I answer that, As we have said already (AA. 5, 6, 7), all the powers of the soul belong to the soul alone as their principle. But some powers belong to the soul alone as their subject; as the intellect and the will. These powers must remain in the soul after the destruction of the body But other powers are in the composite as their subject, as all the powers of the sensitive and nutritive parts. Now accidents cannot remain after the destruction of the subject. Therefore, when the composite is destroyed, such powers do not remain actually; but they remain virtually in the soul, as in their principle or root.

So it is false that, as some say,[6] these powers remain in the soul even after the corruption of the body. It is much more false that, as they say also, the acts of these powers remain in the separated soul,[7] because these powers have no act apart from the corporeal organ.

[1] Pseudo-Augustine (Alcher of Clairvaux), chap. 15 (PL 40, 791).
[2] *Soul*, I, 4 (408^b21).
[3] *Memory and Reminiscence*, 1 (450^a12).
[4] PL 34, 480.
[5] Gennadius. Chap 29 (PL 58, 985).
[6] Pseudo-Augustine, *loc cit.*
[7] *Ibid.*, chap. 30 (PL 40, 800).

Reply Obj. 1. That book has no authority, and so what is there written can be despised with the same facility as it was said; although we may say that the soul takes with itself these powers not actually but virtually.

Reply Obj 2 These powers which we say do not actually remain in the separate soul, are not the properties of the soul alone, but of the composite

Reply Obj 3. These powers are said not to be weakened when the body becomes weak because the soul remains unchangeable, and is the virtual principle of these powers

Reply Obj 4 The recollection spoken of there is to be taken in the same way as Augustine (*De Trin.* x, 11; xiv, 7)[1] places memory in the mind, not as a part of the sensitive soul.

Reply Obj. 5. In the separate soul, sorrow and joy are not in the sensitive, but in the intellectual appetite, as in the angels

Reply Obj 6. Augustine in that passage is speaking as inquiring, not as asserting Therefore he retracted some things which he had said there (*Retract* ii, 24).[2]

QUESTION LXXVIII

OF THE POWERS OF THE SOUL IN PARTICULAR

(In Four Articles)

WE next treat of the powers of the soul in particular The theologian, however, has only to inquire in particular of the intellectual and appetitive powers, in which the virtues reside And since the knowledge of these powers depends to a certain extent on the other powers, our consideration of the powers of the soul taken in particular will be divided into three parts. first, we shall consider those powers which are preliminary to the intellect; secondly, the intellectual powers (Q LXXIX); thirdly, the appetitive powers (Q LXXX)

Under the first head there are four points of inquiry: (1) The powers of the soul considered generally. (2) The various species of the vegetative part (3) The exterior senses (4) The interior senses.

ARTICLE 1. *Whether There Are To Be Distinguished Five Genera of Powers in the Soul?*

We proceed thus to the First Article: It would seem that there are not to be distinguished five genera of powers in the soul—namely, vegetative, sensitive, appetitive, locomotive, and intellectual.

Objection 1. For the powers of the soul are called its parts But only three parts of the soul are commonly assigned by everybody—namely, the vegetative soul, the sensitive soul, and the rational soul. Therefore there are only three genera of powers in the soul, and not five.

Obj. 2. Further, the powers of the soul are the principles of its vital operations. Now, in four ways is a thing said to live. For the Philosopher says,[3] "In several ways a thing is said to live, and even if only one of these is present, the thing is said to live; as intellect and sense, local movement and rest, and lastly, movement of decrease and increase due to nourishment." Therefore there are only four genera of powers of the soul, as the appetitive is excluded

Obj 3. Further, a special kind of soul ought not to be assigned as regards what is common to all the powers. Now desire is common to each power of the soul. For sight desires an appropriate visible object; hence we read (Ecclus. 40 22): *The eye desireth favour and beauty, but more than these green sown fields.* In the same way every other power desires its appropriate object. Therefore the appetitive power should not be made a special genus of the powers of the soul.

Obj. 4. Further, the moving principle in animals is sense, intellect, or appetite, as the Philosopher says [4] Therefore the motive power should not be added to the above as a special genus of soul

On the contrary, The Philosopher says,[5] "The powers are the vegetative, the sensitive, the appetitive, movement according to place, and the intellectual "

I answer that, There are five genera of powers of the soul, as above numbered. Of these, three are called souls and four are called modes of living.

The reason of this diversity lies in the various souls being distinguished accordingly as the operation of the soul surpasses the operation of the corporeal nature in various ways; for the whole corporeal nature is subject to the soul, and is related to it as its matter and instrument. There exists, therefore, an operation of the soul which so far exceeds the corporeal nature that it is not even performed by any corporeal organ; and such is the operation of the rational soul. Below this, there is another operation of the

[1] PL 42, 983, 1043.
[2] PL 32, 640.
[3] *Soul,* II, 2 (413[a]22).
[4] *Ibid.,* III, 10 (433[b]9).
[5] *Ibid.,* II, 3 (414[a]31).

soul, which is indeed performed through a corporeal organ, but not through a corporeal quality, and this is the operation of the sensitive soul; for though hot and cold, wet and dry, and other such corporeal qualities are required for the work of the senses, yet they are not required in such a way that the operation of the senses takes place by virtue of such qualities, but only for the proper disposition of the organ The lowest of the operations of the soul is that which is performed by a corporeal organ, and by virtue of a corporeal quality. Yet this surpasses the operation of the corporeal nature, because the movements of bodies are caused by an extrinsic principle, while these operations are from an intrinsic principle; for this is common to all the operations of the soul, since every animate thing, in some way, moves itself. Such is the operation of the vegetative soul; for digestion, and what follows, is caused instrumentally by the action of heat, as the Philosopher says.[1]

Now the powers of the soul are distinguished generically by their objects. For the higher a power is, the more universal is the object to which it extends, as we have said above (Q. LXXVII, A. 3, Ans. 4). But the object of the soul's operation may be considered in a threefold order. For in the soul there is a power the object of which is only the body that is united to that soul. The powers of this genus are called vegetative, for the vegetative power acts only on the body to which the soul is united There is another genus in the powers of the soul, which genus regards a more universal object—namely, every sensible body, not only the body to which the soul is united. And there is yet another genus in the powers of the soul, which genus regards a still more universal object—namely, not only the sensible body, but all being in general. From this it is evident that the latter two genera of the soul's powers have an operation in regard not only to that which is united to them, but also to something extrinsic Now, since whatever operates must in some way be united to the object about which it operates, it follows of necessity that this something extrinsic, which is the object of the soul's operation, must be related to the soul in a twofold manner. First, in so far as this something extrinsic has a natural aptitude to be united to the soul, and to be by its likeness in the soul. In this way there are two kinds of powers—namely, the sensitive in regard to the less common object—the sensible body, and the intellectual, in regard to the most common object—universal being. Secondly, according as the soul itself has an inclination and tendency to the something extrinsic. And in this way there are again two kinds of powers in the soul: one—the appetitive—in respect of which the soul is related to something extrinsic as to an end, which is first in the intention; the other—the power of local movement—in respect of which the soul is related to something extrinsic as to the term of its operation and movement; for every animal is moved for the purpose of realizing its desires and intentions.

The modes of living are distinguished according to the degrees of living things. There are some living things in which there exists only vegetative power, as the plants. There are others in which with the vegetative there exists also the sensitive, but not the power of local movement; such are immovable animals, as shellfish. There are others which besides this have powers of local movement, as perfect animals, which require many things for their life, and consequently movement to seek necessaries of life from a distance. And there are some living things which with these have intellectual power—namely, men. But the appetitive power does not constitute a degree of living things; because "wherever there is sense there is also appetite."[2]

Thus the *first two objections* are hereby solved.

Reply Obj. 3. The natural appetite is that inclination which each thing has, of its own nature, for something; hence by its natural appetite each power desires something suitable to itself But the animal appetite results from the form apprehended; this sort of appetite requires a special power of the soul—apprehension alone does not suffice. For a thing is desired as it exists in its own nature, whereas in the apprehensive power it does not exist according to its own nature, but according to its likeness. Hence it is clear that sight desires naturally a visible object for the purpose of its act only—namely, for the purpose of seeing; but the animal by the appetitive power desires the thing seen not merely for the purpose of seeing it, but also for other purposes. But if the soul did not require things perceived by the senses, except on account of the actions of the senses, that is, for the purpose of sensing them, there would be no need for a special genus of appetitive powers, since the natural appetite of the powers would suffice.

Reply Obj. 4. Although sense and appetite are principles of movement in perfect animals, yet sense and appetite, as such, are not sufficient to

[1] *Soul*, II, 4 (416^{b}25).

[2] *Ibid.*, II, 3 (414^{b}1).

cause movement unless another power be added to them; for immovable animals have sense and appetite, and yet they have not the power of motion. Now this moving power is not only in the appetite and sense as commanding the movement, but also in the parts of the body, to make them obey the appetite of the soul which moves them. Of this we have a sign in the fact that when the members are deprived of their natural disposition, they do not move in obedience to the appetite.

ARTICLE 2. *Whether the Parts of the Vegetative Soul Are Fittingly Described as the Nutritive, Augmentative, and Generative?*

We proceed thus to the Second Article: It would seem that the parts of the vegetative soul are not fittingly described—namely, the nutritive, augmentative, and generative.

Objection 1. For these are called natural forces. But the powers of the soul are above the natural forces Therefore we should not class the above forces as powers of the soul

Obj. 2 Further, we should not assign a particular power of the soul to that which is common to living and non-living things. But generation is common to all things that can be generated and corrupted, whether living or not living. Therefore the generative force should not be classed as a power of the soul.

Obj. 3 Further, the soul is more powerful than the body. But the body by the same power gives species and quantity; much more, therefore, does the soul. Therefore the power of growth of the soul is not distinct from the generative power.

Obj 4 Further, everything is preserved in being by that whereby it has being But the generative power is that whereby a living thing acquires being Therefore by the same power the living thing is preserved. Now the nutritive force is directed to the preservation of the living thing,[1] being "a power which is capable of preserving whatever receives it." Therefore we should not distinguish the nutritive power from the generative.

On the contrary, The Philosopher says[2] that the operations of this soul are "generation, the use of food, and growth."

I answer that, The vegetative part has three powers. For the vegetative part, as we have said (A. 1), has for its object the body itself, living by the soul, for which body a threefold operation of the soul is required. One is that whereby it acquires being, and to this is directed the generative power. Another is that whereby the living body acquires its due quantity; to this is directed the power of growth. Another is that whereby the body of a living thing is preserved in its being and in its due quantity; to this is directed the nutritive power.

We must, however, observe a difference among these powers The nutritive power and the power of growth have their effect where they exist, since the body itself united to the soul grows and is preserved by the growth and nutritive powers which exist in one and the same soul. But the generative power has its effect not in one and the same body but in another; for a thing cannot generate itself. Therefore the generative power, in a way, approaches to the dignity of the sensitive soul, which has an operation extending to extrinsic things, although in a more excellent and more universal manner; for that which is highest in an inferior nature approaches to that which is lowest in the higher nature, as is made clear by Dionysius (*Div. Nom.* vii)[3] Therefore, of these three powers, the generative has the greater finality, nobility, and perfection, as the Philosopher says,[4] for "it belongs to a thing which is already perfect to produce another like to itself." And the generative power is served by the growth and nutritive powers; and the power of growth by the nutritive.

Reply Obj. 1. Such forces are called natural both because they produce an effect like that of nature, which also gives being, quantity, and preservation (although the above forces accomplish these things in a more perfect way), and because those forces perform their actions instrumentally, through the active and passive qualities, which are the principles of natural actions.

Reply Obj 2. Generation of inanimate things is entirely from an extrinsic source, but the generation of living things is in a higher way, through something in the living thing itself, which is the seed containing the forming principle of the body. Therefore there must be in the living thing a power that prepares this seed. And this is the generative power.

Reply Obj. 3. Since the generation of living things is from a seed, it is necessary that in the beginning an animal be generated small in size. For this reason it must have a power in the soul whereby it is brought to its appropriate size. But the inanimate body is generated from determinate matter by an extrinsic agent. Therefore it

[1] *Ibid.*, II, 4 (416^{b}14).
[2] *Ibid.*, II, 4 (415^{a}25; ^{b}23).
[3] Sect. 3 (PG 3, 872).
[4] *Soul*, II, 4 (416^{b}24).

receives at once its nature and its quantity, according to the condition of the matter.

Reply Obj. 4. As we have said above (A. 1), the operation of the vegetative principle is performed by means of heat, the property of which is to consume humidity. Therefore, in order to restore the humidity thus lost, the nutritive power is required, whereby the food is changed into the substance of the body. This is also necessary for the action of the growth and generative powers.

ARTICLE 3. *Whether the Five Exterior Senses Are Properly Distinguished?*

We proceed thus to the Third Article: It would seem inaccurate to distinguish five exterior senses.

Objection 1. For sense can know accidents. But there are many kinds of accidents. Therefore, as powers are distinguished by their objects, it seems that the senses are multiplied according to the number of the kinds of accidents.

Obj. 2. Further, magnitude and shape, and other things which are called common sensibles, are not sensibles by accident, but are contradistinguished from them by the Philosopher.[1] Now the diversity of objects, as such, diversifies the powers. Since, therefore, magnitude and shape are further from colour than sound is, it seems that there is much more need for another sensitive power that can grasp magnitude or shape than for that which grasps colour or sound.

Obj. 3. Further, one sense is related to one contrariety; as sight regards white and black. But the sense of touch grasps several contrarieties, such as hot or cold, damp or dry, and the like. Therefore it is not a single sense but several. Therefore there are more than five senses.

Obj. 4. Further, a species is not divided against its genus. But taste is a kind of touch. Therefore it should not be classed as a distinct sense from touch.

On the contrary, The Philosopher says,[2] "There is no other besides the five senses."

I answer that, The reason of the distinction and number of the senses has been assigned by some to the organs in which one or other of the elements preponderate, as water, air, or the like.[3] By others it has been assigned to the medium, which is either in conjunction or extrinsic, and is either water or air, or the like.[4] Others have ascribed it to the various natures of the sensible qualities, according as such quality belongs to a simple body or results from complexity.[5]

But none of these explanations is fitting. For the powers are not for the organs, but the organs for the powers. Therefore there are not various powers for the reason that there are various organs, but nature has provided a variety of organs so that they might be adapted to various powers. In the same way nature provided various mediums for the various senses, according to their fitness for the acts of the powers. And to know the natures of sensible qualities does not pertain to the senses but to the intellect.

The reason of the number and distinction of the exterior senses must therefore be ascribed to that which belongs to the senses properly and *per se.* Now, sense is a passive power, and is naturally changed by the exterior sensible. Therefore the exterior cause of such change is what is *per se* perceived by the sense, and according to the diversity of that exterior cause the sensitive powers are diversified.

Now, change is of two kinds, one natural, the other spiritual Natural change takes place by the form of the thing which causes the change being received, according to its natural being, into the thing changed, as heat is received into the thing heated. But spiritual change takes place by the form of the thing which causes the change being received according to a spiritual mode of being into the thing changed, as the form of colour is received into the pupil which does not thereby become coloured Now, for the operation of the senses, a spiritual change is required, whereby an intention of the sensible form is effected in the sensile organ Otherwise, if a natural change alone sufficed for the sense's action, all natural bodies would feel when they undergo alteration.

But in some senses we find spiritual change only, as in sight, while in others we find not only a spiritual but also a natural change, either on the part of the object only, or likewise on the part of the organ. On the part of the object we find natural change as to place in sound, which is the object of hearing; for sound is caused by percussion and commotion of the air. And we find natural change by alteration, in odour which is the object of smelling; for in order to exhale an odour a body must be in a measure altered by heat. On the part of the organ, natural change

[1] *Soul,* II, 6 (418[a]8).
[2] *Ibid.,* III, 1 (424[b]22).
[3] Cf. Albert the Great, *Summa de Creatur.,* III, Q. XXXIV, A. 4 (BO XXXV, 304). Cf. also Alexander of Hales, *Summa Theol.,* I–II, 356 (QR II, 432).
[4] See preceding note.
[5] Cf. Bonaventure, *Itinerarium Mentis in Deum,* chap. 2 (QR V, 300).

takes place in touch and taste; for the hand that touches something hot becomes hot, while the tongue is moistened by the humidity of the flavoured morsel. But the organs of smelling and hearing are not changed in their respective operations by any natural change unless accidentally.

Now, the sight, which is without natural change either in its organ or in its object, is the most spiritual, the most perfect, and the most universal of all the senses After this comes the hearing and then the smell, which require a natural change on the part of the object; but local motion is more perfect than, and naturally prior to, the motion of alteration, as the Philosopher proves.[1] Touch and taste are the most material of all, of the distinction of which we shall speak later on (Ans. 3, 4). Hence it is that the three other senses are not exercised through a medium united to them, to obviate any natural change in their organ, as happens as regards these two senses.

Reply Obj. 1. Not every accident has in itself a power of change, but only qualities of the third species, according to which alteration takes place. Therefore only qualities of this kind are the objects of the senses; because "the senses are affected by the same things whereby inanimate bodies are affected," as stated in the *Physics*.[2]

Reply Obj. 2. Size, shape, and the like, which are called common sensibles, are midway between accidental sensibles and proper sensibles, which are the objects of the senses. For the proper sensibles first, and of their very nature, change the senses, since they are qualities that cause alteration. But the common sensibles are all reducible to quantity. As to size and number, it is clear that they are species of quantity Shape is a quality about quantity, since the notion of shape consists in fixing the bounds of magnitude. Movement and rest are sensed according as the subject is affected in one or more ways in the magnitude of the subject or of its local distance, as in the movement of growth or of local motion, or again, according as it is affected in some sensible qualities, as in the movement of alteration; and thus to sense movement and rest is, in a way, to sense one thing and many. Now quantity is the proximate subject of the qualities that cause alteration, as surface is of colour. Therefore the common sensibles do not move the senses first and of their own nature, but by reason of the sensible quality; as the surface by reason of colour. Yet they are not accidental sensibles, for they produce a certain variety in the change of the senses. For sense is changed differently by a large and by a small surface, since whiteness itself is said to be great or small, and therefore is divided according to its proper subject.

Reply Obj. 3. As the Philosopher seems to say,[3] the sense of touch is generically one, but is divided into several specific senses, and for this reason it extends to various contrarieties; which senses, however, are not separate from one another in their organ, but are spread throughout the whole body, so that their distinction is not evident. But taste, which perceives the sweet and the bitter, accompanies touch in the tongue, but not in the whole body; so it is easily distinguished from touch. We might also say that all those contrarieties agree, each in some proximate genus, and all in a common genus, which is the object of touch according to its common notion. Such common genus is, however, unnamed, just as the proximate genus of hot and cold is unnamed.

Reply Obj. 4. The sense of taste, according to a saying of the Philosopher,[4] is a kind of touch existing in the tongue only It is not distinct from touch in genus, but only from the species of touch distributed in the body But if touch is one sense only, on account of the common notion of its object, we must say that taste is distinguished from touch by reason of a different notion of change For touch involves a natural, and not only a spiritual, change in its organ, by reason of the quality which is its proper object. But the organ of taste is not necessarily changed by a natural change according to the quality which is its proper object, so that the tongue itself becomes sweet or bitter, but by reason of a preceding quality on which is based the flavour, which quality is moisture, the object of touch.

ARTICLE 4 *Whether the Interior Senses Are Suitably Distinguished?*

We proceed thus to the Fourth Article: It would seem that the interior senses are not suitably distinguished.

Objection 1. For the common is not divided against the proper. Therefore the common sense should not be numbered among the interior sensitive powers in addition to the proper exterior senses.

Obj. 2. Further, there is no need to assign an interior power of apprehension when the proper and exterior sense suffices. But the proper and

[1] *Physics*, VIII, 7 (260^a28).
[2] Aristotle, VII, 2 (244^b12).
[3] *Soul*, II, 11 (422^b17).
[4] *Ibid.*, II, 9 (421^a18); also II, 11 (423^a17).

exterior senses suffice for us to judge of sensible things, for each sense judges of its proper object. In like manner they seem to suffice for the perception of their own actions, for since the action of the sense is, in a way, between the power and its object, it seems that sight must be much more able to perceive its own vision, as being nearer to it, than the colour; and in like manner with the other senses. Therefore for this there is no need to assign an interior power, called the common sense.

Obj. 3. Further, according to the Philosopher[1] the imagination and the memory are passions of the "first sensitive." But passion is not divided against its subject. Therefore memory and imagination should not be assigned as powers distinct from the senses.

Obj. 4. Further, the intellect depends on the senses less than any power of the sensitive part. But the intellect knows nothing but what it receives from the senses; hence we read[2] that "those who lack one sense lack one kind of knowledge" Therefore much less should we assign to the sensitive part a power which they call the estimative power, for the perception of intentions which the sense does not perceive.

Obj. 5. Further, the action of the cogitative power, which consists in comparing, uniting, and dividing, and the action of the reminiscence, which consists in the use of a kind of syllogism for the sake of inquiry, is not less distant from the actions of the estimative and memorative powers, than the action of the estimative is from the action of the imagination. Therefore either we must add the cogitative and reminiscing to the estimative and memorative powers, or the estimative and memorative powers should not be made distinct from the imagination.

Obj. 6. Further, Augustine (*Gen ad lit.* xii, 6, 7, 24)[3] describes "three kinds of vision; namely, corporeal, which is an action of the sense, spiritual, which is an action of the imagination or phantasy, and intellectual, which is an action of the intellect." Therefore there is no interior power between the sense and intellect besides the imagination.

On the contrary, Avicenna (*De Anima* iv, 1)[4] assigns five interior sensitive powers; namely, common sense, phantasy, imagination, and the estimative and memorative powers.

I answer that, As nature does not fail in necessary things, there must be as many actions of the sensitive soul as suffice for the life of a perfect animal. If any of these actions cannot be reduced to one principle, they must be assigned to different powers, since a power of the soul is nothing else than the proximate principle of the soul's operation.

Now we must observe that for the life of a perfect animal, the animal should apprehend a thing not only at the actual time of sensation, but also when it is absent. Otherwise, since animal motion and action follow apprehension, an animal would not be moved to seek something absent, the contrary of which we may observe specially in perfect animals, which are moved by progression, for they are moved towards something apprehended and absent. Therefore an animal through the sensitive soul must not only receive the species of sensible things, when it is actually changed by them, but it must also retain and preserve them. Now to receive and retain are, in corporeal things, reduced to diverse principles; for moist things are apt to receive, but retain with difficulty, while it is the reverse with dry things Therefore, since the sensitive power is the act of a corporeal organ, it follows that the power which receives the species of sensible things must be distinct from the power which preserves them.

Again we must observe that if an animal were moved by pleasing and disagreeable things only as affecting the sense, there would be no need to suppose that an animal has a power besides the apprehension of those forms which the senses perceive, and in which the animal takes pleasure, or from which it shrinks with horror But the animal needs to seek or to avoid certain things not only because they are pleasing or otherwise to the senses, but also on account of other advantages and uses, or disadvantages; just as the sheep runs away when it sees an approaching wolf not on account of its colour or shape, but as a natural enemy; and again a bird gathers together straws, not because they are pleasant to the sense, but because they are useful for building its nest. Animals, therefore, need to perceive such intentions, which the exterior sense does not perceive. And some distinct principle is necessary for this, since the perception of sensible forms comes by a sensible change, which is not the case with the perception of the intentions spoken of.

Thus, therefore, for the reception of sensible forms, the "proper sense" and the "common sense" are appointed, and of their distinction we shall speak further on (Ans. 1, 2). But for the retention and preservation of these forms, the

[1] *Memory and Reminiscence,* 1 (450[a]10).
[2] Aristotle, *Posterior Analytics,* 1, 18 (81[a]38).
[3] PL 34, 458, 459, 474.
[4] (17va); also 1, 5 (5rb).

phantasy or imagination is appointed, which is as it were a storehouse of forms received through the senses. Furthermore, for the apprehension of intentions which are not received through the senses, the estimative power is appointed; and for the preservation of them, the memorative power, which is a storehouse of such intentions. A sign of this we have in the fact that the principle of memory in animals is found in some such intention, for instance, that something is harmful or otherwise. And the very notion of the past, which memory considers, is to be reckoned among these intentions.

Now, we must observe that as to sensible forms there is no difference between man and other animals; for they are similarly changed by the exterior sensible But there is a difference as to the above intentions. For other animals perceive these intentions only by some natural instinct, but man perceives them by means of a kind of comparing Therefore the power which in other animals is called the natural estimative, in man is called the cogitative, which by some sort of gathering together and comparison discovers these intentions.[1] Therefore it is also called "the particular reason," to which medical men assign a certain particular organ, namely, the middle part of the head;[2] for it compares individual intentions, just as the intellectual reason compares universal intentions. As to the memorative power, man has not only memory, as other animals have in the sudden recollection of the past, but also reminiscence, by syllogistically, as it were, seeking for a recollection of the past by the application of individual intentions

Avicenna, however,[3] assigns between the estimative and the imaginative, a fifth power, which combines and divides imaginary forms; as when from the imaginary form of gold, and the imaginary form of a mountain, we compose the one form of a golden mountain, which we have never seen. But this operation is not to be found in animals other than man, in whom for this purpose the imaginative power suffices. To man also does Averroes attribute this action in his book *De sensu et sensibilibus* [4]

So there is no need to assign more than four interior powers of the sensitive part—namely, the common sense, the imagination, and the estimative and memorative powers.

Reply Obj 1. The interior sense is called common not by predication, as if it were a genus, but as the common root and principle of the exterior senses

Reply Obj. 2 The proper sense judges of the proper sensible by discerning it from other things which come under the same sense; for instance, by discerning white from black or green. But neither sight nor taste can discern white from sweet, because what discerns between two things must know both Therefore the discerning judgment must be assigned to the common sense, to which, as to a common term, all apprehensions of the senses must be referred, and by which, again, all the intentions of the senses are perceived; as when someone sees that he sees For this cannot be done by the proper sense, which only knows the form of the sensible by which it is changed, in which change the action of sight is completed, and from which change follows another in the common sense which perceives the act of vision

Reply Obj 3 As one power arises from the soul by means of another, as we have seen above (Q LXXVII, A. 7), so also the soul is the subject of one power through another. In this way the imagination and the memory are called passions of the "first sensitive"

Reply Obj 4. Although the operation of the intellect has its origin in the senses, yet, in the thing apprehended through the senses, the intellect knows many things which the senses cannot perceive In like manner does the estimative power, though in a less perfect manner

Reply Obj 5. The cogitative and memorative powers in man owe their excellence not to that which is proper to the sensitive part, but to a certain affinity and proximity to the universal reason, which, so to speak, overflows into them Therefore they are not distinct powers, but the same, yet more perfect than in other animals.

Reply Obj. 6 Augustine calls that vision spiritual which is effected by the likenesses of bodies in the absence of bodies Hence it is clear that it is common to all interior apprehensions.

QUESTION LXXIX
OF THE INTELLECTUAL POWERS
(*In Thirteen Articles*)

THE next question concerns the intellectual powers, under which head there are thirteen points of inquiry: (1) Whether the intellect is

a power of the soul, or its essence? (2) If it be a power, whether it is a passive power? (3) If it is a passive power, whether there is an agent intellect? (4) Whether it is something in the soul? (5) Whether the agent intellect is one in all? (6) Whether memory is in the intellect? (7) Whether the memory is distinct from the intellect? (8) Whether the reason is a distinct power from the intellect? (9) Whether the superior and inferior reason are distinct powers? (10) Whether the intelligence is a power distinct from the intellect? (11) Whether the speculative and practical intellect are different powers? (12) Whether *synderesis* is a power of the intellectual part? (13) Whether the conscience is a power of the intellectual part?

ARTICLE 1. *Whether the Intellect Is a Power of the Soul?*

We proceed thus to the First Article: It would seem that the intellect is not a power of the soul, but the essence of the soul.

Objection 1. For the intellect seems to be the same as the mind. Now the mind is not a power of the soul, but the essence, for Augustine says (*De Trin.* ix, 2):[1] "Mind and spirit are not relative things, but denominate the essence" Therefore the intellect is the essence of the soul.

Obj. 2. Further, different genera of the soul's powers are not united in some one power, but only in the essence of the soul. Now the appetitive and the intellectual are different genera of the soul's powers as the Philosopher says,[2] but they are united in the mind, for Augustine (*De Trin.* x, 11)[3] places the intelligence and will in the mind. Therefore the mind and intellect of man is the very essence of the soul and not one of its powers.

Obj. 3. Further, according to Gregory, in a homily for the Ascension (xxix. *in Ev.*),[4] "man understands with the angels." But angels are called Minds and Intellects. Therefore the mind and intellect of man are not a power of the soul, but the soul itself.

Obj. 4. Further, a substance is intellectual by the fact that it is immaterial. But the soul is immaterial through its essence. Therefore it seems that the soul must be intellectual through its essence.

On the contrary, The Philosopher assigns the intellect as a power of the soul.[5]

I answer that, In accordance with what has been already shown (Q. LIV, A. 3; Q. LXXVII, A. 1) it is necessary to say that the intellect is a power of the soul, and not the very essence of the soul. For the essence of that which operates is the immediate principle of operation, only when operation itself is its being; for as power is related to operation as its act, so is essence to being But the act of understanding is His very Being in God alone Therefore in God alone is His intellect His essence, while in other intellectual creatures the intellect is a power.

Reply Obj. 1. Sense is sometimes taken for the power, and sometimes for the sensitive soul; for the sensitive soul takes its name from its chief power, which is sense. And in like manner the intellectual soul is sometimes called intellect, as from its chief power, and thus we read[6] that "the intellect is a substance." And in this sense also Augustine says that the mind is a species or essence (*De Trin.* ix, 2; xiv, 16).[7]

Reply Obj. 2. The appetitive and intellectual powers are different genera of powers in the soul by reason of the different natures of their objects. But the appetitive power agrees partly with the intellectual power and partly with the sensitive in its mode of operation either through a corporeal organ or without it; for appetite follows apprehension And in this way Augustine puts the will in the mind, and the Philosopher, in the reason[8]

Reply Obj 3. In the angels there is no other power than the intellect, and the will, which follows the intellect. And for this reason an angel is called a Mind or an Intellect; because his whole power consists in this. But the soul has many other powers, such as the sensitive and nutritive powers, and therefore the comparison fails.

Reply Obj. 4. The immateriality of the created intelligent substance is not its intellect, but through its immateriality it has the power of understanding. Hence it follows not that the intellect is the substance of the soul, but that it is its virtue and power.

ARTICLE 2. *Whether the Intellect Is a Passive Power?*

We proceed thus to the Second Article: It would seem that the intellect is not a passive power.

Objection 1. For everything is passive by its matter, and acts by its form But the intellectual power results from the immateriality of the in-

[8] *Soul,* III, 9 (432ᵇ5).

telligent substance. Therefore it seems that the intellect is not a passive power.

Obj. 2. Further, the intellectual power is incorruptible, as we have said above (Q LXXV, A. 6). But "if the intellect is passive, it is corruptible "[1] Therefore the intellectual power is not passive.

Obj. 3. Further, the "agent is nobler than the patient," as Augustine[2] and Aristotle[3] say. But all the powers of the vegetative part are active; yet they are the lowest among the powers of the soul. Much more, therefore, all the intellectual powers, which are the highest, are active.

On the contrary, The Philosopher says[4] that "to understand is in a way to be passive "

I answer that, To be passive may be taken in three ways First, in its most strict sense, when from a thing is taken something which belongs to it by virtue either of its nature, or of its proper inclination, as when water loses coolness by heating, and as when a man becomes ill or sad. Secondly, less strictly, a thing is said to be passive when something, whether suitable or unsuitable, is taken away from it. And in this way not only he who is ill is said to be passive, but also he who is healed; not only he that is sad, but also he that is joyful, or whatever way he be altered or moved Thirdly, in a wide sense a thing is said to be passive, from the very fact that what is in potency to something receives that to which it was in potency without being deprived of anything. And accordingly, whatever passes from potency to act may be said to be passive, even when it is perfected. And thus with us to understand is to be passive. This is clear from the following reason. For the intellect, as we have seen above (Q LXXVIII, A 1), has an operation extending to universal being. We may therefore see whether the intellect be in act or potency by observing first of all the nature of the relation of the intellect to universal being. For we find an intellect whose relation to universal being is that of the act of all being, and such is the Divine intellect, which is the Essence of God, in which originally and virtually, all being pre-exists as in its first cause. And therefore the Divine intellect is not in potency, but is pure act. But no created intellect can be an act in relation to the whole universal being; otherwise it would have to be an infinite being. Therefore no created intellect is the act of all things intelligible by reason of its very being, but is compared to these intelligible things as a potency to act.

Now, potency has a twofold relation to act. There is a potency which is always perfected by its act; as the matter of the heavenly bodies (Q. LVIII, A 1) And there is another potency which is not always in act, but proceeds from potency to act; as we observe in things that are corrupted and generated Therefore the angelic intellect is always in act as regards those things which it can understand, by reason of its nearness to the first intellect, which is pure act, as we have said above. But the human intellect, which is the lowest in the order of intellects and the most removed from the perfection of the Divine intellect, is in potency with regard to things intelligible, and is at first "like a clean tablet on which nothing is written," as the Philosopher says.[5] This is made clear from the fact that at first we are only in potency to understand, and afterwards we are made to understand actually And so it is evident that with us to understand is in a way to be passive, taking passion in the third sense. And consequently the intellect is a passive power

Reply Obj. 1. This objection is verified of passion in the first and second senses, which belong to primary matter. But in the third sense passion is in anything which is reduced from potency to act.

Reply Obj. 2 Passive intellect is the name given by some[6] to the sensitive appetite, in which are the passions of the soul; which appetite is also called "rational by participation, because it obeys the reason."[7] Others[8] give the name of passive intellect to the cogitative power, which is called the particular reason. And in each case passive may be taken in the two first senses, according as this so-called intellect is the act of a corporeal organ. But the intellect which is in potency to things intelligible and which for this reason Aristotle calls "the possible intellect"[9] is not passive except in the third sense, for it is not an act of a corporeal organ. Hence it is incorruptible.

Reply Obj. 3 The agent is nobler than the patient if the action and the passion are referred to the same thing, but not always, if they refer to different things. Now the intellect is a passive power in regard to the whole universal being, while the vegetative power is active in regard to

some particular thing, namely, the body as united to the soul. Therefore nothing prevents such a passive force being nobler than such an active one.

ARTICLE 3. *Whether There Is an Agent Intellect?*

We proceed thus to the Third Article: It would seem that there is no agent intellect.

Objection 1. For as the senses are to things sensible, so is our intellect to things intelligible. But because sense is in potency to things sensible we do not say there is "an agent sense," but only a passive sense. Therefore, since our intellect is in potency to things intelligible, it seems that we cannot say that there is an agent intellect, but only a possible intellect.[1]

Obj. 2. Further, if we say that also in the senses there is something active, such as light,[2] on the contrary, light is required for sight, in so far as it makes the medium to be actually luminous; for colour of its own nature moves the luminous medium. But in the operation of the intellect there is no medium that has to be brought into act. Therefore there is no necessity for an agent intellect.

Obj. 3 Further, the likeness of the agent is received into the patient according to the mode of the patient. But the possible intellect is an immaterial power. Therefore its immateriality suffices for forms to be received into it immaterially. Now a form is intelligible in act from the very fact that it is immaterial. Therefore there is no need to posit an agent intellect to make the species actually intelligible.[3]

On the contrary, The Philosopher says,[4] "As in every nature, so in the soul is there something by which it becomes all things, and something by which it makes all things." Therefore we must admit an agent intellect.

I answer that, According to the opinion of Plato, there is no need for an agent intellect in order to make things actually intelligible, although perhaps in order to provide intellectual light to the intellect, as will be explained further on (A. 4, Q. LXXXIV, A. 6) For Plato supposed[5] that the forms of natural things subsisted apart from matter, and consequently that they are intelligible, since a thing is actually intelligible from the very fact that it is immaterial. And he called such forms "species" or "ideas," from a participation of which he said that even corporeal matter was formed, in order that individuals might be naturally established in their proper genera and species,[6] and that our intellect was formed by such participation in order to have knowledge of the genera and species of things.[7] But since Aristotle did not allow that forms of natural things subsist apart from matter,[8] and as forms existing in matter are not actually intelligible, it follows that the natures or forms of the sensible things which we understand are not actually intelligible. Now nothing is reduced from potency to act except by something in act; just as the senses are made actual by what is actually sensible. We must therefore assign on the part of the intellect some power to make things actually intelligible, by the abstraction of the species from material conditions. And such is the necessity for positing an agent intellect.

Reply Obj. 1. Sensible things are found in act outside the soul, and hence there is no need for an agent sense. And thus it is clear that in the nutritive part all the powers are active, whereas in the sensitive part all are passive; but in the intellectual part, there is something active and something passive.

Reply Obj. 2 There are two opinions as to the effect of light. For some say[9] that light is required for sight, in order to make colours actually visible. And according to this the agent intellect is required for understanding, in like manner and for the same reason as light is required for seeing. But in the opinion of others, light is required for sight "not for the colours to become actually visible, but in order that the medium may become actually luminous," as the Commentator says.[10] And according to this, Aristotle's comparison of the agent intellect to light[11] is verified in this, that as it is required for understanding, so is light required for seeing; but not for the same reason.

Reply Obj. 3. Given the agent, it may well happen that its likeness is received variously into various things, on account of their dispositions. But if the agent does not pre-exist, the disposition of the recipient has nothing to do with the matter Now the intelligible in act is not something existing in nature, if we consider the

nature of things sensible, which do not subsist apart from matter. And therefore in order to understand them, the immaterial nature of the possible intellect would not suffice but for the presence of the agent intellect, which makes things actually intelligible by way of abstraction.

ARTICLE 4. *Whether the Agent Intellect Is Something in the Soul?*

We proceed thus to the Fourth Article: It would seem that the agent intellect is not something in the soul.

Objection 1. For the effect of the agent intellect is to give light for the purpose of understanding. But this is done by something higher than the soul, according to John 1. 9, *He was the true light that enlighteneth every man coming into this world.* Therefore the agent intellect is not something in the soul.[1]

Obj. 2 Further, the Philosopher says[2] of the agent intellect, "that is does not sometimes understand and sometimes not understand." But our soul does not always understand: sometimes it understands, and sometimes it does not understand. Therefore the agent intellect is not something in our soul.[3]

Obj. 3. Further, agent and patient suffice for action. If, therefore, the possible intellect, which is a passive power, is something belonging to the soul; and also the agent intellect, which is an active power, it follows that man would always be able to understand when he wished, which is clearly false. Therefore the agent intellect is not something in our soul.[4]

Obj. 4. Further, the Philosopher says[5] that "the agent intellect is a substance in actual being" But nothing can be in potency and in act with regard to the same thing If, therefore, the possible intellect, which is in potency to all things intelligible, is something in the soul, it seems impossible for the agent intellect to be also something in our soul.

Obj 5 Further, if the agent intellect is something in the soul, it must be a power For it is neither a passion nor a habit, since habits and passions do not have the character of agents in regard to the passivity of the soul, but rather passion is the very action of the passive power, while habit is something which results from acts. But every power flows from the essence of the soul. It would therefore follow that the agent intellect flows from the essence of the soul And thus it would not be in the soul by way of participation from some higher intellect, which is unfitting. Therefore the agent intellect is not something in our soul.

On the contrary, The Philosopher says[6] that it is necessary for these differences, namely, the possible and agent intellect, to be in the soul.

I answer that, The agent intellect, of which the Philosopher speaks, is something in the soul. In order to make this evident, we must observe that above the intellectual soul of man we must suppose a superior intellect, from which the soul acquires the power of understanding. For what is such by participation, and what is subject to motion, and what is imperfect always requires the pre-existence of something essentially such, immovable and perfect. Now the human soul is called intellectual by reason of a participation in intellectual power, a sign of which is that it is not wholly intellectual but only in part Moreover it reaches to the understanding of truth by arguing, with a kind of reasoning and movement Again it has an imperfect understanding, both because it does not understand everything, and because, in those things which it does understand, it passes from potency to act. Therefore there must be some higher intellect, by which the soul is helped to understand.

Therefore some held[7] that this intellect, substantially separate, is the agent intellect, which by lighting up the phantasms as it were, makes them to be actually intelligible But, even supposing the existence of such a separate agent intellect, it would still be necessary to assign to the human soul some power participating in that superior intellect, by which power the human soul makes things actually intelligible Just as in other perfect natural things, besides the universal active causes, each one is endowed with its proper powers derived from those universal causes; for the sun alone does not generate man, but in man is the power of begetting man, and in like manner with other perfect animals Now among these lower things nothing is more perfect than the human soul. Therefore we must say that in the soul is some power derived from a higher intellect, whereby it is able to light up the phantasms.

[1] An argument of William of Paris, *De An.*, 7, 6 (II, 211). See Gilson, AHDLM (1926) p. 63.

[2] *Soul*, III, 5 (430a22).

[3] Cf William of Paris, *op cit*, 7, 3 (II, 206); Gilson, *loc. cit.*

[4] Cf William of Paris, *op. cit.*, 7, 4 (II, 208); Gilson, *op cit.*, p. 64.

[5] *Soul*, III, 5 (430a18)

[6] *Ibid*, (430a13).

[7] Alexander of Aphrodisias, *De intellectu et Intellecto* (TH 76); Averroes, *In de An.*, III, 18 (VI, 161E); 19 (VI, 162A); Avicenna, *De An.*, V, 5 (25rb); *Meta.*, IX, 3 (104rb) For William of Paris, Roger Bacon, John Peckham, and others on this point, cf. Gilson, AHDLM (1926), p. 80.

And we know this by experience, since we perceive that we abstract universal forms from their particular conditions, which is to make them actually intelligible. Now no action belongs to anything except through some principle formally inherent in it, as we have said above of the potential intellect (Q. LXXVI, A. 1). Therefore the power which is the principle of this action must be something in the soul. For this reason Aristotle compared[1] the agent intellect to light, which is something received into the air, while Plato compared the separate intellect impressing the soul to the sun, as Themistius says in his commentary on the third book of the *Soul*.[2]

But the separate intellect, according to the teaching of our faith, is God Himself, Who is the soul's Creator, and only happiness, as will be shown later on (Q. XC, A. 3; Part I.-II., Q. III, A. 7).And so the human soul derives its intellectual light from Him, according to Ps. 4. 7, *The light of Thy countenance, O Lord, is signed upon us.*

Reply Obj. 1. That true light enlightens as a universal cause, from which the human soul derives a particular power, as we have explained.

Reply Obj. 2. The Philosopher says those words not of the agent intellect, but of the intellect in act, of which he had already said: "Knowledge in act is the same as the thing." Or, if we refer those words to the agent intellect, then they are said because it is not owing to the agent intellect that sometimes we do, and sometimes we do not understand, but to the intellect which is in potency.

Reply Obj. 3. If the relation of the agent intellect to the possible intellect were that of the active object to a power, as, for instance, of the visible in act to the sight, it would follow that we could understand all things instantly, since the agent intellect is that which makes all things in act. But the agent intellect is not like an object, rather is it that whereby the objects are made to be in act, for which, besides the presence of the agent intellect, we require the presence of phantasms, the good disposition of the sensitive powers, and practice in this sort of operation, since through one thing understood, other things come to be understood, as from terms are made propositions, and from first principles, conclusions. From this point of view it matters not whether the agent intellect is something belonging to the soul, or something separate from the soul.

Reply Obj. 4. The intellectual soul is indeed actually immaterial, but it is in potency to determinate species of things. On the other hand, though, phantasms are actual likenesses of certain species, but are immaterial in potency. And so nothing prevents one and the same soul, in so far as it is actually immaterial, having one power by which it makes things actually immaterial by abstraction from the conditions of individual matter, which power is called the agent intellect; and another power, receptive of such species, which is called the possible intellect by reason of its being in potency to such species.

Reply Obj. 5. Since the essence of the soul is immaterial, created by the supreme intellect, nothing prevents that power which it participates from the supreme intellect, and whereby it abstracts from matter, flowing from the essence of the soul, in the same way as its other powers.

ARTICLE 5. *Whether the Agent Intellect Is One in All?*

We proceed thus to the Fifth Article: It would seem that there is one agent intellect in all.

Objection 1. For what is separate from the body is not multiplied according to the number of bodies. But "the agent intellect is separate," as the Philosopher says.[3] Therefore it is not multiplied in the many human bodies, but is one for all men.

Obj. 2. Further, the agent intellect is the cause of the universal, which is one in many. But that which is the cause of unity is still more itself one. Therefore the agent intellect is the same in all.

Obj. 3 Further, all men agree in the first intellectual concepts But to these they assent by the agent intellect. Therefore all agree in one agent intellect.

On the contrary, The Philosopher says[4] that "the agent intellect is as a light." But light is not the same in the various things enlightened. Therefore the same agent intellect is not in various men.

I answer that, The truth about this question depends on what we have already said (A. 4). For if the agent intellect were not something belonging to the soul, but were some separate substance, there would be one agent intellect for all men. And this is what they mean who hold that there is one agent intellect for all.[5] But if the agent intellect is something belonging to the soul, as one of its powers, we are bound to say

[1] *Soul*, III, 5 (430[a]15).
[2] CG V, 3–103.35; *Republic* (508).
[3] *Soul*, III, 5 (430[a]17)
[4] *Ibid.* (430[a]15).
[5] See above, A 4.

that there are as many agent intellects as there are souls, which are multiplied according to the number of men, as we have said above (Q LXXVI, A 2). For it is impossible that one same power belong to various substances.

Reply Obj. 1. The Philosopher proves that the agent intellect is separate by the fact that the possible intellect is separate; because, as he says,[1] "the agent is more noble than the patient" Now the possible intellect is said to be separate because it is not the act of any corporeal organ. And in the same sense the agent intellect is also called separate; but not as a separate substance

Reply Obj. 2. The agent intellect is the cause of the universal, by abstracting it from matter. But for this purpose it need not be the same intellect in all intelligent beings; but it must be one in its relationship to all those things from which it abstracts the universal, with respect to which things the universal is one. And this befits the agent intellect since it is immaterial.

Reply Obj. 3 All things which are of one species enjoy in common the action which accompanies the nature of the species, and consequently the power which is the principle of such action, but not in such a way that that power is identical in all Now to know the first intelligible principles is the action belonging to the human species. And so all men must enjoy in common the power which is the principle of this action, and this power is the agent intellect. But there is no need for it to be identical in all. Yet it must be derived by all from one principle. And thus the possession by all men in common of the first principles proves the unity of the separate intellect, which Plato compares to the sun, but not the unity of the agent intellect, which Aristotle compares to light.

ARTICLE 6. *Whether Memory Is In the Intellectual Part of the Soul?*

We proceed thus to the Sixth Article: It would seem that memory is not in the intellectual part of the soul.

Objection 1. For Augustine says (*De Trin* xii, 2, 8)[2] that to the higher part of the soul belong those things "which are not common to man and beast." But memory is common to man and beast, for he says (*ibid.* 2) that "beasts can sense corporeal things through the senses of the body, and commit them to memory." Therefore memory does not belong to the intellectual part of the soul.

Obj. 2. Further, memory is of the past. But the past is said of something with regard to a fixed time Memory, therefore, knows a thing under a condition of a fixed time, which involves knowledge under the conditions of *here* and *now*. But this is not the province of the intellect, but of the sense. Therefore memory is not in the intellectual part, but only in the sensitive part.

Obj. 3. Further, in the memory are preserved the species of those things of which we are not actually thinking. But this cannot happen in the intellect, because the intellect is reduced to act by the fact that it is informed by the intelligible species. Now the intellect in act implies understanding in act, and therefore the intellect actually understands all things of which it has the species. Therefore the memory is not in the intellectual part.

On the contrary, Augustine says (*De Trin* x, 11)[3] that "memory, understanding, and will are one mind."

I answer that, Since it is of the nature of the memory to preserve the species of those things which are not actually apprehended, we must first of all consider whether the intelligible species can thus be preserved in the intellect, because Avicenna held that this was impossible.[4] For he admitted that this could happen in the sensitive part, as to some powers, since they are acts of corporeal organs, in which certain species may be preserved apart from actual apprehension. But in the intellect, which has no corporeal organ, nothing but what is intelligible exists. And so every thing of which the likeness exists in the intellect must be actually understood. Thus, therefore, according to him, as soon as we cease to understand something actually, the species of that thing ceases to be in our intellect, and if we wish to understand that thing anew, we must turn to the agent intellect, which he held to be a separate substance, in order that the intelligible species may thence flow again into our possible intellect. And from the practice and habit of turning to the agent intellect there is formed, according to him, a certain aptitude in the possible intellect for turning to the agent intellect, which aptitude he calls the habit of science. According, therefore, to this supposition, nothing is preserved in the intellectual part that is not actually understood, and so it would not be possible to admit memory in the intellectual part.

But this opinion is clearly opposed to the teaching of Aristotle. For he says[5] that, "when the possible intellect is identified with each thing

[1] *Soul*, III, 5 (430^a18). [2] PL 42, 999, 1005.
[3] PL 42, 983. [4] *De An.*, V, 6 (26rb).
[5] *Soul*, III, 4 (429^b5).

as knowing it, it is said to be in act," and that "this happens when it can operate of itself. And, even then, it is in potency, but not absolutely, as before learning and discovering." Now, the possible intellect is said to be each thing inasmuch as it receives the intelligible species of each thing. To the fact, therefore, that it receives the species of intelligible things it owes its being able to operate when it wills, but not so that it be always operating; for even then is it in potency in a certain sense, though otherwise than before the act of understanding—namely, in the sense that whoever has habitual knowledge is in potency to actual consideration.

The foregoing opinion is also opposed to reason. For what is received into something is received according to the mode of the recipient. But the intellect is of a more stable nature, and is more immovable than corporeal matter If, therefore, corporeal matter holds the forms which it receives, not only while it actually does something through them, but also after ceasing to act through them, much more does the intellect receive the species unchangeably and lastingly, whether it receive them from things sensible or derive them from some superior intellect. Thus, therefore, if we take memory only for the power of retaining species, we must say that it is in the intellectual part.

But if in the notion of memory we include its object as something past, then the memory is not in the intellectual, but only in the sensitive part, which apprehends individual things. For past, as past, since it signifies being under a condition of fixed time, is something individual.

Reply Obj. 1. Memory, if considered as retentive of species, is not common to us and other animals. For species are not retained in the sensitive part of the soul only, but rather in the body and soul united, since the memorative power is the act of some organ. But the intellect in itself is retentive of species, apart from the association of any corporeal organ. And so the Philosopher says[1] that "the soul is the seat of the species, not the whole soul, but the intellect."

Reply Obj. 2. The condition of past may be referred to two things—namely, to the object which is known, and to the act of knowledge. These two are found together in the sensitive part, which apprehends something from the fact of its being changed by a present sensible; and so at the same time an animal remembers to have sensed before in the past, and to have sensed some past sensible thing. But as concerns the intellectual part, the past is acidental, and is not in itself a part of the object of the intellect. For the intellect understands man, as man; and to man, as man, it is accidental that he exist in the present, past, or future. But on the part of the act, the condition of past, even as such, may be understood to be in the intellect, as well as in the senses. Because our soul's act of understanding is an individual act, existing in this or that time, according as a man is said to understand now, or yesterday, or tomorrow. And this is not incompatible with the intellectual nature, for such an act of understanding, though something individual, is yet an immaterial act, as we have said above of the intellect (Q. LXXVI, A. 1); and therefore, as the intellect understands itself, though it be itself an individual intellect, so also it understands its act of understanding, which is an individual act, in the past, present, or future. In this way, then, the notion of memory, in as far as it regards past events, is preserved in the intellect, according as it understands that it previously understood; but not in the sense that it understands the past as something *here* and *now*.

Reply Obj. 3. The intelligible species are sometimes in the intellect only in potency, and then the intellect is said to be in potency. Sometimes the intelligible species is in the intellect as regards the ultimate completion of the act, and then it understands in act. And sometimes the intelligible species is in a middle state, between potency and act, and then we have habitual knowledge. In this way the intellect retains the species even when it does not understand in act.

ARTICLE 7. *Whether the Intellectual Memory Is a Power Distinct From the Intellect?*

We proceed thus to the Seventh Article: It would seem that the intellectual memory is distinct from the intellect.

Objection 1. For Augustine (*De Trin.* X, 11)[2] assigns to the mind memory, understanding, and will. But it is clear that the memory is a distinct power from the will Therefore it is also distinct from the intellect.

Obj. 2. Further, the reason of distinction among the powers in the sensitive part is the same as in the intellectual part. But memory in the sensitive part is distinct from sense, as we have said (Q. LXXVIII, A. 4) Therefore memory in the intellectual part is distinct from the intellect.

Obj. 3 Further, according to Augustine (*De Trin.* X, 11; XI, 7),[3] memory, understanding, and

[1] *Soul*, III, 4 (429a27).

[2] PL 42, 983; cf. XIV, 7 (1043).

[3] PL 42, 983, 993.

will are equal to one another, and one arises from the other. But this could not be if memory and intellect were the same power. Therefore they are not the same power

On the contrary, From its nature the memory is the treasury or storehouse of species But the Philosopher[1] attributes this to the intellect, as we have said (A. 6 Ans. 1) Therefore the memory is not another power from the intellect.

I answer that, As has been said above (Q. LXXXVII, A. 3), the powers of the soul are distinguished by the different aspects of their objects, since each power is defined in reference to that thing to which it is directed and which is its object. It has also been said above (Q LIX, A 4) that if any power by its nature be directed to an object according to the common aspect of the object, that power will not be differentiated according to the individual differences of that object; just as the power of sight, which regards its object under the common aspect of colour is not differentiated by differences of black and white Now, the intellect regards its object under the common aspect of being, since the possible intellect is that which becomes all things And so the possible intellect is not differentiated by any difference of being. Nevertheless there is a distinction between the power of the agent intellect and of the possible intellect, because as regards the same object, the active power which makes the object to be in act must be distinct from the passive power, which is moved by the object existing in act Thus the active power is compared to its object as a being in act is to a being in potency, whereas the passive power, on the contrary, is compared to its object as a being in potency is to a being in act.

Therefore there can be no other difference of powers in the intellect, but that of possible and agent And so it is clear that memory is not a distinct power from the intellect, for it belongs to the nature of a passive power to retain as well as to receive

Reply Obj. 1. Although it is said (3 *Sent.*, D, 1) that memory, intellect, and will are three powers, this is not in accordance with the meaning of Augustine, who says expressly (*De Trin.* xiv)[2] that "if we take memory, intelligence, and will as always present in the soul, whether we actually reflect upon them or not, they seem to pertain to the memory only. And by intelligence I mean that by which we understand when actually thinking; and by will I mean that love or affection which unites the child and its parent." From this it is clear that Augustine does not take the above three for three powers, but by memory he understands the soul's habit of retention, by intelligence, the act of the intellect, and by will the act of the will.

Reply Obj. 2. Past and present may differentiate the sensitive powers, but not the intellectual powers, for the reason given above.

Reply Obj. 3. Intelligence arises from memory, just as act from habit; and in this way it is equal to it, but not as a power to a power.

ARTICLE 8. *Whether the Reason Is a Power Distinct From the Intellect?*

We proceed thus to the Eighth Article: It would seem that the reason is a power distinct from the intellect

Objection 1 For it is stated in *De Spiritu et Anima*[3] that "when we wish to rise from lower things to higher, first the sense comes to our aid, then imagination, then reason, then the intellect" Therefore the reason is distinct from the intellect, just as imagination is from sense

Obj 2 Further, Boëthius says (*De Consol.* iv, 6),[4] that intellect is compared to reason, as eternity to time But it does not pertain to the same power to be in eternity and to be in time. Therefore reason and intellect are not the same power

Obj 3. Further, man has intellect in common with the angels, and sense in common with the brutes But reason, which is proper to man, from which he is called a rational animal, is a power distinct from sense. Therefore is it equally true to say that it is distinct from the intellect, which properly belongs to the angel. Hence they are called intellectual.

On the contrary, Augustine says (*Gen ad lit.* iii, 20)[5] that "that in which man excels irrational animals is reason, or mind, or intelligence, or whatever appropriate name we like to give it." Therefore reason, intellect, and mind are one power.

I answer that, Reason and intellect in man cannot be distinct powers. We shall understand this clearly if we consider their respective actions. For to understand is simply to apprehend intelligible truth, and to reason is to advance from one thing understood to another, so as to know an intelligible truth. And therefore angels

[1] *Soul*, III, 4 (429[a]27).
[2] Chap. 7 (PL 42, 1043).
[3] Pseudo-Augustine (Alcher of Clairvaux) Chap. 11 (PL 40, 780)
[4] PL 63, 818.
[5] PL 34, 292.

who, according to their nature, possess perfect knowledge of intelligible truth, have no need to advance from one thing to another, but apprehend the truth simply and without mental discursion, as Dionysius says (*Div. Nom.* vii).[1] But man arrives at the knowledge of intelligible truth by advancing from one thing to another, and therefore he is called rational. Reasoning, therefore, is compared to understanding as movement is to rest, or acquisition to possession, of which one belongs to the perfect, the other to the imperfect. And since movement always proceeds from something immovable and ends in something at rest, hence it is that human reasoning, by way of inquiry and discovery, advances from certain things simply understood—namely, the first principles; and, again, by way of judgment returns by analysis to first principles, in the light of which it examines what it has found Now it is clear that rest and movement are not to be referred to different powers, but to one and the same, even in natural things, since by the same nature a thing is moved towards a certain place, and rests in that place. Much more, therefore, by the same power do we understand and reason. And so it is clear that in man reason and intellect are the same power.

Reply Obj. 1. That enumeration is made according to the order of actions, not according to the distinction of powers. Moreover, that book is not of great authority.

Reply Obj. 2. The answer is clear from what we have said. For eternity is compared to time as immovable to movable. And thus Boëthius compared the intellect to eternity, and reason to time.

Reply Obj. 3. Other animals are so much lower than man that they cannot attain to the knowledge of truth, which reason seeks. But man attains, although imperfectly, to the knowledge of intelligible truth, which angels know. Therefore in the angels the power of knowledge is not of a different genus from that which is in the human reason, but is compared to it as the perfect to the imperfect.

Article 9. *Whether the Higher and Lower Reason Are Distinct Powers?*

We proceed thus to the Ninth Article: It would seem that the higher and lower reason are distinct powers.

Objection 1. For Augustine says (*De Trin.* xii, 4),[2] that the image of the Trinity is in the higher part of the reason, and not in the lower. But the parts of the soul are its powers. Therefore the higher and lower reason are two powers.

Obj. 2. Further, nothing arises from itself. Now, the lower reason arises from the higher, and is ruled and directed by it. Therefore the higher reason is another power from the lower.

Obj. 3. Further, the Philosopher says[3] that the scientific part of the soul, by which the soul knows necessary things, is another principle, and another part from the opinionative and reasoning part by which it knows contingent things. And he proves this from the principle that "for those things which are generically different, generically different parts of the soul are ordained." Now contingent and necessary are generically different, as corruptible and incorruptible. Since, therefore, necessary is the same as eternal, and temporal the same as contingent, it seems that what the Philosopher calls the scientific part must be the same as the higher reason, which, according to Augustine[4] is intent on "the consideration and consultation of things eternal"; and that what the Philosopher calls the reasoning or opinionative part is the same as the lower reason, which, according to Augustine, is intent on the disposal of temporal things. Therefore the higher reason is another power than the lower.

Obj 4. Further, Damascene says (*De Fid. Orth.* ii)[5] that "opinion rises from imagination; then the mind by judging of the truth or error of the opinion discerns the truth; whence *mens* (mind) is derived from *metiendo* (measuring). And therefore the intellect regards those things which are already subject to judgment and true decision." Therefore the opinionative power, which is the lower reason, is distinct from the mind and the intellect, by which we may understand the higher reason.

On the contrary, Augustine says (*De Trin.* xii, 4)[6] that the higher and lower reason are only distinct by their functions. Therefore they are not two powers.

I answer that, The higher and lower reason, as they are understood by Augustine, can in no way be two powers of the soul. For he says that the higher reason is "that which is intent on the contemplation and consultation of things eternal,"[7] since in contemplation it sees them in themselves, and in consultation it takes its rules of action from them. But he calls the lower reason "that which is intent on the disposal of

[1] Sect. 2 (PG 3, 868).
[2] PL 42, 1000.
[3] *Ethics*, VI, 1 (1139[a]6).
[4] *De Trin*, XII, 7 (PL 42, 1005).
[5] Chap. 22 (PG 94, 941).
[6] PL 42, 1000.
[7] *Op cit.*, XII, 7 (PL 42, 1005)

temporal things." Now these two—namely, eternal and temporal—are related to our knowledge in this way, that one of them is the means of knowing the other. For by way of discovery we come through knowledge of temporal things to that of things eternal, according to the words of the Apostle (Rom. 1. 20), *The invisible things of God are clearly seen, being understood by the things that are made;* while by way of judgment, from eternal things already known, we judge of temporal things, and according to rules of things eternal we dispose of temporal things.

But it may happen that the medium and what is attained thereby belong to different habits, just as the first indemonstrable principles belong to the habit of intellect, whereas the conclusions which we draw from them belong to the habit of science. And so it happens that from the principles of geometry we draw a conclusion in another science—for example, perspective But both medium and term pertain to the same power of reason. For the act of the reason is, as it were, a movement from one thing to another. But the same movable thing passes through the medium and reaches the end And hence the higher and lower reasons are one and the same power. But according to Augustine[1] they are distinguished by the functions of their actions, and according to their various habits, for wisdom is attributed to the higher reason, science to the lower.

Reply Obj 1 We can speak of parts, in whatever way a thing is divided And so far as reason is divided according to its various acts, the higher and lower reason are called parts; but not because they are different powers.

Reply Obj 2. The lower reason is said to flow from the higher, or to be ruled by it, in so far as the principles made use of by the lower reason are drawn from and directed by the principles of the higher reason.

Reply Obj. 3. The scientific part, of which the Philosopher speaks, is not the same as the higher reason, for necessary truths are found even among temporal things, of which natural science and mathematics treat And the opinionative and ratiocinative part is more limited than the lower reason, for it regards only things contingent. Neither must we say, without any qualification, that a power by which the intellect knows necessary things is distinct from a power by which it knows contingent things, because it knows both under the same objective aspect—namely, under the aspect of being and truth. Thus it perfectly knows necessary things, which have perfect being in truth, since it penetrates to their very quiddity, from which it demonstrates their proper accidents. On the other hand, it knows contingent things, but imperfectly, just as they have but imperfect being and truth. Now perfect and imperfect in the action do not vary the power, but they vary the actions as to the mode of acting, and consequently the principles of the actions and the habits themselves. And therefore the Philosopher postulates two lesser parts of the soul—namely, the scientific and the ratiocinative, not because they are two powers, but because they are distinct according to a different aptitude for receiving various habits, concerning the variety of which he inquires For contingent and necessary, though differing according to their proper genera, nevertheless agree in the common aspect of being, which the intellect considers, and to which they are variously compared as perfect and imperfect.

Reply Obj 4 That distinction given by Damascene is according to the variety of acts, not according to the variety of powers. For opinion signifies an act of the intellect which leans to one side of a contradiction, though with fear of the other. But to judge or measure (*mensurare*) is an act of the intellect applying principles which are certain to examine propositions. From this is taken the word *mens* (mind). Lastly, to understand is to adhere to the formed judgment with approval.

ARTICLE 10 *Whether Intelligence Is a Power Distinct From Intellect?*

We proceed thus to the Tenth Article: It would seem that the intelligence is another power than the intellect.

Objection 1. For we read in *De Spiritu et Anima*[2] that "when we rise from lower to higher things, first the sense comes to our aid, then imagination, then reason, then intellect, and afterwards intelligence" But imagination and sense are distinct powers. Therefore also intellect and intelligence are distinct.

Obj. 2. Further, Boëthius says (*De Consol.* v, 4)[3] that "sense considers man in one way, imagination in another, reason in another, intelligence in another." But intellect is the same power as reason Therefore, it seems, intelligence is a distinct power from intellect, as reason is a distinct power from imagination or sense.

[1] Pseudo-Augustine. (Alcher of Clairvaux) chap. 11 (PL 40, 780).

Obj. 3. Further, "actions come before powers," as the Philosopher says.[1] But intelligence is an act separate from others attributed to the intellect. For Damascene says (*De Fid. Orth.* ii)[2] that "the first movement is called intelligence; but that intelligence which is about a certain thing is called intention; that which remains and conforms the soul to that which is understood is called cogitation, and cogitation when it remains in the same man, examining and judging of itself, is called phronesis (that is, wisdom), and phronesis if dilated makes thought, that is, orderly internal speech; from which, they say, comes speech expressed by the tongue." Therefore it seems that intelligence is some special power.

On the contrary, The Philosopher says[3] that "intelligence is of indivisible things in which there is nothing false." But the knowledge of these things belongs to the intellect. Therefore the intelligence is not another power than the intellect.

I answer that, This word intelligence properly signifies the intellect's very act, which is to understand. However, in some works translated from the Arabic, the separate substances[4] which we call angels are called Intelligences, and perhaps for this reason, that such substances are always actually understanding. But in works translated from the Greek,[5] they are called Intellects or Minds. Thus intelligence is not distinct from intellect, as power is from power, but as act is from power. And such a division is recognized even by the philosophers [6] For sometimes they assign four intellects—namely, the agent and possible intellects, the intellect in habit, and the actual intellect. Of these four the agent and possible intellects are different powers, just as in all things the active power is distinct from the passive. But three of these are distinguished as three states of the possible intellect, which is sometimes in potency only, and thus it is called possible; sometimes it is in the first act, which is knowledge, and thus it is called intellect in habit; and sometimes it is in the second act, which is to consider, and thus it is called intellect in act, or actual intellect.

Reply Obj. 1. If this authority is accepted, intelligence there means the act of the intellect. And thus it is divided against intellect as act against power.

Reply Obj. 2. Boëthius takes intelligence as meaning that act of the intellect which transcends the act of the reason. And so he also says that reason alone belongs to the human race, as intelligence alone belongs to God, for it belongs to God to understand all things without any investigation.

Reply Obj 3. All those acts which Damascene enumerates belong to one power—namely, the intellectual power. For this power first of all apprehends something absolutely; and this act is called intelligence Secondly, it directs what it apprehends to the knowledge of something else, or to some operation; and this is called intention And when it goes on in search of what it intends, it is called cogitation When, by reference to something known for certain, it examines what it has cogitated, it is said to know or to be wise, which belongs to phronesis or wisdom; for "it belongs to the wise man to judge," as the Philosopher says [7] And when once it has obtained something for certain, as being fully examined, it thinks about the means of making it known to others; and this is the ordering of interior speech, from which proceeds external speech. For not every difference of acts makes the powers vary, but only what cannot be reduced to the one same principle, as we have said above (Q. LXXVIII, A. 4).

ARTICLE 11. *Whether the Speculative and Practical Intellects Are Distinct Powers?*

We proceed thus to the Eleventh Article: It would seem that the speculative and practical intellects are distinct powers.

Objection. 1. For the apprehensive and moving are different kinds of powers, as is clear from the book on the *Soul* [8] But the speculative intellect is merely an apprehensive power, while the practical intellect is a moving power. Therefore they are distinct powers.

Obj. 2. Further, the different nature of the object differentiates the power But the object of the speculative intellect is truth, and of the practical is good, which differ in nature. Therefore the speculative and practical intellect are distinct powers.

[1] *Soul,* II, 4 (415[a]18).
[2] Chap. 22 (PG 94, 941).
[3] *Soul,* III, 6 (430[a]26).

[5] In Dionysius. See above, Q. LIV, A. 3, Ans 1.
[6] Albert the Great, *Summa de Creatur* , Pt II, Q. 54, A. 1 (BO XXV, 449), attributes this division to Algazel and Avicenna. Cf Alexander of Aphrodisias, *De Intellectu et Intellecto* (TH 74); Alfarabi, *De Intellectu et Intellecto* (GI 117.82); Avicenna, *De An.*, I, 5 (5vb); cf. Gilson, AHDLM (1929), p. 7; p. 53.
[7] *Metaphysics,* I, 2 (982[a]18).
[8] Aristotle, II, 3 (414[a]31).

Obj. 3. Further, in the intellectual part, the practical intellect is compared to the speculative, as the estimative is to the imaginative power in the sensitive part. But the estimative differs from the imaginative as power from power, as we have said above (Q. LXXVIII, A. 4). Therefore also the speculative intellect differs from the practical.

On the contrary, The speculative intellect by extension becomes practical.[1] But one power is not changed into another. Therefore the speculative and practical intellects are not distinct powers.

I answer that, The speculative and practical intellects are not distinct powers The reason of which is that, as we have said above (Q. LXXVII, A. 3), what is accidental to the nature of the object of a power does not differentiate that power. For it is accidental to a thing coloured to be man, or to be great or small; hence all such things are apprehended by the same power of sight. Now, to a thing apprehended by the intellect, it is accidental whether it be directed to operation or not, and it is according to this the speculative and practical intellects differ. For it is the speculative intellect which directs what it apprehends, not to operation, but to the consideration of truth, while the practical intellect is that which directs what it apprehends to operation. And this is what the Philosopher says,[2] that "the speculative differs from the practical in its end." Hence each is named from its end: the one speculative, the other practical —that is, operative.

Reply Obj 1 The practical intellect is a moving power not as executing movement, but as directing towards it, and this belongs to it according to its mode of apprehension.

Reply Obj 2 Truth and good include one another; for truth is something good, otherwise it would not be desirable; and good is something true, otherwise it would not be intelligible. Therefore just as the object of the appetite may be something true, as having the aspect of good, for example, when some one desires to know the truth, so the object of the practical intellect is good directed to operation, and under the aspect of truth. For the practical intellect knows truth, just as the speculative, but it directs the known truth to operation.

Reply Obj. 3 Many differences differentiate the sensitive powers which do not differentiate the intellectual powers, as we have said above (A. 7, Ans. 2, Q. LXXVII, A. 3, Ans. 4).

[1] Aristotle, *Soul*, III, 10 (433[a]14).
[2] *Ibid.*

ARTICLE 12. *Whether Synderesis Is a Special Power of the Soul Distinct From the Others?*

We proceed thus to the Twelfth Article: It would seem that synderesis is a special power, distinct from the others.

Objection 1. For those things which fall under one division seem to be of the same genus. But in the gloss of Jerome on Ezech. 1. 6[3] synderesis is divided against the irascible, the concupiscible, and the rational, which are powers. Therefore synderesis is a power

Obj. 2. Further, opposite things are of the same genus. But synderesis and sensuality seem to be opposed to one another because synderesis always inclines to good, while sensuality always inclines to evil; hence it is signified by the serpent, as is clear from Augustine (*De Trin.* xii, 12, 13).[4] It seems, therefore, that synderesis is a power just as sensuality is.

Obj. 3. Further, Augustine says (*De Lib. Arb.* ii, 10)[5] that in the natural power of judgment there are certain "rules and seeds of virtue, both true and unchangeable." And this is what we call synderesis. Since, therefore, the unchangeable rules which guide our judgment belong to the reason as to its higher part, as Augustine says (*De Trin.* xii, 2,)[6] it seems that synderesis is the same as reason. And thus it is a power.

On the contrary, According to the Philosopher[7] "rational powers regard opposite things." But synderesis does not regard opposites, but inclines to good only. Therefore synderesis is not a power For if it were a power it would be a rational power, since it is not found in brute animals.

I answer that, Synderesis is not a power but a habit, though some held[8] that it is "a power higher than reason," while others said[9] that it is "reason itself, not as reason, but as a nature." In order to make this clear we must observe that, as we have said above (A. 8), man's act of reasoning, since it is a kind of movement, proceeds from the understanding of certain things—namely, those which are naturally known without any investigation on the part of reason, as from an immovable principle,—and ends also at the understanding, since by means

[3] *Glossa ordin.*, (IV, 210E). Jerome, *In Ezech.* I, on 1.6 (PL 25, 22).
[4] PL 42, 1007, 1009.
[5] PL 32, 1256. [6] PL 42, 999.
[7] *Metaphysics*, IX, 2 (1046[b]5).
[8] Wm. of Auxerre, *Summa Aurea*, II, 12, 1 (fol. 65 vb), who is followed by Roland of Cremana and John of Rochelle. (See text cited by Lottin, RNP (1926) p. 446).
[9] Cf. Alexander of Hales, *Sum. Theol*, I-II, n. 418 (QR II, 493)—See Lottin, RNP (1927) p. 265.

of those principles naturally known we judge of those things which we have discovered by reasoning. Now it is clear that, as the speculative reason reasons about speculative things, so the practical reason reasons about practical things. Therefore we must have bestowed on us by nature not only speculative principles, but also practical principles. Now the first speculative principles bestowed on us by nature do not belong to a special power, but to a special habit, which is called "the understanding of principles," as the Philosopher explains.[1] And so also the first practical principles, bestowed on us by nature, do not belong to a special power, but to a special natural habit, which we call synderesis. And so synderesis is said to stir up to good, and to murmur at evil, since through first principles we proceed to discover, and judge of what we have discovered. It is therefore clear that synderesis is not a power, but a natural habit.

Reply Obj. 1. The division given by Jerome is taken from the variety of acts, and not from the variety of powers; and various acts can belong to one power.

Reply Obj. 2. In like manner, the opposition of sensuality to synderesis is an opposition of acts, and not of the different species of one genus.

Reply Obj 3 Those unchangeable notions are the first practical principles, concerning which no one errs; and they are attributed to reason as to a power, and to synderesis as to a habit. And thus we judge naturally both by our reason and by synderesis.

ARTICLE 13. *Whether Conscience Is a Power?*

We proceed thus to the Thirteenth Article: It would seem that conscience is a power.

Objection 1. For Origen says[2] that conscience is "a correcting and guiding spirit accompanying the soul, by which it is led away from evil and made to cling to good." But in the soul, spirit designates a power—either the mind itself, according to the text (Eph. 4. 13), *Be ye renewed in the spirit of your mind*—or the imagination, from which imaginary vision is called "spiritual," as Augustine says (*Gen. ad lit.* vii, 7, 24).[3] Therefore conscience is a power.

Obj. 2. Further, nothing is a subject of sin except a power of the soul. But conscience is a subject of sin; for it is said of some that *their mind and conscience are defiled* (Titus 1. 15). Therefore it seems that conscience is a power.

Obj. 3. Further, conscience must of necessity be either an act, a habit, or a power. But it is not an act, for thus it would not always exist in man. Nor is it a habit, for conscience is not one thing but many, since we are directed in our actions by many habits of knowledge. Therefore conscience is a power.

On the contrary, Conscience can be laid aside But a power cannot be laid aside. Therefore conscience is not a power.

I answer that, Properly speaking conscience is not a power, but an act. This is evident both from the very name and from those things which in the common way of speaking are attributed to conscience. For conscience, according to the very nature of the word, implies the relation of knowledge to something; for conscience may be resolved into *cum alio scientia* [that is, knowledge applied to an individual case]. But the application of knowledge to something is done by some act. And thus, from this explanation of the name it is clear that conscience is an act.

The same is manifest from those things which are attributed to conscience. For conscience is said to witness, to bind, or stir up, and also to accuse, torment, or rebuke. And all these follow the application of knowledge or science to what we do, which application is made in three ways. One way in so far as we recognize that we have done or not done something: *Thy conscience knoweth that thou hast often spoken evil of others* (Eccles. 7. 23), and according to this, conscience is said to witness. In another way, so far as through the conscience we judge that something should be done or not done, and in this sense, conscience is said to stir up or to bind. In the third way, so far as by conscience we judge that something done is well done or ill done, and in this sense conscience is said to excuse, accuse, or torment. Now, it is clear that all these things follow the actual application of knowledge to what we do. Therefore, properly speaking, conscience denominates an act. But since habit is a principle of act, sometimes the name conscience is given to the first natural habit—namely, synderesis: thus Jerome calls synderesis conscience (Gloss. Ezech. 1. 6);[4] Basil,[5] the "natural power of judgment," and Damascene[6] says that it is the "law of our intellect." For it is customary for causes and effects to be called after one another.

Reply Obj. 1. Conscience is called a spirit, so

[1] *Ethics*, VI, 6 (1141[a]7).
[2] *Commentary on Rom.*, 2.15 (PG 14, 892).
[3] PL 34, 459, 474.
[4] *Glossa ordin.* (IV, 210F); Jerome, *In Ezech* I, on 1 6 (PL 25, 22).
[5] Hom. XII, *In Princ Prov.* (PG 31, 404).
[6] *De Fide Orth*, IV, 22 (PG 94, 1089)

far as spirit is the same as mind, because conscience is a certain pronouncement of the mind.

Reply Obj. 2. The conscience is said to be defiled, not as a subject, but as the thing known is in knowledge; in so far, that is, as someone knows he is defiled.

Reply Obj. 3. Although an act does not always remain in itself, yet it always remains in its cause, which is power and habit. Now all the habits by which conscience is formed, although many, nevertheless have their efficacy from one first principle, the habit of first principles, which is called synderesis. And for this special reason, this habit is sometimes called conscience, as we have said above.

QUESTION LXXX

OF THE APPETITIVE POWERS IN GENERAL

(In Two Articles)

NEXT we consider the appetitive powers, concerning which there are four heads of consideration: first, the appetitive powers in general; second, sensuality (Q. LXXXI); third, the will (Q. LXXXII); fourth, free choice (Q LXXXIII). Under the first there are two points of inquiry (1) Whether the appetite should be considered a special power of the soul? (2) Whether the appetite should be divided into intellectual and sensitive as distinct powers?

ARTICLE 1. *Whether the Appetite Is a Special Power of the Soul?*

We proceed thus to the First Article: It would seem that the appetite is not a special power of the soul.

Objection 1. For no power of the soul is to be assigned for those things which are common to animate and to inanimate things. But to desire is common to animate and inanimate things, since "the good is what all desire" as the Philosopher says.[1] Therefore the appetite is not a special power of the soul.

Obj. 2. Further, powers are differentiated by their objects. But what we desire is the same as what we know. Therefore the appetitive power is not distinct from the apprehensive power.

Obj. 3. Further, the common is not divided from the proper. But each power of the soul desires some particular desirable thing—namely, its own suitable object. Therefore, with regard to this object which is the desirable in general we should not assign some particular power distinct from the others, called the appetitive power.

[1] *Ethics*, I, 1 (1094[a]3).

On the contrary, The Philosopher distinguishes[2] the appetitive from the other powers. Damascene also (*De Fid. Orth.* ii, 22)[3] distinguishes the appetitive from the cognitive powers.

I answer that, It is necessary to assign an appetitive power to the soul. To make this evident, we must observe that some inclination follows every form; for example, fire, by its form, is inclined to rise, and to generate its like. Now, the form is found to be more perfect in those things which participate knowledge than in those which lack knowledge. For in those which lack knowledge, the form is found to determine each thing only to its own being—that is, to the being natural to each. Therefore this natural form is followed by a natural inclination, which is called the natural appetite. But in those things which have knowledge, each one is determined to its own natural being by its natural form, in such a manner that it is nevertheless receptive of the species of other things; for example, sense receives the species of all things sensible, and the intellect, of all things intelligible, and thus the soul of man is, in a way, all things by sense and intellect. And thus those things that have knowledge, in a way, approach to a likeness to God, "in Whom all things pre-exist," as Dionysius says (*Div. Nom.* v).[4]

Therefore, as forms exist in those things that have knowledge in a higher manner and above the manner of natural forms, so must there be in them an inclination surpassing the natural inclination, which is called the natural appetite. And this superior inclination belongs to the appetitive power of the soul, through which the animal is able to desire what it apprehends, and not only that to which it is inclined by its natural form. And so it is necessary to assign an appetitive power to the soul.

Reply Obj. 1. To desire is found in things which have knowledge above the common manner in which it is found in all things, as we have said above. Therefore it is necessary to assign to the soul a particular power.

Reply Obj. 2. What is apprehended and what is desired are the same in subject, but differ in aspect; for a thing is apprehended as a sensible or intelligible being, whereas it is desired as suitable or good. Now, it is diversity of aspect in the objects, and not material diversity, which demands a diversity of powers.

Reply Obj. 3. Each power of the soul is a

[2] *Soul*, II, 3 (414[a]31); cf. also III, 10 (433[a]9).
[3] PG 94, 941.
[4] Sect. 5 (PG 3, 820).

form or nature, and has a natural inclination to something. Therefore each power desires by the natural appetite that object which is suitable to itself. Above this natural appetite is the animal appetite, which follows the apprehension, and by which something is desired not as suitable to the act of this or that power, such as sight for seeing, or sound for hearing, but as suitable absolutely to the animal.

ARTICLE 2. *Whether the Sensitive and Intellectual Appetites Are Distinct Powers?*

We proceed thus to the Second Article: It would seem that the sensitive and intellectual appetites are not distinct powers.

Objection 1. For powers are not differentiated by accidental differences, as we have seen above (Q. LXXVII, A. 3). But it is accidental to the desirable object whether it be apprehended by the sense or by the intellect. Therefore the sensitive and intellectual appetites are not distinct powers.

Obj. 2. Further, intellectual knowledge is of universals, and so it is distinct from sensitive knowledge, which is of individual things. But there is no place for this distinction in the appetitive part, for since the appetite is a movement of the soul to individual things, it seems that every act of the appetite regards an individual thing. Therefore the intellectual appetite should not be distinguished from the sensitive.

Obj. 3. Further, as under the apprehensive power, the appetitive is subordinate as a lower power, so also is the moving power. But the moving power which in man follows the intellect is not distinct from the moving power which in animals follows sense. Therefore, for a like reason, neither is there distinction in the appetitive part.

On the contrary, The Philosopher distinguishes[1] a twofold appetite, and says[2] that the higher appetite moves the lower.

I answer that, We must say that the intellectual appetite is a distinct power from the sensitive appetite. For the appetitive power is a passive power, which is naturally moved by the thing apprehended, "and thus the desirable thing apprehended is a mover which is not moved, while the appetite is a mover moved," as the Philosopher says.[3] Now things passive and movable are differentiated according to the distinction of the corresponding active and moving principles, because the moving principle must be proportionate to the movable, and the active to the passive; indeed, the passive power itself has its very nature from its relation to its active principle. Therefore, since what is apprehended by the intellect and what is apprehended by sense are generically different, consequently the intellectual appetite is distinct from the sensitive.

Reply Obj. 1. It is not accidental to the thing desired to be apprehended by the sense or the intellect; on the contrary, this belongs to it *per se,* for the desirable thing does not move the appetite except as it is apprehended. And so differences in the thing apprehended are of themselves differences of the desirable thing And so the appetitive powers are distinct according to the distinction of the things apprehended, as according to their proper objects.

Reply Obj. 2. The intellectual appetite, though it tends to things which are singular outside the soul, yet tends to them according to some universal aspect, as when it desires something because it is good. Hence the Philosopher says[4] that hatred can pertain to a universal, as when "we hate every kind of thief " In the same way by the intellectual appetite we may desire the immaterial good, which is not apprehended by sense, such as knowledge, the virtues and the like.

Reply Obj 3. As the Philosopher says,[5] a universal opinion does not move except by means of a particular opinion; and in like manner the higher appetite moves by means of the lower. And therefore there are not two distinct moving powers following the intellect and the sense.

QUESTION LXXXI
OF SENSUALITY
(In Three Articles)

NEXT we have to consider sensuality, concerning which there are three points of inquiry: (1) Whether sensuality is only an appetitive power? (2) Whether it is divided into irascible and concupiscible as distinct powers? (3) Whether the irascible and concupiscible powers obey reason?

ARTICLE 1. *Whether Sensuality Is Only Appetitive?*

We proceed thus to the First Article: It would seem that sensuality is not only appetitive, but also cognitive.

Objection 1. For Augustine says (*De Trin.* xii, 12)[6] that "the sensual movement of the soul

[1] *Soul,* III, 9 (432^b5); also III, 10 (433^a23).
[2] *Ibid.,* III, 11 (434^a12).
[3] *Ibid.,* III, 10 (433^b16); *Metaphysics,* XII, 7 (1072^a26).
[4] *Rhetoric,* II, 4 (1382^a5).
[5] *Soul,* III, 11 (434^a16).
[6] PL 42, 1007.

which is directed to the bodily senses is common to us and beasts." But the bodily senses belong to the apprehensive powers. Therefore sensuality is a cognitive power.

Obj. 2 Further, things which come under one division seem to be of one genus But Augustine (*De Trin.* xii, *loc. cit*) divides sensuality against the higher and lower reason, which pertain to knowledge. Therefore sensuality also is a cognitive power.

Obj. 3 Further, in man's temptations sensuality stands in the place of the serpent. But in the temptation of our first parents the serpent presented himself as one giving information and proposing sin, which belong to the cognitive power. Therefore sensuality is a cognitive power.

On the contrary, Sensuality is defined as "the appetite of things pertaining to the body."[1]

I answer that, The name sensuality seems to be taken from the sensual movement, of which Augustine speaks (*De Trin* xii, 12, 13),[2] just as the name of a power is taken from its act; for instance, sight from seeing Now the sensual movement is an appetite following sensitive apprehension For the act of the apprehensive power is not so properly called a movement as the act of the appetite, since the operation of the apprehensive power is completed in the very fact that the thing apprehended is in the one that apprehends, while the operation of the appetitive power is completed in the fact that he who desires is borne towards the thing desirable Therefore the operation of the apprehensive power is likened to rest, whereas the operation of the appetitive power is rather likened to movement. Therefore by sensual movement we understand the operation of the appetitive power, so that sensuality is the name of the sensitive appetite.

Reply Obj 1. By saying that the sensual movement of the soul is directed to the bodily senses, Augustine does not give us to understand that the bodily senses are included in sensuality, but rather that the movement of sensuality is a certain inclination to the bodily senses, since we desire things which are apprehended through the bodily senses. And thus the bodily senses appertain to sensuality as a kind of preliminary.

Reply Obj. 2. Sensuality is divided against higher and lower reason, as having in common with them the act of movement; for the apprehensive power, to which belong the higher and lower reason, is a moving power, as is appetite, to which appertains sensuality.

Reply Obj. 3. The serpent not only showed and proposed sin, but also incited to the commission of sin. And in this sensuality is signified by the serpent.

ARTICLE 2. *Whether the Sensitive Appetite Is Divided Into the Irascible and Concupiscible As Distinct Powers?*

We proceed thus to the Second Article: It would seem that the sensitive appetite is not divided into the irascible and concupiscible as distinct powers

Objection 1 For the same power of the soul regards "both sides of a contrariety, as sight regards both black and white," according to the Philosopher.[3] But suitable and harmful are contraries Since, then, the concupiscible power regards what is suitable, while the irascible is concerned with what is harmful, it seems that irascible and concupiscible are the same power in the soul

Obj 2. Further, the sensitive appetite regards only what is suitable according to the senses. But such is the object of the concupiscible power. Therefore there is no sensitive appetite differing from the concupiscible.

Obj 3. Further, hatred is in the irascible part; for Jerome says on Matt. 13. 33:[4] "We ought to have the hatred of vice in the irascible power." But hatred is contrary to love, and is in the concupiscible part Therefore the concupiscible and irascible are the same powers

On the contrary, Gregory of Nyssa (Nemesius, *De Natura Hominis*)[5] and Damascene (*De Fid. Orth* ii, 12)[6] assign two powers to the sensitive appetite, the irascible and the concupiscible parts

I answer that, The sensitive appetite is one generic power, and is called sensuality; but it is divided into two powers, which are species of the sensitive appetite—the irascible and the concupiscible In order to make this clear, we must observe that in natural corruptible things there is needed an inclination not only to the acquisition of what is suitable and to the avoiding of what is harmful, but also to resistance against corruptive and contrary agencies which are a hindrance to the acquisition of what is suitable, and are productive of harm. For example, fire has a natural inclination not only

[1] Cf. Peter Lombard, *Sent.*, II, d. XXIV, 4 (QR I, 421).
[2] PL 42, 1007, 1009.
[3] *Soul*, II, 11 (422^b23).
[4] Bk. I (PL 26, 94)
[5] Chaps. 16, 17 (PG 40, 672, 676).
[6] PG 94, 928.

to rise from a lower position, which is unsuitable to it, towards a higher position which is suitable, but also to resist whatever destroys or hinders its action. Therefore, since the sensitive appetite is an inclination following sensitive apprehension, as natural appetite is an inclination following the natural form, there must be two appetitive powers in the sensitive part—one through which the soul is inclined absolutely to seek what is suitable according to the senses, and to fly from what is hurtful, and this is called the concupiscible; and another by which an animal resists these attacks that hinder what is suitable and inflict harm, and this is called the irascible. And so we say that its object is something arduous, because its tendency is to overcome and rise above obstacles.

Now these two are not to be reduced to one principle, for sometimes the soul busies itself with unpleasant things against the inclination of the concupiscible appetite in order that, following the impulse of the irascible appetite, it may fight against obstacles. Hence also the passions of the irascible appetite seem to go against the passions of the concupiscible appetite, since concupiscence, on being roused, diminishes anger, and anger being roused, diminishes concupiscence in many cases This is clear also from the fact that the irascible is, as it were, the champion and defender of the concupiscible, when it rises up against what hinders the acquisition of the suitable things which the concupiscible desires, or against what inflicts harm, from which the concupiscible flies And for this reason all the passions of the irascible appetite rise from the passions of the concupiscible appetite and terminate in them; for instance, anger rises from sadness, and having wrought vengeance, terminates in joy. For this reason also the quarrels of animals are about things concupiscible—namely, food and sex, as the Philosopher says.[1]

Reply Obj. 1. The concupiscible power regards both what is suitable and what is unsuitable. But the object of the irascible power is to resist the onslaught of the unsuitable.

Reply Obj 2. As in the apprehensive powers of the sensitive part there is an estimative power, which perceives those things which do not change the senses, as we have said above (Q. LXXVIII, A. 2), so also in the sensitive appetite there is a certain appetitive power which regards something as suitable not because it pleases the senses, but because it is useful to the animal for self-defence; and this is the irascible power.

Reply Obj. 3. Hatred belongs absolutely to the concupiscible appetite, but by reason of the strife which arises from hatred, it may pertain to the irascible appetite.

ARTICLE 3. *Whether the Irascible and Concupiscible Appetites Obey Reason?*

We proceed thus to the Third Article: It would seem that the irascible and concupiscible appetites do not obey reason.

Objection 1. For irascible and concupiscible are parts of sensuality. But sensuality does not obey reason; hence it is signified by the serpent, as Augustine says (*De Trin.* xii, 12, 13) [2] Therefore the irascible and concupiscible appetites do not obey reason.

Obj. 2. Further, what obeys a certain thing does not resist it. But the irascible and concupiscible appetites resist reason: according to the Apostle (Rom. 7. 23): *I see another law in my members fighting against the law of my mind* Therefore the irascible and concupiscible appetites do not obey reason

Obj. 3. Further, as the appetitive power is inferior to the rational part of the soul, so also is the sensitive power. But the sensitive part of the soul does not obey reason, for we neither hear nor see just when we wish. Therefore, in like manner, neither do the powers of the sensitive appetite, the irascible and concupiscible, obey reason.

On the contrary, Damascene says (*De Fid. Orth* ii, 12)[3] that "the part of the soul which is obedient and amenable to reason is divided into concupiscence and anger."

I answer that, In two ways the irascible and concupiscible powers obey the higher part, in which are the intellect or reason, and the will: first, as to the reason, secondly as to the will. They obey the reason in their own acts, because in other animals the sensitive appetite is naturally moved by the estimative power; for instance, a sheep, esteeming the wolf as an enemy, is afraid. In man the estimative power, as we have said above (Q. LXXVIII, A. 4), is replaced by the cogitative power, which is called by some the particular reason, because it compares individual intentions.[4] Thus in man the sensitive appetite is naturally moved by this particular reason. But this same particular reason is naturally guided and moved according to the uni-

[1] *History of Animals,* VIII, 1 ($589^{a}2$); cf. VII, 18 ($571^{b}8$); IX, 1 ($608^{b}19$).

[2] PL 42, 1007, 1009.

[3] PG 94, 928.

[4] Cf. above, Q. LXXVIII, A. 4.

versal reason and so, in syllogistic reasoning particular conclusions are drawn from universal propositions. Therefore it is clear that the universal reason directs the sensitive appetite, which is divided into concupiscible and irascible, and this appetite obeys it. But because to draw particular conclusions from universal principles is not the work of the intellect, as such, but of the reason, hence it is that the irascible and concupiscible are said to obey the reason rather than to obey the intellect Anyone can experience this in himself, for by applying certain universal considerations, anger or fear or the like may be modified or excited.

To the will also is the sensitive appetite subject in execution, which is accomplished by the moving power. For in other animals movement follows at once the concupiscible and irascible appetites; for instance, the sheep, fearing the wolf, flies at once, because it has no superior counteracting appetite On the contrary, man is not moved at once, according to the irascible and concupiscible appetites, but he awaits the command of the will, which is the superior appetite. For wherever there is order among a number of moving powers, the second only moves by virtue of the first; and so the lower appetite is not sufficient to cause movement unless the higher appetite consents. And this is what the Philosopher says,[1] that the higher appetite moves the lower appetite, as the higher sphere moves the lower. In this way, therefore, the irascible and concupiscible are subject to reason.

Reply Obj 1. Sensuality is signified by the serpent in what is proper to it as a sensitive power. But the irascible and concupiscible powers denominate the sensitive appetite rather on the part of the act, to which they are led by the reason, as we have said

Reply Obj. 2. As the Philosopher says,[2] "We observe in an animal a despotic and a politic principle, for the soul dominates the body by a despotic power; but the intellect dominates the appetite by a politic and royal power." For that power is called despotic whereby a man rules his slaves, who have not the right to resist in any way the orders of the one that commands them, since they have nothing of their own But that power is called politic and royal by which a man rules over free subjects, who, though subject to the government of the ruler, have nevertheless something of their own, by reason of which they can resist the orders of him who commands. And so, the soul is said to rule the body by a despotic power because the members of the body cannot in any way resist the sway of the soul, but at the soul's command both hand and foot, and whatever member is naturally moved by voluntary movement, are moved at once. But the intellect or reason is said to rule the irascible and concupiscible by a politic power, because the sensitive appetite has something of its own, by virtue of which it can resist the commands of reason. For the sensitive appetite is naturally moved not only by the estimative power in other animals, and in man by the cogitative power which the universal reason guides, but also by the imagination and sense And so it is that we experience that the irascible and concupiscible powers do resist reason, since we sense or imagine something pleasant, which reason forbids, or unpleasant, which reason commands. And so from the fact that the irascible and concupiscible resist reason in something we must not conclude that they do not obey.

Reply Obj 3. The exterior senses require for action exterior sensible things, whereby they are changed, and the presence of which is not ruled by reason. But the interior powers, both appetitive and apprehensive, do not require exterior things Therefore they are subject to the command of reason, which can not only incite or modify the affections of the appetitive power, but can also form the phantasms of the imagination.

[1] *Soul* III 11 (434a12) [2] *Politics*. I. 5 (1254b2).

QUESTION LXXXII
OF THE WILL
(*In Five Articles*)

WE next consider the will. Under this head there are five points of inquiry: (1) Whether the will desires something of necessity? (2) Whether it desires everything of necessity? (3) Whether it is a higher power than the intellect? (4) Whether the will moves the intellect? (5) Whether the will is divided into irascible and concupiscible?

ARTICLE 1. *Whether the Will Desires Something of Necessity?*

We proceed thus to the First Article: It would seem that the will desires nothing of necessity.

Objection 1. For Augustine says[3] that if anything is necessary it is not voluntary. But whatever the will desires is voluntary. Therefore nothing that the will desires is desired of necessity.

[3] *City of God* V. 10 (PL 41. 152).

Obj. 2. Further, "the rational powers," according to the Philosopher,[1] "extend to opposite things." But the will is a rational power, because, as he says,[2] "the will is in the reason" Therefore the will extends to opposite things, and therefore it is determined to nothing of necessity.

Obj. 3. Further, by the will we are masters of our own actions. But we are not masters of that which is of necessity. Therefore the act of the will cannot be necessitated

On the contrary, Augustine says (*De Trin.* xiii, 4)[3] that "all desire happiness with one will." Now if this were not necessary, but contingent, there would at least be a few exceptions. Therefore the will desires something of necessity.

I answer that, The word necessity is employed in many ways. For that which cannot be is necessary. Now that a thing must be may belong to it by an intrinsic principle. either material, as when we say that everything composed of contraries is of necessity corruptible; or formal, as when we say that it is necessary for the three angles of a triangle to be equal to two right angles. And this is natural and absolute necessity. In another way, that a thing must be, belongs to it by reason of something extrinsic, which is either the end or the agent. On the part of the end, as when without it the end is not to be attained or so well attained; for instance, food is said to be necessary for life, and a horse is necessary for a journey. This is called necessity of end, and sometimes also utility On the part of the agent, a thing must be, when someone is forced by some agent, so that he is not able to do the contrary This is called necessity of coercion.

Now this necessity of coercion is altogether contrary to the will. For we call that violent which is against the inclination of a thing. But the very movement of the will is an inclination to something. Therefore, as a thing is called natural because it is according to the inclination of nature, so a thing is called voluntary because it is according to the inclination of the will. Therefore, just as it is impossible for a thing to be at the same time violent and natural, so it is impossible for a thing to be absolutely coerced or violent, and voluntary.

But necessity of end is not contrary to the will when the end cannot be attained except in one way; thus from the will to cross the sea arises in the will the necessity to wish for a ship.

In like manner neither is natural necessity contrary to the will. Indeed, more than this, for as the intellect of necessity adheres to the first principles, the will must of necessity adhere to the last end, which is happiness, since the end is in practical matters what the principle is in speculative matters, as is stated in the *Physics.*[4] For what befits a thing naturally and immovably must be the root and principle of all else pertaining to it, since the nature of a thing is the first in everything, and every movement arises from something immovable.

Reply Obj. 1. The words of Augustine are to be understood of the necessity of coercion. But natural necessity does not take away the liberty of the will, as he says himself.[5]

Reply Obj 2. The will, so far as it desires a thing naturally, corresponds rather to the intellect as regards natural principles than to the reason, which extends to opposite things. Therefore in this respect it is rather an intellectual than a rational power

Reply Obj. 3. We are masters of our own actions by reason of our being able to choose this or that. But choice regards not the end, but "the means to the end," as the Philosopher says[6] Thus the desire of the ultimate end does not regard those actions of which we are masters.

Article 2 *Whether the Will Desires of Necessity, Whatever It Desires?*

We proceed thus to the Second Article: It would seem that the will desires all things of necessity, whatever it desires.

Objection 1. For Dionysius says (*Div. Nom* iv)[7] that "evil is outside the scope of the will." Therefore the will tends of necessity to the good which is proposed to it.

Obj. 2. Further, the object of the will is compared to the will as the mover to the thing movable. But the movement of the movable necessarily follows the mover. Therefore it seems that the will's object moves it of necessity.

Obj 3. Further, as the thing apprehended by sense is the object of the sensitive appetite, so the thing apprehended by the intellect is the object of the intellectual appetite, which is called the will. But what is apprehended by the sense moves the sensitive appetite of necessity; for Augustine says (*Gen. ad lit.* ix, 14)[8] that "animals are moved by things seen" Therefore it

[1] *Metaphysics,* IX, 2 (1046^{b}5).
[2] *Soul,* III, 9 (432^{b}5).
[3] PL 42, 1018.
[4] Aristotle, II, 9 (200^{a}21).
[5] *Loc. cit.*
[6] *Ethics,* III, 2 (1111^{b}27).
[7] Sect. 32 (PG 3, 732).
[8] PL 34, 402.

seems that whatever is apprehended by the intellect moves the will of necessity.

On the contrary, Augustine says (*Retract.* i, 9)[1] that "it is the will by which we sin and live well," and so the will extends to opposite things. Therefore it does not desire of necessity all things whatsoever it desires.

I answer that, The will does not desire of necessity whatsoever it desires. In order to make this evident we must observe that as the intellect naturally and of necessity adheres to the first principles, so the will adheres to the last end, as we have said already (A. 1). Now there are some things intelligible which have not a necessary connection with the first principles, such as contingent propositions, the denial of which does not involve a denial of the first principles. And to such the intellect does not assent of necessity. But there are some propositions which have a necessary connection with the first principles, such as demonstrable conclusions, a denial of which involves a denial of the first principles. And to these the intellect assents of necessity, when once it is aware, through demonstration, of the necessary connection of these conclusions with the principles; but it does not assent of necessity until through the demonstration it recognizes the necessity of such connection It is the same with the will. For there are certain individual goods which have not a necessary connection with happiness, because without them a man can be happy, and to such the will does not adhere of necessity. But there are some things which have a necessary connection with happiness, by means of which things man adheres to God, in Whom alone true happiness consists Nevertheless, until through the certitude of the Divine Vision the necessity of such connection be shown, the will does not adhere to God of necessity, nor to those things which are of God. But the will of the man who sees God in His Essence of necessity adheres to God, just as now we desire of necessity to be happy. It is therefore clear that the will does not desire of necessity whatever it desires.

Reply Obj. 1. The will can tend to nothing except under the aspect of good. But because good is of many kinds, for this reason the will is not of necessity determined to one.

Reply Obj. 2. The mover of necessity causes movement in the thing movable when the power of the mover exceeds the thing movable, so that its entire capacity (*possibilitas*) is subject to the mover. But as the capacity of the will regards the universal and perfect good, its capacity is not subjected to any individual good. And therefore it is not of necessity moved by it.

Reply Obj. 3. The sensitive power does not compare different things with each other, as reason does, but it apprehends absolutely some one thing. Therefore, according to that one thing, it moves the sensitive appetite in a determinate way. But the reason is a power that compares several things together. Therefore from several things the intellectual appetite—that is, the will—may be moved, but not of necessity from one thing.

ARTICLE 3. *Whether the Will Is a Higher Power Than the Intellect?*

We proceed thus to the Third Article: It would seem that the will is a higher power than the intellect.

Objection 1. For the object of the will is good and the end But the end is the first and highest cause. Therefore the will is the first and highest power.

Obj. 2. Further, in the order of natural things we observe a progress from imperfect things to perfect And this also appears in the powers of the soul, for sense precedes the intellect, which is more noble. Now the act of the will, in the natural order, follows the act of the intellect. Therefore the will is a more noble and perfect power than the intellect.

Obj. 3 Further, habits are proportioned to their powers as perfections to what they make perfect. But the habit which perfects the will—namely, charity—is more noble than the habits which perfect the intellect, for it is written (I Cor 13. 2): *If I should know all mysteries, and if I should have all faith, and have not charity, I am nothing* Therefore the will is a higher power than the intellect.

On the contrary, The Philosopher holds the intellect to be the highest power of the soul.[2]

I answer that, The superiority of one thing over another can be considered in two ways: absolutely and relatively. Now a thing is considered to be such absolutely which is considered such in itself, but relatively as it is such with regard to something else. If therefore the intellect and will be considered with regard to themselves, then the intellect is the higher power. And this is clear if we compare their respective objects to one another For the object of the intellect is more simple and more absolute than the object of the will, since the object of the intellect is the very notion of good as desirable; and the good as desirable, the notion of which is

[1] PL 32, 596; cf. also *City of God* v, 10 (PL 41, 152).

[2] *Ethics* x, 7 (1177[a]20).

in the intellect, is the object of the will. Now the more simple and the more abstract a thing is, the nobler and higher it is in itself; and therefore the object of the intellect is higher than the object of the will. Therefore, since the proper nature of a power is in its order to its object, it follows that the intellect in itself and absolutely is higher and nobler than the will.

But relatively and by comparison with something else, we find that the will is sometimes higher than the intellect, from the fact that the object of the will occurs in something higher than that in which occurs the object of the intellect. Thus, for instance, I might say that hearing is relatively nobler than sight, in so far as something in which there is sound is nobler than something in which there is colour, though colour is nobler and simpler than sound. For, as we have said above (Q. XVI, A. 1; Q. XXVII, A. 4), the action of the intellect consists in this—that the notion of the thing understood is in the one who understands, while the act of the will consists in this—that the will is inclined to the thing itself as it is in itself. And therefore the Philosopher says in the *Metaphysics*[1] that good and evil, which are objects of the will, are in things, but truth and error, which are objects of the intellect, are in the mind. When, therefore, the thing in which there is good is nobler than the soul itself, in which is the idea understood, by comparison with such a thing the will is higher than the intellect. But when the thing which is good is less noble than the soul, then even in comparison with that thing the intellect is higher than the will. Therefore the love of God is better than the knowledge of God; but, on the contrary, the knowledge of corporeal things is better than the love of them. Absolutely, however, the intellect is nobler than the will.

Reply Obj. 1 The aspect of cause is perceived by comparing one thing to another, and in such a comparison the notion of good is found to be nobler; but truth signifies something, more absolute, and extends to the notion of good itself; thus, even good is something true. But, again, truth is something good, according as the intellect is a thing, and truth its end. And among other ends this is the most excellent, as also is the intellect among the other powers.

Reply Obj. 2. What precedes in order of generation and time is less perfect, for in one and the same thing potency precedes act, and imperfection precedes perfection. But what precedes absolutely and in the order of nature is more perfect, for thus act precedes potency. And in this way the intellect precedes the will, as the moving power precedes the thing movable, and as the active precedes the passive; for good which is understood moves the will.

Reply Obj. 3. This reason is verified of the will as compared with what is above the soul. For charity is the virtue by which we love God.

ARTICLE 4. *Whether the Will Moves the Intellect?*

We proceed thus to the Fourth Article: It would seem that the will does not move the intellect.

Objection 1. For what move excels and precedes what is moved, because what moves is an agent, and "the agent is nobler than the patient," as Augustine says (*Gen. ad lit.* xii, 16),[2] and the Philosopher.[3] But the intellect excels and precedes the will, as we have said above (A. 3). Therefore the will does not move the intellect.

Obj. 2. Further, what moves is not moved by what is moved, except perhaps accidentally. But the intellect moves the will, because the good apprehended by the intellect moves without being moved, whereas the appetite moves and is moved. Therefore the intellect is not moved by the will.

Obj. 3. Further, we can will nothing but what we understand If, therefore, in order to understand, the will moves by willing to understand, that act of the will must be preceded by another act of the intellect, and this act of the intellect by another act of the will, and so on indefinitely, which is impossible Therefore the will does not move the intellect.

On the contrary, Damascene says (*De Fid. Orth.* ii, 26):[4] "It is in our power whether to learn an art or not." But a thing is in our power by the will, and we learn art by the intellect. Therefore the will moves the intellect

I answer that, A thing is said to move in two ways. First, as an end, for instance, when we say that the end moves the doer. In this way the intellect moves the will, because the good understood is the object of the will, and moves it as an end. Secondly, a thing is said to move as an agent, as what alters moves what is altered, and what impels moves what is impelled. In this way the will moves the intellect, and all the powers of the soul, as Anselm says (Eadmer, *De Similitudinibus*).[5] The reason is, because wherever we have order among a number of active powers,

[1] VI, 4 (1027^{b}25).

[2] PL 34, 467.

[3] *Soul,* III, 5 (430^{a}18).

[4] PG 94, 960.

[5] Chap. 2 (PL 159, 605).

that power which regards the universal end moves the powers which regard particular ends. And we may observe this both in nature and in political things. For the heaven, which aims at the universal preservation of things subject to generation and corruption moves all inferior bodies, each of which aims at the preservation of its own species or of the individual. The king also, who aims at the common good of the whole kingdom, by his rule moves all the governors of cities, each of whom rules over his own particular city. Now the object of the will is good and the end in general, and each power is directed to some suitable good proper to it, as sight is directed to the perception of colour, and the intellect to the knowledge of truth. Therefore the will as an agent moves all the powers of the soul to their respective acts, except the natural powers of the vegetative part, which are not subject to our choice.

Reply Obj. 1. The intellect may be considered in two ways: as apprehensive of universal being and truth, and as a thing and a particular power having a determinate act. In like manner also the will may be considered in two ways: according to the common nature of its object—that is to say, as appetitive of universal good—and as a determinate power of the soul having a determinate act If, therefore, the intellect and will be compared with one another under the aspect of the universality of their respective objects, then, as we have said above (A. 3), the intellect is higher and nobler absolutely than the will. If, however, we take the intellect according to the common nature of its object and the will as a determinate power, then again the intellect is higher and nobler than the will, because under the notion of being and truth which the intellect apprehends is contained both the will itself, and its act, and its object. Thus the intellect understands the will, and its act, and its object, just as it understands other special things, as stone or wood, which are contained in the common notion of being and truth. But if we consider the will as regards the common nature of its object, which is good, and the intellect as a thing and a special power, then the intellect itself, and its act, and its object, which is truth, each of which is some special good, are contained under the common notion of good. And in this way the will is higher than the intellect, and can move it. From this we can easily understand why these powers include one another in their acts, because the intellect understands that the will wills, and the will wills the intellect to understand. In the same way good is contained in truth, inasmuch as it is an understood truth, and truth in good, inasmuch as it is a desired good.

Reply Obj. 2. The intellect moves the will in one sense, and the will moves the intellect in another, as we have said above.

Reply Obj. 3 There is no need to go on indefinitely, but we must stop at the intellect as preceding all the rest. For every movement of the will must be preceded by apprehension, whereas every apprehension is not preceded by an act of the will; but the principle of counselling and understanding is an intellectual principle higher than our intellect—namely, God—as also Aristole says,[1] and in this way he explains that there is no need to proceed to infinity.

ARTICLE 5. *Whether We Should Distinguish Irascible and Concupiscible Parts in the Superior Appetite?*

We proceed thus to the Fifth Article: It would seem that we ought to distinguish irascible and concupiscible parts in the superior appetite, which is the will.

Objection 1. For the concupiscible power is so called from *concupiscere*, to desire, and the irascible part from *irasci*, to be angry. But there is a concupiscence which cannot belong to the sensitive appetite, but only to the intellectual, which is the will, as the concupiscence of wisdom, of which it is said (Wisd. 6. 21): *The concupiscence of wisdom bringeth to the eternal kingdom.* There is also a certain anger which cannot belong to the sensitive appetite, but only to the intellectual, as when our anger is directed against vice. Hence Jerome commenting on Matt. 13. 33[2] warns us to have the hatred of vice in the irascible part. Therefore we should distinguish irascible and concupiscible parts in the intellectual soul as well as in the sensitive.

Obj. 2. Further, as is commonly said, charity is in the concupiscible, and hope in the irascible part. But they cannot be in the sensitive appetite, because their objects are not sensible, but intellectual. Therefore we must assign an irascible and a concupiscible power to the intellectual part.

Obj. 3. Further, it is said (*De Spiritu et Anima*)[3] that "the soul has these powers"—namely, the irascible, concupiscible, and rational—"before it is united to the body." But no power of the sensitive part belongs to the soul alone, but to the soul and body united, as we have said

[1] *Eudemian Ethics*, VII, 14 (1248[a]26).
[2] Bk I (PL 26, 94).
[3] Pseudo-Augustine (Alcher of Clairvaux), Chap. 16 (PL 40, 791).

above (Q. LXXVIII, AA. 5, 8). Therefore the irascible and concupiscible powers are in the will, which is the intellectual appetite.

On the contrary, Gregory of Nyssa (Nemesius, *De Nat. Hom.*)[1] says that the irrational part of the soul is divided into the desiring and irascible, and Damascene says the same (*De Fid. Orth.* ii, 12).[2] And the Philosopher says[3] that "the will is in the reason, while in the irrational part of the soul are concupiscence and anger, or desire and wrath."

I answer that, The irascible and concupiscible are not parts of the intellectual appetite, which is called the will. Because, as was said above (Q. LIX, A. 4; Q. LXXIX, A. 7), a power which is directed to an object according to some common notion is not differentiated by special differences which are contained under that common notion. For instance, because sight regards the visible thing under the common notion of something coloured, the visual power is not multiplied according to the different kinds of colour; but if there were a power regarding white as white, and not as something coloured, it would be distinct from a power regarding black as black.

Now the sensitive appetite does not consider the common notion of good, because neither do the senses apprehend the universal. And therefore the parts of the sensitive appetite are differentiated by the different notions of particular good; for the concupiscible is related to its proper notion of good, as something pleasant to the senses and suitable to nature, whereas the irascible is related to the notion of good as something that wards off and repels what is hurtful. But the will regards good according to the common notion of good, and therefore in the will, which is the intellectual appetite, there is no differentiation of appetitive powers, so that there be in the intellectual appetite an irascible power distinct from a concupsicible power; just as neither on the part of the intellect are the apprehending powers multiplied, although they are on the part of the senses.

Reply Obj. 1. Love, concupiscence, and the like can be understood in two ways. Sometimes they are taken as passions—arising, that is, with a certain disturbance of the soul. And thus they are commonly understood, and in this sense they are only in the sensitive appetite. They may, however, be taken in another way, as far as they are simple affections without passion or disturbance of the soul, and thus they are acts of the will. And in this sense, too, they are attributed to the angels and to God. But if taken in this sense, they do not belong to different powers, but only to one power, which is called the will.

Reply Obj. 2. The will itself may be said to be irascible, as far as it wills to repel evil not from any sudden movement of a passion, but from a judgment of the reason. And in the same way the will may be said to be concupiscible on account of its desire for good And thus in the irascible and concupiscible are charity and hope —that is, in the will as ordered to such acts. And in this way, too, we may understand the words quoted (*De Spiritu et Anima*), that the irascible and concupiscible powers are in the soul before it is united to the body (as long as we understand priority of nature, and not of time), although there is no need to have faith in what that book says. And so the *answer to the third objection* is clear.

QUESTION LXXXIII

OF FREE CHOICE

(In Four Articles)

WE now inquire concerning free choice. Under this head there are four points of inquiry: (1) Whether man has free choice? (2) What is free choice—a power, an act, or a habit? (3) If it is a power, is it appetitive or cognitive? (4) If it is appetitive, is it the same power as the will, or distinct?

ARTICLE 1. *Whether Man Has Free Choice?*

We proceed thus to the First Article: It would seem that man has not free choice.

Objection 1. For whoever has free choice does what he wills But man does not what he wills, for it is written (Rom. 7. 19): *For the good which I will I do not, but the evil which I will not, that I do.* Therefore man has not free choice.

Obj. 2. Further, whoever has free choice has in his power to will or not to will, to do or not to do. But this is not in man's power, for it is written (Rom. 9. 16): *It is not of him that willeth* —namely, to will—*nor of him that runneth*— namely, to run. Therefore man has not free choice.

Obj. 3. Further "what is free is cause of itself," as the Philosopher says.[4] Therefore what is moved by another is not free. But God moves the will, for it is written (Prov. 21. 1): *The heart of the king is in the hand of the Lord;*

[1] Chap 16 (PG 40, 672), also chap 17 (676).
[2] PG 94, 928.
[3] *Soul,* III, 9 (432^b5)
[4] *Metaphysics,* I, 2 (982^b26).

whithersoever He will He shall turn it; and (Phil. 2. 13): *It is God Who worketh in you both to will and to accomplish.* Therefore man has not free choice.

Obj. 4. Further, whoever has free choice is master of his own actions. But man is not master of his own actions: for it is written (Jer. 10. 23): *The way of a man is not his: neither is it in a man to walk.* Therefore man has not free choice.

Obj. 5. Further, the Philosopher says,[1] "According as each one is, such does the end seem to him." But it is not in our power to be of one quality or another, for this comes to us from nature. Therefore it is natural to us to follow some particular end, and therefore we do not do so from free choice.

On the contrary, It is written (Ecclus. 15. 14): *God made man from the beginning, and left him in the hand of his own counsel;* and the gloss adds[2]: That is "of his free choice."

I answer that, Man has free choice. Otherwise counsels, exhortations, commands, prohibitions, rewards and punishments would be in vain In order to make this evident, we must observe that some things act without judgment, as a stone moves downwards; and in like manner all things which lack knowledge. And some act from judgment, but not a free judgment; as brute animals For the sheep, seeing the wolf, judges it a thing to be shunned, from a natural and not a free judgment, because it judges, not from an act of comparison, but from natural instinct. And the same thing is to be said of any judgment of brute animals. But man acts from judgment because by his knowing power he judges that something should be avoided or sought. But because this judgment, in the case of some particular act, is not from a natural instinct, but from some act of comparison in the reason, therefore he acts from free judgment and retains the power of being inclined to various things. For reason in contingent matters may follow opposite courses, as we see in dialectic syllogisms and rhetorical arguments. Now particular operations are contingent, and therefore in such matters the judgment of reason may follow opposite courses, and is not determined to one. And since man is rational man must have free choice.

Reply Obj. 1. As we have said above (Q. LXXXI, A. 3, ANS. 2), the sensitive appetite, though it obeys the reason, yet in a given case can resist by desiring what the reason forbids. This is therefore the good which man does not when he wishes—namely, not to desire against reason, as Augustine says.[3]

Reply Obj. 2. Those words of the Apostle are not to be taken as though man does not wish or does not run of his free choice, but because the free choice is not sufficient for this unless it be moved and helped by God.

Reply Obj 3 Free choice is the cause of its own movement, because by his free choice man moves himself to act. But it does not of necessity belong to liberty that what is free should be the first cause of itself, as neither for one thing to be cause of another need it be the first cause. God, therefore, is the first cause, Who moves causes both natural and voluntary. And just as by moving natural causes He does not prevent their acts being natural, so by moving voluntary causes He does not deprive their actions of being voluntary, but rather is He the cause of this very thing in them; for He operates in each thing according to its own nature

Reply Obj. 4 "Man's way" is said "not to be his" in the execution of his choice, in which he may be impeded, whether he will or not The choice itself, however, is in us, but presupposes the help of God

Reply Obj 5 Quality in man is of two kinds: natural and coming from without. Now the natural quality may be in the intellectual part or in the body and its powers. From the very fact, therefore, that man is such by virtue of a natural quality which is in the intellectual part, he naturally desires his last end, which is happiness. Which, indeed, is a natural desire, and is not subject to free choice, as is clear from what we have said above (Q. LXXXII, AA. 1, 2). But on the part of the body and its powers man may be such by virtue of a natural quality, in so far as he is of such a temperament or disposition due to any impression whatever produced by corporeal causes, which cannot affect the intellectual part, since it is not the act of a corporeal organ. And such as a man is by virtue of a corporeal quality, such also does his end seem to him, because from such a disposition a man is inclined to choose or reject something. But these inclinations are subject to the judgment of reason, which the lower appetite obeys, as we have said (Q. LXXXI, A. 3). And so this is in no way prejudicial to free choice

The qualities that come from without are habits and passions, by virtue of which a man is inclined to one thing rather than to another. And

[1] *Ethics*, III, 5 (1114[a]32).

[2] *Glossa interl.* (III, 401V); cf. *Glossa ordin.* (III, 401E).

[3] *Serm. ad Popul*, CLIV, 3 (PL 38, 834). Cf. *Glossa interl.*, on Rom. 7.19 (VI, 171); cf. also *Glossa ordin.*, on Rom. 7.23 (VI, 17F).

yet even these inclinations are subject to the judgment of reason. Such qualities, too, are subject to reason, as it is in our power either to acquire them, whether by causing them or disposing ourselves to them, or to reject them. And so there is nothing in this that is contrary to the freedom of choice.

ARTICLE 2. *Whether Free Choice Is a Power?*

We proceed thus to the Second Article: It would seem that free choice is not a power.

Objection 1. For free choice is nothing but a free judgment. But judgment denominates an act, not a power. Therefore free choice is not a power

Obj. 2. Further, free choice is defined as "the faculty of the will and reason."[1] But faculty denominates a facility of power, which is due to a habit. Therefore free choice is a habit. Moreover Bernard says (*De Gratia et Lib. Arb.* 1, 2)[2] that free choice is "the soul's habit of disposing of itself." Therefore it is not a power.

Obj 3 Further, no natural power is forfeited through sin. But free choice is forfeited through sin, for Augustine says[3] that "man, by abusing free choice, loses both it and himself." Therefore free choice is not a power.

On the contrary, Nothing but a power, it seems, is the subject of a habit But free choice is the subject of grace, by the help of which it chooses what is good. Therefore free choice is a power.

I answer that, Although free choice in its strict sense denotes an act, in the common manner of speaking we call free choice that which is the principle of the act by which man judges freely. Now in us the principle of an act is both power and habit; for we say that we know something both by knowledge and by the intellectual power. Therefore free choice must be either a power[4] or a habit,[5] or a power with a habit.[6] That it is neither a habit nor a power together with a habit, can be clearly proved in two ways. First of all, because, if it is a habit, it must be a natural habit; for it is natural to man to have a free choice. But there is no natural habit in us with respect to those things which come under free choice; for we are naturally inclined to those things of which we have natural habits—for instance, to assent to first principles, while those things to which we are naturally inclined are not subject to free choice, as we have said of the desire of happiness (Q LXXXII, AA. 1, 2). And so it is against the very notion of free choice that it should be a natural habit. And that it should be a non-natural habit is against its nature Therefore in no sense is it a habit.

Secondly, this is clear because "habits are defined as that by reason of which we are well or ill disposed with regard to actions and passions"[7]; for by temperance we are well-disposed as regards concupiscences, and by intemperance ill-disposed; and by knowledge we are well-disposed to the act of the intellect when we know the truth, and by the contrary habit ill-disposed But free choice is indifferent to good or evil choice; hence it is impossible for free choice to be a habit. Therefore it is a power.

Reply Obj. 1. It is not unusual for a power to be named from its act. And so from this act, which is a free judgment, is named the power which is the principle of this act. Otherwise, if free choice denominated an act, it would not always remain in man.

Reply Obj 2. Faculty sometimes denominates a power ready for operation, and in this sense faculty is used in the definition of free choice. But Bernard takes habit not as divided against power, but as signifying a certain aptitude by which a man has some sort of relation to an act. And this may be both by a power and by a habit, for by a power man is, as it were, empowered to do the action, and by the habit he is apt to act well or ill.

Reply Obj. 3 Man is said to have lost free choice by falling into sin, not as to natural liberty, which is freedom from coercion, but as regards freedom from fault and unhappiness. Of this we shall treat later in the treatise on Morals in the second part of this work (Part I.-II. Q. LXXXV ff.; Q. CIX).

ARTICLE 3. *Whether Free Choice Is an Appetitive Power?*

We proceed thus to the Third Article: It would seem that free choice is not an appetitive, but a cognitive power.[8]

Objection 1. For Damascene (*De Fid. Orth.*

[1] Peter Lombard, *Sent*, II, d. 24, chap. 3 (QR 1-421). Wm of Auxerre, St Thomas (*De Ver* Q. 24, A. 4, arg 1) and many others attributed this definition to St. Augustine. Cf. Lottin, *La Théorie* (p. 49).

[2] PL 182, 1002.

[3] *Enchiridion*, Chap. 30 (PL 40, 246).

[4] According to Albert, *Summa de Creat.*, II, 70, A. 2 (BO XXXV, 575). See Lottin, *La Théorie* (p. 110).

[5] According to Bonaventure, *In Sent*, II, d. 25, pt. 1, A. 1, Q. 4 (QR II, 601) See Lottin, *La Théorie* (p 119).

[6] According to Alexander of Hales, *Summa Theol.*, I-II, n. 390. (QR II, 486). See Lottin, *La Théorie* (p. 80).

[7] *Ethics*, II, 5 (1105^b25).

[8] Praepositinus, Wm. of Auxerre, Roland of Cremona held this doctrine Cf. Lottin, *La Théorie* (p. 37, 51, 55). For the contrary doctrine, cf. Bonaventure, *In Sent*, II, d. 25, pt. 1, A. 1, Q. 6 (QR II, 605). Cf. Lottin (p. 121).

ii, 27)[1] says that "free choice straightway accompanies the rational nature." But reason is a cognitive power. Therefore free choice is a cognitive power.

Obj. 2. Further, free choice is so called as though it were a free judgment. But to judge is an act of a cognitive power. Therefore free choice is a cognitive power.

Obj. 3. Further, the principal function of the free choice is to choose. But choice seems to belong to knowledge, because it implies a certain comparison of one thing to another, which belongs to the cognitive power. Therefore free choice is a cognitive power

On the contrary, The Philosopher says[2] that choice is "the desire of those things which are in us." But desire is an act of the appetitive power. Therefore choice is also But free choice is that by which we choose. Therefore free choice is an appetitive power.

I answer that, The proper act of free choice is election. For we say that we have a free choice because we can take one thing while refusing another, and this is to choose. Therefore we must consider the nature of free choice by considering the nature of choice. Now two things come together in choice. one on the part of the cognitive power, the other on the part of the appetitive power. On the part of the cognitive power, counsel is required, by which we judge one thing to be preferred to another; and on the part of the appetitive power it is required that the appetite should accept the judgment of counsel. Therefore Aristotle[3] leaves it in doubt whether choice belongs principally to the appetitive or the cognitive power, since he says that choice is "either an appetitive intellect or an intellectual appetite." But he inclines to its being an intellectual appetite when he describes choice as "a desire proceeding from counsel."[4] And the reason of this is because the proper object of choice is the means to the end, and this, as such, is in the nature of that good which is called useful; therefore since good, as such, is the object of the appetite, it follows that choice is principally an act of the appetitive power And thus free choice is an appetitive power.

Reply Obj. 1. The appetitive powers accompany the apprehensive, and in this sense Damascene says that free choice straightway accompanies the rational power.

Reply Obj. 2 Judgment, as it were, concludes and determines counsel. Now counsel is determined, first, by the judgment of reason, secondly, by the acceptation of the appetite; hence the Philosopher says[5] that, "having formed a judgment by counsel, we desire in accordance with that counsel." And in this sense choice itself is a judgment from which free choice takes its name.

Reply Obj. 3. This comparison which is implied in the name choice belongs to the preceding counsel, which is an act of reason. For though the appetite does not make comparisons, yet since it is moved by the apprehensive power which does compare, it has some likeness of comparison by choosing one in preference to another.

ARTICLE 4 *Whether Free Choice Is a Power Distinct From the Will?*

We proceed thus to the Fourth Article: It would seem that free choice is a power distinct from the will.[6]

Objection 1 For Damascene says (*De Fid. Orth.* ii, 22)[7] that Θέλησις is one thing and βούλησις another. But Θέλησις is the will, while βούλησις seems to be the free choice, because βούλησις according to him, is the will as concerning an object by way of comparison between two things Therefore it seems that free choice is a distinct power from the will.

Obj. 2. Further, powers are known by their acts. But election, which is the act of free choice, is distinct from the will, because "the will regards the end, whereas choice regards the means to the end."[8] Therefore free choice is a distinct power from the will.

Obj 3. Further, the will is the intellectual appetite. But on the part of the intellect there are two powers—the agent and the possible Therefore, also on the part of the intellectual appetite there must be another power besides the will. And it seems that this can only be free choice. Therefore free choice is a distinct power from the will.

On the contrary, Damascene says (*De Fid. Orth.* iii, 14)[9] free choice is nothing else than the will.

I answer that, The appetitive powers must be proportionate to the apprehensive powers, as we

[1] PG 94, 949.
[2] *Ethics,* III, 3 (1113[a]11).
[3] *Ibid.,* VI, 2 (1139[b]4).
[4] *Ibid.,* III, 3 (1113[a]11).
[5] *Ibid.*
[6] This is the teaching of Albert the Great. Cf *Summa de Creaturis,* II, Q. 70, A. 2 (BO XXXV, 577); *In Sent.,* II, d. 24, A. 5 (BO XXVII, 402). See Lottin, *La Théorie* (p. 113; p. 134).
[7] PG 94, 944.
[8] *Ethics,* III, 2 (1111[b]26).
[9] PG 94, 1037.

have said above (Q. LXIV, A. 2; Q. LXXX, A 2). Now, as on the part of the intellectual apprehension we have intellect and reason, so on the part of the intellectual appetite we have will, and free choice which is nothing else but the power of choice. And this is clear from their relations to their respective objects and acts For the act of understanding implies the simple acceptance of something; hence we say that we understand first principles, which are known of themselves without any comparison. But to reason, properly speaking, is to come from one thing to the knowledge of another; and so, properly speaking, we reason about conclusions, which are known from the principles. In like manner on the part of the appetite to will implies the simple appetite for something; hence the will is said to regard the end, which is desired for itself. But to choose is to desire something for the sake of obtaining something else, and so, properly speaking, it regards the means to the end Now, just as in matters of knowledge, the principles are related to the conclusion to which we assent on account of the principles, so, in appetitive matters, the end is related to the means, which is desired on account of the end Hence it is evident that as the intellect is to reason, so is the will to the power of choice, that is, to free choice. But it has been shown above (Q. LXXIX, A 8) that it belongs to the same power both to understand and to reason, even as it belongs to the same power to be at rest and to be in movement. Therefore it belongs also to the same power to will and to choose, and on this account the will and the free choice are not two powers, but one.

Reply Obj. 1. βούλησις is distinct from θέλησις on account of a distinction not of powers, but of acts.

Reply Obj. 2. Choice and will—that is, the act of willing—are different acts; yet they belong to the same power, as also to understand and to reason, as we have said.

Reply Obj. 3. The intellect is compared to the will as moving the will. And therefore there is no need to distinguish in the will an agent and a possible will.

QUESTION LXXXIV

How the soul while united to the body understands corporeal things beneath it

(In Eight Articles)

We now have to consider the acts and habits of the soul in regard to the intellectual and the appetitive powers, for the other powers of the soul do not come directly under the consideration of the theologian. Furthermore, the acts of the appetitive part of the soul come under the consideration of the science of morals; and so we shall treat of them in the second part of this work, to which the consideration of moral matters belongs. But of the acts of the intellectual part we shall treat now. First, we shall consider the acts, secondly, the habits.

In treating of these acts we shall proceed in the following order. First, we shall inquire how the soul understands when united to the body; secondly, how it understands when separated from the body (Q. LXXXIX).

The former of these inquiries will be threefold: (1) How the soul understands bodies which are beneath it (2) How it understands itself and things contained in itself (Q LXXXVII). (3) How it understands immaterial substances, which are above it (Q. LXXXVIII).

In treating of the knowledge of corporeal things there are three points to be considered: (1) Through what does the soul know them? (2) How and in what order does it know them? (Q. LXXXV). (3) What does it know in them? (Q. LXXXVI).

Under the first head there are eight points of inquiry: (1) Whether the soul knows bodies through the intellect? (2) Whether it understands them through its essence, or through some species? (3) If through some species, whether the species of all things intelligible are naturally innate in the soul? (4) Whether these species are derived by the soul from certain separate immaterial forms? (5) Whether our soul sees in the eternal ideas all that it understands? (6) Whether it acquires intellectual knowledge from the senses? (7) Whether the intellect can, through the species of which it is possessed, actually understand, without turning to the phantasms? (8) Whether the judgment of the intellect is hindered by an obstacle in the sensitive powers?

Article 1. *Whether the Soul Knows Bodies Through the Intellect?*

We proceed thus to the First Article: It would seem that the soul does not know bodies through the intellect.

Objection 1. For Augustine says (*Soliloq* ii, 4)[1] that "bodies cannot be understood by the intellect, nor indeed anything corporeal unless it can be perceived by the senses." He says also (*Gen. ad lit.* xii, 24)[2] that intellectual vision is

[1] PL 32, 888. [2] PL 34, 474.

of those things that are in the soul by their essence. But such are not bodies. Therefore the soul cannot know bodies through the intellect

Obj 2. Further, as sense is to the intelligible, so is the intellect to the sensible But the soul can by no means, through the senses, understand spiritual things, which are intelligible. Therefore by no means can it, through the intellect, know bodies, which are sensible

Obj. 3. Further, the intellect is concerned with things that are necessary and unchangeable But all bodies are movable and changeable Therefore the soul cannot know bodies through the intellect.

On the contrary, Science is in the intellect. If, therefore, the intellect does not know bodies, it follows that there is no science of bodies; and thus natural science, which treats of movable bodies, is destroyed.

I answer, In order to make this question clear, that the early philosophers, who inquired into the natures of things, thought there was nothing in the world save bodies [1] And because they observed that all bodies are movable, and considered them to be always in a state of flux, they were of opinion that we can have no certain knowledge of the truth of things. For what is in a continual state of flux cannot be grasped with certitude, for it passes away before the mind can form a judgment of it, according to the saying of Heraclitus, that "it is not possible twice to touch a drop of water in a passing torrent," as the Philosopher relates [2]

After these came Plato, who, wishing to save the certitude of our knowledge of truth through the intellect, maintained that, besides these things corporeal, there is another genus of beings, separate from matter and movement, which beings he called species or ideas, by participation of which each one of these singular and sensible things is said to be either a man, or a horse, or the like [3] And so he said that sciences and definitions, and whatever pertains to the act of the intellect, are not referred to these sensible bodies, but to those beings immaterial and separate,[4] so that according to this the soul does not understand these corporeal things, but the separate species of these corporeal things.

Now this may be shown to be false for two reasons. First, because, since those species are immaterial and immovable, knowledge of movement and matter would be excluded from science (which knowledge is proper to natural science), and likewise all demonstration through moving and material causes. Secondly, because it seems ridiculous, when we seek for knowledge of things which are clear to us, to introduce other beings, which cannot be the substance of those others, since they differ from them in being; so that granted that we have a knowledge of those separate substances, we cannot for that reason claim to form a judgment concerning these sensible things.

Now it seems that Plato strayed from the truth[5] because, having considered that all knowledge takes place through some kind of likeness,[6] he thought that the form of the thing known must of necessity be in the knower in the same manner as in the thing known. Then he considered that the form of the thing understood is in the intellect under conditions of universality, immateriality, and unchangeableness, which is apparent from the very operation of the intellect, which understands in a universal way, and under a certain manner of necessity; for the mode of action corresponds to the mode of the agent's form And therefore he thought that the things which we understand must subsist in themselves under the same conditions of immateriality and unchangeableness.

But there is no necessity for this For even in sensible things it is to be observed that the form is otherwise in one sensible than in another; for instance, whiteness may be of great intensity in one, and of a less intensity in another, and in one we find whiteness with sweetness, in another without sweetness In the same way the sensible form is conditioned differently in the thing which is outside the soul, and in the sense which receives the forms of sensible things without matter such as the colour of gold without receiving gold So also the intellect, according to its own mode, receives under conditions of immateriality and unchangeableness the species of material and changeable bodies; for the received is in the receiver according to the mode of the receiver. We must conclude, therefore, that through the intellect the soul knows bodies by a knowledge which is immaterial, universal, and necessary.

Reply Obj. 1. These words of Augustine are to be understood as referring to those things by which the intellect knows, but not to what it knows. For the intellect knows bodies by under-

[6] Cf. Aristotle, *Soul*, I, 2 (404[b]17).

standing them, not indeed through bodies, nor through material and corporeal likenesses, but through immaterial and intelligible species, which can be in the soul by their own essence.

Reply Obj. 2. As Augustine says,[1] it is not correct to say that as the sense knows only bodies so the intellect knows only spiritual things; for it follows that God and the angels would not know corporeal things. The reason of this diversity is that the lower power does not extend to those things that belong to the higher power, whereas the higher power does in a more excellent manner those things which belong to the lower power.

Reply Obj. 3. Every movement presupposes something immovable, for when a change of quality occurs the substance remains unmoved, and when there is a change of substantial form, matter remains unmoved Moreover the dispositions of mutable things are themselves immovable; for instance, though Socrates be not always sitting, yet it is unchangeably true that whenever he does sit he remains in one place For this reason there is nothing to hinder our having an unchangeable science of movable things.

ARTICLE 2. *Whether the Soul Understands Corporeal Things Through Its Essence?*

We proceed thus to the Second Article: It would seem that the soul understands corporeal things through its essence

Objection 1. For Augustine says (*De Trin* x, 5)[2] that the soul "collects and lays hold of the images of bodies which are formed in the soul and of the soul, for in forming them it gives them something of its own substance." But the soul understands bodies by likenesses of bodies Therefore the soul knows bodies through its essence, which it employs for the formation of such likenesses, and from which it forms them.

Obj. 2. Further, the Philosopher says[3] that "the soul, after a fashion, is everything." Since, therefore, like is known by like, it seems that the soul knows corporeal things through itself.

Obj. 3. Further, the soul is superior to corporeal creatures. Now lower things are in higher things in a more eminent way than in themselves, as Dionysius says (*Cœl. Hier.* xii).[4] Therefore all corporeal creatures exist in a more excellent way in the soul than in themselves. Therefore the soul can know corporeal creatures through its essence.

On the contrary, Augustine says (*De Trin.* ix, 3)[5] that "the mind gathers knowledge of corporeal things through the bodily senses." But the soul itself cannot be known through the bodily senses. Therefore it does not know corporeal things through its own substance.

I answer that, The ancient philosophers held that the soul knows bodies through its essence. For it was instilled in the minds of all in common that "like is known by like."[6] But they thought that the form of the thing known is in the knower in the same mode as in the thing known. The Platonists however were of a contrary opinion. For Plato, having observed that the intellectual soul is immaterial,[7] and has an immaterial mode of knowledge,[8] held that the forms of things known subsist immaterially.[9] While the earlier natural philosophers, observing that things known are corporeal and material, held that things known must exist materially even in the soul that knows them. And therefore, in order to ascribe to the soul a knowledge of all things, they held that it has a nature in common with all things.[10] And because the nature of a result is determined by its principles, they ascribed to the soul the nature of a principle, so that those who thought fire to be the principle of all, held that the soul had the nature of fire, and in like manner as to air and water.[11] Lastly, Empedocles, who posited four material elements and two principles of movement, said that the soul was composed of these.[12] Consequently, since they held that things exist in the soul materially, they maintained that all the soul's knowledge is material, thus failing to discern intellect from sense [13]

But this opinion will not hold. First, because in the material principle of which they spoke the various results do not exist save in potency. But a thing is not known according as it is in potency, but only according as it is in act, as is shown in the *Metaphysics*;[14] hence neither is a power known except through its act. It is therefore insufficient to ascribe to the soul the nature of the principles of things in order to explain the fact that it knows all things, unless we further

admit in the soul the natures and forms of each individual result, for instance, of bone, flesh, and the like; thus does Aristotle argue against Empedocles.[1] Secondly, because if it were necessary for the thing known to exist materially in the knower, there would be no reason why things which subsist materially outside the soul should lack knowledge; why, for instance, if by fire the soul knows fire, that fire also which is outside the soul should not have knowledge of fire.

We must conclude, therefore, that material things known must exist in the knower not materially, but immaterially. The reason of this is because the act of knowledge extends to things outside the knower, for we also know the things that are outside us. Now by matter the form of a thing is determined to some one thing. Therefore it is clear that knowledge is in inverse ratio to materiality. And consequently things that are not receptive of forms save materially, have no power of knowledge whatever—such as plants, as the Philosopher says.[2] But the more immaterially a thing has the form of the thing known, the more perfect is its knowledge. Therefore the intellect which abstracts the species not only from matter, but also from the individuating conditions of matter, has more perfect knowledge than the senses, which receive the form of the thing known, without matter indeed, but subject to material conditions. Moreover, among the senses, sight has the most perfect knowledge because it is the least material, as we have remarked above (Q. LXXVIII, A. 3), while among intellects the more perfect is the more immaterial.

It is therefore clear from the foregoing that if there be an intellect which knows all things by its essence, then its essence must have all things in itself immaterially; thus the early philosophers held that the essence of the soul, that it may know all things, is actually composed of the principles of all material things. Now it is proper to God that His Essence comprise all things immaterially, as effects pre-exist virtually in their cause. God alone, therefore, understands all things through His Essence; but neither the human soul nor the angels can do so.

Reply Obj. 1. Augustine in that passage is speaking of an imaginary vision, which takes place through the images of bodies. To the formation of such images the soul gives something of its substance, just as a subject is given in order to be informed by some form. In this way the soul makes such images from itself; not that the soul or some part of the soul be turned into this or that image, but just as we say that a body is made into something coloured because of its being informed with colour. That this is the sense, is clear from what follows. For he says that the soul "keeps something"—namely, not informed with such image—"which is able freely to judge of the species of these images," and that "this is the mind or intellect." And he says that the part which is informed with these images—namely, the imagination—is common to us and beasts.

Reply Obj. 2. Aristotle did not hold that the soul is actually composed of all things, as did the earlier philosopher. He said that "the soul is all things, after a fashion," in so far as it is in potency to all things—through the senses, to all things sensible—through the intellect, to all things intelligible.

Reply Obj 3. Every creature has a finite and determinate being. And so although the essence of the higher creature has a certain likeness to the lower creature, according as they have something in common generically, yet it has not a complete likeness of it, because it is determined to a certain species other than the species of the lower creature. But the Divine Essence, as the universal principle of all things, is a perfect likeness of whatever may be found in things created.

ARTICLE 3 *Whether the Soul Understands All Things Through Innate Species?*

We proceed thus to the Third Article: It would seem that the soul understands all things through innate species.

Objection 1. For Gregory says, in a homily for the Ascension (xxix *in Ev*),[3] that "man has understanding in common with the angels." But angels understand all things through innate forms; hence in the book *De Causis*[4] it is said that "every intelligence is full of forms" Therefore the soul also has innate species of things, by means of which it understands corporeal things.

Obj. 2. Further, the intellectual soul is more excellent than corporeal primary matter. But primary matter was created by God under the forms to which it is in potency. Therefore much more is the intellectual soul created by God under intelligible species And so the soul understands corporeal things through innate species.

Obj. 3. Further, no one can answer the truth except concerning what he knows. But even a person untaught and devoid of acquired knowledge answers the truth to every question if put

[1] *Soul*, I, 5 (409^b23). [2] *Ibid.*, II, 12 (424^a32). [3] PL 76, 1214. [4] Sect. 9 (BA 178).

to him in orderly fashion, as we find related in the *Meno* of Plato,[1] concerning a certain individual. Therefore we have some knowledge of things even before we acquire science, which would not be the case unless we had innate species. Therefore the soul understands corporeal things through innate species.

On the contrary, The Philosopher, speaking of the intellect, says[2] that it is like "a tablet on which nothing is written."

I answer that, Since form is the principle of action, a thing must be related to the form which is the principle of an action as it is to that action; for instance, if upward motion is from lightness, then that which only potentially moves upwards must be only potentially light, but that which actually moves upwards must be actually light. Now we observe that man sometimes is only a potential knower, both as to sense and as to intellect. And he is reduced from such potency to act: to the act of sensation through the action of the sensibles on his senses; to the act of understanding by instruction or dicovery. Hence we must say that the cognitive soul is in potency both to the likenesses which are the principles of sensing, and to those which are the principles of understanding. For this reason Aristotle (*ibid*) held that the intellect by which the soul understands has no innate species, but is at first in potency to all such species.

But since that which has a form actually is sometimes unable to act according to that form on account of some hindrance, as a light thing may be hindered from moving upwards, for this reason Plato held[3] that naturally man's intellect is filled with all intelligible species, but that, by being united to the body, it is hindered from the realization of its act. But this seems to be wrong. First, because, if the soul has a natural knowledge of all things, it seems impossible for the soul so far to forget this natural knowledge as not to know that it has it. For no man forgets what he knows naturally; that, for instance, every whole is larger than the part, and the like. And especially unreasonable does this seem if we suppose that it is natural to the soul to be united to the body, as we have established above (Q. LXXVI, A. 1), for it is unreasonable that the natural operation of a thing be totally hindered by that which belongs to it naturally. Secondly, the falseness of this opinion is clearly proved from the fact that if a sense be wanting, the knowledge of what is apprehended through that sense is wanting also; for instance, a man who is born blind can have no knowledge of colours. This would not be the case if the soul had innate species of all intelligible things. We must therefore conclude that the soul does not know corporeal things through innate species.

Reply Obj. 1. Man indeed has intelligence in common with the angels, but not in the same degree of perfection; just as the lower grades of bodies, which merely exist, according to Gregory (*loc. cit.*), have not the same degree of perfection as the higher bodies. For the matter of the lower bodies is not totally completed by its form, but is in potency to forms which it has not; but the matter of heavenly bodies is totally completed by its form, so that it is not in potency to any other form, as we have said above (Q LXVI, A. 2). In the same way the angelic intellect is perfected by intelligible species, in accordance with its nature, whereas the human intellect is in potency to such species.

Reply Obj 2. Primary matter has substantial being through its form, and consequently it had to be created under some form; otherwise it would not be in act But when once it exists under one form it is in potency to others. On the other hand, the intellect does not receive substantial being through the intelligible species, and therefore there is no comparison.

Reply Obj. 3. If questions be put in an orderly fashion they proceed from universal self-evident principles to what is particular. Now by such a process knowledge is produced in the mind of the learner. Therefore when he answers the truth to a subsequent question, this is not because he had knowledge previously, but because he thus learns for the first time. For it does not matter whether the teacher proceeds from universal principles to conclusions by questioning or by asserting, for in either case the mind of the listener is assured of what follows by that which preceded.

ARTICLE 4. *Whether the Intelligible Species Flow into the Soul from Certain Separate Forms?*

We proceed thus to the Fourth Article: It would seem that the intelligible species flow into the soul from some separate forms.

Objection 1. For whatever is such by participation is caused by what is such essentially; for instance, that which is on fire is reduced to fire as its cause. But the intellectual soul according as it is actually understanding, participates the intelligibles themselves, for, in a way, the intel-

[1] *Meno,* 82; cf. Cicero, *Tuscul.,* 24 (DD 635); Augustine, *De Trin.,* II, 15 (PL 42, 1011).

[2] *Soul,* III, 4 (430[a]1).

[3] Cf. Aristotle, *Metaphysics,* I, 9 (993[a]1); see also Q. LXXXIX, A. 1.

ect in act is the thing understood in act. Therefore what in itself and in its essence is understood in act is the cause that the intellectual soul actually understands. Now that which in its essence is actually understood is a form existing without matter Therefore the intelligible species, by which the soul understands, are caused by certain separate forms

Obj 2 Further, the intelligible is to the intellect as the sensible is to the sense. But the sensible species which are in the senses, and by which we sense, are caused by the sensibles which exist actually outside the soul. Therefore the intelligible species, by which our intellect understands, are caused by some things actually intelligible existing outside the soul. But these can be nothing else than forms separate from matter. Therefore the intelligible forms of our intellect flow from some separate substances.

Obj. 3. Further, whatever is in potency is reduced to act by something in act. If, therefore, our intellect, previously in potency, afterwards actually understands, this must be caused by some intellect which is always in act. But this is a separate intellect. Therefore the intelligible species by which we actually understand are caused by some separate substances.

On the contrary, If this were true we should not need the senses in order to understand. And this is proved to be false especially from the fact that if a man be wanting in a sense, he cannot have any knowledge of the sensibles corresponding to that sense

I answer that, Some have held that the intelligible species of our intellect proceed from certain separate forms or substances. And this in two ways. For Plato, as we have said (A. 1), held that the forms of sensible things subsist by themselves without matter; for instance, the form of a man which he called *per se* man, and the form or idea of a horse which he called *per se* horse, and so forth He said therefore that these forms are participated both by our soul and by corporeal matter: by our soul, for knowing, and by corporeal matter for being;[1] so that just as corporeal matter by participating the idea of a stone becomes this stone, so our intellect, by participating the idea of a stone, is made to understand a stone. Now participation of an idea takes place by some likeness of the idea in the participator, just as a model is participated by a copy[2] So just as he held that the sensible forms, which are in corporeal matter, flow from the ideas as certain likenesses of them, so he held that the intelligible species of our intellect are likenesses of the ideas, flowing from them.[3] And for this reason, as we have said above (A. 1), he referred sciences and definitions to those ideas.

But since it is contrary to the nature of sensible things that their forms should subsist without matter, as Aristotle proves in many ways,[4] Avicenna,[5] setting this opinion aside, held that the intelligible species of all sensible things, instead of subsisting in themselves without matter, preexist immaterially in the separate intellects, from the first of which, he said, such species are derived by a second, and so on to the last separate intellect which he called the agent intellect, from which, according to him,[6] intelligible species flow into our souls, and sensible forms into corporeal matter And so Avicenna agrees with Plato in this, that the intelligible species of our intellect flow from certain separate forms; but these Plato held to subsist of themselves, while Avicenna placed them in the agent intelligence They differ, too, in this respect, that Avicenna held that the intelligible species do not remain in our intellect after it has ceased actually to understand, and that it needs to turn (to the agent intellect) in order to receive them anew.[7] Consequently he does not hold that the soul has innate knowledge, as Plato, who held that the participated ideas remain immovably in the soul[8]

But in this opinion no sufficient reason can be assigned for the soul being united to the body. For it cannot be said that the intellectual soul is united to the body for the sake of the body; for neither is form for the sake of matter, nor is the mover for the sake of the moved, but rather the reverse Especially does the body seem necessary to the intellectual soul for the latter's proper operation which is to understand, since as to its being the soul does not depend on the body. But if the soul by its very nature had an inborn aptitude for receiving intelligible species through the influence of only certain separate principles and were not to receive them from the senses, it would not need the body in order to understand. And so it would be united to the body to no purpose.

[1] Cf. Aristotle, *Metaphysics*, I, 9 (991^b3); *Phaedo* (100); Augustine, QQ LXXXIII, Q 46 (PL 40, 30).

[2] Cf. Aristotle, *Metaphysics*, I, 9 (991^a21); *Timaeus* (28, 30).

[3] For the expression "flow from" (*effluere*), see Plotinus, II *Ennead*, 1; also Avicenna, *De An.* V, 5 (25rb); *Meta*, IX, 4 (105ra)

[4] *Metaphysics*, VII, 14 (1039^a24)

[5] *De Anima*, V, 5 (25rb)

[6] *De Anima* V, 6 (26rb), *Meta*, IX, 5 (105rb), cf above, Q LXV, A 4

[7] *De Anima, loc cit*; cf *Contra Gent*, II, 73

[8] Cf Aristotle, *Metaphysics*, I, 7 (988^b3); *Topics*, II, 7 (113^a27)

But if it be said that our soul needs the senses in order to understand through being in some way awakened by them to the consideration of those things the intelligible species of which it receives from the separate principles,[1] even this seems an insufficient explanation. For this awakening does not seem necessary to the soul except in as far as it is overcome by "sluggishness," as the Platonists expressed it,[2] and by "forgetfulness," through its union with the body; and thus the senses would be of no use to the intellectual soul except for the purpose of removing the obstacle which the soul encounters through its union with the body.[3] Consequently the reason of the union of the soul with the body still remains to be sought.

And if it be said with Avicenna that the senses are necessary to the soul because by them it is roused to turn to the agent intelligence from which it receives the species, neither is this a sufficient explanation. Because if it is natural for the soul to understand through species which flow from the agent intelligence, it follows that at times the soul of an individual wanting in one of the senses can turn to the agent intelligence, either from the inclination of its very nature, or through being roused by another sense, in order to receive the species of the things sensible for which the sense is wanting And thus a man born blind could have knowledge of colours, which is clearly untrue. We must therefore conclude that the intelligible species by which our soul understands do not flow from separate forms.

Reply Obj. 1. The intelligible species which are participated by our intellect are reduced, as to their first cause, to a first principle which is by its essence intelligible—namely, God But they proceed from that principle by means of the forms of sensible and material things, from which we gather knowledge, as Dionysius says (*Div. Nom.* vii) [4]

Reply Obj. 2. Material things, as to the being which they have outside the soul, may be actually sensible, but not actually intelligible. Therefore there is no comparison between sense and intellect.

Reply Obj. 3. Our possible intellect is reduced from potency to act by some being in act, that is, by the agent intellect, which is a power of the soul as we have said (Q. LXXIX, A. 4), and not by a separate intellect, as proximate cause, although possibly as a remote cause.

[4] Sect. 2 (PG 3, 886).

ARTICLE 5. *Whether the Intellectual Soul Knows Material Things in the Eternal Types?*

We proceed thus to the Fifth Article: It would seem that the intellectual soul does not know material things in the eternal types.

Objection 1. For that in which anything is known must itself be known more and previously. But the intellectual soul of man, in the present state of life, does not know the eternal types; for it does not know God in Whom the eternal types exist, but is united to God as to the unknown, as Dionysius says (*Myst. Theolog.* i).[5] Therefore the soul does not know all in the eternal types

Obj. 2. Further, it is written (Rom 1. 20) that the *invisible things of God are clearly seen . . . by the things that are made.* But among the invisible things of God are the eternal types. Therefore the eternal types are known through material creatures and not the converse.

Obj 3 Further, the eternal types are nothing other than ideas, for Augustine says (QQ. LXXXIII, *qu.* 46)[6] that "ideas are unchanging types of things existing in the Divine mind " If therefore we say that the intellectual soul knows all things in the eternal types, we come back to the opinion of Plato[7] who said that all knowledge is derived from them.

On the contrary, Augustine says,[8] "If we both see that what you say is true, and if we both see that what I say is true, where do we see this, I pray? Neither do I see it in you, nor do you see it in me, but we both see it in the unchangeable truth which is above our minds " Now the unchangeable truth is contained in the eternal types. Therefore the intellectual soul knows all true things in the eternal types.

I answer that, As Augustine says,[9] "If those who are called philosophers said by chance anything that was true and consistent with our faith, we must claim it from them as from unjust possessors. For some of the doctrines of the heathens are spurious imitations or superstitious inventions, which we must be careful to avoid when we renounce the society of the heathens " Consequently whenever Augustine, who was imbued with the doctrines of the Platonists, found in their teaching anything consistent with faith, he adopted it; and those things which he found contrary to faith he amended. Now Plato held, as we have said above (A. 4), that the forms of

[5] Sect 3 (PG 3, 1001); cf *De Div Nom.*, I, 1 (PG 3, 585).
[6] PL 40, 30.
[7] See above, AA. 1, 4.
[8] *Confessions*, XII, 35 (PL 32, 840).
[9] *Christian Doctrine*, II, 40 (PL 34, 63).

things subsist of themselves apart from matter; and these he called ideas, by participation of which he said that our intellect knows all things, so that just as corporeal matter by participating the idea of a stone becomes a stone, so our intellect, by participating the same idea, has knowledge of a stone. But since it seems contrary to faith that forms of things should subsist of themselves outside the things themselves and apart from matter, as the Platonists held, asserting that *per se* life or *per se* wisdom are creative substances, as Dionysius relates (*Div. Nom.* xi),[1] therefore Augustine (QQ. LXXXIII, *loc cit.*), for the ideas defended by Plato, substituted the types of all creatures existing in the Divine mind, according to which types all things are made, and are known to the human soul

When, therefore, the question is asked: Does the human soul know all things in the eternal types? we must reply that one thing is said to be known in another in two ways First, as in an object itself known, as one may see in a mirror the images of things reflected there In this way the soul, in the present state of life, cannot see all things in the eternal types, but the blessed know all things thus in the eternal types, for they see God, and all things in Him. Secondly, one thing is said to be known in another as in a principle of knowledge; thus we might say that we see in the sun what we see by the sun And in this way we must say that the human soul knows all things in the eternal types, since by participation of these types we know all things For the intellectual light itself which is in us is nothing other than a participated likeness of the uncreated light, in which are contained the eternal types Hence it is written (Ps. 4. 6, 7), *Many say; who showeth us good things?* which question the Psalmist answers, *The light of Thy countenance, O Lord, is signed upon us,* as though he were to say: By the seal of the Divine light in us, all things are made known to us.

But since besides the intellectual light which is in us, intelligible species, which are derived from things, are required in order for us to have knowledge of material things, therefore this same knowledge is not due merely to a participation of the eternal types, as the Platonists held, maintaining that the mere participation of ideas sufficed for knowledge.[2] And so Augustine says (*De Trin.* iv, 16):[3] "Although the philosophers prove by convincing arguments that all things occur in time according to the eternal types, were they able to see in the eternal types, or to find out from them how many kinds of animals there are and the origin of each? Did they not seek for this information from the story of times and places?"

But that Augustine did not understand all things to be known in their eternal types or in the unchangeable truth, as though the eternal types themselves were seen, is clear from what he says (QQ. LXXXIII, *loc. cit.*)—namely, that "not each and every rational soul can be said to be worthy of that vision," namely, of the eternal types, "but only those that are holy and pure," such as the souls of the blessed.

From what has been said *the objections* are easily solved.

ARTICLE 6 *Whether Intellectual Knowledge Is Derived From Sensible Things?*

We proceed thus to the Sixth Article: It would seem that intellectual knowledge is not derived from sensible things.

Objection 1. For Augustine says (QQ. LXXXIII., *qu* 9)[4] that "we cannot expect to learn the fulness of truth from the senses of the body." This he proves in two ways First, because "whatever the bodily senses reach, is continually being changed; and what is never the same cannot be perceived" Secondly, because "whatever we perceive by the body, even when not present to the senses, may be present to the imagination, as when we are asleep or angry; yet we cannot discern by the senses whether what we perceive be the sensible object, or the deceptive image thereof Now nothing can be perceived which cannot be distinguished from its counterfeit." And so he concludes that we cannot expect to learn the truth from the senses But intellectual knowledge apprehends the truth Therefore intellectual knowledge cannot be looked for from the senses.

Obj. 2. Further, Augustine says (*Gen. ad lit.* xii, 16):[5] "We must not think that the body can make any impression on the spirit, as though the spirit were to supply the place of matter in regard to the body's action; for that which acts is in every way more excellent than that which it acts on." Hence he concludes that the body does not cause its image in the spirit, but the spirit causes it in itself. Therefore intellectual knowledge is not derived from sensible things.

Obj. 3. Further, an effect does not surpass the power of its cause. But intellectual knowl-

[1] Sect. 6 (PG 3,956).

[2] See above AA. 1, 4; also below, Q. LXXXVII, A. 1. Cf. the teaching of Bonaventure, *Quaest. Disp. de Scientia Christi,* Q. 4 (QR VI7).

[3] PL 42, 902.

[4] PL 40, 13.

[5] PL 34, 467.

edge extends beyond sensible things, for we understand some things which cannot be perceived by the senses. Therefore intellectual knowledge is not derived from sensible things.

On the contrary, The Philosopher says[1] that the beginning of our knowledge is from the senses.

I answer that, On this point the philosophers held three opinions. For Democritus held that "all knowledge is caused by images issuing from the bodies we think of and entering into our souls," as Augustine says in his letter to Dioscorus (cxviii, 4).[2] And Aristotle says[3] that Democritus held that knowledge is caused by "a discharge of images." And the reason for this opinion was that both Democritus and the other early naturalists did not distinguish between intellect and sense, as Aristotle relates.[4] Consequently, since the sense is changed by the sensible, they thought that all our knowledge is affected by this change alone brought about by sensible things. Democritus held this change to be caused by a discharge of images.

Plato, on the other hand, held that the intellect is distinct from the senses,[5] and that it is an immaterial power not making use of a corporeal organ for its action. And since the incorporeal cannot be changed by the corporeal, he held that intellectual knowledge is not brought about by sensible things affecting the intellect, but by separate intelligible forms being participated by the intellect, as we have said above (AA. 4, 5). Moreover he held that sense is a power operating of itself Consequently neither is sense, since it is a spiritual power, changed by the sensible, but the sensible organs are changed by the sensible, the result being that the soul is in a way roused to form within itself the species of the sensible. Augustine seems to touch on this opinion (*Gen. ad lit.* xii, 24)[6] where he says that "the body feels not, but the soul through the body, which it makes use of as a kind of messenger, for reproducing within itself what is announced from without." Thus according to Plato, neither does intellectual knowledge proceed from sensible knowledge, nor sensible knowledge wholly from sensible things, but these rouse the sensible soul to the sentient act, while the senses rouse the intellect to the act of understanding.

Aristotle chose a middle course. For with Plato he agreed that intellect and sense are different.[7] But he held that the sense does not have its proper operation without the co-operation of the body, so that "to feel is not an act of the soul alone," but of the composite.[8] And he held the same in regard to all the operations of the sensitive part Since, therefore, it is not unreasonable that the sensible things which are outside the soul should produce some effect in the composite, Aristotle agreed with Democritus in this, that the operations of the sensitive part are caused by the impression of the sensible on the sense: not by a discharge, as Democritus said, but by some kind of operation For Democritus maintained that every operation is by way of a discharge of atoms, as we gather from the book on *Generation and Corruption.*[9] But Aristotle held that the intellect has an operation which is independent of the body's co-operation [10] Now nothing corporeal can make an impression on the incorporeal. And therefore in order to cause the intellectual operation, according to Aristotle, the impression of sensible bodies does not suffice, but something more noble is required, for "the agent is more noble than the patient," as he says [11] Not, indeed, in the sense that the intellectual operation is effected in us by the mere impression of some superior beings, as Plato held, but that the higher and more noble agent which he calls the agent intellect, of which we have spoken above (Q. LXXIX, AA. 3, 4), causes the phantasms received from the senses to be actually intelligible, by way of abstraction.

According to this opinion, then, on the part of the phantasms intellectual knowledge is caused by the senses. But since the phantasms cannot of themselves change the possible intellect, and require to be made actually intelligible by the agent intellect, it cannot be said that sensible knowledge is the total and perfect cause of intellectual knowledge, but rather that it is in a way the matter of the cause.

Reply Obj 1. These words of Augustine mean that we must not expect truth wholly from the senses. For the light of the agent intellect is needed, through which we know the truth unchangeably in changeable things, and discern things themselves from their likeness

Reply Obj. 2. In this passage Augustine speaks not of intellectual but of imaginary knowledge. And since, according to the opinion of Plato, the imagination has an operation which belongs to the soul only, Augustine, in order to

[11] *Soul,* III, 5 (430[a]18).

show that corporeal likenesses are impressed on the imagination not by bodies but by the soul, uses the same argument as Aristotle does in proving that the agent intellect must be separate, namely, because "the agent is more noble than the patient." And without doubt, according to the above opinion, in the imagination there must be not only a passive but also an active power. But if we hold, according to the opinion of Aristotle, that the action of the power of imagination is an action of the composite,[1] there is no difficulty; because the sensible body is more noble than the organ of the animal, in so far as it is compared to it as a being in act to a being in potency, even as the thing actually coloured is compared to the pupil which is potentially coloured It may, however, be said, that although the first change of the imagination is through the movement of the sensible, since "fancy is movement produced in accordance with sensation,"[2] nevertheless there is in man an operation which by dividing and composing forms images of various things, even of things not perceived by the senses. And Augustine's words may be taken in this sense.

Reply Obj. 3. Sensitive knowledge is not the entire cause of intellectual knowledge. And therefore it is not strange that intellectual knowledge should extend further than sensitive knowledge.

ARTICLE 7. *Whether the Intellect Can Actually Understand Through the Intelligible Species of Which It Is Possessed, Without Turning to the Phantasms?*

We proceed thus to the Seventh Article: It would seem that the intellect can actually understand through the intelligible species of which it is possessed, without turning to the phantasms.

Objection 1. For the intellect is made actual by the intelligible species by which it is informed. But if the intellect is in act, it understands. Therefore the intelligible species suffices for the intellect to understand actually, without turning to the phantasms.

Obj. 2. Further, the imagination is more dependent on the senses than the intellect on the imagination. But the imagination can actually imagine in the absence of the sensible. Therefore much more can the intellect understand without turning to the phantasms.

Obj. 3. There are no phantasms of incorporeal things, for the imagination does not transcend time and space. If, therefore, our intellect cannot understand anything actually without turning to the phantasms, it follows that it cannot understand anything incorporeal. Which is clearly false, for we understand truth, and God, and the angels.

On the contrary, The Philosopher says[3] that "the soul understands nothing without a phantasm."

I answer that, In the present state of life in which the soul is united to a passible body, it is impossible for our intellect to understand anything actually except by turning to the phantasms. And of this there are two indications. First of all because the intellect, being a power that does not make use of a corporeal organ, would in no way be hindered in its act through the lesion of a corporeal organ if for its act there were not required the act of some power that does make use of a corporeal organ Now sense, imagination and the other powers belonging to the sensitive part, make use of a corporeal organ. Therefore it is clear that for the intellect to understand actually, not only when it acquires fresh knowledge, but also when it uses knowledge already acquired, there is need for the act of the imagination and of the other powers. For when the act of the imagination is hindered by a lesion of the corporeal organ, for instance, in a case of frenzy, or when the act of the memory is hindered, as in the case of lethargy, we see that a man is hindered from actually understanding things of which he had a previous knowledge Secondly, anyone can experience this of himself, that when he tries to understand something, he forms certain phantasms to serve him by way of examples, in which as it were he examines what he is striving to understand It is for this reason that when we wish to make someone understand something we lay examples before him, from which he can form phantasms for the purpose of understanding.

Now the reason of this is that the power of knowledge is proportioned to the thing known. Thus the proper object of the angelic intellect, which is entirely separate from a body, is an intelligible substance separate from a body, and through such intelligible substances it knows material things. On the other hand, the proper object of the human intellect, which is united to a body, is a quiddity or nature existing in corporeal matter, and through such natures of visible things it rises even to some knowledge of things invisible. Now it belongs to such a nature to exist in an individual, and

[1] *Soul*, I, 1 (403[a]5). [2] *Ibid.*, III, 3 (429[a]1). [3] *Ibid.*, III, 7 (431[a]16).

his cannot be apart from corporeal matter; for nstance, it belongs to the nature of a stone to e in this stone, and to the nature of a horse to e in this horse, and so forth. And so the nature f a stone or any material thing cannot be nown completely and truly, except according s it is known as existing in the individual. Now ve apprehend the individual through the senses nd the imagination. And, therefore, for the in- ellect to understand actually its proper object, t must of necessity turn to the phantasms in rder to examine the universal nature existing n the individual. But if the proper object of ur intellect were a separate form, or if, as the latonists say,[1] the natures of sensible things ubsisted apart from the individual, there would e no need for the intellect to turn to the phan- asms whenever it understands.

Reply Obj. 1. The species preserved in the ossible intellect exist there habitually when it loes not understand them actually, as we have aid above (Q. LXXIX, A. 6). Hence in order for is to understand actually, the fact that the pecies are preserved is not enough. We need urther to make use of them in a manner be- itting the things of which they are the species, vhich things are natures existing in individuals.

Reply Obj. 2. Even the phantasm is the like- ess of an individual thing; therefore the imag- nation does not need any further likeness of he individual, whereas the intellect does.

Reply Obj. 3. Incorporeal things, of which here are no phantasms, are known to us by comparison with sensible bodies of which there re phantasms. Thus we understand truth by considering a thing of which we examine the ruth; and God, as Dionysius says (*Div. Nom.*),[2] we know as cause, by way of excess and by way of remotion. Other incorporeal substances ve know in the present state of life only by way of remotion or by some comparison to corporeal hings. And, therefore, when we understand omething about these things, we need to turn o phantasms of bodies, although there are no phantasms of the things themselves.

ARTICLE 8. *Whether the Judgment of the Intellect Is Hindered through Suspension of the Senses?*

We proceed thus to the Eighth Article: It would seem that the judgment of the intellect is not hindered by suspension of the senses.

Objection 1. For the superior does not depend on the inferior. But the judgment of the intellect is higher than the senses. Therefore the judgment of the intellect is not hindered through suspension of the senses.

Obj. 2. Further, to syllogize is an act of the intellect. But during sleep the senses are suspended, as is said in the book on *Sleep*,[3] and yet it sometimes happens that we syllogize while asleep. Therefore the judgment of the intellect is not hindered through suspension of the senses.

On the contrary, What a man does while asleep, against the moral law, is not imputed to him as a sin, as Augustine says (*Gen. ad lit.* xii, 15).[4] But this would not be the case if man, while asleep, had free use of his reason and intellect. Therefore the judgment of the intellect is hindered by suspension of the senses.

I answer that, As we have said above (A. 7; Q. XII, AA. 4, 11), our intellect's proper and proportionate object is the nature of a sensible thing. Now a perfect judgment concerning anything cannot be formed, unless all that pertains to that thing is known; especially if that which is the term and end of judgment is not known. Now the Philosopher says[5] that "as the end of a practical science is the work to be done, so the end of natural science is that which is perceived principally through the senses"; for the smith does not seek knowledge of a knife except for the purpose of the work to be done, in order that he may produce a certain individual knife; and in like manner the natural philosopher does not seek to know the nature of a stone and of a horse save for the purpose of knowing the natures of those things which he perceives with his senses. Now it is clear that a smith cannot judge perfectly of a knife unless he knows the work that must be done, and in like manner the natural philosopher cannot judge perfectly of natural things unless he knows sensible things. But in the present state of life whatever we understand we know by comparison to natural sensible things. Consequently it is not possible for our intellect to form a perfect judgment while the senses are suspended, through which sensible things are known to us.

Reply Obj. 1. Although the intellect is superior to the senses, nevertheless in a manner it receives from the senses, and its first and principal objects are founded in sensible things. And therefore suspension of the senses necessarily involves a hindrance to the judgment of the intellect.

Reply Obj. 2. The senses are suspended in

[1] See above, AA. 1, 4.
[2] Sect. 5 (PG 3, 593).
[3] Chap. 1 (454^b13).
[4] PL 34, 466.
[5] *Heavens*, III, 7 (306^a16).

the sleeper through certain evaporations and the escape of certain exhalations, as we read in the book on *Sleep*.[1] And, therefore, according to the disposition of such evaporation, the senses are more or less suspended. For when the motion of the vapors is considerable, not only are the senses suspended, but also the imagination, so that there are no phantasms; and this happens especially when a man falls asleep after eating and drinking copiously. If, however, the motion of the vapors be somewhat less, phantasms appear, but distorted and without order; thus it happens in a case of fever. And if the motion be still more attenuated, the phantasms will have a certain order; thus especially does it happen towards the end of sleep, in sober men and those who are gifted with a strong imagination. If the motion of the vapors is very slight, not only does the imagination retain its freedom, but also the common sense is partly freed, so that sometimes while asleep a man may judge that what he sees is a dream, discerning, as it were, between things and their likenesses. Nevertheless, the common sense remains partly suspended, and therefore, although it discriminates some likenesses from the reality, yet is it always deceived in some particular. Therefore, while man is asleep, according as sense and imagination are free, so the judgment of his intellect is unfettered, though not entirely. Consequently, if a man syllogizes while asleep, when he wakes up he invariably recognizes a flaw in some respect.

QUESTION LXXXV

OF THE MODE AND ORDER OF UNDERSTANDING

(In Eight Articles)

WE come now to consider the mode and order of understanding. Under this head there are eight points of inquiry: (1) whether our intellect understands by abstracting the species from the phantasms? (2) Whether the intelligible species abstracted from the phantasms are what our intellect understands, or that whereby it understands? (3) Whether our intellect naturally first understands the more universal? (4) Whether our intellect can know many things at the same time? (5) Whether our intellect understands by composing and dividing? (6) Whether the intellect can err? (7) Whether one intellect can understand the same thing better than another? (8) Whether our intellect understands the indivisible before the divisible?

[1] Aristotle, 3 (456[b]17).

ARTICLE 1. *Whether Our Intellect Understands Corporeal and Material Things by Abstraction from Phantasms?*

We proceed thus to the First Article: It would seem that our intellect does not understand corporeal and material things by abstraction from the phantasms

Objection. 1. For the intellect is false if it understands a thing other than it is. Now the forms of material things do not exist abstracted from the particular things whose likenesses are the phantasms. Therefore, if we understand material things by abstraction of the species from the phantasm, there will be falsity in the intellect.

Obj. 2. Further, material things are natural things which include matter in their definition. But nothing can be understood apart from that which enters into its definition. Therefore material things cannot be understood apart from matter. Now matter is the principle of individuation. Therefore material things cannot be understood by abstraction of the universal from the particular, which is to abstract the intelligible species from the phantasm.

Obj. 3 Further, the Philosopher says[2] that "the phantasm is to the intellectual soul what colour is to the sight" But seeing is not caused by abstraction of species from colour, but by colour impressing itself on the sight. Therefore neither does the act of understanding take place by abstraction of something from the phantasm, but by the phantasm impressing itself on the intellect.

Obj. 4. Further, the Philosopher says[3] there are two things in the intellectual soul—the possible intellect and the agent intellect. But it does not pertain to the possible intellect to abstract the intelligible species from the phantasm, but to receive them when abstracted. Neither does it seem to pertain to the agent intellect, which is related to the phantasm, as light is to colour, since light does not abstract anything from colour, but rather flows into it. Therefore in no way do we understand by abstraction from phantasms.

Obj. 5. Further, the Philosopher says[4] that "the intellect understands the species in the phantasm," and not, therefore, by abstraction.

On the contrary, The Philosopher says[5] that "things are intelligible in proportion as they are separable from matter." Therefore material things must be understood according as they are

[2] *Soul*, III, 7 (431[a]14).
[3] *Ibid.*, III, 5 (430[a]14).
[4] *Ibid.*, III, 7 (431[b]2).
[5] *Ibid.*, III, 4 (429[b]21).

abstracted from matter and from material likenesses, namely, phantasms.

I answer that, As stated above (Q. LXXXIV, A. 7), the object of knowledge is proportionate to the power of knowledge. Now there are three grades of knowing powers. For one knowing power, namely, the sense, is the act of a corporeal organ. And therefore the object of every sensitive power is a form as existing in corporeal matter. And since such matter is the principle of individuality, therefore every power of the sensitive part can only have knowledge of the individual. There is another grade of knowing power which is neither the act of a corporeal organ, nor in any way connected with corporeal matter; such is the angelic intellect, the object of whose knowing power is therefore a form subsisting apart from matter, for though angels know material things, yet they do not contemplate them save in something immaterial, namely, either in themselves or in God. But the human intellect holds a middle place, for it is not the act of an organ, yet it is a power of the soul which is the form of the body, as is clear from what we have said above (Q. LXXVI, A. 1). And therefore it is proper to it to know a form existing individually in corporeal matter, but not as existing in this individual matter. But, to know what is in individual matter, not as existing in such matter, is to abstract the form from individual matter which is represented by the phantasms. Therefore we must say that our intellect understands material things by abstracting from the phantasms, and through material things thus considered we acquire some knowledge of immaterial things, just as, on the contrary, angels know material things through the immaterial

But Plato, considering only the immateriality of the human intellect, but not the fact that it is in some way united to the body, held that the objects of the intellect are separate ideas, and that we understand not by abstraction, but by participating things abstract, as stated above (Q. LXXXIV, A. 1).

Reply Obj. 1. Abstraction may occur in two ways: First, by way of composition and division, as when we understand that one thing does not exist in some other, or that it is separate from it. Secondly, by way of simple and absolute consideration, as when we understand one thing without considering the other. Thus for the intellect to abstract one from another things which are not really abstract from one another, does, in the first mode of abstraction, imply falsehood. But, in the second mode of abstraction, for the intellect to abstract things which are not really abstract from one another does not involve falsehood, as clearly appears in the case of the senses. For if we understood or said that colour is not in a coloured body, or that it is separate from it, there would be error in this opinion or assertion. But if we consider colour and its properties, without reference to the apple which is coloured, or if we express in word what we thus understand, there is no error in such an opinion or assertion, because apple is not in the notion of colour, and therefore colour can be understood independently of the apple. Likewise, the things which belong to the notion of the species of a material thing, such as a stone, or a man, or a horse, can be thought of apart from the individualizing principles which do not belong to the notion of the species. This is what we mean by abstracting the universal from the particular, or the intelligible species from the phantasm; that is, by considering the nature of the species apart from its individual principles, which are represented by the phantasms. If, therefore, the intellect is said to be false when it understands a thing otherwise than as it is, that is so, if the word "otherwise" refers to the thing understood; for the intellect is false when it understands a thing otherwise than as it is, and so the intellect would be false if it abstracted the species of a stone from its matter in such a way as to understand the species not to be in matter, as Plato held.[1] But it is not so, if the word "otherwise" be taken as referring to the one who understands. For it is quite true that the mode of understanding, in one who understands, is not the same as the mode of a thing in being, since the thing understood is immaterially in the one who understands, according to the mode of the intellect, and not materially, according to the mode of a material thing.

Reply Obj. 2. Some have thought[2] that the species of a natural thing is a form only, and that matter is not part of the species. If that were so, matter would not enter into the definition of natural things. Therefore it must be said otherwise, that matter is twofold: common, and signate or individual; common, such as flesh and bone, and individual, as this flesh and these bones. The intellect therefore abstracts the species of a natural thing from the individual sensible matter, but not from the common sensible matter; for example, it abstracts

[1] See above, Q. LXXXIV, A. 4.

[2] Averroes, *In Meta.*, VII, 21 (VIII, 171I); 34 (184D). Cf. St. Thomas, *In Meta.*, VII, 9.

the species of man from *this flesh and these bones,* which do not belong to the notion of the species, but to the individual,[1] and need not be considered in the species; the species of man however cannot be abstracted by the intellect from *flesh and bones.*

Mathematical species, however, can be abstracted by the intellect from sensible matter, not only from individual, but also from common matter, though not from common intelligible matter, but only from individual matter. For sensible matter is corporeal matter as subject to sensible qualities, such as being cold or hot, hard or soft, and the like, while intelligible matter is substance as subject to quantity. Now it is manifest that quantity is in substance before sensible qualities are. Hence quantities, such as number, dimension, and figures, which are the terminations of quantity, can be considered apart from sensible qualities, and this is to abstract them from sensible matter; but they cannot be considered without understanding the substance which is subject to the quantity, for that would be to abstract them from common intelligible matter. Yet they can be considered apart from this or that substance, for that is to abstract them from individual intelligible matter.

But some things can be abstracted even from common intelligible matter, such as being, unity, potency and act, and the like, which can be without matter, as is plain regarding immaterial things. Because Plato failed to consider the twofold kind of abstraction, as above explained (Ans. 1), he held that all those things which we have stated to be abstracted by the intellect are abstract in reality.[2]

Reply Obj. 3. Colours, as being in individual corporeal matter, have the same mode of existence as the power of sight, and therefore they can impress their likeness on the sight. But phantasms, since they are likenesses of individuals and exist in corporeal organs, have not the same mode of existence as the human intellect, as is clear from what we have said, and therefore have not the power of themselves to make an impression on the possible intellect. This is done by the power of the agent intellect which by turning towards the phantasm produces in the possible intellect a certain likeness which represents the thing of which it is the phantasm only so far as regards the nature of the species. It is thus that the intelligible species is said to be abstracted from the phantasm, not that the numerically same form which previously was in the phantasm is subsequently in the possible intellect, in the way in which a body is taken from one place and transferred to another.

Reply Obj. 4. The phantasm, is both illuminated by the agent intellect and, beyond this, the intelligible species is abstracted from it by the power of the agent intellect. The agent intellect illuminates the phantasm because just as the sensitive part acquires a greater power by its conjunction with the intellect, so by the power of the agent intellect the phantasms are made more fit for the abstraction from them of intelligible intentions Furthermore the agent intellect abstracts the intelligible species from the phantasm, since by the power of the agent intellect we are able to take into our consideration apart from individual conditions the natures of species, in accordance with whose likenesses the possible intellect is informed.

Reply Obj. 5. Our intellect both abstracts the intelligible species from the phantasms. in so far as it considers the natures of things universally, and nevertheless understands these natures in the phantasms, since it cannot understand the things of which it abstracts the species without turning to the phantasms, as we have said above (Q. LXXXIV, A 7)

ARTICLE 2 *Whether the Intelligible Species Abstracted from the Phantasm Is Related to Our Intellect As That Which Is Understood?*

We proceed thus to the Second Article: It would seem that the intelligible species abstracted from the phantasm is related to our intellect as that which is understood.

Objection 1. For the understood in act is in the one who understands, since the understood in act is the intellect itself in act. But nothing of what is understood is in the intellect actually understanding save the abstracted intelligible species. Therefore this species is what is actually understood.

Obj. 2. Further, what is actually understood must be in something; otherwise it would be nothing But it is not in the thing which is outside the soul, for, since the thing which is outside the soul is material, nothing therein can be what is actually understood. Therefore what is actually understood is in the intellect. Consequently it can be nothing else than the above mentioned intelligible species.

Obj. 3 Further, the Philosopher says[3] that "words are signs of the passions in the soul."

[1] Aristotle, *Metaphysics,* VII, 10 (1035^b28)

[2] See Q. LXXXIV, A. 1; also Q. L, A. 2.

[3] *Interpretation,* 1 (16^a3).

But words signify the things understood, for we express by word what we understand. Therefore these passions of the soul, namely, the intelligible species, are what is actually understood.

On the contrary, The intelligible species is to the intellect what the sensible image is to the sense. But the sensible image is not what is perceived, but rather that by which sense perceives. Therefore the intelligible species is not what is understood, but that by which the intellect understands.

I answer that, Some have asserted that our intellectual powers know only the impression made on them,[1] as, for example, that sense is cognizant only of the impression made on its own organ. According to this theory, the intellect understands only its own impression, namely, the intelligible species which it has received, so that this species is what is understood.

This is, however, manifestly false for two reasons. First, because the things we understand and the objects of science are the same. Therefore if what we understand is merely the intelligible species in the soul, it would follow that every science would not be concerned with things outside the soul, but only with the intelligible species within the soul; thus, according to the teaching of the Platonists all science is about ideas, which they held to be actually understood.[2] Secondly, it is untrue because it would lead to the opinion of the philosophers of antiquity who maintained that "whatever seems, is true,"[3] and that consequently contradictories are true simultaneously. For if the power knows its own impression only, it can judge of that only. Now a thing seems according to the impression made on the knowing power. Consequently the knowing power will always judge of its own impression as such, and so every judgment will be true; for instance, if taste perceived only its own impression, when anyone with a healthy taste judges that honey is sweet, he would judge truly; and likewise if anyone with a corrupt taste judges that honey is bitter, this would be true, for each would judge according to the impression on his taste. Thus every opinion would be equally true; in fact, every sort of apprehension.

Therefore it must be said that the intelligible species is related to the intellect as that by which it understands, which is proved thus. There is a twofold action,[4] one which remains in the agent, for instance, to see and to understand, and another which passes into an external thing, for instance, to heat and to cut; and each of these actions proceeds in virtue of some form. And as the form from which an act tending to something external proceeds is the likeness of the object of the action, as heat in the heater is a likeness of the thing heated, so the form from which an action remaining in the agent proceeds is the likeness of the object. Hence that by which the sight sees is the likeness of the visible thing; and the likeness of the thing understood, that is, the intelligible species, is the form by which the intellect understands But since the intellect is turned back (*reflectitur*) upon itself, by the same reflection it understands both its own act of understanding and the species by which it understands. Thus the intelligible species is that which is understood secondarily, but that which is primarily understood is the thing, of which the intelligible species is the likeness.

This also appears from the opinion of the ancient philosophers,[5] who said that "like is known by like" For they said that the soul knows the earth outside itself by the earth within itself; and so of the rest If, therefore, we take the species of the earth instead of the earth, according to Aristotle,[6] who says that "a stone is not in the soul, but the likeness of the stone," it follows that the soul knows the things which are outside of it, by means of its intelligible species.

Reply Obj 1. The thing understood is in the one who understands by its own likeness, and it is in this sense that we say that the thing actually understood is the intellect in act, because the likeness of the thing understood is the form of the intellect, just as the likeness of a sensible thing is the form of the sense in act. Hence it does not follow that the intelligible species abstracted is what is actually understood, but rather that it is the likeness of it.

Reply Obj 2. In these words "the thing actually understood" there is a twofold meaning: the thing which is understood, and the fact that it is understood. In like manner the words "abstract universal" imply two things, the nature of a thing and its abstraction or universality. Therefore the nature itself to which it falls to be understood, or to be abstracted, or to bear the intention of universality is only in individ-

[2] Cf. Q. LXXXIV, AA. 1, 4.

[3] Cf. Aristotle, *Metaphysics*, IV, 5 (1009^{a}8).

[4] *Metaphysics*, IX, 8 (1050^{a}23).

[5] Empedocles and Plato, in Aristotle, *Soul*, I, 5 (409^{b}26); I, 2 (404^{b}17).

[6] *Soul*, III, 8 (431^{b}29).

uals; but that it is understood, abstracted, or bears the intention of universality is in the intellect. We see something similar to this in the senses. For the sight sees the colour of the apple apart from its smell If therefore it be asked where is the colour which is seen apart from the smell, it is clear that the colour which is seen is only in the apple; but that it is perceived apart from the smell is owing to the sight, since the likeness of colour and not of smell is in the sight In like manner the humanity which is understood is only in this or that man, but that humanity is apprehended without the individual conditions, that is, that it is abstracted and consequently considered as universal, happens to humanity according as it is perceived by the intellect, in which there is a likeness of the specific nature, but not of the individual principles.

Reply Obj. 3. There are two operations in the sensitive part One in regard to change only, and thus the operation of the senses takes place by the senses being changed by the sensible. The other is formation, according as the imagination forms for itself an image of an absent thing, or even of something never seen Both of these operations are found in the intellect. For in the first place there is the passion of the possible intellect as informed by the intelligible species; and then the possible intellect thus informed forms a definition, or a division, or a composition, which is expressed by a word. Thus the notion signified by a word is its definition, and a proposition signifies the intellect's division or composition. Words do not therefore signify the intelligible species themselves, but that which the intellect forms for itself for the purpose of judging of external things.

ARTICLE 3. *Whether the More Universal Is First in Our Intellectual Knowledge?*

We proceed thus to the Third Article: It would seem that the more universal is not first in our intellectual knowledge.

Objection 1. For what is first and more known in its own nature is secondarily and less known in relation to ourselves. But universals come first as regards their nature, because that is first which does not involve the existence of its correlative. Therefore the universals are secondarily known as regards our intellect.

Obj. 2. Further, the composite precedes the simple in relation to us. But universals are the more simple. Therefore they are known secondarily by us.

Obj. 3. Further, the Philosopher says[1] that the object defined comes in our knowledge before the parts of its definition. But the more universal is part of the definition of the less universal, as animal is part of the definition of man. Therefore the universals are secondarily known by us.

Obj 4. Further, we know causes and principles by their effects But universals are principles. Therefore universals are secondarily known by us

On the contrary, "We must proceed from the universal to the singular."[2]

I answer that, In our knowledge there are two things to be considered. First, that intellectual knowledge in some degree arises from sensible knowledge. And, because sense has singular things for its object, and intellect has the universal for its object, it follows that our knowledge of the former comes before our knowledge of the latter Secondly, we must consider that our intellect proceeds from a state of potency to a state of act. But everything which proceeds from potency to act comes first to an incomplete act, which is midway between potency and act, before achieving the perfect act. The perfect act of the intellect is complete knowledge, when the thing is distinctly and determinately known, whereas the incomplete act is imperfect knowledge, when the thing is known indistinctly, and as it were confusedly. A thing thus imperfectly known, is known relatively in act and in some measure in potency, and hence the Philosopher says,[3] that "what is manifest and certain is known to us at first confusedly; afterwards we know it by distinguishing its principles and elements " Now it is evident that to know something that comprises many things without proper knowledge of each thing contained in it is to know that thing confusedly. In this way we can have knowledge not only of the universal whole, which contains parts potentially, but also of the integral whole; for each whole can be known confusedly, without its parts being known. But to know distinctly what is contained in the universal whole is to know the less common, as to know animal indistinctly is to know it as animal, whereas to know animal distinctly is to know it as rational or irrational animal, that is, to know a man or a lion; therefore our intellect knows animal before it knows man, and the same reason holds in comparing anything more universal with the less universal.

Moreover, as sense, like the intellect, proceeds from potency to act, the same order of

[1] *Physics*, I, 1 (184^b11).

[2] *Ibid*, (184^a23).

[3] *Ibid.*, (184^a21).

knowledge appears in the senses For by sense we judge of the more common before the less common, in reference both to place and time; in reference to place, when a thing is seen afar off it is seen to be a body before it is seen to be an animal, and to be an animal before it is seen to be a man, and to be a man before it is seen to be Socrates or Plato; and the same is true as regards time, for a child can distinguish man from not man before he distinguishes this man from that, and therefore "children at first call all men fathers, and later on distinguish each one from the others."[1]

The reason of this is clear, because he who knows a thing indistinctly is in a state of potency as regards knowing its principle of distinction, just as he who knows genus is in a state of potency as regards knowing difference. Thus it is evident that indistinct knowledge is midway between potency and act. We must therefore conclude that knowledge of the singular and individual is prior, as regards us, to the knowledge of the universal, just as sensible knowledge is prior to intellectual knowledge. But in both sense and intellect the knowledge of the more common precedes the knowledge of the less common

Reply Obj 1. The universal can be considered in two ways. First, the universal nature may be considered together with the intention of universality. And since the intention of universality, namely, the relation of one and the same to many, is due to intellectual abstraction, the universal thus considered must be a secondary consideration. Hence it is said[2] that the "universal animal is either nothing or something secondary." But according to Plato, who held that universals are subsistent,[3] the universal considered thus would be prior to the particular, for the latter, according to him, are only participations of the subsistent universals which he called ideas.

Secondly, the universal can be considered in the nature itself—for instance, animality or humanity as existing in the individual. And thus we must distinguish two orders of nature: one, by way of generation and time; and thus the imperfect and the potential come first. In this way the more common comes first in the order of nature, as appears clearly in the generation of man and animal; for "the animal is generated before man," as the Philosopher says.[4] The other order is the order of perfection or of the intention of nature. For instance, act considered absolutely is naturally prior to potency, and the perfect to the imperfect; thus the less common comes naturally before the more common, as man comes before animal. For the intention of nature does not stop at the generation of animal, but goes on to the generation of man.

Reply Obj. 2. The more common universal may be compared to the less common, as the whole and as the part. As the whole, considering that in the more universal is potentially contained not only the less universal, but also other things, as in animal is contained not only man but also horse. As part, considering that the less common contains in its notion not only the more common, but also other things as *man* contains not only animal but also rational. Therefore animal in itself comes into our knowledge before man, but man comes before animal considered as part of the same notion.

Reply Obj. 3. A part can be known in two ways First, absolutely, considered in itself; and thus nothing prevents the parts being known before the whole, as stones are known before a house is known. Secondly, as belonging to a certain whole; and thus we must know the whole before its parts For we know a house in a confused way before we know its individual parts. So likewise the elements of a definition absolutely considered are known before the thing defined is known; otherwise the thing defined would not be made known by them But as parts of the definition they are known after For we know man in a confused way as man before we know how to distinguish all that belongs to the notion of man.

Reply Obj. 4. The universal, as understood with the intention of universality, is, indeed, in a way, a principle of knowledge, in that the intention of universality results from the mode of understanding which is by way of abstraction But what is a principle of knowledge is not of necessity a principle of being, as Plato thought [5] since at times we know a cause through its effect, and substance through accidents. Therefore the universal thus considered, according to the opinion of Aristotle, is neither a principle of being, nor a substance, as he makes clear.[6] But if we consider the generic or specific nature itself as existing in the singular, thus in a way it is in the nature of a formal principle in regard to the singulars, for the singular is the result of matter, while the notion of species is from the form. But the generic nature is compared to the

[1] *Physics*, I, 1 ($184^{b}12$). [2] Aristotle, *Soul*, I, 1 ($402^{b}7$).
[3] See above, Q. LXXXIV, A. 1.
[4] *Generation of Animals*, II, 3 ($736^{b}2$)
[5] See above, Q. LXXXIV, A. 1.
[6] *Metaphysics*, VII, 13 ($1038^{b}8$).

specific nature rather after the fashion of a material principle, because the generic nature is taken from that which is material in a thing, while the notion of species is taken from that which is formal; thus the notion of animal is taken from the sensitive part, while the notion of man is taken from the intellectual part. Thus it is that the ultimate intention of nature is to the species and not to the individual, nor to the genus, because the form is the end of generation, while matter is for the sake of the form Neither is it necessary that, as regards us, knowledge of any cause or principle should be secondary, since at times through sensible causes we become acquainted with unknown effects, and sometimes conversely.

ARTICLE 4 *Whether We Can Understand Many Things at the Same Time?*

We proceed thus to the Fourth Article: It would seem that we can understand many things at the same time

Objection 1. For intellect is above time, whereas the succession of before and after belongs to time. Therefore the intellect does not understand different things in succession, but at the same time.

Obj 2. Further, there is nothing to prevent different forms not opposed to each other from actually being in the same subject, as, for instance, colour and smell are in the apple But intelligible species are not opposed to each other. Therefore there is nothing to prevent the same intellect being in act as regards different intelligible species, and thus it can understand many things at the same time.

Obj. 3. Further, the intellect understands a whole at the same time, such as a man or a house But a whole contains many parts. Therefore the intellect understands many things at the same time.

Obj 4 Further, we cannot know the difference between two things unless we know both at the same time,[1] and the same is to be said of any other comparison. But our intellect knows the difference between one thing and another Therefore it knows many things at the same time.

On the contrary, It is said[2] that "understanding is of one thing only, science is of many."

I answer that, The intellect can, indeed, understand many things as one, but not as many; that is to say, by one but not by many intelligible species. For the mode of every action follows the form which is the principle of that action. Therefore whatever things the intellect can understand under one species it can understand at the same time; hence it is that God sees all things at the same time, because He sees all in one, that is, in His Essence. But whatever things the intellect understands under different species, it does not understand at the same time. The reason of this is that it is impossible for one and the same subject to be perfected at the same time by many forms of one genus and diverse species, just as it is impossible for one and the same body at the same time to have different colours or different shapes. Now all intelligible species belong to one genus, because they are the perfections of one intellectual power; although the things of which they are the species belong to different genera. Therefore it is impossible for one and the same intellect to be perfected at the same time by different intelligible species so as actually to understand different things.

Reply Obj. 1. The intellect is above that time which is the measure of the movement of corporeal things But the multitude itself of intelligible species causes a certain change of intelligible operations, according as one operation succeeds another. And this change is called time by Augustine, who says (*Gen. ad lit.* viii, 20, 22),[3] that "God moves the spiritual creatures through time."

Reply Obj. 2. Not only is it impossible for opposite forms to exist at the same time in the same subject, but neither can any forms belonging to the same genus, even though they are not opposed to one another, as is clear from the examples of colours and shapes

Reply Obj. 3. Parts can be understood in two ways. First, in a confused way, as existing in the whole, and thus they are known through the one form of the whole, and so are known together. In another way they are known distinctly; thus each is known by its species, and so they are not understood at the same time.

Reply Obj. 4. When the intellect knows the difference or comparison between one thing and another, it knows both under the aspect of their difference or comparison; just as it knows the parts under the aspect of the whole, as we have said above (ad 3).

ARTICLE 5. *Whether Our Intellect Understands by Composition and Division?*

We proceed thus to the Fifth Article: It would seem that our intellect does not understand by composition and division.

[1] Aristotle, *Soul*, III, 2 (426^b22).
[2] Aristotle, *Topics*, II, 10 (114^b34).
[3] PL. 34, 388, 389.

Objection 1. For composition and division are only of many. But the intellect cannot understand many things at the same time. Therefore it cannot understand by composition and division.

Obj. 2. Further, every composition and division implies past, present, or future time. But the intellect abstracts from time, as also from other individual conditions. Therefore the intellect does not understand by composition and division.

Obj. 3. Further, the intellect understands things by assimilation to them. But composition and division are not in things, for nothing is in things but the thing signified by the predicate and the subject, which is one and the same if the composition is true, for *man* is truly what *animal* is. Therefore the intellect does not act by composition and division.

On the contrary, Words signify the conceptions of the intellect, as the Philosopher says.[1] But in words we find composition and division, as appears in affirmative and negative propositions. Therefore the intellect acts by composition and division.

I answer that, That human intellect must of necessity understand by composition and division. For since the intellect passes from potency to act, it has a likeness to things which are generated, which do not attain to perfection all at once but acquire it by degrees. And likewise the human intellect does not acquire perfect knowledge of the thing by the first apprehension; but it first apprehends something about the thing, such as its quiddity, and this is its first and proper object; and then it understands the properties, accidents, and the various relations of the essence. Thus it necessarily compares one thing with another by composition or division; and from one composition and division it proceeds to another, which is to reason.

But the angelic and the Divine intellect, like all incorruptible things, have their perfection at once from the beginning. Hence the angelic and the Divine intellect have the entire knowledge of a thing at once and perfectly; and hence also in knowing the quiddity of a thing they know at once whatever we can know by composition, division, and reasoning. Therefore the human intellect knows by composition, division, and reasoning. But the Divine and the angelic intellect know, indeed, composition, division, and reasoning, not by the process itself, but by understanding the simple quiddity.

Reply Obj. 1. Composition and division of the intellect are made by differentiating and comparing. Hence the intellect knows many things when it composes and divides, just as when it knows the difference and comparison of things.

Reply Obj. 2. Although the intellect abstracts from the phantasms, it does not understand actually without turning to the phantasms, as we have said (A. 1, and Q LXXXIV, A 7). And as regards turning to the phantasms, composition and division of the intellect involve time

Reply Obj. 3. The likeness of a thing is received into the intellect according to the mode of the intellect, and not according to the mode of the thing. Therefore something on the part of the thing corresponds to the composition and division of the intellect, but it does not exist in the same way in the intellect and in the thing. For the proper object of the human intellect is the quiddity of a material thing, which falls under the senses and the imagination Now in a material thing there is a twofold composition. First, there is the composition of form with matter, and to this corresponds that composition of the intellect by which the universal whole is predicated of its part; for the genus is derived from common matter, while the difference that completes the species is derived from the form, and the particular from individual matter. The second composition is of accident with subject, and to this composition corresponds that composition of the intellect by which accident is predicated of subject, as when we say "the man is white" Nevertheless composition of the intellect differs from composition of things; for in the latter the components are diverse, whereas composition of the intellect is a sign of the identity of the components. For the composition of the intellect does not assert that man is whiteness, but the assertion, "the man is white, means that "the man is something having whiteness," and the subject, which is a man, is identified with a subject having whiteness. It is the same with the composition of form and matter, for animal signifies that which has a sensitive nature; rational, that which has an intellectual nature; man, that which has both; and Socrates that which has all these things together with individual matter. And according to this kind of identity our intellect composes one thing with another by the act of predication.

ARTICLE 6. *Whether the Intellect Can Be False?*

We proceed thus to the Sixth Article: It would seem that the intellect can be false.

Objection 1. For the Philosopher says[2] that

[1] *Interpretation,* 1 (16^a3).

[2] *Metaphysics,* VI, 4 (1027^b27).

"truth and falsehood are in the mind." But the mind and intellect are the same, as is shown above (Q. LXXII). Therefore falsehood is in the intellect.

Obj. 2. Further, opinion and reasoning belong to the intellect. But falsehood is found in both. Therefore falsehood can be in the intellect.

Obj. 3. Further, sin is in the intellectual part. But sin involves falsehood, for *those err that work evil* (Prov. 14. 22). Therefore falsehood can be in the intellect.

On the contrary, Augustine says (QQ. LXXXIII, *qu.* 32),[1] that "everyone who is deceived, does not rightly understand that wherein he is deceived." And the Philosopher says[2] that "the intellect is always true."

I answer that, The Philosopher[3] compares intellect with sense on this point For sense is not deceived in its proper object, as sight in regard to colour, save accidentally through some hindrance occurring to the organ—for example, the taste of a fever-stricken person judges a sweet thing to be bitter, through his tongue being vitiated by ill humours Sense, however, may be deceived as regards common sensibles, as size or figure; when, for example, it judges the sun to be only a foot in diameter, whereas in reality it exceeds the earth in size. Much more is sense deceived concerning accidental sensibles, as when it judges that vinegar is honey by reason of the colour being the same The reason of this is evident; for every power, as such, is *per se* directed to its proper object, and things of this kind are always the same. Hence, so long as the power exists, its judgment concerning its own proper object does not fail Now the proper object of the intellect is the quiddity of a thing; and hence, properly speaking, the intellect is not at fault concerning this quiddity. But it may go astray as regards what surrounds the essence or quiddity of the thing, when it refers one thing to another, or in composition or division, or also in reasoning. Therefore, also in regard to those propositions, which are understood as soon as the meanings of their terms are understood, the intellect cannot err, as in the case of first principles from which arises the infallibility of truth, with regard to the certitude of scientific conclusions.

The intellect, however, may be accidentally deceived in the quiddity of composite things, not by the defect of its organ, for the intellect is not a power using an organ, but on the part of the composition affecting the definition, when, for instance, the definition of a thing is false in relation to something else, as the definition of a circle applied to a triangle; or when a definition is false in itself as involving the composition of things incompatible, as, for instance, to describe anything as a rational winged animal. Hence as regards simple things in whose definition composition does not enter, we cannot be deceived unless, indeed, we understand nothing whatever about them, as is said the *Metaphysics.*[4]

Reply Obj 1. The Philosopher says that falsehood is in the mind in regard to composition and division The same answer applies to the *second objection* concerning opinion and reasoning, and to the *third objection,* concerning the error of the sinner, who errs in the practical judgment of the object of desire. But in the absolute consideration of the quiddity of a thing and of those things which are known thereby, the intellect is never deceived. In this sense are to be understood the authorities quoted in proof of *the opposite conclusion.*

ARTICLE 7. *Whether One Person Can Understand One and the Same Thing Better Than Another Can?*

We proceed thus to the Seventh Article: It would seem that one person cannot understand one and the same thing better than another can.

Objection 1. For Augustine says (QQ LXXXIII, *qu.* 32),[5] "Whoever understands a thing otherwise than as it is does not understand it at all. Hence it is clear that there is a perfect understanding, than which none other is more perfect; and therefore there are not infinite degrees of understanding a thing, nor can one person understand a thing better than another can "

Obj. 2. Further, the intellect is true in its act of understanding But truth, being a certain equality between thought and thing, is not subject to more or less; for a thing cannot be said to be more or less equal. Therefore a thing cannot be more or less understood.

