunately he often combined it with overelaborate mysteries such as that of the Effinghams. Unquestionably, however, Cooper made the American novel respectable, and his excursions into new types were paralleled by the novels of Lydia Maria Child (1802-1880), Catherine Maria Sedgwick (1769-1867), and James Kirke Paulding (1778-1860).

Unlike the novel, the short story was largely dependent upon the magazines, and therefore had a relatively even start in international competition. Its beginnings are closely connected with those of the essay and with "characters," delineations of unusual or typical personalities. Franklin came close to the short story in "The Way to Wealth" (p. 138) and "The Ephemera" (p. 147). The English magazines, although full of Oriental and moral tales, widely imitated in America, had not perfected the short story by 1815, nor had the German and French storytellers. The Americans had, therefore, a relatively new field, in which the contributions of Irving and Poe were outstanding. Although not many of their contemporaries rivalled them, with the short story the Americans first took a place in the main stream of world literature.

The story sketches of Irving retained many of the characteristics of the essay: a sense of the author's presence and manipulation, leisurely movement, a fullness of detail that is sometimes almost digression, and the achievement of atmosphere rather than suspense and sharp climax. With Poe, however, a close student of magazine requirements, the short story became distinctive. His detective tales, his scientific tales, his psychological studies, his tales of terror—all have a structural sureness which has been admired and imitated. They are often regarded as the first and the best of their kind.

Writing in 1835 to T. W. White, owner of the *Southern Literary Messenger,* Poe remarked that editors were demanding tales containing "the ludicrous heightened into the grotesque; the fearful colored into the horrible; the witty exaggerated into the burlesque; and the singular heightened into the strange and mystical." He could turn out stories with any of these effects, but he was at his best in creating the second and the fourth of them. "The Fall of the House of Usher," "Ligeia," "The Masque of the Red Death," and "The Cask of Amontillado" are all spine-tingling, gooseflesh-raising stories. They owe something, no doubt, to the Gothic romances, but Poe's artistic genius, which was marked by a passion for unity of effect, raises them far above his models. To the most romantically unreal situations imaginable he brought such realistic and carefully ordered detail, such psychological convincingness, that many generations of readers have reacted exactly as Poe intended that they should.

His theory that the short story should produce one single effect—and one only—is now regarded as too cramping; there are many other purposes which a short-story writer may legitimately pursue. Poe, however, presented his conception of a story so clearly (in his review of *Twice-Told Tales,* p. 307), and carried it out so effectively in his own work, that it was accepted almost without challenge down to the twentieth century. Whatever may have been its limitations, it remains one of the most original aesthetic positions in American literature. Working within it, Poe produced a body of short fiction which belongs with the classics, not merely of the United States but of the world. T. H.

Benjamin Franklin

1706 • 1790

Benjamin Franklin was one of the great men of the eighteenth century, famous far beyond the limits of the colonies which he helped unite into a nation. John Adams once remarked—and there is good reason to think he was right—that Franklin was more renowned than Sir Isaac Newton, Frederick the Great, or Voltaire, and "more beloved and esteemed than any or all of them." There was a warmth in Franklin; his mind, inquiring rather than dogmatic, endeared him to an age which regarded itself as peculiarly "enlightened," the more so since his reasonableness and simplicity were combined with a generous flair for showmanship. His contemporaries, and to some extent their posterity, saw Franklin in a series of sharply dramatic pictures—flying his kite in a thunderstorm to demonstrate the identity of lightning with electricity, standing modest but unawed before the House of Commons to assert the justice of American complaints, beaming philosophically yet with obvious delight in the adulation of the ladies of the court of Louis XVI, suggesting to the Constitutional Convention that it break a deadlock in debate by an appeal for the guidance of the Supreme Being.

Panel (l. to r.): An experiment with electricity • Franklin, about 55 years old • Printing-press used by Franklin • View of Philadelphia, 1754 • Franklin's birthplace, Milk Street, Boston

Unfortunately for his later reputation Franklin wrote an autobiography in which he reviewed his early life. It is a classic of its type—the first "rags-to-riches" success story in American literature—but it so glorified thrift, industry, conformity, and shrewd calculation of the material results of tact in personal relations that many sensitive readers have damned Franklin, on his own testimony, as selfishly opportunistic. Only those who accept unthinkingly the bourgeois standard that "getting ahead" is the be-all and end-all of life can wholeheartedly admire his self-portrait.

The truth of the matter is that Franklin was neither a great-souled philanthropist nor an unprincipled "careerist." A somewhat enigmatic mixture of idealist and realist, he comes close to being the first example of the typical American. He could not well have emerged from the mass of people in any corner of the world other than colonial America, and his vanity in having worked his way up is both pardonable and widespread in a land where class lines have never been rigid. Not very many self-made men, however, have turned as Franklin did from the making of a fortune to the broadening of a mind. Blessed with an insatiable curiosity and an admirable gusto for living, he became so widely traveled and so universally acquainted that there was scarcely a nook of the age in which he lived where he was not at home.

The details of his early life are familiar through his autobiography. There he tells of his ancestry and birth (in Boston in 1706), of his early apprenticeship to his printer brother, of the circumstances which led to his running off to Philadelphia when he was seventeen, of his disillusion there and in London concerning easy roads to wealth. In 1728 he founded his own printing firm, determined to make his fortune by hard work and thrift. Only men with financial security could afford to indulge themselves in the public service which he had in the back of his mind.

It took just twenty years for him to make enough money so that he could retire. Other men of forty-two would have gone on to pile up the pounds, shillings, and pence; Franklin, for all his preaching of the gospel of moneymaking, was not ambitious for mere financial power. He turned first to science, long one of his enthusiasms, and within a few years was internationally famous for his *Experiments & Observations on Electricity,* first published in London in 1751. Already, however, he was busy with public projects and political affairs, notable among them the founding of the Library Company of Philadelphia (1731), the organization of the American Philosophical Society (1743), the proposal for the Academy of Philadelphia, later the University of Pennsylvania (1749), and his service as clerk of the colonial legislature (1736-1751).

To recite, much less to evaluate, Franklin's activities during the remainder of his life would require many pages and the recapitulation of American history from the Albany Congress of 1754 to the ratification of the Constitution of the United States in 1789. There was scarcely a stage in the process of binding disparate colonies into a great nation wherein the calm counsel of Benjamin Franklin had no part. He was probably the first American to assert the principle of "no taxation without representation"; between 1757 and 1775 he was the chief representative of the colonial point of view in England; in 1775-1776 he was a key member of the Second Continental Congress, where he was one of the drafting committee for the Declaration of Independence; between 1777 and 1785 he was in France, where he was largely responsible for the alliance without which the Revolution could hardly have been successful and where he helped to negotiate the treaty of peace; and in 1787, back in Philadelphia, he ended his good works by acting as a balance wheel in the stormy Constitutional Convention.

Franklin would not have obtained the influence which he had if he had not been a writer. At sixteen he was contributing essays to his brother's newspaper, over the signature of "Silence Dogood." Thereafter he wrote steadily, with growing ease and polish. Most of his early work appeared in the newspapers and almanacs which helped him make his fortune; later he became a skillful writer of political pamphlets, many of them published anonymously; throughout his life he was an accomplished letter writer. In an age which tended to like ornate Latinate prose he cultivated simplicity in style and structure. He did not think of himself as an author in the belletristic sense, although all his life he had a critical eye for style both in prose and in poetry. His literary purposes, like those in politics, were utilitarian; "that is best wrote," he once said, "which is best adapted for obtaining the end of the writer." Never a writer of books, he succeeded in leaving papers which are ordinarily collected in ten volumes—and there is as yet no really complete edition.

His literary ends were many and various. *A Disserta-*

tion on Liberty and Necessity, Pleasure and Pain (1725) expressed his youthful convictions on the fundamentals of morality—Deistic convictions which he later decided were not "useful," however sound they may have been. *Plain Truth* (1747) marked his entrance into political pamphleteering, with a plea for measures to defend Pennsylvania from the French and Indians. *Experiments & Observations on Electricity* (1751; 2d ed., 1754; 4th ed., 1769) was composed of letters describing his scientific work and that of his friends. *The Interest of Great Britain Considered with Regard to Her Colonies* (1760) was representative of his long effort to persuade the British of the necessity for a home-rule policy. Most of his other pieces were composed for newspaper or periodical publication or for the entertainment and edification of his friends. The *Autobiography*, by far his most extended work, not published until long after his death, was written for the younger members of his family.

Franklin and his writings have meant many things to many men, and they will doubtless continue to attract commentators and special students. The problems which they present are universal problems in religion, education, economics, politics, and the social and physical sciences. To the general reader, moreover, Franklin, as much as any colonial American, has the fascinating power of a great and versatile personality. To understand the drives which found expression in his life and work is not only a means of understanding the eighteenth century but also a way of clarifying certain personal values. What should a man or woman seek to find in the vocation which he chooses to gain his livelihood? To what extent is self-aggrandizement compatible with self-respect? What, after all, is success? Franklin did not give an ultimate answer to these questions, but few persons will read his life or writings without reflecting upon them with new insight.

From the *Autobiography*

Franklin began writing his autobiography when he was sixty-five. Vacationing with his friend Jonathan Shipley, Bishop of St. Asaph's, in Hampshire, he determined to use his unwonted leisure to give an account of his ancestry and early life to his son William, then governor of New Jersey. After setting down a list of events and topics to be discussed, he composed eighty-six pages of manuscript, carrying the story of his life down to 1730. He may have sent this manuscript to his son, although there is no real proof that he did so. At any rate, busy with political affairs, he forgot about his memoirs for eleven years. In 1782, living at Passy, a suburb of Paris, he received a letter from an American friend in which was enclosed a copy of the first portion of the autobiography (how obtained no one knows), with the urgent suggestion that it be continued. After consultation with his French friends, who agreed that the project should be completed, Franklin wrote fourteen more pages in 1784. In this portion he described his effort to learn virtue by a chart system; he was over seventy-eight when he composed it. Four years later, back in Philadelphia, he added a third section of 117 pages, and in 1790, a few weeks before his death, he wrote still a fourth part of seven and one-half pages. Although his memoirs were eagerly awaited, it was, through circumstances too complicated to describe here, many years before there was an edition based upon the original manuscript. John Bigelow's transcription, first published in 1868, is now known to be far from accurate, so far as Franklin's capitalization, punctuation, and sentence structure are concerned. A definitive edition, based upon the original manuscript at the Henry E. Huntington Library and prepared by Max Farrand, embodies careful study of the innumerable interlinear changes.

The following selections include about one third of the portion of the Autobiography written at Twyford in 1771, the larger part of the portion written at Passy in 1784, and a small part (that describing Franklin's success with the investigation of electricity) of the portion written at Philadelphia in 1788. The "preachy" tone of the Twyford and Passy sections may be explained in part by his desire to edify his son, for whom he had high ambitions, and by his penchant for moralizing, evident throughout his work. It should be remembered, however, that the Autobiography, with its strong suggestion that anyone who is willing to pay the price of caution and industry can succeed, is not, for all its frankness, a full revelation of Franklin.

TWYFORD, at the Bishop of St. Asaph's, 1771

Dear Son, I have ever had a Pleasure in obtaining any little Anecdotes of my Ancestors. You may remember the Enquiries I made among the Remains of my Relations when you were with me in England; and the journey I undertook for that purpose. Now imagining it may be equally agreable to you to know the Circumstances of *my* Life, many of which you are yet unacquainted with; and expecting a Weeks uninterrupted Leisure in my present Country Retirement, I sit down to write them for you. To which I have besides some other Inducements. Having emerg'd from the Poverty and Obscurity in which I was born and bred, to a State of Affluence and some Degree of Reputation in the World, and having gone so far thro' Life with a considerable Share of Felicity, the conducing Means I made use of, which, with the Blessing of God, so well succeeded, my Posterity may like to know, as they may find some of them suitable to their own Situations, and therefore fit to be imitated. That Felicity, when I reflected on it, has induc'd me sometimes to say, that were it offer'd to my Choice, I should have no Objection to a Repetition of the same Life from its Beginning, only asking the Advantages Authors have in a second Edition to correct some Faults of the first. So would I if I might, besides corr[ecting] the Faults, change some sinister Accidents and Events of it for others more favourable, but tho' this were deny'd, I should still accept the Offer. However, since such a Repetition is not to be expected, the next Thing most like living one's Life over again, seems to be a *Recollection* of that Life; and to make that Recollection as durable as possible, the putting it down in Writing. Hereby, too, I shall indulge the Inclination so natural in old Men, to be talking of themselves and their own past Actions, and I shall indulge it, without being troublesome to others who thro' respect to Age might think themselves oblig'd to give me a Hearing, since this may be read or not as any one pleases. And lastly (I may as well confess it, since my Denial of it will be believ'd by no Body) perhaps I shall a good deal gratify my own *Vanity*. Indeed I scarce ever heard or saw the introductory Words, *Without vanity I may say*, &c but some vain thing immediately follow'd. Most People dislike Vanity in others whatever share they have of it themselves, but I give it fair Quarter wherever I meet with it, being persuaded that it is often productive of Good to the Possessor and to others that are within his Sphere of Action: And therefore in many Cases it would not be quite absurd if a Man were to thank God for his Vanity among the other Comforts of Life.—

And now I speak of thanking God, I desire with all Humility to acknowledge, that I owe the mention'd Happiness of my past Life to his kind Providence, which led me to the Means I us'd and gave them Success. My Belief of this, induces me to *hope*, tho' I must not *presume*, that the same Goodness will still be exercis'd towards me in continuing that Happiness, or in enabling me to bear a fatal Reverse, which I may experience as others have done, the Complexion of my future Fortune being known to him only: in whose Power it is to bless to us even our Afflictions.

The Notes one of my Uncles (who had the same kind of Curiosity in collecting Family Anecdotes) once put into my Hands, furnish'd me with several Particulars relating to our Ancestors. From these Notes I learnt that the Family had liv'd in the same Village, Ecton in Northamptonshire, for 300 Years, and how much longer

---

Text: That of the first section is based upon the original manuscript as examined by F. L. Mott and C. E. Jorgenson, that of the second and third sections is from the Bigelow edition, Vol. I (1887) • **1 Twyford,** a village near Winchester, about fifty miles southwest of London • **5 with me.** William Franklin and his father made a genealogical tour into central England in 1758 • **62 one . . . Uncles, Benjamin Franklin,** who died in Boston in 1728 • **66 Ecton,** about fifty miles north-northeast of London

he knew not (perhaps from the Time when the Name *Franklin* that before was the name of an Order of People, was assum'd by them for a Surname, when others took surnames all over the kingdom)[,] on a Freehold of about 30 Acres, aided by the Smith's Business, which had continued in the Family till his Time, the eldest son being always bred to that Business[.] A Custom which he and my Father both followed as to their eldest Sons.—When I search'd the Register at Ecton, I found an Account of their Births, Marriages and Burials, from the Year 1555 only, there being no Register kept in that Parish at any time preceding.—By that Register I perceiv'd that I was the youngest Son of the youngest Son for 5 Generations back. My Grandfather Thomas, who was born in 1598, lived at Ecton till he grew too old to follow Business longer, when he went to live with his Son John, a Dyer at Banbury in Oxfordshire, with whom my Father serv'd an Apprenticeship. There my Grandfather died and lies buried. We saw his Gravestone in 1758. His eldest Son Thomas liv'd in the House at Ecton, and left it with the Land to his only Child, a Daughter, who, with her Husband, one Fisher of Wellingborough sold it to Mr. Isted, now Lord of the Manor there. My Grandfather had 4 Sons that grew up, viz Thomas, John, Benjamin and Josiah. I will give you what Account I can of them at this distance from my Papers, and if these are not lost in my Absence, you will among them find many more Particulars. Thomas was bred a Smith under his Father, but being ingenious, and encourag'd in Learning (as all his Brothers likewise were) by an Esquire Palmer then the principal Gentleman in that Parish, he qualify'd himself for the Business of Scrivener, became a considerable Man in the County Affairs, was a chief Mover of all publick Spirited Undertakings for the County or Town of Northampton and his own village, of which many instances were told us; and he was at Ecton much taken Notice of and patroniz'd by the then Lord Halifax. He died in 1702, Jan. 6, old Stile, just 4 Years to a Day before I was born. The Account we receiv'd of his Life and Character from some old People at Ecton, I remember struck you as something extraordinary, from its Similarity to what you knew of mine. Had he died on the same Day, you said one might have suppos'd a Transmigration.—John was bred a Dyer, I believe of Woollens. Benjamin, was bred a Silk Dyer, serving an Apprenticeship at London. He was an ingenious Man, I remember him well, for when I was a Boy he came over to my Father in Boston, and lived in the House with us some Years. He lived to a great Age. His Grandson Samuel Franklin now lives in Boston. He left behind him two Quarto Volumes, M. S. of his own Poetry, consisting of little occasional Pieces address'd to his Friends and Relations, of which the following sent to me, is a Specimen. He had form'd a Shorthand of his own, which he taught me, but, never practising it I have now forgot it. I was nam'd after this Uncle, there being a particular Affection between him and my Father. He was very pious, a great Attender of Sermons of the best Preachers, which he took down in his Shorthand and had with him many Volumes of them. He was also much of a Politician, too much perhaps for his Station. There fell lately into my Hands in London a Collection he had made of all the principal Pamphlets relating to Publick Affairs from 1641 to 1717. Many of the Volumes are wanting, as appears by the Numbering, but there still remains 8 Vols. Folio, and 24 in 4.^{to} and 8.^{vo}.—A Dealer in old Books met with them, and knowing me by my sometimes buying of him, he brought them to me. It seems my Uncle must have left them here when he went to America, which was above 50 years since. There are many of his Notes in the Margins.—

This obscure Family of ours was early in the Reformation, and continu'd Protestants thro' the Reign of Queen Mary, when they were sometimes in Danger of Trouble on Account of their Zeal against Popery. They had got an English Bible, and to conceal and secure it, it was fastened open with Tapes under and within the Frame of a Joint Stool. When my Great Great Grandfather read [it] to his Family, he turn'd up the joint Stool upon his Knees, turning over the Leaves then under the Tapes. One of the Children stood at the Door to give Notice if he saw the Apparitor coming, who was an

2 **Order of People.** Franklins were small landowners in the English feudal society of the fourteenth and fifteenth centuries • 38 **Lord Halifax,** Charles Montague, first Earl of Halifax (1661-1715), a noted financier • 38 **old Stile,** the Julian calendar, superseded by the present Gregorian calendar in 1752. By modern reckoning Franklin was born on January 17, 1706 • 54 **a Specimen,** which Franklin failed to insert, as a marginal note shows was intended. Examples of Uncle Benjamin's verses are printed in the Bigelow edition • 73 **Reign . . . Mary,** 1553-1558 • 78 **Joint Stool,** a wooden footstool made by a joiner.

Officer of the Spiritual Court. In that Case the Stool was turn'd down again upon its feet, when the Bible remain'd conceal'd under it as before. This Anecdote I had from my Uncle Benjamin.—The Family continu'd all of the Church of England till about the End of Charles the 2ds Reign, when some of the Ministers that had been outed for Nonconformity, holding Conventicles in Northamptonshire, Benjamin and Josiah adher'd to them, and so continu'd all their Lives. The rest of the Family remain'd with the Episcopal Church.

Josiah, my father, married young, and carried his Wife with three Children into New England, about 1682. The Conventicles having been forbidden by Law, and frequently disturbed, induced some considerable Men of his Acquaintance to remove to that Country, and he was prevail'd with to accompany them thither, where they expected to enjoy their Mode of Religion with Freedom. —By the same Wife he had 4 Children more born there, and by a second wife ten more, in all 17, of which I remember 13 sitting at one time at his Table, who all grew up to be Men and Women, and married. I was the youngest Son, and the youngest Child but two, and was born in Boston, N. England. My mother, the 2d wife was Abiah Folger, a daughter of Peter Folger, one of the first Settlers of New England, of whom honourable mention is made by Cotton Mather, in his Church History of that Country, (entitled Magnalia Christi Americana) as *a godly learned Englishman,* if I remember the Words rightly. I have heard that he wrote sundry small occasional Pieces, but only one of them was printed which I saw now many years since. It was written in 1675, in the home-spun Verse of that Time and People, and address'd to those then concern'd in the Government there. It was in favour of Liberty of Conscience, and in behalf of the Baptists, Quakers, and other Sectaries, that had been under Persecution; ascribing the Indian Wars and other Distresses, that had befallen the Country to that Persecution, as so many Judgments of God, to punish so heinous an Offense; and exhorting a Repeal of those uncharitable Laws. The whole appear'd to me as written with a good deal of Decent Plainness and manly Freedom. The six last concluding Lines I remember, tho' I have forgotten the two first of the Stanza, but the Purport of them was that his Censures proceeded from Good will, and therefore he would be known as the Author,

"Because to be a Libeller, (says he)
I hate it with my Heart.
From Sherburne Town where now I dwell,
My Name I do put here,
Without Offense, your real Friend,
It is Peter Folgier."

My elder Brothers were all put Apprentices to different Trades. I was put to the Grammar School at Eight Years of Age, my Father intending to devote me as the Tithe of his Sons to the Service of the Church. My early Readiness in learning to read (which must have been very early, as I do not remember when I could not read) and the Opinion of all his Friends that I should certainly make a good Scholar, encourag'd him in this Purpose of his. My Uncle Benjamin too approv'd of it, and propos'd to give me all his Shorthand Volumes of Sermons I suppose as a Stock to set up with, if I would learn his Character. I continu'd however at the Grammar School not quite one Year, tho' in that time I had risen gradually from the Middle of the Class of that Year to be the Head of it, and farther was remov'd into the next Class above it, in order to go with that into the third at the End of the Year. But my Father in the mean time, from a View of the Expence of a College Education which, having so large a Family, he could not well afford, and the mean Living many so educated were afterwards able to obtain, Reasons that he gave to his Friends in my Hearing, altered his first Intention, took me from the Grammar School, and sent me to a School for Writing and Arithmetic kept by a then famous Man, Mr. Geo. Brownell, very successful in his Profession generally, and that by

Brownell,** who taught private pupils in Boston between 1712 and 1734

mild encouraging Methods. Under him I acquired fair Writing pretty soon, but I fail'd in the Arithmetic, and made no Progress in it.—At Ten Years old, I was taken home to assist my Father in his Business, which was that of a Tallow Chandler and Sope Boiler. A Business he was not bred to, but had assumed on his Arrival in New England and on finding his Dying Trade would not maintain his Family, being in little Request. Accordingly I was employed in cutting Wick for the Candles, filling the Dipping Mold, and the Molds for cast Candles, attending the Shop, going of Errands, etc.—I dislik'd the Trade and had a strong Inclination for the Sea; but my Father declar'd against it; however, living near the Water, I was much in and about it, learnt early to swim well, and to manage Boats, and when in a Boat or Canoe with other Boys I was commonly allow'd to govern, especially in any case of Difficulty; and upon other Occasions I was generally a Leader among the Boys, and sometimes led them into Scrapes, of w^{ch} I will mention one Instance, as it shows an early projecting public Spirit, tho' not then justly conducted. There was a salt Marsh that bounded part of the Mill Pond, on the Edge of which at Highwater, we us'd to stand to fish for Min[n]ows. By much Trampling, we had made it a mere Quagmire. My Proposal was to build a Wharf there fit for us to stand upon, and I show'd my Comrades a large Heap of Stones which were intended for a new House near the Marsh, and which would very well suit our Purpose. Accordingly in the Evening when the Workmen were gone, I assembled a Number of my Playfellows; and working with them diligently like so many Emmets, sometimes two or three to a Stone, we brought them all away and built our little Wharff.—The next Morning the Workmen were surpriz'd at Missing the Stones; which were found in our Wharff; Enquiry was made after the Removers; we were discovered and complain'd of; several of us were corrected by our Fathers; and tho' I pleaded the Usefulness of the Work, mine convinc'd me that nothing was useful which was not honest.

I think you may like to know something of his Person and Character. He had an excellent Constitution of Body, was of middle Stature, but well set and very strong. He was ingenious, could draw prettily, was skill'd a little in Music and had a clear pleasing Voice, so that when he play'd Psalm Tunes on his Violin and sung withal as he sometimes did in an Evening after the Business of the Day was over, it was extreamly agreable to hear. He had a mechanical Genius too, and on occasion was very handy in the Use of other Tradesmen's Tools. But his great Excellence lay in a sound Understanding, and solid Judgment in prudential Matters, both in private and publick Affairs. In the latter indeed he was never employed, the numerous Family he had to educate and the straitness of his Circumstances, keeping him close to his Trade, but I remember well his being frequently visited by leading People, who consulted him for his Opinion in Affairs of the Town or of the Church he belong'd to and show'd a good deal of Respect for his Judgment and advice. He was also much consulted by private Persons about their affairs when any Difficulty occurr'd, and frequently chosen an Arbitrator between contending Parties.—At his Table he lik'd to have as often as he could, some sensible Friend or Neighbour to converse with, and always took care to start some ingenious or useful Topic for Discourse, which might tend to improve the Minds of his Children. By this means he turn'd our Attention to what was good, just, and prudent in the Conduct of Life; and little or no Notice was ever taken of what related to the Victuals on the Table, whether it was well or ill drest, in or out of season, of good or bad flavour, preferable or inferior to this or that other thing of the kind; so that I was bro't up in such a perfect Inattention to those Matters as to be quite Indifferent what kind of Food was set before me, and so unobservant of it, that to this Day, if I am ask'd I can scarce tell a few Hours after Dinner, what I din'd upon. This has been a Convenience to me in travelling, where my Companions have been sometimes very unhappy for want of a suitable Gratification of their more delicate[,] because better instructed[,] tastes and appetites.

My Mother had likewise an excellent Constitution. She suckled all her 10 Children. I never knew either my Father or Mother to have any Sickness but that of which they dy'd he at 89 and she at 85 years of age. They lie buried together at Boston, where I some years since placed a Marble Stone over their Grave with this Inscription:

---

20 projecting, promoting

JOSIAH FRANKLIN
And ABIAH his Wife
Lie here interred.
They lived lovingly together in Wedlock
Fifty-five Years.
Without an Estate or any gainful Employment,
By constant labour and Industry,
With God's blessing,
They maintained a large Family
Comfortably;
And brought up thirteen Children,
And seven Grandchildren
Reputably.
From this Instance, Reader,
Be encouraged to Diligence in thy Calling,
And Distrust not Providence.
He was a pious and prudent Man,
She a discreet and virtuous Woman.
Their youngest Son,
In filial Regard to their Memory,
Places this Stone.
J. F. born 1655—Died 1744—Ætat 89.
A. F. born 1667—Died 1752—85.

By my rambling Digressions I perceive myself to be grown old. I us'd to write more methodically.—But one does not dress for private Company as for a publick Ball. 'Tis perhaps only Negligence.—

To return. I continu'd thus employ'd in my Father's Business for two Years, that is till I was 12 Years old, and my Brother John, who was bred to that Business having left my Father, married and set up for himself at Rhodeisland, there was all Appearance that I was destin'd to supply his Place and be a Tallow Chandler. But my Dislike to the Trade continuing, my Father was under Apprehensions that if he did not find one for me more agreable, I should break away and get to Sea, as his Son Josiah had done to his great Vexation. He therefore sometimes took me to walk with him, and see Joiners, Bricklayers, Turners, Braziers, etc. at their Work, that he might observe my Inclination, and endeavour to fix it on some Trade or other on Land. It has ever since been a Pleasure to me to see good Workmen handle their Tools, and it has been useful to me, having learnt so much by it, as to be able to do little Jobs myself in my House, when a Workman could not readily be got; and to construct little Machines for my Experiments while the Intention of making the Experiment was fresh and warm in my Mind. My Father at last fix'd upon the Cutler's Trade, and my Uncle Benjamin's Son Samuel was bred to that Business in London[,] being about that time establish'd in Boston, I was sent to be with him some time on liking. But his Expectations of a Fee with me displeasing my Father, I was taken home again.—

From a Child I was fond of Reading, and all the little Money that came into my Hands was ever laid out in Books. Pleas'd with the Pilgrim's Progress, my first Collection was of John Bunyan's Works, in separate little Volumes I afterwards sold them to enable me to buy R. Burton's Historical Collections; they were small Chapmen's Books and cheap, 40 or 50 in all—My Father's little Library consisted chiefly of Books in polemic Divinity, most of which I read, and have since often regretted, that at a time when I had such a Thirst for Knowledge, more proper Books had not fallen in my Way, since it was now resolv'd I should not be a Clergyman. Plutarch's Lives there was, in which I read abundantly, and I still think that time spent to great Advantage. There was also a Book of Defoe's, called an Essay on Projects, and another of Dr. Mather's, called Essays to do Good which perhaps gave me a Turn of thinking that had an influence on some of the principal future Events of my Life.

This Bookish inclination at length determin'd my Father to make me a Printer, tho' he had already one Son (James) of that Profession. In 1717 my Brother James return'd from England with a Press and Letters to set

---

56 **Pilgrim's Progress,** allegorical novel (1678) by John Bunyan (1628-1688), English nonconformist. Bunyan's writings were not collected at this date, Franklin's purchases were probably early editions of separate works • 59 **R. Burton's . . . Collections,** a series of compilations by an English publisher and hack writer, Nathaniel Crouch (1632?-1725?). Sold at a shilling each by chapmen (peddlers) and bookdealers, they were widely popular in colonial America • 66 **Plutarch's Lives,** the most famous collection of biographies of the Greeks and Romans, by a Greek who lived at Rome in the first century A.D. • 68 **Essay on Projects** (1697) by Daniel Defoe (1661?-1731), English journalist and novelist. The book dealt with such matters as education and insurance • 69 **Essays . . . Good,** contained the ideas of Cotton Mather (see p 71) on cooperative societies for religious and humanitarian improvement • 75 **James,** James Franklin (1696/7-1735)

up his Business in Boston. I lik'd it much better than that of my Father, but still had a Hankering for the Sea. —To prevent the apprehended Effect of such an Inclination, my Father was impatient to have me bound to my Brother. I stood out some time, but at last was persuaded and signed the Indentures, when I was yet but 12 Years old.—I was to serve as an Apprentice till I was 21 Years of Age, only I was to be allow'd Journeyman's Wages during the last Year. In a little time I made great Proficiency in the Business, and became a useful Hand to my Brother. I now had Access to better Books. An Acquaintance with the Apprentices of Booksellers, enabled me sometimes to borrow a small one, which I was careful to return soon and clean. Often I sat up in my Room reading the greatest Part of the Night, when the Book was borrow'd in the Evening and to be return'd early in the Morning[,] lest it should be miss'd or wanted. And after some time an ingenious Tradesman Mr. Matthew Adams who had a pretty Collection of Books, and who frequented our Printing House, took Notice of me, invited me to his Library, and very kindly lent me such Books as I chose to read. I now took a Fancy to Poetry, and made some little Pieces. My Brother, thinking it might turn to account encourag'd me, and put me on composing two occasional Ballads. One was called The *Lighthouse Tragedy,* and contained an Acc[t] of the drowning of Capt. Worthilake with his Two Daughters; the other was a Sailor Song on the Taking of *Teach* or Blackbeard the Pirate. They were wretched Stuff, in the Grub-street Ballad Stile, and when they were printed he sent me about the town to sell them. The first sold wonderfully, the Event being recent, having made a great Noise. This flatter'd my Vanity. But my Father discourag'd me, by ridiculing my Performances, and telling me Verse-makers were generally Beggars; so I escap'd being a Poet, most probably a very bad one. But as Prose Writing has been of great Use to me in the Course of my Life, and was a principal Means of my Advancement, I shall tell you how in such a Situation I acquir'd what little Ability I have in that Way.

There was another Bookish Lad in the Town, John Collins by Name, with whom I was intimately acquainted. We sometimes disputed, and very fond we were of Argument, and very desirous of confuting one another. Which disputacious Turn, by the way, is apt to become a very bad Habit, making People often extreamly disagreeable in Company, by the Contradiction that is necessary to bring it into Practice, and thence, besides souring and spoiling the Conversation, is productive of Disgusts and perhaps Enmities where you may have occasion for Friendship. I had caught it by reading my Father's Books of Dispute about Religion. Persons of good Sense, I have since observ'd, seldom fall into it, except Lawyers, University Men, and Men of all Sorts that have been bred at Edinborough. A Question was once some how or other started between Collins and me, of the Propriety of educating the Female Sex in Learning, and their Abilities for Study. He was of Opinion that it was improper, and that they were naturally unequal to it. I took the contrary Side, perhaps a little for Dispute['s] sake. He was naturally more eloquent, had a ready Plenty of Words, and sometimes as I thought bore me down more by his Fluency than by the Strength of his Reasons. As we parted without settling the Point, and were not to see one another again for some time, I sat down to put my Arguments in Writing, which I copied fair and sent to him. He answer'd and I reply'd. Three of [or] four Letters of a Side had pass'd, when my Father happen'd to find my Papers, and read them. Without ent'ring into the Discussion, he took occasion to talk to me about the Manner of my Writing, observ'd that tho' I had the Advantage of my Antagonist in correct Spelling and pointing (which I ow'd to the Printing House) I fell far short in elegance of Expression, in Method and in Perspicuity, of which he convinc'd me by several Instances. I saw the Justice of his Remarks, and thence grew more attentive to the *Manner* in writing, and determin'd to endeavour at Improvement.—

About this time I met with an odd Volume of the Spectator. It was the Third. I had never before seen any of them. I bought it, read it over and over, and was much delighted with it. I thought the Writing excellent, and wish'd if possible to imitate it. With that

27 Capt. Worthilake or Worthylake, first keeper of the Boston lighthouse. He and his wife and one daughter were drowned (Franklin's memory was at fault here) in November 1718 • **28 Teach,** Edward Teach or Thatch, better known as Blackbeard, killed by a British naval officer in North Carolina in 1718 • **73 pointing,** punctuating • **81 Spectator** (1711-1712; second series, 1714), English literary periodical conducted by Joseph Addison (1672-1719) and Sir Richard Steele (1672-1729)

View, I took some of the Papers, and making short Hints of the Sentiment in each Sentence, laid them by a few Days, and then without looking at the Book, try'd to compleat the Papers again, by expressing each hinted Sentiment at length, and as fully as it had been express'd before, in any suitable Words, that should come to hand.

Then I compar'd my Spectator with the Original, discover'd some of my Faults and corrected them. But I found I wanted a Stock of Words or a Readiness in recollecting and using them, which I thought I should have acquir'd before that time, if I had gone on making Verses, since the continual Occasion for Words of the same Import but of different Length, to suit the Measure, or of different Sound for the Rhyme, would have laid me under a constant Necessity of searching for Variety, and also have tended to fix that Variety in my Mind, and make me Master of it. Therefore I took some of the Tales and turn'd them into Verse: And after a time, when I had pretty well forgotten the Prose, turn'd them back again. I also sometimes jumbled my Collections of Hints into Confusion, and after some Weeks, endeavour'd to reduce them into the best Order, before I began to form the full Sentences, and compleat the Paper. This was to teach me Method in the Arrangement of Thoughts. By comparing my work afterwards with the original, I discover'd many faults and amended them; but I sometimes had the Pleasure of Fancying that in certain Particulars of small Import, I had been lucky enough to improve the Method or the Language and this encourag'd me to think I might possibly in time come to be a tolerable English Writer, of which I was extreamly ambitious.

My time for these Exercises and for Reading, was at Night, after Work or before it began in the Morning; or on Sundays, when I contrived to be in the Printing House alone, evading as much as I could the common Attendance on publick Worship, which my Father used to exact of me when I was under his Care: And which indeed I still thought a Duty; tho' I could not, as it seemed to me, afford the Time to practise it.

When about 16 Years of Age, I happen'd to meet with a Book, written by one Tryon, recommending a Vegetable Diet. I determined to go into it. My Brother being yet unmarried, did not keep House, but boarded himself and his Apprentices in another Family. My refusing to eat Flesh occasioned an Inconveniency, and I was frequently chid for my singularity. I made myself acquainted with Tryon's Manner of preparing some of his Dishes, such as Boiling Potatoes or Rice, making Hasty Pudding, and a few others, and then propos'd to my Brother, that if he would give me Weekly half the Money he paid for my Board I would board myself. He instantly agreed to it, and I presently found that I could save half what he paid me. This was an additional Fund for buying Books. But I had another Advantage in it. My Brother and the rest going from the Printing House to their Meals, I remain'd there alone, and dispatching presently my light Repast, (which often was no more than a Bisket or a Slice of Bread, a Handful of Raisins or a Tart from the Pastry Cook's, and a Glass of Water) had the rest of the Time till their Return, for Study, in which I made the greater Progress from the greater Clearness of Head and quicker Apprehension which usually attend Temperance in Eating and Drinking. And now it was that being on some Occasion made asham'd of my Ignorance in Figures, which I had twice failed in Learning when at School, I took Cocker's Book of Arithmetick, and went thro' the whole by myself with great Ease. I also read Seller's and Sturmy's Books of Navigation, and became acquainted with the little Geometry they contain, but never proceeded far in that Science.—And I read about this Time Locke on Human Understanding, and the Art of Thinking by Messrs du Port Royal.

While I was intent on improving my Language, I met with an English Grammar (I think it was Greenwood's) at the End of which there were two little

---

43 Tryon, Thomas Tryon (1634-1703), English mystic. Franklin probably read Health's Grand Preservative (1682) • 68 Cocker's. Edward Cocker (1631-1675), English textbook writer, was the author of several different arithmetics, the most popular of which was first published in 1678, after Cocker's death • 70 Seller's. John Seller (fl. 1700) was the author of The English Pilot (1671) and Practical Navigation (1718). The latter is the book which Franklin probably read • 70 Sturmy's, presumably Samuel Sturmy's The Mariner's Magazine (1669) • 73 Locke . . . Understanding, the best-known work of the English philosopher John Locke (1632-1704), An Essay Concerning Human Understanding (1690) • 75 Messrs . . . Royal. Port-Royal, originally a nunnery near Chevreuse in France, became in the seventeenth century the center of Jansenism, a movement within the Roman Catholic Church with which were associated Cornelius Jansen (1585-1638) and Blaise Pascal (1623-1662). The book referred to by Franklin is L'Art de penser, a logic first published in 1662 • 77 Greenwood's, "An Essay towards a Practical English Grammar" (1711) by James Greenwood (d. 1737), English grammarian

Sketches of the Arts of Rhetoric and Logic, the latter finishing with a Specimen of a Dispute in the Socratic Method. And soon after I procur'd Xenophon's Memorable Things of Socrates, wherein there are many Instances of the same Method. I was charm'd with it, adopted it, dropt my abrupt Contradiction, and positive Argumentation, and put on the humble Enquirer and Doubter. And being then, from reading Shaftsbury and Collins, become a real Doubter in many Points of our religious Doctrine, I found this Method safest for myself and very embarrassing to those against whom I us'd it, therefore I took a Delight in it, practis'd it continually and grew very artful and expert in drawing People even of superior Knowledge into Concessions the Consequences of which they did not forsee, entangling them in Difficulties out of which they could not extricate themselves, and so obtaining Victories that neither myself nor my Cause always deserved.—I continu'd this Method some few years, but gradually left it, retaining only the Habit of expressing myself in Terms of modest Diffidence, never using when I advance any thing that may possibly be disputed, the Words, *Certainly, undoubtedly;* or any others that give the Air of Positiveness to an Opinion; but rather say, I conceive, or I apprehend a Thing to be so or so, It appears to me, or I should think it so or so for such and such Reasons, or I imagine it to be so, or it is so if I am not mistaken. This Habit I believe has been of great Advantage to me, when I have had occasion to inculcate my Opinions and persuade Men into Measures that I have been from time to time engag'd in promoting.—And as the chief Ends of Conversation are to *inform,* or to be *informed,* to *please* or to *persuade,* I wish wellmeaning sensible Men would not lessen their Power of doing Good by a Positive assuming Manner that seldom fails to disgust, tends to create Opposition, and to defeat every one of those Purposes for which Speech was given us, to wit, giving or receiving Information, or Pleasure: For if you would *inform,* a positive dogmatical Manner in advancing your Sentiments, may provoke Contradiction and prevent a candid Attention. If you wish Information and Improvement from the Knowledge of others and yet at the same time express yourself as firmly fix'd in your present Opinions, modest sensible Men, who do not love Disputation, will probably leave you undisturbed in the Possession of your Error; and by such a Manner you can seldom hope to recommend yourself in *pleasing* your Hearers, or to persuade those whose Concurrence you desire.—Pope says, judiciously,

Men should be taught as if you taught them not,
And things unknown propos'd as things forgot,—

farther recommending it to us,

To speak tho' sure, with seeming Diffidence.

And he might have coupled with this Line that which he has coupled with another, I think less properly,

For want of Modesty is want of Sense.

If you ask why *less properly,* I must repeat the lines;

"Immodest Words admit of *no* Defence;
For Want of Modesty is Want of Sense."

Now is not *Want of Sense* (where a Man is so unfortunate as to want it) some Apology for his *Want of Modesty?* and would not the Lines stand more justly thus?

Immodest Words admit *but this* Defence,
That Want of Modesty is Want of Sense.

This however I should submit to better Judgments.—

My Brother had in 1720 or 21, begun to print a Newspaper. It was the second that appear'd in America, and was called *The New England Courant.* The only one before it, was *the Boston News Letter.* I remember his being dissuaded by some of his Friends from the Undertaking, as not likely to succeed, one Newspaper

---

3 Xenophon's . . . Socrates, probably the translation by that title published in 1712 by Edward Bysshe, an English hack writer. Xenophon (444-354? B.C.) wrote his **Memorabilia** (in dialogue form) to defend Socrates against the charge that he had corrupted the youth of Athens • **8 Shaftsbury and Collins,** presumably a reference to "Characteristicks of Men, Manners, Opinions, and Times" (1711) by Anthony Ashley Cooper, third Earl of Shaftesbury (1671-1713), a moralist whose remarks on the Bible show Deistic tendencies, and the "Discourse of Freethinking" (1713) by Anthony Collins (1676-1729), in which that English writer advanced the thesis that all belief should be based upon reason • **49 Pope says,** in the **Essay on Criticism** (1711), Part II, ll. 574-575. Franklin substitutes "should" for "must" in the first line, evidently quoting from memory. The additional line is from the same poem, line 567 • **55 another,** not actually by Pope. The couplet Franklin had in mind, concluding "For want of decency is want of sense," is from the "Essay on Translated Verse" (1684) by Wentworth Dillon, fourth Earl of Roscommon (1633?-1685) • **68 the second. The New-England Courant** had been preceded by three other newspapers (see p. 14)

being in their Judgment enough for America. — At this time 1771 there are not less than five and twenty. — He went on however with the Undertaking, and after having work'd in composing the Types and printing off the Sheets, I was employ'd to carry the Papers thro' the Streets to the Customers.—He had some ingenious Men among his Friends who amus'd themselves by writing little Pieces for this Paper, which gain'd it Credit, and made it more in Demand; and these Gentlemen often visited us. — Hearing their Conversations, and their Accounts of the Approbation their Papers were receiv'd with, I was excited to try my Hand among them. But being still a Boy, and suspecting that my Brother would object to printing any Thing of mine in his Paper if he knew it to be mine, I contriv'd to disguise my Hand, and writing an anonymous Paper I put it in at Night under the Door of the Printing House. It was found in the Morning and communicated to his Writing Friends when they call'd in as usual They read it, commented on it in my Hearing, and I had the exquisite Pleasure, of finding it met with their Approbation, and that in their different Guesses at the Author none were named but Men of some Character among us for Learning and Ingenuity. — I suppose now that I was rather lucky in my Judges: And that perhaps they were not really so very good ones as I then esteem'd them. Encourag'd however by this, I wrote and convey'd in the same Way to the Press several more Papers, which were equally approv'd, and I kept my Secret till my small Fund of Sense for such Performances was pretty well exhausted, and then I discovered it; when I began to be considered a little more by my Brother's Acquaintance, and in a manner that did not quite please him, as he thought, probably with reason, that it tended to make me too vain. And perhaps this might be one Occasion of the Differences that we began to have about this Time. Tho' a Brother, he considered himself as my Master, and me as his Apprentice; and accordingly expected the same Services from me as he would from another; while I thought he demean'd me too much in some he requir'd of me, who from a Brother expected more Indulgence. Our Disputes were often brought before our Father, and I fancy I was either generally in the right, or else a better Pleader, because the Judgment was generally in my favour. But my Brother was passionate and had often beaten me, which I took extreamly amiss; and thinking my Apprenticeship very tedious, I was continually wishing for some Opportunity of shortening it, which at length offered in a manner unexpected.

One of the Pieces in our Newspaper, on some political Point which I have now forgotten, gave Offence to the Assembly. He was taken up, censur'd and imprison'd for a Month by the Speaker's Warrant, I suppose because he would not discover his Author. I too was taken up and examin'd before the Council; but tho' I did not give them any Satisfaction, they contented themselves with admonishing me, and dismiss'd me; considering me perhaps as an Apprentice who was bound to keep his Master's Secrets. During my Brother's Confinement, which I resented a good deal, notwithstanding our private Differences, I had the Management of the Paper, and I made bold to give our Rulers some Rubs in it, which my Brother took very kindly, while others began to consider me in an unfavourable Light, as a young Genius that had a Turn for Libelling and Satyr. My Brother's Discharge was accompany'd with an Order of the House, (a very odd one) *that James Franklin should no longer print the Paper called the New England Courant.* There was a Consultation held in our Printing House among his Friends what he should do in this Case. Some propos'd to evade the Order by changing the Name of the Paper; but my Brother seeing Inconveniences in that, it was finally concluded on as a better Way, to let it be printed for the future under the Name of *Benjamin Franklin.* And to avoid the Censure of the Assembly that might fall on him, as still printing it by his Apprentice, the Contrivance was, that my old Indenture should be return'd to me with a full Discharge on the Back of it, to be shown on Occasion; but to secure to him the Benefit of my Service I was to sign new Indentures for the Remainder of the Term, w^ch^ were to be kept private.

---

49 **unexpected.** "I fancy his harsh and tyrannical treatment of me, might be a means of impressing me with that aversion to arbitrary power that has stuck to me thro' my whole life."—Franklin • 50 **some political Point.** James Franklin's offense, hardly heinous from a present-day point of view, was to print a fictitious letter from Newport saying that pirates had been seen off the coast and that it was reported that the Massachusetts government was fitting out a ship to go after them, "wind and weather permitting." Franklin was arrested for contempt and released only after apology. The Order of the House came six months later, after James Franklin had printed (in January 1723) an article attacking "hypocritical pretenders to religion." Benjamin Franklin's name appeared as publisher from February 11, 1723, until fall, when he ran away to New York

A very flimsy Scheme it was, but however it was immediately executed, and the Paper went on accordingly under my Name for several Months. At length a fresh Difference arising between my Brother and me, I took upon me to assert my Freedom, presuming that he would not venture to produce the new Indentures. It was not fair in me to take this Advantage, and this I therefore reckon one of the first Errata of my life: But the Unfairness of it weighed little with me, when under the Impressions of Resentment, for the Blows his Passion too often urg'd him to bestow upon me. Tho' he was otherwise not an ill-natur'd Man: Perhaps I was too saucy and provoking.

When he found I would leave him, he took care to prevent my getting Employment in any other Printing-House of the Town, by going round and speaking to every Master, who accordingly refus'd to give me Work. I then thought of going to New York as the nearest Place where there was a Printer: and I was the rather inclin'd to leave Boston, when I reflected that I had already made myself a little obnoxious to the governing Party; and from the arbitrary Proceedings of the Assembly in my Brother's Case it was likely I might if I stay'd soon bring myself into Scrapes; and farther that my indiscrete Disputations about Religion began to make me pointed at with Horror by good People, as an Infidel or Atheist. I determin'd on the Point: but my Father now siding with my Brother, I was sensible that if I attempted to go openly, Means would be used to prevent me. My Friend Collins therefore undertook to manage a little for me. He agreed with the Captain of a New York Sloop for my Passage, under the Notion of my being a young Acquaintance of his that had got a naughty Girl with Child, whose Friends would compel me to marry her, and therefore I could not appear or come away publickly. So I sold some of my Books to raise a little Money, Was taken on board privately, and as we had a fair Wind[,] in three Days I found myself in New York near 300 Miles from home, a Boy of but 17, without the least Recommendation to or Knowledge of any Person in the Place, and with very little Money in my Pocket.

My Inclinations for the Sea, were by this time worne out, or I might now have gratify'd them. But having a Trade, and supposing myself a pretty good Workman, I offer'd my Service to the Printer in the Place, old Mr. W^m^ Bradford, who had been the first Printer in Pensilvania, but remov'd from thence upon the Quarrel of Geo. Keith.—He could give me no Employment, having little to do, and Help enough already: But, says he, my Son at Philadelphia has lately lost his principal Hand, Aquila Rose, by Death. If you go thither I believe he may employ you.—Philadelphia was 100 Miles farther. I set out, however, in a Boat for Amboy, leaving my Chest and Things to follow me round by Sea. In crossing the Bay we met with a Squall that tore our rotten sails to pieces, prevented our getting into the Kill, and drove us upon Long Island. In our Way a drunken Dutchman, who was a Passenger too, fell overboard; when he was sinking I reach'd thro' the Water to his shock Pate and drew him up so that we got him in again. His ducking sober'd him a little, and he went to sleep, taking first out of his Pocket a Book which he desir'd I would dry for him. It prov'd to be my old favourite Author Bunyan's Pilgrim's Progress in Dutch, finely printed on good Paper with copper Cuts, a Dress better than I had ever seen it wear in its own Language. I have since found that it has been translated into most of the Languages of Europe, and suppose it has been more generally read than any other Book except perhaps the Bible. Honest John was the first that I know of who mix'd Narration and Dialogue, a Method of Writing very engaging to the Reader, who in the most interesting Parts finds himself, as it were brought into the Company, and present at the Discourse. De foe in his Cruso, his Moll Flanders, Religious Courtship, Family Instructor, and other Pieces, has imitated it with Success. And Richardson has done the same in his Pamela, etc.—

---

46 old . . . Bradford. William Bradford (1663-1752) was the pioneer printer of the middle colonies, having first visited Pennsylvania in 1682 • **51 my Son,** Andrew Bradford (1686-1742), for many years Franklin's chief rival in Philadelphia • **52 Aquila Rose** (1695-1723), a minor poet, author of the posthumous **Poems on Several Occasions** (1740) • **54 Amboy,** Perth Amboy, on the southern shore of Raritan Bay in New Jersey • **58 Kill,** Kill van Kull, the strait between Staten Island and New Jersey • **75 De foe . . . Pieces.** The references are to **Robinson Crusoe** (1719), **Moll Flanders** (1722), **Religious Courtship** (1722), and **The Family Instructor** (1715-1718) or **A New Family Instructor** (1727). Franklin's acquaintance with the work of Defoe has interesting implications for the student of his style • **78 Richardson,** Samuel Richardson (1689-1761), English novelist, whose **Pamela, or Virtue Rewarded** was first printed in 1740

When we drew near the Island we found it was at a Place where there could be no Landing, there being a great Surff on the stony Beach. So we dropt Anchor and swung round towards the Shore. Some People came down to the Water Edge and hallow'd to us, as we did to them. But the Wind was so high and the Surff so loud, that we could not hear so as to understand each other. There were Canoes on the Shore, and we made Signs and hallow'd that they should fetch us, but they either did not understand us, or thought it impracticable. So they went away, and Night coming on, we had no Remedy but to wait till the Wind should abate, and in the mean time the Boatman and I concluded to sleep if we could, and so crouded into the Scuttle with the Dutchman who was still wet, and the Spray beating over the Head of our Boat, leak'd thro' to us, so that we were soon almost as wet as he. In this Manner we lay all Night with very little Rest. But the Wind abating the next Day, we made a Shift to reach Amboy before Night, having been 30 Hours on the Water without Victuals, or any Drink but a Bottle of filthy Rum: The Water we sail'd on being salt.—

In the Evening I found myself very feverish, and went in to Bed. But having read somewhere that cold Water drank plentifully was good for a Fever, I follow'd the Prescription, sweat plentifully most of the Night, my Fever left me, and in the Morning crossing the Ferry, I proceeded on my Journey, on foot, having 50 Miles to Burlington, where I was told I should find Boats that would carry me the rest of the Way to Philadelphia.

It rain'd very hard all the Day, I was thoroughly soak'd, and by Noon a good deal tir'd, so I stopt at a poor Inn, where I staid all night, beginning now to wish I had never left home. I cut so miserable a Figure too, that I found by the Questions ask'd me I was suspected to be some runaway Servant, and in danger of being taken up on that Suspicion. However I proceeded the next Day, and got in the Evening to an Inn within 8 or 10 Miles of Burlington, kept by one Dr. Brown.—

He ent[e]red into Conversation with me while I took some Refreshment, and finding I had read a little, became very sociable and friendly. Our Acquaintance continu'd as long as he liv'd. He had been, I imagine, an itinerant Doctor, for there was no Town in England, or Country in Europe, of which he could not give a very particular Account. He had some Letters, and was ingenious, but much of an Unbeliever, and wickedly undertook, some Years after to travesty the Bible in doggrel Verse as Cotton had done Virgil. By this means he set many of the Facts in a very ridiculous Light, and might have hurt weak minds if his Work had been publish'd:— but it never was.—At his House I lay that Night, and the next Morning reach'd Burlington.—But had the Mortification to find that the regular Boats were gone, a little before my coming, and no other expected to go till Tuesday, this being Saturday. Wherefore I returned to an old Woman in the Town of whom I had bought Gingerbread to eat on the Water, and ask'd her Advice; she invited me to lodge at her House till a Passage by Water should offer: and being tired with my foot Travelling, I accepted the Invitation. She understanding I was a Printer, would have had me stay at that Town and follow my Business, being ignorant of the Stock necessary to begin with. She was very hospitable, gave me a Dinner of Ox Cheek with great Goodwill, accepting only of a Pot of Ale in return. And I thought myself fix'd till Tuesday should come. However walking in the Evening by the Side of the River, a Boat came by, which I found was going towards Philadelphia, with several People in her. They took me in, and as there was no wind, we row'd all the Way; and about Midnight not having yet seen the City, some of the Company were confident we must have pass'd it, and would row no farther, the others knew not where we were, so we put towards the Shore, got into a Creek, landed near an old Fence[,] with the Rails of which we made a Fire, the Night being cold, in October, and there we remain'd till Daylight. Then one of the Company knew the Place to be Cooper's Creek a little above Philadelphia, which we saw as soon as we got out of the Creek, and arriv'd there about 8 or 9 o'Clock, on the Sunday morning, and landed at the Market Street Wharff.—

I have been the more particular in this Description of my Journey, and shall be so of my first Entry into that

---

29 Burlington, on the Delaware River, northeast of Philadelphia • 39 Dr. Brown, apparently an obscure physician, Dr. John Browne, who died in 1737 • 49 as . . . Virgil, an allusion to a burlesque poem, "Scarronides," or the "First Book of Virgil Travestie" (1664), by Charles Cotton (1630-1687), English translator • 78 Cooper's Creek, a small stream which empties into the Delaware at Camden, just above downtown Philadelphia

City, that you may in your Mind compare such unlikely Beginnings with the Figure I have since made there. I was in my Working Dress, my best Cloaths being to come round by Sea. I was dirty from my Journey; my Pockets were stuff'd out with Shirts and Stockings; I knew no Soul, nor where to look for Lodging. I was fatigued with Travelling, Rowing and Want of Rest. I was very hungry, and my whole Stock of Cash consisted of a Dutch Dollar and about a Shilling in Copper. The latter I gave the People of the Boat for my Passage, who at first refus'd it on Acc[t] of my Rowing; but I insisted on their taking it, a Man being sometimes more generous when he has but a little Money than when he has plenty, perhaps thro' Fear of being thought to have but little. Then I walk'd up the Street, gazing about, till near the Market House I met a Boy with Bread. I had made many a Meal on Bread, and inquiring where he got it, I went immediately to the Baker's he directed me to in Second Street; and ask'd for Bisket, intending such as we had in Boston, but they it seems were not made in Philadelphia, then I ask'd for a threepenny Loaf, and was told they had none such: so not considering or knowing the Difference of Money and the greater Cheapness nor the Names of his Bread, I bad[e] him give me threepenny worth of any sort. He gave me accordingly three great Puffy Rolls. I was surpriz'd at the Quantity, but took it, and having no room in my Pockets, walk'd off, with a Roll under each Arm, and eating the other. Thus I went up Market Street as far as fourth Street, passing by the Door of Mr. Read, my future Wife's Father, when she standing at the Door saw me, and thought I made as I certainly did a most awkward ridiculous Appearance. Then I turn'd and went down Chestnut Street and part of Walnut Street, eating my Roll all the Way, and coming round found myself again at Market Street Wharff, near the Boat I came in, to which I went for a Draught of the River Water, and being fill'd with one of my Rolls, gave the other two to a Woman and her Child that came down the River in the Boat with us and were waiting to go farther. Thus refresh'd I walk'd again up the Street, which by this time had many clean dress'd People in it who were all walking the same Way; I join'd them, and thereby was led into the great Meeting House of the Quakers near the Market. I sat down among them, and after looking round awhile and hearing nothing said; being very drowsy thro' Labour and want of Rest the preceding Night, I fell fast asleep, and continu'd so till the Meeting broke up, when one was kind enough to rouse me. This was therefore the first House I was in or slept in, in Philadelphia.—

. . . I had been religiously educated as a Presbyterian; and tho' some of the dogmas of that persuasion, such as *the eternal decrees of God, election, reprobation, etc.,* appeared to me unintelligible, others doubtful, and I early absented myself from the public assemblies of the sect, Sunday being my studying day, I never was without some religious principles. I never doubted, for instance, the existence of the Deity; that he made the world, and govern'd it by his Providence; that the most acceptable service of God was the doing good to man; that our souls are immortal; and that all crime will be punished, and virtue rewarded, either here or hereafter. These I esteem'd the essentials of every religion; and, being to be found in all the religions we had in our country, I respected them all, tho' with different degrees of respect, as I found them more or less mix'd with other articles, which, without any tendency to inspire, promote, or confirm morality, serv'd principally to divide us, and make us unfriendly to one another. This respect to all, with an opinion that the worst had some good effects, induc'd me to avoid all discourse that might tend to lessen the good opinion another might have of his own religion; and as our province increas'd in people, and new places of worship were continually wanted, and generally erected by voluntary contribution, my mite for such purpose, whatever might be the sect, was never refused.

Tho' I seldom attended any public worship, I had still an opinion of its propriety, and of its utility when rightly conducted, and I regularly paid my annual subscription for the support of the only Presbyterian minister or meeting we had in Philadelphia. He us'd to visit me sometimes as a friend, and admonish me to attend his

---

50 **Philadelphia.** The selection from the portion of the Autobiography written at Twyford ends here; Franklin went on to describe his first connections in Philadelphia, his voyage to England and his work there in 1724-1726, and his business life in Philadelphia down to 1730 • 63 **the essentials . . . religion,** derived, that is to say, from comparing the fundamentals of all faiths—a typical Deistic method. Note also that Franklin omits mention of the Bible as the revealed word of God, an omission which is the surest distinguishing mark of Deism

administrations, and I was now and then prevail'd on to do so, once for five Sundays successively. Had he been in my opinion a good preacher, perhaps I might have continued, notwithstanding the occasion I had for the Sunday's leisure in my course of study; but his discourses were chiefly either polemic arguments, or explications of the peculiar doctrines of our sect, and were all to me very dry, uninteresting, and unedifying, since not a single moral principle was inculcated or enforc'd, their aim seeming to be rather to make us Presbyterians than good citizens.

At length he took for his text that verse of the fourth chapter of Philippians: *"Finally, brethren, whatsoever things are true, honest, just, pure, lovely, or of good report, if there be any virtue, or any praise, think on these things."* And I imagin'd, in a sermon on such a text, we could not miss of having some morality. But he confin'd himself to five points only, as meant by the apostle, viz.: 1. Keeping holy the Sabbath day. 2. Being diligent in reading the holy Scriptures. 3. Attending duly the publick worship. 4. Partaking of the Sacrament. 5. Paying a due respect to God's ministers. These might be all good things; but, as they were not the kind of good things that I expected from that text, I despaired of ever meeting with them from any other, was disgusted, and attended his preaching no more. I had some years before compos'd a little Liturgy, or form of prayer, for my own private use (viz., in 1728), entitled, *Articles of Belief and Acts of Religion.* I return'd to the use of this, and went no more to the public assemblies. My conduct might be blameable, but I leave it, without attempting further to excuse it; my present purpose being to relate facts, and not to make apologies for them.

It was about this time I conceiv'd the bold and arduous project of arriving at moral perfection. I wish'd to live without committing any fault at any time; I would conquer all that either natural inclination, custom, or company might lead me into. As I knew, or thought I knew, what was right and wrong, I did not see why I might not always do the one and avoid the other. But I soon found I had undertaken a task of more difficulty than I had imagined. While my care was employ'd in guarding against one fault, I was often surprised by another; habit took the advantage of attention; inclination was sometimes too strong for reason. I concluded, at length, that the mere speculative conviction that it was our interest to be completely virtuous, was not sufficient to prevent our slipping; and that the contrary habits must be broken, and good ones acquired and established, before we can have any dependence on a steady, uniform rectitude of conduct. For this purpose I therefore contrived the following method.

In the various enumerations of the moral virtues I had met with in my reading, I found the catalogue more or less numerous, as different writers included more or fewer ideas under the same name. Temperance, for example, was by some confined to eating and drinking, while by others it was extended to mean the moderating every other pleasure, appetite, inclination, or passion, bodily or mental, even to our avarice and ambition. I propos'd to myself, for the sake of clearness, to use rather more names, with fewer ideas annex'd to each, than a few names with more ideas; and I included under thirteen names of virtues all that at that time occurr'd to me as necessary or desirable, and annexed to each a short precept, which fully express'd the extent I gave to its meaning.

These names of virtues, with their precepts, were:

1. Temperance.

Eat not to dullness; drink not to elevation.

2. Silence.

Speak not but what may benefit others or yourself; avoid trifling conversation.

3. Order.

Let all your things have their places; let each part of your business have its time.

4. Resolution.

Resolve to perform what you ought; perform without fail what you resolve.

---

28 Articles . . . Religion, to be found in Bigelow's Complete Works, I, 307-316, and in Smyth's Writings, II, 91-100

5. FRUGALITY.

Make no expense but to do good to others or yourself; *i.e.,* waste nothing.

6. INDUSTRY.

Lose no time; be always employ'd in something useful; cut off all unnecessary actions.

7. SINCERITY.

Use no hurtful deceit; think innocently and justly, and, if you speak, speak accordingly.

8. JUSTICE.

Wrong none by doing injuries, or omitting the benefits that are your duty.

9. MODERATION.

Avoid extreams; forbear resenting injuries so much as you think they deserve.

10. CLEANLINESS.

Tolerate no uncleanliness in body, cloaths, or habitation.

11. TRANQUILLITY.

Be not disturbed at trifles, or at accidents common or unavoidable

12. CHASTITY.

Rarely use venery but for health or offspring, never to dulness, weakness, or the injury of your own or another's peace or reputation.

13. HUMILITY.

Imitate Jesus and Socrates.

My intention being to acquire the *habitude* of all these virtues, I judg'd it would be well not to distract my attention by attempting the whole at once, but to fix it on one of them at a time; and, when I should be master of that, then to proceed to another, and so on, till I should have gone thro' the thirteen; and, as the previous acquisition of some might facilitate the acquisition of certain others, I arrang'd them with that view, as they stand above. Temperance first, as it tends to procure that coolness and clearness of head, which is so necessary where constant vigilance was to be kept up, and guard maintained against the unremitting attraction of ancient habits, and the force of perpetual temptations. This being acquir'd and establish'd, Silence would be more easy; and my desire being to gain knowledge at the same time that I improv'd in virtue, and considering that in conversation it was obtain'd rather by the use of the ears than of the tongue, and therefore wishing to break a habit I was getting into of prattling, punning, and joking, which only made me acceptable to trifling company, I gave *Silence* the second place. This and the next, *Order,* I expected would allow me more time for attending to my project and my studies. *Resolution,* once become habitual, would keep me firm in my endeavors to obtain all the subsequent virtues; *Frugality* and Industry freeing me from my remaining debt, and producing affluence and independence, would make more easy the practice of Sincerity and Justice, etc., etc. Conceiving then, that, agreeably to the advice of Pythagoras in his Golden Verses, daily examination would be necessary, I contrived the following method for conducting that examination.

I made a little book, in which I allotted a page for each of the virtues. I rul'd each page with red ink, so as to have seven columns, one for each day of the week, marking each column with a letter for the day. I cross'd these columns with thirteen red lines, marking the beginning of each line with the first letter of one of the virtues, on which line, and in its proper column, I might mark, by a little black spot, every fault I found upon examination to have been committed respecting that virtue upon that day.

---

57 **Pythagoras . . . Verses.** The Greek philosopher Pythagoras (fl. 540-512 B.C.) favored an ascetic discipline as a means of attaining spiritual perfection. A translation of the verses referred to by Franklin, showing remarkable similarity to the program here outlined, is given in Bigelow's Complete Works, I, 177-179. It seems probable that Franklin derived his Pythagorean ideas from Thomas Tryon, whose vegetarianism has been mentioned earlier • 60 **a little book,** which bears, according to William Temple Franklin, the date July 1, 1733

I determined to give a week's strict attention to each of the virtues successively. Thus, in the first week, my great guard was to avoid every the least offence against *Temperance,* leaving the other virtues to their ordinary chance, only marking every evening the faults of the day. Thus, if in the first week I could keep my first line, marked T, clear of spots, I suppos'd the habit of that virtue so much strengthen'd, and its opposite weaken'd, that I might venture extending my attention to include the next, and for the following week keep both lines clear of spots. Proceeding thus to the last, I could go thro' a course compleat in thirteen weeks, and four courses in a year. And like him who, having a garden to weed, does not attempt to eradicate all the bad herbs at once, which would exceed his reach and his strength, but works on one of the beds at a time, and, having accomplish'd the first, proceeds to a second, so I should have, I hoped, the encouraging pleasure of seeing on my pages the progress I made in virtue, by clearing successively my lines of their spots, till in the end, by a number of courses, I should be happy in viewing a clean book, after a thirteen weeks' daily examination.

This my little book had for its motto these lines from Addison's *Cato:*

> Here will I hold. If there's a power above us
> (And that there is, all nature cries aloud
> Thro' all her works), He must delight in virtue;
> And that which He delights in must be happy.

Another from Cicero,

O vitæ Philosophia dux! O virtutum indagatrix expultrixque vitiorum! Unus dies, bene et ex præceptis tuis actus, peccanti immortalitati est anteponendus.

Another from the Proverbs of Solomon, speaking of wisdom or virtue:

Length of days is in her right hand, and in her left hand riches and honour. Her ways are ways of pleasantness, and all her paths are peace.—iii. 16, 17.

And conceiving God to be the fountain of wisdom, I thought it right and necessary to solicit his assistance for obtaining it; to this end I formed the following little prayer, which was prefix'd to my tables of examination, for daily use.

O powerful Goodness! bountiful Father! merciful Guide! Increase in me that wisdom which discovers my truest interest. Strengthen my resolutions to perform what that wisdom dictates. Accept my kind offices to thy other children as the only return in my power for thy continual favours to me.

I used also sometimes a little prayer which I took from Thomson's Poems, viz.:

> Father of light and life, thou Good Supreme!
> O teach me what is good; teach me Thyself!
> Save me from folly, vanity, and vice,
> From every low pursuit; and fill my soul
> With knowledge, conscious peace, and virtue pure;
> Sacred, substantial, never-fading bliss!

---

24 **Addison's Cato,** a tragedy produced and published in 1713. The lines quoted (except for the "us" at the end of the first line) appear in a soliloquy by Cato on Plato's views of the immortality of the soul, at the beginning of Act V • 29 Cicero, Marcus Tullius Cicero (106-43 B.C.), Roman orator and philosopher. The sentences, with a few lines intervening, may be found in Bk V, Chap. II, of the **Tusculan Disputations,** and may be translated as follows. "O philosophy, thou guide of life, O thou explorer of virtue and expeller of vice. One day well spent and in accordance with thy lessons is to be preferred to an eternity of error" • 50 **Thomson's Poems.** The lines are from "Winter" (1726), ll. 210-215, by the English poet James Thomson (1700-1748)

The precept of *Order* requiring that *every part of my business should have its allotted time,* one page in my little book contain'd the following scheme of employment for the twenty-four hours of a natural day.

THE MORNING. *Question.* What good shall I do this day?

5, 6, 7 — Rise, wash and address *Powerful Goodness!* Contrive day's business, and take the resolution of the day; prosecute the present study, and breakfast

8, 9, 10, 11 — Work.

NOON.

12, 1 — Read, or overlook my accounts, and dine.

2, 3, 4, 5 — Work.

EVENING. *Question.* What good have I done to-day?

6, 7, 8, 9 — Put things in their places. Supper. Music or diversion, or conversation. Examination of the day.

NIGHT.

10, 11, 12, 1, 2, 3, 4 — Sleep.

I enter'd upon the execution of this plan for self-examination, and continu'd it with occasional intermissions for some time. I was surpris'd to find myself so much fuller of faults than I had imagined; but I had the satisfaction of seeing them diminish. To avoid the trouble of renewing now and then my little book, which, by scraping out the marks on the paper of old faults to make room for new ones in a new course, became full of holes, I transferr'd my tables and precepts to the ivory leaves of a memorandum book, on which the lines were drawn with red ink, that made a durable stain, and on those lines I mark'd my faults with a black-lead pencil, which marks I could easily wipe out with a wet sponge. After a while I went thro' one course only in a year, and afterward only one in several years, till at length I omitted them entirely, being employ'd in voyages and business abroad, with a multiplicity of affairs that interfered; but I always carried my little book with me.

My scheme of ORDER gave me the most trouble; and I found that, tho' it might be practicable where a man's business was such as to leave him the disposition of his time, that of a journeyman printer, for instance, it was not possible to be exactly observed by a master who must mix with the world and often receive people of business at their own hours. *Order,* too, with regard to places for things, papers, etc., I found extreamly difficult to acquire. I had not been early accustomed to it, and, having an exceeding good memory, I was not so sensible of the inconvenience attending want of method. This article, therefore, cost me so much painful attention, and my faults in it vexed me so much, and I made so little progress in amendment, and had such frequent relapses, that I was almost ready to give up the attempt, and content myself with a faulty character in that respect, like the man who, in buying an ax of a smith, my neighbour, desired to have the whole of its surface as bright as the edge. The smith consented to grind it bright for him if he would turn the wheel; he turn'd, while the smith press'd the broad face of the ax hard and heavily on the stone, which made the turning of it very fatiguing. The man came every now and then from the wheel to see how the work went on, and at length would take his ax as it was, without farther grinding. "No," said the smith, "turn on, turn on; we shall have it bright by-and-by; as yet, it is only speckled." "Yes," says the man, *"but I think I like a speckled ax best."* And I believe this may have been the case with many who, having, for want of some such means as I employ'd, found the difficulty of obtaining good and breaking bad habits in other points of vice and virtue, have given up the struggle, and concluded that *"a speckled ax was best";* for something, that pretended to be reason, was every now and then suggesting to me that such extream nicety as I exacted of myself might be a kind of foppery in morals, which, if it were known, would make me ridiculous; that a perfect character might be attended with the inconvenience of being envied and hated; and that a benevolent man should allow a few faults in himself, to keep his friends in countenance.

In truth, I found myself incorrigible with respect to Order; and now I am grown old, and my memory bad,

I feel very sensibly the want of it. But, on the whole, tho' I never arrived at the perfection I had been so ambitious of obtaining, but fell far short of it, yet I was, by the endeavour, a better and a happier man than I otherwise should have been if I had not attempted it; as those who aim at perfect writing by imitating the engraved copies, tho' they never reach the wish'd-for excellence of those copies, their hand is mended by the endeavour, and is tolerable while it continues fair and legible.

It may be well my posterity should be informed that to this little artifice, with the blessing of God, their ancestor ow'd the constant felicity of his life, down to his 79th year, in which this is written. What reverses may attend the remainder is in the hand of Providence; but, if they arrive, the reflection on past happiness enjoy'd ought to help his bearing them with more resignation. To Temperance he ascribes his long-continued health, and what is still left to him of a good constitution; to Industry and Frugality, the early easiness of his circumstances and acquisition of his fortune, with all that knowledge that enabled him to be a useful citizen, and obtained for him some degree of reputation among the learned; to Sincerity and Justice, the confidence of his country, and the honorable employs it conferred upon him; and to the joint influence of the whole mass of the virtues, even in the imperfect state he was able to acquire them, all that evenness of temper, and that cheerfulness in conversation, which makes his company still sought for, and agreeable even to his younger acquaintances. I hope, therefore, that some of my descendants may follow the example and reap the benefit. . . .

In 1746, being at Boston I met there with a Dr. Spence who was lately arrived from Scotland, and show'd me some electric experiments. They were imperfectly perform'd as he was not very expert but, being on a subject quite new to me, they equally surpris'd and pleased me. Soon after my return to Philadelphia, our library company receiv'd from Mr. P. Collinson, Fellow of the Royal Society of London, a present of a glass tube with some account of the use of it in making such experiments. I eagerly seized the opportunity of repeating what I had seen at Boston; and, by much practice, acquir'd great readiness in performing those, also, which we had an account of from England, adding a number of new ones. I say much practice, for my house was continually full, for some time, with people who came to see these new wonders.

To divide a little this incumbrance among my friends, I caused a number of similar tubes to be blown at our glass-house, with which they furnished themselves, so that we had at length several performers. Among these, the principal was Mr. Kinnersley, an ingenious neighbor, who, being out of business, I encouraged to undertake showing the experiments for money, and drew up for him two lectures, in which the experiments were rang'd in such order, and accompanied with such explanations in such method, as that the foregoing should assist in comprehending the following. He procur'd an elegant apparatus for the purpose, in which all the little machines that I had roughly made for myself were nicely form'd by instrument-makers. His lectures were well attended, and gave great satisfaction, and after some time he went thro' the colonies exhibiting them in every capital town and pick'd up some money. In the West India Islands, indeed, it was with difficulty the experiments could be made, from the general moisture of the air.

Oblig'd as we were to Mr. Collinson for his present of the tube, etc., I thought it right he should be inform'd of our success in using it, and wrote him several letters containing accounts of our experiments. He got them read in the Royal Society where they were not at first thought worth so much notice as to be printed in their

---

32 **benefit.** Here ends the selection from the portion of the Autobiography written at Passy in 1784. A few paragraphs, relating chiefly to a proposed book on the "Art of Virtue," which Franklin never got around to writing, have been omitted • 33 **Dr. Spence** has been identified tentatively by I. Bernard Cohen in his edition (1941) of Franklin's Experiments as a Dr. A. Spencer, who advertised courses in experimental philosophy in Boston in 1743 and in Philadelphia in 1744. It appears probable that Franklin erred both in the date of his first acquaintance with electrical experiments and in the name of the man who displayed them • 39 **Mr. P. Collinson,** Peter Collinson (1694-1768), a Quaker merchant of London whose large trade with America enabled him to gratify a fondness for gardening and natural history. He formed intimate connections not only with Franklin but also with John Bartram, the father of William Bartram (see p. 53), and throughout his life imported exotic plants for his gardens at Mill Hill, near London • 53 **Mr. Kinnersley,** Ebenezer Kinnersley (1711-1778), one of Franklin's closest associates and himself a considerable contributor to electrical science. After 1751 he lectured, on a plan drawn up by Franklin, throughout the colonies and even in the West Indies

Transactions. One paper, which I wrote for Mr. Kinnersley, on the sameness of lightning with electricity, I sent to Dr. Mitchel, an acquaintance of mine and one of the members also of that society, who wrote me word that it had been read, but was laughed at by the connoisseurs. The papers, however, being shown to Dr. Fothergill, he thought they were of too much value to be stifled, and advis'd the printing of them. Mr. Collinson then gave them to Cave for publication in his *Gentleman's Magazine;* but he chose to print them separately in a pamphlet and Dr. Fothergill wrote the preface. Cave, it seems, judged rightly for his profit, for by the additions that arrived afterward, they swell'd to a quarto volume which has had five editions, and cost him nothing for copy-money.

It was, however, some time before those papers were much taken notice of in England. A copy of them happening to fall into the hands of the Count de Buffon, a philosopher deservedly of great reputation in France, and, indeed, all over Europe, he prevailed with M. Dalibard to translate them into French, and they were printed at Paris. The publication offended the Abbé Nollet, preceptor in Natural Philosophy to the royal family, and an able experimenter, who had form'd and publish'd a theory of electricity, which then had the general vogue. He could not at first believe that such a work came from America, and said it must have been fabricated by his enemies at Paris, to decry his system. Afterwards, having been assur'd that there really existed such a person as Franklin at Philadelphia, which he had doubted, he wrote and published a volume of "Letters," chiefly address'd to me, defending his theory, and denying the verity of my experiments, and of the positions deduc'd from them.

I once purpos'd answering the abbé, and actually began the answer; but, on consideration that my writings contain'd a description of experiments which any one might repeat and verify, and if not to be verifi'd, could not be defended; or of observations offer'd as conjectures, and not delivered dogmatically, therefore not laying me under any obligation to defend them; and reflecting that a dispute between two persons, writing in different languages, might be lengthened greatly by mistranslations and thence misconceptions of one another's meaning, much of one of the abbé's letters being founded on an error in the translation, I concluded to let my papers shift for themselves, believing it was better to spend what time I could spare from public business in making new experiments, than in disputing about those already made. I therefore never answered M. Nollet, and the event gave me no cause to repent my silence; for my friend M. le Roy, of the Royal Academy of Sciences, took up my cause and refuted him; my book was translated into the Italian, German, and Latin languages; and the doctrine it contain'd was by degrees universally adopted by the philosophers of Europe in preference to that of the abbé; so that he lived to see himself the last of his sect, except Monsieur B————, of Paris, his *élève* and immediate disciple.

What gave my book the more sudden and general celebrity, was the success of one of its proposed experiments, made by Messrs. Dalibard and Delor at Marly, for drawing lightning from the clouds. This engag'd the public attention every where. M. Delor, who had an apparatus for experimental philosophy, and lectur'd in that branch of science, undertook to repeat what he called the *Philadelphia Experiments;* and, after they were performed before the king and court, all the curious of Paris flocked to see them. I will not swell this narrative with an account of that capital experiment, nor of the infinite pleasure I receiv'd in the success of a similar one I made soon after with a kite at Philadelphia, as both are to be found in the histories of electricity.

---

3 **Dr. Mitchel,** John Mitchell (d. 1768), an English physician and scientist who resided from about 1721 until 1747 or 1748 at Urbanna, Virginia. He is most famous for his map of North America, printed in 1755 • 6 **Dr. Fothergill,** John Fothergill (1712-1780), English Quaker physician. He had many close connections with the American colonies and subsidized William Bartram's expedition into the Floridas and Georgia in 1773-1777 (see pp 54-62) • 9 **Cave,** Edward Cave (1691-1754), English printer and founder of the **Gentleman's Magazine** (1731), probably the most widely circulated periodical of the eighteenth century • 18 **Count de Buffon,** George Louis Leclerc, Comte de Buffon (1707-1785), one of the great natural philosophers of the age • 20 **M. Dalibard,** Jean François Dalibard (1703-1799). His translation was printed in 1752; on May 10 of the same year he successfully carried out the experiment suggested by Franklin of drawing lightning from the clouds • 22 **Abbé Nollet,** Jean Antoine Nollet (1700-1770), the chief French opponent to Franklin's theories. He appears to have been offended because Franklin ignored his earlier work in the field of electricity • 52 **M. le Roy,** Jean Baptiste Le Roy (1719-1800), a French physician much interested in electricity • 62 **Delor.** Of Delor, "master of experimental philosophy," little is known beyond the fact that he performed Franklin's experiments before the King and his courtiers and on May 18, 1752, repeated the experiment of drawing lightning from the clouds by using a ninety-foot iron rod

Dr. Wright, an English physician, when at Paris, wrote to a friend, who was of the Royal Society, an account of the high esteem my experiments were in among the learned abroad, and of their wonder that my writings had been so little noticed in England. The Society, on this, resum'd the consideration of the letters that had been read to them, and the celebrated Dr. Watson drew up a summary account of them and of all I had afterwards sent to England on the subject, which he accompanied with some praise of the writer. This summary was then printed in their Transactions; and some members of the Society in London, particularly the very ingenious Mr. Canton, having verified the experiment of procuring lightning from the clouds by a pointed rod, and acquainting them with the success, they soon made me more than amends for the slight with which they had before treated me. Without my having made any application for that honor, they chose me a member, and voted that I should be excus'd the customary payments, which would have amounted to twenty-five guineas; and ever since have given me their Transactions gratis. They also presented me with the gold medal of Sir Godfrey Copley for the year 1753, the delivery of which was accompanied by a very handsome speech of the president, Lord Macclesfield, wherein I was highly honoured.

1771-1788·1868

---

1 **Dr. Wright.** At this point Franklin's memory seems to have been badly in error. His writings were actually discussed before the Royal Society in June 1751 by Watson (see note), some time before his book had reached France. The Dr. Wright referred to is possibly William Wright (1735-1819), later closely associated with Franklin's friends, Fothergill and Sir John Pringle (see p 143) • 7 **Dr. Watson,** Sir William Watson (1715-1787), who had begun to contribute papers on electricity to the Royal Society as early as 1745 His theories were very similar to Franklin's, although more vaguely expressed • 13 **Mr. Canton,** John Canton (1718-1772), English schoolteacher and electrician, elected a Fellow of the Royal Society in 1749 • 23 **Sir Godfrey Copley,** (d. 1709) left the Royal Society the sum of one hundred pounds, the income of which was expended after 1736 for the annual award of a gold medal to persons making notable contributions to natural knowledge • 25 **Lord Macclesfield,** George Parker, second Earl of Macclesfield (1697-1764), astronomer and a president of the Royal Society He was chiefly responsible for the English acceptance of the change of the calendar in 1752

The Way to Wealth

In 1757, on board ship en route to England, Franklin brought together into a single piece many of the aphorisms relating to industry, frugality, and prudence which had previously appeared in the pages of **Poor Richard's Almanac.** Whether or not he had a file of the almanacs with him is uncertain; very possibly he had at hand a copy of **Gnomologia: Adagies and Proverbs; Wise Sentences and Witty Sayings, Ancient and Modern, Foreign and British** (London, 1732) by Thomas Fuller (1654-1734), a book which contains a great many of the sentences used by Franklin. In any case the compilation eventually proved to be one of Franklin's best-known works. As published in **Poor Richard Improved** for 1758 it had no title; it was reprinted in 1760 as **Father Abraham's Speech,** and in 1774 as **The Way to Wealth,** by which name it is now usually known. Thereafter it was published over and over again and translated into almost all of the modern languages; altogether nearly five hundred different editions are known. The explanation of such popularity lies partly in the age-old love for proverbs and partly in the dominance of the bourgeois philosophy of life during the nineteenth and twentieth centuries.

The almanacs did not always contain such trustful worldly wisdom as appears here; Franklin had a streak of cynicism, and such adages as "Let thy maid-servant be faithful, strong, and homely," "Fish and visitors smell in three days," "An egg today is better than a hen tomorrow," and "He does not possess wealth, it possesses him" are not in quite the same spirit as those included here. It

should be noted that Franklin did not claim to be original in his maxims (only one, "Three Removes is as bad as a Fire," is thought to have been completely his creation); he displayed admirable literary skill, however, in creating a character and background to make his piece more than a mere listing of wise sayings, and in polishing and humanizing the material he garnered from his predecessors. "The cat in gloves catches no mice" is, for example, a redaction of "A gloved cat was never a good mouser" (Scottish proverb) and "A muffled cat is no good mouser" (English).

Courteous Reader,

I have heard that nothing gives an Author so great Pleasure, as to find his Works respectfully quoted by other learned Authors. This Pleasure I have seldom enjoyed; for tho' I have been, if I may say it without Vanity, an *eminent Author* of Almanacks annually now a full Quarter of a Century, my Brother Authors in the same Way, for what Reason I know not, have ever been very sparing in their Applauses; and no other Author has taken the least Notice of me, so that did not my Writings produce me some solid *Pudding,* the great Deficiency of *Praise* would have quite discouraged me.

I concluded at length, that the People were the best Judges of my Merit; for they buy my Works; and besides, in my Rambles, where I am not personally known, I have frequently heard one or other of my Adages repeated, with, *as Poor Richard says,* at the End on't; this gave me some Satisfaction, as it showed not only that my Instructions were regarded, but discovered likewise some Respect for my Authority; and I own, that to encourage the Practice of remembering and repeating those wise Sentences, I have sometimes *quoted myself* with great Gravity.

Judge then how much I must have been gratified by an Incident I am going to relate to you. I stopt my Horse lately where a great Number of People were collected at a Vendue of Merchant Goods. The Hour of Sale not being come, they were conversing on the Badness of the Times, and one of the Company call'd to a plain clean old Man, with white Locks, *Pray, Father* Abraham, *what think you of the Times? Won't these heavy Taxes quite ruin the Country? How shall we ever be able to pay them? What would you advise us to?*— Father *Abraham* stood up, and reply'd, If you'd have my Advice, I'll give it you in short, for a *Word to the Wise is enough,* and *many Words won't fill a Bushel,* as Poor *Richard says.* They join'd in desiring him to speak his Mind, and gathering round him, he proceeded as follows;

"Friends, says he, and Neighbours, the Taxes are indeed very heavy, and if those laid on by the Government were the only Ones we had to pay, we might more easily discharge them; but we have many others, and much more grievous to some of us. We are taxed twice as much by our *Idleness,* three times as much by our *Pride,* and four times as much by our *Folly,* and from these Taxes the Commissioners cannot ease or deliver us by allowing an Abatement. However let us hearken to good Advice, and something may be done for us; *God helps them that help themselves,* as *Poor Richard* says, in his Almanack of 1733.

It would be thought a hard Government that should tax its People one tenth Part of their *Time,* to be employed in its Service. But *Idleness* taxes many of us much more, if we reckon all that is spent in absolute *Sloth,* or doing of nothing, with that which is spent in idle Employments or Amusements, that amount to nothing. *Sloth,* by bringing on Diseases, absolutely shortens Life. *Sloth, like Rust, consumes faster than Labour wears, while the used Key is always bright,* as *Poor Richard* says. But *dost thou love Life, then do not squander Time, for that's the Stuff Life is made of,* as *Poor Richard* says.—How much more than is necessary do we spend in Sleep! forgetting that *The sleeping Fox catches no Poultry,* and that *there will be sleeping enough in the Grave,* as *Poor Richard* says. If Time be of all Things the most precious, *wasting Time* must be, as *Poor Richard* says, *the greatest Prodigality,* since, as he elsewhere tells us, *Lost Time is never found again;* and what we call *Time-enough, always proves little enough:* Let us then up and be doing, and doing to the Purpose; so by Diligence shall we do more with less Perplexity. *Sloth makes all Things difficult, but Industry all easy,* as *Poor*

Text: Poor Richard Improved for 1758 • 7 Quarter . . . Century. The first Poor Richard was compiled in 1732, for the year 1733 • 11 solid Pudding. How much money Franklin made from Poor Richard is not known, but from the beginning his almanac was an enormous success, averaging perhaps ten thousand copies annually. It must have been one of his most reliable sources of income

Richard says; and *He that riseth late, must trot all Day, and shall scarce overtake his Business at Night.* While *Laziness travels so slowly, that Poverty soon overtakes him,* as we read in *Poor Richard,* who adds, *Drive thy Business, let not that drive thee;* and *Early to Bed, and early to rise, makes a Man healthy, wealthy and wise.*

So what signifies *wishing* and *hoping* for better Times. We may make these Times better if we bestir ourselves. *Industry need not wish,* as *Poor Richard* says, and *He that lives upon Hope will die fasting. There are no Gains, without Pains;* then *Help Hands, for I have no Lands,* or if I have, they are smartly taxed. And, as *Poor Richard* likewise observes, *He that hath a Trade hath an Estate,* and *He that hath a Calling, hath an Office of Profit and Honour;* but then the *Trade* must be worked at, and the *Calling* well followed, or neither the *Estate,* nor the *Office,* will enable us to pay our Taxes.—If we are industrious we shall never starve; for, as *Poor Richard* says, *At the working Man's House* Hunger *looks in, but dares not enter.* Nor will the Bailiff or the Constable enter, for *Industry pays Debts, while Despair encreaseth them,* says *Poor Richard.*—What though you have found no Treasure, nor has any rich Relation left you a Legacy, *Diligence is the Mother of Good luck,* as *Poor Richard* says, *and God gives all Things to Industry.* Then *plough deep, while Sluggards sleep, and you shall have Corn to sell and to keep,* says *Poor Dick.* Work while it is called To-day, for you know not how much you may be hindered To-morrow, which makes *Poor Richard* say, *One To-day is worth two To-morrows;* and farther, *Have you somewhat to do To-morrow, do it To-day.* If you were a Servant, would you not be ashamed that a good Master should catch you idle? Are you then your own Master, *be ashamed to catch yourself idle,* as *Poor Dick* says. When there is so much to be done for yourself, your Family, your Country, and your gracious King, be up by Peep of Day; *Let not the Sun look down and say, Inglorious here he lies.* Handle your Tools without Mittens; remember that *the Cat in Gloves catches no Mice,* as *Poor Richard* says. 'Tis true there is much to be done, and perhaps you are weak handed, but stick to it steadily, and you will see great Effects, for *constant Dropping wears away Stones,* and by *Diligence and Patience the Mouse ate in two the Cable;* and *little Strokes fell great Oaks,* as *Poor Richard* says in his Almanack, the Year I cannot just now remember.

Methinks I hear some of you say, *Must a Man afford himself no Leisure?*—I will tell thee, my Friend, what *Poor Richard* says, *Employ thy Time well if thou meanest to gain Leisure;* and *since thou art not sure of a Minute, throw not away an Hour.* Leisure, is Time for doing something useful; this Leisure the diligent Man will obtain, but the lazy Man never; so that, as *Poor Richard* says, a *Life of Leisure and a Life of Laziness are two Things.* Do you imagine that Sloth will afford you more Comfort than Labour? No, for as *Poor Richard* says, *Trouble springs from Idleness, and grievous Toil from needless Ease. Many without Labour, would live by their* WITS *only, but they break for want of Stock.* Whereas Industry gives Comfort, and Plenty, and Respect: *Fly Pleasures, and they'll follow you. The diligent Spinner has a large Shift;* and *now I have a Sheep and a Cow, every Body bids me Good morrow;* all which is well said by *Poor Richard.*

But with our Industry, we must likewise be *steady, settled* and *careful,* and oversee our own Affairs *with our own Eyes,* and not trust too much to others; for, as *Poor Richard* says,

> *I never saw an oft removed Tree,*
> *Nor yet an oft removed Family,*
> *That throve so well as those that settled be.*

And again, *Three Removes is as bad as a Fire;* and again, *Keep thy Shop, and thy Shop will keep thee;* and again, *If you would have your Business done, go; If not, send.* And again,

> *He that by the Plough would thrive,*
> *Himself must either hold or drive.*

And again, *The Eye of a Master will do more Work than both his Hands;* and again, *Want of Care does us more Damage than Want of Knowledge;* and again, *Not to oversee Workmen, is to leave them your Purse open.* Trusting too much to others Care is the Ruin of many; for, as the *Almanack* says, *In the Affairs of this World, Men are saved, not by Faith, but by the Want of it;* but a Man's own Care is profitable; for, saith *Poor Dick, Learning is to the Studious,* and *Riches to the Careful,* as well as *Power to the Bold,* and *Heaven to the Virtuous.* And farther, *If you would have a faithful Servant, and one that you like, serve yourself.* And again, he adviseth to Circumspection and Care, even in the smallest Mat-

ters, because sometimes *a little Neglect may breed great Mischief;* adding, *For want of a Nail the Shoe was lost; for want of a Shoe the Horse was lost; and for want of a Horse the Rider was lost,* being overtaken and slain by the Enemy, all for want of Care about a Horse shoe Nail.

So much for Industry, my Friends, and Attention to one's own Business; but to these we must add *Frugality,* if we would make our *Industry* more certainly successful. A Man may, if he knows not how to save as he gets, *keep his Nose all his Life to the Grindstone,* and die not worth a *Groat* at last. *A fat Kitchen makes a lean Will,* as *Poor Richard* says; and,

Many Estates are spent in the Getting,
Since Women for Tea forsook Spinning and Knitting,
And Men for Punch forsook Hewing and Splitting.

If you would be wealthy, says he, in another Almanack, *think of Saving as well as of Getting: The* Indies *have not made* Spain *rich, because her* Outgoes *are greater than her* Incomes. Away then with your expensive Follies, and you will not have so much Cause to complain of hard Times, heavy Taxes, and chargeable Families; for, as *Poor Dick* says,

Women and Wine, Game and Deceit,
Make the Wealth small, and the Wants great.

And farther, *What maintains one Vice, would bring up two Children.* You may think perhaps, That a *little* Tea, or a *little* Punch now and then, Diet a *little* more costly, Clothes a *little* finer, and a *little* Entertainment now and then, can be no *great* Matter; but remember what *Poor Richard* says, *Many* a Little *makes a Mickle;* and farther, *Beware* of little *Expences; a small Leak will sink a great Ship;* and again, *Who Dainties love, shall Beggars prove;* and moreover, *Fools make Feasts, and wise Men eat them.*

Here you are all got together at this Vendue of *Fineries* and *Knicknacks.* You call them *Goods,* but if you do not take Care, they will prove *Evils* to some of you. You expect they will be sold *cheap,* and perhaps they may for less than they cost; but if you have no Occasion for them, they must be *dear* to you. Remember what *Poor Richard* says, *Buy what thou hast no Need of, and ere long thou shalt sell thy Necessaries.* And again, *At a great Pennyworth pause a while:* He means, that perhaps the Cheapness is *apparent* only, and not *real;* or the Bargain, by straitning thee in thy Business, may do thee more Harm than Good. For in another Place he says, *Many have been ruined by buying good Pennyworths.* Again, *Poor Richard* says, *'Tis foolish to lay out Money in a Purchase of Repentance;* and yet this Folly is practised every Day at Vendues, for want of minding the Almanack. *Wise Men,* as *Poor Dick* says, *learn by others Harms, Fools scarcely by their own;* but *Felix quem faciunt aliena Pericula cautum.* Many a one, for the Sake of Finery on the Back, have gone with a hungry Belly, and half starved their Families; *Silks and Sattins, Scarlet and Velvets,* as *Poor Richard* says, *put out the Kitchen Fire.* These are not the *Necessaries* of Life; they can scarcely be called the *Conveniences,* and yet only because they look pretty, how many *want* to *have* them. The *artificial* Wants of Mankind thus become more numerous than the *natural;* and, as *Poor Dick* says, *For one* poor *Person, there are an hundred* indigent. By these, and other Extravagancies, the Genteel are reduced to Poverty, and forced to borrow of those whom they formerly despised, but who through *Industry* and *Frugality* have maintained their Standing; in which Case it appears plainly, that a *Ploughman on his Legs is higher than a Gentleman on his Knees,* as *Poor Richard* says. Perhaps they have had a small Estate left them which they knew not the Getting of; they think *'tis Day, and will never be Night;* that a little to be spent out of *so much,* is not worth minding; *(a Child and a Fool, as Poor Richard says, imagine* Twenty Shillings *and Twenty Years can never be spent)* but, *always taking out of, the Meal-tub, and never putting in, soon comes to the Bottom;* then, as *Poor Dick* says, *When the Well's dry, they know the Worth of Water.* But this they might have known before, if they had taken his Advice; *If you would know the Value of Money, go and try to borrow some;* for, *he that goes a borrowing goes a sorrowing;* and indeed so does he that lends to such People, when he goes *to get it in again.—Poor Dick* farther advises, and says,

Fond Pride of Dress *is sure a very Curse;*
E'er Fancy *you consult, consult your Purse.*

And again, *Pride is as loud a Beggar as Want, and a*

---

51 **Felix . . . cautum.** Fortunate is he whom the mistakes of others make wary

great deal more saucy. When you have bought one fine Thing you must buy ten more, that your Appearance may be all of a Piece; but *Poor Dick* says, *'Tis easier to* suppress *the first Desire, than to* satisfy *all that follow it.* And 'tis as truly Folly for the Poor to ape the Rich, as for the Frog to swell, in order to equal the Ox.

Great Estates may venture more,
But little Boats should keep near Shore.

'Tis however a Folly soon punished; for *Pride that dines on Vanity sups on Contempt,* as *Poor Richard* says. And in another Place, *Pride breakfasted with Plenty, dined with Poverty, and supped with Infamy.* And after all, of what Use is this *Pride of Appearance,* for which so much is risked, so much is suffered? It cannot promote Health, or ease Pain; it makes no Increase of Merit in the Person, it creates Envy, it hastens Misfortune.

What is a Butterfly? At best
He's but a Caterpillar drest.
The gaudy Fop's his Picture just,

as *Poor Richard* says.

But what Madness must it be to *run in Debt* for these Superfluities! We are offered, by the Terms of this Vendue, *Six Months Credit;* and that perhaps has induced some of us to attend it, because we cannot spare the ready Money, and hope now to be fine without it. But, ah, think what you do when you run in Debt, *You give to another, Power over your Liberty.* If you cannot pay at the Time, you will be ashamed to see your Creditor; you will be in Fear when you speak to him; you will make poor pitiful sneaking Excuses, and by Degrees come to lose your Veracity, and sink into base downright lying; for, as *Poor Richard* says, *The second Vice is Lying, the first is running in Debt.* And again, to the same Purpose, *Lying rides upon Debt's Back.* Whereas a freeborn *Englishman* ought not to be ashamed or afraid to see or speak to any Man living. But Poverty often deprives a Man of all Spirit and Virtue: *'Tis hard for an empty Bag to stand upright,* as *Poor Richard* truly says. What would you think of that Prince, or that Government, who should issue an Edict forbidding you to dress like a Gentleman or a Gentlewoman, on Pain of Imprisonment or Servitude? Would you not say, that you are free, have a Right to dress as you please, and that such an Edict would be a Breach of your Privileges, and such a Government tyrannical? And yet you are about to put yourself under that Tyranny when you run in Debt for such Dress! Your Creditor has Authority at his Pleasure to deprive you of your Liberty, by confining you in Goal [*sic*] for Life, or to sell you for a Servant, if you should not be able to pay him! When you have got your Bargain, you may, perhaps, think little of Payment, but *Creditors, Poor Richard* tells us, *have better Memories than Debtors;* and in another Place says, *Creditors are a superstitious Sect, great Observers of set Days and Times.* The Day comes round before you are aware, and the Demand is made before you are prepared to satisfy it. Or if you bear your Debt in Mind, the Term which at first seemed so long, will, as it lessens, appear extreamly short. *Time* will seem to have added Wings to his Heels as well as Shoulders. *Those have a short Lent,* saith *Poor Richard, who owe Money to be paid at Easter.* Then since, as he says, *The Borrower is a Slave to the Lender, and the Debtor to the Creditor,* disdain the Chain, preserve your Freedom; and maintain your Independency: Be *industrious* and *free;* be *frugal* and *free.* At present, perhaps, you may think yourself in thriving Circumstances, and that you can bear a little Extravagance [*sic*] without Injury; but,

For Age and Want, save while you may;
No Morning Sun lasts a whole Day,

as *Poor Richard* says—Gain may be temporary and uncertain, but ever while you live, Expence is constant and certain; and *'tis easier to build two Chimnies than to keep one in Fuel,* as *Poor Richard* says. So *rather go to Bed supperless than rise in Debt.*

Get what you can, and what you get hold;
'Tis the Stone that will turn all your Lead into Gold,

as *Poor Richard* says. And when you have got the Philosopher's Stone, sure you will no longer complain of bad Times, or the Difficulty of paying Taxes.

This Doctrine, my Friends, is *Reason* and *Wisdom;* but after all, do not depend too much upon your own *Industry,* and *Frugality,* and *Prudence,* though excellent Things, for they may all be blasted without the Blessing of Heaven; and therefore ask that Blessing humbly, and be not uncharitable to those that at present seem to want it, but comfort and help them. Remember *Job* suffered, and was afterwards prosperous.

And now to conclude, *Experience keeps a dear School, but Fools will learn in no other, and scarce in that:* for

it is true, *we may give Advice, but we cannot give Conduct,* as *Poor Richard* says: However, remember this, *They that won't be counselled, can't be helped,* as *Poor Richard* says: And farther, That *if you will not hear Reason, she'll surely rap your Knuckles.*

Thus the old Gentleman ended his Harangue. The People heard it, and approved the Doctrine and immediately practised the contrary, just as if it had been a common Sermon; for the Vendue opened, and they began to buy extravagantly, notwithstanding all his Cautions, and their own Fear of Taxes.—I found the good Man had thoroughly studied my Almanacks, and digested all I had dropt on those Topicks during the Course of Five-and-twenty Years. The frequent Mention he made of me must have tired any one else, but my Vanity was wonderfully delighted with it, though I was conscious that not a tenth Part of the Wisdom was my own which he ascribed to me, but rather the *Gleanings* I had made of the Sense of all Ages and Nations. However, I resolved to be the better for the Echo of it; and though I had at first determined to buy Stuff for a new Coat, I went away resolved to wear my old One a little longer. *Reader,* if thou wilt do the same, thy Profit will be as great as mine.

I am, as ever,
Thine to serve thee,
RICHARD SAUNDERS.

18 **The Gleanings . . . Nations.** Not all of Franklin's adages can be traced to particular sources, but examination of earlier collections of proverbs will disclose most of them in some form similar to that he used • 27 **Richard Saunders,** the fictitious compiler of **Poor Richard**

Letter to Sir John Pringle

It is difficult to represent Franklin's scientific writing, particularly that which deals with electricity, in small space. The following letter, however, illustrates both the clarity of his explanatory style—a factor which had a great deal to do with the wide acceptance of his theories and suggestions—and his talent for devising simple apparatus for the experimental investigation of his hypotheses. His thinking in the field of hydrodynamics has been amply justified by later expenditures to provide experimental tanks for the study of naval architecture and, although he did not foresee them, wind tunnels for the investigation of aerodynamics. Sir John Pringle (1707-1782) was a Scottish physician and professor who served as president of the Royal Society of London from 1772 until 1778. He and Franklin traveled together on the continent in the summer of 1766. This letter was first printed in the 1769 edition of **Experiments & Observations on Electricity.**

Craven Street, 10 May, 1768

Sir:—You may remember that when we were travelling together in Holland, you remarked that the *trackschuit* in one of the stages went slower than usual, and inquired of the boatman what might be the reason; who answered that it had been a dry season and the water in the canal was low. On being again asked if it was so low that the boat touched the muddy bottom, he said no, not so low as that, but so low as to make it harder for the horse to draw the boat. We neither of us at first could conceive that if there was enough water for the boat to swim clear of the bottom, its being deeper would make any difference. But, as the man affirmed it seriously as a thing well known among them, and as the punctuality required in their stages was likely to make such difference, if any there were, more readily observed by them than by other watermen who did not pass so regularly and constantly backwards and forwards in the same track, I began to apprehend there might be something in it, and attempted to account for it from this

---

Text: Bigelow, **Complete Works,** IV, 159-162 • 3 **trackschuit,** the Dutch trek-schuit, towboat

consideration, that the boat, in proceeding along the canal, must, in every boat's length of her course, move out of her way a body of water equal in bulk to the room her bottom took up in the water; that the water so moved must pass on each side of her and under her bottom to get behind her; that if the passage under her bottom was straitened by the shallows, more of that water must pass by her sides, and with a swifter motion, which would retard her, as moving the contrary way; or that the water becoming lower behind the boat than before, she was pressed back by the weight of its difference in height, and her motion retarded by having that weight constantly to overcome. But as it is often lost time to attempt accounting for uncertain facts, I determined to make an experiment of this when I should have convenient time and opportunity.

After our return to England, as often as I happened to be on the Thames, I enquired of our watermen whether they were sensible of any difference in rowing over shallow or deep water. I found them all agreeing in the fact that there was a very great difference, but they differed widely in expressing the quantity of the difference; some supposing it was equal to a mile in six, others to a mile in three, &c. As I did not recollect to have met with any mention of this matter in our philosophical books, and conceiving that if the difference should really be great it might be an object of consideration in the many projects now on foot for digging new navigable canals in this island, I lately put my design of making the experiment in execution, in the following manner.

I provided a trough of planed boards fourteen feet long, six inches wide, and six inches deep, in the clear, filled with water within half an inch of the edge, to represent a canal. I had a loose board of nearly the same length and breadth, that, being put into the water, might be sunk to any depth, and fixed by little wedges where I would choose to have it stay, in order to make different depths of water, leaving the surface at the same height with regard to the sides of the trough. I had a little boat in form of a lighter or boat of burthen, six inches long, two inches and a quarter wide, and one inch and a quarter deep. When swimming it drew one inch water. To give motion to the boat I fixed one end of a long silk thread to its bow, just even with the water's edge, the other end passed over a well-made brass pulley of about an inch diameter, turning freely on a small axis; and a shilling was the weight. Then placing the boat at one end of the trough, the weight would draw it through the water to the other.

Not having a watch that shows seconds, in order to measure the time taken up by the boat in passing from end to end, I counted as fast as I could count to ten repeatedly, keeping an account of the number of tens on my fingers. And, as much as possible to correct any little inequalities in my counting, I repeated the experiment a number of times at each depth of water, that I might take the medium. And the following are the results:

	Water 1½ inches deep.	2 inches.	4½ inches.
1st exp.	100	94	79
2	104	93	78
3	104	91	77
4	106	87	79
5	100	88	79
6	99	86	80
7	100	90	79
8	100	88	81
	813	717	632
	Medium 101	Medium 89	Medium 79

I made many other experiments, but the above are those in which I was most exact; and they serve sufficiently to show that the difference is considerable. Between the deepest and shallowest it appears to be somewhat more than one fifth. So that, supposing large canals and boats and depths of water to bear the same proportions, and that four men or horses would draw a boat in deep water four leagues in four hours, it would require five to draw the same boat in the same time as far in shallow water; or four would require five hours.

Whether this difference is of consequence enough to justify a greater expense in deepening canals, is a matter of calculation, which our ingenious engineers in that way will readily determine. I am, &c.,

B. FRANKLIN

1768·1769

An Edict by the King of Prussia

A large part of Franklin's time in the decade after the repeal of the Stamp Act (1766) was devoted to pleading the cause of the American colonies before the British public and the Tory government. Franklin was ordinarily good-natured about the situation, but sometimes he grew impatient with the measures of men who did not know or wish to know the true state of affairs in America. The latter mood lay behind the satire "An Edict by the King of Prussia," first published in a London newspaper, the **Public Advertiser**, in 1773. By skillfully paraphrasing actual laws by which Parliament had regulated trade in Ireland and America, Franklin dramatized the illogicality of the ministry's position in a way remarkable for its brevity and its effectiveness. Of the reception of the piece he left an account in one of his letters: "What made it the more noticed here was, that people in reading it were, as the phrase is, **taken in**, till they had got half through it, and imagined it a real edict, to which mistake I suppose the King of Prussia's character must have contributed. I was down at Lord Le Despencer's, when the post brought that day's papers. Mr. Whitehead was there, too [Paul Whitehead, the author of "Manners"], who runs early through all the papers, and tells the company what he finds remarkable. He had them in another room, and we were chatting in the breakfast parlour, when he came running in to us, out of breath, with the paper in his hand. 'Here!' says he, 'here's news for ye! Here's the King of Prussia claiming a right to this kingdom!' All stared, and I as much as anybody; and he went on to read it. When he had read two or three paragraphs, a gentleman present said, 'Damn his impudence. I dare say we shall hear by next post, that he is upon his march with one hundred thousand men to back this.' Whitehead, who is very shrewd, soon after began to smoke it, and looking in my face, said, 'I'll be hanged if this is not some of your American jokes upon us.' The reading went on, and ended with abundance of laughing, and a general verdict that it was a fair hit."

Dantzick, Sept. 5

We have long wondered here at the supineness of the English nation, under the Prussian impositions upon its trade entering our port. We did not, till lately, know the claims, ancient and modern, that hang over that nation, and therefore could not suspect that it might submit to those impositions from a sense of duty, or from principles of equity. The following Edict, just made publick, may, if serious, throw some light upon this matter:

"FREDERICK, by the grace of God, King of Prussia, &c. &c. &c. to all present and to come, Health. The peace now enjoyed throughout our dominions, having afforded us leisure to apply ourselves to the regulation of commerce, the improvement of our finances, and at the same time the easing our domestic subjects in their taxes: For these causes and other good considerations us thereunto moving, we hereby make known, that, after having deliberated these affairs in our council, present our dear brothers, and other great officers of the state, members of the same, we, of our certain knowledge, full power, and authority royal, have made and issued this present Edict, viz.

"Whereas it is well known to all the world, that the first German settlements made in the island of Britain were by colonies of people, subjects to our renowned ducal ancestors, and drawn from their dominions, under the conduct of Hengist, Horsa, Hella, Uffa, Cerdicus, Ida, and others; and that the said colonies have flourished under the protection of our august house, for ages past; have never been emancipated therefrom; and yet have hitherto yielded little profit to the same: And whereas we ourself have in the last war fought for and defended the said colonies, against the power of France, and thereby enabled them to make conquests from the said power in America; for which we have not yet received adequate compensation: And whereas it is just and expedient that a revenue should be raised from the said colonies in Britain, towards our indemnification;

Text: Gentleman's Magazine for October 1773 • **12 to all . . . come.** "A tous presens et à venir. ORIGINAL." . . Franklin • **28 Hengist, . . . Ida,** all leaders of the Germanic invasion of Britain, traditionally dated as beginning in 449 A D Franklin seems to have read the **History of England** (1754-1761) by his friend David Hume (1711-1776), wherein these names are mentioned in almost the same order **Hella** should be Ælla, or Ella

and that those who are descendants of our ancient subjects, and thence still owe us due obedience, should contribute to the replenishing of our royal coffers, as they must have done, had their ancestors remained in the territories now to us appertaining: We do therefore hereby ordain and command, that, from and after the date of these presents, there shall be levied, and paid to our officers of the customs, on all goods, wares, and merchandizes, and on all grain and other produce of the earth, exported from the said island of Britain, and on all goods of whatever kind imported into the same, a duty of four and a half per cent. ad valorem, for the use of us and our successors. And that the said duty may more effectually be collected, we do hereby ordain, that all ships or vessels bound from Great-Britain to any other part of the world, or from any other part of the world to Great-Britain, shall in their respective voyages touch at our port of Koningsberg, there to be unladen, searched, and charged with the said duties.

"And whereas there hath been from time to time discovered in the said island of Great-Britain, by our colonists there, many mines or beds of iron stone; and sundry subjects of our ancient dominion, skilful in converting the said stone into metal, have in times past transported themselves thither, carrying with them and communicating that art; and the inhabitants of the said island, presuming that they had a natural right to make the best use they could of the natural productions of their country, for their own benefit, have not only built furnaces for smelting the said stone into iron, but have erected plating forges, slitting mills, and steel furnaces, for the more convenient manufacturing of the same, thereby endangering a diminution of the said manufacture in our ancient dominion; we do therefore hereby farther ordain, that, from and after the date hereof, no mill or other engine for slitting or rolling of iron, or any plating forge to work with a tilt-hammer, or any furnace for making steel, shall be erected or continued in the said island of Great-Britain: And the Lord-Lieutenant of every county in the said island is hereby commanded, on information of any such erection within his county, to order and by force to cause the same to be abated and destroyed, as he shall answer the neglect thereof to us at his peril. But we are nevertheless graciously pleased to permit the inhabitants of the said island to transport their iron into Prussia, there to be manufactured, and to them returned, they paying our Prussian subjects for the workmanship, with all the costs of commission, freight, and risk, coming and returning, any thing herein contained to the contrary notwithstanding.

"We do not, however, think fit to extend this our indulgence to the article of wool; but meaning to encourage not only the manufacturing of woolen cloth, but also the raising of wool, in our ancient dominions; and to prevent both, as much as may be, in our said island, we do hereby absolutely forbid the transportation of wool from thence even to the mother-country, Prussia, And that those islanders may be farther and more effectually restrained in making any advantage of their own wool, in the way of manufacture, we command that none be carried out of one county into another, nor shall any worsted, bay, or woollen-yarn, cloth, says, bays, kerseys, serges, frizes, druggets, cloth-serges, shalloons, or any other drapery stuffs or woollen manufactures whatsoever, made up or mixed with wool in any of the said counties, be carried into any other county, or be water-borne even across the smallest river or creek, on penalty of forfeiture of the same, together with the boats, carriages, horses, &c. that shall be employed in removing them. Nevertheless, our loving subjects there are hereby permitted (if they think proper) to use all their wool as manure, for the improvement of their lands.

"And whereas the art and mystery of making hats hath arrived at great perfection in Prussia; and the making of hats by our remoter subjects ought to be as much as possible restrained: And forasmuch as the islanders before mentioned, being in possession of wool, beaver and other furs, have presumptuously conceived they had a right to make some advantage thereof, by manufacturing the same into hats, to the prejudice of our domestic manufacture: We do therefore hereby strictly command and ordain, that no hats or felts whatsoever, dyed or undyed, finished or unfinished, shall be loaden or put into or upon any vessel, cart, carriage, or

---

12 **ad valorem,** according to value • 18 **Koningsberg,** Königsberg, in East Prussia, peculiarly suitable to Franklin's purpose because of its remoteness The hit is at the laws requiring American ships trading abroad to touch at an English port • 22 **iron stone.** See a parliamentary act of 23 George III, c 29 (1749-1750) prohibiting ironworks in the American colonies • 53 **wool.** See an act of 10 and 11 William III, c. 10 (1698-1699) to prevent the exportation of wool from Ireland and the colonies • 76 **making hats.** See the act of 5 George II, c. 22 (1731-1732) prohibiting the conveyance of hats and felt from the colonies

horse, to be transported or conveyed out of one county in the said island into another county, or to any other place whatsoever, by any person or persons whatsoever, on pain of forfeiting the same, with a penalty of five hundred pounds sterling for every offence. Nor shall any hat-maker, in any of the said counties, employ more than two apprentices, on penalty of five pounds sterling per month: we intending hereby that such hat-makers, being so restrained, both in the production and sale of their commodity, may find no advantage in continuing their business. But, lest the said islanders should suffer inconveniency by the want of hats, we are farther graciously pleased to permit them to send their beaver furs to Prussia; and we also permit hats made thereof to be exported from Prussia to Britain; the people thus favoured to pay all costs and charges of manufacturing, interest, commission to our merchants, insurance and freight going and returning, as in the case of iron.

"And lastly, being willing farther to favour our said colonies in Britain, we do hereby also ordain and command, that all the thieves, highway and street robbers, house-breakers, forgerers, murderers, s—d—tes, and villains of every denomination, who have forfeited their lives to the law in Prussia, but whom we, in our great clemency, do not think fit here to hang, shall be emptied out of our gaols into the said island of Great-Britain, for the better peopling of that country.

"We flatter ourselves, that these our royal regulations and commands will be thought just and reasonable by our much favoured colonists in England; the said regulations being copied from their own statutes, of 10 and 11 Will. III. c. 10—5 Geo. II. c. 22—23 Geo. II. c. 29—4 Geo. I. c. 11. and from other equitable laws made by their parliaments, or from instructions given by their Princes, or from resolutions of both Houses, entered into for the good government of their own colonies in Ireland and America.

"And all persons in the said island are hereby cautioned not to oppose in any wise the execution of this our Edict, or any part thereof, such opposition being high-treason; of which all who are suspected shall be transported in fetters from Britain to Prussia, there to be tried and executed according to the Prussian law.

"Such is our pleasure.

"Given at Potsdam, this twenty-fifth day of the month of August, One thousand seven hundred and seventy-three, in the thirty-third year of our reign.

"By the King, in his Council.

"RECHTMÆSSIG, Sec."

Some take this Edict to be merely one of the King's Jeux d'Esprit: others suppose it serious, and that he means a quarrel with England; but all here think the assertion it concludes with, "that these regulations are copied from acts of the English parliament respecting their colonies," a very injurious one; it being impossible to believe, that a people distinguished for their love of liberty, a nation so wise, so liberal in its sentiments, so just and equitable towards its neighbors, should, from mean and injudicious views of petty immediate profit, treat its own children in a manner so arbitrary and tyrannical!

The Ephemera

An Emblem of Human Life

The Ephemera was originally written in French for Madame Brillon de Jouy, one of Franklin's neighbors during his residence at Passy, and is thought to have been first printed on his private press there, about September 1778. Madame Brillon, perhaps forty years Franklin's junior, was the wife of a government official, none too happy in her family responsibilities but possessed of an abundant share of that vivacity which is so common among educated Frenchwomen. She and Franklin shared a fondness for music and for chess, and they exchanged half-flirtatious, half-serious letters not unlike the more polished bagatelle which follows. The familiar piece entitled **The Whistle** was also written for Madame Brillon.

As appears from the introductory paragraph, **The Ephemera** was suggested by a visit to the Moulin Joli, a

small island in the Seine which was a part of the country estate of Claude-Henri Watelet. Franklin later acknowledged that he owed something to his memory of a newspaper essay on "Human Vanity," printed in the **Pennsylvania Gazette** for December 4, 1735. What makes **The Ephemera** an unusually pointed comment on the well-worn theme of the transience of life is the reader's identification of the experienced Franklin with the insect philosopher. Pathos has seldom been more delicately sustained.

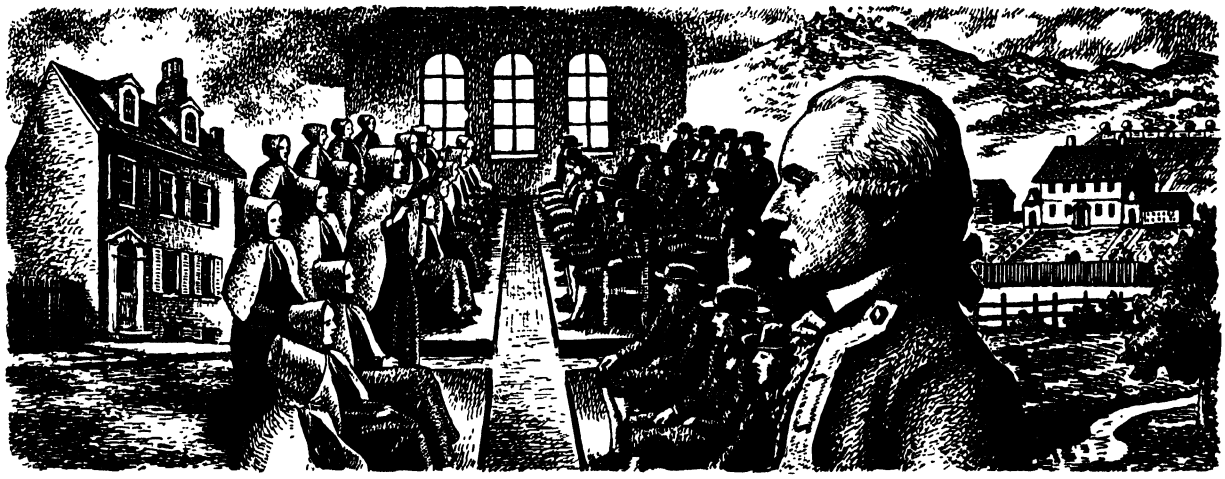
You may remember, my dear friend, that when we lately spent that happy day in the delightful garden and sweet society of the Moulin Joly, I stopt a little in one of our walks, and stayed some time behind the company. We had been shown numberless skeletons of a kind of little fly, called an ephemera, whose successive generations, we were told, were bred and expired within the day. I happened to see a living company of them on a leaf, who appeared to be engaged in conversation. You know I understand all the inferior animal tongues. My too great application to the study of them is the best excuse I can give for the little progress I have made in your charming language. I listened through curiosity to the discourse of these little creatures; but as they, in their national vivacity, spoke three or four together, I could make but little of their conversation. I found, however, by some broken expressions that I heard now and then, they were disputing warmly on the merit of two foreign musicians, one a *cousin,* the other a *moscheto;* in which dispute they spent their time, seemingly as regardless of the shortness of life as if they had been sure of living a month. Happy people! thought I; you are certainly under a wise, just, and mild government, since you have no public grievances to complain of, nor any subject of contention but the perfections and imperfections of foreign music. I turned my head from them to an old gray-headed one, who was single on another leaf, and talking to himself. Being amused with his soliloquy, I put it down in writing, in hopes it will likewise amuse her to whom I am so much indebted for the most pleasing of all amusements, her delicious company and heavenly harmony.

"It was," said he, "the opinion of learned philosophers of our race, who lived and flourished long before my time, that this vast world, the Moulin Joly, could

House in which Franklin lived at Passy.

not itself subsist more than eighteen hours; and I think there was some foundation for that opinion, since, by the apparent motion of the great luminary that gives life to all nature, and which in my time has evidently declined considerably towards the ocean at the end of our earth, it must then finish its course, be extinguished in the waters that surround us, and leave the world in cold and darkness, necessarily producing universal death and destruction. I have lived seven of those hours, a great age, being no less than four hundred and twenty minutes of time. How very few of us continue so long! I have seen generations born, flourish, and expire. My present friends are the children and grandchildren of the friends of my youth, who are now, alas, no more! And I must soon follow them; for, by the course of nature, though still in health, I cannot expect to live above seven or eight minutes longer. What now avails all my toil and labor in amassing honey-dew on this leaf, which

---



Text: Bigelow's **Complete Works,** VI, 237-239 • 19 **one . . . moscheto,** one a gnat, the other a mosquito. In a letter to William Carmichael written June 17, 1780, Franklin said that at the time he wrote "The Ephemera" "all conversations at Paris were filled with disputes about the music of Gluck and Piccini, a German and Italian musician, who divided the town into violent parties." **The Iphigénie en aulide** of C. W. Ritter von Gluck (1714-1787) was produced at Paris in 1774; Niccolo Piccini (1728-1800), the Italian composer, was invited to Paris in 1776

I cannot live to enjoy! What the political struggles I have been engaged in for the good of my compatriot inhabitants of this bush, or my philosophical studies for the benefit of our race in general! for in politics what can laws do without morals? Our present race of ephemeræ will in a course of minutes become corrupt, like those of other and older bushes, and consequently as wretched. And in philosophy how small our progress! Alas! art is long, and life is short! My friends would comfort me with the idea of a name they say I shall leave behind me; and they tell me I have lived long enough to nature and to glory. But what will fame be to an ephemera who no longer exists? And what will become of all history in the eighteenth hour, when the world itself, even the whole Moulin Joly, shall come to an end, and be buried in universal ruin?"

To me, after all my eager pursuits, no solid pleasures now remain, but the reflection of a long life spent in meaning well, the sensible conversation of a few good lady ephemeræ, and now and then a kind smile and a tune from the ever amiable *Brillante.*

B. FRANKLIN
1778-1778?

SOCIAL COMMENTATORS: Crèvecoeur, Woolman

Michel Guillaume St. Jean de Crèvecoeur

1735 • 1813

Michel Guillaume St. Jean de Crèvecoeur was born in France, near Caen. Educated first in a Jesuit school and then in England, he took ship for Canada before he was twenty and there enlisted in the army. He rose to the rank of lieutenant, making himself particularly useful as a mapmaker in the region of the lower Great

Panel (l. to r.): John Woolman's shop • Friends' meeting • Michel Guillaume St. Jean de Crèvecoeur • Crèvecoeur's farm, Orange County

Lakes. About 1759 Crèvecoeur drifted down through the English colonies, probably working as a surveyor, and in 1764 applied for naturalization in New York. He settled on an Orange County farm, married, and for approximately fifteen years lived as a gentleman farmer in a well-established and prosperous rural community. Soon after his marriage in 1769, he appears to have begun setting down his impressions of the country; and by 1780, when he was forced to leave America because his moderate opinions had made both Whigs and Tories suspicious of him, he had a small trunk full of manuscripts. He found a publisher for some of them in London, but the publisher was a Whig and probably selected for *Letters from an American Farmer* (1782) those pieces least critical of the Revolutionary party in America. A few others were published in a French translation in 1784, but a number of more obviously Tory papers remained in manuscript until 1925, when they were included in *Sketches of Eighteenth Century America.*

Crèvecoeur's *Letters* were popular in English, French, and German, and for a time he was a literary lion, the protégé in the Paris salons of Madame d'Houdetot, whom Rousseau had loved. Partly through her influence, the "sauvage" from America was sent back to New York as consul-general, and from 1783 until 1790 Crèvecoeur did his best to keep alive American gratitude to and friendship with France. The last twenty-three years of his life were spent in Europe.

Crèvecoeur expresses many of the revolutionary ideals which operated powerfully in the eighteenth century, first in America and then in France. He was a perfectionist, although he never recognized the paradox in his admiration for social progress and his equally high regard for the primitive and simple. He was more than a believer in religious freedom; he was anticlerical, with a distrust of organized religion almost as strong as Thomas Paine's. Like Benjamin Franklin and the Frenchmen who were weary of the old order, he was a physiocrat, believing that agriculture should be left largely free of taxation because it was the basis of wealth and a healthy economic life. Like Jefferson, he envisaged an agrarian society, free of governmental restrictions; free of the dangers of cities and of great wealth concentrated in the hands of the few; free, by and large, of the influence of clergymen and of lawyers; free of sickness, intemperance, and extravagance. In his most expansive moments, Crèvecoeur was capable of seeing America as "one diffusive scene of happiness reaching from the sea-shores to the last settlements on the borders of the wilderness."

Sometimes, particularly in the pieces which remained so long in manuscript, there is brief recognition of man's inhumanity to man, as exemplified by slavery and civil disturbances and war. Nature, usually beneficent, occasionally displays its crueler aspects, when the snakes fight to the death, the hummingbirds grow irascible, and storms and insects plague the determinedly happy farmer. Crèvecoeur, however, was fundamentally an optimist, and the pastoral tone prevails in his writing. His mind was keen and sensitive; an excellent observer, he had the power to communicate his emotional experience. If he overdramatized, he did so, one is convinced, without intent to deceive. The modern reader can understand the conviction of the friend who described Crèvecoeur as "a philanthropist; a man of serene temper and pure benevolence. The milk of human kindness circulated in every vein."

Crèvecoeur wrote well, although unevenly. The fashion of his day compelled him to shape his best-known book into a series of letters, but within these he displayed considerable command of three different forms: the prose essay, the short story, and the dramatic dialogue. His ideas are not unlike those of the promotion tracts and progress reports, but he had a sense of the form appropriate to his "sentiment and susceptibility." He therefore has his place both as a social philosopher and as one of the earliest American writers to experiment with the nature essay and with fiction as a medium for expression. Whether or not he was an "emotional liar," idealizing the simple life without regard to truth, may be a question for debate; there is almost no dissent, however, from the praise of his literary grace.

Williams, New Haven, 1925 • Julia P. Mitchell, St. Jean de Crèvecoeur, New York, 1916 • H. C. Rice, Le Cultivateur américain: étude sur l'oeuvre de Saint John de Crèvecoeur, Paris, 1933

From

Letters from an American Farmer

Letters from an American Farmer (London, 1782) was reprinted, in the English version, five times before 1793, and there were three editions of the French expansion and two of the German translation.

The twelve essays, or "letters," vary greatly in length, and it seems probable that the letter form was an afterthought of Crèvecoeur or his printer. The first three essays are a general and highly favorable view of American life, emphasizing the construction of a new and superior society in sharp contrast with Europe, which he regarded as decadent, stratified, and priest-dominated. The next six essays are more particular; four of them deal with Nantucket, one with Martha's Vineyard and the whale fishery, and one with Charleston and the deplorable institution of slavery. A nature essay, a description of the visit of a Russian gentleman to John Bartram, and "Distresses of a Frontier Man" complete the book.

The organization of the **Letters** is loose; Crèvecoeur's strength lay in his paragraphs and stretches of dialogue. The selection which follows is approximately the first third of Letter III, "What Is an American?"

I wish I could be acquainted with the feelings and thoughts which must agitate the heart and present themselves to the mind of an enlightened Englishman, when he first lands on this continent. He must greatly rejoice that he lived at a time to see this fair country discovered and settled; he must necessarily feel a share of national pride, when he views the chain of settlements which embellishes these extended shores. When he says to himself, this is the work of my countrymen, who, when convulsed by factions, afflicted by a variety of miseries and wants, restless and impatient, took refuge here. They brought along with them their national genius, to which they principally owe what liberty they enjoy, and what substance they possess. Here he sees the industry of his native country displayed in a new manner, and traces in their works the embrios of all the arts, sciences, and ingenuity which flourish in Europe. Here he beholds fair cities, substantial villages, extensive fields, an immense country filled with decent houses, good roads, orchards, meadows, and bridges, where an hundred years ago all was wild, woody and uncultivated! What a train of pleasing ideas this fair spectacle must suggest; it is a prospect which must inspire a good citizen with the most heartfelt pleasure. The difficulty consists in the manner of viewing so extensive a scene. He is arrived on a new continent; a modern society offers itself to his contemplations, different from what he had hitherto scene. It is not composed, as in Europe, of great lords who possess everything, and of a herd of people who have nothing. Here are no aristocratical families, no courts, no kings, no bishops, no ecclestiastical dominion, no invisible power giving to a few a very visible one; no great manufacturers employing thousands, no great refinements of luxury. The rich and the poor are not so far removed from each other as they are in Europe. Some few towns excepted, we are all tillers of the earth, from Nova Scotia to West Florida. We are a people of cultivators, scattered over an immense territory, communicating with each other by means of good roads and navigable rivers, united by the silken bands of mild government, all respecting the laws, without dreading their power, because they are equitable. We are all animated with the spirit of an industry which is unfettered and unrestrained, because each person works for himself. If he travels through our rural districts he views not the hostile castle, and the haughty mansion, contrasted with the clay-built hut and miserable cabbin, where cattle and men help to keep each other warm, and dwell in meanness, smoke, and indigence. A pleasing uniformity of decent competence appears throughout our habitations. The meanest of our log-houses is a dry and comfortable habitation. Lawyer or merchant are the fairest titles our towns afford; that of a farmer is the only appellation of the rural inhabitants of our country. It must take some time ere he can reconcile himself to our dictionary, which is but short in words of dignity, and names of honor. There, on a Sunday, he sees a congregation of respectable farmers and their wives, all clad in neat homespun, well mounted, or riding in their own humble waggons. There is not among them an esquire, saving

will be litigious; pride and obstinacy are often the cause of law suits; the nature of our laws and governments may be another. As citizens it is easy to imagine, that they will carefully read the newspapers, enter into every political disquisition, freely blame or censure governors and others. As farmers they will be careful and anxious to get as much as they can, because what they get is their own. As northern men they will love the chearful cup. As Christians, religion curbs them not in their opinions; the general indulgence leaves every one to think for themselves in spiritual matters; the laws inspect our actions, our thoughts are left to God. Industry, good living, selfishness, litigiousness, country politics, the pride of freemen, religious indifference, are their characteristics. If you recede still farther from the sea, you will come into more modern settlements; they exhibit the same strong lineaments, in a ruder appearance. Religion seems to have still less influence, and their manners are less improved.

Now we arrive near the great woods, near the last inhabited districts, there men seem to be placed still farther beyond the reach of government, which in some measure leaves them to themselves. How can it pervade every corner; as they were driven there by misfortunes, necessity of beginnings, desire of acquiring large tracks of land, idleness, frequent want of economy, ancient debts; the re-union of such people does not afford a very pleasing spectacle. When discord, want of unity and friendship; when either drunkenness or idleness prevail in such remote districts; contention, inactivity, and wretchedness must ensue. There are not the same remedies to these evils as in a long established community. The few magistrates they have, are in general little better than the rest; they are often in a perfect state of war; that of man against man, sometimes decided by blows, sometimes by means of the law; that of man against every inhabitant of these venerable woods, of which they are come to dispossess them. There men appear to be no better than carnivorous animals of a superior rank, living on the flesh of wild animals when they can catch them, and when they are not able, they subsist on grain. He who would wish to see America in its proper light, and have a true idea of its feeble beginnings and barbarous rudiments, must visit our extended line of frontiers where the last settlers dwell, and where he may see the first labours of settlement, the mode of clearing the earth, in all their different appearances; where men are wholly left dependent on their native tempers, and on the spur of uncertain industry, which often fails when not sanctified by the efficacy of a few moral rules. There, remote from the power of example, and check of shame, many families exhibit the most hideous parts of our society. They are a kind of forlorn hope, preceding by ten or twelve years the most respectable army of veterans which come after them. In that space, prosperity will polish some, vice and the law will drive off the rest, who uniting again with others like themselves will recede still farther; making room for more industrious people, who will finish their improvements, convert the loghouse into a convenient habitation, and rejoicing that the first heavy labours are finished, will change in a few years that hitherto barbarous country into a fine fertile, well regulated district. Such is our progress, such is the march of the Europeans toward the interior parts of this continent. In all societies there are off-casts; this impure part serves as our precursors or pioneers; my father himself was one of that class, but he came upon honest principles, and was therefore one of the few who held fast; by good conduct and temperance, he transmitted to me his fair inheritance, when not above one in fourteen of his contemporaries had the same good fortune.

Forty years ago this smiling country was thus inhabited; it is now purged, a general decency of manners prevails throughout, and such has been the fate of our best countries.

Exclusive of those general characteristics, each province has its own, founded on the government, climate, mode of husbandry, customs, and peculiarity of circumstances. Europeans submit insensibly to these great powers, and become, in the course of a few generations, not only Americans in general, but either Pennsylvanians, Virginians, or provincials under some other name. Whoever traverses the continent must easily observe those strong differences, which will grow more evident in time. The inhabitants of Canada, Massachusetts, the middle provinces, the southern ones will be as different as their climates; their only points of unity will be those of religion and language. . . .

1780?-1782

John Woolman

1720 • 1772

The *Journal* of John Woolman has found enthusiastic readers ever since its first publication in 1774. Among those who have been charmed by its revelation of a man who for honesty, simplicity, and sweetness of temper merits comparison with St. Francis of Assisi and Jesus Christ must be counted Charles Lamb, the English essayist, Lamb's friend Crabb Robinson, diarist-historian of the Romantic era, William Ellery Channing, and John Greenleaf Whittier. To many, Woolman has come to represent American Quakerism at its splendid best, a mystic faith whose outward starkness and lack of pomp accentuate great inward richness. More recently Woolman has been much admired for his unique grasp of the social and economic implications of the concept of the Society of Friends that the human race is one great family.

The brotherhood of man was to Woolman not an ideal but a reality, and as he grew older he sought to divorce himself, quietly but firmly, from all actions and institutions which even indirectly involved injustice to his fellow creatures. Although he made much of his living by drawing up legal documents, he refused to make out bills of sale for slaves. When he learned that plantation workers in the West Indies endured indescribable hardships, he did without sugar. Before he died he was examining every aspect, every purchase, of his daily life in the light of its social effect. He hit upon the methods of passive resistance, non-coöperation, and the economic boycott and, like Thoreau two generations later, learned to scale down his wants to fit his principles. Woolman did not reform society, but he tried to deal honestly with the exceedingly complicated problem of an individual's just relation to his fellow men. On occasion his methods have proved to be tremendously effective.

Woolman was born on a farm on Rancocas Creek, midway between Burlington and Mount Holly, New Jersey. There he lived until he was twenty, learning to love the Quaker way of life in his family, the village school, and the weekly Meeting. He then went into a shop in Mount Holly, five miles away, and in his spare time learned the tailor's trade. Diligent and thrifty, he might easily have grown wealthy, but his social conscience was obviously far greater than that of most of his associates. Soon he felt the call to visit other Meetings, as was the custom of those Friends who wished to become ministers and elders in a sect which had no professional clergy. During the last half of his life, except when he was ill, he made at least one journey a year, sometimes being away from home for as long as four months. Usually accompanied by another Friend, he visited and testified at Quaker meetings and in Quaker homes from New England to the Carolinas and westward into the Indian country, telling what was in his mind and heart and remonstrating with Quaker slaveholders and businessmen whose lives, in his judgment, fell short of what he called "pure wisdom." His tact, his literary skill, and, most of all, his unimpeachable sincerity made him successful in Quaker politics and action, and he was chiefly responsible for consolidating

Quaker sentiment for the emancipation of Negro slaves. His inclination to help arouse the English Quakers to the importance of this cause sent him to England in 1772. He arrived in London in June, visited Friends there and in the neighborhood, and then, wishing to go to the North, chose characteristically to walk rather than have any part in the oppression of postboys and horses. He got as far as York, where he died of smallpox in September.

In the course of his life Woolman wrote more than a dozen essays on matters which he thought ought to be more fully considered by the Quakers. Some of them were published during his lifetime, usually by the Overseers of the Press of the Philadelphia Meeting, so that they were distributed among Quakers with some degree of authority. The *Essay on Some Considerations on the Keeping of Negroes* (Part I, 1754; Part II, 1762) and *Considerations on Pure Wisdom and Human Policy* (1758) are the most important. A few of the more radical essays and the *Journal* did not appear until after Woolman's death.

Woolman's writing is far from being as artless as it may seem at first glance. He gained precisely the effect of unpretentious directness that he wanted, and he revised some of his manuscripts with considerable care. His Quaker readers were suspicious of learning, of dependence upon close-knit logic or rhetorical devices. The sweet reasonableness of Woolman's tone and the apparent carelessness in organization clothe a keen and penetrating intellect, stored with the rich wisdom of the Bible and of personal experience and directed by convictions which are often revolutionary.

The Journal and Essays of John Woolman, ed. Amelia M. Gummere, New York, 1922 • Janet Whitney, John Woolman, American Quaker, Boston, 1942

From

The Journal and Essays of John Woolman

Woolman tells us that he began his journal when he was thirty-six. Presumably he kept some kind of day-by-day diary, but so far as is known none is extant. The Journal has come down to us in two manuscripts, one of which includes a number of Woolman's essays and is the manuscript which he himself prepared for the publication committee of the Philadelphia Meeting before he left for England. The Journal consists of eleven chapters; all of Chapter I and a part of the latter portion of Chapter III follow. Mrs. Whitney has shown in her recent biography, by reference to manuscript account books, that Woolman's dating of events, probably from memory, is not always to be relied upon. His account of his gradual progress toward spiritual enlightenment, "until I felt that rise which prepares the creature to stand like a Trumpet, through which the Lord speaks to his flock," is possibly the clearest exposition of the Quaker faith in our literature.

CHAPTER I

I have often felt a motion of Love to leave some hints of my experience of the Goodness of God: and pursuant thereto, in the 36 year of my age, I begin this work.

I was Born in Northampton, in Burlington county, in West Jersey, in the year of our Lord 1720 & before I was seven years old, I began to be acquainted with the operations of Divine Love. Through the care of my Parents, I was taught to Read as soon as I was capable of it, and as I went from School one seventh-day, I remember, while my companions went to play by the way, I went forward out of sight, and seting down, I read the twenty second chapter of the Revelations: "He showed me a pure River of Water of Life, clear as Crystal, proceeding out of the Throne of God and of the Lamb," &c. and in the reading of it, my mind was drawn to seek after that Pure Habitation, which I then believed God had prepared for his servants. The place where I sat, and

the sweetness that attended my soul, remain fresh in my memory.

This, and the like Gracious Visitations, had that effect upon me, that when boys used ill language, it troubled me, & through the continued Mercies of God, I was preserved from it. The pious instructions of my Parents were often fresh in my mind when I happened to be among wicked children, and were of use to me.

My Parents haveing a large family of children, used frequently on first-days after meeting, to put us to read in the Holy Scriptures, or some religious books, one after another, the rest sitting by without much conversation, which I have since often thought was a good practice. From what I had read, I believed there had been in past ages, people who Walked in Uprightness before God in a degree exceeding any that I knew, or heard of, now living: & the Apprehension of their being less Steadiness and firmness amongst people in this age than in past ages, often Troubled me while I was still young.

I had a Dream about the ninth year of my age as follows: I saw the Moon rise near the West, & run a regular course Eastward, so swift that in about a quarter of an hour, she reached our Meridian, when there descended from her a small Cloud on the Direct line to the Earth, which lighted on a pleasant Green about twenty yards from the Door of my Father's House (in which I thought I stood) and was immediately turned into a Beautiful green Tree. The Moon appeared to run on with Equal swiftness, and soon set in the East, at which time the Sun arose at the place where it commonly doth in the Sumer, and Shineing with full Radiance in a Serene air, it appeared as plesant a morning as ever I saw.

All this time I stood still in the door, in an Awfull frame of mind, and I observed that as heat increased by the Riseing Sun, it wrought so powerfully on the little green Tree, that the leaves gradually withered, and before Noon it appear'd dry & dead. There then appeared a Being, Small of Size, moving Swift from the North Southward, called a *"Sun Worm."*

Tho' I was A Child, this dream was instructive to me.

Another thing remarkable in my childhood was, that once as I went to a neighbour's house, I saw, on the way, a Robbin sitting on her nest, and as I came near she went off, but having young ones, flew about, and with many cries expressed her Concern for them. I stood and threw stones at her, till one striking her, she fell down dead. At first I was pleas'd with the Exploit, but after a few minutes was seized with Horror, as haveing in a sportive way kild an Innocent Creature while she was carefull for her young. I beheld her lying dead, & thought those young ones for which she was so carefull must now perish for want of their dam to nourish them; and after some painfull considerations on the subject, I climbed up the Tree, took all the young birds, and killed them supposing that better than to leave them to pine away and die miserably; and believ'd in this case, that scripture proverb was fulfilled, "The tender mercies of the wicked are Cruel." I then went on my errand, but, for some hours, could think of little else but the Cruelties I had committed, and was much troubled.

Thus He whose tender Mercies are over all his works, hath placed that in the Human mind which incites to exercise goodness towards every liveing creature and This being singly attended to, people become tender-hearted and sympathizing; but being frequently & totally rejected, the mind shuts itself up in a Contrary disposition.

About the twelfth year of my age, my Father being abroad, my Mother reproved me for some misconduct, to which I made an Undutifull reply & the next first-day, as I was with my Father returning from Meeting, He told me he understood I had behaved amis to my Mother, and Advised me to be more carefull in future. I knew myself blameable, and in shame and confusion remained silent. Being thus awakened to a sense of my Wickedness, I felt remorse in my mind, and geting home, I retired and prayed to the Lord to forgive me; and I do not remember that I ever after that, spoke unhandsomely to either of my Parents, however foolish in some other things.

Having attained the age of Sixteen, I began to love wanton company: and though I was preserved from profane language or Scandalous conduct, Still I perceived a plant in me which produced much wild grapes. Yet my Merciful Father forsook me not utterly, but at

---

9 large family. John Woolman was the fourth child and eldest son in a family of six girls and seven boys • **21 a Dream.** The symbolism of Woolman's dream is obscure, but presumably has something to do with his knowledge of good and evil • **59 scripture proverb,** Proverbs 10:12

times through his grace I was brought seriously to consider my ways, and the sight of my backsliding affected me with sorrow: but for want of rightly attending to the reproofs of Instruction, Vanity was added to Vanity, and Repentance. Upon the whole my mind was more and more Alienated from the Truth, and I hastened towards Destruction. While I meditate on the Gulf towards which I traveled, and reflect on my youthful Disobedience, my heart is affected with Sorrow.

Advancing in age, the number of my Acquaintance increased, and thereby my way grew more difficult. Though I had heretofore found comfort in reading the Holy Scriptures, and thinking on heavenly things, I was now Estranged therefrom. I knew I was going from the flock of Christ, and had no resolution to return, hence serious reflections were uneasie to me, and Youthfull Vanities and Diversions my greatest pleasure. Runing in this Road I found many like myself, and we associated in that which is reverse to true Friendship: but in this swift race it pleased God to visit me with Sickness, so that I doubted of recovering· and then did Darkness, Horror and Amazement, with full force seize me, even when my pain and distress of body was verry great: I thought it would have been better for me never to have had a being, than to see the day which I now saw. I was filled with Confusion, & in great affliction both of mind & body, I lay and bewailed myself. I had not confidence to lift up my cries to God, whom I had thus offended; but in a deep sense of my great folly I was humbled before Him, & at length that Word which is as a Fire and a Hamer, broke and dissolved my rebellious heart, and then my Cries were put up in contrition, and in the multitude of His mercies I found inward relief, and felt a close Engagement, that if he was pleased to Restore my health, I might walk Humbly before Him.

After my Recovery, this Exercise remained with me a considerable time, but, by degrees, giving way to youthfull vanities, they gained strength, and geting with wanton young people I lost ground. The Lord had been verry Gracious, and Spoke peace to me in the time of my distress, and I now most ungratefully turned again to folly, on which account, at times, I felt sharp reproof, but did not get low enough to Cry for help. I was not so hardy as to commit things scandalous, but to Exceed in Vanity, and promote myrth, was my chief study. Still I retained a love and esteem for pious people, and their company brought an Awe upon me. My Dear Parents several times Admonished me in the fear of the Lord, and their admonition entered into my heart, & had a good effect for a season, but not geting deep enough to pray rightly, the tempter when he came found entrance. I remember once having spent a part of a day in wantonness, as I went to bed at night, there lay in a window near my bed a Bible, which I opened, and first cast my eye on the Text, "we lie down in our shame, and our confusion covers us." This I knew to be my case, and meeting with so unexpected a reproof, I was somewhat Affected with it, and went to bed under remorse of conscience, which I soon cast off again.

Thus time passed on, my heart was replenished with myrth and wantonness, while pleasing scenes of Vanity were presented to my Imagination, till I attain'd the age of Eighteen years, near which time I felt the Judgments of God in my soul like a consuming fire, and looking over my past life, the prospect was moveing. I was often sad, and longed to be deliver'd from those vanities; then again my heart was Strongly Inclined to them, and there was in me a sore conflict. At times I turned to folly, and then again sorrow and confusion took hold of me. In a while I resolved totally to leave off some of my vanities, but there was a secret reserve in my heart, of the more refined part of them, and I was not low enough to find true peace. Thus for some months, I had great troubles and disquiet, there remaining in me an unsubjected will, which rendered my labours fruitless, till at length, through the Mercifull continuance of Heavenly Visitations, I was made to bow down in Spirit before the Most High. I remember one evening I had spent some time in reading a pious author, and walking out a lone, I humbly prayed to the Lord for his help, that I might be delivered from those vanities which so ensnared me. Thus being brought low he helped me, and as I learned to bear the Cross, I felt refreshment to come from his Presence: but not keeping in that Strength which gave victory I lost ground again, The sense of which greatly afflicted me and I sought Desarts and lonely places, and there with tears did confess my Sins to God, and humbly craved help of HIM, and I may

---

56 the Text, Jeremiah 3 25

say with Reverence he was near to me in my troubles, and in those times of Humiliation opened my ear to Discipline.

I was now led to look seriously at the means by which I was drawn from the pure Truth, and I learned this. That if I would live in the life which the Faithful servants of God lived in, I must not go into company as heretofore in my own will, but all the cravings of Sense must be governed by a Divine principle. In times of sorrow and abasement these Instructions were sealed upon me, and I felt the power of Christ prevail over all selfish desires, so that I was preserved in a good degree of steadiness, and being young and believing at that time that a single life was best for me, I was strengthened to keep from such company as had often been a snare to me.

I kept steady to meetings, spent first-days in the afternoon chiefly in reading the scriptures and other good Books, and was early convinced in my mind that true Religion consisted in an inward life, wherein the Heart doth Love and Reverence God the Creator, and learn to Exercise true Justice and Goodness, not only toward all men, but allso toward the Brute Creatures. That as the mind was moved by an inward Principle to Love God as an invisible, Incomprehensible Being, by the same principle it was moved to love him in all his manifestations in the Visible world. That as by his breath the flame of life was kindled in all Animal and Sensible creatures, to say we Love God as unseen, and at the same time Exercise cruelty toward the least creature moving by his life, or by life derived from Him, was a Contradiction in itself.

I found no narrowness respecting Sects and Opinions, but believe that sincere upright-hearted people, in Every society who truly love God were accepted of HIM.

As I lived under the Cross, and simply followed the openings of Truth, my mind from day to day was more Enlightened, my former acquaintance were left to judge of me as they would, for I found it safest for me to live in private and keep these things sealed up in my own breast. While I silently ponder on that change which was wrought in me, I find no language equal to it, nor any means to convey a clear idea of it. I looked upon the works of God in this Visible Creation, and an awfullness covered me: my heart was tender and often contrite, and a universal Love to my fellow Creatures increased in me. This will be understood by such who have troden in the same path.

Some glances of Real beauty is percieveble in their faces, who dwell in true meekness. Some tincture of true Harmony in the sound of that voice to which Divine Love gives utterance, & Some appearance of right order in their temper and Conduct, whose passions are fully regulated, yet all these do not fully show forth that inward life to such who have not felt it; but this white stone and new name is known rightly to such only who have it.

Now tho' I had been thus Strengthened to bear the Cross, I still found myself in great danger, having many weaknesses Attending me, and strong Temptations to wrestle with, in the feeling whereof I frequently withdrew into private places, and often with tears besought the Lord to help me, whose gracious ear was open to my cry.

All this time I lived with my Parents, and wrought on the plantation, and having had schooling pretty well for a planter, I used to improve winter evenings, and other leisure times, and being now in the Twenty first year of my age, a man in much business at Shopkeeping and Baking, asked me if I would hire with him to tend Shop and keep books. I acquainted my Father with the proposal, and, after some deliberation it was agreed for me to go. I had for a considerable time found my mind less given to Husbandry than heretofore, having often in view some other way of living.

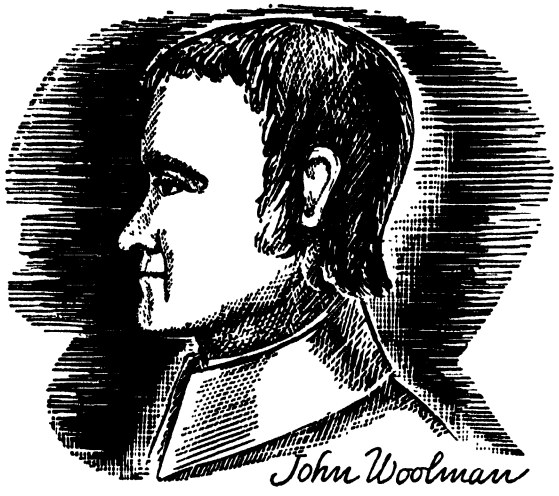
At home I had lived retired, and now having a prospect of being much in the way of company, I felt frequent and fervent Cries in my heart to God the Father of Mercies, that he would preserve me from all Taint & Corruption. That in this more public Employ, I might serve Him my Gracious Redeemer, in that Humility and self Denial with which I had been in a small degree exercised in a verry private life.

The man who employed me furnished a Shop in Mountholly, about five miles from my Father's house & Six from his own and there I lived alone, & tended his Shop. Shortly after my settlement here, I was visited by several young people, my former acquaintances, who knew not but vanities would be as agreeable to me now as ever, and at these times I cryed unto the Lord in Secret for wisdom and Strength, for I felt myself Encompassed with difficulties, and had fresh Ocasion to bewail the follies of time past, in contracting a familiar-

ity with a Libertine people. And as I had now left my Fathers house outwardly, I found my Heavenly Father to be mercifull to me beyond what I can express.

By day I was much among people, and had many tryals to go through, but in evenings I was mostly alone, and may with thankfulness acknowledge, that in those times the Spirit of Supplication was often poured upon me, under which I was frequently exercised, and felt my Strength renewed.

In a few months after I came here, my Master bought several Scotch men-servants, from on board a Vessel, and brought them to Mountholly to sell & having sold several the rest were left with me, one of which was taken sick, & died. The latter part of his sickness, he, being delirious, used to curse and Swear most sorrowfully, and after he was buried, I was left to sleep alone the next night in the same chamber where he died. I perceived in me a Timorousness: I knew however I had not injured the man, but had assisted in taking care of him according to my capacity, and I was not free to ask any one, on that occasion, to sleep with me: nature was feble, but every tryal was a fresh incitement to give myself up wholly to the service of God, for I found no helper like Him in times of Trouble.



After a while my former Acquaintance gave over Expecting me as one of their company, and I began to be known to some whose conversation was helpful to me. And now, as I had Experienced the Love of God, through Jesus Christ, to Redeem me from many polutions, and to be a constant succour to me through a Sea of conflicts, with which no person was fully acquainted, and as my heart was often enlarged in this Heavenly Principle, so I felt a tender compassion for the youth who remain'd entangled in the same snares which had entangled me. From one month to another, this Love & tenderness increased, and my mind was more strongly engaged for the good of my fellow-creatures. I went to meetings in an awfull frame of mind, and endeavoured to be inwardly acquainted with the language of the True Shephered, and one day being under a Strong Exercise of Spirit, I stood up, and said some words in a meeting, but not keeping close to the Divine opening, I said more than was required of me & being soon sencible of my error, I was afflicted in mind some weeks, without any light or comfort, even to that degree that I could take satisfaction in nothing. I remembered God, and was troubled and in the depth of my distress he had pitty upon me, and sent the Comforter. I then felt forgiveness for my offence, and my mind became calm and quiet, being truly thankfull to my Gracious Redeemer for his mercies. And after this, feeling the spring of Divine Love opened, and a Concern to Speak, I said a few words in meeting in which I found peace; this I believe was about six weeks from the first time, and as I was thus humbled and disciplined under the Cross, my understanding became more strengthened to distinguish the language of the pure Spirit which inwardly moves upon the heart, and taught me to wait in Silence sometimes many weeks together, until I felt that rise which prepares the creature to Stand like a Trumpet, through which the Lord Speaks to his flock.

From an inward purifying, and stedfast abideing under it, springs a lively operative desire for the good of others. All faithful people are not called to the publick ministry but whoever are called to it, are called to minister of that which they have taisted and handled spiritually. The outward modes of worship are various, but wheresoever [men] are true Ministers of Jesus Christ, it is from the operation of his Spirit upon their hearts, first purifying them, and thus giving them a [feeling] sense of the conditions of others. This truth was early fixed in my mind, and I was taught to watch the pure opening, and to take heed least while I was standing to speak, my own will should get upermost, and cause me to utter words from worldly wisdom, and depart from the Chanel of the true Gospel Ministry.

In the management of my outward affairs I may say with thankfulness I found Truth to be my Support, and I was respected in my Masters Family who came to live in Mountholly within two years after my going there [1742.]

About the twenty third year of my age I had many fresh and heavenly openings, in respect to the care and providence of the Almighty over his creatures in general, and over man as the most noble amongst those which are visible, and Being clearly convinced in my Judgmt that to place my whole trust in God was best for me, I felt renewed engagements that in all things I might act on an inward principle of Virtue, and pursue worldly business no further than as Truth open'd my way therein.

About the time called Christmas I observed many people from the Country, and dwellers in Town, who resorting to publick houses, spent their time in drink-

ing and vain sports, tending to corrupt one another, on which account I was much troubled. At one house in particular there was much disorder, and I believed it was a duty laid on me to go and speak to the master of that house. I considered I was young, and that several Elderly friends in Town had opportunity to See these things, and though I would gladly have been excused, yet I could not feel my mind clear. The Exercise was heavy, and as I was Reading what the Almighty Said to Ezekiel, respecting his duty as a watchman, the matter was set home more clearly, and then with prayer and tears, I besought the Lord for his Assistance, who in loving kindness gave me a Resigned heart. Then at a sutable Opportunity, I went to the publick house, and Seeing the man amongst a company, I went to him and told him I wanted to speak with him, so we went aside, and there in the Fear and dread of the Almighty I Exprest to him what rested on my mind, which he took kindly, and afterward showed more regard to me than before. In a few years after he died, midle-aged, and I often thought that had I neglected my duty in that case, it would have given me great trouble and I was humbly thankfull to my Gracious Father, who had supported me therein.

