Scott Fitzgerald; copyright 1926 by Charles Scribner's Sons; used by permission of the publishers.

PRINTED IN THE UNITED STATES OF AMERICA

PREFACE

THE PURPOSE of the editors of this anthology in this, its third revision, is to supply for introductory college courses in American literature a body of selections from the chief writers of the eighteenth and nineteenth centuries, and of representative writers of the seventeenth and twentieth centuries. The alteration from the original concentration of the book upon the eighteenth and nineteenth centuries seems to be made necessary by changes in the introductory course.

Nevertheless, it is still the conviction of the editors that the introductory course in American literature has suffered from trying to include too much, with the result that the student leaves the subject in a confused state of mind because he has tried to study too many authors in too short a time. In making this revision the authors hope that they have clung to the original purpose of the collection.

The editors trust that the selections are representative of various important phases of the authors chosen. The authors representing the eighteenth and nineteenth centuries are, they hope, major American writers in the sense that they constitute the core of the national letters. The authors representing the seventeenth and twentieth centuries are, they trust, representative, even though the question of greatness and genius in their cases is under perpetual debate.

Great care has been taken to establish reputable texts. Without prejudice to the labors of others, it has seemed to the editors that in no field is the need of establishing reputable texts more necessary than in the field of American literature. The editors have, however, been catholic in their choices, sometimes printing first editions, sometimes the latest versions to appear in an author's lifetime, sometimes a posthumous version appearing close to the date of the author's demise. They have also preserved the punctuation and spelling of the originals. To many, this will seem pedantry; but the flavor and cadence of literature are often changed for the worse when an editor "improves" or modernizes the punctuation or spelling of the original. Fortunately for the beginning student, American literature is still too young not to be readily grasped in its verbal meanings, even when the spelling is not twentieth-century spelling and the punctuation is that older, rhetorical punctuation we have abandoned under the impact of the newspaper and the linotype machine.

The texts have been heavily annotated where they need it. Years of experience in teaching have shown the editors that little general information can be expected of all members of any class, and the editors have therefore preferred to err on the side of generosity. If a footnote seems obvious, let the reader pleasantly remember that it may not be obvious to those less well informed than he is.

There is, of course, a school which holds that it is the business of the student to look up references. Doubtless there is something to be said for this Spartan

practice, but there is not very much to be said for it. In the first place, references are not always easy to look up—as the editors have discovered to their sorrow; in the second place, students do not always look them up; and in the third place, no adult expects to run constantly to a dictionary or an encyclopaedia when he is trying to get pleasure from a masterpiece. Why should the student, to whom the teacher is trying to make reading attractive, be subjected to "busy work" that the adult does not perform? The editors believe that literature will be attractive in proportion as its meaning is made clear. To that end they have given the meanings of all obscure words and phrases where they have understood them, as well as the meanings of all words, the sense of which has been altered with the passage of time. They have also explained all the allusions they could, and they have tried to fix the sources of the quotations with which good writers abound. If an allusion or a reference goes unexplained, it is because the editors could not, after reasonable search, pin it down with accuracy.

In planning the contents of this collection the editors have chosen selections which should leave the student free to read such novels as *The Scarlet Letter, Typee, Moby Dick, Huckleberry Finn, The Rise of Silas Lapham,* or *The Portrait of a Lady,* which cannot be adequately represented in an anthology.

It is a pleasure to record the generous spirit of co-operation shown by the trustees and officials of the Henry E. Huntington Library in permitting the editors to print for the first time an accurate transcript of that portion of Franklin's *Autobiography* included in this book; and to acknowledge also their help in the matter of Poe. Equally cordial thanks should be given the officials of the University of Michigan Library, particularly Miss Ella M. Hymans and her assistant, Miss Pauline G. Waite, who, in the Reserved Book Room of that institution, have charge of a remarkable collection of American first editions. The unfailing patience and courtesy of Miss Hilda M. Rankin, Miss Mary E. Mixer, and their colleagues in the Reference Library have helped to make scholarly research a pleasure. The co-operation of the library officials of Southern Methodist University is also gratefully acknowledged.

CONTENTS

JOHN SMITH (1579/80-1631) 1
From The Generall Historie of Virginia, New England, & the Summer Isles 3

EDWARD TAYLOR (1645?-1729) 20

Out of the Rolling Ocean the Crowd 1104
Native Moments 1105
The Base of All Metaphysics 1105
I Saw in Louisiana a Live-Oak Growing 1106
I Hear It Was Charged against Me 1106
Song of the Open Road 1106
Crossing Brooklyn Ferry 1113
Pioneers! O Pioneers! 1117
Out of the Cradle Endlessly Rocking 1120
On the Beach at Night Alone 1125
When I Heard the Learn'd Astronomer 1125
Beat! Beat! Drums! 1126
Cavalry Crossing a Ford 1126
Come up from the Fields Father 1127
Give Me the Splendid Silent Sun 1128
Reconciliation 1129
When Lilacs Last in the Dooryard Bloom'd 1129
O Captain! My Captain! 1135
There Was a Child Went Forth 1136
The City Dead-House 1137
Passage to India 1138
The Last Invocation 1145
To a Locomotive in Winter 1145
The Mystic Trumpeter 1146
Spirit That Form'd This Scene 1148
Years of the Modern 1148
The Calming Thought of All 1149
Good-bye, My Fancy! 1149
Democratic Vistas 1150
EMILY DICKINSON (1830-1886) 1169
Success is counted sweetest 1171
If you were coming in the fall 1171
I cannot live with you 1171
Not with a club the heart is broken 1172
Pain has an element of blank 1172
A death-blow is a life-blow to some 1172
Heart, we will forget him! 1172

My life closed twice before its close 1173
The soul selects her own society 1173
A wife at daybreak I shall be 1173
Much madness is divinest sense 1173
Alter? When the hills do 1173
They say that "time assuages" 1173
I taste a liquor never brewed 1173
He preached upon "breadth" till it argued him narrow 1174
I know that he exists 1174
It's such a little thing to weep 1174
I dreaded that first robin so 1174
How happy is the little stone 1175
The bustle in a house 1175
This quiet Dust was Gentlemen and Ladies 1175
I'm nobody! Who are you? 1175
Some keep the Sabbath going to church 1175
The sky is low, the clouds are mean 1175
To hear an oriole sing 1175
To fight aloud is very brave 1176
What soft, cherubic creatures 1176
He ate and drank the precious words 1176
A thought went up my mind to-day 1176
I had been hungry all the years 1176
After great pain a formal feeling comes 1177
All overgrown by cunning moss 1177
These are the days when birds come back 1177
To make a prairie it takes a clover and one bee 1177
Again his voice is at the door 1178
We learned the whole of love 1178
Crumbling is not an instant's act 1178
You cannot make remembrance grow 1178
This is my letter to the world 1178

JOHN SMITH

1579/80-1631

I. EUROPEAN SOLDIER OF FORTUNE (1579/80–1606)

1579/80 Born in Willoughby, Lincolnshire, the son of George and Alice Smith, baptized January 9, 1579, old style.

1596 Upon the death of his father, he entered into his property, and was apprenticed to Thomas Sendall, merchant of Lynn, but ran away.

1596–1599 An adventurer and soldier, partly in the French armies and partly in the Dutch armies.

1600 Shipwrecked off the coast of Northumberland; returned to Willoughby and lived in a "Pavillion of boughes" in a field, studying the art of war.

1600–1601 Military service and adventures in France, the Mediterranean, Italy, and Austria, according to his account.

1601–1602 Service in Hungary and Transylvania against the Turks; his supposed single-handed combats against three Turks at the siege of Canizza brought him a coat of arms granted by Sigismund Bathori, Duke of Transylvania, and registered by the English Garter King-at-Arms.

1602–1603 Taken captive by the Turks at the Battle of Rothenthurm Pass (Nov. 18, 1602), he passed into slavery in Turkey, but escaped into Russia, getting as far as the Crimea, and then returned to Hungary, if his account is accurate.

1604 To Europe, probably being captured by Mediterranean pirates on the way. Return to England, probably to London.

II. AMERICAN EXPLORER AND LEADER (1606–1614)

1606 December, sailed with others in an expedition (three ships) from England to found a colony in Virginia, under sealed orders.

1607 May 24, disembarked at Jamestown, one of 104 colonists. Officially a member of the governing Council, he was not permitted to serve until June 20. Made valuable explorations of the nearby rivers and lands, and according to his own account escaped death at the hands of Powhatan through the intervention of Pocahontas.

1608 January, tried for the loss by death of two men and sentenced to be hanged. The sentence was set aside and Smith restored to his office upon the arrival of Captain Christopher Newport from England, with reinforcements.

1608–1609 President of the Council. During the winter he preserved the colony from starvation. *A True Relation* published in London, 1608.

1609 October, he was injured by an explosion of gunpowder while exploring Chesapeake Bay. Returned to England.

1612 *A Map of Virginia* published at Oxford.

1614 Sent to explore the New England coast. Captured by pirates, but returned safely to London.

III. THE THEORIST OF COLONIZATION (1614–1631)

1615 Smith seems to have settled permanently in London, a friend of Purchas, Dr. John Dee, Dr. William Simmonds, and other members of the "imperialist" or Greater England group.
1616 Published *A Description of New England.*
1620 Published *New Englands Trials* (second edition, much altered, 1622).
1624 Published *The Generall Historie of Virginia, New-England, & the Summer Isles.*
1626 Published *An Accidence or The Path-way to Experience* (also known as *The Seaman's Grammar*), sometimes called the first elementary textbook on navigation.
1630 Published *True Travels, Adventures, & Observations of Captaine Iohn Smith.*
1631 Published *Advertisements For the unexperienced Planters of New-England, or anywhere.*
1631 June 21, died in London.

BIOGRAPHIES: Besides Smith's disputable account of his own career, see Charles Dudley Warner, *Captain John Smith,* Holt, 1881; E. Keble Chatterton, *Captain John Smith,* Harper, 1927; John Gould Fletcher, *John Smith—Also Pocahontas,* Brentano, 1928. The dispute over the authenticity of Smith's accounts of his own achievements can be traced by referring to the bibliography at the end of the sketch of his life in the *Dictionary of American Biography,* by James Truslow Adams. For the general literary background and for a discussion of Smith see Howard Mumford Jones, *The Literature of Virginia in the Seventeenth Century, Memoirs of the American Academy of Arts and Sciences,* Boston, 1946.

BIBLIOGRAPHY AND EDITIONS: The best edition is: *Travels and Works of Captain John Smith, President of Virginia, and Admiral of New England 1580-1631,* 2 vols. ("parts"), ed. by Edward Arber, re-edited with an introduction by A. G. Bradley, Edinburgh, 1910. See also *The True Travels, Adventures, & Observations of Captaine John Smith,* J. G. Fletcher and L. C. Wroth, edd., Rimington and Hooper, 1930. There are bibliographies in Arber-Bradley and in Fletcher-Wroth; and see also Wilberforce Eames, *A Bibliography of Captain John Smith,* 1927, reprinted from Sabin's *Dictionary of Books Relating to America.*

Captain John Smith is the first American writer and the last Elizabethan in our literature. He wrote as he fought, impatiently, practically, a cross between Cyrano de Bergerac and Harry Hotspur; and so indelible is the impress he has left upon the American imagination, it is astonishing to discover that out of a life half a century long, including twenty years of adventure, he spent only four years in the New World. But these four created a mythology. Captain John Smith and Pocahontas are as legendary as Leatherstocking or Little Eva.

His writing is Jacobean English, hurried, graphic, ungrammatical, intent upon getting the thing said, the act done. He was a shrewd observer; and if he thought the Virginia Indians were parts of the feudal order, he had nevertheless the devouring eye which noted their customs and their psychology. He became one of the leading lights in the expansion of empire, both with sword and with pen. Indeed,

the books he wrote or collected from others (his subordinates), form a small library on colonization. His *True Travels* describes the making of an explorer. The *Seaman's Grammar* and the *Advertisements* offer practical instruction in the skills and knowledges necessary for planting a colony. And his other books, especially the *Generall Historie of Virginia,* trace in minute, practical detail the ups and downs of infant colonies, notably at Jamestown. Small wonder that Smith conventionally stands at the fountainhead of the great stream of American letters.

From THE GENERALL HISTORIE OF VIRGINIA, NEW ENGLAND, & THE SUMMER ISLES

Smith's *Generall Historie* is in six books, much of the material being compounded from other authors. Book I hastily traces the history of English voyages from that of Madoc in the twelfth century to Smith's own voyage. Book II is principally a description of the land and its inhabitants. Books III and IV tell the history of Jamestown from 1607 to 1624. Book V is a history of Bermuda, and Book VI of the explorations of the New England coast. Smith helped himself freely to the work of other explorers and to other books and pamphlets about Jamestown. The first three chapters of Book III are here reprinted from the Arber-Bradley text as forming a natural unit, sketching the history of the colony from 1606 to the departure of Captain Newport in the spring of 1608. Certain marginal rubrics are omitted.

CHAPTER I

[THEIR ORDERS OF GOVERNMENT, ACCIDENTS IN GOING, FIRST LANDING AND GOVERNEMENT SETLED.]

IT MIGHT well be thought, a Countrie so faire (as *Virginia* is) and a people so tractable, would long ere this haue beene quietly possessed, to the satisfaction of the adventurers, and the eternizing of the memory of those that effected it. But because all the world doe see a defailement; this following Treatise shall giue satisfaction to all indifferent Readers, how the businesse hath bin carried: where no doubt they will easily vnderstand and answer to their question, how it came to passe there was no better speed and successe in those proceedings.

Captaine *Batholomew Gosnoll,* one of the first movers of this plantation, having many yeares solicited many of his friends, but found small assistants; at last prevailed with some Gentlemen, as Captaine *Iohn Smith,* Master *Edward-maria Wingfield,* Master *Robert Hunt,* and divers others, who depended a yeare vpon his proiects, but nothing could be effected, till by their great charge and industrie, it came to be apprehended by certaine of the Nobilitie, Gentry, and Marchants, so that his Maiestie by his letters patents, gaue com-

3. **adventurers**—investors, i.e., those who ventured money. 4. **defailement**—i.e., in 1612 (Arber-Bradley). 5. **indifferent**—unprejudiced. 9. **Gosnoll**—Bartholomew Gosnold, fl. 1572-1607, navigator and colonizer. 12. **Wingfield**—Edward Maria Wingfield. fl. 1586-1613, removed from office, 1607; author of "A Discourse of Virginia." 12. **Hunt**—Robert Hunt, fl. 1568-1608, Episcopal clergyman. 14. **charge**—expense. 15. **letters patents**—Charter, granted April 10, 1606.

mission for establishing Councels, to direct here; and to governe, and to execute there. To effect this, was spent another yeare, and by that, three ships were provided, one of 100 Tuns, another of 40. and a Pinnace of 20. The transportation of the company was committed to Captaine *Christopher Newport,* a Marriner well practised for the Westerne parts of *America.* But their orders for government were put in a box, not to be opened, nor the governours knowne vntill they arrived in *Virginia.*

On the 19 of December, 1606, we set sayle from Blackwall, but by vnprosperous winds, were kept six weekes in the sight of *England;* all which time, Master *Hunt* our Preacher, was so weake and sicke, that few expected his recovery. Yet although he were but twentie myles from his habitation (the time we were in the Downes) and notwithstanding the stormy weather, nor the scandalous imputations (of some few, little better then Atheists, of the greatest ranke among vs) suggested against him, all this could never force from him so much as a seeming desire to leaue the busines, but preferred the service of God, in so good a voyage, before any affection to contest with his godlesse foes, whose disasterous designes (could they haue prevailed) had even then overthrowne the businesse, so many discontents did then arise, had he not with the water of patience, and his godly exhortations (but chiefly by his true devoted examples) quenched those flames of envie, and dissention.

We watered at the Canaries, we traded with the Salvages at *Dominica;* three weekes we spent in refreshing our selues amongst those west-India Isles; in *Gwardalupa* we found a bath so hot, as in it we boyled Porck as well as over the fire. And at a little Isle calle *Monica,* we tooke from the bushes with our hands, neare two hogsheads full of Birds in three or foure houres. In *Mevis, Mona,* and the Virgin Isles, we spent some time; where, with a lothsome beast like a Crocodil, called a Gwayn, Tortoises, Pellicans, Parrots, and fishes, we daily feasted.

Gone from thence in search of *Virginia,* the company was not a little discomforted, seeing the Marriners had 3 dayes passed their reckoning and found no land; so that Captaine *Ratliffe* (Captain of the Pinnace) rather desired to beare vp the helme to returne for *England,* then make further search. But God the guider of all good actions, forcing them by an extreame storme to hull all night, did driue them by his providence to their desired Port, beyond all their expectations; for never any of them had seene that coast.

The first land they made they called *Cape Henry;* where thirtie of them

1. **Councels**—The Council of the London Company, which directed "here," i.e., in England, as contrasted to the Council set up by the sealed box of line 6, intended to govern "there," i.e., in Virginia. 2. **three ships**—the *Sarah Constant,* the *Goodspeed,* and the *Discovery.* 3. **Pinnace**—a small, two-masted vessel, schooner-rigged. 4-5. **Newport**—Christopher Newport, ?-1617, mariner, who served under Drake. He was "well practised for the Westerne parts" in the sense that he had been on expeditions to the West Indies. 6-7. **governours**—board of governors, or Council. 8. **Blackwall**—on the lower Thames. 12. **Downes**—a roadstead off the Goodwin Sands on the coast of Kent. 20. **examples**—instances. 21. **Canaries**—Canary Islands, off the coast of Africa. 21. **Dominica**—one of the Lesser Antilles in the West Indies. 23. **Gwardalupa**—Guadeloupe, in the Lesser Antilles. 24-26. **Monica . . . Virgin Isles**—small islands in the West Indies. 27. **Gwayn**—iguana. 29. **Virginia**—the mainland of North America. 31. **Ratliffe**—John Ratcliffe, killed by Powhatan in 1610. 34. **hull**—to float or be driven on the hull alone, without the aid of sail. 36. **Henry**—named for Henry Frederick, Prince of Wales (d. 1612).

recreating themselues on shore, were assaulted by fiue Salvages, who hurt two of the English very dangerously.

That night was the box opened, and the orders read, in which *Bartholomew Gosnoll, Iohn Smith, Edward Wingfield, Christopher Newport, Iohn Ratliffe, Iohn Martin,* and *George Kendall,* were named to be the Councell, and to choose a President amongst them for a yeare, who with the Councell should governe. Matters of moment were to be examined by a Iury, but determined by the maior part of the Councell, in which the President had two voyces.

Vntill the 13 of May they sought a place to plant in; then the Councell was sworne, Master *Wingfield* was chosen President, and an Oration made, why Captaine *Smith* was not admitted of the Councell as the rest.

Now falleth every man to worke, the Councell contriue the Fort, the rest cut downe trees to make place to pitch their Tents; some provide clapbord to relade the ships, some make gardens, some nets, &c. The Salvages often visited vs kindly. The Presidents overweening iealousie would admit no exercise at armes, or fortification but the boughs of trees cast together in the forme of a halfe moone by the extraordinary paines and diligence of Captaine *Kendall.*

Newport, Smith, and twentie others, were sent to discover the head of the river: by divers small habitations they passed, in six dayes they arrived at a Towne called *Powhatan,* consisting of some twelue houses, pleasantly seated on a hill; before it three fertile Iles, about it many of their cornefields, the place is very pleasant, and strong by nature, of this place the Prince is called *Powhatan,* and his people *Powhatans.* To this place the river is navigable: but higher within a myle, by reason of the Rockes and Isles, there is not passage for a small Boat, this they call the Falles. The people in all parts kindly intreated them, till being returned within twentie myles of *Iames* towne, they gaue iust cause of iealousie: but had God not blessed the discoverers otherwise then those at the Fort, there had then beene an end of that plantation; for at the Fort, where they arrived the next day, they found 17 men hurt, and a boy slaine by the Salvages, and had it not chanced a crosse barre shot from the Ships strooke downe a bough from a tree amongst them, that caused them to retire, our men had all beene slaine, being securely all at worke, and their armes in dry fats.

Herevpon the President was contented the Fort should be pallisadoed, the Ordnance mounted, his men armed and exercised; for many were the assaults, and ambuscadoes of the Salvages, and our men by their disorderly stragling were often hurt, when the Salvages by the nimblenesse of their heeles well escaped.

What toyle we had, with so small a power to guard our workemen adayes, watch all night, resist our enemies, and effect our businesse, to relade the

6. President—here, about equivalent to chairman. **8. maior**—larger. **9. voyces**—votes. **16. iealousie**—overcarefulness. **19. discover**—explore. **21. houses**—The Virginia Indians lived in houses resembling sheds. **23. Prince**—The seventeenth-century Englishman thought of the Indians as living in a feudal system **24-26. place . . . Falles**—at modern Richmond. **32. crosse barre**—a projectile either in the shape of a ball and bar or so made as to expand into the form of a cross on being shot from a gun. **33. securely**—i.e., with an unjustifiable sense of security. **34. dry fats**—dry vats, that is; their weapons were stored. **36. Ordnance**—cannon. **36. exercised**—drilled. **41. relade**—reload.

ships, cut downe trees, and prepare the ground to plant our Corne, &c, I referre to the Readers consideration.

Six weekes being spent in this manner, Captaine *Newport* (who was hired onely for our transportation) was to returne with the ships.

Now Captaine *Smith,* who all this time from their departure from the Canaries was restrained as a prisoner vpon the scandalous suggestions of some of the chiefe (envying his repute) who fained he intended to vsurpe the government, murther the Councell, and make himselfe King, that his confederats were dispersed in all the three ships, and that divers of his confederats that revealed it, would affirme it; for this he was committed as a prisoner.

Thirteene weekes he remained thus suspected, and by that time the ships should returne they pretended out of their commisserations, to referre him to the Councell in *England* to receiue a check, rather then by particulating his designes make him so odious to the world, as to touch his life, or vtterly overthrow his reputation. But he so much scorned their charitie, and publikely defied the vttermost of their crueltie; he wisely prevented their policies, though he could not suppresse their envies; yet so well he demeaned himselfe in this businesse, as all the company did see his innocency, and his adversaries malice, and those suborned to accuse him, accused his accusers of subornation; many vntruthes were alledged against him; but being so apparently disproved, begat a generall hatred in the hearts of the company against such vniust Commanders, that the President was adiudged to giue him 200*l.*; so that all he had was seized vpon, in part of satisfaction, which *Smith* presently returned to the Store for the generall vse of the *Colony.*

Many were the mischiefes that daily sprung from their ignorant (yet ambitious) spirits; but the good Doctrine and exhortation of our Preacher Master *Hunt* reconciled them, and caused Captaine *Smith* to be admitted of the Councel.

The next day all receiued the Communion, the day following the Salvages voluntarily desired peace, and Captaine *Newport* returned for *England* with newes; leaving in *Virginia* 100. the 15 of Iune 1607. By this obserue;

Good men did ne'r their Countries ruine bring.
But when evill men shall inuries beginne;
Not caring to corrupt and violate
The iudgements-seats for their owne Lucr' sake:
Then looke that Country cannot long haue peace,
Though for the present it haue rest and ease.

10. **affirme**—confirm. 11. **Thirteene weekes**—March 24-June 10, 1607 (Arber-Bradley). 13. **particulating**—itemizing. 16. **prevented**—anticipated. 22. **adiudged**—legally compelled. 22. **he**—Wingfield. 27. **admitted**—June 10 or 20 (Arber-Bradley). 29. **following**—June 22 (Arber-Bradley). 31. **newes**—reports. 31. 15—or rather 22 (Arber-Bradley). 35. **Lucr'**—lucre. 37. **ease**—There follow "the names of them that were the first Planters," here omitted.

CHAPTER II

WHAT HAPPENED TILL THE FIRST SUPPLY

Being thus left to our fortunes, it fortuned that within ten dayes scarce ten amongst vs could either goe, or well stand, such extreame weaknes and sicknes oppressed vs. And thereat none need marvaile, if they could consider the cause and reason, which was this.

Whilest the ships stayed, our allowance was somewhat bettered, by a daily proportion of Bisket, which the sailers would pilfer to sell, giue, or exchange with vs, for money, Saxefras, furres, or loue. But when they departed, there remained neither taverne, beere house, nor place of reliefe but the common Kettell. Had we beene as free from all sinnes as gluttony, and drunkennesse, we might haue beene canonized for Saints; But our President would never haue been admitted, for ingrossing to his private, Oatmeale, Sacke, Oyle, *Aquavitæ,* Beefe, Egges, or what not, but the Kettell; that indeed he allowed equally to be distributed, and that was halfe a pint of wheat, and as much barley boyled with water for a man a day, and this having fryed some 26. weekes in the ships hold, contained as many wormes as graines; so that we might truely call it rather so much bran than corne, our drinke was water, our lodgings Castles in the ayre.

With this lodging and dyet, our extreame toile in bearing and planting Pallisadoes, so strained and bruised vs, and our continuall labour in the extremitie of the heat had so weakned vs, as were cause sufficient to haue made vs as miserable in our natiue Countrey, or any other place in the world.

From May, to September, those that escaped, liued vpon Sturgeon, and Sea-crabs, fiftie in this time we buried, the rest seeing the Presidents proiects to escape these miseries in our Pinnace by flight (who all this time had neither felt want nor sicknes) so moved our dead spirits, as we deposed him; and established *Ratcliffe* in his place, (*Gosnoll* being dead) *Kendall* deposed. *Smith* newly recovered, *Martin* and *Ratcliffe* was by his care preserved and relieued, and the most of the souldiers recovered with the skilfull diligence of Master *Thomas Wotton* our Chirurgian generall.

But now was all our provision spent, the Sturgeon gone, all helps abandoned, each houre expecting the fury of the Salvages; when God the patron of all good indevours, in that desperate extremitie so changed the hearts of the Salvages, that they brought such plenty of their fruits, and provision, as no man wanted.

2. supply—reinforcements and provisions. **4. goe**—be active. **7. allowance**—During its early years Jamestown was managed on communal principles. **8. Bisket**—ship's biscuit, a kind of hardtack. **9. Saxefras**—sassafras, long supposed to have general curative properties. **12. President**—Wingfield. **13. ingrossing to his private**—monopolizing for his private use. **13. Sacke**—sack, a kind of white wine. **14. Aquavitæ**—ardent spirits, usually brandy. **14-15. Kettell . . . distributed**—i.e., the charge is that Wingfield permitted only the commonest foods to go to the common kitchen. **16. fryed**—cooked. **16-17. 26. weekes**—December, 1606-June, 1607 (Arber-Bradley). **18. water**—Unaware of the germ theory, the Jacobeans naturally found water a dangerous drink. **24. September**—1607 (Arber-Bradley). **27. deposed**—September 10, 1607 (Arber-Bradley). **28. dead**—August 22, 1607 (Arber-Bradley). **28. deposed**—September ?, 1607 (Arber-Bradley). **31. Chirurgian**—surgeon, physician. **36. wanted**—lacked anything.

And now where some affirmed it was ill done of the Councell to send forth men so badly provided, this incontradictable reason will shew them plainely they are too ill advised to nourish such ill conceits; first, the fault of our going was our owne, what could be thought fitting or necessary we had; but what we should find, or want, or where we should be, we were all ignorant, and [illegible] to make our passage in two moneths, with victuall to liue, and the advantage of the spring to worke; we were at Sea fiue moneths, where we both spent our victuall and lost the opportunitie of the time and season to plant, by the vnskilfull presumption of our ignorant transporters, that vnderstood not at all, what they vndertooke.

Such actions haue ever since the worlds beginning beene subiect to such accidents, and every thing of worth is found full of difficulties: but nothing so difficult as to establish a Common wealth so farre remote from men and meanes, and where mens mindes are so vntoward as neither doe well themselues, nor suffer others. But to proceed.

The new President, and *Martin,* being little beloved, of weake iudgement in dangers, and lesse industrie in peace, committed the managing of all things abroad to Captaine *Smith:* who by his owne example, good words, and faire promises, set some to mow, others to binde thatch, some to build houses, others to thatch them, himselfe alwayes bearing the greatest taske for his owne share, so that in short time, he provided most of them lodgings, neglecting any for himselfe.

This done, seeing the Salvages superfluitie beginne to decrease (with some of his workemen) shipped himselfe in the Shallop to search the Country for trade. The want of the language, knowledge to mannage his boat without sailes, the want of a sufficient power (knowing the multitude of the Salvages), apparell for his men, and other necessaries, were infinite impediments; yet no discouragement.

Being but six or seauen in company he went downe the river to *Kecoughtan:* where at first they scorned him, as a famished man; and would in derision offer him a handfull of Corne, a peece of bread, for their swords and muskets, and such like proportions also for their apparell. But seeing by trade and courtesie there was nothing to be had, he made bold to try such conclusions as necessitie inforced, though contrary to his Commission: Let fly his muskets, ran his boat on shore; whereat they all fled into the woods.

So marching towards their houses, they might see great heapes of corne: much adoe he had to restraine his hungry souldiers from present taking of it, expecting as it hapned that the Salvages would assault them, as not long after they did with a most hydeous noyse. Sixtie or seaventie of them, some blacke, some red, some white, some party-coloured, came in a square order, singing and dauncing out of the woods, with their *Okee* (which was an Idoll

3. **fault of our going**—The errors in the expedition were our own fault. 8. **spent**—used. 16. **President**—Ratcliffe. 17-18. **things abroad**—matters outside. 21. **owne share**—The egotism of this passage is somewhat diminished when the reader learns at the end of the chapter that it was written by Smith in collaboration with Thomas Studley, Robert Fenton, and Edward Harrington. 24. **Shallop**—a large, heavy boat furnished with one or more masts and appropriate sails. 29. **downe the river**—Jamestown was purposely located some miles above the mouth of the river to protect it from the Spaniards. Kecoughtan was near Hampton. 31. **Corne**—grain. 34. **fly**—fire. 40. **party-coloured**—variously colored.

made of skinnes, stuffed with mosse, all painted and hung with chaines and copper) borne before them: and in this manner, being well armed with Clubs, Targets, Bowes and Arrowes, they charged the English, that so kindly receiued them with their muskets loaden with Pistoll shot, that downe fell their God, and divers lay sprauling on the ground; the rest fled againe to the woods, and ere long sent one of their *Quiyoughkasoucks* to offer peace, and redeeme their *Okee.*

Smith told them, if onely six of them would come vnarmed and loade his boat, he would not only be their friend, but restore them their *Okee,* and giue them Beads, Copper, and Hatchets besides: which on both sides was to their contents performed: and then they brought him Venison, Turkies, wild foule, bread, and what they had; singing and dauncing in signe of friendship till they departed.

In his returne he discovered the Towne and Country of *Warraskoyack.*

Thus God vnboundless by his power,
Made them thus kind, would vs deuour.

Smith perceiving (notwithstanding their late miserie) not any regarded but from hand to mouth: (the company being well recovered) caused the Pinnace to be provided with things fitting to get provision for the yeare following; but in the interim he made 3. or 4. iournies and discovered the people of *Chickahamania:* yet what he carefully provided the rest carelesly spent.

Wingfield and *Kendall* liuing in disgrace, seeing all things at randome in the absence of *Smith,* the companies dislike of their Presidents weaknes, and their small loue to *Martins* never mending sicknes, strengthened themselues with the sailers and other confederates, to regaine their former credit and authority, or at least such meanes abord the Pinnace, (being fitted to saile as *Smith* had appointed for trade) to alter her course and to goe for *England.*

Smith vnexpectedly returning had the plot discovered to him, much trouble he had to prevent it, till with store of sakre and musket shot he forced them stay or sinke in the riuer: which action cost the life of captaine *Kendall.*

These brawles are so disgustfull, as some will say they were better forgotten, yet all men of good iudgement will conclude, it were better their basenes should be manifest to the world, then the business beare the scorne and shame of their excused disorders.

The President and captaine *Archer* not long after intended also to haue abandoned the country, which proiect also was curbed, and suppressed by *Smith.*

The *Spaniard* never more greedily desired gold than he victuall; nor his souldiers more to abandon the Country, then he to keepe it. But finding plentie of Corne in the riuer of *Chickahamania,* where hundreds of Salvages in diuers places stood with baskets expecting his comming.

3. **Targets**—shields (made of wicker). 4. **Pistoll shot**—for "in fighting." 6. **Quiyoughkasoucks**—medicine men. 14. **Warraskoyack**—a tribe occupying the present Isle of Wight County. 17. **their**—the settlers'. 17-18. **regarded . . . mouth**—not anything being regarded but living from hand to mouth. 21. **Chickahamania**—modern Chickahominy. 29. **sakre**—saker, an old form of cannon known as a demi-culverin. 30. **Kendall**—who was condemned to death after a trial. 35. **President**—Ratcliffe. 39. **finding**—he found.

And now the winter approaching, the rivers became so covered with swans, geese, duckes, and cranes, that we daily feasted with good bread, Virginia pease, pumpions, and putchamins, fish, fowle, and diverse sorts of wild beasts as fat as we could eate them: so that none of our Tuftaffaty humorists desired to goe for *England.*

But our *Comœdies* never endured long without a *Tragedie;* some idle exceptions being muttered against Captaine *Smith,* for not discovering the head of the *Chickahamania* river, and taxed by the Councell, to be too slow in so worthy an attempt. The next voyage hee proceeded so farre that with much labour by cutting of trees insunder he made his passage; but when his Barge could passe no farther, he left her in a broad bay out of danger of shot, commanding none should goe a shore till his returne: himselfe with two English and two Salvages went vp higher in a Canowe; but hee was not long absent, but his men went a shore, whose want of government gaue both occasion and opportunity to the Salvages to surprise one *George Cassen,* whom they slew, and much failed not to haue cut of the boat and all the rest.

Smith little dreaming of that accident, being got to the marshes at the rivers head, twentie myles in the desert, had his two men slaine (as is supposed) sleeping by the Canowe, whilst himselfe by fowling sought them victuall: who finding he was beset with 200. Salvages, two of them hee slew, still defending himselfe with the ayd of a Salvage his guid, whom he bound to his arme with his garters, and vsed him as a buckler, yet he was shot in his thigh a little, and had many arrowes that stucke in his cloathes but no great hurt, till at last they tooke him prisoner.

When this newes came to *Iames* towne, much was their sorrow for his losse, fewe expecting what ensued.

Sixe or seuen weekes those Barbarians kept him prisoner, many strange triumphes and coniurations they made of him, yet hee so demeaned himselfe amongst them, as he not onely diverted them from surprising the Fort, but procured his owne libertie, and got himselfe and his company such estimation amongst them, that those Salvages admired him more then their owne *Quiyouckosucks.*

The manner how they vsed and deliuered him, is as followeth.