Obj. 3 Further, the intellect is that which most pertains to form in man. But different forms cause different species. Therefore if one man understands better than another, it would seem that they do not belong to the same species.

On the contrary, Experience shows that some understand more deeply than do others, as one who carries a conclusion to its first principles and ultimate causes understands it more deeply

[1] PL 40, 22. [2] *Soul,* III, 10 (433[a]26).
[3] *Ibid.,* III, 6 (430[b]29).
[4] Aristotle, IX, 10 (1052[a]1).
[5] PL 40, 22.

than the one who reduces it only to its proximate causes.

I answer that, To say that a thing is understood more by one than by another may be taken in two senses. First, so that the word more be taken as determining the act of understanding as regards the thing understood; and thus, one cannot understand the same thing more than another, because to understand it otherwise than as it is, either better or worse, would entail being deceived, and such a one would not understand it, as Augustine argues (*loc. cit*). In another sense the word more can be taken as determining the act of understanding on the part of him who understands; and so one may understand the same thing better than someone else, through having a greater power of understanding, just as a man may see a thing better with his bodily sight, whose power is greater, and whose sight is more perfect. The same applies to the intellect in two ways. First, as regards the intellect itself, which is more perfect. For it is plain that the better the disposition of a body, the better the soul allotted to it, which clearly appears in things of different species. And the reason for this is that act and form are received into matter according to matter's capacity Hence because some men have bodies of better disposition, their souls have a greater power of understanding. Thus it is said[1] that we see that those who have delicate flesh are of apt mind Secondly, this occurs in regard to the lower powers of which the intellect has need in its operation, for those in whom the imaginative, cogitative and remembering powers are of better disposition are better disposed to understand.

The *reply to the first objection* is clear from the above; likewise the *reply to the second,* for the truth of the intellect consists in the intellect understanding a thing as it is.

Reply Obj. 3. The difference of form which is due only to the different disposition of matter causes not a specific but only a numerical difference; for different individuals have different forms, diversified according to the difference of matter.

ARTICLE 8. *Whether the Intellect Understands the Indivisible Before the Divisible?*

We proceed thus to the Eighth Article: It would seem that the intellect understands the indivisible before the divisible.

Objection 1. For the Philosopher says[2] that we understand and know from the knowledge of principles and elements. But principles are indivisible, and elements are of divisible things Therefore the indivisible is known to us before the divisible.

Obj. 2. Further, the definition of a thing contains what is known previously, for a "definition proceeds from the first and more known," as is said in the *Topics.*[3] But the indivisible is part of the definition of the divisible, as a point comes into the definition of a line; for as Euclid says,[4] a line is length without breadth, the extremities of which are points Also unity comes into the definition of number, for "number is multitude measured by one," as is said in the *Metaphysics.*[5] Therefore our intellect understands the indivisible before the divisible.

Obj 3. Further, Like is known by like But the indivisible is more like to the intellect than is the divisible, because "the intellect is simple."[6] Therefore our intellect first knows the indivisible

On the contrary, It is said[7] that "the indivisible becomes known as a privation" But privation is known secondarily. Therefore likewise is the indivisible.

I answer that, The object of our intellect in its present state is the quiddity of a material thing, which it abstracts from the phantasms, as above stated (Q LXXXIV, A. 7). And since that which is known first and of itself by our knowing power is its proper object, we must consider its relationship to that quiddity in order to discover in what order the indivisible is known. Now the indivisible is threefold, as is said in the book on the *Soul*[8] First, the continuous is indivisible, since actually it is undivided, although potentially divisible; and this indivisible is known to us before its division, which is a division into parts, because confused knowledge is prior to distinct knowledge, as we have said above (A. 3). Secondly, the indivisible is called so in relation to species, as the essence of man is something indivisible. This way, also, the indivisible is understood before its division into essential parts, as we have said above (*ibid.*); and again before the intellect composes and divides by affirmation and negation. The reason of this is that both these kinds of indivisible are understood by the intellect of itself, as its proper object. The third kind of indivisible is what is altogether indivisible, as a point and unity, which cannot be divided either actually or potentially.

[1] Aristotle, *Soul,* II, 9 (421^a25).
[2] *Physics,* I, 1 (184^a12).
[3] Aristotle, VI, 4 (141^a32).
[4] *Geom.*, trans of Boethius, I (PL 63, 1307).
[5] Aristotle, X, 6 (1057^a3)
[6] Aristotle, *Soul,* III, 4 (429^a18; $^b23$).
[7] *Ibid.*, III, 6 (430^b21).
[8] Aristotle, III, 6 (430^b6).

And this indivisible is known secondarily, through the privation of divisibility. Hence a point is defined by way of privation as "that which has no parts,"[1] and in like manner "the notion of one is that it is indivisible," as stated in the *Metaphysics*.[2] And the reason of this is that this indivisible has a certain opposition to corporeal reality, which is the quiddity which the intellect seizes primarily and *per se*.

But if our intellect understood by participation of separate indivisible (forms), as the Platonists maintained,[3] it would follow that an indivisible of this kind is understood primarily, for according to the Platonists what is first is first participated by things.[4]

Reply Obj. 1. In the acquisition of knowledge, principles and elements are not always first, for sometimes from sensible effects we arrive at the knowledge of principles and intelligible causes. But in perfected knowledge, the knowledge of effects always depends on the knowledge of principles and elements; for as the Philosopher says in the same passage that we consider ourselves to know, when we can resolve principles into their causes.

Reply Obj. 2. A point is not included in the definition of a line in general, for it is manifest that in an infinite line and in a circular line there is no point, save potentially Euclid defines a finite straight line, and therefore he places a point in the definition of a line as the limit in the definition of that which is limited. But unity is the measure of number. Therefore it is included in the definition of a measured number But it is not included in the definition of the divisible, but rather conversely.

Reply Obj. 3. The likeness through which we understand is the species of the known in the knower. Therefore a thing is known first, not on account of a natural likeness to the knowing power, but on account of a relation of agreement between the knowing power and the object; otherwise sight would perceive hearing rather than colour.

QUESTION LXXXVI

WHAT OUR INTELLECT KNOWS IN MATERIAL THINGS

(In Four Articles)

WE now have to consider what our intellect knows in material things. Under this head there are four points of inquiry: (1) Whether it knows singulars? (2) Whether it knows infinite things? (3) Whether it knows contingent things? (4) Whether it knows future things?

ARTICLE 1. *Whether Our Intellect Knows Singulars?*

We proceed thus to the First Article: It would seem that our intellect knows singulars.

Objection 1. For whoever knows composition knows the terms of composition. But our intellect knows this composition: "Socrates is a man," for it pertains to the intellect to form a proposition. Therefore our intellect knows this singular, Socrates.

Obj. 2. Further, the practical intellect directs to action. But actions are concerned with singular things. Therefore the intellect knows the singular.

Obj. 3. Further, our intellect understands itself But in itself it is a singular, otherwise it would have no action, for actions pertain to singulars. Therefore our intellect knows singulars

Obj. 4. Further, a superior power can do whatever is done by an inferior power. But sense knows the singular Much more, therefore, can the intellect know it

On the contrary, The Philosopher says[5] that "the universal is known by reason, and the singular is known by sense"

I answer that, Our intellect cannot know the singular in material things directly and primarily. The reason of this is that the principle of singularity in material things is individual matter, while our intellect, as we have said above (Q. LXXXV, A. 1), understands by abstracting the intelligible species from such matter. Now what is abstracted from individual matter is the universal. Hence our intellect knows directly the universal only. But indirectly, and as it were by a kind of turning back (reflectio), it can know the singular, because, as we have said above (Q. LXXXV, A 7), even after abstracting the intelligible species, the intellect, in order to understand actually, needs to turn to the phantasms in which it understands the species, as is said in the book on the *Soul*[6] Therefore it understands the universal directly through the intelligible species, and indirectly the singulars represented by the phantasms. And thus it forms the proposition, "Socrates is a man." From this the *reply to the first objection* is clear.

Reply Obj 2 The choice of a particular thing to be done is, as it were, the conclusion of a syl-

[1] Euclid, *Geom*, trans of Boethius, Bk 1 (PL 63, 1307)
[2] Aristotle, X, 1 (1052^b10)
[3] Cf. Q LXXXIV, AA 1, 4, Q LXXXVII, A. 1.
[4] Cf. *Liber de Causis*, 1 (BA 163.3).
[5] *Physics*, I, 5 (189^a5).
[6] Aristotle, III, 7 (431^b2)

logism formed by the practical intellect, as is said in the *Ethics*.[1] But a singular proposition cannot be directly concluded from a universal proposition except through the medium of a singular proposition. Therefore the universal principle of the practical intellect does not move save through the medium of a particular apprehension of the sensitive part, as is said in the book on the *Soul*.[2]

Reply Obj. 3. Intelligibility is incompatible with the singular not as such, but as material, for nothing can be understood otherwise than immaterially. Therefore if there be an immaterial singular such as the intellect, there is no reason why it should not be intelligible.

Reply Obj. 4. The higher power can do what the lower power can, but in a more eminent way. And so what the sense knows materially and concretely, which is to know the singular directly, the intellect knows immaterially and in the abstract, which is to know the universal.

Article 2. *Whether Our Intellect Can Know the Infinite Things?*

We proceed thus to the Second Article: It would seem that our intellect can know infinite things.

Objection 1. For God excels all infinite things But our intellect can know God, as we have said above (Q. XII, A. 1). Much more, therefore, can our intellect know all other infinite things.

Obj. 2. Further, our intellect can naturally know genera and species. But there is an infinity of species in some genera, as in number, proportion, and figure. Therefore our intellect can know infinite things.

Obj. 3. Further, if one body can coexist with another in the same place, there is nothing to prevent an infinite number of bodies being in one place. But one intelligible species can exist with another in the same intellect, for many things can be known habitually at the same time. Therefore our intellect can have an habitual knowledge of an infinite number of things.

Obj. 4. Further, as the intellect is not a power of corporeal matter, as we have said (Q. LXXVI, A. 1), it appears to be an infinite power. But an infinite power has a capacity for an infinite number of things. Therefore our intellect can know infinite things.

On the contrary, It is said[3] that "the infinite, considered as such, is unknown."

I answer that, Since a power is proportioned to its object, the intellect must be related to the infinite in the same way as its object, which is the quiddity of a material thing, is related to it. Now in material things the infinite does not exist actually, but only in potency, in so far as one thing succeeds another, as is said[4] Therefore infinity is potentially in our intellect through its considering successively one thing after another, because our intellect never understands so many things, that it cannot understand more.

On the other hand, our intellect cannot understand the infinite either actually or habitually. Not actually, for our intellect cannot know actually at the same time, except what it knows through one species. But the infinite is not represented by one species, for if it were it would be something whole and complete. Consequently it cannot be understood except by a successive consideration of one part after another, as is clear from its definition:[5] for "the infinite is that from which, however much we may take, there always remains something to be taken." Thus the infinite could not be known actually, unless all its parts were counted, which is impossible.

For the same reason we cannot have habitual knowledge of the infinite, because in us habitual knowledge results from actual consideration, since by understanding we acquire knowledge, as is said in the *Ethics*.[6] And so it would not be possible for us to have a habit of an infinity of things distinctly known unless we had already considered the entire infinity of them, counting them according to the succession of our knowledge, which is impossible And therefore neither actually or habitually can our intellect know the infinite, but only potentially, as explained above.

Reply Obj. 1. As we have said above (Q. VII, A. 1), God is called infinite, because He is a form unlimited by matter, whereas in material things the term infinite is applied to that which is deprived of any formal termination. And because form is known in itself, whereas matter cannot be known without form, it follows that the material infinite is in itself unknowable. But the formal infinite, God, is of Himself known, but He is unknown to us by reason of the defect of our intellect, which in its present state has a natural aptitude for material things only. Therefore we cannot know God in our present life except through material effects In the future life this defect of intellect will be removed by the state of glory, when we shall be able to see the

[4] *Ibid*, III, 5 ($204^{a}20$)
[5] *Ibid.*, 6 ($207^{a}7$).
[6] Aristotle, II, 1 ($1103^{a}33$).

Essence of God Himself, though without being able to comprehend Him.

Reply Obj. 2. Our intellect naturally knows species abstracted from phantasms; therefore it cannot know actually or habitually species of numbers or figures that have not been imagined, except in a general way and in their universal principles. And this is to know them potentially and confusedly.

Reply Obj. 3. If two or more bodies were in the same place, there would be no need for them to occupy the place successively in order for the things placed to be counted according to this succession of occupation. But the intelligible species enter into our intellect successively, since many things cannot be actually understood at the same time. And therefore there must be a determinate and not an infinite number of species in our intellect.

Reply Obj. 4 Our intellect knows the infinite after the manner in which it is infinite in power. For its power is indeed infinite in so far as it is not determined by corporeal matter. Moreover it can know the universal, which is abstracted from individual matter, and which consequently is not limited to one individual, but, considered in itself, extends to an infinite number of individuals.

ARTICLE 3. *Whether Our Intellect Can Know Contingent Things?*

We proceed thus to the Third Article: It would seem that the intellect cannot know contingent things.

Objection 1. Because, as the Philosopher says,[1] the objects of understanding, wisdom and knowledge are not contingent, but necessary things.

Obj. 2. Further, as stated in the *Physics*,[2] "what sometimes is and sometimes is not, is measured by time." Now the intellect abstracts from time, and from other material conditions. Therefore, as it is proper to a contingent thing at one time to be and at another not to be, it seems that contingent things are not known by the intellect.

On the contrary, All knowledge is in the intellect. But some sciences are of contingent things, as the moral sciences, the objects of which are human acts subject to free choice; and, again, the natural sciences in as far as they are drawn from things subject to generation and corruption. Therefore the intellect knows contingent things.

[1] *Ethics*, VI, 6 (1040^b31).
[2] Aristotle, IV, 12 (221^b29).

I answer that, Contingent things can be considered in two ways: either as contingent, or as containing some element of necessity, since every contingent thing has in it something necessary. For example, that Socrates runs, is in itself contingent; but the relation of running to motion is necessary, for it is necessary that Socrates move if he runs. Now contingency arises from matter, for contingency is a potency to be or not to be, and potency pertains to matter. But necessity results from form, because whatever is consequent on form is of necessity in the subject. But matter is the principle of individuation, whereas the universal comes from the abstraction of the form from the particular matter. Moreover it was laid down above (A. 1) that the intellect of itself and directly is related to the universal, while the sense is related to the singular, which in a certain way also is indirectly related to the intellect, as we have said above (*ibid.*). Therefore the contingent, considered as such, is known directly by sense and indirectly by the intellect, while the universal and necessary principles of contingent things are known by the intellect. Hence if we consider the objects of science in their universal principles, then all science is of necessary things. But if we consider the things themselves, then some sciences are of necessary things, some of contingent things.

From which *the replies to the objections* are clear.

ARTICLE 4. *Whether Our Intellect Can Know the Future Things?*

We proceed thus to the Fourth Article: It would seem that our intellect knows future things.

Objection 1. For our intellect knows by means of intelligible species abstracted from the *here* and *now*, and hence related indifferently to all time. But it can know the present. Therefore it can know future things.

Obj 2. Further, man, while his senses are suspended, can know some future things, as in sleep, and in frenzy. But the intellect is freer and more vigorous when removed from sense. Therefore the intellect of its own nature can know the future.

Obj 3. The intellectual knowledge of man is superior to any knowledge of brutes. But some animals know the future; thus crows by their frequent cawing foretell rain. Therefore much more can the intellect know the future.

On the contrary, It is written (Eccles. 8. 6, 7), *There is great affliction for man, because he is*

ignorant of things past; and things to come he cannot know by any messenger.

I answer that, We must apply the same distinction to the knowledge of future things, as we applied above (A. 3) to the knowledge of contingent things. For future things considered as subject to time are singular, and the human intellect knows them by reflexion only, as stated above (A. 1). But the principles of future things may be universal; and thus they may enter the domain of the intellect and become the objects of science.

Speaking, however, of the knowledge of the future in a general way, we must observe that the future may be known in two ways: either in itself, or in its cause. The future cannot be known in itself save by God alone, to Whom even that is present which in the course of events is future, since from eternity His glance embraces the whole course of time, as we have said above when treating of God's knowledge (Q. XIV, A. 13). But according as it exists in its cause, the future can be known by us also And if, indeed, the cause be such as to have a necessary connection with its future result, then the future is known with scientific certitude, just as the astronomer foresees the future eclipse. If, however, the cause be such as to produce a certain result more frequently than not, then the future can be known more or less conjecturally, according as its cause is more or less inclined to produce the effect.

Reply Obj. 1. This argument is true of that knowledge which is drawn from universal causal principles; from these the future may be known after the manner of the order of effects to their cause.

Reply Obj. 2. As Augustine says in the twelfth book of the *Confessions*,[1] the soul has a certain power of forecasting, so that by its very nature it can know the future; hence when withdrawn from corporeal sense, and, as it were, turned back upon itself, it shares in the knowledge of the future. Such an opinion would be reasonable if we were to admit that the soul receives knowledge by participating the ideas as the Platonists maintained,[2] because in that case the soul by its nature would know the universal causes of all effects, and would only be impeded in its knowledge by the body; and hence when withdrawn from the bodily senses it would know the future.

But since it is connatural to our intellect to know things not in this way, but by receiving its knowledge from the senses, it is not natural for the soul to know the future when withdrawn from the senses; rather does it know the future by the impression of superior spiritual and corporeal causes. By the impression of spiritual causes when by Divine power the human intellect is enlightened through the ministry of angels, and the phantasms are directed to the knowledge of future events; or, by the influence of demons when the imagination is moved regarding the future known to the demons, as explained above (Q. LVII, A. 3). The soul is naturally more inclined to receive these impressions of spiritual causes when it is withdrawn from the senses, as it is then nearer to the spiritual world, and freer from external distractions. The same may also come from superior corporeal causes. For it is clear that superior bodies influence inferior bodies. Hence, in consequence of the sensitive powers being acts of corporeal organs, the influence of the heavenly bodies causes the imagination to be affected, and so, as the heavenly bodies cause many future events, the imagination receives certain signs of some such events. These signs are perceived more at night and while we sleep than in the daytime and while we are awake, because, as stated in *Prophesying*,[3] "impressions made by day are evanescent. The night air is calmer, when silence reigns, hence bodily impressions are made in sleep, when slight internal movements are felt more than in wakefulness, and such movements produce in the imagination phantasms from which the future may be foreseen."

Reply Obj. 3. Brute animals have no power above the imagination to regulate the phantasms, as man has his reason, and therefore their imagination follows entirely the influence of the heavenly bodies. Thus from such animals' movements some future things, such as rain and the like, may be better known rather than from human movements directed by the counsel of reason. Hence the Philosopher says[4] that some who are most imprudent are most far-seeing; for their intelligence is not burdened with cares, but is as it were barren and bare of all anxiety, moving at the caprice of whatever is brought to bear on it.

QUESTION LXXXVII

How the intellectual soul knows itself and all within itself

(*In Four Articles*)

We have now to consider how the intellectual soul knows itself and all within itself Under this

[1] Cf. *De Gen. ad lit.*, XII, 13 (PL 34, 464).
[2] Cf. Q. LXXXIV, AA. 1, 4; Q. LXXXVII, A. 1.
[3] Aristotle, 2 (464[a]12). [4] *Ibid.*, (464[a]18).

head there are four points of inquiry: (1) Whether the soul knows itself by its own essence? (2) Whether it knows its own habits? (3) How does the intellect know its own act? (4) How does it know the act of the will?

ARTICLE 1. *Whether the Intellectual Soul Knows Itself by Its Essence?*

We proceed thus to the First Article: It would seem that the intellectual soul knows itself by its own essence.

Objection 1 For Augustine says (*De Trin* ix, 3),[1] that "the mind knows itself by itself, because it is incorporeal."

Obj. 2. Further, both angels and human souls belong to the genus of intellectual substance. But an angel understands itself by its own essence. Therefore likewise does the human soul.

Obj 3. Further, "in things void of matter, the intellect and that which is understood are the same."[2] But the human mind is without matter, for it is not the act of a body, as stated above (Q. LXXVI, A 1). Therefore the intellect and what is understood are the same in the human mind; and therefore the human mind understands itself by its own essence.

On the contrary, It is said[3] that the intellect understands itself in the same way as it understands other things. But it understands other things not by their essence, but by their likenesses Therefore it does not understand itself by its own essence.

I answer that, Everything is knowable so far as it is in act, and not according as it is in potency,[4] for a thing is a being, and is true, and therefore knowable, according as it is actual This is quite clear as regards sensible things, for the eye does not see what is potentially coloured, but what is actually coloured. In like manner it is clear that the intellect, so far as it knows material things, does not know save what is in act, and hence it does not know primary matter except as proportionate to form, as is stated in the *Physics* [5] Consequently immaterial substances are intelligible by their own essence, according as each one is actual by its own essence.

Therefore the Essence of God, which is pure and perfect act, is absolutely and perfectly in itself intelligible; and hence God by His own Essence knows not only Himself, but all other things also. The angelic essence belongs, indeed, to the genus of intelligible things as act, but not as a pure act, nor as a complete act, and hence the angel's act of understanding is not completed by his essence. For although an angel understands himself by his own essence, still he cannot understand all things by his own essence, but he knows things other than himself by their likenesses. Now the human intellect is only a being in potency in the genus of intelligible beings, just as primary matter is in potency in the genus of sensible beings; and hence it is called "possible."[6] Therefore considered in its essence the human mind is potentially understanding. Hence it has in itself the power to understand, but not to be understood, except as it is made actual. For even the Platonists asserted[7] that an order of intelligible beings existed above the order of intellects, since the intellect understands only by participation of the intelligible; for they said that the participator is below what it participates.

If, therefore, the human intellect, as the Platonists held,[8] became actual by participating separate intelligible forms, it would understand itself by such participation of incorporeal beings. But as in this life our intellect naturally has material and sensible things for its proper object, as stated above (Q. LXXXIV, A. 7), it understands itself according as it is made actual by the species abstracted from sensible things through the light of the agent intellect, which actuates the intelligibles themselves, and by their instrumentality, the possible intellect. Therefore the intellect knows itself not by its essence, but by its act.

This happens in two ways. In the first place, in a particular manner, as when Socrates or Plato perceives that he has an intellectual soul because he perceives that he understands. In the second place, in a universal manner, as when we consider the nature of the human mind from the act of understanding. It is true, however, that the judgment and worth of this knowledge, whereby we know the nature of the soul, comes to us according to the derivation of our intellectual light from the Divine Truth which contains the types of all things as above stated (Q. LXXXIV, A. 5). Hence Augustine says (*De Trin.* ix, 6):[9] "We gaze on the inviolable truth whence we can as perfectly as possible define, not what each man's mind is, but what it ought to be in the light of the eternal types."

[1] PL 42, 963. [2] Aristotle, *Soul*, III, 4 (430^a3).
[3] *Ibid.* [4] Aristotle, *Metaphysics*, IX, 9 (1051^a29).
[5] Aristotle, I, 7 (191^a8).
[6] Cf. Aristotle, *Soul*, III, 4 (428^a22).
[7] See Dionysius, *De Div. Nom*, IV, 1 (PG 3, 693); *Liber de Causis*, 9 (BA. 173); Proclus, *Inst. Theol.*, 163, 164 (DD C 111).
[8] See previous note. Cf. also Bonaventure, *In Sent*, II, d. 39, A. 1, Q 2 (QR II, 904). Cf. Luyckx, *Die Erkenntnislehre* (p 171–200). [9] PL 42, 966.

There is, however, a difference between these two kinds of knowledge, and it consists in this that the mere presence of the mind suffices for the first; for the mind itself is the principle of action whereby it perceives itself, and hence it is said to know itself by its own presence. But as regards the second kind of knowledge, the mere presence of the mind does not suffice, and there is further required a careful and subtle inquiry. Hence many are ignorant of the soul's nature, and many have erred about it. So Augustine says (*De Trin.* x, 9),[1] concerning such inquiry about the mind: "Let the mind strive not to see itself as if it were absent, but to discern itself as present"—that is, to know how it differs from other things, which is to know its quiddity and nature.

Reply Obj. 1. The mind knows itself by means of itself because at length it acquires knowledge of itself, though led to it by its own act; for it is itself that it knows, since it loves itself, as he says in the same passage. For a thing can be called self-evident in two ways: either because we can know it by nothing else except itself, as first principles are called self-evident; or because it is not accidentally knowable, just as colour is visible of itself, whereas substance is visible accidentally.

Reply Obj. 2. The essence of an angel is as an act in the genus of intelligible things, and therefore it is both intellect and the thing understood. Hence an angel apprehends his own essence through itself; not so the human mind, which is either altogether in potency with respect to the intelligible,—as is the possible intellect,—or is the act of the intelligibles which are abstracted from the phantasms,—as is the agent intellect.

Reply Obj. 3. This saying of the Philosopher is universally true in every kind of intellect. For as the sense in act is the sensible by reason of the likeness of the sensible which is the form of the sense in act, so likewise the intellect in act is the thing understood in act, by reason of the likeness of the thing understood, which is the form of the intellect in act. So the human intellect, which becames actual by the species of the object understood, is itself understood by the same species as by its own form. Now to say that in "things without matter the intellect and what is understood are the same," is equal to saying that as regards things actually understood the intellect and what is understood are the same. For a thing is actually understood in that it is immaterial. But a distinction must be drawn, since the essences of some things are without matter, as the separate substances called angels, each of which is understood and understands, whereas there are other things whose essences are not without matter, but only the likenesses abstracted from them. Hence the Commentator says (*De Anima*, iii)[2] that the proposition quoted is true only of separate substances; because in a sense it is verified in their regard, and not in regard of other substances, as already stated (Ans. 2).

[1] PL 42, 980.

Article 2. *Whether Our Intellect Knows the Habits of the Soul by Their Essence?*

We proceed thus to the Second Article: It would seem that our intellect knows the habits of the soul by their essence.

Objection 1. For Augustine says (*De Trin.* xiii, 1):[3] *Faith is not seen in the heart wherein it abides, as the soul of a man may be seen by another from the movement of the body; but we know most certainly that it is there, and conscience proclaims its existence.* And the same applies to the other habits of the soul. Therefore the habits of the soul are not known by their acts, but by themselves.

Obj. 2. Further, material things outside the soul are known by their likeness being present in the soul, and are said therefore to be known by their likenesses. But the soul's habits are present by their essence in the soul. Therefore the habits of the soul are known by their essence.

Obj. 3. Further, whatever is the cause of a thing being such is still more so. But habits and intelligible species cause things to be known by the soul. Therefore they are still more known by the soul in themselves.

On the contrary, Habits like powers are the principles of acts. But as is said,[4] "acts and operations are logically prior to powers." Therefore in the same way they are prior to habits; and thus habits, like the powers, are known by their acts.

I answer that, A habit is a kind of medium between pure power and pure act. Now, it has been said (A. 1) that nothing is known except as it is actual. Therefore so far as a habit fails in being a perfect act, it falls short in being of itself knowable, and can be known only by its act. Thus, for example, anyone knows he has a habit from the fact that he can produce the act proper to that habit; or he may inquire into the nature and character of the habit by considering the

[2] Comm. 15 (VI, 2, 160A).

[3] PL 42, 1014. Cf. Bonaventure, *In Sent.*, III; d. XXIII, dub. 4 (QR III, 503).

[4] Aristotle, *Soul*, II, 4 (415^a18).

act. The first kind of knowledge of the habit arises from its being present, for the very fact of its presence causes the act whereby it is known. The second kind of knowledge of the habit arises from a careful inquiry, as is explained above of the mind (A. 1).

Reply Obj. 1. Although faith is not known by outward movements of the body, it is perceived by him in whom it resides, by the interior act of the heart. For no one knows that he has faith unless he perceives that he believes.

Reply Obj 2. Habits are present in our intellect, not as its object, since, in the present state of life, our intellect's object is the nature of a material thing as stated above (Q. LXXXIV, A. 7), but as that by which it understands

Reply Obj. 3. The axiom, whatever is the cause of a thing being such, is still more so, is true of things that are of the same order, for instance, of the same kind of cause; for example, we may say that health is desirable on account of life, and therefore life is more desirable still But if we take things of different orders the axiom is not true: for we may say that health is caused by medicine, but it does not follow that medicine is more desirable than health, for health belongs to the order of final causes, whereas medicine belongs to the order of efficient causes So of two things which belong per se to the order of the objects of knowledge, the one which is the cause of the other being known is the more known, as principles are more known than conclusions. But habit as such does not belong to the order of objects of knowledge; nor are things known on account of the habit, as on account of an object known, but as on account of a disposition or form by which the subject knows. And therefore the argument does not prove.

ARTICLE 3. *Whether Our Intellect Knows Its Own Act?*

We proceed thus to the Third Article: It would seem that our intellect does not know its own act.

Objection 1. For what is known is the object of the knowing power. But the act differs from the object. Therefore the intellect does not know its own act.

Obj. 2. Further, whatever is known is known by some act. If, then, the intellect knows its own act, it knows it by some act, and again it knows that act by some other act; this is to proceed indefinitely, which seems impossible.

Obj. 3. Further, the intellect has the same relation to its act as sense has to its act. But the proper sense does not sense its own act, for this belongs to the common sense, as stated in the book on the *Soul.*[1] Therefore neither does the intellect understand its own act.

On the contrary, Augustine says (*De Trin.* X, 11),[2] "I understand that I understand."

I answer that, As stated above (AA. 1, 2) a thing is known according as it is in act. Now the ultimate perfection of the intellect is its operation, for this is not an act tending to something else in which lies the perfection of the work accomplished, as building is the perfection of the thing built, but it remains in the agent as its perfection and act, as is said in the *Metaphysics.*[3] Therefore the first thing understood of the intellect is its own act of understanding. This occurs in different ways with different intellects. For there is an intellect, namely, the Divine, which is Its own act of understanding, so that in God the understanding of His understanding and the understanding of His Essence, are one and the same act, because His Essence is His act of understanding. But there is another intellect, the angelic, which is not its own act of understanding, as we have said above (Q. LXXIX, A. 1), and yet the first object of its act of understanding is the angelic essence. And so although there is a logical distinction between the act whereby the angel understands that he understands, and that whereby he understands his essence, yet he understands both by one and the same act; because to understand his own essence is the proper perfection of his essence, and by one and the same act is a thing together with its perfection understood. And there is yet another, namely, the human intellect, which neither is its own act of understanding, nor is its own essence the first object of its act of understanding, for this object is something extrinsic, namely, the nature of a material thing. And therefore that which is first known by the human intellect is an object of this kind, and that which is known secondarily is the act by which that object is known; and through the act the intellect itself is known, the perfection of which is this very act of understanding For this reason did the Philosopher assert that objects are known before acts, and acts before powers.[4]

Reply Obj. 1. The object of the intellect is something common, namely, being and the true, in which also the act of understanding is com-

[2] PL 42, 983. For the various interpretations of this passage in Bonaventure, see Luyckx, *Die Erkenntnislehre* (p. 171).

[3] Aristotle, IX, 8 (1050^a36)

[4] *Soul,* II, 4 (415^a16).

prised. Therefore the intellect can understand its own act. But not primarily, since the first object of our intellect, in this state of life, is not every being and everything true, but being and true, as considered in material things, as we have said above (Q. LXXXIV, A. 7), from which it acquires knowledge of all other things.

Reply Obj. 2. The act of understanding of the human intellect is not the act and perfection of the nature understood, as if the nature of the material thing and the act of understanding could be understood by one act; just as a thing and its perfection are understood by one act. Hence the act whereby the intellect understands a stone is distinct from the act whereby it understands that it understands a stone, and so on. Nor is there any difficulty in the intellect being potentially infinite, as explained above (Q. LXXXVI, A. 2).

Reply Obj. 3. The proper sense senses by reason of the change in the material organ caused by the external sensible. A material thing, however, cannot change itself, but one is changed by another, and therefore the act of the proper sense is perceived by the common sense. The intellect, on the contrary, does not understand by the material change of an organ; and so there is no comparison.

ARTICLE 4. *Whether the Intellect Understands the Act of the Will?*

We proceed thus to the Fourth Article: It would seem that the intellect does not understand the act of the will.

Objection 1. For nothing is known by the intellect unless it be in some way present in the intellect. But the act of the will is not in the intellect, since the will and the intellect are distinct powers. Therefore the act of the will is not known by the intellect.

Obj. 2. Further, the act is specified by the object. But the object of the will is not the same as the object of the intellect. Therefore the act of the will is specifically distinct from the object of the intellect, and therefore the act of the will is not known by the intellect.

Obj. 3. Augustine says[1] of the soul's affections that they are known "neither by images as bodies are known, nor by their presence, like the arts, but by certain notions." Now it does not seem that there can be in the soul any notions of things, other than the essences of things known or their likenesses. Therefore it seems impossible for the intellect to know the affections of the soul which are the acts of the will.

[1] *Confessions*, X, 26 (PL 32, 790).

On the contrary, Augustine says (*De Trin.* X, 11),[2] "I understand that I will."

I answer that, As stated above (Q. LIX, A. 1), the act of the will is nothing but an inclination consequent on the form understood, just as the natural appetite is an inclination consequent on the natural form. Now the inclination of a thing resides in it according to the mode of being of the thing; and hence the natural inclination resides in a natural thing naturally, and the inclination called the sensible appetite is in the sensible thing sensibly; and likewise the intelligible inclination, which is the act of the will, is in the intelligent subject intelligibly, as in its principle and proper subject. Hence the Philosopher expresses himself thus, that "the will is in the reason."[3] Now whatever is intelligibly in an intelligent subject is understood by that subject. Therefore the act of the will is understood by the intellect, both in so far as one knows that one wills, and in so far as one knows the nature of this act, and consequently, the nature of its principle which is the habit or power

Reply Obj. 1. This argument would hold good if the will and the intellect were in different subjects, just as they are distinct powers, for then whatever was in the will would not be in the intellect. But as both are rooted in the same substance of the soul, and since one is in a certain way the principle of the other, consequently what is in the will is, in a certain way, also in the intellect.

Reply Obj 2. The good and the true which are the objects of the will and of the intellect differ logically, but one is contained in the other, as we have said above (Q LXXXII, A 4, ANS 1; Q. XVI, A. 4, ANS. 1); for the true is a certain good, and the good is a certain true. Therefore what pertains to the will falls under the intellect, and what pertains to the intellect can fall under the will

Reply Obj. 3. The affections of the soul are in the intellect not by likeness only, as are bodies, nor by being present in their subject, as the arts, but as the thing caused is in its principle, which contains some notion of the thing caused. And so Augustine says that the soul's affections are in the memory by certain notions.

QUESTION LXXXVIII

HOW THE HUMAN SOUL KNOWS WHAT IS ABOVE ITSELF

(In Three Articles)

WE must now consider how the human soul knows what is above itself, namely, immaterial

[2] PL 42, 983. [3] *Soul*, III, 9 (432^b5).

substances. Under this head there are three points of inquiry: (1) Whether the human soul in the present state of life can understand the immaterial substances called angels, in themselves? (2) Whether it can arrive at the knowledge of them by the knowledge of material things? (3) Whether God is what is first known by us?

ARTICLE 1. *Whether the Human Soul in the Present State of Life Can Understand Immaterial Substances in Themselves?*

We proceed thus to the First Article: It would seem that the human soul in the present state of life can understand immaterial substances in themselves.

Objection 1. For Augustine (*De Trin.* ix, 3)[1] says: "As the mind itself acquires the knowledge of corporeal things by means of the corporeal senses, so it gains from itself the knowledge of incorporeal things." But these are immaterial substances. Therefore the human mind understands immaterial substances.

Obj. 2. Further, like is known by like. But the human mind is more akin to immaterial than to material things, since its own nature is immaterial, as is clear from what we have said above (Q. LXXVI, A. 1). Since then our mind understands material things, much more does it understand immaterial things.

Obj. 3. Further, the fact that things which are in themselves most sensible are not most sensed by us comes from sense being corrupted by their very excellence. But the excellence of the intelligible thing does not corrupt the intellect, as is stated in the book on the *Soul*.[2] Therefore things which are in themselves in the highest degree intelligible are likewise to us most intelligible. As material things, however, are intelligible only so far as we make them actually so by abstracting them from matter, it is clear that those substances are more intelligible in themselves whose nature is immaterial. Therefore they are much more known to us than are material things.

Obj. 4 Further, the Commentator says[3] that nature would be frustrated in its end were we unable to understand abstract substances, because it would have made what in itself is naturally intelligible not to be understood at all. But in nature nothing is idle or purposeless. Therefore immaterial substances can be understood by us.

Obj. 5. Further, as sense is to the sensible, so is intellect to the intelligible. But our sight can see all things corporeal, whether superior and incorruptible, or lower and corruptible. Therefore our intellect can understand all intelligible substances, even the superior and immaterial.

On the contrary, It is written (Wisd. 9. 16): *The things that are in heaven who shall search out?* But these substances are said to be in neaven, according to Matthew 18. 10, *Their angels in heaven,* etc. Therefore immaterial substances cannot be known by human investigation.

I answer that, In the opinion of Plato, immaterial substances are not only understood by us, but are the objects we understand first of all. For Plato taught that immaterial subsisting forms, which he called Ideas, are the proper objects of our intellect, and are thus first and *per se* understood by us[4]; and, further, that material things are known by the soul according as imagination and sense are mixed up with the intellect.[5] Hence the more purified the intellect is, the more clearly does it perceive the intelligible truth of immaterial things.[6]

But in Aristotle's opinion,[7] which experience corroborates, our intellect in its present state of life has a natural relationship to the natures of material things, and therefore it can only understand by turning to the phantasms, as we have said above (Q. LXXXIV, A 7). Thus it clearly appears that immaterial substances which do not fall under sense and imagination, cannot first and *per se* be known by us according to the mode of knowledge which experience proves us to have.

Nevertheless Averroës (*Comment. De Anima,* iii)[8] teaches that in this present life man can in the end arrive at the knowledge of separate substances because it is continous with or united to some separate substance, which he calls the agent intellect, which, since it is a separate substance itself, naturally understands separate substances. Hence, when it is perfectly united to us so that by its means we are able to understand perfectly, we also shall be able to understand separate substances, as in the present life through the possible intellect united to us we can understand material things.

[1] PL 42, 963. Cf. Bonaventure's interpretation of this text: *Quaest. Disp. de Scientia Christi,* IV, 3. (QR V, 21, 24), also, *In Sent.,* I, d. III, p. 1, A. 1, Q. 1 (QR I, 68).
[2] Aristotle, III, 4 (429^b2).
[3] *In Meta.,* II, comm. 1 (VIII, 29c).
[4] Cf. Q. LXXXIV, A. 4.
[5] Cf. Macrobius, *In Somn. Scip.,* I, 12, 14 (DD 41b; 46b).
[6] Cf Cicero, *Tuscul.,* I, 30 (DD III, 640); *Phaedo* (80); Augustine, QQ. LXXXIII, Q. 46 (PL 40, 30).
[7] *Soul,* III, 7 (431^a16). [8] Comm. 36, Pt. V (VI, 2, 183c).

Now he held that the agent intellect is united to us, thus. Since we understand by means of both the agent intellect and contemplated intelligible objects, as, for instance, we understand conclusions by principles understood, it is clear that the active intellect must be compared to the objects understood either as the principal agent is to the instrument, or as form to matter. For an action is ascribed to two principles in one of these two ways: to a principal agent and to an instrument, as cutting to the workman and the saw; to a form and its subject, as heating to heat and fire. In both these ways the agent intellect can be related to the intelligible object as perfection is to the perfectible, and as act is to potency. Now a subject is made perfect and receives its perfection at one and the same time, as the reception of what is actually visible synchronizes with the reception of light in the eye. Therefore the possible intellect receives the intelligible object and the agent intellect together. And the more numerous the intelligible objects received, so much the nearer do we come to the point of perfect union between ourselves and the agent intellect, so much so that when we shall have understood all the intelligible objects, the agent intellect will become one with us, and by its instrumentality we shall understand all things material and immaterial And in this he places the ultimate happiness of man.[1] Nor, as regards the present inquiry, does it matter whether the possible intellect in that state of happiness understands separate substances by the agent intellect, as he himself maintains, or whether (as he says Alexander holds)[2] the possible intellect can never understand separate substances (because according to him it is corruptible), but man rather understands separate substances by means of the agent intellect.

This opinion, however, is untrue. First, because, supposing the active intellect to be a separate substance, we could not formally understand through it, for that by which an agent acts formally is its form and act, since every agent acts according to its actuality, as was said of the possible intellect (Q. LXXVI, A. 1).

This opinion is untrue secondly because in the above explanation, the agent intellect, supposing it to be a separate substance, would not be joined to us in its substance, but only in its light, as participated in things understood, and would not extend to the other acts of the agent intellect so as to enable us to understand immaterial substances; just as when we see colours illuminated by the sun we are not united to the substance of the sun so as to act like the sun, but its light only is united to us, that we may see the colours.

This opinion is untrue thirdly, because granted that, as above explained, the agent intellect were united to us in substance, still it is not said that it is wholly united to us in regard to one intelligible object, or two, but rather in regard to all the contemplated intelligible objects. But all such objects together do not equal the power of the agent intellect, as it is a much greater thing to understand separate substances than to understand all material things. Hence it is clear that the knowledge of all material things would not make the agent intellect to be so united to us as to enable us by its means to understand separate substances.

This opinion is untrue fourthly, because it is hardly possible for anyone in this world to understand all material things, and thus no one, or very few, could reach to perfect happiness; which is against what the Philosopher says,[3] that "happiness is a kind of common good, communicable to all capable of virtue." Further, it is unreasonable that only the few of any species attain to the end of the species.

Fifthly, the Philosopher expressly says[4] that "happiness is an operation according to perfect virtue"; and after enumerating many virtues in the tenth book,[5] he concludes that ultimate happiness consisting in the knowledge of the highest things intelligible is attained through the virtue of wisdom, which in the sixth chapter,[6] he had named as the "chief of the speculative sciences." Hence Aristotle clearly places the ultimate happiness of man in the knowledge of separate substances, obtainable by speculative science, and not by a continuation with the agent intellect, as some imagined.

Sixthly, as was shown above (Q. LXXIX, A. 4), the agent intellect is not a separate substance, but a power of the soul, extending itself actively to the same objects to which the possible intellect extends receptively; because, as is stated,[7] the possible intellect is "all things potentially," and the agent intellect is "all things in act." Therefore both intellects, according to the present state of life, extend to material things

[1] *De An. Beat.*, I (IX, 148b). For the same doctrine, cf. Avicenna, *De An.*, V, 6 (26 va).

[2] Alexander of Aphrodisias. Cf. Averroes, *In De An.*, III, 36. (VI, 2, 176B).

[3] *Ethics*, I, 9 (1099^b18).

[4] *Ibid.*, I, 10 (1101^a14).

[5] *Ibid.*, X, 7, 8 (1177^a21; 1179^a30).

[6] *Ibid.*, VI, 7 (1141^a20).

[7] Aristotle, *Soul*, III, 5 (430^a14).

only, which are made actually intelligible by the agent intellect, and are received in the possible intellect. Hence in the present state of life we cannot understand separate immaterial substances in themselves, either by the possible or by the agent intellect.

Reply Obj. 1. Augustine may be taken to mean that the knowledge of incorporeal things in the mind can be gained by the mind itself. This is so true that philosophers also say that the knowledge concerning the soul is a principle for the knowledge of separate substances.[1] For by knowing itself it attains to some knowledge of incorporeal substances, such as is within its compass; not that the knowledge of itself gives it a perfect and absolute knowledge of them.

Reply Obj. 2. The likeness of nature is not a sufficient reason of knowledge; otherwise what Empedocles said would be true—that the soul needs to have the nature of all in order to know all.[2] But knowledge requires that the likeness of the thing known be in the knower, as a kind of form thereof. Now our possible intellect, in the present state of life, is such that it can be informed with likenesses abstracted from phantasms, and therefore it knows material things rather than immaterial substances.

Reply Obj. 3. There must be some proportion between the object and the knowing power, such as of the active to the passive, and of perfection to the perfectible. Hence that sensible objects of great intensity are not grasped by the senses is due not merely to the fact that they corrupt the organ, but also to their being disproportionate to the sensitive power. And thus it is that immaterial substances are disproportionate to our intellect in our present state of life, so that it cannot understand them.

Reply Obj. 4. This argument of the Commentator fails in several ways. First, because if separate substances are not understood by us it does not follow that they are not understood by any intellect, for they are understood by themselves, and by one another.

Secondly, to be understood by us is not the end of separate substances, while only that is vain and purposeless which fails to attain its end. It does not follow, therefore, that immaterial substances are purposeless, even if they are not understood by us at all.

Reply Obj. 5. Sense knows bodies, whether superior or inferior, in the same way, that is, by the sensible acting on the organ. But we do not understand material and immaterial substances in the same way. The former we understand by way of abstraction, which is impossible in the case of the latter, for there are no phantasms of what is immaterial.

[1] Averroes, *In De An.*, I, 2 (VI, 2, 1F); III, 5 (VI, 2, 151E). Cf. St. Thomas, *In De An.*, I, 1.

[2] Cf. Aristotle, *Soul*, I, 2 (404^{b}11).

ARTICLE 2. *Whether Our Intellect Can Arrive at the Understanding of Immaterial Substances through Its Knowledge of Material Things?*

We proceed thus to the Second Article: It would seem that our intellect can arrive at the understanding of immaterial substances through the knowledge of material things.

Objection 1. For Dionysius says (*Cæl. Hier.* i)[3] that "the human mind cannot be raised up to immaterial contemplation of the heavenly hierarchies unless it is led thereto by material guidance according to its own nature." Therefore we can be led by material things to know immaterial substances.

Obj. 2. Further, science is in the intellect. But there are sciences and definitions of immaterial substances, for Damascene defines an angel (*De Fid. Orth.* ii, 3);[4] and we find angels treated of both in theology and philosophy. Therefore immaterial substances can be understood by us.

Obj. 3. Further, the human soul belongs to the genus of immaterial substances. But it can be understood by us through its act, by which it understands material things. Therefore also other immaterial substances can be understood by us through their effects in material things.

Obj. 4. Further, the only cause which cannot be comprehended through its effects is that which is infinitely distant from them, and this is proper to God alone. Therefore other created immaterial substances can be understood by us through material things.

On the contrary, Dionysius says (*Div. Nom.* i)[5] that "intelligible things cannot be understood through sensible things, nor composite things through simple, nor incorporeal through corporeal."

I answer that, Averroës says (*De Anima,* iii)[6] that a philosopher named Avempace taught that by the understanding of natural substances we can be led, according to true philosophical principles, to the understanding of immaterial substances. For since the nature of our intellect is to abstract the quiddity of

[3] Sect. 3 (PG 3, 124).

[4] PG 94, 865.

[5] PG 3, 588.

[6] Comm. 36, pt. III (VI, 2, 180E).

material things from matter, anything material residing in that abstracted quiddity can again be abstracted and as the process of abstraction cannot go on for ever, it must arrive at length at the understanding of some quiddity which would be absolutely without matter; and this would be the understanding of immaterial substance.

Now this opinion would be true, if immaterial substances were the forms and species of these material things, as the Platonists supposed.[1] But supposing, on the contrary, that immaterial substances differ altogether from the quiddity of material things, it follows that however much our intellect abstract the quiddity of material things from matter, it could never arrive at anything like immaterial substance. Therefore we are not able perfectly to understand immaterial substances through material substances.

Reply Obj. 1. From material things we can rise to some kind of knowledge of immaterial things, but not to the perfect knowledge of them. For there is no proper and adequate proportion between material and immaterial things, and the likenesses drawn from material things for the understanding of immaterial things are very dissimilar from them, as Dionysius says (*Cæl. Hier.* ii).[2]

Reply Obj. 2. Science treats of higher things principally by way of remotion. Thus Aristotle explains[3] the heavenly bodies by denying to them the properties of inferior bodies. Hence it follows that much less can immaterial substances be known by us in such a way that we apprehend their quiddity; but we may have a scientific knowledge of them by way of remotion and by their relation to material things.

Reply Obj. 3. The human soul understands itself through its own act of understanding, which is proper to it, showing perfectly its power and nature. But the power and nature of immaterial substances cannot be perfectly known through this act, nor through anything else in material things, because there is no proportion between the latter and the power of the former.

Reply Obj. 4. Created immaterial substances are not in the same natural genus as material substances, for they do not agree in power or in matter; but they belong to the same logical genus, because even immaterial substances are in the predicament of Substance, as their quiddity is distinct from their being. But God has nothing in common with material things, as regards either natural genus or logical genus, because God is in no way in a genus, as stated above (Q. III, A. 5). Hence through the likenesses of material things we can know something positive concerning the angels, according to some common notion, though not according to the specific nature. But we cannot acquire any such knowledge at all about God.

[1] Cf. Q. LXXXIV, A. 1.
[2] Sect. 2 (PG 3, 137).
[3] *Heavens*, I, 3 (269[b]18).

ARTICLE 3 *Whether God Is the First Thing Known by the Human Mind?*

We proceed thus to the Third Article: It would seem that God is the first thing known by the human mind.

Objection 1. For that object in which all others are known and by which we judge others, is the first thing known to us; as light is to the eye, and first principles to the intellect. But we know all things in the light of the first truth, and judge of all things thereby, as Augustine says (*De Trin.* xii, 2; *De Vera Rel.* xxxi)[4] Therefore God is the first object known to us.

Obj. 2. Further, whatever causes a thing to be such is more so. But God is the cause of all our knowledge, for He is *the true light which enlighteneth every man that cometh into this world* (John 1. 9). Therefore God is what is first and most known to us.

Obj. 3. Further, what is first known in the image is the exemplar to which the image is formed. But in our mind is "the image of God," as Augustine says (*De Trin.* xii, 4).[5] Therefore God is the first thing known to our mind.

On the contrary, No man hath seen God at any time (John 1. 18).

I answer that, Since the human intellect in the present state of life cannot understand even created immaterial substances (A. 1), much less can it understand the essence of the uncreated substance. Hence it must be said absolutely that God is not the first object of our knowledge. Rather do we know God through creatures, according to the Apostle (Rom. 1 20), *the invisible things of God are clearly seen, being understood by the things that are made,* while the first object of our knowledge in this life is the quiddity of a material thing, which is the proper object of our intellect, as appears above in many passages (Q. LXXXIV, A. 7; Q. LXXXV, A. 8; Q. LXXXVII, A. 2, ANS. 2).

Reply Obj. 1. We see and judge of all things

[4] PL 42, 999; PL 34, 147. Also, *Confessions*, XII, 35 (PL 32, 840). On this doctrine, cf. Luyckx, *Die Erkenntnislehre* (p. 242–253).
[5] PL 42, 1000.

in the light of the first truth, in so far as the light itself of our mind, whether natural or freely given, is nothing else than the impression of the first truth upon it, as stated above, (Q. XII, A. 11, ANS. 3; Q. LXXXIV, A. 5). Hence, as the light itself of our intellect is not the thing it understands, but that by which it understands, much less can it be said that God is the first thing known by our intellect.

Reply Obj 2. The axiom, Whatever causes a thing to be such is more so, must be understood of things belonging to one and the same order, as explained above (Q LXXXVII, A 2, ANS. 3). Other things than God are known because of God, not as if He were the first known thing, but because He is the first cause of our power of knowledge.

Reply Obj. 3. If there existed in our souls a perfect image of God, as the Son is the perfect image of the Father, our mind would know God at once. But the image in our mind is imperfect. Hence the argument does not prove.

QUESTION LXXXIX

OF THE KNOWLEDGE OF THE SEPARATED SOUL

(In Eight Articles)

WE must now consider the knowledge of the separated soul. Under this head there are eight points of inquiry: (1) Whether the soul separated from the body can understand? (2) Whether it understands separate substances? (3) Whether it understands all natural things? (4) Whether it understands singulars? (5) Whether the habits of knowledge acquired in this life remain? (6) Whether the soul can use the habit of knowledge acquired in this life? (7) Whether local distance impedes the separated soul's knowledge? (8) Whether souls separated from the body know what happens here?

ARTICLE 1. *Whether the Separated Soul Can Understand Anything?*

We Proceed thus to the First Article: It would seem that the soul separated from the body can understand nothing at all.

Objection 1. For the Philosopher says[1] that "the understanding is corrupted together with its interior principle." But by death all human interior principles are corrupted. Therefore also the intellect itself is corrupted.

Obj. 2. Further, the human soul is hindered from understanding when the senses are bound, and by a disordered imagination, as explained above (Q. LXXXIV, AA 7, 8) But death destroys the senses and imagination, as we have shown above (Q. LXXVII, A. 8). Therefore after death the soul understands nothing.

Obj. 3. Further, if the separated soul can understand, this must be by means of some species. But it does not understand by means of innate species, because from the first, it is like a tablet on which nothing is written. Nor does it understand by species abstracted from things, for it does not then possess organs of sense and imagination which are necessary for the abstraction of species. Nor does it understand by means of species formerly abstracted and retained in the soul, for if that were so, a child's soul after death would have no means of understanding at all. Nor does it understand by means of intelligible species divinely infused, for such knowledge would not be natural, such as we treat of now, but the effect of grace. Therefore the soul apart from the body understands nothing.

On the contrary, The Philosopher says,[2] "If the soul had no proper operation, it could not be separated from the body." But the soul is separated from the body. Therefore it has a proper operation, and above all, that which consists in understanding. Therefore the soul can understand when it is apart from the body.

I answer that, The difficulty in solving this question arises from the fact that the soul united to the body can understand only by turning to the phantasms, as experience shows. If this did not proceed from the soul's very nature, but accidentally through its being bound up with the body, as the Platonists said,[3] the difficulty would vanish, for in that case when the hindrance of the body was once removed,[4] the soul would return to its own nature, and would understand intelligible things simply, without turning to the phantasms, as is the case with other separate substances. In that case, however, the union of soul and body would not be for the soul's good, for evidently it would understand worse in the body than out of it, but for the good of the body, which would be unreasonable, since matter exists on account of the form, and not the form for the sake of the matter. But if we admit that the nature of the

[1] *Soul*, I, 4 (408[b]24).

[2] *Ibid.*, I, 1 (403[a]11).

[3] Cf. Cicero, *Tuscul.*, I, 31 (DD III, 640); *Phaedo* (67); Macrobius, *In Somn. Scip.*, I, 14 (DD 45b); cf. also Augustine, *City of God*, XIII, 16 (PL 41, 389); Wm. of Paris, *De Univ.*, II-II, 65, 73. (II 861, 873.)

[4] Cf Cicero, *op. cit.*, I, 34 (DD 636); *Phaedo* (65), cf. also Avicenna, *De An*, V, 5 (25va).

soul requires it to understand by turning to the phantasms, it will seem, since the death of the body does not change its nature, that it can then naturally understand nothing, as the phantasms are wanting to which it may turn.

To solve this difficulty we must consider that as nothing acts except so far as it is actual, the mode of action in every agent follows from its mode of being. Now the soul has one mode of being when joined to the body, and another when separated from it, its nature remaining always the same. But this does not mean that its union with the body is an accidental thing, for, on the contrary, such a union belongs to it by reason of its nature, just as the nature of a light object is not changed whether it is in its proper place, which is natural to it, or outside its proper place, which is foreign to its nature. The soul, therefore, when united to the body, appropriately to that mode of existence has a mode of understanding by turning to corporeal phantasms, which are in corporeal organs; but when it is separated from the body, it is fitting to it to have a mode of understanding by turning to absolutely intelligible objects, as is proper to other separate substances Hence it is as natural for the soul to understand by turning to the phantasms as it is for it to be joined to the body. But to be separated from the body is not in accordance with its nature, and likewise to understand without turning to the phantasms is not natural to it, and hence it is united to the body in order that it may have an existence and an operation suitable to its nature. But here again a difficulty arises. For since a thing is always ordered to what is best, and since it is better to understand by turning to absolutely intelligible things than by turning to the phantasms, God should have made the soul's nature so that the nobler way of understanding would have been natural to it, and it would not have needed the body for that purpose.

In order to resolve this difficulty we must consider that while it is true that it is nobler in itself to understand by turning to something higher than to understand by turning to phantasms, nevertheless such a mode of understanding was not so perfect as regards what was possible to the soul. This will appear if we consider that every intellectual substance possesses the power of understanding by the influx of the Divine light, which is one and simple in its first principle, and the further off intellectual creatures are from the first principle so much the more is the light divided and diversified, as is the case with lines radiating from the centre of a circle. Hence it is that God by His own Essence understands all things, while the superior intellectual substances understand by means of many forms, which nevertheless are fewer and more universal and bestow a deeper comprehension of things, because of the efficaciousness of the intellectual power of such natures. But the inferior intellectual natures possess a greater number of forms, which are less universal, and bestow a lower degree of comprehension in proportion as they recede from the intellectual power of the higher natures. If, therefore, the inferior substances received forms in the same degree of universality as the superior substances, since they are not so strong in understanding, the knowledge which they would derive through them would be imperfect and of a general and confused nature. We can see this to a certain extent in man, for those who are of weaker intellect fail to acquire perfect knowledge through the universal conceptions of those who have a better understanding, unless things are explained to them singly and in detail. Now it is clear that in the natural order human souls hold the lowest place among intellectual substances. But the perfection of the universe required various grades of being. If, therefore, God had willed human souls to understand in the same way as separate substances, it would follow that human knowledge, so far from being perfect, would be confused and general. Therefore to make it possible for human souls to possess perfect and proper knowledge, they were so made that their nature required them to be joined to bodies, and thus to receive a proper knowledge of sensible things from the sensible things themselves; thus we see in the case of uneducated men that they have to be taught by sensible examples.

It is clear then that it was for the soul's good that it was united to a body, and that it understands by turning to the phantasms. Nevertheless it is possible for it to exist apart from the body, and also to understand in another way.

Reply Obj. 1. The Philosopher's words carefully examined will show that he said this on the previous supposition[1] that understanding is a movement of body and soul as united, just as sensation is, for he had not as yet explained the difference between intellect and sense. We may also say that he is referring to the way of understanding by turning to phantasms. This is also the meaning of the second objection.

Reply Obj. 3. The separated soul does not understand by way of innate species, nor by spe-

[1] *Soul*, 1, 4 (408b6).

cies abstracted in that state, nor only by retained species, and this the objection proves; but the soul in that state understands by means of participated species arising from the influx of the Divine light, shared by the soul as by other separate substances though, in a lesser degree. Hence as soon as it ceases to act by turning to the body, the soul turns at once to the superior things; nor is this way of knowledge unnatural, for God is the author of the influx both of the light of grace and of the light of nature.

ARTICLE 2. *Whether the Separated Soul Understands Separate Substances?*

We proceed thus to the Second Article: It would seem that the separated soul does not understand separate substances.

Objection 1. For the soul is more perfect when joined to the body than when separated from it, since it is naturally a part of human nature, and every part of a whole is more perfect when it exists in that whole. But the soul joined to the body does not understand separate substances, as shown above (Q. LXXXVIII, A. 1). Therefore much less is it able to do so when separated from the body.

Obj. 2. Further, whatever is known is known either by its presence or by its species. But separate substances cannot be known to the soul by their presence, for God alone can enter into the soul; nor by means of species abstracted by the soul from an angel, for an angel is more simple than a soul. Therefore the separated soul cannot at all understand separate substances.

Obj. 3. Further, some philosophers said[1] that the ultimate happiness of man consists in the knowledge of separate substances. If, therefore, the separated soul can understand separate substances, its happiness would be secured by its separation alone, which cannot reasonably be said.

On the contrary, Souls apart from the body know other separated souls, as we see in the case of the rich man in hell, who saw Lazarus and Abraham (Luke 16. 23). Therefore separated souls see the devils and the angels.

I answer that, As Augustine says (*De Trin.* IX, 3),[2] "our mind acquires the knowledge of incorporeal things by itself"—that is, by knowing itself (Q. LXXXVIII, A. 1, Ans. 1). Therefore from the knowledge which the separated soul has of itself, we can judge how it knows other separate things. Now it was said above (A. 1), that as long as it is united to the body the soul understands by turning to phantasms, and therefore it does not understand itself save through becoming actually understanding by means of species abstracted from phantasms; for thus it understands itself through its own act, as shown above (Q. LXXXVII, A. 1). When, however, it is separated from the body, it understands no longer by turning to phantasms, but by turning to those things which are intelligible in themselves; hence in that state it understands itself through itself. Now, every separate substance understands what is above itself and what is below itself, according to the mode of its substance, for a thing is understood according as it is in the one who understands, while one thing is in another according to the nature of that in which it is. And the mode of being of a separated soul is inferior to that of an angel, but is the same as that of other separated souls. Therefore the soul apart from the body has perfect knowledge of other separate souls, but it has an imperfect and defective knowledge of the angels so far as its natural knowledge is concerned. But the knowledge of glory is otherwise.

Reply Obj. 1. The separated soul is, indeed, less perfect considering its nature in which it communicates with the nature of the body; but it has a greater freedom of understanding, since the weight and care of the body is a hindrance to the clearness of its understanding in the present life.

Reply Obj. 2. The separated soul understands the angels by means of divinely impressed likenesses, which, however, fail to give perfect representation of them, since the nature of the soul is inferior to that of an angel.

Reply Obj. 3. Man's ultimate happiness consists not in the knowledge of any separate substances whatsoever, but in the knowledge of God, Who is seen only by grace. The knowledge of other separate substances if perfectly understood gives great happiness, though not final and ultimate happiness. But the separated soul does not understand them perfectly, as was shown above in this article.

ARTICLE 3. *Whether the Separated Soul Knows All Natural Things?*

We proceed thus to the Third Article: It would seem that the separated soul knows all natural things.

Objection 1. For the types of all natural things exist in separate substances. Therefore, as separated souls know separate substances, they also know all natural things.

[1] See Q. LXXXVIII, A. 1.
[2] PL 42, 963.

Obj. 2. Further, whoever understands the greater intelligible will be able much more to understand the lesser intelligible. But the separated soul understands immaterial substances, which are in the highest degree of intelligibility. Therefore much more can it understand all natural things which are in a lower degree of intelligibility.

On the contrary, The devils have a more vigorous natural knowledge than the separated soul; yet they do not know all natural things, but have to learn many things by long experience, as Isidore says.[1] Therefore neither can the separated soul know all natural things.

Further, if the soul as soon as separated gained knowledge of all natural things, the efforts of men to know would be in vain. But this cannot be admitted. Therefore the separated soul does not know all natural things.

I answer that, As stated above (A. 1), the separated soul, like the angels, understands by means of species received from the influx of the Divine light. Nevertheless, as the soul by nature is inferior to an angel, to whom this kind of knowledge is natural, the soul apart from the body does not receive perfect knowledge through such species, but only a general and confused kind of knowledge. Separated souls, therefore, have the same relation through such species to imperfect and confused knowledge of natural things as the angels have to the perfect knowledge of them. Now angels through such species know all natural things perfectly, because all that God has produced in the respective natures of natural things has been produced by Him in the angelic intelligence, as Augustine says (*Gen. ad. lit.* ii, 8).[2] Hence it follows that separated souls know all natural things not with a certain and proper knowledge, but in a general and confused manner.

Reply Obj. 1. Even an angel does not understand all natural things through his substance, but through certain species, as stated above (Q. LV, A. 1; Q. LXXXVII, A. 1). So it does not follow that the soul knows all natural things because it knows separate substances.

Reply Obj. 2. As the soul separated from the body does not perfectly understand separate substances, so neither does it know all natural things perfectly, but it knows them confusedly, as explained above in this article.

Reply Obj. 3. Isidore speaks of the knowledge of future things which neither angels, nor demons, nor separated souls know except so far as future things pre-exist in their causes or are known by Divine revelation. But we are here treating of the knowledge of natural things.

Reply Obj. 4. Knowledge acquired here by study is proper and perfect; the knowledge of the separated soul is confused. Hence it does not follow that to study in order to learn is useless.

[1] *Sent.*, I, 10 (PL 83, 556).
[2] PL 34, 269.

ARTICLE 4. *Whether the Separated Soul Knows Singulars?*

We proceed thus to the Fourth Article: It would seem that the separated soul does not know singulars.

Objection 1. For no knowing power besides the intellect remains in the separated soul, as is clear from what has been said above (Q. LXXXVII, A. 8). But the intellect cannot know singulars, as we have shown (Q. LXXXVI, A. 1). Therefore the separated soul cannot know singulars.

Obj. 2 Further, the knowledge of the singular is more determinate than knowledge of the universal. But the separated soul has no determinate knowledge of the species of natural things, and therefore much less can it know singulars.

Obj 3. Further, if it knew the singulars other than by sense, by equal reason it would know all singulars. But it does not know all singulars. Therefore it knows none.

On the contrary, The rich man in hell said: *I have five brethren* (Luke 16. 28).

I answer that, Separated souls know some singulars, but not all, not even all present singulars. To understand this we must consider that there is a twofold way of knowing things, one by means of abstraction from phantasms, and in this way singulars cannot be directly known by the intellect, but only indirectly, as stated above (Q. LXXXVI, A. 1). The other way of understanding is by the infusion of species by God, and in that way it is possible for the intellect to know singulars. For as God knows all things, universal and singular, by His Essence, as the cause of universal and individual principles (Q. XIV, A. 11; Q. LVII, A. 2), so likewise separate substances can know singulars by species which are a kind of participated likeness of the Divine Essence.

There is a difference, however, between angels and separated souls in the fact that through these species the angels have a perfect and proper knowledge of things, whereas separated souls have only a confused knowledge. Hence the angels, by reason of the efficacy of their in-

tellect, through these species know not only the specific natures of things but also the singulars contained in those species; but separated souls by these species know only those singulars to which they are in a certain way determined by former knowledge in this life, or by some affection, or by natural aptitude, or by the disposition of the Divine order; because whatever is received into anything is determined in it according to the mode of the receiver.

Reply Obj. 1. The intellect does not know the singular by way of abstraction; neither does the separated soul know it thus, but as explained above.

Reply Obj. 2. The knowledge of the separated soul is limited to those species or individuals to which the soul has some kind of determinate relation, as we have said.

Reply Obj. 3. The separated soul has not the same relation to all singulars, but one relation to some and another to others. Therefore there is not the same reason why it should know all singulars.

ARTICLE 5 *Whether the Habit of Knowledge Acquired in This Life Remains in the Separated Soul?*

We proceed thus to the Fifth Article: It would seem that the habit of knowledge (*scientia*) acquired in this life does not remain in the soul separated from the body.

Objection 1. For the Apostle says: *Knowledge shall be destroyed* (I Cor. 13. 8).

Obj. 2. Further, some in this world who are less good enjoy knowledge denied to others who are better. If, therefore, the habit of knowledge remained in the soul after death, it would follow that some who are less good would, even in the future life, excel some who are better, which seems unfitting.

Obj. 3. Further, separated souls will possess knowledge by an influx of the Divine light. Supposing, therefore, that knowledge here acquired remained in the separated soul, it would follow that two forms of the same species would coexist in the same subject, which is impossible.

Obj. 4. Further, the Philosopher says[1] that "a habit is a quality hard to remove; yet sometimes knowledge is destroyed by sickness or the like." But in this life there is no change so thorough as death. Therefore it seems that the habit of knowledge is destroyed by death.

On the contrary, Jerome says (*Ep.* liii, *ad Paulinum*),[2] "Let us learn on earth that kind of knowledge which will remain with us in heaven."

I answer that, Some say that the habit of knowledge resides not in the intellect itself, but in the sensitive powers, namely, the imaginative, cogitative, and remembering, and that the intelligible species are not kept in the possible intellect.[3] If this were true, it would follow that when the body is destroyed by death, knowledge acquired here would also be entirely destroyed.[4]

But, since knowledge resides in the intellect, which is "the abode of species," as the Philosopher says,[5] the habit of knowledge acquired in this life must be partly in the sensitive powers mentioned above, and partly in the intellect. This can be seen by considering the very actions from which the habit of science is acquired. For habits are like the actions whereby they are acquired.[6] Now the actions of the intellect, by which science is acquired in this life, are performed by the mind turning to the phantasms in the sensitive powers mentioned above Hence through such acts the possible intellect acquires a certain facility in considering the species received, and the above mentioned lower powers acquire a certain aptitude in helping the action of the intellect when it turns to them to consider the intelligible object. But as the intellectual act resides chiefly and formally in the intellect itself, whilst it resides materially and dispositively in the lower powers, the same distinction is to be applied to habit.

Knowledge, therefore, acquired in the present life does not remain in the separated soul as regards what belongs to the lower powers; but as regards what belongs to the intellect itself, it must remain. Because, as the Philosopher says,[7] a form may be corrupted in two ways: first, per se, when corrupted by its contrary, as heat, by cold; and, secondly, accidentally when its subject is corrupted. Now it is evident that human knowledge is not corrupted through corruption of the subject, for the intellect is incorruptible, as above stated (Q. LXXIX, A. 2, ANS. 2; Q. LXXV, A. 6) Neither can the intelligible species in the possible intellect be corrupted by their contrary, for there is no contrary to intelligible intentions, above all as regards simple understanding by which what a thing is, is understood. But contrariety may exist in the intellect as regards mental composition

[1] *Categories*, 8 (8^b28).
[2] PL 22, 549.
[3] Avicenna, *De An*, V, 6 (26 va).
[4] Cf. Dominic Gundisalinus, *De An.*, 10 (MK 97.12).
[5] *Soul*, III, 4 (429^a27)
[6] *Ethics*, II, 1 (1103^b21).
[7] *Longevity*, 2 (465^a19).

and division, or also reasoning, in so far as what is false in a proposition or argument is contrary to truth. And thus knowledge sometimes is corrupted by its contrary when a false argument leads anyone away from the knowledge of truth. For this reason the Philosopher in the above work[1] mentions two ways in which knowledge is corrupted *per se:* namely, forgetfulness on the part of the remembering power, and deception on the part of a false argument. But these have no place in the separated soul. Therefore we must conclude that the habit of knowledge, so far as it is in the intellect, remains in the separated soul.

Reply Obj. 1. The Apostle is not speaking of knowledge as a habit, but as to the act of knowing; and hence he says, in proof of the assertion quoted, *Now, I know in part.*

Reply Obj. 2. As a less good man may exceed a better man in bodily stature, so the same kind of many may have a habit of knowledge in the future life which a better man may not have. Such knowledge, however, cannot be compared with the other prerogatives enjoyed by the better man.

Reply Obj. 3. These two kinds of knowledge are not of the same species, so there is no impossibility.

Reply Obj. 4. This objection considers the corruption of knowledge on the part of the sensitive powers.

Article 6. *Whether the Act of Knowledge Acquired in This Life Remains in the Separated Soul?*

We proceed thus to the Sixth Article: It would seem that the act of knowledge (*scientia*) acquired in this life does not remain in the separated soul.

Objection 1. For the Philosopher says[2] that "when the body is corrupted, the soul neither remembers nor loves." But to consider what is previously known is an act of memory. Therefore the separated soul cannot have an act of knowledge acquired in this life.

Obj. 2. Further, intelligible species cannot have greater power in the separated soul than they have in the soul united to the body. But in this life we cannot understand by intelligible species without turning to phantasms, as shown above (Q. LXXXIV, A. 7). Therefore the separated soul cannot do so, and thus it cannot understand at all by intelligible species acquired in this life.

Obj. 3. Further, the Philosopher says[3] that habits produce acts similar to those whereby they are acquired. But the habit of knowledge is acquired in this life by acts of the intellect turning to phantasms. Therefore it cannot produce any other acts. These acts, however, are not adapted to the separated soul Therefore the soul in the state of separation will not have any act of knowledge acquired in this life.

On the contrary, It was said to Dives in hell (Luke 16. 25): *Remember thou didst receive good things in thy lifetime.*

I answer that, In an act two things are to be considered, its species and its mode. Its species comes from the object, to which the knowing power is directed by the species, which is the object's likeness, while the mode is gathered from the power of the agent. Thus that a person see a stone is due to the species of the stone in his eye, but that he see it clearly is due to the eye's visual power. Therefore as the intelligible species remain in the separated soul, as stated above (A. 5), and since the state of the separated soul is not the same as it is in this life, it follows that through the intelligible species acquired in this life the soul apart from the body can understand what it understood formerly, but in a different way; not by turning to phantasms, but by a mode suited to a soul existing apart from the body. Thus the act of knowledge acquired in this life remains in the separated soul, but in a different way.

Reply Obj. 1. The Philosopher speaks of remembrance according as memory belongs to the sensitive part, but not as belonging in a way to the intellect, as explained above (Q. LXXIX, A. 6).

Reply Obj. 2. The different mode of understanding is produced by the different state of the soul which understands, and not by difference in power of species.

Reply Obj. 3. The acts by which a habit is acquired are like the acts caused by that habit in species, but not in mode. For example, to do just things, but not justly, that is, with pleasure, causes the habit of political justice, by which we act with pleasure.

Article 7. *Whether Local Distance Impedes the Knowledge in the Separated Soul?*

We proceed thus to the Seventh Article: It would seem that local distance impedes the separated soul's knowledge.

Objection 1. For Augustine says (*De Cura*

[1] *Longevity,* 2 (465^a23).
[2] *Soul,* I, 4 (408^b27).
[3] *Ethics,* II, 1 (1103^b21).

pro Mort. xiii),[1] that "the souls of the dead are where they cannot know what is done here." But they know what is done among themselves. Therefore local distance impedes the knowledge in the separated soul.

Obj. 2. Further, Augustine says (*De Divin. Dæmon,* iii),[2] that "the demons' rapidity of movement enables them to tell things unknown to us." But agility of movement would be useless in that respect unless their knowledge was impeded by local distance, which, therefore, is a much greater hindrance to the knowledge of the separated soul, whose nature is inferior to the demon's.

Obj. 3. Further, as there is distance of place, so is there distance of time. But distance of time impedes knowledge in the separated soul, for the soul does not know future things. Therefore it seems that distance of place also impedes its knowledge.

On the contrary, It is written (Luke 16. 23), that Dives, *lifting up his eyes when he was in torment, saw Abraham afar off.* Therefore local distance does not impede knowledge in the separated soul.

I answer that, Some have held that the separated soul knows the singular by abstraction from the sensible [3] If that were so, it could be said that local distance would impede its knowledge, for either the sensible would need to act upon the soul, or the soul upon the sensible, and in either case a determinate distance would be necessary. This is, however, impossible, because abstraction of the species from the sensible is done through the senses and other sensible powers which do not remain actually in the soul apart from the body. But the soul when separated understands singulars by species derived from the Divine light, which is indifferent to what is near or distant. Hence knowledge in the separated soul is not hindered by local distance.

Reply Obj. 1. Augustine says that the souls of the departed cannot see what is done here, not because they are *there,* as if impeded by local distance, but for some other cause, as we shall explain (A. 8).

Reply Obj. 2. Augustine speaks there in accordance with the opinion that demons have bodies naturally united to them,[4] and so have sensitive powers, which require a determinate distance. In the same book[5] he expressly sets down this opinion, though apparently rather by way of narration than of assertion, as we may gather from The *City of God.*[6]

Reply Obj. 3. Future things, which are distant in time, do not actually exist, and therefore are not knowable in themselves, because so far as a thing falls short of being, so far does it fall short of being knowable. But what is locally distant exists actually, and is knowable in itself. Hence we cannot argue from distance of time to distance of place.

ARTICLE 8. *Whether Separated Souls Know What Takes Place on Earth?*

We proceed thus to the Eighth Article: It would seem that separated souls know what takes place on earth.

Objection 1. For otherwise they would have no care for it, as they have, according to what Dives said (Luke 16. 27, 28), *I have five brethren . . . he may testify unto them, lest they also come into the place of torments.* Therefore separated souls know what passes on earth.

Obj. 2. Further, the dead often appear to the living, asleep or awake, and warn them of what takes place here; as Samuel appeared to Saul (I Kings 28. 11). But this could not be unless they knew what takes place here Therefore they know what takes place on earth.

Obj. 3. Further, separated souls know what happens among themselves If, therefore, they do not know what takes place among us, it must be by reason of local distance; which has been shown to be false (A 7).

On the contrary, It is written (Job 14. 21): *He will not understand whether his children come to honour or dishonour.*

I answer that, By natural knowledge, of which we are treating now, the souls of the dead do not know what passes on earth. This follows from what has been laid down (A. 4), since the separated soul has knowledge of singulars through being in a way determined to them, either by some vestige of previous knowledge or affection, or by the Divine order. Now the souls of the dead are in a state of separation from the living, both by Divine order and by their mode of being, whilst they are joined to the world of incorporeal spiritual substances; and hence they are ignorant of what goes on among us. And Gregory gives the reason thus: "The dead do not know how the living act, for the life of the spirit is far from the life of the flesh; and so, as

[1] PL 40, 605. [2] PL 40, 584

[3] Cf. Cassiodorus, *De An.*, 2 (PL 70, 1286); Pseudo-Augustine (Alcher of Clairvaux), *De Spir. et An.*, 30 (PL 40, 800). Cf. also Bonaventure, *In Sent.*, IV, d. 50, Pt. 2, A. 1, Q. 1 (QR IV, 1046).

[4] Cf. Q. LI, A. 1, Ans. 1.

[5] *De Div. Dæmon,* 3 (PL 40, 584).

[6] XXI, 10 (PL 41, 724).

corporeal things differ from incorporeal in genus, so they are distinct in knowledge" (*Moral.* xii)[1] Augustine seems to say the same (*De Cura pro Mort.* xiii),[2] when he asserts that, "the souls of the dead have no concern in the affairs of the living."

Gregory and Augustine, however, seem to be divided in opinion as regards the souls of the blessed in heaven, for Gregory continues the passage above quoted: "The case of the holy souls is different, for since they see the light of Almighty God, we cannot believe that external things are unknown to them." But Augustine (*De Cura pro Mort.* xiii)[3] expressly says that the dead, even the saints, do not know what is done by the living or by their own children, as a gloss quotes on the text, *Abraham hath not known us* (Isa. 63. 16).[4] He confirms this opinion by saying that he was not visited nor consoled in sorrow by his mother, as when she was alive, and he could not think it possible that she was less kind when in a happier state; and again by the fact that the Lord promised to King Josias that he should die, lest he should see his people's afflictions (IV Kings 22. 20). Yet Augustine says this in doubt, and premises, "Let every one take, as he pleases, what I say." Gregory, on the other hand, is positive, since he says, "We cannot believe." His opinion, indeed, seems to be the more probable one,—that the souls of the blessed who see God do know all that passes here. For they are equal to the angels, of whom Augustine says that they know what happens among those living on earth.[5] But as the souls of the blessed are most perfectly united to Divine justice, they do not suffer from sorrow, nor do they interfere in mundane affairs, except in accordance with Divine justice.

Reply Obj. 1. The souls of the dead may care for the living, even if ignorant of their state, just as we care for the dead by offering prayers on their behalf, though we are ignorant of their state. Moreover, the affairs of the living can be made known to them not in themselves, but through the souls who come to them from this life, or by angels and demons, or even "by the revelation of the Holy Ghost," as Augustine says in the same book.[6]

Reply Obj. 2. That the dead appear to the living in any way whatever is either by the special dispensation of God, in order that the souls of the dead may intervene in affairs of the living,—and this is to be accounted as miraculous; or, else such apparitions occur through the instrumentality of bad or good angels, without the knowledge of the departed, as may likewise happen when in sleep the living appear, without their own knowledge, to others living, as Augustine says in the same book.[7] And so it may be said of Samuel that he appeared through Divine revelation, according to Ecclus. 46. 23, *he slept, and told the king the end of his life.* Or, again, we can say that this apparition was procured by the demons if the authority of Ecclesiasticus be set aside through not being received by the Jews as canonical Scripture.

Reply Obj. 3. This kind of ignorance does not proceed from the obstacle of local distance, but from the cause mentioned above.

QUESTION XC

OF THE FIRST PRODUCTION OF MAN'S SOUL

(In Four Articles)

AFTER the foregoing we must consider the first production of man, concerning which there are four subjects of treatment: (1) The production of man himself. (2) The end of this production (Q. XCIII). (3) The state and condition of the first man (Q. XCIV). (4) The place of his abode (Q. CII). Concerning the production of man, there are three things to be considered: (1) The production of man's soul. (2) The production of man's body (Q. XCI). (3) The production of the woman (Q. XCII).

Under the first head there are four points of inquiry: (1) Whether man's soul was something made, or was of the Divine substance? (2) Whether, if made, it was created? (3) Whether it was made by means of the angels? (4) Whether it was made before the body?

ARTICLE 1. *Whether the Soul Was Made, or Was of God's Substance?*

We proceed thus to the First Article: It would seem that the soul was not made, but was of God's substance.

Objection 1. For it is written (Gen. 2. 7): *God formed man of the slime of the earth, and breathed into his face the breath of life, and man was made a living soul.* But he who breathes sends forth something of himself. Therefore the soul, by which man lives, is of the Divine substance.

Obj. 2. Further, as explained above (Q. LXXV,

[1] Chap. 21 (PL 75, 999).
[2] PL 40, 604; also, chap. 16 (PL 40, 607).
[3] PL 40, 604.
[4] *Glossa interl.* (IV, 102V).
[5] *De Cura pro Mort.*, 15 (PL 40, 605).
[6] Chap 15 (PL 40, 606).
[7] Chap. 12 (PL 40, 600).

A. 5), the soul is a simple form. But a form is an act. Therefore the soul is of God's substance.

Obj. 3. Further, things that exist and do not differ are the same But God and the mind exist, and in no way differ, for they could only be differentiated by certain differences, and thus would be composite. Therefore God and the human mind are the same

On the contrary, Augustine (*De Orig Animæ* iii. 15)[1] mentions certain opinions which he calls "exceedingly and evidently perverse, and contrary to the Catholic Faith," among which the first is the opinion that "God made the soul not out of nothing, but from Himself."

I answer that, To say that the soul is of the Divine substance involves a manifest improbability. For, as is clear from what has been said (Q. LXXVII, A. 2; Q LXXIX, A. 2; Q. LXXXIV, A. 6), the human soul is sometimes in a state of potency to the act of understanding, acquires its knowledge somehow from things, and has various powers; all of which are foreign to the Divine Nature, Which is a pure act, receiving nothing from any other, and admitting of no variety in itself, as we have proved (Q. III, AA. 1, 7; Q. IX, A. 1).

This error seems to have originated from two opinions of the ancients For those who first began to observe the natures of things, being unable to rise above their imagination, supposed that nothing but bodies existed [2] Therefore they said that God was a body,[3] which they considered to be the principle of other bodies And since they held that the soul was of the same nature as that body which they regarded as the first principle, as is stated in the book on the *Soul*,[4] it followed that the soul was of the substance of God According to this supposition, also, the Manichæans, thinking that God was a corporeal light, held that the soul was part of that light, bound up with the body.[5]

Then a further step in advance was made, and some apprehended the being of something incorporeal, not apart from the body, but the form of a body,[6] so that Varro said, "God is a soul governing the world by movement and reason," as Augustine relates.[7] So some supposed man's soul to be part of that all-embracing soul,[8] just as man is a part of the whole world; for they were unable to go so far as to distinguish the different degrees of spiritual substance, except according to the distinction of bodies.

But, all these theories are impossible, as proved above (Q. III, AA. 1, 8; and Q. LXXV, A. 1), and therefore it is evidently false that the soul is of the substance of God.

Reply Obj 1 The term "breathe" is not to be taken in the corporeal sense; but as regards the act of God, to breathe (*spirare*), is the same as to make a spirit Moreover, even in the corporeal sense, man by breathing does not send forth anything of his own substance, but an extraneous thing.

Reply Obj. 2. Although the soul is a simple form in its essence, yet it is not its own being, but is a being by participation, as above explained (Q LXXV, A. 5, Ans. 4). Therefore it is not a pure act like God.

Reply Obj 3 That which differs, properly speaking, differs by something; therefore we seek for difference where we find also resemblance For this reason things which differ must in some way be compound, since they differ in something, and in something resemble each other In this sense, although all that differ are diverse, yet all things that are diverse do not differ, as is stated in the *Metaphysics*.[9] For simple things differ in themselves and not by other different things out of which they are composed. For instance, a man and a horse differ by the difference of rational and irrational, but we cannot say that these again differ by some further difference.

ARTICLE 2. *Whether the Soul Was Produced in Being by Creation?*

We proceed thus to the Second Article: It would seem that the soul was not produced in being by creation.

Objection. 1. For that which has in itself something material is produced from matter. But the soul has something material in itself, since it is not a pure act. Therefore the soul was made of matter, and hence it was not created.

Obj 2. Further, every act of matter is drawn out of the potency of that matter; for since matter is in potency to act, any act pre-exists in matter potentially But the soul is the act of corporeal matter, as is clear from its definition.[10] Therefore the soul is drawn out of the potency of matter.

Obj. 3. Further, the soul is a form. Therefore,

[5] Cf. Augustine, *De Haeres*, XLVI (PL 42, 35), *Gen. ad litt*, VII, 11 (PL 34, 361).
[6] Cf. Q. XLIV, A. 2.
[7] *City of God*, VII, 6 (PL 41, 199); cf. also IV, 31 (PL 41, 138).
[8] Macrobius, *In Somn. Scip.*, I, 14 (DD 45b); Plato, according to Albert the Great, in *De Mot. An.*, I, 1 (BO IX, 258).
[9] Aristotle, V, 9 (1018[a]11).
[10] Aristotle, *Soul*, II, 1 (412[a]27).

if the soul is created, by equal reason all other forms are created. Thus no forms would come into being by generation; which is not true.

On the contrary, It is written (Gen. 1. 27): *God created man to His own image.* But man is in the image of God in his soul. Therefore the soul was created.

I answer that, The rational soul can be made only by creation, which is not true of other forms. The reason is because since to be made is the way to being, a thing must be made in such a way as is suitable to its mode of being. Now that properly is said to be which itself has being, subsisting as it were in its own being. Therefore only substances are properly and truly called beings. But an accident does not have being, but something is by it, and so far is it called a being; for instance, whiteness is called a being because by it something is white. Hence it is said in the *Metaphysics*[1] that an accident should be described as of a being rather than as a being. The same is to be said of all other non-subsistent forms. Therefore, properly speaking, it does not pertain to any non-existing form to be made, but they are said to be made through the composite substances being made. On the other hand, the rational soul is a subsistent form, as above explained (Q. LXXV, A. 2). And so it properly pertains to it to be and to be made. And since it cannot be made of pre-existing (*præjacens*) matter, neither corporeal because in this way it would be a corporeal nature; nor spiritual, which would involve the transmutation of one spiritual substance into another, we must conclude that it cannot exist except by creation.

Reply Obj. 1. The soul's simple essence is as the material element, while its participated being is its formal element, which participated being necessarily exists at the same time with the soul's essence, because being naturally follows the form. The same reason holds if the soul is supposed to be composed of some spiritual matter, as some maintain;[2] because that matter is not in potency to another form, just as the matter of a celestial body is not; otherwise the soul would be corruptible. Therefore the soul cannot in any way be made of pre-existent matter.

Reply Obj. 2. The drawing out of act from the potency of matter is nothing else but something becoming actual that previously was in potency. But since the rational soul does not depend in its being on corporeal matter, but has subsistent being, and exceeds the capacity of corporeal matter, as we have seen (Q. LXXV, A. 2), for this reason it is not drawn out from the potency of matter.

Reply Obj. 3. As we have said, there is no comparison between the rational soul and other forms.

ARTICLE 3. *Whether the Rational Soul Is Produced by God Immediately?*

We proceed thus to the Third Article: It would seem that the rational soul is not immediately made by God, but by the instrumentality of the angels.

Objection 1. For spiritual things have more order than corporeal things But inferior bodies are produced by means of the superior, as Dionysius says (*Div. Nom.* iv).[3] Therefore also the inferior spirits, who are the rational souls, are produced by means of the superior spirits, the angels.

Obj. 2. Further, the end corresponds to the beginning of things, for God is the beginning and end of all. Therefore the issue of things from their beginning corresponds to their going back to their end. But "lower things are brought back by the higher," as Dionysius says (*Eccl. Hier.* v);[4] therefore also the lower come into being through the higher, and souls by angels.

Obj. 3. Further, "The perfect is that which can produce its like," as is stated in the fourth book on *Meteorology.*[5] But spiritual substances are much more perfect than corporeal. Therefore, since bodies produce their like in their own species, much more are angels able to produce something specifically inferior to themselves; and such is the rational soul.

On the contrary, It is written (Gen. 2. 7) that God Himself *breathed into the face of man the breath of life.*

I answer that, Some have held that angels, acting by the power of God, produce rational souls.[6] But this is quite impossible, and is against faith. For it has been proved (A. 2) that the rational soul cannot be produced except by creation. Now, God alone can create, for the first agent alone can act without presupposing anything, while the second cause always presupposes something derived from the first cause, as above explained (Q. LXV, A. 3). And every agent

[2] Cf. Q. L, A. 2; Q. LXXV, A. 6.

[3] Sect. 4 (PG 3, 697).

[4] Sect. 4 (PG 3, 504).

[5] Aristotle, 3 ($380^{b}14$).

[6] Avicenna, *Meta.*, IX, 4 (104 vb); cf. Algazel, in Averroes, *Dest. Dest*, 3 (IX, 52E); *Liber de Causis*, 3 (BA 166.2); cf. Augustine, *De Haeres.*, 59 (PL 42, 41). Albert the Great, in *Summa de Creatur.*, attributes this position to Gundissalinus; cf. Gundissalinus, *De An.*, 5 (MK 51.10).

that presupposes something to its act, acts by making a change in it. Therefore everything else acts by producing a change, but God alone acts by creation. Since, therefore, the rational soul cannot be produced by a change in matter, it cannot be produced except immediately by God.

Thus the *replies to the objections* are clear. For that bodies produce their like or something inferior to themselves, and that the higher things lead back the inferior,—all these things are effected through a certain transmutation.

ARTICLE 4. *Whether the Human Soul Was Produced Before the Body?*

We proceed thus to the Fourth Article: It would seem that the human soul was made before the body.

Objection 1. For the work of creation preceded the work of distinction and adornment, as shown above (Q. LXVI, A. 1; Q LXX, A 1). But the soul was produced in being by creation, whereas the body was made at the end of the work of adornment as was maintained above (Q. LXXII). Therefore the soul of man was made before the body.

Obj. 2. Further, the rational soul has more in common with the angels than with the brute animals. But angels were created before bodies, or at least, at the beginning with corporeal matter, while the body of man was formed on the sixth day, when also the animals were made. Therefore the soul of man was created before the body.

Obj. 3. Further, the end is proportioned to the beginning. But in the end the soul outlasts the body. Therefore in the beginning it was created before the body.

On the contrary, The proper act is produced in its proper potency. Therefore, since the soul is the proper act of the body, the soul was produced in the body.

I answer that, Origen (*Peri Archon,* i)[1] held that not only the soul of the first man, but also the souls of all men were created at the same time as the angels, before their bodies. For he thought that all spiritual substances, whether souls or angels, are equal in their natural condition, and differ only by merit, so that some of them—namely, the souls of men or of heavenly bodies—are united to bodies while others remain in their different orders entirely free from matter. Of this opinion we have already spoken (Q. XLVII, A. 2), and so we need say nothing about it here.

[1] Chaps. 6, 8, 9 (PG 11, 166, 178, 229).

Augustine, however (*Gen. ad lit.* vii, 24),[2] says that the soul of the first man was created at the same time as the angels, before the body, for another reason. For he supposes that the body of man, during the work of the six days, was produced not actually, but only in their causal principles; which cannot be said of the soul, because neither was it made of any pre-existing corporeal or spiritual matter, nor could it be produced from any created principle. Therefore it seems that the soul itself, during the work of the six days when all things were made, was created, together with the angels, and that afterwards, by its own will, was joined to the service of the body. But he does not say this by way of assertion, as his words prove. For he says (*loc. cit.*).[3] "We may believe, if neither Scripture nor reason forbid, that man was made on the sixth day, in the sense that his body was created as to its causal principle in the elements of the world, but that the soul was already created."

Now this could be upheld by those who hold that the soul has of itself a complete species and nature, and that it is not united to the body as its form, but as its ruler.[4] But if the soul is united to the body as its form, and is naturally a part of human nature, this supposition is altogether impossible. For it is clear that God made the first things in their perfect natural state, according as the species of each required. Now the soul, as a part of human nature, has its natural perfection only as united to the body. Therefore it would have been unfitting for the soul to be created without the body.

Therefore, if we admit the opinion of Augustine about the work of the six days (Q. LXXIV, A. 2), we may say that the human soul preceded in the work of the six days by a certain generic likeness, so far as it has intellectual nature in common with the angels, but was itself created at the same time as the body. According to other saints,[5] both the body and soul of the first man were produced in the work of the six days.

Reply Obj 1. If the soul by its nature were a complete species, so that it might be created in itself, this reason would prove that the soul was created in itself in the beginning. But as the soul is naturally the form of the body, it was necessarily created not separately but in the body.

Reply Obj 2. The same observation applies to the second objection. For if the soul had a spe-

[2] PL 34 (368); cf. also Chap. 28 (370).
[3] Bk. VII, Chap. 4 (PL 34, 368).
[4] Cf. Q. LXXVI, A. 1.
[5] Cf. Q. LXXIV, A. 2.

cies of itself it would have something still more in common with the angels. But, as the form of the body, it belongs to the genus of animal, as a formal principle.

Reply Obj. 3. That the soul remains after the body is due to a defect of the body, namely, death. Which defect was not due when the soul was first created.

QUESTION XCI

THE PRODUCTION OF THE FIRST MAN'S BODY

(In Four Articles)

WE have now to consider the production of the first man's body. Under this head there are four points of inquiry: (1) The matter from which it was produced. (2) The author by whom it was produced. (3) The disposition it received in its production. (4) The mode and order of its production.

ARTICLE 1. *Whether the Body of the First Man Was Made of the Slime of the Earth?*

We proceed thus to the First Article: It would seem that the body of the first man was not made of the slime of the earth.

Objection 1. For it is an act of greater power to make something out of nothing than out of something, because non-being is further from act than being in potency. But since man is the most excellent of God's lower creatures, it was fitting that in the production of man's body the power of God should be most clearly shown. Therefore it should not have been made of the slime of the earth, but out of nothing.

Obj. 2. Further, the heavenly bodies are nobler than earthly bodies. But the human body has the greatest nobility, since it is perfected by the noblest form, which is the rational soul. Therefore it should not be made of an earthly body, but of a heavenly body.

Obj. 3. Further, fire and air are nobler bodies than earth and water, as is clear from their subtlety. Therefore, since the human body is most noble, it should rather have been made of fire and air than of the slime of the earth.

Obj. 4. Further, the human body is composed of the four elements. Therefore it was not made of the slime of the earth, but of the four elements.

On the contrary, It is written (Gen. 2. 7): *God made man of the slime of the earth.*

I answer that, As God is perfect in His works, He bestowed perfection on all of them according to their manner: *God's works are perfect* (Deut. 32. 4). He Himself is absolutely perfect by the fact that "all things are pre-contained in Him, not as component parts, but as united in one simple whole," as Dionysius says (*Div. Nom.* v),[1] in the same way as various effects preexist in their cause, according to its single power. This perfection is bestowed on the angels, since all things which are produced by God in nature through various forms come under their knowledge. But on man this perfection is bestowed in another way. For he does not possess a natural knowledge of all natural things, but is in a manner composed of all things, since he has in himself a rational soul of the genus of spiritual substances, and in likeness to the heavenly bodies he is removed from contraries by an equable temperament. As to the elements, he has them in their very substance, yet in such a way that the higher elements, fire and air, predominate in him by their power; for life is mostly found where there is heat, which is from fire, and where there is moisture, which is of the air. But the inferior elements abound in man by their substance; otherwise the mingling of elements would not be evenly balanced, unless the inferior elements, which have the less power, predominated in quantity. Therefore the body of man is said to have been formed from the slime of the earth; because earth and water mingled are called slime, and for this reason man is called "a little world,"[2] because all creatures of the world are in a way to be found in him.

Reply Obj. 1. The power of the Divine Creator was manifested in man's body when its matter was produced by creation. But it was fitting that the human body should be made of the four elements that man might have something in common with the inferior bodies, as being something between spiritual and corporeal substances.

Reply Obj. 2. Although the heavenly body is absolutely nobler than the earthly body, yet for the acts of the rational soul the heavenly body is less adapted. For the rational soul receives the knowledge of truth in a certain way through the senses, the organs of which cannot be formed of a heavenly body which is impassible. Nor is it true that something of the fifth essence enters materially into the composition of the human body, as some say,[3] who suppose that the soul is

[1] Sect. 9 (PG 3, 825).

[2] Cf. Aristotle, *Physics*, VIII, 2 (252^b26); Macrobius, *In Somn Scip.*, II, 12 (DD 98b); Nemesius, *De Nat. Hom.*, I (PG 40, 533); cf. also Part I-II, Q. XVII, A. 8, obj. 2 (note).

[3] Cf. Q. LXXVI, A. 7.

united to the body by means of light. For, first of all, what they say is false—that light is a body. Secondly, it is impossible for something to be taken from the fifth essence, or from a heavenly body, and to be mingled with the elements, since a heavenly body is impassible. Therefore it does not enter into the composition of mixed bodies, except as in the effects of its power.

Reply Obj. 3. If fire and air, whose action is of greater power, predominated also in quantity in the human body, they would entirely draw the rest into themselves, and there would be no equality in the mingling, such as is required in the composition of man for the sense of touch, which is the foundation of the other senses. For the organ of any particular sense must not actually have the contraries of that of which that sense has the perception, but only potentially; either in such a way that it is entirely lacking in the whole genus of such contraries,—thus, for instance, the pupil of the eye is without colour, so as to be in potency to all colours, which is not possible in the organ of touch, since it is composed of the very elements whose qualities are perceived by that sense; or so that the organ is a medium between two contraries, as must be the case with regard to touch; for the medium is in potency to the extremes.

Reply Obj 4. In the slime of the earth are earth and water binding the earth together. Of the other elements, Scripture makes no mention, because they are less in quantity in the human body, as we have said; and because also in the account of the Creation no mention is made of fire and air, which are not perceived by senses of primitive men such as those to whom the Scripture was immediately addressed.

ARTICLE 2. *Whether the Human Body Was Immediately Produced by God?*

We proceed thus to the Second Article: It would seem that the human body was not produced by God immediately.

Objection 1. For Augustine says (*De Trin.* iii, 4),[1] that "corporeal things are disposed by God through the angels." But the human body was made of corporeal matter, as stated above (A. 1). Therefore it was produced by the instrumentality of the angels, and not immediately by God.

Obj. 2. Further, whatever can be made by a created power, is not necessarily produced immediately by God. But the human body can be produced by the created power of a heavenly body, for even certain animals are produced from putrefaction by the active power of a heavenly body, and Albumazar says that man is not generated where heat and cold are extreme, but only in temperate regions.[2] Therefore the human body was not necessarily produced immediately by God.

Obj. 3. Further, nothing is made of corporeal matter except by some material change. But all corporeal change is caused by a movement of a heavenly body, which is the first movement. Therefore, since the human body was produced from corporeal matter, it seems that a heavenly body had part in its production.

Obj. 4. Further, Augustine says (*Gen. ad lit.* vii, 24)[3] that man's body was made during the work of the six days, according to the causal principles which God inserted in corporeal creatures, and that it was actually produced afterwards. But what pre-exists in the corporeal creature by reason of causal principles can be produced by some corporeal body. Therefore the human body was produced by some created power, and not immediately by God.

On the contrary, It is written (Ecclus. 17. 1): *God created man out of the earth.*

I answer that, The first formation of the human body could not be by the instrumentality of any created power, but was immediately from God. Some, indeed, supposed that the forms which are in corporeal matter are derived from some immaterial forms;[4] but the Philosopher refutes this opinion,[5] for the reason that "forms cannot be made in themselves, but only in the composite," as we have explained (Q. LXV, A. 4).[6] And because the agent must be like its effect, it is not fitting that a pure form, not existing in matter, should produce a form which is in matter, and which is only made by the fact that the composite is made. So a form which is in matter can only be the cause of another form that is in matter according as composite is made by composite. Now God, though He is absolutely immaterial, alone can by His own power produce matter by creation. Therefore He alone can produce a form in matter without the aid of any preceding material form. For this reason the angels cannot transform a body except by making use of seminal principles, as Augustine says (*De Trin.* iii).[7] Therefore as no pre-existing

[1] PL 42, 873.

[2] Cf. Duhem, *Le Système du Monde* (II, 369).

[3] PL 34, 368

[4] Cf. Q. XLV, A 8; Q. LXV, A. 4; Q. CXV, A. 1.

[5] *Metaphysics*, VII, 8 (1033^b16).

[6] Cf. also Q XLV, A. 8; Q. XC, A. 2.

[7] Chaps. 8, 9 (PL 42, 876, 878).

body had been formed whereby another body of the same species could be generated, the first human body was of necessity made immediately by God.

Reply Obj. 1. Although the angels are the ministers of God as regards what they do in bodies, yet God does something in bodies beyond the angels' power, as, for instance, raising the dead, or giving sight to the blind, and by this power He formed the body of the first man from the slime of the earth. Nevertheless the angels could act as ministers in the formation of the body of the first man, in the same way as they will do at the last resurrection, by collecting the dust.

Reply Obj. 2. Perfect animals, produced from seed, cannot be made by the sole power of a heavenly body, as Avicenna imagined,[1] although the power of a heavenly body may assist by co-operation in the work of natural generation; for the Philosopher says,[2] "man and the sun beget man from matter." For this reason, a place of moderate temperature is required for the production of man and other perfect animals. But the power of heavenly bodies suffices for the production of some imperfect animals from properly disposed matter; for it is clear that more conditions are required to produce a perfect than an imperfect thing.

Reply Obj. 3. The movement of the heavens causes natural changes, but not changes that surpass the order of nature, and are caused by the Divine Power alone, as for the dead to be raised to life, or the blind to see, like to which also is the making of man from the slime of the earth.

Reply Obj. 4. A thing may be said to pre-exist in the causal principles of creatures in two ways. First, both in active and in passive potency, so that not only can it be produced out of pre-existing matter, but also that some pre-existing creature can produce it. Secondly, in passive potency only; that is, that out of pre-existing matter it can be produced by God. In this sense, according to Augustine, the human body pre-existed in the works produced according to the causal principles.

ARTICLE 3. *Whether the Body of Man Was Given a Fitting Disposition?*

We proceed thus to the Third Article: It would seem that the body of man was not given a fitting disposition.

Objection 1. For since man is the noblest of animals, his body ought to be the best disposed in what is proper to an animal, that is, in sense and movement. But some animals have sharper senses and quicker movement than man; thus dogs have a keener smell, and birds move more swiftly. Therefore man's body was not aptly disposed.

Obj. 2. Further, the perfect is what lacks nothing. But the human body lacks more than the body of other animals, for these are provided with covering and natural arms of defence, in which man is lacking. Therefore the human body is very imperfectly disposed.

Obj. 3. Further, man is more distant from plants than he is from the brutes. But plants are erect in stature, while brutes are prone in stature. Therefore man should not be of erect stature.

On the contrary, It is written (Eccles. 7. 30): *God made man right.*

I answer that, All natural things were produced by the Divine art, and so may be called God's works of art. Now every artist intends to give to his work the best disposition; not absolutely the best, but the best as regards the proposed end. And even if this entails some defect, the artist does not care. Thus, for instance, when a man makes himself a saw for the purpose of cutting, he makes it of iron, which is suitable for the object in view; and he does not prefer to make it of glass, though this be a more beautiful material, because this very beauty would be an obstacle to the end he has in view. Thus, therefore, God gave to each natural being the best disposition; not absolutely so, but in view of its proper end This is what the Philosopher says,[3] "And because it is better so, not absolutely, but for each one's substance."

Now the proximate end of the human body is the rational soul and its operations, since matter is for the sake of the form, and instruments are for the action of the agent. I say, therefore, that God fashioned the human body in that disposition which was best, as most suited to such a form and to such operations. And if there seems to be some defect in the disposition of the human body, it is well to observe that such defect arises as a necessary result of the matter, from the conditions required in the body in order to make it suitably proportioned to the soul and its operations.

Reply Obj. 1. The sense of touch, which is the foundation of the other senses, is more perfect in man than in any other animal, and for this reason man must have the most equable tem-

[1] Cf. Q LXXI, ANS. 1.
[2] *Physics*, II, 2 (194^b13).
[3] *Ibid.*, II, 7 (198^b8).

perament of all animals. Moreover man excels all other animals in the interior sensitive powers, as is clear from what we have said above (Q. LXXVIII, A. 4). But by a kind of necessity, man falls short of the other animals in some of the exterior senses; thus of all animals he has the least sense of smell. For man of all animals needs the largest brain as compared to the body, both for his greater freedom of action in the interior powers required for the intellectual operations, as we have seen above (Q. LXXXIV, A. 7), and in order that the low temperature of the brain may modify the heat of the heart, which has to be considerable in man for him to be able to stand up erect. So that the size of the brain, by reason of its humidity, is an impediment to the smell, which requires dryness. In the same way, we may suggest a reason why some animals have a keener sight, and a more acute hearing than man; namely, on account of a hindrance to his senses arising necessarily from the perfect equability of his temperament. The same reason suffices to explain why some animals are more rapid in movement than man, since this excellence of speed is inconsistent with the equability of the human temperament.

Reply Obj 2 Horns and claws, which are the weapons of some animals, and toughness of hide and quantity of hair or feathers, which are the clothing of animals, are signs of an abundance of the earthly element, which does not agree with the equability and softness of the human temperament. Therefore such things do not suit the nature of man. Instead of these, he has reason and hands whereby he can make himself arms and clothes, and other necessaries of life, of infinite variety. And so the hand is called by Aristotle[1] "the organ of organs." Moreover this was more becoming to the rational nature, which is capable of conceiving an infinite number of things so as to make for itself an infinite number of instruments

Reply Obj 3. An upright stature was becoming to man for four reasons. First, because the senses are given to man, not only for the purpose of procuring the necessaries of life for which they are bestowed on other animals, but also for the purpose of knowledge. Hence, whereas the other animals take delight in the objects of the senses only as ordered to food and sex, man alone takes pleasure in the beauty of sensible objects for its own sake. Therefore, as the senses are situated chiefly in the face, other animals have the face turned to the ground, as it were for the purpose of seeking food and procuring a livelihood; but man has his face erect, in order that by the senses, and chiefly by sight, which is more subtle and penetrates further into the differences of things, he may freely survey the sensible objects around him, both heavenly and earthly, so as to gather intelligible truth from all things. Secondly, for the greater freedom of the acts of the interior powers; the brain, wherein these actions are, in a way, performed, not being low down, but lifted up above other parts of the body Thirdly, because if man's stature were prone to the ground he would need to use his hands as fore-feet, and thus their utility for other purposes would cease Fourthly, because if man's stature were prone to the ground and he used his hands as fore-feet, he would be obliged to take hold of his food with his mouth. Thus he would have a protruding mouth, with thick and hard lips, and also a hard tongue, so as to keep it from being hurt by exterior things, as we see in other animals. Moreover, such an attitude would quite hinder speech, which is reason's proper operation.

Nevertheless, though of erect nature, man is far above plants For man's superior part, his head, is turned towards the superior part of the world, and his inferior part is turned towards the inferior world; and therefore he is perfectly disposed as to the general situation of his body. Plants have the superior part turned towards the lower world, since their roots correspond to the mouth, and their inferior parts towards the upper world But brute animals have a middle disposition, for the superior part of the animal is that by which it takes food, and the inferior part that by which it rids itself of the surplus.

ARTICLE 4. *Whether the Production of the Human Body Is Fittingly Described in Scripture?*

We proceed thus to the Fourth Article: It would seem that the production of the human body is not fittingly described in Scripture (Gen. 1 26; 2. 7).

Objection 1. For, as the human body was made by God, so also were the other works of the six days. But in the other works it is written, *God said; Let it be made, and it was made.* Therefore the same should have been said of man.

Obj. 2. Further, the human body was made by God immediately, as explained above (A. 2). Therefore it was not fittingly said, *Let us make man.*

Obj. 3. Further, the form of the human body is the soul itself which is the breath of life. Therefore, having said, *God made man of the*

[1] *Soul*, III, 8 (432[a]1).

slime of the earth, he should not have added: *And He breathed into him the breath of life.*

Obj. 4. Further, the soul, which is the breath of life, is in the whole body, and chiefly in the heart. Therefore it was not fittingly said: *He breathed into his face the breath of life.*

Obj. 5. Further, the male and female sex belong to the body, while the image of God belongs to the soul. But the soul, according to Augustine (*Gen. ad lit.* vii, 24),[1] was made before the body. Therefore having said: *To His image He made them,* he should not have added, *male and female He created them.*

On the contrary, Is the authority of Scripture.

Reply Obj. 1. As Augustine observes (*Gen. ad lit.* vi, 12),[2] man surpasses other things not in the fact that God Himself made man, as though He did not make other things; since it is written (Ps. 101. 26), *The work of Thy hands is the heaven,* and elsewhere (Ps. 94. 5), *His hands laid down the dry land,* but in this, that man is made to God's image. Yet in describing man's production, Scripture uses a special way of speaking to show that other things were made for man's sake. For we are accustomed to do with more deliberation and care what we have chiefly in mind.

Reply Obj. 2. We must not imagine that when God said *Let us make man,* He spoke to the angels, as some were perverse enough to think.[3] But by these words is signified the plurality of the Divine Person, Whose image is more clearly expressed in man.

Reply Obj. 3. Some have thought that man's body was formed first in priority of time, and that afterwards the soul was infused into the formed body.[4] But it is against the notion of the perfection of the first production of things, that God should have made either the body without the soul, or the soul without the body, since each is a part of human nature. This is especially unfitting as regards the body, for the body depends on the soul, and not the soul on the body.

To remove the difficulty some have said that the words, *God made man,* must be understood of the production of the body with the soul, and that the subsequent words, *and He breathed into his face the breath of life,* should be understood of the Holy Ghost; just as the Lord breathed on His Apostles, saying, *Receive ye the Holy Ghost* (John 20. 22).[5] But this explanation, as Augustine says,[6] is excluded by the very words of Scripture. For we read further on, *And man was made a living soul,* which words the Apostle (I Cor. 15. 45) refers not to spiritual life, but to animal life. Therefore, by breath of life we must understand the soul, so that the words, *He breathed into his face the breath of life,* are a sort of exposition of what goes before; for the soul is the form of the body.

Reply Obj. 4. Since vital operations are more clearly seen in man's face, on account of the senses which are there expressed, therefore Scripture says that the breath of life was breathed into man's face.

Reply Obj. 5. According to Augustine (*Gen. ad lit.* iv, 34),[7] the works of the six days were done all at one time. And so according to him, man's soul, which he holds to have been made with the angels, was not made before the sixth day; but on the sixth day both the soul of the first man was made actually, and his body in its causal principles. But other doctors hold that on the sixth day both body and soul of man were actually made.[8]

QUESTION XCII

THE PRODUCTION OF THE WOMAN

(In Four Articles)

WE must next consider the production of the woman. Under this head there are four points of inquiry: (1) Whether the woman should have been made in that first production of things? (2) Whether the woman should have been made from man? (3) Whether of man's rib? (4) Whether the woman was made immediately by God?

ARTICLE 1. *Whether the Woman Should Have Been Made in the First Production of Things?*

We proceed thus to the First Article: It would seem that the woman should not have been made in the first production of things.

Objection 1. For the Philosopher says[9] that "the female is a misbegotten male." But nothing misbegotten or defective should have been in the first production of things. Therefore woman should not have been made at that first production.

[7] PL 34, 319.
[8] Cf. Q. XC, A. 4.
[9] *Generation of Animals,* II, 3 (737^a27).

Obj. 2. Further, subjection and lessening were a result of sin, for to the woman was it said after sin (Gen. 3. 16): *Thou shalt be under the man's power;* and Gregory says that, "Where there is no sin, there is no inequality."[1] But woman is naturally of less strength and dignity than man, for the agent is always more honourable than the patient, as Augustine says (*Gen ad lit.* xii, 16).[2] Therefore woman should not have been made in the first production of things before sin.

Obj. 3. Further, occasions of sin should be cut off But God foresaw that the woman would be an occasion of sin to man. Therefore He should not have made woman

On the contrary, It is written (Gen. 2 18): *It is not good for man to be alone; let us make him a helper like to himself.*

I answer that, It was necessary for woman to be made, as the Scripture says, as a helper to man; not, indeed, as a helpmate in other works, as some say,[3] since man can be more efficiently helped by another man in other works, but as a helper in the work of generation This can be made clear if we observe the mode of generation carried out in various living things. Some living things do not possess in themselves the power of generation, but are generated by an agent of another species, such as some plants and animals by the influence of the heavenly bodies, from some fitting matter and not from seed. Others possess the active and passive generative power together, as we see in plants which are generated from seed. For the noblest vital function in plants is generation, and so we observe that in these the active power of generation invariably accompanies the passive power. Among perfect animals the active power of generation belongs to the male sex, and the passive power to the female. And as among animals there is a vital operation nobler than generation, to which their life is principally directed, therefore the male sex is not found in continual union with the female in perfect animals, but only at the time of coition; so that we may consider that by coition the male and female become one, just as in plants they are always united, although in some cases one of them preponderates, and in some the other. But man is yet further ordered to a still nobler vital action, and that is to understand. Therefore there was greater reason for the dictinction of these two forces in man, so that the female should be produced separately from the male, although they are carnally united for generation. Therefore directly after the formation of woman, it was said: *And they shall be two in one flesh* (Gen. 2. 24).

Reply Obj. 1. As regards the particular nature, woman is defective and misbegotten, for the active force in the male seed tends to the production of a perfect likeness in the masculine sex, while the production of woman comes from defect in the active force or from some material indisposition, or even from some external change, such as that of a south wind, which is moist, as the Philosopher observes.[4] On the other hand, in relation to the universal nature, woman is not misbegotten, but is included in nature's intention as ordered to the work of generation. Now the universal intention of nature depends on God, Who is the universal Author of nature. Therefore, in producing nature, God formed not only the male but also the female.

Reply Obj. 2. Subjection is twofold. One is servile, by virtue of which a superior makes use of a subject for his own benefit, and this kind of subjection began after sin. There is another kind of subjection, which is called economic or civil, whereby the superior makes use of his subjects for their own benefit and good; and this kind of subjection existed even before sin. For good order would have been wanting in the human family if some were not governed by others wiser than themselves. So by such a kind of subjection woman is naturally subject to man, because in man the discretion of reason predominates. Nor is inequality among men excluded by the state of innocence, as we shall prove (Q. XCVI, A. 3).

Reply Obj. 3 If God had deprived the world of all those things which proved an occasion of sin, the universe would have been imperfect. Nor was it fitting for the common good to be destroyed in order that individual evil might be avoided, especially as God is so powerful that He can direct any evil to a good end.

ARTICLE 2. *Whether Woman Should Have Been Made from Man?*

We proceed thus to the Second Article: It would seem that woman should not have been made from man.

Objection 1. For sex belongs both to man and animals But in the other animals the female was not made from the male. Therefore neither should it have been so with man.

Obj. 2. Further, things of the same species are of the same matter. But male and female are of

[1] *Moral.*, XXI, 15 (PL 76, 203).
[2] PL 34, 467.
[3] Cf. Augustine, *Gen. ad lit*, IX, 3 (PL 34, 395); *City of God*, XIV, 21 (PL 41, 429).
[4] *Generation of Animals*, IV, 2 (766^b33).

the same species. Therefore, as man was made of the slime of the earth, so woman should have been made of the same, and not from man.

Obj. 3. Further, woman was made to be a helpmate to man in the work of generation. But close relationship makes a person unfit for that office; hence near relations are debarred from intermarriage, as is written (Lev. 18. 6). Therefore woman should not have been made from man.

On the contrary, It is written (Ecclus. 17. 5): *He created of him,* that is, out of man, *a helpmate like to himself,* that is, woman.

I answer that, When all things were first formed, it was more suitable for the woman to be made from the man than (for the female to be from the male) in other animals. First, in order thus to give the first man a certain dignity, so that just as God is the principle of the whole universe, so the first man, in likeness to God, was the principle of the whole human race. And so Paul says that *God made the whole human race from one* (Acts 17. 26). Secondly, that man might love woman all the more, and cleave to her more closely, knowing her to be fashioned from himself. Hence it is written (Gen. 2. 23, 24): *She was taken out of man, wherefore a man shall leave father and mother, and shall cleave to his wife.* This was most necessary as regards the human race, in which the male and female live together for life, which is not the case with other animals. Thirdly, because, as the Philosopher says,[1] "the human male and female are united not only for generation, as with other animals, but also for the purpose of domestic life, in which each has his or her particular duty, and in which the man is the head of the woman." Therefore it was suitable for the woman to be made out of man, as out of her principle. Fourthly, there is a sacramental reason for this. For by this is signified that the Church takes her origin from Christ. Therefore the Apostle says (Eph. 5. 32): *This is a great sacrament; but I speak in Christ and in the Church.*

Reply Obj. 1 is clear from the foregoing.

Reply Obj. 2. Matter is that from which something is made. Now created nature has a determinate principle; and since it is determined to one thing, it has also a determinate mode of proceeding. Therefore from determinate matter it produces something in a determinate species. On the other hand, the Divine Power, being infinite, can produce things of the same species out of any matter, such as a man from the slime of the earth, and a woman from a man.

[1] *Ethics,* VIII, 12 (1162a19).

Reply Obj. 3. A certain affinity arises from natural generation, and this is an impediment to matrimony. Woman, however, was not produced from man by natural generation, but by the Divine Power alone. Hence Eve is not called the daughter of Adam; and so this argument does not prove.

ARTICLE 3. *Whether the Woman Was Fittingly Made from the Rib of Man?*

We proceed thus to the Third Article: It would seem that the woman should not have been formed from the rib of man.

Objection 1. For the rib was much smaller than the woman's body. Now from a smaller thing a larger thing can only be made either by addition (and then the woman ought to have been described as made out of that which was added, rather than out of the rib itself), or by rarefaction, because, as Augustine says (*Gen. ad lit.* x):[2] "A body cannot increase in bulk except by rarefaction." But the woman's body is not more rarefied than man's—at least, not in the proportion of a rib to Eve's body. Therefore Eve was not formed from a rib of Adam.

Obj. 2. Further, in those things which were first created there was nothing superfluous. Therefore a rib of Adam belonged to the integrity of his body. So, if a rib was removed, his body remained imperfect, which is unreasonable to suppose.

Obj. 3. Further, a rib cannot be removed from man without pain. But there was no pain before sin Therefore it was not right for a rib to be taken from the man, that Eve might be made from it.

On the contrary, It is written (Gen. 2. 22): *God built the rib, which He took from Adam, into a woman.*

I answer that, It was right for the woman to be made from a rib of man. First, to signify the social union of man and woman, for the woman should neither use authority over man, and so she was not made from his head; nor was it right for her to be subject to man's contempt as his slave, and so she was not made from his feet. Secondly, for the sacramental signification; for from the side of Christ sleeping on the Cross the Sacraments flowed—namely, blood and water—on which the Church was established.

Reply Obj. 1. Some say that the woman's body was formed by a material increase, without anything being added, in the same way as

[2] Chap. 26 (PL 34, 428).

our Lord multiplied the five loaves.[1] But this is quite impossible. For such an increase of matter would either be by a change of the very substance of matter itself, or by a change of its dimensions. Not by change of the substance of the matter, both because matter, considered in itself, is altogether unchangeable, since it has a potential existence, and has nothing but the character of being a subject, and because multiplication and size are extraneous to the essence of matter itself. Therefore multiplication of matter is quite unintelligible, as long as the matter itself remains the same without anything added to it, unless it receives greater dimensions. This implies rarefaction, which is for the same matter to receive greater dimensions, as the Philosopher says.[2] To say, therefore, that matter is multiplied, without being rarefied, is to combine contradictories—namely, the definition with the absence of the thing defined.

Therefore, as no rarefaction is apparent in such multiplication of matter, we must admit an addition of matter, either by creation or, which is more probable, by conversion Hence Augustine says (*Tract.* xxiv, *in Joan*)[3] that "Christ filled five thousand men with five loaves in the same way as from a few seeds He produces the harvest of corn"—that is, by conversion of the nourishment. Nevertheless, we say that the crowds were fed with five loaves, or that woman was made from the rib, because an addition was made to the already existing matter of the loaves and of the rib.

Reply Obj. 2. The rib belonged to the integral perfection of Adam, not as an individual, but as the principle of the human race; just as the semen belongs to the perfection of the begetter, and is released by a natural and pleasurable operation. Much more, therefore, was it possible that by the Divine power the body of the woman should be produced from the man's rib without pain.

From this it is clear how to answer the *third objection.*

ARTICLE 4. *Whether the Woman Was Formed Immediately by God?*

We proceed thus to the Fourth Article: It would seem that the woman was not formed immediately by God.

Objection 1. For no individual is produced immediately by God from another individual alike in species. But the woman was made from a man who is of the same species. Therefore she was not made immediately by God.

Obj 2. Further, Augustine (*De Trin.* iii, 4)[4] says that corporeal things are governed by God through the angels. But the woman's body was formed from corporeal matter. Therefore it was made through the ministry of the angels, and not immediately by God.

Obj. 3 Further, those things which pre-exist in creatures as to their causal principles are produced by the power of some creature, and not immediately by God. But the woman's body was produced in its causal principles among the first created works, as Augustine says (*Gen. ad lit.* ix, 15).[5] Therefore it was not produced immediately by God.

On the contrary, Augustine says, in the same work:[6] "God alone, to Whom all nature owes its existence, could form or build up the woman from the man's rib."

I answer that, As was said above (A. 2, Ans. 2), the natural generation of every species is from some determinate matter. Now the matter from which man is naturally begotten is the human semen of man or woman. Therefore from any other matter an individual of the human species cannot naturally be generated. Now God alone, the Author of nature, can produce a thing in being outside the ordinary course of nature. Therefore God alone could produce either a man from the slime of the earth, or a woman from the rib of man.

Reply Obj. 1. This argument is verified when an individual is begotten, by natural generation, from that which is like it in the same species.

Reply Obj. 2. As Augustine says (*Gen. ad lit.* ix, 15),[7] we do not know whether the angels were employed by God in the formation of the woman; but it is certain that, as the body of man was not formed by the angels from the slime of the earth, so neither was the body of the woman formed by them from the man's rib.

Reply Obj. 3. As Augustine says (*ibid.* 18):[8] "The first creation of things did not demand that woman should be made thus; it made it possible for her to be thus made." Therefore the body of the woman did indeed pre-exist in these causal principles, in the things first created; not as regards active potency, but as regards a potency ordered to the active potency of the Creator.

QUESTION XCIII

THE END OR TERM OF THE PRODUCTION OF MAN

(In Nine Articles)

WE now treat of the end or term of man's production, according as he is said to be made to the image and likeness of God. There are under this head nine points of inquiry: (1) Whether the image of God is in man? (2) Whether the image of God is in irrational creatures? (3) Whether the image of God is in the angels more than in man? (4) Whether the image of God is in every man? (5) Whether the image of God is in man by comparison with the Essence, or with all the Divine Persons, or with one of them? (6) Whether the image of God is in man, as to his mind only? (7) Whether the image of God is in man's power or in his habits and acts? (8) Whether the image of God is in man by comparison with every object? (9) Of the difference between image and likeness.

ARTICLE 1. *Whether the Image of God Is in Man?*

We proceed thus to the First Article: It would seem that the image of God is not in man.

Objection 1. For it is written (Isa. 40. 18): *To whom have you likened God? or what image will you make for Him?*

Obj 2. Further, to be the image of God is the property of the First-Begotten, of Whom the Apostle says (Col. 1. 15): *Who is the image of the invisible God, the First-Born of every creature.* Therefore the image of God is not to be found in man.

Obj. 3. Further, Hilary says (*De Synod.*)[1] that "an image is of the same species as that which it represents"; and he also says[2] that "an image is the undivided and united likeness of one thing adequately representing another." But there is no species common to both God and man, nor can there be an equality between God and man. Therefore there can be no image of God in man.

On the contrary, It is written (Gen. 1. 26): *Let Us make man to Our own image and likeness.*

I answer that, As Augustine says (QQ. LXXXIII, *qu.* 74):[3] "Where an image exists, there immediately is likeness; but where there is likeness, there is not necessarily an image." Hence it is clear that likeness pertains to the notion of image, and that an image adds something to the notion of likeness—namely, that it is copied from something else. For an image is called so because it is produced as an imitation of something else; and so, for instance, an egg, however much like and equal to another egg, is not called an image; for, as Augustine says (*ibid.*): copied from it.

But equality does not belong to the notion of an image; for, as Augustine says (*ibid.*): "Where there is an image there is not necessarily equality," as we see in a person's image reflected in a glass. Yet this pertains to the notion of a perfect image, for in a perfect image nothing is wanting that is to be found in that of which it is a copy. Now it is manifest that in man there is some likeness to God, copied from God as from an exemplar. Yet this likeness is not one of equality, for such an exemplar infinitely excels its copy. Therefore there is in man a likeness to God; not, indeed, a perfect likeness, but imperfect. And Scripture implies the same when it says that man was made "to" God's likeness, for the preposition "to" signifies a certain approach, as of something at a distance.

Reply Obj. 1. The Prophet speaks of bodily images made by man. Therefore he says pointedly: *What image will you make for Him?* But God made a spiritual image to Himself in man.

Reply Obj. 2. The First-Born of creatures is the perfect Image of God, reflecting perfectly that of which He is the Image, and so He is said to be the Image, and never to the Image But man is said to be both image by reason of the likeness, and to the image by reason of the imperfect likeness. And since the perfect likeness to God cannot be except in identity of nature, the Image of God exists in His first-born Son; as the image of the king is in his son, who is of the same nature as himself; but it exists in man as in an alien nature, as the image of the king is in a silver coin, as Augustine explains in *De decem Chordis* (*Serm.* ix).[4]

Reply Obj 3. As unity means absence of division, a species is said to be the same in so far as it is one. Now a thing is said to be one not only numerically, specifically, or generically, but also according to a certain analogy or proportion. In this sense a creature is one with God, or like to Him; but when Hilary says "of a thing which adequately represents another," this pertains to the notion of a perfect image.

[1] PL 10, 490.
[2] *De Synod.*, (PL 10, 490).
[3] PL 40, 85.
[4] Chap. 8 (PL 38, 82).

ARTICLE 2. *Whether the Image of God Is To Be Found in Irrational Creatures?*

We proceed thus to the Second Article: It would seem that the image of God is to be found in irrational creatures.

Objection 1. For Dionysius says (*Div. Nom.* ii):[1] "Effects are contingent images of their causes." But God is the cause not only of rational, but also of irrational creatures. Therefore the image of God is to be found in irrational creatures.

Obj. 2. Further, the more distinct a likeness is, the nearer it approaches to the nature of an image. But Dionysius says (*Div. Nom.* iv)[2] that the solar ray has a very great likeness to the Divine goodness. Therefore it is made to the image of God.

Obj 3 Further, the more perfect anything is in goodness, the more it is like God. But the whole universe is more perfect in goodness than man; for though each individual thing is good, all things together are called *very good* (Gen. 1. 31). Therefore the whole universe is to the image of God, and not only man.

Obj. 4. Further, Boëthius (*De Consol.* iii, 9)[3] says of God: "Holding the world in His mind, and forming it into His image." Therefore the whole world is to the image of God, and not only the rational creature.

On the contrary, Augustine says (*Gen. ad lit.* vi, 12):[4] "Man's excellence consists in the fact that God made him to His own image by giving him an intellectual mind, which raises him above the beasts of the field " Therefore things without intellect are not made to God's image.

I answer that, Not every likeness, not even what is copied from something else, is sufficient to make an image; for if the likeness be only generic, or existing by virtue of some common accident, this does not suffice for one thing to be the image of another. For instance, a worm, though it may originate from man, cannot be called man's image merely because of the generic likeness. Nor, if anything is made white like something else, can we say that it is therefore the image of that thing; for whiteness is an accident common to many species. But the notion of an image requires likeness in species; thus the image of the king exists in his son, or, at least, in some accident proper to the species, and chiefly in the shape; thus, we speak of a man's image in copper. And so Hilary says pointedly[5] that "an image is of the same species."

Now it is clear that specific likeness follows the ultimate difference. But some things are like God first and most commonly because they exist; secondly, because they live; and thirdly because they know or understand; and these last, as Augustine says (QQ. LXXXIII; *qu.* 51),[6] "approach so near to God in likeness, that among all creatures nothing comes nearer to Him." It is clear, therefore, that intellectual creatures alone, properly speaking, are made to God's image

Reply Obj. 1. Everything imperfect is a participation of what is perfect Therefore even what falls short of the notion of an image, so far as it possesses any sort of likeness to God, participates in some degree the notion of an image. So Dionysius says that effects are "contingent images" of their causes; that is, as much as they happen (*contingit*) to be so, but not absolutely

Reply Obj. 2. Dionysius compares the solar ray to Divine goodness as regards its causality, not as regards its natural dignity which is required in the notion of an image.

Reply Obj. 3. The universe is more perfect in goodness than the intellectual creature as regards extension and diffusion; but intensively and collectively the likeness to the Divine goodness is found rather in the intellectual creature, which is capable of the highest good. Or else we may say that a part is not rightly divided against the whole, but only against another part. Therefore, when we say that the intellectual nature alone is to the image of God, we do not mean that the universe in any part is not to God's image, but that the other parts are excluded

Reply Obj. 4. Boëthius here uses the word image to express the likeness which the product of an art bears to the species of the art in the mind of the artist. Thus every creature is an image of its exemplary type in the Divine mind We are not, however, using the word image in this sense; but as it implies a likeness in nature, that is, inasmuch as all things, as being, are like the First Being, as living, like to the First Life, and as intelligent, like to the Supreme Wisdom.

ARTICLE 3. *Whether the Angels Are More to the Image of God Than Man Is?*

We proceed thus to the Third Article: It would seem that the angels are not more to the image of God than man is.

Objection 1. For Augustine says in a sermon *de Imagine*[7] that God granted to no other crea-

[1] Sect. 8 (PG 3, 645). [2] Sect. 4 (PG 3, 697).
[3] PL 63, 759. [4] PL 34, 348. [5] *De Synod.* (PL 10, 490).
[6] PL 40, 32. [7] *Sermo ad Popul.*, XLIII, 2 (PL 38, 255).

ture besides man to be to His image. Therefore it is not true to say that the angels are more than man to the image of God.

Obj. 2. Further, according to Augustine (QQ. LXXXIII; *qu.* 51),[1] "man is so much to God's image that God did not make any creature to be between Him and man, and therefore nothing is more akin to Him." But a creature is called God's image so far as it is akin to God. Therefore the angels are not more to the image of God than man.

Obj. 3. Further, a creature is said to be to God's image so far as it is of an intellectual nature. But the intellectual nature does not admit of intensity or lessening, for it is not an accidental thing, since it is a substance. Therefore the angels are not more to the image of God than man.

On the contrary, Gregory says (*Hom. in Evang.* xxxiv):[2] "The angel is called a 'seal of resemblance' (Ezech. 28. 12) because in him the resemblance of the Divine image is wrought with greater expression."

I answer that, We may speak of God's image in two ways. First, we may consider in it that in which the notion of image chiefly consists, that is, the intellectual nature. Thus the image of God is more in the angels than in man, because their intellectual nature is more perfect, as is clear from what has been said (Q LVIII, A. 3; Q. LXXIX, A. 8). Secondly, we may consider the image of God in man as regards that in which its notion secondarily consists, according as there is found in man a certain imitation of God, consisting in the fact that man proceeds from man, as God from God; and also in the fact that the whole human soul is in the whole body, and again, in every part, as God is in regard to the whole world. In these and the like things the image of God is more perfect in man than it is in the angels. But these do not of themselves belong to the notion of the Divine image in man, unless we presuppose the first imitation, which is in the intellectual nature; otherwise even brute animals would be to God's image. Therefore, as in their intellectual nature, the angels are more to the image of God than man is, we must grant that, absolutely speaking, the angels are more to the image of God than man is, but that man is relatively more like to God.

Reply Obj. 1. Augustine excludes the inferior creatures bereft of reason from the image of God; but not the angels.

Reply Obj. 2. As fire is said to be specifically the most subtle of bodies, while, nevertheless, one kind of fire is more subtle than another, so we say that nothing is more like to God than the human soul according to the genus of intellectual nature, because as Augustine had said previously, "things which have knowledge are so near to Him in likeness that of all creatures none are nearer." Therefore this does not mean that the angels are not more to God's image.

Reply Obj. 3. When we say that "substance does not admit of more or less,"[3] we do not mean that one species of substance is not more perfect than another, but that one and the same individual does not participate in its specific nature at one time more than at another; nor do we mean that a species of substance is shared among different individuals in a greater or lesser degree.

ARTICLE 4. *Whether the Image of God Is Found in Every Man?*

We proceed thus to the Fourth Article: It would seem that the image of God is not found in every man.

Objection 1. For the Apostle says that *man is the image of God, but woman is the image* (Vulg, *glory*) *of man* (I Cor. 11. 7). Therefore, as woman is an individual of the human species, it is clear that every individual is not an image of God

Obj. 2. Further, the Apostle says (Rom. 8 29): *Whom God foreknew, He also predestinated to be made conformable to the image of His Son.* But all men are not predestined. Therefore all men have not the conformity of image.

Obj. 3. Further, likeness belongs to the notion of image, as above explained (A. 1). But by sin man becomes unlike God. Therefore he loses the image of God.

On the contrary, it is written (Ps. 38. 7): *Surely man passeth as an image.*

I answer that, Since man is said to be the image of God by reason of his intellectual nature, he is the most perfectly like God according to that in which he can best imitate God in his intellectual nature. Now the intellectual nature imitates God chiefly in this, that God understands and loves Himself. And so we see that the image of God is in man in three ways. First, because man possesses a natural aptitude for understanding and loving God; and this aptitude consists in the very nature of the mind,

[1] PL 40, 33.
[2] PL 76, 1250.
[3] Aristotle, *Categories,* 5 (3^b33); cf. Boëthius, *In Cat. Arist.,* I (PL 64, 197).

which is common to all men. Secondly, because man actually or habitually knows and loves God, though imperfectly; and this image consists in the conformity of grace. Thirdly, because man knows and loves God perfectly; and this image consists in the likeness of glory. Therefore on the words, *The light of Thy countenance, O Lord, is signed upon us* (Ps. 4 7), the gloss distinguishes a threefold image, of creation, of re-creation, and of likeness.[1] The first is found in all men, the second only in the just, the third only in the blessed.

Reply Obj. 1. The image of God, in its principal signification, namely the intellectual nature, is found both in man and in women. Hence after the words, *To the image of God He created him,* it is added, *Male and female He created them* (Gen. 1. 27) Moreover it is said "them," in the plural, as Augustine (*Gen ad lit.* iii, 22)[2] remarks, lest it should be thought that both sexes were united in one individual. But in a secondary sense the image of God is found in man, and not in woman, for man is the beginning and end of woman, just as God is the beginning and end of every creature So when the Apostle had said that *man is the image and glory of God, but woman is the glory of man,* he adds his reason for saying this: *For man is not of woman, but woman of man; and man was not created for woman, but woman for man*

Reply Objs. 2 and 3. These reasons refer to the image which consists in the conformity of grace and glory.

ARTICLE 5. *Whether the Image of God Is in Man According to the Trinity of Persons?*

We proceed thus to the Fifth Article: It would seem that the image of God is not in man as to the Trinity of Persons.

Objection 1. For Augustine says (Fulgentius, *De Fide ad Petrum,* i)[3] "One in essence is the Godhead of the Holy Trinity; and one is the image to which man was made." And Hilary (*De Trin.* v)[4] says: "Man is made to the image of that which is common in the Trinity." Therefore the image of God in man is of the Divine Essence, and not of the Trinity of Persons.

Obj. 2. Further, it is said (*De Eccl. Dogmat*)[5] that the image of God in man is to be referred to "eternity." Damascene also says (*De Fid Orth.* ii, 12)[6] that the image of God in man belongs to him as an intelligent being endowed with free choice and self-movement. Gregory of Nyssa (*De Homin. Opificio,* xvi)[7] also asserts that, when Scripture says that man was made to the image of God, "it means that human nature was made a participator of all good: for the Godhead is the fulness of goodness." Now all these things belong more to the unity of the Essence than to the distinction of the Persons. Therefore the image of God in man regards, not the Trinity of Persons, but the unity of the Essence.

Obj. 3. Further, an image leads to the knowledge of that of which it is the image Therefore, if there is in man the image of God as to the Trinity of Persons, since man can know himself by his natural reason, it follows that by his natural knowledge man could know the Trinity of the Divine Persons; which is untrue, as was shown above (Q XXXII, A. 1).

Obj. 4. Further, the name of Image is not applicable to any of the Three Persons, but only to the Son; for Augustine says (*De Trin.* vi, 2)[8] that "the Son alone is the image of the Father." Therefore, if in man there were an image of God as regards the Person, this would not be an image of the Trinity, but only of the Son.

On the contrary, Hilary says (*De Trin.* iv):[9] The plurality of the Divine Persons is shown from the fact that man is said to have been made to the image of God.

I answer that, as we have seen (Q XL, A. 2), the distinction of the Divine Persons is only according to origin, or, rather, relations of origin: Now the mode of origin is not the same in all things, but in each thing is adapted to the nature of that thing, animated things being produced in one way, and inanimate in another, animals in one way, and plants in another. And so it is manifest that the distinction of the Divine Persons is suitable to the Divine Nature; and therefore to be to the image of God by imitation of the Divine Nature does not exclude being to the same image by the representation of the Divine Persons, but rather one follows from the other. We must, therefore, say that in man there exists the image of God, both as regards the Divine Nature and as regards the Trinity of Persons; for also in God Himself there is one Nature in Three Persons.

Thus it is clear how to solve *the first two objections.*

[1] *Glossa ordin* (III, 92A); *Gloss* of Peter Lombard (PL 113, 88).
[2] PL 34, 294.
[3] PL 65, 674.
[4] PL 10, 134.
[5] Gennadius, chap. 88 (PL 58, 1000).
[6] PG 94, 920.
[7] PG 44, 184.
[8] PL 42, 925.
[9] PL 10, 111.

Reply Obj. 3. This argument would be true if the image of God in man represented God in a perfect manner. But, as Augustine says (*De Trin.* xv),[1] there is a great difference between the trinity within ourselves and the Divine Trinity. Therefore, as he there says[2]: "We see, rather than believe, the trinity which is in ourselves; but we believe rather than see that God is Trinity."

Reply Obj. 4. Some have said that in man there is an image of the Son only. Augustine rejects this opinion (*De Trin.* xii, 6).[3] First, because as the Son is like the Father by a likeness of essence, it would follow of necessity if man were made in likeness to the Son that he is made to the likeness of the Father. Secondly, because if man were made only to the image of the Son, the Father would not have said, *Let Us make man to* Our *own image and likeness,* but *To* Thy *image.*

When, therefore, it is written, *He made him to the image of God,* the sense is not that the Father made man to the image of the Son only, Who is God, as some explained it, but that the Divine Trinity made man to Its image, that is, of the whole Trinity.

When it is said that God *made man to His image,* this can be understood in two ways. First, so that this preposition "to" points to the term of the making, and then the sense is, "Let Us make man in such a way that Our image may be in him." Secondly, this preposition "to" may point to the exemplary cause, as when we say, "This book is made (like) to that one." Thus the image of God is the very Essence of God, Which is incorrectly called an image according as image is put for the exemplar. Or, as some say, the Divine Essence is called an image because thereby one Person imitates another.[4]

ARTICLE 6. *Whether the Image of God Is in Man As Regards the Mind Only?*

We proceed thus to the Sixth Article: It would seem that the image of God is not only in man's mind.

Objection 1. For the Apostle says (I Cor. 11. 7) that *the man is the image . . . of God.* But man is not only mind. Therefore the image of God is to be observed not only in his mind.

Obj. 2. Further, it is written (Gen. 1. 27): *God created man to His own image; to the image of God He created him; male and female He created them.* But the distinction of male and female is in the body. Therefore the image of God is also in the body, and not only in the mind.

Obj. 3. Further, an image seems to apply principally to the shape of a thing. But shape belongs to the body. Therefore the image of God is to be seen in man's body also, and not only in his mind.

Obj. 4. Further, according to Augustine (*Gen. ad lit.* xii, 7, 24)[5] there is a threefold vision in us, corporeal, spiritual, or imaginary, and intellectual. Therefore, if in the intellectual vision that belongs to the mind there exists in us a trinity by reason of which we are made to the image of God, for the like reason there must be another trinity in the others.

On the contrary, The Apostle says (Eph. 4. 23, 24): *Be renewed in the spirit of your mind, and put on the new man.* From this we are given to understand that our renewal which consists in putting on the new man, belongs to the mind. Now, he says (Col. 3. 10): *Putting on the new* man; *him who is renewed unto knowledge* of God, *according to the image of Him that created him,* where the renewal which consists in putting on the new man is ascribed to the image of God. Therefore to be to the image of God belongs to the mind only.

I answer that, While in all creatures there is some kind of likeness to God, in the rational creature alone we find a likeness of image as we have explained above (AA. 1, 2); but in other creatures we find a likeness by way of a trace. Now the intellect or mind is that in which the rational creature excels other creatures; and so this image of God is not found even in the rational creature except in the mind, while in the other parts which the rational creature may happen to possess, we find the likeness of a trace, as in other things to which, in reference to such parts, the rational creature can be likened. We may easily understand the reason of this if we consider the way in which a trace and the way in which an image, represents anything. An image represents something by likeness in species, as we have said (A. 2), while a trace represents something by way of an effect, which represents the cause in such a way as not to attain to the likeness of species. For imprints which are left by the movements of animals are called traces; so also ashes are a trace of fire, and desolation of the land a trace of a hostile army.

[1] Chaps. 20, 23 (PL 42, 1088, 1090).
[2] PL 42, 1064. [3] PL 42, 1001.
[4] Cf. Hilary, *De Trin.*, IV (PL 10, 111); Peter Lombard, *Sent.*, I, II, 4 (QR 1, 24).
[5] PL 34, 459, 474.

Therefore we may observe this difference between rational creatures and others, both as to the representation of the likeness of the Divine Nature in creatures, and as to the representation in them of the uncreated Trinity. For as to the likeness of the Divine Nature, rational creatures seem to attain, after a fashion, to the representation of the species, since they imitate God, not only in being and life, but also in intelligence, as above explained (A. 2); but other creatures do not understand, although we observe in them a certain trace of the Intellect that created them if we consider their disposition.

Likewise, as the uncreated Trinity is distinguished by the procession of the Word from the Speaker, and of Love from both of these, as we have seen (Q XXVIII, A 3), so we may say that in rational creatures in whom we find a procession of the word in the intellect, and a procession of the love in the will, there exists an image of the uncreated Trinity by a certain representation of the species In other creatures, however, we do not find the principle of the word, and the word, and love; but we do see in them a certain trace of the existence of these in the Cause that produced them For the fact that a creature has a modified and finite substance proves that it proceeds from a principle, while its species points to the word of the maker, just as the shape of a house points to the concept of the architect; and order points to the maker's love by reason of which he directs the effect to good, as also the use of the house points to the will of the architect.

So we find in man a likeness to God by way of an image in his mind, but in the other parts of his being by way of a trace

Reply Obj 1. Man is called the image of God not that he is essentially an image, but that the image of God is impressed on his mind; just as a coin is an image of the king, as having the image of the king Therefore there is no need to consider the image of God as existing in every part of man.

Reply Obj. 2 As Augustine says (*De Trin.* xii, 5),[1] some have thought that the image of God was not in man individually, but severally. They held that "the man represents the Person of the Father; those born of man denote the person of the Son; and that the woman is a third person in likeness to the Holy Ghost, since she so proceeded from man as not to be his son or daughter." All of this is manifestly absurd: first, because it would follow that the Holy Ghost is the principle of the Son, as the woman is the principle of the man's offspring; secondly, because one man would be only the image of one Person; thirdly, because in that case Scripture should not have mentioned the image of God in man until after the birth of the offspring. Therefore we must understand that when Scripture had said, *to the image of God He created him,* it added, *male and female He created them,* not to imply that the image of God came through the distinction of sex, but that the image of God is common to both sexes since it is in the mind, wherein there is no distinction of sexes. And so the Apostle (Col. 3. 10), after saying, *According to the image of Him that created him,* added, *Where there is neither male nor female* (Vulg., *neither Gentile nor Jew*).[2]

Reply Obj. 3. Although the image of God in man is not to be found in his bodily shape, yet because "the body of man alone among terrestrial animals is not inclined prone to the ground, but is adapted to look upward to heaven, for this reason we may rightly say that it is made to God's image and likeness, rather than the bodies of other animals," as Augustine remarks (Q. LXXXIII; *qu* 51)[3] But this is not to be understood as though the image of God were in man's body, but in the sense that the very shape of the human body represents the image of God in the soul by way of a trace.

Reply Obj. 4 Both in the corporeal and in the imaginary vision we may find a trinity, as Augustine says (*De Trin.* xi, 2).[4] For in corporeal vision there is first the species of the exterior body; secondly, the act of vision, which occurs by the impression on the sight of a certain likeness of that species; thirdly, the intention of the will applying the sight to see, and to rest on what is seen.

Likewise, in the imaginary vision we find first the species kept in the memory; secondly, the vision itself, which takes place when the power of vision of the soul, that is, the power of imagination, is informed by the species; and thirdly, we find the intention of the will joining both together. But each of these trinities falls short of the Divine image. For the species of the external body is extrinsic to the essence of the soul, while the species in the memory, though not extrinsic to the soul, comes to it from without; and thus in both cases the species falls short of representing the connaturality

[1] PL 42, 1000.

[2] Cf. Gal. 3.28.

[3] PL 40, 33.

[4] PL 42, 985.

and co-eternity of the Divine Persons. The corporeal vision, too, does not proceed only from the species of the external body, but from this, and, at the same time, from the sense of the seer; in like manner imaginary vision is not only from the species which is preserved in the memory, but also from the imagination. For these reasons the procession of the Son from the Father alone is not suitably represented. Lastly the intention of the will joining the two together does not proceed from them either in corporeal or spiritual vision. Therefore the procession of the Holy Ghost from the Father and the Son is not thus properly represented.

ARTICLE 7. *Whether the Image of God Is to Be Found in the Acts of the Soul?*

We proceed thus to the Seventh Article: It would seem that the image of God is not found in the acts of the soul.

Objection 1. For Augustine says[1] that "man was made to God's image, inasmuch as we are and know that we are, and love this being and knowledge." But to be does not signify an act. Therefore the image of God is not to be found in the soul's acts.

Obj. 2. Further, Augustine (*De Trin.* ix, 12)[2] assigns God's image in the soul to these three things—"mind, knowledge, and love." But mind does not signify an act, but rather the power or the essence of the intellectual soul. Therefore the image of God does not extend to the acts of the soul.

Obj. 3. Further, Augustine (*De Trin.* x, 12)[3] assigns the image of the Trinity in the soul to "memory, understanding, and will." But these three are "natural powers of the soul," as the Master of the Sentences says (1 *Sent.* D. iii).[4] Therefore the image of God is in the powers, and does not extend to the acts of the soul.

Obj. 4. Further, the image of the Trinity always remains in the soul. But an act does not always remain. Therefore the image of God does not extend to the acts.

On the contrary, Augustine (*De Trin.* xi, 2 *seqq.*)[5] assigns the trinity in the lower part of the soul, in relation to the actual vision, whether sensible or imaginative. Therefore, also, the trinity in the mind, by reason of which man is like God's image, must be referred to actual vision.

I answer that, As above explained (A. 2), a certain representation of the species belongs to the notion of an image. Hence, if the image of the Divine Trinity is to be found in the soul, we must look for it where the soul approaches the nearest (so far as this is possible) to a representation of the species of the Divine Persons. Now the Divine Persons are distinct from each other by reason of the procession of the Word from the Speaker, and the procession of Love joining Both. But in our soul word "cannot exist without actual thought," as Augustine says (*De Trin.* xiv, 7).[6] Therefore, first and chiefly, the image of the Trinity is to be found in the acts of the mind, that is, namely, as from the knowledge which we possess, by thinking we form an internal word, and thence break forth into love. But, since the principles of acts are the habits and powers, and everything exists virtually in its principle, therefore, secondarily and as though consequently, the image of the Trinity may be considered as existing in the powers, and still more in the habits, according as the acts exist virtually in them.

Reply Obj. 1. Our being bears the image of God so far as it is proper to us, and excels that of the other animals, in so far as we are endowed with a mind. Therefore, this trinity is the same as that which Augustine mentions (*De Trin.* ix, 12),[7] and which consists in "mind, knowledge, and love."

Reply Obj. 2. Augustine observed this trinity first in the mind. But because the mind, though it knows itself entirely in a certain degree, yet also in a way does not know itself—namely, as being distinct from others (and thus also it seeks itself, as Augustine subsequently proves —*De Trin.* x);[8] therefore, since knowledge is not wholly equal to the mind, he takes three things in the soul which are proper to the mind, namely, memory, understanding, and will, which everyone knows he has, and assigns the image of the Trinity preeminently to these three, as though the first ascription were in part deficient.

Reply Obj. 3. As Augustine proves (*De Trin.* xiv, 7),[9] we may be said to understand, will, or to love certain things, both when we actually think of them, and when we do not think of them. When they are not under our actual consideration, they belong to memory only, which, in his opinion, is nothing else than habitual re-

[1] *City of God,* XI, 26 (PL 41, 339).
[2] PL 42, 972.
[3] PL 42, 984.
[4] Chap. 2 (QR 1, 35).
[5] PL 42, 985.
[6] PL 42, 1043.
[7] PL 42, 972.
[8] Chaps. 4, 8 (PL 42, 976, 979).
[9] PL 42, 1042.

tention of knowledge and love.[1] "But since," as he says,[2] "a word cannot be there without actual thought (for we think everything that we say, even if we speak with that interior word belonging to no nation's tongue), this image chiefly consists in these three things, memory, understanding, and will. And by understanding I mean here that whereby we understand with actual thought; and by will, love, or dilection I mean that which unites this child with its parent." From which it is clear that he places the image of the Divine Trinity more in actual understanding and will than in these as existing in the habitual retention of the memory, although even thus the image of the Trinity exists in the soul in a certain degree, as he says in the same place. Thus it is clear that memory, understanding, and will are not three powers as stated in the *Sentences*.

Reply Obj. 4. Someone might answer by referring to Augustine's statement (*De Trin.* xiv, 6),[3] that "the mind ever remembers itself, ever understands itself, ever loves itself," which some take to mean that the soul ever actually understands, and loves itself.[4] But he excludes this interpretation by adding that "it does not always think of itself as actually distinct from other things." Thus it is clear that the soul always understands and loves itself, not actually but habitually, though we might say that by perceiving its own act, it understands itself whenever it understands anything. But since it is not always actually understanding, as in the case of sleep, we must say that these acts, although not always actually existing in themselves, yet always exist in their principles, the habits and powers. And so, Augustine says (*De Trin.* xiv, 4):[5] "If the rational soul is made to the image of God in the sense that it can make use of reason and intellect to understand and consider God, then the image of God was in the soul from the beginning of its existence."

ARTICLE 8. *Whether the Image of the Divine Trinity Is in the Soul Only By Comparison With God as Its Object?*

We proceed thus to the Eighth Article: It would seem that the image of the Divine Trinity is in the soul not only by comparison with God as its object.

Objection 1. For the image of the Divine Trinity is to be found in the soul, as shown above (A. 7), according as the word in us proceeds from the speaker, and love from both. But this is to be found in us as regards any object. Therefore the image of the Divine Trinity is in our mind as regards any object.

Obj. 2. Further, Augustine says (*De Trin.* xii 4)[6] that "when we seek trinity in the soul, we seek it in the whole of the soul, without separating the process of reasoning in temporal matters from the consideration of things eternal." Therefore the image of the Trinity is to be found in the soul, even as regards temporal objects.

Obj. 3. Further, it is by grace that we can know and love God. If, therefore, the image of the Trinity is found in the soul by reason of the memory, understanding, and will or love of God, this image is not in man by nature but by grace, and thus will not be common to all.

Obj 4. Further, the saints in heaven are most perfectly conformed to the image of God by the vision of glory. And so it is written (II Cor 3. 18): *We . . . are transformed into the same image from glory to glory.* But temporal things are known by the vision of glory. Therefore the image of God exists in us even according to temporal things.

On the contrary, Augustine says (*De Trin.* xiv, 12):[7] "The image of God exists in the mind not because it has a remembrance of itself, loves itself, and understands itself but because it can also remember, understand, and love God by Whom it was made." Much less, therefore, is the image of God in the soul, in respect of other objects.

I answer that, As above explained (AA. 2, 7) image means a likeness which in some degree however small, attains to a representation of the species. Therefore we need to seek in the image of the Divine Trinity in the soul some kind of representation of the species of the Divine Persons, so far as this is possible to a creature. Now the Divine Persons, as above stated (AA. 6, 7), are distinguished from each other according to the procession of the word from the speaker, and the procession of love from both. Moreover the Word of God is born of God by the knowledge of Himself, and Love proceeds from God according as He loves Himself. But it is clear that diversity of object diversifies the species of word and love; for the word conceived in the heart of man of a stone

[1] Cf. Q. LXXIX., A. 7, 1. Ans.
[2] *De Trin.*, XIV, 7 (PL 42, 1043).
[3] PL 42, 1042; cf. also X, 12 (984).
[4] Cf. Bonaventure, *In Sent.*, I, III, P. 2, A. 2, Q. 1 (QR I, 88). Albert the Great also seems to hold this opinion—cf. *In Sent.*, I, d. 3, A. 20 (BO XXV, 119); A. 27 (BO XXV, 126).
[5] PL 42, 1040.
[6] PL 42, 1000.
[7] PL 42, 1048.

is specifically different from that conceived of a horse, while also the love regarding each of them is specifically different. Hence we refer the Divine image in man to the verbal concept born of the knowledge of God, and to the love derived therefrom. Thus the image of God is found in the soul according as the soul turns to God, or possesses a nature that enables it to turn to God. Now the mind may turn towards an object in two ways: directly and immediately, or indirectly and mediately; as, for instance, when anyone sees a man reflected in a looking-glass he may be said to be turned towards that man. So Augustine says (*De Trin.* xiv, 8),[1] that "the mind remembers itself, understands itself, and loves itself If we perceive this, we perceive a trinity, not, indeed God, but, nevertheless, rightly called the image of God." But this is due to the fact, not that the mind is turned to itself absolutely, but that thereby it can furthermore turn to God, as appears from the authority quoted above (Arg. *On the contrary*).

Reply Obj. 1. For the notion of an image it is not enough that something proceed from another, but it is also necessary to observe what proceeds and from what it proceeds; namely, that what is Word of God proceeds from knowledge of God.

Reply Obj. 2. In all the soul we may see a kind of trinity, not, however, as though besides the doing of temporal things and the contemplation of eternal things "any third thing should be required to make up the trinity," as he adds in the same passage. But in that part of the reason which is concerned with temporal things, "although a trinity may be found, yet the image of God is not to be seen there," as he says further on, because this knowledge of temporal things comes to the soul from without. Moreover even the habits by which temporal things are known are not always present, but sometimes they are actually present, and sometimes present only in memory even after they begin to exist in the soul. Such is clearly the case with faith, which comes to us temporally for this present life, while in the future life faith will no longer exist, but only the remembrance of faith.

Reply Obj. 3. The meritorious knowledge and love of God can be in us only by grace. Yet there is a certain natural knowledge and love as seen above (Q. XII, A. 12; Q. LVI, A. 3; Q. LX, A. 5). This, too, is natural, that the mind in order to understand God can make use of reason, in which sense we have already said (A. 7, ad 4) that the image of God abides always in the soul; "whether this image of God be so expunged," as it were clouded, "as almost to amount to nothing," as in those who have not the use of reason, "or obscured and disfigured," as in sinners, "or clear and beautiful," as in the just as Augustine says (*De Trin.* xiv).[2]

Reply Obj. 4. By the vision of glory temporal things will be seen in God Himself, and such a vision of things temporal will belong to the image of God. This is what Augustine means when he says[3] that "in that nature to which the mind will blissfully adhere, whatever it sees it will see as unchangeable;" for in the Uncreated Word are the types of all creatures.

ARTICLE 9. *Whether Likeness Is Properly Distinguished from Image?*

We proceed thus to the Ninth Article: It would seem that likeness is not properly distinguished from image.

Objection 1 For genus is not properly distinguished from species. Now, likeness is to image as genus to species, because, "where there is image, forthwith there is likeness, but not conversely" as Augustine says (QQ. LXXXIII; *qu.* 74).[4] Therefore likeness is not properly to be distinguished from image.

Obj. 2. Further, the notion of image consists not only in the representation of the Divine Persons, but also in the representation of the Divine Essence, to which representation belong immortality and indivisibility. So it is not right to say that "the likeness is in the essence because it is immortal and indivisible, whereas the image is in other things" (2 *Sent.*, d. XVI).[5]

Obj 3 Further, the image of God in man is threefold,—the image of nature, of grace and of glory, as above explained (A. 4) But innocence and justice belong to grace Therefore it is incorrectly said (*ibid.*) that "the image is taken from the memory, the understanding, and the will, while the likeness is from innocence and justice"

Obj 4. Further, knowledge of truth belongs to the intellect, and love of virtue to the will, and these two things are parts of the image. Therefore it is incorrect to say (*ibid.*) that "the image consists in the knowledge of truth, and the likeness in the love of virtue."

On the contrary, Augustine says (QQ. LXXXIII; *qu.* 51):[6] "Some consider that these

[1] PL 42, 1044.
[2] Chap. 4 (PL 42, 1040).
[3] *De Trin*, XIV, 14 (PL 42, 1051).
[4] PL 40, 85.
[5] Peter Lombard (QR 1, 381).
[6] PL 40, 33.

two were mentioned not without reason, namely 'image' and 'likeness,' since, if they meant the same, one would have sufficed."

I answer that, Likeness is a kind of unity, for oneness in quality causes likeness, as the Philosopher says.[1] Now, since "one" is a transcendental, it is both common to all, and applicable to each single thing, just as the good and the true. Therefore, just as the good can be compared to any individual thing both as preliminary and as subsequent to it, as signifying some perfection in it, so also in the same way there is a kind of comparison between likeness and image. For the good comes before man, since man is an individual good; and, again, the good is subsequent to man, since we may say in a special way of a certain man that he is good by reason of his perfect virtue. In like manner, likeness may be considered as preliminary to image, according as it is something more common than image, as we have said above (A. 1); and again, it may be considered as subsequent to image, according as it signifies a certain perfection of image. For we say that an image is like or unlike what it represents according as the representation is perfect or imperfect.

Thus likeness may be distinguished from image in two ways First as preliminary to it and existing in more things, and in this sense likeness concerns things which are more common than the properties of an intellectual nature in which the image is properly to be seen. In this sense it is stated (QQ. LXXXIII; *qu* 51)[2] that "the spirit" (namely, the mind) "without doubt was made to the image of God. But the other parts of man," namely, those belonging to the soul's inferior powers, or even to the body, "are in the opinion of some made to God's likeness." In this sense he says (*De Quant. Animæ* ii)[3] that the likeness of God is found in the soul's incorruptibility; for corruptible and incorruptible are differences of universal being. But likeness may be considered in another way, as signifying the expression and perfection of the image. In this sense Damascene says (*De Fid. Orth,* ii, 12)[4] that "the image implies an intelligent being, endowed with free choice and self-movement, whereas likeness implies a likeness of power, as far as this may be possible in man." In the same sense likeness is said to belong to the love of virtue, for there is no virtue without love of virtue.

Reply Obj. 1. Likeness is not distinct from image in the common notion of likeness (for thus it is included in the notion of image), but so far as any likeness falls short of the notion of image, or again, as it perfects the notion of image.

Reply Obj. 2. The soul's essence belongs to the image as representing the Divine Essence in those things which are proper to the intellectual nature, but not in those conditions which follow on being in general, such as to be simple and indissoluble.

Reply Obj. 3. Even certain virtues are natural to the soul, at least, in their seeds, by reason of which we may say that a natural likeness exists in the soul. Nor is it unfitting to use the term image from one point of view, and from another the term likeness.

Reply Obj. 4. Love of the word, which is knowledge loved, pertains to the notion of image; but love of virtue pertains to likeness as virtue itself pertains to likeness.

QUESTION XCIV

OF THE STATE AND CONDITION OF THE FIRST MAN AS REGARDS HIS INTELLECT (*In Four Articles*)

WE next consider the state or condition of the first man; first, as regards his soul; secondly as regards his body (Q. XCVII) Concerning the first there are two things to be considered: (1) The condition of man as to his intellect; (2) the condition of man as to his will (Q. XCV).

Under the first head there are four points of inquiry: (1) Whether the first man saw the God through His Essence? (2) Whether he could see the separate substances, that is, the angels? (3) Whether he possessed all knowledge? (4) Whether he could err or be deceived?

ARTICLE 1. *Whether the First Man Saw God Through His Essence?*

We proceed thus to the First Article: It would seem that the first man saw God through His Essence.

Objection 1. For man's happiness consists in the vision of the Divine Essence But the first man, "while established in Paradise, led a life of happiness in the enjoyment of all things," as Damascene says (*De Fid. Orth.* ii, 11).[5] And Augustine says,[6] "If man was gifted with the same disposition as now, how happy must he have been in Paradise, that place of ineffable happiness!" Therefore the first man in Paradise saw God through His Essence.

[1] *Metaphysics,* V, 15 (1021[a]11). [2] Augustine (PL 40, 33). [3] PL 32, 1037. [4] PG 94, 920. [5] PG 94, 912. [6] *City of God,* XIV, 10 (PL 41, 417)

Obj. 2. Further, Augustine says[1] that the first man "lacked nothing which his good-will might obtain." But our good-will can obtain nothing better than the vision of the Divine Essence. Therefore man saw God through His Essence.

Obj 3. Further, the vision of God in His Essence is that in which God is seen without a medium or enigma. But man in the state of innocence saw God immediately, as the Master of the Sentences asserts (4 *Sent.*, D i).[2] He also saw without an enigma, for an enigma implies obscurity, as Augustine says (*De Trin.* XV, 9).[3] Now, obscurity resulted from sin. Therefore man in the primitive state saw God through His Essence.

On the contrary, The Apostle says (I Cor 15. 46): *That was not first which is spiritual, but that which is natural.* But to see God through His Essence is most spiritual. Therefore the first man in the primitive state of his animal life did not see God through His Essence.

I answer that, The first man did not see God through His Essence if we consider the ordinary state of that life; unless, perhaps, it be said that he saw God in ecstasy, when *God cast a deep sleep upon Adam* (Gen. 2 21). The reason is because, since the Divine Essence is Happiness itself, the intellect of a man who sees the Divine Essence has the same relation to God as a man has to happiness. Now it is clear that man cannot willingly be turned away from happiness, since naturally and necessarily he desires it, and shuns unhappiness. Therefore no one who sees the Essence of God can willingly turn away from God, which means to sin Hence all who see God through His Essence are so firmly established in the love of God, that for eternity they are not able to sin. Therefore, as Adam did sin, it is clear that he did not see God through His Essence.

Nevertheless he knew God with a more perfect knowledge than we do now. Thus in a sense his knowledge was midway between our knowledge in the present state and the knowledge we shall have in heaven, when we see God through His Essence. To make this clear, we must consider that the vision of God through His Essence is contra-distinguished from the vision of God through His creatures. Now the higher the creature is, and the more like it is to God, the more clearly is God seen in it; for instance, a man is seen more clearly through a mirror in which his image is the more clearly expressed. Thus God is seen in a much more perfect manner through His intelligible effects than through those which are only sensible or corporeal. But in his present state man is impeded as regards the full and clear consideration of intelligible creatures, because he is distracted by and occupied with sensible things. Now, it is written (Eccles. 7. 30): *God made man right.* And man was made right by God in this sense, that in him the lower powers were subjected to the higher, and the higher nature was made so as not to be impeded by the lower. Therefore the first man was not impeded by exterior things from a clear and steady contemplation of the intelligible effects which he perceived by the radiation of the first truth, whether by a natural or by a freely given knowledge. Hence Augustine says (*Gen. ad lit,* xi. 33)[4] that, "perhaps God used to speak to the first man as He speaks to the angels, by shedding on his mind a ray of the unchangeable truth, yet without bestowing on him the experience of which the angels are capable in the participation of the Divine Essence." Therefore, through these intelligible effects of God, man knew God then more clearly than we know Him now.

Reply Obj 1. Man was happy in Paradise but not with that perfect happiness to which he was destined, which consists in the vision of the Divine Essence. He was, however, endowed with "a life of happiness in a certain measure," as Augustine says (*ibid.*, 18),[5] so far as he was gifted with natural integrity and perfection.

Reply Obj. 2. A good will is a well-ordered will; but the will of the first man would have been ill-ordered had he willed to have, while in the state of merit, what had been promised to him as a reward.

Reply Obj 3. A medium is twofold; one through which, and, at the same time, in which, something is seen, as, for example, a man is seen through a mirror, and is seen with the mirror. Another kind of medium is that by which we attain to the knowledge of something unknown, such as the medium in a demonstration. God was seen without this second kind of medium, but not without the first kind. For there was no need for the first man to attain to the knowledge of God by demonstration drawn from an effect, such as we need, since he knew God simultaneously in His effects, especially in the intelligible effects, according to his capacity. Again, we must remark that the obscurity which is implied in the word enigma may be of two kinds. First, so far as every creature is some-

[1] *City of God,* XIV,10, (PL 41, 417)
[2] Chap. 5 (QR II, 747). [3] PL 42, 1069.
[4] PL 34, 447. [5] PL 34, 438.

thing obscure when compared with the immensity of the Divine splendour; and thus Adam saw God in an enigma, because he saw Him in a created effect. Secondly, we may take obscurity as an effect of sin, so far as man is impeded in the consideration of intelligible things by being preoccupied with sensible things; in which sense Adam did not see God in an enigma.

ARTICLE 2. *Whether Adam in the State of Innocence Saw the Angels Through Their Essence?*

We proceed thus to the Second Article: It would seem that Adam, in the state of innocence, saw the angels through their essence.

Objection 1. For Gregory says (*Dialog.* iv, 1)[1]: "In Paradise man was accustomed to enjoy the words of God and by purity of heart and loftiness of vision to have the company of the good angels."

Obj. 2. Further, the soul in the present state is impeded from the knowledge of separate substances by union with a corruptible body which *is a load upon the soul,* as is written Wisdom 9. 15. Therefore the separate soul can see separate substances, as above explained (Q. LXXXIX, A. 2). But the body of the first man was not a load upon his soul, for the body was not corruptible. Therefore he was able to see separate substances.

Obj. 3. Further, one separate substance knows another separate substance by knowing itself (*De Causis,* xiii).[2] But the soul of the first man knew itself. Therefore it knew separate substances.

On the contrary, The soul of Adam was of the same nature as ours. But our souls cannot now understand separate substances. Therefore neither could Adam's soul.

I answer that, The state of the human soul may be distinguished in two ways. First, from a diversity of mode in its natural being; and in this way the state of the separate soul is distinguished from the state of the soul joined to the body. Secondly, the state of the soul is distinguished in relation to integrity and corruption, the state of natural being remaining the same; and thus the state of innocence is distinct from the state of man after sin. For man's soul, in the state of innocence, was adapted to perfect and govern the body just as it is now, and so the first man is said to have been made into a *living soul,* that is, a soul giving life to the body,—namely animal life. But he was endowed with integrity as to this life in that the body was entirely subject to the soul, hindering it in no way, as we have said above (A. 1). Now it is clear from what has been already said (Q. LXXXIV, A. 7; Q. LXXXV, A. 1; Q. LXXXIX, A 1) that since the soul is adapted to perfect and govern the body, as regards animal life, it is fitting that it should have that mode of understanding which is by turning to phantasms. Therefore this mode of understanding was fitting to the soul of the first man also.

Now, according to this mode of understanding, there are three degrees of movement in the soul, as Dionysius says (*Div. Nom.* iv)[3] The first is by the soul passing from exterior things to concentrate its powers on itself; the second is by the soul ascending so as to be associated with superior powers joined together in union, namely the angels; the third is when the soul is led on yet further to the supreme good, that is, to God.

In virtue of the first movement of the soul from exterior things to itself, the soul's knowledge is perfected. This is because the intellectual operation of the soul has a natural order to external things, as we have said above (Q. LXXXVII, A. 3), and so by the knowledge of them, our intellectual operation can be known perfectly, as an act through its object. And through the intellectual operation itself, the human intellect can be known perfectly, as a power through its proper act. But in the second movement we do not find perfect knowledge. Because, since the angel does not understand by turning to phantasms, but by a far more excellent process, as we have said above (Q. LV, A. 2), the above-mentioned mode of knowledge, by which the soul knows itself, is not sufficient to lead it to the knowledge of an angel. Much less does the third movement lead to perfect knowledge, for even the angels themselves, by the fact that they know themselves, are not able to arrive at the knowledge of the Divine Substance, by reason of its surpassing excellence.

Thus therefore the soul of the first man could not see the angels in their essence. Nevertheless he had a more excellent mode of knowledge regarding the angels than we possess, because his knowledge of intelligible things within him was more certain and fixed than our knowledge. And it was on account of this excellence of knowledge that Gregory says that "he enjoyed the company of the angelic spirits."

This makes clear the *reply to the first objection.*

Reply Obj. 2. That the soul of the first man

[1] PL 77, 317. [2] BA 176.2. [3] PG 3, 705.

fell short of the knowledge regarding separate substances was not owing to the fact that the body was a load upon it, but to the fact that its connatural object fell short of the excellence of separate substances. We, in our present state, fall short on account of both these reasons.

Reply Obj. 3. The soul of the first man was not able to arrive at knowledge of separate substances by means of its self-knowledge, as we have shown above, for even each separate substance knows others in its own measure.

ARTICLE 3. *Whether the First Man Knew All Things?*

We proceed thus to the Third Article: It would seem that the first man did not know all things.

Objection 1. For if he had such knowledge it would be either by acquired species, or by connatural species, or by infused species. Not, however, by acquired species, for this kind of knowledge is caused by experience, as stated in the *Metaphysics,*[1] and the first man had not then gained experience of all things. Nor through connatural species, because he was of the same nature as we are, and our soul, as Aristotle says,[2] is "like a clean tablet on which nothing is written." And if his knowledge came by infused species, it would have been of a different kind from ours, which we acquire from things themselves.

Obj. 2. Further, individuals of the same species have the same way of arriving at perfection. Now other men have not from the beginning, knowledge of all things, but they acquire it in the course of time according to their capacity. Therefore neither did Adam know all things when he was first created.

Obj. 3. Further, the present state of life is given to man in order that his soul may advance in knowledge and merit; indeed, the soul seems to be united to the body for that purpose. Now man would have advanced in merit in that state of life, and therefore also in knowledge. Therefore he was not endowed with knowledge of all things.

On the contrary, Man named the animals (Gen. 2. 20). But names should be adapted to the nature of things. Therefore Adam knew the animals' natures, and in like manner he was possessed of the knowledge of all other things.

I answer that, In the natural order, perfection comes before imperfection, as act precedes potency, for whatever is in potency is made actual only by some being in act. And since God created the first things not only for their own existence, but also that they might be the principles of other things, so creatures were produced in their perfect state to be the principles as regards others. Now man can be the principle of another man not only by generation of the body, but also by instruction and government. Hence, as the first man was produced in his perfect state, as regards his body, for the work of generation, so also was his soul established in a perfect state to instruct and govern others.

Now no one can instruct others unless he has knowledge, and so the first man was established by God in such a manner as to have knowledge of all those things for which man has a natural aptitude. And such are whatever are virtually contained in the first self-evident principles, that is, whatever truths man is naturally able to know. Moreover, in order to direct his own life and that of others, man needs to know not only those things which can be naturally known, but also things surpassing natural knowledge, because the life of man is ordered to a supernatural end; just as it is necessary for us to know the truths of faith in order to direct our own lives. Therefore the first man was endowed with such a knowledge of these supernatural truths as was necessary for the direction of human life in that state. But those things which cannot be known by merely human effort, and which are not necessary for the direction of human life, were not known by the first man; such as the thoughts of men, future contingent events, and some individual facts, as for instance the number of pebbles in a stream, and the like.

Reply Obj. 1. The first man had knowledge of all things by divinely infused species. Yet his knowledge was not different from ours, as the eyes which Christ gave to the man born blind were not different from those given by nature.

Reply Obj. 2. To Adam, as being the first man, was due a degree of perfection which was not due to other men, as is clear from what is above explained.

Reply Obj. 3. Adam would have advanced in natural knowledge, not in the number of things known, but in the manner of knowing, because what he knew speculatively he would subsequently have known by experience. But as regards supernatural knowledge, he would also have advanced as regards the number of things known, by further revelation, just as the angels advance by further enlightenment. Moreover

[1] Aristotle, I, 1 (980[b]28). [2] *Soul,* III, 4 (430[a]1).

there is no comparison between advance in knowledge and advance in merit, since one man cannot be a principle of merit to another, although he can be to another a principle of knowledge.

ARTICLE 4. *Whether Man in His First State Could Be Deceived?*

We proceed thus to the Fourth Article: It would seem that man in his primitive state could have been deceived.

Objection 1. For the Apostle says (I Tim. 2. 14) that *the woman being seduced was in the transgression.*

Obj. 2. Further, the Master says (2 *Sent.*, D. xxi)[1] that, "the woman was not frightened at the serpent speaking, because she thought that he had received the faculty of speech from God." But this was untrue. Therefore before sin the woman was deceived.

Obj. 3. Further, it is natural that the farther off anything is from us, the smaller it seems to be. Now, the nature of the eyes is not changed by sin. Therefore this would have been the case in the state of innocence. Therefore man would have been deceived in the size of what he saw, just as he is deceived now.

Obj 4 Further, Augustine says (*Gen. ad lit* xii, 2)[2] that, in sleep the soul adheres to the likenesses of things as if they were the things themselves. But in the state of innocence man would have eaten and consequently have slept and dreamed Therefore he would have been deceived, adhering to likenesses as to realities.

Obj 5. Further, the first man would have been ignorant of other men's thoughts, and of future contingent events, as stated above (A. 3). So if anyone had told him what was false about these things, he would have been deceived.

On the contrary, Augustine says (*De Lib. Arb.* iii, 18):[3] "To regard what is true as false, is not natural to man as created, but is a punishment of man condemned"

I answer that, in the opinion of some,[4] deception may mean two things; namely, any slight surmise, in which one adheres to what is false, as though it were true, but without the assent of belief; or it may mean a firm belief. Thus before sin Adam could not be deceived in either of these ways as regards those things to which his knowledge extended; but as regards things to which his knowledge did not extend, he might have been deceived, if we take deception in the wide sense of the term for any surmise without assent of belief. This opinion was held with the idea that it is not harmful to man to entertain a false opinion in such matters, and that provided he does not assent rashly, he is not to be blamed.

Such an opinion, however, is not fitting as regards the integrity of the primitive state of life, because, as Augustine says,[5] in that state of life "sin was avoided without struggle, and while it remained so, no evil could exist." Now it is clear that as truth is the good of the intellect, so falsehood is its evil, as the Philosopher says.[6] So that, as long as the state of innocence continued, it was impossible for the human intellect to assent to falsehood as if it were truth. For as some perfections, such as clarity, were lacking in the bodily members of the first man, though no evil could be therein, so there could be in his intellect the absence of some knowledge, but no false opinion.

This is clear also from the very rectitude of the primitive state, by virtue of which, while the soul remained subject to God, the lower powers in man were subject to the higher, and were no impediment to their action. And from what has preceded (Q. LXXXV, A. 6),[7] it is clear that as regards its proper object the intellect is always true; and hence it is never deceived of itself, but whatever deception occurs must be ascribed to some lower power, such as the imagination or the like Hence we see that when the natural power of judgment is free we are not deceived by such images, but only when it is not free, as is the case in sleep. Therefore it is clear that the rectitude of the primitive state was incompatible with deception of the intellect.

Reply Obj 1. Though the woman was deceived before she sinned in deed, still it was not till she had already sinned by interior pride. For Augustine says (*Gen. ad lit.* xi, 30)[8] that, "the woman could not have believed the words of the serpent had she not already acquiesced in the love of her own power, and in a presumption of self-conceit."

Reply Obj. 2. The woman thought that the serpent had received this power of speaking, not as acting in accordance with nature, but by virtue of some supernatural operation. We need not, however, follow the Master of the Sentences in this point.

Reply Obj 3. Were anything presented to the

[7] Cf. also Q. XVII, A. 3. [8] PL 34, 445.

imagination or sense of the first man not in accordance with the nature of things, he would not have been deceived, for his reason would have enabled him to judge the truth.

Reply Obj. 4. A man is not accountable for what occurs during sleep, as he has not then the use of his reason, which is man's proper act.

Reply Obj. 5. If anyone had said something untrue as regards future contingencies, or as regards secret thoughts, man in the primitive state would not have believed it was so, but he might have believed that such a thing was possible, which would not have been to entertain a false opinion.

It might also be said that he would have been divinely guided from above, so as not to be deceived in a matter to which his knowledge did not extend.

If any object, as some do,[1] that he was not guided, when tempted, though he was then most in need of guidance, we reply that man had already sinned in his heart, and that he failed to have recourse to the Divine aid.

QUESTION XCV

OF THE THINGS PERTAINING TO THE FIRST MAN'S WILL—NAMELY, GRACE AND JUSTICE

(In Four Articles)

WE next consider what belongs to the will of the first man, concerning which there are two points for treatment: (1) The grace and justice of the first man; (2) the use of justice as regards his dominion over other things.

Under the first head there are four points of inquiry: (1) Whether the first man was created in grace? (2) Whether in the state of innocence he had passions of the soul? (3) Whether he had all virtues? (4) Whether what he did would have been as meritorious as now?

ARTICLE 1. *Whether the First Man Was Created in Grace?*

We proceed thus to the First Article: It would seem that the first man was not created in grace.

Objection 1. For the Apostle, distinguishing between Adam and Christ, says (I Cor. 15. 45): *The first Adam was made into a living soul; the last Adam into a quickening spirit.* But the spirit is quickened by grace. Therefore Christ alone was made in grace.

Obj. 2. Further, Augustine says (QQ. *Vet. et Nov. Test., qu.* 123)[2] that "Adam did not possess the Holy Ghost." But whoever possesses grace has the Holy Ghost. Therefore Adam was not created in grace.

Obj. 3. Further, Augustine says (*De Correp. et Grat.* x)[3] that "God so ordered the life of angels and men as to show first what they could do by free choice, then what they can do by His grace, and by the discernment of justice." God thus first created men and angels in the state of natural freedom of choice only, and afterwards bestowed grace on them.

Obj. 4. Further, the Master says (2 *Sent.*, D. XXIV):[4] "When man was created he was given sufficient help to stand, but not sufficient to advance." But whoever has grace can advance by merit. Therefore the first man was not created in grace.

Obj. 5. Further, the reception of grace requires the consent of the receiver, since thereby a kind of spiritual marriage takes place between God and the soul. But this consent presupposes existence. Therefore man did not receive grace in the first moment of his creation.

Obj. 6. Further, nature is more distant from grace than grace is from glory, which is but grace consummated. But in man grace precedes glory. Therefore much more did nature precede grace.

On the contrary, Man and angel are both ordered to grace. But the angels were created in grace, for Augustine says,[5] "God at the same time fashioned their nature and endowed them with grace." Therefore man also was created in grace.

I answer that, Some say[6] that the first man was not created in grace, but that it was bestowed on him subsequently before sin, and many authorities of the Saints declare[7] that man possessed grace in the state of innocence.

But the very rectitude of the primitive state, with which man was endowed by God, seems to require that, as others say,[8] he was created in grace, according to Eccles. 7. 30, *God made man right.* For this rectitude consisted in his

[7] Cf. Jerome, *In Ephes.,* III, on 4.30 (PL 26, 546); Augustine, *City of God,* XIII, 13 (PL 41, 386); Basil, *Contra Eunom.,* V (PG 29, 728).

[8] Praepositinus, *Summa* (fol. 77rb); Albert the Great, *In Sent.,* II, d. 3, A. 12. (BO XXVII, 85), Cf. Kors, *La Justice Primitive* (p. 62).

reason being subject to God, the lower powers to reason, and the body to the soul. And the first subjection was the cause of both the second and the third, for while reason was subject to God, the lower powers remained subject to reason, as Augustine says.[1] Now it is clear that such a subjection of the body to the soul and of the lower powers to reason, was not from nature; otherwise it would have remained after sin, since even in the demons the natural gifts remained after sin, as Dionysius declares (*Div. Nom.* iv).[2] Hence it is clear that also the primitive subjection by virtue of which reason was subject to God was not a merely natural gift, but a supernatural endowment of grace. For it is not possible that the effect should be of greater efficiency than the cause. Hence Augustine says[3] that, "as soon as they disobeyed the Divine command, and forfeited Divine grace, they were ashamed of their nakedness, for they felt the impulse of disobedience in the flesh, as though it were a punishment corresponding to their own disobedience." Hence if the loss of grace dissolved the obedience of the flesh to the soul, we may gather that the inferior powers were subjected to the soul through grace existing therein.

Reply Obj. 1. The Apostle in these words means to show that there is a spiritual body, if there is an animal body, because the spiritual life of the body began in Christ, who is *the firstborn of the dead* (Col. 1. 18), as the body's animal life began in Adam. From the Apostle's words, therefore, we cannot gather that Adam had no spiritual life in his soul, but that he had not spiritual life as regards the body.

Reply Obj. 2. As Augustine says in the same passage, it is not disputed that Adam, like other just souls, was in some degree gifted with the Holy Ghost; but he did not possess the Holy Ghost, "as the faithful possess Him now," who are admitted to eternal happiness directly after death.

Reply Obj. 3. This passage from Augustine does not assert that angels or men were created with natural freedom of choice before they possessed grace, but that God shows first what their free choice could do before being confirmed in grace, and what they acquired afterwards by being so confirmed.

Reply Obj. 4. The Master here speaks according to the opinion of those who held that man was not created in grace, but only in a state of nature. We may also say that, though man was created in grace, yet it was not by virtue of the nature in which he was created that he could advance by merit, but by virtue of the grace which was added.

Reply Obj. 5. As the motion of the will is not continuous there is nothing against the first man having consented to grace even in the first moment of his existence.

Reply Obj 6. We merit glory by an act of grace, but we do not merit grace by an act of nature. Hence the comparison fails.

ARTICLE 2. *Whether Passions Existed in the Soul of the First Man?*

We proceed thus to the Second Article: It would seem that the first man's soul had no passions.

Objection 1. For by the passions of the soul *the flesh lusteth against the spirit* (Gal. 5. 17). But this did not happen in the state of innocence. Therefore in the state of innocence there were no passions of the soul.

Obj. 2. Further, Adam's soul was nobler than his body. But his body was impassible. Therefore no passions were in his soul.

Obj. 3. Further, the passions of the soul are restrained by the moral virtues. But in Adam the moral virtues were perfect. Therefore the passions were entirely excluded from him.

On the contrary, Augustine says[4] that "in our first parents there was undisturbed love of God," and other passions of the soul

I answer that, The passions of the soul are in the sensual appetite, the object of which is good and evil. Therefore some passions of the soul are directed to what is good, as love and joy; others to what is evil, as fear and sorrow. And since in the primitive state, evil was neither present nor imminent, nor was any good wanting which a good-will could desire to have then, as Augustine says (*ibid.*), therefore Adam had no passion with evil as its object, such as fear, sorrow, and the like. Neither had he passions in respect of good not possessed, but to be possessed now, as burning concupiscence. But those passions which regard present good, as joy and love, or which regard future good to be had at the proper time, as desire and hope that does not cast down, existed in the state of innocence; otherwise, however, than as they exist in ourselves. For our sensual appetite, where the passions reside, is not entirely subject to reason; hence at times our passions forestall and

[3] *City of God,* XIII, 13 (PL 41, 386).
[4] *City of God,* XIV, 10 (PL 41, 417).

hinder reason's judgment, at other times they follow after reason's judgment, accordingly as the sensual appetite obeys reason to some extent. But in the state of innocence the inferior appetite was wholly subject to reason, so that in that state the passions of the soul existed only as consequent upon the judgment of reason.

Reply Obj 1. The flesh lusts against the spirit by the rebellion of the passions against reason, which could not occur in the state of innocence.

Reply Obj. 2. The human body was impassible in the state of innocence as regards the passions which alter the disposition of nature, as will be explained later on (Q. XCVII, A. 2) Likewise the soul was impassible as regards the passions which hinder reason.

Reply Obj 3. Perfection of moral virtue does not wholly take away the passions, but regulates them; for "the temperate man desires as he ought to desire, and what he ought to desire," as stated in the *Ethics*.[1]

ARTICLE 3. *Whether Adam Had All the Virtues?*

We proceed thus to the Third Article: It would seem that Adam had not all the virtues

Objection 1. For some virtues are directed to curb the passions. Thus immoderate concupiscence is restrained by temperance, and immoderate fear by fortitude. But in the state of innocence no immoderation existed in the passions. Therefore neither did these virtues then exist.

Obj. 2. Further, some virtues are concerned with the passions which have evil as their object; as meekness with anger, fortitude with fear. But these passions did not exist in the state of innocence, as stated above (A. 2) Therefore neither did those virtues exist then.

Obj. 3. Further, penance is a virtue that regards sin committed. Mercy, too, is a virtue concerned with unhappiness But in the state of innocence neither sin nor unhappiness existed. Therefore neither did those virtues exist.

Obj. 4. Further, perseverance is a virtue. But Adam did not possess perseverance, as is proved by his subsequent sin. Therefore he did not possess every virtue.

Obj. 5. Further, faith is a virtue. But it did not exist in the state of innocence, for it implies an obscurity of knowledge which seems to be incompatible with the perfection of the primitive state.

On the contrary, Augustine says, in a homily (*Serm. contra Judæos*).[2] "The prince of sin overcame Adam who was made from the slime of the earth to the image of God, adorned with modesty, restrained by temperance, refulgent with brightness."

I answer that, in the state of innocence man in a certain sense possessed all the virtues; and this can be proved from what precedes. For it was shown above (A 1) that such was the rectitude of the primitive state that reason was subject to God, and the lower powers to reason. Now the virtues are nothing but those perfections by which reason is directed to God, and the inferior powers regulated according to the dictate of reason, as will be explained in the Treatise on the Virtues (Part I-II, Q LXIII, A. 2) [3] Therefore the rectitude of the primitive state required that man should in a sense possess every virtue.

It must, however, be noted that some virtues of their very notion do not involve imperfection, such as charity and justice And these virtues did exist in the primitive state absolutely, both in habit and in act. But other virtues are of such a nature as to imply imperfection either in their act, or on the part of the matter If such imperfection be consistent with the perfection of the primitive state, such virtues could then exist in that state, as faith, which is of things not seen, and hope which is of things not yet possessed. For the perfection of that state did not extend to the vision of the Divine Essence, and the possession of God with the enjoyment of final Happiness. Hence faith and hope could exist in the primitive state, both as to habit and as to act. But any virtue which implies imperfection incompatible with the perfection of the primitive state could exist in that state as a habit, but not as to the act; for instance, penance, which is sorrow for sin committed, and mercy, which is sorrow for others' unhappiness; because sorrow, guilt, and unhappiness are incompatible with the perfection of the primitive state Therefore such virtues existed as habits in the first man, but not as to their acts; for he was so disposed that he would repent, if there had been a sin to repent for, and had he seen unhappiness in his neighbour, he would have done his best to remedy it. This is in accordance with what the Philosopher says, "Shame," which regards what is ill done, "may be found in a virtuous man, but only conditionally, as being so disposed that he would be ashamed if he did wrong."[4]

Reply Obj. 1. It is accidental to temperance

[1] Aristotle, III, 12 (1119^b16).

[2] C. II Falsely attributed to Augustine (PL 42, 1117). Cf. Peter Lombard, *Sent.*, II, d 29, chap. 2 (QR I, 457).

[3] Cf. also Q. LVI, AA. 4, 6.

[4] *Ethics*, IV, 9 (1128^b29).

and fortitude to subdue superabundant passion, in so far as they are in a subject which happens to have superabundant passions; and yet those virtues are *per se* suited to moderate the passions.

Reply Obj. 2. Passions which have evil for their object were incompatible with the perfection of the primitive state if that evil be in the one affected by the passion, such as fear and sorrow. But passions which relate to evil in another are not incompatible with the perfection of the primitive state, for in that state man could hate the demons' malice, as he could love God's goodness. Thus the virtues which relate to such passions could exist in the primitive state, in habit and in act. Virtues, however, relating to passions which regard evil in the same subject, if relating to such passions only, could not exist in the primitive state in act, but only in habit, as we have said above of penance and of mercy. But there are other virtues which have relation not to such passions only, but to others also; such as temperance, which relates not only to sorrow, but also to joy; and fortitude, which relates not only to fear, but also to daring and hope. Thus the act of temperance could exist in the primitive state, so far as it moderates pleasure; and in like manner fortitude, as moderating daring and hope, but not as moderating sorrow and fear.

Reply Obj 3 appears from what has been said above.

Reply Obj. 4. Perseverance may be taken in two ways. In one sense as a particular virtue, signifying a habit by which a man makes a choice of persevering in good. In that sense Adam possessed perseverance. In another sense it is taken as a circumstance of virtue, signifying a certain uninterrupted continuation of virtue. In this sense Adam did not possess perseverance

Reply Obj 5 appears from what has been said above.

ARTICLE 4. *Whether the Actions of the First Man Were Less Meritorious Than Ours Are?*

We proceed thus to the Fourth Article: It would seem that the actions of the first man were less meritorious than ours are.

Objection 1. For grace is given to us through the mercy of God, Who succours most those who are most in need. Now we are more in need of grace than was man in the state of innocence. Therefore grace is more copiously poured out upon us And since grace is the source of merit, our actions are more meritorious.

Obj. 2. Further, struggle and difficulty are required for merit; for it is written (II Tim. 2. 5): *He . . . is not crowned except he strive lawfully;* and the Philosopher says,[1] "The object of virtue is the difficult and the good." But there is more strife and difficulty now. Therefore there is greater efficacy for merit

Obj. 3. Further, the Master says (*2 Sent*, D. XXIV)[2] that man would not have merited in resisting temptation, whereas he does merit now, when he resists. Therefore our actions are more meritorious than in the primitive state.

On the contrary, if such were the case, man would be better off after sinning.

I answer that, Merit as regards degree may be gauged in two ways. First, in its root, which is grace and charity. Merit thus measured corresponds in degree to the essential reward, which consists in the enjoyment of God; for the greater the charity from which our actions proceed, the more perfectly shall we enjoy God. Secondly, the degree of merit is measured by the degree of the action itself. This degree is of two kinds, absolute and proportional. The widow who put two mites into the treasury performed a deed of absolutely less degree than others who put in great sums. But in proportionate degree the widow gave more, as Our Lord said, because she gave more in proportion to her means. In each of these cases the degree of merit corresponds to the accidental reward, which consists in rejoicing for created good.

We conclude therefore that in the state of innocence man's works were more meritorious than after sin was committed, if we consider the degree of merit on the part of grace, which would have been more copious as meeting with no obstacle in human nature. And in like manner, if we consider the absolute degree of the work done, because, as man would have had greater virtue, he would have performed greater works. But if we consider the proportionate degree, a greater reason for merit exists after sin, on account of man's weakness; because a small deed is more beyond the capacity of one who works with difficulty than a great deed is beyond one who performs it easily.

Reply Obj. 1. After sin man requires grace for more things than before sin, but he does not need grace more, because man even before sin required grace to obtain eternal life, which is the chief reason for the need of grace. But after sin man required grace also for the remission of sin, and for the support of his weakness.

[1] *Ethics*, II, 3 ($1105^{a}9$).
[2] Chap 1 (QR 1, 420).

Reply Obj. 2. Difficulty and struggle belong to the degree of merit according to the proportionate degree of the work done, as explained above. It is also a sign of the will's promptitude that it strive after what is difficult to itself, and the promptitude of the will is caused by the intensity of charity. Yet it may happen that a person performs an easy deed with as prompt a will as another performs an arduous deed, because he is ready to do even what may be difficult to him. But the actual difficulty, by its penal character, enables the deed to satisfy for sin.

Reply Obj. 3. The first man would not have gained merit in resisting temptation, according to the opinion of those who say that he did not possess grace,[1] even as now there is no merit to those who have not grace. But in this point there is a difference, because in the primitive state there was no interior impulse to evil, as in our present state. Hence man was more able then than now to resist temptation even without grace.

QUESTION XCVI

OF THE MASTERSHIP BELONGING TO MAN IN THE STATE OF INNOCENCE

(In Four Articles)

WE next consider the mastership which belonged to man in the state of innocence. Under this head there are four points of inquiry: (1) Whether man in the state of innocence was master over the animals? (2) Whether he was master over all creatures? (3) Whether in the state of innocence all men were equal? (4) Whether in that state man would have been master over men?

ARTICLE 1. *Whether Adam in the State of Innocence Had Mastership over the Animals?*

We proceed thus to the First Article: It would seem that in the state of innocence Adam had no mastership over the animals.

Objection 1. For Augustine says (*Gen. ad lit.* IX, 14),[2] that the animals were brought to Adam, under the direction of the angels, to receive their names from him. But the angels need not have intervened thus if man himself were master over the animals. Therefore in the state of innocence man had no mastership of the animals.

Obj. 2. Further, it is unfitting that elements hostile to one another should be brought under the mastership of one. But many animals are hostile to one another, as the sheep and the wolf. Therefore all animals were not brought under the mastership of man.

Obj. 3 Further, Jerome says[3] that God gave man mastership over the animals, although before sin he had no need of them, for God foresaw that after sin animals would become useful to man. Therefore, at least before sin, it was unfitting for man to make use of his mastership.

Obj. 4. Further, it is proper to a master to command. But a command is not given rightly except to a rational being. Therefore man had no mastership over the irrational animals.

On the contrary, It is written (Gen. 1. 26): *Let him have dominion over the fishes of the sea, and the birds of the air, and the beasts of the earth* (Vulg., *and the whole earth*).

I answer that, As above stated (Q. XCV, A. 1) for his disobedience to God, man was punished by the disobedience of those creatures which should be subject to him. Therefore in the state of innocence, before man had disobeyed, nothing disobeyed him that was naturally subject to him. Now all animals are naturally subject to man. This can be proved in three ways. First, from the order observed by nature. For just as in the generation of things we perceive a certain order of procession of the perfect from the imperfect (thus matter is for the sake of form, and the imperfect form for the sake of the perfect), so also is there order in the use of natural things. Thus the imperfect are for the use of the perfect; as the plants make use of the earth for their nourishment, and animals make use of plants, and man makes use of both plants and animals. Therefore it is in keeping with the order of nature, that man should be master over animals. Hence the Philosopher says[4] that "the hunting of wild animals is just and natural," because man thereby exercises a natural right. Secondly, this is proved from the order of Divine Providence which always governs inferior things by the superior. Therefore, as man, being made to the image of God, is above other animals, these are rightly subject to his government. Thirdly, this is proved from a property of man and of other animals. For we see in the latter a certain participated prudence of natural estimation, in regard to certain particular acts; but man possesses a universal prudence as regards all practical matters. Now whatever is participated is subject to what is essential and universal. Therefore it is clear that the subjection of other animals to man is natural.

Reply Obj. 1. A higher power can do many

[1] See above, A. 1. [2] PL 34, 402.

[3] Bede, *Hexaem,* I, on Gen. 1, 26 (PL 91, 200).

[4] *Politics,* I, 8 (1256^{b}24).

things that an inferior power cannot do to those which are subject to them. Now an angel is naturally higher than man. Therefore certain things in regard to animals could be done by angels, which could not be done by man; for instance, the rapid gathering together of all the animals.

Reply Obj. 2. In the opinion of some,[1] those animals which now are fierce and kill others, would, in that state, have been tame, not only in regard to man, but also in regard to other animals. But this is quite unreasonable. For the nature of animals was not changed by man's sin, as if those whose nature now it is to devour the flesh of others would then have lived on herbs, as the lion and falcon. Nor does Bede's gloss on Gen. 1. 30,[2] say that trees and herbs were given as food to all animals and birds, but to some. Thus there would have been a natural antipathy between some animals. They would not, however, on this account have been excepted from the mastership of man, as neither at present are they for that reason excepted from the mastership of God, Whose Providence has ordained all this. Of this Providence man would have been the executor, as appears even now in regard to domestic animals, since fowls are given by men as food to the trained falcon.

Reply Obj. 3. In the state of innocence man would not have had any bodily need of animals; neither for clothing, since then they were naked and not ashamed, there being no inordinate motions of concupiscence, nor for food, since they fed on the trees of paradise, nor to carry him about, his body being strong enough for that purpose. But man needed animals in order to have experimental knowledge of their natures. This is signified by the fact that God led the animals to man, that he might give them names expressive of their respective natures.

Reply Obj. 4. All animals by their natural estimative sense have a certain participation of prudence and reason; which accounts for the fact that cranes follow their leader, and bees obey their queen. So all animals would have obeyed man of their own accord, as in the present state some domestic animals obey him.

ARTICLE 2. *Whether Man Had Mastership over All Other Creatures?*

We proceed thus to the Second Article: It would seem that in the state of innocence man would not have had mastership over all other creatures.

Objection 1. For an angel naturally has a greater power than man. But, as Augustine says (*De Trin.* iii, 8),[3] corporeal matter would not have obeyed even the holy angels. Much less therefore would it have obeyed man in the state of innocence.

Obj. 2. Further, the only powers of the soul existing in plants are nutritive, augmentative, and generative. Now these do not naturally obey reason, as we can see in the case of any one man Therefore, since it is by his reason that man has mastership, it seems that in the state of innocence man had no dominion over plants.

Obj. 3. Further, whosoever is master of a thing, can change it. But man could not have changed the course of the heavenly bodies, for this belongs to God alone, as Dionysius says (*Ep. ad Polycarp,* vii).[4] Therefore man had no dominion over them.

On the contrary, It is written (Gen 1. 26): *That he may have dominion over . . . every creature.*

I answer that, Man in a certain sense contains all things; and so according as he is master of what is within himself, in the same way he can have mastership over other things. Now we may consider four things in man: his reason, which makes him like the angels; his sensitive powers, which make him like the animals; his natural powers, which make him like the plants; and the body itself, wherein he is like inanimate things. Now in man reason has the position of a master and not of a subject Therefore man had no mastership over the angels in the primitive state; so when we read *all creatures,* we must understand the creatures which are not made to God's image. Over the sensitive powers, such as the irascible and concupiscible, which obey reason in some degree, the soul has mastership by commanding. So in the state of innocence man had mastership over the animals by commanding them. But of the natural powers and the body itself man is master not by commanding, but by using them. Thus also in the state of innocence man's mastership over plants and inanimate things consisted not in commanding or in changing them, but in making use of them without hindrance.

The *answers to the objections* appear from the above.

[3] PL 42, 875.

[4] Sect. 2 (PG 3, 1080).

ARTICLE 3. *Whether Men Were Equal in the State of Innocence?*

We proceed thus to the Third Article: It would seem that in the state of innocence all would have been equal.

Objection 1. For Gregory says (*Moral* xxi):[1] "Where there is no sin, there is no inequality." But in the state of innocence there was no sin. Therefore all were equal.

Obj. 2. Further, likeness and equality are the reason of mutual love, according to Ecclus. 13. 19, *Every beast loveth its like; so also every man him that is nearest to himself.* Now in that state there was among men an abundance of love, which is the bond of peace. Therefore all were equal in the state of innocence.

Obj. 3. Further, the cause ceasing, the effect also ceases. But the cause of present inequality among men seems to arise, on the part of God, from the fact that He rewards some for merit and punishes others; and on the part of nature, from the fact that some, through a defect of nature, are born weak and deficient, others strong and perfect, which would not have been the case in the primitive state.

On the contrary, It is written (Rom. 13. 1): *The things which are of God, are well ordered* (Vulg., *Those that are, are ordained of God*). But order chiefly consists in inequality; for Augustine says,[2] "Order disposes things equal and unequal in their proper place." Therefore in the primitive state, which was most proper and orderly, inequality would have existed.

I answer that, We must admit that in the primitive state there would have been some inequality, at least as regards sex, because generation depends upon diversity of sex. And likewise as regards age, for some would have been born of others, nor would sexual union have been sterile.

Moreover, as regards the soul, there would have been inequality as to justice and knowledge. For man worked not of necessity, but of his own free choice, by virtue of which man can apply himself, more or less, to action, desire, or knowledge. Hence some would have made a greater advance in justice and knowledge than others.

There might also have been bodily disparity. For the human body was not entirely exempt from the laws of nature, so as not to receive from exterior sources more or less advantage and help, since indeed it was dependent on food with which to sustain life.

So we may say that, according to the climate, or the movement of the stars, some would have been born more robust in body than others, and also greater, and more beautiful, and in all ways better disposed; in such a way, however, in those who were thus surpassed, there would have been no defect or fault either in soul or body.