My Employer having a Negro woman sold her, and directed me to write a bill of Sale, The man being waiting who had bought her. The thing was Sudden, and though the thoughts of writing an Instrument of Slavery for one of my fellow creatures felt uneasie, yet I remembered I was hired by the year; that it was my master who directed me to do it, and that it was an Elderly man, a member of our society who bought her, so through weakness I gave way, and wrote it, but at the Executing it I was so Afflicted in my mind, that I said before my Master and the friend, that I believed Slavekeeping to be a practice inconsistent with the Christian Religion: this in some degree abated my uneasiness, yet as often as I reflected seriously upon it I thought I should have been clearer, if I had desired to be Excused from it, as a thing against my conscience, for such it was. [And] some time after this a young man of our Society, spake to me to write [an instrument of Slavery], he having taken a Negro into his house. I told him I was not easie to write it, for though many [people] kept slaves in our society as in others, I still believed the practice was not right, and desired to be excused from doing the writing. I spoke to him in good will, and he told me, that keeping slaves was not altogether agreable to his mind, but that the slave being a gift made to his wife, he had accepted of her.

CHAPTER III

. . . Until the year 1756, I continued to retail goods, besides following my trade as a Taylor; about which time I grew uneasy on account of my business growing too cumbersome. I began with selling timings for garments, and from thence proceeded to Sell cloaths and linens, and at length having got a considerable shop of goods, my trade increased every year, and the road to large business appeared open: but I felt a Stop in my mind.

Through the Mercies of the Almighty I had in a good degree learned to be content with a plain way of living. I had but a small family my outward Affairs had been prosperous and, on serious reflection I believed Truth did not require me to engage in much cumbering affairs. It had generally been my practice to buy and sell things realy usefull. Things that served chiefly to please the vain mind in people, I was not easie to trade in; seldom did it, and whenever I did, I found it weaken me as a Christian.

The increase of business became my burthen, for though my natural inclination was towards merchandize, yet I believed Truth required me to live more free from outward cumbers. There was now a strife in my mind betwixt the two, and in this exercise my prayers were

---

9 Ezekiel. See Ezekiel 3:17-19

put up to the Lord, who Graciously heard me, and gave me a heart resigned to his Holy will; I then lessened my outward business; and as I had opportunity told my customers of my intention that they might consider what shop to turn to: and so in a while, wholly laid down merchandize, following my trade as a Taylor, myself only, having no prentice. I also had a nursery of Apple trees, in which I spent a good deal of time, howing, grafting, triming & Inoculating.

In merchandize it is the custom, where I lived, to sell chiefly on credit; and poor people often get in debt, & when payment is expected haveing not wherewith to pay, & so their creditors often sue for it at Law: having often observed occurrences of this kind, I found it good for me to advise poor people to take such as were most useful & not costly.

In the time of trading I had an opportunity of seeing that a too liberal use of Spirituous liquors, and the Custom of wearing too costly apparrel, led some people into great inconveniences: and these two things appear to be often connected one with the other; for by not attending to that use of things which is consistent with Universal Righteousness, there is a [necessary] increase of Labour which extends beyond what our Heavenly Father intends for us: and by great labour, and often by much sweting in the heat there is, even among such who are not drunkards, a craving of some liquor to revive the spirits: That partly by the wanton, Luxurious drinking of some, and partly by the drinking of others, led to it through immoderate labour, verry great quantities of Rum are annually expended in our Colonies, of which we should have no need, did we steadily Attend to pure Wisdom.

Where men take pleasure in feeling their minds elevated with strong drink, and so indulge this appetite as to disorder their understanding, neglect their duty as members in a family or civil society, and cast off all pretence to Religion, their case is much to be pitied; And where such whose lives are for the most part regular, and whose Examples have a strong influence on the minds of others, Adhere to some customs which powerfully draw toward the use of More strong liquor than pure wisdom [directeth the Use of,] this allso, as it hinders the spreading of the Spirit of meekness, and Strengthens the hands of the more Excessive drinkers, is a case to be lamented.

As [the least] degree of luxury hath some connection with evil, for those who profess to be disciples of Christ, and are looked upon as leaders of the people, to have that mind in them which was also in Him, & so stand separate from every wrong way, is a means of help to the weaker. As I have sometimes been much spent in the heat, and taken spirits to revive me. I have found by Experience that the mind is not so calm in such circumstances, nor so fitly disposed for Divine meditation, as when all such extreams are avoided, and I have felt an increasing Care to attend to that Holy Spirit which sets right bounds to our desires, and leads those who faithfully follow it to apply all the gifts of Divine Providence to the purposes for which they were intended. Did such who have the care of great Estates, attend with singleness of heart to this Heavenly Instructor, which so opens and enlarges the mind that Men love their neighbours as themselves, They would have wisdom given them to manage, without ever finding occasion to employ some people in the Luxuries of life, or to make it necessary for others to labour too hard: But for want of regarding steadily this Principle of Divine love, a selfish Spirit takes place in the minds of people, which is attended with darkness & manifold confusions in the world.

In the Course of my Tradeing, being somewhat affected at the Various Law Suits about collecting Money which I saw going forward; On aplying to a Constable, he gave me a List of his proceedings for one year as follows; to wit.

Served 267 Warrants, 103 Summonses, and 17 Executions! As to Writs Served by the Sheriff, I got no account of them.

I once had a Warrant for an Idle Man, who I believed was about to run away, which was the only time I applied to the Law to recover Money.

Through trading in things Usefull is an honest employ, yet through the great number of Superfluities which are commonly bought and sold, and through the corruptions of the times, they who apply to merchandize for a living, have great need to be well experienced in that precept which the prophet Jeremiah laid down for Baruc, his scribe: "Seekest thou great things for thyself? seek them not." . . .

1772?-1774

Singers of the Revolution

Both Tories and Continentals used songs and poems to urge their forces to victory, voice their arguments, and celebrate their heroes. Beginning with the passage of the Stamp Act, the verses showed more and more clearly the growth of unrest, then defiance, and finally hatred.

There was a contrast in the sentiments expressed, but not much difference in the forms employed by the opposing songsters. The reason is suggested by Professor Boynton in *Literature and American Life* when he says, "The most popular songs were all set to melodies then current in old England, sometimes occurring in sequence: the first a parody of the English song, the next the parody of a parody, and so on." He cites the fortunes of the tune of David Garrick's "Hearts of Oak," first sung on the stage in 1759. Seven years later, in America, the tune was outfitted with words of a conciliatory sort urging both loyalty and liberty. Then came a series of versions whose first lines show the alternating use of the tune by the two parties:

July 1768: "Come, join hand in hand, brave Americans all."

January 1769: "Come, cheer up, my lads, like a true British band."

1775: "Come, rouse up, my lads, and join the great cause."

These represent only a fraction of the songs which, down to 1812, made use of the Garrick tune.

Despite such typical resemblances the songs of the Revolution have many elements of interest. They vividly tell the story of the war and the feelings of the people about it. Further, like balladry in general—although many of them have an eighteenth-century polish not typical of the older ballads—they forcefully display human emotions and human character in times of stress.

Songs and Ballads of the American Revolution, ed. Frank Moore, New York, 1856 • J. T. Howard, The Music of George Washington's Time, New York, 1931

Yankee Doodle

Anonymous

"The Yankee's Return from Camp" was the title first given to this song, later generally known by its present title. Since it is an authentic ballad, there is no way of determining just who wrote it, when it was written, and what the original words were. The tune was known in the colonies as early as 1767, but the words were composed later, probably by British soldiers or Tory sympathizers who wanted to ridicule the crude Yankees. The contrary Yankees in time apparently used it as a battle song of their own. It is interesting not only for its wartime history and for its lasting appeal to Americans but also for the way it created an American bumpkin by letting him talk his own dialect, later to be a very important procedure in the humor and fiction of the United States.

Father and I went down to camp,
  Along with Captain Gooding,
And there we see the men and boys,
  As thick as hasty pudding.

Chorus

Yankee Doodle, keep it up,
  Yankee Doodle, dandy,
Mind the music and the step,
  And with the girls be handy.

And there we see a thousand men,
  As rich as 'Squire David;
And what they wasted every day,
  I wish it could be saved.

The 'lasses they eat every day,
  Would keep a house a winter;
They have so much that, I'll be bound,
  They eat it when they're a mind to.

And there we see a swamping gun,
  Large as a log of maple,
Upon a deuced little cart,
  A load for father's cattle.

And every time they shoot it off,
  It takes a horn of powder,
And makes a noise like father's gun,
  Only a nation louder.

I went as nigh to one myself,
  As Siah's underpinning;
And father went as nigh again,
  I thought the deuce was in him.

Cousin Simon grew so bold,
  I thought he would have cock'd it;
It scar'd me so, I shrink'd it off,
  And hung by father's pocket.

And Captain Davis had a gun,
  He kind of clapped his hand on't,
And stuck a crooked stabbing iron
  Upon the little end on't.

And there I see a pumpkin shell
  As big as mother's basin;
And every time they touch'd it off,
  They scamper'd like the nation.

I see a little barrel too,
  The heads were made of leather,
They knock'd upon't with little clubs,
  And call'd the folks together.

And there was Captain Washington,
  And gentlefolks about him,
They say he's grown so tarnal proud,
  He will not ride without 'em.

He got him on his meeting clothes,
  Upon a slapping stallion,
He set the world along in rows,
  In hundreds and in millions.

The flaming ribbons in his hat,
  They look'd so tearing fine ah,
I wanted pockily to get,
  To give to my Jemimah.

I see another snarl of men
  A digging graves, they told me,
So tarnal long, so tarnal deep,
  They 'tended they should hold me.

It scar'd me so, I hook'd it off,
  Nor stopp'd, as I remember,
Nor turned about, till I got home,
  Lock'd up in mother's chamber.

1775

Nathan Hale

Anonymous

After the retreat from Long Island in 1776, Washington tried to find among his men a "discreet and enterprising person to penetrate the enemy's camp" as a spy. Young Captain Nathan Hale, three years out of Yale College, undertook the mission. He went through the British lines, secured the information he wanted, and started to return. He was captured, however, and executed as a spy. The excellent ballad which tells of the event does not, surprisingly, make use of his reputed last words ("I regret that I have but one life to give for my country"). But the author perhaps saw that such details did not harmonize well with the rather elegiac account of the execution.

The breezes went steadily thro' the tall pines,
  A saying "Oh hu-ush!" a saying "Oh hu-ush!"
As stilly stole by a bold legion of horse,
  For Hale in the bush, for Hale in the bush.

"Keep still!" said the thrush as she nestled her young,
In a nest by the road, in a nest by the road;
"For the tyrants are near, and with them appear
What bodes us no good, what bodes us no good."

The brave captain heard it and thought of his home,
In a cot by the brook, in a cot by the brook,
With mother and sister and memories dear,
He so gaily forsook, he so gaily forsook.

Cooling shades of the night were coming apace,
The tattoo had beat, the tattoo had beat:
The noble one sprang from his dark lurking-place
To make his retreat, to make his retreat.

He warily trod on the dry rustling leaves,
As he pass'd thro' the wood, as he pass'd thro' the wood,
And silently gain'd his rude launch on the shore,
As she play'd with the flood, as she play'd with the flood.

The guards of the camp, on that dark, dreary night,
Had a murderous will, had a murderous will:
They took him and bore him afar from the shore,
To a hut on the hill, to a hut on the hill.

No mother was there, nor a friend who could cheer,
In that little stone cell, in that little stone cell
But he trusted in love from his Father above;
In his heart all was well, in his heart all was well

An ominous owl with his solemn bass voice
Sat moaning hard by, sat moaning hard by:
"The tyrant's proud minions most gladly rejoice,
For he must soon die, for he must soon die."

The brave fellow told them, no thing he restrain'd,
The cruel gen'ral, the cruel gen'ral;
His errand from camp, of the ends to be gain'd;
And said that was all, and said that was all.

They took him and bound him and bore him away,
Down the hill's grassy side, down the hill's grassy side.
'Twas there the base hirelings, in royal array,
His cause did deride, his cause did deride.

Five minutes were given, short moments, no more,
For him to repent, for him to repent.
He pray'd for his mother, he ask'd not another;
To Heaven he went, to Heaven he went.

The faith of a martyr the tragedy shew'd,
As he trod the last stage, as he trod the last stage;
And Britons will shudder at gallant Hale's blood,
As his words do presage, as his words do presage:

"Thou pale king of terrors, thou life's gloomy foe,
Go frighten the slave, go frighten the slave;
Tell tyrants to you their allegiance they owe;
No fears for the brave, no fears for the brave."

1776

The Battle of the Kegs

Francis Hopkinson 1737 • 1791

The first floating mines ever to be launched against an enemy fleet were tried out by the Americans in January 1778. These mines were kegs of powder which exploded upon coming into contact with other objects. A number of mines sent down the Delaware failed to do much damage to the British ships because the British had drawn them up to docks, out of the way of floating ice. One keg did explode, however, and the colonists claimed that the British became so disturbed that for a while they fearfully fired at every keg floating along the river, including a keg of butter.

Francis Hopkinson, a young Philadelphian and author of many pamphlets and poems in behalf of the Continentals, saw a chance to show the British in a ridiculous light by writing a poem about the incident. His ballad, published in the **Pennsylvania Packet** for March 4, became one of the most popular songs of the Revolution.

G. E. Hastings, **The Life and Works of Francis Hopkinson**, Chicago, 1926

Gallants attend, and hear a friend,
Trill forth harmonious ditty,
Strange things I'll tell, which late befell,
In Philadelphia city.

'Twas early day, as poets say,
Just when the sun was rising,
A soldier stood, on a log of wood.
And saw a thing surprising

As in amaze he stood to gaze,
The truth can't be denied, sir,
He spied a score of kegs or more,
Come floating down the tide, sir.

A sailor, too, in jerkin blue,
This strange appearance viewing,
First damn'd his eyes, in great surprise,
Then said, "some mischief's brewing.

"These kegs, I'm told, the rebels hold,
Packed up like pickled herring,
And they're come down, t' attack the town,
In this new way of ferrying."

The soldier flew, the sailor too,
And scared almost to death, sir,
Wore out their shoes to spread the news,
And ran till out of breath, sir.

Now up and down, throughout the town,
Most frantic scenes were acted;
And some ran here, and others there,
Like men almost distracted.

Some fire cried, which some denied,
But said the earth had quakèd;
And girls and boys, with hideous noise,
Ran through the streets half naked.

Sir William, he, snug as a flea,
Lay all this time a snoring;
Nor dreamed of harm, as he lay warm,
In bed with Mrs. L....g.

Now in a fright, he starts upright,
Awak'd by such a clatter;
He rubs his eyes, and boldly cries,
"For God's sake, what's the matter?"

At his bedside he then espied,
Sir Erskine at command, sir,
Upon one foot he had one boot,
And t'other in his hand, sir.

"Arise! arise, Sir Erskine cries
The rebels—more's the pity—
Without a boat, are all afloat,
And rang'd before the city.

"The motley crew, in vessels new,
With Satan for their guide, sir,
Packed up in bags, or wooden kegs,
Come driving down the tide, sir.

"Therefore prepare for bloody war;
The kegs must all be routed,
Or surely we despis'd shall be,
And British courage doubted."

The royal band, now ready stand,
All ranged in dread array, sir,
With stomachs stout, to see it out,
And make a bloody day, sir.

The cannons roar from shore to shore,
The small arms make a rattle,
Since wars began, I'm sure no man
Ere saw so strange a battle.

The rebel dales, the rebel vales,
With rebel trees surrounded,
The distant woods, the hills and floods,
With rebel echoes sounded.

The fish below swam to and fro,
Attack'd from every quarter;
Why sure, thought they, the devil's to pay,
'Mongst folks above the water.

The kegs, 'tis said, though strongly made
Of rebel staves and hoops, sir,
Could not oppose their powerful foes,
The conquering British troops, sir.

From morn till night, these men of might
Display'd amazing courage;
And when the sun was fairly down,
Retir'd to sup their porridge.

---

33 Sir William, Sir William Howe (1729-1814), the commander of the British army, much hated by the Americans • 36 Mrs. L....g, the wife of Joshua Loring, a Loyalist refugee from Boston • 42 Sir Erskine, Sir William Erskine, a general in the British army

An hundred men, with each a pen,
  Or more, upon my word, sir,
It is most true would be too few,
  Their valor to record, sir.

Such feats did they perform that day,
  Against those wicked kegs, sir,
That years to come, if they get home,
  They'll make their boasts and brags, sir.

1778

The Epilogue

Anonymous

In October 1778, when the British had possession of Philadelphia and the Continental Congress was meeting in Yorktown, Virginia, "The Epilogue," a Tory song, was published in a ballad sheet and posted in the streets of New York and Philadelphia.

Said a foreword: "There was lately exhibited in the city of Philadelphia, an admirable farce called **Independence.** Who the author was is not positively known, but some are of the opinion that it is the work of a certain quack doctor called Franklin. Others assert that it is the joint production of the strolling company by whom it was acted; it is, however, generally allowed, that one Adams gave the first hint, contrived the plot, and cast the parts. It appeared in the exhibition so tragi-comical, that the audience were at a loss whether to laugh or cry. They were, however, well pleased with the catastrophe, and joined heartily in the following chorus. As the renowned Voltaire somewhere relates, that a song was the cause of the French reformation, the excellent actor who performed the part of the President took upon himself the plain song."

Our farce is now finish'd, your sport's at an end,
But ere you depart, let the voice of a friend
By way of a chorus, the evening crown
With a song to the tune of a hey derry down,
  Derry down, down, hey derry down.

Old Shakspeare, a poet, who should not be spit on,
Altho' he was born in the island called Britain,
Hath said that mankind are all players at best,
A truth we'll admit of, for sake of the jest.

On this puny stage we've strutted our hour,
And have acted our parts to the best of our power;
That the farce hath concluded not perfectly well,
Was surely the fault of the devil in hell.

This devil, you know, out of spleen to the church,
Will oftentimes leave his best friends in the lurch,
And turn them adrift in the midst of their joy;
'Tis a difficult matter to cheat the Old Boy.

Since this is the case, we must e'en make the best
Of a game that is lost; let us turn it to jest;
We'll smile, nay, we'll laugh, we'll carouse and we'll sing,
And cheerfully drink life and health to the king.

Let Washington now from his mountains descend,
Who knows but in George he may still find a friend;
A Briton, altho' he loves bottle and wench,
Is an honester fellow than parle vous French.

Our great Independence we give to the wind,
And pray that Great Britain may once more be kind.
In this jovial song all hostility ends,
And Britons and we will for ever be friends.

Boys fill me a bumper! now join in the chorus!
There is happiness still in the prospect before us,
In this sparkling glass, all hostility ends,
And Britons and we will for ever be friends.

Good night! my good people, retire to your houses,
Fair ladies, I beg you, convince your dear spouses
That Britons and we are united in bliss,
And ratify all with a conjugal kiss.

Once more, here's a health to the king and queen!
Confusion to him, who in rancor and spleen,
Refuses to drink with an English friend,
Immutable amity to the world's end.

1778

Thomas Paine

1737 • 1809

The career and reputation of Thomas Paine are tragic evidence of human frailty. His private hells of physical and mental torture were paved with the most altruistic of intentions, and those who have judged him saint or devil have usually been passionately sincere. He emerged from failure and obscurity to become the most powerful single voice of revolutionary thought in British America; pursuing the line of his principles a little farther, he was driven out of England, jailed in France, and insulted and ostracized in the United States. Down through the years his name has called forth more diverse and violent comment than any other in literary history, not excepting Poe and Shelley.

Paine was born at Thetford in Norfolk, England, in 1737. His father was a Quaker farmer and staymaker; his mother a Church of England woman, older than her husband, a shade higher in the social scale, and discontented. Their son's childhood was unhappy, his early manhood scarcely less so. Leaving school at thirteen, he searched fruitlessly for a quarter of a century before he found an agreeable occupation. As sailor, corset-maker, collector of the excise, schoolteacher, tobacconist, he was never quite fitted to his task. At twenty-two he married, only to have his wife die in childbirth within a year. A second marriage, at thirty-four, ended three years later in a legal separation. All that Paine had found at thirty-seven were an interest in science and a sympathy for the underdog in society, the result of his private reading

Panel (l. to r.): Composition of The Crisis • Title page of Common Sense, 1776 • Reading the Crisis papers to the army • Thomas Paine at about 55 • His home in New Rochelle, New York

and his futile championship of the plea of his fellow-excisemen for more pay from Parliament.

Penniless and unknown, Paine encountered Benjamin Franklin, who apparently encouraged him to try America, giving him a letter of introduction as an "ingenious worthy young man" who might well be employed as "clerk, or assistant tutor in a school, or assistant surveyor." Late in 1774, seriously ill, Paine was carried off a ship in Pennsylvania.

Within a year he had readied himself for a new profession by a series of contributions to the *Pennsylvania Magazine.* As "Atlanticus," "Vox Populi," "Æsop," and "An Englishman," Paine learned to shape his humanitarian sympathies into persuasive essays on dueling, marriage, the rights of women, the need of copyright, kindness to animals, and the injustice of slavery. Meanwhile he had to make up his mind about the Battle of Lexington and the events which swiftly followed. That was not difficult, despite his Quaker predilections. What reason had he to love England? In the autumn of 1775 he was writing *Common Sense* to convince his adopted countrymen that "nothing can settle our affairs so expeditiously as an open and determined *Declaration for Independence.*" The pamphlet's appearance and success demonstrated that the colonies had welcomed no mere bankrupt staymaker, but a propagandist of genius, whose skill in moving men to action has seldom been rivaled.

Common Sense, however, was only a beginning. The *Declaration* achieved, Paine joined the army in time to share the disheartening retreat across New Jersey in the fall of 1776. In the face of disaster, he wrote the first of a series of letter-pamphlets now known as *The American Crisis.* Published just before Christmas, its ringing denunciation of the "summer soldier and the sunshine patriot" was read to the troops who crossed the Delaware to surprise the Hessians at Trenton and thereby preserved the morale of the Americans during the first crucial winter of the war. Fifteen times thereafter, in the space of the next seven years, the need arose for a *Crisis* paper to hold the nation together or to arouse the support required for decisive action. Each of the sixteen numbers circulated in the tens of thousands. Finally, in 1783, Paine could write, " 'The times that tried men's souls' are over—and the greatest and completest revolution the world ever knew, gloriously and happily accomplished."

Paine's contributions had included various kinds of work for the Continental Congress, such as a quick but valuable trip to France in 1781. The end of the war, however, found him as poor as at the beginning, and not without his enemies. Washington, remembering the effect of his propaganda pieces, was able to suggest a few rewards: a confiscated estate from New York, a gift of money from Pennsylvania, and $3000 from the Congress itself. Paine's pamphlets had been his freewill offering to the cause; he had never wished to profit from their sale. No place appearing for him in the public service, he devoted what funds he had to promoting one of his inventions—a single-span iron bridge which, he argued, would be more practicable for American rivers than arches on piers, against which ice could jam in the spring. In April 1787 he sailed for France to display his model to the engineering experts and investors there. He was not, however, to succeed as a promoter of his own fortunes.

To follow in detail Paine's fifteen years in Europe would require many pages describing the intricate events of the French Revolution and the conservative reaction in England. Paine was not content to busy himself with bridges. *The Rights of Man* (Part I, 1791; Part II, 1792), his answer to Edmund Burke's *Reflections on the Revolution in France,* is the fullest expression of his political convictions: that the best form of government is a representative republic, with universal manhood suffrage; and that the "natural rights" of men should be protected by written constitutions and legislation to prevent the development of aristocratic and hereditary privileges. For these views, and for his free prediction of coming revolution, he was found guilty of libel and exiled from an England he had already left. English mobs hanged and burned his effigy.

If, as has been said, Paine's views were too French for the English, they were soon to prove too English for the French. As honorary citizen and member of the National Convention, he opposed the execution of Louis XVI; and by December 1793, no longer a hero, he was imprisoned as a foreigner. Gouverneur Morris, the American ambassador, failed to help him (some biographers, in fact, believe that Morris was in part responsible for Paine's imprisonment, because of personal enmity), and Paine was not released until ten months later, after Morris had been succeeded by James Monroe. Broken

in health, his faith in political rationalism seriously damaged, Paine had still to meet the bitterest antagonisms of his career.

The Age of Reason (Part I, 1794; Part II, 1795) was written as Paine's "last offering" to mankind, to provide a religion compatible with the new political and social order which he believed was at hand despite the excesses of the Reign of Terror. Mankind was not only unappreciative; it was so shocked by the apparent blasphemy of his application of reason to religion that a goodly part of it was willing to burn Paine at the stake. To the masses, swayed by newspapers and pulpit pronouncements, Paine's name became a synonym for atheism and infidelity. His English publisher was prosecuted for blasphemy; he himself, after his return to the United States in 1802, was shot at through his window, insulted in the streets, and humiliated on his deathbed by clergymen who forced their way into his room. Even the Quakers refused to permit burial in their cemetery. Ten years later his bones were exhumed and taken to England, where William Cobbett planned to exhibit them as part of a scheme to reform society. Forbidden this final gruesome means of swaying men's minds, Paine's bones were, it is said, nearly sold at auction to satisfy the creditors of Cobbett's son before they finally disappeared.

Men still find moderation virtually impossible when evaluating Thomas Paine. He wrote always for a purpose, and some of his purposes are still anathema to large groups of people. Of his merits as a writer, however, there can be little disagreement. No man of his time was better able to express, simply and clearly, the views which effected vast changes in the political, social, and religious constitution of Western civilization. The force, directness, and variety of his appeals to reason and emotion made him the foremost propagandist-agitator of his time. A master of persuasion rather than a profound or original thinker, he will be studied as long as there are men who seek to understand the social functions of language and literature.

Common Sense

Addressed to the
Inhabitants of America,
On the following Interesting Subjects, viz.:

I. Of the Origin and Design of Government in General; with Concise Remarks on the English Constitution.
II. Of Monarchy and Hereditary Succession.
III. Thoughts on the Present State of American Affairs.
IV. Of the Present Ability of America; with some Miscellaneous Reflections.

A pamphlet of seventy-nine pages, **Common Sense** was published at Philadelphia in January 1776. The first open appeal for a declaration of independence, it achieved a sale estimated at 125,000 copies within three months and by the end of the year had appeared in fifteen or more editions.

George Washington, commanding the army besieging Boston, wrote on January 31 of the "sound doctrine and unanswerable reasoning" of Paine's pamphlet, and it was unquestionably the greatest single force in convincing Americans of the wisdom of separation from England. Its shrewd analyses and arguments are punctuated by bursts of emotion-laden rhetoric, all bound together by a constant reiteration of the theme of "continental" destiny. In one way or another Paine appealed to almost every interest, selfish or benevolent, which could help to draw the colonists together.

The "sound doctrine" which Washington admired will be found upon examination to be largely that of John Locke (1632-1704), the English philosopher whose **Two Treatises on Government** (1689-1690) formed a classic justification of the Glorious Revolution of 1688. It is not profitable, however, to trace the origins of Paine's political thought. He did not claim that it was original, and he did not intend that **Common Sense** should be read for its abstract principles. It was designed to bring action, and in achieving

that end it was supremely successful. Independence was declared, and Paine had every reason to feel, as he did, that the inscription on his tombstone should read simply "Thomas Paine, Author of Common Sense."

OF THE PRESENT ABILITY OF AMERICA WITH SOME MISCELLANEOUS REFLECTIONS

I have never met a man either in England or America, who hath not confessed his opinion, that a separation between the countries would take place, one time or other: And there is no instance, in which we have shown less judgment; than in endeavoring to describe, what we call, the ripeness or fitness of the Continent for independance.

As all men allow the measure, and vary only in their opinion of the time, let us, in order to remove mistakes, take a general survey of things, and endeavor if possible to find out the very time. But I need not go far, the inquiry ceases at once, for the *time hath found us.* The general concurrence, the glorious union of all things, proves the fact.

'Tis not in numbers but in unity that our great strength lies; yet our present numbers are sufficient to repel the force of all the world. The Continent has at this time the largest body of armed and disciplined men of any power under Heaven: and is just arrived at that pitch of strength, in which no single Colony is able to support itself, and the whole, when united, is able to do any thing. Our land force is more than sufficient, and as to naval affairs, we cannot be insensible that Britain would never suffer an American man of war to be built, while the Continent remained in her hands. Wherefore, we should be no forwarder a hundred years hence in that branch than we are now; but the truth is, we should be less so, because the timber of the country is every day diminishing.

Were the Continent crowded with inhabitants, her sufferings under the present circumstances would be intolerable. The more seaport-towns we had, the more should we have both to defend and to lose. Our present numbers are so happily proportioned to our wants, that no man need be idle. The diminution of trade affords an army, and the necessities of an army create a new trade.

Debts we have none; and whatever we may contract on this account will serve as a glorious memento of our virtue. Can we but leave posterity with a settled form of government, an independent constitution of its own, the purchase at any price will be cheap. But to expend millions for the sake of getting a few vile acts repealed, and routing the present ministry only, is unworthy the charge, and is using posterity with the utmost cruelty; because it is leaving them the great work to do, and a debt upon their backs from which they derive no advantage. Such a thought's unworthy a man of honor, and is the true characteristic of a narrow heart and a pidling politician.

The debt we may contract doth not deserve our regard if the work be but accomplished. No nation ought to be without a debt. A national debt is a national bond; and when it bears no interest, it is in no case a grievance. Britain is oppressed with a debt of upwards of one hundred and forty millions sterling, for which she pays upwards of four millions interest. And as a compensation for her debt, she has a large navy. America is without a debt, and without a navy; yet for a twentieth part of the English national debt, could have a navy as large again. The navy of England is not worth at this time more than three millions and a half sterling.

No country on the globe is so happily situated, or so internally capable of raising a fleet as America. Tar, timber, iron and cordage are her natural produce. We need go abroad for nothing. Whereas the Dutch, who make large profits by hiring out their ships of war to the Spaniards and Portuguese, are obliged to import most of the materials they use. We ought to view the building a fleet as an article of commerce, it being the natural manufactory of this country. 'Tis the best money we can lay out. A navy when finished is worth more than it cost: And is that nice point in national policy, in which commerce and protection are united. Let us build; if we want them not, we can sell; and by that means re-place our paper currency with ready gold and silver.

In point of manning a fleet, people in general run into great errors; it is not necessary that one fourth part should be sailors. The Terrible privateer, Captain Death,

---

Text: Professor Peach's version of the first edition, which eliminated "such typographical errors as were clearly destructive of the sense" • 77 **Captain Death,** commander of the **Terrible,** a British privateer captured by the French on December 28, 1756, after a murderous battle. About four hundred men were killed. "Death" was of course a pseudonym; his lieutenants were "Spirit" and "Ghost"

stood the hottest engagement of any ship last war, yet had not twenty sailors on board, though her complement of men was upwards of two hundred. A few able and social sailors will soon instruct a sufficient number of active landsmen in the common work of a ship. Wherefore we never can be more capable of beginning on maritime matters than now, while our timber is standing, our fisheries blocked up, and our sailors and shipwrights out of employ. Men of war, of seventy and eighty guns, were built forty years ago in New England, and why not the same now? Ship building is America's greatest pride, and in which she will, in time, excel the whole world. The great empires of the east are mostly inland, and consequently excluded from the possibility of rivalling her. Africa is in a state of barbarism; and no power in Europe, hath either such an extent of coast, or such an internal supply of materials. Where nature hath given the one, she hath withheld the other; to America only hath she been liberal to both. The vast empire of Russia is almost shut out from the sea; wherefore her boundless forests, her tar, iron, and cordage are only articles of commerce.

In point of safety, ought we to be without a fleet? We are not the little people now, which we were sixty years ago; at that time we might have trusted our property in the streets, or fields rather, and slept securely without locks or bolts to our doors and windows. The case is now altered, and our methods of defence ought to improve with our encrease of property. A common pirate, twelve months ago, might have come up the Delaware, and laid the city of Philadelphia under contribution for what sum he pleased; and the same might have happened to other places. Nay, any daring fellow, in a brig of 14 to 16 guns, might have robbed the whole continent, and carried off half a million of money. These are circumstances which demand our attention, and point out the necessity of naval protection.

Some perhaps will say, that after we have made it up with Britain, she will protect us. Can they be so unwise as to mean, that she will keep a navy in our harbors for that purpose? Common sense will tell us, that the power which hath endeavored to subdue us, is of all others, the most improper to defend us. Conquest may be effected under the pretence of friendship; and ourselves, after a long and brave resistance, be at last cheated into slavery. And if her ships are not to be admitted into our harbors, I would ask, how is she to protect us? A navy three or four thousand miles off can be of little use, and on sudden emergencies, none at all. Wherefore if we must hereafter protect ourselves, why not do it for ourselves? Why do it for another?

The English list of ships of war, is long and formidable, but not a tenth part of them are at any one time fit for service, numbers of them are not in being; yet their names are pompously continued in the list, if only a plank be left of the ship; and not a fifth part of such as are fit for service, can be spared on any one station at one time. The East and West Indies, Mediterranean, Africa, and other parts, over which Britain extends her claim, make large demands upon her navy. From a mixture of prejudice and inattention, we have contracted a false notion respecting the navy of England, and have talked as if we should have the whole of it to encounter at once, and, for that reason, supposed that we must have one as large; which not being instantly practicable, has been made use of by a set of disguised Tories to discourage our beginning thereon. Nothing can be further from truth than this; for if America had only a twentieth part of the naval force of Britain, she would be by far an over-match for her; because, as we neither have, nor claim any foreign dominion, our whole force would be employed on our own coast, where we should, in the long run, have two to one the advantage of those who had three or four thousand miles to sail over, before they could attack us, and the same distance to return in order to refit and recruit. And although Britain, by her fleet, hath a check over our trade to Europe, we have as large a one over her trade to the West Indies, which, by laying in the neighborhood of the Continent lies entirely at its mercy.

Some method might be fallen on to keep up a naval force in time of peace, if we should not judge it necessary to support a constant navy. If premiums were to be given to merchants to build and employ in their service, ships mounted with 20, 30, 40, or 50 guns, (the premiums to be in proportion to the loss of bulk to the merchant,) fifty or sixty of those ships, with a few guardships on constant duty, would keep up a sufficient navy, and that without burdening ourselves with the evil so loudly complained of in England, of suffering their fleet in time of peace to lie rotting in the docks. To unite the sinews of commerce and defence is sound policy; for when our strength and our riches play into each other's hand, we need fear no external enemy.

In almost every article of defence we abound. Hemp flourishes even to rankness, so that we need not want cordage. Our iron is superior to that of other countries. Our small arms equal to any in the world. Cannon we can cast at pleasure. Saltpeter and gunpowder we are every day producing. Our knowledge is hourly improving. Resolution is our inherent character, and courage has never yet forsaken us. Wherefore, what is it that we want? Why is it that we hesitate? From Britain we can expect nothing but ruin. If she is once admitted to the government of America again, this continent will not be worth living in. Jealousies will be always arising; insurrections will be constantly happening; and who will go forth to quell them? Who will venture his life to reduce his own countrymen to a foreign obedience? The difference between Pennsylvania and Connecticut, respecting some unlocated lands, shows the insignificance of a British government, and fully proves that nothing but Continental authority can regulate Continental matters.

Another reason why the present time is preferable to all others, is, that the fewer our numbers are, the more land there is yet unoccupied, which, instead of being lavished by the king on his worthless dependants, may be hereafter supplied, not only to the discharge of the present debt, but to the constant support of government. No nation under Heaven hath such an advantage as this.

The infant state of the Colonies, as it is called, so far from being against is an argument in favor of independance. We are sufficiently numerous, and were we more so we might be less united. 'Tis a matter worthy of observation, that the more a country is peopled, the smaller their armies are. In military numbers, the ancients far exceeded the moderns: and the reason is evident, for trade being the consequence of population, men became too much absorbed thereby to attend to any thing else. Commerce diminishes the spirit both of Patriotism and military defence. And history sufficiently informs us, that the bravest achievements were always accomplished in the nonage of a nation. With the increase of commerce England hath lost its spirit. The city of London, notwithstanding its numbers, submits to continued insults with the patience of a coward. The more men have to lose, the less willing are they to venture. The rich are in general slaves to fear, and submit to courtly power with the trembling duplicity of a spaniel.

Youth is the seed-time of good habits as well in nations as in individuals. It might be difficult, if not impossible, to form the Continent into one Government half a century hence. The vast variety of interests, occasioned by an increase of trade and population, would create confusion. Colony would be against Colony. Each being able would scorn each other's assistance: and while the proud and foolish gloried in their little distinctions, the wise would lament that the union had not been formed before. Wherefore the present time is the true time for establishing it. The intimacy which is contracted in infancy, and the friendship which is formed in misfortune, are of all others the most lasting and unalterable. Our present union is marked with both these characters: we are young, and we have been distressed; but our concord hath withstood our troubles, and fixes a memorable Æra for posterity to glory in.

The present time likewise, is that peculiar time which never happens to a nation but once, viz. the time of forming itself into a government. Most nations have let slip the opportunity, and by that means have been compelled to receive laws from their conquerors, instead of making laws for themselves. First, they had a king, and then a form of government; whereas the articles or charter of government should be formed first, and men delegated to execute them afterwards: but from the errors of other nations let us learn wisdom, and lay hold of the present opportunity—*To begin Government at the right end.*

When William the Conqueror subdued England, he gave them law at the point of the sword; and, until we consent that the seat of government in America be legally and authoritatively occupied, we shall be in danger of having it filled by some fortunate ruffian, who may treat us in the same manner, and then, where will be our freedom? where our property?

As to religion, I hold it to be the indispensible duty of government to protect all conscientious professors thereof, and I know of no other business which government has to do therewith. Let a man throw aside that narrowness of soul, that selfishness of principle, which the niggards of all professions are so unwilling to part with, and he will be at once delivered of his fears on that head. Suspicion is the companion of mean souls, and the bane of all good society. For myself, I fully and conscientiously believe, that it is the will of the Almighty that there should be a diversity of religious opinions among us. It affords a larger field for our christian kindness: were we all of one way of thinking, our religious dispositions would want matter for probation; and on

this liberal principle I look on the various denominations among us, to be like children of the same family, differing only in what is called their Christian names.

In [an earlier section] I threw out a few thoughts on the propriety of a continental charter (for I only presume to offer hints, not plans) and in this place, I take the liberty of re-mentioning the subject, by observing, that a charter is to be understood as a bond of solemn obligation, which the whole enters into, to support the right of every separate part, whether of religion, professional freedom, or property. A right reckoning makes long friends.

I have heretofore likewise mentioned the necessity of a large and equal representation; and there is no political matter which more deserves our attention. A small number of electors, or a small number of representatives, are equally dangerous. But if the number of representatives be not only small, but unequal, the danger is encreased. As an instance of this, I mention the following; when the petition of the associates was before the House of Assembly of Pennsylvania, twenty-eight members only were present, all the Bucks county members, being eight, voted against it, and had seven of the Chester members done the same, this whole province had been governed by two counties only; and this danger it is always exposed to. The unwarrantable stretch likewise, which the house made in their last sitting, to gain an undue authority over the Delegates of that Province, ought to warn the people at large, how they trust power out of their hands. A set of instructions for their Delegates were put together, which in point of sense and business would have dishonoured a school-boy, and after being approved by a few, a very few, without doors, were carried into the house, and there passed in behalf of the whole Colony; whereas, did the whole Colony know with what ill-will that house had entered on some necessary public measures, they would not hesitate a moment to think them unworthy of such a trust.

Immediate necessity makes many things convenient, which if continued would grow into oppressions. Expedience and right are different things. When the calamities of America required a consultation, there was no method so ready, or at that time so proper, as to appoint persons from the several houses of Assembly for that purpose; and the wisdom with which they have proceeded hath preserved this Continent from ruin. But as it is more than probable that we shall never be without a CONGRESS, every well wisher to good order must own that the mode for choosing members of that body, deserves consideration. And I put it as a question to those who make a study of mankind, whether representation and election is not too great a power for one and the same body of men to possess? When we are planning for posterity, we ought to remember that virtue is not hereditary.

It is from our enemies that we often gain excellent maxims, and are frequently surprised into reason by their mistakes. Mr. Cornwall (one of the Lords of the Treasury) treated the petition of the New-York Assembly with contempt, because *that* house, he said, consisted but of twenty-six members, which trifling number, he argued, could not with decency be put for the whole. We thank him for his involuntary honesty.

TO CONCLUDE, however strange it may appear to some, or however unwilling they may be to think so, matters not, but many strong and striking reasons may be given to shew, that nothing can settle our affairs so expeditiously as an open and determined DECLARATION FOR INDEPENDANCE. Some of which are,

First.—It is the custom of Nations, when any two are at war, for some other powers, not engaged in the quarrel, to step in as mediators, and bring about the Preliminaries of a Peace: but while America calls herself the Subject of Great Britain, no power, however well disposed she may be, can offer her Mediation. Wherefore, in our present state we may quarrel on for ever.

Secondly.—It is unreasonable to suppose, that France or Spain will give us any kind of assistance, if we mean only to make use of that assistance for the purpose of repairing the breach, and strengthening the connection between Britain and America; because, those powers would be sufferers by the consequences.

Thirdly.—While we profess ourselves the Subjects of Britain, we must, in the eyes of foreign nations, be considered as Rebels The precedent is somewhat dangerous to *their peace,* for men to be in arms under the name of Subjects: we, on the spot, can solve the paradox; but to

19 **petition . . . associates,** an allusion, apparently, to the Association of 1774, a series of nonimportation, nonconsumption, and nonexportation resolutions adopted by the First Continental Congress • 56 **Mr. Cornwall,** Charles Wolfram Cornwall (1735-1789), Lord of the Treasury in North's cabinet, 1774-1780, later speaker of the House of Commons, 1780-1789 • 61 **honesty.** "Those who would fully understand of what great consequence a large and equal representation is to a State, should read Burgh's Political Disquisitions"—Paine The reference is to **Political Disquisitions** (3 vols., 1774-1775) by James Burgh (1714-1775), a British reformer who was friendly to the American colonists

unite resistance and subjection, requires an idea much too refined for common understanding.

Fourthly.—Were a manifesto to be published, and despatched to foreign Courts, setting forth the miseries we have endured, and the peaceful methods which we have ineffectually used for redress; declaring at the same time, that not being able any longer to live happily or safely under the cruel disposition of the British court, we have been driven to the necessity of breaking off all connections with her, at the same time, assuring all such Courts of our peaceable disposition towards them, and of our desire of entering into trade with them; such a memorial would produce more good effects to this Continent, than if a ship were freighted with petitions to Britain.

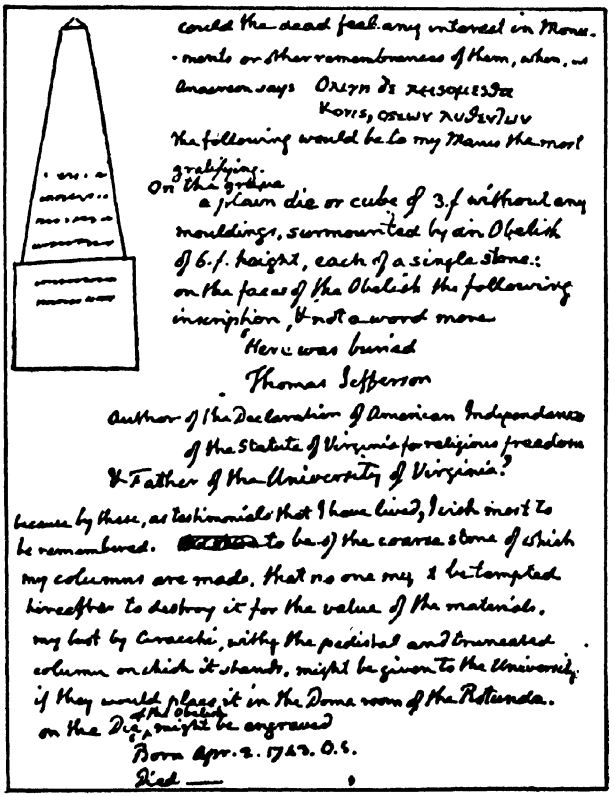
Under our present denomination of British Subjects, we can neither be received nor heard abroad: the custom of All courts is against us, and will be so, until by an independence we take rank with other Nations.

These proceedings may at first seem strange and difficult, but like all other steps which we have already passed over, will in a little time become familiar and agreeable: and until an Independance is declared, the Continent will feel itself like a man who continues putting off some unpleasant business from day to day, yet knows it must be done, hates to set about it, wishes it over, and is continually haunted with the thoughts of its necessity. 1775•1776

Thomas Jefferson

1743 • 1826

Thomas Jefferson, the third President of the United States, remains to this day the chief symbol of what has come to be called the "American way of life." Politicians quote him to lend authority to the most diverse points of view imaginable; to attack Jeffersonian principles would be well-nigh blasphemous. His words are the scriptures of our faith in democracy and the common man ("We hold these truths to be self-evident: that all men are created equal; that they are endowed by their creator with certain inalienable rights; that among these are life, liberty, and the pursuit of happiness"); of our abiding trust in popular education ("Religion, morality, and knowledge being necessary to good government and the happiness of mankind, schools and the means of education shall forever be encouraged"); of our deep-rooted individualism ("I have sworn upon the altar of God eternal hostility against every form of tyranny over the mind of man"). Nor is Jefferson's influence merely a matter of words; he has left his mark upon American political and educational institutions, even upon our public architecture, which reflects his enthusiasm for Greek and Roman models. Yet Jefferson is more than an oracle, more than a builder of the institutional foundations of American society. He himself would have deprecated the use of any man's words or actions to lend credit to any particular political or social program, for he had a sure grasp of the fact that every day is a new day, not merely to be endured but to be lived with as much intelligence and zest as an individual or nation can command. "The earth belongs always to the living generation. They may manage it then and what proceeds from it as they please during their usufruct. They are masters too of their own persons and consequently may govern them as they please."



It would take many pages to describe how Jefferson attained, through painful experience, such wisdom. The outline of his career tells only the outward story, not the inward, mental growth. He was born near Char-

lottesville, Virginia, in 1743, his father being a planter who had married into the famous Randolph family. At fourteen he inherited nearly three thousand acres of land and a considerable number of slaves. He studied hard at William and Mary during 1760-1762, but he was also a social leader, welcome at the dinner table of the colonial governor and other Williamsburg notables. He read law, was admitted to the bar in 1767, and succeeded in combining his profession with the management of large estates. On New Year's Day, 1772, he married Martha Wayles Skelton, an attractive widow with whom he was deeply in love. About a year later she inherited forty thousand acres of land and one hundred and thirty-five slaves. Not many revolutionists have come from such a background, and it would no doubt have been easy for Jefferson to spend his energies in plantation and family life, of which he was very fond, and to let the world go its own way. The record of his public service is, considering his tastes and his ability to satisfy them, one of the most remarkable in American history.

Member of the Virginia House of Burgesses, 1769-1774, member of the Virginia Conventions of 1774 and 1775, Virginia delegate to the Second Continental Congress, 1775-1776, member of the legislature of the new state of Virginia, 1776-1779, governor of Virginia, 1779-1781, member of Congress under the Articles of Confederation, 1783-1784, American minister to France, 1784-1789, secretary of state, 1790-1793, vice-president, 1797-1801, President of the United States, 1801-1809—the list by itself is a thumbnail sketch of the birth and youth of a new nation. Jefferson was in the forefront of most of the great political developments of his age. His *Summary of the Rights of British America* (1774) was one of the notable assertions of the right of the colonists to self-government; he wrote, at thirty-three, the first draft of the *Declaration of Independence*; he led the attack on the state-supported church and the aristocracy-breeding institutions of primogeniture and entail in Virginia; he, more than any other single man, was responsible for the two-party system of government under the Constitution; as Chief Executive he engineered one of the great real-estate deals in history, the Louisiana Purchase; and throughout his life he was an earnest advocate of universal education for citizenship, of generous support of all the arts and sciences, of the emancipation of slaves, and of as large a measure of local self-government as was compatible with the common good of the whole nation.

Not the least of the many paradoxes in his life is that he should be remembered for the studied sentences of his public papers, for he was inclined to distrust rhetoric and oratory. Behind the words of his great state papers, however, are both the maturing of a great people and a deep faith in the integrity of the common man. Jefferson's dream was of a world wherein reason and justice should prevail over brute force and selfishness. To know his writings is to fortify oneself against any shallow interpretation of the much-abused term "Americanism."

Autobiography

Between January 6 and July 29, 1821, Jefferson spent some time composing the paper known as the "Autobiography," an account of his life up to 1790, when he arrived in New York to begin his work as secretary of state under President Washington. It was first printed in **Memoirs, Correspondence, and Miscellanies** (1829), edited by his grandson, T. J. Randolph. The portion here reprinted was written many years before, however, perhaps as early as August 1776. It is the most authoritative account of the composition and adoption of the **Declaration of Independence**, which Jefferson rightly regarded as the contribution for which he was most likely to be remembered by later generations. Neither he nor his contemporaries regarded the **Declaration** as an original composition; it expressed the philosophy of natural rights which had been everywhere accepted in the colonies, and largely in Great Britain, since the Glorious Revolution of 1688. Jefferson denied, however, that he had turned to any book or pamphlet while writing it, and the similarities to John Locke's **Two Treatises on Government** (1689-1690) and James Otis' **The Rights of the British Colonies Asserted and Proved** (1764) were doubtless coincidental. The tone of its appeal to the high court of world opinion and the ingenious concentration of responsibility upon King George III—always a useful device in propaganda—make it an unexcelled model of skillful rhetoric.

In Congress, Friday June 7. 1776. The delegates from Virginia moved in obedience to instructions from their constituents that the Congress should declare that these United colonies are & of right ought to be free & independent states, that they are absolved from all allegiance to the British crown, and that all political connection between them & the state of Great Britain is & ought to be, totally dissolved; that measures should be immediately taken for procuring the assistance of foreign powers, and a Confederation be formed to bind the colonies more closely together.

The house being obliged to attend at that time to some other business, the proposition was referred to the next day, when the members were ordered to attend punctually at ten o'clock.

Saturday June 8. They proceeded to take it into consideration and referred it to a committee of the whole, into which they immediately resolved themselves, and passed that day & Monday the 10th in debating on the subject.

It was argued by Wilson, Robert R. Livingston, E. Rutledge, Dickinson and others

That tho' they were friends to the measures themselves, and saw the impossibility that we should ever again be united with Gr. Britain, yet they were against adopting them at this time:

That the conduct we had formerly observed was wise & proper now, of deferring to take any capital step till the voice of the people drove us into it:

That they were our power, & without them our declarations could not be carried into effect;

That the people of the middle colonies (Maryland, Delaware, Pennsylva, the Jerseys & N. York) were not yet ripe for bidding adieu to British connection, but that they were fast ripening & in a short time would join in the general voice of America:

That the resolution entered into by this house on the

Text: Ford's edition of the Works, Vol. I • 1 **Congress**, the Second Continental Congress, which convened in Philadelphia, May 10, 1775, to direct the contest which had already become, with the Battle of Lexington, open war • 2 **moved**, by Richard Henry Lee (1732-1794), later one of the first two United States senators from Virginia. The motion was seconded by John Adams • 21 **Wilson**, James Wilson (1742-1798) of Pennsylvania, later associate justice of the Supreme Court • 21 **Robert R. Livingston** (1746-1813) of New York; as chancellor of New York he administered the first presidential oath of office to George Washington • 21 **E. Rutledge**, Edward Rutledge (1749-1800) of South Carolina, later a United States senator • 22 **Dickinson**, John Dickinson (1732-1808) of Pennsylvania, author of the popular **Letters from a Farmer in Pennsylvania** (1768) • 37 **resolution**, declaring that "every kind of authority under the said crown should be totally suppressed"

15th of May for suppressing the exercise of all powers derived from the crown, had shown, by the ferment into which it had thrown these middle colonies, that they had not yet accomodated their minds to a separation from the mother country:

That some of them had expressly forbidden their delegates to consent to such a declaration, and others had given no instructions, & consequently no powers to give such consent:

That if the delegates of any particular colony had no power to declare such colony independant, certain they were the others could not declare it for them; the colonies being as yet perfectly independant of each other:

That the assembly of Pennsylvania was now sitting above stairs, their convention would sit within a few days, the convention of New York was now sitting; & those of the Jerseys & Delaware counties would meet on the Monday following, & it was probable these bodies would take up the question of Independance & would declare to their delegates the voice of their state:

That if such a declaration should now be agreed to, these delegates must retire & possibly their colonies might secede from the Union:

That such a secession would weaken us more than could be compensated by any foreign alliance:

That in the event of such a division, foreign powers would either refuse to join themselves to our fortunes, or, having us so much in their power as that desperate declaration would place us, they would insist on terms proportionably more hard and prejudicial:

That we had little reason to expect an alliance with those to whom alone as yet we had cast our eyes:

That France & Spain had reason to be jealous of that rising power which would one day certainly strip them of all their American possessions:

That it was more likely they should form a connection with the British court, who, if they should find themselves unable otherwise to extricate themselves from their difficulties, would agree to a partition of our territories, restoring Canada to France, & the Floridas to Spain, to accomplish for themselves a recovery of these colonies:

That it would not be long before we should receive certain information of the disposition of the French court, from the agent whom we had sent to Paris for that purpose:

That if this disposition should be favorable, by waiting the event of the present campaign, which we all hoped would be successful, we should have reason to expect an alliance on better terms:

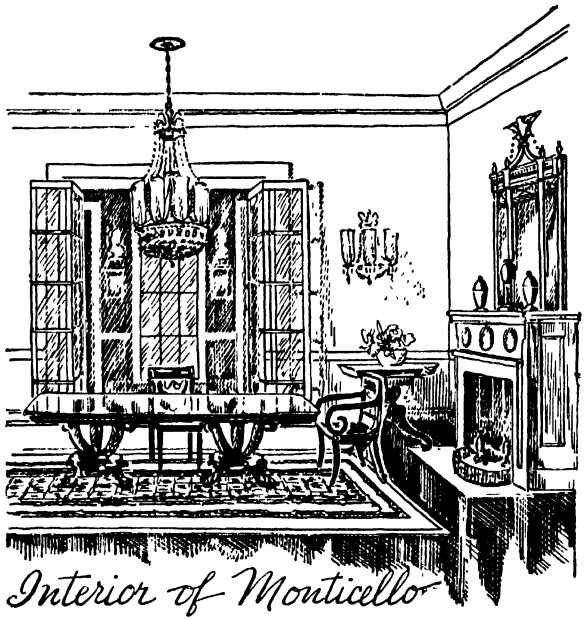
That this would in fact work no delay of any effectual aid from such ally, as, from the advance of the season & distance of our situation, it was impossible we could receive any assistance during this campaign:

That it was prudent to fix among ourselves the terms on which we should form alliance, before we declared we would form one at all events:

And that if these were agreed on, & our Declaration of Independance ready by the time our Ambassador should be prepared to sail, it would be as well to go into that Declaration at this day.

On the other side it was urged by J. Adams, Lee, Wythe, and others

That no gentleman had argued against the policy or the right of separation from Britain, nor had supposed it possible we should ever renew our connection; that they had only opposed its being now declared:



That the question was not whether, by a declaration of independance, we should make ourselves what we are not; but whether we should declare a fact which already exists:

That as to the people or parliament of England, we had alwais been independent of them, their restraints on our trade deriving efficacy from our acquiescence only, & not from any rights they possessed of imposing them, & that so far our connection had been federal only & was now dissolved by the commencement of hostilities:

That as to the King, we had been bound to him by allegiance, but that this bond was now dissolved by his assent to the late act of parliament, by which he declares us out of his protection, and by his levying war on us, a fact which had long ago proved us out of his protection; it being a certain position in law that allegiance & protection are reciprocal, the one ceasing when the other is withdrawn:

45 the agent, Silas Deane (1737-1789), who went to Paris under instructions dated March 1776 • 48 present campaign, to defend New York and the Hudson River. At the time of these deliberations Washington was busy constructing fortifications commanding New York Harbor • 63 Wythe, George Wythe (1726-1806) of Virginia, in whose office Jefferson had studied law, among his other famous pupils were Chief Justice John Marshall, President James Monroe, and Henry Clay

Interior of Monticello

That James the IId. never declared the people of England out of his protection yet his actions proved it & the parliament declared it:

No delegates then can be denied, or ever want, a power of declaring an existing truth:

That the delegates from the Delaware counties having declared their constituents ready to join, there are only two colonies Pennsylvania & Maryland whose delegates are absolutely tied up, and that these had by their instructions only reserved a right of confirming or rejecting the measure:

That the instructions from Pennsylvania might be accounted for from the times in which they were drawn, near a twelvemonth ago since which the face of affairs has totally changed:

That within that time it had become apparent that Britain was determined to accept nothing less than a carte-blanche, and that the King's answer to the Lord Mayor Aldermen & common council of London, which had come to hand four days ago, must have satisfied every one of this point:

That the people wait for us to lead the way:

That *they* are in favour of the measure, tho' the instructions given by some of their *representatives* are not:

That the voice of the representatives is not always consonant with the voice of the people, and that this is remarkably the case in these middle colonies:

That the effect of the resolution of the 15th of May has proved this, which, raising the murmurs of some in the colonies of Pennsylvania & Maryland, called forth the opposing voice of the freer part of the people, & proved them to be the majority, even in these colonies:

That the backwardness of these two colonies might be ascribed partly to the influence of proprietary power & connections, & partly to their having not yet been attacked by the enemy:

That these causes were not likely to be soon removed, as there seemed no probability that the enemy would make either of these the seat of this summer's war:

That it would be vain to wait either weeks or months for perfect unanimity, since it was impossible that all men should ever become of one sentiment on any question:

That the conduct of some colonies from the beginning of this contest, had given reason to suspect it was their settled policy to keep in the rear of the confederacy, that their particular prospect might be better, even in the worst event:

That therefore it was necessary for those colonies who had thrown themselves forward & hazarded all from the beginning, to come forward now also, and put all again to their own hazard:

That the history of the Dutch revolution, of whom three states only confederated at first proved that a secession of some colonies would not be so dangerous as some apprehended:

That a declaration of Independence alone could render it consistent with European delicacy for European powers to treat with us, or even to receive an Ambassador from us:

That till this they would not receive our vessels into their ports, nor acknowledge the adjudications of our courts of admiralty to be legitimate, in cases of capture of British vessels:

That though France & Spain may be jealous of our rising power, they must think it will be much more formidable with the addition of Great Britain; and will therefore see it their interest to prevent a coalition; but should they refuse, we shall be but where we are;

---

18 King's answer, one of George III's rejections of petitions addressed to him on behalf of the colonies • 53 Dutch revolution, of 1576. The United Netherlands Confederation was formed three years later

whereas without trying we shall never know whether they will aid us or not:

That the present campaign may be unsuccessful, & therefore we had better propose an alliance while our affairs wear a hopeful aspect:

That to await the event of this campaign will certainly work delay, because during this summer France may assist us effectually by cutting off those supplies of provisions from England & Ireland on which the enemy's armies here are to depend; or by setting in motion the great power they have collected in the West Indies, & calling our enemy to the defence of the possessions they have there:

That it would be idle to lose time in settling the terms of alliance, till we had first determined we would enter into alliance:

That it is necessary to lose no time in opening a trade for our people, who will want clothes, and will want money too for the paiment of taxes:

And that the only misfortune is that we did not enter into alliance with France six months sooner, as besides opening their ports for the vent of our last year's produce, they might have marched an army into Germany and prevented the petty princes there from selling their unhappy subjects to subdue us.

It appearing in the course of these debates that the colonies of N. York, New Jersey, Pennsylvania, Delaware, Maryland, and South Carolina were not yet matured for falling from the parent stem, but that they were fast advancing to that state, it was thought most prudent to wait a while for them, and to postpone the final decision to July 1. but that this might occasion as little delay as possible a committee was appointed to prepare a declaration of independence. The commee were J. Adams, Dr. Franklin, Roger Sherman, Robert R. Livingston & myself. Committees were also appointed at the same time to prepare a plan of confederation for the colonies, and to state the terms proper to be proposed for foreign alliance. The committee for drawing the declaration of Independence desired me to do it. It was accordingly done, and being approved by them, I reported it to the house on Friday the 28th of June when it was read and ordered to lie on the table. On Monday, the 1st of July the House resolved itself into a commee of the whole & resumed the consideration of the original motion made by the delegates of Virginia, which being again debated through the day, was carried in the affirmative by the votes of N. Hampshire, Connecticut, Massachusetts, Rhode Island, N. Jersey, Maryland, Virginia, N. Carolina, & Georgia. S. Carolina and Pennsylvania voted against it. Delaware having but two members present, they were divided. The delegates for New York declared they were for it themselves & were assured their constituents were for it, but that their instructions having been drawn near a twelvemonth before, when reconciliation was still the general object, they were enjoined by them to do nothing which should impede that object They therefore thought themselves not justifiable in voting on either side, and asked leave to withdraw from the question, which was given them. The commee rose & reported their resolution to the house. Mr. Edward Rutledge of S. Carolina then requested the determination might be put off to the next day, as he believed his colleagues, tho' they disapproved of the resolution, would then join in it for the sake of unanimity. The ultimate question whether the house would agree to the resolution of the committee was accordingly postponed to the next day, when it was again moved and S. Carolina concurred in voting for it. In the meantime a third member had come post from the Delaware counties and turned the vote of that colony in favour of the resolution. Members of a different sentiment attending that morning from Pennsylvania also, her vote was changed, so that the whole 12 colonies who were authorized to vote at all, gave their voices for it; and within a few days, the convention of N. York approved of it and thus supplied the void occasioned by the withdrawing of her delegates from the vote.

Congress proceeded the same day to consider the declaration of Independance which had been reported & lain

---

21 **six months sooner.** The tone here suggests what is generally thought to be the fact: that the colonists had received some assurances of secret assistance from France as early as the autumn of 1775 • 24 **petty princes.** The British ministry sent agents to employ mercenary troops from the German princes late in 1775, with the obvious intention of settling the American revolt in 1776 • 35 **Roger Sherman** (1721-1793), of Connecticut, later United States senator • 36 **myself.** Although he was only thirty-three, Jefferson's reputation as a writer won him more votes for appointment on this committee than any other candidate • 76 **few days,** July 9 • 79 **same day,** Tuesday, July 2

on the table the Friday preceding, and on Monday referred to a commee of the whole. The pusillanimous idea that we had friends in England worth keeping terms with, still haunted the minds of many. For this reason those passages which conveyed censures on the people of England were struck out, lest they should give them offence. The clause too, reprobating the enslaving the inhabitants of Africa, was struck out in complaisance to South Carolina and Georgia, who had never attempted to restrain the importation of slaves, and who on the contrary still wished to continue it. Our northern brethren also I believe felt a little tender under those censures; for tho' their people had very few slaves themselves yet they had been pretty considerable carriers of them to others. The debates having taken up the greater parts of the 2d 3d & 4th days of July were, on the evening of the last, closed the declaration was reported by the commee, agreed to by the house and signed by every member present except Mr. Dickinson. As the sentiments of men are known not only by what they receive, but what they reject also, I will state the form of the declaration as originally reported. The parts struck out by Congress shall be distinguished by a black line drawn under them; and those inserted by them shall be placed in the margin or in a concurrent column.

A DECLARATION BY THE REPRESENTATIVES OF THE UNITED STATES OF AMERICA, IN GENERAL CONGRESS ASSEMBLED

When in the course of human events it becomes necessary for one people to dissolve the political bands which have connected them with another, and to assume among the powers of the earth the separate & equal station to which the laws of nature and of nature's God entitle them, a decent respect to the opinions of mankind requires that they should declare the causes which impel them to the separation.

We hold these truths to be self-evident: that all men are created equal; that they are endowed by their creator with [*inherent and*] inalienable rights; that among these are life, liberty, & the pursuit of happiness: that to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed; that whenever any form of government becomes destructive of these ends, it is the right of the people to alter or to abolish it, & to institute new government, laying it's foundation on such principles, & organizing it's powers in such form, as to them shall seem most likely to effect their safety & happiness. Prudence indeed will dictate that governments long established should not be changed for light & transient causes; and accordingly all experience hath shewn that mankind are more disposed to suffer while evils are sufferable, than to right themselves by abolishing the forms to which they are accustomed. But when a long train of abuses & usurpations [*begun at a distinguished period and*] pursuing invariably the same object, evinces a design to reduce them under absolute despotism, it is their right, it is their duty to throw off such government, & to provide new guards for their future security. Such has been the patient sufferance of these colonies; & such is now the necessity which constrains them to [*expunge*] their former systems of government. The history of the present king of Great Britain is a history of [*unremitting*] injuries &

18 **signed . . . Dickinson.** Historians are agreed that Jefferson's memory was at fault on this point and that the Declaration was only "authenticated" by the signatures of the president and the secretary on July 4. The formal signing took place on August 2 • **23 a black line . . . .** In the present text the excisions are italicized and enclosed within brackets

usurpations, [*among which appears*
all having *no solitary fact to contradict the uniform tenor of the rest but all have*]
in direct object the establishment of an absolute tyranny over these states. To prove this let facts be submitted to a candid world [*for the truth of which we pledge a faith yet unsullied by falsehood*].

He has refused his assent to laws the most wholesome & necessary for the public good.

He has forbidden his governors to pass laws of immediate & pressing importance, unless suspended in their operation till his assent should be obtained; & when so suspended, he has utterly neglected to attend to them

He has refused to pass other laws for the accommodation of large districts of people, unless those people would relinquish the right of representation in the legislature, a right inestimable to them, & formidable to tyrants only.

He has called together legislative bodies at places unusual, uncomfortable, and distant from the depository of their public records, for the sole purpose of fatiguing them into compliance with his measures.

He has dissolved representative houses repeatedly [*& continually*] for opposing with manly firmness his invasions on the rights of the people.

He has refused for a long time after such dissolutions to cause others to be elected, whereby the legislative powers, incapable of annihilation, have returned to the people at large for their exercise, the state remaining in the meantime exposed to all the dangers of invasion from without & convulsions within.

He has endeavored to prevent the population of these states; for that purpose obstructing the laws for naturalization of foreigners, refusing to pass others to encourage their migrations hither, & raising the conditions of new appropriations of lands.

obstructed by He has [*suffered*] the administration of justice [*totally to cease in some of these states*] refusing his assent to laws for establishing judiciary powers.

He has made [*our*] judges dependant on his will alone, for the tenure of their offices, & the amount and paiment of their salaries.

He has erected a multitude of new offices [*by a self-assumed power*] and sent hither swarms of new officers to harass our people and eat out their substance.

He has kept among us in times of peace standing armies [*and ships of war*] without the consent of our legislatures

He has affected to render the military independant of, & superior to the civil power.

He has combined with others to subject us to a jurisdiction foreign to our constitutions & unacknowledged by our laws, giving his assent to their acts of pretended legislation for quartering large bodies of armed troops among us; for protecting them by a mock-trial from punishment for any murders which they should commit on the inhabitants of these states; for cutting off our trade with all parts of the world; for imposing taxes on us without our consent; for depriving us [ ] of the benefits of trial by jury; for transporting us beyond seas to be tried for pretended offences; for abolishing the free system of English laws in a neighboring province, establishing therein an arbitrary government, and enlarging it's boundaries, so as to render it at once an example and fit instrument for in-

in many cases

troducing the same absolute rule into these [*states*]; for taking away our charters, abolishing our most valuable laws, and altering fundamentally the forms of our governments; for suspending our own legislatures, & declaring themselves invested with power to legislate for us in all cases whatsoever.

colonies

He has abdicated government here [*withdrawing his governors, and declaring us out of his allegiance & protection*].

by declaring us out of his protection, and waging war against us.

He has plundered our seas, ravaged our coasts, burnt our towns, & destroyed the lives of our people.

He is at this time transporting large armies of foreign mercenaries to compleat the works of death, desolation & tyranny already begun with circumstances of cruelty and perfidy [ ] unworthy the head of a civilized nation.

scarcely paralleled in the most barbarous ages, & totally

He has constrained our fellow citizens taken captive on the high seas to bear arms against their country, to become the executioners of their friends & brethren, or to fall themselves by their hands.

excited domestic insurrections among us, & has

He has [ ] endeavored to bring on the inhabitants of our frontiers the merciless Indian savages, whose known rule of warfare is an undistinguished destruction of all ages, sexes, & condition [*of existence*].

[*He has incited treasonable insurrections of our fellow-citizens, with the allurements of forfeiture & confiscation of our property.*

He has waged cruel war against human nature itself, violating it's most sacred rights of life and liberty in the persons of a distant people who never offended him, captivating & carrying them into slavery in another hemisphere, or to incur miserable death in their transportation thither. This piratical warfare, the opprobium of INFIDEL *powers, is the warfare of the* CHRISTIAN *king of Great Britain. Determined to keep open a market where* MEN *should be bought & sold, he has prostituted his negative for suppressing every legislative attempt to prohibit or to restrain this execrable commerce. And that this assemblage of horrors might want no fact of distinguished die, he is now exciting those very people to rise in arms among us, and to purchase that liberty of which he has deprived them, by murdering the people on whom he also obtruded them: thus paying off former crimes committed against the* LIBERTIES *of one people, with crimes which he urges them to commit against the* LIVES *of another.*]

In every stage of these oppressions we have petitioned for redress in the most humble terms: our repeated petitions have been answered only by repeated injuries.

A prince whose character is thus marked by every act which may define a tyrant is unfit to be the ruler of a [ ] people [*who mean to be free. Future ages will scarcely believe that the hardiness of one man adventured, within the short compass of twelve years only, to lay a foundation so broad & so undisguised for tyranny over a people fostered & fixed in principles of freedom*].

free

Nor have we been wanting in attentions to our British brethren. We have warned them from time to time of attempts by their legislature to extend [*a*] jurisdiction over [*these our states*]. We have reminded them of the circumstances of our emigration & settlement here, [*no one of which could warrant so strange a pretension: that these were effected at the expense of our own blood & treasure, unassisted*

an unwarrantable us

by the wealth or the strength of Great Britain: that in constituting indeed our several forms of government, we had adopted one common king, thereby laying a foundation for perpetual league & amity with them: but that submission to their parliament was no part of our constitution, nor ever in idea, if history may be credited: and,] we [ ] appealed to their native justice and magnanimity [*as well as to*] the ties of our common kindred to disavow these usurpations which [*were likely to*] interrupt our connection and correspondence. They too have been deaf to the voice of justice & of consanguinity, [*and when occasions have been given them, by the regular course of their laws, of removing from their councils the disturbers of our harmony, they have, by their free election, re-established them in power. At this very time too they are permitting their chief magistrate to send over not only soldiers of our common blood, but Scotch & foreign mercenaries to invade & destroy us. These facts have given the last stab to agonizing affection, and manly spirit bids us to renounce forever these unfeeling brethren. We must endeavor to forget our former love for them, and hold them as we hold the rest of mankind, enemies in war, in peace friends. We might have been a free and a great people together; but a communication of grandeur & of freedom it seems is below their dignity. Be it so, since they will have it. The road to happiness & to glory is open to us too. We will tread it apart from them, and*] acquiesce in the necessity which denounces our [*eternal*] separation [ ]!

have

and we have conjured them by

would inevitably

We must therefore and hold them as we hold the rest of mankind, enemies in war, in peace friends.

We therefore the representatives of the United States of America in General Congress assembled do in the name & by the authority of the good people of these [*states reject & renounce all allegiance & subjection to the kings of Great Britain & all others who may hereafter claim by, through or under them: we utterly dissolve all political connection which may heretofore have subsisted between us & the people or parliament of Great Britain: & finally we do assert & declare these colonies to be free & independent states,*] & that as free & independent states, they have full power to levy war, conclude peace, contract alliances, establish commerce, & to do all other acts & things which independent states may of right do.

And for the support of this declaration we mutually pledge to each other our lives, our fortunes, & our sacred honour.

We therefore the representatives of the United States of America in General Congress assembled, appealing to the supreme judge of the world for the rectitude of our intentions, do in the name, & by the authority of the good people of these colonies, solemnly publish & declare that these united colonies are & of right ought to be free & independent states; that they are absolved from all allegiance to the British crown, and that all political connection between them & the state of Great Britain is, & ought to be, totally dissolved; & that as free and independent states they have full power to levy war, conclude peace, contract alliances, establish commerce & to do all other acts & things which independant states may of right do.

And for the support of this declaration, with a firm reliance on the protection of divine providence we mutually pledge to each other our lives, our fortunes, & our sacred honor.

The Declaration thus signed on the 4th, on paper was engrossed on parchment, & signed again on the 2d. of August. . . .

1776?-1829

Alexander Hamilton

1757 • 1804

Much of the stability of the government of the United States, as we know it even today, must be attributed to the labors of Alexander Hamilton. Soldier, statesman, lawyer, and practical politician, he was only incidentally a writer. Yet, assisted by James Madison and John Jay, he planned and executed *The Federalist,* which Jefferson called, in a letter to Madison, "the best commentary on the principles of government that ever was written."

Hamilton was born in the West Indies in 1757. At an early age he displayed an amazing talent for business, so that interested elders sent him to the Continent to finish his education. In 1774, when he was an undergraduate at King's College (now Columbia University), he joined the Whig opposition to the British and soon distinguished himself as a speaker and pamphleteer. In March 1776 he joined the Continental army; within a year he was a lieutenant colonel and Washington's aide-de-camp.

Hamilton's most important contributions to government were his draft of the call for the Constitutional Convention, his success in obtaining the ratification of the new form of government by New York, his term as first secretary of the treasury in 1789-1795 (usually regarded as having laid the foundations of the fiscal policy, and the chief party issues, of the United States), and his influence as Washington's most trusted adviser. Hamilton's opposition to Aaron Burr resulted in the famous duel in which Hamilton was killed.

The inevitable contrast between Hamilton and Jefferson has frequently obscured the former's greatness. The self-made man, relatively narrow in his interests and distrustful of the masses, has suffered by the comparison with a versatile philosopher who, gracefully minimizing his own wealth and family connections, believed that all men are created equal. Men like Washington, however, quite evidently trusted Hamilton more than they did Jefferson; he had a solid quality, a realism which was wholly honest and direct.

On political questions Hamilton was always well-informed, and he wrote clearly and effectively for the audience to which he addressed himself. There are few better practitioners of argument in American literature.

From

The Federalist

The Federalist consists of eighty-five essays, all but the last eight of which originally appeared in New York City newspapers between October 27, 1787, and April 4, 1788. They were at once collected and published in two volumes, presumably with Hamilton's supervision. The authorship of some of the essays has long been disputed, but it seems certain that Hamilton wrote at least fifty-one, Jay, five, and Madison, fourteen. Three were written by Hamilton and Madison in collaboration, and the authorship of the remaining twelve is now thought to have been Madison's.

The series was begun in answer to newspaper essays and pamphlets in opposition to the ratification of the Constitution (see **Pamphlets on the Constitution of the United States,** 1888, and **Essays on the Constitution of**

the United States, 1892, ed. P. L. Ford). In New York, Hamilton was the only delegate to the Constitutional Convention who supported the proposed new form of government. The Federalist is credited with having carried the issue in New York, and it may have had influence elsewhere. In the course of its creation, however, the series became something more than mere debate; it enables Hamilton to bring to fruition his thorough study of constitutional problems. Of the three essays here reprinted, No. 1 shows his realistic philosophy of politics, No. XXIII his skill in logical argument, and No. LXIX his thorough knowledge of the early state constitutions, eleven of which had been adopted between 1776 and 1784.

NO. I

To the People of the State of New York:

After an unequivocal experience of the inefficiency of the subsisting federal government, you are called upon to deliberate on a new Constitution for the United States of America. The subject speaks its own importance; comprehending in its consequences nothing less than the existence of the UNION, the safety and welfare of the parts of which it is composed, the fate of an empire in many respects the most interesting in the world. It has been frequently remarked that it seems to have been reserved to the people of this country, by their conduct and example, to decide the important question, whether societies of men are really capable or not of establishing good government from reflection and choice, or whether they are forever destined to depend for their political constitutions on accident and force. If there be any truth in the remark, the crisis at which we are arrived may with propriety be regarded as the era in which that decision is to be made; and a wrong election of the part we shall act may, in this view, deserve to be considered as the general misfortune of mankind.

This idea will add the inducements of philanthropy to those of patriotism, to heighten the solicitude which all considerate and good men must feel for the event. Happy will it be if our choice should be directed by a judicious estimate of our true interests, unperplexed and unbiassed by considerations not connected with the public good. But this is a thing more ardently to be wished than seriously to be expected. The plan offered to our deliberations affects too many particular interests, innovates upon too many local institutions, not to involve in its discussion a variety of objects foreign to its merits, and of views, passions and prejudices little favorable to the discovery of truth.

Among the most formidable of the obstacles which the new Constitution will have to encounter may readily be distinguished the obvious interest of a certain class of men in every State to resist all changes which may hazard a diminution of the power, emolument, and consequence of the offices they hold under the State establishments, and the perverted ambition of another class of men, who will either hope to aggrandise themselves by the confusions of their country, or will flatter themselves with fairer prospects of elevation from the subdivision of the empire into several partial confederacies than from its union under one government.

It is not, however, my design to dwell upon observations of this nature. I am well aware that it would be disingenuous to resolve indiscriminately the opposition of any set of men (merely because their situations might subject them to suspicion) into interested or ambitious views. Candor will oblige us to admit that even such men may be actuated by upright intentions; and it cannot be doubted that much of the opposition which has made its appearance, or may hereafter make its appearance, will spring from sources, blameless at least, if not respectable—the honest errors of minds led astray by preconceived jealousies and fears. So numerous indeed and so powerful are the causes which serve to give a false bias to the judgment, that we, upon many occasions, see wise and good men on the wrong as well as on the right side of questions of the first magnitude to society. This circumstance, if duly attended to, would furnish a lesson of moderation to those who are ever so much persuaded of their being in the right in any controversy. And a further reason for caution, in this respect, might be drawn from the reflection that we are not always sure that those who advocate the truth are influenced by purer principles than their antagonists. Ambition, avarice, personal animosity, party opposition, and many other motives not more laudable than these, are apt to operate as well upon those who support as those who oppose the right side of a question. Were there not even these inducements to

---

Text: the Lodge edition of the Works, 1904, Vols. XI and XII • 29 The plan, the Constitution

moderation, nothing could be more ill-judged than that intolerant spirit which has, at all times, characterized political parties. For in politics, as in religion, it is equally absurd to aim at making proselytes by fire and sword. Heresies in either can rarely be cured by persecution.

And yet, however just these sentiments will be allowed to be, we have already sufficient indications that it will happen in this as in all former cases of great national discussion. A torrent of angry and malignant passions will be let loose. To judge from the conduct of the opposite parties, we shall be led to conclude that they will mutually hope to evince the justness of their opinions, and to increase the number of their converts by the loudness of their declamations and the bitterness of their invectives. An enlightened zeal for the energy and efficiency of government will be stigmatized as the offspring of a temper fond of despotic power and hostile to the principles of liberty. An over-scrupulous jealousy of danger to the rights of the people, which is more commonly the fault of the head than of the heart, will be represented as mere pretence and artifice, the stale bait for popularity at the expense of the public good. It will be forgotten, on the one hand, that jealousy is the usual concomitant of love, and that the noble enthusiasm of liberty is apt to be infected with a spirit of narrow and illiberal distrust. On the other hand, it will be equally forgotten that the vigor of government is essential to the security of liberty; that, in the contemplation of a sound and well-informed judgment, their interest can never be separated; and that a dangerous ambition more often lurks behind the specious mask of zeal for the rights of the people than under the forbidding appearance of zeal for the firmness and efficiency of government. History will teach us that the former has been found a much more certain road to the introduction of despotism than the latter, and that of those men who have overturned the liberties of republics, the greatest number have begun their career by paying an obsequious court to the people; commencing demagogues, and ending tyrants.

In the course of the preceding observations, I have had an eye, my fellow-citizens, to putting you upon your guard against all attempts, from whatever quarter, to influence your decision in a matter of the utmost moment to your welfare, by any impressions other than those which may result from the evidence of truth. You will, no doubt, at the same time, have collected from the general scope of them, that they proceed from a source not unfriendly to the new Constitution. Yes, my countrymen, I own to you that, after having given it an attentive consideration, I am clearly of opinion it is your interest to adopt it. I am convinced that this is the safest course for your liberty, your dignity, and your happiness. I affect not reserves which I do not feel. I will not amuse you with an appearance of deliberation when I have decided. I frankly acknowledge to you my convictions, and I will freely lay before you the reasons on which they are founded. The consciousness of good intentions disdains ambiguity. I shall not, however, multiply professions on this head. My motives must remain in the depository of my own breast. My arguments will be open to all, and may be judged of by all. They shall at least be offered in a spirit which will not disgrace the cause of truth.

I propose, in a series of papers, to discuss the following interesting particulars:—*The utility of the UNION to your political prosperity—The insufficiency of the present Confederation to preserve that Union—The necessity of a government at least equally energetic with the one proposed, to the attainment of this object—The conformity of the proposed Constitution to the true principles of republican government—Its analogy to your own State constitution*—and lastly, *The additional security which its adoption will afford to the preservation of that species of government, to liberty, and to property.*

In the progress of this discussion I shall endeavor to give a satisfactory answer to all the objections which shall have made their appearance, that may seem to have any claim to your attention.

It may perhaps be thought superfluous to offer arguments to prove the utility of the UNION, a point, no doubt, deeply engraved on the hearts of the great body of the people in every State, and one, which it may be imagined, has no adversaries. But the fact is, that we already hear it whispered in the private circles of those who oppose the new Constitution, that the thirteen States are of too great extent for any general system, and that we must of necessity resort to separate confederacies

---

65 particulars. The outline covers only the first fifty-one essays; the scheme was later expanded to include analyses of the House of Representatives, the Senate, the Executive (see p. 190), and the Judiciary

taries enough to countenance an open avowal of it. For nothing can be more evident, to those who are able to take an enlarged view of the subject, than the alternative of an adoption of the new Constitution or a dismemberment of the Union. It will therefore be of use to begin by examining the advantages of that Union, the certain evils, and the probable dangers, to which every State will be exposed from its dissolution. This shall accordingly constitute the subject of my next address.

PUBLIUS

NO. XXIII

To the People of the State of New York:

The necessity of a Constitution, at least equally energetic with the one proposed, to the preservation of the Union, is the point at the examination of which we are now arrived.

This inquiry will naturally divide itself into three branches—the objects to be provided for by the federal government, the quantity of power necessary to the accomplishment of those objects, the persons upon whom that power ought to operate. Its distribution and organization will more properly claim our attention under the succeeding head.

The principal purposes to be answered by union are these—the common defence of the members; the preservation of the public peace, as well against internal convulsions as external attacks; the regulation of commerce with other nations and between the States; the superintendence of our intercourse, political and commercial, with foreign countries.

The authorities essential to the common defence are these: to raise armies; to build and equip fleets; to prescribe rules for the government of both; to direct their operations; to provide for their support. These powers ought to exist without limitation, *because it is impossible to foresee or define the extent and variety of national exigencies, or the correspondent extent and variety of the means which may be necessary to satisfy them.* The circumstances that endanger the safety of nations are infinite, and for this reason no constitutional shackles can wisely be imposed on the power to which the care of stances; and ought to be under the direction of the same councils which are appointed to preside over the common defence.

This is one of those truths which, to a correct and unprejudiced mind, carries its own evidence along with it; and may be obscured, but cannot be made plainer by argument or reasoning. It rests upon axioms as simple as they are universal; the *means* ought to be proportioned to the *end;* the persons, from whose agency the attainment of any *end* is expected, ought to possess the *means* by which it is to be attained.

Whether there ought to be a federal government intrusted with the care of the common defence, is a question in the first instance, open for discussion; but the moment it is decided in the affirmative, it will follow, that that government ought to be clothed with all the powers requisite to complete execution of its trust. And unless it can be shown that the circumstances which may affect the public safety are reducible within certain determinate limits; unless the contrary of this position can be fairly and rationally disputed, it must be admitted, as a necessary consequence, that there can be no limitation of that authority which is to provide for the defence and protection of the community, in any matter essential to its efficacy—that is, in any matter essential to the *formation, direction,* or *support* of the NATIONAL FORCES.

Defective as the present Confederation has been proved to be, this principle appears to have been fully recognised by the framers of it; though they have not made proper or adequate provision for its exercise. Congress have an unlimited discretion to make requisitions of men and money; to govern the army and navy; to direct their operations. As their requisitions are made constitutionally binding upon the States, who are in fact under the most solemn obligations to furnish the supplies required of them, the intention evidently was, that the

---

1 the whole. "The same idea, tracing the arguments to their consequences, is held out in several of the late publications against the new Constitution."—Publius. Madison had dealt with this "territorial" objection in No. XIV, and Hamilton returns to it briefly in No. XXIII. One conspicuous use of it by the opposition was the popular **Letters from the Federal Farmer to the Republican** (1787) by Richard Henry Lee of Virginia

United States should command whatever resources were by them judged requisite to the "common defence and general welfare." It was presumed that a sense of their true interests, and a regard to the dictates of good faith, would be found sufficient pledges for the punctual performance of the duty of the members to the federal head.

The experiment has, however, demonstrated that this expectation was ill-founded and illusory; and the observations, made under the last head, will, I imagine, have sufficed to convince the impartial and discerning, that there is an absolute necessity for an entire change in the first principles of the system; that if we are in earnest about giving the Union energy and duration, we must abandon the vain project of legislating upon the States in their collective capacities; we must extend the laws of the federal government to the individual citizens of America; we must discard the fallacious scheme of quotas and requisitions, as equally impracticable and unjust. The result from all this is that the Union ought to be invested with full power to levy troops; to build and equip fleets; and to raise the revenues which will be required for the formation and support of an army and navy, in the customary and ordinary modes practised in other governments.

If the circumstances of our country are such as to demand a compound instead of a simple, a confederate instead of a sole, government, the essential point which will remain to be adjusted will be to discriminate the OBJECTS, as far as it can be done, which shall appertain to the different provinces or departments of power; allowing to each the most ample authority for fulfilling the objects committed to its charge. Shall the Union be constituted the guardian of the common safety? Are fleets and armies and revenues necessary to this purpose? The government of the Union must be empowered to pass all laws, and to make all regulations which have relation to them. The same must be the case in respect to commerce, and to every other matter to which its jurisdiction is permitted to extend. Is the administration of justice between the citizens of the same State the proper department of the local governments? These must possess all the authorities which are connected with this object, and with every other that may be allotted to their particular cognizance and direction. Not to confer in each case a degree of power commensurate to the end, would be to violate the most obvious rules of prudence and propriety, and improvidently to trust the great interests of the nation to hands which are disabled from managing them with vigor and success.

Who so likely to make suitable provisions for the public defence, as that body to which the guardianship of the public safety is confided; which, as the centre of information, will best understand the extent and urgency of the dangers that threaten; as the representative of the WHOLE, will feel itself most deeply interested in the preservation of every part; which, from the responsibility implied in the duty assigned to it, will be most sensibly impressed with the necessity of proper exertions; and which, by the extension of its authority throughout the States, can alone establish uniformity and concert in the plans and measures by which the common safety is to be secured? Is there not a manifest inconsistency in devolving upon the federal government the care of the general defence, and leaving in the State governments the *effective* powers by which it is to be provided for? Is not a want of co-operation the infallible consequence of such a system? And will not weakness, disorder, an undue distribution of the burdens and calamities of war, an unnecessary and intolerable increase of expense, be its natural and inevitable concomitants? Have we not had unequivocal experience of its effects in the course of the revolution which we have just accomplished?

Every view we may take of the subject, as candid inquirers after truth, will serve to convince us, that it is both unwise and dangerous to deny the federal government an unconfined authority, as to all those objects which are intrusted to its management. It will indeed deserve the most vigilant and careful attention of the people, to see that it be modelled in such a manner as to admit of its being safely vested with the requisite powers. If any plan which has been, or may be, offered to our consideration, should not, upon a dispassionate inspection, be found to answer this description, it ought to be rejected. A government, the constitution of which renders it unfit to be trusted with all the powers which a free people *ought to delegate to any government,* would be an unsafe and improper depositary of the NATIONAL

---

10 the last head. Nos. XV-XXII deal with the insufficiency and defects of the Confederation

INTERESTS. Wherever THESE can with propriety be confided, the coincident powers may safely accompany them. This is the true result of all just reasoning upon the subject. And the adversaries of the plan promulgated by the convention ought to have confined themselves to showing, that the internal structure of the proposed government was such as to render it unworthy of the confidence of the people. They ought not to have wandered into inflammatory declamations and unmeaning cavils about the extent of the powers. The POWERS are not too extensive for the OBJECTS of federal administration, or, in other words, for the management of our NATIONAL INTERESTS; nor can any satisfactory argument be framed to show that they are chargeable with such an excess If it be true, as has been insinuated by some of the writers on the other side, that the difficulty arises from the nature of the thing, and that the extent of the country will not permit us to form a government in which such ample powers can safely be reposed, it would prove that we ought to contract our views, and resort to the expedient of separate confederacies, which will move within more practicable spheres. For the absurdity must continually stare us in the face of confiding to a government the direction of the most essential national interests, without daring to trust to it the authorities which are indispensable to their proper and efficient management. Let us not attempt to reconcile contradictions, but firmly embrace a rational alternative.

I trust, however, that the impracticability of one general system cannot be shown. I am greatly mistaken, if anything of weight has yet been advanced of this tendency; and I flatter myself, that the observations which have been made in the course of these papers have served to place the reverse of that position in as clear a light as any matter still in the womb of time and experience can be susceptible of. This, at all events, must be evident, that the very difficulty itself, drawn from the extent of the country, is the strongest argument in favour of an energetic government; for any other can certainly never preserve the Union of so large an empire. If we embrace the tenets of those who oppose the adoption of the proposed Constitution, as the standard of our political creed, we cannot fail to verify the gloomy doctrines which predict the impracticability of a national system pervading the entire limits of the present Confederacy.

PUBLIUS

To the People of the State of New York:

I proceed now to trace the real characters of the proposed Executive, as they are marked out in the plan of the convention. This will serve to place in a strong light the unfairness of the representations which have been made in regard to it.

The first thing which strikes our attention is, that the executive authority, with few exceptions, is to be vested in a single magistrate. This will scarcely, however, be considered as a point upon which any comparison can be grounded; for if, in this particular, there be a resemblance to the king of Great Britain, there is not less a resemblance to the Grand Seignior, to the khan of Tartary, to the Man of the Seven Mountains, or to the governor of New York.

That magistrate is to be elected for *four* years; and is to be reeligible as often as the people of the United States shall think him worthy of their confidence. In these circumstances there is a total dissimilitude between *him* and a king of Great Britain, who is an *hereditary* monarch, possessing the crown as a patrimony descendible to his heirs forever; but there is a close analogy between *him* and a governor of New York, who is elected for *three* years, and is reeligible without limitation or intermission. If we consider how much less time would be requisite for establishing a dangerous influence in a single State, than for establishing a like influence throughout the United States we must conclude that a duration of *four* years for the Chief Magistrate of the Union is a degree of permanency far less to be dreaded in that office, than a duration of *three* years for a corresponding office in a single State.

The President of the United States would be liable to be impeached, tried, and, upon conviction of treason, bribery, or other high crimes or misdemeanors, removed from office; and would afterwards be liable to prosecution and punishment in the ordinary course of law. The person of the king of Great Britain is sacred and inviolable; there is no constitutional tribunal to which he is amenable; no punishment to which he can be subjected without involving the crisis of a national revolution. In this delicate and important circumstance of personal responsibility, the President of Confederated America would

stand upon no better ground than a governor of New York, and upon worse ground than the governors of Maryland and Delaware.

The President of the United States is to have power to return a bill, which shall have passed the two branches of the legislature, for reconsideration; and the bill so returned is to become a law, if, upon that reconsideration, it be approved by two thirds of both houses. The king of Great Britain, on his part, has an absolute negative upon the acts of the two houses of Parliament. The disuse of that power for a considerable time past does not affect the reality of its existence; and is to be ascribed wholly to the crown's having found the means of substituting influence to authority, or the art of gaining a majority in one or the other of the two houses, to the necessity of exerting a prerogative which could seldom be exerted without hazarding some degree of national agitation. The qualified negative of the President differs widely from this absolute negative of the British sovereign; and tallies exactly with the revisionary authority of the council of revision of this State, of which the governor is a constituent part. In this respect the power of the President would exceed that of the governor of New York, because the former would possess, singly, what the latter shares with the chancellor and judges; but it would be precisely the same with that of the governor of Massachusetts, whose constitution, as to this article, seems to have been the original from which the convention have copied.

The President is to be the "commander-in-chief of the army and navy of the United States, and of the militia of the several States, when called into the actual service of the United States. He is to have power to grant reprieves and pardons for offences against the United States, *except in cases of impeachment;* to recommend to the consideration of Congress such measures as he shall judge necessary and expedient; to convene, on extraordinary occasions, both houses of the legislature, or either of them, and, in case of disagreement between them *with respect to the time of adjournment,* to adjourn them to such time as he shall think proper; to take care that the laws be faithfully executed; and to commission all officers of the United States." In most of these particulars, the power of the President will resemble equally that of the king of Great Britain and of the governor of New York. The most material points of difference are these:—*First.* The President will have only the occasional command of such part of the militia of the nation as by legislative provision may be called into the actual service of the Union. The king of Great Britain and the governor of New York have at all times the entire command of all the militia within their several jurisdictions In this article, therefore, the power of the President would be inferior to that of either the monarch or the governor. *Secondly.* The President is to be commander-in-chief of the army and navy of the United States. In this respect his authority would be nominally the same with that of the king of Great Britain, but in substance much inferior to it. It would amount to nothing more than the supreme command and direction of the military and naval forces, as first General and admiral of the Confederacy; while that of the British king extends to the *declaring* of war and to the *raising* and *regulating* of fleets and armies,—all which, by the Constitution under consideration, would appertain to the legislature. The governor of New York, on the other hand, is by the constitution of the State vested only with the command of its militia and navy. But the constitutions of several of the States expressly declare their governors to be commanders-in-chief, as well of the army as navy; and it may well be a question, whether those of New Hampshire and Massachusetts, in particular, do not, in this instance, confer larger powers upon their respective governors, than could be claimed by a President of the United States. *Thirdly.* The power of the President, in respect to par-

---

3 **Maryland and Delaware.** The constitutions of Maryland and Delaware had no specific provision for impeachment, the governor of New York could be impeached • 65 **legislature.** "A writer in a Pennsylvania paper, under the signature of **Tamony,** has asserted that the king of Great Britain owes his prerogative as commander-in-chief to an annual mutiny bill. The truth is, on the contrary, that his prerogative, in this respect, is immemorial, and was only disputed, 'contrary to all reason and precedent,' as Blackstone, vol. I , page 262, expresses it, by the Long Parliament of Charles I.; but by the statute the 13th of Charles II., chap 6, it was declared to be in the king alone, for that the sole supreme government and command of the militia within his Majesty's realms and dominions, and of all forces by sea and land, and of all forts and places of strength, EVER WAS AND IS the undoubted right of his Majesty and his royal predecessors, kings and queens of England, and that both or either house of Parliament cannot nor ought to pretend to the same "—Publius The reference is to **Commentaries on the Laws of England** (1765) by Sir William Blackstone (1723-1780), one of the chief sources of Hamilton's political philosophy

dons, would extend to all cases, *except those of impeachment.* The governor of New York may pardon in all cases, even in those of impeachment, except for treason and murder. Is not the power of the governor, in this article, on a calculation of political consequences, greater than that of the President? All conspiracies and plots against the government, which have not been matured into actual treason, may be screened from punishment of every kind, by the interposition of the prerogative of pardoning. If a governor of New York, therefore, should be at the head of any such conspiracy, until the design had been ripened into actual hostility he could insure his accomplices and adherents an entire impunity. A President of the Union, on the other hand, though he may even pardon treason, when prosecuted in the ordinary course of law, could shelter no offender, in any degree, from the effects of impeachment and conviction. Would not the prospect of a total indemnity for all the preliminary steps be a greater temptation to undertake and persevere in an enterprise against the public liberty, than the mere prospect of an exemption from death and confiscation, if the final execution of the design, upon an actual appeal to arms, should miscarry? Would this last expectation have any influence at all, when the probability was computed, that the person who was to afford that exemption might himself be involved in the consequences of the measure, and might be incapacitated by his agency in it from affording the desired impunity? The better to judge of this matter, it will be necessary to recollect that, by the proposed Constitution, the offence of treason is limited "to levying war upon the United States, and adhering to their enemies, giving them aid and comfort"; and that by the laws of New York it is confined with similar bounds. *Fourthly.* The President can only adjourn the national legislature in the single case of disagreement about the time of adjournment. The British monarch may prorogue or even dissolve the Parliament. The governor of New York may also prorogue the legislature of this State for a limited time; a power which, in certain situations, may be employed to very important purposes.

The President is to have power, with the advice and consent of the Senate, to make treaties, provided two thirds of the senators present concur. The king of Great Britain is the sole and absolute representative of the nation in all foreign transactions. He can of his own accord make treaties of peace, commerce, alliance, and of every other description. It has been insinuated, that his authority in this respect is not conclusive, and that his conventions with foreign powers are subject to the revision, and stand in need of the ratification, of Parliament. But I believe this doctrine was never heard of until it was broached upon the present occasion. Every jurist of that kingdom, and every other man acquainted with its Constitution, knows, as an established fact, that the prerogative of making treaties exists in the crown in its utmost plenitude; and that the compacts entered into by the royal authority have the most complete legal validity and perfection, independent of any other sanction. The Parliament, it is true, is sometimes seen employing itself in altering the existing laws to conform them to the stipulations in a new treaty; and this may have possibly given birth to the imagination, that its coöperation was necessary to the obligatory efficacy of the treaty. But this parliamentary interposition proceeds from a different cause: from the necessity of adjusting a most artificial and intricate system of revenue and commercial laws, to the changes made in them by the operation of the treaty; and of adapting new provisions and precautions to the new state of things, to keep the machine from running into disorder. In this respect, therefore, there is no comparison between the intended power of the President and the actual power of the British sovereign. The one can perform alone what the other can do only with the concurrence of a branch of the legislature. It must be admitted, that, in this instance, the power of the federal Executive would exceed that of any State Executive. But this arises naturally from the sovereign power which relates to treaties. If the Confederacy were to be dissolved, it would become a question, whether the Executives of the several States were not solely invested with that delicate and important prerogative.

The President is also to be authorized to receive ambassadors and other public ministers. This, though it has been a rich theme of declamation, is more a matter of dignity than of authority. It is a circumstance which will be without consequence in the administration of the government; and it was far more convenient that it should

---

54 jurist. "Vide Blackstone's Commentaries, vol. i., p. 257."—Publius

ranches, upon every arrival of a foreign minister, though t were merely to take the place of a departed predecessor.

The President is to nominate and, *with the advice and consent of the Senate,* to appoint ambassadors and other public ministers, judges of the Supreme Court, and in general all officers of the United States established by law, and whose appointments are not otherwise provided for by the Constitution. The king of Great Britain is emphatically and truly styled the fountain of honor. He not only appoints to all offices, but can create offices. He can confer titles of nobility at pleasure; and has the disposal of an immense number of church preferments. There is evidently a great inferiority in the power of the President, in this particular, to that of the British king; nor is it equal to that of the governor of New York, if we are to interpret the meaning of the constitution of the State by the practice which has obtained under it. The power of appointment is with us lodged in a council, composed of the governor and four members of the Senate, chosen by the Assembly. The governor *claims,* and has frequently *exercised,* the right of nomination, and is *entitled* to a casting vote in the appointment. If he really has the right of nominating, his authority is in this respect equal to that of the President, and exceeds it in the article of the casting vote. In the national government, if the Senate should be divided, no appointment could be made; in the government of New York, if the council should be divided, the governor can turn the scale, and confirm his own nomination. If we compare the publicity which must necessarily attend the mode of appointment by the President and an entire branch of the national legislature, with the privacy in the mode of appointment by the governor of New York, closeted in a secret apartment with at most four, and frequently with only two persons; and if we at the same time consider how much more easy it must be to influence the small number of which a council of appointment consists, than the considerable number of which the national Senate would consist, we cannot hesitate to pronounce that the power of the chief magistrate of this State, in the disposition of offices, must, in practice, be greatly superior to that of the Chief Magistrate of the Union.

Hence it appears that, except as to the concurrent would, in the aggregate, possess more or less power than the Governor of New York. And it appears yet more unequivocally, that there is no pretence for the parallel which has been attempted between him and the king of Great Britain. But to render the contrast in this respect still more striking, it may be of use to throw the principal circumstances of dissimilitude into a closer group.

The President of the United States would be an officer elected by the people for *four* years; the king of Great Britain is a perpetual and *hereditary* prince. The one would be amenable to personal punishment and disgrace; the person of the other is sacred and inviolable. The one would have a *qualified* negative upon the acts of the legislative body; the other has an *absolute* negative. The one would have a right to command the military and naval forces of the nation; the other, in addition to this right, possesses that of *declaring* war, and of *raising* and *regulating* fleets and armies by his own authority. The one would have a concurrent power with a branch of the legislature in the formation of treaties; the other is the *sole possessor* of the power of making treaties. The one would have a like concurrent authority in appointing to offices; the other is the sole author of all appointments. The one can confer no privileges whatever: the other can make denizens of aliens, noblemen of commoners; can erect corporations with all the rights incident to corporate bodies. The one can prescribe no rules concerning the commerce or currency of the nation; the other is in several respects the arbiter of commerce, and in this capacity can establish markets and fairs, can regulate weights and measures, can lay embargoes for a limited time, can coin money, can authorize or prohibit the circulation of foreign coin. The one has no particle of spiritual jurisdiction; the other is the supreme head and governor of the national church! What answer shall we give to those who would persuade us that things so unlike resemble each other? The same that ought to be given to those who tell us that a government, the whole power of which would be in the hands of the elective and periodical servants of the people, is an aristocracy, a monarchy, and a despotism.

PUBLIUS

1787-1788•1788

Thomas Paine

1737 • 1809

See page 168 for a biographical account of Paine.

From

The Age of Reason

When Paine was arrested in Paris in December 1793, a part of **The Age of Reason** was in the hands of his printer, and on his way to prison he was allowed to turn over the remainder of the manuscript of Part I to Joel Barlow. A few copies were printed in January 1794. Part II, begun under the shadow of the guillotine and finished in the home of James Monroe, was added, and the whole work was published in 1795.

Paine's outspoken Deism (see p. 108 for a discussion of Deism) and anticlericalism were tempered by an earnest belief in a benevolent God and the perfectibility of man; he was neither an atheist nor a supporter of such mummery as the worship of an actress as representative of the Goddess of Reason—one of the actual incidents of the French Revolution. His book, indeed, was written partly to protest against the excesses of the Reign of Terror under Robespierre. It appeared, however, almost simultaneously with a new wave of evangelical fervor in America and was used to embarrass the Jeffersonian Republicans, whose opponents linked infidelity with political radicalism for the purpose of getting votes. To the orthodox, Paine's attack on some of the most cherished doctrines of Christianity was sheer blasphemy.

The modern reader will wonder chiefly at Paine's persistently literal interpretation of the Bible and his unquestioning assumption that human beings wish to be rational in their beliefs. In both respects he was a child of his time, the eighteenth century, which ordinarily demanded order and consistency, and was thoroughly committed to the mathematical world-view of Sir Isaac Newton, who pictured the universe as a smooth-running, rationally conducted machine.

It has been my intention, for several years past, to publish my thoughts upon Religion. I am well aware of the difficulties that attend the subject; and, from that

consideration, had reserved it to a more advanced period of life. I intended it to be the last offering I should make to my fellow-citizens of all nations; and that at a time when the purity of the motive that induced me to it could not admit of a question, even by those who might disapprove of the work.

The circumstance that has now taken place in France, of the total abolition of the whole national order of priesthood and of everything appertaining to compulsive systems of religion, and compulsive articles of faith, has not only precipitated my intention, but rendered a work of this kind exceedingly necessary; lest, in the general wreck of superstition, of false systems of government, and false theology, we lose sight of morality, of humanity, and of the theology that is true.

As several of my colleagues, and others of my fellow-citizens of France, have given me the example of making their voluntary and individual profession of faith, I also will make mine; and I do this with all that sincerity and frankness with which the mind of man communicates with itself.

I believe in one God, and no more; and I hope for happiness beyond this life.

I believe in the equality of man, and I believe that religious duties consist in doing justice, loving mercy, and endeavoring to make our fellow-creatures happy.

But, lest it should be supposed that I believe many other things in addition to these, I shall, in the progress of this work, declare the things I do not believe, and my reasons for not believing them.

I do not believe in the creed professed by the Jewish church, by the Roman church, by the Greek church, by the Turkish church, by the Protestant church, nor by any church that I know of. My own mind is my own church.

All national institutions of churches—whether Jewish, Christian, or Turkish—appear to me no other than human inventions set up to terrify and enslave mankind and monopolize power and profit.

I do not mean by this declaration to condemn those who believe otherwise. They have the same right to their belief as I have to mine. But it is necessary to the happiness of man, that he be mentally faithful to himself. Infidelity does not consist in believing, or in disbelieving; it consists in professing to believe what he does not believe.

It is impossible to calculate the moral mischief, if I may so express it, that mental lying has produced in society. When a man has so far corrupted and prostituted the chastity of his mind, as to subscribe his professional belief to things he does not believe, he has prepared himself for the commission of every other crime. He takes up the trade of a priest for the sake of gain, and, in order to *qualify* himself for that trade, he begins with a perjury. Can we conceive anything more destructive to morality than this?

Soon after I had published the pamphlet, COMMON SENSE, in America, I saw the exceeding probability that a Revolution in the System of Government would be followed by a revolution in the system of religion. The adulterous connection of church and state, wherever it had taken place, whether Jewish, Christian, or Turkish, had so effectually prohibited, by pains and penalties, every discussion upon established creeds, and upon first principles of religion, that until the system of government should be changed those subjects could not be brought fairly and openly before the world; but that whenever this should be done, a revolution in the system of religion would follow. Human inventions and priestcraft would be detected, and man would return to the pure, unmixed, and unadulterated belief of one God, and no more.

Every national church or religion has established itself by pretending some special mission from God, communicated to certain individuals. The Jews have their Moses; the Christians their Jesus Christ, their apostles and saints; and the Turks their Mahomet—as if the way to God was not open to every man alike.

Each of those churches show certain books which they call *revelation,* or the word of God. The Jews say that their word of God was given by God to Moses face to face; the Christians say that their word of God came by divine inspiration; and the Turks say that their word of God (the Koran) was brought by an angel

---

Text: that established by Professor Peach on the basis of the 1795 edition • 7 The circumstance, a reference to the acts of the National Convention between 1792 and the time of writing

from heaven. Each of those churches accuse the other of unbelief; and, for my own part, I disbelieve them all.

As it is necessary to affix right ideas to words, I will, before I proceed further into the subject, offer some observations on the word *revelation.* Revelation, when applied to religion, means something communicated *immediately* from God to man.

No one will deny or dispute the power of the Almighty to make such a communication, if he pleases. But admitting, for the sake of a case, that something has been revealed to a certain person, and not revealed to any other person, it is revelation to that person only. When he tells it to a second person, a second to a third, a third to a fourth, and so on, it ceases to be a revelation to all those persons. It is a revelation to the first person only, and *hearsay* to every other; and, consequently, they are not obliged to believe it.

It is a contradiction in terms and ideas to call anything a revelation that comes to us at secondhand, either verbally or in writing. Revelation is necessarily limited to the first communication. After this, it is only an account of something which that person says was a revelation made to him; and though he may find himself obliged to believe it, it cannot be incumbent upon me to believe it in the same manner, for it was not a revelation to *me,* and I have only his word for it that it was made to *him.*

When Moses told the children of Israel that he received the two tables of the commandments from the hand of God, they were not obliged to believe him, because they had no other authority for it than his telling them so; and I have no other authority for it than some historian telling me so. The Commandments carry no internal evidence of divinity with them. They contain some good moral precepts, such as any man qualified to be a lawgiver, or legislator, could produce himself, without having recourse to supernatural intervention.

When I am told that the Koran was written in heaven, and brought to Mahomet by an angel, the account comes to near the same kind of hearsay evidence and second-hand authority as the former. I did not see the angel myself, and therefore I have a right not to believe it.

When also I am told that a woman, called the Virgin Mary said, or gave out, that she was with child without any cohabitation with a man, and that her betrothed husband, Joseph, said, that an angel told him so, I have a right to believe them or not; such a circumstance required a much stronger evidence than their bare word for it; but we have not even this; for neither Joseph nor Mary wrote any such matter themselves. It is only reported by others that *they said so.* It is hearsay upon hearsay, and I do not chuse to rest my belief upon such evidence.

It is, however, not difficult to account for the credit that was given to the story of Jesus Christ being the Son of God. He was born at a time when the heathen mythology had still some fashion and repute in the world, and that mythology had prepared the people for the belief of such a story. Almost all the extraordinary men that ever lived under the heathen mythology were reputed to be the sons of some of their gods. It was not a new thing, at that time, to believe a man to have been celestially begotten; the intercourse of gods with women was then a matter of familiar opinion. Their Jupiter, according to their accounts, had cohabited with hundreds; the story therefore had nothing in it either new, wonderful, or obscene; it was conformable to the opinions that then prevailed among the people called Gentiles, or mythologists, and it was those people only that believed it. The Jews, who had kept strictly to the belief of one God and no more, and who had always rejected the heathen mythology, never credited the story.

It is curious to observe how the theory of what is called the Christian church sprung out of the tail of the heathen mythology. A direct incorporation took place, in the first instance, by making the reputed founder to be celestially begotten. The trinity of gods that then followed was no other than a reduction of the former plurality, which was about twenty or thirty thousand. The statue of Mary succeeded the statue of Diana of Ephesus. The deification of heroes changed into the canonization of saints. The mythologists had gods for everything; the Christian mythologists had saints for everything. The church became as crouded with the one as the pantheon had been with the other; and Rome

36 **supernatural intervention.** "It is, however, necessary to except the declaration which says that God visits the sins of the fathers upon the children. This is contrary to every principle of moral justice."—Paine

• 78 **Diana of Ephesus,** whose shrine was one of the seven wonders of the ancient world. See Acts 19

was the place of both. The Christian theory is little else than the idolatry of the ancient mythologists, accommodated to the purposes of power and revenue; and it yet remains to reason and philosophy to abolish the amphibious fraud.

Nothing that is here said can apply, even with the most distant disrespect, to the real character of Jesus Christ. He was a virtuous and an amiable man. The morality that he preached and practiced was of the most benevolent kind; and though similar systems of morality had been preached by Confucius, and by some of the Greek philosophers, many years before; by the Quakers since, and by many good men in all ages, it has not been exceeded by any.

Jesus Christ wrote no account of himself, of his birth, parentage, or anything else. Not a line of what is called the New Testament is of his writing. The history of him is altogether the work of other people; and as to the account given of his resurrection and ascension, it was the necessary counterpart to the story of his birth. His historians, having brought him into the world in supernatural manner, were obliged to take him out again in the same manner, or the first part of the story must have fallen to the ground.

The wretched contrivance with which this latter part is told exceeds everything that went before it. The first part, that of the miraculous conception, was not a thing that admitted of publicity; and therefore the tellers of this part of the story, had this advantage, that though they might not be credited they could not be detected. They could not be expected to prove it, because it was not one of those things that admitted of proof, and it was impossible that the person of whom it was told could prove it himself.

But the resurrection of a dead person from the grave, and his ascension through the air, is a thing very different, as to the evidence it admits of, to the invisible conception of a child in the womb. The resurrection and ascension, supposing them to have taken place, admitted of public and ocular demonstration, like that of the ascension of a balloon, or the sun at noonday, to all Jerusalem at least. A thing which everybody is required to believe, requires that the proof and evidence of it should be equal to all, and universal; and as the public visibility of this last related act was the only evidence that could give sanction to the former part, the whole of it falls to the ground because that evidence never was given. Instead of this, a small number of persons, not more than eight or nine, are introduced as proxies for the whole world, to say they *saw it,* and all the rest of the world are called upon to believe it. But it appears that Thomas did not believe the resurrection; and, as they say, would not believe without having ocular and manual demonstration himself. *So neither will I;* and the reason is equally as good for me, and for every other person, as for Thomas.

It is in vain to palliate or disguise this matter. The story, so far as relates to the supernatural part, has every mark of fraud and imposition stamped upon the face of it. Who were the authors of it is as impossible for us now to know, as it is for us to be assured that the books in which the account is related were written by the persons whose names they bear. The best surviving evidence we now have respecting this affair is the Jews. They are regularly descended from the people who lived in the times this resurrection and ascension is said to have happened, and they say, *it is not true.* It has long appeared to me a strange inconsistency to cite the Jews as a proof of the truth of the story. It is the same as if a man were to say, I will prove the truth of what I have told you by producing the people who say it is false.

That such a person as Jesus Christ existed, and that he was crucified, which was the mode of execution at that day, are historical relations strictly within the limits of probability. He preached most excellent morality, and the equality of man; but he preached also against the corruptions and avarice of the Jewish priests; and this brought upon him the hatred and vengeance of the whole order of priest-hood. The accusation which those priests brought against him was that of sedition and conspiracy against the Roman government, to which the Jews were then subject and tributary; and it is not improbable that the Roman government might have some secret apprehension of the effects of his doctrine as well as the Jewish priests; neither is it improbable that Jesus Christ had in contemplation the delivery of the Jewish nation from the bondage of the Romans.

---

11 **Confucius,** the Chinese philosopher (551?-478 B.C.) • 51 **Thomas.** See John 20:24-29; whence the epithet, "doubting Thomas"

Between the two, however, this virtuous reformer and revolutionist lost his life.

It is upon this plain narrative of facts, together with another case I am going to mention, that the Christian mythologists, calling themselves the Christian church, have erected their fable, which for absurdity and extravagance is not exceeded by anything that is to be found in the mythology of the ancients.

The ancient mythologists tell that the race of Giants made war against Jupiter, and that one of them threw an hundred rocks against him at one throw; that Jupiter defeated him with thunder, and confined him afterwards under Mount Etna; and that every time the Giant turns himself, Mount Etna belches fire. It is here easy to see that the circumstance of the mountain, that of its being a volcano, suggested the idea of the fable; and that the fable is made to fit and wind itself up with that circumstance.

The Christian mythologists tell that their Satan made war against the Almighty, who defeated him, and confined him afterwards, not under a mountain, but in a pit. It is here easy to see that the first fable suggested the idea of the second; for the fable of Jupiter and the Giants was told many hundred years before that of Satan.

Thus far the ancient and the Christian mythologists differ very little from each other. But the latter have contrived to carry the matter much farther. They have contrived to connect the fabulous part of the story of Jesus Christ, with the fable originating from Mount Etna; and, in order to make all the parts of the story ty together, they have taken to their aid the tradition of the Jews; for the Christian mythology is made up partly from the ancient mythology and partly from the Jewish traditions.

The Christian mythologists, after having confined Satan in a pit, were obliged to let him out again, to bring on the sequel of the fable. He is then introduced into the garden of Eden in the shape of a snake, or a serpent, and in that shape he enters into familiar conversation with Eve, who is not in any way surprised to hear a snake talk, and the issue of this *tête-à-tête* is, that he persuades her to eat an apple, and the eating of that apple, damns all mankind.

After giving Satan this triumph over the whole creation, one would have supposed that the church mythologists would have been kind enough to send him back again to the pit; or, if they had not done this, that they would have put a mountain upon him (for they say their faith can remove a mountain) or have him put *under* a mountain, as the former mythologists had done, to prevent his getting again among the women and doing more mischief. But instead of this, they leave him at large without even obliging him to give his parole. The secret of which is, that they could not do without him; and after being at the trouble of making him, they bribed him to stay. They promised him ALL the Jews, ALL the Turks by anticipation, nine-tenths of the world beside, and Mahomet into the bargain. After this, who can doubt the bountifulness of the Christian mythology?

Having thus made an insurrection and a battle in heaven, in which none of the combatants could be either killed or wounded—put Satan into the pit—let him out again—given him a triumph over the whole creation—damned all mankind by the eating of an apple, these Christian mythologists bring the two ends of their fable together. They represent this virtuous and amiable man, Jesus Christ, to be at once both God and man, and also the Son of God, celestially begotten on purpose to be sacrificed, because they say, that Eve in her longing had eaten an apple.

Putting aside everything that might excite laughter by its absurdity, or detestation by its prophaneness, and confining ourselves merely to an examination of the parts, it is impossible to conceive a story more derogatory to the Almighty, more inconsistent with his wisdom, more contradictory to his power, than this story is.

In order to make for it a foundation to rise upon, the inventors were under the necessity of giving to the being whom they call Satan a power equally as great, if not greater, than they attribute to the Almighty. They have not only given him the power of liberating himself from the pit, after what they call his fall, but they have made that power increase afterwards to infinity. Before this fall, they represent him only as an angel of limited existence, as they represent the rest. After his fall, he becomes, by their account, omnipresent. He exists every-

---

34 **Jewish traditions**, especially as found in the Cabala, or mystic books of the Jews, some of which are related to the Apocrypha. The idea of Satan is largely non-Biblical

where, and at the same time. He occupies the whole immensity of space.

Not content with this deification of Satan, they represent him as defeating, by strategem, in the shape of an animal of the creation, all the power and wisdom of the Almighty. They represent him as having compelled the Almighty to the *direct necessity* either of surrendering the whole of the creation to the government and sovereignty of this Satan or of capitulating for its redemption by coming down upon earth and exhibiting himself upon a cross in the shape of a man.

Had the inventors of this story told it the contrary way—that is, had they represented the Almighty as compelling Satan to exhibit *himself* on a cross in the shape of a snake, as a punishment for his new transgression, the story would have been less absurd, less contradictory. But, instead of this, they make the transgressor triumph and the Almighty fall.

That many good men have believed this strange fable, and lived very good lives under that belief (for credulity is not a crime) is what I have no doubt of. In the first place, they were educated to believe it, and they would have believed anything else in the same manner. There are also many who have been so enthusiastically enraptured by what they conceived to be the infinite love of God to man in making a sacrifice of himself, that the vehemence of the idea has forbidden and deterred them from examining into the absurdity and prophaneness of the story. The more unnatural anything is, the more is it capable of becoming the object of dismal admiration.

But if objects for gratitude and admiration are our desire, do they not present themselves every hour to our eyes? Do we not see a fair creation prepared to receive us the instant we were born—a world furnished to our hands that cost us nothing? Is it we that light up the sun, that pour down the rain, and fill the earth with abundance? Whether we sleep or wake the vast machinery of the universe still goes on. Are these things, and the blessings they indicate in future, nothing to us? Can our gross feelings be excited by no other subjects than tragedy and suicide? Or is the gloomy pride of man become so intolerable that nothing can flatter it but the sacrifice of the Creator?

I know that this bold investigation will alarm many, but it would be paying too great a compliment to their credulity to forbear it upon that account. The times and the subject demand it to be done. The suspicion that the theory of what is called the Christian church is fabulous is becoming very extensive in all countries; and it will be a consolation to men staggering under that suspicion, and doubting what to believe and what to disbelieve, to see the subject freely investigated. I therefore pass on to an examination of the books called the Old and the New Testament....

[Most of the remainder of Part I, and a large portion of Part II, here omitted, either display the "true theology" which Paine found in the works of creation, or attack the divine authority of the Bible by citation of conflicting texts and "absurd" stories. His chief argument is that mystery, miracle, and prophecy have been used in all ages to impose priesthood upon mankind. His positive Deism is summarized in the "Conclusion" to Part II, the latter part of which follows.]

Of all the systems of religion that ever were invented, there is none more derogatory to the Almighty, more unedifying to man, more repugnant to reason, and more contradictory in itself, than this thing called Christianity. Too absurd for belief, too impossible to convince, and too inconsistent for practice, it renders the heart torpid or produces only atheists and fanatics. As an engine of power, it serves the purpose of despotism; and as a means of wealth, the avarice of priests; but so far as respects the good of man in general, it leads to nothing here or hereafter.

The only religion that has not been invented, and that has in it every evidence of divine originality, is pure and simple Deism. It must have been the first, and will probably be the last, that man believes. But pure and simple Deism does not answer the purpose of despotic governments. They cannot lay hold of religion as an engine, but by mixing it with human inventions, and making their own authority a part; neither does it answer the avarice of priests but by incorporating themselves and their functions with it, and becoming, like the government, a party in the system. It is that that forms the otherwise mysterious connection of church and state; the church human, and the state tyrannic.

Were man impressed as fully and strongly as he ought to be with the belief of a God, his moral life would be regulated by the force of that belief; he would stand in

awe of God and of himself, and would not do the thing that could not be concealed from either. To give this belief the full opportunity of force, it is necessary that it act alone. This is Deism.

But when, according to the Christian trinitarian scheme, one part of God is represented by a dying man, and another part, called the Holy Ghost, by a flying pigeon, it is impossible that belief can attach itself to such wild conceits.

It has been the scheme of the Christian church, and of all the other invented systems of religion, to hold man in ignorance of the Creator, as it is of government to hold him in ignorance of his rights. The systems of the one are as false as those of the other, and are calculated for mutual support. The study of theology, as it stands for Christian churches, is the study of nothing; it is founded on nothing; it rests on no principles; it proceeds by no authorities, it has no data; it can demonstrate nothing, and admits of no conclusion. Not any thing can be studied as a science without our being in possession of the principles upon which it is founded; and as this is not the case with Christian theology, it is therefore the study of nothing.

Instead, then, of studying theology, as is now done, out of the Bible and Testament, the meanings of which books are always controverted, and the authenticity of which is disproved, it is necessary that we refer to the Bible of the creation. The principles we discover there are eternal, and of divine origin; they are the foundation of all the science that exists in the world, and must be the foundation of theology.

We can know God only through his works. We cannot have a conception of any one attribute but by following some principle that leads to it. We have only a confused idea of his powers if we have not the means of comprehending something of its immensity. We can have no idea of his wisdom but by knowing the order and manner in which it acts. The principles of science lead to this knowledge; for the Creator of man is the Creator of science; and it is through that medium that man can see God, as it were, face to face.

Could a man be placed in a situation, and endowed with the power of vision, to behold at one view, and to contemplate deliberately, the structure of the universe; to mark the movements of the several planets, the cause of their varying appearances, the unerring order in which they revolve, even to the remotest comet; their connection and dependence on each other, and to know the system of laws established by the Creator that governs and regulates the whole; he would then conceive, far beyond what any church theology can teach him, the power, the wisdom, the vastness, the munificence of the Creator. He would then see that all the knowledge man has of science, and that all the mechanical arts by which he renders his situation comfortable here, are derived from that source; his mind, exalted by the scene and convinced by the fact, would increase in gratitude as it increased in knowledge; his religion or his worship would become united with his improvement as a man; any employment he followed that had connection with the principles of the creation, as everything of agriculture, of science, and of the mechanical arts has, would teach him more of God and of the gratitude he owes to him than any theological Christian sermon he now hears. Great objects inspire great thoughts; great munificence excites great gratitude; but the groveling tales and doctrines of the Bible and the Testament are fit only to excite contempt.

---

9 **wild conceits.** "The book called the book of Matthew says (iii, 16) that **the Holy Ghost descended in the shape of a dove.** It might as well have said a goose, the creatures are equally harmless, and the one is as much a nonsensical lie as the other. Acts ii, 2, 3, says that it descended in a mighty **rushing wind,** in the shape of **cloven tongues;** perhaps it was cloven feet. Such absurd stuff is only fit for tales of witches and wizards."—Paine • 23 **the study of nothing.** "The Bible-makers have undertaken to give us, in the first chapter of Genesis, an account of the creation; and in doing this they have demonstrated nothing but their ignorance. They make there to have been three days and three nights, evenings, and mornings, before there was any sun; when it is the presence or absence of the sun that is the cause of day and night—and what is called his rising and setting, that of morning and evening. Besides it is a puerile and pitiful idea to suppose the Almighty to say, 'Let there be light.' It is the imperative manner of speaking that a conjuror uses when he says to his cups and balls, 'Presto! be gone' and most probably has been taken from it, as Moses and his rod are a conjuror and his wand. Longinus calls this expression the sublime; and by the same rule the conjuror is sublime too; for the manner of speaking is expressively and grammatically the same. When authors and critics talk of the sublime, they see not how nearly it borders on the ridiculous. The sublime of the critics, like some parts of Edmund Burke's sublime and beautiful, is like a windmill just visible in a fog, which imagination might distort into a flying mountain, or an archangel, or a flock of wild geese."—Paine

Though man cannot arrive, at least in this life, at the actual scene I have described, he can demonstrate it because he has a knowledge of the principles upon which the creation is constructed. We know that the greatest works can be represented in model, and that the universe can be represented by the same means. The same principles by which we measure an inch or an acre of ground will measure to millions in extent. A circle of an inch diameter has the same geometrical properties as a circle that would circumscribe the universe. The same properties of a triangle that will demonstrate upon paper the course of a ship, will do it on the ocean, and, when applied to what are called the heavenly bodies, will ascertain to a minute the time of an eclipse, though those bodies are millions of miles distant from us. This knowledge is of divine origin, and it is from the Bible of the creation that man has learned it, and not from the stupid Bible of the church that teacheth man nothing.

All the knowledge man has of science and of machinery, by the aid of which his existence is rendered comfortable upon earth, and without which he would be scarcely distinguishable in appearance and condition from a common animal, comes from the great machine and structure of the universe. The constant and unwearied observations of our ancestors upon the movements and revolutions of the heavenly bodies, in what are supposed to have been the early ages of the world, have brought this knowledge upon earth. It is not Moses and the prophets nor Jesus Christ, nor his apostles that have done it. The Almighty is the great mechanic of the creation; the first philosopher and original teacher of all science. Let us then learn to reverence our master, and not forget the labor of our ancestors.

Had we, at this day, no knowledge of machinery, and were it possible that man could have a view, as I have before described, of the structure and machinery of the universe, he would soon conceive the idea of constructing some at least of the mechanical works we now have; and the idea so conceived would progressively advance in practice. Or could a model of the universe, such as is called orrery, be presented before him and put in motion, his mind would arrive at the same idea. Such an object and such a subject would, whilst it improved him in knowledge useful to himself as a man and a member of society, as well as entertaining, afford far better matter for impressing him with a knowledge of and a belief in the Creator, and of the reverence and gratitude that a man owes to him, than the stupid texts of the Bible and the Testament, from which, be the talents of the preacher what they may, only stupid sermons can be preached. If man must preach, let him preach something that is edifying, and from the texts that are known to be true.

The Bible of the Creation is inexhaustible in texts. Every part of the science, whether connected with the geometry of the universe, with the systems of animal and vegetable life, or with the properties of inanimate matter, is a text as well for devotion as for philosophy—for gratitude as for human improvement. It will perhaps be said that if such a revolution in the system of religion takes place, every preacher ought to be a philosopher. *Most certainly;* and every house of devotion a school of science.

It has been by wandering from the immutable laws of science and the light of reason, and setting up an invented thing called revealed religion, that so many wild and blasphemous conceits have been formed of the Almighty. The Jews have made him the assassin of the human species, to make room for the religion of the Jews. The Christians have made him the murderer of himself, and the founder of a new religion, to supersede and expel the Jewish religion. And to find pretense and admission for these things, they must have supposed his power or his wisdom imperfect, or his will changeable; and the changeableness of the will is the imperfection of the judgment. The philosopher knows that the laws of the Creator have never changed with respect either to the principles of science or the properties of matter. Why, then, is it to be supposed they have changed with respect to man?

I here close the subject. I have shown in all the foregoing parts of this work that the Bible and Testament are impositions and forgeries; and I leave the evidence I have produced in proof of it to be refuted, if anyone can do it; and I leave the ideas that are suggested in the conclusion of the work to rest on the mind of the reader; certain, as I am, that when opinions are free, either in matters of government or religion, truth will finally and powerfully prevail.

1793·1794-1795

Philip Freneau

1752 · 1832

Philip Freneau's relatively high rank in American literary history is based upon three different aspects of his work, none of which would by itself justify his being regarded as almost a major writer. Taken together, however, his poems of romantic fancy, his ballads and satires in behalf of American independence, and his work as editor in the interest of Jeffersonian Republicanism reveal a fluent, versatile, and sometimes powerful man of letters. That he never attained the height of genius was perhaps as much an accident of his time as of his talent.

In his youth Freneau had the advantages of wealth, as they were understood at that time in New York and New Jersey. When he entered Princeton at sixteen, he hoped to prepare for the ministry. In college, as the close friend of James Madison (later the fourth President of the United States), Hugh Henry Brackenridge (author of *Modern Chivalry*), and William Bradford (later second attorney general of the United States), Freneau acquired Whig principles and literary ambitions. He began to write, imitating the classics and the English poets. In collaboration with Brackenridge he wrote part of a novel, "Father Bombo's Pilgrimage to Mecca in Arabia," and a Commencement poem, *The Rising Glory of America.* He had every reason to think the future would hold great things for him.

The next decade, however, brought unusual problems as well as the commonplace one of making a living (for Freneau's family resources steadily dwindled after his father's death in 1767). Theology proved unsatisfying; two ventures at teaching even more so. There was no livelihood in literature, although both the Commence-

Panel (l. to r.): The Boston, Plymouth, and Sandwich mail stage • After a husking bee in New England • Summer scene

ment poem and one other, *The American Village,* were printed in 1772. For the next two years or more Freneau's movements are obscure. He was evidently restless, for, although he turned up in New York in 1775, writing satires against General Gage and the British, he was off the next year to the West Indies. For about two years he lived on Santa Cruz, in the Virgin Islands, writing some of his most fanciful poems: "The Jamaica Funeral," "The Beauties of Santa Cruz," and "The House of Night." In 1778, after several voyages to Bermuda and at least one tour of the lower Gulf of Mexico, he started back for New Jersey. His ship was captured off the Carolinas by the British, but he was permitted to land near his home and promptly enlisted in the militia. Capture, apparently, had brought the war close home to him. The *United States Magazine,* edited by Brackenridge, soon printed some of Freneau's best West Indian poems, together with "King George the Third's Soliloquy," but his work as a propagandist did not become important until 1780. By that time he had left the army to become a blockade runner and had made two more trips to the West Indies. He was starting out on a fourth voyage, this time as third mate, when he was captured and confined for six weeks on prison and hospital ships in New York Harbor. That experience made Freneau a boiling, bitter, hate-marked patriot, and *The British Prison-Ship* (1781) was followed by a flood of propaganda, most of it published in the *Freeman's Journal,* a Philadelphia weekly. In satire and in ballads he expressed the hopes and the hates of his countrymen.

The war over, Freneau turned again to the sea to make his living, and between 1784 and 1790 was engaged chiefly in coastwise shipping, most of the time as ship's captain. In port, at Charleston, Philadelphia, or New York, he occasionally offered a new poem to a newspaper or magazine, and he presumably found some satisfaction in seeing in his cabin *The Poems of Philip Freneau* (Philadelphia, 1786) and *The Miscellaneous Works of Mr. Philip Freneau Containing His Essays and Additional Poems* (Philadelphia, 1788).

In April 1790 Freneau married and settled in New York, to try once more to make his living as a writer. While editing the *Daily Advertiser,* he made plans to establish a country paper of his own in New Jersey. Through the influence of James Madison, however, he was offered a part-time clerkship as translator in the Department of State, under Jefferson. In October 1791, encouraged by Madison and Jefferson, Freneau founded in Philadelphia the *National Gazette,* designed to rival the strongly Federalist *Gazette of the United States,* and to provide a focal point for the opposition to the policies of Alexander Hamilton. Freneau and his friends regarded the financial measures of Hamilton as favorable to the wealthy and dangerous to the common people; his frankness in saying so soon plunged him into the midst of the bitterest incidents attending the birth of party politics in the United States. He supported Jefferson with all the force of direct attack, satire, and abuse, and came to epitomize to Hamilton and his party the rabble-rousing journalist. "That rascal Freneau!" Washington is reported to have exclaimed. In the end Freneau's enthusiasm for the French Revolution and his support of Citizen Genêt, after that gentleman had alienated even Jefferson, lost him support, and the *National Gazette* expired in the fall of 1793. There can be no doubt, however, of Freneau's mighty contribution to the establishment of party government and party journalism.

During the last thirty-nine years of his life, Freneau was in almost constant financial difficulty. His chief editorial ventures were on the *Jersey Chronicle* of Mount Pleasant in 1795-1796, where he published his "Tomo Cheeki" essays and failed to collect from his subscribers, and a New York periodical, *The Time-Piece; and Literary Companion,* in 1797-1798. In 1803-1807 he was forced once more to return to the sea. Before his death in a blizzard in 1832, he published three more collections of his work.

Although Freneau was obviously imitative in his forms and themes—most of the famous English poets of the eighteenth century were among his literary mentors—he is remembered for his discovery of American plants and birds, for his primitivistic idealization of the Indian, for his feeling for the sea, on which he spent so much of his life. As a precursor of Bryant, Emerson, Poe, Whittier, and Longfellow, he has historic interest; but he is memorable also for his revelation of himself—a man who lived in stirring, restless, difficult times, fighting, not always judiciously, for the ways of life in which he believed.

The Poems of Philip Freneau, ed. F. L. Pattee, 3 vols, Princeton, 1902-1907 • Poems of Freneau, ed. H. H Clark, New York, 1929 • Lewis Leary, That Rascal Freneau: A Study in Literary Failure, New Brunswick, New Jersey, 1941

The Power of Fancy

"The Power of Fancy" is perhaps the most interesting of the poems which Freneau wrote as an undergraduate at Princeton. The many literary allusions emphasize his reading of the classics, and the delight in distant places exemplifies his romantic tendency. His concept of poetic fancy, which is characteristic of eighteenth-century thought, was probably derived from the "Ode to Fancy" by Joseph Warton (1722-1800), one of the earliest of English "romantic" poets (see H. H. Clark, "Literary Influences on Philip Freneau," **Studies in Philology**, January 1925). Freneau's enthusiasm for Milton, and especially for "Il Penseroso," is more self-evident (see T. P. Haviland, "A Measure for the Early Freneau's Debt to Milton," **Publications of the Modern Language Association**, December 1940).

WAKEFUL, vagrant, restless thing,
Ever wandering on the wing,
Who thy wondrous source can find,
FANCY, regent of the mind;
A spark from Jove's resplendent throne,
But thy nature all unknown.
  THIS spark of bright, celestial flame,
From Jove's seraphic altar came,
And hence alone in man we trace,
Resemblance to the immortal race.
  Ah! what is all this mighty WHOLE,
These suns and stars that round us roll!
What are they all, where'er they shine,
But *Fancies* of the Power Divine!
What is this *globe*, these *lands*, and *seas*,
And *heat*, and *cold*, and *flowers*, and *trees*,
And *life*, and *death*, and *beast*, and *man*,
And *time*,—that with the *sun* began—
But thoughts on reason's scale combin'd,
Ideas of the Almighty mind?
  On the surface of the brain
Night after night she walks unseen,
Noble fabrics doth she raise
In the woods or on the seas,
On some high, steep, pointed rock,
Where the billows loudly knock
And the dreary tempests sweep
Clouds along the uncivil deep.
  Lo! she walks upon the moon,
Listens to the chimy tune
Of the bright, harmonious spheres,
And the song of angels hears;
Sees this earth a distant star,
Pendant, floating in the air;
Leads me to some lonely dome,
Where Religion loves to come,
Where the bride of Jesus dwells,
And the deep ton'd organ swells
In notes with lofty anthems join'd,
Notes that half distract the mind.
  Now like lightning she descends
To the prison of the fiends,
Hears the rattling of their chains,
Feels their never ceasing pains—
But, O never may she tell
Half the frightfulness of hell.
  Now she views Arcadian rocks,
Where the shepherds guard their flocks,
And, while yet her wings she spreads,
Sees chrystal streams and coral beds,
Wanders to some desert deep,
Or some dark, enchanted steep,
By the full moon light doth shew
Forests of a dusky blue,
Where, upon some mossy bed,
Innocence reclines her head.
  SWIFT, she stretches o'er the seas
To the far off Hebrides,
Canvas on the lofty mast

Text: the 1786 edition. In the 1795 edition and thereafter Freneau printed ll. 1-20 and 141-154 as "Ode to Fancy," using the remainder, in a much-revised form, for a poem entitled "Fancy's Ramble" • **20 Ideas . . . mind?** The notion here, essentially Platonic, was common in the eighteenth-century philosophy. The emphasis on reason in line 19 and the implications of the line preceding are evidence of Freneau's Deistic ideas (p 108) • **30 chimy . . . spheres.** The Aristotelian and Ptolemaic systems conceived of the universe as a succession of concentric spheres, something like the layers of an onion, which, as they rubbed together, produced a mighty musical harmony • **33 star,** "Milton's Paradise Lost, B. II, v. 1052."—Freneau • **47 Arcadian,** pastoral, from a mountainous area in ancient Greece, praised by the poets for its idyllic simplicity • **58 Hebrides,** islands off the coast of Scotland

Could not travel half so fast—
Swifter than the eagle's flight
Or instantaneous rays of light!
Lo! contemplative she stands
On Norwegia's rocky lands—
Fickle Goddess, set me down
Where the rugged winters frown
Upon Orca's howling steep,
Nodding o'er the northern deep,
Where the winds tumultuous roar,
Vext that *Ossian* sings no more.
Fancy, to that land repair,
Sweetest Ossian slumbers there;
Waft me far to southern isles
Where the soften'd winter smiles,
To Bermuda's orange shades,
Or Demarara's lovely glades;
Bear me o'er the sounding cape,
Painting death in every shape,
Where daring *Anson* spread the sail
Shatter'd by the stormy gale—
Lo! she leads me wide and far,
Sense can never follow her—
Shape thy course o'er land and sea,
Help me to keep pace with thee,
Lead me to yon chalky cliff,
Over rock and over reef,
Into Britain's fertile land,
Stretching far her proud command.
Look back and view, thro' many a year,
Cæsar, Julius Cæsar, there.
  Now to Tempe's verdant wood,
Over the mid ocean flood
Lo! the islands of the sea
—Sappho, Lesbos mourns for thee:
Greece, arouse thy humbled head,
Where are all thy mighty dead,
Who states to endless ruin hurl'd
And carried vengeance through the world?—
Troy, thy vanish'd pomp resume,
Or, weeping at thy Hector's tomb,
Yet those faded scenes renew,
Whose memory is to *Homer* due.
Fancy, lead me wandering still
Up to Ida's cloud-topt hill;
Not a laurel there doth grow
But in vision thou shalt show,—
Every sprig on Virgil's tomb
Shall in livelier colours bloom,
And every triumph Rome has seen
Flourish on the years between.
  Now she bears me far away
In the east to meet the day,
Leads me over Ganges' streams,
Mother of the morning beams—
O'er the ocean hath she ran,
Places me on *Tinian;*
Farther, farther in the east,
Till it almost meets the west,
Let us wandering both be lost
On Taitis sea-beat coast,
Bear me from that distant strand,
Over ocean, over land,
To California's golden shore—
Fancy, stop, and rove no more.
  Now, tho' late, returning home,
Lead me to *Belinda's* tomb;

---

67 **Orca's,** perhaps a reference to the Orchades or Orkney Islands, to the north of Scotland. In the later version of the poem, "Fancy's Ramble," Freneau substituted **Hecla,** a mountain in Iceland. In either case Fancy's flight is somewhat erratic • 70 **Ossian,** a legendary Gaelic poet who celebrated the deeds of his father, Finn, or Find, who lived, presumably, in the third century. The Ossianic poems exist in fifteenth-century manuscripts, but their fame rests upon the attempt of James MacPherson (1736-1796) to create a Gaelic epic. His **Fingal** (1762) is now known to have been based largely upon forged manuscripts, but in Freneau's time it was accepted as authentic • 76 **Demarara's,** now the name of both a county and a river in British Guiana, it was once also the name for Georgetown, the capital of that South American colony • 79 **Anson,** George Anson (1697-1762), leader of a British naval expedition to the South Pacific, 1740-1744, which, after raiding Peru and a Spanish treasure ship off Accpulco in Mexico, continued westward around the world • 90 **there,** i.e., in Britain, where Caesar landed in 55 B.C. • 91 **Tempe's,** an allusion to the valley in Thessaly whose beauty was often celebrated by the classical poets • 94 **Sappho, Lesbos.** Sappho (fl. 630-570 B.C.), most famous of the women poets of antiquity, was supposedly born on the island of Lesbos or Mytilini, off the coast of Asia Minor • 95 **humbled head.** From 1715 until 1821 Greece was occupied by the Turks. An insurrection in 1770 may have suggested Freneau's phrase • 104 **Ida's.** The gods watched the battles around Troy, described in Homer's **Iliad,** from the summit of Mount Ida • 116 **Tinian,** an island in the Marianas, now well-known to Americans through its occupation in World War II. Anson was there for two months in 1742 • 120 **Taitis,** Tahiti, in the Society Islands, well-known to eighteenth-century readers through the expedition of Captain James Cook, who observed the Transit of Venus of 1769 at that spot • 126 **Belinda's,** a common name in Neoclassical poetry

Let me glide as well as you
Through the shroud and coffin too,
And behold, a moment, there,
All that once was good and fair—
Who doth here so soundly sleep?
Shall we break this prison deep?—
Thunders cannot wake the maid,
Lightnings cannot pierce the shade,
And tho' wintry tempests roar,
Tempests shall disturb no more.
YET must those eyes in darkness stay,
That once were rivals to the day—?
Like heaven's bright lamp beneath the main
They are but set to rise again.
FANCY, thou the muses' pride,
In thy painted realms reside
Endless images of things,
Fluttering each on golden wings,
Ideal objects, such a store,
The universe could hold no more:
Fancy, to thy power I owe
Half my happiness below;
By thee Elysian groves were made,
Thine were the notes that Orpheus play'd;
By thee was Pluto charm'd so well
While rapture seiz'd the sons of hell—
Come, O come—perceiv'd by none,
You and I will walk alone.

1770·1786

George the Third's Soliloquy

As "King George the Third's Soliloquy," this poem first appeared in the United States Magazine for May 1779, and was reprinted almost at once in the Pennsylvania Packet for June 5. Freneau revised it extensively for the 1786 edition of his Poems, changing the order of the lines, omitting some passages, and adding others. He then entitled it "George III. His Soliloquy for 1779." The present title and text first appeared in 1795. The 1809 edition shows minor variations in spelling, but no further changes. In its combination of bitterness, ridicule, and confidence in the ultimate triumph of the American cause, it probably typifies the attitude and methods of the Whig leaders. It was good politics, of course, to picture the Revolution as caused entirely by a tyrannical and unscrupulous monarch.

What mean these dreams, and hideous forms that rise
Night after night, tormenting to my eyes—
No real foes these horrid shapes can be,
But thrice as much they vex and torture me.
How cursed is he—how doubly curs'd am I—
Who lives in pain, and yet who dares not die;
To him no joy this world of Nature brings,
In vain the wild rose blooms, the daisy springs.
Is this a prelude to some new disgrace,
Some baleful omen to my name and race—!
It may be so—ere mighty Cesar died
Presaging Nature felt his doom, and sigh'd;
A bellowing voice through midnight groves was heard,
And threatening ghosts at dusk of eve appear'd—
Ere Brutus fell, to adverse fates a prey,
His evil genius met him on the way,
And so may mine!—but who would yield so soon
A prize, some luckier hour may make my own?—
Shame seize my crown, ere such a deed be mine—
No—to the last my squadrons shall combine,
And slay my foes, while foes remain to slay,
Or *heaven* shall grant me one successful day.
Is there a robber close in Newgate hemm'd,
Is there a cut-throat, fetter'd and condemn'd?
Haste, loyal slaves, to George's standard come,
Attend his lectures when you hear the drum;
Your chains I break—for better days prepare,
Come out, my friends, from prison and from care,
Far to the west I plan your desperate sway,

Power of Fancy • 149 **Elysian groves**, the abode of the blessed in classical mythology, a land of eternal spring and happiness • 150 **Orpheus**, a mythical Greek poet who, by petitioning Pluto with song and lyre, won back his wife Eurydice from Hades, only to lose her again by disobeying the injunction not to look at her until they reached the upper air

George the Third's Soliloquy • **Text**: the 1795 edition • 12 **Presaging Nature.** Plutarch and Strabo, Roman historians, tell of many wonders seen before Caesar's death, these among them • 16 **His evil . . . him.** According to Plutarch, Brutus was visited one night by an apparition, who identified himself as "Thy evil genius. We shall meet again at Philippi." On the eve of the second battle of Philippi the apparition reappeared; next day, defeated, Brutus fell upon his sword • 23 **Newgate.** A London prison

There 'tis no sin to ravage, burn, and slay.
There, without fear, your bloody aims pursue,
And show mankind what English thieves can do.
  That day, when first I mounted to the throne,
 swore to let all foreign foes alone.
Through love of peace to terms did I advance,
And made, they say, a shameful league with France.
But different scenes rise horrid to my view,
I charg'd my hosts to plunder and subdue—
At first, indeed, I thought short wars to wage
And sent some jail-birds to be led by Gage.
For 'twas but right, that those we mark'd for slaves
Should be reduc'd by cowards, fools, and knaves:
Awhile, directed by his feeble hand,
Those *troops* were kick'd and pelted through the land,
Or starv'd in Boston, curs'd the unlucky hour
They left their dungeons for that fatal shore.
  France aids them now, a desperate game I play,
And hostile Spain will do the same, they say;
My armies vanquish'd, and my heroes fled,
My people murmuring, and my commerce dead,
My shattered navy pelted, bruis'd, and clubb'd,
By Dutchmen bullied, and by Frenchmen drubb'd,
My name abhorr'd, my nation in disgrace,
How should I act in such a mournful case!
My hopes and joys are vanish'd with my coin,
My ruin'd army, and my lost Burgoyne!
What shall I do—confess my labours vain,
Or whet my tusks, and to the charge again!
But where's my force—my choicest troops are fled,
Some thousands crippled, and a myriad dead—
If I were own'd the boldest of mankind,
And hell with all her flames inspir'd my mind,
Could I at once with Spain and France contend,
And fight the *rebels,* on the world's green end?—
The pangs of *parting* I can ne'er endure,
Yet *part* we must, and part to meet no more!
Oh! blast this *Congress,* blast each upstart STATE,
On whose commands ten thousand captains wait;
From various climes that dire *Assembly* came,
True to their trust, as hostile to my fame,
'Tis these, ah these, have ruin'd half my sway,
Disgrac'd my arms, and led my slaves astray—
Curs'd be the day, when first I saw the sun,
Curs'd be the hour, when I these wars begun:
The fiends of darkness then possess'd my mind,
And powers unfriendly to the human kind.
To wasting grief, and sullen rage a prey,
To *Scotland's* utmost verge I'll take my way,
There with eternal storms due concert keep
And while the billows rage, as fiercely weep—
Ye highland lads, my rugged fate bemoan,
Assist me with one sympathizing groan,
For late I find the nations are my foes,
I must submit, and that with bloody nose,
Or, like our James, fly basely from the state,
Or share, what still is worse—old *Charles's* fate.

1779·1795

On the Memorable Victory

Obtained by the Gallant Captain John Paul Jones, of the *Bon Homme Richard,* over the *Seraphis,* under the command of Captain Pearson

This poem was first published in the **Freeman's Journal,** August 8, 1781. It relates the action of September 23, 1779, within sight of the east coast of England, in which John Paul Jones (1747-1792) won his greatest victory. The **Bon Homme Richard,** named for Benjamin Franklin, "Poor Richard," was a converted merchantman; only her officers were Americans. The raiding force of which it was the flagship encountered, off Scarborough, a large convoy from the Baltic, guarded by the **Serapis,** under the command of Richard Pearson (1731-1806). Jones, handicapped by inferior arms and equipment, was skillful in placing his deck guns and directing his boarding party, but his triumph came largely from the fact that he never thought of

---

36 a shameful . . . France. Shameful because, in making peace with France, the Earl of Bute, King George's teacher and first prime minister, deserted Frederick the Great of Prussia, who had been fighting the three great absolutist monarchies Austria, Russia, and France • **40 Gage,** Thomas Gage (1721-1787), who ordered the march on Concord In the 1786 edition, this line read "And sent a scoundrel by the name of Gage" • **56 Burgoyne.** John Burgoyne (1723-1792) arrived in Boston to reinforce Gage in September 1774 • **67 Oh! . . . Congress.** In the 1779 version, this line began the poem Freneau's chief addition in 1786 consisted of ll. 1-22, but there was considerable rearrangement • **86 old Charles's fate,** an allusion to the execution of Charles I in 1649

accepting defeat. Freneau, curiously enough, does not use exactly Jones' classic reply to Pearson's demand that he strike his colors. "I have not," he said, "begun to fight."

O'ER the rough main, with flowing sheet,
The guardian of a numerous fleet,
  Seraphis from the Baltic came;
A ship of less tremendous force
Sail'd by her side the self-same course,
  Countess of Scarb'ro' was her name.

And now their native coasts appear,
Britannia's hills their summit rear
  Above the German main:
Fond to suppose their dangers o'er,
They southward coast along the shore,
  Thy waters, gentle Thames, to gain.

Full forty guns Seraphis bore,
And Scarb'ro's Countess twenty-four,
  Mann'd with Old England's boldest tars—
What flag that rides the Gallic seas
Shall dare attack such piles as these,
  Design'd for tumults and for wars!

Now from the top-mast's giddy height
A seaman cry'd—"Four sail in sight
  "Approach with favouring gales,"
Pearson, resolv'd to save the fleet,
Stood off to sea, these ships to meet,
  And closely brac'd his shivering sails.

With him advanc'd the Countess bold,
Like a black tar in wars grown old:
  And now these floating piles drew nigh;
But, muse, unfold, what chief of fame
In the other warlike squadron came,
  Whose standards at his mast head fly.

'Twas JONES, brave JONES, to battle led
As bold a crew as ever bled
  Upon the sky-surrounded main;
The standards of the western world
Were to the willing winds unfurl'd,
  Denying Britain's tyrant reign.

The *Good-Man-Richard* led the line;
The *Alliance* next: with these combine
  The Gallic ship they *Pallas* call,
The *Vengeance*, arm'd with sword and flame;
These to attack the Britons came—
  But *two* accomplish'd all.

Now Phoebus sought his pearly bed:
But who can tell the scenes of dread,
  The horrors of that fatal night!
Close up those floating castles came;
The Good-Man-Richard bursts in flame;
  Seraphis trembled at the sight.

She felt the fury of *her* ball:
Down, prostrate, down the Britons fall;
  The decks were strew'd with slain:
JONES to the foe his vessel lash'd;
And, while the black artillery flash'd,
  Loud thunders shook the main.

Alas! that mortals should employ
Such murdering engines, to destroy
  That frame by heaven so nicely join'd;
Alas! that e'er the god decreed
That brother should by brother bleed,
  And pour'd such madness in the mind.

But thou, brave JONES, no blame shalt bear;
The rights of men demand your care:
  For *these* you dare the greedy waves—
No tyrant, on destruction bent,
Has plann'd thy conquests—thou art sent
  To humble tyrants and their slaves.

See!—dread Seraphis flames again—
And art thou, JONES, among the slain,
  And sunk to Neptune's caves below—

Text: the 1795 edition • **42** two accomplish'd all. The Bon Homme Richard took the Serapis, the Pallas, the Countess of Scarborough. The Vengeance had no part in the action, and the Alliance, commanded by Captain Landis (d. 1818), who was later judged insane, not only failed to help but also fired occasionally, so Jones said, at the Bon Homme Richard • **43** Phoebus, the sun. The battle raged for several hours after sunset

He lives—though crowds around him fall,
Still he, unhurt, survives them all;
  Almost alone he fights the foe.

And can thy ship these strokes sustain?
Behold thy brave companions slain,
  All clasped in ocean's dark embrace.
STRIKE, OR BE SUNK—the Briton cries—
SINK IF YOU CAN—the chief replies,
  Fierce lightnings blazing in his face.

Then to the side three guns he drew,
(Almost deserted by his crew)
  And charg'd them deep with woe:
By *Pearson's* flash he aimed hot balls;
His main-mast totters—down it falls—
  O'erwhelming half below.

Pearson had yet disdain'd to yield,
But scarce his secret fears conceal'd,
  And thus was heard to cry—
"With hell, not mortals, I contend;
"What art thou—human or a fiend,
  "That dost my force defy?

"Return, my lads, the fight renew!"—
So call'd bold Pearson to his crew;
  But call'd, alas, in vain;
Some on the decks lay maim'd and dead;
Some to their deep recesses fled,
  And more were shrouded in the main.

Distress'd, forsaken, and alone,
He haul'd his tatter'd standard down,
  And yielded to his gallant foe;
Bold *Pallas* soon the *Countess* took,—
Thus both their haughty colours struck,
  Confessing what the brave can do.

But, JONES, too dearly didst thou buy
These ships possest so gloriously,
  Too many deaths disgrac'd the fray:
Thy barque that bore the conquering flame,
That the proud Briton overcame,
  Even she forsook thee on thy way;
For when the morn began to shine,
Fatal to her, the ocean brine
  Pour'd through each spacious wound;
Quick in the deep she disappear'd,
But JONES to friendly Belgia steer'd,
  With conquest and with glory crown'd.

Go on, great man, to scourge the foe,
And bid the haughty Britons know
  They to our *Thirteen Stars* shall bend;
The *Stars* that, veil'd in dark attire,
Long glimmer'd with a feeble fire,
  But radiant now ascend.

Bend to the Stars that flaming rise
On western worlds, more brilliant skies.
  Fair Freedom's reign restor'd—
So when the Magi, come from far,
Beheld the God-attending Star,
  They trembled and ador'd.

1781

To the Memory

Of the Brave Americans, under General Greene, in South Carolina, Who Fell in the Action of September 8, 1781

Since its appearance in the Freeman's Journal of November 21, 1781, and in the edition of 1786, this has been one of Freneau's best-known poems. It combines the patriotic theme with that gentle melancholy which is most familiar through Gray's "Elegy Written in a Country Churchyard." The skirmish on which the poem is based was an attack by General Nathanael Greene (1742-1786) and his force upon a British outpost, commanded by Georgia-born General John Stuart (1759-1815). Retreating to another position, the British re-formed their line and this time repulsed

---

113 **Belgia,** here Holland. Jones took his prizes to Texel, largest of the West Frisian Islands • 124 **the Magi,** the wise men from the East who found the child Jesus in Bethlehem

the overanxious Americans, killing and wounding an estimated five to seven hundred men. Greene's attack was one of many which contributed to the failure of the British to hold South Carolina.

At EUTAW springs the valiant died:
Their limbs with dust are cover'd o'er—
Weep on, ye springs, your tearful tide;
How many heroes are no more!

If in this wreck of ruin, they
Can yet be thought to claim a tear,
O smite thy gentle breast, and say
The friends of freedom slumber here!

Thou, who shalt trace this bloody plain,
If goodness rules thy generous breast,
Sigh for the wasted rural reign;
Sigh for the shepherds, sunk to rest!