The Salvages hauing drawne from *George Cassen* whether Captaine *Smith* was gone, prosecuting that oportunity they followed him with. 300. bowmen, conducted by the King of *Pamavnkee,* who in diuisions searching the turnings of the riuer, found *Robinson* and *Emry* by the fire side: those they shot full of arrowes and slew. Then finding the Captaine, as is said, that vsed the Salvage that was his guide as his shield (three of them being slaine and diuers other so gauld) all the rest would not come neere him. Thinking thus to haue

3. **pumpions**—pumpkins. 3. **putchamins**—persimmons. 4. **Tuftaffaty**—taffeta, used derisively. 4. **humorists**—persons governed by a single humor. 14. **government**—good management. 16. **much failed not**—did not fail by much. 18. **desert**—wilderness. 22. **garters**—The Jacobean garter was a long and elaborate affair, like that worn by Malvolio in *Twelfth Night.* 28. **triumphes**—triumphal ceremonies. 34. **whether**—whither. 36. **King of Pamavnkee**—the Pamunky River, formed by the union of the North Anna and the South Anna Rivers. 37. **Robinson and Emry**—A gloss on the original text identifies these as John Robinson and Thomas Emry. 40. **gauld**—galled, harassed in warfare.

returned to his boat, regarding them, as he marched, more then his way, slipped vp to the middle in an oasie creeke and his Salvage with him; yet durst they not come to him till being neere dead with cold, he threw away his armes. Then according to their composition they drew him forth and led him to the fire, where his men were slaine. Diligently they chafed his benummed limbs.

He demanding for their Captaine, they shewed him *Opechankanough,* King of *Pamavnkee,* to whom he gaue a round Ivory double compass Dyall. Much they marvailed at the playing of the Fly and Needle, which they could see so plainely, and yet not touch it, because of the glasse that covered them. But when he demonstrated by that Globe-like Iewell, the roundnesse of the earth, and skies, the spheare of the Sunne, Moone, and Starres, and how the Sunne did chase the night round about the world continually; the greatnesse of the Land and Sea, the diversitie of Nations, varietie of complexions, and how we were to them *Antipodes,* and many other such like matters, they all stood as amazed with admiration.

Notwithstanding, within an houre after[,] they tyed him to a tree, and as many as could stand about him prepared to shoot him: but the King holding vp the Compass in his hand, they all laid downe their Bowes and Arrowes, and in a triumphant manner led him to *Orapaks,* where he was after their manner kindly feasted, and well vsed.

Their order in conducting him was thus; Drawing themselues all in fyle, the King in the middest had all their Peeces and Swords borne before him. Captaine *Smith* was led after him by three great Salvages, holding him fast by each arme: and on each side six went in fyle with their Arrowes nocked. But arriving at the Towne (which was but onely thirtie or fortie hunting houses made of Mats, which they remoue as they please, as we our tents) all the women and children staring to behold him, the souldiers first all in fyle performed the forme of a *Bissone* so well as could be; and on each flanke, officers as Serieants to see them keepe their orders. A good time they continued this exercise, and then cast themselues in a ring, dauncing in such severall Postures, and singing and yelling out such hellish notes and screeches; being strangely painted, every one his quiver of Arrowes, and at his backe a club; on his arme a Fox or an Otters skinne, or some such matter for his vambrace; their heads and shoulders painted red, with Oyle and *Pocones* mingled together, which Scarlet-like colour made an exceeding handsome shew; his Bow in his hand, and the skinne of a Bird with her wings abroad dryed, tyed on his head, a peece of copper, a white shell, a long feather, with a small rattle growing at the tayles of their snaks tyed to it, or some such like toy. All this while *Smith* and the King stood in the middest guarded, as before is said: and after three dances they all departed. *Smith* they conducted

2. **oasie**—oozy. 4. **composition**—mental constitution, i.e., according to their "ways." 5. **were**—had been. 9. **Fly and Needle**—fly: compass card, over which the compass needle moves. 14. **complexions**—here, either temperaments or colors of the skin. 20. **Orapaks**—now in Hanover County. 23. **their**—i.e., of Smith and his slain comrades. 25. **nocked**—the notch of the arrow fitted to the bow-string, ready for use. 29. **Bissone**—*bisoño,* an undisciplined squad. 30. **Serieants**—sergeants, in the general sense of inferior officers. 33. **every one**—insert "with." 35. **vambrace**—armor for the forearm. 35. **Pocones**—blood root. 37. **wings abroad**—wings spread out.

to a long house, where thirtie or fortie tall fellowes did guard him; and ere long more bread and venison was brought him then would haue served twentie men. I thinke his stomacke at that time was not very good; what he left they put in baskets and tyed over his head. About midnight they set the meate againe before him, all this time not one of them would eate a bit with him, till the next morning they brought him as much more; and then did they eate all the old, and reserved the new as they had done the other, which made him thinke they would fat him to eat him. Yet in this desperate estate to defend him from the cold, one *Maocassater* brought him his gowne, in requitall of some beads and toyes *Smith* had given him at his first arrivall in *Virginia.*

Two dayes after a man would haue slain him (but that the guard prevented it) for the death of his sonne, to whom they conducted him to recover the poore man then breathing his last. *Smith* told them that at *Iames* towne he had a water would doe it, if they would let him fetch it, but they would not permit that: but made all the preparations they could to assault *Iames* towne, crauing his advice; and for recompence he should haue life, libertie, land, and women. In part of a Table booke he writ his minde to them at the Fort, what was intended, how they should follow that direction to affright the messengers, and without fayle send him such things as he writ for. And an Inventory with them. The difficultie and danger, he told the Salvages, of the Mines, great gunnes, and other Engins exceedingly affrighted them, yet according to his request they went to *Iames* towne, in as bitter weather as could be of frost and snow, and within three dayes returned with an answer.

But when they came to *Iame*[s] towne, seeing men sally out as he had told them they would, they fled; yet in the night they came againe to the same place where he had told them they should receiue an answer, and such things as he had promised them: which they found accordingly, and with which they returned with no small expedition, to the wonder of them all that heard it, that he could either divine, or the paper could speake.

Then they led him to the *Youthtanunds,* the *Mattapanients,* the *Payankatanks,* the *Nantaughtacunds,* and *Onawmanients* vpon the rivers of *Rapahanock,* and *Patawomek;* over all those rivers, and backe againe by divers other severall Nations, to the Kings habitation at *Pamavnkee:* where they entertained him with most strange and fearefull Coniurations;

As if neare led to hell,
Amongst the Devils to dwell.

Not long after, early in a morning a great fire was made in a long house, and a mat spread on the one side, as on the other; on the one they caused him to sit, and all the guard went out of the house, and presently came skipping in a great grim fellow, all painted over with coale, mingled with oyle; and many Snakes and Wesels skins stuffed with mosse, and all their tayles tyed together, so as they met on the crowne of his head in a tassell; and round

3. **stomacke**—appetite. 4. **tyed over his head**—i.e., tied to the wall over his head. 5. **meate**—food. 9. **gowne**—cloak. 18. **Table booke**—memorandum book. 20-21. **Inventory**—list of the things he wanted. 29. **expedition**—speed. 30. **divine**—prophesy.

about the tassell was a Coronet of feathers, the skins hanging round about his head, backe, and shoulders, and in a manner covered his face; with a hellish voyce, and a rattle in his hand. With most strange gestures and passions he began his invocation, and environed the fire with a circle of meale; which done, three more such like devils came rushing in with the like antique tricks, painted halfe blacke, halfe red: but all their eyes were painted white, and some red stroakes like Muchato's, along their cheekes: round about him those fiends daunced a pretty while, and then came in three more as vgly as the rest; with red eyes, and white stroakes over their blacke faces, at last they all sat down right against him; three of them on the one hand of the chiefe Priest, and three on the other. Then all with their rattles began a song, which ended, the chiefe Priest layd down fiue wheat cornes: then strayning his armes and hands with such violence that he sweat, and his veynes swelled, he began a short Oration; at the conclusion they all gaue a short groane; and then layd down three graines more. After that, began their song againe, and then another Oration, ever laying downe so many cornes as before, till they had twice incirculed the fire; that done, they tooke a bunch of little stickes prepared for that purpose, continuing still their devotion, and at the end of every song and Oration, they layd downe a sticke betwixt the divisions of Corne. Till night, neither he nor they did either eate or drinke; and then they feasted merrily, with the best provisions they could make. Three dayes they vsed this Ceremony; the meaning whereof they told him, was to know if he intended them well or no. The circle of meale signified their Country, the circles of corne the bounds of the Sea, and the stickes his Country. They imagined the world to be flat and round, like a trencher; and they in the middest.

After this they brought him a bagge of gunpowder, which they carefully preserved till the next spring, to plant as they did their corne; because they would be acquainted with the nature of that seede.

Opitchapam the Kings brother invited him to his house, where, with as many platters of bread, foule, and wild beasts, as did environ him, he bid him wellcome; but not any of them would eate a bit with him, but put vp all the remainder in Baskets.

At his returne to *Opechancanoughs,* all the Kings women, and their children, flocked about him for their parts; as a due by Custome, to be merry with such fragments.

But his waking mind in hydeous dreames did oft see wondrous shapes,
Of bodies strange, and huge in growth, and of stupendious makes.

At last they brought him to *Meronocomoco,* where was *Powhatan* their Emperor. Here more than two hundred of those grim Courtiers stood wondering at him, as he had beene a monster; till *Powhatan* and his trayne had put themselues in their greatest braveries. Before a fire vpon a seat like a bedsted, he sat covered with a great robe, made of *Rarowcun* skinnes, and all

5. **antique**—antic. 7. **Muchato's**—mustachio. 12. **cornes**—grains. 25. **trencher**—flat piece of wood used for a plate. 39. **At last**—January 5, 1608 (Arber-Bradley). 42. **braveries**—costumes. 43. **Rarowcun**—raccoon.

the tayles hanging by. On either hand did sit a young wench of 16 or 18 yeares, and along on each side the house, two rowes of men, and behind them as many women, with all their heads and shoulders painted red: many of their heads bedecked with the white downe of Birds; but every one with something: and a great chayne of white beads about their necks.

At his entrance before the King, all the people gaue a great shout. The Queene of *Appamatuck* was appointed to bring him water to wash his hands, and another brought him a bunch of feathers, in stead of a Towell to dry them: having feasted him after their best barbarous manner they could, a long consultation was held, but the conclusion was, two great stones were brought before *Powhatan:* then as many as could layd hands on him, dragged him to them, and thereon laid his head, and being ready with their clubs, to beate out his braines, *Pocahontas* the Kings dearest daughter, when no intreaty could prevaile, got his head in her armes, and laid her owne vpon his to saue him from death: whereat the Emperour was contented he should liue to make him hatchets, and her bells, beads, and copper; for they thought him aswell of all occupations as themselues. For the King himselfe will make his owne robes, shooes, bowes, arrowes, pots; plant, hunt, or doe any thing so well as the rest.

They say he bore a pleasant shew,
But sure his heart was sad.
For who can pleasant be, and rest,
That liues in feare and dread:
And having life suspected, doth
It still suspected lead.

Two dayes after, *Powhatan* having disguised himselfe in the most feare-fullest manner he could, caused Captain *Smith* to be brought forth to a great house in the woods, and there vpon a mat by the fire to be left alone. Not long after from behinde a mat that divided the house, was made the most dolefullest noyse he ever heard; then *Powhatan* more like a devill then a man, with some two hundred more as blacke as himselfe, came vnto him and told him now they were friends, and presently he should goe to *Iames* towne, to send him two great gunnes, and a gryndstone, for which he would giue him the Country of *Capahowosick*, and for ever esteeme him as his sonne *Nantaquoud*.

So to *Iames* towne with 12 guides *Powhatan* sent him. That night they quarterd in the woods, he still expecting (as he had done all this long time of his imprisonment) every houre to be put to one death or other: for all their feasting. But almightie God (by his divine providence) had mollified the hearts of those sterne *Barbarians* with compassion. The next morning betimes they came to the Fort, where *Smith* having vsed the Salvages with what kindnesse he could, he shewed *Rawhunt, Powhatans* trusty servant, two demi-Culverings and a millstone to carry [to] *Powhatan:* they found them somewhat too heavie; but when they did see him discharge them, being

12. **him**—Smith. 12. **them**—the stones. 26. **Two dayes after**—January 7, 1608 (Arber-Bradley). 34. **Capahowosick**—on the north bank of the York River near Gloucester. 36. **That night**—January 7, 1608 (Arber-Bradley). 40. **next morning**—January 8, 1608 (Arber-Bradley). 43. **demi-Culverings**—culverins were a variety of cannon.

loaded with stones, among the boughs of a great tree loaded with Isickles, the yce and branches came so tumbling downe, that the poore Salvages ran away halfe dead with feare. But at least we regained some conference with them, and gaue them such toyes; and sent to *Powhatan,* his women, and children such presents, as gaue them in generall full content.

Now in *Iames* Towne they were all in combustion, the strongest preparing once more to run away with the Pinnace; which with the hazzard of his life, with Sakre falcon and musket shot, *Smith* forced now the third time to stay or sinke.

Some no better then they should be, had plotted with the President, the next day to haue put him to death by the Leviticall law, for the liues of *Robinson* and *Emry;* pretending the fault was his that had led them to their ends: but he quickly tooke such order with such Lawyers, that he layd them by the heeles till he sent some of them prisoners for *England.*

Now ever once in foure or fiue dayes, *Pocahontas* with her attendants, brought him so much provision, that saved many of their liues, that els for all this had starved with hunger.

Thus from numbe death our good God sent reliefe,
The sweete asswager of all other griefe.

His relation of the plenty he had seene, especially at *Werawocomoco,* and of the state and bountie of *Powhatan,* (which till that time was vnknowne) so revived their dead spirits (especially the loue of *Pocahontas*) as all mens feare was abandoned.

Thus you may see what difficulties still crossed any good indevour; and the good successe of the businesse being thus oft brought to the very period of destruction; yet you see by what strange means God hath still delivered it.

As for the insufficiency of them admitted in Commission, that error could not be prevented by the Electors; there being no other choise, and all strangers to each others education, qualities, or disposition.

And if any deeme it a shame to our Nation to haue any mention made of those inormities, led him pervse the Histories of the Spanyards Discoveries and Plantations, where they may see how many mutinies, disorders, and dissensions haue accompanied them, and crossed their attempts: which being knowne to be particular mens offences; doth take away the generall scorne and contempt, which malice, presumption, covetousnesse, or ignorance might produce; to the scandall and reproach of those, whose actions and valiant resolutions deserue a more worthy respect.

Now whether it had beene better for Captaine *Smith,* to haue concluded with any of those severall proiects, to haue abandoned the Countrey, with some ten or twelue of them, who were called the better sort, and haue left Master *Hunt* our Preacher, Master *Anthony Gosnoll,* a most honest, worthy, and industrious Gentleman, Master *Thomas Wotton,* and some 27 others of his Countrymen to the fury of the Salvages, famine, and all manner of mischiefes, and inconveniences, (for they were but fortie in all to keepe possession

8. falcon—a light cannon. **10. President**—Ratcliffe. **10-11. next day**—January 9 (Arber-Bradley). **11. Leviticall law**—*Cf.* Levit. 24:17. **20. Werawocomoco**—near the present Gloucester. **27. admitted in Commission**—commissioned as members of the Council.

of this large Country;) or starue himselfe with them for company, for want of lodging: or but adventuring abroad to make them provision, or by his opposition to preserue the action, and saue all their liues; I leaue to the censure of all honest men to consider. But

We men imagine in our lolitie,
That 'tis all one, or good or bad to be.
But then anone wee alter this againe,
If happily wee feele the sence of paine;
For then we're turn'd into a mourning vaine.

CHAPTER III

THE ARRIVALL OF THE FIRST SUPPLY, WITH THEIR PROCEEDINGS, AND THE SHIPS RETURNE

All this time our care was not so much to abandon the Countrey; but the Treasurer and Councell in *England,* were as diligent and carefull to supply vs. Two good ships they sent vs, with neare a hundred men, well furnished with all things could be imagined necessary, both for them and vs; The one commanded by Captaine *Newport:* the other by Captaine *Francis Nelson,* an honest man, and an expert Marriner. But such was the lewardnesse of his Ship (that though he was within the sight of *Cape Henry*) by stormy contrary winds was he forced so farre to Sea, that the West *Indies* was the next land, for the repaire of his Masts, and reliefe of wood and water.

But *Newport* got in and arrived at *Iames* Towne, not long after the redemption of Captaine *Smith.* To whom the Salvages, as is sayd, every other day repaired, with such provisions that sufficiently did serue them from hand to mouth: part alwayes they brought him as Presents from their Kings, or *Pocahontas;* the rest he as their Market Clarke set the price himselfe, how they should sell: so he had inchanted these poore soules being their prisoner; and now *Newport,* whom he called his Father arriving, neare as directly as he foretold, they esteemed him as an Oracle, and had them at that submission he might command them what he listed. That God that created all things they knew he adored for his God: they would also in their discourses tearme the God of Captaine *Smith.*

Thus the Almightie was the bringer on,
The guide, path, terme, all which was God alone.

But the President and Councell so much envied his estimation among the Salvages, (though we all in generall equally participated with him of the good thereof,) that they wrought it into the Salvages vnderstandings (by their great bounty in giving foure times more for their commodities then *Smith* appointed) that their greatnesse and authoritie as much exceeded his, as their bountie and liberalitie.

9. **vaine**—Here follows in the original the statement: "Written by Thomas Studley, the first Cape Merchant in Virginia, Robert Fenton, Edward Harrington, and I. S." (i.e., John Smith). Cape merchant· principal authorized dealer. **22-23. redemption**—the evening of January 8, 1608, when Smith returned (Arber-Bradley). **26. Clarke**—clerk.

Now the arrivall of this first supply so overioyed us, that wee could not devise too much to please the Marriners. We gaue them libertie to trucke or trade at their pleasures. But in a short time it followed, that could not be had for a pound of Copper, which before was sould vs for an ounce: thus ambition and sufferance cut the throat of our trade, but confirmed their opinion of the greatnesse of Captaine *Newport,* (wherewith *Smith* had possessed *Powhatan*) especially by the great presents *Newport* often sent him, before he could prepare the Pinnace to goe and visit him: so that this great Salvage desired also to see him. A great coyle there was to set him forward.

When he went he was accompanied with Captaine *Smith,* and Master *Scrivener,* a very wise understanding Gentleman, newly arrived and admitted of the Councell, with thirtie or fortie chosen men for their guard.

Arriving at *Werowocomoco, Newports* conceit of this great Savage bred many doubts and suspitions of trecheries, which *Smith* to make appeare was needlesse, with twentie men well appointed, vndertooke to encounter the worst that could happen: Knowing

All is but one, and selfe-same hand, that thus
Both one while scourgeth, and that helped vs.

These, with nine others (whose names I haue forgotten) comming a-shore, landed amongst a many of creekes, over which they were to passe [by] such poore bridges, onely made of a few cratches thrust in the ose, and three or foure poles laid on them, and at the end of them the like, tyed together onely with barkes of trees, that it made them much suspect those bridges were but traps. Which caused *Smith* to make diverse Salvages goe over first, keeping some of the chiefe as hostage till halfe his men were passed, to make a guard for himselfe and the rest.

But finding all things well, by two or three hundred Salvages they were kindly conducted to their towne. Where *Powhatan* strained himselfe to the vtmost of his greatnesse to entertaine them, with great shouts of ioy, Orations of protestations; and with the most plenty of victualls he could provide to feast them.

Sitting vpon his bed of mats, his pillow of leather imbrodered (after their rude manner with pearle and white Beads) his attyre a faire robe of skinnes as large as an Irish mantell: at his head and feete a handsome young woman: on each side his house sat twentie of his Concubines, their heads and shoulders painted red, with a great chaine of white beads about each of their neckes. Before those sat his chiefest men in like order in his arbour-like house, and more then fortie platters of fine bread stood as a guard in two fyles on each side the doore. Foure or fiue hundred people made a guard behinde them for our passage: and Proclamation was made, none vpon paine of death to presume to doe vs any wrong or discourtesie.

With many pretty Discourses to renew their old acquaintance, this great King and our Captaine spent the time, till the ebbe left our Barge aground.

9. **coyle**—fuss. 9. **forward**—February, 1608 (Arber-Bradley). 13. **conceit**—opinion. 18. **vs.**—Here follow in the original the names of eleven gentlemen. 21. **cratches**—wooden gratings or hurdles. 21. **ose**—ooze. 34. **Irish mantell**—a long plaid or blanket worn by the rural Irish of the period, often their only covering.

Then renewing their feasts with feates, dauncing and singing, and such like mirth, we quartered that night with *Powhatan.*

The next day *Newport* came a shore and receiued as much content as those people could giue him: a boy named *Thomas Salvage* was then giuen vnto *Powhatan,* whom *Newport* called his sonne; for whom *Powhatan* gaue him *Namontack* his trustie servant, and one of a shrewd, subtill capacitie.

Three or foure dayes more we spent in feasting, dauncing, and trading, wherein *Powhatan* carried himselfe so proudly, yet discreetly (in his salvage manner) as made vs all admire his naturall gifts, considering his education.

As scorning to trade as his subiects did; he bespake *Newport* in this manner. *Captaine* Newport, *it is not agreeable to my greatnesse, in this pedling manner to trade for trifles; and I esteeme you also a great Werowance. Therefore lay me downe all your commodities together; what I like I will take, and in recompence give you what I thinke fitting their value.*

Captaine *Smith* being our interpreter, regarding *Newport* as his father, knowing best the disposition of *Powhatan,* tould vs his intent was but onely to cheat vs; yet Captaine *Newport* thinking to out braue this Salvage in ostentation of greatnesse, and so to bewitch him with him bountie, as to haue what he listed, it so hapned, that *Powhatan* hauing his desire, valued his corne at such a rate, that I thinke it better cheape in *Spaine:* for we had not foure bushells for that we expected to haue twentie hogsheads.

This bred some vnkindnesse betweene our two Captaines; *Newport* seeking to please the vnsatiable desire of the Salvage, *Smith* to cause the Salvage to please him; but smothering his distast to avoyd the Saluages suspition, glanced in the eyes of *Powhatan* many trifles, who fixed his humor vpon a few blew beades. A long time he importunately desired them, but *Smith* seemed so much the more to affect them, as being composed of a most rare substance of the coulour of the skyes, and not to be worne but by the greatest kings in the world. This made him halfe madde to be the owner of such strange Iewells: so that ere we departed, for a pound or two of blew beades, he brought ouer my king for 2. or 300. Bushells of corne; yet parted good friends.

The like entertainment we found of *Opechankanough* king of *Pamavnkee,* whom also he in like manner fitted (at the like rates) with blew beads: which grew by this meanes, of that estimation, that none durst weare any of them but their great kings, their wiues and children.

And so we returned all well to *Iames* towne, where this new supply being lodged with the rest, accidently fired their quarters, and so the towne: which being but thatched with reeds, the fire was so fierce as it burnt their Pallisado's, (though eight or ten yards distant) with their Armes, bedding, apparell, and much priuate prouision. Good Master *Hunt* our Preacher lost all his Library, and all he had but the cloathes on his backe: yet none neuer heard him repine at his losse. This happned in the winter in that extreame frost. 1607.

Now though we had victuall sufficient I meane onely of Oatmeale, meale

12. **Werowance**—chief. 18. **him**—should read "his." 36. **returned**—March 9, 1608 (Arber-Bradley). 37. **accidently**—insert "had" before this adverb. 43. **1607**—1607-08 (Arber-Bradley).

and corne: yet the Ship staying 14. weekes when shee might as wel haue beene gone in 14. dayes, spent a great part of that, and neare all the rest that was sent to be landed.

When they departed what the[i]re discretion could spare vs, to make a little poore meale or two, we called feastes, to relish our mouthes: of each somwhat they left vs, yet I must confesse, those that had either money, spare clothes, credit to giue billes of paiment, gold rings, furrs, or any such commodoties, were euer welcome to this remouing tauerne, such was our patience to obay such vile Commanders, and buy our owne provisions at 15. times the value, suffering them feast (we bearing the charge) yet must not repine, but fast, least we should incurre the censure of factious and seditious persons: and then leakage, ship-rats, and other casuallties occasioned them losse: but the vessels and remnants (for totals) we were glad to receaue with all our hearts to make vp the account, highly commending their prouidence for preseruing that, least they should discourage any more to come to vs.

Now for all this plenty our ordynary was but meale and water, so that this great charge little releeued our wants, whereby with the extremitie of the bitter cold frost and those defects, more then halfe of vs dyed.

I cannot deny but both *Smith* and *Skriuener* did their best to amend what was amisse, but with the President went the maior part, that the[i]re hornes were to short.

But the worst was our guilded refiners with their golden promises made all men their slaues in hope of recompences; there was no talke, no hope, no worke, but dig gold, wash gold, refine gold, loade gold, such a bruit of gold, that one mad fellow desired to be buried in the sands least they should by the[i]re art make gold of his bones: little neede there was and lesse reason, the ship should stay, the[i]re wages run on, our victualls consume 14. weekes, that the Mariners might say, they did helpe to build such a golden Church that we can say the raine washed neere to nothing in 14. dayes.

Were it that captaine *Smith* would not applaude all those golden inventions, because they admitted him not to the sight of their trialls nor golden consultations, I know not; but I haue heard him oft question with Captaine *Martin* and tell him, except he could shew him a more substantiall triall, he was not inamoured with their durty skill, breathing out these and many other passions, neuer any thing did more torment him, then to see all necessary busines neglected, to fraught such a drunken ship with so much guilded durt.

Till then we neuer accounted, Captaine *Newport* a refiner, who being ready to set saile for *England,* and we not hauing any vse of Parliaments, Plaies, Petitions, Admiralls, Recorders, Interpreters, Chronologers, Courts of Plea, nor Iustices of peace, sent Master *Wingfield* and Captaine *Archer* home with him, that had ingrossed all those titles, to seeke some better place of imployment.

Oh cursed gold, those hunger-starved movers,
To what misfortunes lead'st thou all those lovers!
For all the China *wealth, nor* Indies *can*
Suffice the minde of an av'ritious man.

1. 14. weekes—January 8-April 10, 1608 (Arber-Bradley). **16. ordynary**—ordinary meals. **25. mad fellow**—joker. **39. Admiralls**—in the general sense of viceroys.

EDWARD TAYLOR

1645?-1729

1645? Born in Leicestershire, in or near Coventry, probably of a dissenting family. Went to school for a time at Bagworth.

1668 July 5, arrived at Boston, where he was welcomed by Increase Mather and other important colonials. On July 23, admitted as a sophomore to Harvard College, where he served as college butler.

1671 Graduated from Harvard College, Samuel Sewall being a member of his class. In December he accepted a call to a small church at Westfield, Massachusetts, in the Connecticut Valley.

1675 November 5, married Elizabeth Fitch, daughter of a clergyman in Norwich, Connecticut, by whom he had seven children, none surviving him.

1679 Formally ordained as pastor of the Westfield church.

1689 Death of Mrs. Taylor. June 2, married Ruth Wyllys, daughter of Samuel Wyllys of Hartford, Connecticut, by whom he had six children.

1720 Recipient of an M.A. degree from Harvard College.

1726 The Rev. Nehemiah Bull, his successor, joined him in the pastorate at Westfield.

1729 June 24, died at Westfield.

EDITIONS: Thomas H. Johnson published in 1939 *The Poetical Works of Edward Taylor,* Rockland Editions (New York), which contains the best of Taylor's poetry, drawn from manuscripts in the Yale University Library. This also contains a bibliographical account of writings by and about Taylor and a biographical sketch. These should be supplemented by the sketch by Johnson in Volume XXI (Supplement One) of the *Dictionary of American Biography.* Taylor's diary may be read in the *Proceedings of the Massachusetts Historical Society,* Vol. XVIII (1881), pp. 4-18.

Of the three principal poets of seventeenth-century New England, Anne Bradstreet, Michael Wigglesworth, and Edward Taylor, the last-named was the last to be discovered, largely because he forbade his heirs to publish his work. The world owes the discovery of him to the diligence of Thomas H. Johnson of Lawrenceville, New Jersey, who unearthed the productions of this literary and religious genius in the manuscript collections of Yale University and published his findings in 1939. Johnson's volume does not contain all that Taylor wrote, but it contains all the best that he wrote.

Taylor's poems fall into two broad divisions, according to Mr. Johnson: "God's Determinations" and "Sacramental Meditations." The "Preface" and the "Prologue" to "God's Determinations" are here reprinted as characteristic expressions of Tay-

lor's poetic energy in imagery, conceit, and metrical movement as well as of his sense of the greatness and goodness of God and of the rapture with which the poet contemplates the work of the Eternal. The full title of the section in the *Poetical Works* is "God's Determinations Touching his Elect: and the Elects' Combat in their Conversion, and Coming up to God in Christ, together with the Comfortable Effects Thereof," a phrase which at once defines the poems and indicates something of Taylor's theological position. The other poems here reprinted are, with two exceptions, from the "Sacramental Meditations"; they will surprise those who believe that Calvinism was merely a dour religion by the sweetness of their spirit and by the way everything from a spider to a spinning wheel is made to illuminate Christ's affection and the love of God.

THE PREFACE

Infinity, when all things it beheld,
In Nothing, and of Nothing all did build,
Upon what Base was fixt the Lath, wherein
He turn'd this Globe, and riggalld it so trim?
Who blew the Bellows of his Furnace Vast?
Or held the Mould wherein the world was Cast?
Who laid its Corner Stone? Or whose Command?
Where stand the Pillars upon which it stands?
Who Lac'de and Fillitted the earth so fine,
With Rivers like green Ribbons Smaragdine?
Who made the Sea's its Selvedge, and it locks
Like a Quilt Ball within a Silver Box?
Who spread its Canopy? Or Curtains Spun?
Who in this Bowling Alley bowld the Sun?
Who made it always when it rises set:
To go at once both down, and up to get?
Who th' Curtain rods made for this Tapistry?
Who hung the twinckling Lanthorns in the Sky?
Who? who did this? or who is he? Why, know
It's Onely Might Almighty this did doe.
His hand hath made this noble worke which Stands
His Glorious Handywork not made by hands.
Who spake all things from nothing: and with ease
Can speake all things to nothing, if he please.
Whose Little finger at his pleasure Can
Out mete ten thousand worlds with halfe a Span:
Whose Might Almighty can by half a looks
Root up the rocks and rock the hills by th' roots.
Can take this mighty World up in his hande,
And shake it like a Squitchen or a Wand.
Whose single Frown will make the Heavens shake
Like as an aspen leafe the Winde makes quake.
Oh! what a might is this! Whose single frown
Doth shake the world as it would shake it down?
Which All from Nothing fet, from Nothing, All:
Hath All on Nothing set, lets Nothing fall.
Gave all to nothing Man indeed, whereby
Through nothing man all might him Glorify.
In Nothing is imbosst the brightest Gem
More pretious than all pretiousness in them.
But Nothing man did throw down all by sin:
And darkened that lightsom Gem in him,
That now his Brightest Diamond is grown
Darker by far than any Coalpit Stone.

4. **riggalld**—grooved. 9. **Fillitted**—filleted, bound. 10. **Smaragdine**—emerald. 11. **Selvedge**—the edge of a piece of woven material so finished as to prevent raveling. 12. **Quilt Ball**—i.e., the earth is compared to a ball covered or finished in quilted work in the sense that quilting implies alternations of colors. 30. **Squitchen**—apparently a coinage by Taylor. "Possibly it is a dialect spelling for the obsolete substantive *switching*, a switch or stick" (Johnson). 35. **fet**—fetch. 42. **darkened**—here, a trisyllable.

PROLOGUE

Lord; Can a Crumb of Earth the Earth outweigh:
Outmatch all mountains, nay the Chrystall Sky?
Imbosom in't designs that shall Display
And trace into the Boundless Deity?
Yea, hand a Pen whose moysture doth guild ore
Eternall Glory with a glorious glore.

If it its Pen had of an Angels Quill,
And sharpened on a Pretious Stone ground tite,
And dipt in Liquid Gold, and mov'de by skill
In Christall leaves should golden Letters write,
It would but blot and blur: yea, jag and jar,
Unless thou mak'st the Pen and Scribener.

I am this Crumb of Dust which is design'd
To make my Pen unto thy Praise alone,
And my dull Phancy I would gladly grinde
Unto an Edge on Zions Pretious Stone:
And Write in Liquid Gold upon thy Name
My Letters till thy glory forth doth flame.

Let not th'attempts breake down my Dust I pray,
Nor laugh thou them to scorn, but pardon give.
Inspire this Crumb of Dust till it display
Thy Glory through't: and then thy dust shall live.
Its failings then thou'lt overlook I trust,
They being Slips slipt from thy Crumb of Dust.

Thy Crumb of Dust breaths two words from its breast;
That thou wilt guide its pen to write aright
To Prove thou art, and that thou art the best,
And shew thy Properties to shine most bright.
And then thy Works will shine as flowers on Stems,
Or as in Jewellary Shops, do jems.

THE JOY OF CHURCH FELLOWSHIP RIGHTLY ATTENDED

In Heaven soaring up, I dropt an Eare
On Earth: and oh! sweet Melody!
And listening, found it was the Saints who were
Encroacht for Heaven that sang for Joy.
For in Christs Coach they sweetly sing,
As they to Glory ride therein.

Oh! joyous hearts! Enfir'de with holy Flame!
Is speech thus tasseled with praise?
Will not your inward fire of Joy contain,
That it in open flames doth blaze?
For in Christ[s] Coach Saints sweetly sing,
As they to Glory ride therein.

And if a string do slip by Chance, they soon
Do screw it up again: whereby
They set it in a more melodious Tune
And a Diviner Harmony.
For in Christs Coach they sweetly sing,
As they to Glory ride therein.

In all their Acts, publick and private, nay,
And secret too, they praise impart.
But in their Acts Divine, and Worship, they
With Hymns do offer up their Heart.
Thus in Christs Coach they sweetly sing,
As they to Glory ride therein.

Some few not in; and some whose Time and Place
Block up this Coaches way, do goe
As Travellers afoot: and so do trace
The Road that gives them right thereto;
While in this Coach these sweetly sing
As they to Glory ride therein.

UPON A SPIDER CATCHING A FLY

Thou sorrow, venom Elfe:
Is this thy play,

12. **Scribener**—scrivener, professional writer. 4. **Encroacht**—in the sense of having proceeded beyond the ordinary limits of human nature. 13. **string**—of a musical instrument.

To spin a web out of thyselfe
To Catch a Fly?
For why?

I saw a pettish wasp
Fall foule therein:
Whom yet thy whorle pins did no[t hasp]
Lest he should fling
His sting.

But as afraid, remote
Didst stand hereat,
And with thy little fingers stroke
And gently tap
His back.

Thus gently him didst treate
Lest he should pet,
And in a froppish, aspish heate
Should greatly fret
Thy net.

Whereas the silly Fly,
Caught by its leg,
Thou by the throate took'st hastily,
And 'hinde the head
Bite Dead.

This goes to pot, that not
Nature doth call.
Strive not above what strength hath got,
Lest in the brawle
Thou fall.

This Frey seems thus to us:
Hells Spider gets
His intrails spun to whip Cords thus,
And wove to nets,
And sets.

To tangle Adams race
In's stratagems
To their Destructions, Spoil'd, made base
By venom things,
Damn'd Sins.