Reply Obj. 1. By those words Gregory means to exclude such inequality as exists between justice and sin, the result of which is that some are placed in subjection to others as a penalty.

Reply Obj. 2. Equality is the cause of equality in mutual love. Yet between those who are unequal there can be a greater love than between equals, although there may not be an equal response; for a father naturally loves his son more than a brother loves his brother, although the son may not love his father as much as he is loved by him.

Reply Obj. 3. The cause of inequality could be on the part of God; not indeed that He would punish some and reward others, but that He would exalt some above others, so that the beauty of order would the more shine forth among men. Inequality might also arise on the part of nature as above described, without any defect of nature.

ARTICLE 4. *Whether in the State of Innocence Man Would Have Been Master over Man?*

We proceed thus to the Fourth Article: It would seem that in the state of innocence man would not have been master over man.

Objection 1. For Augustine says,[3] "God willed that man, who was endowed with reason and made to His image, should rule over none but irrational creatures; not over men, but over cattle."

Obj. 2. Further, what came into the world as a penalty for sin would not have existed in the state of innocence. But man was made subject to man as a penalty; for after sin it was said to the woman (Gen. 3. 16): *Thou shalt be under thy husband's power.* Therefore in the state of innocence man would not have been subject to man.

Obj. 3. Further, subjection is opposed to liberty. But liberty is one of the chief goods, and would not have been lacking in the state of innocence, "where nothing was wanting that man's good-will could desire," as Augustine says.[4] Therefore man would not have been master over man in the state of innocence.

[1] Chap. 15 (PL 76, 203).
[2] *City of God,* XIX, 13 (PL 41, 640).
[3] *Ibid.,* XIX, 15 (PL 41, 643).
[4] *Ibid.,* XIV, 10 (PL 41, 417).

On the contrary, The condition of man in the state of innocence was not more exalted than the condition of the angels. But among the angels some rule over others; and so one order is called that of Dominations. Therefore it was not against the dignity of the state of innocence that one man should be subject to another.

I answer that, Mastership has a twofold meaning. First, as opposed to slavery, in which sense a master means one to whom another is subject as a slave. In another sense mastership is referred in a general sense to any kind of subject, and in this sense even he who has the office of governing and directing free men can be called a master. In the state of innocence man could have been a master of men, not in the former but in the latter sense.

This distinction is founded on the reason that a slave differs from a free man in that the latter "has the disposal of himself," as is stated in the beginning of the *Metaphysics,*[1] but a slave is ordered to another. So that one man is master of another as his slave when he refers the one whose master he is, to his own—namely, the master's, use. And since every man's proper good is desirable to himself, and consequently it is a grievous matter to anyone to yield to another what ought to be one's own, therefore such dominion implies of necessity a pain inflicted on the subject. And therefore in the state of innocence such a mastership could not have existed between man and man.

But a man is the master of a free subject by directing him either towards his proper welfare, or to the common good. Such a kind of mastership would have existed in the state of innocence between man and man, for two reasons. First, because man is naturally a social animal, and so in the state of innocence he would have led a social life. Now a social life cannot exist among a number of people unless under the headship of one to look after the common good; for many, as such, seek many things, but one attends only to one. Therefore the Philosopher says, in the beginning of the *Politics,*[2] that "wherever many things are directed to one, we shall always find one at the head directing them." Secondly, if one man surpassed another in knowledge and justice, this would not have been fitting unless these gifts conduced to the benefit of others, according to I Pet. 4. 10, *As every man hath received grace, ministering the same one to another.* Therefore Augustine says,[3] "Just men command not by the love of domineering, but by the service of counsel. The natural order of things requires this; and thus did God make man."

From this appear the *replies to the objections* which are founded on the first-mentioned kind of mastership.

QUESTION XCVII

OF THE PRESERVATION OF THE INDIVIDUAL IN THE PRIMITIVE STATE

(In Four Articles)

WE next consider what belongs to the bodily state of the first man: first, as regards the preservation of the individual; secondly, as regards the preservation of the species (Q XCVIII).

Under the first head there are four points of inquiry: (1) Whether man in the state of innocence was immortal? (2) Whether he was impassible? (3) Whether he stood in need of food? (4) Whether he would have obtained immortality by the tree of life?

ARTICLE 1. *Whether in the State of Innocence Man Would Have Been Immortal?*

We proceed thus to the First Article: It would seem that in the state of innocence man was not immortal.

Objection 1. For the term mortal belongs to the definition of man. But if you take away the definition, you take away the thing defined. Therefore as long as man was man he could not be immortal.

Obj. 2. Further, "corruptible and incorruptible are generically distinct," as the Philosopher says[4] But there can be no passing from one genus to another. Therefore if the first man was incorruptible, man could not be corruptible in the present state.

Obj. 3. Further, if man were immortal in the state of innocence, this would have been due either to nature or to grace. Not to nature, for since nature does not change within the same species, he would also have been immortal now. Likewise neither would this be owing to grace, for the first man recovered grace by repentance, according to Wisdom 10. 2: *He brought him out of his sins.* Hence he would have regained his immortality, which is clearly not the case. Therefore man was not immortal in the state of innocence.

Obj. 4. Further, immortality is promised to man as a reward, according to Apoc. 21. 4: *Death shall be no more.* But man was not created in the state of reward, but that he might

[1] Aristotle, I, 2 (982^b26). [2] I, 5 (1254^a28).
[3] *City of God,* XIX, 14 (PL 41, 643).
[4] *Metaphysics,* X, 10 (1058^b28).

deserve the reward. Therefore man was not immortal in the state of innocence.

On the contrary, It is written (Rom. 5. 12): *By sin death came into the world.* Therefore man was immortal before sin.

I answer that, A thing may be incorruptible in three ways. First, on the part of matter; that is to say, either because it possesses no matter, like an angel, or because it possesses matter that is in potency to one form only, like the heavenly bodies. Such things as these are incorruptible by their very nature. Secondly, a thing is incorruptible in its form, because although it is by nature corruptible, yet it has an inherent disposition which preserves it wholly from corruption. And this is called incorruptibility of glory, because, as Augustine says (*Ep. ad Dioscor.*):[1] "God made man's soul of such a powerful nature that from its fulness of beatitude there redounds to the body a fulness of health, with the vigour of incorruption." Thirdly, a thing may be incorruptible on the part of its efficient cause; in this sense man was incorruptible and immortal in the state of innocence. For, as Augustine says (QQ. *Vet. et Nov. Test., qu.* 19):[2] "God made man immortal as long as he did not sin, so that he might achieve for himself life or death." For man's body was indissoluble not by reason of any intrinsic vigour of immortality, but by reason of a supernatural force given by God to the soul, by which it was enabled to preserve the body from all corruption so long as it remained itself subject to God. This entirely agrees with reason, for since the rational soul surpasses the capacity of corporeal matter, as above explained (Q. LXXVI, A. 1), it was most properly endowed at the beginning with the power of preserving the body in a manner surpassing the capacity of corporeal matter.

Reply Obj. 1 and 2. These objections are founded on natural incorruptibility and immortality.

Reply Obj. 3. This power of preserving the body was not natural to the soul, but was the gift of grace. And though man recovered grace as regards remission of guilt and the merit of glory, yet not as regards his lost immortality; for this was reserved for Christ to accomplish, by Whom the defect of nature was to be restored into something better, as we shall explain further on (Part III, Q. XIV, A. 4, Ans. 1).

Reply Obj. 4. The promised reward of the immortality of glory differs from the immortality which was bestowed on man in the state of innocence.

[1] *Epist.*, 118, chap. 3 (PL 33, 439).
[2] Cf. Ambrosiaster (PL 35, 2227).

ARTICLE 2. *Whether in the State of Innocence Man Would Have Been Passible?*

We proceed thus to the Second Article: It would seem that in the state of innocence man was passible.

Objection 1. For sensation is a kind of passion. But in the state of innocence man would have been sensitive. Therefore he would have been passible.

Obj. 2. Further, sleep is a kind of passion. Now, man slept in the state of innocence, according to Gen. 2. 21, *God cast a deep sleep upon Adam.* Therefore he would have been passible.

Obj. 3. Further, the same passage goes on to say that He *took a rib out of Adam.* Therefore he was passible even to the degree of the cutting out of part of his body.

Obj. 4. Further, man's body was soft. But a soft body is naturally passible as regards a hard body. Therefore if a hard body had come in contact with the soft body of the first man, the latter would have suffered from the impact. Therefore the first man was passible.

On the contrary, Had man been passible, he would have been also corruptible, because excessive suffering wastes the very substance.

I answer that, Passion may be taken in two senses. First, in its proper sense, and thus a thing is said to suffer when changed from its natural disposition. For passion is the effect of action, and in nature contraries are mutually active or passive, according as one thing changes another from its natural disposition. Secondly, passion can be taken in a general sense for any kind of change, even if pertains to the perfection of nature. Thus "understanding and sensation are said to be passions."[3] In this second sense, man was passible in the state of innocence, and was passible both in soul and body. In the first sense, man was impassible, both in soul and body, as he was likewise immortal; for he could curb his passion, as he could avoid death, so long as he refrained from sin.

Thus it is clear how to *reply to the first two objections,* since sensation and sleep do not remove from man his natural disposition, but are ordered to the good of nature.

Reply Obj. 3. As already explained (Q. XCII, A. 3, Ans. 2), the rib was in Adam as the principle of the human race, as the semen in man, who is a principle through generation. Hence as

[3] Aristotle, *Soul,* III, 4 (429°13).

man does not suffer any natural deterioration by seminal issue, so neither did he through the separation of the rib.

Reply Obj. 4. Man's body in the state of innocence could be preserved from suffering injury from a hard body partly by the use of his reason, by which he could avoid what was harmful, and partly also by Divine Providence, so preserving him that nothing of a harmful nature could come upon him unawares

ARTICLE 3. *Whether in the State of Innocence Man Had Need of Food?*

We proceed thus to the Third Article: It would seem that in the state of innocence man did not require food.

Objection 1. For food is necessary for man to restore what he has lost. But Adam's body suffered no loss, because it was incorruptible. Therefore he had no need of food.

Obj. 2. Further, food is needed for nourishment. But nourishment involves passibility. Since, then, man's body was impassible, it does not appear how food could be necessary to him.

Obj. 3. Further, we need food for the preservation of life. But Adam could preserve his life otherwise; for had he not sinned, he would not have died. Therefore he did not require food.

Obj. 4 Further, the consumption of food involves voiding of the surplus, which seems unsuitable to the state of innocence. Therefore it seems that man did not take food in the primitive state.

On the contrary, It is written (Gen. 2. 16): *Of every tree in Paradise ye shall* (Vulg., *thou shalt*) *eat.*

I answer that, In the state of innocence man had an animal life requiring food, but after the resurrection he will have a spiritual life needing no food. In order to make this clear, we must observe that the rational soul is both soul and spirit. It is called a soul by reason of what it possesses in common with other souls—that is, as giving life to the body. And so it is written (Gen. 2. 7): *Man was made into a living soul;* that is, a soul giving life to the body. But the soul is called a spirit according to what properly belongs to itself, and not to other souls, as possessing an intellectual immaterial power.

Thus in the primitive state, the rational soul communicated to the body what belonged to itself as a soul; and so the body was called animal,[1] through having its life from the soul. Now the first principle of life in these lower creatures as the Philosopher says[2] is the vegetative soul, the operations of which are the use of food, generation, and growth. Therefore such operations befitted man in the state of innocence. But in the final state, after the resurrection, the soul will, to a certain extent, communicate to the body what properly belongs to itself as a spirit: immortality to everyone; to the good, whose bodies will be called *spiritual,*[3] impassibility, glory, and power. So, after the resurrection, man will not require food; though he required it in the state of innocence.

Reply Obj. 1. As Augustine says (QQ. *Vet. et Nov. Test., qu.* 19):[4] "How could man have an immortal body, which was sustained by food? Since an immortal being needs neither food nor drink." For we have explained (A. 1) that the immortality of the primitive state was based on a supernatural force in the soul, and not on any intrinsic disposition of the body. Thus by the action of heat, the body might lose part of its humid qualities; and to prevent the entire consumption of the humour, man was obliged to take food.

Reply Obj. 2. A certain passion and alteration attends nutriment on the part of the food changed into the substance of the thing nourished. So we cannot conclude from this that man's body was passible, but that the food taken was passible; although also this kind of passion conduced to the perfection of the nature.

Reply Obj. 3. If man had not taken food he would have sinned, as he also sinned by taking the forbidden fruit. For he was told at the same time to abstain from the tree of the knowledge of good and evil and to eat of every other tree of Paradise.

Reply Obj. 4. Some say[5] that in the state of innocence man would not have taken more than necessary food, so that there would have been nothing superfluous. But this seems unreasonable, as implying that there would have been no fæcal matter. Therefore there was need for voiding the surplus, yet so disposed by God as to be fitting to the state.

ARTICLE 4. *Whether in the State of Innocence Man Would Have Acquired Immortality by the Tree of Life?*

We proceed thus to the Fourth Article: It would seem that the tree of life could not be the cause of immortality.

Objection. 1. For nothing can act beyond its

[1] From *anima,* a soul; cf. I Cor. 15.44 ff.

[2] *Soul,* II, 4 ($415^{a}23$); also, III, 9 ($432^{b}8$). [3] I Cor. 15.44.

[4] Ambrosiaster (PL 35, 2227). [5] Cf. Alexander of Hales, *Summa Theol.,* I-II, n. 457 (QR II, 592).

own species, for an effect does not exceed its cause. But the tree of life was corruptible; otherwise it could not be taken as food, since food is changed into the substance of the thing nourished as we have said (A. 3, ANS. 2). Therefore the tree of life could not give incorruptibility or immortality.

Obj. 2. Further, effects caused by the powers of plants and other natural agencies are natural. If therefore the tree of life caused immortality, this would have been natural immortality.

Obj. 3. Further, this would seem to be reduced to the ancient fable, that the gods by eating a certain food, became immortal, which the Philosopher ridicules.[1]

On the contrary, It is written (Gen. 3. 22): *Lest perhaps he put forth his hand, and take of the tree of life, and eat, and live for ever.* Further Augustine says (QQ. *Vet. et Nov. Test., qu.* 19):[2] "A taste of the tree of life warded off corruption of the body; and even after sin man would have remained immortal, had he been allowed to eat of the tree of life."

I answer that, The tree of life in a certain way was the cause of immortality, but not absolutely. To understand this, we must observe that in the primitive state man possessed, for the preservation of life, two remedies, against two defects. One of these defects was the loss of moisture by the action of natural heat, which acts as the soul's instrument. As a remedy against such loss man was provided with food taken from the other trees of paradise, as now we are provided with the food which we take for the same purpose. The second defect, as the Philosopher says,[3] arises from the fact that the humour which is caused from extraneous sources, when added to the humour already existing, lessens the specific active power; as water added to wine takes at first the taste of wine, then, as more water is added, the strength of the wine is diminished, till the wine becomes watery. In like manner, we may observe that at first the active force of the species is so strong that it is able to transform so much of the food as is required to replace the lost tissue, as well as what suffices for growth; later on, however, the assimilated food does not suffice for growth, but only replaces what is lost. Last of all, in old age, it does not suffice even for this purpose, whereupon the body declines, and finally breaks up. Against this defect man was provided with a remedy in the tree of life, for its effect was to strengthen the force of the species against the weakness resulting from the admixture of extraneous nutriment. Therefore Augustine says,[4] "Man had food to appease his hunger, drink to slake his thirst, and the tree of life to banish the breaking up of old age"; and,[5] "The tree of life, like a medicine, warded off all bodily corruption."

Yet it did not absolutely cause immortality. For neither was the soul's intrinsic power of preserving the body due to the tree of life, nor was it able to give the body a disposition to immortality, by which it might become indissoluble; which is clear from the fact that every bodily power is finite, so that the power of the tree of life could not go so far as to give the body the power of living for an infinite time, but only for a definite time. For it is clear that the greater a force is, the more durable is its effect. Therefore, since the power of the tree of life was finite, man's life was to be preserved for a definite time by partaking of it once; and when that time had elapsed, man was to be either transferred to a spiritual life, or had need to eat once more of the tree of life.

From this the *replies to the objections* clearly appear. For the first proves that the tree of life did not absolutely cause immortality, while the others show that it caused incorruption by warding off corruption, according to the explanation above given.

QUESTION XCVIII

OF THE PRESERVATION OF THE SPECIES

(In Two Articles)

WE next consider what belongs to the preservation of the species; and, first, of generation; secondly, of the state of the offspring (Q. XCIX). Under the first head there are two points of inquiry: (1) Whether in the state of innocence there would have been generation? (2) Whether generation would have been through coition?

ARTICLE 1. *Whether in the State of Innocence Generation Existed?*

We proceed thus to the First Article: It would seem there would have been no generation in the state of innocence.

Objection 1. For, as stated in the *Physics,*[6] "corruption is contrary to generation." But contraries affect the same subject. And there would have been no corruption in the state of inno-

[1] *Metaphysics,* III, 4 (1000ᵃ12).
[2] Ambrosiaster (PL 35, 2227).
[3] *Generation and Corruption,* I, 5 (322ᵃ28).
[4] *City of God,* XIV, 26 (PL 41, 434).
[5] Ambrosiaster, QQ. *Vet. et Nov. Test.,* Q. 19 (PL 35 2228).
[6] Aristotle, V, 5 (229ᵇ12).

cence. Therefore neither would there have been generation.

Obj. 2. Further, the object of generation is the preservation in the species of that which cannot be preserved through the individual. Therefore there is no generation in those individual things which last for ever. But in the state of innocence man would have lived for ever. Therefore in the state of innocence there would have been no generation.

Obj. 3. Further, by generation man is multiplied. But the multiplication of masters requires the division of property, to avoid confusion of mastership. Therefore, since man was made master of the animals, it would have been necessary to make a division of overlordship when the human race increased by generation. This is against the natural law, according to which all things are in common, as Isidore says (*Etym.* v, 4).[1] Therefore there would have been no generation in the state of innocence.

On the contrary, It is written (Gen. 1. 28): *Increase and multiply, and fill the earth.* But this increase could not come about save by generation, since the original number of mankind was two only. Therefore there would have been generation in the state of innocence.

I answer that, In the state of innocence there would have been generation of offspring for the multiplication of the human race; otherwise man's sin would have been very necessary, in order that such a great blessing be its result. We must, therefore, observe that man, by his nature, is established as it were midway between corruptible and incorruptible creatures, his soul being naturally incorruptible, while his body is naturally corruptible. We must also observe that nature's purpose appears to be different as regards corruptible and incorruptible things. For that seems to be the direct purpose of nature, which is invariable and perpetual, while what is only for a time is seemingly not the chief purpose of nature, but, as it were, subordinate to something else; otherwise, when it ceased to exist, nature's purpose would become void.

Therefore, since in things corruptible none is everlasting and permanent except the species, it follows that the chief purpose of nature is the good of the species, for the preservation of which natural generation is ordained. On the other hand, incorruptible substances survive not only in the species, but also in the individual; and so even the individuals are included in the chief purpose of nature.

Hence it pertains to man to beget offspring, on the part of the naturally corruptible body. But on the part of the soul, which is incorruptible, it is fitting that the multitude of individuals should be the direct purpose of nature, or rather of the Author of nature, Who alone is the Creator of the human soul. Therefore, to provide for the multiplication of the human race, He established the begetting of offspring even in the state of innocence.

Reply Obj. 1. In the state of innocence the human body was in itself corruptible, but it could be preserved from corruption by the soul. Therefore, since generation belongs to things corruptible, man was not to be deprived of it.

Reply Obj. 2. Although generation in the state of innocence might not have been required for the preservation of the species, yet it would have been required for the multiplication of the individual.

Reply Obj. 3. In our present state a division of possessions is necessary on account of the multiplicity of masters, since community of possession is a source of strife, as the Philosopher says.[2] In the state of innocence, however, the will of men would have been so ordered that without any danger of strife they would have used in common, according to each one's need, those things of which they were masters—a state of things to be observed even now among many good men.

ARTICLE 2. *Whether in the State of Innocence There Would Have Been Generation by Coition?*

We proceed thus to the Second Article: It would seem that generation by coition would not have existed in the state of innocence.

Objection 1. For, as Damascene says (*De Fid. Orth* ii, 11),[3] the first man in the terrestrial Paradise was "like an angel." But in the future state of the resurrection, when men will be like to the angels, *they shall neither marry nor be married,* as it is written Matt. 22. 30. Therefore neither in Paradise would there have been generation by coition.

Obj. 2. Further, our first parents were created at the age of perfect development Therefore, if generation by coition had existed before sin, they would have had intercourse while still in Paradise, which was not the case according to Scripture (Gen. 4. 1).

Obj. 3. Further, in carnal intercourse, more than at any other time, man becomes like the beasts, on account of the vehement delight which he takes therein; and so continency, by

[1] PL 82, 199.

[2] *Politics,* II, 5 (1263[a]21). PG 94, 916.

which man refrains from such pleasures, is praiseworthy. But man is compared to beasts by reason of sin, according to Psalm 48. 13: *Man, when he was in honour, did not understand; he is compared to senseless beasts, and is become like to them.* Therefore, before sin, there would have been no such intercourse of man and woman.

Obj. 4. Further, in the state of innocence there would have been no corruption. But virginal integrity is corrupted by intercourse. Therefore there would have been no such thing in the state of innocence.

On the contrary, God made man and woman before sin (Gen. 1. 2.). But nothing is void in God's works. Therefore, even if man had not sinned, there would have been such intercourse, to which the distinction of sex is ordained.

Moreover, we are told that woman was made to be a help to man (Gen. 2 18, 20). But she was not fitted to help man except in generation, because another man would have proved a more effective help in anything else. Therefore there would have been such generation also in the state of innocence.

I answer that, Some of the earlier doctors,[1] considering the nature of concupiscence as regards generation in our present state, concluded that in the state of innocence generation would not have been effected in the same way. Thus Gregory of Nyssa says (*De Hom. Opif.* xvii)[2] that in Paradise the human race would have been multiplied by some other means, just as the angels were multiplied without coition by the operation of the Divine Power. He adds that God made man male and female before sin because He foreknew the mode of generation which would take place after sin, which He foresaw.

But this is unreasonable. For what is natural to man was neither acquired nor forfeited by sin. Now it is clear that generation by coition is natural to man by reason of his animal life, which he possessed even before sin, as above explained (Q. XCVII, A. 3), just as it is natural to other perfect animals, as the corporeal members make it clear. So we cannot allow that these members would not have had a natural use, as other members had, before sin.

Thus, as regards generation by coition, there are, in the present state of life, two things to be considered. One, which comes from nature, is the union of man and woman; for in every act of generation there is an active and a passive principle. Therefore, since wherever there is distinction of sex, the active principle is male and the passive is female, the order of nature demands that for the purpose of generation there should be concurrence of male and female. The second thing to be observed is a certain deformity of excessive concupiscence, which in the state of innocence would not have existed, when the lower powers were entirely subject to reason. Therefore Augustine says,[3] "We must be far from supposing that offspring could not be begotten without concupiscence. All the bodily members would have been equally moved by the will, without ardent or wanton incentive, with calmness of soul and body."

Reply Obj. 1. In Paradise man would have been like an angel in his spirituality of mind, yet with an animal life in his body. After the resurrection man will be like an angel, spiritualized in soul and body. And so there is no parallel.

Reply Obj. 2. As Augustine says (*Gen. ad lit.* ix, 4),[4] our first parents did not come together in Paradise, because on account of sin they were ejected from Paradise shortly after the creation of the woman; or because, having received the general Divine command relative to generation, they awaited the special command relative to the time.

Reply Obj. 3. Beasts are without reason. In this way man becomes, as it were, like them in coition, because he cannot moderate concupiscence. In the state of innocence nothing of this kind would have happened that was not regulated by reason, not because delight of sense was less, as some say[5] (rather indeed would sensible delight have been the greater in proportion to the greater purity of nature and the greater sensibility of the body), but because the force of concupiscence would not have so inordinately thrown itself into such pleasure, being curbed by reason, whose place it is not to lessen sensual pleasure, but to prevent the force of concupiscence from cleaving to it immoderately By "immoderately" I mean going beyond the bounds of reason, just as a sober person does not take less pleasure in food taken in moderation than the glutton, but his concupiscence lingers less in such pleasures. This is what Augustine means by the words quoted, which do not exclude intensity of pleasure from the state of innocence, but

[1] John Chrysostom, *In Genesim,* XVI (PG 53, 126); XVIII (PG, 53, 153); John Damascene, *De Fide Ortho.,* II, 30 (PG 94, 976), IV, 24 (PG 94, 1208).

[2] PG 44, 189.

[3] *City of God,* XIV, 26 (PL 41, 434).

[4] PL 34, 395.

[5] Bonaventure, *In Sent.,* II, d. 20, A. 1, Q. 3 (QR II, 481); cf. also Alexander of Hales, *Summa Theol.,* I-II, n. 496 (QR II, 703).

the ardour of desire and restlessness of the soul. Therefore continence would not have been praiseworthy in the state of innocence, whereas it is praiseworthy in our present state, not because it removes fecundity, but because it excludes disordered desire. In that state fecundity would have been without lust.

Reply Obj. 4. As Augustine says,[1] In that state *intercourse would have been without prejudice to virginal integrity; thus would have remained intact, as it does in the menses. And just as in giving birth the mother was then relieved not by groans of pain, but by the instigations of maturity, so in conceiving, the union was one not of lustful desire, but of deliberate action.*

QUESTION XCIX

OF THE CONDITION OF THE OFFSPRING AS TO THE BODY

(In Two Articles)

WE must now consider the condition of the offspring—first, as regards the body; secondly, as regards justice (Q. CI); thirdly, in knowledge (Q. C). Under the first head there are two points of inquiry: (1) Whether in the state of innocence children would have had full powers of the body immediately after birth? (2) Whether all infants would have been of the male sex?

ARTICLE 1. *Whether in the State of Innocence Children Would Have Had Perfect Strength of Body As To the Use of Its Members Immediately after Birth?*

We proceed thus to the First Article: It would seem that in the state of innocence children would have had perfect strength of the body, as to the use of its members, immediately after birth.

Objection 1. For Augustine says (*De Pecc. Merit. et Remiss.* i, 38).[2] "This weakness of the body befits their weakness of mind." But in the state of innocence there would have been no weakness of mind. Therefore neither would there have been weakness of body in infants.

Obj. 2. Further, some animals at birth have sufficient strength to use their members. But man is nobler than other animals. Therefore much more is it natural to man to have strength to use his members at birth. And thus it appears to be a punishment of sin that he has not that strength.

Obj. 3. Further, inability to secure a proffered pleasure causes affliction. But if children had not full strength in the use of their limbs, they would often have been unable to procure something pleasurable offered to them. And so they would have been afflicted, which was not possible before sin. Therefore, in the state of innocence, children would not have been deprived of the use of their limbs.

Obj. 4. Further, the weakness of old age seems to correspond to that of infancy. But in the state of innocence there would have been no weakness of old age. Therefore neither would there have been such weakness in infancy.

On the contrary, Everything generated is first imperfect. But in the state of innocence children would have been begotten by generation. Therefore from the first they would have been imperfect in bodily size and power.

I answer that, By faith alone do we hold truths which are above nature, and what we believe rests on authority. Therefore, in making any assertion, we must be guided by the nature of things, except in those things which are above nature, and are made known to us by Divine authority Now it is clear that it is as natural as it is befitting to the principles of human nature that children should not have sufficient strength for the use of their limbs immediately after birth. Because in proportion to other animals man has naturally a larger brain. Therefore it is natural, on account of the considerable moisture of the brain in children that the nerves which are instruments of movement should not be apt for moving the limbs. On the other hand, no Catholic doubts it possible for a child to have, by Divine power, the use of its limbs immediately after birth.

Now we have it on the authority of Scripture that *God made man right* (Eccles. 7. 30), which rightness, as Augustine says,[3] consists in the perfect subjection of the body to the soul As, therefore, in the primitive state it was impossible to find in the human limbs anything contrary to man's well-ordered will, so was it impossible for those limbs to fail in executing the will's commands. Now the human will is well ordered when it tends to acts which are befitting to man. But the same acts are not befitting to man at every season of life We must, therefore, conclude that children would not have had sufficient strength for the use of their limbs for the purpose of performing every kind of act, but only for the acts befitting the state of infancy, such as suckling, and the like.

Reply Obj. 1. Augustine is speaking of the

[1] *City of God*, XIV, 26 (PL 41, 434).
[2] PL 44, 150.
[3] *City of God*, XIII, 13 (PL 41, 386); cf. also *De Pecc. Remiss. et Bapt. Parv.*, I, 16 (PL 44, 120).

weakness which we observe in children even as regards those acts which befit the state of infancy, as is clear from his preceding remark that "even when close to the breast, and longing for it, they are more apt to cry than to suckle."

Reply Obj. 2. The fact that some animals have the use of their limbs immediately after birth, is due not to their superiority, since more perfect animals are not so endowed, but to the dryness of the brain and to the operations proper to such animals being imperfect, so that a small amount of strength suffices them.

Reply Obj. 3 is clear from what we have said above. We may add that they would have desired nothing except with an ordered will, and only what was befitting to their state of life.

Reply Obj. 4. In the state of innocence man would have been born, yet not subject to corruption. Therefore in that state there could have been certain infantile defects which result from birth, but not senile defects leading to corruption.

ARTICLE 2. *Whether, in the Primitive State, Women Would Have Been Born?*

We proceed thus to the Second Article: It would seem that in the primitive state woman would not have been born.

Objection 1. For the Philosopher says[1] that "woman is a misbegotten male," as though she were a product outside the purpose of nature. But in that state nothing would have been unnatural in human generation. Therefore in that state women would not have been born.

Obj. 2. Further, every agent produces its like, unless prevented by insufficient power or the improper disposition of matter; thus a small fire cannot burn green wood. But in generation the active force is in the male. Since, therefore, in the state of innocence man's active force was not subject to defect, nor was there improper disposition of matter on the part of the woman, it seems that males would always have been born.

Obj. 3. Further, in the state of innocence generation is ordered to the multiplication of the human race. But the race would have been sufficiently multiplied by the first man and woman from the fact that they would have lived for ever. Therefore, in the state of innocence, there was no need for women to be born.

On the contrary, nature's process in generation would have been in harmony with the manner in which it was established by God. But God established male and female in human nature, as it is written (Gen. 1. and 2.). Therefore also in the state of innocence male and female would have been born.

I answer that, Nothing belonging to the completeness of human nature would have been lacking in the state of innocence. And as different grades belong to the perfection of the universe, so also diversity of sex belongs to the perfection of human nature. Therefore in the state of innocence, both sexes would have been begotten.

Reply Obj. 1. Woman is said to be a misbegotten male, as being a product outside the purpose of nature considered in the individual case, but not against the purpose of universal nature, as above explained (Q. XCII, A. 1, ANS. 2).

Reply Obj. 2. The generation of woman is not occasioned either by a defect of the active force or by an improper disposition of matter, as the objection supposes, but sometimes by an extrinsic accidental cause; thus the Philosopher says,[2] "The northern wind favours the generation of males, and the southern wind that of females"; sometimes also by some impression in the soul, which may easily have some effect on the body. Especially was this the case in the state of innocence, when the body was more subject to the soul, so that by the mere will of the parent the sex of the offspring might be diversified.

Reply Obj. 3. The offspring would have been begotten to an animal life, as to the use of food and generation. Hence it was fitting that all should generate, and not only the first parents. From this it seems to follow that males and females would have been in equal number.

QUESTION C

OF THE CONDITION OF THE OFFSPRING AS REGARDS JUSTICE

(In Two Articles)

WE now have to consider the condition of the offspring as to justice. Under this head there are two points of inquiry: (1) Whether men would have been born in a state of justice? (2) Whether they would have been born confirmed in justice?

ARTICLE 1. *Whether Men Would Have Been Born in a State of Justice?*

We proceed thus to the First Article: It would seem that in the state of innocence men would not have been born in a state of justice.

Objection 1. For Hugh of St. Victor says (*De*

[1] *Generation of Animals*, II, 3 (737^a27).

[2] *History of Animals*, VI, 19 (574^a1).

Sacram. i)[1] that before sin, the first man would have begotten children sinless, but not heirs to their father's justice.

Obj 2. Further, justice is effected by grace, as the Apostle says (Rom. 5. 16, 21). Now grace is not transfused from one to another, for thus it would be natural, but is infused by God alone. Therefore children would not have been born in a state of justice.

Obj. 3. Further, justice is in the soul. But the soul is not transmitted from the parent. Therefore neither would justice have been transmitted from parents to the children.

On the contrary, Anselm says (*De Concep. Virg.* x):[2] "As long as man did not sin, he would have begotten children endowed with justice together with the rational soul."

I answer that, Man naturally begets what is like himself in species. Hence whatever accidental qualities result from the nature of the species must be alike in parent and child, unless nature fails in its operation, which would not have occurred in the state of innocence. But individual accidents do not necessarily exist alike in parent and child. Now original justice, in which the first man was created, was an accident pertaining to the nature of the species, not as caused by the principles of the species, but as a gift conferred by God on the entire human nature. This is clear from the fact that opposites are of the same genus; and original sin, which is opposed to original justice, is called the sin of nature, and so it is transmitted from the parent to the offspring. And for this reason also, the children would have been like their parents as regards original justice.

Reply Obj 1. These words of Hugh are to be understood as referring not to the habit of justice, but to the execution of its act

Reply Obj. 2. Some say[3] that children would have been born not with the justice of grace, which is the principle of merit, but with original justice. But since the root of original justice, which conferred rectitude on the first man when he was made, consists in the supernatural subjection of the reason to God, which subjection results from sanctifying grace, as above explained (Q. XCV, A. 1), we must conclude that if children were born in original justice, they would also have been born in grace; thus we have said above that the first man was created in grace (*ibid.*). This grace, however, would not have been natural, for it would not have been transfused by virtue of the semen, but would have been conferred on man immediately on his receiving a rational soul. In the same way the rational soul, which is not transmitted by the parent, is infused by God as soon as the human body is disposed to receive it.

From this the *reply to the third objection* is clear.

ARTICLE 2. *Whether in the State of Innocence Children Would Have Been Born Confirmed in Justice?*

We proceed thus to the Second Article: It would seem that in the state of innocence children would have been born confirmed in justice.

Objection 1. For Gregory says (*Moral.* iv)[4] on the words of Job 3. 13: *For now I should have been asleep,* etc.: "If no sinful corruption had infected our first parent, he would not have begotten 'children of hell'; no children would have been born of him but such as were destined to be saved by the Redeemer." Therefore all would have been born confirmed in justice.

Obj. 2. Further, Anselm says (*Cur Deus Homo* i, 18)[5] that if our first parents "had lived so as not to yield to temptation, they would have been confirmed in grace, so that with their offspring they would have been unable to sin any more." Therefore the children would have been born confirmed in justice.

Obj. 3 Further, good is stronger than evil. But by the sin of the first man there resulted, in those born of him, the necessity of sin. Therefore, if the first man had persevered in justice, his descendants would have derived from him the necessity of preserving justice.

Obj 4 Further, the angels who remained faithful to God, while the others sinned, were at once confirmed in justice, so as to be unable henceforth to sin. In like manner, therefore, man would have been confirmed in justice if he had persevered. But he would have begotten children like himself. Therefore they also would have been born confirmed in justice.

On the contrary, Augustine says,[6] "Happy would have been the whole human race if neither they"—that is, our first parents—"had committed any evil to be transmitted to their descendants, nor any of their race had committed any sin for which they would have been condemned." From these words we gather that even if our first parents had not sinned, any of

[1] VI, 24 (PL 176, 278).
[2] PL 158, 444.
[3] Alexander of Hales, *Summa Theol.*, I-II, n. 499 (QR II, 712); n. 500 (QR II, 714).
[4] Chap 31 (PL 75, 671).
[5] PL 158, 387.
[6] *City of God,* XIV, 10 (PL 41, 417).

their descendants might have done evil, and therefore they would not have been born confirmed in justice.

I answer that, It does not seem possible that in the state of innocence children would have been born confirmed in justice. For it is clear that at their birth they would not have had greater perfection than their parents at the time of begetting. Now the parents, as long as they begot children, would not have been confirmed in justice. For the rational creature is confirmed in justice through the Happiness given by the clear vision of God; and when once it has seen God, it cannot but cleave to Him Who is the essence of goodness, from which no one can turn away, since nothing is desired or loved but under the aspect of good. I say this according to the general law, for it may be otherwise in the case of special privilege, such as we believe was granted to the Virgin Mother of God. And as soon as Adam had attained to that happy state of seeing God in His Essence, he would have become spiritual in soul and body, and his animal life would have ceased, in which alone there is generation. Hence it is clear that children would not have been born confirmed in justice.

Reply Obj. 1. If Adam had not sinned, he would not have begotten children of hell in the sense that they would contract from him sin which is the cause of hell. Yet by sinning of their own free choice they could have become children of hell. If, however, they did not become children of hell by falling into sin, this would not have been owing to their being confirmed in justice, but to Divine Providence preserving them free from sin.

Reply Obj. 2. Anselm does not say this by way of assertion, but only as an opinion, which is clear from his mode of expression as follows: "It seems that if they had lived," etc.

Reply Obj. 3 This argument is not conclusive, though Anselm seems to have been influenced by it, as appears from his words quoted above. For the necessity of sin incurred by the descendants would not have been such that they could not return to justice, which is the case only with the damned. Therefore neither would the parents have transmitted to their descendants the necessity of not sinning, which is only in the blessed.

Reply Obj. 4. There is no comparison between man and the angels; for man's free choice is changeable, both before and after choice, whereas the angel's is not changeable, as we have said above in treating of the angels (Q. LXIV, A. 2).

QUESTION CI

OF THE CONDITION OF THE OFFSPRING AS REGARDS KNOWLEDGE

(In Two Articles)

WE next consider the condition of the offspring as to knowledge. Under this head there are two points of inquiry: (1) Whether in the state of innocence children would have been born with perfect knowledge? (2) Whether they would have had perfect use of reason at the moment of birth?

ARTICLE 1. *Whether in the State of Innocence Children Would Have Been Born with Perfect Knowledge?*

We proceed thus to the First Article: It would seem that in the state of innocence children would have been born with perfect knowledge

Objection 1 For Adam would have begotten children like himself. But Adam was gifted with perfect knowledge (Q. XCIV, A. 3). Therefore children would have been born of him with perfect knowledge.

Obj. 2. Further, ignorance is a result of sin, as Bede says[1] (*cf.* Part I-II, Q LXXXV, AA. 1, 3). But ignorance is privation of knowledge. Therefore before sin children would have had perfect knowledge as soon as they were born.

Obj. 3. Further, children would have been gifted with justice from birth But knowledge is required for justice, since it directs our actions. Therefore they would also have been gifted with knowledge.

On the contrary, The human soul is naturally "like a blank tablet on which nothing is written," as the Philosopher says.[2] But the nature of the soul is the same now as it would have been in the state of innocence. Therefore the souls of children would have been without knowledge at birth.

I answer that, As above stated (Q. XCIX, A. 1), as regards belief in matters which are above nature, we rely on authority alone; and so, when authority is wanting, we must be guided by the ordinary course of nature. Now it is natural for man to acquire knowledge through the senses, as above explained (Q. LV, A. 2; Q. LXXXIV, A. 7), and the soul is united to the body because it needs it for its proper operation. And this would not be so if the soul were endowed at

[1] BEDE, *In Luc.*, III, on 10.30 (PL 92, 469); cf. also *Glossa ordin.*, on Luke, 10.30 (V, 153A).

[2] *Soul*, III, 4 (430[a]1).

birth with knowledge not acquired through the sensitive powers. We must conclude then, that in the state of innocence children would not have been born with perfect knowledge, but in course of time they would have acquired knowledge without difficulty by discovery or learning.

Reply Obj. 1. The perfection of knowledge was an individual accident of our first parent, so far as he was established as the father and instructor of the whole human race. Therefore he begot children like himself, not in that respect, but only in those accidents which were natural or conferred freely on the whole nature.

Reply Obj. 2. Ignorance is privation of knowledge due at some particular time, and this would not have been in children from their birth, for they would have possessed the knowledge due to them at that time. Hence, no ignorance would have been in them, but only nescience in regard to certain matters. Such nescience was even in the holy angels, according to Dionysius (*Cæl. Hier.* vii).[1]

Reply Obj. 3. Children would have had sufficient knowledge to direct them to deeds of justice, in which men are guided by universal principles of what is right; and this knowledge of theirs would have been much more complete than what we have now by nature, as likewise their knowledge of other universal principles.

ARTICLE 2. *Whether Children Would Have Had Perfect Use of Reason at Birth?*

We proceed thus to the Second Article: It would seem that children would have had perfect use of reason at birth.

Objection 1. For that children have not perfect use of reason in our present state is due to the soul being weighed down by the body, which was not the case in paradise, because, as it is written, *The corruptible body is a load upon the soul* (Wisd. 9. 15). Therefore, before sin and the corruption which resulted from sin, children would have had the perfect use of reason at birth.

Obj 2. Further, some animals at birth have the use of their natural powers, as the lamb at once flies from the wolf. Much more, therefore, would men in the state of innocence have had perfect use of reason at birth.

On the contrary, In all things produced by generation nature proceeds from the imperfect to the perfect. Therefore children would not have had the perfect use of reason from the very outset.

[1] Sect. 3 (PG 3, 209).

I answer that, As above stated (Q. LXXXIV, A. 7), the use of reason depends in a certain manner on the use of the sensitive powers. Therefore, while the senses are tied and the interior sensitive powers hampered, man has not the perfect use of reason, as we see in those who are asleep or delirious. Now the sensitive powers are powers of corporeal organs. And therefore, so long as the organs are hindered, the action of the powers is of necessity hindered also, and likewise, consequently, the use of reason. Now children are hindered in the use of these powers on account of the moisture of the brain; therefore they have perfect use neither of these powers nor of reason. Therefore, in the state of innocence, children would not have had the perfect use of reason, which they would have enjoyed later on in life. Yet they would have had a more perfect use than they have now, as to matters regarding that particular state, as explained above regarding the use of their limbs (Q. XCIX, A. 1).

Reply Obj 1. The corruptible body is a load upon the soul because it hinders the use of reason even in those matters which belong to man at all ages.

Reply Obj 2 Even other animals have not at birth such a perfect use of their natural powers as they have later on This is clear from the fact that birds teach their young to fly; and the like may be observed in other animals. Moreover a special impediment exists in man from the copious moisture of the brain, as we have said above (Q. XCIX, A. 1).

QUESTION CII

OF MAN'S ABODE, WHICH IS PARADISE

(In Four Articles)

WE next consider man's abode, which is paradise. Under this head there are four points of inquiry: (1) Whether paradise is a corporeal place? (2) Whether it is a place suitable for human habitation? (3) For what purpose was man placed in paradise? (4) Whether he should have been created in paradise?

ARTICLE 1. *Whether Paradise Is a Corporeal Place?*

We proceed thus to the First Article: It would seem that paradise is not a corporeal place.

Objection 1. For Bede says[2] that paradise reaches "to the lunar circle." But no earthly place answers that description, both because it

[2] Cf. *Glossa ordin*, on Gen. 2 8 (1, 36F); cf. also Peter Lombard, *Sent.*, II, d. 17, chap. 5 (QR 1, 386).

is contrary to the nature of the earth to be raised up so high, and because beneath the moon is the region of fire, which would consume the earth. Therefore paradise is not a corporeal place.

Obj. 2. Further, Scripture mentions four rivers as rising in paradise (Gen. 2. 10). But the rivers there mentioned have visible sources elsewhere, as is clear from the Philosopher.[1] Therefore paradise is not a corporeal place.

Obj. 3. Further, although men have explored the entire habitable world, yet none have made mention of the place of paradise [2] Therefore apparently it is not a corporeal place.

Obj. 4. Further, the tree of life is described as growing in paradise. But the tree of life is a spiritual thing, for it is written of Wisdom that *She is a tree of life to them that lay hold on her* (Prov. 3. 18). Therefore paradise also is not a corporeal, but a spiritual place.

Obj. 5. Further, if paradise be a corporeal place, the trees also of paradise must be corporeal. But it seems they were not, for corporeal trees were produced on the third day, while the planting of the trees of paradise is recorded after the work of the six days. Therefore paradise was not a corporeal place.

On the contrary, Augustine says (*Gen. ad lit.* viii, 1):[3] "Three general opinions prevail about paradise. Some understand a place merely corporeal; others a place entirely spiritual; while others, whose opinion, I confess, pleases me, hold that paradise was both corporeal and spiritual."

I answer that, As Augustine says,[4] "Nothing prevents us from holding, within proper limits, a spiritual paradise, so long as we believe in the truth of the events narrated as having there occurred." For whatever Scripture tells us about paradise is set down as matter of history, and wherever Scripture makes use of this method, we must hold to the historical truth of the narrative as a foundation of whatever spiritual explanation we may offer. And so paradise, as Isidore says (*Etym.* xiv, 3),[5] "is a place situated in the east, its name being the Greek for garden." It was fitting that it should be in the east, for it is to be believed that it was situated in the most excellent part of the earth. Now the east is the right hand of the heavens, as the Philosopher explains,[6] and the right hand is nobler than the left; hence it was fitting that God should place the earthly paradise in the east.

Reply Obj. 1. Bede's assertion is untrue, if taken in its obvious sense. It may, however, be explained to mean that paradise reaches to the moon not literally, but figuratively; because, as Isidore says (*loc. cit*), the atmosphere there is of "a continually even temperature," and in this respect it is like the heavenly bodies, which are without opposing elements. Mention, however, is made of the moon rather than of other bodies, because of all the heavenly bodies the moon is nearest to us, and is, moreover, the most akin to the earth; hence it is observed to be overshadowed by clouds so as to be almost obscured. Others say[7] that paradise reached to the moon—that is, to the middle space of the air, where rain, and wind, and the like arise, because the moon is said to have influence on such changes. But in this sense it would not be a fit place for human dwelling, through being uneven in temperature, and not attuned to the human temperament, as is the lower atmosphere in the neighbourhood of the earth.

Reply Obj. 2. Augustine says (*Gen ad lit.* viii, 7):[8] "It is probable that man has no idea where paradise was, and that the rivers, whose sources are said to be known, flowed for some distance underground, and then sprang up elsewhere. For who is not aware that such is the case with some other streams?"

Reply Obj 3. The situation of paradise is shut off from the habitable world by mountains, or seas, or some torrid region, which cannot be crossed; and so people who have written about places make no mention of it.

Reply Obj. 4. The tree of life is a material tree, and called so because its fruit was endowed with a life-preserving power, as above stated (Q. XCVII, A. 4). Yet it had a spiritual signification, just as the rock in the desert was of a material nature, and yet signified Christ (I Cor. 10. 4). In like manner the tree of the knowledge of good and evil was a material tree, so called in view of future events, because, after eating of it, man was to learn, by experience of the consequent punishment, the difference between the good of obedience and the evil of rebellion. It may also be said to signify spiritually the free choice, as some say.[9]

Reply Obj. 5. According to Augustine (*Gen.*

ad lit. v, 4; viii, 3),[1] the plants were not actually produced on the third day, but in their seminal principles; but, after the work of the six days, the plants, both of paradise and others, were actually produced. According to other holy writers,[2] we ought to say that all the plants were actually produced on the third day, including the trees of paradise. And what is said of the trees of paradise being planted after the work of the six days is to be understood, they say, by way of recapitulation. And so our text reads. *The Lord God had planted a paradise of pleasure from the beginning* (Gen. 2. 8).

ARTICLE 2. *Whether Paradise Was a Place Adapted To Be the Abode of Man?*

We proceed thus to the Second Article: It would seem that paradise was not a place adapted to be the abode of man.

Objection 1. For man and angels are similarly ordered to happiness. But the angels from the very beginning of their existence were made to dwell in the abode of the blessed—that is, the empyrean heaven Therefore the place of man's habitation should have been there also

Obj. 2 Further, if some definite place were required for man's abode, this would be required on the part either of the soul or of the body If on the part of the soul, the place would be in heaven, which is adapted to the nature of the soul, since the desire of heaven is implanted in all. On the part of the body, there was no need for any other place than the one provided for other animals. Therefore paradise was not at all adapted to be the abode of man.

Obj 3 Further, a place which contains nothing is useless. But after sin, paradise was not occupied by man. Therefore if it were adapted as a dwelling-place for man, it seems that God made paradise to no purpose.

Obj. 4. Further, since man is of an even temperament, a fitting place for him should be of even temperature. But paradise was not of an even temperature, for it is said to have been on the equator[3]—a situation of extreme heat, since twice in the year the sun passes vertically over the heads of its inhabitants [4] Therefore paradise was not a fit dwelling-place for man.

On the contrary, Damascene says (*De Fid. Orth.* ii, 11):[5] "Paradise was a divinely ordered region, and worthy of him who was made to God's image."

I answer that, as above stated (Q. XCVII. A. 1), Man was incorruptible and immortal not because his body had a disposition to incorruptibility, but because in his soul there was a power preserving the body from corruption. Now the human body may be corrupted from within or from without. From within, the body is corrupted by the consumption of the humours, and by old age, as above explained (*ibid*, A. 4), and man was able to ward off such corruption by food. Among those things which corrupt the body from without, the chief seems to be an atmosphere of unequal temperature, and to such corruption a remedy is found in an atmosphere of equable nature. In paradise both conditions were found; because, as Damascene says (*loc. cit.*): "Paradise was permeated with the all-pervading brightness of a temperate, pure, and exquisite atmosphere, and decked with ever-flowering plants." And so it is clear that paradise was most fit to be a dwelling-place for man, and in keeping with his original state of immortality.

Reply Obj. 1. The empyrean heaven is the highest of corporeal places, and is outside the region of change. By the first of these two conditions, it is a fitting abode for the angelic nature; for, as Augustine says (*De Trin.* iii),[6] God rules corporeal creatures through spiritual creatures Hence it is fitting that the spiritual nature should be established above the entire corporeal nature, as presiding over it. By the second condition, it is a fitting abode for the state of happiness, which is endowed with the highest degree of stability Thus the abode of happiness was suited to the very nature of the angel; therefore he was created there. But it is not suited to man's nature, since man is not set as a ruler over the entire corporeal creation; it is a fitting abode for man in regard only to his happiness Therefore he was not placed from the beginning in the empyrean heaven, but was destined to be transferred there in the state of his final Happiness.

Reply Obj. 2. It is ridiculous to assert that any particular place is natural to the soul or to any spiritual substances, though some particular place may have a certain fitness in regard to spiritual substances. For the earthly paradise was a place adapted to man as regards both his body and his soul—that is, in so far as in his soul was the force which preserved the human body from corruption. This could not be said of the

[1] PL 34, 324, 371.
[2] Cf Q. LXIX, A. 2.
[3] Albert the Great, *Summa de Creatur.*, II, Q. 79, A 1 (BO XXXV, 640) *In Sent*, II, d 17, A. 4 (BO XXVII, 304); Bonaventure, *In Sent*, II, d. 17, dub 3 (QR II, 427).
[4] Cf. Albert, *De Nat Locorum*, I, 6 (BO IX, 539).
[5] PG 94, 913.
[6] Chap 4 (PL 42, 873).

other animals. Therefore, as Dasmascene says (*loc. cit.*): "No irrational animal inhabited paradise"; although, by a certain dispensation, the animals were brought there by God to Adam; and the serpent was able to trespass there through the work of the devil.

Reply Obj. 3. Paradise did not become useless through being unoccupied by man after sin, just as immortality was not conferred on man in vain, though he was to lose it. For thereby we learn God's kindness to man, and what man lost by sin. Moreover, some say that Enoch and Elias still dwell in that paradise.[1]

Reply Obj. 4. Those who say that paradise was on the equinoctial line are of opinion that such a situation is most temperate, on account of the unvarying equality of day and night; that it is never too cold there, because the sun is never too far off, and never too hot, because, although the sun passes over the heads of the inhabitants, it does not remain long in that position. However, Aristotle expressly says that such a region is uninhabitable on account of the heat.[2] This seems to be more probable, because, even those regions where the sun does not pass vertically overhead are extremely hot on account of the mere proximity of the sun. But whatever be the truth of the matter, we must hold that paradise was situated in a most temperate situation, whether on the equator or elsewhere.

Article 3. *Whether Man Was Placed in Paradise to Work It and Keep It?*

We proceed thus to the Third Article: It would seem that man was not placed in paradise to work and keep it.

Objection 1. For what was brought on him as a punishment of sin would not have existed in paradise in the state of innocence. But the cultivation of the soil was a punishment of sin (Gen. 3. 17). Therefore man was not placed in paradise to work and keep it.

Obj. 2. Further, there is no need of a keeper when there is no fear of trespass with violence. But in paradise there was no fear of trespass with violence. Therefore there was no need for man to keep paradise.

Obj. 3. Further, if man was placed in paradise to work and keep it, man would apparently have been made for the sake of paradise, and not contrariwise; which seems to be false. Therefore man was not placed in paradise to work and keep it.

On the contrary, It is written (Gen. 2. 15): *The Lord God took man and placed him in the paradise of pleasure, to dress and keep it.*

I answer that, As Augustine says (*Gen. ad lit.* viii, 10),[3] these words of Genesis may be understood in two ways. First, in the sense that God placed man in paradise that He might Himself work in man and keep him, by sanctifying him (for if this work cease, man at once relapses into darkness, as the air grows dark when the light ceases to shine), and by keeping man from all corruption and evil. Secondly, that man might work and keep paradise, which working would not have involved labour, as it did after sin, but would have been pleasant on account of man's practical knowledge of the powers of nature. Nor would man have kept paradise against a trespasser, but he would have striven to keep paradise for himself lest he should lose it by sin All of this was for man's good; and so paradise was ordered to man's benefit, and not conversely.

From this the *Replies to the Objections* are made clear.

Article 4 *Whether Man Was Created in Paradise?*

We proceed thus to the Fourth Article: It would seem that man was created in paradise.

Objection 1. For the angel was created in his dwelling-place—namely, the empyrean heaven. But before sin paradise was a fitting abode for man. Therefore it seems that man was created in paradise.

Obj. 2. Further, other animals remain in the place where they are produced, as the fish in water, and walking animals on the earth from which they were made Now man would have remained in paradise after he was created (Q. XCVII, A. 4). Therefore he was created in paradise.

Obj. 3. Further, woman was made in paradise. But man is greater than woman. Therefore much more should man have been made in paradise.

On the contrary, It is written (Gen. 2. 15): *God took man and placed him in paradise.*

I answer that, Paradise was a fitting abode for man as regards the incorruptibility of the primitive state. Now this incorruptibility was man's not by nature, but by a supernatural gift of God. Therefore that this might be attributed to the grace of God, and not to human nature, God

[1] Augustine, *Gen. ad lit*, IX, 6 (PL 34, 396); *Contra Julian.*, VI, 30 (PL 45, 1581); this opinion can be found generally throughout the Fathers.

[2] *Meteorology*, II, 5 (362^b25).

[3] PL 34, 380.

made man outside of paradise, and afterwards placed him there to live there during the whole of his animal life; and, having attained to the spiritual life, to be transferred to heaven.

Reply Obj. 1. The empyrean heaven was a fitting abode for the angels as regards their nature, and therefore they were created there.

In the same way I *reply to the second objection,* for those places befit those animals in their nature.

Reply Obj. 3. Woman was made in paradise not by reason of her own dignity, but on account of the dignity of the principle from which her body was formed. For the same reason the children would have been born in paradise, where their parents were already.

TREATISE ON THE DIVINE GOVERNMENT

QUESTION CIII

OF THE GOVERNMENT OF THINGS IN GENERAL

(In Eight Articles)

HAVING considered the creation of things and their distinction, we now consider in the third place their government and (1) the government of things in general; (2) in particular, the effects of this government (Q. CIV). Under the first head there are eight points of inquiry: (1) Whether the world is governed by someone? (2) What is the end of this government? (3) Whether the world is governed by one? (4) Of the effects of this government? (5) Whether all things are subject to Divine government? (6) Whether all things are immediately governed by God? (7) Whether the Divine government is frustrated in anything? (8) Whether anything is contrary to the Divine Providence?

ARTICLE 1. *Whether the World Is Governed by Anyone?*

We proceed thus to the First Article: It would seem that the world is not governed by anyone.

Objection 1. For it pertains to those things which move or work for an end to be governed. But natural things which make up the greater part of the world do not move, or work for an end, for they have no knowledge of their end. Therefore the world is not governed.

Obj. 2. Further, those things are governed which are moved towards some thing. But the world does not appear to be so directed, but has stability in itself. Therefore it is not governed.

Obj. 3. Further, what is necessarily determined by its own nature to one particular thing does not require any external principle of government. But the principal parts of the world are by a certain necessity determined to something particular in their actions and movements. Therefore the world does not require to be governed.

On the contrary, It is written (Wisd. 14. 3): *But Thou, O Father, governest all things by Thy Providence.* And Boëthius says (*De Consol.* iii, 9):[1] Thou Who governest this universe by mandate eternal."

I answer that, Certain philosophers of old denied the government of the world, saying that all things happened by chance.[2] But such an opinion can be shown to be impossible in two ways. First, by observation of things themselves. For we observe that in nature things happen always or nearly always for the best, which would not be the case unless some sort of providence directed nature towards good as an end, which is to govern. Therefore the unfailing order we observe in things is a sign of their being governed. For instance, if we enter a well-ordered house we gather from it the intention of him who put it in order, as Cicero says (*De Nat. Deorum,* ii),[3] quoting Aristotle. Secondly, this is clear from a consideration of Divine goodness, which, as we have said above (Q. XLIV, A. 4; Q. LXV, A 2), was the cause of the production of things in being. For as it pertains to the best to produce the best, it is not fitting that the supreme goodness of God should produce things without giving them their perfection. Now a thing's ultimate perfection consists in the attainment of its end. Therefore it pertains to the Divine goodness, to lead things to their end just as it brought things into being And this is to govern.

Reply Obj. 1. A thing moves or operates for an end in two ways. First, in moving itself to the end, as man and other rational creatures; and such things have knowledge of their end, and of the means to the end. Secondly, a thing is said to move or operate for an end, as though moved or directed to it by another, as an arrow directed to the target by the archer, who knows the end unknown to the arrow. Therefore, as the movement of the arrow towards a definite end shows clearly that it is directed by someone with knowledge, so the unvarying course of natural things which are without knowledge, shows clearly that the world is governed by some reason.

Reply Obj. 2. In all created things there is a stable element, at least primary matter, and

[1] PL 63, 758.
[2] Democritus and Epicurus; cf. Q. XXII, A. 2.
[3] Chap. 5 (DD IV, III).

something belonging to movement, according as under movement we include operation. And things need governing as to both, because even that which is stable, since it is created from nothing, would return to nothingness were it not sustained by a governing hand, as will be explained later (Q. CIV, A. 1).

Reply Obj. 3. The natural necessity inherent in those beings which are determined to a particular thing is a kind of impression from God, directing them to their end; as the necessity whereby an arrow is moved so as to fly towards a certain point is an impression from the archer, and not from the arrow. But there is a difference, since that which creatures receive from God is their nature, while that which natural things receive from man over and above their nature is somewhat violent. Therefore, as the violent necessity in the movement of the arrow shows the action of the archer, so the natural necessity of things shows the government of Divine Providence.

ARTICLE 2. *Whether the End of the Government of the World Is Something Outside the World?*

We proceed thus to the Second Article: It would seem that the end of the government of the world is not something existing outside the world.

Objection 1. For the end of the government of a thing is that to which the thing governed is brought. But that to which a thing is brought is some good in the thing itself; thus a sick man is brought back to health, which is something good in him. Therefore the end of the government of things is some good not outside, but within the things themselves.

Obj. 2. Further, the Philosopher says,[1] "Some ends are an operation; some are a work" —that is, produced by an operation. But nothing can be produced by the whole universe outside itself, and operation exists in the agent. Therefore nothing extrinsic can be the end of the government of things.

Obj. 3. Further, the good of the multitude seems to consist in order, and peace which is "the tranquillity of order," as Augustine says.[2] But the world is composed of a multitude of things. Therefore the end of the government of the world is the peaceful order in things themselves. Therefore the end of the government of the world is not an extrinsic good.

On the contrary, It is written (Prov. 16. 4): *The Lord hath made all things for Himself.* But God is outside the entire order of the universe. Therefore the end of all things is some good extrinsic to them.

I answer that, As the end of a thing corresponds to its beginning, it is not possible to be ignorant of the end of things if we know their beginning. Therefore, since the beginning of all things is something outside the universe, namely, God, as is clear from what has been expounded above (Q. XLIV, A. 1), we must conclude that the end of all things is some extrinsic good This can be proved by reason. For it is clear that good has the nature of an end; therefore, a particular end of anything consists in some particular good, while the universal end of all things is the universal good. But the universal good is that which is good of itself by virtue of its essence, which is the very essence of goodness, whereas a particular good is good by participation. Now it is manifest that in the whole created universe there is not a good which is not such by participation. Therefore that good which is the end of the whole universe must be a good outside the universe.

Reply Obj. 1. We may acquire some good in many ways: first, as a form existing in us, such as health or knowledge; secondly, as something done by us, as a builder attains his end by building a house; thirdly, as something good possessed or acquired by us, as the buyer of a field attains his end when he enters into possession. Therefore nothing prevents something outside the universe being the good to which it is directed.

Reply Obj. 2. The Philosopher is speaking of the ends of the arts. For the end of some arts consists in the operation itself, as the end of a harpist is to play the harp, while the end of other arts consists in something produced, as the end of a builder is not the act of building, but the house he builds. Now it may happen that something extrinsic is the end not only as made, but also as possessed or acquired, or even as represented, as if we were to say that Hercules is the end of the statue made to represent him. Therefore we may say that some good outside the whole universe is the end of the government of the universe, as something possessed and represented; for each thing tends to participate in it, and to imitate it as far as is possible.

Reply Obj. 3. A good existing in the universe, namely, the order of the universe itself, is an end of the universe; this, however, is not its ultimate end, but is ordered to the extrinsic

[1] *Ethics*, I, 1 (1094^a4).
[2] *City of God*, XIX, 13 (PL 41, 640).

good as to the ultimate end, just as "the order in an army is ordered to the general," as stated in the *Metaphysics*.[1]

ARTICLE 3. *Whether the World Is Governed by One?*

We proceed thus to the Third Article: It would seem that the world is not governed by one.

Objection 1. For we judge the cause by the effect. Now, we see in the government of the universe that things are not moved and do not operate uniformly, but some contingently and some of necessity and according to other differences. Therefore the world is not governed by one.

Obj. 2. Further, things which are governed by one do not act against each other, except by the incapacity or unskilfulness of the ruler, which cannot apply to God. But created things do not agree together, and fight against each other, as is evident in the case of contraries Therefore the world is not governed by one.

Obj. 3. Further, in nature we always find what is the better. But it *is better that two should be together than one* (Eccles. 4. 9). Therefore the world is not governed by one, but by many.

On the contrary, We confess our belief in one God and one Lord, according to the words of the Apostle (I Cor. 8. 6): *To us there is but one God, the Father . . . and one Lord,* and both of these pertain to government. For to the Lord belongs dominion over subjects, and the name of God is taken from Providence as stated above (Q. XIII, A. 8). Therefore the world is governed by one.

I answer that, We must of necessity say that the world is governed by one. For since the end of the government of the world is that which is essentially good, which is the greatest good, the government of the world must be the best kind of government. Now the best government is government by one. The reason of this is that government is nothing but the directing of the things governed to the end, which consists in some good. But unity belongs to the notion of goodness, as Boëthius proves (*De Consol.* iii, 11),[2] from the fact that, as all things desire good, so do they desire unity, without which they could not be. For a thing so far exists as it is one. And so we observe that things resist division, as far as they can, and the dissolution of a thing arises from some defect in it. Therefore the intention of a ruler over a multitude is unity, or peace. Now the cause per se of unity is one. For it is clear that several cannot be the cause of unity or concord, except so far as they are united. Furthermore, what is one in itself is a more apt and a better cause of unity than several things united. Therefore a multitude is better governed by one than by several. From this it follows that the government of the world, since it is the best form of government, must be by one. This is expressed by the Philosopher:[3] "Things refuse to be ill governed; and multiplicity of authorities is a bad thing; therefore there should be one ruler."

Reply Obj. 1. Movement is the act of a thing moved, caused by the mover. Therefore dissimilarity of movements is caused by diversity of things moved, which diversity is required for the perfection of the universe (Q. XLVII, AA. 1, 2; Q XLVIII, A. 2), and not by a diversity of governors.

Reply Obj. 2. Although contraries do not agree with each other in their proximate ends, nevertheless they agree in the ultimate end, so far as they are included in the one order of the universe.

Reply Obj. 3. If we consider individual goods, then two are better than one. But if we consider the essential good, then no addition of good is possible.

ARTICLE 4. *Whether the Effect of Government Is One or Many?*

We proceed thus to the Fourth Article: It would seem that there is but one effect of the government of the world, and not many.

Objection 1. For the effect of government is that which is caused in the things governed. This is one, namely, the good which consists in order, as may be seen in the example of an army. Therefore the government of the world has but one effect.

Obj. 2. Further, from one there naturally proceeds but one. But the world is governed by one as we have proved (A. 3). Therefore also the effect of this government is but one.

Obj. 3. Further, if the effect of government is not one by reason of the unity of the Governor, it must be many by reason of the many things governed. But these are too numerous to be counted. Therefore we cannot assign any definite number to the effects of government.

On the contrary, Dionysius says (*Div. Nom.* xii):[4] "God contains all and fills all by His

[1] Aristotle, XII, 10 (1075^a15).
[2] PL 63, 771.
[3] *Metaphysics*, XII, 10 (1076^a3).
[4] Sect. 2 (PG 3, 969).

providence and perfect goodness." But government belongs to providence. Therefore there are certain definite effects of the Divine government.

I answer that, The effect of any action may be judged from its end, because it is by action that the attainment of the end is effected. Now the end of the government of the world is the essential good, to the participation and imitation of which all things tend. Consequently the effect of the government of the world may be taken in three ways. First, on the part of the end itself; and in this way there is but one effect, that is, assimilation to the supreme good. Secondly, the effect of the government of the world may be considered on the part of those things by means of which the creature is made like to God. Thus there are, in general, two effects of the government. For the creature is made like God in two things: first, with regard to this, that God is good; and so the creature becomes like Him by being good. And secondly, with regard to this, that God is the cause of goodness in others; and so the creature becomes like God by moving others to be good Thus there are two effects of government, the preservation of things in their goodness, and the moving of things to good. Thirdly, we may consider the effects of the government of the world in particular things; and in this way they are without number.

Reply Obj 1. The order of the universe includes both the preservation of the different things created by God and their movement. As regards these two things we find order among them, according as one is better than another, and as one is moved by another.

From what has been said above, we can gather the *replies to the other two objections.*

ARTICLE 5. *Whether All Things Are Subject to the Divine Government?*

We proceed thus to the Fifth Article: It would seem that not all things are subject to the Divine government.

Objection 1. For it is written (Eccles. 9. 11): *I saw that under the sun the race is not to the swift, nor the battle to the strong, nor bread to the wise, nor riches to the learned, nor favour to the skilful, but time and chance in all.* But things subject to the Divine government are not ruled by chance. Therefore those things which are under the sun are not subject to the Divine government.

Obj. 2. Further, the Apostle says (I Cor. 9. 9): *God hath no care for oxen.* But he that governs has care for the things he governs. Therefore all things are not subject to the Divine government.

Obj. 3. Further, what can govern itself does not need to be governed by another. But the rational creature can govern itself, since it is master of its own act, and acts of itself, and is not made to act by another, which seems proper to things which are governed. Therefore all things are not subject to the Divine government.

On the contrary, Augustine says,[1] "Not only heaven and earth, not only man and angel, even the bowels of the lowest animal, even the wing of the bird, the flower of the plant, the leaf of the tree, hath God endowed with every fitting detail of their nature." Therefore all things are subject to His government.

I answer that, God the ruler of things for the same reason as He is their cause, because the same being gives existence as gives perfection, and this belongs to government. Now God is the cause not indeed only of some particular kind of being, but of the whole universal being, as proved above (Q. XLIV, AA. 1, 2). Therefore, as there can be nothing which is not created by God, so there can be nothing which is not subject to His government. This can also be proved from the nature of the end of government. For a man's government extends over all those things which come under the end of his government. Now the end of the Divine government is the Divine goodness, as we have shown (A. 2). Therefore, as there can be nothing that is not ordered to the Divine goodness as its end, as is clear from what we have said above (Q XLIV, A. 4; Q. LXV, A. 2), so it is impossible for anything to escape from the Divine government.

Foolish therefore was the opinion of those who said that the corruptible lower world,[2] or individual things,[3] or that even human affairs,[4] were not subject to the Divine government. These are represented as saying, *God hath abandoned the earth* (Ezech. 9. 9).

Reply Obj. 1. These things are said to be under the sun which are generated and corrupted according to the sun's movement. In all such things we find chance. Not that everything which occurs in such things is by chance, but that in each one there is an element of chance.

[1] *City of God,* V, 11 (PL 41, 154).
[2] Cf. Q. XXII, A, 2.
[3] Cf. Q. LVII, A. 2.
[4] Cf. Augustine, *City of God,* V, 9 (PL 41, 148), where he argues against Cicero.

And the very fact that an element of chance is found in those things proves that they are subject to government of some kind. For unless corruptible things of this kind were governed by a higher being, they would tend to nothing definite, especially those which possess no kind of knowledge. So nothing in them would happen unintentionally, which constitutes the nature of chance. Therefore to show how things happen by chance and yet according to the ordering of a higher cause, he does not say absolutely that he observes chance in all things, but *time and chance*, that is to say, that defects may be found in these things according to some order of time.

Reply Obj. 2. Government implies a certain change effected by the governor in the things governed. Now every movement is "the act of a movable thing, caused by the moving principle," as is laid down in the *Physics*.[1] And every act is proportioned to that of which it is an act. Consequently, various movable things must be moved variously, even as regards movement by one and the same mover. Thus by the one art of the Divine governor, various things are variously governed according to their variety. Some, according to their nature, act of themselves, having dominion over their actions; and these are governed by God, not only in this, that they are moved by God Himself, Who works in them interiorly, but also in this, that they are induced by Him to do good and to fly from evil, by precepts and prohibitions, rewards and punishments. But irrational creatures which do not act but are acted upon, are not thus governed by God. Hence, when the Apostle says that *God hath no care for oxen*, he does not wholly withdraw them from the Divine government, but only as regards the way in which rational creatures are governed.

Reply Obj. 3. The rational creature governs itself by its intellect and will, both of which require to be governed and perfected by the Divine intellect and will. Therefore above the government by which the rational creature governs itself as master of its own act, it requires to be governed by God.

ARTICLE 6. *Whether All Things Are Immediately Governed by God?*

We proceed thus to the Sixth Article: It would seem that all things are governed by God immediately.

Objection 1. For Gregory of Nyssa (Nemesius, *De Nat. Hom.*)[2] reproves the opinion of Plato who divides providence into three parts. The first he ascribes to the supreme god, who watches over heavenly things and all universals; the second providence he attributes to the secondary deities, who go the round of the heavens to watch over things subject to generation and corruption; while he ascribes a third providence to certain spirits who are guardians on earth of human actions. Therefore it seems that all things are immediately governed by God.

Obj. 2. Further, it is better that a thing be done by one, if possible, than by many, as the Philosopher says.[3] But God can by Himself govern all things without any intermediary cause. Therefore it seems that He governs all things immediately.

Obj. 3. Further, in God nothing is defective or imperfect. But it seems to be imperfect in a ruler to govern by means of others. Thus an earthly king, by reason of his not being able to do everything himself, and because he cannot be everywhere at the same time, requires to govern by means of ministers. Therefore God governs all things immediately.

On the contrary, Augustine says (*De Trin.* iii, 4):[4] "As the lower and grosser bodies are ruled in a certain orderly way by bodies of greater subtlety and power, so all bodies are ruled by the rational spirit of life, and the sinful and unfaithful spirit is ruled by the good and just spirit of life, and this spirit by God Himself."

I answer that, In government there are two things to be considered: the principle of government, which is providence itself; and the execution of the design. As to the principle of government, God governs all things immediately, but as to its execution, He governs some things by means of others.

The reason of this is that as God is the very essence of goodness, so everything must be attributed to God in its highest degree of goodness. Now the highest degree of goodness in any practical order, or plan, or knowledge (and such is the principle of government) consists in knowing the individuals acted upon; as the best physician is not the one who can only give his attention to general principles, but who can consider the least details; and so on in other things. Therefore we must say that in God is

[1] Aristotle, III, 3 (202ª14).

[2] Chap. 44 (PG 40, 794).

[3] *Physics*, VIII, 6 (259ª8).

[4] PL 42, 873.

the principle of the government of all things, even of the very least.

But since things which are governed should be brought to perfection by government, this government will be so much the better in the degree the things governed are brought to perfection. Now it is a greater perfection for a thing to be good in itself and also the cause of goodness in others, than only to be good in itself. Therefore God so governs things that He makes some of them to be causes of others in government; as a master, who not only imparts knowledge to his pupils, but also makes them teachers of others.

Reply Obj. 1. Plato's opinion is to be rejected, because he held that God did not govern all things immediately, even in the principle of government; this is clear from the fact that he divided providence, which is the principle of government, into three parts.

Reply Obj 2 If God governed alone, things would be deprived of the perfection of causality. Therefore all that is effected by many would not be better accomplished by one.

Reply Obj. 3. That an earthly king should have ministers to execute his laws is a sign not only of his being imperfect, but also of his dignity, because by the ordering of ministers the kingly power is brought into greater evidence.

ARTICLE 7 *Whether Anything Can Happen outside the Order of the Divine Government?*

We proceed thus to the Seventh Article: It would seem possible that something may occur outside the order of the Divine government.

Objection 1 For Boëthius says (*De Consol.* iii, 12)[1] that "God disposes all for good" Therefore, if nothing happens outside the order of the Divine government, it would follow that no evil exists.

Obj. 2. Further, nothing that is in accordance with the pre-ordination of a ruler occurs by chance. Therefore, if nothing occurs outside the order of the Divine government, it follows that there is nothing fortuitous and casual.

Obj. 3. Further, the order of Divine government is certain and unchangeable, because it is in accordance with the eternal design. Therefore, if nothing happens outside the order of the Divine government, it follows that all things happen by necessity, and nothing is contingent, which is false. Therefore it is possible for something to occur outside the order of the Divine government.

[1] PL 63, 779.

On the contrary, It is written (Esth. 13. 9): *O Lord, Lord, almighty King, all things are in Thy power, and there is none that can resist Thy will.*

I answer that, It is possible for an effect to come about outside the order of some particular cause, but not outside the order of the universal cause. The reason of this is that no effect results outside the order of a particular cause, except through some other impeding cause, which other cause must itself be reduced to the first universal cause; just as indigestion may occur outside the order of the nutritive power by some such impediment as the coarseness of the food, which again is to be reduced to some other cause, and so on till we come to the first universal cause. Therefore as God is the first universal cause, not of one genus only, but of all being, it is impossible for anything to happen outside the order of the Divine government. But from the very fact that from one point of view something seems to evade the order of Divine providence considered in regard to one particular cause, it must necessarily come back to that order as regards some other cause.

Reply Obj. 1. There is nothing wholly evil in the world, for evil is always founded on good, as shown above (Q. XLVIII, A 3). Therefore something is said to be evil through its escaping from the order of some particular good. If it wholly escaped from the order of the Divine government, it would wholly cease to exist.

Reply Obj. 2 Things are said to be fortuitous as regards some particular cause from the order of which they escape. But as to the order of Divine providence, "nothing in the world happens by chance," as Augustine declares (QQ. LXXXIII, *qu.* 24).[2]

Reply Obj. 3 Certain effects are said to be contingent as compared to their proximate causes, which may fail in their effects; but not as though anything could happen entirely outside the order of Divine government The very fact that something occurs outside the order of some proximate cause, is owing to some other cause, itself subject to the Divine government.

ARTICLE 8. *Whether Anything Can Resist the Order of the Divine Government?*

We proceed thus to the Eighth Article: It would seem possible that some resistance can be made to the order of the Divine government.

Objection 1. For it is written (Isa. 3. 8):

[2] PL 40, 17.

Their tongue and their devices are against the Lord.

Obj. 2. Further, a king does not justly punish those who do not rebel against his commands. Therefore if no one rebelled against God's commands, no one would be justly punished by God.

Obj. 3. Further, everything is subject to the order of the Divine government. But some things oppose others. Therefore some things rebel against the order of the Divine government.

On the contrary, Boëthius says (*De Consol.* iii, 12):[1] "There is nothing that can desire to or is able to resist this sovereign good. It is this sovereign good therefore that ruleth all mightily and ordereth all sweetly, as is said (Wisd. 8.) of Divine wisdom.

I answer that, We may consider the order of Divine providence in two ways: in general, according as it proceeds from the governing cause of all; and in particular, according as it proceeds from some particular cause which executes the order of the Divine government.

Considered in the first way, nothing can resist the order of the Divine government. This can be proved in two ways. First, from the fact that the order of the Divine government is wholly directed to good, and everything by its own operation and effort tends to good only; "for no one acts intending evil," as Dionysius says (*Div. Nom.* iv).[2] Secondly from the fact that, as we have said above (A. 1, Ans. 3; A. 5, Ans. 2), every inclination of anything, whether natural or voluntary, is nothing but a kind of impression from the first mover, just as the inclination of the arrow towards a fixed point is nothing but an impulse received from the archer. Therefore every agent, whether natural or free, attains to its divinely appointed end, as though of its own accord. For this reason God is said *to order all things sweetly.* (Wisd. 8. 1).

Reply Obj. 1. Some are said to think or speak, or act against God, not that they entirely resist the order of the Divine government, for even the sinner intends the attainment of a certain good, but because they resist some particular good, which is fitting to their nature or state. Therefore they are justly punished by God.

Reply Obj. 2 is clear from the above.

Reply Obj. 3. From the fact that one thing opposes another, it follows that some one thing can resist the order of a particular cause, but not that order which depends on the universal cause of all things.

[1] PL 63, 779.
[2] Sect. 31 (PG 3, 732).

QUESTION CIV

THE SPECIAL EFFECTS OF THE DIVINE GOVERNMENT

(In Four Articles)

WE next consider the effects of the Divine government in particular, concerning which four points of inquiry arise: (1) Whether creatures need to be kept in being by God? (2) Whether they are immediately preserved by God? (3) Whether God can reduce anything to nothingness? (4) Whether anything is reduced to nothingness?

ARTICLE 1. *Whether Creatures Need to Be Kept in Being by God?*

We proceed thus to the First Article: It would seem that creatures do not need to be kept in being by God.

Objection 1. For what cannot not-be, does not need to be kept in being, just as that which cannot depart, does not need to be kept from departing. But some creatures by their very nature cannot not-be. Therefore not all creatures need to be kept in being by God. The middle proposition is proved thus. That which is included in a thing per se is necessarily in that thing, and its contrary cannot be in it; thus a multiple of two must necessarily be even, and cannot possibly be an odd number. Now being follows *per se* upon form, because everything is an actual being so far as it has form. But some creatures are subsistent forms, as we have said of the angels (Q. L, AA. 2, 5), and thus to be is in them per se. The same reasoning applies to those creatures whose matter is in potency to one form only, as explained above of heavenly bodies (Q. LXVI, A 2). Therefore such creatures as these have in their nature to be necessarily, and cannot not-be; for there can be no potency to not-being, either in the form which per se follows on being, or in matter existing under a form which it cannot lose, since it is not in potency to any other form.

Obj. 2. Further, God is more powerful than any created agent. But a created agent, even after ceasing to act, can cause its effect to be preserved in being. Thus the house continues to stand after the builder has ceased to build, and water remains hot for some time after the fire has ceased to heat. Much more, therefore, can God cause His creature to be kept in being after He has ceased to create it.

Obj. 3. Further, nothing violent can occur without some active cause. But tendency to not-

being is unnatural and violent to any creature, since all creatures naturally desire to be. Therefore no creature can tend to not-being except through some active cause of corruption. Now there are creatures of such a nature that nothing can cause them to corrupt, such as spiritual substances and heavenly bodies. Therefore such creatures cannot tend to not-being even if God were to withdraw His action.

Obj. 4. Further, if God keeps creatures in being, this is done by some action. Now every action of an agent, if that action be efficacious, produces something in the effect. Therefore the preserving power of God must produce something in the creature. But this does not seem to be the case, because this action does not give being to the creature, since being is not given to that which already is; nor does it add anything new to the creature, because either God would not keep the creature in being continually, or He would be continually adding something new to the creature; either of which is unreasonable. Therefore creatures are not kept in being by God.

On the contrary, It is written (Heb. 1. 3): *Upholding all things by the word of His power.*

I answer that, Both reason and faith bind us to say that creatures are kept in being by God. To make this clear, we must consider that a thing is preserved by another in two ways First, indirectly, and accidentally; thus a person is said to preserve anything by removing the cause of its corruption, as a man may be said to preserve a child whom he guards from falling into the fire. In this way God preserves some things, but not all, for there are some things of such a nature that nothing can corrupt them, so that it is not necessary to keep them from corruption. Secondly, a thing is said to preserve another *per se* and directly, namely, when what is preserved depends on the preserver in such a way that it cannot exist without it. In this manner all creatures need to be preserved by God. For the being of every creature depends on God, so that not for a moment could it subsist, but would fall into nothingness were it not kept in being by the operation of the Divine power, as Gregory says (*Moral.* xvi).[1]

This is made clear as follows. Every effect depends on its cause, so far as it is its cause. But we must observe that an agent is the cause of the becoming of its effect, but not directly of its being. This may be seen both in artificial and in natural things. For the builder causes the house in its becoming, but he is not the direct cause of its being. For it is clear that the being of the house is a result of its form, which consists in the putting together and arrangement of the materials, and results from the natural qualities of certain things. Thus a cook dresses the food by applying the natural activity of fire; in the same way a builder constructs a house, by making use of cement, stones, and wood which are able to be put together in a certain order and to preserve it. Therefore the being of a house depends on the nature of these materials, just as its becoming depends on the action of the builder. The same principle applies to natural things. For if an agent is not the cause of a form as such, neither will it be directly the cause of being which results from that form, but it will be the cause of the effect in its becoming only.

Now it is clear that of two things in the same species one cannot *per se* cause the other's form as such, since it would then be the cause of its own form, since it is of the same nature in both. But it can be the cause of this form according as it is in matter—in other words, it may be the cause that this matter receives this form. And this is to be the cause of becoming, as when man begets man, and fire causes fire. Thus whenever a natural effect is such that it has an aptitude to receive from its active cause an impression specifically the same as in that active cause, then the becoming of the effect, but not its being, depends on the agent.

Sometimes, however, the effect does not have this aptitude to receive the impression of its cause in the same way as it exists in the agent, as may be seen clearly in all agents which do not produce an effect of the same species as themselves. Thus the heavenly bodies cause the generation of inferior bodies which differ from them in species. Such an agent can be the cause of a form as such, and not merely as existing in this matter. Consequently it is not merely the cause of becoming but also the cause of being.

Therefore as the becoming of a thing cannot continue when that action of the agent ceases which causes the becoming of the effect, so neither can the being of a thing continue after that action of the agent has ceased, which is the cause of the effect not only in becoming but also in being. This is why hot water retains heat after the cessation of the fire's action, while, on the contrary, the air does not continue to be lit up, even for a moment, when the sun ceases to act upon it, because the matter of water is susceptive of the fire's heat in the same way as it exists in the fire. Therefore if it were to be re-

[1] Chap. 37 (PL 75, 1143).

duced to the perfect form of fire, it would retain that form always; but if it has the form of fire imperfectly in some rudimentary way, the heat will remain for a time only, by reason of the imperfect participation of the principle of heat. On the other hand, air is not of such a nature as to receive light in the same way as it exists in the sun, that is, it is not of such a nature as to receive the form of the sun, which is the principle of light. Therefore, since it has no root in the air, the light ceases with the action of the sun.

Now every creature may be compared to God, as the air is to the sun which enlightens it. For as the sun possesses light by its nature, and as the air is enlightened by sharing the sun's light, though it does not share in its nature, so God alone is Being by virtue of His own Essence, since His Essence is His Being. But every creature has being by participation, so that its essence is not its existence. Therefore, as Augustine says (*Gen. ad lit.* iv, 12):[1] "If the ruling power of God were withdrawn from His creatures, their nature would at once cease, and all nature would collapse." In the same work (viii, 12)[2] he says: "As the air becomes light by the presence of the sun, so is man enlightened by the presence of God, and in His absence returns at once to darkness."

Reply Obj. 1. Being follows per se from the form of a creature given the influence of the Divine action, just as light results from the diaphanous nature of the air, given the action of the sun. Therefore the potency to not-being in spiritual creatures and heavenly bodies is rather in God, Who can withdraw His influence, than in the form or matter of those creatures.

Reply Obj. 2. God cannot impart to a creature conservation in being after the cessation of the Divine influence, just as neither can He make it not to have received its being from Himself. For the creature needs to be preserved by God in so far as the being of an effect depends on the cause of its being. So that there is no comparison with an agent that is not the cause of being, but only of becoming.

Reply Obj. 3. This argument holds in regard to that preservation which consists in the removal of corruption; but all creatures do not need to be preserved thus, as stated above.

Reply Obj. 4. The preservation of things by God is not through any new action but through a continuation of that action by which He gives being, which action is without either motion or time; so also the preservation of light in the air is by the continual influence of the sun.

[1] PL 34, 304.
[2] PL 34, 383.

ARTICLE 2. *Whether God Preserves Every Creature Immediately?*

We proceed thus to the Second Article: It would seem that God preserves every creature immediately.

Objection 1. For God creates and preserves things by the same action, as above stated (A. 1, Ans. 4). But God created all things immediately. Therefore He preserves all things immediately.

Obj. 2. Further, a thing is nearer to itself than to another. But it cannot be given to a creature to preserve itself; much less therefore can it be given to a creature to preserve another Therefore God preserves all things without any intermediate cause preserving them

Obj. 3. Further, an effect is kept in being by the cause, not only of its becoming, but also of its being. But all created causes do not seem to cause their effects except in their becoming, for they cause only by moving, as above stated (Q. XLV, A. 3). Therefore they do not cause so as to keep their effects in being.

On the contrary, A thing is kept in being by that which gives it being. But God gives being to things by means of certain intermediate causes. Therefore He also keeps things in being by means of certain causes.

I answer that, As stated above (A. 1), a thing keeps another in being in two ways. First, indirectly and accidentally, by removing or hindering the action of a corrupting cause. Secondly, directly and *per se,* by the fact that on it depends the other's being, as the being of the effect depends on the cause. And in both ways a created thing keeps another in being. For it is clear that even in corporeal things there are many causes which hinder the action of corrupting agents, and for that reason are called preservatives; just as salt preserves meat from putrefaction, and in like manner with many other things. It happens also that an effect depends on a creature as to its being. For when we have a series of ordered causes, it necessarily follows that while the effect depends first and principally on the first cause, it also depends in a secondary way on all the middle causes Therefore the first cause is the principal cause of the preservation of the effect, which is to be referred to the middle causes in a secondary way; and all the more so, as the middle cause is higher and nearer to the first cause.

For this reason, even in things corporeal, the

preservation and persistence of things is ascribed to the higher causes. Thus the Philosopher says[1] that the first, namely the diurnal, movement is the cause of the continuation of things generated; but the second movement, which is from the zodiac, is the cause of diversity owing to generation and corruption. In like manner astrologers[2] ascribe to Saturn, the highest of the planets, those things which are permanent and fixed. So we conclude that God keeps certain things in being by means of certain causes.

Reply Obj. 1. God created all things immediately, but in the creation itself He established an order among things, so that some depend on others by which they are preserved in being, though He remains the principal cause of their preservation.

Reply Obj. 2 Since an effect is preserved by its proper cause on which it depends, so, just as no effect can be its own cause, though it can produce another effect, no effect can be endowed with the power of self-preservation, but only with the power of preserving another.

Reply Obj. 3. No created nature can be the cause of another, as regards the latter acquiring a new form, or disposition, except by virtue of some change; for the created nature acts always on something presupposed. But after causing the form or disposition in the effect, without any fresh change in the effect, the cause preserves that form or disposition; just as we must allow some change to have taken place in the air, when it is lit up anew, while the preservation of the light is without any further change in the air due to the presence of the source of light.

ARTICLE 3. *Whether God Can Annihilate Anything?*

We proceed thus to the Third Article: It would seem that God cannot annihilate anything.

Objection 1. For Augustine says (QQ. LXXXIII, *qu.* 21)[3] that "God is not the cause of anything tending to non-being." But He would be such a cause if He were to annihilate anything. Therefore He cannot annihilate anything.

Obj. 2. Further, by His goodness God is the cause why things exist, since, as Augustine says,[4] "Because God is good, we exist." But God cannot not be good. Therefore He cannot cause things to cease to exist, which would be the case were He to annihilate anything.

Obj. 3. Further, if God were to annihilate anything it would be by His action. But this cannot be, because the term of every action is some being. Hence even the action of a corrupting cause has its term in something generated; for when one thing is generated another undergoes corruption. Therefore God cannot annihilate anything.

On the contrary, It is written (Jer. 10. 24): *Correct me, O Lord, but yet with judgment; and not in Thy fury, lest Thou bring me to nothing.*

I answer that, Some have held that God, in giving being to creatures, acted from natural necessity [5] If this were true, God could not annihilate anything, since His nature cannot change. But, as we have said above (Q. XIX, A. 4), such an opinion is false, and absolutely contrary to the Catholic Faith, which confesses that God created things by a free will, according to Ps. 134. 6: *Whatsoever the Lord pleased, He hath done.* Therefore that God gives being to a creature depends on His will; nor does He preserve things in being otherwise than by continually pouring out being into them, as we have said. Therefore, just as before things existed, God was free not to give them being, and so not to make them, so after they have been made, He is free not to give them being, and thus they would cease to exist; and this would be to annihilate them.

Reply Obj 1. Non-being has no cause *per se;* for nothing is a cause except in so far as it is a being, and a being essentially as such is a cause of being. Therefore God cannot cause a thing to tend to non-being, but a creature has this tendency of itself, since it is produced from nothing. But accidentally God can be the cause of things being reduced to nothing, by withdrawing His action from them.

Reply Obj. 2. God's goodness is the cause of things, not as though by natural necessity, because the Divine goodness does not depend on creatures, but on a free will Therefore, as without prejudice to His goodness, He might not have produced things in being, so, without prejudice to His goodness He might not preserve things in being.

Reply Obj. 3. If God were to annihilate anything, this would not imply an action on God's part, but a mere cessation of His action.

[3] PL 40, 16.

[4] *Christian Doctrine,* I, 32 (PL 34, 32).

[5] Cf. Q. XXV, A. 5.

ARTICLE 4. *Whether Anything Is Annihilated?*

We proceed thus to the Fourth Article: It would seem that something is annihilated.

Objection 1. For the end corresponds to the beginning. But in the beginning there was nothing but God. Therefore all things must tend to this end, that there shall be nothing but God. Therefore creatures will be reduced to nothing.

Obj. 2. Further, every creature has a finite power. But no finite power extends to the infinite. And so the Philosopher proves[1] that "a finite power cannot move in infinite time." Therefore a creature cannot last for an infinite duration, and so at some time it will be reduced to nothing.

Obj. 3. Further, forms and accidents have no matter as part of themselves. But at some time they cease to exist. Therefore they are reduced to nothing.

On the contrary, It is written (Eccles. 3. 14): *I have learned that all the works that God hath made continue for ever.*

I answer that, Some of those things which God does in creatures occur in accordance with the natural course of things; others happen miraculously, and not in accordance with the natural order, as will be explained (Q. CV, A. 6). Now whatever God wills to do according to the natural order of things may be observed from their nature; but those things which occur miraculously are ordered for the manifestation of grace, according to the Apostle, *To each one is given the manifestation of the Spirit, unto profit* (I Cor. 12. 7); and subsequently he mentions, among others, the working of miracles.

Now the nature of creatures shows that none of them is annihilated. For, either they are immaterial, and therefore have no potency to non-being; or they are material, and then they continue to exist, at least in matter, which is incorruptible, since it is the subject of generation and corruption. Moreover, the annihilation of things does not pertain to the manifestation of grace, since rather the power and goodness of God are manifested by the preservation of things in being. Therefore we must conclude by denying absolutely that anything at all will be annihilated.

Reply Obj. 1. That things were brought into being from a state of non-being clearly shows the power of Him Who made them. But that they should be reduced to nothing would obcure that manifestation, since the power of God is conspicuously shown in His preserving all things in being, according to the Apostle; *Upholding all things by the word of His power* (Heb. 1. 3).

Reply Obj. 2. A creature's potency to being is merely receptive; the active power belongs to God Himself, from Whom being is derived. Therefore the infinite duration of things is a consequence of the infinity of the Divine power. To some things, however, is given a determinate power of duration for a certain time, so far as they may be hindered from receiving the influx of being which comes from Him by some contrary agent whose finite power they cannot resist for an infinite but only for a fixed time. So things which have no contrary, although they have a finite power, continue to exist for ever.

Reply Obj. 3. Forms and accidents are not complete beings, since they do not subsist, but each one of them is something of a being and so is called a being, because something is by it. Yet so far as their mode of existence is concerned, they are not entirely reduced to nothingness; not that any part of them survives, but that they remain in the potency of the matter, or of the subject

QUESTION CV

OF THE CHANGE OF CREATURES BY GOD

(In Eight Articles)

WE now consider the second effect of the Divine government, that is, the change of creatures; and first, the change of creatures by God; secondly, the change of one creature by another (Q. CVI).

Under the first head there are eight points of inquiry. (1) Whether God can move immediately the matter to the form? (2) Whether He can immediately move a body? (3) Whether He can move the intellect? (4) Whether He can move the will? (5) Whether God works in every worker? (6) Whether He can do anything outside the order given to things? (7) Whether all that God does is miraculous? (8) Of the diversity of miracles.

ARTICLE 1. *Whether God Can Move the Matter Immediately to the Form?*

We proceed thus to the First Article: It would seem that God cannot move the matter immediately to receive the form.

Objection 1. For, as the Philosopher proves,[2] nothing can bring a form into any particular matter except that form which is in matter, because, like begets like. But God is not a form in

[2] *Metaphysics,* VII, 8 (1033[b]23).

matter. Therefore He cannot cause a form in matter.

Obj. 2. Further, any agent inclined to several effects will produce none of them, unless it is determined to a particular one by some other cause; for, as the Philosopher says,[1] a universal opinion does not move the mind except by means of some particular apprehension. But the Divine power is the universal cause of all things. Therefore it cannot produce any particular form except by means of a particular agent.

Obj. 3 As universal being depends on the first universal cause, so determinate being depends on determinate particular causes, as we have seen above (Q. CIV, A. 2). But the determinate being of a particular thing is from its own form. Therefore the forms of things are produced by God only by means of particular causes.

On the contrary, It is written (Gen. 2. 7): *God formed man of the slime of the earth.*

I answer that, God can move matter immediately to a form, because a being in passive potency can be reduced to act by the active power which extends over that potency. Therefore, since the Divine power extends over matter, as produced by God, it can be reduced to act by the Divine power. And this is what is meant by matter being moved to a form, for a form is nothing else but the act of matter.

Reply Obj. 1. An effect is likened to the active cause in two ways. First, according to the same species; as man is generated by man, and fire by fire Secondly, by being virtually contained in the cause; as the form of the effect is virtually contained in its cause. Thus animals produced by putrefaction, and plants, and minerals are like the sun and stars, by whose power they are produced. In this way the effect is like its active cause as regards all that over which the power of that cause extends. Now the power of God extends to both matter and form, as we have said above (Q XIV, A. 11; Q XLIV, A. 2) Therefore if a composite thing be produced, it is likened to God by way of a virtual inclusion; and it is likened to the composite generator by a likeness of species. Therefore just as the composite generator can move matter to a form by generating a composite thing like itself, so also can God. But no other form not existing in matter can do this, because the power of no other separate substance extends over matter. Hence angels and demons operate on visible matter not by imprinting forms in matter, but by making use of corporeal elements.

[1] *Soul,* III, 11 (434[a]16).

Reply Obj. 2. This argument would hold if God were to act of natural necessity. But since He acts by His will and intellect, which knows the particular and not only the universal natures of all forms, it follows that He can imprint this or that form on matter in a determinate way.

Reply Obj. 3. The fact that secondary causes are ordered to determinate effects is due to God. Therefore since God orders other causes to determinate effects He can also produce determinate effects by Himself without any other cause.

ARTICLE 2. *Whether God Can Move a Body Immediately?*

We proceed thus to the Second Article: It would seem that God cannot move a body immediately.

Objection 1 For as "the mover and the moved must exist simultaneously," as the Philosopher says,[2] it follows that there must be some contact between the mover and the moved. But there can be no contact between God and a body, for Dionysius says (*Div. Nom.* i):[3] "There is no contact with God." Therefore God cannot move a body immediately.

Obj. 2. Further, God is the mover unmoved. But such also is the desirable object when apprehended. Therefore God moves as the object of desire and apprehension. But He cannot be apprehended except by the intellect, which is neither a body nor a corporeal power. Therefore God cannot move a body immediately.

Obj 3. Further, the Philosopher proves[4] that an infinite power moves instantaneously. But it is impossible for a body to be moved in one instant; for since every movement is between opposites, it follows that two opposites would exist at once in the same subject, which is impossible. Therefore a body cannot be moved immediately by an infinite power. But God's power is infinite, as we have explained above (Q. XXV, A. 2). Therefore God cannot move a body immediately.

On the contrary, God produced the works of the six days immediately, among which is included the movements of bodies, as is clear from Gen. 1. 9: *Let the waters be gathered together into one place.* Therefore God can move a body immediately.

I answer that, It is erroneous to say that God cannot Himself produce all the determinate ef-

[2] *Physics,* VII, 2 (243[a]4).
[3] Sect. 5 (PG 3, 593).
[4] *Physics,* VIII, 10 (266[a]31).

fects which are produced by any created cause.[1] Therefore, since bodies are moved immediately by created causes, we cannot possibly doubt that God can move immediately any bodies whatever. This indeed follows from what is above stated (A. 1). For every movement of any body whatever either results from a form, as the movements of things heavy and light result from the form which they have from their generating cause, for which reason the generator is called the mover, or else tends to a form, as heating tends to the form of heat. Now it belongs to the same cause, to imprint a form, to dispose to that form, and to give the movement which results from that form; for fire not only generates fire, but it also heats and moves things upwards. Therefore, as God can imprint form immediately in matter, it follows that He can move any body whatever in respect of any movement whatever.

Reply Obj. 1. There are two kinds of contact: corporeal contact, when two bodies touch each other; and virtual contact, as the cause of sadness is said to touch the one made sad. According to the first kind of contact, God, since He is incorporeal, neither touches, nor is touched. But according to virtual contact He touches creatures by moving them, but He is not touched, because the natural power of no creature can reach up to Him. Thus did Dionysius understand the words, "There is no contact with God"; that is, in such a way that God Himself would be touched.

Reply Obj. 2. God moves as the object of desire and understanding. But it does not follow that He always moves as being desired and understood by that which is moved, but as being desired and known by Himself. For He does all things for His own goodness.

Reply Obj. 3. The Philosopher intends to prove[2] that the power of the first mover is not a power of size, by the following argument. The power of the first mover is infinite (which he proves from the fact that the first mover can move in infinite time).[3] Now an infinite power, if it were a power of size, would move without time, which is impossible; therefore the infinite power of the first mover must be in something which is not measured by size. From this it is clear that for a body to be moved without time can only be the result of an infinite power. The reason is that every power which has size moves in its entirety, since it moves by the necessity of its nature. But an infinite power surpasses out of all proportion any finite power. Now the greater the power of the mover, the greater is the speed of the movement. Therefore, since a finite power moves in a determinate time, it follows that an infinite power does not move in any time, for between one time and any other time there is some proportion. On the other hand, a power which is without size is the power of an intelligent being, which operates in its effects according to what is fitting to them; and therefore, since it cannot be fitting for a body to be moved without time, it does not follow that it moves without time.

[1] Cf. St. Thomas, *Op.* X, A. 1, *Op.* XI, A. 13. Cf. also in Chenu, *Milanges Mandonnet* (I, 91) and Destrez, *Mélanges Mandonnet* (I, 103).

[2] *Physics*, VIII, 10 (266^a10).

[3] *Ibid.* (267^b25).

Article 3. *Whether God Moves the Created Intellect Immediately?*

We proceed thus to the Third Article: It would seem that God does not immediately move the created intellect.

Objection 1. For the action of the intellect proceeds from that in which it resides, since it does not pass into external matter, as stated in the *Metaphysics*.[4] But the action of what is moved by another does not proceed from that in which it is, but from the mover. Therefore the intellect is not moved by another; and so apparently God cannot move the created intellect.

Obj. 2. Further, anything which has in itself a sufficient principle of movement is not moved by another. But the movement of the intellect is its act of understanding, in the sense in which we say that to understand or to feel is a kind of movement, as the Philosopher says.[5] But the intellectual light which is natural to the soul is a sufficient principle of understanding. Therefore it is not moved by another.

Obj. 3. Further, as the senses are moved by the sensible, so the intellect is moved by the intelligible. But God is not intelligible to us, and exceeds the capacity of our intellect. Therefore God cannot move our intellect.

On the contrary, The teacher moves the intellect of the one taught. But it is written (Ps. 93. 10) that God *teaches man knowledge.* Therefore God moves the human intellect.

I answer that, As in corporeal movement that is called the mover which gives the form that is the principle of movement, so that is said to move the intellect which is the cause of the form that is the principle of the intellectual op-

[4] Aristotle, IX, 8 (1050^a36).

[5] *Soul*, III, 7 (431^a6).

eration, called the movement of the intellect. Now there is a twofold principle of intellectual operation in the intelligent being, one which is the intellectual power itself, which principle exists also in the one who understands in potentiality, and the other which is the principle of actual understanding, namely, the likeness of the thing understood in the one who understands. So a thing is said to move the intellect, whether it gives to him who understands the power of understanding, or impresses on him the likeness of the thing understood.

Now God moves the created intellect in both ways. For He is the First immaterial Being, and since intellectuality is a result of immateriality, it follows that He is the First intelligent Being Therefore since in each order the first is the cause of all that follows, we must conclude that from Him proceeds all intellectual power In like manner, since He is the First Being, and all other beings pre-exist in Him as in their First Cause, it follows that they exist intelligibly in Him, after the mode of His own Nature For as the intelligible types of everything exist first of all in God, and are derived from Him by other intellects in order that these may actually understand, so also are they derived by creatures that they may subsist. Therefore God moves the created intellect in this way, since He gives it the power of understanding, whether natural, or superadded, and impresses on the created intellect the intelligible species, and maintains and preserves both power and species in being.

Reply Obj 1. The intellectual operation is performed by the intellect in which it exists, as by a secondary cause; but it proceeds from God as from its first cause. For the power to understand is given by Him to the one who understands.

Reply Obj. 2. The intellectual light together with the likeness of the thing understood is a sufficient principle of understanding, but it is a secondary principle, and depends upon the First Principle.

Reply Obj. 3. The intelligible moves our intellect, in so far as, in a certain way, it impresses on it its own likeness, by means of which the intellect is able to understand it. But the likenesses which God impresses on the created intellect are not sufficient to enable the created intellect to understand Him through His Essence, as we have seen above (Q. XII, A. 2; Q. LVI, A. 3). Hence He moves the created intellect, and yet He cannot be intelligible to it, as we have explained (Q. XII, A. 4).

ARTICLE 4. *Whether God Can Move the Created Will?*

We proceed thus to the Fourth Article: It would seem that God cannot move the created will.

Objection 1. For whatever is moved from without, is forced But the will cannot be forced. Therefore it is not moved from without. And therefore cannot be moved by God.

Obj 2. Further, God cannot make contradictories to be true at the same time. But this would follow if He moved the will, for to be voluntarily moved means to be moved from within, and not by another. Therefore God cannot move the will.

Obj. 3. Further, movement is attributed to the mover rather than to the one moved. Therefore homicide is not ascribed to the stone, but to the thrower Therefore, if God moves the will, it follows that voluntary actions are not imputed to man for reward or blame. But this is false Therefore God does not move the will.

On the contrary, It is written (Phil. 2. 13): *It is God who worketh in us* (Vulgate,—*you*) *both to will and to accomplish.*

I answer that, As the intellect is moved by the object and by the giver of the power of understanding, as stated above (A. 3), so is the will moved by its object, which is the good, and by Him who creates the power of willing. Now the will can be moved by some good as its object, but sufficiently and efficaciously by God alone. For nothing can move a movable thing sufficiently unless the active power of the mover surpasses or at least equals the passive power of the thing movable. Now the passive power of the will extends to the universal good, for its object is the universal good, just as the object of the intellect is universal being But every created good is some particular good. God alone is the universal good. Therefore He alone fills the capacity of the will, and moves it sufficiently as its object. In like manner the power of willing is caused by God alone. For to will is nothing but to be inclined towards the object of the will, which is universal good. But to incline towards the universal good belongs to the First Mover, to Whom the ultimate end is proportioned; just as in human affairs to him that presides over the community belongs the directing of his subjects to the common good. Therefore in both ways it belongs to God to move the will, but especially in the second way by inclining it in an interior way.

Reply Obj. 1. A thing moved by ar[illegible]

forced if moved against its own inclination; but if it is moved by another giving to it its own inclination, it is not forced. For example, when a heavy body is made to move downwards by that which produced it, it is not forced. In like manner God, while moving the will, does not force it, because He gives the will its own inclination.

Reply Obj. 2. To be moved voluntarily is to be moved from within, that is, by an interior principle. Yet this interior principle may be caused by an exterior principle, and so to be moved from within is not contrary to being moved by another.

Reply Obj. 3. If the will were so moved by another as in no way to be moved from within itself, the act of the will would not be held accountable for reward or blame. But since its being moved by another does not prevent its being moved from within itself, as we have stated (*ad* 2), it does not thereby forfeit the reason for merit or demerit.

ARTICLE 5. *Whether God Works in Every Agent?*

We proceed thus to the Fifth Article: It would seem that God does not work in every agent.

Objection 1. For we must not attribute any insufficiency to God. If therefore God works in every agent, He works sufficiently in each one. Hence it would be superfluous for the created agent to work at all.

Obj. 2. Further, the same work cannot proceed at the same time from two sources, just as neither one and the same movement can belong to two movable things. Therefore if the creature's operation is from God operating in the creature, it cannot at the same time proceed from the creature. And so no creature works at all.

Obj. 3. Further, the maker is the cause of the operation of the thing made, as giving it the form by which it operates. Therefore, if God is the cause of the operation of things made by Him, this would be in so far as He gives them the power of operating. But this is in the beginning, when He makes them. Thus it seems that God does not operate any further in the operating creature.

On the contrary, It is written (Isa. 26. 12): *Lord, Thou hast wrought all our works in* (Vulgate,—*for*) *us.*

I answer that, Some have understood God to work in every agent in such a way that no created power has any effect in things, but that God alone is the immediate cause of everything wrought;[1] for instance, that it is not fire that gives heat, but God in the fire, and so forth. But this is impossible. First, because the order of cause and effect would be taken away from created things. This would imply lack of power in the Creator, for it is due to the power of the cause that it bestows active power on its effect. Secondly, because the active powers which are seen to exist in things would be bestowed on things to no purpose if these wrought nothing through them. Indeed, all things created would seem, in a way, to be purposeless if they lacked an operation proper to them, since the purpose of everything is its operation. For the less perfect is always for the sake of the more perfect. And consequently as the matter is for the sake of the form, so the form which is the first act, is for the sake of its operation, which is the second act; and thus operation is the end of the creature. We must therefore understand that God works in things in such a manner that things nevertheless have their proper operation.

In order to make this clear, we must observe that although there are four kinds of causes, matter is not a principle of action, but is the subject that receives the effect of action. On the other hand, the end, the agent, and the form, are principles of action, but in a certain order. For the first principle of action is the end, which moves the agent; the second is the agent; the third is the form of that which the agent applies to action (although the agent also acts through its own form), as may be clearly seen in things made by art. For the craftsman is moved to action by the end, which is the thing wrought, for instance a chest or a bed; and applies to action the axe which cuts through its being sharp.

Thus then does God work in every worker, according to these three things. First as an end For since every operation is for the sake of some good, real or apparent, and since nothing is good either really or apparently, except in as far as it participates in a likeness to the Supreme Good, which is God, it follows that God Himself is the cause of every operation as its end. Again it is to be observed that where there are several agents in order, the second always acts in virtue of the first, for the first agent moves the second to act. And thus all agents act in virtue of God Himself, and in this way He is the cause of action in every agent. Thirdly, we must observe that God not only moves things to operate, by applying as it were their forms and powers to operation, just as the workman ap-

[1] Cf. Q. XLV, A. 8; Q. CXV, A. 1. Cf. also Averroes, *In Meta.*, IX, 7 (VIII, 231H); XII, 18 (VIII, 305F).

plies the axe to cut (who nevertheless oftentimes does not give the axe its form), but He also gives created agents their forms and preserves them in being. Therefore He is the cause of action not only by giving the form which is the principle of action, as the generator is said to be the cause of movement in things heavy and light, but also as preserving the forms and powers of things, just as the sun is said to be the cause of the manifestation of colours, since it gives and preserves the light by which colours are made manifest. And since the form of a thing is within the thing, and all the more as it approaches nearer to the First and Universal Cause, and because in all things God Himself is properly the cause of universal being which is innermost in all things, it follows that in all things God works inwardly. For this reason in Holy Scripture the operations of nature are attributed to God as operating in nature, according to Job 10. 11: *Thou hast clothed me with skin and flesh: Thou hast put me together with bones and sinews.*

Reply Obj. 1. God works sufficiently in things as First Agent, but it does not follow from this that the operation of secondary agents is superfluous.

Reply Obj. 2. One action does not proceed from two agents of the same order. But nothing hinders the same action from proceeding from a primary and a secondary agent.

Reply Obj. 3. God not only gives things their form, but He also preserves them in being, and applies them to act, and is moreover the end of every action, as explained above.

ARTICLE 6. *Whether God Can Do Anything Outside the Established Order of Things?*

We proceed thus to the Sixth Article: It would seem that God cannot do anything outside the established order of nature.

Objection 1. For Augustine (*Contra Faust.* xxvi, 3)[1] says: "God the Maker and Creator of each nature, does nothing against nature." But that which is outside the natural order seems to be against nature. Therefore God can do nothing outside the natural order.

Obj. 2. Further, as the order of justice is from God, so is the order of nature. But God cannot do anything outside the order of justice, for then He would do something unjust. Therefore He cannot do anything outside the established order of things.

Obj. 3. Further, God established the order of nature. Therefore if God does anything outside the order of nature, it would seem that He is changeable, which cannot be said.

On the contrary, Augustine says (*Contra Faust.* xxvi, *ibid.*):[2] "God sometimes does things which are contrary to the ordinary course of nature."

I answer that, From each cause there results a certain order to its effects, since every cause is a principle. And so, according to the multiplicity of causes, there results a multiplicity of orders, subjected one to the other, as cause is subjected to cause. And so a higher cause is not subjected to a cause of a lower order, but conversely. An example of this may be seen in human affairs. On the father of a family depends the order of the household, which order is contained in the order of the city, which order again depends on the ruler of the city, while this last order depends on that of the king, by whom the whole kingdom is ordered.

If therefore we consider the order of things depending on the first cause, God cannot do anything against this order; for, if He did so, He would act against His foreknowledge, or His will, or His goodness. But if we consider the order of things depending on any secondary cause, then God can do something outside this order; for He is not subject to the order of secondary causes, but, on the contrary, this order is subject to Him, as proceeding from Him, not by a natural necessity, but by the choice of His own will, for He could have created another order of things. Therefore God can do something outside this order created by Him, when He chooses, for instance by producing the effects of secondary causes without them, or by producing certain effects to which secondary causes do not extend. So Augustine says (*Contra Faust.* xxvi, *ibid*): "God acts against the wonted course of nature, but by no means does He act against the supreme law, because He does not act against Himself."

Reply Obj. 1. In natural things something may happen outside this natural order in two ways. It may happen by the action of an agent which did not give them their natural inclination; as, for example, when a man moves upwards a heavy body, which does not owe to him its natural inclination to move downwards; and that would be against nature. It may also happen by the action of the agent on whom the natural inclination depends; and this is not against nature, as is clear in the ebb and flow of the tide, which is not against nature, although it is against the natural movement of water in a downward direction, for it is owing to the influ-

[1] PL 42, 480.

[2] PL 42, 481.

ence of a heavenly body, on which the natural inclination of lower bodies depends. Therefore, since the order of nature is given to things by God, if He does anything outside this order, it is not against nature. And so Augustine says (*ibid.*): "That is natural to each thing which is caused by Him from Whom is all measure, number, and order in nature."

Reply Obj. 2. The order of justice arises by relation to the First Cause, Who is the rule of all justice; and therefore God can do nothing against this order.

Reply Obj. 3. God fixed a certain order in things in such a way that at the same time He reserved to Himself whatever He intended to do otherwise than by a particular cause. So when He acts outside this order, He does not change.

ARTICLE 7. *Whether Whatever God Does Outside the Natural Order Is Miraculous?*

We proceed thus to the Seventh Article: It would seem that not everything which God does outside the natural order of things is miraculous.

Objection 1. For the creation of the world, and of souls, and the justification of the unrighteous, are done by God outside the natural order, for they are not accomplished by the action of any natural cause. Yet these things are not called miracles. Therefore not everything that God does outside the natural order is a miracle.

Obj. 2. Further, a miracle is "something difficult, which seldom occurs, surpassing the power of nature, and going so far beyond our hopes as to compel our astonishment."[1] But some things outside the order of nature are not difficult, for they occur in small things, such as the recovery of jewels and the healing of the sick. Nor are they of rare occurrence, since they happen frequently, as when the sick were placed in the streets, to be healed by the shadow of Peter (Acts 5. 15). Nor do they surpass the power of nature, as when people are cured of a fever. Nor are they beyond our hopes, since we all hope for the resurrection of the dead, which nevertheless will be outside the course of nature. Therefore not all things that are outside the course of nature are miraculous.

Obj. 3. Further, the word miracle is derived from admiration. Now admiration concerns things manifest to the senses. But sometimes things happen outside the order of nature, which are not manifest to the senses, as when the Apostles were endowed with knowledge without studying or being taught. Therefore not everything that occurs outside the order of nature is miraculous.

On the contrary, Augustine says (*Contra Faust.* xxvi, 3):[2] "Where God does anything against that order of nature which we know and are accustomed to observe, we call it a miracle."

I answer that, The word miracle is derived from admiration, which arises when an effect is manifest, and its cause is hidden, as when a man sees an eclipse of the sun without knowing its cause, as the Philosopher says in the beginning of his *Metaphysics.*[3] Now the cause of an effect which makes its appearance may be known to one, but unknown to others. And so a thing is wonderful to one man, and not at all to others; as an eclipse is to a rustic, but not to an astronomer. Now a miracle is called so as being full of wonder, and as having a cause absolutely hidden from all; and this cause is God. Therefore those things which God does outside those causes which we know, are called miracles.

Reply Obj. 1. Creation, and the justification of the unrighteous, though done by God alone, are not, properly speaking, miracles, because they are not of a nature to proceed from any other cause. So they do not occur outside the order of nature, since they do not belong to that order.

Reply Obj. 2. A difficult thing is called a miracle not on account of the excellence of the thing in which it is done, but because it surpasses the power of nature; likewise a thing is called unusual not because it does not often happen, but because it is outside the usual natural course of things. Furthermore, a thing is said to be above the power of nature not only by reason of the substance of the thing done, but also on account of the manner and order in which it is done. Again, a miracle is said to go beyond the hope of nature, not beyond the hope of grace, which hope comes from faith, by which we believe in the future resurrection.

Reply Obj. 3. The knowledge of the Apostles, although not manifest in itself, yet was made manifest in its effect, from which it was shown to be wonderful.

ARTICLE 8. *Whether One Miracle Is Greater Than Another?*

We proceed thus to the Eighth Article: It would seem that one miracle is not greater than another.

[1] Augustine, *De utilitate credendi,* XVI (PL 42, 90).

[2] PL 42, 481.

[3] I, 2 (982b16).

Objection 1. For Augustine says (*Epist. ad Volusian.* CXXXVII):[1] "In miraculous deeds, the whole measure of the deed is the power of the doer." But by the same power of God all miracles are done. Therefore one miracle is not greater than another.

Obj. 2. Further, the power of God is infinite. But the infinite exceeds the finite beyond all proportion; and therefore no more reason exists to wonder at one of its effects than at another. Therefore one miracle is not greater than another.

On the contrary, The Lord says, speaking of miraculous works (John 14. 12): *The works that I do, he also shall do, and greater than these shall he do.*

I answer that, Nothing is called a miracle by comparison with the Divine Power, because no action is of any account compared with the power of God, according to Isa. 40. 15: *Behold the Gentiles are as a drop from a bucket, and are counted as the smallest grain of a balance.* But a thing is called a miracle by comparison with the power of nature which it surpasses. So the more the power of nature is surpassed, the greater is the miracle.

Now the power of nature is surpassed in three ways. First, in the substance of the deed, for instance, if two bodies occupy the same place, or if the sun goes backwards, or if a human body is glorified. Nature is absolutely unable to do such things, and these hold the highest rank among miracles Secondly, a thing surpasses the power of nature not in the deed, but in that in which it is done, such as the raising of the dead, and giving sight to the blind, and the like. For nature can give life, but not to the dead, and nature can give sight, but not to the blind. And such hold the second rank in miracles. Thirdly, a thing surpasses nature's power in the measure and order in which it is done, as when a man is cured of a fever suddenly, without treatment or the usual process of nature; or as when the air is suddenly condensed into rain, by Divine power without a natural cause, as occurred at the prayers of Samuel and Elias.[2] And these hold the lowest place in miracles. Moreover, each of these kinds has various degrees, according to the different ways in which the power of nature is surpassed.

From this it is clear how to *reply to the objections,* arguing as they do from the Divine power.

[1] Chap. 2 (PL 33, 519).
[2] II Kings, 12.18; III Kings, 18.44.

QUESTION CVI

HOW ONE CREATURE MOVES ANOTHER

(*In Four Articles*)

WE next consider how one creature moves another. This consideration will be threefold. (1) How the angels who are purely spiritual creatures move; (2) How bodies move (Q. CXV); (3) How man moves, who is composed of a spiritual and a corporeal nature (Q. CXVII).

Concerning the first point, there are three things to be considered: (1) How an angel acts on an angel; (2) How an angel acts on a corporeal nature (Q. CX); (3) How an angel acts on man (Q. CXI).

The first of these raises the question of the enlightenment and speech of the angels (Q. CVII); and of their mutual ordering, both of the good and of the bad angels (Q. CVIII; Q. CIX).

Concerning their enlightenment there are four points of inquiry: (1) Whether one angel moves the intellect of another by enlightenment? (2) Whether one angel moves the will of another? (3) Whether an inferior angel can enlighten a superior angel? (4) Whether a superior angel enlightens an inferior angel in all that he knows himself?

ARTICLE 1. *Whether One Angel Enlightens Another?*

We proceed thus to the First Article: It would seem that one angel does not enlighten another.

Objection 1. For the angels possess now the same Happiness which we hope to obtain. But one man will not then enlighten another, according to Jer. 31. 34: *They shall teach no more every man his neighbour, and every man his brother.* Therefore neither does an angel enlighten another now.

Obj. 2. Further, light in the angels is threefold: of nature, of grace, and of glory. But an angel is enlightened in the light of nature, by the Creator; in the light of grace, by the Justifier; in the light of glory by the Beatifier; all of which comes from God. Therefore one angel does not enlighten another.

Obj. 3. Further, light is a form in the mind. But the rational mind is "informed by God alone, without created intervention," as Augustine says (QQ. LXXXIII, *qu.* 51).[3] Therefore one angel does not enlighten the mind of another.

On the contrary, Dionysius says (*Cæl. Hier.* viii)[4] that "the angels of the second hierarchy

[3] PL 40, 33. [4] Sect. 1 (PG 3, 240).

are cleansed, enlightened and perfected by the angels of the first hierarchy."

I answer that, One angel enlightens another. To make this clear, we must observe that intellectual light is nothing else than a manifestation of truth, according to Eph. 5. 13: *All that is made manifest is light.* Hence to enlighten means nothing else but to communicate to others the manifestation of the known truth; according to the Apostle (Eph. 3. 8): *To me the least of all the saints is given this grace . . . to enlighten all men, that they may see what is the dispensation of the mystery which hath been hidden from eternity in God.* Therefore one angel is said to enlighten another by manifesting the truth which he knows himself. Hence Dionysius says (*Cæl. Hier.* vii):[1] "Theologians plainly show that the orders of the heavenly beings are taught Divine science by the higher minds."

Now since two things co-operate in understanding, as we have said (Q. CV, A. 3), namely, the intellectual power, and the likeness of the thing understood, and in both of these one angel can announce the known truth to another. First, by strengthening his intellectual power. For just as the power of an imperfect body is strengthened by the neighbourhood of a more perfect body,—for instance, the less hot is made hotter by the presence of what is hotter, so the intellectual power of an inferior angel is strengthened by the superior angel turning to him. For in spiritual things, for one thing to turn to another corresponds to neighbourhood in corporeal things. Secondly, one angel manifests the truth to another as regards the likeness of the thing understood. For the superior angel receives the knowledge of truth by a kind of universal conception, which the inferior angel's intellect is not sufficiently powerful to seize, for it is natural to him to receive truth in a more particular manner. Therefore the superior angel distinguishes, in a way, the truth which he conceives universally, so that it can be grasped by the inferior angel; and thus he proposes it to his knowledge. Thus it is with us that the teacher, in order to adapt himself to others, divides into many points the knowledge which he possesses in the universal. This is thus expressed by Dionysius (*Cæl. Hier.* xv):[2] "Every intellectual substance with provident power divides and multiplies the uniform knowledge bestowed on it by one nearer to God, so as to lead its inferiors upwards by analogy."

[1] Sect. 3 (PG 3, 209).
[2] Sect. 3 (PG 3, 332).

Reply Obj. 1. All the angels, both inferior and superior, see the Essence of God immediately, and in this respect one does not teach another. It is of this truth that the prophet speaks; and so he adds: *They shall teach no more every man his brother, saying: Know the Lord: for all shall know Me, from the least of them even to the greatest.* But all the types of the Divine works, which are known in God as in their cause, God knows in Himself, because He comprehends Himself; but of others who see God, each one knows the more types the more perfectly he sees God. Hence a superior angel knows more about the types of the Divine works than an inferior angel, and concerning these the former enlightens the latter; and as to this Dionysius says (*Div. Nom.* iv),[3] that the angels "are enlightened by the types of existing things."

Reply Obj. 2. An angel does not enlighten another by giving him the light of nature, grace, or glory, but by strengthening his natural light, and by manifesting to him the truth of things pertaining to the state of nature, of grace, and of glory, as explained above.

Reply Obj. 3. The rational mind is formed immediately by God, either as the image from the exemplar, because it is made to the image of God alone; or as the subject by the ultimate perfecting form. For the created mind is always considered to be unformed, unless it adheres to the first truth, while other kinds of enlightenment that proceed from man or angel are, as it were, dispositions to this ultimate form.

ARTICLE 2. *Whether One Angel Moves Another Angel's Will?*

We proceed thus to the Second Article: It would seem that one angel can move another angel's will.

Objection 1. Because, according to Dionysius,[4] as one angel enlightens another, so does he cleanse and perfect another. But cleansing and perfecting seem to belong to the will, for the former seems to point to the stain of sin which pertains to the will, while to be perfected is to obtain an end, which is the object of the will. Therefore an angel can move another angel's will.

Obj. 2. Further, as Dionysius says (*Cæl. Hier.* vii)[5] that the names of the angels designate their properties. Now the Seraphim are called so because they kindle or give heat, and this is by love which belongs to the will. Therefore one angel moves another angel's will.

[3] Sect. 1 (PG 3, 693). [4] *Cæl. Hier.*, VIII, 1 (PG 3, 240).
[5] Sect. 1 (PG 3, 205).

Obj. 3. Further, the Philosopher says[1] that the higher appetite moves the lower. But as the intellect of the superior angel is higher, so also is his will. It seems, therefore, that the superior angel can change the will of another angel.

On the contrary, To him it belongs to change the will to whom it belongs to bestow justice, for justice is the rightness of the will. But God alone bestows justice. Therefore one angel cannot change another angel's will.

I answer that, As was said above (Q. CV, A. 4), the will is changed in two ways, on the part of the object, and on the part of the power. On the part of the object, both the good itself which is the object of the will moves the will, as the desirable object moves the appetite, and he who points out the object, as, for instance, one who proves something to be good. But as we have said above (*ibid.*), other goods in a measure incline the will, yet nothing sufficiently moves the will save the universal good, and that is God And this good He alone shows, that it may be seen in its essence by the blessed, Who, when Moses asked: *Show me Thy glory,* answered: *I will show thee all good* (Exod 33. 18, 19). Therefore an angel does not move the will sufficiently, either as the object or as showing the object. But he inclines the will as something lovable, and as manifesting some created good ordered to God's goodness. And thus he can incline the will to the love of the creature or of God, by way of persuasion.

But on the part of the power the will cannot be moved at all save by God. For the operation of the will is a certain inclination of the willer to the thing willed. And He alone can change this inclination Who bestowed on the creature the power to will; just as that agent alone can change the natural inclination which can give the power which the natural inclination follows. Now God alone gave to the creature the power to will, because He alone is the author of the intellectual nature. Therefore an angel cannot move another angel's will.

Reply Obj. 1. Cleansing and perfecting are to be understood according to the mode of enlightenment. And since God enlightens by changing the intellect and will, He cleanses by removing defects of intellect and will, and perfects according to the end of the intellect and will. But the enlightenment caused by an angel concerns the intellect, as explained above (A. 1). Therefore an angel is to be understood as cleansing from the defect of nescience in the intellect, and as perfecting by the achievement of the end of the intellect, and this is the knowledge of truth. Thus Dionysius says (*Eccl. Hier.* vi)[2] that "in the heavenly hierarchy the cleansing of the inferior essence is an enlightening on things unknown, that leads them to more perfect knowledge." For instance, we might say that corporeal sight is cleansed by the removal of darkness, enlightened by the diffusion of light, and perfected by being brought to the knowledge of the coloured thing.

Reply Obj. 2. One angel can induce another to love God by persuasion, as explained above.

Reply Obj. 3. The Philosopher speaks of the lower sensitive appetite, which can be moved by the superior intellectual appetite, because it belongs to the same nature of the soul, and because the inferior appetite is a power in a corporeal organ. But this does not apply to the angels.

ARTICLE 3. *Whether an Inferior Angel Can Enlighten a Superior Angel?*

We proceed thus to the Third Article: It would seem that an inferior angel can enlighten a superior angel.

Objection 1. For the ecclesiastical hierarchy is derived from, and represents the heavenly hierarchy; and hence the heavenly Jerusalem is called *our mother* (Gal. 4. 26). But in the Church even superiors are enlightened and taught by their inferiors, as the Apostle says (I Cor. 14. 31): *You may all prophesy one by one, that all may learn and all may be exhorted.* Therefore, likewise in the heavenly hierarchy the superiors can be enlightened by inferiors.

Obj. 2. Further, as the order of corporeal substances depends on the will of God, so also does the order of spiritual substances. But, as was said above (Q. CV, A. 6), God sometimes acts outside the order of corporeal substances. Therefore he also sometimes acts outside the order of spiritual substances, by enlightening inferiors otherwise than through their superiors. Therefore in that way the inferiors enlightened by God can enlighten superiors.

Obj. 3. Further, one angel enlightens the other to whom he turns, as was above explained (A. 1). But since this turning to another is voluntary, the highest angel can turn to the lowest, passing over the others. Therefore he can enlighten him immediately, and thus the latter can enlighten his superiors.

On the contrary, Dionysius says that "this is the Divine unalterable law, that inferior things

[1] *Soul,* III, 11 (434[a]13).

[2] Part III (PG 3, 537).

are led to God by the superior" (*Cæl. Hier.* iv; *Eccl. Hier.* v).[1]

I answer that, The inferior angels never enlighten the superior, but are always enlightened by them. The reason is, because, as explained above (Q. CV, A. 6), one order is under another, as cause is under cause; and hence as cause is ordered to cause, so is order to order. Therefore there is no incongruity if at times something is done outside the order of the inferior cause to be ordered to the superior cause, as in human affairs the command of the lesser ruler is passed over from obedience to the prince. So it happens that God works miraculously outside the order of corporeal nature in order that men may be ordered to the knowledge of Him. But the passing over of the order that is due to spiritual substances in no way pertains to the ordering of men to God, since the angelic operations are not made known to us, as are the operations of sensible bodies. Thus the order which belongs to spiritual substances is never passed over by God, so that the inferiors are always moved by the superior, and not conversely.

Reply Obj. 1. The ecclesiastical hierarchy imitates the heavenly in some degree, but not by a perfect likeness. For in the heavenly hierarchy the entire principle of order is nearness to God, so that those who are the nearer to God are the more sublime in degree, and more clear in knowledge; and on that account the superiors are never enlightened by the inferiors. But in the ecclesiastical hierarchy, sometimes those who are the nearer to God in sanctity are in the lowest degree, and are not outstanding in knowledge. And some also are eminent in one kind of knowledge, and fail in another. And on that account superiors may be taught by inferiors.

Reply Obj. 2. As explained above, there is no similarity between what God does outside the order of corporeal nature, and that of spiritual nature. Hence the argument does not hold.

Reply Obj. 3. An angel turns voluntarily to enlighten another angel, but the angel's will is always regulated by the Divine law which established the order in the angels.

ARTICLE 4. *Whether the Superior Angel Enlightens the Inferior As Regards All He Himself Knows?*

We proceed thus to the Fourth Article: It would seem that the superior angel does not enlighten the inferior concerning all he himself knows.

Objection 1. For Dionysius says (*Cæl. Hier.* xii),[2] that the superior angels have a more universal knowledge, and the inferior a more particular and inferior knowledge. But more is contained under a universal knowledge than under a particular knowledge. Therefore not all that the superior angels know is known by the inferior through the enlightenment by the former.

Obj. 2. Further, the Master of the *Sentences* says (II, XI)[3] that the superior angels had long known the Mystery of the Incarnation, but that the inferior angels did not know it until it was accomplished. Thus we find that on some of the angels inquiring, as it were, in ignorance: *Who is this King of glory?* other angels, who knew, answered: *The Lord of Hosts, He is the King of glory,* as Dionysius expounds (*Cæl. Hier.* vii).[4] But this would not be if the superior angels enlightened the inferior concerning all they know themselves. Therefore they do not do so.

Obj. 3. Further, if the superior angels enlighten the inferior about all they know, nothing that the superior angels know would be unknown to the inferior angels. Therefore the superior angels could communicate nothing more to the inferior, which appears open to objection. Therefore the superior angels enlighten the inferior in all things.

On the contrary, Gregory says:[5] "In that heavenly country, though there are some excellent gifts, yet nothing is held individually." And Dionysius says: "Each heavenly essence communicates to the inferior the understanding derived from the superior" (*Cæl. Hier.* xv),[6] as quoted above (A. 1).

I answer that, Every creature participates in the Divine goodness, so as to diffuse the good it possesses to others, for it is of the nature of good to communicate itself to others. Hence also corporeal agents give their likeness to others so far as they can. So the more an agent is established in the share of the Divine goodness, so much the more does it strive to transmit its perfections to others as far as possible. Hence the Blessed Peter admonishes those who by grace share in the Divine goodness, saying: *As every man hath received grace, ministering the same one to another; as good stewards of the manifold grace of God* (I Pet. 4. 10). Much more therefore do the holy angels, who enjoy the fulness of participation of the Divine goodness impart the same to those below them.

[1] Sect. 3 (PG 3, 281); PT. I (PG 3, 504).
[2] Sect. 2 (PG 3, 293).
[3] QR I, 356.
[4] Sect. 3 (PG 3, 209).
[5] Cf. Gregory, Hom. XXXIV *in Ev.* (PL 76, 1255); cf. also Peter Lombard, *Sent.*, II, d. 9, chap. 3 (QR I, 346).
[6] Sect. 3 (PG 3, 332).

Nevertheless this gift is not received so excellently by the inferior as by the superior angels, and therefore the superior always remain in a higher order, and have a more perfect knowledge, just as the master understands the same thing more fully than the pupil who learns from him.

Reply Obj. 1. The knowledge of the superior angels is said to be more universal as regards the more eminent mode of understanding.

Reply Obj. 2. The Master's words are not to be so understood as if the inferior angels were entirely ignorant of the Mystery of the Incarnation, but that they did not know it as fully as the superior angels, and that they progressed in the knowledge of it afterwards when the Mystery was accomplished.

Reply Obj. 3. Till the Judgment Day some new things are always being revealed by God to the highest angels concerning the course of the world, and especially the salvation of the elect. Hence there is always something for the superior angels to make known to the inferior.

QUESTION CVII

THE SPEECH OF THE ANGELS

(In Five Articles)

WE now consider the speech of the angels. Here there are five points of inquiry: (1) Whether one angel speaks to another? (2) Whether the inferior speaks to the superior. (3) Whether an angel speaks to God? (4) Whether the angelic speech is subject to local distance? (5) Whether the speech of one angel to another is known to all?

ARTICLE 1. *Whether One Angel Speaks to Another?*

We proceed thus to the First Article: It would seem that one angel does not speak to another.

Objection 1. For Gregory says (*Moral.* xviii)[1] that, in the state of the resurrection "each one's body will not hide his mind from his fellows." Much less, therefore, is one angel's mind hidden from another. But speech manifests to another what lies hidden in the mind. Therefore it is not necessary that one angel should speak to another.

Obj. 2 Further, speech is twofold. interior, whereby one speaks to oneself, and exterior, whereby one speaks to another. But exterior speech takes place by some sensible sign, as by voice, or gesture, or some bodily member, as the tongue, or the fingers, and this cannot apply to the angels. Therefore one angel does not speak to another.

Obj. 3. Further, the speaker incites the hearer to listen to what he says. But it does not appear that one angel incites another to listen, for this happens among us by some sensible sign. Therefore one angel does not speak to another.

On the contrary, The Apostle says (I Cor. 13. 1): *If I speak with the tongues of men and of angels.*

I answer that, The angels speak in a certain way. But, as Gregory says (*Moral.* ii):[2] "It is fitting that our mind, rising above the properties of bodily speech, should be lifted to the sublime and unknown ways of interior speech."

To understand how one angel speaks to another, we must consider that, as we explained above (Q. LXXXII, A. 4) when treating of the actions and powers of the soul, the will moves the intellect to its operation. Now an intelligible object is present to the intellect in three ways First, habitually, or in the memory, as Augustine says (*De Trin.* xiv, 6, 7).[3] Secondly, as actually considered or conceived Thirdly, as related to something else. And it is clear that the intelligible object passes from the first to the second stage by the command of the will, and hence in the definition of habit these words occur: "which anyone uses when he wills."[4] So likewise the intelligible object passes from the second to the third stage by the will. For by the will the concept of the mind is ordered to something else, as, for instance, either to the performing of an action, or to being made known to another. Now when the mind turns itself to the actual consideration of any habitual knowledge, then a person speaks to himself; for the concept of the mind is called the interior word. And by the fact that the concept of the angelic mind is ordered to be made known to another by the will of the angel himself, the concept of one angel is made known to another; and in this way one angel speaks to another. For to speak to another means nothing other than to make known the mental concept to another.

Reply Obj. 1. Our mental concept is hidden by a twofold obstacle. The first is in the will, which can retain the mental concept within, or can direct it externally. In this way God alone can see the mind of another, according to I Cor. 2. 11: *What man knoweth the things of a man, but the spirit of a man that is in him?* The other obstacle by which the mind of man is shut off from another one's knowledge, comes from the

[1] Chap. 48 (PL 76, 84).
[2] Chap. 7 (PL 75, 559).
[3] PL 42, 1042, 1043.
[4] Averroes, *In De An.*, II, 18 (VI, 2, 161E).

denseness of the body; and so it happens that even when the will directs the concept of the mind to make itself known, it is not at once made known to another, but some sensible sign must be used. Gregory alludes to this fact when he says (*Moral.* ii):[1] "To other eyes we seem to stand aloof as it were behind the wall of the body; and when we wish to make ourselves known, we go out as it were by the door of the tongue to show what we really are." But an angel has no such obstacle, and so he can make his concept known to another at once.

Reply Obj. 2. External speech, made by the voice, is a necessity for us on account of the obstacle of the body. Hence it does not befit an angel, but only interior speech belongs to him; and this includes not only the interior speech by mental concept, but also its being ordered to another's knowledge by the will. So the tongue of an angel is called metaphorically the angel's power, whereby he manifests his concept.

Reply Obj. 3. There is no need to draw the attention of the good angels, since they always see each other in the Word, for as one always sees the other, so he always sees what is ordered to himself. But because even in the state of nature they were able to speak to each other, and even now the bad angels speak to each other, we must say that the intellect is moved by the intelligible object just as sense is affected by the sensible object. Therefore, as sense is aroused by the sensible object, so the mind of an angel can be aroused to attention by some intelligible power.

Article 2. *Whether the Inferior Angel Speaks to the Superior?*

We proceed thus to the Second Article: It would seem that the inferior angel does not speak to the superior.

Objection 1. For on the text (I Cor. 13. 1), *If I speak with the tongues of men and of angels,* a gloss remarks[2] that the speech of the angels is an enlightenment whereby the superior enlightens the inferior. But the inferior never enlightens the superior, as was above explained (Q. CVI, A. 3). Therefore neither do the inferior speak to the superior.

Obj. 2. Further, as was said above (Q. CVI, A. 1), to enlighten means merely to make known to one being what is known to another, and this is to speak. Therefore to speak and to enlighten are the same. And so the same conclusion follows.

Obj. 3. Further, Gregory says (*Moral.* ii):[3] "God speaks to the angels by the very fact that He shows to their hearts His hidden and invisible things." But this is to enlighten them. Therefore, whenever God speaks, He enlightens. In the same way every angelic speech is an enlightening. Therefore an inferior angel can in no way speak to a superior angel.

On the contrary, According to the exposition of Dionysius (*Cæl. Hier.* vii),[4] the inferior angels said to the superior: *Who is this King of Glory?* (Ps. 23.10)

I answer that, The inferior angels can speak to the superior. To make this clear, we must consider that every angelic enlightening is an angelic speech, but on the other hand, not every speech is an enlightening; because, as we have said (A. 1), for one angel to speak to another angel means nothing else but that by his own will he directs his concept in such a way that it becomes known to the other. Now what the mind conceives may be reduced to a twofold principle: to God Himself, Who is the first truth; and to the will of the one who understands, whereby we actually consider anything. But because truth is the light of the intellect, and God Himself is the rule of all truth, the manifestation of what is conceived by the mind, as depending on the first truth, is both speech and enlightenment as, for example, when one man says to another: "Heaven was created by God" or, "Man is an animal" The manifestation, however, of what depends on the will of the one who understands cannot be called an enlightenment, but is only a speech; for instance, when one says to another: "I wish to learn this; I wish to do this or that." The reason is that the created will is not a light, nor a rule of truth, but participates of light. Hence to communicate what comes from the created will is not, as such, an enlightening. For to know what you may will, or what you may understand, does not belong to the perfection of my intellect, but only to know the truth in reality.

Now it is clear that the angels are called superior or inferior by comparison with this principle, God; and therefore enlightenment, which depends on the principle which is God, is conveyed only by the superior angels to the inferior. But as regards the will as the principle, he who wills is first and supreme, and therefore the manifestation of what belongs to the will is conveyed to others by the one who wills. In that manner both the superior angels speak to the inferior, and the inferior speak to the superior.

[1] Chap. 7 (PL 75, 559).
[2] *Glossa ordin.*, (VI, 53E); *Glossa* Lombardi (PL 191, 1658).
[3] Chap. 7 (PL 75, 559).
[4] Sect. 3 (PG 3, 209).

From this the *replies to the first and second objections clearly appear.*

Reply Obj. 3. Every speech of God to the angels is an enlightening because, since the will of God is the rule of truth, it pertains to the perfection and enlightenment of the created mind to know even what God wills. But the same does not apply to the will of the angels, as was explained above.

ARTICLE 3. *Whether an Angel Speaks to God?*

We proceed thus to the Third Article: It would seem that an angel does not speak to God.

Objection 1. For speech makes known something to another. But an angel cannot make known anything to God, who knows all things. Therefore an angel does not speak to God.

Obj. 2. Further, to speak is to order the concept of the intellect in reference to another, as was shown above (A. 1). But an angel always orders his mental concept to God. So if an angel speaks at any time to God, he always speaks to God; which in some way appears to be unreasonable, since an angel sometimes speaks to another angel. Therefore it seems that an angel never speaks to God.

On the contrary, It is written (Zach. 1. 12): *The angel of the Lord answered and said: O Lord of hosts, how long wilt Thou not have mercy on Jerusalem.* Therefore an angel speaks to God.

I answer that, As was said above (AA. 1, 2), the angel speaks by ordering his mental concept to something else. Now one thing is ordered to another in a twofold manner. In one way for the purpose of giving one thing to another, as in natural things the agent is ordered to the patient, and in human speech the teacher is ordered to the learner. And in this sense an angel in no way speaks to God either of what concerns the truth, or of whatever depends on the created will, because God is the principle and source of all truth and of all will. In another way one thing is ordered to another to receive something, as in natural things the passive is ordered to the agent, and in human speech the disciple to the master. And in this way an angel speaks to God, either by consulting the Divine will of what ought to be done, or by admiring the Divine excellence which he can never comprehend. Thus Gregory says (*Moral.* ii)[1] that "the angels speak to God, when by contemplating what is above themselves they rise to a movement of admiration."

Reply Obj. 1. Speech is not always for the purpose of making something known to another, but is sometimes finally ordered to the purpose of manifesting something to the speaker himself, as when the disciples ask instruction from the master.

Reply Obj. 2. The angels are always speaking to God in the sense of praising and admiring Him and His works; but they speak to Him by consulting Him about what ought to be done whenever they have to perform any new work, concerning which they desire enlightenment.

ARTICLE 4. *Whether Local Distance Influences the Angelic Speech?*

We proceed thus to the Fourth Article: It would seem that local distance affects the angelic speech.

Objection 1. For as Damascene says (*De Fid. Orth.* 1, 13):[2] "An angel works where he is." But speech is an angelic operation. Therefore, as an angel is in a determinate place, it seems that an angel's speech is limited by the bounds of that place.

Obj. 2. Further, a speaker cries out on account of the distance of the hearer. But it is said of the Seraphim that *they cried one to another* (Isa. 6. 3). Therefore in the angelic speech local distance has some effect.

On the contrary. It is said that the rich man in hell spoke to Abraham, notwithstanding the local distance (Luke 16. 24). Much less therefore does local distance impede the speech of one angel to another.

I answer that, The angelic speech consists in an intellectual operation, as explained above (AA 1, 2, 3). And the intellectual operation of an angel abstracts from place and time. For even our own intellectual operation takes place by abstraction from the here and now, except accidentally on the part of the phantasms, which do not exist at all in an angel. But as regards whatever is abstracted from place and time, neither difference of time nor local distance has any influence whatever. Hence in the angelic speech local distance is no impediment.

Reply Obj. 1. The angelic speech, as above explained (A. 1, Ans. 2), is interior, but perceived, nevertheless, by another; and therefore it exists in the angel who speaks, and consequently where the angel is who speaks. But just as local distance does not prevent one angel seeing another, so neither does it prevent an angel perceiving what is ordered to him on the part of another And this is to perceive his speech.

Reply Obj. 2. The cry mentioned is not a

[1] Chap. 7 (PL 75, 560).

[2] PG 94, 853.

bodily voice raised by reason of the local distance, but is taken to signify the importance of what is said, or the intensity of the affection, according to what Gregory says (*Moral.* ii):[1] "The less one desires, the less one cries out."

ARTICLE 5. *Whether All the Angels Know What One Speaks to Another?*

We proceed thus to the Fifth Article: It would seem that all the angels know what one speaks to another.

Objection 1. For unequal local distance is the reason why all men do not know what one man says to another. But in the angelic speech local distance has no effect, as above explained (A. 4). Therefore all the angels know what one speaks to another.

Obj. 2. Further, all the angels have the intellectual power in common. So if the mental concept of one ordered to another is known by one, it is for the same reason known by all.

Obj. 3. Further, enlightenment is a kind of speech. But the enlightenment of one angel by another extends to all the angels, because, as Dionysius says (*Cæl. Hier.* xv):[2] "Each one of the heavenly essences communicates what he learns to the others." Therefore the speech of one angel to another extends to all.

On the contrary, One man can speak to another alone; much more can this be the case among the angels.

I answer that, As above explained (AA. 1, 2), the mental concept of one angel can be perceived by another when the angel who possesses the concept refers it by his will to another. Now a thing can be ordered through some cause to one thing and not to another. Consequently the concept of one (angel) may be known by one and not by another. And therefore an angel can perceive the speech of one angel to another while others do not, not through the obstacle of local distance, but on account of the will so ordering, as explained above (AA. 1, 2).

From this appear the *replies to the first and second objections.*

Reply Obj. 3. Enlightenment is of those truths that emanate from the first rule of truth, which is the principle common to all the angels; and in that way enlightenments are common to all. But speech may be of something ordered to the principle of the created will, which is proper to each angel. And in this way it is not necessary that these speeches should be common to all.

[1] Chap. 7 (PL 75, 560).
[2] Sect. 3 (PG 3, 332).

QUESTION CVIII

OF THE ANGELIC DEGREES OF HIERARCHIES AND ORDERS

(In Eight Articles)

WE next consider the degrees of the angels in their hierarchies and orders; for it was said above (Q. CVI, A. 3), that the superior angels enlighten the inferior angels; and not conversely.

Under this head there are eight points of inquiry: (1) Whether all the angels belong to one hierarchy? (2) Whether in one hierarchy there is only one order? (3) Whether in one order there are many angels? (4) Whether the distinction of hierarchies and orders is natural? (5) Of the names and properties of each order. (6) Of the comparison of the orders to one another. (7) Whether the orders will outlast the Day of Judgment? (8) Whether men are taken up into the angelic orders?

ARTICLE 1. *Whether All the Angels Are of One Hierarchy?*

We proceed thus to the First Article: It would seem that all the angels belong to one hierarchy.

Objection 1. For since the angels are supreme among creatures, it is evident that they are ordered for the best. But the best ordering of a multitude is for it to be governed by one authority, as the Philosopher shows[3] Therefore as a hierarchy is nothing but a sacred principality, it seems that all the angels belong to one hierarchy.

Obj. 2. Further, Dionysius says (*Cæl. Hier,* iii)[4] that "hierarchy is order, knowledge, and action." But all the angels agree in one order towards God, Whom they know, and by Whom in their actions they are ruled. Therefore all the angels belong to one hierarchy.

Obj. 3. Further, the sacred principality called hierarchy is to be found among men and angels. But all men are of one hierarchy. Therefore likewise all the angels are of one hierarchy.

On the contrary, Dionysius (*Cæl. Hier.* vi)[5] distinguishes three hierarchies of angels.

I answer that, Hierarchy means a sacred principality, as above explained (obj. 1). Now principality includes two things: the ruler himself and the multitude ordered under the ruler. Therefore because there is one God, the ruler not only of all the angels but also of men and

[3] *Metaphysics,* XII, 10 (1076^a4); cf. *Ethics,* VIII, 10 (1160^a35); *Politics,* IV, 2 (1289^a40).
[4] Sect. 1 (PG 3, 164).
[5] Sect. 2 (PG 3, 200).

all creatures; so there is one hierarchy, not only of all the angels, but also of all rational creatures, who can be participators of sacred things, according as Augustine says,[1] "There are two cities, that is, two societies, one of the good angels and men, the other of the wicked." But if we consider the principality on the part of the multitude ordered under the ruler, then principality is said to be one according as the multitude can be subject in one way to the government of the ruler. And those that cannot be governed in the same way by a ruler belong to different principalities. Thus, under one king there are different cities, which are governed by different laws and administrators. Now it is evident that men do not perceive the Divine enlightenments in the same way as do the angels; for the angels receive them in their intelligible purity, whereas men receive them under sensible likeness, as Dionysius says (*Cæl. Hier.* 1).[2] There fore there must be a distinction between the human and the angelic hierarchy.

In the same manner we distinguish three angelic hierarchies. For it was shown above (Q. LV, A. 3), in treating of the angelic knowledge, that the superior angels have a more universal knowledge of the truth than the inferior angels. This universal knowledge has three grades among the angels. For the types of things, concerning which the angels are enlightened, can be considered in a threefold manner. First as proceeding from God as the first universal principle. And this mode of knowledge belongs to the first hierarchy, connected immediately with God, and, "as it were, placed in the vestibule of God," as Dionysius says (*Cæl. Hier.* vii).[3] Secondly, according as these types depend on the universal created causes which in some way are already multiplied; and this mode belongs to the second hierarchy. Thirdly, according as these types are applied to particular things as depending on their causes; and this mode belongs to the lowest hierarchy. All this will appear more clearly when we treat of each of the orders (A. 6). In this way are the hierarchies distinguished on the part of the multitude of subjects.

Hence it is clear that those err and speak against the meaning of Dionysius. For in the Divine Persons there exists, indeed, a natural order, but there is no hierarchical order, for as Dionysius says (*Cæl. Hier.* iii):[4] "The hierarchical order is so directed that some be cleansed, enlightened, and perfected; and that others cleanse, enlighten, and perfect." And far be it from us to apply this to the Divine Persons.

Reply Obj. 1. This objection holds good as concerns the relation of the ruler to the principality, since the multitude is best ruled by one ruler, as the Philosopher asserts in those passages.

Reply Obj. 2. As regards knowing God Himself, Whom all see in one way—that is, in His Essense—there is no hierarchical distinction among the angels; but there is such a distinction as regards the types of created things, as explained above.

Reply Obj. 3. All men are of one species, and have one connatural mode of understanding, which is not the case in the angels. And hence the same argument does not apply to both.

ARTICLE 2. *Whether There Are Several Orders in One Hierarchy?*

We proceed thus to the Second Article: It would seem that in the one hierarchy there are not several orders.

Objection 1. For when a definition is multiplied, the thing defined is also multiplied. But hierarchy is order, as Dionysius says (*Cæl. Hier.* iii).[5] Therefore, if there are many orders, there is not one hierarchy only, but many.

Obj. 2. Further, different orders are different grades, and grades among spirits are constituted by different spiritual gifts. But among the angels all the spiritual gifts are common to all, for amongst them nothing is possessed individually. Therefore there are not different orders of angels.

Obj. 3. Further, in the ecclesiastical hierarchy the orders are distinguished according to the actions of cleansing, enlightening, and perfecting. For the order of deacons is cleansing, the order of priests is enlightening, and of bishops perfecting, as Dionysius says (*Eccl. Hier.* v).[6] But each of the angels cleanses, enlightens, and perfects. Therefore there is no distinction of orders among the angels.

On the contrary. The Apostle says (Eph. 1. 20, 21) that *God has set the Man Christ above all principality and power, and virtue, and dominion,* which are the various orders of the angels, and some of them belong to one hierarchy, as will be explained (A. 6).

I answer that, As explained above (A. 1), one hierarchy is one principality—that is, one multi-

[1] *City of God,* XII, 1 (PL 41, 349).
[2] Sect. 2 (PG 3, 140).
[3] Sect. 2 (PG 3, 208).
[4] Sect. 2 (PG 3, 165).
[5] Sect. 1 (PG 3, 164).
[6] Pt. 1, Sect. 6 (PG 3, 505).

tude ordered in one way under the governance of a ruler. Now such a multitude would not be ordered, but confused, if there were not in it different orders. So the nature of a hierarchy requires diversity of orders.

This diversity of order arises from the diversity of offices and actions, as appears in one city where there are different orders according to the different actions. For there is one order of those who judge, and another of those who fight, and another of those who labour in the fields, and so forth.

But although one city thus comprises several orders, all may be reduced to three, when we consider that every multitude has a beginning, a middle, and an end. So in every city, a threefold order of men is to be seen, some of whom are supreme, as the nobles; others are the last, as the common people, while others hold a place between these, as the middle-class (*populus honorabilis*). In the same way we find in each angelic hierarchy the orders distinguished according to their actions and offices, and all this diversity is reduced to three—namely, to the summit, the middle, and the base. And so in every hierarchy Dionysius places three orders (*Cæl. Hier.* vi).[1]

Reply Obj. 1. Order is twofold. In one way it is taken as the order comprehending in itself different grades, and in that way a hierarchy is called an order. In another way one grade is called an order, and in that sense the several orders of one hierarchy are so called.

Reply Obj. 2. All things are possessed in common by the angelic society, some things, however, being held more excellently by some than by others. Each gift is more perfectly possessed by the one who can communicate it than by the one who cannot communicate it; just as the hot thing which can communicate heat is more perfect than what is unable to give heat. And the more perfectly anyone can communicate a gift, the higher grade he occupies, as he is in the more perfect grade of mastership who can teach a higher science. By this likeness we can reckon the variety of grades or orders among the angels, according to their different offices and actions.

Reply Obj. 3. The inferior angel is superior to the highest man of our hierarchy, according to the words, *He that is the lesser in the kingdom of heaven, is greater than he*—namely, John the Baptist, than whom *there hath not risen a greater among them that are born of women* (Matt. 11. 11). Hence the lesser angel of the heavenly hierarchy can not only cleanse, but also enlighten and perfect, and in a higher way than can the orders of our hierarchy. Thus the heavenly orders are not distinguished by reason of these, but by reason of other different acts.

[1] PG 3, 200.

Article 3. *Whether There Are Many Angels in One Order?*

We proceed thus to the Third Article: It seems that there are not many angels in one order.

Objection 1. For it was shown above (Q. L, A. 4), that all the angels are unequal. But equals belong to one order. Therefore there are not many angels in one order.

Obj. 2. Further, it is superfluous for a thing to be done by many which can be done sufficiently by one. But that which belongs to one angelic office can be done sufficiently by one angel, by so much the more sufficiently than the one sun does what belongs to the office of the sun, according as the angel is more perfect than a heavenly body. If, therefore, the orders are distinguished by their offices, as stated above (A. 2), several angels in one order would be superfluous.

Obj. 3. Further, it was said above (obj. 1), that all the angels are unequal. Therefore, if several angels (for instance, three or four), are of one order, the lowest one of the superior order will be more akin to the highest of the inferior order than with the highest of his own order. And thus he does not seem to be more of one order with the latter than with the former. Therefore there are not many angels of one order.

On the contrary, It is written: *The Seraphim cried to one another* (Isa. 6. 3). Therefore there are many angels in the one order of the Seraphim.

I answer that, Whoever knows anything perfectly is able to distinguish its acts, powers, and nature, down to the minutest details, but he who knows a thing in an imperfect manner can only distinguish it in a general way, and only as regards a few points. Thus, one who knows natural things imperfectly can distinguish their orders in a general way, placing the heavenly bodies in one order, inanimate inferior bodies in another, plants in another, and animals in another. But he who knows natural things perfectly is able to distinguish different orders in the heavenly bodies themselves, and in each of the other orders.

Now our knowledge of the angels is imperfect, as Dionysius says (*Cæl. Hier.* vi).[2] Hence

[2] Sect. 1 (PG 3, 200).

we can only distinguish the angelic offices and orders in a general way, so as to place many angels in one order. But if we knew the offices and distinctions of the angels perfectly, we should know perfectly that each angel has his own office and his own order among things, and much more so than any star, though this be hidden from us.

Reply Obj. 1. All the angels of one order are in some way equal in a common likeness according to which they are placed in that order, but absolutely speaking they are not equal. Hence Dionysius says (*Cæl. Hier.* x)[1] that in one and the same order of angels there are those who are first, middle, and last.

Reply Obj. 2. That special distinction of orders and offices according to which each angel has his own office and order is hidden from us.

Reply Obj. 3. As in a surface which is partly white and partly black the two parts on the borders of white and black are more akin as regards their position than any other two white parts, but are less akin in quality, so two angels who are on the boundary of two orders are more akin in propinquity of nature than one of them is akin to the others of its own order, but less akin in their fitness for similar offices, which fitness, indeed, extends to a definite limit.

ARTICLE 4. *Whether the Distinction of Hierarchies and Orders Comes from the Angelic Nature?*

We proceed thus to the Fourth Article: It would seem that the distinction of hierarchies and of orders is not from the nature of the angels.

Objection 1. For hierarchy is a sacred principality, and Dionysius places in its definition that "it approaches a resemblance to God, as far as may be" (*Cæl Hier.* iii).[2] But sanctity and resemblance to God is in the angels by grace, and not by nature. Therefore the distinction of hierarchies and orders in the angels is by grace, and not by nature.

Obj. 2. Further, "the Seraphim are called burning or kindling," as Dionysius says (*Cæl Hier.* vii).[3] This pertains to charity which comes not from nature but from grace; for *it is poured forth in our hearts by the Holy Ghost Who is given to us* (Rom. 5. 5), which is said not only of holy men, but also of the holy angels, as Augustine says.[4] Therefore the angelic orders are not from nature, but from grace.

Obj. 3. Further, the ecclesiastical hierarchy is copied from the heavenly. But the orders among men are not from nature, but by the gift of grace; for it is not a natural gift for one to be a bishop, and another a priest, and another a deacon. Therefore neither in the angels are the orders from nature, but from grace only.

On the contrary, The Master says (ii, d, 9)[5] that an angelic order is a multitude of heavenly spirits who are likened to each other by some gift of grace, just as they agree also in the participation of natural gifts. Therefore the distinction of orders among the angels is not only by gifts of grace, but also by gifts of nature.

I answer that, The order of government, which is the order of a multitude under authority, is derived from its end. Now the end of the angels may be considered in two ways. First, according to the power of nature, as, for example, that they may know and love God by natural knowledge and love; and according to their relation to this end the orders of the angels are distinguished by natural gifts. Secondly, the end of the angelic multitude can be taken from what is above their natural powers, which consists in the vision of the Divine Essence, and in the unchangeable enjoyment of His goodness, to which end they can reach only by grace. And hence as regards this end, the orders in the angels are adequately distinguished by the gifts of grace, but dispositively by natural gifts, because the angels are given gratuitous gifts according to the capacity of their natural gifts, which is not the case with men, as explained above (Q. LXII, A. 6). Hence among men the orders are distinguished according to the gratuitous gifts only, and not according to natural gifts.

From the above the *replies to the objections* are evident.

ARTICLE 5. *Whether the Orders of the Angels Are Properly Named?*

We proceed thus to the Fifth Article: It would seem that the orders of the angels are not properly named.

Objection 1. For all the heavenly spirits are called Angels and Virtues heavenly powers.[6] But common names should not be appropriated to individuals. Therefore the orders of the Angels and Virtues are ineptly named.

Obj. 2. Further, it is proper to God alone to be Lord, according to the words, *Know ye that the Lord He is God* (Ps. 99. 3). Therefore one

[1] Sect. 2 (PG 3, 273). [2] Sect. 1 (PG 3, 164).
[3] Sect. 1 (PG 3, 205).
[4] *City of God,* XII, 9 (PL 41, 357).
[5] Chap. 2 (QR 1, 345).
[6] Dionysius, *Cæl. Hier.,* 5 (PG 3, 196).

rder of the heavenly spirits is not properly alled Dominations.

Obj. 3. Further, the name Domination seems o imply government, and likewise the names Principalities and Powers. Therefore these three ames do not seem to be properly applied to hree orders.

Obj. 4. Further, archangels are as it were rinces of the angels. Therefore this name ught not to be given to any other order than to he Principalities.

Obj. 5. Further, the name Seraphim is derived from ardour, which pertains to charity, and the name Cherubim from knowledge. But charity and knowledge are gifts common to all the angels. Therefore they ought not to be names of any particular orders.

Obj. 6. Further, Thrones are seats. But from the fact that God knows and loves the rational creature He is said to sit within it. Therefore there ought not to be any order of Thrones besides the Cherubim and Seraphim. Therefore it appears that the orders of angels are not properly named.

On the contrary is the authority of Holy Scripture wherein they are so named. For the name Seraphim is found in Isaias 6. 2; the name Cherubim in Ezechiel 1. (*cf.* 10. 15, 20); Thrones in Colossians 1. 16; Dominations, Virtues, Powers, and Principalities are mentioned in Ephesians 1. 21; the name Archangels in the canonical epistle of St. Jude (9), and the name Angels is found in many places of Scripture.

I answer that, As Dionysius says (*Cæl. Hier.* vii),[1] in the names of the angelic orders it is necessary to observe that "the proper name of each order expresses its property." Now to see what is the property of each order, we must consider that in ordered things something may be found in a threefold manner: by way of property, by way of excess, and by way of participation. A thing is said to be in another by way of property if it is adequate and proportionate to its nature; by excess when an attribute is less than that to which it is attributed, but is possessed thereby in an eminent manner, as we have stated (Q. XIII, A. 2) concerning all the names which are attributed to God; by participation, when an attribute is possessed by something not fully but partially—thus holy men are called gods by participation. Therefore, if anything is to be called by a name designating its property, it ought not to be named from what it participates imperfectly, nor from that which it possesses in excess, but from that which is equal to it. For instance, when we wish properly to name a man, we should call him a rational substance, but not an intellectual substance, which is the proper name of an angel, because simple intelligence belongs to an angel as a property, and to a man by participation. Nor do we call him a sensible substance, which is the proper name of a brute animal; because sense is less than the property of a man, and belongs to man in a more excellent way than to other animals.

So we must consider that in the angelic orders all spiritual perfections are common to all the angels, and that they are all more abundantly in the superior than in the inferior angels. Further, as in these perfections there are grades, the superior perfection belongs to the superior order as its property, but to the inferior by participation. And conversely the inferior perfection belongs to the inferior order as its property, and to the superior by way of excess. And thus the superior order is named from the superior perfection.

So in this way Dionysius (*Cæl. Hier.* vii)[2] explains the names of the orders according as they befit the spiritual perfections they signify. Gregory, on the other hand, in expounding these names (*Hom.* xxxiv *in Evang.*)[3] seems to regard more the exterior ministrations. For he says that "angels are called so as announcing the least things; and the archangels in the greatest; by the virtues miracles are wrought; by the powers hostile powers are repulsed; and the principalities preside over the good spirits themselves."

Reply Obj. 1. Angel means messenger. So all the heavenly spirits, so far as they make known Divine things, are called angels. But the superior angels enjoy a certain excellence, as regards this manifestation, from which the superior orders are named. The lowest order of angels possess no excellence above the common manifestation, and therefore it is named from manifestation only; and thus the common name remains as it were proper to the lowest order, as Dionysius says (*Cæl. Hier.* v).[4] Or we may say that the lowest order can be specially called the order of Angels because they announce things to us immediately.

Virtue can be taken in two ways. First, commonly, considered as the medium between the essence and the operation, and in that sense all

[1] Sect. 1 (PG 3, 205).

[2] Sect. 1 (PG 3, 205). Cf. Also, Chap. VIII, 1; IX, 1 (PG 3, 237, 257).

[3] PL 76, 1250.

[4] PG 3, 196.

the heavenly spirits are called heavenly Virtues, as also "heavenly essences."[1] Secondly, as meaning a certain excellence of strength; and thus it is the proper name of an angelic order. Hence Dionysius says (*Cæl. Hier.* viii)[2] that "the name 'virtues' signifies a certain virile and immovable strength," first, in regard of all those Divine operations which befit them, secondly, in regard to receiving Divine gifts. Thus it signifies that they undertake fearlessly the Divine behests appointed to them; and this seems to imply strength of mind.

Reply Obj. 2. As Dionysius says (*Div. Nom.* xii):[3] "Domination is attributed to God in a special manner, by way of excess: but the Divine word gives the more illustrious heavenly princes the name of Lord by participation, through whom the inferior angels receive the Divine gifts" Hence Dionysius also states (*Cæl. Hier.* viii)[4] that "the name Domination means first a certain liberty, free from servile condition and common subjection, such as that of plebeians, and from tyrannical oppression, endured sometimes even by the great. Secondly, it signifies a certain rigid and inflexible supremacy which does not bend to any servile act, or to the act of those who are subject to or oppressed by tyrants Thirdly, it signifies the desire and participation of the true dominion which belongs to God" Likewise the name of each order signifies the participation of what belongs to God, as the name Virtues signifies the participation of the Divine virtue; and the same principle applies to the rest.

Reply Obj. 3. The names Domination, Power, and Principality belong to government in different ways The place of a lord is only to prescribe what is to be done So Gregory says (*In Evang.* II, hom. xxxiv),[5] that "some companies of the angels, because others are subject in obedience to them, are called dominations." The name Power points out a kind of order, according to what the Apostle says, *He that resisteth the power, resisteth the ordination of God* (Rom. 13. 2). And so Dionysius says (*Cæl. Hier.* viii)[6] that the name Power signifies a kind of ordination both as regards the reception of Divine things, and as regards the Divine actions performed by superiors towards inferiors by leading them to things above. Therefore, to the order of Powers it belongs to regulate what is to be done by those who are subject to them. "To preside (*principari*)," as Gregory says (*loc. cit.*) "is to be first among others," as being first in carrying out what is ordered to be done. And so Dionysius says (*Cæl. Hier.* ix)[7] that the name of Principalities signifies one who leads in a sacred order. For those who lead others, being first among them, are properly called princes, according to the words, *Princes went before joined with singers* (Ps. 67. 26).

Reply Obj. 4. The Archangels, according to Dionysius (*Cæl. Hier.* ix),[8] are between the Principalities and the Angels. A medium compared to one extreme seems like the other, as participating in the nature of both extremes; thus tepid seems cold compared to hot, and hot compared to cold. So the Archangels are called the angel princes, because they are princes as regards the Angels, and angels as regards the Principalities. But according to Gregory (*loc. cit.*) they are called "Archangels, because they preside over the one order of the Angels, announcing as it were, great things. And the Principalities are called so as presiding over all the heavenly Virtues who fulfil the Divine commands."

Reply Obj. 5. The name Seraphim does not come from charity only, but from the excess of charity, expressed by the word ardour or fire. Hence Dionysius (*Cæl. Hier.* vii)[9] expounds the name Seraphim according to the properties of fire, containing an excess of heat. Now in fire we may consider three things. First, the movement which is upwards and continuous. This signifies that they are borne inflexibly towards God Secondly, the active force which is heat, which is not found in fire absolutely, but exists with a certain acuity, as being of most penetrating action, and reaching even to the smallest things, and as it were, with superabundant fervour. And by this is signified the action of these angels, exercised powerfully upon those who are subject to them, rousing them to a like fervour, and cleansing them wholly by their heat. Thirdly, we consider in fire its brightness, which signifies that these angels have in themselves an inextinguishable light, and that they also perfectly enlighten others.

In the same way the name Cherubim comes from a certain excess of knowledge; hence it is interpreted fulness of knowledge. Dionysius (*Cæl. Hier.* vii)[10] expounds this in regard to

[1] Dionysius, *Cæl. Hier.*, 5 (PG 3, 196).
[2] Sect. 1 (PG 3, 237).
[3] Sect. 2 (PG 3, 969;) sect. 4 (PG 3, 972).
[4] Sect. 1 (PG 3, 237).
[5] PL 76, 1251.
[6] Sect. 1 (PG 3, 240).
[7] Sect. 1 (PG 3, 257).
[8] *Ibid.*
[9] Sect. 1 (PG 3, 205).
[10] *Ibid.*

four things: the perfect vision of God; the full reception of the Divine Light; their contemplation in God of the beauty of the Divine order; and in regard to the fact that possessing this knowledge fully, they pour it forth copiously upon others.

Reply Obj. 6. The order of the Thrones excels the inferior orders as having an immediate knowledge of the types of the Divine works. But the Cherubim have the excellence of knowledge and the Seraphim the excellence of ardour. And although these two excellent attributes include the third, yet the gift belonging to the Thrones does not include the other two; and so the order of the Thrones is distinguished from the orders of the Cherubim and the Seraphim. For it is a common rule in all things that the excellence of the inferior is contained in the superior, but not conversely. But Dionysius (*ibid.*) explains the name Thrones by its relation to material seats, in which we may consider four things. First, the site; because seats are raised above the earth, and so the angels who are called Thrones are raised up to the immediate knowledge of the types of things in God. Secondly, because in material seats is displayed strength, since a person sits firmly on them But here the reverse is the case, for the angels themselves are made firm by God. Thirdly, because the seat receives him who sits there, and he can be carried upon it; and so the angels receive God in themselves, and in a certain way bear Him to the inferior creatures. Fourthly, because in its shape, a seat is open on one side to receive the sitter; and thus are the angels promptly open to receive God and to serve Him.

Article 6. *Whether the Grades of the Orders Are Properly Assigned?*

We proceed thus to the Sixth Article: It would seem that the grades of the orders are not properly assigned.

Objection 1. For the order of prelates is the highest. But the names of Dominations, Principalities, and Powers of themselves imply precedence. Therefore these orders ought to be supreme.

Obj. 2. Further, the nearer an order is to God, the higher it is. But the order of Thrones is the nearest to God; for nothing is nearer to the sitter than the seat. Therefore the order of the Thrones is the highest.

Obj. 3. Further, knowledge comes before love, and intellect is higher than will. Therefore the order of Cherubim seems to be higher than the Seraphim.

Obj. 4. Further, Gregory (*In Evang. II*, hom. xxxiv)[1] places the Principalities above the Powers. These therefore are not placed immediately above the Archangels, as Dionysius says (*Cæl. Hier.* ix).[2]

On the contrary, Dionysius (*ibid.* vi),[3] places in the highest hierarchy the Seraphim as the first, the Cherubim as the middle, the Thrones as the last; in the middle heirarchy he places the Dominations, as the first, the Virtues in the middle, the Powers last; in the lowest heirarchy the Principalities first, then the Archangels, and lastly the Angels.

I answer that, The grades of the angelic orders are assigned by Gregory (*loc. cit.*) and Dionysius (*Cæl. Hier. ibid.*), who agree as regards all except the Principalities and Virtues. For Dionysius places the Virtues beneath the Dominations, and above the Powers; the Principalities beneath the Powers and above the Archangels. Gregory, however, places the Principalities between the Dominations and the Powers; and the Virtues between the Powers and the Archangels. Each of these placings may claim authority from the words of the Apostle, who (Eph. i. 20, 21) enumerates the middle orders, beginning from the lowest, saying that *God set Him,* that is, Christ, *on His right hand in the heavenly places above all Principality and Power, and Virtue, and Domination.* Here he places Virtues between Powers and Dominations, according to the placing of Dionysius. Writing however to the Colossians (i. 16), numbering the same orders from the highest, he says: *Whether Thrones, or Dominations, or Principalities, or Powers, all things were created by Him and in Him.* Here he places the Principalities between Dominations and Powers, as does also Gregory.

Let us then first examine the reason for the ordering of Dionysius, in which we see, that, as said above (A. 1), the highest hierarchy contemplates the types of things in God Himself, the second in the universal causes, and the third in their application to particular effects. And because God is the end not only of the angelic ministrations, but also of the whole creation, it pertains to the first hierarchy to consider the end. To the middle one pertains the universal disposition of what is to be done. And to the last pertains the application of this disposition to the effect, which is the carrying out of the work. For it is clear that these three things exist

[1] PL 76, 1249.
[2] Sect. 1 (PG 3, 257); cf. also VI, 2 (PG 3, 200).
[3] Sect. 2 (PG 3, 200).

in every kind of operation. So Dionysius,[1] considering the properties of the orders as derived from their names, places in the first hierarchy those orders the names of which are taken from their relation to God, the Seraphim, Cherubim, and Thrones. And he places in the middle hierarchy those orders whose names denote a certain kind of common government or disposition, —the Dominations, Virtues, and Powers. And he places in the third hierarchy the orders whose names denote the execution of the work, the Principalities, Angels and Archangels.

As regards the end, three things may be considered. For first we consider the end, then we acquire perfect knowledge of the end, thirdly, we fix our intention on the end; of these the second is an addition to the first, and the third an addition to both. And because God is the end of creatures, as the leader is the end of an army, as the Philosopher says,[2] so a somewhat similar order may be seen in human affairs. For there are some who enjoy the dignity of being able with familiarity to approach the king or leader; others in addition are privileged to know his secrets; and others above these always keep near him, in a close union. According to this likeness, we can understand the disposition in the orders of the first hierarchy; for the Thrones are raised up so as to be the familiar recipients of God in themselves, in the sense of knowing immediately the types of things in Himself; and this is proper to the whole of the first hierarchy. The Cherubim know the Divine secrets supereminently. And the Seraphim excel in what is the supreme excellence of all, in being united to God Himself And all this is in such a manner that the whole of this hierarchy can be called the Thrones; as, from what is common to all the heavenly spirits together, they are all called Angels.

As regards government, three things are comprised in its notion. The first which is to appoint those things which are to be done, and this belongs to the Dominations. The second is to give the power of carrying out what is to be done, which belongs to the Virtues. The third is to order how what has been commanded or decided to be done can be carried out by others, which belongs to the Powers.

The execution of the angelic ministrations consists in announcing Divine things. Now in the execution of any action there are beginners and leaders; as in singing, the precentors; and in war, generals and officers. This pertains to the Principalities. There are others who simply execute what is to be done; and these are the Angels. Others hold a middle place; and these are the Archangels, as above explained (A. 5, Ans. 4).

This explanation of the orders is a reasonable one. For the highest in an inferior order always has affinity to the lowest in the higher order, just as the lowest animals are near to the plants. Now the first order is that of the Divine Persons, which terminates in the Holy Ghost, Who is Love proceeding, with Whom the highest order of the first hierarchy has affinity, named as it is from the fire of love. The lowest order of the first hierarchy is that of the Thrones, who in their own order are akin to the Dominations. For the Thrones, according to Gregory (*op. cit.*),[3] are called so "because through them God accomplishes His judgments," since they are enlightened by Him in a manner adapted to the immediate enlightening of the second hierarchy, to which pertains the disposition of the Divine ministrations.—The order of the Powers is akin to the order of the Principalities. For as it belongs to the Powers to impose order on those subject to them, this ordering is plainly shown at once in the name of Principalities, who, as presiding over the government of peoples and kingdoms (which occupies the first and principal place in the Divine ministrations), are the first in their execution; for the good of a nation is more divine than the good of one man. And hence it is written, *The prince of the kingdom of the Persians resisted me* (Dan. 10. 13).

The disposition of the orders which is mentioned by Gregory is also reasonable. For since the Dominations appoint and order what belongs to the Divine ministrations, the orders subject to them are arranged according to the disposition of those things in which the Divine ministrations are effected. Still, as Augustine says (*De Trin.* iii),[4] "bodies are ruled in a certain order; the inferior by the superior; and all of them by the spiritual creature, and the bad spirit by the good spirit." So the first order after the Dominations is called that of Principalities, who rule even over good spirits. Then the Powers, who coerce the evil spirits, even as evildoers are coerced by earthly powers, as it is written (Rom. 13. 3, 4). After these come the Virtues, who have power over corporeal nature in the working of miracles; after these are the Angels and the Archangels, who announce to men either great things above reason, or small things within the scope of reason.

[1] *Ibid.* Cf. also VIII, 1; IX, 1 (PG 3, 237, 257).
[2] *Metaphysics*, XII, 10 (1075[a]15).
[3] PL 76, 1252. [4] Chap. 4 (PL 42, 873).

Reply Obj. 1. The angels' subjection to God is greater than their presiding over inferior things, and the latter is derived from the former. Thus the orders which derive their name from presiding are not the first and highest, but rather the orders deriving their name from their nearness and relation to God.

Reply Obj. 2. The nearness to God designated by the name of the Thrones, belongs also to the Cherubim and Seraphim, and in a more excellent way, as explained above.

Reply Obj. 3. As explained above (Q. XXVII, A. 3), knowledge takes place according as the thing known is in the knower, but love according as the lover is united to the object loved Now higher things are in a nobler way in themselves than in lower things, but lower things are in higher things in a nobler way than they are in themselves. Therefore to know lower things is better than to love them; and to love the higher things, God above all, is better than to know them.

Reply Obj. 4. A careful comparison will show that little or no difference exists in reality between the dispositions of the orders according to Dionysius and Gregory. For Gregory expounds[1] the name Principalities from their "presiding over good spirits," which also agrees with the Virtues according as this name expresses a certain strength, giving efficacy to the inferior spirits in the execution of the Divine ministrations. Again, according to Gregory, the Virtues seem to be the same as the Principalities of Dionysius. For to work miracles holds the first place in the Divine ministrations, since thus the way is prepared for the announcements of the archangels and the angels.

ARTICLE 7. *Whether the Orders Will Outlast the Day of Judgment?*

We proceed thus to the Seventh Article: It would seem that the orders of angels will not outlast the Day of Judgment.

Objection 1. For the Apostle says (I Cor. 15. 24), that Christ will *bring to naught all principality and power, when He shall have delivered up the kingdom to God and the Father;* and this will be in the final consummation. Therefore for the same reason all other orders will be abolished in that state.

Obj. 2. Further, to the office of the angelic orders it belongs to cleanse, enlighten, and perfect. But after the Day of Judgment one angel will not cleanse, enlighten, or perfect another, because they will not advance any more in knowledge. Therefore the angelic orders would remain for no purpose.

Obj. 3. Further, the Apostle says of the angels (Heb. 1. 14), that *they are all ministering spirits, sent to minister to them who shall receive the inheritance of salvation;* from this it appears that the angelic offices are ordered for the purpose of leading men to salvation. But all the elect are in pursuit of salvation until the Day of Judgment. Therefore the angelic offices and orders will not outlast the Day of Judgment.

On the contrary, It is written (Judg. 5. 20): *Stars remaining in their order and courses,* which is applied to the angels.[2] Therefore the angels will ever remain in their orders.

I answer that, In the angelic orders we may consider two things, the distinction of grades, and the execution of their offices. The distinction of grades among the angels takes place according to the difference of grace and nature, as above explained (A. 4). And these differences will always remain in the angels, for these differences of natures cannot be taken from them unless they themselves be corrupted. The difference of glory will also remain always in them according to the difference of preceding merit. As to the execution of the angelic offices, it will to a certain degree remain after the Day of Judgment, and to a certain degree will cease. It will cease accordingly as their offices are directed towards leading others to their end, but it will remain, accordingly as it harmonizes with the attainment of the end. Thus also the various ranks of soldiers have different duties to perform in battles and in triumph.

Reply Obj. 1. The principalities and powers will come to an end in that final consummation as regards their office of leading others to their end, because when the end is attained, it is no longer necessary to tend towards the end. This is clear from the words of the Apostle, *When He shall have delivered up the kingdom of God and the Father,* that is, when He shall have led the faithful to the enjoyment of God Himself.

Reply Obj. 2. The actions of angels over the other angels are to be considered according to a likeness to our own intellectual actions. In ourselves we find many intellectual actions which are ordered according to the order of cause and effect, as when we gradually arrive at one conclusion by many middle terms. Now it is manifest that the knowledge of a conclusion depends on all the preceding middle terms not only in the new acquisition of knowledge, but also as

[1] *In Evang.* II, hom. XXXIV (PL 76, 1251).

[2] *Glossa interl.* (II, 38r).

regards the keeping of the knowledge acquired. A proof of this is that when anyone forgets any of the preceding middle terms he can have opinion or belief about the conclusion, but not knowledge, because he is ignorant of the order of the causes. So, since the inferior angels know the types of the Divine works by the light of the superior angels, their knowledge depends on the light of the superior angels not only as regards the acquisition of knowledge, but also as regards the preserving of the knowledge possessed. So, although after the Judgment the inferior angels will not progress in the knowledge of some things, still this will not prevent their being enlightened by the superior angels.

Reply Obj. 3. Although after the Day of Judgment men will not be led any more to salvation by the ministry of the angels, still those who are already saved will be enlightened through the angelic ministry.

ARTICLE 8. *Whether Men Are Taken up into the Angelic Orders?*

We proceed thus to the Eighth Article: It would seem that men are not taken up into the orders of the angels.

Objection 1. For the human hierarchy is stationed beneath the lowest heavenly hierarchy, as the lowest under the middle hierarchy and the middle beneath the first. But the angels of the lowest hierarchy are never transferred into the middle, or the first. Therefore neither are men transferred to the angelic orders.

Obj. 2. Further, certain offices belong to the orders of the angels, as to guard, to work miracles, to coerce the demons, and the like, which do not appear to pertain to the souls of the saints. Therefore they are not transferred to the angelic orders.

Obj. 3. Further, as the good angels lead on to good, so do the demons to what is evil. But it is erroneous to say that the souls of bad men are changed into demons, for Chrysostom rejects this (*Hom.* XXVIII *in Matt.*).[1] Therefore it does not seem that the souls of the saints will be transferred to the orders of angels.

On the contrary, The Lord says of the saints that, *they will be as the angels of God* (Matt. 22. 30).

I answer that, As above explained (AA. 4, 7), the orders of the angels are distinguished according to the conditions of nature and according to the gifts of grace. Considered only as regards the grade of nature, men can in no way be assumed into the angelic orders, for the natural distinction will always remain. In view of this distinction, some asserted[2] that men can in no way be transferred to an equality with the angels. But this is erroneous, contradicting as it does the promise of Christ saying that the children of the resurrection will be equal to the angels in heaven (Luke 20. 36). For whatever belongs to nature is as the material part in the notion of order, whilst that which perfects is from grace which depends on the liberty of God, and not on the order of nature. Therefore by the gift of grace men can merit glory in such a degree as to be equal to the angels, in each of the angelic grades; and this implies that men are taken up into the orders of the angels. Some, however, say[3] that not all who are saved are assumed into the angelic orders, but only virgins or the perfect, and that the others will constitute their own order, corresponding as it were to the whole society of the angels. But this is against what Augustine says,[4] that there will not be two societies of men and of angels, but only one; because the happiness of all is to cleave to God alone.

Reply Obj. 1. Grace is given to the angels in proportion to their natural gifts. This, however, does not apply to men, as above explained (A. 4; Q. LXII, A. 6). So, as the inferior angels cannot be transferred to the natural grade of the superior, neither can they be transferred to the superior grade of grace. Men however can ascend to the grade of grace, but not of nature.

Reply Obj. 2. The angels according to the order of nature are between us and God; and therefore according to the common law not only human affairs are administered by them, but also all corporeal matters. But holy men even after this life are of the same nature with ourselves. And hence according to the common law they do not administer human affairs, "nor do they interfere in the things of the living," as Augustine says (*De cura pro mortuis* XIII, XVI).[5] Still, by a certain special dispensation it is sometimes granted to some of the saints to exercise these offices, by working miracles, by coercing the demons, or by doing something of that kind, as Augustine says (*ibid.,* XVI).

Reply Obj. 3. It is not erroneous to say that men are transferred to the penalty of demons;

[1] PG 57, 354.

[3] Cf. Bonaventure, *In Sent.,* II, d. IX, A. 1, Q. 7 (QR II, 254). Cf. also Gregory, *In Evang.,* II, hom. XXXIV (PL 76, 1249, 1252); Peter Lombard, *Sent.,* II, d. IX, chap. 6 (QR I, 349).

[4] *City of God,* XII, 9 (PL 41, 357).

[5] PL 40, 604, 607.

but some erroneously stated that the demons are nothing but souls of the dead,[1] and it is this that Chrysostom rejects.

QUESTION CIX

THE ORDERING OF THE BAD ANGELS

(In Four Articles)

WE now consider the ordering of the bad angels, concerning which there are four points of inquiry: (1) Whether there are orders among the demons? (2) Whether among them there is precedence? (3) Whether one enlightens another? (4) Whether they are subject to the precedence of the good angels?

ARTICLE 1. *Whether There Are Orders Among the Demons?*

We proceed thus to the First Article: It would seem that there are no orders among the demons.

Objection 1. For order pertains to the notion of good, as also mode, and species, as Augustine says (*De Nat. Boni,* iii);[2] and on the contrary, disorder pertains to the notion of evil But there is nothing disorderly in the good angels. Therefore in the bad angels there are no orders.

Obj. 2. Further, the angelic orders are contained under a hierarchy. But the demons are not in a hierarchy, which is a holy principality, for they are empty of all holiness. Therefore among the demons there are no orders.

Obj. 3. Further, the demons fell from every one of the angelic orders, as is commonly supposed. Therefore, if some demons are said to belong to an order, as falling from that order, it would seem necessary to give them the names of each of those orders. But we never find that they are called Seraphim, or Thrones, or Dominations. Therefore on the same ground they are not to be placed in any other order.

On the contrary, The Apostle says (Eph. 6. 12): *Our wrestling . . . is against principalities and powers, against the rulers of the world of this darkness.*

I answer that, As explained above (Q. CVIII, AA. 4, 7, 8), order in the angels is considered both according to the grade of nature, and according to that of grace. Now grace has a twofold state, the imperfect, which is that of merit, and the perfect, which is that of consummate glory.

If therefore we consider the angelic orders in the light of the perfection of glory, then the demons are not in the angelic orders, and never were. But if we consider them in relation to imperfect grace, in that view the demons were at that time in the orders of angels, but fell away from them, according to what was said above (Q. LXII, A. 3), that all the angels were created in grace. But if we consider them in the light of nature, in that view they are still in those orders, because they have not lost their natural gifts, as Dionysius says (*Div. Nom.* iv).[3]

Reply Obj. 1. Good can exist without evil, but evil cannot exist without good (Q. XLIX, A. 3); so there is order in the demons, in so far as they possess a good nature.

Reply Obj. 2. If we consider the ordering of the demons on the part of God Who orders them, it is sacred, for He uses the demons for Himself. But on the part of the demons' will it is not a sacred thing, because they abuse their nature for evil.

Reply Obj. 3. The name Seraphim is given from the ardour of charity, and the name Thrones from the Divine indwelling, and the name Dominations imports a certain liberty, all of which are opposed to sin. And therefore these names are not given to the angels who sinned.

ARTICLE 2. *Whether Among the Demons There Is Precedence?*

We proceed thus to the Second Article: It would seem that there is no precedence among the demons.

Objection 1. For every precedence is according to some order of justice But the demons are wholly fallen from justice. Therefore there is no precedence among them.

Obj. 2. Further, there is no precedence where obedience and subjection do not exist. But these cannot be without concord, which is not to be found among the demons, according to the text, *Among the proud there are always contentions* (Prov. 13. 10). Therefore there is no precedence among the demons.

Obj. 3. If there be precedence among them it is either according to nature, or according to their sin or punishment. But it is not according to their nature, for subjection and service do not come from nature, but from subsequent sin. Neither is it according to sin or punishment, because in that case the superior demons who have sinned the most grievously would be subject to the inferior. Therefore there is no precedence among the demons.

[1] Cf. John Chrysostom, *In Math.*, hom. XXVIII (PG 57, 353). Augustine in *De Haeres*, 86 (PL 42, 47), ascribes this doctrine to Tertullian. [2] PL 42, 553.

[3] Sect. 23 (PG 3, 725).

On the contrary, On I Cor. 15. 24 the gloss says:[1] "While the world lasts, angels will preside over angels, men over men, and demons over demons."

I answer that, Since action follows the nature of a thing, where natures are ordered, actions also must be ordered to each other. Thus it is in corporeal things, for as the inferior bodies by natural order are below the heavenly bodies, their actions and movements are subject to the actions and movements of the heavenly bodies. Now it is plain from what we have said (A. 1), that the demons are by natural order subject to others. And hence their actions are subject to the action of those above them. And this is what we mean by precedence, namely, that the action of the subject should be under the action of a superior. So the natural disposition itself of the demons requires that there should be precedence among them. This agrees too with Divine wisdom, which leaves nothing unordered, which *reacheth from end to end mightily, and ordereth all things sweetly* (Wisd. 8 1).

Reply Obj. 1. The authority of the demons is not founded on their justice, but on the justice of God ordering all things.

Reply Obj. 2 The concord of the demons, whereby some obey others, does not arise from mutual friendships, but from their common wickedness, whereby they hate men, and fight against God's justice. For it is proper to wicked men to join and subject themselves to those whom they see to be stronger, in order to carry out their own wickedness.

Reply Obj 3. The demons are not equal in nature; and so among them there exists a natural precedence, which is not the case with men, who are naturally equal. That the inferior are subject to the superior is not for the benefit of the superior, but rather to their detriment, because since to do evil belongs in a pre-eminent degree to unhappiness, it follows that to take the lead in evil is to be more unhappy.

ARTICLE 3. *Whether There Is Enlightenment in the Demons?*

We proceed thus to the Third Article: It would seem that enlightenment is in the demons.

Objection 1. For enlightenment means the manifestation of the truth. But one demon can manifest truth to another, because the superior excel in natural knowledge. Therefore the superior demons can enlighten the inferior.

Obj. 2. Further, a body abounding in light can enlighten a body deficient in light, as the sun enlightens the moon. But the superior demons abound in the participation of natural light. Therefore it seems that the superior demons can enlighten the inferior.

On the contrary, Enlightenment is not without cleansing and perfecting, as stated above (Q. CVI, A. 1). But to cleanse does not befit the demons, according to the words: *What can be made clean by the unclean?* (Ecclus. 34. 4). Therefore neither can they enlighten.

I answer that, There can be no enlightenment properly speaking among the demons. For, as above explained (Q. CVII, A. 2), enlightenment, properly speaking, is the manifestation of the truth in reference to God, Who enlightens every intellect. Another kind of manifestation of the truth is speech, as when one angel manifests his concept to another. Now the demon's perversity does not lead one to order another to God, but rather to lead away from the Divine order; and so one demon does not enlighten another. But one can make known his mental concept to another by way of speech.

Reply Obj. 1. Not every kind of manifestation of the truth is enlightenment, but only that which is above described.

Reply Obj. 2. According to what pertains to natural knowledge, there is no necessary manifestation of the truth either in the angels, or in the demons, because, as expounded above (Q. LV, A. 2; Q. LVIII, A. 2; Q. LXXIX, A. 2), they know from the first all that pertains to their natural knowledge. So the greater fulness of natural light in the superior demons does not prove that they can enlighten others.

ARTICLE 4. *Whether the Good Angels Have Precedence over the Bad Angels?*

We proceed thus to the Fourth Article: It would seem that the good angels have no precedence over the bad angels.

Objection 1. For the angels' precedence is especially connected with enlightenment. But the bad angels, since they are darkness, are not enlightened by the good angels. Therefore the good angels do not rule over the bad.

Obj. 2. Further, superiors are responsible as regards negligence for the evil deeds of their subjects. But the demons do much evil. Therefore if they are subject to the good angels, it seems that negligence is to be charged to the good angels, which cannot be admitted.

Obj 3. Further, the angels' precedence follows upon the order of nature, as explained

[1] *Glossa ordin.* (VI, 58B); *Glossa* Lombardi (PL 191, 1679).

above (A. 2). But if the demons fell from every order, as is commonly said, many of the demons are superior to many good angels in the natural order. Therefore the good angels have no precedence over all the bad angels.

On the contrary, Augustine says (*De Trin.* iii),[1] that "the treacherous and sinful spirit of life is ruled by the rational, pious, and just spirit of life"; and Gregory says (*Hom.* xxxiv)[2] that "the Powers are the angels to whose charge are subjected the hostile powers."

I answer that, The whole order of precedence is first and originally in God, and it is shared by creatures accordingly as they are the nearer to God. For those creatures, which are more perfect and nearer to God have the power to act on others. Now the greatest perfection and that which brings them nearest to God belongs to the creatures who enjoy God, as the holy angels, of which perfection the demons are deprived. And therefore the good angels have precedence over the bad, and these are ruled by them.

Reply Obj. 1. Many things concerning Divine mysteries are made known by the holy angels to the bad angels, whenever the Divine justice requires the demons to do anything, whether for the punishment of the evil, or for the trial of the good, as in human affairs the judge's assessors make known his sentence to the executioners. This revelation, if compared to the angelic revealers, can be called an enlightenment, since they order it to God. But it is not an enlightenment on the part of the demons, for these do not order it to God, but to the fulfilment of their own wickedness.

Reply Obj. 2. The holy angels are the ministers of the Divine wisdom. Hence as the Divine wisdom permits some evil to be done by bad angels or men, for the sake of the good that is drawn out of it, so also the good angels do not entirely restrain the bad from inflicting harm.

Reply Obj. 3. An angel who is inferior in the natural order presides over demons, although these may be naturally superior, because the power of Divine justice to which the good angels cleave is stronger than the natural power of the angels. Hence likewise among men, *the spiritual man judgeth all things* (I Cor. 2. 15), and the Philosopher says[3] that "the virtuous man is the rule and measure of all human acts."

QUESTION CX

How angels rule over bodies

(In Four Articles)

We now consider how the angels rule over corporeal creatures. Under this head there are four points of inquiry: (1) Whether the corporeal creature is governed by the angels? (2) Whether the corporeal creature obeys the mere will of the angels? (3) Whether the angels by their own power can immediately move bodies locally? (4) Whether the good or bad angels can work miracles?

Article 1. *Whether the Corporeal Creature Is Governed by the Angels?*

We proceed thus to the First Article: It would seem that the corporeal creature is not governed by the angels.

Objection 1. For whatever possesses a determinate mode of action does not need to be governed by any superior power For we must be governed lest we do what we ought not. But corporeal things have their actions determined by the nature divinely bestowed upon them. Therefore they do not need the government of angels.

Obj. 2. Further, the lowest beings are ruled by the superior. But some corporeal things are inferior and others are superior. Therefore they need not be governed by the angels.

Obj. 3. Further, the different orders of the angels are distinguished by different offices. But if corporeal creatures were ruled by the angels, there would be as many angelic offices as there are species of things So also there would be as many orders of angels as there are species of things, which is against what is laid down above (Q. CVIII, A. 2). Therefore the corporeal creature is not governed by angels.

On the contrary, Augustine says (*De Trin.* iii, 4)[4] that "all bodies are ruled by the rational spirit of life"; and Gregory says (*Dial* iv, 6),[5] that "in this visible world nothing takes place without the agency of the invisible creature."

I answer that, It is generally found both in human affairs and in natural things that every particular power is governed and ruled by the universal power; as, for example, the bailiff's power is governed by the power of the king. Among the angels also, as explained above (Q. LV, A. 3; Q. CVIII, A. 1), the superior angels who preside over the inferior possess a more universal knowledge. Now it is manifest that the

[4] PL 42, 873.
[5] PL 77, 329.

power of any individual body is more particular than the power of any spiritual substance. For every corporeal form is a form individualized by matter, and determined to the here and now; but immaterial forms are absolute and intelligible Therefore, as the inferior angels who have the less universal forms, are ruled by the superior, so are all corporeal things ruled by the angels. This is not only laid down by the holy doctors, but also by all philosophers who admit the existence of incorporeal substances.[1]

Reply Obj. 1. Corporeal things have determinate actions, but they exercise such actions only according as they are moved, because it is proper to a body not to act unless moved Hence a corporeal creature must be moved by a spiritual creature.

Reply Obj. 2 The reason alleged is according to the opinion of Aristotle who laid down[2] that the heavenly bodies are moved by spiritual substances, the number of which he endeavoured to assign according to the number of motions apparent in the heavenly bodies. But he did not say that there were any spiritual substances with immediate rule over the inferior bodies, except perhaps human souls. And this was because he did not consider that any operations were exercised in the inferior bodies except the natural ones for which the government of the heavenly bodies sufficed. But because we assert that many things are done in the inferior bodies besides the natural corporeal actions, for which the movements of the heavenly bodies are not sufficient, therefore in our opinion we must assert that the angels possess an immediate rule not only over the heavenly bodies, but also over the inferior bodies.

Reply Obj. 3. Philosophers have held different opinions about immaterial substances. For Plato laid down that immaterial substances were types and species of sensible bodies, and that some were more universal than others; and so he held that immaterial substances preside immediately over all sensible bodies, and different ones over different bodies.[3] But Aristotle held that immaterial substances are not the species of sensible bodies, but something higher and more universal; and so he did not attribute to them any immediate presiding over single bodies, but only over the universal agents, the heavenly bodies.[4] Avicenna followed a middle course.[5] For he agreed with Plato in supposing some spiritual substance to preside immediately in the sphere of active and passive elements, because, as Plato also said, he held that the forms of these sensible things are derived from immaterial substances. But he differed from Plato because he supposed only one immaterial substance to preside over all interior bodies, which he called the agent intelligence.

The holy doctors held with the Platonists that different spiritual substances were placed over corporeal things. For Augustine says (QQ. LXXXIII, *qu.* 79):[6] Every visible thing in this world has an angelic power placed over it. And Damascene says (*De Fid. Orth.* ii, 4):[7] "The devil was one of the angelic powers who presided over the terrestrial order"; and Origen says on the text, *When the ass saw the angel* (Num. 22. 23), that "the world has need of angels who preside over beasts, and over the birth of animals, and trees, and plants, and over the increase of all other things" (*Hom* xiv *in Num.*).[8] The reason of this, however, is not that one kind of angel is more fitted by his nature to preside over animals than over plants, because each angel, even the least, has a higher and more universal power than any kind of corporeal thing. The reason is to be sought in the order of Divine wisdom, Who places different rulers over different things. Nor does it follow that there are more than nine orders of angels, because, as above expounded (Q. CVIII, A. 2), the orders are distinguished by their general offices Hence as according to Gregory[9] "all the angels whose proper office is to preside over the demons are of the order of the Powers, so to the order of the Virtues do those angels seem to belong who preside over purely corporeal creatures; for by their ministration miracles are sometimes performed"

ARTICLE 2. *Whether Corporeal Matter Obeys the Mere Will of an Angel?*

We proceed thus to the Second Article: It would seem that corporeal matter obeys the mere will of an angel.

Objection 1. For the power of an angel excels the power of the soul. But corporeal matter certainly obeys a conception of the soul, for the body of man is changed by a conception of the soul as regards heat and cold, and sometimes

[1] See below, Ans. 3; cf. Destrez, Mél. Mandonnet (I, 128); Chenu, Mél. Mandonnet (I, 195).

[2] *Metaphysics*, XII, 8 (1073^a32).

[3] Cf. Q. LXXXIV, AA. 1, 4; Q. LXV, A. 4; Q. XXII, A. 2.

[6] PL 40, 90.

[7] PG 94, 873.

[8] PG 12, 680

[9] *In Evang.*, II, hom. 34 (PL 76, 1251).

even as regards health and sickness. Therefore much more is corporeal matter changed by a conception of an angel.

Obj. 2. Further, whatever can be done by an inferior power, can be done by a superior power. Now the power of an angel is superior to corporeal power. But a body by its power is able to transform corporeal matter, as appears when fire begets fire. Therefore much more efficaciously can an angel by his power transform corporeal matter.

Obj. 3. Further, all corporeal nature is under angelic administration, as appears above (A. 1), and thus it appears that bodies are as instruments to the angels, for an instrument is essentially a mover moved. Now in effects there is something that is due to the power of their principal agents, and which cannot be due to the power of the instrument, and it is this that takes the principal place in the effect. For example, digestion is due to the force of natural heat, which is the instrument of the nutritive soul, but that living flesh is thus generated is due to the power of the soul. Again the cutting of the wood is from the saw, but that it assumes at length the form of a bed is due to the power of the craftsman. Therefore the substantial form which takes the principal place in the corporeal effects, is due to the angelic power. Therefore matter obeys the angels in receiving its form.

On the contrary, Augustine says,[1] "It is not to be thought that this visible matter obeys these rebel angels; for it obeys God alone."

I answer that, The Platonists asserted[2] that the forms which are in matter are caused by immaterial forms, because they said that the material forms are participations of immaterial forms. Avicenna followed them in this opinion to some extent, for he said that "all forms which are in matter, proceed from the concept of the intelligence," and that "corporeal agents only dispose [matter] for the forms."[3] They seem to have been deceived on this point, through supposing a form to be something made *per se,* so that it would be the effect of a formal principle. But, as the Philosopher proves,[4] what is made, properly speaking, is the composite; for this, properly speaking, is what subsists. But the form is called a being not as that which is, but as that by which something is; and consequently neither is a form, properly speaking, made; for that is made which is, since to be made is nothing but the way to being.

Now it is manifest that what is made is like to the maker, because every agent makes its like. So whatever makes natural things, has a likeness to the composite; either because it is composite itself, as when fire begets fire, or because the whole composite as to both matter and form is within its power, which is proper to God. Therefore every informing of matter is either immediately from God, or from some corporeal agent, but not immediately from an angel.

Reply Obj. 1. Our soul is united to the body as the form, and so it is not surprising for the body to be formally changed by the soul's conception, especially as the movement of the sensitive appetite, which is accompanied with a certain bodily change, is subject to the command of reason. An angel, however, has not the same relation with natural bodies, and hence the argument does not hold.

Reply Obj. 2. Whatever an inferior power can do, a superior power can do, not in the same way, but in a more excellent way; for example, the intellect can know sensible things in a more excellent way than sense knows them. So an angel can change corporeal matter in a more excellent way than can corporeal agents, that is by moving the corporeal agents themselves, as being the superior cause.