Stranger, their humble graves adorn;
You too may fall, and ask a tear:
'Tis not the beauty of the morn
That proves the evening shall be clear—

They saw their injur'd country's woe;
The flaming town, the wasted field;
Then rush'd to meet the insulting foe;
They took the spear—but left the shield,

Led by thy conquering genius, GREENE,
The Britons they compell'd to fly:
None distant view'd the fatal plain,
None griev'd, in such a cause, to die—

But, like the Parthian, fam'd of old,
Who, flying, still their arrows threw;
These routed Britons, full as bold,
Retreated, and retreating slew.

Now rest in peace, our patriot band;
Though far from Nature's limits thrown,
We trust, they find a happier land,
A brighter sun-shine of their own.

1781

The Wild Honey Suckle

"These stanzas," writes Professor Leary, "placed Freneau, beyond the reach of calumny or special pleading, chronologically at the head of America's procession of poets." They were first printed over the signature "K" in the **Columbian Herald**, July 6, 1786. Other printings followed in the **Pennsylvania Packet**, the **Freeman's Journal**, and the **Massachusetts Centinel**. There is no better evidence of Freneau's independence of the classical tradition and of his fresh perception of nature.

Fair flower, that dost so comely grow,
Hid in this silent, dull retreat,
Untouch'd thy honey'd blossoms blow,
Unseen thy little branches greet:
  No roving foot shall crush thee here,
  No busy hand provoke a tear.

By Nature's self in white array'd,
She bade thee shun the vulgar eye,
And planted here the guardian shade,
And sent soft waters murmuring by;
  Thus quietly thy summer goes,
  Thy days declining to repose.

Smit with those charms, that must decay,
I grieve to see your future doom;
They died—nor were those flowers less gay,
The flowers that did in Eden bloom;

To the Memory • **Text:** the 1795 edition • 1 **Eutaw springs**, on the Santee River, midway between Charleston and Columbia, South Carolina • 19 **Then rush'd.** Professor Pattee has noted that Sir Walter Scott borrowed this and the following line for the introduction to Canto III of **Marmion:** "When Prussia hurried to the field, And snatch'd the spear, but left the shield" • 25 **the Parthian.** The horsemen of Parthia, a region in ancient Persia, used the stratagem of pretended retreat; when their enemies were scattered, they turned to the attack

The Wild Honey Suckle • **Text:** the 1795 edition, with changes of diction indicated on the basis of Professor Leary's text of the original printing (**That Rascal Freneau**, p. 71). Variations in punctuation have not all been described • 5 **crush.** 1786, find • 15 **They died.** In the 1786 version the following two lines are in parentheses • 15 **less.** 1786, more

Unpitying frosts, and Autumn's power
Shall leave no vestige of this flower.

From morning suns and evening dews
At first thy little being came:
If nothing once, you nothing lose,
For when you die you are the same;
The space between, is but an hour,
The frail duration of a flower.

1786

The Indian Burying-Ground

"Lines occasioned by a visit to an old Indian burying ground" appeared in the American Museum for November 1787 and in Freneau's Miscellaneous Works (1788). This poem is usually regarded as one of the earliest idealizations of the Indian.

In spite of all the learn'd have said,
I still my old opinion keep;
The *posture,* that *we* give the dead,
Points out the soul's eternal sleep.

Not so the ancients of these lands—
The Indian, when from life releas'd,
Again is seated with his friends,
And shares again the joyous feast.

His imag'd birds, and painted bowl,
And ven'son, for a journey dress'd,
Bespeak the nature of the soul,
ACTIVITY, that knows no rest.

His bow, for action ready bent,
And arrows, with a head of stone,
Can only mean that life is spent,
And not the finer essence gone.

Thou, stranger, that shalt come this way,
No fraud upon the dead commit—
Observe the swelling turf, and say
They do not *lie,* but here they *sit.*

Here still a lofty rock remains,
On which the curious eye may trace
(Now wasted, half, by wearing rains)
The fancies of a ruder race.

Here still an aged elm aspires,
Beneath whose far-projecting shade
(And which the shepherd still admires)
The children of the forest play'd!

There oft a restless Indian queen
(Pale *Shebah,* with her braided hair)
And many a barbarous form is seen
To chide the man that lingers there.

By midnight moons, o'er moistening dews,
In habit for the chace array'd,
The hunter still the deer pursues,
The hunter and the deer, a shade!

And long shall timorous fancy see
The painted chief, and pointed spear,
And Reason's self shall bow the knee
To shadows and delusions here.

1787

Lines by H. Salem, On His Return from Calcutta

No representative selection from Freneau would be complete without some poem of the sea, where he spent so many years of his life. There is no evidence that Freneau ever visited Calcutta, but this poem leaves no doubt of how he felt about the mariner's life. It first appeared as "A

The Wild Honey Suckle • 24 frail duration. 1786, empty image **The Indian Burying-Ground • Text.** the 1795 edition • **8 joyous feast.** "The North American Indians bury their dead in a sitting posture; decorating the corpse with wampum, the images of birds, quadrupeds, &c· And (if that of a warrior) with bows, arrows, tomahawks, and other military weapons."—Freneau • **16 finer essence.** 1809, old ideas • **36 The hunter . . . shade!** Professor Pattee points out that the English poet Thomas Campbell borrowed this line in the fourth stanza of "O'Connor's Child"· "Now o'er the hills in chase he flits, The hunted and the deer a shade!"

Mistake Rectified" over the signature of "Sinbat the Sailor," in the National Gazette, and was soon reprinted in the Philadelphia Daily Advertiser and the Charleston City Gazette. In the 1795 edition it was called "Epistle to a Desponding Sea-man." Hezekiah Salem appears as a character or spokesman in several other poems by Freneau.

Your men of the land, from the king to Jack Ketch,
All join in supposing the sailor a wretch;
That his life is a round of vexation and woe,
With always too much or too little to do:
In the dead of the night, when other men sleep,
He, starboard and larboard, his watches must keep;
Imprisoned by Neptune, he lives like a dog;
And to know where he is, must depend on a LOG;
Must fret in a calm, and be sad in a storm;
In winter much trouble to keep himself warm:

Through the heat of the summer pursuing his trade,
No trees, but his topmasts, to yield him a shade:
Then, add to the list of the mariner's evils,
The water corrupted, the bread full of weevils;
Salt-junk to be eat, be it better or worse,
And, often bull beef of an Irishman's horse:
Whosoever is free, he must still be a slave,
(Despotic is always the rule on the wave;)
Not relished on water, your lords of the main
Abhor the republican doctrines of PAINE,
And each, like the despot of Prussia, may say
That his crew has no right, but the right to obey.
Such things say the lubbers, and sigh when they've said 'em,
But things are not so bad as their fancies persuade 'em:
There ne'er was a task but afforded some ease,
Nor a calling in life, but had something to please.
If the sea has its storms, it has also its calms,
A time to sing songs and a time to sing psalms.—
Yes—give me a vessel well timbered and sound,
Her bottom good plank, and in rigging well found,
If her spars are but staunch, and her oakham swelled tight,
From tempests and storms I'll extract some delight—
At sea I would rather have Neptune my jailor,
Than a lubber on shore, that despises a sailor.
Do they ask me what pleasure I find on the sea?—
Why, absence from land is a pleasure to me:
A hamper of porter, and plenty of grog,
A friend, when too sleepy, to give me a jog,
A coop that will always some poult[r]y afford,
Some bottles of gin, and no parson on board,
A crew that is brisk when it happens to blow,
One compass on deck and another below,
A girl, with more sense than the girl at the head,
To read me a novel, or make up my bed—
The man that has these, has a treasure in store
That millions possess not, who live upon shore:
But if it should happen that commerce grew dull,
Or Neptune, ill-humoured, should batter our hull,
Should damage my cargo, or heave me aground,
Or pay me with farthings instead of a pound:
Should I always be left in the rear of the race,
And this be forever—forever the case;
Why then, if the honest plain truth I may tell,
I would clew up my topsails, and bid him farewell.

1791

On Passing by an Old Church-Yard

This poem first appeared as "Melancholy reflections in passing by a burying place in the neighbourhood of Philadelphia" in the Time-Piece, September 15, 1797. It is a good example of the republicanism which sustained Freneau's distrust of pomp and aristocracy throughout the period of the French Revolution.

Pensive, on this green turf I cast my eye,
And almost feel inclined to muse and sigh:
Such tokens of mortality so nigh.

But hold,—who knows if these who soundly sleep,
Would not, alive, have made some orphan weep,
Or plunged some slumbering victim in the deep.

Lines . . . • Text: the 1809 edition • 15 Salt-junk, salt meat used on long voyages • 16 bull beef, the flesh of bulls, exceedingly tough; also a term of abuse • 20 Paine. Freneau admired Thomas Paine, as appears from a poem "On Mr. Paine's Rights of Man" (1795). Paine had left Philadelphia before Freneau had many associations there • 21 the despot of Prussia, probably Frederick the Great (1712-1786), famous for his reluctance to delegate his powers • 31 oakham, oakum, loose fiber from old rope, used to calk ships' seams • 43 the girl . . . head, the figurehead at the bow of the ship

On Passing by an Old Church-Yard • Text: the 1815 edition

There may be here, who once were virtue's foes,
A curse through life, the cause of many woes,
Who wrong'd the widow, and disturb'd repose.

There may be here, who with malicious aim
Did all they could to wound another's fame,
Steal character, and filch away good name.

Perhaps yond' solitary turf invests
Some who, when living, were the social pests,
Patrons of ribands, titles, crowns and crests.

Can we on such a kindred tear bestow?
They, who, in life, were every just man's foe,
A plague to all about them!—oh, no, no.

What though sepultured with the funeral whine;
Why, sorrowing on such tombs should we recline,
Where truth, perhaps, has hardly penn'd a line.

—Yet, what if here some honest man is laid
Whom nature of her best materials made,
Who all respect to sacred honor paid.

Gentle, humane, benevolent and just,
(Though now forgot and mingled with the dust,
There may be such, and such there are we trust.)

Yes—for the sake of that one honest man
We would on knaves themselves bestow a tear,
Think nature form'd them on some crooked plan,
And say *peace rest on all that slumber here.*

1797

Stanzas to an Alien,

Who After a Series of Persecutions Emigrated to the South Western Country.——1799.——

Freneau and his friends of Jefferson's party were thoroughly suspicious of the conservative reaction to the French Revolution, exemplified by the Alien and Sedition Acts of 1798. This poem, first published as "To an Alien" in the **Time-Piece** for July 13, 1798, shows Freneau's party spirit as well as his sympathy with political exiles. The "alien" has been identified by Professor Leary as John Daly Burk (1775?-1808), an Irishman who arrived in the United States in 1796. He had some reputation as an editor and dramatist and, after some trouble in New York, settled in Petersburg, Virginia.

Remote, beneath a sultry star
Where Mississippi flows afar
I see you rambling, God knows where.

Sometimes, beneath a cypress bough
When met in dreams, with spirits low,
I long to tell you what I know.

How matters go, in this our day,
When monarchy renews her sway,
And royalty begins her play.

I thought you wrong to come so far
Till you had seen our western star
Above the mists ascended clear.

I thought you right, to speed your sails
If you were fond of loathsome jails,
And justice with uneven scales.

And so you came and spoke too free
And soon they made you bend the knee,
And lodged you under lock and key.

Discharged at last, you made your peace
With all you had, and left the place
With empty purse and meagre face.—

You sped your way to other climes
And left me here to teaze with rhymes
The worst of men in worst of times.

Where you are gone the soil is free
And freedom sings from every tree,
"Come quit the crowd and live with me!"

Text: the 1815 edition

Where I must stay, no joys are found;
Excisemen haunt the hateful ground,
And chains are forged for all around.

The scheming men, with brazen throat,
Would set a murdering tribe afloat
To hang you for the lines you wrote.

If you are safe beyond their rage
Thank heaven, and not our *ruling sage,*
Who shuts us up in jail and cage.

Perdition seize that odious race
Who, aiming at distinguish'd place,
Would life and liberty efface;

With iron rod would rule the ball
And, at their shrine, debase us all,
Bid devils rise and angels fall.

Oh wish them ill, and wish them long
To be as usual in the wrong
In scheming for a chain too strong.

So will the happy time arrive
When coming home, if then alive,
You'll see them to the devil drive.

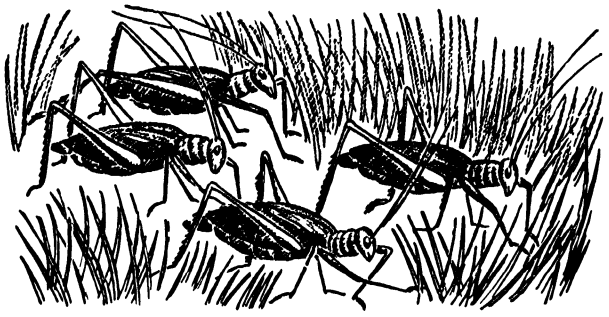
1798

To a Caty-Did

In a branch of a willow hid
Sings the evening Caty-did:
From the lofty locust bough
Feeding on a drop of dew,
In her suit of green array'd
Hear her singing in the shade
Caty-did, Caty-did, Caty-did!

While upon a leaf you tread,
Or repose your little head,
On your sheet of shadows laid,
All the day you nothing said:
Half the night your cheery tongue
Revell'd out its little song,
Nothing else but Caty-did.

From your lodgings on the leaf
Did you utter joy or grief—?
Did you only mean to say,
I have had my summer's day,
And am passing, soon, away
To the grave of Caty-did:—
Poor, unhappy Caty-did!



But you would have utter'd more
Had you known of nature's power—
From the world when you retreat,
And a leaf's your winding sheet,
Long before your spirit fled,
Who can tell but nature said,
Live again, my Caty-did!
Live, and chatter Caty-did.

Tell me, what did Caty do?
Did she mean to trouble you?—
Why was Caty not forbid
To trouble little Caty-did?—
Wrong, indeed at you to fling,
Hurting no one while you sing
Caty-did! Caty-did! Caty-did!

Why continue to complain?
Caty tells me, she again
Will not give you plague or pain:—
Caty says you may be hid
Caty will not go to bed

Stanzas to an Alien • 35 **our ruling sage,** John Adams, the President. One of the acts relating to aliens gave him, for two years, the power to deport any aliens he deemed dangerous

To a Caty-Did • **Text:** the 1815 edition, apparently the first printing of this poem. In the table of contents it is entitled "Stanzas to a Caty-Did, the precursor of winter." **Caty-Did.** "A well-known insect, when full grown, about two inches in length, and of the exact color of a green leaf It is of the genus cicada, or grasshopper kind, inhabiting the green foliage of trees and singing such a note as **Caty-did** in the evening, towards autumn."—Freneau

While you sing us Caty-did.
Caty-did! Caty-did! Caty-did!

But, while singing, you forgot
To tell us what did Caty *not:*
Caty-did not think of cold,
Flocks retiring to the fold,
Winter, with his wrinkles old,
Winter, that yourself foretold
When you gave us Caty-did.

Stay securely in your nest;
Caty now, will do her best,
All she can, to make you blest;
But, you want no human aid—
Nature, when she form'd you, said,
"Independent you are made,
My dear little Caty-did:
Soon yourself must disappear
With the verdure of the year,"—
And to go, we know not where,
With your song of Caty-did.

1815

On the Uniformity and Perfection of Nature

Freneau's views of God, man, and nature are fairly well summarized in this poem. The reference to the "great first cause" and the acceptance of an uninterrupted order of nature are Deistic in tendency, and it is possible to regard Freneau as philosophically akin to Franklin, Paine, and Jefferson. He had perhaps less faith in man than they; as Professor Leary says, his philosophy is one of "optimistic resignation."

On one fix'd point all nature moves,
Nor deviates from the track she loves;
Her system, drawn from reason's source,
She scorns to change her wonted course.

Could she descend from that great plan
To work unusual things for man,
To suit the insect of an hour—
This would betray a want of power,

Unsettled in its first design
And erring, when it did combine
The parts that form the vast machine,
The figures sketch'd on nature's scene.

Perfections of the great first cause
Submit to no contracted laws,
But all-sufficient, all-supreme,
Include no trivial views in them.

Who looks through nature with an eye
That would the scheme of heaven descry,
Observes her constant, still the same,
In all her laws, through all her frame.

No imperfection can be found
In all that is, above, around,—
All, nature made, in reason's sight
Is order all, and *all is right.*

1815

Text: the 1815 edition • **24 all is right.** See the last lines of the first Epistle of Pope's **Essay on Man** (1732):

"All Nature is but Art, unknown to thee;
All Chance, Direction, which thou canst not see;
All Discord, Harmony not understood;
All partial Evil, universal Good:
And, spite of Pride, in erring Reason's spite,
One truth is clear, **Whatever is, is right.**"

Joel Barlow

1754 • 1812

Philanthropist, statesman, philosopher, poet—such is the order in which his biographer ranks the various capacities in which Joel Barlow distinguished himself. There can be little objection to the judgment; but it records the failure of a great ambition, for Barlow wanted above all things to be an epic poet. Later generations have regretted that the hours and years he spent on *The Columbiad* did not go instead into more prose such as the vigorous *Advice to the Privileged Orders* or, if he had to express himself in poetry, to such unpretentious portrayals of life and manners as *The Hasty-Pudding.*

Barlow was born at Redding, Connecticut, in 1754, and was graduated from Yale College with the Class of 1778. His college career was distinguished chiefly by at least one vacation spent in the army, of all places, and a Commencement poem, *The Prospect of Peace.* Settling down in the atmosphere of revolution proved somewhat difficult. He studied law for a time, then served as an unordained chaplain from September 1780 until the end of the war. Choosing Hartford for his home, he then tried his hand at teaching and editing before being admitted to the bar in 1786. In the year following he helped organize the Scioto Company, which planned to buy lands in Ohio and sell them at a large profit to European immigrants. Going abroad as a promoter in 1788, Barlow found London apathetic, but with the aid of enticing circulars he created a speculative flurry in Ohio real estate in Paris. Unfortunately the titles which he sold were not clear, and the Frenchmen who occupied Gallipolis in 1790 found that they had been swindled. The guilt, however, lay more with others than with Barlow, if not, indeed, with the French themselves, who were gulled by dreams of a Utopia in the wilderness.

Barlow was caught in Paris by the French Revolution. Somewhat surprisingly for a son of Federalist Connecticut who had collaborated in *The Anarchiad* (1786), an attack on populist tendencies in government, Barlow emerged in 1792 as an ardent radical. He expected a general revolution in the political and social structure of Europe along the lines of the American system. *Advice to the Privileged Orders*—a pamphlet attack on monarchy, an established church, inequalities in taxation and access to the courts, and standing armies—helped precipitate the conservative reaction in England, of which Edmund Burke was leader. A poem entitled *The Conspiracy of Kings* made him anathema to cautious Englishmen. Another pamphlet, *A Letter to the National Convention of France,* won him the honor of French citizenship. Barlow lived through the Terror without inconvenience and was able to befriend Thomas Paine in one serious crisis (see p. 194). From 1795 to 1797 he served as American consul in Algiers, engineering a treaty with the pirates there; he then returned to Paris and by judicious speculation in securities made a comfortable fortune. From 1805 until 1811 he lived in considerable splendor near Washington, D. C., polishing what he regarded as his great epic and entertaining his wide circle of friends. President Madison sent him once more to

France in 1811, as ambassador, and in the following year Barlow died in Poland, where he had gone to confer with Napoleon on matters of state.

Barlow spent a large part of his life planning, composing, and revising a long philosophical poem on the importance of American history. Some of it was written in 1780; two years later he was taking subscriptions for its publication. It appeared as *The Vision of Columbus* in 1787, and the final version, *The Columbiad*, was published in 1807, nearly thirty years after Barlow had conceived it. All that can be said for it is that it is a better epic than Timothy Dwight's *The Conquest of Canaan*. Barlow is now read almost exclusively in *The Hasty-Pudding*, tossed off in a few days in a nostalgic mood.

The Connecticut Wits, ed. V. L. Parrington, New York, 1926 • C. B. Todd, Life and Letters of Joel Barlow, New York, 1886 • T. A. Zunder, The Early Days of Joel Barlow, a Connecticut Wit, New Haven, 1934 • V. C. Miller, Joel Barlow: Revolutionist, London, 1791-1792, Hamburg, 1932

The Hasty-Pudding

A Poem, in Three Cantos, Written at Chambery in Savoy, January, 1793

In January 1793, the month of the execution of Louis XVI, Barlow was in Savoy, apparently hoping to become a deputy to the National Convention from a new department or election district being organized there. In a spell of homesickness, brought on by encountering unexpectedly the most familiar porridge of his New England boyhood, he composed **The Hasty-Pudding**, which imitates the mock-heroic and pastoral veins of the age of Pope. The burlesque of the traditional epic invocation to the Muse, the rhetorical passages on exceedingly homely subjects, the numerous allusions—all reveal Barlow's familiarity with literature. Yet the poem, typical of the productions of the Connecticut group in its backward-looking tendencies, has a verve and an abundant local reference which save it from dullness. One might argue, indeed, that Barlow's democratic sympathies are as well expressed in his praise of simplicity as in his radical pamphlets. At any rate, to remember the most popular of Barlow's work is not wholly, as V. L. Parrington's remarks tend to suggest, to "make a mush" of an "honest thinker."

Omne tulit punctum qui miscuit utile dulci.
He makes a good breakfast who mixes pudding with molasses.

PREFACE

A simplicity in diet, whether it be considered with reference to the happiness of individuals or the prosperity of a nation, is of more consequence than we are apt to imagine. In recommending so important an object to the rational part of mankind, I wish it were in my power to do it in such a manner as would be likely to gain their attention. I am sensible that it is one of those subjects in which example has infinitely more power than the most convincing arguments or the highest charms of poetry. Goldsmith's Deserted Village, *though possessing these two advantages in a greater degree than any other work of the kind, has not prevented villages in England from being deserted. The apparent interest of the rich individuals, who form the taste as well as the laws in that country, has been against him; and with that interest it has been vain to contend.*

Text: that which appeared in the January 1796 issue of the **New-York Magazine.** The first separate publication was apparently at New Haven; it contains an "advertisement" dated in April. The New Haven edition reveals several changes: the Preface became a dedication to Martha Washington; greater particularity was obtained by making "our sires" "my sire" throughout; four lines (following 264) were added; a prose note was appended and numerous changes made in punctuation, spelling, and italics. Possibly Barlow sent back two manuscripts; it is also possible that the dedication to Mrs. Washington was someone else's idea • **Omne . . . dulci.** He has gained all approval who has mingled the useful with the agreeable • **apparent interest.** A distinction between the "interests" of privileged groups and the interests of the masses is the basis of Barlow's argument in **Advice to the Privileged Orders.** He sought to appeal to the enlightened self-interest of all readers

The vicious habits which in this little piece I endeavor to combat, seem to me not so difficult to cure. No class of people has any interest *in supporting them, unless it be the interest which certain families feel in vying with each other in sumptuous entertainments. There may indeed be some instances of depraved appetites, which no arguments will conquer; but these must be rare. There are very few persons but what would always prefer a plain dish for themselves, and would prefer it likewise for their guests, if there were no risk of reputation in the case. This difficulty can only be removed by example; and the example should proceed from those whose situation enables them to take the lead in forming the manners of a nation. Persons of this description in America, I should hope, are neither above nor below the influence of truth and reason, when conveyed in language suited to the subject.*

Whether the manner I have chosen to address my arguments to them be such as to promise any success is what I cannot decide. But I certainly had hopes of doing some good, or I should not have taken the pains of putting so many rhymes together.—The example of domestic virtues has doubtless a great effect. I only wish to rank simplicity of diet *among the virtues. In that case I should hope it will be cherished and more esteemed by others than it is at present.*

THE AUTHOR

CANTO I

Ye Alps audacious, thro' the heav'ns that rise,
To cramp the day and hide me from the skies;
Ye Gallic flags, that o'er their heights unfurl'd,
Bear death to kings, and freedom to the world,
I sing not you. A softer theme I chuse,
A virgin theme, unconscious of the Muse,
But fruitful, rich, well suited to inspire
The purest frenzy of poetic fire.
Despise it not, ye Bards to terror steel'd,
Who hurl your thunders round the epic field;
Nor ye who strain your midnight throats to sing
Joys that the vineyard and the still-house bring;
Or on some distant fair your notes employ,
And speak of raptures that you ne'er enjoy.
I sing the sweets I know, the charms I feel,
My morning incense, and my evening meal,
The sweets of Hasty-Pudding. Come, dear bowl,
Glide o'er my palate, and inspire my soul.
The milk beside thee, smoking from the kine,
Its substance mingled, married in with thine,
Shall cool and temper thy superior heat,
And save the pains of blowing while I eat.
Oh! could the smooth, the emblematic song
Flow like thy genial juices o'er my tongue,
Could those mild morsels in my numbers chime,
And, as they roll in substance, roll in rhyme,
No more thy aukward unpoetic name
Should shun the Muse, or prejudice thy fame;
But rising grateful to th' accustom'd ear,
All Bards should catch it, and all realms revere.
Assist me first with pious toil to trace
Thro' wrecks of time thy lineage and thy race;
Declare what lovely squaw, in dayes of yore,
(Ere great Columbus sought thy native shore)
First gave thee to the world; her works of fame
Have liv'd indeed, but liv'd without a name.
Some tawny Ceres, goddess of her days
First learn'd with stones to crack the well dry'd maise,
Thro' the rough seive to shake the golden show'r,
In boiling water stir the yellow flour:
The yellow flour, bestrew'd and stir'd with haste,
Swells in the flood and thickens to a paste,
Then puffs and wallops, rises to the brim,
Drinks the dry knobs that on the surface swim;
The knobs at last the busy ladle breaks,
And the whole mass its true consistence takes.
Could but her sacred name unknown so long,
Rise, like her labors, to the son of song,
To her, to them, I'd consecrate my lays,
And blow her pudding with the breath of praise.
If 'twas Oella, whom I sang before,

---

3 **Gallic flags**, French standards. At the beginning of the French Revolution, Savoy was a part of the Kingdom of Sardinia; it was invaded and taken by the French in 1792 • 12 **still-house**, distillery • 37 **Ceres**, goddess of grain • 43 **wallops**, bubbles (dialect) • 51 **Oella . . . before.** In Bks. II and III of **The Vision of Columbus** and **The Columbiad**, Barlow made great use of the legend that the Incas of Peru originated with two children of the Sun, Manco Capac and his sister-wife, Mama Oella. This legend, derived from the history of Peru by Garcilaso de la Vega (1540-1616), made Oella the originator of spinning and other useful arts

I here ascribe her one great virtue more.
Not thro' the rich Peruvian realms alone
The fame of Sol's sweet daughter should be known,
But o'er the world's wide clime should live secure,
Far as his rays extend, as long as they endure.
  Dear Hasty-Pudding, what unpromis'd joy
Expands my heart, to meet thee in Savoy!
Doom'd o'er the world thro' devious paths to roam,
Each clime my country, and each house my home,
My soul is sooth'd, my cares have found an end,
I greet my long-lost, unforgotten friend.
  For Thee thro' Paris, that corrupted town,
How long in vain I wandered up and down,
Where shameless Bacchus, with his drenching hoard,
Cold from his cave usurps the morning board.
London is lost in smoke and steep'd in tea;
No Yankey there can lisp the name of thee;
The uncouth word, a libel on the town,
Would call a proclamation from the crown.
For climes oblique, that fear the sun's full rays,
Chill'd in their fogs, exclude the generous maize;
A grain whose rich luxuriant growth requires
Short gentle showers, and bright etherial fires.
  But here, tho' distant from our native shore,
With mutual glee we meet and laugh once more.
The same! I know thee by that yellow face,
That strong complexion of true Indian race.
Which time can never change, nor soil impair,
Nor Alpine snows, nor Turkey's morbid air;
For endless years, thro' every mild domain,
Where grows the maize, there thou art sure to reign.
  But man, more fickle, the bold licence claims,
In different realms to give thee different names.
Thee the soft nations round the warm Levant
Polanta call, the French of course *Polante.*
Ev'n in thy native regions, how I blush
To hear the Pennsylvanians call thee *Mush!*
On Hudson's banks, while men of Belgic spawn
Insult and eat thee by the name *Suppawn.*
Thy name is *Hasty-Pudding!* thus our sires
Were wont to greet thee fuming from their fires,
And while they argu'd in thy just defence
With logic clear, they thus explain'd the sense:—
"In *haste* the boiling cauldron, o'er the blaze,
"Receives and cooks the ready-powder'd maize;
"In *haste* 'tis served, and then in equal *haste,*
"With cooling milk, we make the sweet repast.
"No carving to be done, no knife to grate
"The tender ear, and wound the stony plate;
"But the smooth spoon, just fitted to the lip,
"And taught with art the yielding mass to dip,
"By frequent journeys to the bowl well stor'd,
"Performs the hasty honors of the board."
Such is thy name, significant and clear,
A name, a sound to every Yankey dear,
But most to me, whose heart and palate chaste
Preserve my pure hereditary taste.
  There are who strive to stamp with disrepute
The luscious food, because it feeds the brute;
In tropes of high-strain'd wit, while gaudy prigs
Compare thy nursling man to pamper'd pigs;
With sovereign scorn I treat the vulgar jest,
Nor fear to share thy bounties with the beast.
What though the generous cow gives me to quaff
The milk nutritious; am I then a calf?
Or can the genius of the noisy swine,
Though nurs'd on pudding, thence lay claim to mine?
Sure the sweet song, I fashion to thy praise,
Runs more melodious than the notes they raise.
  My song resounding in its grateful glee,
No merit claims; I praise myself in thee.
My father lov'd thee thro' his length of days;
For thee his fields were shaded o'er with maize;
From thee what health, what vigor he possesst,
Ten sturdy freemen from his loins attest;
Thy constellation rul'd my natal morn,
And all my bones were made of Indian corn.
Delicious grain! whatever form it take,
To roast or boil, to smother or to bake,
In every dish 'tis welcome still to me,
But most, my *Hasty-Pudding,* most in thee.
  Let the green Succatash with thee contend,

---

65 **Bacchus**, god of wine • 70 **crown.** "A certain king, at the time when this was written, was publishing proclamations to prevent American principles from being propagated in his country."—Barlow. The allusion is probably to a royal proclamation against seditious publications issued in England in May 1792, which forced Barlow to publish Part II of **Advice to the Privileged Orders** (1793) in Paris • 85 **Levant,** countries of the eastern Mediterranean • 89 **Belgic spawn,** the Dutch • 90 **Suppawn,** supawn, a word of American Indian origin • 126 **Ten sturdy freemen.** Only nine Barlow children are accounted for. "Still," says Professor Zunder, "Joel must have known the truth"

Let beans and corn their sweetest juices blend,
Let butter drench them in its yellow tide,
And a long slice of bacon grace their side;
Not all the plate, how fam'd soe'er it be,
Can please my palate like a bowl of thee.
Some talk of Hoe-Cake, fair Virginia's pride,
Rich Johnny-Cake this mouth has often tri'd;
Both please me well, their virtues much the same;
Alike their fabric, as allied their fame,
Except in dear New-England, where the last
Receive a dash a pumpkin in the paste,
To give it sweetness and improve the taste.
But place them all before me, smoaking hot,
The big, round dumplin rolling from the pot;
The pudding of the bag, whose quivering breast,
With suet lin'd, leads on the Yankey feast;
The Charlotte brown, within whose crusty sides
A belly soft the pulpy apple hides;
The yellow bread, whose face like amber glows,
And all of Indian that the bake-pan knows—
You tempt me not, my fav'rite greets my eyes,
To that lov'd bowl my spoon by instinct flies.

CANTO II

To mix the food by vicious rules of art,
To kill the stomach and to sink the heart,
To make mankind to social virtue sour,
Cram o'er each dish, and be what they devour;
For this the kitchen Muse first fram'd her book,
Commanding sweat to stream from every cook;
Children no more their antic gambols tri'd,
And friends to physic wonder'd why they died.
Not so the Yankey—his abundant feast,
With simples furnish'd, and with plainness drest,
A numerous offspring gathers round the board,
And cheers alike the servant and the lord;
Whose well-bought hunger prompts the joyous taste,
And health attends them from the short repast.
While the full pail rewards the milk-maid's toil,
The mother sees the morning cauldron boil;
To stir the pudding next demands their care,
To spread the table and the bowls prepare;
To feed the children, as their portions cool,
And comb their heads, and send them off to school.
Yet may the simplest dish some rules impart,
For nature scorns not all the aids of art.
Ev'n Hasty-Pudding, purest of all food,
May still be bad, indifferent, or good,
As sage experience the short process guides,
Or want of skill, or want of care presides.
Whoe'er would form it on the surest plan,
To rear the child and long sustain the man;
To shield the morals while it mends the size,
And all the powers of every food supplies,
Attend the lessons that the Muse shall bring,
Suspend your spoons, and listen while I sing.
But since, O man! thy life and health demand
Not food alone, but labour from thy hand,
First in the field, beneath the sun's strong rays,
Ask of thy mother earth the needful maize;
She loves the race that courts her yielding soil,
And gives her bounties to the sons of toil.
When now the ox, obedient to thy call,
Repays the loan that fill'd the winter stall,
Pursue his traces o'er the furrow'd plain,
And plant in measur'd hills the golden grain.
But when the tender germe begins to shoot,
And the green spire declares the sprouting root,
Then guard your nursling from each greedy foe,
Th' insidious worm, the all-devouring crow.
A little ashes, sprinkled round the spire,
Soon steep'd in rain, will bid the worm retire;
The feather'd robber with his hungry maw
Swift flies the field before your man of straw,
A frightful image, such as school-boys bring
When met to burn the Pope, or hang the King.
Thrice in each season, through each variant row
Wield the strong plow-share and the faithful hoe;
The faithful hoe; a double task that takes,
To till the summer corn, and roast the winter cakes.
Slow springs the blade, while check'd by chilling rains,
Ere yet the sun the seat of Cancer gains;

---

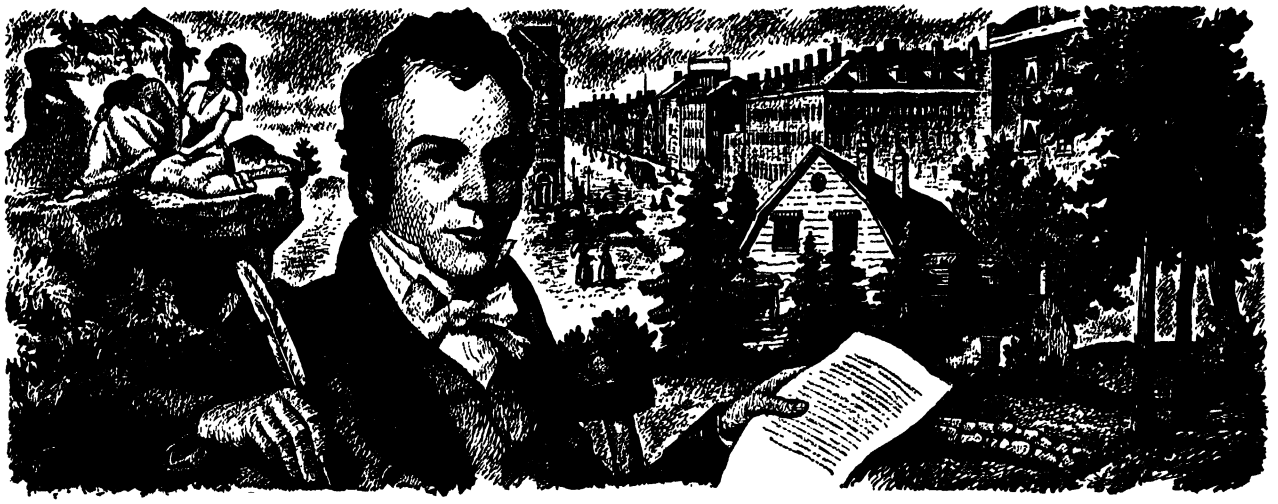
150 **Charlotte**, a sweet enclosed in cake, crust, or crumbs, such as charlotte russe. Barlow probably picked up the word in Europe, although he may have been describing a kind of apple pie • 207 **burn . . . King.** The allusion is probably to the traditional celebration of Guy Fawkes Day, November 5, the anniversary of the discovery of the Gunpowder Plot in 1605. English children still ask "a penny for the Guy"; American boys probably cared little for distinctions between Fawkes, Pope, and King • 213 **Cancer**, the sign of the zodiac marking the summer solstice or longest day in the year; about June 21

But when his fiercest fires emblaze the land,
Then start the juices, then the roots expand;
Then, like a column of Corinthian mould,
The stalk struts upward, and the leaves unfold;
The busy branches all the ridges fill,
Entwine their arms, and kiss from hill to hill.
Here cease to vex them, all your cares are done;
Leave the last labors to the parent sun;
Beneath his genial smiles, the well-drest field,
When autumn calls, a plenteous crop shall yield.
  Now the strong foliage bears the standards high,
And shoots the tall top-gallants to the sky;
The suckling ears their silky fringes bend,
And pregnant grown, their swelling coats distend;
The loaded stalk, while still the burthen grows,
O'erhangs the space that runs between the rows;
High as a hop-field waves the silent grove,
A safe retreat for little thefts of love,
When the pledg'd roasting-ears invite the maid,
To meet her swain beneath the new-form'd shade;
His generous hand unloads the cumbrous hill,
And the green spoils her ready basket fill;
Small compensation for the two-fold bliss,
The promis'd wedding and the present kiss.
  Slight depredations these; but now the moon
Calls from his hollow tree the sly raccoon;
And while by night he bears his prize away,
The bolder squirrel labors thro' the day.
Both thieves alike, but provident of time,
A virtue rare, that almost hides their crime.
Then let them steal the little stores they can,
And fill their gran'ries from the toils of man;
We've one advantage where they take no part,—
With all their wiles they ne'er have found the art
To boil the Hasty-Pudding; here we shine
Superior far to tenants of the pine;
This envy'd boon to man shall still belong,
Unshar'd by them in substance or in song.
  At last the closing season browns the plain,
And ripe October gathers in the grain;
Deep loaded carts the spacious corn-house fill,
The sack distended marches to the mill;
The lab'ring mill beneath the burthen groans,
And show'rs the future pudding from the stones;
Till the glad house-wife greets the powder'd gold,
And the new crop exterminates the old.

  The days grow short; but tho' the falling sun
To the glad swain proclaims his day's work done,
Night's pleasing shades his various tasks prolong,
And yield new subjects to my various song.
For now, the corn-house fill'd, the harvest home,
Th' invited neighbors to the *Husking* come;
A frolic scene, where work, and mirth, and play,
Unite their charms, to chace the hours away.
  Where the huge heap lies center'd in the hall,
The lamp suspended from the cheerful wall,
Brown corn-fed nymphs, and strong hard-handed beaux,
Alternate rang'd, extend in circling rows,
Assume their seats, the solid mass attack;
The dry husks rustle, and the corn-cobs crack;
The song, the laugh, alternate notes resound,
And the sweet cider trips in silence round.
  The laws of Husking every wight can tell;
And sure no laws he ever keeps so well:
For each red ear a general kiss he gains,
With each smut ear he smuts the luckless swains;
But when to some sweet maid a prize is cast,
Red as her lips, and taper as her waist,
She walks the round, and culls one favor'd beau,
Who leaps, the luscious tribute to bestow.
Various the sport, as are the wits and brains
Of well-pleas'd lasses and contending swains;
Till the vast mound of corn is swept away,
And he that gets the last ear, wins the day.
  Meanwhile the house-wife urges all her care,
The well-earn'd feast to hasten and prepare.
The sifted meal already waits her hand.
The milk is strain'd, the bowls in order stand,
The fire flames high; and, as a pool (that takes
The headlong stream that o'er the mill-dam breaks)
Foams, roars, and rages, with incessant toils,

---

216 **Corinthian mould**, the most ornamental of the Greek capital orders • 259 **the old.** New Haven ed. inserts.



> Ah, who can sing what every wight must feel,
> The joy that enters with the bag of meal,
> A general jubilee pervades the house,
> Wakes every child and gladdens every mouse.

So the vext cauldron rages, roars and boils.
First with clean salt she seasons well the food,
Then strews the flour, and thickens all the flood.
Long o'er the simmering fire she lets it stand;
To stir it well demands a stronger hand;
The husband takes his turn and round and round
The ladle flies; at last the toil is crown'd;
When to the board the thronging huskers pour,
And take their seats as at the corn before.
I leave them to their feast. There still belong
More copious matters to my faithful song.
For rules there are, tho' ne'er unfolded yet,
Nice rules and wise, how pudding should be ate.
Some with molasses grace the luscious treat,
And mix, like Bards, the useful with the sweet.
A wholesome dish, and well deserving praise,
A great resource in those bleak wintry days,
When the chill'd earth lies buried deep in snow,
And raging Boreas dries the shivering cow.
Blest cow! thy praise shall still my notes employ,
Great source of health, the only source of joy;
Mother of Egypt's God,—but sure, for me,
Were I to leave my God, I'd worship thee.
How oft thy teats these pious hands have prest!
How oft thy bounties proved my only feast!
How oft I've fed thee with my fav'rite grain!
And roar'd, like thee, to find thy children slain!
Ye swains who know her various worth to prize,
Ah! house her well from Winter's angry skies.
Potatoes, pumpkins, should her sadness cheer,
Corn from your crib, and mashes from your beer;
When spring returns she'll well acquit the loan,
And nurse at once your infants and her own.
Milk then with pudding I should always chuse;
To this in future I confine my Muse,
Till she in haste some farther hints unfold,
Well for the young, nor useless to the old.
First in your bowl the milk abundant take,
Then drop with care along the silver lake
Your flakes of pudding; these at first will hide
Their little bulk beneath the swelling tide;
But when their growing mass no more can sink,
When the soft island looms above the brink,
Then check your hand; you've got the portion's due,
So taught our sires, and what they taught is true.
There is a choice in spoons. Tho' small appear
The nice distinction, yet to me 'tis clear.
The deep-bowl'd Gallic spoon, contriv'd to scoop
In ample draughts the thin diluted soup,
Performs not well in these substantial things,
Whose mass adhesive to the metal clings;
Where the strong labial muscles must embrace,
The gentle curve, and sweep the hollow space.
With ease to enter and discharge the freight,
A bowl less concave but still more dilate,
Becomes the pudding best. The shape, the size,
A secret rests unknown to vulgar eyes.
Experienc'd feeders can alone impart
A rule so much above the lore of art.
These tuneful lips, that thousand spoons have tried,
With just precision could the point decide.
Tho' not in song; the muse but poorly shines
In cones, and cubes, and geometric lines,
Yet the true form, as near as she can tell,
Is that small section of a goose-egg shell,
Which in two equal portions shall divide
The distance from the centre to the side.
Fear not to slaver; 'tis no deadly sin.
Like the free Frenchman, from your joyous chin
Suspend the ready napkin; or, like me,
Poise with one hand your bowl upon your knee;
Just in the zenith your wise head project,
Your full spoon, rising in a line direct,
Bold as a bucket, heeds no drops that fall,
The wide-mouth'd bowl will surely catch them all!

1793 • 1796

---

362 **slaver**, drool, slobber • 369 **catch them all.** New Haven ed inserts a note "There are various ways of preparing and eating it; with molasses, butter, sugar, cream, and fried. Why so excellent a thing cannot be eaten alone? Nothing is perfect alone, even man who boasts of so much perfection is nothing without his fellow substance. In eating, beware of the lurking heat that lies deep in the mass; dip your spoon gently, take shallow dips and cool it by degrees. It is sometimes necessary to blow. This is indicated by certain signs which every experienced feeder knows. They should be taught to young beginners. I have known a child's tongue blistered for want of this attention, and then the school-dame would insist that the poor thing had told a lie. A mistake the falsehood was in the faithless pudding. A prudent mother will cool it for her child with her own sweet breath The husband, seeing this, pretends his own wants blowing too from the same lips A sly deceit of love She knows the cheat, but feigning ignorance, lends her pouting lips and gives a gentle blast, which warms the husband's heart more than it cools his pudding"

William Cullen Bryant

1794 • 1878

When William Cullen Bryant was born, during Washington's second term as President, there were fifteen states in the Union, with Kentucky the only one west of the Alleghenies. When Bryant died, twenty-two of the thirty-eight states were "western," and the first transcontinental railroad had been in operation for nearly a decade. In this period of unparalleled expansion, Bryant, as a public-spirited citizen and the editor of an influential newspaper, had a conspicuous place and would be remembered even had he not written poetry. Sober, dignified, earnest in urging principles and policies in which he believed, he was recognized as a great liberal, and it is likely that he will command respect, for one reason or another, from each succeeding generation of Americans.

As a poet, Bryant has suffered from being called the American Wordsworth, or a belated representative of New England Puritanism, or a cold child of the eighteenth century, only slightly affected by the warming influences of the Romantic movement. That there is some justice in each of these judgments cannot be denied, but Bryant may be better understood against the background of American expansion. His love of nature was typical of an age which was discovering the wildness and variety of American scenery; his moral earnestness was shared by the vast majority of his countrymen, although few of them, perhaps, were as untouched by denominational bigotry; and his conservative tastes in the arts were in large part the result of the uncertain groping of his generation toward standards and traditions. In Bryant's poetry, moreover, we can observe the

Panel (l. to r.): "Monument Mountain" • William Cullen Bryant at 25 • Broadway in 1840 • Bryant's birthplace, Cummington, Massachusetts

the idea of continuity on the one hand; and on the other the future, the manifest destiny of America, and the hope of a new start toward a more perfect world.

Bryant was born at Cummington, in western Massachusetts, November 3, 1794. Brought up in a Calvinistic and Federalist environment, he took himself and the world very seriously as soon as he knew anything about them. His first verses appeared in a newspaper when he was ten, and he saw his first book in print five years later, when his father arranged for the publication of *The Embargo,* an attack on Jefferson's methods of avoiding entanglement in the Napoleonic conflict. He had only one year of college, at Williams, and then, because there was no livelihood in poetry, he turned to the study of law. Admitted to the bar in 1814, he practiced in several Massachusetts towns with moderate success, occasionally using his leisure for composing poems. After 1817, when his father sent some of his poems to a Boston friend and "Thanatopsis" came out in the *North American Review,* he became known as poet and reviewer for that periodical and others. In 1821 he married Fanny Fairchild, the "fairest of the rural maids"; theirs was an unusually happy marriage. During a visit to Boston in that same year, to read "The Ages" before the Phi Beta Kappa society at Harvard, Bryant arranged for the first collection of his poems. Thin volume though it was—it contained only eight pieces—the *Poems* of 1821 remains a landmark in American literary history.

Then, in 1825, Bryant had the courage to give up the law for the uncertainties of a literary life and deserted Massachusetts for New York City. Within a few months he formed a connection with the *Evening Post,* a daily newspaper which had been founded by Alexander Hamilton; in 1829 he became its editor-in-chief. Thereafter until his death in 1878 he was first of all the editor of the *Evening Post;* as a part owner he grew wealthy and was able to afford much European travel for himself and his family, as well as to establish a comfortable home at Roslyn on Long Island. His liberalism was most marked in his lifelong devotion to free trade; it may also be followed in his treatment of both national and local politics. In editorials, travel letters, and public discourses he persistently and fearlessly spoke out for people, upholding the right of workingmen to organize, the abolition of slavery, and the rejected plans of Lincoln and Johnson for reconstruction of the South. A recital of his public services would be lengthy, and would include recognition of his part in the establishment of New York City's Central Park and Metropolitan Museum of Art, as well as his close connections with the National Academy of Design and the Century Association.

Busy as he was, Bryant continued to write poetry throughout his life, although not in great quantity. After 1821, the chief editions of his poems were those of 1832, 1836, 1847, 1854, 1871, and 1876. Other volumes of importance included *The Fountain and Other Poems* (1842), *The White Footed Deer and Other Poems* (1844), and *Thirty Poems* (1864). He also translated the *Iliad* and the *Odyssey* and published three volumes of travel letters as well as numerous commemorative discourses.

Bryant's poetry, although apparently simple, presents some very complicated problems, inadequately suggested by the familiar terms "classical" and "romantic." Lowell's famous description in *A Fable for Critics* (". . . Bryant, as quiet, as cool, and as dignified, / As a smooth, silent iceberg, that never is ignified") hints at the "classic" qualities of Bryant: his concern for form and clarity, harmony and serenity. That Bryant owed much to such English poets as James Thomson and William Cowper is clear. Yet his poetic theories and, more particularly, his themes—the past, death, freedom, nature—have much in them that is ordinarily called "romantic." Thoughtful consideration of his work will show how largely a matter of degree is the distinction between the classical and the romantic, and, for most readers, will bring respect for the mind of a man who was much more than a transition figure in the growth of American literature.

Bradley, William Cullen Bryant, English Men of Letters Series, New York, 1905

Thanatopsis

Bryant's best-known poem, "Thanatopsis" (meaning "view of death"), was in large part written in 1811, when he was only sixteen. Six years later, without his knowledge, his father sent it and other pieces to the North American Review. The story goes that Richard Henry Dana, later one of Bryant's closest friends, remarked on seeing the manuscript that no one in America was capable of writing such verses. Thinking that another poem on death, consisting of four stanzas in iambic tetrameter rhyming abab, was a part of "Thanatopsis," the editors of the North American published both under one title in the issue for September 1817. When Bryant prepared the Poems of 1821, he added lines 1-17 (to "Yet a few days") as an introduction, and sixteen lines at the end (beginning with "As the long train").

The poem should be read in the light of both literary tradition and Bryant's own religious background. From the English poets (notably Henry Kirke White, Robert Blair, Bishop Beilby Porteus, Robert Southey, and William Cowper) he learned of the possibilities of blank verse and the themes of the "graveyard school" of writers. Even had he not read these poets, however, he would have had, from his Puritan background, a predilection for the funereal. Note, however, that Bryant's concept of Man's long sleep is more Stoic than Christian, with no hint of the resurrection or immortality of the soul.

To him who in the love of Nature holds
Communion with her visible forms, she speaks
A various language; for his gayer hours
She has a voice of gladness, and a smile
And eloquence of beauty, and she glides
Into his darker musings, with a mild
And healing sympathy, that steals away
Their sharpness, ere he is aware. When thoughts
Of the last bitter hour come like a blight
Over thy spirit, and sad images
Of the stern agony, and shroud, and pall,
And breathless darkness, and the narrow house,
Make thee to shudder, and grow sick at heart;—
Go forth, under the open sky, and list
To Nature's teachings, while from all around—
Earth and her waters, and the depths of air—
Comes a still voice—Yet a few days, and thee
The all-beholding sun shall see no more
In all his course; nor yet in the cold ground,
Where thy pale form was laid, with many tears,
Nor in the embrace of ocean, shall exist
Thy image. Earth, that nourished thee, shall claim
Thy growth, to be resolved to earth again,
And, lost each human trace, surrendering up
Thine individual being, shalt thou go
To mix for ever with the elements,
To be a brother to the insensible rock
And to the sluggish clod, which the rude swain
Turns with his share, and treads upon. The oak
Shall send his roots abroad, and pierce thy mould.

Yet not to thine eternal resting-place
Shalt thou retire alone, nor couldst thou wish
Couch more magnificent. Thou shalt lie down
With patriarchs of the infant world—with kings,
The powerful of the earth—the wise, the good,
Fair forms, and hoary seers of ages past,
All in one mighty sepulchre. The hills
Rock-ribbed and ancient as the sun,—the vales
Stretching in pensive quietness between;
The venerable woods—rivers that move
In majesty, and the complaining brooks
That make the meadows green; and, poured round all,
Old Ocean's gray and melancholy waste,—
Are but the solemn decorations all
Of the great tomb of man. The golden sun,
The planets, all the infinite host of heaven,
Are shining on the sad abodes of death,
Through the still lapse of ages. All that tread
The globe are but a handful to the tribes
That slumber in its bosom.—Take the wings
Of morning, pierce the Barcan wilderness,
Or lose thyself in the continuous woods

Text: here, as in the poems which follow, is the 1876 edition • 51 pierce . . . wilderness. North American: and the Borean desert pierce, 1821, 1832, 1847: and the Barcan desert pierce; 1854: traverse Barca's desert sands; present reading, 1871. Barca is the ancient name of that part of Libya east of Tripoli, its capital being Bengazi. Bryant seems to have had the idea, common in his time, that there was a Sahara-like desert west of the Mississippi

Where rolls the Oregon, and hears no sound,
Save his own dashings—yet the dead are there:
And millions in those solitudes, since first
The flight of years began, have laid them down
In their last sleep—the dead reign there alone.
So shalt thou rest, and what if thou withdraw
In silence from the living, and no friend
Take note of thy departure? All that breathe
Will share thy destiny. The gay will laugh
When thou art gone, the solemn brood of care
Plod on, and each one as before will chase
His favorite phantom; yet all these shall leave
Their mirth and their employments, and shall come
And make their bed with thee. As the long train
Of ages glide away, the sons of men,
The youth in life's green spring, and he who goes
In the full strength of years, matron and maid,
The speechless babe, and the gray-headed man—
Shall one by one be gathered to thy side,
By those, who in their turn shall follow them.

So live, that when thy summons comes to join
The innumerable caravan, which moves
To that mysterious realm, where each shall take
His chamber in the silent halls of death,
Thou go not, like the quarry-slave at night,
Scourged to his dungeon, but, sustained and soothed
By an unfaltering trust, approach thy grave,
Like one who wraps the drapery of his couch
About him, and lies down to pleasant dreams.

1811·1817-1821

Inscription for the Entrance to a Wood

Nowhere, perhaps, does Bryant express more happily the romantic view of nature than in "A Fragment," which first appeared in the North American Review for September 1817 with "Thanatopsis." In the Poems of 1821 it was entitled "Inscription for the Entrance into a Wood." Note that nature is a joy and a solace to man, not, as the post-Darwinians tell us, an arena for the struggle to survive.

Stranger, if thou hast learned a truth which needs
No school of long experience, that the world
Is full of guilt and misery, and hast seen
Enough of all its sorrows, crimes, and cares,
To tire thee of it, enter this wild wood
And view the haunts of Nature. The calm shade
Shall bring a kindred calm, and the sweet breeze
That makes the green leaves dance, shall waft a balm
To thy sick heart. Thou wilt find nothing here
Of all that pained thee in the haunts of men,
And made thee loathe thy life. The primal curse
Fell, it is true, upon the unsinning earth,
But not in vengeance. God hath yoked to guilt
Her pale tormentor, misery. Hence, these shades
Are still the abodes of gladness; the thick roof
Of green and stirring branches is alive
And musical with birds, that sing and sport
In wantonness of spirit; while below
The squirrel, with raised paws and form erect,
Chirps merrily. Throngs of insects in the shade
Try their thin wings and dance in the warm beam
That waked them into life. Even the green trees
Partake the deep contentment; as they bend

Misery is wed
To guilt. Hence in these shades we still behold
The abodes of gladness, here from tree to tree
And through the rustling branches flit the birds
In wantonness of spirit;—theirs are strains
Of no dissembled rapture—while below
The squirrel with rais'd paws and form erect
Chirps merrily. In the warm glade the throngs
Of dancing insects sport in the mild beam
That wak'd them into life

1821·

Misery is wed
To guilt. And hence the shades are still the abodes
Of undissembled gladness, the thick roof . . .

which is followed by the present version except for the use of "glade" instead of "shade" in line 20 By 1832 Bryant had come to the present reading

To the soft winds, the sun from the blue sky
Looks in and sheds a blessing on the scene.
Scarce less the cleft-born wild-flower seems to enjoy
Existence, than the wingèd plunderer
That sucks its sweets. The mossy rocks themselves,
And the old and ponderous trunks of prostrate trees
That lead from knoll to knoll a causey rude
Or bridge the sunken brook, and their dark roots,
With all their earth upon them, twisting high,
Breathe fixed tranquillity. The rivulet
Sends forth glad sounds, and tripping o'er its bed
Of pebbly sands, or leaping down the rocks,
Seems, with continuous laughter, to rejoice
In its own being. Softly tread the marge,
Lest from her midway perch thou scare the wren
That dips her bill in water. The cool wind,
That stirs the stream in play, shall come to thee,
Like one that loves thee nor will let thee pass
Ungreeted, and shall give its light embrace.

1817

To a Waterfowl

This poem, which Matthew Arnold believed the finest of its length in the English language, was composed by Bryant after a walk from Cummington to Plainfield, Massachusetts, in December 1815. It was first published in the North American Review for March 1818 and collected in the Poems of 1821. The clarity of the central image and the aptness and simplicity of the moral analogy have always been admired, even by those who dislike "preaching" in poetry. The effect of the stanza form has been described as "gliding," appropriate to the visual image of the second stanza.

Whither, midst falling dew,
While glow the heavens with the last steps of day,
Far, through their rosy depths, dost thou pursue
Thy solitary way?

Vainly the fowler's eye
Might mark thy distant flight to do thee wrong,
As, darkly seen against the crimson sky,
Thy figure floats along.

Seek'st thou the plashy brink
Of weedy lake, or marge of river wide,
Or where the rocking billows rise and sink
On the chafed ocean-side?

There is a Power whose care
Teaches thy way along that pathless coast—
The desert and illimitable air—
Lone wandering, but not lost.

All day thy wings have fanned,
At that far height, the cold, thin atmosphere,
Yet stoop not, weary, to the welcome land,
Though the dark night is near.

And soon that toil shall end;
Soon shalt thou find a summer home, and rest,
And scream among thy fellows; reeds shall bend,
Soon, o'er thy sheltered nest.

Thou'rt gone, the abyss of heaven
Hath swallowed up thy form; yet, on my heart
Deeply hath sunk the lesson thou hast given,
And shall not soon depart.

He who, from zone to zone,
Guides through the boundless sky thy certain flight,
In the long way that I must tread alone,
Will lead my steps aright.

1815-1818

A Forest Hymn

"A Hymn" first appeared in the United States Literary Gazette for April 1, 1825, over the signature of "B." It was reprinted as "Forest Hymn" in the Poems of 1832. Ex-

Inscription • 25 Looks. 1817 Peeps • 28 mossy. Until 1854 massy • 30 causey. 1817 causeway • 31 brook. 1817 stream • 39 in water. The 1817 version ends with these words

To a Waterfowl • 5 fowler's, hunter's • 9 plashy, marshy

cept for minor changes in capitalization, punctuation, and spelling, Bryant left the poem pretty well alone down through the years. Thought to have been composed at Great Barrington early in 1825, it has always been praised for the simplicity and sincerity of its quiet love of the revelation of God in external nature.

The groves were God's first temples. Ere man learned
To hew the shaft, and lay the architrave,
And spread the roof above them—ere he framed
The lofty vault, to gather and roll back
The sound of anthems; in the darkling wood,
Amid the cool and silence, he knelt down,
And offered to the Mightiest solemn thanks
And supplication. For his simple heart
Might not resist the sacred influences
Which, from the stilly twilight of the place,
And from the gray old trunks that high in heaven
Mingled their mossy boughs, and from the sound
Of the invisible breath that swayed at once
All their green tops, stole over him, and bowed
His spirit with the thought of boundless power
And inaccessible majesty. Ah, why
Should we, in the world's riper years, neglect
God's ancient sanctuaries, and adore
Only among the crowd, and under roofs
That our frail hands have raised? Let me, at least,
Here, in the shadow of this aged wood,
Offer one hymn—thrice happy, if it find
Acceptance in His ear.
Father, thy hand
Hath reared these venerable columns, thou
Didst weave this verdant roof. Thou didst look down
Upon the naked earth, and, forthwith, rose
All these fair ranks of trees. They, in thy sun,
Budded, and shook their green leaves in thy breeze,
And shot toward heaven. The century-living crow
Whose birth was in their tops, grew old and died
Among their branches, till, at last, they stood,
As now they stand, massy, and tall, and dark,
Fit shrine for humble worshipper to hold
Communion with his Maker. These dim vaults,
These winding aisles, of human pomp or pride
Report not. No fantastic carvings show
The boast of our vain race to change the form
Of thy fair works. But thou art here—thou fill'st
The solitude. Thou art in the soft winds
That run along the summit of these trees
In music; thou art in the cooler breath
That from the inmost darkness of the place
Comes, scarcely felt; the barky trunks, the ground,
The fresh moist ground, are all instinct with thee.
Here is continual worship;—Nature, here,
In the tranquillity that thou dost love,
Enjoys thy presence. Noiselessly, around,
From perch to perch, the solitary bird
Passes; and yon clear spring, that, midst its herbs,
Wells softly forth and wandering steeps the roots
Of half the mighty forest, tells no tale
Of all the good it does. Thou hast not left
Thyself without a witness, in these shades,
Of thy perfections. Grandeur, strength, and grace,
Are here to speak of thee. This mighty oak—
By whose immovable stem I stand and seem
Almost annihilated—not a prince,
In all that proud old world beyond the deep,
E'er wore his crown as loftily as he
Wears the green coronal of leaves with which
Thy hand has graced him. Nestled at his root
Is beauty, such as blooms not in the glare
Of the broad sun. That delicate forest flower,
With scented breath and look so like a smile,
Seems, as it issues from the shapeless mould,
An emanation of the indwelling Life,
A visible token of the upholding Love,
That are the soul of this great universe.

My heart is awed within me when I think
Of the great miracle that still goes on,
In silence, round me—the perpetual work
Of thy creation, finished, yet renewed
Forever. Written on thy works I read
The lesson of thy own eternity.

---

2 shaft, column • **2 architrave,** in classical architecture, that part of the entablature, or lintel, lying between the capital and the frieze Bryant was thinking first of the Greek temple and then ("lofty vault," l 4) of the Gothic cathedral • **30 century-living crow.** The long life of the crow, or raven, is traditional, there are said to be instances of captive ravens that have lived nearly a hundred years • **37 fantastic carvings.** At this period of his life, Bryant apparently cared little for Gothic architecture

Lo! all grow old and die—but see again,
How on the faltering footsteps of decay
Youth presses—ever-gay and beautiful youth
In all its beautiful forms. These lofty trees
Wave not less proudly that their ancestors
Moulder beneath them. Oh, there is not lost
One of earth's charms: upon her bosom yet,
After the flight of untold centuries,
The freshness of her far beginning lies
And yet shall lie. Life mocks the idle hate
Of his arch-enemy Death—yea, seats himself
Upon the tyrant's throne—the sepulchre,
And of the triumphs of his ghastly foe
Makes his own nourishment. For he came forth
From thine own bosom, and shall have no end.

There have been holy men who hid themselves
Deep in the woody wilderness, and gave
Their lives to thought and prayer, till they outlived
The generation born with them, nor seemed
Less aged than the hoary trees and rocks
Around them;—and there have been holy men
Who deemed it were not well to pass life thus.
But let me often to these solitudes
Retire, and in thy presence reassure
My feeble virtue. Here its enemies,
The passions, at thy plainer footsteps shrink
And tremble and are still. Oh, God! when thou
Dost scare the world with tempests, set on fire
The heavens with falling thunderbolts, or fill,
With all the waters of the firmament,
The swift dark whirlwind that uproots the woods
And drowns the villages; when, at thy call,
Uprises the great deep and throws himself
Upon the continent, and overwhelms
Its cities—who forgets not, at the sight
Of these tremendous tokens of thy power,
His pride, and lays his strifes and follies by?
Oh, from these sterner aspects of thy face
Spare me and mine, nor let us need the wrath
Of the mad, unchained elements to teach
Who rules them. Be it ours to meditate,
In these calm shades, thy milder majesty,
And to the beautiful order of thy works
Learn to conform the order of our lives.

1825

I Cannot Forget With What Fervid Devotion

Nine "Stanzas" by "X. X." appeared in the **New-York Review and Atheneum Magazine** for February 1826. When Bryant prepared the 1832 edition of his poems, he condensed this piece to seven stanzas. The poem is thought to have been written at Cummington in 1815, when Bryant was only twenty-one, but the nostalgia of a man of affairs for the dreams of his early youth was apparently recurrent throughout his life.

I cannot forget with what fervid devotion
I worshipped the visions of verse and of fame;
Each gaze at the glories of earth, sky, and ocean,
To my kindled emotions, was wind over flame.

And deep were my musings in life's early blossom,
'Mid the twilight of mountain-groves wandering long;
How thrilled my young veins, and how throbbed my full bosom,
When o'er me descended the spirit of song!

'Mong the deep-cloven fells that for ages had listened
To the rush of the pebble-paved river between,
Where the kingfisher screamed and gray precipice glistened,
All breathless with awe have I gazed on the scene;

Till I felt the dark power o'er my reveries stealing,
From the gloom of the thickets that over me hung,
And the thoughts that awoke, in that rapture of feeling,
Were formed into verse as they rose to my tongue.

Bright visions! I mixed with the world, and ye faded,
No longer your pure rural worshipper now;
In the haunts your continual presence pervaded,
Ye shrink from the signet of care on my brow.

---

9 fells, mountains, rocky uplands. 1832.

From his throne in the depth of that stern solitude,
And he breathed through my lips, in that tempest of feeling,
Strains warm with his spirit, though artless and rude.

In the old mossy groves on the breast of the mountain,
  In deep lonely glens where the waters complain,
By the shade of the rock, by the gush of the fountain,
  I seek your loved footsteps, but seek them in vain.

Oh, leave not forlorn and forever forsaken,
  Your pupil and victim to life and its tears!
But sometimes return, and in mercy awaken
  The glories ye showed to his earlier years.

1815?-1826

A Meditation on Rhode Island Coal

Humor and awareness of the technological advances of the age are pleasantly combined in "A Meditation on Rhode Island Coal," first published in the **New-York Review and Atheneum Magazine** for April 1826.

"Decolor, obscurus, vilis, non ille repexam
Cesariem regum, non candida virginis ornat
Colla, nec insigni splendet per cingula morsu
Sed nova si nigri videas miracula saxi,
Tunc superat pulchros cultus et quicquid Eois
Indus litoribus rubra scrutatur in alga."—CLAUDIAN

I sat beside the glowing grate, fresh heaped
  With Newport coal, and as the flame grew bright
—The many-colored flame—and played and leaped,
  I thought of rainbows, and the northern light,
Moore's Lalla Rookh, the Treasury Report,
And other brilliant matters of the sort.

And last I thought of that fair isle which sent
  The mineral fuel; on a summer day
I saw it once, with heat and travel spent,
  And scratched by dwarf-oaks in the hollow way.
Now dragged through sand, now jolted over stone—
A rugged road through rugged Tiverton.

And hotter grew the air, and hollower grew
  The deep-worn path, and horror-struck, I thought,
Where will this dreary passage lead me to?
  This long dull road, so narrow, deep, and hot?
I looked to see it dive in earth outright;
I looked—but saw a far more welcome sight.

Like a soft mist upon the evening shore,
  At once a lovely isle before me lay,
Smooth, and with tender verdure covered o'er,
  As if just risen from its calm inland bay;
Sloped each way gently to the grassy edge,
And the small waves that dallied with the sedge.

The barley was just reaped; the heavy sheaves
  Lay on the stubble-field; the tall maize stood
Dark in its summer growth, and shook its leaves,
  And bright the sunlight played on the young wood—
For fifty years ago, the old men say,
The Briton hewed their ancient groves away.

I saw where fountains freshened the green land,
  And where the pleasant road, from door to door,
With rows of cherry-trees on either hand,
  Went wandering all that fertile region o'er—
Rogue's Island once—but when the rogues were dead,
Rhode Island was the name it took instead.

Beautiful island! then it only seemed
  A lovely stranger; it has grown a friend.

Claudian • The message is from a poem on the magnet, by Claudianus (365?-408), to be found among his **Carminum Minorum Corpusculum** (XXIX, ll. 10-15). The sense is Black, dull, and common, it does not adorn the braided hairs of kings nor the snowy necks of girls, nor shine in the jewelled buckles of warrior's belts. But consider the marvelous properties of this dull-looking stone and you will see that it is of more worth than lovely gems and any pearl sought of Indian amid the seaweed on the Red Sea's shore • **2 Newport coal.** Rhode Island coal was actually mined near Portsmouth on the northern part of the island in Narragansett Bay called Aquidneck by the Indians, on which Newport is located • **5 Lalla Rookh.** Part III of the poem by Thomas Moore (1779-1852) deals with Oriental fire worshipers • **5 the Treasury Report.** Since 1800, the law has required that the secretary of the treasury make an annual report of the state of the finances. • **12 Tiverton,** on the mainland north and east of Rhode Island proper • **29 fifty years ago,** during the British occupation of Newport, between 1776 and 1779, when much timber was cut for firewood • **31 fountains, springs** • **35 Rogue's Island.** Bryant's etymology is not admitted by Rhode Island folk, who attribute the name Rhode Island to Giovanni da Verrazano, a Florentine sailing under the flag of France, who visited Narragansett Bay in 1524 and thought it looked like the extensive harbors of the island of Rhodes in the Mediterranean

I gazed on its smooth slopes, but never dreamed
How soon that green and quiet isle would send
The treasures of its womb across the sea,
To warm a poet's room and boil his tea.

Dark anthracite! that reddenest on my hearth,
Thou in those island mines didst slumber long;
But now thou art come forth to move the earth,
And put to shame the men that mean thee wrong:
Thou shalt be coals of fire to those that hate thee,
And warm the shins of all that underrate thee.

Yea, they did wrong thee foully—they who mocked
Thy honest face, and said thou wouldst not burn;
Of hewing thee to chimney-pieces talked,
And grew profane, and swore, in bitter scorn,
That men might to thy inner caves retire,
And there, unsinged, abide the day of fire.

Yet is thy greatness nigh. I pause to state,
That I too have seen greatness—even I—
Shook hands with Adams, stared at La Fayette,
When, barehead, in the hot noon of July,
He would not let the umbrella be held o'er him,
For which three cheers burst from the mob before him.

And I have seen—not many months ago—
An Eastern Governor in chapeau bras
And military coat, a glorious show!
Ride forth to visit the reviews, and ah!
How oft he smiled and bowed to Jonathan!
How many hands were shook and votes were won!

'Twas a great Governor; thou too shalt be
Great in thy turn, and wide shall spread thy fame
And swiftly; farthest Maine shall hear of thee,
And cold New Brunswick gladden at thy name;
And, faintly through its sleets, the weeping isle
That sends the Boston folks their cod shall smile.

For thou shalt forge vast railways, and shalt heat
The hissing rivers into steam, and drive
Huge masses from thy mines, on iron feet,
Walking their steady way, as if alive,
Northward, till everlasting ice besets thee,
And South as far as the grim Spaniard lets thee.

Thou shalt make mighty engines swim the sea,
Like its own monsters—boats that for a guinea
Will take a man to Havre—and shalt be
The moving soul of many a spinning-jenny,
And ply thy shuttles, till a bard can wear
As good a suit of broadcloth as the mayor.

Then we will laugh at winter when we hear
The grim old churl about our dwellings rave:
Thou, from that "ruler of the inverted year,"
Shalt pluck the knotty sceptre Cowper gave,
And pull him from his sledge, and drag him in,
And melt the icicles from off his chin.

1826

To Cole, the Painter, Departing for Europe

Thomas Cole (1801-1848), lionized in New York City in the 1820's for his discovery of native subjects for landscape paintings, was one of Bryant's numerous friends in the world of art. The two men, companions on walking tours in the Catskills, were remarkably similar in their tastes and accomplishments. From the Hudson River scenes which gave him reputation Cole turned to allegories and moral-

---

43 **anthracite.** Rhode Island coal is so compressed that it is much more difficult to ignite than ordinary hard coal, it is no longer commercially mined • 57 **Shook . . . La Fayette.** Bryant probably saw Lafayette when he took part in the Fourth of July celebration at New York in 1825, near the end of his triumphal tour of the United States; the other reference is probably to John Adams, still living in Quincy, Massachusetts, when the poem was written • 62 **Eastern . . . chapeau bras,** that is, in a three-cornered hat, of the late-eighteenth-century fashion. The governor was perhaps De Witt Clinton (1769-1828) • 71 **weeping isle,** Newfoundland, notorious for its fogs • 87 **"ruler . . . year,"** a line from Bk. IV, "The Winter Evening," of Cowper's **The Task** (1785) • 90 **his chin.** In the **New-York Review** there was an additional stanza, somewhat more convivial and topical than those Bryant retained, it refers to the famous punch of Newport and the "Lunch"—the Bread and Cheese Club in which James Fenimore Cooper was the leading spirit:

Heat will be cheap—a small consideration
Will put one in a way to raise his punch,
Set lemon-trees, and have a cane plantation—
'Twill be a pretty saving to the Lunch.
Then the West India Negroes may go play
The banjo and keep endless holiday.

izing in such series of paintings as "The Course of Empire" and "The Voyage of Life," both remarkably like Bryant's "The Flood of Years." Cole, born in England, came to the United States at eighteen, and in later life is said to have remarked that he would give his left hand to have been a native American. The nationalistic tone of Bryant's tribute is therefore quite appropriate.

Thine eyes shall see the light of distant skies;
  Yet, COLE! thy heart shall bear to Europe's strand
  A living image of our own bright land,
Such as upon thy glorious canvas lies;
Lone lakes—savannas where the bison roves—
  Rocks rich with summer garlands—solemn streams—
  Skies, where the desert eagle wheels and screams—
Spring bloom and autumn blaze of boundless groves.
Fair scenes shall greet thee where thou goest—fair,
  But different—everywhere the trace of men,
Paths, homes, graves, ruins, from the lowest glen
To where life shrinks from the fierce Alpine air—
  Gaze on them, till the tears shall dim thy sight,
  But keep that earlier, wilder image bright.

1829

The Prairies

About 1830, two of Bryant's younger brothers went west to take up land, eventually settling at Princeton, Illinois. Visiting them in the summer of 1832, the poet rode on horseback northward a hundred miles from Jacksonville. "The Prairies," in which he combined his impressions on this trip with his well-tried themes of the ruins of empire and the transience of human life, was first published in the Knickerbocker for December 1833. The last lines suggest that he believed it was the "manifest destiny" of the United States to occupy the entire North American continent.

These are the gardens of the Desert, these
The unshorn fields, boundless and beautiful,
For which the speech of England has no name—
The Prairies. I behold them for the first,
And my heart swells, while the dilated sight
Takes in the encircling vastness. Lo! they stretch
In airy undulations, far away,
As if the Ocean, in his gentlest swell,
Stood still, with all his rounded billows fixed,
And motionless for ever. Motionless?—
No—they are all unchained again. The clouds
Sweep over with their shadows, and, beneath,
The surface rolls and fluctuates to the eye;
Dark hollows seem to glide along and chase
The sunny ridges. Breezes of the South!
Who toss the golden and the flame-like flowers,
And pass the prairie-hawk that, poised on high,
Flaps his broad wings, yet moves not—ye have played
Among the palms of Mexico and vines
Of Texas, and have crisped the limpid brooks
That from the fountains of Sonora glide
Into the calm Pacific—have ye fanned
A nobler or a lovelier scene than this?
Man hath no part in all this glorious work:
The hand that built the firmament hath heaved
And smoothed these verdant swells, and sown their slopes
With herbage, planted them with island-groves,
And hedged them round with forests. Fitting floor
For this magnificent temple of the sky—
With flowers whose glory and whose multitude
Rival the constellations! The great heavens
Seem to stoop down upon the scene in love,—
A nearer vault, and of a tenderer blue,
Than that which bends above our Eastern hills.

  As o'er the verdant waste I guide my steed,
Among the high rank grass that sweeps his sides

To Cole . . . • **3 our own bright.** Bryant seems not to have known that Cole was English-born until he delivered a funeral oration on Cole before the National Academy of Design in 1848

The Prairies • **3 no name.** "Prairie," French in origin, seems to have come into general use in American English late in the eighteenth century • **13 The surface . . . eye.** "The prairies of the West, with an undulating surface, rolling prairies, as they are called, present to the unaccustomed eye a singular spectacle when the shadows of the clouds are passing rapidly over them. The face of the ground seems to fluctuate and toss like billows of the sea."—Bryant • **17 the prairie-hawk . . . not.** "I have seen the prairie-hawk balancing himself in the air for hours together, apparently over the same spot; probably watching his prey."—Bryant • **21 Sonora,** a state in the northwestern part of Mexico

The hollow beating of his footstep seems
A sacrilegious sound. I think of those
Upon whose rest he tramples. Are they here—
The dead of other days?—and did the dust
Of these fair solitudes once stir with life
And burn with passion? Let the mighty mounds
That overlook the rivers, or that rise
In the dim forest crowded with old oaks,
Answer. A race, that long has passed away,
Built them; a disciplined and populous race
Heaped, with long toil, the earth, while yet the Greek
Was hewing the Pentelicus to forms
Of symmetry, and rearing on its rock
The glittering Parthenon. These ample fields
Nourished their harvests, here their herds were fed,
When haply by their stalls the bison lowed,
And bowed his manèd shoulder to the yoke.
All day this desert murmured with their toils,
Till twilight blushed, and lovers walked, and wooed
In a forgotten language, and old tunes,
From instruments of unremembered form,
Gave the soft winds a voice. The red-man came—
The roaming hunter-tribes, warlike and fierce,
And the mound-builders vanished from the earth.
The solitude of centuries untold
Has settled where they dwelt. The prairie-wolf
Hunts in their meadows, and his fresh-dug den
Yawns by my path. The gopher mines the ground
Where stood their swarming cities. All is gone;
All—save the piles of earth that hold their bones,
The platforms where they worshipped unknown gods,
The barriers which they builded from the soil
To keep the foe at bay—till o'er the walls
The wild beleaguerers broke, and, one by one,
The strongholds of the plain were forced, and heaped
With corpses. The brown vultures of the wood
Flocked to those vast uncovered sepulchres,
And sat, unscared and silent, at their feast.
Haply some solitary fugitive,
Lurking in marsh and forest, till the sense
Of desolation and of fear became
Bitterer than death, yielded himself to die.
Man's better nature triumphed then. Kind words
Welcomed and soothed him; the rude conquerors
Seated the captive with their chiefs; he chose
A bride among their maidens, and at length
Seemed to forget—yet ne'er forgot—the wife
Of his first love, and her sweet little ones,
Butchered, amid their shrieks, with all his race.

Thus change the forms of being. Thus arise
Races of living things, glorious in strength,
And perish, as the quickening breath of God
Fills them, or is withdrawn. The red-man, too,
Has left the blooming wilds he ranged so long,
And, nearer to the Rocky Mountains, sought
A wilder hunting-ground. The beaver builds
No longer by these streams, but far away,
On waters whose blue surface ne'er gave back
The white man's face—among Missouri's springs,
And pools whose issues swell the Oregon,
He rears his little Venice. In these plains
The bison feeds no more. Twice twenty leagues
Beyond remotest smoke of hunter's camp,
Roams the majestic brute, in herds that shake
The earth with thundering steps—yet here I meet
His ancient footprints stamped beside the pool.

Still this great solitude is quick with life.
Myriads of insects, gaudy as the flowers
They flutter over, gentle quadrupeds,
And birds, that scarce have learned the fear of man,
Are here, and sliding reptiles of the ground,
Startlingly beautiful. The graceful deer
Bounds to the wood at my approach. The bee,

---

42 **mighty mounds.** In the forty-two lines which follow, Bryant builds upon the theory, common in his time but now generally rejected, that the burial, ceremonial, and earthwork mounds of the Mississippi Valley were not constructed by the ancestors of the Indians, but by an extinct race, the Mound Builders. There are said to be ten thousand such mounds in Illinois alone; Bryant's letters reveal that he had examined some near St. Louis • 48 **Pentelicus,** a mountain range some miles northeast of Athens, where an unusually white marble was quarried • 50 **Parthenon,** a temple dedicated to Athena Parthenos on the Acropolis in Athens. Completed about 435 B.C., it is still one of the great monuments of the ancient world • 50 **These . . . harvests.** "The size and extent of the mounds in the valley of the Mississippi indicate the existence, at a remote period, of a nation at once populous and laborious, and therefore probably subsisting by agriculture"—Bryant • 52 **bison.** There is little evidence that the American buffalo was ever domesticated • 80 **the rude . . . chiefs.** "Instances are not wanting of generosity like this among the North American Indians toward a captive or survivor of a hostile tribe on which the greatest cruelties had been exercised."—Bryant

With whom he came across the eastern deep,
Fills the savannas with his murmurings,
And hides his sweets, as in the golden age,
Within the hollow oak. I listen long
To his domestic hum, and think I hear
The sound of that advancing multitude
Which soon shall fill these deserts. From the ground
Comes up the laugh of children, the soft voice
Of maidens, and the sweet and solemn hymn
Of Sabbath worshippers. The low of herds
Blends with the rustling of the heavy grain
Over the dark-brown furrows. All at once
A fresher wind sweeps by, and breaks my dream,
And I am in the wilderness alone.

1832·1833

The Antiquity of Freedom

As an editor Bryant had a constant and direct concern with politics. "The Antiquity of Freedom" should be read with the recollection that Bryant was deeply interested in political developments in Europe between the revolutions of 1830 and those of 1848. In that period the rise of socialism and the continuous struggle against despotic rulers kept most of the Continent in turmoil, and thousands fled to the United States. World War II has brought more Americans than ever before to a realization of the truth of Bryant's conception of freedom.

Here are old trees, tall oaks, and gnarlèd pines,
That stream with gray-green mosses; here the ground
Was never trenched by spade, and flowers spring up
Unsown, and die ungathered. It is sweet
To linger here, among the flitting birds
And leaping squirrels, wandering brooks, and winds
That shake the leaves, and scatter, as they pass,
A fragrance from the cedars, thickly set
With pale-blue berries. In these peaceful shades—
Peaceful, unpruned, immeasurably old—
My thoughts go up the long dim path of years,
Back to the earliest days of liberty.

A fair young girl, with light and delicate limbs,
And wavy tresses gushing from the cap
With which the Roman master crowned his slave
When he took off the gyves. A bearded man,
Armed to the teeth, art thou; one mailèd hand
Grasps the broad shield, and one the sword; thy brow,
Glorious in beauty though it be, is scarred
With tokens of old wars; thy massive limbs
Are strong with struggling. Power at thee has launched
His bolts, and with his lightnings smitten thee;
They could not quench the life thou hast from heaven;
Merciless Power has dug thy dungeon deep,
And his swart armorers, by a thousand fires,
Have forged thy chain, yet, while he deems thee bound,
The links are shivered, and the prison-walls
Fall outward, terribly thou springest forth,
As springs the flame above a burning pile,
And shoutest to the nations, who return
Thy shoutings, while the pale oppressor flies.

Thy birthright was not given by human hands:
Thou wert twin-born with man. In pleasant fields,
While yet our race was few, thou sat'st with him,
To tend the quiet flock and watch the stars,
And teach the reed to utter simple airs.
Thou by his side, amid the tangled wood,
Didst war upon the panther and the wolf,
His only foes, and thou with him didst draw
The earliest furrow on the mountain-side,
Soft with the deluge. Tyranny himself,
Thy enemy, although of reverend look,
Hoary with many years and far obeyed,
Is later born than thou; and as he meets
The grave defiance of thine elder eye,
The usurper trembles in his fastnesses.

Thou shalt wax stronger with the lapse of years,
But he shall fade into a feeble age—
Feebler, yet subtler He shall weave his snares,

The Prairies • **111 came . . . deep.** Although the point is disputed, most authorities agree that the honeybee was not native to North America

The Antiquity • **15 cap.** Bryant had in mind the "liberty cap" of the French Revolution, adapted from the Roman "pilleus," given to a slave when he was freed • **37 reed.** The allusion is to the syrinx, or Panpipe, a primitive musical instrument made of reeds • **40 His. Knickerbocker**· Thine • **41 furrow.** Until 1854 furrows • **43 reverend,** venerable • **49 feeble.** In all other editions· feebler; probably, in 1876, an error

And spring them on thy careless steps, and clap
His withered hands, and from their ambush call
His hordes to fall upon thee. He shall send
Quaint maskers, wearing fair and gallant forms
To catch thy gaze, and uttering graceful words
To charm thy ear; while his sly imps, by stealth,
Twine round thee threads of steel, light thread on thread,
That grow to fetters; or bind down thy arms
With chains concealed in chaplets. Oh! not yet
Mayst thou unbrace thy corslet, nor lay by
Thy sword; nor yet, O Freedom! close thy lids
In slumber; for thine enemy never sleeps,
And thou must watch and combat till the day
Of the new earth and heaven. But wouldst thou rest
Awhile from tumult and the frauds of men,
There old and friendly solitudes invite
Thy visit. They, while yet the forest-trees
Were young upon the unviolated earth,
And yet the moss-stains on the rock were new,
Beheld thy glorious childhood, and rejoiced.

1842

"Oh Mother of a Mighty Race"

Although Bryant was decidedly lukewarm about the Mexican War, he shared the nationalistic feeling of the Polk administration. His patriotic emotions were doubtless accentuated by his trips to Europe, where he met sharp criticism of American democracy. The sentiment in this poem should be compared with that in the last lines of "The Prairies."

Oh mother of a mighty race,
Yet lovely in thy youthful grace!
The elder dames, thy haughty peers,
Admire and hate thy blooming years.
With words of shame
And taunts of scorn they join thy name.

For on thy cheeks the glow is spread
That tints thy morning hills with red;
Thy step—the wild-deer's rustling feet,
Within thy woods are not more fleet;
Thy hopeful eye
Is bright as thine own sunny sky.
Ay, let them rail—those haughty ones,
While safe thou dwellest with thy sons.
They do not know how loved thou art,
How many a fond and fearless heart
Would rise to throw
Its life between thee and the foe.

They know not, in their hate and pride,
What virtues with thy children bide;
How true, how good, thy graceful maids
Make bright, like flowers, the valley-shades;
What generous men
Spring, like thine oaks, by hill and glen.

What cordial welcomes greet the guest
By thy lone rivers of the West;
How faith is kept, and truth revered,
And man is loved, and God is feared,
In woodland homes,
And where the ocean-border foams

There's freedom at thy gates and rest
For Earth's down-trodden and opprest,
A shelter for the hunted head,
For the starved laborer toil and bread,
Power, at thy bounds,
Stops and calls back his baffled hounds.

Oh, fair young mother! on thy brow
Shall sit a nobler grace than now.
Deep in the brightness of thy skies
The thronging years in glory rise,
And, as they fleet,
Drop strength and riches at thy feet.

Thine eye, with every coming hour,
Shall brighten, and thy form shall tower;
And when thy sisters, elder born,
Would brand thy name with words of scorn,
Before thine eye,
Upon their lips the taunt shall die.

Robert of Lincoln

Bryant's pleasure in the bobolink is characteristically combined with a quiet comment on the round of human life. "Robert of Lincoln" is about as close as the sober Bryant ever gets to the "carpe diem" theme—the glorification, that is to say, of the enjoyment of the present moment.

Merrily swinging on brier and weed,
  Near to the nest of his little dame,
Over the mountain-side or mead,
  Robert of Lincoln is telling his name:
    Bob-o'-link, bob-o'-link,
    Spink, spank, spink;
  Snug and safe is that nest of ours,
Hidden among the summer flowers.
                Chee, chee, chee.

Robert of Lincoln is gayly drest,
  Wearing a bright black wedding-coat;
White are his shoulders and white his crest,
  Hear him call in his merry note:
    Bob-o'-link, bob-o'-link,
    Spink, spank, spink;
Look, what a nice new coat is mine,
Sure there was never a bird so fine.
                Chee, chee, chee.

Robert of Lincoln's Quaker wife,
  Pretty and quiet, with plain brown wings,
Passing at home a patient life,
  Broods in grass while her husband sings:
    Bob-o'-link, bob-o'-link,
    Spink, spank, spink;
Brood, kind creature; you need not fear
Thieves and robbers while I am here.
                Chee, chee, chee.

Modest and shy as a nun is she;
  One weak chirp is her only note.
Braggart and prince of braggarts is he,
  Pouring boasts from his little throat:
    Bob-o'-link, bob-o'-link,
    Spink, spank, spink;
Never was I afraid of man;
Catch me, cowardly knaves, if you can!
                Chee, chee, chee.

Six white eggs on a bed of hay,
  Flecked with purple, a pretty sight!
There as the mother sits all day,
  Robert is singing with all his might:
    Bob-o'-link, bob-o'-link,
    Spink, spank, spink;
Nice good wife, that never goes out,
Keeping house while I frolic about.
                Chee, chee, chee.

Soon as the little ones chip the shell
  Six wide mouths are open for food;
Robert of Lincoln bestirs him well,
  Gathering seeds for the hungry brood.
    Bob-o'-link, bob-o'-link,
    Spink, spank, spink;
This new life is likely to be
Hard for a gay young fellow like me.
                Chee, chee, chee.

Robert of Lincoln at length is made
  Sober with work, and silent with care;
Off is his holiday garment laid,
  Half forgotten that merry air:
    Bob-o'-link, bob-o'-link,
    Spink, spank, spink;
Nobody knows but my mate and I
Where our nest and our nestlings lie.
                Chee, chee, chee.

Summer wanes; the children are grown;
  Fun and frolic no more he knows;
Robert of Lincoln's a humdrum crone;
  Off he flies, and we sing as he goes:

---

49 **Gathering seeds.** John Burroughs, in an essay on "Nature and the Poets," challenged Bryant's natural history. The bobolink, he said, "is an insectivorous bird in the North, or until its brood has flown" • 66 **crone,** a withered old woman. Bryant refers to the fact that the male bobolink (the rice-bird of the South) annually loses his glossy black, buff, and white plumage, together with his song, and at the summer's end is almost indistinguishable from the female

Bob-o'-link, bob-o'-link,
Spink, spank, spink;
When you can pipe that merry old strain,
Robert of Lincoln, come back again.
Chee, chee, chee.

1855

The Poet

Godwin informs us that "The Poet," the expression of Bryant's conviction that poetry depends primarily upon emotion, was written in 1863. As early as 1826, in his lectures on poetry before the American Atheneum Society, Bryant had asserted that "the great spring of poetry is emotion," although he also acknowledged the importance of appealing to the imagination and the understanding. His theories are similar to but somewhat less mystical than those of Emerson (see p. 434) and Whitman. The extent to which he followed his own advice about revision is debatable, for textual study reveals that he often changed his mind about his diction. Textual revisions are indicated in the footnotes for "Thanatopsis," "Inscription for the Entrance to a Wood," and "The Antiquity of Freedom."

Thou, who wouldst wear the name
Of poet mid thy brethren of mankind,
And clothe in words of flame
Thoughts that shall live within the general mind!
Deem not the framing of a deathless lay
The pastime of a drowsy summer day.

But gather all thy powers,
And wreak them on the verse that thou dost weave,
And in thy lonely hours,
At silent morning or at wakeful eve,
While the warm current tingles through thy veins,
Set forth the burning words in fluent strains.

No smooth array of phrase,
Artfully sought and ordered though it be,
Which the cold rhymer lays
Upon his page with languid industry,
Can wake the listless pulse to livelier speed,
Or fill with sudden tears the eyes that read.

The secret wouldst thou know
To touch the heart or fire the blood at will?
Let thine own eyes o'erflow;
Let thy lips quiver with the passionate thrill;
Seize the great thought, ere yet its power be past,
And bind, in words, the fleet emotion fast.

Then, should thy verse appear
Halting and harsh, and all unaptly wrought,
Touch the crude line with fear,
Save in the moment of impassioned thought;
Then summon back the original glow, and mend
The strain with rapture that with fire was penned.

Yet let no empty gust
Of passion find an utterance in thy lay,
A blast that whirls the dust
Along the howling street and dies away;
But feelings of calm power and mighty sweep,
Like currents journeying through the windless deep.

Seek'st thou, in living lays,
To limn the beauty of the earth and sky?
Before thine inner gaze
Let all that beauty in clear vision lie;
Look on it with exceeding love, and write
The words inspired by wonder and delight.

Of tempests wouldst thou sing,
Or tell of battles—make thyself a part
Of the great tumult; cling
To the tossed wreck with terror in thy heart;
Scale, with the assaulting host, the rampart's height,
And strike and struggle in the thickest fight.

So shalt thou frame a lay
That haply may endure from age to age,
And they who read shall say:
"What witchery hangs upon this poet's page!
What art is his the written spells to find
That sway from mood to mood the willing mind!"

1863·1864

The Poet • **8 wreak them on,** let them play upon

Washington Irving

1783 • 1859

Washington Irving was both the most polished and the most popular American prose writer of his generation. Not a profound thinker and heavily indebted for his tastes and skills to European models, he was nevertheless a gifted observer of surface details, and in the course of time he developed a style which justly earned him lasting fame. Wherever the short story is read, men, women, and children continue to enjoy "Rip Van Winkle," "The Legend of Sleepy Hollow," and other story sketches by Irving. They are both historically important, being among the first mature examples of American fiction, and charmingly untouched by time, revealing their author as a man who understood the amenities of life in a world which is not always orderly and reasonable.

Irving's career is best understood when divided into three periods: (1) 1783-1815, a rather lengthy but youthful groping for a profession which would satisfy his somewhat dilettantish tastes; (2) 1815-1832, a seventeen-year residence in Europe, where he achieved international recognition as one of the romantic rediscoverers of the past; and (3) 1832-1859, in which, established as a fashionable author, he wrote chiefly as a biographer and historian.

He was born in New York City on April 3, 1783, the eleventh and last son of Scotch-English parents. The staunch Presbyterianism of his father, a well-to-do merchant, played little part in Washington Irving's unsystematic education. A delicate boy, he found his chief pleasures in light literature, the theater, art, travel, and, most particularly, in good company. At nineteen, while reading law, he contributed a series of essays dealing

---

largely with the theater to his brother Peter's newspaper, the *Morning Chronicle,* signing them in the eighteenth-century manner as "Jonathan Oldstyle." Between 1804 and 1806 he traveled in Europe, curiously unconcerned about the political turmoil in Napoleon's empire, but much impressed with such new friends as Washington Allston, the painter.

Back in New York and admitted to the bar, he joined his brother and James Kirke Paulding in the *New Yorker*-like series, *Salmagundi,* which ran for twenty numbers in 1807-1808. A more extended burlesque, begun with Peter Irving, resulted in *A History of New York . . . By Diedrich Knickerbocker* (1809), a satire so elaborate that the law must have been much neglected during its composition. In his twenties, as a matter of fact, Irving was doubtless uncertain of himself and of his aims. He enjoyed the convivial society of New York's younger set, shared some responsibility in the family hardware business, and dabbled occasionally in Federalist politics, meanwhile pursuing a gentlemanly interest in literature. A moot question in Irving's biography is the importance of his romantic attachment to Matilda Hoffman, who died of consumption in 1809. Had he married, Irving might conceivably have settled down to the law or to the editing of literary magazines. Matilda's death made roving possible. A bachelor all his life, he cherished as he grew older a sentimental memory which did not entirely outlaw mild flirtations with living ladies.

In 1815 he went to Liverpool on business and found that family affairs there were in great disorder because of a brother's illness. Three years later the Irving firm was bankrupt, and his great decision—to make his living by authorship—was more or less forced upon him. The results were impressive: *The Sketch Book,* published serially in 1819-1820; *Bracebridge Hall* (1822); *Tales of a Traveller* (1824); and, after a stay in Spain as a diplomatic attaché, *The Alhambra* (1832). These and other books, together with his many social connections, brought fame and considerable fortune. Irving was at home in London, Paris, Dresden, and Madrid; he met and was accepted by many of the leading literary folk of Europe; he became, in short, a great success, bringing to the United States what the new nation most ardently desired in a man of letters—the respect of the Old World. Like Sir Walter Scott, whom he much admired, Irving worked hard but insisted on preserving the pleasant fiction that authorship was something that a gentleman accomplished with his left hand.

In this attitude he had the assistance of various governmental appointments which were urged upon him in his later years. He wisely refused offers of nominations to a seat in Congress, to the post of mayor of New York, to the secretaryship of the Navy. In 1841, however, he accepted the appointment of minister to Spain, and was again in Madrid between 1842 and 1845, when he resigned. The last years of his life were devoted to several relatively minor books dealing with the American West ("A Tour on the Prairies" in *The Crayon Miscellany,* 1835; *Astoria,* written in collaboration with his nephew, Pierre, 1836; and *Adventures of Captain Bonneville,* 1837), as well as to the biographical works which display his literary and political nostalgias (*Life of Oliver Goldsmith,* 1840, and *Life of Washington,* 5 vols., 1855-1859). Much of his time after 1835 was spent in the rambling, stepped-gabled cottage at Sunnyside, near Tarrytown and Sleepy Hollow on the Hudson, where he died on November 28, 1859.

Irving's historical work exemplifies the antiquarian spirit which he shared with Scott and other romanticists, but he is most significant for bringing American fiction into the main stream of world literature. He wrote with full knowledge of his immediate predecessors and contemporaries, and his work held its own in direct comparison with theirs. Irving owed much to Fielding, Sterne, Goldsmith, and Scott; he owed much, also, to such German romanticists as Ludwig Tieck and E. T. A. Hoffman. When all his literary obligations are recognized, however, there is much in Irving that is his own: a feeling for place and local customs; good-humored acceptance of eccentricities in human beings and divergent ways of looking at the world; a persistent refusal to take either himself or society too seriously; and, not least of all, a delicate balance between conformity and independence which, if not originality in the strictest sense, is still creative and individual. These are virtues which Americans have always liked to think characteristic of their nation.

From

A History of New York By Diedrich Knickerbocker

Soon after the conclusion of the **Salmagundi** series in January 1808, Irving and his brother Peter planned to parody Samuel Latham Mitchill's **The Picture of New York** (1807) with a historical sketch, "followed by notices of the customs, manners, and institutions of the city; written in a serio-comic vein, and treating local errors, follies, and abuses, with good-humored satire" ("The Author's Apology," in the 1848 edition). But Peter went to Europe, and Washington Irving took up the task alone. He eventually confined himself to an account of the period of Dutch domination, in seven books. Despite his humorous and satirical purposes, his account embodied fact as well as fiction, and his work provoked research into the forgotten archives of the province.

Almost every page of the **History** reflects Irving's wide reading of classical and English literature. He parodies or imitates Homer, Cervantes, Malory, Fielding, Sterne, Swift, and many other favorites; the work is, in effect, a patchwork quilt of references, echoes, burlesques.

No one can read Irving's **History** without feeling its youthful, undisciplined, irreverent buoyancy. The aping of various literary models is accomplished with such verve that its occasional lack of restraint and proportion is easily forgiven. The book should be received as Irving wished it to be, "with good-humored indulgence," to "be thumbed and chuckled over by the family fireside."

BOOK VI

CONTAINING THE SECOND PART OF THE REIGN OF PETER THE HEADSTRONG, AND HIS GALLANT ACHIEVEMENTS ON THE DELAWARE

Chapter VII

Showing the Great Advantage That the Author Has over His Reader in Time of Battle—Together with Divers Portentous Movements; Which Betoken That Something Terrible Is About To Happen

Like as a mighty alderman, when at a corporation feast the first spoonful of turtle-soup salutes his palate, feels his appetite but tenfold quickened, and redoubles his vigorous attacks upon the tureen; while his projecting eyes roll greedily round, devouring everything at table—so did the mettlesome Peter Stuyvesant feel that hunger for martial glory, which raged within his bowels, inflamed by the capture of Fort Casimir, and nothing could allay it but the conquest of all New Sweden. No sooner, therefore, had he secured his conquest, than he stumped resolutely on, flushed with success, to gather fresh laurels at Fort Christina.

This was the grand Swedish post, established on a small river (or, as it is improperly termed, creek) of the same name; and here that crafty governor Jan Risingh lay grimly drawn up, like a gray-bearded spider in the citadel of his web.

But before we hurry into the direful scenes which must attend the meeting of two such potent chieftains, it is advisable to pause for a moment, and hold a kind of warlike council. Battles should not be rushed into precipitately by the historian and his readers, any more than by the general and his soldiers. The great commanders of antiquity never engaged the enemy without previously preparing the minds of their followers by animating harangues; spiriting them up to heroic deeds assuring them of the protection of the gods, and inspiring them with a confidence in the prowess of their leaders. So the historian should awaken the attention and enlist the passions of his readers; and having set them all on fire with the importance of his subject, he should put himself at their head, flourish his pen, and lead them on to the thickest of the fight.

An illustrious example of this rule may be seen in that mirror of historians, the immortal Thucydides. Having arrived at the breaking out of the Peloponnesian war, one of his commentators observes that "he sounds the charge

---

Surrendered to the Swedes in 1654, it was recaptured by Stuyvesant and his forces in 1655 • **12 Fort Christina.** "At present a flourishing town, called Christiana, or Christeen, about thirty-seven miles from Philadelphia, on the post-road to Baltimore."—Irving. This fort, established in 1638, is usually said to have been at Wilmington • **15 Jan Risingh,** Johan Classon Rising (1617-1672), director-general of New Sweden, 1654-1655

in all the disposition and spirit of Homer. He catalogues the allies on both sides. He awakens our expectations, and fast engages our attention. All mankind are concerned in the important point now going to be decided. Endeavors are made to disclose futurity. Heaven itself is interested in the dispute. The earth totters, and nature seems to labor with the great event. This is his solemn, sublime manner of setting out. Thus he magnifies a war between two, as Rapin styles them, petty states; and thus artfully he supports a little subject by treating it in a great and noble method."

In like manner, having conducted my readers into the very teeth of peril—having followed the adventurous Peter and his band into foreign regions—surrounded by foes, and stunned by the horrid din of arms—at this important moment, while darkness and doubt hang o'er each coming chapter, I hold it meet to harangue them, and prepare them for the events that are to follow.

And here I would premise one great advantage which, as historian, I possess over my reader; and this it is, that though I cannot save the life of my favorite hero, nor absolutely contradict the event of a battle (both which liberties, though often taken by the French writers of the present reign, I hold to be utterly unworthy of a scrupulous historian), yet I can now and then make him bestow on his enemy a sturdy back-stroke sufficient to fell a giant; though, in honest truth, he may never have done anything of the kind—or I can drive his antagonist clear round and round the field, as did Homer make that fine fellow Hector scamper like a poltroon round the walls of Troy; for which, if ever they have encountered one another in the Elysian fields, I'll warrant the prince of poets has had to make the most humble apology.

I am aware that many conscientious readers will be ready to cry out "foul play!" whenever I render a little assistance to my hero—but I consider it one of those privileges exercised by historians of all ages—and one which has never been disputed. An historian is, in fact, as it were, bound in honor to stand by his hero—the fame of the latter is intrusted to his hands, and it is his duty to do the best by it he can. Never was there a general, an admiral, or any other commander, who, in giving account of any battle he had fought, did not sorely belabor the enemy; and I have no doubt that, had my heroes written the history of their own achievements, they would have dealt much harder blows than any that I shall recount. Standing forth, therefore, as the guardian of their fame, it behooves me to do them the same justice they would have done themselves; and if I happen to be a little hard upon the Swedes, I give free leave to any of their descendants, who may write a story of the State of Delaware, to take fair retaliation, and belabor Peter Stuyvesant as hard as they please.

Therefore stand by for broken heads and bloody noses! —My pen hath long itched for a battle—siege after siege have I carried on without blows or bloodshed; but now I have at length got a chance, and I vow to Heaven and St. Nicholas, that, let the chronicles of the times say what they please, neither Sallust, Livy, Tacitus, Polybius, nor any other historian, did ever record a fiercer fight than that in which my valiant chieftains are now about to engage.

And you, oh most excellent readers, whom, for your faithful adherence, I could cherish in the warmest corner of my heart—be not uneasy—trust the fate of our favorite Stuyvesant with me—for by the rood, come what may, I'll stick by Hardkoppig Piet to the last. I'll make him drive about these losels vile, as did the renowned Launcelot of the Lake a herd of recreant Cornish knights—and if he does fall, let me never draw my pen to fight another battle in behalf of a brave man, if I don't make these lubberly Swedes pay for it!

No sooner had Peter Stuyvesant arrived at Fort Christina than he proceeded without delay to intrench himself, and immediately on running his first parallel, dispatched Antony Van Corlear to summon the fortress to surrender. Van Corlear was received with all due formality, hoodwinked at the portal, and conducted through a pestiferous smell of salt fish and onions to the citadel, a substantial hut built of pine logs. His eyes were here uncovered,

---

59 **Sallust . . . Polybius**, ancient historians. Polybius was a Greek, the others Romans • 68 **losels**, worthless fellows (archaic) • 68 **Launcelot . . . Lake**, an echo of the **Morte d'Arthur** by Sir Thomas Malory (fl. 1470). The "driving about" of Cornish knights occurs chiefly in Bk. IX • 76 **Antony Van Corlear**, or Van Curler, a figure more renowned in folklore than in history. As governor's trumpeter, he is supposed by Irving to have given his name to Anthony's Nose, a mountain across the Hudson from West Point, and to have died in 1664 on a mission from Stuyvesant. Sent to arouse the Dutch colonists to their danger from the British, he discovered that the creek separating Manhattan from the Bronx was swollen by rains. Swearing to swim it "en spuyt den Duyvil," he started out, but was seized halfway across by the Devil. He freed himself once by a blast on his trumpet, but the Devil, recovering from surprise, dragged him down. Hence the name Spuyten Duyvil Creek

and he found himself in the august presence of Governor Risingh. This chieftain, as I have before noted, was a very giantly man; and was clad in a coarse blue coat, strapped round the waist with a leathern belt, which caused the enormous skirts and pockets to set off with a very warlike sweep. His ponderous legs were cased in a pair of foxy-colored jackboots, and he was straddling in the attitude of the Colossus of Rhodes before a bit of broken looking-glass, shaving himself with a villanously dull razor. This afflicting operation caused him to make a series of horrible grimaces, which heightened exceedingly the grisly terrors of his visage. On Antony Van Corlear's being announced, the grim commander paused for a moment, in the midst of one of his most hard-favored contortions, and after eying him askance over the shoulder, with a kind of snarling grin on his countenance, resumed his labors at the glass.

This iron harvest being reaped, he turned once more to the trumpeter, and demanded the purport of his errand. Antony Van Corlear delivered in a few words, being a kind of short-hand speaker, a long message from his excellency, recounting the whole history of the province, with a recapitulation of grievances, and enumeration of claims, and concluding with a peremptory demand of instant surrender; which done, he turned aside, took his nose between his thumb and fingers, and blew a tremendous blast, not unlike the flourish of a trumpet of defiance—which it had doubtless learned from a long and intimate neighborhood with the melodious instrument.

Governor Risingh heard him through, trumpet and all, but with infinite impatience; leaning at times, as was his usual custom, on the pommel of his sword, and at times twirling a huge steel watch-chain, or snapping his fingers. Van Corlear having finished, he bluntly replied, that Peter Stuyvesant and his summons might go to the d.....l, whither he hoped to send him and his crew of ragamuffins before supper time. Then unsheathing his brass-hilted sword, and throwing away the scabbard—"'Fore gad," quod he, "but I will not sheathe thee again until I make a scabbard of the smoke-dried leathern hide of this runagate Dutchman." Then having flung a fierce defiance in the teeth of his adversary by the lips of his messenger, the latter was reconducted to the portal, with all the ceremonious civility due to the trumpeter, squire, and ambassador of so great a commander; and being again unblinded, was courteously dismissed with a tweak of the nose, to assist him in recollecting his message.

No sooner did the gallant Peter receive this insolent reply than he let fly a tremendous volley of red-hot execrations, which would infallibly have battered down the fortifications, and blown up the powder magazine about the ears of the fiery Swede, had not the ramparts been remarkably strong, and the magazine bomb-proof. Perceiving that the works withstood this terrific blast, and that it was utterly impossible (as it really was in those unphilosophic days) to carry on a war with words, he ordered his merry men all to prepare for an immediate assault. But here a strange murmur broke out among his troops, beginning with the tribe of the Van Bummels, those valiant trenchermen of the Bronx, and spreading from man to man, accompanied with certain mutinous looks and discontented murmurs. For once in his life, and only for once, did the great Peter turn pale, for he verily thought his warriors were going to falter in this hour of perilous trial, and thus to tarnish forever the fame of the province of New Netherlands

But soon did he discover, to his great joy, that in his suspicion he deeply wronged his most undaunted army; for the cause of this agitation and uneasiness simply was, that the hour of dinner was at hand, and it would have almost broken the hearts of these regular Dutch warriors to have broken in upon the invariable routine of their habits. Besides, it was an established rule among our ancestors always to fight upon a full stomach; and to this may be doubtless attributed the circumstance that they came to be so renowned in arms.

And now are the hearty men of the Manhattoes, and their no less hearty comrades, all lustily engaged under the trees, buffeting stoutly with the contents of their wallets, and taking such affectionate embraces of their canteens and pottles, as though they verily believed they were to be the last. And as I foresee we shall have hot work in a page or two, I advise my readers to do the same, for which purpose I will bring this chapter to a close; giving them my word of honor, that no advantage shall be taken of this armistice to surprise, or in any wise molest, the honest Nederlanders, while at their vigorous repast.

---

40 **runagate,** vagabond • 60 **trenchermen,** hearty eaters • 77 **Manhattoes,** the inhabitants of Manhattan. The origin of the name, spelled variously as Monados, Manados, Mantoes, and Manhates, is obscure; one theory is that is came from the Spanish "monados," drunken men • 81 **pottles,** two-quart tankards (obsolete)

Chapter VIII

Containing the Most Horrible Battle Ever Recorded in Poetry or Prose; With the Admirable Exploits of Peter the Headstrong

"Now had the Dutchmen snatched a huge repast," and finding themselves wonderfully encouraged and animated thereby, prepared to take the field. Expectation, says the writer of the Stuyvesant manuscript—Expectation now stood on stilts. The world forgot to turn round, or rather stood still, that it might witness the affray; like a round-bellied alderman, watching the combat of two chivalrous flies upon his jerkin. The eyes of all mankind, as usual in such cases, were turned upon Fort Christina. The sun, like a little man in a crowd at a puppet-show, scampered about the heavens, popping his head here and there, and endeavoring to get a peep between the unmannerly clouds that obtruded themselves in his way. The historians filled their ink-horns—the poets went without their dinners, either that they might buy paper and goose-quills, or because they could not get anything to eat. Antiquity scowled sulkily out of its grave, to see itself outdone—while even Posterity stood mute, gazing in gaping ecstasy of retrospection on the eventful field.

The immortal deities, who whilom had seen service at the "affair" of Troy—now mounted their feather-bed clouds, and sailed over the plain, or mingled among the combatants in different disguises, all itching to have a finger in the pie. Jupiter sent off his thunderbolt to a noted coppersmith, to have it furbished up for the direful occasion. Venus vowed by her chastity to patronize the Swedes, and in semblance of a blear-eyed trull paraded the battlements of Fort Christina, accompanied by Diana, as a sergeant's widow, of cracked reputation. The noted bully, Mars, stuck two horse-pistols into his belt, shouldered a rusty firelock, and gallantly swaggered at their elbow, as a drunken corporal—while Apollo trudged in their rear, as a bandy-legged fifer, playing most villanously out of tune.

On the other side, the ox-eyed Juno, who had gained a pair of black eyes over night, in one of her curtain lectures with old Jupiter, displayed her haughty beauties on a baggage-wagon—Minerva, as a brawny gin-suttler, tucked up her skirts, brandished her fists, and swore most heroically, in exceeding bad Dutch (having but lately studied the language,) by way of keeping up the spirits of the soldiers; while Vulcan halted as a club-footed blacksmith, lately promoted to be a captain of militia. All was silent awe, or bustling preparation: war reared his horrid front, gnashed loud his iron fangs, and shook his direful crest of bristling bayonets.

And now the mighty chieftains marshalled out their hosts. Here stood stout Risingh, firm as a thousand rocks—incrusted with stockades, and intrenched to the chin in mud batteries. His valiant soldiery lined the breastwork in grim array, each having his mustachios fiercely greased, and his hair pomatumed back, and queued so stiffly, that he grinned above the ramparts like a grisly death's head.

There came on the intrepid Peter—his brows knit, his teeth set, his fists clenched, almost breathing forth volumes of smoke, so fierce was the fire that raged within his bosom. His faithful squire Van Corlear trudged valiantly at his heels, with his trumpet gorgeously bedecked with red and yellow ribbons, the remembrances of his fair mistresses at the Manhattoes. Then came waddling on the sturdy chivalry of the Hudson. There were the Van Wycks, and the Van Dycks, and the Ten Eycks—the Van Nesses, the Van Tassels, the Van Grolls; the Van Hoesens, the Van Giesons and the Van Blarcoms—the Van Warts, the Van Winkles, the Van Dams; the Van Pelts, the Van Rippers, and the Van Brunts. There were the Van Hornes, the Van Hooks, the Van Bunschotens; the Van Gelders, the Van Arsdales, and the Van Bummels; the Vander Belts, the Vander Hoofs, the Vander Voorts, the Vander Lyns, the Vander Pools, and the Vander Spiegles—then came the Hoffmans, the Hooghlands, the Hoppers, the Cloppers, the Ryckmans, the Dyckmans, the Hogebooms, the Rosebooms, the Oothouts, the Quackenbosses, the Roerbacks, the Garrebrantzes, the Bensons, the Brouwers, the Waldrons, the Onderdonks, the Varra Vangers, the Schermerhorns, the Stoutenburghs, the Brinkerhoffs, the Bontecous, the Knickerbockers, the Hockstrassers, the Ten Breecheses and the Tough Breecheses, with a host more of worthies, whose names are too crabbed to be written, or if they could be written, it would be impossible for man to utter—all fortified with a mighty dinner,

---

4 **Stuyvesant manuscript,** described in Irving's Preface as "an elaborate manuscript written in exceeding pure and classic low Dutch, excepting a few errors in orthography, which was found in the archives of the Stuyvesant family." It is apparently one of Irving's few fictitious authorities • 21 **the "affair" of Troy.** In this and the following paragraph Irving burlesques Bk. V of Homer's **Iliad** • 38 **gin-suttler,** gin-selling camp-follower • 52 **pomatumed,** smoothed with pomatum, a scented ointment • 62 **Van Wycks, etc.** See the catalogue of ships in Bk. I of the **Iliad**

and, to use the words of a great Dutch poet,

"Brimful of wrath and cabbage."

For an instant the mighty Peter paused in the midst of his career, and mounting on a stump, addressed his troops in eloquent Low Dutch, exhorting them to fight like *duyvels,* and assuring them that if they conquered, they should get plenty of booty—if they fell, they should be allowed the satisfaction, while dying, of reflecting that it was in the service of their country—and after they were dead, of seeing their names inscribed in the temple of renown, and handed down, in company with all the other great men of the year, for the admiration of posterity.—Finally, he swore to them, on the word of a governor (and they knew him too well to doubt it for a moment), that if he caught any mother's son of them looking pale, or playing craven, he would curry his hide till he made him run out of it like a snake in spring time. Then lugging out his trusty sabre, he brandished it three times over his head, ordered Van Corlear to sound a charge, and shouting the words "St. Nicholas and the Manhattoes!" courageously dashed forwards. His warlike followers, who had employed the interval in lighting their pipes, instantly stuck them into their mouths, gave a furious puff, and charged gallantly under cover of the smoke.

The Swedish garrison, ordered by the cunning Risingh not to fire until they could distinguish the whites of their assailants' eyes, stood in horrid silence on the covert-way, until the eager Dutchmen had ascended the glacis. Then did they pour into them such a tremendous volley, that the very hills quaked around, and were terrified even unto an incontinence of water, insomuch that certain springs burst forth from their sides, which continue to run unto the present day. Not a Dutchman but would have bitten the dust beneath that dreadful fire, had not the protecting Minerva kindly taken care that the Swedes should, one and all, observe their usual custom of shutting their eyes and turning away their heads at the moment of discharge.

The Swedes followed up their fire by leaping the counterscarp, and falling tooth and nail upon the foe with furious outcries. And now might be seen prodigies of valor, unmatched in history or song. Here was the sturdy Stoffel Brinkerhoff brandishing his quarter-staff, like the giant Blanderon his oak tree (for he scorned to carry any other weapon), and drumming a horrific tune upon the hard heads of the Swedish soldiery. There were the Van Kortlandts, posted at a distance, like the Locrian archers of yore, and plying it most potently with the longbow, for which they were so justly renowned. On a rising knoll were gathered the valiant men of Sing-Sing, assisting marvellously in the fight, by chanting the great song of St. Nicholas; but as to the Gardeniers of Hudson, they were absent on a marauding party, laying waste the neighboring watermelon patches.

In a different part of the field were the Van Grolls of Antony's Nose, struggling to get to the thickest of the fight, but horribly perplexed in a defile between two hills, by reason of the length of their noses. So also the Van Bunschotens of Nyack and Kakiat, so renowned for kicking with the left foot, were brought to a stand for want of wind, in consequence of the hearty dinner they had eaten, and would have been put to utter rout but for the arrival of a gallant corps of voltigeurs, composed of the Hoppers, who advanced nimbly to their assistance on one foot. Nor must I omit to mention the valiant achievements of Antony Van Corlear, who, for a good quarter of an hour, waged stubborn fight with a little pursy Swedish drummer; whose hide he drummed most magnificently, and whom he would infallibly have annihilated on the spot, but that he had come into the battle with no other weapon but his trumpet.

But now the combat thickened.—On came the mighty Jacobus Varra Vanger and the fighting men of the Wallabout; after them thundered the Van Pelts of Esopus, together with the Van Rippers and the Van Brunts, bearing down all before them—then the Suy Dams, and the Van Dams, pressing forward with many a blustering oath, at the head of the warriors of Hell-gate, clad in their thunder and lightning gaberdines; and lastly, the standard-bearers and body-guard of Peter Stuyvesant, bearing the great beaver of the Manhattoes.

And now commenced the horrid din, the desperate struggle, the maddening ferocity, the frantic desperation, the confusion and self-abandonment of war. Dutchman

---

26 **covert-way . . . glacis.** Irving's familiarity with the scientific terms of military fortification was probably derived from one of his favorite books, **Tristram Shandy.** The covert-way is a covered passage in the counterscarp, or outer wall of a trench; the glacis is the open slope in front of that wall • 43 **the giant Blanderon,** a name apparently invented by Irving. Perhaps he had in mind the giants of Greek mythology who revolted against Jupiter, using tree trunks for weapons • 46 **Locrian archers.** The Locrians were the most ancient of Greek peoples • 62 **voltigeurs,** members of a special skirmishing company attached to a French infantry regiment (obsolete)

and Swede commingled, tugged, panted, and blowed. The heavens were darkened with a tempest of missives. Bang! went the guns—whack! went the broad-swords—thump! went the cudgels—crash! went the musket-stocks—blows—kicks—cuffs—scratches—black eyes and bloody noses swelling the horrors of the scene! Thick thwack, cut and hack, helter-skelter, higgledy-piggledy, hurly-burly, head over heels, rough and tumble!—Dunder and blixum! swore the Dutchmen—splitter and splutter! cried the Swedes—Storm the works! shouted Hardkoppig Peter—Fire the mine! roared stout Risingh—Tanta-rarra-ra! twanged the trumpet of Antony Van Corlear—until all voice and sound became unintelligible—grunts of pain, yells of fury, and shouts of triumph mingling in one hideous clamor. The earth shook as if struck with a paralytic stroke—trees shrunk aghast, and withered at the sight—rocks burrowed in the ground like rabbits—and even Christina creek turned from its course, and ran up a hill in breathless terror!

Long hung the contest doubtful, for though a heavy shower of rain, sent by the "cloud-compelling Jove," in some measure cooled their ardor, as doth a bucket of water thrown on a group of fighting mastiffs, yet did they but pause for a moment, to return with tenfold fury to the charge. Just at this juncture a vast and dense column of smoke was seen slowly rolling toward the scene of battle. The combatants paused for a moment, gazing in mute astonishment, until the wind, dispelling the murky cloud, revealed the flaunting banner of Michael Paw, the Patroon of Communipaw. That valiant chieftain came fearlessly on at the head of a phalanx of oyster-fed Pavonians and a corps de reserve of the Van Arsdales and Van Bummels, who had remained behind to digest the enormous dinner they had eaten. These now trudged manfully forward, smoking their pipes with outrageous vigor, so as to raise the awful cloud that has been mentioned; but marching exceedingly slow, being short of leg, and of great rotundity in the belt.

And now the deities who watched over the fortunes of the Nederlanders having unthinkingly left the field, and stepped into a neighboring tavern to refresh themselves with a pot of beer, a direful catastrophe had well-nigh ensued. Scarce had the myrmidons of Michael Paw attained the front of battle, when the Swedes, instructed by the cunning Risingh, levelled a shower of blows full at their tobacco-pipes. Astounded at this assault, and dismayed at the havoc of their pipes, these ponderous warriors gave way, and like a drove of frightened elephants broke through the ranks of their own army. The little Hoppers were borne down in the surge: the sacred banner emblazoned with the gigantic oyster of Communipaw was trampled in the dirt: on blundered and thundered the heavy-sterned fugitives, the Swedes pressing on their rear and applying their feet *a parte poste* of the Van Arsdales and the Van Brummels with a vigor that prodigiously accelerated their movements—nor did the renowned Michael Paw himself fail to receive divers grievous and dishonorable visitations of shoe-leather.

But what, oh Muse! was the rage of Peter Stuyvesant, when from afar he saw his army giving way! In the transports of his wrath he sent forth a roar, enough to shake the very hills. The men of the Manhattoes plucked up new courage at the sound; or rather, they rallied at the voice of their leader, of whom they stood more in awe than of all of the Swedes in Christendom. Without waiting for their aid, the daring Peter dashed sword in hand into the thickest of the foe. Then might be seen achievements worthy of the days of the giants. Wherever he went, the enemy shrank before him; the Swedes fled to right and left, or were driven, like dogs, into their own ditch; but as he pushed forward singly with headlong courage, the foe closed behind and hung upon his rear. One aimed a blow full at his heart; but the protecting power which watches over the great and good turned aside the hostile blade and directed it to a side-pocket, where reposed an enormous iron tobacco-box, endowed, like the shield of Achilles, with supernatural powers, doubtless from bearing the portrait of the blessed St. Nicholas. Peter Stuyvesant turned like an angry bear upon the foe, and seizing him as he fled, by an immeasurable queue, "Ah, whoreson caterpillar," roared he, "here's what shall make worms' meat of thee!" So saying, he whirled his sword, and dealt a blow that would have decapitated the varlet, but that the pitying steel struck short and shaved the queue forever from his crown. At this moment an arquebusier levelled his piece from a neighboring mound, with deadly aim; but the watchful Minerva, who had just stopped to tie up her garter, seeing the peril of her favorite hero, sent old Boreas with his bellows, who, as the match descended to the pan, gave a blast that blew the priming from the touch-hole.

---

32 **corps de reserve,** reserve corps • 54 **a parte poste,** from the part after, here meaning to the backsides

ing the field from the top of a little ravelin, perceived his troops banged, beaten, and kicked by the invincible Peter. Drawing his falchion and uttering a thousand anathemas, he strode down to the scene of combat with some such thundering strides as Jupiter is said by Hesiod to have taken, when he strode down the spheres to hurl his thunder-bolts at the Titans.

When the rival heroes came face to face, each made a prodigious start in the style of a veteran stage-champion. Then did they regard each other for a moment with the bitter aspect of two furious ram-cats on the point of a clapper-clawing. Then did they throw themselves into one attitude, then into another, striking their swords on the ground, first on the right side, then on the left—at last at it they went, with incredible ferocity. Words cannot tell the prodigies of strength and valor displayed in this direful encounter—an encounter compared to which the far-famed battles of Ajax with Hector, of Æneas with Turnus, Orlando with Rodomont, Guy of Warwick with Colbrand the Dane, or of that renowned Welsh knight, Sir Owen of the Mountains with the giant Guylon, were all gentle sports and holiday recreations. At length the valiant Peter, watching his opportunity, aimed a blow, enough to cleave his adversary to the very chine; but Risingh, nimbly raising his sword, warded it off so narrowly, that glancing on one side, it shaved away a huge canteen in which he carried his liquor; thence pursuing its trenchant course, it severed off a deep coat pocket, stored with bread and cheese—which provant rolling among the armies, occasioned a fearful scrambling between the Swedes and Dutchmen, and made the general battle to wax more furious than ever.

Enraged to see his military stores laid waste, the stout Risingh, collecting all his forces, aimed a mighty blow full at the hero's crest. In vain did his fierce little cocked hat oppose its course. The biting steel clove through the stubborn ram beaver, and would have cracked the crown of any one not endowed with supernatural hardness of head; but the brittle weapon shivered in pieces on the skull of Hardkoppig Piet, shedding a thousand sparks, like beams of glory, round his grizzly visage.

The good Peter reeled with the blow, and turning up his eyes beheld a thousand suns, besides moons and stars, dancing about the firmament—at length, missing his footing, by reason of his wooden leg, down he came on his seat of honor with a crash which shook the surrounding

received into a cushion softer than velvet, which Providence, or Minerva, or St. Nicholas, or some cow, had benevolently prepared for his reception.

The furious Risingh, in spite of the maxim, cherished by all true knights, that "fair play is a jewel," hastened to take advantage of the hero's fall; but, as he stooped to give a fatal blow, Peter Stuyvesant dealt him a thwack over the sconce with his wooden leg, which set a chime of bells ringing triple bob majors in his cerebellum. The bewildered Swede staggered with the blow, and the wary Peter seizing a pocket pistol, which lay hard by, discharged it full at the head of the reeling Risingh. Let not my reader mistake, it was not a murderous weapon loaded with powder and ball, but a little sturdy stone pottle charged to the muzzle with a double dram of true Dutch courage, which the knowing Antony Van Corlear carried about him by way of replenishing his valor; and which had dropped from his wallet during his furious encounter with the drummer. The hideous weapon sang through the air, and true to its course as was the fragment of rock discharged at Hector by bully Ajax, encountered the head of the gigantic Swede with matchless violence.

This heaven-directed blow decided the battle. The ponderous pericranium of General Jan Risingh sank upon his breast; his knees tottered under him; a deathlike torpor seized upon his frame, and he tumbled to the earth with such violence, that old Pluto started with affright, lest he should have broken through the roof of his infernal palace.

His fall was the signal of defeat and victory—the Swedes gave way—the Dutch pressed forward, the former took to their heels, the latter hotly pursued.—Some entered with them, pell-mell, through the sally-port—others stormed the bastion, and others scrambled over the

---

6 Hesiod (fl 900 B C), Greek poet • **12 ram-cats . . . clapper-clawing,** tomcats about to fight (dialectal) • **19 Ajax . . . Guylon,** a list of famous combats in literature. Irving's ultimate sources were Bk XIV of the **Iliad,** Bk XII of the **Aeneid,** Bk VI of the **Orlando Inamorata** of Matteo Maria Boiardo (1434-1494), the metrical romance of **Guy of Warwick** (thirteenth century), and **The Mabinogion** (twelfth century) • **30 provant,** provender, an allowance of food • **38 ram beaver,** man's hat • **52 maxim,** usually attributed to Scott's **Redgauntlet** (1824). Since Irving's use is of an earlier date, it is probable that both authors drew upon some source in chivalric literature • **57 triple bob majors,** a bell-ringing term. Bob-majors are rung upon eight bells, a treble bob being a method which produces a dodging or irregular effect • **81 sally-port . . . bastion . . . curtain.** The sally-port is a small concealed gate in a fortification; the bastion, a projection; the curtain, the wall between bastions

curtain. Thus in a little while the fortress of Fort Christina, which, like another Troy, had stood a siege of full ten hours, was carried by assault, without the loss of a single man on either side. Victory, in the likeness of a gigantic ox-fly, sat perched upon the cocked hat of the gallant Stuyvesant; and it was declared, by all the writers whom he hired to write the history of his expedition, that on this memorable day he gained a sufficient quantity of glory to immortalize a dozen of the greatest heroes in Christendom.

Chapter IX

In Which Author and the Reader, While Reposing after the Battle, Fall into a Very Grave Discourse—after Which Is Recorded the Conduct of Peter Stuyvesant after His Victory

Thanks to St. Nicholas, we have safely finished this tremendous battle. let us sit down, my worthy reader, and cool ourselves, for I am in a prodigious sweat and agitation—truly this fighting of battles is hot work! and if your great commanders did but know what trouble they give their historians, they would not have the conscience to achieve so many horrible victories. But methinks I hear my reader complain, that throughout this boasted battle there is not the least slaughter, nor a single individual maimed, if we except the unhappy Swede, who was shorn of his queue by the trenchant blade of Peter Stuyvesant; all of which, he observes, is great outrage on probability, and highly injurious to the interest of the narration.

This is certainly an objection of no little moment, but it arises entirely from the obscurity enveloping the remote periods of time about which I have undertaken to write Thus, though doubtless, from the importance of the object, and the prowess of the parties concerned, there must have been terrible carnage, and prodigies of valor displayed before the walls of Christina, yet, notwithstanding that I have consulted every history, manuscript, and tradition, touching this memorable though long-forgotten battle, I cannot find mention made of a single man killed or wounded in the whole affair.

This is, without doubt, owing to the extreme modesty of our forefathers, who, unlike their descendants, were never prone to vaunt of their achievements; but it is a virtue which places their historian in a most embarrassing predicament; for, having promised my readers a hideous and unparalleled battle, and having worked them up into a warlike and bloodthirsty state of mind, to put them off without any havoc and slaughter would have been as bitter a disappointment as to summon a multitude of good people to attend an execution, and then cruelly balk them by a reprieve.

Had the fates only allowed me some half a score of dead men, I had been content; for I would have made them such heroes as abounded in the olden time, but whose race is now unfortunately extinct; any one of whom, if we may believe those authentic writers, the poets, could drive great armies, like sheep, before him, and conquer and desolate whole cities by his single arm.

But seeing that I had not a single life at my disposal, all that was left me was to make the most I could of my battle, by means of kicks, and cuffs, and bruises, and such like ignoble wounds. And here I cannot but compare my dilemma, in some sort, to that of the divine Milton, who, having arrayed with sublime preparation his immortal hosts against each other, is sadly put to it how to manage them, and how he shall make the end of his battle answer to the beginning, inasmuch as, being mere spirits, he cannot deal a mortal blow, nor even give a flesh wound to any of his combatants. For my part, the greatest difficulty I found was, when I had once put my warriors in a passion, and let them loose into the midst of the enemy, to keep them from doing mischief. Many a time had I to restrain the sturdy Peter from cleaving a gigantic Swede to the very waistband, or spitting half a dozen little fellows on his sword, like so many sparrows. And when I had set some hundred of missives flying in the air, I did not dare to suffer one of them to reach the ground, lest it should have put an end to some unlucky Dutchman.

The reader cannot conceive how mortifying it is to a writer thus in a manner to have his hands tied, and how many tempting opportunities I had to wink at, where I might have made as fine a death-blow as any recorded in history or song.

From my own experience I begin to doubt most potently of the authenticity of many of Homer's stories. I verily believe, that when he had once launched one of his favorite heroes among a crowd of the enemy, he cut down many an honest fellow, without any authority for so do-

58 Milton. See Bk VI of Paradise Lost

ing, excepting that he presented a fair mark—and that often a poor fellow was sent to grim Pluto's domains, merely because he had a name that would give a sounding turn to a period. But I disclaim all such unprincipled liberties—let me but have truth and the law on my side, and no man would fight harder than myself—but since the various records I consulted did not warrant it, I had too much conscience to kill a single soldier. By St. Nicholas, but it would have been a pretty piece of business! My enemies, the critics, who I foresee will be ready enough to lay any crime they can discover at my door, might have charged me with murder outright—and I should have esteemed myself lucky to escape with no harsher verdict than manslaughter!

And now, gentle reader, that we are tranquilly sitting down here, smoking our pipes, permit me to indulge in a melancholy reflection which at this moment passes across my mind. How vain, how fleeting, how uncertain are all those gaudy bubbles after which we are panting and toiling in this world of fair delusions! The wealth which the miser has amassed with so many weary days, so many sleepless nights, a spendthrift here may squander away in joyless prodigality; the noblest monuments which pride has ever reared to perpetuate a name, the hand of time will shortly tumble into ruins—and even the brightest laurels, gained by feats of arms, may wither, and be forever blighted by the chilling neglect of mankind. "How many illustrious heroes," says the good Boëtius, "who were once the pride and glory of the age, hath the silence of historians buried in eternal oblivion!" And this it was that induced the Spartans, when they went to battle, solemnly to sacrifice to the Muses, supplicating that their achievements might be worthily recorded. Had not Homer tuned his lofty lyre, observes the elegant Cicero, the valor of Achilles had remained unsung. And such, too, after all the toils and perils he had braved, after all the gallant actions he had achieved, such too had nearly been the fate of the chivalric Peter Stuyvesant, but that I fortunately stepped in and engraved his name on the indelible tablet of history, just as the caitiff Time was silently brushing it away forever!

The more I reflect, the more I am astonished at the important character of the historian. He is the sovereign censor to decide upon the renown or infamy of his fellow men. He is the patron of kings and conquerors, on whom it depends whether they shall live in after ages, or be forgotten as were their ancestors before them. The tyrant may oppress while the object of his tyranny exists; but the historian possesses superior might, for his power extends even beyond the grave. The shades of departed and long-forgotten heroes anxiously bend down from above, while he writes, watching each movement of his pen, whether it shall pass by their names with neglect, or inscribe them on the deathless pages of renown. Even the drop of ink which hangs trembling on his pen, which he may either dash upon the floor, or waste in idle scrawlings—that very drop, which to him is not worth the twentieth part of a farthing, may be of incalculable value to some departed worthy—may elevate half a score, in one moment, to immortality, who would have given worlds, had they possessed them, to insure the glorious meed.

Let not my readers imagine, however, that I am indulging in vainglorious boastings, or am anxious to blazon forth the importance of my tribe. On the contrary, I shrink when I reflect on the awful responsibility we historians assume—I shudder to think what direful commotions and calamities we occasion in the world—I swear to thee, honest reader, as I am a man, I weep at the very idea! Why, let me ask, are so many illustrious men daily tearing themselves away from the embraces of their families—slighting the smiles of beauty—despising the allurements of fortune, and exposing themselves to the miseries of war?—Why are kings desolating empires, and depopulating whole countries? In short, what induces all great men of all ages and countries to commit so many victories and misdeeds, and inflict so many miseries upon mankind and upon themselves, but the mere hope that some historian will kindly take them into notice, and admit them into a corner of his volume? For, in short, the mighty object of all their toils, their hardships, and privations, is nothing but *immortal fame.* And what is immortal fame?—why, half a page of dirty paper!—alas! alas! how humiliating the idea—that the renown of so great a man as Peter Stuyvesant would depend upon the pen of so little a man as Diedrich Knickerbocker!

And now, having refreshed ourselves after the fatigues and perils of the field, it behooves us to return once more to the scene of conflict, and inquire what were the results

---

of this renowned conquest. The fortress of Christina being the fair metropolis, and in a manner the key to New Sweden, its capture was speedily followed by the entire subjugation of the province. This was not a little promoted by the gallant and courteous deportment of the chivalric Peter. Though a man terrible in battle, yet in the hour of victory was he endued with a spirit generous, merciful, and humane. He vaunted not over his enemies, nor did he make defeat more galling by unmanly insults; for like that mirror of knightly virtue, the renowned Paladin Orlando, he was more anxious to do great actions than to talk of them after they were done. He put no man to death; ordered no houses to be burnt down; permitted no ravages to be perpetrated on the property of the vanquished; and even gave one of his bravest officers a severe admonishment with his walking staff, for having been detected in the act of sacking a hen-roost.

He moreover issued a proclamation, inviting the inhabitants to submit to the authority of their High Mightinesses; but declaring, with unexampled clemency, that whoever refused should be lodged at the public expense in a goodly castle provided for the purpose, and have an armed retinue to wait on them in the bargain. In consequence of these beneficent terms, about thirty Swedes stepped manfully forward and took the oath of allegiance; in reward for which they were graciously permitted to remain on the banks of the Delaware, where their descendants reside at this very day. I am told, however, by divers observant travellers, that they have never been able to get over the chap-fallen looks of their ancestors; but that they still do strangely transmit from father to son manifest marks of the sound drubbing given them by the sturdy Amsterdammers.

The whole country of New Sweden, having thus yielded to the arms of the triumphant Peter, was reduced to a colony called South River, and placed under the superintendence of a lieutenant-governor, subject to the control of the supreme government of New Amsterdam. This great dignitary was called Mynheer William Beekman, or rather *Beck*-man, who derived his surname, as did Ovidious Naso of yore, from the lordly dimensions of his nose, which projected from the centre of his countenance, like the beak of a parrot. He was the great progenitor of the tribe of the Beekmans, one of the most ancient and honorable families of the province; the members of which do gratefully commemorate the origin of their dignity; not as your noble families in England would do, by having a glowing proboscis emblazoned in their escutcheon, but by one and all wearing a right goodly nose, stuck in the very middle of their faces.

Thus was this perilous enterprise gloriously terminated, with the loss of only two men—Wolfert Van Horne, a tall spare man, who was knocked overboard by the boom of a sloop in a flaw of wind; and fat Brom Van Bummel, who was suddenly carried off by an indigestion; both, however, were immortalized, as having bravely fallen in the service of their country. True it is, Peter Stuyvesant had one of his limbs terribly fractured in the act of storming the fortress; but as it was fortunately his wooden leg, the wound was promptly and effectually healed.

And now nothing remains to this branch of my history but to mention that this immaculate hero, and his victorious army, returned joyously to the Manhattoes; where they made a solemn and triumphant entry, bearing with them the conquered Risingh, and the remnant of his battered crew, who had refused allegiance; for it appears that the gigantic Swede had only fallen into a swoon, at the end of the battle, from which he was speedily restored by a wholesome tweak of the nose.

These captive heroes were lodged, according to the promise of the governor, at the public expense, in a fair and spacious castle; being the prison of state, of which Stoffel Brinkerhoff, the immortal conqueror of Oyster Bay, was appointed governor; and which has ever since remained in the possession of his descendants.

It was a pleasant and goodly sight to witness the joy of the people of New Amsterdam, at beholding their warriors once more return from this war in the wilderness. The old women thronged round Antony Van Corlear, who gave the whole history of the campaign with matchless accuracy; saving that he took the credit of fighting the whole battle himself, and especially of vanquishing the stout Risingh; which he considered himself as clearly entitled to, seeing that it was effected by his own stone pottle.

The schoolmasters throughout the town gave holiday to their little urchins, who followed in droves after the drums, with paper caps on their heads, and sticks in their

breeches, thus taking the first lesson in the art of war. As to the sturdy rabble, they thronged at the heels of Peter Stuyvesant wherever he went, waving their greasy hats in the air, and shouting "Hardkoppig Piet forever!"

It was indeed a day of roaring rout and jubilee. A huge dinner was prepared at the Stadthouse in honor of the conquerors, where were assembled in one glorious constellation the great and little luminaries of New Amsterdam. There were the lordly Schout and his obsequious deputy—the burgomasters with their officious schepens at their elbows—the subaltern officers at the elbows of the schepens, and so on down to the lowest hanger-on of police: every tag having his rag at his side, to finish his pipe, drink off his heel-taps, and laugh at his flights of immortal dullness. In short—for a city feast is a city feast all the world over, and has been a city feast ever since the creation—the dinner went off much the same as do our great corporation junketings and Fourth of July banquets. Loads of fish, flesh, and fowl were devoured, oceans of liquor drank, thousands of pipes smoked, and many a dull joke honored with much obstreperous fat-sided laughter.

I must not omit to mention, that to this far-famed victory Peter Stuyvesant was indebted for another of his many titles—for so hugely delighted were the honest burghers with his achievements, that they unanimously honored him with the name of *Pieter de Groodt*, that is to say, Peter the Great, or, as it was translated into English by the people of New Amsterdam, for the benefit of their New England visitors, *Piet de pig*—an appellation which he maintained even unto the day of his death

From • The Sketch Book

The Legend of Sleepy Hollow

Found Among the Papers of the Late Diedrich Knickerbocker

The Sketchbook of Geoffrey Crayon, Gent. was first published in seven numbers in New York, between June 23, 1819, and September 13, 1820. In his Preface to the revised edition of 1848, Irving said that most of the essays and stories therein were part of an intended series which, before his plan had matured, he was compelled by circumstances to send piecemeal to the United States.

In addition to "The Author's Account of Himself" and "L'Envoy," collected editions usually contain thirty-two pieces; the original seven numbers offered only twenty-five. Among the additions were "Traits of Indian Character" and "Philip of Pokanoket," previously printed in the **Analectic Magazine** of Philadelphia. The greater part of **The Sketch Book** is composed of essays on English life and manners with a decidedly nostalgic flavor. Among the more famous are "Rural Life in England" (in No. II), "The Boar's Head Tavern, Eastcheap" (No. III), a series on Christmas customs at the country house of a Yorkshire squire, "Bracebridge Hall" (in No. V), "John Bull" (No. VI), and "Westminster Abbey" and "Stratford-on-Avon" (No. VII). Their emphasis upon the common literary and social heritage of Americans and Englishmen doubtless contributed to international good will in an era when misunderstanding seemed inevitable. That Irving was no sycophantic Anglophile was shown by his vigorous "English Writers on America" (No. II), a frank warning to England that "should those reverses overtake her, from which the proudest empires have not been exempt," she might regret having lost the friendship of the United States. **The Sketch Book** has remained a classic, however, largely because of two sketches or short stories, "Rip Van Winkle" (No. I) and "The Legend of Sleepy Hollow" (No. VI), which are unquestionably among the best-known tales in the English language.

Both stories were written in England in 1818, while Irving was absorbed in what he called "the rich mine of German literature," whose discovery he probably owed to the enthusiasm of Scott. Scholarly investigation has shown that Irving followed German legends for both plots (see especially H. A. Pochmann's article in **Studies in Philology** for July 1930); his many allusions and tags of quotation reveal, in fact, how conscious he was of liter-

ary tradition. Yet, bookish as they are, both tales are skillfully localized and depend for their effect upon much the same feeling for history and folk life which characterizes the History of New York. Both of them continue the pleasant fiction of Diedrich Knickerbocker; both, although thin in plot and unremarkable for characterization, display a perfection of tone and the delight in details of living which are Irving's finest qualities.

A pleasing land of drowsy head it was,
Of dreams that wave before the half-shut eye;
And of gay castles in the clouds that pass,
For ever flushing round a summer sky.
CASTLE OF INDOLENCE

In the bosom of one of those spacious coves which indent the eastern shore of the Hudson, at that broad expansion of the river denominated by the ancient Dutch navigators the Tappan Zee, and where they always prudently shortened sail, and implored the protection of St. Nicholas when they crossed, there lies a small market-town or rural port, which by some is called Greensburgh, but which is more generally and properly known by the name of Tarry Town. This name was given, we are told, in former days, by the good housewives of the adjacent country, from the inveterate propensity of their husbands to linger about the village tavern on market days. Be that as it may, I do not vouch for the fact, but merely advert to it, for the sake of being precise and authentic. Not far from this village, perhaps about two miles, there is a little valley, or rather lap of land, among high hills, which is one of the quietest places in the whole world. A small brook glides through it, with just murmur enough to lull one to repose; and the occasional whistle of a quail, or tapping of a woodpecker, is almost the only sound that ever breaks in upon the uniform tranquillity.

I recollect that, when a stripling, my first exploit in squirrel-shooting was in a grove of tall walnut-trees that shades one side of the valley. I had wandered into it at noon time, when all nature is peculiarly quiet, and was startled by the roar of my own gun, as it broke the Sabbath stillness around, and was prolonged and reverberated by the angry echoes. If ever I should wish for a retreat, whither I might steal from the world and its distractions, and dream quietly away the remnant of a troubled life, I know of none more promising than this little valley.

From the listless repose of the place, and the peculiar character of its inhabitants, who are descendants from the original Dutch settlers, this sequestered glen has long been known by the name of SLEEPY HOLLOW, and its rustic lads are called the Sleepy Hollow Boys throughout all the neighboring country. A drowsy, dreamy influence seems to hang over the land, and to pervade the very atmosphere. Some say that the place was bewitched by a high German doctor, during the early days of the settlement, others, that an old Indian chief, the prophet or wizard of his tribe, held his powwows there before the country was discovered by Master Hendrick Hudson. Certain it is, the place still continues under the sway of some witching power, that holds a spell over the minds of the good people, causing them to walk in a continual reverie. They are given to all kinds of marvellous beliefs, are subject to trances and visions; and frequently see strange sights, and hear music and voices in the air. The whole neighborhood abounds with local tales, haunted spots, and twilight superstitions; stars shoot and meteors glare oftener across the valley than in any other part of the country, and the nightmare, with her whole nine fold, seems to make it the favorite scene of her gambols.

The dominant spirit, however, that haunts this enchanted region, and seems to be commander-in-chief of all the powers of the air, is the apparition of a figure on horseback without a head. It is said by some to be the ghost of a Hessian trooper, whose head had been carried away by a cannon-ball, in some nameless battle during the revolutionary war; and who is ever and anon seen by the country folk, hurrying along in the gloom of night, as if on the wings of the wind. His haunts are not confined to the valley, but extend at times to the adjacent roads, and especially to the vicinity of a church

---

Text: the revised edition of 1848 • **Castle of Indolence** (1748), an English poem in imitation of Spenser, by James Thomson (1700-1848). The lines appear in Bk. I • **9 Tarry Town,** one of the first Dutch settlements on the Hudson. It was Irving's home after 1835, and he was buried in the cemetery at Sleepy Hollow • **16 lap,** surface or bosom (archaic and poetic) • **42 high German,** southern or highland German • **45 Hendrick Hudson** (d. 1611?) entered the river bearing his name in 1609 • **56 nine fold,** an allusion to a line in **King Lear,** Act III, Scene iv. In folk belief the nightmare was a demon, nine fold refers to her offspring (from **foals**) or familiars. See note, pp. 73 and 75

at no great distance. Indeed, certain of the most authentic historians of those parts, who have been careful in collecting and collating the floating facts concerning this spectre, allege that the body of the trooper, having been buried in the church-yard, the ghost rides forth to the scene of battle in nightly quest of his head; and that the rushing speed with which he sometimes passes along the Hollow, like a midnight blast, is owing to his being belated, and in a hurry to get back to the church-yard before daybreak.

Such is the general purport of this legendary superstition, which has furnished materials for many a wild story in that region of shadows; and the spectre is known, at all the country firesides, by the name of the Headless Horseman of Sleepy Hollow.

It is remarkable that the visionary propensity I have mentioned is not confined to the native inhabitants of the valley, but is unconsciously imbibed by every one who resides there for a time. However wide awake they may have been before they entered that sleepy region, they are sure, in a little time, to inhale the witching influence of the air, and begin to grow imaginative—to dream dreams, and see apparitions.

I mention this peaceful spot with all possible laud; for it is in such little retired Dutch valleys, found here and there embosomed in the great State of New-York, that population, manners, and customs, remain fixed; while the great torrent of migration and improvement, which is making such incessant changes in other parts of this restless country, sweeps by them unobserved. They are like those little nooks of still water which border a rapid stream; where we may see the straw and bubble riding quietly at anchor, or slowly revolving in their mimic harbor, undisturbed by the rush of the passing current. Though many years have elapsed since I trod the drowsy shades of Sleepy Hollow, yet I question whether I should not still find the same trees and the same families vegetating in its sheltered bosom.

In this by-place of nature, there abode, in a remote period of American history, that is to say, some thirty years since, a worthy wight of the name of Ichabod Crane; who sojourned, or, as he expressed it, "tarried," in Sleepy Hollow, for the purpose of instructing the children of the vicinity. He was a native of Connecticut; a State which supplies the Union with pioneers for the mind as well as for the forest, and sends forth yearly its legions of frontier woodsmen and country schoolmasters.

The cognomen of Crane was not inapplicable to his person. He was tall, but exceedingly lank, with narrow shoulders, long arms and legs, hands that dangled a mile out of his sleeves, feet that might have served for shovels, and his whole frame most loosely hung together. His head was small, and flat at top, with huge ears, large green glassy eyes, and a long snipe nose, so that it looked like a weather-cock, perched upon his spindle neck, to tell which way the wind blew. To see him striding along the profile of a hill on a windy day, with his clothes bagging and fluttering about him, one might have mistaken him for the genius of famine descending upon the earth, or some scarecrow eloped from a cornfield.

His school-house was a low building of one large room, rudely constructed of logs; the windows partly glazed, and partly patched with leaves of old copy-books. It was most ingeniously secured at vacant hours, by a withe twisted in the handle of the door, and stakes set against the window shutters; so that, though a thief might get in with perfect ease, he would find some embarrassment in getting out; an idea most probably borrowed by the architect, Yost Van Houten, from the mystery of an eel-pot. The school-house stood in a rather lonely but pleasant situation, just at the foot of a woody hill, with a brook running close by, and a formidable birch tree growing at one end of it. From hence the low murmur of his pupils' voices, conning over their lessons, might be heard in a drowsy summer's day, like the hum of a bee-hive; interrupted now and then by the authoritative voice of the master, in the tone of menace or command; or, peradventure, by the appalling sound of the birch, as he urged some tardy loiterer along the flowery path of knowledge. Truth to say, he was a conscientious man, and ever bore in mind the golden maxim, "Spare the rod and spoil the child."—Ichabod Crane's scholars certainly were not spoiled.

I would not have it imagined, however, that he was one of those cruel potentates of the school, who joy in the smart of their subjects; on the contrary, he administered justice with discrimination rather than severity; taking the burthen off the backs of the weak, and

---

10 before daybreak. See the actions of the ghost of Hamlet's father, in **Hamlet**, Act I • **59 genius**, guiding spirit • **82 "Spare . . . child."** See Proverbs 13-24: "He that spareth his rod hateth his son." In the form used here the maxim first appeared in Part II (1664) of **Hudibras**, by Samuel Butler (1612-1680), an English satirical poet

laying it on those of the strong. Your mere puny stripling, that winced at the least flourish of the rod, was passed by with indulgence; but the claims of justice were satisfied by inflicting a double portion on some little, tough, wrong-headed, broad-skirted Dutch urchin, who sulked and swelled and grew dogged and sullen beneath the birch. All this he called "doing his duty by their parents;" and he never inflicted a chastisement without following it by the assurance, so consolatory to the smarting urchin, that "he would remember it, and thank him for it the longest day he had to live."

When school hours were over, he was even the companion and playmate of the larger boys; and on holiday afternoons would convoy some of the smaller ones home, who happened to have pretty sisters, or good housewives for mothers, noted for the comforts of the cupboard. Indeed it behooved him to keep on good terms with his pupils. The revenue arising from his school was small, and would have been scarcely sufficient to furnish him with daily bread, for he was a huge feeder, and though lank, had the dilating powers of an anaconda; but to help out his maintenance, he was, according to country custom in those parts, boarded and lodged at the houses of the farmers, whose children he instructed. With these he lived successively a week at a time; thus going the rounds of the neighborhood, with all his worldly effects tied up in a cotton handkerchief.

That all this might not be too onerous on the purses of his rustic patrons, who are apt to consider the costs of schooling a grievous burden, and schoolmasters as mere drones, he had various ways of rendering himself both useful and agreeable. He assisted the farmers occasionally in the lighter labors of their farms; helped to make hay; mended the fences; took the horses to water; drove the cows from pasture; and cut wood for the winter fire. He laid aside, too, all the dominant dignity and absolute sway with which he lorded it in his little empire, the school, and became wonderfully gentle and ingratiating. He found favor in the eyes of the mothers, by petting the children, particularly the youngest; and like the lion bold, which whilom so magnanimously the lamb did hold, he would sit with a child on one knee, and rock a cradle with his foot for whole hours together.

In addition to his other vocations, he was the singing-master of the neighborhood, and picked up many bright shillings by instructing the young folks in psalmody. It was a matter of no little vanity to him, on Sundays, to take his station in front of the church gallery, with a band of chosen singers; where, in his own mind, he completely carried away the palm from the parson. Certain it is, his voice resounded far above all the rest of the congregation; and there are peculiar quavers still to be heard in that church, and which may even be heard half a mile off, quite to the opposite side of the mill-pond, on a still Sunday morning, which are said to be legitimately descended from the nose of Ichabod Crane. Thus, by divers little make-shifts in that ingenious way which is commonly denominated "by hook and by crook," the worthy pedagogue got on tolerably enough, and was thought, by all who understood nothing of the labor of headwork, to have a wonderfully easy life of it.

The schoolmaster is generally a man of some importance in the female circle of a rural neighborhood; being considered a kind of idle gentlemanlike personage, of vastly superior taste and accomplishments to the rough country swains, and, indeed, inferior in learning only to the parson. His appearance, therefore, is apt to occasion some little stir at the tea-table of a farmhouse, and the addition of a supernumerary dish of cakes or sweetmeats, or, peradventure, the parade of a silver tea-pot. Our man of letters, therefore, was peculiarly happy in the smiles of all the country damsels. How he would figure among them in the church-yard, between services on Sundays! gathering grapes for them from the wild vines that overrun the surrounding trees; reciting for their amusement all the epitaphs on the tombstones; or sauntering, with a whole bevy of them, along the banks of the adjacent mill-pond; while the more bashful country bumpkins hung sheepishly back, envying his superior elegance and address.

From his half itinerant life, also, he was a kind of travelling gazette, carrying the whole budget of local gossip from house to house; so that his appearance was always greeted with satisfaction. He was, moreover, esteemed by the women as a man of great erudition, for he had read several books quite through, and was a perfect master of Cotton Mather's history of New-England

---

40 **the lion bold . . . ,** a couplet which appears in the 1747 edition of **The New England Primer** • 58 **"by . . . crook,"** a phrase from "Colyn Cloute" (1523), by the English poet, John Skelton (1460?-1529) • 87 **Cotton Mather's history,** a reference either to the **Memorable Providences** (1689) or to **Wonders of the Invisible World** (1693). See p. 72

Witchcraft, in which, by the way, he most firmly and potently believed.

He was, in fact, an odd mixture of small shrewdness and simple credulity. His appetite for the marvellous, and his powers of digesting it, were equally extraordinary; and both had been increased by his residence in this spell-bound region. No tale was too gross or monstrous for his capacious swallow. It was often his delight, after his school was dismissed in the afternoon, to stretch himself on the rich bed of clover, bordering the little brook that whimpered by his school-house, and there con over old Mather's direful tales, until the gathering dusk of the evening made the printed page a mere mist before his eyes. Then, as he wended his way, by swamp and stream and awful woodland, to the farmhouse where he happened to be quartered, every sound of nature, at that witching hour, fluttered his excited imagination: the moan of the whip-poor-will from the hill-side; the boding cry of the tree-toad, that harbinger of storm; the dreary hooting of the screech-owl, or the sudden rustling in the thicket of birds frightened from their roost. The fire-flies, too, which sparkled most vividly in the darkest places, now and then startled him, as one of uncommon brightness would stream across his path; and if, by chance, a huge blockhead of a beetle came winging his blundering flight against him, the poor varlet was ready to give up the ghost, with the idea that he was struck with a witch's token. His only resource on such occasions, either to drown thought, or drive away evil spirits, was to sing psalm tunes;—and the good people of Sleepy Hollow, as they sat by their doors of an evening, were often filled with awe, at hearing his nasal melody, "in linked sweetness long drawn out," floating from the distant hill, or along the dusky road.

Another of his sources of fearful pleasure was, to pass long winter evenings with the old Dutch wives, as they sat spinning by the fire, with a row of apples roasting and spluttering along the hearth, and listen to their marvellous tales of ghosts and goblins, and haunted fields, and haunted brooks, and haunted bridges, and haunted houses, and particularly of the headless horseman, or galloping Hessian of the Hollow, as they sometimes called him. He would delight them equally by his anecdotes of witchcraft, and of the direful omens and portentous sights and sounds in the air, which prevailed in the earlier times of Connecticut; and would frighten them wofully with speculations upon comets and shooting stars; and with the alarming fact that the world did absolutely turn round, and that they were half the time topsy-turvy!