But mighty, Gracious Lord,
Communicate
Thy Grace to breake the Cord; afford
Us Glorys Gate
And State.

We'l Nightingaile sing like
When pearcht on high
In Glories Cage, thy glory, bright:
[Yea,] thankfully,
For joy.

HUSWIFERY

Make me, O Lord, thy Spin[n]ing Wheele compleat;
Thy Holy Worde my Distaff make for mee.
Make mine Affections thy Swift Flyers neate,
And make my Soule thy holy Spoole to bee.
My Conversation make to be thy Reele,
And reele the yarn thereon spun of thy Wheele.

Make me thy Loome then, knit therein this Twine:
And make thy Holy Spirit, Lord, winde quills:
Then weave the Web thyselfe. The yarn is fine.
Thine Ordinances make my Fulling Mills.
Then dy the same in Heavenly Colours Choice,
All pinkt with Varnish't Flowers of Paradise.

Then cloath therewith mine Understanding, Will,
Affections, Judgment, Conscience, Memory;
My Words and Actions, that their shine may fill
My wayes with glory and thee glorify.
Then mine apparell shall display before yee
That I am Cloathd in Holy robes for glory.

8. whorle pins—apparently the pins by which the whorl or fly-wheel is attached to the spindle of a spinning-wheel. **8. hasp**—clamp down upon. **17. pet**—i.e., fall into a pet; ill-humor. **18. froppish**—peevish. **31. Frey**—fray. **33. whip Cords**—whipcord, a tough hempen cord. **8. quills**—spools. **10. Fulling Mills**—mills for cleansing cloth with fuller's earth or soap. **12. pinkt**—ornamented. **12. Varnish't**—bright, glossy.

THE REFLEXTION

CANTICLES * II:1: I AM THE ROSE OF SHARON

Lord, art thou at the Table Head above
Meat, Med'cine, Sweetness, sparkling Beautys, to
Enamour Souls with Flaming Flakes of Love,
And not my Trencher, nor my Cup o're-flow?
Ben't I a bidden guest? Oh! sweat mine Eye:
O'reflow with Teares: Oh! draw thy fountains dry.

Shall I not smell thy sweet, oh! Sharons Rose?
Shall not mine Eye salute thy Beauty? Why?
Shall thy sweet leaves their Beautious sweets upclose?
As halfe ashamde my sight should on them ly?
Woe's me! For this my sighs shall be in grain,
Offer'd on Sorrows Altar for the same.

Had not my Soule's, thy Conduit, Pipes stopt bin
With mud, what Ravishment would'st thou Convay?
Let Graces Golden Spade dig till the Spring
Of tears arise, and cleare this filth away.
Lord, let thy Spirit raise my sighings till
These Pipes my soule do with thy sweetness fill.

Earth once was Paradise of Heaven below,
Till inkefac'd sin had it with poyson stockt;
And Chast this Paradise away into
Heav'ns upmost Loft, and it in Glory Lockt.
But thou, sweet Lord, hast with thy golden Key
Unlock[t] the Doore, and made a golden day.

Once at thy Feast, I saw thee Pearle-like stand
'Tween Heaven and Earth, where Heavens Bright glory all
In streams fell on thee, as a floodgate and,
Like Sun Beams through thee on the World to Fall.
Oh! Sugar sweet then! My Deare sweet Lord, I see
Saints Heaven-lost Happiness restor'd by thee.

Shall Heaven and Earth's bright Glory all up lie,
Like Sun Beams bundled in the sun in thee?
Dost thou sit Rose at Table Head, where I
Do sit, and Carv'st no morsell sweet for mee?
So much before, so little now! Sprindge, Lord,
Thy Rosie Leaves, and me their Glee afford.

Shall not thy Rose my Garden fresh perfume?
Shall not thy Beauty my dull Heart assaile?
Shall not thy golden gleams run through this gloom?
Shall my black Velvet Mask thy fair Face Vaile?
Pass o're my Faults; shine forth, bright sun; arise!
Enthrone thy Rosy-selfe within mine Eyes.

* **Canticles**—in the King James Bible, The Song of Solomon. **4. Trencher**—flat wooden plate. **21. Chast**—chased. **35. Sprindge**—spread out, extend over (Johnson).

WILLIAM BYRD II

1674-1744

I. THE SCION OF A GREAT COLONIAL FAMILY (1674–1705)

1674 Born March 28, son of William and Mary Byrd, near the present city of Richmond, Virginia, heir to one of the richest landed proprietors in the colony.
1684 Sent to school in England; under supervision of his grandfather.
1690 Sent to Holland to study the Dutch commercial system; on return to London, entered as student of law in Middle Temple.
1696 Returned to Virginia; through father's influence elected member of the Assembly from Henrico County.
1697 Sent to England as one of two colonial representatives before the Board of Trade; attempted to defend Sir Edmund Andros against charges made by the Anglicans.
1698 Appointed colonial agent from Virginia in London. Member of the Royal Society (before 1698). Brilliant social career.

II. PERIOD OF POLITICAL CONTROVERSY (1705–1726)

1705 Returned to Virginia on the news of his father's death (December 4, 1704), succeeding him in official life of the colony (receiver-general, 1706-1716(?); member of Council of State, 1709-1744).
1706 Married Lucy Parke, and later (1710) assumed the debts of her father.
1710 Arrival of Lieutenant-Governor Alexander Spotswood; beginning of his quarrel with Byrd over collection of taxes and appointment of judiciary.
1715 Byrd in London to denounce Spotswood as one who desired "his own absolute will." Spokesman of the landed gentry.
1716 Death of Mrs. Byrd (in London).
1717 Arrival in London of daughter, Evelyn (born July 16, 1707). Period of social brilliance. Evelyn's love affair with the Earl of Peterborough; she returned to Virginia, and died November 13, 1737.
1720 Byrd returned to Virginia in order to retain offices. Reconciliation with Spotswood. Appointed agent in London, Byrd immediately sailed for England.
1724 Married Maria Taylor of Kensington, mother of William Byrd III (1728-1777).

III. "COLONEL WILLIAM BYRD, OF WESTOVER IN VIRGINIA, ESQR." (1726–1744)

1726 Final return to Virginia, living at Westover as a great colonial gentleman. Began to build up the richest library in the colonies.

1727–1728 Helped to settle boundary dispute between Virginia and North Carolina, the events forming the nucleus of *The History of the Dividing Line.**

1732 Made westward journey described in *A Progress to the Mines.*

1733 Bought 20,000 acres in North Carolina, his visit to which is recorded in *A Journey to the Land of Eden.*

1736 Surveyed bounds of "Northern Neck" in Virginia.

1736–1738(?) Worked over the original *Secret History of the Dividing Line* into *The History of the Dividing Line.* Years of financial strain.

1743 President of the Council of State.

1744 Died August 26.

BIOGRAPHIES: J. S. Bassett, ed., *The Writings of "Colonel William Byrd, of Westover in Virginia, Esqr.,"* Doubleday, Page, 1901, pp. xl-lxxxviii; T. J. Wertenbaker, "Byrd, William," *Dictionary of American Biography,* Vol. III, pp. 383-84; P. A. Bruce, *The Virginia Plutarch,* University of North Carolina Press, 1929, 2 vols., Vol. I, pp. 134-54; R. C. Beatty, *William Byrd of Westover,* Houghton Mifflin, 1932. See also Louis B. Wright and Marion Tinling, edd., *The Secret Diary of William Byrd of Westover, 1709-1712,* Dietz Press, Richmond, 1941, and Maude H. EDITIONS: As *The Westover Manuscripts . . .* , Petersburg, 1841; *History of the Dividing Line and Other Tracts . . .* , ed. by T. H. Wynne, Richmond, 1866, 2 vols.; edition of J. S. Bassett (see above); *William Byrd's Histories of the Dividing Line . . .* with introduction and notes by W. K. Boyd, North Carolina Historical Commission, 1929 (containing *History* and *Secret History* on opposite pages). Popular edition: *Journey to the Land of Eden and Other Papers,* Macy-Masius, 1928.

The importance of the writings of William Byrd in the development of the American mind is manifold. They represent, in the first place, the utterance of a great Virginia gentleman who viewed the lower orders with a certain amused tolerance: in the contrast of social ranks implicit in his work one sees the distance which the Revolutionary leaders were to traverse toward social democracy. In the second place, he was a cultivated person who had at his finger tips the learning of the day; his writings are strewn with allusions to the classics, to current topics, to scientific theories, and to well-known objects. Inheriting the tradition of the Renaissance gentleman, Byrd was curious about all knowledge; and the *History of the Dividing Line* in particular is rich in scientific observations on the flora and fauna of the region traversed, on medical lore, on the habits of animals, and on the Indians. Byrd is at times a little credulous, though usually he writes with great shrewdness. But above all, his writing is still lively because of its vital style. The adjective which is usually applied to him is "sprightly," and sprightliness results in that play of humor, that sense of the odd in human behavior, that droll gravity, which places Byrd early in the ranks of American humorists. He is racy, he likes a good story, and is not too skeptical about its truth; and he takes a mischievous delight in recording the discomfiture of the pompous. With all these worldly characteristics, moreover, he ex-

* For original records of the survey, and Byrd's first journal, see *The Colonial Records of North Carolina,* Vol. II, pp. 750-57, 799-815.

hibits the growing religious tolerance of the eighteenth century. Yet, though he is amused at the demands for christenings in "Lubberland," dislikes puritan narrowness, and is no church zealot, Byrd has a profound faith in the goodness of life and in the direction of its concerns (for example, the surveying party) by the providence of God.

[LUBBERLAND]

From *The History of the Dividing Line.* The vagueness of the earlier colonial charters left the boundary lines of the various British dominions in North America in confusion; and especially had there been constant bickering between Virginia and North Carolina after 1680 as to the common boundary line. An unsatisfactory survey in 1710 did not help matters; and after endless controversy a joint commission was appointed by the governors of the two colonies to settle the problem. The Virginia commissioners in actual charge of the survey were William Byrd, William Dandridge, and Richard Fitz-William; the North Carolina commissioners were Christopher Gale, Edward Moseley, William Little, and John Lovick. Both sides also appointed surveyors: Alexander Irvine and William Mayo for Virginia, Samuel Swann and Commissioner Moseley for North Carolina. The survey was begun at the seacoast (Currituck Inlet), where the commissioners met on March 5, 1728. By March 14 the line had been carried to the edge of the Dismal Swamp. The surveyors and twelve assistants plunged into the swamp, but the commissioners went around it and awaited the other half of the party on the western edge of the swamp, at the plantation of Thomas Speight of Perquimans County in North Carolina. At this point the selection in the text begins; the surveyors have just struggled through the swamp, and curious Carolinians, wondering whether their farms are in Virginia or North Carolina, have been swarming over the Speight plantation to gaze at the commissioners. The text is from Bassett's edition of the *Writings.*

[March 24, 1728] This being Sunday, we had a Numerous congregation, which flockt to our Quarters from all the adjacent Country. The News that our Surveyors were come out of the Dismal, increas'd the Number very much, because it wou'd give them an Opportunity of guessing, at least, whereabouts the Line wou'd cut, whereby they might form Some Judgment whether they belong'd to Virginia or Carolina. Those who had taken up Land within the Disputed Bounds were in great pain lest it should be found to ly in Virginia; because this being done contrary to an Express Order of that government, the Patentees had great reason to fear they should in that case have lost their land. But their Apprehensions were now at an end, when they understood that all the Territory which had been controverted was like to be left in Carolina.

In the afternoon, those who were to re-enter the Dismal were furnisht with the Necessary Provisions, and Order'd to repair the Over-Night to their Landlord, Peter Brinkley's, that they might be ready to begin their Business early on Monday Morning. Mr. Irvin was excus'd from the Fatigue, in complement to his Lungs; but Mr. Mayo and Mr. Swan were Robust enough to return upon that painful Service, and, to do them Justice, they went with great Alac-

9. **Patentees**—those who had acquired grants of land.

rity. The Truth was, they now knew the worst of it; and cou'd guess pretty near at the time when they might hope to return to Land again.

[March] 25. The air was chill'd this Morning with a Smart North-west Wind, which favour'd the Dismalites in their Dirty March. They return'd by the Path they had made in coming out, and with great Industry arriv'd in the Evening at the Spot where the Line had been discontinued.

After so long and laborious a Journey, they were glad to repose themselves on their couches of Cypress-bark, where their sleep was as sweet as it wou'd have been on a Bed of Finland Down.

In the mean time, we who stay'd behind had nothing to do, but to make the best observations we cou'd upon that Part of the Country. The Soil of our Landlord's Plantation, tho' none of the best, seem'd more fertile than any thereabouts, where the Ground is near as Sandy as the Desarts of Affrica, and consequently barren. The Road leading from thence to Edenton, being in distance about 27 Miles, lies upon a Ridge call'd Sandy-Ridge, which is so wretchedly Poor that it will not bring Potatoes.

The Pines in this Part of the country are of a different Species from those that grow in Virginia: their bearded Leaves are much longer and their Cones much larger. Each Cell contains a Seed of the Size and Figure of a black-ey'd Pea, which, Shedding in November, is very good Mast for Hogs, and fattens them in a Short time.

The Smallest of these Pines are full of Cones, which are 8 or 9 Inches long, and each affords commonly 60 or 70 Seeds. This Kind of Mast has the Advantage of all other, by being more constant, and less liable to be nippt by the Frost, or Eaten by the Caterpillars. The Trees also abound more with Turpentine, and consequently yield more Tarr, than either the Yellow or the White Pine; And for the same reason make more durable Timber for building. The Inhabitants hereabouts pick up Knots of Lightwood in Abundance, which they burn into tar, and then carry it to Norfolk or Nansimond for a Market. The Tar made in this method is the less Valuable, because it is said to burn the Cordage, tho' it is full as good for all other uses, as that made in Sweden and Muscovy.

Surely there is no place in the World where the Inhabitants live with less Labour than in N Carolina. It approaches nearer to the Description of Lubberland than any other, by the great felicity of the Climate, the easiness of raising Provisions, and the Slothfulness of the People.

Indian Corn is of so great increase, that a little Pains will Subsist a very large Family with Bread, and then they may have meat without any pains at all, by the Help of the Low Grounds, and the great Variety of Mast that grows on the High-land. The Men, for their Parts, just like the Indians, im-

4. Dismalites—the surveyors. **9. Finland Down**—that is, like eider down. **16. bring**—bring forth. **18. bearded Leaves**—that is, pine "leaves." **28. Lightwood**—resinous pine. **29. burn into tar**—Crude tar can be made by heaping up pine wood, covering it over with earth, leaving only a small vent, and recovering the liquid tar which exudes. **29. Nansimond**—Nansemond County in Virginia, just north of the Dismal Swamp. **30. burn**—eat into. **33. Surely there is**—This celebrated description of the North Carolinians does not appear in *The Secret History*, and was apparently added later. *The Secret History* contains only one short passage commenting unfavorably on North Carolina. **34-35. Lubberland**—imaginary country where people live in perfect idleness.

pose all the Work upon the poor Women. They make their Wives rise out of their Beds early in the Morning, at the same time that they lye and Snore, till the Sun has run one third of his course, and disperst all the unwholesome Damps. Then, after Stretching and Yawning for half an Hour, they light their Pipes, and, under the Protection of a cloud of Smoak, venture out into the open Air; tho', if it happens to be never so little cold, they quickly return Shivering into the Chimney corner. When the Weather is mild, they stand leaning with both their arms upon the corn-field fence, and gravely consider whether they had best go and take a Small Heat at the Hough: but generally find reasons to put it off till another time.

Thus they loiter away their Lives, like Solomon's Sluggard, with their Arms across, and at the Winding up of the Year Scarcely have Bread to Eat.

To speak the Truth, tis a thorough Aversion to Labor that makes People file off to N Carolina, where Plenty and a Warm Sun confirm them in their Disposition to Laziness for their whole Lives.

[March] 26. Since we were like to be confin'd to this place, till the People return'd out of the Dismal, twas agreed that our Chaplain might Safely take a turn to Edenton, to preach the Gospel to the Infidels there, and Christen their Children. He was accompany'd thither by Mr. Little, One of the Carolina Commissioners, who, to shew his regard for the Church, offer'd to treat Him on the Road with a Fricassee of Rum. They fry'd half a Dozen Rashers of very fat Bacon in a Pint of Rum, both which being disht up together, serv'd the Company at once both for meat and Drink.

Most of the Rum they get in this Country comes from New England, and is so bad and unwholesome, that it is not improperly call'd "Kill-Devil." It is distill'd there from forreign molosses, which, if Skilfully manag'd, yields near Gallon for Gallon. Their molosses comes from the same country, and has the name of "Long Sugar" in Carolina, I suppose from the Ropiness of it, and Serves all the purposes of Sugar, both in their Eating and Drinking.

When they entertain their Friends bountifully, they fail not to set before them a Capacious Bowl of Bombo, so call'd from the Admiral of that name. This is a Compound of Rum and Water in Equal Parts, made palatable with the said long Sugar. As good Humour begins to flow, and the Bowl to Ebb, they take Care to replenish it with Shear Rum, of which there always is a Reserve under the Table. But such Generous doings happen only when that Balsam of life is plenty; for they have often such Melancholy times, that neither Land-graves nor Cassicks can procure one drop for their Wives, when they ly in, or are troubled with the Colick or Vapours. Very few in this Country have the Industry to plant Orchards, which, in a Dearth of Rum, might supply them with much better Liquor.

The Truth is, there is one Inconvenience that easily discourages lazy People

9. **Small Heat at the Hough**—short turn at the hoe. 11. **Solomon's Sluggard**—See Prov. 20:4. 28. **Ropiness**—stringiness. 31. **Bombo**—Admiral John Benbow (1653-1702) seems to have had nothing to do with naming the drink in question. The word is Italian in origin. 37. **Land-graves nor Cassicks**—a hit at the pompous nomenclature in John Locke's "The Fundamental Constitutions of Carolina" (1669), intended for the government of the colony. This provided for the creation of one landgrave (count) and two casiques for each county, who were to constitute a hereditary nobility.

from making This improvement: very often, in Autumn, when the Apples begin to ripen, they are visited with Numerous Flights of paraqueets, that bite all the Fruit to Pieces in a moment, for the sake of the Kernels. The Havock they make is Sometimes so great, that whole Orchards are laid waste in Spite of all the Noises that can be made, or Mawkins that can be dresst up, to fright 'em away. These Ravenous Birds visit North Carolina only during the warm Season, and so soon as the Cold begins to come on, retire back towards the Sun. They rarely Venture so far North as Virginia, except in a very hot Summer, when they visit the most Southern Parts of it. They are very Beautiful; but like some other pretty Creatures, are apt to be loud and mischievous.

[March] 27. Betwixt this and Edenton there are many thuckleberry Slashes, which afford a convenient Harbour for Wolves and Foxes. The first of these wild Beasts is not so large and fierce as they are in other countries more Northerly. He will not attack a Man in the Keenest of his Hunger, but run away from him, as from an Animal more mischievous than himself.

The Foxes are much bolder, and will Sometimes not only make a Stand, but likewise assault any one that would balk them of their Prey. The Inhabitants hereabouts take the trouble to dig abundance of Wolf-Pits, so deep and perpendicular, that when a Wolf is once tempted into them, he can no more Scramble out again, than a Husband who has taken the Leap can Scramble out of Matrimony.

Most of the Houses in this Part of the Country are Log-houses, covered with Pine or Cypress Shingles, 3 feet long, and one broad. They are hung upon Laths with Peggs, and their doors too turn upon Wooden Hinges, and have wooden Locks to Secure them, so that the Building is finisht without Nails or other Iron-Work. They also set up their Pales without any Nails at all, and indeed more Securely than those that are nail'd. There are 3 Rails mortised into the Posts, the lowest of which serves as a Sill with a Groove in the Middle, big enough to receive the End of the Pales: the middle Part of the Pale rests against the Inside of the Next Rail, and the Top of it is brought forward to the outside of the uppermost. Such Wreathing of the Pales in and out makes them stand firm, and much harder to unfix than when nail'd in the Ordinary way.

Within 3 or 4 Miles of Edenton, the Soil appears to be a little more fertile, tho' it is much cut with Slashes, which seem all to have a tendency towards the Dismal.

This Towne is Situate on the North side of Albemarle Sound, which is there about 5 miles over. A Dirty Slash runs all along the Back of it, which in

2. paraqueets—According to Mark Catesby, who visited this region from 1712 to 1719, flocks of parakeets or "parrots" visited orchards in autumn "where they make great destruction for their kernels only: for the same purpose they frequent *Virginia;* which is the furthest North I ever hear they have been seen." (*The Natural History of Carolina,* London, 1771, 2 vols., Vol. I, p. 11). **5. Mawkins**—scarecrows. **12. thuckleberry**—huckleberry. **13. Wolves and Foxes**—As showing the accuracy of Byrd's observations, his description of the habits of the wolf is confirmed by Catesby, *op. cit.,* Vol. I, p. xxvi. **27. Pales**—rails for fencing. **35. Edenton**—During the administration of Governor Charles Eden (1714-1722) Edenton, formerly known as Queen Anne's Creek, became the seat of government. **36-37. Slashes . . . tendency towards the Dismal**—low, wet, overgrown swamps draining into the Dismal Swamp.

the Summer is a foul annoyance, and furnishes abundance of that Carolina plague, musquetas. There may be 40 or 50 Houses, most of them Small, and built without Expense. A Citizen here is counted Extravagant, if he has Ambition enough to aspire to a Brick-chimney. Justice herself is but indifferently Lodged, the Court-House having much the Air of a Common Tobacco-House. I believe this is the only Metropolis in the Christian or Mahometan World, where there is neither Church, Chappel, Mosque, Synagogue, or any other Place of Publick Worship of any Sect or Religion whatsoever.

What little Devotion there may happen to be is much more private than their vices. The People seem easy without a Minister, as long as they are exempted from paying Him. Some times the Society for propagating the Gospel has had the Charity to send over Missionaries to this Country; but unfortunately the Priest has been too Lewd for the people, or, which oftener happens, they too lewd for the Priest. For these Reasons these Reverend Gentlemen have always left their Flocks as arrant Heathen as they found them. Thus much however may be said for the Inhabitants of Edenton, that not a Soul has the least taint of Hypocrisy, or Superstition, acting very Frankly and above-board in all their Excesses.

Provisions here are extremely cheap, and extremely good, so that People may live plentifully at a trifling expense. Nothing is dear but Law, Physick, and Strong Drink, which are all bad in their Kind, and the last they get with so much Difficulty, that they are never guilty of the Sin of Suffering it to Sour upon their Hands. Their Vanity generally lies not so much in having a handsome Dining-Room, as a Handsome House of Office: in this Kind of Structure they are really extravagant.

They are rarely guilty of Flattering or making any Court to their governors, but treat them with all the Excesses of Freedom and Familiarity. They are of Opinion their rulers wou'd be apt to grow insolent, if they grew Rich, and for that reason take care to keep them poorer, and more dependent, if possible, than the Saints in New England used to do their Governors. They have very little coin, so they are forced to carry on their Home-Traffick with Paper-Money. This is the only Cash that will tarry in the Country, and for that rea-

2. musquetas—mosquitoes. **8. Place of Publick Worship**—Byrd probably did not visit Edenton. Within a mile of the Edenton courthouse an Anglican chapel had been built in 1703 (Boyd). **10. without a Minister**—Not literally true. The Society for the Propagation of the Gospel sent missionaries to North Carolina in 1711, 1712, 1718, and 1723, and "there was generally a missionary" at Edenton (S. A. Ashe, *Narrative History of North Carolina,* C. L. Van Noppen, 1925, 2 vols., Vol. I, p. 197). In 1732, however, there was no minister of the Church of England (the only one established by law) in the entire colony. **13. too Lewd for the people**—Byrd probably gleaned this information from Moseley, the North Carolina commissioner. The two ministers in the province, the Rev. Mr. Bailey and the Rev. Mr. Blacknall, in 1725-1726 took opposite sides in a quarrel between Sir Richard Everard, the new governor, and the assembly led by former Governor George Burrington. Bailey swore on oath, December 3, 1725, that the Everard party used "base & scurrilous language" to him: "such . . . he never heard given to a Clergyman by any Majestrate before," and Moseley took his deposition. Everard wrote the Bishop of London, Jan. 25, 1725/6, that Bailey was an habitual drunkard. Blacknall, however, was charged with marrying a white woman to a mulatto, and was fined therefor. (*The Colonial Records of North Carolina,* Vol. II, pp. 581, 604-05, 672.) **27. Excesses**—Rioting and tumults marked the political quarrels of North Carolina in the first quarter of this century. **30. Saints in New England**—Puritans. **32. Cash that will tarry**—Under the existing theory of political economy gold was drained from the colonies to England.

son the Discount goes on increasing between that and real Money, and will do so to the End of the Chapter.

[March] 28. Our Time passt heavily in our Quarters, where we were quite cloy'd with the Carolina Felicity of having nothing to do. It was really more insupportable than the greatest Fatigue, and made us even envy the Drudgery of our Friends in the Dismal. Besides, tho' the Men we had with us were kept in Exact Discipline, and behav'd without Reproach, yet our Landlord began to be tired of them, fearing they would breed a Famine in his Family.

Indeed, so many keen Stomachs made great Havock amongst the Beef and Bacon, which he had laid in for his Summer Provision, nor cou'd he easily purchase More at that time of the Year, with the Money we paid him, because the People having no certain Market seldom provide any more of these Commodities than will barely supply their own Occasions. Besides the Weather was now grown too warm to lay in a fresh Stock so late in the Spring. These Considerations abated somewhat of that chearfulness with which he bidd us Welcome in the Beginning, and made him think the time quite as long as we did till the Surveyors return'd.

While we were thus all Hands uneasy, we were comforted with the News that this Afternoon the Line was finisht through the Dismal. The Messenger told us it had been the hard work of three days to measure the Length of only 5 Miles, and mark the Trees as they past along, and by the most exact Survey they found the Breadth of the Dismal in this Place to be completely 15 miles.

How wide it may be in other Parts, we can give no Account, but believe it grows narrower towards the North; possibly towards Albemarle Sound it may be something broader, where so many Rivers issue out of it. All we know for certain is, that from the Place where the Line enter'd the Dismal, to where it came out, we found the Road round that Portion of it which belongs to Virginia to be about 65 Miles. How great the Distance may be from Each of those Points, round that Part that falls within the Bounds of Carolina, we had no certain Information: tho' tis conjectur'd it cannot be so little as 30 Miles. At which rate the whole Circuit must be about an Hundred. What a Mass of Mud and Dirt is treasur'd up within this filthy circumference, and what a Quantity of Water must perpetually drain into it from the riseing ground that Surrounds it on every Side?

Without taking the Exact level of the Dismal, we may be sure that it declines towards the Places where the Several Rivers take their Rise, in order to carrying off the constant Supplies of Water. Were it not for such Discharges, the whole Swamp would long Since have been converted into a Lake. On the other Side this Declension must be very gentle, else it would be laid perfectly dry by so many continual drains; Whereas, on the contrary, the Ground seems every where to be thoroughly drencht even in the dryest Season of the Year.

The Surveyors concluded this day's Work with running 25 chains up into the Firm Land, where they waited further Orders from the Commissioners.

7. Exact Discipline—*The Secret History* shows this was not the case **7. Landlord**—Neither Byrd's original journal nor *The Secret History* says anything of the landlord's impatience. **44. chains**—A chain is a measure of length, 66 feet.

[INDIANS]

Having carried the line westward about seventy-five miles, the commission stopped work April 6 (among other reasons because "the Rattle-Snakes began to crawl out of their Winter-Quarters"), and met again on September 19 to resume their labors. They first met a considerable body of Indians in April when the line carried them to the Nottoway tribe. On October 7 they made a plat of the line and pushed forward, with increasing difficulty, into the broken country beyond the Dan. Byrd pauses on Sunday, October 20, to make some general observations on the habits of the Indians, probably collecting his material from the reports of others, and from books.

[October] 20. . . . The Atmosphere was so smoaky all round us, that the Mountains were again grown invisible. This happen'd not from the Hazyness of the Sky, but from the fireing of the Woods by the Indians, for we were now near the Route the Northern Savages take when they go out to War against the Cataubas and other Southern Nations.

On their way the Fires they make in their camps are left burning, which, catching the dry Leaves they ly near, soon put the adjacent Woods into a flame.

Some of our men in Search of their Horses discovered one of those Indian camps, where not long before they had been Furring and dressing their Skins.

And now I mention the Northern Indians, it may not be improper to take Notice of their implacable Hatred to those of the South. Their Wars are everlasting, without any Peace, Enmity being the only Inheritance among them that descends from Father to Son, and either Party will march a thousand Miles to take their Revenge upon such Hereditary Enemies.

These long Expeditions are Commonly carry'd on in the following Manner; Some Indian, remarkable for his Prowess, that has rais'd himself to the Reputation of a War-Captain, declares his Intention of paying a Visit to some southern Nation; Hereupon as many of the Young Fellows as have either a Strong Thirst of Blood or Glory, list themselves under his command.

With these Volunteers he goes from One Confederate Town to another, listing all the Rabble he can, til he has gather'd together a competent Number for Mischief.

Their Arms are a Gun and Tomahawk, and all the Provisions they carry from Home is a Pouch of Rockahominy. Thus provided and accoutr'd, they march towards their Enemy's Country, not in a Body, or by a certain Path, but Straggling in Small Numbers, for the greater convenience of Hunting and passing along undiscover'd.

So soon as they approach the Grounds on which the Enemy is used to hunt, they never kindle any Fire themselves, for fear of being found out by the smoak, nor will they Shoot at any kind of Game, tho' they shou'd be half Famisht, lest they might alarm their Foes, and put them upon their Guard.

5. **Cataubas**—a tribe of Siouan stock once numbering 1,500 warriors, but reduced before 1743 to less than 400 men owing to constant warfare with the Tuscaroras, and to the smallpox. The **Northern Savages** are members of the Five Nations. **22. listing**—enlisting. **25. Rockahominy**—hominy, parched corn.

Sometimes indeed, while they are still at some distance, they roast either Venison or Bear, till it is very dry, and then having Strung it on their Belts, wear it round their Middle, eating very Sparingly of it, because they know not when they shall meet with a fresh Supply. But coming nearer, they begin to look all round the Hemisphere, to watch if any smoke ascends, and listen continually for the Report of Guns, in order to make some happy Discovery for their own advantage.

It is amazing to see their Sagacity in discerning the Track of a Human Foot, even amongst dry leaves, which to our Shorter Sight is quite undiscoverable. If by one or more of those Signs they be able to find out the Camp of any Southern Indians, they Squat down in some Thicket, and keep themselves hush and Snug till it is dark; Then creeping up Softly, they approach near enough to observe all the Motions of the Enemy. And about two a Clock in the Morning, when they conceive them to be in a Profound Sleep, for they never keep Watch and Ward, pour in a Volley upon them, each Singling out his Man. The Moment they have discharg'd their Pieces, they rush in with their Tomahawks, and make sure work of all that are disabled.

Sometimes, when they find the Enemy Asleep around their little Fire, they first Pelt them with little Stones to wake them, and when they get up, fire in upon them, being in that posture a better Mark than when prostrate on the Ground.

Those that are kill'd of the Enemy, or disabled, they Scalp, that is, they cut the Skin all around the Head just below the hair, and then clapping their Feet to the poor Mortal's Shoulders, pull the Scalp off clean, and carry it home in Triumph, being as proud of those Trophies, as the Jews used to be of the Foreskins of the Philistines.

This way of Scalping was practised by the Ancient Scythians, who us'd these hairy Scalps as Towels at Home, and Trappings for their Horses when they went abroad.

They also made Cups of their Enemies' Skulls, in which they drank Prosperity to their country, and Confusion to all their Foes.

The Prisoners they happen to take alive in these expeditions generally pass their time very Scurvily. They put them to all the Tortures that ingenious Malice and cruelty can invent. And (what shews the baseness of the Indian Temper in Perfection) they never fail to treat those with the greatest Inhumanity that have distinguish'd themselves most by their Bravery; and, if he be a War-Captain, they do him the Honour to roast him alive, and distribute a Collop to all that had a Share in stealing the Victory.

5. Hemisphere—horizon. **14. they**—The second **they** refers to the Southern Indians. **25-26. Jews . . . Philistines**—*Cf.* I Sam. 18:27. **27. Ancient Scythians**—The passage on scalping among the Scythians is translated, almost literally, from Herodotus, IV, 64; the passage on drinking-cups is from IV, 65. The comparison of Indians and classic warriors is not uncommon in colonial literature. **38. Victory**—"Tho' who can reproach the poor Indians for this when Homer makes his celebrated hero, Achilles, drag the Body of Hector at the Tail of his chariot for having fought gallantly for the defense of his Country. Nor was Alexander the Great with all his Fam'd Generosity, less inhuman to the brave Tyrians 2,000 of whom he ordered to be crucified in cold Blood, for no other fault but for having defended their City most courageously against him, during a Seige of Seven Months. And what was still more brutal, he drag'd alive at the Tail of his Chariot thro' all the Streets for defending the Town with so much Vigour." (Byrd's note.) For the reference to **Hector** see Iliad, XXII; for the **brave Tyrians**, *cf.* Diodorus Siculus, XVII, 40-47.

They are very cunning in finding out new ways to torment their unhappy Captives, tho',· like those of Hell, their usual Method is by Fire. Sometimes they Barbecue them over live-Coals, taking them off every now and then, to prolong their Misery; at other times they will Stick Sharp Pieces of Lightwood all over their Body's, and setting them afire, let them burn down into the Flesh to the very Bone. And when they take a Stout Fellow, that they believe able to endure a great deal, they will tear all the Flesh off his Bones with red hot Pincers.

While these and such like Barbarities are practising, the Victors are so far from being touch'd with Tenderness and Compassion, that they dance and Sing round these wretched Mortals, shewing all the Marks of Pleasure and Jollity. And if such cruelties happen to be executed in their Towns, they employ their Children in tormenting the Prisoners, in order to extinguish in them betimes all Sentiments of Humanity.

In the mean time, while these poor Wretches are under the Anguish of all this inhuman Treatment, they disdain so much as to groan, Sigh, or shew the least Sign of Dismay or concern, so much as in their Looks; on the Contrary, they make it a Point of Honour all the time to Soften their Features, and look as pleas'd as if they were in the Actual Enjoyment of Some Delight; and if they never sang before in their Lives, they will be sure to be Melodious on this sad and Dismal Occasion.

So prodigious a Degree of Passive Valour in the Indians is the more to be wonder'd at, because in all Articles of Danger they are apt to behave like Cowards. And what is still more Surprizeing, the very Women discover, on such Occasions, as great Fortitude and Contempt, both of Pain and Death, as the Gallantest of their Men can do.

[A BEAR STORY]

By the first of November the expedition had penetrated into deeply wooded, mountainous country and was approaching Peter's Creek on the borders of Stokes County. The North Carolina commissioners had in the meantime (October 4) refused to continue, arguing that the disputed parts of the boundary had been settled, leaving the Virginia commissioners to carry on. Despite their desire to discover something about the sources of the Shenandoah and James rivers, the Virginians began their homeward journey on October 27. The rest of Byrd's narrative concerns their struggles to get back safely to Virginia.