Reply Obj. 3. There is nothing to prevent some natural effect taking place by angelic power for which the power of corporeal agents would not suffice. This, however, is not to obey an angel's will (as neither does matter obey the mere will of a cook, when by regulating the fire according to the prescription of the art he produces a dish that the fire could not have produced by itself), since to reduce matter to the act of the substantial form does not exceed the power of a corporeal agent; for it is natural for like to make like.

Article 3. *Whether Bodies Obey the Angels as Regards Local Motion?*

We proceed thus to the Third Article: It would seem that bodies do not obey the angels in local motion.

Objection 1. For the local motion of natural bodies follows on their forms. But the angels do not cause the forms of natural bodies, as stated above (A. 2; Q. LXV, A. 4; Q. XCI, A. 2). Therefore neither can they cause in them local motion.

[1] *De Trin.*, III, 8 (PL 42, 875). [2] Cf. Q. LXV, A. 4.
[3] *Meta.*, IX, 3 (103vb); cf. Q. LXXXIV, A. 4.
[4] *Metaphysics*, VII, 8 (1033^b17).

Obj. 2. Further, the Philosopher proves[1] that "local motion is the first of all movements." But the angels cannot cause other movements by a formal change of the matter. Therefore neither can they cause local motion.

Obj. 3. Further, the corporeal members obey the conception of the soul as regards local movement, as having in themselves some principle of life. In natural bodies, however, there is no vital principle. Therefore they do not obey the angels in local motion.

On the contrary, Augustine says (*De Trin.* iii, 8, 9)[2] that the angels use corporeal seed to produce certain effects. But they cannot do this without causing local movement. Therefore bodies obey them in local motion.

I answer that, As Dionysius says (*Div Nom.* vii):[3] "Divine wisdom has joined the ends of the first to the principles of the second." Hence it is clear that the inferior nature at its highest point reaches to the superior nature. Now corporeal nature is below the spiritual nature. But among all corporeal movements the most perfect is local motion, as the Philosopher proves[4] The reason of this is that what is moved locally is not as such in potency to anything intrinsic, but only to something extrinsic—that is, to place. Therefore the corporeal nature has a natural aptitude to be moved immediately by the spiritual nature as regards place. Hence also the philosophers asserted[5] that the supreme bodies are moved locally by the spiritual substances. And so we see that the soul moves the body first and chiefly by a local motion.

Reply Obj 1. There are in bodies other local movements besides those which result from the forms; for instance, the ebb and flow of the sea does not follow from the substantial form of the water, but from the influence of the moon. And much more can local movements result from the power of spiritual substances.

Reply Obj. 2. The angels, by causing local motion, as the first motion, can thereby cause other movements; that is, by employing corporeal agents to produce these effects, as a workman employs fire to soften iron.

Reply Obj. 3. The power of an angel is not so limited as is the power of the soul. Hence the moving power of the soul is limited to the body united to it, which is vivified by it, and by which it can move other things. But an angel's power is not limited to any body. Hence it can move locally bodies not joined to it.

[1] *Physics,* VIII, 7 (260[a]28). [2] PL 42, 875, 878.
[3] Sect. 3 (PG 3, 872). [4] *Op. cit.* (261[a]14). [5] Cf. Q. LVII, A. 2.

ARTICLE 4. *Whether Angels Can Work Miracles?*

We proceed thus to the Fourth Article: It would seem that the angels can work miracles.

Objection 1. For Gregory says (*Hom.* XXXIV *in Ev.*).[6] "Those spirits are called virtues by whom signs and miracles are usually done."

Obj 2 Further, Augustine says (QQ. LXXXIII.; *qu.* 79)[7] that " magicians work miracles by private contract; good Christians by public justice, bad Christians by the signs of public justice." But magicians work miracles because "they are heard by the demons," as he says elsewhere in the same work[8] Therefore the demons can work miracles. Therefore much more can the good angels

Obj 3. Further, Augustine says in the same work (*ibid*) that "it is not absurd to believe that all the things we see happen may be brought about by the lower powers that dwell in our atmosphere." But when an effect of natural causes is produced outside the order of natural cause, we call it a miracle, as, for instance, when anyone is cured of a fever without the operation of nature. Therefore the angels and demons can work miracles.

Obj 4. Further, superior power is not subject to the order of an inferior cause. But corporeal nature is inferior to an angel. Therefore an angel can work outside the order of corporeal agents, which is to work miracles.

On the contrary, It is written of God (Ps. 135. 4): *Who alone doth great wonders.*

I answer that, A miracle properly so called is when something is done outside the order of nature But it is not enough for a miracle if something is done outside the order of any particular nature; for otherwise anyone would perform a miracle by throwing a stone upwards, as such a thing is outside the order of the stone's nature. So for something to be called a miracle it is required that it be against the order of the whole created nature. But God alone can do this, because, whatever an angel or any other creature does by its own power, is according to the order of created nature, and thus it is not a miracle. Hence God alone can work miracles.

Reply Obj. 1. Some angels are said to work miracles either because God works miracles at their request, in the same way as holy men are said to work miracles, or because they exercise

[6] PL 76, 1251. [7] PL 40, 92.
[8] Cf. *Liber* XXI *Sent.*, 4; among the suppositious works of St. Augustine. (PL 40, 726).

a kind of ministry in the miracles which take place, as in collecting the dust in the general resurrection, or by doing something of that kind.

Reply Obj. 2. Properly speaking, as said above, miracles are those things which are done outside the order of the whole of created nature. But as we do not know all the power of created nature, it follows that when anything is done outside the order of created nature by a power unknown to us, it is called a miracle as regards ourselves. So when the demons do anything of their own natural power, these things are called miracles not in an absolute sense, but in reference to ourselves. In this way the magicians work miracles through the demons; and these are said to be done "by private contract," since every power of the creature, in the universe, may be compared to the power of a private person in a city. Hence when a magician does anything by compact with the devil, this is done as it were by private contract. On the other hand, the Divine justice is in the whole universe as the public law is in the city. Therefore good Christians, so far as they work miracles by Divine justice, are said to work miracles "by public justice"; but bad Christians "by the signs of public justice," as by invoking the name of Christ, or by making use of other sacred signs.

Reply Obj. 3. Spiritual powers are able to effect whatever happens in this visible world by employing corporeal seeds by local movement.

Reply Obj. 4. Although the angels can do something which is outside the order of corporeal nature, yet they cannot do anything outside the whole created order, which is essential to a miracle, as explained above.

QUESTION CXI

THE ACTION OF THE ANGELS ON MAN

(In Four Articles)

WE now consider the action of the angels on man, and inquire: (1) How far they can change them by their own natural power. (2) How they are sent by God to the ministry of men (Q. CXII). (3) How they guard and protect men (Q. CXIII). Under the first head there are four points of inquiry: (1) Whether an angel can enlighten the human intellect? (2) Whether he can change man's will? (3) Whether he can change man's imagination? (4) Whether he can change man's senses?

ARTICLE 1. *Whether an Angel Can Enlighten Man?*

We proceed thus to the First Article: It would seem that an angel cannot enlighten man.

Objection 1. For man is enlightened by faith. Hence Dionysius (*Eccl. Hier.* iii)[1] attributes enlightenment to baptism, as the sacrament of faith. But faith is immediately from God, according to Eph. 2. 8: *By grace you are saved through faith, and that not of yourselves, for it is the gift of God.* Therefore man is not enlightened by an angel, but immediately by God.

Obj. 2. Further, on the words, *God hath manifested it to them* (Rom. 1. 19), the gloss observes[2] that "not only natural reason availed," for the manifestation of Divine truths to men, "but God also revealed them by His work," that is, by His creature. But both are immediately from God—that is, natural reason and the creature. Therefore God enlightens man immediately.

Obj. 3. Further, whoever is enlightened is aware of being enlightened. But man is not aware of being enlightened by angels. Therefore he is not enlightened by them.

On the contrary, Dionysius says (*Cæl. Hier.* iv)[3] that the revelation of Divine things reaches men through the ministry of the angels But such revelation is an enlightenment, as we have stated (Q. CVI, A. 1; Q. CVII, A. 2). Therefore men are enlightened by the angels.

I answer that, Since the order of Divine Providence disposes that lower things be subject to the actions of higher, as explained above (Q. CIX, A 2), just as the inferior angels are enlightened by the superior, so men, who are inferior to the angels, are enlightened by them.

The modes of each of these kinds of enlightenment are in one way alike and in another way unlike. For, as was shown above (Q CVI, A. 1), the enlightenment which consists in making known Divine truth has two functions: namely, according as the inferior intellect is strengthened by the action of the superior intellect, and according as the intelligible species which are in the superior intellect are proposed to the inferior so as to be grasped by it. This takes place in the angels when the superior angel divides his universal concept of the truth according to the capacity of the inferior angel, as explained above (*ibid.*).

[1] Sect. 3 (PG 3, 397); cf. also II, 1 (PG 3, 392).
[2] *Glossa ordin.* (VI, 5B); *Glossa* Lombardi (PL 191, 1326).
[3] Sect. 2 (PG 3, 180).

The human intellect, however, cannot grasp the universal truth itself unveiled, because its nature requires it to understand by turning to the phantasms, as above explained (Q. LXXXIV, A. 7). So the angels propose the intelligible truth to men under the likenesses of sensible things, according to what Dionysius says (*Cæl. Hier.* i),[1] that, "It is impossible for the divine ray to shine on us, otherwise than shrouded by the variety of the sacred veils." On the other hand, the human intellect as the inferior, is strengthened by the action of the angelic intellect. And in these two ways man is enlightened by an angel.

Reply Obj. 1. Two dispositions come together in the virtue of faith. First, the habit of the intellect by which it is disposed to obey the will tending to Divine truth. For the intellect assents to the truth of faith not as convinced by the reason, but as commanded by the will; hence Augustine says,[2] "No one believes except willingly." In this respect faith comes from God alone. Secondly, faith requires that what is to be believed be proposed to the believer, which is accomplished by man, according to Rom. 10. 17, *Faith cometh by hearing;* but principally, however, by the angels, by whom Divine things are revealed to men. Hence the angels have some part in the enlightenment of faith. Moreover, men are enlightened by the angels not only concerning what is to be believed, but also as regards what is to be done.

Reply Obj. 2. Natural reason, which is immediately from God, can be strengthened by an angel, as we have said above. Again, the more the human intellect is strengthened, so much higher an intelligible truth can be elicited from the species derived from creatures. Thus man is assisted by an angel so that he may obtain from creatures a more perfect knowledge of God.

Reply Obj. 3. Intellectual operation and enlightenment can be understood in two ways. First, on the part of the thing understood. Thus whoever understands or is enlightened, knows that he understands or is enlightened, because he knows that the thing is made known to him. Secondly, on the part of the principle. And in this case it does not follow that whoever understands a truth knows what the intellect is, which is the principle of the intellectual operation. In like manner not everyone who is enlightened by an angel knows that he is enlightened by him.

[1] Sect. 2 (PG 3, 121).
[2] *In Joann.* VI, 44, tract. XXVI (PL 35, 1607).

ARTICLE 2. *Whether the Angels Can Change the Will of Man?*

We proceed thus to the Second Article: It would seem that the angels can change the will of man.

Objection 1. For, upon the text, *Who maketh His angels spirits and His ministers a flame of fire* (Heb. 1. 7), the gloss notes[3] that "they are fire, as being spiritually fervent, and as burning away our vices." This could not be, however, unless they changed the will. Therefore the angels can change the will.

Obj. 2. Further, Bede says (*Super Matt.* 15. 11),[4] that the devil does not send wicked thoughts, but kindles them. Damascene, however, says that he also sends them, for he remarks that "every malicious act and unclean passion is contrived by the demons and put into men" (*De Fid. Orth* ii, 4):[5] In like manner also the good angels introduce and kindle good thoughts. But this could only be if they changed the will. Therefore the will is changed by them.

Obj. 3. Further, the angel, as above explained, enlightens the human intellect by means of the phantasms. But as the imagination which serves the intellect can be changed by an angel, so can the sensitive appetite which serves the will, because it also is a power using a corporeal organ. Therefore as the angel enlightens the mind, so can he change the will.

On the contrary, To change the will belongs to God alone, according to Prov. 21. 1: *The heart of the king is in the hand of the Lord, whithersoever He will He shall turn it.*

I answer that, The will can be changed in two ways. First, from within. And in this way, since the movement of the will is nothing but the inclination of the will to the thing willed, God alone can thus change the will, because He gives the power of such an inclination to the intellectual nature. For as the natural inclination is from God alone Who gives the nature, so the inclination of the will is from God alone, Who causes the will.

Secondly, the will is moved from without. As regards an angel, this can be only in one way, —by the good apprehended by the intellect. Hence in as far as anyone may be the cause why anything be apprehended as a desirable good, so far does he move the will. In this way also God

[3] *Glossa* Lombardi (PL 192, 410); *Ibid.*, on Ps. 103.4 (PL 191, 929); cf. Also *Glossa ordin.* (VI 135A); Augustine, *Enarr. in Psalm.*, Ps. 103.4, Serm. 1 (PL 37, 1349).
[4] PL 92, 75; Cf. *Glossa ordin.*, on Matt. 15.11 (V, 49E).
[5] PG 94, 877.

alone can move the will efficaciously; but an angel and man move the will by way of persuasion, as above explained (Q. CVI, A. 2).

In addition to this manner the human will can be moved from without in another way; namely, by the passion residing in the sensitive appetite. Thus by concupiscence or anger the will is inclined to will something. In this manner the angels, as being able to rouse these passions, can move the will, not however by necessity, for the will always remains free to consent to, or to resist, the passion.

Reply Obj. 1. Those who act as God's ministers, either men or angels, are said to burn away vices, and to incite to virtue by way of persuasion.

Reply Obj. 2. The demon cannot put thoughts in our minds by causing them from within, since the act of the knowing power is subject to the will; nevertheless the devil is called the kindler of thoughts, inasmuch as he incites to thought, by the desire of the things thought of, by way of persuasion, or by rousing the passions. Damascene calls this kindling "a putting in," because such a work is accomplished within. But good thoughts are attributed to a higher principle, namely, God, though they may be procured by the ministry of the angels.

Reply Obj. 3. The human intellect in its present state can understand only by turning to the phantasms. But the human will can will something following the judgment of reason rather than the passion of the sensitive appetite. Hence the comparison does not hold.

ARTICLE 3. *Whether an Angel Can Change Man's Imagination?*

We proceed thus to the Third Article: It would seem that an angel cannot change man's imagination.

Objection 1. For the phantasy, as is said in the book on the *Soul*,[1] is "a motion caused by the sense in act." But if this motion were caused by an angel, it would not be caused by the sense in act. Therefore it is contrary to the nature of the phantasy, which is the act of the imaginative power, to be changed by an angel.

Obj. 2. Further, since the forms in the imagination are spiritual, they are nobler than the forms existing in sensible matter. But an angel cannot impress forms upon sensible matter (Q. CX, A. 2). Therefore he cannot impress forms on the imagination, and so he cannot change it.

Obj. 3. Further, Augustine says (*Gen. ad lit.* xii, 12):[2] "One spirit by intermingling with another can communicate his knowledge to the other spirit by these images, so that the latter either understands it himself, or accepts it as understood by the other." But it does not seem that an angel can be mingled with the human imagination, nor that the imagination can seize the intelligibles, which are what the angel knows. Therefore it seems that an angel cannot change the imagination.

Obj. 4. Further, in the imaginative vision man cleaves to the likenesses of the things as to the things themselves. But in this there is deception. So as a good angel cannot be the cause of deception, it seems that he cannot cause the imaginative vision by changing the imagination.

On the contrary, Those things which are seen in dreams are seen by imaginative vision. But the angels reveal things in dreams, as appears from Matt. 1. 20; 2. 13, 19 in regard to the angel who appeared to Joseph in dreams. Therefore an angel can move the imagination.

I answer that, Both a good and a bad angel by their own natural power can move the human imagination. This may be explained as follows. For it was said above (Q. CX, A. 3), that corporeal nature obeys the angel as regards local movement, so that whatever can be caused by the local movement of bodies is subject to the natural power of the angels. Now it is manifest that imaginative apparitions are sometimes caused in us by the local movement of animal spirits and humours. Hence Aristotle says,[3] when assigning the cause of visions in dreams, that "when an animal sleeps, the blood descends in abundance to the sensitive principle, and movements descend with it"; that is, the impressions left from the movements of sensible things, which movements are preserved in the animal spirits, "and move the sensitive principle," so that a certain appearance ensues, as if the sensitive principle were being then changed by the external objects themselves. Indeed, the disturbance of the spirits and humours may be so great that such appearances may even occur to those who are awake, as is seen in mad people, and the like. So, as this happens by a natural disturbance of the humours, and sometimes also by the will of man who voluntarily imagines what he previously experienced, so also the same may be done by the power of a good or a bad angel, sometimes with alienation from the bodily senses, sometimes without such alienation.

Reply Obj. 1. The principle of the imagination is from the sense in act. For we cannot imagine what we have never perceived by the

[1] Aristotle, III, 3 (429a1). [2] PL 34, 464. [3] *Sleep*, 3 (461b11).

senses, either wholly or partly; as a man born blind cannot imagine colour. Sometimes, however, the imagination is informed in such a way that the act of the imaginative movement arises from the impressions preserved within, as we have said above.

Reply Obj. 2. An angel changes the imagination, not indeed by the impression of an imaginative form in no way previously received from the senses (for he cannot make a man born blind imagine colour), but by local movement of the spirits and humours, as explained above.

Reply Obj. 3. The commingling of the angelic spirit with the human imagination is not a mingling of essences, but by reason of an effect which he produces in the imagination in the way stated above, so that he shows man what he [the angel] knows, but not in the way he knows.

Reply Obj. 4. An angel causing an imaginative vision, sometimes enlightens the intellect at the same time, so that it knows what these images signify, and then there is no deception. But sometimes by the angelic operation the likenesses of things only appear in the imagination. But neither then is deception caused by the angel, but by the defect in the intellect of him to whom such things appear. Thus neither was Christ a cause of deception when He spoke many things to the people in parables, which He did not explain to them.

ARTICLE 4. *Whether an Angel Can Change the Human Senses?*

We proceed thus to the Fourth Article: It seems that an angel cannot change the human senses.

Objection 1. For the sensitive operation is a vital operation. But such an operation does not come from an extrinsic principle. Therefore the sensitive operation cannot be caused by an angel.

Obj. 2. Further, the sensitive operation is nobler than the nutritive. But the angel cannot change the nutritive power, nor other natural forms. Therefore neither can he change the sensitive power.

Obj. 3. Further, the senses are naturally moved by the sensible objects. But an angel cannot change the order of nature (Q. CX, A. 4). Therefore an angel cannot change the senses, but these are changed always by the sensible object.

On the contrary, The angels who overturned Sodom, *struck the people of Sodom with blindness* or ἀορασία,[1] *so that they could not find the door* (Gen. 19. 11). The same is recorded of the Syrians whom Eliseus led into Samaria (IV Kings 6. 18).

I answer that, The senses may be changed in a twofold manner. From without, as when they are changed by the sensible object. And from within, for we see that the senses are changed when the spirits and humours are disturbed; as for example, a sick man's tongue, charged with choleric humour, tastes everything as bitter, and the like with the other senses. Now an angel, by his natural power, can work a change in the senses both ways. For an angel can offer the senses a sensible object from without, formed by nature or by the angel himself, as when he assumes a body, as we have said above (Q. LI, A. 2). Likewise he can move the spirits and humours from within, as above remarked (A. 3), by which the senses are changed in various ways.

Reply Obj. 1. The principle of the sensitive operation cannot be without the interior principle which is the sensitive power; but this interior principle can be moved in many ways by the exterior principle, as explained above.

Reply Obj. 2. By the interior movement of the spirits and humours an angel can do something towards changing the act of the nutritive power, and also of the appetitive and sensitive power, and of any other power using a corporeal organ.

Reply Obj. 3. An angel can do nothing outside the entire order of creatures, but he can outside some particular order of nature, since he is not subject to that order. Thus in some special way an angel can work a change in the senses outside the common way of nature.

QUESTION CXII

THE MISSION OF THE ANGELS

(In Four Articles)

WE next consider the mission of the angels. Under this head arise four points of inquiry: (1) Whether any angels are sent on works of ministry? (2) Whether all are sent? (3) Whether those who are sent stand before God. (4) From what orders they are sent.

ARTICLE 1. *Whether the Angels Are Sent on Works of Ministry?*

We proceed thus to the First Article: It would

[1] These are the only two passages in the Greek version where the word ἀορασία appears. It expresses, in fact, the effect produced on the people of Sodom—namely, dazzling (French version, *éblouissement*), which the Latin *cæcitas* (blindness) does not necessarily imply.

seem that the angels are not sent on works of ministry.

Objection 1. For every mission is to some determinate place. But intellectual actions do not determine a place, for intellect abstracts from the here and now. Since therefore the angelic actions are intellectual, it appears that the angels are not sent to perform their own actions.

Obj. 2. Further, the empyrean heaven is the place that befits the angelic dignity. Therefore if they are sent to us in ministry, it seems that something of their dignity would be lost, which is not fitting.

Obj. 3. Further, external occupation hinders the contemplation of wisdom; hence it is said: *He that is less in action, shall receive wisdom* (Ecclus. 38. 25). So if some angels are sent on external ministrations, they would seemingly be hindered from contemplation. But the whole of their happiness consists in the contemplation of God. So if they were sent, their happiness would be lessened, which is unfitting.

Obj. 4. Further, to minister is the part of an inferior. Hence it is written (Luke 22. 27): *Which is the greater, he that sitteth at table, or he that serveth? is not he that sitteth at table?* But the angels are naturally greater than we are. Therefore they are not sent to administer to us.

On the contrary, It is written (Exod. 23. 20): *Behold I will send My angels who shall go before thee.*

I answer that, From what has been said above (Q. CVIII, A. 6), it may be shown that some angels are sent in ministry by God. For, as we have already stated (Q. XLIII, A. 1), in treating of the mission of the Divine Persons, he is said to be sent who in any way proceeds from another so as to begin to be where he was not, or to be in another way where he already was. Thus the Son, or the Holy Ghost is said to be sent as proceeding from the Father by origin, and begins to be in a new way by grace or by the nature assumed, where He was before by the presence of His Godhead. For it is proper to God to be present everywhere, because, since He is the universal agent, His power reaches to all being, and hence He exists in all things (Q. VIII, A. 1).

An angel's power, however, as a particular agent, does not reach to the whole universe, but reaches to one thing in such a way as not to reach another. And so he is *here* in such a manner as not to be *there*. But it is clear from what was above stated (Q. CX, A. 1), that the corporeal creature is governed by the angels. Hence, whenever an angel has to perform any work concerning a corporeal creature, the angel applies himself anew to that body by his power, and in that way begins to be there afresh. Now all this takes place by Divine command. Hence it follows that an angel is sent by God.

Yet the action performed by the angel who is sent proceeds from God as from its first principle, at Whose nod and by Whose authority the angels work; and is reduced to God as to its last end. Now this is what is meant by a minister, for a minister is an intelligent instrument; but an instrument is moved by another, and its action is ordered to another. Hence angels' actions are called ministries; and for this reason they are said to be sent in ministry.

Reply Obj. 1. An operation can be intellectual in two ways. In one way, as dwelling in the intellect itself, as contemplation. Such an operation does not require to be in a place; indeed, as Augustine says (*De Trin.* iv, 20):[1] "Even we ourselves as mentally tasting something eternal, are not in this world." In another sense an action is said to be intellectual because it is regulated and commanded by some intellect. In that sense the intellectual operations evidently have sometimes a determinate place.

Reply Obj. 2. The empyrean heaven belongs to the angelic dignity by way of fitness, since it is fitting that the higher body should be appointed to that nature which occupies a rank above bodies. Yet an angel does not derive his dignity from the empyrean heaven. So when he is not actually in the empyrean heaven, nothing of his dignity is lost, as neither does a king lessen his dignity when not actually sitting on his regal throne, which suits his dignity.

Reply Obj. 3. In ourselves the purity of contemplation is obscured by exterior occupation because we give ourselves to action through the sensitive powers, the action of which when it is intense impedes the action of the intellectual powers. An angel, on the contrary, regulates his exterior actions by the intellectual operation alone. Hence it follows that his external occupations in no respect impede his contemplation, because, given two actions, one of which is the rule and the reason of the other, one does not hinder but helps the other. Therefore Gregory says (*Moral.* ii)[2] that "the angels do not go abroad in such a manner as to lose the delights of inward contemplation."

Reply Obj. 4. In their external actions the angels chiefly minister to God, and secondarily to us; not because we are superior to them, abso-

[1] PL 42, 907.
[2] Chap. 3 (PL 75, 556).

lutely speaking, but because, since every man or angel by cleaving to God is made one spirit with God, he is thereby superior to every creature. Hence the Apostle says (Phil. 2. 3): *Esteeming others better than themselves.*

ARTICLE 2. *Whether All the Angels Are Sent in Ministry?*

We proceed thus to the Second Article: It would seem that all the angels are sent in ministry.

Objection 1. For the Apostle says (Heb. 1. 14): *All are ministering spirits, sent to minister* (Vulg., *Are they not all . . .?*).

Obj. 2. Further, among the orders, the highest is that of the Seraphim, as stated above (Q. CVIII, A. 6). But a Seraph was sent to purify the lips of the prophet (Isa. 6. 6, 7). Therefore much more are the inferior orders sent.

Obj. 3. Further, the Divine Persons infinitely excel all the angelic orders. But the Divine Persons are sent. Therefore much more are even the highest angels sent.

Obj. 4. Further, if the superior angels are not sent to the external ministries, this can only be because the superior angels execute the Divine ministries by means of the inferior angels. But as all the angels are unequal, as stated above (Q. L, A. 4), each angel has an angel inferior to himself except the last one. Therefore only the last angel would be sent in ministry, which contradicts the words, *Thousands of thousands ministered to Him* (Dan. 7. 10).

On the contrary, Gregory says (*Hom.* xxxiv *in Ev.*),[1] quoting the statement of Dionysius (*Cæl. Hier.* xiii),[2] that "the higher ranks fulfil no exterior service."

I answer that, As appears from what has been said above (Q CVI, A. 3; Q. CX, A. 1), the order of Divine Providence has so disposed not only among the angels, but also in the whole universe, that inferior things are administered by the superior. By the Divine dispensation, however, this order is sometimes departed from as regards corporeal things for the sake of a higher order, that is, according as it is suitable for the manifestation of grace. That the man born blind was enlightened (John, 9.1), that Lazarus was raised from the dead (John 11. 43), was accomplished immediately by God without the action of the heavenly bodies. Moreover both good and bad angels can work some effect in these bodies independently of the heavenly bodies, by the condensation of the clouds into rain, and by producing some such effects. Nor can anyone doubt that God can immediately reveal things to men without the help of the angels, and the superior angels without the inferior. From this standpoint some have said[3] that according to the general law the superior angels are not sent, but only the inferior, yet that sometimes, by Divine dispensation, the superior angels also are sent.

This, however, does not seem to be reasonable, because the angelic order is according to the gifts of grace. Now the order of grace has no order above itself for the sake of which it should be passed over, as the order of nature is passed over for the sake of grace. It may likewise be observed that the order of nature in the working of miracles is passed over for the strengthening of faith, which purpose would receive no additional strength if the angelic order were passed over, since this could not be perceived by us Further, there is nothing in the Divine ministries above the capacity of the inferior orders. Hence Gregory says (*loc. cit.*) that "those who announce the highest things are called archangels. For this reason the archangel Gabriel was sent to the Virgin Mary." And yet, as he says further on, this was the greatest of all the Divine ministries. Thus with Dionysius (*Cæl Hier.* xiii)[4] we must say, without any distinction, that the superior angels are never sent to the external ministry.

Reply Obj. 1. As in the missions of the Divine Persons there is a visible mission, in regard to the corporeal creature, and an invisible mission, in regard to a spiritual effect, so likewise in the angelic missions there is an external mission, in respect of some administration of corporeal things—and on such a mission not all the angels are sent,—and an interior mission, in respect of some intellectual effect, just as one angel enlightens another—and in this way all the angels are sent.

It may also be said that the Apostle wishes to prove that Christ is greater than the angels who were chosen as the messengers of the law, in order that He might thus show the excellence of the new over the old law. Hence there is no need to apply this to any other angels besides those who were sent to give the law.

Reply Obj. 2. According to Dionysius (*ibid.*), the angel who was sent to purify the prophet's lips was one of the inferior order, but was called a *Seraph,* that is, burning in an equivocal sense, because he came to burn the lips of the prophet.

[1] PL 76,1254.
[2] Sect. 2 (PG 3, 300).
[3] Dionysius, *Cæl. Hier.*, XIII, 2 (PG 3, 300).
[4] *Ibid.*

It may also be said that the superior angels communicate their own proper gifts whereby they are named, through the ministry of the inferior angels. Thus one of the Seraphim is described as purifying by fire the prophet's lips, not as if he did so immediately, but because an inferior angel did so by his power, just as the Pope is said to absolve a man when he gives absolution by means of someone else.

Reply Obj. 3. The Divine Persons are not sent in ministry, but are said to be sent in an equivocal sense, as appears from what has been said (Q. XLIII, A. 1).

Reply Obj. 4. Many grades exist in the Divine ministries. Hence there is nothing to prevent angels though unequal from being sent immediately in ministry, in such a manner however that the superior are sent to the higher ministries, and the lower to the inferior ministries.

ARTICLE 3. *Whether All the Angels Who Are Sent Stand Before God?*

We proceed thus to the Third Article: It would seem that the angels who are sent also stand before God (*assistant*).

Objection 1. For Gregory says (*Hom.* xxxiv *in Ev.*):[1] "So the angels are sent and stand before God; for, though the angelic spirit is limited, yet the supreme Spirit, God, is not limited."

Obj. 2. Further, the angel was sent to administer to Tobias. Yet he said, *I am the angel Raphael, one of the seven who stand before the Lord* (Tob. 12. 15). Therefore the angels who are sent stand before God.

Obj. 3. Further, every holy angel is nearer to God than Satan is. Yet Satan stood before God, according to Job. 1. 6: *When the sons of God came to stand before the Lord, Satan also was present among them.* Therefore much more do the angels who are sent to minister stand before God.

Obj. 4. Further, if the inferior angels do not stand before God, the reason is because they receive the Divine enlightenment not immediately, but through the superior angels. But every angel receives the Divine enlightenment from a superior, except the one who is highest of all. Therefore only the highest angel would stand before God, which is contrary to the text of Dan. 7. 10: *Ten thousand times a hundred thousand stood before Him.* Therefore the angels who are sent also stand before God.

On the contrary, Gregory says, on Job. 25. 3: *Is there any numbering of His soldiers?* (*Moral.* xvii):[2] "Those powers stand before God who do not go forth as messengers to men." Therefore those who are sent in ministry do not assist.

I answer that, The angels are spoken of as being present before and administering, after the likeness of those who attend upon a king, some of whom ever wait upon him, and hear his commands immediately, while others there are to whom the royal commands are conveyed by those who are in attendance—for instance, those who are placed at the head of the administration of various cities. These are said to administer, not to wait upon.

We must therefore observe that all the angels gaze upon the Divine Essence immediately; in regard to which all, even those who minister, are said to stand before God. Hence Gregory says (*Moral.* ii)[3] that "those who are sent on the external ministry of our salvation can always be present before or see the face of the Father." Yet not all the angels can perceive the secrets of the Divine mysteries in the clearness itself of the Divine Essence, but only the superior angels who announce them to the inferior. And in that respect only the superior angels belonging to the highest hierarchy are said to be present before God, those, according to Dionysius,[4] whose special prerogative it is to be enlightened immediately by God.

From this appears the *reply to the first and second objections,* which are based on the first mode of attending.

Reply Obj. 3. Satan is not described as having stood before God, but as present among those who stood before God; for, as Gregory says (*Moral.* ii),[5] "though he has lost happiness still he has retained a nature like to the angels."

Reply Obj. 4. All the attendants see some things immediately in the glory of the Divine Essence, and so it may be said that it is the prerogative of the whole of the highest hierarchy to be immediately enlightened by God. But the higher ones among them see more than is seen by the inferior; some of whom enlighten others, as also among those who attend upon the king, one knows more of the king's secrets than another.

ARTICLE 4. *Whether All the Angels of the Second Hierarchy Are Sent?*

We proceed thus to the Fourth Article: It

[1] PL 76, 1255.
[2] Chap. XIII (PL 76, 20).
[3] Chap. III (PL 76, 556).
[4] *Cæl. Hier.*, VII, 3 (PG 3, 209).
[5] Chap. 4 (PL 75, 557).

would seem that all the angels of the second hierarchy are sent.

Objection 1. For all the angels either attend, or minister, according to Daniel 7. 10. But the angels of the second hierarchy do not stand before God, for they are enlightened by the angels of the first hierarchy, as Dionysius says (*Cæl. Hier.* viii).[1] Therefore all the angels of the second hierarchy are sent in ministry.

Obj. 2. Further, Gregory says (*Moral.* xvii)[2] that "there are more who minister than who stand before the throne." This would not be the case if the angels of the second hierarchy were not sent in ministry. Therefore all the angels of the second hierarchy are sent to minister.

On the contrary, Dionysius says (*Cæl. Hier.* viii)[3] that "the Dominations are above all subjection." But to be sent implies subjection. Therefore the Dominations are not sent to minister.

I answer that, As above stated (A. 1), to be sent to external ministry properly belongs to an angel according as he acts by Divine command in respect of any corporeal creature, which is part of the execution of the Divine ministry. Now the angelic properties are manifested by their names, as Dionysius says (*Cæl. Hier* vii).[4] And therefore the angels of those orders are sent to external ministry whose names signify some kind of administration. But the name Dominations does not signify any such administration, but only disposition and command in administering. On the other hand, the names of the inferior orders imply administration, for the Angels and Archangels are called so from announcing; the Virtues and Powers are called so in respect of some act; and it is right that the Prince, according to what Gregory says (*Hom.* xxxiv *in Ev.*),[5] "be first among the workers." Hence it belongs to these five orders to be sent to external ministry, but not to the four superior orders.

Reply Obj. 1. The Dominations are counted amongst the ministering angels, not as exercising but as disposing and commanding what is to be done by others. Thus an architect does not put his hands to the production of his art, but only disposes and orders what others are to do.

Reply Obj. 2. A twofold reason may be given in assigning the number of the attending and ministering angels. For Gregory says that those who minister are more numerous than those who attend, because he takes the words (Dan. 7. 10) *thousands of thousands ministered to Him,* not in a multiple but in a partitive sense, to mean thousands out of thousands. Thus the number of those who minister is indefinite, and signifies excess; but the number of attendants is finite as in the words added, *and ten thousand times a hundred thousand assisted Him.* This explanation rests on the opinion of the Platonists,[6] who said that the nearer things are to the one first principle, the smaller they are in number, just as the nearer a number is to unity, the lesser it is than multitude This opinion is verified as regards the number of orders, as six administer and three stand before the throne.

Dionysius, however (*Cæl. Hier.* xiv)[7] declares that the multitude of angels surpasses all the multitude of material things; so that, just as the superior bodies exceed the inferior in magnitude to an immeasurable degree, so the superior incorporeal natures surpass all corporeal natures in multitude, because whatever is better is more intended and more multiplied by God. Hence, as the attendants are superior to the ministers there will be more attendants than ministers. In this way, the words "thousands of thousands" are taken by way of multiplication, to signify a thousand times a thousand. And because ten times a hundred is a thousand, if it were said "ten times a hundred thousand" it would mean that there are as many attendants as ministers. But since it is written "ten thousand times a hundred thousand," we are given to understand that the attendants are much more numerous than the ministers. Nor is this said to signify that this is the precise number of angels, but rather that it is much greater, in that it exceeds all material multitude. This is signified by the multiplication together of the greatest numbers, namely ten, a hundred, and a thousand, as Dionysius remarks in the same passage.

QUESTION CXIII

OF THE GUARDIANSHIP OF THE GOOD ANGELS AND THEIR WARFARE AGAINST THE EVIL ANGELS

(In Eight Articles)

WE next consider the guardianship exercised by the good angels, and their warfare against the

evil angels (Q. CXIV). Under the first head eight points of inquiry arise: (1) Whether men are guarded by the angels? (2) Whether to each man is assigned a single guardian angel? (3) Whether the guardianship belongs only to the lowest order of angels? (4) Whether it is fitting for each man to have an angel guardian? (5) When does an angel's guardianship of a man begin? (6) Whether the angel guardians always watch over men? (7) Whether the angel grieves over the loss of the one guarded? (8) Whether rivalry exists among the angels as regards their guardianship?

ARTICLE 1. *Whether Men Are Guarded By the Angels?*

We proceed thus to the First Article: It would seem that men are not guarded by the angels.

Objection 1. For guardians are assigned to some because they either do not know how, or are not able, to guard themselves, as children and the sick. But man is able to guard himself by his free choice, and knows how by his natural knowledge of natural law. Therefore man is not guarded by an angel.

Obj. 2. Further, a strong guard makes a weaker one superfluous. But men are guarded by God, according to Ps. 120. 4: *He shall neither slumber nor sleep, that keepeth Israel.* Therefore man does not need to be guarded by an angel.

Obj. 3. Further, the loss of the guarded comes back to the negligence of the guardian; hence it was said to a certain one: *Keep this man; and if he shall slip away, thy life shall be for his life* (III Kings 20. 39). Now many perish daily through falling into sin, whom the angels could help by visible appearance, or by miracles, or in some such way. The angels would therefore be negligent if men are given to their guardianship. But that is clearly false. Therefore the angels are not the guardians of men.

On the contrary, It is written (Ps. 90. 11): *He hath given His angels charge over thee, to keep thee in all thy ways.*

I answer that, According to the plan of Divine Providence, we find that in all things the movable and changeable are moved and regulated by the immovable and unchangeable, as all corporeal things by immovable spiritual substances, and the inferior bodies by the superior which are unchangeable in substance. We ourselves also are regulated as regards conclusions, about which we may have various opinions, by the principles which we hold in an invariable manner. It is moreover manifest that as regards things to be done human knowledge and affection can vary and fail from good in many ways. And so it was necessary that angels should be assigned for the guardianship of men, in order to regulate them and move them to good.

Reply Obj. 1. By free choice man can avoid evil to a certain degree, but not in any sufficient degree, for he is weak in affection towards good on account of the manifold passions of the soul. Likewise universal natural knowledge of the law, which by nature belongs to man, to a certain degree directs man to good, but not in a sufficient degree, because in the application of the universal principles of law to particular works man happens to be deficient in many ways. Hence it is written (Wisd. 9. 14): *The thoughts of mortal men are fearful, and our counsels uncertain.* Thus man needs to be guarded by the angels.

Reply Obj. 2. Two things are required for a good action. First, that the affection be inclined to good, which is effected in us by the habit of moral virtue. Secondly, that reason should discover the proper ways to carry out the good of virtue. This the Philosopher attributes[1] to prudence. As regards the first, God guards man immediately by pouring into him grace and virtues. As regards the second, God guards man as his universal teacher, Whose precepts reach man by the medium of the angels, as above stated (Q. CXI, A. 1).

Reply Obj. 3. As men depart from the natural instinct of good by reason of a sinful passion, so also do they depart from the instigation of the good angels, which takes place invisibly when they enlighten man that he may do what is right. Hence that men perish is not to be ascribed to the negligence of the angels but to the malice of men. That they sometimes appear to men visibly outside the ordinary course of nature comes from a special grace of God, as likewise that miracles occur outside the order of nature.

ARTICLE 2. *Whether Each Man Is Guarded By an Angel?*

We proceed thus to the Second Article: It would seem that each man is not guarded by an angel.

Objection 1. For an angel is stronger than a man. But one man suffices to guard many men. Therefore much more can one angel guard many men.

Obj. 2. Further, the lower things are brought

[1] *Ethics,* VI, 12 (1144a8).

to God through the medium of the higher, as Dionysius says (*Cæl. Hier.* iv).[1] But as all the angels are unequal (Q. L, A. 4), there is only one angel between whom and men there is no medium. Therefore there is only one angel who immediately keeps men.

Obj. 3. Further, the greater angels are deputed to the greater offices. But it is not a greater office to keep one man more than another, since all men are naturally equal. Since therefore of all the angels one is greater than another, as Dionysius says (*Cæl. Hier.* x),[2] it seems that different men are not guarded by different angels.

On the contrary, On the text, *Their angels in heaven,* etc. (Matt. 8 10), Jerome says:[3] "Great is the dignity of souls, for each one to have an angel assigned to guard it from its birth."

I answer that, Each man has a guardian angel appointed to him. The reason for this is that the guardianship of angels belongs to the execution of Divine Providence concerning men. But God's providence acts differently as regards men and as regards other corruptible creatures, for they are related differently to incorruptibility. For men are not only incorruptible in the common species, but also in the proper forms of each individual, which are the rational souls, which cannot be said of other incorruptible things. Now it is manifest that the providence of God is chiefly exercised towards what remains for ever; but as regards things which pass away, the providence of God acts so as to order them to the things which are perpetual. Thus the providence of God is related to each man as it is to every genus or species of things corruptible But, according to Gregory (*Hom.* xxxiv *in Ev.*),[4] "the different orders are assigned to the different genera of things, for instance the Powers to coerce the demons, the Virtues to work miracles in things corporeal." And it is probable that the different species are presided over by different angels of the same order. Hence it is also reasonable to suppose that different angels are appointed to the guardianship of different men.

Reply Obj. 1. A guardian may be assigned to a man for two reasons. First, since a man is an individual, and thus to one man one guardian is due; and sometimes several are appointed to guard one. Secondly, since a man is part of a community. And thus one man is appointed as guardian of a whole community, to whom it pertains to deal with what concerns each man in his relation to the whole community, such as external deeds, which are sources of strength or weakness to others. But guardian angels are given to men also as regards invisible and hidden things, concerning the salvation of each one in his own regard. Hence individual angels are appointed to guard individual men.

Reply Obj. 2. As above stated (Q. CXII, A. 3, Ans. 4), all the angels of the first hierarchy are, as to some things, enlightened by God directly; but, as to other things, only the superior are directly enlightened by God, and these reveal them to the inferior. And the same also applies to the inferior orders. For a lower angel is enlightened in some respects by one of the highest, and in other respects by the one immediately above him Thus it is possible that some one angel enlightens a man immediately, and yet has other angels beneath him whom he enlightens.

Reply Obj. 3. Although men are equal in nature, still inequality exists among them, according as Divine Providence orders some to the greater, and others to the lesser things, according to Ecclus. 33. 11, 12: *With much knowledge the Lord hath divided them, and diversified their ways: some of them hath He blessed and exalted, and some of them hath He cursed and brought low.* Thus it is a greater office to guard one man than another.

ARTICLE 3. *Whether to Guard Men Belongs Only to the Lowest Order of Angels?*

We proceed thus to the Third Article: It would seem that the guardianship of men does not belong only to the lowest order of the angels.

Objection 1. For Chrysostom says[5] that the text (Matt. 18. 10), *Their angels in heaven,* etc., "is to be understood not of any angels, but of the highest." Therefore the superior angels guard men.

Obj. 2. Further, the Apostle says that angels *are sent to minister for them who shall receive the inheritance of salvation* (Heb. 1. 14), and thus it seems that the mission of the angels is directed to the guardianship of men. But five orders are sent in external ministry (Q. CXII, A. 4). Therefore all the angels of the five orders are appointed to the guardianship of men.

Obj. 3. Further, for the guardianship of men it seems especially necessary to coerce the demons, which pertains most of all to the Powers,

[1] Sect. 3 (PG 3, 181).
[2] Sect. 2, 3 (PG 3, 273).
[3] Bk. III (PL 26, 135).
[4] PL 76, 1251.
[5] *In Matt.*, hom. LIX (PG 58, 579).

according to Gregory (*Hom.* xxxiv *in Ev.*),[1] and to work miracles, which pertains to the Virtues. Therefore these orders are also appointed to the work of guardianship, and not only the lowest order.

On the contrary, In the Psalm (90) the guardianship of men is attributed to the angels, who belong to the lowest order, according to Dionysius (*Cæl. Hier.* ix).[2]

I answer that, As above stated (A. 2, Ans. 1), man is guarded in two ways. In one way by particular guardianship, according as to each man an angel is appointed to guard him; and such guardianship belongs to the lowest order of the angels, whose place it is, according to Gregory,[3] "to announce the lesser things." For it seems to be the least of the angelic offices to procure what concerns the salvation of only one man. The other kind of guardianship is universal, multiplied according to the different orders. For the more universal an agent is, the higher it is. Thus the guardianship of the human race belongs to the order of Principalities, or perhaps to the Archangels, whom we call the angel princes. Hence, Michael, whom we call an archangel, is also styled *one of the princes* (Dan. 10. 13). Moreover all corporeal natures are guarded by the Virtues, and likewise the demons by the Powers, and the good spirits by the Principalities, according to Gregory's opinion (*op. cit.*).[4]

Reply Obj. 1. The words of Chrysostom can be taken to mean the highest in the lowest order of angels. For, as Dionysius says (*Cæl. Hier.* x)[5] in each order there are first, middle, and last. It is, however, probable that the greater angels are appointed to keep those chosen by God for the higher degree of glory.

Reply Obj. 2. Not all the angels who are sent have a particular guardianship of individual men, but some orders have a universal guardianship, greater or less, as explained above.

Reply Obj. 3. Even inferior angels exercise the office of the superior, in so far as they share in their gifts, and they are executors of the superiors' power. And in this way all the angels of the lowest order can coerce the demons, and work miracles.

Article 4. *Whether Angels Are Appointed to the Guardianship of All Men?*

We proceed thus to the Fourth Article: It would seem that angels are not appointed to the guardianship of all men.

Objection 1. For it is written of Christ (Phil. 2. 7) that He was *made in the likeness of men, and in habit found as a man.* If therefore angels are appointed to the guardianship of all men, Christ also would have had a guardian angel. But this is not fitting, for Christ is greater than all the angels. Therefore angels are not appointed to the guardianship of all men.

Obj. 2. Further, Adam was the first of all men. But it was not fitting that he should have a guardian angel, at least in the state of innocence, for then he was not beset by any dangers. Therefore angels are not appointed to the guardianship of all men.

Obj. 3. Further, angels are appointed to the guardianship of men that they may take them by the hand and guide them to eternal life, encourage them to good works, and protect them against the assaults of the demons. But men who are foreknown to damnation never attain to eternal life. Infidels also, though at times they perform good works, do not perform them well, for they have not a right intention; for "faith directs the intention" as Augustine says (*Enarr. ii in* Ps. 31).[6] Moreover, the coming of Antichrist will be *according to the working of Satan,* as it is written (II Thess. 2. 9). Therefore angels are not appointed to the guardianship of all men.

On the contrary is the authority of Jerome quoted above (A. 2),[7] for he says that "each soul has an angel appointed to guard it."

I answer that, Man while in this state of life, is, as it were, on a road by which he should journey towards heaven. On this road man is threatened by many dangers both from within and from without, according to Ps. 161. 4: *In this way wherein I walked, they have hidden a snare for me.* And therefore as guardians are appointed for men who have to pass by an unsafe road, so an angel guardian is assigned to each man as long as he is a wayfarer. When, however, he arrives at the end of life he no longer has a guardian angel, but in the kingdom he will have an angel to reign with him, in hell a demon to punish him.

Reply Obj. 1. Christ as man was guided immediately by the Word of God. Therefore He did not need to be guarded by an angel. Again as regards His soul, He was one comprehending, although in regard to His passible body, he was a wayfarer. In this latter respect it was right that He should have, not a guardian angel as

[1] PL 76, 1251. [2] Sect. 2 (PG 3, 260).
[3] *Op. cit.* (PL 76, 1250).
[4] PL 76, 1251.
[5] Sect. 2 (PG 3, 273).
[6] PL 36, 259. [7] *In Matt.*, III, on 18.10 (PL 26, 135).

superior to Him, but a ministering angel as inferior to Him. And so it is written (Matt. 4. 11) that *angels came and ministered to Him.*

Reply Obj. 2. In the state of innocence man was not threatened by any peril from within, because all was well ordered within him, as we have said above (Q. XCV, AA. 1, 3). But peril threatened from without on account of the snares of the demons, as was proved by the event. For this reason he needed a guardian angel.

Reply Obj. 3. Just as the foreknown, the infidels, and even Antichrist, are not deprived of the interior help of natural reason, so neither are they deprived of that exterior help granted by God to the whole human race,—namely the guardianship of the angels. And although this help which they receive does not result in their deserving eternal life by good works, it does nevertheless conduce to their being protected from certain evils which would hurt both themselves and others. For even the demons are held off by the good angels, lest they hurt as much as they will to do. In like manner Antichrist will not do as much harm as he would wish.

ARTICLE 5. *Whether an Angel Is Appointed to Guard a Man from His Birth?*

We proceed thus to the Fifth Article: It would seem that an angel is not appointed to guard a man from his birth.

Objection 1. For angels are *sent to minister for them who shall receive the inheritance of salvation,* as the Apostle says (Heb. 1. 14). But men begin to receive the inheritance of salvation when they are baptized. Therefore an angel is appointed to guard a man from the time of his baptism, not of his birth.

Obj. 2. Further, men are guarded by angels in as far as angels enlighten and instruct them. But children are not capable of instruction as soon as they are born, for they do not have the use of reason. Therefore angels are not appointed to guard children as soon as they are born.

Obj. 3. Further, a child has a rational soul for some time before birth, just as well as after. But it does not appear that an angel is appointed to guard a child before its birth, for they are not then admitted to the sacraments of the Church. Therefore angels are not appointed to guard men from the moment of their birth.

On the contrary, Jerome says[1] that "each soul has an angel appointed to guard it from its birth."

I answer that, As Origen observes (*Tract.* xiii *super Matt.*)[2] there are two opinions on this matter. For some have held that the guardian angel is appointed at the time of baptism, others, that he is appointed at the time of birth. The latter opinion Jerome approves (*loc. cit.*), and with reason. For those benefits which are conferred by God on man as a Christian, such as receiving the Eucharist, and the like, begin with his baptism. But those which are conferred by God on man as a rational being, are bestowed on him at his birth, for it is then that he receives that nature. Among the latter benefits we must count the guardianship of angels, as we have said above (AA. 1, 4). Therefore from the very moment of his birth man has an angel guardian appointed to him.

Reply Obj. 1. Angels are sent to minister, and efficaciously, only for those who will receive the inheritance of salvation, if we consider the ultimate effect of their guardianship, which is the realizing of that inheritance. Nevertheless, the angelic ministrations are not withdrawn from others, although they are not so efficacious as to bring them to salvation. Still, they are efficacious in so far as they ward off many evils.

Reply Obj. 2. Guardianship is ordered to enlightenment by instruction as to its ultimate and principal effect. Nevertheless it has many other effects consistent with childhood; for instance to ward off the demons, and to prevent both bodily and spiritual harm.

Reply Obj. 3. As long as the child is in the mother's womb it is not entirely separate, but by reason of a certain intimate tie, is still part of her, just as the fruit while hanging on the tree is part of the tree. And therefore it can be said with some degree of probability, that the angel who guards the mother guards the child while in the womb. But at its birth, when it becomes separate from the mother, an angel guardian is appointed to it, as Jerome, quoted above, says.

ARTICLE 6. *Whether the Angel Guardian Ever Forsakes a Man?*

We proceed thus to the Sixth Article: It would seem that the angel guardian sometimes forsakes the man whom he is appointed to guard.

Objection 1. For it is said (Jer. 51. 9) in the person of the angels: *We would have cured Babylon, but she is not healed: let us forsake her.* And (Isa. 5. 5) it is written: *I will take away the hedge*—that is, the guardianship of the angels (gloss)[3]—*and it shall be wasted.*

Obj. 2. Further, God's guardianship excels that of the angels. But God forsakes man at

[1] *In Matt.*, III, on 18.10 (PL 26, 135). [2] PG 13, 1165. [3] *Glossa interl.*, on Isa., 5.5 (IV, 141).

times, according to Ps. 21. 2: *O God, my God, look upon me: why hast Thou forsaken me?* Much rather therefore does an angel guardian forsake man.

Obj. 3. Further, according to Damascene (*De Fide Orth.* ii, 3),[1] "When the angels are here with us, they are not in heaven." But sometimes they are in heaven. Therefore sometimes they forsake us.

On the contrary, The demons are ever assailing us, according to I Pet. 5. 8: *Your adversary the devil, as a roaring lion, goeth about, seeking whom he may devour.* Much more therefore do the good angels ever guard us.

I answer that, As appears above (A. 2), the guardianship of the angels is an effect of Divine Providence in regard to man. Now it is evident that neither man, nor anything at all, is entirely withdrawn from the providence of God; for in as far as a thing participates being, so far is it subject to the providence that extends over all being. God indeed is said to forsake man, according to the ordering of His providence, but only in so far as He allows man to suffer some defect of punishment or of fault. In like manner it must be said that the angel guardian never forsakes a man entirely, but sometimes he leaves him in some particular, for instance by not preventing him from being subject to some trouble, or even from falling into sin, according to the ordering of Divine judgments. In this sense Babylon and the House of Israel are said to have been forsaken by the angels, because their angel guardians did not prevent them from being subject to tribulation.

From this the answers are clear to the *first and second objections.*

Reply Obj. 3. Although an angel may forsake a man sometimes as regards place, he does not for that reason forsake him as to the effect of his guardianship. For even when he is in heaven he knows what is happening to man; nor does he need time for his local motion, for he can be with man in an instant.

ARTICLE 7. *Whether Angels Grieve for the Ills of Those Whom They Guard?*

We proceed thus to the Seventh Article: It would seem that angels grieve for the ills of those whom they guard.

Objection 1. For it is written (Isa. 33. 7): *The angels of peace shall weep bitterly.* But weeping is a sign of grief and sorrow. Therefore angels grieve for the ills of those whom they guard.

[1] PG 94, 869.

Obj. 2. Further, according to Augustine,[2] "sorrow is for those things that happen against our will." But the loss of the man whom he has guarded is against the guardian angel's will. Therefore angels grieve for the loss of men.

Obj. 3. Further, as sorrow is contrary to joy, so penance is contrary to sin. But angels rejoice about one sinner doing penance, as we are told, Luke 15. 7. Therefore they grieve for the just man who falls into sin.

Obj. 4. Further, on Numbers 18. 12: *Whatsoever first-fruits they offer,* etc., the gloss of Origen says:[3] "The angels are brought to judgment as to whether men have fallen through their negligence or through their own fault." But it is reasonable for anyone to grieve for the ills which have brought him to judgment. Therefore angels grieve for men's sins.

On the contrary, Where there is grief and sorrow, there is not perfect happiness. And so it is written (Apoc. 21. 4): *Death shall be no more, nor mourning, nor crying, nor sorrow.* But the angels are perfectly happy. Therefore they have no cause for grief.

I answer that, Angels do not grieve, either for sins or for the pains inflicted on men. For grief and sorrow, according to Augustine (*loc. cit.*) are for those things which occur against our will. But nothing happens in the world contrary to the will of the angels and the other blessed, because their will cleaves entirely to the ordering of Divine justice, while nothing happens in the world save what is effected or permitted by Divine justice. Therefore absolutely speaking, nothing occurs in the world against the will of the blessed. For as the Philosopher says[4] that is called absolutely voluntary, which a man wills in a particular case, and at a particular time, having considered all the circumstances. But considered universally, such a thing would not be voluntary; thus for example, the sailor does not will the casting of his cargo into the sea, considered universally and absolutely, but he wills it on account of the threatened danger of his life. And so this is voluntary rather than involuntary, as stated in the same passage. Therefore universally and absolutely speaking, the angels do not will sin and the pains inflicted on its account, but they do will the fulfilment of the ordering of Divine justice in this matter, in respect of which some are subjected to pains and are allowed to fall into sin.

Reply Obj. 1. These words of Isaias may be

[2] *City of God,* XIV, 15 (PL 41, 424).
[3] *In Num.,* hom. XI (PG 12, 647).
[4] *Ethics,* III, 1 (1110^a9).

understood of the angels, that is, the messengers, of Ezechias, who wept on account of the words of Rabsaces, as related Isa. 37. 2 *seqq.* This would be the literal sense. According to the allegorical sense the angels of peace are the apostles and preachers who weep for men's sins. If this passage be expounded of the blessed angels according to the anagogical sense, then the expression is metaphorical, and signifies that, universally speaking, the angels will the salvation of mankind. For it is in this manner that we attribute passions to God and the angels.

The *reply to the second objection* appears from what has been said

Reply Obj. 3. Both in man's repentance and in man's sin there is one reason for the angel's joy, namely the fulfilment of the ordering of the Divine Providence.

Reply Obj. 4. The angels are brought into judgment for the sins of men, not as guilty, but as witnesses to convict man of weakness.

ARTICLE 8. *Whether There Can Be Strife or Discord among the Angels?*

We proceed thus to the Eighth Article: It would seem that there can not be strife or discord among the angels.

Objection 1. For it is written (Job 25 2): *Who maketh peace in His high places* But strife is opposed to peace. Therefore among the high angels there is no strife.

Obj. 2. Further, where there is perfect charity and just authority there can be no strife. But all this exists among the angels. Therefore there is no strife among the angels.

Obj. 3. Further, if we say that angels strive for those whom they guard, one angel must take one side, and another angel the opposite side. But if one side has justice the other side lacks justice. It will follow therefore, that a good angel is a furtherer of injustice, which is unfitting. Therefore there is no strife among good angels.

On the contrary, It is written (Dan. 10. 13): *The prince of the kingdom of the Persians resisted me one and twenty days.* But this prince of the Persians was the angel appointed to the guardianship of the kingdom of the Persians. Therefore one good angel resists the others, and thus there is strife among them.

I answer that, The raising of this question is occasioned by this passage of Daniel.[1] Jerome explains it[2] by saying that the prince of the kingdom of the Persians is the angel who opposed the setting free of the people of Israel, for whom Daniel was praying, his prayers being offered to God by Gabriel. And this resistance of his may have been caused by some prince of the demons having led the Jewish captives in Persia into sin, which sin was an impediment to the efficacy of the prayer which Daniel put up for that same people.

But according to Gregory (*Moral.* xvii),[3] the prince of the kingdom of Persia was a good angel appointed to the guardianship of that kingdom To see therefore how one angel can be said to resist another, we must note that the Divine judgments in regard to various kingdoms and various men are executed by the angels. Now in their actions the angels are ruled by the Divine decree But it happens at times in various kingdoms or various men there are contrary merits or demerits, so that one of them is subject to or placed over another. As to what is the ordering of Divine wisdom on such matters, the angels cannot know it unless God reveal it to them, and so they need to consult Divine wisdom concerning these things. And so according as they consult the Divine will concerning various contrary and opposing merits, they are said to resist one another; not that their wills are in opposition, since they are all of one mind as to the fulfilment of the Divine decree, but that the things about which they seek knowledge are in opposition.

From this *the answers to the objections* are clear.

QUESTION CXIV

OF THE ASSAULTS OF THE DEMONS

(In Five Articles)

WE now consider the assaults of the demons. Under this head there are five points of inquiry: (1) Whether men are assailed by the demons? (2) Whether to tempt is proper to the devil? (3) Whether all the sins of men are to be set down to the assaults or temptations of the demons? (4) Whether they can work true miracles for the purpose of leading men astray? (5) Whether the demons who are overcome by men are hindered from making further assaults?

ARTICLE 1. *Whether Men Are Assailed by the Demons?*

We proceed thus to the First Article: It would seem that men are not assailed by the demons.

Objection 1. For angels are sent by God to guard man. But demons are not sent by God, for the demons' intention is the loss of souls, whereas God's intention is the salvation of souls. Therefore demons are not assigned to assail man.

Obj. 2. Further, it is not a fair fight for the weak to be set against the strong, and the ignorant against the astute. But men are weak and ignorant, whereas the demons are strong and astute. It is not therefore to be permitted by God, the author of all justice, that men should be assailed by demons.

Obj. 3. Further, the assaults of the flesh and the world are enough for man's exercise. But God permits His elect to be assailed that they may be exercised. Therefore there is no need for them to be assailed by the demons.

On the contrary, The Apostle says (Eph. 6. 12): *Our wrestling is not against flesh and blood; but against Principalities and Powers, against the rulers of the world of this darkness, against the spirits of wickedness in the high places.*

I answer that, Two things may be considered in the assault of the demons—the assault itself, and its ordering The assault itself is due to the malice of the demons, who through envy endeavour to hinder man's progress, and through pride usurp a semblance of Divine power, by appointing certain ministers to assail man, as the angels of God in their various offices minister to man's salvation. But the ordering of the assault is from God, Who knows how to make orderly use of evil by ordering it to good. On the other hand, in regard to the angels, both their guardianship and its ordering are to be referred to God as their first author.

Reply Obj. 1. The wicked angels assail men in two ways. First, by instigating them to sin. And thus they are not sent by God to assail us, but are sometimes permitted to do so according to God's just judgments. But sometimes their assault is a punishment to man. And thus they are sent by God, as the lying spirit was sent to punish Achab, King of Israel, as is related in III Kings (22. 20). For punishment is referred to God as its first author. Nevertheless the demons who are sent to punish, do so with an intention other than that for which they are sent; for they punish from hatred or envy, although they are sent by God on account of His justice.

Reply Obj. 2. In order that the conditions of the fight be not unequal, there is as regards man the promised recompense, to be gained principally through the grace of God, secondarily through the guardianship of the angels. And so (IV Kings 6. 16), Eliseus said to his servant: *Fear not, for there are more with us than with them.*

Reply Obj. 3. The assault of the flesh and the world would suffice for the exercise of human weakness, but it does not suffice for the demons' malice, which makes use of both the above in assailing men. But by the Divine ordering this tends to the glory of the elect.

ARTICLE 2. *Whether to Tempt Is Proper to the Devil?*

We proceed thus to the Second Article: It would seem that to tempt is not proper to the devil.

Objection 1. For God is said to tempt, according to Genesis 22. 1, *God tempted Abraham.* Moreover man is tempted by the flesh and the world. Again, man is said to tempt God, and to tempt man. Therefore it is not proper to the devil to tempt.

Obj. 2. Further, to tempt is a sign of ignorance. But the demons know what happens among men. Therefore the demons do not tempt.

Obj. 3. Further, temptation is the road to sin. Now sin dwells in the will. Since therefore the demons cannot change man's will, as appears from what has been said above (Q. CXI, A. 2), it seems that it is not in their province to tempt.

On the contrary, It is written (I Thess. 3 5): *Lest perhaps he that tempteth should have tempted you:* to which the gloss adds,[1] "that is, the devil, whose office it is to tempt"

I answer that, To tempt is, properly speaking, to make trial of something. Now we make trial of something in order to know something about it. Hence the immediate end of every tempter is knowledge. But sometimes another end, either good or bad, is sought to be acquired through that knowledge; a good end, when, for instance, one desires to know of someone, what sort of a man he is as to knowledge, or virtue, with a view to his advancement; a bad end, when that knowledge is sought with the purpose of deceiving or ruining him.

From this we can gather how various beings are said to tempt in various ways. For man is said to tempt sometimes indeed merely for the sake of knowing something; and for this reason it is a sin to tempt God. For man, being uncertain as it were, presumes to make an experiment of God's power. Sometimes too he tempts

[1] *Glossa inter.* (VI, 110 v); *Glossa* Lombardi (PL 192, 297).

in order to help, sometimes in order to hurt The devil, however, always tempts in order to hurt by urging man into sin. In this sense it is said to be his proper office to tempt; for though at times man tempts thus, he does this as minister of the devil. God is said to tempt that He may know, in the same sense as that is said to know which makes others to know. Hence it is written (Deut. 13. 3): *The Lord your God trieth you, that it may appear whether you love Him.*

The flesh and the world are said to tempt as the instruments or matter of temptations, since one can know what sort of a man someone is, according as he follows or resists the desires of the flesh, and according as he despises worldly advantages and adversity; of which things the devil also makes use in tempting.

Thus the *reply to the first objection* is clear.

Reply Obj 2 The demons know what happens outwardly among men, but the inward disposition of man God alone knows, Who is the *weigher of spirits* (Prov. 16. 2). It is this disposition that makes man more prone to one vice than to another. Hence the devil tempts in order to explore this inward disposition of man, so that he may tempt him to that vice to which he is most prone.

Reply Obj. 3. Although a demon cannot change the will, yet, as stated above (Q. CXI, A. 3), he can change the lower powers of man, in a certain degree, by which powers, though the will cannot be forced, it can nevertheless be inclined.

ARTICLE 3. *Whether All Sins Are Due to the Temptation of the Devil?*

We proceed thus to the Third Article: It would seem that all sins are due to the temptation of the devil.

Objection 1. For Dionysius says (*Div. Nom.* iv)[1] that "the multitude of demons is the cause of all evils, both to themselves and to others." And Damascene says (*De Fide Orth.* ii, 4)[2] that "all malice and all uncleanness have been devised by the devil."

Obj. 2. Further, of every sinner can be said what the Lord said of the Jews (John 8. 44): *You are of your father the devil.* But this was in as far as they sinned through the devil's instigation. Therefore every sin is due to the devil's instigation.

Obj. 3. Further, as angels are appointed to guard men, so demons are appointed to assail men. But every good thing we do is due to the suggestion of the good angels, because the Divine gifts are borne to us by the angels. Therefore all the evil we do, is due to the instigation of the devil.

On the contrary, It is written (*De Eccl. Dogmat.*):[3] "Not all our evil thoughts are stirred up by the devil, but sometimes they arise from the movement of our free choice."

I answer that, One thing can be the cause of another in two ways, directly and indirectly. Indirectly as when an agent is the cause of a disposition to a certain effect, it is said to be the occasional and indirect cause of that effect. For instance, we might say that he who dries the wood is the cause of the wood burning. In this way we must admit that the devil is the cause of all our sins, because it was he who instigated the first man to sin, from whose sin there resulted a proneness to sin in the whole human race. And we must take the words of Damascene and Dionysius in this sense.

But a thing is said to be the direct cause of something, when its action tends to it directly. And in this way the devil is not the cause of every sin. For all sins are not committed at the devil's instigation, but some are due to the freedom of choice and the corruption of the flesh. For, as Origen says (*Peri Archon,* iii),[4] even if there were no devil, men would have the desire for food and love and such pleasures, with regard to which many disorders may arise unless those desires be curbed by reason, especially if we presuppose the corruption of our natures. Now it is in the power of free choice to curb this appetite and keep it in order. Consequently there is no need for all sins to come from the instigation of the devil. But those sins which are from his instigation man perpetrates "through being deceived by the same blandishments as were our first parents," as Isidore says.[5]

Thus the *answer to the first objection* is clear.

Reply Obj 2. When man commits sin without being instigated to it by the devil, he nevertheless becomes a child of the devil, in so far as he imitates him who was the first to sin.

Reply Obj. 3. Man can of his own accord fall into sin, but he cannot advance in merit without the Divine assistance, which is borne to man by the ministry of the angels. For this reason the angels take part in all our good works, though all our sins are not due to the demons' instigation. Nevertheless there is no kind of sin which is not sometimes due to the demons' suggestion.

[4] Chap. 2 (PG 11, 305).
[5] *Sent.*, III, 5 (PL 83, 664).

Article 4. *Whether Demons Can Lead Men Astray by Means of True Miracles?*

We proceed thus to the Fourth Article: It would seem that the demons cannot lead men astray by means of true miracles.

Objection 1. For the activity of the demons will show itself especially in the works of Antichrist. But as the Apostle says (II Thess. 2. 9), his *coming is according to the working of Satan, in all power, and signs, and lying wonders.* Much the more therefore at other times do the demons perform only by lying wonders.

Obj. 2. Further, true miracles are wrought by some corporeal change. But demons are unable to change the nature of a body. For Augustine says,[1] "I cannot believe that the human body can receive the limbs of a beast by means of a demon's art or power." Therefore the demons cannot work true miracles.

Obj. 3. Further, an argument which may prove both ways is useless. If therefore true miracles can be wrought by demons to persuade one of what is false, they will be useless to confirm the teaching of faith. This is unfitting, for it is written (Mark 16. 20): *The Lord working withal, and confirming the word with signs that followed.*

On the contrary, Augustine says (QQ. LXXXIII):[2] "Often by means of the magic art miracles are wrought like those which are wrought by the servants of God."

I answer that, As is clear from what has been said above (Q. CX, A. 4), if we take a miracle in the strict sense, the demons cannot work miracles, nor can any creature, but God alone, since in the strict sense a miracle is something done outside the order of the entire created nature, under which order every power of a creature is contained. But sometimes miracles may be taken in a wide sense for whatever exceeds the human power and experience. And thus demons can work miracles, that is, things which rouse man's astonishment, by reason of their being beyond his power and outside his sphere of knowledge. For even a man by doing what is beyond the power and knowledge of another leads him to marvel at what he has done, so that in a way he seems to that man to have worked a miracle.

It is to be noted, however, that although these works of demons which appear marvellous to us are not real miracles, they are sometimes nevertheless something real. Thus the magicians of Pharaoh by the demons' power produced real serpents and frogs (Exod. 7.12; 8.7). And "when fire came down from heaven and at one blow consumed Job's servants and sheep; when the storm struck down his house and with it his children—these were the work of Satan, not phantoms," as Augustine says.[3]

Reply Obj. 1. As Augustine says in the same place, the works of Antichrist may be called lying signs, "either because he will deceive men's senses by means of phantoms, so that he will not really do what he will seem to do; or because, if he work real prodigies, they will lead those into falsehood who believe in him"

Reply Obj. 2. As we have said above (Q CX, A. 2), corporeal matter does not obey either good or bad angels at their will, in such a way as to enable the demons by their power to transmute matter from one form to another. But they can employ certain seeds that exist in the elements of the world in order to produce these effects, as Augustine says (*De Trin.* iii, 8, 9).[4] Therefore it must be admitted that all the transformations of corporeal things which can be produced by certain natural powers, to which we must assign the seeds mentioned above, can be produced by the operation of the demons by the employment of these seeds, as when certain things are transformed into serpents or frogs, which can be produced by putrefaction. But those transformations which cannot be produced by the power of nature cannot in reality be effected by the operation of the demons; for instance, that the human body be changed into the body of a beast, or that the body of a dead man return to life. And if at times something of this sort seems to be effected by the operation of demons, it is not real but according to appearance only.

Now this may happen in two ways. First, from within. In this way a demon can work on man's imagination and even on his corporeal senses, so that something seems otherwise than it is, as explained above (Q. CXI, AA 3, 4) It is said indeed that this can be done sometimes by the power of certain bodies. Secondly, from without. For just as he can from the air form a body of any form and shape, and assume it so as to appear in it visibly, so, in the same way he can clothe any corporeal thing with any corporeal form, so as to appear there. This is what Augustine says:[5] "Man's imagination, which,

[1] *City of God,* XVIII, 18 (PL 41, 575).

[2] *Lib.* XXI, *Sent.,* 4, among the supposititious works of St. Augustine. (PL 40, 726).

[3] *City of God,* XX, 19 (PL 41, 687).

[4] PL 42, 875, 877.

[5] *City of God,* XVIII, 18 (PL 41, 575).

whether thinking or dreaming, takes the forms of an innumerable number of things, appears to other men's senses, as it were embodied in the semblance of some animal." This is not to be understood as though the imagination itself or the images formed in it were identified with that which appears embodied to the senses of another man, but that the demon, who forms an image in a man's imagination, can offer the same picture to another man's senses.

Reply Obj. 3. As Augustine says (QQ. LXXXIII, *qu.* 79):[1] "When magicians do what holy men do, they do it for a different end and by a different law. The former do it for their own glory, the latter, for the glory of God; the former, by certain private compacts, the latter by the evident assistance and command of God, to Whom every creature is subject."

ARTICLE 5. *Whether a Demon Who Is Overcome by Man, Is for This Reason Hindered from Making Further Assaults?*

We proceed thus to the Fifth Article: It would seem that a demon who is overcome by a man, is not for that reason hindered from any further assault.

Objection 1. For Christ overcame the tempter most effectively. Yet afterwards the demon assailed Him by instigating the Jews to kill Him. Therefore it is not true that the devil when conquered ceases his assaults.

Obj. 2. Further, to inflict punishment on one who has been worsted in a fight, is to incite him to a sharper attack. But this does not accord with God's mercy. Therefore the conquered demons are not prevented from further assaults.

On the contrary, It is written (Matt. 4. 11): *Then the devil left Him,* that is, Christ Who overcame.

I answer that, Some say[2] that when once a demon has been overcome he can no more tempt any man at all, neither to the same nor to any other sin. And others say[3] that he can tempt others, but not the same man. This seems more probable as long as we understand it to be so for a certain definite time. And so it is written (Luke 4. 13): *All temptation being ended, the devil departed from Him for a time.* There are two reasons for this. One is on the part of God's clemency. For as Chrysostom says (*Super Matt. Hom.* v),[4] "the devil does not tempt man for just as long as he likes, but for as long as God allows; for although He allows him to tempt for a short time, He orders him off on account of our weakness." The other reason is taken from the astuteness of the devil. As to this, Ambrose says[5] on Luke 4. 13: "The devil is afraid of persisting, because he shrinks from frequent defeat." That the devil does nevertheless sometimes return to the assault, is apparent from Matthew 12. 44: *I will return into my house from whence I came out.*

From what has been said, *the objections* can easily be solved.

QUESTION CXV

OF THE ACTION OF THE CORPOREAL CREATURE

(In Six Articles)

WE have now to consider the action of the corporeal creature (Q. CXVI), and fate, which is ascribed to certain bodies. Concerning corporeal actions there are six points of inquiry: (1) Whether a body can be active? (2) Whether there exist in bodies certain seminal principles? (3) Whether the heavenly bodies are the causes of what is done here by the inferior bodies? (4) Whether they are the cause of human acts? (5) Whether demons are subject to their influence? (6) Whether the heavenly bodies impose necessity on those things which are subject to their influence?

ARTICLE 1. *Whether a Body Can Be Active?*

We proceed thus to the First Article: It would seem that no bodies are active.

Objection 1. For Augustine says,[6] "There are things that are acted upon, but do not act; such are bodies: there is one Who acts but is not acted upon; this is God: there are things that both act and are acted upon; these are the spiritual substances."

Obj. 2. Further, every agent except the first agent requires in its work a subject susceptible of its action. But "there is no substance below the corporeal substance which can be receptive of the latter's action, since it belongs to the lowest degree in beings."[7] Therefore corporeal substance is not active.

Obj. 3. Further, every corporeal substance is limited by quantity. But quantity hinders sub-

stance from movement and action, because it surrounds it and penetrates it, just as a cloud hinders the air from receiving light. A sign of this is that the more a body increases in quantity, the heavier it is and the more difficult to move.[1] Therefore no corporeal substance is active.

Obj. 4. Further, the power of action in every agent is according to its nearness to the first active cause. But "bodies, being most composite, are most remote from the first active cause, which is most simple."[2] Therefore no bodies are active.

Obj. 5. Further, if a body is an agent, the term of its action is either a substantial, or an accidental form. But it is not a substantial form, for it is not possible to find in a body any principle of action save an active quality, which is an accident, and an accident cannot be the cause of a substantial form, since the cause is always more excellent than the effect. Likewise, neither is it an accidental form, for an accident does not extend beyond its subject, as Augustine says (*De Trin.* ix, 4).[3] Therefore no bodies are active.

On the contrary, Dionysius says (*Cæl. Hier.* xv)[4] that among other qualities of corporeal fire, "it shows its greatness in its action and power on that of which it lays hold."

I answer that, It is apparent to the senses that some bodies are active. But concerning the action of bodies there have been three errors. For some denied all action to bodies. This is the opinion of Avicebron in his book on *The Fount of Life,* where, by the arguments mentioned above, he endeavours to prove that no bodies act, but that all the actions which seem to be the actions of bodies are the actions of "some spiritual power that penetrates all bodies."[5] Thus, according to him, it is not fire that heats, but a spiritual power which penetrates by means of the fire. And this opinion seems to be derived from that of Plato. For Plato held that all forms existing in corporeal matter are participated, and determined and limited to this nature, and that separate forms are absolute and as it were universal.[6] Therefore he said that these separate forms are the causes of forms that exist in matter.[7] Therefore since the form which is in corporeal matter is determined to this matter individualized by quantity, Avicebron held[8] that the corporeal form is held fast and confined by quantity, as the principle of individuation, so as to be unable by action to extend to any other matter; and that the spiritual and immaterial form alone, which is not confined by quantity, can flow forth in action on something else.

But this does not prove that the corporeal form is not an agent, but that it is not a universal agent. For in proportion as a thing is participated, so, of necessity, must that which is proper to it be participated; thus the participation of visibility is in proportion to the participation of light. But to act, which is nothing else than to make something to be in act, is essentially proper to an act as such; and thus every agent produces its like. So therefore that a thing is an indeterminate and universal agent comes from the fact that it is a form not determined by matter subject to quantity; but that it is a limited and particular agent comes from the fact that it is determined to this matter. And so if the form of fire were separate, as the Platonists supposed, it would be, in a fashion, the cause of every burning. But this form of fire which is in this corporeal matter, is the cause of this burning which passes from this body to that. Hence such an action is effected by the contact of two bodies.

But this opinion of Avicebron goes further than that of Plato. For Plato held only substantial forms to be separate,[9] while he reduced accidents to the material principles which are the great and the small, which he considered to be the first contraries,[10] just as others considered them to be the rare and the dense.[11] Consequently both Plato and Avicenna, who follow him to a certain extent, held that corporeal agents act through their accidental forms, by disposing matter for the substantial form, but that the ultimate perfection attained by the introduction of the substantial form is due to an immaterial principle. And this is the second opinion concerning the action of bodies, of which we have spoken above when treating of the creation (Q. XLV, A. 8).[12]

The third opinion is that of Democritus, who held that action takes place through the flowing out of atoms from the corporeal agent, while passion consists in the reception of the atoms in the pores of the passive body. This opinion is

[11] Cf. also Q. LXV, A. 4.

disproved by Aristotle.[1] For it would follow that a body would not be passive as a whole, and that the quantity of the active body would be diminished through its action, which things are manifestly untrue.

We must therefore say that a body acts according as it is in act, on another body according as it is in potency.

Reply Obj. 1. This passage of Augustine is to be understood of the whole corporeal nature considered as a whole, which thus has no nature inferior to it, on which it can act, in the way the spiritual nature acts on the corporeal, and the uncreated nature on the created. Nevertheless one body is inferior to another, according as it is in potency to that which the other has in act.

From this follows the solution of the second objection. But it must be observed, when Avicebron argues thus,[2] "There is a mover who is not moved, namely, the first maker of all; therefore, on the other hand, there exists something moved which is purely passive," that this is to be conceded. But this latter is prime matter, which is a pure potency, just as God is pure act. Now a body is composed of potency and act, and therefore it is both active and passive.

Reply Obj. 3 Quantity does not entirely hinder the corporeal form from action, as stated above, but from being a universal agent, in so far as a form is individualized through being in matter subject to quantity The proof taken from the weight of bodies is not to the purpose. First, because addition of quantity is not the cause of weight, as is proved.[3] Secondly, it is false that weight retards movement; on the contrary, the heavier a thing, the more it moves with its own movement Thirdly, because action is not effected by local movement, as Democritus held, but by something being reduced from potency to act.

Reply Obj. 4. A body is not that which is most distant from God, for it participates something of a likeness to the Divine Being, according as it has a form. That which is most distant from God is prime matter, which is in no way active, since it is a pure potency.

Reply Obj. 5. The term of a body's action is both an accidental form and a substantial form. For the active quality, such as heat, although itself an accident, acts nevertheless by virtue of the substantial form, as its instrument, and so its action can terminate in a substantial form. Thus natural heat, as the instrument of the soul, has an action terminating in the generation of flesh. But it produces an accident by its own power. Nor is it against the nature of an accident to surpass its subject in acting, but that it surpass it in being, unless indeed one were to imagine that an accident transfers its identical self from the agent to the patient, in the way that Democritus explained action by a procession of atoms.

ARTICLE 2. *Whether There Are Any Seminal Principles in Corporeal Matter?*

We proceed thus to the Second Article: It would seem that there are no seminal principles in corporeal matter.

Objection 1. For principle (*ratio*) implies something of a spiritual order. But in corporeal matter nothing exists spiritually, but only materially, that is, according to the mode of that in which it is. Therefore there are no seminal principles in corporeal matter.

Obj. 2. Further, Augustine (*De Trin.* iii, 8, 9)[4] says that demons produce certain results by employing with a hidden movement certain seeds, which they know to exist in matter. But bodies, not principles, are what can be employed with local movement. Therefore it is unreasonable to say that there are seminal principles in corporeal matter.

Obj. 3. Further, seeds are active principles. But there are no active principles in corporeal matter, since, as we have said above, it does not pertain to matter to act (A. 1, Ans. 2, 4). Therefore there are no seminal principles in corporeal matter.

Obj. 4. Further, there are said to be certain causal principles (Augustine, *De Gen. ad lit.* vi, 14)[5] which seem to suffice for the production of things But seminal principles are not causal principles, for miracles are outside the scope of seminal principles, but not of causal principles. Therefore it is unreasonable to say that there are seminal principles in corporeal matter.

On the contrary, Augustine says (*De Trin.* iii, 8):[6] "Of all the things which are generated in a corporeal and visible fashion, certain seeds lie hidden in the corporeal things of this world."

I answer that, It is customary to name things after what is more perfect, as the Philosopher says.[7] Now in the whole corporeal nature, living bodies are the most perfect, and so the word nature has been transferred from living things to

[4] PL 42, 876, 878.
[5] PL 34, 349; cf. also Bonaventure, *In Sent.*, II, d. 18, A. 1, Q. 2 (QR II, 438).
[6] PL 42, 875. [7] *Soul*, II, 4 (416[b]23).

all natural things. For the word itself, nature, as the Philosopher says,[1] was first applied to signify the generation of living things, which is called nativity. And because living things are generated from a principle united to them, as fruit from a tree, and the offspring from the mother, to whom it is united, consequently the word nature has been applied to every principle of movement existing in that which is moved. Now it is manifest that the active and passive principles of the generation of living things are the seeds from which living things are generated. Therefore Augustine fittingly gave the name of seminal principles (*seminales rationes*) to all those active and passive powers which are the principles of natural generation and movement.[2]

These active and passive powers may be considered in several orders. For in the first place, as Augustine says (*Gen. ad lit.* vi, 10),[3] they are principally and originally in the Word of God, as exemplar ideas. Secondly, they are in the elements of the world, where they were produced altogether at the beginning, as in universal causes. Thirdly, they are in those things which, in the succession of time, are produced by universal causes, for instance in this plant, and in that animal, as in particular causes. Fourthly, they are in the seeds produced from animals and plants. And these again are related to further particular effects, as the primordial universal causes to the first effects produced.

Reply Obj. 1. These active and passive powers (virtues) of natural things, though not called principles (*rationes*) by reason of their being in corporeal matter, can nevertheless be called so in respect of their origin, according as they are the effect of the exemplar ideas (*rationes ideales*).

Reply Obj. 2. These active and passive principles are in certain parts of corporeal things, and when they are employed with local movement for the production of certain results, we speak of the demons as employing seeds.

Reply Obj. 3. The seed of the male is the active principle in the generation of an animal. But that can be called seed also which the female contributes as the passive principle. And thus the word seed covers both active and passive principles.

Reply Obj. 4. From the words of Augustine when speaking of these seminal principles, it is easy to gather that they are also causal principles, just as seed is a kind of cause; for he says (*De Trin.* iii, 9)[4] that, "as a mother is pregnant with the unborn offspring, so is the world itself pregnant with the causes of unborn beings." Nevertheless, the exemplar ideas can be called causal principles, but not, strictly speaking, seminal principles, because seed is not a separate principle, and because miracles are not wrought outside the scope of causal principles. Likewise neither are miracles wrought which are outside the scope of the passive principles so implanted in the creature that the latter can be used to any purpose that God commands. But miracles are said to be wrought outside the scope of the natural active principles, and the passive potencies which are ordered to such active principles, and this is what is meant when we say that they are wrought outside the scope of seminal principles.

ARTICLE 3. *Whether the Heavenly Bodies Are the Cause of What Is Produced in Bodies Here Below?*

We proceed thus to the Third Article: It would seem that the heavenly bodies are not the cause of what is produced in bodies here below.

Objection 1. For Damascene says (*De Fide Orth.* ii, 7):[5] "We say that they," namely, the heavenly bodies, "are not the cause of generation or corruption; they are rather signs of storms and atmospheric changes."

Obj. 2. Further, for the production of anything, an agent and matter suffice. But in things here below there is passive matter; and there are contrary agents—heat and cold, and the like. Therefore for the production of things here below there is no need to ascribe causality to the heavenly bodies.

Obj. 3. Further, the agent produces its like. Now we see that everything which is produced here below is produced through the action of heat and cold, moisture and dryness, and other such qualities, which do not exist in the heavenly bodies. Therefore the heavenly bodies are not the cause of what is produced here below.

Obj. 4. Further, Augustine says,[6] "Nothing is more corporeal than sex." But sex is not caused by the heavenly bodies; a sign of this is that of twins born under the same constellation, one may be male, the other female. Therefore the heavenly bodies are not the cause of things produced in bodies here below.

On the contrary, Augustine says (*De Trin.* iii, 4):[7] "Bodies of a grosser and inferior nature are ruled in a certain order by those of a more sub-

[1] *Metaphysics*, v, 4 (1014b16).
[2] *De Trin.*, III, 8 (PL 42, 875).
[3] PL 34, 346.
[4] PL 42, 878.
[5] PG 94, 983.
[6] *City of God*, v, 6 (PL 41, 146).
[7] PL 42, 873.

tle and powerful nature." And Dionysius (*Div. Nom.* iv)[1] says that "the light of the sun conduces to the generation of sensible bodies, moves them to life, gives them nourishment, growth, and perfection."

I answer that, Since every multitude proceeds from unity, and since what is immovable is always in the same way of being, while what is moved has many ways of being, it must be observed that throughout the whole of nature, all movement proceeds from the immovable. Therefore the more immovable certain things are, the more are they the cause of those things which are most movable. Now the heavenly bodies are of all bodies the most immovable, for they are not moved save locally. Therefore the movements of bodies here below, which are various and multiform, must be reduced to the movement of the heavenly bodies, as to their cause.

Reply Obj. 1. These words of Damascene are to be understood as denying that the heavenly bodies are the first cause of generation and corruption here below; for this was affirmed by those who held that the heavenly bodies are gods.

Reply Obj. 2. The active principles of bodies here below are only the active qualities of the elements, such as hot and cold and the like. If therefore the substantial forms of inferior bodies were not diversified save according to accidents of that kind, the principles of which the early natural philosophers held to be the rare and the dense,[2] there would be no need to suppose some principle above these inferior bodies, for they would be of themselves sufficient to act. But to anyone who considers the matter rightly, it is clear that those accidents are merely material dispositions in regard to the substantial forms of natural bodies. Now matter is not of itself sufficient to act. And therefore it is necessary to suppose some active principle above these material dispositions.

This is why the Platonists maintained the existence of separate species, by participation of which the inferior bodies receive their substantial forms.[3] But this does not seem enough. For the separate species, since they are supposed to be immovable, would always have the same mode of being, and consequently there would be no variety in the generation and corruption of inferior bodies, which is clearly false.

Therefore it is necessary, as the Philosopher says,[4] to suppose a movable active principle, which by reason of its presence or absence causes variety in the generation and corruption of inferior bodies. And such are the heavenly bodies. Consequently whatever generates here below moves to the production of the species as the instrument of a heavenly body. Thus the Philosopher says that "man and the sun generate man"[5]

Reply Obj. 3. The heavenly bodies have not a specific likeness to the bodies here below. Their likeness consists in this, that by reason of their universal power, whatever is generated in inferior bodies, is contained in them. In this way also we say that all things are like God.

Reply Obj 4. The actions of heavenly bodies are variously received in inferior bodies, according to the various dispositions of matter. Now it happens at times that the matter in the human conception is not wholly disposed to the male sex. Therefore it is formed sometimes into a male, sometimes into a female. Augustine quotes this as an argument against divination by stars, because the effects of the stars are varied even in corporeal things, according to the various dispositions of matter.

ARTICLE 4 *Whether the Heavenly Bodies Are the Cause of Human Actions?*

We proceed thus to the Fourth Article: It would seem that the heavenly bodies are the cause of human actions.

Objection 1. For since the heavenly bodies are moved by spiritual substances, as stated above (Q. CX, A. 3), they act by their power as their instruments. But those spiritual substances are superior to our souls. Therefore it seems that they can cause impressions on our souls, and thus cause human actions.

Obj. 2. Further, everything multiform is reducible to a uniform principle. But human actions are various and multiform. Therefore it seems that they are reducible to the uniform movements of heavenly bodies, as to their principles.

Obj. 3. Further, astrologers often foretell the truth concerning the outcome of wars, and other human actions, of which the intellect and will are the principles. But they could not do this by means of the heavenly bodies, unless these were the cause of human actions. Therefore the heavenly bodies are the cause of human actions.

On the contrary, Damascene says (*De Fide Orth.* ii, 7)[6] that "the heavenly bodies are by no means the cause of human actions."

[1] Sect. 4 (PG 3, 700).
[2] Cf. Aristotle, *Physics*, I, 4 (187^a15). [3] Cf. above, A. 1.
[4] *Generation and Corruption*, II, 10 (336^a15).
[5] *Physics*, II, 2 (194^b13). [6] PG 94, 893.

I answer that, The heavenly bodies can directly and of themselves act on bodies, as stated above (A. 3). They can act directly indeed on those powers of the soul which are the acts of corporeal organs, but accidentally, because the acts of such powers must be hindered by obstacles in the organs; thus an eye when disturbed cannot see well. Therefore if the intellect and will were powers tied to corporeal organs, as some maintained,[1] holding that intellect does not differ from sense, it would follow of necessity that the heavenly bodies are the cause of human choice and action. It would also follow that man is led by natural instinct to his actions, just as other animals, in which there are no powers other than those which are bound up with corporeal organs; for whatever is done here below in virtue of the action of heavenly bodies, is done naturally. It would therefore follow that man has no free choice, and that he would have determinate actions, like other natural things. All of which is manifestly false, and contrary to the way men act.

It must be observed, however, that indirectly and accidentally, the impressions of heavenly bodies can reach the intellect and will, in so far, namely, as both intellect and will receive something from the inferior powers which are bound up with corporeal organs. But in this the intellect and will are differently situated For the intellect of necessity receives from the inferior apprehensive powers; therefore if the imaginative, cogitative, or memorative powers be disturbed, the action of the intellect is of necessity disturbed also. The will, on the contrary, does not of necessity follow the inclination of the lower appetite; for although the irascible and concupiscible passions have a certain force in inclining the will, nevertheless the will retains the power of following the passions or repressing them. Therefore the impressions of the heavenly bodies, by virtue of which the inferior powers can be changed, has less influence on the will, which is the proximate cause of human actions, than on the intellect.

To maintain therefore that heavenly bodies are the cause of human actions is proper to those who hold that intellect does not differ from sense. And so some of these said that "such is the will of men, as is the day which the father of men and of gods brings on" (*Odyssey* xviii, 136).[2] Since, therefore, it is manifest that intellect and will are not acts of corporeal organs, it is impossible that heavenly bodies be the cause of human actions.

Reply Obj. 1. The spiritual substances that move the heavenly bodies do indeed act on corporeal things by means of the heavenly bodies; but they act immediately on the human intellect by enlightening it. On the other hand, they cannot compel the will, as stated above (Q. CXI, A. 2).

Reply Obj. 2. Just as the multiformity of corporeal movements is reducible to the uniformity of the heavenly movement as to its cause, so the multiformity of actions proceeding from the intellect and the will is reduced to a uniform principle which is the Divine intellect and will.

Reply Obj. 3. The majority of men follow their passions, which are movements of the sensitive appetite, in which movements heavenly bodies can co-operate; but few are wise enough to resist these passions. Consequently astrologers are able to foretell the truth in the majority of cases, especially in a general way. But not in particular cases, for nothing prevents man resisting his passions by his free-will. And so the astrologers themselves say that the wise man is stronger than the stars,[3] in so far as, that is, he conquers his passions.

ARTICLE 5. *Whether Heavenly Bodies Can Act on the Demons?*

We proceed thus to the Fifth Article: It would seem that heavenly bodies can act on the demons.

Objection 1. For the demons, according to certain phases of the moon, can harass men, who on that account are called lunatics, as appears from Matthew 4. 24 and 17. 14. But this would not be if they were not subject to the heavenly bodies. Therefore the demons are subject to them.

Obj. 2. Further, necromancers observe certain constellations in order to invoke the demons. But these would not be invoked through the heavenly bodies unless they were subject to them. Therefore they are subject to them.

Obj. 3. Further, heavenly bodies are more powerful than inferior bodies. But the demons are confined to certain inferior bodies, namely, "herbs, stones, animals, and to certain sounds and words, forms and figures," as Porphyry

[1] Cf. Aristotle, *Soul,* III, 3 (427[b]21).

[2] This quotation is found in Aristotle, *Soul,* III, 3 (427[a] 26), in the translation ascribed to Boëthius by St. Thomas (*In De An.,* III, 4).

[3] Ptolemy, *Centiloquium,* 4–8 (46vb–47rb); cf. *Quadripartitum,* I, 3 (2v); see also Albert the Great, *In Sent.,* II, d. 15, A. 4 (BO XXVII, 276).

says, quoted by Augustine.[1] Much more therefore are the demons subject to the action of heavenly bodies.

On the contrary, The demons are superior, in the order of nature, to the heavenly bodies. But the agent is superior to the patient, as Augustine says (*Gen. ad lit.* xii, 16).[2] Therefore the demons are not subject to the action of heavenly bodies.

I answer that, There have been three opinions about the demons In the first place the Peripatetics denied the existence of demons, and held that what is ascribed to the demons, according to the necromantic art, is effected by the power of the heavenly bodies. This is what Augustine relates[3] as having been held by Porphyry, namely, that "on earth men fabricate certain powers useful in producing certain effects of the stars." But this opinion is manifestly false For we know by experience that many things are done by demons, for which the power of heavenly bodies would in no way suffice; for instance, that a man in a state of delirium should speak an unknown tongue, recite poetry and authors of whom he has no previous knowledge, that necromancers make statues to speak and move, and other like things.

For this reason the Platonists were led to hold that "demons are animals with an aerial body and a passive soul," as Apuleius says, quoted by Augustine.[4]

And this is the second of the opinions mentioned above, according to which it could be said that demons are subject to heavenly bodies in the same way as we have said man is subject to them (A. 4). But this opinion is proved to be false from what we have said above (Q LI, A. 1), for we hold that demons are spiritual substances not united to bodies Hence it is clear that they are subject to the action of heavenly bodies neither essentially nor accidentally, neither directly nor indirectly.

Reply Obj. 1. That demons harass men according to certain phases of the moon happens in two ways. Firstly, they do so in order to defame God's creature, namely, the moon, as Jerome (*In Matt* 4. 24)[5] and Chrysostom (*Hom.* lvii *in Matt.*)[6] say. Secondly, because as they are unable to effect anything save by means of the natural forces, as stated above (Q CXIV, A. 4, Ans. 2) they take into account the aptitude of bodies for the intended result. Now it is manifest that "the brain is the most moist of all the parts of the body," as Aristotle says.[7] Therefore it is the most subject to the action of the moon, the property of which is to move what is moist. And it is precisely in the brain that animal forces culminate. Therefore the demons, according to certain phases of the moon, disturb man's imagination, when they observe that the brain is so disposed.

Reply Obj. 2. Demons when summoned through certain constellations, come for two reasons. First, in order to lead man into the error of believing that there is a certain divinity in the stars. Secondly, because they consider that under certain constellations corporeal matter is better disposed for the result for which they are summoned.

Reply Obj. 3. As Augustine says,[8] "the demons are enticed through various kinds of stones, herbs, trees, animals, songs, rites, not as an animal is enticed by food, but as a spirit by signs"; that is to say, in so far as these things are offered to them in token of the honour due to God, of which they are covetous.

ARTICLE 6 *Whether Heavenly Bodies Impose Necessity on Things Subject to Their Action?*

We proceed thus to the Sixth Article: It would seem that heavenly bodies impose necessity on things subject to their action.

Objection 1. For given a sufficient cause, the effect follows of necessity. But heavenly bodies are a sufficient cause of their effects. Since, therefore, heavenly bodies, with their movements and dispositions, are necessary beings, it seems that their effects follow of necessity.

Obj 2 Further, an agent's effect results of necessity in matter, when the power of the agent is such that it can subject the matter to itself entirely. But the entire matter of inferior bodies is subject to the power of heavenly bodies, since this is a higher power than theirs. Therefore the effect of the heavenly bodies is of necessity received in corporeal matter.

Obj. 3. Further, if the effect of the heavenly body does not follow of necessity, this is due to some hindering cause. But any corporeal cause that might possibly hinder the effect of a heavenly body, must of necessity be reducible to some heavenly principle, since the heavenly bodies are the causes of all that takes place here below. Therefore, since also that heavenly principle is necessary, it follows that the effect of the heavenly body is necessarily hindered. Con-

[1] *City of God,* X, 11 (PL 41, 290). [2] PL 34, 467.
[3] *Loc cit.,* X, 11 (PL 41, 299).
[4] *City of God,* VIII, 16 (PL 41, 241).
[5] PL 26, 34. [6] PG 58, 562.
[7] *Parts of Animals,* II, 7 (652^a27); *Sleep,* 3 (457^b29).
[8] *City of God,* XXI, 6 (PL 41, 717).

sequently it would follow that all that takes place here below happens of necessity.

On the contrary, The Philosopher says,[1] "It is not incongruous that many of the signs observed in bodies of occurrences in the heavens, such as rain and wind, should not be fulfilled." Therefore not all the effects of heavenly bodies take place of necessity.

I answer that, This question is partly solved by what was said above (A. 4), and in part presents some difficulty. For it was shown that although the action of heavenly bodies produces certain inclinations in corporeal nature, the will nevertheless does not of necessity follow these inclinations. Therefore there is nothing to prevent the effect of heavenly bodies being hindered by the action of the will, not only in man himself, but also in other things to which human action extends.

But in natural things there is no such principle, endowed with freedom to follow or not to follow the impressions produced by heavenly agents. Therefore it seems that in such things at least, everything happens of necessity according to the reasoning of some of the ancients,[2] who supposing that everything that is, has a cause, and that, given the cause, the effect follows of necessity, concluded that all things happen of necessity. This opinion as to this double supposition, is refuted by Aristotle.[3]

For in the first place it is not true that, given any cause whatever, the effect must follow of necessity. For some causes are so ordered to their effects as to produce them not of necessity but in the majority of cases, and in the minority to fail in producing them. But that such causes do fail in the minority of cases is due to some hindering cause; consequently the above-mentioned difficulty seems not to be avoided, since the cause in question is hindered of necessity.

Therefore we must say, in the second place, that everything that is a being *per se,* has a cause; but what is accidentally has not a cause, because it is not truly a being, since it is not truly one. For (that a thing is) *white* has a cause, likewise (that a man is) *musical* has a cause, but (that a being is) *white-musical* has not a cause, because it is not truly a being, nor truly one. Now it is manifest that a cause which hinders the action of a cause so ordered to its effect as to produce it in the majority of cases, clashes sometimes with this cause by accident; and so the clashing of these two causes, in so far as it is accidental, has no cause. Consequently what results from this clashing of causes is not to be reduced to a further pre-existing cause, from which it follows of necessity. For instance, that some terrestrial body take fire in the higher regions of the air and fall to the earth is caused by some heavenly power; again, that there be on the surface of the earth some combustible matter, is reducible to some heavenly principle. But that the burning body should alight on this matter and set fire to it is not caused by a heavenly body, but is accidental. Consequently not all the effects of heavenly bodies result of necessity.

Reply Obj. 1. The heavenly bodies are causes of effects that take place here below, through the means of particular inferior causes, which can fail in their effects in the minority of cases.

Reply Obj. 2. The power of a heavenly body is not infinite Therefore it requires a determinate disposition in matter, both as to local distance and as to other conditions, in order to produce its effect. Therefore as local distance hinders the effect of a heavenly body (for the sun has not the same effect in heat in Dacia as in Ethiopia), so the density of matter, its low or high temperature or other such disposition, can hinder the effect of a heavenly body.

Reply Obj. 3 Although the cause that hinders the effect of another cause can be reduced to a heavenly body as its cause, nevertheless the clashing of two causes, being accidental, is not reduced to the causality of a heavenly body, as stated above.

QUESTION CXVI
OF FATE
(*In Four Articles*)

WE come now to the consideration of fate. Under this head there are four points of inquiry: (1) Is there such a thing as fate? (2) Where is it? (3) Is it unchangeable? (4) Are all things subject to fate?

ARTICLE 1. *Whether There Be Such a Thing as Fate?*

We proceed thus to the First Article: It would seem that fate is nothing.

Objection 1. For Gregory says in a homily for the Epiphany (*Hom.* xi *in Ev.*):[4] "Far be it from the hearts of the faithful to think that fate is anything real."

Obj. 2. Further, what happens by fate is not

[1] *Prophesying,* 2 (463[b]22). [2] Avicenna, *Sufficientia,* 1, 13 (211ra); *Meta.,* 1, 7 (73ra); cf. St. Thomas, *In Meta.,* VI, 3. [3] *Metaphysics,* VI, 3 (1027[a]31).

[4] PL 76, 1112.

unforeseen, for as Augustine says,[1] "fate is understood to be derived from the verb *'fari'* which means to speak"; as though things were said to happen by fate which are "fore-spoken" by one who decrees them to happen. Now what is foreseen is neither lucky nor chance-like. If therefore things happen by fate, there will be neither luck nor chance in the world.

On the contrary, What does not exist cannot be defined. But Boëthius (*De Consol.* iv, 6)[2] defines fate thus: "Fate is a disposition inherent to changeable things, by which Providence connects each one with its proper order."

I answer that, In this world some things seem to happen by luck or chance. Now it happens sometimes that something is lucky or chance-like, as compared to inferior causes, which, if compared to some higher cause, is directly intended. For instance, if two servants are sent by their master to the same place, the meeting of the two servants in regard to themselves is by chance; but as referred to the master, who had ordered it, it is directly intended.

So there were some who refused to refer to a higher cause such events which take place here below by luck or chance. These denied the existence of fate and Providence, as Augustine relates of Tully.[3] And this is contrary to what we have said above about Providence (Q. XXII, A. 2).

On the other hand, some have considered that everything that takes place here below by luck or by chance, whether in natural things or in human affairs, is to be reduced to a superior cause, namely, the heavenly bodies.[4] According to these fate is nothing else than "a disposition of the stars under which each one is begotten or born."[5]

But this will not hold. First, as to human affairs, because we have proved above (Q. CXV, A. 4) that human actions are not subject to the action of heavenly bodies, save accidentally and indirectly. Now the cause of fate, since it has the ordering of things that happen by fate, must of necessity be directly and of itself the cause of what takes place. Secondly, as to all things that happen accidentally, for it has been said (*ibid.* A. 6) that what is accidental is, properly speaking, neither a being, nor a unity. But every action of nature terminates in some one thing. Therefore it is impossible for that which is accidental to be the effect *per se* of an active natural principle. No natural cause can therefore have for its proper effect that a man intending to dig a grave finds a treasure. Now it is manifest that a heavenly body acts after the manner of a natural principle, and so its effects in this world are natural. It is therefore impossible that any active power of a heavenly body be the cause of what happens by accident here below, whether by luck or by chance.

We must therefore say that what happens here by accident, both in natural things and in human affairs, is reduced to a pre-ordaining cause, which is Divine Providence. For nothing hinders that which happens by accident being considered as one by an intellect. Otherwise the intellect could not form this proposition: "The digger of a grave found a treasure." And just as an intellect can apprehend this so can it effect it. For instance, someone who knows of a place where a treasure is hidden, might instigate a rustic, ignorant of this, to dig a grave there. Consequently, nothing hinders what happens here by accident, by luck or by chance, being reduced to some ordering cause which acts by the intellect, especially the Divine intellect. For God alone can change the will, as shown above (Q. CV, A. 4).[6] Consequently the ordering of human actions, the principle of which is the will, must be ascribed to God alone.

So therefore since all that happens here below is subject to Divine Providence, as being pre-ordained, and as it were fore-spoken, we can admit the existence of fate; although the holy doctors avoided the use of this word, on account of those who twisted its application to a certain force in the position of the stars. Hence Augustine says,[7] "If anyone ascribes human affairs to fate, meaning thereby the will or power of God, let him keep to his opinion, but hold his tongue." For this reason Gregory denies the existence of fate; and so the first objection's solution is manifest.

Reply Obj. 2. Nothing hinders certain things happening by luck or by chance, if compared to their proximate causes, but not if compared to Divine Providence, in accordance with which "nothing happens at random in the world," as Augustine says (QQ. LXXXIII., *qu.* 24).[8]

ARTICLE 2. *Whether Fate Is in Created Things?*

We proceed thus to the Second Article: It would seem that fate is not in created things.

[1] *City of God,* V, 9 (PL 41, 150). [2] PL 63, 815.
[3] *City of God,* V, 9 (PL 41, 148); cf. Cicero, *De Divin.,* II, 5, 10 (DD IV, 218, 221).
[4] Posidonius and the Astrologers, in Augustine, *City of God,* V, 7 (PL 41, 147).
[5] Cf. Augustine, *City of God,* V, 1 (PL 41, 141).
[6] Cf. also Q. CVI, A. 2; Q. CXV, A. 2.
[7] *City of God,* V, 1 (PL 41, 141).
[8] PL 40, 17.

Objection 1. For Augustine says[1] that "the Divine will or power is called fate." But the Divine will or power is not in creatures, but in God. Therefore fate is not in creatures but in God.

Obj. 2. Further, fate is compared to things that happen by fate, as their cause, as the very use of the word shows. But the universal cause that of itself effects what takes place by accident here below is God alone, as stated above (A. 1). Therefore fate is in God, and not in creatures.

Obj. 3. Further, if fate is in creatures it is either a substance or an accident, and whichever it is it must be multiplied according to the number of creatures. Since, therefore, fate seems to be one thing only, it seems that fate is not in creatures, but in God.

On the contrary, Boëthius says (*De Consol.* iv, 6):[2] "Fate is a disposition inherent to changeable things."

I answer that, As is clear from what has been stated above (Q. XXII, A. 3; Q. CIII, A. 6), Divine Providence produces effects through mediate causes. We can therefore consider the ordering of the effects in two ways. First, as being in God Himself, and thus the ordering of the effects is called Providence. But if we consider this ordering as being in the mediate causes ordered by God to the production of certain effects, thus it has the nature of fate. This is what Boëthius says (*De Consol.* iv):[3] "Fate is worked out when Divine Providence is served by certain spirits, whether by the soul, or by all nature itself which obeys Him, whether by the heavenly movements of the stars, whether by the angelic power, or by the ingenuity of the demons, whether by some of these, or by all, the chain of fate is forged." Of each of these things we have spoken above (A. 1; Q. CIV, A. 2; Q. CX, A. 1; Q. CXIII, Q. CXIV). It is therefore manifest that fate is in the created causes themselves, as ordered by God to the production of their effects.

Reply Obj. 1. The ordering itself of second causes, which Augustine calls the "series of causes,"[4] has not the nature of fate, except as dependent on God. Therefore the Divine power or will can be called fate as being the cause of fate. But essentially fate is the very disposition or series, that is, the order, of second causes.

Reply Obj. 2. Fate has the nature of a cause, just as much as the second causes themselves, the ordering of which is called fate.

Reply Obj. 3. Fate is called a disposition, not that disposition which is a species of quality, but in the sense in which it signifies order, which is not a substance, but a relation. And if this order be considered in relation to its principle, it is one, and thus fate is one. But if it be considered in relation to its effects, or to the mediate causes, this fate is multiple. In this sense the poet wrote: "Thy fate draws thee."[5]

ARTICLE 3. *Whether Fate Is Unchangeable?*

We proceed thus to the Third Article: It seems that fate is not unchangeable.

Objection 1. For Boëthius says (*De Consol.* iv, 6):[6] "As reasoning is to the intellect, as the begotten is to that which is, as time to eternity, as the circle to its centre, so is the fickle chain of fate to the unwavering simplicity of Providence."

Obj. 2. Further, the Philosopher says[7]: "If we be moved, what is in us is moved." But fate is "a disposition inherent to changeable things," as Boëthius says (*loc. cit.*).[8] Therefore fate is changeable.

Obj. 3. Further, if fate is unchangeable, what is subject to fate happens unchangeably and of necessity. But things ascribed to fate seem principally to be contingencies. Therefore there would be no contingencies in the world, but all things would happen of necessity.

On the contrary, Boëthius says (*ibid.*)[9] that fate is an unchangeable disposition.

I answer that, The disposition of second causes which we call fate, can be considered in two ways. First, in regard to the second causes themselves which are thus disposed or ordered; secondly, in regard to the first principle, namely, God, by Whom they are ordered. Some, therefore, have held[10] that the series itself or disposition of causes is in itself necessary, so that all things would happen of necessity, for the reason that each effect has a cause, and given a cause the effect must follow of necessity. But this is false, as proved above (Q. CXV, A. 6).

Others, on the other hand, held that fate is changeable, even as dependent on Divine Providence. Therefore the Egyptians said that fate could be changed by certain sacrifices, as Gregory of Nyssa says (Nemesius, *De Homine*).[11]

[1] *City of God,* V, 1 (PL 41, 141).
[2] PL 63, 815. [3] *Ibid.*
[4] *City of God,* V, 8 (PL 41, 148).
[5] Hildebertus Cenomanensis, *Versus de Excidio Troiae* (PL 171, 1449D).
[6] PL 63, 817. [7] *Topics,* II, 7 (113[a]29).
[8] PL 63, 815. [9] PL 63, 816.
[10] Cf. above, Q. CXV, A. 6.
[11] Chap. 36 (PG 40, 745).

This too has been disproved above for the reason that it is contrary to the unchangeable character of Divine Providence.[1]

We must therefore say that fate, considered in regard to second causes, is changeable, but as subject to Divine Providence, it derives a certain unchangeableness, not of absolute but of conditional necessity. In this sense we say that this conditional is true and necessary: "If God foreknew that this would happen, it will happen." Therefore Boëthius, having said that the chain of fate is fickle, shortly afterwards adds, —"which, since it is derived from an unchangeable Providence, must also itself be unchangeable."

From this the answers to the objections are clear.

ARTICLE 4. *Whether All Things Are Subject to Fate?*

We proceed thus to the Fourth Article: It seems that all things are subject to fate.

Objection 1. For Boëthius says (*De Consol.* iv, 6):[2] "The chain of fate moves the heaven and the stars, tempers the elements to one another, and models them by a reciprocal transformation. By fate all things that are born into the world and perish are renewed in a uniform progression of offspring and seed" Nothing therefore seems to be excluded from the domain of fate.

Obj. 2. Further, Augustine says[3] that "fate is something real, as referred to the Divine will and power." But the Divine will is cause of all things that happen, as Augustine says (*De Trin.* iii, 1, *seqq.*).[4] Therefore all things are subject to fate.

Obj. 3. Further, Boëthius says (*loc. cit.*)[5] that fate is "a disposition inherent to changeable things." But all creatures are changeable, and God alone is truly unchangeable, as stated above (Q. IX, A. 2). Therefore fate is in all things.

On the contrary, Boëthius says (*De Consol.* iv, 6)[6] that "some things subject to Providence are above the ordering of fate."

I answer that, As stated above (A. 2), fate is the ordering of second causes to effects foreseen by God. Whatever, therefore, is subject to second causes, is subject also to fate. But whatever is done immediately by God, since it is not subject to second causes, neither is it subject to fate; such are creation, the glorification of spiritual substances, and the like. And this is what Boëthius says (*loc. cit.*), namely, that "those things which are nigh to God have a state of immobility, and exceed the changeable order of fate." Hence it is clear that "the further a thing is from the First Mind, the more it is involved in the chain of fate," since so much the more it is bound up with second causes.

Reply Obj. 1. All the things mentioned in this passage are done by God by means of second causes; for this reason they are contained in the order of fate. But it is not the same with everything else, as stated above.

Reply Obj. 2. Fate is to be referred to the Divine will and power as to its first principle. Consequently it does not follow that whatever is subject to the Divine will or power is subject also to fate, as already stated.

Reply Obj. 3. Although all creatures are in some way changeable, yet some of them do not proceed from changeable created causes. And these, therefore, are not subject to fate, as stated above.

[1] Cf. Q. XXIII, A. 8. [2] PL 63, 817.
[3] *City of God,* V, 1 (PL 41, 141); cf. also V, 8 (PL 41, 148).
[4] PL 42, 871; *Enchiridion,* chap. 95 (PL 40, 276).
[5] PL 63, 815. [6] PL 63, 816.

QUESTION CXVII

OF THINGS PERTAINING TO THE ACTION OF MAN

(In Four Articles)

WE have next to consider those things which pertain to the action of man, who is composed of a created corporeal and spiritual nature. In the first place we shall consider the action of man, and secondly the propagation of man from man (Q. CXVIII). As to the first, there are four points of inquiry: (1) Whether one man can teach another, as being the cause of his knowledge? (2) Whether man can teach an angel? (3) Whether by the power of his soul man can change corporeal matter? (4) Whether the separate soul of man can move bodies by local movement?

ARTICLE 1. *Whether One Man Can Teach Another?*

We proceed thus to the First Article: It would seem that one man cannot teach another.

Objection 1. For the Lord says (Matt. 23. 8): *Be not you called Rabbi,* on which the gloss of Jerome says,[7] "Lest you give to men the honour due to God." Therefore to be a master is properly an honour due to God. But it belongs to a master to teach. Therefore man cannot teach, and this is proper to God.

[7] *Glossa interl.* (V, 711).

Obj. 2. Further, if one man teaches another, this is only in so far as he acts through his own knowledge, so as to cause knowledge in the other. But a quality through which anyone acts so as to produce his like is an active quality. Therefore it follows that knowledge is an active quality just as heat is.

Obj. 3. Further, for knowledge we require intellectual light, and the species of the thing understood. But a man cannot cause either of these in another man. Therefore a man cannot by teaching cause knowledge in another man.

Obj. 4. Further, the teacher does nothing in regard to a disciple save to propose to him certain signs, so as to signify something by words or gestures. But it is not possible to teach anyone so as to cause knowledge in him, by putting signs before him. For these are signs either of things that he knows or of things he does not know. If of things that he knows, he to whom these signs are proposed is already in the possession of knowledge, and does not acquire it from the master. If they are signs of things that he does not know, he can learn nothing from them. For instance, if one were to speak Greek to a man who only knows Latin, he would learn nothing thereby. Therefore in no way can a man cause knowledge in another by teaching him.

On the contrary, The Apostle says (I Tim. 2. 7): *Whereunto I am appointed a preacher and an apostle . . . a doctor of the Gentiles in faith and truth.*

I answer that, On this question there have been various opinions. For Averroes, commenting on the third book on the *Soul*,[1] maintains that all men have one possible intellect in common, as stated above (Q. LXXVI, A. 2). From this it followed that the same intelligible species belong to all men. Consequently he held that one man does not cause another to have a knowledge distinct from that which he has himself, but that he communicates the identical knowledge which he has himself, by moving him to order rightly the phantasms in his soul, so that they be rightly disposed for intelligible apprehension. This opinion is true so far as knowledge is the same in disciple and master, if we consider the identity of the thing known, for the same truth of the thing is known by both of them. But so far as he maintains that all men have but one possible intellect and the same intelligible species, differing only as to various phantasms, his opinion is false, as stated above (Q. LXXVI, A. 2).

Besides this, there is the opinion of the Platonists, who held that our souls are possessed of knowledge from the very beginning, through the participation of separate forms, as stated above (Q. LXXXIV, AA. 3, 4), but that the soul is hindered, through its union with the body, from the free consideration of those things which it knows. According to this, the disciple does not acquire fresh knowledge from his master, but is roused by him to consider what he knows, so that to learn would be nothing else than to remember. In the same way they held[2] that natural agents only dispose (matter) to receive forms, which matter acquires by a participation of separate species. But against this we have shown above (Q. LXXIX, A. 2; Q. LXXXIV, A. 3) that the possible intellect of the human soul is in pure potency to intelligibles, as Aristotle says.[3]

We must therefore decide the question differently, by saying that the teacher causes knowledge in the learner by reducing him from potency to act, as the Philosopher says.[4] In order to make this clear, we must observe that of effects proceeding from an exterior principle, some proceed from the exterior principle alone; as for instance the form of a house is caused to be in matter by art alone. But other effects proceed sometimes from an exterior principle, sometimes from an interior principle; thus health is caused in a sick man, sometimes by an exterior principle, namely by the medical art, sometimes by an interior principle, as when a man is healed by the force of nature. In these latter effects two things must be noticed. First, that art in its work imitates nature, for just as nature heals a man by alteration, digestion, rejection of the matter that caused the sickness, so does art. Secondly, we must remark that the exterior principle, art, acts not as principal agent, but as helping the principal agent, which is the interior principle, by strengthening it, and by furnishing it with instruments and assistance, of which nature makes use in producing the effect. Thus the physician strengthens nature, and employs food and medicine, of which nature makes use for the intended end.

Now knowledge is acquired in man both from an interior principle, as is clear in one who procures knowledge by his own search, and from an exterior principle, as is clear in one who learns (by instruction). For in every man there is a certain principle of knowledge, namely the light of the agent intellect, through which certain

[1] Comm. 5, *digressio*, p. v (VI, 2, 146F).

[2] Plato and Avicenna; cf. above, Q. CXV, A. 1.

[3] *Soul*, III, 4 (429^b30).

[4] *Physics*, VIII, 4 (225^b1).

universal principles of all the sciences are naturally understood as soon as proposed to the intellect. Now when anyone applies these universal principles to certain particular things, the memory or experience of which he acquires through the senses, then by his own search advancing from the known to the unknown, he obtains knowledge of what he knew not before. Therefore anyone who teaches leads the disciple from things known by the latter to the knowledge of things previously unknown to him, according to what the Philosopher says,[1] "All teaching and all learning proceed from previous knowledge."

Now the master leads the disciple from things known to knowledge of the unknown in a twofold manner. First, by proposing to him certain helps or means of instruction, which his intellect can use for the acquisition of science. For instance, he may put before him certain less universal propositions, of which nevertheless the disciple is able to judge from previous knowledge; or he may propose to him some sensible examples, either by way of likeness or of opposition, or something of the sort, from which the intellect of the learner is led to the knowledge of truth previously unknown. Secondly, by strengthening the intellect of the learner; not, indeed, by some active power as of a higher nature, as explained above (Q. CVI, A. 1; Q. CXI, A. 1) of the angelic enlightenment, because all human intellects are of one grade in the natural order, but in so far as he proposes to the disciple the order of principles to conclusions, because he does not have sufficient powers of comparison to be able to draw the conclusions from the principles. Hence the Philosopher says[2] that "a demonstration is a syllogism that causes knowledge." In this way a demonstrator causes his hearers to know.

Reply Obj. 1. As stated above, the teacher only brings exterior help, as the physician who heals. But just as the inward nature is the principal cause of the healing, so the interior light of the intellect is the principal cause of knowledge. But both of these are from God. Therefore as of God is it written: *Who healeth all thy diseases* (Ps. 102. 3), so of Him is it written: *He that teacheth man knowledge* (Ps. 93. 10), since *the light of His countenance is signed upon us* (Ps. 4. 7), through which light all things are shown to us.

Reply Obj. 2. As Averroes argues[3], the teacher does not cause knowledge in the disciple after the manner of a natural agent. Therefore knowledge need not be an active quality, but is the principle by which one is directed in teaching, just as art is the principle by which one is directed in working.

Reply Obj. 3. The master does not cause the intellectual light in the disciple, nor does he cause the intelligible species directly, but he moves the disciple by teaching, so that the latter, by the power of his intellect, forms intelligible concepts, the signs of which are proposed to him from without.

Reply Obj. 4. The signs proposed by the master to the disciple are of things known in a universal and confused manner, but not known in particular and distinctly. Therefore when anyone acquires knowledge by himself, he cannot be called self-taught, or be said to have been his own master, because perfect knowledge did not precede in him, such as is required in a master.

ARTICLE 2. *Whether Man Can Teach the Angels?*

We proceed thus to the Second Article: It would seem that men can teach angels.

Objection 1. For the Apostle says (Eph. 3, 10): *That the manifold wisdom of God may be made known to the principalities and powers in the heavenly places through the Church.* But the Church is the union of all the faithful. Therefore some things are made known to angels through men.

Obj. 2. Further, the superior angels, who are enlightened immediately concerning Divine things by God, can instruct the inferior angels, as stated above (Q. CVI, A. 1; Q. CXII, A. 3). But some men are instructed immediately concerning Divine things by the Word of God, as appears principally of the apostles from Heb. 1. 1, 2: *Last of all, in these days (God) hath spoken to us by His Son.* Therefore some men have been able to teach the angels.

Obj. 3. Further, the inferior angels are instructed by the superior. But some men are higher than some angels, since some men are taken up to the highest angelic orders, as Gregory says in a homily (*Hom.* xxxiv *in Ev.*).[4] Therefore some of the inferior angels can be instructed by men concerning Divine things.

On the contrary, Dionysius says (*Div. Nom.* iv)[5] that every Divine enlightenment is borne to men by the ministry of the angels. Therefore angels are not instructed by men concerning Divine things.

[1] *Posterior Analytics*, I, 1 (71a1).
[2] *Ibid.*, I, 2 (71b17).
[3] *In De An.*, III. 5. digressio. pt. V (VI. 2. 152D).
[4] PL 76, 1252.
[5] Sect. 2 (PG 3, 180).

I answer that, As stated above (Q. CVII, A. 2), the inferior angels can indeed speak to the superior angels, by making their thoughts known to them; but concerning Divine things superior angels are never enlightened by inferior angels. Now it is manifest that in the same way as inferior angels are subject to the superior, the highest men are subject even to the lowest angels. This is clear from Our Lord's words (Matt. 11. 11): *There hath not risen among them that are born of women a greater than John the Baptist; yet he that is lesser in the kingdom of heaven is greater than he.* Therefore angels are never enlightened by men concerning Divine things. But men can by means of speech make known to angels the thoughts of their hearts, because it belongs to God alone to know the heart's secrets.

Reply Obj. 1. Augustine (*Gen. ad lit.* v, 19)[1] thus explains this passage of the Apostle, who in the preceding verses says: *"To me, the least of all the saints, is given this grace . . . to enlighten all men, that they may see what is the dispensation of the mystery which hath been hidden from eternity in God.*—Hidden, yet so that 'the multiform wisdom of God' was made known to the principalities and powers in the heavenly places—that is, through the Church." As though he were to say: This mystery was hidden from men, but not from the Church in heaven, which is contained in the principalities and powers who knew it "from all ages, but not before all ages: because the Church was at first there, where after the resurrection this Church composed of men will be gathered together."

It can also be explained otherwise that "what is hidden, is known by the angels, not only in God, but also here when it takes place and is made public," as Augustine says further on (*ibid.*). Thus when the mysteries of Christ and the Church were fulfilled by the apostles, some things concerning these mysteries became apparent to the angels which were hidden from them before. In this way we can understand what Jerome says (*Comment. in Ep. ad Eph., loc. cit.*),—that from the preaching of the apostles the angels learnt certain mysteries; that is to say, through the preaching of the apostles, the mysteries were realized in the things themselves. Thus by the preaching of Paul the Gentiles were converted, of which mystery the Apostle is speaking in the passage quoted.

Reply Obj. 2. The apostles were instructed immediately by the Word of God, not according to His Divinity, but according as He spoke in His human nature. Hence the argument does not prove.

Reply Obj. 3. Certain men even in this state of life are greater than certain angels, not actually, but virtually, in so far as they have such great charity that they can merit a higher degree of happiness than that possessed by certain angels. In the same way we might say that the seed of a great tree is virtually greater than a small tree, though actually it is much smaller.

ARTICLE 3. *Whether Man by the Power of His Soul Can Change Corporeal Matter?*

We proceed thus to the Third Article: It would seem that man by the power of his soul can change corporeal matter.

Objection 1. For Gregory says (*Dialog.* ii, 30):[2] "Saints work miracles, sometimes by prayer, sometimes by their power. Thus Peter, by prayer, raised the dead Tabitha to life, and by his reproof delivered to death the lying Ananias and Saphira." But in the working of miracles a change is wrought in corporeal matter. Therefore men, by the power of the soul, can change corporeal matter.

Obj. 2. Further, on these words (Gal. 3. 1): *Who hath bewitched you, that you should not obey the truth?* the gloss says[3] that "some have blazing eyes, who by a single look bewitch others, especially children." But this would not be unless the power of the soul could change corporeal matter. Therefore man can change corporeal matter by the power of his soul.

Obj. 3. Further, the human body is nobler than other inferior bodies. But by the apprehension of the human soul the human body is changed to heat and cold, as appears when a man is angry or afraid; indeed this change sometimes goes so far as to bring on sickness and death. Much more, then, can the human soul by its power change corporeal matter.

On the contrary, Augustine says (*De Trin.* iii, 8):[4] "Corporeal matter obeys God alone at will."

I answer that, As stated above (Q. CX, A. 2), corporeal matter is not changed to (the reception of) a form save either by some agent composed of matter and form, or by God Himself, in Whom both matter and form pre-exist virtually, as in the primordial cause of both. Therefore of the angels also we have stated (*ibid.*) that they cannot change corporeal matter by their natural power, except by employing cor-

[1] PL 34, 335.

[2] PL 66, 188.

[3] *Glossa ordin.* (VI, 82A); *Glossa* Lombardi (PL 192, 117). cf. Jerome, *In 1 Gal.* on 3.1 (PL 26, 372).

[4] PL 42, 875.

poreal agents for the production of certain effects. Much less therefore can the soul, by its natural power, change corporeal matter, except by means of bodies.

Reply Obj. 1. The saints are said to work miracles by the power of grace, not of nature. This is clear from what Gregory says in the same place: "Those who are sons of God, in power, as John says,—what wonder is there that they should work miracles by that power?"

Reply Obj. 2. Avicenna assigns the cause of bewitchment to the fact that corporeal matter has a natural tendency to obey spiritual substance rather than natural contrary agents.[1] Therefore when the soul is of strong imagination, it can change corporeal matter. This he says is the cause of the "evil eye."

But it has been shown above (Q. CX, A. 2) that corporeal matter does not obey spiritual substances at will, but the Creator alone. Therefore it is better to say, that by a strong imagination the spirits of the body united to that soul are changed, which change in the spirits takes place especially in the eyes, to which the more subtle spirits can reach. And the eyes infect the air which is in contact with them to a certain distance, in the same way as a new and clear mirror contracts a tarnish from the look of a woman in menstruation, as Aristotle says.[2]

Hence then when a soul is vehemently moved to wickedness, as occurs mostly in little old women, according to the above explanation, the countenance becomes venomous and hurtful, especially to children, who have a tender and most impressionable body. It is also possible that by God's permission, or from some hidden deed, the spiteful demons co-operate in this, as the witches may have some compact with them.

Reply Obj. 3. The soul is united to the body as its form, and the sensitive appetite, which obeys the reason in a certain way, as stated above (Q. LXXXI, A. 3), is the act of a corporeal organ. Therefore at the apprehension of the human soul, the sensitive appetite must be moved with an accompanying corporeal operation. But the apprehension of the human soul does not suffice to work a change in exterior bodies, except by means of a change in the body united to it, as stated above (Ans. 2).

ARTICLE 4. *Whether the Separated Human Soul Can Move Bodies at Least Locally?*

We proceed thus to the Fourth Article: It seems that the separated human soul can move bodies at least locally.

Objection 1. For a body naturally obeys a spiritual substance as to local motion, as stated above (Q CX, A. 3). But the separated soul is a spiritual substance. Therefore it can move exterior bodies by its command.

Obj. 2. Further, in the *Itinerary* of Clement it is said[3] in the narrative of Nicetas to Peter, that Simon Magus, by sorcery retained power over the soul of a child that he had slain, and that through this soul he worked magical wonders. But this could not have been without some corporeal change at least as to place. Therefore the separated soul has the power to move bodies locally.

On the contrary, the Philosopher says[4] that the soul cannot move any other body whatsoever but its own.

I answer that, The separated soul cannot by its natural power move a body. For it is manifest that, even while the soul is united to the body, it does not move the body unless it is endowed with life, so that if one of the members become lifeless, it does not obey the soul as to local motion. Now it is also manifest that no body is quickened by the separated soul. Therefore within the limits of its natural power the separated soul cannot command the obedience of a body, though, by the power of God, it can exceed those limits.

Reply Obj. 1. There are certain spiritual substances whose powers are not determined to certain bodies. Such are the angels who are naturally unfettered by a body; consequently various bodies may obey them as to movement. But if the moving power of a separated substance is naturally determined to move a certain body, that substance will not be able to move a body of higher degree, but only one of lower degree; thus according to philosophers the mover of the lower heaven cannot move the higher heaven.[5] Therefore, since the soul is by its nature determined to move the body of which it is the form, it cannot by its natural power move any other body.

Reply Obj. 2. As Augustine[6] and Chrysostom (*Hom.* XXVIII *in Matt.*)[7] say, the demons often pretend to be the souls of the dead, in order to confirm the error of the Gentiles, who believed this. It is therefore credible that Simon Magus was deceived by some demon who pretended to be the soul of the child whom the magician had slain.

QUESTION CXVIII

OF THE PRODUCTION OF MAN FROM MAN AS TO THE SOUL

(In Three Articles)

WE now consider the production of man from man: first, as to the soul; secondly, as to the body. (Q. CXIX).

Under the first head there are three points of inquiry: (1) Whether the sensitive soul is transmitted with the semen? (2) Whether the intellectual soul is thus transmitted? (3) Whether all souls were created at the same time?

ARTICLE 1. *Whether the Sensitive Soul Is Transmitted with the Semen?*

We proceed thus to the First Article: It would seem that the sensitive soul is not transmitted with the semen, but created by God.

Objection 1. For every perfect substance not composed of matter and form that begins to exist, acquires existence not by generation but by creation, for nothing is generated save from matter. But the sensitive soul is a perfect substance, otherwise it could not move the body; and since it is the form of a body, it is not composed of matter and form. Therefore it begins to exist not by generation but by creation.

Obj. 2. Further, in living things the principle of generation is the generating power, which, since it is one of the powers of the vegetative soul, is of a lower order than the sensitive soul. Now nothing acts beyond its species. Therefore the sensitive soul cannot be caused by the animal's generating power.

Obj. 3. Further, the generator begets its like, so that the form of the generator must be actually in the cause of generation. But neither the sensitive soul itself nor any part of it is actually in the semen, for no part of the sensitive soul is elsewhere than in some part of the body. But in the semen there is not even a particle of the body, because there is not a particle of the body which is not made from the semen and by its power. Therefore the sensitive soul is not produced through the semen.

Obj. 4. Further, if there be in the semen any principle productive of the sensitive soul, this principle either remains after the animal is begotten, or it does not remain. Now it cannot remain. For either it would be identified with the sensitive soul of the begotten animal, which is impossible, for thus there would be identity between begetter and begotten, maker and made; or it would be distinct from it, and again this is impossible, for it has been proved above (Q. LXXVI, A. 4) that in one animal there is but one formal principle, which is the soul. If on the other hand this principle does not remain, this again seems to be impossible, for thus an agent would act to its own destruction, which is impossible. Therefore the sensitive soul cannot be generated from the semen.

On the contrary, The power in the semen is to the animal generated from semen, as the power in the elements of the world is to animals produced from these elements,—for instance by putrefaction. But in the latter animals the soul is produced by the power that is in the elements, according to Genesis 1. 20: *Let the waters bring forth the creeping creatures having life.* Therefore also the souls of animals generated from semen are produced by the seminal power.

I answer that, Some have held that the sensitive souls of animals are created by God.[1] This opinion would hold if the sensitive soul were subsistent, having being and operation of itself. For thus, as having being and operation of itself, to be made would be proper to it. And since a simple and subsistent thing cannot be made except by creation, it would follow that the sensitive soul would come into being by creation.

But this principle is false,—namely, that being and operation are proper to the sensitive soul, as has been made clear above (Q. LXXV, A. 3), for then it would not cease to exist when the body perishes. Since, therefore, it is not a subsistent form, its relation to existence is that of the corporeal forms, to which being does not belong as proper to them, but which are said to be in so far as the subsistent composites exist through them.

And so to be made is proper to composites. And since the generator is like the generated, it follows of necessity that both the sensitive soul, and all other like forms are naturally brought into being by certain corporeal agents that reduce the matter from potency to act, through some corporeal power of which they are possessed.

Now the more powerful an agent, the greater the scope of its action. For instance, the hotter a body, the greater the distance to which its heat carries. Therefore bodies not endowed with life, which are the lowest in the order of nature, generate their like, not through some medium, but by themselves; thus fire by itself generates fire. But living bodies, as being more powerful, act so as to generate their like, both without

[1] Plato, according to Averroes, *In Meta.*, VII, 31 (VIII, 180K); cf. St. Thomas, *De Pot.*, III, 11; *In De An.*, I, 10.

and with a medium. Without a medium—in the work of nutrition, in which flesh generates flesh; with a medium—in the act of generation, because the seed of the animal or plant derives a certain active force from the soul of the generator, just as the instrument derives a certain moving power from the principal agent. And as it matters not whether we say that something is moved by the instrument or by the principal agent, so neither does it matter whether we say that the soul of the generated is caused by the soul of the generator, or by some seminal power derived from it.

Reply Obj. 1. The sensitive soul is not a perfect self-subsistent substance. We have spoken of this above (Q. LXXV, A. 3), nor need we repeat it here.

Reply Obj. 2. The generating power begets not only by its own power, but by that of the whole soul, of which it is a power. Therefore the generating power of a plant generates a plant, and that of an animal begets an animal. For the more perfect the soul is, to so much a more perfect effect is its generating power ordered.

Reply Obj. 3. This active force which is in the semen, and which is derived from the soul of the generator, is, as it were, a certain movement of this soul itself; nor is it the soul or a part of the soul, save virtually. Thus the form of a bed is not in the saw or the axe, but a certain movement towards that form. Consequently there is no need for this active force to have an actual organ; but it is based on the (vital) spirit in the semen which is frothy, as is attested by its whiteness. In the spirit, moreover, there is a certain heat derived from the power of the heavenly bodies, by virtue of which the inferior bodies also act towards the production of the species as stated above (Q. CXV, A. 3, ANS. 2). And since in this (vital) spirit, the power of the soul is concurrent with the power of a heavenly body, it has been said that "man and the sun generate man"[1] Moreover, elemental heat is employed instrumentally by the soul's power, as also by the nutritive power, as stated.[2]

Reply Obj. 4. In perfect animals, generated by coition, the active force is in the semen of the male, as the Philosopher says,[3] but the fœtal matter is provided by the female. In this matter the vegetable soul exists from the very beginning, not as to the second act, but as to the first act, as the sensitive soul is in one who sleeps. But as soon as it begins to attract nourishment, then it already operates in act. This matter therefore is transmuted by the power which is in the semen of the male, until it is actually informed by the sensitive soul; but not as though the force itself which was in the semen becomes the sensitive soul, for in this way the generator and generated would be identical, and this would be more like nourishment and growth than generation, as the Philosopher says.[4] And after the sensitive soul by the power of the active principle in the semen has been produced in one of the principal parts of the thing generated, then the sensitive soul of the offspring begins to work towards the perfection of its own body, by nourishment and growth. As to the active power which was in the semen, it ceases to be, when the semen is dissolved and its (vital) spirit vanishes. Nor is there anything unreasonable in this, because this force is not the principal but the instrumental agent, and the movement of an instrument ceases when once the effect has been produced.

ARTICLE 2. *Whether the Intellectual Soul Is Produced From the Semen?*

We proceed thus to the Second Article: It would seem that the intellectual soul is produced from the semen.

Objection 1. For it is written (Gen. 46. 26): *All the souls that came out of Jacob's thigh, sixty-six.* But nothing is produced from the thigh of a man, except as caused by the semen. Therefore the intellectual soul is produced from the semen.

Obj. 2. Further, as shown above (Q. LXXVI, A. 3), the intellectual, sensitive, and nutritive souls are, in substance, one soul in man. But the sensitive soul in man is generated from the semen, as in other animals. And so the Philosopher says[5] that "the animal and the man are not made at the same time," but first of all the animal is made having a sensitive soul. Therefore also the intellectual soul is produced from the semen.

Obj. 3. Further, it is one and the same agent whose action is directed to the matter and to the form. Otherwise from the matter and the form there would not result something absolutely one. But the intellectual soul is the form of the human body, which is formed by the power of the semen. Therefore the intellectual soul also is produced by the power of the semen.

Obj. 4. Further, man begets his like in spe-

[1] Aristotle, *Physics*, II, 2 (194^b13).
[2] Aristotle, *Soul*, II, 4 (416^a9; $^a28$).
[3] *Generation of Animals*, II, 4 (740^b24).
[4] *Generation and Corruption*, I, 5 (321^a22).
[5] *Generation of Animals*, II, 3 (736^b2).

cies. But the human species is constituted by the rational soul. Therefore the rational soul is from the begetter.

Obj. 5. Further, it cannot be said that God co-operates in sin. But if the rational soul be created by God, sometimes God co-operates in the sin of adultery, since sometimes offspring is begotten of illicit intercourse. Therefore the rational soul is not created by God.

On the contrary, It is written in *De Eccl. Dogmat.* xiv[1] that "the rational soul is not engendered by coition."

I answer that, It is impossible for an active power existing in matter to extend its action to the production of an immaterial effect. Now it is manifest that the intellectual principle in man transcends matter, for it has an operation in which the body takes no part whatever. It is therefore impossible for the seminal power to produce the intellectual principle.

Again, the seminal power acts by virtue of the soul of the begetter, according as the soul of the begetter is the act of the body, making use of the body in its operation. Now the body has nothing whatever to do in the operation of the intellect. Therefore the power of the intellectual principle, as intellectual, cannot reach to the semen. Hence the Philosopher says,[2] "It follows that the intellect alone comes from without."

Again, since the intellectual soul has a vital operation independent of the body, it is subsistent, as proved above (Q. LXXV, A. 2). Therefore to be and to be made are proper to it. Moreover, since it is an immaterial substance it cannot be caused through generation, but only through creation by God. Therefore to hold that the intellectual soul is caused by the begetter is nothing else than to hold the soul to be non-subsistent, and consequently to perish with the body. It is therefore heretical to say that the intellectual soul is transmitted with the semen.

Reply Obj. 1. In the passage quoted, the part is put instead of the whole, the soul for the whole man, by the figure of synecdoche.

Reply Obj. 2. Some say that the vital functions observed in the embryo are not from its soul, but from the soul of the mother,[3] or from the formative power of the semen,[4] Both of these explanations are false, for vital functions such as feeling, nourishment, and growth cannot be from an extrinsic principle. Consequently it must be said that the soul is in the embryo, the nutritive soul from the beginning, then the sensitive, lastly the intellectual soul.

Therefore some say that in addition to the vegetative soul which existed first, another, namely, the sensitive soul supervenes;[5] and in addition to this, again another, namely the intellectual soul. Thus there would be in man three souls of which one would be in potency to another This has been disproved above (Q. LXXVI, A. 3).

Therefore others say[6] that the same soul which was at first merely vegetative, afterwards through the action of the seminal power, becomes a sensitive soul. And finally this same soul becomes intellectual, not indeed through the active seminal power, but by the power of a higher agent, namely God enlightening it from without. For this reason the Philosopher says that the intellect comes from without.[7]—But this will not hold. First, because no substantial form is susceptive of more or less, but addition of greater perfection constitutes another species, just as the addition of unity constitutes another species of number. Now it is not possible for the same identical form to belong to different species. Secondly, because it would follow that the generation of an animal would be a continuous movement, proceeding gradually from the imperfect to the perfect, as happens in alteration. Thirdly, because it would follow that the generation of a man or an animal is not generation absolutely, because its subject would be a being in act. For if the vegetative soul is from the beginning in the matter of offspring, and is subsequently gradually brought to perfection, there will be addition of further perfection without corruption of the preceding perfection. And this is contrary to the nature of generation properly so called. Fourthly, because either that which is caused by the action of God is something subsistent, and then it must be essentially distinct from the pre-existing form, which was non-subsistent (and we shall then come back to the opinion of those who held the existence of several souls in the body)—or else it is not subsistent, but a perfection of the pre-

[6] Albert the Great, *In de An.,* XVI, 1, 11 (BO XII, 157); *Summa de Creatur.,* II, 17.3 (BO XXXV, 155).

[7] *Generation of Animals,* II, 3 (736[b]27).

existing soul; and from this it follows of necessity that the intellectual soul perishes with the body, which cannot be admitted.

There is again another explanation, according to those who held that all men have but one intellect in common: but this has been disproved above (Q. LXXVI, A. 2).[1]

We must therefore say that since the generation of one thing is the corruption of another, it follows of necessity that both in men and in other animals, when a more perfect form supervenes the previous form is corrupted, yet so that the succeeding form contains the perfection of the previous form, and something in addition. It is in this way that through many generations and corruptions we arrive at the ultimate substantial form, both in man and other animals. This indeed is apparent to the senses in animals generated from putrefaction We conclude therefore that the intellectual soul is created by God at the end of human generation, and this soul is at the same time sensitive and nutritive, the pre-existing forms being corrupted.

Reply Obj 3. This argument holds in the case of different agents not ordered to one another. But where there are many agents ordered to one another, nothing hinders the power of the higher agent from reaching to the ultimate form, while the powers of the inferior agents extend only to some disposition of matter. Thus in the generation of an animal, the seminal power disposes the matter, but the power of the soul gives the form Now it is manifest from what has been said above (Q CV, A. 5; Q CX, A. 1) that the whole of corporeal nature acts as the instrument of a spiritual power, especially of God. Therefore nothing hinders the formation of the body from being due to a corporeal power, while the intellectual soul is from God alone.

Reply Obj. 4 Man begets his like in so far as by his seminal power the matter is disposed for the reception of a certain species of form

Reply Obj. 5. In the action of the adulterer, what is of nature is good; in this God co-operates. But what there is of inordinate lust is evil, and in this God does not co-operate.

ARTICLE 3. *Whether Human Souls Were Created All Together at the Beginning of the World?*

We proceed thus to the Third Article: It would seem that human souls were created all together at the beginning of the world.

Objection 1. For it is written (Gen. 2, 2): *God rested Him from all His work which He had done.* This would not be true if He created new souls every day. Therefore all souls were created at the same time.

Obj. 2. Further, spiritual substances before all others pertain to the perfection of the universe. If therefore souls were created with the bodies, every day innumerable spiritual substances would be added to the perfection of the universe and so, at the beginning the universe would have been imperfect. This is contrary to Genesis 2. 2, where it is said that *God ended* all *His work.*

Obj. 3. Further, the end of a thing corresponds to its beginning. But the intellectual soul remains when the body perishes. Therefore it began to exist before the body.

On the contrary, it is said (*De Eccl. Dogmat.* xiv, xviii)[2] that "the soul is created together with the body"

I answer that, Some have maintained that it is accidental to the intellectual soul to be united to the body, asserting that the soul is of the same condition as those spiritual substances which are not united to a body.[3] These, therefore stated that the souls of men were created together with the angels at the beginning. But this statement is false. First, in the very principle on which it is based. For if it were accidental to the soul to be united to the body, it would follow that man who results from this union is a being by accident, or that the soul is a man, which is false, as proved above (Q. LXXV, A. 4). Moreover, that the human soul is not of the same nature as the angels is proved from the different mode of understanding, as shown above (Q LV, A 2; Q LXXXV, A. 1); for man understands through receiving from the senses, and turning to phantasms, as stated above (Q. LXXXV, A. 1). For this reason the soul needs to be united to the body, which is necessary to it for the operation of the sensitive part. But this cannot be said of an angel.

Secondly, this position can be proved to be false in itself. For if it is natural to the soul to be united to the body, it is unnatural to it to be without a body, and as long as it is without a body it does not have its natural perfection. Now it was not fitting that God should begin His work with things imperfect and unnatural, for He did not make man without a hand or a foot, which are natural parts of a man. Much

[1] Cf. Albert, *De Nat. et Orig. An.*, tr. 1, 5 (BO IX, 390), where he refers to Abubacer.

[2] Gennadius, (PL 58, 984, 985).

[3] Origen, *Peri Archon*, 1, 6, 8 (PG 11, 166, 178); II, 9 (PG 11, 229).

less, therefore, did He make the soul without the body.

But if someone say that it is not natural to the soul to be united to the body, we must seek reason why it is united to a body. And the reason must be either because the soul so willed, or for some other reason. That the soul willed it seems incongruous. First, because it would be unreasonable of the soul to wish to be united to the body, if it did not need the body; for if it did need it, it would be natural for it to be united to it, since nature does not fail in what is necessary. Secondly, because there would be no reason why, having been created from the beginning of the world, the soul should, after such a long time, come to wish to be united to the body. For a spiritual substance is above time, and superior to the heavenly revolutions. Thirdly, because it would seem that this body was united to this soul by chance, since for this union to take place two wills would have to concur—namely, that of the soul which comes, and that of the begetter. If, however, this union be neither voluntary nor natural on the part of the soul, then it must be the result of some violent cause, and would be to the soul something of a penal and afflicting character. This is in keeping with the opinion of Origen, who held that souls were embodied in punishment of sin. Since, therefore, all these opinions are unreasonable, we must confess absolutely that souls were not created before bodies, but are created at the same time as they are infused into them.

Reply Obj. 1. God is said to have rested on the seventh day, not from all work, since we read (John 5. 17): *My Father worketh until now,* but from the creation of any new genera and species, which did not in some way pre-exist in the first works. For in this sense, the souls which are created now, pre-existed, as to the likeness of the species, in the first works, which included the creation of Adam's soul.

Reply Obj. 2. Something can be added every day to the perfection of the universe, as to the number of individuals, but not as to the number of species.

Reply Obj. 3. That the soul remains without the body is due to the corruption of the body, which was a result of sin. Consequently it was not fitting that God should make the soul without the body from the beginning; for as it is written (Wisd. 1. 13, 16): *God made not death . . . but the wicked with works and words have called it to them.*

QUESTION CXIX

OF THE PROPAGATION OF MAN AS TO THE BODY

(In Two Articles)

WE now consider the propagation of man as to the body. Concerning this there are two points of inquiry: (1) Whether any part of the food is changed into true human nature? (2) Whether the semen, which is the principle of human generation, is produced from the surplus food?

ARTICLE 1. *Whether Some Part of the Food Is Changed into True Human Nature?*

We proceed thus to the First Article: It would seem that none of the food is changed into true human nature.

Objection 1. For it is written (Matt. 15. 17): *Whatsoever entereth into the mouth, goeth into the belly, and is cast out into the privy.* But what is cast out is not changed into the reality of human nature. Therefore none of the food is changed into true human nature.

Obj. 2. Further, the Philosopher distinguishes flesh according to species from flesh according to matter, and says that the latter comes and goes.[1] Now what is formed from food comes and goes. Therefore what is produced from food is flesh according to matter, not to according species. But what pertains to true human nature pertains to the species. Therefore the food is not changed into true human nature.

Obj. 3. Further, the radical humour seems to belong to the reality of human nature, and if it is lost, it cannot be recovered, according to physicians.[2] But it could be recovered if the food were changed into the humour. Therefore food is not changed into true human nature.

Obj. 4. Further, if the food were changed into true human nature, whatever is lost in man could be restored. But man's death is due only to the loss of something. Therefore man would be able by taking food to insure himself forever against death.

Obj. 5. Further, if the food is changed into true human nature, there is nothing in man which may not disappear or be repaired, for what is generated in a man from his food can both disappear and be repaired. If therefore a man lived long enough, it would follow that in the end nothing would be left in him of what be-

[1] *Generation and Corruption,* 1, 5 (321^b21).

[2] Avicenna. Cf. in Bonaventure, *Opera Omnia, In Sent.,* II, p. 736, notes 2 and 3.

longed to him, materially at the beginning. Consequently he would not be numerically the same man throughout his life, since for the thing to be numerically the same, identity of matter is necessary. But this is incongruous. Therefore the food is not changed into true human nature.

On the contrary, Augustine says (*De Vera Relig.* xl):[1] "The bodily food when corrupted, that is, having lost its form, is changed into the texture of the members." But the texture of the members pertains to true human nature. Therefore the food is changed into the reality of human nature.

I answer that, According to the Philosopher,[2] "The relation of a thing to truth is the same as its relation to being." Therefore that belongs to the true nature of any thing which enters into the constitution of that nature. But nature can be considered in two ways, first, in general according to the notion of the species; secondly, as it is in this individual. And while the form and the common matter belong to a thing's true nature considered in general, individual signate matter and the form individualized by that matter belong to the true nature considered in this particular individual. Thus a soul and body belong to the true human nature in general, but to the true human nature of Peter and Martin belong this soul and this body.

Now there are certain things whose form cannot exist save in one signate matter; thus the form of the sun cannot exist save in the matter in which it actually is. And in this sense some have said that the human form cannot exist but in a certain signate matter, which, they said, was given that form at the very beginning in the first man.[3] So that whatever may have been added to that which was derived by posterity from the first parent does not belong to the truth of human nature, as not receiving in truth the form of human nature.

But, said they, that matter which, in the first man, was the subject of the human form, was multiplied in itself, and in this way the multitude of human bodies is derived from the body of the first man. According to these, the food is not changed into true human nature. We take food, they stated, in order to help nature to resist the action of natural heat, and prevent the consumption of the radical humour, just as lead or tin is mixed with silver to prevent its being consumed by fire.

But this is unreasonable in many ways. First, because it comes to the same thing that a form can be produced in another matter, or that it can cease to be in its proper matter. Therefore all things that can be generated are corruptible, and conversely. Now it is manifest that the human form can cease to exist in this matter which is its subject; otherwise the human body would not be corruptible. Consequently it can begin to exist in another matter, something else being changed into true human nature. Secondly, because in all beings whose entire matter is found in one individual there is only one individual in the species, as is clearly the case with the sun, moon and the like. Thus there would only be one individual of the human species. Thirdly, because multiplication of matter cannot be understood otherwise than either in respect of quantity only, as in things which are rarefied, so that their matter increases in dimensions, or in respect of the substance itself of the matter. But as long as the substance alone of matter remains, it cannot be said to be multiplied, for multitude cannot consist in the addition of a thing to itself, since of necessity it can only result from division. Therefore some other substance must be added to matter, either by creation, or by something else being changed into it. Consequently no matter can be multiplied save either by rarefaction, as when air is made from water, or by the change of some other thing, as fire is multiplied by the addition of wood, or lastly by the creation of matter. Now it is manifest that the multiplication of matter in the human body does not occur by rarefaction, for thus the body of a man of perfect age would be more imperfect than the body of a child. Nor does it occur by creation of new matter, for, according to Gregory (*Moral.* xxxii):[4] "All things were created together as to the substance of matter, but not as to the specific form." Consequently the multiplication of the human body can only be the result of the food being changed into the true human body. Fourthly, because, since man does not differ from animals and plants in regard to the vegetative soul, it would follow that the bodies of animals and plants do not increase through a change of nourishment into the body so nourished, but through some kind of multiplication. Nor can this multiplication be natural, since the matter cannot naturally extend beyond a certain fixed quantity. Nor again does anything increase naturally save either by rarefaction or the change of something else into it. Conse-

[4] Chap. 12 (PL 76, 644).

quently the whole process of generation and nourishment, which are called natural powers, would be miraculous. And this cannot be admitted.

And so others have said that the human form can indeed begin to exist anew in some other matter if we consider the human nature in general, but not if we consider it as it is in this individual.[1] For in the individual the form remains confined to a certain determinate matter, on which it is first imprinted at the generation of that individual, so that it never leaves that matter until the ultimate dissolution of the individual. And this matter, say they, principally belongs to the true human nature. But since this matter does not suffice for the requisite quantity, some other matter must be added, through the change of food into the substance of the individual partaking of it, in such a quantity as suffices for the increase required. And this matter, they state, belongs secondarily to the true human nature, because it is not required for the primary being of the individual, but for the quantity due to him. And if anything further is produced from the food, this does not belong to true human nature, properly speaking.

However, this also is inadmissible. First, because this opinion judges of living bodies in the same way as of inanimate bodies, in which, although there be a power of generating their like in species, there is not the power of generating their like in the individual (which power in living bodies is the nutritive power). Nothing, therefore, would be added to living bodies by their nutritive power, if their food were not changed into their true nature. Secondly, because the active seminal power is a certain impression derived from the soul of the begetter, as stated above (Q. CXVIII, A 1). Hence it cannot have a greater power in acting than the soul from which it is derived. If, therefore, by the seminal power a certain matter truly assumes the form of human nature, much more can the soul, by the nutritive power, imprint the true form of human nature on the food which is assimilated. Thirdly, because food is needed not only for growth, (otherwise at the term of growth, food would no longer be necessary) but also to renew that which is lost by the action of natural heat. But there would be no renewal, unless what is formed from the food took the place of what is lost. Therefore just as that which was there previously belonged to true human nature, so also does that which is generated from the food.

Therefore, according to others,[2] it must be said that the food is really changed into the true human nature by reason of its assuming the specific form of flesh, bones and the like parts. This is what the Philosopher says,[3] that is, that food nourishes in so far as it is potentially flesh.

Reply Obj. 1. Our Lord does not say that the whole of what enters into the mouth, but all,—because something from every kind of food is cast out into the privy. It may also be said that whatever is generated from food can be dissolved by natural heat, and be cast aside through the pores, as Jerome expounds the passage.[4]

Reply Obj. 2. By flesh belonging to the species, some have understood that which first receives the human species, which is derived from the begetter; and this, they say, lasts as long as the individual does.[5] By flesh belonging to the matter these understand what is generated from food; and this, they say, does not always remain, but as it comes, so it goes. But this is contrary to the mind of Aristotle. For he says there,[6] that "just as in things which have their species in matter,"—for instance, wood or stone —"so in flesh, there is something belonging to the species, and something belonging to matter." Now it is clear that this distinction has no place in inanimate things, which are not generated seminally, or nourished. Again, since what is generated from food is united to the body so nourished, by mixing with it, just as water is mixed with wine, as the Philosopher says there by way of example,[7] it follows that that which is added, and that to which it is added, cannot be of different natures, since they are already made one by a true mixture. Therefore there is no reason for saying that one is destroyed by natural heat, while the other remains.

It must therefore be said that this distinction of the Philosopher is not of different kinds of flesh, but of the same flesh considered from different points of view. For if we consider the flesh according to the species, that is, according to that which is formal in it, then it remains always, because the nature of flesh always remains together with its natural disposition. But

[7] *Ibid.* (322^a9).

if we consider flesh according to matter, then it does not remain, but is gradually destroyed and renewed, just as in the fire of a furnace, the form of fire remains, but the matter is gradually consumed, and other matter is substituted in its place.

Reply Obj. 3. The radical humour is said to comprise whatever the power of the species is founded on. If this is taken away it cannot be renewed, as when a man's hand or foot is amputated. But the nutritive humour is that which has not yet received perfectly the specific nature, but is on the way there; for example the blood, and the like Therefore if such as these are taken away, the power of the species remains in its root, which is not destroyed.

Reply Obj. 4. Every power of a passible body is weakened by continuous action, because such agents are also acted upon. Therefore the transforming power is strong at first so as to be able to transform not only enough for the renewal of what is lost, but also for growth. Later on it can only transform enough for the renewal of what is lost, and then growth ceases. At last it cannot even do this, and then begins decline. Finally, when this virtue fails altogether, the animal dies. Thus the power of wine that transforms the water added to it, is weakened by further additions of water, so as to become at length watery, as the Philosopher says by way of example.[1]

Reply Obj. 5. As the Philosopher says,[2] when a certain matter is directly transformed into fire, then fire is said to be generated anew; but when matter is transformed into a fire already existing, then fire is said to be fed. And so if the entire matter together loses the form of fire, and another matter transformed into fire, there will be another distinct fire. But if, while one piece of wood is gradually burning, another piece is laid on, and so on until the first piece is entirely consumed, the same identical fire will remain all the time, because that which is added passes into what pre-existed. It is the same with living bodies, in which by means of nourishment that is restored which was consumed by natural heat.

ARTICLE 2. *Whether the Semen Is Produced from Surplus Food?*

We proceed thus to the Second Article: It would seem that the semen is not produced from the surplus food, but from the substance of the begetter.

Objection 1. For Damascene says (*De Fide Orth.* i, 8)[3] that generation is "a work of nature, producing, from the substance of the begetter, that which is begotten." But that which is generated is produced from the semen. Therefore the semen is produced from the substance of the begetter.

Obj. 2. Further, the son is like his father in respect of that which he receives from him. But if the semen from which something is generated is produced from the surplus food, a man would receive nothing from his grandfather and his ancestors in whom the food never existed. Therefore a man would not be more like to his grandfather or ancestors than to any other men.

Obj. 3. Further, the food of the generator is sometimes the flesh of cows, pigs and like. If, therefore, the semen were produced from surplus food, the man begotten of such semen would be more akin to the cow and the pig than to his father or other relations.

Obj. 4. Further, Augustine says (*Gen. ad lit.* x, 20)[4] that we were in Adam "not only by seminal principle, but also in the very substance of the body." But this would not be if the semen were produced from surplus food. Therefore the semen is not produced from surplus food.

On the contrary, The Philosopher proves in many ways[5] that "the semen is surplus food."

I answer that, This question depends in some way on what has been stated above (A. 1; Q. CXVIII, A. 1). For if there is in human nature a power for the communication of its form to alien matter not only in another, but also in its own subject, it is clear that the food which at first is dissimilar becomes at length similar through the form communicated to it. Now it is the order of nature that a thing should be reduced from potency to act gradually. Hence in things generated we observe that at first each is imperfect and is afterwards perfected. But it is clear that the common is to the proper and determinate, as imperfect is to perfect. Therefore we see that in the generation of an animal, the animal is generated first, then the man or the horse. So therefore food first of all receives a certain common virtue in regard to all the parts of the body, and is subsequently determinate to this or that part.

Now it is not possible that the semen be a kind of solution from what is already transformed into the substance of the members. For this solution, if it does not retain the nature of the member it is taken from, would no longer be

[1] *Generation and Corruption*, I, 5 (322[a]31).
[2] *Ibid.* (322[a]14).
[3] PG 94, 813. [4] PL 34, 424.
[5] *Generation of Animals*, I, 18 (726[a]26).

of the nature of the begetter, and would be as it were already on the way to corruption; and consequently it would not have the power of transforming something else into the likeness of that nature. But if it retained the nature of the member it is taken from, then it is limited to a determinate part of the body, and it would not have the power of moving towards (the production of) the whole nature, but only the nature of that part. Unless one were to say that the solution is taken from all the parts of the body, and that it retains the nature of each part. Thus the semen would be as a kind of small animal in act, and generation of animal from animal would be a mere division, as mud is generated from mud, and as animals which continue to live after being cut in two. This, however, cannot be admitted.

It remains to be said, therefore, that the semen is not something cut off from what was the actual whole. Rather is it the whole, though potentially, having the power, derived from the soul of the begetter, to produce the whole body, as stated above (A. 1; Q. CVIII, A. 1). Now that which is in potency to the whole is that which is generated from the food before it is transformed into the substance of the members. Therefore the semen is taken from this. In this sense the nutritive power is said to serve the generative power, because what is transformed by the nutritive power is employed as semen by the generative power. A sign of this, according to the Philosopher,[1] is that animals of great size, which require much food, have little semen in proportion to the size of their bodies, and generate seldom; and in like manner fat men, and for the same reason.

Reply Obj. 1. Generation is from the substance of the begetter in animals and plants, in so far as the semen owes its power to the form of the begetter, and in so far as it is in potency to the substance.

Reply Obj. 2. The likeness of the begetter to the begotten is on account not of the matter, but of the form of the agent that generates its like. And so in order for a man to be like his grandfather, there is no need that the corporeal seminal matter should have been in the grandfather, but that there be in the semen a power derived from the soul of the grandfather through the father.

In like manner the *third objection* is answered. For kinship is not according to matter, but rather according to the derivation of the form.

Reply Obj. 4. These words of Augustine are not to be understood as though the immediate seminal principle, or the corporeal substance from which this individual was formed were actually in Adam, but that both were in Adam according to origin. For even the corporeal matter, which is supplied by the mother, and which he calls the corporeal substance, is originally derived from Adam; and likewise the active seminal power of the father, which is the immediate seminal principle of this man.

But Christ is said to have been in Adam according to the corporeal substance, not according to the seminal principle. Because the matter from which His Body was formed, and which was supplied by the Virgin Mother, was derived from Adam; but the active power was not derived from Adam, because His Body was not formed by the seminal power of a man, but by the operation of the Holy Ghost. For such a birth was becoming to Him, WHO IS ABOVE ALL GOD FOR EVER BLESSED. Amen.

[1] *Generation of Animals*, I, 18 (725[a]28).

SECOND PART

Part I of the Second Part

PROLOGUE

SINCE, as Damascene states (*De Fide Orthod.* ii, 12),[1] man is said to be made to God's image, in so far as the image implies an intelligent being endowed with free choice and self-movement, now that we have treated of the exemplar, that is, of God, and of those things which came forth from the power of God in accordance with His will, it remains for us to treat of His image, that is, man, according as he too is the principle of his actions, as having free choice and control of his actions.

TREATISE ON THE LAST END

QUESTION I
OF MAN'S LAST END
(*In Eight Articles*)

IN this matter we shall consider first the last end of human life, and secondly, those things by means of which man may advance towards this end, or stray from it (Q VI); for the end is the rule of whatever is ordered to the end. And since the last end of human life is stated to be Happiness, we must consider (1) the last end in general; (2) Happiness (Q. II).

Under the first head there are eight points of inquiry: (1) Whether it pertains to man to act for an end? (2) Whether this is proper to the rational nature? (3) Whether a man's actions are specified by the end? (4) Whether there is any last end of human life? (5) Whether one man can have several last ends? (6) Whether man orders all things to the last end? (7) Whether all men have the same last end? (8) Whether all other creatures agree with man in that last end?

ARTICLE 1. *Whether It Is Proper to Man To Act for an End?*

We proceed thus to the First Article: It seems unfitting for man to act for an end.

Objection 1. For a cause is naturally first. But an end, in its very name, has the nature of something that is last. Therefore an end does not have the nature of a cause. But that for which a man acts, is the cause of his action, since this preposition "for" indicates a relation of causality. Therefore it is not proper to man to act for an end.

Obj. 2. Further, that which is itself the last end is not for the sake of an end. But in some cases the last end is an action, as the Philosopher states.[2] Therefore man does not do everything for an end.

Obj. 3. Further, a man seems to act for an end whenever he acts deliberately. But man does many things without deliberation, sometimes not even thinking of what he is doing; for instance when one moves one's foot or hand or scratches one's beard while intent on something else. Therefore man does not do everything for an end.

On the contrary, All things contained in a genus are derived from the principle of that genus. Now the end is the principle in human operations, as the Philosopher states,[3] Therefore it is proper to man to do everything for an end.

I answer that, Of actions done by man those alone are properly called "human" which are

[1] PG 94, 920.

[2] *Ethics*, I, 9 (1094[a]4). [3] *Physics*, II. 9 (200[a]34).

proper to man as man. Now man differs from irrational creatures in this, that he is master of his actions. And so those actions alone are properly called human of which man is master. Now man is master of his actions through his reason and will; hence, too, free choice is called "the power of will and reason."[1] Therefore those actions are properly called human which proceed from a deliberate will. And if any other actions are found in man, they can be called actions "of a man," but not properly "human" actions, since they do not pertain to man as man. Now it is clear that whatever actions proceed from a power are caused by that power in accordance with the nature of its object. But the object of the will is the end and the good. Therefore all human actions must be for an end.

Reply Obj. 1. Although the end is last in the order of execution, yet it is first in the order of the agent's intention. And it is in this way that it has the nature of a cause.

Reply Obj. 2. If any human action be the last end, it must be voluntary; otherwise it would not be human, as stated above. Now an action is voluntary in one of two ways: first, because it is commanded by the will, for example, to walk, or to speak; secondly, because it is elicited by the will, for instance the very act of willing Now it is impossible for the very act elicited by the will to be the last end. For the object of the will is the end, just as the object of sight is colour; therefore just as the first visible cannot be the act of seeing, because every act of seeing is of some visible object; so the first appetible, that is, the end, cannot be the act itself of willing. Consequently it follows that if a human action be the last end, it must be an action commanded by the will, so that even in this case some action of man, at least the act of willing, is for the end. Therefore whatever a man does it is true to say that man acts for an end, even when he does that action in which the last end consists.

Reply Obj. 3. Actions of this kind are not properly human actions, since they do not proceed from deliberation of the reason, which is the proper principle of human actions. Therefore they have a kind of imagined end, but not one that is fixed by reason.

Article 2. *Whether It Is Proper to the Rational Nature to Act for an End?*

We proceed thus to the Second Article: It seems that it is proper to the rational nature to act for an end.

Objection 1. For man, to whom it pertains to act for an end, never acts for an unknown end. On the other hand, there are many things that have no knowledge of an end, either because they are altogether without knowledge, as insensible creatures, or because they do not apprehend the aspect of end, as irrational animals. Therefore it seems proper to the rational nature to act for an end.

Obj. 2. Further, to act for an end is to order one's action to an end. But this is the work of reason. Therefore it does not befit things that lack reason.

Obj. 3. Further, the good and the end is the object of the will. But "the will is in the reason."[2] Therefore to act for an end belongs to none but a rational nature.

On the contrary, The Philosopher proves[3] that "not only intellect but also nature acts for an end."

I answer that, Every agent, of necessity, acts for an end. For if in a number of causes ordered to one another the first be removed, the others must of necessity be removed also. Now the first of all causes is the final cause. The reason of which is that matter does not strive after form, save in so far as it is moved by an agent; for nothing reduces itself from potency to act. But an agent does not move except out of intention for an end. For if the agent were not determined to some effect, it would not do one thing rather than another; consequently in order that it produce a determinate effect, it must, of necessity, be determined to some certain one, which has the nature of an end. And just as this determination is effected in the rational nature by the rational appetite, which is called the will, so in other things it is caused by their natural inclination, which is called the natural appetite.

Nevertheless, it must be observed that a thing tends to an end by its action or movement in two ways: first, as a thing moving itself to the end,—as for instance man; secondly, as a thing moved by another to the end, as an arrow tends to a determinate end through being moved by the archer, who directs his action to the end. Therefore those things that have reason move themselves to an end, because they have dominion over their actions through their free choice which is the power of will and reason. But those things that lack reason tend to an end by natural inclination, as being moved by another and not by themselves, since they do not know the nature of an end, and consequently cannot order

[1] Cf. Peter Lombard, *Sent.*, II, d. 24, chap. 3 (QR 1, 421).

[2] *Soul*, III, 9 (432^b5).

[3] *Physics*, II, 5 (196^b21).

anything to an end, but can be ordered to an end only by another. For the entire irrational nature is related to God as an instrument to the principal agent, as stated above (Part I, Q. XXII, A. 2, Reply 4; Q. CIII, A. 1, Reply 3). Consequently it is proper to the rational nature to tend to an end as moving (agens) and leading itself to the end; but it is proper to the irrational nature to tend to an end as moved or led by another, whether it apprehend the end, as do irrational animals, or do not apprehend it, as is the case of those things which are altogether lacking in knowledge.

Reply Obj. 1. When a man of himself acts for an end, he knows the end, but when he is moved or led by another, for instance, when he acts at another's command, or when he is moved under another's compulsion, it is not necessary that he should know the end. And it is thus with irrational creatures.

Reply Obj 2. To order towards an end pertains to that which directs itself to an end, whereas to be ordered to an end belongs to that which is directed by another to an end. And this can belong to an irrational nature, but by reason of some one possessed of reason.

Reply Obj. 3. The object of the will is the end and the good in universal. Consequently there can be no will in those things that lack reason and intellect, since they cannot apprehend the universal; but they have a natural appetite or a sensitive appetite, determined to some particular good Now it is clear that particular causes are moved by a universal cause; thus the governor of a city, who intends the common good, moves by his command all the particular departments of the city. Consequently all things that lack reason are of necessity moved to their particular ends by some rational will which extends to the universal good, namely by the Divine will.

ARTICLE 3. *Whether Human Acts Are Specified By Their End?*

We proceed thus to the Third Article: It seems that human acts are not specified by their end.

Objection 1. For the end is an extrinsic cause. But everything is specified by an intrinsic principle. Therefore human acts are not specified by their end.

Obj. 2. Further, that which gives a thing its species should exist before it. But the end comes last in being. Therefore a human act does not derive its species from the end.

Obj. 3. Further, one thing cannot be in more than one species. But one and the same act may happen to be ordered to various ends. Therefore the end does not give the species to human acts.

On the contrary, Augustine says (*De Mor. Eccl. et Manich.* ii, 13):[1] "According as their end is worthy of blame or praise, so are our deeds worthy of blame or praise."

I answer that, Each thing receives its species in respect of an act and not in respect of potency; therefore things composed of matter and form are established in their respective species by their own forms. And this is also to be observed in proper movements. For since movements are, in a way, divided into action and passion, each of these receives its species from an act; action indeed from the act which is the principle of acting, and passion from the act which is the term of the movement. And so heating as an action is nothing other than a certain movement proceeding from heat, while heating as a passion is nothing other than a movement towards heat; and it is the definition that shows the specific nature. And either way, human acts, whether they be considered as actions or as passions, receive their species from the end. For human acts can be considered in both ways, since man moves himself, and is moved by himself. Now it has been stated above (A. 1) that acts are called human in so far as they proceed from a deliberate will. Now the object of the will is the good and the end. And hence it is clear that the principle of human acts, in so far as they are human, is the end. In like manner it is their term, for the human act terminates at that which the will intends as the end; thus in natural agents the form of the thing generated is conformed to the form of the generator. And since, as Ambrose says (*Prolog. super Luc.*)[2] "morality is said properly of man," moral acts properly speaking receive their species from the end, for moral acts are the same as human acts.

Reply Obj. 1. The end is not altogether extrinsic to the act, because it is related to the act as principle or term; and it is just this that is characteristic of an act, namely, to proceed from something considered as action, and to proceed towards something considered as passion.

Reply Obj. 2. The end, in so far as it preexists in the intention, pertains to the will, as stated above (A. 1, Reply 1). And it is thus that it gives the species to the human or moral act.

Reply Obj. 3. One and the same act, in so far as it proceeds once from the agent, is ordered but to one proximate end, from which it has its species, but it can be ordered to several remote

[1] PL 32, 1356. [2] PL 15, 1612.

ends, of which one is the end of the other. It is possible, however, that an act which is one in respect of its natural species is ordered to several ends of the will; thus this act, to kill a man, which is but one act in respect of its natural species, can be ordered, as to an end, to the safeguarding of justice, and to the satisfying of anger, the result being that there would be several acts in different species of morality, since in one way there will be an act of virtue, in another, an act of vice. For a movement does not receive its species from that which is its term accidentally, but only from that which is its *per se* term. Now moral ends are accidental to a natural thing, and conversely the character of a natural end is accidental to morality. Consequently there is no reason why acts which are the same considered in their natural species should not be different considered in their moral species, and conversely.

ARTICLE 4. *Whether There Is One Last End of Human Life?*

We proceed thus to the Fourth Article: It would seem that there is no last end of human life, but that we proceed to infinity in ends.

Objection 1. For good, according to its very notion spreads itself abroad, as Dionysius states (*Div. Nom.* iv).[1] Consequently if that which proceeds from good is itself good, the latter must diffuse some other good, so that the diffusion of good goes on to infinity. But good has the nature of an end. Therefore there is an infinite series of ends.

Obj. 2. Further, things pertaining to the reason can be multiplied to infinity; thus mathematical quantities have no limit. For the same reason the species of numbers are infinite, since given any number the reason can think of one yet greater. But desire of the end is consequent on the apprehension of the reason. Therefore it seems that there is also an infinite series of ends.

Obj. 3. Further, the good and the end is the object of the will. But the will can turn back on itself an infinite number of times, for I can will something, and will to will it, and so on infinitely. Therefore there is an infinite series of ends of the human will, and there is no last end of the human will.

On the contrary, The Philosopher says[2] that "to suppose a thing to be infinite is to eliminate the good." But the good is that which has the nature of an end. Therefore it is contrary to the nature of an end to proceed to infinity. Therefore it is necessary to fix one last end.

I answer that, Absolutely speaking, it is not possible to proceed infinitely in the matter of ends, from any point of view. For in whatsoever things there is an essential order of one to another, if the first be removed those that are ordered to the first must of necessity be removed also. Thus the Philosopher proves[3] that "we cannot proceed to infinity in causes of movement," because then there would be no first mover, without which neither can the others move, since they move only through being moved by the first mover. Now there is to be observed a twofold order in ends, the order of intention, and the order of execution, and in either of these orders there must be something first. For that which is first in the order of intention is the principle, as it were, moving the appetite; consequently, if you remove this principle there will be nothing to move the appetite. On the other hand, the principle in execution is that in which work has its beginning, and if this principle is taken away, no one will begin to work. Now the principle in the intention is the last end, while the principle in execution is the first of the things which are ordered to the end. Consequently, on neither side is it possible to go on to infinity, since if there were no last end nothing would be desired, nor would any action have its term, nor would the intention of the agent be at rest; while if there is no first thing among those that are ordered to the end, none would begin to work at anything, and counsel would have no term, but would continue infinitely.

On the other hand, we may have an infinity of things that are ordered to one another not essentially but accidentally, for accidental causes are not determinate. And in this way it happens that there is an accidental infinity of ends and of things ordered to the end.

Reply Obj. 1. The very nature of good is that something flows from it, but not that it proceeds from something else. Since, therefore, good has the nature of end, and the first good is the last end, this argument does not prove that there is no last end, but that from the end already supposed we may proceed downwards infinitely towards those things that are ordered to the end. And this would be true if we considered but the power of the First Good, which is infinite. But, since the First Good diffuses itself according to the intellect, to which it is proper to flow forth into its effects according to a certain determined form it follows that there is a certain measure to the flow of good things from the First Good from Which all other goods share

[1] Sect. 26 (PG 3, 719). Cf. also sects. 1, 4 (694, 698).
[2] *Metaphysics*, II, 2 (994^b12).
[3] *Physics*, VIII, 5 (256^a17).

the power of diffusion. Consequently the diffusion of good does not proceed indefinitely, but, as it is written (Wisd. 11. 21), God disposes all things *in number, weight and measure.*

Reply Obj. 2. In things which are of themselves reason begins from principles that are known naturally, and advances to some term. And so the Philosopher proves[1] that there is no infinite process in demonstrations, because there we find a process of things having an essential, not an accidental, connection with one another. But in those things which are accidentally connected nothing hinders the reason from proceeding indefinitely. Now it is accidental to a stated quantity or number, as such, that quantity or unity be added to it. Therefore in things of this kind nothing hinders the reason from an infinite process.

Reply Obj 3. This multiplication of acts of the will turning back on itself is accidental to the order of ends. This is clear from the fact that in regard to one and the same end the will turns back on itself indifferently once or several times.

ARTICLE 5. *Whether One Man Can Have Several Last Ends?*

We proceed thus to the Fifth Article: It would seem possible for one man's will to be directed at the same time to several things, as last ends.

Objection 1. For Augustine says[2] that some held man's last end to consist in four things, namely, "in pleasure, repose, the gifts of nature, and virtue." But these are clearly more than one thing. Therefore one man can place the last end of his will in many things.

Obj. 2. Further, things not in opposition to one another do not exclude one another. Now there are many things which are not in opposition to one another. Therefore the supposition that one thing is the last end of the will does not exclude others.

Obj. 3. Further, by the fact that it places its last end in one thing, the will does not lose its freedom. But before it placed its last end in that thing, for example, pleasure, it could place it in something else, for example, riches. Therefore even after having placed his last end in pleasure, a man can at the same time place his last end in riches. Therefore it is possible for one man's will to be directed at the same time to several things, as last ends.

On the contrary, That in which a man rests as in his last end is master of his affections, since he takes from this his entire rule of life. Hence of gluttons it is written (Phil. 3. 19): *Whose god is their belly,* namely, because they place their last end in the pleasures of the belly. Now according to Matt. 6. 24, *No man can serve two masters,* such, that is, as are not ordered to one another. Therefore it is impossible for one man to have several last ends not ordered to one another.

I answer that, It is impossible for one man's will to be directed at the same time to diverse things, as to so many last ends Three reasons may be assigned for this. First, because since everything desires its own perfection a man desires for his ultimate end that which he desires as his perfect and crowning good. Hence Augustine says,[3] "In speaking of the end of good we mean now not that it passes away so as to be no more, but that it is perfected so as to be complete." It is therefore necessary for the last end so to fill man's appetite that nothing is left beside it for man to desire. And this is not possible if something else be required for his perfection. Consequently it is not possible for the appetite so to tend to two things as though each were its perfect good.

The second reason is because just as in the process of reasoning the principle is that which is naturally known, so in the process of the rational appetite, which is the will, the principle must be that which is naturally desired. Now this must be one, since nature tends to one thing only. But the principle in the process of the rational appetite is the last end. Therefore that to which the will tends under the aspect of last end, must be one.

The third reason is because since voluntary actions receive their species from the end, as stated above (A. 3), they must receive their genus from the last end, which is common to them all, just as natural things are placed in a genus according to a common form. Since, then, all things that can be desired by the will, belong, as such, to one genus, the last end must be one. And all the more because in every genus there is one first principle, and the last end has the nature of a first principle, as stated above.

Now as the last end of man, taken absolutely as man, is to the whole human race, so is the last end of any individual man to that individual man. Therefore, just as of all men there is naturally one last end, so the will of an individual man must be fixed on one last end.

Reply Obj. 1. All these several things were

[1] *Posterior Analytics,* I, 3 (72[b]7); cf. I, 22 (84[a]11).

[2] *City of God,* XIX, 1 (PL 41, 622); cf. also XIX, 4 (PL 41, 627).

[3] *City of God,* XIX, 1 (PL 41, 621).

considered as one perfect good made up from them by those who placed in them the last end.

Reply Obj. 2. Although it is possible to find several things which are not in opposition to one another, yet it is contrary to the perfect good that anything besides be required for that thing's perfection.

Reply Obj. 3. The power of the will does not extend to making opposites to be at the same time. Which would be the case were it to tend to several diverse objects as last ends, as has been shown above (Reply 2).

ARTICLE 6. *Whether Man Wills All That He Wills for the Last End?*

We proceed thus to the Sixth Article: It would seem that man does not will all things whatsoever he wills for the last end.

Objection 1. For things ordered to the last end are said to be serious things, as being useful. But jests are distinguished from serious things. Therefore what man does in jest, he does not order to the last end.

Obj. 2. Further, the Philosopher says at the beginning of his *Metaphysics*[1] that the speculative sciences are sought for their own sake. Now it cannot be said that each speculative science is the last end. Therefore man does not desire all things whatsoever he desires for the last end.

Obj. 3. Further, whoever orders something to an end, thinks of that end. But man does not always think of the last end in all that he desires or does. Therefore man neither desires nor does all for the last end.

On the contrary, Augustine says,[2] "That is the end of our good, for the sake of which we love other things, whereas we love it for its own sake."

I answer that, Man must, of necessity, desire all things whatsoever he desires for the last end. This is evident for two reasons. First, because whatever man desires he desires it under the aspect of good. And if he does not desire it as his perfect good, which is the last end, he must, of necessity, desire it as tending to the perfect good, because the beginning of anything is always ordered to its completion, as is clearly the case in effects both of nature and of art. Therefore every beginning of perfection is ordered to complete perfection which is achieved through the last end. Secondly, because the last end stands in the same relation in moving the appetite as the first mover in other movements. Now it is clear that secondary moving causes do not move except according as they are moved by the first mover. Therefore secondary objects of the appetite do not move the appetite, except as ordered to the first object of the appetite, which is the last end.

Reply Obj. 1. Actions done jestingly are not ordered to any extrinsic end but merely to the good of the jester, in so far as they afford him pleasure or relaxation. But man's perfect good is his last end.

Reply Obj. 2. The same applies to speculative science, which is desired as the investigator's good, included in complete and perfect good, which is the ultimate end.

Reply Obj. 3. One need not always be thinking of the last end whenever one desires or does something; but the force of the first intention, which is in respect of the last end, persists in every desire directed to any object whatever, even though one's thoughts be not actually directed to the last end. Thus while walking along the road one does not need to be thinking of the end at every step.

ARTICLE 7. *Whether All Men Have the Same Last End?*

We proceed thus to the Seventh Article: It would seem that all men have not the same last end.

Objection 1. For before all else the unchangeable good seems to be the last end of man. But some turn away from the unchangeable good, by sinning. Therefore all men have not the same last end.

Obj. 2. Further, man's entire life is ruled according to his last end. If, therefore, all men had the same last end, they would not have various pursuits in life. Which is evidently false.

Obj. 3. Further, the end is the term of action. But actions are of individuals. Now although men agree in their specific nature, yet they differ in things pertaining to individuals. Therefore all men have not the same last end.

On the contrary, Augustine says (*De Trin.* xiii, 3)[3] that all men agree in desiring the last end, which is happiness.

I answer that, We can speak of the last end in two ways: first, considering the notion of last end; secondly, considering the thing in which the aspect of last end is found. So, then, as to the notion of last end, all agree in desiring the last end, since all desire the fulfilment of their perfection, and it is in this that the last end consists, as stated above (A. 5). But as to the thing in which this notion is realized, all men are not

[1] I, 2 (982^a14; $^a28$).
[2] *City of God,* XIX, 1 (PL 41, 621).
[3] PL 42, 1018.

agreed as to their last end, since some desire riches as their consummate good; some, pleasure; others, something else. Thus to every taste the sweet is pleasant; but to some, the sweetness of wine is most pleasant, to others, the sweetness of honey, or of something similar. Yet that sweet is absolutely the best of all pleasant things in which he who has the best taste takes most pleasure. In like manner that good is most complete which the man with well-disposed affections desires for his last end.

Reply Obj. 1. Those who sin turn from that in which their last end really consists, but they do not turn away from the intention of the last end, which intention they mistakenly seek in other things.

Reply Obj. 2. Various pursuits in life are found among men by reason of the various things in which men seek to find their last end.

Reply Obj. 3. Although actions are of individuals, yet their first principle of action is nature, which tends to one thing, as stated above (A. 5).

ARTICLE 8. *Whether Other Creatures Concur in That Last End?*

We proceed thus to the Eighth Article: It would seem that all other creatures concur in man's last end.

Objection 1. For the end corresponds to the beginning. But man's beginning—that is, God—is also the beginning of all else. Therefore all other things concur in man's last end.

Obj. 2. Further, Dionysius says (*Div. Nom.* iv)[1] that God turns all things to Himself as to their last end. But He is also man's last end, because He alone is to be enjoyed by man. Therefore other things, too, concur in man's last end.

Obj. 3. Further, man's last end is the object of the will. But the object of the will is the universal good, which is the end of all. Therefore all must concur in man's last end.

On the contrary, man's last end is happiness, which all men desire, as Augustine says (*De Trin.* xiii, 3, 4).[2] But "happiness is not possible for animals bereft of reason," as Augustine says.[3] Therefore other things do not concur in man's last end.

I answer that, As the Philosopher says,[4] the end is twofold,—the end for which and the end by which; namely, the thing itself in which is found the aspect of good, and the use or acquisition of that thing. Thus we say that the end of the movement of a weighty body is either a lower place as thing, or to be in a lower place, as use; and the end of the miser is money as thing, or possession of money as use.

If, therefore, we speak of man's last end and mean the thing which is the end, then all other things concur in man's last end, since God is the last end of man and of all other things. If, however, we speak of man's last end and mean the attainment of the end, then irrational creatures have no part with man in this end. For man and other rational creatures reach their last end by knowing and loving God, and this is not possible to other creatures, which attain their last end in so far as they share in the Divine likeness, according as they are, or live, or even know.

Hence it is evident how *the objections* are solved, since happiness means the attainment of the last end.

QUESTION II

OF THOSE THINGS IN WHICH MAN'S HAPPINESS CONSISTS

(In Eight Articles)

WE have now to consider happiness: and (1) in what it consists; (2) what it is (Q III); (3) how we can obtain it (Q. V).

Concerning the first there are eight points of inquiry: (1) Whether happiness consists in wealth? (2) Whether in honour? (3) Whether in fame or glory? (4) Whether in power? (5) Whether in any good of the body? (6) Whether in pleasure? (7) Whether in any good of the soul? (8) Whether in any created good?

ARTICLE 1. *Whether Man's Happiness Consists in Wealth?*

We proceed thus to the First Article: It seems that man's happiness consists in wealth.

Objection 1. For since happiness is man's last end, it must consist in that which has the greatest hold on man's affections. Now this is wealth, for it is written (Eccles. 10. 19): *All things obey money.* Therefore man's happiness consists in wealth.

Obj. 2. Further, according to Boëthius (*De Consol.* iii, 2),[5] happiness is "a state of life made perfect by the aggregate of all good things." Now money seems to be the means of possessing all things, for, as the Philosopher says,[6] money was invented that it might be a sort of guarantee for the acquisition of what-

[1] Sect. 4 (PG 3, 700).
[2] Chap. 3 (PL 42, 1018); cf. also *City of God,* XIX, 1 (PL 41, 621).
[3] QQ. LXXXIII., Q. 5 (PL 40, 12).
[4] *Physics,* II, 2 (194^{a}35); cf. also *Soul,* II, 4 (415^{b}2; ^{b}20).
[5] PL 63, 724.
[6] *Ethics,* V, 5 (1133^{b}12).

ever man desires. Therefore happiness consists in wealth.

Obj. 3. Further, since the desire for the sovereign good never fails, it seems to be infinite. But this is the case with riches more than anything else, since *a covetous man shall not be satisfied with riches* (Eccles. 5. 9). Therefore happiness consists in wealth.

On the contrary, Man's good consists in retaining happiness rather than in giving it up. But as Boëthius says (*De Consol.* ii, 5),[1] "wealth shines in giving rather than in hoarding, for the miser is hateful whereas the generous man is applauded." Therefore man's happiness does not consist in wealth.

I answer that, It is impossible for man's happiness to consist in wealth. For wealth is twofold, as the Philosopher says,[2] natural and artificial. Natural wealth is that which serves man as a remedy for his natural wants, such as food, drink, clothing, conveyances, dwellings, and things of this kind, while artificial wealth is that which is not a direct help to nature, as money, but is invented by the art of man for the convenience of exchange and as a measure of things saleable.

Now it is evident that man's happiness cannot consist in natural wealth. For wealth of this kind is sought as a support of human nature; consequently it cannot be man's last end, but rather is ordered to man as to its end. Therefore in the order of nature, all such things are below man, and made for him, according to Ps. 8. 8: *Thou hast subjected all things under his feet.*

And as to artificial wealth, it is not sought save for the sake of natural wealth, since man would not seek it except that by its means he procures for himself the necessaries of life. Consequently much less does it have the character of the last end. Therefore it is impossible for happiness, which is the last end of man, to consist in wealth.

Reply Obj. 1. All material things obey money so far as the multitude of fools is concerned, who know no other than material goods, which can be obtained for money. But we should take our judgment of human goods not from the foolish but from the wise, just as it is for a person whose sense of taste is in good order to judge whether a thing is palatable.

Reply Obj. 2. All things saleable can be had for money, but not spiritual things, which cannot be sold. Hence it is written (Prov. 17. 16): *What doth it avail a fool to have riches, seeing he cannot buy wisdom?*

Reply Obj. 3. The desire for natural riches is not infinite, because they suffice for nature in a certain measure. But the desire for artificial wealth is infinite, for it is the servant of disordered concupiscence, which is not curbed, as the Philosopher makes clear.[3] Yet this desire for wealth is infinite otherwise than the desire for the sovereign good. For the more perfectly the sovereign good is possessed, the more is it loved and other things despised, because the more we possess it, the more we know it. Hence it is written (Ecclus. 24. 29): *They that eat me shall yet hunger.* Whereas in the desire for wealth and for whatsoever temporal goods, the contrary is the case, for when we already possess them, we despise them and seek others, which is the sense of Our Lord's words (John 4. 13): *Whosoever drinketh of this water,* by which temporal goods are signified, *shall thirst again.* The reason of this is that we realize more their insufficiency when we possess them: and this very fact shows that they are imperfect, and that the sovereign good does not consist in them.

ARTICLE 2 *Whether Man's Happiness Consists in Honours?*

We proceed thus to the Second Article: It seems that man's happiness consists in honours.

Objection 1. For "happiness or bliss is the reward of virtue," as the Philosopher says.[4] But honour more than anything else seems to be that by which virtue is rewarded, as the Philosopher says.[5] Therefore happiness consists especially in honours.

Obj. 2. Further, that which belongs to God and to beings of great excellence seems especially to be happiness, which is the perfect good. But that is honour, as the Philosopher says.[6] Moreover, the Apostle says (I Tim. 1. 17): *To . . . the only God be honour and glory.* Therefore happiness consists in honour.

Obj. 3. Further, that which man desires above all is happiness. But nothing seems more desirable to man than honour, since man suffers loss in all other things lest he should suffer loss of honour. Therefore happiness consists in honour.

On the contrary, Happiness is in the happy. But honour "is not in the honoured, but rather in him who honours," and who offers deference to the person honoured, as the Philosopher

[1] PL 63, 690.
[2] *Politics,* I, 9 (1257[a]4).
[3] *Ibid.* (1258[a]1).
[4] *Ethics,* I, 9 (1099[b]16).
[5] *Ibid.,* IV, 3 (1123[b]35).
[6] *Ibid.,* IV, 3 (1123[b]20).

says.[1] Therefore happiness does not consist in honour.

I answer that, It is impossible for happiness to consist in honour. For honour is given to a man on account of some excellence in him, and consequently it is a sign and testimony of the excellence that is in the person honoured. Now a man's excellence is in proportion to his happiness, which is man's perfect good; and to its parts, that is those goods by which he has a certain share of happiness. And therefore honour can result from happiness, but happiness cannot principally consist therein.

Reply Obj. 1. As the Philosopher says,[2] honour is not that reward of virtue, for which the virtuous work, but they receive honour from men by way of reward, as from those who have nothing greater to offer. But virtue's true reward is happiness itself, for which the virtuous work, whereas if they worked for honour, it would no longer be virtue, but ambition.

Reply Obj. 2. Honour is due to God and to beings of great excellence as a sign or testimony of excellence already existing, not that honour makes them excellent.

Reply Obj. 3. That man desires honour above all else arises from his natural desire for happiness, from which honour results, as stated above. And so man seeks to be honoured especially by the wise, on whose judgment he believes himself to be excellent or happy.

ARTICLE 3. *Whether Man's Happiness Consists in Fame or Glory?*

We proceed thus to the Third Article: It seems that man's happiness consists in glory.

Objection 1. For happiness seems to consist in that which is paid to the saints for the trials they have undergone in the world. But this is glory, for the Apostle says (Rom. 8. 18) *The sufferings of this time are not worthy to be compared with the glory to come, that shall be revealed in us.* Therefore happiness consists in glory.

Obj. 2. Further, good pours itself out, as stated by Dionysius (*Div. Nom.* iv).[3] But man's good is spread abroad in the knowledge of others by glory more than by anything else, since, according to Ambrose (Augustine,—*Contra Maxim. Arian.* ii),[4] glory consists "in being well known and praised." Therefore man's happiness consists in glory.

Obj. 3. Further, happiness is the most enduring good. Now this seems to be fame or glory, because by this men attain to eternity after a fashion. Hence Boëthius says (*De Consol.* ii, 7):[5] "You seem to beget unto yourselves eternity, when you think of your fame in future time." Therefore man's happiness consists in fame or glory.

On the contrary, Happiness is man's true good. But it happens that fame or glory is false, for as Boëthius says (*De Consol.* iii, 6),[6] "Many owe their renown to the lying reports spread among the people. Can anything be more shameful? For those who receive false fame must blush at their own praise." Therefore man's happiness does not consist in fame or glory.

I answer that, Man's happiness cannot consist in human fame or glory. For glory consists "in being well known and praised," as Ambrose (Augustine, *loc. cit.*) says. Now the thing known is related to human knowledge otherwise than to God's knowledge, for human knowledge is caused by the things known, whereas God's knowledge is the cause of the things known. Therefore the perfection of human good, which is called happiness, cannot be caused by human knowledge, but rather human knowledge of another's happiness proceeds from, and, in a fashion, is caused by, human happiness itself, whether incomplete or perfect. Consequently man's happiness cannot consist in fame or glory. On the other hand, man's good depends on God's knowledge as its cause. And therefore man's happiness depends, as on its cause, on the glory which man has with God; according to Ps. 90. 15, 16: *I will deliver him, and I will glorify him; I will fill him with length of days, and I will show him my salvation.*

Furthermore, we must observe that human knowledge often fails, especially in contingent singulars, such as are human acts. For this reason human glory is frequently deceptive. But since God cannot be deceived, His glory is always true; hence it is written (II Cor. 10. 18): *He ... is approved ... whom God commendeth.*

Reply Obj. 1. The Apostle speaks, then, not of the glory which is with men, but of the glory which is from God, with His angels. Hence it is written (Mark 8. 38): *The Son of Man shall confess him in the glory of His Father, before His angels.*[7]

Reply Obj. 2. A man's good which, through fame or glory, is in the knowledge of many, if

[1] *Ethics*, I, 5 (1095[b]24). [2] *Ibid.*
[3] Sect. 20 (PG 3, 719); cf. sects. 1, 4 (694, 698).
[4] Chap. 13 (PL 42, 770).
[5] PL 63, 711. [6] PL 63, 745.
[7] St. Thomas joins Mark 8. 38 with Luke 12. 8, owing to a possible variant in his text, or to the fact that he was quoting from memory.

this knowledge be true, must be derived from good existing in the man himself, and hence it presupposes perfect or incomplete happiness. But if the knowledge be false, it does not harmonize with the thing, and thus good does not exist in him who is looked upon as famous. Hence it follows that fame can in no way make man happy.

Reply Obj. 3. Fame has no stability; in fact, it is easily ruined by false report. And if sometimes it endures, this is by accident. But happiness endures of itself, and for ever.

Article 4. *Whether Man's Happiness Consists in Power?*

We proceed thus to the Fourth Article: It seems that happiness consists in power.

Objection 1. For all things desire to become like God, as to their last end and first beginning. But men who are in power seem, on account of the similarity of power, to be most like God; hence also in Scripture they are called gods (Exod. 12. 8),—*Thou shalt not speak ill of the gods.* Therefore happiness consists in power.

Obj. 2. Further, happiness is the perfect good. But the highest perfection for man is to be able to rule others, which belongs to those who are in power. Therefore happiness consists in power.

Obj. 3. Further, since happiness is supremely desirable, it is contrary to that which is before all to be shunned. But, more than anything else, men shun servitude, which is contrary to power. Therefore happiness consists in power.

On the contrary, Happiness is the perfect good. But power is most imperfect. For as Boëthius says (*De Consol.* iii, 4),[1] "the power of man cannot relieve the gnawings of care, nor can it avoid the thorny path of anxiety"; and further on: "Think you a man is powerful who is surrounded by attendants, whom he inspires with fear indeed, but whom he fears still more?" Therefore happiness does not consist in power.

I answer that, It is impossible for happiness to consist in power, and this for two reasons. First because power has the nature of a principle, as is stated in the *Metaphysics,*[2] whereas happiness has the nature of last end. Secondly, because power has relation to good and evil, whereas happiness is man's proper and perfect good. Therefore some happiness might consist rather in the good use of power, which is through virtue, rather than in power itself.

Now four general reasons may be given to prove that happiness consists in none of the foregoing external goods. First, because, since happiness is man's supreme good, it is incompatible with any evil. Now all the foregoing can be found both in good and in evil men. Secondly, because since it is the nature of happiness "to be self-sufficient," as stated in the *Ethics,*[3] having gained happiness man cannot lack any needed good. But after acquiring any one of the foregoing, man may still lack many goods that are necessary to him; for instance, wisdom, bodily health, and the like. Thirdly, because, since happiness is the perfect good, no evil can accrue to anyone from it. This cannot be said of the foregoing, for it is written (Eccles. 5. 12) that *riches* are sometimes *kept to the hurt of the owner;* and the same may be said of the other three. Fourthly, because man is ordered to happiness through principles that are within him, since he is naturally ordered to happiness. Now the four goods mentioned above are due rather to external causes, and in most cases to fortune, for which reason they are called goods of fortune. Therefore it is evident that happiness in no way consists in the foregoing.

Reply Obj. 1. God's power is His goodness; hence He cannot use His power otherwise than well. But it is not so with men. Consequently it is not enough for man's happiness that he become like God in power, unless he become like Him in goodness also.

Reply Obj. 2. Just as it is a very good thing for a man to make good use of power in ruling many, so is it a very bad thing if he makes a bad use of it. And so it is that power is towards good and evil.

Reply Obj. 3. Servitude is a hindrance to the good use of power; therefore is it that men naturally shun it, not because man's supreme good consists in power.

Article 5. *Whether Man's Happiness Consists in Any Bodily Good?*

We proceed thus to the Fifth Article: It would seem that man's happiness consists in bodily goods.

Objection 1. For it is written (Ecclus. 30. 16): *There are no riches above the riches of the health of the body.* But happiness consists in that which is best. Therefore it consists in the health of the body.

Obj. 2. Further, Dionysius says (*Div. Nom.* v),[4] that to be is better than to live, and to live is better than all that follows. But for man's being and living, the health of the body is necessary. Since, therefore, happiness is man's su-

[1] PL 63, 741. [2] Aristotle, v, 12 (1019[a]15).
[3] Aristotle, i, 7 (1097[b]8).
[4] Sect. 3 (PG 3, 817).

preme good, it seems that health of the body belongs more than anything else to happiness.

Obj. 3. Further, the more universal a thing is, the higher the principle from which it depends, because the higher a cause is, the greater the scope of its power. Now just as the causality of the efficient cause consists in its flowing into something, so the causality of the end consists in its drawing the appetite. Therefore, just as the First Efficient Cause is that which flows into all things, so the last end is that which attracts the desire of all. But being itself is that which is most desired by all. Therefore man's happiness consists most of all in things pertaining to his being, such as the health of the body.

On the contrary, Man surpasses all other animals in regard to happiness. But in bodily goods he is surpassed by many animals; for instance, by the elephant in longevity, by the lion in strength, by the stag in fleetness. Therefore man's happiness does not consist in goods of the body.

I answer that, It is impossible for man's happiness to consist in the goods of the body, and this for two reasons. First, because if a thing be ordered to another as to its end, the last end of that thing cannot consist in the preservation of its own being. Hence a captain does not intend, as a last end, the preservation of the ship entrusted to him, since a ship is ordered to something else as an end, namely, to navigation. Now just as the ship is entrusted to the captain that he may steer its course, so man is given over to his will and reason, according to Ecclus. 15. 14: *God made man from the beginning and left him in the hand of his own counsel.* Now it is evident that man is ordered to something as his end, since man is not the supreme good. Therefore the last end of man's reason and will cannot be the preservation of man's being.

Secondly, because, granted that the end of man's will and reason be the preservation of man's being, it could not be said that the end of man is some good of the body. For man's being consists in soul and body; and though the being of the body depends on the soul, yet the being of the human soul depends not on the body, as shown above (Part I, Q. LXXV, A. 2); and the very body is for the sake of the soul, as matter for its form, and the instruments for the man that puts them into motion, that by their means he may do his work. And so all goods of the body are ordered to the goods of the soul, as to their end. Consequently happiness, which is man's last end, cannot consist in goods of the body.

Reply Obj. 1. Just as the body is ordered to the soul, as its end, so are external goods ordained to the body itself. And therefore it is with reason that the good of the body is preferred to external goods, which are signified by riches, just as the good of the soul is preferred to all bodily goods.

Reply Obj. 2. Being taken absolutely, as including all perfection of being, surpasses life and all the perfections consequent upon it; for thus being itself includes all these. And in this sense Dionysius speaks. But if we consider being itself as participated in this or that thing, which does not possess the whole perfection of being but has imperfect being, such as the being of any creature, then it is evident that being itself together with an additional perfection is more excellent. Hence in the same passage Dionysius says that things that live are better than things that exist, and intelligent better than living things.

Reply Obj. 3. Since the end corresponds to the beginning, this argument proves that the last end is the first beginning of being, in Whom every perfection of being is, Whose likeness, according to their perfection, some desire as to being only, some as to living being, some as to being which is living, intelligent and happy. And this belongs to few.

ARTICLE 6. *Whether Man's Happiness Consists in Pleasure?*

We proceed thus to the Sixth Article: It seems that man's happiness consists in pleasure.

Objection 1. For since happiness is the last end, it is not desired for something else, but other things for it. But this answers to pleasure more than to anything else, "for it is absurd to ask anyone what is his motive in wishing to be pleased"[1] Therefore happiness consists principally in pleasure and delight.