But if there was a pleasure in all this, while snugly cuddling in the chimney corner of a chamber that was all of a ruddy glow from the crackling wood fire, and where, of course, no spectre dared to show his face, it was dearly purchased by the terrors of his subsequent walk homewards. What fearful shapes and shadows beset his path amidst the dim and ghastly glare of a snowy night!—With what wistful look did he eye every trembling ray of light streaming across the waste fields from some distant window!—How often was he appalled by some shrub covered with snow, which, like a sheeted spectre, beset his very path!—How often did he shrink with curdling awe at the sound of his own steps on the frosty crust beneath his feet; and dread to look over his shoulder, lest he should behold some uncouth being tramping close behind him!—and how often was he thrown into complete dismay by some rushing blast, howling among the trees, in the idea that it was the Galloping Hessian on one of his nightly scourings!

All these, however, were mere terrors of the night, phantoms of the mind that walk in darkness; and though he had seen many spectres in his time, and been more than once beset by Satan in divers shapes, in his lonely perambulations, yet daylight put an end to all these evils; and he would have passed a pleasant life of it, in despite of the devil and all his works, if his path had not been crossed by a being that causes more perplexity to mortal man than ghosts, goblins, and the whole race of witches put together, and that was—a woman.

Among the musical disciples who assembled, one evening in each week, to receive his instructions in psalmody, was Katrina Van Tassel, the daughter and only child of a substantial Dutch farmer. She was a blooming lass of fresh eighteen; plump as a partridge; ripe and melting and rosy cheeked as one of her father's peaches, and universally famed, not merely for her beauty, but her vast expectations. She was withal a little of a coquette, as

---

18 **whip-poor-will.** "The whip-poor-will is a bird which is only heard at night. It receives its name from its note, which is thought to resemble those words" (Irving's note, added after 1820) • 32 **"in linked . . . out,"** a line from "L'Allegro" by John Milton (1608-1674)

might be perceived even in her dress, which was a mixture of ancient and modern fashions, as most suited to set off her charms. She wore the ornaments of pure yellow gold, which her great-great-grandmother had brought over from Saardam; the tempting stomacher of the olden time; and withal a provokingly short petticoat, to display the prettiest foot and ankle in the country round.

Ichabod Crane had a soft and foolish heart towards the sex; and it is not to be wondered at, that so tempting a morsel soon found favor in his eyes; more especially after he had visited her in her paternal mansion. Old Baltus Van Tassel was a perfect picture of a thriving, contented, liberal-hearted farmer. He seldom, it is true, sent either his eyes or his thoughts beyond the boundaries of his own farm; but within those every thing was snug, happy, and well-conditioned. He was satisfied with his wealth, but not proud of it; and piqued himself upon the hearty abundance, rather than the style in which he lived. His stronghold was situated on the banks of the Hudson, in one of those green, sheltered, fertile nooks, in which the Dutch farmers are so fond of nestling. A great elm-tree spread its broad branches over it; at the foot of which bubbled up a spring of the softest and sweetest water, in a little well, formed of a barrel; and then stole sparkling away through the grass, to a neighboring brook, that bubbled along among alders and dwarf willows. Hard by the farmhouse was a vast barn, that might have served for a church; every window and crevice of which seemed bursting forth with the treasures of the farm; the flail was busily resounding within it from morning to night; swallows and martins skimmed twittering about the eaves; and rows of pigeons, some with one eye turned up, as if watching the weather, some with their heads under their wings, or buried in their bosoms, and others swelling, and cooing, and bowing about their dames, were enjoying the sunshine on the roof. Sleek unwieldy porkers were grunting in the repose and abundance of their pens; whence sallied forth, now and then, troops of sucking pigs, as if to snuff the air. A stately squadron of snowy geese were riding in an adjoining pond, convoying whole fleets of ducks; regiments of turkeys were gobbling through the farmyard, and guinea fowls fretting about it, like ill-tempered housewives, with their peevish discontented cry. Before the barn door strutted the gallant cock, that pattern of a husband, a warrior, and a fine gentleman, clapping his burnished wings, and crowing in the pride and gladness of his heart—sometimes tearing up the earth with his feet, and then generously calling his ever-hungry family of wives and children to enjoy the rich morsel which he had discovered.

The pedagogue's mouth watered, as he looked upon this sumptuous promise of luxurious winter fare. In his devouring mind's eye, he pictured to himself every roasting-pig running about with a pudding in his belly, and an apple in his mouth; the pigeons were snugly put to bed in a comfortable pie, and tucked in with a coverlet of crust; the geese were swimming in their own gravy; and the ducks pairing cosily in dishes, like snug married couples, with a decent competency of onion sauce. In the porkers he saw carved out the future sleek side of bacon, and juicy relishing ham; not a turkey but he beheld daintily trussed up, with its gizzard under its wing, and, peradventure, a necklace of savory sausages; and even bright chanticleer himself lay sprawling on his back, in a side-dish, with uplifted claws, as if craving that quarter which his chivalrous spirit disdained to ask while living.

As the enraptured Ichabod fancied all this and as he rolled his great green eyes over the fat meadow-lands, the rich fields of wheat, of rye, of buckwheat, and Indian corn, and the orchards burthened with ruddy fruit, which surrounded the warm tenement of Van Tassel, his heart yearned after the damsel who was to inherit these domains, and his imagination expanded with the idea, how they might be readily turned into cash, and the money invested in immense tracts of wild land, and shingle palaces in the wilderness. Nay, his busy fancy already realized his hopes, and presented to him the blooming Katrina, with a whole family of children, mounted on the top of a wagon loaded with household trumpery, with pots and kettles dangling beneath; and he beheld himself bestriding a pacing mare, with a colt at her heels, setting out for Kentucky, Tennessee, or the Lord knows where.

When he entered the house the conquest of his heart was complete. It was one of those spacious farmhouses, with high-ridged, but lowly-sloping roofs, built in the style handed down from the first Dutch settlers; the low projecting eaves forming a piazza along the front,

---

5 Saardam, modern Zaandam, a village near Amsterdam

capable of being closed up in bad weather. Under this were hung flails, harness, various utensils of husbandry, and nets for fishing in the neighboring river. Benches were built along the sides for summer use; and a great spinning-wheel at one end, and a churn at the other, showed the various uses to which this important porch might be devoted. From this piazza the wondering Ichabod entered the hall, which formed the centre of the mansion and the place of usual residence. Here, rows of resplendent pewter, ranged on a long dresser, dazzled his eyes. In one corner stood a huge bag of wool ready to be spun; in another a quantity of linsey-woolsey just from the loom; ears of Indian corn, and strings of dried apples and peaches, hung in gay festoons along the walls, mingled with the gaud of red peppers; and a door left ajar gave him a peep into the best parlor, where the claw-footed chairs, and dark mahogany tables, shone like mirrors; and irons, with their accompanying shovel and tongs, glistened from their covert of asparagus tops; mock-oranges and conch-shells decorated the mantelpiece; strings of various colored birds' eggs were suspended above it: a great ostrich egg was hung from the centre of the room, and a corner cupboard, knowingly left open, displayed immense treasures of old silver and well-mended china.

From the moment Ichabod laid his eyes upon these regions of delight, the peace of his mind was at an end, and his only study was how to gain the affections of the peerless daughter of Van Tassel. In this enterprise, however, he had more real difficulties than generally fell to the lot of a knight-errant of yore, who seldom had any thing but giants, enchanters, fiery dragons, and such like easily-conquered adversaries, to contend with; and had to make his way merely through gates of iron and brass, and walls of adamant, to the castle keep, where the lady of his heart was confined; all which he achieved as easily as a man would carve his way to the centre of a Christmas pie; and then the lady gave him her hand as a matter of course. Ichabod, on the contrary, had to win his way to the heart of a country coquette, beset with a labyrinth of whims and caprices, which were for ever presenting new difficulties and impediments; and he had to encounter a host of fearful adversaries of real flesh and blood, the numerous rustic admirers, who beset every portal to her heart; keeping a watchful and angry eye upon each other, but ready to fly out in the common cause against any new competitor.

Among these the most formidable was a burly, roaring, roystering blade, of the name of Abraham, or, according to the Dutch abbreviation, Brom Van Brunt, the hero of the country round, which rang with his feats of strength and hardihood. He was broad-shouldered and double-jointed, with short curly black hair, and a bluff, but not unpleasant countenance, having a mingled air of fun and arrogance. From his Herculean frame and great powers of limb, he had received the nickname of BROM BONES, by which he was universally known. He was famed for great knowledge and skill in horsemanship, being as dexterous on horseback as a Tartar. He was foremost at all races and cock-fights; and, with the ascendency which bodily strength acquires in rustic life, was the umpire in all disputes, setting his hat on one side, and giving his decisions with an air and tone admitting of no gainsay or appeal. He was always ready for either a fight or a frolic; but had more mischief than ill-will in his composition; and, with all his overbearing roughness, there was a strong dash of waggish good humor at bottom. He had three or four boon companions, who regarded him as their model, and at the head of whom he scoured the country, attending every scene of feud or merriment for miles round. In cold weather he was distinguished by a fur cap, surmounted with a flaunting fox's tail; and when the folks at a country gathering descried this well-known crest at a distance, whisking about among a squad of hard riders, they always stood by for a squall. Sometimes his crew would be heard dashing along past the farmhouses at midnight, with whoop and halloo, like a troop of Don Cossacks; and the old dames, startled out of their sleep, would listen for a moment till the hurry-scurry had clattered by, and then exclaim, "Ay, there goes Brom Bones and his gang!" The neighbors looked upon him with a mixture of awe, admiration, and good-will; and when any madcap prank, or rustic brawl, occurred in the vicinity, always shook their heads, and warranted Brom Bones was at the bottom of it.

This rantipole hero had for some time singled out the

18 and irons. 1820: andirons. The 1848 text is probably in error • 20 mock-oranges, probably syringas • 78 Don Cossacks, Cossacks of the Don River region of Russia. The Cossacks were originally tribes notable for their strong military (and especially their cavalry) organization; the name is variously interpreted as meaning "adventurers," "freebooters," and "plunderers" • 87 rantipole, reckless, wild (rare)

blooming Katrina for the object of his uncouth gallantries, and though his amorous toyings were something like the gentle caresses and endearments of a bear, yet it was whispered that she did not altogether discourage his hopes. Certain it is, his advances were signals for rival candidates to retire, who felt no inclination to cross a lion in his amours; insomuch, that when his horse was seen tied to Van Tassel's paling, on a Sunday night, a sure sign that his master was courting, or, as it is termed, "sparking," within all other suitors passed by in despair, and carried the war into other quarters.

Such was the formidable rival with whom Ichabod Crane had to contend, and, considering all things, a stouter man than he would have shrunk from the competition, and a wiser man would have despaired. He had, however, a happy mixture of pliability and perseverance in his nature; he was in form and spirit like a supple-jack—yielding, but tough; though he bent, he never broke; and though he bowed beneath the slightest pressure, yet, the moment it was away—jerk! he was erect, and carried his head as high as ever.

To have taken the field openly against his rival would have been madness; for he was not a man to be thwarted in his amours, any more than that stormy lover, Achilles. Ichabod, therefore, made his advances in a quiet and gently-insinuating manner. Under cover of his character of singing-master, he made frequent visits at the farmhouse; not that he had any thing to apprehend from the meddlesome interference of parents, which is so often a stumbling-block in the path of lovers. Balt Van Tassel was an easy indulgent soul; he loved his daughter better even than his pipe, and, like a reasonable man and an excellent father, let her have her way in every thing. His notable little wife, too, had enough to do to attend to her housekeeping and manage her poultry; for, as she sagely observed, ducks and geese are foolish things, and must be looked after, but girls can take care of themselves. Thus while the busy dame bustled about the house, or plied her spinning-wheel at one end of the piazza, honest Balt would sit smoking his evening pipe at the other, watching the achievements of a little wooden warrior, who, armed with a sword in each hand, was most valiantly fighting the wind on the pinnacle of the barn. In the mean time, Ichabod would carry on his suit with the daughter by the side of the spring under the great elm, or sauntering along in the twilight, that hour so favorable to the lover's eloquence.

I profess not to know how women's hearts are wooed and won. To me they have always been matters of riddle and admiration. Some seem to have but one vulnerable point, or door of access; while others have a thousand avenues, and may be captured in a thousand different ways. It is a great triumph of skill to gain the former, but a still greater proof of generalship to maintain possession of the latter, for the man must battle for his fortress at every door and window. He who wins a thousand common hearts is therefore entitled to some renown; but he who keeps undisputed sway over the heart of a coquette, is indeed a hero. Certain it is, this was not the case with the redoubtable Brom Bones; and from the moment Ichabod Crane made his advances, the interests of the former evidently declined; his horse was no longer seen tied at the palings on Sunday nights, and a deadly feud gradually arose between him and the preceptor of Sleepy Hollow.

Brom, who had a degree of rough chivalry in his nature, would fain have carried matters to open warfare, and have settled their pretensions to the lady, according to the mode of those most concise and simple reasoners, the knights-errant of yore—by single combat; but Ichabod was too conscious of the superior might of his adversary to enter the lists against him: he had overheard a boast of Bones, that he would "double the schoolmaster up, and lay him on a shelf of his own school-house;" and he was too wary to give him an opportunity. There was something extremely provoking in this obstinately pacific system; it left Brom no alternative but to draw upon the funds of rustic waggery in his disposition, and to play off boorish practical jokes upon his rival. Ichabod became the object of whimsical persecution to Bones, and his gang of rough riders. They harried his hitherto peaceful domains; smoked out his singing school, by stopping up the chimney; broke into the school-house at night, in spite of its formidable fastenings of withe and window stakes, and turned every thing topsy-turvy: so that the poor schoolmaster began to think all the witches in the country held their meetings there. But what was still

17 supple-jack, a walking-stick, cut from a climbing vine • 24 Achilles, an allusion to his passion for Polyxena, daughter of Priam, the Trojan. Slain while arranging for the marriage, which was expected to bring peace, Achilles or his shade returned after death to demand his promised bride; she was accordingly sacrificed by the Greeks

more annoying, Brom took all opportunities of turning him into ridicule in presence of his mistress, and had a scoundrel dog whom he taught to whine in the most ludicrous manner, and introduced as a rival of Ichabod's to instruct her in psalmody.

In this way matters went on for some time, without producing any material effect on the relative situation of the contending powers. On a fine autumnal afternoon, Ichabod, in pensive mood, sat enthroned on a lofty stool whence he usually watched all the concerns of his little literary realm. In his hand he swayed a ferule, that sceptre of despotic power; the birch of justice reposed on three nails, behind the throne, a constant terror to evil doers; while on the desk before him might be seen sundry contraband articles and prohibited weapons, detected upon the persons of idle urchins; such as half-munched apples, popguns, whirligigs, fly-cages, and whole legions of rampant little paper game-cocks. Apparently there had been some appalling act of justice recently inflicted, for his scholars were all busily intent upon their books, or slyly whispering behind them with one eye kept upon the master; and a kind of buzzing stillness reigned throughout the school-room. It was suddenly interrupted by the appearance of a Negro, in tow-cloth jacket and trowsers, a round-crowned fragment of a hat, like the cap of Mercury, and mounted on the back of a ragged, wild, half-broken colt, which he managed with a rope by way of halter. He came clattering up to the school door with an invitation to Ichabod to attend a merry-making or "quilting frolic," to be held that evening at Mynheer Van Tassel's; and having delivered his message with that air of importance, and effort at fine language, which a Negro is apt to display on petty embassies of the kind, he dashed over the brook, and was seen scampering away up the hollow, full of the importance and hurry of his mission.

All was now bustle and hubbub in the late quiet school-room. The scholars were hurried through their lessons, without stopping at trifles; those who were nimble skipped over half with impunity, and those who were tardy, had a smart application now and then in the rear, to quicken their speed, or help them over a tall word. Books were flung aside without being put away on the shelves, inkstands were overturned, benches thrown down, and the whole school was turned loose an hour before the usual time; bursting forth like a legion of young imps, yelping and racketing about the green, in joy at their early emancipation.

The gallant Ichabod now spent at least an extra half hour at his toilet, brushing and furbishing up his best, and indeed only suit of rusty black, and arranging his looks by a bit of broken looking-glass, that hung up in the school-house. That he might make his appearance before his mistress in the true style of a cavalier, he borrowed a horse from the farmer with whom he was domiciliated, a choleric old Dutchman, of the name of Hans Van Ripper, and, thus gallantly mounted, issued forth, like a knight-errant in quest of adventures. But it is meet I should, in the true spirit of romantic story, give some account of the looks and equipments of my hero and his steed. The animal he bestrode was a broken-down plough-horse, that had outlived almost every thing but his viciousness. He was gaunt and shagged, with a ewe neck and a head like a hammer; his rusty mane and tail were tangled and knotted with burrs; one eye had lost its pupil, and was glaring and spectral; but the other had the gleam of a genuine devil in it. Still he must have had fire and mettle in his day, if we may judge from the name he bore of Gunpowder. He had, in fact, been a favorite steed of his master's, the choleric Van Ripper, who was a furious rider, and had infused, very probably, some of his own spirit into the animal, for, old and broken-down as he looked, there was more of the lurking devil in him than in any young filly in the country.

Ichabod was a suitable figure for such a steed. He rode with short stirrups, which brought his knees nearly up to the pommel of the saddle; his sharp elbows stuck out like grasshoppers'; he carried his whip perpendicularly in his hand, like a sceptre, and, as his horse jogged on, the motion of his arms was not unlike the flapping of a pair of wings. A small wool hat rested on the top of his nose, for so his scanty strip of forehead might be called; and the skirts of his black coat fluttered out almost to the horse's tail. Such was the appearance of Ichabod and his steed, as they shambled out of the gate of Hans Van Ripper, and it was altogether such an apparition as is seldom to be met with in broad daylight.

It was, as I have said, a fine autumnal day, the sky was clear and serene, and nature wore that rich and golden

---

26 **cap of Mercury,** the Petasus, or winged hat, symbol of Mercury's speed as messenger of the gods

livery which we always associate with the idea of abundance. The forests had put on their sober brown and yellow, while some trees of the tenderer kind had been nipped by the frosts into brilliant dyes of orange, purple, and scarlet. Streaming files of wild ducks began to make their appearance high in the air; the bark of the squirrel might be heard from the groves of beech and hickory nuts, and the pensive whistle of the quail at intervals from the neighboring stubble-field.

The small birds were taking their farewell banquets. In the fulness of their revelry, they fluttered, chirping and frolicking, from bush to bush, and tree to tree, capricious from the very profusion and variety around them. There was the honest cock-robin, the favorite game of stripling sportsmen, with its loud querulous note; and the twittering blackbirds flying in sable clouds, and the golden-winged woodpecker, with his crimson crest, his broad black gorget, and splendid plumage; and the cedar bird, with its red-tipt wings and yellow-tipt tail, and its little monteiro cap of feathers; and the blue jay, that noisy coxcomb, in his gay light-blue coat and white under-clothes; screaming and chattering, nodding and bobbing and bowing, and pretending to be on good terms with every songster of the grove.

As Ichabod jogged slowly on his way, his eye, ever open to every symptom of culinary abundance, ranged with delight over the treasures of jolly autumn. On all sides he beheld vast store of apples; some hanging in oppressive opulence on the trees; some gathered into baskets and barrels for the market; others heaped up in rich piles for the cider-press. Farther on he beheld great fields of Indian corn, with its golden ears peeping from their leafy coverts, and holding out the promise of cakes and hasty pudding; and the yellow pumpkins lying beneath them, turning up their fair round bellies to the sun, and giving ample prospects of the most luxurious of pies; and anon he passed the fragrant buckwheat fields, breathing the odor of the bee-hive, and as he beheld them, soft anticipation stole over his mind of dainty slapjacks, well buttered, and garnished with honey or treacle, by the delicate little dimpled hand of Katrina Van Tassel.

Thus feeding his mind with many sweet thoughts and "sugar suppositions," he journeyed along the sides of a range of hills which look out upon some of the goodliest scenes of the mighty Hudson. The sun gradually wheeled his broad disk down into the west. The wide bosom of the Tappan Zee lay motionless and glassy, excepting that here and there a gentle undulation waved and prolonged the blue shadow of the distant mountain. A few amber clouds floated in the sky, without a breath of air to move them. The horizon was of a fine golden tint, changing gradually into a pure apple green, and from that into the deep blue of the mid-heaven. A slanting ray lingered on the woody crests of the precipices that overhung some parts of the river, giving greater depth to the dark-gray and purple of their rocky sides. A sloop was loitering in the distance, dropping slowly down with the tide, her sail hanging uselessly against the mast; and as the reflection of the sky gleamed along the still water, it seemed as if the vessel was suspended in the air.

It was toward evening that Ichabod arrived at the castle of the Heer Van Tassel, which he found thronged with the pride and flower of the adjacent country. Old farmers, a spare leathern-faced race, in homespun coats and breeches, blue stockings, huge shoes, and magnificent pewter buckles. Their brisk withered little dames, in close crimped caps, long-waisted short-gowns, homespun petticoats, with scissors and pincushions, and gay calico pockets hanging on the outside. Buxom lasses, almost as antiquated as their mothers, excepting where a straw hat, a fine ribbon or perhaps a white frock, gave symptoms of city innovation. The sons, in short square-skirted coats with rows of stupendous brass buttons, and their hair generally queued in the fashion of the times, especially if they could procure an eel-skin for the purpose, it being esteemed, throughout the country, as a potent nourisher and strengthener of the hair.

Brom Bones, however, was the hero of the scene, having come to the gathering on his favorite steed Daredevil, a creature, like himself, full of mettle and mischief, and which no one but himself could manage. He was, in fact, noted for preferring vicious animals, given to all kinds of tricks, which kept the rider in constant risk of his neck, for he held a tractable well-broken horse as unworthy of a lad of spirit.

Fain would I pause to dwell upon the world of charms that burst upon the enraptured gaze of my hero, as he entered the state parlor of Van Tassel's mansion. Not those of the bevy of buxom lasses, with their luxurious

---

20 monteiro cap, a hunting-cap with a flap

display of red and white: but the ample charms of a genuine Dutch country tea-table, in the sumptuous time of autumn. Such heaped-up platters of cakes of various and almost indescribable kinds, known only to experienced Dutch housewives! There was the doughty dough-nut, the tenderer oly koek, and the crisp and crumbling cruller; sweet cakes and short cakes, ginger cakes and honey cakes, and the whole family of cakes. And then there were apple pies and peach pies and pumpkin pies; besides slices of ham and smoked beef; and moreover delectable dishes of preserved plums, and peaches, and pears, and quinces; not to mention broiled shad and roasted chickens; together with bowls of milk and cream, all mingled higgledy-piggledy, pretty much as I have enumerated them, with the motherly tea-pot sending up its clouds of vapor from the midst—Heaven-bless the mark! I want breath and time to discuss this banquet as it deserves, and am too eager to get on with my story. Happily, Ichabod Crane was not in so great a hurry as his historian, but did ample justice to every dainty.

He was a kind and thankful creature, whose heart dilated in proportion as his skin was filled with good cheer; and whose spirits rose with eating as some men's do with drink. He could not help, too, rolling his large eyes round him as he ate, and chuckling with the possibility that he might one day be lord of all this scene of almost unimaginable luxury and splendor. Then, he thought, how soon he'd turn his back upon the old school-house; snap his fingers in the face of Hans Van Ripper, and every other niggardly patron, and kick any itinerant pedagogue out of doors that should dare to call him comrade!

Old Baltus Van Tassel moved about among his guests with a face dilated with content and good humor, round and jolly as the harvest moon. His hospitable attentions were brief, but expressive, being confined to a shake of the hand, a slap on the shoulder, a loud laugh, and a pressing invitation to "fall to, and help themselves."

And now the sound of the music from the common room or hall, summoned to the dance. The musician was an old grayheaded Negro, who had been the itinerant orchestra of the neighborhood for more than half a century. His instrument was as old and battered as himself. The greater part of the time he scraped on two or three strings, accompanying every movement of the bow with a motion of the head; bowing almost to the ground, and stamping with his foot whenever a fresh couple were to start.

Ichabod prided himself upon his dancing as much as upon his vocal powers. Not a limb, not a fibre about him was idle; and to have seen his loosely hung frame in full motion, and clattering about the room, you would have thought Saint Vitus himself, that blessed patron of the dance, was figuring before you in person. He was the admiration of all the Negroes; who having gathered, of all ages and sizes, from the farm and the neighborhood, stood forming a pyramid of shining black faces at every door and window, gazing with delight at the scene, rolling their white eye-balls, and showing grinning rows of ivory from ear to ear. How could the flogger of urchins be otherwise than animated and joyous? the lady of his heart was his partner in the dance; and smiling graciously in reply to all his amorous oglings; while Brom Bones, sorely smitten with love and jealousy, sat brooding by himself in one corner.

When the dance was at an end, Ichabod was attracted to a knot of the sager folks, who, with old Van Tassel, sat smoking at one end of the piazza, gossiping over former times, and drawing out long stories about the war.

This neighborhood, at the time of which I am speaking, was one of those highly-favored places which abound with chronicle and great men. The British and American line had run near it during the war; it had, therefore, been the scene of marauding, and infested with refugees, cow-boys, and all kinds of border chivalry. Just sufficient time had elapsed to enable each story-teller to dress up his tale with a little becoming fiction, and, in the indistinctness of his recollection, to make himself the hero of every exploit.

There was the story of Doffue Martling, a large blue-bearded Dutchman, who had nearly taken a British frigate with an old iron nine-pounder from a mud breastwork, only that his gun burst at the sixth discharge. And there was an old gentleman who shall be nameless, being too rich a mynheer to be lightly mentioned, who, in the battle of Whiteplains, being an excellent master of

---

5 dough-nut . . . oly koek . . . cruller, all of them fried in deep fat, but varying in composition. Oly koek, from the Dutch, is known chiefly in New York • **54 Saint Vitus,** according to legend a Christian martyr of the third century, especially venerated in medieval Germany • **76 cow-boys,** bands of Tory guerillas who operated near New York City during the Revolution

defence, parried a musket ball with a small sword, insomuch that he absolutely felt it whiz round the blade, and glance off at the hilt: in proof of which, he was ready at any time to show the sword, with the hilt a little bent. There were several more that had been equally great in the field, not one of whom but was persuaded that he had a considerable hand in bringing the war to a happy termination.

But all these were nothing to the tales of ghosts and apparitions that succeeded. The neighborhood is rich in legendary treasures of the kind. Local tales and superstitions thrive best in these sheltered long-settled retreats; but are trampled under foot by the shifting throng that forms the population of most of our country places. Besides, there is no encouragement for ghosts in most of our villages, for they have scarcely had time to finish their first nap, and turn themselves in their graves, before their surviving friends have travelled away from the neighborhood; so that when they turn out at night to walk their rounds, they have no acquaintance left to call upon. This is perhaps the reason why we so seldom hear of ghosts except in our long-established Dutch communities.

The immediate cause, however, of the prevalence of supernatural stories in these parts, was doubtless owing to the vicinity of Sleepy Hollow. There was a contagion in the very air that blew from that haunted region; it breathed forth an atmosphere of dreams and fancies infecting all the land. Several of the Sleepy Hollow people were present at Van Tassel's, and, as usual, were doling out their wild and wonderful legends. Many dismal tales were told about funeral trains, and mourning cries and wailings heard and seen about the great tree where the unfortunate Major André was taken, and which stood in the neighborhood. Some mention was made also of the woman in white, that haunted the dark glen at Raven Rock, and was often heard to shriek on winter nights before a storm, having perished there in the snow. The chief part of the stories, however, turned upon the favorite spectre of Sleepy Hollow, the headless horseman, who had been heard several times of late, patrolling the country; and, it was said, tethered his horse nightly among the graves in the church-yard.

The sequestered situation of this church seems always to have made it a favorite haunt of troubled spirits. It stands on a knoll, surrounded by locust-trees and lofty elms, from among which its decent, whitewashed walls shine modestly forth, like Christian purity beaming through the shades of retirement. A gentle slope descends from it to a silver sheet of water, bordered by high trees, between which, peeps may be caught at the blue hills of the Hudson. To look upon its grass-grown yard, where the sunbeams seem to sleep so quietly, one would think that there at least the dead might rest in peace. On one side of the church extends a wide woody dell, along which raves a large brook among broken rocks and trunks of fallen trees. Over a deep black part of the stream, not far from the church, was formerly thrown a wooden bridge; the road that led to it, and the bridge itself, were thickly shaded by overhanging trees, which cast a gloom about it, even in the daytime; but occasioned a fearful darkness at night. This was one of the favorite haunts of the headless horseman; and the place where he was most frequently encountered. The tale was told of old Brouwer, a most heretical disbeliever in ghosts, how he met the horseman returning from his foray into Sleepy Hollow, and was obliged to get up behind him; how they galloped over bush and brake, over hill and swamp, until they reached the bridge; when the horseman suddenly turned into a skeleton, threw old Brouwer into the brook, and sprang away over the tree-tops with a clap of thunder.

This story was immediately matched by a thrice marvellous adventure of Brom Bones, who made light of the galloping Hessian as an arrant jockey. He affirmed that, on returning one night from the neighboring village of Sing Sing, he had been overtaken by this midnight trooper; that he had offered to race with him for a bowl of punch, and should have won it too, for Daredevil beat the goblin horse all hollow, but, just as they came to the church bridge, the Hessian bolted, and vanished in a flash of fire.

All these tales, told in that drowsy undertone with which men talk in the dark, the countenances of the listeners only now and then receiving a casual gleam from the glare of a pipe, sank deep in the mind of Ichabod. He repaid them in kind with large extracts from his invaluable author, Cotton Mather, and added many marvellous events that had taken place in his native State

---

34 Major André (1751-1780), executed at Tappan, across the Hudson a few miles below Tarrytown, following his capture with the plans of West Point and evidence of the treason of Benedict Arnold. A monument now stands near the place of his capture in Tarrytown

of Connecticut, and fearful sights which he had seen in his nightly walks about Sleepy Hollow.

The revel now gradually broke up. The old farmers gathered together their families in their wagons, and were heard for some time rattling along the hollow roads, and over the distant hills. Some of the damsels mounted on pillions behind their favorite swains, and their light-hearted laughter, mingling with the clatter of hoofs, echoed along the silent woodlands, sounding fainter and fainter until they gradually died away—and the late scene of noise and frolic was all silent and deserted. Ichabod only lingered behind, according to the custom of country lovers, to have a tête-à-tête with the heiress; fully convinced that he was now on the high road to success. What passed at this interview I will not pretend to say, for in fact I do not know. Something, however, I fear me, must have gone wrong, for he certainly sallied forth, after no very great interval, with an air quite desolate and chop-fallen.—Oh these women! these women! Could that girl have been playing off any of her coquettish tricks?—Was her encouragement of the poor pedagogue all a mere sham to secure her conquest of his rival?—Heaven only knows, not I!—Let it suffice to say, Ichabod stole forth with the air of one who had been sacking a hen-roost, rather than a fair lady's heart. Without looking to the right or left to notice the scene of rural wealth, on which he had so often gloated, he went straight to the stable, and with several hearty cuffs and kicks, roused his steed most uncourteously from the comfortable quarters in which he was soundly sleeping, dreaming of mountains of corn and oats, and whole valleys of timothy and clover.

It was the very witching time of night that Ichabod, heavy-hearted and crest-fallen, pursued his travel homewards, along the sides of the lofty hills which rise above Tarry Town, and which he had traversed so cheerily in the afternoon. The hour was as dismal as himself. Far below him, the Tappan Zee spread its dusky and indistinct waste of waters, with here and there the tall mast of a sloop, riding quietly at anchor under the land. In the dead hush of midnight, he could even hear the barking of the watch dog from the opposite shore of the Hudson; but it was so vague and faint as only to give an idea of his distance from this faithful companion of man. Now and then, too, the long-drawn crowing of a cock, accidentally awakened, would sound far, far off, from some farmhouse away among the hills—but it was like a dreaming sound in his ear. No signs of life occurred near him, but occasionally the melancholy chirp of a cricket, or perhaps the guttural twang of a bull-frog, from a neighboring marsh, as if sleeping uncomfortably, and turning suddenly in his bed.

All the stories of ghosts and goblins that he had heard in the afternoon, now came crowding upon his recollection. The night grew darker and darker; the stars seemed to sink deeper in the sky, and driving clouds occasionally hid them from his sight. He had never felt so lonely and dismal. He was, moreover, approaching the very place where many of the scenes of the ghost stories had been laid. In the centre of the road stood an enormous tulip-tree, which towered like a giant above all the other trees of the neighborhood, and formed a kind of landmark. Its limbs were gnarled, and fantastic, large enough to form trunks for ordinary trees, twisting down almost to the earth, and rising again into the air. It was connected with the tragical story of the unfortunate André, who had been taken prisoner hard by; and was universally known by the name of Major André's tree. The common people regarded it with a mixture of respect and superstition, partly out of sympathy for the fate of its ill-starred namesake, and partly from the tales of strange sights and doleful lamentations told concerning it.

As Ichabod approached this fearful tree, he began to whistle; he thought his whistle was answered—it was but a blast sweeping sharply through the dry branches. As he approached a little nearer, he thought he saw something white, hanging in the midst of the tree—he paused and ceased whistling; but on looking more narrowly, perceived that it was a place where the tree had been scathed by lightning, and the white wood laid bare. Suddenly he heard a groan—his teeth chattered and his knees smote against the saddle: it was but the rubbing of one huge bough upon another, as they were swayed about by the breeze. He passed the tree in safety, but new perils lay before him.

About two hundred yards from the tree a small brook crossed the road, and ran into a marshy and thickly-wooded glen, known by the name of Wiley's swamp. A few rough logs, laid side by side, served for a bridge over this stream. On that side of the road where the brook entered the wood, a group of oaks and chestnuts, matted thick with wild grapevines, threw a cavernous gloom over it. To pass this bridge was the severest trial.

It was at this identical spot that the unfortunate André was captured, and under the covert of those chestnuts and vines were the sturdy yeomen concealed who surprised him. This has ever since been considered a haunted stream, and fearful are the feelings of the schoolboy who has to pass it alone after dark.

As he approached the stream, his heart began to thump; he summoned up, however, all his resolution, gave his horse half a score of kicks in the ribs, and attempted to dash briskly across the bridge; but instead of starting forward, the perverse old animal made a lateral movement, and ran broadside against the fence. Ichabod, whose fears increased with the delay, jerked the reins on the other side, and kicked lustily with the contrary foot: it was all in vain; his steed started, it is true, but it was only to plunge to the opposite side of the road into a thicket of brambles and alder bushes. The schoolmaster now bestowed both whip and heel upon the starveling ribs of old Gunpowder, who dashed forward, snuffling and snorting, but came to a stand just by the bridge, with a suddenness that had nearly sent his rider sprawling over his head. Just at this moment a plashy tramp by the side of the bridge caught the sensitive ear of Ichabod. In the dark shadow of the grove, on the margin of the brook, he beheld something huge, misshapen, black and towering. It stirred not, but seemed gathered up in the gloom, like some gigantic monster ready to spring upon the traveller.

The hair of the affrighted pedagogue rose upon his head with terror. What was to be done? To turn and fly was now too late; and besides, what chance was there of escaping ghost or goblin, if such it was, which could ride upon the wings of the wind? Summoning up, therefore, a show of courage, he demanded in stammering accents—"Who are you?" He received no reply. He repeated his demand in a still more agitated voice. Still there was no answer. Once more he cudgelled the sides of the inflexible Gunpowder, and, shutting his eyes, broke forth with involuntary fervor into a psalm tune. Just then the shadowy object of alarm put itself in motion, and, with a scramble and a bound, stood at once in the middle of the road. Though the night was dark and dismal, yet the form of the unknown might now in some degree be ascertained. He appeared to be a horseman of large dimensions, and mounted on a black horse of powerful frame. He made no offer of molestation or sociability, but kept aloof on one side of the road,

"He beheld something huge, misshapen . . . towering."

jogging along on the blind side of old Gunpowder, who had now got over his fright and waywardness.

Ichabod, who had no relish for this strange midnight companion, and bethought himself of the adventure of Brom Bones with the Galloping Hessian, now quickened his steed, in hopes of leaving him behind. The stranger, however, quickened his horse to an equal pace. Ichabod pulled up, and fell into a walk, thinking to lag behind—the other did the same. His heart began to sink within him; he endeavored to resume his psalm tune, but his parched tongue clove to the roof of his mouth, and he could not utter a stave. There was something in the moody and dogged silence of this pertinacious companion, that was mysterious and appalling. It was soon fearfully accounted for. On mounting a rising ground, which brought the figure of his fellow-traveller in relief against the sky, gigantic in height, and muffled in a cloak, Ichabod was horror-struck, on perceiving that he was headless!—but his horror was still more increased, on observing that the head, which should have rested on his shoulders, was carried before him on the pommel of the saddle: his terror rose to desperation; he rained a shower of kicks and blows upon Gunpowder, hoping, by a sudden movement, to give his companion the slip—but the spectre started full jump with him. Away then they dashed, through thick and thin; stones flying, and sparks flashing at every bound. Ichabod's flimsy garments fluttered in the air, as he stretched his long lank body away over his horse's head, in the eagerness of his flight.

They had now reached the road which turns off to

Sleepy Hollow; but Gunpowder, who seemed possessed with a demon, instead of keeping up it, made an opposite turn, and plunged headlong down hill to the left. This road leads through a sandy hollow, shaded by trees for about a quarter of a mile, where it crosses the bridge famous in goblin story, and just beyond swells the green knoll on which stands the whitewashed church.

As yet the panic of the steed had given his unskilful rider an apparent advantage in the chase; but just as he had got half way through the hollow, the girths of the saddle gave way, and he felt it slipping from under him. He seized it by the pommel, and endeavored to hold it firm, but in vain; and had just time to save himself by clasping old Gunpowder round the neck, when the saddle fell to the earth, and he heard it trampled under foot by his pursuer. For a moment the terror of Hans Van Ripper's wrath passed across his mind—for it was his Sunday saddle; but this was no time for petty fears; the goblin was hard on his haunches; and (unskilful rider that he was!) he had much ado to maintain his seat; sometimes slipping on one side, sometimes on another, and sometimes jolted on the high ridge of his horse's backbone, with a violence that he verily feared would cleave him asunder.

An opening in the trees now cheered him with the hopes that the church bridge was at hand. The wavering reflection of a silver star in the bosom of the brook told him that he was not mistaken. He saw the walls of the church dimly glaring under the trees beyond. He recollected the place where Brom Bones's ghostly competitor had disappeared. "If I can but reach that bridge," thought Ichabod, "I am safe." Just then he heard the black steed panting and blowing close behind him; he even fancied that he felt his hot breath. Another convulsive kick in the ribs, and old Gunpowder sprang upon the bridge; he thundered over the resounding planks; he gained the opposite side; and now Ichabod cast a look behind to see if his pursuer should vanish, according to rule, in a flash of fire and brimstone. Just then he saw the goblin rising in his stirrups, and in the very act of hurling his head at him. Ichabod endeavored to dodge the horrible missile, but too late. It encountered his cranium with a tremendous crash—he was tumbled headlong into the dust, and Gunpowder, the black steed, and the goblin rider, passed by like a whirlwind.

The next morning the old horse was found without his saddle, and with the bridle under his feet, soberly cropping the grass at his master's gate. Ichabod did not make his appearance at breakfast—dinner-hour came, but no Ichabod. The boys assembled at the school-house, and strolled idly about the banks of the brook; but no schoolmaster. Hans Van Ripper now began to feel some uneasiness about the fate of poor Ichabod, and his saddle. An inquiry was set on foot, and after diligent investigation they came upon his traces. In one part of the road leading to the church was found the saddle trampled in the dirt; the tracks of horses' hoofs deeply dented in the road, and evidently at furious speed, were traced to the bridge, beyond which, on the bank of a broad part of the brook, where the water ran deep and black, was found the hat of the unfortunate Ichabod, and close beside it a shattered pumpkin.

The brook was searched, but the body of the schoolmaster was not to be discovered. Hans Van Ripper, as executor of his estate, examined the bundle which contained all his worldly effects. They consisted of two shirts and a half; two stocks for the neck; a pair or two of worsted stockings; an old pair of corduroy small-clothes; a rusty razor; a book of psalm tunes, full of dogs' ears; and a broken pitchpipe. As to the books and furniture of the school-house, they belonged to the community, excepting Cotton Mather's History of Witchcraft, a New England Almanac, and a book of dreams and fortune-telling; in which last was a sheet of foolscap much scribbled and blotted in several fruitless attempts to make a copy of verses in honor of the heiress of Van Tassel. These magic books and the poetic scrawl were forthwith consigned to the flames by Hans Van Ripper; who from that time forward determined to send his children no more to school; observing, that he never knew any good come of this same reading and writing. Whatever money the schoolmaster possessed, and he had received his quarter's pay but a day or two before, he must have had about his person at the time of his disappearance.

The mysterious event caused much speculation at the church on the following Sunday. Knots of gazers and gossips were collected in the churchyard, at the bridge, and at the spot where the hat and pumpkin had been found. The stories of Brouwer, of Bones, and a whole budget of others, were called to mind; and when they had diligently considered them all, and compared them with the symptoms of the present case, they shook their heads, and came to the conclusion that Ichabod had been carried off by the galloping Hessian. As he was a

bachelor, and in nobody's debt, nobody troubled his head any more about him. The school was removed to a different quarter of the hollow, and another pedagogue reigned in his stead.

It is true, an old farmer, who had been down to New-York on a visit several years after, and from whom this account of the ghostly adventure was received, brought home the intelligence that Ichabod Crane was still alive; that he had left the neighborhood, partly through fear of the goblin and Hans Van Ripper, and partly in mortification at having been suddenly dismissed by the heiress; that he had changed his quarters to a distant part of the country; had kept school and studied law at the same time, had been admitted to the bar, turned politician, electioneered, written for the newspapers, and finally had been made a justice of the Ten Pound Court. Brom Bones too, who, shortly after his rival's disappearance, conducted the blooming Katrina in triumph to the altar, was observed to look exceedingly knowing whenever the story of Ichabod was related, and always burst into a hearty laugh at the mention of the pumpkin; which led some to suspect that he knew more about the matter than he chose to tell.

The old country wives, however, who are the best judges of these matters, maintain to this day that Ichabod was spirited away by supernatural means; and it is a favorite story often told about the neighborhood round the winter evening fire. The bridge became more than ever an object of superstitious awe, and that may be the reason why the road has been altered of late years, so as to approach the church by the border of the mill-pond. The school-house being deserted, soon fell to decay, and was reported to be haunted by the ghost of the unfortunate pedagogue; and the plough boy, loitering homeward of a still summer evening, has often fancied his voice at a distance, chanting a melancholy psalm tune among the tranquil solitudes of Sleepy Hollow.

POSTSCRIPT, FOUND IN THE HANDWRITING OF MR. KNICKERBOCKER

The preceding Tale is given, almost in the precise words in which I heard it related at a Corporation meeting of the ancient city of Manhattoes, at which were present many of its sagest and most illustrious burghers. The narrator was a pleasant, shabby, gentlemanly old fellow, in pepper-and-salt clothes, with a sadly humorous face; and one whom I strongly suspected of being poor,—he made such efforts to be entertaining. When his story was concluded, there was much laughter and approbation, particularly from two or three deputy aldermen, who had been asleep the greater part of the time. There was, however, one tall, dry-looking old gentleman, with beetling eyebrows, who maintained a grave and rather severe face throughout: now and then folding his arms, inclining his head, and looking down upon the floor, as if turning a doubt over in his mind. He was one of your wary men, who never laugh, but upon good grounds —when they have reason and the law on their side. When the mirth of the rest of the company had subsided, and silence was restored, he leaned one arm on the elbow of his chair, and sticking the other akimbo, demanded, with a slight, but exceedingly sage motion of the head, and contraction of the brow, what was the moral of the story, and what it went to prove?

The story-teller, who was just putting a glass of wine to his lips, as a refreshment after his toils, paused for a moment, looked at his inquirer with an air of infinite deference, and, lowering the glass slowly to the table, observed, that the story was intended most logically to prove:—

"That there is no situation in life but has its advantages and pleasures—provided we will but take a joke as we find it:

"That, therefore, he that runs races with goblin troopers is likely to have rough riding of it.

"Ergo, for a country schoolmaster to be refused the hand of a Dutch heiress, is a certain step to high preferment, in the state."

The cautious old gentleman knit his brows tenfold closer after this explanation, being sorely puzzled by the ratiocination of the syllogism; while, methought, the one in pepper-and-salt eyed him with something of a triumphant leer. At length he observed, that all this was very well, but still he thought the story a little on the extravagant—there were one or two points on which he had his doubts.

"Faith, sir," replied the story-teller, "as to that matter, I don't believe one-half of it myself."

16 **Ten Pound Court**, in which cases involving not more than ten pounds were tried by a justice

James Fenimore Cooper

1789 • 1851

James Cooper (he became "James Fenimore-Cooper" by a legislative act in 1826 and later dropped the hyphen) was born at Burlington, New Jersey, in 1789. In the previous year his father had laid out the site of Cooperstown at the foot of Otsego Lake, in New York, and in 1790 he settled there with his family. The son was brought up in a community in which the Coopers were by far the most important personages; his future was from the first defined as that of a landowner and estate manager. To prepare for it he had the education of a gentleman, first under a private tutor in Albany, and then in Yale College, which expelled him for too much pleasure-seeking in 1806. His further education consisted of shipping to England as a common sailor in 1806-1807 and three years' service as a midshipman in the United States Navy, from which he resigned shortly after his marriage, in 1811, to Susan Augusta De Lancey, daughter of a wealthy family in Mamaroneck, Westchester County. Both he and his wife had money of their own, and there was more in prospect. They settled down to raising a family and supervising their interests, living for some time at Cooperstown, and later in Westchester. In 1819, when Cooper was thirty, he was a gentleman farmer and a small capitalist, with neither the ambition nor the necessity for authorship.

Seldom, perhaps, has a novelist developed more casually. The tradition is that, reading aloud to his wife a story of English country life, he remarked that he could do as well himself and set out to make good his boast. The result was *Precaution,* a novel picturing English society and abounding with moral sentiment on marriage. It was published in 1820, and, although not especially successful, it led directly to *The Spy* (1821), which was enormously so. The course of Cooper's life was changed abruptly from that natural to a country gentleman to the uncertain peregrinations of a writer. He discovered that he had both a fertile imagination and a ready pen, and, devoting his mornings to composition, he began to produce a stream of books which, at the time of his death in 1851, consisted of thirty-three novels and numerous volumes of social comment, naval history, and travel.

The relation between his life and his writing is highly complicated. In general, however, three periods are clearly distinguishable. Between 1820 and 1826 he explored the possibilities of the novel of romantic action, in emulation of Sir Walter Scott; living in New York City after 1822, the center of the congenial "Lunch" or Bread and Cheese Club, he sent forth to the world, in rapid succession, *The Pioneers* (1823), *The Pilot* (1824), *Lionel Lincoln* (1825), and *The Last of the Mohicans* (1826). Between 1826 and 1833 he lived in Europe, where, under the tutelage of Lafayette, he became deeply interested in political philosophy, particularly as it appeared in the contrast between American and European institutions. An ardent patriot, he wrote a trilogy in opposition to Scott's glorification of medievalism, but *The Bravo* (1831), *The Heidenmauer* (1832), and *The Headsman* (1833) disappointed the public, in America as well as in Europe, and inaugurated a disillusion in their author which grew steadily with the years. From 1834 until his death Cooper lived half of each year in Cooperstown, spending the other six months in New York City. He had left the United States in the administration of John Quincy Adams; when he returned, the Jacksonian revolution had materially changed the social and political complexion of the nation. Cooper, an aristocrat by birth, by education, and by temperament, did not find the change wholly admirable; indeed, the last seventeen years of his life were spent in an unhappy battle for aristocratic principles which his countrymen found objectionable. Occasionally, as in *The Pathfinder* (1840) and *The Deerslayer* (1841), Cooper returned to his earlier vein, but his more characteristic works were social satires, such as *Home as Found* (1838), and the problem novels, *Satanstoe* (1845), *The Chainbearer* (1845), and *The Redskins* (1846), based upon the opposition of New Yorkers to the continuance of the tenant farm system of the patroons. Sometimes, indeed, he deserted fiction to present his conviction that individual liberty can only be achieved by a constitutional government which protects property as well as human rights; in *The American Democrat* (1838), for example, he argued for an aristocracy of merit not unlike that envisaged by Alexander Hamilton and the Federalists.

Cooper was unpopular in his later years because of his criticism of democracy. The tale of his innumerable libel suits against those critics who unjustly defamed his character is lengthy and inappropriate here, but it should be said that he was usually in the right and won his cases. There is justice in Professor Spiller's claim that Cooper was the "most thoroughly critical mind that early America produced." Few men of his generation realized as he did that democracy, wrongly understood, can be tyrannical; that distinction and quality cannot be achieved by the glorification of mediocrity and numbers.

It is not as a social critic, however, that Cooper has won his fame, and another age than the present may well forget his problem novels. He lives, as his friend Bryant said, as the American Hesiod or Theocritus, a poet of the youth of a nation, a nation which was wresting a continent from nature and the Indians, not always intelligently, not always justly, but with full awareness of the imaginative "lift" of the great open spaces and the epic quality of man's struggle with the wilderness. His claim to fame as the first great American novelist can scarcely be challenged.

The Pioneers;

or The Sources of the Susquehanna

The Pioneers, Cooper's third published novel and the first of the five Leather-Stocking tales, appeared in two volumes on February 1, 1823, in New York. A London edition appeared in the same month and by 1832 there were translations into French, German, Swedish, Danish, and Spanish. Although it has not been, over the years, the most popular of his writings, **The Pioneers** has the distinction of introducing the two characters of the American wildernes. for which Cooper is most famous—Natty Bumppo, or the Leather-Stocking, and Chingachgook, Natty's Mohican friend and companion. The novel, moreover, is among the most autobiographical of Cooper's works, frequently foreshadowing his criticism of the ignorance and irresponsibility of frontier democracy which later became almost an obsession.

The first half of the book moves slowly—it takes Cooper nineteen chapters to cover the first twenty-four hours of his tale—but the reader is rewarded by a faithful representation of the life of a newly settled community in 1793, obviously based upon the author's memories of Cooperstown. The remainder of the book consists of a series of episodes in which the woodcraft and native intelligence of Natty Bumppo are given a central position. The plot will be found a mixture of disguised identity and escape from physical danger, a somewhat weak but wholly characteristic example of Cooper's storytelling. In the following abridgement, Cooper's poetical handling of external nature will be apparent, as well as his typical methods of characterization, successful frequently in the case of his men, almost always conventional in the portrayal of women. A Preface written for a revision made in 1831 acknowledged that the author depended largely upon fact for his setting and Templeton backgrounds, but denied any intention of describing accurately any real characters. Nevertheless, Judge Temple has seemed to most critics a portrait of William Cooper, the novelist's father, and various other characters have been identified with Cooperstown folk.

Natty Bumppo, however, was a creation all Cooper's own, with only a vague resemblance to Daniel Boone, who has been suggested as his prototype. Natty, under various names—the Leather-Stocking, Deerslayer, Hawk-eye, and Pathfinder—appears in and binds together five novels: **The Pioneers** (1823), **The Last of the Mohicans** (1826), **The Prairie** (1827), **The Pathfinder** (1840), and **The Deerslayer** (1841). Cooper did not plan these novels as a whole, however, and they are held together only as parts of a biographical whole which has numerous discrepancies. In point of biographical time **The Deerslayer** should be read first; its action takes place on Otsego Lake between 1740 and 1745. Next comes **The Last of the Mohicans**, which occurs on Lake George in 1757; then **The Pathfinder**, whose scene is Lake Ontario in 1760. After **The Pioneers**, as if Natty were not feeble enough at its conclusion, comes **The Prairie**, in which the nameless hero—his dog Hector, stuffed by an Indian taxidermist, at his side—dies in 1804 amid the scenic splendor of the Pawnee country.

CHAPTER I

Near the centre of the State of New York lies an extensive district of country, whose surface is a succession of hills and dales, or, to speak with greater deference to geographical definitions, of mountains and valleys. It is among these hills that the Delaware takes its rise; and flowing from the limpid lakes and thousand springs of this region, the numerous sources of the Susquehanna meander through the valleys, until, uniting their streams, they form one of the proudest rivers of the United States. The mountains are generally arable to the tops, although 10
instances are not wanting where the sides are jutted with rocks, that aid greatly in giving to the country that romantic and picturesque character which it so eminently possesses. The vales are narrow, rich, and cultivated; with a stream uniformly winding through

---

Text: the collected edition of Cooper's novels in thirty-two volumes, New York, 1859-1861. The tags of poetry used by Cooper for chapter heads have been omitted

each. Beautiful and thriving villages are found interspersed along the margins of the small lakes, or situated at those points of the streams which are favorable to manufacturing; and neat and comfortable farms, with every indication of wealth about them, are scattered profusely through the vales, and even to the mountain tops. Roads diverge in every direction, from the even and graceful bottoms of the valleys, to the most rugged and intricate passes of the hills. Academies, and minor edifices of learning, meet the eye of the stranger at every few miles, as he winds his way through this uneven territory; and places for the worship of God abound with that frequency which characterizes a moral and reflecting people, and with that variety of exterior and canonical government which flows from unfettered liberty of conscience. In short, the whole district is hourly exhibiting how much can be done, in even a rugged country, and with a severe climate, under the dominion of mild laws, and where every man feels a direct interest in the prosperity of a commonwealth, of which he knows himself to form a part. The expedients of the pioneers who first broke ground in the settlement of this country are succeeded by the permanent improvements of the yeoman, who intends to leave his remains to moulder under the sod which he tills, or, perhaps, of the son, who, born in the land, piously wishes to linger around the grave of his father. Only forty years have passed since this territory was a wilderness.

Very soon after the establishment of the independence of the States, by the peace of 1783, the enterprise of their citizens was directed to a development of the natural advantages of their widely extended dominions. Before the war of the revolution the inhabited parts of the colony of New York were limited to less than a tenth of its possessions. A narrow belt of country, extending for a short distance on either side of the Hudson, with a similar occupation of fifty miles on the banks of the Mohawk, together with the islands of Nassau and Staten, and a few insulated settlements on chosen land along the margins of streams, composed the country, which was then inhabited by less than two hundred thousand souls. Within the short period we have mentioned, the population has spread itself over five degrees of latitude and seven of longitude, and has swelled to a million and a half inhabitants, who are maintained in abundance, and can look forward to ages before the evil day must arrive when their possessions shall become unequal to their wants.

Our tale begins in 1793, about seven years after the commencement of one of the earliest of those settlements, which have conduced to effect that magical change in the power and condition of the State, to which we have alluded.

It was near the setting of the sun, on a clear, cold day in December, when a sleigh was moving slowly up one of the mountains, in the district we have described. The day had been fine for the season, and but two or three large clouds, whose color seemed brightened by the light reflected from the mass of snow that covered the earth, floated in a sky of the purest blue. The road wound along the brow of a precipice, and on one side was upheld by a foundation of logs, piled one upon the other, while a narrow excavation in the mountain, in the opposite direction, had made a passage of sufficient width for the ordinary travelling of that day. But logs, excavation, and everything that did not reach several feet above the earth, lay alike buried beneath the snow. A single track, barely wide enough to receive the sleigh, denoted the route of the highway, and this was sunk nearly two feet below the surrounding surface. In the vale, which lay at a distance of several hundred feet lower, there was what in the language of the country was called a *clearing,* and all the usual improvements of a new settlement; these even extended up the hill to the point where the road turned short and ran across the level land, which lay on the summit of the mountain; but the summit itself remained in

---

14 **canonical,** legal—a somewhat unusual handling of the word • 27 **forty years.** "The book was written in 1823."—Cooper • 44 **a million . . . inhabitants.** "The population of New York is now (1831) quite 2,000,000."—Cooper • 67 **sleigh.** "Sleigh is the word used in every part of the United States to denote a traineau. It is of local use in the west of England, whence it is more probably derived by the Americans. The latter draw a distinction between a sled, or sledge, and a sleigh, the sleigh being shod with metal. Sleighs are also subdivided into two-horse and one-horse sleighs. Of the latter, there are the cutter, with thills so arranged as to permit the horse to travel in the side track; the 'pung' or 'tow-pung,' which is driven with a pole, and the 'gumper,' a rude construction used for temporary purposes, in the new countries.

"Many of the American sleighs are elegant, though the use of this mode of conveyance is much lessend with the melioration of the climate, consequent on the clearing of the forests."—Cooper. Cooper was apparently correct in regarding "sleigh" as an American word, although present-day lexicographers believe its origin to have been Dutch. His remark on climate represents an opinion on a much-debated question of his day

forest. There was a glittering in the atmosphere, as if it were filled with innumerable shining particles; and the noble bay horses that drew the sleigh were covered, in many parts, with a coat of hoar frost. The vapor from their nostrils was seen to issue like smoke; and every object in the view, as well as every arrangement of the travellers, denoted the depth of a winter in the mountains. The harness, which was of a deep dull black, differing from the glossy varnishing of the present day, was ornamented with enormous plates and buckles of brass, that shone like gold in those transient beams of the sun, which found their way obliquely through the tops of the trees. Huge saddles, studded with nails, and fitted with cloth that served as blankets to the shoulders of the cattle, supported four high, square-topped turrets, through which the stout reins led from the mouths of the horses to the hands of the driver, who was a Negro, of apparently twenty years of age. His face, which nature had colored with a glistening black, was now mottled with the cold, and his large shining eyes filled with tears; a tribute to their power that the keen frosts of those regions always extracted from one of his African origin. Still there was a smiling expression of good humor in his happy countenance, that was created by the thoughts of home, and a Christmas fire-side, with its Christmas frolics. The sleigh was one of those large, comfortable, old-fashioned conveyances, which would admit a whole family within its bosom, but which now contained only two passengers besides the driver. The color of its outside was a modest green, and that of its inside a fiery red. The latter was intended to convey the idea of heat in that cold climate. Large buffalo skins, trimmed around the edges with red cloth, cut into festoons, covered the back of the sleigh, and were spread over its bottom, and drawn up around the feet of the travellers—one of whom was a man of middle age, and the other a female, just entering upon womanhood. The former was of a large stature; but the precautions he had taken to guard against the cold left but little of his person exposed to view. A greatcoat, that was abundantly ornamented by a profusion of furs, enveloped the whole of his figure, excepting the head, which was covered with a cap of marten skins, lined with morocco, the sides of which were made to fall, if necessary and were now drawn close over the ears, and fastened beneath his chin with a black riband. The top of the cap was surmounted with the tail of the animal whose skin had furnished the rest of the materials, which fell back, not ungracefully, a few inches behind the head. From beneath this mask were to be seen part of a fine manly face, and particularly a pair of expressive, large blue eyes, that promised extraordinary intellect, covert humor, and great benevolence. The form of his companion was literally hid beneath the garments she wore. There were furs and silks peeping from under a large camlet cloak, with a thick flannel lining, that, by its cut and size, was evidently intended for a masculine wearer. A huge hood of black silk, that was quilted with down, concealed the whole of her head, except at a small opening in front for breath, through which occasionally sparkled a pair of animated jet-black eyes.

Both the father and daughter (for such was the connection between the two travellers) were too much occupied with their reflections to break a stillness, that received little or no interruption from the easy gliding of the sleigh, by the sound of their voices The former was thinking of the wife that had held this their only child to her bosom, when, four years before, she had reluctantly consented to relinquish the society of her daughter, in order that the latter might enjoy the advantages of an education which the city of New York could only offer at that period. A few months afterward death had deprived him of the remaining companion of his solitude; but still he had enough of real regard for his child, not to bring her into the comparative wilderness in which he dwelt, until the full period had expired to which he had limited her juvenile labors. The reflections of the daughter were less melancholy, and mingled with a pleased astonishment at the novel scenery she met at every turn in the road.

The mountain on which they were journeying was covered with pines, that rose without a branch some seventy or eighty feet, and which frequently doubled that height by the addition of the tops. Through the innumerable vistas that opened beneath the lofty trees, the eye could penetrate, until it was met by a distant inequality in the ground, or was stopped by a view of the summit of the mountain, which lay on the opposite side of the valley to which they were hastening. The dark trunks of the trees rose from the pure white of the snow, in regularly formed shafts, until, at a great height, their branches shot forth horizontal limbs, that

were covered with the meagre foliage of an evergreen, affording a melancholy contrast to the torpor of nature below. To the travellers, there seemed to be no wind; but these pines waved majestically at their topmost boughs, sending forth a dull, plaintive sound, that was quite in consonance with the rest of the melancholy scene.

The sleigh had glided for some distance along the even surface, and the gaze of the female was bent in inquisitive, and, perhaps, timid glances, into the recesses of the forest, when a loud and continued howling was heard, pealing under the long arches of the woods, like the cry of a numerous pack of hounds. The instant the sound reached the ears of the gentleman, he cried aloud to the black—

"Hold up, Aggy; there is old Hector; I should know his bay among ten thousand! The Leather-stocking has put his hounds into the hills, this clear day, and they have started their game. There is a deer-track a few rods ahead;—and now, Bess, if thou canst muster courage enough to stand fire, I will give thee a saddle for thy Christmas dinner."

The black drew up, with a cheerful grin upon his chilled features, and began thrashing his arms together, in order to restore the circulation to his fingers, while the speaker stood erect, and, throwing aside his outer covering, stepped from the sleigh upon a bank of snow, which sustained his weight without yielding.

In a few moments the speaker succeeded in extricating a double-barrelled fowling-piece from among a multitude of trunks and bandboxes. After throwing aside the thick mittens which had encased his hands, that now appeared in a pair of leather gloves tipped with fur, he examined his priming, and was about to move forward, when the light bounding noise of an animal plunging through the woods was heard, and a fine buck darted into the path, a short distance ahead of him. The appearance of the animal was sudden, and his flight inconceivably rapid; but the traveller appeared to be too keen a sportsman to be disconcerted by either. As it came first into view he raised the fowling-piece to his shoulder, and, with a practised eye and steady hand, drew a trigger. The deer dashed forward undaunted, and apparently unhurt. Without lowering his piece, the traveller turned its muzzle toward his victim, and fired again. Neither discharge, however, seemed to have taken effect.

The whole scene had passed with a rapidity that confused the female, who was unconsciously rejoicing in the escape of the buck, as he rather darted like a meteor, than ran across the road, when a sharp quick sound struck her ear, quite different from the full, round reports of her father's gun, but still sufficiently distinct to be known as the concussion produced by fire-arms. At the same instant that she heard this unexpected report, the buck sprang from the snow to a great height in the air, and directly a second discharge, similar in sound to the first, followed, when the animal came to the earth, falling headlong, and rolling over on the crust with its own velocity. A loud shout was given by the unseen marksman, and a couple of men instantly appeared from behind the trunks of two of the pines, where they had evidently placed themselves in expectation of the passage of the deer.

"Ha! Natty, had I known you were in ambush, I should not have fired," cried the traveller, moving toward the spot where the deer lay—near to which he was followed by the delighted black, with his sleigh; "but the sound of old Hector was too exhilarating to be quiet; though I hardly think I struck him either."

"No—no—Judge," returned the hunter, with an inward chuckle, and with that look of exultation that indicates a consciousness of superior skill; "you burnt your powder only to warm your nose this cold evening. Did ye think to stop a full-grown buck, with Hector and the slut open upon him within sound, with that pop-gun in your hand? There's plenty of pheasants among the swamps; and the snow-birds are flying round your own door, where you may feed them with crumbs, and shoot them at pleasure, any day; but if you're for a buck, or a little bear's meat, Judge, you'll have to take the long rifle, with a greased wadding, or you'll waste more powder than you'll fill stomachs, I'm thinking."

As the speaker concluded, he drew his bare hand across the bottom of his nose, and again opened his enormous mouth with a kind of inward laugh.

"The gun scatters well, Natty, and it has killed a deer before now," said the traveller, smiling good-humoredly. "One barrel was charged with buck-shot; but the other was loaded for birds only. Here are two hurts; one through the neck, and the other directly through the heart. It is by no means certain, Natty, but I gave him one of the two."

The Leather-Stocking's cabin.

"Let who will kill him," said the hunter, rather surlily, "I suppose the creature is to be eaten." So saying, he drew a large knife from a leathern sheath, which was stuck through his girdle or sash, and cut the throat of the animal. "If there are two balls through the deer, I would ask if there wer'n't two rifles fired—besides, who ever saw such a ragged hole from a smooth-bore, as this through the neck?—and you will own yourself, Judge, that the buck fell at the last shot, which was sent from a truer and a younger hand than your'n or mine either; but for my part, although I am a poor man, I can live without the venison, but I don't love to give up my lawful dues in a free country. Though, for the matter of that, might often makes right here, as well as in the old country, for what I can see."

An air of sullen dissatisfaction pervaded the manner of the hunter during the whole of this speech; yet he thought it prudent to utter the close of the sentence in such an undertone, as to leave nothing audible but the grumbling sounds of his voice.

"Nay, Natty," rejoined the traveller, with undisturbed good humor, "it is for the honor that I contend. A few dollars will pay for the venison; but what will requite me for the lost honor of a buck's tail in my cap? Think, Natty, how I should triumph over that quizzing dog, Dick Jones, who has failed seven times already this season, and has only brought in one woodchuck and a few gray squirrels."

"Ah! the game is becoming hard to find, indeed, Judge, with your clearings and betterments," said the old hunter, with a kind of compelled resignation. "The time has been, when I have shot thirteen deer, without counting the fa'ns, standing in the door of my own hut!—and for bear's meat, if one wanted a ham or so, he had only to watch a-nights, and he could shoot one by moonlight, through the cracks of the logs; no fear of his over-sleeping himself neither, for the howling of the wolves was sartin to keep his eyes open. There's old Hector,"—patting with affection a tall hound, of black and yellow spots, with white belly and legs, that just then came in on the scent, accompanied by the slut he had mentioned; "see where the wolves bit his throat, the night I druv them from the venison that was smoking on the chimbly top;—that dog is more to be trusted than many a Christian man; for he never forgets a friend, and loves the hand that gives him bread."

There was a peculiarity in the manner of the hunter that attracted the notice of the young female, who had been a close and interested observer of his appearance and equipments, from the moment he came into view. He was tall, and so meagre as to make him seem above even the six feet that he actually stood in his stockings. On his head, which was thinly covered with lank, sandy hair, he wore a cap made of foxskin, resembling in shape the one we have already described, although much inferior in finish and ornaments. His face was skinny, and thin almost to emaciation; but yet it bore no signs of disease—on the contrary, it had every indication of the most robust and enduring health. The cold and the exposure had, together, given it a color of uniform red. His gray eyes were glancing under a pair of shaggy brows, that overhung them in long hairs of gray mingled with their natural hue; his scraggy neck was bare, and burnt to the same tint with his face; though a small part of a shirt collar, made of the country check, was to be seen above the over-dress he wore. A kind of coat, made of dressed deerskin, with the hair on, was belted close to his lank body, by a girdle of colored worsted. On his feet were deerskin moccasins, ornamented with porcupines' quills, after the manner of the Indians, and his limbs were guarded with long leggings of the same material as the moccasins, which, gartering over the knees of his tarnished buckskin breeches, had obtained for him, among the settlers, the nickname of Leather-stocking. Over his left shoulder was slung a belt of deerskin, from which depended an enormous ox horn, so thinly scraped as to discover the powder it contained. The larger end was fitted ingeniously and securely with a wooden bottom, and the other was stopped tight by a little plug. A leathern pouch hung before him, from

---

25 quizzing, fun-loving or mocking

which, as he concluded his last speech, he took a small measure, and, filling it accurately with powder, he commenced reloading the rifle, which, as its butt rested on the snow before him, reached nearly to the top of his foxskin cap.

The traveller had been closely examining the wounds during these movements, and now, without heeding the ill-humor of the hunter's manner, he exclaimed:

"I would fain establish a right, Natty, to the honor of this death; and surely if the hit in the neck be mine, it is enough; for the shot in the heart was unnecessary—what we call an act of supererogation, Leather-stocking."

"You may call it by what larned name you please, Judge," said the hunter, throwing his rifle across his left arm, and knocking up a brass lid in the breech, from which he took a small piece of greased leather, and wrapping a ball in it, forced them down by main strength on the powder, where he continued to pound them while speaking. "It's far easier to call names than to shoot a buck on the spring; but the cretur came by his end from a younger hand than either your'n or mine, as I said before."

"What say you, my friend," cried the traveller, turning pleasantly to Natty's companion; "shall we toss up this dollar for the honor, and you keep the silver if you lose; what say you, friend?"

"That I killed the deer," answered the young man with a little haughtiness, as he leaned on another long rifle, similar to that of Natty.

"Here are two to one, indeed," replied the Judge, with a smile; "I am outvoted—over-ruled, as we say on the bench. There is Aggy, he can't vote, being a slave; and Bess is a minor—so I must even make the best of it. But you'll sell me the venison; and the deuce is in it, but I make a good story about its death."

"The meat is none of mine to sell," said Leather-stocking, adopting a little of his companion's hauteur; "for my part I have known animals travel days with shots in the neck, and I'm none of them who'll rob a man of his rightful dues."

"You are tenacious of your rights, this cold evening, Natty," returned the Judge, with unconquerable good nature; "but what say you, young man; will three dollars pay you for the buck?"

"First let us determine the question of right to the satisfaction of us both," said the youth, firmly but respectfully, and with a pronunciation and language vastly superior to his appearance; "with how many shot did you load your gun?"

"With five, sir," said the Judge, a little struck with the other's manner; "are they not enough to slay a buck like this?"

"One would do it; but," moving to the tree from behind which he had appeared, "you know, sir, you fired in this direction—here are four of the bullets in the tree."

The Judge examined the fresh marks in the bark of the pine, and shaking his head, said, with a laugh:

"You are making out the case against yourself, my young advocate—where is the fifth?"

"Here," said the youth, throwing aside the rough overcoat that he wore, and exhibiting a hole in his under garment, through which large drops of blood were oozing.

"Good God!" exclaimed the Judge with horror; "have I been trifling here about an empty distinction, and a fellow-creature suffering from my hands without a murmur? But hasten—quick—get into my sleigh—it is but a mile to the village, where surgical aid can be obtained;—all shall be done at my expense, and thou shalt live with me until thy wound is healed, aye, and forever afterward."

"I thank you for your good intention, but I must decline your offer. I have a friend who would be uneasy were he to hear that I am hurt and away from him. The injury is but slight, and the bullet has missed the bones; but I believe, sir, you will now admit my title to the venison."

"Admit it!" repeated the agitated Judge; "I here give thee a right to shoot deer, or bears, or anything thou pleasest in my woods, forever. Leather-stocking is the only other man that I have granted the same privilege to; and the time is coming when it will be of value. But I buy your deer—here, this bill will pay thee, both for thy shot and my own."

The old hunter gathered his tall person up into an air of pride, during this dialogue, but he waited until the other had done speaking.

"There's them living who say that Nathaniel Bumppo's right to shoot on these hills is of older date than Marmaduke Temple's right to forbid him," he said. "But if there's a law about it at all—though who ever heard of a law that a man shouldn't kill deer where he pleased! —but if there is a law at all, it should be to keep people from the use of smooth-bores. A body never knows

where his lead will fly, when he pulls the trigger of one of them uncertain fire-arms."

Without attending to the soliloquy of Natty, the youth bowed his head silently to the offer of the bank note, and replied:

"Excuse me; I have need of the venison."

"But this will buy you many deer," said the Judge; "take it, I entreat you," and lowering his voice to a whisper, he added—"it is for a hundred dollars."

For an instant only, the youth seemed to hesitate, and then, blushing even through the high color that the cold had given to his cheeks, as if with inward shame at his own weakness, he again declined the offer.

During this scene the female arose, and, regardless of the cold air, she threw back the hood which concealed her features, and now spoke, with great earnestness

"Surely, surely—young man,—sir—you would not pain my father so much, as to have him think that he leaves a fellow-creature in this wilderness, whom his own hand has injured. I entreat you will go with us, and receive medical aid."

Whether his wound became more painful, or there was something irresistible in the voice and manner of the fair pleader for her father's feelings, we know not; but the distance of the young man's manner was sensibly softened by this appeal, and he stood in apparent doubt, as if reluctant to comply with, and yet unwilling to refuse her request. The Judge, for such being his office, must in future be his title, watched, with no little interest, the display of this singular contention in the feelings of the youth; and advancing, kindly took his hand, and as he pulled him gently toward the sleigh, urged him to enter it.

"There is no human aid nearer than Templeton," he said, "and the hut of Natty is full three miles from this, —come—come, my young friend, go with us, and let the new doctor look to this shoulder of thine. Here is Natty will take the tidings of thy welfare to thy friend; and should'st thou require it, thou shalt return home in the morning."

The young man succeeded in extricating his hand from the warm grasp of the Judge, but he continued to gaze on the face of the female, who, regardless of the cold, was still standing with her fine features exposed, which expressed feelings that eloquently seconded the request of her father. Leather-stocking stood, in the meantime, leaning upon his long rifle, with his head turned a little to one side, as if engaged in sagacious musing; when, having apparently satisfied his doubts, by revolving the subject in his mind, he broke silence.

"It may be best to go, lad, after all; for if the shot hangs under the skin, my hand is getting too old to be cutting into human flesh, as I once used to. Though some thirty years agone, in the old war, when I was out under Sir William, I travelled seventy miles alone in the howling wilderness, with a rifle bullet in my thigh, and then cut it out with my own jack-knife Old Indian John knows the time well. I met him with a party of the Delawares, on the trail of the Iroquois, who had been down and taken five scalps on the Schoharie. But I made a mark on the redskin that I'll warrant he carried to his grave! I took him on his posteerum, saving the lady's presence, as he got up from the ambushment, and rattled three buckshot into his naked hide, so close, that you might have laid a broad joe upon them all—" here Natty stretched out his long neck, and straightened his body, as he opened his mouth, which exposed a single tusk of yellow bone, while his eyes, his face, even his whole frame seemed to laugh, although no sound was emitted, except a kind of thick hissing, as he inhaled his breath in quavers. "I had lost my bullet mould in crossing the Oneida outlet, and had to make shift with the buckshot; but the rifle was true, and didn't scatter like your two-legged thing there, Judge, which don't do, I find, to hunt in company with."

Natty's apology to the delicacy of the young lady was unnecessary, for, while he was speaking, she was too much employed in helping her father to remove certain articles of baggage to hear him. Unable to resist the kind urgency of the travellers any longer, the youth, though still with an unaccountable reluctance, suffered himself to be persuaded to enter the sleigh. The black, with the aid of his master, threw the buck across the baggage, and entering the vehicle themselves, the Judge invited the hunter to do so likewise.

55 **Sir William,** Sir William Johnson (1715-1774), who led an expedition against Crown Point on Lake Champlain in 1755 and the successful attack on Fort Niagara at the mouth of the Niagara River in 1759 His influence with the Mohawk Indians was one of the main reasons for the British success in their long struggle with the French • 65 **broad joe,** gold coin of Portugal

"No, no," said the old man, shaking his head; "I have work to do at home this Christmas eve—drive on with the boy, and let your doctor look to the shoulder; though if he will only cut out the shot, I have yarbs that will heal the wound quicker than all his foreign 'intments." He turned, and was about to move off, when, suddenly recollecting himself, he again faced the party, and added: "If you see anything of Indian John, about the foot of the lake, you had better take him with you, and let him lend the doctor a hand; for old as he is, he is curious at cuts and bruises, and it's likelier than not he'll be in with brooms to sweep your Christmas ha'arths."

"Stop, stop," cried the youth, catching the arm of the black as he prepared to urge his horses forward; "Natty —you need say nothing of the shot, nor of where I am going—remember, Natty, as you love me."

"Trust old Leather-stocking," returned the hunter, significantly; "he hasn't lived fifty years in the wilderness, and not larnt from the savages how to hold his tongue—trust to me, lad; and remember old Indian John."

"And, Natty," said the youth eagerly, still holding the black by the arm, "I will just get the shot extracted, and bring you up to-night, a quarter of the buck, for the Christmas dinner."

He was interrupted by the hunter, who held up his finger with an expressive gesture for silence. He then moved softly along the margin of the road, keeping his eyes steadfastly fixed on the branches of a pine. When he had obtained such a position as he wished, he stopped, and cocking his rifle, threw one leg far behind him, and, stretching his left arm to its utmost extent along the barrel of his piece, he began slowly to raise its muzzle in a line with the straight trunk of the tree. The eyes of the group in the sleigh naturally preceded the movement of the rifle, and they soon discovered the object of Natty's aim. On a small dead branch of the pine, which, at the distance of seventy feet from the ground, shot out horizontally, immediately beneath the living members of the tree, sat a bird, that in the vulgar language of the country was indiscriminately called a pheasant or a partridge. In size, it was but little smaller than a common barn-yard fowl. The baying of the dogs, and the conversation that had passed near the root of the tree on which it was perched, had alarmed the bird, which was now drawn up near the body of the pine, with a head and neck so erect, as to form nearly a straight line with its legs. As soon as the rifle bore on the victim, Natty drew his trigger, and the partridge fell from its height with a force that buried it in the snow.

"Lie down, you old villain!" exclaimed Leather-stocking, shaking his ramrod at Hector as he bounded toward the foot of the tree, "lie down, I say!" The dog obeyed, and Natty proceeded with great rapidity, though with the nicest accuracy, to reload his piece. When this was ended, he took up his game, and showing it to the party without a head, he cried: "Here is a titbit for an old man's Christmas—never mind the venison, boy, and remember Indian John; his yarbs are better than all the foreign 'intments Here, Judge," holding up the bird again, "do you think a smooth-bore would pick game off their roost, and not ruffle a feather?" The old man gave another of his remarkable laughs, which partook so largely of exultation, mirth, and irony, and shaking his head, he turned, with his rifle at a trail, and moved into the forest with steps that were between a walk and a trot. At each movement he made, his body lowered several inches, his knees yielding with an inclination inward; but as the sleigh turned at a bend in the road, the youth cast his eyes in quest of his old companion, and he saw that he was already nearly concealed by the trunks of the trees, while his dogs were following quietly in his footsteps, occasionally scenting the deer track, that they seemed to know instinctively was now of no further use to them. Another jerk was given to the sleigh, and Leather-stocking was hid from view.

[CHAPTER II. Here the reader learns that Marmaduke Temple is the descendant of a Quaker who had settled in Pennsylvania toward the end of the seventeenth century and had acquired many thousands of acres of land. For two generations, however, the family fortunes had dwindled; then, in the person of Marmaduke's father, they began again to rise. Marmaduke, sent to a good school, had made the acquaintance of Edward Effingham, the son of a British major who so disliked business affairs that he transferred his estate to his son. Edward thereupon invested it in a silent partnership with Marmaduke in a Philadelphia mercantile house, a transaction kept secret because of Major Effingham's distrust of the Quaker sect, to which Marmaduke nominally belonged. The business proved successful and the two friends prospered—then came the Revolution. Leaving his papers and effects in

Marmaduke's hands, Edward went to England, whence he returned in the uniform of a British officer. Marmaduke sided with the rebels and, although forced to abandon Philadelphia, handled his business affairs wisely, while serving his country in civil capacities. A large part of his funds he used to purchase confiscated Tory estates in New York, including (as is revealed a bit later) those of the Effinghams. He has now turned from commerce to the settlement and development of his land holdings in Otsego County and has become the chief magistrate in that jurisdiction. His only child and heir, Elizabeth, is returning from school to become the mistress of his household.]

CHAPTER III

Some little while elapsed ere Marmaduke Temple was sufficiently recovered from his agitation to scan the person of his new companion. He now observed that he was a youth of some two or three and twenty years of age, and rather above the middle height. Further observation was prevented by the rough overcoat which was belted close to his form by a worsted sash, much like the one worn by the old hunter. The eyes of the Judge, after resting a moment on the figure of the stranger, were raised to a scrutiny of his countenance. There had been a look of care visible in the features of the youth, when he first entered the sleigh, that had not only attracted the notice of Elizabeth, but which she had been much puzzled to interpret. His anxiety seemed the strongest when he was enjoining his old companion to secrecy; and even when he had decided, and was rather passively suffering himself to be conveyed to the village, the expression of his eyes by no means indicated any great degree of self-satisfaction at the step. But the lines of an uncommonly prepossessing countenance were gradually becoming composed; and he now sat silent, and apparently musing. The Judge gazed at him for some time with earnestness, and then smiling, as if at his own forgetfulness, he said:

"I believe, my young friend, that terror has driven you from my recollection; your face is very familiar, and yet, for the honor of a score of bucks' tails in my cap, I could not tell your name."

"I came into the country but three weeks since," returned the youth coldly, "and I understand you have been absent twice that time."

"It will be five to-morrow. Yet your face is one that I have seen; though it would not be strange, such has been my affright, should I see thee in thy winding-sheet walking by my bedside to-night. What say'st thou, Bess? Am I compos mentis or not?—Fit to charge a grand jury, or, what is just now of more pressing necessity, able to do the honors of a Christmas-eve in the hall of Templeton?"

"More able to do either, my dear father," said a playful voice from under the ample inclosures of the hood, "than to kill deer with a smooth-bore." A short pause followed, and the same voice, but in a different accent, continued: "We shall have good reasons for our thanksgiving to-night, on more accounts than one."

The horses soon reached a point where they seemed to know by instinct that the journey was nearly ended, and bearing on the bits as they tossed their heads, they rapidly drew the sleigh over the level land which lay on the top of the mountain, and soon came to the point where the road descended, suddenly but circuitously, into the valley.

The Judge was roused from his reflections, when he saw the four columns of smoke which floated above his own chimneys. As house, village, and valley burst on his sight, he exclaimed cheerfully to his daughter:

"See, Bess, there is thy resting-place for life!—And thine, too, young man, if thou wilt consent to dwell with us."

The eyes of his auditors involuntarily met; and if the color that gathered over the face of Elizabeth was contradicted by the cold expression of her eye, the ambiguous smile that again played about the lips of the stranger seemed equally to deny the probability of his consenting to form one of this family group. The scene was one, however, which might easily warm a heart less given to philanthropy than that of Marmaduke Temple.

The side of the mountain on which our travellers were journeying, though not absolutely perpendicular, was so steep as to render great care necessary in descending the rude and narrow path, which, in that early day, wound along the precipices. The Negro reined in his impatient steeds, and time was given Elizabeth to dwell on a scene which was so rapidly altering under the hands

---

36 compos mentis, of sound mind

of man, that it only resembled, in its outlines, the picture she had so often studied with delight in childhood. Immediately beneath them lay a seeming plain, glittering without inequality, and buried in mountains. The latter were precipitous, especially on the side of the plain, and chiefly in forest. Here and there the hills fell away in long, low points, and broke the sameness of the outline, or setting to the long and wide field of snow, which, without house, tree, fence, or any other fixture, resembled so much spotless cloud settled to the earth. A few dark and moving spots were, however, visible on the even surface, which the eye of Elizabeth knew to be so many sleighs going their several ways, to or from the village. On the western border of the plain, the mountains, though equally high, were less precipitous, and, as they receded, opened into irregular valleys and glens, or were formed into terraces and hollows that admitted of cultivation. Although the evergreens still held dominion over many of the hills that rose on this side of the valley, yet the undulating outlines of the distant mountains, covered with forests of beech and maple, gave a relief to the eye, and the promise of a kinder soil. Occasionally spots of white were discoverable amidst the forests of the opposite hills, which announced, by the smoke that curled over the tops of the trees, the habitations of man, and the commencement of agriculture. These spots were sometimes, by the aid of united labor, enlarged into what were called settlements, but more frequently were small and insulated; though so rapid were the changes, and so persevering the labors of those who had cast their fortunes on the success of the enterprise, that it was not difficult for the imagination of Elizabeth to conceive they were enlarging under her eye, while she was gazing, in mute wonder, at the alterations that a few short years had made in the aspect of the country. The points on the western side of this remarkable plain, on which no plant had taken root, were both larger and more numerous than those on its eastern, and one in particular thrust itself forward in such a manner as to form beautifully curved bays of snow on either side. On its extreme end an oak stretched forward, as if to overshadow, with its branches, a spot which its roots were forbidden to enter. It had released itself from the thraldom that a growth of centuries had imposed on the branches of the surrounding forest trees, and threw its gnarled and fantastic arms abroad, in the wildness of liberty. A dark spot of a few acres in extent at the southern extremity of this beautiful flat, and immediately under the feet of our travellers, alone showed by its rippling surface, and the vapors which exhaled from it, that what at first might seem a plain was one of the mountain lakes, locked in the frosts of winter. A narrow current rushed impetuously from its bosom at the open place we have mentioned, and was to be traced, for miles, as it wound its way toward the south through the real valley, by its borders of hemlock and pine, and by the vapor which arose from its warmer surface into the chill atmosphere of the hills. The banks of this lovely basin, at its outlet, or southern end, were steep but not high; and in that direction the land continued, far as the eye could reach, a narrow but graceful valley, along which the settlers had scattered their humble habitation, with a profusion that bespoke the quality of the soil, and the comparative facilities of intercourse.

Immediately on the bank of the lake and at its foot, stood the village of Templeton. It consisted of some fifty buildings, including those of every description, chiefly built of wood, and which, in their architecture, bore no great marks of taste, but which also, by the unfinished appearance of most of the dwellings, indicated the hasty manner of their construction. To the eye, they presented a variety of colors. A few were white in both front and rear, but more bore that expensive color on their fronts only, while their economical but ambitious owners had covered the remaining sides of the edifices with a dingy red. One or two were slowly assuming the russet of age; while the uncovered beams that were to be seen through the broken windows of their second stories, showed that either the taste or the vanity of their proprietors had led them to undertake a task which they were unable to accomplish. The whole were grouped in a manner that aped the streets of a city, and were evidently so arranged by the directions of one who looked to the wants of posterity rather than to the convenience of the present incumbents. Some three or four of the better sort of buildings, in addition to the uniformity of their color, were fitted with green blinds, which, at that season at least, were rather strangely contrasted to the chill aspect of the lake, the mountains, the forests, and the wide fields of snow. Before the doors of these pretending dwellings were placed a few saplings, either without branches, or possessing only the feeble shoots of one or two summers'

growth, that looked not unlike tall grenadiers on post near the threshold of princes. In truth, the occupants of these favored habitations were the nobles of Templeton, as Marmaduke was its king. They were the dwellings of two young men who were cunning in the law; an equal number of that class who chaffered to the wants of the community under the title of storekeepers; and a disciple of Æsculapius, who, for a novelty, brought more subjects into the world than he sent out of it. In the midst of this incongruous group of dwellings, rose the mansion of the Judge, towering above all its neighbors. It stood in the centre of an inclosure of several acres, which were covered with fruit trees. Some of the latter had been left by the Indians, and began already to assume the moss and inclination of age, therein forming a very marked contrast to the infant plantations that peered over most of the picketed fences of the village. In addition to this show of cultivation, were two rows of young Lombardy poplars, a tree but lately introduced into America, formally lining either side of a pathway, which led from a gate that opened on the principal street to the front door of the building. The house itself had been built entirely under the superintendence of a certain Mr. Richard Jones, whom we have already mentioned, and who from his cleverness in small matters, and an entire willingness to exert his talents, added to the circumstance of their being sisters' children, ordinarily superintended all the minor concerns of Marmaduke Temple. Richard was fond of saying, that this child of his invention consisted of nothing more nor less than what should form the groundwork of every clergyman's discourse; viz., a firstly, and a lastly. He had commenced his labors, in the first year of their residence, by erecting a tall, gaunt edifice of wood, with its gable toward the highway. In this shelter, for it was little more, the family resided three years. By the end of that period, Richard had completed his design. He had availed himself, in this heavy undertaking, of the experience of a certain wandering eastern mechanic, who, by exhibiting a few soiled plates of English architecture, and talking learnedly of friezes, entablatures, and particularly of the composite order, had obtained a very undue influence over Richard's taste, in everything that pertained to that branch of the fine arts. Not that Mr. Jones did not affect to consider Hiram Doolittle a perfect empiric in his profession, being in the constant habit of listening to his treatises on architecture with a kind of indulgent smile; yet, either from an inability to oppose them by anything plausible from his own stores of learning, or from secret admiration, Richard generally submitted to the arguments of his coadjutor. Together, they had not only erected a dwelling for Marmaduke, but they had given a fashion to the architecture of the whole county. The composite order, Mr. Doolittle would contend, was an order composed of many others, and was intended to be the most useful of all, for it admitted into its construction such alterations as convenience or circumstances might require. To this proposition Richard usually assented; and when rival geniuses, who monopolize not only all the reputation, but most of the money of a neighborhood, are of a mind, it is not uncommon to see them lead the fashion, even in graver matters. In the present instance, as we have already hinted, the castle, as Judge Templeton's dwelling was termed in common parlance, came to be the model, in some one or other of its numerous excellences, for every aspiring edifice within twenty miles of it.

The house itself, or the "lastly," was of stone; large, square, and far from uncomfortable. These were four requisites on which Marmaduke had insisted with a little more than his ordinary pertinacity. But everything else was peaceably assigned to Richard and his associate. These worthies found the material a little too solid for the tools of their workmen, which, in general, were employed on a substance no harder than the white pine of the adjacent mountains, a wood so proverbially soft, that it is commonly chosen by the hunters for pillows. But for this awkward dilemma, it is probable that the ambitious tastes of our two architects would have left us much more to do in the way of description. Driven from the faces of the house by the obduracy of the material, they took refuge in the porch and on the roof. The former, it was decided, should be severely classical, and the latter a rare specimen of the merits of the composite order.

A roof, Richard contended, was a part of the edifice that the ancients always endeavored to conceal, it being an excrescence in architecture that was only to be tolerated on account of its usefulness. Besides, as he wittily added, a chief merit in a dwelling was to present a front, on whichever side it might happen to be seen; for as it

---

8 Æsculapius, god of medicine in classical mythology

was exposed to all eyes in all weathers, there should be no weak flank for envy or unneighborly criticism to assail. It was therefore decided that the roof should be flat, and with four faces. To this arrangement, Marmaduke objected the heavy snows that lay for months, frequently covering the earth to a depth of three or four feet. Happily, the facilities of the composite order presented themselves to effect a compromise, and the rafters were lengthened, so as to give a descent that should carry off the frozen element. But unluckily, some mistake was made in the admeasurement of these material parts of the fabric; and as one of the greatest recommendations of Hiram was his ability to work by the "square rule," no opportunity was found of discovering the effect until the massive timbers were raised, on the four walls of the building. Then, indeed, it was soon seen that, in defiance of all rule, the roof was by far the most conspicuous part of the whole edifice. Richard and his associate consoled themselves with the belief, that the covering would aid in concealing this unnatural elevation; but every shingle that was laid only multiplied objects to look at. Richard essayed to remedy the evil with paint, and four different colors were laid on by his own hands. The first was a sky-blue, in the vain expectation that the eye might be cheated into the belief it was the heavens themselves that hung so imposingly over Marmaduke's dwelling; the second was what he called a "cloud-color," being nothing more nor less than an imitation of smoke; the third was what Richard termed an invisible green, an experiment that did not succeed against a background of sky. Abandoning the attempt to conceal, our architects drew upon their invention for means to ornament the offensive shingles. After much deliberation and two or three essays by moonlight, Richard ended the affair by boldly covering the whole beneath a color that he christened "sunshine," a cheap way, as he assured his cousin, the Judge, of always keeping fair weather over his head. The platform, as well as the eaves of the house, were surmounted by gaudily painted railings, and the genius of Hiram was exerted in the fabrication of divers urns and mouldings, that were scattered profusely around this part of their labors. Richard had originally a cunning expedient, by which the chimneys were intended to be so low, and so situated, as to resemble ornaments on the balustrades; but comfort required that the chimneys should rise with the roof, in order that the smoke might be carried off, and they thus became four extremely conspicuous objects in the view.

As this roof was much the most important architectural undertaking in which Mr. Jones was ever engaged, his failure produced a correspondent degree of mortification. At first, he whispered among his acquaintances, that it proceeded from ignorance of the square rule on the part of Hiram; but as his eye became gradually accustomed to the object, he grew better satisfied with his labors, and instead of apologizing for the defects, he commenced praising the beauties of the mansion-house. He soon found hearers; and, as wealth and comfort are at all times attractive, it was, as has been said, made a model for imitation on a small scale. In less than two years from its erection, he had the pleasure of standing on the elevated platform, and of looking down on three humble imitators of its beauty. Thus it is ever with fashion, which even renders the faults of the great, subjects of admiration.

Marmaduke bore this deformity in his dwelling with great good nature, and soon contrived, by his own improvements, to give an air of respectability and comfort to his place of residence. Still there was much of incongruity, even immediately about the mansion-house. Although poplars had been brought from Europe to ornament the grounds, and willows and other trees were gradually springing up nigh the dwelling, yet many a pile of snow betrayed the presence of the stump of a pine; and even in one or two instances, unsightly remnants of trees that had been partly destroyed by fire were seen rearing their black, glistening columns twenty or thirty feet above the pure white of the snow. These, which in the language of the country are termed stubs, abounded in the open fields adjacent to the village, and were accompanied by the ruin of a pine or a hemlock that had been stripped of its bark, and which waved in melancholy grandeur its naked limbs to the blast, a skeleton of its former glory. But these and many other unpleasant additions to the view were unseen by the delighted Elizabeth, who, as the horses moved down the side of the mountain, saw only in gross the cluster of houses that lay like a map at her feet; the fifty smokes that were curling from the valley to the clouds; the frozen lake as it lay imbedded in mountains of evergreen, with the long shadows of the pines on its white surface, lengthening in the setting sun; the dark riband of water that gushed from the outlet, and was winding its way toward the dis-

tant Chesapeake—the altered, though still remembered, scenes of her childhood.

Five years had wrought greater changes than a century would produce in countries where time and labor have given permanency to the works of man. To the young hunter and the Judge the scene had less novelty; though none ever emerge from the dark forests of that mountain, and witness the glorious scenery of that beauteous valley, as it bursts unexpectedly upon them, without a feeling of delight. The former cast one admiring glance from north to south, and sank his face again beneath the folds of his coat; while the latter contemplated, with philanthropic pleasure, the prospect of affluence and comfort that was expanding around him, the result of his own enterprise, and much of it the fruits of his own industry. . . .

[CHAPTER IV. On the way down the mountain the party is met by a four-horse lumber-sleigh containing four men: Richard Jones, small and red-faced; Monsieur Le Quoi, tall and sharp-featured, with projecting eyes, light blue and glassy; Major Fritz Hartmann, solid, short, and square; and Mr. Grant, a meek-looking, long-visaged clergyman. They welcome the Judge and his daughter in their various dialects. Richard attempts to turn around on the narrow road, and a bad accident is averted only by the quick action of the young hunter in seizing the bridles of the lead team; the welcoming party, however, is tossed out into the snow and the sleigh overturned. The Judge throws out the deer and his baggage, leaving Richard and the Negro to bring them when they have righted the larger sleigh; he takes the others in and drives on down the mountain. While they are alone, Richard worms out of Agamemnon the details of the shooting of the deer.

CHAPTER V. At the base of the mountain Richard and Agamemnon catch up with the smaller sleigh, and all arrive at the mansion-house as the sun goes down. There they are greeted by the major-domo, Benjamin Penguillan (nicknamed Ben Pump), a Cornishman who until 1783 had served in the British navy, by the housekeeper, Remarkable Pettibone, and by several lesser servants and the family dogs. The interior, as inexpertly furnished as the house itself is constructed, is described in detail. After some conversation, by which Richard is restrained from attempting to practice his amateur knowledge of surgery upon the young hunter, the village physician arrives.

CHAPTER VI. Dr. Elnathan Todd, largely self-educated, makes elaborate preparations to remove the bullet, although he has never previously attempted such an operation. He is aided by numerous suggestions from the bystanders. At length his patient informs him that the ball is only skin deep at the back of the shoulder, and no probe will be necessary. The incision is made; the young hunter jerks his arm; and the bullet falls out. At that moment Indian John appears in the doorway.

CHAPTER VII. At this point, Cooper digresses to give an account of the two Indian nations of the region: the Iroquois and the Delawares. Chingachgook or "Great Snake," locally known as John Mohegan or Indian John, is one of the last of the Mohegans, a Delaware tribe. He is much distressed by the accident to the young stranger, but quickly absolves the Judge from blame and dresses the wound, to the admiration of the doctor and the others. The Judge again attempts to purchase the deer from the young hunter, but he refuses to sell any part of it. The Judge finally gives up trying, and the young man, when questioned, identifies himself merely as Oliver Edwards and departs, with the deer, in the Judge's sleigh. Indian John remains, and his acceptance of an invitation to attend church next day gives him an opportunity to make some remarks on religion.

CHAPTER VIII. The story now halts for further exposition. Monsieur Le Quoi is revealed to be a refugee from the French Revolution who has become a prosperous storekeeper in the Judge's "Patent," as the grant of land in Otsego County is known locally. Major Hartmann is identified as the descendant of a German immigrant who had settled early in the century on the Mohawk River; he visits his friend the Judge four times a year, staying precisely a week each time. Mr. Grant, it appears, has just arrived as a missionary of the Protestant Episcopal Church; his first public service is scheduled for this very evening, Christmas Eve. It will be held in the great room of the Academy, a structure built by Richard Jones, Hiram Doolittle, and the local Freemasons at a time when Templeton had ambitions for an institution of higher learning. The Academy, now a common country school, is used for unusual trials at law, balls, and other meetings, including church services. When no itinerant preacher appears of

a Sunday, Richard Jones is accustomed to read one of Laurence Sterne's sermons.

CHAPTER IX. The Judge and his friends have dinner, and their food is described at mouth-watering length. Conversation turns upon the mysterious young stranger who has been living with Natty Bumppo for nearly three weeks. Elizabeth shows that he has interested her; Richard inclines to be critical of him and of his ancestry. Dinner over, the party prepare to leave for the church service.

CHAPTER X. The Judge, Elizabeth, Mr. Grant, and Major Hartmann walk through the streets, Elizabeth looking out for familiar houses and persons. At the "Bold Dragoon," a tavern on one of the principal corners, they encounter Captain and Mrs. Hollister, the proprietors. When they have entered the Academy, Richard Jones and Monsieur Le Quoi appear and discuss with Hiram Doolittle, who comes on the scene for the first time, the church which is being built opposite the Academy. Richard is trying, none too successfully, to make New St. Paul's, as the church is called, Episcopalian. The Judge has decreed that when it is completed the people shall decide for themselves what denomination it shall be.

CHAPTER XI. The interior of the Academy, the seating of the congregation, and Mr. Grant's service and sermon are described.

CHAPTER XII. The service over, Elizabeth is introduced to Louisa Grant, the clergyman's daughter; the two girls take an immediate fancy to each other. After the Temples go, Chingachgook, Natty Bumppo, Oliver Edwards, and the Grants remain. The Indian and Natty express themselves on religion, and Oliver reveals that he has been baptized an Episcopalian and has never attended worship in any other church. Mr. Grant is moved to invite him and his friends to the Grant home; Chingachgook and Oliver accept. There, Oliver reveals a strong antipathy to Judge Temple, which the clergyman deprecates, attributing it to Oliver's Delaware blood, of which he has spoken proudly. After an hour's conversation, Oliver and the Indian leave.

CHAPTER XIII. After a description of the "Bold Dragoon," the local tavern, and its host and hostess, there is a discussion among the company about whether or not the mysterious young man could sue Judge Templeton for damages. Squire Lippett expresses the hope that the young man will press his case, and tries to get Dr. Todd to say he will sue Judge Temple for the medical care given Oliver. Lippett promises to take his case, free of cost. Natty then enters, and the story continues:]

The old hunter carried in his hand his never-failing companion, the rifle; and although all of the company were uncovered excepting the lawyer, who wore his hat on one side, with a certain dam'me air, Natty moved to the front of one of the fires, without in the least altering any part of his dress or appearance. Several questions were addressed to him, on the subject of the game he had killed, which he answered readily, and with some little interest; and the landlord, between whom and Natty there existed much cordiality, on account of their both having been soldiers in youth, offered him a glass of a liquid, which, if we might judge from its reception, was no unwelcome guest. When the forester had got his potation also, he quietly took his seat on the end of one of the logs that lay nigh the fires, and the slight interruption produced by his entrance seemed to be forgotten.

"The testimony of the blacks could not be taken, sir," continued the lawyer, "for they are all the property of Mr. Jones, who owns their time. But there is a way by which Judge Temple, or any other man, might be made to pay for shooting another, and for the cure in the bargain.—There is a way, I say, and that without going into the 'court of errors,' too."

"And a mighty big error ye would make of it, Mister Todd," cried the landlady, "should ye be putting the matter into the law at all, with Joodge Temple, who has a purse as long as one of them pines on the hill, and who is an asy man to dale wid, if yees but mind the humor of him. He's a good man is Joodge Temple, and a kind one, and one who will be no the likelier to do the pratty thing, becase ye would wish to tarrify him wid the law. I know of but one objection to the same, which is an over carelessness about his sowl. It's neither a Methodie, nor a Papish, nor Prasbetyrian, that he is, but just nothing at all; and it's hard to think that he, 'who will not fight the good fight, under the banners of a rig'lar church, in this world, will be mustered among the chosen in heaven,' as my husband, the captain there, as ye call him, says—though there is but one captain that I know, who desarves the name. I hopes, Lather-stocking, ye'll no be foolish, and putting the boy up to try

the law in the matter; for 'twill be an evil day to ye both, when ye first turn the skin of so paceable an animal as a sheep into a bone of contention. The lad is wilcome to his drink for nothing, until his shoulther will bear the rifle ag'in."

"Well, that's gin'rous," was heard from several mouths at once, for this was a company in which a liberal offer was not thrown away; while the hunter, instead of expressing any of that indignation which he might be supposed to feel, at hearing the hurt of his young companion alluded to, opened his mouth, with the silent laugh for which he was so remarkable, and after he had indulged his humor, made this reply:—

"I know'd the Judge would do nothing with his smooth-bore when he got out of his sleigh. I never saw but one smooth-bore that would carry at all, and 'that was a French-ducking-piece, upon the big lakes: it had a barrel half as long ag'in as my rifle, and would throw fine shot into a goose, at 100 yards; but it made dreadful work with the game, and you wanted a boat to carry it about in. When I went with Sir William ag'in the French, at Fort Niagara, all the rangers used the rifle, and a dreadful weapon it is, in the hands of one who knows how to charge it, and keep a steady aim. The Captain knows, for he says he was a soldier in Shirley's; and though they were nothing but baggonet-men, he must know how we cut up the French and Iroquois in the skrimmages in that war. Chingachgook, which means 'Big Sarpent' in English, old John Mohegan, who lives up at the hut with me, was a great warrior then, and was out with us; he can tell all about it, too; though he was overhand for the tomahawk, never firing more than once or twice, before he was running in for the scalps. Ah! times is dreadfully altered since then. Why, Doctor, there was nothing but a footpath, or at the most a track for pack-horses, along the Mohawk, from the Jarman Flats up to the forts. Now, they say, they talk of running one of them wide roads with gates on it along the river; first making a road, and then fencing it up! I hunted one season back of the Kaatskills, nighhand to the settlements, and the dogs often lost the scent, when they came to them highways, there was so much travel on them, though I can't say that the brutes was of a very good breed. Old Hector will wind a deer in the fall of the year, across the broadest place in the Otsego, and that is a mile and a half, for I paced it myself on the ice, when the tract was first surveyed, under the Indian grant."

"It sames to me, Natty, but a sorry compliment, to call your comrad after the evil one," said the landlady; "and it's no much like a snake that old John is looking now. Nimrod would be a more besameing name for the lad, and a more Christian, too, seeing that it comes from the Bible. The sargeant read me the chapter about him, the night before my christening, and a mighty asement it was, to listen to anything from the book."

"Old John and Chingachgook were very different men to look on," returned the hunter, shaking his head at his melancholy recollections.—"In the 'fifty-eighth war' he was in the middle of manhood, and taller than now by three inches. If you had seen him, as I did, the morning we beat Dieskau, from behind our log walls, you would have called him as comely a red-skin as ye ever set eyes on. He was naked all to his breech-cloth and leggins; and you never seed a creater so handsomely painted. One side of his face was red, and the other black. His head was shaved clean, all to a few hairs on the crown, where he wore a tuft of eagle's feathers, as bright as if they had come from a peacock's tail. He had colored his sides so that they looked like an atomy, ribs and all; for Chingachgook had a great taste in such things, so that, what with his bold, fiery countenance, his knife, and his tomahawk, I have never seen a fiercer warrior on the ground. He played his part, too, like a man; for I saw him next day, with thirteen scalps on his pole. And I will say this for the 'Big Snake,' that he always dealt fair, and never scalped any that he didn't kill with his own hands."

"Well, well," cried the landlady; "fighting is fighting, anyway, and there is different fashions in the thing,

---

22 **Fort Niagara,** captured by a large force of British and Indians, under the command of Sir William Johnson, on July 7, 1759 • 25 **Shirley's,** William Shirley (1694-1771), royal governor of Massachusetts from 1741 until 1757, and commander of the British forces in America from Braddock's death in 1755 until he was superseded in the following year. He led an unsuccessful expedition against Fort Niagara in 1755 • 37 **Jarman Flats,** German Flatts, a settlement on the present site of Herkimer, New York, made by Germans from the Palatinate in 1725 • 52 **Nimrod.** See Genesis 10 8-9 • 59 **fifty-eighth war,** the French and Indian War • 62 **Dieskau,** Ludwig August Dieskau (1701-1767), German baron and general who served under the French in Canada. He was taken prisoner by Johnson and his men near Fort Edward on the upper Hudson on September 8, 1755

though I can't say that I relish mangling a body after the breath is out of it; neither do I think it can be uphild by doctrine. I hope, sargeant, ye niver was helping in sich evil worrek."

"It was my duty to keep my ranks, and to stand or fall by the baggonet or lead," returned the veteran. "I was then in the fort, and seldom leaving my place, saw but little of the savages, who kept on the flanks or in front, skrimmaging. I remember, howsomever, to have heard mention made of the 'Great Snake,' as he was called, for he was a chief of renown; but little did I ever expect to see him enlisted in the cause of Christianity, and civilized like old John."

"Oh! he was Christianized by the Moravians, who were always over intimate with the Delawares," said Leatherstocking. "It's my opinion that, had they been left to themselves, there would be no such doings now, about the head waters of the two rivers, and that these hills mought have been kept as good hunting-ground by their right owner, who is not too old to carry a rifle, and whose sight is as true as a fish-hawk hovering——"

He was interrupted by more stamping at the door, and presently the party from the Mansion-house entered, followed by the Indian himself.

CHAPTER XIV

Some little commotion was produced by the appearance of the new guests, during which the lawyer slunk from the room. Most of the men approached Marmaduke, and shook his offered hand, hoping "that the Judge was well;" while Major Hartmann, having laid aside his hat and wig, and substituted for the latter a warm, peaked woollen night-cap, took his seat very quietly on one end of the settee, which was relinquished by its former occupants. His tobacco-box was next produced, and a clean pipe was handed him by the landlord. When he had succeeded in raising a smoke, the Major gave a long whiff, and turning his head toward the bar, he said—

"Petty, pring in ter toddy."

In the mean time the Judge had exchanged his salutations with most of the company, and taken a place by the side of the Major, and Richard had bustled himself into the most comfortable seat in the room. Mr. Le Quoi was the last seated, nor did he venture to place his chair finally until by frequent removals he had ascertained that he could not possibly intercept a ray of heat from any individual present. Mohegan found a place on an end of one of the benches, and somewhat approximated to the bar. When these movements had subsided, the Judge remarked pleasantly—

"Well, Betty, I find you retain your popularity through all weathers, against all rivals, and among all religions. How liked you the sermon?"

"Is it the sarmon?" exclaimed the landlady. "I can't say but it was rasonable; but the prayers is mighty unasy. It's no small a matter for a body in their fifty-nint' year, to be moving so much in church. Mr. Grant sames a godly man, anyway, and his garrel is a hoomble one, and a devout.—Here, John, is a mug of cider, laced with whiskey. An Indian will drink cider, though he niver be athirst."

"I must say," observed Hiram, with due deliberation, "that it was a tonguey thing; and I rather guess that it gave considerable satisfaction. There was one part, though, which might have been left out, or something else put in; but then I s'pose that, as it was a written discourse, it is not so easily altered as where a minister preaches without notes."

"Ay! there's the rub, Joodge," cried the landlady. "How can a man stand up and be praching his word, when all that he is saying is written down, and he is as much tied to it as iver a thaving dragoon was to the pickets?"

"Well, well," cried Marmaduke, waving his hand for silence, "there is enough said; as Mr. Grant told us, there are different sentiments on such subjects, and in my opinion he spoke most sensibly.—So, Jotham, I am told you have sold your betterments to a new settler, and have moved into the village, and opened a school. Was it cash or dicker?"

The man who was thus addressed occupied a seat immediately behind Marmaduke; and one who was ignorant of the extent of the Judge's observation, might have thought he would have escaped notice. He was of a thin, shapeless figure, with a discontented expression of countenance, and with something extremely shiftless in his whole air. Thus spoken to, after turning and twisting a little, by way of preparation, he made a reply.

---

14 Moravians, or United Brethren, a German Protestant sect active after 1734 in Indian missions. Heckewelder, from whom Cooper derived much of his Indian lore, was a Moravian missionary

"Why, part cash, and part dicker. I sold out to a Pumfret-man who was so'thin forehanded. He was to give me ten dollars an acre for the clearin', and one dollar an acre over the first cost on the woodland; and we agreed to leave the buildin's to men. So I tuck Asa Montagu, and he tuck Absalom Bement, and they two tuck old Squire Napthali Green. And so they had a meetin', and made out a vardict of eighty dollars for the buildin's. There was twelve acres of clearin', at ten dollars, and eighty-eight at one, and the whull came to two hundred and eighty-six dollars and a half, after paying the men."

"Hum," said Marmaduke: "what did you give for the place?"

"Why, besides what's comin' to the Judge, I gi'n my brother Tim a hundred dollars for his bargain; but then there's a new house on't, that cost me sixty more, and I paid Moses a hundred dollars, for choppin', and loggin', and sowin'; so that the whull stood me in about two hundred and sixty dollars. But then I had a great crop off on't, and as I got twenty-six dollars and a half more than it cost, I conclude I made a pretty good trade on't."

"Yes, but you forgot that the crop was yours without the trade, and you have turned yourself out of doors for twenty-six dollars."

"Oh! the Judge is clean out," said the man, with a look of sagacious calculation; "he turned out a span of horses, that is wuth a hundred and fifty dollars of any man's money, with a bran new wagon; fifty dollars in cash; and a good note for eighty more; and a side-saddle that was valued at seven and a half—so there was jist twelve shillings betwixt us. I wanted him to turn out a set of harness, and take the cow and the sap troughs. He wouldn't—but I saw through it; he thought I should have to buy the tacklin' afore I could use the wagon and horses; but I know'd a thing or two myself; I should like to know of what use is the tacklin' to him! I offered him to trade back ag'in, for one hundred and fifty-five. But my woman said she wanted a churn, so I tuck a churn for the change."

"And what do you mean to do with your time this winter? you must remember that time is money."

"Why, as the master is gone down country, to see his mother, who, they say, is going to make a die on't, I agreed to take the school in hand till he comes back. If times doosn't get worse in the spring, I've some notion of going into trade, or maybe I may move off to the Genesee; they say they are carryin' on a great stroke of business that-a-way. If the wust comes to the wust, I can but work at my trade, for I was brought up in a shoe manufactory."

It would seem that Marmaduke did not think his society of sufficient value to attempt inducing him to remain where he was; for he addressed no further discourse to the man, but turned his attention to other subjects. After a short pause, Hiram ventured a question:

"What news does the Judge bring us from the Legislature? it's not likely that Congress has done much this session: or maybe the French haven't fit any more battles lately?"

"The French, since they have beheaded their king, have done nothing but fight," returned the Judge. "The character of the nation seems changed. I knew many French gentlemen, during our war, and they all appeared to me to be men of great humanity and goodness of heart; but these Jacobins are as bloodthirsty as bull-dogs."

"There was one Roshambow wid us, down at Yorrektown," cried the landlady; "a mighty pratty man he was, too; and their horse was the very same. It was there that the sargeant got the hurt in the leg, from the English batteries, bad luck to 'em."

"Ah! mon pauvre Roi!" murmured Monsieur Le Quoi.

"The Legislature have been passing laws," continued Marmaduke, "that the country much required. Among others, there is an act prohibiting the drawing of seines, at any other than proper seasons, in certain of our streams and small lakes; and another, to prohibit the killing of deer in the teeming months. These are laws that were loudly called for, by judicious men; nor do I despair of getting an act to make the unlawful felling of timber a criminal offence."

The hunter listened to this detail with breathless attention, and when the Judge had ended, he laughed in open derision.

"You may make your laws, Judge," he cried, "but who

---

48 **Genesee**, a river which runs across New York State from south to north, almost on a line with the present city of Rochester • 67 **Roshambow**, Jean Baptiste Donatien de Vimeur, Count Rochambeau (1725-1807), commander of the French forces in the action ended by the surrender of Cornwallis at Yorktown, 1781

will you find to watch the mountains through the long summer days, or the lakes at night? Game is game, and he who finds may kill; that has been the law in these mountains for forty years, to my sartain knowledge; and I think one old law is worth two new ones. None but a green-one would wish to kill a doe with a fa'n by its side, unless his moccasins were getting old, or his leggins ragged, for the flesh is lean and coarse. But a rifle rings among the rocks along the shore, sometimes, as if fifty pieces were fired at once:—it would be hard to tell where the man stood who pulled the trigger."

"Armed with the dignity of the law, Mr. Bumppo," returned the Judge, gravely, "a vigilant magistrate can prevent much of the evil that has hitherto prevailed, and which is already rendering the game scarce. I hope to live to see the day when a man's rights in his game shall be as much respected as his title to his farm."

"Your titles and your farms are all new together," cried Natty; "but laws should be equal, and not more for one than another. I shot a deer, last Wednesday was a fortnight, and it floundered through the snow-banks till it got over a brush fence; I catch'd the lock of my rifle in the twigs in following, and was kept back, until finally the creater got off. Now I want to know who is to pay me for that deer; and a fine buck it was. If there hadn't been a fence I should have gotten another shot into it; and I never draw'd upon anything that hadn't wings three times running, in my born days.—No, no, Judge, it's the farmers that makes the game scarce, and not the hunters."

"Ter teer is not so plenty as in ter old war, Pumppo," said the Major, who had been an attentive listener, amidst clouds of smoke; "put ter lant is not mate as for ter teer to live on, put for Christians."

"Why, Major, I believe you're a friend to justice and the right, though you go so often to the grand house; but it's a hard case to a man to have his honest calling for a livelihood stopped by laws, and that too when, if right was done, he mought hunt or fish on any day in the week, or on the best flat in the Patent, if he was so minded."

"I unstertant you, Letter-stockint," returned the Major, fixing his black eyes, with a look of peculiar meaning, on the hunter; "put you didn't use to be so prutent, as to look ahet mit so much care."

"Maybe there wasn't so much occasion," said the hunter, a little sulkily; when he sank into a silence from which he was not roused for some time.

"The Judge was saying so'thin about the French," Hiram observed, when the pause in the conversation had continued a decent time.

"Yes, sir," returned Marmaduke, "the Jacobins of France seem rushing from one act of licentiousness to another. They continue those murders which are dignified by the name of executions. You have heard that they have added the death of their Queen to the long list of their crimes."

"Les monstres!" again murmured Monsieur Le Quoi, turning himself suddenly in his chair, with a convulsive start.

"The province of La Vendée is laid waste by the troops of the republic, and hundreds of its inhabitants, who are royalists in their sentiments, are shot at a time. La Vendée is a district in the southwest of France that continues yet much attached to the family of the Bourbons; doubtless Monsieur Le Quoi is acquainted with it, and can describe it more faithfully."

"Non, non, non, mon cher ami," returned the Frenchman, in a suppressed voice, but speaking rapidly, and gesticulating with his right hand, as if for mercy, while with his left he concealed his eyes.

"There have been many battles fought lately," continued Marmaduke, "and the infuriated republicans are too often victorious. I cannot say, however, that I am sorry they have captured Toulon from the English, for it is a place to which they have a just right."

"Ah—ha!" exclaimed Monsieur Le Quoi, springing on his feet, and flourishing both arms with great animation; "ces Anglais!"

The Frenchman continued to move about the room with great alacrity for a few minutes, repeating his exclamations to himself; when, overcome by the contradictory nature of his emotions, he suddenly burst out of the house, and was seen wading through the snow toward his little shop, waving his arms on high, as if to pluck down honor from the moon. His departure excited but little surprise, for the villagers were used to his manner; but Major Hartmann laughed outright, for the first time during his visit, as he lifted the mug, and observed—

"Ter Frenchman is mat—put he is goot as for notting to trink; he is trunk mit joy."

"The French are good soldiers," said Captain Hollister; "they stood us in hand a good turn, down at Yorktown; nor do I think, although I am an ignorant man about the great movements of the army, that his Excellency would have been able to march against Cornwallis, without their reinforcements."

"Ye spake the trut', sargeant," interrupted his wife, "and I would iver have ye be doing the same. It's varry pratty men is the French; and jist when I stopt the cart, the time when ye was pushing on in front it was, to kape the rig'lers in, a rigiment of the jontlemen marched by, and so I dealt them out to their liking Was it pay I got? sure did I, in good solid crowns: the divil a bit of continental could they muster among them all, for love nor money. Och! the Lord forgive me for swearing and spakeing of such vanities: but this I will say for the French, that they paid in good silver; and one glass would go a great way wid 'em, for they gin'rally handed it back wid a drop in the cup; and that's a brisk trade, Joodge, where the pay is good, and the men not over partic'lar."

"A thriving trade, Mrs. Hollister," said Marmaduke. "But what has become of Richard? he jumped up as soon as seated, and has been absent so long that I am fearful he has frozen."

"No fear of that, cousin 'duke," cried the gentleman himself; "business will sometimes keep a man warm the coldest night that ever snapt in the mountains. Betty, your husband told me, as we came out of church, that your hogs were getting mangy, so I have been out to take a look at them, and found it true. I stepped across, Doctor, and got your boy to weigh me out a pound of salts, and have been mixing it with their swill. I'll bet a saddle of venison against a gray squirrel, that they are better in a week. And now, Mrs. Hollister, I'm ready for a hissing mug of flip."

"Sure I know'd yee'd be wanting that same," said the landlady; "it's mixt and ready to the boiling. Sargeant, dear, be handing up the iron, will ye?—no the one in the far fire, it's black, ye will see. Ah! you've the thing now; look if it's not as red as a cherry."

The beverage was heated, and Richard took that kind of draught which men are apt to indulge in, who think that they have just executed a clever thing, especially when they like the liquor.

"Oh! you have a hand, Betty, that was formed to mix flip," cried Richard, when he paused for breath. "The very iron has a flavor in it. Here, John, drink, man, drink. I and you and Dr. Todd have done a good thing with the shoulder of that lad this very night. 'Duke, I made a song while you were gone—one day when I had nothing to do; so I'll sing you a verse or two, though I haven't really determined on the tune yet:—

What is life but a scene of care,
  Where each one must toil in his way?
Then let us be jolly, and prove that we are
A set of good fellows, who seem very rare,
  And can laugh and sing all the day.
    Then let us be jolly,
    And cast away folly,
  For grief turns a black head to gray.

There, 'duke, what do you think of that? There is another verse of it, all but the last line. I haven't got a rhyme for the last line yet. Well, old John, what do you think of the music? as good as one of your war songs, ha?"

"Good!" said Mohegan, who had been sharing deeply in the potations of the landlady, besides paying a proper respect to the passing mugs of the Major and Marmaduke.

"Pravo! pravo! Richart," cried the Major, whose black eyes were beginning to swim in moisture; "pravissimo! it is a goot song; put Natty Pumppo hast a petter. Letterstockint, vilt sing? olt poy, vilt sing ter song, as apout ter woots?"

"No, no, Major," returned the hunter, with a melancholy shake of the head, "I have lived to see what I thought eyes could never behold in these hills, and I have no heart left for singing. If he, that has a right to be master and ruler here, is forced to squinch his thirst, when a-dry, with snow-water, it ill becomes them that have lived by his bounty to be making merry, as if there was nothing in the world but sunshine and summer."

When he had spoken, Leather-stocking again dropped his head on his knees, and concealed his hard and wrinkled features with his hands. The change from the excessive cold without, to the heat of the bar-room, coupled with the depth and frequency of Richard's draughts, had already levelled whatever inequality there might have existed between him and the other guests, on the score of spirits; and he now held out a pair of swimming mugs of foaming flip toward the hunter, as he cried—

"Merry! ay! merry Christmas to you, old boy! Sunshine and summer! no! you are blind, Leather-stocking, 'tis moonshine and winter;—take these spectacles, and open your eyes—

So let us be jolly,
And cast away folly,
For grief turns a black head to gray.

"Hear how old John turns his quavers. What damned dull music an Indian song is after all, Major! I wonder if they ever sing by note."

While Richard was singing and talking, Mohegan was uttering dull, monotonous tones, keeping time by a gentle motion of his head and body. He made use of but few words, and such as he did utter were in his native language, and consequently only understood by himself and Natty. Without heeding Richard, he continued to sing a kind of wild, melancholy air, that rose, at times, in sudden and quite elevated notes, and then fell again into the low, quavering sounds that seemed to compose the character of his music.

The attention of the company was now much divided, the men in the rear having formed themselves into little groups, where they were discussing various matters; among the principal of which were the treatment of mangy hogs, and Parson Grant's preaching; while Dr. Todd was endeavoring to explain to Marmaduke the nature of the hurt received by the young hunter. Mohegan continued to sing, while his countenance was becoming vacant, though, coupled with his thick bushy hair, it was assuming an expression very much like brutal ferocity. His notes were gradually growing louder, and soon rose to a height that caused a general cessation in the discourse. The hunter now raised his head again, and addressed the old warrior, warmly, in the Delaware language, which, for the benefit of our readers, we shall render freely into English.

"Why do you sing of your battles, Chingachgook, and of the warriors you have slain, when the worst enemy of all is near you, and keeps the Young Eagle from his rights? I have fought in as many battles as any warrior in your tribe, but cannot boast of my deeds at such a time as this."

"Hawk-eye," said the Indian, tottering with a doubtful step from his place, "I am the Great Snake of the Delawares. I can track the Mingoes like an adder that is stealing on the whip-poor-will's eggs, and strike them like a rattlesnake, dead at a blow. The white man made the tomahawk of Chingachgook bright as the water of Otsego, when the last sun is shining; but it is red with the blood of the Maquas."

"And why have you slain the Mingo warriors? Was it not to keep these hunting grounds and lakes to your father's children? and were they not given in solemn council to the Fire-eater? and does not the blood of a warrior run in the veins of the young chief, who should speak aloud, where his voice is now too low to be heard?"

The appeal of the hunter seemed in some measure to recall the confused faculties of the Indian, who turned his face toward the listeners and gazed intently on the Judge. He shook his head, throwing his hair back from his countenance, and exposed eyes that were glaring with an expression of wild resentment. But the man was not himself. His hand seemed to make a fruitless effort to release his tomahawk, which was confined by its handle to his belt, while his eyes gradually became vacant. Richard at that instant thrusting a mug before him, his features changed to the grin of idiocy, and seizing the vessel with both hands, he sank backward on the bench and drank until satiated, when he made an effort to lay aside the mug with the helplessness of total inebriety.

"Shed not blood!" exclaimed the hunter, as he watched the countenance of the Indian in its moment of ferocity; "but he is drunk, and can do no harm. This is the way with all the savages; give them liquor, and they make dogs of themselves. Well, well—the time will come when right will be done; and we must have patience."

Natty still spoke in the Delaware language, and of course was not understood. He had hardly concluded, before Richard cried—

"Well, old John is soon sowed up. Give him a berth, Captain, in the barn, and I will pay for it. I am rich to-night, ten times richer than 'duke, with all his lands, and military lots, and funded debts, and bonds, and mortgages.

Come let us be jolly,
And cast away folly,
For grief—

Drink, King Hiram—drink, Mr. Doo-nothing—drink, sir, I say. This is a Christmas eve, which comes, you know, but once a year."

"He! he! he! the squire is quite moosical to-night,"

said Hiram, whose visage began to give marvellous signs of relaxation. "I rather guess we shall make a church on't yet, Squire?"

"A church, Mr. Doolittle! we will make a cathedral of it! bishops, priests, deacons, wardens, vestry, and choir: organ, organist, and bellows! By the Lord Harry, as Benjamin says, we will clap a steeple on the other end of it, and make two churches of it. What say you, 'duke, will you pay? ha! my cousin Judge, wil't pay!"

"Thou makest such a noise, Dickon," returned Marmaduke, "it is impossible that I can hear what Dr. Todd is saying,—I think thou observed'st, it is probable the wound will fester, so as to occasion danger to the limb in this cold weather?"

"Out of nater, sir, quite out of nater," said Elnathan, attempting to expectorate, but succeeding only in throwing a light, frothy substance, like a flake of snow, into the fire—"quite out of nater, that a wound so well dressed, and with the ball in my pocket, should fester. I s'pose, as the Judge talks of taking the young man into his house, it will be most convenient if I make but one charge on't."

"I should think one would do," returned Marmaduke, with that arch smile that so often beamed on his face; leaving the beholder in doubt whether he most enjoyed the character of his companion, or his own covert humor. The landlord had succeeded in placing the Indian on some straw in one of his outbuildings, where, covered with his own blanket, John continued for the remainder of the night.

In the mean time, Major Hartmann began to grow noisy and jocular, glass succeeded glass, and mug after mug was introduced, until the carousal had run deep into the night, or rather morning; when the veteran German expressed an inclination to return to the Mansion-house. Most of the party had already retired, but Marmaduke knew the habits of his friend too well to suggest an earlier adjournment. So soon, however, as the proposal was made, the Judge eagerly availed himself of it, and the trio prepared to depart. Mrs. Hollister attended them to the door in person, cautioning her guests as to the safest manner of leaving her premises.

"Lane on Mister Jones, Major," said she, "he's young, and will be a support to ye. Well, it's a charming sight to see ye, any way, at the Bould Dragoon; and sure it's no harm to be kaping a Christmas eve wid a light heart, for it's no telling when we may have sorrow come upon us. So good night, Joodge, and a merry Christmas to ye all, to-morrow morning."

The gentlemen made their adieus as well as they could, and taking the middle of the road, which was a fine, wide, and well-beaten path, they did tolerably well until they reached the gate of the Mansion-house: but on entering the Judge's domains, they encountered some slight difficulties. We shall not stop to relate them, but will just mention that, in the morning, sundry diverging paths were to be seen in the snow; and that once during their progress to the door, Marmaduke, missing his companions, was enabled to trace them, by one of these paths, to a spot where he discovered them with nothing visible but their heads: Richard singing in a most vivacious strain,

"Come, let us be jolly,
And cast away folly,
For grief turns a black head to gray."

[CHAPTER XV. Meanwhile, back at the mansion-house, there have been conversations between Elizabeth and Remarkable Pettibone, and between Remarkable and Ben Pump after Elizabeth has gone to bed. The latter dialogue is considerably the warmer for the steady consumption of a bottle of rum. It grows clear that the housekeeper is likely to resent Elizabeth's assumption of the rôle of mistress and that Ben enjoys talking about his seafaring past.

CHAPTER XVI. Before breakfast on Christmas morning Elizabeth steps out for some fresh air, meets Richard Jones and gets him his Christmas present—a commission as sheriff of Otsego County. Walking out to observe the "improvements" of Templeton, the two encounter Oliver Edwards, Natty Bumppo, and Chingachgook, who are debating which shall spend the single shilling they have among them for the entry fee in the traditional Christmas turkey shoot. Elizabeth offers another shilling, and Natty agrees to shoot for her; but Oliver, who shows great anxiety to win the bird, claims the right to precede his friend.

CHAPTER XVII. It seems that Natty has long had a rival in marksmanship, a woodchopper named Billy Kirby. They prepare for the test, which is to hit the head of a turkey at the distance of one hundred yards. Kirby misses; Oliver misses; Natty's gun snaps but does not fire. After some argument Natty is ruled to have had his chance. Kirby

misses again; Oliver declines a second shot; Natty, taking great care this time, kills the turkey, which Elizabeth asks Oliver to accept as a peace offering. As she and Richard turn back toward the mansion-house they meet Judge Temple, who wishes to speak to Oliver.

CHAPTER XVIII. The Judge has decided that he needs a new assistant, now that Richard is to be sheriff, and he asks Oliver to take the post. Oliver at first refuses; then, after some discussion in which Chingachgook takes the Judge's part, agrees to undertake the task as an experiment. The Temples go home, discussing Oliver's strange reluctance to accept such a promising post; the other party likewise discuss the event, Oliver remarking that he could not have foreseen a month earlier even a tentative acceptance of living and serving in the "dwelling of the greatest enemy of my race." Natty is most uncertain of the experiment, although he is aware that times are changing. Chingachgook is sure that the days when one could live by hunting are at an end. That afternoon there is a heavy rain and the snow disappears.

CHAPTER XIX. At night, however, the wind shifts; the weather turns suddenly severe; and in the morning all Templeton is covered with a sheet of ice. Oliver, in civilized clothing, arrives to take up his work; Major Hartmann departs. Three months pass as Oliver learns his duties. To the mystification of the Templeton folk, however, he spends all his leisure moments and many of his nights in Natty Bumppo's hut.

CHAPTER XX. Spring comes gradually. At the end of March Richard proposes an excursion to see Billy Kirby's "sugar bush" and a magnificent view of the valley which he has discovered. Elizabeth, Louisa Grant, Oliver, Monsieur Le Quoi, the Judge, and Richard all go on horseback. The Judge has already shown his determination to preserve the maple trees and encourage the maple-sugar industry, which is described in detail.

CHAPTER XXI. On the way to the "view" the Judge is led to reminiscence of his first travels in the region and his first meeting with Natty Bumppo. Oliver shows keen interest in the Judge's acquisition of the land and in Natty's views of the Indian rights, a subject which the Judge does not take to kindly. On the return to the village a tree falls across the path, and Oliver saves Louisa by grasping her horse's bridle. "Now, Mr. Edwards," she remarks at the end of the chapter, "both father and daughter owe their lives to you."

CHAPTER XXII. Thaws and freezes alternate until the close of April. Then one day the pigeons arrive from the south. They fly over the valley in such numbers that even the children can kill them, and are so ruthlessly destroyed that the villagers cover the ground with dead and dying birds. Natty Bumppo is disgusted at the wastefulness, but when the chance comes to humiliate Billy Kirby by bringing down a single pigeon he cannot resist the temptation and again displays incredible skill with his rifle.

CHAPTER XXIII. The season now advances rapidly. Fishing having begun, Richard organizes a night expedition to seine for bass; the first cast brings in two thousand fish. The Judge perceives that such methods are "a fearful expenditure of the choicest gifts of Providence."

CHAPTER XXIV. Elizabeth and Louisa, strolling along the shore of the lake, observe a fire on the farther side, where Natty has his cabin. The light approaches and a canoe appears, manned by Natty and Chingachgook. Natty refuses a gift of fish acquired by "such a sinful kind of fishing"; he then takes Elizabeth out in the canoe and exhibits his skill with the spear. Their expedition ends suddenly when Ben Pump, handling the seine, is knocked into the lake from Billy Kirby's boat. Ben cannot swim, but he is rescued by Natty, who entwines his spear in Ben's clothing and hair.

CHAPTER XXV. Next morning Richard expects to take the Judge to a spot where he hints coal may be found, but discovers that the Judge has spent a sleepless night after having received a letter from London. The letter is read by Richard and makes little sense to the reader; it appears, however, to convey the news of the loss of a ship which sailed from Falmouth in England about the first of September 1792. For some mysterious reason this is most upsetting to the Judge. He sends for his lawyer, Dirck Van der School, and spends the day drawing up confidential papers. Oliver is excluded from this business and is very curious; his questioning of Elizabeth and the lawyer is of no avail. For many days the Judge is uneasy and melancholy, but early in July he agrees to accompany Richard on the excursion relating to mines.

CHAPTER XXVI. As Richard and the Judge start off, Elizabeth and Louisa are ready to go out walking. The Judge warns them of the heat and suggests that they be careful not to stray too far into the forest. Oliver, who has planned to go fishing, offers to accompany the girls as their protector and is snubbed for his pains; they take

the mastiff Brave instead. Oliver then rows across the lake to Natty's cabin, where he is somewhat surprised to find Hiram Doolittle lurking in the bushes. He secures the cabin with a padlock and returns to the lake. The story then goes on as follows:]

. . . There were several places in the Otsego that were celebrated fishing-grounds for perch. One was nearly opposite to the cabin, and another, still more famous, was near a point, at the distance of a mile and a half above it, under the brow of the mountain, and on the same side of the lake with the hut. Oliver Edwards pulled his little skiff to the first, and sat, for a minute, undecided whether to continue there, with his eyes on the door of the cabin, or to change his ground, with a view to get superior game. While gazing about him, he saw the light-colored bark canoe of his old companions, riding on the water, at the point we have mentioned, and containing two figures, that he at once knew to be Mohegan and the Leather-stocking. This decided the matter, and the youth pulled, in a very few minutes, to the place where his friends were fishing, and fastened his boat to the light vessel of the Indian.

The old men received Oliver with welcoming nods, but neither drew his line from the water, nor in the least varied his occupation. When Edwards had secured his own boat, he baited his hook and threw it into the lake, without speaking.

"Did you stop at the wigwam, lad, as you rowed past?" asked Natty.

"Yes, and I found all safe; but that carpenter and justice of the peace, Mr., or as they call him, Squire, Doolittle, was prowling through the woods I made sure of the door before I left the hut, and I think he is too great a coward to approach the hounds."

"There's little to be said in favor of that man," said Natty, while he drew in a perch and baited his hook. "He craves dreadfully to come into the cabin, and has as good as asked me as much to my face; but I put him off with unsartain answers so that he is no wiser than Solomon. This comes of having so many laws that such a man may be called on to intarpret them."

"I fear he is more knave than fool," cried Edwards; "he makes a tool of that simple man, the Sheriff; and I dread that his impertinent curiosity may yet give us much trouble."

"If he harbors too much about the cabin, lad, I'll shoot the creater," said the Leather-stocking, quite simply.

"No, no, Natty, you must remember the law," said Edwards, "or we shall have you in trouble; and that, old man, would be an evil day, and sore tidings to us all."

"Would it, boy!" exclaimed the hunter, raising his eyes with a look of friendly interest, toward the youth. "You have the true blood in your veins, Mr. Oliver; and I'll support it to the face of Judge Temple, or in any court in the country. How is it, John? Do I speak the true word? Is the lad staunch, and of the right blood?"

"He is a Delaware," said Mohegan, "and my brother. The young Eagle is brave, and he will be a chief. No harm can come."

"Well, well," cried the youth, impatiently, "say no more about it, my good friends; if I am not all that your partiality would make me, I am yours through life, in prosperity as in poverty. We will talk of other matters."

The old hunters yielded to his wish, which seemed to be their law. For a short time a profound silence prevailed, during which each man was very busy with his hook and line; but Edwards, probably feeling that it remained with him to renew the discourse, soon observed, with the air of one who knew not what he said—

"How beautifully tranquil and glassy the lake is! Saw you it ever more calm and even than at this moment, Natty?"

"I have known the Otsego water for five and forty years," said Leather-stocking; "and I will say that for it, which is, that a cleaner spring or better fishing is not to be found in the land Yes, yes; I had the place to myself once, and a cheerful time I had of it. The game was plenty as heart could wish, and there was none to meddle with the ground, unless there might have been a hunting party of the Delawares crossing the hills, or, maybe, a rifling scout of them thieves, the Iroquois. There was one or two Frenchmen that squatted in the flats, further west, and married squaws, and some of the Scotch-Irishers, from the Cherry-Valley, would come on to the lake, and borrow my canoe to take a mess of parch, or drop a line for salmon-trout; but, in the main,

80 Cherry-Valley, a settlement made in 1740 about ten miles northeast of Cooperstown. It was the scene of a massacre by Indians and Tories in 1778

it was a cheerful place, and I had but little to disturb me in it. John would come, and John knows."

Mohegan turned his dark face at this appeal; and, moving his hand forward with a graceful motion of assent, he spoke, using the Delaware language—

"The land was owned by my people; we gave it to my brother, in council—to the Fire-eater; and what the Delawares give lasts as long as the waters run. Hawk-eye smoked at that Council, for we loved him."

"No, no, John," said Natty; "I was no chief, seeing that I know'd nothing of scholarship, and had a white skin. But it was a comfortable hunting-ground then, lad, and would have been so to this day, but for the money of Marmaduke Temple, and the twisty ways of the law."

"It must have been a sight of melancholy pleasure indeed," said Edwards, while his eye roved along the shores and over the hills, where the clearings, groaning with the golden corn, were cheering the forests with the signs of life, "to have roamed over these mountains, and along this sheet of beautiful water, without a living soul to speak to, or to thwart your humor."

"Haven't I said it was cheerful?" said Leather-stocking. "Yes, yes; when the trees began to be covered with leaves, and the ice was out of the lake, it was a second paradise. I have travelled the woods for fifty-three years, and have made them my home for more than forty; and I can say that I have met but one place that was more to my liking; and that was only to eyesight, and not for hunting or fishing."

"And where was that?" asked Edwards.

"Where! why up on the Catskills. I used often to go up into the mountains after wolves' skins and bears; once they paid me to get them a stuffed painter, and so I often went. There's a place in them hills that I used to climb to when I wanted to see the carryings on of the world, that would well pay any man for a barked shin or a torn moccasin. You know the Catskills, lad; for you must have seen them on your left, as you followed the river up from York, looking as blue as a piece of clear sky, and holding the clouds on their tops, as the smoke curls over the head of an Indian chief at the council fire. Well, there's the High-peak and the Round-top, which lay back like a father and mother among their children, seeing they are far above all the other hills. But the place I mean is next to the river, where one of the ridges juts out a little from the rest, and where the rocks fall, for the best part of a thousand feet, so much up and down, that a man standing on their edges is fool enough to think he can jump from top to bottom."

"What see you when you get there?" asked Edwards.

"Creation," said Natty, dropping the end of his rod into the water, and sweeping one hand around him in a circle: "all creation, lad. I was on that hill when Vaughan burned 'Sopus in the last war; and I saw the vessels come out of the Highlands as plain as I can see that lime-scow rowing into the Susquehanna, though one was twenty times further from me than the other. The river was in sight for seventy miles, looking like a curled shaving under my feet, though it was eight long miles to its banks. I saw the hills in the Hampshire grants, the highlands of the river, and all that God had done, or man could do, far as eye could reach—you know that the Indians named me for my sight, lad; and from the flat on the top of that mountain, I have often found the place where Albany stands. And as for 'Sopus, the day the royal troops burnt the town, the smoke seemed so nigh, that I thought I could hear the screeches of the women."

"It must have been worth the toil to meet with such a glorious view."

"If being the best part of a mile in the air, and having men's farms and houses at your feet, with rivers looking like ribbons, and mountains bigger than the 'Vision,' seeming to be hay-stacks of green grass under you, gives any satisfaction to a man, I can recommend the spot. When I first came into the woods to live, I used to have weak spells when I felt lonesome; and then I would go into the Catskills, and spend a few days on that hill to look at the ways of man; but it's now many a year since I felt any such longings, and I am getting too old for rugged rocks. But there's a place, a short two miles back of that very hill, that in late times I relished better than the mountain; for it was more covered with the trees, and nateral."

---

35 **a place . . . hills.** Cooper is almost certainly describing North Point, the site of the Catskill Mountain House, built in 1823. It is about halfway between Albany and Kingston, on the west bank of the Hudson • 54 **when . . . 'Sopus.** Kingston, settled by the Dutch under the name of Esopus, was burned by the British under the command of General Sir John Vaughan (1748?-1795) on October 16, 1777

"And where was that?" inquired Edwards, whose curiosity was strongly excited by the simple description of the hunter.

"Why, there's a fall in the hills where the water of two little ponds, that lie near each other, breaks out of their bounds and runs over the rocks into the valley. The stream is, maybe, such a one as would turn a mill, if so useless a thing was wanted in the wilderness. But the hand that made that 'Leap' never made a mill. There the water comes crooking and winding among the rocks; first so slow that a trout could swim in it, and then starting and running like a crater that wanted to make a far spring, till it gets to where the mountain divides, like the cleft hoof of a deer, leaving a deep hollow for the brook to tumble into. The first pitch is nigh two hundred feet, and the water looks like flakes of driven snow afore it touches the bottom; and there the stream gathers itself together again for a new start, and maybe flutters over fifty feet of flat rock before it falls for another hundred, when it jumps about from shelf to shelf, first turning this-away and then turning that-away, striving to get out of the hollow, till it finally comes to the plain."

"I have never hear of this spot before; it is not mentioned in the books."

"I never read a book in my life," said Leather-stocking; "and how should a man who has lived in towns and schools know anything about the wonders of the woods? No, no lad; there has that little stream of water been playing among the hills since He made the world, and not a dozen white men have ever laid eyes on it. The rock sweeps like mason-work, in a half-round, on both sides of the fall, and shelves over the bottom for fifty feet; so that when I've been sitting at the foot of the first pitch, and my hounds have run into the caverns behind the sheet of water, they've looked no bigger than so many rabbits. To my judgment, lad, it's the best piece of work that I've met with in the woods; and none know how often the hand of God is seen in the wilderness, but them that rove it for a man's life."

"What becomes of the water? In which direction does it run? Is it a tributary of the Delaware?"

"Anan!" said Natty.

"Does the water run into the Delaware?"

"No, no; it's a drop for the old Hudson, and a merry time it has till it gets down off the mountain. I've sat on the shelving rock many a long hour, boy, and watched the bubbles as they shot by me, and thought how long it would be before that very water, which seemed made for the wilderness, would be under the bottom of a vessel, and tossing in the salt sea. It is a spot to make a man solemnize. You can see right down into the valley that lies to the east of the High Peak, where, in the fall of the year, thousands of acres of woods are before your eyes, in the deep hollow, and along the side of the mountain, painted like ten thousand rainbows, by no hand of man, though without the ordering of God's providence."

"You are eloquent, Leather-stocking," exclaimed the youth.

"Anan!" repeated Natty.

"The recollection of the sight has warmed your blood, old man. How many years is it since you saw the place?"

The hunter made no reply; but, bending his ear near the water, he sat holding his breath, and listening attentively as if to some distant sound. At length he raised his head, and said—

"If I hadn't fastened the hounds with my own hands, with a fresh leash of green buckskin, I'd take a Bible oath that I heard old Hector ringing his cry on the mountain."

"It is impossible," said Edwards; "it is not an hour since I saw him in his kennel."

By this time the attention of Mohegan was attracted to the sounds; but, notwithstanding the youth was both silent and attentive, he could hear nothing but the lowing of some cattle from the western hills. He looked at the old men, Natty sitting with his hand to his ear, like a trumpet, and Mohegan bending forward, with an arm raised to a level with his face, holding the forefinger elevated as a signal for attention, and laughed aloud at what he deemed to be their imaginary sounds.

"Laugh if you will, boy," said Leather-stocking; "the hounds be out, and are hunting a deer. No man can deceive me in such a matter. I wouldn't have had the thing happen for a beaver's skin. Not that I care for the law! but the venison is lean now, and the dumb things run the flesh off their own bones for no good. Now do you hear the hounds?"

---

43 **Anan,** a dialectal variation of anon, in the sense of "I beg your pardon" or "What did you say?"

Edwards started, as a full cry broke on his ear, changing from the distant sounds that were caused by some intervening hill, to confused echoes that rang among the rocks that the dogs were passing, and then directly to a deep and hollow baying that pealed under the forest on the lake shore. These variations in the tones of the hounds passed with amazing rapidity; and while his eyes were glancing along the margin of the water, a tearing of the branches of the alder and dogwood caught his attention, at a spot near them, and at the next moment a noble buck sprang on the shore, and buried himself in the lake. A full-mouthed cry followed, when Hector and the slut shot through the opening in the bushes, and darted into the lake also, bearing their breasts gallantly against the water.

CHAPTER XXVII

"I know'd it—I know'd it!" cried Natty, when both deer and hounds were in full view;—"the buck has gone by them with the wind, and it has been too much for the poor rogues; but I must break them of these tricks, or they'll give me a deal of trouble. He-ere, he-ere—shore with you, rascals—shore with you—will ye?—Oh! off with you, old Hector, or I'll hatchel your hide with my ramrod when I get ye."

The dogs knew their master's voice, and after swimming in a circle, as if reluctant to give over the chase, and yet afraid to persevere, they finally obeyed, and returned to the land, where they filled the air with their cries.

In the meantime the deer, urged by his fears, had swum over half the distance between the shore and the boats, before his terror permitted him to see the new danger. But at the sounds of Natty's voice, he turned short in his course, and for a few moments seemed about to rush back again, and brave the dogs. His retreat in this direction was, however, effectually cut off, and turning a second time, he urged his course obliquely for the centre of the lake, with an intention of landing on the western shore. As the buck swam by the fishermen, raising his nose high into the air, curling the water before his slim neck like the beak of a galley, the Leatherstocking began to sit very uneasy in his canoe.

"'Tis a noble creater!" he exclaimed; "what a pair of horns! a man might hang up all his garments on the branches. Let me see—July is the last month, and the flesh must be getting good." While he was talking, Natty had instinctively employed himself in fastening the inner end of the bark rope, that served him for a cable, to a paddle, and rising suddenly on his legs, he cast this buoy away, and cried—"Strike out, John! let her go. The creater's a fool to tempt a man in this way."

Mohegan threw the fastening of the youth's boat from the canoe, and with one stroke of his paddle sent the light bark over the water like a meteor.

"Hold!" exclaimed Edwards. "Remember the law, my old friends. You are in plain sight of the village, and I know that Judge Temple is determined to prosecute all indiscriminately, who kill deer out of season."

The remonstrance came too late: the canoe was already far from the skiff, and the two hunters were too much engaged in the pursuit to listen to his voice.

"Natty . . . passed his knife across the throat of the animal. . . ."

The buck was now within fifty yards of his pursuers, cutting the water gallantly, and snorting at each breath with terror and his exertions, while the canoe seemed to dance over the waves, as it rose and fell with the undulations made by its own motion. Leather-stocking raised his rifle and freshened the priming, but stood in suspense whether to slay his victim or not.

"Shall I, John, or no?" he said. "It seems but a poor advantage to take of the dumb thing too. I won't; it has taken to the water on its own nater, which is the

reason that God has given to a deer, and I'll give it the lake play; so, John, lay out your arm, and mind the turn of the buck; it's easy to catch them, but they'll turn like a snake."

The Indian laughed at the conceit of his friend, but continued to send the canoe forward with a velocity that proceeded much more from his skill than his strength Both of the old men now used the language of the Delawares when they spoke.

"Hugh!" exclaimed Mohegan; "the deer turns his head. Hawk-eye, lift your spear."

Natty never moved abroad without taking with him every implement that might, by possibility, be of service in his pursuits. From his rifle he never parted; and although intending to fish with the line, the canoe was invariably furnished with all of its utensils, even to its grate. This precaution grew out of the habits of the hunter, who was often led, by his necessities or his sports, far beyond the limits of his original destination. A few years earlier than the date of our tale, the Leather-stocking had left his hut on the shores of the Otsego, with his rifle and his hounds, for a few days' hunting in the hills; but before he returned he had seen the waters of Ontario. One, two, or even three hundred miles had once been nothing to his sinews, which were now a little stiffened by age. The hunter did as Mohegan advised, and prepared to strike a blow, with the barbed weapon, into the neck of the buck.

"Lay her more to the left, John," he cried, "lay her more to the left; another stroke of the paddle, and I have him."

While speaking, he raised the spear, and darted it from him like an arrow. At that instant the buck turned, the long pole glanced by him, the iron striking against his horn, and buried itself, harmlessly, in the lake

"Back water," cried Natty, as the canoe glided over the place where the spear had fallen; "hold water, John."

The pole soon reappeared, shooting upward from the lake, and as the hunter seized it in his hand, the Indian whirled the light canoe round, and renewed the chase. But this evolution gave the buck a great advantage, and it also allowed time for Edwards to approach the scene of action.

"Hold your hand, Natty!" cried the youth, "hold your hand! remember it is out of season."

This remonstrance was made as the bateau arrived close to the place where the deer was struggling with the water, his back now rising to the surface, now sinking beneath it, as the waves curled from his neck, the animal still sustaining itself nobly against the odds.

"Hurrah!" shouted Edwards, inflamed beyond prudence at the sight; "mind him as he doubles—mind him as he doubles; sheer more to the right, Mohegan, more to the right, and I'll have him by the horns; I'll throw the rope over his antlers."

The dark eye of the old warrior was dancing in his head, with a wild animation, and the sluggish repose in which his aged frame had been resting in the canoe was now changed to all the rapid inflections of practised agility. The canoe whirled with each cunning evolution of the chase, like a bubble floating in a whirlpool; and when the direction of the pursuit admitted of a straight course, the little bark skimmed the lake with a velocity that urged the deer to seek its safety in some new turn.

It was the frequency of these circuitous movements, that, by confining the action to so small a compass, enabled the youth to keep near his companions. More than twenty times both the pursued and the pursuers glided by him, just without the reach of his oars, until he thought the best way to view the sport was to remain stationary, and, by watching a favorable opportunity, assist as much as he could in taking the victim.

He was not required to wait long, for no sooner had he adopted this resolution, and risen in the boat, than he saw the deer coming bravely toward him, with an apparent intention of pushing for a point of land at some distance from the hounds, who were still barking and howling on the shore Edwards caught the painter of his skiff, and, making a noose, cast it from him with all his force, and luckily succeeded in drawing its knot close around one of the antlers of the buck.

For one instant, the skiff was drawn through the water, but in the next, the canoe glided before it, and Natty, bending low, passed his knife across the throat of the animal, whose blood followed the wound, dying the waters. The short time that was passed in the last struggles of the animal was spent by the hunters in bringing their boats together, and securing them in that position, when Leather-stocking drew the deer from the water, and laid its lifeless form in the bottom of the canoe. He placed his hands on the ribs, and on different

parts of the body of his prize, and then, raising his head, he laughed in his peculiar manner.

"So much for Marmaduke Temple's law!" he said. "This warms a body's blood, old John; I haven't killed a buck in the lake afore this, sin' many a year. I call that good venison, lad; and I know them that will relish the creater's steaks, for all the betterments in the land."

The Indian had long been drooping with his years, and perhaps under the calamities of his race, but this invigorating and exciting sport caused a gleam of sunshine to cross his swarthy face that had long been absent from his features. It was evident the old man enjoyed the chase more as a memorial of his youthful sports and deeds, than with any expectation of profiting by the success. He felt the deer, however, lightly, his hand already trembling with the reaction of his unusual exertions, and smiled with a nod of approbation, as he said, in the emphatic and sententious manner of his people—

"Good."

"I am afraid, Natty," said Edwards, when the heat of the moment had passed, and his blood began to cool, "that we have all been equally transgressors of the law. But keep your own counsel, and there are none here to betray us. Yet, how came those dogs at large? I left them securely fastened, I know, for I felt the thongs, and examined the knots, when I was at the hut."

"It has been too much for the poor things," said Natty, "to have such a buck take the wind of them. See, lad, the pieces of the buckskin are hanging from their necks yet. Let us paddle up, John, and I will call them in, and look a little into the matter."

When the old hunter landed, and examined the thongs that were yet fast to the hounds, his countenance sensibly changed, and he shook his head doubtingly.

"Here has been a knife at work," he said:—"this skin was never torn, nor is this the mark of a hound's tooth. No, no,—Hector is not in fault, as I feared."

"Has the leather been cut?" cried Edwards.

"No, no—I didn't say it had been cut, lad; but this is a mark that was never made by a jump or a bite."

"Could that rascally carpenter have dared!"

"Ay! he durst to do anything where there is no danger," said Natty: "he is a curious body, and loves to be helping other people on with their consarns. But he had best not harbor so much near the wigwam!"

In the meantime, Mohegan had been examining, with an Indian's sagacity, the place where the leather thong had been separated. After scrutinizing it closely, he said, in Delaware—

"It was cut with a knife—a sharp blade and a long handle—the man was afraid of the dogs."

"How is this, Mohegan?" exclaimed Edwards: "you saw it not! how can you know these facts?"

"Listen, son," said the warrior. "The knife was sharp, for the cut is smooth;—the handle was long, for a man's arm would not reach from this gash to the cut that did not go through the skin:—he was a coward, or he would have cut the thongs around the necks of the hounds."

"On my life," cried Natty, "John is on the scent! It was the carpenter; and he has got on the rock back of the kennel, and let the dogs loose by fastening his knife to a stick. It would be an easy matter to do it, where a man is so minded."

"And why should he do so?" asked Edwards: "who has done him wrong, that he should trouble two old men like you?"

"It's a hard matter, lad, to know men's ways, I find, since the settlers have brought in their new fashions. But is there nothing to be found out in the place? and may be he is troubled with his longings after other people's business, as he often is."

"Your suspicions are just. Give me the canoe: I am young and strong, and will get down there yet, perhaps, in time to interrupt his plans. Heaven forbid that we should be at the mercy of such a man!"

His proposal was accepted, the deer being placed in

"... the old hunter landed, and examined the thongs...."

the skiff in order to lighten the canoe, and in less than five minutes the little vessel of bark was gliding over the glassy lake, and was soon hid by the points of land, as it shot close along the shore.

Mohegan followed slowly with the skiff, while Natty called his hounds to him, bade them keep close, and, shouldering his rifle, he ascended the mountain, with an intention of going to the hut by land.

[CHAPTER XXVIII. Elizabeth and Louisa walk to a point above Natty's hut, talking about the mysterious association of the three friends and speculating on Oliver's ancestry. Thinking they hear the cries of a child, they start searching for it. Suddenly they are threatened by a female panther. Brave, the dog, dies in their defense; then Natty opportunely arrives and shoots the panther. After the frightened girls have departed, full of gratitude, Hiram Doolittle appears and accuses Natty of breaking the law by shooting a deer. Natty shows him the panther he has killed, but when he asks Doolittle to make out an order for the bounty, the magistrate tells him he must take an oath. Doolittle's real motive is to see the inside of the cabin, and when this becomes obvious Natty warns him to keep away. But Hiram is determined to make trouble.

CHAPTER XXIX. In the meantime Richard and the judge have been together, not, as it turns out, investigating possible coal deposits, but in order that Richard can demonstrate to the Judge a theory which he, Hiram Doolittle, and Jotham Riddel have concocted. This theory, to state it briefly—which Richard does not do—is that Natty, Chingachgook, and Oliver are secretly mining silver and smelting it in the hut which is so carefully guarded from prying eyes. Richard takes the Judge to a cave on the mountain back of the hut, where he shows digging tools and an excavation. There is no sign of ore, but the Judge's curiosity is roused to the point that he determines to interview Natty. Returning home, however, he meets Elizabeth and Louisa and hears their story; "and when the image of Natty again crossed his recollection, it was not as a lawless and depredating squatter, but as the preserver of his child."