[November] 3. A North-west Wind having clear'd the Sky, we were now tempted to travel on a Sunday, for the first time, for want of more plentiful Forage, though some of the more Scrupulous amongst us we[re] unwilling to do Evil, that good might come of it, and make our Cattle work a Good part of the Day in order to fill their Bellies at Night. However, the Chaplain put on his casuistical Face, and offer'd to take the sin upon Himself. We therefore

1-2. **torment their . . . Captives**—There is no evidence that Byrd ever witnessed such a scene. His description is therefore at second hand. 30. **Cattle**—horses. 31. **Chaplain**—Rev. Peter Fountain (Fontaine), 1691-1757, rector of Manakintown and Westover parishes, the chaplain of the expedition.

consented to move a Sabbath Day's Journey of 3 or 4 Miles, it appearing to be a Matter of some necessity.

On the way our unmerciful Indian kill'd no less than two Brace of Deer and a large Bear. We only prim'd the Deer, being unwilling to be encumbered with their whole Carcasses. The rest we consign'd to the Wolves, which in Return seranaded us a great part of the Night. They are very clamerous in their Banquets, which we know is the way some other Brutes have, in the extravagance of their Jollity and Sprightliness, of expressing their thanks to Providence.

We came to our Old camp, in Sight of the River Irvin, whose Stream was Swell'd now near four feet with the Rain that fell the Day before. This made it impracticable for us to ford it, nor could we guess when the water wou'd fall enough to let us go over.

This put our Mathematical Professor, who shou'd have set a better Example, into the Vapours, fearing he shou'd be oblig'd to take up his Winter Quarters in that doleful Wilderness. But the rest were not affected with his want of Faith, but preserv'd a Firmness of Mind Superior to such little Adverse Accidents. They trusted that the same good Providence which had most remarkably prosper'd them hitherto, would continue his goodness and conduct them safe to the End of their Journey.

However, we found plainly that travelling on the Sunday, contrary to our constant Rule, had not thriven with us in the least. We were not gainers of any distance by it, because the River made us pay two days for Violating one.

Nevertheless, by making this Reflection, I would not be thought so rigid an observer of the Sabbath as to allow of no Work at all to be done, or Journeys to be taken upon it. I should not care to ly still and be knockt on the head, as the Jews were heretofore by Antiochus, because I believ'd it unlawful to stand upon my Defense on this good day. Nor would I care, like a certain New England Magistrate, to order a Man to the Whipping Post, for daring to ride for a Midwife on the Lord's Day.

On the contrary, I am for doing all acts of Necessity, Charity, and Self-Preservation, upon a Sunday as well as other days of the Week. But, as I think our present March cou'd not Strictly be justify'd by any of these Rules, it was but just we should suffer a little for it.

I never could learn that the Indians set apart any day of the Week or the Year for the Service of God. They pray, as Philosophers eat, only when they have a stomach, without having any set time for it. Indeed these Idle People have very little occasion for a sabbath to refresh themselves after hard Labour,

3. our unmerciful Indian—On September 29 the commissioners had hired Bear-skin, a Saponi Indian, to hunt for the expedition. He "Supply'd us plentifully all the way with Meat, Seldom discharging his piece in vain." **10. Old camp**—The Virginians had camped on the banks of the Irvin (Irvine) River on October 18. At that time the river "seem'd to be deep every where except just where we forded." **14. Mathematical Professor**—Alexander Irvine, professor of natural philosophy and mathematics at William and Mary College, whom Byrd had come to dislike. **27. Jews . . . Antiochus**—This seems to be a confused remembrance of passages from Josephus's *Antiquities of the Jews*. Antiochus Epiphanes plundered the city of Jerusalem, but Ptolemy the son of Lagus surprised it (B.C. 324) on the Sabbath day when the Jews would not fight. (Josephus, Bk. XII, Chaps. 1, 5.) **29. New England Magistrate**—See, for a list of similar cases, Alice Morse Earle, *The Sabbath in Puritan New England*, Scribner, 1891, Chap. XVII.

because very few of them ever Labour at all. Like the wild Irish, they would rather want than Work, and are all men of Pleasure to whom every day is a day of rest.

Indeed, in their Hunting, they will take a little Pains, but this being only a Diversion, their spirits are rather rais'd than depress'd by it, and therefore need at most but a Night's Sleep to recruit them.

[November] 4. By some Stakes we had driven into the River yesterday, we perceiv'd the Water began to fall, but fell so Slowly that we found we must have patience a day or two longer. And because we were unwilling to ly altogether Idle, we sent back some of the men to bring up the two Horses that tir'd the Saturday before. They were found near the place where we had left them, but seemed too sensible of their Liberty to come to us. They were found Standing indeed, but as Motionless as the Equestrian statue at CHARING-CROSS.

We had great reason to apprehend more Rain by the clouds that drove over our Heads. The boldest among us were not without some Pangs of uneasiness at so very Sullen a Prospect. However, God be prais'd! it all blew over in a few Hours.

If much Rain had fallen, we resolv'd to make a Raft and bind it together with Grape Vines, to Ferry ourselves and Baggage over the River. Tho', in that Case, we expected the Swiftness of the Stream wou'd have carry'd down our Raft a long way before we cou'd have tugg'd it to the opposite shoar.

One of the Young Fellows we had sent to bring up the tired Horses entertained us in the Evening with a remarkable adventure he had met with that day.

He had straggled, it seems, from his Company in a mist, and made a cub of a year old betake itself to a Tree. While he was new-priming his piece, with intent to fetch it down, the Old Gentlewoman appeared, and perceiving her Heir apparent in Distress, advanc'd open-mouth'd to his relief.

The man was so intent upon his Game, that she had approacht very near him before he perceived her. But finding his Danger, he faced about upon the Enemy, which immediately rear'd upon her posteriors, & put herself in Battle Array.

The Man, admiring at the Bear's assurance, endeavour'd to fire upon Her, but by the Dampness of the Priming, his Gun did not go off. He cockt it a second time, and had the same misfortune. After missing Fire twice, he had the folly to punch the Beast with the muzzle of his Piece; but mother Bruin, being upon her Guard, seized the Weapon with her Paws, and by main strength wrenched it out of the Fellow's Hands.

The Man being thus fairly disarm'd, thought himself no longer a Match for the Enemy, and therefore retreated as fast as his Legs could carry him.

The brute naturally grew bolder upon the flight of her Adversary, and pursued him with all her heavy speed. For some time it was doubtful whether fear made one run faster, or Fury the other. But after an even course of about

1. **wild Irish**—During the sixteenth and seventeenth centuries the Irish, suffering from a multitude of oppressive laws, were frequently thus misjudged. 13. **Equestrian statue**—statue of Charles I by Hubert Le Sœur, erected at Charing Cross in 1674, the subject of various poetic eulogies.

50 yards, the Man had the Mishap to Stumble over a Stump, and fell down his full Length. He now wou'd have sold his Life a Penny-worth; but the Bear apprehending there might be some Trick in the Fall, instantly halted, and lookt with much attention on her Prostrate Foe.

In the mean while, the Man had with great presence of Mind resolved to make the Bear believe he was dead, by lying Breathless on the Ground, in Hopes that the Beast would be too generous to kill him over again. To carry on the Farce, he acted the Corpse for some time without dareing to raise his head, to see how near the Monster was to him. But in about two Minutes, to his unspeakable Comfort, he was rais'd from the Dead by the Barking of a Dog, belonging to one of his companions, who came Seasonably to his Rescue, and drove the Bear from pursuing the Man to take care of her Cub, which she fear'd might now fall into a second Distress.

JONATHAN EDWARDS

1703-1758

I. A PRECOCIOUS, PIOUS YOUTH (1703–1726)

1703 Born at East Windsor, Connecticut, October 5, fifth child and only son of cultured parents, Rev. Timothy and Esther Stoddard Edwards.
1709 Wrote a letter refuting materialism, bantering in tone; also wrote on habits of spiders.
1716 Entered Yale College after excellent tutoring at home. Read Locke "greedily," and recorded rationalizations on science and on the human mind.
1720–1722 After graduation, spent two further years in theological study.
1723 Conversion to Calvinistic doctrine of absolute divine sovereignty. Brief pastorate in New York.
1724 Elected a tutor at Yale, but resigned after a year because of illness.

II. THE PURITAN PREACHER (1726–1750)

1726 Became assistant to his grandfather, Rev. Solomon Stoddard, at Northampton, Massachusetts.
1727 July. Married Sarah Pierrepont of New Haven.
1731 *God Glorified in . . . Man's Dependence* published at the request of Boston ministers.
1734–1740 Revival of religion spread from Northampton to Connecticut. Whitefield came from England to assist.
1741 Preached sermon, "Sinners in the Hands of an Angry God," at Enfield, Massachusetts.
1742–1743 Series of sermons, *A Treatise Concerning Religious Affections* (published 1746), his chief expression of religious psychology, influential in Scotland.
1744–1750 Difficulties with his parish over sacraments and "indecent books," through defection of relatives, brought his dismissal.
1750 His *A Farewell Sermon,* warning against Arminianism, delivered July 1.

III. EXILE AT STOCKBRIDGE (1750–1758)

1751 Settled in Stockbridge as missionary among the Indians of western Massachusetts.
1752 His daughter Esther married Rev. Aaron Burr, president of College of New Jersey.
1754 Publication of *A Careful and Strict Enquiry into the Modern prevailing Notions of that Freedom of the Will which is Supposed to be Essential to Moral Agency . . .* , ranked him as the first American intellect.

1757 Elected Burr's successor as president of Nassau Hall, Princeton.
1758 Died March 22, following inoculation against smallpox.

With Edwards Puritanism in America came to its fullest expression. According to this religious philosophy God was glorified by man's entire dependence; few were predestined by the grace of God to eternal life. Naturally there was searching of heart on the part of the individual, and on the side of those who led, there developed the idea of a theocracy. When, by the close of the seventeenth century, the dominance of the Mathers declined before the growing prosperity of the colonies, the religious temper of New England seemed inert. But in Edwards the moribund faith became once more vibrant. The traditional themes were reasserted in the Great Awakening of 1740 with the logical vigor and intimate meaning that belonged to Edwards's peculiar genius. This last and greatest of the theocrats was a curious combination of logician and mystic. In his more personal writings, in his feeling for nature, and in many of his sermons is the ardor of the true mystic; in his defense of the hard-pressed dogmas of Calvinism he displays that clear scholastic logic which made him the power he was. He has been spoken of as "a baffled poet and stylist," which should give him claims to literary consideration. He was a great metaphysician and not merely a preacher of hell-fire sermons. He believed that the world exists for the glory of God, and, being a man of convictions, he preached the duty of living sincerely.

OF BEING

Of Being, which illustrates Edwards's metaphysical idealism, was written about 1718-20, when its author was a student in Yale College. It was first correctly printed from Edwards's manuscript by E. C. Smyth in the *Proceedings of the American Antiquarian Society,* October, 1895, pp. 241-45. This text has been followed here, but Edwards's spelling and punctuation have been modernized, his sentences have been broken up, and a few obviously necessary phrases have been inserted. Most printings of this essay follow an earlier and less authentic version. Though Edwards's

reasoning requires close attention, the student will soon discover that he is seeking to prove that nothing can be said to exist unless it is perceived. To arrive at this conclusion Edwards has first to destroy the notion of the absolute existence of nullity. The parallel with Berkeley has often been remarked upon.

THAT there should absolutely be nothing at all is utterly impossible. The mind can never (let it stretch its conceptions ever so much) bring itself to conceive a state of perfect nothing. It puts the mind into mere convulsion and confusion to endeavor to think of such a state, and it contradicts the very nature of the soul to think that it should be; and it is the greatest contradiction, and the aggregate of all contradictions, to say that there should not be. 'Tis true, we can't so distinctly show the contradiction by words, because we cannot talk about it without speaking horrid nonsense and contradicting ourselve[s] at every word, and because "nothing" is that whereby we distinctly show other particular contradictions. But here we are run up to our first principle, and we have no other to explain the nothingness, or not being, of "nothing" by. Indeed, we can mean nothing else by "nothing" but a state of absolute contradiction; and if any man thinks that he can think well enough how there should be nothing, I'll engage that what he means by "nothing" is as much something as any thing that ever he thought of in his life. And I believe that if he know what "nothing" was, it would be intuitively evident to him that it could not be. So that we see it is necessary some being should eternally be; and 'tis a more palpable contradiction still, to say that there must be being somewhere and not otherwhere, for the words "absolute nothing," and "where," contradict each other. And besides, it gives as great a shock to the mind to thin[k] of pure nothing being in any one place, as it does to think of it in all; and it is self-evident that there can be nothing in one place as well as in another; and so, if there can be in one, there can be in all. So that we see this necessary, eternal being must be infinite and omnipresent.

This infinite and omnipresent being cannot be solid. Let us see how contradictory it is to say that an infinite being is solid, for solidity is surely nothing but resistance to other solidities.

Space is this necessary, eternal, infinite, and omnipresent being. We find that we can with ease conceive how all other beings should not be; we can remove them out of our minds, and place some other in the room of them; but space is the very thing that we can never remove, and conceive of its not being. If a man would imagine space anywhere to be divided so as there should be nothing between the divided parts, there remains space between, notwithstanding; and so the man contradicts himself. And it is self-evident, I believe, to every man that space is necessary, eternal, infinite, and omnipresent. But I had as good speak plain. I have already said as much as that space is God; and it is indeed clear to me, that all the space there is, not proper to body—all the space there is without the bounds of the creation—all the space there was before the creation, is God himself; and nobody would in the least stick at it if it were not because of the gross conceptions that we have of space.

A state of absolute nothing is a state of absolute contradiction. Absolute

nothing is the aggregate of all the absurd[?] contradictions in the world—a state wherein there is neither body, nor spirit, nor space, neither empty space nor full space, neither little nor great, narrow nor broad, neither infinitely great space, nor finite space, nor a mathematical point, neither up nor down, neither north nor south (I don't mean as it is with respect to the body of the earth or some other great body, but) no contrary point, nor positions or directions, no such thing as either here or there, this way or that way, or only one way. When we go about to form an idea of perfect nothing, we must shut out all these things; we must shut out of our minds both space that has something in it, and space that has nothing in it; we must not allow ourselves to think of the least part of space (never so small), nor must we suffer our thoughts to take sanctuary in a mathematical point. When we go to expel body out of our thoughts, we must cease not to leave empty space in the room of it; and when we go to expel emptiness from our thoughts, we must not think to squeeze it out by anything close, hard, and solid, but we must think of the same that the sleeping rocks dream of; and not till then, shall we get a complete idea of nothing.

A state of nothing is a state wherein every proposition in Euclid is not true, nor any of those self-evident maxims by which they are demonstrated; and all other eternal truths are neither true nor false.

When we go to enquire whether or no there can be absolutely nothing, we speak nonsense in enquiring. The stating of the question is nonsense because we make a disjunction where there is none. "Either being or absolute nothing" is no disjunction, no more than whether a t[r]iangle is a t[r]iangle or not a t[r]iangle. There is no other way but only for there to be existence; there is no such thing as absolute nothing. There is such a thing as nothing with respect to this ink and paper; there is such a thing as nothing with respect to you and me; there is such a thing as nothing with respect to this globe of earth and with respect to this created universe——there is another way besides these things having existence—but there is no such thing as nothing with respect to entity, or being, absolutely considered. We don't know what we say if we say we think it possible in itself that there should not be entity.

And how doth it grate upon the mind to thin[k] that something should be from all eternity, and nothing all the while be conscious of it! Let us suppose, to illustrate it, that the world had a being from all eternity, and had many great changes and wonderful revolutions, and all the while nothing knew [that] there was no knowledge in the universe of any such thing. How is it possible to bring the mind to imagine [this]? Yea, it is really impossible, [and] it should be, that anything should be, and nothing know it. Then you'll say, if it be so, it is because nothing has any existence anywhere else but in consciousness. No, certainly, nowhere else but either in created or uncreated consciousness. Supposing there were another universe only of bodies, created at a great distance from this, created in excellent order and harmonious motions and a beautiful variety; and [supposing] there was no created intelligence in it—nothing but senseless bodies—[and that] nothing but God knew anything of it: I demand in what respect this world has a being, but only in the divine consciousness? Certainly in no respect. There would be figures and

magnitudes and motions and proportions, but where—where else but in the Almighty's knowledge? How is it possible there should [be]? Then you'll say: for the same reason, in a room [so] close shut up that nobody sees nor hears nothing in it, there is nothing any other way than in God's knowledge. I answer: created beings are conscious of the effects of what is in the room, for perhaps there is not one leaf of a tree nor spear of grass, but what has effects all over the universe, and will have, to the end of eternity. But any otherwise there is nothing in a room shut up, but only in God's consciousness. How can anything be there any other way? This will appear to be truly so to anyone that thinks of it with the whole united strength of his mind. Let us suppose, for illustration, this impossibility: that all the spirits in the universe . . . be for a time . . . deprived of their consciousness, and that God's consciousness at the same time . . . intermitted. I say the universe, for that time, would cease to be of itself, and not only as we speak because the Almighty could not attend to uphold the world, but [also] because God knew nothing of it. 'Tis our foolish imagination that will not suffer us to see. We fancy there may be figures and magnitudes, relations and properties, without any one's knowing of it, but it is our imagination hurts us. We don't know what figures and properties are.

Our imagination makes us fancy we see shapes an[d] colors and magnitudes, though nobody is there to behold it. But to help our imagination, let us state the case. Let us suppose the world deprived of every ray of light, so that there should not be the least glimmering of light in the universe. Now all will own that, in such case, the universe would be immediately really deprived of all its colors. One part of the universe is [in that case] no more red or blue or green or yellow or black or white or light or dark or transparent or opaque. There would be no visible distinction between the world, and the rest of the incomprehensible void. Yea, there would be no difference in these respect[s] between the world and the infinite void: that is, any part of that void would really be as light and as dark, as white and as black, as red and [as] green, as blue and as brown, as transparent and as opaque, as any part of the universe; or, as there would be in such case no difference between the world and nothing, in these respects, so there would be no difference between one part of the world and another. All, in these respects, is alike confounded with, and indistinguishable from, infinite emptiness.

At the same time also, let us suppose the universe to be altogether deprived of motion, and all parts of it to be at perfec[t] rest (the same supposition is, indeed, included in this, but we distinguish them for better clearness). Then the universe would not differ from the void in this respect. There will be no more motion in one than the other. Then also solidity would cease, [since] all that we mean, or can be meant, by solidity is resistance. Resistance to touch —the resistance of some parts of space—this is all the knowledge we get of solidity by our senses, and, I am sure, all that we can get any other way. (But solidity shall be shown to be nothing else, more fully hereafter.) But there can be no resistance if there is no motion. One body can[not] resist another when there is perfect rest amongst them. But you'll say, tho' there is not actual resistance, yet there is potential existence; that is, such and such parts of space would

resist upon occasion. But this is all I would have: that there is no solidity now (not but that God would cause there to be [solidity] on occasion). And if there is no solidity, there is no extension, for extension is the extendedness of the solidity; then all figure and magnitude and proportion immediately ceases. Put both these suppositions together—that is, deprive the world of light and motion, and the case would stand thus with the world: there would [be] neither white nor black, neither blue nor brown, bright nor shaded, pellucid nor opaque, no noise or sound, neither heat nor cold, neither fluid nor wet nor dry, hard nor soft, nor solidity nor extension, nor figure, nor magnitude, nor proportion, nor body, nor spirit. What then [is] to become of the universe? Certainly it exists nowhere but in the Divine mind. This will be abundantly clearer to one after having read what I have further to say of solidity, &c.

So that we see that a world without motion can exist nowhere else but in the mind, either infinite or finite.

Corollary. It follows from hence that . . . those beings which have knowledge and consciousness are the only proper and real and substantial beings, inasmuch as the being of other things is only by these. From hence we may see the gross mistake of those who think material things the most substantial beings, and spirits more like a shadow, whereas spirits only are properly substance.

SARAH PIERREPONT

Edwards wrote this rhapsody in 1723 about his future wife, who was then thirteen years old. The two were married four years later and lived happily together. The text of this selection is from Dwight's *Life of President Edwards,* which forms Vol. I of the *Works* (1830). The selection is on pp. 114-15.

THEY say there is a young lady in [New Haven] who is beloved of that Great Being, who made and rules the world, and that there are certain seasons in which this Great Being, in some way or other invisible, comes to her and fills her mind with exceeding sweet delight, and that she hardly cares for anything, except to meditate on him—that she expects after a while to be received up where he is, to be raised up out of the world and caught up into heaven; being assured that he loves her too well to let her remain at a distance from him always. There she is to dwell with him, and to be ravished with his love and delight forever. Therefore, if you present all the world before her, with the richest of its treasures, she disregards it and cares not for it, and is unmindful of any pain or affliction. She has a strange sweetness in her mind, and singular purity in her affections; is most just and conscientious in all her conduct; and you could not persuade her to do any thing wrong or sinful, if you would give her all the world, lest she should offend this Great Being. She is of a wonderful sweetness, calmness and universal benevolence of mind; especially after this Great God has manifested himself to her mind. She will sometimes go about from place to place, singing sweetly; and seems to be always full of joy and pleasure; and no one knows for what. She loves to be alone, walking in the fields and groves, and seems to have some one invisible always conversing with her.

PERSONAL NARRATIVE

The *Personal Narrative,* written about 1740-1742, and found among Edwards's papers at his death, is one of the classics of religious literature. Its intellectual honesty, simplicity, and mystical insight suggest comparison with the writings of St. Francis of Assisi. The text of this selection is from Dwight's *Life,* pp. 58-62; 64-67; 98-99; 131-36.

I HAD a variety of concerns and exercises about my soul from my childhood; but had two more remarkable seasons of awakening, before I met with that change by which I was brought to those new dispositions, and that new sense of things, that I have since had. The first time was when I was a boy, some years before I went to college, at a time of remarkable awakening in my father's congregation. I was then very much affected for many months, and concerned about the things of religion, and my soul's salvation; and was abundant in duties. I used to pray five times a day in secret, and to spend much time in religious talk with other boys, and used to meet with them to pray together. I experienced I know not what kind of delight in religion. My mind was much engaged in it, and had much self-righteous pleasure; and it was my delight to abound in religious duties. I with some of my school-mates joined together, and built a booth in a swamp, in a very retired spot, for a place of prayer. And besides, I had particular secret places of my own in the woods, where I used to retire by myself; and was from time to time much affected. My affections seemed to be lively and easily moved, and I seemed to be in my element when engaged in religious duties. And I am ready to think, many are deceived with such affections, and such a kind of delight as I then had in religion, and mistake it for grace.

But in process of time, my convictions and affections wore off; and I entirely lost all those affections and delights and left off secret prayer, at least as to any constant performance of it; and returned like a dog to his vomit, and went on in the ways of sin. Indeed I was at times very uneasy, especially towards the latter part of my time at college; when it pleased God, to seize me with the pleurisy; in which he brought me nigh to the grave, and shook me over the pit of hell. And yet, it was not long after my recovery, before I fell again into my old ways of sin. But God would not suffer me to go on with my quietness; I had great and violent inward struggles, till, after many conflicts, with wicked inclinations, repeated resolutions, and bonds that I laid myself under by a kind of vows to God, I was brought wholly to break off all former wicked ways, and all ways of known outward sin; and to apply myself to seek salvation, and practice many religious duties; but without that kind of affection and delight which I had formerly experienced. My concern now wrought more by inward struggles and conflicts, and self-reflections. I made seeking my salvation the main business of my life. But yet, it seems to me, I sought after a miserable manner; which has made me sometimes since to question, whether ever it issued in that which was saving; being ready to doubt, whether such miserable seeking ever succeeded. I was indeed brought

22. **vomit**—Prov. 26: 11.

to seek salvation in a manner that I never was before; I felt a spirit to part with all things in the world, for an interest in Christ.—My concern continued and prevailed, with many exercising thoughts and inward struggles; but yet it never seemed to be proper to express that concern by the name of terror.

From my childhood up, my mind had been full of objections against the doctrine of God's sovereignty, in choosing whom he would to eternal life, and rejecting whom he pleased; leaving them eternally to perish, and be everlastingly tormented in hell. It used to appear like a horrible doctrine to me. But I remember the time very well, when I seemed to be convinced, and fully satisfied, as to this sovereignty of God, and his justice in thus eternally disposing of men, according to his sovereign pleasure. But never could give an account, how, or by what means, I was thus convinced, not in the least imagining at the time, nor a long time after, that there was any extraordinary influence of God's Spirit in it; but only that now I saw further, and my reason apprehended the justice and reasonableness of it. However, my mind rested in it; and it put an end to all those cavils and objections. And there has been a wonderful alteration in my mind, with respect to the doctrine of God's sovereignty, from that day to this; so that I scarce ever have found so much as the rising of an objection against it, in the most absolute sense, in God's shewing mercy to whom he will shew mercy, and hardening whom he will. God's absolute sovereignty and justice, with respect to salvation and damnation, is what my mind seems to rest assured of, as much as of any thing that I see with my eyes; at least it is so at times. But I have often, since that first conviction, had quite another kind of sense of God's sovereignty than I had then. I have often since had not only a conviction, but a delightful conviction. The doctrine has very often appeared exceeding pleasant, bright, and sweet.

Absolute sovereignty is what I love to ascribe to God. But my first conviction was not so.

The first instance that I remember of that sort of inward, sweet delight in God and divine things that I have lived much in since, was on reading those words, 1 Tim. 1: 17. *Now unto the King eternal, immortal, invisible, the only wise God, be honor and glory forever and ever, Amen.* As I read the words, there came into my soul, and was as it were diffused through it, a sense of the glory of the Divine Being; a new sense, quite different from any thing I ever experienced before. Never any words of scripture seemed to me as these words did. I thought within myself, how excellent a being that was, and how happy I should be, if I might enjoy that God, and be wrapt up in heaven, and be as it were swallowed up in him forever! I kept saying, and as it were singing over these words of scripture to myself; and went to pray to God that I might enjoy him, and prayed in a manner quite different from what I used to do; with a new sort of affection. But it never came into my thought, that there was any thing spiritual, or of a saving nature in this.

From about that time, I began to have a new kind of apprehensions and ideas of Christ, and the work of redemption, and the glorious way of salvation

21. mercy—Rom. 9: 18.

by him. An inward, sweet sense of these things, at times, came into my heart; and my soul was led away in pleasant views and contemplations of them. And my mind was greatly engaged to spend my time in reading and meditating on Christ, on the beauty and excellency of his person, and the lovely way of salvation by free grace in him. I found no books so delightful to me, as those that treated of these subjects. Those words, Cant. ii: 1, used to be abundantly with me, *I am the Rose of Sharon, and the Lily of the valleys.* The words seemed to me, sweetly to represent the loveliness and beauty of Jesus Christ. The whole book of Canticles used to be pleasant to me, and I used to be much in reading it, about that time; and found, from time to time, an inward sweetness, that would carry me away, in my contemplations. This I know not how to express otherwise, than by a calm, sweet abstraction of soul from all the concerns of this world; and sometimes a kind of vision, or fixed ideas and imaginations, of being alone in the mountains, or some solitary wilderness, far from all mankind, sweetly conversing with Christ, and wrapt and swallowed up in God. The sense I had of divine things, would often of a sudden kindle up, as it were, a sweet burning in my heart; an ardor of soul, that I know not how to express.

Not long after I began to experience these things, I gave an account to my father of some things that had passed in my mind. I was pretty much affected by the discourse we had together; and when the discourse was ended, I walked abroad alone, in a solitary place in my father's pasture for contemplation. And as I was walking there and looking up on the sky and clouds, there came into my mind so sweet a sense of the glorious *majesty* and *grace* of God, that I know not how to express. I seemed to see them both in a sweet conjunction; majesty and meekness joined together; it was a gentle, and holy majesty; and also a majestic meekness; a high, great, and holy gentleness.

After this my sense of divine things gradually increased, and became more and more lively, and had more of that inward sweetness. The appearance of every thing was altered; there seemed to be, as it were, a calm, sweet cast, or appearance of divine glory, in almost every thing. God's excellency, his wisdom, his purity and love, seemed to appear in every thing; in the sun, moon, and stars; in the clouds, and blue sky; in the grass, flowers, trees; in the water, and all nature; which used greatly to fix my mind. I often used to sit and view the moon for continuance; and in the day, spent much time in viewing the clouds and sky, to behold the sweet glory of God in these things; in the mean time, singing forth, with a low voice; my contemplations of the Creator and Redeemer. And scarce any thing, among all the works of nature, was so delightful to me as thunder and lightning; formerly, nothing had been so terrible to me. Before, I used to be uncommonly terrified with thunder, and to be struck with terror when I saw a thunder storm rising; but now, on the contrary, it rejoiced me. I felt God, so to speak, at the first appearance of a thunder storm; and used to take the opportunity, at such times, to fix myself in order to view the clouds, and see the lightnings play, and hear the majestic and awful voice of God's thunder, which oftentimes was exceedingly entertaining, leading me to sweet contemplations of my great and glorious

6. **Cant.**—Song of Solomon, the **Canticles** of line 9.

God. While thus engaged, it always seemed natural to me to sing, or chant for my meditations; or, to speak my thoughts in soliloquies with a singing voice.

I felt then great satisfaction, as to my good state; but that did not content me. I had vehement longings of soul after God and Christ, and after more holiness, wherewith my heart seemed to be full, and ready to break; which often brought to my mind the words of the Psalmist, Psal. cxix. 28: *My soul breaketh for the longing it hath.* I often felt a mourning and lamenting in my heart, that I had not turned to God sooner, that I might have had more time to grow in grace. My mind was greatly fixed on divine things; almost perpetually in the contemplation of them. I spent most of my time in thinking of divine things, year after year; often walking alone in the woods, and solitary places, for meditation, soliloquy, and prayer, and converse with God; and it was always my manner, at such times, to sing forth my contemplations. I was almost constantly in ejaculatory prayer, wherever I was. Prayer seemed to be natural to me, as the breath by which the inward burnings of my heart had vent. The delights which I now felt in the things of religion, were of an exceedingly different kind from those before mentioned, that I had when a boy; and what I then had no more notion of, than one born blind has of pleasant and beautiful colors. They were of a more inward, pure, soul-animating and refreshing nature. Those former delights never reached the heart; and did not arise from any sight of the divine excellency of the things of God; or any taste of the soul-satisfying and life-giving good there is in them.

My sense of divine things seemed gradually to increase, until I went to preach at New York, which was about a year and a half after they began; and while I was there, I felt them, very sensibly, in a higher degree than I had done before. My longings after God and holiness, were much increased. Pure and humble, holy and heavenly Christianity, appeared exceedingly amiable to me. I felt a burning desire to be in every thing a complete Christian; and conform to the blessed image of Christ; and that I might live, in all things, according to the pure and blessed rules of the gospel. I had an eager thirsting after progress in these things; which put me upon pursuing and pressing after them. It was my continual strife day and night, and constant inquiry, how I should *be* more holy, and *live* more holily, and more becoming a child of God, and a disciple of Christ. I now sought an increase of grace and holiness, and a holy life, with much more earnestness, than ever I sought grace before I had it. I used to be continually examining myself, and studying and contriving for likely ways and means, how I should live holily, with far greater diligence and earnestness, than ever I pursued any thing in my life; but yet with too great a dependance on my own strength; which afterwards proved a great damage to me. My experience had not then taught me, as it has done since, my extreme feebleness and impotence, every manner of way; and the bottomless depths of secret corruption and deceit there was in my heart. However, I went on with my eager pursuit after more holiness, and conformity to Christ.

The heaven I desired was a heaven of holiness; to be with God, and to spend my eternity in divine love, and holy communion with Christ. My mind was very much taken up with contemplations on heaven, and the enjoyments there;

24. New York—about 1722.

and living there in perfect holiness, humility and love. And it used at that time to appear a great part of the happiness of heaven, that there the saints could express their love to Christ. It appeared to me a great clog and burden, that what I felt within, I could not express as I desired. The inward ardor of my soul, seemed to be hindered and pent up, and could not freely flame out as it would. I used often to think, how in heaven this principle should freely and fully vent and express itself. Heaven appeared exceedingly [illegible] as a world of love; and that all happiness consisted in living in pure, humble, heavenly, divine love.

I remember the thoughts I used then to have of holiness; and said sometimes to myself, "I do certainly know that I love holiness, such as the gospel prescribes." It appeared to me, that there was nothing in it but what was ravishingly lovely; the highest beauty and amiableness—a *divine* beauty; far purer than any thing here upon earth; and that every thing else was like mire and defilement, in comparison of it.

Holiness, as I then wrote down some of my contemplations on it, appeared to me to be of a sweet, pleasant, charming, serene, calm nature; which brought an inexpressible purity, brightness, peacefulness and ravishment to the soul. In other words, that it made the soul like a field or garden of God, with all manner of pleasant flowers; all pleasant, delightful, and undisturbed; enjoying a sweet calm, and the gently vivifying beams of the sun. The soul of a true Christian, as I then wrote my meditations, appeared like such a little white flower as we see in the spring of the year; low and humble on the ground, opening its bosom to receive the pleasant beams of the sun's glory; rejoicing as it were in a calm rapture; diffusing around a sweet fragrancy; standing peacefully and lovingly, in the midst of other flowers round about; all in like manner opening their bosoms, to drink in the light of the sun. There was no part of creature holiness, that I had so great a sense of its loveliness, as humility, brokenness of heart and poverty of spirit; and there was nothing that I so earnestly longed for. My heart panted after this, to lie low before God, as in the dust; that I might be nothing, and that God might be ALL, that I might become as a little child.

While at New York, I was sometimes much affected with reflections on my past life, considering how late it was before I began to be truly religious; and how wickedly I had lived till then; and once so as to weep abundantly, and for a considerable time together.

On *January* 12, 1723. I made a solemn dedication of myself to God, and wrote it down; giving up myself, and all that I had to God; to be for the future in no respect my own; to act as one that had no right to himself, in any respect. And solemnly vowed to take God for my whole portion and felicity; looking on nothing else as any part of my happiness, nor acting as if it were; and his law for the constant rule of my obedience; engaging to fight with all my might, against the world, the flesh and the devil, to the end of my life. But I have reason to be infinitely humbled, when I consider how much I have failed of answering my obligation.

I had then abundance of sweet religious conversation in the family where I lived, with Mr. John Smith and his pious mother. My heart was knit in affec-

tion to those in whom were appearances of true piety; and I could bear the thoughts of no other companions, but such as were holy, and the disciples of the blessed Jesus. I had great longings for the advancement of Christ's kingdom in the world; and my secret prayer used to be, in great part, taken up in praying for it. If I heard the least hint of any thing that happened, in any part of the world, that appeared, in some respect or other, to have a favorable aspect on the interest of Christ's kingdom, my soul eagerly catched at it; and it would much animate and refresh me. I used to be eager to read public news letters, mainly for that end; to see if I could not find some news favorable to the interest of religion in the world.

