PREFACE

THE system adopted for classifying books in this Library is the well known 'Decimal Classification' invented by Mr. Melvil Dewey. In this system Arabic numerals instead of letters are used to denote notation of a subject. A decimal point for each sub-section of a subject is added to give each subject a separate number in classification.

This Catalogue is intended to help readers to find quickly any particular book or books they may wish to consult. It will also make it possible to know for certain, at a glance, what books are contained in the Library on a given subject.

Books are arranged in this catalogue as they stand on the shelves of the Library. This catalogue has an index at the end to show under what class books on a particular subject may be found. Subjects are arranged in alphabetical order. Reference to a particular subject in the Index will give numbers under which the books on that subject can be found on the shelves.