Obj. 2. Further, "the first cause goes more deeply into the effect than the second cause" (*De Causis,* i).[2] Now the influence of the end consists in its attracting the appetite. Therefore it seems that that which moves most the appetite answers to the notion of the last end. Now this is pleasure, and a sign of this is that delight so far absorbs man's will and reason that it causes him to despise other goods. Therefore it seems that man's last end, which is happiness, consists principally in pleasure.

Obj. 3. Further, since desire is for good, it seems that what all desire is best. But all desire delight, both wise and foolish, and even irra-

[1] *Ethics,* X, 2 (1172[b]22). [2] BA 163.

tional creatures. Therefore delight is the best of all. Therefore happiness, which is the supreme good, consists in pleasure.

On the contrary, Boëthius says (*De Consol.* iii, 7):[1] "Any one that chooses to look back on his past excesses, will perceive that pleasures have a sad ending; and if they can render a man happy, there is no reason why we should not say that the very beasts are happy too."

I answer that, "Because bodily delights are more generally known, the name of pleasure has been appropriated to them,"[2] although other delights excel them; and yet happiness does not consist in them. Because in every thing, that which pertains to its essence is distinct from its proper accident; thus in man it is one thing that he is a mortal rational animal, and another that he is an animal capable of laughter. We must therefore consider that every delight is a kind of proper accident resulting from happiness or from some part of happiness, since the reason that a man is delighted is that he has some fitting good, either in reality, or in hope, or at least in memory. Now a fitting good, if indeed it be the perfect good, is precisely man's happiness; and if it is imperfect, it is a share of happiness, either proximate, or remote, or at least apparent. Therefore it is evident that neither is delight, which results from the perfect good, the very essence of happiness, but something resulting from it as its proper accident.

But bodily pleasure cannot result from the perfect good even in that way. For it results from a good apprehended by sense, which is a power of the soul, which power makes use of the body. Now good pertaining to the body and apprehended by sense cannot be man's perfect good. For since the rational soul excels the proportion of corporeal matter, that part of the soul which is independent of a corporeal organ has a certain infinity in regard to the body and those parts of the soul which are tied down to the body, just as immaterial things are in a way infinite as compared to material things, since a form is, after a fashion, contracted and bounded by matter, so that a form which is independent of matters is, in a way, infinite. Therefore sense, which is a power of the body, knows the singular, which is determinate through matter, whereas the intellect, which is a power independent of matter, knows the universal, which is abstracted from matter, and contains under it an infinite number of singulars. Consequently it is evident that good which is fitting to the body, and which causes bodily delight through being apprehended by sense, is not man's perfect good, but is very small as compared with the good of the soul. Hence it is written (Wisd. 7. 9) that *all gold in comparison of her, is as a little sand* And therefore bodily pleasure is neither happiness itself nor a proper accident of happiness.

Reply Obj. 1. It comes to the same whether we desire good, or desire delight, which is nothing else than the appetite's rest in good; thus it is owing to the same natural force that a weighty body is borne downwards and that it rests there. Consequently just as good is desired for itself, so delight is desired for itself and not for anything else, if the preposition "for" denote the final cause. But if it denote the formal or rather the moving cause, then delight is desirable for something else, that is, for the good which is the object of that delight, and consequently is its principle, and gives it its form for the reason that delight is desired is that it is rest in the thing desired.

Reply Obj. 2. The vehemence of desire for sensible delight arises from the fact that operations of the senses, through being the principles of our knowledge, are more perceptible. And so it is that sensible pleasures are desired by the majority.

Reply Obj. 3. All desire delight in the same way as they desire good, and yet they desire delight by reason of the good and not conversely as stated above (Reply 1). Consequently it does not follow that delight is the supreme and per se good, but that every delight results from some good, and that some delight results from that which is the per se and supreme good.

Article 7. *Whether Some Good of the Soul Constitutes Man's Happiness?*

We proceed thus to the Seventh Article: It seems that some good of the soul constitute man's happiness.

Objection 1. For happiness is man's good. Now this is threefold, external goods, goods of the body, and goods of the soul. But happiness does not consist in external goods, nor in goods of the body, as shown above (aa. 4, 5). Therefore it consists in goods of the soul.

Obj. 2. Further, we love that for which we desire good more than the good that we desire for it; thus we love a friend for whom we desire money more than we love money. But whatever good a man desires, he desires it for himself. Therefore he loves himself more than all other goods. Now happiness is what is loved above all, which is evident from the fact that for its sake

[1] PL 63, 749. [2] *Ethics,* VII, 13 (1153^{b}33).

all else is loved and desired. Therefore happiness consists in some good of man himself; not, however, in goods of the body. Therefore it consists in goods of the soul.

Obj. 3. Further, perfection is something belonging to that which is perfected. But happiness is a perfection of man. Therefore happiness is something belonging to man. But it is not something belonging to the body, as shown above (A. 5). Therefore it is something belonging to the soul; and thus it consists in goods of the soul.

On the contrary As Augustine says,[1] "that which constitutes the life of happiness is to be loved for its own sake." But man is not to be loved for his own sake, but whatever is in man is to be loved for God's sake. Therefore happiness consists in no good of the soul.

I answer that, As stated above (Q. 1, A. 8), the end is twofold: namely, the thing itself, which we desire to attain, and the use, namely, the attainment or possession of that thing. If, then, we speak of man's last end as to the thing itself which we desire as last end, it is impossible for man's last end to be the soul itself or something belonging to it. Because the soul, considered in itself, is as something existing in potency; for it becomes knowing actually, from being potentially knowing and actually virtuous, from being potentially virtuous. Now since potency is for the sake of act as for its fulfilment, that which in itself is in potency cannot have the character of last end. Therefore the soul itself cannot be its own last end.

In like manner neither can anything belonging to it, whether power, habit, or act. For that good which is the last end is the perfect good fulfilling the desire. Now man's appetite, otherwise the will, is for the universal good. And any good inherent to the soul is a participated good, and consequently a particularized good. Therefore none of them can be man's last end.

But if we speak of man's last end, with respect to its attainment or possession, or as to any use whatever of the thing itself desired as an end, in this way something of man, in respect of his soul, belongs to his last end, since man attains happiness through his soul. Therefore the thing itself which is desired as end is that which constitutes happiness, and makes man happy; but the attainment of this thing is called happiness. Consequently we must say that happiness is something belonging to the soul, but that which constitutes happiness is something outside the soul.

[1] *Christian Doctrine,* I, 22 (PL 34, 26).

Reply Obj. 1. According as this division includes all goods that man can desire, the good of the soul is not only power, habit, or act, but also the object of these, which is something outside. And in this way nothing hinders us from saying that what constitutes happiness is a good of the soul.

Reply Obj. 2 As far as the proposed objection is concerned, happiness is loved above all, as the good desired, whereas a friend is loved as that to which good is desired; and thus, too, man loves himself. Consequently it is not the same kind of love in both cases. As to whether man loves anything to a greater degree than himself with the love of friendship, there will be occasion to inquire when we treat of Charity.

Reply Obj. 3. Happiness itself, since it is a perfection of the soul, is a good inhering in the soul; but that which constitutes happiness, namely what makes man happy, is something outside his soul, as stated above.

ARTICLE 8. *Whether Any Created Good Constitutes Man's Happiness?*

We proceed thus to the Eighth Article: It seems that some created good constitutes man's happiness.

Objection 1. For Dionysius says (*Div. Nom.* vii)[2] that "Divine wisdom unites the ends of first things to the beginnings of second things," from which we may gather that the summit of a lower nature touches the base of the higher nature. But man's highest good is happiness. Since then the angel is above man in the order of nature, as stated in the First Part (Q. CXI, A. 1; Q. CVIII, AA. 2, 8; Q. CXI, A 1), it seems that man's happiness consists in man somehow reaching to the angel.

Obj. 2. Further, the last end of each thing is that which, in relation to it, is perfect; hence the part is for the whole, as for its end. But the universe of creatures which is called the macrocosm, is compared to man who is called the microcosm,[3] as perfect to imperfect. Therefore man's happiness consists in the whole universe of creatures.

Obj. 3. Further, man is made happy by that in which his natural desire takes its rest. But man's desire does not reach out to a good surpassing his capacity. Since then man's capacity does not include that good which surpasses the limits of all creation, it seems that man can be made happy by some created good. Consequently some created good constitutes man's happiness.

On the contrary, Augustine says,[4] "As the soul

[2] Sect. 3 (PG 3, 872). [3] *Physics,* VIII, 2 (252^b24).
[4] *City of God,* XIX, 26 (PL 41, 656).

is the life of the body, so God is man's life of happiness; of Whom it is written": *Happy is that people whose God is the Lord* (Ps. 143 15).

I answer that, It is impossible for any created good to constitute man's happiness. For happiness is the perfect good, which, quiets the appetite altogether since it would not be the last end if something yet remained to be desired. Now the object of the will, that is, of man's appetite, is the universal good, just as the object of the intellect is the universal true. Hence it is evident that nothing can quiet man's will except the universal good. This is to be found not in any creature, but in God alone, because every creature has goodness by participation. Therefore God alone can satisfy the will of man, according to the words of Ps. 102. 5: *Who satisfieth thy desire with good things.* Therefore God alone constitutes man's happiness.

Reply Obj. 1. The summit of man does indeed touch the base of the angelic nature, by a kind of likeness; but man does not rest there as in his last end, but reaches out to the universal fount itself of good, which is the common object of happiness of all the blessed, as being the infinite and perfect good.

Reply Obj. 2. If a whole be not the last end, but ordered to a further end, then the last end of its part is not the whole itself, but something else. Now the universe of creatures, to which man is related as part to whole, is not the last end, but is ordered to God, as to its last end. Therefore the last end of man is not the good of the universe, but God Himself.

Reply Obj. 3. Created good is not less than that good of which man is capable, as of something intrinsic and inherent to him, but it is less than the good of which he is capable as of an object, and which is infinite. And the participated good which is in an angel, and in the whole universe, is a finite and restricted good.

QUESTION III

WHAT IS HAPPINESS

(In Eight Articles)

We have now to consider (1) what happiness is, and (2) what things are required for it (Q. IV).

Concerning the first there are eight points of inquiry: (1) Whether happiness is something uncreated? (2) If it be something created, whether it is an operation? (3) Whether it is an operation of the sensitive, or only of the intellectual part? (4) If it be an operation of the intellectual part, whether it is an operation of the intellect, or of the will? (5) If it be an operation of the intellect, whether it is an operation of the speculative or of the practical intellect? (6) If it be an operation of the speculative intellect, whether it consist in the considerations of speculative sciences? (7) Whether it consists in the consideration of separate substances, namely, angels? (8) Whether it consists in the sole contemplation of God seen in His Essence?

ARTICLE 1. *Whether Happiness Is Something Uncreated?*

We proceed thus to the First Article: It seems that happiness is something uncreated.

Objection 1. For Boëthius says (*De Consol.* iii, 10):[1] "We must confess that God is happiness itself."

Obj. 2. Further, happiness is the supreme good. But it pertains to God to be the supreme good. Since, then, there are not several supreme goods, it seems that happiness is the same as God.

Obj. 3. Further, happiness is the last end, to which man's will tends naturally. But man's will should tend to nothing else as an end, but to God, Who alone is to be enjoyed, as Augustine says.[2] Therefore happiness is the same as God.

On the contrary, Nothing made is uncreated. But man's happiness is something made, because according to Augustine,[3] "Those things are to be enjoyed, which make us happy." Therefore happiness is not something uncreated.

I answer that, As stated above (Q. I, A. 8; Q. II, A. 7), our end is twofold. First, there is the thing itself which we desire to attain; thus for the miser, the end is money. Secondly there is the attainment or possession, the use or enjoyment of the thing desired; thus we may say that the end of the miser is the possession of money, and the end of the intemperate man is to enjoy something pleasurable. In the first sense, then, man's last end is the uncreated good, namely God, Who alone, of His infinite goodness can perfectly satisfy man's will. But in the second way, man's last end is something created, existing in him, and this is nothing else than the attainment or enjoyment of the last end. Now the last end is called happiness. If, therefore, we consider man's happiness in its cause or object, then it is something uncreated; but if we con-

[1] PL 63, 766.
[2] *Christian Doctrine,* I, 5, 22 (PL 34, 21, 26).
[3] *Ibid.,* I, 3 (PL 34, 20).

sider it as to the very essence of happiness, then it is something created.

Reply Obj. 1. God is happiness by His Essence, for He is happy not by acquisition or participation of anything else, but by His Essence. On the other hand, men are happy, as Boethius says (*loc. cit.*) by participation, just as they are called gods, by participation. And this participation of happiness, in respect of which man is said to be happy, is something created.

Reply Obj. 2. Happiness is called man's supreme good because it is the attainment or enjoyment of the supreme good.

Reply Obj. 3. Happiness is said to be the last end in the same way as the attainment of the end is called the end.

ARTICLE 2. *Whether Happiness Is an Operation?*

We proceed thus to the Second Article: It would seem that happiness is not an operation.

Objection 1. For the Apostle says (Rom. 6. 22): *You have your fruit unto sanctification, and the end, life everlasting.* But life is not an operation, but the very being of living things. Therefore the last end, which is happiness, is not an operation.

Obj. 2. Further, Boethius says (*De Consol.* iii, 2)[1] that happiness is "a state made perfect by the aggregate of all good things." But state does not indicate operation. Therefore happiness is not an operation.

Obj. 3. Further, happiness signifies something existing in the happy one, since it is man's final perfection. But the meaning of operation does not imply anything existing in the operator, but rather something proceeding from it. Therefore happiness is not an operation.

Obj. 4. Further, happiness remains in the happy one. Now operation does not remain, but passes. Therefore happiness is not an operation.

Obj. 5. Further, to one man there is one happiness. But operations are many. Therefore happiness is not an operation.

Obj. 6. Further, happiness is in the happy one uninterruptedly. But human operation is often interrupted; for instance, by sleep, or some other occupation, or by cessation. Therefore happiness is not an operation.

On the contrary, The Philosopher says[2] that "happiness is an operation according to perfect virtue."

I answer that, In so far as man's happiness is something created, existing in him, we must say that it is an operation. For happiness is man's supreme perfection. Now each thing is perfect in so far as is actual, for potency without act is imperfect. Consequently happiness must consist in man's last act. But it is evident that operation is the last act of the operator, and so the Philosopher calls it second act,[3] because that which has a form can be potentially operating, just as he who knows is potentially considering. And hence it is that in other things, too, "each thing is said to be for its operation."[4] Therefore man's happiness must of necessity consist in an operation.

Reply Obj. 1. Life is taken in two senses. First for the very being of the living. And thus happiness is not life, since it has been shown (Q. II, A. 5) that the being of a man, no matter in what it may consist, is not that man's happiness; for of God alone is it true that His Being is His happiness. Secondly, life means the operation of the living, by which operation the principle of life is made actual; thus we speak of active and contemplative life, or of a life of pleasure. And in this sense eternal life is said to be the last end, as is clear from John 17. 3: *This is life everlasting, that they may know Thee, the only true God.*

Reply Obj. 2. Boëthius, in defining happiness, considered happiness in general, for considered thus it is the perfect common good; and he signified this by saying that happiness is "a state made perfect by the aggregate of all good things," thus implying nothing other than that the happy man is in a state of perfect good. But Aristotle expressed the very essence of happiness, showing by what man is established in this state, and that it is by some kind of operation.[5] And so it is that he also proves happiness to be "the perfect good."[6]

Reply Obj. 3. As stated in the *Metaphysics*[7] action is twofold. One proceeds from the agent into outward matter, such as to burn and to cut. And such an operation cannot be happiness, for such an operation is an action and a perfection not of the agent but rather of the patient, as is stated in the same passage. The other is an action that remains in the agent, such as to feel, to understand, and to will, and such an action is a perfection and an act of the agent. And such an operation can be happiness.

Reply Obj. 4. Since happiness signifies some final perfection, according as various things

[1] PL 63, 724.
[2] *Ethics*, I, 13 (1102[a]5); also, I, 7 (1098[a]16).
[3] *Soul*, II, 1 (412[a]23).
[4] *Heavens*, II, 3 (286[a]8).
[5] *Ethics*, I, 7, 13 (1098[a]16; 1102[a]5).
[6] *Ibid.*, I, 7 (1097[a]29).
[7] Aristotle, IX, 8 (1050[a]30).

capable of happiness can attain to various degrees of perfection, so must there be various meanings applied to happiness. For in God there is happiness essentially, since His very Being is His operation, whereby He enjoys no other than Himself. In the happy angels, the final perfection is in respect of some operation, by which they are united to the Uncreated Good, and this operation of theirs is one only and everlasting. But in men, according to their present state of life, the final perfection is in respect of an operation whereby man is united to God; but this operation neither can be continual, nor, consequently, is it one only, because operation is multiplied by being interrupted. And for this reason in the present state of life, perfect happiness cannot be attained by man. Hence the Philosopher, in placing man's happiness in this life,[1] says that it is imperfect, and after a long discussion, concludes: "We call men happy, but only as men." But God has promised us perfect happiness, when we shall be *as the angels . . . in heaven* (Matt 22. 30).

Consequently in regard to this perfect happiness, the objection fails, because in that state of happiness, man's mind will be united to God by one, continual, everlasting operation. But in the present life, in as far as we fall short of the unity and continuity of that operation, we fall short of perfect happiness. Nevertheless it is a participation of happiness, and so much the greater as the operation can be more continuous and more one. Consequently the active life, which is busy with many things, has less of the character of happiness than the contemplative life, which is busied with one thing, that is, the contemplation of truth. And if at any time man is not actually engaged in this operation, yet since he can always easily turn to it, and since he orders the very cessation, for example, sleep or other natural occupations to the aforesaid operation, the latter seems, as it were, continuous.

From these remarks the *replies to objections 5 and 6 are evident.*

ARTICLE 3. *Whether Happiness Is an Operation of the Sensitive Part, or of the Intellectual Part Only?*

We proceed thus to the Third Article: It seems that happiness consists in an operation of the senses only.

Objection 1. For there is no more excellent operation in man than that of the senses, except the intellectual operation. But in us the intellectual operation depends on the sensitive, since "we cannot understand without a phantasm."[2] Therefore happiness consists in an operation of the senses also.

Obj. 2. Further, Boëthius says (*De Consol.* iii. 2)[3] that happiness is "a state made perfect by the aggregate of all good things." But some goods are sensible, which we attain by the operation of the senses. Therefore it seems that the operation of the senses is needed for happiness

Obj. 3. Further, "happiness is the perfect good," as we find proved in the *Ethics*,[4] which would not be true, were not man perfected thereby in all his parts. But some parts of the soul are perfected by sensitive operations. Therefore sensitive operation is required for happiness.

On the contrary, Irrational animals have the sensitive operation in common with us, but they have not happiness in common with us. Therefore happiness does not consist in a sensitive operation.

I answer that, A thing may pertain to happiness in three ways: (1) essentially, (2) antecedently, (3) consequently. Now the operation of sense cannot pertain to happiness essentially. For man's happiness consists essentially in his being united to the Uncreated Good, Which is his last end, as shown above (A 1), to Which man cannot be united by an operation of his senses. Again, in like manner, because, as shown above (Q. II, A. 5), man's happiness does not consist in goods of the body, which goods alone, however, we attain through the operation of the senses.

Nevertheless the operations of the senses can pertain to happiness, both antecedently and consequently: antecedently, in respect of imperfect happiness, such as can be had in this life, since the operation of the intellect demands a previous operation of the sense; consequently, in that perfect happiness which we await in heaven, because at the resurrection, from the very happiness of the soul, as Augustine says (*Ep. ad Dioscor.*)[5] the body and the bodily senses will receive a certain overflow, so as to be perfected in their operations, a point which will be explained further on when we treat of the resurrection (Part III, Suppl. Q. LXXXII). But then the operation by which man's mind is united to God will not depend on the senses.

Reply Obj. 1. This objection proves that the operation of the senses is required antecedently

[1] *Ethics*, I, 10 (1101[a]20).
[2] *Soul*, III, 7 (431[a]16).
[3] PL 63, 724.
[4] Aristotle, I, 7 (1097[b]29).
[5] *Epist.*, 118, chap. 3 (PL 33, 439).

for imperfect happiness, such as can be had in this life.

Reply Obj. 2. Perfect happiness, such as the angels have, includes the aggregate of all good things, by being united to the universal source of all good,—not that it requires each individual good. But in this imperfect happiness, we need the aggregate of those goods that suffice for the most perfect operation of this life.

Reply Obj. 3. In perfect happiness the entire man is perfected, but in the lower part of his nature, by an overflow from the higher. However in the imperfect happiness of this life, it is otherwise; we advance from the perfection of the lower part to the perfection of the higher part.

ARTICLE 4. *Whether, if Happiness Is in the Intellectual Part, It Is an Operation of the Intellect or of the Will?*

We proceed thus to the Fourth Article: It would seem that happiness consists in an act of the will.

Objection 1. For Augustine says[1] that man's happiness consists in peace; therefore it is written (Ps. 147. 3): *Who hath placed peace in thy end* (Douay,— *borders*). But peace pertains to the will. Therefore man's happiness is in the will.

Obj. 2. Further, happiness is the supreme good. But good is the object of the will. Therefore happiness consists in an operation of the will.

Obj. 3. Further, the last end corresponds to the first mover; thus the last end of the whole army is victory, which is the end of the leader, who moves all the men. But the first mover in regard to operations is the will, because it moves the other powers, as we shall state further on (Q. IX, AA. 1, 3). Therefore happiness pertains to the will.

Obj. 4. Further, if happiness be an operation, it must be man's most excellent operation. But the love of God, which is an act of the will, is a more excellent operation than knowledge, which is an operation of the intellect, as the Apostle declares (I Cor. 13.). Therefore it seems that happiness consists in an act of the will.

Obj. 5. Further, Augustine says (*De Trin.* xiii, 5)[2] that "happy is he who has whatever he desires, and desires nothing amiss." And a little further on he adds:[3] "He is almost happy who desires well, whatever he desires, for good things make a man happy, and such a man already possesses some good—namely, a good will." Therefore happiness consists in an act of the will.

On the contrary, Our Lord said (John 17. 3): *This is eternal life: that they may know Thee, the only true God.* Now eternal life is the last end, as stated above (A. 2, Reply 1). Therefore man's happiness consists in the knowledge of God, which is an act of the intellect.

I answer that, As stated above (Q. II, A. 6) two things are needed for happiness: the one, which is the essence of happiness; the other, which is, as it were, its proper accident, that is, the delight joined to it. I say, then, that as to the very essence of happiness, it is impossible for it to consist in an act of the will. For it is evident from what has been said (AA. 1, 2; Q. II, A. 7) that happiness is the attainment of the last end. But the attainment of the end does not consist in the act of the will itself. For the will is directed to the end, both absent, when it desires it, and present, when it is delighted by resting in it. Now it is evident that the desire itself of the end is not the attainment of the end, but is a movement towards the end, while delight comes to the will from the end being present; and a thing, conversely, is not made present by the fact that the will delights in it. Therefore, that the end be present to him who desires it must be due to something else than an act of the will.

This is evidently the case in regard to sensible ends. For if the acquisition of money were through an act of the will, the covetous man would have it from the very moment that he wished for it. But at that moment it is far from him; and he attains it by grasping it in his hand, or in some like manner, and then he delights in the money acquired. And so it is with an intelligible end. For at first we desire to attain an intelligible end; we attain it, through its being made present to us by an act of the intellect; and then the delighted will rests in the end when it is attained.

So, therefore, the essence of happiness consists in an act of the intellect, but the delight that results from happiness pertains to the will. In this sense Augustine says[4] that "happiness is joy in truth," because, namely, joy itself is the consummation of happiness.

Reply Obj. 1. Peace pertains to man's last end, not as though it were the very essence of happiness, but because it is antecedent and consequent to it: antecedent, in so far as all those things are removed which disturb and hinder

[1] *City of God,* XIX, 10, 11 (PL 41, 636, 637).
[2] PL 42, 1020. [3] Chap. 6 (PL 42, 1020).
[4] *Confessions,* X, 33 (PL 32, 793).

man in attaining the last end; consequent, since, when man has attained his last end, he remains at peace, his desire being at rest.

Reply Obj. 2. The will's first object is not its act, just as the first object of the sight is not vision, but a visible thing. Therefore, from the very fact that happiness pertains to the will, as the will's first object, it follows that it does not pertain to it as its act.

Reply Obj. 3. The intellect apprehends the end before the will does, yet motion towards the end begins in the will. And therefore to the will belongs that which last of all follows the attainment of the end, namely, delight or enjoyment.

Reply Obj. 4. Love ranks above knowledge in moving, but knowledge precedes love in attaining, for "naught is loved save what is known," as Augustine says (*De Trin.* x).[1] Consequently we first attain an intelligible end by an act of the intellect, just as we first attain a sensible end by an act of sense.

Reply Obj. 5. He who has whatever he desires, is happy because he has what he desires, and this indeed is by something other than the act of his will. But to desire nothing amiss is needed for happiness, as a necessary disposition thereto. And a good will is reckoned among the good things which make a man happy, since it is an inclination of the will; just as a movement is reduced to the genus of its term, for instance, alteration to the genus quality.

Article 5. *Whether Happiness Is an Operation of the Speculative, or of the Practical Intellect?*

We proceed thus to the Fifth Article: It seems that happiness is an operation of the practical intellect.

Objection 1. For the last end of every creature consists in becoming like God. But man is like God by his practical intellect, which is the cause of things understood, rather than by his speculative intellect, which derives its knowledge from things. Therefore man's happiness consists in an operation of the practical intellect rather than of the speculative.

Obj. 2. Further, happiness is man's perfect good. But the practical intellect is ordered to the good rather than the speculative intellect, which is ordered to the true. Hence we are said to be good according to the perfection of the practical intellect, but not according to the perfection of the speculative intellect, according to which we are said to be knowing or understanding. Therefore man's happiness consists in an act of the practical intellect rather than of the speculative.

Obj. 3. Further, happiness is a good of man himself. But the speculative intellect is more concerned with things outside man, whereas the practical intellect is concerned with things pertaining to man himself, namely, his operations and passions. Therefore man's happiness consists in an operation of the practical intellect rather than of the speculative.

On the contrary, Augustine says (*De Trin.* i, 8)[2] that "contemplation is promised us as being the goal of all our actions, and the everlasting perfection of our joys."

I answer that, Happiness consists in an operation of the speculative rather than of the practical intellect. This is evident for three reasons. First because if man's happiness is an operation, it must be man's highest operation. Now man's highest operation is that of his highest power in respect of its highest object, and his highest power is the intellect, whose highest object is the Divine Good, which is the object not of the practical, but of the speculative intellect. Consequently happiness consists principally in such an operation, namely, in the contemplation of Divine things. And since "that seems to be each man's self, which is best in him," according to the *Ethics*,[3] therefore such an operation is most proper to man and most delightful to him.

Secondly, it is evident from the fact that contemplation is sought principally for its own sake. But the act of the practical intellect is not sought for its own sake but for the sake of the action, and these very actions are ordered to some end. Consequently it is evident that the last end cannot consist in the active life, which pertains to the practical intellect.

Thirdly, it is again evident, from the fact that in the contemplative life man has something in common with things above him, namely, with God and the angels, to whom he is made like by happiness. But in things pertaining to the active life other animals also have something in common with man, although imperfectly.

Therefore the last and perfect happiness, which we await in the life to come, consists entirely in contemplation. But imperfect happiness, such as can be had here, consists first and principally in contemplation, but secondarily, in an operation of the practical intellect ordering human actions and passions, as stated in the *Ethics*.[4]

[1] PL 42, 973.

[2] PL 42, 831.

[3] Aristotle, IX, 8 (1169a2); X, 7 (1178a2).

[4] Aristotle, X, 7, 8 (1177a12; 1178a9).

Reply Obj. 1. The asserted likeness of the practical intellect to God is one of proportionality; that is to say, it stands in relation to what it knows as God does to what He knows. But the likeness of the speculative intellect to God is one of union or informing, which is a much greater likeness. And yet it may be answered that, in regard to the principal thing known, which is His Essence, God has not practical but only speculative knowledge.

Reply Obj. 2. The practical intellect is ordered to good which is outside of it, but the speculative intellect has good within it, namely, the contemplation of truth. And if this good be perfect, the whole man is perfected and made good by it. The practical intellect does not have such a good but it orders man to it.

Reply Obj. 3. This argument would hold if man himself were his own last end, for then the consideration and ordering of his actions and passions would be his happiness. But since man's last end is something outside of him, namely, God, to Whom we reach out by an operation of the speculative intellect, therefore man's happiness consists in an operation of the speculative intellect rather than of the practical intellect.

ARTICLE 6. *Whether Happiness Consists in the Consideration of Speculative Sciences?*

We proceed thus to the Sixth Article: It seems that man's happiness consists in the consideration of speculative sciences.

Objection 1. For the Philosopher says[1] that "happiness is an operation according to perfect virtue." And in distinguishing the virtues, he gives no more than three speculative virtues,—science, wisdom and understanding,[2] which all belong to the consideration of speculative sciences. Therefore man's final happiness consists in the consideration of speculative sciences.

Obj. 2. Further, that which all desire for its own sake seems to be man's final happiness. Now such is the consideration of speculative sciences, because, as stated in the *Metaphysics*,[3] "all men naturally desire to know"; and, a little further on it is stated[4] that speculative sciences are sought for their own sakes. Therefore happiness consists in the consideration of speculative sciences.

Obj. 3. Further, happiness is man's final perfection. Now everything is perfected according as it is reduced from potency to act. But the human intellect is reduced to act by the consideration of speculative sciences. Therefore it seems that in the consideration of these sciences, man's final happiness consists.

On the contrary, It is written (Jer. 9. 23): *Let not the wise man glory in his wisdom,* and this is said in reference to speculative sciences. Therefore man's final happiness does not consist in the consideration of these.

I answer that, As stated above (A. 2, Reply 4), man's happiness is twofold, one perfect, the other imperfect. And by perfect happiness we are to understand that which attains to the true notion of happiness; and by imperfect happiness that which does not attain to it, but partakes of some particular likeness of happiness. Thus perfect prudence is in man, with whom is the notion of things to be done; while imperfect prudence is in certain irrational animals, who are possessed of certain particular instincts in respect of works similar to works of prudence.

Accordingly perfect happiness cannot consist essentially in the consideration of speculative sciences. To prove this, we must observe that the consideration of a speculative science does not extend beyond the scope of the principles of that science, since the entire science is virtually contained in its principles. Now the first principles of speculative sciences are received through the senses, as the Philosopher clearly states at the beginning of the *Metaphysics*,[5] and at the end of the *Posterior Analytics*.[6] Therefore the entire consideration of speculative sciences cannot extend further than knowledge of sensibles can lead. Now man's final happiness, which is his final perfection, cannot consist in the knowledge of sensibles. For a thing is not perfected by something lower, except in so far as the lower partakes of something higher. Now it is evident that the form of a stone or of any sensible, is lower than man. Consequently the intellect is not perfected by the form of a stone, as such, but in so far as it partakes of a certain likeness to that which is above the human intellect, namely, the intelligible light, or something of the kind. Now whatever is by something else is reduced to that which is of itself. Therefore man's final perfection must be through knowledge of something above the human intellect. But it has been shown (Part I, Q. LXXXVIII, A. 2) that man cannot acquire through sensibles the knowledge of separate substances, which are above the human intellect. Consequently it follows that man's happiness cannot consist in the consideration of speculative sciences. However,

[1] *Ethics*, I, 13 (1102[a]5).
[2] *Ibid.*, VI, 3, 7 (1139[b]16; 1141[a]19).
[3] Aristotle, I, 1 (980[a]21). [4] *Ibid.*, I, 2 (982[a]14; [a]28).
[5] I, 1 (980[b]29). [6] II, 19 (100[a]6).

just as in sensible forms there is a participation of some likeness of higher substances, so the consideration of speculative sciences is a certain participation of true and perfect happiness.

Reply Obj. 1. In his book on *Ethics* the Philosopher treats of imperfect happiness, such as can be had in this life, as stated above (A. 2, Reply 4).

Reply Obj. 2. Not only is perfect happiness naturally desired, but also any likeness or participation of it.

Reply Obj. 3. Our intellect is reduced to act, in a fashion, by the consideration of speculative sciences, but not to its final and complete act.

ARTICLE 7. *Whether Happiness Consists in the Knowledge of Separate Substances, Namely, Angels?*

We proceed thus to the Seventh Article: It seems that man's happiness consists in the knowledge of separate substances, namely, angels.

Objection 1. For Gregory says in a homily (XXVI):[1] It avails nothing to take part in the feasts of men, if we fail to take part in the feasts of angels," by which he means final happiness. But we can take part in the feasts of the angels by contemplating them. Therefore it seems that man's final happiness consists in contemplating the angels.

Obj. 2. Further, the final perfection of each thing is for it to be united to its principle; hence a circle is said to be a perfect figure, because it has the same beginning and end. But the beginning of human knowledge is from the angels, by whom men are enlightened, as Dionysius says (*Cæl. Hier* iv).[2] Therefore the perfection of the human intellect consists in contemplating the angels.

Obj. 3. Further, each nature is perfect when united to a higher nature, just as the final perfection of a body is to be united to the spiritual nature. But above the human intellect, in the natural order, are the angels. Therefore the final perfection of the human intellect is to be united to the angels by contemplation.

On the contrary, It is written (Jerem. 9. 24): *Let him that glorieth, glory in this, that he understandeth and knoweth Me.* Therefore man's final glory or happiness consists only in the knowledge of God.

I answer that, As stated above (A. 6), man's perfect happiness consists not in that which perfects the intellect by some participation, but in that which is so by its essence. Now it is evident that whatever perfects a power does so in so far as it has the character of the proper object of that power. Now the proper object of the intellect is the true. Therefore the contemplation of whatever has participated truth does not perfect the intellect with its final perfection. Since, therefore, the order of things is the same in being and in truth,[3] whatever are beings by participation are true by participation. Now angels have being by participation, because in God alone is His Being His Essence, as shown in the First Part (Q. XLIV, A. 1; Q. III, A. 4). It follows that God alone is truth by His Essence, and that contemplation of Him makes man perfectly happy. However, there is no reason why we should not admit a certain imperfect happiness in the contemplation of the angels; and higher indeed than in the consideration of speculative science.

Reply Obj. 1. We shall take part in the feasts of the angels by contemplating not only the angels, but also, together with them God Himself.

Reply Obj. 2. According to those that hold human souls to be created by the angels, it seems fitting enough that man's happiness should consist in the contemplation of the angels, in the union, as it were, of man with his beginning.[4] But this is erroneous, as stated in the First Part (Q. XC, A. 3). Therefore the final perfection of the human intellect is by union with God, Who is the first principle both of the creation of the soul and of its enlightenment. But the angel enlightens as a minister, as stated in the First Part (Q. CXI, A. 2 Reply 2). Consequently, by his ministration he helps man to attain to happiness, but he is not the object of man's happiness.

Reply Obj. 3. The lower nature may reach the higher in two ways. First, according to a degree of the participating power, and thus man's final perfection will consist in his attaining to a contemplation such as that of the angels. Secondly, as the object is attained by the power, and thus the final perfection of each power is to attain that in which the notion of its object is found to the full degree.

ARTICLE 8. *Whether Man's Happiness Consists in the Vision of the Devine Essence?*

We proceed thus to the Eighth Article: It seems that man's happiness does not consist in the vision of the Divine Essence.

[1] *In Evang.*, II (PL 76, 1202).
[2] Sect. 2 (PG 3, 180).
[3] Aristotle, *Metaphysics*, II, 1 (993^b30).
[4] *Liber de Causis*, 3 (BA 166.2); Avicenna, *Meta.*, IX, 4 (104vb), *De An.*, V, 6 (26va).

Objection 1. For Dionysius says (*Myst. Theol.* i)[1] that by that which is highest in his intellect man is united to God as to something altogether unknown. But that which is seen in its essence is not altogether unknown. Therefore the final perfection of the intellect, namely, happiness, does not consist in God being seen in His Essence.

Obj. 2. Further, the higher perfection belongs to the higher nature. But to see His own Essence is the perfection proper to the Divine intellect. Therefore the final perfection of the human intellect does not reach to this, but consists in something less.

On the contrary, It is written (I John 3. 2): *When He shall appear, we shall be like to Him; and* (Vulg., *because*) *we shall see Him as He is.*

I answer that, Final and perfect happiness can consist in nothing else than the vision of the Divine Essence. To make this clear, two points must be observed. First, that man is not perfectly happy, so long as something remains for him to desire and seek; secondly, that the perfection of any power is determined by the nature of its object. Now "the object of the intellect is what a thing is, that is, the essence of a thing," according to the book on the *Soul.*[2] Therefore the intellect attains perfection in so far as it knows the essence of a thing. If therefore an intellect know the essence of some effect in which it is not possible to know the essence of the cause, that is, to know of the cause "what it is," that intellect cannot be said to reach that cause absolutely, although it may be able to gather from the effect the knowledge that the cause is. Consequently, when man knows an effect, and knows that it has a cause, there naturally remains in man the desire to know about that cause, "what it is." And this desire is one of wonder, and causes inquiry, as is stated in the beginning of the *Metaphysics.*[3] For instance, if a man, knowing the eclipse of the sun, consider that it must be due to some cause, and know not what that cause is, he wonders about it, and from wondering proceeds to inquire. Nor does this inquiry cease until he arrive at a knowledge of the essence of the cause.

If therefore the human intellect, knowing the essence of some created effect, knows no more of God than that He is, the perfection of that intellect does not yet reach absolutely the First Cause, but there remains in it the natural desire to seek the cause. And so it is not yet perfectly happy. Consequently, for perfect happiness the intellect needs to reach the very Essence of the First Cause. And thus it will have its perfection through union with God as with that object in which alone man's happiness consists, as stated above (AA. 1, 7; Q. II, A. 8).

Reply Obj. 1. Dionysius speaks of the knowledge of wayfarers journeying towards happiness.

Reply Obj. 2. As stated above (Q. 1, A. 8), the end has a twofold acceptation. First, as to the thing itself which is desired, and in this way, the same thing is the end of the higher and of the lower nature, and indeed of all things, as stated above (*ibid.*). Secondly, as to the attainment of this thing, and thus the end of the higher nature is different from that of the lower, according to their respective relations to that thing. So then the happiness of God, Who, in understanding his Essence comprehends It, is higher than that of a man or angel who sees It indeed, but does not comprehend It

QUESTION IV

OF THOSE THINGS THAT ARE REQUIRED FOR HAPPINESS

(In Eight Articles)

WE have now to consider those things that are required for happiness, and concerning this there are eight points of inquiry: (1) Whether delight is required for happiness? (2) Which is of greater account in happiness, delight or vision? (3) Whether comprehension is required? (4) Whether rectitude of the will is required? (5) Whether the body is necessary for man's happiness? (6) Whether any perfection of the body is necessary? (7) Whether any external goods are necessary? (8) Whether the fellowship of friends is necessary?

ARTICLE 1. *Whether Delight Is Required for Happiness?*

We proceed thus to the First Article: It seems that delight is not required for happiness.

Objection 1. For Augustine says (*De Trin.* i, 8)[4] that "vision is the entire reward of faith." But "the prize or reward of virtue is happiness," as the Philosopher clearly states.[5] Therefore nothing besides vision is required for happiness.

Obj. 2. Further, "happiness is the most self-sufficient of all goods," as the Philosopher declares.[6] But that which needs something else is

[1] Sect. 3 (PG 3, 1001).
[2] Aristotle, III, 6 (430^b27).
[3] Aristotle, I, 2 (982^b12; 983^a12).
[4] PL 42, 831; cf also *Enarr. in Ps.* 90.16, serm. 2 (PL 37, 1170).
[5] *Ethics*, I, 9 (1099^b16).
[6] *Ibid.*, I, 7 (1097^b8).

not self-sufficient. Since then the essence of happiness consists in seeing God, as stated above (Q. III, A. 8), it seems that delight is not necessary for happiness.

Obj. 3. Further, "the operation of bliss or happiness should be unhindered."[1] But delight hinders the operation of the intellect, since it destroys the estimation of prudence.[2] Therefore delight is not necessary for happiness.

On the contrary, Augustine says[3] that "happiness is joy in truth."

I answer that, One thing may be necessary for another in four ways. First, as a preamble or preparation to it; thus instruction is necessary for science. Secondly, as perfecting it; thus the soul is necessary for the life of the body. Thirdly, as helping it from without; thus friends are necessary for some undertaking. Fourthly, as something concomitant; thus we might say that heat is necessary for fire. And in this way delight is necessary for happiness. For it is caused by the appetite being at rest in the good attained. Therefore, since happiness is nothing else but the attainment of the Sovereign Good, it cannot be without concomitant delight.

Reply Obj. 1. From the very fact that a reward is given to anyone, the will of him who deserves it is at rest, and in this consists delight. Consequently, delight is included in the very notion of reward.

Reply Obj. 2. The very sight of God causes delight. Consequently, he who sees God cannot need delight.

Reply Obj. 3. Delight that is attendant upon the operation of the intellect does not hinder it, but rather perfects it, as stated in the *Ethics,*[4] since what we do with delight we do with greater care and perseverance. On the other hand, delight which is extraneous to the operation is a hindrance to it: sometimes by distracting the attention, because, as already observed, we are more attentive to those things that delight us, and when we are very attentive to one thing, we must be less attentive to another; and sometimes on account of opposition; thus a sensual delight that is contrary to reason, hinders the estimation of prudence more than it hinders the estimation of the speculative intellect.

ARTICLE 2. *Whether in Happiness Vision Ranks Before Delight?*

We proceed thus to the Second Article: It would seem that in happiness, delight ranks before vision.

Objection 1. For "delight is the perfection of operation."[5] But perfection ranks before the thing perfected. Therefore delight ranks before the operation of the intellect, that is, vision.

Obj. 2. Further, that by reason of which a thing is desirable, is itself yet more desirable. But operations are desired on account of the delight they afford; hence, too, nature has adjusted delight to those operations which are necessary for the preservation of the individual and of the species, lest animals should neglect such operations. Therefore, in happiness, delight ranks before the operation of the intellect, which is vision.

Obj. 3. Further, vision corresponds to faith, while delight or enjoyment corresponds to charity. But charity ranks before faith, as the Apostle says (I Cor. 13. 13). Therefore delight or enjoyment ranks before vision.

On the contrary, The cause is greater than its effect. But vision is the cause of delight. Therefore vision ranks before delight.

I answer that, The Philosopher discusses this question,[6] and leaves it unsolved. But if one consider the matter carefully, the operation of the intellect which is vision, must rank before delight. For delight consists in a certain repose of the will. Now that the will finds rest in anything can only be on account of the goodness of that thing in which it reposes. If therefore the will reposes in an operation, the will's repose is caused by the goodness of the operation. Nor does the will seek good for the sake of repose, for thus the very act of the will would be the end, which has been disproved above (Q. I, A. 1, Reply 2; Q. III, A. 4), but it seeks to be at rest in the operation, because that operation is its good. Consequently it is evident that the operation in which the will reposes ranks before the resting of the will therein.

Reply Obj. 1. As the Philosopher says,[7] "delight perfects operation as grace perfects youth, because it is a result of youth." Consequently delight is a perfection attendant upon vision, but not a perfection by which vision is made perfect in its own species.

Reply Obj. 2. The apprehension of the senses does not attain to the universal notion of good, but to some particular good which is delightful. And consequently, according to the sensitive appetite which is in animals, operations are sought for the sake of delight. But the intellect apprehends the universal notion of good, the attainment of which results in delight; hence its pur-

[1] *Ethics,* VII, 1 (1153^b16). [2] *Ibid.,* VI, 5 (1140^b12).
[3] *Confessions,* X, 33 (PL 32, 793). [4] *Ethics,* X, 4 (1174^b23).
[5] *Ibid.* (1174^b23; $^b31$).
[6] *Ibid.* (1175^a18). [7] *Ibid.* (1174^b31).

pose is directed to good rather than to delight. And so it is that the Divine intellect, which is the Author of nature, adjusted delights to operations for the sake of the operations. Nor should we form our estimate of things absolutely according to the order of the sensitive appetite, but rather according to the order of the intellectual appetite.

Reply Obj. 3. Charity does not seek the good loved for the sake of delight; it is only by way of consequence that charity delights in the good gained which it loves. Thus delight does not answer to charity as its end, but vision does, by which the end is first made present to charity.

ARTICLE 3. *Whether Comprehension Is Necessary for Happiness?*

We proceed thus to the Third Article: It seems that comprehension is not necessary for happiness.

Objection 1. For Augustine says (*Ad Paulinam de Videndo Deum;—De Verbis Evang., Serm.* CXVII, 3):[1] "To reach God with the mind is great happiness, to comprehend Him is impossible." Therefore happiness is without comprehension.

Obj. 2. Further, happiness is the perfection of man as to his intellectual part, in which there are no other powers than the intellect and will, as stated in the First Part (QQ. LXXIX *and foll.*). But the intellect is sufficiently perfected by seeing God, and the will by enjoying Him. Therefore there is no need for comprehension as a third.

Obj. 3. Further, happiness consists in an operation. But operations are determined by their objects, and there are two universal objects, the true and the good, of which the true corresponds to vision, and good to delight. Therefore there is no need for comprehension as a third.

On the contrary, The Apostle says (I Cor. 9. 24): *So run that you may comprehend* (Douay, —*obtain*). But happiness is the goal of the spiritual race; hence he says (II Tim. 4. 7, 8): *I have fought a good fight, I have finished my course, I have kept the faith; as to the rest there is laid up for me a crown of justice.* Therefore comprehension is necessary for Happiness.

I answer that, Since Happiness consists in gaining the last end, those things that are required for Happiness must be gathered from the way in which man is ordered to an end. Now man is ordered to an intelligible end partly through his intellect, and partly through his will: through his intellect in so far as a certain imperfect knowledge of the end pre-exists in the intellect; through the will, first by love which is the will's first movement towards anything, secondly, by a real relation of the lover to the thing loved, which relation may be threefold. For sometimes the thing loved is present to the lover, and then it is no longer sought for. Sometimes it is not present, and it is impossible to attain it, and then, too, it is not sought for. But sometimes it is possible to attain it, yet it is raised above the power of the attainer, so that he cannot have it at once; and this is the relation of one that hopes to that which he hopes for, and this relation alone causes a search for the end.

To these three, there are a corresponding three in Happiness itself. For perfect knowledge of the end corresponds to imperfect knowledge; presence of the end corresponds to the relation of hope; but delight in the end now present results from love, as already stated (A. 2, REPLY 3). And therefore these three must come together in Happiness: namely, vision, which is perfect knowledge of the intelligible end; comprehension, which implies presence of the end; and delight or enjoyment, which implies repose of the lover in the thing loved.

Reply Obj. 1. Comprehension is twofold. First, inclusion of the comprehended in the one comprehending; and thus whatever is comprehended by the finite is itself finite. And so God cannot be comprehended in this way by a created intellect. Secondly, comprehension means nothing but the holding of something already present and possessed; thus one who runs after another is said to comprehend ("catch") him when he lays hold on him. And in this sense comprehension is necessary for Happiness.

Reply Obj. 2. Just as hope and love pertain to the will, because it is the same person that loves a thing, and that tends towards it while not possessed, so, too, comprehension and delight belong to the will, since it is the same person that possesses a thing and reposes in it.

Reply Obj. 3. Comprehension is not an operation distinct from vision, but a certain relation to the end already gained. Therefore even vision itself, or the thing seen according as it is present, is the object of comprehension.

ARTICLE 4. *Whether Rectitude of the Will Is Necessary for Happiness?*

We proceed thus to the Fourth Article: It seems that rectitude of the will is not necessary for Happiness.

[1] PL 38, 633.

Objection 1. For Happiness consists essentially in an operation of the intellect, as stated above (Q. III, A. 4). But rectitude of the will, by reason of which men are said to be clean of heart, is not necessary for the perfect operation of the intellect; for Augustine says (*Retract.* i, 4):[1] "I do not approve of what I said in a prayer: O God, Who didst will none but the clean of heart to know the truth. For it can be answered that many who are not clean of heart, know many truths." Therefore rectitude of the will is not necessary for Happiness.

Obj. 2. Further, what precedes does not depend on what follows. But the operation of the intellect precedes the operation of the will. Therefore Happiness, which is the perfect operation of the intellect, does not depend on rectitude of the will.

Obj. 3. Further, that which is ordered to another as its end is not necessary when the end is already gained; as a ship, for instance, after arrival in port. But rectitude of the will, which is by reason of virtue, is ordered to Happiness as its end. Therefore, when Happiness is once obtained, rectitude of the will is no longer necessary.

On the contrary, It is written (Matt. 5. 8): *Blessed are the clean of heart; for they shall see God;* and (Heb. 12. 14): *Follow peace with all men, and holiness; without which no man shall see God.*

I answer that, Rectitude of the will is necessary for Happiness both antecedently and concomitantly. Antecedently, because rectitude of the will consists in being duly ordered to the last end. Now the end in comparison to what is ordered to the end is as form compared to matter. Therefore, just as matter cannot receive a form unless it be properly disposed to it, so nothing gains an end unless it is properly ordered to it. And therefore none can obtain Happiness without rectitude of the will. Concomitantly, because as stated above (Q. III, A. 8), final Happiness consists in the vision of the Divine Essence, Which is the very essence of goodness. So that the will of him who sees the Essence of God of necessity loves whatever he loves in subordination to God, just as the will of him who does not see God's Essence of necessity loves whatever he loves under that common notion of good which he knows And this is precisely what makes the will right. Therefore it is evident that Happiness cannot be without a right will.

Reply Obj. 1. Augustine is speaking of the knowledge of that truth which is not the very Essence of goodness.

Reply Obj 2. Every act of the will is preceded by an act of the intellect, but a certain act of the will precedes a certain act of the intellect. For the will tends to the final act of the intellect which is happiness. And consequently right inclination of the will is required antecedently for happiness, just as the arrow must take a right course in order to strike the target.

Reply Obj. 3. Not everything that is ordered to the end ceases with the getting of the end, but only that which involves imperfection, such as movement. Hence the instruments of movement are no longer necessary when the end has been gained, but the due order to the end is necessary.

ARTICLE 5. *Whether the Body Is Necessary for Man's Happiness?*

We proceed thus to the Fifth Article: It seems that the body is necessary for Happiness.

Objection 1. For the perfection of virtue and grace presupposes the perfection of nature. But Happiness is the perfection of virtue and grace. Now the soul, without the body, does not have the perfection of nature, since the body is naturally a part of human nature and every part is imperfect while separated from its whole. Therefore the soul cannot be happy without the body.

Obj. 2. Further, Happiness is a perfect operation, as stated above (Q. III, AA. 2,5). But perfect operation follows perfect being, since nothing operates except in so far as it is an actual being. Since, therefore, the soul does not have perfect being while it is separated from the body, just as neither does a part while separate from its whole, it seems that the soul cannot be happy without the body.

Obj. 3. Further, Happiness is the perfection of man. But the soul without the body is not man. Therefore Happiness cannot be in the soul separated from the body.

Obj. 4. Further, according to the Philosopher,[2] "the operation of bliss, in which operation happiness consists, is not hindered." But the operation of the separate soul is hindered, because, as Augustine says (*Gen. ad lit.* xii, 35)[3] the soul "has a natural desire to rule the body, the result of which is that it is held back, so to speak, from tending with all its might to the heavenward journey," that is, to the vision of the Divine Essence. Therefore the soul cannot be happy without the body.

[1] PL 32, 589.

[2] *Ethics,* VII, 13 (1153b16).

[3] PL 34, 483.

Obj. 5. Further, Happiness is the sufficient good and lulls desire. But this cannot be said of the separated soul, for it yet desires to be united to the body, as Augustine says (*ibid.*). Therefore the soul is not happy while separated from the body.

Obj. 6. Further, in Happiness man is equal to the angels. But the soul without the body is not equal to the angels, as Augustine says (*ibid.*). Therefore it is not happy.

On the contrary, It is written (Apoc. 14. 13): *Happy* (Douay,—*blessed*) *are the dead who die in the Lord.*

I answer that, Happiness is twofold: the one is imperfect and is had in this life; the other is perfect, consisting in the vision of God. Now it is evident that the body is necessary for the happiness of this life. For the happiness of this life consists in an operation of the intellect, either speculative or practical. And the operation of the intellect in this life cannot be without a phantasm, which is only in a bodily organ, as was shown in the First Part (Q. LXXXIV, AA. 6, 7). Consequently that happiness which can be had in this life, depends, in a way, on the body.

But as to perfect Happiness, which consists in the vision of God, some have maintained that it is not possible to the soul separated from the body,[1] and have said that the souls of saints, when separated from their bodies, do not attain to that Happiness until the Day of Judgment, when they will receive their bodies back again. And this is shown to be false, both by authority and by reason. By authority, since the Apostle says (II Cor. 5. 6): *While we are in the body, we are absent from the Lord;* and he points out the reason of this absence, saying: *For we walk by faith and not by sight.* Now from this it is clear that so long as we walk by faith and not by sight, bereft of the vision of the Divine Essence, we are not present to the Lord. But the souls of the saints, separated from their bodies, are in God's presence; and so the text continues: *But we are confident and have a good will to be absent . . . from the body, and to be present with the Lord.* From this it is evident that the souls of the saints, separated from their bodies, *walk by sight,* seeing the Essence of God, in whom is true Happiness.

Again this is made clear by reason. For the intellect does not need the body for its operation save on account of the phantasms, in which it looks on the intelligible truth, as stated in the First Part (Q. LXXXIV, A. 7). Now it is evident that the Divine Essence cannot be seen by means of phantasms, as stated in the First Part (Q. XII, A. 3). Therefore, since man's perfect Happiness consists in the vision of the Divine Essence, it does not depend on the body. Consequently, the soul can be happy without the body.

We must, however, notice that something may pertain to a thing's perfection in two ways. First, as constituting its essence; thus the soul is necessary for man's perfection. Secondly, as necessary for its well-being; thus, beauty of body and keenness of wit belong to man's perfection. Therefore though the body does not belong in the first way to the perfection of human Happiness, yet it does in the second way. For since operation depends on a thing's nature, the more perfect is the soul in its nature, the more perfectly it has its proper operation, wherein its Happiness consists. Hence Augustine, after inquiring (*Gen. ad lit.* xii, 35)[2] "whether that perfect Happiness can be ascribed to the souls of the dead separated from their bodies," answers that "they cannot see the Unchangeable Substance, as the blessed angels see It; either for some other more hidden reason, or because they have a natural desire to rule the body."

Reply Obj. 1. Happiness is the perfection of the soul on the part of the intellect, in respect of which the soul transcends the organs of the body; but not according as the soul is the natural form of the body. Therefore the soul retains that natural perfection in respect of which Happiness is due to it, though it does not retain that natural perfection in respect of which it is the form of the body.

Reply Obj. 2 The relation of the soul to being is not the same as that of other parts, for the being of the whole is not that of any individual part. Therefore, either the part ceases altogether to be, when the whole is destroyed, just as the parts of an animal, when the animal is destroyed; or, if they remain, they have another actual being, just as a part of a line has another being from that of the whole line. But the human soul retains the being of the composite after the destruction of the body, and this because the being of the form is the same as that of its matter, and this is the being of the composite. Now the soul subsists in its own being, as stated in the First Part (Q. LXXV, A. 2). It follows, therefore, that after being separated from the body it has perfect being, and that consequently it can have a perfect operation, although it has not the perfect specific nature.

Reply Obj. 3. Happiness belongs to man in re-

[1] Cf. Part I, Q. LXIV, A. 4, reply 3, note.

[2] PL 34, 483.

spect of his intellect, and, therefore, since the intellect remains, it can have Happiness. Thus the teeth of an Ethiopian, in respect of which he is said to be white, can retain their whiteness, even after extraction.

Reply Obj. 4. One thing is hindered by another in two ways. First, by way of contrariety, just as cold hinders the action of heat, and such a hindrance to operation is contrary to Happiness. Secondly, by way of some kind of defect, because, namely, that which is hindered does not have all that is necessary to make it perfect in every way, and such a hindrance to operation is not contrary to Happiness, but prevents it from being perfect in every way. And thus it is that separation from the body is said to hold the soul back from tending with all its might to the vision of the Divine Essence. For the soul desires to enjoy God in such a way that the enjoyment also may overflow into the body, as far as possible. And therefore, as long as it enjoys God, without the fellowship of the body, its appetite is at rest in that which it has, in such a way that it would still wish the body to attain to its share.

Reply Obj. 5. The desire of the separated soul is entirely at rest, as regards the thing desired, since it has that which suffices its appetite. But it is not wholly at rest as regards the desirer, since it does not possess that good in every way that it would wish to possess it. Consequently, after the body has been resumed, Happiness increases not in intensity, but in extent.

Reply Obj 6. The passage quoted to the effect that "the souls of the departed see not God as the angels do," is not to be understood as referring to inequality of quantity, because even now some souls of the Blessed are raised to the higher orders of angels, thus seeing God more clearly than the lower angels. But it refers to inequality of proportion, because the angels, even the lowest, have every perfection of Happiness that they ever will have, whereas the separated souls of the saints have not.

ARTICLE 6. *Whether Perfection of the Body Is Necessary for Happiness?*

We proceed thus to the Sixth Article: It seems that perfection of the body is not necessary for man's perfect Happiness.

Objection 1. For perfection of the body is a bodily good. But it has been shown above (Q. II) that Happiness does not consist in bodily goods. Therefore no perfect disposition of the body is necessary for man's Happiness.

Obj. 2. Further, man's Happiness consists in the vision of the Divine Essence, as shown above (Q. III, A. 8). But the body has no part in this operation, as shown above (A. 5). Therefore no disposition of the body is necessary for Happiness.

Obj. 3. Further, the more the intellect is abstracted from the body the more perfectly it understands. But Happiness consists in the most perfect operation of the intellect. Therefore the soul should be abstracted from the body in every way. Therefore, in no way is a disposition of the body necessary for Happiness.

On the contrary, Happiness is the reward of virtue; therefore it is written (John 13. 17): *You shall be blessed, if you do them.* But the reward promised to the saints is not only that they shall see and enjoy God, but also that their bodies shall be well-disposed; for it is written (Isa. 66. 14): *You shall see and your heart shall rejoice, and your bones shall flourish like a herb.* Therefore good disposition of the body is necessary for Happiness.

I answer that, If we speak of that happiness which man can acquire in this life, it is evident that a well-disposed body is of necessity required for it. For "this happiness consists," according to the Philosopher,[1] "in an operation according to perfect virtue"; and it is clear that man can be hindered, by indisposition of the body, from every operation of virtue.

But speaking of perfect Happiness, some have maintained that no disposition of body is necessary for Happiness; indeed, that it is necessary for the soul to be entirely separated from the body. Hence Augustine[2] quotes the words of Porphyry who said that "for the soul to be happy, it must be severed from everything corporeal." But this is unfitting. For since it is natural to the soul to be united to the body, it is not possible for the perfection of the soul to exclude its natural perfection.

Consequently, we must say that perfect disposition of the body is necessary, both antecedently and consequently, for that Happiness which is in all ways perfect.—Antecedently, because, as Augustine says (*Gen. ad lit.* xii, 35),[3] "if the body be such that the governance thereof is difficult and burdensome, like unto flesh which is corruptible and weighs upon the soul, the mind is turned away from that vision of the highest heaven." And so he concludes that, "when this body will no longer be 'animal,' but 'spiritual,' then will it be equalled to the angels, and that will be its glory, which erstwhile was

[1] *Ethics*, I, 13 (1102^a5).
[2] *City of God*, XXII, 26 (PL41, 794).
[3] PL 34, 483.

its burden."—Consequently, because from the Happiness of the soul there will be an overflow on to the body, so that this too will obtain its perfection. Hence Augustine says (*Ep. ad Dioscor.*)[1] that "God gave the soul such a powerful nature that from its exceeding fulness of happiness the vigour of incorruption overflows into the lower nature."

Reply Obj. 1. Happiness does not consist in bodily good as its object, but bodily good can add a certain grace and perfection to Happiness.

Reply Obj. 2 Although the body has no part in that operation of the intellect whereby the Essence of God is seen, yet it might prove a hindrance to it. Consequently, perfection of the body is necessary, lest it hinder the mind from being lifted up.

Reply Obj. 3. The perfect operation of the intellect requires indeed that the intellect be abstracted from this corruptible body which weighs upon the soul, but not from the spiritual body, which will be wholly subject to the spirit. On this point we shall treat in the Third Part of this work (Suppl., Q. LXXXII).

ARTICLE 7. *Whether Any External Goods Are Necessary for Happiness?*

We proceed thus to the Seventh Article: It seems that external goods also are necessary for Happiness.

Objection 1 For that which is promised the saints for reward belongs to Happiness. But external goods are promised the saints; for instance, food and drink, wealth, and a kingdom; for it is said (Luke 22. 30): *That you may eat and drink at My table in My kingdom;* and (Matt. 6. 20): *Lay up to yourselves treasures in heaven;* and (Matt. 25. 34): *Come, ye blessed of my Father, possess you the kingdom.* Therefore external goods are necessary for Happiness.

Obj. 2. Further, according to Boëthius (*De Consol.* iii, 2)[2], happiness is "a state made perfect by the aggregate of all good things." But "some of man's goods are external, although they be of least account," as Augustine says (*De Lib. Arb.* ii, 19).[3] Therefore they too are necessary for Happiness.

Obj. 3. Further, Our Lord said (Matt. 5. 12): *Your reward is very great in heaven.* But to be in heaven implies being in a place. Therefore at least external place is necessary for Happiness.

[1] *Epist.*, 118, chap. 3 (PL 33, 439).
[2] PL 63, 724. [3] PL 32, 1267.

On the contrary, It is written (Ps. 72. 25): *For what have I in heaven? and besides Thee what do I desire upon earth?* As though to say: "I desire nothing but this,—*It is good for me to adhere to my God.*" Therefore nothing outside God is necessary for Happiness.

I answer that, For imperfect happiness, such as can be had in this life, external goods are necessary, not as belonging to the essence of happiness, but by serving as instruments to happiness, "which consists in an operation of virtue," as stated in the *Ethics.*[4] For man needs, in this life, the necessaries of the body, both for the operation of contemplative virtue, and for the operation of active virtue, for which latter he needs also many other things by means of which to perform its operations

On the other hand, such goods as these are in no way necessary for perfect Happiness, which consists in seeing God. The reason of this is that all external goods of this kind are requisite either for the support of the animal body, or for certain operations which belong to human life, which we perform by means of the animal body. But that perfect Happiness which consists in seeing God will be either in the soul separated from the body, or in the soul united to the body then no longer animal but spiritual. Consequently these external goods are in no way necessary for that Happiness, since they are ordered to the animal life.—And, since, in this life, the happiness of contemplation, as being more God-like, approaches nearer than the happiness of action to the likeness of that perfect Happiness, therefore it stands in less need of these goods of the body, as stated in the *Ethics.*[5]

Reply Obj. 1. All those material promises contained in Holy Scripture are to be understood metaphorically, since Scripture is accustomed to express spiritual things under the form of things corporeal, in order that "from things we know, we may rise to the desire of things unknown," as Gregory says (*Hom. xi. in Ev.*).[6] Thus food and drink signify the delight of Happiness; wealth, the sufficiency of God for man; the kingdom, the lifting up of man to union with God.

Reply Obj. 2. These goods that serve for the animal life are incompatible with that spiritual life in which perfect Happiness consists. Nevertheless in that Happiness there will be the aggregate of all good things, because whatever

[4] Aristotle, I, 13 (1102^a5).
[5] Aristotle, X, 8 (1178^b1).
[6] Bk. II (PL 76, 1114).

good there be in these things, we shall possess it all in the Supreme Fount of goodness.

Reply Obj. 3. According to Augustine (*De Serm. Dom. in Monte*, i, 5),[1] it is not a material heaven that is described as the reward of the saints, but a heaven raised on the height of spiritual goods. Nevertheless a bodily place, namely, the empyrean heaven, will be appointed to the Blessed, not as a need of Happiness, but by reason of a certain fitness and adornment.

ARTICLE 8. *Whether the Fellowship of Friends Is Necessary for Happiness?*

We proceed thus to the Eighth Article: It seems that friends are necessary for Happiness.

Objection 1. For future Happiness is frequently designated by Scripture under the name of glory. But glory consists in man's good being brought to the notice of many. Therefore the fellowship of friends is necessary for Happiness.

Obj. 2. Further, Boëthius says[2] that "there is no delight in possessing any good whatever, without someone to share it with us." But delight is necessary for Happiness. Therefore fellowship of friends is also necessary.

Obj. 3. Further, charity is perfected in Happiness. But charity includes the love of God and of our neighbour. Therefore it seems that fellowship of friends is necessary for Happiness.

On the contrary, It is written (Wisd. 7. 11): *All good things came to me together with her,* that is, with divine wisdom, which consists in contemplating God. Consequently nothing else is necessary for Happiness.

I answer that, If we speak of the happiness of this life, the happy man needs friends, as the Philosopher says,[3] not, indeed, to make use of them, since he suffices himself, nor to delight in them, since he possesses perfect delight in the operation of virtue, but for the purpose of a good operation, namely, that he may do good to them, that he may delight in seeing them do good, and again that he may be helped by them in his good work. For in order that man may do well, whether in the works of the active life, or in those of the contemplative life, he needs the fellowship of friends.

But if we speak of perfect Happiness which will be in our heavenly Fatherland, the fellowship of friends is not essential to Happiness, since man has the entire fulness of his perfection in God. But the fellowship of friends conduces to the well-being of Happiness. Hence Augustine says (*Gen. ad lit.* viii, 25)[4] that "the spiritual creatures receive no other interior aid to happiness than the eternity, truth, and charity of the Creator. But if they can be said to be helped from without, perhaps it is only by this that they see one another and rejoice in God, at their fellowship."

Reply Obj. 1. That glory which is essential to Happiness is that which man has not with man but with God.

Reply Obj. 2. This saying is to be understood of the possession of good that does not fully satisfy. This does not apply to the question under consideration, because man possesses in God a sufficiency of every good.

Reply Obj 3. Perfection of charity is essential to Happiness, as to the love of God, but not as to the love of our neighbour. And so if there were but one soul enjoying God, it would be happy, though having no neighbour to love. But supposing one neighbour to be there, love of him results from perfect love of God. Consequently, friendship is, as it were, concomitant with perfect Happiness.

QUESTION V

OF THE ATTAINMENT OF HAPPINESS

(In Eight Articles)

WE must now consider the attainment of Happiness. Under this heading there are eight points of inquiry: (1) Whether man can attain Happiness? (2) Whether one man can be happier than another? (3) Whether any man can be happy in this life? (4) Whether Happiness once had can be lost? (5) Whether man can attain Happiness by means of his natural powers? (6) Whether man attains Happiness through the action of some higher creature? (7) Whether any actions of man are necessary in order that man may obtain Happiness of God? (8) Whether every man desires Happiness?

ARTICLE 1. *Whether Man Can Attain Happiness?*

We proceed thus to the First Article: It seems that man cannot attain Happiness.

Objection 1. For just as the rational nature is above the sensible nature, so the intellectual is above the rational, as Dionysius declares (*Div. Nom.* iv, vi, vii)[5] in several passages. But ir-

[1] PL 34, 1237.
[2] Cf. Seneca, *Ad Lucilium*, Epist., VI (DD 532).
[3] *Ethics*. IX. 9 (1169[b]22).
[4] PL 34, 391.
[5] PG 3. 693. 856. 868.

rational animals that have the sensitive nature only, cannot attain the end of the rational nature. Therefore neither can man, who is of rational nature, attain the end of the intellectual nature, which is Happiness.

Obj. 2. Further, True Happiness consists in seeing God, Who is pure Truth. But from his very nature, man considers truth in material things; hence "he understands the intelligible species in the phantasm."[1] Therefore he cannot attain Happiness.

Obj. 3. Further, Happiness consists in attaining the Sovereign Good. But we cannot arrive at the top without surmounting the middle. Since, therefore, the angelic nature through which man cannot mount is midway between God and human nature, it seems that he cannot attain Happiness.

On the contrary, It is written (Ps. 93. 12): *Blessed is the man whom Thou shalt instruct, O Lord.*

I answer that, Happiness is the attainment of the Perfect Good. Whoever, therefore, is capable of the Perfect Good can attain Happiness. Now, that man is capable of the Perfect Good. is proved both because his intellect can apprehend the universal and perfect good, and because his will can desire it. And therefore man can attain Happiness. This can be proved again from the fact that man is capable of seeing God, as stated in the First Part (Q. XII, A. 1), in which vision, as we stated above (Q. III, A. 8) man's perfect Happiness consists.

Reply Obj. 1. The rational exceeds the sensitive nature otherwise than the intellectual surpasses the rational For the rational exceeds the sensitive nature in respect of the object of its knowledge, since the senses have no knowledge whatever of the universal, whereas the reason does have knowledge of the universal. But the intellectual surpasses the rational nature as to the mode of knowing intelligible truth, for the intellectual nature grasps at once the truth which the rational nature reaches by the inquiry of reason, as was made clear in the First Part (Q. LVIII, A. 3; Q. LXXIX, A. 8). Therefore reason arrives by a kind of movement at that which the intellect apprehends. Consequently the rational nature can attain Happiness, which is the perfection of the intellectual nature, but otherwise than the angels. Because the angels attained it at once after the beginning of their knowledge, whereas man attains it after a time. But the sensitive nature can attain this end in no way.

[1] *Soul,* III, 7 (431[b]2).

Reply Obj 2. To man in the present state of life the natural way of knowing intelligible truth is by means of phantasms. But after this state of life, he has another natural way, as was stated in the First Part (Q. LXXXIV, A. 7; Q. LXXXIX, A. 1).

Reply Obj. 3. Man cannot surmount the angels in the degree of nature, so as to be above them naturally. But he can surmount them by an operation of the intellect, by understanding that there is above the angels something that makes men happy, and that when he has attained it, he will be perfectly happy.

ARTICLE 2. *Whether One Man Can Be Happier Than Another?*

We proceed thus to the Second Article: It seems that one man cannot be happier than another.

Objection 1. For "Happiness is the reward of virtue," as the Philosopher says.[2] But equal reward is given for all the works of virtue, because it is written (Matt. 20. 10) that all who laboured in the vineyard *received every man a penny;* for, as Gregory says (*Hom.* XIX *in Evang.*),[3] "each was equally rewarded with eternal life." Therefore one man cannot be happier than another.

Obj 2 Further, Happiness is the supreme good But nothing can surpass the supreme. Therefore one man's Happiness cannot be surpassed by another's.

Obj 3 Further, since Happiness is the perfect and sufficient good it brings rest to man's desire. But his desire is not at rest if he yet lacks some good that can be had. And if he lack nothing that he can get, there can be no still greater good. Therefore either man is not happy; or, if he be happy, no other Happiness can be greater.

On the contrary, It is written (John 14. 2): *In My Father's house there are many mansions;* which, according to Augustine (*Tract.* lxvii)[4] signify "the various dignities of merits in the eternal life." But the dignity of eternal life which is given according to merit is Happiness itself. Therefore there are various degrees of Happiness, and Happiness is not equally in all.

I answer that, As stated above (Q. 1, A. 8; Q. II, A. 7), in the notion of Happiness there are two things, namely, the last end itself, which is the Sovereign Good, and the attainment or enjoyment of that same Good. As to that Good it-

[2] *Ethics,* I, 9 (1099[b]16).
[3] Bk. I (PL 76, 1156).
[4] *In Joann.,* on 14.2 (PL 35, 1812).

self Which is the object and cause of Happiness, one Happiness cannot be greater than another, since there is but one Sovereign Good, namely, God, by enjoying Whom, men are made happy. But as to the attainment or enjoyment of this Good, one man can be happier than another because the more a man enjoys this Good the happier he is. Now, that one man enjoys God more than another happens through his being better disposed or ordered to the enjoyment of Him. And in this sense one man can be happier than another.

Reply Obj. 1. The one penny signifies that Happiness is one in its object. But the many mansions signify the manifold Happiness in the different degrees of enjoyment.

Reply Obj. 2. Happiness is said to be the supreme good, because it is the perfect possession or enjoyment of the Supreme Good.

Reply Obj. 3. None of the Blessed lacks any desirable good, since they have the Infinite Good Itself, Which is "the good of all good," as Augustine says (*Enarr. in* Ps. 134).[1] But one is said to be happier than another by reason of different participation of the same good. And the addition of other goods does not increase Happiness; hence Augustine says,[2] "He who knows Thee, and others besides, is not the happier for knowing them, but is happy for knowing Thee alone."

Article 3. *Whether One Can Be Happy in This Life?*

We proceed thus to the Third Article: It would seem that Happiness can be had in this life.

Objection 1. For it is written (Ps. 118. 1): *Blessed are the undefiled in the way, who walk in the law of the Lord.* But this happens in this life. Therefore one can be happy in this life.

Obj. 2. Further, imperfect participation in the Sovereign Good does not destroy the nature of Happiness, otherwise one would not be happier than another. But men can participate in the Sovereign Good in this life by knowing and loving God, although imperfectly. Therefore man can be happy in this life.

Obj. 3. Further, what is said by many cannot be altogether false, since what is in many, comes, apparently, from nature, and nature does not fail altogether. Now many say that Happiness can be had in this life, as appears from Ps. 143. 15: *They have called the people happy that hath these things,* that is to say, the good things of this life. Therefore one can be happy in this life.

On the contrary, It is written (Job 14. 1): *Man born of a woman, living for a short time, is filled with many miseries.* But Happiness excludes misery. Therefore man cannot be happy in this life.

I answer that, A certain participation of Happiness can be had in this life, but perfect and true Happiness cannot be had in this life. This may be seen from a twofold consideration.

First, from the general notion of happiness For since happiness is a perfect and sufficient good, it excludes every evil, and fulfils every desire. But in this life every evil cannot be excluded. For this present life is subject to many unavoidable evils: to ignorance on the part of the intellect, to disordered affection on the part of the appetite, and to many penalties on the part of the body, as Augustine sets forth in the *City of God.*[3] Likewise neither can the desire for good be satiated in this life For man naturally desires the good which he has to be abiding Now the goods of the present life pass away, since life itself passes away, which we naturally desire to have, and would wish to hold abidingly, for man naturally shrinks from death Therefore it is impossible to have true Happiness in this life.

Secondly, from a consideration of that in which Happiness specially consists, namely, the vision of the Divine Essence, which man cannot obtain in this life, as was shown in the First Part (Q. XII, A. 2). Hence it is evident that none can attain true and perfect Happiness in this life.

Reply Obj. 1. Some are said to be happy in this life, either on account of the hope of obtaining Happiness in the life to come, according to Rom. 8. 24: *We are saved by hope;* or on account of a certain participation of Happiness, by reason of a kind of enjoyment of the Sovereign Good.

Reply Obj. 2. The imperfection of participated Happiness is due to one of two causes. First, on the part of the object of Happiness, which is not seen in Its Essence. And this imperfection takes away the character of true Happiness. Secondly, the imperfection may be on the part of the participator, who indeed attains the object of Happiness, in itself, namely God, but imperfectly in comparison with the way in which God enjoys Himself. This imperfection does not destroy the true notion of Happiness; because, since Happiness is an opera-

[1] PL 37, 1741.
[2] *Confessions,* V. 5 (PL 32, 708).
[3] XIX, 4 (PL 41, 628).

tion, as stated above (Q. III, A. 2), the true notion of Happiness is taken from the object, which specifies the act, and not from the subject.

Reply Obj. 3. Men consider that there is some kind of happiness to be had in this life on account of a certain likeness to true Happiness. And thus they do not fail altogether in their estimate.

ARTICLE 4. *Whether Happiness Once Had Can Be Lost?*

We proceed thus to the Fourth Article: It would seem that Happiness can be lost.

Objection 1. For Happiness is a perfection. But every perfection is in the thing perfected according to the mode of the latter. Since then man is, by his nature, changeable, it seems that Happiness is participated by man in a changeable manner. And consequently it seems that man can lose Happiness.

Obj. 2. Further, Happiness consists in an act of the intellect, and the intellect is subject to the will. But the will can be directed to opposites. Therefore it seems that it can desist from the operation whereby man is made happy; and thus man will cease to be happy.

Obj. 3. Further, the end corresponds to the beginning. But man's Happiness has a beginning, since man was not always happy Therefore it seems that it has an end.

On the contrary, It is written (Matt. 25. 46) of the just that *they shall go . . . into life everlasting,* which, as stated above (A. 2), is the Happiness of the saints. Now what is eternal does not cease. Therefore Happiness cannot be lost.

I answer that, If we speak of imperfect happiness, such as can be had in this life, in this sense it can be lost. This is clear of contemplative happiness, which is lost either by forgetfulness, for instance, when knowledge is lost through sickness; or again by certain occupations, whereby a man is altogether withdrawn from contemplation.

This is also clear of active happiness, since man's will can be changed so as to fall to vice from the virtue in whose act that happiness principally consists. If, however, the virtue remain unimpaired, outward changes can indeed disturb such happiness, in so far as they hinder many acts of virtue; but they cannot take it away altogether, because there still remains an act of virtue, as long as man bears these trials in a praiseworthy manner. And since the happiness of this life can be lost, which seems to be against the notion of happiness, therefore the Philosopher stated that some are happy in this life not absolutely, but as men, whose nature is subject to change.[1]

But if we speak of that perfect Happiness which we await after this life, it must be observed that Origen (*Peri Archon,* ii),[2] following the error of certain Platonists,[3] held that man can become unhappy after the final Happiness.

This, however, is evidently false, for two reasons. First, from the general notion of happiness. For since happiness is the perfect and sufficient good, it must set man's desire at rest and exclude every evil. Now man naturally desires to hold to the good that he has, and to have the surety of his holding; otherwise he must of necessity be troubled with the fear of losing it, or with the sorrow of knowing that he will lose it. Therefore it is necessary for true Happiness that man have the assured opinion of never losing the good that he possesses. If this opinion be true, it follows that he never will lose happiness; but if it be false, it is in itself an evil that he should have a false opinion, because the false is the evil of the intellect, just as the true is its good, as stated in the *Ethics.*[4] Consequently he will no longer be truly happy if evil is in him.

Secondly, it is again evident if we consider the special notion of Happiness. For it has been shown above (Q. III, A. 8) that man's perfect Happiness consists in the vision of the Divine Essence. Now it is impossible for anyone seeing the Divine Essence to wish not to see It. Because every good that one possesses and yet wishes to be without is either insufficient, something more sufficing being desired in its stead; or else has some inconvenience attached to it, by reason of which it becomes wearisome. But the vision of the Divine Essence fills the soul with all good things, since it unites it to the source of all goodness; hence it is written (Ps. 16. 15): *I shall be satisfied when Thy glory shall appear;* and (Wisd. 7. 11): *All good things came to me together with her,* that is, with the contemplation of wisdom. In like manner neither has it any inconvenience attached to it, because it is written of the contemplation of wisdom (Wisd. 8. 16): *Her conversation hath no bitterness, nor her company any tediousness.* It is thus evident that the happy man cannot forsake Happiness of his own will.

[1] *Ethics,* I, 10 (1101^a19).

[2] Jerome's translation, Bk. I., chaps. 5, 6 (PG 11, 164 167, note 70).

[3] See Jerome, *Epist.,* 124 *Ad Avitum,* chap. 2 (PL 22 1066) Cf. also Augustine, *City of God,* X, 30 (PL 41, 309)

[4] Aristotle, VI, 2 (1139^a26).

Moreover, neither can he lose Happiness through God taking it away from him. Because, since the withdrawal of Happiness is a punishment, it cannot be enforced by God, the just Judge, except for some fault; and he that sees the Essence of God cannot fall into a fault, since rightness of the will, of necessity, results from that vision as was shown above (Q. IV, A. 4). Nor again can it be withdrawn by any other agent. Because the mind that is united to God is raised above all other things, and consequently no other agent can sever the mind from that union. Therefore it seems unreasonable that as time goes on, man should pass from happiness to misery, and contrariwise, because such vicissitudes of time can only be for such things as are subject to time and movement.

Reply Obj. 1. Happiness is consummate perfection, which excludes every defect from the happy. And therefore whoever has happiness has it altogether unchangeably. This is done by the Divine power, which raises man to the participation of eternity which transcends all change.

Reply Obj. 2. The will can be directed to opposites in things which are ordered to the end; but it is ordered of natural necessity to the last end. This is evident from the fact that man is unable not to wish to be happy.

Reply Obj. 3. Happiness has a beginning owing to the condition of the participator; but it has no end by reason of the condition of the good in whose participation man is made happy. Hence the beginning of happiness is from one cause, its endlessness is from another.

ARTICLE 5. *Whether Man Can Attain Happiness by His Natural Powers?*

We proceed thus to the Fifth Article: It seems that man can attain Happiness by his natural powers.

Objection 1. For nature does not fail in necessary things. But nothing is so natural to man as that by which he attains the last end. Therefore this is not lacking to human nature. Therefore man can attain Happiness by his natural powers.

Obj. 2. Further, since man is more noble than irrational creatures, it seems that he must be more self-sufficient. But irrational creatures can attain their end by their natural powers. Much more therefore can man attain Happiness by his natural powers.

Obj. 3. Further, "Happiness is a perfect operation," according to the Philosopher.[1] Now the beginning of a thing and its perfecting pertain to the same principle. Since, therefore, the imperfect operation, which is as it were the beginning in human operations, is subject to man's natural power, by which he is master of his own actions, it seems that he can attain to perfect operation, that is, Happiness, by his natural powers.

On the contrary, Man is naturally the principle of his action by his intellect and will. But final Happiness prepared for the saints surpasses the intellect and will of man; for the Apostle says (I Cor. 2, 9): *Eye hath not seen, nor ear heard, neither hath it entered into the heart of man, what things God hath prepared for them that love Him.* Therefore man cannot attain Happiness by his natural powers.

I answer that, Imperfect happiness that can be had in this life can be acquired by man by his natural powers, in the same way as virtue, in whose operation it consists; on this point we shall speak further on (Q. LXIII). But man's perfect Happiness, as stated above (Q III, A. 8), consists in the vision of the Divine Essence. Now the vision of God's Essence surpasses the nature not only of man, but also of every creature, as was shown in the First Part (Q. XII, A. 4). For the natural knowledge of every creature is in keeping with the mode of its substance; thus it is said of the intelligence (*De Causis*)[2] that it knows things that are above it, and things that are below it, according to the mode of its substance. But every knowledge that is according to the mode of created substance falls short of the vision of the Divine Essence, which infinitely surpasses all created substance. Consequently neither man, nor any creature, can attain final Happiness by his natural powers.

Reply Obj. 1. Just as nature does not fail man in necessaries, although it has not provided him with weapons and clothing as it provided other animals, because it gave him reason and hands, with which he is able to get these things for himself, so neither did it fail man in things necessary, by not giving him the means to attain Happiness, since this was impossible. But it did give him free choice, with which he can turn to God, that He may make him happy. "For what we do by means of our friends, is done, in a sense, by ourselves."[3]

Reply Obj. 2. The nature that can attain perfect good, although it needs help from without in order to attain it, is of more noble condition than a nature which cannot attain perfect good but attains some imperfect good, although it

[1] *Ethics*, VII, 13 (1153^{b}16).

[2] Sect. 7 (BA 170).

[3] *Ethics*, III, 3 (1112^{b}27).

need no help from without in order to attain it, as the Philosopher says.[1] Thus he is better disposed to health who can attain perfect health, even though by means of medicine, than he who can attain but imperfect health without the help of medicine. And therefore the rational creature, which can attain the perfect good of Happiness, but needs the Divine assistance for the purpose, is more perfect than the irrational creature, which is not capable of attaining this good, but attains some imperfect good by its natural powers.

Reply Obj. 3. When imperfect and perfect are of the same species, they can be caused by the same power. But this does not follow of necessity, if they be of different species, for not everything that can cause the disposition of matter can confer the final perfection. Now the imperfect operation, which is subject to man's natural power, is not of the same species as that perfect operation which is man's happiness, since operation takes its species from its object. Consequently the argument does not prove.

ARTICLE 6. *Whether Man Attains Happiness through the Action of Some Higher Creature?*

We proceed thus to the Sixth Article: It seems that man can be made happy through the action of some higher creature, namely, an angel.

Objection 1. For since we observe a twofold order in things—one, of the parts of the universe to one another, the other, of the whole universe to a good which is outside the universe; the former order is ordered to the second as to its end.[2] Thus the order of the parts of an army to each other is dependent on the order of the whole army to the general. But the order of the parts of the universe to each other consists in the higher creatures acting on the lower, as stated in the First Part (Q. CIX, A 2),[3] while happiness consists in the order of man to a good which is outside the universe, that is, God Therefore man is made happy through a higher creature, namely, an angel, acting on him.

Obj. 2 Further, that which is such in potency can be reduced to act by that which is such actually; thus what is potentially hot is made actually hot by something that is actually hot. But man is potentially happy. Therefore he can be made actually happy by an angel who is actually happy.

Obj. 3. Further, Happiness consists in an operation of the intellect, as stated above (Q. III, A. 4). But an angel can enlighten man's intellect, as shown in the First Part (Q. CXI, A. 1). Therefore an angel can make a man happy.

. *On the contrary,* It is written (Ps. 83. 12): *The Lord will give grace and glory.*

I answer that, Since every creature is subject to the laws of nature from the very fact that its power and action are limited, that which surpasses created nature cannot be done by the power of any creature. Consequently if anything need to be done that is above nature, it is done by God immediately, such as raising the dead to life, restoring sight to the blind, and the like Now it has been shown above (A. 5) that Happiness is a good surpassing created nature. Therefore it is impossible that it be bestowed through the action of any creature, but man is made happy by God alone, if we speak of perfect Happiness. If, however, we speak of imperfect happiness, the same is to be said of it and of the virtue in whose exercise it consists.

Reply Obj. 1. It often happens in the case of active powers ordered to one another that it belongs to the highest power to reach the last end, while the lower powers contribute to the attainment of that last end, by causing a disposition to it; thus it pertains to the art of sailing, which governs the art of ship-building, to use a ship for the end for which it was made. Thus, too, in the order of the universe, man is indeed helped by angels in the attainment of his last end, in respect of certain preliminary dispositions to that end; but he attains the last end itself through the First Agent, which is God.

Reply Obj. 2. When a form exists in something according to its natural and perfect being, it can be the principle of action on something else; for instance, a hot thing heats through fire. But if a form exist in something imperfectly and not according to its natural being, it cannot be the principle by which it is communicated to something else; thus the intention of colour which is in the pupil, cannot make a thing white; nor indeed can anything illuminated or heated give heat or light to something else, for if they could, illumination and heating would go on to infinity. But the light of glory, by which God is seen, is in God perfectly according to its natural being; but in any creature, it is imperfectly and according to the being of likeness or participation. Consequently no creature can communicate its Happiness to another.

Reply Obj 3. A happy angel enlightens the intellect of a man or of a lower angel, as to certain notions of the Divine works, but not as to

[1] *Heavens*, II. 12 (292^a22).
[2] *Metaphysics*, XII, 10 (1075^a11).
[3] Cf. also, Q. XIX, A. 5 Reply 2; Q. XLVIII, A. 1, Reply 5.

the vision of the Divine Essence, as was stated in the First Part (Q. CVI, A. 1), since in order to see this, all are immediately enlightened by God.

ARTICLE 7. *Whether Any Good Works Are Necessary that Man May Receive Happiness from God?*

We proceed thus to the Seventh Article: It seems that no works of man are necessary that he may obtain Happiness from God.

Objection 1. For since God is an agent of infinite power, He requires before acting, neither matter, nor disposition of matter, but can immediately produce the whole effect. But man's works, since they are not required for Happiness as its efficient cause, as stated above (A. 6), can be required only as dispositions to Happiness. Therefore God Who does not require dispositions before acting bestows Happiness without any previous works.

Obj. 2. Further, just as God is the immediate cause of Happiness, so is He the immediate cause of nature. But when God first established nature, He produced creatures without any previous disposition or action on the part of the creature, but made each one perfect at once in its species. Therefore it seems that He bestows Happiness on man without any previous works.

Obj. 3. Further, the Apostle says (Rom. 4. 6) that Happiness is of the man *to whom God reputeth justice without works.* Therefore no works of man are necessary for attaining Happiness.

On the contrary, It is written (John 13. 17): *If you know these things, you shall be blessed if you do them.* Therefore Happiness is obtained through works.

I answer that, Rightness of the will, as stated above (Q. IV, A. 4), is necessary for Happiness, since it is nothing else than the due order of the will to the last end; and it is therefore necessary for obtaining the last end, just as the right disposition of matter, in order to receive the form. But this does not prove that any work of man need precede his Happiness, for God could make a will which has a right tendency to the end which at the same time attains the end; just as sometimes He disposes matter and at the same time introduces the form. But the order of Divine wisdom demands that it should not be thus; for as it is stated in the book on the *Heavens,*[1] "Of those things that have a natural capacity for the perfect good, one has it without movement, some by one movement, some by several." Now to possess the perfect good without movement, belongs to that which has it naturally, and to have Happiness naturally belongs to God alone. Therefore it belongs to God alone not to be moved towards Happiness by any previous operation. Now since Happiness surpasses every created nature, no mere creature can fittingly gain Happiness, without the movement of operation, whereby it tends to it. But the angel, who is above man in the natural order, obtained it according to the order of Divine wisdom by one movement of a meritorious work, as was explained in the First Part (Q. LXII, A. 5); man however obtains it by many movements of works which are called merits. Hence also according to the Philosopher,[2] "happiness is the reward of works of virtue."

Reply Obj. 1. Works are necessary to man in order to gain Happiness not on account of the insufficiency of the Divine power which bestows Happiness, but that the order in things be observed.

Reply Obj. 2 God produced the first creatures so that they were perfect at once without any previous disposition or operation of the creature because He instituted the individuals of the various species, that through them nature might be propagated to their progeny. And in like manner, because Happiness was to be bestowed on others through Christ, Who is God and Man, *Who,* according to Heb. 2. 10, *had brought many children into glory,* therefore, from the very beginning of His conception His soul was happy, without any preceding meritorious operation. But this is peculiar to Him, for Christ's merit avails baptized children for the gaining of Happiness, though they have no merits of their own, because by Baptism they are made members of Christ.

Reply Obj. 3. The Apostle is speaking of the Happiness of Hope, which is bestowed on us by sanctifying grace, which is not given on account of previous works. For grace is not a term of movement, as Happiness is; rather is it the principle of the movement that tends towards Happiness.

ARTICLE 8. *Whether Every Man Desires Happiness?*

We proceed thus to the Eighth Article: It seems that not all desire Happiness.

Objection 1. For no man can desire what he knows not, since the good apprehended is the object of the appetite.[3] But many do not know

[1] Aristotle, II, 12 (292ᵃ22).

[2] *Ethics,* I, 9 (1099ᵇ16).

[3] *Soul,* III, 10 (433ᵃ27; ᵇ12).

what Happiness is. This is evident from the fact that, as Augustine says (*De Trin.* xiii, 4),[1] "some thought that Happiness consists in pleasures of the body; some, in a power of the soul; some, in other things." Therefore not all desire Happiness.

Obj. 2. Further, the essence of Happiness is the vision of the Divine Essence, as stated above (Q. III, A. 8). But some consider it impossible for man to see the Divine Essence,[2] and so they do not desire it. Therefore all men do not desire Happiness.

Obj. 3. Further, Augustine says (*De Trin* xiii, 5)[3] that "happy is he who has all he desires, and desires nothing amiss." But all do not desire this; for some desire certain things amiss, and yet they wish to desire such things. Therefore all do not desire Happiness.

On the contrary, Augustine says (*De Trin.* xiii, 3):[4] "If that actor had said: 'You all wish to be happy; you do not wish to be unhappy,' he would have said that which none would have failed to acknowledge in his will." Therefore everyone desires to be happy.

I answer that, Happiness can be considered in two ways. First according to the general notion of happiness; and thus, of necessity, every man desires happiness. For the general notion of happiness consists in the perfect good, as stated above (AA 3, 4). But since good is the object of the will, the perfect good of a man is that which entirely satisfies his will. Consequently to desire happiness is nothing else than to desire that one's will be satisfied. And this everyone desires. Secondly we may speak of Happiness according to its special notion, as to that in which it consists. And thus all do not know Happiness, because they do not know in what thing the general notion of happiness is found. And consequently, in this respect, not all desire it. Therefore the *reply to the first Objection* is clear.

Reply Obj. 2. Since the will follows the apprehension of the intellect or reason, just as it happens that where there is no real distinction there may be a distinction according to the consideration of reason, so does it happen that one and the same thing is desired in one way, and not desired in another. So that happiness may be considered under the aspect of final and perfect good, which is the general notion of happiness; and thus the will naturally and of necessity tends to it, as stated above. Again it can be considered under other special aspects, either on the part of the operation itself, or on the part of the operating power, or on the part of the object; and thus the will does not tend to it of necessity.

Reply Obj. 3. This definition of Happiness given by some,[5]—Happy is the man that has all he desires, or, whose every wish is fulfilled, is a good and adequate definition if it be understood in a certain way, but an inadequate definition if understood in another. For if we understand it absolutely of all that man desires by his natural appetite, thus it is true that he who has all that he desires, is happy, since nothing satisfies man's natural desire except the perfect good which is Happiness. But if we understand it of those things that man desires according to the apprehension of the reason, in this way it does not pertain to Happiness to have certain things that man desires; rather does it belong to unhappiness, in so far as the possession of such things hinders man from having all that he desires naturally; just as reason also sometimes accepts as true things that are a hindrance to the knowledge of truth. And it was through taking this into consideration that Augustine added so as to include perfect Happiness,—that "he desires nothing amiss," although the first part suffices if rightly understood, that is to say, that "happy is he who has all he desires."

TREATISE ON HUMAN ACTS

I. Of those Acts Which are Proper to Man

(a) *The Nature of Voluntary Acts in General*

QUESTION VI

Of the voluntary and the involuntary

(In Eight Articles)

Since therefore Happiness must be gained by means of certain acts, we are obliged consequently to consider human acts, in order to know by what acts we may obtain Happiness, and by what acts we are prevented from obtaining it. But because operations and acts are concerned with things singular, consequently all practical knowledge is incomplete unless it take account of things in detail. The study of Morals, therefore, since it treats of human acts, should consider first the universal principles, and secondly matters of detail Part II-II.

In treating of the universal principles, the points that offer themselves for our consideration are—(1) human acts themselves; (2) their principles (Q. XLIX). Now of human acts some are proper to man; others are common to man and animals. And since Happiness is man's proper good, those acts which are proper to man have a closer connection with Happiness than have those which are common to man and the other animals. First, then, we must consider those acts which are proper to man; secondly, those acts which are common to man and the other animals, and are called Passions (Q XXII). The first of these points offers a twofold consideration: (1) What makes a human act? (2) What distinguishes human acts (Q. XVIII)?

And since those acts are properly called human which are voluntary, because the will is the rational appetite, which is proper to man, we must consider acts in so far as they are voluntary.

First, then, we must consider the voluntary and involuntary in general; secondly, those acts which are voluntary, as being elicited by the will, and as issuing from the will immediately (Q. VIII); thirdly, those acts which are voluntary, as being commanded by the will, which issue from the will through the medium of the other powers (Q. XVII).

And because voluntary acts have certain circumstances, according to which we form our judgment concerning them, we must first consider the voluntary and the involuntary, and afterwards, the circumstances of those acts which are found to be voluntary or involuntary (Q. VII). Under the first head there are eight points of inquiry: (1) Whether there is anything voluntary in human acts? (2) Whether in irrational animals? (3) Whether there can be voluntariness without any action? (4) Whether violence can be done to the will? (5) Whether violence causes involuntariness? (6) Whether fear causes involuntariness? (7) Whether concupiscence causes involuntariness? (8) Whether ignorance causes involuntariness?

Article 1. *Whether There Is Anything Voluntary in Human Acts?*

We proceed thus to the First Article: It seems that there is nothing voluntary in human acts.

Objection 1. For "that is voluntary which has its principle within itself," as Gregory of Nyssa (Nemesius, *De Natura Hom.* xxxii),[1] Damascene (*De Fide Orthod.* ii, 24),[2] and Aristotle[3] declare. But the principle of human acts is not in man himself, but outside him, since man's appetite is moved to act by the appetible object which is outside him, and is as "a mover unmoved."[4] Therefore there is nothing voluntary in human acts.

Obj. 2. Further, the Philosopher proves[5] that in animals no new act arises that is not preceded by a motion from without. But all human acts are new, since none is eternal. Consequently, the principle of all human acts is from with-

[1] PG 40, 728.
[2] PG 94, 953.
[3] *Ethics*, III, 1 (1111^a23).
[4] Aristotle, *Soul*, III, 4 (433^b11).
[5] *Physics*, VIII, 2 (253^a11).

out, and therefore there is nothing voluntary in them.

Obj. 3. Further, he that acts voluntarily can act of himself. But this is not true of man; for it is written (John 15. 5): *Without Me you can do nothing.* Therefore there is nothing voluntary in human acts.

On the contrary, Damascene says (*De Fide Orthod.* ii)[1] that "the voluntary is an act consisting in a rational operation." Now such are human acts. Therefore there is something voluntary in human acts.

I answer that, There must be something voluntary in human acts. In order to make this clear, we must take note that the principle of some acts or movements is within the agent, or that which is moved and that the principle of some movements or acts is outside. For when a stone is moved upwards, the principle of this movement is outside the stone; but when it is moved downwards, the principle of this movement is in the stone. Now of those things that are moved by an intrinsic principle, some move themselves, some not. For since every agent or thing moved acts or is moved for an end, as stated above (Q. 1, A. 2), those are perfectly moved by an intrinsic principle whose intrinsic principle is one not only of movement but of movement for an end. Now in order for a thing to be done for an end some knowledge of the end is necessary. Therefore, whatever so acts or is so moved by an intrinsic principle that it has some knowledge of the end, has within itself the principle of its act, so that it not only acts, but acts for an end. On the other hand, if a thing has no knowledge of the end, even though it have an intrinsic principle of action or movement, nevertheless the principle of acting or being moved for an end is not in that thing, but in something else, by which the principle of its action towards an end is imprinted on it. Therefore things of this kind are not said to move themselves, but to be moved by others. But those things which have a knowledge of the end are said to move themselves because there is in them a principle by which they not only act but also act for an end. And consequently, since both are from an intrinsic principle, namely, that they act and that they act for an end, the movements of such things are said to be voluntary, for the word voluntary implies that their movements and acts are from their own inclination. Hence it is that, according to the definitions of Aristotle, Gregory of Nyssa, and Damascene (obj. 1), the voluntary is defined not only as having "a principle within" the agent, but also as implying "knowledge." Therefore, since man especially knows the end of his work, and moves himself, in his acts especially is the voluntary to be found.

Reply Obj. 1. Not every principle is a first principle. Therefore, although it is essential to the voluntary act that its principle be within the agent, nevertheless it is not contrary to the nature of the voluntary act that this intrinsic principle be caused or moved by an extrinsic principle, because it is not essential to the voluntary act that its intrinsic principle be a first principle. Yet again it must be observed that a principle of movement may happen to be first in a genus, but not first absolutely; thus in the genus of things subject to alteration, the first mover is a heavenly body, which nevertheless is not the first mover absolutely, but is moved locally by a higher mover. And so the intrinsic principle of the voluntary act, which is the knowing and appetitive power, is the first principle in the genus of appetitive movement, although it is moved by an extrinsic principle according to other species of movement.

Reply Obj. 2. New movements in animals are indeed preceded by a motion from without; and this in two respects. First, in so far as by means of an extrinsic motion an animal's senses are confronted with something sensible, which, on being apprehended, moves the appetite. Thus a lion, on seeing a stag in movement and coming towards him, begins to be moved towards the stag. Secondly, in so far as some extrinsic motion produces a physical change in an animal's body, as in the case of cold or heat; and through the body being thus changed by the motion of an outward body, the sensitive appetite which is the power of a bodily organ, is also moved indirectly; thus it happens that through some alteration in the body the appetite is roused to the desire of something. But this is not contrary to the nature of voluntariness, as stated above (Reply 1), for such movements caused by an extrinsic principle are of another genus of movement.

Reply Obj. 3. God moves man to act not only by proposing the appetible to the senses, or by effecting a change in his body, but also by moving the will itself, because every movement either of the will or of nature, proceeds from God as the First Mover. And just as it is not incompatible with nature that the natural movement be from God as the First Mover, since nature is an instrument of God moving it, so it is not contrary to the notion of a voluntary act

[1] Chap. 24 (PG 94, 953).

that it proceed from God in so far as the will is moved by God. Nevertheless both natural and voluntary movements have this in common, that it is essential that they should proceed from a principle within the agent.

ARTICLE 2. *Whether There Is Anything Voluntary in Irrational Animals?*

We proceed thus to the Second Article: It seems that there is nothing voluntary in irrational animals.

Objection 1. For a thing is called "voluntary" from *voluntas* (will). Now since the will is "in the reason,"[1] it cannot be in irrational animals. Therefore neither is there anything voluntary in them.

Obj. 2. Further, according as human acts are voluntary, man is said to be master of his actions. But irrational animals are not masters of their actions; for "they act not; rather are they acted upon," as Damascene says (*De Fide Orthod.* ii).[2] Therefore there is no such thing as a voluntary act in irrational animals.

Obj. 3. Further, Damascene says (*ibid.*)[3] that "voluntary acts lead to praise and blame." But neither praise nor blame is due to the acts of irrational animals. Therefore such acts are not voluntary.

On the contrary, The Philosopher says[4] that "both children and irrational animals participate in the voluntary." The same is said by Damascene (*loc. cit.*) and Gregory of Nyssa.[5]

I answer that, As stated above (A. 1), it is essential to the voluntary act that its principle be within the agent, together with some knowledge of the end. Now knowledge of the end is twofold: perfect and imperfect. Perfect knowledge of the end consists in not only apprehending the thing which is the end, but also in knowing it under the aspect of end, and the relationship of the means to that end. And such knowledge belongs only to the rational nature. But imperfect knowledge of the end consists in mere apprehension of the end, without knowing it under the aspect of end, or the relationship of an act to the end. Such knowledge of the end is exercised by irrational animals through their senses and their natural estimative power.

Consequently perfect knowledge of the end leads to the perfect voluntary act according as, having apprehended the end, a man can, from deliberating about the end and the means to it, be moved, or not moved, to gain that end. But imperfect knowledge of the end leads to the imperfect voluntary act, according as the agent apprehends the end, but does not deliberate, and is moved to the end at once. Therefore the voluntary act in its perfection belongs to none but the rational nature; but the imperfect voluntary act pertains to even irrational animals.

Reply Obj. 1. The will is the name of the rational appetite, and consequently it cannot be in things devoid of reason. But the word "voluntary" is derived from *voluntas* (will), and can be extended to those things in which there is some participation of will, by way of likeness. It is thus that voluntary action is attributed to irrational animals, in so far as they are moved to an end through some kind of knowledge.

Reply Obj. 2. The fact that man is master of his actions is due to his being able to deliberate about them, for since the deliberating reason is indifferently disposed to opposite things, the will can be inclined to either. But it is not thus that voluntariness is in irrational animals, as stated above.

Reply Obj. 3. Praise and blame are the result of the voluntary act, in which the perfect notion of voluntariness is to be found, such as is not to be found in irrational animals.

ARTICLE 3. *Whether There Can Be Voluntariness Without Any Act?*

We proceed thus to the Third Article: It seems that voluntariness cannot be without any act.

Objection 1. For that is voluntary which proceeds from the will. But nothing can proceed from the will except through some act, at least an act of the will. Therefore there cannot be voluntariness without act.

Obj. 2. Further, just as one is said to wish by an act of the will, so when the act of the will ceases, one is said not to wish. But not to wish causes involuntariness, which is opposed to voluntariness. Therefore there can be nothing voluntary when the act of the will ceases.

Obj. 3. Further, knowledge is essential to the voluntary, as stated above (AA. 1, 2). But knowledge involves an act. Therefore voluntariness cannot be without some act.

On the contrary, the word "voluntary" is applied to that of which we are masters. Now we are masters in respect of to act and not to act, to will and not to will. Therefore just as to act and to will are voluntary, so also are not to act and not to will.

I answer that, Voluntary is what proceeds from the will. Now one thing proceeds from an-

[1] Aristotle, *Soul,* III, 9 (432^b5). [2] Chap. 27 (PG 94, 960).
[3] Chap. 24 (PG 94, 953). [4] *Ethics,* III, 2 (1111^b8).
[5] Nemesius, *De Nat. Hom.,* XXXII (PG 40, 729).

other in two ways. First, directly, in which sense something proceeds from another inasmuch as this other acts; for instance, heating from heat. Secondly, indirectly in which sense something proceeds from another through this other not acting; thus the sinking of a ship is set down to the helmsman, from his having ceased to steer. But we must take note that the cause of what follows from want of action is not always the agent as not acting, but only then when the agent can and ought to act. For if the helmsman were unable to steer the ship, or if the ship's helm be not entrusted to him, the sinking of the ship would not be set down to him, although it might be due to his absence from the helm.

Since, then, the will by willing and acting, is able, and sometimes ought, to hinder not-willing and not-acting, this not-willing and not-acting is imputed to the will as though arising from it. And thus it is that we can have the voluntary without an act; sometimes without outward act, but with an interior act, for instance, when one wills not to act; and sometimes without even an interior act, as when one does not will to act.

Reply Obj. 1. We apply the word "voluntary" not only to that which proceeds from the will directly, as from its action, but also to that which proceeds from it indirectly as from its inaction.

Reply Obj. 2. "Not to wish" is said in two senses. First, as though it were one word, and the infinitive of "I-do-not-wish." Consequently just as when I say "I do not wish to read," the sense is, "I wish not to read," so "not to wish to read" is the same as "to wish not to read," and in this sense "not to wish" implies involuntariness. Secondly it is taken as a sentence, and then no act of the will is affirmed. And in this sense "not to wish" does not cause involuntariness.

Reply Obj. 3. Voluntariness requires an act of knowledge in the same way as it requires an act of will; namely, in order that it be in one's power to consider, to wish, and to act. And then, just as not to wish, and not to act, when it is time to wish and to act, is voluntary, so is it voluntary not to consider.

ARTICLE 4. *Whether Violence Can Be Done to the Will?*

We proceed thus to the Fourth Article: It seems that violence can be done to the will.

Objection 1. For everything can be compelled by that which is more powerful. But there is something, namely, God, that is more powerful than the human will. Therefore it can be compelled, at least by Him.

Obj. 2. Further, every passive subject is compelled by its active principle when it is changed by it. But the will is a passive force, "for it is a mover moved."[1] Therefore, since it is sometimes moved by its active principle, it seems that sometimes it is compelled.

Obj. 3. Further, violent movement is that which is contrary to nature. But the movement of the will is sometimes contrary to nature, as is clear of the will's movement to sin, which is contrary to nature, as Damascene says (*De Fide Orthod.* iv, 20).[2] Therefore the movement of the will can be compelled.

On the contrary, Augustine says[3] that what is done by the will is not done of necessity. Now, whatever is done under compulsion is done of necessity. Consequently what is done by the will cannot be compelled. Therefore the will cannot be compelled to act.

I answer that, The act of the will is twofold: one is its immediate act, as it were, elicited by it, namely, to wish; the other is an act of the will commanded by it, and put into execution by means of some other power, such as to walk and to speak, which are commanded by the will to be executed by means of the power of movement.

As regards the commanded acts of the will, then, the will can suffer violence, in so far as violence can prevent the exterior members from executing the will's command. But as to the will's own proper act, violence cannot be done to the will.

The reason of this is that the act of the will is nothing else than an inclination proceeding from the interior principle of knowledge, just as the natural appetite is an inclination proceeding from an interior principle without knowledge. Now what is compelled or violent is from an exterior principle. Consequently it is contrary to the notion of the will's own act that it should be subject to compulsion or violence, just as it is also contrary to the notion of the natural inclination or movement of a stone that it should be borne upwards. For a stone may have an upward movement from violence, but that this violent movement be from its natural inclination is impossible. In like manner a man may be dragged by force, but it is contrary to the very notion of violence that he be thus dragged of his own will.

[1] Aristotle, *Soul,* III, 10 (433[a]9; [b]16).
[2] PG 94, 1196. [3] *City of God,* V, 10 (PL 41, 152).

Reply Obj. 1. God Who is more powerful than the human will, can move the will of man, according to Prov. 21. 1: *The heart of the king is in the hand of the Lord; whithersoever He will He shall turn it.* But if this were by compulsion, it would no longer be by an act of the will, nor would the will itself be moved, but something else against the will.

Reply Obj. 2. It is not always a violent movement when a passive subject is changed by its active principle, but only when this is done against the interior inclination of the passive subject. Otherwise every alteration and generation of simple bodies would be unnatural and violent, whereas they are natural by reason of the natural interior aptitude of the matter or subject to such a disposition. In like manner when the will is moved according to its own inclination by the appetible object, this movement is not violent but voluntary.

Reply Obj. 3. That to which the will tends by sinning, although in reality, it is evil and contrary to the rational nature, nevertheless is apprehended as something good and suitable to nature in so far as it is suitable to man by reason of some pleasurable sensation or some corrupt habit.

ARTICLE 5. *Whether Violence Causes Involuntariness?*

We proceed thus to the Fifth Article: It seems that violence does not cause involuntariness.

Objection 1. For we speak of voluntariness and involuntariness in respect of the will. But violence cannot be done to the will, as shown above (A. 4). Therefore violence cannot cause involuntariness.

Obj. 2. Further, that which is done involuntarily is done with grief, as Damascene (*De Fide Orthod.* ii)[1] and the Philosopher[2] say. But sometimes a man suffers compulsion without being grieved thereby. Therefore violence does not cause involuntariness.

Obj. 3. Further, what is from the will cannot be involuntary. But some violent actions proceed from the will, for instance, when a man with a heavy body goes upwards, or when a man contorts his limbs in a way contrary to their natural flexibility. Therefore violence does not cause involuntariness.

On the contrary, The Philosopher[3] and Damascene (*loc. cit.*) say that "things done under compulsion are involuntary."

[1] Chap. 24 (PG 94, 953).
[2] *Ethics,* III, 1 (1111[a]20). [3] *Ibid.* (1109[b]35).

I answer that, Violence is directly opposed to the voluntary, as likewise to the natural. For the voluntary and the natural have this in common, that both are from an intrinsic principle, whereas violence is from an extrinsic principle. And for this reason, just as in things devoid of knowledge, violence effects something against nature, so in things endowed with knowledge, it effects something against the will. Now that which is against nature is said to be unnatural; and in like manner that which is against the will is said to be involuntary. Therefore violence causes involuntariness.

Reply Obj. 1. The involuntary is opposed to the voluntary. Now it has been said (A. 4) that not only the act, which proceeds immediately from the will, is called voluntary, but also the act commanded by the will. Consequently, as to the act which proceeds immediately from the will, violence cannot be done to the will, as stated above (*ibid.*). But as to the commanded act, the will can suffer violence, and consequently in this respect violence causes involuntariness.

Reply Obj. 2. As that is said to be natural which is according to the inclination of nature, so that is said to be voluntary which is according to the inclination of the will. Now a thing is said to be natural in two ways. First, because it is from nature as from an active principle; thus it is natural for fire to produce heat. Secondly, according to a passive principle, because, namely, there is an innate inclination to receive an action from an extrinsic principle; thus the movement of the heavens is said to be natural by reason of the natural aptitude in a heavenly body to receive such movement, although the cause of that movement is a voluntary agent. In like manner an act is said to be voluntary in two ways. First, in regard to action, for instance, when one wishes to act; secondly, in regard to passion, as when one wishes to be acted upon by another. Hence when action is brought to bear on something by an extrinsic agent, as long as the will to suffer that action remains in the passive subject there is not violence absolutely, for although the patient does nothing by way of action, he does something by being willing to suffer. Consequently this cannot be called involuntary.

Reply Obj. 3. As the Philosopher says,[4] the movement of an animal by which at times an animal is moved against the natural inclination of the body, although it is not natural to the body, is nevertheless somewhat natural to the

[4] *Physics,* VIII, 4 (254[b]14).

animal, to which it is natural to be moved according to its appetite. Accordingly this is violent not absolutely, but relatively. The same remark applies in the case of one who contorts his limbs in a way that is contrary to their natural disposition. For this is violent relatively, that is, as to that particular limb, but not absolutely, that is, as to the man himself.

ARTICLE 6. *Whether Fear Causes Involuntariness Simply?*

We proceed thus to the Sixth Article: It seems that fear causes involuntariness simply.

Objection 1. For just as is violence with respect to that which is contrary to the will at the time, so is fear with respect to a future evil which is contrary to the will. But violence causes involuntariness absolutely. Therefore fear too causes involuntariness absolutely.

Obj. 2. Further, that which is such of itself, remains such, whatever be added to it; thus what is hot of itself, as long as it remains, is still hot, whatever be added to it. But that which is done through fear is involuntary in itself. Therefore, even with the addition of fear, it is involuntary.

Obj. 3. Further, that which is such, subject to a condition, is such relatively; but what is such without any condition, is such absolutely; thus what is necessary, subject to a condition, is necessary relatively: but what is necessary absolutely, is necessary simply. But that which is done through fear is absolutely involuntary, and is not voluntary save under a condition, namely, in order that the evil feared may be avoided. Therefore that which is done through fear, is involuntary simply.

On the contrary, Gregory of Nyssa[1] and the Philosopher[2] say that such things as are done through fear are voluntary rather than involuntary.

I answer that, As the Philosopher says[3] and likewise Gregory of Nyssa in his book on Man (Nemesius, *loc. cit*), such things as are done through fear are of a mixed character, being partly voluntary and partly involuntary. For that which is done through fear, considered in itself, is not voluntary; but it becomes voluntary in this particular case, in order, namely, to avoid the evil feared.

But if the matter be considered rightly, such things are voluntary rather than involuntary; for they are voluntary absolutely, but involuntary relatively. For a thing is said to be absolutely, according as it is in act; but according as it is only in the apprehension, it is not absolutely, but relatively. Now that which is done through fear is in act in so far as it is done. For, since acts are concerned with singulars, and the singular, as such, is here and now, that which is done is in act, in so far as it is here and now and under other individuating circumstances. And that which is done through fear, is voluntary, in so far as it is here and now, that is to say, in so far as in this instance it hinders a greater evil which was feared; thus the throwing of the cargo into the sea becomes voluntary during the storm, through fear of the danger. And so it is clear that it is voluntary absolutely. And hence it is that what is done out of fear possesses the character of being voluntary, because its principle is within. But if we consider what is done through fear as being outside this particular case, and according as it is averse to the will, this is merely something existing in our reason. And consequently what is done through fear is involuntary, considered in that respect, that is to say, outside the actual circumstances of the case.

Reply Obj. 1. Things done through fear and compulsion differ not only according to present and future time, but also in this, that the will does not consent, but is moved entirely counter to that which is done through compulsion, whereas what is done through fear becomes voluntary because the will is moved towards it, although not for its own sake, but on account of something else, that is, in order to avoid an evil which is feared. For the conditions of a voluntary act are satisfied if it be done on account of something else voluntary, since the voluntary is not only what we will for its own sake, as an end, but also what we will for the sake of something else, as an end. It is clear therefore that in what is done from compulsion, the will does nothing inwardly; but in what is done through fear, the will does something. Accordingly, as Gregory of Nyssa (Nemesius, *loc. cit.*) says, in order to exclude things done through fear, a violent action is defined as not only one, "the principle of which is from without," but with the addition, "in which he that suffers violence in no way concurs," because the will of him that is in fear does concur somewhat in that which he does through fear.

Reply Obj. 2. Things that are such absolutely remain such, whatever be added to them, for instance, a cold thing, or a white thing; but things that are such relatively, vary according as they are compared with different things. For what is

[1] Nemesius, *De Nat. Hom.*, XXX (PG 40, 721).
[2] *Ethics*, III, 1 (1110[a]12). [3] *Ibid.*

big in comparison with one thing is small in comparison with another. Now a thing is said to be voluntary, not only for its own sake, as it were absolutely, but also for the sake of something else, as it were relatively. Accordingly, nothing prevents a thing which was not voluntary in comparison with one thing from becoming voluntary when compared with another.

Reply Obj. 3. That which is done through fear is voluntary without any condition, that is to say, according as it is actually done; but it is involuntary under a certain condition, that is, if such a fear were not threatening. Consequently, this argument proves rather the opposite.

Article 7. *Whether Concupiscence Causes Involuntariness?*

We proceed thus to the Seventh Article: It would seem that concupiscence causes involuntariness.

Objection 1. For just as fear is a passion, so is concupiscence. But fear causes involuntariness to a certain extent. Therefore concupiscence does so too.

Obj. 2. Further, just as the timid man through fear acts counter to that which he proposed, so does the incontinent, through concupiscence. But fear causes involuntariness to a certain extent, Therefore concupiscence does so also.

Obj. 3. Further, knowledge is necessary for voluntariness. But concupiscence impairs knowledge; for the Philosopher says[1] that delight, or the lust of pleasure, destroys the judgment of prudence. Therefore concupiscence causes involuntariness.

On the contrary, Damascene says (*De Fide Orthod.* ii, 24):[2] "The involuntary act deserves mercy or indulgence, and is done with regret." But neither of these can be said of that which is done out of concupiscence. Therefore concupiscence does not cause involuntariness.

I answer that, Concupiscence does not cause involuntariness, but rather makes something to be voluntary. For a thing is said to be voluntary from the fact that the will is moved to it. Now concupiscence inclines the will to desire the object of concupiscence. Therefore the effect of concupiscence is to make something to be voluntary rather than involuntary.

Reply Obj. 1. Fear regards evil, but concupiscence regards good. Now evil of itself is counter to the will, whereas good harmonizes with the will. Therefore fear is more inclined than concupiscence to cause involuntariness.

Reply Obj. 2. He who acts from fear remains averse in his will to that which he does, considered in itself. But he that acts from concupiscence, for example, an incontinent man, does not retain his former will whereby he repudiated the object of his concupiscence; for his will is changed, so that he desires that which previously he repudiated. Accordingly, that which is done out of fear is involuntary to a certain extent, but that which is done from concupiscence is in no way involuntary. For the man who yields to concupiscence acts counter to that which he purposed at first, but not counter to that which he desires now; but the timid man acts counter to that which in itself he desires now.

Reply Obj. 3. If concupiscence were to destroy knowledge altogether, as happens with those whom concupiscence has rendered mad, it would follow that concupiscence would take away voluntariness. And yet, properly speaking, it would not result in the act being involuntary, because in things bereft of reason, there is neither voluntary nor involuntary. But sometimes in those actions which are done from concupiscence, knowledge is not completely destroyed, because the power of knowing is not taken away entirely, but only the actual consideration in some particular possible act. Nevertheless, this itself is voluntary, according as by voluntary we mean that which is in the power of the will, as not to act and not to will, and in like manner not to consider; for the will can resist the passion, as we shall state later on (Q. X, A. 3; Q. LXXVII, A. 7).

Article 8. *Whether Ignorance Causes Involuntariness?*

We proceed thus to the Eighth Article: It seems that ignorance does not cause involuntariness.

Objection 1. For the "involuntary act deserves pardon," as Damascene says (*De Fide Orthod.* ii, 24).[3] But sometimes that which is done through ignorance does not deserve pardon, according to I Cor. 14. 38: *If any man know not, he shall not be known.* Therefore ignorance does not cause involuntariness.

Obj. 2. Further, every sin implies ignorance, according to Prov. 14. 22: *They err, that work evil.* If, therefore, ignorance causes involuntariness, it would follow that every sin is involuntary, which is opposed to the saying of Augustine, that "every sin is voluntary" (*De Vera Relig.* xiv).[4]

Obj. 3. Further, "involuntariness is not without sadness," as Damascene says (*loc. cit.*).

[1] *Ethics,* VI, 5 (1140b12). [2] PG 94, 953. [3] PG 94, 953. [4] PL 34, 133.

But some things are done out of ignorance, but without sadness; for instance, a man may kill a foe, whom he wishes to kill, thinking at the time that he is killing a stag. Therefore ignorance does not cause involuntariness.

On the contrary, Damascene (*loc. cit.*) and the Philosopher[1] say that "what is done through ignorance is involuntary."

I answer that, Ignorance causes involuntariness, by the very fact that it excludes knowledge, which is a necessary condition of voluntariness, as was declared above (A. 1). But not every kind of ignorance deprives one of this knowledge. Accordingly, we must take note that ignorance has a threefold relationship to the act of the will: in one way, concomitantly; in another, consequently; in a third way, antecedently. Ignorance is concomitant to the act when a person is ignorant of what he is doing but would do it just the same if he knew. For then, ignorance does not induce one to wish this to be done, but it just happens that a thing is at the same time done and not known; thus in the example given (obj. 3) a man did indeed wish to kill his foe, but killed him in ignorance, thinking to kill a stag. And ignorance of this kind, as the Philosopher states,[2] does not cause involuntariness, since it is not the cause of anything that is averse to the will; but it causes non-voluntariness, since that which is unknown cannot be actually willed.

Ignorance is consequent to the act of the will in so far as ignorance itself is voluntary and this happens in two ways, in accordance with the two kinds of voluntary acts mentioned above. (A. 3). First, because the act of the will is brought to bear on the ignorance, as when a man wishes not to know, that he may have an excuse for sin, or that he may not be withheld from sin, according to Job 21.14: *We desire not the knowledge of Thy ways.* And this is called "affected ignorance." Secondly, ignorance is said to be voluntary with respect to that which one can and ought to know, for in this sense not to act and not to will are said to be voluntary, as stated above (A. 3). And ignorance of this kind happens either when one does not actually consider what one can and ought to consider, which is called "ignorance of evil choice," and arises from some passion or habit; or it happens when one does not take the trouble to acquire the knowledge which one ought to have in which sense, ignorance of the general principles of law, which one ought to know, is voluntary, as being due to negligence. Accordingly if, in either of these ways, ignorance is voluntary, it cannot cause involuntariness simply. Nevertheless, it causes involuntariness relatively, since it precedes the movement of the will towards the act, which movement would not be, if there were knowledge.

Ignorance is antecedent to the act of the will when it is not voluntary, and yet is the cause of man's willing what he would not will otherwise. Thus a man may be ignorant of some circumstance of his act which he was not bound to know, the result being that he does that which he would not do if he knew of that circumstance; for instance, a man, after taking proper precaution, may not know that someone is coming along the road, so that he shoots an arrow and slays a passer-by. Such ignorance causes involuntariness absolutely.

From this may be gathered the *solution of the objections.* For the first objection deals with ignorance of what a man is bound to know. The second, with ignorance of choice, which is voluntary to a certain extent, as stated above. The third, of that ignorance which is concomitant with the act of the will.

[1] *Ethics,* III, 1 (1110^{a}1).
[2] *Ibid.* (1110^{b}25).

QUESTION VII

OF THE CIRCUMSTANCES OF HUMAN ACTS

(In Four Articles)

WE must now consider the circumstances of human acts, under which head there are four points of inquiry: (1) What is a circumstance? (2) Whether a theologian should take note of the circumstances of human acts? (3) How many circumstances are there? (4) Which are the most important of them?

ARTICLE 1. *Whether a Circumstance Is an Accident of a Human Act?*

We proceed thus to the First Article: It would seem that a circumstance is not an accident of a human act.

Objection 1. For Tully says (*De Invent. Rhetor.* i)[3] that a circumstance is that from which an orator adds authority and strength to his argument. But oratorical arguments are derived principally from things pertaining to the substance of a thing, such as the definition, the genus, the species, and the like, from which also Tully declares that an orator should draw his arguments.[4] Therefore a circumstance is not an accident of a human act.

[3] Chap. 17 (DD I, 99).
[4] *Top.,* III (DD I, 491).

Obj. 2. Further, "to be in" is proper to an accident. But that which surrounds (*circumstat*) is rather out than in. Therefore the circumstances are not accidents of human acts.

Obj. 3. Further, an accident has no accident. But human acts themselves are accidents. Therefore the circumstances are not accidents of acts.

On the contrary, The particular conditions of any singular thing are called its individuating accidents. But the Philosopher calls the circumstances particular things, *i.e.,* the particular conditions of each act.[1] Therefore the circumstances are individual accidents of human acts.

I answer that, Since, according to the Philosopher,[2] words are the signs of what we understand, it must be that in naming things we follow the process of intellectual knowledge. Now our intellectual knowledge proceeds from the better known to the less known. Accordingly with us, names of more known things are transferred so as to signify things less known; and hence it is that, as stated in the *Metaphysics,*[3] the notion of distance has been transferred from things that are apart locally, to all kinds of opposition, and in like manner words that signify local movement are employed to designate all other movements, because bodies which are circumscribed by place, are best known to us. And hence it is that the word "circumstance" has passed from things in place to human acts.

Now in things in place, that is said to surround something which is outside it, but touches it, or is near to it in place. Accordingly, whatever conditions are outside the substance of an act and yet in some way touch the human act are called circumstances. Now what is outside a thing's substance but pertains to that thing, is called its accident. Therefore the circumstances of human acts should be called their accidents.

Reply Obj. 1. The orator gives strength to his argument, in the first place, from the substance of the act, and, secondly, from the circumstances of the act. Thus a man becomes indictable, first, through being guilty of murder; secondly, through having done it deceitfully, or from motives of greed, or at a holy time or place, and so forth. And so in the passage quoted, it is said pointedly that the orator "adds strength to his argument," as though this were something secondary.

Reply Obj. 2. A thing is said to be an accident of something in two ways. First, from being in that thing; thus, whiteness is said to be an accident of Socrates. Secondly, because it is together with that thing in the same subject; thus, whiteness is an accident of music, in so far as they meet in the same subject, so as to touch one another, as it were. And in this sense circumstances are said to be the accidents of human acts.

Reply Obj. 3. As stated above (Reply 2), an accident is said to be the accident of an accident, from the fact that they meet in the same subject. But this happens in two ways. First, in so far as two accidents are both related to the same subject without any relation to one another, as whiteness and music in Socrates. Secondly, when such accidents are related to one another, as when the subject receives one accident by means of the other; for instance, a body receives colour by means of its surface. And in this way also one accident is said to be in another; for we speak of colour as being in the surface.

Accordingly, circumstances are related to acts in both these ways. For some circumstances that have a relation to acts pertain to the agent otherwise than through the act, such as place and condition of person; but others belong to the agent by reason of the act, as for example the manner in which the act is done.

Article 2. *Whether Theologians Should Take Note of the Circumstances of Human Acts?*

We proceed thus to the Second Article: It seems that theologians should not take note of the circumstances of human acts.

Objection 1. Because theologians do not consider human acts otherwise than according to their quality of good or evil. But it seems that circumstances cannot give quality to human acts, for a thing is never qualified, formally speaking, by that which is outside it, but by that which is in it. Therefore theologians should not take note of the circumstances of acts.

Obj. 2. Further, circumstances are the accidents of acts. But one thing may be subject to an infinity of accidents; hence the Philosopher says[4] that "no art or science considers accidental being," except the art of sophistry. Therefore the theologian has not to consider circumstances.

Obj. 3. Further, the consideration of circumstances belongs to the rhetorician. But rhetoric is not a part of theology. Therefore it is not a theologian's business to consider circumstances.

On the contrary, Ignorance of circumstances

[1] *Ethics,* III, 1 (1110^{b}33).
[2] *Interpretation,* 1 (16^{a}3).
[3] Aristotle, X, 4 (1055^{a}9).
[4] *Metaphysics,* VI, 2 (1026^{b}3).

causes an act to be involuntary, according to Damascene (*De Fide Orthod.* ii)[1] and Gregory of Nyssa (Nemesius,—*De Nat. Hom.* xxxi).[2] But involuntariness excuses from sin, the consideration of which belongs to the theologian. Therefore circumstances also should be considered by the theologian.

I answer that, Circumstances come under the consideration of the theologians for a threefold reason. First, because the theologian considers human acts in so far as man is thereby ordered to Happiness. Now, everything that is ordered to an end should be proportionate to that end. But acts are made proportionate to an end by means of a certain commensurateness, which results from the due circumstances. Hence the theologian has to consider the circumstances. Secondly, because the theologian considers human acts according as they are found to be good or evil, better or worse, and this diversity depends on circumstances, as we shall see further on (Q. XVIII, AA 10, 11; Q. LXXIII, A. 7). Thirdly, because the theologian considers human acts under the aspect of merit and demerit, which is proper to human acts; and for this it is requisite that they be voluntary. Now a human act is judged to be voluntary or involuntary according to knowledge or ignorance of circumstances, as stated above (cf. Q VI, A. 8). Therefore the theologian has to consider circumstances

Reply Obj. 1. Good ordered to the end is said to be useful, and this implies some kind of relation; therefore the Philosopher says[3] that "good in relation to something, is the useful" Now, in the genus "relation" a thing is denominated not only according to that which is inherent in the thing, but also according to that which is extrinsic to it, as may be seen in the expressions right and left, equal and unequal, and the like. Accordingly, since the goodness of acts consists in their usefulness to the end, nothing hinders their being called good or bad according to their proportion to extrinsic things adjacent to them.

Reply Obj. 2. Accidents which are altogether accidental are neglected by every art, by reason of their uncertainty and infinity. But accidents of this kind are not what we call circumstances, because circumstances, although, as stated above (A. 1), they are extrinsic to the act, nevertheless are in a kind of contact with it, by being related to it. Proper accidents, however, come under the consideration of art.

Reply Obj. 3. The consideration of circumstances belongs to the moralist, the politician, and the rhetorician. To the moralist, in so far as with respect to circumstances we find or lose the mean of virtue in human acts and passions. To the politician and to the rhetorician, in so far as circumstances make acts to be worthy of praise or blame, of excuse or indictment. In different ways, however, because where the rhetorician persuades, the politician judges. To the theologian this consideration belongs in all the ways mentioned, since to him all the other arts are subservient; for he has to consider virtuous and vicious acts, just as the moralist does, and with the rhetorician and politician he considers acts according as they are deserving of reward or punishment.

ARTICLE 3. *Whether the Circumstances Are Properly Set Forth in the Third Book of Ethics?*

We proceed thus to the Third Article: It would seem that the circumstances are not properly set forth in the *Ethics.*[4]

Objection 1. For a circumstance of an act is described as something outside the act. Now time and place answer to this description. Therefore there are only two circumstances, namely, when and where.

Obj. 2. Further, we judge from the circumstances whether a thing is well or ill done. But this belongs to the mode of an act Therefore all the circumstances are included under one, which is the mode of acting.

Obj. 3. Further, circumstances are not part of the substance of an act But the causes of an act seem to belong to its substance. Therefore no circumstance should be taken from the cause of the act itself. Accordingly, neither "who," nor "why," nor "about what," are circumstances, since "who" refers to the efficient cause, "why" to the final cause, and "about what" to the material cause.

On the contrary is the authority of the Philosopher in the *Ethics.*[5]

I answer that, Tully, in his Rhetoric (*De Invent. Rhetor* i),[6] gives seven circumstances, which are contained in this verse.

Quis, quid, ubi, quibus auxiliis, cur, quomodo, quando—

Who, what, where, by what aids, why, how, and when.

For in acts we must take note of who did it, by what aids or instruments he did it, what he did, where he did it, why he did it, how and when he did it. But Aristotle in the *Ethics*[7]

[1] Chap. 24 (PG 94, 953). [2] PG 40, 724.
[3] *Ethics,* I, 6 (1096[b]26).
[4] Aristotle, III, 1 (1111[a]3). [5] III, 1 (1111[a]3).
[6] Chap. 24 (DD I, 104). [7] *Loc. Cit.*

added yet another, namely, about what, which Tully included in the circumstance what.

The reason of this enumeration may be set down as follows. For a circumstance is described as something outside the substance of the act, and yet in a way touching it. Now this happens in three ways: first, in so far as it touches the act itself; secondly, in so far as it touches the cause of the act; thirdly, in so far as it touches the effect. It touches the act itself either by way of measure, as time and place, or by way of qualifying the act, as the mode of acting. It touches the effect when we consider what is done. It touches the cause of the act, as to the final cause, by the circumstance why; as to the material cause, or object, in the circumstance about what; as to the principal efficient cause, in the circumstance who; and as to the instrumental agent cause, in the circumstance by what aids.

Reply Obj. 1. Time and place surround (*circumstant*) the act by way of measure, but the others surround the act by touching it in any other way, while at the same time they are extrinsic to the substance of the act.

Reply Obj. 2. This mode "well" or "ill" is not a circumstance, but results from all the circumstances. But the mode which pertains to a quality of the act is a special circumstance; for instance, that a man walk fast or slowly, that he strike hard or gently, and so forth.

Reply Obj. 3. A condition of the cause, on which the substance of the act depends, is not a circumstance but an additional condition. Thus, in regard to the object, it is not a circumstance of theft that the object is another's property, for this belongs to the substance of the act, but that it be great or small. And the same applies to the other causes. For the end that specifies the act is not a circumstance, but some additional end. Thus, that a valiant man act valiantly for the sake of the good of the virtue of fortitude is not a circumstance, but rather if he act valiantly for the sake of the delivery of the state, or of Christendom, or some such purpose. The same is to be said with regard to the circumstance what; for that a man by pouring water on someone should happen to wash him is not a circumstance of the washing, but that in doing so he give him a chill, or scald him, heal him or harm him, these are circumstances.

Article 4. *Whether the Most Important Circumstances Are "Why" and "In What the Act Consists?"*

would seem that these are not the most impor-

We proceed thus to the Fourth Article: It

tant circumstances, namely, "why" and those "in which the act is," as stated in the *Ethics*.[1]

Objection 1. For those "in which the act is" seem to be place and time, and these do not seem to be the most important of the circumstances, since, of them all, they are the most extrinsic to the act. Therefore "those things in which the act is" are not the most important circumstances.

Obj. 2. Further, the end of a thing is extrinsic to it. Therefore it is not the most important circumstance.

Obj 3. Further, that which holds the foremost place in regard to each thing is its cause and its form. But the cause of an act is the person that does it, while the form of an act is the manner in which it is done. Therefore these two circumstances seem to be of the greatest importance.

On the contrary, Gregory of Nyssa[2] says that "the most important circumstances are why it is done and what is done."

I answer that, As stated above (Q. 1, A. 1), acts are properly called human according as they are voluntary. Now, the motive and object of the will is the end Therefore that circumstance is the most important of all which touches the act on the part of the end, namely, the circumstance "why"; and the second in importance is that which touches the very substance of the act, namely, the circumstance "what he did." As to the other circumstances, they are more or less important according as they more or less approach to these.

Reply Obj. 1. By those things "in which the act is" the Philosopher does not mean time and place, but those circumstances that are joined to the act itself. Therefore Gregory of Nyssa, as though he were explaining the dictum of the Philosopher, instead of the latter's term,—"in which the act is," said, "what is done."

Reply Obj. 2. Although the end is not part of the substance of the act, yet it is the most important cause of the act, since it moves the agent to act. Therefore the moral act is specified chiefly by the end.

Reply Obj. 3. The person that does the act is the cause of that act in so far as he is moved to it by the end; and it is chiefly in this respect that he is ordered to the act; but the other conditions of the person have not such an important relation to the act. As to the mode, it is not the substantial form of the act, for in an act the

[1] Aristotle, III, 1 (1111^a18).

[2] Nemesius, *De Nat. Hom.*, XXXI (PG 40, 728).

substantial form depends on the object and term or end; but it is, as it were, a certain accidental quality of the act.

QUESTION VIII

OF THE WILL, IN REGARD TO WHAT IT WILLS

(In Three Articles)

WE must now consider the different acts of the will; and in the first place, those acts which belong to the will itself immediately, as being elicited by the will; secondly, those acts which are commanded by the will (Q XVII).

Now the will is moved to the end, and to the means to the end. We must therefore consider (1) Those acts of the will by which it is moved to the end; and (2) those whereby it is moved to the means (Q. XIII). And since it seems that there are three acts of the will in reference to the end; namely, volition, enjoyment, and intention, we must consider (1) Volition; (2) enjoyment (Q. XI); (3) intention (Q. XII).—Concerning the first, three things must be considered: (1) Of what things is the will? (2) By what is the will moved (Q. IX)? (3) How is it moved (Q X)?

Under the first head there are three points of inquiry: (1) Whether the will is of good only? (2) Whether it is of the end only, or also of the means? (3) If in any way it is of the means, whether it is moved to the end and to the means by the one movement?

ARTICLE 1. *Whether the Will Is of Good Only?*

We proceed thus to the First Article: It seems that the will is not of good only.

Objection 1. For the same power regards opposites; for instance, sight regards white and black. But good and evil are opposites. Therefore the will is not only of good, but also of evil.

Obj. 2. Further, rational powers can be directed to opposite purposes, according to the Philosopher.[1] But the will is a rational power, since it is "in the reason," as is stated in the book of the *Soul*.[2] Therefore the will can be directed to opposites. And consequently its volition is not confined to good, but extends to evil.

Obj. 3. Further, good and being are convertible. But will is directed not only to beings, but also to non-beings. For sometimes we will not to walk, or not to speak; and again at times we will future things, which are not actual beings. Therefore the will is not of good only.

On the contrary, Dionysius says (*Div. Nom.* iv)[3] that "evil is outside the scope of the will," and that "all things desire good."[4]

I answer that, The will is a rational appetite. Now every appetite is only of something good. The reason of this is that the appetite is nothing else than an inclination of a person desirous of a thing towards that thing. Now every inclination is to something like and suitable to the thing inclined. Since, therefore, everything, in so far as it is being and substance, is a good, it must be that every inclination is to something good And hence it is that the Philosopher says[5] that "the good is that which all desire."

But it must be noted that since every inclination follows from a form, the natural appetite results from a form existing in nature, while the sensitive appetite, as also the intellectual or rational appetite, which we call the will, follows from an apprehended form. Therefore, just as the natural appetite tends to good existing in a thing, so the animal or voluntary appetite tends to a good which is apprehended. Consequently, in order that the will tend to anything, it is requisite, not that this be good in very truth, but that it be apprehended under the aspect of good. Therefore the Philosopher says[6] that "the end is a good, or an apparent good."

Reply Obj. 1. The same power regards opposites, but it is not referred to them in the same way. Accordingly, the will is referred both to good and to evil, but to good, by desiring it, to evil by shunning it. Therefore the actual desire of good is called "volition,"[7] meaning thereby the act of the will; for it is in this sense that we are now speaking of the will On the other hand, the shunning of evil is better described as "nolition." Therefore, just as volition is of good, so nolition is of evil.

Reply Obj. 2. A rational power is not directed to any opposite whatsoever, but to those which are contained under its proper object, for no power seeks other than its proper object. Now, the object of the will is good. And so the will can be directed to such opposites as are contained under good, such as to be moved, or to be at rest, to speak or to be silent, and the like, for the will can be directed to either under the aspect of good.

[5] *Ethics*, I, 1 (1094^a3).
[6] *Physics*, II, 3 (195^a26).
[7] In Latin,—*voluntas*. To avoid confusion with *voluntas* (the will) St. Thomas adds a word of explanation, which in the translation may appear superfluous.

Reply Obj. 3. That which is not a being in nature is considered as a being in the reason, and thus negations and privations are said to be "beings of reason." In this way, too, future things, in so far as they are apprehended, are beings. Accordingly, in so far as things of this kind are beings, they are apprehended under the aspect of good; and it is thus that the will is directed to them. Therefore the Philosopher says[1] that to lack evil has the nature of a good.

ARTICLE 2. *Whether Volition Is of the End Only, or Also of the Means?*

We proceed thus to the Second Article: It seems that volition is not of the means, but of the end only.

Objection 1. For the Philosopher says[2] that "volition is of the end, while choice is of the means."

Obj. 2. Further, "For objects differing in genus there are corresponding different powers of the soul."[3] Now, the end and the means are in different genera of good, because the end, which is either the virtuous good (*bonum honestum*) or the good of pleasure, is in the genus quality, or action, or passion; but "the good which is useful, and is directed to an end, is in the genus relation."[4] Therefore, if volition is of the end, it is not of the means.

Obj. 3. Further, habits are proportionate to powers, since they are perfections of them. But in those habits which are called practical arts, the end belongs to one, and the means to another art; thus the use of a ship, which is its end, belongs to the (art of the) helmsman; but the building of the ship, which is directed to the end, belongs to the art of the shipwright. Therefore, since volition is of the end, it is not of the means.

On the contrary, In natural things, a thing passes through the middle space and arrives at the term by the same power. But the means are a kind of middle space, through which one arrives at the end or term. Therefore, if volition is of the end, it is also of the means.

I answer that, The word *voluntas* sometimes designates the power of the will, sometimes its act.[5] Accordingly, if we speak of the will as a power, it extends both to the end and to the means. For every power extends to those things in which may be found the nature of its object in any way whatever; thus the sight extends to all things whatsoever that are in any way coloured. Now the aspect of good, which is the object of the power of will, may be found not only in the end but also in the means.

If, however, we speak of the will in regard to its act, then, properly speaking, volition is of the end only. Because every act denominated from a power designates the simple act of that power; thus to understand designates the simple act of the understanding. Now the simple act of a power is directed towards what is in itself the object of that power. But that which is good and willed for itself is the end. Therefore volition, properly speaking, is of the end itself. On the other hand, the means are good and willed not for themselves, but as related to the end. Therefore the will is directed to them only in so far as it is directed to the end, so that what it wills in them is the end. Thus, to understand, is properly directed to things that are known in themselves, that is, principles; but we do not speak of understanding with regard to things known through principles except is so far as we see the principles in those things. "For in morals the end is what principles are in speculative science."[6]

Reply Obj. 1. The Philosopher is speaking of the will in reference to the simple act of the will, not in reference to the power of the will.

Reply Obj. 2. There are different powers for objects that differ in genus and are of equal degree; for instance, sound and colour are different genera of sensibles, to which are referred hearing and sight. But the useful and the virtuous are related to one another not in an equal degree, but as that which is of itself, and that which is in relation to another. Now objects of this kind are always referred to the same power; for instance, the power of sight perceives both colour and light by which colour is seen.

Reply Obj. 3. Not everything that diversifies habits diversifies the powers, since habits are certain determinations of powers to certain special acts. Moreover, every practical art considers both the end and the means. For the art of the helmsman does indeed consider the end, as that which it effects; and the means, as that which it commands. On the other hand, the shipbuilding art considers the means as that which it effects; but it considers that which is the end, as that to which it orders what it effects. And again, in every practical art there is an end proper to it, and means that belong properly to that art.

[5] Cf. A. 1, note.
[6] Cf. Aristotle, *Ethics*, VII, 8 (1151[a]16).

ARTICLE 3. *Whether the Will Is Moved by the Same Act to the End and to the Means?*

We proceed thus to the Third Article: It would seem that the will is moved by the same act, to the end and to the means.

Objection 1. Because according to the Philosopher,[1] "where one thing is on account of another there is only one." But the will does not will the means save on account of the end. Therefore it is moved to both by the same act.

Obj. 2. Further, the end is the reason for willing the means, just as light is the reason of seeing colours. But light and colours are seen by the same act. Therefore the movement of the will, whereby it wills the end and the means is one and the same.

Obj. 3. Further, the movement which tends through the middle space to the term is one and the same natural movement. But the means are related to the end as the middle space is to the term. Therefore the movement of the will whereby it is directed to the end and to the means is one and the same.

On the contrary, Acts are diversified according to their objects. But the end is a different species of good from the means, which are a useful good. Therefore the will is not moved to both by the same act.

I answer that, Since the end is willed in itself, whereas the means, as such, are only willed for the end, it is evident that the will can be moved to the end, as such, without being moved to the means; but it cannot be moved to the means, as such, unless it is moved to the end Accordingly the will is moved to the end in two ways: first, to the end absolutely and in itself; secondly, as the reason for willing the means. Hence it is evident that the will is moved by one and the same movement,—to the end, as the reason for willing the means, and to the means themselves. But the act whereby the will is moved to the end absolutely is another act. And sometimes this act precedes the other in time; for example, when a man first wills to have health, and afterwards, deliberating by what means to be healed, wills to send for the doctor to heal him. The same happens in regard to the intellect: for at first a man understands the principles in themselves; but afterwards he understands them in the conclusions, according as he assents to the conclusions on account of the principles.

Reply Obj. 1. This argument holds in respect of the will being moved to the end as the reason for willing the means.

[1] *Topics*, III, 2 (117[a]18).

Reply Obj. 2. Whenever colour is seen, by the same act the light is seen; but the light can be seen without the colour being seen. In like manner whenever a man wills the means, by the same act he wills the end; but not conversely.

Reply Obj. 3. In the execution of a work, the means are as the middle-space, and the end, as the term. Therefore just as natural movement sometimes stops in the middle and does not reach the term, so sometimes one is busy with the means, without gaining the end. But in willing it is the reverse, for the will through (willing) the end comes to will the means, just as the intellect arrives at the conclusions through the principles which are called means. Hence it is that sometimes the intellect understands a mean and does not proceed from it to the conclusion. And in like manner the will sometimes wills the end and yet does not proceed to will the means.

The solution to the argument in the contrary sense is clear from what has been said above (A. 2 ANS 2). For the useful and the virtuous are not species of good in an equal degree, but are as that which is for its own sake and that which is for the sake of something else; and so the act of the will can be directed to one and not to the other, but not conversely.

QUESTION IX

OF WHAT MOVES THE WILL

(*In Six Articles*)

WE must now consider what moves the will, and under this head there are six points of inquiry: (1) Whether the will is moved by the intellect? (2) Whether it is moved by the sensitive appetite? (3) Whether the will moves itself? (4) Whether it is moved by an intrinsic principle? (5) Whether it is moved by a heavenly body? (6) Whether the will is moved by God alone as by an extrinsic principle?

ARTICLE 1. *Whether the Will Is Moved by the Intellect?*

We proceed thus to the First Article: It would seem that the will is not moved by the intellect.

Objection 1. For Augustine says on Ps. 118. 20:[2] *My soul hath coveted to long for Thy justifications,* "The intellect flies ahead, the desire follows sluggishly or not at all; we know what is good, but deeds delight us not." But it would not be so, if the will were moved by the intellect, because movement of the moveable results

[2] *Enarr. in Ps.*, Serm. 8 (PL 37, 1552).

from motion of the mover. Therefore the intellect does not move the will.

Obj. 2. Further, the intellect in presenting the desirable thing to the will stands in relation to the will as the imagination in representing the desirable thing to the sensitive appetite. But the imagination, in presenting the desirable thing, does not move the sensitive appetite; indeed sometimes our imagination affects us no more than what is set before us in a picture, and moves us not at all.[1] Therefore neither does the intellect move the will.

Obj. 3. Further, the same is not mover and moved in respect of the same thing. But the will moves the intellect, for we use our intellect when we will. Therefore the intellect does not move the will.

On the contrary, The Philosopher says[2] that the desirable thing is "a mover not moved," but the will is "a mover moved."

I answer that, A thing requires to be moved by something in so far as it is in potency to several things; for that which is in potency must be reduced to act by something actual, and to do this is to move. Now a power of the soul is seen to be in potency to different things in two ways: first, with regard to acting and not acting; secondly, with regard to this or that action Thus the sight sometimes sees actually, and sometimes does not see; and sometimes it sees white, and sometimes black. It needs a mover therefore in two respects: namely, as to the exercise or use of the act, and as to the determination of the act. The first of these is on the part of the subject, which is sometimes acting, sometimes not acting, while the other is on the part of the object, by reason of which the act is specified.

The motion of the subject itself is due to some agent. And since every agent acts for an end, as was shown above (Q. I, A 2), the principle of this motion lies in the end. And hence it is that the art which is concerned with the end, by its command moves the art which is concerned with the means, " just as the art of sailing commands the art of shipbuilding."[3] Now good in general, which has the nature of an end, is the object of the will. Consequently, in this respect, the will moves the other powers of the soul to their acts, for we make use of the other powers when we will. For the end and perfection of every other power is included under the object of the will as some particular good, and always the act or power to which the universal end belongs moves to their acts the acts or powers to which belong the particular ends included in the universal end. Thus the leader of an army, who intends the common good—that is, the order of the whole army—by his command moves one of the captains, who intends the order of one company.

On the other hand, the object moves by determining the act, after the manner of a formal principle, by which in natural things actions are specified, as heating by heat. Now the first formal principle is universal being and truth, which is the object of the intellect. And therefore by this kind of motion the intellect moves the will, as presenting its object to it.

Reply Obj. 1. The passage quoted proves not that the intellect does not move, but that it does not move of necessity.

Reply Obj. 2. Just as the imagination of a form without estimation of fitness or harmfulness does not move the sensitive appetite, so neither does the apprehension of the true without the aspect of goodness and desirability. Hence it is not the speculative intellect that moves, but the practical intellect.[4]

Reply Obj. 3. The will moves the intellect as to the exercise of its act, since even the true itself which is the perfection of the intellect is included in the universal good, as a particular good. But as to the determination of the act, which the act derives from the object, the intellect moves the will, since the good itself is apprehended under a special aspect as contained in the universal true. It is therefore evident that the same is not mover and moved in the same respect.

ARTICLE 2. *Whether the Will Is Moved by the Sensitive Appetite?*

We proceed thus to the Second Article: It would seem that the will cannot be moved by the sensitive appetite.

Objection 1. For "to move and to act is more excellent than to be passive," as Augustine says (*Gen. ad lit.* xii, 16).[5] But the sensitive appetite is less excellent than the will which is the intellectual appetite, just as sense is less excellent than intellect. Therefore the sensitive appetite does not move the will.

Obj. 2. Further, no particular power can produce a universal effect. But the sensitive appetite is a particular power, because it follows the particular apprehension of sense. Therefore it cannot cause the movement of the will, which

[1] *Soul,* III, 3 ($427^{b}23$). [2] *Ibid.*, III, 6 ($433^{b}10$).
[3] *Physics,* II, 2 ($194^{b}5$).
[4] *Soul,* III, 9 ($432^{b}26$); III, 10 ($433^{a}17$).
[5] PL 34, 467.

movement is universal, as following the universal apprehension of the intellect.

Obj. 3. Further, as is proved in the *Physics*,[1] the mover is not moved by that which it moves, in such a way that there be reciprocal motion. But the will moves the sensitive appetite, in so far as the sensitive appetite obeys the reason. Therefore the sensitive appetite does not move the will.

On the contrary, It is written (James 1. 14): *Every man is tempted by his own concupiscence, being drawn away and allured.* But man would not be drawn away by his concupiscence unless his will were moved by the sensitive appetite, in which concupiscence resides Therefore the sensitive appetite moves the will.

I answer that, As stated above (A. 1), that which is apprehended under the aspect of good and fitting moves the will by way of object Now, that a thing appear to be good and fitting, happens from two causes: namely, from the condition either of the thing proposed, or of the one to whom it is proposed. But fitness is spoken of by way of relation; and so it depends on both extremes. And hence it is that taste, according as it is variously disposed, takes to a thing in various ways, as being fitting or unfitting. Therefore as the Philosopher says,[2] "According as a man is, such does the end seem to him."

Now it is evident that man is changed to a certain disposition according to a passion of the sensitive appetite. Therefore according as man is affected by a passion, something seems to him fitting which does not seem so when he is not so affected; thus that seems good to a man when angered which does not seem good when he is calm. And in this way the sensitive appetite moves the will on the part of the object.

Reply Obj. 1. Nothing hinders that which is better absolutely and in itself from being less excellent in a certain respect. Accordingly the will is absolutely more excellent than the sensitive appetite, but in respect of the man in whom a passion is predominant, in so far as he is subject to that passion, the sensitive appetite is more excellent.

Reply Obj. 2. Men's acts and choices are in reference to singulars. Therefore from the very fact that the sensitive appetite is a particular power, it has great influence in disposing man so that something seems to him such or otherwise, in particular cases.

Reply Obj. 3. As the Philosopher says,[3] the reason, in which resides the will, moves by its command the irascible and concupiscible powers, not, indeed, by a despotic rule, as a slave is moved by his master, but by a royal and political rule, as free men are ruled by their governor, and can nevertheless act counter to his commands. Hence both irascible and concupiscible can move counter to the will, and accordingly nothing hinders the will from being moved by them at times.

ARTICLE 3. *Whether the Will Moves Itself?*

We proceed thus to the Third Article: It would seem that the will does not move itself.

Objection 1. For every mover, as such, is in act, but what is moved is in potency, since "movement is the act of that which is in potency, as such."[4] Now the same thing is not in potency and in act in respect of the same. Therefore nothing moves itself. Neither, therefore, can the will move itself.

Obj 2. Further, the movable is moved on the mover being present. But the will is always present to itself. If, therefore, it moved itself, it would always be moving itself, which is clearly false.

Obj. 3. Further, the will is moved by the intellect, as stated above (A 1). If, therefore, the will move itself, it would follow that the same thing is at once moved immediately by two movers, which seems unreasonable. Therefore the will does not move itself.

On the contrary, The will is mistress of its own act, and to it belongs to will and not to will. But this would not be so had it not the power to move itself to will. Therefore it moves itself.

I answer that, As stated above (A. 1), it pertains to the will to move the other powers, by reason of the end which is the will's object. Now, as stated above (Q. VIII, A. 2), the end is in things desirable, what the principle is in things intelligible. But it is evident that the intellect, through its knowledge of the principle, reduces itself from potency to act, as to its knowledge of the conclusions; and thus it moves itself And, in like manner, the will, through willing the end, moves itself to will the means.

Reply Obj. 1. It is not in respect of the same that the will moves itself and is moved, and so neither is it in act and in potency in respect of the same. But in so far as it actually wills the end, it reduces itself from potency to act with

[1] Aristotle, VIII, 5 (257^b23).
[2] *Ethics*, III, 5 (1114^a32).
[3] *Politics*, I, 5 (1254^b5).
[4] Aristotle, *Physics*, III, 1 (201^a10).

regard to the means, so that it actually wills them.

Reply Obj. 2. The power of the will is always actually present to itself, but the act of the will, by which it wills an end, is not always in the will. And this is the way it moves itself. Accordingly it does not follow that it is always moving itself.

Reply Obj. 3. The will is moved by the intellect otherwise than by itself. By the intellect it is moved on the part of the object, whereas it is moved by itself as to the exercise of its act, in respect of the end.

Article 4. *Whether the Will Is Moved by an Exterior Principle?*

We proceed thus to the Fourth Article: It would seem that the will is not moved by anything exterior.

Objection 1. For the movement of the will is voluntary. But it pertains to the notion of the voluntary act that it be from an intrinsic principle, just as it pertains to the notion of the natural act. Therefore the movement of the will is not from anything exterior.

Obj. 2. Further, the will cannot suffer violence, as was shown above (Q. VI, A. 4). But "the violent act is one the principle of which is outside the agent."[1] Therefore the will cannot be moved by anything exterior.

Obj. 3. Further, that which is sufficiently moved by one mover does not need to be moved by another. But the will moves itself sufficiently. Therefore it is not moved by anything exterior.

On the contrary, The will is moved by the object, as stated above (A. 1). But the object of the will can be something exterior offered to the sense. Therefore the will can be moved by something exterior.

I answer that, As far as the will is moved by the object, it is evident that it can be moved by something exterior. But in so far as it is moved to the exercise of its act, we must again hold it to be moved by some exterior principle.

For everything that is at one time an agent actually, and at another time an agent in potency, needs to be moved by a mover. Now it is evident that the will begins to will something, whereas previously it did not will it. Therefore it must, of necessity, be moved by something to will it. And, indeed, it moves itself, as stated above (A. 3.), in so far as through willing the end it reduces itself to the act of willing the means. Now it cannot do this without the aid of counsel. For when a man wills to be healed, he begins to reflect how this can be attained, and through this reflection he comes to the conclusion that he can be healed by a physician, and he wills this. But since he did not always actually will to have health, he must, of necessity, have begun, through something moving him, to will to be healed. And if the will moved itself to will this, it must of necessity have done this with the aid of counsel following some previous volition. But this process could not go on to infinity. Therefore we must of necessity suppose that the will advanced to its first movement in virtue of the impulse of some exterior mover, as Aristotle concludes in a chapter of the *Eudemian Ethics.*[2]

Reply Obj. 1. It pertains to the notion of the voluntary act that its principle be within the agent, but it is not necessary that this inward principle be the first principle unmoved by another. And so though the voluntary act has an inward proximate principle, nevertheless its first principle is from without. Thus, too, the first principle of the natural movement is from without, that, namely, which moves nature.

Reply Obj. 2. For an act to be violent it is not enough that its principle be extrinsic, but we must add "without the concurrence of him that suffers violence." This does not happen when the will is moved by an exterior principle, for it is the will that wills, though moved by another. But this movement would be violent if it were counter to the movement of the will, which in the present case is impossible, since then the will would will and not will the same thing.

Reply Obj. 3. The will moves itself sufficiently in one respect, and in its own order, that is to say as proximate agent; but it cannot move itself in every respect, as we have shown. Therefore it needs to be moved by another as first mover.

Article 5. *Whether the Will Is Moved by a Heavenly Body?*

We proceed thus to the Fifth Article: It seems that the human will is moved by a heavenly body.

Objection 1. For all various and multiform movements are reduced, as to their cause, to a uniform movement which is that of the heavens, as is proved in the *Physics.*[3] But human movements are various and multiform, since they begin to be, whereas previously they were not. Therefore they are reduced, as to their cause, to the movement of the heavens, which is uniform according to its nature.

[1] Aristotle, *Ethics,* III, 1 (1110[a]1).

[2] VII, 14 (1248[a]14).

[3] Aristotle, VIII, 9 (265[a]27), cf. IV, 14 (223[b]18).

Obj. 2. Further, according to Augustine (*De Trin.* iii, 4)[1] "the lower bodies are moved by the higher." But the movements of the human body, which are caused by the will, could not be reduced to the movement of the heavens, as to their cause, unless the will too were moved by the heavens. Therefore the heavens move the human will.

Obj. 3. Further, by observing the heavenly bodies astrologers foretell the truth about future human acts, which are caused by the will. But this would not be so if the heavenly bodies could not move man's will. Therefore the human will is moved by a heavenly body.

On the contrary, Damascene says (*De Fide Orthod.* ii, 7)[2] that the heavenly bodies are not the causes of our acts. But they would be, if the will, which is the principle of human acts, were moved by the heavenly bodies. Therefore the will is not moved by the heavenly bodies.

I answer that, It is evident that the will can be moved by the heavenly bodies in the same way as it is moved by its exterior object, that is to say, in so far as exterior bodies, which move the will through being offered to the senses, and also the organs themselves of the sensitive powers, are subject to the movements of the heavenly bodies.

But some have maintained that heavenly bodies have an influence on the human will in the same way as some exterior agent moves the will, as to the exercise of its act.[3] But this is impossible For "the will," as stated in the book on the *Soul*,[4] "is in the reason " Now the reason is a power of the soul, not bound to a bodily organ. And so it follows that the will is a power absolutely incorporeal and immaterial. But it is evident that no body can act on what is incorporeal, but rather the reverse; because things incorporeal and immaterial have a power more formal and more universal than any corporeal things whatever. Therefore it is impossible for a heavenly body to act directly on the intellect or the will. For this reason Aristotle[5] ascribed to those who held that intellect does not differ from sense the theory that "such is the will of men as is the day which the father of men and of gods brings on"[6] (referring to Jupiter, by whom they understand the entire heavens). For all the sensitive powers, since they are acts of bodily organs, can be moved accidentally by the heavenly bodies—that is, through those bodies (whose acts they are) being moved.

But since it has been stated (A. 2) that the intellectual appetite is moved, in a fashion, by the sensitive appetite, the movements of the heavenly bodies have an indirect bearing on the will, in so far as the will happens to be moved by the passions of the sensitive appetite.

Reply Obj. 1. The multiform movements of the human will are reduced to some uniform cause, which, however, is above the intellect and will. This can be said not of any body, but of some superior immaterial substance. Therefore there is no need for the movement of the will to be referred to the movement of the heavens as to its cause.

Reply Obj. 2. The movements of the human body are reduced, as to their cause, to the movement of a heavenly body in so far as the disposition suitable to a particular movement is somewhat due to the influence of heavenly bodies; also, in so far as the sensitive appetite is stirred by the influence of heavenly bodies; and again, in so far as exterior bodies are moved in accordance with the movement of heavenly bodies, at whose presence the will begins to will or not to will something; for instance, when the body is chilled, we begin to wish to make the fire. But this movement of the will is on the part of the object offered from without, not on the part of an inward impulse.

Reply Obj 3 As stated above (cf. Part I, Q. LXXXIV, AA. 6, 7) the sensitive appetite is the act of a bodily organ. Therefore there is no reason why man should not be prone to anger or concupiscence, or some like passion, by reason of the influence of heavenly bodies, just as by reason of his natural make-up. But the majority of men are led by the passions, which the wise alone resist. Consequently, in the majority of cases predictions about human acts, gathered from the observation of heavenly bodies, are fulfilled. Nevertheless, as Ptolemy says (*Centiloquium* v),[7] "the wise man governs the stars," which is as though to say that by resisting his passions, he opposes his will, which is free and in no way subject to the movement of the heavens, to effects of this nature of the heavenly bodies.

Or, as Augustine says (*Gen. ad lit.* ii, 17)[8]: "We must confess that when the truth is foretold by astrologers, this is due to some most hidden inspiration, to which the human mind

is subject without knowing it. And since this is done in order to deceive man, it must be the work of the lying spirits."

ARTICLE 6. *Whether the Will Is Moved by God Alone, as Exterior Principle?*

We proceed thus to the Sixth Article: It would seem that the will is not moved by God alone as exterior principle.

Objection 1. For it is natural that the inferior be moved by its superior, just as the lower bodies are moved by the heavenly bodies. But there is something which is higher than the will of man and below God, namely, the angel. Therefore man's will can be moved by an angel also, as exterior principle.

Obj. 2. Further, the act of the will follows the act of the intellect. But man's intellect is reduced to act not by God alone, but also by the angel who enlightens it, as Dionysius says (*Cæl. Hier.* iv).[1] For the same reason, therefore, the will also is moved by an angel.

Obj. 3. Further, God is not cause of other than good things, according to Gen 1. 31: *God saw all the things that He had made, and they were very good.* If therefore man's will were moved by God alone, it would never be moved to evil, and yet "it is the will whereby we sin and whereby we do right," as Augustine says (*Retract.* i, 9).[2]

On the contrary, It is written (Phil. 2. 13): *It is God Who worketh in us* (Vulg.,—*you*) *both to will and to accomplish.*

I answer that, The movement of the will is from within, as also is the movement of nature. Now although it is possible for something to move a natural thing without being the cause of the nature of the thing moved, yet that alone which is in some way the cause of a thing's nature can cause a natural movement in that thing. For a stone is moved upwards by a man, who is not the cause of the stone's nature; but the natural movement of the stone is caused by no other than the cause of its nature Hence it is said in the *Physics*[3] that the being who generates them moves heavy and light things according to place. And so man endowed with a will is sometimes moved by something that is not his cause; but that his voluntary movement be from an exterior principle that is not the cause of his will is impossible.

Now the cause of the will can be none other than God. And this is evident for two reasons. First, because the will is a power of the rational soul, which is caused by God alone, by creation, as was stated in the First Part (Q XC, A. 2). Secondly, it is evident from the fact that the will is ordered to the universal good. Therefore nothing else can be the cause of the will, except God Himself, Who is the universal good, while every other good is good by participation, and is some particular good; and a particular cause does not give a universal inclination. Hence neither can prime matter, which is potency to all forms, be created by some particular agent.

Reply Obj. 1. An angel is not above man in such a way as to be the cause of his will in the way that the heavenly bodies are the causes of natural forms from which result the natural movements of natural bodies.

Reply Obj 2. Man's intellect is moved by an angel on the part of the object, which by the power of the angelic light is proposed to man's knowledge. And in this way the will also can be moved by a creature from without, as stated above (A. 4).

Reply Obj. 3. God moves man's will as the Universal Mover to the universal object of the will, which is the good. And without this universal motion, man cannot will anything. But man determines himself by his reason to will this or that, which is true or apparent good. Nevertheless, sometimes God moves some specially to the willing of something determinate, which is good, as in the case of those whom He moves by grace, as we shall state later on (Q. CIX, A. 2).

QUESTION X

OF THE MANNER IN WHICH THE WILL IS MOVED

(In Four Articles)

WE must now consider the manner in which the will is moved. Under this head there are four points of inquiry (1) Whether the will is moved to anything naturally? (2) Whether it is moved of necessity by its object? (3) Whether it is moved of necessity by the lower appetite? (4) Whether it is moved of necessity by the exterior mover which is God?

ARTICLE 1. *Whether the Will Is Moved to Anything Naturally?*

We proceed thus to the First Article: It seems that the will is not moved to anything naturally.

Objection 1. For the natural agent is divided against the voluntary agent, as stated at the be-

[1] Sect. 2 (PG 3, 180).
[2] PL 32, 596.
[3] Aristotle, VIII, 4 (255^b35).

ginning of the second book of the *Physics*.[1] Therefore the will is not moved to anything naturally.

Obj. 2. Further, that which is natural is in a thing always, as being hot is in fire. But no movement is always in the will. Therefore no movement is natural to the will.

Obj. 3. Further, nature is determined to one thing, whereas the will is referred to opposites. Therefore the will wills nothing naturally.

On the contrary, The movement of the will follows the act of the intellect. But the intellect understands some things naturally Therefore the will, too, wills some things naturally.

I answer that, As Boëthius says (*De Duabus Nat.*),[2] and the Philosopher also,[3] the word nature is used in a manifold sense. For sometimes it stands for the intrinsic principle in movable things. In this sense nature is either matter or the material form, as stated in the *Physics*.[4] In another sense nature stands for any substance, or even for any being. And in this sense, that is said to be natural to a thing which befits it in respect of its substance. And this is that which of itself is in a thing Now all things that do not of themselves belong to the thing in which they are, are reduced to something which belongs of itself to that thing, as to their principle. Therefore, taking nature in this sense, it is necessary that the principle of whatever belongs to a thing be a natural principle. This is evident in regard to the intellect, for the principles of intellectual knowledge are naturally known. In like manner the principle of voluntary movements must be something naturally willed.

Now this is the good in general, to which the will tends naturally, as does each power to its object; and again it is the last end, which stands in the same relation to things desirable, as the first principles of demonstrations to things intelligible; and, speaking generally, it is all those things which belong to the willer according to his nature. For it is not only things pertaining to the power of the will that the will desires, but also that which pertains to each power, and to the entire man. Therefore man wills naturally not only the object of the will, but also other things that are appropriate to the other powers, such as the knowledge of truth, which befits the intellect, and to be and to live and other like things which regard the natural well-being, all of which are included in the object of the will as so many particular goods.

Reply Obj 1. The will is distinguished from nature as one kind of cause from another, for some things happen naturally and some are done voluntarily. There is, however, another manner of causing that is proper to the will, which is mistress of its act, besides the manner proper to nature, which is determined to one thing. But since the will is founded on some nature, it is necessary that the movement proper to nature be shared by the will, to some extent, just as what belongs to a previous cause is shared by a subsequent cause. Because in every thing, being itself which is from nature, precedes volition, which is from the will. And hence it is that the will wills something naturally.

Reply Obj. 2. In the case of natural things, that which is natural as a result of the form only is always in them actually, as heat is in fire. But that which is natural as a result of matter is not always in them actually, but sometimes only in potency, because form is act, whereas matter is potency. Now "movement is the act of that which is in potency."[5] Therefore that which pertains to or results from movement in regard to natural things is not always in them. Thus fire does not always move upwards, but only when it is outside its own place.[6] And in like manner it is not necessary that the will (which is reduced from potency to act when it wills something), should always be in the act of willing, but only when it is in a certain determinate disposition But God's will, which is pure act, is always in the act of willing

Reply Obj. 3. To every nature there is one thing corresponding, proportioned to that nature. For to nature considered as a genus there corresponds something one generically; and to nature as species there corresponds something one specifically; and to the individualized nature there corresponds some one individual. Since, therefore, the will is an immaterial power, like the intellect, some one common thing corresponds naturally to it, which is the good; just as to the intellect there corresponds some one common thing, which is the true, or being, or what a thing is. And under good in general are included many particular goods, to none of which is the will determined

ARTICLE 2. *Whether the Will Is Moved of Necessity by Its Object?*

We proceed thus to the Second Article: It

[1] Aristotle, II, 1 (192^{b}8); II, 5 (196^{b}21).
[2] Chap 1 (PL 64, 1341).
[3] *Metaphysics*, V, 4 (1014^{b}16). [4] Aristotle, II, 1 (193^{a}28).
[5] Aristotle, *Physics*, III, 1 (201^{a}10).
[6] The Aristotelian theory was that fire's proper place is the fiery heaven, that is, the Empyrean.

seems that the will is moved of necessity by its object.

Objection 1. For the object of the will is compared to the will as mover to movable, as stated in the book on the *Soul*.[1] But a mover, if it be sufficient, moves the movable of necessity. Therefore the will can be moved of necessity by its object.

Obj. 2. Further, just as the will is an immaterial power, so is the intellect, and both powers are ordered to a universal object, as stated above (A. 1. Reply 3). But the intellect is moved of necessity by its object; therefore the will also, by its object.

Obj. 3. Further, whatever one wills, is either the end or something ordered to an end. But it seems that one wills an end necessarily, because it is like the principle in speculative matters, to which principle one assents of necessity. Now the end is the reason for willing the means, and so it seems that we will the means also necessarily. Therefore the will is moved of necessity by its object.

On the contrary, The rational powers, according to the Philosopher,[2] are directed to opposites. But the will is a rational power, since it is "in the reason," as stated in the book on the *Soul*[3] Therefore the will is directed to opposites. Therefore it is not moved of necessity to either of the opposites

I answer that, The will is moved in two ways: first, as to the exercise of its act; secondly, as to the specification of its act, which is from the object. As to the first way, no object moves the will necessarily, for no matter what the object be, it is in man's power not to think of it, and consequently not to will it actually.

But as to the second manner of motion, the will is moved by one object necessarily, by another not. For in the movement of a power by its object, we must consider under what aspect the object moves the power. For the visible moves the sight under the aspect of colour actually visible. Therefore if colour be offered to the sight, it moves the sight necessarily, unless one turns one's eyes away, which pertains to the exercise of the act. But if the sight were confronted with something not in all respects coloured actually, but only so in some respects, and in other respects not, the sight would not of necessity see such an object, for it might look at that part of the object which is not actually coloured, and thus it would not see it. Now just as the actually coloured is the object of sight, so is good the object of the will. Therefore if the will be offered an object which is good universally and from every point of view, the will tends to it of necessity, if it wills anything at all, since it cannot will the opposite. If, on the other hand, the will is offered an object that is not good from every point of view, it will not tend to it of necessity. And since lack of any good whatever is a non-good, consequently that good alone which is perfect and lacking in nothing is such a good that the will cannot not-will it; and this is Happiness. But any other particular goods, in so far as they are lacking in some good, can be regarded as non-goods, and from this point of view, they can be set aside or approved by the will, which can tend to one and the same thing from various points of view.

Reply Obj. 1. The sufficient mover of a power is none but that object that in every respect presents the aspect of the mover of that power. If, on the other hand, it is lacking in any respect, it will not move of necessity, as stated above.

Reply Obj 2. The intellect is moved of necessity by an object which is such as to be always and necessarily true, but not by that which may be either true or false—namely, by that which is contingent, as we have said of the good.

Reply Obj. 3. The last end moves the will necessarily, because it is the perfect good, and in like manner whatever is ordered to that end, and without which the end cannot be attained, such as to be and to live, and the like. But other things without which the end can be gained are not necessarily willed by one who wills the end, just as he who assents to the principle does not necessarily assent to the conclusions without which the principles can still be true.

Article 3. *Whether the Will Is Moved, of Necessity, by the Lower Appetite?*

We proceed thus to the Third Article: It would seem that the will is moved of necessity by a passion of the lower appetite.

Objection 1. For the Apostle says (Rom. 7. 19): *The good which I will I do not; but the evil which I will not, that I do,* and this is said by reason of concupiscence, which is a passion. Therefore the will is moved of necessity by a passion.

Obj. 2. Further, as stated in the *Ethics,*[4] "according as a man is, such does the end seem to him." But it is not in the power of the will to cast aside a passion at once. Therefore it is not

[1] Aristotle, III, 10 (433^b10).
[2] *Metaphysics*, IX, 2 (1046^b8).
[3] III, 9 (432^b5).
[4] Aristotle, III, 5 (1114^a32).

in the power of the will not to will that to which the passion inclines him.

Obj. 3 Further, a universal cause is not applied to a particular effect except by means of a particular cause; therefore the universal reason does not move save by means of a particular estimation, as stated in the book on the *Soul*.[1] But as the universal reason is to the particular estimation, so is the will to the sensitive appetite. Therefore the will is not moved to will something particular except through the sensitive appetite Therefore, if the sensitive appetite happen to be disposed to something, by reason of a passion, the will cannot be moved in a contrary sense

On the contrary, It is written (Gen. 4. 7): *Thy lust* (Vulg —*The lust thereof*) *shall be under thee, and thou shalt have dominion over it.* Therefore man's will is not moved of necessity by the lower appetite.

I answer that, As stated above (Q. IX, A. 2), the passion of the sensitive appetite moves the will, in so far as the will is moved by its object, inasmuch as, namely, man through being disposed in such and such a way by a passion, judges something to be fitting and good, which he would not judge thus were it not for the passion. Now this influence of a passion on man occurs in two ways First, so that his reason is wholly bound, so that he has not the use of reason, as happens in those who through a violent access of anger or concupiscence become furious or insane, just as they may from some other bodily disorder; for passions of this kind do not take place without some change in the body. And of such the same is to be said as of irrational animals, which follow of necessity the impulse of their passions; for in them there is no movement of reason, nor, consequently, of will.

Sometimes, however, the reason is not entirely engrossed by the passion, so that the judgment of reason retains, to a certain extent, its freedom; and thus the movement of the will remains in a certain degree. Accordingly in so far as the reason remains free, and not subject to the passion, to this extent also the will's movement, which also remains, does not tend of necessity to that to which the passion inclines it. Consequently, either there is no movement of the will in that man, and the passion alone holds its sway, or if there be a movement of the will, it does not necessarily follow the passion.

Reply Obj. 1. Although the will cannot prevent the movement of concupiscence from arising, of which the Apostle says: *The evil which I will not, that I do*—that is, *I desire,* yet it is in the power of the will not to will to desire, or not to consent to concupiscence. And thus it does not necessarily follow the movement of concupiscence.

Reply Obj. 2. Since there is in man a twofold nature, intellectual and sensitive, sometimes man is disposed in a certain way uniformly in respect of his whole soul, either because the sensitive part is wholly subject to his reason as in the virtuous, or because reason is entirely engrossed by passion, as in a madman But sometimes, although reason is clouded by passion, yet something of the reason remains free. And in respect of this, man can either repel the passion entirely, or at least hold himself in check so as not to be led away by the passion For when thus disposed, since man is variously disposed according to the various parts of the soul, a thing appears to him otherwise according to his reason than it does according to a passion.

Reply Obj 3. The will is moved not only by the universal good apprehended by the reason, but also by good apprehended by sense Therefore he can be moved to some particular good independently of a passion of the sensitive appetite. For we will and do many things without passion, and through choice alone, as is most evident in those cases in which reason resists passion

ARTICLE 4. *Whether the Will Is Moved of Necessity by the Exterior Mover Which Is God?*

We proceed thus to the Fourth Article· It would seem that the will is moved of necessity by God.

Objection 1. For every agent that cannot be resisted moves of necessity. But God cannot be resisted, because His power is infinite; therefore it is written (Rom. 9. 19); *Who resisteth His will?* Therefore God moves the will of necessity.

Obj. 2. Further, the will is moved of necessity to whatever it wills naturally, as stated above (A. 2. Reply 3). But "whatever God does in a thing is natural to it," as Augustine says (*Contra Faust* xxvi, 3).[2] Therefore the will wills of necessity everything to which God moves it.

Obj. 3. Further, a thing is possible if nothing impossible follows from its being supposed. But something impossible follows from the supposition that the will does not will that to which

[1] Aristotle, III, 11 (434[a]19).

[2] PL 42, 480.

God moves it, because in that case God's operation would be ineffectual. Therefore it is not possible for the will not to will that to which God moves it. Therefore it wills it of necessity.

On the contrary, It is written (Ecclus. 15. 14): *God made man from the beginning, and left him in the hand of his own counsel.* Therefore He does not of necessity move man's will.

I answer that, As Dionysius says (*Div. Nom.* iv)[1] it pertains "to Divine providence not to destroy but to preserve the nature of things." Therefore it moves all things in accordance with their conditions, so that from necessary causes, through the Divine motion, effects follow of necessity; but from contingent causes, effects follow contingently. Since, therefore, the will is an active principle, not determined to one thing, but having an indifferent relation to many things, God so moves it that He does not determine it of necessity to one thing, but its movement remains contingent and not necessary, except in those things to which it is moved naturally.

Reply Obj. 1. The Divine will extends not only to the doing of something by the thing which He moves, but also to its being done in a way which is fitting to the nature of that thing. And therefore it would be more contrary to the Divine motion for the will to be moved of necessity, which is not fitting to its nature, than for it to be moved freely, which is fitting to its nature.

Reply Obj. 2. That is natural to a thing, which God makes to be natural to it. Thus something is fitting to a thing, according as God wishes it to be fitting to it. Now He does not wish that whatever He works in things should be natural to them, for instance, that the dead should rise again. But this He does wish to be natural to each thing,—that it be subject to the Divine power.

Reply Obj 3. If God moves the will to anything, it is impossible to hold that the will be not moved to it. But it is not impossible absolutely. Consequently it does not follow that the will is moved by God necessarily.

(b) *The Nature of Elicited Voluntary Acts*

QUESTION XI

OF ENJOYMENT, WHICH IS AN ACT OF THE WILL

(In Four Articles)

WE must now consider enjoyment (fruition), concerning which there are four points of inquiry: (1) Whether to enjoy is an act of the appetitive power? (2) Whether it belongs to the rational creature alone, or also to irrational animals? (3) Whether enjoyment is only of the last end? (4) Whether it is only of the end possessed?

ARTICLE 1. *Whether to Enjoy Is an Act of the Appetitive Power?*

We proceed thus to the First Article: It would seem that to enjoy belongs not only to the appetitive power.

Objection 1. For to enjoy [*frui*] seems nothing else than to lay hold of the fruit. But it is the intellect, in whose act Happiness consists, as shown above (Q. III, A. 4), that receives the fruit of human life, which is Happiness. Therefore to enjoy is not an act of the appetitive power, but of the intellect.

Obj. 2. Further, each power has its proper end, which is its perfection; thus the end of sight is to know the visible, of the hearing, to perceive sounds, and so forth. But the end of a thing is its fruit. Therefore to enjoy belongs to each power, and not only to the appetite.

Obj. 3. Further, enjoyment implies a certain delight. But sensible delight belongs to sense, which delights in its object; and for the same reason, intellectual delight belongs to the apprehensive, and not to the appetitive power.

On the contrary, Augustine says,[2] "To enjoy is to adhere lovingly to something for its own sake." But love belongs to the appetitive power. Therefore also to enjoy is an act of the appetitive power.

I answer that, Fruitio (enjoyment) and *fructus* (fruit) seem to refer to the same, the one being derived from the other; which from which, matters not for our purpose, though it seems probable that the one which is more clearly known, was first named. Now those things are most manifest to us which appeal most to the senses, and so it seems that the word "fruition" is derived from sensible fruits. But sensible fruit is that which we expect the tree to produce in the last place, and in which a certain sweetness is to be perceived. Hence fruition seems to have relation to love, or to the delight which one has

[1] Sect. 33 (PG 3, 733).

[2] *Christian Doctrine,* I, 4 (PL 34, 20); *De Trin.,* X, 10, 11 (PL 42, 981, 982).

in realizing the longed-for term, which is the end. Now the end and the good is the object of the appetitive power. Therefore it is evident that fruition[1] is the act of the appetitive power.

Reply Obj. 1. Nothing hinders one and the same thing from belonging, under different aspects, to different powers. Accordingly the vision of God, as vision, is an act of the intellect; but as a good and an end, is the object of the will. And it is according to the latter that the enjoyment of the vision of God is realized. The intellect attains this end as the executive power, but the will as the power which moves towards the end and enjoys the end attained.

Reply Obj. 2. The perfection and end of every other power is contained in the object of the appetitive power as the proper is contained in the common, as stated above (Q. IX, A. 1). Hence the perfection and end of each power, in so far as it is a good, belongs to the appetitive power. Thus the appetitive power moves the other powers to their ends, and itself realizes the end when each of them reaches the end.

Reply Obj 3 In delight there are two things: perception of what is fitting—and this pertains to the apprehensive power; and satisfaction in that which is offered as fitting—and this pertains to the appetitive power, in which the notion of delight is realized.

ARTICLE 2. *Whether to Enjoy Belongs to the Rational Creature Alone, or Also to Irrational Animals?*

We proceed thus to the Second Article: It would seem that to enjoy belongs to men alone

Objection 1. For Augustine says[2] that "it is given to us men to enjoy and to use." Therefore other animals cannot enjoy.

Obj. 2. Further, to enjoy relates to the last end. But irrational animals cannot attain to the last end. Therefore it is not for them to enjoy.

Obj. 3. Further, just as the sensitive appetite is beneath the intellectual appetite, so is the natural appetite beneath the sensitive. If, therefore, to enjoy belongs to the sensitive appetite, it seems that for the same reason it can belong to the natural appetite. But this is evidently false, since the latter cannot delight in anything. Therefore the sensitive appetite cannot enjoy, and accordingly enjoyment is not possible for irrational animals.

On the contrary, Augustine says (QQ. LXXXIII, *qu.* 30):[3] "It is not so absurd to suppose that even beasts enjoy their food and any bodily pleasure."

I answer that, As was stated above (A. 1) to enjoy is not the act of the power that achieves the end as executor, but of the power that commands the achievement; for we have said that it belongs to the appetitive power. Now things that do not have knowledge have indeed a power of achieving an end by way of execution, as that by which a heavy body has a downward tendency, and a light body has an upward tendency. Yet the power of command in respect of the end is not in them, but in some higher nature, which moves all nature by its command, just as in things endowed with knowledge the appetite moves the other powers to their acts. Therefore it is clear that things void of knowledge, although they attain an end, have no enjoyment of the end. This is only for those that are endowed with knowledge.

Now knowledge of the end is twofold: perfect and imperfect. Perfect knowledge of the end is that whereby not only is that known which is the end and the good, but also the universal nature of the end and the good; and such knowledge belongs to the rational nature alone. On the other hand, imperfect knowledge is that by which the end and the good are known in the particular. Such knowledge is in irrational animals, whose appetitive powers do not command with freedom, but are moved according to a natural instinct to whatever they apprehend. Consequently, enjoyment belongs to the rational nature in a perfect degree; to irrational animals, imperfectly; to other creatures, not at all.

Reply Obj. 1. Augustine is speaking there of perfect enjoyment.

Reply Obj. 2. Enjoyment need not be of the last end absolutely, but of that which each one chooses for his last end.

Reply Obj. 3. The sensitive appetite follows knowledge, but not the natural appetite, especially in things void of knowledge.

Reply Obj. 4. Augustine is speaking there of imperfect enjoyment. This is clear from his way of speaking, for he says that "it is not so absurd to suppose that even beasts enjoy," that is, as it would be, if one were to say that they use.

ARTICLE 3. *Whether Enjoyment Is Only of the Last End?*

We proceed thus to the Third Article: It seems that enjoyment is not only of the last end.

[1] *Fruitio* is translated in general throughout this work as "enjoyment."

[2] *Christian Doctrine,* I, 22 (PL 34, 26).

[3] PL 40, 19.

Objection 1. For the Apostle says (*Philem.* 20): *Yea, brother, may I enjoy thee in the Lord.* But it is evident that Paul had not placed his last end in a man. Therefore to enjoy is not only of the last end.

Obj. 2. Further, what we enjoy is the fruit. But the Apostle says (Gal. 5. 22): *The fruit of the Spirit is charity, joy, peace,* and other like things, which are not in the nature of the last end. Therefore enjoyment is not only of the last end.

Obj. 3. Further, the acts of the will reflect on themselves; for I will to will, and I love to love. But to enjoy is an act of the will, since "it is the will with which we enjoy," as Augustine says (*De Trin.* x. 10).[1] Therefore a man enjoys his enjoyment. But the last end of man is not enjoyment, but the uncreated good alone, which is God. Therefore enjoyment is not only of the last end.

On the contrary, Augustine says (*De Trin.* x. 11):[2] "A man does not enjoy that which he desires for the sake of something else." But the last end alone is that which man does not desire for the sake of something else. Therefore enjoyment is of the last end alone.

I answer that, As stated above (A. 1) the notion of fruit implies two things: first that it should come last; secondly, that it should calm the appetite with a certain sweetness and delight. Now a thing is last either absolutely or relatively; absolutely, if it be referred to nothing else; relatively, if it is the last in a particular series Therefore that which is last absolutely, and in which one delights as in the last end, is properly called fruit, and this it is that one is properly said to enjoy. But that which is delightful not in itself, but is desired only as referred to something else, for example, a bitter potion for the sake of health, cannot in any way be called fruit. And that which has something delightful about it, to which a number of preceding things are referred, may indeed be called fruit in a certain manner, but we cannot be said to enjoy it properly or as though it answered perfectly to the notion of fruit. Hence Augustine says (*De Trin.* x, 10)[3] that "we enjoy what we know, when the delighted will is at rest therein." But its rest is not absolute save in the possession of the last end, for as long as something is looked for, the movement of the will remains in suspense, although it has reached something. Thus in local movement, although any point between the two terms is a beginning and an end, yet it is not considered as an actual end, except when the movement stops there.

Reply Obj. 1. As Augustine says,[4] "if he had said, 'May I enjoy thee,' without adding 'in the Lord,' he would seem to have set the end of his love in him. But since he added that he set his end in the Lord, he implied his desire to enjoy Him," as if we were to say that he expressed his enjoyment of his brother not as a term but as a means.

Reply Obj. 2. Fruit bears one relation to the tree that bore it, and another to man that enjoys it. To the tree indeed that bore it, it is compared as effect to cause; to the one enjoying it, as the final object of his longing and the consummation of his delight. Accordingly these fruits mentioned by the Apostle are called so because they are certain effects of the Holy Ghost in us, and so they are called *fruits of the Spirit,* but not as though we are to enjoy them as our last end Or we may say with Ambrose[5] that they are called fruits "because we should desire them for their own sake," not indeed as though they were not ordered to Happiness, but because they are in themselves of such a character that we ought to find pleasure in them.

Reply Obj 3. As stated above (Q. 1, A. 8; Q. II, A. 7), we speak of an end in a twofold sense: first, as being the thing itself; secondly, as the attainment of it These are not, of course, two ends, but one end, considered in itself and in its relation to something else. Accordingly God is the last end as that which is ultimately sought for, while the enjoyment is as the attainment of this last end And so, just as God is not one end and the enjoyment of God another, so it is the same enjoyment by which we enjoy God, and by which we enjoy our enjoyment of God And the same applies to created happiness which consists in enjoyment.

ARTICLE 4. *Whether Enjoyment Is Only of the End Possessed?*

We proceed thus to the Fourth Article: It would seem that enjoyment is only of the end possessed.

Objection 1. For Augustine says (*De Trin.* x, 11)[6] that "to enjoy is to use joyfully, with the joy, not of hope, but of possession." But so long as a thing is not had, there is joy, not of possession but of hope Therefore enjoyment is only of the end possessed.

[1] PL 42, 981. [2] PL 42, 983.
[3] PL 42, 981.

[4] *Christian Doctrine,* I, 33 (PL 34, 33).
[5] Cf. *Glossa interl.,* on Gal. 5.22 (VI, 87v); *Glossa* Lombardi, on Gal 5 22 (PL 192, 160); *Sent.,* I, I, 3 (QR I, 19); cf also Ambrose, *In Gal.* 5.22 (PL 17, 389). [6] PL 42, 982.

Obj. 2. Further, as stated above (A. 3), enjoyment is not properly otherwise than of the last end, because this alone gives rest to the appetite. But the appetite has no rest save in the possession of the end. Therefore enjoyment, properly speaking, is only of the end possessed.

Obj. 3. Further, to enjoy is to lay hold of the fruit. But one does not lay hold of the fruit until one is in possession of the end. Therefore enjoyment is only of the end possessed.

On the contrary, "To enjoy is to adhere lovingly to something for its own sake," as Augustine says.[1] But this is possible, even in regard to a thing which is not in our possession. Therefore it is possible to enjoy the end even though it be not possessed

I answer that, To enjoy implies a certain relation of the will to the last end, according as the will possesses something as a last end. Now an end is possessed in two ways; perfectly and imperfectly. Perfectly, when it is possessed not only in intention but also in reality; imperfectly, when it is possessed in intention only Perfect enjoyment, therefore, is of the end already possessed. But imperfect enjoyment is also of the end possessed, not really, but only in intention.

Reply Obj. 1. Augustine speaks there of perfect enjoyment.

Reply Obj 2. The will is hindered in two ways from being at rest. First on the part of the object, by reason of its not being the last end, but ordered to something else. Secondly on the part of the one who desires the end, by reason of his not being yet in possession of it. Now it is the object that specifies an act. But on the agent depends the manner of acting, whether it be perfect or imperfect, according to the condition of the agent. Therefore enjoyment of anything but the last end is not enjoyment properly speaking, as falling short of the nature of enjoyment. But enjoyment of the last end not yet possessed, is enjoyment properly speaking, but imperfect, on account of the imperfect way in which it is possessed.

Reply Obj. 3. One is said to lay hold of or to have an end, not only in reality, but also in intention, as stated above.

QUESTION XII

OF INTENTION

(*In Five Articles*)

WE must now consider Intention, concerning which there are five points of inquiry: (1) Whether intention is an act of the intellect or of the will? (2) Whether it is only of the last end? (3) Whether one can intend two things at the same time? (4) Whether intention of the end is the same act as volition of the means? (5) Whether intention is appropriate to irrational animals?

ARTICLE 1. *Whether Intention Is an Act of the Intellect or of the Will?*

We proceed thus to the First Article: It seems that intention is an act of the intellect, and not of the will.

Objection 1. For it is written (Matt. 6. 22): *If thy eye be single, thy whole body shall be lightsome,* where, according to Augustine (*De Serm. Dom in Monte* ii)[2] "the eye signifies intention" But since the eye is the instrument of sight, it signifies the apprehensive power. Therefore intention is not an act of the appetitive but of the apprehensive power.

Obj. 2. Further, Augustine says (*ibid.*) that Our Lord spoke of intention as a light, when He said (Matt. 6. 23): *If the light that is in thee be darkness,* etc. But light pertains to knowledge. Therefore intention does too.

Obj 3. Further, intention implies a kind of ordering to an end. But to order is an act of reason Therefore intention belongs not to the will but to the reason

Obj. 4. Further, an act of the will is either of the end or of the means. But the act of the will in respect of the end is called volition, or enjoyment; with regard to the means, it is choice, from which intention is distinct. Therefore it is not an act of the will.

On the contrary, Augustine says (*De Trin.* xi, 4, 8, 9)[3] that "the intention of the will unites the sight to the object seen; and the images retained in the memory, to the penetrating gaze of the soul's inner thought." Therefore intention is an act of the will.

I answer that, Intention, as the very word denotes, means to tend to something. Now both the action of the mover and the movement of the thing moved tend to something. But that the movement of the thing moved tends to anything is due to the action of the mover. Consequently intention belongs first and principally to that which moves to the end; hence we say that an architect or anyone who is in authority, by his command moves others to that which he intends. Now the will moves all the other powers of the soul to the end, as shown above (Q. IX, A. 1). Therefore it is evident that intention, properly speaking, is an act of the will.

[1] *Christian Doctrine,* I, 4 (PL 34, 20).

[2] Chap. 13 (PL 34, 1289).

[3] PL 42. 990, 994, 996.

Reply Obj. 1. The eye designates intention figuratively, not because intention has reference to knowledge, but because it presupposes knowledge, which proposes to the will the end to which the latter moves. Thus we foresee with the eye where we should tend with our bodies.

Reply Obj. 2. Intention is called a light because it is manifest to him who intends. And so works are called darkness, because a man knows what he intends, but does not know what the result may be, as Augustine expounds (*loc. cit.*).

Reply Obj. 3. The will does not order, but tends to something according to the order of reason. Consequently this word "intention" indicates an act of the will, presupposing the act by which the reason orders something to the end.

Reply Obj. 4. Intention is an act of the will in regard to the end Now the will stands in a threefold relation to the end. First, absolutely. And in this way we have volition, whereby we will absolutely to have health and so forth Secondly, it considers the end, as its place of rest. And in this way enjoyment regards the end. Thirdly, it considers the end as the term towards which something is ordered; and thus intention regards the end. For when we speak of intending to have health, we mean not only that we will to have it, but that we will to have it by means of something else.

ARTICLE 2 *Whether Intention Is Only of the Last End?*

We proceed thus to the Second Article: It seems that intention is only of the last end.

Objection 1 For it is said in the book of Prosper's *Sentences:*[1] "The intention of the heart is a cry to God." But God is the last end of the human heart. Therefore intention always regards the last end.

Obj. 2. Further, intention regards the end as the term, as stated above (A. 1. Reply 4). But a term is something last. Therefore intention always regards the last end.

Obj. 3. Further, just as intention regards the end, so does enjoyment. But enjoyment is always of the last end. Therefore intention is too.

On the contrary, There is but one last end of human wills, namely, Happiness, as stated above (Q. 1, A. 7). If, therefore, intention were only of the last end, men would not have different intentions, which is evidently false.

I answer that, As stated above (A. 1. Reply 4), intention regards the end as a term of the movement of the will. Now a term of movement may be taken in two ways. First, the very last term, when the movement comes to a stop; this is the term of the whole movement. Secondly, some point midway, which is the beginning of one part of the movement, and the end or term of the other. Thus in the movement from A to C through B, C is the last term, while B is a term, but not the last And intention can be of both. Consequently though intention is always of the end, it need not be always of the last end

Reply Obj. 1. The intention of the heart is called a cry to God, not that God is always the object of intention, but because He knows our intention.—Or because, when we pray, we direct our intention to God, which intention has the force of a cry.

Reply Obj 2. A term is something last, not always in respect of the whole, but sometimes in respect of a part.

Reply Obj. 3 Enjoyment implies rest in the end, and this pertains to the last end alone. But intention implies movement towards an end, not rest. Therefore the comparison proves nothing.

ARTICLE 3. *Whether One Can Intend Two Things at the Same Time?*

We proceed thus to the Third Article: It would seem that one cannot intend several things at the same time.

Objection 1 For Augustine says (*De Serm. Dom in Monte,* ii, 14, 17)[2] that man's intention cannot be directed at the same time to God and to bodily benefits. Therefore, for the same reason, neither to any other two things.

Obj. 2. Further, intention designates a movement of the will towards a term. Now there cannot be several terms in the same direction of one movement. Therefore the will cannot intend several things at the same time.

Obj. 3. Further, intention presupposes an act of reason or of the intellect. But "it is not possible to understand several things at the same time," according to the Philosopher.[3] Therefore neither is it possible to intend several things at the same time.

On the contrary, Art imitates nature. Now nature intends two purposes by means of one instrument; thus "the tongue is for the purpose of taste and speech."[4] Therefore, for the same reason, art or reason can at the same time

[1] *Sent.,* 100 (PL51, 441).

[2] PL 34, 1290, 1294.

[3] *Topics,* II, 10 (114^b35).

[4] *Soul,* II, 8 (420^b18).

direct one thing to two ends, so that one can intend several ends at the same time.

I answer that, The expression "two things" may be taken in two ways: they may be ordered to one another or not so ordered. And if they are ordered to one another, it is evident, from what has been said, that a man can intend many things at the same time. For intention is not only of the last end, as stated above (A. 2), but also of an intermediary end. Now a man intends at the same time both the proximate and the last end, as for example, the mixing of a medicine and the giving of health.

But if we take two things that are not ordered to one another, in this way also a man can intend several things at the same time. This is evident from the fact that a man prefers one thing to another because it is the better of the two. Now one of the reasons for which one thing is better than another is that it is available for more purposes, and so one thing can be chosen in preference to another, because of the greater number of purposes for which it is available. And so it is evident that a man can intend several things at the same time.

Reply Obj 1. Augustine means to say that man cannot at the same time direct his intention to God and to bodily benefits, as to two last ends, since, as stated above (Q. 1, A. 5), one man cannot have several last ends.

Reply Obj. 2. There can be several terms ordered to one another, of the same movement and in the same direction, but not unless they are ordered to one another. At the same time it must be observed that what is not one in reality can be taken as one by the reason. Now intention is a movement of the will to something already ordered by the reason, as stated above (A. 1. Reply 3). Therefore where we have many things in reality, we may take them as one term of intention, in so far as the reason takes them as one; either because two things meet for the integrity of one whole, as a proper measure of heat and cold conduce to health, or because two things are included in one which may be intended. For instance, the acquiring of wine and clothing is included in wealth, as in something common to both. And so nothing hinders the man who intends to acquire wealth from intending both the others.

Reply Obj. 3. As stated in the First Part (Q. XII, A. 10; Q. LVIII, A. 2; Q. LXXXV, A. 4), it is possible to understand several things at the same time, in so far as, in some way, they are one.

ARTICLE 4. *Whether Intention of the End Is the Same Act as the Volition of the Means?*

We proceed thus to the Fourth Article: It seems that the intention of the end and the volition of the means are not one and the same movement.

Objection 1. For Augustine says (*De Trin.* xi)[1] that "the will to see the window has for its end the seeing of the window, and is another act from the will to see, through the window, the passers-by." But that I should will to see the passers-by through the window belongs to intention; but that I will to see the window belongs to the volition of the means. Therefore intention of the end and the willing of the means are distinct movements of the will.

Obj. 2. Further, acts are distinct according to their objects. But the end and the means are different objects. Therefore the intention of the end and the willing of the means are different movements of the will.

Obj. 3 Further, the willing of the means is called choice. But choice and intention are not the same. Therefore intention of the end and the willing of the means are not the same movement of the will.

On the contrary, The means in relation to the end are as the mid-space to the term. Now it is all the same movement that passes through the mid-space to the term, in natural things. Therefore in things pertaining to the will, the intention of the end is the same movement as the willing of the means.

I answer that, The movement of the will to the end and to the means can be considered in two ways. First, according as the will is moved to each absolutely and in itself. And thus there are absolutely two movements of the will to them. Secondly, it may be considered accordingly as the will is moved to the means for the sake of the end, and in this way the movement of the will to the end and its movement to the means are one and the same thing. For when I say: I wish to take medicine for the sake of health, I signify no more than one movement of my will. And this is because the end is the reason for willing the means. Now the object, and that by reason of which it is an object, come under the same act; thus it is the same act of sight that perceives colour and light, as stated above (Q. VIII, A. 3. Reply 2). And the same applies to the intellect, for if it consider principle and conclusion absolutely, it considers

[1] PL 42, 992.

each by a distinct act; but when it assents to the conclusion on account of the principles, there is but one act of the intellect.

Reply Obj. 1. Augustine is speaking of seeing the window and of seeing, through the window, the passers-by, according as the will is moved to either absolutely.

Reply Obj. 2. The end, considered as a thing, and the means to that end, are distinct objects of the will. But in so far as the end is the reason for willing the means, they are one and the same object.

Reply Obj. 3. A movement which is one as to the subject, may differ, according to reason, as to its beginning and end, as in the case of ascent and descent.[1] Accordingly, in so far as the movement of the will is to the means, as ordered to the end, it is called choice; but the movement of the will to the end as acquired by the means, is called intention. A sign of this is that we can have intention of the end without having determined the means which are the object of choice.

ARTICLE 5. *Whether Intention Is Appropriate to Irrational Animals?*

We proceed thus to the Fifth Article: It would seem that irrational animals intend the end.

Objection 1. For in things lacking reason nature stands further apart from the rational nature than does the sensitive nature in irrational animals. But nature intends the end even in things void of reason, as is proved in the *Physics*.[2] Much more, therefore, do irrational animals intend the end.

Obj. 2. Further, just as intention is of the end, so is enjoyment. But enjoyment is in irrational animals, as stated above (Q XI, A. 2). Therefore intention is too.

Obj. 3. Further, to intend an end belongs to one who acts for an end, since to intend is nothing else than to tend to something But irrational animals act for an end, for an animal is moved either to seek food, or to do something of the kind. Therefore irrational animals intend an end.

On the contrary, Intention of an end implies ordering something to an end, which pertains to reason. Since therefore irrational animals do not have reason, it seems that they do not intend an end.

I answer that, As stated above (A. 1), to intend is to tend to something, and this pertains to the mover and to the moved. According, therefore, as that which is moved to an end by another is said to intend the end; in this way nature is said to intend an end as being moved to its end by God, just as the arrow is moved by the archer. And in this way irrational animals intend an end, in so far as they are moved to something by natural instinct. The other way of intending an end belongs to the mover, according as he orders the movement of something, either his own or another's, to an end. This belongs to reason alone. And so irrational animals do not intend an end in this way, which is to intend properly and principally, as stated above (A. 1).

Reply Obj. 1. This argument takes intention in the sense of being moved to an end.