I very frequently used to retire into a solitary place, on the banks of Hudson's river, at some distance from the city, for contemplation on divine things, and secret converse with God; and had many sweet hours there. Sometimes Mr. Smith and I walked there together, to converse on the things of God; and our conversation used to turn much on the advancement of Christ's kingdom in the world, and the glorious things that God would accomplish for his church in the latter days. I had then, and at other times the greatest delight in the holy scriptures, of any book whatsoever. Oftentimes in reading it, every word seemed to touch my heart. I felt a harmony between something in my heart, and those sweet and powerful words. I seemed often to see so much light exhibited by every sentence, and such a refreshing food communicated, that I could not get along in reading; often dwelling long on one sentence, to see the wonders contained in it; and yet almost every sentence seemed to be full of wonders.

I came away from New York in the month of April, 1723, and had a most bitter parting with Madam Smith and her son. My heart seemed to sink within me at leaving the family and city, where I had enjoyed so many sweet and pleasant days. I went from New York to Weathersfield, by water, and as I sailed away, I kept sight of the city as long as I could. However, that night, after this sorrowful parting, I was greatly comforted in God at Westchester, where we went ashore to lodge; and had a pleasant time of it all the voyage to Saybrook. It was sweet to me to think of meeting dear Christians in heaven, where we should never part more. At Saybrook we went ashore to lodge, on Saturday, and there kept the Sabbath; where I had a sweet and refreshing season, walking alone in the fields.

After I came home to Windsor, I remained much in a like frame of mind, as when at New York; only sometimes I felt my heart ready to sink with the thoughts of my friends at New York. My support was in contemplations on the heavenly state; as I find in my Diary of May 1, 1723. It was a comfort to think of that state, where there is fulness of joy; where reigns heavenly, calm, and delightful love, without alloy; where there are continually the dearest expressions of this love; where is the enjoyment of the persons loved, without ever parting; where those persons who appear so lovely in this world, will really be inexpressibly more lovely and full of love to us. And how sweetly will the mutual lovers join together to sing the praises of God and the Lamb! How will it fill us with joy to think, that this enjoyment, these sweet exercises will never cease, but will last to all eternity! I continued much in the same

44. God and the Lamb—Rev. 22.

frame, in the general, as when at New York, till I went to New Haven as tutor to the college; particularly once at Bolton, on a journey from Boston, while walking out alone in the fields. After I went to New Haven I sunk in religion; my mind being diverted from my eager pursuits after holiness, by some affairs that greatly perplexed and distracted my thoughts.

In September, 1725, I was taken ill at New Haven, and while endeavoring to go home to Windsor, was so ill at the North Village, that I could go no further; where I lay sick for about a quarter of a year. In this sickness God was pleased to visit me again with the sweet influences of his Spirit. My mind was greatly engaged there in divine, pleasant contemplations, and longings of soul. I observed that those who watched with me, would often be looking out wishfully for the morning; which brought to my mind those words of the Psalmist, and which my soul with delight made its own language, *My soul waiteth for the Lord, more than they that watch for the morning, I say, more than they that watch for the morning;* and when the light of day came in at the windows, it refreshed my soul from one morning to another. It seemed to be some image of the light of God's glory.

I remember, about that time, I used greatly to long for the conversion of some that I was concerned with; I could gladly honor them, and with delight be a servant to them, and lie at their feet, if they were but truly holy. But, some time after this, I was again greatly diverted in my mind with some temporal concerns that exceedingly took up my thoughts, greatly to the wounding of my soul; and went on through various exercises, that it would be tedious to relate, which gave me much more experience of my own heart, than ever I had before.

Since I came to this town, I have often had sweet complacency in God, in views of his glorious perfections and the excellency of Jesus Christ. God has appeared to me a glorious and lovely being, chiefly on the account of his holiness. The holiness of God has always appeared to me the most lovely of all his attributes. The doctrines of God's absolute sovereignty, and free grace, in shewing mercy to whom he would shew mercy; and man's absolute dependence on the operations of God's Holy Spirit, have very often appeared to me as sweet and glorious doctrines. These doctrines have been much my delight. God's sovereignty has ever appeared to me, great part of his glory. It has often been my delight to approach God, and adore him as a sovereign God, and ask sovereign mercy of him.

I have loved the doctrines of the gospel; they have been to my soul like green pastures. The gospel has seemed to me the richest treasure; the treasure that I have most desired, and longed that it might dwell richly in me. The way of salvation by Christ has appeared, in a general way, glorious and excellent, most pleasant and most beautiful. It has often seemed to me, that it would in a great measure spoil heaven, to receive it in any other way. That text has often been affecting and delightful to me. Isa. xxxii: 2. *A man shall be an hiding place from the wind, and a covert from the tempest,* &c.

It has often appeared to me delightful, to be united to Christ; to have him for my head, and to be a member of his body; also to have Christ for my

13. My soul—Ps. 130: 6. **26. town**—Northampton.

teacher and prophet. I very often think with sweetness, and longings, and pantings of soul, of being a little child, taking hold of Christ, to be led by him through the wilderness of this world. That text, Matth. xviii: 3, has often been sweet to me, *except ye be converted and become as little children,* &c. I love to think of coming to Christ, to receive salvation of him, poor in spirit, and quite empty of self, humbly exalting him alone; cut off entirely from my own root, in order to grow into, and out of Christ; to have God in Christ to be all in all; and to live by faith on the Son of God, a life of humble unfeigned confidence in him. That scripture has often been sweet to me, Psal. cxv: 1. *Not unto us, O Lord, not unto us, but to thy name give glory, for thy mercy and for thy truth's sake.* And those words of Christ, Luke x: 21. *In that hour Jesus rejoiced in spirit, and said, I thank thee, O Father, Lord of heaven and earth, that thou hast hid these things from the wise and prudent, and hast revealed them unto babes; even so, Father, for so it seemed good in thy sight.* That sovereignty of God which Christ rejoiced in, seemed to me worthy of such joy; and that rejoicing seemed to show the excellency of Christ, and of what spirit he was.

Sometimes, only mentioning a single word caused my heart to burn within me; or only seeing the name of Christ, or the name of some attribute of God. And God has appeared glorious to me, on account of the Trinity. It has made me have exalting thoughts of God, that he subsists in three persons; Father, Son and Holy Ghost. The sweetest joys and delights I have experienced, have not been those that have arisen from a hope of my own good estate; but in a direct view of the glorious things of the gospel. When I enjoy this sweetness, it seems to carry me above the thoughts of my own estate; it seems at such times a loss that I cannot bear, to take off my eye from the glorious pleasant object I behold without me, to turn my eye in upon myself, and my own good estate.

My heart has been much on the advancement of Christ's kingdom in the world. The histories of the past advancement of Christ's kingdom have been sweet to me. When I have read histories of past ages, the pleasantest thing in all my reading has been, to read of the kingdom of Christ being promoted. And when I have expected, in my reading, to come to any such thing, I have rejoiced in the prospect, all the way as I read. And my mind has been much entertained and delighted with the scripture promises and prophecies, which relate to the future glorious advancement of Christ's kingdom upon earth.

I have sometimes had a sense of the excellent fulness of Christ, and his meetness and suitableness as a Saviour; whereby he has appeared to me, far above all, the chief of ten thousands. His blood and atonement have appeared sweet, and his righteousness sweet; which was always accompanied with ardency of spirit; and inward strugglings and breathings, and groanings that cannot be uttered, to be emptied of myself, and swallowed up in Christ.

Once as I rode out into the woods for my health, in 1737, having alighted from my horse in a retired place, as my manner commonly has been, to walk for divine contemplation and prayer, I had a view that for me was extraordinary, of the glory of the Son of God, as Mediator between God and man, and his wonderful, great, full, pure and sweet grace and love, and meek and gentle

condescension. This grace that appeared so calm and sweet, appeared also great above the heavens. The person of Christ appeared ineffably excellent with an excellency great enough to swallow up all thought and conception—which continued as near as I can judge, about an hour; which kept me the greater part of the time in a flood of tears, and weeping aloud. I felt an ardency of soul to be, what I know not otherwise how to express, emptied and annihilated; to lie in the dust, and to be full of Christ alone; to love him with a holy and pure love; to trust in him; to live upon him; to serve and follow him; and to be perfectly sanctified and made pure, with a divine and heavenly purity. I have, several other times, had views very much of the same nature, and which have had the same effects.

I have many times had a sense of the glory of the third person in the Trinity, in his office of Sanctifier; in his holy operations, communicating divine light and life to the soul. God, in the communications of his Holy Spirit, has appeared as an infinite fountain of divine glory and sweetness; being full, and sufficient to fill and satisfy the soul; pouring forth itself in sweet communications; like the sun in its glory, sweetly and pleasantly diffusing light and life. And I have sometimes had an affecting sense of the excellency of the word of God, as a word of life; as the light of life; a sweet, excellent, life-giving word; accompanied with a thirsting after that word, that it might dwell richly in my heart.

Often, since I lived in this town, I have had very affecting views of my own sinfulness and vileness; very frequently to such a degree as to hold me in a kind of loud weeping, sometimes for a considerable time together; so that I have often been forced to shut myself up. I have had a vastly greater sense of my own wickedness, and the badness of my own heart, than ever I had before my conversion. It has often appeared to me, that if God should mark iniquity against me, I should appear the very worst of all mankind; of all that have been, since the beginning of the world to this time; and that I should have by far the lowest place in hell. When others, that have come to talk with me about their soul concerns, have expressed the sense they have had of their own wickedness, by saying that it seemed to them, that they were as bad as the devil himself; I thought their expression seemed exceedingly faint and feeble, to represent my wickedness.

My wickedness, as I am in myself, has long appeared to me perfectly ineffable, and swallowing up all thought and imagination; like an infinite deluge, or mountains over my head. I know not how to express better what my sins appear to me to be, than by heaping infinite upon infinite, and multiplying infinite by infinite. Very often, for these many years, these expressions are in my mind, and in my mouth, "Infinite upon infinite—Infinite upon infinite!" When I look into my heart, and take a view of my wickedness, it looks like an abyss infinitely deeper than hell. And it appears to me, that were it not for free grace, exalted and raised up to the infinite height of all the fulness and glory of the great Jehovah, and the arm of his power and grace stretched forth in all the majesty of his power, and in all the glory of his sovereignty, I should appear sunk down in my sins below hell itself; far beyond the sight of every thing, but the eye of sovereign grace, that can pierce even down to such a depth. And

yet, it seems to me, that my conviction of sin is exceedingly small, and faint; it is enough to amaze me, that I have no more sense of my sin. I know certainly, that I have very little sense of my sinfulness. When I have had turns of weeping and crying for my sins, I thought I knew at the time, that my repentance was nothing to my sin.

I have greatly longed of late, for a broken heart, and to lie low before God; and, when I ask for humility, I cannot bear the thoughts of being no more humble than other Christians. It seems to me, that though their degrees of humility may be suitable for them, yet it would be a vile self-exaltation to me, not to be the lowest in humility of all mankind. Others speak of their longing to be "humbled to the dust;" that may be a proper expression for them, but I always think of myself, that I ought, and it is an expression that has long been natural for me to use in prayer, "to lie infinitely low before God." And it is affecting to think, how ignorant I was, when a young Christian, of the bottomless, infinite depths of wickedness, pride, hypocrisy and deceit, left in my heart.

I have a much greater sense of my universal, exceeding dependence on God's grace and strength, and mere good pleasure, of late, than I used formerly to have; and have experienced more of an abhorrence of my own righteousness. The very thought of any joy arising in me, on any consideration of my own amiableness, performances, or experiences, or any goodness of heart or life, is nauseous and detestable to me. And yet I am greatly afflicted with a proud and self-righteous spirit, much more sensibly than I used to be formerly. I see that serpent rising and putting forth its head continually, every where, all around me.

Though it seems to me, that, in some respects, I was a far better Christian, for two or three years after my first conversion, than I am now; and lived in a more constant delight and pleasure; yet, of late years, I have had a more full and constant sense of the absolute sovereignty of God, and a delight in that sovereignty; and have had more of a sense of the glory of Christ, as a Mediator revealed in the gospel. On one Saturday night, in particular, I had such a discovery of the excellency of the gospel above all other doctrines, that I could not but say to myself, "This is my chosen light, my chosen doctrine;" and of Christ, "This is my chosen Prophet." It appeared sweet, beyond all expression, to follow Christ, and to be taught, and enlightened, and instructed by him; to learn of him, and live to him. Another Saturday night, (*January*, 1739) I had such a sense, how sweet and blessed a thing it was to walk in the way of duty; to do that which was right and meet to be done, and agreeable to the holy mind of God; that it caused me to break forth into a kind of loud weeping, which held me some time, so that I was forced to shut myself up, and fasten the doors. I could not but, as it were, cry out, "How happy are they which do that which is right in the sight of God! They are blessed indeed, they are the happy ones!" I had, at the same time, a very affecting sense, how meet and suitable it was that God should govern the world, and order all things according to his own pleasure; and I rejoiced in it, that God reigned, and that his will was done.

CONCERNING THE NOTION OF LIBERTY, AND OF MORAL AGENCY

From *The Freedom of the Will,* Boston, 1754, Part I, Section V.

THE PLAIN and obvious meaning of the words *Freedom* and *Liberty,* in common speech, is *The power, opportunity, or advantage that any one has, to do as he pleases.* Or in other words, his being free from hinderance or impediment in the way of doing, or conducting in any respect, as he wills. And the contrary to Liberty, whatever name we call that by, is a person's being hindered or unable to conduct as he will, or being necessitated to do otherwise.

If this which I have mentioned be the meaning of the word Liberty, in the ordinary use of language; as I trust that none that has ever learned to talk, and is unprejudiced, will deny; then it will follow, that in propriety of speech, neither Liberty, nor its contrary, can properly be ascribed to any being or thing, but that which has such a faculty, power, or property, as is called will. For that which is possessed of no *will,* cannot have any *power* or *opportunity* of doing *according to its will,* nor be necessitated to act *contrary to its will,* nor be restrained from acting agreeably to it. And therefore to talk of Liberty, or the contrary, as belonging to the *very will itself,* is not to speak good sense; if we judge of sense, and nonsense, by the original and proper signification of words.—For the *will itself* is not an Agent that *has a will:* the power of choosing, itself, has not a power of choosing. That which has the power of volition is the man, or the soul, and not the power of volition itself. And he that has the Liberty of doing according to his will, is the Agent who is possessed of the will; and not the will which he is possessed of. We say with propriety, that a bird let loose has power and Liberty to fly; but not that the bird's power of flying has a power and Liberty of flying. To be free is the property of an agent, who is possessed of powers and faculties, as much as to be cunning, valiant, bountiful, or zealous. But these qualities are the properties of persons; and not the properties of properties.

There are two things contrary to what is called Liberty in common speech. One is *constraint;* otherwise called *force, compulsion,* and *coaction;* which is a person's being necessitated to do a thing *contrary* to his will. The other is *restraint;* which is, his being hindered, and not having power to do *according* to his will. But that which has no will cannot be the subject of these things.—I need say the less on this head, Mr. LOCKE having set the same thing forth, with so great clearness, in his *Essay on the Human Understanding.*

But one thing more I would observe concerning what is vulgarly called *Liberty;* namely, that power and opportunity for one to do and conduct as he

5. **he wills**—"I say not only doing, but conducting; because a voluntary forbearing to do, sitting still, keeping silence, &c., are instances of persons' conduct, about which Liberty is exercised; though they are not so properly called doing." (Edwards's note) 33. **Mr. Locke**—John Locke (1632-1704), English philosopher, whom Edwards had read at college. *An Essay concerning Humane Understanding* was first published in 1690.

UNIVERSITY LIBRARY

will, or according to his choice, is all that is meant by it; without taking into the meaning of the word, any thing of the *cause* of that choice; or at all considering how the person came to have such a volition; whether it was caused by some external motive, or internal habitual bias; whether it was determined by some internal antecedent volition, or whether it happened without a cause; whether it was necessarily connected with something foregoing, or not connected. Let the person come by his choice any how, yet, if he is able, and there is nothing in the way to hinder his pursuing and executing his will, the man is perfectly free, according to the primary and common notion of freedom.

What has been said may be sufficient to shew what is meant by *Liberty,* according to the common notions of mankind, and in the usual and primary acceptation of the word: but the word, as used by *Arminians, Pelagians* and others, who oppose the *Calvinists,* has an entirely different signification.—These several things belong to their notion of Liberty. 1. That it consists in a *self-determining power* in the will, of a certain sovereignty the will has over itself, and its own acts, whereby it determines its own volitions; so as not to be dependent in its determinations, on any cause without itself, nor determined by any thing prior to its own acts. 2. *Indifference* belongs to Liberty in their notion of it, or that the mind, previous to the act of volition, be *in equilibrio.* 3. *Contingence* is another thing that belongs and is essential to it; not in the common acceptation of the word, as that has been already explained, but as opposed to all necessity, or any fixed and certain connection with some previous ground or reason of its existence. They suppose the essence of Liberty so much to consist in these things, that unless the will of man be free in this sense, he has no real freedom, how much soever he may be at Liberty to act according to his will.

A *moral Agent* is a being that is capable of those actions that have a *moral* quality, and which can properly be denominated good or evil in a moral sense, virtuous or vicious, commendable or faulty. To moral Agency belongs a *moral faculty,* or sense of moral good and evil, or of such a thing as desert or worthiness, of praise or blame, reward or punishment; and a capacity which an Agent has of being influenced in his actions by moral inducements or motives, exhibited to the view of understanding and reason, to engage to a conduct agreeable to the moral faculty.

The sun is very excellent and beneficial in its actions and influence on the earth, in warming and causing it to bring forth its fruits; but it is not a moral Agent: its action, though good, is not virtuous or meritorious. Fire that breaks out in a city, and consumes great part of it, is very mischievous in its operation; but it is not a moral Agent: what it does is not faulty or sinful, or deserving of any punishment. The brute creatures are not moral Agents: the actions of some of them are very profitable and pleasant; others are very hurtful: yet seeing they have no moral faculty, or sense of desert, and do not act from choice guided by understanding, or with a capacity of reasoning and reflecting,

12. **Arminians**—Jacobus Arminius (1560-1609), a Dutch Protestant theologian, and his followers were a sect that attacked the doctrine of predestination as allowing no personal choice between right and wrong. 12. **Pelagians**—Followers of a fourth-century British monk who denied original sin, and asserted that man's unaided will achieves spiritual good. 19. **in equilibrio**—in a state of balance.

but only from instinct, and are not capable of being influenced by moral inducements, their actions are not properly sinful or virtuous; nor are they properly the subjects of any such moral treatment for what they do, as moral Agents are for their faults or good deeds.

Here it may be noted, that there is a circumstantial difference between the moral Agency of a *ruler* and a *subject.* I call it *circumstantial,* because it lies only in the difference of moral inducements, by which they are capable of being influenced, arising from the difference of *circumstances.* A *ruler* acting in that capacity only, is not capable of being influenced by a moral law, and its sanctions of threatenings and promises, rewards and punishments, as the *subject* is; though both may be influenced by a knowledge of moral good and evil. And therefore the moral Agency of the Supreme Being, who acts only in the capacity of a *ruler* towards his creatures, and never as a *subject,* differs in that respect from the moral Agency of created intelligent beings. God's actions, and particularly those which he exerts as a moral governor, have moral qualifications, and are morally good in the highest degree. They are most perfectly holy and righteous; and we must conceive of Him as influenced in the highest degree, by that which, above all others, is properly a moral inducement; viz. the moral good which He sees in such and such things: and therefore He is, in the most proper sense, a moral Agent, the source of all moral ability and Agency, the fountain and rule of all virtue and moral good; though by reason of his being supreme over all, it is not possible He should be under the influence of law or command, promises or threatenings, rewards or punishments, counsels or warnings. The essential qualities of a moral Agent are in God, in the greatest possible perfection; such as understanding, to perceive the difference between moral good and evil; a capacity of discerning that moral worthiness and demerit, by which some things are praiseworthy, others deserving of blame and punishment; and also a capacity of choice, and choice guided by understanding, and a power of acting according to his choice or pleasure, and being capable of doing those things which are in the highest sense praiseworthy. And herein does very much consist that image of God wherein he made man, (which we read of *Gen.* i. 26, 27, and *chap.* ix. 6.) by which God distinguished man from the beasts, *viz.* in those faculties and principles of nature, whereby He is capable of moral Agency. Herein very much consists the *natural* image of God; whereas the *spiritual* and *moral* image, wherein man was made at first, consisted in that moral excellency with which he was endowed.

BENJAMIN FRANKLIN

1706-1790

I. THE APPRENTICE MAKES HIS FORTUNE (1706–1748)

1706 Born January 17 in Milk Street, Boston, the tenth son of Josiah Franklin and his eighth child by his second wife, Abiah Folger Franklin.

1718 After a desultory schooling, and a brief period in his father's tallow shop, Franklin was apprenticed to his half-brother James, who founded (1721) the *New England Courant,* in which young Benjamin's first periodical contributions, the "Silence Dogood" papers, appeared.

1723 Arrived in Philadelphia (October), having quarreled with James. Employment in Keimer's printing shop.

1724 Sailed for London at the instigation of Governor William Keith. Stranded there, Franklin worked in various printing shops, and expressed deistic principles in *A Dissertation on Liberty and Necessity, Pleasure and Pain* (1725).

1726 Returned to Philadelphia (October), eventually becoming a printer in partnership (1728-1730) with Hugh Meredith.

1727 Founded The Junto.

1730 Married Deborah Read; beginning of success of *The Pennsylvania Gazette.*

1731 The Philadelphia Library founded through Franklin's efforts.

1732–1757 Franklin's connection with *Poor Richard's Almanack.*

1736–1751 Clerk of the Pennsylvania Assembly.

1743 Instrumental in founding the American Philosophical Society. Increasing interest in scientific theory, invention, and natural phenomena, notably electricity.

1748 Firm of Franklin and Hall formed. Franklin's income being now £2,000 a year, he was freed for public and philosophical services.

II. SCIENTIST AND COLONIAL STATESMAN (1748–1775)

1751 Instrumental in founding the Philadelphia Academy (which became the University of Pennsylvania) and the Philadelphia City Hospital.

1752 Kite-flying experiment, following on the publication of *Experiments & Observations on Electricity, made at Philadelphia, in America,* London, 1751, and letters setting forth the theory of the experiment (1750-1752).

1753 First collegiate honors (M.A., Harvard; M.A., Yale). Others were M.A., William and Mary (1756); LL.D., St. Andrews, 1759; D.C.L., Oxford, 1762.

1754 Delegate to the Albany Congress, having been a member of the Pennsylvania Assembly (1751-1764) and deputy postmaster-general for the colonies (1753-1774).

1757–1762 Sent to England as agent of the Pennsylvania Assembly, Franklin opposed proprietary government in Pennsylvania; moved in cultivated society; explored Europe; and kept in touch with scientific progress. He wrote much

on colonial and scientific problems. This is the period of the charming *Craven Street Gazette,* and of two important "imperialistic" documents—*Observations on the Increase of Mankind* (1755) and *The Interest of Great Britain Considered* (1760).

1762 Brief return to Philadelphia; immediately sent back to England as colony representative.

1766 Examined before the House of Commons (February) on the repeal of the Stamp Act; recovered popularity, temporarily lost. Franklin became representative of other colonies—Georgia (1768); New Jersey (1769); Massachusetts (1770)—a kind of ambassador extraordinary.

1769 Publication of third version of *Experiments & Observations;* growing scientific fame.

1770–1774 Struggle with unfriendly British government agents; quarrel over the "Hutchinson Letters"; much propaganda for the colonies, like "An Edict by the King of Prussia" and "Rules by which a Great Empire may be Reduced to a Small One."

1771 Began writing the *Autobiography* at Twyford.

1775 Sailed for America March 20, convinced that peace was hopeless.

III. THE PATRIOT AND SAGE (1775–1790)

1775 May 6. Franklin chosen a member of the Second Continental Congress. Member of many important committees, including that on the Declaration of Independence, and the committee in charge of foreign affairs.

1776 Sent to France (arrived December 4) as one of three American representatives to work for an alliance. Residence at Passy; beginning of vast enthusiasm in France for Franklin, the modern Socrates. *Œuvres* of Franklin, translated by Dubourg, 1773.

1778 After unsuccessful attempts at peace with England, Franklin was instrumental in negotiating the French alliance. End of his undercover activities. Increasing diplomatic responsibility.

1779 Publication of *Political, Miscellaneous and Philosophical Pieces by Dr. Franklin,* edited by Benjamin Vaughan.

1781 Resigned as American representative (March 12) and was appointed one of the commissioners to negotiate peace with Great Britain (June 8).

1783 Signed (September 3) with John Jay and John Adams the Treaty of Paris, whereby Great Britain recognized the independence of the United States.

1785 Recalled by Congress to America, arriving in Philadelphia September 14. Made president of the executive council of Pennsylvania.

1787 Member of the Constitutional Convention.

1790 Died April 17 in Philadelphia.

1791 The *Autobiography* first published as *Mémoires* in a French translation appearing in Paris.

Works, ed. by Jared Sparks, rev. ed., Philadelphia, Childs & Peterson, 1840, 10 vols. (unsatisfactory text); *Complete Works,* ed. by John Bigelow, Putnam, 1887-89, 10 vols. (includes text of the *Autobiography* as printed separately by Bigelow in 3 vols. in 1874); *Writings,* ed. by A. H. Smyth, Macmillan, 1905-07, 10 vols. (omits certain pieces); *A Dissertation on Liberty and Necessity, Pleasure and Pain,* reprinted from the first edition by the Facsimile Text Society, Columbia University Press, 1930; and *Benjamin Franklin's Letters to the Press,* ed. by V. W. Crane, University of North Carolina Press, 1951. Among innumerable selections see F. L. Mott and C. E. Jorgenson, *Benjamin Franklin: Representative Selections* (American Writers Series), American Book Co., 1936.

To represent Franklin in selections is much like representing the Atlantic Ocean by a tumbler of water. He absorbed the entire rationalistic world of the eighteenth century, touching every aspect of its thought; and because the modern sciences and the modern social sciences were still in the stage where new theories could be freshly made, he contributed largely to almost every department of organized thought. He was, as the French and British liberals recognized, a "good European"—a fact which explains the world-wide vogue of the first great influential American. But this "good European" was in the eyes of sophisticated continentals the product of the American wilderness, so that in Franklin one finds a union of extreme sophistication of experience and knowledge with the appeal of simplicity and directness, and even of sentiment. The core of the eighteenth-century world was bourgeois; and Franklin is the first great representative of the American middle class in politics, business ethics, religion, and psychology. As a literary figure he stands foremost among those eighteenth-century writers for whom literature exists only because it is a tool with which to get something done; even Franklin's lighter pieces have, in most cases, a lesson to teach, a purpose to fulfill. At the same time he mastered a style marvelously lucid, flexible, and competent for his purposes; it lacks only poetry and richness to be a great style. The student had best begin with the first part of the *Autobiography* to see Franklin emerge from the chrysalis of pioneer social conditions into the "great world" of the eighteenth century; after that, seiz-

ing upon some one aspect of this many-sided genius, he may follow this thread through the collected works.

[THE AUTOBIOGRAPHY]

The story of the publication of Franklin's *Autobiography* involves a complex biographical and bibliographical problem, the details of which are for the special student. Suffice it to say that the final draft of this famous work, as printed in the standard edition of Franklin, represents four "layers" of composition, only the first of which, dated from Twyford, England, is reprinted here. Franklin made various copies of his manuscript, all of which disappeared for a time; and not until 1868, when John Bigelow published an edition of the *Autobiography* based on a manuscript by Franklin which had turned up in France, was anything like the original text available. Before that time the texts of the *Autobiography* had been English translations of a French translation of the original manuscript, or imperfect versions going back to Temple Franklin's edition, published in 1816. John Bigelow corrected, he said, some twelve hundred errors in the Temple Franklin text of the *Autobiography,* and professed to give a true text.

The manuscript from which Bigelow (and after him, A. H. Smyth) printed the *Autobiography* is now in the Henry E. Huntington Library. Through the courtesy of this institution it has been possible to compare the Bigelow text with the original manuscript; and it appears that, whatever errors Bigelow corrected, he made a great many additional ones himself—misreading words, changing punctuation, and reconstructing Franklin's sentences. Except for Franklin's system of capitalization, which has been modernized, the text of the *Autobiography* as here printed faithfully reproduces pages 1-87 of this original manuscript.

But although the text here reproduced is believed to be faithful to what Franklin first wrote, it is but a transcript of a single manuscript. The late Max Farrand, director of the Huntington Library, set himself the problem of producing a "critical" text of the autobiography. This may be consulted (in modernized English) by reading *The Autobiography of Benjamin Franklin: A Restoration of a "Fair Copy"* by Max Farrand, Berkeley and Los Angeles, 1949; and the four basic texts in parallel columns may be consulted in *Benjamin Franklin's Memoirs, Parallel Text Edition,* ed. Max Farrand, with an introduction by Godfrey Davies, Berkeley and Los Angeles, 1949.

Franklin did not give his work a title, though he often refers to it as his "Memoirs." As the address to his "Dear Son" indicates, he intended his manuscript, or at least the first portion of it, for the eyes of his illegitimate son, William Franklin, only. William Franklin served from 1763 to 1776 as royal governor of New Jersey. Father and son took opposite sides during the American Revolution.

TWYFORD, *at the Bishop of St. Asaph's,* 1771.

Dear Son: I have ever had a pleasure in obtaining any little anecdotes of my ancestors. You may remember the enquiries I made among the remains of my

1. **Twyford**—the country house of Jonathan Shipley (1714-1788), Bishop of St. Asaph, is near Winchester in England. Shipley had been made bishop of St. Asaph in 1769. He was a Whig in politics, a follower of Burke, an ardent champion of the cause of the colonies. Franklin was intimate with the family, including the daughters, to one of whom (Georgiana) he wrote some of his most charming letters.

relations when you were with me in England; and the journey I undertook for that purpose. Now imagining it may be equally agreeable to you to know the circumstances of *my* life, many of which you are yet unacquainted with; and expecting a weeks uninterrupted leisure in my present country retirement, I sit down to write them for you. To which I have besides some other inducements. Having emerg'd from the poverty and obscurity in which I was born and bred, to a state of affluence and some degree of reputation in the world, and having gone so far thro' life with a considerable share of felicity, the conducing means I made use of, which with the blessing of God so well succeeded, my posterity may like to know, as they may find some of them suitable to their own situations, and therefore fit to be imitated. That felicity, when I reflected on it, has induc'd me sometimes to say, that were it offer'd to my choice, I should have no objection to a repetition of the same life from its beginning, only asking the advantages authors have in a second edition to correct some faults of the first. So would I if I might, besides corr[ecting] the faults, change some sinister accidents and events of it for others more favourable, but tho' this were deny'd, I should still accept the offer. However, since such a repetition is not to be expected, the next thing most like living one's life over again, seems to be a *recollection* of that life, and to make that recollection as durable as possible the putting it down in writing. Hereby, too, I shall indulge the inclination so natural in old men, to be talking of themselves and their own past actions, and I shall indulge it, without being troublesome to others, who thro' respect to age, might conceive themselves oblig'd to give me a hearing, since this may be read or not as any one pleases. And lastly (I may as well confess it, since my denial of it will be believ'd by nobody), perhaps I shall a good deal gratify my own *vanity*. Indeed I scarce ever heard or saw the introductory words, *Without vanity I may say,* &c., but some vain thing immediately follow'd. Most people dislike vanity in others whatever share they have of it themselves, but I give it fair quarter wherever I meet with it, being persuaded that it is often productive of good to the possessor, and to others that are within his sphere of action: And therefore in many cases it would not be quite absurd if a man were to thank God for his vanity among the other comforts of life.——

And now I speak of thanking God, I desire with all humility to acknowledge, that I owe the mention'd happiness of my past life to His kind providence, which led me to the means I us'd and gave them success. My belief of this, induces me to *hope,* tho' I must not *presume,* that the same goodness will still be exercis'd towards me, in continuing that happiness, or in enabling me to bear a fatal reverse, which I may experience as others have done, the complexion of my future fortune being known to Him only: in whose power it is to bless to us even our afflictions.

1. **when you were with me in England**—In 1757 William Franklin accompanied his father to England, where he studied law, entered into the scientific and social activities of his father, received an M.A. degree from Oxford, and was appointed governor of New Jersey. 1-2. **journey . . . for that purpose**—After attending the Cambridge commencement of 1758 Franklin and his son "went from Cambridge through Huntingdonshire into Northumberlandshire" and at Wellingborough found Mary Franklin Fisher, who remembered the migration of some of the Franklins to New England in 1685. See Franklin's letter to his wife in *Writings,* ed. by A. H. Smyth, Vol. III, pp. 451-54. 33. **thanking God**—The student should read in connection with this paragraph Franklin's "Articles of Belief and Acts of Religion" (1728) in *Writings,* Vol. II, pp. 91-100.

The notes one of my uncles (who had the same kind of curiosity in collecting family anecdotes) once put into my hands, furnish'd me with several particulars relating to our ancestors. From these notes I learnt that the family had liv'd in the same village, Ecton in Northamptonshire, for 300 years, and how much longer he knew not (perhaps from the time when the name *Franklin* that before was the name of an order of people, was assum'd by them for a surname, when others took surnames all over the kingdom)[,] on a freehold of about 30 acres, aided by the smith's business, which had continued in the family till his time, the eldest son being always bred to that business[,] a custom which he and my father both followed as to their eldest sons.——When I search'd the registers at Ecton, I found an account of their births, marriages and burials from the year 1555 only, there being no register kept in that parish at any time preceding.——By that register I perceiv'd that I was the youngest son of the youngest son for 5 generations back. My grandfather Thomas, who was born in 1598, lived at Ecton till he grew too old to follow business longer, when he went to live with his son John, a dyer at Banbury in Oxfordshire, with whom my father serv'd an apprenticeship. There my grandfather died and lies buried. We saw his gravestone in 1758. His eldest son Thomas liv'd in the house at Ecton, and left it with the land to his only child, a daughter, who, with her husband, one Fisher, of Wellingborough, sold it to Mr. Isted, now lord of the manor there. My grandfather had 4 sons that grew up, viz Thomas, John, Benjamin and Josiah. I will give you what account I can of them, at this distance from my papers, and if these are not lost in my absence, you will among them find many more particulars. Thomas was bred a smith under his father, but, being ingenious, and encourag'd in learning (as all his brothers likewise were) by an Esquire Palmer, then the principal gentleman in that parish, he qualify'd himself for the business of scrivener, became a considerable man in the county affairs, was a chief mover of all publick spirited undertakings for the county or town of Northampton, and his own village, of which many instances were told us; and he was at Ecton much taken notice of and patroniz'd by the then Lord Halifax. He died in 1702, Jan. 6, old style, just 4 years to a day before I was born. The account we receiv'd of his life and character from some old people at Ecton, I remember struck you as something extraordinary, from its similarity to what you knew of mine. Had he died on the same day, you said, one might have suppos'd a transmigration.——John was bred a dyer, I believe of woollens. Benjamin, was bred a silk dyer, serving an apprenticeship at London. He was an ingenious man, I remember him well, for when I was a boy he came over to my father in Boston, and lived in the house with us some years. He lived to a great age. His grandson Samuel Franklin now lives in Boston. He left behind him two quarto volumes, M.S.