CHAPTER XXX. At home, as Elizabeth and her father discuss the panther episode, Hiram Doolittle makes his appearance and, after much circumlocution, says that he thinks Natty has a deer in his cabin. The Judge tells Hiram to issue a search warrant himself, but Hiram evidently wants support and intimates to the Judge that the latter is showing partiality. The Judge then agrees to sign the warrant, calming Elizabeth by telling her that the fine will be no great matter. He goes to his office to make out the paper. Returning, he meets Oliver, and in their mutual relief at the escape of the girls, they reach a friendlier status than ever before. Oliver goes to pay his respects to the Grants. Meanwhile, however, another and highly serious cause of friction is developing:]

. . . When Hiram Doolittle had obtained his search-warrant, his first business was to procure a proper officer to see it executed. The sheriff was absent, summoning in person the grand inquest for the county; the deputy, who resided in the village, was riding on the same errand, in a different part of the settlement; and the regular constable of the township had been selected for his station from motives of charity, being lame of a leg. Hiram intended to accompany the officer as a spectator, but he felt no very strong desire to bear the brunt of the battle. It was, however, Saturday, and the sun was already turning the shadows of the pines toward the east; on the morrow the conscientious magistrate could not engage in such an expedition at the peril of his soul; and long before Monday, the venison, and all vestiges of the death of the deer, might be secreted or destroyed. Happily, the lounging form of Billy Kirby met his eye, and Hiram, at all times fruitful in similar expedients, saw his way clear at once. Jotham, who was associated in the whole business, and who had left the mountain in consequence of a summons from his coadjutor, but who failed, equally with Hiram, in the unfortunate particular of nerve, was directed to summon the wood-chopper to the dwelling of the magistrate.

When Billy appeared, he was very kindly invited to take the chair in which he had already seated himself, and was treated in all respects as if he were an equal.

"Judge Temple has set his heart on putting the deer law in force," said Hiram, after the preliminary civilities were over, "and a complaint has been laid before him that a deer has been killed. He has issued a search-warrant, and sent for me to get somebody to execute it."

Kirby, who had no idea of being excluded from the deliberative part of any affair in which he was engaged, drew up his bushy head in a reflecting attitude, and,

after musing a moment, replied by asking a few questions.

"The Sheriff is gone out of the way?"

"Not to be found."

"And his deputy too?"

"Both gone on the skirts of the Patent."

"But I saw the constable hobbling about town an hour ago."

"Yes, yes," said Hiram with a coaxing smile and knowing nod, "but this business wants a man—not a cripple."

"Why," said Billy, laughing, "will the chap make fight?"

"He's a little quarrelsome at times, and thinks he's the best man in the country at rough and tumble."

"I heard him brag once," said Jotham, "that there wasn't a man 'twixt the Mohawk Flats and the Pennsylvany line that was his match at a close hug."

"Did you?" exclaimed Kirby, raising his huge frame in his seat, like a lion stretching in his lair; "I rather guess he never felt a Varmounter's knuckles on his backbone. But who is the chap?"

"Why," said Jotham, "it's—"

"It's ag'in law to tell," interrupted Hiram, "unless you'll qualify to sarve. You'd be the very man to take him, Bill; and I'll make out a special deputation in a minute, when you will get the fees."

"What's the fees?" said Kirby, laying his large hand on the leaves of a statute-book, that Hiram had opened in order to give dignity to his office, which he turned over, in his rough manner, as if he were reflecting on a subject about which he had, in truth, already decided; "will they pay a man for a broken head?"

"They'll be something handsome," said Hiram.

"Damn the fees," said Billy, again laughing:—"does the fellow think he's the best wrestler in the county, though? what's his inches?"

"He's taller than you be," said Jotham, "and one of the biggest—"

Talkers, he was about to add, but the impatience of Kirby interrupted him. The wood-chopper had nothing fierce or even brutal in his appearance; the character of his expression was that of good-natured vanity. It was evident he prided himself on the powers of the physical man, like all who have nothing better to boast of; and, stretching out his broad hand, with the palm downward, he said, keeping his eyes fastened on his own bones and sinews—

"Come, give us a touch of the book. I'll swear, and you'll see that I'm a man to keep my oath."

Hiram did not give the wood-chopper time to change his mind, but the oath was administered without unnecessary delay. So soon as this preliminary was completed, the three worthies left the house, and proceeded by the nearest road toward the hut. They had reached the bank of the lake, and were diverging from the route of the highway, before Kirby recollected that he was now entitled to the privilege of the initiated, and repeated his question as to the name of the offender.

"Which way, which way, Squire?" exclaimed the hardy wood-chopper; "I thought it was to search a house that you wanted me, not the woods. There is nobody lives on this side of the lake, for six miles, unless you count the Leather-stocking and old John for settlers. Come, tell me the chap's name, and I warrant me that I lead you to his clearing by a straighter path than this, for I know every sapling that grows within two miles of Templetown."

"This is the way," said Hiram, pointing forward and quickening his step, as if apprehensive that Kirby would desert, "and Bumppo is the man."

Kirby stopped short, and looked from one of his companions to the other in astonishment. He then burst into a loud laugh, and cried—

"Who? Leather-stocking! he may brag of his aim and his rifle, for he has the best of both, as I will own myself, for sin' he shot the pigeon I knock under to him; but for a wrestle! why, I would take the creatur' between my finger and thumb, and tie him in a bow-knot around my neck for a Barcelony. The man is seventy, and was never anything particular for strength."

"He's a deceiving man," said Hiram, "like all the hunters; he is stronger than he seems; besides, he has his rifle."

"That for his rifle!" cried Billy: "he'd no more hurt me with his rifle than he'd fly. He is a harmless creater, and I must say that I think he has as good right to kill deer as any man on the Patent. It's his main support, and this is a free country, where a man is privileged to follow any calling he likes."

"According to that doctrine," said Jotham, "anybody may shoot a deer."

---

78 Barcelony, Barcelona, a silk neckerchief

"This is the man's calling, I tell you," returned Kirby, "and the law was never made for such as he."

"The law was made for all," observed Hiram, who began to think that the danger was likely to fall to his own share, notwithstanding his management; "and the law is particular in noticing parjury."

"See here, Squire Doolittle," said the reckless wood-chopper, "I don't care the value of a beetlering for you and your parjury too. But as I have come so far, I'll go down and have a talk with the old man, and maybe we'll fry a steak of the deer together."

"Well, if you can get in peaceably, so much the better," said the magistrate "To my notion, strife is very unpopular; I prefar, at all times, clever conduct to an ugly temper."

As the whole party moved at a great pace, they soon reached the hut, where Hiram thought it prudent to halt on the outside of the top of the fallen pine, which formed a chevaux-de-frise, to defend the approach to the fortress, on the side next the village. The delay was little relished by Kirby, who clapped his hands to his mouth, and gave a loud halloo that brought the dogs out of their kennel and, almost at the same instant, the scantily covered head of Natty from the door.

"Lie down, old fool," cried the hunter; "do you think there's more painters about you?"

"Ha! Leather-stocking, I've an arrand with you," cried Kirby; "here's the good people of the state have been writing you a small letter, and they're hired me to ride post."

"What would you have with me, Billy Kirby?" said Natty, stepping across his threshold, and raising his hand over his eyes to screen them from the rays of the setting sun, while he took a survey of his visitor. "I've no land to clear; and heaven knows I would set out six trees afore I would cut down one. Down, Hector, I say; into your kennel with ye."

"Would you, old boy?" roared Billy; "then so much the better for me. But I must do my arrand. Here's a letter for you, Leather-stocking. If you can read it, it's all well, and if you can't, here's Squire Doolittle at hand to let you know what it means. It seems you mistook the twentieth of July for the first of August, that's all."

By this time Natty had discovered the lank person of Hiram, drawn up under the cover of a high stump; and all that was complacent in his manner instantly gave way to marked distrust and dissatisfaction. He placed his head within the door of his hut, and said a few words in an undertone, when he again appeared, and continued:

"I've nothing for ye, so away, afore the evil one tempts me to do you harm. I owe you no spite, Billy Kirby, and what for should you trouble an old man, who has done you no harm?"

Kirby advanced through the top of the pine, to within a few feet of the hunter, where he seated himself on the end of a log with great composure, and began to examine the nose of Hector, with whom he was familiar, from their frequently meeting in the woods, where he sometimes fed the dog from his own basket of provisions.

"You've outshot me, and I'm not ashamed to say it," said the wood-chopper, "but I don't owe you a grudge for that, Natty! though it seems that you've shot once too often, for the story goes that you've killed a buck."

"I've fired but twice to-day, and both times at the painters," returned the Leather-stocking; "see, here are the scalps! I was just going in with them to the Judge's to ask the bounty."

While Natty was speaking, he tossed the ears to Kirby, who continued playing with them, with a careless air, holding them to the dogs, and laughing at their movements when they scented the unusual game.

But Hiram, emboldened by the advance of the deputed constable, now ventured to approach also, and took up the discourse with the air of authority that became his commission. His first measure was to read the warrant aloud, taking care to give due emphasis to the most material parts, and concluding with the name of the Judge in very audible and distinct tones.

"Did Marmaduke Temple put his name to that bit of paper?" said Natty, shaking his head;—"well, well, that man loves the new ways, and his betterments, and his lands, afore his own flesh and blood. But I won't mistrust the gal· she has an eye like a full-grown buck! poor thing, she didn't choose her father, and can't help it. I know but little of the law, Mr. Doolittle; what is to be done, now you've read your commission?"

"Oh! it's nothing but form, Natty," said Hiram, endeavoring to assume a friendly aspect. "Let's go in, and talk the thing over in reason; I dare say that the money

---

19 **chevaux-de-frise,** literally "horses of Friesland", large, six-sided joists studded with long iron spikes, used to block breaches in fortifications or to halt cavalry charges

can be easily found, and I partly conclude, from what passed, that Judge Temple will pay it himself."

The old hunter had kept a keen eye on the movements of his three visitors, from the beginning, and had maintained his position, just without the threshold of his cabin, with a determined manner, that showed he was not to be easily driven from his post. When Hiram drew nigher, as if expecting his proposition would be accepted, Natty lifted his hand, and motioned for him to retreat.

"Haven't I told you more than once, not to tempt me?" he said. "I trouble no man; why can't the law leave me to myself? Go back—go back, and tell your Judge that he may keep his bounty; but I won't have his wasty ways brought into my hut."

This offer, however, instead of appeasing the curiosity of Hiram, seemed to inflame it the more; while Kirby cried—

"Well, that's fair, squire; he forgives the county his demand, and the county should forgive him the fine; it's what I call an even trade, and should be concluded on the spot. I like quick dealings, and what's fair 'twixt man and man."

"I demand entrance into this house," said Hiram, summoning all the dignity he could master to his assistance, "in the name of the people; and by virtue of this warrant, and of my office, and with this peace-officer."

"Stand back, stand back, squire, and don't tempt me," said the Leather-stocking, motioning for him to retire, with great earnestness.

"Stop us at your peril," continued Hiram. "Billy! Jotham! close-up—I want testimony."

Hiram had mistaken the mild but determined air of Natty for submission, and had already put his foot on the threshold to enter, when he was seized unexpectedly by his shoulders, and hurled over the little bank toward the lake, to the distance of twenty feet. The suddenness of the movement, and the unexpected display of strength on the part of Natty, created a momentary astonishment in his invaders, that silenced all noises; but at the next instant Billy Kirby gave vent to his mirth in peals of laughter, that he seemed to heave up from his very soul.

"Well done, old stub!" he shouted: "the squire know'd you better than I did. Come, come, here's a green spot; take it out like men, while Jotham and I see fair play."

"William Kirby, I order you to do your duty," cried Hiram, from under the bank; "seize that man; I order you to seize him in the name of the people."

But the Leather-stocking now assumed a more threatening attitude; his rifle was in his hand, and its muzzle was directed toward the wood-chopper.

"Stand off, I bid ye," said Natty; "you know my aim, Billy Kirby; I don't crave your blood, but mine and yourn both shall turn this green grass red, afore you put foot into the hut."

While the affair appeared trifling, the wood-chopper seemed disposed to take sides with the weaker party; but when the fire-arms were introduced, his manner very sensibly changed. He raised his large frame from the log, and facing the hunter with an open front, he replied—

"I didn't come here as your enemy, Leather-stocking; but I don't value the hollow piece of iron in your hand so much as a broken axe-helve, so, squire, say the word, and keep within the law, and we'll soon see who's the best man of the two."

But no magistrate was to be seen! The instant the rifle was produced, Hiram and Jotham vanished; and when the wood-chopper bent his eyes about him in surprise at receiving no answer, he discovered their retreating figures moving toward the village at a rate that sufficiently indicated that they had not only calculated the velocity of a rifle-bullet, but also its probable range.

"You've scared the creaters off," said Kirby, with great contempt expressed on his broad features; "but you are not going to scare me; so, Mr. Bumppo, down with your gun, or there'll be trouble 'twixt us."

Natty dropped his rifle, and replied—

"I wish you no harm, Billy Kirby; but I leave it to yourself, whether an old man's hut is to be run down by such varmint. I won't deny the buck to you, Billy, and you may take the skin in, if you please, and show it as testimony. The bounty will pay the fine, and that ought to satisfy any man."

" 'Twill, old boy, 'twill," cried Kirby, every shade of displeasure vanishing from his open brow at the peace-offering; "throw out the hide, and that shall satisfy the law."

Natty entered the hut, and soon re-appeared, bringing with him the desired testimonial; and the wood-chopper departed, as thoroughly reconciled to the hunter as if nothing had happened. As he paced along the margin of the lake he would burst into frequent fits of laughter, while he recollected the summerset of Hiram;

The prisoners.

and, on the whole, he thought the affair a very capital joke.

Long before Billy reached the village, however, the news of his danger, and of Natty's disrespect of the law, and of Hiram's discomfiture, were in circulation. A good deal was said about sending for the Sheriff; some hints were given about calling out the posse comitatus to avenge the insulted laws; and many of the citizens were collected, deliberating how to proceed. The arrival of Billy with the skin, by removing all grounds for a search, changed the complexion of things materially. Nothing now remained but to collect the fine, and assert the dignity of the people; all of which, it was unanimously agreed, could be done as well on the succeeding Monday as on Saturday night,—a time kept sacred by a large portion of the settlers. Accordingly, all further proceedings were suspended for six-and-thirty hours.

[CHAPTER XXXI. Oliver, at the Grants, knows nothing of the encounter at the hut until, returning to the center of the town, he sees the villagers dispersing. Chester Lippet, the lawyer, tells him what has happened, and Oliver retains Lippet to defend Natty. He then goes in search of the Judge. At the mansion-house he finds Elizabeth serenely sure that the search warrant will bring no harm; she is quickly disillusioned by her father, who appears and says that Natty's obstinate resistance to the law must be punished. At this announcement Oliver loses his temper and accuses the Judge of being responsible for the impoverishment of Natty and Chingachgook. The Judge rightly regards the accusation as an attack on the validity of his title to the lands and discharges his assistant. Oliver then bids farewell to Elizabeth, who tells him to let Natty know that she is his friend.

CHAPTER XXXII. Late the following evening Richard returns from an expedition to arrest a gang of counterfeiters. He extracts the story of events from Ben Pump, after great difficulty, and at once assembles a posse to take Natty into custody. When they arrive at the hut, they find only a heap of ashes and smoldering logs. As they gaze at the embers Natty appears, to say that those who have driven the wild beasts from the wilderness have now driven an old man from the home that has been his for forty years. Richard apologizes for his duty, but takes Natty to the jail.

CHAPTER XXXIII. Natty's trial is described in detail, with much satire of frontier legal procedures. The jury acquits him of assault and battery, but finds him guilty of pointing a rifle at an officer of the law. The Judge sentences him to an hour's confinement in the stocks and a month in jail, and levies a fine of one hundred dollars, stipulating that the fine must be paid before Natty will be set free. Natty objects to this condition on the grounds that he has no money and could not earn the hundred dollars unless permitted to return to the woods. After eloquently recounting his past services to the Judge, he promises to trap and hunt and earn enough money selling the furs to pay the fine. Benjamin intervenes and offers to put up a sum of money to guarantee that the old man will pay. He is silenced for interrupting the court, and Natty marches off to the stocks, the crowd following to see his disgrace.

CHAPTER XXXIV. Ben Pump, much incensed at the verdict, insists on taking the empty place in the stocks next to Natty Bumppo. When Hiram Doolittle unwarily comes near, Ben seizes one of his legs and gives him a drubbing; as a result Ben and Natty return to the jail together. Just before nightfall they are visited by Oliver, who apparently brings words of comfort, for by eight o'clock they have ostensibly retired for the night.

CHAPTER XXXV. An hour later Elizabeth and Louisa come to the jail, with a pocketbook containing two hundred dollars for Natty. Outside they meet Oliver, disguised as a teamster and driving a yoke of oxen. Inside

they find that Natty already has a hole in the log wall and is ready to escape. Elizabeth agrees to buy powder for Natty's rifle and deliver it next day to the Vision, the mountain which overlooks Templeton. Then circumstances force her to take an active part in the jail break; amid much excitement and comings and goings she directs Oliver and Natty to the Judge's boat, and they escape across the lake. Billy Kirby, whose ox team Oliver had appropriated, delivers Ben Pump from the searching parties which, with torches blazing, scour the forest during the night.

CHAPTER XXXVI. Next morning, having purchased the powder from Monsieur Le Quoi, Elizabeth and Louisa start up the mountain. Remembering the panther, Louisa cannot go on, so Elizabeth leaves her at the edge of the woods. Natty is not on the mountaintop, but Elizabeth hears a faint cry and, following the sound, discovers Chingachgook on a small rocky terrace, watered by a spring, about a hundred feet below. He is bitterly reviewing the wrongs done his race, but is about to tell Elizabeth of Oliver's identity when they are startled by immense volumes of smoke and the noise of flames. A voice is heard crying for Chingachgook, and an instant later Oliver joins them.

CHAPTER XXXVII. Oliver has been searching for the old Indian to take him out of the way of the swiftly spreading forest fire. He and Elizabeth quickly discover that they are surrounded by flames and cannot escape; Chingachgook is wholly reconciled to dying. As Oliver, thinking the end has come, declares his love for Elizabeth, Natty Bumppo's voice is heard, the can of powder explodes, and, a moment later, Natty appears by the spring.

CHAPTER XXXVIII. It appears that he has learned from Louisa of their position on the mountain. He has explained to her the origin of the fire—carelessly dropped torches from the night search—and sent her to the village to give the alarm. He produces a buckskin to wrap around Elizabeth's flimsy clothing, straps the uncoöperative Chingachgook to his back, and leads the way to safety along the crevice which is the course of the spring. They come to a rocky platform over the cavern which has excited so much curiosity and are joined there by Ben Pump and, to their surprise, Mr. Grant, who has been searching for Louisa. Chingachgook, after a dramatic farewell to the world, dies to the accompaniment of a great flash of lightning. Rain begins to fall, and not long after voices are heard calling Elizabeth. Oliver takes her to the road, promises that all will be explained on the morrow, and leaves her to be found and taken home by her father.

CHAPTER XXXIX. Next morning many miles of woods are black and smoking, but the fire is at a stop. The villagers are sure that it was set by Oliver and Natty and, urged on by curiosity as much as by wrath, gather a large force to besiege the mysterious cavern, now stoutly barricaded. There is much slapstick parleying and bloodless fighting, but the defenders of the cave are about to be overwhelmed when Judge Temple appears and orders the fighting halted. At almost the same moment Oliver and Major Hartmann come down the mountain, having shouted that all shall be yielded and the cave opened.

CHAPTER XL. Five or six minutes later an old man with snow-white hair and a vacant eye is carried from the cave on a deerskin chair. Major Hartmann and Oliver stand beside him. Judge Temple begins to suspect the truth, and when Oliver announces that the feeble oldster was once the rightful proprietor of the very soil on which all stand the Judge recognizes Major Effingham, the father of his one-time friend and partner. Oliver is revealed as his grandson, Edward Oliver Effingham, whose father had been drowned at sea in the ship whose loss had led the Judge to call in Dirck Van der School. The villagers are sent home and explanations begun. Major Hartmann has vouched to Oliver for Judge Temple's honest dealings; he is now justified by the Judge's representations that he has never regarded the estates as his own and has sought constantly for an opportunity of restoring to the Effinghams the property which he has held as trustee. Back at the mansion-house the Judge's will is produced, completely sustaining his explanations, and Oliver is promised half the Temple properties as soon as the transfer can be arranged.

CHAPTER XLI. Early in September Elizabeth and Oliver are married, and a few days later Major Effingham dies. After a brief stay in jail, Natty and Ben Pump are pardoned by the governor. Hiram Doolittle has been appeased and has left Templeton for opportunities farther west. Richard Jones has grown humble by the discovery that his silver mining theory had been based upon Jotham Riddel's faith in a diviner, and by the revelation that all the mystery was demanded by the concealment of the major. Monsieur Le Quoi has returned to Paris. It is now a mild October morning, and Elizabeth and Oliver are

taking a walk. She informs him that her father has procured a call from one of the towns on the Hudson for Mr. Grant; there Louisa will find society which may well lead to a suitable marriage. They approach the object of their walk:]

. . . The place at which they arrived was the little spot of level ground, where the cabin of the Leather-stocking had so long stood. Elizabeth found it entirely cleared of rubbish, and beautifully laid down in turf, by the removal of sods, which, in common with the surrounding country, had grown gay, under the influence of profuse showers, as if a second spring had passed over the land. This little place was surrounded by a circle of mason-work, and they entered by a small gate, near which, to the surprise of both, the rifle of Natty was leaning against the wall. Hector and the slut reposed on the grass by its side, as if conscious that, however altered, they were lying on the ground, and were surrounded by objects with which they were familiar. The hunter himself was stretched on the earth, before a headstone of white marble, pushing aside with his fingers the long grass that had already sprung up from the luxuriant soil around its base, apparently to lay bare the inscription. By the side of this stone, which was a simple slab at the head of a grave, stood a rich monument, decorated with an urn, and ornamented with the chisel.

Oliver and Elizabeth approached the graves with a light tread, unheard by the old hunter, whose sunburnt face was working, and whose eyes twinkled as if something impeded their vision. After some little time, Natty raised himself slowly from the ground, and said aloud—

"Well, well—I'm bold to say it's all right! There's something that I suppose is reading; but I can't make anything of it; though the pipe, and the tomahawk, and the moccasins be pretty well—pretty well, for a man that, I dares to say, never seed 'ither of the things. Ah's me! there they lie, side by side, happy enough! Who will there be to put me in the 'arth when my time comes?"

"When that unfortunate hour arrives, Natty, friends shall not be wanting to perform the last offices for you," said Oliver, a little touched at the hunter's soliloquy.

The old man turned, without manifesting surprise, for he had got the Indian habits in this particular, and running his hand under the bottom of his nose, seemed to wipe away his sorrow with the action.

"You've come out to see the graves, children, have ye?" he said; "well, well, they're wholesome sights to young as well as old."

"I hope they are fitted to your liking," said Effingham; "no one has a better right than yourself to be consulted in the matter."

"Why, seeing that I ain't used to fine graves," returned the old man, "it is but little matter consarning my taste. Ye laid the Major's head to the west, and Mohegan's to the east, did ye, lad?"

"At your request it was done."

"It's so best," said the hunter; "they thought they had to journey different ways, children; though there is One greater than all, who'll bring the just together, at his own time, and who'll whiten the skin of a black-moor, and place him on a footing with princes."

"There is but little reason to doubt that," said Elizabeth, whose decided tones were changed to a soft, melancholy voice; "I trust we shall all meet again, and be happy together."

"Shall we, child, shall we?" exclaimed the hunter, with unusual fervor; "there's comfort in that thought too. But before I go, I should like to know what 'tis you tell these people, that be flocking into the country like pigeons in the spring, of the old Delaware, and of the bravest white man that ever trod the hills."

Effingham and Elizabeth were surprised at the manner of the Leather-stocking, which was unusually impressive and solemn; but, attributing it to the scene, the young man turned to the monument, and read aloud—

" 'Sacred to the memory of Oliver Effingham, Esquire, formerly a Major in his B. Majesty's 60th Foot; a soldier of tried valor; a subject of chivalrous loyalty; and a man of honesty. To these virtues, he added the graces of a Christian. The morning of his life was spent in honor, wealth, and power; but its evening was obscured by poverty, neglect, and disease, which were alleviated only by the tender care of his old, faithful, and upright friend and attendant, Nathaniel Bumppo. His descendants rear this stone to the virtues of the master, and to the enduring gratitude of the servant.' "

The Leather-stocking stared at the sound of his own name, and a smile of joy illumined his wrinkled features, as he said—

"And did ye say it, lad? have you then got the old man's name cut in the stone, by the side of his master's? God

bless ye, children! 'twas a kind thought, and kindness goes to the heart as life shortens."

Elizabeth turned her back to the speakers. Effingham made a fruitless effort before he succeeded in saying—

"It is there cut in plain marble; but it should have been written in letters of gold!"

"Show me the name, boy," said Natty, with simple eagerness; "let me see my own name placed in such honor. 'Tis a gin'rous gift to a man who leaves none of his name and family behind him, in a country where he has tarried so long."

Effingham guided his finger to the spot, and Natty followed the windings of the letters to the end with deep interest, when he raised himself from the tomb, and said—

"I suppose it's all right; and it's kindly thought, and kindly done! But what have ye put over the red-skin?"

"You shall hear—

" 'This stone is raised to the memory of an Indian Chief, of the Delaware tribe, who was known by the several names of John Mohegan; Mohican—' "

"Mo-hee can, lad, they call theirselves! 'he-can."

" 'Mohican; and Chingagook—' "

" 'Gach, boy;—'gach-gook; Chingachgook, which, intarpreted, means Big-sarpent. The name should be set down right, for an Indian's name has always some meaning in it."

"I will see it altered. 'He was the last of his people who continued to inhabit this country; and it may be said of him, that his faults were those of an Indian, and his virtues those of a man.' "

"You never said truer word, Mr. Oliver; ah's me! if you had know'd him as I did, in his prime, in that very battle where the old gentleman, who sleeps by his side, saved his life, when them thieves, the Iroquois, had him at the stake, you'd have said all that, and more too. I cut the thongs with this very hand, and gave him my own tomahawk and knife, seeing that the rifle was always my fav'rite weapon. He did lay about him like a man! I met him as I was coming home from the trail, with eleven Mingo scalps on his pole. You needn't shudder, Madam Effingham, for they was all from shaved heads and warriors. When I look about me, at these hills, where I used to could count sometimes twenty smokes, curling over the tree-tops, from the Delaware camps, it raises mournful thoughts, to think that not a red-skin is left of them all; unless it be a drunken vagabond from the Oneidas, or them Yankee Indians, who, they say, be moving up from the sea-shore; and who belong to none of God's creaters, to my seeming, being, as it were, neither fish nor flesh—neither white man nor savage. Well, well! the time has come at last, and I must go—"

"Go!" echoed Edwards, "whither do you go?"

The Leather-stocking, who had imbibed, unconsciously, many of the Indian qualities, though he always thought of himself as of a civilized being, compared with even the Delawares, averted his face to conceal the workings of his muscles, as he stooped to lift a large pack from behind the tomb, which he placed deliberately on his shoulders.

"Go!" exclaimed Elizabeth, approaching him with a hurried step; "you should not venture so far in the woods alone, at your time of life, Natty; indeed, it is imprudent. He is bent, Effingham, on some distant hunting."

"What Mrs. Effingham tells you is true, Leather-stocking," said Edwards; "there can be no necessity for your submitting to such hardships now! So throw aside your pack, and confine your hunt to the mountains near us, if you will go."

"Hardship! 'tis a pleasure, children, and the greatest that is left me on this side the grave."

"No, no; you shall not go to such a distance," cried Elizabeth, laying her white hand on his deer-skin pack— "I am right! I feel his camp-kettle, and a canister of powder! he must not be suffered to wander so far from us, Oliver; remember how suddenly Mohegan dropped away."

"I know'd the parting would come hard, children; I know'd it would!" said Natty, "and so I got aside to look at the graves by myself, and thought if I left ye the keepsake which the Major gave me when we first parted in the woods, ye wouldn't take it unkind, but would know, that, let the old man's body go where it might, his feelings stayed behind him."

"This means something more than common!" exclaimed the youth; "where is it, Natty, that you purpose going?"

The hunter drew nigh him with a confident, reasoning air, as if what he had to say would silence all objections, and replied—

"Why, lad, they tell me, that on the big lakes there's the best of hunting, and a great range, without a white man on it, unless it may be one like myself. I'm weary of living in clearings, and where the hammer is sounding in my ears from sunrise to sundown. And though I'm

much bound to ye both, children—I wouldn't say it if it was not true—I crave to go into the woods ag'in, I do."

"Woods!" echoed Elizabeth, trembling with her feelings; "do you not call these endless forests woods?"

"Ah! child, these be nothing to a man that's used to the wilderness. I have took but little comfort sin' your father come on with his settlers; but I wouldn't go far, while the life was in the body that lies under the sod there. But now he's gone, and Chingachgook is gone; and you be both young and happy. Yes! the big house has rung with merriment this month past! And now, I thought, was the time to try to get a little comfort in the close of my days. Woods! indeed! I doesn't call these woods, Madam Effingham, where I lose myself every day of my life in the clearings."

"If there be anything wanting to your comfort, name it, Leather-stocking; if it be attainable it is yours."

"You mean all for the best, lad; I know it; and so does Madam, too: but your ways isn't my ways. 'Tis like the dead there, who thought, when the breath was in them, that one went east, and one went west, to find their heavens; but they'll meet at last; and so shall we, children. Yes, ind as you've begun, and we shall meet in the land of the just at last."

"This is so new! so unexpected!" said Elizabeth, in almost breathless excitement; "I had thought you meant to live with us and die with us, Natty."

"Words are of no avail," exclaimed her husband; "the habits of forty years are not to be dispossessed by the ties of a day. I know you too well to urge you further, Natty; unless you will let me build you a hut on one of the distant hills, where we can sometimes see you, and know that you are comfortable."

"Don't fear for the Leather-stocking, children; God will see that his days be provided for, and his ind happy. I know you mean all for the best, but our ways doesn't agree. I love the woods, and ye relish the face of man; I eat when hungry, and drink when a-dry; and ye keep stated hours and rules: nay, nay, you even over-feed the dogs, lad, from pure kindness; and hounds should be gaunty to run well. The meanest of God's creaters be made for some use, and I'm formed for the wilderness; if ye love me, let me go where my soul craves to be ag'in!"

The appeal was decisive; and not another word of entreaty for him to remain was then uttered; but Elizabeth bent her head to her bosom and wept, while her husband dashed away the tears from his eyes; and, with hands that almost refused to perform their office, he produced his pocket-book, and extended a parcel of bank-notes to the hunter.

"Take these," he said, "at least take these; secure them about your person, and in the hour of need, they will do you good service."

The old man took the notes, and examined them with a curious eye.

"This, then, is some of the new-fashioned money that they've been making at Albany, out of paper! It can't be worth much to they that hasn't larning! No, no, lad— take back the stuff; it will do me no sarvice. I took kear to get all the Frenchman's powder afore he broke up, and they say lead grows where I'm going. It isn't even fit for wads, seeing that I use none but leather!—Madam Effingham, let an old man kiss your hand, and wish God's choicest blessings on you and your'n."

"Once more let me beseech you, stay!" cried Elizabeth. "Do not, Leather-stocking, leave me to grieve for the man who has twice rescued me from death, and who has served those I love so faithfully. For my sake, if not for your own, stay. I shall see you in those frightful dreams that still haunt my nights, dying in poverty and age, by the side of those terrific beasts you slew. There will be no evil, that sickness, want, and solitude can inflict, that my fancy will not conjure as your fate. Stay with us, old man, if not for your own sake, at least for ours."

"Such thoughts and bitter dreams, Madam Effingham," returned the hunter, solemnly, "will never haunt an innocent parson long. They'll pass away with God's pleasure. And if the cat-a-mounts be yet brought to your eyes in sleep, 'tis not for my sake, but to show you the power of Him that led me there to save you. Trust in God, Madam, and your honorable husband, and the thoughts for an old man like me can never be long nor bitter. I pray that the Lord will keep you in mind—the Lord that lives in clearings as well as in the wilderness—and bless you, and all that belong to you, from this time till the great day when the whites shall meet the red-skins in judgment, and justice shall be the law, and not power."

Elizabeth raised her head, and offered her colorless cheek to his salute, when he lifted his cap and touched it respectfully. His hand was grasped with convulsive

fervor by the youth, who continued silent. The hunter prepared himself for his journey, drawing his belt tighter, and wasting his moments in the little reluctant movements of a sorrowful departure. Once or twice he essayed to speak, but a rising in his throat prevented it. At length he shouldered his rifle, and cried with a clear huntsman's call that echoed through the woods—

"He-e-e-re, he-e-e-re, pups—away, dogs, away;—ye'll be footsore afore ye see the ind of the journey!"

The hounds leaped from the earth at this cry, and scenting around the graves and the silent pair, as if conscious of their own destination, they followed humbly at the heels of their master. A short pause succeeded, during which even the youth concealed his face on his grandfather's tomb. When the pride of manhood, however, had suppressed the feelings of nature, he turned to renew his entreaties, but saw that the cemetery was occupied only by himself and his wife.

"He is gone!" cried Effingham.

Elizabeth raised her face, and saw the old hunter standing, looking back for a moment, on the verge of the wood. As he caught their glances, he drew his hard hand hastily across his eyes again, waved it on high for an adieu, and uttering a forced cry to his dogs, who were crouching at his feet, he entered the forest.

This was the last that they ever saw of the Leatherstocking, whose rapid movements preceded the pursuit which Judge Temple both ordered and conducted. He had gone far toward the setting sun,—the foremost in that band of pioneers who are opening the way for the march of the nation across the continent.

1822·1823

POE

Edgar Allan Poe

1809 • 1849

Probably more than any other American author, Edgar Allan Poe—as a personality—has appealed to popular imagination. Generally, people think of him as a figure who might have emerged from one of his stories or poems—mysterious, wild, abnormal. There are, to be sure, elements of strangeness in the life of this neurotic genius. But it is dangerous to guess that his tales were merely autobiographical exploitations of his weird way of living. For one thing, it is easy to see that he deliberately tried to make people look upon him as a Byronic, enigmatic poet. For another, his highly logical criticisms and the tales themselves show that he used his extraordinary mind to work out his literary effects with almost mathematical exactitude.

Poe's tragic life was a product of bad luck and instability. The son of a wandering theatrical family, he was orphaned at two and became the ward of the John Allan family of Richmond, Virginia. Never legally adopted, he could not live quite the normal life of a son in a well-to-do family. Although in his early years both Mr. and Mrs. Allan did what they could to spoil him, friction grew between him and his foster father until he was withdrawn from the University of Virginia after less than a year of attendance. There followed a period of service in the army (1827-1829), an unhappy brief career at West Point (1830-1831), and a final break with Allan (1832).

Before the break Poe had published three books of

poetry—*Tamerlane and Other Poems* (1827), *Al Aaraaf, Tamerlane, and Minor Poems* (1829), and *Poems* (Second Edition, 1831)—none very successful financially. Now driven to try to make a living with his pen, he began writing tales. A sign that he had some success was that one of them, "The MS. Found in a Bottle," won a one-hundred-dollar prize in 1833. Befriended by one of the contest judges, John Pendleton Kennedy (p. 589), he began a career as editor, serving on the staff of the *Southern Literary Messenger* (1835-1837), *Burton's Gentleman's Magazine* (1839), *Graham's Magazine* (1841-1842), and other periodicals. Other tales won repute for him, and he was an alert and canny editor; but his fiery temper and his instability worked against his success.

Although Poe was not at all times the brooding, gloomy person tradition has painted, his life was on the whole an unhappy one. In 1831 he found a home with Mrs. Maria Clemm, mother of Poe's cousin, Virginia—a home in which poverty and sickness had made life hard. In 1835 he married thirteen-year-old Virginia, a fragile child who suffered from a devastating illness destined to end her life when she was twenty-six. To forget home troubles or what seemed bad treatment by the world, Poe periodically went on drinking sprees which completely disorganized his high-strung nerves. Between such outbreaks there were periods of sorrowful remorse. Proud because of his aristocratic upbringing and because of the high opinion he had of his abilities, he was bitter about not doing better in the world. Even in 1845, after he had won wide popularity, a collection of his verse, *The Raven and Other Poems,* and a volume of his stories, *Tales of the Grotesque and Arabesque,* did not have much financial success He died, in mysterious circumstances, in Baltimore, October 7, 1849.

When Poe was about to start his career as a writer of tales, he evidently studied successful magazine stories with great care to find a formula for marketable fiction. He saw that, because of a complicated international copyright situation, the most remunerative market was the one for short narratives. He also found that in all the magazines—even the delicate *Godey's Lady's Book*—the tale of terror was thriving. Using the keen mind which eventually was to make him the outstanding journalistic critic of his day, he figured out a highly successful way of contriving such tales. This formula was that of the single effect, set forth in his "Review of *Twice-Told Tales.*" The writer of a tale, Poe held, should subordinate everything in it to the effect he wanted the narrative to have upon the reader. This formula he employed so well that the tales he wrote have outlasted all the less skillful narratives which originally had been his models. Two elements in the tales chiefly accounted for their success: the climactic arrangement of happenings in them and a poetic style appropriate to their unfolding.

Panel (l. to r.): The University of Virginia • Edgar Allan Poe at 32 • "On the pallid bust of Pallas . . ." • Poe's cottage at Fordham • Helen Whitman and Poe

This poetic style and a similar "single effect" formula were also important in molding Poe's poems. Using words carefully chosen for their connotations and making the most of his mastery of rhythm and tone color, he wrote a number of memorable lyrics. Some of these are too showy in technique, too deliberately blurred in meaning to satisfy modern taste; but others, such as "Romance," "To Helen," "Israfel," and "To One in Paradise," still stand as masterpieces of their kind.

Review of "Twice-Told Tales"

Since Poe's critical writing is of peculiar value in explaining the nature of his works, and is particularly useful for the study of his technical skill, a critical essay is presented before the selections from the creative writings themselves. The tales and then the poems follow, each group chronologically arranged.

The criticism of Hawthorne's book typifies Poe's overwhelming interest in "effect"—the impact which a work has upon the reader—an interest which leads him not only to rank Hawthorne as an essayist in exactly the way he does but also to give essays, poems, and tales their respective ranks in a literary hierarchy. Even the talk about originality is talk about effect, since Poe thought of originality—as he said elsewhere—as "the reader's sense of the new." And clearly, poems are given their preëminent place because they have the greatest effect upon the highest faculty of the reader.

The most famous passage in this essay is the paragraph beginning with the words, "A skilful literary artist has constructed a tale"—a passage almost inevitably quoted in any book on the short story. Here, very specifically, Poe asserts that everything in a tale—every incident, every combination of events, every word—must aid the author in achieving a preconceived emotional effect. In a revision of the passage five years later, Poe was to make the second sentence even more specific by revising it to read in part: "He then invents such incidents, he then combines such events, and discusses them in such tone as may best serve him in establishing this preconceived effect." (The darker type indicates the addition.) What Poe means by "tone" perhaps was indicated in an earlier article in which he noted that Hawthorne's "tone is singularly effective—wild, plaintive, thoughtful, and in full accordance with his themes."

This review was published in Graham's Magazine, May 1842. Parts of it were revised and included in an article, "Tale-Writing," in Godey's Lady's Book, November 1847, which shows some interesting modifications of Poe's judgments of Hawthorne.

We said a few hurried words about Mr. Hawthorne in our last number, with the design of speaking more fully in the present. We are still, however, pressed for room, and must necessarily discuss his volumes more briefly and more at random than their high merits deserve.

The book professes to be a collection of *tales*, yet is, in two respects, misnamed. These pieces are now in their third republication, and, of course, are thrice-told. Moreover, they are by no means *all* tales, either in the ordinary or in the legitimate understanding of the term. 10 Many of them are pure essays; for example, "Sights from a Steeple," "Sunday at Home," "Little Annie's Ramble," "A Rill from the Town Pump," "The Toll-Gatherer's

---

1 a few . . . words, in a notice published in the April issue of Graham's Magazine, now available in Works, ed. Harrison (hereafter referred to as Works), XI, 102-104. The earlier review makes several of the same points made by the later one. It is notable, however, that in the first review Poe says that, despite its fame, "A Rill from the Town Pump" is "the least meritorious" of Hawthorne's compositions and that the best include, in addition to those cited in this second review, "David Swan"

Day," "The Haunted Mind," "The Sister Years," "Snow-Flakes," "Night Sketches," and "Foot-Prints on the Sea-Shore." We mention these matters chiefly on account of their discrepancy with that marked precision and finish by which the body of the work is distinguished.

Of the essays just named, we must be content to speak in brief. They are each and all beautiful, without being characterised by the polish and adaptation so visible in the tales proper. A painter would at once note their leading or predominant feature, and style it *repose.* There is no attempt at effect. All is quiet, thoughtful, subdued. Yet this repose may exist simultaneously with high originality of thought; and Mr. Hawthorne has demonstrated the fact. At every turn we meet with novel combinations; yet these combinations never surpass the limits of the quiet. We are soothed as we read; and withal is a calm astonishment that ideas so apparently obvious have never occurred or been presented to us before. Herein our author differs materially from Lamb or Hunt or Hazlitt—who, with vivid originality of manner and expression, have less of the true novelty of thought than is generally supposed, and whose originality, at best, has an uneasy and meretricious quaintness, replete with startling effects unfounded in nature, and inducing trains of reflection which lead to no satisfactory result. The Essays of Hawthorne have much of the character of Irving, with more of originality, and less of finish; while, compared with the Spectator, they have a vast superiority at all points. The Spectator, Mr. Irving, and Mr. Hawthorne have in common that tranquil and subdued manner which we have chosen to denominate *repose;* but, in the case of the two former, this repose is attained rather by the absence of novel combination, or of originality, than otherwise, and consists chiefly in the calm, quiet, unostentatious expression of common-place thoughts, in an unambitious, unadulterated Saxon. In them, by strong effort, we are made to conceive the absence of all. In the essays before us the absence of effort is too obvious to be mistaken, and a strong under current of *suggestion* runs continuously beneath the upper stream of the tranquil thesis. In short, these effusions of Mr. Hawthorne are the product of a truly imaginative intellect, restrained, and in some measure repressed, by fastidiousness of taste, by constitutional melancholy and by indolence.

But it is of his tales that we desire principally to speak. The tale proper, in our opinion, affords unquestionably the fairest field for the exercise of the loftiest talent, which can be afforded by the wide domains of mere prose. Were we bidden to say how the highest genius could be most advantageously employed for the best display of its own powers, we should answer, without hesitation—in the composition of a rhymed poem, not to exceed in length what might be perused in an hour. Within this limit alone can the highest order of true poetry exist. We need only here say, upon this topic, that, in almost all classes of composition, the unity of effect or impression is a point of the greatest importance. It is clear, moreover, that this unity cannot be thoroughly preserved in productions whose perusal cannot be completed at one sitting. We may continue the reading of a prose composition, from the very nature of prose itself, much longer than we can persevere, to any good purpose, in the perusal of a poem. This latter, if truly fulfilling the demands of the poetic sentiment, induces an exaltation of the soul which cannot be long sustained. All high excitements are necessarily transient. Thus a long poem is a paradox. And, without unity of impression, the deepest effects cannot be brought about. Epics were the offspring of an imperfect sense of Art, and their reign is no more. A poem *too* brief may produce a vivid, but never an intense or enduring impression. Without a certain continuity of effort—without a certain duration or repetition of purpose—the soul is never deeply moved. There must be the dropping of the water upon the rock. De Beranger has wrought brilliant things—pungent and spirit-stirring—but, like all immassive bodies, they lack *momentum,* and thus fail to satisfy the Poetic Sentiment. They sparkle and excite, but, from want of continuity, fail deeply to impress. Extreme brevity will degenerate into epigrammatism; but the sin of extreme length is even more unpardonable. *In medio tutissimus ibis.*

Were we called upon, however, to designate that class of composition which, next to such a poem as we have suggested, should best fulfil the demands of high genius —should offer it the most advantageous field of exertion—we should unhesitatingly speak of the prose tale,

---

76 De Beranger, Pierre Jean de Béranger (1780-1857), a French poet

• 83 In medio . . . ibis. You will go most safely in the middle path

as Mr. Hawthorne has here exemplified it. We allude to the short prose narrative, requiring from a half-hour to one or two hours in its perusal. The ordinary novel is objectionable, from its length, for reasons already stated in substance. As it cannot be read at one sitting, it deprives itself, of course, of the immense force derivable from *totality*. Worldly interests intervening during the pauses of perusal, modify, annul, or counteract, in a greater or less degree, the impressions of the book. But simple cessation in reading, would, of itself, be sufficient to destroy the true unity. In the brief tale, however, the author is enabled to carry out the fullness of his intention, be it what it may. During the hour of perusal the soul of the reader is at the writer's control. There are no external or extrinsic influences—resulting from weariness or interruption.

A skilful literary artist has constructed a tale. If wise, he has not fashioned his thoughts to accommodate his incidents; but having conceived, with deliberate care, a certain unique or single *effect* to be wrought out, he then invents such incidents—he then combines such events as may best aid him in establishing this preconceived effect. If his very initial sentence tend not to the outbringing of this effect, then he has failed in his first step. In the whole composition there should be no word written, of which the tendency, direct or indirect, is not to the one preestablished design. And by such means, with such care and skill, a picture is at length painted which leaves in the mind of him who contemplates it with a kindred art, a sense of the fullest satisfaction. The idea of the tale has been presented unblemished, because undisturbed; and this is an end unattainable by the novel. Undue brevity is just as exceptional here as in the poem; but undue length is yet more to be avoided.

We have said that the tale has a point of superiority even over the poem. In fact, while the *rhythm* of this latter is an essential aid in the development of the poet's highest idea—the idea of the Beautiful—the artificialities of this rhythm are an inseparable bar to the development of all points of thought or expression which have their basis in *Truth*. But Truth is often, and in very great degree, the aim of the tale. Some of the finest tales are tales of ratiocination. Thus the field of this species of composition, if not in so elevated a region on the mountain of Mind, is a table-land of far vaster extent than the domain of the mere poem. Its products are never so rich, but infinitely more numerous, and more appreciable by the mass of mankind. The writer of the prose tale, in short, may bring to his theme a vast variety of modes or inflections of thought and expression—(the ratiocinative, for example, the sarcastic, or the humorous) which are not only antagonistical to the nature of the poem, but absolutely forbidden by one of its most peculiar and indispensable adjuncts; we allude, of course, to rhythm. It may be added here, *par parenthèse,* that the author who aims at the purely beautiful in a prose tale is laboring at great disadvantage. For Beauty can be better treated in a poem. Not so with terror, or passion, or horror, or a multitude of such other points. And here it will be seen how full of prejudice are the usual animadversions against those *tales of effect,* many fine examples of which were found in the earlier numbers of Blackwood. The impressions produced were wrought in a legitimate sphere of action, and constituted a legitimate although sometimes an exaggerated interest. They were relished by every man of genius; although there were found many men of genius who condemned them without just ground. The true critic will but demand that the design intended be accomplished, to the fullest extent, by the means most advantageously applicable.

We have very few American tales of real merit—we may say, indeed, none, with the exception of "The Tales of a Traveller" of Washington Irving, and these "Twice-Told Tales" of Mr. Hawthorne. Some of the pieces of Mr. John Neal abound in vigor and originality; but in general, his compositions of this class are excessively diffuse, extravagant, and indicative of an imperfect sentiment of Art. Articles at random are, now and then, met with in our periodicals which might be advantageously compared with the best effusions of the British Magazines; but, upon the whole, we are far behind our progenitors in this department of literature.

Of Mr. Hawthorne's Tales we would say, emphatically, that they belong to the highest region of Art—an Art

---

56 **par parenthèse**, by way of parenthesis • 64 **Blackwood**, a magazine in which Poe found a great deal of Gothic fiction. A tale which he wrote "à la Blackwood" parodied the Gothic technique • 76 **Mr. John Neal** (1793-1876), an American fiction writer

subservient to genius of a very lofty order. We had supposed, with good reason for so supposing, that he had been thrust into his present position by one of the impudent *cliques* which beset our literature, and whose pretensions it is our full purpose to expose at the earliest opportunity; but we have been most agreeably mistaken. We know of few compositions which the critic can more honestly commend than these "Twice-Told Tales." As Americans, we feel proud of the book.

Mr. Hawthorne's distinctive trait is invention, creation, imagination, originality—a trait which, in the literature of fiction, is positively worth all the rest. But the nature of originality, so far as regards its manifestation in letters, is but imperfectly understood. The invective or original mind as frequently displays itself in novelty of *tone* as in novelty of matter. Mr. Hawthorne is original at *all* points.

It would be a matter of some difficulty to designate the best of these tales; we repeat that, without exception, they are beautiful. "Wakefield" is remarkable for the skill with which an old idea—a well-known incident—is worked up or discussed. A man of whims conceives the purpose of quitting his wife and residing *incognito,* for twenty years, in her immediate neighborhood. Something of this kind actually happened in London. The force of Mr. Hawthorne's tale lies in the analysis of the motives which must or might have impelled the husband to such folly, in the first instance, with the possible causes of his perseverance. Upon this thesis a sketch of singular power has been constructed.

"The Wedding Knell" is full of the boldest imagination—an imagination fully controlled by taste. The most captious critic could find no flaw in this production.

"The Minister's Black Veil" is a masterly composition of which the sole defect is that to the rabble its exquisite skill will be *caviare.* The *obvious* meaning of this article will be found to smother its insinuated one. The *moral* put into the mouth of the dying minister will be supposed to convey the *true* import of the narrative; and that a crime of dark dye (having reference to the "young lady"), has been committed, is a point which only minds congenial with that of the author will perceive.

"Mr. Higginbotham's Catastrophe" is vividly original and managed most dexterously.

"Dr. Heidegger's Experiment" is exceedingly well imagined, and executed with surpassing ability. The artist breathes in every line of it.

"The White Old Maid" is objectionable, even more than the "Minister's Black Veil," on the score of its mysticism. Even with the thoughtful and analytic, there will be much trouble in penetrating its entire import.

"The Hollow of the Three Hills" we would quote in full, had we space;—not as evincing higher talent than any of the other pieces, but as affording an excellent example of the author's peculiar ability. The subject is commonplace. A witch subjects the Distant and the Past to the view of a mourner. It has been the fashion to describe, in such cases, a mirror in which the images of the absent appear; or a cloud of smoke is made to arise, and thence the figures are gradually unfolded. Mr. Hawthorne has wonderfully heightened his effect by making the ear, in place of the eye, the medium by which the fantasy is conveyed. The head of the mourner is enveloped in the cloak of the witch, and within its magic folds there arise sounds which have an all-sufficient intelligence. Throughout this article also, the artist is conspicuous—not more in positive than in negative merits. Not only is all done that should be done, but (what perhaps is an end with more difficulty attained) there is nothing done which should not be. Every word *tells,* and there is not a word that does *not* tell. . . .

In the way of objection we have scarcely a word to say of these tales. There is, perhaps, a somewhat too general or prevalent *tone*—a tone of melancholy and mysticism. The subjects are insufficiently varied. There is not so much of *versatility* evinced as we might well be warranted in expecting from the high powers of Mr. Hawthorne. But beyond these trivial exceptions we have really none to make. The style is purity itself. Force abounds. High imagination gleams from every page. Mr. Hawthorne is a man of the truest genius. We only regret that the limits of our Magazine will not permit us to pay him that full tribute of commendation, which, under other circumstances, we should be so eager to pay.

1842

70 Every word . . . tell . . . . The omitted passage hints that Hawthorne plagiarized from Poe in "Howe's Masquerade." The accusation is unfounded

The Fall of the House of Usher

In "The Philosophy of Composition," an essay on poetry, Poe implied something about his methods in this most famous of his tales. "It is an obvious rule of art," he said, "that effects should be made to spring from direct causes —that objects should be attained through means best adapted for their attainment. . . ." In modern psychological terms, it might therefore be said that he regarded the work of art as a stimulus setting up a response in the reader. He also suggests that the reader reacts in certain ways in sympathy with a character in a story as the character's reaction changes or develops

These details about Poe's method of constructing a story, applied to "The Fall of the House of Usher," indicate the story's two interrelated strands of narrative—the one dealing with the emotions of the "affected" character and the one dealing with the incidents which have the effects. Studying the character (here undoubtedly the narrator), the reader will find that though, at the beginning of the tale, the "I" of the story is disturbed by "a sense of insufferable gloom," he can stand aside, as it were, and detachedly attempt to discover why he feels as he does. But as the happenings unfold, his uneasiness changes to fear, his fear grows, and his detachment decreases, until at the end he "flees aghast" and his "brain reels" as the "walls of the house rush asunder."

As one examines the tale, one may see in the strange appearance of the house, the actions of its mad inmate, Usher, the strange burial and return to life of Madeline, and the dissolution of the house, appropriate causes for such a developing emotion. But a more subtle and unified thread of narrative does even more to suggest the reason for increasing terror. This is made up of a series of increasingly weird identifications: identification, for instance, between the house and its inmates, between Usher and his sister, between works of art and actual happenings, and finally between the madness of Usher and the (at least momentary) madness of the narrator. These, more than the explicitly detailed incidents, account for the crescendo of horror which ends the tale.

Son coeur est un luth suspendu;
Sitot qu'on le touche il resonne.—BÉRANGER

During the whole of a dull, dark, and soundless day in the autumn of the year, when the clouds hung oppressively low in the heavens, I had been passing alone, on horseback, through a singularly dreary tract of country, and at length found myself, as the shades of the evening drew on, within view of the melancholy House of Usher I know not how it was, but, with the first glimpse of the building, a sense of insufferable gloom pervaded my spirit. I say insufferable; for the feeling was unrelieved by any of that half pleasurable, because poetic, sentiment with which the mind usually receives even the sternest natural images of the desolate or terrible. I looked upon the scene before me—upon the mere house, and the simple landscape features of the domain, upon the bleak walls, upon the vacant eyelike windows, upon a few rank sedges, and upon a few white trunks of decayed trees—with an utter depression of soul which I can compare to no earthly sensation more properly than to the afterdream of the reveler upon opium: the bitter lapse into everyday life, the hideous dropping off of the veil. There was an iciness, a sinking, a sickening of the heart, an unredeemed dreariness of thought, which no goading of the imagination could torture into aught of the sublime. What was it—I paused to think—what was it that so unnerved me in the contemplation of the House of Usher? It was a mystery all insoluble; nor could I grapple with the shadowy fancies that crowded upon me as I pondered. I was forced to fall back upon the unsatisfactory conclusion that while, beyond doubt, there *are* combinations of very simple natural objects which have the power of thus affecting us, still the analysis of this power lies among considerations beyond our depth. It was possible, I reflected, that a mere different arrangement of the particulars of the scene, of the details of the picture, would be sufficient to modify, or perhaps to annihilate, its capacity for sorrowful impression, and, acting upon this idea, I reined my horse to the precipitous brink of a black and lurid tarn that lay in unruffled luster by the dwelling, and gazed down—but with a shudder even more thrilling

---

Son coeur . . . . His heart is a suspended lute which resounds as soon as it is touched. The quotation is from the poem, "Le Refus," by Pierre Jean de Béranger

than before—upon the remodeled and inverted images of the gray sedge, and the ghastly tree-stems, and the vacant and eyelike windows.

Nevertheless, in this mansion of gloom I now proposed to myself a sojourn of some weeks. Its proprietor, Roderick Usher, had been one of my boon companions in boyhood; but many years had elapsed since our last meeting. A letter, however, had lately reached me in a distant part of the country—a letter from him—which in its wildly importunate nature had admitted of no other than a personal reply. The MS. gave evidence of nervous agitation. The writer spoke of acute bodily illness, of a mental disorder which oppressed him, and of an earnest desire to see me, as his best and indeed his only personal friend, with a view of attempting, by the cheerfulness of my society, some alleviation of his malady. It was the manner in which all this, and much more, was said—it was the apparent *heart* that went with his request—which allowed me no room for hesitation; and I accordingly obeyed forthwith what I still considered a very singular summons.

Although as boys we had been even intimate associates, yet I really knew little of my friend. His reserve had been always excessive and habitual. I was aware, however, that his very ancient family had been noted, time out of mind, for a peculiar sensibility of temperament, displaying itself, through long ages, in many works of exalted art, and manifested of late in repeated deeds of munificent yet unobtrusive charity, as well as in a passionate devotion to the intricacies, perhaps even more than to the orthodox and easily recognizable beauties, of musical science. I had learned, too, the very remarkable fact that the stem of the Usher race, all time-honored as it was, had put forth at no period any enduring branch; in other words, that the entire family lay in the direct line of descent, and had always, with a very trifling and very temporary variation, so lain. It was this deficiency, I considered, while running over in thought the perfect keeping of the character of the premises with the accredited character of the people, and while speculating upon the possible influence which the one, in the long lapse of centuries, might have exercised upon the other—it was this deficiency, perhaps, of collateral issue, and the consequent undeviating transmission from sire to son of the patrimony with the name, which had at length so identified the two as to merge the original title of the estate in the quaint and equivocal appellation of the "House of Usher"—an appellation which seemed to include, in the minds of the peasantry who used it, both the family and the family mansion.

I have said that the sole effect of my somewhat childish experiment, that of looking down within the tarn, had been to deepen the first singular impression. There can be no doubt that the consciousness of the rapid increase of my superstition—for why should I not so term it?—served mainly to accelerate the increase itself. Such, I have long known, is the paradoxical law of all sentiments having terror as a basis. And it might have been for this reason only, that, when I again uplifted my eyes to the house itself from its image in the pool, there grew in my mind a strange fancy—a fancy so ridiculous, indeed, that I but mention it to show the vivid force of the sensations which oppressed me. I had so worked upon my imagination as really to believe that about the whole mansion and domain there hung an atmosphere peculiar to themselves and their immediate vicinity: an atmosphere which had no affinity with the air of heaven, but which had reeked up from the decayed trees, and the gray wall, and the silent tarn; a pestilent and mystic vapor, dull, sluggish, faintly discernible, and leaden-hued.

Shaking off from my spirit what *must* have been a dream, I scanned more narrowly the real aspect of the building. Its principal feature seemed to be that of an excessive antiquity. The discoloration of ages had been great. Minute fungi overspread the whole exterior, hanging in a fine tangled webwork from the eaves. Yet all this was apart from any extraordinary dilapidation. No portion of the masonry had fallen; and there appeared to be a wild inconsistency between its still perfect adaptation of parts and the crumbling condition of the individual stones. In this there was much that reminded me of the specious totality of old woodwork which has rotted for long years in some neglected vault, with no disturbance from the breath of the external air. Beyond this indication of extensive decay, however, the fabric gave little token of instability. Perhaps the eye of a scrutinizing observer might have discovered a barely perceptible fissure, which, extending from the roof of the building in front, made its way down the wall in a zigzag direction, until it became lost in the sullen waters of the tarn.

Noticing these things, I rode over a short causeway to the house. A servant in waiting took my horse, and I entered the Gothic archway of the hall. A valet, of stealthy step, thence conducted me in silence through many dark and intricate passages in my progress to the

studio of his master. Much that I encountered on the way contributed, I know not how, to heighten the vague sentiments of which I have already spoken. While the objects around me—while the carvings of the ceiling, the somber tapestries of the walls, the ebon blackness of the floors, and the phantasmagoric armorial trophies which rattled as I strode, were but matters to which, or to such as which, I had been accustomed from my infancy,—while I hesitated not to acknowledge how familiar was all this, I still wondered to find how unfamiliar were the fancies which ordinary images were stirring up. On one of the staircases I met the physician of the family. His countenance, I thought, wore a mingled expression of low cunning and perplexity. He accosted me with trepidation and passed on. The valet now threw open a door and ushered me into the presence of his master.

The room in which I found myself was very large and lofty. The windows were long, narrow, and pointed, and at so vast a distance from the black oaken floor as to be altogether inaccessible from within. Feeble gleams of encrimsoned light made their way through the trellised panes, and served to render sufficiently distinct the more prominent objects around; the eye, however, struggled in vain to reach the remoter angles of the chamber, or the recesses of the vaulted and fretted ceiling. Dark draperies hung upon the walls. The general furniture was profuse, comfortless, antique, and tattered. Many books and musical instruments lay scattered about, but failed to give any vitality to the scene. I felt that I breathed an atmosphere of sorrow. An air of stern, deep, and irredeemable gloom hung over and pervaded all.

Upon my entrance, Usher arose from a sofa on which he had been lying at full length, and greeted me with a vivacious warmth which had much in it, I at first thought, of an overdone cordiality—of the constrained effort of the *ennuyé* man of the world. A glance, however, at his countenance, convinced me of his perfect sincerity. We sat down; and for some moments, while he spoke not, I gazed upon him with a feeling half of pity, half of awe. Surely man had never before so terribly altered, in so brief a period, as had Roderick Usher! It was with difficulty that I could bring myself to admit the identity of the wan being before me with the companion of my early boyhood. Yet the character of his face had been at all times remarkable. A cadaverousness of complexion; an eye large, liquid, and luminous beyond comparison; lips somewhat thin and very pallid, but of a surpassingly beautiful curve; a nose of a delicate Hebrew model, but with a breadth of nostril unusual in similar formations; a finely-molded chin, speaking, in its want of prominence, of a want of moral energy; hair of a more than weblike softness and tenuity,—these features, with an inordinate expansion above the regions of the temple, made up altogether a countenance not easily to be forgotten. And now in the mere exaggeration of the prevailing character of these features, and of the expression they were wont to convey, lay so much of change that I doubted to whom I spoke. The now ghastly pallor of the skin, and the now miraculous luster of the eye, above all things startled and even awed me. The silken hair, too, had been suffered to grow all unheeded, and as, in its wild gossamer texture, it floated rather than fell about the face, I could not, even with effort, connect its arabesque expression with any idea of simple humanity.

In the manner of my friend I was at once struck with an incoherence, an inconsistency; and I soon found this to arise from a series of feeble and futile struggles to overcome an habitual trepidancy, an excessive nervous agitation. For something of this nature I had indeed been prepared, no less by his letter than by reminiscences of certain boyish traits, and by conclusions deduced from his peculiar physical conformation and temperament. His action was alternately vivacious and sullen. His voice varied rapidly from a tremulous indecision (when the animal spirits seemed utterly in abeyance) to that species of energetic concision—that abrupt, weighty, unhurried, and hollow-sounding enunciation, that leaden, self-balanced, and perfectly modulated guttural utterance—which may be observed in the lost drunkard, or the irreclaimable eater of opium, during the periods of his most intense excitement.

It was thus that he spoke of the object of my visit, of his earnest desire to see me, and of the solace he expected me to afford him. He entered at some length into what he conceived to be the nature of his malady. It was, he said, a constitutional and a family evil, and one for which he despaired to find a remedy—a mere nervous affection, he immediately added, which would undoubtedly soon pass off. It displayed itself in a host of unnatural sensations. Some of these, as he detailed them, interested and bewildered me; although, perhaps, the terms and the gen-

---

44 **the character . . . face.** As critics have noted, the description of Usher is remarkably like one appropriate for Poe. The "inordinate expansion," according to phrenologists of the day, indicated "ideality"

eral manner of the narration had their weight. He suffered much from a morbid acuteness of the senses; the most insipid food was alone endurable; he could wear only garments of certain texture; the odors of all flowers were oppressive; his eyes were tortured by even faint light, and there were but peculiar sounds, and these from stringed instruments, which did not inspire him with horror.

To an anomalous species of terror I found him a bounden slave. "I shall perish," said he, "I *must* perish in this deplorable folly. Thus, thus, and not otherwise, shall I be lost. I dread the events of the future, not in themselves, but in their results. I shudder at the thought of any, even the most trivial, incident, which may operate upon this intolerable agitation of soul. I have, indeed, no abhorrence of danger, except in its absolute effect,—in terror. In this unnerved, in this pitiable condition, I feel that the period will sooner or later arrive when I must abandon life and reason together in some struggle with the grim phantasm, FEAR."

I learned moreover at intervals, and through broken and equivocal hints, another singular feature of his mental condition. He was enchained by certain superstitious impressions in regard to the dwelling which he tenanted, and whence for many years he had never ventured forth, in regard to an influence whose supposititious force was conveyed in terms too shadowy here to be restated,—an influence which some peculiarities in the mere form and substance of his family mansion had, by dint of long sufferance, he said, obtained over his spirit, an effect which the *physique* of the gray walls and turrets, and of the dim tarn into which they all looked down, had at length brought about upon the *morale* of his existence.

He admitted, however, although with hesitation, that much of the peculiar gloom which thus afflicted him could be traced to a more natural and far more palpable origin,—to the severe and long-continued illness, indeed to the evidently approaching dissolution, of a tenderly beloved sister, his sole companion for long years, his last and only relative on earth. "Her decease," he said, with a bitterness which I can never forget, "would leave him (him, the hopeless and the frail) the last of the ancient race of the Ushers." While he spoke, the lady Madeline (for so was she called) passed slowly through a remote portion of the apartment, and, without having noticed my presence, disappeared. I regarded her with an utter astonishment not unmingled with dread, and yet I found it impossible to account for such feelings. A sensation of stupor oppressed me, as my eyes followed her retreating steps. When a door, at length, closed upon her, my glance sought instinctively and eagerly the countenance of the brother; but he had buried his face in his hands, and I could only perceive that a far more than ordinary wanness had overspread the emaciated fingers through which trickled many passionate tears.

The disease of the lady Madeline had long baffled the skill of her physicians. A settled apathy, a gradual wasting away of the person, and frequent although transient affections of a partially cataleptical character, were the unusual diagnosis. Hitherto she had steadily borne up against the pressure of her malady, and had not betaken herself finally to bed; but, on the closing-in of the evening of my arrival at the house, she succumbed (as her brother told me at night with inexpressible agitation) to the prostrating power of the destroyer; and I learned that the glimpse I had obtained of her person would thus probably be the last I should obtain,—that the lady, at least while living, would be seen by me no more.

For several days ensuing, her name was unmentioned by either Usher or myself; and during this period I was busied in earnest endeavors to alleviate the melancholy of my friend. We painted and read together; or I listened, as if in a dream, to the wild improvisations of his speaking guitar. And thus, as a closer and still closer intimacy admitted me more unreservedly into the recesses of his spirit, the more bitterly did I perceive the futility of all attempt at cheering a mind from which darkness, as if an inherent positive quality, poured forth upon all objects of the moral and physical universe, in one unceasing radiation of gloom

I shall ever bear about me a memory of the many solemn hours I thus spent alone with the master of the House of Usher. Yet I should fail in my attempt to convey an idea of the exact character of the studies, or of the occupations, in which he involved me, or led me the way. An excited and highly distempered ideality threw a sulphureous luster over all. His long, improvised dirges will ring forever in my ears. Among other things, I hold painfully in mind a certain singular perversion and amplification of the wild air of the last waltz of Von Weber. From the paintings over which his elaborate fancy brooded, and which grew, touch by touch, into

---

88 **the last . . . Von Weber**, No. 5 of Danses brillantes by Karl Gottlieb Reissiger (1798-1859), based on Von Weber's last waltz

vaguenesses at which I shuddered the more thrillingly because I shuddered knowing not why,—from these paintings (vivid as their images now are before me) I would in vain endeavor to educe more than a small portion which should lie within the compass of merely written words. By the utter simplicity, by the nakedness of his designs, he arrested and over-awed attention. If ever mortal painted an idea, that mortal was Roderick Usher. For me at least, in the circumstances then surrounding me, there arose, out of the pure abstractions which the hypochondriac contrived to throw upon his canvas, an intensity of intolerable awe, no shadow of which felt I ever yet in the contemplation of the certainly glowing yet too concrete reveries of Fuseli.

One of the phantasmagoric conceptions of my friend, partaking not so rigidly of the spirit of abstraction, may be shadowed forth, although feebly, in words A small picture presented the interior of an immensely long and rectangular vault or tunnel, with low walls, smooth, white, and without interruption or device Certain accessory points of the design served well to convey the idea that this excavation lay at an exceeding depth below the surface of the earth. No outlet was observed in any portion of its vast extent, and no torch, or other artificial source of light, was discernible; yet a flood of intense rays rolled throughout, and bathed the whole in a ghastly and inappropriate splendor.

I have just spoken of that morbid condition of the auditory nerve which rendered all music intolerable to the sufferer, with the exception of certain effects of stringed instruments. It was, perhaps, the narrow limits to which he thus confined himself upon the guitar, which gave birth, in great measure, to the fantastic character of his performances. But the fervid *facility* of his *impromptus* could not be so accounted for. They must have been, and were, in the notes as well as in the words of his wild fantasias (for he not unfrequently accompanied himself with rimed verbal improvisations), the result of that intense mental collectedness and concentration to which I have previously alluded as observable only in particular moments of the highest artificial excitement. The words of one of these rhapsodies I have easily remembered. I was, perhaps, the more forcibly impressed with it as he gave it, because, in the under or mystic current of its meaning, I fancied that I perceived, and for the first time, a full consciousness, on the part of Usher, of the tottering of his lofty reason upon her throne. The verses, which were entitled "The Haunted Palace," ran very nearly, if not accurately, thus:—

I

In the greenest of our valleys
By good angels tenanted,
Once a fair and stately palace—
Radiant palace—reared its head.
In the monarch Thought's dominion,
It stood there;
Never seraph spread a pinion
Over fabric half so fair.

II

Banners yellow, glorious, golden,
On its roof did float and flow
(This—all this—was in the olden
Time long ago),
And every gentle air that dallied,
In that sweet day,
Along the ramparts plumed and pallid,
A winged odor went away.

III

Wanderers in that happy valley
Through two luminous windows saw
Spirits moving musically
To a lute's well-tuned law,
Round about a throne, where sitting,
Porphyrogene,
In state his glory well befitting,
The ruler of the realm was seen.

IV

And all with pearl and ruby glowing
Was the fair palace door,
Through which came flowing, flowing, flowing,
And sparkling evermore,
A troop of Echoes, whose sweet duty
Was but to sing,
In voices of surpassing beauty,
The wit and wisdom of their king.

---

14 **Fuseli,** Heinrich Fuseli, a Swiss painter who was taught in the Royal Academy at London • 17 **A small picture.** Compare the vault in which the body of Madeline is placed later in the story • 48 **"The Haunted Palace."** Poe said this poem was intended "to imply a mind haunted by phantoms." It should be compared with the description of Usher in the eighth paragraph of the story • 71 **Porphyrogene,** a name meaning "born to the purple"

V

But evil things, in robes of sorrow,
Assailed the monarch's high estate;
(Ah, let us mourn, for never morrow
Shall dawn upon him, desolate!)
And, round about his home, the glory
That blushed and bloomed
Is but a dim-remembered story
Of the old time entombed.

VI

And travelers now within that valley
Through the red-litten windows see
Vast forms that move fantastically
To a discordant melody;
While, like a ghastly rapid river,
Through the pale door,
A hideous throng rush out forever,
And laugh—but smile no more.

I well remember that suggestions arising from this ballad led us into a train of thought, wherein there became manifest an opinion of Usher's which I mention, not so much on account of its novelty (for other men have thought thus) as on account of the pertinacity with which he maintained it. This opinion, in its general form, was that of the sentience of all vegetable things. But in his disordered fancy, the idea had assumed a more daring character, and trespassed, under certain conditions, upon the kingdom of inorganization. I lack words to express the full extent or the earnest *abandon* of his persuasion. The belief, however, was connected (as I have previously hinted) with the gray stones of the home of his forefathers. The conditions of the sentience had been here, he imagined, fulfilled in the method of collocation of these stones,—in order of their arrangement, as well as in that of the many fungi which overspread them, and of the decayed trees which stood around; above all, in the long undisturbed endurance of this arrangement, and in its reduplication in the still waters of the tarn. Its evidence—the evidence of the sentience—was to be seen, he said (and I here started as he spoke), in the gradual yet certain condensation of an atmosphere of their own about the waters and the walls. The result was discoverable, he added, in that silent yet importunate and terrible influence which for centuries had molded the destinies of his family, and which made *him* what I now saw him,—what he was. Such opinions need no comment, and I will make none.

Our books—the books which for years had formed no small portion of the mental existence of the invalid—were, as might be supposed, in strict keeping with this character of phantasm. We pored together over such works as the Ververt and Chartreuse of Gresset; the Belphegor of Machiavelli; the Heaven and Hell of Swedenborg; the Subterranean Voyage of Nicholas Klimm by Holberg; the Chiromancy of Robert Flud, of Jean D'Indagine, and of De la Chambre; the Journey into the Blue Distance of Tieck; and the City of the Sun of Campanella. One favorite volume was a small octavo edition of the *Directorium Inquisitorum*, by the Dominician Eymeric de Gironne; and there were passages in Pomponius Mela, about the old African Satyrs and Aegipans, over which Usher would sit dreaming for hours. His chief delight, however, was found in the perusal of an exceedingly rare and curious book in quarto Gothic,—the manual of a forgotten church,—the *Vigilioe Mortuorum secundum Chorum Ecclesioe Maguntinoe.*

I could not help thinking of the wild ritual of this work, and of its probable influence upon the hypochon-

---

20 **other men.** "Watson, Dr. Percival, Spallanzani, and especially the Bishop of Llandaff"—Poe. See **Chemical Essays**, Vol. V • 50 **Ververt and Chartreuse,** anticlerical and licentious poems by Jean Baptiste Gresset (1709-1777) • 51 **Belphegor,** a novel by Machiavelli (1469-1527) which tells how the archdemon Balfagor visited the earth and then returned to hell • 52 **Swedenborg,** Emmanuel Swedenborg, Swedish mystic (1688-1772) • 53 **Holberg,** Ludwig Holberg (1684-1754), who published the book mentioned, in Latin, in 1741 The title brings in another mention of a journey into supernatural realms • 53 **Chiromancy,** palmistry • 53 **Robert Flud** (1547-1637), English physician and writer on pseudo-science • 54 **Jean D'Indagine,** author of **Chiromantia** (1522), a work on palmistry • 54 **De la Chambre,** Maria Cireau de la Chambre (1594-1669), French writer on palmistry • 55 **Tieck,** Ludwig Tieck (1773-1853), German writer Tieck is not known to have written any such book. Perhaps Poe invented the title so as to repeat the motif of the journey from one world to another, thus foreshadowing Madeline's revival after death • 56 **Campanella,** Tommaso Campanella (1568-1639), an Italian philosopher. His **Civitas Solis,** actually a Utopian treatise, serves here, by title, to connote the world beyond • 57 **Directorium Inquisitorúm** (1503) was by Nicholas Eymeric de Girone, inquisitor-general for Castile in 1536 The book gives in detail an account of the tortures of the Inquisition, and the title not only augments the suggestion of the exoticism of Usher's reading but also foreshadows the torture Madeline is to undergo • 59 **Pomponius Mela** (first century A.D.), author of a geography often concerned with strange beasts. Here a journey into distant lands, instead of a journey into the other world, is suggested • 60 **Aegipans,** goat-god Pan • 63 **Vigilioe Mortuorum . . .,** "The Watches of the Dead According to the Choir of the Church of Mayence." As the author points out, this title is definitely related to what happens in the next paragraph

driac, when one evening, having informed me abruptly that the lady Madeline was no more, he stated his intention of preserving her corpse for a fortnight, (previously to its final interment) in one of the numerous vaults within the main walls of the building. The worldly reason, however, assigned for this singular proceeding was one which I did not feel at liberty to dispute. The brother had been led to his resolution (so he told me) by consideration of the unusual character of the malady of the deceased, of certain obtrusive and eager inquiries on the part of her medical men, and of the remote and exposed situation of the burial ground of the family. I will not deny that when I called to mind the sinister countenance of the person whom I met upon the staircase, on the day of my arrival at the house, I had no desire to oppose what I regarded as at best but harmless, and by no means an unnatural, precaution.

At the request of Usher, I personally aided him in the arrangement for the temporary entombment. The body having been encoffined, we two alone bore it to its rest. The vault in which we placed it (and which had been so long unopened that our torches, half smothered in its oppressive atmosphere, gave us little opportunity for investigation) was small, damp, and entirely without means of admission for light; lying, at great depth, immediately beneath that portion of the building in which was my own sleeping apartment. It had been used apparently, in remote feudal times, for the worst purposes of a donjon keep, and in later days as a place of deposit for powder, or some other highly combustible substance, as a portion of its floor, and the whole interior of a long archway through which we reached it, were carefully sheathed with copper. The door, of massive iron, had been also similarly protected. Its immense weight caused an unusually sharp grating sound as it moved upon its hinges.

Having deposited our mournful burden upon tressels within this region of horror, we partially turned aside the yet unscrewed lid of the coffin, and looked upon the face of the tenant. A striking similitude between the brother and sister now first arrested my attention; and Usher, divining, perhaps, my thoughts, murmured out some few words from which I learned that the deceased and himself had been twins, and that sympathies existed between them. Our glances, however, rested not long upon the dead, for we could not regard her unawed. The disease which had thus entombed the lady in the maturity of youth, had left, as usual in all maladies of a strictly cataleptical character, the mockery of a faint blush upon the bosom and the face, and that suspiciously lingering smile upon the lip which is so terrible in death. We replaced and screwed down the lid, and having secured the door of iron, made our way, with toil, into the scarcely less gloomy apartments of the upper portion of the house.

And now, some days of bitter grief having elapsed, an observable change came over the features of the mental disorder of my friend. His ordinary manner had vanished. His ordinary occupations were neglected or forgotten. He roamed from chamber to chamber with hurried, unequal, and objectless step. The pallor of his countenance had assumed, if possible, a more ghastly hue, but the luminousness of his eye had utterly gone out. The once occasional huskiness of his tone was heard no more; and a tremulous quavor, as if of extreme terror, habitually characterized his utterance. There were times, indeed, when I thought his unceasingly agitated mind was laboring with some oppressive secret, to divulge which he struggled for the necessary courage. At times, again, I was obliged to resolve all into the mere inexplicable vagaries of madness, for I beheld him gazing upon vacancy for long hours, in an attitude of the profoundest attention, as if listening to some imaginary sound. It was no wonder that his condition terrified—that it infected me. I felt creeping upon me, by slow yet certain degrees, the wild influences of his own fantastic yet impressive superstitions.

It was, especially, upon retiring to bed late in the night of the seventh or eighth day after the placing of the lady Madeline within the donjon, that I experienced the full power of such feelings. Sleep came not near my couch, while the hours waned and waned away. I struggled to reason off the nervousness which had dominion over me. I endeavored to believe that much if not all of what I felt was due to the bewildering influence of the gloomy furniture of the room,—of the dark and tattered draperies which, tortured into motion by the breath of a rising tempest, swayed fitfully to and fro

---

17 **precaution.** The medical man, briefly glimpsed at the start of the story, at this point serves his sole purpose in the narrative. Usher's fear of "body-snatching" causes the temporary entombment of Madeline within the House of Usher. The earlier characterization of the doctor is meager but sufficient: his "mingled expression of perplexity and cunning" motivates Usher's apprehension

upon the walls, and rustled uneasily about the decorations of the bed. But my efforts were fruitless. An irrepressible tremor gradually pervaded my frame; and at length there sat upon my very heart an incubus of utterly causeless alarm. Shaking this off with a gasp and a struggle, I uplifted myself upon the pillows, and, peering earnestly within the intense darkness of the chamber, hearkened—I know not why, except that an instinctive spirit prompted me—to certain low and indefinite sounds which came, through the pauses of the storm, at long intervals, I knew not whence. Overpowered by an intense sentiment of horror, unaccountable yet unendurable, I threw on my clothes with haste (for I felt that I should sleep no more during the night), and endeavored to arouse myself from the pitiable condition to which I had fallen, by pacing rapidly to and fro through the apartment.

I had taken but few turns in this manner, when a light step on an adjoining staircase arrested my attention. I presently recognized it as that of Usher. In an instant afterward he rapped with a gentle touch at my door, and entered, bearing a lamp. His countenance was, as usual, cadaverously wan—but, moreover, there was a species of mad hilarity in his eyes,—an evidently restrained hysteria in his whole demeanor. His air appalled me—but anything was preferable to the solitude which I had so long endured, and I even welcomed his presence as a relief.

"And you have not seen it?" he said abruptly, after having stared about him for some moments in silence,—"you have not then seen it?—but, stay! you shall." Thus speaking, and having carefully shaded his lamp, he hurried to one of the casements, and threw it freely open to the storm.

The impetuous fury of the entering gust nearly lifted us from our feet. It was, indeed, a tempestuous yet sternly beautiful night, and one wildly singular in its terror and its beauty. A whirl wind had apparently collected its force in our vicinity, for there were frequent and violent alterations in the direction of the wind; and the exceeding density of the clouds (which hung so low as to press upon the turrets of the house) did not prevent our perceiving the lifelike velocity with which they flew careering from all points against each other, without passing away into the distance. I say that even their exceeding density did not prevent our perceiving this; yet we had no glimpse of the moon or stars, nor was there any flashing forth of the lightning. But the under surfaces of the huge masses of agitated vapor, as well as all terrestrial objects immediately around us, were glowing in the unnatural light of a faintly luminous and distinctly visible gaseous exhalation which hung about and enshrouded the mansion.

"You must not—you shall not behold this!" said I shudderingly, to Usher, as I led him with a gentle violence from the window to a seat. "These appearances, which bewilder you, are merely electrical phenomena not uncommon—or it may be that they have their ghastly origin in the rank miasma of the tarn. Let us close this casement; the air is chilling and dangerous to your frame. Here is one of your favorite romances. I will read, and you shall listen;—and so we will pass away this terrible night together."

The antique volume which I had taken up was the "Mad Trist" of Sir Launcelot Canning, but I had called it a favorite of Usher's more in sad jest than in earnest; for, in truth, there is little in its uncouth and unimaginative prolixity which could have had interest for the lofty and spiritual ideality of my friend. It was, however, the only book immediately at hand, and I indulged a vague hope that the excitement which now agitated the hypochondriac might find relief (for the history of mental disorder is full of similar anomalies) even in the extremeness of the folly which I should read. Could I have judged, indeed, by the wild, overstrained air of vivacity with which he hearkened, or apparently hearkened, to the words of the tale, I might well have congratulated myself upon the success of my design.

I had arrived at that well-known portion of the story where Ethelred, the hero of the Trist, having sought in vain for peaceable admission into the dwelling of the hermit, proceeds to make good an entrance by force. Here, it will be remembered, the words of the narrative run thus:—

"And Ethelred, who was by nature of a doughty heart, and who was now mighty withal on account of the powerfulness of the wine which he had drunken, waited no longer to hold parley with the hermit, who, in sooth, was of an obstinate and maliceful turn, but, feeling the rain upon his shoulders, and fearing the rising of the tempest, uplifted his mace outright, and with blows made quickly room in the plankings of the door for his

gauntleted hand; and now, pulling therewith sturdily, he so cracked, and ripped, and tore all asunder, that the noise of the dry and hollow-sounding wood alarumed and reverberated throughout the forest."

At the termination of this sentence I started, and for a moment paused; for it appeared to me (although I at once concluded that my excited fancy had deceived me) —it appeared to me that from some very remote portion of the mansion there came, indistinctly, to my ears, what might have been in its exact similarity of character the echo (but a stifled and dull one certainly) of the very cracking and ripping sound which Sir Launcelot had so particularly described. It was, beyond doubt, the coincidence alone which had arrested my attention; for amid the rattling of the sashes of the casements, and the ordinary commingled noises of the still increasing storm, the sound, in itself, had nothing, surely, which should have interested or disturbed me. I continued the story:—

"But the good champion Ethelred, now entering within the door, was sore enraged and amazed to perceive no signal of the maliceful hermit; but, in the stead thereof, a dragon of a scaly and prodigious demeanor, and of a fiery tongue, which sate in guard before a palace of gold with a floor of silver, and upon the wall there hung a shield of shining brass with this legend enwritten:—

Who entereth herein, a conqueror hath bin;
Who slayeth the dragon, the shield he shall win.

And Ethelred uplifted his mace, and struck upon the head of the dragon, which fell before him, and gave up his pesty breath, with a shriek so horrid and harsh, and withal so piercing, that Ethelred had fain to close his ears with his hands against the dreadful noise of it, the like whereof was never before heard."

Here again I paused abruptly, and now with a feeling of wild amazement, for there could be no doubt whatever that, in this instance, I did actually hear (although from what direction it proceeded I found it impossible to say) a low and apparently distant, but harsh, protracted, and most unusual screaming or grating sound,—the exact counterpart of what my fancy had already conjured up for the dragon's unnatural shriek as described by the romancer.

Oppressed as I certainly was, upon the occurrence of this second and most extraordinary coincidence, by a thousand conflicting sensations, in which wonder and extreme terror were predominant, I still retained sufficient presence of mind to avoid exciting, by any observation, the sensitive nervousness of my companion. I was by no means certain that he had noticed the sounds in question; although, assuredly, a strange alteration had during the last few minutes taken place in his demeanor. From a position fronting my own, he had gradually brought round his chair, so as to sit with his face to the door of the chamber; and thus I could but partially perceive his features, although I saw that his lips trembled as if he were murmuring inaudibly. His head had dropped upon his breast; yet I knew that he was not asleep, from the wide rigid opening of the eyes as I caught a glance of it in profile. The motion of his body, too, was at variance with this idea, for he rocked from side to side with a gentle yet constant and uniform sway. Having rapidly taken notice of all this, I resumed the narrative of Sir Launcelot, which thus proceeded:—

"And now the champion, having escaped from the terrible fury of the dragon, bethinking himself of the brazen shield, and of the breaking up of the enchantment which was upon it, removed the carcass from out of the way before him, and approached valorously over the silver pavement of the castle to where the shield was upon the wall; which in sooth tarried not for his full coming, but fell down at his feet upon the silver floor, with a mighty great and terrible ringing sound."

No sooner had these syllables passed my lips than—as if a shield of brass had indeed, at the moment, fallen heavily upon a floor of silver—I became aware of a distinct, hollow, metallic, and clangorous yet apparently muffled reverberation. Completely unnerved, I leaped to my feet; but the measured rocking movement of Usher was undisturbed. I rushed to the chair in which he sat. His eyes were bent fixedly before him, and throughout his whole countenance there reigned a stony rigidity. But, as I placed my hand upon his shoulder, there came a strong shudder over his whole person; a sickly smile quivered about his lips; and I saw that he spoke in a low, hurried, and gibbering murmur, as if unconscious of my presence. Bending closely over him, I at length drank in the hideous import of his words.

"Not hear it?—yes, I hear it, and *have* heard it. Long —long—long—many minutes, many hours, many days, have I heard it, yet I dared not—oh, pity me, miserable wretch that I am!—I dared not—I *dared* not speak! *We*

have put her living in the tomb! Said I not that my senses were acute? I *now* tell you that I have heard her first feeble movements in the hollow coffin. I heard them—many, many days ago—yet I dared not—*I dared not speak!* And now—tonight—Ethelred—ha! ha!—the breaking of the hermit's door, and the deathcry of the dragon, and the clangor of the shield!—say, rather, the rending of her coffin, and the grating of the iron hinges of her prison, and her struggles within the copper archway of the vault! Oh, whither shall I fly? Will she not be here anon? Is she not hurrying to upbraid me for my haste? Have I not heard her footstep on the stair? Do I not distinguish that heavy and horrible beating of her heart? Madman!"—here he sprang furiously to his feet, and shrieked out his syllables, as if in the effort he were giving up his soul—*"Madman! I tell you that she now stands without the door!"*

As if in the superhuman energy of his utterance there had been found the potency of a spell, the huge antique panels to which the speaker pointed threw slowly back, upon the instant, their ponderous and ebony jaws. It was the work of the rushing gust—but then without those doors there *did* stand the lofty and enshrouded figure of the lady Madeline of Usher! There was blood upon her white robes, and the evidence of some bitter struggle upon every portion of her emaciated frame. For a moment she remained trembling and reeling to and fro upon the threshold—then, with a low moaning cry, fell heavily inward upon the person of her brother, and in her violent and now final death agonies, bore him to the floor a corpse, and a victim to the terrors he had anticipated.

From that chamber and from that mansion I fled aghast. The storm was still abroad in all its wrath as I found myself crossing the old causeway. Suddenly there shot along the path a wild light, and I turned to see whence a gleam so unusual could have issued; for the vast house and its shadows were alone behind me. The radiance was that of the full, setting, and blood-red moon, which now shone vividly through that once barely discernible fissure, of which I have before spoken as extending from the roof of the building, in a zigzag direction, to the base. While I gazed, this fissure rapidly widened—there came a fierce breath of the whirlwind—the entire orb of the satellite burst at once upon my sight—my brain reeled as I saw the mighty walls rushing asunder—there was a long, tumultuous shouting sound like the voice of a thousand waters—and the deep and dank tarn at my feet closed sullenly and silently over the fragments of the *"House of Usher."*

1839

Ligeia

Poe believed that this was his best story, and at least some readers who are at times distressed by Poe's lack of subtlety may share his preference. One problem he faced (one he had previously tried to cope with in a similar story, "Morella") was that of unifying a narrative which tended to break into two disunited parts—one telling of the life and death of his chief character; and another telling of her return, several years later, to the world of the living.

He did this by (1) creating, in the first part, the character Ligeia, whose characteristics were of exactly the sort to give fictional probability to her strange conquest of death in the second part; (2) emphasizing throughout the theme of metempsychosis—the belief in transmigration of souls; (3) "discussing"—as he might have put it—his incidents "in such tone as best served him in establishing the preconceived effect." In making subtle use of this last device, Poe caused a series of highly suggestive words and images, associated with Ligeia in the first portion of the narrative, to prepare for and slowly build up to her weird return in the second.

This story was published in the American Museum, September 1838, and was included in Tales of the Grotesque and Arabesque (1840). Since some of the revisions in the last half of the tale interestingly suggest how

Poe improved his narrative, a few are pointed out in the footnotes.

And the will therein lieth, which dieth not. Who knoweth the mysteries of the will, with its vigor? For God is but a great will pervading all things by nature of its intentness. Man doth not yield himself to the angels, nor unto death utterly, save only through the weakness of his feeble will.—JOSEPH GLANVILL

I cannot, for my soul, remember how, when, or even precisely where, I first became acquainted with the lady Ligeia. Long years have since elapsed, and my memory is feeble through much suffering. Or, perhaps, I cannot *now* bring these points to mind, because, in truth, the character of my beloved, her rare learning, her singular yet placid cast of beauty, and the thrilling and enthralling eloquence of her low musical language, made their way into my heart by paces so steadily and stealthily progressive that they have been unnoticed and unknown. Yet I believe that I met her first and most frequently in some large, old decaying city near the Rhine. Of her family—I have surely heard her speak. That it is of a remotely ancient date cannot be doubted. Ligeia! Ligeia! Buried in studies of a nature more than all else adapted to deaden impressions of the outward world, it is by that sweet word alone—by Ligeia—that I bring before mine eyes in fancy the image of her who is no more. And now, while I write, a recollection flashes upon me that I have *never known* the paternal name of her who was my friend and my betrothed, and who became the partner of my studies, and finally the wife of my bosom. Was it a playful charge on the part of my Ligeia? or was it a test of my strength of affection, that I should institute no inquiries upon this point? or was it rather a caprice of my own—a wildly romantic offering on the shrine of the most passionate devotion? I but indistinctly recall the fact myself—what wonder that I have utterly forgotten the circumstances which originated or attended it? And, indeed, if ever that spirit which is entitled *Romance*—if ever she, the wan and the misty-winged *Ashtophet* of idolatrous Egypt, presided, as they tell, over marriages ill-omened, then most surely she presided over mine.

There is one dear topic, however, on which my memory fails me not. It is the *person* of Ligeia. In stature she was tall, somewhat slender, and, in her latter days, even emaciated. I would in vain attempt to portray the majesty, the quiet ease, of her demeanor, or the incomprehensible lightness and elasticity of her footfall. She came and departed as a shadow. I was never made aware of her entrance into my closed study save by the dear music of her low sweet voice, as she placed her marble hand upon my shoulder. In beauty of her face no maiden ever equalled her. It was the radiance of an opium dream—an airy and spirit-lifting vision more wildly divine than the phantasies which hovered about the slumbering souls of the daughters of Delos. Yet her features were not of that regular mould which we have been falsely taught to worship in the classical labors of the heathen. "There is no exquisite beauty," says Bacon, Lord Verulam, speaking truly of all the forms and *genera* of beauty, "without some *strangeness* in the proportion." Yet, although I saw that the features of Ligeia were not of a classic regularity—although I perceived that her loveliness was indeed "exquisite," and felt that there was much of "strangeness" pervading it, yet I have tried in vain to detect the irregularity and to trace home my own perception of "the strange." I examined the contour of the lofty and pale forehead—it was faultless—how cold indeed that word when applied to a majesty so divine!—the skin rivalling the purest ivory, the commanding extent and repose, the gentle prominence of the regions above the temples; and then the raven-black, the glossy, the luxuriant and naturally-curling tresses, setting forth the full force of the Homeric epithet, "hyacinthe"! I looked at the delicate outlines of the nose—and nowhere but in the graceful medallions of the Hebrews had I beheld a similar perfection. There were the same luxurious smoothness of sur-

---

Text: the revised version printed in the Broadway Journal, September 27, 1845 • Joseph Glanvill, English philosopher (1636-1680), associated with the Cambridge Platonists. The quotation has not been located • 31 Ashtophet, probably Ashtoreth, a Canaanitish deity who, after adoption in Egypt, had the significance Poe suggests • 47 daughters of Delos, an obscure reference, perhaps to Greek maidens who made offerings in the temple on the island of Delos • 50 Bacon, a slight misquotation, since Bacon's word is not "exquisite" but "excellent" • 62 gentle . . . temples, in Poe's day, according to phrenological lore, signified "love of life" • 67 medallions . . . Hebrews, the Roman bas-reliefs of the Jews

face, the same scarcely perceptible tendency to the aquiline, the same harmoniously curved nostrils speaking the free spirit. I regarded the sweet mouth. Here was indeed the triumph of all things heavenly—the magnificent turn of the short upper lip—the soft, voluptuous slumber of the under—the dimples which sported, and the color which spoke—the teeth glancing back, with a brilliancy almost startling, every ray of the holy light which fell upon them in her serene and placid, yet most exultingly radiant of all smiles. I scrutinized the formation of the chin—and here, too, I found the gentleness of breadth, the softness and the majesty, the fullness and the spirituality, of the Greek—the contour which the God Apollo revealed but in a dream, to Cleomenes, the son of the Athenian. And then I peered into the large eyes of Ligeia.

For eyes we have no models in the remotely antique. It might have been, too, that in these eyes of my beloved lay the secret to which Lord Verulam alludes. They were, I must believe, far larger than the ordinary eyes of our own race. They were even fuller than the fullest of the gazelle eyes of the tribe of the valley of Nourjahad. Yet it was only at intervals—in moments of intense excitement—that this peculiarity became more than slightly noticeable in Ligeia. And at such moments was her beauty—in my heated fancy thus it appeared perhaps—the beauty of being either above or apart from the earth—the beauty of the Fabulous Houri of the Turk. The hue of the orbs was the most brilliant of black, and, far over them, hung jetty lashes of great length. The brows, slightly irregular in outline, had the same tint. The "strangeness," however, which I found in the eyes, was of a nature distinct from the formation, or the color, or the brilliancy of the features, and must, after all, be referred to the *expression.* Ah, word of no meaning! behind whose vast latitude of mere sound we intrench our ignorance of so much of the spiritual. The expression of the eyes of Ligeia! How for long hours have I pondered upon it! How have I, through the whole of a midsummer night, struggled to fathom it! What was it—that something more profound than the well of Democritus—which lay far within the pupils of my beloved? What *was* it? I was possessed with a passion to discover. Those eyes! those large, those shining, those divine orbs! they became to me twin stars of Leda, and I to them devoutest of astrologers.

There is no point, among the many incomprehensible anomalies of the science of mind, more thrillingly exciting than the fact—never, I believe, noticed in the schools—that, in our endeavors to recall to memory something long forgotten, we often find ourselves *upon the very verge* of remembrance, without being able, in the end, to remember. And thus how frequently, in my intense scrutiny of Ligeia's eyes, have I felt approaching the full knowledge of their expression—felt it approaching—yet not quite be mine—and so at length entirely depart! And (strange, oh strangest mystery of all!) I found, in the commonest objects of the universe, a circle of analogies to that expression. I mean to say that, subsequently to the period when Ligeia's beauty passed into my spirit, there dwelling as in a shrine, I derived, from many existences in the material world, a sentiment such as I felt always aroused within me by her large and luminous orbs. Yet not the more could I define that sentiment, or analyze, or even steadily view it. I recognized it, let me repeat, sometimes in the survey of a rapidly-growing vine—in the contemplation of a moth, a butterfly, a chrysalis, a stream of running water. I have felt it in the ocean; in the falling of a meteor. I have felt it in the glances of unusually aged people. And there are one or two stars in heaven—(one especially, a star of the sixth magnitude, double and changeable, to be found near the large star in Lyra) in a telescopic scrutiny of which I have been made aware of the feeling. I have been filled with it by certain sounds from stringed instruments, and not unfrequently by passages from books. Among innumerable other instances, I well remember something in a volume of Joseph Glanvill, which (perhaps merely from its quaintness—who shall say?) never failed to inspire me with the sentiment;—"And the will therein lieth, which dieth not. Who knoweth the mysteries of the will, with its vigor? For God is but a great will pervading all things by nature of its intentness. Man doth not yield him to the angels, nor unto death utterly, save only through the weakness of his feeble will."

---

14 **Cleomenes,** an Athenian sculptor whose most famous work is the Venus de' Medici. There is no legend of a revelation by Apollo to Cleomenes • 21 **Nourjahad** refers to an Oriental novel, **The History of Nourjahad** (1767) by Mrs. Frances Sheridan • 27 **Fabulous Houri,** the beautiful women who inhabit the Mohammedan heaven • 40 **Democritus,** a Greek philosopher who said that truth lies in a deep well • 72 **Lyra,** a constellation containing a binary star known as Epsilon Lyra

Length of years, and subsequent reflection, have enabled me to trace, indeed, some remote connection between this passage in the English moralist and a portion of the character of Ligeia. An *intensity* in thought, action, or speech, was possibly, in her, a result, or at least an index of that gigantic volition which, during our long intercourse, failed to give other and more immediate evidence of its existence. Of all the women whom I have ever known, she, the outwardly calm, the ever-placid Ligeia, was the most violently a prey to the tumultuous vultures of stern passion. And of such passion I could form no estimate, save by the miraculous expansion of those eyes which at once so delighted and appalled me—by the almost magical melody, modulation, distinctness, and placidity of her very low voice—and by the fierce energy (rendered doubly effective by contrast with her manner of utterance) of the wild words which she habitually uttered.

I have spoken of the learning of Ligeia: it was immense—such as I have never known in woman. In the classical tongues was she deeply proficient, and as far as my own acquaintance extended in regard to the modern dialects of Europe, I have never known her at fault. Indeed upon any theme of the most admired, because simply the most abstruse of the boasted erudition of the academy, have I *ever* found Ligeia at fault? How singularly—how thrillingly, this one point in the nature of my wife forced itself, at this late period only, upon my attention! I said her knowledge was such as I have never known in woman—but where breathes the man who has traversed, and successfully, *all* the wide areas of moral, physical, and mathematical science? I saw not then what I now clearly perceive, that the acquisitions of Ligeia were gigantic, were astounding; yet I was sufficiently aware of her infinite supremacy to resign myself, with a child-like confidence, to her guidance through the chaotic world of metaphysical investigation at which I was most busily occupied during the earlier years of our marriage. With how vast a triumph—with how vivid a delight—with how much of all that is ethereal in hope—did I *feel*, as she bent over me in studies but little sought—but less known—that delicious vista by slow degrees expanding before me, down whose long, gorgeous, and all untrodden path, I might at length pass onward to the goal of a wisdom too divinely precious not to be forbidden!

How poignant, then, must have been the grief with which, after some years, I beheld my well-grounded expectations take wings to themselves and fly away! Without Ligeia I was but as a child groping benighted. Her presence, her readings alone, rendered vividly luminous the many mysteries of the transcendentalism in which we were immersed. Wanting the radiant lustre of her eyes, letters, lambent and golden, grew duller than Saturnian lead. And now those eyes shone less and less frequently upon the pages over which I pored. Ligeia grew ill. The wild eyes blazed with a too-too glorious effulgence; the pale fingers became of the transparent waxen hue of the grave, and the blue veins upon the lofty forehead swelled and sank impetuously with the tides of the most gentle emotion. I saw that she must die—and I struggled desperately in spirit with the grim Azrael. And the struggles of the passionate wife were, to my astonishment, even more energetic than my own. There had been much in her stern nature to impress me with the belief that, to her, death would have come without its terrors;—but not so. Words are impotent to convey any just idea of the fierceness of resistance with which she wrestled with the Shadow. I groaned in anguish at the pitiable spectacle. I would have soothed—I would have reasoned; but, in the intensity of her wild desire for life,—for life—*but* for life—solace and reason were alike the utmost of folly. Yet not until the last instance, amid the most convulsive writhings of her fierce spirit, was shaken the external placidity of her demeanor. Her voice grew more gentle—grew more low—yet I would not wish to dwell upon the wild meaning of the quietly uttered words. My brain reeled as I hearkened entranced, to a melody more than mortal—to assumptions and aspirations which mortality had never before known.

That she loved me I should not have doubted; and I might have been easily aware that, in a bosom such as hers, love would have reigned no ordinary passion. But in death only, was I fully impressed with the strength of her affection. For long hours, detaining my hand, would she pour out before me the overflowing of a heart whose more than passionate devotion amounted to idolatry. How had I deserved to be so blessed by such confessions?

---

51 transcendentalism refers less to the specific beliefs of the Concord school than to the vague, the strange, in philosophy • 53 Saturnian, pertaining to Saturn, Roman god renowned in fable as a king during a golden age • 61 Azrael, the angel of death, who separates the soul from the body

—how had I deserved to be so cursed with the removal of my beloved in the hour of her making them? But upon this subject I cannot bear to dilate. Let me say only, that in Ligeia's more than womanly abandonment to a love, alas! all unmerited, all unworthily bestowed, I at length recognized the principle of her longing with so wildly earnest a desire for the life which was now fleeing so rapidly away. It is this wild longing—it is this eager vehemence of desire for life—*but* for life—that I have no power to portray—no utterance capable of expressing.

At high noon of the night in which she departed, beckoning me, peremptorily, to her side, she bade me repeat certain verses composed by herself not many days before. I obeyed her.—They were these:

Lo! 'tis a gala night
  Within the lonesome latter years!
An angel throng, bewinged, bedight
  In veils, and drowned in tears,
Sit in a theatre, to see
  A play of hopes and fears,
While the orchestra breathes fitfully
  The music of the spheres.

Mimes, in the form of God on high,
  Mutter and mumble low,
And hither and thither fly—
  Mere puppets they, who come and go
At bidding of vast formless things
  That shift the scenery to and fro,
Flapping from out their Condor wings
  Invisible Woe!

That motley drama!—oh, be sure
  It shall not be forgot!
With its Phantom chased forevermore,
  By a crowd that seized it not,
Through a circle that ever returneth in
  To the self-same spot,
And much of madness and more of Sin
  And Horror the soul of the plot.

But see, amid the mimic rout,
  A crawling shape intrude!
A blood-red thing that writhes from out
  The scenic solitude!
It writhes!—it writhes!—with mortal pangs
  The mimes become its food,
And the seraphs sob at vermin fangs
  In human gore imbued.

Out—out are the lights—out all!
  And over each quivering form,
The curtain, a funeral pall,
  Comes down with the rush of a storm,
And the angels, all pallid and wan,
  Uprising, unveiling, affirm
That the play is the tragedy, "Man,"
  And its hero the Conqueror Worm.

"O God!" half shrieked Ligeia, leaping to her feet and extending her arms aloft with a spasmodic movement, as I made an end of these lines—"O God! O Divine Father!—shall these things be undeviatingly so?—shall this Conqueror be not once conquered? Are we not part and parcel of Thee? Who—who knoweth the mysteries of the will with its vigor? Man doth not yield him to the angels, *nor unto death utterly* save only through the weakness of his feeble will."

And now, as if exhausted with emotion, she suffered her white arms to fall, and returned solemnly to her bed of death. And as she breathed her last sighs, there came mingled with them a low murmur from her lips. I bent to them my ear and distinguished, again, the concluding words of the passage in Glanvill—*"Man doth not yield him to the angels, nor unto death utterly, save only through the weakness of his feeble will."*

She died;—and I, crushed into the very dust with sorrow, could no longer endure the lonely desolation of my dwelling in the dim and decaying city by the Rhine. I

---

11 **At high noon** marks the beginning of a passage, including the poem and the two paragraphs following the poem, which replaced the paragraph telling of Ligeia's death in the first version of the story. This version read: "Methinks I again behold the terrific struggles of her lofty, her nearly idealized nature, with the might and terror, and the majesty, of the great Shadow. But she perished. The giant will succumbed to a power more stern. And I thought, as I gazed upon the corpse, of the wild passage in Joseph Glanville. 'The will therein lieth, which dieth not. Who knoweth the mysteries of the will, with its vigor? For God is but a great will pervading all things by the nature of its intentness. Man doth not yield him to the angels, nor unto death utterly, save only through the weakness of his feeble will' "

had no lack of what the world calls wealth. Ligeia had brought me far more, very far more than ordinarily falls to the lot of mortals. After a few months, therefore, of weary and aimless wandering, I purchased, and put in some repair, an abbey, which I shall not name, in one of the wildest and least frequented portions of fair England. The gloomy and dreary grandeur of the building, the almost savage aspect of the domain, the many melancholy and time-honored memories connected with both, had much in unison with the feelings of utter abandonment which had driven me into that remote and unsocial region of the country. Yet although the external abbey, with its verdant decay hanging about it, suffered but little alteration, I gave way, with a childlike perversity, and perchance with a faint hope of alleviating my sorrows, to a display of more than regal magnificence within.—For such follies, even in childhood, I had imbibed a taste and now they came back to me as if in the dotage of grief. Alas, I feel how much even of incipient madness might have been discovered in the gorgeous and fantastic draperies, in the solemn carvings of Egypt, in the wild cornices and furniture, in the Bedlam patterns of the carpets of tufted gold! I had become a bounden slave in the trammels of opium, and my labors and my orders had taken a coloring from my dreams. But these absurdities I must not pause to detail. Let me speak only of that one chamber, ever accursed, whither in a moment of mental alienation, I led from the altar as my bride—as the successor of the unforgotten Ligeia—the fair-haired and blue-eyed Lady Rowena Trevanion, of Tremaine.

There is no individual portion of the architecture and decoration of that bridal chamber which is not now visibly before me. Where were the souls of the haughty family of the bride, when, through thirst of gold, they permitted to pass the threshold of an apartment *so* bedecked, a maiden and a daughter so beloved? I have said that I minutely remember the details of the chamber—yet I am sadly forgetful on topics of deep moment—and here there was no system, no keeping, in the fantastic display, to take hold upon the memory. The room lay in a high turret of the castellated abbey, was pentagonal in shape, and of capacious size. Occupying the whole southern face of the pentagon was the sole window—an immense sheet of unbroken glass from Venice—a single pane, and tinted of a leaden hue, so that the rays of either the sun or moon, passing through it, fell with a ghastly lustre on the objects within. Over the upper portion of this huge window, extended the trellis-work of an aged vine, which clambered up the massy walls of the turret. The ceiling, of gloomy-looking oak, was excessively lofty, vaulted, and elaborately fretted with the wildest and most grotesque specimens of a semi-Gothic, semi-Druidical device. From out the most central recess of this melancholy vaulting, depended, by a single chain of gold with long links, a huge censer of the same metal, Saracenic in pattern, and with many perforations so contrived that there writhed in and out of them, as if endued with a serpent vitality, a continual succession of parti-colored fires.

Some few ottomans and golden candelabra, of Eastern figure, were in various stations about—and there was the couch, too—the bridal couch—of an Indian model, and low, and sculptured of solid ebony, with a pall-like canopy above. In each of the angles of the chamber stood on end a gigantic sarcophagus of black granite, from the tombs of the kings over against Luxor, with their aged lids full of immemorial sculpture. But in draping of the apartment lay, alas! the chief phantasy of all. The lofty walls, gigantic in height—even unproportionably so—were hung from summit to foot, in vast folds, with a heavy and massive-looking tapestry—tapestry of a material which was found alike as a carpet on the floor, as a covering for the ottomans and the ebony bed, as a canopy for the bed, and as the gorgeous volutes of the curtains which partially shaded the window. The material was the richest cloth of gold. It was spotted all over, at irregular intervals, with arabesque figures, about a foot in diameter, and wrought upon the cloth in patterns of the most jetty black. But these figures partook of the true character of the arabesque only when regarded from a single point of view. By a contrivance now common, and indeed traceable to a very remote period of antiquity, they were made changeable in aspect. To one entering the room, they bore the appearance of simple monstrosities; but upon a farther advance, this appearance gradually departed; and step by step, as the visitor moved his station in the chamber, he saw himself surrounded by an endless succession of the ghastly forms which belong to the superstition of the Norman, or arise in the guilty

---

22 **Bedlam**, insane; derived from Bedlam, an asylum in London • 62 **pall-like**, added to the earlier version, which spoke simply of "a canopy" • 65 **Luxor**, a center of archeological research near Thebes

slumbers of the monk. The phantasmagoric effect was vastly heightened by the artificial introduction of a strong continual current of wind behind the draperies—giving a hideous and uneasy animation to the whole.

In halls such as these—in a bridal chamber such as this—I passed, with the lady of Tremaine, the unhallowed hours of the first month of our marriage—passed them with but little disquietude. That my wife dreaded the fierce moodiness of my temper—that she shunned me and loved me but little—I could not help perceiving; but it gave me rather pleasure than otherwise I loathed her with a hatred belonging more to demon than to man. My memory flew back (oh, with what intensity of regret!) to Ligeia, the beloved, the august, the beautiful, the entombed. I revelled in recollections of her purity, of her wisdom, of her lofty, her ethereal nature, of her passionate, her idolatrous love. Now, then, did my spirit fully and freely burn with more than all the fires of her own. In the excitement of my opium dreams (for I was habitually fettered in the shackles of the drug) I would call aloud upon her name, during the silence of the night, or among the sheltered recesses of the glens by day, as if, through the wild eagerness, the solemn passion, the consuming ardor of my longing for the departed, I could restore her to the pathway she had abandoned—ah, *could* it be forever?—upon the earth.

About the commencement of the second month of the marriage, the Lady Rowena was attacked with sudden illness, from which her recovery was slow. The fever which consumed her rendered her nights uneasy; and in her perturbed state of half-slumber, she spoke of sounds, and of motions in and about the chamber of the turret, which I concluded had no origin save in the distemper of her fancy, or perhaps in the phantasmagoric influences of the chamber itself. She became at length convalescent—finally well. Yet but a brief period elapsed, ere a second more violent disorder again threw her upon a bed of suffering; and from this attack her frame, at all times feeble, never altogether recovered. Her illnesses were, after this epoch, of alarming character, and of more alarming recurrence, defying alike the knowledge and the great exertions of her physicians. With the increase of the chronic disease which had thus, apparently, taken too sure hold upon her constitution to be eradicated by human means, I could not fail to observe a similar increase in the nervous irritation of her temperament, and in her excitability by trivial causes of fear. She spoke again, and now more frequently and pertinaciously, of the sounds—of the slight sounds—and of the unusual motions among the tapestries, to which she had formerly alluded.

One night, near the closing in of September, she pressed this distressing subject with more than usual emphasis upon my attention. She had just awakened from an unquiet slumber, and I had been watching, with feelings half of anxiety, half of vague terror, the workings of her emaciated countenance. I sat by the side of her ebony bed, upon one of the ottomans of India. She partly arose, and spoke, in an earnest low whisper, of sounds which she *then* heard, but which I could not hear—and of motions which she *then* saw, but which I could not perceive. The wind was rushing hurriedly behind the tapestries, and I wished to show her (what, let me confess it, I could not *all* believe) that those almost inarticulate breathings, and those very gentle variations of the figures upon the wall, were but the natural effects of that customary rushing of the wind. But a deadly pallor, overspreading her face, had proved to me that my exertions to reassure her would be fruitless. She appeared to be fainting, and no attendants were within call. I remembered where was deposited a decanter of light wine which had been ordered by her physicians, and hastened across the chamber to procure it. But, as I stepped beneath the light of the censer, two circumstances of a startling nature attracted my attention. I had felt that some palpable although invisible object had passed lightly by my person; and I saw that there lay upon the golden carpet, in the very middle of the rich lustre thrown from the censer, a shadow—a faint, indefinite shadow of angelic aspect—such as might be fancied for the shadow of a shade. But I was wild with the excitement of an immoderate dose of opium, and heeded these things but little, nor spoke of them to Rowena. Having found the wine, I recrossed the chamber and poured out a goblet-ful, which I held to the lips of the fainting lady. She had now partially recovered, however, and took the vessel herself, while I sank

---

14 the august, added in the later version • 47 fear, followed in the earlier version with the sentence, "Indeed reason seemed fast tottering from her throne." By cutting out the sentence, the author casts less doubt upon the perceptions of Lady Rowena, thus more effectively preparing for the reincarnation of Ligeia

upon an ottoman near me, with my eyes fastened upon her person. It was then that I became distinctly aware of a gentle foot-fall upon the carpet, and near the couch; and in a second thereafter, as Rowena was in the act of raising the wine to her lips, I saw, or may have dreamed that I saw, fall within the goblet, as if from some invisible spring in the atmosphere of the room, three or four large drops of a brilliant and ruby colored fluid. If this I saw—not so Rowena. She swallowed the wine unhesitatingly, and I forbore to speak to her of a circumstance which must, after all, I considered, have been but the suggestion of a vivid imagination, rendered morbidly active by the terror of the lady, by the opium, and by the hour.

Yet I cannot conceal it from my own perception that, immediately subsequent to the fall of the ruby-drops, a rapid change for the worse took place in the disorder of my wife; so that, on the third subsequent night, the hands of her menials prepared her for the tomb, and on the fourth, I sat alone, with her shrouded body, in that fantastic chamber which had received her as my bride. Wild visions, opium-engendered, flitted, shadow-like, before me. I gazed with unquiet eye upon the sarcophagi in the angles of the room, upon the varying figures of the drapery, and upon the writhing of the parti-colored fires in the censer overhead. My eyes then fell, as I called to mind the circumstances of a former night, to the spot beneath the glare of the censer where I had seen the faint traces of the shadow. It was there, however, no longer; and breathing with greater freedom, I turned my glances to the pallid and rigid figure upon the bed. Then rushed upon me a thousand memories of Ligeia—and then came back upon my heart, with the turbulent violence of a flood, the whole of that unutterable woe with which I had regarded *her* thus enshrouded. The night waned; and still, with a bosom full of bitter thoughts of the one only and supremely beloved, I remained gazing upon the body of Rowena.

It might have been midnight, or perhaps earlier, or later, for I had taken no note of time, when a sob, low, gentle, but very distinct, startled me from my revery.—I *felt* that it came from the bed of ebony—the bed of death. I listened in an agony of superstitious terror—but there was no repetition of the sound. I strained my vision to detect any motion in the corpse—but there was not the slightest perceptible. Yet I could not have been deceived. I *had* heard the noise, however faint, and my soul was awakened within me. I resolutely and perseveringly kept my attention riveted upon the body. Many minutes elapsed before any circumstance occurred tending to throw light upon the mystery. At length it became evident that a slight, a very feeble, and barely noticeable tinge of color had flushed up within the cheeks, and along the sunken small veins of the eyelids. Through a species of unutterable horror and awe, for which the language of mortality has no sufficiently energetic expression, I felt my heart cease to beat, my limbs grow rigid where I sat. Yet a sense of duty finally operated to restore my self-possession. I could no longer doubt that we had been precipitate in our preparations—that Rowena still lived. It was necessary that some immediate exertion be made; yet the turret was altogether apart from the portion of the abbey tenanted by the servants—there were none within call—I had no means of summoning them to my aid without leaving the room for many minutes—and this I could not venture to do. I therefore struggled alone in my endeavors to call back the spirit still hovering. In a short period it was certain, however, that a relapse had taken place; the color disappeared from both eyelid and cheek, leaving a wanness even more than that of marble; the lips became doubly shrivelled and pinched up in the ghastly expression of death; a repulsive clamminess and coldness overspread rapidly the surface of the body; and all the usual rigorous stiffness immediately supervened. I fell back with a shudder upon the couch from which I had been so startlingly aroused, and again gave myself up to passionate waking visions of Ligeia.

An hour thus elapsed when (could it be possible?) I was a second time aware of some vague sound issuing from the region of the bed. I listened—in extremity of horror. The sound came again—it was a sigh. Rushing to the corpse, I saw—distinctly saw—a tremor upon the lips. In a minute afterward they relaxed, disclosing a bright line of the pearly teeth. Amazement now struggled in my bosom with the profound awe which had hitherto reigned there alone. I felt that my vision grew dim, that my reason wandered; and it was only by a violent effort that I at length succeeded in nerving myself to the task which duty thus once more had pointed out. There was now a partial glow upon the forehead and upon the cheek and throat; a perceptible warmth pervaded the

whole frame; there was even a slight pulsation at the heart. The lady *lived;* and with redoubled ardor I betook myself to the task of restoration. I chafed and bathed the temples and the hands, and used every exertion which experience, and no little medical reading, could suggest. But in vain. Suddenly, the color fled, the pulsation ceased, the lips resumed the expression of the dead, and in an instant afterward, the whole body took upon itself the icy chilliness, the livid hue, the intense rigidity, the sunken outline, and all the loathsome peculiarities of that which has been, for many days, a tenant of the tomb.

And again I sunk into visions of Ligeia—and again (what marvel that I shudder while I write?), *again* there reached my ears a low sob from the region of the ebony bed. But why shall I minutely detail the unspeakable horrors of that night? Why shall I pause to relate how, time after time, until near the period of the gray dawn, this hideous drama of revivification was repeated; how each terrific relapse was only into a sterner and apparently more irredeemable death; how each agony wore the aspect of a struggle with some invisible foe; and how each struggle was succeeded by I know not what wild change in the personal appearance of the corpse? Let me hurry to a conclusion.

The greater part of the fearful night had worn away, and she who had been dead, once again stirred—and now more vigorously than hitherto, although arousing from a dissolution more appalling in its utter hopelessness than any. I had long ceased to struggle or to move, and remained sitting rigidly upon the ottoman, a helpless prey to a whirl of violent emotions, of which extreme awe was perhaps the least terrible, the least consuming. The corpse, I repeat, stirred and now more vigorously than before. The hues of life flushed up with unwonted energy into the countenance—the limbs relaxed—and, save that the eyelids were yet pressed heavily together, and that the bandages and draperies of the grave still imparted their charnel character to the figure, I might have dreamed that Rowena had indeed shaken off, utterly, the fetters of Death. But if this idea was not, even then, altogether adopted, I could at least doubt no longer, when arising from the bed, tottering, with feeble steps, with closed eyes, and with the manner of one bewildered in a dream, the thing that was enshrouded advanced boldly and palpably into the middle of the apartment.

I trembled not—I stirred not—for a crowd of unutterable fancies connected with the air, the stature, the demeanor of the figure, rushing hurriedly through my brain, had paralyzed—had chilled me into stone. I stirred not—but gazed upon the apparition. There was a mad disorder in my thoughts—a tumult unappeasable. Could it, indeed, be the *living* Rowena who confronted me? Could it indeed be Rowena *at all*—the fair-haired, the blue-eyed Lady Rowena Trevanion of Tremaine? Why, *why* should I doubt it? The bandage lay heavily about the mouth—but then might it not be the mouth of the breathing Lady of Tremaine? And the cheeks—there were the roses as in her noon of life—yes, these might indeed be the fair cheeks of the living Lady of Tremaine. And the chin, with its dimples, as in health, might it not be hers?—but *had she then grown taller since her malady?* What inexpressible madness seized me with that thought? One bound, and I had reached her feet! Shrinking from my touch, she let fall from her head, unloosened, the ghastly cerements which had confined it, and there streamed forth, into the rushing atmosphere of the chamber, huge masses of long and dishevelled hair; *it was blacker than the raven wings of the midnight!* And now slowly opened *the eyes* of the figure which stood before me. "Here then, at least," I shrieked aloud, "can I never—can I never be mistaken—these are the full, and the black, and the wild eyes—of my lost love—of the lady—of the LADY LIGEIA!"

1838·1845

---

20 how each agony, and the remainder of this sentence, did not appear in the earlier version of the story • 26 she . . . dead, in the later version, replaced "the corpse of Rowena." By making this change and the one next recorded, Poe prepared for the reappearance of Ligeia by using ambiguous words to refer to the corpse • 44 the thing . . . enshrouded, in the later version, replaced "the Lady of Tremaine" of the earlier version • 47 the stature, added in the second version, perhaps to indicate more definitely that the change had taken place • 53 Could it indeed, and the remainder of this sentence, added in the revised version. This emphasizes the *contrast*, which now becomes important

The Masque of the Red Death

Once the exposition has been presented, this story so orders its happenings as to make them increasingly horrifying. The account of the ball falls into three climactically arranged parts, each terrifying in its own peculiar way. The "tone" is handled to give different emotional significance to each of these sections. The tone, by repeating symbols of death and of fleeting time, also adds to allegorical implications concerning the inevitable triumph of death over mankind.

The "Red Death" had long devastated the country. No pestilence had ever been so fatal, or so hideous. Blood was its avatar and its seal—the redness and the horror of blood. There were sharp pains, and sudden dizziness, and then profuse bleeding at the pores, with dissolution. The scarlet stains upon the body, and especially upon the face, of the victim were the pest ban which shut him out from the aid and from the sympathy of his fellow men. And the whole seizure, progress, and termination of the disease were the incidents of half an hour.

But the Prince Prospero was happy and dauntless and sagacious. When his dominions were half depopulated he summoned to his presence a thousand hale and lighthearted friends from among the knights and dames of his court, and with these retired to the deep seclusion of one of his castellated abbeys. This was an extensive and magnificent structure, the creation of the prince's own eccentric yet august taste. A strong and lofty wall girdled it in. This wall had gates of iron. The courtiers, having entered, brought furnaces and massy hammers, and welded the bolts. They resolved to leave means neither of ingress or egress to the sudden impulses of despair or of frenzy from within. The abbey was amply provisioned. With such precautions the courtiers might bid defiance to contagion. The external world could take care of itself. In the meantime it was folly to grieve, or to think. The prince had provided all the appliances of pleasure. There were buffoons, there were improvisatori, there were ballet-dancers, there were musicians, there was Beauty, there was wine. All these and security were within. Without was the Red Death.

It was toward the close of the fifth or sixth month of his seclusion, and while the pestilence raged most furiously abroad, that the Prince Prospero entertained his thousand friends at a masked ball of the most unusual magnificence.

It was a voluptuous scene, that masquerade. But first let me tell of the rooms in which it was held. There were seven—an imperial suite. In many palaces, however, such suites form a long and straight vista, while the sliding doors slide back nearly to the walls on either hand, so that the view of the whole extent is scarcely impeded. Here the case was very different, as might have been expected from the prince's love of the bizarre. The apartments were so irregularly disposed that the vision embraced but little more than one at a time. There was a sharp turn at every twenty or thirty yards, and at each turn a novel effect. To the right and left, in the middle of each wall, a tall and narrow Gothic window looked out upon a closed corridor which pursued the windings of the suite. These windows were of stained glass, whose color varied in accordance with the prevailing hue of the decorations of the chamber into which it opened. That at the eastern extremity was hung, for example, in blue—and vividly blue were its windows. The second chamber was purple in its ornaments and tapestries, and here the panes were purple. The third was green throughout, and so were the casements. The fourth was furnished and lighted with orange, the fifth with white, the sixth with violet. The seventh apartment was closely shrouded in black velvet tapestries that hung all over the ceiling and down the walls, falling in heavy folds upon a carpet of the same material and hue. But, in this chamber only, the color of the windows failed to correspond with the decorations. The panes here were scarlet—a deep blood-color. Now in no one of the seven apartments was there any lamp or candelabrum, amid the profusion of golden ornaments that lay scattered to and fro or depended from the roof. There was no light of any kind emanating from lamp or candle within the suite of chambers. But in the corridors that followed the suite there stood, opposite to each window, a heavy tripod, bearing a brazier of fire,

---

Text: the Broadway Journal, July 19, 1845 • 28 improvisatori, composers and singers of extemporary songs • 45 irregularly disposed. The arrangement of the rooms is of a sort to distress anyone with a tendency toward claustrophobia

that projected its rays through the tinted glass and so glaringly illumined the room. And thus were produced a multitude of gaudy and fantastic appearances. But in the western or black chamber the effect of the firelight that streamed upon the dark hanging through the blood-tinted panes was ghastly in the extreme, and produced so wild a look upon the countenances of those who entered that there were few of the company bold enough to set foot within its precincts at all.

It was in this apartment, also, that there stood against the western wall a gigantic clock of ebony. Its pendulum swung to and fro with a dull, heavy, monotonous clang; and when the minute hand made the circuit of the face, and the hour was to be stricken, there came from the brazen lungs of the clock a sound which was clear and loud and deep and exceedingly musical, but of so peculiar a note and emphasis that, at each lapse of an hour, the musicians of the orchestra were constrained to pause, momentarily, in their performance, to hearken to the sound; and thus the waltzers perforce ceased their evolutions; and there was a brief disconcert of the whole gay company; and, while the chimes of the clock yet rang, it was observed that the giddiest grew pale, and the more aged and sedate passed their hands over their brows as if in confused revery or meditation. But when the echoes had fully ceased, a light laughter at once pervaded the assembly; the musicians looked at each other and smiled as if at their own nervousness and folly, and made whispering vows, each to the other, that the next chiming of the clock should produce in them no similar emotion and then, after the lapse of sixty minutes (which embrace three thousand and six hundred seconds of the Time that flies) there came yet another chiming of the clock, and then were the same disconcert and tremulousness and meditation as before.

But, in spite of these things, it was a gay and magnificent revel. The tastes of the prince were peculiar. He had a fine eye for colors and effects. He disregarded the *decora* of mere fashion. His plans were bold and fiery, and his conceptions glowed with barbaric luster. There are some who would have thought him mad. His followers felt that he was not. It was necessary to hear and see and touch him to be *sure* that he was not.

He had directed, in great part, the movable embellishments of the seven chambers, upon occasion of this great fete; and it was his own guiding taste which had given character to the masqueraders. Be sure they were grotesque. There were much glare and glitter and piquancy and phantasm—much of what has been since seen in *Hernani.* There were arabesque figures with unsuited limbs and appointments. There were delirious fancies such as the madman fashions. There was much of the beautiful, much of the wanton, much of the bizarre, something of the terrible, and not a little of that which might have excited disgust. To and fro in the seven chambers there stalked, in fact, a multitude of dreams. And these—the dreams—writhed in and about, taking hue from the rooms, and causing the wild music of the orchestra to seem as the echo of their steps. And, anon, there strikes the ebony clock which stands in the hall of the velvet. And then, for a moment, all is still, and all is silent save the voice of the clock. The dreams are stiff frozen as they stand. But the echoes of the chime die away—they have endured but an instant—and a light, half-subdued laughter floats after them as they depart. And now again the music swells, and the dreams live, and writhe to and fro more merrily than ever, taking hue from the many-tinted windows through which stream the rays from the tripods. But to the chamber which lies most westwardly of the seven, there are now none of the maskers who venture; for the night is waning away, and there flows a ruddier light through the blood-colored panes; and the blackness of the sable drapery appals; and to him whose foot falls upon the sable carpet, there comes from the near clock of ebony a muffled peal more solemnly emphatic than any which reaches their ears who indulge in the more remote gaieties of the other apartments.

But these other apartments were densely crowded, and in them beat feverishly the heart of life. And the revel went whirlingly on, until at length there commenced the sounding of midnight upon the clock. And then the music ceased, as I have told; and the evolutions of the waltzers were quieted; and there was an uneasy cessation of all things as before. But now there were twelve strokes to be sounded by the bell of the clock; and thus it happened, perhaps, that before the last echoes of the last chime had utterly sunk into silence, there were many individuals in the crowd who had found leisure to become aware of the presence of a masked figure which

---

50 Hernani (1830), a lavishly costumed, romantic play by Victor Hugo • 84 the waltzers. It is important to know that, since in 1842 many considered the waltz an immoral dance, mention of waltzers adds to the depiction of revelry

had arrested the attention of no single individual before. And the rumor of this new presence having spread itself whisperingly around, there arose at length from the whole company a buzz, or murmur, expressive of disapprobation and surprise—then, finally, of terror, of horror, and of disgust.

In an assembly of phantasms such as I have painted, it may well be supposed that no ordinary appearance could have excited such sensation. In truth the masquerade license of the night was nearly unlimited; but the figure in question had outHeroded Herod, and gone beyond the bound of even the prince's indefinite decorum. There are chords in the hearts of the most reckless which cannot be touched without emotion. Even with the utterly lost, to whom life and death are equally jests, there are matters of which no jest can be made. The whole company, indeed, seemed now deeply to feel that in the costume and bearing of the stranger neither wit nor propriety existed. The figure was tall and gaunt, and shrouded from head to foot in the habiliments of the grave. The mask which concealed the visage was made so nearly to resemble the countenance of a stiffened corpse that the closest scrutiny must have had difficulty in detecting the cheat And yet all this might have been endured, if not approved, by the mad revelers around. But the mummer had gone so far as to assume the type of the Red Death His vesture was dabbed in *blood*—and his broad brow, with all the features of the face, was besprinkled with the scarlet horror.

When the eyes of Prince Prospero fell upon this spectral image (which with a slow and solemn movement, as if more fully to sustain its role, stalked to and fro among the waltzers) he was seen to be convulsed, in the first moment, with a strong shudder either of terror or distaste; but, in the next, his brow reddened with rage.

"Who dares?" he demanded hoarsely of the courtiers who stood near him—"who dares insult us with this blasphemous mockery? Seize him and unmask him—that we may know whom we have to hang at sunrise, from the battlements!"

It was in the eastern or blue chamber in which stood the Prince Prospero as he uttered these words. They rang throughout the seven rooms loudly and clearly—for the prince was a bold and robust man, and the music had become hushed at the waving of his hand.

It was in the blue room where stood the prince, with a group of pale courtiers by his side. At first, as he spoke, there was a slight rushing movement of this group in the direction of the intruder, who at the moment was also near at hand, and now, with deliberate and stately step, made closer approach to the speaker. But from a certain nameless awe with which the mad assumptions of the mummer had inspired the whole party, there were found none who put forth hand to seize him; so that, unimpeded, he passed within a yard of the prince's person; and while the vast assembly as if with one impulse, shrank from the centers of the rooms to the walls, he made his way uninterruptedly, but with the same solemn and measured step which had distinguished him from the first, through the blue chamber to the purple—through the purple to the green—through the green to the orange—through this again to the white—and even thence to the violet, ere a decided movement had been made to arrest him. It was then, however, that the Prince Prospero, maddening with rage and the shame of his own momentary cowardice, rushed hurriedly through the six chambers, while none followed him on account of a deadly terror that had seized upon all. He bore aloft a drawn dagger, and had approached, in rapid impetuosity, to within three or four feet of the retreating figure, when the latter, having attained the extremity of the velvet apartment, turned suddenly and confronted his pursuer There was a sharp cry—and the dagger dropped gleaming upon the sable carpet, upon which, instantly afterwards, fell prostrate in death the Prince Prospero. Then, summoning the wild courage of despair, a throng of the revelers at once threw themselves into the black apartment, and, seizing the mummer, whose tall figure stood erect and motionless within the shadow of the ebony clock, gasped in unutterable horror at finding the grave cerements and corpselike mask, which they handled with so violent a rudeness, untenanted by any tangible form.

And now was acknowledged the presence of the Red Death. He had come like a thief in the night And one by one dropped the revelers in the blood-bedewed halls of their revel, and died each in the despairing posture of his fall. And the life of the ebony clock went out with that of the last of the gay. And the flames of the tripods expired And Darkness and Decay and the Red Death held illimitable dominion over all. 1842

11 **had outHeroded Herod,** a quotation from Hamlet's speech to the players, meaning, in this context, "had gone beyond the extremes of this orgy"

The Cask of Amontillado

The thousand injuries of Fortunato I had borne as I best could; but when he ventured upon insult, I vowed revenge. You, who so well know the nature of my soul, will not suppose, however, that I gave utterance to a threat. *At length* I would be avenged; this was a point definitively settled—but the very definitiveness with which it was resolved precluded the idea of risk. I must not only punish, but punish with impunity. A wrong is unredressed when retribution overtakes its redresser. It is equally unredressed when the avenger fails to make himself felt as such to him who has done the wrong.

It must be understood that neither by word nor deed had I given Fortunato cause to doubt my good will. I continued, as was my wont, to smile in his face, and he did not perceive that my smile *now* was at the thought of his immolation.

He had a weak point—this Fortunato—although in other regards he was a man to be respected and even feared. He prided himself on his connoisseurship in wine. Few Italians have the true virtuoso spirit. For the most part their enthusiasm is adopted to suit the time and opportunity—to practice imposture upon the British and Austrian millionaires. In painting and gemmary, Fortunato, like his countrymen, was a quack—but in the matter of old wines he was sincere. In this respect I did not differ from him materially: I was skillful in the Italian vintages myself, and bought largely whenever I could.

It was about dusk, one evening during the supreme madness of the carnival season, that I encountered my friend. He accosted me with excessive warmth, for he had been drinking much. The man wore motley. He had on a tight-fitting parti-striped dress, and his head was surrounded by the conical cap and bells. I was so pleased to see him that I thought I should never have done wringing his hand.

I said to him, "My dear Fortunato, you are luckily met. How remarkably well you are looking today! But I have received a pipe of what passes for Amontillado, and I have my doubts."

"How?" said he. "Amontillado? A pipe? Impossible! And in the middle of the carnival!"

"I have my doubts," I replied; "and I was silly enough to pay the full Amontillado price without consulting you in the matter. You were not to be found, and I was fearful of losing a bargain."

"Amontillado!"

"I have my doubts."

"Amontillado!"

"And I must satisfy them."

"Amontillado!"

"As you are engaged, I am on my way to Luchresi. If any one has a critical turn, it is he. He will tell me—"

"Luchresi cannot tell Amontillado from Sherry."

"And yet some fools will have it that his taste is a match for your own."

"Come, let us go."

"Whither?"

"To your vaults."

"My friend, no; I will not impose upon your good nature. I perceive you have an engagement. Luchresi—"

"I have no engagement;—come."

"My friend, no. It is not the engagement, but the severe cold with which I perceive you are afflicted. The vaults are insufferably damp. They are incrusted with niter."

"Let us go, nevertheless. The cold is merely nothing. Amontillado! You have been imposed upon. And as for Luchresi, he cannot distinguish Sherry from Amontillado."

Thus speaking, Fortunato possessed himself of my arm. Putting on a mask of black silk, and drawing a *roquelaire* closely about my person, I suffered him to hurry me to my palazzo.

There were no attendants at home; they had absconded to make merry in honor of the time. I had told them that I should not return until the morning, and had given them explicit orders not to stir from the house. These orders were sufficient, I well knew, to insure their immediate disappearance, one and all, as soon as my back was turned.

I took from their sconces two flambeaus, and giving one to Fortunato, bowed him through several suites of rooms to the archway that led into the vaults. I passed

---

24 gemmary, knowledge of precious gems • 39 pipe, large barrel • 39 Amontillado, a Spanish sherry • 73 roquelaire, a knee-length cloak

down a long and winding staircase, requesting him to be cautious as he followed. We came at length to the foot of the descent, and stood together on the damp ground of the catacombs of the Montresors.

The gait of my friend was unsteady, and the bells upon his cap jingled as he strode.

"The pipe," said he.

"It is farther on," said I; "but observe the white webwork which gleams from these cavern walls."

He turned towards me, and looked into my eyes with two filmy orbs that distilled the rheum of intoxication.

"Niter?" he asked at length.

"Niter," I replied. "How long have you had that cough?"

"Ugh! ugh! ugh!—ugh! ugh! ugh!—ugh! ugh! ugh! —ugh! ugh! ugh!—ugh! ugh! ugh!—ugh! ugh! ugh!"

My poor friend found it impossible to reply for many minutes.

"It is nothing," he said, at last.

"Come," I said, with decision, "we will go back; your health is precious. You are rich, respected, admired, beloved; you are happy, as once I was. You are a man to be missed. For me it is no matter. We will go back; you will be ill, and I cannot be responsible. Besides, there is Luchresi—"

"Enough," he said; "the cough is a mere nothing; it will not kill me. I shall not die of a cough."

"True—true," I replied; "and, indeed, I had no intention of alarming you unnecessarily—but you should use all proper caution. A draught of this Medoc will defend us from the damps."

Here I knocked off the neck of a bottle which I drew from a long row of its fellows that lay upon the mold.

"Drink," I said, presenting him the wine.

He raised it to his lips with a leer. He paused and nodded to me familiarly, while his bells jingled.

"I drink," he said, "to the buried that repose around us."

"And I to your long life."

He again took my arm, and we proceeded.

"These vaults," he said, "are extensive."

"The Montresors," I replied, "were a great and numerous family."

"I forget your arms."

"A huge human foot d'or, in a field azure; the foot crushes a serpent rampant whose fangs are embedded in the heel."

"And the motto?"

"Nemo me impune lacessit."

"Good!" he said.

The wine sparkled in his eyes and the bells jingled. My own fancy grew warm with the Medoc. We had passed through long walls of piled skeletons, with casks and puncheons intermingling, into the inmost recesses of the catacombs. I paused again, and this time I made bold to seize Fortunato by an arm above the elbow.

"The niter!" I said; "see, it increases. It hangs like moss upon the vaults. We are below the river's bed. The drops of moisture trickle among the bones. Come, we will go back ere it is too late. Your cough—"

"It is nothing," he said; "let us go on. But first, another draught of the Medoc."

I broke and reached him a flagon of De Grâve. He emptied it at a breath. His eyes flashed with a fierce light. He laughed and threw the bottle upwards with a gesticulation I did not understand.

I looked at him in surprise. He repeated the movement—a grotesque one.

"You do not comprehend?" he said.

"Not I," I replied.

"Then you are not of the brotherhood."

"How?"

"You are not of the masons."

"Yes, yes," I said, "yes, yes."

"You? Impossible! A mason?"

"A mason," I replied.

"A sign," he said, "a sign."

"It is this," I answered, producing from beneath the folds of my *roquelaire,* a trowel.

"You jest," he exclaimed, recoiling a few paces. "But let us proceed to the Amontillado."

"Be it so," I said, replacing the tool beneath the cloak, and again offering him my arm. He leaned upon it heavily. We continued our route in search of the Amontillado. We passed through a range of low arches, descended, passed on, and, descending again, arrived at a deep crypt, in which the foulness of the air caused our flambeaus rather to glow than flame.

---

30 Medoc, wine from a particular region in France • 44 arms, coat of arms. The coat of arms described by the narrator—a golden foot on a blue field, crushing a serpent—is symbolic, from his point of view, of the action of his story • 49 Nemo . . . lacessit. No one attacks me with impunity—a reiteration of the vengeful attitude of the narrator • 64 De Grâve, more accurately, Grâves, a Bordeaux wine

At the most remote end of the crypt there appeared another less spacious. Its walls had been lined with human remains, piled to the vault overhead, in the fashion of the great catacombs of Paris. Three sides of this interior crypt were still ornamented in this manner. From the fourth the bones had been thrown down, and lay promiscuously upon the earth, forming at one point a mound of some size. Within the wall thus exposed by the displacing of the bones, we perceived a still interior recess, in depth about four feet, in width three, in height six or seven. It seemed to have been constructed for no especial use within itself, but formed merely the interval between two of the colossal supports of the roof of the catacombs, and was backed by one of their circumscribing walls of solid granite.

It was in vain that Fortunato, uplifting his dull torch, endeavored to pry into the depth of the recess. Its termination the feeble light did not enable us to see.

"Proceed," I said; "herein is the Amontillado. As for Luchresi—"

"He is an ignoramus," interrupted my friend, as he stepped unsteadily forward, while I followed immediately at his heels. In an instant he had reached the extremity of the niche, and finding his progress arrested by the rock stood stupidly bewildered. A moment more and I had fettered him to the granite. In its surface were two iron staples, distant from each other about two feet, horizontally. From one of these depended a short chain, from the other a padlock. Throwing the links about his waist, it was but the work of a few seconds to secure it. He was too much astounded to resist. Withdrawing the key, I stepped back from the recess.

"Pass your hand," I said, "over the wall; you cannot help feeling the niter. Indeed it is *very* damp. Once more let me *implore* you to return. No? Then I must positively leave you. But I must first render you all the little attentions in my power."

"The Amontillado!" ejaculated my friend, not yet recovered from his astonishment.

"True," I replied; "the Amontillado."

As I said these words I busied myself among the pile of bones of which I have before spoken. Throwing them aside, I soon uncovered a quantity of building stone and mortar. With these materials and with the aid of my trowel, I began vigorously to wall up the entrance of the niche.

I had scarcely laid the first tier of the masonry when I discovered that the intoxication of Fortunato had in a great measure worn off. The earliest indication I had of this was a low moaning cry from the depth of the recess. It was *not* the cry of a drunken man. There was then a long and obstinate silence. I laid the second tier, and the third, and the fourth; and then I heard the furious vibrations of the chain. The noise lasted for several minutes, during which, that I might hearken to it with the more satisfaction, I ceased my labors and sat down upon the bones. When at last the clanking subsided, I resumed the trowel, and finished without interruption the fifth, the sixth, and the seventh tier. The wall was now nearly upon a level with my breast. I again paused, and holding the flambeaus over the mason work, threw a few feeble rays upon the figure within.

A succession of loud and shrill screams, bursting suddenly from the throat of the chained form, seemed to thrust me violently back. For a brief moment I hesitated—I trembled. Unsheathing my rapier, I began to grope with it about the recess; but the thought of an instant reassured me. I placed my hand upon the solid fabric of the catacombs, and felt satisfied. I reapproached the wall. I replied to the yells of him who clamored. I re-echoed—I aided—I surpassed them in volume and in strength. I did this, and the clamorer grew still.

It was now midnight, and my task was drawing to a close. I had completed the eighth, the ninth, and the tenth tier. I had finished a portion of the last and the eleventh; there remained but a single stone to be fitted and plastered in. I struggled with its weight; I placed it partially in its destined position. But now there came from out the niche a low laugh that erected the hairs upon my head. It was succeeded by a sad voice, which I had difficulty in recognizing as that of the noble Fortunato. The voice said—

"Ha! ha! ha!—he! he! he!—a very good joke indeed—an excellent jest. We will have many a rich laugh about it at the palazzo—he! he! he!—over our wine—he! he! he!"

"The Amontillado!" I said.

"He! he! he!—he! he! he!—yes, the Amontillado. But is it not getting late? Will not they be awaiting us at the palazzo,—the Lady Fortunato and the rest? Let us be gone."

"Yes," I said, "let us be gone."

"For the love of God, Montresor!"

"Yes," I said, "for the love of God!"

But to these words I hearkened in vain for a reply. I grew impatient. I called aloud—

"Fortunato!"

No answer. I called again—

"Fortunato!"

No answer still. I thrust a torch through the remaining aperture and let it fall within. There came forth in return only a jingling of the bells. My heart grew sick—on account of the dampness of the catacombs. I hastened to make an end of my labor. I forced the last stone into its position; I plastered it up. Against the new masonry I re-erected the old rampart of bones. For the half of a century no mortal has disturbed them. *In pace requiescat.*

1846

15 **In pace requiescat.** In peace may he rest

Romance

First published in 1829, this poem, like many by Poe, underwent a great deal of revision. In 1831 it was extended to about three times its original length; then, in later versions (1843, 1845), it returned to approximately its first form Professor Killis Campbell says that the passages added in 1831 "are largely personal in nature—a fact which probably explains their omission in subsequent editions." Equally important, perhaps, is the fact that they were unduly repetitious. In a letter to John Neal, Poe characterized this poem as the "best thing," in every respect save "sound," in the 1829 volume. He was "certain," he said, that the five opening lines of the second stanza had "never been surpassed." The theme is much like that of Byron's "To Romance": in each poem the author renounces romance and swears allegiance to truth.

Romance, who loves to nod and sing,
With drowsy head and folded wing,
Among the green leaves as they shake
Far down within some shadowy lake,
To me a painted paroquet
Hath been—a most familiar bird—
Taught me my alphabet to say,
To lisp my very earliest word,
While in the wild wood I did lie,
A child—with a most knowing eye.

Of late, eternal Condor years
So shake the very Heaven on high
With tumult as they thunder by,
I have no time for idle cares
Through gazing on the unquiet sky.
And when an hour with calmer wings
Its down upon my spirit flings—
That little time with lyre and rhyme
To while away—forbidden things!
My heart would feel to be a crime
Unless it trembled with the strings.

1829

Sonnet—To Science

Probably composed in the spring or summer of 1829, "Sonnet—To Science" echoes ideas of John Keats and Samuel Taylor Coleridge. "Do not all charms fly," asked Keats, in "Lamia," "at the merest touch of cold philosophy?" The opening lines of "Lamia" show some interesting parallels to lines 9-14 of this poem. Similarly, in Chapter XIV of his **Biographia Literaria**, Coleridge had discoursed on science versus poetry.

Science! true daughter of Old Time thou art!
Who alterest all things with thy peering eyes,
Why preyest thou thus upon the poet's heart,
Vulture, whose wings are dull realities?
How should he love thee? or how deem thee wise,
Who wouldst not leave him in his wandering
To seek for treasure in the jewelled skies,
Albeit he soared with an undaunted wing?
Hast thou not dragged Diana from her car?
And driven the Hamadryad from the wood

To seek a shelter in some happier star?
Hast thou not torn the Naiad from her flood,
The Elfin from the green grass, and from me
The summer dream beneath the tamarind tree?

1829

To Helen

Although Poe tacitly sanctioned the claim that this poem was written when he was only fourteen, it seems more likely that it was produced between 1829 and the year when it was published, 1831. It is, nevertheless, a tribute to Poe's boyhood idol, Mrs. Jane Stith Stanard of Richmond, who died in 1824, and whom he called "the first pure ideal love of my soul." As the notes suggest, some lines were felicitously revised in the 1845 edition, here reproduced.

The unity of this poem derives from both its feeling and its metaphorical expression. The imagery not only makes its heroine a haven for a desperate wanderer in darkness; it also increasingly associates Helen's type of classical beauty with the immortal splendor of Greece and Rome. In the first stanza, Helen's beauty is like "barks of yore," which carried the wanderer to his homeland, and the words "Nicean," "perfumed," and "weary, wayworn wanderer" (Ulysses) vaguely connote classical associations. In stanza two the classical quality of Helen's beauty is more clearly suggested, and "home" becomes "the glory that was Greece and the grandeur that was Rome." These opening stanzas hark back to the past; the third stanza, in the present tense, likens Helen to a statue standing in a lighted window-niche, thus attributing to her not only physical beauty but also immortal beauty of soul.

Helen, thy beauty is to me
  Like those Nicean barks of yore,
That gently, o'er a perfumed sea,
  The weary, wayworn wanderer bore
  To his own native shore.

On desperate seas long wont to roam,
  Thy hyacinth hair, thy classic face,
Thy Naiad airs, have brought me home
  To the Glory that was Greece
And the grandeur that was Rome.

Lo! in yon brilliant window-niche
  How statue-like I see thee stand,
  The agate lamp within thy hand!
Ah, Psyche, from the regions which
  Are Holy Land!

1829?-1831

The City in the Sea

Lo! Death has reared himself a throne
In a strange city lying alone
Far down within the dim West,
Where the good and the bad and the worst
  and the best
Have gone to their eternal rest.
There shrines and palaces and towers
(Time-eaten towers that tremble not)
Resemble nothing that is ours.
Around, by lifting winds forgot,
Resignedly beneath the sky
The melancholy waters lie.

No rays from the holy heaven come down
On the long night-time of that town;
But light from out the lurid sea
Streams up the turrets silently,
Gleams up the pinnacles far and free:
Up domes, up spires, up kingly halls;
Up fanes, up Babylon-like walls,
Up shadowy long-forgotten bowers
Of sculptured ivy and stone flowers,

To Helen • 2 **Nicean**, a word about which there has been much scholarly argument. The suggestion of Mr. J. J. Jones that it is derived from the Latin poetry of Catullus seems likely • 7 **hyacinth** harks back to "Hyacinthine," a Homeric epithet for hair, probably meaning "golden" • 9 **To the Glory . . . Rome**, read, in the 1831 version, "To the beauty of fair Greece, and the grandeur of old Rome" • 11 **brilliant window-niche**, in the original version, was "that little window-niche." The change set off the heroine in light from the poet in darkness • 13 **agate lamp**, in the original, was "golden scroll." The lamp gives more of an impression of permanence and adds to the light associated with the figures of the woman

Up many and many a marvelous shrine
Whose wreathed friezes intertwine
The viol, the violet, and the vine.

Resignedly beneath the sky
The melancholy waters lie.
So blend the turrets and shadows there
That all seem pendulous in air,
While from a proud tower in the town
Death looks gigantically down.

There open fanes and gaping graves
Yawn level with the luminous waves;
But not the riches there that lie
In each idol's diamond eye,—
Not the gayly-jewelled dead,
Tempt the waters from their bed;
For no ripples curl, alas,
Along that wilderness of glass;
No swellings tell that winds may be
Upon some far-off happier sea;
No heavings hint that winds have been
On seas less hideously serene!

But lo, a stir is in the air!
The wave—there is a movement there!
As if the towers had thrust aside,
In slightly sinking, the dull tide;
As if their tops had feebly given
A void within the filmy Heaven!
The waves have now a redder glow,
The hours are breathing faint and low;
And when, amid no earthly moans,
Down, down that town shall settle hence,
Hell, rising from a thousand thrones,
Shall do it reverence.

1831

Israfel

Poe, in the motto, took a few liberties with the description of Israfel in Sale's "Preliminary Discourse" on the Koran, thereby making the phrases of the motto more appropriate. The words added, "whose heart-strings are a lute," were probably suggested by a passage in a poem by Béranger, also used as a motto for "The Fall of the House of Usher."

The song embodies some of Poe's theories about poetry—that a true poet writes from his heart, that his song is melodious and inspiring. The final stanzas voice despair concerning a poet's hampering environment.

And the angel Israfel, whose heart-strings are a lute, and who has the sweetest voice of all God's creatures.—KORAN

In Heaven a spirit doth dwell
  "Whose heart-strings are a lute;"
None sing so wildly well
As the angel Israfel,
And the giddy stars (so legends tell)
Ceasing their hymns, attend the spell
  Of his voice, all mute.

Tottering above
  In her highest noon,
  The enamoured moon
Blushes with love,
  While, to listen, the red levin
  (With the rapid Pleiads, even,
  Which were seven,)
  Pauses in Heaven.

And they say (the starry choir
  And the other listening things)
That Israfeli's fire
Is owing to that lyre
  By which he sits and sings—
The trembling living wire
Of those unusual strings.

But the skies that angel trod,
  Where deep thoughts are a duty—
Where Love's a grown-up God—
  Where the Houri glances are
Imbued with all the beauty
  Which we worship in a star.

Therefore, thou art not wrong,
  Israfeli, who despisest
An unimpassioned song;
To thee the laurels belong,
  Best bard, because the wisest!
Merrily live, and long!

Israfel • Text: the 1845 volume

The ecstasies above
  With thy burning measures suit—
Thy grief, thy joy, thy hate, thy love,
  With the fervour of thy lute—
  Well may the stars be mute!

Yes, Heaven is thine; but this
  Is a world of sweets and sours;
  Our flowers are merely—flowers,
And the shadow of thy perfect bliss
  Is the sunshine of ours.

If I could dwell
Where Israfel
  Hath dwelt, and he where I,
He might not sing so wildly well
  A mortal melody,
While a bolder note than this might swell
  From my lyre within the sky.

1831

The Coliseum

This poem, which was at one time a soliloquy of the hero of Poe's drama, Politian, was first published in The Visiter in 1833. It is interesting in two ways: as evidence of Byron's influence on Poe and as the earliest known example of Poe's use of blank verse. The first two stanzas announce the spell to be worked by the ancient ruin; the second two show the "silence, desolation, and dim night" with a series of appropriate images; and the final stanza evokes the light and the melody which give the scene immortal power.

Type of the antique Rome! Rich reliquary
Of lofty contemplation left to Time
By buried centuries of pomp and power!
At length—at length—after so many days
Of weary pilgrimage and burning thirst
(Thirst for the springs of lore that in thee lie),
I kneel, an altered and an humble man,
Amid thy shadows, and so drink within
My very soul thy grandeur, gloom, and glory!

Vastness! and Age! and Memories of Eld!
Silence! and Desolation! and dim Night!
I feel ye now—I feel ye in your strength—
O spells more sure than e'er Judaen king
Taught in the garden of Gethsemane!
O charms more potent than the rapt Chaldee
Ever drew down from out the quiet stars!

Here, where a hero fell, a column falls!
Here, where the mimic eagle glared in gold,
A midnight vigil holds the swarthy bat!
Here, where the dames of Rome their gilded hair
Waved to the wind, now wave the reed and thistle!
Here, where on golden throne the monarch lolled,
Glides, spectre-like, unto his marble home,
Lit by the wan light of the horned moon,
The swift and silent lizard of the stones!

But stay! these walls—these ivy-clad arcades—
These mouldering plinths—these sad and blackened shafts—
These vague entablatures—this crumbling frieze—
These shattered cornices—this wreck—this ruin—
These stones—alas! these gray stones—are they all—
All of the famed and the colossal left
By the corrosive Hours to Fate and me?

"Not all"—the Echoes answer me—"not all!
Prophetic sounds and loud, arise forever
From us, and from all Ruin, unto the wise,
As melody from the Memnon to the Sun.
We rule the hearts of mightiest men—we rule
With a despotic sway all giant minds.
We are not impotent—we pallid stones.
Not all our power is gone—not all our fame—
Not all the magic of our high renown—
Not all the wonder that encircles us—
Not all the mysteries that in us lie—
Not all the memories that hang upon
And cling around about us as a garment,
Clothing us in a robe of more than glory."

1833

---

1 **Type**, emblem • 13 **Judaen king**, Christ • 14 **Gethsemane**, the garden near Jerusalem which was the scene of the agony and arrest of Christ, as recorded in Matthew 26:36 • 15 **Chaldee** refers to the fame of the Chaldeans as astrologers and wizards • 18 **mimic eagle**, the standard of the Roman legions • 20 **gilded hair** refers to the gilt wigs worn by fashionable Roman ladies, and continues the association of departed gold with the vanished folk of the ancient world • 36 **Memnon**, an Egyptian statue which was reputed to give forth a harplike sound when touched by the rays of the rising sun

To One in Paradise

This song first appeared, without title, in a story published in January 1834. After numerous revisions, it appeared in 1845 with the present text and title. The most fortunate revision discarded this final stanza which had reduced a melodious and moving poem to the level of sentimentality:

Alas! for that accursed time
They bore thee o'er the billow,
From Love to titled age and crime,
And an unholy pillow—
From me, and from our misty clime,
Where weeps the silver willow!