Reply Obj. 2. Enjoyment does not imply the ordering of one thing to another, as intention does, but absolute repose in the end.

Reply Obj. 3. Irrational animals are moved to an end, not as though they thought that they can gain the end by this movement, for this belongs to the one that intends; but through desiring the end by natural instinct, they are moved to an end, moved, as it were, by another, like other things that are moved naturally.

QUESTION XIII

OF CHOICE, WHICH IS AN ACT OF THE WILL IN RELATION TO THE MEANS (*In Six Articles*)

WE must now consider the acts of the will in relation to the means. There are three of them: to choose, to consent, and to use. And choice is preceded by counsel. First of all, then, we must consider choice; secondly, counsel (Q. XIV); thirdly, consent (Q. XV); fourthly, use (Q. XVI).

Concerning choice there are six points of inquiry: (1) Of what power is it the act; of the will or of the reason? (2) Whether choice is to be found in irrational animals? (3) Whether choice is only of the means, or sometimes also of the end? (4) Whether choice is only of things that we do ourselves? (5) Whether choice is only of possible things? (6) Whether man chooses of necessity or freely?

ARTICLE 1. *Whether Choice Is an Act of Will or of Reason?*

We proceed thus to the First Article: It would seem that choice is an act, not of will but of reason.

Objection 1. For choice implies comparison,

[1] Aristotle, *Physics*, III, 3 (202^a19).
[2] Aristotle, II, 8 (199^b30).

by which one is given preference to another. But to compare is an act of reason. Therefore choice is an act of reason.

Obj. 2. Further, it pertains to the same power to form a syllogism and to draw the conclusion. But, in practical matters, it is the reason that forms syllogisms. Since therefore choice is a kind of conclusion in practical matters, as stated in the *Ethics*[1] it seems that it is an act of reason.

Obj. 3 Further, ignorance does not pertain to the will but to the knowing power. Now "there is an ignorance of choice", as is stated in the *Ethics*[2] Therefore it seems that choice does not belong to the will but to the reason.

On the contrary, The Philosopher says[3] that "choice is the desire of things in our own power." But desire is an act of will. Therefore choice is too.

I answer that, The word choice implies something belonging to the reason or intellect, and something belonging to the will; for the Philosopher says[4] that "choice is either intellect influenced by appetite or appetite influenced by intellect." Now whenever two things concur to make one, one of them serves as form for the other. Hence Gregory of Nyssa (Nemesius, *De Nat. Hom* xxxiii)[5] says that "choice is neither desire only, nor counsel only, but a combination of the two. For just as we say that an animal is composed of soul and body, and that it is neither a mere body, nor a mere soul, but both, so is it with choice."

Now we must observe, as regards the acts of the soul, that an act belonging essentially to some power or habit, receives a form or species from a higher power or habit, according as the lower is ordered by the higher. For if a man were to perform an act of fortitude for the love of God, that act is materially an act of fortitude, but formally, an act of charity Now it is evident that, in a sense, reason precedes the will and orders its act, that is in so far as the will tends to its object according to the order of reason, since the apprehensive power presents the object to the appetite. Accordingly, that act by which the will tends to something proposed to it as good, is, from the fact that it is ordered to the end by the reason, materially an act of the will, but formally an act of the reason. Now in matters of this kind the substance of the act is as the matter in relation to the order imposed by the higher power. Therefore choice is substantially not an act of the reason but of the will, for choice is accomplished by a certain movement of the soul towards the good which is chosen. Consequently it is evidently an act of the appetitive power.

Reply Obj. 1. Choice implies a previous comparison, but not as though it consisted in the comparison itself.

Reply Obj. 2. It is true that it is for the reason to draw the conclusion of a practical syllogism; and it is called a decision or judgment, to be followed by choice. And for this reason the conclusion seems to belong to the act of choice, as to that which results from it.

Reply Obj. 3 In speaking of ignorance of choice, we do not mean that choice is a sort of knowledge, but that there is ignorance of what ought to be chosen.

ARTICLE 2. *Whether Choice Is to Be Found in Irrational Animals?*

We proceed thus to the Second Article: It would seem that irrational animals are able to choose.

Objection 1. For choice is "the desire of certain things on account of an end," as stated in the *Ethics*.[6] But irrational animals desire something on account of an end, since they act for an end and from desire. Therefore choice is in irrational animals.

Obj 2. Further, the very word *electio* (choice) seems to signify the taking of something in preference to others. But irrational animals take something in preference to others, for we can easily see for ourselves that a sheep will eat one grass and refuse another. Therefore choice is in irrational animals.

Obj. 3. Further, according to the *Ethics*,[7] "it is from prudence that a man makes a good choice of means." But prudence is found in irrational animals; hence it is said in the beginning of the *Metaphysics*[8] that "those animals which, like bees, cannot hear sounds, are prudent without learning it." We see this plainly, in wonderful cases of sagacity manifested in the works of various animals, such as bees, spiders, and dogs. For a hound in following a stag, on coming to a cross-road, tries by scent whether the stag has passed by the first or the second road, and if he find that the stag has not passed there, being thus assured, takes to the third road without trying the scent, as though he were reasoning by way of exclusion, arguing

[1] Aristotle, III, 3 (1113^a4)
[2] Aristotle, III, 1 (1110^b31).
[3] *Ethics*, III, 3 (1113^a9).
[4] *Ibid.*, VI, 2 (1139^b4).
[5] PG 40, 732.
[6] Aristotle, III, 2, 3 (1111^b27; 1113^a11).
[7] Aristotle, VI, 12 (1144^a8).
[8] Aristotle, I, 1 (980^b22).

that the stag must have passed by this way, since he did not pass by the others, and there is no other road. Therefore it seems that irrational animals are able to choose.

On the contrary, Gregory of Nyssa says[1] that "children and irrational animals act willingly but not from choice." Therefore choice is not in irrational animals.

I answer that, Since choice is the taking of one thing in preference to another, it must of necessity be in respect of several things that can be chosen. Consequently in those things which are altogether determined to one thing there is no place for choice Now the difference between the sensitive appetite and the will is that, as stated above (Q I, A. 2. Reply 3), the sensitive appetite is determined to one particular thing, according to the order of nature; but the will, although determined to one thing in general, namely, the good, according to the order of nature, is nevertheless indeterminate in respect of particular goods. Consequently choice belongs properly to the will, and not to the sensitive appetite which is all that irrational animals have. Therefore irrational animals are not able to choose.

Reply Obj. 1. Not every desire of one thing on account of an end is called choice, but there must be a certain discrimination of one thing from another. And this cannot be except when the appetite can be moved to several things.

Reply Obj 2. An irrational animal takes one thing in preference to another because its appetite is naturally determined to that thing Therefore as soon as an animal, whether by its sense or by its imagination, is offered something to which its appetite is naturally inclined, it is moved to that alone, without making any choice. Just as fire is moved upwards and not downwards, without its making any choice.

Reply Obj. 3. As stated in the *Physics,*[2] "movement is the act of the movable, caused by a mover." Therefore the power of the mover appears in the movement of that which it moves. Accordingly, in all things moved by reason, the order of reason which moves them is evident, although the things themselves are void of reason; for an arrow through the motion of the archer goes straight towards the target, as though it were endowed with reason to direct its course. The same may be seen in the movements of clocks and all engines put together by the art of man. Now as artificial things are in comparison to human art, so are all natural things in comparison to the Divine art. And accordingly order is to be seen in things moved by nature, just as in things moved by reason, as is stated in the *Physics.*[3] And thus it is that in the works of irrational animals we notice certain marks of sagacity, in so far as they have a natural inclination to set about their actions in a most orderly manner through being ordered by the Supreme art. For which reason, too, certain animals are called prudent or sagacious, and not because they reason or exercise any choice about things. This is clear from the fact that all that share in one nature invariably act in the same way.

[1] Nemesius, *De Nat. Hom.*, XXXIII (PG 40, 732).
[2] Aristotle, III, 3 (202^a13).

ARTICLE 3. *Whether Choice Is Only of the Means, or Sometimes Also of the End?*

We proceed thus to the Third Article: It seems that choice is not only of the means.

Objection 1. For the Philosopher says[4] that "virtue makes us choose rightly; but it is not the part of virtue, but of some other power to direct rightly those things which are to be done for its sake." But that for the sake of which something is done is the end. Therefore choice is of the end.

Obj. 2. Further, choice implies preference of one thing to another. But just as there can be preference of means, so can there be preference of ends. Therefore choice can be of ends, just as it can be of means.

On the contrary, The Philosopher says[5] that "volition is of the end, but choice, of the means."

I answer that, As already stated (A. 1. Reply 2), choice results from the decision or judgment which is, as it were, the conclusion of a practical syllogism. Hence that which is the conclusion of a practical syllogism, falls under choice. Now in practical things the end stands in the position of a principle, not of a conclusion, as the Philosopher says.[6] Therefore the end, as such, is not a matter of choice.

But just as in speculative knowledge nothing hinders the principle of one demonstration or of one science from being the conclusion of another demonstration or science, although the first indemonstrable principle cannot be the conclusion of any demonstration or science, so too that which is the end in one operation may be ordered to something as an end. And in this

[3] Aristotle, II, 5 (196^b17).
[4] *Ethics*, VI, 12 (1144^a20).
[5] *Ibid.*, III, 2 (1111^b26).
[6] *Physics*, II, 9 (200^a20).

way it is a matter of choice. Thus in the work of a physician, health is the end, and so it is not a matter of choice for a physician, but a matter of principle. Now the health of the body is ordered to the good of the soul, so that with one who has charge of the soul's health, health or sickness may be a matter of choice; for the Apostle says (II Cor. 12. 10): *For when I am weak, then am I powerful.* But the last end is in no way a matter of choice.

Reply Obj. 1. The proper ends of virtues are ordered to Happiness as to their last end. And thus it is that they can be a matter of choice.

Reply Obj. 2. As stated above (Q 1, A. 5), there is but one last end. Accordingly wherever there are several ends, they can be the subject of choice, in so far as they are ordered to a further end.

ARTICLE 4. *Whether Choice Is of Those Things Only That Are Done by Us?*

We proceed thus to the Fourth Article: It seems that choice is not only in respect of human acts.

Objection 1. For choice regards the means. Now, "not only acts, but also the organs, are means."[1] Therefore choice is not only concerned with human acts

Obj. 2. Further, action is distinct from contemplation But choice has a place even in contemplation, in so far as one opinion is preferred to another. Therefore choice is not concerned with human acts alone.

Obj 3. Further, men are chosen for certain posts, whether secular or ecclesiastical, by those who exercise no action in their regard. Therefore choice is not concerned with human acts alone.

On the contrary, The Philosopher says[2] that "no man chooses save what he thinks he can do himself."

I answer that, Just as intention is of the end, so is choice of the means. Now the end is either an action or a thing. And when the end is a thing, some human action must intervene, either in so far as man produces the thing which is the end, as the physician produces health (and so the production of health is said to be the end of the physician), or in so far as man, in some fashion, uses or enjoys the thing which is the end; thus for the miser, money or the possession of money is the end. The same is to be said of the means. For the means must needs be either an action, or a thing, with some action intervening by which man either makes the thing which is the means, or puts it to some use. And thus it is that choice is always in regard to human acts.

Reply Obj. 1. The organs are ordered to the end, inasmuch as man makes use of them for the sake of the end.

Reply Obj. 2. In contemplation itself there is the act of the intellect assenting to this or that opinion. What is put in contradistinction to contemplation is exterior action.

Reply Obj. 3. When a man chooses someone for a bishopric or some high position in the state, he chooses to name that man to that post. Otherwise, if he had no right to act in the appointment of the bishop or official, he would have no right to choose Likewise, whenever we speak of one thing being chosen in preference to another, it is in conjunction with some action of the chooser.

ARTICLE 5. *Whether Choice Is Only of Possible Things?*

We proceed thus to the Fifth Article: It seems that choice is not only of possible things.

Objection 1. For choice is an act of the will, as stated above (A. 1). Now "there is a willing of possibilities and impossibilities."[3] Therefore there is also a choice of impossibilities.

Obj. 2. Further, choice is of things done by us, as stated above (A. 4.) Therefore it does not matter, as far as the act of choosing is concerned, whether one choose that which is impossible absolutely or that which is impossible to the chooser. Now it often happens that we are unable to accomplish what we choose, so that this proves to be impossible to us. Therefore choice is of the impossible.

Obj. 3. Further, to try to do a thing is to choose to do it. But the blessed Benedict says (*Regula* lxviii)[4] that if the superior command what is impossible, it should be attempted. Therefore choice can be of the impossible.

On the contrary, The Philosopher says[5] that "there is no choice of impossibilities."

I answer that, As stated above (A. 4), our choice is always concerned with our actions. Now whatever is done by us, is possible to us. Therefore we must say that choice is only of possible things.

Moreover, the reason for choosing a thing

[1] *Physics*, II, 3 ($195^{a}1$).
[2] *Ethics*, III, 2 ($1111^{b}25$).
[3] *Ibid.*, III, 2 ($1111^{b}22$).
[4] PL 66, 917.
[5] *Ethics*, III, 2 ($1111^{b}20$).

is that it leads to an end. But what is impossible cannot lead to an end. A sign of this is that when men in taking counsel together come to something that is impossible to them, they depart, as being unable to proceed with the business.

Again, this is evident if we examine the process of the reason that precedes. For the means, which are the object of choice, are to the end as the conclusion is to the principle. Now it is clear that an impossible conclusion does not follow from a possible principle. Therefore an end cannot be possible, unless the means be possible. Now no one is moved to the impossible. Consequently no one would tend to the end, save for the fact that the means appear to be possible. Therefore the impossible is not the object of choice.

Reply Obj. 1. The will stands between the intellect and the external action, for the intellect proposes to the will its object, and the will itself causes the external action Hence the beginning of the movement in the will is to be found in the intellect, which apprehends something as universal good; but the term or perfection of the will's act is to be observed in its relation to the action by which a man tends to the attainment of a thing; for the movement of the will is from the soul to the thing. Consequently the perfection of the act of the will is in respect of something that is good for one to do. Now this cannot be something impossible Therefore the complete act of the will is only in respect of what is possible and good for him that wills. But the incomplete act of the will is in respect of the impossible, and by some is called "velleity," because, namely, one would will (*vellet*) such a thing, were it possible. But choice is an act of the will already determined to something to be done by the chooser. And therefore it can only be of what is possible.

Reply Obj. 2. Since the object of the will is the apprehended good, we must judge of the object of the will according as it it apprehended. And so, just as sometimes the will tends to something which is apprehended as good, and yet is not really good, so is choice sometimes made of something apprehended as possible to the chooser, and yet impossible to him.

Reply Obj. 3 The reason for this is that the subject should not rely on his own judgment to decide whether a certain thing is possible, but in each case should stand by his superior's judgment.

ARTICLE 6. *Whether Man Chooses of Necessity or Freely?*

We proceed thus to the Sixth Article: It seems that man chooses of necessity.

Objection 1. For the end stands in relation to the things that can be chosen as the principle to that which follows from the principles, as declared in the *Ethics*.[1] But conclusions follow of necessity from their principles. Therefore man is moved of necessity from the end to the choice.

Obj. 2. Further, as stated above (A. 1. Reply 2), choice follows the reason's judgment of what is to be done. But reason judges of necessity about some things, on account of the necessity of the premisses. Therefore it seems that choice also follows of necessity.

Obj. 3. Further, if two things are absolutely equal, man is not moved to one more than to the other. Thus if a hungry man, as Plato says,[2] be confronted on either side with two portions of food equally appetizing and at an equal distance, he is not moved towards one more than to the other; and he finds the reason of this in the immobility of the earth in the middle of the world as it is said in the book on the *Heavens*.[3] Now much less can that be chosen which is less desirable than that which is equally so. Therefore if two or more things are available, of which one appears to be more desirable, it is impossible to choose any of the others. Therefore that which appears to hold the first place is chosen of necessity But every act of choosing is in regard to something that seems in some way better. Therefore every choice is made necessarily.

On the contrary, Choice is an act of a rational power, which according to the Philosopher,[4] stands in relation to opposites.

I answer that, Man does not choose of necessity. And this is because that which is possible not to be, is not of necessity. Now the reason why it is possible not to choose, or to choose, may be gathered from a twofold power in man For man can will and not will, act and not act; again, he can will this or that, and do this or that. The reason of this is seated in the very power of the reason. For the will can tend to whatever the reason can apprehend as good. Now the reason can apprehend as good, not only this, namely, to will or to act, but also this,

[1] Aristotle, VII, 8 (1151^a16).

[2] *Timaeus* (63); *Phaedo* (108); cf. Averroes, *In de Cælo*, II, 90 (V, 157c) See also Duhem, *Le Système du Monde*. (I, 85).

[3] Aristotle, II, 13 (295^b12; $^b25$); cf. St. Thomas, *In de Cælo*, II, 25.

[4] *Metaphysics*, IX, 2 (1046^b8).

namely, not to will or not to act. Again, in all particular goods, the reason can consider an aspect of some good and the lack of some good, which has the aspect of evil; and in this respect, it can apprehend any single one of such goods as to be chosen or to be avoided. The perfect good alone, which is Happiness, cannot be apprehended by the reason under the aspect of evil, or as lacking in any way. Consequently man wills Happiness of necessity, nor can he will not to be happy, or to be unhappy Now since choice is not of the end, but of the means, as stated above (A. 3), it is not of the perfect good, which is Happiness, but of other particular goods. Therefore man chooses not of necessity but freely.

Reply Obj 1. The conclusion does not always of necessity follow from the principles, but only when the principles cannot be true if the conclusion is not true In like manner, the end does not always necessitate in man the choosing of the means, because the means are not always such that the end cannot be gained without them; of, if they be such, they are not always considered in that light

Reply Obj 2. The reason's decision or judgment of what is to be done is about contingent things that are possible to us. In such matters the conclusions do not follow of necessity from principles that are absolutely necessary, but from such as are so conditionally; as, for instance, If he runs, he is in motion.

Reply Obj. 3. If two things be proposed as equal under one aspect, nothing hinders us from considering in one of them some particular point of superiority, so that the will has a bent towards that one rather than towards the other.

QUESTION XIV

OF COUNSEL, WHICH PRECEDES CHOICE

(In Six Articles)

WE must now consider counsel; concerning which there are six points of inquiry. (1) Whether counsel is an inquiry? (2) Whether counsel is of the end or only of the means? (3) Whether counsel is only of things that we do? (4) Whether counsel is of all things that we do? (5) Whether the process of counsel is one of resolution? (6) Whether the process of counsel is infinite?

ARTICLE 1. *Whether Counsel Is an Inquiry?*

We proceed thus to the First Article: It seems that counsel is not an inquiry.

Objection 1. For Damascene says (*De Fide Orthod.* ii)[1] that "counsel is an appetite." But inquiry is not an act of the appetite. Therefore counsel is not an inquiry.

Obj. 2. Further, inquiry is a discursive act of the intellect, for which reason it is unbecoming to God, Whose knowledge is not discursive, as we have shown in the First Part (Q. XIV, A. 7). But counsel is ascribed to God, for it is written (Eph. 1. 11) that *He worketh all things according to the counsel of His will.* Therefore counsel is not inquiry.

Obj. 3. Further, inquiry is of doubtful matters. But counsel is given in matters that are certainly good; thus the Apostle says (I Cor. 7. 25): *Now concerning virgins I have no commandment of the Lord: but I give counsel.* Therefore, counsel is not an inquiry.

On the contrary, Gregory of Nyssa says[2]: "Every counsel is an inquiry; but not every inquiry is a counsel."

I answer that, Choice, as stated above (Q XIII, A. 1. Reply 2; A. 3), follows the judgment of the reason about what is to be done. Now there is much uncertainty in things that have to be done, because actions are concerned with contingent singulars, which by reason of their changeability, are uncertain. Now in things doubtful and uncertain the reason does not pronounce judgment without previous inquiry. Therefore the reason must of necessity institute an inquiry before deciding on the objects of choice, and this inquiry is called counsel Hence the Philosopher says[3] that choice is "the desire of what has been already counselled"

Reply Obj. 1. When the acts of two powers are ordered to one another, in each of them there is something belonging to the other power. Consequently each act can be named from either power. Now it is evident that the act of the reason giving direction as to the means, and the act of the will tending to these means according to the reason's direction, are ordered to one another. Consequently there is to be found something of the reason, namely, order, in that act of the will, which is choice. And in counsel, which is an act of reason, there is to be found something of the will,—both as matter (since counsel is of what man wills to do),—and as motive (because it is from willing the end, that man is moved to take counsel in regard to the means). And therefore, just as the Philosopher says[4] that "choice is intellect influenced by ap-

[1] Chap 22 (PG 94, 945).
[2] Nemesius, *De Nat. Hom*, XXXIV (PG 40, 736).
[3] *Ethics*, III, 2, 3 (1112^a15, 1113^a11).
[4] *Ibid.*, VI, 2 (1139^b4).

petite," thus pointing out that both concur in the act of choosing, so Damascene says (*loc. cit.*) that "counsel is appetite based on inquiry," so as to show that counsel belongs, in a way, both to the will, on whose behalf and by whose impulse the inquiry is made, and to the reason that makes the inquiry.

Reply Obj. 2. The things that we say of God must be understood without any of the defects which are to be found in us. Thus in us science is of conclusions derived by reasoning from causes to effects, but science when said of God, means certain knowledge of all effects in the First Cause, without any reasoning process. In like manner we ascribe counsel to God, as to the certainty of His decision or judgment, which certainty in us arises from the inquiry of counsel. But such inquiry has no place in God, and therefore in this respect it is not ascribed to God In which sense Damascene says (*loc. cit.*): "God takes not counsel: those only take counsel who lack knowledge."

Reply Obj. 3. It may happen that things which are most certainly good in the opinion of wise and spiritual men are not certainly good in the opinion of many, or at least of carnal-minded men. Consequently in such things counsel may be given.

Article 2. *Whether Counsel Is of the End, or Only of the Means?*

We proceed thus to the Second Article: It would seem that counsel is not only of the means but also of the end.

Objection 1. For whatever is doubtful, can be the subject of inquiry. Now in things to be done by man there happens sometimes a doubt as to the end and not only as to the means Since therefore inquiry as to what is to be done is counsel, it seems that counsel can be of the end.

Obj. 2. Further, the matter of counsel is human actions. But some human actions are ends, as stated in the *Ethics*.[1] Therefore counsel can be of the end.

On the contrary, Gregory of Nyssa says[2] that "counsel is not of the end, but of the means"

I answer that, The end is the principle in practical matters, because the nature of the means is to be found in the end. Now the principle cannot be called in question, but must be presupposed in every inquiry. Since therefore counsel is an inquiry, it is not of the end but only of the means. Nevertheless it may happen that what is the end in regard to some things is ordered to something else; just as also what is the principle of one demonstration is the conclusion of another. And consequently that which is looked upon as the end in one inquiry may be looked upon as the means in another. And thus it will become an object of counsel.

Reply Obj. 1. That which is looked upon as an end is already determined. Consequently as long as there is any doubt about it, it is not looked upon as an end. Therefore if counsel is taken about it, it will be counsel not about the end, but about the means.

Reply Obj. 2. Counsel is about operations, in so far as they are ordered to some end. Consequently if any human act be an end, it will not, as such, be the matter of counsel.

Article 3. *Whether Counsel Is Only of Things That We Do?*

We proceed thus to the Third Article: It seems that counsel is not only of things that we do.

Objection 1. For counsel implies some kind of bringing together. But it is possible for many to compare things that are not subject to movement, and are not the result of our actions, such as the natures of various things. Therefore counsel is not only of things that we do.

Obj. 2. Further, men sometimes seek counsel about things that are laid down by law; hence we speak of counsel at law. And yet those who seek counsel thus have nothing to do in making the laws Therefore counsel is not only of things that we do.

Obj 3. Further, some are said to take consultation about future events, which, however, are not in our power. Therefore counsel is not only of things that we do.

Obj. 4. Further, if counsel were only of things that we do, no one would take counsel about what another does. But this is clearly untrue. Therefore counsel is not only of things that we do.

On the contrary, Gregory of Nyssa (Nemesius,—*De Nat Hom.* xxxiv)[3] says: "We take counsel of things that take place within us and that we are able to do."

I answer that, Counsel properly implies a conference held between several. The very word (*consilium*) denotes this, for it means a sitting together (*considium*), from the fact that many sit together in order to confer with one another. Now we must take note that in contingent particular cases, in order that anything be known for certain it is necessary to take several condi-

[1] Aristotle, I, 1 (1094[a]4).

[2] Nemesius, *De Nat. Hom.*, XXXIV (PG 40, 740).

[3] PG 40, 737.

tions or circumstances into consideration, which it is not easy for one to consider, but are considered by several with greater certainty, since what one takes note of escapes the notice of another. But in necessary and universal things, our view is brought to bear on matters much more absolute and simple, so that one man by himself may be more adequate to consider these things. Therefore the inquiry of counsel is concerned, properly speaking, with contingent singulars. Now the knowledge of the truth in such matters does not rank so high as to be desirable of itself, as is the knowledge of things universal and necessary, but it is desired as being useful towards action, because actions bear on things singular and contingent. Consequently, properly speaking, counsel is about things done by us.

Reply Obj. 1. Counsel implies comparison, not of any kind, but about what is to be done, for the reason given above.

Reply Obj. 2. Although that which is laid down by the law is not due to the action of him who seeks counsel, nevertheless it directs him in his action, since the mandate of the law is one reason for doing something.

Reply Obj 3 Counsel is not only about what is done, but also about whatever has relation to what is done And for this reason we speak of consulting about future events, in so far as man is induced to do or omit something, through the knowledge of future events.

Reply Obj 4 We seek counsel about the actions of others in so far as they are, in some way, one with us; either by union of affection—thus a man is solicitous about what concerns his friend, as though it concerned himself; or after the manner of an instrument, for the principal agent and the instrument are, in a way, one cause, since one acts through the other; thus the master takes counsel about what he would do through his servant.

ARTICLE 4. *Whether Counsel Is About All Things That We Do?*

We proceed thus to the Fourth Article: It seems that counsel is about all things that we have to do.

Objection 1. For choice is the desire of what is counselled as stated above (A. 1). But choice is about all things that we do. Therefore counsel is too.

Obj. 2. Further, counsel implies the reason's inquiry. But whenever we do not act through the impulse of passion we act in virtue of the reason's inquiry. Therefore there is counsel about everything that we do.

Obj. 3. Further, the Philosopher says[1] that "if it appears that something can be done by more means than one, we take counsel by inquiring whereby it may be done most easily and best; but if it can be accomplished by one means, how it can be done by this." But whatever is done, is done by one means or by several. Therefore counsel takes place in all things that we do.

On the contrary, Gregory of Nyssa (Nemesius,—*De Nat. Hom.* xxxiv)[2] says that "counsel has no place in things that are done according to science or art."

I answer that, Counsel is a kind of inquiry, as stated above (A. 1). But we are accustomed to inquire about things that admit of doubt; hence the process of inquiry, which is called an argument, is a reason that certifies to something that admitted of doubt. Now, that something in relation to human acts, admits of no doubt, arises from a twofold source. First, because certain determinate ends are gained by certain determinate means, as happens in the arts which are governed by certain fixed rules of action. Thus a writer does not take counsel how to form his letters, for this is determined by art. Secondly, from the fact that it matters little whether it is done this or that way. This occurs in trivial matters, which help or hinder but little towards the end aimed at; and reason accounts them as nothing Consequently there are two things of which we do not take counsel, although they are ordered to the end, as the Philosopher says;[3] namely, trivial things, and those which have a fixed way of being done, as in works produced by art, with the exception of those arts that admit of conjecture, such as medicine, commerce, and the like, as Gregory of Nyssa says (Nemesius,—*loc. cit.*).

Reply Obj. 1. Choice presupposes counsel by reason of its judgment or decision Consequently when the judgment or decision is evident without inquiry there is no need for the inquiry of counsel.

Reply Obj. 2. In matters that are evident the reason makes no inquiry, but judges at once. Consequently there is no need of counsel in all that is done by reason.

Reply Obj. 3. When a thing can be accomplished by one means, but in different ways, doubt may arise, just as when it can be accomplished by several means. And hence the need of counsel. But when not only the means but also the way of using the means, is fixed, then there is no need of counsel.

[1] *Ethics*, III, 3 (1112^b16). [2] PG 40, 740.
[3] *Ethics*, III, 3 (1112^b9).

ARTICLE 5. *Whether the Process of Counsel Is One of Resolution?*

We proceed thus to the Fifth Article: It seems that the process of counsel is not one of resolution.

Objection 1. For counsel is about things that we do. But the process of our actions is not one of resolution, but rather one of composition, namely, from the simple to the composite. Therefore counsel does not always proceed by way of resolution.

Obj. 2. Further, counsel is an inquiry of the reason. But reason proceeds from things that precede to things that follow, according to the more appropriate order. Since then, the past precedes the present, and the present precedes the future, it seems that in taking counsel one should proceed from the past and present to the future, which is not the order of resolution. Therefore the process of counsel is not one of resolution.

Obj. 3. Further, counsel is only of such things as are possible to us, according to the *Ethics*.[1] But the question as to whether a certain thing is possible to us depends on what we are able or unable to do in order to gain such and such an end. Therefore the inquiry of counsel should begin from things present.

On the contrary, The Philosopher says[2] that "he who takes counsel seems to inquire and resolve."

I answer that, In every inquiry one must begin from some principle. And if this principle precedes both in knowledge and in being, the process is not one of resolution, but rather of composition, because to proceed from cause to effect is to proceed by way of composition, since causes are more simple than effects. But if that which precedes in knowledge is later in the order of being, the process is one of resolution, as when our judgment deals with clearly known effects, which we resolve into their simple causes. Now the principle in the inquiry of counsel is the end, which precedes indeed in intention, but comes afterwards in being. Hence the inquiry of counsel must be one of resolution, beginning, that is to say, from that which is intended in the future, and continuing until it arrives at that which is to be immediately done.

Reply Obj. 1. Counsel is indeed about action. But the notion of action is taken from the end, and consequently the order of reasoning about actions is contrary to the order of actions.

Reply Obj. 2. Reason begins with that which is first according to reason, but not always with that which is first in point of time.

Reply Obj. 3. We should not want to know whether something to be done for an end be possible, if it were not suitable for gaining that end. Hence we must first inquire whether it be conducive to the end before considering whether it be possible.

ARTICLE 6. *Whether the Process of Counsel Is Infinite?*

We proceed thus to the Sixth Article: It seems that the process of counsel is infinite.

Objection 1. For counsel is an inquiry about the particular things with which action is concerned. But singulars are infinite Therefore the process of counsel is infinite.

Obj. 2 Further, the inquiry of counsel has to consider not only what is to be done, but how to avoid obstacles. But every human action can be hindered, and an obstacle can be removed by some human reason. Therefore the inquiry about removing obstacles can go on infinitely.

Obj. 3 Further, the inquiry of demonstrative science does not go on infinitely, because one can come to principles that are self-evident, which are absolutely certain. But certainty of this kind is not to be had in contingent singulars, which are variable and uncertain. Therefore the inquiry of counsel goes on infinitely.

On the contrary, "No one is moved to that which he cannot possibly reach"[3] But it is impossible to pass through the infinite. If therefore the inquiry of counsel is infinite, no one would begin to take counsel. Which is clearly untrue.

I answer that, The inquiry of counsel is actually finite on both sides, on that of its principle and on that of its term. For a twofold principle is available in the inquiry of counsel One is proper to it, and belongs to the very genus of things pertaining to operation; this is the end, which is not the matter of counsel, but is taken for granted as its principle, as stated above (A. 2). The other principle is taken from another genus, so to speak; thus in demonstrative sciences one science postulates certain things from another, without inquiring into them. Now these principles which are taken for granted in the inquiry of counsel are any facts received through the senses—for instance, that this is bread or iron; and also what is known in a universal manner either through speculative or through practical science; for instance, that adultery is

[1] Aristotle, III, 3 (1112^b26).
[2] *Ethics*, III, 3 (1112^b20).
[3] Aristotle, *Heavens*, I, 7 (274^b17).

forbidden by God, or that man cannot live without suitable nourishment. Of such things counsel makes no inquiry. But the term of inquiry is that which we are able to do at once. For just as the end has the character of a principle, so the means have the character of a conclusion. Therefore that which presents itself as to be done first, has the character of an ultimate conclusion at which the inquiry comes to an end Nothing however prevents counsel from being infinite potentially, since an infinite number of things may present themselves to be inquired into by means of counsel.

Reply Obj 1 Singulars are infinite, not actually, but only potentially.

Reply Obj 2 Although human action can be hindered, the hindrance is not always present Consequently it is not always necessary to take counsel about removing the obstacle.

Reply Obj. 3 In contingent singulars, something may be taken for certain, not absolutely, indeed, but for the time being, and as far as it concerns the work to be done Thus that Socrates is sitting is not a necessary statement, but that he is sitting, as long as he continues to sit, is necessary. And this can be held with certainty.

QUESTION XV

OF CONSENT, WHICH IS AN ACT OF THE WILL IN RELATION TO THE MEANS

(In Four Articles)

WE must now consider consent, concerning which there are four points of inquiry: (1) Whether consent is an act of the appetitive or of the apprehensive power? (2) Whether it is appropriate to irrational animals? (3) Whether it is directed to the end or to the means? (4) Whether consent to an act pertains to the higher part of the soul only?

ARTICLE 1. *Whether Consent Is an Act of the Appetitive or of the Apprehensive Power?*

We proceed thus to the First Article: It seems that consent belongs only to the apprehensive part of the soul.

Objection 1. For Augustine (*De Trin.* xii)[1] ascribes consent to the higher reason. But the reason is an apprehensive power. Therefore consent belongs to an apprehensive power.

Obj. 2. Further, consent is "co-sense." But sense is an apprehensive power. Therefore consent is the act of an apprehensive power.

Obj. 3. Further, just as assent is an application of the intellect to something, so is consent. But assent pertains to the intellect, which is an apprehensive power. Therefore consent also belongs to an apprehensive power.

On the contrary, Damascene says (*De Fide Orthod.* ii)[2] that "if a man judge without love for that of which he judges, there is no decision," that is, consent. But to love pertains to the appetitive power. Therefore consent does also.

I answer that, Consent implies application of sense to something. Now it is proper to sense to take cognizance of things present, for the imagination apprehends the likeness of corporeal things even in the absence of the things of which they bear the likeness, while the intellect apprehends universal notions, which it can apprehend indifferently, whether the singulars be present or absent. And since the act of an appetitive power is a kind of inclination to the thing itself, the application of the appetitive power to the thing, in so far as it cleaves to it, gets by a kind of likeness, the name of sense, since it acquires an experience as it were, of the thing to which it cleaves, in so far as it is satisfied in it. Hence it is written (Wisd 1. 1) · *Think of* (*Sentite*) *the Lord in goodness.* And on these grounds consent is an act of the appetitive power.

Reply Obj 1. As stated in the treatise on the *Soul*,[3] "the will is in the reason." Hence, when Augustine ascribes consent to the reason, he takes reason as including the will.

Reply Obj. 2. Sense, properly speaking, belongs to the apprehensive faculty; but by way of likeness, in so far as it implies seeking acquaintance, it pertains to the appetitive power, as stated above.

Reply Obj. 3. To assent (*assentire*) is, so to speak, to feel towards something (*ad aliud sentire*); and thus it implies a certain distance from that to which assent is given But to consent (*consentire*) is to feel with, and this implies a certain union to the object of consent. Hence the will, to which it pertains to tend to the thing itself, is more properly said to consent; but the intellect, whose act does not consist in a movement towards the thing, but rather the reverse, as we have stated in the First Part (Q XVI, A 1; Q. XXVII, A 4; Q. LIX, A. 2), is more properly said to assent; although one word is customarily used for the other. We may also say that the intellect assents, in so far as it is moved by the will.

[1] Chap. 12 (PL 42, 1007).

[2] Chap. 22 (PG 94, 945).

[3] Aristotle, III. 9 (432^b5).

ARTICLE 2. *Whether Consent Is Appropriate to Irrational Animals?*

We proceed thus to the Second Article: It seems that consent is appropriate to irrational animals.

Objection 1. For consent implies a determination of the appetite to one thing. But the appetite of irrational animals is determined to one thing. Therefore consent is to be found in irrational animals.

Obj. 2. Further, if you remove what is first, you remove what follows. But consent precedes the accomplished act. If therefore there were no consent in irrational animals, there would be no act accomplished, which is clearly false.

Obj. 3. Further, men are sometimes said to consent to do something through some passion; desire, for instance, or anger. But irrational animals act through passion. Therefore they consent.

On the contrary, Damascene says (*De Fide Orthod.* ii)[1] that "after judging, man approves and embraces the judgment of his counselling, and this is called the decision," that is, consent. But counsel is not in irrational animals. Therefore neither is consent.

I answer that, Consent, properly speaking, is not in irrational animals. The reason of this is that consent implies an application of the appetitive movement to something as to be done. Now to apply the appetitive movement to the doing of something pertains to the subject in whose power it is to move the appetite Thus to touch a stone is an action suitable to a stick, but to apply the stick so that it touch the stone, pertains to one who has the power of moving the stick. But irrational animals have not the command of the appetitive movement, for this is in them through natural instinct. Hence in the irrational animal, there is indeed the movement of appetite, but it does not apply that movement to some particular thing. And hence it is that the irrational animal is not properly said to consent. This is proper to the rational nature alone, which has the command of the appetitive movement, and is able to apply or not to apply it to this or that thing.

Reply Obj. 1. In irrational animals the determination of the appetite to a particular thing is merely passive. But consent implies a determination of the appetite which is active rather than merely passive.

Reply Obj. 2. If the first be removed, then what follows is removed, provided that, properly speaking, it follow from that only. But if something can follow from several things, it is not removed by the fact that one of them is removed. Thus if hardening is the effect of heat and of cold (since bricks are hardened by fire, and frozen water is hardened by the cold), then by removing heat it does not follow that there is no hardening Now the accomplishment of an act follows not only from consent, but also from the impulse of the appetite, such as is found in irrational animals.

Reply Obj. 3. The man who acts through passion is able not to follow the passion. But irrational animals do not have that power. Hence the comparison fails.

ARTICLE 3. *Whether Consent Is Directed to the End or to the Means?*

We proceed thus to the Third Article: It would seem that consent is directed to the end.

Objection 1. Because that on account of which a thing is such is still more such But it is on account of the end that we consent to the means. Therefore, still more do we consent to the end.

Obj. 2 Further, the act of the intemperate man is his end, just as the act of the virtuous man is his end. But the intemperate man consents to his own act. Therefore consent can be directed to the end.

Obj. 3. Further, desire of the means is choice, as stated above (Q. XIII, A. 1). If therefore consent were only directed to the means it would in no way differ from choice. And this is proved to be false by the authority of Damascene who says (*De Fide Orthod.* ii, 22)[2] that after the approval which he calls the decision, comes the choice. Therefore consent is not only directed to the means.

On the contrary, Damascene says (*ibid*) that the decision, that is, the consent, takes place "when man approves and embraces the judgment of his counsel." But counsel is only about the means. Therefore the same applies to consent.

I answer that, Consent is the application of the appetitive movement to something that is already in the power of him who causes the application. Now the order of action is this: first there is the apprehension of the end; then the desire of the end; then the counsel about the means; then the desire of the means. Now the appetite tends to the last end naturally, and therefore the application of the appetitive movement to the apprehended end has not the

[1] Chap. 22 (PG 94, 945).

[2] PG 94, 945.

nature of consent, but of simple volition. But as to those things which come under consideration after the last end, in so far as they are directed to the end, they come under counsel; and so consent can be applied to them, in so far as the appetitive movement is applied to the judgment resulting from counsel. But the appetitive movement to the end is not applied to counsel, but rather counsel is applied to it, because counsel presupposes the desire of the end. On the other hand, the desire of the means presupposes the decision of counsel. And therefore the application of the appetitive movement to counsel's decision is consent, properly speaking. Consequently, since counsel is only about the means, consent, properly speaking, is of nothing else but the means.

Reply Obj. 1. Just as the knowledge of conclusions through the principles is science, while the knowledge of the principles is not science, but something higher, namely, understanding, so we consent to the means on account of the end, in respect of which our act is not consent, but something greater, namely, volition.

Reply Obj. 2. Delight in his act, rather than the act itself, is the end of the intemperate man, and for sake of this delight he consents to that act.

Reply Obj. 3. Choice includes something that consent does not have, namely, a certain relation to something to which something else is preferred. And therefore after consent there still remains a choice. For it may happen that by aid of counsel several means have been found which lead to the end, and through each of these meeting with approval, consent has been given to each. But after approving of many, we have given our preference to one by choosing it. But if only one meets with approval, then consent and choice do not differ in reality, but only in our way of looking at them, so that we call it consent, according as we approve of doing that thing, but choice according as we prefer it to those that do not meet with our approval.

ARTICLE 4. *Whether Consent to the Act Pertains Only to the Higher Part of the Soul?*

We proceed thus to the Fourth Article: It would seem that consent to the act does not always pertain to the higher reason.

Objection 1. For *delight follows action, and perfects it, just as beauty perfects youth.*[1] But consent to delight pertains to the lower reason, as Augustine says (*De Trin.* xii, 12).[2] Therefore consent to the act does not pertain only to the higher reason.

Obj. 2. Further, an act to which we consent is said to be voluntary. But it pertains to many powers to produce voluntary acts. Therefore the higher reason is not alone in consenting to the act.

Obj. 3. Further, the higher reason is that which is intent on "the contemplation and consultation of things eternal," as Augustine says (*De Trin.* xii. 7) [3] But man often consents to an act not for eternal, but for temporal reasons, or even on account of some passion of the soul. Therefore consent to an act does not pertain to the higher reason alone.

On the contrary, Augustine says (*De Trin.* xii, 12):[4] It is impossible for man to make up his mind to commit a sin, unless that mental faculty which has the sovereign power of urging his members to act, or restraining them from act, yield to the evil deed and become its slave."

I answer that, The final decision belongs to him who holds the highest place, and to whom it pertains to judge of the others. For as long as judgment about some matter remains to be pronounced, the final decision has not been given. Now it is evident that it pertains to the higher reason to judge of all, since it is by the reason that we judge of sensible things; and of things pertaining to human principles we judge according to Divine principles, which is the function of the higher reason. Therefore as long as a man is uncertain whether he should resist or not, according to Divine principles, no judgment of the reason can be considered in the light of a final decision. Now the final decision of what is to be done is consent to the act. Therefore consent to the act pertains to the higher reason, but in that sense in which the reason includes the will, as stated above (A. 1. Reply 1).

Reply Obj. 1. Consent to delight in the work done belongs to the higher reason, as also does consent to the work, but consent to delight in thought belongs to the lower reason, just as to the lower reason it belongs to think. Nevertheless the higher reason exercises judgment on the fact of thinking or not thinking, considered as an action, and in like manner on the delight that results. But in so far as the act of thinking is considered as ordered to a further act, it pertains to the lower reason. For that which is ordered to something else, pertains to a lower art

[1] Aristotle, *Ethics,* X, 4 (1174^{b}31); οἷον τοῖς ἀκμαίοις ἡ ὥρα; as youthful vigour perfects a man in his prime.

[2] PL 42, 1008.

[3] PL 42, 1005.

[4] PL 42, 1008.

or power than does the end to which it is ordered. Hence the art which is concerned with the end is called the master (archetectonic) or principal art.

Reply Obj. 2. Since actions are called voluntary from the fact that we consent to them, it does not follow that consent is an act of each power, but of the will which is in the reason, as stated above (A. 1. reply 1), and from which the voluntary act is named.

Reply Obj. 3. The higher reason is said to consent not only because it always moves to act according to the eternal ideas, but also because it does not dissent according to those same ideas.

QUESTION XVI

OF USE, WHICH IS AN ACT OF THE WILL IN RELATION TO THE MEANS (*In Four Articles*)

WE must now consider use, concerning which there are four points of inquiry: (1) Whether use is an act of the will? (2) Whether it is to be found in irrational animals? (3) Whether it is of the means only, or the end also? (4) Of the relation of use to choice.

ARTICLE 1. *Whether Use Is an Act of the Will?*

We proceed thus to the First Article: It seems that use is not an act of the will.

Objection 1. For Augustine says[1] that "to use is to refer that which is the object of use to the obtaining of something else." But to refer something to another is an act of the reason to which it pertains to compare and to order. Therefore use is an act of the reason and not of the will.

Obj. 2. Further, Damascene says (*De Fide Orthod.* ii)[2] that "man goes forward to the operation, and this is called impulse; then he makes use (of the powers) and this is called use." But operation belongs to the executive power, and the act of the will does not follow the act of the executive power. On the contrary execution comes last. Therefore use is not an act of the will.

Obj. 3. Further, Augustine says,[3] "All things that were made were made for man's use, because reason with which man is endowed uses all things by its judgment of them." But judgment of things created by God pertains to the speculative reason, which seems to be altogether distinct from the will, which is the principle of human acts. Therefore use is not an act of the will.

On the contrary, Augustine says (*De Trin.* x):[4] "To use is to apply something in the power of the will."

I answer that, The use of a thing implies the application of that thing to an operation Hence the operation to which we apply a thing is called its use; thus the use of a horse is to ride, and the use of a stick is to strike. Now we apply to an operation not only the interior principles of action, namely, the powers of the soul or the members of the body, as the intellect to understand and the eye to see, but also external things, as a stick to strike. But it is evident that we do not apply external things to an operation save through the interior principles, which are either the powers of the soul, or the habits of those powers, or the organs which are parts of the body. Now it has been shown above (Q. IX, A. 1) that it is the will which moves the soul's powers to their acts, and this is to apply them to operation Hence it is evident that first and principally use belongs to the will as first mover, to the reason, as directing, and to the other powers as executing the operation, which powers are compared to the will which applies them to act, as the instruments are compared to the principal agent. Now action is properly ascribed not to the instrument, but to the principal agent, as building is ascribed to the builder but not to his tools. Hence it is evident that use is, properly speaking, an act of the will

Reply Obj. 1. Reason does indeed refer one thing to another, but the will tends to that which is referred by the reason to something else. And in this sense to use is to refer one thing to another.

Reply Obj. 2. Damascene is speaking of use in so far as it belongs to the executive powers

Reply Obj. 3. Even the speculative reason is applied by the will to the act of understanding or judging. Consequently the speculative reason is said to use, in so far as it is moved by the will, in the same way as the other executive powers.

ARTICLE 2. *Whether Use Is to Be Found in Irrational Animals?*

We proceed thus to the Second Article: It would seem that use is to be found in irrational animals.

Objection 1. For it is better to enjoy than to use, because, as Augustine says (*De Trin.* x, 10):[5] "We use things by referring them to some-

[1] *Christian Doctrine,* I, 4 (PL 34, 20).
[2] Chap. 22 (PG 94, 945).
[3] QQ. LXXXIII, Qu. 30 (PL 40, 20).
[4] Chap. 11 (PL 42, 982).
[5] PL 42, 981

thing else which we are to enjoy." But enjoyment is to be found in irrational animals, as stated above (Q. XI, A 2) Much more, therefore, is it possible for them to use.

Obj. 2. Further, to apply the members to action is to use them. But irrational animals apply their members to action; for instance, their feet, to walk, their horns, to strike. Therefore it is possible for irrational animals to use.

On the contrary, Augustine says (QQ. LXXXIII, *qu.* 30):[1] "None but a rational animal can make use of a thing"

I answer that, as stated above (A. 1), to use is to apply an active principle to action. Thus to consent is to apply the appetitive movement to the desire of something, as stated above (Q. XV, AA. 1, 2, 3). Now he alone who has the disposal of a thing, can apply it to something else, and this pertains to him alone who knows how to refer it to something else, which is an act of the reason. And therefore none but a rational animal consents and uses.

Reply Obj. 1. To enjoy implies the absolute movement of the appetite to the appetible, but to use implies a movement of the appetite to something as ordered to something else. If therefore we compare use and enjoyment in respect of their objects, enjoyment is better than use, because that which is desirable absolutely is better than that which is desirable only as ordered to something else. But if we compare them in respect of the apprehensive power that precedes them, greater excellence is required on the part of use, because to direct one thing to another is an act of reason, but to apprehend something absolutely is within the capacity even of sense.

Reply Obj. 2. Animals by means of their members do something from natural instinct, not through knowing the relation of their members to these operations. Therefore, properly speaking, they do not apply their members to action, nor do they use them.

ARTICLE 3. *Whether Use Can Be Also of the Last End?*

We proceed thus to the Third Article: It seems that use can be also of the last end.

Objection 1. For Augustine says (*De Trin.* X):[2] "Whoever enjoys, uses." But man enjoys the last end. Therefore he uses the last end.

Obj. 2. Further, "to use is to apply something in the power of the will" (*ibid.*). But the last end, more than anything else, is the object of the will's application. Therefore it can be the object of use.

Obj. 3. Further, Hilary says (*De Trin.* ii)[3] that "Eternity is in the Father, Likeness in the Image," that is, in the Son, "Use in the Gift," that is, in the Holy Ghost. But the Holy Ghost, since He is God, is the last end. Therefore the last end can be the object of use.

On the contrary, Augustine says,[4] "No one rightly uses God, but he enjoys Him." But God alone is the last end. Therefore we cannot use the last end.

I answer that, Use, as stated above (A. 1), implies the application of one thing to another. Now that which is applied to another is regarded in the light of means to an end; and consequently use always is of the means For this reason things are adapted to a certain end are said to be useful; in fact their very usefulness is sometimes called use.

It must, however, be observed that the last end may be taken in two ways: first, absolutely; secondly, in respect of an individual. For since the end, as stated above (Q I, A. 8; Q. II, A. 7), signifies sometimes the thing itself, and sometimes the attainment or possession of that thing (thus the miser's end is either money or the possession of it), it is evident that, absolutely speaking, the last end is the thing itself; for the possession of money is good only in so far as there is some good in money. But in regard to the individual, the obtaining of money is the last end, for the miser would not seek for money, save that he might have it. Therefore, absolutely and properly speaking, a man enjoys money, because he places his last end in it; but in so far as he seeks to possess it, he is said to use it.

Reply Obj. 1. Augustine is speaking of use in general, in so far as it implies the relation of an end to the enjoyment which a man seeks in that end.

Reply Obj. 2. The end is applied to the purpose of the will, that the will may rest in it. Consequently this rest in the end, which is the enjoyment of the end, is in this sense called use of the end. But the means are applied to the will's purpose not only in being used as means, but as ordered to something else in which the will finds rest.

Reply Obj. 3. The words of Hilary refer to use as applicable to rest in the last end; just as, speaking in a general sense, one may be said to use the end for the purpose of attaining it, as

[1] PL, 40, 19
[2] Chap. 11 (PL 42, 982).
[3] PL 10, 51.
[4] QQ. LXXXIII, Qu. 30 (PL 40, 20).

stated above. Hence Augustine says (*De Trin.* vi, 10)[1] that "this love, delight, felicity, or happiness, is called use by him."

ARTICLE 4. *Whether Use Precedes Choice?*

We proceed thus to the Fourth Article: It would seem that use precedes choice.

Objection 1. For nothing follows after choice, except execution. But use, since it pertains to the will, precedes execution. Therefore it precedes choice also.

Obj. 2. Further, the absolute precedes the relative. Therefore the less relative precedes the more relative. But choice implies two relations: one, of the thing chosen, in relation to the end; the other, of the thing chosen, in respect of that to which it is preferred. But use implies relation to the end only. Therefore use precedes choice.

Obj. 3 Further, the will uses the other powers in so far as it moves them. But the will moves itself too, as stated above (Q IX, A. 3). Therefore it uses itself, by applying itself to act. But it does this when it consents. Therefore there is use in consent. But consent precedes choice, as stated above (Q XV, A. 3. Reply 3). Therefore use does also.

On the contrary, Damascene says (*De Fide Orthod.* ii)[2] that "the will after choosing has an impulse to the operation, and afterwards it uses (the powers)." Therefore use follows choice.

I answer that, The will has a twofold relation to the thing willed. One, according as the thing willed is, in a way, in the willing subject, by a kind of proportion or order to the thing willed. And so those things that are naturally proportioned to a certain end are said to desire that end naturally. Yet to have an end thus is to have it imperfectly. Now every imperfect thing tends to perfection. And therefore both the natural and the voluntary appetite tend to have the end in reality, and this is to have it perfectly. This is the second relation of the will to the thing willed.

Now the thing willed is not only the end, but also the means. And the last act that pertains to the first relation of the will to the means, is choice, for there the will becomes fully proportioned, by willing the means fully. Use, on the other hand, pertains to the second relation of the will, in respect of which it tends to the realization of the thing willed. Therefore it is evident that use follows choice, provided that by use we mean the will's use of the executive power in moving it. But since the will, in a way, moves the reason also, and uses it, we may take the use of the means as consisting in the consideration of the reason, according as it refers the means to the end. In this sense use precedes choice.

Reply Obj. 1. The motion of the will to the execution of the work precedes execution but follows choice. And so, since use belongs to that very motion of the will, it stands between choice and execution.

Reply Obj. 2. What is essentially relative is after the absolute, but the thing to which relation is referred need not come after. Indeed, the more a cause precedes, the more numerous the effects to which it has relation.

Reply Obj. 3. Choice precedes use, if they are referred to the same object. But nothing hinders the use of one thing preceding the choice of another. And since the acts of the will react on one another, in each act of the will we can find both consent and choice and use, so that we may say that the will consents to choose, and consents to consent, and uses itself in consenting and choosing. And such acts as are ordered to that which precedes, precede also.

(c) *The Nature of Commanded Voluntary Acts*

QUESTION XVII

OF THE ACTS COMMANDED BY THE WILL

(*In Nine Articles*)

WE must now consider the acts commanded by the will, under which head there are nine points of inquiry: (1) Whether command is an act of the will or of the reason? (2) Whether command pertains to irrational animals? (3) Of the order between command and use. (4) Whether command and the commanded act are one act or distinct? (5) Whether the act of the will is commanded? (6) Whether the act of the reason is commanded? (7) Whether the act of the sensitive appetite is commanded? (8) Whether the act of the vegetal soul is commanded? (9) Whether the acts of the external members are commanded?

ARTICLE 1. *Whether Command Is an Act of the Reason or of the Will?*

We proceed thus to the First Article: It seems that command is not an act of the reason but of the will.

[1] PL 42, 932. [2] Chap. 22 (PG 94, 945).

Objection 1. For command is a kind of motion; because Avicenna says[1] that there is a fourfold way of moving, by perfecting, by disposing, by commanding, and by counselling. But it pertains to the will to move all the other powers of the soul, as stated above (Q. IX, A. 1). Therefore command is an act of the will.

Obj. 2. Further, just as to be commanded pertains to that which is subject, so to command seems to pertain to that which is most free. But the root of liberty is especially in the will. Therefore to command pertains to the will.

Obj. 3. Further, command is followed at once by act. But the act of the reason is not followed at once by act, for he who judges that a thing should be done, does not do it at once. Therefore command is not an act of the reason, but of the will.

On the contrary, Gregory of Nyssa[2] and the Philosopher[3] say that "the appetite obeys reason" Therefore command is an act of the reason.

I answer that, Command is an act of the reason, presupposing, however, an act of the will. In proof of this, we must take note that since the acts of the reason and of the will can be brought to bear on one another, in so far as the reason reasons about willing, and the will wills to reason, the result is that the act of the reason precedes the act of the will, and conversely. And since the power of the preceding act continues in the act that follows, it happens sometimes that there is an act of the will in so far as it retains in itself something of an act of the reason, as we have stated in reference to use (Q. XVI, A. 1) and choice (Q. XIII, A. 1); and conversely, that there is an act of the reason in so far as it retains in itself something of an act of the will.

Now, command is essentially indeed an act of the reason, for the commander orders the one commanded to do something, by way of intimation or declaration, and to order thus by intimating or declaring is an act of the reason. Now the reason can intimate or declare something in two ways. First, absolutely. And this intimation is expressed by a verb in the indicative mood, as when one person says to another: "This is what you should do." Sometimes, however, the reason intimates something to a man by moving him to it; and this intimation is expressed by a verb in the imperative mood, as when it is said to someone: "Do this." Now the first mover among the powers of the soul to the doing of an act is the will, as stated above (Q. IX, A. 1).[4] Since, therefore, the second mover does not move save in virtue of the first mover, it follows that the very fact that the reason moves by commanding is due to the power of the will. Consequently it follows that command is an act of the reason, presupposing an act of the will, in virtue of which the reason, by its command, moves to the execution of the act.

Reply Obj. 1. To command is to move, not anyhow, but by intimating and declaring to another; and this is an act of the reason.

Reply Obj. 2. The root of liberty is the will as its subject, but it is the reason as its cause. For the will can tend freely towards various objects, owing to the fact that the reason can have various conceptions of good. Hence philosophers define free choice as being "a free judgment arising from reason,"[5] implying that reason is the cause of liberty.

Reply Obj. 3 This argument proves that command is an act of reason not absolutely, but with a kind of motion, as stated above.

ARTICLE 2. *Whether Command Pertains to Irrational Animals?*

We proceed thus to the Second Article: It seems that command pertains to irrational animals.

Objection 1. Because, according to Avicenna,[1] "the power that commands movement is the appetite, and the power that executes movement is in the muscles and nerves." But both powers are in irrational animals. Therefore command is to be found in irrational animals.

Obj. 2. Further, the condition of a slave is that of one who receives commands. But the body is compared to the soul as a slave to his master, as the Philosopher says[7] Therefore the body is commanded by the soul, even in irrational animals, since they are composed of soul and body.

Obj. 3. Further, by commanding, man has an impulse towards an action. But "impulse to action is to be found in irrational animals," as Damascene says (*De Fide Orthod.* ii).[8] Therefore command is to be found in irrational animals.

On the contrary, Command is an act of reason, as stated above (A. 1). But in irrational

[1] *Suffic.*, I, 10 (19ra).
[2] Nemesius, *De Nat. Hom.*, XVI, (PG 40, 672).
[3] *Ethics*, I, 13 (1102^b26).
[4] Cf. also Part I, Q. LXXXII, A. 4.
[5] Boëthius, *Maior Comm. in De Interp. Arist.*, Bk. III, Prol. (PL 64, 492). Cf. Peter Lombard, *Sent.*, II, d. 25, chap 1. (QR I, 428).
[6] *De An*, I, 5 (4vb).
[7] *Politics*, I, 5 (1254^b4).
[8] Chap. 22 (PG 94, 945).

animals there is no reason. Neither, therefore, is there command.

I answer that, To command is nothing other than to direct someone to do something, by a certain motion of intimation. Now to direct (ordinare) is the proper act of the reason. Therefore it is impossible that irrational animals should command in any way, since they are devoid of reason.

Reply Obj 1. The appetitive power is said to command movement in so far as it moves the commanding reason. But this is only in man. In irrational animals the appetitive power is not, properly speaking, a commanding faculty, unless command be taken in a wide sense for motion.

Reply Obj. 2. The body of the irrational animal is able to obey, but its soul is not able to command, because it is not able to direct. Consequently there is no aspect there of commander and commanded, but only of mover and moved.

Reply Obj. 3. Impulse to action is in irrational animals otherwise than in man. For the impulse of man to action arises from the directing reason, and so his impulse has the character of command. On the other hand, the impulse of the irrational animals arises from natural instinct, because as soon as they apprehend the fitting or the unfitting, their appetite is moved naturally to pursue or to avoid. Therefore they are directed by another to act, and they themselves do not direct themselves to act. Consequently there is impulse in them but not command.

ARTICLE 3. *Whether Use Precedes Command?*

We proceed thus to the Third Article: It would seem that use precedes command.

Objection 1. For command is an act of the reason presupposing an act of the will, as stated above (A. 1). But, as we have already shown (Q. XVI, A. 1), use is an act of the will. Therefore use precedes command.

Obj. 2. Further, command is one of those things that are ordered to the end. But use is of those things that are ordered to the end. Therefore it seems that use precedes command.

Obj. 3. Further, every act of a power moved by the will is called use, because the will uses the other powers, as stated above (Q. XVI, A. 1). But command is an act of the reason as moved by the will, as stated above (A. 1). Therefore command is a kind of use. Now the common precedes the proper. Therefore use precedes command.

On the contrary, Damascene says (*De Fide Orthod.* ii)[1] that impulse to action precedes use. But impulse to operation is given by command. Therefore command precedes use.

I answer that, Use of that which is directed to the end, in so far as it is in the reason referring this to the end, precedes choice, as stated above (Q. XVI, A. 4). Therefore much more does it precede command. On the other hand, use of that which is directed to the end, in so far as it is subject to the executive power, follows command, because use in the user is united to the act of the thing used; for one does not use a stick before doing something with the stick. But command is not simultaneous with the act of the thing to which the command is given, for it naturally precedes its fulfilment, sometimes, indeed, by priority of time Consequently it is evident that command precedes use

Reply Obj 1 Not every act of the will precedes this act of the reason which is command, but an act of the will precedes, namely, choice, and an act of the will follows, namely, use Because after counsel's decision, which is reason's judgment, the will chooses; and after choice, the reason commands that power which has to do what was chosen; and then, last of all, someone's will begins to use, by executing the command of reason. Sometimes it is another's will, when one commands another; sometimes the will of the one that commands, when he commands himself to do something.

Reply Obj. 2. Just as act ranks before power, so does the object rank before the act. Now the object of use is that which is directed to the end. Consequently, from the fact that command is directed to the end, one should conclude that command precedes, rather than that it follows use.

Reply Obj. 3. Just as the act of the will in using the reason for the purpose of command precedes the command, so also we may say that this act whereby the will uses the reason is preceded by a command of reason, because the acts of these powers react on one another.

ARTICLE 4. *Whether Command and the Commanded Act Are One Act, or Distinct?*

We proceed thus to the Fourth Article: It would seem that the commanded act is not one with the command itself.

Objection 1. For the acts of different powers are themselves distinct. But the commanded act belongs to one power, and the command to another, since one is the power that commands,

[1] Chap. 22 (PG 94, 945). Cf. Albert, *Summa de Creatura,* PT. II, Q. 69, A. 2 (BO XXXV, 567).

and the other is the power that receives the command. Therefore the commanded act is not one with the command.

Obj. 2. Further, whatever things can be separated from one another, are distinct, for nothing is separated from itself. But sometimes the commanded act is separated from the command, for sometimes the command is given, and the commanded act does not follow. Therefore command is a distinct act from the act commanded.

Obj. 3. Further, whatever things are related to one another as before and after, are distinct. But command naturally precedes the commanded act. Therefore they are distinct.

On the contrary, The Philosopher says[1] that "where one thing is by reason of another, there is but one." But there is no commanded act unless by reason of the command. Therefore they are one.

I answer that, Nothing prevents certain things being distinct in one respect, and one in another respect. Indeed, every multitude is one in some respect, as Dionysius says (*Div Nom.* XIII).[2] But a difference is to be observed in this, that some are many absolutely, and one in a particular respect, while with others it is the reverse. Now *one* is predicated in the same way as *being* And substance is being absolutely, while accident or being of reason is a being only in a certain respect. And so those things that are one in substance are one absolutely, though many in a certain respect. Thus, in the genus substance, the whole composed of its integral or essential parts, is one absolutely, because the whole is being and substance absolutely, and the parts are beings and substances in the whole. But those things which are distinct in substance, and one according to an accident, are distinct absolutely, and one in a certain respect. Thus many men are one people, and many stones are one heap, which is unity of composition or order. In like manner also many individuals that are one in genus or species are many absolutely, and one in a certain respect, since to be one in genus or species is to be one according to the consideration of the reason.

Now just as in the genus of natural things, a whole is composed of matter and form (for example, man, who is one natural being, though he has many parts, is composed of soul and body), so in human acts, the act of a lower power is in the position of matter in regard to the act of a higher power, in so far as the lower power acts in virtue of the higher power moving it; for thus also the act of the first mover is as the form in regard to the act of its instrument. Hence it is evident that command and the commanded act are one human act, just as a whole is one, yet, in its parts, many.

Reply Obj. 1. If the distinct powers are not ordered to one another, their acts are different absolutely. But when one power is the mover of the other, then their acts are, in a way, one, since "the act of the mover and the act of the thing moved are one act."[3]

Reply Obj 2. The fact that command and the commanded act can be separated from one another shows that they are many in parts. Because the parts of a man can be separated from one another, and yet they form one whole.

Reply Obj. 3. In those things that are many in parts, but one as a whole, nothing hinders one part from preceding another. Thus the soul, in a way, precedes the body, and the heart, the other members.

ARTICLE 5. *Whether the Act of the Will Is Commanded?*

We proceed thus to the Fifth Article: It would seem that the act of the will is not commanded.

Objection 1. For Augustine says,[4] "The mind commands the mind to will, and yet it does not." But to will is the act of the will. Therefore the act of the will is not commanded.

Obj. 2. Further, to receive a command belongs to one who can understand the command. But the will cannot understand the command, for the will differs from the intellect, to which it pertains to understand. Therefore the act of the will is not commanded.

Obj. 3 Further, if one act of the will is commanded, for the same reason all are commanded But if all the acts of the will are commanded, we must proceed to infinity, because the act of the will precedes the act of reason commanding, as stated above (A. 1). For if that act of the will be also commanded, this command will be preceded by another act of the reason, and so on to infinity. But to proceed to infinity is not possible. Therefore the act of the will is not commanded.

On the contrary, Whatever is in our power is subject to our command. But the acts of the will, most of all, are in our power, since all our acts are said to be in our power in so far as they are voluntary. Therefore the acts of the will are commanded by us.

[1] *Topics*, III, 2 (1117^a18). [2] Sect. 2 (PG 3, 977).
[3] Aristotle, *Physics*, III, 3 (202^a18; $^b20$).
[4] *Confessions*, VIII, 21 (PL 32, 758).

I answer that, As stated above (A. 1), command is nothing other than the act of the reason directing, with a certain motion, something to act. Now it is evident that the reason can direct the act of the will, for just as it can judge it to be good to will something so it can direct by commanding man to will. From this it is evident that an act of the will can be commanded.

Reply Obj. 1. As Augustine says,[1] when the mind commands itself perfectly to will, then already it wills. But that sometimes it commands and wills not, is due to the fact that it commands imperfectly. Now imperfect command arises from the fact that the reason is moved by opposite motives to command or not to command; and so it fluctuates between the two, and fails to command perfectly.

Reply Obj. 2. Just as each of the members of the body works not for itself alone but for the whole body, as, for example the eye sees for the whole body, so is it with the powers of the soul. For the intellect understands not for itself alone, but for all the powers, and the will wills not only for itself, but for all the powers too. Therefore man, in so far as he is endowed with intellect and will, commands the act of the will for himself.

Reply Obj. 3. Since command is an act of the reason, that act is commanded which is subject to reason. Now the first act of the will is not due to the direction of the reason but to the instigation of nature, or of a higher cause, as stated above (Q. IX, A. 4). Therefore there is no need to proceed to infinity.

ARTICLE 6. *Whether the Act of the Reason Is Commanded?*

We proceed thus to the Sixth Article: It seems that the act of the reason cannot be commanded.

Objection 1. For it seems impossible for a thing to command itself. But it is the reason that commands, as stated above (A. 1). Therefore the act of the reason is not commanded.

Obj. 2. Further, that which is through its essence is different from that which is by participation. But the power whose act is commanded by reason is rational by participation, as stated in the *Ethics.*[2] Therefore the act of that power which is essentially rational is not commanded

Obj. 3. Further, that act is commanded which is in our power. But to know and judge the truth, which is the act of reason, is not always in our power. Therefore the act of the reason cannot be commanded.

On the contrary, That which we do of our free choice, can be done by our command. But the acts of the reason are accomplished through free choice, for Damascene says (*De Fide Orthod.* ii, 22)[3] that "by his free choice man inquires, considers, judges, disposes." Therefore the acts of the reason can be commanded.

I answer that, Since the reason turns back on itself, just as it directs the acts of other powers, so it can direct its own act. Consequently its act can be commanded. But we must take note that the act of the reason may be considered in two ways. First, as to the exercise of the act. And considered thus, the act of the reason can always be commanded, as when one is told to be attentive, and to use one's reason. Secondly, as to the object, in respect of which two acts of the reason have to be noticed. One is the act by which it apprehends the truth about something. This act is not in our power, because it happens in virtue of a natural or supernatural light. Consequently in this respect, the act of the reason is not in our power and cannot be commanded. The other act of the reason is that by which it assents to what it apprehends If, therefore, that which the reason apprehends is such that it naturally assents to it; for example, the first principles, it is not in our power to assent or dissent; for with such things assent follows naturally, and consequently, properly speaking, is not subject to our command But some things which are apprehended do not convince the intellect to such an extent as not to leave it free to assent or dissent, or at least suspend its assent or dissent, on account of some cause or other. And in such things assent or dissent is in our power, and is subject to our command.

Reply Obj. 1. Reason commands itself, just as the will moves itself, as stated above (Q. IX, A. 3), that is to say, in so far as each power turns back upon its own act, and from one thing tends to another.

Reply Obj. 2. On account of the difference of objects subject to the act of the reason, nothing prevents the reason from participating in itself, just as the knowledge of principles is participated in the knowledge of the conclusions.

The *reply to the third objection* is evident from what has been said.

ARTICLE 7. *Whether the Act of the Sensitive Appetite Is Commanded?*

We proceed thus to the Seventh Article: It seems that the act of the sensitive appetite is not commanded.

[1] *Confessions,* VIII, 21 (PL 32, 758).
[2] Aristotle, I, 13 (1102^{b}13; ^{b}26).
[3] PG 94, 945.

Objection 1. For the Apostle says (*Rom.* 7. 5): *For I do not that good which I will,* and a loss explains this by saying[1] that man lusts, although he wills not to lust. But to lust is an act f the sensitive appetite. Therefore the act of he sensitive appetite is not subject to our comnand.

Obj. 2. Further, corporeal matter obeys God lone as to change of form, as was shown in the 'irst Part (Q. LXV, A. 4; Q. XCI, A. 2; Q. CX, A.). But the act of the sensitive appetite is accompanied by a formal change of the body, consisting in heat or cold. Therefore the act of the ensitive appetite is not subject to man's comnand.

Obj. 3. Further, the proper moving principle f the sensitive appetite is something appreiended by sense or imagination. But it is not lways in our power to apprehend something by ense or imagination. Therefore the act of the ensitive appetite is not subject to our comnand.

On the contrary, Gregory of Nyssa (Nemeius,—*De Nat Hom.* xvi)[2] says. "That which ibeys reason is twofold, the concupiscible and he irascible," which belong to the sensitive apetite. Therefore the act of the sensitive appeite is subject to the command of reason.

I answer that, An act is subject to our comnand in so far as it is in our power, as stated bove (A 5) Consequently in order to undertand in what manner the act of the sensitive ppetite is subject to the command of reason, ve must consider in what manner it is in our ower. Now it must be observed that the sensiive appetite differs from the intellectual appeite, which is called the will, in the fact that the ensitive appetite is the power of a corporeal rgan, while the will is not. Again, every act of power that uses a corporeal organ depends not nly on a power of the soul, but also on the disosition of that corporeal organ, thus the act of ision depends on the power of sight, and on he condition of the eye, which is a help or a indrance to that act. Consequently the act of he sensitive appetite depends not only on the ppetitive power, but also on the disposition of he body.

But the activity of any power of the soul follows apprehension. And the apprehension of the magination, since it is a particular apprehenion, is regulated by the apprehension of reaon, which is universal; just as a particular active power is regulated by a universal active power. Consequently in this respect the act of the sensitive appetite is subject to the command of reason. On the other hand, condition (*qualitas*) and disposition of the body is not subject to the command of reason. And consequently in this respect, the movement of the sensitive appetite is hindered from being wholly subject to the command of reason.

Moreover it happens sometimes that the movement of the sensitive appetite is aroused suddenly in consequence of an apprehension of the imagination or sense. And then such movement occurs without the command of reason, although reason could have prevented it, had it foreseen. Hence the Philosopher says[3] that "the reason governs the irascible and concupiscible not by a despotic supremacy," which is that of a master over his slave, "but by a politic or royal supremacy," which is the way the free are governed, who are not wholly subject to command.

Reply Obj. 1. That man lusts, although he wills not to lust, is due to a disposition of the body by which the sensitive appetite is hindered from perfect compliance with the command of reason. Hence the Apostle adds (*ibid.*): *I see another law in my members, fighting against the law of my mind.* This may also happen through a sudden movement of concupiscence, as stated above.

Reply Obj. 2. The condition (*qualitas*) of the body stands in a twofold relation to the act of the sensitive appetite First, as preceding it; thus a man may be disposed in one way or another, in respect of his body, to this or that passion. Secondly, as consequent to it; thus a man becomes heated through anger. Now the condition that precedes, is not subject to the command of reason, since it is due either to nature, or to some previous movement, which cannot quiet down at once. But the condition that is consequent, follows the command of reason, since it results from the local movement of the heart, which has various movements according to the various acts of the sensitive appetite.

Reply Obj. 3. Since the external sensible is necessary for the apprehension of the senses, it is not in our power to apprehend anything by the senses, unless the sensible be present; and this presence of the sensible is not always in our power. For it is then that man can use his senses if he will to do so, unless there be some obstacle on the part of the organ. On the other hand, the apprehension of the imagination is

[1] *Glossa ordin.*, Rom. 7.15 (VI, 17B). Augustine, *Contra ulian.*, III, 26 (PL 44, 734).

[2] PG 40, 672.

[3] *Politics*, I, 5 (1254^b5).

subject to the ordering of reason, in proportion to the strength or weakness of the imaginative power. For that man is unable to imagine the things that reason considers, is either because they cannot be imagined, such as incorporeal things, or because of the weakness of the imaginative power, due to some organic indisposition.

ARTICLE 8. *Whether the Act of the Vegetal Soul Is Commanded?*

We proceed thus to the Eighth Article: It seems that the acts of the vegetal soul are subject to the command of reason

Objection 1. For the sensitive powers are of higher rank than the vegetal powers. But the powers of the sensitive soul are subject to the command of reason. Much more, therefore, are the powers of the vegetal soul

Obj. 2. Further, "man is called a little world,"[1] because "the soul is in the body, just as God is in the world "[2] But God is in the world in such a way that everything in the world obeys His command Therefore all that is in man, even the powers of the vegetal soul, obey the command of reason.

Obj. 3 Further, praise and blame are awarded only to such acts as are subject to the command of reason. But in the acts of the nutritive and generative power, there is room for praise and blame, virtue and vice, as in the case of gluttony and lust, and their opposite virtues. Therefore the acts of these powers are subject to the command of reason

On the contrary, Gregory of Nyssa says[3] that "the nutritive and generative power is one over which the reason has no control."

I answer that, Some acts proceed from the natural appetite, others from the animal, or from the intellectual appetite, for every agent desires an end in some way. Now the natural appetite does not follow from some apprehension, as do the animal and the intellectual appetite. But the reason commands by way of an apprehensive power. And so those acts that proceed from the intellective or the animal appetite can be commanded by the reason, but not those acts that proceed from the natural appetite. And such are the acts of the vegetal soul; hence Gregory of Nyssa (Nemesius,—*loc. cit.*) says that "generation and nutrition belong to what are called natural powers." Consequently the acts of the vegetal soul are not subject to the command of reason.

Reply Obj 1. The more immaterial an act is, the more noble it is, and the more is it subject to the command of reason. Hence the very fact that the acts of the vegetal soul do not obey reason shows that they rank lowest.

Reply Obj. 2. The comparison holds in a certain respect, because, namely, as God moves the world, so the soul moves the body. But it does not hold in every respect, for the soul did not create the body out of nothing, as God created the world, for which reason the world is wholly subject to His command.

Reply Obj 3. Virtue and vice, praise and blame are not due to the acts themselves of the nutritive and generative power, that is, digestion, and formation of the human body, but rather to the acts of the sensitive part that are ordered to the acts of generation and nutrition; for example the desire for pleasure in the act of taking food or in the act of generation, and their right or wrong use.

ARTICLE 9. *Whether the Acts of the External Members Are Commanded?*

We proceed thus to the Ninth Article: It seems that the members of the body do not obey reason as to their acts.

Objection 1 For it is evident that the members of the body are more distant from the reason than the powers of the vegetal soul. But the powers of the vegetal soul do not obey reason, as stated above (A. 8). Therefore much less do the members of the body obey.

Obj. 2 Further, the heart is the principle of animal movement But the movement of the heart is not subject to the command of reason, for Gregory of Nyssa (Nemesius,—*De Nat. Hom.* xxii)[4] says that "the pulse is not controlled by reason " Therefore the movement of the bodily members is not subject to the command of reason

Obj 3. Further, Augustine says[5] that the movement of the genital members "is sometimes inopportune and not desired; sometimes when sought it fails, and whereas the heart is warm with desire, the body remains cold." Therefore the movements of the members are not obedient to reason.

On the contrary, Augustine says,[6] "The mind commands a movement of the hand, and so

[1] Aristotle, *Physics*, VIII, 2 (252^b26).

[2] This interpretation is given on the supposed authority of Augustine (Alcher of Clairvaux), *De Spir. et An.*, 35 (PL 40, 805). Cf. Albert the Great, *Summa de Creat.*, II, 3, A. 1 (BO XXXV, 28); also Bonaventure, *In Sent*, III, d. II, A. 1, Q. 2 (QR III, 40).

[3] Nemesius, *De Nat. Hom.*, XXII (PG 40, 692).

[4] PG 40, 693.

[5] *City of God*, XIV, 16 (PL 41, 425).

[6] *Confessions*, VIII, 21 (PL 32, 758).

ready is the hand to obey, that scarcely can one discern obedience from command."

I answer that, The members of the body are organs of the soul's powers. Consequently according as the powers of the soul stand in respect of obedience to reason, so do the members of the body stand in respect of obedience to reason. Since then the sensitive powers are subject to the command of reason, while the natural powers are not, therefore all movements of members that are moved by the sensitive powers are subject to the command of reason, but those movements of members that arise from the natural powers are not subject to the command of reason.

Reply Obj. 1. The members do not move themselves but are moved through the powers of the soul; of these powers, some are closer to reason than are the powers of the vegetal soul.

Reply Obj. 2. In things pertaining to intellect and will that which is according to nature, from which all other things are derived, stands first. Thus from the knowledge of principles that are naturally known is derived knowledge of the conclusions, and from volition of the end naturally desired is derived the choice of the means. So also in bodily movements the principle is according to nature. Now the principle of bodily movements begins with the movement of the heart. Consequently the movement of the heart is according to nature, and not according to the will, for like a proper accident, it results from life, which follows from the union of soul and body. Thus the movement of heavy and light things results from their substantial form, for which reason they are said to be moved by their generator, as the Philosopher states.[1] And so this movement is called vital. For which reason Gregory of Nyssa (Nemesius,—*loc. cit.*) says that, just as the movement of generation and nutrition does not obey reason, so neither does the pulse which is a vital movement. By the pulse he means the movement of the heart which is indicated by the pulse veins.

Reply Obj. 3. As Augustine says[2] it is in punishment of sin that the movement of these members does not obey reason, in this sense, that the soul is punished for its rebellion against God by the insubmission of that member by which original sin is transmitted to posterity.

But because, as we shall state later on (Q. LXXXV, A. 1. Reply 3), the effect of the sin of our first parent was that his nature was left to itself, through the withdrawal of the supernatural gift which God had bestowed on man, we must consider the natural cause of this particular member's non-submission to reason. This is stated by Aristotle,[3] who says that "the movements of the heart and of the organs of generation are involuntary," and that the reason of this is as follows. These members are stirred at the occasion of some apprehension, in so far as the intellect and imagination represent such things as arouse the passions of the soul, of which passions these movements are a consequence. But they are not moved at the command of the reason or intellect, because there is required for these movements a certain natural change of heat and cold, which change is not subject to the command of reason. This is the case with these two organs in particular, because each is as it were a separate animal being, in so far as it is a principle of life; and the principle is virtually the whole. For the heart is the principle of the senses, and from the organ of generation proceeds the seminal principle, which is virtually the entire animal. Consequently they have their proper movements naturally, because principles must be natural, as stated above (Ans. 2).

(d) *The Division of Human Acts*

QUESTION XVIII

OF THE GOOD AND EVIL OF HUMAN ACTS, IN GENERAL

(In Eleven Articles)

WE must now consider the good and evil of human acts. First, how a human act is good or evil; secondly, what results from the good or evil of a human act, as merit or demerit, sin and guilt (Q. XXI).

Under the first head there will be a threefold consideration. The first will be of the good and evil of human acts, in general; the second, of the good and evil of internal acts (Q. XIX); the third, of the good and evil of external acts (Q. XX).

Concerning the first there are eleven points of inquiry: (1) Whether every human action is good, or are there evil actions? (2) Whether the good or evil of a human action is derived from its object? (3) Whether it is derived from

[1] *Physics*, VIII, 4 (255^b35).

[2] *City of God*, XIV, 17, 20 (PL 41, 425, 428).

[3] *Motion of Animals*, 11 (703^b5).

a circumstance? (4) Whether it is derived from the end? (5) Whether a human action is good or evil in its species? (6) Whether an act has the species of good or evil from its end? (7) Whether the species derived from the end is contained under the species derived from the object, as under its genus, or conversely? (8) Whether any act is indifferent in its species? (9) Whether an individual act can be indifferent? (10) Whether a circumstance places a moral act in the species of good or evil? (11) Whether every circumstance that makes an act better or worse, places the moral action in the species of good or evil?

Article 1. *Whether Every Human Action Is Good, or Are There Evil Actions?*

We proceed thus to the First Article: It seems that every human action is good, and that none is evil.

Objection 1. For Dionysius says (*Div. Nom.* iv)[1] that evil does not act, except through the power of the good. But no evil is done through the power of the good. Therefore no action is evil.

Obj. 2. Further, nothing acts except in so far as it is in act. Now a thing is evil not according as it is in act, but according as its potency is deprived of act, while in so far as its potency is perfected by act, it is good, as stated in the *Metaphysics*[2] Therefore nothing acts in so far as it is evil, but only according as it is good Therefore every action is good, and none is evil.

Obj. 3. Further, evil cannot be a cause, except accidentally, as Dionysius declares (*Div. Nom.* iv).[3] But every action has some effect which is proper to it. Therefore no action is evil, but every action is good.

On the contrary, Our Lord said (John 3. 20): *Every one that doth evil, hateth the light.* Therefore some actions of man are evil.

I answer that, We must say of good and evil in actions just what we say of good and evil in things, because such as everything is such is the act that it produces. Now in things, each one has as much of good as it has of being, since good and being are convertible, as was stated in the First Part (Q. V, AA. 1, 3). But God alone has the whole fulness of His Being in a unified and simple way, while every other thing has its proper fulness of being according to a certain multiplicity. And so it happens with some things that they have being in some respect and yet they are lacking in the fulness of being due to them. Thus the fulness of human being requires a composite of soul and body, having all the powers and instruments of knowledge and movement. Therefore if any man is lacking in any of these, he is lacking in something due to the fulness of his being. So that as much as he has of being, so much has he of goodness, while so far as he is lacking in the fulness of his being, so far is he lacking in goodness, and is said to be evil. Thus a blind man is possessed of goodness from the fact that he lives, and yet it is an evil for him to be without sight But if anything were without either being or goodness, it could not be said to be either evil or good. But since this same fulness of being is of the very nature of good, if a thing be lacking in its due fulness of being, it is not said to be good absolutely, but in a certain respect, in so far as it is a being, although it can be called a being absolutely, and a non-being in a certain respect, as was stated in the First Part (Q V, A. 1. Reply 1).

We must therefore say that every action has goodness in so far as it has being, but it is lacking in goodness in so far as it is lacking in something of the fulness of being due to a human action, and thus it is said to be evil; for instance if it lacks the quantity determined by reason, or its due place, or something of the kind.

Reply Obj. 1. Evil acts through the power of a deficient good. For if there were nothing of good there, there would be neither being nor possibility of action. On the other hand if good were not deficient, there would be no evil. Consequently the action done is a deficient good, which is good in a certain respect, but evil absolutely.

Reply Obj. 2. Nothing hinders a thing from being in act in a certain respect, so that it can act, and in a certain respect deficient in act, so as to cause a deficient act. Thus a blind man has in act the power of walking by which, he is able to walk; but in so far as he is deprived of sight he suffers a defect in walking by stumbling when he walks.

Reply Obj. 3. An evil action can have a proper effect, according to the goodness and being that it has. Thus adultery is the cause of human generation, in so far as it implies union of male and female, but not in so far as it lacks the order of reason.

Article 2. *Whether the Good or Evil of a Man's Action Is Derived from Its Object?*

We proceed thus to the Second Article: It seems that the good or evil of an action is not derived from its object.

[1] Sect. 20 (PG 3, 717). [2] Aristotle, IX, 9 (1051[a]4; [a]29).
[3] Sect. 20, 32 (PG 3, 717, 732).

Objection 1. For the object of an action is a thing. But evil is not in things, but in the sinner's use of them, as Augustine says.[1] Therefore the good or evil of a human action is not derived from its object.

Obj. 2. Further, the object is compared to the action as its matter. But the goodness of a thing is not from its matter, but rather from the form, which is an act. Therefore good and evil in actions is not derived from their object.

Obj. 3. Further, the object of an active power is compared to the action as effect to cause. But the goodness of a cause does not depend on its effect, but rather the contrary. Therefore good or evil in actions is not derived from their object.

On the contrary, It is written (Osee 9. 10): *They became abominable as those things which they loved.* Now man becomes abominable to God on account of the malice of his action. Therefore the malice of his action is according to the evil objects that man loves. And the same applies to the goodness of his action.

I answer that, as stated above (A. 1) the good or evil of an action, as of other things, depends on its fulness of being or its lack of that fulness. Now the first thing that pertains to the fulness of being seems to be that which gives a thing its species And just as a natural thing has its species from its form, so an action has its species from its object, as also movement from its term. And therefore just as the primary goodness of a natural thing is derived from its form, which gives it its species, so the primary goodness of a moral action is derived from its suitable object. Hence some call such an action "good in its genus";[2] for instance, to make use of what is one's own. And just as, in natural things, the primary evil is when a generated thing does not realize its specific form (for instance, if instead of a man, something else be generated), so the primary evil in moral actions is that which is from the object, for instance, to take what belongs to another. And this action is said to be evil in its genus, genus here standing for species, just as we apply the term mankind to the whole human species.

Reply Obj. 1. Although external things are good in themselves, nevertheless they have not always a due proportion to this or that action. And so, in so far as they are considered as objects of such actions, they have not the nature of goodness.

Reply Obj. 2. The object is not the matter out of which, but the matter about which, and in a certain way has the character of form, in so far as it gives (the act) its species.

Reply Obj. 3. The object of the human action is not always the object of an active power. For the appetitive power is, in a way, passive, in so far as it is moved by the appetible object; and yet it is a principle of human actions. Nor again have the objects of the active powers always the nature of an effect, but only when they are already transformed; thus food when transformed is the effect of the nutritive power, but food before being transformed stands in relation to the nutritive power as the matter about which it exercises its operation. Now since the object is in some way the effect of the active power, it follows that it is the term of its action, and consequently that it gives it its form and species, since movement derives its species from its terms. Moreover, although the goodness of an action is not caused by the goodness of its effect, yet an action is said to be good from the fact that it can produce a good effect. Consequently the very proportion of an action to its effect is the measure of its goodness.

ARTICLE 3. *Whether Man's Action Is Good or Evil from a Circumstance?*

We proceed thus to the Third Article: It seems that an action is not good or evil from a circumstance.

Objection 1. For circumstances stand around (*circumstant*) an act, as existing outside it, as stated above (Q. VII, A. 1). But "good and evil are in things themselves," as is stated in the *Metaphysics*.[3] Therefore an action does not derive goodness or malice from a circumstance.

Obj. 2. Further, the goodness or malice of an act is considered principally in the doctrine of morals. But since circumstances are accidents of acts, it seems that they are outside the scope of art, because "no art takes notice of what is accidental."[4] Therefore the goodness or malice of an action is not taken from a circumstance.

Obj. 3. Further, that which belongs to a thing in respect of its substance, is not attributed to it in respect of an accident. But good and evil belong to an action in respect of its substance, because an action can be good or evil in its genus as stated above (A. 2). Therefore an action is not good or bad from a circumstance.

On the contrary, the Philosopher says[5] that "a virtuous man acts as he should, and when he

[1] *Christian Doctrine,* III, 12 (PL 34, 73).
[2] Peter Lombard; cf. *Sent.,* II, d. 36, chap. 6 (QR I, 504)
[3] Aristotle, VI, 4 (1027^b25).
[4] Aristotle, *Metaphysics,* VI, 2 (1026^b4).
[5] *Ethics,* II, 3 (1104^b26).

should, and so on in respect of the other circumstances." Therefore, on the other hand, the vicious man, in the matter of each vice, acts when he should not, or where he should not, and so on with the other circumstances. Therefore human actions are good or evil according to circumstances.

I answer that, In natural things, it is to be noted that the whole fulness of perfection due to a thing is not from the substantial form that gives it its species, for a thing derives much from supervening accidents, as man does from shape, colour, and the like. And if any one of these accidents be out of due proportion, evil is the result. So is it with action. For the fulness of its goodness does not consist wholly in its species, but also in certain additions which accrue to it by reason of certain accidents And its due circumstances are of this character. Therefore if something be wanting that is requisite as a due circumstance the action will be evil.

Reply Obj. 1. Circumstances are outside an action in so far as they are not part of its essence; but they are in an action as its accidents. Thus, too, accidents in natural substances are outside the essence.

Reply Obj. 2. Every accident is not accidentally in its subject, for some are proper accidents, and of these every art takes notice. And thus it is that the circumstances of actions are considered in the doctrine of morals.

Reply Obj 3 Since good and being are convertible, according as being is predicated of substance and of accident, so is good predicated of a thing both in respect of its essential being, and in respect of its accidental being; and this, both in natural things and in moral actions.

ARTICLE 4. *Whether a Human Action Is Good or Evil from Its End?*

We proceed thus to the Fourth Article: It would seem that the good and evil in human actions are not from the end.

Objection 1. For Dionysius says (*Div. Nom.* iv)[1] that "nothing acts with a view to evil." If therefore an action were good or evil from its end, no action would be evil. Which is clearly false.

Obj. 2. Further, the goodness of an action is something in the action. But the end is an extrinsic cause. Therefore an action is not said to be good or bad according to its end.

Obj. 3. Further, a good action may happen to be ordered to an evil end, as when a man gives an alms from vainglory; and conversely, an evil action may happen to be ordered to a good end, as a theft committed in order to give something to the poor. Therefore an action is not good or evil from its end.

On the contrary, Boëthius says (*De Differ. Topic.* ii)[2] that "if the end is good, the thing is good"; and if the end be evil, the thing also is evil.

I answer that, The disposition of things as to goodness is the same as their disposition as to being. Now in some things the being does not depend on another, and in these it suffices to consider their being absolutely. But there are things the being of which depends on something else, and hence in their regard we must consider their being in its relation to the cause on which it depends. Now just as the being of a thing depends on the agent and the form, so the goodness of a thing depends on its end Hence in the Divine Persons, Whose goodness does not depend on another, the measure of goodness is not taken from the end. But human actions, and other things, the goodness of which depends on something else, have a measure of goodness from the end on which they depend, besides that goodness which is in them absolutely.

Accordingly a fourfold goodness may be considered in a human action. First, that which, as an action, it derives from its genus; because as much as it has of action and being so much has it of goodness, as stated above (A. 1). Secondly, it has goodness according to its species, which is derived from its suitable object Thirdly, it has goodness from its circumstances, in respect, as it were, of its accidents. Fourthly, it has goodness from its end, to which it is related as to the cause of its goodness

Reply Obj 1. The good in view of which one acts is not always a true good, but sometimes it is a true good, sometimes an apparent good And in the latter event, an evil action results from the end in view.

Reply Obj. 2. Although the end is an extrinsic cause, nevertheless due proportion to the end, and relation to the end, are inherent to the action.

Reply Obj. 3. Nothing hinders an action that is good in one of the ways mentioned above from lacking goodness in another way. And thus it may happen that an action which is good in its species or in its circumstances, is ordered to an evil end, or vice versa. However, an action is not good absolutely, unless it is good in all those ways, since "evil results from any single defect, but good from the complete cause," as Dionysius says (*Div. Nom.* iv).[3]

[1] Sects. 19, 31 (PG 3, 716, 732).

[2] PL 64, 1189.

[3] Sect. 30 (PG 3, 729).

ARTICLE 5. *Whether a Human Action Is Good or Evil in Its Species?*

We proceed thus to the Fifth Article: It would seem that good and evil in moral acts do not make a difference of species.

Objection 1. For the existence of good and evil in actions is in conformity with their existence in things, as stated above (A. 1). But good and evil do not make a specific difference in things; for a good man is specifically the same as a bad man. Therefore neither do they make a specific difference in actions.

Obj. 2. Further, since evil is a privation, it is a non-being. But non-being cannot be a difference, according to the Philosopher.[1] Since therefore the difference constitutes the species, it seems that an action is not constituted in a species through being evil. Consequently good and evil do not diversify the species of human actions.

Obj. 3. Further, acts that differ in species produce different effects. But the same specific effect results from a good and from an evil action; thus a man is born of adulterous or of lawful wedlock. Therefore good and evil actions do not differ in species.

Obj. 4. Further, actions are sometimes said to be good or bad from a circumstance, as stated above (A 3). But since a circumstance is an accident, it does not give an action its species. Therefore human actions do not differ in species on account of their goodness or malice.

On the contrary, According to the Philosopher,[2] "like habits produce like actions." But a good and a bad habit differ in species, as liberality and prodigality. Therefore also good and bad actions differ in species.

I answer that, Every action derives its species from its object, as stated above (A. 2). Hence it follows that a difference of object causes a difference of species in actions. Now, it must be observed that a difference of objects causes a difference in actions according as the latter are referred to one active principle, and does not cause a difference in actions according as they are referred to another active principle. Because nothing accidental constitutes a species, but only that which is essential, and a difference of object may be essential in reference to one active principle, and accidental in reference to another. Thus to know colour and to know sound differ essentially in reference to sense, but not in reference to the intellect.

Now in human actions, good and evil are predicated in reference to the reason, because as Dionysius says (*Div. Nom.* iv),[3] the good of man is to be in accordance with reason, and "evil is to be against reason." For that is good for a thing which suits it in regard to its form; and evil, that which is against the order of its form. It is therefore evident that the difference of good and evil considered in reference to the object has a direct relation to reason; that is to say, according as the object is suitable or unsuitable to reason. Now certain actions are called human or moral according as they proceed from the reason. And so it is evident that good and evil diversify the species in moral actions, since essential differences cause a difference of species.

Reply Obj. 1. Even in natural things, good and evil (in so far as something is according to nature, and something against nature), diversify the natural species; for a dead body and a living body are not of the same species. In like manner, good, in so far as it is in accord with reason, and evil, in so far as it is against reason, diversify the moral species.

Reply Obj. 2. Evil implies not absolute privation, but privation affecting some potentiality. For an action is said to be evil in its species not because it has no object at all, but because it has an object in disaccord with reason; for instance, to appropriate another's property. Therefore in so far as the object is something positive, it can constitute the species of an evil act.

Reply Obj. 3. The conjugal act and adultery, as related to reason, differ specifically and have effects specifically different, because the one deserves praise and reward, and the other blame and punishment. But as related to the generative power, they do not differ in species. And thus they have one specific effect.

Reply Obj. 4 A circumstance is sometimes taken as the essential difference of the object, according as it is related to reason; and then it can specify a moral act. And this must be so whenever a circumstance changes an action from good to evil; for a circumstance would not make an action evil except through being contrary to reason.

ARTICLE 6. *Whether an Action Has the Species of Good or Evil from Its End?*

We proceed thus to the Sixth Article: It would seem that the good and evil which are from the end do not diversify the species of actions.

[1] *Metaphysics*, III, 3 (988^b22). [2] *Ethics*, II, 1 (1103^b21).

[3] Sect. 32 (PG 3, 732).

Objection 1. For actions derive their species from the object. But the end is outside the notion of the object. Therefore the good and evil which are from the end do not diversify the species of an action.

Obj. 2. Further, that which is accidental does not constitute the species, as stated above (A. 5). But it is accidental to an action to be ordered to some particular end; for instance, to give alms from vainglory. Therefore actions are not diversified as to species according to the good and evil which are from the end.

Obj. 3. Further, acts that differ in species, can be ordered to the same end; thus actions of various virtues and vices can be ordered to the end of vainglory. Therefore the good and evil which are taken from the end do not diversify the species of action.

On the contrary, It has been shown above (Q. 1, A. 3) that human actions derive their species from the end. Therefore good and evil which are taken from the end diversify the species of actions.

I answer that, Certain acts are called human in so far as they are voluntary, as stated above (Q 1, A. 1). Now, in a voluntary act, there is a twofold act, namely, the interior act of the will, and the external act, and each of these acts has its object. The end is properly the object of the interior act of the will, while the object of the external action is that on which the action is brought to bear. Therefore just as the external act takes its species from the object on which it bears, so the interior act of the will takes its species from the end, as from its proper object.

Now that which is on the part of the will is formal in relation to that which is on the part of the external action, because the will uses the limbs to act, as instruments; nor have external actions any measure of morality, except in so far as they are voluntary. Consequently the species of a human act is considered formally with regard to the end, but materially with regard to the object of the external act. Hence the Philosopher says[1] that "he who steals that he may commit adultery, is, strictly speaking, more adulterer than thief."

Reply Obj. 1. The end also has the character of an object, as stated above.[2]

Reply Obj. 2. Although it is accidental to the external action to be ordered to some particular end, it is not accidental to the interior act of the will, which act is related to the external act, as form to matter.

Reply Obj. 3. When many actions, differing in species, are ordered to the same end, there is indeed a diversity of species on the part of the external actions, but unity of species on the part of the internal action.

ARTICLE 7. *Whether the Species Derived from the End Is Contained Under the Species Derived from the Object, as Under Its Genus, or Conversely?*

We proceed thus to the Seventh Article: It seems that the species of goodness derived from the end is contained under the species of goodness derived from the object, as a species is contained under its genus, as for instance, when a man commits a theft in order to give an alms.

Objection 1. For an action takes its species from its object, as stated above (A. 6). But it is impossible for a thing to be contained under another species if this species be not contained under the proper species of that thing, because the same thing cannot be contained in different species that are not subalterns. Therefore the species which is taken from the end is contained under the species which is taken from the object.

Obj. 2. Further, the last difference always constitutes the last species. But the difference derived from the end seems to come after the difference derived from the object, because the end is something last. Therefore the species derived from the end is contained under the species derived from the object, as the last species

Obj. 3. Further, the more formal a difference is, the more particular (*specialis*) it is because difference is related to genus, as form to matter. But the species derived from the end, is more formal than that which is derived from the object, as stated above (A. 6). Therefore the species derived from the end is contained under the species derived from the object, as the most particular species is contained under the subaltern genus.

On the contrary, Each genus has its determinate differences. But an action of one same species on the part of its object can be ordered to an infinite number of ends; for instance, theft can be ordered to an infinite number of good and bad ends. Therefore the species derived from the end is not contained under the species derived from the object, as under its genus.

I answer that, The object of the external act can stand in a twofold relation to the end of the will. First, as being of itself ordered to it; thus to fight well is of itself ordered to victory. Secondly, as being ordered to it accidentally; thus to take what belongs to another is ordered acci-

[1] *Ethics,* V, 2 (1130[a]24).
[2] Ans; cf. also Q. 1, AA. 1, 3.

dentally to the giving of alms. Now the differences that divide a genus and constitute the species of that genus, must, as the Philosopher says,[1] divide that genus essentially; and if they belong to it accidentally, the division is incorrect, as for example if one were to say: "Animals are divided into rational and irrational; and the irrational into animals with wings, and animals without wings"; for "winged" and "wingless" are not essential determinations of irrational being. But the following division would be correct: "Some animals have feet, some have no feet; and of those that have feet, some have two feet, some four, some many," because these are an essential determination of the prior difference. Accordingly when the object is not essentially ordered to the end, the specific difference derived from the object is not an essential determination of the species derived from the end, nor conversely. Therefore one of these species is not under the other. But then the moral action is contained under two species that are disparate, as it were. Consequently we say that he that commits theft for the sake of adultery, is guilty of a twofold malice in one action On the other hand, if the object is essentially ordered to the end, one of these differences is an essential determination of the other Therefore one of these species will be contained under the other.

It remains to be considered which of the two is contained under the other. In order to make this clear, we must first of all observe that the more particular the form is from which a difference is taken, the more specific is the difference. Secondly, that the more universal an agent is, the more universal a form does it cause. Thirdly, that the more remote an end is, the more universal the agent to which it corresponds; thus victory, which is the last end of the army, is the end intended by the commander in chief, while the right ordering of this or that regiment is the end intended by one of the lower officers. From all this it follows that the specific difference derived from the end, is more general, and that the difference derived from an object which is essentially ordered to that end is a specific difference in relation to the former. For the will, whose proper object is the end, is the universal mover in respect of all the powers of the soul, whose proper objects are the objects of their particular acts.

Reply Obj. 1. One and the same thing, considered in its substance, cannot be in two species, one of which is not subordinate to the other. But in respect of those things which are superadded to the substance, one thing can be contained under different species. Thus one and the same fruit, as to its colour, is contained under one species, namely, white; and, as to its odor, under the species of sweet-smelling things. In like manner an action which, as to its substance, is in one natural species, considered in respect to the moral conditions that are added to it can belong to two species, as stated above (Q. 1, A. 3. Reply 3).

Reply Obj. 2. The end is last in execution, but first in the intention of the reason, according to which moral actions receive their species.

Reply Obj. 3. Difference is compared to genus as form to matter, in so far as it actualizes the genus. On the other hand, the genus is considered as more formal than the species, according as it is something more absolute and less contracted. Hence also the parts of a definition are reduced to the genus of formal cause, as is stated in the *Physics*.[2] And in this sense the genus is the formal cause of the species, and so much the more formal as it is more universal.

Article 8. *Whether Any Action Is Indifferent in Its Species?*

We proceed thus to the Eighth Article: It would seem that no action is indifferent in its species.

Objection 1. For evil is the privation of good, according to Augustine (*Enchirid.* xi).[3] But privation and habit are immediate contraries, according to the Philosopher.[4] Therefore there is no such thing as an action that is indifferent in its species, as though it were between good and evil.

Obj. 2. Further, human actions derive their species from their end or object, as stated above (A. 6; Q. 1, A. 3). But every end and every object is either good or bad. Therefore every human action is good or evil according to its species. None, therefore, is indifferent in its species.

Obj. 3. Further, as stated above (A 1), an action is said to be good when it has its due perfection of goodness; and evil, when it lacks that perfection. But every action must either have the entire fulness of its goodness, or lack it in some respect. Therefore every action must needs be either good or bad in its species, and none is indifferent.

On the contrary, Augustine says (*De Serm. Dom. in Mont.* ii, 18),[5] that there are certain

[1] *Metaphysics*, VII, 12 ($1038^{a}9$).

[2] Aristotle, II, 3 ($194^{b}26$).

[3] PL 40, 236.

[4] *Categories*, 10 ($12^{b}26$).

[5] PL 34, 1296.

deeds of a middle kind, "which can be done with a good or evil mind," of which it is rash to form a judgment. Therefore some actions are indifferent according to their species.

I answer that, As stated above (AA. 2, 5), every action takes its species from its object, and human action, which is called moral, takes its species from the object, in relation to the principle of human actions, which is the reason. Therefore if the object of an action includes something in accord with the order of reason, it will be a good action according to its species; for instance, to give alms to a person in want. On the other hand, if it includes something contrary to the order of reason, it will be an evil act according to its species; for instance, to steal, which is to take what belongs to another. But it may happen that the object of an action does not include something pertaining to the order of reason; for instance, to pick up a straw from the ground, to walk in the fields, and the like, and such actions are indifferent according to their species.

Reply Obj. 1. Privation is twofold. One is total privation of being (*privatum esse*), and this leaves nothing, but takes all away Thus blindness takes away sight altogether, darkness, light, and death, life. Between this privation and the contrary habit, there can be no medium in respect of the proper subject The other is privation in process (*privari*); thus sickness is privation of health, not that it takes health away altogether, but that it is a kind of road to the entire loss of health, occasioned by death. And since this sort of privation leaves something, it is not always the immediate contrary of the opposite habit. In this way evil is a privation of good, as Simplicius says in his commentary on the *Categories,*[1] because it does not take away all good, but leaves some. Consequently there can be something between good and evil.

Reply Obj. 2. Every object or end has some goodness or malice, at least natural; but this does not imply moral goodness or malice, which is considered in relation to the reason, as stated above, and which is what we are now concerned with.

Reply Obj. 3. Not everything belonging to an action belongs also to its species. And so although an action's specific nature may not contain all that belongs to the full complement of its goodness, it is not therefore an action specifically bad, nor is it specifically good. Thus a man in regard to his species is neither virtuous nor wicked.

[1] *In Cat.*, X (CG VIII, 388.7).

ARTICLE 9. *Whether an Individual Action Can Be Indifferent?*

We proceed thus to the Ninth Article: It seems that an individual action can be indifferent.

Objection 1. For there is no species that does not, or cannot, contain an individual. But an action can be indifferent in its species, as stated above (A. 8). Therefore an individual action can be indifferent.

Obj. 2. Further, "individual actions cause like habits," as stated in *Ethics.*[2] But a habit can be indifferent. For the Philosopher says[3] that those who are of an even temper and prodigal disposition are not evil; and yet it is evident that they are not good, since they depart from virtue; and thus they are indifferent in respect of a habit Therefore some individual actions are indifferent.

Obj. 3. Further, moral good pertains to virtue, while moral evil pertains to vice. But it happens sometimes that a man fails to order a specifically indifferent action to a vicious or virtuous end. Therefore an individual action may happen to be indifferent.

On the contrary, Gregory says in a homily (vi *in Evang.*).[4] "An idle word is one that lacks either the usefulness of rectitude or the motive of just necessity or pious utility." But an idle word is an evil, because *men . . . shall render an account of it in the day of judgment* (Matt. 12. 36), while if it does not lack the motive of just necessity or pious utility, it is good. Therefore every word is either good or bad. For the same reason every other action is either good or bad. Therefore no individual action is indifferent.

I answer that, It sometimes happens that an action is indifferent in its species, but considered in the individual it is good or evil. And the reason of this is because a moral action, as stated above (A. 3), derives its goodness not only from its object, from which it takes its species, but also from the circumstances, which are its accidents, as it were; just as something belongs to a man by reason of his individual accidents which does not belong to him by reason of his species. And every individual action must have some circumstance that makes it good or bad, at least in respect of the intention of the end. For since it belongs to the reason to direct, if an action that proceeds from deliberate reason be not directed to the due end, it is, by that fact alone, contrary to reason, and has the character

[2] Aristotle, II, 1 (1103^b21).
[3] *Ethics*, IV, 1 (1121^a26).
[4] PL 76, 1098.

of evil. But if it be directed to a due end it is in accord with reason, and so it has the character of good. Now it must be either directed or not directed to a due end. Consequently every human action that proceeds from deliberate reason, if it be considered in the individual, must be good or bad.

If, however, it does not proceed from deliberate reason, but from some act of the imagination, as when a man strokes his beard, or moves his hand or foot, such an action, properly speaking, is not moral or human, since this depends on the reason. Hence it will be indifferent, as standing apart from the genus of moral actions

Reply Obj. 1. For an action to be indifferent in its species can be understood in several ways. First in such a way that its indifference is drawn from its very species; and in this respect the objection proves. But no action can be specifically indifferent in this way, since no object of human action is such that it cannot be ordered to good or evil, either through its end or through a circumstance. Secondly, an action may be indifferent in its species from the fact that as far as its species is concerned, it is neither good nor bad. Therefore it can be made good or bad by something else. Thus man, as far as his species is concerned, is neither white nor black. Nor is it a condition of his species that he should not be black or white, but blackness or whiteness is superadded to man by other principles than those of his species.

Reply Obj. 2. The Philosopher states[1] that a man is evil, properly speaking, if he be hurtful to others. And accordingly he says[2] that the prodigal is not evil, because he hurts none save himself. And the same applies to all others who are not hurtful to their neighbors. But we say here that evil, in general, is all that is repugnant to right reason. And in this sense every individual action is either good or bad, as stated above.

Reply Obj. 3. Whenever an end is intended by deliberate reason, it pertains either to the good of some virtue or to the evil of some vice. Thus, if a man's action is directed to the support or repose of his body, it is also directed to the good of virtue, provided he direct his body itself to the good of virtue. The same clearly applies to other actions.

ARTICLE 10. *Whether a Circumstance Places a Moral Action in the Species of Good or Evil?*

We proceed thus to the Tenth Article: It seems that a circumstance cannot place a moral action in the species of good or evil.

[1] *Ethics*, IV, 1 (1121[a]29). [2] *Ibid* (1121[a]26).

Objection 1. For the species of an action is taken from its object. But circumstances differ from the object. Therefore circumstances do not give an action its species.

Obj. 2. Further, circumstances are as accidents in relation to the moral action, as stated above (Q. VII, A. 1). But an accident does not constitute the species Therefore a circumstance does not constitute a species of good or evil.

Obj. 3. Further, one thing is not in several species. But one action has several circumstances. Therefore a circumstance does not place a moral action in a species of good or evil.

On the contrary, Place is a circumstance. But place puts a moral action in a certain species of evil; for theft of a thing from a holy place is a sacrilege. Therefore a circumstance makes a moral action to be specifically good or bad.

I answer that, Just as the species of natural things are constituted by their natural forms, so the species of moral actions are constituted by forms as conceived by the reason, as is evident from what was said above (A. 5). But since nature is determined to one thing, nor can a process of nature go on to infinity, there must be some ultimate form constituting a specific difference beyond which no further specific difference is possible. Hence it is that in natural things, that which is accidental to a thing cannot be taken as a difference constituting the species. But the process of reason is not determined to any one thing, for at any point it can still proceed further. And consequently that which, in one action, is taken as a circumstance added to the object that specifies the action, can again be taken by the directing reason as the principal condition of the object that determines the action's species. Thus to take another's property is specified by reason of the property being another's, and in this respect it is placed in the species of theft; and if we consider that action also in its bearing on place or time, then this will be an additional circumstance. But since the reason can direct as to place, time, and the like, it may happen that the condition as to place, in relation to the object, is considered as being in disaccord with reason; for instance, reason forbids injury to be done to a holy place. Consequently to steal from a holy place has a special contrariness to the order of reason. And thus place, which was first of all considered as a circumstance, is considered here as the principal condition of the object, and as itself contrary to reason. And in this way, whenever a circumstance has a special relation to reason, either for

or against, it must specify the moral action, either as good or bad.

Reply Obj. 1. A circumstance, in so far as it specifies an action, is considered as a condition of the object, as stated above, and as being, as it were, a specific difference of it.

Reply Obj. 2. A circumstance, so long as it is but a circumstance, does not specify an action, since thus it is a mere accident, but when it becomes a principal condition of the object, then it does specify the action.

Reply Obj. 3 Not every circumstance places the moral action in the species of good or evil, since not every circumstance implies accord or disaccord with reason. Consequently, although one action may have many circumstances, it does not follow that it is in many species. Nevertheless there is no reason why one action should not be in several, even disparate, moral species, as said above (A. 7. Reply 1; Q. 1, A. 3. Reply 3).

ARTICLE 11. *Whether Every Circumstance That Makes an Action Better or Worse Places a Moral Action in a Species of Good or Evil?*

We proceed thus to the Eleventh Article: It would seem that every circumstance relating to good or evil specifies an action.

Objection 1. For good and evil are specific differences of moral actions. Therefore that which causes a difference in the goodness or malice of a moral action causes a specific difference, which is the same as to make it differ in species. Now that which makes an action better or worse makes it differ in goodness and malice. Therefore it causes it to differ in species. Therefore every circumstance that makes an action better or worse constitutes a species

Obj. 2. Further, an additional circumstance either has in itself the character of goodness or malice, or it has not. If not, it cannot make the action better or worse, because what is not good cannot make a greater good, and what is not evil cannot make a greater evil. But if it has in itself the character of good or evil, for this very reason it has a certain species of good or evil. Therefore every circumstance that makes an action better or worse constitutes a new species of good or evil.

Obj. 3. Further, according to Dionysius (*Div. Nom.* iv),[1] "evil is caused by each single defect." Now every circumstance that increases malice has a special defect. Therefore every such circumstance adds a new species of sin. And for the same reason, every circumstance that increases goodness seems to add a new species of goodness; just as every unity added to a number makes a new species of number, for the good consists in number, weight, and measure (Part I, Q. V, A. 5).

On the contrary, More and less do not change a species. But more and less is a circumstance of additional goodness or malice. Therefore not every circumstance that makes a moral action better or worse places it in a species of good or evil.

I answer that, As stated above (A. 10), a circumstance gives the species of good or evil to a moral action, in so far as it concerns a special order of reason Now it happens sometimes that a circumstance does not concern a special order of reason in respect of good or evil, except on the supposition of another previous circumstance, from which the moral action takes its species of good or evil. Thus to take something in a large or small quantity does not concern the order of reason in respect of good or evil, unless a certain other condition is presupposed, from which the action takes its malice or goodness; for instance, if what is taken belongs to another, which makes the action to be discordant with reason. Therefore to take what belongs to another in a large or small quantity does not change the species of the sin Nevertheless it can aggravate or diminish the sin The same applies to other evil or good actions. Consequently not every circumstance that makes a moral action better or worse changes its species.

Reply Obj 1. In things which can be more or less intense the difference of more or less does not change the species Thus by differing in whiteness through being more or less white a thing is not changed in regard to its species of colour. In like manner that which makes an action to be more or less good or evil does not make the action differ in species.

Reply Obj. 2. A circumstance that aggravates a sin or adds to the goodness of an action, sometimes has no goodness or malice in itself, but in regard to some other condition of the action, as stated above. Consequently it does not add a new species, but adds to the goodness or malice derived from this other condition of the action.

Reply Obj. 3. A circumstance does not always involve a distinct defect of its own; sometimes it causes a defect in reference to something else. In like manner a circumstance does not always add further perfection, except in reference to something else. And, to the extent that it does, although it may add to the goodness or malice, it

[1] Sect. 30 (PG 3, 729).

does not always change the species of good or evil.

QUESTION XIX

OF THE GOODNESS AND MALICE OF THE INTERIOR ACT OF THE WILL (*In Ten Articles*)

WE must now consider the goodness of the interior act of the will, under which head there are ten points of inquiry: (1) Whether the goodness of the will depends on the object? (2) Whether it depends on the object alone? (3) Whether it depends on reason? (4) Whether it depends on the eternal law? (5) Whether erring reason binds? (6) Whether the will is evil if it follows the erring reason against the law of God? (7) Whether the goodness of the will in regard to the means depends on the intention of the end? (8) Whether the degree of goodness or malice in the will depends on the degree of good or evil in the intention? (9) Whether the goodness of the will depends on its conformity to the Divine Will? (10) Whether it is necessary for the human will in order to be good to be conformed to the Divine Will as regards the thing willed?

ARTICLE 1. *Whether the Goodness of the Will Depends on the Object?*

We proceed thus to the First Article: It would seem that the goodness of the will does not depend on the object.

Objection 1. For the will cannot be directed otherwise than to what is good, for "evil is outside the scope of the will," as Dionysius says (*Div. Nom.* iv).[1] If therefore the goodness of the will were to be judged from the object, it would follow that every act of the will is good, and none bad.

Obj. 2. Further, good is first of all in the end. Therefore the goodness of the end, as such, does not depend on any other. But, according to the Philosopher,[2] "goodness of action is the end, but goodness of making is never the end," because the latter is always ordered to the thing made, as to its end. Therefore the goodness of the act of the will does not depend on any object.

Obj. 3. Further, according as a thing is, so does it make a thing to be. But the object of the will is good by reason of the goodness of *nature*. Therefore it cannot give *moral* goodness to the will. Therefore the moral goodness of the will does not depend on the object.

On the contrary, The Philosopher says[3] that "justice is that habit from which men wish for just things," and accordingly, virtue is a habit from which men wish for good things. But a good will is one which is in accordance with virtue. Therefore the goodness of the will is from the fact that a man wills that which is good.

I answer that, Good and evil are essential differences of the act of the will. Because good and evil of themselves pertain to the will, just as truth and falsehood pertain to reason, the act of which is divided essentially by the difference of truth and falsehood, according as an opinion is said to be true or false. Consequently good and evil acts of the will are acts differing in species. Now the specific difference in acts is according to objects, as stated above (Q. XVIII, A. 5). Therefore good and evil in the acts of the will is derived properly from the objects.

Reply Obj 1. The will is not always directed to what is truly good, but sometimes to the apparent good, which has indeed some measure of good, but not of a good that is absolutely suitable to be desired Hence it is that the act of the will is not always good, but sometimes evil.

Reply Obj 2. Although an action can, in a certain way, be man's last end, nevertheless such action is not an act of the will, as stated above (Q. I, A. 1. Reply 2).

Reply Obj. 3. Good is presented by the reason to the will as its object, and in so far as it is in accord with reason, it enters the moral order, and causes moral goodness in the act of the will. For reason is the principle of human and moral acts, as stated above (Q. XVIII, A. 5).

ARTICLE 2. *Whether the Goodness of the Will Depends on the Object Alone?*

We proceed thus to the Second Article: It seems that the goodness of the will does not depend on the object alone.

Objection 1. For the end has a closer relationship to the will than to any other power. But the acts of the other powers derive goodness not only from the object but also from the end, as we have shown above (Q. XVIII, A 4). Therefore the act also of the will derives goodness not only from the object but also from the end.

Obj. 2. Further, the goodness of an action is derived not only from the object but also from the circumstances, as stated above (Q. XVIII, A. 3). But according to the difference of circumstances there may be a difference of goodness and malice in the act of the will; for instance, if a man will, when he ought, where he ought, as

[1] Sect. 32 (PG 3, 732).
[2] *Ethics*, VI, 5 (1140b6).
[3] *Ibid.*, V, 1 (1129a9).

much as he ought, and how he ought, or if he will as he ought not. Therefore the goodness of the will depends not only on the object, but also on the circumstances.

Obj. 3. Further, ignorance of circumstances excuses malice of the will, as stated above (Q. VI, A. 8). But it would not be so unless the goodness or malice of the will depended on the circumstances. Therefore the goodness and malice of the will depend on the circumstances, and not only on the object.

On the contrary, An action does not take its species from the circumstances as such, as stated above (Q. XVIII, A. 10. Reply 2). But good and evil are specific differences of the act of the will, as stated above (A. 1). Therefore the goodness and malice of the will depend not on the circumstances but on the object alone.

I answer that, In every genus, the more a thing is first, the more simple it is, and the fewer the principles of which it consists; thus primary bodies are simple. Hence it is to be observed that the first things in every genus, are, in some way, simple and consist of one principle. Now the principle of the goodness and malice of human actions is taken from the act of the will. Consequently the goodness and malice of the act of the will depend on some one thing, while the goodness and malice of other acts may depend on several things.

Now that one thing which is the principle in each genus is not something accidental to that genus but something essential to it, because whatever is accidental is reduced to something essential, as to its principle Therefore the goodness of the will's act depends on that one thing alone, which of itself causes goodness in the act; and that one thing is the object, and not the circumstances, which are accidents, as it were, of the act.

Reply Obj. 1. The end is the object of the will, but not of the other powers. Hence, in regard to the act of the will, the goodness derived from the object does not differ from that which is derived from the end, as they differ in the acts of the other powers, except perhaps accidentally, in so far as one end depends on another, and one act of the will on another.

Reply Obj. 2. Given that the act of the will is fixed on some good, no circumstance can make that act bad. Consequently when it is said that a man wills a good when he ought not, this can be understood in two ways. First, so that this circumstance is referred to the thing willed. And in this way the act of the will is not fixed on something good, since to will to do something when it ought not to be done is not to will something good. Secondly, so that the circumstance is referred to the act of willing. And thus, it is impossible to will something good when one ought not to, because one ought always to will what is good; unless, perhaps, accidentally, in so far as a man by willing some particular good, is prevented from willing at the same time another good which he ought to will at that time. And then evil results not from his willing that particular good but from his not willing the other. The same applies to the other circumstances.

Reply Obj. 3. Ignorance of circumstances excuses malice of the will, in so far as the circumstance affects the thing willed; that is to say, in so far as a man is ignorant of the circumstances of the act which he wills.

ARTICLE 3. *Whether the Goodness of the Will Depends on Reason?*

We proceed thus to the Third Article: It seems that the goodness of the will does not depend on reason.

Objection 1. For what comes first does not depend on what follows. But the good pertains to the will before it belongs to reason, as is clear from what has been said above (Q. IX, A. 1). Therefore the goodness of the will does not depend on reason.

Obj. 2. Further, the Philosopher says[1] that "the goodness of the practical intellect is a truth that is in conformity with right desire." But right desire is a good will. Therefore the goodness of the practical reason depends on the goodness of the will, rather than conversely.

Obj. 3 Further, the mover does not depend on that which is moved, but vice versa. But the will moves the reason and the other powers, as stated above (Q. IX, A. 1). Therefore the goodness of the will does not depend on reason.

On the contrary, Hilary says (*De Trin.* X):[2] "It is an unruly will that persists in its desires in opposition to reason." But the goodness of the will consists in not being unruly. Therefore the goodness of the will depends on its being subject to reason.

I answer that, As stated above (AA. 1, 2), the goodness of the will depends properly on the object. Now the will's object is proposed to it by reason. Because the good understood is the proportionate object of the will, while sensitive or imaginary good is proportionate not to the will but to the sensitive appetite, for the will can tend to the universal good, which reason apprehends, but the sensitive appetite tends only to

[1] *Ethics,* VI, 2 (1139[a]29). [2] PL 10, 344.

the particular good, apprehended by the sensitive power. Therefore the goodness of the will depends on reason, in the same way as it depends on the object.

Reply Obj. 1. The good considered as such, that is, as desirable, pertains to the will before pertaining to the reason. But considered as true it pertains to the reason, before, under the aspect of goodness, pertaining to the will, because the will cannot desire a good that is not previously apprehended by reason.

Reply Obj. 2. The Philosopher speaks there of the practical intellect, in so far as it counsels and reasons about the means; for in this respect it is perfected by prudence. Now in regard to the means, the rectitude of the reason depends on its conformity with the desire of a due end. Nevertheless the very desire of the due end presupposes a right apprehension of the end, which is through reason.

Reply Obj. 3. The will moves the reason in one way, and the reason moves the will in another, namely, on the part of the object, as stated above (Q. IX, A. 1).

ARTICLE 4 *Whether the Goodness of the Will Depends on the Eternal Law?*

We proceed thus to the Fourth Article: It would seem that the goodness of the human will does not depend on the eternal law.

Objection 1. Because to one thing there is one rule and one measure. But the rule of the human will, on which its goodness depends, is right reason. Therefore the goodness of the will does not depend on the eternal law.

Obj. 2 Further, "a measure is homogeneous with the thing measured."[1] But the eternal law is not homogeneous with the human will. Therefore the eternal law cannot be the measure on which the goodness of the human will depends.

Obj. 3. Further, a measure should be most certain. But the eternal law is unknown to us Therefore it cannot be the measure on which the goodness of our will depends.

On the contrary, Augustine says (*Contra Faust.* xxii)[2] that "sin is a deed, word or desire against the eternal law." But malice of the will is the root of sin. Therefore, since malice is contrary to goodness, the goodness of the will depends on the eternal law.

I answer that, Wherever a number of causes are subordinate to one another, the effect depends more on the first than on the second cause, since the second cause acts only in virtue of the first. Now that human reason is the rule of the human will, from which the human will derives its goodness, is from the eternal law, which is the Divine Reason. Hence it is written (Ps. 4. 6, 7): *Many say: Who showeth us good things? The light of Thy countenance, O Lord, is signed upon us,* as though to say: "The light of our reason is able to show us good things, and guide our will, in so far as it is the light of (that is, derived from) Thy countenance." It is therefore evident that the goodness of the human will depends on the eternal law much more than on human reason. And when human reason fails we must have recourse to the Eternal Reason.

Reply Obj 1. To one thing there are not several proximate measures; but there can be several measures subordinate to one another.

Reply Obj. 2. A proximate measure is homogeneous with the thing measured; a remote measure is not.

Reply Obj. 3. Although the eternal law is unknown to us according as it is in the Divine Mind, nevertheless, it becomes known to us somewhat, either by natural reason which is derived from it as its proper image, or by some sort of additional revelation.

ARTICLE 5. *Whether the Will Is Evil When It Is at Variance with Erring Reason?*

We proceed thus to the Fifth Article: It would seem that the will is not evil when it is at variance with erring reason.

Objection 1. Because the reason is the rule of the human will, in so far as it is derived from the eternal law, as stated above (A. 4). But erring reason is not derived from the eternal law. Therefore erring reason is not the rule of the human will. Therefore the will is not evil if it be at variance with erring reason.

Obj. 2. Further, according to Augustine,[3] the command of a lower authority does not bind if it be contrary to the command of a higher authority, for instance, if a proconsul command something that is forbidden by the emperor. But erring reason sometimes proposes what is against the command of a higher power, namely, God Whose power is supreme. Therefore the dictate of an erring reason does not bind. Consequently the will is not evil if it be at variance with erring reason.

Obj. 3. Further, every evil will is reducible to some species of malice. But the will that is at variance with erring reason is not reducible to some species of malice. For instance, if a man's reason err in telling him to commit fornication,

[1] Aristotle, *Metaphysics,* X, 1 (1053[a]24).

[2] Chap. 27 (PL 42, 418).

[3] *Serm. ad Popul.,* Serm. LXII, 8 (PL 38, 421).

his will in not willing to do so cannot be reduced to any species of malice. Therefore the will is not evil when it is at variance with erring reason.

On the contrary, As stated in the First Part (Q. LXXIX, A. 13), conscience is nothing else than the application of knowledge to some action. Now knowledge is in the reason. Therefore when the will is at variance with erring reason, it is against conscience. But every such will is evil, for it is written (Rom. 14. 23): *All that is not of faith*—that is, all that is against conscience—*is sin.* Therefore the will is evil when it is at variance with erring reason.

I answer that, Since conscience is a kind of dictate of the reason (for it is an application of knowledge to action, as was stated in the First Part, Q. LXXIX, A. 13), to inquire whether the will is evil when it is at variance with erring reason, is the same as to inquire whether an erring conscience binds. On this matter, some distinguished three kinds of actions: for some are good generically, some are indifferent, and some are evil generically.[1] And they say that if reason or conscience tell us to do something which is good generically, there is no error. And in like manner if it tell us not to do something which is evil generically, since it is the same reason that prescribes what is good and forbids what is evil. On the other hand if a man's reason or conscience tell him that he is bound by precept to do what is evil in itself, or that what is good in itself, is forbidden, then his reason or conscience errs. In like manner if a man's reason or conscience tell him that what is indifferent in itself, for instance to raise a straw from the ground, is forbidden or commanded, his reason or conscience errs. They say, therefore, that reason or conscience when erring in matters of indifference, either by commanding or by forbidding them, binds, so that the will which is at variance with that erring reason is evil and sinful. But they say that when reason or conscience errs in commanding what is evil in itself, or in forbidding what is good in itself, it does not bind. And so in such cases the will which is at variance with erring reason or conscience is not evil.

But this is unreasonable. For in matters of indifference the will that is at variance with erring reason or conscience is evil in some way on account of the object, on which the goodness or malice of the will depends; not indeed on account of the object according as it is in its own nature, but according as it is accidentally apprehended by reason as something evil to do or to avoid. And since the object of the will is that which is proposed by the reason, as stated above (A. 3), from the very fact that a thing is proposed by the reason as being evil, the will by tending to it becomes evil. And this is the case not only in indifferent matters, but also in those that are good or evil in themselves. For not only indifferent matters can receive the character of goodness or malice accidentally, but also that which is good can receive the character of evil, or that which is evil can receive the character of goodness, on account of the reason apprehending it as such. For instance, to refrain from fornication is good, yet the will does not tend to this good except in so far as it is proposed by the reason. If, therefore, the erring reason propose it as an evil, the will tends to it as to something evil. Consequently the will is evil, because it wills evil, not indeed that which is evil in itself, but that which is evil accidentally, through being apprehended as such by the reason. In like manner, to believe in Christ is good in itself, and necessary for salvation, but the will does not tend to this, except in so far as it is proposed by the reason. Consequently if it be proposed by the reason as something evil, the will tends to it as to something evil—not as if it were evil in itself, but because it is evil accidentally, through the apprehension of the reason. Hence the Philosopher says[2] that "properly speaking the incontinent man is one who does not follow right reason; but accidentally, he is also one who does not follow false reason." We must therefore conclude that, absolutely speaking, every will at variance with reason, whether right or erring, is always evil.

Reply Obj. 1. Although the judgment of an erring reason is not derived from God, yet the erring reason puts forward its judgment as being true, and consequently as being derived from God, from Whom is all truth.

Reply Obj. 2. The saying of Augustine holds good when it is known that the inferior authority prescribes something contrary to the command of the higher authority. But if a man were to believe the command of the proconsul to be the command of the emperor, in scorning the command of the proconsul he would scorn the command of the emperor. In like manner if a man were to know that human reason was dictating something contrary to God's commandment, he would not be bound to abide by reason; but then reason would not be entirely erroneous. But when erring reason proposes some-

[1] Bonaventure, *In Sent.*, II, d. 39, A. 1, Q. 3 (QR II, 906); see also Alexander of Hales, *Summa Theol.*, I–II, n. 388 (QR III, 388).

[2] *Ethics*, VII, 9 (1151[a]33).

thing as being commanded by God, then to scorn the dictate of reason is to scorn the commandment of God.

Reply Obj. 3. Whenever reason apprehends something as evil, it apprehends it under some aspect of evil; for instance, as being something contrary to a divine precept, or as giving scandal, or for some such reason. And then that evil is reduced to that species of malice.

ARTICLE 6. *Whether the Will Is Good When It Abides by Erring Reason?*

We proceed thus to the Sixth Article: It seems that the will is good when it abides by erring reason.

Objection 1. For just as the will when at variance with the reason tends to that which reason judges to be evil, so, when in accord with the reason it tends to what reason judges to be good. But the will is evil when it is at variance with reason, even when erring. Therefore even when it abides by erring reason the will is good.

Obj. 2. Further, the will is always good when it abides by the commandment of God and the eternal law. But the eternal law and God's commandment are proposed to us by the apprehension of the reason, even when it errs. Therefore the will is good even when it abides by erring reason.

Obj. 3. Further, the will is evil when it is at variance with erring reason. If, therefore, the will is evil also when it abides by erring reason, it seems that the will is always evil when in conjunction with erring reason, so that in such a case a man would be in two minds, and, of necessity, would sin, which is unreasonable. Therefore the will is good when it abides by erring reason.

On the contrary, The will of those who slew the apostles was evil. And yet it was in accord with their erring reason, according to John 16. 2: *The hour cometh, that whosoever killeth you, will think that he doth a service to God.* Therefore the will can be evil when it abides by erring reason.

I answer that, Just as the previous question is the same as inquiring whether an erring conscience binds, so this question is the same as inquiring whether an erring conscience excuses. Now this question depends on what has been said above about ignorance. For it was said (Q. VI, A. 8) that ignorance sometimes causes an act to be involuntary, and sometimes not. And since moral good and evil consist in action in so far as it is voluntary, as was stated above (A. 2), it is evident that when ignorance causes an act to be involuntary it takes away the character of moral good and evil; but not, when it does not cause the act to be involuntary. Again, it has been stated above (Q. VI, A. 8) that when ignorance is in any way willed, either directly or indirectly, it does not cause the act to be involuntary. And I call that ignorance directly voluntary, to which the act of the will tends; and that ignorance indirectly voluntary, which is due to negligence, by reason of a man not wishing to know what he ought to know, as stated above (Q. VI, A. 8).

If then reason or conscience err with an error that is voluntary, either directly, or through negligence, so that one errs about what one ought to know, then such an error of reason or conscience does not excuse the will that abides by that erring reason or conscience from being evil. But if the error arise from ignorance of some circumstance, and without any negligence, so that it cause the act to be involuntary, then that error of reason or conscience excuses the will that abides by that erring reason from being evil. For instance, if erring reason tell a man that he should go to another man's wife, the will that abides by that erring reason is evil, since this error arises from ignorance of the Divine Law, which he is bound to know. But if a man's reason errs in mistaking another for his wife, and if he wish to give her her right when she asks for it, his will is excused from being evil, because this error arises from ignorance of a circumstance, which ignorance excuses, and causes the act to be involuntary.

Reply Obj. 1. As Dionysius says (*Div. Nom.* iv),[1] "good results from the entire cause, evil from each particular defect." Consequently, in order that the thing to which the will tends be called evil, it suffices either that it be evil in itself, or that it be apprehended as evil. But in order for it to be good, it must be good in both ways.

Reply Obj. 2. The eternal law cannot err, but human reason can. Consequently the will that abides by human reason is not always right, nor is it always in accord with the eternal law.

Reply Obj. 3. Just as in syllogistic arguments, granted one absurdity, others must follow, so in moral matters, given one absurdity, others must follow too. Thus suppose a man to seek vainglory, he will sin, whether he does his duty for vainglory, or whether he omit to do it. Nor is he in two minds about the matter, because he can put aside his evil intention. In like manner, if we suppose a man's reason or conscience to

[1] Sect. 30 (PG 3, 729).

err through inexcusable ignorance, then evil must result in the will. Nor is this man in two minds, because he can lay aside his error, since his ignorance is vincible and voluntary.

ARTICLE 7. *Whether the Goodness of the Will, as Regards the Means, Depends on the Intention of the End?*

We proceed thus to the Seventh Article: It seems that the goodness of the will does not depend on the intention of the end.

Objection 1. For it has been stated above (A. 2) that the goodness of the will depends on the object alone. But as regards the means, the object of the will is one thing, and the end intended is another. Therefore in such matters the goodness of the will does not depend on the intention of the end.

Obj. 2. Further, to wish to keep God's commandment, belongs to a good will. But this can be referred to an evil end, for instance to vainglory or covetousness, by willing to obey God for the sake of temporal gain. Therefore the goodness of the will does not depend on the intention of the end.

Obj 3. Further, just as good and evil diversify the will, so do they diversify the end. But malice of the will does not depend on the malice of the end intended; for a man who wills to steal in order to give alms has an evil will, although he intends a good end Therefore neither does the goodness of the will depend on the goodness of the end intended.

On the contrary, Augustine says that God rewards the intention.[1] But God rewards a thing because it is good. Therefore the goodness of the will depends on the intention of the end.

I answer that, The intention may stand in a twofold relation to the act of the will; first, as preceding it, secondly as following it. The intention precedes the act of the will causally when we will something because we intend a certain end. And then the order to the end is considered as the reason of the goodness of the thing willed; for instance, when a man wills to fast for God's sake, because the act of fasting has the character of good from the very fact that it is done for God's sake. Therefore, since the goodness of the will depends on the goodness of the thing willed, as stated above (AA. 1, 2), it must of necessity depend on the intention of the end.

On the other hand, intention follows the act of the will when it is added to a preceding act of the will; for instance, a man may will to do something, and may afterwards refer it to God. And then the goodness of the previous act of the will does not depend on the subsequent intention, except in so far as that act is repeated with the subsequent intention.

Reply Obj. 1. When the intention is the cause of the act of willing, the order to the end is considered as the reason of the goodness of the object, as stated above.

Reply Obj. 2. The act of the will cannot be said to be good if an evil intention is the cause of willing. For when a man wills to give an alms for the sake of vainglory, he wills that which is good in itself, under the aspect of evil; and therefore, as willed by him, it is evil. Therefore his will is evil. If, however, the intention is subsequent to the act of the will, then the latter may be good, and the intention does not spoil that act of the will which preceded, but that which is repeated

Reply Obj. 3. As we have already stated (A. 6. reply 1), "evil results from each particular defect, but good from the whole and entire cause." Hence, whether the will tend to what is evil in itself, even under the aspect of good, or to the good under the aspect of evil, it will be evil in either case. But in order for the will to be good, it must tend to the good under the aspect of good; in other words, it must will the good for the sake of the good.

ARTICLE 8. *Whether the Degree of Goodness or Malice in the Will Depends on the Degree of Good or Evil in the Intention?*

We proceed thus to the Eighth Article: It seems that the degree of goodness in the will depends on the degree of good in the intention.

Objection 1. Because on Matt. 12. 35 (Luke 6. 45), *A good man out of the good treasure of his heart, bringeth forth that which is good,* the gloss says: "A man does as much good as he intends."[2] But the intention gives goodness not only to the external action, but also to the act of the will, as stated above (A. 7). Therefore the goodness of a man's will is according to the goodness of his intention.

Obj 2. Further, if you add to the cause, you add to the effect But the goodness of the intention is the cause of the good will. Therefore a man's will is good according as his intention is good.

Obj. 3. Further, in evil actions, a man sins in proportion to his intention. For if a man were to throw a stone with a murderous intention, he would be guilty of murder. Therefore, for the

[1] *Confessions,* XIII, 41 (PL 32, 863).

[2] *Glossa interl.* (V, 43r).

same reason, in good actions, the will is good in proportion to the good intended.

On the contrary, The intention can be good, while the will is evil. Therefore, for the same reason, the intention can be better, and the will less good.

I answer that, In regard to both the act and the intention of the end, we may consider a twofold quantity. One, on the part of the object, by reason of a man willing or doing a good that is greater. The other, taken from the intensity of the act, according as a man wills or acts intensely; and this is more on the part of the agent.

If then we speak of these respective quantities from the point of view of the object, it is evident that the quantity in the act does not depend on the quantity in the intention. With regard to the external act this may happen in two ways. First, through the object that is ordered to the intended end not being proportionate to that end; for instance, if a man were to give ten pounds, he could not realize his intention if he intended to buy a thing worth a hundred pounds. Secondly, on account of the obstacles that may supervene in regard to the exterior action, which obstacles we are unable to remove; for instance, a man intends to go to Rome, and encounters obstacles, which prevent him from going. On the other hand, with regard to the interior act of the will, this happens in only one way, because the interior acts of the will are in our power, though the external actions are not. But the will can will an object that is not proportionate to the intended end, and thus the will that tends to that object considered absolutely is not so good as the intention. Yet because the intention also belongs, in a way, to the act of the will,—in so far, namely, as it is the reason for the act, therefore the quantity of goodness in the intention overflows upon the act of the will; that is to say, in so far as the will wills some great good for an end, although that by which it wills to gain so great a good is not proportionate to that good.

But if we consider the quantity in the intention and in the act according to their respective intensity, then the intensity of the intention redounds upon the interior act and the exterior act of the will, since the intention stands in relation to them as a kind of form, as is clear from what was said above (Q. XII, A. 4; Q. XVIII, A. 6). And yet considered materially, while the intention is intense, the interior or exterior act may be not so intense (materially speaking); for instance, when a man does not will with as much intensity to take medicine as he wills to regain health. Nevertheless the very fact of intending health intensely, redounds, as a formal principle, upon the intense willing of medicine.

We must observe, however, that the intensity of the interior or exterior act may be referred to the intention as its object; for instance when a man intends to will intensely, or to do something intensely. And yet it does not follow that he wills or acts intensely, because the quantity of goodness in the interior or exterior act does not depend on the quantity of the good intended, as was shown above (A. 7). And hence it is that a man does not merit as much as he intends to merit, because the quantity of merit is measured by the intensity of the act, as we shall show later on (Q. XX, A. 4; Q. CXIV, A. 4).

Reply Obj. 1. This gloss speaks of good as in the estimation of God, Who considers principally the intention of the end. And so another gloss says on the same passage that "the treasure of the heart is the intention, according to which God judges our works."[1] For the goodness of the intention, as stated above, redounds in a certain way upon the goodness of the will, which makes the eternal act also meritorious in God's sight.

Reply Obj. 2. The goodness of the intention is not the whole cause of a good will. Hence the argument does not prove.

Reply Obj. 3. The mere malice of the intention suffices to make the will evil; and therefore too, the will is as evil as the intention is evil. But the same reasoning does not apply to goodness, as stated above. (Reply 2).

ARTICLE 9. *Whether the Goodness of the Will Depends on Its Conformity to the Divine Will?*

We proceed thus to the Ninth Article: It would seem that the goodness of the human will does not depend on its conformity to the Divine will.

Objection 1. Because it is impossible for man's will to be conformed to the Divine will, as appears from the word of Isaias (55. 9): *As the heavens are exalted above the earth, so are My ways exalted above your ways, and My thoughts above your thoughts.* If therefore goodness of the will depended on its conformity to the Divine will, it would follow that it is impossible for man's will to be good. Which is inadmissible.

[1] *Glossa ordin.*, on Matt. 12.35 (V, 43A); also cf. Rabanus Maurus, *In Matt.* IV, on 12.35 (PL 107, 931).

Obj. 2. Further, just as our wills arise from the Divine will, so does our knowledge flow from the Divine knowledge. But our knowledge does not require to be conformed to God's knowledge, since God knows many things that we do not know. Therefore there is no need for our will to be conformed to the Divine will.

Obj. 3. Further, the will is a principle of action. But our action cannot be conformed to God's. Therefore neither can our will be conformed to His.

On the contrary, It is written (Matt. 26. 39): *Not as I will, but as Thou wilt,* which words He said, because He wishes man to be upright and to tend to God as Augustine expounds in the *Enchiridion.*[1] But the rectitude of the will is its goodness. Therefore the goodness of the will depends on its conformity to the Divine will.

I answer that, As stated above (A. 7), the goodness of the will depends on the intention of the end. Now the last end of the human will is the Sovereign Good, namely, God, as stated above (Q. I, A. 8; Q. III, A. 1). Therefore the goodness of the human will requires it to be ordered to the Sovereign Good, that is, to God.

Now this Good is primarily and essentially related to the Divine will, as its proper object Again that which is primary in any genus is the measure and rule of all that belongs to that genus. Moreover, everything is right and good in so far as it comes up to its proper measure. Therefore in order that man's will be good it must be conformed to the Divine will.

Reply Obj. 1. The human will cannot be conformed to the will of God so as to equal it, but only so as to imitate it. In like manner human knowledge is conformed to the Divine knowledge, in so far as it knows truth. And human action is conformed to the Divine, in so far as it is right for the agent—and this is by way of imitation, not by way of equality.

From the above may be gathered the *replies to the Second and Third Objections.*

ARTICLE 10. *Whether It Is Necessary for the Human Will, in Order to Be Good, To Be Conformed to the Divine Will, as Regards the Thing Willed?*

We proceed thus to the Tenth Article: It seems that the human will need not always be conformed to the Divine will, as regards the thing willed.

Objection 1. For we cannot will what we do not know since the good apprehended is the object of the will. But in many things we do not know what God wills. Therefore the human will cannot be conformed to the Divine will as to the thing willed.

Obj. 2. Further, God wills to damn the man whom He foresees about to die in mortal sin. If therefore man were bound to conform his will to the Divine will in the point of the thing willed, it would follow that a man is bound to will his own damnation. Which is inadmissible.

Obj. 3. Further, no one is bound to will what is against filial piety. But if man were to will what God wills, this would sometimes be contrary to filial piety, for instance, when God wills the death of a father. If his son were to will it also, it would be against filial piety. Therefore man is not bound to conform his will to the Divine will, as to the thing willed.

On the contrary, (1) On Ps. 32. 1, *Praise becometh the upright,* a gloss says: "That man has an upright heart, who wills what God wills."[2] But everyone is bound to have an upright heart. Therefore everyone is bound to will what God wills.

(2) Moreover, the will takes its form from the object, as does every act. If therefore man is bound to conform his will to the Divine will, it follows that he is bound to conform it as to the thing willed.

(3) Moreover, opposition of wills arises from men willing different things. But whoever has a will in opposition to the Divine will, has an evil will. Therefore whoever does not conform his will to the Divine will, as to the thing willed, has an evil will.

I answer that, As is evident from what has been said above (AA. 3, 5), the will tends to its object according as it is proposed by the reason. Now a thing may be considered in various ways by the reason, so as to appear good from one point of view, and not good from another point of view. And therefore if a man's will wills a thing to be, according as it appears to be good, his will is good; and the will of another man, who wills that thing not to be, according as it appears evil, is also good. Thus a judge has a good will, in willing a thief to be put to death, because this is just; while the will of another for example, the thief's wife or son, who wishes him not to be put to death, in so far as killing is a natural evil, is also good.

Now since the will follows the apprehension of the reason or intellect, the more universal the aspect of the apprehended good, the more

[1] *Enarr. in Psalm,* Ps. 32.1 (PL 36, 278).

[2] *Glossa ordin.* (III, 130A); *Glossa* Lombardi (PL 191, 325); Augustine, *Enarr. in Psalm,* Ps. 32.1 (PL 36, 277).

universal the good to which the will tends. This is evident in the example given above, because the judge has care of the common good, which is justice, and therefore he wishes the thief's death, which has the aspect of good in relation to the common estate; but the thief's wife has to consider the private good of the family, and from this point of view she wishes her husband, the thief, not to be put to death. Now the good of the whole universe is that which is apprehended by God, Who is the Maker and Governor of all things. Hence whatever He wills, He wills it under the aspect of the common good; this is His own Goodness, which is the good of the whole universe. On the other hand, the apprehension of a creature, according to its nature, is of some particular good, proportionate to that nature. Now a thing may happen to be good under a particular aspect, and yet not good under a universal aspect, or vice verse, as stated above. And therefore it comes to pass that a certain will is good from willing something considered under a particular aspect, which nevertheless God does not will, under a universal aspect, and vice versa. And hence too it is that various wills of various men can be good in respect of opposite things, according as, under various aspects, they wish a particular thing to be or not to be.

But a man's will is not right in willing a particular good unless he refer it to the common good as an end, since even the natural appetite of each part is ordered to the common good of the whole. Now it is the end that supplies the formal reason, as it were, of willing whatever is directed to the end. Consequently, in order that a man will some particular good with a right will, he must will that particular good materially, and the Divine and universal good formally. Therefore the human will is bound to be conformed to the Divine will as to that which is willed formally, for it is bound to will the Divine and universal good; but not as to that which is willed materially, for the reason given above.

At the same time in both these respects, the human will is conformed to the Divine, in a certain degree. Because in so far as it is conformed to the Divine will in the common aspect of the thing willed, it is conformed to it in the point of the last end. While, in so far as it is not conformed to the Divine will in the thing willed materially, it is conformed to that will considered as efficient cause, since the proper inclination consequent to nature, or to the particular apprehension of some particular thing, comes to a thing from God as its efficient cause. Hence it is customary to say that a man's will, in this respect, is conformed to the Divine will, because it wills what God wishes him to will.

There is yet another kind of conformity in respect of the formal cause, consisting in man's willing something from charity, as God wills it. And this conformity is also reduced to the formal conformity, that is in respect of the last end, which is the proper object of charity.

Reply Obj. 1. We can know in a general way what God wills. For we know that whatever God wills, He wills it under the aspect of good. Consequently whoever wills a thing under any aspect of good, has a will conformed to the Divine will, as to the character of the thing willed. But we do not know what God wills in particular, and in this respect we are not bound to conform our will to the Divine will.

But in the state of glory, every one will see in each thing that he wills the relation of that thing to what God wills in that particular matter Consequently he will conform his will to God in all things not only formally, but also materially.

Reply Obj. 2. God does not will the damnation of a man under that aspect, nor a man's death under that aspect because, *He wills all men to be saved* (I Tim. 2. 4), but He wills such things under the aspect of justice. Therefore in regard to such things it suffices for man to will the upholding of God's justice and of the natural order.

From this the *reply to the Third Objection* is evident.

To the first argument advanced in a contrary sense, it should be said that a man who conforms his will to God's as far as the reason of the thing willed is concerned, wills what God wills more than the man who conforms his will to God's, in the point of the very thing willed; because the will tends more to the end than to that which is on account of the end.

To the second, it must be replied that the species and form of an act are taken from the object considered formally rather than from the object considered materially.

To the third, it must be said that there is no opposition of wills when several people desire different things, but not under the same aspect. But there is opposition of wills, when under one and the same aspect, one man wills a thing which another wills not. But there is no question of this here.

QUESTION XX

OF GOODNESS AND MALICE IN EXTERNAL HUMAN ACTIONS

(In Six Articles)

WE must now consider goodness and malice as to external actions, under which point there are six points of inquiry: (1) Whether goodness and malice is first in the act of the will or in the external action? (2) Whether the whole goodness or malice of the external action depends on the goodness of the will? (3) Whether the goodness and malice of the interior act are the same as those of the external action? (4) Whether the external action adds any goodness or malice to that of the interior act? (5) Whether the consequences of an external action increase its goodness or malice? (6) Whether one and the same external action can be both good and evil?

ARTICLE 1. *Whether Goodness or Malice Is First in the Act of the Will, or in the Eternal Action?*

We proceed thus to the First Article: It seems that good and evil are in the external action prior to being in the act of the will.

Objection 1. For the will derives goodness from its object, as stated above (Q. XIX, AA. 1, 2). But the external action is the object of the interior act of the will; for a man is said to will to commit a theft, or to will to give an alms. Therefore good and evil are in the external action, prior to being in the act of the will.

Obj. 2. Further, good belongs first to the end, since what is directed to the end receives the aspect of good from its relation to the end. Now while the act of the will cannot be an end, as stated above (Q. I, A. 1. Reply 2), the act of another power can be an end. Therefore good is in the act of some other power prior to being in the act of the will.

Obj. 3. Further, the act of the will is related to the external action as its form, as stated above (Q. XVIII, A. 6). But that which is formal is subsequent, since form comes to matter. Therefore good and evil are in the external action prior to being in the act of the will.

On the contrary, Augustine says (*Retract.* i, 9)[1] that "it is by the will that we sin, and that we live rightly." Therefore moral good and evil are first in the will.

I answer that, External actions may be said to be good or bad in two ways. First, in regard to their genus, and the circumstances connected with them; thus the giving of alms, if the required conditions be observed, is said to be good. Secondly, a thing is said to be good or evil from its relation to the end; thus the giving of alms for vainglory is said to be evil. Now, since the end is the will's proper object, it is evident that this aspect of good or evil which the external action derives from its relation to the end is to be found first of all in the act of the will, and from there it passes to the external action. On the other hand, the goodness or malice which the external action has of itself, on account of its being about due matter and its being attended by due circumstances, is not derived from the will, but rather from the reason. Consequently, if we consider the goodness of the external action in so far as it comes from reason's ordering and apprehension, it is prior to the goodness of the act of the will. But if we consider it in so far as it is in the execution of the action done, it is subsequent to the goodness of the will, which is its principle.

Reply Obj. 1. The exterior action is the object of the will in so far as it is proposed to the will by the reason, as a good apprehended and ordered by the reason; and thus it is prior to the good in the act of the will. But in so far as it is found in the execution of the action, it is an effect of the will, and is subsequent to the will.

Reply Obj. 2 The end precedes in the order of intention, but follows in the order of execution

Reply Obj. 3. A form as received into matter is subsequent to matter in the order of generation, although it precedes it in the order of nature. But according as it is in the active cause, it precedes in every way. Now the will is related to the exterior action as its efficient cause And so the goodness of the act of the will, as existing in the active cause, is the form of the exterior action.

ARTICLE 2. *Whether the Whole Goodness and Malice of the External Action Depend on the Goodness of the Will?*

We proceed thus to the Second Article: It would seem that the whole goodness and malice of the external action depend on the goodness of the will.

Objection 1. For it is written (Matt. 7. 18): *A good tree cannot bring forth evil fruit, neither can an evil tree bring forth good fruit.* But, according to the gloss,[2] the tree signifies the will,

[1] PL 32, 596.

[2] *Glossa ordin.*, on Matt. 7.18 (V, 29B); Augustine, *Contra Julian.*, I, 8 (PL 44, 667).

and fruit signifies works. Therefore, it is impossible for the interior act of the will to be good, and the external action evil, or vice versa.

Obj. 2. Further, Augustine says (*Retract.* i, 9)[1] that there is no sin without the will If therefore there is no sin in the will, there will be none in the external action. And so the whole goodness or malice of the external action depends on the will.

Obj 3. Further, the good and evil of which we are speaking now are differences of the moral act. Now differences make an essential division in a genus, according to the Philosopher.[2] Since therefore an act is moral from being voluntary, it seems that goodness and malice in an act are derived from the will alone.

On the contrary, Augustine says (*Contra Mendac* vii)[3] that "there are some actions which neither a good end nor a good will can make good."

I answer that, As stated above (A. 1), we may consider a twofold goodness or malice in the external action: one in respect of due matter and circumstances; the other in respect of the order to the end. And the goodness which is in respect of the order to the end depends entirely on the will. But the goodness which is in respect of due matter or circumstances depends on the reason, and on this goodness depends the goodness of the will, in so far as the will tends towards it.

Now it must be observed, as was noted above (Q. XIX, A. 6. Reply 1), that for a thing to be evil, one single defect suffices. But for it to be good absolutely, it is not enough for it to be good in one point only, it must be good in every respect. If therefore the will be good both from its proper object and from its end, it follows that the external action is good. But if the will be good from its intention of the end, this is not enough to make the external action good; and if the will be evil either by reason of its intention of the end, or by reason of the act willed, it follows that the external action is evil.

Reply Obj. 1. If the good tree be taken to signify the good will, it must be in so far as the will derives goodness from the act willed and from the end intended.

Reply Obj. 2. A man sins by his will not only when he wills an evil end, but also when he wills an evil act.

Reply Obj. 3. Voluntariness applies not only to the interior act of the will, but also to external actions, according as they proceed from the will and the reason. Consequently the difference of good and evil is applicable to both the interior and external act.

ARTICLE 3. *Whether the Goodness and Malice of the External Action Are the Same As Those of the Interior Act?*

We proceed thus to the Third Article: It would seem that the goodness and malice of the interior act of the will are not the same as those of the external action.

Objection 1. For the principle of the interior act is the interior apprehensive or appetitive power of the soul, while the principle of the external action is the power that accomplishes the movement. Now where the principles of action are different, the actions themselves are different. Moreover, it is the action which is the subject of goodness or malice, and the same accident cannot be in different subjects. Therefore the goodness of the interior act cannot be the same as that of the external action.

Obj. 2. Further, "A virtue makes that which has it good, and renders its action good also."[4] But the intellectual virtue in the commanding power is distinct from the moral virtue in the power commanded, as is declared in the *Ethics*.[5] Therefore the goodness of the interior act, which belongs to the commanding power, is distinct from the goodness of the external action, which belongs to the power commanded.

Obj. 3. Further, the same thing cannot be cause and effect, since nothing is its own cause. But the goodness of the interior act is the cause of the goodness of the external action, or *vice versa,* as stated above (AA. 1, 2). Therefore it is not the same goodness in each.

On the contrary, It was shown above (Q. XVIII, A. 6) that the act of the will is the form, as it were, of the external action. Now that which results from the material and formal element is one thing. Therefore there is but one goodness of the internal and external act.

I answer that, As stated above (Q. XVII, A. 4), the interior act of the will, and the external action, considered morally, are one act. Now it happens sometimes that one and the same individual act has several aspects of goodness or malice, and sometimes that it has but one. Hence we must say that sometimes the goodness of the interior act is the same as that of the external action, and sometimes not. For as we have already said (AA. 1, 2), these two goodnesses or malices, of the internal and external

[1] PL 32, 596.
[2] *Metaphysics,* VII, 12 (1038[a]9).
[3] PL 40, 528.
[4] Aristotle, *Ethics,* II, 6 (1106[a]15).
[5] Aristotle, I, 13 (1103[a]3).

acts, are ordered to one another. Now it may happen, in things that are ordered to something else, that a thing is good merely from being ordered to another; thus a bitter draught is good merely because it procures health. Therefore there are not two goodnesses, one the goodness of health, and the other the goodness of the draught, but one and the same. On the other hand it happens sometimes that that which is ordered to another has some aspect of goodness in itself, besides the fact of its being ordered to some other good; thus a palatable medicine can be considered in the light of a pleasurable good, besides of being conducive to health.

We must therefore say that when the external action derives goodness or malice from its relation to the end only, then there is but one and the same goodness of the act of the will which of itself regards the end and of the external action, which regards the end through the medium of the act of the will. But when the external action has goodness or malice of itself, that is, in regard to its matter and circumstances, then the goodness of the external action is distinct from that goodness of the will which is taken from the end; yet so that the goodness of the end passes into the external action, and the goodness of the matter and circumstances passes into the act of the will, as stated above (AA. 1, 2).

Reply Obj. 1. This argument proves that the internal and external actions are different in the natural order; yet distinct as they are in that respect, they combine to form one thing in the moral order, as stated above (Q. XVII, A. 4).

Reply Obj. 2. As stated in the *Ethics*,[1] a moral virtue is ordered to the act of that virtue, which act is the end, as it were, of that virtue; but prudence, which is in the reason, is ordered to things directed to the end For this reason different virtues are necessary. But right reason in regard to the very end of a virtue has no other goodness than the goodness of that virtue, in so far as the goodness of the reason is participated in each virtue.

Reply Obj. 3. When a thing is derived by one thing from another, as from a univocal agent cause, then it is not the same in both; thus when a hot thing heats, the heat of the thing heating is distinct from the heat of the thing heated, although it is the same specifically. But when a thing is derived by one thing from another according to analogy or proportion, then it is one and the same in both; thus the healthiness which is in medicine or urine is derived from the healthiness of the animal's body; nor is health as applied to urine and medicine, distinct from health as applied to the body of an animal, of which health medicine is the cause, and urine the sign. It is in this way that the goodness of the external action is derived from the goodness of the will, and vice versa; namely, according to the order of one to the other.

[1] Aristotle, VI, 12 (1144a8).

ARTICLE 4. *Whether the External Action Adds Any Goodness or Malice to That of the Interior Act?*

We proceed thus to the Fourth Article: It would seem that the external action does not add any goodness or malice to that of the interior action.

Objection 1. For Chrysostom says (*Hom.* XIX *in Matt.*):[2] "It is the will that is rewarded for doing good, or punished for doing evil." Now works are the witnesses of the will. Therefore God seeks for works not on His own account, in order to know how to judge, but for the sake of others, that all may understand how just He is. But good or evil is to be estimated according to God's judgment rather than according to the judgment of man. Therefore the external action adds no goodness or malice to that of the interior act.

Obj. 2. Further, the goodness and malice of the interior and external acts are one and the same, as stated above (A. 3). But increase is the addition of one thing to another. Therefore the external action does not add to the goodness or malice of the interior act.

Obj. 3. Further, the entire goodness of created things does not add to the Divine Goodness, because it is entirely derived from it. But sometimes the entire goodness of the external action is derived from the goodness of the interior act, and sometimes conversely, as stated above (AA. 1, 2). Therefore neither of them adds to the goodness or malice of the other.

On the contrary, Every agent intends to attain good and avoid evil. If therefore by the external action no further goodness or malice is added, it is to no purpose that he who has a good or an evil will does a good deed or refrains from an evil deed. Which is unreasonable.

I answer that, If we speak of the goodness which the external action derives from the will tending to the end, then the external action adds nothing to this goodness, unless it happen

[2] PG 57, 274.

that the will in itself is made better in good things, or worse in evil things. This, it seems, may happen in three ways. First in point of number. If, for instance, a man wishes to do something with a good or an evil end in view, and does not do it then, but afterwards wills and does it, the act of his will is doubled, and a double good, or a double evil is the result. Secondly, in point of extension. If, for instance, a man wishes to do something for a good or an evil end, and is hindered by some obstacle, while another man perseveres in the movement of the will until he accomplish it in deed, it is evident that the will of the latter is more lasting in good or evil, and, in this respect, is better or worse. Thirdly, in point of intensity. For there are certain external actions, which, in so far as they are pleasurable or painful, are such as naturally to make the will more intense or more remiss. And it is evident that the more intensely the will tends to good or evil, the better or worse it is.

On the other hand, if we speak of the goodness which the external action derives from its matter and due circumstances, thus it stands in relation to the will as its term and end. And in this way it adds to the goodness or malice of the will, because every inclination or movement is perfected by attaining its end or reaching its term. Therefore the will is not perfect, unless it be such that, given the opportunity, it realizes the operation. But if this prove impossible, as long as the will is perfect, so as to realize the operation if it could, the lack of perfection derived from the external action, is involuntary absolutely. Now just as the involuntary deserves neither punishment nor reward in the accomplishment of good or evil deeds, so neither does it lessen reward or punishment if a man through absolute involuntariness fail to do good or evil.

Reply Obj. 1. Chrysostom is speaking of the case where a man's will is complete, and does not refrain from the deed save through the impossibility of achievement.

Reply Obj. 2. This argument applies to that goodness which the external action derives from the will as tending to the end. But the goodness which the external action takes from its matter and circumstances is distinct from that which it derives from the end; but it is not distinct from that which it has from the very act willed, to which it stands in the relation of measure and cause, as stated above (AA. 1, 2).

From this the *reply to the Third Objection* is evident.

ARTICLE 5. *Whether the Consequences of the External Action Increase Its Goodness or Malice?*

We proceed thus to the Fifth Article: It would seem that the consequences of the external action increase its goodness or malice.

Objection 1. For the effect pre-exists virtually in its cause. But the consequences result from the action as an effect from its cause. Therefore they pre-exist virtually in actions. Now a thing is judged to be good or bad according to its virtue, since "a virtue makes that which has it to be good."[1] Therefore the consequences increase the goodness or malice of an action.

Obj. 2. Further, the good actions of his hearers are consequences resulting from the words of a preacher. But such goods as these redound to the merit of the preacher, as is evident from Phil. 4. 1: *My dearly beloved brethren, my joy and my crown.* Therefore the consequences of an action increase its goodness or malice.

Obj. 3. Further, punishment is not increased, unless the fault increases, and so it is written (Deut. 25. 2): *According to the measure of the sin shall the measure also of the stripes be* But the punishment is increased on account of the consequences; for it is written (Exod 21. 29): *But if the ox was wont to push with his horn yesterday and the day before, and they warned his master, and he did not shut him up, and he shall kill a man or a woman, then the ox shall be stoned, and his owner also shall be put to death.* But he would not have been put to death if the ox, although he had not been shut up, had not killed a man. Therefore the consequences increase the goodness or malice of an action.

Obj. 4. Further, if a man do something which may cause death, by striking, or by sentencing, and if death does not ensue, he does not contract irregularity;[2] but he would if death were to ensue. Therefore the consequences of an action increase its goodness or malice.

On the contrary, The consequences do not make an action that was evil to be good, nor one that was good to be evil. For instance, if a man give an alms to a poor man who makes bad use of the alms by committing a sin, this does not undo the good done by the giver; and, in like manner, if a man bear patiently a wrong done to him, the wrongdoer is not on that account excused. Therefore the consequences of an action do not increase its goodness or malice.

[1] *Ethics*, II, 6 (1106[a]15).

[2] Irregularity—"Infraction of the rule as to entrance into or exercise of Holy Orders"—O.E.D.

I answer that, The consequences of an action are either foreseen or not. If they are foreseen, it is evident that they increase the goodness or malice. For when a man foresees that many evils may follow from his action, and yet does not therefore desist from it, this shows his will to be all the more inordinate.

But if the consequences are not foreseen, we must make a distinction. Because if they follow from the nature of the action, and in the majority of cases, in this respect, the consequences increase the goodness or malice of that action; for it is evident that an action is better in kind, if better results can follow from it, and worse, if it is of a nature to produce worse results. On the other hand, if the consequences follow by accident and seldom, then they do not increase the goodness or malice of the action, because we do not judge of a thing according to that which belongs to it by accident, but only according to that which belongs to it of itself.

Reply Obj. 1. The virtue of a cause is measured by the effect that flows from the nature of the cause, not by that which results by accident.

Reply Obj. 2. The good actions done by the hearers result from the preacher's words as an effect that flows from their very nature. Hence they redound to the merit of the preacher and, especially when such is his intention.

Reply Obj. 3. The consequences for which that man is ordered to be punished, both follow from the nature of the cause, and are supposed to be foreseen. For this reason they are considered as punishable.

Reply Obj. 4. This argument would prove if irregularity were the result of the fault. But it is not the result of the fault, but of the fact, and of the obstacle to the reception of a sacrament.

ARTICLE 6. *Whether One and the Same External Action Can Be Both Good and Evil?*

We proceed thus to the Sixth Article: It would seem that one and the same external action can be both good and evil.

Objection 1. For "movement, if continuous, is one and the same."[1] But one continuous movement can be both good and bad; for instance, a man may go to Church continuously, intending at first vainglory, and afterwards the service of God. Therefore one and the same action can be both good and evil.

Obj. 2. Further, according to the Philosopher,[2] "action and passion are one act." But the passion may be good, as Christ's was, and the action evil, as that of the Jews. Therefore one and the same act can be both good and evil.

Obj. 3. Further, since a servant is an instrument, as it were, of his master, the servant's action is his master's, just as the action of a tool is the workman's action. But it may happen that the servant's action result from his master's good will, and is therefore good, and from the evil will of the servant, and is therefore evil. Therefore the same action can be both good and evil.

On the contrary, The same thing cannot be the subject of contraries. But good and evil are contraries. Therefore the same action cannot be both good and evil.

I answer that, Nothing hinders a thing from being one in so far as it is in one genus, and manifold in so far as it is referred to another genus. Thus a continuous surface is one, considered as in the genus of quantity; and yet it is manifold, considered as to the genus of colour, if it be partly white and partly black. And accordingly, nothing hinders an action from being one, considered in the natural order, which nevertheless, is not one, considered in the moral order, and vice versa, as we have stated above (Q. XVIII, A. 7. REPLY 1). For continuous walking is one action, considered in the natural order, but it may resolve itself into many actions, considered in the moral order, if a change take place in the walker's will, for the will is the principle of moral actions. If therefore we consider an action in the moral order, it is impossible for it to be morally both good and evil. But if it be one as to natural and not moral unity, it can be both good and evil.

Reply Obj. 1. This continual movement which proceeds from various intentions, although it is one in the natural order, is not one in the point of moral unity.

Reply Obj. 2. Action and passion belong to the moral order, in so far as they are voluntary. And therefore in so far as they are voluntary in respect of wills that differ, they are two distinct things, and good can be in one of them, while evil is in the other.

Reply Obj. 3. The action of the servant, in so far as it proceeds from the will of the servant, is not the master's action, but only in so far as it proceeds from the master's command. And so the evil will of the servant does not make the action evil in this respect.

[2] *Physics,* III, 3 (202[a]18).

QUESTION XXI

OF THE CONSEQUENCES OF HUMAN ACTIONS BY REASON OF THEIR GOODNESS AND MALICE

(In Four Articles)

WE have now to consider the consequences of human actions by reason of their goodness and malice, and under this head there are four points of inquiry: (1) Whether a human action is right or sinful by reason of its being good or evil? (2) Whether it thus deserves praise or blame? (3) Whether accordingly, it is meritorious or demeritorious? (4) Whether it is accordingly meritorious or demeritorious before God?

ARTICLE 1. *Whether a Human Action Is Right or Sinful, in so Far as It Is Good or Evil?*

We proceed thus to the First Article: It seems that a human action is not right or sinful, in so far as it is good or evil.

Objection 1. For "monsters are the sins of nature."[1] But monsters are not actions, but things engendered outside the order of nature. Now things that are produced according to art and reason imitate those that are produced according to nature.[2] Therefore an action is not sinful by reason of its being disordered and evil.

Obj. 2. Further, sin, as stated in the *Physics*,[3] occurs in nature and art, when the end intended by nature or art is not attained. But the goodness or malice of a human action depends, before all, on the intention of the end, and on its achievement. Therefore it seems that the malice of an action does not make it sinful.

Obj. 3. Further, if the malice of an action makes it sinful, it follows that wherever there is evil, there is sin. But this is false, since punishment is not a sin, although it is an evil. Therefore an action is not sinful by reason of its being evil.

On the contrary, As shown above (Q. XIX, A. 4), the goodness of a human action depends principally on the Eternal Law, and consequently its malice consists in its being in disaccord with the Eternal Law. But this is the very nature of sin; for Augustine says (*Contra Faust.* xxii)[4] that "sin is a word, deed, or desire, in opposition to the Eternal Law." Therefore a human action is sinful by reason of its being evil.

[1] Aristotle, *Physics*, II, 8 (199^b4).
[2] *Ibid.*, (199^a16). [3] *Ibid.*, (199^a33).
[4] Chap. 27 (PL 42, 418).

I answer that, Evil is more comprehensive than sin, as also is good than right. For every privation of good, in whatever subject, is an evil; but sin consists properly in an action done for a certain end, and lacking due order to that end. Now the due order to an end is measured by some rule. In things that act according to nature, this rule is the natural power that inclines them to that end. When therefore an action proceeds from a natural power, in accord with the natural inclination to an end, then the action is said to be right, since the means does not exceed its limits, that is, the action does not swerve from the order of its active principle to the end. But when an action strays from this rightness, it comes under the notion of sin.

Now in those things that are done by the will, the proximate rule is the human reason, while the supreme rule is the Eternal Law. When, therefore, a human action tends to the end, according to the order of reason and of the Eternal Law, then that action is right; but when it turns aside from that rightness, then it is said to be a sin. Now it is evident from what has been said (Q. XIX, AA. 3, 4) that every voluntary action that turns aside from the order of reason and of the Eternal Law, is evil, and that every good action is in accord with reason and the Eternal Law. Hence it follows that a human action is right or sinful by reason of its being good or evil.

Reply Obj. 1. Monsters are called sins in so far as they result from a sin in nature's action.

Reply Obj. 2. The end is twofold; the last end, and the proximate end. In the sin of nature, the action does indeed fail in respect of the last end, which is the perfection of the thing generated; but it does not fail in respect of any proximate end whatever, since when nature works it forms something. In like manner, the sin of the will always fails as regards the last end intended, because no voluntary evil action can be ordered to happiness, which is the last end; and yet it does not fail in respect of some proximate end, which is intended and achieved by the will. Therefore also, since the very intention of this end is ordered to the last end, this same intention may be right or sinful.

Reply Obj. 3. Each thing is ordered to its end by its action, and therefore sin, which consists in straying from the order to the end, consists properly in an action. On the other hand, punishment regards the person of the sinner, as was stated in the First Part (Q. XLVIII, A. 5. Reply 4; A. 6. Reply 3).

ARTICLE 2. *Whether a Human Action Deserves Praise or Blame, by Reason of Its Being Good or Evil?*

We proceed thus to the Second Article: It would seem that a human action does not deserve praise or blame by reason of its being good or evil.

Objection 1. For "sin happens even in things done by nature."[1] And yet natural things are not deserving of praise or blame.[2] Therefore a human action does not deserve blame by reason of its being evil or sinful; and, consequently, neither does it deserve praise by reason of its being good.

Obj. 2. Further, just as sin occurs in moral actions, so does it happen in the productions of art, because as stated in the *Physics*,[3] "it is a sin in a grammarian to write badly, and in a doctor to give the wrong medicine." But the artist is not blamed for making something bad, because the artist's work is such that he can produce a good or a bad thing, just as he wishes. Therefore it seems that neither is there any reason for blaming a moral action in the fact that it is evil.

Obj. 3. Further, Dionysius says (*Div. Nom.* iv)[4] that "evil is weak and powerless." But weakness or inability either takes away or diminishes guilt. Therefore a human action does not incur guilt from being evil.

On the contrary, The Philosopher says[5] that virtuous deeds deserve praise, while deeds that are opposed to virtue deserve censure and blame. But good actions are virtuous, because "virtue makes that which has it good, and makes its operation good" as stated in the *Ethics*.[6] And so actions opposed to virtue are evil. Therefore a human action deserves praise or blame through being good or evil.

I answer that, Just as evil is more comprehensive than sin, so is sin more comprehensive than blame (culpa). For an action is said to deserve praise or blame from its being imputed to the agent; for to praise or to blame means nothing else than to impute to someone the malice or goodness of his action. Now an action is imputed to an agent when it is in his power, so that he has dominion over it. And this is the case in all voluntary acts, because it is through his will that man has dominion over his actions, as was made clear above (Q. I, AA. 1, 2). Hence it follows that good or evil, in voluntary actions alone, renders them worthy of praise or blame; and in actions of this kind, evil, sin and guilt are one and the same thing.

Reply Obj. 1. Natural actions are not in the power of the natural agent, since the action of nature is determined to one thing. And, therefore, although there be sin in natural actions, there is no blame.

Reply Obj. 2 Reason stands in different relations to the productions of art and to moral actions. In matters of art, reason is directed to a particular end, which is something devised by reason, while in moral matters, it is directed to the general end of all human life. Now a particular end is ordered to the general end. Since therefore sin is a departure from the order to the end, as stated above (A. 1), sin may occur in two ways in a production of art. First, by a departure from the particular end intended by the artist, and this sin will be proper to the art; for instance, if an artist produce a bad thing while intending to produce something good, or produce something good while intending to produce something bad. Secondly, by a departure from the general end of human life, and then he will be said to sin if he intend to produce a bad work, and does so in effect, so that another is thus deceived. But this sin is not proper to the artist as such, but as a man. Consequently for the former sin the artist is blamed as an artist, while for the latter he is blamed as a man. On the other hand, in moral matters, where we take into consideration the order of reason to the general end of human life, sin and evil are always due to a departure from the order of reason to the general end of human life. Therefore man is blamed for such a sin both as man and as a moral being. Hence the Philosopher says[7] that "in art, he who sins voluntarily is preferable"; but in prudence, as in the moral virtues, which prudence directs, he is less preferable.

Reply Obj. 3. Weakness that occurs in voluntary evils is subject to man's power, and so it neither takes away nor diminishes guilt.

ARTICLE 3. *Whether a Human Action Is Meritorious or Demeritorious, In So Far As It Is Good or Evil?*

We proceed thus to the Third Article: It would seem that a human action is not meritorious or demeritorious on account of its goodness or malice.

[1] Aristotle, *Physics*, II, 8 (199^a35).
[2] Aristotle, *Ethics*, III, 5 (1144^a23).
[3] Aristotle, II, 8 (199^a33).
[4] Sect. 31 (PG 3, 732).
[5] *Virtues and Vices*, I (1249^a28); cf. *Ethics*, III, 1 (1109^b31); IV, 5 (1127^b4).
[6] Aristotle, II, 6 (1106^a15).
[7] *Ethics*, VI, 5 (1140^b22).

Objection 1. For we speak of merit or demerit in relation to retribution, which has no place save in matters relating to another person. But good or evil actions are not all related to another person, for some are related to the person of the agent. Therefore not every good or evil human action is meritorious or demeritorious.

Obj. 2. Further, no one deserves punishment or reward for doing as he chooses with that of which he is master; thus if a man destroys what belongs to him, he is not punished, as if he had destroyed what belongs to another. But man is master of his own actions Therefore a man does not merit punishment or reward through putting his action to a good or evil purpose.

Obj. 3. Further, if a man acquire some good for himself, he does not on that account deserve to be benefited by another man, and the same applies to evil Now a good action is itself a kind of good and perfection of the agent, while a disordered action is his evil Therefore a man does not merit or demerit from the fact that he does a good or an evil deed.

On the contrary, It is written (Isa. 3. 10, 11): *Say to the just man that it is well; for he shall eat the fruit of his doings. Wo to the wicked unto evil; for the reward of his hands shall be given him.*

I answer that, We speak of merit and demerit in relation to retribution rendered according to justice. Now, retribution according to justice is rendered to a man by reason of his having done something to another's advantage or hurt. It must, moreover, be observed that every individual member living in a society is, in a way, a part and member of the whole society. Therefore, any good or evil done to the member of a society, redounds on the whole society; thus, who hurts the hand, hurts the man. When, therefore, anyone does good or evil to another individual, there is a twofold measure of merit or demerit in his action: first, in respect of the retribution owed to him by the individual to whom he has done good or harm; secondly, in respect of the retribution owed to him by the whole of society. Now when a man orders his action directly for the good or evil of the whole society, retribution is owed to him, before and above all, by the whole society; secondarily, by all the parts of society. But when a man does that which conduces to his own benefit or disadvantage, then again is retribution owed to him, in so far as this too affects the community, according as he is a part of society, although retribution is not due to him, in so far as it conduces to the good or harm of an individual, who is identical with the agent; unless, perhaps, he owe retribution to himself, by a sort of resemblance, in so far as man is said to be just to himself.

It is therefore evident that a good or evil action deserves praise or blame, in so far as it is in the power of the will; that it is right or sinful, according as it is ordered to the end; and that its merit or demerit depends on the recompense for justice or injustice towards another.

Reply Obj. 1. Sometimes a man's good or evil actions, although not ordered to the good or evil of another individual, are nevertheless ordered to the good or evil of that other which is the community.

Reply Obj. 2. Man is master of his actions; and yet, in so far as he belongs to another, that is, the community, of which he forms part, he merits or demerits, in so far as he disposes his actions well or ill; just as if he were to dispense well or ill other belongings of his in respect of which he is bound to serve the community.

Reply Obj. 3. This very good or evil which a man does to himself by his action redounds to the community, as stated above.

ARTICLE 4. *Whether a Human Action Is Meritorious or Demeritorious before God, According as It Is Good or Evil?*

We proceed thus to the Fourth Article: It would seem that man's actions, good or evil, are not meritorious or demeritorious in the sight of God.

Objection 1. Because, as stated above (A. 3), merit and demerit imply relation to retribution for good or harm done to another But a man's action, good or evil, does no good or harm to God; for it is written (Job 35. 6, 7): *If thou sin, what shalt thou hurt Him? . . . And if thou do justly, what shalt thou give Him?* Therefore a human action, good or evil, is not meritorious or demeritorious in the sight of God.

Obj. 2. Further, an instrument acquires no merit or demerit in the sight of him that uses it, because the entire action of the instrument belongs to the user. Now when man acts he is the instrument of the Divine power which is the principal cause of his action; hence it is written (Isa 10. 15): *Shall the axe boast itself against him that cutteth with it? Or shall the saw exalt itself against him by whom it is drawn?* where man while acting is evidently compared to an instrument. Therefore man merits or demerits nothing in God's sight, by good or evil deeds.

Obj. 3. Further, a human action acquires

merit or demerit through being ordered to someone else. But not all human actions are ordered to God. Therefore not every good or evil action acquires merit or demerit in God's sight.

On the contrary, It is written (Eccles. 12. 14): *All things that are done, God will bring into judgment . . . whether it be good or evil.* Now judgment implies retribution, in respect of which we speak of merit and demerit. Therefore every human action, both good and evil, has the character of merit or demerit in God's sight.

I answer that, A man's action, as stated above (A. 3), acquires merit or demerit through being ordered to someone else, either by reason of himself, or by reason of the community; and in each way, our actions, good and evil, acquire merit or demerit in the sight of God. On the part of God Himself, in so far as He is man's last end; and it is our duty to refer all our actions to the last end, as stated above (Q. XIX, A. 10). Consequently whoever does an evil deed, not referable to God, does not give God the honour due to Him as our last end. On the part of the whole community of the universe, because in every community, he who governs the community, cares, first of all, for the common good; and so it is his business to award retribution for such things as are done well or ill in the community. Now God is the governor and ruler of the whole universe, as stated in the First Part (Q. CIII, A. 5), and especially of rational creatures. Consequently it is evident that human actions acquire merit or demerit in reference to Him; otherwise it would follow that human actions are no business of God's.

Reply Obj. 1. God in Himself neither gains nor loses anything by the action of man. But man, for his part, takes something from God, or offers something to Him, when he observes or does not observe the order instituted by God.

Reply Obj. 2. Man is so moved as an instrument by God, that at the same time he moves himself by his free choice, as was explained above (Q. IX, A. 6. Reply 3). Consequently, by his action he acquires merit or demerit in God's sight.

Reply Obj. 3. Man is not ordered to the body politic according to all that he is and has; and so it does not follow that every action of his acquires merit or demerit in relation to the body politic. But all that man is, and can, and has, must be ordered to God; and therefore every action of man, whether good or bad, acquires merit or demerit in the sight of God, from the very character itself of the act.

2. Of the Passions, Which Are Acts Common to Man and Other Animals

(a) *In General*

QUESTION XXII

Of the Subject of the Soul's Passions

(In Three Articles)

We must now consider the passions of the soul: first, in general; secondly, in particular (Q. XXVI). Taking them in general, there are four things to be considered: (1) Their subject; (2) The difference between them (Q. XXIII); (3) Their mutual relationship (Q. XXV); (4) Their malice and goodness (Q. XXIV).

Under the first head there are three points of inquiry: (1) Whether there is any passion in the soul? (2) Whether passion is in the appetitive rather than in the apprehensive part? (3) Whether passion is in the sensitive appetite rather than in the intellectual appetite, which is called the will?

Article 1. *Whether Any Passion Is in the Soul?*

We proceed thus to the First Article: It seems that there is no passion in the soul.

Objection 1. Because to be passive is proper to matter. But the soul is not composed of matter and form, as stated in the First Part (Q. LXXV, A. 5). Therefore there is no passion in the soul.

Obj. 2. Further, passion is movement, as is stated in the *Physics.*[1] But the soul is not moved, as is proved in the book on the *Soul.*[2] Therefore passion is not in the soul.

Obj. 3. Further, passion is the road to corruption; for "every passion, when increased, alters the substance," as is stated in the *Topics.*[3] But

[1] Aristotle, III, 3 (202ᵃ25).
[2] Aristotle, I, 3 (406ᵃ12).
[3] Aristotle, VI, 6 (145ᵃ3).

the soul is incorruptible. Therefore no passion is in the soul.

On the contrary, The Apostle says (Rom. 7. 5): *When we were in the flesh, the passions of sins which were by the law, did work in our members.* Now sins are, properly speaking, in the soul. Therefore passions also, which are described as being *of sins,* are in the soul.

I answer that, The word *passive* is used in three ways. First, in a general way, according as whatever receives something is passive, even though nothing is taken from it; thus we may say that the air is passive when it is lit up But this is to be perfected rather than to be passive. Secondly, the word passive is employed in its proper sense, when something is received, while something else is taken away, and this happens in two ways. For sometimes that which is lost is unsuitable to the thing; thus when an animal's body is healed, it is said to be passive, because it receives health, and loses sickness. At other times the contrary occurs; thus to ail is to be passive, because the ailment is received and health is lost. And here we have passion in its most proper acceptation. For a thing is said to be passive from its being drawn to the agent, and when a thing recedes from what is suitable to it, then especially does it appear to be drawn to something else Moreover in the treatise on *Generation and Corruption,*[1] it is stated that when a more excellent thing is generated from a less excellent, we have generation absolutely, and corruption relatively But the reverse is the case, when from a more excellent thing a less excellent is generated In these three ways it happens that passions are in the soul. For in the sense of reception only, we speak of "feeling and understanding as being a kind of passion."[2] But passion accompanied by the loss of something is only in respect of a bodily change; and so passion properly so called cannot be in the soul, save accidentally, in so far, namely, as the composite is passive. But here again we find a difference, because when this change is for the worse, it has more of the nature of a passion than when it is for the better; hence sorrow is more properly a passion than joy.

Reply Obj. 1. It is proper to matter to be passive in such a way as to lose something and to be changed; hence this is found only in those things that are composed of matter and form But to be passive according as it implies reception only need not be in matter but can be in anything that is in potency. Now, though the soul is not composed of matter and form, yet it has something of potentiality, in respect of which it is fitting to it to receive or to be passive, according as the act of understanding is a kind of passion, as stated in the book on the *Soul.*[3]

Reply Obj. 2. Although it does not belong to the soul in itself to be passive and to be moved, yet it belongs to it accidentally, as stated in the book on the *Soul.*[4]

Reply Obj. 3. This argument is true of passion accompanied by change to something worse. And passion, in this sense, is not found in the soul, except accidentally; but the composite, which is corruptible, admits of it by reason of its own nature.

ARTICLE 2. *Whether Passion Is in the Appetitive Rather Than in the Apprehensive Part?*

We proceed thus to the Second Article: It would seem that passion is in the apprehensive part of the soul rather than in the appetitive.

Objection 1. Because that which is first in any genus, seems to rank first among all things that are in that genus, and to be their cause, as is stated in the *Metaphysics.*[5] Now passion is found to be in the apprehensive before being in the appetitive part. For the appetitive part is not affected unless there be a previous passion in the apprehensive part. Therefore passion is in the apprehensive part more than in the appetitive.

Obj 2 Further, what is more active seems to be less passive; for action is contrary to passion. Now the appetitive part is more active than the apprehensive. Therefore it seems that passion is more in the apprehensive part.

Obj. 3. Further, just as the sensitive appetite is the power of a corporeal organ, so is the power of sensitive apprehension. But passion in the soul occurs, properly speaking, in respect of a bodily change. Therefore passion is not more in the appetitive than in the apprehensive part.

On the contrary, Augustine says[6] that "the movements of the soul, which the Greeks call πάθη, are styled by some of our writers, Cicero for instance,[7] disturbances; by some, affections or emotions; while others rendering the Greek more accurately, call them passions." From this it is evident that the passions of the soul are the same as affections. But affections manifestly pertain to the appetitive, and not to the ap-

[6] *City of God,* IX, 4 (PL 41, 258).
[7] *Tusc.,* IV, 5.

prehensive part. Therefore the passions are in the appetitive rather than in the apprehensive part.

I answer that, As we have already stated (A. 1) the word passion implies that the patient is drawn to that which belongs to the agent. Now the soul is drawn to a thing by the appetitive power rather than by the apprehensive power, because the soul has, through its appetitive power, an order to things as they are in themselves. Hence the Philosopher says[1] that "good and evil," that is, the objects of the appetitive power, "are in things themselves." On the other hand the apprehensive power is not drawn to a thing as it is in itself, but knows it according to an intention of the thing, which intention it has in itself, or receives in its own way. Hence, we find it stated[2] that "the true and the false," which pertain to knowledge, "are not in things, but in the mind." Consequently it is evident that the notion of passion is found rather in the appetitive than in the apprehensive part.

Reply Obj. 1. In things relating to perfection the case is the opposite, in comparison to things that pertain to defect. Because in things relating to perfection, intensity is in proportion to the approach to one first principle, to which the nearer a thing approaches, the more intense it is. Thus the intensity of a thing possessed of light depends on its approach to something endowed with light in a supreme degree, to which the nearer a thing approaches, the more light it possesses. But in things that relate to defect, intensity depends not on approach to something supreme but in receding from that which is perfect, because in this consists the very notion of privation and defect. Therefore the less a thing recedes from that which stands first, the less intense it is; and the result is that at first we always find some small defect, which afterwards increases as it goes on. Now passion pertains to defect, because it belongs to a thing according as it is in potency. Therefore in those things that approach to the Supreme Perfection, namely, to God, there is but little potency and passion; while in other things, consequently, there is more. Hence also, in the supreme power, that is, the apprehensive, power of the soul, passion is found less than in the other powers.

Reply Obj. 2. The appetitive power is said to be more active because it is, more than the apprehensive power, the principle of the exterior action; and this from the very fact that it is more passive through being related to things as they are in themselves, since it is through the external action that we attain to things.

Reply Obj. 3. As stated in the First Part (Q. LXXVIII, A. 3), the organs of the soul can be changed in two ways. First, by a spiritual change, in respect of which the organ receives an intention of the thing. And this is essential to the act of the sensitive power of apprehension; thus the eye is changed by the visible thing, not by being coloured, but by receiving an intention of colour. But the organs are receptive of another natural change, which affects their natural disposition; for instance, when they become hot or cold, or undergo some similar change. And this kind of change is accidental to the act of the sensitive power of apprehension; for instance, if the eye be wearied through gazing intently at something, or be overcome by the intensity of the object. On the other hand, this kind of change is essential to the act of the sensitive appetite; and so the material element in the definitions of the movements of the appetitive part is the natural change of the organ; for instance, anger is said to be "a kindling of the blood about the heart."[3] Hence it is evident that the notion of passion is found more in the act of the sensitive appetite than in that of the sensitive apprehension, although both are actions of a corporeal organ.

ARTICLE 3. *Whether Passion Is in the Sensitive Appetite Rather Than in the Intellectual Appetite, Which Is Called the Will?*

We proceed thus to the Third Article: It would seem that passion is not more in the sensitive than in the intellectual appetite.

Objection 1. For Dionysius declares (*Div. Nom.* ii)[4] Hierotheus "to be taught by a kind of yet more Godlike instruction; not only by learning Divine things, but also by suffering (*patiens*) them." But the sensitive appetite cannot suffer Divine things, since its object is the sensible good. Therefore passion is in the intellectual appetite, just as it is also in the sensitive appetite.

Obj. 2. Further, the more powerful the active force, the more intense the passion. But the object of the intellectual appetite, which is the universal good, is a more powerful active force than the object of the sensitive appetite, which is a particular good. Therefore passion is found

[1] *Metaphysics*, VI, 4 (1027[b]25).
[2] *Ibid.*
[3] Aristotle, *Soul*, I, 1 (403[a]31); cf. below, Q. XLVIII, A. 2, Arg. on the Contrary; Damascene, *De Fide Orth.*, II, 16 (PG 94, 932).
[4] Sect. 9 (PG 3, 648).

more in intellectual than in the sensitive appetite.

Obj. 3. Further, joy and love are said to be passions. But these are to be found in the intellectual and not only in the sensitive appetite; otherwise they would not be ascribed by the Scriptures to God and the angels. Therefore the passions are not more in the sensitive than in the intellectual appetite.

On the contrary, Damascene says (*De Fide Orthod.* ii, 22),[1] while describing the animal passions: "Passion is a movement of the sensitive appetite when we imagine good or evil; in other words, passion is a movement of the irrational soul, when we think of good or evil."

I answer that, As stated above (A. 1) passion is properly to be found where there is corporeal change. This corporeal change is found in the act of the sensitive appetite, and is not only spiritual, as in the sensitive apprehension, but also natural. Now there is no need for corporeal change in the act of the intellectual appetite because this appetite is not the power of a corporeal organ. It is therefore evident that the notion of passion is found more properly in the act of the sensitive appetite than in that of the intellectual appetite; and this is again evident from the definitions of Damascene quoted above.

Reply Obj. 1. By suffering Divine things is meant being well affected towards them, and united to them by love, and this takes place without any alteration in the body.

Reply Obj. 2. Intensity of passion depends not only on the power of the agent, but also on the passibility of the patient, because things that are disposed to passion suffer much even from petty agents. Therefore although the object of the intellectual appetite has greater activity than the object of the sensitive appetite, yet the sensitive appetite is more passive.

Reply Obj. 3. When love and joy and the like are ascribed to God or the angels, or to man in respect of his intellectual appetite, they signify simple acts of the will having like effects, but without passion. Hence Augustine says:[2] "The holy angels feel no anger while they punish . . ., no fellow-feeling with misery while they relieve the unhappy; and yet ordinary human speech is accustomed to ascribe to them also these passions by name, because, although they have none of our weakness, their acts bear a certain resemblance to ours.

[1] PG 94, 941; cf. also Nemesius, *De Nat. Hom.*, 16 (PG 40, 673).

QUESTION XXIII

How the Passions Differ from One Another

(In Four Articles)

We must now consider how the passions differ from one another, and under this head there are four points of inquiry: (1) Whether the passions of the concupiscible part are different from those of the irascible part? (2) Whether the contrariety of passions in the irascible part is based on the contrariety of good and evil? (3) Whether there is any passion that has no contrary? (4) Whether, in the same power there are any passions differing in species but not contrary to one another?

Article 1. *Whether the Passions of the Concupiscible Part Are Different From Those of the Irascible Part?*

We proceed thus to the First Article: It seems that the same passions are in the irascible and concupiscible parts.

Objection 1. For the Philosopher says[3] that "the passions of the soul are those which are followed by joy or sorrow." But joy and sorrow are in the concupiscible part. Therefore all the passions are in the concupiscible part, and not some in the irascible, others in the concupiscible part.

Obj. 2. Further, on the words of Matt. 13. 33, *The kingdom of heaven is like to leaven,* etc., the gloss of Jerome says:[4] "We should have prudence in the reason; hatred of vice, in the irascible part; desire of virtue, in the concupiscible part." But hatred is in the concupiscible part, as also is love, of which it is the contrary, as is stated in the *Topics.*[5] Therefore the same passion is in the concupiscible and irascible parts.

Obj. 3. Further, passions and actions differ specifically according to their objects. But the objects of the irascible and concupiscible passions are the same, namely, good and evil. Therefore the same passions are in the irascible and concupiscible parts.

On the contrary, The acts of different powers differ in species; for instance, to see, and to hear. But the irascible and the concupiscible are two powers into which the sensitive appetite is divided, as stated in the First Part (Q. LXXXI, A. 2). Therefore, since the passions are movements of the sensitive appetite, as stated above (Q.

[3] *Ethics*, II, 5 (1105^b23).
[4] PL 26, 94; *Glossa ordin.* (V, 46A).
[5] Aristotle, II, 7 (113^b1).

XXII, A. 3), the passions of the irascible part are specifically distinct from those of the concupiscible part.

I answer that, The passions of the irascible part differ in species from those of the concupiscible part. For since different powers have different objects, as stated in the First Part (Q. LXXVII, A. 3), the passions of different powers must of necessity be referred to different objects. Much more, therefore, do the passions of different powers differ in species, since a greater difference in the object is required to diversify the species of the powers than to diversify the species of passions or actions. For just as in the physical order, diversity of genus arises from diversity in the potency of matter, while diversity of species arises from diversity of form in the same matter, so in the acts of the soul, those that belong to different powers differ not only in species but also in genus, while acts and passions which concern different special objects, included under the one common object of a single power, differ as the species of that genus.

In order, therefore, to discern which passions are in the irascible and which in the concupiscible part, we must take the object of each of these powers. For we have stated in the First Part (Q. LXXXI, A. 2) that the object of the concupiscible power is sensible good or evil taken absolutely, that is, the pleasurable or the painful. But, since the soul must, of necessity, experience difficulty or struggle at times in acquiring some such good, or in avoiding some such evil, in so far as such good or evil is more than our animal nature can easily acquire or avoid, therefore this very good or evil, according as it is of an arduous or difficult character, is the object of the irascible part. Therefore whatever passions look to good or evil absolutely belong to the concupiscible part; for instance, joy, sorrow, love, hatred and the like. But those passions which have to do with good or bad as arduous, through being difficult to obtain or avoid, belong to the irascible part; such are daring, fear, hope and the like.

Reply Obj. 1. As stated in the First Part (Q. LXXXI, A. 2), the irascible power is bestowed on animals in order to remove the obstacles that hinder the concupiscible power from tending towards its object, either by making some good difficult to obtain, or by making some evil hard to avoid. The result is that all the irascible passions terminate in the concupiscible passions, and thus it is that the passions which are in the irascible part are followed by joy and sorrow which are in the concupiscible part.

Reply Obj. 2. Jerome ascribes hatred of vice to the irascible part, not by reason of hatred, which is properly a concupiscible passion, but on account of the struggle, which pertains to the irascible power.

Reply Obj. 3. Good, in so far as it is delightful, moves the concupiscible power. But if it prove difficult to obtain, from this very fact it has a certain contrariety to the concupiscible power, and hence the need of another power tending to that good. The same applies to evil. And this power is the irascible power. Consequently the concupiscible passions are specifically different from the irascible passions.

ARTICLE 2. *Whether the Contrariety of the Irascible Passions Is Based on the Contrariety of Good and Evil?*

We proceed thus to the Second Article: It seems that the contrariety of the irascible passions is based on no other contrariety than that of good and evil.

Objection 1. For the irascible passions are ordered to the concupiscible passions, as stated above (A. 1, ANS. 1). But the contrariety of the concupiscible passions is no other than that of good and evil; as for instance, love and hatred, joy and sorrow. Therefore the same applies to the irascible passions.

Obj. 2. Further, passions differ according to their objects, just as movements differ according to their terms. But there is no other contrariety of movements except that of the terms, as is stated in the *Physics.*[1] Therefore there is no other contrariety of passions save that of the objects. Now the object of the appetite is good or evil. Therefore in no appetitive power can there be contrariety of passions other than that of good and evil.

Obj. 3. Further, "every passion of the soul is by way of approach and withdrawal," as Avicenna declared in his sixth book of the *Physics.*[2] Now approach is caused by the aspect of good, withdrawal, by the aspect of evil, since just as "the good is what all desire,"[3] so evil is what all shun. Therefore, in the passions of the soul there can be no other contrariety than that of good and evil.

On the contrary, Fear and daring are contrary to one another, as stated in the *Ethics.*[4] But fear and daring do not differ in respect of good and evil, because each looks to some kind of evil. Therefore not every contrariety of the irascible passions is that of good and evil.

[1] Aristotle, V, 5 (229^a30). [2] *De An*, II, 3 (8ra).
[3] *Ethics*, I, 1 (1094^a3). [4] Aristotle, III, 7 (1116^b3).

I answer that, "Passion is a kind of movement," as stated in the *Physics.*[1] Therefore contrariety of passions must be based on contrariety of movements or changes. Now there is a twofold contrariety in changes and movements, as stated in the *Physics.*[2] One is according to approach and withdrawal in respect of the same term, and this contrariety belongs properly to changes, that is, to generation, which is a change to being; and to corruption, which is change from being. The other contrariety is according to opposition of terms, and belongs properly to movements; thus whitening, which is movement from black to white, is contrary to blackening, which is movement from white to black.

Accordingly there is a twofold contrariety in the passions of the soul: one, according to contrariety of objects, that is, of good and evil; the other, according to approach and withdrawal in respect of the same term. In the concupiscible passions the former contrariety alone is to be found; namely, that which is based on the objects. But in the irascible passions we find both forms of contrariety. The reason of this is that the object of the concupiscible power, as stated above (A. 1), is sensible good or evil considered absolutely. Now good, as such, cannot be a term from which, but only a term to which, since nothing shuns good as such, but on the contrary, all things desire it. In like manner, nothing desires evil, as such, but all things shun it. And so evil cannot have the aspect of a term to which, but only of a term from which. Accordingly every concupiscible passion in respect of good, tends to it, as love, desire and joy, while every concupiscible passion in respect of evil, tends from it, as hatred, avoidance or dislike, and sorrow. Therefore, in the concupiscible passions there can be no contrariety of approach and withdrawal in respect of the same object.

On the other hand, the object of the irascible power is sensible good or evil, considered not absolutely, but under the aspect of difficulty or arduousness as we have said above (A. 1) Now the good which is difficult or arduous, considered as good, is of such a nature as to produce in us a tendency to it, which tendency pertains to the passion of hope; but, considered as arduous or difficult, it makes us turn from it, and this pertains to the passion of despair. In like manner the arduous evil, considered as an evil, has the aspect of something to be shunned, and this belongs to the passion of fear. But it also contains a reason for tending to it, as attempting something arduous, in order to escape being subject to evil, and this tendency is called daring. Consequently in the irascible passions we find contrariety in respect of good and evil (as between hope and fear), and also contrariety according to approach and withdrawal in respect of the same term (as between daring and fear).

From what has been said the *replies to the objections* are evident.

[1] Aristotle, III, 3 (202[a]25). [2] Aristotle, V, 5 (229[b]20).

ARTICLE 3. *Whether Any Passion of the Soul Has No Contrary?*

We proceed thus to the Third Article: It would seem that every passion of the soul has a contrary.

Objection 1. For every passion of the soul is either in the irascible or in the concupiscible part, as stated above (A. 1). But both kinds of passions have their respective modes of contrariety. Therefore every passion of the soul has its contrary.

Obj. 2. Further, every passion of the soul has either good or evil for its object; for these are universally the objects of the appetitive part. But a passion having good for its object is contrary to a passion having evil for its object. Therefore every passion has a contrary.

Obj. 3. Further, every passion of the soul is in respect of approach or withdrawal, as stated above (A. 2). But every approach has a corresponding contrary withdrawal, and vice versa. Therefore every passion of the soul has a contrary.

On the contrary, Anger is a passion of the soul But no passion is set down as being contrary to anger, as stated in the *Ethics.*[3] Therefore not every passion has a contrary.

I answer that, The passion of anger is peculiar in this, that it cannot have a contrary, either according to approach and withdrawal, or according to the contrariety of good and evil. For anger is caused by a difficult evil already present, and when such an evil is present, the appetite must either succumb, so that it does not go beyond the limits of sadness, which is a concupiscible passion; or else it has a movement of attack on the hurtful evil, which movement is that of anger. But it cannot have a movement of withdrawal, because the evil is supposed to be already present or past. Thus no passion is contrary to the movement of anger according to contrariety of approach and withdrawal.

In like manner neither can there be according to contrariety of good and evil. Because the opposite of present evil is good obtained, which can no longer have the aspect of arduousness or

[3] Aristotle, IV, 5 (1125[b]26).

difficulty. Nor, when once good is obtained, does there remain any other movement except the appetite's repose in the good obtained; and this repose belongs to joy, which is a passion of the concupiscible faculty.

Accordingly no movement of the soul can be contrary to the movement of anger, and nothing else than cessation from its movement is its contrary. Thus the Philosopher says[1] that "calm is contrary to anger," by opposition not of contrariety but of negation or privation.

From what has been said the *replies to the objections* are evident.