1. **one of my uncles**—His uncle Benjamin Franklin, described a little later, is meant. 4. **Ecton**—Ecton is halfway between Northampton and Wellingborough. It is interesting to note that Sulgrave Manor, the ancestral home of the Washingtons, is some twelve miles from Ecton. 6. **order of people**—A franklin was formerly a lesser landholder not of noble birth. *Cf.* Chaucer's *Canterbury Tales*. 7. **over the kingdom**—Franklin inserts in the text the parenthetical phrase, "Here a Note," apparently intending to amplify his discussion of English surnames and their adoption. In so doing he confused his parenthesis marks, which are here regularized. 31. **old style**—January 17 in modern reckoning. By the act of Parliament of 1750 England adopted the "New Style" calendar, the difference beginning in September, 1752.

of his own poetry, consisting of little occasional pieces address'd to his friends and relations, of which the following sent to me, is a specimen. He had form'd a shorthand of his own, which he taught me, but, never practising it, I have now forgot it. I was nam'd after this uncle, there being a particular affection between him and my father. He was very pious, a great attender of sermons of the best preachers, which he took down in his shorthand and had with him many volumes of them. He was also much of a politician, too much perhaps for his station. There fell lately into my hands in London a collection he had made of all the principal pamphlets relating to public affairs from 1641 to 1717. Many of the volumes are wanting, as appears by the numbering, but there still remains 8 vols. folio, and 24 in 4to and 8vo.——A dealer in old books met with them, and knowing me by my sometimes buying of him, he brought them to me. It seems my uncle must have left them here when he went to America, which was above 50 years since. There are many of his notes in the margins.——

This obscure family, of ours was early in the Reformation, and continu'd Protestants thro' the reign of Queen Mary, when they were sometimes in danger of trouble on account of their zeal against popery. They had got an English Bible, and to conceal and secure it, it was fastened open with tapes under and within the frame of a joint stool. When my great great grandfather read it [it] to his family, he turn'd up the joint stool upon his knees, turning over the leaves then under the tapes. One of the children stood at the door to give notice if he saw the apparitor coming, who was an officer of the spiritual court. In that case the stool was turn'd down again upon its feet, when the Bible remain'd conceal'd under it as before. This anecdote I had from my uncle Benjamin.——The family continu'd all of the Church of England till about the end of Charles the 2^{ds} reign, when some of the ministers that had been outed for nonconformity, holding conventicles in Northamptonshire, Benjamin and Josiah adher'd to them, and so continu'd all their lives. The rest of the family remain'd with the Episcopal Church.

Josiah, my father, married young, and carried his wife with three children into New England, about 1682. The conventicles having been forbidden by law, and frequently disturbed, induced some considerable men of his acquaintance to remove to that country, and he was prevail'd with to accompany them thither, where they expected to enjoy their mode of religion with freedom.—— By the same wife he had 4 children more born there, and by a second wife

2. is a specimen—Franklin has a parenthetical note: "Here insert it," which, however, he failed to do. **11. 4to and 8vo**—quarto and octavo. **17. Queen Mary**—During the reign of the Catholic Queen Mary, 1553-1558, Protestants were persecuted in England. **19. English Bible**—Of course this was not the King James Bible, but some one of the earlier translations, such as Coverdale's. **20. joint stool**—stool made by a joiner; footstool. Obviously a stool with sufficient surface area to conceal a large book, laid open. **23-24. spiritual court**—ecclesiastical court especially designed to root out heresy. **26. family . . . Church of England**—The family continued in the Anglican faith. **28. outed**—ousted, ejected from their positions. **28. nonconformity**—By the Act of Uniformity of 1662 all ministers in the Established Church were required to use the revised Prayer Book, from which Puritan sentiments had been purged. Those who refused to conform to the order were called the Nonconformists. Ejected with their followers from the State Church, they met their congregations in illegal assemblies known as **conventicles. 31. carried** —that is, "took" his wife and children. The word is still used in the sense of convey, conduct, or escort in certain parts of the country.

ten more, in all 17, of which I remember 13 sitting at one time at his table, who all grew up to be men and women, and married. I was the youngest son, and the youngest child but two, and was born in Boston, N. England. My mother, the 2d wife, was Abiah Folger, daughter of Peter Folger, one of the first settlers of New England, of whom honourable mention is made by Cotton Mather, in his church history of that country, (entitled Magnalia Christi Americana) as *a godly, learned Englishman,* if I remember the words rightly. I have heard that he wrote sundry small occasional pieces, but only one of them was printed, which I saw now many years since. It was written in 1675, in the homespun verse of that time and people, and address'd to those then concern'd in the government there. It was in favour of liberty of conscience, and in behalf of the Baptists, Quakers, and other sectaries, that had been under persecution; ascribing the Indian wars and other distresses, that had befallen the country, to that persecution, as so many judgments of God, to punish so heinous an offense; and exhorting a repeal of those uncharitable laws. The whole appear'd to me as written with a good deal of decent plainness and manly freedom. The six last concluding lines I remember, tho' I have forgotten the two first of the stanza, but the purport of them was that his censures proceeded from good will, and, therefore he would be known as the author,

"Because to be a libeller, (says he)
I hate it with my heart;
From * Sherburne town where now I dwell,
My name I do put here,
Without offense, your real friend,
It is Peter Folgier."

My elder brothers were all put apprentices to different trades. I was put to the grammar school at eight years of age, my father intending to devote me as the tithe of his sons to the service of the church. My early readiness in learning to read (which must have been very early, as I do not remember when I could not read) and the opinion of all his friends that I should certainly make a good scholar, encourag'd him in this purpose of his. My uncle Benjamin too approv'd of it, and propos'd to give me all his short hand volumes of sermons, I suppose as a stock to set up with, if I would learn his character. I continu'd however at the grammar school not quite one year, tho' in that time I had risen gradually from the middle of the class of that year to be the head of it, and farther was remov'd into the next class above it, in order to go with that into the third at the end of the year. But my father in the mean time, from a view of the expence of a college education which, having so large a family he could not well afford, and the mean living many so educated were afterwards able to obtain—reasons that he gave to his friends in my hearing, altered

* In the Island of Nantucket. (Franklin's MS note)

5-7. Cotton Mather . . . Magnalia Christi Americana—In Cotton Mather's famous *Magnalia,* London, 1702, Bk. VI, p. 54, Franklin read of "an Able Godly *Englishman,* nam'd *Peter Foulger,* who was imploy'd in teaching the Youth in Reading, Writing, and the Principles of *Religion,* by Catechising." **28. tithe**—tenth. In British usage a tenth part of the product of the land was often devoted to the support of the clergy. *Cf.* Lev. 27: 30-32.

his first intention, took me from the grammar school, and sent me to a school for writing and arithmetic kept by a then famous man, Mr. Geo. Brownell, very successful in his profession generally, and that by mild encouraging methods. Under him I acquired fair writing pretty soon, but I fail'd in the arithmetic, and made no progress in it.——At ten years old, I was taken home to assist my father in his business, which was that of a tallow chandler and sope-boiler. A business he was not bred to, but had assumed on his arrival in New England, and on finding his dying trade would not maintain his family, being in little request. Accordingly, I was employed in cutting wick for the candles, filling the dipping mold and the molds for cast candles, attending the shop, going of errands, etc.——I dislik'd the trade and had a strong inclination for the sea; but my father declar'd against it; however, living near the water, I was much in and about it, learnt early to swim well, and to manage boats, and when in a boat or canoe with other boys, I was commonly allow'd to govern, especially in any case of difficulty; and upon other occasions I was generally a leader among the boys, and sometimes led them into scrapes, of w^{ch} I will mention one instance, as it shows an early projecting public spirit, tho' not then justly conducted. There was a salt marsh that bounded part of the mill pond, on the edge of which at highwater, we us'd to stand to fish for min[n]ows. By much trampling, we had made it a mere quagmire. My proposal was to build a wharff there fit for us to stand upon, and I show'd my comrades a large heap of stones which were intended for a new house near the marsh, and which would very well suit our purpose. Accordingly in the evening when the workmen were gone, I assembled a number of my play fellows, and working with them diligently like so many emmets, sometimes two or three to a stone, we brought them all away and built our little wharff.——The next morning the workmen were surpriz'd at missing the stones, which were found in our wharff; enquiry was made after the removers; we were discovered and complain'd of; several of us were corrected by our fathers; and tho' I pleaded the usefulness of the work, mine convinc'd me that nothing was useful which was not honest.

I think you may like to know something of his person and character. He had an excellent constitution of body, was of middle stature, but well set, and very strong. He was ingenious, could draw prettily, was skill'd a little in music, and had a clear pleasing voice, so that when he play'd psalm tunes on his violin and sung withal as he sometimes did in an evening after the business of the day was over, it was extreamly agreeable to hear. He had a mechanical genius too, and on occasion was very handy in the use of other tradesmen's tools. But his great excellence lay in a sound understanding, and solid judgment in prudential matters, both in private and publick affairs. In the latter indeed he was never employed, the numerous family he had to educate and the straitness of his circumstances, keeping him close to his trade, but I remember well his being

2. Geo. Brownell—George Brownell taught school in Boston from 1712 to 1734, advertising that he would instruct in "Writing, Cyphering, Dancing, Treble Violin, Flute, Spinnet &c. Also English and French Quilting, Imbroidery, Florishing, Plain Work, Marking in several sorts of Stiches and several other Works." *Publications of the Colonial Society of Massachusetts*, Vol. XXVII, "Transactions, 1927-1930," pp. 131, 139-140. **14. govern**—manage the ship, steer. **34. ingenious**—intelligent. **34. prettily**—neatly.

frequently visited by leading people, who consulted him for his opinion in affairs of the town or of the church he belong'd to and show'd a good deal of respect for his judgment and advice. He was also much consulted by private persons about their affairs when any difficulty occurr'd, and frequently chosen an arbitrator between contending parties.——At his table he lik'd to have as often as he could, some sensible friend or neighbour to converse with, and always took care to start some ingenious or useful topic for discourse, which might tend to improve the minds of his children. By this means he turn'd our attention to what was good, just, and prudent in the conduct of life; and little or no notice was ever taken of what related to the victuals on the table, whether it was well or ill drest, in or out of season, of good or bad flavour, preferable or inferior to this or that other thing of the kind; so that I was bro't up in such a perfect inattention to those matters as to be quite indifferent what kind of food was set before me, and so unobservant of it, that to this day, if I am ask'd I can scarce tell a few hours after dinner, what I din'd upon. This has been a convenience to me in travelling, where my companions have been sometimes very unhappy for want of a suitable gratification of their more delicate[,] because better instructed[,] tastes and appetites.

My mother had likewise an excellent constitution. She suckled all her children. I never knew either my father or mother to have any sickness but that of which they dy'd, he at 89, and she at 85 years of age. They lie buried together at Boston, where I some years since placed a marble stone over their grave with this inscription:

JOSIAH FRANKLIN
And ABIAH his wife
lie here interred.
They lived lovingly together in wedlock
fifty-five years.
Without an estate or any gainful employment,
By constant labour and industry,
with God's blessing.
They maintained a large family
comfortably;
and brought up thirteen children,
and seven grandchildren
reputably.
From this instance, reader,
Be encouraged to diligence in thy calling,
And distrust not Providence.
He was a pious and prudent man,
She, a discreet and virtuous woman.
Their youngest son,
In filial regard to their memory,
Places this stone.
J. F. born 1655, died 1744, Ætat 89
A. F. born 1667, died 1752 —— 85.

7. **ingenious**—here, about equivalent to sensible.

By my rambling digressions I perceive myself to be grown old. I us'd to write more methodically.——But one does not dress for private company as for a publick ball. 'Tis perhaps only negligence.——

To return. I continu'd thus employ'd in my father's business for two years, that is till I was 12 years old; and my brother John, who was bred to that business, having left my father, married and set up for himself at Rhodeisland, there was all appearance that I was destin'd to supply his place, and become a tallow chandler. But my dislike to the trade continuing, my father was under apprehensions that if he did not find one for me more agreeable, I should break away and get to sea, as his son Josiah had done to his great vexation. He therefore sometimes took me to walk with him, and see joiners, bricklayers, turners, braziers, etc. at their work, that he might observe my inclination, and endeavour to fix it on some trade or other on land. It has ever since been a pleasure to me to see good workmen handle their tools; and it has been useful to me, having learnt so much by it, as to be able to do little jobs myself in my house, when a workman could not readily be got; and to construct little machines for my experiments, while the intention of making the experiment was fresh and warm in my mind. My father at last fix'd upon the cutler's trade, and my uncle Benjamin's son Samuel, who was bred to that business in London[,] being about that time establish'd in Boston, I was sent to be with him some time on liking. But his expectations of a fee with me displeasing my father, I was taken home again.

From a child I was fond of reading, and all the little money that came into my hands was ever laid out in books. Pleas'd with the Pilgrim's Progress, my first collection was of John Bunyan's works, in separate little volumes. I afterward sold them to enable me to buy R. Burton's Historical Collections; they were small chapmen's books and cheap, 40 or 50 in all.——My father's little library consisted chiefly of books in polemic divinity, most of which I read, and have since often regretted that, at a time when I had such a thirst for knowledge, more proper books had not fallen in my way, since it was now resolv'd I should not be a clergyman. Plutarch's Lives there was, in which I read abundantly, and I still think that time spent to great advantage. There was also a book of Defoe's, called an Essay on Projects, and another of Dr. Mather's, called Essays to do Good which perhaps gave me a turn of thinking that had an influence on some of the principal future events of my life.

This bookish inclination at length determin'd my father to make me a printer, tho' he had already one son (James) of that profession. In 1717 my

21. time—Franklin's manuscript shows that he first wrote *days;* then wrote **time** above *days,* but failed to cancel the first word. **24. Pilgrim's Progress**—Bunyan's work was popular in the American colonies, as in England. **26. R. Burton's Historical Collections**—Nathaniel Crouch (1632?-1725?), an English hack writer, produced a great number of books of the kind described in the text. See Dictionary of National Biography under "Burton, Robert or Richard." **27. chapmen's**—peddlers'. **31. Plutarch's Lives**—Franklin presumably read what is known as the Dryden translation of Plutarch's *Lives* in five volumes, originally printed in 1683-86, and often reprinted. This was widely distributed in the colonies. **33. Defoe's . . . an Essay on Projects**—This was published by Daniel Defoe in 1697, and reissued in 1702. It suggests a number of ingenious inventions which have since come into commercial usefulness. **34. Essays to do Good**—Cotton Mather's *Bonifacius* originally appeared in Boston in 1710. In later editions the title was changed to *Essays to Do Good.* The emphasis of this work is upon practical virtue. For Franklin's opinion of it, see his letter to Samuel Mather from France, May 12, 1784, in *Writings,* Vol. IV, p. 208.

brother James return'd from England with a press and letters to set up his business in Boston. I lik'd it much better than that of my father, but still had a hankering for the sea. To prevent the apprehended effect of such an inclination, my father was impatient to have me bound to my brother. I stood out some time, but at last was persuaded, and signed the indentures, when I was yet but 12 years old.——I was to serve as an apprentice till I was 21 years of age, only I was to be allow'd journeyman's wages during the last year. In a little time I made great proficiency in the business, and became a useful hand to my brother. I now had access to better books. An acquaintance with the apprentices of booksellers, enabled me sometimes to borrow a small one, which I was careful to return soon and clean. Often I sat up in my room reading the greatest part of the night, when the book was borrow'd in the evening and to be return'd early in the morning[,] lest it should be miss'd or wanted. And after some time an ingenious tradesman Mr. Matthew Adams who had a pretty collection of books, and who frequented our printing house, took notice of me, invited me to his library, and very kindly lent me such books as I chose to read. I now took a fancy to poetry, and made some little pieces. My brother, thinking it might turn to account encourag'd me, and put me on composing occasional ballads. One was called the *Lighthouse Tragedy,* and contained an acct of the drowning of Capt. Worthilake, with his two daughters: the other was a sailor song on the taking of *Teach* or Blackbeard the pirate. They were wretched stuff, in the Grub-street ballad stile, and when they were printed he sent me about the town to sell them. The first sold wonderfully, the event being recent, having made a great noise. This flatter'd my vanity. But my father discourag'd me, by ridiculing my performances, and telling me verse-makers were generally beggars; so I escap'd being a poet, most probably a very bad one. But as prose writing has been of great use to me in the course of my life, and was a principal means of my advancement, I shall tell you how in such a situation I acquir'd what little ability I have in that way.

There was another bookish lad in the town, John Collins by name, with whom I was intimately acquainted. We sometimes disputed, and very fond we were of argument, and very desirous of confuting one another. Which disputacious turn, by the way, is apt to become a very bad habit, making people often extreamly disagreeable in company, by the contradiction that is necessary to bring it into practice, and thence, besides souring and spoiling the conversation, productive of disgusts and, perhaps enmities where you may have occasion for friendship. I had caught it by reading my father's books of dispute about

1. letters—type. **14. ingenious**—intelligent, as before. **14. Matthew Adams**—The main source of information about Matthew Adams is Franklin himself. He was a mechanic with a passion for books, and contributed occasionally to the *Courant* and the *Weekly Journal.* **14. pretty**—considerable. **20. Worthilake**—George Worthylake was the first keeper of the Boston Light. Rowing to town on November 3, 1718, with his wife and daughter, he and his family were drowned. Justin Winsor, ed., *Memorial History of Boston,* Osgood, 1880-82, 4 vols., Vol. II, p. 274. Franklin's memory that two daughters were drowned seems to be a slip. **21. Teach**—Edward Teach, known as Blackbeard, was a famous pirate operating off the Virginia and North Carolina coasts. On November 22, 1717, he was killed by Lieutenant Maynard of the British navy after a desperate struggle. The legend is that Maynard returned to port with Blackbeard's head attached to the bowsprit. See *Colonial Records of North Carolina,* Vol. II, pp. 325-26. **25. generally**—Franklin first wrote *always,* then wrote **generally** above it, but forgot to cross out *always.* **30. John Collins**—Franklin seems to be our sole source of information about John Collins.

religion. Persons of good sense, I have since observ'd, seldom fall into it, except lawyers, university men, and men of all sorts that have been bred at Edinborough. A question was once, some how or other, started between Collins and me, of the propriety of educating the female sex in learning, and their abilities for study. He was of opinion that it was improper, and that they were naturally unequal to it. I took the contrary side, perhaps a little for dispute['s] sake. He was naturally more eloquent, had a ready plenty of words, and sometimes as I thought bore me down more by his fluency than by the strength of his reasons. As we parted without settling the point, and were not to see one another again for some time, I sat down to put my arguments in writing, which I copied fair and sent to him. He answer'd, and I reply'd. Three of four letters of a side had pass'd, when my father happen'd to find my papers and read them. Without ent'ring into the discussion, he took occasion to talk to me about the manner of my writing, observ'd that, tho' I had the advantage of my antagonist in correct spelling and pointing (which I ow'd to the printing house) I fell far short in elegance of expression, in method and in perspicuity, of which he convinc'd me by several instances. I saw the justice of his remarks, and thence grew more attentive to the *manner* in writing, and determin'd to endeavour at improvement.——

About this time I met with an odd volume of the Spectator. It was the third. I had never before seen any of them. I bought it, read it over and over, and was much delighted with it. I thought the writing excellent, and wish'd if possible to imitate it. With that view, I took some of the papers, and, making short hints of the sentiment in each sentence, laid them by a few days, and then, without looking at the book, try'd to compleat the papers again, by expressing each hinted sentiment at length, and as fully as it had been express'd before, in any suitable words, that should come to hand.

Then I compared my Spectator with the original, discover'd some of my faults, and corrected them. But I found I wanted a stock of words or a readiness in recollecting and using them, which I thought I should have acquir'd before that time, if I had gone on making verses, since the continual occasion for words of the same import but of different length, to suit the measure, or of different sound for the rhyme, would have laid me under a constant necessity of searching for variety, and also have tended to fix that variety in my mind, and make me master of it. Therefore I took some of the tales and turn'd them into verse: And after a time, when I had pretty well forgotten the prose, turn'd them back again. I also sometimes jumbled my collections of hints into confusion, and after some weeks, endeavour'd to reduce them into the best order, before I began to form the full sentences and compleat the paper. This was to teach me method in the arrangement of thoughts. By comparing my work afterwards with the original, I discover'd many faults and amended them; but I sometimes had the pleasure of fancying that in certain particulars of small import, I had been lucky enough to improve the method or the language and this encourag'd me to think I might possibly in time come to be a tolerable English writer, of which I was extreamly ambitious.

15. **pointing**—punctuating. The student should note that Franklin's punctuation in the *Autobiography* is rhetorical, not logical. 20. **Spectator**—The famous periodical chiefly written by Addison and Steele, published 1711-12, and immensely popular in various editions throughout the American colonies. 32. **measure**—meter.

My time for these exercises and for reading was at night, after work or before it began in the morning; or on Sundays, when I contrived to be in the printing house alone, evading as much as I could the common attendance on publick worship, which my father used to exact of me when I was under his care: And which indeed I still thought a duty, tho' I could not, as it seemed to me, afford the time to practise it.

When about 16 years of age I happen'd to meet with a book, written by one Tryon, recommending a vegetable diet. I determined to go into it. My brother, being yet unmarried, did not keep house, but boarded himself and his apprentices in another family. My refusing to eat flesh occasioned an inconveniency, and I was frequently chid for my singularity. I made myself acquainted with Tryon's manner of preparing some of his dishes, such as boiling potatoes or rice, making hasty pudding, and a few others, and then propos'd to my brother, that if he would give me weekly half the money he paid for my board I would board myself. He instantly agreed to it, and I presently found that I could save half what he paid me. This was an additional fund for buying books. But I had another advantage in it. My brother and the rest going from the printing house to their meals, I remain'd there alone, and dispatching presently my light repast, (which often was no more than a bisket or a slice of bread, a handful of raisins or a tart from the pastry cook's, and a glass of water), had the rest of the time till their return, for study, in which I made the greater progress from that greater clearness of head and quicker apprehension which usually attend temperance in eating and drinking. And now it was that being on some occasion made asham'd of my ignorance in figures, which I had twice failed in learning when at school, I took Cocker's book of Arithmetick, and went thro' the whole by myself with great ease. I also read Seller's and Sturmy's books of navigation, and became acquainted with the little geometry they contain, but never proceeded far in that science. And I read about this time Locke on Human Understanding, and the Art of Thinking, by Mess[rs] du Port Royal.

While I was intent on improving my language, I met with an English grammar (I think it was Greenwood's), at the end of which there were two little sketches of the arts of rhetoric and logic, the latter finishing with a speci-

8. Tryon—Thomas Tryon (1634-1703) wrote some sixteen books and pamphlets of a mystical turn of thinking. Franklin has reference either to *Health's Grand Preservative,* 1684, retitled and republished as *The Way to Health,* 1691, and reprinted, or to *Wisdom's Dictates . . . to Which Is Added a Bill of Fare of Seventy-five Noble Dishes, of Excellent Food,* 1691, or (more probably) to both. Some excerpts from Tryon may be readily found in Fay, *Franklin,* pp. 30-33. It should be noted that English **hasty pudding** (line 13) differs from the American dish of the same name, the latter using cornmeal. **25. Cocker's**—Edward Cocker (1631-1675) was the author or compiler of a great many useful manuals of penmanship, arithmetic, and similar subjects. His *Arithmetick,* first published in 1678, is said to have gone through 112 editions. **27. Seller's**—John Seller, hydrographer to the king, the dates of whose life and death are not known, published in 1671 *The English Pilot,* often reprinted, but Franklin probably has reference to his *Practical Navigation,* London, 1718, which contains "many useful Geometrical Definitions and Problems." **27. Sturmy's**—This is Samuel Sturmy's *The Mariner's Magazine, stor'd with these Mathematical Arts, Navigation and Geometry, Mathematical Instruments, Doctrine of Triangles, Art of Navigation,* etc., first published in London in 1669. There was a third edition in 1684. **29. Locke**—See note, p. 55. **29-30. Art of Thinking**—*L'art de penser* (1662), a treatise on logic by followers of Descartes, and associated with the abbey of Port Royal, the intellectual capital of a movement in French thought known as Jansenism. **32. Greenwood's**—This is James Greenwood's *An Essay towards a Practical English Grammar,* first published in London in 1711, and often reprinted. Throughout the eighteenth century grammatical theory was closely associated with logic.

men of a dispute in the Socratic method. And soon after I procur'd Xenophon's Memorable Things of Socrates, wherein there are many instances of the same method. I was charm'd with it, adopted it, dropt my abrupt contradiction and positive argumentation, and put on the humble enquirer and doubter. And being then, from reading Shaftsbury and Collins, become a real doubter in many points of our religious doctrine, I found this method safest for myself and very embarrassing to those against whom I us'd it; therefore I took a delight in it, practis'd it continually, and grew very artful and expert in drawing people even of superior knowledge into concessions the consequences of which they did not foresee, entangling them in difficulties out of which they could not extricate themselves, and so obtaining victories that neither myself nor my cause always deserved.——I continu'd this method some few years, but gradually left it, retaining only the habit of expressing myself in terms of modest diffidence, never using when I advanced any thing that may possibly be disputed, the words *certainly, undoubtedly,* or any others that give the air of positiveness to an opinion; but rather say, I conceive, or I apprehend a thing to be so or so, it appears to me, or I should think it so or so for such and such reasons, or I imagine it to be so, or it is so if I am not mistaken. This habit I believe has been of great advantage to me, when I have had occasion to inculcate my opinions and persuade men into measures that I have been from time to time engag'd in promoting. And as the chief ends of conversation are to *inform,* or to be *informed,* to *please* or to *persuade,* I wish wellmeaning sensible men would not lessen their power of doing good by a positive assuming manner that seldom fails to disgust, tends to create opposition, and to defeat every one of those purposes for which speech was given to us, to wit, giving or receiving information, or pleasure. For if you would *inform,* a positive dogmatical manner in advancing your sentiments, may provoke contradiction and prevent a candid attention. If you wish information and improvement from the knowledge of others, and yet at the same time express yourself as firmly fix'd in your present opinions, modest sensible men, who do not love disputation, will probably leave you undisturbed in the possession of your error; and by such a manner, you can seldom hope to recommend yourself in *pleasing* your hearers, or to persuade those whose concurrence you desire.——Pope says, judiciously,

> *Men should be taught as if you taught them not,*
> *And things unknown propos'd as things forgot,——*

farther recommending it to us,

1-2. **Xenophon's Memorable Things of Socrates**—As the title remained in Franklin's mind for forty years, he apparently read a translation of Xenophon's *Memorabilia* which appeared as *Memorable Things of Socrates,* by E. Bysshe, in 1712. 5. **Shaftsbury**—Anthony Ashley Cooper, third earl of Shaftesbury (1671-1713), author of a number of influential essays and books, of which the most important is *Characteristicks of Men, Manners, Opinions and Times,* first edition, 1711; second edition, 1714, a kind of "complete works" of the author. 5. **Collins**—Anthony Collins (1676-1729), author of various pamphlets and books, of which the *Discourse of Freethinking,* London, 1713, is the best known. 35. **Men should be taught**—Quoted from memory from Pope's *Essay on Criticism,* II, lines 574-75, which read:

> "Men must be taught as if you taught them not,
> And things unknown propos'd as things forgot."

To speak tho' sure, with seeming diffidence.

And he might have coupled with this line that which he has coupled with another, I think less properly,

For want of modesty is want of sense.

If you ask why *less properly,* I must repeat the lines,

"Immodest words admit of *no* defense,
For want of modesty is want of sense."

Now, is not *want of sense* (where a man is so unfortunate as to want it) some apology for his *want of modesty?* and would not the lines stand more justly thus?

Immodest words admit *but this* defense,
That want of modesty is want of sense.

This however I should submit to better judgments.——

My brother had, in 1720 or 21, begun to print a newspaper. It was the second that appear'd in America, and was called *The New England Courant.* The only one before it, was *the Boston News-Letter.* I remember his being dissuaded by some of his friends from the undertaking, as not likely to succeed, one newspaper being in their judgment enough for America. At this time 1771 there are not less than five and twenty.——He went on however with the undertaking, and after having work'd in composing the types and printing off the sheets, I was employ'd to carry the papers thro' the streets to the customers.——He had some ingenious men among his friends who amus'd themselves by writing little pieces for this paper, which gain'd it credit, and made it more in demand; and these gentlemen often visited us.——Hearing their conversations, and their accounts of the approbation their papers were receiv'd with, I was excited to try my hand among them. But being still a boy, and suspecting that my brother would object to printing any thing of mine in his paper if he knew it to be mine, I contriv'd to disguise my hand, and writing an anonymous paper, I put it in at night under the door of the printing house. It was found in the morning and communicated to his writing friends when they call'd in as usual. They read it, commented on it in my hearing, and I had the exquisite pleasure, of finding it met with their approbation, and that in their different guesses at the author none were named but

1. To speak tho' sure—Line 567 of the *Essay on Criticism* reads:

"And speak, tho' sure, with seeming diffidence."

7. For want of modesty—Franklin's memory has curiously betrayed him. The couplet he is discussing is not by Pope at all, but is found in the *Essay on Translated Verse* by the Earl of Roscommon, and runs:

"Immodest words admit of no defence,
For want of decency is want of sense."

15. New England Courant—The *New England Courant* began publication Aug. 7, 1721, and was preceded in point of time by *Publick Occurrences* (Boston), Sept. 25, 1690 (only one issue); the *Boston News-Letter,* founded April 24, 1704, the *Boston Gazette,* founded Dec. 21, 1719, and the *American Weekly Mercury* (Philadelphia), founded Dec. 22, 1718. **19. five and twenty**—According to W. A. Dill, *The First Century of American Newspapers,* University of Kansas, 1925, in 1770 there were 29 newspapers in the future United States.

men of some character among us for learning and ingenuity.——I suppose now that I was rather lucky in my judges: And that perhaps they were not really so very good ones as I then esteem'd them.

Encourag'd however by this, I wrote and convey'd in the same way to the press several more papers, which were equally approv'd, and I kept my secret till my small fund of sense for such performances was pretty well exhausted, and then I discovered it; when I began to be considered a little more by my brother's acquaintance, and in a manner that did not quite please him, as he thought, probably with reason, that it tended to make me too vain. And, perhaps, this might be one occasion of the differences that we began to have about this time. Tho' a brother, he considered himself as my master, and me as his apprentice; and accordingly expected the same services from me as he would from another; while I thought he demean'd me too much in some he requir'd of me, who from a brother expected more indulgence. Our disputes were often brought before our father, and I fancy I was either generally in the right, or else a better pleader, because the judgment was generally in my favour. But my brother was passionate and had often beaten me, which I took extreamly amiss; and, thinking my apprenticeship very tedious, I was continually wishing for some opportunity of shortening it, which at length offered in a manner unexpected.*

One of the pieces in our newspaper, on some political point, which I have now forgotten, gave offense to the Assembly. He was taken up, censur'd, and imprison'd for a month, by the speaker's warrant, I suppose because he would not discover his author. I too was taken up and examin'd before the council; but tho' I did not give them any satisfaction, they contented themselves with admonishing me, and dismiss'd me; considering me perhaps as an apprentice, who was bound to keep his master's secrets. During my brother's confinement, which I resented a good deal, notwithstanding our private differences, I had the management of the paper, and I made bold to give our rulers some rubs in it, which my brother took very kindly, while others began to consider me in an unfavourable light, as a young genius that had a turn for libelling and satyr. My brother's discharge was accompany'd with an order of the House, (a very odd one), that *James Franklin should no longer print the paper called the New England Courant.* There was a consultation held in our printing house among his friends, what he should do in this case. Some propos'd to

*I fancy his harsh and tyrannical treatment of me, might be a means of impressing me with that aversion to arbitrary power that has stuck to me thro' my whole life —(Franklin's note)

5. **several more papers**—These are the "Dogood Papers," for which see Franklin's *Writings,* Vol. II, pp. 2-49. 7. **discovered**—disclosed. 10. **began to have**—Franklin first wrote *frequently had,* then wrote **began to have** over this, and failed to cross out *frequently had.* 21. **political point**—In the issue of his newspaper for June 11, 1722, James Franklin insinuated that the government was negligent in suppressing piracy. The next day he was examined by the General Court, and imprisoned until the end of the session, July 7. See *Publications of the Colonial Society of Massachusetts,* Vol. IX, pp. 451 ff. 33. **James Franklin**—Franklin's memory is unconsciously telescoping two events separate in point of time. After James Franklin was released in July, he continued to edit and print the *Courant.* On Jan. 14, 1723, he published an article on hypocrites, with other material so displeasing to the authorities that a warrant for his arrest was issued (on Jan. 28), the General Court having previously voted that James Franklin be forbidden to publish the paper further "except it be first supervised by the Secretary of this Province." Benjamin Franklin first appears as the "present publisher" with the issue of Feb. 11, 1723. See *Writings,* Vol. II, pp. 49-52. This episode was the last attempt to establish government press censorship in colonial Massachusetts.

evade the order by changing the name of the paper; but my brother seeing inconveniences in that, it was finally concluded on as a better way, to let it be printed for the future under the name of *Benjamin Franklin*. And to avoid the censure of the Assembly that might fall on him, as still printing it by his apprentice, the contrivance was, that my old indenture should be return'd to me, with a full discharge on the back of it, to be shown on occasion; but to secure to him the benefit of my service I was to sign new indentures for the remainder of the term, w.ch were to be kept private. A very flimsy scheme it was, but however it was immediately executed, and the paper went on accordingly under my name for several months.——At length a fresh difference arising between my brother and me, I took upon me to assert my freedom, presuming that he would not venture to produce the new indentures. It was not fair in me to take this advantage, and this I therefore reckon one of the first errata of my life: But the unfairness of it weighed little with me, when under the impressions of resentment, for the blows his passion too often urg'd him to bestow upon me. Tho' he was otherwise not an ill-natur'd man: Perhaps I was too saucy and provoking.

When he found I would leave him, he took care to prevent my getting employment in any other printing house of the town, by going round and speaking to every master, who accordingly refus'd to give me work. I then thought of going to New York as the nearest place where there was a printer: and I was rather inclin'd to leave Boston when I reflected that I had already made myself a little obnoxious to the governing party; and from the arbitrary proceedings of the Assembly in my brother's case it was likely I might if I stay'd soon bring myself into scrapes; and farther that my indiscrete disputations about religion began to make me pointed at with horror by good people, as an infidel or atheist. I determin'd on the point: but my father now siding with my brother, I was sensible that if I attempted to go openly, means would be used to prevent me. My friend Collins therefore undertook to manage a little for me. He agreed with the captain of a New York sloop for my passage, under the notion of my being a young acquaintance of his that had got a naughty girl with child, whose friends would compel me to marry her, and therefore I could not appear or come away publickly. So I sold some of my books to raise a little money, was taken on board privately, and as we had a fair wind[,] in three days I found myself in New York near 300 miles from home, a boy of but 17, without the least recommendation to or knowledge of any person in the place, and with very little money in my pocket.