Thou wast all that to me, love,
For which my soul did pine:
A green isle in the sea, love,
A fountain and a shrine,
All wreathed with fairy fruits and flowers,
And all the flowers were mine.

Ah, dream too bright to last!
Ah, starry Hope, that didst arise
But to be overcast!
A voice from out the Future cries,
"On! on!"—but o'er the Past
(Dim gulf!) my spirit hovering lies
Mute, motionless, aghast!

For, alas! alas! with me
The light of Life is o'er!
No more—no more—no more—
(Such language holds the solemn sea
To the sands upon the shore)
Shall bloom the thunder-blasted tree,
Or the stricken eagle soar!

And all my days are trances,
And all my nightly dreams
Are where thy gray eye glances,
And where thy footstep gleams—
In what ethereal dances,
By what eternal streams.

1833·1834

Sonnet—Silence

About the phrase "the corporate Silence" in line 10 of this irregular sonnet, Professor Campbell wrote this illuminating note: "That is, I take it, the physical death, the death which we can perceive with the senses. His shadow (l. 13), incorporate Silence, is, then, to be construed as the tyrant that rules in the nether world, in which the spirits of the unrighteous remain till the Day of Judgment."

There are some qualities—some incorporate things,
That have a double life, which thus is made
A type of that twin entity which springs
From matter and light, evinced in solid and shade.
There is a two-fold *Silence*—sea and shore—
Body and soul. One dwells in lonely places,
Newly with grass o'ergrown; some solemn graces,
Some human memories and tearful lore,
Render him terrorless: his name's "No More."
He is the corporate Silence: dread him not!
No power hath he of evil in himself;
But should some urgent fate (untimely lot!)
Bring thee to meet his shadow (nameless elf,
That haunteth the lone regions where hath trod
No foot of man), commend thyself to God!

1840

Dream-Land

In this poem, published in **Graham's Magazine**, June 1, 1844, Poe hit upon what critics called his later manner—the repetitive and rhythmic style of such lyrical works as "The Raven" and "Ulalume." The romantic depiction of a land "out of space, out of time" is representative of many

---

Sonnet—Silence • **Text:** the 1845 volume

of Poe's poetic descriptions. The identification of the land as the kingdom of death adds a touch highly characteristic of the author.

By a route obscure and lonely,
Haunted by ill angels only,
Where an Eidolon, named NIGHT,
On a black throne reigns upright,
I have reached these lands but newly
From an ultimate dim Thule—
From a wild weird clime that lieth, sublime,
Out of SPACE—out of TIME.

Bottomless vales and boundless floods,
And chasms, and caves, and Titan woods,
With forms that no man can discover
For the tears that drip all over;
Mountains toppling evermore
Into seas without a shore;
Seas that restlessly aspire,
Surging, unto skies of fire;
Lakes that endlessly outspread
Their lone waters, lone and dead,—
Their still waters, still and chilly
With the snows of the lolling lily.

By the lakes that thus outspread
Their lone waters, lone and dead,—
Their sad waters, sad and chilly
With the snows of the lolling lily,—
By the mountains—near the river
Murmuring lowly, murmuring ever,—
By the grey woods,—by the swamp
Where the toad and the newt encamp,—
By the dismal tarns and pools
Where dwell the Ghouls,—
By each spot the most unholy—
In each nook most melancholy,—
There the traveller meets, aghast,
Sheeted Memories of the Past—
Shrouded forms that start and sigh
As they pass the wanderer by—
White-robed forms of friends long given,
In agony, to the Earth—and Heaven.

For the heart whose woes are legion
'Tis a peaceful, soothing region—
For the spirit that walks in shadow
'Tis—oh, 'tis an Eldorado!
But the traveller, travelling through it,
May not—dare not openly view it;
Never its mysteries are exposed
To the weak human eye unclosed;
So wills its King, who hath forbid
The uplifting of the fringed lid;
And thus the sad Soul that here passes
Beholds it but through darkened glasses.

By a route obscure and lonely,
Haunted by ill angels only,
Where an Eidolon, named NIGHT,
On a black throne reigns upright,
I have wandered home but newly
From this ultimate dim Thule.

1844

---

3 Eidolon, phantom • 3 Night, here personified, as in many poems by Poe and others, as Death • 6 ultimate dim Thule, from Latin ultima Thule, the farthest land • 10 Titan, gigantic and ancient • 30 Ghouls, demons which rob graves and feed upon corpses • 42 Eldorado, a legendary place abounding in gold

The Raven

Poe's "The Philosophy of Composition" (1846) purports to tell how this poem was composed. Poe believed that the poet, like the tale writer, should subordinate everything in each work to a desired effect. He therefore—so he said—determined the length of this poem, the sound and the meaning of the refrain, the nature and the order of the happenings unfolded, the rhythm, and the suggestion of a meaning in the final lines, by considering the effect he wished to produce. Regardless of whether it is literally accurate or not (and many have doubted that it is), this account shows clearly that Poe did carefully consider every element in this poem, and it doubtless suggests how he considered it. He probably composed the poem between 1842 and 1844.

Once upon a midnight dreary, while I pondered, weak and weary,
Over many a quaint and curious volume of forgotten lore—
While I nodded, nearly napping, suddenly there came a tapping,
As of some one gently rapping, rapping at my chamber door.
"'Tis some visitor," I muttered, "tapping at my chamber door—
Only this and nothing more."

Ah, distinctly I remember it was in the bleak December;
And each separate dying ember wrought its ghost upon the floor.
Eagerly I wished the morrow;—vainly I had sought to borrow
From my books surcease of sorrow—sorrow for the lost Lenore—
For the rare and radiant maiden whom the angels named Lenore—
Nameless *here* for evermore.

And the silken, sad, uncertain rustling of each purple curtain
Thrilled me—filled me with fantastic terrors never felt before;
So that now, to still the beating of my heart, I stood repeating
"'Tis some visitor entreating entrance at my chamber door,
Some late visitor entreating entrance at my chamber door:
This it is and nothing more."

Presently my soul grew stronger; hesitating then no longer,
"Sir," said I, "or Madam, truly your forgiveness I implore:
But the fact is I was napping, and so gently you came rapping,
And so faintly you came tapping, tapping at my chamber door,
That I scarce was sure I heard you"—here I opened wide the door;—
Darkness there and nothing more.

Deep into that darkness peering, long I stood there wondering, fearing,
Doubting, dreaming dreams no mortals ever dared to dream before:
But the silence was unbroken, and the stillness gave no token,
And the only word there spoken was the whispered word, "Lenore?"
This I whispered, and an echo murmured back the word, "Lenore!"
Merely this and nothing more.

Back into the chamber turning, all my soul within me burning,
Soon again I heard a tapping somewhat louder than before.

Text: the 1845 version as corrected by the author in his personal copy

"Surely," said I, "surely that is something at my window lattice;
Let me see, then, what thereat is, and this mystery explore;
Let my heart be still a moment and this mystery explore:
'Tis the wind and nothing more!"

Open here I flung the shutter, when, with many a flirt and flutter,
In there stepped a stately Raven of the saintly days of yore;
Not the least obeisance made he; not a minute stopped or stayed he;
But with mien of lord or lady, perched above my chamber door,
Perched upon a bust of Pallas just above my chamber door:
Perched, and sat, and nothing more.

Then this ebon bird beguiling all my fancy into smiling
By the grave and stern decorum of the countenance it wore,
"Though thy crest be shorn and shaven, thou," I said, "art sure no craven,
Ghastly grim and ancient Raven wandering from the Nightly shore—
Tell me what thy lordly name is on the Night's Plutonian shore!"
Quoth the Raven "Nevermore."

Much I marveled this ungainly fowl to hear discourse so plainly,
Though its answer little meaning—little relevancy bore;
For we cannot help agreeing that no living human being
Ever yet was blessed with seeing bird above his chamber door,
Bird or beast upon the sculptured bust above his chamber door,
With such name as "Nevermore."

But the Raven, sitting lonely on the placid bust, spoke only
That one word, as if his soul in that one word he did outpour,
Nothing further then he uttered, not a feather then he fluttered,
Till I scarcely more than muttered,—"Other friends have flown before;
On the morrow *he* will leave me, as my Hopes have flown before."
Then the bird said "Nevermore."

Startled at the stillness broken by reply so aptly spoken,
"Doubtless," said I, "what it utters is its only stock and store,
Caught from some unhappy master whom unmerciful Disaster
Followed fast and followed faster till his songs one burden bore—
Till the dirges of his Hope that melancholy burden bore
Of 'Never—nevermore.'"

But the Raven still beguiling all my fancy into smiling,
Straight I wheeled a cushioned seat in front of bird and bust and door;
Then, upon the velvet sinking, I betook myself to linking
Fancy unto fancy, thinking what this ominous bird of yore,
What this grim, ungainly, ghastly, gaunt, and ominous bird of yore
Meant in croaking "Nevermore."

This I sat engaged in guessing, but no syllable expressing
To the fowl whose fiery eyes now burned into my bosom's core;
This and more I sat divining, with my head at ease reclining
On the cushion's velvet lining that the lamp-light gloated o'er,
But whose velvet violet lining with the lamp-light gloating o'er
She shall press, ah, nevermore!

Then, methought, the air grew denser, perfumed from an unseen censer
Swung by Seraphim whose foot-falls tinkled on the tufted floor.

---

41 **Pallas,** Pallas Athene, the goddess of wisdom • 43 **all my fancy,** substituted for the "all my sad soul" of an earlier version • 76 **gloated.** "Gloat" has as one of its unusual meanings, "to refract light" • 80 **Seraphim whose foot-falls,** a correction from "angels whose faint foot-falls" • 80 **tinkled,** defended by Poe as a word description of foot-falls, "because I saw that it had . . . been suggested to my mind by the sense of the supernatural with which it was, at the moment, filled"

"Wretch," I cried, "thy God hath lent thee—by these angels he hath sent thee
Respite—respite and nepenthe, from thy memories of Lenore,
Quaff, oh quaff this kind nepenthe and forget this lost Lenore!"
Quoth the Raven "Nevermore."

"Prophet!" said I, "thing of evil! prophet still, if bird or devil!
Whether Tempter sent, or whether tempest tossed thee here ashore,
Desolate yet all undaunted, on this desert land enchanted—
On this home by Horror haunted—tell me truly, I implore:
Is there—*is* there balm in Gilead?—tell me—tell me, I implore!"
Quoth the Raven "Nevermore."

"Prophet!" said I, "thing of evil—prophet still, if bird or devil!
By that Heaven that bends above us, by that God we both adore,
Tell this soul with sorrow laden if, within the distant Aidenn,
It shall clasp a sainted maiden whom the angels name Lenore—
Clasp a rare and radiant maiden whom the angels name Lenore!"
Quoth the Raven "Nevermore."

"Be that word our sign of parting, bird or fiend!" I shrieked, up-starting:
"Get thee back into the tempest and the Night's Plutonian shore!
Leave no black plume as a token of that lie thy soul hath spoken!
Leave my loneliness unbroken! quit the bust above my door!
Take thy beak from out my heart, and take thy form from off my door!"
Quoth the Raven "Nevermore."

And the Raven, never flitting, still is sitting, *still* is sitting
On the pallid bust of Pallas just above my chamber door;
And his eyes have all the seeming of a demon's that is dreaming,
And the lamplight o'er him streaming throws his shadow on the floor;
And my soul from out that shadow that lies floating on the floor
Shall be lifted—nevermore!

1845

Ulalume

For a time after the first publication of "Ulalume" (American Whig Review, December 1847), Poe liked the poem best without the tenth stanza. In his final published version of the poem, however, the last ten lines were included, and they therefore appear in this text.

The first nine stanzas build up admirably the tale of a growing uneasiness, and a growing perception of the

---

89 balm in Gilead. See Jeremiah 8:22 • 93 Aidenn, a place of pleasure—variant of Eden or Aden • 106 shadow, justified by Poe thus: "For the purposes of poetry it is quite sufficient that a thing is possible, or at least that the improbability be not offensively glaring. It is true that in several ways, . . . the lamp might have thrown the bird's shadow on the floor. My conception was that of the bracket candelabrum affixed against the wall, high up above the door and bust. . ."

cause of that uneasiness, on the part of the narrator. Then comes a stanza which, so far as a large number of readers are concerned, hovers so close to the ridiculous as to spoil the effect. Perhaps Poe added the final stanza, as he said he did the final stanzas of "The Raven," to avoid repelling "the artistical eye" with "a certain hardness and nakedness." Whatever his reason for writing the last stanza, many will feel that his impulse to drop it was sounder than his final impulse.

The skies they were ashen and sober;
  The leaves they were crisped and sere,
  The leaves they were withering and sere;
It was night in the lonesome October
  Of my most immemorial year;
It was hard by the dim lake of Auber,
  In the misty mid region of Weir:
It was down by the dank tarn of Auber,
  In the ghoul-haunted woodland of Weir.

Here once, through an alley Titanic
  Of cypress, I roamed with my Soul—
  Of cypress, with Psyche, my Soul.
These were days when my heart was volcanic
  As the scoriac rivers that roll,
  As the lavas that restlessly roll
Their sulphurous currents down Yaanek
  In the ultimate climes of the Pole,
That groan as they roll down Mount Yaanek
  In the realms of the Boreal Pole.

Our talk had been serious and sober,
  But our thoughts they were palsied and sere,
  Our memories were treacherous and sere,
For we knew not the month was October,
  And we marked not the night of the year,
  (Ah, night of all nights in the year!)
We noted not the dim lake of Auber
  (Though once we had journeyed down here),
Remembered not the dank tarn of Auber,
  Nor the ghoul-haunted woodland of Weir.

And now, as the night was senescent
  And star-dials pointed to morn,
  As the star-dials hinted of morn,
At the end of our path a liquescent
  And nebulous lustre was born,
Out of which a miraculous crescent
  Arose, with a duplicate horn,
Astarte's bediamonded crescent
  Distinct with its duplicate horn.

And I said—"She is warmer than Dian:
  She rolls through an ether of sighs,
  She revels in a region of sighs:
She has seen that the tears are not dry on
  These cheeks, where the worm never dies,
And has come past the stars of the Lion
  To point us the path to the skies,
  To the Lethean peace of the skies:
Come up, in despite of the Lion,
  To shine on us with her bright eyes:
Come up through the lair of the Lion,
  With love in her luminous eyes."

But Psyche, uplifting her finger,
  Said—"Sadly this star I mistrust,
  Her pallor I strangely mistrust:
Oh, hasten!—oh, let us not linger!
  Oh, fly!—let us fly!—for we must."
In terror she spoke, letting sink her
  Wings till they trailed in the dust;
In agony sobbed, letting sink her
  Plumes till they trailed in the dust,
  Till they sorrowfully trailed in the dust.

I replied—"This is nothing but dreaming:
  Let us on by this tremulous light!
  Let us bathe in this crystalline light!

---

6 **Auber**, a geographic name, like Weir and Yaanek in the lines which follow, evidently invented by Poe • 11 **cypress**, a species of tree often planted about tombs. The occurrence of an alley of such trees anticipates the narrator's grim discovery • 14 **scoriac**, volcanic, a word harking back to "ashen," "crisped," and "sere" in the first stanza, words suggestive of burning • 19 **Boreal**, northern, combining the suggestion of the blighting cold of October with the burning brightness of the aurora borealis • 37 **Astarte**, or Ashtoreth, Phoenician goddess associated with earthly love. See note, p. 321 • 39 **Dian**, Diana, goddess of the moon; with the Romans, the chaste huntress typifying pure love • 43 **where . . . dies.** See Isaiah 66.24 • 44 **the Lion**, constellation of Leo, here used to signify danger • 52 **I mistrust.** This phrase of Psyche forecasts the distressing discovery at the end of the poem

Its sibyllic splendor is beaming
With hope and in beauty tonight:
See, it flickers up the sky through the night!
Ah, we safely may trust to its gleaming,
And be sure it will lead us aright:
We safely may trust to a gleaming
That cannot but guide us aright,
Since it flickers up to Heaven through the night."

Thus I pacified Psyche and kissed her,
And tempted her out of her gloom,
And conquered her scruples and gloom;
And we passed to the end of the vista,
But were stopped by the door of a tomb,
By the door of a legended tomb;
And I said—"What is written, sweet sister,
On the door of this legended tomb?"
She replied—"Ulalume—Ulalume—
'Tis the vault of thy lost Ulalume!"

Then my heart it grew ashen and sober
As the leaves that were crisped and sere,
As the leaves that were withering and sere,
And I cried—"It was surely October
On this very night of last year
That I journeyed—I journeyed down here!—
That I brought a dread burden down here—
On this night of all nights in the year,
Ah, what demon has tempted me here?
Well I know, now, this dim lake of Auber,
This misty mid region of Weir:
Well I know, now, this dank tarn of Auber,
This ghoul-haunted woodland of Weir.

Said we, then—the two, then: "Ah can it
Have been that the woodlandish ghouls—
The pitiful, the merciful ghouls—
To bar up our way and to ban it
From the secret that lies in these wolds—
From the thing that lies hidden in these wolds—
Have drawn up the spectre of a planet
From the limbo of lunary souls—
This sinfully scintillant planet
From the Hell of the planetary souls?"

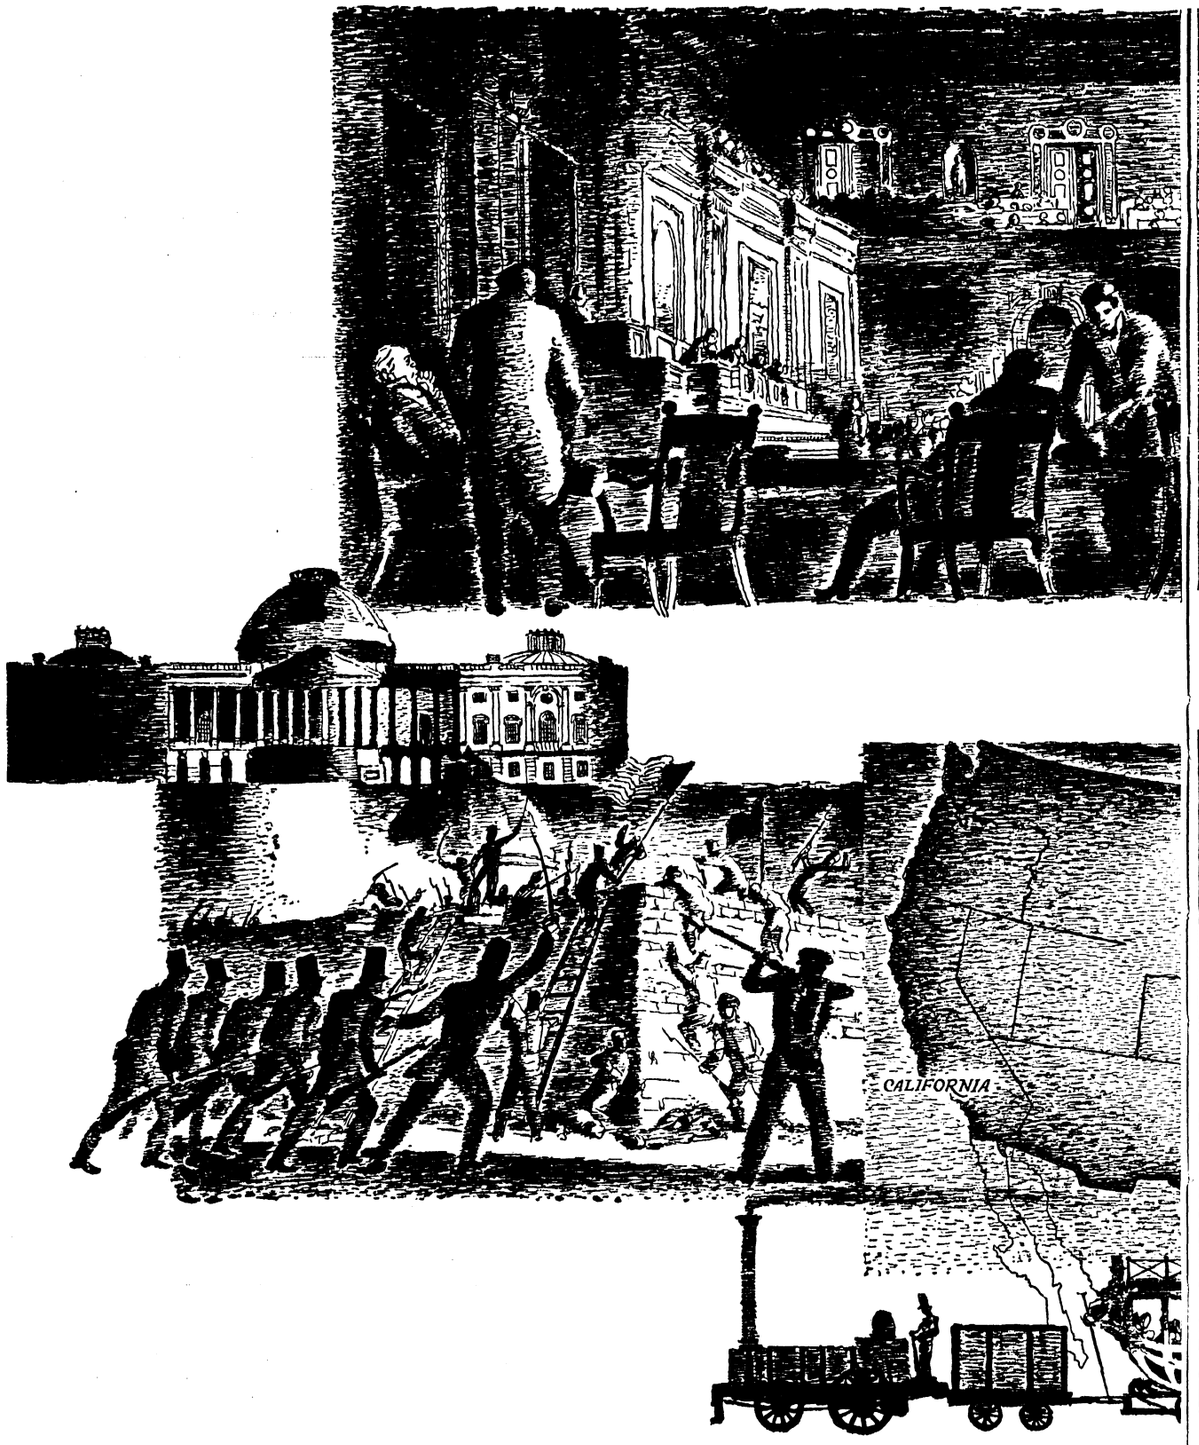
1847

Eldorado

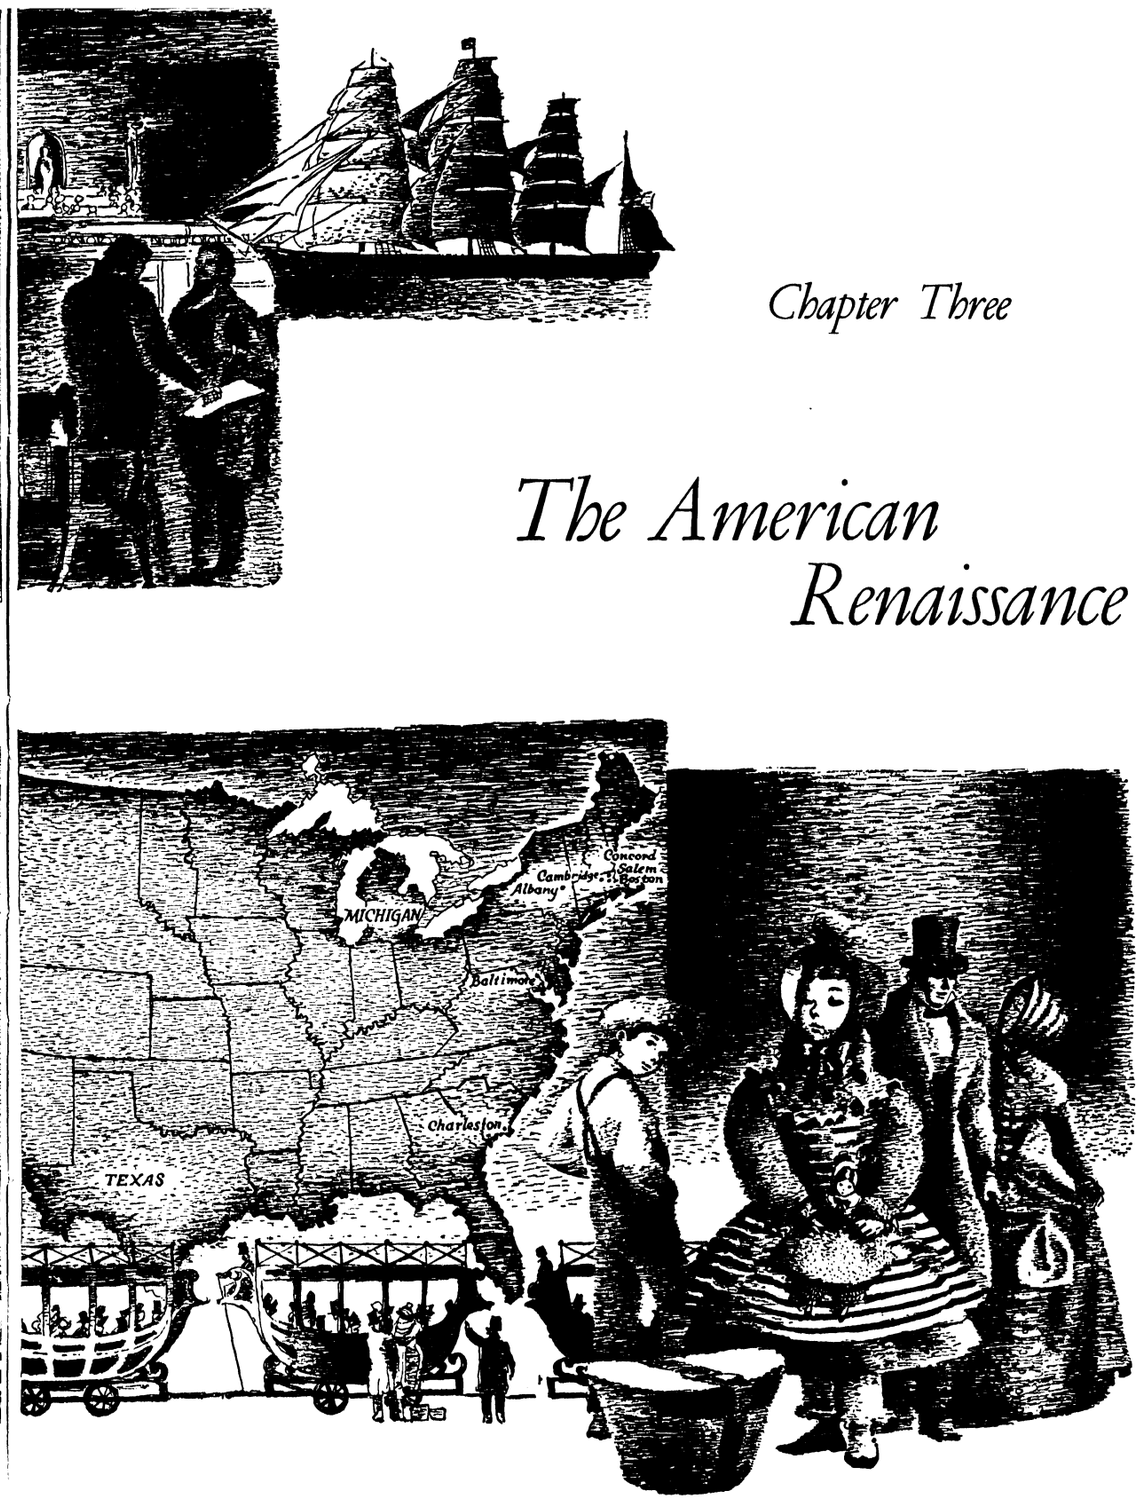
Written in the late winter or early spring of 1849, this poem was first published in Flag of Our Union, April 21, 1849. Eldorado was a fabulously rich city which early explorers of the Western world vainly sought. In 1849 the name was frequently applied to California gold fields.

Gayly bedight,
A gallant knight,
In sunshine and in shadow,
Had journeyed long,
Singing a song,
In search of Eldorado.

But he grew old,
This knight so bold,
And o'er his heart a shadow
Fell as he found
No spot of ground
That looked like Eldorado.



And, as his strength
Failed him at length,
He met a pilgrim shadow—
"Shadow," said he,
"Where can it be,
This land of Eldorado?"



"Over the Mountains
Of the Moon,
Down the Valley of the Shadow,
Ride, boldly ride,"
The shade replied,
"If you seek for Eldorado!"

1849

---

64 sibyllic, oracular. In this stanza the narrator is attempting to prove that this "crystalline light" promises good fortune. Yet his talk of "tremulous light" which "flickers" actually admits distrust. Here, perhaps, as in "The Raven," at about the middle of the poem, the author "availed himself of the force of contrast, with a view of deepening the ultimate impression"

Chapter Three

The American Renaissance

Chapter 3

The American Renaissance

1829 • 1860

WE WILL SPEAK OUR OWN MINDS. "We will walk on our own feet; we will work with our own hands; we will speak our own minds." — **Emerson**

I. Intellectual Currents

Between the triumph of the frontier in Jackson's election and the days of the Civil War, the United States emerged a flourishing nation—a nation for the common man, a nation with a culture, a nation of promises.

This was the period of renaissance, the period of awakening and development, when Americans at last were to begin to speak their own minds. The writers of the era represented in this chapter belong mostly to New England; and indeed the New England writers loom large in any survey of American literature during the years from 1829 to 1860. One great writer—possibly the very greatest of the period—was outside the New England orbit: Herman Melville was born in New York and educated in the South Seas. Yet he was not entirely outside—on the periphery rather, for Melville was influenced by the New England writers, especially by Hawthorne.

The New England influence was far-reaching. It extended into the Middle West, where Emerson lectured repeatedly in the 1850's. It was evident even in the South, though largely in opposition. Aesthetic writers like Poe challenged the vogue of moral literature, defenders of the social structure of the South opposed New England abolitionism, and lusty raconteurs on plantation and frontier flouted puritanic restraints.

NEW ENGLAND in ITS GOLDEN DAY

The period of 1829-1860 in New England has had applied to it a variety of happy designations: Barrett Wendell called it "The Renaissance of New England." "The Golden Day" is Lewis Mumford's phrase. But by whatever name it is known—whether by one of these or by some other—it was the greatest literary period in the history of New England. This was a rich period, and in their writings the men of Boston and Cambridge, Concord and Salem set forth their all-embracing ideas and attitudes—ideas and attitudes on religion and the con-

ception of human nature, democracy and the common man, industry and the expanding frontier, slavery and the Civil War, science and human progress.

Changing Concepts of God and Man

The most important factor in the religious thought of New England in this period was the break with Calvinism. Boston clergymen had become increasingly liberal in the eighteenth century (as shown in the opposition between Chauncy and Edwards), but it was not until the beginning of the nineteenth century that Unitarianism was strongly established. The appointment in 1805 of an avowed Unitarian to the chair of Divinity at Harvard, hitherto occupied by staunch Calvinists, may be taken as marking the transition. And yet the change from Calvinism to Unitarianism was perhaps not so complete, even in eastern Massachusetts, as some have supposed. That William Ellery Channing, the most influential of the early Unitarians, should have delivered his famous "Moral Argument Against Calvinism" as late as 1820 would seem to suggest the tenacity of the old orthodox beliefs. Preaching from his Unitarian pulpit in 1831, Emerson designated the Calvinistic and Unitarian groups as the "rigid" and the "liberal" parties, respectively, and urged his hearers to "borrow something of eternal truth from both of these opinions."

The chief points of difference between Calvinism and Unitarianism as expounded by Channing and his successors can be summarized briefly: (1) The two beliefs differed in their conceptions of the Deity. Calvinism emphasized God's inexorable justice; Unitarianism stressed His benevolence. The Unitarians questioned the justice of the doctrine of election: a God who says (according to Wigglesworth) "I do save none but mine own elect" seemed arbitrary and capricious. (2) The two beliefs differed in their conceptions of Christ. According to Calvinism, Christ is literally the Son of God, the second member of the Holy Trinity. According to Unitarianism, Christ is divine only in the sense in which all men are divine or have an element, however small, of divinity in their nature. The difference between Christ and ordinary mortals becomes one of degree, not of kind. (3) The two beliefs differed in their conceptions of man. Calvinism asserted the innate depravity of man, his predestination, and the necessity of his salvation through the atoning death of Christ. Unitarianism insisted upon man's innate goodness and his spiritual freedom. The Atonement became unnecessary to Unitarians, who preferred to point to Christ's life as an example to be emulated by men already potentially good.

As a young man Channing lived for two years in Virginia, where he presumably absorbed French romantic philosophy. From Rousseau and writers of his school, Channing probably derived, and imported into the Boston of the early 1800's, the ideas of the excellence of human nature and its infinite perfectibility. The inscription on the base of Channing's statue in Boston aptly summarizes his contribution to the religious thought of New England· "He breathed into theology a humane spirit and proclaimed anew the divinity of man." In his *Flowering of New England* Van Wyck Brooks declares justly, "By raising the general estimate of human nature, which the old religion had despised, Channing gave a prodigious impulse to the creative life."

By 1820 Channing could say, "Calvinism is giving place to better views. We think the decline of Calvinism one of the most encouraging facts in our passing history." Unitarianism became the religion particularly of the fashionable and the well-to-do in and around Boston. "Whoever clung to the older faith," remarks Barrett Wendell, "did so at his social peril." Unitarianism, however, did not conquer the whole of New England. There were scattered Unitarian outposts, such as the parish of Sylvester Judd in Augusta, Maine, but the older faith continued dominant in the regions west and north of Boston.

Apart from both Calvinists and Unitarians, the Quakers were a comparatively small but important group. In early New England, Quakers were apt to be obstreperously fanatical; but by the time of John Woolman (1720-1772) their fanaticism had diminished, and in nineteenth-century New England they were, in the words of one historian, "inconspicuous and inoffensive."

Like the Calvinists, the Quakers believed in the divinity of Christ and in the Bible as the inspired word of God. Like the Calvinists, too, they insisted upon the essential sinfulness of man: "Too dark ye cannot paint the sin," Whittier, their chief representative in literature, said in "The Eternal Goodness," his best poetical statement of the Quaker belief. But Whittier in the poem objects to the "iron creeds" of the Calvinists and to their emphasis upon God's wrath; he prefers to think

of "our Lord's beatitudes." The Quakers emphasized the "inner light," which God, they believed, gave to all human beings and which afforded an infallible guide to a righteous life. Quakerism was more benevolent and humanitarian than Calvinism, and more pietistic than Unitarianism. A mere layman might experience some difficulty in distinguishing between the doctrine of the inner light and the Emersonian doctrine of intuition.

After less than three years in the Unitarian ministry, Emerson resigned his pulpit in 1832 because of a growing dissatisfaction with the official rôle of the clergyman and the formalities of the church. Unitarianism, he felt, was good as far as it went; but it did not go far enough toward the rehabilitation of the individual. The new doctrine of which Emerson became the chief interpreter is known as Transcendentalism. Emerson's *Nature,* published in 1836, was the bible of the early Transcendentalists. The "Transcendental Club" was, from 1836 until about 1844, a center of activity. Another focus was a quarterly magazine, *The Dial* (edited by Margaret Fuller, 1840-1842, and by Emerson, 1842-1844), which published many contributions by Transcendentalists during its lifetime of four years. The group as a whole was greatly influenced by the idealistic philosophies of other lands and ages: by Plato and the Neo-Platonists, by the Oriental Scriptures, by Kant and other German idealists—particularly as interpreted by Coleridge and Carlyle.

Transcendentalism has been defined philosophically as "the recognition in man of the capacity of knowing truth intuitively, or of attaining knowledge transcending the reach of the senses." It has been defined historically as follows. "New England Transcendentalism was produced by the importing of German idealism into American Unitarianism." The last definition indicates an important relation between Transcendentalism and Unitarianism and requires a consideration of the similarities and differences between the two.

Unitarianism prepared the way for Transcendentalism by insisting that man is essentially good and that man may trust his own perceptions of religious truth. Channing spoke of "the confidence which is due to our rational and moral faculties in religion" and said that "the ultimate reliance of a human being is and must be on his own mind." But it is important to observe two points of difference: (1) Channing, the Unitarian, expressed confidence in "our *rational* faculties." Emerson, the Transcendentalist, drew a sharp distinction between the "Understanding," by which he meant the rational faculty, and the "Reason," by which he meant the suprarational or intuitive faculty; and he regarded the "Reason" as much more authoritative in spiritual matters than the "Understanding." (2) The Transcendentalists carried this reliance upon the intuitive perceptions of the individual much further than conventional Unitarianism would warrant—carried it so far as to set aside even the authority of the Christian Bible. "Make your own Bible," said Emerson. "Select and collect all the words and sentences that in all your reading have been to you like the blast of a trumpet, out of Shakespeare, Seneca, Moses, John, and Paul." Emerson would renounce all authority, all standards and laws externally imposed. "Nothing is at last sacred but the integrity of your own mind." He proclaimed this glorification of intuition and the repudiation of all external religious authority to a Unitarian audience at Harvard in 1838. "Thank God for these good men [meaning the Saints and the Prophets] but say 'I also am a man.' " The result was a storm of protest. Emerson's Transcendentalism had gone far beyond the bounds of even liberal Unitarianism.

Transcendental thought in the abstract can be best studied in Emerson. His disciples, of whom there were many, were usually interested more in practice than in theory and attempted to apply Emerson's individualistic doctrines in various practical ways. George Ripley, for example, organized the famous utopian community at Brook Farm Theodore Parker militantly espoused reforms in church and state. Margaret Fuller advocated the emancipation of women. Henry Thoreau made a famous experiment in living at Walden Pond.

Many passages in Thoreau seem echoes of Emerson, though Thoreau's expression of the thought is always more concrete than Emerson's. "The fact is," Thoreau wrote in his journal in 1853, "I am a mystic, a transcendentalist, and a natural philosopher to boot"—meaning by "natural philosopher" a scientific student of nature. The emphasis in the statement is significant. Mystical, transcendental passages abound in Thoreau, especially in his earlier writings, as they abound everywhere in Emerson. But as Thoreau grew older, his interest in the observation and description of the world of nature became more and more absorbing. He became

—as his journals of the 1850's attest—more of the natural philosopher and somewhat less of the Transcendentalist.

Transcendental ideas scarcely touched the writers of Boston and Cambridge. Influenced by his medical studies, Dr. Holmes approached religious problems from the scientific point of view. He objected to the Calvinistic condemnation of sinners because he believed that wrongdoing is often the result of an unfortunate heredity. Bad men, he thought, should be treated as if they were insane. On the positive side, he had no transcendental ardor, but rather a rationalistic belief in the ability of the soul, in favorable circumstances, to "build more stately mansions." Longfellow's religious thought—such as it was—was mildly Unitarian, pleasantly optimistic about life and death. And although Lowell could write appreciatively of the stimulating effect of Emerson ("... he made us conscious of the supreme and everlasting originality of whatever bit of soul might be in any of us"), he was not a disciple; nor was he in sympathy with Transcendental ideas. "The word 'transcendental,' " he declared in the unsympathetic essay on Thoreau, "was the maid of all work for those who could not think." The men of Boston and Cambridge found the Concord air too rarefied for their mundane needs.

The chief spokesman of the opposition to Transcendentalism, however, was Hawthorne, who returned, in part at least, to the Calvinist position. He satirized utopian reforms on the ground that superficial reform measures avail nothing so long as the human heart, which is innately sinful, remains unregenerated. "Purify that inward sphere," he advised in "Earth's Holocaust," "and the many shapes of evil that haunt the outward will vanish of their own accord." He satirized Unitarianism and Transcendentalism in "The Celestial Railroad"; Bunyan's arduous pilgrimage seemed to him still the best way of reaching the Celestial City. In stories and novels he showed that evil is an ever-present reality, not an illusion to be brushed aside, and that self-reliant individualism alone does not save man from disaster. Hawthorne is a striking example of the persistence of the Puritan point of view in an age of liberalism and progressivism.

But it would be a mistake to suppose that the Puritan inheritance affected Hawthorne alone. It was everywhere present, giving native roots and indigenous strength to New England's flowering. The religious emphasis was a Puritan trait, as was the emphasis on books and reading. The Transcendental pursuit of perfection was the old Puritan pursuit of perfection in a new guise and on different terms. The diaries of Emerson, Thoreau, and Hawthorne continued an old Puritan practice; and the searchings of soul in Emerson and Thoreau recall passages in Cotton Mather and Jonathan Edwards. When Emerson said that the poet "must drink water out of a wooden bowl," he was quoting the austerest of English Puritans, John Milton. The austerity of Emerson and Thoreau, and of Hawthorne, too, was of the essence of Puritanism. If the Puritan essence was considerably diluted in the other writers of the period, it nevertheless made itself felt. It came out in the ethical earnestness of Longfellow and Lowell and in their native attachments. In sum, the great period of New England literature would have been impossible without the two centuries of Puritan inheritance. It is hardly an accident that the three New England writers of the period whose works seem most likely to endure—Emerson, Thoreau, and Hawthorne—are the writers whose roots were deepest in New England's Puritan past.

DEMOCRACY, INDUSTRIALISM, EXPANSION

From 1829 to 1860 the two major political parties in the United States were known as the Whigs and the Democrats. Conservative men of property in New England were likely to be Whigs; liberals and men of little or no property were likely to be Democrats.

The election of Andrew Jackson of Tennessee by the Democrats in 1828 is one of the great landmarks in the evolution of American democracy. The common man, whether backwoodsman, farmer, or small merchant, regarded Jackson, the conqueror of the Creek Indians and the hero of New Orleans, as a popular champion. Jackson's Whig opponent, the "aristocratic" John Quincy Adams, carried only New England and the North Atlantic states; the South and West went solidly for "Old Hickory." During the Jacksonian period, government in America became more democratic. The movement toward democracy, which had begun with the War of Independence and which had been arrested somewhat in the 1790's owing to a certain apprehension caused among the more conservative citizenry by the excesses of the French Revolution, now resumed its

onward course. State constitutions were liberalized. Religious tests and property qualifications for office were removed. Manhood suffrage was adopted generally.

New England Looks at the New Democracy

To many New Englanders, Jackson and his supporters seemed the dregs of democracy. Emerson wrote to Carlyle, "A most unfit person in the Presidency has been doing the worst things; and the worse he grew, the more popular." But it would not be fair to Emerson to suppose that this snobbish statement represents his real attitude. Like most educated men, he doubted at times the wisdom of the uneducated masses. "The mass," he wrote in a skeptical moment, "are animal, in state of pupilage, and nearer the chimpanzee." But despite moments of skepticism, he held firmly to his faith in the ultimate wisdom of the people. The belief that "God is in every man" was to him "the highest revelation." And he said in another passage on the subject, "The great mass understand what's what." It should be remembered that Emerson took sharp issue with his friend Carlyle on the subject of democracy: when Carlyle advocated what we today should call a fascist doctrine, Emerson vigorously dissented. He could think of many benefits that might come from even the "rank rabble party, the Jacksonism of the country." For one thing, this new democracy of the West might cure America of its slavish dependence upon Old World literature and Old World traditions, might "root out the hollow dilettantism of our cultivation." And he came ultimately to an admiration of Jackson himself. Writing in 1862 of the truly memorable things which he associated with the national capital, he mentioned along with the eloquence of Webster and the "sublime behaviour" of John Quincy Adams "the fine military energy of Jackson in his presidency."

Jackson's fine military energy appealed also to James Russell Lowell, who wrote in his "Latest Views of Mr. Biglow":

> Ole Hick'ry wouldn't ha' stood see-saw
> 'Bout doin' things till they wuz done with,—
> H'd smashed the tables o' the Law
> In time o' need to load his gun with;
> He couldn't see but jest one side,—
> Ef his, 'twuz God's, an' thet wuz plenty;
> An' so his *'Forrards'* multiplied
> An army's fightin' weight by twenty.

It must have required great effort for the New England mind to appreciate a man like Andrew Jackson; but the point is that the minds of Emerson and Lowell were capable of making such an accommodation. No violent adjustment was necessary, however, for a third New Englander, Nathaniel Hawthorne, for he alone among the major New England writers was a loyal member of the Democratic party and a staunch supporter of Jackson. Late in life he recorded in his journal the considered judgment, "Surely Jackson was a great man." But despite the personal challenge of Jackson himself, Emerson spoke for the generality of educated New Englanders when he said that the Whig party had the "best men"; the Democratic party, he added, had the "best cause."

The "best cause" became more and more pervasive in the literature of the period. An earlier democratic impetus had been supplied by the English Romantic Movement. When Emerson, in *The American Scholar* (p. 435), hailed as one of the "auspicious signs" the exploring and poetizing of "the near, the low, the common," he was thinking particularly of the English Romantic poets. And when Longfellow celebrated the village blacksmith, and Whittier, the barefoot boy, the inspiration was at least partly derived from Burns and Wordsworth. Thus initiated, the democratic movement in literature was broadened and deepened and made more American by the fresh impetus of Jacksonian Democracy. Lowell affords a good illustration. With him the democratic attitude evolved from the romantic and literary to the realistic and American. His celebration of Lincoln in 1865 as "New birth of our new soil, the first American" is a landmark in the democratic evolution of the New England mind. His full development in this direction is seen in his famous address on "Democracy" (1884), in which he said:

> I recollect hearing a sagacious old gentleman say in 1840 that the doing away with the property qualification for suffrage twenty years before had been the ruin of the State of Massachusetts. . . . I lived to see that Commonwealth twenty odd years later paying the interest on her bonds in gold. . . . To the door of every generation there comes a knocking, and unless the household, like the Thane of Cawdor and his wife, have been doing some deed without a name, they need not shudder. It

turns out at worst to be a poor relation who wishes to come in out of the cold.

Thus Lowell, the Brahmin, spoke for democracy and the forgotten man.

Another Brahmin, Oliver Wendell Holmes, was not visibly touched by the evolution of democratic thought in America. In *The Autocrat of the Breakfast-Table* (p. 396), he clung tenaciously to his aristocratic bias: "Self-made men?—Well, yes. Of course everybody likes and respects self-made men. It is a great deal better to be made in that way than not to be made at all. . . . But *other things being equal,* in most relations of life I prefer a man of family." His favorite subjects in poetry were aristocratic types ("Dorothy Q," "The Last Leaf," p. 392) and aristocratic heirlooms ("On Lending a Punch-Bowl"). It is not without significance in this connection that many of the writings of Dr. Holmes seem less vital and less important today than those of his more democratic contemporaries.

The Machine vs. Self-Reliance

The Jacksonian revolution affected the entire country; the industrial revolution was confined largely to the Northern states, and its effects became especially important in New England. After the War of 1812, business capital and initiative in New England were diverted from commerce to manufacturing, and the abundance of water power and skilled labor guaranteed the success of the factory system. The most striking new feature of the New England landscape about 1820 was the factory village, built near some waterfall and consisting of mills and houses for the "operatives." Conditions were much more agreeable in the new factory villages of New England than in the older manufacturing centers of England. Workers in the New England factories were mostly farmers' daughters from the surrounding country. Hawthorne in one of his rambles about the countryside remarked on the bright, cheerful faces looking out through the factory windows. A notable instance was Lowell, Massachusetts (founded in 1822), where the factory girls dressed neatly, were properly chaperoned, and published a literary weekly. By 1840 there were some 1200 cotton factories in the United States, two thirds of which were in New England.

One result of the industrial revolution in New England was the accumulation of wealth, a good deal of which was used for cultural purposes. Many New Englanders studied in Europe. The colleges of New England grew in resources and prestige. Almost every town had its free public library and its lyceum, where an instructive course of lectures was given during the winter. Emerson, and even Thoreau, lectured on many lyceum platforms. In the cities, mechanics' institutes offered vocational training. The Lowell family might be cited as illustrating the happy marriage of wealth and culture: one uncle of James Russell Lowell founded the manufacturing city which bears his name; another uncle established the famous Lowell Institute in Boston, where lectures have been given for more than a century by distinguished scientists, scholars, and men of letters.

To most New England writers of the period the industrial revolution no doubt seemed more beneficent than otherwise. One major writer, however, spoke out, loud and bold, against the mechanization of American life. Thoreau's objection was based upon the fundamental principle, Emerson's principle, of self-reliance. A man ought to do for himself the things which more and more were being done by machines: he ought to walk instead of riding on the train; he ought to build his own house, make his own clothes, bake his own bread. The machine brought on the division of labor which reduced men from integers to fractions. "Where is this division of labor to end?" Thoreau cried in *Walden,* and he added a statement the force of which is only today becoming apparent: "No doubt another *may* also think for me; but it is not therefore desirable that he should do so to the exclusion of my thinking for myself."

Compared with Thoreau's, the comments of other writers on the advancing machine age seem less decisive. Emerson entered a mild demurrer in *Self-Reliance* (p. 453), warning that "the harm of the improved machinery may compensate its good"; but, in the long run, he was willing to accept the machine as part of the "beneficent tendency." Hawthorne seems to have been apprehensive of evil results; to him, apparently, the machine was a malevolent monster. One finds in his journal the following note for a story: "A steam engine in a factory to be supposed to possess a malignant spirit; it catches one man's arm and pulls it off; seizes another by the coat-tails, and almost grapples him bodily; catches a girl by the hair, and scalps her; and finally draws a man and crushes him to death." Here was a conception

out of which Hawthorne might have developed a tale of Gothic horror, and perhaps of social prophecy.

A conspicuous and characteristic product of the industrial revolution in America was the man of big business, the captain of industry. The subject received scant attention in the literature of the period. One passage, however, is of particular interest—a passage in Emerson's *Journals* which expresses the writer's great admiration of John M. Forbes, a builder of railroads in the West in the 1860's:

> Forbes is an American to be proud of. Never was such force, good meaning, good sense, good action, combined with such domestic lovely behaviour. . . . Wherever he moves, he is the benefactor. It is of course that he should shoot well, ride well, sail well, administer railroads well, carve well, keep house well, but he was the best talker also in the company. . . .

The type has suffered at the hands of later writers. Perhaps Emerson was naïve; or possibly the type deteriorated in the post-Civil War period; or, quite likely, the American businessman was given less than justice by the satirists and "debunkers" of the 1920's.

New England Looks West with Mixed Feelings

Thinking in New England along political, economic, and social lines was conditioned not only by Jacksonian Democracy and the industrial revolution; it was conditioned also by the Westward movement. Some of the details of the movement are reserved for a later chapter. Our concern here is with its effect upon New England attitudes.

In the early years of the century New Englanders had settled in western New York and Ohio; by the 1840's they not only had occupied Indiana, Illinois, and southern Michigan, but had ventured as far as Wisconsin, Minnesota, and Iowa. A popular song summed up the invitation to the West:

> Come all ye Yankee farmers who wish to change your lot,
> Who've spunk to travel beyond your native spot. . . .

The Westward migration gave an outlet to the discontented elements, to those who wished to change their lot.

Despite the ties between New England and the West, conservative New Englanders were inclined to deprecate the Western migration. There were economic reasons for this attitude: the draining off of energetic young people tended to keep high the price of factory labor, and the revenue from sale of public lands in the West furnished an argument to Southerners for lowering the tariff. There were moral reasons also. The appeal to "spunk" to leave "your native spot" in the song quoted above was reversible since one might argue that more spunk was required to succeed in one's native place, particularly if that place was a New England farm. "The wise man stays at home," said Emerson. And possibly Whittier was thinking of those who were tempted by the West when he emphasized the noble austerity of life in New England.

> Then ask not why to these bleak hills
> I cling, as clings the tufted moss . . .
> Better with naked nerve to bear
> The needles of this goading air,
> Than, in the lap of sensual ease, forego
> The godlike power to do, the godlike
> aim to know.

By many high-minded New Englanders, migration to the West was regarded, no doubt, as a decline to a lower level. Some reformers, on the other hand, made the point that Westward migration might be checked if certain improvements were made at home. Sylvester Judd said of his fictional utopia, described in *Margaret: A Tale of the Real and Ideal* (1845), that "the mania for removing to the West, which prevails all over New England, has here subsided."

The Western theme does not bulk very large in the writings and memoirs of the authors of New England's Renaissance, but a few details may be of interest to suggest their views and attitudes.

Hawthorne was interested in the West, although his knowledge of the subject was not great. In the 1830's he traveled by stagecoach and canal boat as far as Niagara Falls and recorded his observations in a few slight but revealing sketches. While American consul at Liverpool,

he met more Westerners than he had ever seen in Salem or Concord, some of whom he viewed with disapproval. A Mr. Lilley from Ohio, for example, he described in his notebooks as "a very unfavorable specimen of American manners—an outrageous tobacco chewer and atrocious spitter on carpets." But some years later in Concord he met young William Dean Howells, an Ohioan, whose manners were irreproachable. Hawthorne was (as Howells recorded) "curious about the West, which he seemed to fancy more purely American, and said he would like to see some part of the country on which the damned shadow of Europe had not fallen."

To Lowell, as to Hawthorne, the West seemed more purely American because it was freer from European influences. (The same point was to be made at the end of the century by the historian Frederick Jackson Turner.) When "Nature" made Lincoln, Lowell said in his "Commemoration Ode" (p. 426),

> For him her Old-World moulds aside she threw,
> And choosing sweet clay from the breast
> Of the unexhausted West,
> With stuff untainted shaped a hero new . . .
> Nothing of Europe here. . . .

The great Americans in the early history of the Republic —Franklin, Washington, Jefferson, and the rest—possessed a culture which was largely European; but the culture of Lincoln was "untainted" by the Old World. Lowell's appreciation of this fact is all the more remarkable because, as a lifelong student of the Romance languages and literatures, he himself was an embodiment of European culture. Such an insight into the significance of the West was beyond the reach of another devotee of European literature, Longfellow, whose conception of the subject, as revealed in *Hiawatha* and *Evangeline,* was literary and romantic.

Unlike Longfellow, Thoreau was a tough, realistic writer who was qualified by temperament and personal habits to appreciate the values of the Western frontier. From Thoreau's point of view, life in New England had become too sophisticated; he spoke repeatedly of "these degenerate days." "We need the tonic of wildness," he declared in *Walden* (p. 490); and in "Walking" he said, "The West is but another name for the Wild." He praised the sturdy self-reliance of the pioneer. If the race is to retain its vigor, men must live "a primitive and frontier life." Such a life had been lived by the settlers of New England, and Thoreau liked to quote from the colonial historians, particularly from Edward Johnson, who told how the first inhabitants of Concord were forced to live in a cave and "cut their bread very thin." Such a Spartan existence was enjoyed also, he supposed, by the Western frontiersman. "Adam in Paradise," he declared, "was not so favorably situated on the whole as is the backwoodsman in America." The backwoodsman whom Thoreau envisaged, we may be sure, was not of the lawless or mercenary sort; rather he was the sober New Englander dedicated to plain living and high thinking on a farm in Michigan or Illinois. The gold rush to California was quite another matter. The greed and the gambling instinct therein displayed, he thought, were a "disgrace on mankind." The California spectacle of 1849, he said, made of God "a moneyed gentleman who scatters a handful of pennies in order to see mankind scramble for them."

If Thoreau praised the West for its primitive qualities, Emerson praised it for its astonishingly rapid acquisition of culture. He lectured many times throughout the Middle West in the 1850's. He went as far as Beloit, Wisconsin, where on January 9, 1856, he found an interested audience despite a temperature of thirty degrees below zero. The spread of culture on the frontier was to him indeed remarkable. Having heard piano music on one of his Western travels, he wrote:

> Witness the mute all hail
> The joyful traveller gives, when on the verge
> Of craggy Indian wilderness he hears
> From a log cabin stream Beethoven's notes
> On the piano, played with master's hand.

The college in Evanston blew down one night (Emerson recorded in his journal in 1857), but so great were the energy and progressivism of the founders of Northwestern that "they raised it again the next day, or built another." To Emerson, the West seemed the country of the future. He warned his Eastern readers that some day the sturdy Westerner would "gather all their laurels in his strong hands." Emerson's treatment of the West

(which one finds chiefly in his *Journals*) emphasizes his identification not only with New England but with America as well.

Slavery and Civil War

Still another influence on New England thought about political, economic, and social problems was the growing controversy over Negro slavery in the South and the tragic climax of the Civil War. The details of the antislavery movement and the rôle of Whittier as New England's chief abolitionist in literature are reserved for a later chapter, where the two sides—Northern and Southern—may more conveniently be brought together. Here we are concerned with the movement as a stimulus to thought and with the reactions of the major New England writers, Whittier excepted, to that stimulus.

Longfellow, as we might expect, was only mildly responsive. His sentiments were broadly and sincerely humanitarian; he believed that slavery was a great evil. But he was not active in reform; he disliked controversy, and he preferred to write his poems on other subjects. Longfellow did, however, compose a few poems on slavery, of which "The Slave's Dream" (p. 378) may be regarded as typical of his attitude and method of treatment. The slave in the poem falls asleep in a rice field and dreams of his former life in Africa, where he had been a king and had ridden a spirited horse bridled with golden reins. The description would be more applicable to a knight of medieval romance and it reflects Longfellow's preoccupation with European romantic literature. When the Union was threatened by the sectional dispute, he wrote the noble and justly famous poem "The Building of the Ship" (1849), which was a poetical plea—matching Webster's plea in prose—for the preservation of the Union:

> Thou too sail on, O Ship of State!
> Sail on, O Union, strong and great!

Lowell was much more vocal than his fellow Cantabrigian. He had pretty definite political convictions, and he enjoyed being in the thick of the fray. In the first series of the *Biglow Papers* (p. 414), he vigorously opposed the Mexican War, which Northern abolitionists unanimously regarded as having been precipitated by Southern strategists with the aim of extending slave territory in the Southwest:

> They jest want this Californy
> So's to lug new slave states in. . . .

He declared himself opposed to all war, "Ez fer war, I call it murder. . . ," and preferred the separation of the North and South to slavery:

> Ef I'd my way I hed ruther
> We should go to work an' part. . . .

In the second series of the *Biglow Papers* (p. 424), written in 1862 when the Army of the Potomac had met with ill success, he abandoned his early pacifism and argued for a more vigorous prosecution of the War by the North:

> Oh for three weeks o' Crommle an' the Lord!
> Up, Isr'el, to your tents an' grind the sword!

After the Civil War, however, Lowell directed his best poetical efforts toward reunion. Writing in 1875 in commemoration of the one hundredth anniversary of Washington's taking command of the colonial army, he extended the hand of reconciliation from Massachusetts to Virginia:

> Virginia gave us this imperial man . . .
> She gave us this unblemished gentleman.
> What shall we give her back but love and praise
> As in the dear old unestrangèd days. . . .

Ever responsive to changing conditions, Lowell's attitudes show, it seems fair to say, his flexibility, adaptability, and capacity for growth in his thinking on political questions.

It so happened that Lowell was usually on the side of the majority; Thoreau had a predilection for the side of the minority, often a minority of one. He had the rare personal courage to carry his convictions to their logical conclusion, even if that conclusion meant the defiance of civil law. He refused to pay taxes to a government which allowed slavery, and as a consequence spent a night in the Concord jail. The record of this

episode is given in "Civil Disobedience" (p. 479). He records in his journal that, disobedient to the Fugitive Slave Law, on at least one occasion he helped a slave escape into Canada. While John Brown was in prison awaiting execution, Thoreau made a speech in Brown's behalf at Concord, and again at Boston and at Worcester to unsympathetic audiences. In his famous "Plea for Captain John Brown" he said, "It was his peculiar doctrine that a man has a perfect right to interfere by force with the slaveholder, in order to rescue the slave. I agree with him." Thoreau is the best example in American literature of the extremely individualistic position: that a man must do what he believes to be right with utter disregard for the conventions of society and the laws of the state.

Emerson was as individualistic in theory, though in practice a good deal more amenable to laws and conventions. Nor did he have the crusading spirit of Thoreau. He was nevertheless an active opponent of slavery after 1850, and like Thoreau, he spoke publicly in defense of John Brown. The high point of his participation in public affairs came on January 1, 1863, when he read the "Boston Hymn" at a meeting to celebrate the Emancipation Proclamation and was interrupted by the cheering crowd at the famous lines:

> Who is the owner? The slave is owner,
> And ever was. Pay *him.*

Alone among the great New England writers, Hawthorne did not give his approval to the antislavery movement. Possibly, from the Calvinistic point of view, chattel slavery seemed not the greatest of evils: all mankind were victims of a worse bondage—the bondage of sin. He was distrustful of reforms and reformers. reformers were likely to be impractical fanatics; reforms were superficial and as often as not proposed remedies which were worse than the disease. After the manner of the old Puritans, he believed that an inscrutable Providence would bring about the needed reform "at some brighter period, when the world should have grown ripe for it." Furthermore, as a loyal member of the Democratic party of James K. Polk and Franklin Pierce, Hawthorne subscribed to the conventional party arguments that (1) slavery was entitled to recognition and protection under the Constitution; (2) the Union was threatened with disruption by the activities of the abolitionists; and (3) the welfare and happiness of the Negro himself would be jeopardized by his emancipation. During the Civil War he found his position as a Northern Democrat embarrassing; he was looked at askance by friends and neighbors. He did not, however, join those Northern Democrats, known as Copperheads, who opposed the prosecution of the War and advocated a return to the *status quo ante bellum.* "I always thought that the War should have been avoided," he wrote in 1863, "although since it has broken out, I have longed for military success as much as any man or woman of the North." Devoted as he was to the older Union established by the founding fathers, he felt in 1863 that the permanent separation of North and South was inevitable, and persuaded himself "to be content with half the soil that was once our broad inheritance." He did not live to see the end of the War.

SCIENCE and HUMAN PROGRESS

Natural science advanced with remarkable rapidity in the nineteenth century, and its effects became more and more pervasive. In England—to mention only two of many notable publications in the scientific field—Sir Charles Lyell's *Principles of Geology* (1830) established the antiquity of the earth and the gradual evolution of its surface, and Charles Darwin's *Origin of Species* (1859) presented the theory of the evolution of man through a process of natural selection. In New England, as well as elsewhere in America, scientific activity in all of the fields kept pace with developments in the Old World. Benjamin Silliman at Yale published his *Elements of Chemistry* in 1830; Asa Gray at Harvard brought out a notable *Survey of Botany in the Northern United States* in 1847; Louis Agassiz of Switzerland began in 1846 a distinguished career at Harvard in the field of comparative zoölogy. The Harvard Astronomical Observatory in 1846 was equipped with the world's largest telescope; and in 1847 the American Association for the Advancement of Science was organized in Boston in order "to promote intercourse between American scientists, to give a strong and more systematic impulse to research, and to procure for the labors of scientific men increased facilities and wider usefulness." New England

writers were aware of scientific developments, and their writings reflect, in various ways and degrees, the influence of the new facts and the new theories of experimental science.

Emerson greeted the scientific movement with enthusiasm. "One of the distinctions of our century," he wrote, "has been the devotion of cultivated men to natural science; the benefits thence derived to the arts and to civilization are signal and immense." Late in life he declared, "If absolute leisure were offered me, I should run to the college or the scientific school which offered the best lectures on Geology, Chemistry, Minerals, and Botany." Although one cannot be sure that Emerson read all of the scientists to whom he refers in his writings, his scientific reading was remarkably wide and certainly included, among other things, the works of Newton, Linnæus, Buffon, Lamarck, Lyell, Gray, Agassiz, and Darwin. But Emerson was not himself a scientist, nor was he interested in science for its own sake. Science was of value to him for the moral and spiritual implications which scientific fact and theory suggested to his mind—a quite unscientific reason. He liked to draw illustrations of spiritual truth from physical phenomena ("The axioms of physics translate the law of ethics," he said), and his pages abound in analogies between natural and spiritual laws. He was delighted, furthermore, by the doctrine of evolution, particularly by the earlier evolutionary theory of Lamarck, which seemed to him to confirm his optimistic hope for mankind. Paraphrasing Lamarck, he wrote as a motto for *Nature:*

> And striving to be man, the worm
> Mounts through all the spires of form.

If the worm might become man, if the caterpillar might evolve into a philosopher, then the future of the constantly evolving human race became glorious to contemplate.

Thoreau's relation to science was much more intimate than Emerson's Thoreau was interested in nature for its own sake quite as much as for its Transcendental meanings. A student of botany and zoölogy, he liked to use the Latin names of plants and animals when he wrote about them. He sent to Agassiz for identification specimens of fishes and turtles, some of which were unknown to the Harvard professor. Thoreau did not have, however, either the equipment or the temperament of the genuine scientist. He did not go beyond description of behavior and classification. He would not murder to dissect. A hawk could be best studied, he maintained, not as a "dead specimen," but free and soaring above the fields. In short, Thoreau was, to use the phrase of his friend Ellery Channing (a nephew of William Ellery Channing), "the *poet*-naturalist."

Among the Brahmins, Longfellow and Lowell gave little attention to science, though Longfellow shared the general faith in the contributions of science to human progress. Lowell, on one occasion, twitted the Darwinians upon their arrogant assumption that evolution had supplanted God in the modern world (see his "Credidimus Jovem Regnare"). A third Brahmin, however, achieved a real distinction in science. Oliver Wendell Holmes studied medicine in Paris. From 1847 to 1882 he was professor of anatomy and physiology in the Harvard Medical School. His most famous contribution to medical science was his essay on "The Contagiousness of Puerperal Fever" (1843), which materially aided the efforts of the medical profession to reduce the mortality of women in childbirth. Holmes' medical training gave him a scientific approach to his literary subjects. He became particularly interested in the problem of the bearing of heredity upon moral responsibility, which is the subject of his novel *Elsie Venner* (1861) and of other writings He stated the problem as follows in the Preface to the novel:

> Was Elsie Venner, poisoned by the venom of a crotalus [rattlesnake] before she was born, morally responsible for the 'volitional' aberrations, which translated into acts become what is known as sin, and, it may be, what is punished as crime? If, on presentation of the evidence, she becomes by the verdict of the human conscience a proper object of divine pity and not of divine wrath, as a subject of moral poisoning, wherein lies the difference between her position at the bar of judgment, human or divine, and that of the unfortunate victim who received a moral poison from a remote ancestor before he drew his first breath?

Holmes anticipated by at least a generation the approach of modern neurology. The author of many volumes

of novels, essays, and verse, he nevertheless considered his article on childbed fever his best title to fame.

Hawthorne, once again, is found perversely at odds with this self-confident, progressive, optimistic age. He discovered a danger in the new emphasis upon experimental science. In "Rappaccini's Daughter" (p. 525), in "Ethan Brand," and elsewhere, he examined the scientist and discovered that the scientist had been dehumanized. Of Dr. Rappaccini, "as true a man of science as ever distilled his own heart in an alembic," Hawthorne wrote: "His patients are interesting to him only as subjects for some new experiment. He would sacrifice human life, his own among the rest, or whatever else was dearest to him, for the sake of adding so much as a grain of mustard seed to the great heap of his accumulated knowledge." Likewise, Ethan Brand, a scientist in the field of experimental psychology, became "a cold observer, looking on mankind as the subject of his experiment"; he "lost his hold of the magnetic chain of humanity"; he became "a fiend." Hawthorne seemed to think that the exclusive cultivation of the scientific faculty produces atrophy of soul, and creates and lets loose in the world an agent which is "fiendish" because utterly unmoral and irresponsible. The mid-nineteenth century did not take the warning seriously, failed sometimes even to recognize it. Now, a hundred years later, Hawthorne's point becomes more plainly perceptible.

HERMAN MELVILLE: EXPLORER of the WORLD and ENIGMAS

After a boyhood in New York City and Albany, a voyage to Liverpool, three years in the South Seas, a brief second residence in New York City, and a journey to London and Paris, the much-traveled Herman Melville settled in 1850, at the age of thirty-one, at "Arrowhead" near Pittsfield, Massachusetts. Obviously he was not a product of Massachusetts or a part of the literary movement of New England. But his Massachusetts residence, which lasted, with interruptions for other travels, for more than twenty years, brought him within the sphere of influence of the New England Renaissance. He met in the Berkshires many of the New England writers and struck up a stimulating and sympathetic friendship with Hawthorne, who in 1850-1851 resided at near-by Lenox. It is significant that Melville wrote his greatest book, *Moby Dick,* during the months of his close association with Hawthorne and that he dedicated the book to Hawthorne.

For like Hawthorne, Melville was concerned with the darker side of human fate. Both insisted upon the reality of evil in the world; both were skeptical of the optimism of Emerson and his benevolent theory of the Universe; both presented the tragedies of the mind and soul. Hawthorne agreed with Bunyan's *Pilgrim's Progress,* where man is represented as going through life weighed down by a burden of sin. Melville called Ecclesiastes "the truest of all books . . . the fine hammered steel of woe."

Melville dwelt much upon the evil in the world. He had seen at first hand the brutality of ship captains, the depravity of Old World cities, the vices brought to the South Sea islanders by "civilized" invaders. More than that, evil appeared triumphant (as in *Pierre*), even when man's motives were virtuous. Why, Melville asked, did a good God—if indeed He is good—permit evil in His world? Melville could not accept the Universe with as much resignation as his friend Hawthorne. He persisted in challenging the sphinx riddle, courageously, defiantly.

In *Moby Dick,* which is a compendium of Melville's metaphysical speculation, Captain Ahab relentlessly pursues the White Whale only to be destroyed in the end. The allegory is susceptible of many interpretations. To Ahab "all evil was visibly personified and made practically assailable in Moby Dick." Ahab, however, is not the embodiment of unmixed good: his conduct is irrational and foolhardy; it is contrary to the well-being of others; it is motivated by revenge. Elsewhere, Ahab (and perhaps Melville) saw in Moby Dick "outrageous strength with an inscrutable malice sinewing it," and he hated chiefly the *inscrutability* of the whale. The story perhaps represents man's hopeless but heroic attempt to search out the inscrutable, to know the unknowable; the tragedy of man becomes the tragedy of his limited comprehension. But whatever the interpretation—and each reader must make his own, for the allegory with its countless ramifications is too complex to admit of a simple, categorical definition—Melville's Ahab, like Ethan Brand and other characters of Hawthorne, becomes completely obsessed with this one pursuit and sacrifices everything else to it. If the tragedy of man is his inability to possess complete knowledge of himself and

his destiny, Ahab's tragedy is his monomania, the narrow range of his interests.

Melville's chief concern was with the profound enigmas—the nature of God and man, the mystery of "Providence, Foreknowledge, Will and Fate"—and like Milton's philosophers he "found no end, in wandering mazes lost." He was not, however, indifferent to the more mundane problems of modern society, and scattered through his works one finds abundant evidence of his awareness of contemporary social questions.

His own observation of tyranny on shipboard and the exploitation of the native population on the Pacific islands had awakened in him a flaming passion for social justice in a truly democratic society. This passion expressed itself angrily in *White Jacket,* where he condemned the naval practice of flogging, and philosophically and satirically in *Mardi,* where he surveyed much of the nineteenth-century world.

The latter book is of special importance for the student of Melville's social ideas with reference to his own country. He was critical of America's faults. "Vivenza [the United States] was a braggadocio": boastfulness was getting to be a national habit; after all, God should be given some credit for our mountains and rivers. The existence of slavery nullified our noble *Declaration of Independence.* The war against Mexico was foisted upon the nation by the imperialistic action of the President. The California of the gold rush was a "golden Hell." And speaking more radically, Melville pointed out the incompleteness of our freedom: political freedom alone was not enough, for "freedom is more social than political." But despite these and many other imperfections, the young American democracy inspired in Melville an ardent faith. The West was a source of fresh hope—Westerners "were a fine young tribe; like strong new wine they worked violently in becoming clear." "In its better aspect," he declared, "Vivenza was a noble land": "Like a young tropic tree she stood, laden down with greenness, myriad blossoms, and the ripened fruit thick-hanging from one bough. She was promising as the morning. Or Vivenza might be likened to St. John, feeding on locusts and wild honey, and with prophetic voice, crying to the nations from the wilderness. Or, childlike, standing among the old robed kings and emperors of the Archipelago, Vivenza seemed a young Messiah, to whose discourse the bearded Rabbis bowed."

Like Hawthorne, Melville was a philosophical pessimist and a political optimist. It was possible to believe in original sin and still be a democrat.

THE OLD SOUTH—In OPPOSITION

Religious questions were not nearly so vital in Southern literature as in the literature of New England and in the writings of Melville. Southern writers, in general, did not concern themselves with spiritual laws, like Emerson; or with the remorse for sin, like Hawthorne; or with metaphysical speculation, like Melville. Indeed, in religious matters the cultivated Southerner was likely to be tolerant to the point of indifference. John Pendleton Kennedy's account of Frank Meriwether in *Swallow Barn* (p. 590) may be regarded as fairly typical of the gentry of the Old South:

> If my worthy cousin be somewhat over-argumentative as a politician, he restores the equilibrium of his character by a considerate coolness in religious matters. He piques himself upon being a high-churchman, but is not the most diligent frequenter of places of worship, and very seldom permits himself to get into a dispute upon points of faith. If Mr. Chub, the Presbyterian tutor in the family, ever succeeds in drawing him into this field, as he occasionally has the address to do Meriwether is sure to fly the course; he gets puzzled with scripture names, and makes some odd mistakes between Peter and Paul, and then generally turns the parson over to his wife, who, he says, has an astonishing memory.

Good form, however, required a decent respect for the outward observances of religion. Among the aristocracy, the Episcopal Church was the best form; the Presbyterian, though less good, was socially acceptable; the revivalistic evangelism of the Methodists and Baptists flourished on the frontiers west of Charleston and Richmond.

The Puritan, as in *The Yemassee,* was likely to be thought a disagreeable fellow—crabbed in temperament, morbid in the pursuit of virtue. William Gilmore Simms preferred the Cavalier type. If religious ideas became articulate in the Charleston of Simms or the Baltimore of Kennedy, they were likely to take on a ration-

alistic, eighteenth-century flavor. The following statement by Kennedy, written on his sixty-fifth birthday, might have come from Franklin or Jefferson: "I endeavor to avoid the uncharitableness of sectarian opinion, and maintain an equal mind toward the various forms in which an earnest piety shapes the divisions of the world of believers,—tolerating honest differences as the right of all sincere thinkers, and looking only to the kindly nature of Christian principle as it influences the personal lives and conduct of men, as the substantial and true test of a sound religion."

Politics, however, were quite another matter. The Old South had a genius for politics, and nothing delighted the Charleston lawyer or the Virginia planter more than a political discussion. The hero of *Swallow Barn* was a Jeffersonian Democrat who supported the rights of the states against "the ambitious designs of the general government" and preferred the agrarianism of the South to the mercantilism and industrialism of the North. In early life Kennedy doubtless agreed with his hero; but he later opposed the new Jacksonian Democracy, satirizing it vigorously in *Quodlibet.* As a result of his growing connections with the business interests of Baltimore, he abandoned his early Jeffersonian principles, became a Whig advocate of the protective tariff for manufactures, and ended as a staunch Unionist and Republican.

Simms' political course was the reverse of Kennedy's. Whereas the latter began as a states' rights man and became a Unionist, Simms began as a Unionist and became an ardent champion of states' rights. New occasions teach new duties, Simms might have said. When he opposed nullification in South Carolina in 1832, he was supporting Old Hickory and the issue was the tariff. When he advocated nullification in South Carolina twenty years later, he was supporting Calhoun and the issue was slavery.

Although Simms was more democratic in his sympathies than Kennedy—possibly because of his youthful experiences on the Southwestern frontier, the Jackson country—the two men were agreed in the belief that the business of government belonged in the abler hands of the ruling class, which was ordinarily the planter aristocracy. Considerations of wisdom, prudence, and efficiency seemed to them to dictate such a view. As to the subject races—the Indian and the Negro—writers like Kennedy and Simms believed that their state of subjection argued their intrinsic inferiority to the whites and that the white superiors of the blacks should maintain them in humane tutelage until some distant time when emancipation might prove feasible. Kennedy no doubt agreed with his Virginia planter who said in the 1820's, "The question of emancipation is exclusively our own, and every intermeddling with it from abroad will but mar its chance of success." He painted a disarming picture of the master-slave relationship at Swallow Barn, where he found "an air of contentment and good humor and kind family attachment." He looked forward to gradual emancipation and the possible success of colonizing experiments. Simms' view was substantially the same in 1835, as his treatment of the subject in *The Yemassee* suggests. His later violent championship of slavery as "a wisely devised institution of heaven" can be understood only in the light of the sectional controversy of the 1850's, the literature of which is deferred until the next chapter.

Despite democratic sympathies discoverable in the works of Emerson, Hawthorne, Melville, Simms, and other writers of the period, the complete champion of the common man, irrespective of race, does not appear in American literature before Whitman. R.S.

II. Literary Trends

FOREIGN and DOMESTIC IMPULSES

The period of 1829-1860 was rich not only in ideas but also in artistic expression. Although New England produced more than its share of great artists, other sections also nurtured authors of whom they might well have been proud. The South was represented notably by such a fine novelist as William Gilmore Simms and by several minor fiction writers; the Southwest by a great group of humorists. Both the South and the East were the background for Edgar Allan Poe, who, though he has been considered in the preceding chapter as a transitional figure, flourished in the 1830's and 1840's. New York was represented by Herman Melville, whose best fiction ranks with the finest our country has produced, and also

by a preëminent poet, Walt Whitman. The consideration of Whitman, whose notable career began near the end of this period, in 1855, and extended until 1892, we postpone until later.

In designating this period the American Renaissance, critics have had in mind, doubtless, certain similarities it had to the English Renaissance. The English period, which preceded the American by about two and a half centuries, had produced a host of great writers and literary masterpieces. In the literary productions, whether they were created by giants such as Marlowe, Spenser, and Shakespeare or by lesser men, two impulses had been operative, one foreign and the other native. The exciting discovery of foreign literary works, both old and new, had accounted in part for such works as Shakespeare's *Julius Caesar,* based upon the *Lives* by the Greek biographer-historian Plutarch (translated by North in 1579), and for his *Othello,* derived from an Italian *novella* by Cinthio which had first appeared during Shakespeare's lifetime. The patriotic enthusiasm of the day, which had soared during the reign of Queen Elizabeth, found expression in Shakespeare's historical plays such as *Henry IV* and *Henry V* as well as in many of his dramas with foreign settings.

Similarly, during the American Renaissance both foreign and domestic influences, old and new, were notable. Respectful study of ancient and contemporary foreign works and travel abroad, which acquainted authors with European culture, left their marks upon not only the stuff but also the form of our literature. At the same time, proud of their unique democratic system and of the vast nation whose beauty and strength they were coming to know, many authors recounted the history of their land and attempted to depict accurately native scenes and characters.

THE ESSAY—A STANDARD FORM TAKES ON NEW QUALITIES

In this period, as in the preceding one, the essay was an important literary form; but a combination of old and new influences, as well as the personal predilections of each author, gave the type distinctive qualities.

Lowell: Critical, Reminiscent

Of the famous Massachusetts men, perhaps the nearest to traditional essayists was James Russell Lowell. Yet the patterns he followed obviously were not those of abstract, relatively impersonal essays such as some British authors had written in the eighteenth century. What he wrote was, as a rule, quite personal. A large share of his prose, that which dealt with issues of the day—candidacies, governmental policies, political theories—might have appeared in newspapers and did appear in magazines which took stands on current affairs.

Such prose, however, though it served its purpose well in its time, has interest now for political rather than literary historians. The prose by Lowell most important as literature is critical or reminiscent—"Shakespeare," "Keats" (p. 422), "Emerson," or "A Good Word for Winter," and the like. In both critical and reminiscent essays an important factor is the revelation of Lowell's personality—his wit, his learning, his enthusiasm, his sensitivity, his novel way of putting things. One of his volumes bore a title which might have been used for many—"Fireside Travels." He wrote as if he were putting down on paper the sort of talk an informed professor, blessed with a good sense of humor, might deliver to an intelligent college student who had dropped in for an evening chat by the library fire in Elmwood. Lowell poured out enthusiasms, drove home points by unctuously quoting now and then from old books pulled down from towering tiers of shelves, frolicked with classical allusions or Latin quotations, rolled felicitous phrases over his tongue. In particular, Lowell was a master of the epigram—a condensation of his observation and judgment into witty or striking phrases and sentences. Despite some unevenness in his achievements, Lowell did admirable work in the field of the personal essay.

Holmes: Conversational, *Spectator*-like

Holmes, like Howell, wrote much prose of a frankly utilitarian kind, in his case prose which made use of the doctor's scientific interests and training. Whatever such writing contributed to the thought of the period—and many believe that it contributed a great deal—the work in prose which showed Holmes at his inimitable best was more like the informal talk of a New England drawing room or boarding house than like a lecture delivered in the medical school. Such work took the unique form employed in the *Breakfast-Table* series (p. 396).

Literature which Holmes knew as a boy did its part to shape his essays. He was fond of remarking how much it had meant to him to have been born and reared "among books and those who knew what was in books," to have

had a chance, as a youngster, to page through first editions of eighteenth-century classics in the large library which his forbears had collected. "All men are afraid of books," he claimed, "who have not handled them from infancy." The form of his essays had its parallels with those written in the period with which he felt a spiritual kinship—the eighteenth century. This had been the period of his boyhood idols, Addison and Steele, authors of *The Spectator,* which as *The New Yorker* of its day reviewed, laughed at, or philosophized about people and events of eighteenth-century London.

The Autocrat, the Professor, and the Poet of Holmes' series were Spectators commenting upon contemporary manners; and boarding-house society, like the club to which the Spectator had belonged, was "very luckily composed of such persons as were engaged in different ways of life, and deputed as it were out of the most conspicuous classes of mankind." Sketches introduced characters in such a way as to catch *Spectator*-like types—the landlady's daughter, for instance: "(Aet. 19+. Tender-eyed blonde. Long ringlets. Cameo pin. Gold pencil-case on a chain. Locket. Bracelet. Album. Autograph book. Accordeon. Reads Byron, Tupper, and Sylvanus Cobb, Junior, while her mother makes the puddings. Says 'Yes?' when you tell her anything.)" Essays in the form of conversation—dialogues—had been used frequently in the eighteenth century: by Shaftesbury to comment upon ethics; by Berkeley, on philosophy; by Hume, on natural religion; and by Franklin, on a variety of subjects. In a similar manner the *Autocrat* papers record many conversations of the boarding-house members. James Boswell (1740-1795) had reported the sparkling talk and what Holmes called the "bow-wow manner" of autocratic Samuel Johnson; and Holmes acknowledged indebtedness to this model in the subtitle of the *Autocrat*—"Every Man His Own Boswell." In *Tristram Shandy* (1759) Laurence Sterne had recorded meandering talk interspersed with personal essays and punctuated with dashes in a manner foreshadowing Holmes' eccentric punctuation.

Nineteenth-century publications, nevertheless, probably suggested several devices which gave the *Autocrat* papers novelty. Possibly the magazine or the annual (which first achieved remarkable popularity in this period), with its alternation of story, essay, and poems, suggested a similar intermingling of types. The dramatic interplay of personalities common to fiction may have suggested the author's habit of giving his conversations a dramatic quality and of running a plot (like one in a magazine serial story) through his papers. Like Lowell, Holmes no doubt followed the example of nineteenth-century English essayists—such as Lamb and Hazlitt—in talking intimately of his life, his personal prejudices, his feelings. His Autocrat is, in effect, Holmes airing many of his own views to fellow boarders. "He was a well-behaved gentleman at table," testified the Autocrat's landlady, "only talked a good deal, and pretty loud sometimes, and had a way of turnin' up his nose when he didn't like what folks said. . . . Many's the time I've seen that gentleman keepin' two or three of the boarders settin' round the breakfast table after the rest had swallered their meal, and things was cleared off . . . and there the little man would set . . . a-talkin' and a-talkin',—and sometimes he would laugh, and sometimes the tears would come into his eyes. . . . He was a master hand to talk when he got a-goin'."

Thoreau and Emerson: Philosophical, Transcendental

A kind of discourse distantly related to informal talk left its imprint upon Thoreau's prose works, whether short pieces or longer ones in which numerous essays were linked, such as *Walden* (p. 490). For Thoreau kept a detailed journal (see p. 498) in which, from day to day, he set down his experiences, observations, and thoughts; from this he drew materials relevant to his essays, as needed. These diaries were written with artistic care, the passages in them were carefully integrated with other parts of essays in which they were used, and the sentences were scrupulously polished, so that in the end there was less improvisation than there perhaps appeared to be. In learning to shape sentences to his needs—by studying the metaphysical poets, by translating Greek dramas and passages from Greek poets, by aping English prose masters—Thoreau became indebted to earlier authors. "Every sentence," he wrote, with these models in mind, "is the result of long probation, and should be read as if its author, had he held a plough instead of a pen, could have drawn a furrow deep and straight to the end."

Since the conveying of rich personal experience and meaning by straight-furrow expressions was, in Thoreau's opinion, the chief task of the writer, what shaped his prose style more than anything else was his philosophy. To see what Thoreau was trying to do, the

ing led him to care little for strictly scientific writing. He attempted, instead, in his finished works, to write in the rôle of a philosopher. The scientist, according to Transcendental beliefs, recorded the workings of the mere intellect—the "Understanding." The great writer, the man of vision, by contrast, recorded the discoveries of a faculty above mind and more important—the "Imagination" or the "Reason," which intuitively perceived in natural objects the truth of which they were symbols. Said Thoreau:

> It is the subject of the vision, the truth alone, that concerns me. The philosopher for whom rainbows, etc., can be explained never saw them. With regard to such objects, I find that it is not they themselves [with which men of science deal] that concern me; the point of interest is somewhere *between* me and them [i.e., the objects]. . . .

Seeing the inner meanings of natural phenomena, the great writer employed those phenomena, Thoreau believed, to communicate those meanings. "My thought," he explained, "is a part of the meaning of the world, and hence I use a part of the world to express my thought."

When he filled his pages with vivid details, he attempted to present them so as to make them illuminating in the Transcendental sense: he wanted to see and set down particular instances of the universal law so that readers might find his own sense of "reality"—the higher kind—in them. His stay at Walden was a search for basic truths, "for the essential facts of life," and his circumstantial record of the stay (or more precisely of an ideal stay based upon sixteen years of records in his journal) was an attempt to convey his insights in meaningful symbols. And elsewhere than in *Walden* his constant practice was to show the eternally true in terms of the particular. "There was an excellent wisdom in him, proper to a rare class of men, which showed him the material world as a means and a symbol," wrote Emerson. "To him there was no such thing as size. The pond was a small ocean; the Atlantic, a large Walden Pond." Thus certain that the small stood for the large, Thoreau expounded higher meanings here and there in his writings by using paradoxes or philosophical generalizations, but

Emerson, though extraordinarily concrete for a philosopher, was more abstract than Thoreau. "In reading Thoreau," he said, "I find the same thought, the same spirit that is in me, but he takes a step beyond and illustrates by excellent images that which I should have conveyed in a sleepy generality." Trained in the composition of sermons and lectures, Emerson, in speeches such as "The Divinity School Address" and in essays often largely derived from his lectures, had the interest that preachers and lecturers frequently have in generalizing, in following lines of reasoning. Perhaps it is not inaccurate to say that while Thoreau's emphasis was particularly upon concrete things, Emerson's emphasis was upon philosophical relationships.

Emerson set forth what he conceived to be the task of the philosopher in his study of his idol Plato: it was to follow the natural course of the mind as it related the One which was the Oversoul to the Many, or as it related the Many to the One.

> The mind [he wrote] is urged to ask for one cause of many effects; then for the cause of that; and again the cause . . . self-assured that it will arrive at an absolute and sufficient one,—a one that shall be all . . . . Urged by an opposite necessity, the mind returns from the one to that which is not one, but . . . many; from cause to effect; and affirms the necessary existence of variety, the self-existence of both, as each is involved in the other. These strictly-blended elements it is the problem of thought to separate and reconcile.

Such was the idea Emerson had of the method of his essays, and a reader who has a great deal of patience and some skill in dialectic can, indeed, see that the essays are constructed according to this pattern.* Most readers, however, will not care to follow the involvements of his peculiar Transcendental structure. They will find that, though some of Emerson's essays have organizations such as they have seen in other compositions, most appear to lack coherence and unity. These readers will

* For some analyses of Emerson's essays according to this principle, see W. T. Harris, "Ralph Waldo Emerson," Atlantic, 1882, CL, 238-252 • Walter Blair and Clarence Faust, "Emerson's Literary Method," Modern Philology, 1944, XLII, 79-95

agree with Carlyle's remarks to Emerson in a letter about the *First Series of Essays:*

> The sentences . . . did not . . . always entirely cohere for me. Pure genuine Saxon; strong and simple; of a clearness, of a beauty—But they did not, sometimes, rightly stick to their foregoers and their followers: the paragraph not as a beaten *ingot,* but as a beautiful square *bag of duckshot* held together by canvas!

For them, the virtue of the essays will be found chiefly in individual sentences—sentences excellent for their extraordinary proverbial quality, for their compact expression of profound thoughts. Even such small units as sentences, however, show that Emerson, like other essayists of his day, combined old materials and methods with newly discovered ones which particularly appealed to him, thereby making his own purposeful writing seem a new thing.

AMERICAN FICTION COMES Into ITS OWN

When authors of the prewar period wrote fiction, they were inclined to consider carefully whether the setting of their narratives should be remote or near at hand in both time and space. Both kinds of settings were popular in the literature which was generally admired. German and British Gothic romances—or tales of terror—utilizing exotic backgrounds were extremely popular; so were Sir Walter Scott's historical novels, the last of which appeared in 1832. Across the ocean, in addition, flourished fiction which portrayed the manners and talk of common folk. This fiction had a large audience in the United States: England's Maria Edgeworth (1767-1849) and Charles Dickens (1812-1870), who wrote about common folk, were perhaps the most popular authors in this country—native authors included—during this period. When our authors told stories, they adapted both types of settings and characterizations to their own purposes.

Hawthorne: Romance and Allegory

Poe's aim, to create "a certain unique or single effect," led him, it will be recalled, to subordinate everything in the tale to the effect—setting, characterization, incidents, and tone or style. In so doing, he skillfully utilized characteristic backgrounds, characters, and incidents of Gothic romance. But Poe believed that the most soul-stirring effect could be achieved by blurred rather than precise details. Here, of course, he differed from Hawthorne, whom he greatly admired and at times rather badly misread—differed, as a matter of fact, from most New Englanders. In this period, one who saw a Yankee village from a distance noticed first of all the tidy white-spired churches which were an important and recurrent motif in the quiet green landscape—a motif which stood for a great force in the life of the section. Founded by zealots, New England for decades had produced moralizing literature, and it continued to produce it even when its authors wrote fiction. For Hawthorne, preëminent among New England fictionists, the theme of the tale was tremendously important. Although the Gothic influence was almost as pronounced with Hawthorne as it was with Poe and though sentimental fiction and allegorical narrative shaped his fiction, these devices were subordinated to Hawthorne's own New England purpose.

As has frequently been noticed, paraphernalia of the tale of terror—animated ancestral portraits, fiendlike villains, men who sold their souls to the devil, witches, unnatural portents—figured notably in this author's tales and novels. The influence of sentimental fiction, too, is clear—even in such a masterpiece as *The Scarlet Letter.* The penalty of seduction, a chief stock-in-trade of the sentimentalists of this frequently sentimental period, is the chief substance of this great romance. A typical character of the fiction of sensibility—a child bringing sunshine into the home and gently leading parents to virtue—is little Pearl, an important character in the work. The misled feminist and the ministering angel popular in fourth-rate novels are combined in the portrayal of Hester. Calvinistic villainy common in sentimental fiction was bestowed upon Chillingworth. The sensibility of the minister and his dying glimpses of heavenly glory are hackneyed motifs in the sentimental pattern. And in the tales, as in the longer works, one familiar with the fiction of feeling will see its stuff used by Hawthorne.

From childhood, in addition, Hawthorne had read with much pleasure a type of fiction not of his own time so much as of the distant past—the allegorical narrative. When in 1843 he listed the authors he considered most notable, it is significant that along with such conventional choices as Homer, Cervantes, Shakespeare, and Milton

he named masters of fable and allegory: Aesop, Ariosto, Spenser, and "Bunyan, moulded of homeliest clay, but instinct with celestial fire." Other influences in addition to his liking for these authors encouraged him to borrow from them. Like Emerson, he had philosophical ideas about the artist's duty to give meaning to natural objects when he depicts them. The artist, he felt, cannot exactly reproduce the grandeur of nature which itself suggested truth. His "only resource," he decided, was to substitute something "that may stand instead of and suggest the truth." His Preface to *The House of the Seven Gables* (p. 540) suggested that a great advantage of a Romance was that it "has fairly a right to present . . . truth under circumstances, to a great extent, of the author's own choosing or creation." This truth, moreover, might be the unifying element. "In all my stories, I think," he remarked, "there is one idea running through them like an iron rod, and to which all other ideas are referred and subordinate. . . ." Lowell's comment noted the same sort of ideational unity: "It is commonly true of Hawthorne's romances," he said, "that the interest centres in one strongly defined protagonist,—perhaps we should rather say a ruling Idea, of which all the characters are fragmentary embodiments."

Subtly adapted devices of allegorical fiction—for the portrayal of background, the depiction of character, and the selection of incidents—made possible Hawthorne's amalgamation of Gothic and sentimental elements in truly impressive fiction. Reminiscent of Spenser's Forest of Error or Bower of Bliss, in which many details of background are made to stand for the author's concepts, is Hawthorne's description of the exotic garden in "Rappaccini's Daughter" (p. 525). Characters, too, are made embodiments of ideas according to allegorical formulas. Sometimes older allegorists, for instance, associated significant articles or details of dress with a character: in *Pilgrim's Progress* Christian always labors under his heavy burden; in *The Faerie Queene* the knight has his "bloudie crosse." In "The Minister's Black Veil" (p. 506) Hooper wears his puzzling but meaningful bit of crepe. Again, older allegorists at times showed physical deformities which betokened spiritual deformities, as in the cases of Bunyan's Giant Despair and Spenser's Malbecco. Similarly, Hawthorne ingeniously conceived symbolic attributes of characters to signify their import: the gleaming smile of Minister Hooper and the perfume of Beatrice, to cite only two examples.

"The Artist of the Beautiful" (p. 513) both embodies and expounds Hawthorne's critical theory. The story treats, as its author says, "the troubled life of those who strive to create the beautiful," and the opening paragraph establishes a contrast—between the artist, working in bright light, and the thwarters of the artist, standing in darkness—which is important throughout the tale. Warland, who is given the attributes of the eternal artist, is the creator of a butterfly in the beauty of which is "represented the intellect, the sensibility, the soul" of such a creator. Each of the other characters is, in one way or another, a thwarter of the artist, and each is so presented as to signify one of the hostile forces which work against art. All the details, images, and happenings in the tale are richly fused with the meaning—and this fusion is highly typical of the unique art which Hawthorne discovered for himself.

Melville: Symbol and Actuality

In 1850 Hawthorne and Melville, living a few miles apart but not yet personally acquainted, read one another's writings and found them good. What each author said about the other indicates likenesses and differences. Melville admired Hawthorne for confronting the darker aspects of life. Hawthorne wrote: "I have read Melville's works with progressive appreciation of the author. No writer ever put reality before the reader more unflinchingly than he does in *Redburn* and *White Jacket*. *Mardi* is a rich book, with depths here and there that compel a man to swim for his life. It is so good that one scarcely pardons the writer for not having brooded long over it, so as to make it a good deal better."

Clearly there was a kinship between Melville and Hawthorne in artistry as well as in philosophy. Both thought that the theme of a fictional work—that which is more than surface meaning—was very important. Both thought that an author should manipulate imagery, characterization, and plot to convey his ideas. But Hawthorne indicated a difference when he complained that his neighbor had not "brooded" enough over his material. Melville's fiction, if we may employ Hawthorne's terms, did not subdue "the Actual." "He felt instinctively," as William Ellery Sedgwick asserts in

Herman Melville, "that the effective use of a fact as symbol, having both inward and outward reference, depended on the preservation of its outward reality." Melville's aim—comparable with the way of writing which Hawthorne contrasted with his own achievement in the Preface to *The Scarlet Letter*—was "to diffuse thought and imagination through the opaque substance of today, and thus to make it a bright transparency . . . to seek, resolutely, the true and indestructible value that lay hidden in the petty and wearisome incidents, and ordinary characters. . . ." Though Hawthorne could not thus simultaneously convey meaning and a sense of actuality, he could admire others who were able to, since he recognized that writing of this type achieved an objective similar to his own in a contrasting fashion.

Mardi is perhaps not the best illustration of Melville's typical procedure. Despite Hawthorne's criticism, this work is probably closer to the New Englander's conception of "the Romance" (p. 540) than anything else Melville wrote. Romance though it is, it includes many more earthy details than Hawthorne would ever have been likely to insert into a typical piece of fiction. And when one turns to other, more typical, works by Melville —works in which he presents many particular and vivid details, based on fact and experience, representing the everyday lives of seamen—the contrast becomes very clear. His selection and presentation of such facts made them actual, near at hand rather than remote, and at the same time meaningful. "Benito Cereno" (p. 550)—not only one of Melville's most typical stories but also one of his best—is a good example. Based as it is upon a first-hand account of Captain Delano's real experience, it loses little of its factuality when it is transformed into fiction. At the same time the changes in the nature of the details and in the structure of the narrative make possible the development of a significant theme.

Simms: Romance and Reality

The portrayal of real life without much philosophizing was the purpose of several fictionists contemporary with Melville. Some of these clearly patterned their work after Washington Irving and his school: these filled "sketchbooks" with little pictures of life in a section. They combined charm of manner with truth to the pleasanter aspects of life.

William Gilmore Simms, down in the South, belonged to a somewhat sturdier tradition. According to his own avowal, Simms tried to adhere to "real life" in presenting man, not only in his happier moods but in "all his phases." Influenced by Cooper and Scott, however, in many of his novels he turned his attention to the past. Furthermore, he unfortunately followed the example of his models in creating a number of colorless heroines and stuffy heroes. Nevertheless, in presenting the comic Porgy and a scattering of poor whites and in describing Southern scenes, he did manage to infuse a good deal of reality into his pages.

HORSE SENSE and HUMOR

Still it remained for the humorists of the day, both Northern and Southwestern, to get the largest amount of common life into their depictions. Their technique for showing scenes of ordinary life was, in important ways, the freshest of the period. So far did the humor of the Southwest move in the direction of realism, as a matter of fact, that the editors have placed it in a later chapter, where its value in preparing for postwar realism may be clearly shown.

The ancestry of the New England humorists of the day, an outstanding group, is to be traced less directly to the eighteenth-century wits who inspired Holmes than to the portrayers of American character in almanacs, tales, and travel books of the nineteenth century. Scott's fiction, too, with its representation of low characters by the depiction of manners, dress, and speech, had some value as a model for these limners of folk indigenous to a particular part of the country.

Preachments figured in the writings of almost all the most notable Northern humorists. Seba Smith led the group to see the great possibilities of humorous writing with a purpose when, in 1830, he launched his creation, Jack Downing, upon a career destined to last (with some interruptions) until the eve of the Civil War. In letters which he wrote to the homefolk or to newspaper editors, Smith's character Jack told of his adventures in politics, and now and then one of the family would write Jack news of how things were going back in Downingville. Since Jack purportedly spent a great deal of time with leading public men in Washington, on the battle front during the Mexican War, and in the European

capitals, many interesting things about current controversies turned up in the letters.

So wide a following did Jack gain that many New England humorists, following his example, created Down East characters. And when, in the days of the Mexican War, James Russell Lowell was looking around for a way of preaching his views to a wide public, he, like Smith, hit upon the idea of letting one Hosea Biglow speak for him. The result was that this scion of a Brahmin family wrote some of the most memorable examples of this kind of humor.

Written to appeal chiefly to the relatively uneducated Yankee farmers and mechanics, humorous pieces had to dramatize the way of thinking prevalent in that class. According to that way of thinking the best person to point out the path to what was true and what was right was one with sound common sense—a person who had been born with a sound head, who had had experiences in the world of men rather than of books, and who arrived at his solutions of current problems on the basis of those experiences.

This philosophy, given new prestige by its triumphs in Jacksonian politics, determined the nature of the characters to appear in these papers—either horse-sense characters such as Jack Downing or Hosea Biglow, fool characters such as Birdofredum Sawin, or both. The characters blessed with common sense offered sound solutions to current problems; the chump characters urged actions which were patently muddleheaded. Since the earmarks of either kind of character would be his background, his way of thinking, his way of talking, it was necessary to show something about his environment and to let him talk a good deal. But since the pieces had to appear in the columns of the rather skimpy newspapers of the day, they had to be short.

These factors largely determined the nature of the Yankee humorous writings of Smith, Lowell, and dozens of others such as George E. Foxcraft, Tobias H. Miller, Matthew F. Whittier, and Thomas Chandler Haliburton. The characters divided sharply on the basis of their being either common-sensible or the opposite, and various devices were used to make clear to which class they belonged. Their talk was that of the uneducated—the native dialect which more and more, as time passed, was to shape the style of American literature. The talk showed, in brief snatches, what kind of minds they had, what their background and experience had been, what they had figured out on the basis of their experience. Often, if they were strong on common sense, they uttered aphorisms of the sort favored by ordinary men in America ever since the days of Poor Richard. (Examples are Jack Downing's "Sometimes rum gets folks so they can't see at all—so do the newspapers"; or Hosea Biglow's "The moral question's always plain enough; it's jes' the human-natur' side thet's tough.") Often, too, if their creators knew well the background and characteristics appropriate for them, these salty characters were portrayed with an abundance of authentic detail—and the matter as well as the manner of the fiction about them was both native and novel.

POETRY: A COMBINATION of the OLD and the NEW

The nearest approach in this period to such humor in poetry—by authors other than Lowell, of course—is offered by the songs of the Singers of the West (pp. 614-619). These were in the tradition of ancient and modern balladry—composed by the people (or by an artist who felt and thought as they did), for the people, and kept alive by the people. At this time, little attention was paid to such crude poems, but in a later period many serious poets learned much about art and life from these earthy and vigorous songs.

For the most part, the poetry of this prewar period had more of the elegance and remoteness characteristic of Poe than of the simplicity and immediacy of the author of "Hell in Texas." The background of the cultured New England poets led them to think of poetry as the height of elegance. Among the books which Holmes listed as obligatory reading for a boy of a good Boston or Cambridge family was "Pope, original edition, 15 volumes, London, 1717." Not only Holmes but others as well who had learned to like literature as youngsters in ancestral libraries had a natural tendency to worship somewhat old-fashioned literary gods. Bowdoin and Harvard were likely to encourage this tendency with their classical curriculums and their courses in writing based upon Blair's old-fashioned, square-toed *Rhetoric.* When Emerson was in Latin school, his favorite declamation was from the "Pleasures of Hope," a

typical eighteenth-century philosophizing poem written by Campbell in heroic couplets. When he versified an old nursery story for his brother, Emerson wrote:

> So erst two brethren climb'd the cloud capp'd hill,
> Ill-fated Jack and long-lamented Jill,
> Snatched from the crystal font its lucid store,
> And in full pails the precious treasure bore.
> But ah! by dull forgetfulness oppress'd
> (Forgive me, Edward), I've forgot the rest.

Many gems of expression in these lines might have been by polished Alexander Pope. The superstition that this same Pope was "the greatest poet that ever lived" was, Lowell confessed, inculcated in him by childhood teachers; and, similarly, the other famous New England authors from babyhood to manhood listened to encomiums of the older poets.

But the tradition of culture, though it fostered approval of old ideas and models, also fostered the discovery and development of new ones. The new forces it put to work in Massachusetts made certain that the prominent authors would modify, in various fashions, the ways of looking at things and the ways of voicing attitudes. Literary men of Massachusetts might be sketchily informed about the nation to the West and to the South, but in this period they were likely to widen their horizons by traveling extensively in the Old World. As Parrington has noticed, the New England Renaissance "involved three major strands: the social Utopianism that came from revolutionary France; the idealistic metaphysics that emerged from revolutionary Germany; and the new culture that spread with the development of literary romanticism . . . these strands . . . are but different, new world phases of a comprehensive European movement. . . ." The widespread revolutionary spirit invaded both the quiet Cambridge libraries and the woods by Walden Pond.

From the old and new books which they discovered abroad and at home, the New England authors took hints about poetic techniques. They learned procedures in writing from modern writers such as Goethe, Wordsworth, Coleridge, and Keats and from those of other times, such as the writers of Norse epic poems, the authors of ancient Oriental works, and Plato and the Neo-Platonists. In much of the poetry of the section, as a result, there was a combination of the old and the new—and each author's conception of poetry determined the nature of the combinations he made.

Holmes: "Florist in Verse"

Much of Holmes' poetry had a periwig-and-velvet-breeches quality about it. In such verse there were so many similarities in form and substance to that of Goldsmith, Pope, Gray, Campbell, Gay, and others of their century that Holmes appeared, in the words of one critic, to be "less a revival of the eighteenth century than its latest survival."

Holmes' kinship with the coffee-house gentry was in part a result of his paying them the tribute of imitation, in part the consequence of his seeing poetry, as they often had, as a graceful social accomplishment. "I'm a florist in verse," he sang, "and what would people say, if I came to a banquet without my boquet?" So successful was he at writing "by request of friends" that around Boston, almost invariably, first-class celebrations, anniversaries, banquets, receptions, and professional meetings were likely to list on the program an appearance of Dr. Holmes, poem in hand. Again, he wrote verse appropriate for reading at more informal gatherings, "at the breakfast table," perhaps, or "over the teacups."

All this had an important effect upon his poetry. For *vers de société* or *vers d'occasion,* he saw as well as had the Neoclassicists, had to have certain qualities of tone and form. In it deep emotion was as much out of place as it would be in a social group; the tone had to be light—wit and pathos were better than deep feeling. Much depended upon exactly the right phrasing—polished but conversational, graceful, witty, condensed. With these points in mind, Holmes wrote some of the finest familiar verse this country has produced.

Yet Holmes himself in the end considered his most typical poems evidences of his talent rather than of his genius. Eventually he came to feel that his earliest conception of poetry, that of a young man "trained after the schools of classical English verse," had represented "simple and partial views," since it had dealt too exclusively with "the constructive side of the poet's function." "I should rather say," he continued, "if I were

called upon now to define that which makes a poet, it is the power of transfiguring the experience and shows of life into an aspect which comes from his imagination and kindles that of others." His occasional poems, he told Lowell, were "for the most part to poetry as the beating of a drum or tinkling of a triangle is to the harmony of a band." True poetry, he believed, was inspired: its thought and to some extent its form came to a poet in an intuitive flash (see p. 390). Only once during his career did he feel sure that he had written a poem which was inspired—"The Chambered Nautilus" (p. 394).

This romantic concept of the inspired poet was shared by all the famous New England literary men, both those of Cambridge and those of Concord. These men differed only in their ideas about the extent to which a poem was inspired as compared with the extent to which it was consciously contrived. The Brahmins rather tended, with Holmes, to see careful artistry playing an important part. They also joined him in allowing the older conception of poet as teacher to shape their writings.

Longfellow: Master of Words and Accents

Longfellow in particular has been praised by recent scholars for his technique and scolded for his didacticism. His prosodic skill was developed most definitely, perhaps, by his achievement of the exacting task of changing over to English, without signs of painful effort, the *chansons* of French troubadours, the *lieder* of German lyricists, the *terza rima* and sonnets of Italians, the eclogues of Latin poets, the sagas of Finnish bards. However he acquired his skill, as Professor Shepard says, "Together with his thought, he had at the same moment a clear notion of the form in which it could be expressed most effectively . . . and it is for this reason that in his better work the thought seems to fill the form without crowding or inflation."

Longfellow's art concealed art largely because of its simple naturalness. Unlike most poets, he managed to get both rhyme and rhythm without using many unusual words and, as a rule, without changing the normal order of phrases and sentences. What Professor Allen, in his *American Prosody,* says about the hackneyed poem "The Village Blacksmith" hints at similar compliments which might be paid to more important achievements: "Its severe simplicity of diction and regularity of rhythm is likely to make us underestimate the technical achievements. . . . There are only two inversions in the whole piece: 'a mighty man is he' and 'onward through life he goes.' The natural speech and syntax . . . was practically unique in American versification in 1839." The representative poems by Longfellow in this volume (pp. 374-388) show his simple diction and natural grammatical arrangement. Also, it happens, they show him using without ostentation or evident difficulty each of the ordinary meters (iambic, anapestic, dactylic, and trochaic), some of them in unusual ways, and combining them with several metrical devices which are quite extraordinary. (Note the refrain of "My Lost Youth," and the spacing of accented syllables in "The Skeleton in Armor," "Jugurtha," and "The Tide Rises.")

This master of words and accents could, at times, make each word, each line do its job. The plots of his best narratives he developed in excellent order. His best lyrics—whatever might be said against their preachments—at least have the unity which development of a single thought or sentiment gives them. The unity of thought in such poems as "The Rainy Day," "The Arrow and the Song," and "Jugurtha" cannot be surpassed; in each the first part offers some image, and the second part suggests, usually with the aid of incremental repetition, the spiritual connotation in a detailed parallel. Similarly, "The Bridge" starts with a description of a scene, then passes to the meaning of the scene to the poet, and ends by applying the meaning to all men. In such simple structures, there is integration of the sort important in sonnets, a form particularly well handled by Longfellow.

Despite such prosodic skill and such unity and coherence of thought, Longfellow often failed to please for three reasons. The thought which held together a lyric of his was too often platitudinous. Secondly, more even than Holmes or Lowell, he was a bookish, library poet. One sees why Whitman complained of Longfellow's poetry being "reminiscent, polish'd, elegant, with the air of finest conventional library, picture-gallery or parlor, with ladies and gentlemen in them. . . ." Finally, although his poems were logically constructed, they were likely to be badly put together emotionally—or connotatively. That similes and metaphors should be more than handsome ornaments—that they should be as organic to the poem as the thought—he apparently

did not conceive. Hence in many of his poems he used imagery which modern readers find incongruous, and in only a few did he avoid jarring connotations.

Lowell: Pioneer in Freedom of Verse Form

Professor Howard Mumford Jones has noticed that "readers do not turn to Lowell as they do to Longfellow, for a body of verse; and though certain lyrics are individual favorites, they are such as two or three other poets might have written. 'To the Dandelion' is Keatsian; many readers confuse 'The First Snowfall' with Bryant's poem on the same theme, and 'The Present Crisis' inevitably suggests Whittier." This comparison can be carried further: *A Fable for Critics* (p. 407), with its Pope-like critiques, suggests Holmes; and "Auspex" (p. 432) might well have been written by Longfellow. Lowell perhaps busied himself too much with other matters to develop a poetic style all his own.

Yet in some of Lowell's work there are merits not discoverable in Holmes or Longfellow. His *Biglow Papers* are the most effective political satire in verse yet written in America, and *A Fable for Critics* combines sharply phrased wit with shrewd literary judgments as no other poetry in this country has. In his famous "Commemoration Ode" he showed ability in shaping a long contemplative poem beyond the skill of his fellow Brahmins. He had exactly the perception of the emotional relationship that Longfellow lacked. "My notion of a true lyric," he said, "is that the meaning should float steadfast in the centre of every stanza, while the vapory emotions . . . float up to it and over it, and wreathe it with an opal halo which seems their own, but is truly its own work. The shades of emotion over, there floats the meaning, clear and sole and sharp-cut in its luminous integrity. . . ." Lowell wrote some poems in which the figurative language thus related the emotion it connoted to the meaning as a whole: "To the Dandelion" (p. 406), "The Courtin' " (p. 424), and "Auspex" are instances. Finally, Lowell did make the sort of technical contribution to American versification best suggested by his irregular "Ode Recited at the Harvard Commemoration." In Professor Allen's words, this poet's prosody "introduced into American poetry the freedom which we find in the first two or three decades of nineteenth-century English poetry. . . . This freedom includes a more varied placing of accents and the combination of different kinds of feet to produce a suggestiveness of tone and cadence. . . . Yet . . . Lowell's versification is more important for the lessons it teaches than for the poetic beauty it achieved."

Emerson and Thoreau: Rebels Against Nineteenth-Century Forms

Some free verse lines of the Transcendentalist, Ralph Waldo Emerson, serve to set off his aims in poetry from those of the Brahmins who have just been considered:

> I will not read a pretty tale
> To pretty people in a nice saloon
> Borrowed from their expectation,
> But I will sing aloud and free
> From the heart of the world.

Thoreau, another Transcendentalist, also stated a view of writing at variance with that of the genteel Cambridge men when he wrote: "Enough has been said in these days of the charm of fluent writing. . . . The surliness with which the woodchopper speaks of his woods, handling them as indifferently as his axe, is better than the mealy-mouthed enthusiasm of the lover of nature. Better that the primrose by the river's brim be a yellow primrose, and nothing more, than that it be something less." In some ways, so far as form and substance were concerned, the most radical of the ante-bellum New England versifiers were the Transcendentalists, Emerson in a few great poems and Thoreau in even fewer.

"The form [of Transcendental poetry]," Cooke notes, "is often rugged, the verse is halting and defective. The metres stumble, and . . . rhymes are not correct. The poems are . . . metaphysical, subtle, and complicated in their thought. . . ." Unlike Longfellow, who acquired his free and easy ways with verse by echoing foreign metrical schemes, or Lowell, who came late enough to learn lessons from Shelley, the Transcendentalists found their chief models in a seventeenth-century school of unorthodox versifiers. From the metaphysical poets—Marvell, Crashaw, Donne, and others—who had rebelled against the dulcet melodiousness of Elizabethan lyricists, these rebels against the nineteenth-century saccharinity learned something about the forcefulness which results from breaking up regular patterns. It may be true, as some critics claim, that the very infrequency of the Con-

cord men's excursions into verse had something to do with the harshness of their songs. But the most important cause for their radicalism, probably, was that the nature of Transcendental poetry, like that of Transcendental prose, was influenced strongly by the philosophy of its creators.

According to this philosophy the matter and the expression of a poem, one and inseparable, were both spontaneously inspired. Theoretically, this would lead a Transcendentalist, trusting his "instinct," to set down his songs without change; actually, it did cause the Transcendentalists to tinker with initial expressions less than other poets did. And the intuitive expression, in their opinion, would carry to others the message the poets themselves had been vouchsafed. It would do this because the poets would pass on to readers the same symbols which originally had suggested eternal verities to the poets. "Things," said Emerson, "admit of being used as symbols, because nature is a symbol, in the whole, and in every part." The whole theory of Emerson and his group has been admirably summarized by Miss Gorely (in "Emerson's Theory of Poetry," *Poetry Review,* July-August 1931, XXII, 272-273):

> Emerson . . . believed that poetry . . . comes into being as the result of inspiration. In that moment the poet sees the very essence of things. . . . The poet makes the unseen visible by means of language. But he is not the conscious creator. Vision, also, shows him the symbols and the thought takes its own form in language that is rhythmical. Because of this, there is a certain indwelling beauty of poetry . . . poetry is spiritual and forms a link between the visible and invisible worlds.

Thus the symbols were important, and the ideas of deep perceptions for which the symbols stood were even more important—so significant that, as in earlier metaphysical poetry, they controlled everything else in a poem. The sentiment often cultivated by the Brahmin poets was practically crowded out by the thought. Since only imagery which developed such a thought was relevant, merely ornamental imagery was avoided. And the concept being expressed determined the general structure of the poem. "It is not metres, but metre-making argument," said Emerson, "that makes a poem,—a thought so passionate and alive, that, like the spirit of a plant or an animal, it has an architecture of its own and adorns nature with a new thing." This theory suggested the four chief methods for ordering material used by Emerson and Thoreau: (1) as in "The Snow-storm" (p. 468) or "Though All the Fates" (p. 503), the poet might give a description of an object or scene which embodied and implied meaning; (2) as in "Brahma" (p. 475) or "The Summer Rain" (p. 501), the poet might list a number of parallel phenomena; (3) as in "Each and All" (p. 466) or "Inspiration" (p. 502), the poet might record the process by which he arrived at a great truth; (4) as in "Rumors from an Æolian Harp" (p. 500), the poet might record a state of inspiration.

Logically, the meter in such poems should be appropriate for the emphasis of both the symbols and the truths for which the symbols stand. "There is a soberness," wrote Thoreau, "in a rough aspect, as of unhewn granite, which addresses a depth in us, but a polished surface hits only the ball of the eye." And Emerson, in "Merlin" (p. 469), pointed out that:

> The kingly bard
> Must strike the chords rudely and hard,
> As with hammer or with mace;
> That they may render back
> Artful thunder, which conveys
> Secrets of the solar track. . . .

In these ways, the Transcendental poetry of Emerson and Thoreau looked backward to seventeenth-century metaphysical poetry, forward to the poetry admired most in the third and fourth decades of the present century.

Thus in the essay, in fiction, and in poetry, the authors of the period 1829-1860 combined old and new materials and techniques. As a result, these writers gave memorable expression to the ideas about which our countrymen were excited during the American Renaissance, one of the richest periods in our literary history. W.B.

Henry Wadsworth Longfellow

1807 • 1882

During his lifetime Henry Wadsworth Longfellow was the best-loved American poet, and even today his poetry is popular because it says what many people want to be told in ways generally considered "poetic." Critics who disapprove of a large share of Longfellow's verse do so because they feel that its thought is commonplace, its mood sentimental, and its form not well related to its substance. Such critics are likely to admit, however, that at his infrequent best he wrote poetry which deserves to be treasured by fastidious readers.

Longfellow was born in Portland, Maine, on February 27, 1807. He was educated at Bowdoin and abroad, and he taught modern languages at Bowdoin (1829-1835) and then, after a second trip abroad, at Harvard (1837-1854). Meanwhile, his fame, which had begun to flourish when *Voices of the Night* was published in 1839, was augmented by such books as *Ballads and Other Poems* (1841) and *Evangeline* (1847). Works published after his retirement from Harvard—*Hiawatha* (1855), *The Courtship of Miles Standish* (1858), *Tales of a Wayside Inn* (1863), and *Christus: A Mystery* (1872)—brought still greater appreciation. Carefully sheltered in childhood and early manhood, never worried by poverty, the poet lived most of his days in peaceful old Craigie House in Cambridge. Professor Shepard has pictured him there as "he sat by the fireside writing verse on his knee with his eyes closed, now and then striding to the window to look down the vista of bristling elms to where the River Charles was 'writing the last letter of his name.'" When Howells saw

him at the height of fame, he thought he was perfectly characterized as "the white Mr. Longfellow."

These and other similar details have long caused scholars to think of Longfellow's life as always sheltered and placid. Recent study by Lawrance Thompson, however, has shown that Longfellow won such peacefulness only after a youth full of storm and struggle. His fight, against odds, to become an author, his desperate sorrow following the death of his first wife in 1835, and his torture of spirit during the seven-year courtship of his second wife, Frances Appleton, all left their imprint on his life and work.

Because Europe was the background for some of his deepest emotional experiences and because he discovered new possibilities in literature during his study there, Longfellow was impelled to acquaint his countrymen with the Old World as he saw it. Culture-starved, painfully aware of their crudeness as European travel-book writers showed it, Americans were delighted with Longfellow's translations of European poems and his romantic depictions of the picturesque Old World. When he turned to the depiction of the America of the past (as he frequently did), one of his services was, in a sense, to "Europeanize" it—to show that this country, too, had mellow legends which might be given something like Old World treatments.

Much of Longfellow's verse has a simple pattern: a story is told, an object or scene is described, and then a moral which figuratively makes use of the story, object, or scene concludes the poem. The morals, some derived from German authors, have popular appeal; typical ones are: "Fight on"; "Others sorrow, too"; and "Sorrow must end." Many times there are striking figures of speech not only in the closing lines but also in earlier lines, but too often these are not related to one another or—in a basic way, at least—to the poem as a whole. The poems are written in relatively simple (sometimes prosaic) words and in memorable rhythms. When Longfellow avoids obvious preachments, sentimental tone, flat words, and loosely related figures, he does his best work. Sometimes, as in *The Courtship of Miles Standish,* he tells a story masterfully and employs a gentle sort of humor with excellent effect. At other times, as in some sonnets and in some lyrics—"Hymn to the Night" and "The Tide Rises," for instance—his economically managed imagery, his emotional restraint, his sure diction, and his masterfully handled rhythms create memorable verse.

A Psalm of Life

When, in 1838, Longfellow gave a new course on "Literature and the Literary Life" at Harvard, his study of Goethe was particularly useful in helping him to formulate a workable philosophy. The period was a trying one in Longfellow's life. His first wife's death had been and still was the cause of much sorrow. His courtship of Frances Appleton seemed doomed to failure. In Goethe, Longfellow found a suggestion for living when "the time is out of joint"—"to bear one's self doughtily in Life's battle: and make the best of things." This was the message expressed in "A Psalm of Life." "I kept it some time in manuscript," he wrote, "unwilling to show it to any one, it being a voice from my inmost heart, and expressing my feelings at a time when I was rallying from the depression of disappointment." Many repetitions have robbed the poem of its early fire, but it is important to remember that at the time it appeared this attack on acquiescence fostered by either dreamy romanticism or Calvinistic fatalism said something of significance to many readers.

Tell me not, in mournful numbers,
  Life is but an empty dream!
For the soul is dead that slumbers,
  And things are not what they seem.

Life is real! Life is earnest!
  And the grave is not its goal;
Dust thou art, to dust returnest,
  Was not spoken of the soul.

Not enjoyment, and not sorrow,
  Is our destined end or way; 10

But to act, that each to-morrow
  Find us farther than today.

Art is long, and Time is fleeting,
  And our hearts, though stout and brave,
Still, like muffled drums, are beating
  Funeral marches to the grave.

In the world's broad field of battle,
  In the bivouac of Life,
Be not like dumb, driven cattle!
  Be a hero in the strife!

Trust no Future, howe'er pleasant!
  Let the dead Past bury its dead!
Act,—act in the living Present!
  Heart within, and God o'erhead!

Lives of great men all remind us
  We can make our lives sublime,
And, departing, leave behind us
  Footprints on the sands of time;

Footprints, that perhaps another,
  Sailing o'er life's solemn main,
A forlorn and shipwrecked brother,
  Seeing, shall take heart again.

Let us, then, be up and doing,
  With a heart for any fate;
Still achieving, still pursuing,
  Learn to labor and to wait.

1838

Hymn to the Night

'Ασπασίη, τρίλλιστος

Longfellow said he wrote this poem in the summer of 1839, "while sitting at my chamber window, on one of the balmiest nights of the year. I endeavored to reproduce the impression of the hour and scene." The poem offers a way of coping with sorrow contrasting with the one suggested in "Psalm of Life." Here nighttime reveries, rather than heroic action, bring surcease of sorrow.

I heard the trailing garments of the Night
  Sweep through her marble halls!
I saw her sable skirts all fringed with light
  From the celestial walls!

I felt her presence, by its spell of might,
  Stoop o'er me from above;
The calm, majestic presence of the Night,
  As of the one I love.

I heard the sounds of sorrow and delight,
  The manifold, soft chimes,
That fill the haunted chambers of the Night,
  Like some old poet's rhymes.

From the cool cisterns of the midnight air
  My spirit drank repose;
The fountain of perpetual peace flows there,—
  From those deep cisterns flows.

O holy Night! from thee I learn to bear
  What man has borne before!
Thou layest thy finger on the lips of Care,
  And they complain no more.

Peace! Peace! Orestes-like I breathe this prayer!
  Descend with broad-winged flight,
The welcome, the thrice-prayed for, the most fair,
  The best-beloved Night!

1839

The Skeleton in Armor

In a letter to his father written in December 1840, Longfellow announced that he had prepared this ballad, "which has been lying by me for some time," for the press. "It is connected," he said, "with the old Round Tower at New-

---

Hymn . . . • 'Ασπασίη, τρίλλιστος • Welcome, three times prayed for • 21 Orestes-like refers to the character Orestes in the plays of Aeschylus At the end of the tragedy The Choephorae, Orestes, having avenged his father by murdering his mother, is pursued by the Furies. In a sequel he finds peace

port. The skeleton in armor really exists. It was dug up near Fall River, where I saw it some two years ago. I suppose it to be the remains of one of the old Northern sea-rovers. . . . Of course, I make the tradition myself; and I think I have succeeded in giving the whole a Northern air."

Reviewing **Ballads and Other Poems** (1841), in which the ballad was published, Poe said: "In 'The Skeleton in Armor' we find a pure and perfect thesis artistically treated. . . . The metre is simple, sonorous, well-balanced, and fully adapted to the subject." Scholars have pointed out Longfellow's indebtedness in this ballad to Michael Drayton's poem on the battle of Agincourt and to Shelley's "The Fugitives."

"Speak! speak! thou fearful guest!
Who, with thy hollow breast,
Still in rude armor drest,
  Comest to daunt me!
Wrapt not in Eastern balms,
But with thy fleshless palms
Stretched, as if asking alms,
  Why dost thou haunt me?"

Then from those cavernous eyes
Pale flashes seemed to rise,
As when the Northern skies
  Gleam in December;
And, like the water's flow
Under December's snow,
Came a dull voice of woe
  From the heart's chamber.

"I was a Viking old!
My deeds, though manifold,
No Skald in song has told,
  No Saga taught thee!
Take heed that in thy verse
Thou dost the tale rehearse,
Else dread a dead man's curse;
  For this I sought thee.

"Far in the Northern Land,
By the wild Baltic's strand,
I, with my childish hand,
  Tamed the gerfalcon;
And, with my skates fast-bound,
Skimmed the half-frozen Sound,
That the poor whimpering hound
  Trembled to walk on.

"Oft to his frozen lair
Tracked I the grisly bear,
While from my path the hare
  Fled like a shadow;
Oft through the forest dark
Followed the were-wolf's bark,
Until the soaring lark
  Sang from the meadow.

"But when I older grew,
Joining a corsair's crew,
O'er the dark sea I flew
  With the marauders.
Wild was the life we led;
Many the souls that sped,
Many the hearts that bled,
  By our stern orders.

"Many a wassail-bout
Wore the long winter out;
Often our midnight shout
  Set the cocks crowing,
As we the Berserk's tale
Measured in cups of ale,
Draining the oaken pail
  Filled to o'erflowing.

"Once as I told in glee
Tales of the stormy sea,
Soft eyes did gaze on me,
  Burning yet tender;
And as the white stars shine
On the dark Norway pine,
On that dark heart of mine
  Fell their soft splendor.

"I wooed the blue-eyed maid,
Yielding, yet half afraid,
And in the forest's shade
  Our vows were plighted.
Under its loosened vest

Fluttered her little breast,
Like birds within their nest
  By the hawk frighted.

"Bright in her father's hall
Shields gleamed upon the wall,
Loud sang the minstrels all,
  Chanting his glory;
When of old Hildebrand
I asked his daughter's hand,
Mute did the minstrels stand
  To hear my story.

"While the brown ale he quaffed,
Loud then the champion laughed,
And as the wind-gusts waft
  The sea-foam brightly,
So the loud laugh of scorn
Out of those lips unshorn,
From the deep drinking-horn
  Blew the foam lightly.

"She was a Prince's child,
I but a Viking wild,
And though she blushed and smiled,
  I was discarded!
Should not the dove so white
Follow the sea-mew's flight?
Why did they leave that night
  Her nest unguarded?

"Scarce had I put to sea,
Bearing the maid with me,
Fairest of all was she
  Among the Norsemen!
When on the white sea-strand,
Waving his armèd hand,
Saw we old Hildebrand,
  With twenty horsemen.

"Then launched they to the blast,
Bent like a reed each mast,
Yet we were gaining fast,
  When the wind failed us;
And with a sudden flaw
Came round the gusty Skaw,
So that our foe we saw
  Laugh as he hailed us.

"And as to catch the gale
Round veered the flapping sail,
'Death!' was the helmsman's hail,
  'Death without quarter!'
Midships with iron keel
Struck we her ribs of steel;
Down her black hulk did reel
  Through the black water!

"As with his wings aslant,
Sails the fierce cormorant,
Seeking some rocky haunt,
  With his prey laden,—
So toward the open main,
Beating to sea again,
Through the wild hurricane,
  Bore I the maiden.

"Three weeks we westward bore,
And when the storm was o'er,
Cloud-like we saw the shore
  Stretching to leeward;
There for my lady's bower
Built I the lofty tower,
Which, to this very hour,
  Stands looking seaward.

"There lived we many years;
Time dried the maiden's tears;
She had forgot her fears,
  She was a mother;
Death closed her mild blue eyes;
Under that tower she lies;
Ne'er shall the sun arise
  On such another!

"Still grew my bosom then,
Still as a stagnant fen!
Hateful to me were men,
  The sunlight hateful;

---

110 Skaw, Cape Skagen, the northern point of Jutland in Denmark

In the vast forest here,
Clad in my warlike gear,
Fell I upon my spear,
  Oh, death was grateful!

"Thus, seamed with many scars,
Bursting these prison bars
Up to its native stars
  My soul ascended!
There from the flowing bowl
Deep drinks the warrior's soul,
Skoal! to the Northland! *skoal!*"
  Thus the tale ended.

1840·1841

The Slave's Dream

Returning from a trip abroad in 1842, Longfellow had a stormy journey. "I was not out of my berth more than twelve hours for the first twelve days," he recorded. "I was in the forward part of the vessel, where all the great waves struck and broke with voices of thunder. There, 'cribbed, cabined, and confined,' I passed fifteen days. During this time I wrote seven poems on slavery; I meditated upon them in the stormy, sleepless nights, and wrote them down with a pencil in the morning."

Shortly after arriving in America, he published these poems and one other in a volume called **Poems on Slavery**—his contribution to the antislavery crusade. In a period when most of the New Englanders of good family were saying as little as possible about this controversy, it was rather brave for him thus to speak out.

Beside the ungathered rice he lay,
  His sickle in his hand;
His breast was bare, his matted hair
  Was buried in the sand.
Again, in the mist and shadow of sleep,
  He saw his Native Land.

Wide through the landscape of his dreams
  The lordly Niger flowed;
Beneath the palm-trees on the plain
  Once more a king he strode;
And heard the tinkling caravans
  Descend the mountain road.

He saw once more his dark-eyed queen
  Among her children stand;
They clasped his neck, they kissed his cheeks,
  They held him by the hand!—
A tear burst from the sleeper's lids
  And fell into the sand.

And then at furious speed he rode
  Along the Niger's bank;
His bridle-reins were golden chains,
  And, with a martial clank,
At each leap he could feel his scabbard of steel
  Smiting his stallion's flank.

Before him, like a blood-red flag,
  The bright flamingoes flew;
From morn till night he followed their flight,
  O'er plains where the tamarind grew,
Till he saw the roofs of Caffre huts,
  And the ocean rose to view.

At night he heard the lion roar,
  And the hyena scream,
And the river-horse, as he crushed the reeds
  Beside some hidden stream;
And it passed, like a glorious roll of drums,
  Through the triumph of his dream.

The forests, with their myriad tongues,
  Shouted of liberty;
And the Blast of the Desert cried aloud,
  With a voice so wild and free,
That he started in his sleep and smiled
  At their tempestuous glee.

He did not feel the driver's whip,
  Nor the burning heat of day;

The Skeleton . . . • 159 **Skoal,** "the customary salutation for drinking a health in Scandinavia."—Longfellow

For Death had illumined the Land of Sleep,
And his lifeless body lay
A worn-out fetter, that the soul
Had broken and thrown away!

1842

The Rainy Day

The day is cold, and dark, and dreary;
It rains, and the wind is never weary;
The vine still clings to the mouldering wall,
But at every gust the dead leaves fall,
And the day is dark and dreary.

My life is cold, and dark, and dreary;
It rains, and the wind is never weary;
My thoughts still cling to the mouldering Past,
But the hopes of youth fall thick in the blast,
And the days are dark and dreary.

Be still, sad heart! and cease repining;
Behind the clouds is the sun still shining;
Thy fate is the common fate of all,
Into each life some rain must fall,
Some days must be dark and dreary.

1842

The Bridge

I stood on the bridge at midnight
As the clocks were striking the hour,
And the moon rose o'er the city,
Behind the dark church-tower.

I saw her bright reflection
In the waters under me,
Like a golden goblet falling
And sinking into the sea.

And far in the hazy distance
Of that lovely night in June,
The blaze of the flaming furnace
Gleamed redder than the moon.

Among the long, black rafters
The wavering shadows lay,
And the current that came from the ocean
Seemed to lift and bear them away;

As sweeping and eddying through them,
Rose the belated tide,
And, streaming into the moonlight,
The seaweed floated wide.

And like those waters rushing
Among the wooden piers,
A flood of thoughts came o'er me
That filled my eyes with tears.

How often, oh how often,
In the days that had gone by,
I had stood on that bridge at midnight
And gazed on that wave and sky!

How often, oh how often,
I had wished that the ebbing tide
Would bear me away on its bosom
O'er the ocean wild and wide!

For my heart was hot and restless,
And my life was full of care,
And the burden laid upon me
Seemed greater than I could bear.

But now it has fallen from me,
It is buried in the sea;
And only the sorrow of others
Throws its shadow over me.

Yet whenever I cross the river
On its bridge with wooden piers,
Like the odor of brine from the ocean
Comes the thought of other years.

And I think how many thousands
Of care-encumbered men,

Each bearing his burden of sorrow
  Have crossed the bridge since then.

I see the long procession
  Still passing to and fro,
The young heart hot and restless,
  And the old subdued and slow!

And forever and forever,
  As long as the river flows,
As long as the heart has passions,
  As long as life has woes;

The moon and its broken reflection
  And its shadows shall appear,
As the symbol of love in heaven,
  And its wavering image here.

1845

The Arrow and the Song

The following is Longfellow's account of the writing of this poem: "October 16, 1845. Before church, wrote 'The Arrow and the Song,' which came into my mind as I stood with my back to the fire, and glanced onto the paper with an arrow's speed. Literally an improvisation."

I shot an arrow into the air,
It fell to earth, I knew not where;
For, so swiftly it flew, the sight
Could not follow it in its flight.

I breathed a song into the air,
It fell to earth, I knew not where;
For who has sight so keen and strong,
That it can follow the flight of song?

Long, long afterward, in an oak
I found the arrow, still unbroke;
And the song, from beginning to end,
I found again in the heart of a friend.

1845

The Jewish Cemetery at Newport

An entry in Longfellow's journal for June 9, 1852, tells of the visit to the cemetery which suggested this poem. "There are few graves," he wrote; "nearly all are low tombstones of marble, with Hebrew inscriptions, and a few words added in English or Portuguese. . . . It is a shady nook, at the corner of two dusty, frequented streets. . . ."

Professor Odell Shepard comments: "The poem . . . is written in the difficult stanza of Gray's 'Elegy' and in the mood of that poem. Comparison will show that Longfellow is as much superior to Gray in thought-structure and 'sense of the whole' as he is inferior in vividness and intensity of phrase and image."

How strange it seems! These Hebrews in their graves,
  Close by the street of this fair seaport town,
Silent beside the never-silent waves,
  At rest in all this moving up and down!

The trees are white with dust, that o'er their sleep
  Wave their broad curtains in the south-wind's breath,
While underneath these leafy tents they keep
  The long, mysterious Exodus of Death.

And these sepulchral stones, so old and brown,
  That pave with level flags their burial-place,
Seem like the tablets of the Law, thrown down
  And broken by Moses at the mountain's base.

The very names recorded here are strange,
  Of foreign accent, and of different climes;
Alvares and Rivera interchange
  With Abraham and Jacob of old times.

"Blessed be God, for he created Death!"
  The mourners said, "and Death is rest and peace;"
Then added, in the certainty of faith,
  "And giveth Life that nevermore shall cease."

The Jewish Cemetery . . . • **8 Exodus** refers to the Book of Exodus, which recounts the journey of the Israelites from Egypt under Moses

Closed are the portals of their Synagogue,
No Psalms of David now the silence break,
No Rabbi reads the ancient Decalogue
In the grand dialect the Prophets spake.

Gone are the living, but the dead remain,
And not neglected; for a hand unseen,
Scattering its bounty, like a summer rain,
Still keeps their graves and their remembrance green.

How came they here? What burst of Christian hate,
What persecution, merciless and blind,
Drove o'er the sea—that desert desolate—
These Ishmaels and Hagars of mankind?

They lived in narrow streets and lanes obscure,
Ghetto and Judenstrass, in mirk and mire;
Taught in the school of patience to endure
The life of anguish and the death of fire.

All their lives long, with the unleavened bread
And bitter herbs of exile and its fears,
The wasting famine of the heart they fed,
And slaked its thirst with marah of their tears.

Anathema maranatha! was the cry
That rang from town to town, from street to street:
At every gate the accursed Mordecai
Was mocked and jeered, and spurned by Christian feet.

Pride and humiliation hand in hand
Walked with them through the world where'er they went;
Trampled and beaten were they as the sand,
And yet unshaken as the continent.

For in the background figures vague and vast
Of patriarchs and of prophets rose sublime,
And all the great traditions of the Past
They saw reflected in the coming time.

And thus forever with reverted look
The mystic volume of the world they read,
Spelling it backward, like a Hebrew book,
Till life became a Legend of the Dead.

But ah! what once has been shall be no more!
The groaning earth in travail and in pain
Brings forth its races, but does not restore,
And the dead nations never rise again.

1852

My Lost Youth

During a visit to Portland in 1846 Longfellow took a long walk around Munjoy's hill and down to old Fort Lawrence. Then, he says, "I lay down in one of the embrasures and listened to the lashing, lulling sound of the sea just at my feet. It was a beautiful afternoon, and the harbor was full of white sails, coming and departing." He considered writing a poem at the time, but not until 1855 did these two entries in his journal record its composition:

"March 29. A day of pain; cowering over the fire. At night, as I lie in bed, a poem comes into my mind,—a memory of Portland,—my native town, the city by the sea. . . .

"March 30. Wrote the poem; and am rather pleased with it, and with the bringing in of the two lines of the old Lapland song. . . ."

The song may be found in a book by John Scheffer, **The History of Lapland** (1674). The important passage is:

"A youth's desire is the desire of the wind,
All his essaies
Are long delaies,
No issue can they find."

Often I think of the beautiful town
That is seated by the sea;
Often in thought go up and down
The pleasant streets of that dear old town,

The Jewish Cemetery . . . • **32 Ishmael.** See Genesis 16, 21 • **32 Hagar,** a concubine of Abraham who was driven into the desert with Ishmael, her son • **34 Ghetto and Judenstrass,** quarters in which Jews are segregated • **41 Anathema maranatha,** an expression found in I Corinthians, formerly thought to be a double curse • **43 Mordecai,** the cousin of Esther. See the Book of Esther • **55 Spelling it backward.** Hebrew is printed so as to be read from right to left in contrast with other languages reading from left to right

And my youth comes back to me.
And a verse of a Lapland song
Is haunting my memory still:
"A boy's will is the wind's will,
And the thoughts of youth are long, long thoughts."

I can see the shadowy lines of its trees,
And catch, in sudden gleams,
The sheen of the far-surrounding seas,
And islands that were the Hesperides
Of all my boyish dreams.
And the burden of that old song,
It murmurs and whispers still:
"A boy's will is the wind's will,
And the thoughts of youth are long, long thoughts."

I remember the black wharves and the slips,
And the sea-tides tossing free;
And Spanish sailors with bearded lips,
And the beauty and mystery of the ships,
And the magic of the sea.
And the voice of that wayward song
Is singing and saying still:
"A boy's will is the wind's will,
And the thoughts of youth are long, long thoughts."

I remember the bulwarks by the shore,
And the fort upon the hill;
The sunrise gun, with its hollow roar,
The drumbeat repeated o'er and o'er,
And the bugle wild and shrill.
And the music of that old song
Throbs in my memory still:
"A boy's will is the wind's will,
And the thoughts of youth are long, long thoughts."

I remember the sea-fight far away,
How it thundered o'er the tide!
And the dead captains, as they lay
In their graves, o'erlooking the tranquil bay
Where they in battle died.
And the sound of that mournful song
Goes through me with a thrill:
"A boy's will is the wind's will,
And the thoughts of youth are long, long thoughts."

I can see the breezy dome of groves,
The shadows of Deering's Woods;
And the friendships old and the early loves
Come back with a Sabbath sound, as of doves
In quiet neighborhoods.
And the verse of that sweet old song,
It flutters and murmurs still:
"A boy's will is the wind's will,
And the thoughts of youth are long, long thoughts."

I remember the gleams and glooms that dart
Across the schoolboy's brain;
The song and the silence in the heart,
That in part are prophecies, and in part
Are longings wild and vain.
And the voice of that fitful song
Sings on, and is never still:
"A boy's will is the wind's will,
And the thoughts of youth are long, long thoughts."

There are things of which I may not speak;
There are dreams that cannot die;
There are thoughts that make the strong heart weak,
And bring a pallor into the cheek,
And a mist before the eye.
And the words of that fatal song
Come over me like a chill:
"A boy's will is the wind's will,
And the thoughts of youth are long, long thoughts."

Strange to me now are the forms I meet,
When I visit the dear old town;
But the native air is pure and sweet,
And the trees that o'ershadow each well-known street,
As they balance up and down,
Are singing the beautiful song,
Are singing and whispering still:
"A boy's will is the wind's will,
And the thoughts of youth are long, long thoughts."

And Deering's Woods are fresh and fair,
And with joy that is almost pain
My heart goes back to wander there,
And among the dreams of the days that were,
I find my lost youth again.

And the strange and beautiful song,
Sings on, and is never still:
"A boy's will is the wind's will,
And the thoughts of youth are long, long thoughts."

1855

Divina Commedia

The six sonnets under this title prefaced the three parts of Longfellow's translation of Dante's masterpiece—I and II, the "Inferno"; III and IV, the "Purgatorio"; and V and VI, the "Paradiso." They at once comment on Dante's poem and reveal what it meant to Longfellow when, in the years of his grief over the death of his second wife—the years, also, of the Civil War—he translated the poem.

I

Oft have I seen at some cathedral door
A laborer, pausing in the dust and heat,
Lay down his burden, and with reverent feet
Enter, and cross himself, and on the floor
Kneel to repeat his paternoster o'er;
Far off the noises of the world retreat;
The loud vociferations of the street
Become an undistinguishable roar.
So, as I enter here from day to day,
And leave my burden at this minster gate,
Kneeling in prayer, and not ashamed to pray,
The tumult of the time disconsolate
To inarticulate murmurs dies away,
While the eternal ages watch and wait.

1865

II

How strange the sculptures that adorn these towers!
This crowd of statues, in whose folded sleeves
Birds build their nests; while canopied with leaves
Parvis and portal bloom like trellised bowers,
And the vast minster seems a cross of flowers!
But fiends and dragons on the gargoyled eaves
Watch the dead Christ between the living thieves,
And, underneath, the traitor Judas lowers!
Ah! from what agonies of heart and brain,
What exultations trampling on despair,
What tenderness, what tears, what hate of wrong,
What passionate outcry of a soul in pain,
Uprose this poem of the earth and air,
This medieval miracle of song!

1865

III

I enter, and I see thee in the gloom
Of the long aisles, O poet saturnine!
And strive to make my steps keep pace with thine.
The air is filled with some unknown perfume;
The congregation of the dead make room
For thee to pass; the votive tapers shine;
Like rooks that haunt Ravenna's groves of pine
The hovering echoes fly from tomb to tomb.
From the confessionals I hear arise
Rehearsals of forgotten tragedies,
And lamentations from the crypts below;
And then a voice celestial that begins
With the pathetic words, "Although your sins
As scarlet be," and end with "as the snow."

1866

IV

With snow-white veil and garments as of flame,
She stands before thee, who so long ago
Filled thy young heart with passion and the woe
From which thy song and all its splendors came;
And while with stern rebuke she speaks thy name,
The ice about thy heart melts as the snow
On mountain heights, and in swift overflow
Comes gushing from thy lips in sobs of shame.
Thou makest full confession; and a gleam,
As of the dawn on some dark forest cast,

Divina Commedia • **5 paternoster,** literally, "Our Father"—the rosary • **10 minster gate,** cathedral door • **12 time disconsolate** refers to the Civil War • **18 Parvis,** the church porch • **20 fiends,** a richly allusive reference, literally to the gargoyles in the church, figuratively to man in a world of evil and to the sufferers in the "Inferno" • **27 this poem . . . air,** the "Inferno." Here the poet combines the images of the opening five lines of this sonnet with those describing the "fiends and dragons" • **30 poet saturnine,** Dante • **35 Ravenna,** a city in Italy frequently mentioned by Dante • **44 She,** Beatrice

Seems on thy lifted forehead to increase;
Lethe and Eunoë—the remembered dream
And the forgotten sorrow—bring at last
That perfect pardon which is perfect peace.

1866

V

I lift mine eyes, and all the windows blaze
With forms of Saints and holy men who died,
Here martyred and hereafter glorified;
And the great Rose upon its leaves displays
Christ's Triumph, and the angelic roundelays,
With splendor upon splendor multiplied;
And Beatrice again at Dante's side
No more rebukes, but smiles her words of praise.
And then the organ sounds, and unseen choirs
Sing the old Latin hymns of peace and love
And benedictions of the Holy Ghost;
And the melodious bells among the spires
O'er all the housetops and through heaven above
Proclaim the elevation of the Host!

1867

VI

O star of morning and of liberty!
O bringer of the light, whose splendor shines
Above the darkness of the Apennines,
Forerunner of the day that is to be!
The voices of the city and the sea,
The voices of the mountains and the pines,
Repeat thy song, till the familiar lines
Are footpaths for the thought of Italy!
Thy flame is blown abroad from all the heights,
Through all the nations, and a sound is heard,
As of a mighty wind, and men devout,
Strangers of Rome, and the new proselytes,
In their own language hear the wondrous word,
And many are amazed and many doubt.

1867

Morituri Salutamus

When he was sixty-seven, Longfellow composed this poem for delivery at the fiftieth-anniversary celebration of the Class of 1825, Bowdoin College. The title, which means "We who are about to die salute you," was the legendary cry of gladiators to the emperor as they were about to enter the arena.

"O Caesar, we who are about to die
Salute you!" was the gladiators' cry
In the arena, standing face to face
With death and with the Roman populace.

O ye familiar scenes,—ye groves of pine,
That once were mine and are no longer mine,—
Thou river, widening through the meadows green
To the vast sea, so near and yet unseen,—
Ye halls, in whose seclusion and repose
Phantoms of fame, like exhalations, rose
And vanished,—we who are about to die,
Salute you; earth and air and sea and sky,
And the Imperial Sun that scatters down
His sovereign splendors upon grove and town.

Ye do not answer us! ye do not hear!
We are forgotten; and in your austere
And calm indifference, ye little care
Whether we come or go, or whence or where.
What passing generations fill these halls,
What passing voices echo from these walls,
Ye heed not; we are only as the blast,
A moment heard, and then forever past.

Not so the teachers who in earlier days
Led our bewildered feet through learning's maze;
They answer us—alas! what have I said?
What greetings come there from the voiceless dead?
What salutation, welcome, or reply?
What pressure from the hands that lifeless lie?
They are no longer here; they all are gone
Into the land of shadows,—all save one.
Honor and reverence, and the good repute

---

54 Lethe and Eunoë. In classical mythology the Lethe is the river of forgetfulness and the Eunoë, the river of the memory of good. At the summit of the mountain of Purgatory, Dante drinks from these rivers • 60 Rose refers not only to the windows of the cathedral but also to the end of Dante's journey in the "Paradiso," when he sees the Trinity and the Blessed in the form of a rose • 70 the . . . Host, the climax of the celebration of the Mass when the Host is lifted high before the congregation • 71 star, Dante

Morituri Salutamus • 30 one, Professor A. S. Packard

That follows faithful service as its fruit,
Be unto him, whom living we salute.

The great Italian poet, when he made
His dreadful journey to the realms of shade,
Met there the old instructor of his youth,
And cried in tone of pity and of ruth:
"Oh, never from the memory of my heart
Your dear, paternal image shall depart,
Who while on earth, ere yet by death surprised,
Taught me how mortals are immortalized;
How grateful am I for that patient care
All my life long my language shall declare."

Today we make the poet's words our own,
And utter them in plaintive undertone;
Nor to the living only be they said,
But to the other living called the dead,
Whose dear, paternal images appear
Not wrapped in gloom, but roped in sunshine here;
Whose simple lives, complete and without flaw,
Were part and parcel of great Nature's law;
Who said not to their Lord, as if afraid,
"Here is thy talent in a napkin laid,"
But labored in their sphere, as men who live
In the delight that work alone can give.
Peace be to them; eternal peace and rest,
And the fulfillment of the great behest:
"Ye have been faithful over a few things,
Over ten cities shall ye reign as kings."

And ye who fill the places we once filled,
And follow in the furrows that we tilled,
Young men, whose generous hearts are beating high,
We who are old, and are about to die,
Salute you; hail you; take your hands in ours,
And crown you with our welcome as with flowers!
How beautiful is youth! how bright it gleams
With its illusions, aspirations, dreams!
Book of Beginnings, Story without End,
Each maid a heroine, and each man a friend!

Aladdin's Lamp, and Fortunatus' Purse,
That holds the treasures of the universe!
All possibilities are in its hands,
No danger daunts it, and no foe withstands;
In its sublime audacity of faith,
"Be thou removed," it to the mountain saith,
And with ambitious feet, secure and proud,
Ascends the ladder leaning on the cloud!

As ancient Priam at the Scæan gate
Sat on the walls of Troy in regal state
With the old men, too old and weak to fight,
Chirping like grasshoppers in their delight
To see the embattled hosts, with spear and shield,
Of Trojans and Achaians in the field;
So from the snowy summits of our years
We see you in the plain, as each appears,
And question of you; asking, "Who is he
That towers above the others? Which may be
Atreides, Menelaus, Odysseus,
Ajax the great, or bold Idomeneus?"

Let him not boast who puts his armor on
As he who puts it off, the battle done.
Study yourselves; and most of all note well
Wherein kind Nature meant you to excel.
Not every blossom ripens into fruit;
Minerva, the inventress of the flute,
Flung it aside, when she her face surveyed
Distorted in a fountain as she played;
The unlucky Marsyas found it, and his fate
Was one to make the bravest hesitate.
Write on your doors the saying wise and old,
"Be bold! be bold!" and everywhere, "Be bold;
Be not too bold!" Yet better the excess
Than the defect; better the more than less;
Better like Hector in the field to die,
Than like a perfumed Paris turn and fly.

And now, my classmates; ye remaining few
That number not the half of those we knew,
Ye, against whose familiar names not yet
The fatal asterisk of death is set,

---

36 **the old instructor**, Brunetto Latini. Lines 38-43 are a translation of a speech in the "Inferno" • 70 **Fortunatus' Purse**, an inexhaustible purse which, according to an old tale, was given to Fortunatus by Fortune • 78 **As ancient Priam . . .** The incident treated in **Il.** 78-89 occurs in the **Iliad**, Bk. III • 98 **Marsyas**, a presumptuous Greek poet who challenged Apollo to a musical contest, lost, and was flayed alive • 104 **Hector**, a Grecian hero who bravely met his death at the hands of Achilles. For Hector's bravery, and Paris' less admirable activity, see the **Iliad**, Bks. III and XXII • 109 **fatal asterisk**, a reference to the custom of indicating which members of a college class have died by marking their names with asterisks

Ye I salute! The horologe of Time
Strikes the half-century with a solemn chime,
And summons us together once again,
The joy of meeting not unmixed with pain.
Where are the others? Voices from the deep
Caverns of darkness answer me: "They sleep!"
I name no names; instinctively I feel
Each at some well-remembered grave will kneel,
And from the inscription wipe the weeds and moss,
For every heart best knoweth its own loss.
I see their scattered gravestones gleaming white
Through the pale dusk of the impending night;
O'er all alike the impartial sunset throws
Its golden lilies mingled with the rose;
We give to each a tender thought, and pass
Out of the graveyards with their tangled grass,
Unto these scenes frequented by our feet
When we were young, and life was fresh and sweet.

What shall I say to you? What can I say
Better than silence is? When I survey
This throng of faces turned to meet my own,
Friendly and fair, and yet to me unknown,
Transformed the very landscape seems to be;
It is the same, yet not the same to me.
So many memories crowd upon my brain,
So many ghosts are in the wooded plain,
I fain would steal away, with noiseless tread,
As from a house where someone lieth dead.
I cannot go;—I pause;—I hesitate;
My feet reluctant linger at the gate;
As one who struggles in a troubled dream
To speak and cannot, to myself I seem.

Vanish the dream! Vanish the idle fears!
Vanish the rolling mists of fifty years!
Whatever time or space may intervene,
I will not be a stranger in this scene.
Here every doubt, all indecision, ends;
Hail, my companions, comrades, classmates, friends!

Ah me! the fifty years since last we met
Seem to me fifty folios bound and set
By Time, the great transcriber, on his shelves,
Wherein are written the histories of ourselves.
What tragedies, what comedies, are there;
What joy and grief, what rapture and despair!
What chronicles of triumph and defeat,
Of struggle, and temptation, and retreat!
What records of regrets, and doubts, and fears!
What pages blotted, blistered by our tears!
What lovely landscapes on the margin shine,
What sweet, angelic faces, what divine
And holy images of love and trust,
Undimmed by age, unsoiled by damp or dust!
Whose hand shall dare to open and explore
These volumes, closed and clasped forevermore?
Not mine. With reverential feet I pass;
I hear a voice that cries, "Alas! alas!
Whatever hath been written shall remain,
Nor be erased nor written o'er again;
The unwritten only still belongs to thee:
Take heed, and ponder well what that shall be."

As children frightened by a thunder-cloud
Are reassured if some one reads aloud
A tale of wonder, with enchantment fraught,
Or wild adventure, that diverts their thought,
Let me endeavor with a tale to chase
The gathering shadows of the time and place,
And banish what we all too deeply feel
Wholly to say, or wholly to conceal.

In medieval Rome, I know not where,
There stood an image with its arm in air,
And on its lifted finger, shining clear,
A golden ring with the device, "Strike here!"
Greatly the people wondered, though none guessed
The meaning that these words but half expressed,
Until a learned clerk, who at noonday
With downcast eyes was passing on his way,
Paused, and observed the spot, and marked it well,
Whereon the shadow of the finger fell;

And, coming back at midnight, delved, and found
A secret stairway leading underground.
Down this he passed into a spacious hall,
Lit by a flaming jewel on the wall;
And opposite, in threatening attitude,

---

174 tale, in the famous medieval collection, Gesta Romanorum, Tale CVII

With bow and shaft a brazen statue stood.
Upon its forehead, like a coronet,
Were these mysterious words of menace set:
"That which I am, I am; my fatal aim
None can escape, not even yon luminous flame!"
Midway the hall was a fair table placed,
With cloth of gold, and golden cups enchased
With rubies, and the plates and knives were gold,
And gold the bread and viands manifold.
Around it, silent, motionless, and sad,
Were seated gallant knights in armor clad,
And ladies beautiful with plume and zone,
But they were stone, their hearts within were stone;
And the vast hall was filled in every part
With silent crowds, stony in face and heart.

Long at the scene, bewildered and amazed,
The trembling clerk in speechless wonder gazed;
Then from the table, by his greed made bold,
He seized a goblet and a knife of gold,
And suddenly from their seats the guests upsprang,
The vaulted ceiling with loud clamors rang,
The archer sped his arrow, at their call,
Shattering the lambent jewel on the wall,
And all was dark around and overhead;—
Stark on the floor the luckless clerk lay dead.