ARTICLE 4. *Whether in the Same Power There Are Any Passions Specifically Different, but Not Contrary to One Another?*

We proceed thus to the Fourth Article: It seems that there cannot be in the same power specifically different passions that are not contrary to one another.

Objection 1. For the passions of the soul differ according to their objects. Now the objects of the soul's passions are good and evil, and on this distinction is based the contrariety of the passions. Therefore no passions of the same power that are not contrary to one another differ specifically.

Obj. 2. Further, difference of species implies a difference of form. But every difference of form is in respect of some contrariety, as stated in the *Metaphysics*.[2] Therefore passions of the same power that are not contrary to one another do not differ specifically.

Obj. 3. Further, since every passion of the soul consists in approach or withdrawal in respect of good or evil, it seems that every difference in the passions of the soul must arise from the difference of good and evil, or from the difference of approach and withdrawal, or from degrees in approach or withdrawal. Now the first two differences cause contrariety in the passions of the soul, as stated above (A. 2). But the third difference does not diversify the species, for thus the species of the soul's passions would be infinite. Therefore it is not possible for passions of the same power to differ in species without being contrary to one another.

On the contrary, Love and joy differ in species, and are in the concupiscible power; and yet they are not contrary to one another; rather, in fact, one causes the other. Therefore in the same power there are passions that differ in species without being contrary to one another.

I answer that, Passions differ according to their active causes, which are the objects of the soul's passions. Now active causes are differentiated in two ways. First, in respect of their species or nature; thus fire differs from water. Secondly in respect of a difference in their active powers. And the difference of active or moving causes, in respect of their moving powers, can be applied to the passions of the soul, according to the likeness to natural agents. For every mover, in a fashion, either draws the patient to itself, or drives it back. Now in drawing it to itself, it does three things in the patient. Because, in the first place, it gives the patient an inclination or aptitude to tend to the mover; thus a light body, which is above, bestows lightness on the body generated, so that it has an inclination or aptitude to be above. Secondly, if the generated body be outside its proper place, the mover gives it movement towards that place. Thirdly, it makes it to rest when it shall have come to its proper place, since to the same cause both rest in a place and the movement to that place are due. The same applies to the cause of repulsion.

Now, in the movements of the appetitive part, good has, as it were, a power of attraction, while evil has a power of repulsion. Primarily, therefore, good causes, in the appetitive power, a certain inclination, aptitude or connaturalness for good; and this belongs to the passion of love, the corresponding contrary of which is hatred in respect of evil. Secondly, if the good be not yet possessed, it causes in the appetite a movement towards the attainment of the good loved, and this pertains to the passion of desire or concupiscence; and contrary to it, in respect of evil, is the passion of aversion or dislike. Thirdly, when the good is obtained, it causes the appetite to rest, as it were, in the good obtained, and this pertains to the passion of delight or joy; the contrary of which, in respect of evil, is sorrow or sadness.

On the other hand, in the irascible passions, the aptitude, or inclination to seek good, or to shun evil, is presupposed as arising from the concupiscible part, which regards good or evil absolutely. And in respect of good not yet obtained, we have hope and despair. In respect of evil not yet present we have fear and daring. But in respect of good obtained there is no irascible passion, because it no longer has the character of something arduous, as stated above (A. 3). But evil already present gives rise to the passion of anger.

Accordingly it is clear that in the concupiscible part there are three pairs of passions; namely, love and hatred, desire and aversion, joy and

[1] *Rhetoric*, II, 3 (1380[a]5). [2] Aristotle, X, 8 (1058[a]7).

sadness. In like manner there are three groups in the irascible part; namely, hope and despair, fear and daring, and anger which has no contrary passion.

Consequently there are altogether eleven passions differing specifically, six in the concupiscible part, and five in the irascible; and under these all the passions of the soul are contained.

From this the *replies to the objections* are evident.

QUESTION XXIV

OF GOOD AND EVIL IN THE PASSIONS OF THE SOUL

(In Four Articles)

WE must now consider good and evil in the passions of the soul, and under this head there are four points of inquiry: (1) Whether moral good and evil can be found in the passions of the soul? (2) Whether every passion of the soul is morally evil? (3) Whether every passion increases or decreases the goodness or malice of an act? (4) Whether any passion is good or evil specifically?

ARTICLE 1. *Whether Moral Good and Evil Can Be Found in the Passions of the Soul?*

We proceed thus to the First Article: It seems that no passion of the soul is morally good or evil.

Objection 1. For moral good and evil are proper to man, since morals are properly predicated of man," as Ambrose says (*Super Luc., Prolog*) [1] But passions are not proper to man, for he has them in common with other animals. Therefore no passion of the soul is morally good or evil

Obj. 2. Further, the good or evil of man consists in being in accord, or in disaccord with reason, as Dionysius says (*Div Nom.* iv).[2] Now the passions of the soul are not in the reason, but in the sensitive appetite, as stated above (Q. XXII, A. 3). Therefore they do not pertain to human, that is, moral, good or evil.

Obj. 3 Further, the Philosopher says[3] that "we are neither praised nor blamed for our passions." But we are praised and blamed for moral good and evil. Therefore the passions are not morally good or evil.

On the contrary, Augustine says while speaking of the passions of the soul: "They are evil if our love is evil; good if our love is good."[4]

I answer that, We may consider the passions of the soul in two ways: first, in themselves; secondly, as being subject to the command of the reason and will. If then the passions be considered in themselves, namely, as movements of the irrational appetite, thus there is no moral good or evil in them, since this depends on the reason, as stated above (Q. XVIII, A. 5). If, however, they be considered as subject to the command of the reason and will, then moral good and evil are in them. For the sensitive appetite is nearer than the outward members to the reason and will, and yet the movements and actions of the outward members are morally good or evil according as they are voluntary. Much more, therefore, may the passions, in so far as they are voluntary, be called morally good or evil. And they are said to be voluntary either from being commanded by the will or from not being checked by the will.

Reply Obj. 1. These passions, considered in themselves, are common to man and other animals; but, as commanded by the reason, they are proper to man.

Reply Obj. 2. Even the lower appetitive powers are called rational, in so far as "they partake of reason in some sort."[5]

Reply Obj. 3. The Philosopher says that we are neither praised nor blamed for our passions considered absolutely; but he does not exclude their becoming worthy of praise or blame, in so far as they are subordinate to reason. Hence he continues: "For the man who fears or is angry, is not praised . . . or blamed, but the man who fears or is angry in a certain way, that is, according to, or against reason."

ARTICLE 2. *Whether Every Passion of the Soul Is Evil Morally?*

We proceed thus to the Second Article: It would seem that all the passions of the soul are morally evil.

Objection 1. For Augustine says that "some call the soul's passions diseases or disturbances of the soul."[6] But every disease or disturbance of the soul is morally evil. Therefore every passion of the soul is evil morally.

Obj. 2. Further, Damascene says (*De Fide Orthod.* ii, 22)[7] that "movement in accord with nature is an operation, but movement contrary to nature is passion." But in movements of the soul, what is against nature has the character of sin and moral evil; hence he says elsewhere[8]

[1] PL 15, 1612. [2] Sect. 32 (PG 3, 733).
[3] *Ethics*, II, 5 (1105^b31).
[4] *City of God*, XIV, 7 (PL 41, 410).
[5] Aristotle, *Ethics*, I, 13 (1102^b13).
[6] *City of God*, XIV, 5, 9 (PL 41, 408, 415).
[7] PG 94, 941. [8] *Ibid.*, II, 4 (PG 94, 876).

that "the devil turned from that which is in accord with nature to that which is against nature." Therefore these passions are morally evil.

Obj. 3. Further, whatever leads to sin has an aspect of evil. But these passions lead to sin; and thus they are called *the passions of sins* (Rom. 7. 5). Therefore it seems that they are morally evil.

On the contrary, Augustine says[1] that "all these emotions are right in those whose love is rightly placed. . . . For they fear to sin, they desire to persevere; they grieve for sin, they rejoice in good works."

I answer that, On this question the opinion of the Stoics differed from that of the Peripatetics, for the Stoics held that all passions are evil, while the Peripatetics maintained that moderate passions are good.[2] This difference, although it appears great in words, is nevertheless, in reality, none at all, or but little, if we consider the intent of either school. For the Stoics did not discern between sense and intellect, and consequently neither between the intellectual and sensitive appetite.[3] Hence they did not discriminate the passions of the soul from the movements of the will, in so far as the passions of the soul are in the sensitive appetite, while the simple movements of the will are in the intellectual appetite; but every rational movement of the appetitive part they called will, while they called passion a movement that exceeds the limits of reason. Therefore Tully, following their opinion (*Tusc.* iii, 4)[4] calls all passions diseases of the soul, from which he argues that those who are diseased are unsound, and that those who are unsound are wanting in sense. Hence we speak of those who are wanting in sense as being unsound (*insanus*).

On the other hand, the Peripatetics give the name of passions to all the movements of the sensitive appetite. And so they esteem them good when they are checked by reason, and evil when they are unchecked by reason. Hence it is evident that Tully was wrong in disapproving (*ibid.*) of the Peripatetic doctrine of a mean in the passions, when he says that "every evil, though moderate, should be shunned; for, just as a body, though it be moderately ailing, is not sound, so, this mean in the diseases or passions of the soul is not sound." For passions are not called diseases or disturbances of the soul save when they are unchecked by reason.

[1] *City of God,* XIV, 9 (PL 41, 413).

[2] Cf. Augustine, *City of God,* IX, 4, 5 (PL 41, 258, 261); Cicero, *De Finibus,* III, 12, 13 (DD III, 551, 552).

[3] Cf. Nemesius, *De Nat. Hom.,* 6 (PG 40, 633); Augustine, *Epist.,* CXVIII, 3 (PL 33, 440). [4] DD IV, 3.

Hence the *reply to the first objection* is evident.

Reply Obj. 2. In every passion there is an increase or decrease in the natural movement of the heart, according as the heart is moved more or less intensely by contraction and dilatation; and hence it derives the character of passion. But there is no need for passion to deviate always from the order of natural reason.

Reply Obj. 3. The passions of the soul, in so far as they are contrary to the order of reason, incline us to sin; but in so far as they are controlled by reason, they pertain to virtue.

ARTICLE 3. *Whether Passion Increases or Decreases the Goodness or Malice of an Act?*

We proceed thus to the Third Article: It seems that every passion always decreases the goodness of a moral action.

Objection 1. For anything that hinders the judgment of reason, on which depends the goodness of a moral act, consequently decreases the goodness of the moral act. But every passion hinders the judgment of reason; for Sallust says (*Catilin.*):[5] "All those that take counsel about matters of doubt, should be free from hatred, anger, friendship and pity." Therefore passion decreases the goodness of a moral act.

Obj. 2. Further, the more a man's action is like to God, the better it is; hence the Apostle says (Eph. 5. 1): *Be ye followers of God, as most dear children.* But "God and the holy angels feel no anger when they punish . . . no fellow-feeling with misery when they relieve the unhappy," as Augustine says.[6] Therefore it is better to do deeds of this kind without than with a passion of the soul.

Obj. 3. Further, just as moral evil depends on subordination to reason, so also does moral good. But moral evil is lessened by passion, for he sins less who sins from passion than he who sins deliberately. Therefore he does a better deed who does well without passion than he who does with passion.

On the contrary, Augustine says[7] that the passion of pity "is obedient to reason, when pity is bestowed without violating right, as when the poor are relieved, or the penitent forgiven." But nothing that is obedient to reason lessens the moral good. Therefore a passion of the soul does not lessen moral good.

I answer that, Since the Stoics held[8] that every passion of the soul is evil, they consequently

[5] Chap. 51 (BU 47).

[6] *City of God,* IX, 5 (PL 41, 261).

[7] *Ibid.* [8] Cf. Cicero, *Tuscul.,* III, 4 (DD IV, 2).

held that every passion of the soul lessens the goodness of an act, since the admixture of evil either destroys good altogether, or makes it to be less good. And this is true indeed, if by passions we understand none but the disorderly movements of the sensitive appetite, considered as disturbances or diseases. But if we give the name of passions absolutely to all the movements of the sensitive appetite, then it pertains to the perfection of man's good that his passions be moderated by reason. For since man's good is founded on reason as its root, that good will be all the more perfect according as it extends to more things pertaining to man. Therefore no one questions the fact that it pertains to the perfection of moral good that the actions of the outward members be controlled by the law of reason. Hence, since the sensitive appetite can obey reason, as stated above (Q. XVII, A. 7), it pertains to the perfection of moral or human good that the passions themselves also should be controlled by reason.

Accordingly just as it is better that man should both will good and do it in his external act, so also does it pertain to the perfection of moral good, that man should be moved to good not only in respect of his will, but also in respect of his sensitive appetite; according to Ps. 83. 3: *My heart and my flesh have rejoiced in the living God,* where by *heart* we are to understand the intellectual appetite, and by *flesh* the sensitive appetite.

Reply Obj. 1. The passions of the soul may stand in a twofold relation to the judgment of reason. First, antecedently, and thus, since they obscure the judgment of reason, on which the goodness of the moral act depends, they diminish the goodness of the act; for it is more praiseworthy to do a work of charity from the judgment of reason than from the mere passion of pity. In the second place, consequently, and this in two ways First, by way of superabundance, because, namely, when the higher part of the soul is intensely moved to anything, the lower part also follows that movement; and thus the passion that results in consequence, in the sensitive appetite, is a sign of the intensity of the will, and so indicates greater moral goodness. Secondly, by way of choice; when, namely, a man, by the judgment of his reason, chooses to be affected by a passion in order to work more promptly with the co-operation of the sensitive appetite And thus a passion of the soul increases the goodness of an action.

Reply Obj. 2. In God and the angels there is no sensitive appetite, nor again bodily members, and so in them good does not depend on the right ordering of passions or of bodily actions, as it does in us.

Reply Obj. 3. A passion that tends to evil and precedes the judgment of reason diminishes sin; but if it be consequent in either of the ways mentioned above (Ans. 1), it aggravates the sin, or else it is a sign of its being more grievous.

ARTICLE 4. *Whether Any Passion Is Good or Evil in Its Species?*

We proceed thus to the Fourth Article: It seems that no passion of the soul is morally good or evil according to its species.

Objection 1. For moral good and evil depend on reason. But the passions are in the sensitive appetite, so that accordance with reason is accidental to them. Since, therefore, nothing accidental belongs to a thing's species, it seems that no passion is good or evil according to its species.

Obj. 2. Further, acts and passions take their species from their object. If, therefore, any passion were good or evil according to its species, it would follow that those passions are specifically good, the object of which is good, such as love, desire and joy; and that those passions are specifically evil, the object of which is evil, such as hatred, fear and sadness. But this is clearly false. Therefore no passion is good or evil according to its species.

Obj 3. Further, there is no species of passion that is not to be found in other animals. But moral good is in man alone. Therefore no passion of the soul is good or evil according to its species.

On the contrary, Augustine says[1] that pity pertains to virtue. Moreover, the Philosopher says[2] that shame is a praiseworthy passion. Therefore some passions are good or evil according to their species.

I answer that, We ought, it seems, to apply to passions what has been said in regard to acts (Q. XVIII, AA. 5, 6; Q. XX, A 1)—namely, that the species of a passion, as the species of an act, can be considered from two points of view. First, according to its natural genus; and thus moral good and evil do not pertain to the species of an act or passion. Secondly, according to its moral genus, according as it is voluntary and controlled by reason. In this way moral good and evil can pertain to the species of a passion, in so far as the object to which a passion tends, is, of itself, in harmony or in discord with reason, as

[1] *City of God,* IX, 5 (PL 41, 260).
[2] *Ethics,* II, 7 (1108[a]32).

is clear in the case of shame which is base fear, and of envy which is sorrow for another's good; for thus passions pertain to the same species as the external act.

Reply Obj. 1. This argument considers the passions in their natural species, in so far as the sensitive appetite is considered in itself. But in so far as the sensitive appetite obeys reason, good and evil of reason are no longer accidentally in the passions of the appetite, but *per se.*

Reply Obj. 2. Passions having a tendency to good are themselves good if they tend to that which is truly good, and in like manner if they turn away from that which is truly evil. On the other hand, those passions which consist in aversion from good and a tendency to evil are themselves evil.

Reply Obj. 3. In irrational animals the sensitive appetite does not obey reason. Nevertheless, in so far as they are led by a kind of natural estimative power, which is subject to a higher, that is, the Divine, reason, there is a certain likeness of moral good in them, in regard to the soul's passions.

QUESTION XXV

OF THE ORDER OF THE PASSIONS TO ONE ANOTHER

(In Four Articles)

WE must now consider the order of the passions to one another, and under this head there are four points of inquiry: (1) The order of the irascible passions to the concupiscible passions. (2) The order of the concupiscible passions among themselves. (3) The order of the irascible passions among themselves. (4) The four principal passions.

ARTICLE 1. *Whether the Irascible Passions Precede the Concupiscible Passions, or Vice Versa?*

We proceed thus to the First Article: It seems that the irascible passions precede the concupiscible passions.

Objection 1. For the order of the passions is that of their objects. But the object of the irascible faculty is the difficult good, which seems to be the highest good. Therefore the irascible passions seem to precede the concupiscible passions.

Obj. 2. Further, the mover precedes that which is moved. But the irascible part is compared to the concupiscible, as mover to that which is moved; for it is given to animals, for the purpose of removing the obstacles that hinder the concupiscible part from enjoying its object, as stated above (Q. XXIII, A. 1. Reply 1; Part 1, Q. LXXXI, A. 2). Now that which removes an obstacle, is a kind of mover.[1] Therefore the irascible passions precede the concupiscible passions.

Obj. 3. Further, joy and sadness are concupiscible passions. But joy and sadness succeed to the irascible passions; for the Philosopher says[2] that "retaliation causes anger to cease, because it produces pleasure instead of the previous pain." Therefore the concupiscible passions follow the irascible passions.

On the contrary, The concupiscible passions look to the absolute good, while the irascible passions look to a restricted, namely, the difficult, good. Since, therefore, the absolute good precedes the restricted good, it seems that the concupiscible passions precede the irascible.

I answer that, In the concupiscible passions there is more diversity than in the passions of the irascible part. For in the former we find something relating to movement—for instance, desire; and something belonging to repose, for instance, joy and sadness. But in the irascible passions there is nothing pertaining to repose, and only that which belongs to movement. The reason of this is that when we find rest in a thing, we no longer look upon it as something difficult or arduous, which is the object of the irascible part.

Now since rest is the end of movement, it is first in the order of intention, but last in the order of execution. If, therefore, we compare the passions of the irascible part with those concupiscible passions that denote rest in good, it is evident that in the order of execution the irascible passions take precedence of the like passions of the concupiscible part; thus hope precedes joy, and hence causes it, according to the Apostle (Rom. 12. 12): *Rejoicing in hope.* But the concupiscible passion which denotes rest in evil, namely, sadness, comes between two irascible passions. For it follows fear, since we become sad when we are confronted by the evil that we feared; while it precedes the movement of anger, since the movement towards revenge that results from sadness is the movement of anger. And because it is looked upon as a good thing to pay back the evil done to us, when the angry man has achieved this he rejoices. Thus it is evident that every passion of the irascible part terminates in a concupiscible passion denoting rest, namely, either in joy or in sadness.

But if we compare the irascible passions to

[1] *Physics,* VIII, 4 (255^b24). [2] *Ethics,* IV, 5 (1126^a21).

those concupiscible passions that denote movement, then it is clear that the latter take precedence, because the passions of the irascible part add something to those of the concupiscible part, just as the object of the irascible adds the aspect of arduousness or difficulty to the object of the concupiscible part. Thus hope adds to desire a certain effort, and a certain raising of the soul to the realization of the arduous good. In like manner fear adds to flight or detestation a certain depression of the soul, on account of difficulty in shunning the evil.

Accordingly the passions of the irascible part stand between those concupiscible passions that denote movement towards good or evil and those concupiscible passions that denote rest in good or evil. And it is therefore evident that the irascible passions both arise from and terminate in the passions of the concupiscible part.

Reply Obj. 1. This argument would prove, if the notion of the object of the concupiscible part were something contrary to the arduous, just as the notion of the object of the irascible power is that which is arduous. But because the object of the concupiscible power is good absolutely, it naturally precedes the object of the irascible part, as the common precedes the proper.

Reply Obj. 2. The remover of an obstacle is not a per se but an accidental mover, while we are speaking here of passions as directly ordered to one another. Moreover, the irascible passion removes the obstacle that hinders the concupiscible from resting in its object. And so it only follows that the irascible passions precede those concupiscible passions that denote rest.

The third objection leads to the same conclusion.

ARTICLE 2. *Whether Love Is the First of the Concupiscible Passions?*

We proceed thus to the Second Article: It would seem that love is not the first of the concupiscible passions.

Objection 1. For the concupiscible power is called so from concupiscence, which is the same passion as desire. But "things are named from their chief characteristic."[1] Therefore desire takes precedence of love.

Obj. 2. Further, love implies a certain union, since it is "a uniting and binding force," as Dionysius states (*Div. Nom.* iv).[2] But concupiscence or desire is a movement towards union with the thing coveted or desired. Therefore desire precedes love.

[1] Aristotle, *Soul*, II, 4 (416^{b}23). [2] Sect. 12 (PG 3, 709).

Obj. 3. Further, the cause precedes its effect. But pleasure is sometimes the cause of love, since some love on account of pleasure.[3] Therefore pleasure precedes love, and consequently love is not the first of the concupiscible passions.

On the contrary, Augustine says[4] that all the passions are caused by love, since "love yearning for the beloved object, is desire; and, having and enjoying it, is joy." Therefore love is the first of the concupiscible passions.

I answer that, Good and evil are the object of the concupiscible part. Now good naturally precedes evil, since evil is the privation of good. Therefore all the passions, the object of which is good, are naturally before those the object of which is evil,—that is to say, each precedes its contrary passion, because the quest of a good is the reason for shunning the opposite evil.

Now good has the aspect of an end, and the end is indeed first in the order of intention, but last in the order of execution. Consequently the order of the concupiscible passions can be considered either in the order of intention or in the order of sequence. In the order of sequence, the first place belongs to that which occurs first in the thing that tends to the end. Now it is evident that whatever tends to an end, has, in the first place, an aptitude or proportion to that end, for nothing tends to a disproportionate end; secondly, it is moved to that end; thirdly, it rests in the end, after having attained it. And this very aptitude or proportion of the appetite to good is love, which is satisfaction in good, while movement towards good is desire or concupiscence, and rest in good is joy or pleasure. Accordingly in this order, love precedes desire, and desire precedes pleasure. But in the order of intention, it is the reverse, because the pleasure intended causes desire and love. For pleasure is the enjoyment of the good, which enjoyment is, in a way, the end, just as the good itself is, as stated above (Q. XI, A. 3. Reply 3).

Reply Obj. 1. We name a thing as we know it, for words are signs of thoughts, as the Philosopher states.[5] Now in most cases we know a cause by its effect. But the effect of love, when the object loved is possessed, is pleasure; when it is not possessed, it is desire or concupiscence. And, as Augustine says,[6] "we feel love more, when we lack that which we love." Consequently of all the concupiscible passions, concupis-

[3] Aristotle, *Ethics*, VIII, 3, 4 (1156^{a}12; ^{a}31; 1156^{b}33).
[4] *City of God*, XIV, 7 (PL 41, 410).
[5] *Interpretation*, I (16^{a}3).
[6] *De Trin.*, X, 12 (PL 42, 984).

cence is felt most; and for this reason the power is named after it.

Reply Obj. 2. The union of lover and the thing loved is twofold. There is real union, consisting in the joining of one with the other. This union pertains to joy or pleasure, which follows desire. There is also an affective union, consisting in an aptitude or proportion, in so far as one thing, from the very fact of its having an aptitude for and an inclination to another, partakes of it; and love implies such a union. This union precedes the movement of desire.

Reply Obj. 3. Pleasure causes love in so far as it precedes love in the order of intention.

ARTICLE 3. *Whether Hope Is the First of the Irascible Passions?*

We proceed thus to the Third Article: It would seem that hope is not the first of the irascible passions.

Objection 1. For the irascible part is denominated from anger. Since, therefore, things are named from their chief characteristic, it seems that anger precedes and surpasses hope.

Obj. 2. Further, the object of the irascible part is something arduous. Now it seems more arduous to strive to overcome a contrary evil that threatens soon to overtake us, which pertains to daring, or an evil actually present, which pertains to anger, than to strive absolutely to obtain some good. Again, it seems more arduous to strive to overcome a present evil than a future evil. Therefore anger seems to be a stronger passion than daring, and daring, than hope. And consequently it seems that hope does not surpass them.

Obj. 3. Further, when a thing is moved towards an end, the movement of withdrawal precedes the movement of approach. But fear and despair imply withdrawal from something, while daring and hope imply approach towards something. Therefore fear and despair precede hope and daring.

On the contrary, The nearer a thing is to the first, the more it precedes others. But hope is nearer to love, which is the first of the passions. Therefore hope is the first of the passions in the irascible part.

I answer that, As stated above (A. 1) all the irascible passions imply movement towards something. Now this movement in the irascible part towards something may be due to two causes: one is the mere aptitude or proportion to the end, and this pertains to love or hatred; the other is the presence of good or evil, and this pertains to sadness or joy. As a matter of fact, the presence of good produces no passion in the irascible, as stated above (Q. XXIII, AA. 3, 4), but the presence of evil gives rise to the passion of anger.

Since then in the order of generation or sequence, proportion or aptitude to the end precedes the achievement of the end, it follows that, of all the irascible passions, anger is the last in the order of generation. And among the other passions of the irascible part which imply a movement arising from love of good or hatred of evil, those whose object is good, namely, hope and despair, must naturally precede those whose object is evil, namely, daring and fear. And yet so that hope precedes despair, since hope is a movement towards good as such, which is of its very nature attractive, so that hope tends to good directly; but despair is a movement away from good, a movement which is consistent with good, not as such, but in respect of something else, and so its tendency from good is accidental, as it were. In like manner fear, through being a movement from evil, precedes daring. And that hope and despair naturally precede fear and daring is evident from this,—that as the desire of good is the reason for avoiding evil, so hope and despair are the reason for fear and daring, because daring arises from the hope of victory, and fear arises from the despair of overcoming. Lastly, anger arises from daring, for no one is angry while seeking vengeance, unless he dare to avenge himself, as Avicenna observes in the sixth book of his *Physics*.[1] Accordingly, it is evident that hope is the first of all the irascible passions.

And if we wish to know the order of all the passions in the way of generation, love and hatred are first; desire and aversion, second; hope and despair, third; fear and daring, fourth; anger, fifth; sixth and last, joy and sadness, which follow from all the passions, as stated in the *Ethics*,[2] yet so that love precedes hatred; desire precedes aversion; hope precedes despair; fear precedes daring; and joy precedes sadness, as may be gathered from what has been stated above. (A.A. 1, 2, 3).

Reply Obj. 1. Because anger arises from the other passions, as an effect from the causes that precede it, the power takes its name from anger as being more manifest than the other passions.

Reply Obj. 2. It is not the arduousness but the good that is the reason for approach or desire. Consequently hope which looks to good

[1] *De An.*, IV, 6 (22ra)

[2] Aristotle, II, 5 (1105^b23).

more directly, takes precedence, although at times daring or even anger looks to something more arduous.

Reply Obj. 3. The movement of the appetite is primarily and per se towards the good as to its proper object, and its movement from evil results from this. For the movement of the appetitive part is in proportion not to natural movement, but to the intention of nature, which intends the end before intending the removal of a contrary, which removal is desired only for the sake of obtaining the end.

ARTICLE 4. *Whether These Are the Four Principal Passions—Joy, Sadness, Hope and Fear?*

We proceed thus to the Fourth Article: It seems that joy, sadness, hope and fear are not the four principal passions.

Objection 1. For Augustine omits hope and puts desire in its place.[1]

Obj. 2. Further, there is a twofold order in the passions of the soul: the order of intention, and the order of sequence or generation. The principal passions should therefore be taken, either in the order of intention, and thus joy and sadness, which are the final passions, will be the principal passions; or in the order of sequence or generation, and thus love will be the principal passion. Therefore joy and sadness, hope and fear should in no way be called the four principal passions.

Obj. 3. Further, just as daring is caused by hope, so fear is caused by despair Either, therefore, hope and despair, should be accounted as principal passions, since they cause others, or hope and daring from being akin to one another.

On the contrary, Boëthius in enumerating the four principal passions, says:[2]

Banish joys: banish fears:
Away with hope: away with tears.

I answer that, These four are commonly called the principal passions.[3] Two of them, namely, joy and sadness, are said to be principal, because in them all the other passions have their completion and end; and so they arise from all the other passions, as is stated in the *Ethics.*[4] Fear and hope are principal passions, not because they complete the others absolutely, but because they complete them as regards the movement of the appetite towards something, for in respect of good, movement begins in love, goes forward to desire, and ends in hope; while in respect of evil, it begins in hatred, goes on to aversion, and ends in fear. Hence it is customary[5] to distinguish these four passions in relation to the present and the future, for movement regards the future, while rest is in something present. Therefore joy relates to present good, sadness relates to present evil, hope regards future good, and fear, future evil.

As to the other passions that concern good or evil, present or future, they all culminate in these four. For this reason have some said that these four are the principal passions, because they are general passions. And this is true, provided that by hope and fear we understand the common tendency of the appetite to desire or aversion for something.

Reply Obj. 1. Augustine puts desire or covetousness in place of hope, in so far as they seem to regard the same thing, namely, some future good.

Reply Obj. 2. These are called principal passions in the order of intention and completion And though fear and hope are not the last passions absolutely, yet they are the last of those passions that tend towards something as future. Nor can the argument be pressed any further except in the case of anger. Yet neither can anger be reckoned a principal passion, because it is an effect of daring, which cannot be a principal passion, as we shall state further on (*Reply Obj.* 3).

Reply Obj. 3. Despair implies movement away from good, and this is, as it were, accidental. And daring implies movement towards evil, and this too is accidental. Consequently these cannot be principal passions, because that which is accidental cannot be said to be principal. And so neither can anger be called a principal passion, because it arises from daring.

QUESTION XXVI

OF THE PASSIONS OF THE SOUL IN PARTICULAR, AND FIRST, OF LOVE

(In Four Articles)

WE have now to consider the soul's passions in particular, and (1) The passions of the concupiscible part; (2) The passions of the irascible part (Q. XL).

[1] *City of God,* XIV, 3, 7 (PL 41, 406, 410).
[2] *De Consol.,* I, 7 (PL 63, 657).
[3] According to the doctrine of the Stoics; cf. Cicero, *De Finibus,* III, 10 (DD III, 550); Nemesius, *De Nat. Hom.,* 17 (PG 40, 676); cf. Jerome, *In Ezech.,* I, on 1.7; Bonaventure, *In Sent.,* III, d. 26, A. 2, Q. 5 (QR III, 579); Albert, *In Sent.,* III, d. 26, A. 1 (BO XXVIII, 490).
[4] Aristotle, II, 5 (1105^b23).
[5] Amongst the Stoics; cf. Cicero, *Tuscul.,* IV, 6 (DD IV, 27); Nemesius, *De Nat Hom.,* 17 (PG 40, 676); Damascene, *De Fide Orthod.,* II, 12 (PG 94, 929).

The first of these considerations will be threefold, since we shall consider (1) Love and hatred; (2) Desire and aversion (Q. XXX); (3) Pleasure and sadness (Q. XXXI).

Concerning love, three points must be considered: (1) Love itself; (2) The cause of love (Q. XXVII); (3) The effects of love (Q. XXVIII). Under the first head there are four points of inquiry: (1) Whether love is in the concupiscible power? (2) Whether love is a passion? (3) Whether love is the same as dilection? (4) Whether love is properly divided into love of friendship, and love of concupiscence?

ARTICLE 1. *Whether Love Is in the Concupiscible Power?*

We proceed thus to the First Article: It seems that love is not in the concupiscible power.

Objection 1. For it is written (Wis. 8. 2): *Her,* namely, wisdom, *have I loved, and have sought her out from my youth.* But the concupiscible power, being a part of the sensitive appetite, cannot tend to wisdom, which is not apprehended by the senses. Therefore love is not in the concupiscible power.

Obj. 2. Further, love seems to be identified with every passion, for Augustine says:[1] "Love, yearning for the object beloved, is desire; having and enjoying it, is joy; fleeing what is contrary to it, is fear; and feeling what is contrary to it, is sadness." But not every passion is in the concupiscible power; indeed, fear, which is mentioned in this passage, is in the irascible power. Therefore we must not say absolutely that love is in the concupiscible power.

Obj. 3. Further, Dionysius (*Div. Nom* iv)[2] mentions a "natural love." But natural love seems to pertain rather to the natural powers, which belong to the vegetal soul. Therefore love is not absolutely in the concupiscible power.

On the contrary, The Philosopher says that "love is in the concupiscible power."[3]

I answer that, Love is something pertaining to the appetite, since good is the object of both. Therefore love differs according to the difference of appetites. For there is an appetite which arises from an apprehension existing, not in the subject of the appetite, but in some other, and this is called the natural appetite. Because natural things seek what is suitable to them according to their nature, by reason of an apprehension which is not in them, but in the Author of their nature, as stated in the First Part (Q. VI, A. 1. Reply 2; Q. CIII, A. 1. Reply 1, 3). And there is another appetite arising from an apprehension in the subject of the appetite, but from necessity and not from free choice. Such is, in irrational animals, the sensitive appetite, which, however, in man, has a certain share of liberty, in so far as it obeys reason. Again, there is another appetite following from an apprehension in the subject of the appetite according to free choice And this is the rational or intellectual appetite, which is called the will.

Now in each of these appetites, the name love is given to the principle of movement towards the end loved. In the natural appetite the principle of this movement is the appetitive subject's connaturalness with the thing to which it tends, and may be called natural love; thus the connaturalness of a heavy body for the centre is by reason of its weight and may be called natural love. In like manner the aptitude of the sensitive appetite or of the will to some good, that is to say, its very satisfaction in good, is called sensitive love, or intellectual or rational love. So that sensitive love is in the sensitive appetite, just as intellectual love is in the intellectual appetite. And it belongs to the concupiscible power, because it has to do with good absolutely, and not under the aspect of difficulty, which is the object of the irascible faculty.

Reply Obj. 1. The words quoted refer to intellectual or rational love.

Reply Obj. 2. Love is spoken of as being fear, joy, desire and sadness, not essentially but causally.

Reply Obj. 3. Natural love is not only in the powers of the vegetal soul, but in all the soul's powers, and also in all the parts of the body, and universally in all things, because, as Dionysius says (*Div. Nom.* iv),[4] "Beauty and goodness are beloved by all things," since each single thing has a connaturalness with that which is naturally suitable to it.

ARTICLE 2. *Whether Love Is a Passion?*

We proceed thus to the Second Article: It would seem that love is not a passion. For no power is a passion.

Objection 1. But every love is a power, as Dionysius says (*Div. Nom.* iv).[5] Therefore love is not a passion.

Obj. 2. Further, love is a kind of union or

[1] *City of God,* XIV, 7 (PL 41, 410).
[2] Sect. 15 (PG 3, 713).
[3] *Topics,* II, 7 (113[b]2).
[4] Sect. 10 (PG 3, 708).
[5] Sect. 15 (PG 3, 713).

bond, as Augustine says (*De Trin.* vii, 10).[1] But a union or bond is not a passion, but rather a relation. Therefore love is not a passion.

Obj. 3. Further, Damascene says (*De Fide Orthod.* ii, 22)[2] that "passion is a movement." But love does not imply the movement of the appetite; for this is desire, of which movement love is the principle. Therefore love is not a passion.

On the contrary, The Philosopher says that "love is a passion."[3]

I answer that, Passion is the effect of the agent on the patient. Now a natural agent produces a twofold effect on the patient: for in the first place it gives it the form, and secondly it gives it the movement that results from the form. Thus the generator gives the generated body both weight and the movement resulting from weight, so that weight, from being the principle of movement to the place which is connatural to that body by reason of its weight, can, in a way, be called natural love. In the same way the appetible thing gives the appetite, first, a certain adaptation to itself, which consists in satisfaction in that thing; and from this follows movement towards the appetible thing. For the appetitive movement is circular, as stated in the book on the *Soul*,[4] because the appetible thing moves the appetite, introducing itself, as it were, to its intention, while the appetite moves towards the realization of the appetible thing, so that the movement ends where it began. Accordingly, the first change wrought in the appetite by the appetible thing is called love, and is nothing else than satisfaction in that thing, and from this satisfaction results a movement towards that same thing, and this movement is desire; and lastly, there is rest which is joy. Since, therefore, love consists in a change wrought in the appetite by the appetible thing, it is evident that love is a passion: properly so called, according as it is in the concupiscible part; in a wider and extended sense, according as it is in the will.

Reply Obj. 1 Since power denotes a principle of movement or action, Dionysius calls love a power in so far as it is a principle of movement in the appetite.

Reply Obj. 2. Union belongs to love in so far as by reason of the satisfaction of the appetite, the lover stands in relation to that which he loves as though it were himself or part of himself. Hence it is clear that love is not the very relation of union, but that union is a result of love. Hence, too, Dionysius says that "love is a unitive force" (*Div. Nom.* iv),[5] and the Philosopher says that "union is the work of love."[6]

Reply Obj. 3. Although love does not denote the movement of the appetite in tending towards the appetible object, yet it denotes that movement by which the appetite is changed by the appetible thing, so as to have satisfaction in it.

ARTICLE 3. *Whether Love Is the Same as Dilection?*

We proceed thus to the Third Article: It seems that love is the same as dilection.

Objection 1. For Dionysius says (*Div. Nom.* iv)[7] that love is to dilection, "as four is to twice two, and as a rectilinear figure is to one composed of straight lines." But these have the same meaning. Therefore love and dilection denote the same thing.

Obj. 2 Further, the movements of the appetite differ by reason of their objects. But the objects of dilection and love are the same. Therefore these are the same.

Obj 3. Further, if dilection and love differ, it seems that it is chiefly in the fact that "dilection refers to good things, love to evil things, as some have maintained," according to Augustine.[8] But they do not differ thus, because as Augustine says the holy Scripture uses both words in reference to either good or bad things. Therefore love and dilection do not differ; thus indeed Augustine concludes that "it is not one thing to speak of love, and another to speak of dilection."

On the contrary, Dionysius says (*Div. Nom.* iv)[9] that "some holy men have held that love means something more Godlike than dilection does."

I answer that, We find four words referring, in a way, to the same thing: namely love, dilection, charity and friendship. They differ, however, in this, that "friendship," according to the Philosopher,[10] "is like a habit, but love and dilection are expressed by way of act or passion"; and charity can be taken either way.

Moreover these three express act in different ways. For love has a wider signification than the others, since every dilection or charity is love, but not vice versa. Because dilection im-

[1] PL 42, 960. [2] PG 94, 940.
[3] *Ethics*, VIII, 5 (1157^b28).
[4] Aristotle, III, 10 (433^b22).
[5] Sect. 12 (PG 3, 709). [6] *Politics*, II, 4 (1262^b10).
[7] Sect. 11 (PG 3, 708).
[8] *City of God*, XIV, 7 (PL 41, 410).
[9] Sect. 12 (PG 3, 709). [10] *Ethics*, VIII, 5 (1157^b28).

plies, in addition to love, a choice (*electionem*) made beforehand, as the very word denotes; and therefore dilection is not in the concupiscible power, but only in the will, and only in the rational nature. Charity denotes, in addition to love, a certain perfection of love, in so far as that which is loved is held to be of great price, as the word itself implies.[1]

Reply Obj. 1. Dionysius is speaking of love and dilection, in so far as they are in the intellectual appetite; for thus love is the same as dilection.

Reply Obj. 2. The object of love is more general than the object of dilection, because love extends to more than dilection does, as stated above.

Reply Obj. 3. Love and dilection differ, not in respect of good and evil, but as stated in the body of the article. Yet in the intellectual part love is the same as dilection. And it is in this sense that Augustine speaks of love in the passage quoted; hence a little further on he adds that "a right will is a good love, and a wrong will is a bad love." However, the fact that love, which is a concupiscible passion, inclines many to evil, is the reason why some assigned the difference spoken of.[2]

Reply Obj. 4. The reason why some held[3] that, even when applied to the will itself, the word love signifies something more Godlike than dilection, was because love denotes a passion, especially in so far as it is in the sensitive appetite; but dilection presupposes the judgment of reason. But it is possible for man to tend to God by love, being as it were passively drawn by Him, more than he can possibly be drawn to Him by his reason, which pertains to the nature of dilection, as stated above. And consequently love is more Godlike than dilection.

Article 4. *Whether Love Is Properly Divided into Love of Friendship and Love of Concupiscence?*

We proceed thus to the Fourth Article: It would seem that love is not properly divided into love of friendship and love of concupiscence.[4]

Objection 1. For "love is a passion, while friendship is a habit," according to the Philosopher.[5] But habit cannot be a part of a division of passions. Therefore love is not properly divided into love of concupiscence and love of friendship.

Obj. 2. Further, a thing cannot be divided by another member of the same division; for man is not a member of the same division as animal. But concupiscence is a member of the same division as love, as a passion distinct from love. Therefore concupiscence is not a division of love.

Obj. 3. Further, according to the Philosopher[6] friendship is threefold, that which is founded on usefulness, that which is founded on pleasure, and that which is founded on goodness. But useful and pleasant friendship are not without concupiscence. Therefore concupiscence should not be divided against friendship.

On the contrary, We are said to love certain things, because we desire them; thus "a man is said to love wine, on account of its sweetness which he desires," as stated in the *Topics*.[7] But we have no friendship for wine and the like things, as stated in the *Ethics*.[8] Therefore love of concupiscence is distinct from love of friendship.

I answer that, As the Philosopher says,[9] "to love is to wish good to someone." Hence the movement of love has a twofold tendency: towards the good which a man wishes to someone, whether for himself or for another; and towards that to which he wishes some good. Accordingly, man has love of concupiscence towards the good that he wishes to another, and love of friendship towards him to whom he wishes good.

Now the members of this division are related as primary and secondary, since that which is loved with the love of friendship is love absolutely and for itself; but that which is loved with the love of concupiscence is loved not absolutely and for itself, but for something else. For just as being *per se* is absolutely that which has being, while that which exists in another has relative being, so, because good is convertible with being, the good which itself has goodness is good absolutely; but that which is another's good is a relative good. Consequently the love with which a thing is loved in order that it may have some good, is love absolutely,

[1] Referring to the Latin *carus* (dear).

[2] Anonymously mentioned by Augustine, *City of God*, XIV, 7 (PL 41, 410). Cf. Isidore, *Etymol.*, VIII, 2 (PL 82, 296).

[3] Cf. Dionysius, *De Div. Nom.*, IV, 12 (PG 3, 709).

[4] Cf. Albert, *Summa Theol.*, II, 4, Q. XIV, M. 4, A. 2 (BO XXXII, 200); *In Sent.*, III, d. 28, A. 2 (BO XXVIII, 537); Bonaventure, *In Sent.*, II, d. 3, Pt. II, A. 3, Q. 1 (QR II, 125).

[5] *Ethics*, VIII, 5 (1157^b28).

[6] *Ibid.*, VIII, 3 (1156^a7).

[7] Aristotle, II, 3 (111^a3).

[8] Aristotle, VIII, 2 (1155^b29).

[9] *Rhetoric*, II, 4 (1380^b35).

while the love with which a thing is loved that it may be another's good is relative love.

Reply Obj. 1. Love is not divided into friendship and concupiscence, but into love of friendship, and love of concupiscence. For a friend is, properly speaking, one to whom we wish good, while we are said to desire what we wish for ourselves.

Hence the *Reply to the Second Objection* is evident.

Reply Obj. 3. When friendship is based on usefulness or pleasure, a man does indeed wish his friend some good, and in this respect the character of friendship is preserved. But since he refers this good further to his own pleasure or use, the result is that friendship of the useful or pleasant, in so far as it is drawn to the love of concupiscence, loses the character of true friendship.

QUESTION XXVII
OF THE CAUSE OF LOVE
(In Four Articles)

WE must now consider the cause of love, and under this head there are four points of inquiry: (1) Whether good is the only cause of love? (2) Whether knowledge is a cause of love? (3) Whether likeness is a cause of love? (4) Whether any other passion of the soul is the cause of love?

ARTICLE 1. *Whether Good Is the Only Cause of Love?*

We proceed thus to the First Article: It seems that good is not the only cause of love.

Objection 1. For good does not cause love, unless because it is loved. But it happens that evil also is loved, according to Ps. 10 6. *He that loveth iniquity, hateth his own soul;* otherwise every love would be good. Therefore good is not the only cause of love

Obj. 2. Further, the Philosopher says[1] that "we love those who acknowledge their evils." Therefore it seems that evil is the cause of love.

Obj. 3. Further, Dionysius says (*Div. Nom.* iv)[2] that "not the good only but also the beautiful is beloved by all."

On the contrary, Augustine says (*De Trin.* viii):[3] "Assuredly, the good alone is beloved." Therefore good alone is the cause of love.

I answer that, As stated above (Q. XXVI, A. 1), Love belongs to the appetitive power which is a passive power. Therefore its object stands in relation to it as the cause of its movement or act. Therefore the cause of love must properly be the object of love. Now the proper object of love is the good, because, as stated above (Q. XXVI, AA. 1, 2), love implies a certain connaturalness or pleasingness (complacentia) of the lover for the thing loved, and to everything, that thing which is connatural and proportionate to it is a good. It follows, therefore, that good is the proper cause of love.

Reply Obj. 1. Evil is never loved except under the aspect of good, that is to say, in so far as it is good in some respect, and is apprehended as being good absolutely. And thus a certain love is evil in so far as it tends to that which is not absolutely a true good. It is in this way that man loves iniquity, in so far as, by means of iniquity, some good is gained; pleasure, for instance, or money, or the like.

Reply Obj. 2. Those who acknowledge their evils are loved, not for their evils, but because they acknowledge them, for it is a good thing to acknowledge one's faults, in so far as it excludes insincerity or hypocrisy.

Reply Obj. 3. The beautiful is the same as the good, and they differ in aspect only. For since good is what all seek, that which calms the desire is implied in the notion of good, while that which calms the desire by being seen or known pertains to the notion of the beautiful Consequently those senses especially have to do with the beautiful which are the best avenues of knowledge, namely, sight and hearing, as ministering to reason; for we speak of beautiful sights and beautiful sounds. But in reference to the other objects of the other senses, we do not use the expression beautiful, for we do not speak of beautiful tastes, or of beautiful odours. Thus it is evident that beauty adds to goodness a relation to the knowing power, so that good means that which pleases absolutely the appetite, while the beautiful is something pleasant to apprehend.

ARTICLE 2. *Whether Knowledge Is a Cause of Love?*

We proceed thus to the Second Article: It would seem that knowledge is not a cause of love.

Objection 1. For it is due to love that a thing is sought. But some things are sought without being known, for instance, the sciences; for since "to have them is the same as to know them," as Augustine says,[4] if we knew them we

[1] *Rhetoric,* II, 4 (1381b29).
[2] Sect. 10 (PG 3, 708).
[3] PL 42, 949.
[4] QQ. LXXXIII, Qu 35 (PL 40, 24).

should have them, and should not seek them. Therefore knowledge is not the cause of love.

Obj. 2. Further, to love what we know not seems like loving something more than we know it. But some things are loved more than they are known; thus in this life God can be loved in Himself, but cannot be known in Himself. Therefore knowledge is not the cause of love.

Obj. 3. Further, if knowledge were the cause of love, there would be no love where there is no knowledge. But in all things there is love, as Dionysius says (*Div. Nom.* iv);[1] but there is not knowledge in all things. Therefore knowledge is not the cause of love.

On the contrary, Augustine proves (*De Trin.* x, 1)[2] that "none can love what he does not know."

I answer that, As stated above (A. 1), good is the cause of love, as being its object. But good is not the object of the appetite, except as apprehended. And therefore love demands some apprehension of the good that is loved. For this reason the Philosopher says[3] that "bodily sight is the beginning of sensitive love"; and in like manner the contemplation of spiritual beauty or goodness is the beginning of spiritual love. Accordingly knowledge is the cause of love for the same reason as good is, which can be loved only if known.

Reply Obj. 1. He who seeks science is not entirely without knowledge of it, but knows something about it already in some respect, either in a universal way, or in some one of its effects, or from having heard it commended, as Augustine says (*De Trin.* x, 1).[4] But to have it is not to know it in this way, but to know it perfectly.

Reply Obj. 2. Something is required for the perfection of knowledge that is not requisite for the perfection of love. For knowledge pertains to the reason, whose function consists in distinguishing things which in reality are united, and in uniting together, after a fashion, things that are distinct, by comparing one with another. Consequently the perfection of knowledge requires that man should know one by one all that is in a thing, such as its parts, powers, and properties. On the other hand, love is in the appetitive power, which regards a thing as it is in itself; therefore it suffices, for the perfection of love, that a thing be loved according as it is apprehended in itself. Hence it is, therefore, that a thing is loved more than it is known, since it can be loved perfectly, even without being perfectly known. This is most evident in regard to the sciences, which some love through having a certain summary knowledge of them; for instance, they know that rhetoric is a science that enables man to persuade others, and this is what they love in rhetoric. The same applies to the love of God.

Reply Obj. 3. Even natural love, which is in all things, is caused by a kind of knowledge, not indeed existing in natural things themselves, but in Him Who created their nature, as stated above (Q. XXVI, A. 1; cf. Part I, Q. VI, A. 1, Reply 2).

ARTICLE 3. *Whether Likeness Is a Cause of Love?*

We proceed thus to the Third Article: It would seem that likeness is not a cause of love.

Objection 1. For the same thing is not the cause of contraries. But likeness is the cause of hatred, for it is written (Prov. 13. 10) that *among the proud there are always contentions;* and the Philosopher says[5] that potters quarrel with one another. Therefore likeness is not a cause of love.

Obj. 2. Further, Augustine says[6] that a man loves in another that which he would not be himself; thus he loves an actor, but would not himself be an actor. But it would not be so if likeness were the proper cause of love, for in that case a man would love in another that which he possesses himself, or would like to possess. Therefore likeness is not a cause of love.

Obj. 3. Further, everyone loves that which he needs, even if he have it not; thus a sick man loves health, and a poor man loves riches. But in so far as he needs them and lacks them, he is unlike them. Therefore not only likeness but also unlikeness is a cause of love.

Obj. 4. Further, the Philosopher says[7] that "we love those who bestow money and health on us; and also those who retain their friendship for the dead." But all are not such. Therefore likeness is not a cause of love.

On the contrary, It is written (Ecclus. 13. 19): *Every beast loveth its like.*

I answer that, Likeness, properly speaking, is a cause of love. But it must be observed that likeness between things is twofold. One kind of likeness arises from each thing having the same quality actually; for example, two things hav-

[1] Sect. 10 (PG 3, 708). [2] PL 42, 971.
[3] *Ethics,* IX, 5, 12 (1167^{a}3; 1171^{b}29).
[4] PL 42, 974.
[5] *Ethics,* VIII, 1 (1155^{a}35); cf. *Rhetoric,* II, 4 (1381^{b}16); *Eudemian Ethics,* VII, 1 (1235^{a}18).
[6] *Confessions,* IV, 22 (PL 32, 702).
[7] *Rhetoric,* II, 4 (1381^{a}20; ^{b}24).

ing whiteness are said to be alike. Another kind of likeness arises from one thing having potentially and by way of inclination, a quality which the other has actually; thus we may say that a heavy body existing outside its proper place is like another heavy body that exists in its proper place. Or again, according as potency bears a resemblance to its act, since act is contained, in a manner, in the potency itself.

Accordingly the first kind of likeness causes love of friendship or well-wishing. For the very fact that two men are alike, having, as it were, one form, makes them to be, in a manner, one in that form; thus two men are one thing in the species of humanity, and two white men are one thing in whiteness. Hence the affections of one tend to the other, as being one with him, and he wishes good to him as to himself. But the second kind of likeness causes love of concupiscence, or friendship founded on usefulness or pleasure; because whatever is in potency, as such, has the desire for its act, and it takes pleasure in its realization, if it be a sentient and cognitive being.

Now it has been stated above (Q. XXVI, A. 4), that in the love of concupiscence, the lover, properly speaking, loves himself, in willing the good that he desires. But a man loves himself more than another, because he is one with himself substantially, while with another he is one only in the likeness of some form. Consequently, if this other's likeness to him arising from the participation of a form hinders him from gaining the good that he loves, he becomes hateful to him, not for being like him, but for hindering him from gaining his own good. This is why potters quarrel among themselves, because they hinder one another's gain, and why *there are contentions among the proud,* because they hinder one another in attaining the position they covet.

Hence the *Reply to the First Objection* is evident.

Reply Obj. 2. Even when a man loves in another what he does not love in himself, there is a certain likeness of proportionality, because as the latter is to that which is loved in him, so is the former to that which he loves in himself; for instance, if a good singer love a good writer, we can see a likeness of proportion, according as each one has that which is becoming to him in respect of his art.

Reply Obj. 3. He that loves what he needs bears a likeness to what he loves, as potency bears a likeness to its act, as stated above.

Reply Obj. 4. According to the same likeness of potency to its act, the illiberal man loves the man who is liberal, in so far as he expects from him something which he desires. The same applies to the man who is constant in his friendship as compared to one who is inconstant. For in either case friendship seems to be based on usefulness. We might also say that although not all men have these virtues in the complete habit, yet they have them according to certain seminal principles in the reason, in force of which principles the man who is not virtuous loves the virtuous man, as being in conformity with his own natural reason.

ARTICLE 4. *Whether Any Other Passion of the Soul Is a Cause of Love?*

We proceed thus to the Fourth Article: It would seem that some other passion can be the cause of love.

Objection 1. For the Philosopher says[1] that some are loved for the sake of the pleasure they give. But pleasure is a passion. Therefore another passion is a cause of love.

Obj. 2. Further, desire is a passion. But we love some because we desire to receive something from them, as happens in every friendship based on usefulness. Therefore another passion is a cause of love.

Obj. 3. Further, Augustine says (*De Trin.* X, 1):[2] "When we have no hope of getting a thing, we love it but half-heartedly or not at all, even if we see how beautiful it is."

On the contrary, All the other emotions of the soul are caused by love, as Augustine says.[3]

I answer that, There is no other passion of the soul that does not presuppose love of some kind. The reason is that every other passion of the soul denotes either movement towards something, or rest in something. Now every movement towards something, or rest in something, arises from some kinship or aptness to that thing; and this pertains to the notion of love. Therefore it is not possible for any other passion of the soul to be universally the cause of every love. But it may happen that some other passion is the cause of some particular love, just as one good is the cause of another.

Reply Obj. 1. When a man loves a thing for the pleasure it affords, his love is indeed caused by pleasure, but that very pleasure is caused, in its turn, by another preceding love; for none takes pleasure save in that which is loved in some way.

Reply Obj. 2. Desire for a thing always pre-

[1] *Ethics,* VIII, 3 (1156[a]12). [2] PL 42, 973.
[3] *City of God,* XIV, 7 (PL 41, 410).

supposes love for that thing. But desire of one thing can be the cause of another thing being loved; thus he that desires money, for this reason loves him from whom he receives it.

Reply Obj. 3. Hope causes or increases love; both by reason of pleasure, because it causes pleasure, and by reason of desire, because hope strengthens desire, since we do not desire so intensely that which we have no hope of receiving. Nevertheless hope itself is of a good that is loved.

QUESTION XXVIII

OF THE EFFECTS OF LOVE

(In Six Articles)

WE now have to consider the effects of love, under which head there are six points of inquiry: (1) Whether union is an effect of love? (2) Whether mutual indwelling is an effect of love? (3) Whether ecstasy is an effect of love? (4) Whether zeal is an effect of love? (5) Whether love is a passion that is hurtful to the lover? (6) Whether love is cause of all that the lover does?

ARTICLE 1. *Whether Union Is an Effect of Love?*

We proceed thus to the First Article: It would seem that union is not an effect of love.

Objection 1. For absence is contrary to union But love is compatible with absence, for the Apostle says (Gal. 4. 18): *Be zealous for that which is good in a good thing always* (speaking of himself, according to a gloss),[1] *and not only when I am present with you.* Therefore union is not an effect of love.

Obj. 2. Further, every union is either according to essence,—thus form is united to matter, accident to subject, and a part to the whole, or to another part in order to make up the whole —or according to likeness, in genus, species, or accident. But love does not cause union of essence; otherwise love could not be between things essentially distinct. On the other hand, love does not cause union of likeness, but rather is caused by it, as stated above (Q. XXVII, A. 3). Therefore union is not an effect of love.

Obj. 3. Further, the sense in act is the sensible in act, and the intellect in act is the thing actually understood. But the lover in act is not the thing loved in act. Therefore union is the effect of knowledge rather than of love.

On the contrary, Dionysius says (*Div. Nom.* iv)[2] that every love is "a unitive force."

I answer that, The union of lover and the thing loved is twofold. The first is real union; for instance, when the thing loved is present with the lover. The second is union of affection, and this union must be considered in relation to the preceding apprehension; for movement of the appetite follows apprehension Now love being twofold, namely, love of concupiscence, and love of friendship, each of these arises from a kind of apprehension of the oneness of the thing loved with the lover For when we love a thing by desiring it, we apprehend it as belonging to our well-being. In like manner when a man loves another with the love of friendship, he wills good to him, just as he wills good to himself; and so he apprehends him as his other self, in so far, namely, as he wills good to him as to himself. Hence a friend is called a man's "other self,"[3] and Augustine says,[4] "Well did one say to his friend: Thou half of my soul."

The first of these unions is caused effectively by love, because love moves man to desire and seek the presence of the being loved, as of something suitable and belonging to him. The second union is caused formally by love because love itself is this union or bond. In this sense Augustine says (*De Trin.* viii, 10)[5] that "love is a vital principle uniting, or seeking to unite two together, the lover, namely, and the beloved." For in describing it as uniting he refers to the union of affection, without which there is no love; and in saying that it seeks to unite, he refers to real union.

Reply Obj. 1. This argument is true of real union. That is necessary to pleasure as being its cause. Desire implies the real absence of the being loved, but love remains whether the being loved be absent or present

Reply Obj. 2. Union has a threefold relation to love. There is a union which causes love, and this is substantial union, as regards the love with which one loves oneself; while as regards the love with which one loves other things, it is the union of likeness, as stated above (Q. XXVII, A. 3). There is also a union which is essentially love itself. This union is according to a bond of affection, and is likened to substantial union, in so far as the lover stands to the object of his love as to himself, if it be love of friendship; as to something belonging to himself, if it be love of concupiscence. Again there is a union which is the effect of love. This is real union, which the lover seeks with the object of his love. Moreover

[1] *Glossa interl.* (VI, 85v); *Glossa* Lombardi (PL 192, 145). [2] Sect. 12 (PG 3, 709).

[3] Aristotle, *Ethics,* IX, 4 (1166a31); cf. IX, 9 (1169b6).
[4] *Confessions,* IV, 11 (PL 32, 698).
[5] PL 42, 960.

this union is in keeping with the demands of love, for as the Philosopher relates,[1] "Aristophanes stated that lovers would wish to be united both into one," but since "this would result in either one or both being destroyed," they seek a suitable and becoming union,—to live together, speak together, and be united in other like things.

Reply Obj. 3. Knowledge is perfected by the thing known being united, through its likeness, to the knower. But the effect of love is that the thing itself which is loved, is, in a way, united to the lover, as stated above. Consequently love is more of a unifying force than knowledge.

ARTICLE 2. *Whether Mutal Indwelling Is an Effect of Love?*

We proceed thus to the Second Article: It seems that love does not cause mutual indwelling, so that the lover is in the beloved and vice versa.

Objection 1. For that which is in another is contained by it. But the same thing cannot be both container and contents. Therefore love cannot cause mutual indwelling, so that the lover is in the beloved and vice versa.

Obj. 2. Further, nothing can penetrate within a whole, except by means of a division of the whole. But it is the function of the reason, not of the appetite where love resides, to divide things that are really united. Therefore mutual indwelling is not an effect of love.

Obj. 3. Further, if through love the lover is in the beloved and vice versa, it follows that the beloved is united to the lover in the same way as the lover is united to the beloved. But the union itself is love, as stated above (A. 1). Therefore it follows that the lover is always loved by the object of his love, which is evidently false. Therefore mutual indwelling is not an effect of love.

On the contrary, It is written (I John 4.16): *He that abideth in charity abideth in God, and God in him.* Now charity is the love of God. Therefore, for the same reason, every love makes the beloved to be in the lover, and vice versa.

I answer that, This effect of mutual indwelling may be understood as referring both to the apprehensive and to the appetitive power. For as to the apprehensive power, the beloved is said to be in the lover in so far as the beloved abides in the apprehension of the lover, according to Phil. 1. 7, *For that I have you in my heart.* But the lover is said to be in the beloved according to apprehension in so far as the lover is not satisfied with a superficial apprehension of the beloved, but strives to gain an intimate knowledge of each thing pertaining to the beloved, so as to penetrate into his very soul. Thus it is written concerning the Holy Ghost, Who is God's Love, that He *searcheth all things, yea the deep things of God* (I Cor. 2. 10).

As to the appetitive power, the object loved is said to be in the lover, because it is in his affections by a kind of satisfaction, causing him either to take pleasure in it, or in its good, when present; or, in the absence of the object loved, by his longing, to tend towards it with the love of concupiscence, or towards the good that he wills to the beloved, with the love of friendship, not indeed from any extrinsic cause (as when we desire one thing on account of another, or wish good to another on account of something else), but because the satisfaction in the beloved is rooted in the lover's heart. For this reason we speak of love as being intimate, and of the bowels of charity.

On the other hand, the lover is in the beloved by the love of concupiscence and by the love of friendship, but not in the same way. For the love of concupiscence does not find rest in any external or superficial possession or enjoyment of the beloved, but seeks to possess the beloved perfectly, by penetrating into his heart, as it were. But in the love of friendship the lover is in the beloved in the sense that he regards what is good or evil to his friend, as being so to himself and his friend's will as his own, so that it seems as though he felt the good or suffered the evil in the person of his friend. Hence "it is the way of friends to desire the same things, and to grieve and rejoice at the same," as the Philosopher says.[2] Consequently in so far as he considers what affects his friend as affecting himself, the lover seems to be in the beloved, as though he were become one with him; but in so far as, on the other hand, he wills and acts for his friend's sake as for his own sake, looking on his friend as identified with himself, thus the beloved is in the lover.

In yet a third way, mutual indwelling in the love of friendship can be understood in regard to reciprocal love, in so far as friends return love for love, and desire and do good things for one another.

Reply Obj. 1. The beloved is contained in the lover by being impressed on his affection

[1] *Politics*, II, 4 (1262^b11); cf. Plato, *Symposium* (191; 192).

[2] *Ethics*, IX, 3 (1165^b27); *Rhetoric*, II, 4 (1381^a3).

through a kind of tranquil satisfaction. On the other hand, the lover is contained in the beloved because the lover penetrates, so to speak, into the beloved. For nothing hinders a thing from being both container and contents in different ways, just as a genus is contained in its species, and vice versa.

Reply Obj. 2. The apprehension of the reason precedes the movement of love. Consequently, just as the reason divides, so does the movement of love penetrate into the beloved, as was explained above.

Reply Obj. 3. This argument is true of the third kind of mutual indwelling, which is not to be found in every kind of love.

ARTICLE 3. *Whether Ecstasy Is an Effect of Love?*

We proceed thus to the Third Article: It would seem that ecstasy is not an effect of love.

Objection 1. For ecstasy seems to imply loss of reason. But love does not always result in loss of reason, for lovers are masters of themselves at times. Therefore love does not cause ecstasy.

Obj. 2. Further, the lover desires the beloved to be united to him. Therefore he draws the beloved to himself, rather than proceeding to the beloved, going forth out from himself as it were.

Obj. 3. Further, love unites the beloved to the lover, as stated above (A. 1). If, therefore, the lover goes out from himself in order to proceed to the beloved, it follows that the lover always loves the beloved more than himself, which is evidently false. Therefore ecstasy is not an effect of love.

On the contrary, Dionysius says (*Div. Nom.* iv)[1] that "the Divine love produces ecstasy," and that "God Himself suffered ecstasy through love." Since therefore according to the same author (*ibid.*), every love is a participated likeness of the Divine Love, it seems that every love causes ecstasy.

I answer that, To suffer ecstasy means to be placed outside oneself. This happens as to the apprehensive power and as to the appetitive power. As to the apprehensive power, a man is said to be placed outside himself when he is placed outside the knowledge proper to him. This may be due to his being raised to a higher knowledge; thus, a man is said to suffer ecstasy because he is placed outside the connatural apprehension of his sense and reason, when he is raised up so as to comprehend things that surpass sense and reason. Or it may be due to his being cast down into a state of debasement; thus a man may be said to suffer ecstasy when he is overcome by violent passion or madness. As to the appetitive part, a man is said to suffer ecstasy when the appetite is borne towards something else, so that it goes forth out from itself, as it were.

The first of these ecstasies is caused by love by way of disposition, in so far, namely, as love makes the beloved to dwell in the lover's mind, as stated above (A. 2); and the more we give our mind to one thing, the less we think of others. The second ecstasy is caused by love directly; by love of friendship, absolutely, by love of concupiscence, not absolutely but in a relative sense. Because in love of concupiscence, the lover is taken out from himself, in a certain sense; in so far, namely, as not being satisfied with enjoying the good that he has, he seeks to enjoy something outside himself. But since he seeks to have this extrinsic good for himself, he does not go out from himself absolutely, and this affection remains finally within him. On the other hand, in the love of friendship, a man's affection goes out from itself absolutely, because he wishes and does good to his friend, as it were, caring and providing for him, for his sake.

Reply Obj. 1. This argument is true of the first kind of ecstasy.

Reply Obj. 2. This argument applies to love of concupiscence, which, as stated above, does not cause ecstasy absolutely.

Reply Obj. 3. He who loves, goes out from himself, in so far as he wills the good of his friend and works for it. Yet he does not will the good of his friend more than his own good, and so it does not follow that he loves another more than himself.

ARTICLE 4. *Whether Zeal Is an Effect of Love?*

We proceed thus to the Fourth Article: It seems that zeal is not an effect of love.

Objection 1. For zeal is a principle of contention; therefore it is written (I Cor. 3. 3): *Whereas there is among you zeal* (Douay,—*envying*) *and contention,* etc. But contention is contrary to love. Therefore zeal is not an effect of love.

Obj. 2. Further, the object of love is the good, which communicates itself to others. But zeal is opposed to communication, since it seems an effect of zeal that a man refuses to share the object of his love with another; thus husbands are said to be jealous of (*zelare*) their wives because they will not share them with others. Therefore zeal is not an effect of love.

[1] Sect. 13 (PG 3, 712).

Obj. 3. Further, there is no zeal without hatred, as neither is there without love; for it is written (Ps. 72. 3): *I had a zeal on occasion of the wicked.* Therefore it should not be set down as an effect of love any more than of hatred.

On the contrary, Dionysius says (*Div. Nom.* iv):[1] "God is said to be a Zealot, on account of this great love for all things."

I answer that, Zeal, whatever way we take it arises from the intensity of love. For it is evident that the more intensely a power tends to anything, the more vigorously it withstands opposition or resistance. Since therefore "love is a movement towards the object loved," as Augustine says,[2] an intense love seeks to remove everything that opposes it.

But this happens in different ways according to love of concupiscence and love of friendship. For in love of concupiscence he who desires something intensely is moved against all that hinders his gaining or quietly enjoying the object of his love. It is thus that husbands are said to be jealous of their wives, lest association with others prove a hindrance to their exclusive individual rights In like manner those who seek to excel are moved against those who seem to excel, as though these were a hindrance to their excelling And this is the zeal of envy, of which it is written (Ps. 36. 1): *Be not emulous of evil doers, nor envy (zelaveris) them that work iniquity.*

On the other hand, love of friendship seeks the friend's good. Therefore, when it is intense, it causes a man to be moved against everything that opposes the friend's good. In this respect, a man is said to be zealous on behalf of his friend, when he makes a point of repelling whatever may be said or done against his friend's good. In this way, too, a man is said to be zealous on God's behalf, when he endeavours, to the best of his means, to repel whatever is contrary to the honour or will of God; according to III Kings 19. 14: *With zeal have I been zealous for the Lord of hosts.* Again on the words of John 2. 17: *The zeal of Thy house hath eaten me up,* a gloss says[3] that "a man is eaten up with a good zeal, who strives to remedy whatever evil he perceives; and if he cannot, bears with it and laments it."

Reply Obj 1. The Apostle is speaking in this passage of the zeal of envy, which is indeed the cause of contention, not against the object of love, but for it, and against that which is opposed to it.

Reply Obj. 2. Good is loved in so far as it can be communicated to the lover. Consequently whatever hinders the perfection of this communication becomes hateful. Thus zeal arises from love of good. But through defect of goodness, it happens that certain small goods cannot, in their entirety, be possessed by many at the same time; and from the love of such things arises the zeal of envy. But it does not arise, properly speaking, in the case of those things which in their entirety can be possessed by many; for no one envies another the knowledge of truth, which can be known entirely by many except perhaps one may envy another his superiority in the knowledge of it

Reply Obj. 3 The very fact that a man hates whatever is opposed to the object of his love is the effect of love. Hence zeal is set down as an effect of love rather than of hatred.

ARTICLE 5. *Whether Love Is a Passion That Wounds the Lover?*

We proceed thus to the Fifth Article: It would seem that love wounds the lover.[4]

Objection 1. For languor denotes a hurt in the one that languishes But love causes languor, for it is written (Cant. 2. 5): *Stay me up with flowers, compass me about with apples; because I languish with love.* Therefore love is a wounding passion.

Obj 2. Futher, melting is a kind of dissolution. But love melts that in which it is, for it is written (Cant. 5. 6): *My soul melted when my beloved spoke* Therefore love is a dissolvent and, therefore it is a corruptive and a wounding passion.

Obj. 3 Further, fervour denotes a certain excess of heat, which excess has a corruptive effect. But love causes fervour, for Dionysius (*Cæl. Hier.* vii)[5] in enumerating the properties belonging to the Seraphim's love, includes hot and piercing and most fervent. Moreover it is said of love (Cant. 8. 6) that *its lamps are fire and flames.* Therefore love is a wounding and corruptive passion.

On the contrary, Dionysius says (*Div. Nom.* iv)[6] that "everything loves itself with a love that holds it together," that is, that preserves it. Therefore love is not a wounding passion, but rather one that preserves and perfects.

I answer that, As stated above (Q. XXVI, AA. 1, 2; Q. XXVII, A. 1), love denotes a certain

[1] Sect. 13 (PG 3, 712).
[2] QQ. LXXXIII, QU 35 (PL 40, 23).
[3] *Glossa ordin.*, (V, 193E)—Aug., *In Joann.*, tract X, on 2.17 (PL 35, 1471).
[4] Cf. Hugh of St. Victor, *In Hier. Cæl. S. Dionysii,* VI (PL 175, 1044); see also Rousselot, *Problème de l'amour* (p. 65–69).
[5] Sect. 1, (PG3, 205).
[6] Sect. 10 (PG3, 708).

adapting of the appetitive power to some good. Now nothing is hurt by being adapted to that which is suitable to it; rather, if possible, it is perfected and bettered. But if a thing be adapted to that which is not suitable to it, it is hurt and made worse by it. Consequently love of a suitable good perfects and betters the lover; but love of a good which is unsuitable to the lover, wounds and worsens him. And so man is perfected and bettered chiefly by the love of God, but is wounded and worsened by the love of sin, according to Osee 9. 10: *They became abominable, as those things which they loved.*

And let this be understood as applying to love in respect to what is formal in it, that is, in regard to the appetite. But in respect to what is material in the passion of love, that is, a certain bodily change, it happens that love is hurtful by reason of this change being excessive, just as it happens in the senses, and in every act of a power of the soul that is exercised through the change of some bodily organ.

In reply to the objections, it is to be observed that four proximate effects may be ascribed to love: namely, melting, enjoyment, languor, and fervour. Of these the first is melting, which is opposed to freezing. For things that are frozen, are closely bound together, so as to be hard to pierce. But it pertains to love that the appetite is fitted to receive the good which is loved, in so far as the object loved is in the lover, as stated above (A. 2). Consequently the freezing or hardening of the heart is a disposition incompatible with love, while melting denotes a softening of the heart, by which the heart shows itself to be ready for the entrance of the beloved. If, then, the beloved is present and possessed, pleasure or enjoyment ensues. But if the beloved be absent, two passions arise: namely, sadness at its absence, which is denoted by languor (hence Tully in *De Tuscul. Quæst.* iii[1] applies the term ailment chiefly to sadness), and an intense desire to possess the beloved, which is signified by fervour. And these are the effects of love considered formally, according to the relation of the appetitive power to its object. But in the passion of love, other effects ensue, proportionate to the above, according to change in the organ.

ARTICLE 6. *Whether Love Is Cause of All That the Lover Does?*

We proceed thus to the Sixth Article: It seems that the lover does not everything from love.

Objection 1. For love is a passion, as stated above (Q. XXVI, A. 2). But man does not do everything from passion: some things he does from choice, and some things from ignorance, as stated in the *Ethics.*[2] Therefore man does not everything that he does, from love.

Obj. 2. Further, the appetite is a principle of movement and action in all animals, as stated in the book on the *Soul.*[3] If, therefore, whatever a man does, is done from love, the other passions of the appetitive part are superfluous.

Obj. 3. Further, nothing is produced at one and the same time by contrary causes. But some things are done from hatred. Therefore all things are not done from love.

On the contrary, Dionysius says (*Div. Nom.* iv)[4] that "all things, whatever they do, they do for the love of good."

I answer that, Every agent acts for an end, as stated above (Q. I, A. 2). Now the end is the good desired and loved by each one. Therefore it is evident that every agent, whatever it be, does every action from love of some kind.

Reply Obj. 1. This objection takes love as a passion existing in the sensitive appetite. But here we are speaking of love in a general sense, according as it includes intellectual, rational, animal, and natural love; for it is in this sense that Dionysius speaks of love in chap. iv of *De Divinis Nominibus.*

Reply Obj. 2. As stated above (A. 5) desire, sadness and pleasure, and consequently all the other passions of the soul, result from love. Therefore every act that proceeds from any passion proceeds also from love as from a first cause. And so the other passions, which are proximate causes, are not superfluous.

Reply Obj. 3. Hatred also is caused by love, as we shall state further on (Q. XXIX, A. 2).

QUESTION XXIX

OF HATRED

(*In Six Articles*)

WE must now consider hatred, concerning which there are six points of inquiry: (1) Whether evil is the cause and the object of hatred? (2) Whether love is the cause of hatred? (3) Whether hatred is stronger than love? (4) Whether a man can hate himself (5) Whether a man can hate the truth? (6) Whether a thing can be the object of universal hatred?

[1] Chap. 11 (DD IV, 7).

[2] Aristotle, V, 8 (1135^b21; $^b25$; 1136^a6).

[3] Aristotle, III, 10 (433^a21).

[4] Sect. 10 (PG 3, 708).

ARTICLE 1. *Whether Evil Is the Cause and Object of Hatred?*

We proceed thus to the First Article: It seems that evil is not the object and cause of hatred.

Objection 1. For everything that exists, as such, is good. If therefore evil is the object of hatred, it follows that nothing but the lack of something can be the object of hatred, which is clearly untrue.

Obj. 2. Further, hatred of evil is praiseworthy; hence (II Machab. 3. 1) some are praised for that *the laws were very well kept, because of the godliness of Onias the high-priest, and the hatred their souls* (Douay,—*his soul*) *had of evil.* If, therefore, nothing but evil be the object of hatred, it would follow that all hatred is commendable. And this is clearly false.

Obj. 3. Further, the same thing is not at the same time both good and evil. But the same thing is lovable and hateful to different subjects. Therefore hatred is not only of evil, but also of good.

On the contrary, Hatred is the opposite of love. But the object of love is good, as stated above (Q. XXVI, A. 1; Q XXVII, A. 1). Therefore the object of hatred is evil.

I answer that, Since the natural appetite is the result of some apprehension (though this apprehension is not in the same subject as the natural appetite), it seems that what applies to the inclination of the natural appetite, applies also to the animal appetite, which does result from an apprehension in the same subject, as stated above (Q. XXVI, A. 1) Now, with regard to the natural appetite, it is evident that just as each thing is naturally attuned and adapted to that which is suitable to it, in which natural love consists, so has it a natural dissonance from that which opposes and destroys it; and this is natural hatred. Hence therefore, in the animal appetite, or in the intellectual appetite, love is a certain harmony of the appetite with that which is apprehended as suitable, while hatred is a certain dissonance of the appetite from that which is apprehended as repugnant and hurtful. Now, just as whatever is suitable, as such, bears the aspect of good, so whatever is repugnant, as such, bears the aspect of evil. And therefore, just as good is the object of love, so evil is the object of hatred.

Reply Obj. 1. Being, as such has not the aspect of incompatibility but only of fittingness, because all things agree in being. But being, in so far as it is this determinate being, has an aspect of incompatibility to some determinate being. And in this way, one being is hateful to another, and is evil; though not in itself, but by comparison with something else.

Reply Obj. 2. Just as a thing may be apprehended as good, when it is not truly good, so a thing may be apprehended as evil, although it is not truly evil. Hence it happens sometimes that neither hatred of evil nor love of good is good

Reply Obj. 3. To different things the same thing may be lovable or hateful, in respect of the natural appetite, owing to one and the same thing being naturally suitable to one thing and naturally unsuitable to another; thus heat is accordant with fire and not accordant with water. But in respect of the animal appetite, it is owing to one and the same thing being apprehended by one as good, by another as bad.

ARTICLE 2 *Whether Love Is a Cause of Hatred?*

We proceed thus to the Second Article: It would seem that love is not a cause of hatred.

Objection 1. For "the opposite members of a division are naturally simultaneous."[1] But love and hatred are opposite members of a division, since they are contrary to one another. Therefore they are naturally simultaneous. Therefore love is not the cause of hatred.

Obj. 2. Further, of two contraries, one is not the cause of the other. But love and hatred are contraries. Therefore love is not the cause of hatred.

Obj. 3. Further, that which follows is not the cause of that which precedes But it seems that hatred precedes love, since hatred implies a turning away from evil, and love implies a turning towards good. Therefore love is not the cause of hatred.

On the contrary, Augustine says[2] that all emotions are caused by love. Therefore hatred also, since it is an emotion of the soul, is caused by love.

I answer that, As stated above (A. 1), love consists in a certain agreement of the lover with the thing loved, while hatred consists in a certain disagreement or dissonance. Now we should consider in each thing what agrees with it, before that which disagrees, since a thing disagrees with another through destroying or hindering that which agrees with it. Consequently love must precede hatred, and nothing is hated save through being contrary to a suit-

[1] Aristotle, *Categories,* 13 (14^b33).
[2] *City of God,* XIV, 7 (PL 41, 410).

able thing which is loved. And hence it is that every hatred is caused by love.

Reply Obj. 1. The opposite members of a division are sometimes naturally simultaneous, both really and logically; for instance, two species of animal, or two species of colour. Sometimes they are simultaneous logically, while, in reality, one precedes, and causes the other; for instance, the species of numbers, figures and movements. Sometimes they are not simultaneous either really or logically; for instance, substance and accident, for substance is in reality the cause of accident, and being is predicated of substance before it is predicated of accident by a priority of reason, because it is not predicated of accident except in so far as the latter is in substance. Now love and hatred are naturally simultaneous logically, but not really. And so nothing hinders love from being the cause of hatred.

Reply Obj. 2. Love and hatred are contraries if considered in respect of the same thing. But if taken in respect of contraries, they are not themselves contrary, but consequent to one another; for it amounts to the same that one love a certain thing, or that one hate its contrary. Thus love of one thing is the cause of one's hating its contrary.

Reply Obj. 3. In the order of execution, the turning away from one term precedes the turning towards the other. But the reverse is the case in the order of intention, since approach to one term is the reason for turning away from the other. Now the appetitive movement pertains rather to the order of intention than to that of execution. Therefore love precedes hatred because each is an appetitive movement.

ARTICLE 3. *Whether Hatred Is Stronger Than Love?*

We proceed thus to the Third Article: It would seem that hatred is stronger than love.

Objection 1. For Augustine says (QQ. LXXXIII, *qu.* 36):[1] "There is no one who does not flee from pain more than he desires pleasure." But flight from pain pertains to hatred, while desire for pleasure belongs to love. Therefore hatred is stronger than love.

Obj. 2. Further, the weaker is overcome by the stronger. But love is overcome by hatred, when, that is to say, love is turned into hatred. Therefore hatred is stronger than love.

Obj. 3. Further, the emotions of the soul are shown by their effects. But man insists more on repelling what is hateful than on seeking what is pleasant; thus also irrational animals refrain from pleasure for fear of the whip, as Augustine instances (*loc. cit.*). Therefore hatred is stronger than love.

On the contrary, Good is stronger than evil, because evil does nothing except in virtue of good, as Dionysius says (*Div. Nom.* iv).[2] But hatred and love differ according to the difference of good and evil. Therefore hatred is stronger than love.

I answer that, It is impossible for an effect to be stronger than its cause. Now every hatred arises from some love as its cause, as above stated (A. 2). Therefore it is impossible absolutely for hatred to be stronger than love.

But furthermore, love must be stronger, absolutely speaking, than hatred. Because a thing is moved to the end more strongly than to the means. Now turning away from evil is ordered as a means to the gaining of good, as to amend Therefore, absolutely speaking, the soul's movement in respect of good is stronger than its movement in respect of evil.

Nevertheless hatred sometimes seems to be stronger than love, for two reasons. First, because hatred is more keenly felt than love. For, since the sensitive perception is accompanied by a certain change, when once the change has been received it is not felt so keenly as in the moment of being changed. Hence the heat of a hectic fever, though greater, is nevertheless not felt so much as the heat of a tertian fever, because the heat of the hectic fever is, as it were, habitual and like a second nature. For this reason, love is felt more keenly in the absence of the object loved; thus Augustine says (*De Trin.* X, 12)[3] that "love is felt more keenly when we lack what we love." And for the same reason, the unbecomingness of that which is hated is felt more keenly than the becomingness of that which is loved. Secondly, because comparison is made between a hatred and a love which do not correspond to one another. Because according to different degrees of good there are different degrees of love to which correspond different degrees of hatred. Therefore a hatred that corresponds to a greater love moves us more than a lesser love.

Hence it is clear how to *reply to the First Objection.* For the love of pleasure is less than the love of self-preservation, to which corresponds flight from pain and therefore we flee from pain more than we love pleasure.

Reply Obj. 2. Hatred would never overcome love were it not for the greater love to which

[1] PL 40, 25.

[2] Sect. 20 (PG 3, 717).

[3] PL 42, 984.

that hatred corresponds. Thus man loves himself more than he loves his friend; and because he loves himself, his friend is hateful to him if he oppose him.

Reply Obj 3. The reason why we act with greater insistence in repelling what is hateful is because we feel hatred more keenly.

ARTICLE 4. *Whether a Man Can Hate Himself?*

We proceed thus to the Fourth Article: It would seem that a man can hate himself.

Objection 1. For it is written (Ps. 10. 6): *He that loveth iniquity, hateth his own soul.* But many love iniquity. Therefore many hate themselves.

Obj. 2. Further, him we hate, to whom we wish and work evil. But sometimes a man wishes and works evil to himself; for example, a man who kills himself. Therefore some men hate themselves.

Obj. 3. Further, Boëthius says (*De Consol.* ii, 5)[1] that "avarice makes a man hateful"; from this we may conclude that everyone hates a miser. But some men are misers. Therefore they hate themselves

On the contrary, The Apostle says (Eph 5. 29) that *no man ever hated his own flesh.*

I answer that, Properly speaking, it is impossible for a man to hate himself. For everything naturally desires good, nor can anyone desire anything for himself, save under the aspect of good; for "evil is outside the scope of the will," as Dionysius says (*Div. Nom.* iv).[2] Now to love a man is to will good to him, as stated above (Q. XXVI, A. 4). Consequently, a man must, of necessity, love himself; and it is impossible for a man to hate himself, properly speaking.

But accidentally it happens that a man hates himself, and this in two ways. First, on the part of the good which a man wills to himself. For it happens sometimes that what is desired as good in some particular respect, is evil absolutely; and in this way, a man accidentally wills evil to himself; and thus hates himself. Secondly, in regard to himself, to whom he wills good. For each thing is that which is predominant in it; hence the state is said to do what the king does, as if the king were the whole state. Now it is clear that man is principally the mind of man. And it happens that some men account themselves as being principally that which they are in their bodily and sensitive nature. And so they love themselves according to what they take themselves to be, while they hate that which they really are, by desiring what is contrary to reason. And in both these ways, *he that loveth iniquity hateth* not only *his own soul,* but also himself.

From this the *reply to the First Objection* is evident.

Reply Obj. 2. No man wills and works evil to himself, except as he apprehends it under the aspect of good. For even they who kill themselves apprehend death itself as a good, considered as putting an end to some unhappiness or pain.

Reply Obj. 3. The miser hates something accidental to himself, but not for that reason does he hate himself; thus a sick man hates his sickness for the very reason that he loves himself. Or we may say that avarice makes man hateful to others, but not to himself. In fact, it is caused by a disordered self-love, in respect of which man desires temporal goods for himself more than he should.

ARTICLE 5. *Whether a Man Can Hate the Truth?*

We proceed thus to the Fifth Article: It seems that a man cannot hate the truth.

Objection 1. For good, true, and being are convertible. But a man cannot hate good Neither, therefore, can he hate the truth.

Obj. 2. Further, "All men have a natural desire for knowledge," as stated in the beginning of the *Metaphysics.*[3] But knowledge is only of true things. Therefore truth is naturally desired and loved. But that which is in a thing naturally is always in it. Therefore no man can hate the truth.

Obj. 3. Further, the Philosopher says[4] that "men love those who are straightforward." But there can be no other motive for this save truth. Therefore man loves the truth naturally. Therefore he cannot hate it.

On the contrary, The Apostle says (Gal. 4. 16): *Am I become your enemy because I tell you the truth?*[5]

I answer that, Good, true and being are the same in reality, but differ as considered by reason. For good is considered in the light of something desirable, while being and true are not so considered, for the good is what all things seek. Therefore good, as such, cannot be the object of hatred, neither in the universal

[1] PL 63, 690.
[2] Sect. 32 (PG 3, 732).
[3] Aristotle, I, 1 (980^a21).
[4] *Rhetoric,* II, 4 (1381^b28).
[5] St. Thomas quotes the passage, probably from memory, as though it were an assertion: *I am become, etc.*

nor in the particular. Being and truth in the universal cannot be the object of hatred because disagreement is the cause of hatred, and agreement is the cause of love, while being and truth are common to all things. But nothing hinders some particular being or some particular truth being an object of hatred, in so far as it is considered as something contrary and repugnant; for contrariness and repugnance are not incompatible with the notion of being and truth, as they are with the notion of good.

Now it may happen in three ways that some particular truth is repugnant or contrary to the good we love. First, according as truth is in things as in its cause and origin. And thus man sometimes hates a particular truth when he wishes that what is true were not true. Secondly, according as truth is in man's knowledge, which hinders him from gaining the object loved; such is the case of those who wish not to know the truth of faith, that they may sin freely; in whose person it is said (Job 21. 14): *We desire not the knowledge of Thy ways.* Thirdly, a particular truth is hated as something repugnant according as it is in the intellect of another man; as, for instance, when a man wishes to remain indolent in his sin, he hates that anyone should know the truth about his sin In this respect, Augustine says[1] that men "love truth when it enlightens, they hate it when it reproves." This suffices for the *Reply to the First Objection.*

Reply Obj. 2. The knowledge of truth is lovable in itself; hence Augustine says that men love it when it enlightens. But accidentally, the knowledge of truth may become hateful, in so far as it hinders one from accomplishing one's desire.

Reply Obj. 3. The reason why we love those who are straightforward is because they tell the truth, the knowledge of which is lovable for its own sake.

ARTICLE 6. *Whether Anything Can Be an Object of Universal Hatred?*

We proceed thus to the Sixth Article: It seems that a thing cannot be an object of universal hatred.

Objection 1. Because hatred is a passion of the sensitive appetite, which is moved by an apprehension in the senses. But the senses cannot apprehend the universal. Therefore a thing cannot be an object of universal hatred.

Obj. 2. Further, hatred is caused by dissonance; and where there is dissonance, there is nothing in common. But the notion of universality implies something in common. Therefore nothing can be the object of universal hatred.

Obj. 3. Further, the object of hatred is evil. But "evil is in things, and not in the mind."[2] Since therefore the universal is in the mind only, which abstracts the universal from the particular, it seems that hatred cannot have a universal object.

On the contrary, the Philosopher says[3] that "anger is directed always to something singular, whereas hatred is also directed to a thing in general; for everybody hates the thief and the backbiter."

I answer that, There are two ways of speaking of the universal: first, according as it is under the intention of universality; secondly, as considered in the nature to which the intention is attributed; for it is one thing to consider the universal man, and another to consider man in that which is a man. If, therefore, we take the universal in the first way, no sensitive power, whether of apprehension or of appetite, can attain the universal, because the universal is obtained by abstraction from individual matter, in which every sensitive power is rooted

Nevertheless the sensitive powers, both of apprehension and of appetite, can tend to something universally. Thus we say that the object of sight is colour considered generically; not that the sight knows universal colour, but because the fact that colour is knowable by the sight is attributed to colour, not as being this particular colour, but because it is colour absolutely. Accordingly hatred in the sensitive part can regard something universally, because this thing, by reason of its common nature, and not merely as an individual, is hostile to the animal—for instance, a wolf in regard to a sheep. Hence a sheep hates the wolf generally. On the other hand, anger is always caused by something in particular because it is caused by some action of the one that hurts us, and actions proceed from individuals. For this reason the Philosopher says[4] that "anger is always directed to something singular, whereas hatred can be directed to a thing in general." But according as hatred is in the intellectual part, since it arises from the universal apprehension of the intellect, it can regard the universal in both ways.

Reply Obj. 1. The senses do not apprehend the universal as such; but they apprehend

[1] *Confessions,* X, 34 (PL 32, 794).

[2] Aristotle, *Metaphysics,* VI, 4 (1027^b25).

[3] *Rhetoric,* II, 4 (1382^a4). [4] *Ibid.*

something to which the character of universality is given by abstraction.

Reply Obj. 2. That which is common to all cannot be a reason of hatred. But nothing hinders a thing from being common to many and dissonant to others, so as to be hateful to them.

Reply Obj. 3. This argument considers the universal under the intention of universality, and thus it does not come under the sensitive apprehension or appetite.

QUESTION XXX
OF CONCUPISCENCE
(In Four Articles)

WE have now to consider concupiscence, under which head there are four points of inquiry: (1) Whether concupiscence is in the sensitive appetite only? (2) Whether concupiscence is a special passion? (3) Whether some concupiscences are natural, and some not natural? (4) Whether concupiscence is infinite?

ARTICLE 1. *Whether Concupiscence Is in the Sensitive Appetite Only?*

We proceed thus to the First Article: It seems that concupiscence is not only in the sensitive appetite.

Objection 1. For there is a concupiscence of wisdom, according to Wis. 6. 21: *The concupiscence* (Douay,—*desire*) *of wisdom bringeth to the everlasting kingdom.* But the sensitive appetite can have no tendency to wisdom. Therefore concupiscence is not only in the sensitive appetite.

Obj. 2. Further, the desire for the commandments of God is not in the sensitive appetite; rather the Apostle says (Rom. 7. 18): *There dwelleth not in me, that is to say, in my flesh, that which is good.* But desire for God's commandments falls under concupiscence, according to Ps. 118. 20: *My soul hath coveted (concupivit) to long for thy justification.* Therefore concupiscence is not only in the sensitive appetite.

Obj. 3. Further, proper good to each power is a matter of concupiscence. Therefore concupiscence is in each power of the soul, and not only in the sensitive appetite.

On the contrary, Damascene says (*De Fide Orthod.* ii, 12)[1] that "the irrational part which is subject and amenable to reason, is divided into concupiscence and anger. This is the irrational part of the soul, passive and appetitive." Therefore concupiscence is in the sensitive appetite.

I answer that, As the Philosopher says,[2] "concupiscence is a desire for that which is pleasant." Now pleasure is twofold, as we shall state later on (Q. XXXI, AA. 3, 4). One is in the intelligible good, which is the good of reason; the other is in good perceptible to the senses. The former pleasure seems to be in the soul alone. But the latter is in both soul and body, because the sense is a power seated in a bodily organ, and so sensible good is the good of the whole composite. Now concupiscence seems to be the desire for this latter pleasure, since it pertains at the same time to both soul and body, as is implied by the very word *concupiscentia* indicates. Therefore, properly speaking, concupiscence is in the sensitive appetite, and in the concupiscible power, which takes its name from it.

Reply Obj. 1. The desire for wisdom, or other spiritual goods is sometimes called concupiscence, either by reason of a certain likeness, or on account of the desire in the higher part of the soul being so intense that it overflows into the lower appetite, so that the latter also, in its own way, tends to the spiritual good, following the lead of the higher appetite, the result being that the body itself tenders its service in spiritual matters, according to Ps. 83. 3: *My heart and my flesh have rejoiced in the living God.*

Reply Obj. 2. Properly speaking, desire may be not only in the lower, but also in the higher appetite. For it does not imply fellowship in craving, as concupiscence does, but simply movement towards the thing desired.

Reply Obj. 3. It pertains to each power of the soul to seek its proper good by the natural appetite, which does not follow from apprehension. But the desire for good by the animal appetite, which follows apprehension, belongs to the appetitive power alone. And to desire a thing under the aspect of a good delightful to the senses, in which concupiscence properly consists, pertains to the concupiscible power.

ARTICLE 2. *Whether Concupiscence Is a Special Passion?*

We proceed thus to the Second Article: It would seem that concupiscence is not a special passion of the concupiscible power.

Objection 1. For passions are distinguished by their objects. But the object of the concupiscible power is something delightful to the senses, and this is also the object of concupis-

[1] PG 94, 928; also Nemesius, *De Nat. Hom.*, XVI (PG 40, 672); cf. Aristotle, *Soul*, III, 9 (432^b6).

[2] *Rhetoric*, I, 11 (1370^a17).

cence, as the Philosopher declares.[1] Therefore concupiscence is not a special passion of the concupiscible power.

Obj. 2. Further, Augustine says (QQ. LXXXIII, *qu.* 33)[2] that "cupidity is the love of transitory things," so that it is not distinct from love But all particular passions are distinct from one another. Therefore concupiscence is not a special passion in the concupiscible power.

Obj. 3. Further, to each passion of the concupiscible power there is a particular contrary passion in that power, as stated above (Q. XXIII, A. 4). But no special passion of the concupiscible power is contrary to concupiscence For Damascene says (*De Fide Orthod* ii, 12)[3] that "good when desired gives rise to concupiscence, when present, gives joy; in like manner, the evil we apprehend makes us fear, the evil that is present makes us sad," from which we gather that as sadness is contrary to joy, so is fear contrary to concupiscence. But fear is not in the concupiscible, but in the irascible part. Therefore concupiscence is not a special passion of the concupiscible power.

On the contrary, Concupiscence is caused by love, and tends to pleasure, both of which are passions of the concupiscible power. Hence it is distinguished from the other concupiscible passions, as a special passion.

I answer that, As stated above (A. 1; Q. XXIII, A. 1), the good which gives pleasure to the senses is the common object of the concupiscible part. Hence the various concupiscible passions are distinguished according to the differences of that good. Now the diversity of the object can arise from the very nature of the object, or from a diversity in its power of acting. The diversity derived from the nature of the active object causes a material difference of passions, while the difference in regard to its active power causes a formal diversity of passions, in respect of which the passions differ specifically.

Now the character of the moving power of the end or of the good differs according as it is really present, or absent, because, according as it is present, it causes us to find rest in it; but according as it is absent, it causes us to be moved towards it. And so the object of sensible pleasure causes love in so far as, so to speak, it adopts and shapes the appetite to itself; it causes concupiscence in so far as, when absent, it draws the power to itself; and it begets pleasure in so far as, when present, it causes the power to find rest in it. Accordingly, concupiscence is a passion differing in species from both love and pleasure. But concupiscences of this or that pleasurable object differ in number.

Reply Obj. 1. Pleasurable good is the object of concupiscence not absolutely, but considered as absent, just as the sensible, considered as past, is the object of memory. For these particular conditions diversify the species of passions, and even of the powers of the sensitive part, which looks to particular things.

Reply Obj. 2. In the passage quoted we have casual, not essential, predication, for cupidity is not essentially love, but an effect of love. We may also say that Augustine is taking cupidity in a wide sense for any movement of the appetite in respect of good to come, so that it includes both love and hope.

Reply Obj. 3. The passion which is directly contrary to concupiscence has no name, and stands in relation to evil as concupiscence in regard to good. But since, like fear, it regards the absent evil, sometimes it goes by the name of fear, just as hope is sometimes called cupidity For a small good or evil is accounted as though it were nothing; and consequently every movement of the appetite in future good or evil is called hope or fear, which regard good and evil as arduous.

ARTICLE 3. *Whether Some Concupiscences Are Natural, and Some Not Natural?*

We proceed thus to the Third Article: It would seem that concupiscences are not divided into those which are natural and those which are not.

Objection 1. For concupiscence pertains to the animal appetite, as stated above (A. 1. Reply 3). But the natural appetite is divided against the animal appetite. Therefore no concupiscence is natural.

Obj. 2. Further, material difference makes no difference of species, but only numerical difference, a difference which is outside the scope of art. But if some concupiscences are natural, and some not, they differ only in respect of their objects, which amounts to a material difference, and one of number only. Therefore concupiscences should not be divided into those that are natural and those that are not.

Obj. 3. Further, reason is divided against nature, as stated in the *Physics*.[4] If therefore in man there is a concupiscence which is not nat-

[1] *Rhetoric*, I, 11 (1370^{a}16).
[2] PL 40, 23.
[3] PG 94, 929. (See above, Q. XXV, A. 4).
[4] Aristotle, II, 5, 6 (196^{b}22; 198^{a}4).

ural, it must be rational. But this is impossible, because, since concupiscence is a passion, it belongs to the sensitive appetite, and not to the will, which is the rational appetite. Therefore there are no concupiscences which are not natural.

On the contrary, The Philosopher distinguishes[1] natural concupiscences from those that are not natural.

I answer that, As stated above (A. 1), concupiscence is the desire for pleasurable good. Now a thing is pleasurable in two ways. First, because it is suitable to the nature of the animal; for example, food, drink, and the like. And concupiscence of such pleasurable things is said to be natural. Secondly, a thing is pleasurable because it is apprehended as suitable to the animal, as when one apprehends something as good and suitable, and consequently takes pleasure in it. And concupiscence of such pleasurable things is said to be not natural, and is more customarily called cupidity.

Accordingly concupiscences of the first kind, or natural concupiscences, are common to men and other animals, because to both is there something suitable and pleasurable according to nature, and in these all men agree. Therefore the Philosopher[2] calls them common and necessary.—But concupiscences of the second kind are proper to men, to whom it is proper to devise something as good and suitable, beyond that which nature requires. Hence the Philosopher says[3] that "the former concupiscences are irrational, but the latter, rational." And because different men reason differently, therefore the latter are also called[4] peculiar to the individual and acquired, that is, in addition to those that are natural.

Reply Obj. 1. The same thing that is desired by the natural appetite, may be desired by the animal appetite, once it is apprehended. And in this way there may be an animal concupiscence for food, drink and the like, which are objects of the natural appetite.

Reply Obj. 2. The difference between those concupiscences that are natural and those that are not is not merely a material difference; it is also, in a way, formal, in so far as it proceeds from a difference in the active object. Now the object of the appetite is the apprehended good. Hence diversity of the active object follows from diversity of apprehension—according as a thing is apprehended as suitable, either by absolute apprehension, from which arise natural concupiscences, which the Philosopher calls irrational;[5] or by apprehension together with deliberation, from which arise those concupiscences that are not natural, and which for this very reason the Philosopher calls rational.[6]

Reply Obj 3. Man has not only universal reason, pertaining to the intellectual part, but also particular reason pertaining to the sensitive part, as stated in the First Part (Q. LXXVIII, A. 4; Q. LXXXI, A. 3), so that even rational concupiscence may pertain to the sensitive appetite. Moreover the sensitive appetite can be moved by the universal reason also, through the means of the particular imagination.

ARTICLE 4. *Whether Concupiscence Is Infinite?*

We proceed thus to the Fourth Article: It seems that concupiscence is not infinite.

Objection 1. For the object of concupiscence is good, which has the aspect of an end. But where there is infinity there is no end.[7] Therefore concupiscence cannot be infinite.

Obj 2. Further, concupiscence is of the suitable good, since it proceeds from love. But the infinite is without proportion, and therefore unsuitable. Therefore concupiscence cannot be infinite.

Obj. 3. Further, there is no passing through infinite things, and thus there is no reaching an ultimate term in them. But the subject of concupiscence is delighted by the fact that he attains the ultimate term. Therefore, if concupiscence were infinite, no delight would ensue.

On the contrary, The Philosopher says[8] that "since concupiscence is infinite, men desire an infinite number of things."

I answer that, As stated above (A. 3), concupiscence is twofold; one is natural, the other is not natural. Natural concupiscence cannot be actually infinite, because it is of that which nature requires; and nature always tends to something finite and fixed. Hence man never desires infinite meat, or infinite drink. But just as in nature there is potential successive infinity, so this kind of concupiscence can be infinite successively; so that, for instance, after getting food, a man may desire food yet again, and so of anything else that nature requires; because these bodily goods, when obtained, do not last for ever, but fail. Hence Our Lord said to the woman of Samaria (John 4. 13): *Whosoever drinketh of this water, shall thirst again.*

[1] *Ethics,* III, 11 ($1118^{b}8$); *Rhetoric,* I, 11 ($1370^{a}20$).
[2] *Ethics, loc. cit.*
[3] *Rhetoric,* I, 11 ($1370^{a}18$).
[4] *Ethics, loc. cit.*
[5] *Rhetoric, loc. cit.*
[6] *Rhetoric,* I, 11 ($1370^{a}25$).
[7] Aristotle, *Metaphysics,* II, 2 ($994^{b}10$).
[8] *Politics,* I, 9 ($1258^{a}1$).

But non-natural concupiscence is altogether infinite. Because, as stated above (A. 3) it follows from the reason, and it belongs to the reason to proceed to infinity. Hence he that desires riches may desire to be rich beyond a fixed limit, and absolutely to be as rich as possible.

Another reason may be assigned, according to the Philosopher,[1] why a certain concupiscence is finite, and another infinite. Because concupiscence of the end is always infinite, since the end is desired for its own sake, for instance, health, and thus greater health is more desired, and so on to infinity; just as, if a white thing of itself dilates the sight, that which is more white dilates yet more. On the other hand, concupiscence of the means is not infinite, because the concupiscence of the means is in suitable proportion to the end. Consequently those who place their end in riches have an infinite concupiscence of riches; but those who desire riches on account of the necessities of life, desire a finite measure of riches, sufficient for the necessities of life, as the Philosopher says.[2] The same applies to the concupiscence of any other things.

Reply Obj. 1. Every object of concupiscence is taken as something finite, either because it is finite in reality, as being actually desired at a single time, or because it is finite as apprehended. For it cannot be apprehended as infinite, since "the infinite is that from which, however much we may take, there always remains something to be taken."[3]

Reply Obj. 2. The reason is possessed of infinite power, in a certain sense, in so far as it can consider a thing infinitely, as appears in the addition of numbers and lines. Consequently, the infinite, taken in a certain way, is proportionate to reason. And the universal which the reason apprehends is infinite in a sense, in so far as it contains potentially an infinite number of singulars.

Reply Obj. 3. In order that a man be delighted, there is no need for him to realize all that he desires, for he delights in the realization of each object of his concupiscence.

QUESTION XXXI

OF PLEASURE CONSIDERED IN ITSELF
(*In Eight Articles*)

WE must now consider pleasure (*delectatio*) and sadness. Concerning pleasure four things must be considered: (1) Pleasure in itself (Q. XXXII); (2) The causes of pleasure; (3) Its effects (Q. XXXIII); (4) Its goodness and malice (Q. XXXIV).

Under the first head there are eight points of inquiry: (1) Whether pleasure is a passion? (2) Whether pleasure is subject to time? (3) Whether it differs from joy? (4) Whether it is in the intellectual appetite? (5) Of the pleasures of the higher appetite compared with the pleasures of the lower. (6) Of sensible pleasures compared with one another. (7) Whether any pleasure is non-natural? (8) Whether one pleasure can be contrary to another?

ARTICLE 1. *Whether Pleasure Is a Passion?*

We proceed thus to the First Article: It would seem that pleasure is not a passion.

Objection 1. For Damascene (*De Fide Orthod.* ii, 22)[4] distinguishes operation from passion, and says that "operation is a movement in accord with nature, while passion is a movement contrary to nature." But "pleasure is an operation," according to the Philosopher.[5] Therefore pleasure is not a passion.

Obj. 2. Further, to be passive is to be moved, as stated in the *Physics*.[6] But pleasure does not consist in being moved, but in having been moved for it is caused by good already gained. Therefore pleasure is not a passion.

Obj. 3. Further, pleasure is a kind of a perfection of the one who is delighted "for it perfects operation," as stated in the *Ethics*.[7] But to be perfected does not consist in being passive or in being changed, as stated in the *Physics*[8] and the treatise on the *Soul*.[9] Therefore pleasure is not a passion.

On the contrary, Augustine puts pleasure whether joy or gladness, among the other passions of the soul.[10]

I answer that, The movements of the sensitive appetites are properly called passions, as stated above (Q. XXII, A. 3). Now every emotion arising from a sensitive apprehension is a movement of the sensitive appetite. But this must be in what pleasure consists, since, according to the Philosopher,[11] "Pleasure is a certain

[3] *Physics*, III, 6 (207^a7).
[4] PG 94, 941; cf. Nemesius, *De Nat. Hom.*, XVI (PG 40, 673); cf. also Cicero, *Tuscul.*, IV, 21 (DD IV, 35); Diogenes Laertes, *De Vita et Mor. Phil.*, VII, 110 (DD 183).
[5] *Ethics*, VII, 12 (1153^a10); X, 5 (1175^b33).
[6] Aristotle, III, 3 (202^a25).
[7] Aristotle, X, 4 (1174^b23).
[8] Aristotle, VII, 3 (246^b2).
[9] Aristotle, II, 5 (417^b2).
[10] *City of God*, IX, 5; XIV, 8 (PL 41, 260, 411).
[11] *Rhetoric*, I, 11 (1369^b33).

movement of the soul and a sensible establishing thereof all at once, in keeping with the nature of the thing."

In order to understand this, we must observe that just as in natural things some happen to attain to their natural perfections, so does this happen in animals. And though movement towards perfection does not occur all at once, yet the attainment of natural perfection does occur all at once. Now there is this difference between animals and other natural things, that when these latter are established in the state becoming their nature, they do not perceive it, while animals do. And from this perception there arises a certain movement of the soul in the sensitive appetite and this movement is called pleasure. Accordingly by saying that pleasure is "a movement of the soul," we designate its genus. By saying that it is "an establishing in keeping with the thing's nature," that is, with that which exists in the thing we assign the cause of pleasure, namely, the presence of a connatural good. By saying that this establishing is "all at once," we mean that this establishing is to be understood not as in the process of establishment, but as in the fact of complete establishment, in the term of the movement, as it were; for pleasure is not a becoming as Plato maintained, but a complete fact, as stated in the *Ethics* [1] Lastly, by saying that this establishing is "sensible," we exclude the perfections of insensible things in which there is no pleasure It is therefore evident that, since pleasure is a movement of the animal appetite arising from an apprehension of sense, it is a passion of the soul.

Reply Obj. 1. Connatural operation, which is unhindered, is a second perfection, as stated in the book on the *Soul*,[2] and therefore when a thing is established in its proper connatural and unhindered operation, pleasure follows, which consists in a state of completion, as observed above. Accordingly when we say that pleasure is an operation, we predicate not its essence but its cause.

Reply Obj. 2. A twofold movement is to be observed in an animal: one, according to the intention of the end, and this belongs to the appetite; the other, according to the execution, and this belongs to the external operation. And so, although in him who has already gained the good in which he delights, the movement of execution ceases, by which he tends to the end, yet the movement of the appetitive part does not cease, since, just as before it desired that which it had not, so afterwards does it delight in that which it possesses. For though pleasure is a certain repose of the appetite, if we consider the presence of the pleasurable good that satisfies the appetite, nevertheless there remains the change made on the appetite by its object, by reason of which pleasure is a kind of movement.

Reply Obj. 3. Although the name of passion is more appropriate to those passions which have a corruptive and evil tendency, such as bodily ailments, and sadness and fear in the soul, yet some passions are ordered to something good, as stated above (Q. XXIII, AA. 1, 4). And in this sense pleasure is called a passion.

ARTICLE 2. *Whether Pleasure Is in Time?*

We proceed thus to the Second Article: It would seem that pleasure is in time.

Objection 1. For "pleasure is a kind of movement," as the Philosopher says.[3] But all movement is in time. Therefore pleasure is in time.

Obj. 2. Further, a thing is said to last long and to be lingering in respect of time. But some pleasures are called lingering. Therefore pleasure is in time.

Obj. 3. Further, the passions of the soul are of one same genus. But some passions of the soul are in time. Therefore pleasure is too.

On the contrary, The Philosopher says[4] that "no one takes pleasure according to time."

I answer that, A thing may be in time in two ways: first, by itself; secondly, by reason of something else, and accidentally as it were. For since time is the measure of successive things, those things are of themselves said to be in time to which, of their very notion, succession or something pertaining to succession belongs; such are movement, repose, speech and the like. On the other hand, those things are said to be in time by reason of something else and not of themselves, to which succession does not belong of their very notion, but which are subject to something successive. Thus the fact of being a man is not of its very notion something successive; for it is not a movement, but the term of a movement or change, namely, of his being begotten. Yet, because human being is subject to changeable causes, in this respect, to be a man is in time.

Accordingly, we must say that pleasure, of itself indeed, is not in time; for it concerns good already gained, which is, as it were, the term of the movement. But if this good gained be sub-

[1] Aristotle, VII, 12 (1153^{a}13); cf. *Philebus* (53).
[2] Aristotle, II, 1 (412^{a}10).
[3] *Rhetoric*, I, 11 (1369^{b}33).
[4] *Ethics*, X, 4 (1174^{a}17).

ject to change, the pleasure will be in time accidentally; if however it be altogether unchangeable, the pleasure will not be in time, either by reason of itself or accidentally.

Reply Obj. 1. As stated in the book on the *Soul*,[1] movement is twofold. One is "the act of something imperfect," namely, existing in potency as such; this movement is successive and is in time. Another movement is "the act of something perfect," that is, existing in act, for example, to understand, to feel, and to will and the like, and also to delight. This movement is not successive, nor is it of itself in time.

Reply Obj. 2. Pleasure is said to be long lasting or lingering, according as it is accidentally in time.

Reply Obj. 3. Other passions have not for their object a good obtained, as pleasure has. Therefore there is more of the movement of the imperfect in them than in pleasure. And consequently it belongs more to pleasure not to be in time.

Article 3. *Whether Pleasure Differs From Joy?*

We proceed thus to the Third Article: It would seem that pleasure is altogether the same as joy.

Objection 1. Because the passions of the soul differ according to their objects. But pleasure and joy have the same object, namely, a good obtained. Therefore joy is altogether the same as pleasure.

Obj. 2. Further, one movement does not end in two terms. But one and the same movement, that of concupiscence, ends in joy and pleasure. Therefore pleasure and joy are altogether the same.

Obj. 3. Further, if joy differs from pleasure, it seems that there is equal reason for distinguishing gladness, exultation, and cheerfulness from pleasure, so that they would all be various passions of the soul. But this seems to be untrue. Therefore joy does not differ from pleasure.

On the contrary. We do not speak of joy in irrational animals; but we do speak of pleasure in them. Therefore joy is not the same as pleasure.

I answer that, Joy, as Avicenna states (*De Anima,* iv),[2] is a kind of pleasure. For we must observe that, just as some concupiscences are natural, and some not natural, but consequent to reason, as stated above (Q. XXX, A. 3), so also some pleasures are natural, and some are not natural but rational. Or, as Damascene (*De Fide Orthod.* ii, 13)[3] and Gregory of Nyssa[4] put it, "some delights are of the body, some are of the soul," which amounts to the same. For we take pleasure both in those things which we desire naturally, when we get them, and in those things which we desire as a result of reason. But we do not speak of joy except when pleasure follows reason; and so we do not ascribe joy to irrational animals, but only pleasure.

Now whatever we desire naturally can also be the object of reasoned desire and pleasure, and consequently whatever can be the object of pleasure, can also be the object of joy in rational beings. And yet everything is not always the object of joy, since sometimes one feels a certain pleasure in the body without rejoicing in it according to reason. And accordingly pleasure extends to more things than does joy.

Reply Obj. 1. Since the object of the appetite of the soul is an apprehended good, diversity of apprehension pertains, in a way, to diversity of the object. And so pleasures of the soul which are also called joys, are distinct from bodily pleasures, which are not called otherwise than pleasures, as we have observed above in regard to concupiscence (Q. XXX, A. 3, Reply 2).

Reply Obj. 2. A like difference is to be observed in concupiscences also, so that pleasure corresponds to concupiscence, while joy corresponds to desire, which seems to pertain more to animal concupiscence. Hence there is a difference of repose corresponding to the difference of movement.

Reply Obj. 3. These other names pertaining to pleasure are derived from the effects of delight; for *lætitia* (gladness) is derived from the dilatation of the heart, as if one were to say *latitia*;[5] "exultation" is derived from the exterior signs of inward delight, which appear outwardly in so far as the inward joy breaks forth from its bounds;[6] and "cheerfulness" is so called from certain special signs and effects of gladness.[7] Yet all these names seem to pertain to joy; for we do not employ them save in speaking of rational beings.

Article 4. *Whether Pleasure Is in the Intellectual Appetite?*

We proceed thus to the Fourth Article: It would seem that pleasure is not in the intellectual appetite.

Objection 1. Because the Philosopher says[8]

[1] Aristotle, III, 7 (431[a]6). [2] Chap. 5 (211ra).
[3] PG 94, 929. [4] Nemesius, *De Nat. Hom.*, XVIII (PG 40, 677). [5] Isidore, *Etymol.*, X, 1 (PL 82, 383); cf. below, Q. XXX, A. 1. [6] Isidore, *Diff.* I, n. 329 (PL 83, 44).
[7] Isidore, *Etymol.*, X, 1 (PL 82, 380).
[8] *Rhetoric*, I, 11 (1369[b]33).

that "pleasure is a sensible movement." But sensible movement is not in the intellectual part. Therefore pleasure is not in the intellectual part.

Obj. 2. Further, pleasure is a passion. But every passion is in the sensitive appetite. Therefore pleasure is only in the sensitive appetite.

Obj. 3. Further, pleasure is common to us and to the irrational animals. Therefore it is not elsewhere than in that part which we have in common with irrational animals.

On the contrary, It is written (Ps. 36. 4): *Delight in the Lord.* But the sensitive appetite cannot reach to God; only the intellectual appetite can. Therefore pleasure can be in the intellectual appetite.

I answer that, As stated above (A. 3), a certain pleasure arises from the apprehension of the reason. Now on the reason apprehending something, not only the sensitive appetite is moved, as regards its application to some particular thing, but also the intellectual appetite, which is called the will. And accordingly, in the intellectual appetite or will there is that pleasure which is called joy, but not bodily pleasure. However, there is this difference of pleasure in either power, that pleasure of the sensitive appetite is accompanied by a bodily change, while pleasure of the intellectual appetite is nothing but the simple movement of the will Hence Augustine says[1] that "desire and joy are nothing else but a volition of consent to the things we wish."

Reply Obj. 1. In this definition of the Philosopher, he uses the word "sensible" in its wide acceptation for any kind of apprehension. For he says[2] that "pleasure is attendant upon every sense, as it is also upon every act of the understanding and speculation."—Or we may say that he is defining pleasure of the sensitive appetite.

Reply Obj. 2. Pleasure has the character of passion, properly speaking, when accompanied by bodily change. It is not thus in the intellectual appetite, but according to simple movement; for thus it is also in God and the angels. Hence the Philosopher says[3] that "God rejoices by one simple act"; and Dionysius says at the end of *De Cæl Hier.*,[4] that "the angels are not susceptible to our passible pleasure, but rejoice together with God with the gladness of incorruption."

Reply Obj. 3. In us there is pleasure not only in common with dumb animals, but also in common with angels. Therefore Dionysius says (*ibid.*) that "holy men often take part in the angelic delights." Accordingly we have pleasure not only in the sensitive appetite, which we have in common with dumb animals, but also in the intellectual appetite, which we have in common with the angels.

[1] *City of God,* XIV, 6 (PL 41, 409).
[2] *Ethics,* X, 4 (1174^{b}20).
[3] *Ibid.,* VII, 14 (1154^{b}26).
[4] XV, 9 (PG 3, 340).

ARTICLE 5. *Whether Bodily and Sensible Pleasures Are Greater Than Spiritual and Intellectual Pleasures?*

We proceed thus to the Fifth Article: It would seem that bodily and sensible pleasures are greater than spiritual and intelligible pleasures.

Objection 1. "For all men seek some pleasure," according to the Philosopher.[5] But more seek sensible pleasures, than intelligible spiritual pleasures. Therefore bodily pleasures are greater.

Obj. 2. Further, the greatness of a cause is known by its effect. But bodily pleasures have greater effects, since "they alter the state of the body, and in some they cause madness."[6] Therefore bodily pleasures are greater.

Obj. 3. Further, bodily pleasures need to be tempered and checked, by reason of their vehemence; but there is no need to check spiritual pleasures. Therefore bodily pleasures are greater.

On the contrary, It is written (Ps. 118. 103): *How sweet are thy words on my palate; more than honey to my mouth!* And the Philosopher says[7] that "the greatest pleasure is derived from the operation of wisdom."

I answer that, As stated above (A. 1) pleasure arises from union with a suitable object when it is sensed or known. Now in the operations of the soul, especially of the sensitive and intellectual soul, it must be noted, that, since they do not pass into outward matter, they are acts or perfections of the doer, for instance, to understand, to sense, to will, and the like; because actions which pass into outward matter are actions and perfections rather of the matter transformed; for movement is an act produced by the mover in the thing moved. Accordingly the above mentioned actions of the sensitive and intellectual soul are themselves a certain good of the doer, and are also known by sense and intellect. Therefore from them also pleasure arises, and not only from their objects.

[5] *Ethics,* X, 2, 4 (1172^{b}10; 1175^{a}10).
[6] Aristotle, *Ethics,* VII, 3 (1147^{a}16).
[7] *Ethics,* X, 7 (1177^{a}23).

If therefore we compare intellectual pleasures with sensible pleasures according as we delight in the very actions, for instance in sensitive and in intellectual knowledge, without doubt intellectual pleasures are much greater than sensible pleasures. For man takes much more delight in knowing something, by understanding it, than in knowing something by perceiving it with his sense; both because intellectual knowledge is more perfect and because it is better known, since the intellect reflects on its own act more than sense does. Moreover intellectual knowledge is more loved; for there is no one who would not forfeit his bodily sight rather than his intellectual vision in the way beasts or fools are without the latter, as Augustine says in the *City of God.*[1]

If, however, intellectual spiritual pleasures be compared with sensible bodily pleasures, then, in themselves and absolutely speaking, spiritual pleasures are greater. And this appears from the consideration of the three things needed for pleasure; namely, the good which is brought into conjunction, that to which it is joined, and the union itself. For spiritual good is both greater and more loved than bodily good; a sign of this is that men abstain from even the greatest bodily pleasures, rather than suffer loss of honour which is an intellectual good. Likewise the intellectual part is much more noble and more knowing than the sensitive part. Also the conjunction is more intimate, more perfect and more firm. More intimate, because the senses stop at the outward accidents of a thing, while the intellect penetrates to the essence; for the object of the intellect is what a thing is. More perfect, because the conjunction of the sensible to the sense implies movement, which is an imperfect act; thus sensible pleasures are not wholly together at once, but some part of them is passing away, while some other part is looked forward to as yet to be realized, as is manifest in pleasures of the table and in sexual pleasures. But intelligible things are without movement; hence pleasures of this kind are realized all at once. They are more firm, because the objects of bodily pleasures are corruptible and soon pass away; but spiritual goods are incorruptible.

On the other hand, in relation to us, bodily pleasures are more vehement, for three reasons. First, because sensible things are more known to us than intelligible things. Secondly, because sensible pleasures, through being passions of the sensitive appetite, are accompanied by some alteration in the body; but this does not occur in spiritual pleasures unless by reason of a certain reaction of the superior appetite on the lower. Thirdly, because bodily pleasures are sought as remedies for bodily defects or troubles, from which various griefs arise. And so bodily pleasures, because they come after griefs of this kind, are felt the more, and consequently are more welcome than spiritual pleasures, which have no contrary griefs, as we shall state further on (Q. XXXV, A. 5).

Reply Obj. 1. The reason why more seek bodily pleasures is because sensible goods are known better and in greater numbers; and, again, because men need pleasures as remedies for many kinds of sorrow and sadness. And since many men cannot attain spiritual pleasures, which are proper to the virtuous, hence it is that they turn aside to seek those of the body.

Reply Obj. 2. Bodily change arises more from bodily pleasures because they are passions of the sensitive appetite.

Reply Obj. 3. Bodily pleasures are realized in the sensitive part which is governed by reason; therefore they need to be tempered and checked by reason. But spiritual pleasures are in the mind, which is itself the rule; hence they are in themselves both sober and moderate.

ARTICLE 6. *Whether the Pleasures of Touch Are Greater Than the Pleasures Afforded By the Other Senses?*

We proceed thus to the Sixth Article: It would seem that the pleasures of touch are not greater than the pleasures afforded by the other senses.

Objection 1. Because the greatest pleasure seems to be that without which all joy is at an end. But such is the pleasure afforded by the sight, according to the words of Tobias 5. 12: *What manner of joy shall be to me, who sit in darkness, and see not the light of heaven?* Therefore the pleasure afforded by the sight is the greatest of sensible pleasures.

Obj. 2. Further, every one finds pleasure in what he loves, as the Philosopher says.[2] But of all the senses the sight is loved most. Therefore the greatest pleasure is that which is afforded by the sight.

Obj. 3. Further, the beginning of friendship which is for the sake of the pleasant is principally sight. But pleasure is the cause of such friendship. Therefore the greatest pleasure seems to be afforded by sight.

[1] Cf. *De Trin.*, XIV, 14 (PL 42, 1051).

[2] *Rhetoric*, I, 11 (1370^{b}19); cf. *Ethics*, I, 8 (1099^{a}8).

On the contrary, The Philosopher says[1] that the greatest pleasures are those which are afforded by the touch.

I answer that, As stated above (Q. XXV, A. 2, Reply 1; Q. XXVII, A. 4, Reply 1), everything gives pleasure according as it is loved. Now, as stated in the *Metaphysics,*[2] the senses are loved for two reasons: for the purpose of knowledge, and on account of their usefulness. Hence the senses afford pleasure in both these ways. But because it is proper to man to apprehend knowledge itself as something good, it follows that the former pleasures of the senses, that is, those which arise from knowledge, are proper to man; but pleasures of the senses, as loved for their usefulness, are common to all animals.

If therefore we speak of that sensible pleasure which is by reason of knowledge, it is evident that the sight affords greater pleasure than any other sense. On the other hand, if we speak of that sensible pleasure which is by reason of usefulness, then the greatest pleasure is afforded by the touch. For the usefulness of sensible things is gauged by their relation to the preservation of the animal's nature. Now the sensible objects of touch bear the closest relation to this usefulness; for the touch takes cognizance of those things of which an animal consists—namely, of things hot and cold and the like. Therefore in this respect, the pleasures of touch, are greater as being more closely related to the end. For this reason, too, other animals who do not experience sensible pleasure except by reason of usefulness, derive no pleasure from the other senses except as subordinated to the sensible objects of the touch: "for dogs do not take delight in the smell of hares, but in eating them; . . . nor does the lion feel pleasure in the lowing of an ox, but in devouring it."[3]

Since then the pleasure afforded by touch is the greatest in respect of usefulness, and the pleasure afforded by sight the greatest in respect of knowledge, if anyone wish to compare these two he will find that the pleasure of touch is, absolutely speaking, greater than the pleasure of sight, so far as the latter remains within the limits of sensible pleasure. Because it is evident that the natural in any being is also the strongest thing in it. And it is to these pleasures of the touch that the natural concupiscences, such as those of food, sexual union, and the like, are ordered. If, however, we consider the pleasures of sight according as sight is the handmaid of the mind, then the pleasures of sight are greater, for the same reason that intellectual pleasures are greater than sensible.

Reply Obj. 1. Joy, as stated above (A. 3), denotes animal pleasure; and this belongs principally to the sight. But natural pleasure belongs principally to the touch.

Reply Obj. 2. The sight is loved most on account of knowledge, because "it helps us to distinguish many things" as is stated in the same passage.[4]

Reply Obj. 3. Pleasure causes carnal love in one way; the sight, in another. For pleasure, especially that which is afforded by the touch, is the final cause of the friendship which is for the sake of the pleasant; but the sight is a cause like that from which a movement has its beginning, in so far as the beholder on seeing the lovable object receives an impression of its likeness, which draws him to love it and seek its pleasure.

ARTICLE 7. *Whether Any Pleasure Is Not Natural?*

We proceed thus to the Seventh Article: It would seem that no pleasure is not natural.

Objection 1. For pleasure is to the emotions of the soul what repose is to bodies. But the appetite of a natural body does not rest except in a connatural place. Neither, therefore, can the repose of the animal appetite, which is pleasure, be elsewhere than in something connatural. Therefore no pleasure is non-natural.

Obj 2. Further, what is against nature is violent. But "whatever is violent causes grief."[5] Therefore nothing which is against nature can give pleasure.

Obj. 3. Further, the fact of being established in one's own nature, if perceived, gives rise to pleasure, as is evident from the Philosopher's definition[6] quoted above (A. 1). But it is natural to every thing to be established in its nature, because that movement is natural which tends to a natural end. Therefore every pleasure is natural.

On the contrary, The Philosopher says[7] that some things are pleasant not from nature but from disease.

I answer that, We speak of that as being natural, which is in accord with nature, as stated in the *Physics.*[8] Now in man nature can be taken in two ways. First, according as intellect

[1] *Ethics,* III, 10 (1118^{a}33). [2] Aristotle, I, 1 (980^{a}21).
[3] Aristotle, *Ethics,* III, 10 (1118^{a}18).
[4] *Metaphysics,* I, 1 (980^{a}26).
[5] *Ibid.,* V, 5 (1015^{a}28).
[6] *Rhetoric,* I, 11 (1369^{b}33).
[7] *Ethics,* VII, 5, 6 (1148^{b}18; ^{b}27; 1149^{b}29).
[8] Aristotle, II, 1 (192^{b}35; 193^{a}32).

and reason is the principal part of man's nature, since in respect thereof man is constituted in his species. And in this sense, those pleasures may be called natural to man which are derived from things pertaining to man in respect of his reason; for instance, it is natural to man to take pleasure in contemplating the truth and in doing works of virtue. Secondly, nature in man may be taken as divided against reason, and as denoting that which is common to man and other animals, especially that part of man which does not obey reason. And in this sense, that which pertains to the preservation of the body, either as regards the individual, as food, drink, sleep, and the like, or as regards the species, as sexual intercourse, are said to afford man natural pleasure.

Under each kind of pleasures, we find some that are not natural, speaking absolutely, and yet connatural in some respect. For it happens in an individual that some one of the natural principles of the species is corrupted, so that something which is contrary to the specific nature becomes accidentally natural to this individual; thus it is natural to this hot water to give heat. Consequently it happens that something which is not natural to man, either in regard to reason, or in regard to the preservation of the body, becomes connatural to this individual man, on account of there being some corruption of nature in him. And this corruption may be either on the part of the body, for example, from some ailment (thus to a man suffering from fever, sweet things seem bitter, and vice versa)—or from an evil temperament; thus some take pleasure in eating earth and coals and the like; —or on the part of the soul; thus from custom some take pleasure in cannibalism or in the unnatural intercourse of man and beast, or other things of this kind, which are not in accord with human nature.

This suffices for the *answers to the objections.*

ARTICLE 8. *Whether One Pleasure Can Be Contrary to Another?*

We proceed thus to the Eighth Article: It seems that one pleasure cannot be contrary to another.

Objection 1. For the passions of the soul derive their species and contrariety from their objects. Now the object of pleasure is the good. Since therefore good is not contrary to good, but "good is contrary to evil, and evil to evil," as stated in the *Categories,*[1] it seems that one pleasure is not contrary to another.

[1] Aristotle, 11 (13^b36).

Obj. 2. Further, "to one thing there is one contrary," as is proved in the *Metaphysics.*[2] But sadness is contrary to pleasure. Therefore pleasure is not contrary to pleasure.

Obj. 3. Further, if one pleasure is contrary to another, this is only on account of the contrariety of the things which give pleasure. But this difference is material and contrariety is a difference of form, as stated in the *Metaphysics.*[3] Therefore there is no contrariety between one pleasure and another.

On the contrary, "Things of the same genus that impede one another are contraries," according to the Philosopher.[4] But some pleasures impede one another, as stated in the *Ethics.*[5] Therefore some pleasures are contrary to one another.

I answer that, Pleasure, in the emotions of the soul, is likened to repose in natural bodies, as stated above (Q. XXIII, A. 4). Now one repose is said to be contrary to another when they are in contrary terms; thus "repose in a high place is contrary to repose in a low place"[6] And so it happens in the emotions of the soul that one pleasure is contrary to another.

Reply Obj. 1. This saying of the Philosopher is to be understood of good and evil as applied to virtues and vices, because one vice may be contrary to another vice, though no virtue can be contrary to another virtue. But in other things nothing prevents one good being contrary to another, such as hot and cold, of which the former is good in relation to fire, the latter, in relation to water. And in this way one pleasure can be contrary to another. That this is impossible with regard to the good of virtue, is due to the fact that virtue's good depends on fittingness in relation to some one thing, namely, reason.

Reply Obj. 2. Pleasure, in the emotions of the soul, is likened to natural repose in bodies; for its object is something suitable and connatural, so to speak. But sadness is like a violent repose, because its object is disagreeable to the animal appetite, just as the place of violent repose is disagreeable to the natural appetite. Now natural repose is contrary both to violent repose of the same body, and to the natural repose of another, as stated in the *Physics.*[7] Therefore pleasure is contrary both to another pleasure and to sadness.

[2] Aristotle, X, 4, 5 (1055^a19; 1055^b30).
[3] Aristotle, X, 4 (1055^a3).
[4] *Physics,* VIII, 8 (262^a11); *Metaphysics,* X, 4 (1055^a27).
[5] Aristotle, X, 5 (1175^b1).
[6] Aristotle, *Physics,* V, 6 (230^b11).
[7] Aristotle, V, 6 (230^b18; 231^a13).

Reply Obj. 3. The things in which we take pleasure, since they are the objects of pleasure, cause not only a material, but also a formal difference, if the aspect of pleasurableness be different. Because difference in the aspect of the object causes a specific difference in acts and passions, as stated above (Q. XXIII, AA. 1, 4; Q. XXX, A. 2).

QUESTION XXXII

OF THE CAUSE OF PLEASURE

(In Eight Articles)

WE must now consider the causes of pleasure; and under this head there are eight points of inquiry: (1) Whether operation is the proper cause of pleasure? (2) Whether movement is a cause of pleasure? (3) Whether hope and memory cause pleasure? (4) Whether sadness causes pleasure? (5) Whether the actions of others are a cause of pleasure to us? (6) Whether doing good to another is a cause of pleasure? (7) Whether likeness is a cause of pleasure? (8) Whether wonder is a cause of pleasure?

ARTICLE 1. *Whether Operation Is the Proper Cause of Pleasure?*

We proceed thus to the First Article: It would seem that operation is not the proper and first cause of pleasure.

Objection 1. For, as the Philosopher says,[1] "pleasure consists in a perception of the senses," since knowledge is requisite for pleasure, as stated above (Q. XXXI, A. 1). But the objects of operations are knowable before the operations themselves. Therefore operation is not the proper cause of pleasure.

Obj. 2. Further, pleasure consists especially in an end gained, since it is this that is chiefly desired. But the end is not always an operation, but is sometimes the effect of the operation. Therefore operation is not the proper and per se cause of pleasure.

Obj. 3. Further, leisure and rest consist in cessation from work, and they are objects of pleasure.[2] Therefore operation is not the proper cause of pleasure.

On the contrary, The Philosopher says[3] that "pleasure is a connatural and uninterrupted operation."

I answer that, As stated above (Q. XXXI, A. 1), two things are requisite for pleasure: namely, the attainment of the suitable good, and knowledge of this attainment. Now each of these consists in a kind of operation, because actual knowledge is an operation and the attainment of the suitable good is by means of an operation. Moreover, the proper operation itself is a suitable good. Therefore every pleasure must be the result of some operation.

Reply Obj. 1. The objects of operations are not pleasurable except in so far as they are united to us; either by knowledge alone, as when we take pleasure in thinking of or looking at certain things; or in some other way along with knowledge, as when a man takes pleasure in knowing that he has something good,—riches, honour, or the like, which would not be pleasurable unless they were apprehended as possessed. For as the Philosopher observes,[4] "we take great pleasure in looking upon a thing as our own, by reason of the natural love we have for ourselves." Now to have such things is nothing else but to use them or to be able to use them, and this is through some operation. Therefore it is evident that every pleasure is reduced to some operation as its cause.

Reply Obj. 2. Even when the end is not an operation, but the effect of an operation, this effect is pleasant in so far as possessed or effected; and this comes back to use or operation.

Reply Obj. 3. Operations are pleasant in so far as they are proportionate and connatural to the doer. Now, since human power is finite, operation is proportioned to it according to a certain measure. And so if it exceed that measure, it will be no longer proportionate or pleasant, but, on the contrary, painful and irksome. And in this sense, leisure and play and other things pertaining to rest, are pleasant, since they banish sadness which results from labour.

ARTICLE 2. *Whether Movement Is a Cause of Pleasure?*

We proceed thus to the Second Article: It seems that movement is not a cause of pleasure.

Objection 1. Because, as stated above (Q. XXXI, A. 1), the good which is obtained and is actually possessed, is the cause of pleasure. Therefore the Philosopher says[5] that pleasure is not compared with generation, but with the operation of a thing already in existence. Now that which is being moved towards something does not yet have it; but it is, so to speak, being

[1] *Rhetoric,* I, 11 (1370^{a}27).
[2] *Ibid.* (1370^{a}14).
[3] *Ethics,* VII, 12, 13 (1153^{a}14; ^{b}9); X, 4 (1174^{b}20).
[4] *Politics,* II, 5 (1263^{a}40).
[5] *Ethics,* VII, 12 (1153^{a}12).

generated in its regard, since generation or corruption are united to every movement, as stated in the *Physics*.[1] Therefore movement is not a cause of pleasure.

Obj. 2. Further, movement is the chief cause of toil and fatigue in our works. But operations through being toilsome and fatiguing are not pleasant but disagreeable. Therefore movement is not a cause of pleasure.

Obj. 3. Further, movement implies a certain innovation, which is the opposite of custom. But "things which we are accustomed to, are pleasant," as the Philosopher says.[2] Therefore movement is not a cause of pleasure.

On the contrary, Augustine says,[3] "What means this, O Lord my God, whereas Thou art everlasting joy to Thyself, and some things around Thee evermore rejoice in Thee? What means this, that this portion of things ebbs and flows alternately displeased and reconciled?" From these words we gather that man rejoices and takes pleasure in some kind of alternations; and therefore movement seems to cause pleasure.

I answer that, Three things are requisite for pleasure: the one that is pleased, the pleasurable object joined to him, and a third thing, the knowledge of this union. And in respect of these three, movement is pleasant, as the Philosopher says.[4] For as far as we who feel pleasure are concerned, change is pleasant to us because our nature is changeable; and for this reason that which is suitable to us at one time is not suitable at another,—thus to warm himself at a fire is suitable to man in winter and not in summer. Again, on the part of the pleasing good which is united to us, change is pleasant, because the continued action of an agent increases its effect; thus the longer a person remains near the fire, the more he is warmed and dried. Now the natural disposition consists in a certain measure; and therefore when the continued presence of a pleasant object exceeds the measure of one's natural disposition, the removal of that object becomes pleasant. On the part of the knowledge itself (change becomes pleasant) because man desires to know something whole and perfect; when therefore a thing cannot be apprehended all at once as a whole, change in such a thing is pleasant, so that one part may pass and another succeed, and thus the whole be perceived. Hence Augustine says,[5] "Thou wouldst not have the syllables stay, but fly away, that others may come, and thou hear the whole. And so whenever any one thing is made up of many, all of which do not exist together, all would please collectively more than they do severally, if all could be perceived collectively."

If therefore there be any thing whose nature is unchangeable, whose natural disposition cannot be exceeded by the continuation of any pleasing object, and which can behold the whole object of its delight at once,—to such a one change will afford no delight. And the more any pleasures approach to this, the more are they capable of being continual.

Reply Obj. 1. Although the subject of movement does not yet have perfectly that to which it is moved, nevertheless it is beginning to have something of it; and in this respect movement itself has something of pleasure. But it falls short of the perfection of pleasure, because the more perfect pleasures regard things that are unchangeable. Moreover movement becomes the cause of pleasure in so far as thereby something which previously was unsuitable becomes suitable or ceases to be, as stated above.

Reply Obj. 2. Movement causes toil and fatigue when it exceeds our natural disposition. It is not thus that it causes pleasure, but by removing what is contrary to our natural disposition.

Reply Obj. 3. What is customary becomes pleasant, in so far as it becomes natural; for custom is like a second nature. But the movement which gives pleasure is not that which departs from custom, but rather that which prevents the corruption of the natural disposition that might result from continued operation. And thus from the same cause of connaturalness, both custom and movement become pleasant.

Article 3. *Whether Hope and Memory Cause Pleasure?*

We proceed thus to the Third Article: It seems that memory and hope do not cause pleasure.

Objection 1. Because pleasure is caused by present good, as Damascene says (*De Fide Orthod.* ii).[6] But hope and memory regard what is absent, for memory is of the past, and hope of the future. Therefore memory and hope do not cause pleasure.

Obj. 2. Further, the same thing is not the

[1] Aristotle, VIII, 3 (254[a]10).
[2] *Rhetoric*, I, 11 (1370[a]3; 1371[a]24).
[3] *Confessions*, VIII, 8 (PL 32, 752).
[4] *Ethics*, VII, 14 (1154[b]28), *Rhetoric*, I, 11 (1371[a]25).
[5] *Confessions*, IV, 17 (PL 32, 700).
[6] Chap. 12 (PG 94, 929).

cause of contraries. But hope causes affliction, according to Prov. 13.12: *Hope that is deferred afflicteth the soul.* Therefore hope does not cause pleasure.

Obj. 3. Further, just as hope agrees with pleasure in regarding good, so also do concupiscence and love. Therefore hope should not be assigned as a cause of pleasure, any more than concupiscence or love.

On the contrary, It is written (Rom. 12.12): *Rejoicing in hope;* and (Ps. 76.4): *I remembered God, and was delighted.*

I answer that, Pleasure is caused by the presence of suitable good, in so far as it is sensed, or in any way perceived. Now a thing is present to us in two ways. First, in knowledge, that is, according as the thing known is in the knower by its likeness; secondly, in reality, that is, according as one thing is really joined with another, either actually or potentially according to any kind of union. And since real conjunction is greater than conjunction by likeness, which is the conjunction of knowledge; and again, since actual is greater than potential conjunction, therefore the greatest pleasure is that which arises from sensation which requires the presence of the sensible object. The second place belongs to the pleasure of hope, in which there is pleasurable conjunction, not only in respect of apprehension, but also in respect of the power or possibility of obtaining the pleasurable object. The third place belongs to the pleasure of memory, which has only the conjunction of apprehension.

Reply Obj. 1. Hope and memory are indeed of things which, absolutely speaking, are absent, and yet these are, after a fashion, present, that is, either according to apprehension only; or according to apprehension and power, at least supposed, of attainment.

Reply Obj. 2. Nothing prevents the same thing, in different ways, being the cause of contraries. And so hope, in so far as it implies a present appraising of a future good, causes pleasure; but in so far as it implies absence of that good, it causes affliction.

Reply Obj. 3. Love and concupiscence also cause pleasure. For everything that is loved becomes pleasing to the lover, since love is a kind of union or connaturalness of lover and beloved. In like manner every object of desire is pleasing to the one that desires, since concupiscence is chiefly a desire for pleasure. However hope, as implying a certainty of the real presence of the pleasing good that is not implied either by love or by concupiscence, is considered in preference to them as causing pleasure; and also in preference to memory, which is of that which has already passed away.

ARTICLE 4. *Whether Sadness Causes Pleasure?*

We proceed thus to the Fourth Article: It would seem that sadness does not cause pleasure.

Objection 1. For nothing causes its own contrary. But sadness is contrary to pleasure. Therefore it does not cause it.

Obj. 2. Further, contraries have contrary effects. But pleasures, when called to mind, cause pleasure. Therefore sad things, when remembered, cause sorrow and not pleasure.

Obj. 3. Further, as sadness is to pleasure, so is hatred to love. But hatred does not cause love, but rather the other way about, as stated above (Q. XXIX, A. 2). Therefore sadness does not cause pleasure.

On the contrary, It is written (Ps. 41. 4): *My tears have been my bread day and night,* where bread denotes the refreshment of pleasure. Therefore tears, which arise from sadness, can give pleasure.

I answer that, Sadness may be considered in two ways: as existing actually, and as existing in the memory, and in both ways sadness can cause pleasure. Because sadness, as actually existing, causes pleasure, since it brings to mind that which is loved, the absence of which causes sadness; and yet the mere thought of it gives pleasure.—The recollection of sadness becomes a cause of pleasure on account of the subsequent deliverance, because absence of evil is looked upon as something good; hence according as a man thinks that he has been delivered from that which caused him sorrow and pain, so much reason has he to rejoice. And so Augustine says in the *City of God*[1] that oftentimes in joy we call to mind sad things . . . and in the season of health we recall past pains without feeling pain, . . . and in proportion are the more filled with joy and gladness; and again he says[2] that "the more peril there was in the battle, so much the more joy will there be in the triumph."

Reply Obj. 1. Sometimes accidentally a thing is the cause of its contrary; thus "that which is cold sometimes causes heat," as stated in the *Physics.*[3] In like manner sadness is the accidental cause of pleasure, in so far as it gives rise to the apprehension of something pleasant.

[1] Cf. Gregory, *Moral*, IV, 36 (PL 75, 678).
[2] *Confessions*, VIII, 7 (PL 32, 752).
[3] Aristotle, VIII, 1 (251a31).

Reply Obj. 2. Sad things called to mind cause pleasure, not in so far as they are sad and contrary to pleasant things, but in so far as man is delivered from them. In like manner the recollection of pleasant things, by reason of these being lost, may cause sadness.

Reply Obj. 3. Hatred also can be the accidental cause of love, that is, so far as some love one another because they agree in hating one and the same thing.

ARTICLE 5. *Whether the Actions of Others Are a Cause of Pleasure to Us?*

We proceed thus to the Fifth Article: It seems that the actions of others are not a cause of pleasure to us.

Objection 1. Because the cause of pleasure is our own good when conjoined to us. But the actions of others are not conjoined to us. Therefore they are not a cause of pleasure to us.

Obj. 2. Further, action is the agent's own good. If, therefore, the actions of others are a cause of pleasure to us, for the same reason all goods belonging to others will be pleasing to us, which is evidently untrue.

Obj. 3. Further, action is pleasant through proceeding from an innate habit; hence it is stated in the *Ethics*[1] that "we must regard the pleasure which follows after action, as being the sign of a habit existing in us." But the actions of others do not proceed from habits existing in us, but, sometimes, from habits existing in the agents. Therefore the actions of others are not pleasing to us, but to the agents themselves.

On the contrary, It is written in the second canonical epistle of John (*verse* 4): *I was exceeding glad that I found thy children walking in truth.*

I answer that, As stated above (A. 1; Q. XXXI, A. 1), two things are requisite for pleasure, namely, the attainment of one's proper good, and the knowledge of having obtained it. Therefore the action of another may cause pleasure to us in three ways. First, from the fact that we obtain some good through the action of another. And in this way, the actions of those who do some good to us are pleasing to us, for it is pleasant to be benefited by another. Secondly, from the fact that another's action makes us to know or appreciate our own good; and for this reason men take pleasure in being praised or honoured by others, because, that is, they thus become aware of some good existing in themselves. And since this appreciation receives greater weight from the testimony of good and wise men, therefore men take greater pleasure in being praised and honoured by them. And because a flatterer appears to praise, therefore flattery is pleasing to some. And as love is for something good, while admiration is for something great, so it is pleasant to be loved and admired by others, since a man thus becomes aware of his own goodness or greatness, through their giving pleasure to others. Thirdly, from the fact that another's actions, if they be good, are regarded as one's own good, by reason of the power of love, which makes a man to regard his friend as one with himself. And on account of hatred, which makes one to reckon another's good as being in opposition to oneself, the evil action of an enemy becomes an object of pleasure; and so it is written (I Cor. 13.6) that charity *rejoiceth not in iniquity, but rejoiceth with the truth.*

Reply Obj. 1. Another's action may be joined to me, either by its effect, as in the first way, or by knowledge, as in the second way, or by affection, as in the third way.

Reply Obj. 2. This argument avails for the third mode, but not for the first two.

Reply Obj. 3. Although the actions of another do not proceed from habits that are in me, yet they either produce in me something that gives pleasure; or they make me appreciate or know a habit of mine; or they proceed from the habit of one who is one with me by love.

ARTICLE 6. *Whether Doing Good to Another Is a Cause of Pleasure?*

We proceed thus to the Sixth Article: It seems that doing good to another is not a cause of pleasure.

Objection 1. Because pleasure is caused by one's obtaining one's own good, as stated above (A. 1; Q. XXXI, A. 1). But doing good pertains not to the obtaining but to the spending of one's own good. Therefore it seems to be the cause of sadness rather than of pleasure.

Obj. 2. Further, the Philosopher says[2] that "illiberality is more connatural to man than prodigality." Now it is a mark of prodigality to do good to others, while it is a mark of illiberality to cease from doing good. Since therefore everyone takes pleasure in a connatural operation, as stated in the *Ethics,*[3] it seems that doing good to others is not a cause of pleasure.

Obj. 3. Further, contrary effects proceed from contrary causes. But man takes a natural

[1] Aristotle, II, 3 (1104^b3).

[2] *Ethics,* IV, 1 (1121^b14).

[3] Aristotle, VII, 14 (1154^b20); X, 4 (1174^b20).

pleasure in certain kinds of ill-doing, such as overcoming, contradicting or scolding others, or, if he be angry, of punishing them, as the Philosopher says.[1] Therefore doing good to others is a cause of sadness rather than of pleasure.

On the contrary, The Philosopher says[2] that "it is most pleasant to give presents or assistance to friends and strangers."

I answer that, Doing good to another may give pleasure in three ways. First, in relation to the effect, which is the good conferred on another. In this respect, since through being united to others by love we look upon their good as being our own, we take pleasure in the good we do to others, especially to our friends, as in our own good. Secondly, in consideration of the end; as when a man, from doing good to another, hopes to get some good for himself, either from God or from man; for hope is a cause of pleasure. Thirdly, in consideration of the principle; and thus, doing good to another can give pleasure in respect of a threefold principle. One is the power of doing good; and in this regard doing good to another becomes pleasant in so far as it arouses in man an imagination of abundant good existing in him, of which he is able to give others a share. Therefore men take pleasure in their children, and in their own works, as being things on which they bestow a share of their own good. Another principle is a man's habitual inclination to do good, by reason of which doing good becomes connatural to him, for which reason the liberal man takes pleasure in giving to others. The third principle is the motive; for instance when a man is moved by one whom he loves to do good to someone. For whatever we do or suffer for a friend is pleasant, because love is the principle cause of pleasure

Reply Obj. 1. Spending gives pleasure as showing forth one's good. But in so far as it empties us of our own good it may be a cause of sadness; for instance when it is excessive.

Reply Obj. 2. Prodigality is an excessive spending, which is unnatural. Hence prodigality is said to be contrary to nature.

Reply Obj. 3. To overcome, to contradict and to punish, give pleasure, not as tending to another's ill, but as pertaining to one's own good, which man loves more than he hates another's ill. For it is naturally pleasant to overcome, since it makes a man appreciate his own superiority. Therefore all those games in which there is a striving for the mastery, and a possibility of winning it, afford the greatest pleasure; and speaking generally all contests, in so far as they admit hope of victory. To contradict and to scold can give pleasure in two ways. First, as making man imagine himself to be wise and excellent, since it belongs to wise men and elders to reprove and to scold. Secondly, in so far as by scolding and reproving, one does good to another, for this gives one pleasure, as stated above. It is pleasant to an angry man to punish, in so far as he thinks himself to be removing an apparent slight, which seems to be due to a previous hurt; for when a man is hurt by another, he seems to be slighted by him, and therefore he wishes to be quit of this slight by paying back the hurt. And thus it is clear that doing good to another may be of itself pleasant, but doing evil to another is not pleasant, except in so far as it seems to affect one's own good.

ARTICLE 7. *Whether Likeness Is a Cause of Pleasure?*

We proceed thus to the Seventh Article: It would seem that likeness is not a cause of pleasure.

Objection 1. Because ruling and presiding seem to imply a certain unlikeness. But "it is natural to take pleasure in ruling and presiding," as stated in the treatise on *Rhetoric.*[3] Therefore unlikeness, rather than likeness, is a cause of pleasure.

Obj. 2 Further, nothing is more unlike pleasure than sorrow. But those who are burdened by sorrow are most inclined to seek pleasures, as the Philosopher says.[4] Therefore unlikeness, rather than likeness, is a cause of pleasure.

Obj. 3. Further, those who are satiated with certain delights, do not derive pleasure but disgust from them, as when one is satiated with food. Therefore likeness is not a cause of pleasure.

On the contrary, Likeness is a cause of love, as above stated (Q. XXVII, A. 3), and love is the cause of pleasure. Therefore likeness is a cause of pleasure.

I answer that, Likeness is a kind of unity; hence that which is like us, as being one with us, causes pleasure, just as it causes love, as stated above (Q. XXVII, A. 3). And if that which is like us does not hurt our own good, but in-

[1] *Rhetoric,* I, 11 (1370^{b}10).
[2] *Politics,* II, 5 (1263^{b}5).
[3] Aristotle, I, 11 (1371^{b}26).
[4] *Ethics,* VII, 14 (1154^{a}27).

crease it, it is pleasurable absolutely; for instance one man in respect of another, one youth in relation to another. But if it be hurtful to our own good, thus accidentally it causes disgust or sadness, not as being like and one with us, but as hurtful to that which is yet more one with us.

Now it happens in two ways that something like is hurtful to our own good. First, by destroying the measure of our own good, by a kind of excess; because good, chiefly bodily good, as health, consists in a certain measure; and thus superfluous food or any bodily pleasure causes disgust. Secondly, by being directly contrary to one's own good; thus a potter dislikes other potters, not because they are potters, but because they deprive him of his own excellence or profits, which he seeks as his own good.

Reply Obj. 1. Since ruler and subject are in communion with one another, there is a certain likeness between them; but this likeness is conditioned by a certain superiority, since ruling and presiding pertain to the excellence of a man's own good; for they belong to men who are wise and better than others, the result being that they give man an idea of his own excellence. Another reason is that by ruling and presiding, a man does good to others, which is pleasant.

Reply Obj. 2. That which gives pleasure to the sorrowful man, though it be unlike sorrow, bears some likeness to the man that is sorrowful, because sorrows are contrary to his own good. And therefore the sorrowful man seeks pleasure as making for his own good, in so far as it is a remedy for its contrary. And this is why bodily pleasures, which are contrary to certain sorrows, are more sought than intellectual pleasures, which have no contrary sorrow, as we shall state later on (Q XXXV, A. 5). This also explains why all animals naturally desire pleasure, because animals always work through sense and movement. For this reason also young people are most inclined to seek pleasures, on account of the many changes to which they are subject, while yet growing. Moreover this is why the melancholic has a strong desire for pleasures, in order to drive away sorrow, because his body is corroded by a base humour, as stated in the *Ethics*.[1]

Reply Obj. 3. Bodily goods consist in a certain fixed measure. Hence surfeit of such things destroys the proper good, and consequently gives rise to disgust and sorrow, through being contrary to the proper good of man.

[1] Aristotle, VII, 14 (1154^b7).

ARTICLE 8. *Whether Wonder Is a Cause of Pleasure?*

We proceed thus to the Eighth Article: It would seem that wonder is not a cause of pleasure.

Objection 1. Because wonder is the act of one who is ignorant of the nature of something, as Damascene says. But knowledge, rather than ignorance, is a cause of pleasure. Therefore wonder is not a cause of pleasure.

Obj. 2. Further, wonder is the beginning of wisdom, being as it were, the road to the search of truth, as stated in the beginning of the *Metaphysics*.[2] But "it is more pleasant to think of what we already know, than to seek for what we know not," as the Philosopher says,[3] since in the latter case we encounter difficulties and hindrances, in the former not; "pleasure however arises from an operation which is unhindered," as stated in the *Ethics*.[4] Therefore wonder hinders rather than causes pleasure

Obj. 3. Further, everyone takes pleasure in what he is accustomed to; hence the actions of habits acquired by custom, are pleasant. But we wonder at what is unusual as Augustine says (*Tract* XXIV *in Joann.*) [5] Therefore wonder is contrary to the cause of pleasure.

On the contrary, The Philosopher says that wonder is the cause of pleasure.[6]

I answer that, It is pleasant to obtain what one desires, as stated above (Q XXIII, A. 4), and therefore the greater the desire for the thing loved, the greater the pleasure when it is attained; indeed the very increase of desire brings with it an increase of pleasure, according as it gives rise also to the hope of obtaining that which is loved, since it was stated above (A. 3, Reply 3) that desire resulting from hope is a cause of pleasure. Now wonder is a kind of desire for knowledge, a desire which comes to man when he sees an effect of which the cause either is unknown to him, or surpasses his knowledge or power of understanding Consequently wonder is a cause of pleasure in so far as it includes a hope of getting the knowledge which one desires to have. For this reason whatever is wonderful is pleasing, for instance things that are scarce Also, representations of things, even of those which are not pleasant in themselves, give rise to pleasure; for the soul rejoices in comparing one thing with an-

[2] Aristotle, I, 2 (982^b12).
[3] *Ethics*, X, 7 (1177^a26).
[4] Aristotle, VII, 12, 13 (1153^a14; 1153^b11).
[5] PL 35, 1593. [6] *Rhetoric*, I, 11 (1371^a31; $^b4$).

other, because comparison of one thing with another is the proper and connatural act of the reason, as the Philosopher says.[1] This again is why "it is more delightful to be delivered from great danger, because it is something wonderful," as stated in the *Rhetoric*.[2]

Reply Obj. 1. Wonder gives pleasure, not because it implies ignorance but in so far as it includes the desire of learning the cause, and in so far as the wonderer learns something new, that is, that the cause is other than he had thought it to be.

Reply Obj. 2. Pleasure includes two things: rest in the good, and perception of this rest. As to the former therefore, since it is more perfect to contemplate the known truth than to seek for the unknown, the contemplation of what we know is in itself more pleasing than the search for what we do not know. Nevertheless, as to the second, it happens that inquiries are sometimes more pleasing accidentally, in so far as they proceed from a greater desire; for greater desire is awakened when we are aware of our ignorance. This is why man takes the greatest pleasure in finding or learning things for the first time.

Reply Obj 3. It is pleasant to do what we are accustomed to do, since this is connatural to us, as it were. And yet things that are of rare occurrence can be pleasant, either as regards knowledge, from the fact that we desire to know something about them, in so far as they are wonderful; or as regards operation, from the fact that the mind is more inclined by desire to act intensely in things that are new, as stated in the *Ethics*,[3] since more perfect operation causes more perfect pleasure.

QUESTION XXXIII

OF THE EFFECTS OF PLEASURE

(In Four Articles)

WE must now consider the effects of pleasure; and under this head there are four points of inquiry: (1) Whether expansion is an effect of pleasure? (2) Whether pleasure causes thirst or desire for itself? (3) Whether pleasure hinders the use of reason? (4) Whether pleasure perfects operation?

ARTICLE 1. *Whether Expansion Is an Effect of Pleasure?*

We proceed thus to the First Article: It would seem that expansion is not an effect of pleasure.

Objection 1. For expansion seems to pertain more to love, according to the Apostle (II Cor. 6. 11): *Our heart is enlarged.* Therefore it is written (Ps. 118. 96) concerning the precept of charity: *Thy commandment is exceeding broad.* But pleasure is a distinct passion from love. Therefore expansion is not an effect of pleasure.

Obj. 2. Further, when a thing expands it is enabled to receive more. But receiving pertains to desire, which is for something not yet possessed. Therefore expansion seems to belong to desire rather than to pleasure.

Obj. 3. Further, contraction is contrary to expansion. But contraction seems to belong to pleasure, for the hand closes on that which we wish to grasp firmly, and such is the affection of appetite in regard to that which pleases it. Therefore expansion does not pertain to pleasure.

On the contrary, In order to express joy, it is written (Isa. 60. 5): *Thou shalt see and abound, thy heart shall wonder and be enlarged.* Moreover pleasure is called by the name of *laetitia,* as being derived from *dilatatio* (expansion), as stated above (Q XXXI, A. 3, Reply 3).

I answer that, Breadth (*latitudo*) is a dimension of bodily magnitude; hence it is not applied to the emotions of the soul except metaphorically. Now expansion denotes a kind of movement towards breadth, and it belongs to pleasure in respect of the two things requisite for pleasure. One of these is on the part of the apprehensive power, which apprehends the union with some suitable good. As a result of this apprehension, man perceives that he has attained a certain perfection, which is a magnitude of the spiritual order; and in this respect man's mind is said to be magnified or expanded by pleasure. The other requisite for pleasure is on the part of the appetitive power, which acquiesces in the pleasurable object, and rests in it, offering, as it were, to enfold it within itself. And thus man's affection is expanded by pleasure, as though it surrendered itself to hold within itself the object of its pleasure.

Reply Obj. 1. In metaphorical expressions nothing hinders one and the same thing from being compared to different things according to different likenesses. And in this way expansion pertains to love by reason of a certain spreading out, in so far as the affection of the lover spreads out to others, so as to care, not only for his own interests, but also for what concerns others. On the other hand expansion pertains to pleasure in so far as a thing becomes more ample in itself so as to become more capacious.

[1] *Poetics*, 4 (1448^{b}9); cf. *Rhetoric*, I, 11 (1371^{b}9).
[2] Aristotle, I, 11 (1371^{b}10). [3] Aristotle, X, 4 (1175^{a}6).

Reply Obj. 2. Desire includes a certain expansion arising from the imagination of the thing desired; but this expansion is much greater in the presence of the pleasurable object, because the mind surrenders itself more to that object when it is already taking pleasure in it than when it desires it before possessing it, since pleasure is the end of desire.

Reply Obj. 3 He that takes pleasure in a thing holds it fast, by clinging to it with all his might; but he opens his heart to it that he may enjoy it perfectly.

Article 2. *Whether Pleasure Causes Thirst or Desire for Itself?*

We proceed thus to the Second Article: It seems that pleasure does not cause desire for itself.

Objection 1. Because all movement ceases when repose is reached. But pleasure is, as it were, a certain repose of the movement of desire, as stated above (Q. XXIII, A. 4; Q. XXV, A. 2). Therefore the movement of desire ceases when pleasure is reached. Therefore pleasure does not cause desire.

Obj. 2. Further, a thing does not cause its opposite. But pleasure is, in a way, opposite to desire, on the part of the object, since desire regards a good which is not yet possessed, while pleasure regards the good that is possessed. Therefore pleasure does not cause desire for itself.

Obj. 3. Further, distaste is incompatible with desire. But pleasure often causes distaste. Therefore it does not cause desire.

On the contrary, Our Lord said (John 4. 13): *Whosoever drinketh of this water, shall thirst again,* where, according to Augustine (*Tract.* XV *in Joann.*),[1] water denotes pleasures of the body.

I answer that, Pleasure can be considered in two ways: first, as existing in act; secondly, as existing in the memory.—Again thirst, or desire, can be taken in two ways: first, properly, as denoting a desire for something not possessed; secondly, in general, as excluding distaste.

Considered as existing in act, pleasure does not cause thirst or desire for itself, properly speaking, but only accidentally, provided we take thirst or desire as denoting a desire for something not possessed; for pleasure is an emotion of the appetite in respect of something actually present. But it may happen that what is actually present is not perfectly possessed; and this may be on the part of the thing possessed, or on the part of the possessor. On the part of the thing possessed, this happens through the thing possessed not being a simultaneous whole; therefore one obtains possession of it successively, and while taking pleasure in what one has, one desires to possess the remainder; thus if a man is pleased with the first part of a verse, he desires to hear the second part, as Augustine says.[2] In this way nearly all bodily pleasures cause thirst for themselves, until they are fully realized, because pleasures of this kind arise from some movement, as is evident in pleasures of the table. On the part of the possessor, this happens when a man possesses a thing which is perfect in itself, yet does not possess it perfectly, but obtains possession of it little by little. Thus in this life, a faint perception of Divine knowledge affords us delight, and delight sets up a thirst or desire for perfect knowledge; in which sense we may understand the words of Ecclus 24. 29: *They that drink me shall yet thirst.*

On the other hand if by thirst or desire we understand the intensity only of the emotion, which excludes distaste, thus more than all others spiritual pleasures cause thirst or desire for themselves Because bodily pleasures become distasteful by reason of their causing an excess in the natural disposition when they are increased or even when they are protracted, as is evident in the case of pleasures of the table. This is why, when a man arrives at the point of perfection in bodily pleasures, he wearies of them, and sometimes desires another kind Spiritual pleasures, on the contrary, do not exceed the natural disposition, but perfect nature Hence when their point of perfection is reached, they then afford the greatest delight; except, perhaps, accidentally, in so far as the work of contemplation is accompanied by some operation of the bodily powers, which tire from protracted activity. And in this sense also we may understand those words of Ecclus. 24. 29: *They that drink me shall yet thirst;* for, even of the angels, who know God perfectly, and delight in Him, it is written (I Pet. 1. 12) that they *desire to look at* Him.

Lastly, if we consider pleasure, not as existing in act, but as existing in the memory, thus it has of itself a natural tendency to cause thirst and desire for itself when, that is, man returns to that disposition in which he was when he experienced the pleasure that is past. But if he be changed from that disposition, the memory of that pleasure does not give him pleasure, but distaste; for instance, the memory of food in

[1] PL 35, 1515.

[2] *Confessions,* IV, 17 (PL 32, 700).

respect of a man who has eaten to repletion.

Reply Obj. 1. When pleasure is perfect, then it includes complete rest, and the movement of desire, tending to what was not possessed, ceases. But when it is imperfect, then the movement of desire, tending to what was not possessed, does not cease altogether.

Reply Obj. 2. That which is possessed imperfectly, is possessed in one respect, and in another respect is not possessed. Consequently it may be the object of desire and pleasure at the same time.

Reply Obj 3. Pleasures cause distaste in one way, desire in another, as stated above.

ARTICLE 3 *Whether Pleasure Hinders the Use of Reason?*

We proceed thus to the Third Article: It seems that pleasure does not hinder the use of reason.

Objection 1. Because repose facilitates very much the due use of reason; hence the Philosopher says[1] that "while we sit and rest the soul becomes knowing and prudent." And it is written (Wisd. 8. 16): *When I go into my house, I shall repose myself with her,* that is, wisdom. But pleasure is a kind of repose. Therefore it helps rather than hinders the use of reason.

Obj. 2. Further, things which are not in the same subject even if they are contraries, do not hinder one another But pleasure is in the appetitive part, while the use of reason is in the apprehensive part. Therefore pleasure does not hinder the use of reason.

Obj 3. Further, that which is hindered by another seems in a certain way to be changed by it. But the use of an apprehensive power moves pleasure rather than is moved by it, because it is the cause of pleasure. Therefore pleasure does not hinder the use of reason

On the contrary, The Philosopher says[2] that pleasure destroys the estimate of prudence

I answer that, As is stated in the *Ethics,*[3] "appropriate pleasures increase activity . . . but pleasures arising from other sources are impediments to activity." Accordingly there is a certain pleasure that is taken in the very act of reason, as when one takes pleasure in contemplating or in reasoning, and such pleasure does not hinder the act of reason, but helps it, because we are more attentive in doing that which gives us pleasure, and attention helps operation.

On the other hand bodily pleasures hinder the use of reason in three ways. First, by distracting the reason. Because, as we have already observed (Q. IV, A. 1. Reply 3), we attend much to that which pleases us. Now when the attention is firmly fixed on one thing, it is either weakened in respect of other things, or it is entirely withdrawn from them; and thus if the bodily pleasure be great, either it entirely hinders the use of reason, by concentrating the mind's attention on itself, or else it hinders it considerably. Secondly, by being contrary to reason. Because some pleasures, especially those that are in excess, are contrary to the order of reason, and in this sense the Philosopher says that bodily pleasures destroy the estimate of prudence, but not the speculative estimate, to which they are not opposed, for instance that the three angles of a triangle are together equal to two right angles. In the first sense, however, they hinder both estimates. Thirdly, by fettering the reason, in so far as bodily pleasure is followed by a certain alteration in the body, greater even than in the other passions, in proportion as the appetite is more vehemently affected towards a present than towards an absent thing Now such bodily disturbances hinder the use of reason, as may be seen in the case of drunkards, in whom the use of reason is fettered or hindered.

Reply Obj. 1. Bodily pleasure implies indeed repose of the appetite in the object of pleasure, and this repose is sometimes contrary to reason; but on the part of the body it always implies alteration. And in respect of both points, it hinders the use of reason.

Reply Obj. 2. The powers of appetite and of apprehension are indeed distinct parts, but belonging to the one soul. Consequently when the intention of the soul is strongly applied to the act of one part, it is hindered from the contrary act of the other part.

Reply Obj. 3. The use of reason requires the due use of the imagination and of the other sensitive powers, which are exercised through a bodily organ. Consequently alteration in the body hinders the use of reason, because it hinders the acts of the imagination and of the other sensitive powers.

ARTICLE 4. *Whether Pleasure Perfects Operation?*

We proceed thus to the Fourth Article: It seems that pleasure does not perfect operation.

Objection 1. For every human operation depends on the use of reason. But pleasure hin-

[1] *Physics,* VII, 3 (247^b10).
[2] *Ethics,* VI, 5 (1140^b12).
[3] Aristotle, X, 5 (1175^b13).

ders the use of reason, as stated above (A. 3). Therefore pleasure does not perfect, but weakens human operation.

Obj. 2. Further, nothing perfects itself or its cause. But "pleasure is an operation"[1] that is, either in its essence or in its cause. Therefore pleasure does not perfect operation.

Obj. 3. Further, if pleasure perfects operation, it does so either as end, or as form, or as agent. But not as end, because operation is not sought for the sake of pleasure, but rather the reverse, as stated above (Q. IV, A. 2); nor as agent, because rather is it the operation that causes pleasure; nor again as form, because, according to the Philosopher,[2] "pleasure does not perfect operation, as a habit does." Therefore pleasure does not perfect operation.

On the contrary, The Philosopher says[3] that pleasure perfects operation.

I answer that, Pleasure perfects operation in two ways. First, as an end; not indeed according as an end is that on account of which a thing is, but according as every good which is added to a thing and completes it can be called its end. And in this sense the Philosopher says[4] that "pleasure perfects operation . . . as some end added to it"; that is to say, in so far as to this good, which is operation, there is added another good, which is pleasure, denoting the repose of the appetite in a good that is presupposed. Secondly, as agent; not indeed directly, for the Philosopher says[5] that "pleasure perfects operation, not as a physician makes a man healthy, but as health does." But it does so indirectly, in so far as the agent, through taking pleasure in his action, is more eagerly intent on it, and carries it out with greater care. And in this sense it is said in the *Ethics*[6] that "pleasures increase their appropriate activities, and hinder those that are not appropriate."

Reply Obj. 1. It is not every pleasure that hinders the act of reason, but only bodily pleasure; for this arises, not from the act of reason, but from the act of the concupiscible part, which act is intensified by pleasure. On the contrary, pleasure that arises from the act of reason strengthens the use of reason.

Reply Obj. 2. As stated in the *Physics,*[7] two things may be causes of one another, if one be the efficient, the other the final cause. And in this way operation is the efficient cause of pleasure, while pleasure perfects operation by way of final cause, as stated above.

The *Reply to the Third Objection* is evident from what has been said.

QUESTION XXXIV

OF THE GOODNESS AND MALICE OF PLEASURES

(In Four Articles)

WE must now consider the goodness and malice of pleasures, under which head there are four points of inquiry: (1) Whether every pleasure is evil? (2) If not, whether every pleasure is good? (3) Whether any pleasure is the greatest good? (4) Whether pleasure is the measure or rule by which to judge of moral good and evil?

ARTICLE 1. *Whether Every Pleasure Is Evil?*

We proceed thus to the First Article: It seems that every pleasure is evil.

Objection 1. For that which destroys prudence and hinders the use of reason seems to be evil in itself, for man's good is to be in accord with reason, as Dionysius says (*Div. Nom.* iv).[8] But pleasure destroys prudence and hinders the use of reason, and so much the more, as the pleasure is greater. Hence "in sexual pleasures," which are the greatest of all, "it is impossible to understand anything," as stated in the *Ethics*[9] Moreover, Jerome says in his commentary on Matthew (Origen,—*Hom.* vi *in Num.*)[10] that "at the time of conjugal intercourse, the presence of the Holy Ghost is not vouchsafed, even if it be a prophet that fulfils the conjugal duty" Therefore pleasure is evil in itself, and consequently every pleasure is evil.

Obj. 2. Further, that which the virtuous man shuns, and the ungodly man seeks, seems to be evil in itself, and should be avoided; because, as stated in the *Ethics,*[11] "the virtuous man is a kind of measure and rule of human actions"; and the Apostle says (I Cor. 2. 15): *The spiritual man judgeth all things.* But children and dumb animals, in whom there is no virtue, seek pleasure, but the man who is master of himself does not. Therefore pleasures are evil in themselves and should be avoided.

Obj. 3. Further, "virtue and art are concerned about the difficult and the good."[12] But no art is ordered to pleasure. Therefore pleasure is not something good.

[8] Sect. 32 (PG 3, 733).
[9] Aristotle, VII, 11 (1152^{b}16).
[10] PG 12, 610.
[11] Aristotle, X, 5 (1176^{a}17); cf. III, 4 (1113^{a}33); IX, 4 (1166^{a}12). [12] Aristotle, *Ethics,* II, 3 (1105^{a}9).

On the contrary, It is written (Ps. 36. 4): *Delight in the Lord.* Since, therefore, Divine authority leads to no evil, it seems that not every pleasure is evil.

I answer that, As stated in the *Ethics,*[1] some have maintained that all pleasure is evil. The reason seems to have been that they took account only of sensible and bodily pleasures which are more manifest; for, also in other respects, the ancient philosophers did not discriminate between the intelligible and the sensible, nor between intellect and sense.[2] And they held that all bodily pleasures should be accounted as bad, and thus that man, being prone to immoderate pleasures, arrives at the mean of virtue by abstaining from pleasure. But they were wrong in holding this opinion Because, since none can live without some sensible and bodily pleasure, if they who teach that all pleasures are evil, are found taking pleasure, men will be more inclined to pleasure by following the example of their works instead of listening to the doctrine of their words. For in human actions and passions, in which experience is of great weight, example moves more than words.

We must therefore say that some pleasures are good, and that some are evil For pleasure is a repose of the appetitive power in some loved good, and resulting from some operation; hence we may assign a twofold reason for this assertion The first is in respect of the good in which a man reposes with pleasure. For good and evil in the moral order depend on agreement or disagreement with reason, as stated above (Q XVIII, A 5), just as in the order of nature, a thing is said to be natural, if it agrees with nature, and unnatural, if it disagrees. Accordingly, just as in the natural order there is a certain natural repose, whereby a thing rests in that which agrees with its nature, for instance, when a heavy body rests down below; and again an unnatural repose, whereby a thing rests in that which disagrees with its nature, as when a heavy body rests up aloft: so, in the moral order, there is a good pleasure, according to which the higher or lower appetite rests in that which is in accord with reason, and an evil pleasure, whereby the appetite rests in that which is discordant from reason and the law of God.

The second reason can be found by considering the actions, some of which are good, some evil. Now pleasures which are joined to actions are more akin to those actions than concupiscences, which precede them in point of time Therefore, since the concupiscences of good actions are good, and of evil actions, evil, much more are the pleasures of good actions good, and those of evil actions evil.

Reply Obj. 1. As stated above (Q. XXXIII, A. 3), it is not the pleasures which result from an act of reason that hinder the reason or destroy prudence, but extraneous pleasures, such as the pleasures of the body. These indeed hinder the use of reason, as stated above (*ibid.*), either by contrariety of the appetite that rests in something contrary to reason, which makes the pleasure morally bad, or by fettering the reason; thus in conjugal intercourse, though the pleasure be in accord with reason, yet it hinders the use of reason, on account of the accompanying bodily change. But in this case the pleasure is not morally evil, as neither is sleep, by which the reason is fettered, morally evil, if it be taken according to reason; for reason itself demands that the use of reason be interrupted at times. We must add, however, that although this fettering of the reason through the pleasure of conjugal intercourse has no moral malice, since it is neither a mortal nor a venial sin, yet it proceeds from a kind of moral malice, namely, from the sin of our first parent; for, as stated in the First Part (Q. XCVIII, A 2) the case was different in the state of innocence.

Reply Obj. 2. The temperate man does not shun all pleasures, but those that are immoderate, and contrary to reason. The fact that children and dumb animals seek pleasures does not show that all pleasures are evil, because they have from God their natural appetite, which is moved to that which is suitable to them.

Reply Obj 3. Art is not concerned with all kinds of good, but with the making of external things, as we shall state further on (Q. LVII, A. 3). But prudence and virtue are more concerned with operations and passions than art is. Nevertheless "there is an art of making pleasure, namely, the art of cookery and the art of making unguents," as stated in the *Ethics.*[3]

ARTICLE 2. *Whether Every Pleasure Is Good?*

We proceed thus to the Second Article: It seems that every pleasure is good.

Objection 1. Because as stated in the First Part (Q. V, A. 6), there are three kinds of good, the virtuous, the useful, and the pleasant. But everything virtuous is good, and in like manner everything useful is good. Therefore also every pleasure is good.

Obj. 2. Further, that which is not sought for

[1] Aristotle, X, 1 ($1172^{a}28$); cf below, A. 2.
[2] Aristotle, *Soul,* III, 3 ($427^{a}21$).
[3] Aristotle, VII, 12 ($1153^{a}26$).

the sake of something else, is good in itself, as stated in the *Ethics*.[1] But pleasure is not sought for the sake of something else; for it seems absurd to ask anyone why he seeks to be pleased. Therefore pleasure is good in itself. Now that which is predicated of a thing considered in itself, is predicated of it universally. Therefore every pleasure is good.

Obj. 3. Further, that which is desired by all, seems to be good of itself, because "good is what all things seek," as stated in the *Ethics*.[2] But everyone seeks some kind of pleasure, even children and dumb animals. Therefore pleasure is good in itself, and consequently all pleasure is good.

On the contrary, It is written (Prov. 2. 14): *Who are glad when they have done evil, and rejoice in most wicked things.*

I answer that, While some of the Stoics maintained that all pleasures are evil,[3] the Epicureans held that pleasure is good in itself, and that consequently all pleasures are good.[4] They seem to have thus erred through not discriminating between that which is good absolutely, and that which is good in respect of a particular individual. That which is good absolutely is good in itself. Now that which is not good in itself may be good in respect of some individual in two ways. In one way, because it is suitable to him by reason of a disposition in which he is now, which disposition, however, is not natural; thus it is sometimes good for a leper to eat things that are poisonous, which are not suitable absolutely to the human temperament. In another way, through something unsuitable being esteemed suitable. And since pleasure is the repose of the appetite in some good, if the appetite reposes in that which is good absolutely, the pleasure will be pleasure absolutely, and good absolutely. But if a man's appetite repose in that which is good, not absolutely, but in respect of that particular man, then his pleasure will not be pleasure absolutely, but a pleasure to him; neither will it be good absolutely, but in a certain respect, or an apparent good.

Reply Obj. 1. The virtuous and the useful depend on accordance with reason, and consequently nothing is virtuous or useful without being good. But the pleasant depends on agreement with the appetite, which tends sometimes to that which is discordant with reason. Consequently not every object of pleasure is good in the moral order, which depends on the order of reason.

Reply Obj. 2. The reason why pleasure is not sought for the sake of something else is because it is repose in the end. Now the end may be either good or evil, although nothing can be an end except in so far as it is good in respect of such and such a man; and so too with regard to pleasure.

Reply Obj. 3. All things seek pleasure in the same way as they seek good, since pleasure is the repose of the appetite in good. But, just as it happens that not every good which is desired, is of itself and truly good, so not every pleasure is of itself and truly good.

Article 3. *Whether Any Pleasure Is the Greatest Good?*

We proceed thus to the Third Article: It would seem that no pleasure is the greatest good.

Objection 1. Because nothing generated is the greatest good, since generation cannot be the last end But pleasure follows on generation, for the fact that a thing takes pleasure is due to its being established in its own nature, as stated above (Q. XXXI, A. 1). Therefore no pleasure is the greatest good

Obj. 2. Further, that which is the greatest good cannot be made better by addition. But pleasure is made better by addition; for pleasure together with virtue is better than pleasure without virtue Therefore pleasure is not the greatest good.

Obj. 3. Further, that which is the greatest good is universally good, as being good of itself, since that which is such of itself is prior to and greater than that which is such accidentally. But pleasure is not universally good, as stated above (A. 2) Therefore pleasure is not the greatest good.

On the contrary, Happiness is the greatest good, since it is the end of man's life. But Happiness is not without pleasure, for it is written (Ps 15. 11): *Thou shalt fill me with joy with Thy countenance; at Thy right hand are delights even to the end.*

I answer that, Plato held neither with the Stoics, who asserted that all pleasures are evil,[5] nor with the Epicureans, who maintained that all pleasures are good,[6] but he said that some are good, and some evil; yet, so that no pleasure be

[1] Aristotle, I, 6 (1096[b]14).
[2] Aristotle, I, 1 (1094[a]3).
[3] See Augustine, *City of God*, XIV, 8 (PL 41, 412).
[4] See Cicero, *De Finibus*, II, 3 (DD III, 507); Augustine, *City of God*, XIV, 2 (PL 41, 403).
[5] See Augustine, *City of God*, XIV, 8 (PL 41, 412).
[6] See Cicero, *De Finibus*, II, 3 (DD III, 507); Augustine, *City of God*, XIV, 2 (PL 41, 403).

the sovereign or greatest good.[1] But, judging from his arguments, he fails in two points First,[2] because, from observing that sensible and bodily pleasure consists in a certain movement and generation, as is evident in satiety from eating and the like, he thought that all pleasure arises from generation and movement; and from this, since generation and movement are the acts of something imperfect, it would follow that pleasure does not have the character of ultimate perfection —But this is seen to be evidently false as regards intellectual pleasures. For one takes pleasure not only in the generation of knowledge, for instance, when one learns or wonders, as stated above (Q. XXXII, A. 8, Reply 2), but also in the act of contemplation, by making use of knowledge already acquired.

Secondly, because by greatest good he understood[3] that which is the supreme good absolutely, that is, the good itself apart from as it were, and unparticipated by, all else, in which sense God is the Supreme Good; but we are speaking of the greatest good in human things.[4] Now the greatest good of everything is its last end. And the end, as stated above (Q. I, A. 8; Q. II, A. 7) is twofold: namely, the thing itself, and the use of that thing; thus the miser's end is either money, or the possession of money. Accordingly, man's last end may be said to be either God Who is the Supreme Good absolutely; or the enjoyment of God, which denotes a certain pleasure in the last end. And in this sense a certain pleasure of man may be said to be the greatest among human goods.

Reply Obj. 1. Not every pleasure arises from a generation, for some pleasures result from perfect operations, as stated above. Accordingly nothing prevents some pleasure being the greatest good, although every pleasure is not such.

Reply Obj. 2 This argument is true of the greatest good absolutely, by participation of which all things are good; therefore no addition can make it better. But in regard to other goods, it is universally true that any good becomes better by the addition of another good. However it might be said that pleasure is not something extraneous to the operation of virtue, but that it accompanies it, as stated in the *Ethics*.[5]

Reply Obj. 3. That pleasure is the greatest good is due not to the mere fact that it is pleasure, but to the fact that it is perfect repose in the perfect good. Hence it does not follow that every pleasure is supremely good, or even good at all. Thus a certain science is supremely good, but not every science is.

[4] Cf. Aristotle, *op. cit.* (1096^{b}34).[5] Aristotle, I, 8 (1098^{b}25).

ARTICLE 4. *Whether Pleasure Is the Measure or Rule by Which to Judge of Moral Good or Evil?*

We proceed thus to the Fourth Article: It would seem that pleasure is not the measure or rule of moral good and evil.

Objection 1. Because "that which is first in a genus is the measure of all the rest."[6] But pleasure is not the first thing in the moral genus, for it is preceded by love and desire. Therefore it is not the rule of goodness and malice in moral matters.

Obj. 2. Further, a measure or rule should be uniform; hence that movement which is the most uniform, is the measure and rule of all movements.[7] But pleasures are various and multiform, since some of them are good, and some evil. Therefore pleasure is not the measure and rule of morals.

Obj 3. Further, judgment of the effect from its cause is more certain than judgment of cause from effect. Now goodness or malice of operation is the cause of goodness or malice of pleasure, because those pleasures are good which result from good operations, and those are evil which arise from evil operations, as stated in the *Ethics*.[8] Therefore pleasures are not the rule and measure of moral goodness and malice.

On the contrary, Augustine, commenting on Ps 7. 10, *The searcher of hearts and reins is God,* says:[9] "The end of care and thought is the pleasure which each one aims at achieving." And the Philosopher says[10] that "pleasure is the architect, that is, the principal end,[11] in regard to which, we say absolutely that this is evil, and that, good."

I answer that, Moral goodness or malice depends chiefly on the will, as stated above (Q. XX, A. 1), and it is chiefly from the end that we know whether the will is good or evil. Now the end is taken to be that in which the will reposes;

[6] Aristotle, *Metaphysics*, X, 1 (1052^{b}18); cf *Physics*, IV, 14 (223^{b}13).

[7] Aristotle, *Metaphysics*, X, 1 (1053^{a}8); cf. *Physics*, *loc. cit.*

[8] Aristotle, X, 5 (1175^{b}24); cf. VII, 14 (1154^{a}18; ^{b}6).

[9] *Enarr. in Ps.* (PL 36, 103).

[10] *Ethics*, VII, 11 (1152^{b}2).

[11] St. Thomas took *finis* as being in the nominative, whereas it is the genitive—Τοῦ Τέλους; and the Greek reads, "He (i.e., the political philosopher), is the architect of the end."

and the repose of the will and of every appetite in the good is pleasure. And therefore man is judged to be good or bad chiefly according to the pleasure of the human will; for that man is good and virtuous who takes pleasure in the works of virtue, and that man evil who takes pleasure in evil works.

On the other hand, pleasures of the sensitive appetite are not the rule of moral goodness and malice; for food is universally pleasurable to the sensitive appetite both of good and of evil men. But the will of the good man takes pleasure in them in accordance with reason, to which the will of the evil man gives no heed.

Reply Obj. 1. Love and desire precede pleasure in the order of generation But pleasure precedes them in the order of the end, which serves as a principle in actions; and it is by the principle, which is the rule and measure of such matters, that we form our judgment.

Reply Obj. 2. All pleasures are uniform in the point of their being the repose in something good, and in this respect pleasure can be a rule or measure. Because that man is good, whose will rests in the true good, and that man evil, whose will rests in evil

Reply Obj. 3. Since pleasure perfects operation as its end, as stated above (Q. XXXIII, A. 4), an operation cannot be perfectly good unless there be also pleasure in good; for the goodness of a thing depends on its end And thus, in a way, the goodness of the pleasure is the cause of goodness in the operation.

QUESTION XXXV

OF PAIN OR SORROW, IN ITSELF

(In Eight Articles)

WE have now to consider pain and sorrow, concerning which we must consider (1) Sorrow or pain in itself; (2) Its cause (Q. XXXVI); (3) Its effects (Q. XXXVII); (4) Its remedies (Q. XXXVIII); (5) Its goodness or malice (Q. XXXIX).

Under the first head there are eight points of inquiry: (1) Whether pain is a passion of the soul? (2) Whether sorrow is the same as pain? (3) Whether sorrow or pain is contrary to pleasure? (4) Whether all sorrow is contrary to all pleasure? (5) Whether there is a sorrow contrary to the pleasure of contemplation? (6) Whether sorrow is to be shunned more than pleasure is to be sought? (7) Whether exterior pain is greater than interior? (8) Of the species of sorrow?

ARTICLE 1. *Whether Pain Is a Passion of the Soul?*

We proceed thus to the First Article: It seems that pain is not a passion of the soul.

Objection 1. Because no passion of the soul is in the body. But pain can be in the body, since Augustine says (*De Vera Relig.* xii),[1] that "bodily pain is a sudden corruption of the well-being of that thing which the soul, by making evil use of it, made subject to corruption." Therefore pain is not a passion of the soul.

Obj. 2 Further, every passion of the soul pertains to the appetitive power. But pain does not pertain to the appetitive, but rather to the apprehensive part; for Augustine says (*De Nat. Boni,* xx)[2] that "bodily pain is caused by the sense resisting a more powerful body." Therefore pain is not a passion of the soul

Obj. 3. Further, every passion of the soul pertains to the animal appetite. But pain does not pertain to the animal appetite, but rather to the natural appetite; for Augustine says (*Gen. ad lit.* viii, 14):[3] "Had not some good remained in nature, we should feel no pain in being punished by the loss of good." Therefore pain is not a passion of the soul.

On the contrary, Augustine[4] places pain among the passions of the soul, quoting Virgil (*Æneid,* vi, 733):

> *"Hence wild desires and grovelling fears*
> *And human laughter, human tears."*
> (*Trl.* CONINGTON)

I answer that, Just as two things are requisite for pleasure; namely, being joined to good and perception of this union, so also two things are requisite for pain; namely, being joined to some evil (which is in so far evil as it deprives one of some good), and perception of this union. Now whatever is joined, if it does not have the aspect of good or evil with respect to the being to which it is joined, cannot cause pleasure or pain. Hence it is evident that something under the aspect of good or evil is the object of pleasure or pain. But good and evil, as such, are objects of the appetite. Consequently it is clear that pleasure and pain belong to the appetite.

Now every appetitive movement or inclination consequent to apprehension, belongs to the intellectual or sensitive appetite; for the inclination of the natural appetite is not consequent to an apprehension of the subject of that appetite, but to the apprehension of another, as stated in

[1] PL 34, 142. [2] PL 42, 557. [3] PL 34, 385.
[4] *City of God,* XIV, 8 (PL 41, 412).

the First Part (Q. VI, A. 1; Q. CIII, AA. 1, 3). Since then pleasure and pain presuppose some sense or apprehension in the same subject, it is evident that pain, like pleasure, is in the intellectual or sensitive appetite.

Again every movement of the sensitive appetite is called a passion, as stated above (Q. XXII, AA. 1, 3), and especially those which tend to some defect. Consequently pain, according as it is in the sensitive appetite, is most properly called a passion of the soul, just as bodily ailments are properly called passions of the body. Hence Augustine[1] calls pain in particular a kind of "ailment."

Reply Obj. 1. We speak of pain of the body, because the cause of pain is in the body, as for instance when we suffer something hurtful to the body. But the movement of pain is always in the soul; for "the body cannot feel pain unless the soul feel it," as Augustine says on Ps. 86. 10.[2]

Reply Obj. 2. We speak of pain of the senses not as though it were an act of the sensitive power, but because the senses are required for bodily pain, in the same way as for bodily pleasure.

Reply Obj 3. Pain at the loss of good proves the goodness of the nature, not because pain is an act of the natural appetite, but because nature desires something as good, the removal of which being perceived, there follows the passion of pain in the sensitive appetite.

ARTICLE 2. *Whether Sorrow Is the Same as Pain?*

We proceed thus to the Second Article: It seems that sorrow is not pain.

Objection 1. For Augustine says[3] that "pain is used to express bodily suffering." But sorrow is used more in reference to the soul. Therefore sorrow is not pain.

Obj. 2. Further, pain is only in respect of present evil. But sorrow can refer to both past and future evil; thus repentance is sorrow for the past, and anxiety is sorrow for the future. Therefore sorrow is quite different from pain.

Obj. 3 Further, pain does not seem to follow save from the sense of touch. But sorrow can arise from all the senses. Therefore sorrow is not pain, and extends to more objects.

On the contrary, The Apostle says (Rom. 9. 2): *I have great sorrow* (Douay,—*sadness*) *and continual pain* (Douay,—*sorrow*) *in my heart,* thus denoting the same thing by sorrow and pain.

I answer that, Pleasure and pain can arise from a twofold apprehension, namely, from the apprehension of an exterior sense, and from the interior apprehension of the intellect or of the imagination. Now the interior apprehension extends to more objects than the exterior apprehension, because whatever things come under the exterior apprehension, come under the interior, but not conversely. Consequently that pleasure alone which is caused by an interior apprehension is called joy, as stated above (Q. XXXI, A. 3); and in like manner that pain alone which is caused by an interior apprehension, is called sorrow. And just as that pleasure which is caused by an exterior apprehension is called pleasure but not joy, so too that pain which is caused by an exterior apprehension is called pain but not sorrow. Accordingly sorrow is a species of pain, as joy is a species of pleasure.

Reply Obj. 1. Augustine is speaking there of the use of the word, because pain is more generally used in reference to bodily pains, which are better known, than in reference to spiritual pains.

Reply Obj. 2. External sense perceives only what is present; but the interior knowing power can perceive the present, past and future. Consequently sorrow can regard present, past and future, but bodily pain, which follows the apprehension of the external sense, can only regard something present.

Reply Obj. 3. The sensibles of touch are painful, but only in so far as they are disproportionate to the apprehensive power, but also in so far as they are contrary to nature; but the objects of the other senses can indeed be disproportionate to the apprehensive power, but they are not contrary to nature, save as they are subordinate to the sensibles of touch. Consequently man alone, who is an animal perfect in knowledge, takes pleasure in the objects of the other senses for their own sake; but other animals take no pleasure in them save as referable to the sensibles of touch, as stated in the *Ethics.*[4] Accordingly, in referring to the objects of the other senses, we do not speak of pain in so far as it is contrary to natural pleasure, but rather of sorrow, which is contrary to joy. So then if pain be taken as denoting bodily pain, which is its more usual meaning, then it is contrasted with sorrow, according to the distinction of interior and exterior apprehension; although, on the part of the objects, pleasure extends further than does bodily pain. But if pain be taken in a wide sense, then it is the genus of sorrow, as stated above.

[1] *City of God,* XIV, 7 (PL 41, 411).
[2] *Enarr. in Ps.* (PL 37, 1110).
[3] *City of God, loc. cit.*
[4] Aristotle, III, 10 (1118a16).

ARTICLE 3. *Whether Sorrow or Pain Is Contrary to Pleasure?*

We proceed thus to the Third Article: It would seem that sorrow is not contrary to pleasure.

Objection 1. For one of two contraries is not the cause of the other. But sorrow can be the cause of pleasure; for it is written (*Matt.* 5. 5): *Blessed are they that mourn, for they shall be comforted.* Therefore they are not contrary to one another.

Obj. 2 Further, one contrary does not denominate the other. But to some, pain or sorrow gives pleasure; thus Augustine says[1] that in stage-plays sorrow itself gives pleasure; and that "weeping is a bitter thing, and yet it sometimes pleases us."[2] Therefore pain is not contrary to pleasure.

Obj. 3. Further, one contrary is not the matter of the other, because contraries cannot be together at the same time. But sorrow can be the matter of pleasure; for Augustine says (*De Pœnit.* xiii)[3]: "The penitent should ever sorrow, and rejoice in his sorrow." The Philosopher too says that, on the other hand, "the evil man feels pain at having been pleased."[4] Therefore pleasure and pain are not contrary to one another.

On the contrary, Augustine says[5] that "joy is the volition of consent to the things we wish; but sorrow is the volition of dissent from the things we do not wish." But consent and dissent are contraries Therefore pleasure and sorrow are contrary to one another.

I answer that, As the Philosopher says,[6] contrariety is a difference in respect of a form. Now the form or species of a passion or movement is taken from the object or term. Consequently, since the objects of pleasure and sorrow or pain, namely, present good and present evil, are contrary to one another, it follows that pain and pleasure are contrary to one another.

Reply Obj. 1. Nothing hinders one contrary causing the other accidentally, and in this way sorrow can be the cause of pleasure. In one way, in so far as from sorrow at the absence of something, or at the presence of its contrary, one seeks the more eagerly for something pleasant; thus a thirsty man seeks more eagerly the pleasure of a drink, as a remedy for the pain that he suffers. In another way, in so far as, from a strong desire for a certain pleasure, one does not shrink from undergoing pain, so as to obtain that pleasure. In each of these ways, the sorrows of the present life lead us to the comfort of the future life. Because by the mere fact that man mourns for his sins, or for the delay of glory, he merits the consolation of eternity. In like manner a man merits it when he does not shrink from hardships and difficulties in order to obtain it.

Reply Obj. 2. Pain itself can be pleasurable accidentally in so far as it is accompanied by wonder, as in stage-plays; or in so far as it recalls a beloved object to one's memory, and makes one feel one's love for the thing, whose absence gives us pain. Consequently, since love is pleasant, both pain and whatever else results from love, in so far as they remind us of our love, are pleasant And, for this reason, we derive pleasure even from pains depicted on the stage, in so far as, in witnessing them, we perceive ourselves to conceive a certain love for those who are there represented.

Reply Obj. 3. The will and the reason reflect on their own acts, since the acts themselves of the will and reason are considered under the aspect of good or evil. In this way sorrow can be the matter of pleasure, or vice versa, not *per se* but accidentally; that is, in so far as either of them is considered under the aspect of good or evil.

ARTICLE 4. *Whether All Sorrow Is Contrary to All Pleasure?*

We proceed thus to the Fourth Article: It seems that all sorrow is contrary to all pleasure

Objection 1. Because, just as whiteness and blackness are contrary species of colour, so pleasure and sorrow are contrary species of the soul's passions. But whiteness and blackness are universally opposed to one another. Therefore pleasure and sorrow are so too.

Obj. 2 Further, remedies are made of things contrary. But every pleasure is a remedy for all manner of sorrow, as the Philosopher declares.[7] Therefore every pleasure is contrary to every sorrow.

Obj 3. Further, contraries are hindrances to one another. But every sorrow hinders any kind of pleasure, as is evident from the *Ethics.*[8] Therefore every sorrow is contrary to every pleasure.

On the contrary, The same thing is not the cause of contraries. But joy for one thing and sorrow for the opposite thing proceed from the

[1] *Confessions,* III, 2 (PL 32, 683).
[2] *Ibid,* IV, 10 (PL 32, 697).
[3] Contained among the works of Augustine (PL 40, 1124).
[4] *Ethics,* IX, 4 (1166^{b}23).
[5] *City of God,* XIV, 6 (PL 41, 409).
[6] *Metaphysics,* X, 4 (1055^{a}3).
[7] *Ethics,* VII, 14 (1154^{b}13).
[8] Aristotle, X, 5 (1175^{b}16).

same habit; thus from charity it happens that we *rejoice with them that rejoice,* and *weep with them that weep* (Rom. 12. 15). Therefore not every sorrow is contrary to every pleasure

I answer that, As stated in the *Metaphysics,*[1] contrariety is a difference according to form. Now a form may be generic or specific. Consequently things may be contraries in respect of a generic form, as virtue and vice; or in respect of a specific form, as justice and injustice.

Now we must observe that some things are specified by absolute forms, for instance, substances and qualities; but other things are specified in relation to something extrinsic, for instance, passions and movements, which derive their species from their terms or objects. Accordingly in those things that are specified by absolute forms, it happens that species contained under contrary genera are not contrary as to their specific nature; but it does not happen for them to have any affinity or fittingness to one another For intemperance and justice, which are in the contrary genera of virtue and vice, are not contrary to one another in respect of their specific nature; and yet they have no affinity or fittingness to one another. On the other hand, in those things that are specified in relation to something extrinsic, it happens that species belonging to contrary genera are not only not contrary to one another, but also that they have a certain mutual affinity and fittingness. The reason of this is that where there is one same relation to two contraries, there is contrariety; for example, to approach to a white thing, and to approach to a black thing, are contraries; but contrary relations to contrary things implies a certain likeness, for instance, to recede from something white, and to approach to something black. This is most evident in the case of contradiction, which is the principle of opposition; because opposition consists in affirming and denying the same thing, for example, white and not-white, while there is fittingness and likeness in the affirmation of one contrary and the denial of the other, as, if I were to say black and not white.

Now sorrow and pleasure, being passions, are specified by their objects According to their respective genera, they are contrary to one another; for "one pertains to pursuit, the other to avoidance, which are to the appetite what affirmation and denial are to the intellect."[2] Consequently sorrow and pleasure in respect of the same object, are in opposition to one another according to species; but sorrow and pleasure in respect of objects that are not opposite but disparate, are not opposed to one another according to the aspect of species, but are also disparate; for instance, sorrow at the death of a friend, and pleasure in contemplation. If, however, those diverse objects be contrary to one another, then pleasure and sorrow are not only not specifically contrary, but they also have a certain mutual fittingness and affinity; for instance to rejoice in good and to sorrow for evil.

Reply Obj. 1. Whiteness and blackness do not take their species from their relationship to something extrinsic, as pleasure and sorrow do; therefore the comparison does not hold.

Reply Obj. 2. Genus is taken from matter, as is stated in the *Metaphysics,*[3] and in accidents the subject takes the place of matter. Now it has been said above that pleasure and sorrow are generically contrary to one another. Consequently in every sorrow the subject has a disposition contrary to the disposition of the subject of pleasure, for in every pleasure the appetite is viewed as accepting what it possesses, and in every sorrow, as avoiding it. And therefore on the part of the subject every pleasure is a remedy for any kind of sorrow, and every sorrow is a hindrance of all manner of pleasure; but chiefly when pleasure is opposed to sorrow specifically.

Hence the *Reply to the Third Objection* is evident.—Or we may say that although not every sorrow is specifically contrary to every pleasure, yet they are contrary to one another in regard to their effects; for one has the effect of strengthening the animal nature, while the other results in a kind of discomfort.

ARTICLE 5. *Whether There Is Any Sorrow Contrary to the Pleasure of Contemplation?*

We proceed thus to the Fifth Article: It would seem that there is a sorrow that is contrary to the pleasure of contemplation.

Objection 1. For the Apostle says (II Cor. 7. 10): *The sorrow that is according to God, worketh penance steadfast unto salvation.* Now to look at God pertains to the higher reason, whose act is to give itself to contemplation, according to Augustine (*De Trin.* xii, 3, 4).[4] Therefore there is a sorrow contrary to the pleasure of contemplation.

Obj. 2. Further, contrary things have contrary effects. If therefore the contemplation of one contrary gives pleasure, the other contrary

[1] Aristotle, X, 4 (1055[a]3).
[2] Aristotle, *Ethics,* VII, 2 (1139[a]21).
[3] Aristotle, VIII, 2 (1043[a]5); cf. VI, 12 (1038[a]6).
[4] PL 42, 999, 1000.

will give sorrow, and so there will be a sorrow contrary to the pleasure of contemplation.

Obj. 3. Further, as the object of pleasure is good, so the object of sorrow is evil. But contemplation can have an aspect of evil: since the Philosopher says[1] that it is unfitting to meditate of certain things. Therefore sorrow can be contrary to the pleasure of contemplation.

Obj. 4. Further, any work, so far as it is unhindered, can be a cause of pleasure, as stated in the *Ethics*.[2] But the work of contemplation can be hindered in many ways, either so as to destroy it altogether, or so as to make it difficult. Therefore in contemplation there can be a sorrow contrary to the pleasure.

Obj. 5. Further, affliction of the flesh is a cause of sorrow. But, as it is written (Eccles. 12. 12) *much study is an affliction of the flesh.* Therefore contemplation admits of sorrow contrary to its pleasure.

On the contrary, It is written (Wisd. 8. 16): *Her,* that is, wisdom's, *conversation hath no bitterness, nor her company any tediousness; but joy and gladness.* Now the conversation and company of wisdom are found in contemplation. Therefore there is no sorrow contrary to the pleasure of contemplation.