My inclinations for the sea, were by this time worne out, or I might now have gratify'd them. But having a trade, and supposing myself a pretty good workman, I offer'd my service to the printer in the place, old Mr. W.m Bradford, who had been the first printer in Pensilvania, but remov'd from thence

10. several months—that is, until Benjamin Franklin ran off. In the issue of the *Courant* for Sept. 30, 1723, James Franklin advertises for a "likely lad" for apprentice—a fact which suggests that Benjamin left before this date. **40. W.m Bradford**—William Bradford (1663-1752) began printing in Philadelphia in 1685, and immediately got into difficulties with the Quaker government. In 1692, having espoused the cause of George Keith, an Anglican divine who had drifted into hostilities with the reigning Quaker group in Pennsylvania, he was imprisoned, and his property was seized. A jury refused to convict, and in 1693, on the invitation of New York officials, he removed to that province, where, on Nov. 8, 1725, he founded the first newspaper in New York. Franklin incloses the passage about Bradford in brackets.

upon the quarrel of George Keith. He could give me no employment, having little to do, and help enough already: But, says he, my son at Philadelphia has lately lost his principal hand, Aquila Rose, by death. If you go thither I believe he may employ you. Philadelphia was 100 miles further. I set out, however, in a boat for Amboy, leaving my chest and things to follow me round by sea. In crossing the bay we met with a squall that tore our rotten sails to pieces, prevented our getting into the Kill; and drove us upon Long Island. In our way, a drunken Dutchman, who was a passenger too, fell overboard; when he was sinking I reach'd thro' the water to his shock pate and drew him up, so that we got him in again. His ducking sober'd him a little, and he went to sleep, taking first out of his pocket a book, which he desir'd I would dry for him. It prov'd to be my old favourite author Bunyan's Pilgrim's Progress in Dutch, finely printed on good paper with copper cuts, a dress better than I had ever seen it wear in its own language. I have since found that it has been translated into most of the languages of Europe, and suppose it has been more generally read than any other book except perhaps the Bible. Honest John was the first that I know of who mix'd narration and dialogue, a method of writing very engaging to the reader, who in the most interesting parts finds himself, as it were brought into the company, and present at the discourse. De foe in his Cruso, his Moll Flanders, Religious Courtship, Family Instructor, and other pieces, has imitated it with success. And Richardson has done the same in his Pamela, etc.——

When we drew near the island we found it was at a place where there could be no landing, there being a great surff on the stony beach. So we dropt anchor and swung round towards the shore. Some people came down to the water edge and hallow'd to us, as we did to them. But the wind was so high and the surff so loud, that we could not hear so as to understand each other. There were canoes on the shore, and we made signs and hallow'd that they should fetch us, but they either did not understand us, or thought it impracticable. So they went away, and night coming on, we had no remedy but to wait till the wind should abate, and, in the mean time the boatman and I concluded to sleep, if we could and so crouded into the scuttle with the Dutchman who was still wet, and the spray beating over the head of our boat leak'd thro' to us, so that we were soon almost as wet as he. In this manner we lay all night with very little rest. But the wind abating the next day, we made a shift to reach Amboy before night, having been 30 hours on the water without victuals, or any drink but a bottle of filthy rum: The water we sail'd on being salt.

In the evening I found myself very feverish, and went in to bed. But having read somewhere that cold water drank plentifully was good for a fever, I follow'd the prescription, sweat plentifully most of the night, my fever left me,

2. **my son**—Andrew Bradford (1686-1742), later Franklin's principal competitor in Philadelphia as a printer. 3. **Aquila Rose**—(1695-1723), a mediocre poet, whose *Poems on Several Occasions,* published by his son in 1740, are his only claim to renown. 5. **Amboy**—Perth Amboy, on Raritan Bay, and one of the two capitals of New Jersey. 7. **Kill**—Kill van Kull, the channel between Staten Island and the New Jersey shore. 19. **De foe**—Defoe's *The Life and Strange Surprizing Adventures of Robinson Crusoe, of York, Mariner* (part 1) appeared in 1719; his *The Fortunes and Misfortunes of the Famous Moll Flanders,* in 1722; *Religious Courtship,* in 1722; *A New Family Instructor,* in 1727. 21. **Richardson**—Samuel Richardson (1689-1761) published *Pamela, or Virtue Rewarded* in 1740-42.

and in the morning crossing the ferry, I proceeded on my journey, on foot, having 50 miles to Burlington, where I was told I should find boats that would carry me the rest of the way to Philadelphia.

It rain'd very hard all the day, I was thoroughly soak'd, and by noon a good deal tir'd, so I stopt at a poor inn, where I staid all night, beginning now to wish that I had never left home. I cut so miserable a figure too, that I found by the questions ask'd me I was suspected to be some runaway servant, and in danger of being taken up on that suspicion. However I proceeded the next day, and got in the evening to an inn within 8 or 10 miles of Burlington, kept by one Dr. Brown.

He ent[e]red into conversation with me while I took some refreshment, and, finding I had read a little, became very sociable and friendly. Our acquaintance continu'd as long as he liv'd. He had been, I imagine, an itinerant doctor, for there was no town in England, or country in Europe, of which he could not give a very particular account. He had some letters, and was ingenious, but much of an unbeliever, and wickedly undertook, some years after to travesty the Bible in doggrel verse, as Cotton had done Virgil. By this means he set many of the facts in a very ridiculous light, and might have hurt weak minds if his work had been published:—but it never was.——At his house I lay that night, and the next morning reach'd Burlington.——But had the mortification to find that the regular boats were gone a little before my coming, and no other expected to go till Tuesday, this being Saturday. Wherefore I returned to an old woman in the town of whom I had bought gingerbread to eat on the water, and ask'd her advice; she invited me to lodge at her house till a passage by water should offer: and being tired with my foot travelling, I accepted the invitation. She understanding I was a printer, would have had me stay at that town and follow my business, being ignorant of the stock necessary to begin with. She was very hospitable, gave me a dinner of ox cheek with great good will, accepting only of a pot of ale in return. And I thought myself fix'd till Tuesday should come. However walking in the evening by the side of the river, a boat came by, which I found was going towards Philadelphia, with several people in her. They took me in, and as there was no wind, we row'd all the way; and about midnight not having yet seen the city, some of the company were confident we must have passed it, and would row no farther, the others knew not where we were, so we put towards the shore, got into a creek, landed near an old fence[,] with the rails of which we made a fire, the night being cold, in October, and there we remain'd till daylight. Then one of the company knew the place to be Cooper's Creek a little above Philadelphia, which we saw as soon as we got out of the creek,

2. Burlington—As a glance at the map will show, Franklin crossed New Jersey in its narrowest part in a diagonal direction to Burlington, on the Delaware River, where he hoped to find a boat to take him the few remaining miles to Philadelphia. **10. Dr. Brown**—This is Dr. John Browne (died 1737), who lived on the York Road, and of whom little is known. But inasmuch as Browne advertised in the *American Weekly Mercury* for Sept. 1, 1726, for a runaway servant, Franklin's fear of being taken for such a runaway has a certain irony. See *New Jersey Archives*, First Series, Vol. XI, index under "Browne." **15. some letters**—some education. **17. Cotton . . . Virgil**—Charles Cotton (1630-1687) published in 1664 *Scarronides, or the First Book of Virgil Travestie*, which was amplified and coarsened in succeeding editions. **38. Cooper's Creek**—This creek, the natural upper boundary of Camden, New Jersey, runs into the Delaware River from the New Jersey side.

and arriv'd there about 8 or 9 o'clock, on the Sunday morning, and landed a the Market street wharff.

I have been the more particular in this description of my journey, and shal be so of my first entry into that city, that you may in your mind compare suc unlikely beginnings with the figure I have since made there. I was in m working dress, my best cloaths being to come round by sea. I was dirty fron my journey; my pockets were stuff'd out with shirts and stockings; I knev no soul, nor where to look for lodging. I was fatigued with travelling, rowin and want of rest, I was very hungry, and my whole stock of cash consisted o a Dutch dollar and about a shilling in copper. The latter I gave the peopl of the boat for my passage, who at first refus'd it, on acc! of my rowing; but insisted on their taking it, a man being sometimes more generous when h has but a little money than when he has plenty, perhaps thro' fear of bein thought to have but little. Then I walk'd up the street, gazing about, till nea the market house I met a boy with bread. I had made many a meal on bread and inquiring where he got it, I went immediately to the baker's he directe me to, in Second street, and ask'd for bisket, intending such as we had i Boston, but they it seems were not made in Philadelphia, then I ask'd for threepenny loaf, and was told they had none such: so not considering or know ing the difference of money and the greater cheapness nor the names of hi bread, I bad him give me threepenny worth of any sort. He gave me thre great puffy rolls. I was surpriz'd at the quantity, but took it, and having n room in my pockets, walk'd off, with a roll under each arm, and eating th other. Thus I went up Market street as far as fourth street, passing by th door of Mr. Read, my future wife's father, when she standing at the doo saw me, and thought I made as I certainly did a most awkward ridiculou appearance. Then I turn'd and went down Chestnut street and part of Walnu street, eating my roll all the way, and coming round found myself again a Market street wharff, near the boat I came in, to which I went for a draugh of the river water, and, being fill'd with one of my rolls, gave the other tw to a woman and her child that came down the river in the boat with us, an were waiting to go farther. Thus refresh'd I walk'd again up the street, whic by this time had many clean dress'd people in it who were all walking th same way; I join'd them, and thereby was led into the great meeting hous of the Quakers near the market. I sat down among them, and after lookin round awhile and hearing nothing said, being very drowsy thro' labour an want of rest the preceding night, I fell fast asleep, and continu'd so till th meeting broke up, when one was kind enough to rouse me. This was, there fore, the first house I was in or slept in in Philadelphia.

Walking down again towards the river, and, looking in the faces of people I met a young Quaker man whose countenance I lik'd, and accosting hin requested he would tell me where a stranger could get lodging. We were the near the sign of the Three Mariners. Here, says he, is one place that entertain strangers, but it is not a reputable house; if thee wilt walk with me, I'll shov

25. door of Mr. Read—The various places associated with Franklin's earlier years i Philadelphia may be studied from a map of the city made in 1750 by N. Scull and G. Heap, re produced in Faÿ, *Franklin*, opposite p. 111.

thee a better. He brought me to the Crooked Billet in Water street. Here I got a dinner. And while I was eating it, several sly questions were ask'd me, as it seemed to be suspected from my youth and appearance, that I might be some runaway. After dinner my sleepiness return'd, and being shown to a bed, I lay down without undressing, and slept till six in the evening; was call'd to supper, went to bed again very early and slept soundly till next morning. Then I made myself as tidy as I could, and went to Andrew Bradford the printer's. I found in the shop the old man his father, whom I had seen at New York, and who travelling on horseback had got to Philadelphia before me. He introduc'd me to his son, who receiv'd me civilly, gave me a breakfast, but told me he did not at present want a hand, being lately supply'd with one. But there was another printer in town lately set up, one Keimer, who perhaps might employ me; if not, I should be welcome to lodge at his house, and he would give me a little work to do now and then till fuller business should offer.

The old gentleman said, he would go with me to the new printer: And when we found him, Neighbor, says Bradford, I have brought to see you a young man of your business, perhaps you may want such a one. He ask'd me a few questions, put a composing stick in my hand to see how I work'd, and then said he would employ me soon, tho' he had just then nothing for me to do. And taking old Bradford whom he had never seen before, to be one of the towns people that had a good will for him, enter'd into a conversation on his present undertaking and prospects; while Bradford not discovering that he was the other printer's father, on Keimer's saying he expected soon to get the greatest part of the business into his own hands, drew him on by artful questions and starting little doubts, to explain all his views, what interest he rely'd on, and in what manner he intended to proceed. I who stood by and heard all, saw immediately that one of them was a crafty old sophister, and the other a mere novice. Bradford left me with Keimer, who was greatly surpriz'd when I told him who the old man was.

Keimer's printing-house I found, consisted of an old shatter'd press, and one small, worn-out font of English, which he was then using himself, composing in it an elegy on Aquila Rose before-mentioned, an ingenious young man of excellent character much respected in the town, clerk of the Assembly, and a pretty poet. Keimer made verses, too, but very indifferently. He could not be said to write them, for his manner was to compose them in the types directly out of his head; so there being no copy, but one pair of cases, and the elegy likely to require all the letter[s], no one could help him.——I endeavour'd to put his press (which he had not yet us'd, and of which he understood nothing) into order fit to be work'd with; and, promising to come and print off his elegy as soon as he should have got it ready, I return'd to Bradford's who gave me a little job to do for the present, [and] there I lodged and

12. Keimer—Samuel Keimer (died 1738 or thereafter), a member of a visionary Protestant sect known as the French Prophets, was born in England, and emigrated to America in 1722. The rest of his story is told in the *Autobiography*. **31. English**—fourteen-point type. The standard font of type for books is usually 10-point or long primer; hence, Franklin remarks upon the inadequacies of Keimer's shop. **36. cases**—Type is distributed into two sets of **cases**, one containing boxes for each of the capital letters, and one for the "lower case" letters (whence the term).

dieted. A few days after[,] Keimer sent for me to print off the elegy. And now he had got another pair of cases, and a pamphlet to reprint, on which he set me to work.

These two printers I found poorly qualified for their business. Bradford had not been bred to it, and was very illiterate; and Keimer tho' something of a scholar, was a mere compositor, knowing nothing of presswork. He had been one of the French prophets and could act their enthusiastic agitations. At this time he did not profess any particular religion, but something of all on occasion; was very ignorant of the world, and had, as I afterward found, a good deal of the knave in his composition. He did not like my lodging at Bradford's while I work'd with him. He had a house indeed, but without furniture, so he could not lodge me: But he got me a lodging at Mr. Read's, beforementioned, who was the owner of his house. And my chest and clothes being come by this time, I made rather a more respectable appearance in the eyes of Miss Read than I had done when she first happen'd to see me eating my roll in the street.

I began now to have some acquaintance among the young people of the town, that were lovers of reading, with whom I spent my evenings very pleasantly and gaining money by my industry and frugality, I lived very agreeably, forgetting Boston as much as I could, and not desiring that any there should know where I resided, except my friend Collins who was in my secret, and kept it when I wrote to him. At length an incident happened that sent me back again much sooner than I had intended.

I had a brother-in-law, Robert Holmes, master of a sloop, that traded between Boston and Delaware. He being at New Castle 40 miles below Philadelphia, heard there of me, and wrote me a letter, mentioning the concern of my friends in Boston at my abrupt departure, assuring me of their good will to me, and that every thing would be accommodated to my mind if I would return, to which he exhorted me very earnestly. I wrote an answer to his letter, thank'd him for his advice, but stated my reasons for quitting Boston fully, and in such a light as to convince him I was not so wrong as he had apprehended. Sir William Keith, governor of the province, was then at New Castle, and Capt. Holmes happening to be in company with him when my letter came to hand, spoke to him of me, and show'd him the letter. The governor read it, and seem'd surpriz'd when he was told my age. He said I appear'd a young man of promising parts, and therefore should be encouraged: The printers at Philadelphia were wretched ones, and if I would set up there, he made no doubt I should succeed; for his part, he would procure me the public business, and do me every other service in his power. This my brother-in-law afterwards told me in Boston. But I knew as yet nothing of it; when, one day

1. dieted—that is, boarded. **2. pamphlet to reprint**—This is possibly a pamphlet entitled *A Parable,* by Keimer and Franklin, because of which, at their monthly meeting in September, 1723, the Quakers repudiated Keimer. **32. Sir William Keith**—(1680-1749) almost the only royal governor to espouse the popular cause in our colonial history; after serving as surveyor-general of the customs for southern North America, was appointed lieutenant-governor of Pennsylvania and Delaware, arriving in Philadelphia May 31, 1717, and was finally forced out of office by the Penn family in 1726. He was later in great financial distress.

Keimer and I being at work together near the window, we saw the governor and another gentleman (which prov'd to be Col. French, of New Castle) finely dress'd, come directly across the street to our house, and heard them at the door. Keimer ran down immediately, thinking it a visit to him. But the governor enquir'd for me, came up, and with a condescension and politeness I had been quite unus'd to, made me many compliments, desired to be acquainted with me, blam'd me kindly for not having made myself known to him when I first came to the place, and would have me away with him to the tavern, where he was going with Col. French to taste as he said some excellent Madeira. I was not a little surpriz'd, and Keimer star'd like a pig poison'd. I went however with the governor and Col. French, to a tavern [at] the corner of Third street, and over the Madeira he propos'd my setting up my business, laid before me the probabilities of success, and both he and Col. French, assur'd me I should have their interest and influence in procuring the publick business of both governments. On my doubting whether my father would assist me in it, Sir William said he would give me a letter to him, in which he would state the advantages, and he did not doubt of prevailing with him. So it was concluded I should return to Boston in the first vessel with the governor's letter recommending me to my father. In the mean time the intention was to be kept secret, and I went on working with Keimer as usual, the governor sending for me now and then to dine with him, a very great honour I thought it, and conversing with me in the most affable, familiar, and friendly manner imaginable. About the end of April 1724 a little vessel offer'd for Boston. I took leave of Keimer as going to see my friends. The governor gave me an ample letter, saying many flattering things of me to my father, and strongly recommending the project of my setting up at Philadelphia, as a thing that must make my fortune. We struck on a shoal in going down the bay and sprung a leak, we had a blustering time at sea, and were oblig'd to pump almost continually, at which I took my turn. We arriv'd safe however at Boston in about a fortnight. I had been absent seven months and my friends had heard nothing of me; for my br. Holmes was not yet return'd, and had not written about me. My unexpected appearance surpriz'd the family; all were however very glad to see me and made me welcome, except my brother. I went to see him at his printing-house: I was better dress'd than ever while in his service, having a genteel new suit from head to foot, a watch, and my pockets lin'd with near five pounds sterling in silver. He receiv'd me not very frankly, look'd me all over, and turn'd to his work again. The journeymen were inquisitive where I had been, what sort of a country it was, and how I lik'd it? I prais'd it much, and the happy life I led in it, expressing strongly my intention of returning to it; and one of them asking what kind of money we had there, I produc'd a handful of silver and spread it before them, which was a kind of raree show they had not been us'd to, paper being the money of Boston. Then I took an opportunity of letting them see my watch: and,

2. **Col. French**—Colonel John French was a member of the governor's council for New Castle County from 1717 to 1726, and had been an officer during Queen Anne's War. He seems to have died in 1728. (Information from Professor George H. Ryden, University of Delaware.)

lastly, (my brother still grum and sullen) I gave them a piece of eight to drink, and took my leave. This visit of mine offended him extreamly. For when my mother some time after spoke to him of a reconciliation, and of her wishes to see us on good terms together, and that we might live for the future as brothers, he said, I had insulted him in such a manner before his people that he could never forget or forgive it. In this however he was mistaken.

My father received the governor's letter with some apparent surprize; but said little of it to me for some days; when Capt. Holmes returning, he show'd it to him, ask'd him if he knew Keith, and what kind of a man he was: Adding his opinion that he must be of small discretion, to think of setting a boy up in business who wanted yet 3 years of being at man's estate. Holmes said what he could in favr of the project; but my father was clear in the impropriety of it; and at last gave a flat denial to it. Then he wrote a civil letter to Sir William thanking him for the patronage he had so kindly offered me, but declining to assist me as yet in setting up, I being in his opinion too young to be trusted with the management of a business so important, and for which the preparation must be so expensive.

My friend and companion Collins, who was a clerk at the post-office, pleas'd with the account I gave him of my new country, determin'd to go thither also: And while I waited for my fathers determination, he set out before me by land to Rhodeisland, leaving his books which were a pretty collection of mathematicks and natural philosophy, to come with mine and me to New York where he propos'd to wait for me. My father, tho' he did not approve Sir William's proposition was yet pleas'd that I had been able to obtain so advantageous a character from a person of such note where I had resided, and that I had been so industrious and careful as to equip myself so handsomely in so short a time: therefore seeing no prospect of an accommodation between my brother and me, he gave his consent to my returning again to Philadelphia, advis'd me to behave respectfully to the people there, endeavour to obtain the general esteem, and avoid lampooning and libelling to which he thought I had too much inclination; telling me, that by steady industry and a prudent parsimony, I might save enough by the time I was one and twenty to set me up and that if I came near the matter he would help me out with the rest. This was all I could obtain, except some small gifts as tokens of his and my mother's love, when I embark'd again for New-York, now with their approbation and their blessing.

The sloop putting in at Newport, Rhodeisland, I visited my brother John, who had been married and settled there some years. He received me very affectionately, for he always lov'd me. A friend of his, one Vernon, having some money due to him in Pensilvania, about 35 pounds currency, desired I would receive it for him, and keep it till I had his directions what to remit it in. Accordingly, he gave me an order. This afterwards occasion'd me a good deal of uneasiness. At Newport we took in a number of passengers for New York: Among which were two young women, companions, and a grave, sensible, matron-like Quaker woman with her attendants.——I had shown an oblig-

1. **piece of eight**—Spanish dollar of eight reals. 13. **civil**—polite. 20. **determination**—decision. 21. **pretty**—fair. 22. **natural philosophy**—natural science. 27. **accommodation**—reconciliation.

ing readiness to do her some little services which impress'd her I suppose with a degree of good-will towards me. Therefore when she saw a daily growing familiarity between me and the two young women, which they appear'd to encourage, she took me aside and said, Young man, I am concern'd for thee, as thou has no friend with thee, and seems not to know much of the world, or of the snares youth is expos'd to; depend upon it those are very bad women, I can see it in all their actions, and if thee art not upon thy guard, they will draw thee into some danger: they are strangers to thee, and I advise thee in a friendly concern for thy welfare, to have no acquaintance with them. As I seem'd at first not to think so ill of them as she did, she mentioned some things she had observ'd and heard that had escap'd my notice; but now convinc'd me she was right. I thank'd her for her kind advice, and promis'd to follow it. When we arriv'd at New York, they told me where they liv'd, and invited me to come and see them: but I avoided it. And it was well I did: For the next day, the captain miss'd a silver spoon and some other things that had been taken out of his cabbin, and knowing that these were a couple of strumpets, he got a warrant to search their lodgings, found the stolen goods, and had the thieves punish'd. So tho' we had escap'd a sunken rock which we scrap'd upon in the passage, I thought this escape of rather more importance to me. At New York I found my friend Collins, who had arriv'd there some time before me. We had been intimate from children, and had read the same books together. But he had the advantage of more time for reading and studying and a wonderful genius for mathematical learning in which he far outstript me. While I liv'd in Boston most of my hours of leisure for conversation were spent with him, and he continu'd a sober as well as an industrious lad; was much respected for his learning by several of the clergy and other gentlemen, and seemed to promise making a good figure in life: but during my absence he had acquir'd a habit of sotting with brandy; and I found by his own account and what I heard from others, that he had been drunk every day since his arrival at New York, and behav'd very oddly. He had gam'd too and lost his money, so that I was oblig'd to discharge his lodgings, and defray his expenses to and at Philadelphia: Which prov'd extreamly inconvenient to me. The then governor of N[ew] York[,] Burnet, son of Bishop Burnet hearing from the captain that a young man, one of his passengers, had a great many books, desired he would bring me to see him. I waited upon him accordingly, and should have taken Collins with me but that he was not sober. The gov[r]. treated me with great civility, show'd me his library, which was a very large one, and we had a good deal of conversation about books and authors. This was the second governor who had done me the honour to take notice of me; which to a poor boy like me was very pleasing.——We proceeded to Philadelphia. I received on the way Vernon's money, without which we could hardly have finish'd our journey. Collins wish'd to be employ'd in some counting house; but whether they discover'd his dramming by his breath, or by his

33. **Burnet**—William Burnet (1688-1729), son of Bishop Gilbert Burnet, famed as a historian, was appointed governor of New York and New Jersey in 1720. In 1728 he was transferred to Massachusetts. Burnet, unlike some colonial governors, was a highly cultivated man. See p. 105, below.

behaviour, tho' he had some recommendations, he met with no success in any application, and continu'd lodging and boarding at the same house with me and at my expense. Knowing I had that money of Vernon's he was continually borrowing of me, still promising repayment as soon as he should be in business. At length he had got so much of it, that I was distress'd to think what I should do, in case of being call'd on to remit it. His drinking continu'd, about which we sometimes quarrel'd, for when a little intoxicated he was very fractious. Once in a boat on the Delaware with some other young men, he refused to row in his turn: I will be row'd home, says he. We will not row you, says I. You must or stay all night on the water, says he; just as you please. The others said, Let us row; what signifies it? But my mind being soured with his other conduct, I continu'd to refuse. So he swore he would make me row, or throw me overboard; and coming along stepping on the thwarts towards me, when he came up and struck at me I clapped my hand under his crutch, and rising pitched him head-foremost into the river. I knew he was a good swimmer, and so was under little concern about him; but before he could get round to lay hold of the boat, we had with a few strokes pull'd her out of his reach. And ever when he drew near the boat, we ask'd if he would row, striking a few strokes to slide her away from him. He was ready to die with vexation, and obstinately would not promise to row; however seeing him at last beginning to tire, we lifted him in; and brought him home dripping wet in the evening. We hardly exchang'd a civil word afterwards; and a West India captain who had a commission to procure a tutor for the sons of a gentleman at Barbadoes, happening to meet with him, agreed to carry him thither. He left me then, promising to remit me the first money he should receive in order to discharge the debt. But I never heard of him after. The breaking into this money of Vernon's was one of the first great errata of my life[.] And this affair show'd that my father was not much out in his judgment when he suppos'd me too young to manage business of importance. But Sir William, on reading his letter, said he was too prudent. There was great difference in persons, and discretion did not always accompany years, nor was youth always without it. And since he will not set you up, says he, I will do it myself. Give me an inventory of the things necessary to be had from England, and I will send for them. You shall repay me when you are able; I am resolv'd to have a good printer here, and I am sure you must succeed. This was spoken with such an appearance of cordiality, that I had not the least doubt of his meaning what he said. I had hitherto kept the proposition of my setting up[,] a secret in Philadelphia, and I still kept it. Had it been known that I depended on the governor, probably some friend that knew him better would have advis'd me not to rely on him, as I afterwards heard it as his known character to be liberal of promises which he never meant to keep.——Yet unsolicited as he was by me, how could I think his generous offers insincere? I believ'd him one of the best men in the world.

I presented him an inventory of a little printg. house, amounting by my computation to about 100£ sterling. He lik'd it, but ask'd me if my being on the spot in England to chuse the types and see that every thing was good

24. Barbadoes—the easternmost of the British West Indies.

of the kind, might not be of some advantage. Then, says he, when there, you may make acquaintances and establish correspondencies in the bookselling and stationary way. I agreed that this might be advantageous. Then, says he, get yourself ready to go with Annis; which was the annual ship, and the only one at that time usually passing between London and Philadelphia. But it would be some months before Annis sail'd, so I continu'd working with Keimer, fretting about the money Collins had got from me, and in daily apprehensions of being call'd upon by Vernon, which however did not happen for some years after.

I believe I have omitted mentioning that in my first voyage from Boston, being becalm'd off Block Island, our people set about catching cod and hauled up a great many. Hitherto I had stuck to my resolution of not eating animal food; and on this occasion I consider'd with my master Tryon, the taking every fish as a kind of unprovoked murder, since none of them had or ever could do us any injury that might justify the slaughter. All this seem'd very reasonable. But I had formerly been a great lover of fish, and, when this came hot out of the frying pan, it smelt admirably well. I balanc'd some time between principle and inclination: till I recollected, that when the fish were opened, I saw smaller fish taken out of their stomachs; then thought I, if you eat one another, I don't see why we mayn't eat you. So I din'd upon cod very heartily and continu'd to eat with other people, returning only now and then occasionally to a vegetable diet. So convenient a thing it is to be a *reasonable creature,* since it enables one to find or make a reason for every thing one has a mind to do.

Keimer and I liv'd on a pretty good familiar footing and agreed tolerably well: for he suspected nothing of my setting up. He retain'd a great deal of his old enthusiasms, and lov'd argumentation. We therefore had many disputations. I used to work him so with my Socratic method, and had trepann'd him so often by questions apparently so distant from any point we had in hand, and yet by degrees led to the point, and brought him into difficulties and contradictions that at last he grew ridiculously cautious, and would hardly answer me the most common question, without asking first, *What do you intend to infer from that?* However it gave him so high an opinion of my abilities in the confuting way, that he seriously proposed my being his colleague in a project he had of setting up a new sect. He was to preach the doctrines, and I was to confound all opponents. When he came to explain with me upon the doctrines, I found several conundrums which I objected to, unless I might have my way a little too, and introduce some of mine. Keimer wore his beard at full length, because somewhere in the Mosaic law it is said, *thou shalt not mar the corners of thy beard.* He likewise kept the seventh day Sabbath; and these two points were essentials with him. I dislik'd both, but agreed to admit them upon condition of his adopting the doctrine of using no animal food. I doubt, said he, my constitution will not bear that. I assur'd him it would, and that he would be the better for it. He was usually a great glutton, and I promis'd myself some diversion in half-starving him. He agreed to try

11. **Block Island**—an island ten miles off the coast of Rhode Island. **28. trepann'd**—entrapped. **37. conundrums**—difficult questions. **39-40. thou shalt not . . .**—Lev. 19:27.

the practice if I would keep him company. I did so and we held it for three months. We had our victuals dress'd, and brought to us regularly by a woman in the neighbourhood, who had from me a list of 40 dishes, to be prepar'd for us at different times, in all which there was neither fish flesh nor fowl, and the whim suited me the better at this time from the cheapness of it, not costing us above 18^{d} sterling each, per week. I have since kept several Lents most strictly, leaving the common diet for that, and that for the common, abruptly, without the least inconvenience: So that I think there is little in the advice of making those changes by easy gradations. I went on pleasantly, but poor Keimer suffer'd grievously, tir'd of the project, long'd for the flesh pots of Egypt, and order'd a roast pig. He invited me and two women friends to dine with him, but it being brought too soon upon the table, he could not resist the temptation, and ate it all up before we came.

I had made some courtship during this time to Miss Read. I had a great respect and affection for her, and had some reason to believe she had the same for me: but as I was about to take a long voyage, and we were both very young, only a little above 18, it was thought most prudent by her mother to prevent our going too far at present, as a marriage if it was to take place would be more convenient after my return, when I should be as I expected set up in my business. Perhaps too she thought my expectations not so well founded as I imagined them to be.

My chief acquaintances at this time were, Charles Osborne, Joseph Watson, and James Ralph; all lovers of reading. The two first were clerks to an eminent scrivener or conveyancer in the town, Charles Brogden; the other was clerk to a merchant. Watson was a pious sensible young man, of great integrity.——The others rather more lax in their principles of religion, particularly Ralph, who as well as Collins had been unsettled by me, for which they both made me suffer.——Osborne was sensible, candid, frank, sincere and affectionate to his friends; but in literary matters too fond of criticising. Ralph, was ingenious, genteel in his manners, and extreamly eloquent; I think I never knew a prettier talker. Both of them great admirers of poetry, and began to try their hands in little pieces. Many pleasant walks we four had together on Sundays into the woods near Schuylkill, where we read to one another and conferr'd on what we read. Ralph was inclin'd to pursue the study of poetry, not doubting but he might become eminent in it and make his fortune by it, alledging that the best poets must when they first began to write, make as many faults as he did.——Osborne dissuaded him, assur'd him he had no genius for poetry, and advis'd him to think of nothing beyond the business he was bred to; that in the mercantile way tho' he had no stock, he might by his diligence and punctuality recommend himself to employment as a factor, and in time acquire

10-11. flesh pots of Egypt—*Cf.* Ex. 16:3. **22-23. Charles Osborne . . . James Ralph**—The most notable of these companions of young Franklin was James Ralph (1705?-1762), whose early career is given in the *Autobiography*. A mediocre poet, he was denounced by Pope, as Franklin later indicates. His historical writing was of some importance. See his life in the Dictionary of National Biography. **24. scrivener . . . conveyancer**—A scrivener is a notary; a conveyancer is a lawyer who prepares documents for the conveyance of property and investigates the titles of land. **33. near Schuylkill**—The "romantic" scenery of the region about the Schuylkill River near Philadelphia was often celebrated by eighteenth-century American writers.

wherewith to trade on his own account. I approv'd the amusing one's self with poetry now and then, so far as to improve one's language, but no farther. On this it was propos'd that we should each of us, at our next meeting produce a piece of our own composing, in order to improve by our mutual observations, criticisms, and corrections. As language and expression was what we had in view, we excluded all considerations of invention, by agreeing that the task should be a version of the 18th Psalm, which describes the descent of a Deity. When the time of our meeting drew nigh, Ralph call'd on me first, and let me know his piece was ready. I told him I had been busy, and having little inclination had done nothing. He then show'd me his piece for my opinion, and I much approv'd it, as it appear'd to me to have great merit. Now, says he, Osborne never will allow the least merit in any thing of mine, but makes 1000 criticisms out of mere envy. He is not so jealous of you. I wish therefore you would take this piece, and produce it as yours. I will pretend not to have had time, and so produce nothing: We shall then see what he will say to it. It was agreed, and I immediately transcrib'd it that it might appear in my own hand. We met. Watson's performance was read: there were some beauties in it: but many defects. Osborne's was read: It was much better. Ralph did it justice, remark'd some faults, but applauded the beauties. He himself had nothing to produce. I was backward, seem'd desirous of being excused, had not had sufficient time to correct, etc. but no excuse could be admitted, produce I must. It was read and repeated; Watson and Osborne gave up the contest; and join'd in applauding it. Ralph only made some criticisms and propos'd some amendments; but I defended my text. Osborne was against Ralph, and told him he was no better a critic than poet; so he dropt the argument. As they two went home together, Osborne express'd himself still more strongly in favour of what he thought my production, having restrain'd himself before as he said, lest I should think it flattery. But who would have imagin'd, says he, that Franklin had been capable of such a performance; such painting, such force! such fire! he has even improv'd the original! In his common conversation, he seems to have no choice of words; he hesitates and blunders; and yet, good God! how he writes!——When we next met, Ralph discover'd the trick we had plaid him, and Osborne was a little laught at. This transaction fix'd Ralph in his resolution of becoming a poet. I did all I could to dissuade him from it, but he continued scribbling verses, till *Pope* cured him. He became however a pretty good prose writer. More of him hereafter. But as I may not have occasion again to mention the other two, I shall just remark here, that Watson died in my arms a few years after, much lamented, being the best of our set. Osborne went to the West Indies, where he became an eminent lawyer and made money, but died young. He and I had made a serious agreement, that the one who happen'd first to die, should

7. 18th Psalm—Only a portion of the Psalm in question describes the "descent of a Deity." *Cf.* Ps. 18: 6-16. **35. Pope**—In later editions of the *Dunciad* Pope (in revenge for a satire of Ralph's called *Sawney*) referred to Ralph as follows (III, lines 165-66):

> "Silence, ye Wolves! while Ralph to Cynthia howls,
> And makes night hideous—Answer him, ye Owls!"