The writer of this legend then records
Its ghostly application in these words:
The image is the Adversary old,
Whose beckoning finger points to realms of gold;
Our lusts and passions are the downward stair
That leads the soul from a diviner air;
The archer, Death; the flaming jewel, Life;
Terrestrial goods, the goblet and the knife;
The knights and ladies, all whose flesh and bone
By avarice have been hardened into stone;
The clerk, the scholar whom the love of pelf
Tempts from his books and from his nobler self.

The scholar and the world! The endless strife,
The discord in the harmonies of life!
The love of learning, the sequestered nooks,
And all the sweet serenity of books;
The market-place, the eager love of gain,
Whose aim is vanity, and whose end is pain!

But why, you ask me, should this tale be told
To men grown old, or who are growing old?
It is too late! Ah, nothing is too late
Till the tired heart shall cease to palpitate.
Cato learned Greek at eighty; Sophocles
Wrote his grand Œdipus, and Simonides
Bore off the prize of verse from his compeers,
When each had numbered more than fourscore years,
And Theophrastus, at fourscore and ten,
Had but begun his "Characters of Men."
Chaucer, at Woodstock with the nightingales,
At sixty wrote the Canterbury Tales;
Goethe at Weimar, toiling to the last,
Completed Faust when eighty years were past.
These are indeed exceptions; but they show
How far the gulf-stream of our youth may flow
Into the arctic regions of our lives,
Where little else than life itself survives.

As the barometer foretells the storm
While still the skies are clear, the weather warm,
So something in us, as old age draws near,
Betrays the pressure of the atmosphere.
The nimble mercury, ere we are aware,
Descends the elastic ladder of the air;
The telltale blood in artery and vein
Sinks from its higher levels in the brain;
Whatever poet, orator, or sage
May say of it, old age is still old age.
It is the waning, not the crescent moon;
The dusk of evening, not the blaze of noon;
It is not strength, but weakness; not desire,
But its surcease; not the fierce heat of fire,
The burning and consuming element,
But that of ashes and of embers spent,
In which some living sparks we still discern,
Enough to warm, but not enough to burn.

---

240 Cato, Cato the Censor (234-149 B.C.) • 240 Sophocles (495-405 B.C.) is said to have written Oedipus at Colonus shortly before his death • 241 Simonides (556-467 B.C.), great Greek lyric poet • 244 Theophrastus (382-297 B.C.), author of Moral Characters • 246 Chaucer . . . sixty. At the same time Longfellow wrote, it was thought that Chaucer had been born in 1320. Modern scholars believe that 1340 was nearer the date of his birth • 248 Goethe began work on Faust in 1773, but the conclusion did not appear until 1833

What then? Shall we sit idly down and say
The night hath come; it is no longer day?
The night hath not yet come; we are not quite
Cut off from labor by the failing light;
Something remains for us to do or dare;
Even the oldest tree some fruit may bear;
Not Œdipus Coloneus, or Greek Ode,
Or tales of pilgrims that one morning rode
Out of the gateway of the Tabard Inn,
But other something, would we but begin;
For age is opportunity no less
Than youth itself, though in another dress,
And as the evening twilight fades away
The sky is filled with stars, invisible by day.

1874·1875

Sleep

Lull me to sleep, ye winds, whose fitful sound
  Seems from some faint Æolian harp-string caught;
  Seal up the hundred wakeful eyes of thought
  As Hermes with his lyre in sleep profound
The hundred wakeful eyes of Argus bound;
  For I am weary, and am overwrought
  With too much toil, with too much care distraught,
  And with the iron crown of anguish crowned.
Lay thy soft hand upon my brow and cheek,
  O peaceful Sleep! until from pain released
  I breathe again uninterrupted breath!
Ah, with what subtle meaning did the Greek
  Call thee the lesser mystery at the feast
Whereof the greater mystery is death!

1875

Jugurtha

The incident treated here is based on Plutarch's life of Marius, the Roman general. In Plutarch's account Jugurtha, a Numidian king defeated by the Romans, addresses his words to Hercules. But the name of Apollo, the god of manly youth and beauty, of poetry, music, and oracles, and of healing and sudden death, has more poetic associations for modern readers.

How cold are thy baths, Apollo!
  Cried the African monarch, the splendid,
As down to his death in the hollow
  Dark dungeons of Rome he descended,
  Uncrowned, unthroned, unattended;
How cold are thy baths, Apollo!

How cold are thy baths, Apollo!
  Cried the Poet, unknown, unbefriended,
As the vision that lured him to follow
  With the mist and the darkness blended,
  And the dream of his life was ended;
How cold are thy baths, Apollo!

1879·1880

The Tide Rises, the Tide Falls

The tide rises, the tide falls,
The twilight darkens, the curlew calls;
Along the sea-sands damp and brown
The traveller hastens toward the town,
  And the tide rises, the tide falls.

Darkness settles on roofs and walls,
But the sea, the sea in the darkness calls;
The little waves, with their soft, white hands,
Efface the footprints in the sands,
  And the tide rises, the tide falls.

The morning breaks; the steeds in their stalls
Stamp and neigh, as the hostler calls;
The day returns, but nevermore
Returns the traveller to the shore,
  And the tide rises, the tide falls.

1879·1880

Sleep • 4 **Hermes**, son of Jupiter and the inventor of the lyre • 5 **Argus**, the hundred-eyed son of Zeus, who had a habit of sleeping with only two eyes at a time. Hermes, by playing wonderful music, put all his eyes to sleep at once and then slew him

Oliver Wendell Holmes

1809 • 1894

"I have always been good company for myself," said Oliver Wendell Holmes. Because he was also good company—almost always—for others, Holmes' chief contribution to our letters probably was the infusion into them of a social grace that, in those days, flourished most notably in Europe. For this reason historians have pointed out that, like the two other famed Cambridge authors, Longfellow and Lowell, in his own unique way Holmes helped adapt European culture to American needs.

It was Holmes who dubbed the social group to which he belonged "Brahmins." A Brahmin is defined in the dictionary as "a Hindu of the highest, or priestly, caste." That Holmes belonged to the highest caste in New England there can be no doubt. His birth and his rearing were in accord with the tradition of his class. He was born in an old house which had historical associations with important battles of the Revolution. He was what he called "a man of family"—one "who inherits family traditions and the cumulative humanities of at least five generations." He was educated at a leading private school, at Harvard, and abroad. In his profession, medicine, he won honors first as a scholar and later (1847-1882) as a noted professor at Harvard.

But there was nothing priestly about little Doctor Holmes. Perhaps his chief contribution to American thought was the exposition of the deterministic philosophy which stressed the way a man's nature and upbringing molded his life. Furthermore, he was enough of a conservative in his social attitude during this great period of reform to attack vigorously any notions of human regeneration. Finally, much of his most admired verse is worldly, polished, amusing, rather than profound or preachy; and such papers as *The Autocrat of the Breakfast-Table* (1858) and *Over the Teacups* (1891) thrive chiefly because they gracefully transfer Holmes' charming talk to the printed page.

Strung together on slender threads of fiction, these collections of papers from the *Atlantic Monthly* happily combine the informal essay with informal conversation. A group of boarding-house characters who now and then voice opinions or ask questions are, for the most part, useful foils for the Autocrat, the Professor, or the Poet as each carries on his interrupted monologues. Each of the monologuists, since he has various aspects of Holmes' character, can, like his creator, talk shrewdly and wittily about hosts of subjects. In books of this type, rather than in novels such as *Elsie Venner* (1861), Holmes excelled. The novels—"medicated" novels, he called them—deal more seriously but less successfully with scientific and ethical problems. Their chief interest, aside from the ideas they express, derives from their gropings toward the form of something like the psychological fiction Henry James was later to write.

Holmes' verse, like his prose, is at its best when it is most informal. With a taste for eighteenth-century

authors formed by childhood reading in his father's library, Holmes for a long time scoffed at the idea of poetic inspiration. Although in time he came to believe that the best poetry was inspired, as a rule he himself was content to write after the models of the sociable Neoclassical authors who flourished in England between 1660 and 1720. His numerous occasional verses, his use of the mock-heroic form, his preference for ballad stanzas and heroic couplets show his kinship with the Queen Anne "gentlemen who writ with ease." "I hold it to be a gift of a certain value," he wrote Lowell, "to give that slight passing spasm of pleasure which a few ringing couplets often cause, read at the right moment. Though they are for the most part to poetry as the beating of a drum or the tinkling of a triangle is to the harmony of a band, yet it is not everybody who can get their limited significance out of these humble instruments."

Prose Works of Oliver Wendell Holmes, Riverside Edition, Boston, 1891 • **Poetical Works of Oliver Wendell Holmes,** Cambridge Edition, Boston, 1895 • J. T. Morse, **The Life and Letters of Oliver Wendell Holmes,** 2 vols., Boston, 1896 • W. S. Knickerbocker, "His Own Boswell. A Note on the Poetry of Oliver Wendell Holmes," **Sewanee Review,** October-December 1933, XLI, 454-466 • Catherine Bowen, **Yankee from Olympus,** Boston, 1944

Old Ironsides

When, in September 1830, Holmes read a newspaper report that the old and unseaworthy frigate **Constitution,** the conqueror of the **Guerrière** in the War of 1812, had been ordered destroyed, he wrote this indignant protest. Published first in the September 16, 1830 issue of the **Boston Daily Advertiser,** the poem was reprinted in many newspapers and was circulated in handbill form in Washington, D. C. The stir started by the poem caused the order to be retracted.

Ay, tear her tattered ensign down!
  Long has it waved on high,
And many an eye has danced to see
  That banner in the sky;
Beneath it rung the battle shout,
  And burst the cannon's roar;—
The meteor of the ocean air
  Shall sweep the clouds no more!

Her deck, once red with heroes' blood,
  Where knelt the vanquished foe,
When winds were hurrying o'er the flood,
  And waves were white below,
No more shall feel the victor's tread,
  Or know the conquered knee;—
The harpies of the shore shall pluck
  The eagle of the sea!

Oh, better that her shattered hulk
  Should sink beneath the wave;
Her thunder shook the mighty deep,
  And there should be her grave;
Nail to the mast her holy flag,
  Set every threadbare sail,
And give her to the god of storms,
  The lightning and the gale!

1830

The Ballad of the Oysterman

This mock-heroic poem emphasizes Holmes' indebtedness to the eighteenth-century light verse writers, such as Prior and Gray, who frequently wrote amusing poetry of this sort. An excellent example of the pretentious treatment of a nonheroic subject, it uses epic and ballad conventions to emphasize the incongruous elements in some of the sentimental love poetry of the 1830's.

It was a tall young oysterman lived by the river-side,
His shop was just upon the bank, his boat was on the tide;
The daughter of a fisherman, that was so straight and slim,
Lived over on the other bank, right opposite to him.

It was the pensive oysterman that saw a lovely maid,
Upon a moonlight evening, a-sitting in the shade;
He saw her wave her handkerchief, as much as if to say,
"I'm wide awake, young oysterman, and all the folks away."

Then up arose the oysterman, and to himself said he,
"I guess I'll leave the skiff at home, for fear that folks should see;
I read it in the story-book, that, for to kiss his dear,
Leander swam the Hellespont,—and I will swim this here."

And he has leaped into the waves, and crossed the shining stream,
And he has clambered up the bank, all in the moonlight gleam;
Oh there were kisses sweet as dew, and words as soft as rain,—
But they have heard her father's step, and in he leaps again!

Out spoke the ancient fisherman,—"Oh, what was that, my daughter?"
"'Twas nothing but a pebble, sir, I threw into the water."
"And what is that, pray tell me, love, that paddles off so fast?"
"It's nothing but a porpoise, sir, that's been a-swimming past."

Out spoke the ancient fisherman,—"Now bring me my harpoon!
I'll get into my fishing-boat, and fix the fellow soon."
Down fell that pretty innocent, as falls a snow-white lamb,
Her hair drooped round her pallid cheeks, like seaweed on a clam.

Alas for those two loving ones! she waked not from her swound.
And he was taken with the cramp, and in the waves was drowned;
But Fate has metamorphosed them, in pity of their woe,
And now they keep an oyster-shop for mermaids down below.

1830

My Aunt

My aunt! my dear unmarried aunt!
Long years have o'er her flown;
Yet still she strains the aching clasp
That binds her virgin zone;
I know it hurts her,—though she looks
As cheerful as she can;
Her waist is ampler than her life,
For life is but a span.

My aunt! my poor deluded aunt!
Her hair is almost gray;
Why will she train that winter curl
In such a spring-like way?
How can she lay her glasses down,
And say she reads as well,
When through a double convex lens
She just makes out to spell?

Her father—grandpapa! forgive
This erring lip its smiles—
Vowed she should make the finest girl
Within a hundred miles;
He sent her to a stylish school;
'Twas in her thirteenth June;
And with her, as the rules required,
"Two towels and a spoon."

They braced my aunt against a board,
To make her straight and tall;
They laced her up, they starved her down,
To make her light and small;
They pinched her feet, they singed her hair,
They screwed it up with pins;—
Oh, never mortal suffered more
In penance for her sins.

So, when my precious aunt was done,
My grandsire brought her back;

---

12 **Leander**, according to Greek legend, nightly swam the Hellespont to visit Hero, a priestess of Aphrodite. When Leander was drowned, Hero threw herself into the sea. The comparison of the humble oysterman to this character is a typical incongruous touch

(By daylight, lest some rabid youth
  Might follow on the track;)
"Ah!" said my grandsire, as he shook
  Some powder in his pan,
"What could this lovely creature do
  Against a desperate man!"

Alas! nor chariot, nor barouche,
  Nor bandit cavalcade,
Tore from the trembling father's arms
  His all-accomplished maid.
For her how happy had it been!
  And Heaven had spared to me
To see one sad, ungathered rose
  On my ancestral tree.

1831

The Last Leaf

A note preceding this poem, first published in the Amateur for March 23, 1831, remarks that it "was suggested by the appearance in one of our streets of a venerable relic of the Revolution, said to be one of the party that threw the tea overboard in Boston Harbor." Students of American literature have been interested to learn that the subject was old Major Thomas Melville, Herman Melville's grandfather.

This is one of the most famous examples of Holmes' admirable light verse. Actually, the material might have been used in a very sentimental poem, but the exaggerated and incongruous imagery and the tripping verse form save it from mawkishness. Of the metrical scheme, Holmes said: "I do not recall any earlier example of this form of verse, which was commended by the fastidious Edgar Allan Poe, who made a copy of the poem which I have in his own handwriting."

I saw him once before,
As he passed by the door,
  And again
The pavement stones resound,
As he totters o'er the ground
  With his cane.

They say that in his prime,
Ere the pruning-knife of Time
  Cut him down,
Not a better man was found
By the Crier on his round
  Through the town.

But now he walks the streets,
And he looks at all he meets
  Sad and wan,
And he shakes his feeble head,
That it seems as if he said,
  "They are gone."

The mossy marbles rest
On the lips that he has prest
  In their bloom,
And the names he loved to hear
Have been carved for many a year
  On the tomb.

My grandmamma has said—
Poor old lady, she is dead
  Long ago—
That he had a Roman nose,
And his cheek was like a rose
  In the snow;

But now his nose is thin,
And it rests upon his chin
  Like a staff,
And a crook is in his back,
And a melancholy crack
  In his laugh.

I know it is a sin
For me to sit and grin
  At him here;
But the old three-cornered hat,
And the breeches, and all that,
  Are so queer!

And if I should live to be
The last leaf upon the tree
  In the spring,
Let them smile, as I do now,
At the old forsaken bough
  Where I cling.

1831

The Deacon's Masterpiece

or, The Wonderful "One-Hoss Shay"

A Logical Story

A satire on the great logical system of theology worked out by Calvinists and on the downfall of Calvinism, this poem was published in the Atlantic Monthly of September 1858 as part of one of the Autocrat papers. The date of the building of the deacon's masterpiece, 1755, was the year after the publication of Jonathan Edwards' greatest defense of Calvinism, Freedom of the Will; the year, too, of the Lisbon earthquake, which provoked many arguments favorable to the Calvinistic system.

Have you heard of the wonderful one-hoss shay,
That was built in such a logical way
It ran a hundred years to a day,
And then, of a sudden, it—ah, but stay,
I'll tell you what happened without delay,
Scaring the parson into fits,
Frightening people out of their wits,—
Have you ever heard of that, I say?

Seventeen hundred and fifty-five.
Georgius Secundus was then alive,—
Snuffy old drone from the German hive.
That was the year when Lisbon-town
Saw the earth open and gulp her down,
And Braddock's army was done so brown,
Left without a scalp to its crown.
It was on the terrible Earthquake-day
That the Deacon finished the one-hoss shay.

Now in building of chaises, I tell you what,
There is always *somewhere* a weakest spot,—
In hub, tire, felloe, in spring or thill,
In panel, or crossbar, or floor, or sill,
In screw, bolt, thoroughbrace,—lurking still,
Find it somewhere you must and will,—
Above or below, or within or without,—
And that's the reason, beyond a doubt,
That a chaise *breaks down,* but doesn't *wear out.*

But the Deacon swore (as Deacons do,
With an "I dew vum," or an "I tell *yeou*")
He would build one shay to beat the taown
'N' the keountry 'n' all the kentry raoun';
It should be so built that it *could n'* break daown;
"Fur," said the Deacon, "'t 's mighty plain
Thut the weakes' place mus' stan' the strain;
'N' the way t' fix it, uz I maintain,
Is only jest
T' make that place uz strong uz the rest."

So the Deacon inquired of the village folk
Where he could find the strongest oak,
That could n't be split nor bent nor broke,—
That was for spokes and floors and sills;
He sent for lancewood to make the thills;
The crossbars were ash, from the straightest trees,
The panels of white-wood, that cuts like cheese,
But lasts like iron for things like these;
The hubs of logs from the "Settler's ellum,"—
Last of its timber,—they could n't sell 'em,

Never an axe had seen their chips,
And the wedges flew from between their lips,
Their blunt ends frizzled like celery-tips;
Step and prop-iron, bolt and screw,
Spring, tire, axle, and linchpin too,
Steel of the finest, bright and blue;
Thoroughbrace bison-skin, thick and wide;
Boot, top, dasher, from tough old hide
Found in the pit when the tanner died.
That was the way he "put her through."
"There!" said the Deacon, "naow she'll dew!"

Do! I tell you, I rather guess
She was a wonder, and nothing less!
Colts grew horses, beards turned gray,
Deacon and deaconess dropped away,
Children and grandchildren—where were they?
But there stood the stout old one-hoss shay
As fresh as on Lisbon-earthquake-day!

EIGHTEEN HUNDRED;—it came and found
The Deacon's masterpiece strong and sound.
Eighteen hundred increased by ten;—
"Hahnsum kerridge" they called it then.
Eighteen hundred and twenty came;—

Running as usual; much the same.
Thirty and forty at last arrive,
And then come fifty, and FIFTY-FIVE.

Little of all we value here
Wakes on the morn of its hundredth year
Without both feeling and looking queer.
In fact, there 's nothing that keeps its youth,
So far as I know, but a tree and truth.
(This is a moral that runs at large;
Take it.—You 're welcome.—No extra charge.)

FIRST OF NOVEMBER,—the Earthquake-day,—
There are traces of age in the one-hoss shay,
A general flavor of mild decay,
But nothing local, as one may say.
There couldn't be,—for the Deacon's art
Had made it so like in every part
That there wasn't a chance for one to start.
For the wheels were just as strong as the thills,
And the floor was just as strong as the sills,
And the panels just as strong as the floor,
And the whipple-tree neither less nor more,
And the back crossbar as strong as the fore,
And spring and axle and hub *encore.*
And yet, *as a whole,* it is past a doubt
In another hour it will be *worn out!*

First of November, 'Fifty-five!
This morning the parson takes a drive.
Now, small boys, get out of the way!
Here comes the wonderful one-hoss shay,
Drawn by a rat-tailed, ewe-necked bay.
"Huddup!" said the parson.—Off went they.
The parson was working his Sunday's text,—
Had got to *fifthly,* and stopped perplexed
At what the—Moses—was coming next.
All at once the horse stood still,
Close by the meet'n'-house on the hill.
First a shiver, and then a thrill,
Then something decidedly like a spill,—
And the parson was sitting upon a rock,
At half past nine by the meet'n'-house clock—
Just the hour of the Earthquake shock!
What do you think the parson found,
When he got up and stared around?
The poor old chaise in a heap or mound,
As if it had been to the mill and ground!
You see, of course, if you're not a dunce,
How it went to pieces all at once,—
All at once, and nothing first,—
Just as bubbles do when they burst.

End of the wonderful one-hoss shay.
Logic is logic. That 's all I say.

1858

The Chambered Nautilus

The paragraph preceding this poem when it appeared at the end of a section of **The Autocrat** gave the necessary facts about the background of the poem: "If you will look into Roget's **Bridgewater Treatise,** you will find a figure of one of these shells [the nautilus], and a section of it. The last will show you the series of enlarging compartments successively dwelt in by the animal that inhabits the shell, which is built in a widening spiral. Can you find no lesson in this?"

Of "The Chambered Nautilus," Holmes wrote: "I am as willing to submit this to criticism as any [poem] I have written, in form as well as substance, and I have not seen any English verse of just the same pattern." It was one work of his which he avowed had been inspired.

"The Chambered Nautilus" is unusually suggestive of Longfellow's poems. Like "Excelsior" or "The Builders," it preaches a sermon with the text "Onward and upward." The form, too, resembles Longfellow's: an object is described in the three opening stanzas, and then, in the two stanzas addressed to the nautilus at the end, the moral is drawn. Holmes seems to have been bothered very little by the incongruity—distressing to careful readers—of some of his images.

This is the ship of pearl, which, poets feign,
Sails the unshadowed main,—
The venturous bark that flings
On the sweet summer wind its purpled wings
In gulfs enchanted, where the Siren sings,
And coral reefs lie bare,
Where the cold sea-maids rise to sun their streaming hair.

Its webs of living gauze no more unfurl;
Wrecked is the ship of pearl!
Where its dim dreaming life was wont to dwell,
As the frail tenant shaped his growing shell,
And every chambered cell,
Before thee lies revealed,—
Its irised ceiling rent, its sunless crypt unsealed!

Year after year beheld the silent toil
That spread his lustrous coil;
Still, as the spiral grew,
He left the past year's dwelling for the new,
Stole with soft step its shining archway through,
Built up its idle door,
Stretched in his last-found home, and knew the old no more.

Thanks for the heavenly message brought by thee,
Child of the wandering sea,
Cast from her lap, forlorn!
From thy dead lips a clearer note is born
Than ever Triton blew from wreathed horn!
While on mine ear it rings,
Through the deep caves of thought I hear a voice that sings:—

Build thee more stately mansions, O my soul,
As the swift seasons roll!
Leave thy low-vaulted past!
Let each new temple, nobler than the last,
Shut thee from heaven with a dome more vast,
Till thou at length art free,
Leaving thine outgrown shell by life's unresting sea!

1858

The Boys

For many years Holmes read a poem composed for the occasion at the annual dinner of the Harvard Class of 1829. This one was written for the reunion of 1859, when he and his classmates probably were about fifty years old. It shows better perhaps than any other the way Holmes gave such verses the right mingling of wit and pathos. Even though it was written with a particular group in mind, the poem communicates its spirited humor to any reader.

Has there any old fellow got mixed with the boys?
If there has, take him out, without making a noise.
Hang the Almanac's cheat and the Catalogue's spite!
Old Time is a liar! We're twenty to-night!

We're twenty! We're twenty! Who says we are more?
He's tipsy,—young jackanapes!—show him the door!
"Gray temples at twenty?"—Yes! *white* if we please;
Where the snow-flakes fall thickest there's nothing can freeze!

Was it snowing I spoke of? Excuse the mistake!
Look close,—you will see not a sign of a flake!
We want some new garlands for those we have shed,—
And these are white roses in place of the red.

We've a trick, we young fellows, you may have been told,
Of talking (in public) as if we were old:—
That boy we call "Doctor," and this we call "Judge";
It's a neat little fiction,—of course it's all fudge.

That fellow's the "Speaker,"—the one on the right;
"Mr. Mayor," my young one, how are you to-night?
That's our "Member of Congress," we say when we chaff;
There's the "Reverend." What's his name?—don't make me laugh.

That boy with the grave mathematical look
Made believe he had written a wonderful book,
And the ROYAL SOCIETY thought it was *true!*
So they chose him right in; a good joke it was, too!

There's a boy, we pretend, with a three-decker brain,
That could harness a team with a logical chain;

The Boys • **15 Doctor,** Francis Thomas • **15 Judge,** George T. Bigelow, chief justice of Massachusetts • **17 Speaker,** Francis B. Crowninshield, speaker of the Massachusetts House of Representatives • **18 Mr. Mayor,** G. W. Richardson, mayor of Worcester, Massachusetts • **19 Member of Congress,** George T. Davis, whom Thackeray described as "the most agreeable dinner-companion" that he had met during his visit to America • **20 Reverend,** James Freeman Clark, a Unitarian minister and a friend of Emerson • **21 That boy,** Prof. Benjamin Peirce of Harvard

When he spoke for our manhood in syllabled fire,
We called him "The Justice," but now he's "The Squire."

And there's a nice youngster of excellent pith,—
Fate tried to conceal him by naming him Smith;
But he shouted a song for the brave and the free,—
Just read on his medal, "My country," "of thee!"

You hear that boy laughing?—You think he's all fun;
But the angels laugh, too, at the good he has done;
The children laugh loud as they troop to his call,
And the poor man that knows him laughs loudest of all!

Yes, we're boys,—always playing with tongue or with pen,—
And I sometimes have asked,—Shall we ever be men?
Shall we always be youthful, and laughing, and gay,
Till the last dear companion drops smiling away?

Then here's to our boyhood, its gold and its gray!
The stars of its winter, the dews of its May!
And when we have done with our life-lasting toys,
Dear Father, take care of thy children, THE BOYS!

1859

Hymn of Trust

O Love Divine, that stooped to share
Our sharpest pang, our bitterest tear,
On Thee we cast each earth-born care,
We smile at pain while Thou art near!

Though long the weary way we tread,
And sorrow crown each lingering year,
No path we shun, no darkness dread,
Our hearts still whispering, Thou art near!

When drooping pleasure turns to grief,
And trembling faith is changed to fear,
The murmuring wind, the quivering leaf,
Shall softly tell us, Thou art near!

On Thee we fling our burdening woe,
O Love Divine, forever dear,
Content to suffer while we know,
Living and dying, Thou art near!

From

The Autocrat of the Breakfast-Table

When Holmes was nearly fifty, Lowell, urged to edit the new Atlantic Monthly, "made it a condition precedent" to his acceptance that Holmes should be "the first contributor to be engaged." Since Holmes was hardly a towering figure in the literary world, though he did have a fine reputation in medicine, the request rather surprised him. **The Autocrat of the Breakfast-Table,** which he contributed in monthly installments, established his literary reputation and did much to establish that of the magazine.

The Autocrat papers, like the other series which followed them, are unique in form. Each paper is a printed account of a conversation, informal because of its chatty tone and because of interruptions—the author's own asides and the remarks of other boarders who sit at the table. In a sense, furthermore, the papers have some of the appeals of fiction: they have the slightest of plots running through them, and they reveal characters and the interplay between diverse personalities.

Since the speakers differ greatly, there is a good deal of variety in the attitudes expressed. Variety is also pro-

vided by the wide range of subjects discussed. A glance at the Index to The Autocrat shows that Holmes, interested in all sorts of matters, treated, among hundreds of other subjects, Aristocracy, Boating, Calamities, Drunkenness, Ears (Voluntary Movement of), Family, Hysterics, Jailers, Keats, Logical Minds, Maine (Willows in), Nerve-tapping, Old Age, Punning, Quantity, Racing (Horse), Sporting Men, Travel, Unloved, Voices, Women, and Zimmerman's Treatise on Solitude. The talk is witty and learned, allusive to both the classics and contemporary events—an excellent key to the appeal of Holmes as a talker.

A lyric conception—my friend, the Poet, said—hits me like a bullet in the forehead. I have often had the blood drop from my cheeks when it struck, and felt that I turned as white as death. Then comes a creeping as of centipedes running down the spine,—then a gasp and a great jump of the heart,—then a sudden flush and a beating in the vessels of the head,—then a long sigh, —and the poem is written.

It is an impromptu, I suppose, then, if you write it so suddenly,—I replied.

No, said he,—far from it. I said written, but I did not say *copied.* Every such poem has a soul and a body, and it is the body of it, or the copy, that men read and publishers pay for. The soul of it is born in an instant in the poet's soul. It comes to him a thought, tangled in the meshes of a few sweet words,—words that have loved each other from the cradle of the language, but have never been wedded until now. Whether it will ever fully embody itself in a bridal train of a dozen stanzas or not is uncertain; but it exists potentially from the instant that the poet turns pale with it. It is enough to stun and scare anybody, to have a hot thought come crashing into his brain, and ploughing up those parallel ruts where the wagon trains of common ideas were jogging along in their regular sequences of association. No wonder the ancients made the poetical impulse wholly external. Μῆνιν ἄειδε Θεά. Goddess,—Muse,—divine afflatus,—something outside always. *I* never wrote any verses worth reading. I can't. I am too stupid. If I ever copied any that were worth reading, I was only a medium.

[I was talking all this time to our boarders, you understand,—telling them what this poet told me. The company listened rather attentively, I thought, considering the literary character of the remarks.]

The old gentleman opposite all at once asked me if I ever read anything better than Pope's "Essay on Man"? Had I ever perused McFingal? He was fond of poetry when he was a boy,—his mother taught him to say many little pieces,—he remembered one beautiful hymn; —and the old gentleman began, in a clear, loud voice, for his years,—

> "The spacious firmament on high,
> With all the blue ethereal sky,
> And spangled heavens,"—

He stopped, as if startled by our silence, and a faint flush ran up beneath the thin white hairs that fell upon his cheek. As I looked round, I was reminded of a show I once saw at the Museum,—the Sleeping Beauty, I think they called it. The old man's sudden breaking out in this way turned every face towards him, and each kept his posture as if changed to stone. Our Celtic Bridget, or Biddy, is not a foolish fat scullion to burst out crying for a sentiment. She is of the serviceable, red-handed, broad-and-high-shouldered type; one of those imported female servants who are known in public by their amorphous style of person, their stoop forwards, and a headlong and as it were precipitous walk,—the waist plunging downwards into the rocking pelvis at every heavy foot-fall. Bridget, constituted for action, not for emotion, was about to deposit a plate heaped with something upon the table, when I saw the coarse arm stretched by my shoulder arrested,—motionless as the arm of a terra-cotta caryatid; she couldn't set the plate down while the old gentleman was speaking!

He was quite silent after this, still wearing the slight flush on his cheek. Don't ever think the poetry is dead in an old man because his forehead is wrinkled, or that his manhood has left him when his hand trembles! If they ever *were* there, they *are* there still!

By and by we got talking again.—Does a poet love the verses written through him, do you think, Sir?—said the divinity-student.

So long as they are warm from his mind,—carry any

---

27 Μῆνιν ἄειδε Θεά, the opening words of the Iliad, "Goddess, sing of the wrath [of Achilles]" • 43 The spacious firmament . . . , opening lines of "Hymn" by Joseph Addison (1672-1719)

of his animal heat about them, I *know* he loves them,—I answered. When they have had time to cool, he is more indifferent.

A good deal as it is with buckwheat cakes,—said the young fellow whom they call John.

The last words, only, reached the ear of the economically organized female in black bombazine.—Buckwheat is skerce and high,—she remarked. [Must be a poor relation sponging on our landlady—pays nothing,—so she must stand by the guns and be ready to repel boarders.]

I liked the turn the conversation had taken, for I had some things I wanted to say, and so, after waiting a minute, I began again.—I don't think the poems I read you sometimes can be fairly appreciated, given to you as they are in the green state.

—You don't know what I mean by the *green state?* Well, then, I will tell you. Certain things are good for nothing until they have been kept a long while; and some are good for nothing until they have been long kept and *used.* Of the first, wine is the illustrious and immortal example. Of those which must be kept and used I will name three,—meerschaum pipes, violins, and poems. The meerschaum is but a poor affair until it has burned a thousand offerings to the cloud-compelling deities. It comes to us without complexion or flavor,—born of the sea-foam, like Aphrodite, but colorless as *pallida Mors* herself. The fire is lighted in its central shrine, and gradually the juices which the broad leaves of the Great Vegetable had sucked up from an acre and curdled into a drachm are diffused through its thirsting pores. First a discoloration, then a stain, and at last a rich, glowing, umber tint spreading over the whole surface. Nature true to her old brown autumnal hue, you see,—as true in the fire of the meerschaum as in the sunshine of October! And then the cumulative wealth of its fragrant reminiscences! he who inhales its vapors takes a thousand whiffs in a single breath; and one cannot touch it without awakening the old joys that hang around it as the smell of flowers clings to the dresses of the daughters of the house of Farina!

[Don't think I use a meerschaum myself, for I *do not,* though I have owned a calumet since my childhood, which from a naked Pict (of the Mohawk species) my grandsire won, together with a tomahawk and beaded knife-sheath; paying for the lot with a bullet-mark on his right cheek. On the maternal side I inherit the loveliest silver-mounted tobacco-stopper you ever saw. It is a little box-wood Triton, carved with charming liveliness and truth; I have often compared it to a figure in Raphael's "Triumph of Galatea." It came to me in an ancient shagreen case,—how old it is I do not know,—but it must have been made since Sir Walter Raleigh's time. If you are curious, you shall see it any day. Neither will I pretend that I am so unused to the more perishable smoking contrivance that a few whiffs would make me feel as if I lay in a ground-well on the Bay of Biscay. I am not unacquainted with that fusiform, spiral-wound bundle of chopped stems and miscellaneous incombustibles, the *cigar,* so called, of the shops,—which to "draw" asks the suction-power of a nursling infant Hercules, and to relish, the leathery palate of an old Silenus. I do not advise you, young man, even if my illustration strike your fancy, to consecrate the flower of your life to painting the bowl of a pipe, for, let me assure you, the stain of a reverie-breeding narcotic may strike deeper than you think for. I have seen the green leaf of early promise grow brown before its time under such Nicotian regimen, and thought the umbered meerschaum was dearly bought at the cost of a brain enfeebled and a will enslaved.]

Violins, too,—the sweet old Amati!—the divine Stradivarius! Played on by ancient *maestros* until the bow-hand lost its power and the flying fingers stiffened. Bequeathed to the passionate young enthusiast, who made it whisper his hidden love, and cry his inarticulate longings, and scream his untold agonies, and wail his monotonous despair. Passed from his dying hand to the cold *virtuoso,* who let it slumber in its case for a generation, till, when his hoard was broken up, it came forth once more and rode the stormy symphonies of royal orchestras, beneath the rushing bow of their lord and leader. Into lonely prisons with improvident artists; into convents from which arose, day and night, the holy hymns with which its tones were blended; and back

---

28 **pallida Mors,** pale Death • 51 **Triumph of Galatea,** a famous painting. Galatea was a Naiad, a lesser goddess • 57 **Bay of Biscay,** on the Cantabrian Sea, noted for the fierce waves stirred up on it by strong winds • 72 **Amati,** Nicoló Amati (1596-1684), a great violin maker, teacher of Antonio Stradivarius • 73 **Stradivarius,** Antonio Stradivarius (1644-1737), the most famous of the Stradivari, a family of famous violin makers in Cremona

again to orgies in which it learned to howl and laugh as if a legion of devils were shut up in it; then again to the gentle *dilettante* who calmed it down with easy melodies until it answered him softly as in the days of the old *maestros*. And so given into our hands, its pores all full of music; stained, like the meerschaum, through and through, with the concentrated hue and sweetness of all the harmonies which have kindled and faded on its strings.

Now I tell you a poem must be kept *and used*, like a meerschaum, or a violin. A poem is just as porous as the meerschaum;—the more porous it is, the better. I mean to say that a genuine poem is capable of absorbing an indefinite amount of the essence of our own humanity,—its tenderness, its heroism, its regrets, its aspirations, so as to be gradually stained through with a divine secondary color derived from ourselves. So you see it must take time to bring the sentiment of a poem into harmony with our nature, by staining ourselves through every thought and image our being can penetrate.

Then again as to the mere music of a new poem; why, who can expect anything more from that than from the music of a violin fresh from the maker's hands? Now you know very well that there are no less than fifty-eight different pieces in a violin. These pieces are strangers to each other, and it takes a century, more or less, to make them thoroughly acquainted. At last they learn to vibrate in harmony and the instrument becomes an organic whole, as if it were a great seed-capsule which had grown from a garden-bed in Cremona, or elsewhere. Besides, the wood is juicy and full of sap for fifty years or so, but at the end of fifty or a hundred more gets tolerably dry and comparatively resonant.

Don't you see that all this is just as true of a poem? Counting each word as a piece, there are more pieces in an average copy of verses than in a violin. The poet has forced all these words together, and fastened them, and they don't understand it at first. But let the poem be repeated aloud and murmured over in the mind's muffled whisper often enough, and at length the parts become knit together in such absolute solidarity that you could not change a syllable without the whole world's crying out against you for meddling with the harmonious fabric. Observe, too, how the drying process takes place in the stuff of a poem just as in that of a violin. Here is a Tyrolese fiddle that is just coming to its hundredth birthday,—(Pedro Klauss, Tyroli, fecit, 1760),—the sap is pretty well out of it. And here is the song of an old poet whom Neæra cheated:—

The landlady's daughter.

"Nox erat, et cœlo fulgebat Luna sereno
Inter minora sidera,

---

48 **Pedro Klauss . . . fecit, 1760,** made by Pedro Klauss in 1760 • 51 **Nox erat . . . mea.** Horace, **Epodes,** XV. The lines quoted have been translated thus by G. E. Bennett: " 'Twas night, and in a cloudless sky the moon was shining amid the lesser lights, when thou, soon to outrage the majesty of the mighty gods, didst pledge thy loyalty . . ."

Cum tu magnorum numen læsura deorum
In verba jurabas mea."

Don't you perceive the sonorousness of these old dead Latin phrases? Now I tell you that every word fresh from the dictionary brings with it a certain succulence; and though I cannot expect the sheets of the "Pactolian," in which, as I told you, I sometimes print my verses, to get so dry as the crisp papyrus that held those words of Horatius Flaccus, yet you may be sure, that, while the sheets are damp, and while the lines hold their sap, you can't fairly judge of my performances, and that, if made of the true stuff, they will ring better after a while.

[There was silence for a brief space, after my somewhat elaborate exposition of these self-evident analogies. Presently *a person* turned towards me—I do not choose to designate the individual—and said that he rather expected my pieces had given pretty good "sahtisfahction"—I had, up to this moment, considered this complimentary phrase as sacred to the use of secretaries of lyceums, and, as it has been usually accompanied by a small pecuniary testimonial, have acquired a certain relish for this moderately tepid and unstimulating expression of enthusiasm. But as a reward for gratuitous services, I confess I thought it a little below that blood-heat standard which a man's breath ought to have, whether silent, or vocal and articulate. I waited for a favorable opportunity, however, before making the remarks which follow.]

—There are single expressions, as I have told you already, that fix a man's position for you before you have done shaking hands with him. Allow me to expand a little. There are several things, very slight in themselves, yet implying other things not so unimportant. Thus, your French servant has *dévalisé* your premises and got caught. *Excusez,* says the *sergent-de-ville,* as he politely relieves him of his upper garments and displays his bust in the full day-light. Good shoulders enough,—a little marked,—traces of smallpox, perhaps, —but white. . . . *Crac!* from the *sergent-de-ville's* broad palm on the white shoulder! Now look! *Vogue la galère!* Out comes the big red V—mark of the hot iron;—he had blistered it out pretty nearly,—hadn't he?—the old rascal VOLEUR, branded in the galleys at Marseilles! [Don't! What if he has got something like this?—nobody supposes I *invented* such a story.]

My man John, who used to drive two of those six equine females which I told you I had owned,—for, look you, my friends, simple though I stand here, I am one that has been driven in his "kerridge,"—not using that term, as liberal shepherds do, for any battered old shabby-genteel go-cart which has more than one wheel, but meaning thereby a four-wheeled vehicle *with a pole,*—my man John, I say, was a retired soldier. He retired unostentatiously, as many of Her Majesty's modest servants have done before and since. John told me, that when an officer thinks he recognizes one of these retiring heroes, and would know if he has really been in the service, that he may restore him, if possible, to a grateful country, he comes suddenly upon him, and says, sharply, "Strap!" If he has ever worn the shoulder-strap, he has learned the reprimand for its ill adjustment. The old word of command flashes through his muscles, and his hand goes up in an instant to the place where the strap used to be.

[I was all the time preparing for my grand *coup,* you understand; but I saw they were not quite ready for it, and so continued,—always in illustration of the general principle I had laid down.]

Yes, odd things come out in ways that nobody thinks of. There was a legend, that, when the Danish pirates made descents upon the English coast, they caught a few Tartars occasionally, in the shape of Saxons, who would not let them go,—on the contrary, insisted on their staying, and, to make sure of it, treated them as Apollo treated Marsyas, or as Bartholinus has treated a fellow-creature in his title-page, and, having divested them of the one essential and perfectly fitting garment, indispensable in the mildest climates, nailed the same on the church-door as we do the banns of marriage, *in terrorem.*

[There was a laugh at this among some of the young folks; but as I looked at our landlady, I saw that "the

water stood in her eyes," as it did in Christiana's when the interpreter asked her about the spider, and I fancied, but wasn't quite sure that the schoolmistress blushed, as Mercy did in the same conversation, as you remember.]

That sounds like a cock-and-bull-story,—said the young fellow whom they call John. I abstained from making Hamlet's remark to Horatio, and continued.

Not long since, the church-wardens were repairing and beautifying an old Saxon church in a certain English village, and among other things thought the doors should be attended to. One of them particularly, the front-door, looked very badly, crusted, as it were, and as if it would be all the better for scraping. There happened to be a microscopist in the village who had heard the old pirate story, and he took it into his head to examine the crust on this door. There was no mistake about it; it was a genuine historical document, of the Ziska drum-head pattern,—a real *cutis humana,* stripped from some old Scandinavian filibuster, and the legend was true.

My friend, the Professor, settled an important historical and financial question once by the aid of an exceedingly minute fragment of a similar document. Behind the pane of plate-glass which bore his name and title burned a modest lamp, signifying to the passers-by that at all hours of the night the slightest favors (or fevers) were welcome. A youth who had freely partaken of the cup which cheers and likewise inebriates, following a moth-like impulse very natural under the circumstances, dashed his fist at the light and quenched the meek luminary,—breaking through the plate-glass, of course, to reach it. Now I don't want to go into *minutiæ* at table, you know, but a naked hand can no more go through a pane of thick glass without leaving some of its cuticle, to say the least, behind it, than a butterfly can go through a sausage-machine without looking the worse for it. The Professor gathered up the fragments of glass, and with them certain very minute but entirely satisfactory documents which would have identified and hanged any rogue in Christendom who had parted with them.—The historical question, *Who did it?* and the financial question, *Who paid for it?* were both settled before the new lamp was lighted the next evening.

You see, my friends, what immense conclusions, touching our lives, our fortunes, and our sacred honor, may be reached by means of very insignificant premises. This is eminently true of manners and forms of speech; a movement or a phrase often tells you all you want to know about a person. Thus, "How's your health?" (commonly pronounced *haàlth)* instead of, How do you do? or, How are you? Or calling your little dark entry a "hall," and your old rickety one-horse wagon a "kerridge." Or telling a person who has been trying to please you that he has given you pretty good "sahtisfahction." Or saying that you "remember of" such a thing, or that you have been "stoppin' " at Deacon Somebody's,—and other such expressions. One of my friends had a little marble statuette of Cupid in the parlor of his country-house,—bow, arrows, wings, and all complete. A visitor, indigenous to the region, looking pensively at the figure, asked the lady of the house "if that was a statoo of her deceased infant?" What a delicious, though somewhat voluminous biography, social, educational, and aesthetic, in that brief question!

[Please observe with what Machiavellian astuteness I smuggled in the particular offence which it was my object to hold up to my fellow-boarders, without too personal an attack on the individual at whose door it lay.]

That was an exceedingly dull person who made the remark, *Ex pede Herculem.* He might as well have said, "from a peck of apples you may judge of the barrel." *Ex* PEDE, to be sure! Read, instead, *Ex ungue minimi digiti pedis, Herculem, ejusque patrem, matrem, avos et proavos, filios, nepotes et pronepotes!* Talk to me about your δὸς ποῦ στῶ! Tell me about Cuvier's getting up a megatherium from a tooth, or Agassiz's drawing a portrait of an undiscovered fish from a single scale! As the

"O" revealed Giotto,—as the one word "moi" betrayed the Stratford atte-Bowe-taught Anglais,—so all a man's antecedents and possibilities are summed up in a single utterance which gives at once the gauge of his education and his mental organization.

Possibilities, Sir?—said the divinity-student; can't a man who says *Haow?* arrive at distinction?

Sir,—I replied,—in a republic all things are possible. But the man *with a future* has almost of necessity sense enough to see that any odious trick of speech or manners must be got rid of. Doesn't Sydney Smith say that a public man in England never gets over a false quantity uttered in early life? *Our* public men are in little danger of this fatal misstep, as few of them are in the habit of introducing Latin into their speeches,—for good and sufficient reasons. But they are bound to speak decent English,—unless, indeed, they are rough old campaigners, like General Jackson or General Taylor; in which case, a few scars on Priscian's head are pardoned to old fellows who have quite as many on their own, and a constituency of thirty empires is not at all particular, provided they do not swear in their Presidential Messages.

However, it is not for me to talk. I have made mistakes enough in conversation and print. I never find them out until they are stereotyped, and then I think they rarely escape me. I have no doubt I shall make half a dozen slips before this breakfast is over, and remember them all before another. How one does tremble with rage at his own intense momentary stupidity about things he knows perfectly well, and to think how he lays himself open to the impertinences of the *captatores verborum*, those useful but humble scavengers of the language, whose business it is to pick up what might offend or injure, and remove it, hugging and feeding on it as they go! I don't want to speak too slightingly of these verbal critics; —how can I, who am so fond of talking about errors and vulgarisms of speech? Only there is a difference between those clerical blunders which almost every man commits, knowing better, and that habitual grossness or meanness of speech which is unendurable to educated persons, from anybody that wears silk or broadcloth.

[I write down the above remarks this morning, January 26th, making this record of the date that nobody may think it was written in wrath, on account of any particular grievance suffered from the invasion of any *individual scarabœus grammaticus.*]

—I wonder if anybody ever finds fault with anything I say at this table when it is repeated? I hope they do, I am sure. I should be very certain that I had said nothing of much significance, if they did not.

Did you never, in walking in the fields, come across a large flat stone, which had lain, nobody knows how long, just where you found it, with the grass forming a little hedge, as it were, all round it, close to its edges,—and have you not, in obedience to a kind of feeling that told you it had been lying there long enough, insinuated your stick or your foot or your fingers under its edge and turned it over as a housewife turns a cake, when she says to herself, "It's done brown enough by this time"? What an odd revelation, and what an unforeseen and unpleasant surprise to a small community, the very existence of which you had not suspected, until the sudden dismay and scattering among its members produced by your turning the old stone over! Blades of grass flattened down, colorless, ironed; hideous crawling creatures, some of them coleopterous or horny-shelled,—turtle-bugs one wants to call them, some of them softer, but cunningly spread out and compressed like Lepine watches; (Nature never loses a crack or a crevice, mind you, or a joint in a tavern bedstead, but she always has one of her flat-pattern live timekeepers to slide into it); black glossy crickets, with their long filaments sticking out like the whips of four-horse stage-coaches; motionless, slug-like creatures, young larvæ, perhaps more horrible in their pulpy stillness than even in the infernal wriggle of maturity. But no sooner is the stone turned and the wholesome light of day let upon this compressed and blinded community of creeping things, than all of them which enjoy the luxury of legs—and some of them have a good many—rush

1 **Giotto** (1276?-1337?), Florentine painter and architect who reputedly could draw, free hand, a perfect circle • 2 **Stratford . . . Anglais.** The reference is to the prioress in the **Canterbury Tales,** of whom Chaucer said·

> And Frenssh she spak ful faire and fetishly [neatly]
> After the acole [school] of Stratford-atte-Bowe . . . .

Stratford-atte-Bowe was a Benedictine nunnery at Stratford, London, E. The French taught there was Anglo-French, which differed from that of Paris. Therefore, the way she pronounced "moi" would show her training • 11 **Sydney Smith** (1771-1845), English divine, writer, and wit • 18 **General Jackson,** Andrew Jackson (1767-1845), seventh President (1829-1837) of the United States • 18 **General Taylor,** Zachary Taylor (1784-1850), twelfth President (1849-1850) • 19 **Priscian,** Latin grammarian of the sixth century • 31 **captatores verborum,** word hunters • 46 **scarabœus grammaticus,** grammar beetle, or bookworm • 66 **coleopterous,** belonging to the beetle species of insects

round wildly, butting each other and everything in their way, and end in a general stampede for underground retreats from the region poisoned by sunshine. *Next year* you will find the grass growing tall and green where the stone lay; the ground-bird builds her nest where the beetle had his hole; the dandelion and the buttercup are growing there, and the broad fans of insect-angels open and shut over their golden disks, as the rhythmic waves of blissful consciousness pulsate through their glorified being.

—The young fellow whom they call John saw fit to say, in his very familiar way,—at which I do not choose to take offence, but which I sometimes think it necessary to repress, that I was coming it rather strong on the butterflies.

No, I replied; there is meaning in each of those images,—the butterfly as well as the others. The stone is ancient error. The grass is human nature borne down and bleached of all its colour by it. The shapes which are found beneath are the crafty beings that thrive in darkness, and the weaker organisms kept helpless by it. He who turns the stone over is whosoever puts the staff of truth to the old lying incubus, no matter whether he do it with a serious face or a laughing one. The next year stands for the coming time. Then shall the nature which had lain blanched and broken rise in its full stature and native hues in the sunshine. Then shall God's minstrels build their nests in the hearts of a newborn humanity. Then shall beauty—Divinity taking outlines and color—light upon the souls of men as the butterfly, image of the beatified spirit rising from the dust, soars from the shell that held a poor grub, which would never have found wings, had not the stone been lifted.

You never need think you can turn over any old falsehood without a terrible squirming and scattering of the horrid little population that dwells under it.

—Every real thought on every subject knocks the wind out of somebody or other. As soon as his breath comes back, he very probably begins to expend it in hard words. These are the best evidence a man can have that he has said something it was time to say. Dr. Johnson was disappointed in the effect of one of his pamphlets. "I think I have not been attacked enough for it," he said;—"attack is the reaction; I never think I have hit hard unless it rebounds."

—If a fellow attacked my opinions in print, would I reply? Not I. Do you think I don't understand what my friend, the Professor, long ago called *the hydrostatic paradox of controversy?*

Don't know what that means?—Well, I will tell you. You know, that, if you had a bent tube, one arm of which was of the size of a pipe-stem, and the other big enough to hold the ocean, water would stand at the same height in one as in the other. Controversy equalizes fools and wise men in the same way,—*and the fools know it.*

The young fellow whom they call John.

—No, but I often read what they say about other people. There are about a dozen phrases which all come tumbling along together, like the tongs, and the shovel, and the poker, and the brush, and the bellows, in one of those domestic avalanches that everybody knows. If you get one, you get the whole lot.

What are they?—Oh, that depends a good deal on

latitude and longitude. Epithets follow the isothermal lines pretty accurately. Grouping them in two families, one finds himself a clever, genial, witty, wise, brilliant, sparkling, thoughtful, distinguished, celebrated, illustrious scholar and perfect gentleman, and first writer of the age; or a dull, foolish, wicked, pert, shallow, ignorant, insolent, traitorous, black-hearted outcast, and disgrace to civilization.

What do I think determines the set of phrases a man gets?—Well, I should say a set of influences something like these:—1st. Relationships, political, religious, social, domestic. 2nd. Oysters, in the form of suppers given to gentlemen connected with criticism. I believe in the school, the college, and the clergy; but my sovereign logic, for regulating public opinion—which means commonly the opinion of half a dozen of the critical gentry—is the following. *Major proposition.* Oysters *au naturel.* *Minor proposition.* The same "scalloped." *Conclusion.* That—(here insert entertainer's name) is clever, witty, wise, brilliant,—and the rest.

—No, it isn't exactly bribery. One man has oysters, and another epithets. It is an exchange of hospitalities; one gives a "spread" on linen, and the other on paper,—that is all. Don't you think you and I should be apt to do just so, if we were in the critical line? I am sure I couldn't resist the softening influences of hospitality. I don't like to dine out, you know,—I dine so well at our own table, [our landlady looked radiant,] and the company is so pleasant [a rustling movement of satisfaction among the boarders]; but if I did partake of a man's salt, with such additions as that article of food requires to make it palatable, I could never abuse him, and if I had to speak of him, I suppose I should hang my set of jingling epithets round him like a string of sleigh-bells. Good feeling helps society to make liars of most of us,—not absolute liars, but such careless handlers of truth that its sharp corners get terribly rounded. I love truth as chiefest among the virtues; I trust it runs in my blood; but I would never be a critic, because I know I could not always tell it. I might write a criticism of a book that happened to please me; that is another matter.

—Listen, Benjamin Franklin! This is for you, and such others of tender age as you may tell it to.

When we are as yet small children, long before the time when those two grown ladies offer us the choice of Hercules, there comes up to us a youthful angel, holding in his right hand cubes like dice, and in his left spheres like marbles. The cubes are of stainless ivory, and on each is written in letters of gold—TRUTH. The spheres are veined and streaked and spotted beneath, with a dark crimson flush above, where the light falls on them, and in a certain aspect you can make out upon every one of them the three letters L, I, E. The child to whom they are offered very probably clutches at both. The spheres are the most convenient things in the world; they roll with the least possible impulse just where the child would have them. The cubes will not roll at all; they have a great talent for standing still, and always keep right side up. But very soon the young philosopher finds that things which roll so easily are very apt to roll into the wrong corner, and to get out of his way when he most wants them, while he always knows where to find the others, which stay where they are left. Thus he learns—thus we learn—to drop the streaked and speckled globes of falsehood and to hold fast the white angular blocks of truth. But then comes Timidity, and after her Good-nature, and last of all Polite-behavior, all insisting that truth must *roll,* or nobody can do anything with it; and so the first with her coarse rasp, and the second with her broad file, and the third with her silken sleeve, do so round off and smooth and polish the snow-white cubes of truth, that, when they have got a little dingy by use, it becomes hard to tell them from the rolling spheres of falsehood.

The schoolmistress was polite enough to say that she was pleased with this, and that she would read it to her little flock the next day. But she should tell the children, she said, that there were better reasons for truth than could be found in mere experience of its convenience and the inconvenience of lying.

Yes,—I said,—but education always begins through the senses, and works up to the idea of absolute right and wrong The first thing the child has to learn about this matter is, that lying is unprofitable,—afterwards, that it is against the peace and dignity of the universe.

James Russell Lowell

1819 • 1891

James Russell Lowell's background and training seemed fairly certain to make him exactly the conservative in politics and literature that his neighbor Holmes was. For several reasons, however, he diverged notably from the Brahmin pattern. Born ten years after Holmes, he belonged to a generation which was beginning to rebel against an established style of thinking and living. Moreover, his reading of foreign literature differed from that of Longfellow and Holmes and led him to form different notions about the most important tasks and methods of great writers. Finally, his acquaintanceships and friendships influenced him to depart from beaten paths in New England literature.

Lowell was born February 22, 1819, at Elmwood, a large pre-Revolutionary mansion in Cambridge, Massachusetts, on what was called "Tory Row." A member of one of the most honored Brahmin families, he had the usual sort of education at home (dame's school and Harvard) and abroad. When Longfellow retired, Lowell took the distinguished chair which Longfellow had held at Harvard and served there from 1856 until 1877. He was not only a teacher, a critic, and a poet but also an editor of the *Atlantic Monthly* (1857-1861) and of the *North American Review* (1864-1872), a minister to Spain (1877-1880), and a minister to England (1880-1885). After his return to America, Lowell continued to express himself in political essays, criticism, and poetry to the time of his death, at Elmwood, August 12, 1891. The wide range of activity represented in his life is paralleled by the wide range in the writings of this most versatile of the Cambridge authors.

In the years before his appointment at Harvard, Lowell, largely because of the influence of his first wife, Maria White, became a leading writer in behalf of abolition. His *Biglow Papers* (first series, 1848; second series, 1867) in Yankee dialect were his chief contribution to antislavery literature. These writings, in the crackerbox philosopher tradition of Jack Downing (see p. 541) and others, effectively argued for Lowell's beliefs on the basis of common sense. Most notable of his other political writings are *On a Certain Condescension in Foreigners* (1869) and *Democracy* (1884), which have a mannered elegance strikingly different from the Yankee diatribes.

In the field of belles-lettres, Lowell wrote criticism and poetry. His earliest criticism was frankly impressionistic, deriving its value from Lowell's sensitivity and his ability to state his reactions in striking phrases. Beginning in the 1850's, however, his study of the classic critics, of Goethe and of Coleridge, led him to adopt less impressionistic methods to stress the relationship between the period and the author, between the author and his work, and between the details and the whole composition. This approach appeared in *Among My Books* (first series, 1870; second series, 1876) and *My Study Windows* (1871). The essays in these volumes deal with the great authors of various lands and not only communicate Lowell's judgments in memorable terms but also employ rather systematic tests of excellence and many illuminating comparisons.

Much of the poetry which Lowell wrote might have been written by either Longfellow or Holmes: it had similar material, a similar arrangement, and a similar

form. In some of his other poems, though, he showed his kinship with the new generation, which included such writers as Emily Dickinson and Walt Whitman, by departing more frequently than his famous fellow townsmen from the well-established verse patterns. As a poet Lowell was versatile enough to publish the rustic Biglow verses, the sparklingly witty *Fable for Critics*, and the moralizing metrical romance, *The Vision of Sir Launfal*, all in one year. Although his versatility somewhat diffused his energies, he did write some good poetry. Lowell was at his poetic best, perhaps, in some of his nature poems and in some of his odes—notably "Ode Recited at the Harvard Commemoration" (1865).

The Writings of James Russell Lowell, 10 vols , Boston, 1890 • F. H. Underwood, **The Poet and the Man**, Boston, 1893 • H E. Scudder, **James Russell Lowell**, Boston, 1906 • **Letters of James Russell Lowell**, ed. C. E. Norton, 2 vols., New York, 1906

To the Dandelion

America, in the early forties, developed a great passion for democracy—a passion shared by Lowell and his bride of 1844. In the early days of their marriage this couple had astonished some of their neighbors by insisting that old family servants sit at the table with them at mealtime. Expressive of Lowell's current enthusiasm for democracy, this song uses the humble flower as a symbol of the glory of the common man. The choice of imagery, except perhaps in part of the fourth stanza, is highly appropriate to the development of the thought. In this poem, published in **Graham's Magazine** in January 1845, Lowell showed that now and then he could write a lyric poem which had both richness and unity.

Dear common flower, that grow'st beside the way,
Fringing the dusty road with harmless gold,
First pledge of blithesome May,
Which children pluck, and, full of pride, uphold,
High-hearted buccaneers, o'erjoyed that they
An Eldorado in the grass have found,
Which not the rich earth's ample round
May match in wealth,—thou art more dear to me
Than all the prouder summer-blooms may be.

Gold such as thine ne'er drew the Spanish prow
Through the primeval hush of Indian seas,
Nor wrinkled the lean brow
Of age, to rob the lover's heart of ease,
'Tis the spring's largess, which she scatters now
To rich and poor alike, with lavish hand,
Though most hearts never understand
To take it at God's value, but pass by
The offered wealth with unrewarded eye.

Thou art my tropics and mine Italy;
To look at thee unlocks a warmer clime;
The eyes thou givest me
Are in the heart, and heed not space or time:
Not in mid June the golden cuirassed bee
Feels a more summer-like warm ravishment
In the white lily's breezy tent,
His fragrant Sybaris, than I, when first
From the dark green thy yellow circles burst.

Then think I of deep shadows on the grass,
Of meadows where in sun the cattle graze,
Where, as the breezes pass,
The gleaming rushes lean a thousand ways,
Of leaves that slumber in a cloudy mass,
Or whiten in the wind, of waters blue
That from the distance sparkle through
Some woodland gap, and of a sky above,
Where one white cloud like a stray lamb doth move.

---

26 **Sybaris**, an ancient Greek city famous for its luxury and for the voluptuousness which flourished in its mild climate

My childhood's earliest thoughts are linked with thee;
The sight of thee calls back the robin's song,
Who, from the dark old tree
Beside the door, sang clearly all day long,
And I, secure in childish piety,
Listened as if I heard an angel sing
With news from heaven, which he could bring
Fresh every day to my untainted ears,
When birds and flowers and I were happy peers.

How like a prodigal doth nature seem,
When thou, for all thy gold, so common art!
Thou teachest me to deem
More sacredly of every human heart,
Since each reflects in joy its scanty gleam
Of heaven and, could some wondrous secret show
Did we but pay the love we owe,
And with a child's undoubting wisdom look
On all these living pages of God's book.

1845

From

A Fable for Critics

Lowell wrote that "this jeu d'esprit was extemporized, I may say, so rapidly was it written. . . . I sent daily installments to a friend in New York, the late Charles Briggs. He urged me to let it be printed, and I at last consented to its anonymous publication."

As Lowell said at the outset of the poem, its plot,

. . . like an icicle's slender and slippery,
Every moment more slender, and likely to slip awry. . . .

In the main, it presents a critic explaining to Apollo what American authors of the period were like. The passages below (the titles were supplied by the editors) are the critic's remarks about the leading figures dealt with in the poem, as well as those about two minor authors famous at the time, Dana and Neal.

A long line of ancestors might be cited for the poem, notably Byron's "English Bards and Scotch Reviewers" and a poem which Lowell had enjoyed reading not long before 1847—Leigh Hunt's "Feast of the Poets." For discernment, liveliness, and wit, Lowell's poem compares very favorably with these predecessors.

EMERSON

"There comes Emerson first, whose rich words, every one,
Are like gold nails in temples to hang trophies on,
Whose prose is grand verse, while his verse, the Lord knows,
Is some of it pr— No, 't is not even prose;
I'm speaking of metres; some poems have welled
From those rare depths of soul that have ne'er been excelled;
They're not epics, but that doesn't matter a pin,
In creating, the only hard thing's to begin;
A grass-blade's no easier to make than an oak;
If you've once found the way, you've achieved the grand stroke;
In the worst of his poems are mines of rich matter,
But thrown in a heap with a crash and a clatter;
Now it is not one thing nor another alone
Makes a poem, but rather the general tone,
The something pervading, uniting the whole,
The before unconceived, unconceivable soul,
So that just in removing this trifle or that, you
Take away, as it were, a chief limb of the statue;
Roots, wood, bark, and leaves singly perfect may be,
But, clapt hodge-podge together, they don't make a tree.

"But, to come back to Emerson (whom, by the way,
I believe we left waiting),—his is, we may say,

---

2 gold nails. See Ecclesiastes 12 11 "The words of the wise are as . . . nails fastened by the masters of assemblies . . ." • 5 metres, a reference to Emerson's rather bumpy versification

A Greek head on right Yankee shoulders, whose range
Has Olympus for one pole, for t'other the Exchange;
He seems, to my thinking (although I'm afraid
The comparison must, long ere this, have been made),
A Plotinus-Montaigne, where the Egyptian's gold mist
And the Gascon's shrewd wit cheek-by-jowl coexist;
All admire, and yet scarcely six converts he's got
To I don't (nor they either) exactly know what;
For though he builds glorious temples, 'tis odd
He leaves never a doorway to get in a god.
'T is refreshing to old-fashioned people like me
To meet such a primitive Pagan as he,
In whose mind all creation is duly respected
As parts of himself—just a little projected;
And who's willing to worship the stars and the sun,
A convert to—nothing but Emerson.
So perfect a balance there is in his head,
That he talks of things sometimes as if they were dead;
Life, nature, love, God, and affairs of that sort,
He looks at as merely ideas; in short,
As if they were fossils stuck round in a cabinet,
Of such vast extent that our earth's a mere dab in it;
Composed just as he is inclined to conjecture her,
Namely, one part pure earth, ninety-nine parts pure lecturer,
You are filled with delight at his clear demonstration,
Each figure, word, gesture, just fits the occasion,
With the quiet precision of science he'll sort 'em,
But you can't help suspecting the whole a *post mortem.*

"There are persons, mole-blind to the soul's make and style,
Who insist on a likeness 'twixt him and Carlyle;
To compare him with Plato would be vastly fairer,
Carlyle's the more burly, but E. is the rarer;
He sees fewer objects, but clearlier, truelier,
If C.'s as original, E.'s more peculiar;
That he's more of a man you might say of the one,
Of the other he's more of an Emerson;
C.'s the Titan, as shaggy of mind as of limb,—
E. the clear-eyed Olympian, rapid and slim;
The one's two thirds Norseman, the other half Greek,
Where the one's most abounding, the other's to seek;
C.'s generals require to be seen in the mass,—
E.'s specialties gain if enlarged by the glass;
C. gives nature and God his own fits of the blues,
And rims common-sense things with mystical hues,—
E. sits in a mystery calm and intense,
And looks coolly around him with sharp common-sense;
C. shows you how every-day matters unite
With the dim transdiurnal recesses of night,—
While E., in a plain, preternatural way,
Makes mysteries matters of mere every day;
C. draws all his characters quite *a la* Fuseli,—
Not sketching their bundles of muscles and thews illy,
He paints with a brush so untamed and profuse,
They seem nothing but bundles of muscles and thews;
E. is rather like Flaxman, lines strait and severe,
And a colorless outline, but full, round, and clear;—
To the men he thinks worthy he frankly accords
The design of a white marble statue in words.
C. labors to get at the centre, and then
Take a reckoning from there of his actions and men;
E. calmly assumes the said centre as granted,
And, given himself, has whatever is wanted.

"He has imitators in scores, who omit
No part of the man but his wisdom and wit,—
Who go carefully o'er the sky-blue of his brain,
And when he has skimmed it once, skim it again;
If at all they resemble him, you may be sure it is
Because their shoals mirror his mists and obscurities,
As a mud-puddle seems deep as heaven for a minute,
While a cloud that floats o'er is reflected within it.

BRYANT

"There is Bryant, as quiet, as cool, and as dignified,
As a smooth, silent iceberg, that never is ignified,
Save when by reflection 'tis kindled o' nights

---

24 **Olympus,** dwelling place of the Grecian gods. Here Lowell is referring to Emerson's Platonic idealism • 24 **Exchange,** symbol of Emerson's practicality. When a typical Brahmin praised a Transcendentalist, he was likely to laud him for not being too impractical • 27 **Plotinus-Montaigne** repeats the claim that Emerson was a happy mixture of idealism and practicality. Plotinus (205?-270?) was the most famous of the neo-Platonic philosophers. Michel Eyquem de Montaigne (1553-1592) was a French skeptic, essayist, and moralist • 59 **Titan,** earth-born giant, contrasted here with the heaven-born Olympian • 63 **generals,** generalizations • 73 **Fuseli.** Heinrich Fuseli (1742?-1825), a German-Swiss painter, was noted for his distortions of form and the extravagance of his colors • 77 **Flaxman,** John Flaxman (1755-1826), an English sculptor who followed classic models

h a semblance of flame by the chill Northern Lights.
may rank (Griswold says so) first bard of your nation
ere's no doubt that he stands in supreme ice-olation),
r topmost Parnassus he may set his heel on,
no warm applauses come, peal following peal on,—
; too smooth and too polished to hang any zeal on:
ualified merits, I'll grant, if you choose, he has 'em,
he lacks the one merit of kindling enthusiasm;
e stir you at all, it is just, on my soul,
: being stirred up with the very North Pole.

He is very nice reading in summer, but *inter*
, we don't want *extra* freezing in winter,
e him up in the depth of July, my advice is,
en you feel an Egyptian devotion to ices.
, deduct all you can, there's enough that's right good
in him,
has a true soul for field, river, and wood in him;
l his heart, in the midst of brick walls, or where'er
it is,
ws, softens, and thrills with the tenderest charities—
you mortals that delve in this trade-ridden planet?
to old Berkshire's hills, with their limestone and
granite.
ou're one who *in loco* (add *foco* here) *desipis*,
ı will get of his outermost heart (as I guess) a piece;
you'd get deeper down if you came as a precipice,
l would break the last seal of its inwardest fountain,
ou only could palm yourself off for a mountain.
Quivis, or somebody quite as discerning,
ıe scholar who's hourly expecting his learning,
ls B. the American Wordsworth; but Wordsworth
y be rated at more than your whole tuneful herd's
worth.
, don't be absurd, he's an excellent Bryant;
, my friends, you'll endanger the life of your client,
attempting to stretch him up into a giant:
ou choose to compare him, I think there are two per-
sons fit for a parallel—Thompson and Cowper;
ɔn't mean exactly—there's something of each,
:re's T.'s love of nature, C.'s penchant to preach;
t mix up their minds so that C.'s spice of craziness
ll balance and neutralize T.'s turn for laziness,
l it gives you a brain cool, quite frictionless, quiet,
ıose internal police nips the buds of all riot,—
ɔrain like a permanent straight-jacket put on
: heart that strives vainly to burst off a button,—
A brain which, without being slow or mechanic,
Does more than a larger less drilled, more volcanic;
He's a Cowper condensed, with no craziness bitten,
And the advantage that Wordsworth before him had
written.

"But, my dear little bardlings, don't prick up your ears
Nor suppose I would rank you and Bryant as peers;
If I call him an iceberg, I don't mean to say
There is nothing in that which is grand in its way;
He is almost the one of your poets that knows
How much grace, strength, and dignity lie in Repose;
If he sometimes fall short, he is too wise to mar
His thought's modest fulness by going too far;
'T would be well if your authors should all make a trial
Of what virtue there is in severe self-denial,
And measure their writings by Hesiod's staff,
Which teaches that all has less value than half.

WHITTIER

"There is Whittier, whose swelling and vehement heart
Strains the strait-breasted drab of the Quaker apart,
And reveals the live Man, still supreme and erect,
Underneath the bemummying wrappers of sect;
There was ne'er a man born who had more of the swing
Of the true lyric bard and all that kind of thing;
And his failures arise (though he seem not to know it)
From the very same cause that has made him a poet,—
A fervor of mind which knows no separation
'Twixt simple excitement and pure inspiration,
As my Pythoness erst sometimes erred from not knowing
If 'twere I or mere wind through her tripod was blowing;

---

97 **Griswold,** Rufus Griswold (1815-1857), a leading nineteenth-century anthologist • 106 **inter Nos,** between ourselves • 116 **in . . . desipis.** You can be foolish in a particular place. The "add foco here" adds a rather complicated pun, referring not only to "one's own fireside" but also to the then-famous Locofoco political party • 121 **Mr. Quivis,** Mr Anybody • 129 **Thompson,** properly spelled Thomson, James (1700-1748), author of **The Seasons** • 129 **Cowper,** William Cowper (1731-1800), author of **The Task.** At this point Lowell wrote this rhymed footnote:

> To demonstrate quickly and easily how per-
> versely absurd 'tis to sound his Cowper
> As people in general call him named super
> I remark that he rhymes it himself with horse-trooper.

• 152 **Hesiod** (fl. 766 B.C.), a Greek poet, author of **Works and Days**
• 164 **Pythoness,** the oracle of Delphi

Let his mind once get head in its favorite direction
And the torrent of verse bursts the dams of reflection,
While, borne with the rush of the metre along,
The poet may chance to go right or go wrong,
Content with the whirl and delirium of song;
Then his grammar's not always correct, nor his rhymes,
And he's prone to repeat his own lyrics sometimes,
Not his best, though, for those are struck off at white-heats
When the heart in his breast like a trip-hammer beats,
And can ne'er be repeated again any more
Than they could have been carefully plotted before:
Like old what's-his-name there at the battle of Hastings
(Who, however, gave more than mere rhythmical bastings),
Our Quaker leads off metaphorical fights
For reform and whatever they call human rights,
Both singing and striking in front of the war,
And hitting his foes with the mallet of Thor;
Anne haec, one exclaims, on beholding his knocks,
Vestis filii tui, O leather-clad Fox?
Can that be thy son, in the battle's mid din,
Preaching brotherly love and then driving it in
To the brain of the tough old Goliath of sin,
With the smoothest of pebbles from Castaly's spring
Impressed on his hard moral sense with a sling?

"All honor and praise to the right-hearted bard
Who was true to The Voice when such service was hard,
Who himself was so free he dared sing for the slave
When to look but a protest in silence was brave;
All honor and praise to the women and men
Who spoke out for the dumb and the down-trodden then!
It needs not to name them, already for each
I see History preparing the statue and niche;
They were harsh, but shall *you* be so shocked at hard words
Who have beaten your pruning-hooks up into swords,
Whose rewards and hurrahs men are surer to gain
By the reaping of men and of women than grain?
Why should *you* stand aghast at their fierce wordy war, if
You scalp one another for Bank or for Tariff?
Your calling them cut-throats and knaves all day long
Doesn't prove that the use of hard language is wrong;
While the World's heart beats quicker to think of such men
As signed Tyranny's doom with a bloody steel-pen,
While on Fourth-of-Julys beardless orators fright one
With hints at Harmodius and Aristogeiton,
You need not look shy at your sisters and brothers
Who stab with sharp words for the freedom of others;—
No, a wreath, twine a wreath for the the loyal and true
Who, for sake of the many, dared stand with the few,
Not of blood-spattered laurel for enemies braved,
But of broad, peaceful oak-leaves for citizens saved!

DANA

"Here comes Dana, abstractedly loitering along,
Involved in a paulo-post-future of song,
Who'll be going to write what'll never be written
Till the Muse, ere he think of it, gives him the mitten,—
Who is so well aware of how things should be done,
That his own works displease him before they're begun,—
Who so well all that makes up good poetry knows,
That the best of his poems is written in prose;
All saddled and bridled stood Pegasus waiting,
He was booted and spurred, but he loitered debating;
In a very grave question his soul was immersed,—
Which foot in the stirrup he ought to put first;
And, while this point and that he judicially dwelt on,
He, somehow or other, had written Paul Felton,
Whose beauties or faults, whichsoever you see there,
You'll allow only genius could hit upon either.
That he once was the Idle Man none will deplore,
But I fear he will never be anything more;
The ocean of song heaves and glitters before him,
The depth and the vastness and longing sweep o'er him,

---

177 old what's-his-name, Taillefer, a minstrel who rode into battle at Hastings (1066) singing of Roland • **182 Thor,** Norse god of war and thunder • **183 Anne haec . . . tui.** Is this indeed the robe of thy son? • **184 Fox, George Fox (1624-1691),** English founder of the Society of Friends or Quakers • **188 Castaly's spring,** a spring on Mount Parnassus • **191 The Voice**—of God • **203 Bank or for Tariff.** Two of the hottest political issues of the period were the United States Bank and the protective tariff • **209 Harmodius and Aristogeiton,** sixth-century Greeks who slew Hipparchus, tyrant of Athens • **216 Dana.** Richard Henry Dana, Sr. (1787-1879) is an author whose fame has been eclipsed by that of his son, Richard Henry, Jr., author of **Two Years Before the Mast.** Poet and essayist, the elder Dana, somewhat too academic to win widespread fame, was important for his work on the influential **North American Review** • **229 Paul Felton,** a tale by Dana • **232 Idle Man,** a periodical edited by Dana in 1824. Lowell mentions the pseudonym in connection with Dana's retirement from literary work in 1840

He knows every breaker and shoal on the chart,
He has the Coast Pilot and so on by heart,
Yet he spends his whole life, like the man in the fable,
In learning to swim on his library-table.

NEAL

"There swaggers John Neal, who has wasted in Maine
The sinews and cords of his pugilist brain,
Who might have been poet, but that, in its stead, he
Preferred to believe that he was so already;
Too hasty to wait till Art's ripe fruit should drop,
He must pelt down an unripe and colicky crop;
Who took to the law, and had this sterling plea for it,
It required him to quarrel, and paid him a fee for it;
A man who's made less than he might have, because
He always has thought himself more than he was,—
Who, with very good natural gifts as a bard,
Broke the strings of his lyre out by striking too hard,
And cracked half the notes of a truly fine voice,
Because song drew less instant attention than noise.
Ah, men do not know how much strength is in poise,
That he goes the farthest who goes far enough,
And that all beyond that is just bother and stuff.
No vain man matures, he makes too much new wood;
His blooms are too thick for the fruit to be good;
'Tis the modest man ripens, 'tis he that achieves,
Just what's needed of sunshine and shade he receives;
Grapes, to mellow, require the cool dark of their leaves;
Neal wants balance; he throws his mind always too far,
Whisking out flocks of comets, but never a star;
He has so much muscle, and loves so to show it,
That he strips himself naked to prove he's a poet,
And, to show he could leap Art's wide ditch, if he tried,
Jumps clean o'er it, and into the hedge t' other side.
He has strength, but there's nothing about him in keeping;
One gets surelier onward by walking than leaping;
He has used his own sinews himself to distress,
And had done vastly more had he done vastly less;
In letters, too soon is as bad as too late;
Could he only have waited he might have been great;
But he plumped into Helicon up to the waist,
And muddied the stream ere he took his first taste.

"There is Hawthorne, with genius so shrinking and rare
That you hardly at first see the strength that is there;
A frame so robust, with a nature so sweet,
So earnest, so graceful, so lithe and so fleet,
Is worth a descent from Olympus to meet;
'Tis as if a rough oak that for ages had stood,
With his gnarled bony branches like ribs of the wood,
Should bloom, after cycles of struggle and scathe,
With a single anemone trembly and rathe;
His strength is so tender, his wildness so meek,
That a suitable parallel sets one to seek,—
He's a John Bunyan Fouqué, a Puritan Tieck;
When Nature was shaping him, clay was not granted
For making so full-sized a man as she wanted,
So, to fill out her model, a little she spared
From some finer-grained stuff for a woman prepared,
And she could not have hit a more excellent plan
For making him fully and perfectly man.
The success of her scheme gave her so much delight,
That she tried it again, shortly after, in Dwight;
Only, while she was kneading and shaping the clay,
She sang to her work in her sweet childish way,
And found, when she'd put the last touch to his soul,
That the music had somehow got mixed with the whole.

COOPER

"Here's Cooper, who's written six volumes, to show
He's as good as a lord: well, let's grant that he's so;
If a person prefer that description of praise,
Why, a coronet's certainly cheaper than bays;
But he need take no pains to convince us he's not
(As his enemies say) the American Scott.
Choose any twelve men, and let C. read aloud
That one of his novels of which he's most proud,
And I'd lay any bet that, without ever quitting

Neal, John Neal (1793-1876), a hasty and highly productive author famous in his time as an outspoken critic of other American writers • 287 **John Bunyan Fouqué,** a combination of John Bunyan (1628-1688), author of the allegorical Pilgrim's Progress, and Baron de la Motte Fouqué (1777-1843), who wrote imaginative romances • 287 **Tieck,** Ludwig Tieck. See note, p 316 • 295 **Dwight,** John Sullivan Dwight (1813-1893), a Boston composer and music critic

Their box, they'd be all, to a man, for acquitting.
He has drawn you one character, though, that is new,
One wildflower he's plucked that is wet with the dew
Of this fresh Western world, and, the thing not to mince,
He has done naught but copy it ill ever since;
His Indians, with proper respect be it said,
Are just Natty Bumppo, daubed over with red,
And his very Long Toms are the same useful Nat,
Rigged up in duck pants and a sou'wester hat
(Though once in a Coffin, a good chance was found
To have slipped the old fellow away underground).
All his other men-figures are clothes upon sticks,
The *dernière chemise* of a man in a fix
(As a captain besieged, when his garrison's small
Sets up caps upon poles to be seen o'er the wall);
And the women he draws from one model don't vary,
All sappy as maples and flat as a prairie.
When a character's wanted, he goes to the task
As a cooper would do in composing a cask;
He picks out the staves, of their qualities heedful,
Just hoops them together as tight as is needful,
And, if the best fortune should crown the attempt, he
Has made at the most something wooden and empty.

"Don't suppose I would underrate Cooper's abilities;
If I thought you'd do that, I should feel very ill at ease;
The men who have given to *one* character life
And objective existence are not very rife;
You may number them all, both prose-writers and singers,
Without overrunning the bounds of your fingers,
And Natty won't go to oblivion quicker
Than Adams the parson or Primrose the vicar.

"There is one thing in Cooper I like, too, and that is
That on manners he lectures his countrymen gratis;
Not precisely so either, because, for a rarity,
He is paid for his tickets in unpopularity.
Now he may overcharge his American pictures,
But you'll grant there's a good deal of truth in his strictures;
And I honor the man who is willing to sink
Half his present repute for the freedom to think,
And, when he has thought, be his cause strong or weak,
Will risk t' other half for the freedom to speak,
Caring naught for what vengeance the mob has in store,
Let that mob be the upper ten thousand or lower.

"There comes Poe, with his raven, like Barnaby Rudge,
Three fifths of him genius and two fifths sheer fudge,
Who talks like a book of iambs and pentameters,
In a way to make people of common sense damn metres,
Who has written some things quite the best of their kind,
But the heart somehow seems all squeezed out by the mind,
Who—But hey-day! What's this? Messieurs Mathews and Poe,
You mustn't fling mud-balls at Longfellow so,
Does it make a man worse that his character's such
As to make his friends love him (as you think) too much?
Why, there is not a bard at this moment alive
More willing than he that his fellows should thrive;
While you are abusing him thus, even now
He would help either one of you out of a slough;
You may say that he's smooth and all that till you're hoarse,
But remember that elegance also is force;
After polishing granite as much as you will,
The heart keeps its tough old persistency still;
Deduct all you can, *that* still keeps you at bay;
Why, he'll live till men weary of Collins and Gray.
I'm not over-fond of Greek metres in English,
To me rhyme's a gain, so it be not too jinglish,
And your modern hexameter verses are no more
Like Greek ones than sleek Mr. Pope is like Homer;
As the roar of the sea to the coo of a pigeon is,
So, compared to your moderns, sounds old Melesigenes;
I may be too partial, the reason, perhaps, o't is
That I've heard the old blind man recite his own rhapsodies,
And my ear with that music impregnate may be,
Like the poor exiled shell with the soul of the sea,

---

316 **Long Toms.** Long Tom Coffin was the American sailor in **The Pilot** (1823) • 321 **dernière chemise,** last shirt • 339 **Adams,** Parson Adams, a memorable character in Fielding's **Joseph Andrews** • 339 **Primrose,** the amiable, garrulous Dr. Primrose in Goldsmith's **The Vicar of Wakefield** • 352 **Barnaby Rudge** (1841), a novel by Dickens in which a raven was important. Poe criticized the mechanism of the tale • 358 **Mathews,** Cornelius Mathews (1817-1889), a New York author who, like Poe, created quite a stir by attacking Longfellow • 371 **Collins,** William Collins (1721-1759), English lyrical poet • 371 **Gray,** Thomas Gray (1716-1771), English poet, author of the famous elegy • 377 **Melesigenes,** Homer

Or as one can't bear Strauss when his nature is cloven
To its deeps within deeps by the stroke of Beethoven;
But, set that aside, and 'tis truth that I speak,
Had Theocritus written in English, not Greek,
I believe that his exquisite sense would scarce change a line
In that rare, tender, virgin-like pastoral Evangeline.
That's not ancient nor modern, its place is apart
Where time has no sway, in the realm of pure Art,
'Tis a shrine of retreat from Earth's hubbub and strife
As quiet and chaste as the author's own life.

IRVING

"What! Irving? thrice welcome, warm heart and fine brain,
You bring back the happiest spirit from Spain,
And the gravest sweet humor, that ever was there
Since Cervantes met death in his gentle despair;
Nay, don't be embarrassed, nor look so beseeching,
I sha'n't run directly against my own preaching,
And having just laughed at their Raphaels and Dantes,
Go to setting you up beside matchless Cervantes;
But allow me to speak what I honestly feel,—
To a true poet-heart add the fun of Dick Steele,
Throw in all of Addison *minus* the chill,
With the whole of that partnership's honest good-will,
Mix well, and while stirring, hum o'er, as a spell,
The fine *old* English Gentleman, simmer it well,
Sweeten just to your own private liking, then strain,
That only the finest and clearest remain,
Let it stand out of doors till a soul it receives
From the warm lazy sun loitering down through green leaves,
And you'll find a choice nature, not wholly deserving
A name either English or Yankee,—just Irving.

HOLMES

"There's Holmes, who is matchless among you for wit;
A Leyden-jar always full-charged, from which flit
The electrical tingles of hit after hit;
In long poems 'tis painful sometimes, and invites
A thought of the way the new Telegraph writes,
Which pricks down its little sharp sentences spitefully
As if you got more than you'd title to rightfully,
And you find yourself hoping its wild father Lightning
Would flame in for a second and give you a fright'ning.
He has perfect sway of what *I* call a sham metre,
But many admire it, the English pentameter,
And Campbell, I think, wrote most commonly worse,
With less nerve, swing, and fire in the same kind of verse,
Nor e'er achieved aught in't so worthy of praise
As the tribute of Holmes to the grand *Marseillaise.*
You went crazy last year over Bulwer's New Timon;—
Why, if B., to the day of his dying, should rhyme on,
Heaping verses on verses and tomes upon tomes,
He could ne'er reach the best point and vigor of Holmes.
His are just the fine hands, too, to weave you a lyric
Full of fancy, fun, feeling, or spiced with satiric
In a measure so kindly, you doubt if the toes
That are trodden upon are your own or your foes'.

LOWELL

"There is Lowell, who's striving Parnassus to climb
With a whole bale of *isms* tied together with rhyme,
He might get on alone, spite of brambles and boulders,
But he can't with that bundle he has on his shoulders,
The top of the hill he will ne'er come nigh reaching
Till he learns the distinction 'twixt singing and preaching;
His lyre has some chords that would ring pretty well,
But he'd rather by half make a drum of the shell,
And rattle away till he's old as Methusalem,
At the head of a march to the last new Jerusalem."

1847-1848 • 1848

---

382 **Strauss,** Johann Strauss (1804-1849), Viennese "Waltz King" • 383 **Beethoven,** Ludwig van Beethoven (1770-1827), German composer • 385 **Theocritus,** a third-century Greek pastoral poet • 393 **from Spain** refers to Irving's return from that country in 1846 • 395 **Cervantes,** Miguel de Cervantes Saavedra (1547-1616), author of **Don Quixote.** Cervantes, at the time of his death, was a monk • 398 **Raphael** (1483-1520), Italian painter • 398 **Dante** (1265-1321), Italian poet • 405 **English Gentleman,** an essay by Irving • 413 **Leyden-jar,** a glass jar which condenses electricity • 416 **new Telegraph,** the Morse code • 423 **Campbell,** Thomas Campbell (1777-1844), a British poet. Holmes' early poems are frequently reminiscent of his poems • 426 **tribute,** in Section II of Holmes' **Poetry: A Metrical Essay** (1836) • 427 **Bulwer's New Timon,** a satirical poem which had appeared in 1846 • 443 **Methusalem,** or Methuselah, according to **Genesis,** died at "nine hundred sixty and nine years"

From

The Biglow Papers, First Series

Written as a protest against the Mexican War and various political events connected with it, this series of poems had a success in the years of their appearance (1847-1848) which surprised and delighted their author. Lowell's earlier poems had been relatively unpopular. These he saw pinned up in workshops; he heard them quoted everywhere and their authorship debated. They were effective propaganda.

They were effective partly because, like the writings of numerous humorists of New England at the time (notably Seba Smith, creator of Jack Downing), they appealed to the Yankee liking for Down East horse-sense philosophers who could voice their ideas—ideas of any sort arrived at by down-to-earth thinking—in amusing phrases. Chief among the characters exhibited by the papers was Hosea Biglow, intended by Lowell to represent New England's "homely common-sense vivified and heated by conscience." Biglow's rural way of feeling, thinking, and expressing himself was sure-fire appeal to an audience of Americans who had supreme respect for the intelligence of common men.

Other characters developed in the papers—a pedantic parson, for instance—were invented to serve in various ways as foils for the chief character and to attack Lowell's foes in ways impossible for the puritanical and unlearned Hosea. Birdofredum Sawin, to cite one more instance, was another Yankee farmer whom Lowell invented as "a mouthpiece of the mere drollery . . . meant to embody . . . that half-conscious unmorality which I have noticed as the recoil in gross natures from . . . puritanism." Sawin, unlike Biglow, was persuaded to join the army, and both during the War and after it his horrible experiences dragged him deeper and deeper into degradation. And the Rev. Homer Wilbur, Hosea's pastor, who edited his parishioner's poems, wrote in a learned, pedantic style which was amusingly incongruous with the earthy patois of the poems.

Because of their style and their fictional excellence the verses have had an appeal more lasting than much political satire. An accomplished linguist, Lowell appreciated and reproduced accurately the native idiom, which he praised as "racy with life and vigor and originality, bucksome . . . to our new occasions." A keen observer of life in Yankeedom, he created characters, according to critic J. R. Dennet, writing in the **Nation** (November 15, 1866, III, 397), "so life-like and, in the main, so true to nature—so good as individuals and as types that we know not where in literature to look for . . . others that excel them."

No. I
A LETTER

From Mr. Ezekiel Biglow of Jaalam to the Hon. Joseph T. Buckingham, Editor of the Boston Courier, Enclosing A Poem of His Son, Mr. Hosea Biglow

Jaylem, june 1846

Mister Eddyter:—Our Hosea wuz down to Boston last week, and he see a cruetin Sarjunt a struttin round as popler as a hen with 1 chicking, with 2 fellers a drummin and fifin arter him like all nater. the sarjunt he thout Hosea hedn't gut his i teeth cut cos he looked a kindo 's though he'd jest com down, so he cal'lated to hook him in, but Hosy woodn't take none o' his sarse for all he hed much as 20 Rooster's tales stuck onto his hat and eenamost enuf brass a bobbin up and down on his shoulders and figureed onto his coat and trousis, let alone wut nater hed sot in his featers, to make a 6 pounder out on.

wal, Hosea he com home considerabal riled, and arter I'd gone to bed I heern Him a thrashin round like a short-tailed Bull in flitime. The old Woman ses she to me ses she, Zekle, ses she, our Hosee's gut the chollery or suthin anuther ses she, don't you Bee skeered, ses

---

2 cruetin Sarjunt, recruiting sergeant. Lowell was angered into writing this paper when, like Hosea, he saw a sergeant of the sort described trying to enlist men in Boston • 4 nater, nature • 9 brass. Ezekiel is pointing out that, both literally and figuratively, the sergeant had "a lot of brass"

I, he's oney amaking pottery [*Aut insanit, aut versos facit.*—H.W.] ses i, he's ollers on hand at that ere busynes like Da & martin, and shure enuf, cum mornin, Hosy he cum down stares full chizzle, hare on eend and cote tales flyin, and sot rite of to go reed his varses to Parson Wilbur bein he haint aney grate shows o' book larnin himself, bimeby he cum back and sed the parson wuz dreffle tickled with 'em as i hoop you will Be, and said they wuz True grit.

Hosea ses taint hardly fair to call 'em hisn now, cos the parson kind o' slicked off sum O' the last varses, but he told Hosee he didn't want to put his ore in to tetch to the Rest on 'em, bein they wuz verry well As thay wuz, and then Hosy ses he sed suthin a nuther about Simplex Mundishes or sum such feller, but I guess Hosea kind o' didn't hear him, for I never hearn o' nobody o' that name in this village, and I've lived here man and boy 76 year cum next tater diggin, and thair aint no wheres a kitting spryer'n I be.

If you print 'em I wish you'd jest let folks know who hosy's father is, cox my ant Keziah used to say it's nater to be curus ses she, she aint livin though and he's a likely kind o' lad.

EZEKIEL BIGLOW

Thrash away, you'll *hev* to rattle
  On them kittle-drums o' yourn,—
'Taint a knowin' kind o' cattle
  Thet is ketched with moldy corn;
Put in stiff, you fifer feller,
  Let folks see how spry you be,—
Guess you'll toot till you are yeller
  'Fore you git ahold o' me!

Thet air flag's a leetle rotten,
  Hope it aint your Sunday's best;—
Fact! it takes a sight o' cotton
  To stuff out a soger's chest:
Sence we farmers hev to pay fer't,
  Ef you must wear humps like these,
Sposin' you should try salt hay fer't,
  It would du ez slick ez grease.

'Twouldn't suit them Southun fellers,
  They're a dreffle graspin' set,
We must ollers blow the bellers
  Wen they want their irons het;
May be it's all right ez preachin',
  But *my* narves it kind o' grates,
Wen I see the overreachin'
  O' them nigger-drivin' States.

Them thet rule us, them slave-traders,
  Haint they cut a thunderin' swarth,
(Helped by Yankee renegaders,)
  Thru the vartu o' the North!
We begin to think it's nater
  To take sarse an' not be riled;—
Who'd expect to see a tater
  All on eend at bein' biled?

Ez fer war, I call it murder,—
  There you hev it plain an' flat;
I don't want to go no furder
  Than my Testyment fer that;
God hez sed so plump an' fairly,
  It's ez long ez it is broad,
An' you've gut to git up airly
  If you want to take in God.

'Taint your eppyletts an' feathers
  Make the thing a grain more right;
'Taint afollerin' your bell-wethers
  Will excuse ye in His sight;
Ef you take a sword an' dror it,
  An' go stick a feller thru,
Guv'ment aint to answer for it,
  God'll send the bill to you.

Wut's the use o' meetin'-goin'
  Every Sabbath, wet or dry,
Ef it's right to go amowin'
  Feller-men like oats an' rye?

---

1 **pottery,** poetry. Here, as elsewhere, the bad spelling makes possible a pun • 1 **Aut . . . facit.** "He is either mad or is making verses." This is a note inserted by H. W., Parson Homer Wilbur, the pedantic editor of the text for book publication • 3 **Da & martin,** Day & Martin, who published rhymed advertisements of their shoeblacking • 14 **Simplex Mundishes,** Hosea's inaccurate pronunciation of **simplex mundiiis**—neat but not gaudy, unsophisticated

11 **takes . . . cotton.** The abolitionists charged that the real purpose of the Mexican War was to increase the cotton-growing territory

I dunno but wut it's pooty
  Trainin' round in bobtail coats,—
But it's curus Christian dooty
  This 'ere cuttin' folks's throats.

They may talk o' Freedom's airy
  Tell they'er pupple in the face,—
It's a grand gret cemetary
  Fer the barthrights of our race;
They jest want this Californy
  So's to lug new slave-states in
To abuse ye, an' to scorn ye,
  An' to plunder ye like sin.

Aint it cute to see a Yankee
  Take sech everlastin' pains,
All to git the Devil's thankee,
  Helpin' on 'em weld their chains?
Wy, it's jest ez clear ez figgers,
  Clear ez one an' one make two,
Chaps thet make black slaves o' niggers
  Want to make wite slaves o' you.

Tell ye jest the eend I've come to
  Arter cipherin' plaguy smart,
An' it makes a handy sum, tu,
  Any gump could larn by heart;
Laborin' man an' laborin' woman
  Hev one glory an' one shame,
Ev'y thin' thet's done inhuman
  Injers all on 'em the same.

'Taint by turnin' out to hack folks
  You're agoin' to git your right,
Nor by lookin' down on black folks
  Coz you're put upon by wite;
Slavery aint o' nary color,
  'Taint the hide thet makes it wus,
All it keers fer in a feller
  'S jest to make him fill its pus.

Want to tackle *me* in, du ye?
  I expect you'll hev to wait;
Wen cold lead puts daylight thru ye
  You'll begin to kal'late;
'Spose the crows wun't fall to pickin'
  All the carkiss from your bones,
Coz you helped to give a lickin'
  To them poor half-Spanish drones?

Jest go home an' ask our Nancy
  Whether I'd be sech a goose
Ez to jine ye,—guess you'd fancy
  The etarnal bung was loose!
She wants me fer home consumption,
  Let alone the hay's to mow,—
Ef you're arter folks o' gumption,
  You've a darned long row to hoe.

Take them editors thet's crowin'
  Like a cockerel three months old,—
Don't ketch any on 'em goin',
  Though they *be* so blasted bold;
Aint they a prime lot o' fellers?
  'Fore they think on't guess they'll sprout,
(Like a peach thet's got the yellers)
  With the meanness bustin' out.

Wal, go 'long to help 'em stealin'
  Bigger pens to cram with slaves,
Help the men thet's ollers dealin'
  Insults on your fathers' graves;
Help the strong to grind the feeble,
  Help the many agin the few,
Help the men thet call your people
  Witewashed slaves an' peddlin' crew!

Massachusetts, God forgive her,
  She's akneeling with the rest,
She thet ough' to ha' clung ferever
  In her grand old eagle-nest;
She thet ough' to stand so fearless
  Wile the wracks are round her hurled,
Holdin' up a beacon peerless
  To the oppressed of all the world!

---

61 want this Californy refers to the claim that California was to be admitted to statehood only in order that more slave states might be formed • 65 Yankee . . . thankee. The Yankees had a widespread reputation for striking good bargains • 88 pus, purse • 92 kal'late, calculate • 96 half-Spanish drones, the Mexicans • 111 yellers, a disease of peach trees accompanied by the sprouting of sterile shoots

Ha'n't they sold your colored seamen?
Ha'n't they made your env'ys wi'z?
Wut'll make ye act like free men?
Wut'll git your dander riz?
Come, I'll tell ye wut I'm thinkin'
Is our dooty in this fix,
They'd ha' done 't ez quick ez winkin'
In the days o' seventy-six.

Clang the bells in every steeple,
Call all true men to disown
The tradoocers of our people,
The enslavers o' their own;
Let our dear old Bay State proudly
Put the trumpet to her mouth,
Let her ring this messidge loudly
In the ears of all the South:—

"I'll return ye good for evil
Much ez we frail mortils can,
But I won't go help the Devil
Makin' man the cus o' man;
Call me coward, call me traiter,
Jest ez suits your mean idees,—
Here I stand a tyrant-hater,
An' the friend o' God an' Peace!"
Ef I'd *my* way I hed ruther
We should go to work an' part,—
They take one way, we take t'other,—
Guess it wouldn't break my heart;
Man hed ough' to put asunder
Them thet God has noways jined;
An' I shouldn't gretly wonder
Ef there's thousands o' my mind.

[The first recruiting sergeant on record I conceive to have been that individual who is mentioned in the Book of Job as *going to and fro in the earth, and walking up and down in it.* Bishop Latimer will have him to have been a bishop, but to me that other calling would appear more congenial. The sect of Cainites is not yet extinct, who esteemed the first-born of Adam to be the most worthy, not only because of that privilege of primogeniture, but inasmuch as he was able to overcome and slay his younger brother. That was a wise saying of the famous Marquis Pescara to the Papal Legate, that *it was impossible for men to serve Mars and Christ at the same time.* Yet in time past the profession of arms was judged to be κατ' εξοχήν that of a gentleman, nor does this opinion want for strenuous upholders even in our day. Must we suppose, then, that the profession of Christianity was only intended for losels, or, at best, to afford an opening for plebeian ambition? Or shall we hold with that nicely metaphysical Pomeranian, Captain Vratz, who was Count Konigsmark's chief instrument in the murder of Mr. Thynne, that the Scheme of Salvation had been arranged with an especial eye to the necessities of the upper classes, and that "God would consider *a gentleman* and deal with him suitably to the condition and profession, he had placed him in"? It may be said of us all, *Exemplo plus quam ratione vivimus.*—H. W.]

1846

No. III

WHAT MR. ROBINSON THINKS

The gubernatorial campaign of 1847 in Massachusetts inspired Hosea to write these bitingly satirical lines. George Nixon Briggs (Guvener B. in the poem), who had been the state executive since 1844, was running for reëlection. His opponent was General Caleb Cushing (Gineral C.), then a brigadier general, serving in Mexico. John P. Robinson, who had been a past supporter of Briggs, wrote an open letter to the newspapers telling of his support for Cushing.

Guvener B. is a sensible man;
He stays to his home an' looks arter his folks;
He draws his furrer ez straight ez he can,
An' into nobody's tater-patch pokes;

---

130 **env'ys wi'z,** envoys whiz, a reference to the impolite treatment in the period of American envoys • 154 **We . . . part,** an interesting advocacy, by Lowell, of disunion

2 **that individual,** Satan. **This note is** Parson Wilbur's learned commentary on the poem • 4 **Bishop Latimer,** Hugh Latimer (1480?-1535), English religious reformer • 6 **Cainites,** a second-century religious sect which held that Cain represented the higher power • 11 **Pescara,** Marquis Pescara (1489-1525), an Italian soldier • 14 **κατ' ἐξοχήν,** especially • 19 **Captain Vratz,** a murderer who was executed in 1682 • 26 **Exemplo . . . vivimus.** We live more by example than by reason

But John P.
Robinson he
Sez he wunt vote fer Guvener B.

My! aint it terrible! Wut shall we du?
We can't never choose him o' course,—thet's flat;
Guess we shall hev to come round, (don't you?)
An' go in fer thunder an' guns, an' all that;
Fer John B.
Robinson he
Sez he wunt vote fer Guvener B.

Gineral C. is a dreffle smart man:
He's ben on all sides thet give places or pelf;
But consistency still wuz a part of his plan,—
He's ben true to *one* party—an' thet is himself;—
So John P.
Robinson he
Sez he shall vote fer Gineral C.

Gineral C. he goes in fer the war;
He don't vally principle more 'n an old cud;
Wut did God make us raytional creeturs fer,
But glory an' gunpowder, plunder an' blood?
So John P.
Robinson he
Sez he shall vote for Gineral C.

We were gittin' on nicely up here to our village,
With good old idees o' wut's right an' wut aint,
We kind o' thought Christ went agin war an' pillage,
An' thet eppyletts worn't the best mark of a saint;
But John P.
Robinson he
Sez this kind o' thing's an exploded idee.

The side of our country must ollers be took,
An' Presidunt Polk, you know, *he* is our country.
An' the angel thet writes all our sins in a book
Puts the *debit* to him, an' to us the *per contry;*
An' John P.
Robinson he
Sez this is his view o' the thing to a T.

Parson Wilbur he calls all these argimunts lies;
Sez they 're nothin' on airth but jest *fee, faw, fum:*
An' thet all this big talk of our destinies
Is half on it ign'ance, an' t' other half rum;
But John P.
Robinson he
Sez it aint no sech thing; an', of course, so must we.

Parson Wilbur sez *he* never heerd in his life
Thet th' Apostles rigged out in their swaller-tail coats,
An' marched round in front of a drum an' a fife,
To git some on 'em office, an' some on 'em votes;
But John P.
Robinson he
Sez they did n't know everythin' down in Judee.

Wal, it's a marcy we' ve gut folks to tell us
The rights an' the wrongs o' these matters, I vow,—
God sends country lawyers, an' other wise fellers,
To start the world's team wen it gits in a slough;
Fer John P.
Robinson he
Sez the world 'll go right, ef he hollers out Gee!

1847·1848

No. VIII

A SECOND LETTER FROM B. SAWIN, ESQ.

Birdofredum Sawin was a country boy who, unlike Hosea, had been lured into army service by the rattle of a drum and had marched off to Mexico. From time to time he wrote home to Hosea, and Hosea translated his letters into verse. Sawin soon lost his illusions and became a rascal—one of the most amusing ones in American humor.

The Whig candidate for the Presidency in 1848 was Zachary Taylor, who was not very articulate on the great issues of the day—particularly slavery—but who had won fame as the hero of Buena Vista. Birdofredum Sawin likewise based his political claims upon his military record. In this letter, a take-off on Old Zach's candidacy, Birdofredum tells of his own situation after the war.

I spose you wonder ware I be; I can't tell, fer the soul o' me,
Exactly ware I be myself,—meanin' by thet the holl o' me.

Wen I left hum, I hed two legs, an' they worn't bad ones neither,
(The scaliest trick they ever played wuz bringin' on me hither,)
Now one on 'em's I dunno ware;—they thought I wuz adyin',
An' sawed it off because they said 't wuz kin' o' mortifyin';
I'm willin' to believe it wuz, an' yit I don't see, nuther,
Wy one shoud take to feelin' cheap a minnit sooner 'n t' other,
Sence both wuz equilly to blame; but things is ez they be;
It took on so they took it off, an' thet's enough fer me:
There's one good thing, though, to be said about my wooden new one,—
The liquor can't git into it ez 't used to in the true one;
So it saves drink; an' then, besides, a feller could n't beg
A gretter blessin' then to hev one ollers sober peg;
It's true a chap 's in want o' two fer follerin' a drum,
But all the march I'm up to now is jest to Kingdom Come.

I've lost one eye, but thet's a loss it's easy to supply
Out o' the glory that I 've gut, fer thet is all my eye;
An' one is big enough, I guess, by diligently usin' it,
To see all I shall ever git by way o' pay fer losin' it;
Off'cers I notice, who git paid fer all our thumps an' kickins,
Du wal by keepin' single eyes arter the fattest pickins;
So, ez the eye 's put fairly out, I'll larn to go without it,
An' not allow *myself* to be no gret put out about it.
Now, le' me see, thet is n't all; I used, 'fore leavin' Jaalam,
To count things on my finger-eends, but sutthin' seems to ail 'em:
Ware's my left hand? O, darn it, yes, I recollect wut 's come on 't;
I haint no left arm but my right, an' thet 's gut jest a thumb on 't;
It aint so hendy ez it wuz to cal'late a sum on 't.
I've hed some ribs broke,—six (I bl'ieve),—I haint kep' no account on 'em;
Wen pensions git to be the talk, I'll settle the amount on 'em.
An' now I'm speakin' about ribs, it kin' o' brings to mind
One thet I could n't never break,—the one I lef' behind;
Ef you should see her, jest clear out the spout o' your invention
An' pour the longest sweetnin' in about an annooal pension,
An' kin' o' hint (in case, you know, the critter should refuse to be
Consoled) I aint so 'xpensive now to keep ez wut I used to be;
There 's one arm less, ditto one eye, an' then the leg thet 's wooden
Can be took off an' sot away wenever ther 's a puddin.'

I spose you think I'm comin' back ez opperlunt ez thunder,
With shiploads o' gold images an' varus sorts o' plunder;
Wal, 'fore I vullinteered, I thought this country wuz a sort o'
Canaan, a reg'lar Promised Land flowin' with rum an' water,
Ware propaty growed up like time, without no cultivation,
An' gold wuz dug ez taters be among our Yankee nation,
Ware nateral advantages were pufficly amazin',
Ware every rock there wuz about with precious stuns wuz blazin',
Ware mill-sites filled the country up ez thick ez you could cram 'em
An' desput rivers run about a beggin' folks to dam 'em;
Then there were meetinhouses, tu, chockful o' gold an' silver
Thet you could take, an' no one could n't hand ye in no bill fer;—
Thet's wut I thought afore I went, thet 's wut them fellers told us
Thet stayed to hum an' speechified an' to the buzzards sold us;
I thought thet gold-mines could be gut cheaper than Chiny asters,
An' see myself acomin' back like sixty Jacob Astors;
But sech idees soon melted down an' did n't leave a grease-spot;

---

25 Jaalam, home town of Hosea and Birdofredum • 55 Jacob Astor (1763-1848), a German-American merchant, one of the richest men of the time

I vow my holl sheer o' the spiles would n't come nigh
a V spot;
Although, most anywares we 've ben, you need n't break
no locks,
Nor run no kin' o' risks, to fill your pocket full o' rocks.
I 'xpect I mentioned in my last some o' the nateral
feeturs
O' this all-fiered buggy hole in th' way o' awfle creeturs,
But I fergut to name (new things to speak on so
abounded)
How one day you 'll most die o' thust, an' 'fore the next
git drownded.
The clymit seems to me jest like a teapot made o'
pewter
Our Preudence hed, thet would n't pour (all she could
du) to suit her;
Fust place the leaves 'ould choke the spout, so 's not a
drop 'ould dreen out,
Then Prude 'ould tip an' tip an' tip, till the holl kit bust
clean out,
The kiver-hinge-pin bein' lost, tea-leaves an' tea an'
kiver
'ould all come down *kerswosh!* ez though the dam bust
in a river.
Jest so 't is here; holl months there aint a day o' rainy
weather,
An' jest ez th' officers 'ould be a layin' heads together
Ez t' how they 'd mix their drink at sech a milingtary
deepot,—
'T would pour ez though the lid wuz off the everlastin'
teapot.
The cons'quence is, thet I shall take, wen I 'm allowed
to leave here,
One piece o' propaty along, an' thet 's the shakin' fever;
It's reggilar employment, though, an' thet aint thought
to harm one,
Nor 't aint so tiresome ez it wuz with t' other leg an'
arm on;
An' it 's a consolation, tu, although it doos n't pay,
To hev it said you 're some gret shakes in any kin' o' way.
'T worn't very long, I tell ye wut, I thought o' fortin-
makin',—
One day a reg'lar shiver-de-freeze, an' next ez good ez
bakin',—
One day abrilin' in the sand, then smoth'rin' in the
mashes,—
Git up all sound, be put to bed a mess o' hacks an'
smashes.
But then, thinks I, at any rate there 's glory to be hed,—
Thet's an investment, arter all, thet may n't turn out
so bad;
But somehow, wen we'd fit an' licked, I ollers found the
thanks
Gut kin' o' lodged afore they come ez low down ez
the ranks;
The Gin'rals gut the biggest sheer, the Cunnles next, an'
so on,—
We never gut a blasted mite o' glory ez I know on;
An' spose we hed, I wonder how you 're goin' to contrive
its
Division so 's to give a piece to twenty thousand privits;
Ef you should multiply by ten the portion o' the brav'st
one,
You would n't git more 'n half enough to speak of on
a grave-stun;
We git the licks,—we're jest the grist thet 's put into
War's hoppers;
Leftenants is the lowest grade thet helps pick up the
coppers.
It may suit folks thet go agin a body with a soul in 't,
An' aint contented with a hide without a bagnet hole
in 't;
But glory is a kin' o' thing *I* sha' n't pursue no furder,
Coz thet 's the off'cers parquisite,—yourn 's on'y jest the
murder.

Wal, arter I gin glory up, thinks I at least there 's one
Thing in the bills we aint hed yit, an' thet 's the
GLORIOUS FUN;
Ef once we git to Mexico, we fairly may persume we
All day an' night shall revel in the halls o' Montezumy.
I'll tell ye wut *my* revels wuz, an' see how you would like
'em;
We never gut inside the hall: the nighest ever *I* come
Wuz stan'in sentry in the sun (an', fact, it *seemed* a
cent'ry)
A ketchin' smells o' biled an' roast thet come out thru
the entry,
An' hearin' ez I sweltered thru my passes an' repasses,

---

97 bagnet, bayonet

A rat-tat-too o' knives an' forks, a clinkty-clink o' glasses:
I can't tell off the bill o' fare the Ginrals hed inside;
All I know is, thet out o' doors a pair o' soles wuz fried,
An' not a hunderd miles away frum ware this child wuz posted,
A Massachusetts citizen wuz baked an' biled an' roasted;
The on'y thing like revellin' thet ever come to me
Wuz bein' routed out o' sleep by thet darned revelee.

They say the quarrel 's settled now; fer my part I 've some doubt on 't,
't 'll take more fish-skin than folks think to take the rile clean out on 't;
At any rate I 'm so used up I can't do no more fightin',
The on'y chance thet 's left to me is politics or writin';
Now, ez the people 's gut to hev a milingtary man,
An' I aint nothin' else jest now, I've hit upon a plan;
The can'idatin' line, you know, 'ould suit me to a T,
An' ef I lose, 't wunt hurt my ears to lodge another flea;
So I 'll set up ez can'idate fer any kin' o' office,
(I mean fer any thet includes good easy-cheers an' soffies;
Fer ez tu runnin' fer a place ware work 's the time o' day,
You know thet 's wut I never did,—except the other way;)
Ef it 's the Presidential cheer fer wich I 'd better run,
Wut two legs anywares about could keep up with my one?
There aint no kin' o' quality in can'idates, it 's said,
So useful ez a wooden leg,—except a wooden head;
There's nothin' aint so poppylar—(wy, it 's a parfect sin
To think wut Mexico hez paid fer Santy Anny's pin;)—
Then I haint gut no princerples, an', sence I wuz knee-high,
I never *did* hev any gret, ez you can testify;
I 'm a decided peace-man, tu, an' go agin the war,—
Fer now the holl on 't 's gone an' past, wut is there to go *for?*
Ef, wile you 're 'lectioneerin' round, some curus chaps should beg
To know my views o' state affairs, jest answer WOODEN LEG!
Ef they aint settisfied with thet, an' kin' o' pry an' doubt
An' ax fer sutthin' deffynit, jest say ONE EYE PUT OUT!
Thet kin' o' talk I guess you 'll find 'll answer to a charm,
An' wen you 're druv tu nigh the wall, hol' up my missin' arm;
Ef they should nose round fer a pledge, put on a vartoous look
An' tell 'em thet's percisely wut I never gin nor—took!

Then you can call me "Timbertoes,"—thet 's wut the people likes;
Sutthin' combinin' morril truth with phrases sech ez strikes;
Some say the people 's fond o' this, or thet, or wut you please,—
I tell ye wut the people want is jest correct idees;
"Old Timbertoes," you see, 's a creed it 's safe to be quite bold on,
There 's nothin' in 't the other side can any ways git hold on;
It's a good tangible idee, a sutthin' to embody
Thet valooable class o' men who look thru brandy-toddy;
It gives a Party Platform, tu, jest level with the mind
Of all right-thinkin', honest folks thet mean to go it blind;
Then there air other good hooraws to dror on ez you need 'em,
Sech ez the ONE-EYED SLARTERER, the BLOODY BIRDOFREDUM:
Them 's wut takes hold o' folks thet think, ez well ez o' the masses,
An' makes you sartin o' the aid o' good men of all classes.

There 's one thing I 'm in doubt about; in order to be Presidunt,
It's absolutely ne'ssary to be a Southern residunt;
The Constitution settles thet, an' also thet a feller
Must own a nigger o' some sort, jet black, or brown, or yeller.
Now I haint no objections agin particklar climes,
Nor agin ownin' anythin' (except the truth sometimes),
But, ez I haint no capital, up there among ye, maybe,

---

133 Santy Anny, General A. L. de Santa Anna, leader of the Mexican army • 146 Timbertoes refers not only to Sawin's wooden leg but also to one Enoch Timbertoes, humorous character of the day who wrote humor of the sort characterized in l. 147

You might raise funds enough fer me to buy a low-priced baby,
An' then to suit the No'thern folks, who feel obleeged to say
They hate an' cuss the very thing they vote fer every day,
Say you 're assured I go full butt fer Libbaty's diffusion

An' made the purchis on'y jest to spite the Institootion;—
But, golly! there 's the currier's hoss upon the pavement pawin'!
I 'll be more 'xplicit in my next.

Yourn,

BIRDOFREDUM SAWIN

1848

From

Keats

This essay on Keats was written in 1854, not long after study in Europe (1851-1852) had led Lowell to new perceptions of critical standards and procedures. He begins (in the portion of the essay not here printed) with a presentation of "those essential facts which underlie the life and make the individual man," noting particularly that Keats is a poet "in whom the moral seems to have so perfectly interfused the physical man, that you might almost say he could feel sorrow with his hands."

He then launches upon the evaluation here reprinted. In considering Keats' diction, he praises the poet for his eventual achievement of "the perfect mean of diction"—the "costly plainness" which combines richness with economy of language. Then he turns to a consideration of the poet himself, and describes his nature and his influence by contrasting him with Wordsworth and Byron. The paragraph of comparison which discriminates among the three poets offers an example of Lowell's precise though sometimes complex way of drawing distinctions. Keats, he notes, was remarkable for his "penetrative and sympathetic imagination," one which caused him, like Shakespeare, "to assimilate at a touch whatever could serve his purpose"—the things of the world as well as wisdom. Thus Keats had a sort of insight which serves a poet well. In addition, he had "the shaping faculty" which made his expression accord perfectly with his thought.

The faults of Keats' poetry are obvious enough, but it should be remembered that he died at twenty-five, and that he offends by superabundance and not poverty. That he was overlanguaged at first there can be no doubt, and in this was implied the possibility of falling back to the perfect mean of diction. It is only by the rich that the costly plainness, which at once satisfies the taste and the imagination, is attainable.

Whether Keats was original or not, I do not think it useful to discuss until it has been settled what originality is. Lord Houghton tells us that this merit [whatever it be] has been denied to Keats, because his poems take the color of the authors he happened to be reading at the time he wrote them. But men have their intellectual ancestry, and the likeness of some one of them is forever unexpectedly flashing out in the features of a descendant; it may be after a gap of several generations. In the parliament of the present every man represents a constituency of the past. It is true that Keats has the accent of the men from whom he learned to speak, but this is to make originality a mere question of externals, and in this sense the author of a dictionary might bring an action of trover against every author who used his words. It is the man behind the words that gives them value, and if Shakespeare help himself to a verse or a phrase, it is with ears that have learned of him to listen that we feel the harmony of the one, and it is the mass of his intellect that makes the other weighty with meaning. Enough that we recognize in Keats that indefinable newness and

---

11 Lord Houghton. Richard Monckton Milnes, Lord Houghton (1809-1885), English poet and prose writer, published his Life of Keats in 1848 • 25 Shakespeare was regarded by Lowell as one of the peerless poets of all time. Here Lowell notes that Shakespeare could borrow a line or a phrase from a predecessor and still give the expression new values indicative of his own personality

unexpectedness which we call genius. The sunset is original every evening, though for thousands of years it has built out of the same light and vapor its visionary cities with domes and pinnacles, and its delectable mountains which night shall utterly abase and destroy.

Three men, almost contemporaneous with each other, —Wordsworth, Keats, and Byron,—were the great means of bringing back English poetry from the sandy deserts of rhetoric, and recovering for her her triple inheritance of simplicity, sensuousness, and passion. Of these, Wordsworth was the only conscious reformer, and his hostility to the existing formalism injured his earlier poems by tingeing them with something of iconoclastic extravagance. He was the deepest thinker, Keats the most essentially a poet, and Byron the most keenly intellectual of the three. Keats had the broadest mind, or at least his mind was open on more sides, and he was able to understand Wordsworth and judge Byron, equally conscious, through his artistic sense, of the greatnesses of the one and the many littlenesses of the other; while Wordsworth was isolated in a feeling of his prophetic character, and Byron had only an uneasy and jealous instinct of contemporary merit. The poems of Wordsworth, as he was the most individual, accordingly reflect the moods of his own nature; those of Keats, from sensitiveness of organization, the moods of his own taste and feeling, and those of Byron, who was impressible chiefly through the understanding, the intellectual and moral wants of the time in which he lived. Wordsworth has influenced most the ideas of succeeding poets, Keats, their forms; and Byron, interesting to men of imagination less for his writings than for what his writings indicate, reappears no more in poetry, but presents an ideal to youth made restless with vague desires not yet regulated by experience nor supplied with motives by the duties of life.

Keats certainly had more of the penetrative and sympathetic imagination which belongs to the poet, of that imagination which identifies itself with the momentary object of its contemplation, than any man of these later days. It is not merely that he has studied the Elizabethans and caught their turn of thought, but that he really sees things with their sovereign eye, and feels them with their electrified senses. His imagination was his bliss and bane. Was he cheerful, he "hops about the gravel with the sparrows"; was he morbid, he "would reject a Petrarcal coronation,—on account of my dying-day, and because women have cancers." So impressible was he as to say that he "had no nature" meaning character. But he knew what the faculty was worth, and says finely, "The imagination may be compared to Adam's dream: he awoke and found it truth." He had an unerring instinct for the poetic uses of things, and for him they had no other use. We are apt to talk of the classic *renaissance* as of a phenomenon long past, nor ever to be renewed, and to think the Greeks and Romans alone had the mighty magic to work such a miracle. To me one of the most interesting aspects of Keats is that in him we have an example of the *renaissance* going on almost under our own eyes, and that the intellectual ferment was in him kindled by a purely English leaven. He had properly no scholarship, any more than Shakespeare had, but like him he assimilated at a touch whatever could serve his purpose. His delicate senses absorbed culture at every pore. Of the self-denial to which he trained himself [unexampled in one so young] the second draft of *Hyperion* as compared with the first is a conclusive proof. And far indeed is his "Lamia" from the lavish indiscrimination of "Endymion." In his Odes he showed a sense of form and proportion which we seek vainly in almost any other English poet, and some of his sonnets (taking all qualities into consideration) are the most perfect in our language. No doubt there is something tropical and of strange overgrowth in his sudden maturity, but it *was* maturity nevertheless. Happy the young poet who has the saving fault of exuberance, if he have also the shaping faculty that sooner or later will amend it!

As every young person goes through all the world-old

---

7 **Wordsworth.** William Wordsworth (1770-1850) rebelled against eighteenth-century poetry in his Preface to the 1800 edition of **Lyrical Ballads.** In 1875, Lowell was to note that throughout his two long, philosophical poems, "The Prelude" and "The Excursion," Wordsworth "seems striving to bind the wizard Imagination with the sand-ropes of dry disquisition." Nevertheless, Lowell ranked him fifth among the great English poets • 7 **Byron.** George Gordon Byron, Lord Byron (1788-1824), English poet, was famous for brilliant satires upon the life of his period • 41 **the Elizabethans,** authors of the period of Queen Elizabeth of England (1533-1603)—notably Shakespeare and Spenser, both of whom Keats admired greatly • 46 **Petrarcal coronation** refers to Francesco Petrarca, or Petrarch (1304-1374), Italian poet • 67 **Hyperion,** a poem left uncompleted, though partly revised, at Keats' death in 1821 • 68 **Lamia,** a narrative poem by Keats, published in 1820 • 69 **Endymion,** an early, rather formless poem by Keats, published in 1818

experiences, fancying them something peculiar and personal to himself, so it is with every new generation, whose youth always finds its representatives in its poets. Keats rediscovered the delight and wonder that lay enchanted in the dictionary. Wordsworth revolted at the poetic diction which he found in vogue, but his own language rarely rises above it, except when it is upborne by the thought. Keats had an instinct for fine words, which are in themselves pictures and ideas, and had more of the power of poetic expression than any modern English poet. And by poetic expression I do not mean merely a vividness in particulars, but the right feeling which heightens or subdues a passage or a whole poem to the proper tone, and gives entireness to the effect. There is a great deal more than is commonly supposed in this choice of words. Men's thoughts and opinions are in a great degree vassals of him who invents a new phrase or reapplies an old epithet. The thought or feeling a thousand times repeated becomes his at last who utters it best. This power of language is veiled in the old legends which make the invisible powers the servants of some word. As soon as we have discovered the word for our joy or sorrow we are no longer its serfs, but its lords. We reward the discoverer of an anaesthetic for the body and make him member of all the societies, but him who finds a nepenthe for the soul we elect into the small academy of the immortals.

The poems of Keats mark an epoch in English poetry; for, however often we may find traces of it in others, in them found its most unconscious expression that reaction against the barrel-organ style which had been reigning by a kind of sleepy divine right for half a century. The lowest point was indicated when there was such an utter confounding of the common and the uncommon sense that Dr. Johnson wrote verse and Burke prose. The most profound gospel of criticism was, that nothing was good poetry that could not be translated into good prose, as if one should say that the test of sufficient moonlight was that tallow-candles could be made of it. We find Keats at first going to the other extreme, and endeavoring to extract green cucumbers from the rays of tallow; but we see also incontestable proof of the greatness and purity of his poetic gift in the constant return toward equilibrium and repose in his later poems. And it is a repose always lofty and clear-aired, like that of the eagle balanced in incommunicable sunshine. In him a vigorous understanding developed itself in equal measure with the divine faculty; thought emancipated itself from expression without becoming in turn its tyrant; and music and meaning floated together, accordant as swan and shadow, on the smooth element of his verse. Without losing its sensuousness, his poetry refined itself and grew more inward, and the sensational was elevated into the typical by the control of that finer sense which underlies the senses and is the spirit of them.

1854

35 **Dr. Johnson,** Samuel Johnson (1709-1785), English author, whose verse was excellent for its common sense rather than any noteworthy passion • 35 **Burke,** Edmund Burke (1729-1797), political writer, many of whose speeches were eloquent and poetic

From • The Biglow Papers, Second Series

The Courtin'

This most famous of the **Biglow Papers** appeared in at least three versions. In the first, written to fill in a page of the book version of the first series, it contained what are now stanzas 2, 5, 4, 6, 14, and 15, in that order. In the second, these verses were supplemented with stanzas 16, 17, 19, 20, 21, and 24. Later, said Lowell, "I added other verses, into some of which I infused a little more sentiment in a homely way, and after a fashion completed the poem by sketching in the characters and making a connected story. Most likely I have spoiled it. . . ." The version below is the third.

Lowell's skill in depicting life and character, particularly well illustrated by this poem, led critic William D. Howells to call attention to the value of the **Biglow Papers** as more than "mere satire." The two series, Howells claimed, "form a creative fiction of unique excellence." Not only, he said, is there vivid depiction of character but also of scene: "We enjoy the very woods and fields in Hosea Biglow's quaintly and subtly faithful

feeling for them. They are justly subordinate to him, however, and we are not suffered to forget Mr. Lowell's creed, that human nature is the nature best worth celebrating. The landscape is but the setting for Jaalam,—shrewd, honest, moral, angular,—Hosea Biglow municipalized. The place should be on the maps, for it has as absolute existence as any in New England, and its people by slight unnerving touches are made as real."

God makes sech nights, all white an' still
  Fur 'z you can look or listen,
Moonshine an' snow on field an' hill,
  All silence an' all glisten.

Zekle crep' up quite unbeknown
  An' peeked in thru' the winder,
An' there sot Huldy all alone,
  'ith no one nigh to hender.

A fireplace filled the room's one side
  With half a cord o' wood in—
There warn't no stoves (tell comfort died)
  To bake ye to a puddin'.

The wa'nut logs shot sparkles out
  Towards the pootiest, bless her,
An' leetle flames danced all about
  The chiny on the dresser.

Agin the chimbley crook-necks hung,
  An' in amongst 'em rusted
The ole queen's-arm thet gran'ther Young
  Fetched back from Concord busted.

The very room, coz she was in,
  Seemed warm from floor to ceilin',
An' she looked full ez rosy agin
  Ez the apples she was peelin'.

'Twas kin' o' kingdom-come to look
  On sech a blessed cretur,
A dogrose blushin' to a brook
  Ain't modester nor sweeter.

He was six foot o' man, A-1,
  Clear grit an' human natur';
None couldn't quicker pitch a ton
  Nor dror a furrer straighter.

He'd sparked it with full twenty gals,
  Hed squired 'em, danced 'em, druv 'em,
Fust this one, an' then thet, by spells—
  All is, he couldn't love 'em.

But long o' her his veins 'ould run
  All crinkly like curled maple,
The side she breshed felt full o' sun
  Ez a south slope in Ap'il.

She thought no v'ice hed sech a swing
  Ez hisn in the choir;
My! when he made Ole Hunderd ring,
  She *knowed* the Lord was nigher.

An' she'd blush scarlit, right in prayer,
  When her new meetin'-bunnet
Felt somehow thru' its crown a pair
  O' blue eyes sot upun it.

Thet night, I tell ye, she looked *some!*
  She seemed to've gut a new soul,
For she felt sartin-sure he'd come,
  Down to her very shoe-sole.

She heered a foot, an' knowed it tu,
  A-raspin' on the scraper,—
All ways to once her feelin's flew
  Like sparks in burnt-up paper.

He kin' o' l'itered on the mat
  Some doubtfle o' the sekle,
His heart kep' goin' pity-pat
  But hern went pity Zekle.

An' yet she gin her cheer a jerk
  Ez though she wished him furder,
An' on her apples kep' to work,
  Parin' away like murder.

"You want to see my Pa, I s'pose?"
  "Wal. . . . no. . . . I come dasignin' "—
"To see my Ma? She's sprinklin' clo'es
  Agin to-morrer's i'nin'."

To say why gals acts so or so,
  Or don't, 'ould be presumin';

---

17 crook-necks, gourds • 19 queen's-arm, musket • 43 Ole Hunderd, "Old Hundred," a psalm tune, based on Psalm 100

Mebby to mean *yes* an' say *no*
Comes nateral to women.

He stood a spell on one foot fust,
Then stood a spell on t'other,
An' on which one he felt the wust
He couldn't ha' told ye nuther.

Says he, "I'd better call agin";
Says she, "Think likely, Mister":
Thet last word pricked him like a pin,
An'. . . . Wal, he up an' kist her.

When Ma bimeby upon 'em slips,
Huldy sot pale ez ashes,
All kin' o' smily roun' the lips
An' teary roun' the lashes.

For she was jes' the quiet kind
Whose naturs never vary,
Like streams that keep a summer mind
Snowhid in Jenooary.

The blood clost roun' her heart felt glued
Too tight for all expressin',
Tell mother see how metters stood,
An' gin 'em both her blessin'.

Then her red come back like the tide
Down to the Bay o' Fundy,
An 'all I know is they was cried
In meetin' come nex' Sunday. 1861

93 like the tide alludes to the huge tide in the Bay of Fundy

Ode Recited at the Harvard Commemoration

This poem was read on July 21, 1865, to a group of friends and alumni who, in a broad tent raised near the grounds of Harvard College, had gathered to pay tribute to the Harvard men who had served during the recently concluded Civil War. There can be no doubt that Lowell was speaking sincerely in the ode. Former students of his were among those honored, and he himself had lost three nephews in the war.

In what is considered his greatest serious poem Lowell grapples with a question which arises in all times of war—"What possible justification is there for the sacrifices of the men who served?" He praises the faith of men which is made whole by brave actions, and sees such faith made immortal not only in the lives of contemporaries but also in the race and the nation which such men have served. In the sixth stanza, he pays reverent tribute to Lincoln, whom he cites as a great example of American insight and bravery.

Lowell tells of experiments with verse forms and justifies the form which he employed in this account of the composition of the poem written to James B. Thayer in 1877: "A long series of uniform stanzas (I am always speaking of public recitation) with regularly recurring rhymes produces somnolence among the men and a desperate resort to their fans on the part of the women. . . Now, my problem was to contrive a measure which should not be tedious by uniformity, but which should vary with varying moods, in which the transitions . . . should be managed without a jar. I at first thought of mixed rhymed and blank verses of unequal measures, like those in the chorus of 'Samson Agonistes'. . . . I wrote some stanzas . . . on this theory at first, leaving some verses without a rhyme to match. But my ear was better pleased when the rhyme, coming at a longer interval, as a far-off echo rather than instant reverberation, produced the same effect almost, and yet was grateful by unexpectedly recalling an association and faint reminiscence of consonance."

I

Weak-winged is song,
Nor aims at that clear-ethered height
Whither the brave deed climbs for light:
We seem to do them wrong,
Bringing our robin's-leaf to deck their hearse
Who in warm life-blood wrote their nobler verse,
Our trivial song to honor those who come
With ears attuned to strenuous trump and drum,
And shaped in squadron-strophes their desire,
Live battle-odes whose lines were steel and fire:

Yet sometimes feathered words are strong,
A gracious memory to buoy up and save
From Lethe's dreamless ooze, the common grave
Of the unventurous throng.

II

Today our Reverend Mother welcomes back
Her wisest Scholars, those who understood
The deeper teaching of her mystic tome,
And offered their fresh lives to make it good:
No lore of Greece or Rome,
No science peddling with the names of things,
Or reading stars to find inglorious fates,
Can lift our life with wings
Far from Death's idle gulf that for the many waits,
And lengthen out our dates
With that clear fame whose memory sings
In manly hearts to come, and nerves them and dilates:
Nor such thy teaching, Mother of us all!
Not such the trumpet-call
Of thy diviner mood,
That could thy sons entice
From happy homes and toils, the fruitful nest
Of those half-virtues which the world calls best,
Into War's tumult rude;
But rather far that stern device
The sponsors chose that round thy cradle stood
In the dim, unventured wood,
The VERITAS that lurks beneath
The letter's unprolific sheath,
Life of whate'er makes life worth living,
Seed-grain of high emprise, immortal food,
One heavenly thing whereof earth hath the giving.

III

Many loved Truth, and lavished life's best oil
Amid the dust of books to find her,
Content at last, for guerdon of their toil,
With the cast mantle she hath left behind her.
Many in sad faith sought for her,
Many with crossed hands sighed for her;
But these, our brothers, fought for her,
At life's dear peril wrought for her,
So loved her that they died for her,
Tasting the raptured fleetness
Of her divine completeness:
Their higher instinct knew
Those love her best who to themselves are true,
And what they dare to dream of dare to do;
They followed her and found her
Where all may hope to find,
Not in the ashes of the burnt-out mind,
But beautiful, with danger's sweetness round her.
Where faith made whole with deed
Breathes its awakening breath
Into the lifeless creed,
They saw her plumed and mailed,
With sweet, stern face unveiled,
And all-repaying eyes, look proud on them in death.

IV

Our slender life runs rippling by, and glides
Into the silent hollow of the past;
What is there that abides
To make the next age better for the last?
Is earth too poor to give us
Something to live for here that shall outlive us?
Some more substantial boon
Than such as flows and ebbs with Fortune's fickle moon?
The little that we see
From doubt is never free;
The little that we do
Is but half-nobly true;
With our laborious hiving
What men call treasure, and the gods call dross,
Life seems a jest of Fate's contriving,
Only secure in every one's conniving,
A long account of nothings paid with loss,
Where we poor puppets, jerked by unseen wires,
After our little hour of strut and rave,
With all our pasteboard passions and desires,
Loves, hates, ambitions, and immortal fires,
Are tossed pell-mell together in the grave.
But stay! no age was e'er degenerate,
Unless men held it at too cheap a rate,
For in our likeness still we shape our fate.
Ah, there is something here
Unfathomed by the cynic's sneer,

---

15 **Reverend Mother,** Harvard, personified as the alma mater • 37 **Veritas,** Truth—the motto of Harvard. The lines describe the university seal

Something that gives our feeble light
A high immunity from Night,
Something that leaps life's narrow bars
To claim its birthright with the hosts of heaven;
A seed of sunshine that can leaven
Our earthly dulness with the beams of stars,
And glorify our clay
With light from fountains elder than the Day;
A conscience more divine than we,
A gladness fed with secret tears,
A vexing, forward-reaching sense
Of some more noble permanence;
A light across the sea,
Which haunts the soul and will not let it be,
Still beaconing from the heights of undegenerate years.

V

Whither leads the path
To ampler fates that leads?
Not down through flowery meads,
To reap an aftermath
Of youth's vainglorious weeds,
But up the steep, amid the wrath
And shock of deadly-hostile creeds,
Where the world's best hope and stay
By battle's flashes gropes a desperate way,
And every turf the fierce foot clings to bleeds.
Peace hath her not ignoble wreath,
Ere yet the sharp, decisive word
Light the black lips of cannon, and the sword
Dreams in its easeful sheath;
But some day the live coal behind the thought,
Whether from Baäl's stone obscene,
Or from the shrine serene
Of God's pure altar brought,
Bursts up in flame; the war of tongue and pen
Learns with what deadly purpose it was fraught,
And, helpless in the fiery passion caught,
Shakes all the pillared state with shock of men:
Some day the soft Ideal that we wooed
Confronts us fiercely, foe-beset, pursued,
And cries reproachful: "Was it, then, my praise,
And not myself was loved? Prove now thy truth;
I claim of thee the promise of thy youth;
Give me thy life, or cower in empty phrase,
The victim of thy genius, not its mate!"

Life may be given in many ways,
And loyalty to Truth be sealed
As bravely in the closet as the field,
So bountiful is Fate;
But then to stand beside her,
When craven churls deride her,
To front a lie in arms and not to yield,
This shows, methinks, God's plan
And measure of a stalwart man,
Limbed like the old heroic breeds,
Who stands self-poised on manhood's solid earth,
Not forced to frame excuses for his birth,
Fed from within with all the strength he needs.

VI

Such was he, our Martyr-Chief,
Whom late the Nation he had led,
With ashes on her head,
Wept with the passion of an angry grief:
Forgive me, if from present things I turn
To speak what in my heart will beat and burn,
And hang my wreath on his world-honored urn.
Nature, they say, doth dote,
And cannot make a man
Save on some worn-out plan,
Repeating us by rote:
For him her Old-World moulds aside she threw,
And, choosing sweet clay from the breast
Of the unexhausted West,
With stuff untainted shaped a hero new,
Wise, steadfast in the strength of God, and true.
How beautiful to see
Once more a shepherd of mankind indeed,
Who loved his charge but never loved to lead;
One whose meek flock the people joyed to be,
Not lured by any cheat of birth,
But by his clear-grained human worth,
And brave old wisdom of sincerity!
They knew that outward grace is dust;
They could not choose but trust
In that sure-footed mind's unfaltering skill,

---

123 **Baäl's stone obscene,** idol worshiped by the idolatrous Baalites. See I Kings 18 • 150 **Martyr-Chief,** Lincoln, who had been assassinated April 14. This sixth section, perhaps the most famous in the poem, was added after the public recital

And supple-tempered will
That bent like perfect steel to spring again and thrust.
His was no lonely mountain-peak of mind,
Thrusting to thin air o'er our cloudly bars,
A sea-mark now, now lost in vapors blind;
Broad prairie rather, genial, level-lined,
Fruitful and friendly for all human kind,
Yet also nigh to heaven and loved of loftiest stars.
Nothing of Europe here,
Or, then, of Europe fronting mornward still,
Ere any names of Serf and Peer
Could Nature's equal scheme deface
And thwart her genial will;
Here was a type of the true elder race,
And one of Plutarch's men talked with us face to face.
I praise him not; it were too late;
And some innative weakness there must be
In him who condescends to victory
Such as the Present gives, and cannot wait,
Safe in himself as in a fate.
So always firmly he:
He knew to bide his time,
And can his fame abide,
Still patient in his simple faith sublime,
Till the wise years decide.
Great captains, with their guns and drums,
Disturb our judgment for the hour,
But at last silence comes;
These all are gone, and, standing like a tower,
Our children shall behold his fame,
The kindly-earnest, brave, foreseeing man,
Sagacious, patient, dreading praise, not blame,
New birth of our new soil, the first American.

VII

Long as man's hope insatiate can discern
Or only guess some more inspiring goal
Outside of Self, enduring as the pole,
Along whose course the flying axles burn
Of spirits bravely-pitched, earth's manlier brood;
Long as below we cannot find
The meed that stills the inexorable mind;
So long this faith to some ideal Good,
Under whatever mortal names its masks,
Freedom, Law, Country, this ethereal mood
That thanks the Fates for their severer tasks,
Feeling its challenged pulses leap
While others skulk in subterfuges cheap,
And, set in Danger's van, has all the boon it asks,
Shall win a man's praise and woman's love,
Shall be a wisdom that we set above
All other skills and gifts to culture dear,
A virtue round whose forehead we enwreathe
Laurels that with a living passion breathe
When other crowns grow, while we twine them, sear.
What brings us thronging these high rites to pay,
And seal these hours the noblest of our year,
Save that our brothers found this better way?

VIII

We sit here in the Promised Land
That flows with Freedom's honey and milk;
But 'twas they won it, sword in hand,
Making the nettle danger soft for us as silk.
We welcome back our bravest and our best—
Ah me! not all! some come not with the rest,
Who went forth brave and bright as any here!
I strive to mix some gladness with my strain,
But the sad strings complain,
And will not please the ear:
I sweep them for a pæan, but they wane
Again and yet again
Into a dirge and die away in pain.
In these brave ranks I only see the gaps,
Thinking of dear ones whom the dumb turf wraps,
Dark to the triumph which they died to gain:
Fitlier may others greet the living,
For me the past is unforgiving;
I with uncovered head
Salute the sacred dead,
Who went, and who return not.—Say not so!
'Tis not the grapes of Canaan that repay,
But the high faith that failed not by the way;
Virtue treads paths that end not in the grave;
No ban of endless night exiles the brave;
And to the saner mind
We rather seem the dead that stayed behind.
Blow, trumpets, all your exultations blow!
For never shall their aureoled presence lack.
I see them muster in a gleaming row,

---

190 **one of . . . men,** a man worthy of comparison with the heroic Greeks and Romans celebrated in Plutarch's Lives (first century, B.C.)

• 232 **Promised Land,** the land sought by the chosen people. See Exodus 13:5

With ever-youthful brows that nobler show;
We find in our dull road their shining track;
In every nobler mood
We feel the orient of their spirit glow,
Part of our life's unalterable good,
Of all our saintlier aspiration;
They come transfigured back,
Secure from change in their high-hearted ways,
Beautiful evermore, and with the rays
Of morn on their white Shields of Expectation!

IX

But is there hope to save
Even this ethereal essence from the grave?
Whatever 'scaped Oblivion's subtle wrong
Save a few clarion names, or golden threads of song?
Before my musing eye
The mighty ones of old sweep by,
Disvoiced now and insubstantial things,
As noisy once as we; poor ghosts of kings,
Shadows of empire wholly gone to dust,
And many races, nameless long ago,
To darkness driven by that imperious gust
Of ever-rushing Time that here doth blow:
O visionary world, condition strange,
Where naught abiding is but only Change,
Where the deep-bolted stars themselves still shift
and range!
Shall we to more continuance make pretence?
Renown builds tombs; a life-estate is Wit;
And, bit by bit,
The cunning years steal all from us but woe;
Leaves are we, whose decays no harvest sow.
But, when we vanish hence,
Shall they lie forceless in the dark below,
Save to make green their little length of sods,
Or deepen pansies for a year or two,
Who now to us are shining-sweet as gods?
Was dying all they had the skill to do?
That were not fruitless: but the Soul resents
Such short-lived service, as if blind events
Ruled without her, or earth could so endure;
She claims a more divine investiture
Of longer tenure than Fame's airy rents;
Whate'er she touches doth her nature share;
Her inspiration haunts the ennobled air,
Gives eyes to mountains blind,
Ears to the deaf earth, voices to the wind,
And her clear trump sings succor everywhere
By lonely bivouacs to the wakeful mind;
For soul inherits all that soul could dare:
Yea, Manhood hath a wider span
And larger privilege of life than man.
The single deed, the private sacrifice,
So radiant now through proudly-hidden tears,
Is covered up erelong from mortal eyes
With thoughtless drift of the deciduous years;
But that high privilege that makes all men peers,
That leap of heart whereby a people rise
Up to a noble anger's height,
And, flamed on by the Fates, not shrink, but grow
more bright,
That swift validity in noble veins,
Of choosing danger and disdaining shame,
Of being set on flame
By the pure fire that flies all contact base
But wraps its chosen with angelic might,
These are imperishable gains,
Sure as the sun, medicinal as light,
These hold great futures in their lusty reins
And certify to earth a new imperial race.

X

Who now shall sneer?
Who dare again to say we trace
Our lines to a plebeian race?
Roundhead and Cavalier!
Dumb are those names erewhile in battle loud;
Dream-footed as the shadow of a cloud,
They flit across the ear:
That is best blood that hath most iron in't
To edge resolve with, pouring without stint
For what makes manhood dear.
Tell us not of Plantagenets,
Hapsburgs, and Guelfs, whose thin bloods crawl
Down from some victor in a border-brawl!
How poor their outworn coronets,
Matched with one leaf of that plain civic wreath
Our brave for honor's blazon shall bequeath,

---

332 **Roundhead and Cavalier,** the Puritans and the followers of Charles I, here representing the New Englanders and the Southerners • 339 **Plantagenets,** a line of English kings • 340 **Hapsburgs, and Guelfs,** respectively, the royal family which ruled the Holy Roman Empire and the papal party in medieval Italy

Through whose desert a rescued Nation sets
Her heel on treason, and the trumpet hears
Shout victory, tingling Europe's sullen ears
With vain resentments and more vain regrets!

XI

Not in anger, not in pride,
Pure from passion's mixture rude
Ever to base earth allied,
But with far-heard gratitude,
Still with heart and voice renewed,
To heroes living and dear martyrs dead,
The strain should close that consecrates our brave.
Lift the heart and lift the head!
Lofty be its mood and grave,
Not without a martial ring,
Not without a prouder tread
And a peal of exultation:
Little right has he to sing
Through whose heart in such an hour
Beats no march of conscious power,
Sweeps no tumult of elation!
'Tis no Man we celebrate,
By his country's victories great,
A hero half, and half the whim of Fate,
But the pith and marrow of a Nation
Drawing force from all her men,
Highest, humblest, weakest, all,
For her time of need, and then
Pulsing it again through them,
Till the basest can no longer cower,
Feeling his soul spring up divinely tall,
Touched but in passing by her mantle-hem.
Come back, then, noble pride, for 'tis her dower!
How could poet ever tower,
If his passions, hopes, and fears,
In his triumphs and his tears,
Kept not measure with his people?
Boom, cannon, boom to all the winds and waves!
Clash out, glad bells, from every rocking steeple!
Banners, advance with triumph, bend your staves!
And from every mountain-peak
Let beacon-fire to answering beacon speak,
Katahdin tell Monadnock, Whiteface he,
And so leap on in light from sea to sea,
Till the glad news be sent
Across a kindling continent,
Making earth feel more firm and air breathe braver:
"Be proud! for she is saved, and all have helped to save her!
She that lifts up the manhood of the poor,
She of the open soul and open door,
With room about her hearth for all mankind!
The fire is dreadful in her eyes no more;
From her bold front the helm she doth unbind,
Sends all her handmaid armies back to spin,
And bids her navies, that so lately hurled
Their crashing battle, hold their thunders in,
Swimming like birds of calm along the unharmful shore.
No challenge sends she to the elder world,
That looked askance and hated; a light scorn
Plays on her mouth, as round her mighty knees
She calls her children back, and waits the morn
Of nobler day, enthroned between her subject seas."

XII

Bow down, dear Land, for thou hast found release!
Thy God, in these distempered days,
Hath taught thee the sure wisdom of His ways,
And through thine enemies hath wrought thy peace!
Bow down in prayer and praise!
No poorest in thy borders but may now
Lift to the juster skies a man's enfranchised brow.
O Beautiful! my Country! ours once more!
Smoothing thy gold of war-dishevelled hair
O'er such sweet brows as never other wore,
And letting thy set lips,
Freed from wrath's pale eclipse,
The rosy edges of their smile lay bare,
What words divine of lover or of poet
Could tell our love and make thee know it,
Among the Nations bright beyond compare?
What were our lives without thee?
What all our lives to save thee?
We reck not what we gave thee;
We will not dare to doubt thee,
But ask whatever else, and we will dare!

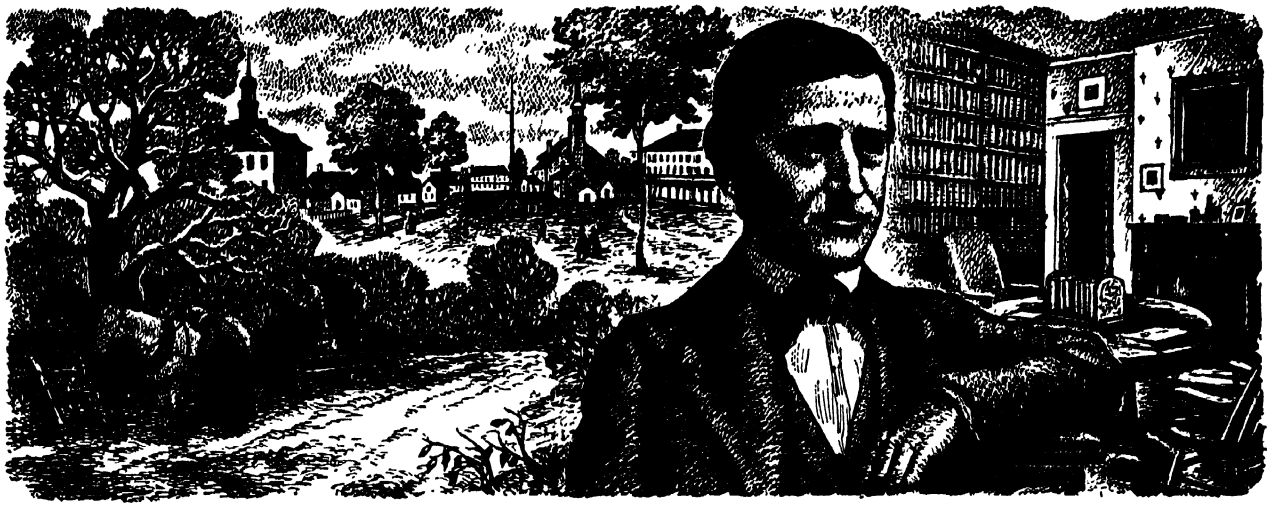
Auspex

My heart, I cannot still it,
Nest that had song-birds in it;
And when the last shall go,
The dreary days, to fill it,
Instead of lark or linnet,
Shall whirl dead leaves and snow.

Had they been swallows only,
Without the passion stronger
That skyward longs and sings,—
Woe's me, I shall be lonely
When I can feel no longer
The impatience of their wings!

A moment, sweet delusion,
Like birds the brown leaves hover;
But it will not be long
Before their wild confusion
Fall wavering down to cover
The poet and his song.

1879·1888



THE TRANSCENDENTALISTS: Emerson, Thoreau

Ralph Waldo Emerson

1803 · 1882

Ralph Waldo Emerson was descended from nine successive generations of ministers. His grandfather was a minister at Concord at the beginning of the American Revolution and gave encouragement to the embattled farmers who fired the shot heard around the world. His father, who was minister of the First Church, Unitarian, in Boston, Ralph Waldo's birthplace, died when Emerson was eight years old, leaving a widow and four sons in difficult financial circumstances. Nevertheless, all four sons went through Harvard, Ralph Waldo graduating in 1821. He taught school for a while, attended the Harvard Divinity School, spent a winter in Florida for his health, and, in 1829, became pastor of the Second Church of Boston and married Miss Ellen Tucker. His felicity at this time seemed perfect; in his journal he uneasily asked himself, "Can this hold?" It didn't hold, for in 1831 Ellen died, and in 1832 he resigned his pastorate because of his unwillingness to administer the Lord's Supper. In a remarkably candid sermon on the subject he said to his congregation: "It is my desire, in the office of a Christian minister, to do nothing which I cannot do with my whole heart. Having said this, I have said all. I have no hostility to this institution [the Lord's supper]; I am only stating my want of sympathy with it."

Emerson at twenty-nine possibly looked like a failure; but, as Bliss Perry has happily observed, "he pulled himself together, being of the old, unbeatable Puritan stuff." In 1833 he went abroad and visited Landor in Italy, Coleridge and Wordsworth in England, and (most important of all, because the meeting was the beginning of a lifelong friendship) Carlyle in Scotland, at Craigenputtock, "amid desolate heathery hills, where the lonely

scholar nourished his mighty heart" (see *English Traits).* Upon his return to America, he bought a house and two acres of land in Concord, married Miss Lydia Jackson, and in 1836 published his first volume, *Nature,* which Henry Seidel Canby has called "the most seminal of all American books." Except among Transcendentalists, *Nature* met with a mild reception; but the two challenging addresses which followed soon after, *The American Scholar* in 1837 and *The Divinity School Address* in 1838, made Emerson famous. *Essays, First Series* appeared in 1841, and *Essays, Second Series,* in 1844. From 1840 to 1842, he assisted Margaret Fuller in editing *The Dial,* the chief magazine of New England Transcendentalism, and was himself editor from 1842 to 1844. He lectured extensively and successfully in England in 1847-1848. In 1847 *Poems* appeared; in 1850, *Representative Men;* in 1856, *English Traits;* in 1860, *The Conduct of Life.*

In the 1840's and 1850's Emerson was in ever increasing demand as a lecturer on Lyceum platforms in New England, the middle Atlantic states, and the "Northwest." He met this demand heroically. An entry in his journal dated Beloit, Wisconsin, January 9, 1856, reads as follows: "Mercury varying from 20° to 30° below zero for the last week. . . . This climate and people are a new test for the wares of a man of letters. All his thin, watery matter freezes; 'tis only the smallest portion of alcohol that remains good. At the Lyceum, the stout Illinoisan, after a short trial, walks out of the hall." And another entry dated Kalamazoo, Michigan, February 1860: "My chief adventure was the necessity of riding in a buggy forty-eight miles to Grand Rapids; then, after the lecture, twenty more on the return; and the next morning getting back to Kalamazoo in time for the train at twelve. So I saw Michigan and its forests and Wolverines pretty thoroughly." One marvels at Emerson's hardihood and adaptability. He was enthusiastic about the development of civilization in the West. When Bret Harte accused him of naïveté, Emerson replied that he "spoke from Pilgrim experience, and knew on good grounds the resistless culture that religion effects."

Emerson kept aloof from the slavery controversy in the 1830's and 1840's. Why "this incredible tenderness for black folk a thousand miles off?" he asked in 1841; and in 1846 he had "quite other slaves to free than those Negroes, to wit, imprisoned spirits, imprisoned thoughts." But later events drove him inexorably into the ranks of the radical abolitionists. When Webster, who had previously been something of a hero in Emerson's eyes, supported the Fugitive Slave Law as a part of the Compromise of 1850, Emerson wrote of him scathingly in his journal: "The word *liberty* in the mouth of Mr. Webster sounds like the word *love* in the mouth of a

---

Panel (l. to r.): "The sled and traveller stopped"; from "The Snow-Storm" • View of Concord in 1839 • Ralph Waldo Emerson at 51 • His Concord study

courtezan." The law itself Emerson called a "filthy enactment," and he added, "I will not obey it, by God" (the only instance of profanity in his writings). In 1859 he took his stand publicly as a champion of John Brown. From 1861 to 1865 he was caught up in the general hysteria of war; "Emerson," Hawthorne said in 1861, "is breathing slaughter like the rest of us." On January 1, 1863, he read the "Boston Hymn" in the Boston Music Hall. Henry James remembered "the momentousness of the occasion, the vast excited multitude, the crowded platform, the tall spare figure of Emerson" and "the immense effect with which his beautiful voice pronounced the lines"—lines, it may be noted, expressing the most intransigent of positions—

> Pay ransom to the owner
> And fill the bag to the brim.
> Who is the owner? The slave is owner,
> And ever was. Pay *him!*

In April 1865 he objected in his journal that Grant's terms of surrender were "a little too easy." Perhaps the world is yet to see the philosopher whose philosophy is proof against the excitements of war.

In his personal relations, Emerson has seemed to many readers to have been a little remote. "True love," he wrote in the essay on "Friendship," "dwells and broods on the eternal"; friends "descend to meet." Because his thoughts were so habitually fixed on the ideal, "actual society" was to him "a perpetual disappointment"—an attitude sufficiently illustrated in the references in his journal to his Concord friendships. His conversations with Margaret Fuller were "strange, cold-warm, attractive-repelling." Of his long and fruitful friendship with Thoreau he wrote in 1856, "All his resources of wit and invention are lost to me, in every experiment, year after year, that I make to hold intercourse with his mind." After the death of Hawthorne, with whom he had much less in common, he regretted that he had been unable to "conquer a friendship"; to him, the fault seemed to lie in Hawthorne's "unwillingness and caprice." To the more worldly Hawthorne, on the other hand, Emerson was "the mystic, stretching his hand out of cloud-land, in vain search for something real."

But whatever his human limitations and whatever the limitations of his thinking—"I could never give much reality to evil," he frankly admitted—as an idealist who insisted always upon the "beneficent tendency" in human life and as an inspirer of youth, Emerson was unquestionably great. James Russell Lowell, who was inclined to be skeptical of Emerson's philosophy as such, testified to the inspiring quality of his discourses. "He brought us *life*," Lowell said in "Emerson the Lecturer"; "gave us ravishing glimpses of an ideal under the dry husk of our New England, made us conscious of the supreme and everlasting originality of whatever bit of soul might be in any of us." After a lecture by Emerson, his hearers "walked homeward with prouder stride over the creaking snow." To Matthew Arnold as an undergraduate at Oxford, Emerson was one of the four most stimulating contemporary "voices."