I answer that, The pleasure of contemplation can be understood in two ways. In one way, so that contemplation is the cause, but not the object of pleasure; and then pleasure is taken not in contemplating but in the thing contemplated. Now it is possible to contemplate something harmful and sorrowful, just as to contemplate something suitable and pleasant. Consequently if the pleasure of contemplation be taken in this way, nothing hinders some sorrow being contrary to the pleasure of contemplation.

In another way, the pleasure of contemplation is understood so that contemplation is its object and cause, as when one takes pleasure in the very act of contemplating. And thus, according to Gregory of Nyssa,[3] "no sorrow is contrary to that pleasure which is about contemplation"; and the Philosopher says the same.[4] This, however, is to be understood as being the case properly speaking. The reason is because sorrow is of itself contrary to pleasure in a contrary object; thus pleasure in heat is contrary to sorrow caused by cold. But there is no contrary to the object of contemplation, because contraries, as apprehended by the mind, are not contrary, but one is the means of knowing the other. Therefore, properly speaking, there cannot be a sorrow contrary to the pleasure of contemplation. Nor has it any sorrow joined to it, as bodily pleasures have, which are like remedies against certain annoyances; thus a man takes pleasure in drinking through being troubled with thirst, but when the thirst is completely driven out, the pleasure of drinking ceases also. Because the pleasure of contemplation is not caused by one's being quit of an annoyance, but by the fact that contemplation is pleasant in itself, for pleasure is not a generation but a perfect operation, as stated above (Q. XXXI, A. 1).

Accidentally, however, sorrow is mingled with the pleasure of apprehension, and this in two ways; first, on the part of an organ, secondly, through some impediment in the apprehension. On the part of an organ, sorrow or pain is mingled with apprehension, directly, as regards the apprehensive powers of the sensitive part, which have a bodily organ;—either from the sensible object disagreeing with the normal condition of the organ, as the taste of something bitter, and the smell of something foul,—or from the sensible object, though agreeable, being so continuous in its action on the sense, that it exceeds the natural habit, as stated above (Q. XXXIII, A. 2), the result being that an apprehension which at first was pleasant becomes tedious.

But these two things cannot occur directly in the contemplation of the mind, because the mind has no corporeal organ; and so it was said in the authority quoted above (*on the contrary*) that intellectual contemplation has neither bitterness, nor tediousness. Since, however, the human mind makes use in contemplation of the sensitive powers of apprehension, to whose acts weariness is incidental, therefore some affliction or pain is indirectly mingled with contemplation.

Nevertheless, in neither of these ways is the pain thus accidentally mingled with contemplation contrary to the pleasure of contemplation. Because pain caused by a hindrance to contemplation is not contrary to the pleasure of contemplation, but rather is in affinity and in harmony with it, as is evident from what has been said above (A. 4); but pain or sorrow caused by bodily weariness does not belong to the same genus, and hence it is altogether disparate. Accordingly it is evident that no sorrow is contrary to pleasure taken in the very act of contemplation; nor is any sorrow connected with it save accidentally.

[1] *Metaphysics,* XII, 9 ($1074^{b}32$).
[2] Aristotle, VII, 12, 13 ($1153^{a}14$; $^{b}11$); X, 4 ($1174^{b}20$).
[3] Nemesius, *De Nat Hom.,* XVIII (PG 40, 680).
[4] *Topics,* I, 13 ($106^{a}38$); *Ethics,* X, 3 ($1173^{b}16$).

Reply Obj. 1. The *sorrow which is according to God,* is not caused by the contemplation itself of the mind, but by something which the mind contemplates; namely, by sin, which the mind considers as contrary to the love of God.

Reply Obj. 2. Things which are contrary according to nature are not contrary according as they exist in the mind; for the notions of contraries are not contrary, but rather is one contrary the reason for knowing the other. Hence one and the same science considers contraries.

Reply Obj. 3. Contemplation, in itself, is never evil, since it is nothing else than the consideration of truth, which is the good of the intellect; it can, however, be evil accidentally, that is, in so far as the contemplation of a less noble object hinders the contemplation of a more noble object; or on the part of the object contemplated, to which the appetite is inordinately attached

Reply Obj 4 Sorrow caused by a hindrance to contemplation is not contrary to the pleasure of contemplation, but is in kindred to it, as stated above.

Reply Obj. 5 Affliction of the flesh affects contemplation accidentally and indirectly, as stated above.

ARTICLE 6. *Whether Sorrow Is to Be Shunned More Than Pleasure Is to Be Sought?*

We proceed thus to the Sixth Article: It seems that sorrow is to be shunned more than pleasure is to be sought.

Objection 1. For Augustine says,[1] "There is nobody that does not shun sorrow more than he seeks pleasure." Now that which all agree in doing, seems to be natural. Therefore it is natural and right for sorrow to be shunned more than pleasure is sought.

Obj. 2. Further, the action of a contrary conduces to rapidity and intensity of movement; for "hot water freezes quicker and harder."[2] But the shunning of sorrow is due to the contrariety of the cause of sorrow; the desire for pleasure however does not arise from any contrariety, but rather from the suitableness of the pleasant object. Therefore sorrow is shunned more eagerly than pleasure is sought.

Obj. 3. Further, the stronger the passion which a man resists according to reason, the more worthy is he of praise, and the more virtuous, for "virtue is concerned with the difficult and the good."[3] But the brave man who resists the movement of shunning sorrow is more virtuous than the temperate man, who resists the movement of desire for pleasure, for the Philosopher says[4] that "the brave and the just are chiefly honored." Therefore the movement of shunning sorrow is more eager than the movement of seeking pleasure.

On the contrary, Good is stronger than evil, as Dionysius declares (*Div. Nom.* iv).[5] But pleasure is desirable for the sake of the good which is its object, but the shunning of sorrow is on account of evil. Therefore the desire for pleasure is more eager than the shunning of sorrow

I answer that, The desire for pleasure is of itself stronger than the shunning of sorrow. The reason of this is that the cause of pleasure is a suitable good, while the cause of pain or sorrow is an unsuitable evil. Now it happens that a certain good is suitable without any discordance at all, but it is not possible for any evil to be so unsuitable as not to be suitable in some way. Therefore pleasure can be entire and perfect; but sorrow is always partial. Therefore desire for pleasure is naturally greater than the shunning of sorrow. Another reason is because the good, which is the object of pleasure, is sought for its own sake, but evil, which is the object of sorrow, is to be shunned as being a privation of good. And that which is by reason of itself is stronger than that which is by reason of something else. Moreover we find a sign of this in natural movements. For every natural movement is more intense in the end, when a thing approaches the term that is suitable to its nature, than at the beginning, when it leaves the term that is unsuitable to its nature; as though nature were more eager in tending to what is suitable to it than in shunning what is contrary. Therefore the inclination of the appetitive power is, of itself, more eager in tending to pleasure than in shunning sorrow.

But it happens accidentally that a man shuns sorrow more eagerly than he seeks pleasure, and this for three reasons. First, on the part of the apprehension. Because, as Augustine says (*De Trin.* x, 12),[6] "love is felt more keenly, when we lack that which we love." Now from the lack of what we love, sorrow results, which is caused either by the loss of some loved good, or by the entrance of some contrary evil. But pleasure suffers no lack of the good loved, for it rests in possession of it. Since then love is the cause of

[1] QQ. LXXXIII, QU. 36 (PL 40, 25).
[2] *Meteorology,* I, 12 (348^b36). [3] *Ethics,* II, 3 (1105^a9).
[4] *Rhetoric,* II, 4 (1381^a21).
[5] Sect. 20 (PG 3, 717).
[6] PL 42, 984.

pleasure and sorrow, the latter is the more shunned according as love is the more keenly felt on account of that which is contrary to it. Secondly, on the part of the cause of sorrow or pain, which cause is contrary to a good that is more loved than the good in which we take pleasure. For we love the natural well-being of the body more than the pleasure of eating, and consequently we would leave the pleasure of eating and the like, from fear of the pain occasioned by blows or other such causes, which are contrary to the well-being of the body. Thirdly, on the part of the effect; namely, in so far as sorrow hinders not only one pleasure, but all.

Reply Obj. 1. The saying of Augustine that "sorrow is shunned more than pleasure is sought" is true accidentally but not per se. And this is clear from what he says after: "Since we see that the most savage animals are deterred from the greatest pleasures by fear of pain," which pain is contrary to life which is loved above all.

Reply Obj. 2. The case is not the same with movement from within and movement from without. For movement from within tends to what is suitable more than it recedes from that which is contrary, as we remarked above in regard to natural movement. But movement from without is intensified by the very contrariety, because each thing strives in its own way to resist anything contrary to it, as aiming at its own preservation. Hence violent movement is intense at first, and slackens towards the end. Now the movement of the appetitive part is from within, since it tends from the soul to the thing. Consequently pleasure is, of itself, more to be sought than sorrow is to be shunned. But the movement of the sensitive part is from without, as it were from things to the soul. Consequently the more contrary a thing is, the more it is felt. And then too, accidentally, in so far as the senses are required for pleasure and pain, pain is shunned more than pleasure is sought.

Reply Obj. 3. A brave man is not praised because, in accordance with reason, he is not overcome by any kind of sorrow or pain whatever, but because he is not overcome by that which is concerned with the dangers of death. And this kind of sorrow is more shunned than pleasures of the table or of sexual intercourse are sought, which latter pleasures are the object of temperance; just as life is loved more than food and sexual pleasure. But the temperate man is praised for refraining from pleasures of touch more than for not shunning the pains which are contrary to them, as is stated in the *Ethics*.[1]

Article 7. *Whether Outward Pain Is Greater Than Interior Sorrow?*

We proceed thus to the Seventh Article: It seems that outward pain is greater than interior sorrow of the heart.

Objection 1. Because outward pain arises from a cause contrary to the well-being of the body in which is life, while interior sorrow is caused by some evil in the imagination. Since, therefore, life is loved more than an imagined good, it seems that, according to what has been said above (A. 6), outward pain is greater than interior sorrow.

Obj. 2. Further, the reality moves more than its likeness does. But outward pain arises from the real conjunction of some contrary, while inward sorrow arises from the apprehended likeness of a contrary. Therefore outward pain is greater than inward sorrow.

Obj. 3. Further, a cause is known by its effect. But outward pain has stronger effects; for man dies more easily of outward pain than of interior sorrow. Therefore outward pain is greater and is shunned more than interior sorrow.

On the contrary, It is written (Ecclus. 25. 17): *The sadness of the heart is every wound* (Douay,—*plague*), *and the wickedness of a woman is all evil.* Therefore, just as the wickedness of a woman surpasses all other wickedness, as the text implies, so sadness of the heart surpasses every outward wound.

I answer that, Interior and exterior pain agree in one point, and differ in two. They agree in this, that each is a movement of the appetitive power, as stated above (A. 1). But they differ in respect of those two things which are requisite for pain and pleasure; namely, in respect of the cause, which is a conjoined good or evil, and in respect of the apprehension. For the cause of outward pain is a conjoined evil contrary to the body, while the cause of inward pain is a conjoined evil contrary to the appetite. Again, outward pain arises from an apprehension of sense, and especially of touch, while inward pain arises from an interior apprehension, of the imagination or of the reason.

If then we compare the cause of inward pain to the cause of outward pain, the former belongs, of itself, to the appetite to which both these pains belong, while the latter belongs to the appetite indirectly. Because inward pain

[1] Aristotle, III, 11 (1118^b28).

arises from something being contrary to the appetite itself, while outward pain arises from something being contrary to the appetite, through being contrary to the body. Now, that which is of itself is always prior to that which is by reason of another. Therefore, from this point of view, inward pain surpasses outward pain. In like manner also on the part of apprehension, because the apprehension of reason and imagination is of a higher order than the apprehension of the sense of touch. Consequently inward pain is, absolutely and of itself, more keen than outward pain. A sign of this is that one willingly undergoes outward pain in order to avoid inward pain. And in so far as outward pain is not contrary to the interior appetite, it becomes in a manner pleasant and agreeable by way of inward joy.

Sometimes, however, outward pain is accompanied by inward pain, and then the pain is increased. Because inward pain is not only greater than outward pain, it is also more universal, since whatever is contrary to the body, can be contrary to the interior appetite; and whatever is apprehended by sense may be apprehended by imagination and reason, but not conversely. Hence in the passage quoted above it is said expressively: *Sadness of the heart is every wound,* because even the pains of outward wounds are comprised in the interior sorrows of the heart.

Reply Obj. 1 Inward pain can also arise from things that are contrary to life. And then the comparison of inward to outward pain must not be taken in reference to the various evils that cause pain, but in regard to the various ways in which this cause of pain is compared to the appetite.

Reply Obj. 2. Inward pain does not proceed from the apprehended likeness of a thing as from a cause; for a man is not inwardly pained by the apprehended likeness itself, but by the thing which the likeness represents. And this thing is all the more perfectly apprehended by means of its likeness as this likeness is more immaterial and abstract. Consequently inward pain is, of itself, greater, as being caused by a greater evil, because evil is better known by an inward apprehension.

Reply Obj. 3. Bodily changes are more liable to be caused by outward pain, both from the fact that outward pain is caused by a corrupting thing joined to it corporally, which is a necessary condition of the sense of touch; and from the fact that the outward sense is more material than the inward sense, just as the sensitive appetite is more material than the intellectual. For this reason, as stated above (Q. XXII, A. 3; Q. XXXI, A. 5), the body undergoes a greater change from the movement of the sensitive appetite; and, in like manner, from outward than from inward pain.

ARTICLE 8. *Whether There Are Only Four Species of Sorrow?*

We proceed thus to the Eighth Article: It would seem that Damascene's (*De Fide Orthod.* ii, 14)[1] division of sorrow into four species is incorrect; namely, into acedia, distress, which Gregory of Nyssa[2] calls anxiety,—pity, and envy.

Objection 1. For sorrow is contrary to pleasure. But there are not several species of pleasure. Therefore it is incorrect to assign different species of sorrow.

Obj. 2. Further, repentance is a species of sorrow, and so are indignation (*nemesis*) and jealousy (*zelus*), as the Philosopher states.[3] But these are not included in the above species. Therefore this division is insufficient.

Obj. 3. Further, the members of a division should be things that are opposed to one another. But these species are not opposed to one another. For according to Gregory[4] "acedia is sorrow depriving of speech; anxiety is the sorrow that weighs down; envy is sorrow for another's good; pity is sorrow for another's evils." But it is possible for one to sorrow for another's evils, and for another's good, and at the same time to be weighed down inwardly, and outwardly to be speechless. Therefore this division is incorrect.

On the contrary stands the twofold authority of Gregory of Nyssa and of Damascene.

I answer that, It pertains to the notion of a species that it is something added to the genus. But a thing can be added to a genus in two ways. First, as something belonging of itself to the genus, and contained in it virtually; thus rational is added to animal. Such an addition makes true species of a genus, as the Philosopher says.[5] But, secondly, a thing may be added to a genus, that is, as it were, extraneous to the notion conveyed by that genus; thus white or something of the kind may be added to animal. Such an addition does not make true species of the genus, according to the usual sense in which we speak of genera and species. But sometimes a thing is said to be a species of a certain genus

[1] PG 94, 932.
[2] Nemesius,—*De Nat. Hom.*, XIX (PG 40, 688).
[3] *Rhetoric*, II, 9, 11 (1386^b9; 1388^a30).
[4] Cf. Nemesius, *loc. cit.* Cf. Diogenes Laertes, *De Vita et Mor Philosoph.*, VII, III (DD 183); Stobaeus, *Eclogae*, II, 6.
[5] *Metaphysics*, VII, 12 (1038^a5); VIII, 2 (1043^a5).

through having something extraneous to that genus indeed, but to which the notion of that genus is applicable; thus a live coal or a flame is said to be a species of fire, because in each of them the nature of fire is applied to a foreign matter. In like manner we speak of astronomy and perspective as being species of mathematics, in so far as the principles of mathematics are applied to natural matter.

In accordance with this manner of speaking, the species of sorrow are assigned by an application of the notion of sorrow to something extraneous to it. This extraneous thing may be taken on the part of the cause or object, or of the effect. For the proper object of sorrow is one's own evil. Hence sorrow may be concerned for an object extraneous to it either through one's being sorry for an evil that is not one's own; and thus we have pity which is sorrow for another's evil, considered, however, as one's own;—or through one's being sorry for something that is neither evil nor one's own, but another's good, considered, however, as one's own evil; and thus we have envy. But the proper effect of sorrow consists in a certain flight of the appetite. Therefore the extraneous element in the effect of sorrow may be taken so as to affect the first part only, by excluding flight; and thus we have anxiety which weighs on the mind, so as to make escape seem impossible; hence it is also called perplexity. If, however, the mind be weighed down so much that even the limbs become motionless, which belongs to acedia, then we have the extraneous element affecting both, since there is neither flight, nor is the effect in the appetite. And the reason why acedia especially is said to deprive one of speech is because of all the external movements the voice is the best expression of the inward concept and desire, not only in men, but also in other animals, as is stated in the *Politics*.[1]

Reply Obj. 1. Pleasure is caused by good, which has only one meaning, and so pleasure is not divided into several species as sorrow is; for the latter is caused by evil, which happens in many ways, as Dionysius says (*Div. Nom.* iv).[2]

Reply Obj. 2. Repentance is for one's own evil, which is of itself the object of sorrow; therefore it does not belong to these species. Jealousy and indignation are included in envy, as we shall explain later (Part II-II, Q. XXXVI, A. 2).

Reply Obj. 3. This division is not according to opposite species, but according to the diversity of extraneous things to which the notion of sorrow is applied, as stated above.

[1] Aristotle, I, 2 (1253[a]10). [2] Sect. 30 (PG 3, 729).

QUESTION XXXVI

OF THE CAUSES OF SORROW OR PAIN

(In Four Articles)

WE must now consider the causes of sorrow, under which head there are four points of inquiry: (1) Whether sorrow is caused by the loss of a good or rather by the presence of an evil? (2) Whether desire is a cause of sorrow? (3) Whether the craving for unity is a cause of sorrow? (4) Whether an irresistible power is a cause of sorrow?

ARTICLE 1. *Whether Sorrow Is Caused by the Loss of Good or by the Presence of Evil?*

We proceed thus to the First Article: It would seem that sorrow is caused by the loss of a good rather than by the presence of an evil.

Objection 1. For Augustine says (*De viii. QQ Dulcit.*, qu. 1)[3] that sorrow is caused by the loss of temporal goods. Therefore, in like manner, every sorrow is caused by the loss of some good.

Obj. 2. Further, it was said above (Q. XXXV, A. 4) that the sorrow, which is contrary to a pleasure has the same object as that pleasure But the object of pleasure is good, as stated above (Q. XXIII, A. 4; Q. XXXI, A. 1; Q. XXXV, A. 3). Therefore sorrow is caused chiefly by the loss of good.

Obj. 3. Further, according to Augustine,[4] love is the cause of sorrow, as of the other emotions of the soul. But the object of love is good. Therefore pain or sorrow is felt for the loss of good rather than for an evil that is present.

On the contrary, Damascene says (*De Fide Orthod.* ii. 12)[5] that "the dreaded evil gives rise to fear, the present evil is the cause of sorrow"

I answer that, If privations, as considered by the mind, were what they are in reality, this question would seem to be of no importance. For, as stated in the First Part (Q. XIV, A. 10; Q. XLVIII, A. 3), evil is the privation of good, and privation is in reality nothing else than the lack of the contrary habit, so that, in this respect, to sorrow for the loss of good would be the same as to sorrow for the presence of evil. But sorrow is a movement of the appetite in consequence of an apprehension, and even a privation, as apprehended, has the aspect of a

[3] PL 40, 153. [4] *City of God*, XIV, 7 (PL 41, 410).
[5] PG 94, 929; also Nemesius, *De Nat. Hom.*, XVII (PG 40, 676); cf. Q. XXV, A. 4.

being, and so it is called a being of reason. And in this way evil, being a privation, is regarded as a contrary. Accordingly, so far as the movement of the appetite is concerned, it makes a difference which of the two it regards chiefly, the present evil or the good which is lost.

Again, since the movement of the animal appetite holds the same place in the actions of the soul as natural movement in natural things, the truth of the matter is to be found by considering natural movements. For if, in natural movements, we observe those of approach and withdrawal, approach is of itself directed to something suitable to nature, while withdrawal is of itself directed to something contrary to nature; thus a heavy body, of itself, withdraws from a higher place and approaches naturally to a lower place. But if we consider the cause of both these movements, namely, gravity, then gravity itself inclines towards the lower place more than it withdraws from the higher place, since withdrawal from the latter is the reason for its downward tendency

Accordingly, since, in the movements of the appetite, sorrow is a kind of flight or withdrawal, while pleasure is a kind of pursuit or approach, just as pleasure regards first the good possessed, as its proper object, so sorrow regards the evil that is present. On the other hand love, which is the cause of pleasure and sorrow, regards good rather than evil, and therefore, since the object is the cause of a passion, the present evil is more properly the cause of sorrow or pain than the good which is lost.

Reply Obj. 1. The loss itself of good is apprehended as an evil, just as the loss of evil is apprehended as a good, and in this sense Augustine says that pain results from the loss of temporal goods.

Reply Obj. 2. Pleasure and its contrary pain have the same object, but under contrary aspects; for if the presence of a particular thing be the object of pleasure, the absence of that same thing is the object of sorrow. Now "one contrary includes the privation of the other," as stated in the *Metaphysics*,[1] and consequently sorrow in respect of one contrary, is, in a way, directed to the same thing under a contrary aspect.

Reply Obj. 3. When many movements arise from one cause, it does not follow that they all regard chiefly that which the cause regards chiefly, but only the first of them. And each of the others regards chiefly that which is suitable to it according to its own character.

[1] Aristotle, X, 4 (1055^b18).

ARTICLE 2. *Whether Desire Is a Cause of Sorrow?*

We proceed thus to the Second Article: It seems that desire is not a cause of pain or sorrow.

Objection 1. Because sorrow of itself regards evil, as stated above (A. 1), while desire is a movement of the appetite towards good. Now movement towards one contrary is not a cause of the movement towards the other contrary. Therefore desire is not a cause of pain.

Obj. 2. Further, pain, according to Damascene (*De Fide Orthod.* ii),[2] is caused by something present; but the object of desire is something future. Therefore desire is not a cause of pain.

Obj. 3. Further, that which is pleasant in itself is not a cause of pain. But desire is pleasant in itself, as the Philosopher says [3] Therefore desire is not a cause of pain or sorrow.

On the contrary, Augustine says (*Enchirid.* xxiv).[4] "When ignorance of things necessary to be done, and desire of things hurtful, found their way in, error and pain stole an entrance in their company." But ignorance is the cause of error. Therefore desire is a cause of sorrow.

I answer that, Sorrow is a movement of the animal appetite. Now, as stated above (A. 1) the appetitive movement is likened to the natural appetite, a likeness that may be assigned to a twofold cause: one, on the part of the end; the other, on the part of the principle of movement. Thus, on the part of the end, the cause of a heavy body's downward movement is the lower place, while the principle of that movement is a natural inclination resulting from gravity.

Now the cause of the appetitive movement, on the part of the end, is the object of that movement. And thus, it has been said above (A. 1) that the cause of pain or sorrow is a present evil. On the other hand, the cause, by way of principle, of that movement, is the inward inclination of the appetite, which inclination regards, first of all, the good, and in consequence, the rejection of a contrary evil. Hence the first principle of this kind of appetitive movement is love, which is the first inclination of the appetite towards the possession of good; the second principle however, is hatred, which is the first inclination of the appetite towards the avoidance of evil. But since concupiscence or desire is the first effect of love, which gives

[2] Chap. 12 (PG 94, 929).
[3] *Rhetoric*, I, 11 (1370^b15).
[4] PL 40, 244.

rise to the greatest pleasure, as stated above (Q. XXXII, A. 6), hence it is that Augustine often speaks of desire or concupiscence in the sense of love, as was also stated (Q. XXX, A. 2, Reply 2); and in this sense he says that desire is the universal cause of sorrow. Sometimes, however, desire taken in its proper sense, is the cause of sorrow. Because whatever hinders a movement from reaching its end is contrary to that movement. Now that which is contrary to the movement of the appetite is a cause of sorrow. Consequently, desire becomes a cause of sorrow in so far as we sorrow for the delay of a desired good, or for its entire removal. But it cannot be a universal cause of sorrow, since we sorrow more for the loss of present good, in which we have already taken pleasure, than for the withdrawal of future good which we desire to have.

Reply Obj. 1. The inclination of the appetite to the possession of good causes the inclination of the appetite to fly from evil, as stated above. And hence it is that the appetitive movements that regard good are reckoned as causing the appetitive movements that regard evil.

Reply Obj. 2. That which is desired, though really future, is, nevertheless, in a way present, in so far as it is hoped for. Or we may say that although the desired good itself is future, yet the hindrance is held as present, and so gives rise to sorrow.

Reply Obj 3. Desire gives pleasure, so long as there is a hope of obtaining that which is desired. But, when hope is removed through the presence of an obstacle, desire causes sorrow.

ARTICLE 3. *Whether the Craving for Unity Is a Cause of Sorrow?*

We proceed thus to the Third Article: It would seem that the craving for unity is not a cause of sorrow.

Objection 1. For the Philosopher says[1] that "this opinion, which held repletion to be the cause of pleasure, and division[2] the cause of sorrow, seems to have originated in pains and pleasures connected with food" But not every pleasure or sorrow is of this kind. Therefore the craving for unity is not the universal cause of sorrow, since repletion pertains to unity, and division is the cause of multitude.

Obj. 2. Further, every separation is opposed to unity. If therefore sorrow were caused by a craving for unity, no separation would be pleasant; and this is clearly untrue as regards the separation of whatever is superfluous.

Obj. 3. Further, for the same reason we desire the conjunction of good and the removal of evil. But as conjunction regards unity, since it is a kind of union, so separation is contrary to unity Therefore the craving for unity rather than the craving for separation, should not be held as the cause of sorrow.

On the contrary, Augustine says (*De Lib. Arb.* iii, 23),[3] that "from the pain that dumb animals feel, it is quite evident how their souls desire unity, in ruling and quickening their bodies. For what else is pain but a feeling of impatience of division or corruption?"

I answer that, In the same way that the desire or craving for good is considered as a cause of sorrow, so must a craving for unity and love be accounted as causing sorrow. Because the good of each thing consists in a certain unity, according as, that is, each thing has, united in itself, the elements of which its perfection consists; hence the Platonists held that one is a principle, just as good is.[4] And so everything naturally desires unity, just as it desires goodness, and therefore, just as love or desire for good is a cause of sorrow, so also is the love or craving for unity.

Reply Obj. 1 Not every kind of union causes perfect goodness, but only that on which the perfect being of a thing depends Hence neither does the desire of any kind of unity cause pain or sorrow, as some have maintained, whose opinion is rejected by the Philosopher,[5] from the fact that repletion is not always pleasant; for instance, when a man has eaten to repletion, he takes no further pleasure in eating, for repletion or union of this kind is contrary to rather than conducive to perfect being. Consequently sorrow is caused by the craving, not for any kind of unity, but for that unity in which the perfection of nature consists

Reply Obj. 2. Separation can be pleasant either because it removes something contrary to a thing's perfection, or because it has some union connected with it, such as union of the sensible to the sense.

Reply Obj 3. Separation from things hurtful and corrupting is desired in so far as they destroy the unity which is due. Therefore the desire for a such separation is not the first

[1] *Ethics*, X, 3 (1173^{b}12); cf. Plato, *Philebus* (31; 32; 42).

[2] Aristotle wrote ἀνδειαν, want; St. Thomas, in the Latin version, read *incisionem* (for *indigentiam?*)

[3] PL 32, 1305.

[4] Proclus, *Inst. Theol.*, prop. XII (DD LV); prop. XIII (DD LV).

[5] *Ethics*, X, 3 (1173^{b}14).

cause of sorrow, but rather the craving for unity.

ARTICLE 4. *Whether an Irresistible Power Is a Cause of Sorrow?*

We proceed thus to the Fourth Article: It would seem that a greater power should not be accounted a cause of sorrow.

Objection 1. For that which is in the power of the agent is not present but future. But sorrow is for present evil. Therefore a greater power is not a cause of sorrow.

Obj. 2. Further, hurt inflicted is the cause of sorrow. But hurt can be inflicted even by a lesser power. Therefore a greater power should not be reckoned as a cause of sorrow.

Obj. 3. Further, the interior inclinations of the soul are the causes of the movements of appetite. But a greater power is something external. Therefore it should not be put as a cause of sorrow.

On the contrary, Augustine says (*De Nat. Boni,* XX):[1] "Sorrow in the soul is caused by the will resisting a stronger power, while pain in the body is caused by sense resisting a stronger body."

I answer that, As stated above (A. 1), a present evil, is cause of sorrow or pain, by way of object. Therefore that which is the cause of the evil being present, should be accounted as the cause of pain or sorrow. Now it is evident that it is contrary to the inclination of the appetite to be united with a present evil; and whatever is contrary to a thing's inclination does not happen to it save by the action of something stronger. Therefore Augustine accounts a greater power as being the cause of sorrow.

But it must be noted that if the stronger power goes so far as to transform the contrary inclination into its own inclination, there will be no longer opposition or violence; thus if a stronger agent, by its action on a heavy body, deprives it of its downward tendency, its consequent upward tendency is not violent but natural to it.

Accordingly if some greater power prevail so far as to take away from the will or the sensitive appetite their respective inclinations, pain or sorrow will not result from it; such is the result only when the contrary inclination of the appetite remains. And hence Augustine says (*loc. cit.*) that "sorrow is caused by the will resisting a stronger power," for were it not to resist, but to yield by consenting, the result would be not sorrow but pleasure.

[1] PL 42, 557.

Reply Obj. 1. A greater power causes sorrow, as acting not potentially but actually, that is, by causing the actual presence of the corruptive evil.

Reply Obj. 2. Nothing hinders a power which is not greater absolutely, from being greater in some respect; and accordingly it is able to inflict some harm. But if it be in no way stronger it can do no harm at all; hence it cannot bring about that which causes sorrow.

Reply Obj. 3. External agents can be the causes of appetitive movements in so far as they cause the presence of the object; and it is thus that a greater power is considered to be the cause of sorrow.

QUESTION XXXVII

OF THE EFFECTS OF PAIN OR SORROW (*In Four Articles*)

WE must now consider the effects of pain or sorrow, under which head there are four points of inquiry: (1) Whether pain deprives one of the power to learn? (2) Whether the effect of sorrow or pain is to burden the soul? (3) Whether sorrow or pain weakens all activity? (4) Whether sorrow is more harmful to the body than all the other passions of the soul?

ARTICLE 1. *Whether Pain Deprives One of the Power to Learn?*

We proceed thus to the First Article: It seems that pain does not deprive one of the power to learn.

Objection 1. For it is written (Isa. 26. 9): *When Thou shalt do Thy judgments on the earth, the inhabitants of the world shall learn justice;* and further on (*verse* 16): *In the tribulation of murmuring Thy instruction was with them.* But the judgments of God and tribulation cause sorrow in men's hearts. Therefore pain or sorrow, far from destroying, increases the power of learning.

Obj. 2. Further, it is written (Isa. 28. 9): *Whom shall He teach knowledge? And whom shall He make to understand the hearing? Them that are weaned from the milk, that are drawn away from the breasts,* that is, from pleasures. But pain and sorrow are most destructive of pleasure; since sorrow hinders all pleasure, as stated in the *Ethics*[2]; and (Ecclus. 11. 29) it is stated that the *affliction of an hour maketh one forget great delights.* Therefore pain, instead of taking away, increases the power of learning.

[2] Aristotle, VII, 14 (1154[a]18; [b]6); cf. X, 5 (1175[b]24).

Obj. 3. Further, inward sorrow surpasses outward pain, as stated above (Q. XXXV, A. 7). But man can learn while sorrowful. Much more, therefore, can he learn while in bodily pain.

On the contrary, Augustine says (*Soliloq.* i, 12):[1] "Although during those days I was tormented with a violent tooth-ache,—I was not able to turn over in my mind other things than those I had already learnt; and as to learning anything, I was quite unequal to it, because it required undivided attention."

I answer that, Since all the powers of the soul are rooted in the one essence of the soul, it is necessary that, when the intention of the soul is strongly drawn towards the action of one power, it is withdrawn from the action of another power, because the soul, being one, can only have one intention. The result is that if one thing draws upon itself the entire intention of the soul, or a great portion thereof, anything else requiring considerable attention is incompatible with it.

Now it is evident that sensible pain above all draws the soul's intention to itself, because it is natural for each thing to tend wholly to repel whatever is contrary to it, as may be observed even in natural things. It is likewise evident that in order to learn anything new, we require study and effort with a strong intention, as is clearly stated in Prov. 2. 4, 5: *If thou shalt seek* wisdom *as money, and shalt dig for her as for a treasure, then shalt thou understand learning* (Vulg.,—*the fear of the Lord*). Consequently if the pain be acute, man is prevented at the time from learning anything; indeed it can be so acute, that, as long as it lasts, a man is unable to give his attention even to that which he knew already. However a difference is to be observed according to the difference of love that a man has for learning or for considering, because the greater his love, the more will he retain the intention of his mind so as to prevent it from turning entirely to the pain.

Reply Obj. 1. Moderate sorrow, that does not cause the mind to wander, can conduce to the acquisition of learning, especially in regard to those things by which a man hopes to be freed from sorrow. And thus, *in the tribulation of murmuring,* men are more apt to be taught of God.

Reply Obj. 2. Both pleasure and pain, in so far as they draw upon themselves the soul's intention, hinder the reason from the act of consideration, and so it is stated in the *Ethics*[2] that "in the moment of sexual pleasure, a man cannot understand anything." Nevertheless pain attracts the soul's intention more than pleasure does. Thus we observe in natural things that the action of a natural body is more intense in regard to its contrary; for instance, hot water is more accessible to the action of cold, and in consequence freezes harder. If therefore pain or sorrow be moderate, it can conduce accidentally to the facility of learning, in so far as it takes away an excess of pleasure. But, of itself, it is a hindrance, and if it is intense, it prevents it altogether.

Reply Obj. 3. External pain arises from hurt done to the body, so that it involves bodily change more than inward sorrow does. And yet the latter is greater in regard to the formal element of pain, which belongs to the soul. Consequently bodily pain is a greater hindrance to contemplation which requires complete repose, than inward sorrow is. Nevertheless if inward sorrow be very intense, it attracts the intention, so that man is unable to learn anything new: therefore on account of sorrow Gregory interrupted his commentary on Ezechiel (*Hom.* x *in Ezechiel*).[3]

ARTICLE 2 *Whether the Effect of Sorrow or Pain Is to Burden the Soul?*

We proceed thus to the Second Article: It would seem that it is not an effect of sorrow to burden the soul.

Objection 1. For the Apostle says (II Cor. 7. 11): *Behold this self-same thing, that you were made sorrowful according to God, how great carefulness it worketh in you: yea defence, yea indignation,* etc. Now carefulness and indignation (*indignatio*) imply that the soul is uplifted, which is contrary to being depressed. Therefore depression is not an effect of sorrow.

Obj. 2. Further, sorrow is contrary to pleasure. But the effect of pleasure is expansion, the opposite of which is not depression but contraction. Therefore depression should not be accounted as an effect of sorrow.

Obj. 3. Further, sorrow consumes those who are afflicted with it, as may be gathered from the words of the Apostle (II Cor. 2. 7): *Lest perhaps such an one be swallowed up with overmuch sorrow.* But that which is depressed is not consumed; rather, it is weighed down by something heavy, while that which is consumed enters within the consumer. Therefore depression should not be put as an effect of sorrow.

On the contrary, Gregory of Nyssa[4] and Dam-

[1] PL 32, 880. [2] Aristotle, VII, 11 (1152[b]16).

[3] PL 76, 1072.

[4] Nemesius, *De Nat. Hom.*, XIX (PG 40, 688); cf. Q. XXXV, A. 8, Reply 3.

ascene (*De Fide Orthod.* ii, 14)[1] speak of "depressing sorrow."

I answer that, The effects of the soul's passions are sometimes named metaphorically from a likeness to sensible bodies, for the reason that the movements of the animal appetite are like the inclinations of the natural appetite. And in this way fervour is ascribed to love, expansion to pleasure, and depression to sorrow. For a man is said to be depressed through being hindered in his own movement by some weight. Now it is evident from what has been said above (Q. XXIII, A. 4; Q. XXV, A. 4; Q. XXXVI, A. 1) that sorrow is caused by a present evil; and this evil, from the very fact that it is contrary to the movement of the will, depresses the soul, since it hinders it from enjoying that which it wishes to enjoy. And if the evil which is the cause of sorrow be not so strong as to deprive one of the hope of avoiding it, although the soul be depressed in so far as, for the present, it fails to grasp that which it craves for, yet it retains the movement for repelling that evil. If, on the other hand, the strength of the evil be such as to exclude the hope of evasion, then even the interior movement of the afflicted soul is absolutely hindered, so that it cannot turn aside either this way or that. Sometimes even the external movement of the body is paralyzed, so that a man becomes completely stupefied.

Reply Obj. 1. That uplifting of the soul ensues from the sorrow which is according to God, because it brings with it the hope of the forgiveness of sin.

Reply Obj. 2. As far as the movement of the appetite is concerned, contraction and depression amount to the same, because the soul, through being depressed so as to be unable to attend freely to outward things, withdraws to itself, closing itself up as it were.

Reply Obj. 3. Sorrow is said to consume man when the force of the afflicting evil is such as to shut out all hope of evasion; and thus also it both depresses and consumes at the same time For certain things, taken metaphorically, imply one another, which taken literally, appear to exclude one another.

ARTICLE 3. *Whether Sorrow or Pain Weakens All Activity?*

We proceed thus to the Third Article: It seems that sorrow does not weaken all activity.

Objection 1. Because carefulness is caused by sorrow, as is clear from the passage of the Apostle quoted above (A. 2, obj. 1). But carefulness conduces to good work; and so the Apostle says (II Tim. 2. 15): *Carefully study to present thyself . . . a workman that needeth not to be ashamed.* Therefore sorrow is not a hindrance to work, but rather helps one to work well.

Obj. 2. Further, sorrow causes concupiscence in many cases, as stated in the *Ethics.*[2] But concupiscence causes intensity of action. Therefore sorrow does too.

Obj. 3. Further, as some actions are proper to the joyful, so are others proper to the sorrowful; for instance, to mourn. Now a thing is improved by that which is suitable to it. Therefore certain actions are not hindered but improved by reason of sorrow.

On the contrary, The Philosopher says[3] that "pleasure perfects action," while on the other hand, "sorrow hinders it."

I answer that, As stated above (A. 2), sorrow at times does not depress or consume the soul so as to shut out all movement, internal or external; but certain movements are sometimes caused by sorrow itself. Accordingly action stands in a twofold relation to sorrow. First, as being the object of sorrow; and thus sorrow hinders any action, for we never do that which we do with sorrow so well as that which we do with pleasure, or without sorrow. The reason for this is that the will is the cause of human actions, and consequently when we do something that gives pain, the action must of necessity be weakened in consequence. Secondly, action stands in relation to sorrow, as to its principle and cause; and such action must be improved by sorrow. Thus the more one sorrows on account of a certain thing, the more one strives to shake off sorrow, provided there is a hope of shaking it off; otherwise no movement or action would result from that sorrow.

From what has been said *the replies to the objections* are evident.

ARTICLE 4. *Whether Sorrow Is More Harmful to the Body Than the Other Passions of the Soul?*

We proceed thus to the Fourth Article: It would seem that sorrow is not most harmful to the body.

Objection 1. For sorrow has a spiritual being in the soul. But those things which have only a spiritual being do not cause a change in the body, as is evident with regard to the intentions of colours, which images are in the air and do

[1] PG 94, 932.

[2] Aristotle, VII, 14 (1154^b11).

[3] *Ethics,* X, 4, 5 (1174^b23; 1175^b17).

not give colour to bodies. Therefore sorrow is not harmful to the body.

Obj. 2. Further if it be harmful to the body, this can only be due to its having a bodily change joined to it. But bodily change takes place in all the passions of the soul, as stated above (Q. XXII, AA. 1, 3). Therefore sorrow is not more harmful to the body than the other passions of the soul.

Obj. 3. Further, the Philosopher says[1] that "anger and concupiscence drive some to madness," which seems to be a very great harm, since reason is the most excellent thing in man Moreover despair seems to be more harmful than sorrow, for it is the cause of sorrow. Therefore sorrow is not more harmful to the body than the other passions of the soul.

On the contrary, It is written (Prov. 17. 22): *A joyful mind maketh age flourishing: a sorrowful spirit drieth up the bones;* and (*ibid.* 25. 20): *As a moth doth by a garment, and a worm by the wood; so the sadness of a man consumeth the heart;* and (Ecclus. 38. 19): *Of sadness cometh death.*

I answer that, Of all the soul's passions, sorrow is most harmful to the body. The reason of this is because sorrow is contrary to man's life in respect of the species of its movement, and not merely in respect of its measure or quantity, as is the case with the other passions of the soul. For man's life consists in a certain movement, which flows from the heart to the other parts of the body; and this movement is befitting to human nature according to a certain fixed measure. Consequently if this movement goes beyond the right measure, it will be contrary to man's life in respect of the measure of quantity, but not in respect of its specific character. But if this movement be hindered in its progress, it will be contrary to life in respect of its species.

Now it must be noted that, in all the passions of the soul, the bodily change which is their material element, is in conformity with and in proportion to the appetitive movement, which is the formal element, just as in every thing matter is proportionate to form. Consequently those passions of the soul that imply a movement of the appetite in pursuit of something, are not contrary to the vital movement as regards its species, but they may be contrary to it as regards its measure; such are love, joy, desire and the like. Therefore these passions conduce to the well-being of the body, though, if they be excessive, they may be harmful to it. On the other hand, those passions which denote in the appetite a movement of flight or contraction, are contrary to the vital movement not only as regards its measure, but also as regards its species and therefore they are harmful absolutely; such are fear and despair, and above all, sorrow which depresses the soul by reason of a present evil, which makes a stronger impression than future evil.

Reply Obj. 1. Since the soul naturally moves the body, the spiritual movement of the soul is naturally the cause of bodily change. Nor is there any parallel with spiritual intentions, because they are not naturally ordained to move such other bodies as are not naturally moved by the soul.

Reply Obj. 2. Other passions imply a bodily change which is specifically in conformity with the vital movement; but sorrow implies a change that is contrary to it, as stated above.

Reply Obj. 3. A lesser cause suffices to hinder the use of reason than to destroy life, since we observe that many ailments deprive one of the use of reason before depriving one of life. Nevertheless fear and anger cause very great harm to the body, by reason of the sorrow which they imply, and which arises from the absence of the thing desired. Moreover sorrow too sometimes deprives man of the use of reason, as may be seen in those who through sorrow become a prey to melancholy or madness.

QUESTION XXXVIII

OF THE REMEDIES OF SORROW OR PAIN

(In Five Articles)

WE must now consider the remedies of pain or sorrow, under which head there are five points of inquiry: (1) Whether pain or sorrow is assuaged by every pleasure? (2) Whether it is assuaged by weeping? (3) Whether it is assuaged by the sympathy of friends? (4) Whether it is assuaged by contemplating the truth? (5) Whether it is assuaged by sleep and baths?

ARTICLE 1. *Whether Pain or Sorrow Is Assuaged by Every Pleasure?*

We proceed thus to the First Article: It seems that not every pleasure assuages every pain or sorrow.

Objection 1. For pleasure does not assuage sorrow, except in so far as it is contrary to it; for "remedies work by contraries."[2] But not every pleasure is contrary to every sorrow, as stat-

[1] *Ethics,* VII, 3 (1147[a]15).

[2] *Ibid.,* II, 3 (1104[b]17).

ed above (Q. XXXV, A. 4). Therefore not every pleasure assuages every sorrow.

Obj. 2. Further, that which causes sorrow does not assuage it. But some pleasures cause sorrow, since, as stated in the *Ethics*,[1] "the wicked man feels pain at having been pleased." Therefore not every pleasure assuages sorrow.

Obj. 3. Further, Augustine says[2] that he fled from his country, where he had been accustomed to associate with his friend, now dead; "for so should his eyes look for him less, where they were not wont to see him." Hence we may gather that those things which united us to our dead or absent friends become burdensome to us when we mourn their death or absence. But nothing united us more than the pleasures we enjoyed in common. Therefore these very pleasures become burdensome to us when we mourn. Therefore not every pleasure assuages every sorrow.

On the contrary, The Philosopher says[3] that "sorrow is driven forth by pleasure, both by a contrary pleasure and by any other, provided it be intense."

I answer that, As is evident from what has been said above (Q. XXIII, A. 4; Q. XXXI, A. 1, Reply 2), pleasure is a kind of repose of the appetite in a suitable good, while sorrow arises from something unsuited to the appetite. Consequently in movements of the appetite pleasure is to sorrow, what, in bodies, repose is to weariness, which is due to a non-natural change; for sorrow itself denotes a certain weariness or ailing of the appetitive power. Therefore just as all repose of the body brings relief to any kind of weariness, ensuing from any non-natural cause, so every pleasure brings relief by assuaging any kind of sorrow, due to any cause whatever.

Reply Obj. 1. Although not every pleasure is specifically contrary to every sorrow, yet it is generically, as stated above (Q. XXXV, A. 4). And consequently, on the part of the disposition of the subject, any sorrow can be assuaged by any pleasure.

Reply Obj. 2. The pleasures of wicked men are not a cause of sorrow while they are enjoyed, but afterwards; that is to say, in so far as wicked men repent of those things in which they took pleasure. This sorrow is healed by contrary pleasures.

Reply Obj. 3. When there are two causes inclining to contrary movements, each hinders the other, yet the one which is stronger and more persistent prevails in the end. Now when a man is made sorrowful by those things in which he took pleasure in common with a deceased or absent friend, there are two causes producing contrary movements. For the thought of the friend's death or absence, inclines him to sorrow, while the present good inclines him to pleasure. Consequently each is modified by the other. And yet since the perception of the present moves more strongly than the memory of the past, and since love of self is more persistent than love of another, hence it is that, in the end, the pleasure drives out the sorrow. Therefore a little further on Augustine says that his "sorrows gave way to his former pleasures."[4]

[1] Aristotle, IX, 4 (1166^b23).
[2] *Confessions*, IV, 12 (PL 32, 698).
[3] *Ethics*, VII, 14 (1154^b13).

ARTICLE 2. *Whether Pain or Sorrow Is Assuaged by Tears?*

We proceed thus to the Second Article: It would seem that tears do not assuage sorrow.

Objection 1. Because no effect diminishes its cause But tears or groans are an effect of sorrow. Therefore they do not diminish sorrow.

Obj. 2. Further, just as tears or groans are an effect of sorrow, so laughter is an effect of joy. But laughter does not lessen joy. Therefore tears do not lessen sorrow.

Obj. 3. Further, when we weep, the evil that saddens us is present to the imagination. But the image of that which saddens us increases sorrow, just as the image of a pleasant thing adds to joy. Therefore it seems that tears do not assuage sorrow.

On the contrary, Augustine says that when he mourned the death of his friend, "in groans and in tears alone did he find some little refreshment."[5]

I answer that, Tears and groans naturally assuage sorrow, and this for two reasons. First, because a hurtful thing hurts yet more if we keep it shut up, because the soul is more intent on it; but if it be allowed to escape, the soul's intention is dispersed as it were on outward things, so that the inward sorrow is lessened. This is why when men, burdened with sorrow, make outward show of their sorrow, by tears or groans or even by words, their sorrow is assuaged. Secondly, because an action that befits a man according to his actual disposition is always pleasant to him. Now tears and groans are actions befitting a man who is in sorrow or pain, and consequently they become pleasant to him. Since then, as stated above (A. 1), every pleasure assuages sorrow or pain somewhat, it follows

[4] *Confessions*, IV, 13 (PL 32, 698).
[5] *Ibid.*, 12 (PL 32, 698).

that sorrow is assuaged by lamentations and groans.

Reply Obj. 1. The very relation of cause to effect is contrary to the relation between the sorrowing man and his sorrow, for every effect agrees with its cause, and consequently is pleasant to it; but the cause of sorrow is disagreeable to him that sorrows. Consequently the relation of the cause of sorrow to the sorrowful is contrary to the relation of sorrow to its cause, so that sorrow is assuaged by its effect, on account of this contrariety.

Reply Obj. 2. The relation of effect to cause is like the relation of the object of pleasure to him that takes pleasure in it, because in each case the one agrees with the other. Now every like thing increases its like. Therefore joy is increased by laughter and the other effects of joy; unless they be excessive, in which case, accidentally, they lessen it.

Reply Obj. 3. The image of that which saddens us, considered in itself, has a natural tendency to increase sorrow; yet from the very fact that a man imagines himself to be doing that which is fitting according to his actual state, he feels a certain amount of pleasure. For the same reason if laughter escapes a man when he is so disposed that he thinks he ought to weep, he is sorry for it, as having done something unbecoming to him, as Tully says (*Tusc. Quæst.* iii, 27).[1]

Article 3. *Whether Pain and Sorrow Are Assuaged by the Sympathy of Friends?*

We proceed thus to the Third Article: It seems that the sorrow of sympathizing friends does not assuage our own sorrow.

Objection 1. For contraries have contrary effects. Now as Augustine says,[2] "when many rejoice together, each one has more exuberant joy, for they are kindled and inflamed one by the other." Therefore, in like manner when many are sorrowful it seems that their sorrow is greater.

Obj. 2. Further, friendship demands mutual love, as Augustine declares.[3] But a sympathizing friend is pained at the sorrow of his friend with whom he sympathizes. Consequently the pain of a sympathizing friend becomes, to the friend in sorrow, a further cause of sorrow, so that his pain being doubled his sorrow seems to increase.

Obj. 3. Further, sorrow arises from every evil affecting a friend, as though it affected oneself since "a friend is one's other self."[4] But sorrow is an evil. Therefore the sorrow of the sympathizing friend increases the sorrow of the friend with whom he sympathizes.

On the contrary, The Philosopher says that "those who are in pain are consoled when their friends sympathize with them."[5]

I answer that, When one is in pain, it is natural that the sympathy of a friend should afford consolation. The Philosopher indicates a twofold reason for this.[6] The first is because since sorrow has a depressing effect, it is like a weight of which we strive to unburden ourselves; so that when a man sees others saddened by his own sorrow, it seems as though others were bearing the burden with him, striving, as it were, to lessen its weight; and so the load of sorrow becomes lighter for him, just as also occurs in the carrying of bodily burdens. The second and better reason is because when a man's friend condole with him, he sees that he is loved by them, and this affords him pleasure, as stated above (Q. XXXII, A. 5). Consequently, since every pleasure assuages sorrow, as stated above (A. 1), it follows that sorrow is mitigated by a sympathizing friend.

Reply Obj. 1. In either case there is a proof of friendship, namely, when a man rejoices with the joyful, and when he sorrows with the sorrowful. Consequently each becomes an object of pleasure by reason of its cause.

Reply Obj. 2. The friend's sorrow itself would be a cause of sorrow; but consideration of its cause, namely, his love, gives rise rather to pleasure.

And this suffices for the *reply to the Third Objection.*

Article 4. *Whether Pain and Sorrow Are Assuaged by the Contemplation of Truth?*

We proceed thus to the Fourth Article: It seems that the contemplation of truth does not assuage sorrow.

Objection 1. For it is written (Eccles. 1 18) *He that addeth knowledge addeth also sorrow* (Vulg.,—*labour*). But knowledge pertains to the contemplation of truth. Therefore the contemplation of truth does not assuage sorrow.

Obj. 2. Further, the contemplation of truth belongs to the speculative intellect. But the speculative intellect does not move, as stated in the book on the *Soul.*[7] Therefore, since joy and sorrow are movements of the soul, it seems that

[1] DD IV, 18.
[2] *Confessions,* VIII, 9 (PL 32, 752).
[3] *Ibid.*, IV, 14 (PL 32, 699).
[4] Aristotle, *Ethics,* IX, 4 (1166[a]31).
[5] *Ibid.*, IX, 11 (1171[a]29).
[6] *Ibid.*
[7] Aristotle, III, 9 (432[b]27). Cf. III, 10 (433[a]13).

the contemplation of truth does not help to assuage sorrow.

Obj. 3. Further, the remedy for an ailment should be applied to the part which ails. But contemplation of truth is in the intellect. Therefore it does not assuage bodily pain which is in the senses.

On the contrary, Augustine says (*Soliloq.* I, 12):[1] "It seemed to me that if the light of that truth were to dawn on our minds, either I should not feel that pain, or at least that the pain would seem nothing to me."

I answer that, As stated above (Q. III, A. 5), the greatest of all pleasures consists in the contemplation of truth. Now every pleasure assuages pain as stated above (A. 1). Hence the contemplation of truth assuages pain or sorrow, and the more so the more perfectly one is a lover of wisdom. And therefore in the midst of tribulations men rejoice in the contemplation of Divine things and of future Happiness, according to James I. 2: *My brethren, count it all joy, when you shall fall into divers temptations;* and, what is more, even in the midst of bodily tortures this joy is found as "the martyr Tiburtius, when he was walking barefoot on the burning coals, said: Methinks, I walk on roses, in the name of Jesus Christ."[2]

Reply Obj. 1. *He that addeth knowledge, addeth sorrow,* either on account of the difficulty and disappointment in the search of truth, or because knowledge makes man acquainted with many things that are contrary to his will. Accordingly, on the part of the things known knowledge causes sorrow, but on the part of the contemplation of truth it causes pleasure.

Reply Obj. 2. The speculative intellect does not move the mind on the part of the thing contemplated, but on the part of contemplation itself, which is man's good and naturally pleasant to him.

Reply Obj. 3. In the powers of the soul there is an overflow from the higher to the lower powers; and accordingly, the pleasure of contemplation, which is in the higher part, overflows so as to mitigate even that pain which is in the senses.

ARTICLE 5. *Whether Pain and Sorrow Are Assuaged by Sleep and Baths?*

We proceed thus to the Fifth Article: It would seem that sleep and baths do not assuage sorrow.

Objection 1. For sorrow is in the soul, while sleep and baths regard the body. Therefore they do not conduce to the assuaging of sorrow.

Obj. 2. Further, the same effect does not seem to follow from contrary causes. But these, being bodily things, are incompatible with the contemplation of truth which is a cause of the assuaging of sorrow, as stated above (A. 4). Therefore sorrow is not mitigated by the like.

Obj. 3. Further, sorrow and pain, in so far as they affect the body, denote a certain change of the heart. But such remedies as these seem to pertain to the outward senses and limbs, rather than to the interior disposition of the heart. Therefore they do not assuage sorrow.

On the contrary, Augustine says:[3] "I had heard that the bath had its name[4] . . . from the fact of its driving sadness from the mind." And further on, he says: "I slept, and woke up again, and found my grief not a little assuaged," and quotes the words from the hymn of Ambrose in which it is said that "Sleep restores the tired limbs to labour, refreshes the weary mind, and banishes sorrow."[5]

I answer that, As stated above (Q. XXXVII, A. 4), sorrow, by reason of its specific nature, is contrary to the vital movement of the body; and consequently whatever restores the bodily nature to its due state of vital movement, is opposed to sorrow and assuages it. Moreover such remedies, from the very fact that they bring nature back to its normal state, are causes of pleasure, for this is precisely in what pleasure consists, as stated above (Q XXXI, A. 1). Therefore, since every pleasure assuages sorrow, sorrow is assuaged by such bodily remedies.

Reply Obj. 1. The normal disposition of the body, so far as it is felt, is itself a cause of pleasure, and consequently assuages sorrow.

Reply Obj. 2. As stated above (Q. XXXI, A. 8), one pleasure hinders another, and yet every pleasure assuages sorrow. Consequently it is not unreasonable that sorrow should be assuaged by causes which hinder one another.

Reply Obj. 3. Every good disposition of the body reacts somewhat on the heart, which is the beginning and end of bodily movements, as stated in the treatise *Motion of Animals.*[6]

QUESTION XXXIX

OF THE GOODNESS AND MALICE OF SORROW OR PAIN

(In Four Articles)

WE must now consider the goodness and malice of pain or sorrow, under which head there are four points of inquiry: (1) Whether all sorrow is evil? (2) Whether sorrow can be a virtuous good? (3) Whether it can be a useful good? (4) Whether bodily pain is the greatest evil?

ARTICLE 1. *Whether All Sorrow Is Evil?*

We proceed thus to the First Article: It seems that all sorrow is evil.

Objection 1. For Gregory of Nyssa (Nemesius, *De Nat. Hom.* xix)[1] says: "All sorrow is evil, from its very nature." Now what is naturally evil, is evil always and everywhere. Therefore all sorrow is evil.

Obj. 2. Further, That which all, even the virtuous, avoid, is evil. But all avoid sorrow, even the virtuous, since as stated in the *Ethics*,[2] "though the prudent man does not aim at pleasure, yet he aims at avoiding sorrow." Therefore sorrow is evil.

Obj. 3. Further, Just as bodily evil is the object and cause of bodily pain, so spiritual evil is the object and cause of spiritual sorrow. But every bodily pain is a bodily evil. Therefore every sorrow of the soul is an evil of the soul.

On the contrary, Sorrow for evil is contrary to pleasure in evil But pleasure in evil is evil; hence, in condemnation of certain men, it is written (Prov. 2. 14), that *they are glad when they have done evil.* Therefore sorrow for evil is good.

I answer that, A thing may be good or evil in two ways: first considered absolutely and in itself; and thus all sorrow is an evil, because the mere fact of a man's appetite being uneasy about a present evil is itself an evil, because it hinders the repose of the appetite in good. Secondly, a thing is said to be good or evil on the supposition of something else; thus shame is said to be good, on the supposition of a shameful deed done, as stated in the *Ethics*.[3] Accordingly, supposing the presence of something saddening or painful, it is a sign of goodness if a man is in sorrow or pain on account of this present evil. For if he were not to be in sorrow or pain, this could only be either because he does not feel it, or because he does not consider it as something unbecoming, both of which are manifest evils. Consequently it pertains to goodness, that, supposing an evil to be present, sorrow or pain should ensue. Therefore Augustine says (*Gen. ad lit.* viii, 14)[4] "It is also a good thing that he sorrows for the good he has lost; for had not some good remained in his nature, he could not be punished by the loss of good." Because, however, in the science of Morals, we consider things individually,—for actions are concerned about individuals,—that which is good on some supposition should be considered as good; just as that which is voluntary on some supposition, is judged to be voluntary, as stated in the *Ethics*,[5] and likewise above (Q. VI, A. 6).

Reply Obj. 1. Gregory of Nyssa (Nemisius) is speaking of sorrow on the part of the evil that causes it, but not on the part of the subject that feels and rejects the evil. And from this point of view all shun sorrow, since they shun evil; but they do not shun the perception and rejection of evil. The same also applies to bodily pain, because the perception and rejection of bodily evil is the proof of the goodness of nature.

This suffices for the *replies to the second and third objections.*

ARTICLE 2. *Whether Sorrow Can Be a Virtuous Good?*

We proceed thus to the Second Article: It seems that sorrow is not a virtuous good.

Objection 1. For that which leads to hell is not a virtuous good. But, as Augustine says (*Gen. ad lit.* xii, 33),[6] "Jacob seems to have feared lest he should be troubled overmuch by sorrow and so, instead of entering into the rest of the blessed, be consigned to the hell of sinners." Therefore sorrow is not a virtuous good.

Obj. 2. Further, The virtuous good is praiseworthy and meritorious. But sorrow lessens praise or merit; for the Apostle says (II Cor. 9. 7): *Everyone, as he hath determined in his heart, not with sadness, or of necessity.* Therefore sorrow is not a virtuous good.

Obj. 3. Further, As Augustine says,[7] "sorrow is concerned about those things which happen against our will." But not to will those things which are actually taking place is to have a will opposed to the decree of God, to Whose providence whatever is done is subject. Since, then, conformity of the human to the Divine will is a condition of the rectitude of the will, as stat

[1] PG 40, 688.
[2] Aristotle, VII, 11 (1152[b]15).
[3] Aristotle, III, 1 (1110[a]18).
[4] PL 34, 385.
[5] Aristotle, III, 1 (1110[a]18).
[6] PL 34, 482.
[7] *City of God,* XIV, 15 (PL 41, 424)

above (Q. XIX, A. 9), it seems that sorrow is incompatible with rectitude of the will, and that consequently it is not virtuous.

On the contrary, Whatever merits the reward of eternal life is virtuous. But such is sorrow, as is evident from Matt. 5. 5: *Blessed are they that mourn, for they shall be comforted.* Therefore sorrow is a virtuous good.

I answer that, In so far as sorrow is good, it can be a virtuous good. For it has been said above (A. 1) that sorrow is a good according as it denotes perception and rejection of evil. These two things, as regards bodily pain, are a proof of the goodness of nature, to which it is due that the senses perceive, and that nature shuns, the harmful thing that causes pain. As regards interior sorrow, knowledge of the evil is sometimes due to a right judgment of reason, while the rejection of the evil is the act of the will, well disposed and detesting that evil. Now every virtuous good results from these two things, the rectitude of the reason and of the will. Therefore it is evident that sorrow may be a virtuous good.

Reply Obj. 1. All the passions of the soul should be regulated according to the rule of reason, which is the root of the virtuous good; but excessive sorrow, of which Augustine is speaking, oversteps this rule, and therefore it fails to be a virtuous good.

Reply Obj. 2. Just as sorrow for an evil arises from a right will and reason, which detest the evil, so sorrow for a good is due to a perverse reason and will, which detest the good. Consequently such sorrow is an obstacle to the praise and merit of the virtuous good; for instance, when a man gives an alms sorrowfully.

Reply Obj. 3 Some things do actually happen, not because God wills, but because He permits them to happen—such as sins. Consequently a will that is opposed to sin, whether in oneself or in another, is not discordant from the Divine will.—Penal evils happen actually, even by God's will. But it is not necessary for the rectitude of his will, that man should will them in themselves, but only that he should not revolt against the order of Divine justice, as stated above (Q. XIX, A. 10).

ARTICLE 3. *Whether Sorrow Can Be a Useful Good?*

We proceed thus to the Third Article: It would seem that sorrow cannot be a useful good.

Objection 1. For it is written (*Ecclus.* 30. 25): *Sadness hath killed many, and there is no profit in it.*

Obj. 2. Further, choice is of that which is useful to an end. But sorrow is not an object of choice; in fact, "a thing without sorrow is to be chosen rather than the same thing with sorrow."[1] Therefore sorrow is not a useful good.

Obj. 3. Further, "Everything is for the sake of its own operation," as stated in the book on the *Heavens.*[2] But "sorrow hinders operation," as stated in the *Ethics.*[3] Therefore sorrow is not a useful good.

On the contrary, The wise man seeks only that which is useful. But according to Eccles. 7., *the heart of the wise is where there is mourning, and the heart of fools where there is mirth.* Therefore sorrow is useful.

I answer that, A twofold movement of the appetite ensues from a present evil. One is that by which the appetite is opposed to the present evil; and, in this respect, sorrow is of no use, because that which is present, cannot be not present. The other movement arises in the appetite to the effect of avoiding or expelling the saddening evil; and, in this respect, sorrow is of use, if it be for something which ought to be avoided. Because there are two reasons for which it may be right to avoid a thing. First, because it should be avoided in itself, on account of its being contrary to good; for instance, sin. Therefore sorrow for sin is useful as inducing man to avoid sin Hence the Apostle says (II Cor. 7. 9): *I am glad: not because you were made sorrowful, but because you were made sorrowful unto penance.* Secondly, a thing is to be avoided, not as though it were evil in itself, but because it is an occasion of evil; either through one's being attached to it, and loving it too much, or through one's being thrown headlong thereby into an evil, as is evident in the case of temporal goods. And, in this respect, sorrow for temporal goods may be useful; according to Eccles. 7. 3: *It is better to go to the house of mourning, than to the house of feasting: for in that we are put in mind of the end of all.*

Moreover, sorrow for that which ought to be avoided is always useful, since it adds another motive for avoiding it. Because the very evil is in itself a thing to be avoided; while everyone avoids sorrow for its own sake, just as everyone seeks the good, and pleasure in the good. Therefore just as pleasure in the good makes one seek the good more earnestly, so sorrow for evil makes one avoid evil more eagerly.

Reply Obj. 1. This passage is to be taken as referring to excessive sorrow, which consumes the soul; for such sorrow paralyzes the soul, and

[1] Aristotle, *Topics,* III, 2 (117^b30).
[2] Aristotle, II, 3 (286^a8). [3] Aristotle, X, 5 (1175^b17).

hinders it from shunning evil, as stated above (Q. XXXVII, A. 2).

Reply Obj. 2. Just as any object of choice becomes less eligible by reason of sorrow, so that which ought to be shunned is still more to be shunned by reason of sorrow. And, in this respect, sorrow is useful.

Reply Obj. 3 Sorrow caused by an action hinders that action; but sorrow for the cessation of an action makes one do it more earnestly.

ARTICLE 4. *Whether Bodily Pain Is the Greatest Evil?*

We proceed thus to the Fourth Article: It would seem that pain is the greatest evil.

Objection 1. Because "the worst is contrary to the best."[1] But a certain pleasure is the greatest good, namely, the pleasure of happiness. Therefore a certain pain is the greatest evil.

Obj. 2. Further, Happiness is man's greatest good, because it is his last end. But man's Happiness consists in his having whatever he will, and in willing nothing evil, as stated above (Q. III, A. 4, obj. 5; Q. V, A 8, obj. 3). Therefore man's greatest good consists in the fulfilment of his will. Now pain consists in something happening contrary to the will, as Augustine declares,[2] Therefore pain is man's greatest evil

Obj. 3. Further, Augustine argues thus (*Soliloq.* i, 12):[3] "We are composed of two parts, that is of a soul and a body, whereof the body is the inferior. Now the sovereign good is the greatest good of the better part, while the supreme evil is the greatest evil of the inferior part But wisdom is the greatest good of the soul; while the worst thing in the body is pain. Therefore man's greatest good is to be wise, while his greatest evil is to suffer pain."

On the contrary, Guilt is a greater evil than punishment as was stated in the First Park (Q. XLVIII, A. 6). But sorrow or pain belongs to the punishment of sin, just as the enjoyment of changeable things is an evil of guilt. For Augustine says (*De Vera Relig.* xii):[4] "What is pain of the soul, except for the soul to be deprived of changeable things which it was wont to enjoy, or had hoped to enjoy? And this is all that is called evil, that is sin, and the punishment of sin." Therefore sorrow or pain is not man's greatest evil.

I answer that, It is impossible for any sorrow or pain to be man's greatest evil. For all sorrow or pain is either for something that is truly evil, or for something that is apparently evil but good in reality. Now pain or sorrow for that which is truly evil cannot be the greatest evil; for there is something worse, namely, either not to judge that to be evil which is really evil, or not to reject it. Again, sorrow or pain for that which is apparently evil but really good, cannot be the greatest evil, for it would be worse to be altogether separated from that which is truly good. Hence it is impossible for any sorrow or pain to be man's greatest evil.

Reply Obj. 1. Pleasure and sorrow have two good points in common: namely, a true judgment concerning good and evil, and the due order of the will in approving of good and rejecting evil. Thus it is clear that in pain and sorrow there is a good by the removal of which they become worse; and yet there is not an evil in every pleasure by the removal of which the pleasure is better. Consequently, a pleasure can be man's highest good, in the way above stated (Q. XXXIV, A. 3); but sorrow cannot be man's greatest evil.

Reply Obj. 2. The very fact of the will being opposed to evil is a good. And for this reason, sorrow or pain cannot be the greatest evil, because it has an admixture of good.

Reply Obj. 3. That which harms the better thing is worse than that which harms the worse. Now a thing is called evil because it harms, as Augustine says (*Enchirid.* xii) [5] Therefore that which is an evil to the soul is a greater evil than that which is an evil to the body. Therefore this argument does not prove; nor does Augustine give it as his own, but as taken from another.[6]

QUESTION XL

OF THE IRASCIBLE PASSIONS, AND FIRST, OF HOPE AND DESPAIR

(In Eight Articles)

WE must now consider the irascible passions: (1) Hope and despair; (2) Fear and daring (Q. XLI); (3) Anger (Q. XLVI). Under the first head there are eight points of inquiry: (1) Whether hope is the same as desire or cupidity? (2) Whether hope is in the apprehensive, or in the appetitive power? (3) Whether hope is in dumb animals? (4) Whether despair is contrary to hope? (5) Whether experience is a cause of hope? (6) Whether hope abounds in young men and drunkards? (7) Concerning the order

[1] Aristotle, *Ethics,* VIII, 10 (1160[b]9).
[2] *City of God,* XIV, 6, 15 (PL 41, 409; 424).
[3] PL 32, 881. [4] PL 34, 132.
[5] PL 40, 237; *De Mor. Eccl. Cathol.,* II, 3 (PL 32, 1346).
[6] Cornelius Celsus, in a work now lost; cf. Augustine, *Solil.,* I, 12 (PL 32, 881).

of hope to love? (8) Whether hope conduces to action?

ARTICLE 1. *Whether Hope Is the Same as Desire or Cupidity?*

We proceed thus to the First Article: It seems that hope is the same as desire or cupidity.

Objection 1. Because hope is accounted as one of the four principal passions. But Augustine in setting down the four principal passions puts cupidity in the place of hope.[1] Therefore hope is the same as cupidity or desire.

Obj. 2. Further, passions differ according to their objects. But the object of hope is the same as the object of cupidity or desire, namely, the future good. Therefore hope is the same as cupidity or desire.

Obj. 3. If it be said that hope, in addition to desire, denotes the possibility of obtaining the future good; on the contrary, whatever is accidental to the object does not make a different species of passion. But possibility of acquisition is accidental to a future good, which is the object of cupidity or desire, and of hope. Therefore hope does not differ specifically from desire or cupidity.

On the contrary, To different powers belong different species of passions. But hope is in the irascible power, while desire or cupidity is in the concupiscible. Therefore hope differs specifically from desire or cupidity.

I answer that, The species of a passion is taken from the object. Now, in the object of hope, we may note four conditions. First, that it is something good, since, properly speaking, hope regards only the good; in this respect, hope differs from fear, which regards evil. Secondly, that it is future, for hope does not regard that which is present and already possessed. In this respect, hope differs from joy which regards a present good. Thirdly, that it must be something arduous and difficult to obtain, for we do not speak of any one hoping for trifles, which are in one's power to have at any time; in this respect, hope differs from desire or cupidity, which regards the future good absolutely. Therefore it belongs to the concupiscible, while hope belongs to the irascible part. Fourthly, that this difficult thing is something possible to obtain, for one does not hope for that which one cannot get at all; and, in this respect, hope differs from despair. It is therefore evident that hope differs from desire, as the irascible passions differ from the concupiscible. For this reason, moreover, hope presupposes desire, just as all the irascible passions presuppose the passions of the concupiscible part, as stated above (Q. XXV, A. 1).

Reply Obj. 1. Augustine mentions desire instead of hope because each regards future good, and because the good which is not arduous is reckoned as nothing, thus implying that desire seems to tend chiefly to the arduous good, to which hope tends likewise.

Reply Obj 2. The object of hope is the future good considered, not absolutely, but as arduous and difficult of attainment, as stated above.

Reply Obj. 3. The object of hope adds not only possibility to the object of desire, but also difficulty; and this makes hope belong to another power, namely the irascible, which regards something difficult, as stated in the First Part (Q LXXXI, A. 2).[2] Moreover, possibility and impossibility are not altogether accidental to the object of the appetitive power. For the appetite is a principle of movement, and nothing is moved to anything except under the aspect of being possible; for no one is moved to that which he thinks impossible to get. Consequently hope differs from despair according to the difference of possible and impossible.

ARTICLE 2. *Whether Hope Is in the Apprehensive or in the Appetitive Power?*

We proceed thus to the Second Article: It would seem that hope belongs to the cognitive power.

Objection 1. Because hope seems to be a kind of awaiting; for the Apostle says (Rom. 8. 25): *If we hope for that which we see not; we wait for it with patience.* But awaiting (*expectatio*) seems to belong to the cognitive power, which we exercise by looking out (*exspectare*) Therefore hope belongs to the cognitive power.

Obj. 2. Further, apparently hope is the same as confidence; hence when a man hopes he is said to be confident, as though to hope and to be confident were the same thing. But confidence, like faith, seems to belong to the cognitive power. Therefore hope does too.

Obj. 3. Further, certainty is a property of the cognitive power. But certainty is ascribed to hope. Therefore hope belongs to the cognitive power.

On the contrary, Hope regards good, as stated above (A. 1). Now good, as such, is not the object of the cognitive, but of the appetitive

[1] *City of God,* XIV, 3 (PL 41, 406).

[2] Cf. Q. XXIII, A. 1.

power. Therefore hope belongs, not to the cognitive, but to the appetitive power.

I answer that, Since hope denotes a certain stretching out of the appetite towards good, it evidently belongs to the appetitive power; for movement towards things belongs properly to the appetite, while the action of the cognitive power is accomplished not by a movement of the knower towards things, but rather according as the things known are in the knower. But since the cognitive power moves the appetite by representing its object to it, there arise in the appetite various movements according to various aspects of the apprehended object For the apprehension of good gives rise to one kind of movement in the appetite, while the apprehension of evil gives rise to another; in like manner various movements arise from the apprehension of something present and of something future, of something considered absolutely, and of something considered as arduous, of something possible, and of something impossible. And accordingly hope is a movement of the appetitive power ensuing from the apprehension of a future good, difficult but possible to obtain; that is, a stretching forth of the appetite to such a good.

Reply Obj. 1. Since hope regards a possible good, there arises in man a twofold movement of hope, for a thing may be possible to him in two ways, namely by his own power, or by another's. Accordingly when a man hopes to obtain something by his own power, he is not said to wait for it, but only to hope for it. But, properly speaking, he is said to await that which he hopes to get by another's help as though to await (*exspectare*) implied keeping one's eyes on another (*ex alio spectare*), in so far as the apprehensive power, by going ahead, not only keeps its eye on the good which man intends to get, but also on the thing by whose power he hopes to get it, according to Ecclus. 51. 10: *I looked for the succour of men.* Therefore the movement of hope is sometimes called expectation, on account of the preceding inspection of the knowing power.

Reply Obj. 2. When a man desires a thing and thinks that he can get it, he believes that he will get it; and from this belief which precedes in the knowing power the ensuing movement in the appetite is called confidence. Because the movement of the appetite takes its name from the knowledge that precedes it, as an effect from a cause which is better known; for the apprehensive power knows its own act better than that of the appetite.

Reply Obj. 3. Certainty is ascribed to the movement, not only of the sensitive, but also of the natural appetite; thus we say that a stone is certain to tend downwards. This is owing to the inerrancy which the movement of the sensitive or even natural appetite derives from the certainty of the knowledge that precedes it.

ARTICLE 3. *Whether Hope Is in Dumb Animals?*

We proceed thus to the Third Article: It would seem that there is no hope in dumb animals.

Objection 1. Because hope is for some future good, as Damascene says (*De Fide Orthod.* ii, 12).[1] But knowledge of the future does not belong to dumb animals, whose knowledge is confined to the senses and does not extend to the future Therefore there is no hope in dumb animals.

Obj. 2. Further, the object of hope is a future good, possible of attainment. But possible and impossible are differences of the true and the false, "which are only in the mind," as the Philosopher states.[2] Therefore there is no hope in dumb animals, since they have no mind.

Obj. 3. Further, Augustine says (*Gen. ad lit.* ix, 14)[3] that "animals are moved by the things that they see." But hope is of things unseen, *for what a man seeth, why doth he hope for?* (Rom. 8. 24) Therefore there is no hope in dumb animals.

On the contrary, Hope is an irascible passion But the irascible power is in dumb animals. Therefore hope is also.

I answer that, The internal passions of animals can be gathered from their outward movements, from which it is clear that hope is in dumb animals. For if a dog see a hare, or a hawk see a bird, too far off, it makes no movement towards it, as having no hope to catch it; but if it be near, it makes a movement towards it, as being in hopes of catching it. Because, as stated above (Q. I, A. 2; Q. XXVI, A. 1; Q XXXV, A. 1), the sensitive appetite of dumb animals, and likewise the natural appetite of insensible things, result from the apprehension of an intellect, just as the appetite of the intellectual nature, which is called the will. But there is a difference, in that the will is moved by an apprehension of the intellect joined to it, while the movement of the natural appetite results from the apprehension of the separate Intellect, Who is the Author of nature, and it

[1] PG 94, 929. [2] *Metaphysics,* VI, 4 (1027^b27).
[3] PL 34, 402.

is the same with the sensitive appetite of dumb animals, who act from a certain natural instinct. Consequently, in the actions of irrational animals and of other natural things, we observe a procedure which is similar to that which we observe in the actions of art. And in this way hope and despair are in dumb animals

Reply Obj. 1. Although dumb animals do not know the future, yet an animal is moved by its natural instinct to something future, as though it foresaw the future. Because this instinct is planted in them by the Divine Intellect that foresees the future

Reply Obj. 2. The object of hope is not the possible as differentiating the true, for thus the possible ensues from the relation of a predicate to a subject. The object of hope is the possible as compared to a power. For such is the division of the possible given in the *Metaphysics*,[1] that is, into the two kinds we have just mentioned.

Reply Obj. 3. Although the thing which is future does not come under the object of sight, nevertheless through seeing something present, an animal's appetite is moved to seek or avoid something future.

ARTICLE 4 *Whether Despair Is Contrary to Hope?*

We proceed thus to the Fourth Article: It seems that despair is not contrary to hope.

Objection 1 Because "to one thing there is one contrary."[2] But fear is contrary to hope. Therefore despair is not contrary to hope.

Obj. 2. Further, contraries seem to bear on the same thing. But hope and despair do not bear on the same thing, for hope regards the good, but despair arises from some evil that is in the way of obtaining good. Therefore hope is not contrary to despair.

Obj. 3. Further, movement is contrary to movement; while repose is in opposition to movement as a privation of it. But despair seems to imply immobility rather than movement. Therefore it is not contrary to hope, which implies movement of stretching out towards the hoped-for good

On the contrary, The very name of despair (*desperatio*) implies that it is contrary to hope (*spes*).

I answer that, As stated above (Q. XXIII, A. 2), there is a twofold contrariety in changes. One is in respect of approach to contrary terms, and this contrariety alone is to be found in the concupiscible passions, for instance between love and hatred. The other is according to approach and withdrawal with regard to the same term, and is to be found in the irascible passions, as stated above (*loc. cit.*). Now the object of hope, which is the arduous good, has the character of a principle of attraction, if it be considered in the light of something possible of attainment; and thus hope tends to that good, for it denotes a kind of approach. But in so far as it is considered as unobtainable, it has the character of a principle of repulsion, because, as stated in the *Ethics*,[3] "when men come to an impossibility they disperse." And this is how despair stands in regard to this object, and so it implies a movement of withdrawal. Consequently it is contrary to hope, as withdrawal is to approach

Reply Obj 1. Fear is contrary to hope, because their objects, that is, good and evil, are contrary; for this contrariety is found in the irascible passions, according as they are derived from the passions of the concupiscible. But despair is contrary to hope only by contrariety of approach and withdrawal.

Reply Obj. 2. Despair does not regard evil as such; sometimes, however, it regards evil accidentally, as making the difficult good impossible to obtain. But it can arise from the mere excess of good.

Reply Obj. 3. Despair implies not only privation of hope, but also a recoil from the thing desired, by reason of its being thought impossible to get. Hence despair, like hope, presupposes desire, because we neither hope for nor despair of that which we do not desire to have. For this reason, too, each of them regards the good, which is the object of desire.

ARTICLE 5 *Whether Experience Is a Cause of Hope?*

We proceed thus to the Fifth Article: It would seem that experience is not a cause of hope.

Objection 1. Because experience belongs to the knowing power; hence the Philosopher says[4] that "intellectual virtue needs experience and time." But hope is not in the knowing power, but in the appetite, as stated above (A. 2). Therefore experience is not a cause of hope.

Obj. 2. Further, the Philosopher says[5] that "the old are slow to hope, on account of their experience"; from this it seems to follow that experience causes want of hope. But the same

[1] Aristotle, V, 12 ($1019^{b}30$).
[2] Aristotle; *Metaphysics*, X, 4, 5 ($1055^{a}19$; $1055^{b}30$).
[3] Aristotle, III, 3 ($1112^{b}24$).
[4] *Ethics*, II, 1 ($1103^{a}16$).
[5] *Rhetoric*, II, 13 ($1390^{a}4$).

cause is not productive of opposites. Therefore experience is not a cause of hope.

Obj. 3. Further, the Philosopher says[1] that "to have something to say about everything, without leaving anything out, is sometimes a proof of folly." But to attempt everything seems to point to great hopes, while folly arises from inexperience. Therefore inexperience, rather than experience, seems to be a cause of hope.

On the contrary, The Philosopher says[2] "some are of good hope, through having been victorious often and over many opponents," which seems to pertain to experience. Therefore experience is a cause of hope.

I answer that, As stated above (A. 1), the object of hope is a future good, difficult but possible to obtain. Consequently a thing may be a cause of hope either because it makes something possible to a man or because it makes him think something possible. In the first way hope is caused by everything that increases a man's power; for instance riches, strength, and, among others, experience, for by experience man acquires the possibility of getting something easily, and the result of this is hope. Therefore Vegetius says:[3] "No one fears to do that which he is sure of having learnt well."

In the second way, hope is caused by everything that makes man think that something is possible for him; and thus both teaching and persuasion may be a cause of hope. And in this way also experience is a cause of hope, in so far as it makes him consider something possible which before his experience he looked upon as impossible. However, in this way, experience can cause a lack of hope, because just as it makes a man think possible what he had previously thought impossible, so, conversely, experience makes a man consider as impossible that which hitherto he had thought possible. Accordingly experience causes hope in two ways, despair in one way; and for this reason we may say rather that it causes hope.

Reply Obj. 1. Experience in matters pertaining to action not only produces knowledge, it also causes a certain habit, by reason of custom, which renders the action easier. Moreover, the intellectual virtue itself adds to the possibility of acting with ease, because it shows something to be possible, and thus is a cause of hope.

Reply Obj. 2. The old are wanting in hope because of their experience in so far as experience makes them think something impossible. Hence he adds[4] that "many evils have befallen them."

Reply Obj. 3. Folly and inexperience can be a cause of hope accidentally as it were, by removing the knowledge which would help one to judge truly a thing to be impossible. Therefore inexperience is a cause of hope for the same reason as experience causes lack of hope.

ARTICLE 6. *Whether Hope Abounds in Young Men and Drunkards?*

We proceed thus to the Sixth Article: It would seem that youth and drunkenness are not causes of hope.

Objection 1. Because hope implies certainty and steadiness, and hence it is compared to an anchor (Heb. 6. 19). But young men and drunkards are wanting in steadiness, since their minds are easily changed. Therefore youth and drunkenness are not causes of hope.

Obj. 2. Further, as stated above (A. 5), the cause of hope is chiefly whatever increases one's power. But youth and drunkenness are united to weakness. Therefore they are not causes of hope

Obj. 3. Further, experience is a cause of hope, as stated above (A. 5). But youth lacks experience. Therefore it is not a cause of hope.

On the contrary, The Philosopher says that "drunken men are hopeful";[5] and that "the young are full of hope."[6]

I answer that, Youth is a cause of hope for three reasons, as the Philosopher states in the *Rhetoric.*[7] And these three reasons may be gathered from the three conditions of the good which is the object of hope—namely, that it is future, arduous and possible, as stated above (A. 1). For youth has much of the future before it, and little of the past; and therefore since memory is of the past, and hope of the future, it has little to remember and lives very much in hope. Again, youths, on account of the heat of their nature, are full of spirit, so that their heart expands, and it is owing to the heart being expanded that one tends to that which is arduous; therefore youths are spirited and hopeful. Likewise they who have not suffered defeat, nor had experience of obstacles to their efforts, are prone to count a thing possible to them. Therefore youths, through inexperience of obstacles and of their own shortcomings, easily count a thing possible, and consequently are of good hope. Two of these causes are also

[1] *Heavens,* II, 5 (287[b]28).
[2] *Ethics,* III, 8 (1117[a]10).
[3] *Instit. Rei Militar.,* I, 1 (DD 660).
[4] Aristotle, *Rhetoric,* II, 13 (1390[a]5).
[5] *Ethics,* III, 8 (1117[a]14).
[6] *Rhetoric,* II, 12 (1389[a]19).
[7] *Ibid.*

in those who are in drink—namely, heat and high spirits, on account of wine, and heedlessness of dangers and shortcomings. For the same reason all foolish and thoughtless persons attempt everything and are full of hope.

Reply Obj. 1. Although youths and men in drink lack steadiness in reality, yet they are steady in their own estimation, for they think that they will steadily obtain that which they hope for.

In like manner, in *reply to the Second Objection,* we must observe that young people and men in drink are indeed unsteady in reality, but, in their own estimation, they are capable, for they do not know their shortcomings.

Reply Obj. 3. Not only experience, but also lack of experience, is, in some way, a cause of hope, as explained above, (A. 5 Ans. 3).

ARTICLE 7. *Whether Hope Is a Cause of Love?*

We proceed thus to the Seventh Article: It would seem that hope is not a cause of love.

Objection 1. Because, according to Augustine,[1] love is the first of the soul's emotions. But hope is an emotion of the soul. Therefore love precedes hope, and consequently hope does not cause love.

Obj. 2. Further, desire precedes hope. But desire is caused by love, as stated above (Q. XXV, A. 2). Therefore hope, too, follows love, and consequently is not its cause.

Obj. 3. Further, hope causes pleasure, as stated above (Q XXXII, A. 3). But pleasure is only of the good that is loved. Therefore love precedes hope.

On the contrary, The gloss commenting on Matt. 1. 2, *Abraham begot Isaac, and Isaac begot Jacob,* says,[2] that is, faith begets hope, and hope begets charity. But charity is love. Therefore love is caused by hope.

I answer that, Hope can regard two things. For it regards as its object the good which one hopes for. But since the good we hope for is something difficult but possible to obtain, and since it happens sometimes that what is difficult becomes possible to us, not through ourselves but through others, hence it is that hope regards also that by which something becomes possible to us.

In so far, then, as hope regards the good we hope to get, it is caused by love, for we do not hope save for that which we desire and love. But in so far as hope regards one through whom something becomes possible to us, love is caused by hope, and not vice versa. Because by the very fact that we hope that good will accrue to us through someone, we are moved towards him as to our own good; and thus we begin to love him. Though from the fact that we love someone we do not hope in him, except accidentally, that is, in so far as we think that he returns our love. Therefore the fact of being loved by another makes us hope in him, but our love for him is caused by the hope we have in him.

Hence the *Replies to the Objections* are evident.

ARTICLE 8. *Whether Hope Is a Help or a Hindrance to Action?*

We proceed thus to the Eighth Article: It seems that hope is not a help but a hindrance to action.

Objection 1. Because hope implies security. But security begets negligence which hinders action. Therefore hope is a hindrance to action.

Obj. 2. Further, sorrow hinders action, as stated above (Q. XXXVII, A. 3). But hope sometimes causes sorrow, for it is written (Prov. 13. 12) *Hope that is deferred afflicteth the soul.* Therefore hope hinders action.

Obj. 3. Further, despair is contrary to hope, as stated above (A. 4). But despair, especially in matters of war, conduces to action; for it is written (II Kings 2. 26), that *it is dangerous to drive people to despair.* Therefore hope has a contrary effect, namely, by hindering action.

On the contrary, It is written (I Cor. 9. 10) that *he that plougheth should plough in hope . . . to receive fruit;* and the same applies to all other actions.

I answer that, Hope of its very nature is a help to action by making it more intense, and this for two reasons. First, by reason of its object, which is a good, difficult but possible. For the thought of its being difficult arouses our attention, while the thought that it is possible does not hinder our effort. Hence it follows that by reason of hope man is intent on his action. Secondly, on account of its effect. Because hope, as stated above (Q. XXXII, A. 3), causes pleasure, which is a help to action, as stated above (Q. XXXIII, A. 4). Therefore hope is conducive to action.

Reply Obj. 1. Hope regards a good to be obtained, and security an evil to be avoided. Therefore security seems to be contrary to fear rather than to belong to hope. Yet security does not beget negligence, except in so far as it lessens the idea of difficulty, by which it also

[1] *City of God,* XIV, 7 (PL 41, 410).
[2] *Glossa interl.* (V, 5r).

lessens the character of hope. For the things in which a man fears no hindrance are no longer looked upon as difficult.

Reply Obj. 2. Hope of itself causes pleasure; it is by accident that it causes sorrow, as stated above (Q. XXXII, A. 3, Reply 2).

Reply Obj. 3. Despair threatens danger in war, on account of a certain hope that attaches to it. For they who despair of flight strive less to fly, but hope to avenge their death; and therefore in this hope they fight the more sharply, and consequently prove dangerous to the foe.

QUESTION XLI
OF FEAR, IN ITSELF
(*In Four Articles*)

WE must now consider, in the first place, fear; and, secondly, daring. With regard to fear, four things must be considered: (1) Fear, in itself; (2) Its object (Q. XLII); (3) Its cause (Q. XLIII); (4) Its effect (Q. XLIV). Under the first head there are four points of inquiry: (1) Whether fear is a passion of the soul? (2) Whether fear is a special passion? (3) Whether there is a natural fear? (4) Of the species of fear.

ARTICLE 1. *Whether Fear Is a Passion of the Soul?*

We proceed thus to the First Article: It would seem that fear is not a passion of the soul.

Objection 1. For Damascene says (*De Fide Orthod.* iii, 23)[1] that "fear is a power, by way of συστολή"—that is, of contraction—"desirous of vindicating nature." But no power is a passion, as is proved in the *Ethics*.[2] Therefore fear is not a passion.

Obj. 2. Further, every passion is an effect due to the presence of an agent. But fear is not of something present, but of something future, as Damascene declares (*De Fide Orthod.* ii, 12).[3] Therefore fear is not a passion.

Obj. 3. Further, every passion of the soul is a movement of the sensitive appetite in consequence of an apprehension of the senses. But sense apprehends not the future but the present. Since, then, fear is of future evil, it seems that it is not a passion of the soul.

On the contrary, Augustine numbers fear among the other passions of the soul.[4]

[1] PG 94, 1088. [2] Aristotle, II, 5 (1105^{b}28).
[3] PG 94, 929.
[4] *City of God,* XIV, 5 (PL 41, 408).

I answer that, Among the other passions of the soul, after sorrow, fear chiefly has the character of passion. For as we have stated above (Q. XXII), the notion of passion implies first of all a movement of a passive power—that is, of a power whose object is compared to it as its active mover, for the reason that passion is the effect of an agent. In this way, both to feel and to understand are said to be passive. Secondly, more properly speaking, passion is a movement of the appetitive power; and more properly still, it is a movement of an appetitive power that has a bodily organ, such movement being accompanied by a bodily change. And, again, most properly those movements are called passions which imply some harm. Now it is evident that fear, since it regards evil, belongs to the appetitive power, which of itself regards good and evil. Moreover, it belongs to the sensitive appetite, for it is accompanied by a certain change—that is, contraction, as Damascene says (cf. obj. 1). Again, it implies relation to evil, according as evil has a kind of victory over some good. Therefore it has most truly the character of passion; less, however, than sorrow, which regards the present evil, because fear regards future evil, which is not so strong a motive as present evil.

Reply Obj. 1. Power denotes a principle of action; therefore, in so far as the interior movements of the appetitive power are principles of external action, they are called powers. But the Philosopher denies[5] that passion is a power by way of habit.

Reply Obj. 2. Just as the passion of a natural body is due to the bodily presence of an agent, so is the passion of the soul due to the agent being present to the soul, although neither corporally nor really present; that is to say, in so far as the evil which is really future is present in the apprehension of the soul.

Reply Obj. 3. The senses do not apprehend the future; but from apprehending the present, an animal is moved by natural instinct to hope for a future good or to fear a future evil.

ARTICLE 2. *Whether Fear Is a Special Passion?*

We proceed thus to the Second Article: It would seem that fear is not a special passion.

Objection 1. For Augustine says (QQ. LXXXIII, *qu.* 33)[6] that "the man who is not distraught by fear, is neither harassed by desire, nor wounded by sickness"—that is, sorrow—"nor tossed about in transports of empty joys." Therefore it seems that, if fear be set

[5] *Loc. cit.* [6] PL 40, 23.

aside, all the other passions are removed. Therefore fear is not a special but a general passion.

Obj. 2. Further, the Philosopher says[1] that "pursuit and avoidance in the appetite are what affirmation and denial are in the intellect." But denial is nothing special in the intellect, as neither is affirmation, but something common to many. Therefore neither is avoidance anything special in the appetite. But fear is nothing but a kind of avoidance of evil. Therefore it is not a special passion.

Obj. 3. Further, if fear were a special passion, it would be chiefly in the irascible part. But fear is also in the concupiscible, since the Philosopher says[2] that "fear is a kind of sorrow"; and Damascene says (*De Fide Orthod.* iii, 23)[3] that fear is "a power of desire"; and both sorrow and desire are in the concupiscible part, as stated above (Q. XXIII, A. 4). Therefore fear is not a special passion, since it belongs to different powers.

On the contrary, Fear is divided with the other passions of the soul, as is clear from Damascene (*De Fide Orthod.* ii, 12, 15).[4]

I answer that, The passions of the soul derive their species from their objects; hence that is a special passion which has a special object. Now fear has a special object, as hope has. For just as the object of hope is a future good, difficult but possible to obtain, so the object of fear is a future evil, difficult and irresistible. Consequently fear is a special passion of the soul.

Reply Obj. 1. All the passions of the soul arise from one source, namely, love, wherein they are connected with one another. By reason of this connection, when fear is put aside, the other passions of the soul are dispersed; not, however, as though it were a general passion.

Reply Obj. 2. Not every avoidance in the appetite is fear, but avoidance of a special object, as stated. Therefore, though avoidance be something general, yet fear is a special passion.

Reply Obj. 3. Fear is in no way in the concupiscible part, for it regards evil, not absolutely, but as difficult or arduous, so as to be almost irresistible. But since the irascible passions arise from the passions of the concupiscible part and terminate in them, as stated above (Q. XXV, A. 1), hence it is that what belongs to the concupiscible is ascribed to fear. For fear is called sorrow in so far as the object of fear causes sorrow when present; and hence the Philosopher says (*loc. cit.*) that fear arises "from the representation of a future evil which is either corruptive or painful." In like manner desire is ascribed by Damascene to fear (*loc. cit.*), because just as hope is caused or arises from the desire of good, so fear arises from avoidance of evil, while avoidance of evil arises from the desire of good, as is evident from what has been said above (Q. XXV, A. 2; Q. XXIX, A. 2; Q. XXXVI, A. 2).

ARTICLE 3. *Whether There Is a Natural Fear?*

We proceed thus to the Third Article: It would seem that there is a natural fear.

Objection 1. For Damascene says (*De Fide Orthod.* iii, 23)[5] that "there is a natural fear, through the soul refusing to be severed from the body."

Obj. 2. Further, fear arises from love, as stated above (A. 2, Reply 1). But there is "a natural love," as Dionysius states (*Div. Nom.* iv).[6] Therefore there is also a natural fear.

Obj. 3. Further, fear is opposed to hope, as stated above (Q. XL, A. 4, Reply 1). But there is a hope of nature, as is evident from Rom. 4. 18, where it is said of Abraham that *against hope* of nature, *he believed in hope* of grace. Therefore there is also a fear of nature.

On the contrary, That which is natural is common to things animate and inanimate. But fear is not in things inanimate. Therefore there is no natural fear.

I answer that, A movement is said to be natural because nature inclines to it. Now this happens in two ways. First, so that it is entirely accomplished by nature, without any operation of the apprehensive power; thus to have an upward movement is natural to fire, and to grow is the natural movement of animals and plants. Secondly, a movement is said to be natural if nature inclines to it, even though it be accomplished by the apprehensive power alone, since, as stated above (Q. X, A. 1), the movements of the knowing and appetitive powers are reducible to nature as to their first principle. In this way even the acts of the apprehensive power, such as understanding, feeling, and remembering, as well as the movements of the animal appetite, are sometimes said to be natural.

And in this sense we may say that there is a natural fear; and it is distinguished from non-natural fear by reason of the diversity of its ob-

[1] *Ethics,* VI, 2 (1139[a]21).
[2] *Rhetoric,* II, 5 (1382[a]21).
[3] PG 94, 1088.
[4] PG 94, 929; 932.
[5] PG 94, 1008.
[6] Sect. 15 (PG 3, 713).

ject. For, as the Philosopher says,[1] there is a fear of corruptive evil, which nature shrinks from on account of its natural desire of being; and such fear is said to be natural. Again, there is a fear of painful evil, which is contrary not to nature, but to the desire of the appetite; and such fear is not natural. In this sense we have stated above (Q. XXVI, A. 1; Q XXX, A. 3; Q XXXI, A. 7) that love, concupiscence, and pleasure are divisible into natural and non-natural.

But in the first sense of the word natural, we must observe that certain passions are sometimes said to be natural, as love, desire, and hope, but the others cannot be called natural. The reason of this is because love and hatred, desire and avoidance, imply a certain inclination to pursue what is good or to avoid what is evil, which inclination is to be found in the natural appetite also. Consequently there is a kind of natural love, while we may also speak in a certain manner of desire and hope as being even in natural things devoid of knowledge. On the other hand, the other passions of the soul denote certain movements to which the natural inclination is in no way sufficient This is due either to the fact that sensing or knowledge is of the very notion of these passions (thus we have said that apprehension is a necessary condition of pleasure and sorrow),[2] and so things devoid of knowledge cannot be said to take pleasure or to be sorrowful. Or else it is because such movements are contrary to the very notion of natural inclination; for instance, despair flies from good on account of some difficulty, and fear shrinks from repelling a contrary evil, both of which are contrary to the inclination of nature. Hence passions of this kind are in no way ascribed to inanimate beings.

Thus the *Replies to the Objections* are evident.

ARTICLE 4. *Whether the Species of Fear Are Suitably Assigned?*

We proceed thus to the Fourth Article: It seems that the species of fear are unsuitably assigned by Damascene (*De Fide Orthod.* ii);[3] namely, "laziness, shamefacedness, shame, amazement, stupor, and anxiety."

[1] *Rhetoric*, II, 5 (1382[a]22).

[2] Cf. Q. XXXI, AA. 1, 3; Q. XXXV, A. 1.

[3] Chap. 15 (PG 94, 932); also in Nemesius, *De Nat. Hom.*, XX (PG 40, 683); for the origin of this doctrine amongst the Stoics, cf. Diogenes Laertes, *De Vita et Mor. Phil.*, VII, 112 (DD 183); cf. also Stobaeus, *Eclogae* II, 6 (p. 584).

Objection 1. Because, as the Philosopher says[4] "fear regards a saddening evil." Therefore the species of fear should correspond to the species of sorrow. Now there are four species of sorrow, as stated above (Q. XXXV, A. 8). Therefore there should only be four species of fear, corresponding to them.

Obj. 2. Further, that which consists in an action of our own is in our power. But fear regards an evil that surpasses our power, as stated above (A. 2). Therefore laziness, shamefacedness, and shame, which regard our own actions, should not be put as species of fear.

Obj. 3. Further, fear is of the future, as stated above (AA. 1, 2). But "shame regards a disgraceful deed already done," as Gregory of Nyssa (Nemesius, *De Nat. Hom.* XX)[5] says. Therefore shame is not a species of fear.

Obj. 4. Further, fear is only of evil. But amazement and stupor regard great and unaccustomed things, whether good or evil. Therefore amazement and stupor are not species of fear.

Obj. 5. Further, philosophers have been led by amazement to seek the truth, as stated at the beginning of the *Metaphysics*[6] But fear leads to flight rather than to search. Therefore amazement is not a species of fear.

On the contrary suffices the authority of Damascene and Gregory of Nyssa (Nemisius) (cf. obj. 1, 3).

I answer that, As stated above (A. 2), fear regards a future evil which surpasses the power of him that fears, so that it is irresistible. Now man's evil, like his good, may be considered either in his action or in external things In his action he has a twofold evil to fear. First, there is the toil that burdens his nature, and hence arises laziness, as when a man shrinks from work for fear of too much toil. Secondly, there is the disgrace which damages him in the opinion of others. And thus, if disgrace is feared in a deed that is yet to be done, there is shamefacedness; if, however, it be in a deed already done, there is shame.

On the other hand, the evil that consists in external things may surpass man's power of resistance in three ways. First, by reason of its magnitude; when, that is to say, a man considers some great evil the outcome of which he is unable to gauge, and then there is amazement. Secondly, by reason of its being unaccustomed; because, that is, some unaccustomed

[4] *Rhetoric*, II, 5 (1382[a]22).

[5] PG 40, 689.

[6] Aristotle, I, 2 (982[b]12).

evil arises before us, and on that account is great in our estimation, and then there is stupor, which is caused by the imagination of something unaccustomed. Thirdly, by reason of its being unforeseen; because, that is, it cannot be foreseen; thus future misfortunes are feared, and fear of this kind is called anxiety.

Reply Obj. 1. Those species of sorrow given above are not derived from the diversity of objects, but from the diversity of effects, and for certain special reasons. Consequently there is no need for those species of sorrow to correspond with these species of fear which are derived from the proper division of the object of fear itself.

Reply Obj. 2. A deed considered as being actually done is in the power of the doer. But it is possible to take into consideration something connected with the deed, and surpassing the power of the doer, for which reason he shrinks from the deed. It is in this sense that laziness, shamefacedness, and shame are numbered as species of fear.

Reply Obj. 3. The past deed may be the occasion of fear of future reproach or disgrace, and in this sense shame is a species of fear.

Reply Obj. 4. Not every amazement and stupor are species of fear, but that amazement which is caused by a great evil, and that stupor which arises from an unaccustomed evil. Or else we may say that, just as laziness shrinks from the toil of external work, so amazement and stupor shrink from the difficulty of considering a great and unaccustomed thing, whether good or evil, so that amazement and stupor stand in relation to the act of the intellect as laziness does to external work.

Reply Obj. 5. He who is amazed shrinks at present from forming a judgment of that which amazes him, fearing to fall short of the truth, but inquires afterwards. But he who is overcome by stupor fears both to judge at present, and to inquire afterwards Therefore amazement is a beginning of philosophical consideration, but stupor is a hindrance to it.

QUESTION XLII

OF THE OBJECT OF FEAR

(*In Six Articles*)

WE must now consider the object of fear, under which head there are six points of inquiry: (1) Whether good or evil is the object of fear? (2) Whether evil of nature is the object of fear? (3) Whether the evil of sin is an object of fear? (4) Whether fear itself can be feared? (5) Whether sudden things are especially feared? (6) Whether those things are more feared against which there is no remedy?

ARTICLE 1. *Whether the Object of Fear Is Good or Evil?*

We proceed thus to the First Article: It seems that good is the object of fear.

Objection 1. For Augustine says[1] that we fear nothing "save to lose what we love and possess, or not to obtain that which we hope for." But that which we love is good. Therefore fear regards good as its proper object.

Obj. 2. Further, the Philosopher says that power and to be above another is a thing to be feared.[2] But this is a good thing. Therefore good is the object of fear.

Obj. 3. Further, there can be no evil in God. But we are commanded to fear God, according to Ps. 33. 10: *Fear the Lord, all ye saints.* Therefore even the good is an object of fear.

On the contrary, Damascene says (*De Fide Orthod.* ii, 12)[3] that fear is of future evil.

I answer that, Fear is a movement of the appetitive power. Now it pertains to the appetitive power to pursue and to avoid, as stated in the *Ethics*,[4] and pursuit is of good, while avoidance is of evil. Consequently whatever movement of the appetitive power implies pursuit has some good for its object, and whatever movement implies avoidance has an evil for its object Therefore, since fear implies an avoidance, in the first place and of its very nature it regards evil as its proper object.

It can, however, regard good also, in so far as it is referable to evil. This can be in two ways. In one way, in so far as an evil causes privation of good. Now a thing is evil from the very fact that it is a privation of some good. Therefore, since evil is shunned because it is evil, it follows that it is shunned because it deprives one of the good that one pursues through love for that good. And in this sense Augustine says that there is no cause for fear, save loss of the good we love.

In another way, good stands related to evil as its cause, in so far as some good can by its power bring harm to the good we love. And so, just as hope, as stated above (Q. XL, A. 7), regards two things, namely, the good to which it tends, and the thing through which there is a hope of obtaining the desired good, so also does fear regard two things, namely, the evil

[1] QQ. LXXXIII, Qu. 33 (PL 40, 22).
[2] *Rhetoric*, II, 5 (1382^a30).
[3] PG 94, 929. [4] Aristotle, VI, 2 (1139^a21).

from which it shrinks, and that good which, by its power, can inflict that evil. In this way God is feared by man, in so far as He can inflict punishment, spiritual or corporal. In this way, too, we fear the power of man, especially when it has been thwarted, or when it is unjust, because then it is more likely to do us a harm.

In like manner one fears "to be over another," that is, to lean on another, so that it is in his power to do us a harm; thus a man fears another who knows him to be guilty of a crime, lest he reveal it to others.

This suffices for *the Replies to the Objections.*

ARTICLE 2. *Whether Evil of Nature Is an Object of Fear?*

We proceed thus to the Second Article: It seems that evil of nature is not an object of fear.

Objection 1. For the Philosopher says[1] that "fear makes us take counsel." But we do not take counsel about things which happen naturally, as stated in *Ethics*[2] Therefore evil of nature is not an object of fear.

Obj. 2. Further, natural defects such as death and the like are always threatening man. If therefore such evils were an object of fear, man would have to be always in fear.

Obj. 3. Further, nature does not move to contraries. But evil of nature is an effect of nature. Therefore if a man shrinks from such evils through fear of them, this is not an effect of nature. Therefore natural fear is not of the evil of nature and yet it seems to pertain to it.

On the contrary. The Philosopher says[3] that "the most terrible of all things is death," which is an evil of nature.

I answer that, As the Philosopher says,[4] fear is caused by "the imagination of a future evil which is either corruptive or painful " Now just as a painful evil is that which is contrary to the will, so a corruptive evil is that which is contrary to nature. And this is the evil of nature. Consequently evil of nature can be the object of fear.

But it must be observed that evil of nature sometimes arises from a natural cause, and then it is called evil of nature not merely from being a privation of the good of nature, but also from being an effect of nature; such are natural death and other like defects. But sometimes evil of nature arises from a non-natural cause, such as violent death inflicted by an assailant. In either case evil of nature is feared to a certain extent, and to a certain extent not. For since fear arises "from the imagination of future evil," as the Philosopher says, whatever removes the imagination of the future evil, removes fear also. Now it may happen in two ways that an evil, considered as future, may not seem great. First, through being remote and far off; for, on account of the distance, such a thing is considered as though it were not to be at all Hence we either do not fear it, or fear it but little; for, as the Philosopher says,[5] "we do not fear things that are very far off; for all know that they shall die, but as death is not near, they heed it not." Secondly, a future evil is considered as though it were not to be on account of its being inevitable, and so we look upon it as already present Hence the Philosopher says[6] that "those who are already on the scaffold, are not afraid," seeing that they are on the very point of a death from which there is no escape; "but in order that a man be afraid, there must be some hope of escape for him." Consequently evil of nature is not feared if it is not apprehended as future; but if evil of nature that is corruptive is apprehended as near at hand, and yet with some hope of escape, then it will be feared.

Reply Obj 1. The evil of nature sometimes is not an effect of nature, as stated above But in so far as it is an effect of nature, although it may be impossible to avoid it entirely, yet it may be possible to delay it And with this hope one may take counsel about avoiding it

Reply Obj. 2. Although evil of nature always threatens, yet it does not always threaten from near at hand, and consequently it is not always feared.

Reply Obj. 3 Death and other defects of nature are the effects of the universal nature, and yet the particular nature rebels against them as far as it can. Accordingly, from the inclination of the particular nature arise pain and sorrow for such evils, when present, and fear if they threaten in the future.

ARTICLE 3 *Whether the Evil of Sin Is an Object of Fear?*

We proceed thus to the Third Article: It seems that the evil of sin can be an object of fear.

Objection 1. For Augustine says on the canonical Epistle of John (*Tract.* ix),[7] that by chaste fear man fears to be severed from God. Now

[1] *Rhetoric*, II, 5 (1383a6).
[2] Aristotle, III, 3 (1112a23).
[3] *Ethics*, III, 6 (1115a26).
[4] *Rhetoric*, II, 5 (1382a21).
[5] *Ibid* (1382a25).
[6] *Ibid.* (1383a5).
[7] PL 35, 2049.

nothing but sin severs us from God, according to Isa. 59. 2: *Your iniquities have divided between you and your God.* Therefore the evil of sin can be an object of fear.

Obj. 2. Further, Cicero says (*Quæst. Tusc.* iv, 6)[1] that we fear when they are yet to come those things which give us pain when they are present. But it is possible for one to be pained or sorrowful on account of the evil of sin Therefore one can also fear the evil of sin

Obj. 3. Further, hope is contrary to fear. But the good of virtue can be the object of hope, as the Philosopher declares;[2] and the Apostle says (Gal. 5. 10): *I have confidence in you in the Lord, that you will not be of another mind.* Therefore fear can regard evil of sin.

Obj. 4. Further, shame is a kind of fear, as stated above (Q XLI, A. 4). But shame regards a disgraceful deed, which is an evil of sin. Therefore fear does so likewise

On the contrary, The Philosopher says[3] that "not all evils are feared, for instance that someone be unjust or slow"

I answer that, As stated above (Q. XL, A. 1; Q. XLI, A. 2), as the object of hope is a future good difficult but possible to obtain, so the object of fear is a future evil, arduous and not to be easily avoided From this we may gather that whatever is entirely subject to our power and will is not an object of fear, and that nothing gives rise to fear save what is due to an external cause. Now human will is the proper cause of the evil of sin, and consequently evil of sin, properly speaking, is not an object of fear.

But since the human will may be inclined to sin by an extrinsic cause, if this cause have a strong power of inclination, in that respect a man may fear the evil of sin, in so far as it arises from that extrinsic cause; as when he fears to dwell in the company of wicked men lest he be led by them to sin. But, properly speaking, a man thus disposed fears the being led astray rather than the sin considered in its proper notion, that is, as a voluntary act; for considered in this light it is not an object of fear to him

Reply Obj. 1. Separation from God is a punishment resulting from sin; and every punishment is, in some way, due to an extrinsic cause.

Reply Obj. 2. Sorrow and fear agree in one point, since each regards evil. They differ, however, in two points. First, because sorrow is about present evil, while fear is of future evil. Secondly, because sorrow, being in the concupiscible part, regards evil absolutely; hence it can be about any evil, great or small. But fear, being in the irascible part, regards evil with the addition of a certain arduousness or difficulty, which difficulty, ceases in so far as a thing is subject to the will. Consequently not all things that give us pain when they are present make us fear when they are yet to come, but only some things, namely, those that are difficult.

Reply Obj. 3. Hope is of good that is obtainable. Now one may obtain a good either of oneself, or through another; and so, hope may be of an act of virtue, which lies within our own power. On the other hand, fear is of an evil that does not lie in our own power, and consequently the evil which is feared is always from an extrinsic cause, while the good that is hoped for may be both from an intrinsic and from an extrinsic cause

Reply Obj. 4. As stated above (Q. XLI, A 4, Reply 2, 3), shame is not fear of the very act of sin, but of the disgrace or ignominy which arises from it, and which is due to an extrinsic cause.

ARTICLE 4 *Whether Fear Itself Can Be Feared?*

We proceed thus to the Fourth Article: It seems that fear cannot be feared

Objection 1. For whatever is feared is prevented from being lost through fear that; thus a man who fears to lose his health keeps it, through fearing its loss. If therefore a man be afraid of fear, he will keep himself from fear by being afraid, which seems absurd

Obj. 2. Further, fear is a kind of flight. But nothing flies from itself Therefore fear cannot be the object of fear.

Obj. 3 Further, fear is about the future. But fear is present to him that fears Therefore it cannot be the object of his fear.

On the contrary, A man can love his own love, and can grieve at his own sorrow. Therefore, in like manner, he can fear his own fear.

I answer that, As stated above (A. 3), nothing can be an object of fear save what is due to an extrinsic cause; not however that which ensues from our own will. Now fear partly arises from an extrinsic cause, and is partly subject to the will. It is due to an extrinsic cause in so far as it is a passion resulting from the imagination of an imminent evil. In this sense it is possible for fear to be the object of fear, that is, a man may fear lest he should be threatened by

[1] DD IV, 26.
[2] *Ethics*, IX, 4 (1166[a]25).
[3] *Rhetoric*, II, 5 (1382[a]22).

the necessity of fearing, through being assailed by some great evil. It is subject to the will, however in so far as the lower appetite obeys reason, and so man is able to drive fear away. In this sense fear cannot be the object of fear, as Augustine says (QQ. LXXXIII, *qu.* 33).[1] Lest, however, anyone make use of his arguments in order to prove that fear cannot at all be the object of fear, we must add a solution to the same.

Reply Obj. 1. Not every fear is identically the same; there are various fears according to the various objects of fear. Nothing, then, prevents a man from keeping himself from fearing one thing by fearing another, so that the fear which he has preserves him from the fear which he has not.

Reply Obj. 2. Since fear of an imminent evil is not identical with the fear of the fear of an imminent evil, it does not follow that a thing flies from itself, or that it is the same flight in both cases.

Reply Obj. 3. On account of the various kinds of fear already alluded to (Reply 2) a man's present fear may have a future fear for its object.

ARTICLE 5. *Whether Sudden Things Are Especially Feared?*

We proceed thus to the Fifth Article: It seems that unaccustomed and sudden things are not especially feared.

Objection 1. Because, as hope is about good things, so fear is about evil things. But experience contributes to the increase of hope in good things. Therefore it also adds to fear in evil things.

Obj. 2. Further, the Philosopher says[2] that those are feared most, "not who are quick-tempered, but who are gentle and cunning." Now it is clear that those who are quick-tempered are more subject to sudden emotions. Therefore sudden things are less to be feared.

Obj. 3. Further, we think less about things that happen suddenly. But the more we think about a thing, the more we fear it; hence the Philosopher says[3] that "some appear to be courageous through ignorance, but as soon as they discover that the case is different from what they expected, they run away." Therefore sudden things are feared less.

On the contrary, Augustine says[4] "Fear is startled at things unaccustomed and sudden, which endanger things beloved, and takes forethought for their safety."

I answer that, As stated above (A 3; Q. XLI, A. 2), the object of fear is an imminent evil, which can be repelled, but with difficulty. Now this is due to one of two causes: to the greatness of the evil, or to the weakness of him that fears. But unusualness and suddenness contribute to both of these causes. First, they help an imminent evil to seem greater. Because all corporeal things, whether good or evil, the more we consider them, the smaller they seem. Consequently, just as sorrow for a present evil is mitigated in course of time, as Tully states (*Quæst. Tusc.* iii, 30),[5] so too, fear of a future evil is diminished by thinking about it beforehand Secondly, unusualness and suddenness increase the weakness of him that fears, in so far as they deprive him of the remedies with which he might otherwise provide himself to forestall the coming evil, were it not for the evil taking him by surprise.

Reply Obj. 1. The object of hope is a good that it is possible to obtain Consequently whatever increases a man's power is of a nature to increase hope, and, for the same reason, to diminish fear, since fear is about an evil which cannot be easily repelled. Since, therefore, experience increases a man's power of action, therefore, as it increases hope, so does it diminish fear.

Reply Obj. 2. Those who are quick-tempered do not hide their anger; hence the harm they do others is not so sudden as not to be foreseen. On the other hand, those who are gentle or cunning hide their anger; therefore the harm which may be impending from them cannot be foreseen, but takes one by surprise. For this reason the Philosopher says that such men are feared more than others.

Reply Obj. 3. Bodily good or evil, considered in itself, seems greater at first. The reason for this is that a thing seems greater when seen in juxtaposition with its contrary. Hence when a man passes unexpectedly from penury to wealth, he thinks more of his wealth on account of his previous poverty; and, on the other hand, the rich man who suddenly becomes poor, finds poverty all the more disagreeable. For this reason sudden evil is feared more, because it seems more to be evil. However, it may happen through some accident that the greatness of some evil is hidden; for instance if the foe hides himself in ambush. And then it is true that evil inspires greater fear through being much thought about.

[1] PL 40, 23. [2] *Rhetoric*, II, 5 (1382^b20).
[3] *Ethics*, III, 8 (1117^a24).
[4] *Confessions*, II, 13 (PL 32, 681).
[5] DD IV, 20.

ARTICLE 6. *Whether Those Things Are More Feared, for Which There Is No Remedy?*

We proceed thus to the Sixth Article: It would seem that those things are not more to be feared for which there is no remedy.

Objection 1. Because it is a condition of fear that there be some hope of safety, as stated above (A. 2). But an evil that cannot be remedied leaves no hope of escape. Therefore such things are not feared at all

Obj. 2. Further, there is no remedy for the evil of death, since, in the natural course of things, there is no return from death to life. And yet death is not the most terrible thing of all, as the Philosopher says.[1] Therefore those things are not feared most for which there is no remedy.

Obj. 3. Further, the Philosopher says[2] that "a thing which lasts long is no better than that which lasts but one day; nor is that which lasts for ever any better than that which is not everlasting"; and the same applies to evil. But things that cannot be remedied do not seem to differ from other things except in point of their lasting long or for ever. Consequently they are not therefore any more to be feared.

On the contrary, the Philosopher says[3] that "those things are most to be feared which when done wrong cannot be put right, . . . or for which there is no help, or which are not easy."

I answer that, The object of fear is evil Consequently whatever tends to increase evil contributes to the increase of fear Now evil is increased not only in its species of evil, but also in respect of circumstances, as stated above (Q XVIII, A. 3). And of all the circumstances, long-lastingness, or even everlastingness, seems to have the greatest bearing on the increase of evil. Because things that exist in time are measured, in a way, according to the duration of time. Therefore if it be an evil to suffer something for a certain length of time, we should reckon the evil doubled if it be suffered for twice that length of time. And, accordingly, to suffer the same thing for an infinite length of time, that is, for ever, implies, so to speak, an infinite increase. Now those evils which, after they have come, cannot be remedied at all, or at least not easily, are considered as lasting for ever or for a long time. And therefore they inspire the greatest fear.

Reply Obj. 1. Remedy for an evil is twofold. One, by which a future evil is warded off from coming. If such a remedy be removed, there is an end to hope and consequently to fear. Therefore we do not speak now of remedies of that kind. The other remedy is one by which an already present evil is removed, and of such a remedy we speak now.

Reply Obj 2. Although death be an evil without remedy, yet, since it does not threaten from near at hand, it is not feared, as stated above (A 2).

Reply Obj. 3. The Philosopher is speaking there of things that are good in themselves, that is, good specifically. And such good is no better for lasting long or for ever; its goodness depends on its very nature.

QUESTION XLIII

OF THE CAUSE OF FEAR

(In Two Articles)

WE must now consider the cause of fear, under which head there are two points of inquiry: (1) Whether love is the cause of fear? (2) Whether defect is the cause of fear?

ARTICLE 1. *Whether Love Is the Cause of Fear?*

We proceed thus to the First Article: It seems that love is not the cause of fear.

Objection 1. For that which leads to a thing is its cause. But *"fear leads to the love of charity"* as Augustine says on the canonical epistle of John (*Tract.* ix).[4] Therefore fear is the cause of love, and not conversely.

Obj. 2. Further, the Philosopher says[5] that those are feared most from whom we dread the advent of some evil. But the dread of evil being caused by someone makes us hate rather than love him. Therefore fear is caused by hate rather than by love.

Obj. 3. Further, it has been stated above (Q. XLII, A. 3) that those things which occur by our own doing are not fearful. But that which we do from love is done from our inmost heart. Therefore fear is not caused by love.

On the contrary, Augustine says,[6] "There can be no doubt that there is no cause for fear save the loss of what we love, when we possess it, or the failure to obtain what we hope for." Therefore all fear is caused by our loving

[1] *Rhetoric,* II, 5 (1382[a]26).
[2] *Ethics,* I, 6 (1096[b]3).
[3] *Rhetoric,* II, 5 (1382[b]22).
[4] PL 35, 2049
[5] *Rhetoric,* II, 5 (1382[b]33).
[6] QQ. LXXXIII, QU. 33 (PL 40, 22).

something; and consequently love is the cause of fear.

I answer that, The objects of the soul's passions stand in relation to them as the forms to things natural or artificial, because the passions of the soul take their species from their objects as the aforesaid things do from their forms. Therefore, just as whatever is a cause of the form is a cause of the thing constituted by that form so whatever is a cause in any way whatever of the object, is a cause of the passion. Now a thing may be a cause of the object either by way of efficient cause or by way of material disposition. Thus the object of pleasure is good apprehended as suitable and conjoined, and its efficient cause is that which causes the union, or the suitableness, or goodness, or apprehension of that good thing, while its cause by way of material disposition is a habit or any sort of disposition by reason of which this conjoined good becomes suitable or is apprehended as such.

Accordingly, as to the matter in question, the object of fear is something reckoned as an evil to come, near at hand and difficult to avoid. Therefore that which can inflict such an evil is the effective cause of the object of fear, and consequently, of fear itself. But that which renders a man so disposed that a thing is such an evil to him, is a cause of fear and of its object, by way of material disposition. And thus it is that love causes fear, since it is through his loving a certain good that whatever deprives a man of that good is an evil to him, and that consequently he fears it as an evil.

Reply Obj. 1. As stated above (Q. XLII, A. 1), fear, of itself and in the first place, regards the evil from which it recoils as being contrary to some loved good; and thus fear, of itself, is born of love. But, in the second place, it regards the cause from which that evil ensues, so that sometimes, accidentally, fear gives rise to love; in so far as, for instance, through fear of God's punishments, man keeps His commandments, and thus begins to hope, while hope leads to love, as stated above (Q. XL, A. 7).

Reply Obj. 2. He, from whom evil is expected is indeed hated at first; but afterwards, when once we begin to hope for good from him, we begin to love him. But the good, the contrary evil of which is feared, was loved from the beginning.

Reply Obj. 3. This argument is true of that which is the efficient cause of the evil to be feared. But love causes fear by way of material disposition, as stated above.

ARTICLE 2. *Whether Defect Is the Cause of Fear?*

We proceed thus to the Second Article: It seems that defect is not a cause of fear.

Objection 1. Because those who are in power are very much to be feared. But defect is contrary to power. Therefore defect is not a cause of fear.

Obj. 2. Further, the defect of those who are already being executed is extreme. But such do not fear as stated in the *Rhetoric.*[1] Therefore defect is not a cause of fear.

Obj. 3. Further, men compete with one another from strength not from defect. But "those who contend fear those who contend with them."[2] Therefore defect is not a cause of fear.

On the contrary, Contraries are caused by contrary causes. But "wealth, strength, a multitude of friends, and power drive fear away."[3] Therefore fear is caused by lack of these.

I answer that, As stated above (A. 1), fear may be set down to a twofold cause: one is by way of a material disposition, on the part of him that fears; the other is by way of efficient cause, on the part of the person feared. As to the first then, some defect is, of itself, the cause of fear, for it is owing to some lack of power that one is unable easily to repulse a threatening evil. And yet, in order to cause fear, this defect must be according to a measure. For the defect which causes fear of a future evil is less than the defect caused by evil present, which is the object of sorrow. And still greater would be the defect, if perception of the evil, or love of the good whose contrary is feared, were entirely absent.

But as to the second, power and strength are, of themselves, the cause of fear, because it is owing to the fact that the cause apprehended as harmful is powerful that its effect cannot be repulsed. It may happen, however, in this respect, that some defect causes fear accidentally, in so far as owing to some defect someone wishes to hurt another; for instance, by reason of injustice, either because that other has already done him a harm, or because he fears to be harmed by him.

Reply Obj. 1. This argument is true of the cause of fear, on the part of the efficient cause.

Reply Obj. 2. Those who are already being executed are actually suffering from a present evil; therefore their defect exceeds the measure of fear.

[1] Aristotle, II, 5 (1383^a5).
[2] *Ibid.* (1382^b13). [3] *Ibid.* (1383^b1).

Reply Obj. 3. Those who contend with one another are afraid, not on account of the power which enables them to contend, but on account of the lack of power, owing to which they are not confident of victory.

QUESTION XLIV
OF THE EFFECTS OF FEAR
(In Four Articles)

WE must now consider the effects of fear: under which head there are four points of inquiry: (1) Whether fear causes contraction? (2) Whether it makes men suitable for counsel? (3) Whether it makes one tremble? (4) Whether it hinders action?

ARTICLE 1. *Whether Fear Causes Contraction?*

We proceed thus to the First Article: It seems that fear does not cause contraction.

Objection 1. For when contraction takes place, the heat and vital spirits are withdrawn inwardly. But accumulation of heat and vital spirits in the interior parts of the body dilates the heart with consequent endeavours of daring, as may be seen in those who are angered, while the contrary happens in those who are afraid. Therefore fear does not cause contraction.

Obj. 2. Further, when, as a result of contraction, the vital spirits and heat are accumulated in the interior parts, man cries out, as may be seen in those who are in pain. But those who fear utter nothing; on the contrary they lose their speech. Therefore fear does not cause contraction.

Obj. 3. Further, shame is a kind of fear, as stated above (Q. XLI, A. 4). But "those who are ashamed blush," as Tully (*Quæst. Tusc.* iv, 8),[1] and the Philosopher[2] observe. But blushing is an indication, not of contraction, but of the contrary. Therefore contraction is not an effect of fear.

On the contrary, Damascene says (*De Fide Orthod.* iii, 23)[3] that *fear is "a power according to* συστολή," that is, contraction.

I answer that, As stated above (Q. XXVIII, A. 5), in the passions of the soul, the movement of the appetitive power is as the formal element while the bodily change is as the material element. Both of these are mutually proportionate, and consequently the bodily change assumes a resemblance to and the very character of the appetitive movement. Now, as to the appetitive movement of the soul, fear implies a certain contraction, the reason of which is that fear arises from the imagination of some threatening evil which is difficult to repel, as stated above (Q. XLI, A. 2). But that a thing be difficult to repel is due to lack of power, as stated above (Q. XLIII, A. 2), and the weaker a power is, the fewer the things to which it extends. Therefore from the very imagination that causes fear there ensues a certain contraction in the appetite. Thus we observe in one who is dying that nature withdraws inwardly on account of the lack of power; and again we see the inhabitants of a city, when seized with fear, leave the outskirts, and, as far as possible, make for the inner quarters. It is in resemblance to this contraction, which pertains to the appetite of the soul, that in fear a similar contraction of heat and vital spirits towards the inner parts takes place in regard to the body.

Reply Obj. 1. As the Philosopher says,[4] although in those who fear the vital spirits recede from the outer to the inner parts of the body, yet the movement of vital spirits is not the same in those who are angry and those who are afraid. For in those who are angry, by reason of the heat and subtlety of the vital spirits, which result from the desire for vengeance, the inward movement has an upward direction, and therefore the vital spirits and heat concentrate around the heart, with the result that an angry man is quick and brave in attacking. But in those who are afraid on account of the condensation caused by the cold, the vital spirits have a downward movement; for this cold is due to the imagined lack of power. Consequently the heat and vital spirits abandon the heart instead of concentrating around it, the result being that a man who is afraid is not quick to attack, but is more inclined to run away.

Reply Obj. 2. To everyone that is in pain, whether man or animal, it is natural to use all possible means of repelling the harmful thing that causes pain by its presence; thus we observe that animals, when in pain, attack with their jaws or with their horns. Now the greatest help for all purposes, in animals, is heat and vital spirits. Therefore when they are in pain, their nature stores up the heat and vital spirits within them, in order to make use of them in repelling the harmful thing. Hence the Philosopher says[5] that when the vital spirits and heat are concentrated together within, they require

[1] DD IV, 28. [2] *Ethics*, IV, 9 (1128^{b}13).
[3] PG 94, 1088.
[4] Pseudo-Aristotle, *Problemata*, XXVII, 3 (947^{b}23).
[5] *Ibid.*, XXVII, 9 (948^{b}20).

o find a vent in the voice, for which reason hose who are in pain can scarcely refrain from :rying aloud. On the other hand, in those who ire afraid the internal heat and vital spirits nove from the heart downwards, as stated ibove (Reply 1); and therefore fear hinders ipeech which ensues from the emission of the /ital spirits in an upward direction through the nouth, the result being that fear makes its sub-iect speechless. For this reason, too, "fear nakes its subject tremble," as the Philosopher ;ays.[1]

Reply Obj. 3. Mortal perils are contrary not ɔnly to the animal appetite, but also to nature. Consequently in this kind of fear, there is con-raction not only in the appetite but also in the :orporeal nature, for when an animal is moved ɔy the imagination of death, it experiences a :ontraction of heat towards the inner parts of he body, just as when it is threatened by a iatural death. Hence it is that "those who are in fear of death turn pale."[2] But the evil that shame fears is contrary, not to nature but only o the appetite of the soul. Consequently there results a contraction in this appetite, but not in he corporeal nature; rather, indeed, the soul, is though contracted in itself, is set free from :he motion of the vital spirits and heat, so that hey spread to the outward parts of the body, he result being that those who are ashamed ɔlush

Article 2. *Whether Fear Makes One Suitable for Counsel?*

We proceed thus to the Second Article: It would seem that fear does not make one suitable for counsel.

Objection 1. For the same thing cannot be conducive to counsel, and a hindrance to it. But fear hinders counsel because every passion disturbs repose, which is requisite for the good use of reason. Therefore fear does not make a man suitable for counsel.

Obj. 2. Further, counsel is an act of reason in thinking and deliberating about the future. But a certain fear "drives away all thought, and dislocates the mind," as Cicero observes (*De Quæst, Tusc.* iv, 8).[3] Therefore fear does not conduce to counsel, but hinders it.

Obj. 3. Further, just as we have recourse to counsel in order to avoid evil, so likewise do we in order to attain good things. But just as fear is of evil to be avoided, so is hope concerned with good things to be obtained. Therefore fear is not more conductive to counsel, than hope is.

On the contrary, The Philosopher says[4] that "fear makes men of counsel."

I answer that, A man of counsel may be taken in two ways. First, from his being willing or anxious to take counsel. And thus fear makes men of counsel Because, as the Philosopher says,[5] "we take counsel on great matters, because therein we distrust ourselves." Now things which make us afraid are not evil absolutely, but have a certain magnitude, both because they seem difficult to repel and because they are apprehended as near to us, as stated above (Q. XLII, A. 2). Therefore men seek for counsel especially when they are afraid.

Secondly, a man of counsel means one who is apt for giving good counsel, and in this sense neither fear nor any passion makes men of counsel Because when a man is affected by a passion, things seem to him greater or smaller than they really are; thus to a lover, what he loves seems better; to him that fears, what he fears seems more dreadful. Consequently owing to the want of right judgment, every passion, considered in itself, hinders the power of giving good counsel.

This suffices for the *Reply to the First Objection.*

Reply Obj 2 The stronger a passion is, the greater hindrance is it to the man who is swayed by it. Consequently, when fear is intense, man does indeed wish to take counsel, but his thoughts are so disturbed that he can find no counsel. If, however, the fear be slight, so as to make a man wish to take counsel without gravely disturbing the reason, it may even make it easier for him to take good counsel, by reason of its making him want to do so.

Reply Obj. 3. Hope also makes man a good counsellor, because, as the Philosopher says,[6] "no man takes counsel in matters he despairs of," nor about impossible things, as he says in the *Ethics.*[7] But fear incites to counsel more than hope does. For hope is of good things, as being possible of attainment, while fear is of evil things, as being difficult to repel, so that fear regards the aspect of difficulty more than hope does. And it is in matters of difficulty, especially when we distrust ourselves, that we take counsel, as stated above.

[6] *Rhetoric,* II, 5 (1383^{a}7).
[7] III, 3 (1112^{b}24).

ARTICLE 3. *Whether Fear Makes One Tremble?*

We proceed thus to the Third Article: It seems that trembling is not an effect of fear.

Objection 1. Because trembling is occasioned by cold; thus we observe that a cold person trembles. Now fear does not seem to make one cold, but rather to cause a dessicating heat. A sign of this is that those who fear are thirsty, especially if their fear be very great, as in the case of those who are being led to death. Therefore fear does not cause trembling.

Obj. 2. Further, fæcal evacuation is occasioned by heat; hence most laxative medicines are generally warm. But these evacuations are often caused by fear. Therefore fear apparently causes heat, and consequently does not cause trembling.

Obj. 3. Further, in fear, the heat is withdrawn from the outer to the inner parts of the body. If, therefore, man trembles in his outward parts through the heat being withdrawn in this way, it seems that fear should cause this trembling in all the external members. But such is not the case. Therefore trembling of the body is not caused by fear.

On the contrary, Cicero says (*De Quæst. Tusc.* iv, 8)[1] that "fear is followed by trembling, pallor and chattering of the teeth "

I answer that, As stated above (A. 1), in fear there takes place a certain contraction from the outward to the inner parts of the body, the result being that the outer parts become cold; and for this reason trembling is occasioned in these parts, being caused by a lack of power in controlling the members. This lack of power is due to the want of heat, which is the instrument by which the soul moves those members, as stated in the treatise on the *Soul.*[2]

Reply Obj. 1. When the heat withdraws from the outer to the inner parts, the inward heat increases, especially in the inferior (or nutritive) parts. Consequently the humid element being spent, thirst ensues; sometimes indeed the result is a loosening of the bowels, and urinary or even seminal evacuation.—Or else such evacuations are due to contraction of the abdomen and testicles, as the Philosopher says.[3]

This suffices for the *Reply to the Second Objection.*

Reply Obj. 3. In fear, heat abandons the heart, with a downward movement. Hence in those who are afraid the heart especially trembles, as also those members which are connected with the breast where the heart resides. Hence those who fear tremble especially in their speech, on account of the tracheal artery being near the heart. The lower lip, too, and the lower jaw tremble, through their connection with the heart, which explains the chattering of the teeth. For the same reason the arms and hands tremble. Or else because these members are more moveable. For this reason also the knees tremble in those who are afraid, according to Isa. 35. 3: *Strengthen ye the feeble hands, and confirm the trembling* (Vulg., *weak*) *knees.*

ARTICLE 4. *Whether Fear Hinders Action?*

We proceed thus to the Fourth Article: It seems that fear hinders action.

Objection 1. For action is hindered chiefly by a disturbance in the reason, which directs action. But fear disturbs reason, as stated above (A. 2). Therefore fear hinders action.

Obj. 2. Further, those who fear while doing anything, are more apt to fail; thus a man who walks on a plank placed high up, is likely to fall through fear; but if he were to walk on the same plank down below, he would not fall, through not being afraid. Therefore fear hinders action.

Obj. 3. Further, laziness or sloth is a kind of fear. But laziness hinders action. Therefore fear does too.

On the contrary, The Apostle says (Phil. 2. 12): *With fear and trembling work out your salvation,* and he would not say this if fear were a hindrance to a good work. Therefore fear does not hinder a good action.

I answer that, Man's exterior actions are caused by the soul as first mover, but by the bodily members as instruments. Now action may be hindered both by defect of the instrument and by defect of the principal mover. On the part of the bodily instruments, fear, considered in itself, will always naturally hinder exterior action, on account of the outward members being deprived, through fear, of their heat. But on the part of the soul, if the fear be moderate, without much disturbance of the reason, it conduces to working well, in so far as it causes a certain solicitude, and makes a man take counsel and work with greater attention. If, however, fear increases so much as to disturb the reason, it hinders action even on the part of the soul. But of such a fear the Apostle does not speak.

[1] DD IV, 28. [2] Aristotle, II, 4 (416^b29)

[3] Pseudo-Aristotle, *Problemata,* XXVII, 10, 11 (948^b35; 949^a9).

This suffices for the *Reply to the First Objection.*

Reply Obj. 2. He that falls from a plank placed aloft suffers a disturbance of his imagination, through fear of the fall that is pictured to his imagination

Reply Obj. 3. Everyone in fear shuns that which he fears, and therefore, since laziness is a fear of work itself as being toilsome, it hinders work by withdrawing the will from it. But fear of other things conduces to action, in so far as it inclines the will to do that by which a man escapes from what he fears.

QUESTION XLV
OF DARING
(*In Four Articles*)

WE must now consider daring, under which head there are four points of inquiry: (1) Whether daring is contrary to fear? (2) How is daring related to hope? (3) Of the cause of daring; (4) Of its effect.

ARTICLE 1. *Whether Daring Is Contrary to Fear?*

We proceed thus to the First Article: It would seem that daring is not contrary to fear

Objection 1. For Augustine says (QQ. LXXXIII, *qu.* 31)[1] that "daring is a vice." Now vice is contrary to virtue. Since, therefore, fear is not a virtue but a passion, it seems that daring is not contrary to fear.

Obj. 2. Further, to one thing there is one contrary. But hope is contrary to fear. Therefore daring is not contrary to fear.

Obj. 3. Further, every passion excludes its opposite. But fear excludes safety; for Augustine says[2] that "fear takes forethought for safety." Therefore safety is contrary to fear. Therefore daring is not contrary to fear.

On the contrary, The Philosopher says[3] that "daring is contrary to fear "

I answer that, It is of the very notion of contraries to be farthest removed from one another, as stated in the *Metaphysics.*[4] Now that which is farthest removed from fear is daring, for fear turns away from the future hurt on account of its victory over him that fears it; but daring turns on threatened danger, because of its own victory over that same danger. Consequently it is evident that daring is contrary to fear.

Reply Obj. 1. Anger, daring and all the names of the passions can be taken in two ways. First, as denoting absolutely movements of the sensitive appetite in respect of some object, good or bad, and thus they are names of passions. Secondly, as denoting besides this movement a straying from the order of reason, and thus they are names of vices. It is in this sense that Augustine speaks of daring, but we are speaking of it here in the first sense.

Reply Obj. 2. To one thing, in the same respect, there are not several contraries; but in different respects nothing prevents one thing from having several contraries. Accordingly it has been said above (Q. XXIII, A. 2; Q. XL, A. 4) that the irascible passions admit of a twofold contrariety: one, according to the opposition of good and evil, and thus fear is contrary to hope; the other, according to the opposition of approach and withdrawal, and thus daring is contrary to fear, and despair contrary to hope.

Reply Obj 3. Safety does not denote something contrary to fear, but merely the exclusion of fear; for he is said to be safe who does not fear. Therefore safety is opposed to fear as a privation, while daring is opposed to it as a contrary. And as contrariety implies privation, so daring implies safety.

ARTICLE 2. *Whether Daring Ensues from Hope?*

We proceed thus to the Second Article: It seems that daring does not ensue from hope.

Objection 1. Because daring is in respect of evil and fearful things, as stated in the *Ethics.*[5] But hope regards good things, as stated above (Q. XL, A. 1). Therefore they have different objects and are not in the same order Therefore daring does not ensue from hope.

Obj. 2. Further, just as daring is contrary to fear, so is despair contrary to hope But fear does not ensue from despair; rather indeed despair excludes fear, as the Philosopher says.[6] Therefore daring does not result from hope.

Obj. 3. Further, daring is intent on something good, namely, victory. But it pertains to hope to tend to that which is good and difficult. Therefore daring is the same as hope, and consequently does not result from it.

On the contrary, The Philosopher says[7] that those who are hopeful are full of daring. Therefore it seems that daring ensues from hope.

I answer that, As we have often stated (Q. XXII, A. 2; Q. XXXV, A. 1; Q. XLI, A. 1), all passions of this kind pertain to the appetitive power. Now every movement of the appetitive pow-

[1] PL 40, 21; cf. qu 34 (PL 40, 23).
[2] *Confessions,* II, 13 (PL 32, 681).
[3] *Rhetoric,* II, 5 (1383[a]16). [4] Aristotle, X, 4 (1055[a]9).
[5] Aristotle, III, 7 (1115[b]28).
[6] *Rhetoric,* II, 5 (1383[a]3). [7] *Ethics,* III, 8 (1117[a]9).

er is reducible to one either of pursuit or of avoidance. Again, pursuit or avoidance is of something either by reason of itself or by reason of something accidental. By reason of itself, good is the object of pursuit, and evil the object of avoidance. But by reason of something accidental evil can be the object of pursuit, through some good attaching to it, and good can be the object of avoidance, through some evil attaching to it. Now that which is accidental follows that which is by reason of itself. Consequently pursuit of evil follows pursuit of good, and avoidance of good follows avoidance of evil. Now these four things pertain to four passions, since pursuit of good pertains to hope, avoidance of evil to fear, the pursuit of the fearful evil pertains to daring, and the avoidance of good to despair. It follows, therefore, that daring results from hope; for it is in the hope of overcoming the threatening object of fear that one attacks it boldly But despair results from fear, for the reason why a man despairs is because he fears the difficulty attaching to the good he should hope for

Reply Obj 1. This argument would hold, if good and evil were not objects ordered to one another But because evil has a certain order to good, since it comes after good, as privation comes after habit, therefore daring which pursues evil, comes after hope which pursues good.

Reply Obj 2. Although good, absolutely speaking, is prior to evil, yet avoidance of evil precedes avoidance of good, just as the pursuit of good precedes the pursuit of evil. Consequently just as hope precedes daring, so fear precedes despair. And just as fear does not always lead to despair, but only when it is intense, so hope does not always lead to daring, but only when it is strong.

Reply Obj. 3. Although the object of daring is an evil to which, in the estimation of the daring man, the good of victory is joined, yet daring regards the evil, and hope regards the good joined to it. In like manner despair regards directly the good which it turns away from, while fear regards the evil joined to it. Hence, properly speaking, daring is not a part of hope, but its effect, just as despair is an effect, not a part, of fear. For this reason, too, daring cannot be a principal passion.

ARTICLE 3. *Whether Some Defect Is a Cause of Daring?*

We proceed thus to the Third Article: It would seem that some defect is a cause of daring.

Objection 1. For the Philosopher says[1] that "lovers of wine are strong and daring." But from wine ensues the defect of drunkenness. Therefore daring is caused by a defect.

Obj. 2. Further, the Philosopher says[2] that "those who have no experience of danger are bold." But want of experience is a defect. Therefore daring is caused by a defect.

Obj. 3. Further, those who have suffered wrongs are usually daring, like beasts when beaten, as stated in the *Ethics*.[3] But the suffering of wrongs pertains to defect. Therefore daring is caused by a defect.

On the contrary, The Philosopher says[4] that the cause of daring "is the presence in the imagination of the hope that the means of safety are near, and that the things to be feared are either non-existent or far off" But anything pertaining to defect implies either the removal of the means of safety, or the proximity of something to be feared Therefore nothing pertaining to defect is a cause of daring.

I answer that, As stated above (AA 1, 2) daring results from hope and is contrary to fear. Therefore whatever is naturally apt to cause hope or banish fear, is a cause of daring Since, however, fear and hope, and also daring, being passions, consist in a movement of the appetite, and in a certain bodily change, a thing may be considered as the cause of daring in two ways, whether by raising hope, or by banishing of fear; in one way, on the part of the appetitive movement, in another way, on the part of the bodily change.

On the part of the appetitive movement which follows apprehension, hope that leads to daring is roused by those things that make us estimate victory as possible. Such things regard either our own power, as bodily strength, experience of dangers, abundance of wealth, and the like, or they regard the power of others, such as having a great number of friends or any other means of help, especially if a man trust in the Divine assistance; hence "those are more daring with whom it is well in regard to godlike things," as the Philosopher says.[5] Fear is banished. in this way, by the removal of threatening causes of fear; for instance, by the fact that a man has no enemies, because he has harmed nobody, because he is not aware of any imminent danger; for those especially appear to be threatened by danger who have harmed others

[1] Pseudo-Aristotle, *Problemata*, XXVII, 4 (948^a13).
[2] *Rhetoric*, II, 5 (1383^a28). [3] Aristotle, III, 8 (1116^b32).
[4] *Rhetoric*, II, 5 (1383^a17). [5] *Ibid.*, II, 5 (1383^b5).

On the part of the bodily change, daring is caused through the incitement of hope and the banishment of fear, by those things which raise the temperature about the heart. Therefore the Philosopher says[1] that "those whose heart is small according to quantity, are more daring, while animals whose heart is large are timid, because the natural heat is unable to give the same degree of temperature to a large as to a small heart; just as a fire does not heat a large house as well as it does a small house." He says also[2] that "those whose lungs contain much blood, are more daring, through the heat in the heart that results from this." He says also in the same passage that "lovers of wine are more daring, on account of the heat of the wine"; hence it has been said above (Q. XL, A. 6) that drunkenness conduces to hope, since the heat in the heart banishes fear and raises hope, by reason of the dilation and enlargement of the heart.

Reply Obj. 1. Drunkenness causes daring, not through being a defect, but through dilating the heart; and again through making a man think greatly of himself.

Reply Obj. 2. Those who have no experience of dangers are more daring, not on account of a defect, but accidentally, that is, in so far as through being inexperienced they do not know their own failings, nor the dangers that threaten. Hence it is that the removal of the cause of fear gives rise to daring.

Reply Obj. 3. As the Philosopher says[3] "those who have been wronged are courageous, because they think that God comes to the assistance of those who suffer unjustly."

Hence it is evident that no defect causes daring except accidentally, that is, in so far as some excellence attaches to it, real or imaginary, either in oneself or in another.

ARTICLE 4. *Whether the Daring Are More Eager at First than in the Midst of Danger?*

We proceed thus to the Fourth Article: It seems that the daring are more eager at first than in the midst of danger.

Objection 1. Because trembling is caused by fear, which is contrary to daring, as stated above (A. 1; Q. XLIV, A. 3). But the daring sometimes tremble at first, as the Philosopher says.[4] Therefore they are not more eager at first than in the midst of danger.

Obj. 2. Further, passion is intensified by an increase in its object; thus since a good is lovable, what is better is yet more lovable. But the object of daring is something difficult. Therefore the greater the difficulty, the greater the daring. But danger is more arduous and difficult when present. It is then therefore that daring is greatest.

Obj. 3. Further, anger is provoked by the infliction of wounds. But anger causes daring; for the Philosopher says[5] that "anger makes man bold." Therefore when man is in the midst of danger and when he is being beaten, then is he most daring.

On the contrary, It is said in the *Ethics*[6] that "the daring are precipitate and full of eagerness before the danger, yet in the midst of dangers they give way."

I answer that, Daring, being a movement of the sensitive appetite, follows an apprehension of the sensitive power. But the sensitive power cannot make comparisons, nor can it inquire into individual circumstances; its judgment is instantaneous. Now it happens sometimes that it is impossible for a man to take note in an instant of all the difficulties of a certain situation; hence there arises the movement of daring to face the danger, and when he comes to experience the danger, he feels the difficulty to be greater than he expected, and so gives way.

On the other hand, reason discusses all the difficulties of a situation. Consequently men of fortitude who face danger according to the judgment of reason at first seem slack, because they face the danger not from passion but with due deliberation. Yet when they are in the midst of danger, they experience nothing unforeseen, but sometimes the difficulty turns out to be less than they anticipated; therefore they are more persevering. Moreover, it may be because they face the danger on account of the good of virtue which is the abiding object of their will, however great the danger may prove; but men of daring face the danger on account of estimation only, which gives rise to hope and banishing fear, as stated above (A. 3).

Reply Obj. 1. Trembling does occur in men of daring, on account of the heat being withdrawn from the outer to the inner parts of the body, as occurs also in those who are afraid. But in men of daring the heat withdraws to the heart; in those who are afraid, however, it withdraws to the inferior parts.

Reply Obj. 2. The object of love is good ab-

[1] *Parts of Animals*, III, 4 (667^a15).
[2] Pseudo-Aristotle, *Problemata*, XXVII, 4 (948^a17).
[3] *Rhetoric*, II, 5 (1383^b7).
[4] Pseudo-Aristotle, *Problemata*, XXVII, 3 (948^a8).
[5] *Rhetoric*, II, 5 (1383^b7).
[6] Aristotle, III, 7 (1116^a7).

solutely, and so if it be increased, love is increased absolutely. But the object of daring is a compound of good and evil, and the movement of daring towards evil presupposes the movement of hope towards good. If, therefore, so much difficulty be added to the danger that it overcomes hope, the movement of daring does not follow, but fails. But if the movement of daring does ensue, the greater the danger the greater is the daring considered to be

Reply Obj. 3. Hurt does not give rise to anger unless there be some kind of hope, as we shall see later on (Q. XLVI, A. 1). Consequently if the danger be so great as to banish all hope of victory, anger does not follow. It is true, however, that if danger does ensue, there will be greater daring.

QUESTION XLVI

OF ANGER IN ITSELF

(In Eight Articles)

WE must now consider anger; and (1) anger in itself; (2) the cause that produces anger and its remedy (Q XLVII); (3) the effect of anger (Q. XLVIII).

Under the first head there are eight points of inquiry: (1) Whether anger is a special passion? (2) Whether the object of anger is good or evil? (3) Whether anger is in the concupiscible part? (4) Whether anger is accompanied by an act of reason? (5) Whether anger is more natural than concupiscence? (6) Whether anger is more grievous than hatred? (7) Whether anger is only towards those with whom we have a relation of justice? (8) Of the species of anger.

ARTICLE 1. *Whether Anger Is a Special Passion?*

We proceed thus to the First Article: It seems that anger is not a special passion.

Objection 1. For the irascible power takes its name from anger (*ira*). But there are several passions in this power, not only one. Therefore anger is not a special passion.

Obj. 2. Further, to every special passion there is a contrary passion, as is evident by going through them one by one. But no passion is contrary to anger, as stated above (Q. XXIII, A. 3). Therefore anger is not a special passion.

Obj. 3. Further, one special passion does not include another. But anger includes many passions, since it accompanies sorrow, pleasure, and hope, as the Philosopher states.[1] Therefore anger is not a special passion.

[1] *Rhetoric*, II, 2 (1378[a]31).

On the contrary, Damascene (*De Fide Orthod.* ii, 16)[2] calls anger a special passion, and so does Cicero (*De Quæst. Tusc.* iv, 7, 9).[3]

I answer that, A thing is said to be general in two ways. First, by predication; thus "animal" is general in respect of all animals. Secondly, by causality; thus the sun is the general cause of all things generated here below, according to Dionysius (*Div. Nom.* iv).[4] Because just as a genus contains potentially many differences, according to a likeness of matter, so an agent cause contains many effects according to its active power. Now it happens that an effect is produced by the concurrence of different causes; and since every cause remains somewhat in its effect, we may say that, in yet a third way, an effect which is due to the concurrence of several causes has a certain generality, in so far as it contains many causes in a certain manner in act.

Accordingly in the first way, anger is not a general passion, but is divided with the other passions, as stated above (Q. XXIII, A. 4). In like manner, neither is it in the second way, since it is not a cause of the other passions But in this way love may be called a general passion, as Augustine declares,[5] because love is the primary root of all the passions, as stated above (Q. XXVII, A 4). But, in the third way, anger may be called a general passion, in so far as it is caused by a concurrence of several passions For the movement of anger does not arise except on account of some pain inflicted, and unless there be the desire and hope of revenge; for, as the Philosopher says,[6] "the angry man hopes to punish; for he desires for revenge as being possible." Consequently if the person who inflicted the injury excel very much, anger does not ensue, but only sorrow, as Avicenna states (*De Anima*, iv, 6).[7]

Reply Obj. 1. The irascible power takes its name from *ira* (anger), not because every movement of that power is one of anger, but because all its movements terminate in anger, and because, of all these movements, anger is the most manifest.

Reply Obj. 2. From the very fact that anger is caused by contrary passions, that is, by hope, which is of good, and by sorrow, which is of evil, it includes in itself contrariety; and consequently it has no contrary outside itself. Thus also in mixed colours there is no contrariety except that of the simple colours from which they are made.

[2] PG 94, 932. [3] DD IV, 27, 29.
[4] Sect. 4 (PG 3, 697).
[5] *City of God*, XIV, 7 (PL 41, 410).
[6] *Rhetoric*, II, 2 (1378[b]4). [7] 22ra.

Reply Obj. 3. Anger includes several passions, not indeed as a genus includes several species, but rather according to the inclusion of cause and effect.

ARTICLE 2. *Whether the Object of Anger Is Good or Evil?*

We proceed thus to the Second Article: It seems that the object of anger is evil.

Objection 1. For Gregory of Nyssa (Nemesius, *De Nat. Hom.* xxi)[1] says that "anger is as it were the sword-bearer of desire," in so far, that is, as it assails whatever obstacle stands in the way of desire. But every obstacle has the character of evil. Therefore anger regards evil as its object.

Obj. 2. Further, anger and hatred agree in their effect, since each seeks to inflict harm on another. But hatred regards evil as its object, as stated above (Q. XXIX, A. 1). Therefore anger does also.

Obj. 3 Further, anger arises from sorrow; hence the Philosopher says[2] that "anger acts with sorrow." But evil is the object of sorrow. Therefore it is also the object of anger.

On the contrary, Augustine says[3] that "anger craves for revenge." But the desire for revenge is a desire for something good, since revenge pertains to justice. Therefore the object of anger is good.

2. *Moreover,* anger is always accompanied by hope, and so it causes pleasure, as the Philosopher says[4] But the object of hope and of pleasure is good. Therefore good is also the object of anger.

I answer that, The movement of the appetitive power follows an act of the apprehensive power. Now the apprehensive power apprehends a thing in two ways First, by way of an incomplex object, as when we understand what a man is; secondly, by way of a complex object, as when we understand that whiteness is in a man. Consequently in each of these ways the appetitive power can tend to both good and evil: by way of a simple and incomplex object, when the appetite simply follows or adheres to good, or recoils from evil (and such movements are desire, hope, pleasure, sorrow, and so forth); by way of a complex object, as when the appetite is concerned with some good or evil being in, or being done to, another, either seeking this or recoiling from it. This is evident in the case of love and hatred; for we love someone in so far as we wish some good to be in him, and we hate someone in so far as we wish some evil to be in him. It is the same with anger, for when a man is angry, he wishes to be avenged on someone. Hence the movement of anger has a twofold tendency: namely, to vengeance itself, which it desires and hopes for as being a good, and in which consequently it takes pleasure; and to the person on whom it seeks vengeance, as to something contrary and hurtful, which bears the character of evil.

We must, however, observe a twofold difference in this respect, between anger on the one side, and hatred and love on the other. The first difference is that anger always looks to two objects, but love and hatred sometimes look to but one object, as when a man is said to love wine or something of the kind, or to hate it. The second difference is, that both the objects of love are good, since the lover wishes good to someone, as to something agreeable to himself, while both the objects of hatred bear the character of evil, for the man who hates wishes evil to someone, as to something disagreeable to him. But anger looks to one object under the aspect of good, namely, vengeance, which it desires to have, and the other object under the aspect of evil, namely, the undesirable person, on whom it seeks to be avenged. Consequently it is a passion made up in a certain way of contrary passions.

This suffices for the *Replies to the Objections.*

ARTICLE 3 *Whether Anger Is in the Concupiscible Part?*

We proceed thus to the Third Article: It would seem that anger is in the concupiscible part.

Objection 1. For Cicero says (*De Quæst. Tusc.* iv, 9)[5] that anger is a kind of desire. But desire is in the concupiscible part. Therefore anger is too.

Obj. 2. Further, Augustine says in his Rule,[6] that "anger grows into hatred"; and Cicero says (*loc. cit.*) that "hatred is inveterate anger." But hatred, like love, is a concupiscible passion. Therefore anger is in the concupiscible part.

Obj. 3. Further, Damascene (*De Fide Orthod.* ii, 16)[7] and Gregory of Nyssa[8] say that anger is made up of sorrow and desire. Both of these are in the concupiscible part. Therefore anger is in the concupiscible part.

On the contrary, The concupiscible is distinct from the irascible power. If, therefore, anger

[1] PG 40, 692 [2] *Ethics,* VII, 6 (1149b20).
[3] *Confessions,* II, 13 (PL 32, 681)
[4] *Rhetoric,* II, 2 (1378b1).
[5] DD IV, 28. [6] *Epist.,* CCXI (PL 33, 964).
[7] PG 94, 933.
[8] Cf. Nemesius, *De Nat. Hom.,* chap. 21 (PG 40, 692).

were in the concupiscible power, the irascible would not take its name from it.

I answer that, As stated above (Q. XXIII, A. 1), the passions of the irascible part differ from the passions of the concupiscible part in that the objects of the concupiscible passions are good and evil absolutely considered, while the objects of the irascible passions are good and evil of a certain elevation or arduousness. Now it has been stated (A. 2) that anger looks to two objects: namely, the vengeance that it seeks, and the person on whom it seeks vengeance; and in respect of both, anger requires a certain arduousness, for the movement of anger does not arise unless there be some magnitude about both these objects, since "we take no account about things that are nothing or very minute," as the Philosopher observes.[1] It is therefore evident that anger is not in concupiscible, but in the irascible part.

Reply Obj. 1. Cicero gives the name of desire to any kind of craving for a future good,[2] without discriminating between that which is arduous and that which is not. Accordingly he considers anger as a kind of desire, since it is a desire of vengeance. In this sense, however, desire is common to the irascible and concupiscible parts.

Reply Obj. 2. Anger is said to grow into hatred, not as though the same passion which at first was anger afterwards becomes hatred by becoming inveterate, but by a kind of causality. For anger when it lasts a long time engenders hatred.

Reply Obj. 3. Anger is said to be composed of sorrow and desire, not as though they were its parts, but because they are its causes; and it has been said above (Q. XXV, A. 2) that the concupiscible passions are the causes of the irascible passions.

ARTICLE 4. *Whether Anger Requires an Act of Reason?*

We proceed thus to the Fourth Article: It seems that anger does not require an act of reason.

Objection 1. For, since anger is a passion, it is in the sensitive appetite. But the sensitive appetite follows an apprehension, not of reason, but of the sensitive part. Therefore anger does not require an act of reason.

Obj. 2. Further, dumb animals are devoid of reason, and yet they are seen to be angry. Therefore anger does not require an act of reason.

Obj. 3. Further, drunkenness fetters the reason; nevertheless it is conducive to anger. Therefore anger does not require an act of reason.

On the contrary, The Philosopher says[3] that "anger listens to reason somewhat."

I answer that, As stated above (A. 2), anger is a desire for vengeance. Now vengeance implies a comparison between the punishment to be inflicted and the hurt done; therefore the Philosopher says[4] that "anger, as if it had drawn the inference that it ought to quarrel with such a person, is therefore immediately exasperated." Now to compare and to draw an inference is an act of reason. Therefore anger, in a fashion, requires an act of reason.

Reply Obj. 1. The movement of the appetitive power may follow an act of reason in two ways. In the first way, it follows the reason in so far as the reason commands, and thus the will follows reason; hence it is called the rational appetite. In another way, it follows reason in so far as the reason denounces, and thus anger follows reason. For the Philosopher says[5] that "anger follows reason, not in obedience to reason's command, but as a result of reason's denouncing the injury" For the sensitive appetite is subject to the reason, not immediately but through the will.

Reply Obj. 2. Dumb animals have a natural instinct imparted to them by the Divine Reason, in virtue of which they are gifted with movements, both internal and external, like rational movements, as stated above (Q. XL, A. 3).

Reply Obj 3. As stated in the *Ethics,*[6] "anger listens somewhat to reason" in so far as reason denounces the injury inflicted, "but listens not perfectly," because it does not observe the rule of reason as to the measure of vengeance. Anger, therefore, requires an act of reason, and yet proves a hindrance to reason. Therefore the Philosopher says[7] that those who are very drunk, so as to be incapable of the use of reason, do not get angry; but those who are slightly drunk do get angry, through being still able, though hampered, to form a judgment of reason.

ARTICLE 5. *Whether Anger Is More Natural than Concupiscence?*

We proceed thus to the Fifth Article: It would seem that anger is not more natural than concupiscence.

[1] *Rhetoric,* II, 2 (1378[b]12).
[2] *Tuscul.,* IV, 6 (DD III, 26).
[3] *Ethics,* VII, 6 (1149[b]1). [4] *Ibid.* (1149[a]13).
[5] Pseudo-Aristotle, *Problemata,* XXVIII, 3 (949[b]17).
[6] Aristotle, VII, 6 (1149[b]1)
[7] Pseudo-Aristotle, *Problemata,* III, 2, 27 (871[a]8; 875[a]29).

Objection 1. Because it is proper to man to be by nature a gentle animal. But "gentleness is contrary to anger," as the Philosopher states.[1] Therefore anger is not more natural than concupiscence; indeed it seems to be altogether unnatural to man.

Obj. 2 Further, reason is divided against nature, for those things that are according to reason are not said to act according to nature. Now "anger requires an act of reason, but concupiscence does not," as stated in the *Ethics*.[2] Therefore concupiscence is more natural than anger.

Obj. 3. Further, anger is a desire for vengeance, while concupiscence is a desire for those things especially which are pleasant to the touch, namely, for pleasures of the table and for sexual pleasures. But these things are more natural to man than vengeance. Therefore concupiscence is more natural than anger.

On the contrary, The Philosopher says[3] that "anger is more natural than concupiscence."

I answer that, By natural we mean that which is caused by nature, as stated in the *Physics*.[4] Consequently the question as to whether a particular passion is more or less natural cannot be decided without reference to the cause of that passion. Now the cause of a passion, as stated above (Q. XXXVI, A. 2), may be considered in two ways: first, on the part of the object; secondly, on the part of the subject If then we consider the cause of anger and of desire, on the part of the object, thus concupiscence, especially of pleasures of the table, and of sexual pleasures, is more natural than anger, in so far as these pleasures are more natural to man than vengeance.

If, however, we consider the cause of anger on the part of the subject, thus anger, in a manner, is more natural, and, in a manner, concupiscence is more natural. Because the nature of any man may be considered either as to the generic, or as to the specific nature, or again as to the particular temperament of the individual. If then we consider the generic nature, that is, the nature of this man considered as an animal, in this way concupiscence is more natural than anger, because it is from this very generic nature that man is inclined to desire those things which tend to preserve in him the life both of the species and of the individual. If, however, we consider the specific nature, that is, the nature of this man as a rational being, then anger is more natural to man than concupiscence, in so far as anger follows reason more than concupiscence does. Therefore the Philosopher says[5] that "to punish," which pertains to anger, "is more natural to man than meekness"; for it is natural to everything to rise up against things contrary and hurtful And if we consider the nature of the individual in respect of his particular temperament, in this way anger is more natural than concupiscence, for the reason that anger is prone to ensue from the natural tendency to anger, more than desire, or any other passion, is to ensue from a natural tendency to desire, which tendencies result from a man's individual temperament. Because disposition to anger is due to a bilious (*cholerica*) temperament; and of all the humours, the bile moves quickest, for it is like fire. Consequently he that is temperamentally disposed to anger is sooner incensed with anger, than he that is temperamentally disposed to desire, is inflamed with desire; and for this reason the Philosopher says[6] that a disposition to anger is more liable to be transmitted from parent to child than a disposition to desire.

Reply Obj 1. We may consider in man both the natural temperament on the part of the body, and the reason On the part of the bodily temperament, a man, considered specifically, does not naturally excel others either in anger or in any other passion, on account of the equability of his temperament. But other animals, in so far as their temperament recedes from this equability and approaches to an extreme disposition, are naturally disposed to some excess of passion, such as the lion in daring, the hound in anger, the hare in fear, and so forth On the part of reason, however, it is natural to man both to be angry and to be gentle, in so far as reason somewhat causes anger, by proclaiming the injury which causes anger, and somewhat appeases anger, in so far as the angry man does not listen wholly to the command of reason, as stated above (A. 4, Reply 3).

Reply Obj. 2 Reason itself belongs to the nature of man; therefore from the very fact that anger requires an act of reason, it follows that it is, in a manner, natural to man.

Reply Obj. 3. This argument regards anger and concupiscence on the part of the object.

ARTICLE 6. *Whether Anger Is More Grievous than Hatred?*

We proceed thus to the Sixth Article: It seems that anger is more grievous than hatred.

[1] *Rhetoric*, II, 3 (1380a6).
[2] Aristotle, VII, 6 (1149b1).
[3] *Ibid.* (1149b6).
[4] Aristotle, II, 1 (192b35; 193a32).
[5] *Ethics*, IV, 5 (1126a30).
[6] *Ibid*, VII, 6 (1149b6)

Objection 1. For it is written (Prov. 27. 4) that *anger hath no mercy, nor fury when it breaketh forth.* But hatred sometimes has mercy. Therefore anger is more grievous than hatred.

Obj. 2. Further, it is worse to suffer evil and to grieve for it, than merely to suffer it. But when a man hates, he is contented if the object of his hatred suffer evil; but the angry man is not satisfied unless the object of his anger know it and sorrow from it, as the Philosopher says.[1] Therefore, anger is more grievous than hatred.

Obj. 3. Further, a thing seems to be so much the more firm according as more things concur to set it up; thus a habit is all the more settled through being caused by several acts. But anger is caused by the concurrence of several passions, as stated above (A 1), but hatred is not. Therefore anger is more settled and more grievous than hatred.

On the contrary, Augustine, in his Rule,[2] compares hatred to "a beam," but anger to "a mote."

I answer that, The species and character of a passion are taken from its object. Now the object of anger and the object of hatred have the same subject; for, just as the hater wishes evil to him whom he hates, so does the angry man wish evil to him with whom he is angry. But there is a difference of aspect; for the hater desires evil to his enemy, as evil, but the angry man wishes evil to him with whom he is angry, not as evil but in so far as it has an aspect of good, that is, in so far as he estimates it as just, since it is a means of vengeance. Therefore also it has been said above (A. 2) that hatred implies application of evil to evil, while anger denotes application of good to evil. Now it is evident that to seek evil under the aspect of justice is a lesser evil than to seek evil to someone absolutely. Because to wish evil to someone under the aspect of justice may be according to the virtue of justice, if it be in conformity with the command of reason; and anger fails only in this, that it does not obey the precept of reason in taking vengeance Consequently it is evident that hatred is far worse and graver than anger.

Reply Obj. 1. In anger and hatred two points may be considered: namely, the thing desired, and the intensity of the desire. As to the thing desired, anger has more mercy than hatred has. For since hatred desires another's evil for evil's sake, it is satisfied with no particular measure of evil, because those things that are desired for their own sake, are desired without measure, as the Philosopher states,[3] instancing a miser with regard to riches. Hence it is written (Ecclus. 12. 16): *An enemy . . . if he find an opportunity, will not be satisfied with blood.* Anger, on the other hand, seeks evil only under the aspect of a just means of vengeance. Consequently when the evil inflicted goes beyond the measure of justice according to the estimate of the angry man, then he has mercy. Therefore the Philosopher says[4] that "the angry man is appeased if many evils befall, whereas the hater is never appeased "

As to the intensity of the desire, anger excludes mercy more than hatred does, because the movement of anger is more impetuous, through the heating of the bile. Hence the passage quoted continues: *Who can bear the violence of one provoked?*

Reply Obj 2. As stated above, an angry man wishes evil to someone in so far as this evil is a means of just vengeance. Now vengeance is wrought by the infliction of a punishment, and the notion of punishment consists in being contrary to the will, painful, and inflicted for some fault. Consequently an angry man desires this that the person whom he is hurting may feel it and be in pain and know that this has been brought upon him on account of the harm he has done the other The hater, on the other hand, cares not for all this, since he desires another's evil as such It is not true, however, that an evil is worse through giving pain, because "injustice and imprudence, although evil," yet, being voluntary, "do not grieve those in whom they are," as the Philosopher observes.[5]

Reply Obj 3. That which proceeds from several causes, is more settled when these causes are of one kind; but it may be that one cause prevails over many others. Now hatred ensues from a more lasting cause than anger does. For anger arises from a disturbance of the soul due to the wrong inflicted, but hatred ensues from a disposition in a man by reason of which he considers that which he hates to be contrary and hurtful to him. Consequently, as passion is more transitory than disposition or habit, so anger is less lasting than hatred, although hatred itself is a passion ensuing from this disposition. Hence the Philosopher says[6] that "hatred is more incurable than anger."

[1] *Rhetoric*, II, 4 (1382a8).
[2] *Epist.*, CCXI (PL 33, 964).
[3] *Politics*, I, 9 (1257b25); cf. II, 7 (1267b4).
[4] *Rhetoric*, II, 4 (1382a14).
[5] *Ibid.*, II, 4 (1382a11).
[6] *Ibid.* (1382a7).

ARTICLE 7. *Whether Anger Is Only Towards Those to Whom One Has a Relation of Justice?*

We proceed thus to the Seventh Article: It seems that anger is not only towards those to whom one has a relation of justice.

Objection 1. For there is no justice between man and irrational beings. And yet sometimes one is angry with irrational beings; thus, out of anger, a writer throws away his pen, or a rider strikes his horse. Therefore anger is not only towards those to whom one has a relation of justice.

Obj. 2. Further, "there is no justice towards oneself . . . nor is there justice towards one's own."[1] But sometimes a man is angry with himself, for instance, a penitent, on account of his sin; hence it is written (Ps. 4. 5): *Be ye angry and sin not.* Therefore anger is not only towards those with whom one has a relation of justice.

Obj. 3. Further, justice and injustice can be of one man towards an entire class, or a whole community; for instance, when the state injures an individual. But anger is not towards a class but only towards an individual, as the Philosopher states.[2] Therefore, properly speaking, anger is not towards those with whom one is in relation of justice or injustice.

The contrary, however, may be gathered from the Philosopher.[3]

I answer that, As stated above (A 6), anger desires evil as being a means of just vengeance. Consequently, anger is towards those to whom we are just or unjust; for vengeance is an act of justice, and to inflict injury is an act of injustice. Therefore both on the part of the cause, namely, the harm done by another, and on the part of the vengeance sought by the angry man, it is evident that anger concerns those to whom one is just or unjust.

Reply Obj. 1. As stated above (A. 4, Reply 2), anger, though it follows an act of reason, can nevertheless be in dumb animals that are devoid of reason, in so far as through their natural instinct they are moved by their imagination to something like rational action. Since then in man there is both reason and imagination, the movement of anger can be aroused in man in two ways. First, when only his imagination proclaims the injury, and in this way, man is aroused to a movement of anger even against irrational and inanimate beings, which movement is like that which occurs in animals against anything that injures them. Secondly, by the reason proclaiming the injury; and thus, according to the Philosopher,[4] "it is impossible to be angry with insensible things, or with the dead," both because they feel no pain, which is, above all, what the angry man seeks in those with whom he is angry, and because there is no question of vengeance on them, since they can do us no harm

Reply Obj 2 As the Philosopher says,[5] metaphorically speaking there is a certain justice and injustice between a man and himself, in so far as the reason rules the irascible and concupiscible parts of the soul. And in this sense a man is said to be avenged on himself, and consequently, to be angry with himself But properly, and *per se,* a man is never angry with himself.

Reply Obj 3 The Philosopher assigns as one difference between hatred and anger, that "hatred may be felt towards a class, as we hate the entire class of thieves, while anger is directed only towards an individual."[6] The reason is that hatred arises from our considering a quality as disagreeing with our disposition, and this may refer to a thing in general or in particular. Anger, on the other hand, ensues from someone having injured us by his action. Now all actions are the deeds of individuals, and consequently anger is always pointed at an individual When the whole community hurts us, the whole community is counted as one individual

ARTICLE 8. *Whether the Species of Anger Are Suitably Assigned?*

We proceed thus to the Eighth Article: It seems that Damascene (*De Fide Orthod.* ii, 16)[7] unsuitably assigns three species of anger,—wrath, ill-will and rancour

Objection 1. For no genus derives its specific differences from accidents But these three are diversified in respect of an accident; for the beginning of the movement of anger is called wrath (χόλος), if anger continue it is called ill-will (μῆνις), while rancour (κότος) is anger waiting for an opportunity of vengeance. Therefore these are not different species of anger

Obj. 2. Further, Cicero says (*Quæst. Tusc.* iv, 9)[8] that "*excandescentia* (irascibility) is what

[1] Aristotle, *Ethics,* v. 6 (1134[b]12).
[2] *Rhetoric,* II, 4 (1382[a]4).
[3] *Ibid.,* II, 2, 3 (1378[a]31; 1380[a]5).
[4] *Ibid.,* II, 3 (1380[b]24).
[5] *Ethics,* v, 11 (1138[b]5).
[6] *Rhetoric,* II, 4 (1382[a]4).
[7] PG 94, 933; also Nemesius, *De Nat. Hom.,* XXI (PG 40, 692); cf. the doctrine of the stoics in Stobaeus, *Eclogae,* II, 6 (p. 583), and Diogenes Laertius, *De Vita et Mor. Philosoph.,* VII, 144 (DD 183).
[8] DD IV, 28.

the Greeks call θυμῶσις, and is a kind of anger that arises and subsides intermittently"; while according to Damascene (*ibid.*) θυμῶσις is the same as κότος (rancour) Therefore κότος does not bide its time for taking vengeance, but in course of time spends itself.

Obj 3. Further, Gregory (*Moral.* xxi, 5)[1] gives three degrees of anger, namely, "anger without utterance, anger with utterance, anger with perfection of speech," corresponding to the three degrees mentioned by Our Lord (Matt. 5. 22): *Whosoever is angry with his brother* (thus implying anger without utterance), and then, *whoever shall say to his brother, "Raca"* (implying anger with utterance yet without full expression), and lastly, *whoever shall say "Thou fool"* (where we have perfection of speech) Therefore Damascene's division is imperfect, since it takes no account of utterance.

On the contrary stands the authority of Damascene (*loc cit*) and Gregory of Nyssa (Nemesius, *De Nat Hom* xxi)[2]

I answer that, The species of anger given by Damascene and Gregory of Nyssa are taken from those things which give increase to anger. This happens in three ways First, from the facility of the movement itself, and he calls this kind of anger "bile" (*fel*, χόλος) because it is quickly aroused Secondly, on the part of the grief that causes anger, and which dwells some time in the memory; this pertains to "ill-will" (*mania*, μῆνις), which is derived from the verb to dwell (*maneo*, μένειν) Thirdly, on the part of that which the angry man seeks, namely, vengeance; and this pertains to "rancour" (*furor*, κότος), which never rests until it is avenged Hence the Philosopher calls some angry persons "choleric" (*acutus*, ἀκρόχολοι), because they are easily angered; some he calls "bitter" (*amarus*, πικροί), because they retain their anger for a long time; and some he calls "ill-tempered" (*difficilis*, χαλεποί), because they never rest until they have retaliated[3]

Reply Obj. 1 All those things which give anger some kind of perfection are not altogether accidental to anger, and consequently nothing prevents them from causing a specific difference of anger.

Reply Obj. 2. Irascibility, which Cicero mentions seems to pertain to the first species of anger, which consists in a certain quickness of temper, rather than to rancour (*furor*). And there is no reason why the Greek θυμῶσις, which is denoted by the Latin *furor*, should not signify both quickness to anger, and firmness of purpose in being avenged.

Reply Obj. 3 These degrees are distinguished according to various effects of anger, and not according to degrees of perfection in the very movement of anger

[1] PL 76, 194 [2] PG 40, 692.
[3] *Ethics*, IV, 5 (1268[a]18).

QUESTION XLVII

OF THE CAUSE THAT PROVOKES ANGER, AND THE REMEDIES OF ANGER

(In Four Articles)

WE must now consider the cause that provokes anger, and its remedies. Under this head there are four points of inquiry. (1) Whether the motive of anger is always something done against the one who is angry? (2) Whether slight or contempt is the sole motive of anger? (3) Of the cause of anger on the part of the angry person. (4) Of the cause of anger on the part of the person with whom one is angry.

ARTICLE 1 *Whether the Motive of Anger Is Always Something Done Against the One Who Is Angry?*

We proceed thus to the First Article: It would seem that the motive of anger is not always something done against the one who is angry.

Objection 1 Because man, by sinning, can do nothing against God, for it is written (Job 35. 6) *If thy iniquities be multiplied, what shalt thou do against Him?* And yet God is spoken of as being angry with man on account of sin, according to Ps 105 40: *The Lord was exceedingly angry with His people* Therefore it is not always on account of something done against him that a man is angry.

Obj. 2 Further, anger is a desire for vengeance But one may desire vengeance for things done against others. Therefore we are not always angry on account of something done against us.

Obj 3. Further, as the Philosopher says,[4] man is angry especially with those "who despise what he takes a great interest in, thus men who study philosophy are angry with those who despise philosophy," and so forth. But contempt of philosophy does not harm the philosopher. Therefore it is not always a harm done to us that makes us angry

Obj. 4 Further, he that holds his tongue when another insults him, provokes him to greater anger, as Chrysostom observes (*Hom.*

[4] *Rhetoric*, II, 2 (1379[a]33).

xxii *in Ep. ad Rom.*).[1] But by holding his tongue he does nothing against the other. Therefore a man is not always provoked to anger by something done against him.

On the contrary, The Philosopher says[2] that "anger is always due to something done to oneself; but hatred may arise without anything being done to us, for we hate a man simply because we think him such."

I answer that, As stated above (Q. XLVI, A. 6), anger is the desire to hurt another for the purpose of just vengeance. Now unless some injury has been done, there is no question of vengeance. Nor does any injury provoke one to vengeance, but only that which is done to the person who seeks vengeance. For just as everything naturally seeks its own good, so does it naturally repel its own evil. But injury done by anyone does not affect a man unless in some way it be something done against him. Consequently the motive of a man's anger is always something done against him.

Reply Obj 1. We speak of anger in God, not as of a passion of the soul but as of a judgment of justice, according as He wills to take vengeance on sin. Because the sinner, by sinning, cannot do God any actual harm. But so far as he himself is concerned, he acts against God in two ways. First, in so far as he despises God in His commandments Secondly, in so far as he harms himself or another, which injury pertains to God, since the person injured is an object of God's providence and protection.

Reply Obj. 2 If we are angry with those who harm others and seek to be avenged on them, it is because those who are injured belong in some way to us, either by some kinship or by friendship, or at least because of the nature we have in common.

Reply Obj. 3. When we take a very great interest in a thing, we look upon it as our own good, so that if anyone despise it, it seems as though we ourselves were despised and injured.

Reply Obj. 4 Silence provokes the insulter to anger when he thinks it is due to contempt, as though his anger were slighted; and a slight is an action.

ARTICLE 2. *Whether the Sole Motive of Anger Is Slight or Contempt?*

We proceed thus to the Second Article: It would seem that slight or contempt is not the sole motive of anger.

Objection 1. For Damascene says (*De Fide Orthod.* ii, 16)[3] that "we are angry when we suffer, or think that we are suffering, an injury." But one may suffer an injury without being despised or slighted. Therefore a slight is not the only motive of anger.

Obj. 2. Further, desire for honour and grief for a slight belong to the same subject. But dumb animals do not desire honour. Therefore they are not grieved by being slighted. And yet they are roused to anger when wounded, as the Philosopher says.[4] Therefore a slight is not the sole motive of anger.

Obj 3. Further, the Philosopher gives many other causes of anger,[5] for instance, being forgotten by others; that others should rejoice in our misfortunes; that they should make known our evils; being hindered from doing as we like. Therefore being slighted is not the only motive for being angry.

On the contrary, The Philosopher says[6] that "anger is a desire, with sorrow, for vengeance, on account of a seeming slight done unbecomingly."

I answer that, All the causes of anger are reduced to slight For "slight is of three kinds," as stated in the *Rhetoric,*[7] namely, "contempt, despiteful treatment," that is, hindering one from doing one's will, and "insolence," and all motives of anger are reduced to these three. Two reasons may be assigned for this. First, because anger seeks another's hurt as being a means of just vengeance; and therefore it seeks vengeance in so far as it seems just. Now just vengeance is taken only for that which is done unjustly; hence that which provokes anger is always something considered in the light of an injustice. Hence the Philosopher says[8] that "men are not angry if they think that they have wronged some one and are suffering justly on that account; for there is no anger at what is just." Now injury is done to another in three ways: namely, through ignorance, through passion, and through choice. Then, most of all, a man does an injustice when he does it from choice, on purpose, or from deliberate malice, as stated in the *Ethics.*[9] Therefore we are most of all angry with those who, in our opinion, have hurt us on purpose. For if we think that some one has done us an injury through ignorance or through passion, either we are not angry with him at all, or very much less, for to do anything through ignorance or through pas-

[1] PG 60, 609. [2] *Rhetoric,* II, 4 (1382^{a}2).
[3] PG 94, 932. [4] *Ethics,* III, 8 (1116^{b}25).
[5] *Rhetoric,* II, 2 (1379^{a}9). [6] *Ibid.* (1378^{a}31).
[7] Aristotle, II, 2 (1378^{b}13).
[8] *Rhetoric,* II, 3 (1380^{b}16).
[9] Aristotle, V, 8 (1135^{b}24; 1136^{a}4).

sion takes away from the notion of injury, and to a certain extent calls for mercy and forgiveness. Those, on the other hand, who do an injury on purpose seem to sin from contempt; therefore we are angry with them most of all. Hence the Philosopher says[1] that "we are either not angry at all, or not very angry with those who have acted through anger, because they do not seem to have acted slightingly."

The second reason is because a slight is opposed to a man's excellence, for; "men think little of things that are not worth much"[2] Now we seek for some kind of excellence from all our goods. Consequently whatever injury is inflicted on us, in so far as it takes away from our excellence, seems to pertain to slight.

Reply Obj. 1. Any other cause, besides contempt, through which a man suffers an injury, takes away from the notion of injury; contempt or slight alone adds to the motive of anger, and consequently is of itself the cause of anger

Reply Obj. 2. Although a dumb animal does not seek honour as such, yet it naturally seeks a certain superiority, and is angry with anything that takes away from it

Reply Obj. 3 Each of those causes amounts to some kind of slight. Thus forgetfulness is a clear sign of slight esteem, for the more we think of a thing the more is it fixed in our memory. Again if a man does not hesitate by his remarks to give pain to another, this seems to show that he thinks little of him; and those too who show signs of hilarity when another is in misfortune, seem to care little about his good or evil. Again he that hinders another from carrying out his will, without deriving thereby any profit to himself, seems not to care much for his friendship. Consequently all those things, in so far as they are signs of contempt, provoke anger.

ARTICLE 3 *Whether a Man's Excellence Is the Cause of His Being Angry?*

We proceed thus to the Third Article: It would seem that a man's excellence is not the cause of his being more easily angry.

Objection 1. For the Philosopher says[3] that "some are angry especially when they are grieved, for instance, the sick, the poor, and those who are disappointed." But these things seem to pertain to defect. Therefore defect rather than excellence makes one prone to anger.

Obj. 2. Further, the Philosopher says[4] that "some are very much inclined to be angry when they are despised for some failing or weakness of the existence of which there are grounds for suspicion; but if they think they excel in those points, they do not trouble." But a suspicion of this kind is due to some defect. Therefore defect rather than excellence is a cause of a man being angry.

Obj. 3. Further, whatever pertains to excellence makes a man agreeable and hopeful. But the Philosopher says[5] that "men are not angry when they play, make jokes, or take part in a feast, nor when they are prosperous or successful, nor in moderate pleasures and well-founded hope." Therefore excellence is not a cause of anger.

On the contrary, The Philosopher says[6] that excellence makes men prone to anger.

I answer that, The cause of anger in the man who is angry may be taken in two ways. First in respect of the motive of anger, and thus excellence is the cause of a man being easily angered. Because the motive of anger is an unjust slight, as stated above (A 2) Now it is evident that the more excellent a man is, the more unjust is a slight offered him in the matter in which he excels. Consequently those who excel in any matter are most of all angry if they be slighted in that matter; for instance, a wealthy man in his riches, or an orator in his eloquence, and so forth.

Secondly, the cause of anger in the man who is angry may be considered on the part of the disposition produced in him by the motive mentioned above. Now it is evident that nothing moves a man to anger except a hurt that grieves him. But whatever pertains to defect is above all a cause of grief, since men who suffer from some defect are more easily hurt And this is why men who are weak, or subject to some other defect, are more easily angered, since they are more easily grieved.

This suffices for the *Reply to the First Objection*

Reply Obj 2. If a man be despised in a matter in which he evidently excels greatly, he does not consider himself the loser thereby, and therefore is not grieved, and in this respect he is less angered. But in another respect, in so far as he suffers a greater indignity through being despised, he has more reason for being angry; unless perhaps he thinks that he is envied or insulted not through contempt but through ignorance, or some other like cause.

[1] *Rhetoric*, II, 3 (1380[a]34)
[2] *Ibid*, II, 2 (1378[b]12)
[3] *Ibid*, II, 2 (1379[a]15).
[4] *Ibid.* (1379[a]36).
[5] *Ibid*, II, 3 (1380[b]3).
[6] *Ibid*, II, 9 (1380[b]12, 1387[b] 1)

Reply Obj. 3. All these things hinder anger in so far as they hinder sorrow. But in another respect they naturally provoke anger, because they make it more unbecoming to insult anyone.

Article 4. *Whether a Person's Defect Is a Reason for Being More Easily Angry with Him?*

We proceed thus to the Fourth Article: It would seem that a person's defect is not a reason for being more easily angry with him.

Objection 1 For the Philosopher says[1] that "we are not angry with those who confess and repent and humble themselves; on the contrary, we are gentle with them. Hence dogs do not bite those who sit down." But these things pertain to littleness and defect. Therefore littleness of a person is a reason for being less angry with him.

Obj. 2. Further, there is no greater defect than death. But anger ceases at the sight of death. Therefore defect of a person does not provoke anger against him.

Obj. 3. Further, no one thinks little of a man through his being friendly towards him. But we are more angry with friends if they offend us or refuse to help us; hence it is written (Ps. 54. 13): *If my enemy had reviled me I would verily have borne with it.* Therefore a person's defect is not a reason for being more easily angry with him.

On the contrary, The Philosopher says[2] that "the rich man is angry with the poor man, if the latter despise him; and in like manner the prince is angry with his subject."

I answer that, As stated above (AA. 2, 3), unmerited contempt more than anything else is a provocative of anger. Consequently deficiency or littleness in the person with whom we are angry tends to increase our anger, in so far as it adds to the unmeritedness of being despised. For just as the higher a man's position is, the more undeservedly he is despised, so the lower it is the less reason he has for despising. Thus a nobleman is angry if he be insulted by a peasant; a wise man, if by a fool; a master, if by a servant.

If, however, the littleness or deficiency lessens the unmerited contempt, then it does not increase but lessens anger. In this way those who repent of their ill-deeds and confess that they have done wrong, who are humbled and ask pardon, mitigate anger, according to Prov. 15. 1: *A mild answer breaketh wrath,* because, that is, they seem not to despise, but rather to think much of those before whom they humble themselves.

This suffices for the *Reply to the First Objection.*

Reply Obj. 2. There are two reasons why anger ceases at the sight of death. One is because the dead are incapable of sorrow and sensation, and this is chiefly what the angry seek in those with whom they are angered. Another reason is because the dead seem to have attained to the limit of evils. Hence anger ceases in regard to all who are grievously hurt, in so far as this hurt surpasses the measure of just retaliation.

Reply Obj. 3. To be despised by one's friends seems also a greater indignity. Consequently if they despise us by hurting or by failing to help, we are angry with them for the same reason for which we are angry with those who are beneath us.

QUESTION XLVIII

Of the Effects of Anger

(In Four Articles)

We must now consider the effects of anger, under which head there are four points of inquiry: (1) Whether anger causes pleasure? (2) Whether above all it causes fervour in the heart? (3) Whether above all it hinders the use of reason? (4) Whether it causes taciturnity?

Article 1. *Whether Anger Causes Pleasure?*

We proceed thus to the First Article: It would seem that anger does not cause pleasure.

Objection 1. Because sorrow excludes pleasure. But anger is never without sorrow, since, as stated in the *Ethics,*[3] "everyone that acts from anger, acts with pain." Therefore anger does not cause pleasure.

Obj. 2. Further, the Philosopher says[4] that "vengeance makes anger to cease, because it substitutes pleasure for pain"; from this we may gather that the angry man derives pleasure from vengeance, and that vengeance quells his anger. Therefore on the advent of pleasure, anger departs. Consequently anger is not an effect united with pleasure.

Obj. 3. Further, no effect hinders its cause, since it is conformed to its cause. But pleasure hinders anger, as stated in the *Rhetoric.*[5] Therefore pleasure is not an effect of anger.

[1] *Rhetoric,* II, 3 (1380^{a}13).
[2] *Ibid.,* II, 2 (1379^{a}1).
[3] Aristotle, VII, 6 (1149^{b}20).
[4] *Ethics,* IV, 5 (1126^{a}21).
[5] Aristotle, II, 3 (1380^{b}4).

On the contrary, The Philosopher quotes[1] the saying that anger is

"Sweet to the soul as honey to the taste."[2]

I answer that, As the Philosopher says,[3] pleasures, chiefly sensible and bodily pleasures, are remedies against sorrow, and therefore the greater the sorrow or anxiety, the more sensible are we to the pleasure which heals it, as is evident in the case of thirst which increases the pleasure of drink. Now it is clear from what has been said (Q. XLVII, AA. 1, 3), that the movement of anger arises from a wrong done that causes sorrow, for which sorrow vengeance is sought as a remedy. Consequently as soon as vengeance is present, pleasure follows, and so much the greater according as the sorrow was greater. Therefore if vengeance be really present, perfect pleasure ensues, entirely excluding sorrow, so that the movement of anger ceases. But before vengeance is really present, it becomes present to the angry man in two ways: in one way, by hope, because none is angry unless he hopes for vengeance, as stated above (Q. XLVI, A. 1); in another way, by thinking of it continually, for to everyone that desires a thing it is pleasant to dwell on the thought of what he desires, and thus the imaginings of dreams are pleasant. Accordingly an angry man takes pleasure in thinking about vengeance. This pleasure, however, is not perfect, so as to banish sorrow and consequently anger.

Reply Obj. 1. The angry man does not grieve and rejoice at the same thing; he grieves for the wrong done, while he takes pleasure in the thought and hope of vengeance. Consequently sorrow is to anger as its beginning, while pleasure is the effect or term of anger.

Reply Obj. 2. This argument holds in regard to pleasure caused by the real presence of vengeance, which banishes anger altogether.

Reply Obj. 3 Pleasure that precedes hinders sorrow from ensuing, and consequently is a hindrance to anger. But pleasure felt in taking vengeance follows from vengeance.

ARTICLE 2. *Whether Anger Above All Causes Fervour in the Heart?*

We proceed thus to the Second Article: It would seem that fervour is not above all the effect of anger.

Objection 1. For fervour, as stated above (Q. XXVIII, A. 5; Q. XXXVII, A. 2), belongs to love. But love, as above stated (Q. XXVII, A. 4), is the beginning and cause of all the passions. Since then the cause is more powerful than its effect, it seems that anger is not the chief cause of fervour.

Obj. 2. Further, those things which of themselves arouse fervour increase as time goes on; thus love grows stronger the longer it lasts. But in course of time anger grows weaker; for the Philosopher says[4] that "time puts an end to anger." Therefore fervour is not the proper effect of anger.

Obj. 3. Further, fervour added to fervour produces greater fervour. But the addition of a greater anger banishes already existing anger, as the Philosopher says.[5] Therefore anger does not cause fervour.

On the contrary, Damascene says (*De Fide Orth.* ii, 16)[6] that "anger is fervour of the blood around the heart, resulting from an exhalation of the bile."

I answer that, As stated above (Q. XLIV, A. 1), the bodily change that occurs in the passions of the soul is proportionate to the movement of the appetite. Now it is evident that every appetite, even the natural appetite, tends with greater force to repel that which is contrary to it, if it be present; hence we see that hot water freezes harder, as though the cold acted with greater force on the hot object. Since then the appetitive movement of anger is caused by some injury inflicted, as by a contrary that is present, it follows that the appetite tends with great force to repel the injury by the desire of vengeance; and hence ensues great vehemence and impetuosity in the movement of anger. And because the movement of anger is not one of recoil, which corresponds to the action of cold, but one of prosecution, which corresponds to the action of heat, the result is that the movement of anger produces fervour of the blood and vital spirits around the heart, which is the instrument of the soul's passions. And hence it is that, on account of the heart being so disturbed by anger especially those who are angry betray signs of it in their outer members. For, as Gregory says (*Moral.* v, 45)[7] "the heart that is inflamed with the stings of its own anger beats quick, the body trembles, the tongue stammers, the countenance takes fire, the eyes grow fierce, they that are well known are not recognized. With the mouth indeed he shapes a sound, but the understanding knows not what it says."

[1] *Ibid.*, II, 2 ($1378^{b}5$).
[2] *Iliad*, XVIII, 109, 110 (trans. Pope).
[3] *Ethics*, VII, 14 ($1154^{a}27$).
[4] *Rhetoric*, II, 3 ($1380^{b}6$).
[5] *Ibid.* ($1380^{b}10$).
[6] PG 94, 932; also in Nemesius, *De Nat Hom.*, XXI (PG 40, 692); cf. Aristotle, *Soul*, I, 1 ($403^{a}31$), also Plotinus, IV *Ennead*, IV, 28 (BU IV, 130).
[7] PL 75, 724.

Reply Obj. 1. "Love itself is not felt so keenly as in the absence of the beloved," as Augustine observes (*De Trin.* x, 12).[1] Consequently when a man suffers from a hurt done to the excellence that he loves, he feels his love for it the more, the result being that his heart is moved with greater fervour to remove the hindrance to the object of his love, so that anger increases the fervour of love and makes it to be felt more.

Nevertheless, the fervour arising from heat differs according as it is to be referred to love or to anger. Because the fervour of love has a certain sweetness and gentleness, for it tends to the good that one loves, and hence it is likened to the warmth of the air and of the blood. For this reason sanguine temperaments are more inclined to love; and hence the saying that love springs from the liver, because of the blood being formed there. On the other hand, the fervour of anger has a certain bitterness with a tendency to destroy, for it seeks to be avenged on the contrary evil; hence it is likened to the heat of fire and of the bile, and for this reason Damascene says (*loc. cit.*) that it "results from an exhalation of the bile whence it takes its name (χολή)."

Reply Obj. 2 Time, of necessity, weakens all those things the causes of which are impaired by time. Now it is evident that memory is weakened by time, for things which happened long ago easily slip from our memory. But anger is caused by the memory of a wrong done Consequently the cause of anger is impaired little by little as time goes on, until at length it vanishes altogether. Moreover a wrong seems greater when it is first felt, and our estimate of it is gradually lessened the farther the sense of present wrong recedes into the past. The same applies to love, so long as the cause of love is in the memory alone; hence the Philosopher says[2] that "if a friend's absence lasts long, it seems to make men forget their friendship." But in the presence of a friend, the cause of friendship is continually being multiplied by time, therefore the friendship increases; and the same would apply to anger, were its cause continually multiplied.

Nevertheless the very fact that anger soon spends itself proves the strength of its fervour, for as a great fire is soon spent having burnt up all the fuel, so too anger, by reason of its vehemence, soon dies away.

Reply Obj. 3. Every power that is divided in several parts is weakened. Consequently if a man who is already angry with one becomes angry with another, by this very fact his anger with the former is weakened Especially is this so if his anger in the second case is greater, because the wrong done which aroused his former anger will, in comparison with the second wrong, which is considered greater, seem to be of little or no account.

[1] PL 42, 984.
[2] *Ethics*, VIII, 5 (1157^{b}11).

ARTICLE 3. *Whether Anger Above All Hinders the Use of Reason?*

We proceed thus to the Third Article: It would seem that anger does not hinder the use of reason.

Objection 1. Because that which presupposes an act of reason, does not seem to hinder the use of reason. But anger listens to reason, as stated in the *Ethics*.[3] Therefore anger does not hinder reason.

Obj. 2. Further, the more the reason is hindered, the less does man show his thoughts. But the Philosopher says[4] that "an angry man is not cunning but is open" Therefore anger does not seem to hinder the use of reason, as concupiscence does; for concupiscence is cunning, as he also states[5]

Obj 3 Further, the judgment of reason becomes more evident by juxtaposition of the contrary, because contraries stand out more clearly when placed beside one another But this also increases anger, for the Philosopher says[6] that "men are more angry if they receive contrary treatment; for instance, honourable men, if they be dishonoured," and so forth. Therefore the same cause increases anger and aids the judgment of reason. Therefore anger does not hinder the judgment of reason.

On the contrary, Gregory says (*Moral.* v, 25)[7] that "anger withdraws the light of understanding, while by agitating it troubles the mind."

I answer that, Although the mind or reason makes no use of a bodily organ in its proper act, yet, since it needs certain sensitive powers for the execution of its act, the acts of which powers are hindered when the body is disturbed, it follows of necessity that any disturbance in the body hinders even the judgment of reason, as is clear in the case of drunkenness or sleep. Now it has been stated (A. 2) that anger, above all, causes a bodily disturbance in the region of the heart, so much so as to affect even the outward members. Consequently, of all the passions,

[3] Aristotle, VII, 6 (1149^{a}25).
[4] *Ethics*, VII, 6 (1149^{b}14).
[5] *Ibid.*
[6] *Rhetoric*, II, 2 (1379^{b}4).
[7] PL 75, 724.

anger is the most manifest obstacle to the judgment of reason, according to Ps. 30. 10: *My eye is troubled with wrath.*

Reply Obj. 1. The beginning of anger is in the reason as regards the appetitive movement, which is the formal element of anger. But the passion of anger forestalls the perfect judgment of reason, as though it listened but imperfectly to reason, on account of the agitation of the heart urging to instant action, which agitation is the material element of anger. In this respect it hinders the judgment of reason.

Reply Obj. 2. An angry man is said to show his thoughts not because it is clear to him what he ought to do, but because he acts openly, without thought of hiding anything. This is due partly to the reason being hindered so that it is not able to discern what should be hidden and what done openly, nor to devise the means of hiding, and partly to the dilatation of the heart which pertains to magnanimity which is an effect of anger; hence the Philosopher says of the magnanimous man[1] that "he is open in his hatreds and his friendships . . . and speaks and acts openly."—Concupiscence, on the other hand, is said to lie low and to be cunning, because, in many cases, the pleasurable things that are desired, savour of shame and voluptuousness, in which man does not wish to be seen. But in those things that savour of manliness and excellence, such as matters of vengeance, man seeks to be in the open.

Reply Obj. 3. As stated above (Reply 1) the movement of anger begins in the reason, and therefore the juxtaposition of one contrary with another facilitates the judgment of reason, on the same grounds as it increases anger. For when a man who is possessed of honour or wealth suffers a loss in them, the loss seems all the greater, both on account of the contrast, and because it was unforeseen Consequently it causes greater grief, just as a great good, through being received unexpectedly, causes greater delight. And in proportion to the increase of the grief that precedes, anger is increased also.

Article 4 *Whether Anger Above All Causes Taciturnity?*

We proceed thus to the Fourth Article: It would seem that anger does not cause taciturnity.

Objection 1. Because taciturnity is opposed to speech. But increase of anger conduces to speech, as is evident from the degrees of anger laid down by Our Lord (Matt. 5. 22), where He says: *Whosoever is angry with his brother;* and . . . *whosoever shall say to his brother, "Raca";* and . . . *whosoever shall say to his brother, "Thou fool."* Therefore anger does not cause taciturnity.

Obj. 2. Further, through failing to obey reason, man sometimes breaks out into disordered words; hence it is written (Prov 25. 28): *As a city that lieth open and is not compassed with walls, so is a man that cannot refrain his own spirit in speaking.* But anger, above all, hinders the judgment of reason, as stated above (A. 3). Consequently above all it makes one break out into disordered words. Therefore it does not cause taciturnity.

Obj. 3. Further, it is written (Matt. 12. 34): *Out of the abundance of the heart the mouth speaketh.* But anger, above all, causes a disturbance in the heart, as stated above (A. 2). Therefore, above all, it conduces to speech. Therefore it does not cause taciturnity.

On the contrary, Gregory says (*Moral.* V, 45)[2] that "when anger does not vent itself outwardly by the lips, inwardly it burns the more fiercely."

I answer that, As stated above (A. 3; Q. XLVI, A. 4), anger both follows an act of reason, and hinders the reason; and in both respects it may cause taciturnity. On the part of the reason, when the judgment of reason prevails so far that although it does not curb the appetite in its inordinate desire for vengeance, yet it curbs the tongue from unbridled speech. Therefore Gregory says (*ibid*): "Sometimes when the mind is disturbed, anger, as if in judgment, commands silence."—On the part of the impediment to reason because, as stated above (A. 2), the disturbance of anger reaches to the outward members, and chiefly to those members which reflect more distinctly the emotions of the heart, such as the eyes, face and tongue; hence, as observed above (A. 2), "the tongue stammers, the countenance takes fire, the eyes grow fierce." Consequently anger may cause such a disturbance that the tongue is altogether deprived of speech, and taciturnity is the result.

Reply Obj. 1. Anger sometimes goes so far as to hinder the reason from curbing the tongue; but sometimes it goes yet further, so as to prevent the movement of the tongue and other outward members.

And this suffices for the *Reply to the Second Objection.*

Reply Obj. 3. The disturbance of the heart

[1] *Ethics,* IV, 3 (1124[b]26).

[2] PL 75, 725.

may sometimes superabound to the extent that the movements of the outward members are hindered by the disordered movement of the heart. Thence ensue taciturnity and immobility of the outward members, and sometimes even death. If, however, the disturbance be not so great, then *out of the abundance of the heart* thus disturbed, the mouth proceeds to speak.