"In all my lectures," Emerson wrote, "I have taught one doctrine, namely, the infinitude of the private man." And again, he said, "I gain my point, gain all points, whenever I can reach the young man with any statement which teaches him his own worth." Emerson had a genius, in the words of Henry James ("Emerson" in *Partial Portraits*), for "seeing character as a real and supreme thing." "He serves," James continued, "and will not wear out . . . indeed, we cannot afford to drop him. . . . He did something better than anyone else; he had a particular faculty, which has not been surpassed, for speaking to the soul in a voice of direction and authority." Emerson should be judged and appreciated, then, not primarily as a metaphysical philosopher, but as a moral teacher. If his moral teachings seem to have lost some of their early force, if Emerson for almost a generation has been "unfashionable" (Mr. T. S. Eliot could speak of the essays in 1919 as "already an encumbrance"), it is by no means certain that with a change of intellectual and moral "climate"—such a change as now seems impending—Emerson may not regain much of his old authority and influence.

The American Scholar

An Oration Delivered Before the Phi Beta Kappa Society, at Cambridge, August 31, 1837

The American Scholar was the most famous literary address of the century. "This grand oration," wrote Oliver Wendell Holmes, "was our intellectual Declaration of Independence. Nothing like it had been heard in the halls of Harvard since Samuel Adams supported the affirmative of the question, 'Whether it be lawful to resist the chief magistrate, if the commonwealth cannot otherwise be preserved.' " James Russell Lowell called it "our Yankee version of a lecture by Abelard." Thomas Carlyle wrote to Emerson, after having read **The American Scholar**: "I could have wept to read that speech; the clear high melody of it went tingling through my heart; I said to my wife, 'There, woman!' She read; and charges me to return for answer 'that there has been nothing met with like it since Schiller. . . .' "

The circumstances of the delivery of **The American Scholar** have been vividly reconstructed by Bliss Perry in "Emerson's Most Famous Speech," **The Praise of Folly and Other Papers**, 1923, 81-113.

Mr. President and Gentlemen, I greet you on the recommencement of our literary year Our anniversary is one of hope, and, perhaps, not enough of labor. We do not meet for games of strength or skill, for the recitation of histories, tragedies, and odes, like the ancient Greeks; for parliaments of love and poesy, like the Troubadours; nor for the advancement of science, like our contemporaries in the British and European capitals. Thus far, our holiday has been simply a friendly sign of the survival of the love of letters amongst a people too busy to give to letters any more. As such it is precious as the sign of an indestructible instinct. Perhaps the time is already come when it ought to be, and will be, something else; when the sluggard intellect of this continent will look from under its iron lids and fill the postponed expectation of the world with something better than the exertions of mechanical skill. Our day of dependence, our long apprenticeship to the learning of other lands, draws to a close. The millions that around us are rushing into life, cannot always be fed on the sere remains of foreign harvests. Events, actions arise, that must be sung, that will sing themselves. Who can doubt that poetry will revive and lead in a new age, as the star in the constellation Harp, which now flames in our zenith, astronomers announce, shall one day be the pole-star for a thousand years?

In this hope I accept the topic which not only usage but the nature of our association seem to prescribe to this day,—the AMERICAN SCHOLAR. Year by year we come up hither to read one more chapter of his biography. Let us inquire what light new days and events have thrown on his character and his hopes.

It is one of those fables which out of an unknown antiquity convey an unlooked-for wisdom, that the gods, in the beginning, divided Man into men, that he might be more helpful to himself; just as the hand was divided into fingers, the better to answer its end.

The old fable covers a doctrine ever new and sublime; that there is One Man,—present to all particular men only partially, or through one faculty; and that you must take the whole society to find the whole man. Man is not a farmer, or a professor, or an engineer, but he is all. Man is priest, and scholar, and statesman, and producer, and soldier. In the *divided* or social state these functions are parcelled out to individuals, each of whom aims to do his stint of the joint work, whilst each other performs his. The fable implies that the individual, to possess himself, must sometimes return from his own labor to embrace all the other laborers. But, unfortunately, this original unit, this fountain of power, has been so distributed to multitudes, has been so minutely sub-

---

17 **Our . . . close.** Emerson's view that American literature should no longer follow European models but should be indigenous to America was by no means original with him. Other writers had been saying the same thing for a good many years (See, for example, John C. McCloskey, "The Campaign of Periodicals after the War of 1812 for National American Literature," **Publications of the Modern Language Association**, March 1935.) Emerson has been remembered in this connection, while earlier writers have been forgotten, because Emerson expressed the view more effectively

divided and peddled out, that it is spilled into drops, and cannot be gathered. The state of society is one in which the members have suffered amputation from the trunk, and strut about so many walking monsters,—a good finger, a neck, a stomach, an elbow, but never a man.

Man is thus metamorphosed into a thing, into many things. The planter, who is Man sent out into the field to gather food, is seldom cheered by any idea of the true dignity of his ministry. He sees his bushel and his cart, and nothing beyond, and sinks into the farmer, instead of Man on the farm. The tradesman scarcely ever gives an ideal worth to his work, but is ridden by the routine of his craft, and the soul is subject to dollars. The priest becomes a form; the attorney a statute-book; the mechanic a machine; the sailor a rope of the ship.

In this distribution of functions the scholar is the delegated intellect. In the right state he is *Man Thinking.* In the degenerate state, when the victim of society, he tends to become a mere thinker, or still worse, the parrot of other men's thinking.

In this view of him, as Man Thinking, the theory of his office is contained. Him Nature solicits with all her placid, all her monitory pictures; him the past instructs; him the future invites. Is not indeed every man a student, and do not all things exist for the student's behoof? And, finally, is not the true scholar the only true master? But the old oracle said, "All things have two handles: beware of the wrong one." In life, too often, the scholar errs with mankind and forfeits his privilege. Let us see him in his school, and consider him in reference to the main influences he receives.

I. The first in time and the first in importance of the influences upon the mind is that of nature. Every day, the sun; and, after the sunset, Night and her stars. Ever the winds blow; ever the grass grows. Every day, men and women, conversing, beholding and beholden. The scholar is he of all men whom this spectacle most engages. He must settle its value in his mind. What is nature to him? There is never a beginning, there is never an end, to the inexplicable continuity of this web of God, but always circular power returning into itself. Therein it resembles his own spirit, whose beginning, whose ending, he never can find.—so entire, so boundless. Far too as her splendors shine, system on system shooting like rays, upward, downward without centre, without circumference,—in the mass and in the particle, Nature hastens to render account of herself to the mind. Classification begins. To the young mind every thing is individual, stands by itself. By and by, it finds how to join two things and see in them one nature; then three, then three thousand; and so, tyrannized over by its own unifying instinct, it goes on tying things together, diminishing anomalies, discovering roots running under ground whereby contrary and remote things cohere and flower out from one stem. It presently learns that since the dawn of history there has been a constant accumulation and classifying of facts. But what is classification but the perceiving that these objects are not chaotic, and are not foreign, but have a law which is also a law of the human mind? The astronomer discovers that geometry, a pure abstraction of the human mind, is the measure of planetary motion. The chemist finds proportions and intelligible method throughout matter; and science is nothing but the finding of analogy, identity, in the most remote parts. The ambitious soul sits down before each refractory fact; one after another reduces all strange constitutions, all new powers, to their class and their law, and goes on forever to animate the last fibre of organization, the outskirts of nature, by insight.

Thus to him, to this schoolboy under the bending dome of day, is suggested that he and it proceed from one root; one is leaf and one is flower; relation, sympathy, stirring in every vein. And what is that root? Is not that the soul of his soul? A thought too bold; a dream too wild. Yet when this spiritual light shall have revealed the law of more earthly natures,—when he has learned to worship the soul, and to see that the natural philosophy that now is, is only the first gropings of its gigantic hand, he shall look forward to an ever expanding knowledge as to a becoming creator. He shall see that nature is the opposite of the soul, answering to it part for part. One is seal and one is print Its beauty is the beauty of his own mind. Its laws are the laws of his own mind. Nature then becomes to him the measure of his attainments. So much of nature as he is ignorant of, so much of his own mind does he not yet possess. And, in fine, the ancient precept, "Know thyself," and the modern precept, "Study nature," become at last one maxim.

II. The next great influence into the spirit of the scholar is the mind of the Past,—in whatever form, whether of literature, of art, of institutions, that mind is

inscribed. Books are the best type of the influence of the past, and perhaps we shall get at the truth,—learn the amount of this influence more conveniently,—by considering their value alone.

The theory of books is noble. The scholar of the first age received into him the world around; brooded thereon; gave it the new arrangement of his own mind, and uttered it again. It came into him life; it went out from him truth. It came to him short-lived actions; it went out from him immortal thoughts. It came to him business; it went from him poetry. It was dead fact; now, it is quick thought. It can stand, and it can go. It now endures, it now flies, it now inspires. Precisely in proportion to the depth of mind from which it issued, so high does it soar, so long does it sing.

Or, I might say, it depends on how far the process had gone, of transmuting life into truth. In proportion to the completeness of the distillation, so will the purity and imperishableness of the product be. But none is quite perfect. As no air-pump can by any means make a perfect vacuum, so neither can any artist entirely exclude the conventional, the local, the perishable from his book, or write a book of pure thought, that shall be as efficient, in all respects, to a remote posterity, as to contemporaries, or rather to the second age. Each age, it is found, must write its own books; or rather, each generation for the next succeeding. The books of an older period will not fit this.

Yet hence arises a grave mischief. The sacredness which attaches to the act of creation, the act of thought, is transferred to the record. The poet chanting was felt to be a divine man: henceforth the chant is divine also. The writer was a just and wise spirit: henceforward it is settled the book is perfect; as love of the hero corrupts into worship of his statue. Instantly the book becomes noxious: the guide is a tyrant. The sluggish and perverted mind of the multitude, slow to open to the incursions of Reason, having once so opened, having once received this book, stands upon it, and makes an outcry if it is disparaged. Colleges are built on it. Books are written on it by thinkers, not by Man Thinking; by men of talent, that is, who start wrong, who set out from accepted dogmas, not from their own sight of principles. Meek young men grow up in libraries, believing it their duty to accept the views which Cicero, which Locke, which Bacon, have given; forgetful that Cicero, Locke, and Bacon were only young men in libraries when they wrote these books.

Hence, instead of Man Thinking, we have the bookworm. Hence the book-learned class, who value books, as such; not as related to nature and the human constitution, but as making a sort of Third Estate with the world and the soul. Hence the restorers of readings, the emendators, the bibliomaniacs of all degrees.

Books are the best of things, well used; abused, among the worst. What is the right use? What is the one end which all means go to effect? They are for nothing but to inspire. I had better never see a book than to be warped by its attraction clean out of my own orbit, and made a satellite instead of a system. The one thing in the world, of value, is the active soul. This every man is entitled to; this every man contains within him, although in almost all men obstructed, and as yet unborn. The soul active sees absolute truth and utters truth, or creates. In this action it is genius; not the privilege of here and there a favorite, but the sound estate of every man. In its essence it is progressive. The book, the college, the school of art, the institution of any kind, stop with some past utterance of genius. This is good, say they,—let us hold by this. They pin me down. They look backward and not forward. But genius looks forward: the eyes of man are set in his forehead, not in his hindhead: man hopes: genius creates. Whatever talents may be, if the man create not, the pure efflux of the Deity is not his;—cinders and smoke there may be, but not yet flame. There are creative manners, there are creative actions, and creative words; manners, actions, words, that is, indicative of no custom or authority, but springing spontaneous from the mind's own sense of good and fair.

On the other part, instead of being its own seer, let it receive from another mind its truth, though it were in torrents of light, without periods of solitude, inquest, and self-recovery, and a fatal disservice is done. Genius is always sufficiently the enemy of genius by over-influence. The literature of every nation bears me witness. The English dramatic poets have Shakespearized now for two hundred years.

---

12 quick, living • 38 Reason. In Emersonian usage, "Reason" is supra-rational, intuitive; "Understanding" is logical, scientific. See p. 350

Undoubtedly there is a right way of reading, so it be sternly subordinated. Man Thinking must not be subdued by his instruments. Books are for the scholar's idle times. When he can read God directly, the hour is too precious to be wasted in other men's transcripts of their readings. But when the intervals of darkness come, as come they must,—when the sun is hid and the stars withdraw their shining,—we repair to the lamps which were kindled by their ray, to guide our steps to the East again, where the dawn is. We hear, that we may speak. The Arabian proverb says, "A fig tree, looking on a fig tree, becometh fruitful."

It is remarkable, the character of the pleasure we derive from the best books. They impress us with the conviction that one nature wrote and the same reads. We read the verses of one of the great English poets; of Chaucer, of Marvell, of Dryden, with the most modern joy,—with a pleasure, I mean, which is in great part caused by the abstraction of all *time* from their verses. There is some awe mixed with the joy of our surprise, when this poet, who lived in some past world, two or three hundred years ago, says that which lies close to my own soul, that which I also had well-nigh thought and said. But for the evidence thence afforded to the philosophical doctrine of the identity of all minds, we should suppose some pre-established harmony, some foresight of souls that were to be, and some preparation of stores for their future wants, like the fact observed in insects, who lay up food before death for the young grub they shall never see.

I would not be hurried by any love of system, by any exaggeration of instincts, to underrate the Book. We all know, that as the human body can be nourished on any food, though it were boiled grass and the broth of shoes, so the human mind can be fed by any knowledge. And great and heroic men have existed who had almost no other information than by the printed page. I only would say that it needs a strong head to bear that diet. One must be an inventor to read well. As the proverb says, "He that would bring home the wealth of the Indies, must carry out the wealth of the Indies." There is then creative reading as well as creative writing. When the mind is braced by labor and invention, the page of whatever book we read becomes luminous with manifold allusion. Every sentence is doubly significant, and the sense of our author is as broad as the world. We then see, what is always true, that as the seer's hour of vision is short and rare among heavy days and months, so is its record, perchance, the least part of his volume. The discerning will read, in his Plato or Shakspeare, only that least part,—only the authentic utterances of the oracle;—all the rest he rejects, were it never so many times Plato's and Shakspeare's.

Of course there is a portion of reading quite indispensable to a wise man. History and exact science he must learn by laborious reading. Colleges, in like manner, have their indispensable office,—to teach elements. But they can only highly serve us when they aim not to drill, but to create; when they gather from far every ray of various genius to their hospitable halls, and by the concentrated fires, set the hearts of their youth on flame. Thought and knowledge are natures in which apparatus and pretension avail nothing. Gowns and pecuniary foundations, though of towns of gold, can never countervail the least sentence or syllable of wit. Forget this, and our American colleges will recede in their public importance, whilst they grow richer every year.

III. There goes in the world a notion that the scholar should be a recluse, a valetudinarian,—as unfit for any handiwork, or public labor as a penknife for an axe. The so-called "practical men" sneer at speculative men, as if, because they speculate or *see*, they could do nothing. I have heard it said that the clergy,—who are always, more universally than any other class, the scholars of their day,—are addressed as women; that the rough, spontaneous conversation of men they do not hear, but only a mincing and diluted speech. They are often virtually disfranchised; and indeed there are advocates for their celibacy. As far as this is true of the studious classes, it is not just and wise. Action is with the scholar subordinate, but it is essential. Without it he is not yet man. Without it thought can never ripen into truth. Whilst the world hangs before the eye as a cloud of beauty, we cannot even see its beauty. Inaction is cowardice, but there can be no scholar without the heroic

---

17 **Marvell.** Emerson's naming Andrew Marvell (1621-1678) as "one of the great English poets" is significant. For an informative study of Marvell's influence on Emerson, see Norman A. Brittin, "Emerson and the Metaphysical Poets," American Literature, March 1936 • 63 Gowns, academic costume • 65 wit, wisdom • 72 speculate or see. "Speculate" is from the Latin, meaning to spy out, to observe

mind. The preamble of thought, the transition through which it passes from the unconscious to the conscious, is action. Only so much do I know, as I have lived. Instantly we know whose words are loaded with life, and whose not.

The world,—this shadow of the soul, or *other me*,—lies wide around. Its attractions are the keys which unlock my thoughts and make me acquainted with myself. I run eagerly into this resounding tumult. I grasp the hands of those next me, and take my place in the ring to suffer and to work, taught by an instinct that so shall the dumb abyss be vocal with speech. I pierce its order; I dissipate its fear; I dispose of it within the circuit of my expanding life. So much only of life as I know by experience, so much of the wilderness have I vanquished and planted, or so far have I extended my being, my dominion. I do not see how any man can afford, for the sake of his nerves and his nap, to spare any action in which he can partake. It is pearls and rubies to his discourse. Drudgery, calamity, exasperation, want, are instructors in eloquence and wisdom. The true scholar grudges every opportunity of action past by, as a loss of power. It is the raw material out of which the intellect moulds her splendid products. A strange process too, this by which experience is converted into thought, as a mulberry leaf is converted into satin. The manufacture goes forward at all hours.

The actions and events of our childhood and youth are now matters of calmest observation. They lie like fair pictures in the air. Not so with our recent actions,—with the business which we now have in hand. On this we are quite unable to speculate. Our affections as yet circulate through it. We no more feel or know it than we feel the feet, or the hand, or the brain of our body. The new deed is yet a part of life,—remains for a time immersed in our unconscious life. In some contemplative hour it detaches itself from the life like a ripe fruit, to become a thought of the mind. Instantly it is raised, transfigured; the corruptible has put on incorruption. Henceforth it is an object of beauty, however base its origin and neighborhood. Observe too the impossibility of antedating this act. In its grub state, it cannot fly, it cannot shine, it is a dull grub. But suddenly, without observation, the self-same thing unfurls beautiful wings, and is an angel of wisdom. So is there no fact, no event, in our private history, which shall not, sooner or later, lose its adhesive, inert form, and astonish us by soaring from our body into the empyrean. Cradle and infancy, school and playground, the fear of boys, and dogs, and ferules, the love of little maids and berries, and many another fact that once filled the whole sky, are gone already; friend and relative, profession and party, town and country, nation and world, must also soar and sing.

Of course, he who has put forth his total strength in fit actions has the richest return of wisdom. I will not shut myself out of this globe of action, and transplant an oak into a flower-pot, there to hunger and pine; nor trust the revenue of some single faculty, and exhaust one vein of thought, much like those Savoyards, who, getting their livelihood by carving shepherds, shepherdesses, and smoking Dutchmen, for all Europe, went out one day to the mountain to find stock, and discovered that they had whittled up the last of their pine trees. Authors we have, in numbers, who have written out their vein, and who, moved by a commendable prudence, sail for Greece or Palestine, follow the trapper into the prairie, or ramble round Algiers, to replenish their merchantable stock.

If it were only for a vocabulary, the scholar would be covetous of action. Life is our dictionary. Years are well spent in country labors; in town; in the insight into trades and manufactures; in frank intercourse with many men and women; in science; in art; to the one end of mastering in all their facts a language by which to illustrate and embody our perceptions. I learn immediately from any speaker how much he has already lived, through the poverty or the splendor of his speech. Life lies behind us as the quarry from whence we get tiles and copestones for the masonry of to-day. This is the way to learn grammar. Colleges and books only copy the language which the field and the work-yard made.

But the final value of action, like that of books, and better than books, is that it is a resource. The great principle of Undulation in nature, that shows itself in the inspiring and expiring of the breath; in desire and satiety; in the ebb and flow of the sea; in day and night; in heat and cold; and, as yet more deeply ingrained in every atom and every fluid, is known to us under the name of Polarity,—these "fits of easy transmission and

---

39 the corruptible . . . incorruption, I Corinthians 15:53: "For this corruptible must put on incorruption . . ." • **59 Savoyards,** inhabitants of Savoy in northwestern Italy

reflection," as Newton called them, are the law of nature because they are the law of spirit.

The mind now thinks, now acts, and each fit reproduces the other. When the artist has exhausted his materials, when the fancy no longer paints, when thoughts are no longer apprehended and books are a weariness,—he has always the resource *to live.* Character is higher than intellect. Thinking is the function. Living is the functionary. The stream retreats to its source. A great soul will be strong to live, as well as strong to think. Does he lack organ or medium to impart his truth? He can still fall back on this elemental force of living them. This is a total act. Thinking is a partial act. Let the grandeur of justice shine in his affairs. Let the beauty of affection cheer his lowly roof. Those "far from fame," who dwell and act with him, will feel the force of his constitution in the doings and passages of the day better than it can be measured by any public and designed display. Time shall teach him that the scholar loses no hour which the man lives. Herein he unfolds the sacred germ of his instinct, screened from influence. What is lost in seemliness is gained in strength. Not out of those on whom systems of education have exhausted their culture, comes the helpful giant to destroy the old or to build the new, but out of unhandselled savage nature; out of terrible Druids and Berserkers come at last Alfred and Shakspeare.

I hear therefore with joy whatever is beginning to be said of the dignity and necessity of labor to every citizen. There is virtue yet in the hoe and the spade, for learned as well as for unlearned hands. And labor is everywhere welcome; always we are invited to work; only be this limitation observed, that a man shall not for the sake of wider activity sacrifice any opinion to the popular judgments and modes of action.

I have now spoken of the education of the scholar by nature, by books, and by action. It remains to say somewhat of his duties.

They are such as become Man Thinking. They may all be comprised in self-trust. The office of the scholar is to cheer, to raise, and to guide men by showing them facts amidst appearances. He plies the slow, unhonored, and unpaid task of observation. Flamsteed and Herschel, in their glazed observatories, may catalogue the stars with the praise of all men, and the results being splendid and useful, honor is sure. But he, in his private observatory, cataloguing obscure and nebulous stars of the human mind, which as yet no man has thought of as such,—watching days and months sometimes for a few facts; correcting still his old records;—must relinquish display and immediate fame. In the long period of his preparation he must betray often an ignorance and shiftlessness in popular arts, incurring the disdain of the able who shoulder him aside. Long he must stammer in his speech; often forego the living for the dead. Worse yet, he must accept—how often!—poverty and solitude. For the ease and pleasure of treading the old road, accepting the fashions, the education, the religion of society, he takes the cross of making his own, and, of course, the self-accusation, the faint heart, the frequent uncertainty and loss of time, which are the nettles and tangling vines in the way of the self-relying and self-directed; and the state of virtual hostility in which he seems to stand to society, and especially to educated society. For all this loss and scorn, what offset? He is to find consolation in exercising the highest functions of human nature. He is one who raises himself from private considerations and breathes and lives on public and illustrious thoughts. He is the world's eye. He is the world's heart. He is to resist the vulgar prosperity that retrogrades ever to barbarism, by preserving and communicating heroic sentiments, noble biographies, melodious verse, and the conclusions of history. Whatsoever oracles the human heart, in all emergencies, in all solemn hours, has uttered as its commentary on the world of actions,—these he shall receive and impart. And whatsoever new verdict Reason from her inviolable seat pronounces on the passing men and events of to-day,—this he shall hear and promulgate.

These being his functions, it becomes him to feel all confidence in himself, and to defer never to the popular cry. He and he only knows the world. The world of any moment is the merest appearance. Some great decorum, some fetish of a government, some ephemeral trade, or

1 **Newton,** Sir Isaac Newton (1642-1727), English philosopher and mathematician who discovered the laws of universal gravitation • 25 **unhandselled,** without "handsel" or gift made as a token of good luck; without, that is, artificial advantages or initial good auspices • 43 **Flamsteed,** John Flamsteed (1646-1719), English astronomer • 43 **Herschel,** Sir William Herschel (1738-1822), German astronomer in England, or his son, also a famous astronomer

war, or man, is cried up by half mankind and cried down by the other half, as if all depended on this particular up or down. The odds are that the whole question is not worth the poorest thought which the scholar has lost in listening to the controversy. Let him not quit his belief that a popgun is a popgun, though the ancient and honorable of the earth affirm it to be the crack of doom. In silence, in steadiness, in severe abstraction, let him hold by himself; add observation to observation, patient of neglect, patient of reproach, and bide his own time,—happy enough if he can satisfy himself alone that this day he has seen something truly. Success treads on every right step. For the instinct is sure, that prompts him to tell his brother what he thinks. He then learns that in going down into the secrets of his own mind he has descended into the secrets of all minds. He learns that he who has mastered any law in his private thoughts, is master to that extent of all men whose language he speaks, and of all into whose language his own can be translated. The poet, in utter solitude remembering his spontaneous thoughts and recording them, is found to have recorded that which men in crowded cities find true for them also. The orator distrusts at first the fitness of his frank confessions, his want of knowledge of the persons he addresses, until he finds that he is the complement of his hearers;—that they drink his words because he fulfils for them their own nature; the deeper he dives into his privatest, secretest presentiment, to his wonder he finds this is the most acceptable, most public, and universally true. The people delight in it; the better part of every man feels, This is my music; this is myself.

In self-trust all the virtues are comprehended. Free should the scholar be,—free and brave. Free even to the definition of freedom, "without any hindrance that does not arise out of his own constitution." Brave; for fear is a thing which a scholar by his very function puts behind him. Fear always springs from ignorance. It is a shame to him if his tranquillity, amid dangerous times, arise from the presumption that like children and women his is a protected class; or if he seek a temporary peace by the diversion of his thoughts from politics or vexed questions, hiding his head like an ostrich in the flowering bushes, peeping into microscopes, and turning rhymes, as a boy whistles to keep his courage up. So is the danger a danger still; so is the fear worse. Manlike let him turn and face it. Let him look into its eye and search its nature, inspect its origin,—see the whelping of this lion,—which lies no great way back; he will then find in himself a perfect comprehension of its nature and extent; he will have made his hands meet on the other side, and can henceforth defy it and pass on superior. The world is his who can see through its pretension. What deafness, what stone-blind custom, what overgrown error you behold is there only by sufferance, —by your sufferance. See it to be a lie, and you have already dealt it its mortal blow.

Yes, we are the cowed,—we the trustless. It is a mischievous notion that we are come late into nature; that the world was finished a long time ago. As the world was plastic and fluid in the hands of God, so it is ever to so much of his attributes as we bring to it. To ignorance and sin, it is flint. They adapt themselves to it as they may; but in proportion as a man has any thing in him divine, the firmament flows before him and takes his signet and form. Not he is great who can alter matter, but he who can alter my state of mind. They are the kings of the world who give the color of their present thought to all nature and all art, and persuade men by the cheerful serenity of their carrying the matter, that this thing which they do is the apple which the ages have desired to pluck, now at last ripe, and inviting nations to the harvest. The great man makes the great thing. Wherever Macdonald sits, there is the head of the table. Linnæus makes botany the most alluring of studies, and wins it from the farmer and the herb-woman; Davy, chemistry; and Cuvier, fossils. The day is always his who works in it with serenity and great aims. The unstable estimates of men crowd to him whose mind is filled with a truth, as the heaped waves of the Atlantic follow the moon.

For this self-trust, the reason is deeper than can be fathomed,—darker than can be enlightened. I might not carry with me the feeling of my audience in stating my own belief. But I have already shown the ground of my hope, in adverting to the doctrine that man is one. I believe man has been wronged; he has wronged himself. He has almost lost the light that can lead him back to his prerogatives. Men are become of no account. Men

73 Wherever . . . table, taken from a proverb • 74 Linnæus, Carolus Linnæus (1707-1778), Swedish botanist • 76 Davy, Sir Humphry Davy (1778-1829), English chemist • 76 Cuvier, Georges Léopold Cuvier (1769-1832), French naturalist

in history, men in the world of to-day, are bugs, are spawn, and are called "the mass" and "the herd." In a century, in a millennium, one or two men; that is to say, one or two approximations to the right state of every man. All the rest behold in the hero or the poet their own green and crude being,—ripened; yes, and are content to be less, so *that* may attain to its full stature. What a testimony, full of grandeur, full of pity, is borne to the demands of his own nature, by the poor clansman, the poor partisan, who rejoices in the glory of his chief. The poor and the low find some amends to their immense moral capacity, for their acquiescence in a political and social inferiority. They are content to be brushed like flies from the path of a great person, so that justice shall be done by him to that common nature which it is the dearest desire of all to see enlarged and glorified. They sun themselves in the great man's light, and feel it to be their own element. They cast the dignity of man from their downtrod selves upon the shoulders of a hero, and will perish to add one drop of blood to make that great heart beat, those giant sinews combat and conquer. He lives for us, and we live in him.

Men such as they are, very naturally seek money or power; and power because it is as good as money,—the "spoils," so called, "of office." And why not? for they aspire to the highest, and this, in their sleep-walking, they dream is highest. Wake them and they shall quit the false good and leap to the true, and leave governments to clerks and desks. This revolution is to be wrought by the gradual domestication of the idea of Culture. The main enterprise of the world for splendor, for extent, is the upbuilding of a man. Here are the materials strewn along the ground. The private life of one man shall be a more illustrious monarchy, more formidable to its enemy, more sweet and serene in its influence to its friend, than any kingdom in history. For a man, rightly viewed, comprehendeth the particular natures of all men. Each philosopher, each bard, each actor has only done for me, as by a delegate, what one day I can do for myself. The books which once we valued more than the apple of the eye, we have quite exhausted. What is that but saying that we have come up with the point of view which the universal mind took through the eyes of one scribe; we have been that man, and have passed on. First, one, then another, we drain all cisterns, and waxing greater by all these supplies, we crave a better and more abundant food. The man has never lived that can feed us ever. The human mind cannot be enshrined in a person who shall set a barrier on any one side to this unbounded, unboundable empire. It is one central fire, which, flaming now out of the lips of Etna, lightens the capes of Sicily, and now out of the throat of Vesuvius, illuminates the towers and vineyards of Naples. It is one light which beams out of a thousand stars. It is one soul which animates all men.

But I have dwelt perhaps tediously upon this abstraction of the Scholar. I ought not to delay longer to add what I have to say of nearer reference to the time and to this country.

Historically, there is thought to be a difference in the ideas which predominate over successive epochs, and there are data for marking the genius of the Classic, of the Romantic, and now of the Reflective or Philosophical age. With the views I have intimated of the oneness or the identity of the mind through all individuals, I do not much dwell on these differences. In fact, I believe each individual passes through all three. The boy is a Greek; the youth, romantic; the adult, reflective. I deny not, however, that a revolution in the leading idea may be distinctly enough traced.

Our age is bewailed as the age of Introversion. Must that needs be evil? We, it seems, are critical; we are embarrassed with second thoughts; we cannot enjoy any thing for hankering to know whereof the pleasure consists; we are lined with eyes; we see with our feet; the time is infected with Hamlet's unhappiness,—

"Sicklied o'er with the pale cast of thought."

It is so bad then? Sight is the last thing to be pitied. Would we be blind? Do we fear lest we should outsee nature and God, and drink truth dry? I look upon the discontent of the literary class as a mere announcement of the fact that they find themselves not in the state of mind of their fathers, and regret the coming state as untried; as a boy dreads the water before he has learned that he can swim. If there is any period one would desire to be born in, is it not the age of Revolution; when the old and the new stand side by side and admit of being compared; when the energies of all men are searched by fear and by hope; when the historic glories of the old can be compensated by the rich possibilities

---

77 Sicklied . . . thought. Hamlet, Act III, Scene i, l. 85

of the new era? This time, like all times, is a very good one, if we but know what to do with it.

I read with some joy of the auspicious signs of the coming days, as they glimmer already through poetry and art, through philosophy and science, through church and state.

One of these signs is the fact that the same movement which effected the elevation of what was called the lowest class in the state, assumed in literature a very marked and as benign an aspect. Instead of the sublime and beautiful, the near, the low, the common, was explored and poetized. That which had been negligently trodden under foot by those who were harnessing and provisioning themselves for long journeys into far countries, is suddenly found to be richer than all foreign parts. The literature of the poor, the feelings of the child, the philosophy of the street, the meaning of household life, are the topics of the time. It is a great stride. It is a sign—is it not?—of new vigor when the extremities are made active, when currents of warm life run into the hands and the feet. I ask not for the great, the remote, the romantic; what is doing in Italy or Arabia; what is Greek art, or Provençal minstrelsy; I embrace the common, I explore and sit at the feet of the familiar, the low. Give me insight into to-day, and you may have the antique and future worlds. What would we really know the meaning of? The meal in the firkin; the milk in the pan; the ballad in the street; the news of the boat; the glance of the eye, the form and the gait of the body;—show me the ultimate reason of these matters; show me the sublime presence of the highest spiritual cause lurking, as always it does lurk, in these suburbs and extremities of nature; let me see every trifle bristling with the polarity that ranges it instantly on an eternal law; and the shop, the plough, and the ledger referred to the like cause by which light undulates and poets sing;—and the world lies no longer a dull miscellany and lumber room, but has form and order; there is no trifle, there is no puzzle, but one design unites and animates the farthest pinnacle and the lowest trench.

This idea has inspired the genius of Goldsmith, Burns, Cowper, and in a newer time, of Goethe, Wordsworth, and Carlyle. This idea they have differently followed and with various success. In contrast with their writing, the style of Pope, of Johnson, of Gibbon, looks cold and pedantic. This writing is blood-warm. Man is surprised to find that things near are not less beautiful and wondrous than things remote. The near explains the far. The drop is a small ocean. A man is related to all nature. This perception of the worth of the vulgar is fruitful in discoveries. Goethe, in this very thing the most modern of the moderns, has shown us, as none ever did, the genius of the ancients.

There is one man of genius who has done much for this philosophy of life, whose literary value has never yet been rightly estimated;—I mean Emanuel Swedenborg. The most imaginative of men, yet writing with the precision of a mathematician, he endeavored to engraft a purely philosophical Ethics on the popular Christianity of his time. Such an attempt of course must have difficulty which no genius could surmount. But he saw and showed the connection between nature and the affections of the soul. He pierced the emblematic or spiritual character of the visible, audible, tangible world. Especially did his shade-loving muse hover over and interpret the lower parts of nature; he showed the mysterious bond that allies moral evil to the foul material forms, and has given in epical parables a theory of insanity, of beasts, of unclean and fearful things.

Another sign of our times, also marked by an analogous political movement, is the new importance given to the single person. Every thing that tends to insulate the individual,—to surround him with barriers of natural respect, so that each man shall feel the world is his, and man shall treat with man as a sovereign state with a sovereign state,—tends to true union as well as greatness. "I learned," said the melancholy Pestalozzi, "that no man in God's wide earth is either willing or able to help any other man." Help must come from the bosom alone. The scholar is that man who must take up into himself all the ability of the time, all the contributions of the past, all the hopes of the future. He must be an university of knowledges. If there be one lesson more than another which should pierce his ear, it is, The world is nothing, the man is all; in yourself is the law of all nature, and you know not yet how a globule of sap ascends; in yourself slumbers the whole of Rea-

---

56 **Emanuel Swedenborg** is the subject of an essay in Emerson's **Representative Men** (1850). See note, p. 316 • 77 **Pestalozzi,** Johann Heinrich Pestalozzi (1746-1827), Swiss educational reformer. His **Hints to Parents** influenced Bronson Alcott

son; it is for you to know all; it is for you to dare all. Mr. President and Gentlemen, this confidence in the unsearched might of man belongs, by all motives, by all prophecy, by all preparation, to the American Scholar. We have listened too long to the courtly muses of Europe. The spirit of the American freeman is already suspected to be timid, imitative, tame. Public and private avarice make the air we breathe thick and fat. The scholar is decent, indolent, complaisant. See already the tragic consequence. The mind of this country, taught to aim at low objects, eats upon itself. There is no work for any but the decorous and the complaisant. Young men of the fairest promise, who begin life upon our shores, inflated by the mountain winds, shined upon by all the stars of God, find the earth below not in unison with these, but are hindered from action by the disgust which the principles on which business is managed inspire, and turn drudges, or die of disgust, some of them suicides. What is the remedy? They did not yet see, and thousands of young men as hopeful now crowding to the barriers for the career do not yet see, that if the single man plant himself indomitably on his instincts, and there abide, the huge world will come round to him. Patience,—patience; with the shades of all the good and great for company; and for solace the perspective of your own infinite life; and for work the study and the communication of principles, the making those instincts prevalent, the conversion of the world. Is it not the chief disgrace in the world, not to be an unit;—not to be reckoned one character;—not to yield that peculiar fruit which each man was created to bear, but to be reckoned in the gross, in the hundred, or the thousand, of the party, the section, to which we belong; and our opinion predicted geographically, as the north, or the south? Not so, brothers and friends,—please God, ours shall not be so. We will walk on our own feet; we will work with our own hands; we will speak our own minds. The study of letters shall be no longer a name for pity, for doubt, and for sensual indulgence. The dread of man and the love of man shall be a wall of defence and a wreath of joy around all. A nation of men will for the first time exist, because each believes himself inspired by the Divine Soul which also inspires all men.

1837

---

9 complaisant, here in the unfavorable sense of too eager to please, too compliant with the wishes of others (not to be confused with "complacent")

The Divinity School Address

Delivered Before the Senior Class in Divinity College, Cambridge, Sunday Evening, July 15, 1838

Emerson wrote to Carlyle, October 17, 1838, concerning the reception of this address: "The publication of my **Address to the Divinity College** . . . has been the occasion of an outcry in all our leading newspapers against my 'infidelity,' 'pantheism,' and 'atheism.' The writers warn all and sundry against me, and against whatever is supposed to be related to my connection of opinion, &c; against Transcendentalism, Goethe, and Carlyle. I am heartily sorry to see this last aspect of the storm in our washbowl." The opposition which Emerson refers to, it is important to notice, came from Unitarians as well as from the orthodox or "Calvinist" party; Emerson was not invited again to lecture at Unitarian Harvard until 1867. The core of his heresy was his denial of the special authority of the Christian revelation and his assertion of the supreme authority of the spiritual intuition belonging to each individual.

For an illuminating treatment of historical background, see C. H. Faust, "The Background of the Unitarian Opposition to Transcendentalism," **Modern Philology**, February 1938, XXXV, 297.

In this refulgent summer, it has been a luxury to draw the breath of life. The grass grows, the buds burst, the meadow is spotted with fire and gold in the tint of

flowers. The air is full of birds, and sweet with the breath of the pine, the balm-of-Gilead, and the new hay. Night brings no gloom to the heart with its welcome shade. Through the transparent darkness the stars pour their almost spiritual rays. Man under them seems a young child, and his huge globe a toy. The cool night bathes the world as with a river, and prepares his eyes again for the crimson dawn. The mystery of nature was never displayed more happily. The corn and the wine have been freely dealt to all creatures, and the never-broken silence with which the old bounty goes forward has not yielded yet one word of explanation. One is constrained to respect the perfection of this world in which our senses converse. How wide; how rich; what invitation from every property it gives to every faculty of man! In its fruitful soils; in its navigable sea; in its mountains of metal and stone; in its forests of all woods; in its animals; in its chemical ingredients; in the powers and path of light, heat, attraction and life, it is well worth the pith and heart of great men to subdue and enjoy it. The planters, the mechanics, the inventors, the astronomers, the builders of cities, and the captains, history delights to honor.

But when the mind opens and reveals the laws which traverse the universe and make things what they are, then shrinks the great world at once into a mere illustration and fable of this mind. What am I? and What is? asks the human spirit with a curiosity new-kindled, but never to be quenched. Behold these outrunning laws, which our imperfect apprehension can see tend this way and that, but not come full circle. Behold these infinite relations, so like, so unlike; many, yet one. I would study, I would know, I would admire forever. These works of thought have been the entertainments of the human spirit in all ages.

A more secret, sweet, and overpowering beauty appears to man when his heart and mind open to the sentiment of virtue. Then he is instructed in what is above him. He learns that his being is without bound; that to the good, to the perfect, he is born, low as he now lies in evil and weakness. That which he venerates is still his own, though he has not realized it yet. *He ought.* He knows the sense of that grand word, though his analysis fails to render account of it. When in innocency or when by intellectual perception he attains to say,—"I love the Right; Truth is beautiful within and without for evermore. Virtue, I am thine; save me; use me; thee will I serve, day and night, in great, in small, that I may be not virtuous, but virtue";—then is the end of the creation answered, and God is well pleased.

The sentiment of virtue is a reverence and delight in the presence of certain divine laws. It perceives that this homely game of life we play, covers, under what seem foolish details, principles that astonish. The child amidst his baubles is learning the action of light, motion, gravity, muscular force; and in the game of human life, love, fear, justice, appetite, man, and God, interact. These laws refuse to be adequately stated. They will not be written out on paper, or spoken by the tongue. They elude our persevering thought; yet we read them hourly in each other's faces, in each other's actions, in our own remorse. The moral traits which are all globed into every virtuous act and thought,—in speech we must sever, and describe or suggest by painful enumeration of many particulars. Yet, as this sentiment is the essence of all religion, let me guide your eye to the precise objects of the sentiment, by an enumeration of some of those classes of facts in which this element is conspicuous.

The intuition of the moral sentiment is an insight of the perfection of the laws of the soul. These laws execute themselves. They are out of time, out of space, and not subject to circumstance. Thus in the soul of man there is a justice whose retributions are instant and entire. He who does a noble deed is instantly ennobled. He who does a mean deed is by the action itself contracted. He who puts off impurity, thereby puts on purity. If a man is at heart just, then in so far is he God; the safety of God, the immortality of God, the majesty of God do enter into that man with justice. If a man dissemble, deceive, he deceives himself, and goes out of acquaintance with his own being. A man in the view of absolute goodness, adores, with total humility. Every step so downward, is a step upward. The man who renounces himself, comes to himself.

See how this rapid intrinsic energy worketh everywhere, righting wrongs, correcting appearances, and bringing up facts to a harmony with thoughts. Its operation in life, though slow to the senses, is at last as sure

---

83 The . . . himself. Compare Matthew 10:39: ". . . he that loseth his life for my sake shall find it"

as in the soul. By it a man is made the Providence to himself, dispensing good to his goodness, and evil to his sin. Character is always known. Thefts never enrich; alms never impoverish; murder will speak out of stone walls. The least admixture of a lie,—for example, the taint of vanity, any attempt to make a good impression, a favorable appearance,—will instantly vitiate the effect. But speak the truth, and all nature and all spirits help you with unexpected furtherance. Speak the truth, and all things alive or brute are vouchers, and the very roots of the grass underground there do seem to stir and move to bear you witness. See again the perfection of the Law as it applies itself to the affections, and becomes the law of society. As we are, so we associate. The good, by affinity, seek the good; the vile, by affinity, the vile. Thus of their own volition, souls proceed into heaven, into hell.

These facts have always suggested to man the sublime creed that the world is not the product of manifold power, but of one will, of one mind; and that one mind is everywhere active, in each ray of the star, in each wavelet of the pool; and whatever opposes that will is everywhere balked and baffled, because things are made so, and not otherwise. Good is positive. Evil is merely privative, not absolute: it is like cold, which is the privation of heat. All evil is so much death or nonentity. Benevolence is absolute and real. So much benevolence as a man hath, so much life hath he. For all things proceed out of this same spirit, which is differently named love, justice, temperance, in its different applications, just as the ocean receives different names on the several shores which its washes. All things proceed out of the same spirit, and all things conspire with it. Whilst a man seeks good ends, he is strong by the whole strength of nature. In so far as he roves from these ends, he bereaves himself of power, or auxiliaries; his being shrinks out of all remote channels, he becomes less and less, a mote, a point, until absolute badness is absolute death.

The perception of this law of laws awakens in the mind a sentiment which we call the religious sentiment, and which makes our highest happiness. Wonderful is its power to charm and to command. It is a mountain air. It is the embalmer of the world. It is myrrh and storax, and chlorine and rosemary. It makes the sky and the hills sublime, and the silent song of the stars is it. By it is the universe made safe and habitable, not by science or power. Thought may work cold and intransitive in things, and find no end or unity; but the dawn of the sentiment of virtue on the heart, gives and is the assurance that Law is sovereign over all natures; and the worlds, time, space, eternity, do seem to break out into joy.

This sentiment is divine and deifying. It is the beatitude of man. It makes him illimitable. Through it, the soul first knows itself. It corrects the capital mistake of the infant man, who seeks to be great by following the great, and hopes to derive advantages *from another,*— by showing the fountain of all good to be in himself, and that he, equally with every man, is an inlet into the deeps of Reason. When he says, "I ought"; when love warms him; when he chooses, warned from on high, the good and great deed; then, deep melodies wander through his soul from Supreme Wisdom.—Then he can worship, and be enlarged by his worship; for he can never go behind this sentiment. In the sublimest flights of the soul, rectitude is never surmounted, love is never outgrown.

This sentiment lies at the foundation of society, and successively creates all forms of worship. The principle of veneration never dies out. Man fallen into superstition, into sensuality, is never quite without the visions of the moral sentiment. In like manner, all the expressions of this sentiment are sacred and permanent in proportion to their purity. The expressions of this sentiment affect us more than all other compositions. The sentences of the oldest time, which ejaculate this piety, are still fresh and fragrant. This thought dwelled always deepest in the minds of men in the devout and contemplative East; not alone in Palestine, where it reached its purest expression, but in Egypt, in Persia, in India, in China. Europe has always owed to oriental genius its divine impulses. What these holy bards said, all sane men found agreeable and true. And the unique impression of Jesus upon mankind, whose name is not so much written as ploughed into the history of this world, is proof of the subtle virtue of this infusion.

Meantime, whilst the doors of the temple stand open, day and night, before every man, and the oracles of this truth cease never, it is guarded by one stern condition; this, namely: it is an intuition. It cannot be received at second hand. Truly speaking, it is not instruction, but provocation, that I can receive from another soul. What he announces, I must find true in me,

or reject; and on his word, or as his second, be he who he may, I can accept nothing. On the contrary, the absence of this primary faith is the presence of degradation. As is the flood, so is the ebb. Let this faith depart, and the very words it spake and the things it made become false and hurtful. Then falls the church, the state, art, letters, life. The doctrine of the divine nature being forgotten, a sickness infects and dwarfs the constitution. Once man was all; now he is an appendage, a nuisance. And because the indwelling Supreme Spirit cannot wholly be got rid of, the doctrine of it suffers this perversion, that the divine nature is attributed to one or two persons, and denied to all the rest, and denied with fury. The doctrine of inspiration is lost; the base doctrine of the majority of voices usurps the place of the doctrine of the soul. Miracles, prophecy, poetry, the ideal life, the holy life, exist as ancient history merely; they are not in the belief, nor in the aspiration of society; but, when suggested, seem ridiculous. Life is comic or pitiful as soon as the high ends of being fade out of sight, and man becomes near-sighted, and can only attend to what addresses the senses.

These general views, which, whilst they are general, none will contest, find abundant illustration in the history of religion, and especially in the history of the Christian church. In that, all of us have had our birth and nurture. The truth contained in that, you, my young friends, are now setting forth to teach. As the Cultus, or established worship of the civilized world, it has great historical interest for us. Of its blessed words, which have been the consolation of humanity, you need not that I should speak. I shall endeavor to discharge my duty to you on this occasion, by pointing out two errors in its administration, which daily appear more gross from the point of view we have just now taken.

Jesus Christ belonged to the true race of prophets. He saw with open eye the mystery of the soul. Drawn by its severe harmony, ravished with its beauty, he lived in it, and had his being there. Alone in all history he estimated the greatness of man. One man was true to what is in you and me. He saw that God incarnates himself in man, and evermore goes forth anew to take possession of his World. He said, in this jubilee of sublime emotion, "I am divine. Through me, God acts; through me, speaks. Would you see God, see me; or see thee, when thou also thinkest as I now think." But what a distortion did his doctrine and memory suffer in the same, in the next, and the following ages! There is no doctrine of the Reason which will bear to be taught by the Understanding. The understanding caught this high chant from the poet's lips, and said, in the next age, "This was Jehovah come down out of heaven. I will kill you, if you say he was a man." The idioms of his language and the figures of his rhetoric have usurped the place of his truth; and churches are not built on his principles, but on his tropes. Christianity became a Mythus, as the poetic teaching of Greece and of Egypt, before. He spoke of miracles; for he felt that man's life was a miracle, and all that man doth, and he knew that this daily miracle shines as the character ascends. But the word Miracle, as pronounced by Christian churches, gives a false impression; it is Monster. It is not one with the blowing clover and the falling rain.

He felt respect for Moses and the prophets, but no unfit tenderness at postponing their initial revelations to the hour and the man that now is; to the eternal revelation in the heart. Thus was he a true man. Having seen that the law in us is commanding, he would not suffer it to be commanded. Boldly, with hand, and heart, and life, he declared it was God. Thus is he, as I think, the only soul in history who has appreciated the worth of man.

1. In this point of view we become sensible of the first defect of historical Christianity. Historical Christianity has fallen into the error that corrupts all attempts to communicate religion. As it appears to us, and as it has appeared for ages, it is not the doctrine of the soul, but an exaggeration of the personal, the positive, the ritual. It has dwelt, it dwells, with noxious exaggeration about the *person* of Jesus. The soul knows no persons. It invites every man to expand to the full circle of the universe, and will have no preferences but those of spontaneous love. But by this eastern monarchy of a Christianity, which indolence and fear have built, the friend of man is made the injurer of man. The manner in which his name is surrounded with expressions which were once sallies of admiration and love, but are now petrified into official titles, kills all generous sympathy

---

44 I . . . think. The words are not Jesus' exact words, but Emerson's interpretation of Jesus' meaning • 49 Reason . . . Understanding. See note, p. 439 • 84 friend of man. When Elizabeth Peabody urged Emerson to write "friend" with a capital F, he replied, "If I did so, they would all go to sleep"

and liking. All who hear me, feel that the language that describes Christ to Europe and America is not the style of friendship and enthusiasm to a good and noble heart, but is appropriated and formal,—paints a demi-god, as the Orientals or the Greeks would describe Osiris or Apollo. Accept the injurious impositions of our early catechetical instruction, and even honesty and self-denial were but splendid sins, if they did not wear the Christian name. One would rather be

"A pagan, suckled in a creed outworn,"

than to be defrauded of his manly right in coming into nature and finding not names and places, not land and professions, but even virtue and truth foreclosed and monopolized. You shall not be a man even. You shall not own the world; you shall not dare and live after the infinite Law that is in you, and in company with the infinite Beauty which heaven and earth reflect to you in all lovely forms; but you must subordinate your nature to Christ's nature; you must accept our interpretations, and take his portrait as the vulgar draw it.

That is always best which gives me to myself. The sublime is excited in me by the great stoical doctrine, Obey thyself. That which shows God in me, fortifies me. That which shows God out of me, makes me a wart and a wen. There is no longer a necessary reason for my being. Already the long shadows of untimely oblivion creep over me, and I shall decease forever.

The divine bards are the friends of my virtue, of my intellect, of my strength. They admonish me that the gleams which flash across my mind are not mine, but God's; that they had the like, and were not disobedient to the heavenly vision. So I love them. Noble provocations go out from them, inviting me to resist evil; to subdue the world; and to Be. And thus, by his holy thoughts, Jesus serves us, and thus only. To aim to convert a man by miracles is a profanation of the soul. A true conversion, a true Christ, is now, as always, to be made by the reception of beautiful sentiments. It is true that a great and rich soul, like his, falling among the simple, does so preponderate, that, as his did, it names the world. The world seems to exist for him, and they have not yet drunk so deeply of his sense as to see that only by coming again to themselves, or to God in themselves, can they grow forevermore. It is a low benefit to give me something; it is a high benefit to enable me to do somewhat of myself. The time is coming when all men will see that the gift of God to the soul is not a vaunting, overpowering, excluding sanctity, but a sweet, natural goodness, a goodness like thine and mine, and that so invites thine and mine to be and to grow.

The injustice of the vulgar tone of preaching is not less flagrant to Jesus than to the souls which it profanes. The preachers do not see that they make his gospel not glad, and shear him of the locks of beauty and the attributes of heaven. When I see a majestic Epaminondas, or Washington; when I see among my contemporaries a true orator, an upright judge, a dear friend; when I vibrate to the melody and fancy of a poem; I see beauty that is to be desired. And so lovely, and yet with more entire consent of my human being, sounds in my ear the severe music of the bards that have sung of the true God in all ages. Now do not degrade the life and dialogues of Christ out of the circle of this charm, by insulation and peculiarity. Let them lie as they befell, alive and warm, part of human life and of the landscape and of the cheerful day.

2. The second defect of the traditionary and limited way of using the mind of Christ is a consequence of the first; this namely: that the Moral Nature, that Law of laws whose revelations introduce greatness—yea, God himself—into the open soul, is not explored as the fountain of the established teaching in society. Men have come to speak of the revelation as somewhat long ago given and done, as if God were dead. The injury to faith throttles the preacher; and the goodliest of institutions becomes an uncertain and inarticulate voice.

It is very certain that it is the effect of conversation with the beauty of the soul, to beget a desire and need to impart to others the same knowledge and love. If utterance is denied, the thought lies like a burden on the man. Always the seer is a sayer. Somehow his dream is told; somehow he publishes it with solemn joy: sometimes with pencil on canvas; sometimes with chisel on stone; sometimes in towers and aisles of granite, his soul's worship is builded; sometimes in anthems of in-

definite music; but clearest and most permanent, in words.

The man enamored of this excellency becomes its priest or poet. The office is coeval with the world. But observe the condition, the spiritual limitation of the office. The spirit only can teach. Not any profane man, not any sensual, not any liar, not any slave can teach, but only he can give, who has; he only can create, who is. The man on whom the soul descends, through whom the soul speaks, alone can teach. Courage, piety, love, wisdom, can teach; and every man can open his door to these angels, and they shall bring him the gift of tongues. But the man who aims to speak as books enable, as synods use, as the fashion guides, and as interest commands, babbles. Let him hush.

To this holy office you propose to devote yourselves. I wish you may feel your call in throbs of desire and hope. The office is the first in the world. It is of that reality that it cannot suffer the deduction of any falsehood. And it is my duty to say to you that the need was never greater of new revelation than now. From the views I have already expressed, you will infer the sad conviction, which I share, I believe, with numbers, of the universal decay and now almost death of faith in society. The soul is not preached. The Church seems to totter to its fall, almost all life extinct. On this occasion, any complaisance would be criminal which told you, whose hope and commission it is to preach the faith of Christ, that the faith of Christ is preached.

It is time that this ill-suppressed murmur of all thoughtful men against the famine of our churches;—this moaning of the heart because it is bereaved of the consolation, the hope, the grandeur that come alone out of the culture of the moral nature,—should be heard through the sleep of indolence, and over the din of routine. This great and perpetual office of the preacher is not discharged. Preaching is the expression of the moral sentiment in application to the duties of life. In how many churches, by how many prophets, tell me, is man made sensible that he is an infinite Soul; that the earth and heavens are passing into his mind; that he is drinking forever the soul of God? Where now sounds the persuasion, that by its very melody imparadises my heart, and so affirms its own origin in heaven? Where shall I hear words such as in elder ages drew men to leave all and follow,—father and mother, house and land, wife and child? Where shall I hear these august laws of moral being so pronounced as to fill my ear, and I feel ennobled by the offer of my uttermost action and passion? The test of the true faith, certainly, should be its power to charm and command the soul, as the laws of nature control the activity of the hands,—so commanding that we find pleasure and honor in obeying. The faith should blend with the light of rising and of setting suns, with the flying cloud, the singing bird, and the breath of flowers. But now the priest's Sabbath has lost the splendor of nature; it is unlovely; we are glad when it is done; we can make, we do make, even sitting in our pews, a far better, holier, sweeter, for ourselves.

Whenever the pulpit is usurped by a formalist, then is the worshipper defrauded and disconsolate. We shrink as soon as the prayers begin, which do not uplift, but smite and offend us. We are fain to wrap our cloaks about us, and secure, as best we can, a solitude that hears not. I once heard a preacher who sorely tempted me to say I would go to church no more. Men go, thought I, where they are wont to go, else had no soul entered the temple in the afternoon. A snow-storm was falling around us. The snow-storm was real, the preacher merely spectral, and the eye felt the sad contrast in looking at him, and then out of the window behind him into the beautiful meteor of the snow. He had lived in vain. He had no one word intimating that he had laughed or wept, was married or in love, had been commended, or cheated, or chagrined. If he had ever lived and acted, we were none the wiser for it. The capital secret of his profession, namely, to convert life into truth, he had not learned. Not one fact in all his experience had he yet imported into his doctrine. This man had ploughed and planted and talked and bought and sold; he had read books; he had eaten and drunken; his head aches, his heart throbs; he smiles and suffers; yet was there not a surmise, a hint, in all the discourse, that he had ever lived at all. Not a line did he draw out of real history. The true preacher can be known by this, that he deals out to his people his life,—life passed through the fire of thought. But of the bad preacher, it could not be told from his sermon what age of the world he fell in; whether he had a father or a child; whether he was a

---

24 The Church . . . extinct. Emerson wrote in his Journals of "the corpse-cold Unitarianism of Brattle Street"

freeholder or a pauper; whether he was a citizen or a countryman; or any other fact of his biography. It seemed strange that the people should come to church. It seemed as if their houses were very unentertaining, that they should prefer this thoughtless clamor. It shows that there is a commanding attraction in the moral sentiment, that can lend a faint tint of light to dulness and ignorance coming in its name and place. The good hearer is sure he has been touched sometimes; is sure there is somewhat to be reached, and some word that can reach it. When he listens to these vain words, he comforts himself by their relation to his remembrance of better hours, and so they clatter and echo unchallenged.

I am not ignorant that when we preach unworthily, it is not always quite in vain. There is a good ear, in some men, that draws supplies to virtue out of very indifferent nutriment. There is poetic truth concealed in all the commonplaces of prayer and of sermons, and though foolishly spoken, they may be wisely heard; for each is some select expression that broke out in a moment of piety from some stricken or jubilant soul, and its excellency made it remembered. The prayers and even the dogmas of our church are like the zodiac of Denderah and the astronomical monuments of the Hindoos, wholly insulated from anything now extant in the life and business of the people. They mark the height to which the waters once rose. But this docility is a check upon the mischief from the good and devout. In a large portion of the community, the religious service gives rise to quite other thoughts and emotions. We need not chide the negligent servant. We are struck with pity, rather, at the swift retribution of his sloth. Alas for the unhappy man that is called to stand in the pulpit, and *not* give bread of life. Everything that befalls, accuses him. Would he ask contributions for the missions, foreign or domestic? Instantly his face is suffused with shame, to propose to his parish that they should send money a hundred or a thousand miles, to furnish such poor fare as they have at home and would do well to go the hundred or the thousand miles to escape. Would he urge people to a godly way of living;—and can he ask a fellow-creature to come to Sabbath meetings, when he and they all know what is the poor uttermost they can hope for therein? Will he invite them privately to the Lord's Supper? He dares not. If no heart warm this rite, the hollow, dry, creaking formality is too plain, than that he can face a man of wit and energy and put the invitation without terror. In the street, what has he to say to the bold village blasphemer? The village blasphemer sees fear in the face, form, and gait of the minister.

Let me not taint the sincerity of this plea by any oversight of the claims of good men. I know and honor the purity and strict conscience of numbers of the clergy. What life the public worship retains, it owes to the scattered company of pious men, who minister here and there in the churches, and who, sometimes accepting with too great tenderness the tenet of the elders, have not accepted from others, but from their own heart, the genuine impulses of virtue, and so still command our love and awe, to the sanctity of character. Moreover, the exceptions are not so much to be found in a few eminent preachers, as in the better hours, the truer inspirations of all,—nay, in the sincere moments of every man. But, with whatever exception, it is still true that tradition characterizes the preaching of this country; that it comes out of the memory, and not out of the soul; that it aims at what is usual, and not at what is necessary and eternal; that thus historical Christianity destroys the power of preaching, by withdrawing it from the exploration of the moral nature of man; where the sublime is, where are the resources of astonishment and power. What a cruel injustice it is to that Law, the joy of the whole earth, which alone can make the thought dear and rich; that Law whose fatal sureness the astronomical orbits poorly emulate;—that it is travestied and depreciated, that it is behooted and behowled, and not a trait, not a word of it articulated. The pulpit in losing sight of this Law, loses its reason, and gropes after it knows not what. And for want of this culture the soul of the community is sick and faithless. It wants nothing so much as a stern, high, stoical, Christian discipline, to make it know itself and the divinity that speaks through it. Now man is ashamed of himself; he skulks and sneaks through the world, to be tolerated, to be

---

46 **Lord's Supper.** Emerson had resigned the pastorate of the Second Church in Boston in 1832 because of a disagreement with his parishioners on the nature and importance of the Lord's Supper. In a sermon, "The Lord's Supper" (printed in Miscellanies, Centenary Edition of his works), delivered to the Church September 9, 1832, he gave the reasons for his "want of sympathy" with the sacrament

pitied, and scarcely in a thousand years does any man dare to be wise and good, and so draw after him the tears and blessings of his kind.

Certainly there have been periods when, from the inactivity of the intellect on certain truths, a greater faith was possible in names and persons. The Puritans in England and America found in the Christ of the Catholic Church and in the dogmas inherited from Rome, scope for their austere piety and their longings for civil freedom. But their creed is passing away, and none arises in its room. I think no man can go with his thoughts about him into one of our churches, without feeling that what hold the public worship had on men is gone, or going. It has lost its grasp on the affection of the good and the fear of the bad. In the country, neighborhoods, half parishes are *signing off,* to use the local term. It is already beginning to indicate character and religion to withdraw from the religious meetings. I have heard a devout person, who prized the Sabbath, say in bitterness of heart, "On Sundays, it seems wicked to go to church." And the motive that holds the best there is now only a hope and a waiting. What was once a mere circumstance, that the best and the worst men in the parish, the poor and the rich, the learned and the ignorant, young and old, should meet one day as fellows in one house, in sign of an equal right in the soul, has come to be a paramount motive for going thither.

My friends, in these two errors, I think, I find the causes of a decaying church and a wasting unbelief. And what greater calamity can fall upon a nation than the loss of worship? Then all things go to decay. Genius leaves the temple to haunt the senate or the market. Literature becomes frivolous. Science is cold. The eye of youth is not lighted by the hope of other worlds, and age is without honor. Society lives to trifles, and when men die we do not mention them.

And now, my brothers, you will ask, What in these desponding days can be done by us? The remedy is already declared in the ground of our complaint of the Church. We have contrasted the Church with the Soul. In the soul then let the redemption be sought. Wherever a man comes, there comes revolution. The old is for slaves. When a man comes, all books are legible, all things transparent, all religions are forms. He is religious. Man is the wonderworker. He is seen amid miracles. All men bless and curse. He saith yea and nay, only. The stationariness of religion; the assumption that the age of inspiration is past, that the Bible is closed; the fear of degrading the character of Jesus by representing him as a man;—indicate with sufficient clearness the falsehood of our theology. It is the office of a true teacher to show us that God is, not was; that He speaketh, not spake. The true Christianity,—a faith like Christ's in the infinitude of man,—is lost. None believeth in the soul of man, but only in some man or person old and departed. Ah me! no man goeth alone. All men go in flocks to this saint or that poet, avoiding the God who seeth in secret. They cannot see in secret; they love to be blind in public. They think society wiser than their soul, and know not that one soul, and their soul, is wiser than the whole word. See how nations and races flit by on the sea of time and leave no ripple to tell where they floated or sunk, and one good soul shall make the name of Moses, or of Zeno, or of Zoroaster, reverend forever. None assayeth the stern ambition to be the Self of the nation and of nature, but each would be an easy secondary to some Christian scheme, or sectarian connection, or some eminent man. Once leave your own knowledge of God, your own sentiment, and take secondary knowledge, as St. Paul's or George Fox's, or Swedenborg's, and you get wide from God with every year this secondary form lasts, and if, as now, for centuries,—the chasm yawns to that breadth, that men can scarcely be convinced there is in them anything divine.

Let me admonish you, first of all, to go alone; to refuse the good models, even those which are sacred to the imagination of men, and dare to love God without mediator or veil. Friends enough you shall find who will hold up to your emulation Wesleys and Oberlins, Saints and Prophets. Thank God for these good men, but say, "I also am a man." Imitation cannot go above its model. The imitator dooms himself to hopeless mediocrity. The inventor did it because it was natural to him, and so in him it has a charm. In the imitator something else

---

19 a devout person, Mrs Emerson, who is quoted in the Journals (December 3, 1837), as follows "Lidian says, it is wicked to go to Church Sundays" • **64 Zeno,** Greek philosopher, founder of the Stoic School of philosophy • **64 Zoroaster,** founder of the ancient Persian religion about 1000 B.C. • **70 George Fox.** See note, p. 410 • **79 Wesley,** John Wesley, founder of Methodism • **79 Oberlin,** Jean Frédéric Oberlin (1740-1826), Franco-German clergyman and philanthropist

is natural, and he bereaves himself of his own beauty, to come short of another man's.

Yourself a newborn bard of the Holy Ghost, cast behind you all conformity, and acquaint men at first hand with Deity. Look to it first and only, that fashion, custom, authority, pleasure, and money, are nothing to you, —are not bandages over your eyes, that you cannot see,—but live with the privilege of the immeasurable mind. Not too anxious to visit periodically all families and each family in your parish connection,—when you meet one of these men or women, be to them a divine man; be to them thought and virtue; let their timid aspirations find in you a friend; let their trampled instincts be genially tempted out in your atmosphere, let their doubts know that you have doubted, and their wonder feel that you have wondered. By trusting your own heart, you shall gain more confidence in other men For all our penny-wisdom, for all our soul-destroying slavery to habit, it is not to be doubted that all men have sublime thoughts; that all men value the few real hours of life; they love to be heard; they love to be caught up into the vision of principles. We mark with light in the memory the few interviews we have had, in the dreary years of routine and of sin, with souls that made our souls wiser; that spoke what we thought; that told us what we knew; that gave us leave to be what we inly were. Discharge to men the priestly office, and, present or absent, you shall be followed with their love as by an angel.

And, to this end, let us not aim at common degrees of merit. Can we not leave, to such as love it, the virtue that glitters for the commendation of society, and ourselves pierce the deep solitudes of absolute ability and worth? We easily come up to the standard of goodness in society. Society's praise can be cheaply secured, and almost all men are content with those easy merits; but the instant effect of conversing with God will be to put them away. There are persons who are not actors, not speakers, but influences; persons too great for fame, for display; who disdain eloquence; to whom all we call art and artist, seems too nearly allied to show and by-ends, to the exaggeration of the finite and selfish, and loss of the universal. The orators, the poets, the commanders encroach on us only as fair women do, by our allowance and homage. Slight them by preoccupation of mind, slight them, as you can well afford to do, by high and universal aims, and they instantly feel that you have right, and that it is in lower places that they must shine. They also feel your right; for they with you are open to the influx of the all-knowing Spirit, which annihilates before its broad noon the little shades and gradations of intelligence in the compositions we call wiser and wisest.

In such high communion let us study the grand strokes of rectitude: a bold benevolence, an independence of friends, so that not the unjust wishes of those who love us shall impair our freedom, but we shall resist for truth's sake the freest flow of kindness, and appeal to sympathies far in advance; and—what is the highest form in which we know this beautiful element,—a certain solidity of merit, that has nothing to do with opinion, and which is so essentially and manifestly virtue, that it is taken for granted that the right, the brave, the generous step will be taken by it, and nobody thinks of commending it. You would compliment a coxcomb doing a good act, but you would not praise an angel. The silence that accepts merit as the most natural thing in the world, is the highest applause. Such souls, when they appear, are the Imperial Guard of Virtue, the perpetual reserve, the dictators of fortune. One needs not praise their courage,—they are the heart and soul of nature. O my friends, there are resources in us on which we have not drawn. There are men who rise refreshed on hearing a threat; men to whom a crisis which intimidates and paralyzes the majority,—demanding not the faculties of prudence and thrift, but comprehension, immovableness, the readiness of sacrifice,—comes graceful and beloved as a bride. Napoleon said of Massena, that he was not himself until the battle began to go against him; then, when the dead began to fall in ranks around him, awoke his powers of combination, and he put on terror and victory as a robe. So it is in rugged crises, in unweariable endurance, and in aims which put sympathy out of the question, that the angel is shown. But these are heights that we can scarce remember and look up to without contrition and shame. Let us thank God that such things exist.

And now let us do what we can to rekindle the smouldering, nigh quenched fire on the altar. The evils of the church that now is are manifest. The question returns, What shall we do? I confess, all attempts to

---

76 Massena, André Masséna (1758-1817), Marshal of Napoleon I

project and establish a Cultus with new rites and forms, seem to me vain. Faith makes us, and not we it, and faith makes its own forms. All attempts to contrive a system are as cold as the new worship introduced by the French to the goddess of Reason,—today, pasteboard and filigree, and ending tomorrow in madness and murder. Rather let the breath of new life be breathed by you through the forms already existing. For if once you are alive, you shall find they shall become plastic and new. The remedy to their deformity is first, soul, and second, soul, and evermore, soul. A whole popedom of forms one pulsation of virtue can uplift and vivify. Two inestimable advantages Christianity has given us; first the Sabbath, the jubilee of the whole world, whose light dawns welcome alike into the closet of the philosopher, into the garret of toil, and into prison-cells, and everywhere suggests, even to the vile, the dignity of spiritual being. Let it stand forevermore, a temple, which new love, new faith, new sight shall restore to more than its first splendor to mankind. And secondly, the institution of preaching,—the speech of man to men,—essentially the most flexible of all organs, of all forms. What hinders that now, everywhere, in pulpits, in lecture-rooms, in houses, in fields, wherever the invitation of men or your own occasions lead you, you speak the very truth, as your life and conscience teach it, and cheer the waiting, fainting hearts of men with new hope and new revelation?

I look for the hour when that supreme Beauty which ravished the souls of those Eastern men, and chiefly of those Hebrews, and through their lips spoke oracles to all time, shall speak in the West also. The Hebrew and Greek Scriptures contain immortal sentences, that have been bread of life to millions. But they have no epical integrity; are fragmentary; are not shown in their order to the intellect. I look for the new Teacher that shall follow so far those shining laws that he shall see them come full circle; shall see their rounding complete grace; shall see the world to be the mirror of the soul; shall see the identity of the law of gravitation with purity of heart; and shall show that the Ought, that Duty, is one thing with Science, with Beauty, and with Joy.

1838

Self-Reliance

Self-Reliance has been in the past, and perhaps is still, the best-known and most often quoted essay in American literature. "Trust thyself; every heart vibrates to that iron string," and "Nothing can bring you peace but the triumph of principles" are only two among many examples of Emerson's gift for expressing spiritual truth in quotable form. "These lofty sentences of Emerson," Matthew Arnold wrote in 1884, "and a hundred others of like strain, I never have lost out of my memory; I never can lose them."

Emerson's belief in self-reliance follows as the logical result of his doctrine of the "over-soul." According to this doctrine, every man has something of the divine in his nature and is capable of establishing a direct relationship with the universal spirit. By means of what Emerson liked to call "the intuition of the moral sentiment," every man is capable of perceiving the highest truth. To quote from the essay: "We lie in the lap of immense intelligence, which makes us receivers of its truth and organs of its activity." Every man, therefore, ought to rely upon his own spiritual perceptions, ought to be self-reliant.

Emerson was an individualist, and his Self-Reliance is an extreme statement of the individualistic point of view. To the modern reader, the author may appear unmindful of social obligations when he says: "What I must do is all that concerns me, not what the people think"; and again,

"Are they my poor?" But Emerson was not indifferent to society. He thought of society as composed of individuals. A good society would be a society composed of good individuals. The primary obligation of the individual, therefore, is to perfect his own life. Like his Puritan forbears, Emerson believed that social salvation could be achieved only through the salvation of the individuals who compose society.

A superficial reading may leave one with the impression that Emerson's doctrine is fatally easy. He appears to say, simply, "Do as you like." It should be remembered, however, that Emerson, again like his Puritan forbears, is holding himself to an almost intolerably high standard of thinking and living. The individual must obey his own highest instinct, must "absolve" himself to himself. Self-imposed requirements, in the case of a conscientious person, may be rigorous to the last degree. "If anyone imagines that this law is lax," says Emerson, a little defiantly, "let him keep its commandment one day."

I read the other day some verses written by an eminent painter which were original and not conventional. The soul always hears an admonition in such lines, let the subject be what it may. The sentiment they instil is of more value than any thought they may contain. To believe your own thought, to believe that what is true for you in your private heart is true for all men,—that is genius. Speak your latent conviction, and it shall be the universal sense; for the inmost in due time becomes the outmost, and our first thought is rendered back to us by the trumpets of the Last Judgment. Familiar as the voice of the mind is to each, the highest merit we ascribe to Moses, Plato and Milton is that they set at naught books and traditions, and spoke not what men, but what *they* thought. A man should learn to detect and watch that gleam of light which flashes across his mind from within, more than the lustre of the firmament of bards and sages. Yet he dismisses without notice his thought, because it is his. In every work of genius we recognize our own rejected thoughts; they come back to us with a certain alienated majesty. Great works of art have no more affecting lesson for us than this. They teach us to abide by our spontaneous impression with good-humored inflexibility then most when the whole cry of voices is on the other side. Else to-morrow a stranger will say with masterly good sense precisely what we have thought and felt all the time, and we shall be forced to take with shame our own opinion from another.

There is a time in every man's education when he arrives at the conviction that envy is ignorance; that imitation is suicide; that he must take himself for better for worse as his portion; that though the wide universe is full of good, no kernel of nourishing corn can come to him but through his toil bestowed on that plot of ground which is given to him to till. The power which resides in him is new in nature, and none but he knows what that is which he can do, nor does he know until he has tried. Not for nothing one face, one character, one fact, makes much impression on him, and another none. This sculpture in the memory is not without preestablished harmony. The eye was placed where one ray should fall, that it might testify of that particular ray. We but half express ourselves, and are ashamed of that divine idea which each of us represents. It may be safely trusted as proportionate and of good issues, so it be faithfully imparted, but God will not have his work made manifest by cowards. A man is relieved and gay when he has put his heart into his work and done his best; but what he has said or done otherwise shall give him no peace. It is a deliverance which does not deliver. In the attempt his genius deserts him; no muse befriends; no invention, no hope.

Trust thyself: every heart vibrates to that iron string. Accept the place the divine providence has found for you, the society of your contemporaries, the connection of events. Great men have always done so, and confided themselves childlike to the genius of their age, betraying their perception that the absolutely trustworthy was seated at their heart, working through their hands, predominating in all their being. And we are now men, and must accept in the highest mind the same transcendent destiny; and not minors and invalids in a protected corner nor cowards fleeing before a revolution, but guides, redeemers and benefactors, obeying the Almighty effort and advancing on Chaos and the Dark.

What pretty oracles nature yields us on this text in the

---

1 **eminent painter,** probably Washington Allston (1779-1843) • 65 **Chaos . . . Dark,** reminiscent of Milton's "Chaos and Old Night" in **Paradise Lost, Bk. I, l. 543**

face and behavior of children, babes, and even brutes! That divided and rebel mind, that distrust of a sentiment because our arithmetic has computed the strength and means opposed to our purpose, these have not. Their mind being whole, their eye is as yet unconquered, and when we look in their faces we are disconcerted. Infancy conforms to nobody; all conform to it; so that one babe commonly makes four or five out of the adults who prattle and play to it. So God has armed youth and puberty and manhood no less with its own piquancy and charm, and made it enviable and gracious and its claims not to be put by, if it will stand by itself. Do not think the youth has no force, because he cannot speak to you and me. Hark! in the next room his voice is sufficiently clear and emphatic. It seems he knows how to speak to his contemporaries. Bashful or bold then, he will know how to make us seniors very unnecessary.

The nonchalance of boys who are sure of a dinner, and would disdain as much as a lord to do or say aught to conciliate one, is the healthy attitude of human nature. A boy is in the parlor what the pit is in the playhouse; independent, irresponsible, looking out from his corner on such people and facts as pass by, he tries and sentences them on their merits, in the swift, summary way of boys, as good, bad, interesting, silly, eloquent, troublesome. He cumbers himself never about consequences, about interests; he gives an independent, genuine verdict. You must court him; he does not court you. But the man is as it were clapped into jail by his consciousness. As soon as he has once acted or spoken with *éclat* he is a committed person, watched by the sympathy or the hatreds of hundreds, whose affections must now enter into his account. There is no Lethe for this. Ah, that he could pass again into his neutrality! Who can thus avoid all pledges and, having observed, observe again from the same unaffected, unbiased, unbribable, unaffrighted innocence,—must always be formidable. He would utter opinions on all passing affairs, which being seen to be not private but necessary, would sink like darts into the ear of men and put them in fear.

These are the voices which we hear in solitude, but they grow faint and inaudible as we enter into the world. Society everywhere is in conspiracy against the manhood of every one of its members. Society is a joint-stock company, in which the members agree, for the better securing of his bread to each shareholder, to surrender the liberty and culture of the eater. The virtue in most request is conformity. Self-reliance is its aversion. It loves not realities and creators, but names and customs.

Whoso would be a man, must be a nonconformist. He who would gather immortal palms must not be hindered by the name of goodness, but must explore if it be goodness. Nothing is at last sacred but the integrity of your own mind. Absolve you to yourself, and you shall have the suffrage of the world. I remember an answer which when quite young I was prompted to make to a valued adviser who was wont to importune me with the dear old doctrines of the church. On my saying, "What have I to do with the sacredness of traditions, if I live wholly from within?" my friend suggested,—"But these impulses may be from below, not from above." I replied, "They do not seem to me to be such; but if I am the Devil's child, I will live then from the Devil." No law can be sacred to me but that of my nature. Good and bad are but names very readily transferable to that or this, the only right is what is after my constitution; the only wrong what is against it. A man is to carry himself in the presence of all opposition as if every thing were titular and ephemeral but he. I am ashamed to think how easily we capitulate to badges and names, to large societies and dead institutions. Every decent and well-spoken individual affects and sways me more than is right. I ought to go upright and vital, and speak the rude truth in all ways. If malice and vanity wear the coat of philanthropy, shall that pass? If an angry bigot assumes this bountiful cause of Abolition, and comes to me with his last news from Barbadoes, why should I not say to him, "Go love thy infant; love thy woodchopper; be good-natured and modest; have that grace; and never varnish your hard, uncharitable ambition with this incredible tenderness for black folk a thousand miles off. Thy love afar is spite at home." Rough and graceless would be such greeting, but truth is handsomer than the affectation of love. Your goodness must have some edge to it,—else it is none. The doctrine of

21 **pit**, that part of the theater now usually known in the United States as the "orchestra." In Elizabethan times, the pit was the cheapest location in the house and was occupied by the "groundlings" (see **Hamlet**, Act III, Scene ii, l. 11), who were very outspoken in their judgments on the performance • 33 **Lethe**. See note, p. 384 • 51 **palms**, symbol of success • 77 **Barbadoes**, an island in the British West Indies in which Negro slavery was abolished in 1834

hatred must be preached, as the counteraction of the doctrine of love, when that pules and whines. I shun father and mother and wife and brother when my genius calls me. I would write on the lintels of the door-post, *Whim.* I hope it is somewhat better than whim at last, but we cannot spend the day in explanation. Expect me not to show cause why I seek or why I exclude company. Then again, do not tell me, as a good man did to-day, of my obligation to put all poor men in good situations. Are they *my* poor? I tell thee, thou foolish philanthropist, that I grudge the dollar, the dime, the cent I give to such men as do not belong to me and to whom I do not belong. There is a class of persons to whom by all spiritual affinity I am bought and sold; for them I will go to prison if need be; but your miscellaneous popular charities; the education at college of fools; the building of meeting-houses to the vain end to which many now stand; alms to sots, and the thousand-fold Relief Societies;—though I confess with shame I sometimes succumb and give the dollar, it is a wicked dollar, which by and by I shall have the manhood to withhold.

Virtues are, in the popular estimate, rather the exception than the rule. There is the man *and* his virtues. Men do what is called a good action, as some piece of courage or charity, much as they would pay a fine in expiation of daily non-appearance on parade. Their works are done as an apology or extenuation of their living in the world,—as invalids and the insane pay a high board. Their virtues are penances. I do not wish to expiate, but to live. My life is for itself and not for a spectacle. I much prefer that it should be of a lower strain, so it be genuine and equal, than that it should be glittering and unsteady. I wish it to be sound and sweet, and not to need diet and bleeding. I ask primary evidence that you are a man, and refuse this appeal from the man to his actions. I know that for myself it makes no difference whether I do or forbear those actions which are reckoned excellent. I cannot consent to pay for a privilege where I have intrinsic right. Few and mean as my gifts may be, I actually am, and do not need for my own assurance or the assurance of my fellows any secondary testimony.

What I must do is all that concerns me, not what the people think. This rule, equally arduous in actual and in intellectual life, may serve for the whole distinction between greatness and meanness. It is the harder because you will always find those who think they know what is your duty better than you know it. It is easy in the world to live after the world's opinion; it is easy in solitude to live after our own; but the great man is he who in the midst of the crowd keeps with perfect sweetness the independence of solitude.

The objection to conforming to usages that have become dead to you is that it scatters your force. It loses your time and blurs the impression of your character. If you maintain a dead church, contribute to a dead Bible-society, vote with a great party either for the government or against it, spread your table like base housekeepers,—under all these screens I have difficulty to detect the precise man you are: and of course so much force is withdrawn from your proper life. But do your work, and I shall know you. Do your work, and you shall reinforce yourself. A man must consider what a blind-man's-buff is this game of conformity. If I know your sect I anticipate your argument. I hear a preacher announce for his text and topic the expediency of one of the institutions of his church. Do I not know beforehand that not possibly can he say a new and spontaneous word? Do I not know that with all this ostentation of examining the grounds of the institution he will do no such thing? Do I not know that he is pledged to himself not to look but at one side, the permitted side, not as a man, but as a parish minister? He is a retained attorney, and these airs of the bench are the emptiest affectation. Well, most men have bound their eyes with one or another handkerchief, and attached themselves to some one of these communities of opinion. This conformity makes them not false in a few particulars, authors of a few lies, but false in all particulars. Their every truth is not quite true. Their two is not the real two, their four is not the real four; so that every word they say chagrins us and we know not where to begin to set them right. Meantime nature is not slow to equip us in the prison-uniform of the party to which we adhere. We come to wear one cut of face and figure, and acquire by degrees the gentlest asinine expression. There is a mortifying experience in particular, which does not fail to wreak itself also in the general history; I mean "the foolish face of praise," the forced smile which we put on in company where we

---

4 lintels. A lintel is the crosspiece above a door • 73 bench, the judge, who sits on the "bench" • 87 the foolish . . . praise, from Pope's famous satire on Addison in his "Epistle to Dr. Arbuthnot"

do not feel at ease, in answer to conversation which does not interest us. The muscles, not spontaneously moved but moved by a low usurping wilfulness, grow tight about the outline of the face, with the most disagreeable sensation.

For nonconformity the world whips you with its displeasure. And therefore a man must know how to estimate a sour face. The by-standers look askance on him in the public street or in the friend's parlor. If this aversion had its origin in contempt and resistance like his own he might well go home with a sad countenance; but the sour faces of the multitude, like their sweet faces, have no deep cause, but are put on and off as the wind blows and a newspaper directs. Yet is the discontent of the multitude more formidable than that of the senate and the college. It is easy enough for a firm man who knows the world to brook the rage of the cultivated classes. Their rage is decorous and prudent, for they are timid, as being very vulnerable themselves. But when to their feminine rage the indignation of the people is added, when the ignorant and the poor are aroused, when the unintelligent brute force that lies at the bottom of society is made to growl and mow, it needs the habit of magnanimity and religion to treat it godlike as a trifle of no concernment.

The other terror that scares us from self-trust is our consistency; a reverence for our past act or word because the eyes of others have no other data for computing our orbit than our past acts, and we are loth to disappoint them.

But why should you keep your head over your shoulder? Why drag about this corpse of your memory, lest you contradict somewhat you have stated in this or that public place? Suppose you should contradict yourself, what then? It seems to be a rule of wisdom never to rely on your memory alone, scarcely even in acts of pure memory, but to bring the past for judgment into the thousand-eyed present, and live ever in a new day. In your metaphysics you have denied personality to the Deity, yet when the devout motions of the soul come, yield to them heart and life, though they should clothe God with shape and color. Leave your theory, as Joseph his coat in the hand of the harlot, and flee.

A foolish consistency is the hobgoblin of little minds, adored by little statesmen and philosophers and divines. With consistency a great soul has simply nothing to do. He may as well concern himself with his shadow on the wall. Speak what you think now in hard words and to-morrow speak what to-morrow thinks in hard words again, though it contradict every thing you said to-day.— "Ah, so you shall be sure to be misunderstood."—Is it so bad then to be misunderstood? Pythagoras was misunderstood, and Socrates, and Jesus, and Luther, and Copernicus, and Galileo, and Newton, and every pure and wise spirit that ever took flesh. To be great is to be misunderstood.

I suppose no man can violate his nature. All the sallies of his will are rounded in by the law of his being, as the inequalities of Andes and Himmaleh are insignificant in the curve of the sphere. Nor does it matter how you gauge and try him. A character is like an acrostic or Alexandrian stanza;—read it forward, backward, or across, it still spells the same thing. In this pleasing contrite wood-life which God allows me, let me record day by day my honest thought without prospect or retrospect, and, I cannot doubt, it will be found symmetrical, though I mean it not and see it not. My book should smell of pines and resound with the hum of insects. The swallow over my window should interweave that thread or straw he carries in his bill into my web also. We pass for what we are. Character teaches above our wills. Men imagine that they communicate their virtue or vice only by overt actions, and do not see that virtue or vice emit a breath every moment.

There will be an agreement in whatever variety of actions, so they be each honest and natural in their hour. For of one will, the actions will be harmonious, however unlike they seem. These varieties are lost sight of at a little distance, at a little height of thought. One tendency unites them all. The voyage of the best ship is a zigzag line of a hundred tacks. See the line from a sufficient distance, and it straightens itself to the average tendency.

---

23 **mow**, make grimaces • 42 **Joseph . . . flee.** The allusion is to Genesis 39-12 • 52 **Pythagoras.** See note, p. 133 • 53 **Socrates,** Greek philosopher of the fifth century B.C. • 53 **Luther,** Martin Luther (1483-1546), a leader in the Protestant Reformation • 53 **Copernicus,** Nikolaus Copernicus (1473-1543), Polish astronomer whose system superseded the Ptolemaic • 54 **Galileo** (1564-1642), Italian astronomer • 54 **Newton,** Sir Isaac Newton. See note, p. 440 • 59 **Andes,** a mountain range in South America, extending from the Isthmus of Panama to Cape Horn • 59 **Himmaleh,** or Himalaya, a mountain range between India and China in which are found the world's highest mountains

Your genuine action will explain itself and will explain your other genuine actions. Your conformity explains nothing. Act singly, and what you have already done singly will justify you now. Greatness appeals to the future. If I can be firm enough to-day to do right and scorn eyes, I must have done so much right before as to defend me now. Be it how it will, do right now. Always scorn appearances and you always may. The force of character is cumulative. All the foregone days of virtue work their health into this. What makes the majesty of the heroes of the senate and the field, which so fills the imagination? The consciousness of a train of great days and victories behind. They shed a united light on the advancing actor. He is attended as by a visible escort of angels. That is it which throws thunder into Chatham's voice, and dignity into Washington's port, and America into Adams's eye. Honor is venerable to us because it is no ephemera. It is always ancient virtue. We worship it today because it is not of to-day. We love it and pay it homage because it is not a trap for our love and homage, but is self-dependent, self-derived, and therefore of an old immaculate pedigree, even if shown in a young person.

I hope in these days we have heard the last of conformity and consistency. Let the words be gazetted and ridiculous henceforward. Instead of the gong for dinner, let us hear a whistle from the Spartan fife. Let us never bow and apologize more. A great man is coming to eat at my house. I do not wish to please him; I wish that he should wish to please me. I will stand here for humanity, and though I would make it kind, I would make it true. Let us affront and reprimand the smooth mediocrity and squalid contentment of the times, and hurl in the face of custom and trade and office, the fact which is the upshot of all history, that there is a great responsible Thinker and Actor working wherever a man works; that a true man belongs to no other time or place, but is the centre of things. Where he is, there is nature. He measures you and all men and all events. Ordinarily, every body in society reminds us of somewhat else, or of some other person. Character, reality, reminds you of nothing else; it takes place of the whole creation. The man must be so much that he must make all circumstances indifferent. Every true man is a cause, a country, and an age; requires infinite spaces and numbers and time fully to accomplish his design;—and posterity seem to follow his steps as a train of clients. A man Cæsar is born, and for ages after we have a Roman Empire. Christ is born, and millions of minds so grow and cleave to his genius that he is confounded with virtue and the possible of man. An institution is the lengthened shadow of one man; as, Monachism, of the Hermit Antony; the Reformation, of Luther; Quakerism, of Fox; Methodism, of Wesley; Abolition, of Clarkson. Scipio, Milton called "the height of Rome;" and all history resolves itself very easily into the biography of a few stout and earnest persons.

Let a man then know his worth, and keep things under his feet. Let him not peep or steal, or skulk up and down with the air of a charity-boy, a bastard, or an interloper in the world which exists for him. But the man in the street, finding no worth in himself which corresponds to the force which built a tower or sculptured a marble god, feels poor when he looks on these. To him a palace, a statue, or a costly book have an alien and forbidding air, much like a gay equipage, and seem to say like that, "Who are you, Sir?" Yet they all are his, suitors for his notice, petitioners to his faculties that they will come out and take possession. The picture waits for my verdict; it is not to command me, but I am to settle its claims to praise. That popular fable of the sot who was picked up dead-drunk in the street, carried to the duke's house, washed and dressed and laid in the duke's bed, and, on his waking, treated with all obsequious ceremony like the duke, and assured that he had been insane, owes its popularity to the fact that it symbolizes so well the state of man, who is in the world a sort of sot, but now and then wakes up, exercises his reason and finds himself a true prince.

Our reading is mendicant and sycophantic. In history our imagination plays us false. Kingdom and lordship, power and estate, are a gaudier vocabulary than private John and Edward in a small house and common day's work; but the things of life are the same to both; the sum total of both is the same. Why all this deference to Alfred and Scanderbeg and Gustavus? Suppose they were virtuous; did they wear out virtue? As great a stake depends on your private act to-day as followed their public and renowned steps. When private men shall act with original views, the lustre will be transferred from the actions of kings to those of gentlemen.

The world has been instructed by its kings, who have so magnetized the eyes of nations. It has been taught by this colossal symbol the mutual reverence that is due from man to man. The joyful loyalty with which men have everywhere suffered the king, the noble, or the great proprietor to walk among them by a law of his own, make his own scale of men and things and reverse theirs, pay for benefits not with money but with honor, and represent the law in his person, was the hieroglyphic by which they obscurely signified their consciousness of their own right and comeliness, the right of every man.

The magnetism which all original action exerts is explained when we inquire the reason of self-trust. Who is the Trustee? What is the aboriginal Self, on which a universal reliance may be grounded? What is the nature and power of that science-baffling star, without parallax, without calculable elements, which shoots a ray of beauty even into trivial and impure actions, if the least mark of independence appear? The inquiry leads us to that source, at once the essence of genius, of virtue, and of life, which we call Spontaneity or Instinct. We denote this primary wisdom as Intuition, whilst all later teachings are tuitions. In that deep force, the last fact behind which analysis cannot go, all things find their common origin. For the sense of being which in calm hours rises, we know not how, in the soul, is not diverse from things, from space, from light, from time, from man, but one with them and proceeds obviously from the same source whence their life and being also proceed. We first share the life by which things exist and afterwards see them as appearances in nature and forget that we have shared their cause. Here is the fountain of action and of thought. Here are the lungs of that inspiration which giveth man wisdom and which cannot be denied without impiety and atheism. We lie in the lap of immense intelligence, which makes us receivers of its truth and organs of its activity. When we discern justice, when we discern truth, we do nothing of ourselves, but allow a passage to its beams. If we ask whence this comes, if we seek to pry into the soul that causes, all philosophy is at fault. Its presence or its absence is all we can affirm. Every man discriminates between the voluntary acts of his mind and his involuntary perceptions, and knows that to his involuntary perceptions a perfect faith is due. He may err in the expression of them, but he knows that these things are so, like day and night, not to be disputed. My wilful actions and acquisitions are but roving;—the idlest reverie, the faintest native emotion, command my curiosity and respect. Thoughtless people contradict as readily the statement of perceptions as of opinions, or rather much more readily; for they do not distinguish between perception and notion. They fancy that I choose to see this or that thing. But perception is not whimsical, but fatal. If I see a trait, my children will see it after me, and in course of time all mankind,—although it may chance that no one has seen it before me. For my perception of it is as much a fact as the sun.

The relations of the soul to the divine spirit are so pure that it is profane to seek to interpose helps. It must be that when God speaketh he should communicate, not one thing, but all things; should fill the world with his voice; should scatter forth light, nature, time, souls, from the centre of the present thought; and new date and new create the whole. Whenever a mind is simple and receives a divine wisdom, old things pass away,—means, teachers, texts, temples fall; it lives now, and absorbs past and future into the present hour. All things are made sacred by relation to it,—one as much as another. All things are dissolved to their centre by their cause, and in the universal miracle petty and particular miracles disappear. If therefore a man claims to know and speak of God and carries you backward to the phraseology of some old mouldered nation in another country, in an-

---

7 Alfred, Alfred the Great (849-901), king of the West Saxons • 7 Scanderbeg (1403-1468), Albanian patriot who opposed the Turks • 7 Gustavus, Gustavus Adolphus (1594-1632), king of Sweden • 28 parallax, the apparent displacement (or the difference in apparent direction) of an object, as seen from two different points

other world, believe him not. Is the acorn better than the oak which is its fulness and completion? Is the parent better than the child into whom he has cast his ripened being? Whence then this worship of the past? The centuries are conspirators against the sanity and authority of the soul. Time and space are but physiological colors which the eye makes, but the soul is light: where it is, is day; where it was, is night; and history is an impertinence and an injury if it be any thing more than a cheerful apologue or parable of my being and becoming.

Man is timid and apologetic; he is no longer upright; he dares not say 'I think,' 'I am,' but quotes some saint or sage. He is ashamed before the blade of grass or the blowing rose. These roses under my window make no reference to former roses or to better ones; they are for what they are; they exist with God to-day. There is no time to them. There is simply the rose; it is perfect in every moment of its existence. Before a leaf-bud has burst, its whole life acts; in the full-blown flower there is no more; in the leafless root there is no less. Its nature is satisfied and it satisfies nature in all moments alike. But man postpones or remembers; he does not live in the present, but with reverted eye laments the past, or, heedless of the riches that surround him, stands on tiptoe to foresee the future. He cannot be happy and strong until he too lives with nature in the present, above time.

This should be plain enough. Yet see what strong intellects dare not yet hear God himself unless he speak the phraseology of I know not what David, or Jeremiah, or Paul. We shall not always set so great a price on a few texts, on a few lives. We are like children who repeat by rote the sentences of grandames and tutors, and, as they grow older, of the men of talents and character they chance to see,—painfully recollecting the exact words they spoke; afterwards, when they come into the point of view which those had who uttered these sayings, they understand them and are willing to let the words go; for at any time they can use words as good when occasion comes. If we live truly, we shall see truly. It is as easy for the strong man to be strong, as it is for the weak to be weak. When we have new perception, we shall gladly disburden the memory of its hoarded treasures as old rubbish. When a man lives with God, his voice shall be as sweet as the murmur of the brook and the rustle of the corn.

And now at last the highest truth on this subject remains unsaid; probably cannot be said; for all that we say is the far-off remembering of the intuition. That thought by what I can now nearest approach to say it, is this. When good is near you, when you have life in yourself, it is not by any known or accustomed way; you shall not discern the footprints of any other; you shall not see the face of man; you shall not hear any name;—the way, the thought, the good, shall be wholly strange and new. It shall exclude example and experience. You take the way from man, not to man. All persons that ever existed are its forgotten ministers. Fear and hope are alike beneath it. There is somewhat low even in hope. In the hour of vision there is nothing that can be called gratitude, nor properly joy. The soul raised over the passion beholds identity and eternal causation, perceives the self-existence of Truth and Right, and calms itself with knowing that all things go well. Vast spaces of nature, the Atlantic Ocean, the South Sea; long intervals of time, years, centuries, are of no account. This which I think and feel underlay every former state of life and circumstances, as it does underlie my present, and what is called life and what is called death.

Life only avails, not the having lived. Power ceases in the instant of repose; it resides in the moment of transition from a past to a new state, in the shooting of the gulf, in the darting to an aim. This one fact the world hates; that the soul *becomes;* for that forever degrades the past, turns all riches to poverty, all reputation to a shame, confounds the saint with the rogue, shoves Jesus and Judas equally aside. Why then do we prate of self-reliance? Inasmuch as the soul is present there will be power not confident but agent. To talk of reliance is a poor external way of speaking. Speak rather of that which relies because it works and is. Who has more obedience than I masters me, though he should not raise his finger. Round him I must revolve by the gravitation of spirits. We fancy it rhetoric when we speak of eminent virtue. We do not yet see that virtue is Height, and that a man or a company of men, plastic and permeable to principles, by the law of nature must overpower and ride all cities, nations, kings, rich men, poets, who are not.

This is the ultimate fact which we so quickly reach on this, as on every topic, the resolution of all into the ever-blessed ONE. Self-existence is the attribute of the Supreme Cause, and it constitutes the measure of good by

the degree in which it enters into all lower forms. All things real are so by so much virtue as they contain. Commerce, husbandry, hunting, whaling, war, eloquence, personal weight, are somewhat, and engage my respect as examples of its presence and impure action. I see the same law working in nature for conservation and growth. Power is, in nature, the essential measure of right. Nature suffers nothing to remain in her kingdoms which cannot help itself. The genesis and maturation of a planet, its poise and orbit, the bended tree recovering itself from the strong wind, the vital resources of every animal and vegetable, are demonstrations of the self-sufficing and therefore self-relying soul.

Thus all concentrates: let us not rove; let us sit at home with the cause. Let us stun and astonish the intruding rabble of men and books and institutions by a simple declaration of the divine fact. Bid the invaders take the shoes from off their feet, for God is here within. Let our simplicity judge them, and our docility to our own law demonstrate the poverty of nature and fortune beside our native riches.

But now we are a mob. Man does not stand in awe of man, nor is his genius admonished to stay at home, to put itself in communication with the internal ocean, but it goes abroad to beg a cup of water of the urns of other men. We must go alone. I like the silent church before the service begins, better than any preaching. How far off, how cool, how chaste the persons look, begirt each one with a precinct or sanctuary! So let us always sit. Why should we assume the faults of our friend, or wife, or father, or child, because they sit around our hearth, or are said to have the same blood? All men have my blood and I all men's. Not for that will I adopt their petulance or folly, even to the extent of being ashamed of it. But your isolation must not be mechanical, but spiritual, that is, must be elevation. At times the whole world seems to be in conspiracy to importune you with emphatic trifles. Friend, client, child, sickness, fear, want, charity, all knock at once at thy closet door and say,—'Come out unto us.' But keep thy state; come not into their confusion. The power men possess to annoy me I give them by a weak curiosity. No man can come near me but through my act. "What we love that we have, but by desire we bereave ourselves of the love."

If we cannot at once rise to the sanctities of obedience and faith, let us at least resist our temptations; let us enter into the state of war and wake Thor and Woden, courage and constancy, in our Saxon breasts. This is to be done in our smooth times by speaking the truth. Check this lying hospitality and lying affection. Live no longer to the expectation of these deceived and deceiving people with whom we converse. Say to them, 'O father, O mother, O wife, O brother, O friend, I have lived with you after appearances hitherto. Henceforward I am the truth's. Be it known unto you that henceforward I obey no law less than the eternal law. I will have no covenants but proximities. I shall endeavor to nourish my parents, to support my family, to be the chaste husband of one wife,—but these relations I must fill after a new and unprecedented way. I appeal from your customs. I must be myself. I cannot break myself any longer for you, or you. If you can love me for what I am, we shall be the happier. If you cannot, I will still seek to deserve that you should. I will not hide my tastes or aversions. I will so trust that what is deep is holy, that I will do strongly before the sun and moon whatever inly rejoices me and the heart appoints. If you are noble, I will love you; if you are not, I will not hurt you and myself by hypocritical attentions. If you are true, but not in the same truth with me, cleave to your companions; I will seek my own. I do this not selfishly but humbly and truly. It is alike your interest, and mine, and all men's, however long we have dwelt in lies, to live in truth. Does this sound harsh to-day? You will soon love what is dictated by your nature as well as mine, and if we follow the truth it will bring us out safe at last.'—But so may you give these friends pain. Yes, but I cannot sell my liberty and my power, to save their sensibility. Besides, all persons have their moments of reason, when they look out into the region of absolute truth; then will they justify me and do the same thing.

The populace think that your rejection of popular standards is a rejection of all standard, and mere antinomianism; and the bold sensualist will use the name of philosophy to gild his crimes. But the law of conscious-

---

18 shoes . . . feet, an allusion to the words of God to Moses in Exodus 3.5: ". . . put off thy shoes from off thy feet, for the place whereon thou standest is holy ground" • **47 Thor.** See note, p 410 • **47 Woden,** or Odin, is treated at length in Carlyle's **Heroes and Hero-Worship** as "the central figure of Scandinavian Paganism" • **83 antinomianism,** the doctrine that the moral law may be set aside on the ground that faith alone is necessary to salvation

ness abides. There are two confessionals, in one or the other of which we must be shriven. You may fulfil your round of duties by clearing yourself in the *direct,* or in the *reflex* way. Consider whether you have satisfied your relations to father, mother, cousin, neighbor, town, cat, and dog—whether any of these can upbraid you. But I may also neglect this reflex standard and absolve me to myself. I have my own stern claims and perfect circle. It denies the name of duty to many offices that are called duties. But if I can discharge its debts it enables me to dispense with the popular code. If any one imagines that this law is lax, let him keep its commandment one day.

And truly it demands something godlike in him who has cast off the common motives of humanity and has ventured to trust himself for a taskmaster. High be his heart, faithful his will, clear his sight, that he may in good earnest be doctrine, society, law, to himself, that a simple purpose may be to him as strong as iron necessity is to others!

If any man consider the present aspects of what is called by distinction *society,* he will see the need of these ethics. The sinew and heart of man seem to be drawn out, and we are become timorous, desponding whimperers. We are afraid of truth, afraid of fortune, afraid of death, and afraid of each other. Our age yields no great and perfect persons. We want men and women who shall renovate life and our social state, but we see that most natures are insolvent, cannot satisfy their own wants, have an ambition out of all proportion to their practical force and do lean and beg day and night continually. Our housekeeping is mendicant, our arts, our occupations, our marriages, our religion we have not chosen, but society has chosen for us. We are parlor soldiers. We shun the rugged battle of fate, where strength is born.

If our young men miscarry in their first enterprises they lose all heart. If the young merchant fails, men say he is *ruined.* If the finest genius studies at one of our colleges and is not installed in an office within one year afterwards in the cities or suburbs of Boston or New York, it seems to his friends and to himself that he is right in being disheartened and in complaining the rest of his life. A sturdy lad from New Hampshire or Vermont, who in turn tries all the professions, who *teams it, farms it, peddles,* keeps a school, preaches, edits a newspaper, goes to Congress, buys a township, and so forth, in successive years, and always like a cat falls on his feet, is worth a hundred of these city dolls. He walks abreast with his days and feels no shame in not 'studying a profession,' for he does not postpone his life, but lives already. He has not one chance, but a hundred chances. Let a Stoic open the resources of man and tell men they are not leaning willows, but can and must detach themselves; that with the exercise of self-trust, new powers shall appear; that a man is the word made flesh, born to shed healing to the nations; that he should be ashamed of our compassion, and that the moment he acts from himself, tossing the laws, the books, idolatries and customs out of the window, we pity him no more but thank and revere him;—and that teacher shall restore the life of man to splendor and make his name dear to all history.

It is easy to see that a greater self-reliance must work a revolution in all the offices and relations of men, in their religion; in their education; in their pursuits; their modes of living; their association; in their property; in their speculative views.

1. In what prayers do men allow themselves! That which they call a holy office is not so much as brave and manly. Prayer looks abroad and asks for some foreign addition to come through some foreign virtue, and loses itself in endless mazes of natural and supernatural, and mediatorial and miraculous. Prayer that craves a particular commodity, anything less than all good, is vicious Prayer is the contemplation of the facts of life from the highest point of view. It is the soliloquy of a beholding and jubilant soul It is the spirit of God pronouncing his works good. But prayer as a means to effect a private end is meanness and theft. It supposes dualism and not unity in nature and consciousness. As soon as the man is at one with God, he will not beg He will then see prayer in all action. The prayer of the farmer kneeling in his field to weed it, the prayer of the rower kneeling with the stroke of his oar, are true prayers heard throughout nature, though for cheap ends. Caratach, in Fletcher's

56 word made flesh. Compare John 1 14 "And the Word was made flesh, and dwelt among us . . ." • 57 healing . . . nations. Compare Revelation 22 2: ". . . and the leaves of the tree [of life] were for the healing of the nations" • 78 God . . . good. Compare Genesis 1:31: "And God saw everything that he had made, and behold, it was very good"

"Bonduca," when admonished to inquire the mind of the god Audate, replies,—

> His hidden meaning lies in our endeavors;
> Our valors are our best gods.

Another sort of false prayers are our regrets. Discontent is the want of self-reliance: it is infirmity of will. Regret calamities if you can thereby help the sufferer; if not, attend your own work and already the evil begins to be repaired. Our sympathy is just as base. We come to them who weep foolishly and sit down and cry for company, instead of imparting to them truth and health in rough electric shocks, putting them once more in communication with their own reason. The secret of fortune is joy in our hands. Welcome evermore to gods and men is the self-helping man. For him all doors are flung wide; him all tongues greet, all honors crown, all eyes follow with desire. Our love goes out to him and embraces him because he did not need it. We solicitously and apologetically caress and celebrate him because he held on his way and scorned our disapprobation. The gods love him because men hated him. "To the persevering mortal," said Zoroaster, "the blessed Immortals are swift."

As men's prayers are a disease of the will, so are their creeds a disease of the intellect. They say with those foolish Israelites, 'Let not God speak to us, lest we die. Speak thou, speak any man with us, and we will obey.' Everywhere I am hindered of meeting God in my brother, because he has shut his own temple doors and recites fables merely of his brother's, or his brother's brother's God. Every new mind is a new classification. If it prove a mind of uncommon activity and power, a Locke, a Lavoisier, a Hutton, a Bentham, a Fourier, it imposes its classification on other men, and lo! a new system. In proportion to the depth of the thought, and so to the number of the objects it touches and brings within reach of the pupil, is his complacency. But chiefly is this apparent in creeds and churches, which are also classifications of some powerful mind acting on the elemental thought of duty and man's relation to the Highest. Such is Calvinism, Quakerism, Swedenborgism. The pupil takes the same delight in subordinating every thing to the new terminology as a girl who has just learned botany in seeing a new earth and new seasons thereby. It will happen for a time that the pupil will find his intellectual power has grown by the study of his master's mind. But in all unbalanced minds the classification is idolized, passes for the end and not for a speedily exhaustible means, so that the walls of the system blend to their eye in the remote horizon with the walls of the universe; the luminaries of heaven seem to them hung on the arch their master built. They cannot imagine how you aliens have any right to see,—how you can see; 'It must be somehow that you stole the light from us.' They do not yet perceive that light, unsystematic, indomitable, will break into any cabin, even into theirs. Let them chirp awhile and call it their own. If they are honest and do well, presently their neat new pinfold will be too strait and low, will crack, will lean, will rot and vanish, and the immortal light, all young and joyful, million-orbed, million-colored, will beam over the universe as on the first morning.

2. It is for want of self-culture that the superstition of Travelling, whose idols are Italy, England, Egypt, retains its fascination for all educated Americans. They who made England, Italy, or Greece venerable in the imagination, did so by sticking fast where they were, like an axis of the earth. In manly hours we feel that duty is our place. The soul is no traveller; the wise man stays at home, and when his necessities, his duties, on any occasion call him from his house, or into foreign lands, he is at home still and shall make men sensible by the expression of his countenance that he goes, the missionary of wisdom and virtue, and visits cities and men like a sovereign and not like an interloper or a valet.

I have no churlish objection to the circumnavigation of the globe for the purposes of art, of study, and benevolence, so that the man is first domesticated, or does not go abroad with the hope of finding somewhat greater than he knows. He who travels to be amused, or to get somewhat which he does not carry, travels away from himself, and grows old even in youth among old things. In Thebes, in Palmyra, his will and mind have become old and dilapidated as they. He carries ruins to ruins.

---

3 **His . . . gods,** from John Fletcher's **Bonduca** (1647), **Act III,** Scene i, ll. 88-89 • 22 **Zoroaster.** See note, p 451 • 26 **Let . . . obey,** inaccurately quoted from Exodus 20 19 • 33 **Locke,** John Locke See note, p 126 • 33 **Lavoisier,** Antoine Lavoisier (1743 1794), French chemist • 33 **Hutton,** James Hutton (1726-1797), English geologist • 33 **Bentham,** Jeremy Bentham (1748-1832), English philosopher and jurist • 33 **Fourier,** François Fourier (1772-1837), French socialist • 83 **Thebes,** ancient ruined city in Egypt • 83 **Palmyra,** ancient ruined city in Syria

Travelling is a fool's paradise. Our first journeys discover to us the indifference of places. At home I dream that at Naples, at Rome, I can be intoxicated with beauty and lose my sadness. I pack my trunk, embrace my friends, embark on the sea and at last wake up in Naples, and there beside me is the stern fact, the sad self, unrelenting, identical, that I fled from. I seek the Vatican and the palaces I affect to be intoxicated with sights and suggestions, but I am not intoxicated. My giant goes with me wherever I go.

3. But the rage of travelling is a symptom of a deeper unsoundness affecting the whole intellectual action. The intellect is vagabond, and our system of education fosters restlessness. Our minds travel when our bodies are forced to stay at home. We imitate; and what is imitation but the travelling of the mind? Our houses are built with foreign taste, our shelves are garnished with foreign ornaments; our opinions, our tastes, our faculties, lean, and follow the Past and the Distant. The soul created the arts wherever they have flourished. It was in his own mind that the artist sought his model. It was an application of his own thought to the thing to be done and the conditions to be observed. And why need we copy the Doric or the Gothic model? Beauty, convenience, grandeur of thought and quaint expression are as near to us as to any, and if the American artist will study with hope and love the precise thing to be done by him, considering the climate, the soil, the length of the day, the wants of the people, the habit and form of the government, he will create a house in which all these will find themselves fitted, and taste and sentiment will be satisfied also.

Insist on yourself; never imitate. Your own gift you can present every moment with the cumulative force of a whole life's cultivation, but of the adopted talent of another you have only an extemporaneous half possession. That which each can do best, none but his Maker can teach him. No man yet knows what it is, nor can, till that person has exhibited it. Where is the master who could have taught Shakspeare? Where is the master who could have instructed Franklin, or Washington, or Bacon, or Newton? Every great man is a unique. The Scipionism of Scipio is precisely that part he could not borrow. Shakspeare will never be made by the study of Shakspeare. Do that which is assigned you, and you cannot hope too much or dare too much. There is at this moment for you an utterance brave and grand as that of the colossal chisel of Phidias, or trowel of the Egyptians, or the pen of Moses or Dante, but different from all these. Not possibly will the soul, all rich, all eloquent, with thousand-cloven tongue, deign to repeat itself, but if you can hear what these patriarchs say, surely you can reply to them in the same pitch of voice, for the ear and the tongue are two organs of one nature. Abide in the simple and noble regions of thy life, obey thy heart, and thou shalt reproduce the Foreworld again.

4 As our Religion, our Education, our Art look abroad, so does our spirit of society. All men plume themselves on the improvement of society, and no man improves

Society never advances. It recedes as fast on one side as it gains on the other. It undergoes continual changes; it is barbarous, it is civilized, it is christianized, it is rich, it is scientific; but this change is not amelioration For every thing that is given something is taken Society acquires new arts and loses old instincts. What a contrast between the well-clad, reading, writing, thinking American, with a watch, a pencil and a bill of exchange in his pocket, and the naked New Zealander, whose property is a club, a spear, a mat and an undivided twentieth of a shed to sleep under! But compare the health of the two men and you shall see that the white man has lost his aboriginal strength. If the traveller tell us truly, strike the savage with a broad-axe and in a day or two the flesh shall unite and heal as if you struck the blow into soft pitch, and the same blow shall send the white to his grave

The civilized man has built a coach, but has lost the use of his feet. He is supported on crutches, but lacks so much support of muscle He has a fine Geneva watch, but he fails of the skill to tell the hour by the sun. A Greenwich nautical almanac he has, and so being sure of the information when he wants it, the man in the street does not know a star in the sky. The solstice he does not observe; the equinox he knows as little; and the whole bright calendar of the year is without a dial in his mind. His note-books impair his memory; his libraries overload his wit; the insurance-office increases the number of

accidents; and it may be a question whether machinery does not encumber; whether we have not lost by refinement some energy, by a Christianity, entrenched in establishments and forms, some vigor of wild virtue. For every Stoic was a Stoic; but in Christendom where is the Christian?

There is no more deviation in the moral standard than in the standard of height or bulk. No greater men are now than ever were. A singular equality may be observed between the great men of the first and of the last ages; nor can all the science, art, religion, and philosophy of the nineteenth century avail to educate greater men than Plutarch's heroes, three or four and twenty centuries ago. Not in time is the race progressive. Phocion, Socrates, Anaxagoras, Diogenes, are great men, but they leave no class. He who is really of their class will not be called by their name, but will be his own man, and in his turn the founder of a sect. The arts and inventions of each period are only its costume and do not invigorate men. The harm of the improved machinery may compensate its good. Hudson and Behring accomplished so much in their fishing-boats as to astonish Parry and Franklin, whose equipment exhausted the resources of science and art. Galileo, with an opera-glass, discovered a more splendid series of celestial phenomena than any one since. Columbus found the New World in an undecked boat. It is curious to see the periodical disuse and perishing of means and machinery which were introduced with loud laudation a few years or centuries before. The great genius returns to essential man. We reckoned the improvements of the art of war among the triumphs of science, and yet Napoleon conquered Europe by the bivouac, which consisted of falling back on naked valor and disencumbering it of all aids. The Emperor held it impossible to make a perfect army, says Las Cases, "without abolishing our arms, magazines, commissaries and carriages, until, in imitation of the Roman custom, the soldier should receive his supply of corn, grind it in his hand-mill and bake his bread himself."

Society is a wave. The wave moves onward, but the water of which it is composed does not. The same particle does not rise from the valley to the ridge. Its unity is only phenomenal. The persons who make up a nation to-day, next year die, and their experience dies with them.

And so the reliance on Property, including the reliance on governments which protect it, is the want of self-reliance. Men have looked away from themselves and at things so long that they have come to esteem the religious, learned and civil institutions as guards of property, and they deprecate assaults on these, because they feel them to be assaults on property. They measure their esteem of each other by what each has, and not by what each is. But a cultivated man becomes ashamed of his property, out of new respect for his nature. Especially he hates what he has if he see that it is accidental,—came to him by inheritance, or gift, or crime; then he feels that it is not having; it does not belong to him, has no root in him and merely lies there because no revolution or no robber takes it away. But that which a man is, does always by necessity acquire; and what the man acquires, is living property, which does not wait the beck of rulers, or mobs, or revolutions, or fire, or storm, or bankruptcies, but perpetually renews itself wherever the man breathes. "Thy lot or portion of life," said the Caliph Ali, "is seeking after thee; therefore be at rest from seeking after it." Our dependence on these foreign goods leads us to our slavish respect for numbers. The political parties meet in numerous conventions; the greater the concourse and with each new uproar of announcement, The delegation from Essex! The Democrats from New Hampshire! The Whigs of Maine! the young patriot feels himself stronger than before by a new thousand of eyes and arms. In like manner the reformers summon conventions and vote and resolve in multitude. Not so, O friends! will the God deign to enter and inhabit you, but by a method precisely the reverse. It is only as a man puts off all foreign support and stands alone that I see him to be strong and to prevail. He is weaker by every recruit to his banner. Is not a man better than a town? Ask nothing of men, and, in the endless mutation, thou only firm column must presently appear the upholder of all that

---

13 **Plutarch's heroes**, the noble Greeks and Romans of Plutarch's **Lives** • 14 **Phocion** (402-317 B.C.), Greek philosopher • 15 **Anaxagoras** (500-428 B C), Greek philosopher • 15 **Diogenes** (412?-323 B C), Greek Cynic philosopher • 21 **Hudson**, Henry Hudson (d 1611), English navigator. See note, p. 251 • 21 **Behring**, Vitus Jonassen Bering (1680-1741), Danish navigator who explored the Bering Sea • 22 **Parry**, Sir William Edward Parry (1790-1855), English explorer of the Arctic • 22 **Franklin**, Sir John Franklin (1786-1847), English explorer, was lost in the Arctic • 35 **Las Cases**. Marquis de Las Cases (1766-1842) recorded in **Mémorial de Ste. Hélène** his conversations with Napoleon at St. Helena • 64 **Caliph Ali**, Ali ben Abu Talib (602?-661), fourth caliph of Mecca • 70 **Essex**, a county in eastern Massachusetts

surrounds thee. He who knows that power is inborn, that he is weak because he has looked for good out of him and elsewhere, and, so perceiving, throws himself unhesitatingly on his thought, instantly rights himself, stands in the erect position, commands his limbs, works miracles; just as a man who stands on his feet is stronger than a man who stands on his head.

So use all that is called Fortune Most men gamble with her, and gain all, and lose all, as her wheel rolls. But do thou leave as unlawful these winnings, and deal with Cause and Effect, the chancellors of God. In the Will work and acquire, and thou hast chained the wheel of Chance, and shall sit hereafter out of fear from her rotations. A political victory, a rise of rents, the recovery of your sick or the return of your absent friend, or some other favorable event raises your spirits, and you think good days are preparing for you. Do not believe it. Nothing can bring you peace but yourself. Nothing can bring you peace but the triumph of principles.

1841

The Rhodora:

On Being Asked, Whence Is the Flower?

In May, when sea-winds pierced our solitudes,
I found the fresh Rhodora in the woods,
Spreading its leafless blooms in a damp nook,
To please the desert and the sluggish brook.
The purple petals, fallen in the pool,
Made the black water with their beauty gay,
Here might the red-bird come his plumes to cool,
And court the flower that cheapens his array.
Rhodora! if the sages ask thee why
This charm is wasted on the earth and sky,
Tell them, dear, that if eyes were made for seeing,
Then Beauty is its own excuse for being
Why thou wert there, O rival of the rose!
I never thought to ask, I never knew:
But, in my simple ignorance, suppose
The self-same Power that brought me there brought you.

1834·1839

Each and All

Little thinks, in the field, yon red-cloaked clown
Of thee from the hill-top looking down,
The heifer that lows in the upland farm,
Far-heard, lows not thine ear to charm;
The sexton, tolling his bell at noon,
Deems not that great Napoleon
Stops his horse, and lists with delight,
Whilst his files sweep round yon Alpine height;
Nor knowest thou what argument
Thy life to thy neighbor's creed has lent.
All are needed by each one;
Nothing is fair or good alone.
I thought the sparrow's note from heaven,
Singing at dawn on the alder bough;
I brought him home, in his nest, at even,
He sings the song, but it cheers not now,
For I did not bring home the river and sky,—
He sang to my ear,—they sang to my eye.
The delicate shells lay on the shore,
The bubbles of the latest wave
Fresh pearls to their enamel gave,
And the bellowing of the savage sea
Greeted their safe escape to me.
I wiped away the weeds and foam,
I fetched my sea-born treasures home;
But the poor, unsightly, noisome things
Had left their beauty on the shore
With the sun and the sand and the wild uproar.
The lover watched his graceful maid,
As 'mid the virgin train she strayed,
Nor knew her beauty's best attire
Was woven still by the snow-white choir.
At last she came to his hermitage,
Like the bird from the woodlands to the cage,—
The gay enchantment was undone,

The Rhodora: • **12 Beauty . . . being.** This often-quoted line hardly represents Emerson's usual attitude More characteristic is the following from **Nature** (1836). "Beauty in nature is not ultimate. It is the herald of inward and eternal beauty, and is not alone a solid and satisfactory good"

A gentle wife, but fairy none.
Then I said, "I covet truth;
Beauty is unripe childhood's cheat;
I leave it behind with the games of youth":—
As I spoke, beneath my feet
The ground-pine curled its pretty wreath,
Running over the club-moss burrs;
I inhaled the violet's breath;
Around me stood the oaks and firs;
Pine-cones and acorns lay on the ground;
Over me soared the eternal sky,
Full of light and of deity;
Again I saw, again I heard,
The rolling river, the morning bird;—
Beauty through my senses stole;
I yielded myself to the perfect whole.

1834? • 1839

Concord Hymn

Sung at the Completion of the Battle Monument, July 4, 1837

By the rude bridge that arched the flood,
  Their flag to April's breeze unfurled,
Here once the embattled farmers stood
  And fired the shot heard round the world.

The foe long since in silence slept;
  Alike the conqueror silent sleeps;
And Time the ruined bridge has swept
  Down the dark stream which seaward creeps.

On this green bank, by this soft stream,
  We set to-day a votive stone;
That memory may their deed redeem,
  When, like our sires, our sons are gone.

Spirit, that made those heroes dare
  To die, and leave their children free,
Bid Time and Nature gently spare
  The shaft we raise to them and thee.

1837

The Problem

I like a church; I like a cowl;
I love a prophet of the soul;
And on my heart monastic aisles
Fall like sweet strains, or pensive smiles;
Yet not for all his faith can see
Would I that cowlèd churchman be.

Why should the vest on him allure,
Which I could not on me endure?

Not from a vain or shallow thought
His awful Jove young Phidias brought;
Never from lips of cunning fell
The thrilling Delphic oracle;
Out from the heart of nature rolled
The burdens of the Bible old;
The litanies of nations came,
Like the volcano's tongue of flame,
Up from the burning core below,—
The canticles of love and woe:
The hand that rounded Peter's dome
And groined the aisles of Christian Rome
Wrought in a sad sincerity;
Himself from God he could not free;
He builded better than he knew;—
The conscious stone to beauty grew.
Know'st thou what wove yon woodbird's nest
Of leaves, and feathers from her breast?
Or how the fish outbuilt her shell,
Painting with morn each annual cell?
Or how the sacred pine-tree adds

Concord Hymn • **4 fired . . . world.** The first armed clash of the American Revolution occurred at Lexington and Concord, April 19, 1775. After having retreated from Lexington, the minutemen rallied at Concord and drove the British back to Boston

The Problem • **10 Jove . . . Phidias, statue of Zeus by Phidias.** See note, p 464 • **12 Delphic oracle.** The oracles of Apollo, given in the temple at Delphi in ancient Greece • **19 hand . . . dome,** the famous dome of St. Peter's at Rome, designed by Michelangelo (1475-1564)

To her old leaves new myriads?
Such and so grew these holy piles,
Whilst love and terror laid the tiles.
Earth proudly wears the Parthenon,
As the best gem upon her zone,
And Morning opes with haste her lids
To gaze upon the Pyramids;
O'er England's abbeys bends the sky,
As on its friends, with kindred eye;
For out of Thought's interior sphere
These wonders rose to upper air;
And Nature gladly gave them place,
Adopted them into her race,
And granted them an equal date
With Andes and with Ararat.

These temples grew as grows the grass;
Art might obey, but not surpass.
The passive Master lent his hand
To the vast soul that o'er him planned;
And the same power that reared the shrine
Bestrode the tribes that knelt within.
Ever the fiery Pentecost
Girds with one flame the countless host,
Trances the heart through chanting choirs,
And through the priest the mind inspires.
The word unto the prophet spoken
Was writ on tables yet unbroken;
The word by seers or sibyls told,
In groves of oak, or fanes of gold,
Still floats upon the morning wind,
Still whispers to the willing mind.
One accent of the Holy Ghost
The heedless world hath never lost.
I know what say the fathers wise,—
The Book itself before me lies,
Old *Chrysostom,* best Augustine,
And he who blent both in his line,
The younger *Golden Lips* or mines,
Taylor, the Shakspeare of divines.
His words are music in my ear,
I see his cowlèd portrait dear;
And yet, for all his faith could see,
I would not the good bishop be.

1839-1840

The Snow-Storm

Announced by all the trumpets of the sky,
Arrives the snow, and, driving o'er the fields,
Seems nowhere to alight: the whited air
Hides hills and woods, the river, and the heaven,
And veils the farm-house at the garden's end.
The sled and traveller stopped, the courier's feet
Delayed, all friends shut out, the housemates sit
Around the radiant fireplace, enclosed
In a tumultuous privacy of storm.

Come see the north wind's masonry.
Out of an unseen quarry evermore
Furnished with tile, the fierce artificer
Curves his white bastions with projected roof
Round every windward stake, or tree, or door.
Speeding, the myriad-handed, his wild work
So fanciful, so savage, nought cares he
For number or proportion. Mockingly,
On coop or kennel he hangs Parian wreaths;
A swan-like form invests the hidden thorn,
Fills up the farmer's lane from wall to wall,
Maugre the farmer's sighs; and at the gate
A tapering turret overtops the work
And when his hours are numbered, and the world
Is all his own, retiring, as he were not,
Leaves, when the sun appears, astonished Art
To mimic in slow structures, stone by stone,
Built in an age, the mad wind's nightwork,
The frolic architecture of the snow.

1841

Grace

"Grace" was published in **The Dial** for January 1842, but Emerson did not include it in his collected **Poems** (1847) or in later collections. His reason for "rejecting" it probably was that it expresses ideas contrary to those expressed elsewhere in his writings, especially in **Self-Reliance.** In the essay he says: "Society everywhere is in conspiracy against the manhood of every one of its members. . . . Whoso would be a man, must be a nonconformist. . . . What I must do is all that concerns me, not what the people think." Although one of his best poems, "Grace" expresses a view which must have been unusual with Emerson and which we may regard as uncharacteristic. The poem shows the influence of the English religious poets of the seventeenth century.

How much, preventing God, how much I owe
To the defenses thou hast round me set;
Example, custom, fear, occasion slow,—
These scorned bondmen were my parapet.
I dare not peep over this parapet
To gauge with glance the roaring gulf below,
The depths of sin to which I had descended,
Had not these me against myself defended.

1842

Merlin

Emerson uses Merlin, famous prophet and magician of Arthurian romance, to typify the ideal poet. The ideas of the poem are similar to those of the essay on "The Poet."

I

Thy trivial harp will never please
Or fill my craving ear;
Its chords should ring as blows the breeze,
Free, peremptory, clear.
No jingling serenader's art,
Nor tinkle of piano strings,
Can make the wild blood start
In its mystic springs.
The kingly bard
Must smite the chords rudely and hard,
As with hammer or with mace;
That they may render back
Artful thunder, which conveys
Secrets of the solar track,
Sparks of the supersolar blaze.
Merlin's blows are strokes of fate,
Chiming with the forest tone,
When boughs buffet boughs in the wood;
Chiming with the gasp and moan
Of the ice-imprisoned flood;
With the pulse of manly hearts;
With the voice of orators;
With the din of city arts;
With the cannonade of wars;
With the marches of the brave;
And prayers of might from martyrs' cave.

Great is the art,
Great be the manners, of the bard.
He shall not his brain encumber
With the coil of rhythm and number;
But, leaving rule and pale forethought,
He shall aye climb
For his rhyme.
"Pass in, pass in," the angels say,
"In to the upper doors,
Nor count compartments of the floors,
But mount to paradise
By the stairway of surprise."

Blameless master of the games,
King of sport that never shames,
He shall daily joy dispense
Hid in song's sweet influence.
Forms more cheerly live and go,
What time the subtle mind

Merlin • **5 No jingling . . . strings.** Possibly Emerson was thinking of Poe, whom he once called "the jingle man" • **29 He . . . number.** An idea in Emerson's essay "The Poet," ". . . it is not metres, but a metre-making argument that makes a poem"

Sings aloud the tune whereto
Their pulses beat,
And march their feet,
And their members are combined.

By Sybarites beguiled,
He shall no task decline;
Merlin's mighty line
Extremes of nature reconciled,—
Bereaved a tyrant of his will,
And made the lion mild.
Songs can the tempest still,
Scattered on the stormy air,
Mold the year to fair increase
And bring in poetic peace.

He shall not seek to weave,
In weak, unhappy times,
Efficacious rhymes;
Wait his returning strength.
Bird, that from the nadir's floor
To the zenith's top can soar,
The soaring orbit of the muse exceeds that journey's length.
Nor profane affect to hit
Or compass that, by meddling wit,
Which only the propitious mind
Publishes when 'tis inclined.
There are open hours
When the God's will sallies free,
And the dull idiot might see
The flowing fortunes of a thousand years;—
Sudden, at unawares,
Self-moved, fly-to the doors,
Nor sword of angels could reveal
What they conceal.

II

The rhyme of the poet
Modulates the king's affairs;
Balance-loving Nature
Made all things in pairs.
To every foot its antipode;
Each color with its counter glowed;
To every tone beat answering tones,
Higher or graver;
Flavor gladly blends with flavor;
Leaf answers leaf upon the bough;
And match the paired cotyledons.
Hands to hands, and feet to feet,
In one body grooms and brides;
Eldest rite, two married sides
In every mortal meet.
Light's far furnace shines,
Smelting balls and bars,
Forging double stars,
Glittering twins and trines.
The animals are sick with love,
Lovesick with rhyme;
Each with all propitious Time
Into chorus wove.

Like the dancers' ordered band,
Thoughts come also hand in hand;
In equal couples mated,
Or else alternated;
Adding by their mutual gage,
One to other, health and age.
Solitary fancies go
Short-lived wandering to and fro,
Most like to bachelors,
Or an ungiven maid,
Not ancestors,
With no posterity to make the lie afraid,
Or keep truth undecayed.
Perfect-paired as eagle's wings,
Justice is the rhyme of things;
Trade and counting use
The selfsame tuneful muse;
And Nemesis,
Who with even matches odd,
Who athwart space redresses

---

49 Sybarites, voluptuaries • **51 Merlin's mighty line** recalls "Marlowe's mighty line" (in Ben Jonson's "To the Memory of My Beloved Master William Shakespeare," l. 30) • **67 meddling wit.** Emerson's doctrine of inspiration disparages the rôle of the intellect in artistic creation, the intellect being denoted by "meddling wit" in the present passage and by "cunning" in "The Problem," l. 11 • **78 The rhyme . . . affairs,** a romantic conception of the power of the poet found elsewhere in the nineteenth century, in the following, for example, from Shelley's **Defense of Poetry:** "Poets are the unacknowledged legislators of the world"

The partial wrong,
Fills the just period,
And finishes the song.

Subtle rhymes, with ruin rife,
Murmur in the house of life,
Sung by the Sisters as they spin;
In perfect time and measure they
Build and unbuild our echoing clay,
As the two twilights of the day
Fold us music-drunken in.

1846·1847

Bacchus

Bring me wine, but wine which never grew
In the belly of the grape,
Or grew on vine whose tap-roots, reaching through
Under the Andes to the Cape,
Suffered no savor of the earth to scape.

Let its grapes the morn salute
From a nocturnal root,
Which feels the acrid juice
Of Styx and Erebus;
And turns the woe of Night,
By its own craft, to a more rich delight.

We buy ashes for bread;
We buy diluted wine;
Give me of the true,—
Whose ample leaves and tendrils curled
Among the silver hills of heaven
Draw everlasting dew;
Wine of wine,
Blood of the world,
Form of forms, and mould of statures,
That I intoxicated,
And by the draught assimilated,
May float at pleasure through all natures;
The bird-language rightly spell,
And that which roses say so well.

Wine that is shed
Like the torrents of the sun
Up the horizon walls,
Or like the Atlantic streams, which run
When the South Sea calls.
Water and bread,
Food which needs no transmuting,
Rainbow-flowering, wisdom-fruiting,
Wine which is already man,
Food which teach and reason can.

Wine which music is,—
Music and wine are one,—
That I, drinking this,
Shall hear far Chaos talk with me;
Kings unborn shall walk with me;
And the poor grass shall plot and plan
What it will do when it is man.
Quickened so, will I unlock
Every crypt of every rock.

I thank the joyful juice
For all I know;—
Winds of remembering
Of the ancient being blow,
And seeming-solid walls of use
Open and flow.

Pour, Bacchus! the remembering wine;
Retrieve the loss of me and mine!
Vine for vine be antidote,
And the grape requite the lote!
Haste to cure the old despair,—
Reason in Nature's lotus drenched,

Merlin • **126 Sisters,** the three goddesses of Greek mythology who determined the course of human life Clotho spun the thread, Lachesis measured its length, and Atropos cut it off

Bacchus • **9 Styx,** in Greek mythology, the river which had to be crossed in passing to the regions of the dead • **9 Erebus,** in Greek mythology, the gloomy space through which souls passed to Hades • **21 intoxicated.** The poet is obviously speaking of a "transcendental" intoxication • **51 remembering wine,** wine which causes the soul to remember. Emerson has in mind the Platonic doctrines of pre-existence and reminiscence • **54 lote.** The eating of the fruit of the lotus caused forgetfulness (compare Tennyson's poem, "The Lotus Eaters")

The memory of ages quenched;
Give them again to shine;
Let wine repair what this undid;
And where the infection slid,
A dazzling memory revive;
Refresh the faded tints,
Recut the aged prints,
And write my old adventures with the pen
Which on the first day drew,
Upon the tablets blue,
The dancing Pleiads and eternal men.

1846·1847

Ode

Inscribed to W. H. Channing

This poem was Emerson's answer to the Rev. William Henry Channing, and other reformers, who insisted that Emerson take an active part in the movement for the abolition of slavery.

Though loath to grieve
The evil time's sole patriot,
I cannot leave
My honeyed thought
For the priest's cant
Or statesman's rant.

If I refuse
My study for their politique,
Which at the best is trick,
The angry Muse
Puts confusion in my brain.

But who is he that prates
Of the culture of mankind,
Of better arts and life?
Go, blindworm, go,
Behold the famous States
Harrying Mexico
With rifle and with knife!
Or who, with accent bolder,
Dare praise the freedom-loving mountaineer?
I found by thee, O rushing Contoocook!
And in thy valleys, Agiochook!
The jackals of the Negro-holder.

The God who made New Hampshire
Taunted the lofty land
With little men;—
Small bat and wren
House in the oak:—
If earth-fire cleave
The upheaved land, and bury the folk,
The southern crocodile would grieve.
Virtue palters; Right is hence;
Freedom praised, but hid;
Funeral eloquence
Rattles the coffin-lid.

What boots thy zeal,
O glowing friend,
That would indignant rend
The northland from the south?
Wherefore? to what good end?
Boston Bay and Bunker Hill
Would serve things still;—
Things are of the snake.

The horseman serves the horse,
The neatherd serves the neat,
The merchant serves the purse,
The eater serves his meat;
'Tis the day of the chattel,
Web to weave, and corn to grind;
Things are in the saddle,
And ride mankind.

---

17 **Mexico.** War with Mexico began in April 1846 and was formally concluded in February 1848. In New England the war was strongly opposed (compare Lowell's **Biglow Papers, First Series,** 1846) • 21 **Contoocook,** a river which rises in New Hampshire and flows into the Merrimac • 22 **Agiochook,** Indian name for the White Mountains • 23 **jackals.** The jackal, or wild dog, was once supposed to hunt game for the lion; the reference may be to the pursuit of fugitive slaves in New Hampshire, and in New England generally • 45 **neat,** cattle

There are two laws discrete,
Not reconciled,—
Law for man, and law for thing;
The last builds town and fleet,
But it runs wild,
And doth the man unking.

'Tis fit the forest fall,
The steep be graded,
The mountain tunnelled,
The sand shaded,
The orchard planted,
The glebe tilled,
The prairie granted,
The steamer built.

Let man serve law for man;
Live for friendship, live for love,
For truth's and harmony's behoof;
The state may follow how it can,
As Olympus follows Jove.

Yet do not I implore
The wrinkled shopman to my sounding woods,
Nor bid the unwilling senator
Ask votes of thrushes in the solitudes.
Every one to his chosen work;—
Foolish hands may mix and mar;
Wise and sure the issues are.
Round they roll till dark is light,
Sex to sex, and even to odd;—
The over-god
Who marries Right to Might,
Who peoples, unpeoples,—
He who exterminates
Races by stronger races,
Black by white faces,—
Knows to bring honey
Out of the lion;
Grafts gentlest scion
On pirate and Turk.

The Cossack eats Poland,
Like stolen fruit;
Her last noble is ruined,
Her last poet mute:
Straight, into double band
The victors divide;
Half for freedom strike and stand;—
The astonished Muse finds thousands at her side.

1847

Hamatreya

"Hamatreya" is based upon a passage in the Vishnu Purana (one of the sacred books of the Hindus), which Emerson transcribed in his Journals in 1845 as follows: "These and other kings who . . . have indulged the feeling that suggests 'This earth is mine—it is my son's—it belongs to my dynasty'—have all passed away. So, many who reigned before them, many who succeeded them, and many who are yet to come, have ceased or will cease to be. Earth laughs, as if smiling with autumnal flowers, to behold her Kings unable to effect the subjugation of themselves. I will repeat to you, Maitreya, the stanzas that were chanted by Earth. . . .

" 'How great is the folly of princes who are endowed with the faculty of reason, to cherish the confidence of ambition when they themselves are but foam upon the wave. . . . Foolishness has been the character of every King who has boasted, "All this earth is mine—everything is mine—it will be in my house forever,"—for he is dead. . . .'

"These were the verses, Maitreya, which Earth recited, and by listening to which ambitions fade away like snow before the sun."

Emerson's title is apparently a variant of "Maitreya" in the quoted passage.

---

52 **discrete,** separate, individual, distinct (not to be confused with "discreet") • 75 **Every one . . . work.** William James justly noted Emerson's "fidelity to the limits of his genius" • 86 **honey . . . lion.** Samson found "honey in the carcase of the lion" which he had slain. See Judges 14 5-9 • 90 **Cossack eats Poland,** a frequent occurrence. Russia had appropriated Polish territory in 1772 ("the first partition of Poland"), in 1793 ("the second partition"), and in 1795 ("the third partition"). A Polish revolution in 1830 had been suppressed by the czar

Bulkeley, Hunt, Willard, Hosmer, Meriam, Flint
Possessed the land which rendered to their toil
Hay, corn, roots, hemp, flax, apples, wool and wood.
Each of these landlords walked amidst his farm,
Saying, "'Tis mine, my children's and my name's.
How sweet the west wind sounds in my own trees!
How graceful climb those shadows on my hill!
I fancy these pure waters and the flags
Know me, as does my dog we sympathize;
And, I affirm, my actions smack of the soil."

Where are these men? Asleep beneath their grounds:
And strangers, fond as they, their furrows plough.
Earth laughs in flowers, to see her boastful boys
Earth-proud, proud of the earth which is not theirs;
Who steer the plough, but cannot steer their feet
Clear of the grave.
They added ridge to valley, brook to pond,
And sighed for all that bounded their domain;
"This suits me for a pasture; that's my park;
We must have clay, lime, gravel, granite-ledge,
And misty lowland, where to go for peat.
The land is well,—lies fairly to the south.
'Tis good, when you have crossed the sea and back,
To find the sitfast acres where you left them."
Ah! the hot owner sees not Death, who adds
Him to his land, a lump of mould the more.
Hear what the Earth says:—

EARTH-SONG

"Mine and yours;
Mine, not yours.
Earth endures;
Stars abide—
Shine down in the old sea;
Old are the shores;
But where are old men?
I who have seen much,
Such have I never seen.

"The lawyer's deed
Ran sure,
In tail,
To them, and to their heirs
Who shall succeed,
Without fail,
Forevermore.

"Here is the land,
Shaggy with wood,
With its old valley,
Mound and flood.
But the heritors?—
Fled like the flood's foam.
The lawyer, and the laws,
And the kingdom,
Clean swept herefrom.

"They called me theirs,
Who so controlled me;
Yet every one
Wished to stay, and is gone,
How am I theirs,
If they cannot hold me,
But I hold them?"

When I heard the Earth-song
I was no longer brave;
My avarice cooled
Like lust in the chill of the grave.

1847

Give All to Love

Give all to love;
Obey thy heart;
Friends, kindred, days,
Estate, good-fame,
Plans, credit and the Muse,—
Nothing refuse.

'Tis a brave master;
Let it have scope:

Hamatreya • 1 Bulkeley . . . Flint, first settlers of Concord • 12 fond, foolish • 23 'Tis . . . them. These lines might have been written by Robert Frost • 39 In tail, entail, designating the possession of property

Follow it utterly,
Hope beyond hope:
High and more high
It dives into noon,
With wing unspent,
Untold intent;
But it is a god,
Knows its own path
And the outlets of the sky.

It was never for the mean;
It requireth courage stout.
Souls above doubt
Valor unbending,
It will reward,—
They shall return
More than they were,
And ever ascending.

Leave all for love;
Yet, hear me, yet,
One word more thy heart behoved,
One pulse more of firm endeavor,—
Keep thee to-day,
To-morrow, forever,
Free as an Arab
Of thy beloved.

Cling with life to the maid;
But when the surprise,
First vague shadow of surmise
Flits across her bosom young,
Of a joy apart from thee,
Free be she, fancy-free;
Nor thou detain her vesture's hem,
Nor the palest rose she flung
From her summer diadem.

Though thou loved her as thyself,
As a self of purer clay,
Though her parting dims the day,
Stealing grace from all alive;
Heartily know,
When half-gods go,
The gods arrive.

1847

Days

"Days" is Emerson's version of a favorite theme of the early Puritans, who often preached on "redeeming the time."

Daughters of Time, the hypocritic Days,
Muffled and dumb like barefoot dervishes,
And marching single in an endless file,
Bring diadems and fagots in their hands.
To each they offer gifts after his will,
Bread, kingdoms, stars, and sky that holds them all.
I, in my pleached garden, watched the pomp,
Forgot my morning wishes, hastily
Took a few herbs and apples, and the Day
Turned and departed silent. I, too late,
Under her solemn fillet saw the scorn.

1852? • 1857

Brahma

"Brahma" is the most notable expression of Hindu religious thought in Emerson's writings. Brahma is the underlying, unchanging reality; it can best be understood in contrast with Maya, the changing, illusory world of appearance, as shown in the following passage from the Hindu scriptures (quoted in Arthur Christy, **The Orient in American Transcendentalism**, p. 91): "Brahma is without attribute and form, Maya is endowed with both; Brahma is infinite, Maya finite; Brahma is immaculate and serene, Maya fleeting and restless; Brahma is without adjuncts, Maya is full of them; Maya is visible, Brahma invisible; Maya perceptible, Brahma imperceptible; Maya perishable, Brahma imperishable; Maya groweth, Brahma waxeth not; Maya diminisheth, Brahma waneth not; Maya appealeth to the ignorant, Brahma attracts him not; Maya is born, Brahma is birthless; Maya dieth, Brahma is deathless; Maya descendeth into cognition, Brahma is beyond cognition; Maya fructifieth, Brahma doth not, Maya dissolveth, Brahma is indissoluble; Maya palleth, Brahma is

Give . . . Love • 48 When . . . arrive. Compare in the concluding paragraph of the essay on "Friendship": "True love transcends the unworthy object and dwells and broods on the eternal . . ."

a joy forever; Maya changeth, Brahma is immutable; Maya acteth, Brahma is beyond all activity; Maya assumeth various forms, Brahma is formless; Maya is . . . manifold, Brahma is one and eternal. . . . Maya is spread everywhere enveloping the Brahma, the sage alone can pierce through the mist."

If the red slayer think he slays,
  Or if the slain think he is slain,
They know not well the subtle ways
  I keep, and pass, and turn again.

Far or forgot to me is near;
  Shadow and sunlight are the same;
The vanished gods to me appear;
  And one to me are shame and fame.

They reckon ill who leave me out;
  When me they fly, I am the wings;
I am the doubter and the doubt,
  And I the hymn the Brahmin sings.

The strong gods pine for my abode,
  And pine in vain the sacred Seven;
But thou, meek lover of the good!
  Find me, and turn thy back on heaven.

1856·1857

Terminus

The poem expresses an extraordinarily clear recognition of failing powers. Emerson was correct in thinking that at sixty-three he had reached and passed the peak of his achievement. He lived on for sixteen years after "Terminus" without adding anything significant to his literary output. A few months before his death, he lost his memory completely.

The poem shows a strong vein of realism and Yankee common sense.

It is time to be old,
To take in sail:—
The god of bounds,
Who sets to seas a shore,
Came to me in his fatal rounds,
And said: "No more!
No farther shoot
Thy broad ambitious branches, and thy root.
Fancy departs: no more invent;
Contract thy firmament
To compass of a tent.
There's not enough for this and that,
Make thy option which of two;
Economize the failing river,
Not the less revere the Giver,
Leave the many and hold the few.
Timely wise accept the terms,
Soften the fall with wary foot;
A little while
Still plan and smile,
And,—fault of novel germs,—
Mature the unfallen fruit.
Curse, if thou wilt, thy sires,
Bad husbands of their fires,
Who when they gave thee breath,
Failed to bequeath
The needful sinew stark as once,
The Baresark marrow to thy bones,
But left a legacy of ebbing veins,
Inconstant heat and nerveless reins,—
Amid the Muses, left thee deaf and dumb,
Amid the gladiators, halt and numb."

As the bird trims her to the gale,
I trim myself to the storm of time,
I man the rudder, reef the sail,
Obey the voice at eve obeyed at prime.
"Lowly faithful, banish fear,
Right onward drive unharmed;
The port, well worth the cruise, is near,
And every wave is charmed."

1866·1867

Brahma • **8 shame and fame.** Emerson intended an opposition· bad report and good report. The line must mean, "Evil and Good are to me one and the same." Emerson is said to have suggested to a puzzled reader the substitution of "Jehovah" for 'Brahma," and E. W. Emerson (**Poems**, Centenary Edition, p. 467) tells with approval the story of the child who said that the poem means simply "God everywhere." These suggestions are seriously misleading. To Jehovah, or to the God of the Christian Bible, Good and Evil are not the same • **14 sacred Seven,** the highest saints of the Hindu hierarchy

Terminus • **3 The god of bounds.** Terminus was the Roman god of boundaries • **5 fatal,** appointed by fate • **21 fault of novel,** in the lack of new • **30 nerveless reins,** weak back

Henry David Thoreau

1817 • 1862

Henry David Thoreau was born in Concord, Massachusetts, July 12, 1817. The time and place of his birth pleased him enormously: "I have never got over my surprise that I should have been born into the most estimable place in all the world, and in the very nick of time, too." He was graduated without distinction from Harvard College in 1837, the year of *The American Scholar.* After graduation, he assisted his brother John for a while in teaching a private school. He also helped his father manufacture lead pencils in the 1840's; but when their product equaled, or perhaps surpassed, the best pencils on the market, he gave up pencil making because of a desire for fresh experiences. In 1839 he and John went on a famous journey, the literary record of which, *A Week on the Concord and Merrimack Rivers,* appeared ten years later. About the time of their journey together, both Henry and John fell in love with Ellen Sewall, who, perhaps wisely, refused them both.

Thoreau was a frequent contributor to *The Dial* from 1840 to 1844. In 1841, and again in 1847-1848, he was a member of Emerson's household, doing odd jobs; in 1842 John died; in 1843 Henry was a tutor in the family of William Emerson, a brother of Ralph Waldo, on Staten Island. In 1838 he had delivered before the Concord Lyceum his first lecture, in which he described his neighbors as "newly shingled and clapboarded, but if you knock, no one is at home." He continued to lecture for many years; indeed, much of his writing, like Emerson's,

was done with the intention of using it as lecture material. Mr. Canby records lectures not only in Concord but in Boston, Salem, Portland, Bangor, Providence, Philadelphia, New Bedford, and Amherst (New Hampshire); at the last-named place, Thoreau lectured in December 1856 in the basement of the orthodox church, and, as he commented later, "helped to undermine it." But despite a good many attempts, he was not very successful as a lecturer; much less successful and less popular than Emerson, to whom he remarked, with a little bitterness, that "whatever succeeded with the audience was bad." He concluded in 1858 that "audiences go to the Lyceum to suck a sugar-plum."

On July 4, 1845, Thoreau began his famous residence at Walden Pond. "I went to the woods," he explains in a great passage in *Walden,* "because I wished to live deliberately, to front only the essential facts of life. . . ." On September 6, 1847, he left Walden, not from a sense of failure or disappointment but, once more, because of a desire to explore new modes of living. "I left the woods," he wrote in the concluding chapter of his book, "for as good a reason as I went there. Perhaps it seemed to me that I had several more lives to live and could not spare any more time for that one. It is remarkable how easily and insensibly we fall into a particular route and make a beaten track for ourselves. I had not lived there a week before my feet wore a path from my door to the pond-side. . . . How worn and dusty, then, must be the highways of the world, how deep the ruts of tradition and conformity!" *Walden,* published in 1854, is the immortal record of Thoreau's rich, elemental experience. It is a mistake to think of Thoreau as a hermit during the Walden period, though he has frequently been called that. While he lived in the woods, he was often in the village, he received visitors at the Pond, and he continued to do, in and around Concord, the various odd jobs at which he was so adept: fence building, house painting, carpentering, gardening, berry picking, surveying. His aim was always, in his best phrase, to "adventure on life."

In 1846, during his residence at Walden, Thoreau was arrested because of his refusal to pay the poll tax and spent perforce a night in the Concord jail. The experience itself, as he tells us in "Civil Disobedience" (1849), was "novel and interesting enough." Through the grating of his prison cell, he saw his native village from a fresh point of view. The reason for his rebellion was his opposition to Negro slavery and the movement to increase slave territory in the Southwest. He persisted courageously in this opposition. He helped at least one fugitive slave to evade the Boston police and escape into Canada (see Thoreau's *Journal,* October 1, 1851). Along with Emerson, he gave active support to John Brown. In his *Plea for Captain John Brown,* delivered in the Concord Town Hall, October 30, 1859, when Brown was under sentence of death, Thoreau likened him to Cromwell and the early New England Puritans. When the selectmen of the village refused to sanction a memorial service to Brown, Thoreau rang the bell of the Town Hall himself.

"I have traveled a good deal in Concord," Thoreau wrote in *Walden;* he traveled a good deal in other places, too. There were three excursions to the Maine Woods (in 1846, 1853, and 1857), and four excursions to Cape Cod (in 1849, 1850, 1855, and 1857). He spent a week in Canada in 1850 with Ellery Channing, a Concord friend and neighbor. He frequently journeyed to Monadnock and the White Mountains. These excursions furnished material for much writing, which appeared in part in magazines during Thoreau's lifetime and was collected after his death (*Excursions,* 1863; *The Maine Woods,* 1864; *Cape Cod,* 1865). In 1856 he went with another Concord friend, Bronson Alcott, to New York, where he saw Whitman; shortly after the visit, he wrote to a friend, "That Walt Whitman is the most interesting fact to me at present." In 1861 he traveled as far west as Minnesota; but his health was already failing. He died of tuberculosis in Concord, May 6, 1862, before he had reached his forty-fifth birthday. When asked in his last hours by his Aunt Louisa if he had "made his peace with God," he replied, "I have never quarrelled with Him."

It is only in comparatively recent years that Thoreau has attained his present high reputation in American literature. For more than a half-century after his death, he was very generally regarded as an interesting eccentric and one of the minor Emersonians. This low estimate may be attributed in part to the influence of the derogatory essays of James Russell Lowell and Robert Louis Stevenson. Lowell, the cosmopolite, cleverly ridiculed Thoreau's provincialism and "morbid self-consciousness" ("Thoreau," *My Study Windows,* 1871). Stevenson, *bon vivant* and man of the world, objected that "Thoreau is

dry, priggish, and selfish,"—"in one word, a skulker" ("Henry David Thoreau," *Familiar Studies of Men and Books,* 1882). The growth of Thoreau's fame in the third and fourth decades of the present century has no doubt been owing not only to a recognition of his fine literary qualities but also to various special appeals which his works make to modern readers. His lessons in simplicity and economy have appealed to those who are harassed by the complexity and expense of modern life. His almost primitive intimacy with nature has come home to a generation whose mode of life is largely artificial and divorced from natural influences. His sturdy, rebellious individualism has had a special attraction for members of an increasingly regimented society. His indigenousness, deeply rooted in a particular place, has been a warning and a rebuke to a generation so mobile and migratory that many people can scarcely be said to have roots anywhere. In short, we read Thoreau for those values which we have lost and which more and more seem necessary to our health and vigor and peace of mind.

Civil Disobedience

"Civil Disobedience" was first published in Aesthetic Papers (1849), a collection of essays edited by Elizabeth Peabody. "'Civil Disobedience' attracted no attention at the time, but has since gone round the world. It was Gandhi's source-book in his Indian campaign for Civil Resistance, and has been read and pondered by thousands who hope to find some way to resist seemingly irresistible force" (Canby, Thoreau, p. 235).

I heartily accept the motto,—"That government is best which governs least," and I should like to see it acted up to more rapidly and systematically. Carried out, it finally amounts to this, which also I believe,—"That government is best which governs not at all;" and when men are prepared for it, that will be the kind of government which they will have. Government is at best but an expedient; but most governments are usually, and all governments are sometimes, inexpedient. The objections which have been brought against a standing army, and they are many and weighty, and deserve to prevail, may also at last be brought against a standing government. The standing army is only an arm of the standing government. The government itself, which is only the mode which the people have chosen to execute their will, is equally liable to be abused and perverted before the people can act through it. Witness the present Mexican war, the work of comparatively a few individuals using the standing government as their tool; for, in the outset, the people would not have consented to this measure.

This American government,—what is it but a tradition, though a recent one, endeavoring to transmit itself unimpaired to posterity, but each instant losing some of its integrity? It has not the vitality and force of a single living man; for a single man can bend it to his will. It is a sort of wooden gun to the people themselves. But it is not the less necessary for this; for the people must have some complicated machinery or other, and hear its din, to satisfy that idea of government which they have. Governments show thus how successfully men can be

---

1 That . . . least. The idea is Jeffersonian. In his First Inaugural (1801), Jefferson advocated "a wise and frugal government, which shall restrain men from injuring one another, shall leave them otherwise free to regulate their own pursuits of industry and improvement, and shall not take from the mouth of labor the bread it has earned" • **17 Mexican war.** The Mexican War was unpopular in New England, where it was regarded as a device of the Southern Democrats to increase slave territory. Compare Lowell's protest in The Biglow Papers, First Series

imposed on, even impose on themselves, for their own advantage. It is excellent, we must all allow. Yet this government never of itself furthered any enterprise, but by the alacrity with which it got out of its way. *It* does not keep the country free. *It* does not settle the West. *It* does not educate. The character inherent in the American people has done all that has been accomplished; and it would have done somewhat more, if the government had not sometimes got in its way. For government is an expedient by which men would fain succeed in letting one another alone; and, as has been said, when it is most expedient, the governed are most let alone by it. Trade and commerce, if they were not made of India-rubber, would never manage to bounce over the obstacles which legislators are continually putting in their way; and, if one were to judge these men wholly by the effects of their actions and not partly by their intentions, they would deserve to be classed and punished with those mischievous persons who put obstructions on the railroads.

But, to speak practically and as a citizen, unlike those who call themselves no-government men, I ask for, not at once no government, but *at once* a better government. Let every man make known what kind of government would command his respect, and that will be one step toward obtaining it.