Pope also has other abusive references to Ralph. *Cf. Dunciad,* I, lines 215-16.

if possible make a friendly visit to the other, and acquaint him how he found things in that separate state. But he never fulfill'd his promise.

The governor, seeming to like my company, had me frequently to his house; and his setting me up was always mention'd as a fix'd thing. I was to take with me letters recommendatory to a number of his friends, besides the letter of credit to furnish me with the necessary money for purchasing the press and types, paper, etc. For these letters I was appointed to call at different times, when they were to be ready, but a future time was still named. Thus he went on till the ship whose departure too had been several times postponed was on the point of sailing. Then when I call'd to take my leave and receive the letters, his secretary, Dr. Bard, came out to me and said the governor was extreamly busy, in writing, but would be down at Newcastle before the ship, and there the letters would be delivered to me.

Ralph, tho' married and having one child, had determined to accompany me in this voyage. It was thought he intended to establish a correspondence, and obtain goods to sell on commission But I found afterwards, that thro' some discontent with his wife's relations, he purposed to leave her on their hands, and never return again.——Having taken leave of my friends, and interchang'd some promises with Miss Read, I left Philadelphia in the ship, which anchor'd at Newcastle. The governor was there. But when I went to his lodging, the secretary came to me from him with the civillest message in the world, that he could not then see me being engaged in business of the utmost importance, but should send the letters to me on board, wish'd me heartily a good voyage and a speedy return, etc. I return'd on board, a little puzzled, but still not doubting.——

Mr. Andrew Hamilton, a famous lawyer of Philadelphia, had taken passage in the same ship for himself and son: and with Mr. Denham a Quaker merchant, and Messrs. Onion and Russel[,] masters of an iron work in Maryland, had engag'd the great cabin; so that Ralph and I were forc'd to take up with a birth in the steerage: And none on board knowing us, were considered as ordinary persons.——But Mr. Hamilton and his son (it was James, since governor) return'd from New Castle to Philadelphia, the father being recall'd by a great fee to plead for a seized ship.——And, just before we sail'd, Col. French coming on board, and showing me great respect, I was more taken notice of, and with my friend Ralph invited by the other gentlemen to come into the cabin, there being now room. Accordingly, we remov'd thither.

Understanding that Col. French had brought on board the governor's dispatches, I ask'd the captain for those letters that were to be under my care.

11. Dr. Bard—Dr. John Bard (1716-1799) was a famous physician and friend of Franklin, but since in 1724 he was only eight years old, it is probable that Franklin has telescoped the doctor with his father, Peter Bard, a member of the governor's council of New Jersey, who died in 1734. **26. Andrew Hamilton**—(died 1741) the most famous American lawyer of the first part of the eighteenth century, by his speech in behalf of John Peter Zenger did much to end official censorship of the press in the colonies. From 1724 to 1726 he served as the agent in England of the proprietary government of Pennsylvania. See his life in the Dictionary of American Biography. **28. Onion and Russel**—Owners of the Principio Iron Works (Smyth). **31. James**—James Hamilton (1710?-1783) served as governor of Pennsylvania on four separate occasions from 1748 to 1773. His sympathies were proprietary and royalist. See his life in the Dictionary of American Biography.

He said all were put into the bag together; and he could not then come at them; but before we landed in England, I should have an opportunity of picking them out. So I was satisfy'd for the present, and we proceeded on our voyage. We had a sociable company in the cabin, and lived uncommonly well, having the addition of all Mr. Hamilton's stores, who had laid in plentifully. In this passage Mr. Denham contracted a friendship for me that continued during his life. The voyage was otherwise not a pleasant one, as we had a great deal of bad weather.

When we came into the Channel, the captain kept his word with me, and gave me an opportunity of examining the bag for the governor's letters. I found none upon which my name was put, as under my care; I pick'd out 6 or 7 that by the hand writing I thought might be the promis'd letters, especially as one of them was directed to Basket the king's printer, and another to some stationer. We arriv'd in London the 24th of December, 1724. I waited upon the stationer who came first in my way, delivering the letter as from Gov. Keith. I don't know such a person, says he: but opening the letter, O, this is from Riddlesden; I have lately found him to be a compleat rascal, and I will have nothing to do with him, nor receive any letters from him. So putting the letter into my hand, he turn'd on his heel and left me to serve some customer. I was surprized to find these were not the governor's letters. And after recollecting and comparing circumstances, I began to doubt his sincerity.——I found my friend Denham, and opened the whole affair to him. He let me into Keith's character, told me there was not the least probability that he had written any letters for me, that no one who knew him had the smallest dependence on him, and he laught at the notion of the governor's giving me a letter of credit, having as he said no credit to give.——On my expressing some concern about what I should do: he advis'd me to endeavour getting some employment in the way of my business. Among the printers here, says he, you will improve yourself; and when you return to America, you will set up to greater advantage.——

We both of us happen'd to know, as well as the stationer, that Riddlesden the attorney was a very knave. He had half ruin'd Miss Read's father by acquiring his note he bound for him. By this letter it appear'd, there was a secret scheme on foot to the prejudice of Hamilton, (suppos'd to be then coming over with us,) and that Keith was concern'd in it with Riddlesden. Denham, who was a friend of Hamilton's, thought he ought to be acquainted with it. So when he arriv'd in England, which was soon after, partly from resentment and ill-will to Keith and Riddlesden, and partly from good will to him: I waited on him, and gave him the letter. He thank'd me cordially, the information being of importance to him. And from that time he became my friend, greatly to my advantage afterwards on many occasions.

But what shall we think of a governor's playing such pitiful tricks, and imposing so grossly on a poor ignorant boy! It was a habit he had acquired.

13. **Basket**—John Baskett (died 1742), made king's printer about 1709, and publisher of the so-called Vinegar Bible. 31-32. **acquiring his note he bound for him**—Franklin's handwriting in this passage is well-nigh undecipherable. The Bigelow reading "persuading him to be bound for him" is, however, clearly wrong. The sense is that Mr. Read had endorsed a note for Riddlesden. 35. **ought**—Franklin wrote *should,* then wrote **ought to** above it, and failed to cross out *should.*

He wish'd to please every body; and, having little to give, he gave expectations. He was otherwise an ingenious sensible man, a pretty good writer, and a good governor for the people, tho' not for his constituents the proprietaries, whose instructions he sometimes disregarded. Several of our best laws were of his planning, and pass'd during his administration.

Ralph and I were inseparable companions. We took lodgings together in Little Britain at 3/6 p[er] a week, as much as we could then afford. He found some relations, but they were poor and unable to assist him. He now let me know his intentions of remaining in London, and that he never meant to return to Philad[a].——He had brought no money with him, the whole he could muster having been expended in paying his passage. I had fifteen pistoles: So he borrowed occasionally of me to subsist while he was looking out for business.——He first endeavoured to get into the playhouse, believing himself qualify'd for an actor; but Wilkes, to whom he apply'd, advis'd him candidly not to think of that employment, as it was impossible he should succeed in it. ——Then he propos'd to Roberts, a publisher in Paternoster Row, to write for him a weekly paper like the Spectator, on certain conditions, which Roberts did not approve. Then he endeavour'd to get employm[t] as a hackney writer to copy for the stationers and lawyers about the Temple: but could find no vacancy.

I immediately got into work at Palmer's then a famous printing house in Bartholomew Close; and here I continu'd near a year. I was pretty diligent; but spent with Ralph a good deal of my earnings in going to plays and other places of amusement. We had together consumed all my pistoles, and now just rubb'd on from hand to mouth. He seem'd quite to forget his wife and child, and I by degrees my engagements w[th] Miss Read, to whom I never wrote more than one letter, and that was to let her know I was not likely soon to return. This was another of the great errata of my life, which I should wish to correct if I were to live it over again.——In fact, by our expences, I was constantly kept unable to pay my passage.

At Palmer's I was employ'd in composing for the second edition of Wollaston's Religion of Nature. Some of his reasonings not appearing to me well-

7. **Little Britain**—a street (and section) in the heart of London, near St. Paul's Cathedral. The student should consult Sir Walter Besant, *London in the Eighteenth Century*, Macmillan, 1903, for the background of Franklin's first trip to England. 7. **3/6**—three shillings sixpence. 11. **pistoles**—A pistole was a gold coin worth about 18 shillings. 14. **Wilkes**—Robert Wilks (1665?-1732), one of the most famous actors of the day, was one of the managers of Drury Lane Theatre during this period. 16. **Roberts**—It is difficult to identify this printer. There was a James Roberts near Stationers' Hall in 1706, and a James Roberts in Warwick Lane (which forms one of the termini for Paternoster Row) during Franklin's residence in London. See Henry R. Plomer, *A Dictionary of Printers and Booksellers . . . 1688 to 1725*, Oxford, 1932, p. 255. 16. **Paternoster Row**—A street near St. Paul's Cathedral long associated with the printing business. 19. **stationers**—properly, law stationers; tradesmen who sold legal forms required by lawyers, and also copied legal documents. 19. **Temple**—the Inner and Middle Temples, off Fleet Street, long associated with the legal profession. 21. **Palmer's**—Samuel Palmer (died 1732), author of an inferior *History of Printing*, and famous as a printer. 22. **Bartholomew Close**—a court associated with publishers a little north of Paternoster Row, near St. Bartholomew's Hospital of the present day. 31. **Wollaston's**—William Wollaston (1660-1724), one of the most famous deists of the period, wrote and privately printed *The Religion of Nature Delineated* in 1722, and published the work in 1724. According to Oswald, *Benjamin Franklin, Printer*, pp. 43-44, Franklin worked on the third edition of this book, not the second, as stated in the text.

founded, I wrote a little metaphysical piece, in which I made remarks on them. It was entitled *A Dissertation on Liberty and Necessity, Pleasure and pain.* I inscribed it to my friend Ralph.——I printed a small number. It occasion'd my being more consider'd by Mr. Palmer, as a young man of some ingenuity, tho' he seriously expostulated with me upon the principles of my pamphlet, which to him appear'd abominable. My printing this pamphlet was another erratum.

In our house there lodg'd a young woman; a millener, who I think had a shop in the Cloisters. She had been genteelly bred, was sensible and lively, and of most pleasing conversation. Ralph read plays to her in the evenings, they grew intimate, she took another lodging, and he follow'd her. They liv'd together some time, but he being still out of business, and her income not sufficient to maintain them with her child, he took a resolution of going from London to try for a country school, which he thought himself well qualify'd to undertake, as he wrote an excellent hand, and was a master of arithmetic and accounts.——This however he deem'd a business below him, and confident of future better fortune when he should be unwilling to have it known that he once was so meanly employ'd, he chang'd his name, and did me the honour to assume mine.——For I soon after had a letter from him acquainting me, that he was settled in a small village in Berkshire, I think it was where he taught reading and writing to 10 or a dozen boys at 6 pence each p[er] week, recommending Mrs. T. to my care, and desiring me to write to him directing for Mr. Franklin schoolmaster at such a place. He continu'd to write frequently, sending me large specimens of an epic poem, which he was then composing, and desiring my remarks and corrections.——These I gave him from time to time, but endeavour'd rather to discourage his proceeding. One of Young's satires was then just publish'd. I copy'd and sent him a great part of it, which set in a strong light the folly of pursuing the muses with any hope of advancement by them. All was in vain. Sheets of the poem continu'd to come by every post. In the mean time Mrs. T. having on his account lost her friends and business, was often in distresses, and us'd to send for me and borrow what I could spare to help her out of them. I grew fond of her company, and being at this time under no religious restraint, and presuming on my importance to her, I attempted familiarities (another erratum), which she repuls'd with a proper resentment, and acquainted him with my behaviour. This made a breach between us, and when he returned again to London, he let me know he thought I had cancell'd all the obligations he had been under to me.——So I

2-3. A Dissertation . . . pain—Franklin later destroyed (as he thought) all but one copy of this pamphlet, which is not included in the Smyth edition of his works. It was, however, reprinted, with many unauthorized changes, in 1733; and in 1930 the first edition was reprinted by the Facsimile Text Society. **7. erratum**—Because the pamphlet denies the existence of vice and virtue. **8.** The order of Franklin's paragraphs from "In our house" to "While I lodg'd" is not clear. He wrote the passage beginning "While I lodg'd" down through "for which he paid me handsomely" as additional material, but failed to indicate precisely where to insert it. The present arrangement differs from that of the Bigelow edition by bringing relevant material together. **9. Cloisters**—Apparently the cloisters of (or near) St. Bartholomew's Church. **26. Young's**—Edward Young (1683-1765) began publishing in 1725 his most famous satirical poem, first called *The Universal Passion,* four parts appearing that year. In 1728 the seven parts were published as *Love of Fame the Universal Passion.*

found I was never to expect his repaying me what I lent to him or advanc'd for him. This was however not then of much consequence, as he was totally unable: And in the loss of his friendship I found myself reliev'd from a burthen. I now began to think of getting a little money beforehand; and expecting better work, I left Palmer's to work at Watts's, near Lincoln's Inn Fields, a still greater printing house. Here I continu'd all the rest of my stay in London.

While I lodg'd in Little Britain I made an acquaintance with one Wilcox a bookseller, whose shop was at the next door. He had an immense collection of second-hand books. Circulating libraries were not then in use; but we agreed that on certain reasonable terms which I have now forgotten, I might take, read, and return any of his books. This I esteem'd a great advantage, and I made as much use of it as I could.

My pamphlet by some means falling into the hands of one Lyons, a surgeon, author of a book intitled *The Infallibility of Human Judgment* it occasioned an acquaintance between us; he took great notice of me, call'd on me often, to converse on those subjects, carried me to the Horns, a pale alehouse in—— Lane, Cheapside, and introduc'd me to Dr. Mandeville, author of the Fable of the Bees who had a club there, of which he was the soul, being a most facetious entertaining companion. Lyons too introduced me to Dr. Pemberton, at Batson's Coffee house, who promis'd to give me an opportunity some time or other of seeing Sir Isaac Newton, of which I was extreamly desirous; but this never happened.

I had brought over a few curiosities among which the principal was a purse made of the asbestos, which purifies by fire. Sir Hans Sloane heard of it, came to see me, and invited me to his house in Bloomsbury Square, where he show'd me all his curiosities, and persuaded me to let him add that to the number, for which he paid me handsomely.

At my first admission into this printing house, I took to working at press, imagining I felt a want of the bodily exercise I had been us'd to in America, where presswork is mix'd with composing, I drank only water; the other workmen, near 50 in number, were great guzzlers of beer. On occasion I car-

5. Watts's—John Watts (1700?-1763), one of the most important printers of London, had a shop in Little Queen Street, Lincoln's Inn Fields, which was just south of High Holborn Street, in 1725 a square associated with lawyers. **8. Wilcox**—This was John (?) Wilcox (1721-1762?), a London bookseller. **15. Infallibility**—*The Infallibility, Dignity and excellency of Humane Judgment* first appeared in 1719; second edition, 1721. It is simply credited to "Lyons" in the British Museum Catalogue. **17-18. Horns . . . Cheapside**—According to Besant, *London in the Eighteenth Century*, p. 243, the Horn Tavern was in Carter Lane, south of St. Paul's, and not in Cheapside. There was also a tavern called the Horns at Highgate, four and one-half miles northwest, but it seems probable that Franklin meant the first named of these. **18. Mandeville**—Bernard Mandeville (1670-1733), famous as the author of *The Fable of the Bees* (1714; 1729), a work preaching an ethical doctrine comparable to young Franklin's first treatise. **20. Pemberton**—Henry Pemberton (1694-1771), editor of the third edition of Newton's *Principia* (1726), and author of *A View of Sir I. Newton's Philosophy* (1728). **21. Batson's Coffee house**—Batson's Coffeehouse, near the Temple, was frequented by merchants. **22. Sir Isaac Newton**—The influence of Sir Isaac Newton (1642-1727), the greatest scientific mind of the age, upon Franklin's thought was profound. **25. Sir Hans Sloane**—Sir Hans Sloane (1660-1753), the most brilliant physician of the day in London, at his death left his collection of books and specimens to form the nucleus of the British Museum. **26. Bloomsbury Square**—Bloomsbury Square, facing Bedford House, and just north of High Holborn, was then a new and fashionable part of London.

ried up and down stairs a large form of types in each hand, when others carried but one in both hands. They wonder'd to see from this and several instances that the water-American as they call'd me was *stronger* than themselves who drank *strong* beer. We had an alehouse boy who attended always in the house to supply the workmen. My companion at the press, drank every day a pint before breakfast, a pint at breakfast with his bread and cheese; a pint between breakfast and dinner; a pint at dinner; a pint in the afternoon about six o'clock, and another when he had done his day's work. I thought it a detestable custom.——but it was necessary, he suppos'd, to drink *strong* beer that he might be *strong* to labour. I endeavour'd to convince him that the bodily strength afforded by beer could only be in proportion to the grain or flour of the barley dissolved in the water of which it was made; that there was more flour in a penny-worth of bread, and therefore if he would eat that with a pint of water, it would give him more strength than a quart of beer.——He drank on however, and had 4 or 5 shillings to pay out of his wages every Saturday night for that muddling liquor; an expence I was free from.——And thus these poor devils keep themselves always under.

Watts after some weeks desiring to have me in the composing-room, I left the pressmen. A new *bienvenu* or sum for drink, being 5/, was demanded of me by the compositors. I thought it an imposition, as I had paid below. The master thought so too, and forbad my paying it. I stood out two or three weeks, was considered as an excommunicate, and had so many little pieces of private mischief done me, by mixing my sorts, transposing my pages, breaking my matter, etc., etc., and if I were ever so little out of the room, and all ascrib'd to the chapel ghost, which they said ever haunted those not regularly admitted, that, notwithstanding the master's protection, I found myself oblig'd to comply and pay the money; convinc'd of the folly of being on ill terms with those one is to live with continually. I was now on a fair footing with them, and soon acquir'd considerable influence. I propos'd some reasonable alterations in their * chapel laws, and carried them against all opposition. From my example a great part of them, left their muddling breakfast of beer and bread and cheese, finding they could with me be supply'd from a neighbouring house with a large porringer of hot water-gruel, sprinkled with pepper, crumb'd with bread, and a bit of butter in it, for the price of a pint of beer, viz., three half pence. This was a more comfortable as well as cheaper breakfast, and kept their heads clearer.——Those who continu'd sotting with beer all day, were often, by not paying, out of credit at the alehouse, and us'd to make interest with me to get beer, *their light,* as they phras'd it, *being out.* I watch'd the pay table on Saturday night, and collected what I stood engag'd for them, having to pay some times near thirty shillings a week on their accounts.——This, and my being esteem'd a pretty good riggite, that is, a jocular verbal satyrist, supported my consequence in the society.——My

* A printing house is always called a chappel, [sic] by the workmen.—(Franklin's note)

1. form—form, or forme, refers to the body of type locked in an iron chase (like an iron square or rectangle) for printing. **19. bienvenu**—Literally, welcome. By convention, a new workman was supposed to "treat" the workmen already employed, among whom he entered. **23. sorts**—type distributed in the compositor's box. **24. matter**—type set up for printing. **25. ever**—Franklin wrote *ever,* then wrote *always,* and failed to cross out *always.* **41. riggite**—This word is apparently found only in the *Autobiography.*

constant attendance, (I never making a St. Monday), recommended me to the master; and my uncommon quickness at composing, occasion'd my being put upon all work of dispatch which was generally better paid. So I went on now very agreeably.——

My lodging in Little Britain being too remote, I found another in Duke-street, opposite to the Romish Chapel. It was two pair of stairs backwards at an Italian warehouse. A widow lady kept the house; she had a daughter and a maid servant, and a journey-man who attended the warehouse, but lodg'd abroad. After sending to enquire my character at the house where I last lodg'd, she agreed to take me in at the same rate 3/6 p[er] week, cheaper as she said from the protection she expected in having a man lodge in the house. She was a widow, an elderly woman, had been bred a Protestant, being a clergyman's daughter, but was converted to the Catholic religion by her husband, whose memory she much revered[;] had lived much among people of distinction, and knew a 1000 [sic] anecdotes of them as far back as the times of Charles the Second. She was lame in her knees with the gout, and therefore seldom stirr'd out of her room, so sometimes wanted company; and hers was so highly amusing to me; that I was sure to spend an evening with her whenever she desired it. Our supper was only half an anchovy each, on a very little strip of bread and butter, and half a pint of ale between us. But the entertainment was in her conversation. My always keeping good hours, and giving little trouble in the family, made her unwilling to part with me; so that when I talk'd of a lodging I had heard of, nearer my business, for 2/ a week, which, intent as I now was on saving money, made some difference, she bid me not think of it, for she would abate me two shillings a week for the future, so I remain'd with her at 1/6 as long as I staid in London.

In a garret of her house there lived a maiden lady of 70 in the most retired manner, of whom my landlady gave me this account, that she was a Roman Catholic, had been sent abroad when young, and lodg'd in a nunnery with an intent of becoming a nun: but the country not agreeing with her, she return'd to England, where there being no nunnery, she had vow'd to lead the life of a nun as near as might be done in those circumstances: Accordingly she had given all her estate to charitable uses, reserving only twelve pounds a year to live on, and out of this sum she still gave a great deal in charity, living herself on watergruel only, and using no fire but to boil it.——She had lived many years in that garret, being permitted to remain there gratis by successive Catholic tenants of the house below, as they deem'd it a blessing to have her there. A priest visited her, to confess her every day. I have ask'd her, says my landlady, how she, as she liv'd, could possibly find so much employment for a confessor? O, said she, it is impossible to avoid *vain thoughts.* I was permitted once to visit her: She was chearful and polite, and convers'd pleasantly. The room was clean, but had no other furniture than a matras, a table with a crucifix and book, a stool, which she gave me to sit on, and a picture over the chimney of St. *Veronica,* displaying her handkerchief with the miraculous

1. **St. Monday**—that is, holiday, due to drunkenness over the week-end. 5. **Duke-street**—Duke Street leads into Lincoln's Inn Fields. 6. The **Romish Chapel** is the Sardinian Chapel, built in 1648.

figure of Christ's bleeding face on it, which she explain'd to me with great seriousness. She look'd pale, but was never sick, and I give it as another instance on how small an income life and health may be supported.

At Watts's printinghouse I contracted an acquaintance with an ingenious young man, one Wygate, who having wealthy relations, had been better educated than most printers was a tolerable Latinist, spoke French, and lov'd reading. I taught him and a friend of his, to swim, at twice going into the river, and they soon became good swimmers. They introduc'd me to some gentlemen from the country who went to Chelsea by water to see the college and Don Saltero's curiosities. In our return, at the request of the company, whose curiosity Wygate had excited, I stript and leapt into the river, and swam from near Chelsea to Blackfryars, performing on the way many feats of activity both upon and under water, that surpriz'd and pleas'd those to whom they were novelties.——I had from a child been ever delighted with this exercise, had studied and practis'd all Thevenot's motions and positions, added some of my own, aiming at the graceful and easy, as well as the useful. All these I took this occasion of exhibiting to the company, and was much flatter'd by their admiration.——And Wygate, who was desirous of becoming a master, grew more and more attach'd to me, on that account, as well as from the similarity of our studies. He at length propos'd to me travelling all over Europe together, supporting ourselves everywhere by working at our business. I was once inclin'd to it. But mentioning it to my good friend Mr. Denham, with whom I often spent an hour, when I had leisure, he dissuaded me from it, advising me to think only of returning to Pensilvania, which he was now about to do.

I must record one trait of this good man's character. He had formerly been in business at Bristol, but fail'd in debt to a number of people, compounded and went to America. There, by a close application to business as a merchant, he acquir'd a plentiful fortune in a few years. Returning to England in the ship with me, he invited his old creditors to an entertainment, at which he thank'd them for the easy composition they had favour'd him with, and when they expected nothing but the treat, every man at the first remove, found under his plate an order on a banker for the full amount of the unpaid remainder with interest.

He now told me he was about to return to Philadelphia, and should carry over a great quantity of goods in order to open a store there: He propos'd to take me over as his clerk, to keep his books (in which he would instruct me) copy his letters, and attend the store. He added, that as soon as I should be acquainted with mercantile business he would promote me by sending me with a cargo of flour and bread etc to the West Indies, and procure me commissions from others which would be profitable; and if I manag'd well, would establish

9. college—Chelsea College was commenced under James I to "maintain fellows in holy orders," but failed of its object, and was given by Charles II to the newly established Royal Society. In 1681-1682 this organization sold the property to Sir Stephen Fox as a site for the Chelsea Hospital for disabled soldiers, the building being completed under William and Mary. **9. Don Saltero**—James Salter, nicknamed **Don Saltero,** "a sage of a thin and meagre countenance," established a coffeehouse and museum in Cheyne Walk, much patronized by scientists and literary men of the day. The dates of his birth and death are unknown. **15. Thevenot's**—Melchissédech Thévenot (1620-1692). In 1695 appeared his *L'art de nager,* illustrated with diagrams of "motions and positions."

me handsomely. The thing pleas'd me, for I was grown tired of London, remember'd with pleasure the happy months I had spent in Pennsylvania, and wish'd again to see it. Therefore I immediately agreed, on the terms of fifty pounds a year, Pensylvania money; less indeed than my present gettings as a compositor, but affording a better prospect.——

I now took leave of printing; as I thought, for ever, and was daily employ'd in my new business; going about with Mr. Denham among the tradesmen, to purchase various articles, and seeing them pack'd up, doing errands, calling upon workmen to dispatch, etc. and, when all was on board, I had a few days leisure. On one of these days I was to my surprise sent for by a great man I knew only by name, a Sir William Wyndham, and I waited upon him. He had heard by some means or other of my swimming from Chelsey to Blackfryars, and of my teaching Wygate and another young man to swim in a few hours. He had two sons, about to set out on their travels; he wish'd to have them first taught swimming; and propos'd to gratify me handsomely if I would teach them.——They were not yet come to town and my stay was uncertain, so I could not undertake it But from this incident I thought it likely, that if I were to remain in England and open a swimming school, I might get a good deal of money. And it struck me so strongly, that had the overture been sooner made me, probably I should not so soon have returned to America.——After many years, you and I had something of more importance to do with one of these sons of Sir William Wyndham, become Earl of Egremont, which I shall mention in its place.——

Thus I spent about 18 months in London. Most part of the time, I work'd hard at my business, and spent but little upon myself except in seeing plays, and in books.——My friend Ralph had kept me poor. He owed me about 27 pounds, which I was now never likely to receive; a great sum out of my small earnings. I lov'd him notwithstanding, for he had many amiable qualities.—— I had by no means improv'd my fortune. But I had pick'd up some very ingenious acquaintance whose conversation was of great advantage to me, and I had read considerably.

We sail'd from Gravesend on the 23^{d} of July 1726. For the incidents of the voyage, I refer you to my Journal, where you will find them all minutely related. Perhaps the most important part of that journal is the *plan* to be found in it which I formed at sea, for regulating my future conduct in life. It is the more remarkable, as being form'd when I was so young, and yet being pretty faithfully adhered to quite thro' to old age.——We landed in Philadelphia the 11th of October, where I found sundry alterations. Keith was no longer governor, being superseded by Major Gordon: I met him walking the streets as a common citizen. He seem'd a little asham'd at seeing me, but pass'd without saying any thing. I should have been as much asham'd at seeing Miss Read, had not

11. Sir William Wyndham—Sir William Wyndham (1687-1740) was a distinguished Tory politician, a disciple of Bolingbroke. **22. Egremont**—This was Sir Charles Wyndham, second Earl of Egremont (1710-1763), but Franklin did not fulfill his promise to "mention in its place" his relations with this nobleman. **33. Journal**—Franklin's *Journal* may be read in the Smyth edition of his *Writings,* Vol. II, pp. 53-86. The printed *Journal* contains, however, nothing of the "plan" he mentions. **39. Major Gordon**—Patrick Gordon (1644-1736), governor of Pennsylvania from 1726 to his death.

her fr^{ds}, despairing with reason of my return after the receipt of my letter, persuaded her to marry another, one Rogers, a potter, which was done in my absence. With him however she was never happy, and soon parted from him, refusing to cohabit with him, or bear his name[,] it being now said that he had another wife. He was a worthless fellow tho' an excellent workman[,] which was the temptation to her friends. He got into debt, ran away in 1727 or 28. went to the West Indies, and died there. Keimer had got a better house, a shop well supply'd with stationary, plenty of new types, a number of hands tho' none good, and seem'd to have a great deal of business.

Mr. Denham took a store in Water street, where we open'd our goods. I attended the business diligently, studied accounts, and grew in a little time expert at selling. We lodg'd and boarded together; he counsell'd me as a father, having a sincere regard for me: I respected and lov'd him: and we might have gone on together very happily: But in the beginning of Feb^{y}, $172\frac{6}{7}$ which I had just pass'd my 21st year, we both were taken ill. My distemper was a pleurisy, which very nearly carried me off:—I suffered a good deal, gave up the point in my own mind, and was rather disappointed when I found myself recovering; regretting in some degree that I must now some time or other have all that disagreeable work to do over again.——I forget what his distemper was. It held him a long time, and at length carried him off. He left me a small legacy in a nuncupative will, as a token of his kindness for me, and he left me once more to the wide world. For the store was taken into the care of his executors, and my employment under him ended:——My brother-in-law Holmes, being now at Philadelphia, advised my return to my business. And Keimer tempted me with an offer of large wages by the year to come and take the management of his printing-house, that he might better attend his stationer's shop.——I had heard a bad character of him in London from his wife and her friends, and was not fond of having any more to do with him. I try'd for farther employment as a merchant's clerk; but not readily meeting with any, I clos'd again with Keimer.

I found in *his* house these hands; Hugh Meredith a Welsh Pensilvanian, 30 years of age, bred to country work; honest, sensible, had a great deal of solid observation, was something of a reader, but given to drink: Stephen Potts, a young countryman of full age, bred to the same: of uncommon natural parts, and great wit and humour, but a little idle. These he had agreed with at extream low wages, p[er] week, to be rais'd a shilling every 3 months, as they would deserve by improving in their business, and the expectation of these high wages to come on hereafter was what he had drawn them in with. Meredith was to work at press, Potts at bookbinding, which he by agreement, was to teach them, tho' he knew neither one nor t'other. John ——, a wild Irishman brought up to no business, whose service, for 4 years Keimer had purchas'd from the captain of a ship. He too was to be made a pressman. George Webb, an Oxford scholar, whose time for 4 years he had likewise bought, intending

31. **Hugh Meredith**—Almost all that is known of the various persons Franklin here enumerates is given by Franklin himself. The only one rising into literary eminence of a sort is George Webb, author of *Batchelor-Hall: A Poem* (of twelve pages) published by Franklin and Meredith in 1731.

him for a compositor, of whom more presently: And David Harry, a country boy, whom he had taken apprentice. I soon perceiv'd that the intention of engaging me at wages so much higher than he had been us'd to give, was to have these raw cheap hands form'd thro' me, and as soon as I had instructed them, then, they being all articled to him, he should be able to do without me.——I went on however, very chearfully; put his printing house in order, which had been in great confusion, and brought his hands by degrees to mind their business and to do it better.

It was an odd thing to find an Oxford scholar in the situation of a bought servant. He was not more than 18 years of age, and gave me this account of himself; that he was born in Gloucester, educated at a grammar school there, had been distinguish'd among the scholars for some apparent superiority in performing his part, when they exhibited plays; belong'd to the Witty Club there, and had written some pieces in prose and verse, which were printed in the Gloucester newspapers. Thence he was sent to Oxford; where he continu'd about a year, but not well satisfy'd, wishing of all things to see London and become a player. At length receiving his quarterly allowance of 15 guineas, instead of discharging his debts he walk'd out of town, hid his gown in a furz bush, and footed it to London, where having no friend to advise him, he fell into bad company, soon spent his guineas, found no means of being introduc'd among the players, grew necessitous, pawn'd his cloaths and wanted bread. Walking the street very hungry, and not knowing what to do with himself, a crimps bill was put into his hand, offering immediate entertainment and encouragement to such as would bind themselves to serve in America. He went directly, sign'd the indentures, was put into the ship and came over; never writing a line to acquaint his friends what was become of him. He was lively, witty, good-natur'd, and a pleasant companion, but idle, thoughtless and imprudent to the last degree.

John the Irishman soon ran away. With the rest I began to live very agreeably; for they all respected me, the more as they found Keimer incapable of instructing them, and that from me they learnt something daily. We never work'd on a Saturday, that being Keimer's Sabbath. So I had two days for reading. My acquaintance with ingenious people in the town, increased. Keimer himself treated me with great civility, and apparent regard; and nothing now made me uneasy but my debt to Vernon, which I was yet unable to pay being hitherto but a poor œconomist. He however kindly made no demand of it.

Our printing-house often wanted sorts, and there was no letter founder in America. I had seen types cast at James's in London, but without much attention to the manner: However I now contriv'd a mould, made use of the letters we had, as puncheons, struck the matrices in lead, and thus supply'd in a pretty tolerable way all deficiencies. I also engrav'd several things on occasion. I made the ink, I was warehouse-man, and every thing, in short, quite a factotum.

But however serviceable I might be, I found that my services became every

24. bind themselves—Poor immigrants, in return for transportation to America, sometimes contracted with sea captains to serve whomsoever the captain would sell them to, for a fixed term of years. **36. œconomist**—economist, manager. **39-40. mould . . . puncheons . . . matrices**—Franklin, using the type he had as punches, "cut" impressions of the letters by striking them into the lead held by the mold; from the matrices so produced he then cast type.

day of less importance, as the other hands improv'd in the business. And when Keimer paid my second quarter's wages, he let me know that he felt them too heavy, and thought I should make an abatement. He grew by degrees less civil, put on more of the master, frequently found fault, was captious, and seem'd ready for an outbreaking. I went on nevertheless with a good deal of patience, thinking that his incumber'd circumstances were partly the cause. At length a trifle snapt our connexion. For a great noise happening near the courthouse, I put my head out of the window to see what was the matter. Keimer being in the street look'd up and saw me, call'd out to me in a loud voice and angry tone to mind my business, adding some reproachful words, that nettled me the more for their publicity, all the neighbours who were looking out on the same occasion being witnesses how I was treated. He came up immediately into the printing-house, continu'd the quarrel, high words pass'd on both sides, he gave me the quarter's warning we had stipulated, expressing a wish that he had not been oblig'd to so long a warning: I told him his wish was unnecessary for I would leave him that instant; and so taking my hat walk'd out of doors; desiring Meredith whom I saw below to take care of some things I left, and bring them to my lodging.——

Meredith came accordingly in the evening, when we talked my affair over. He had conceiv'd a great regard for me, and was very unwilling that I should leave the house while he remain'd in it. He dissuaded me from returning to my native country which I began to think of. He reminded me that Keimer was in debt for all he possess'd, that his creditors began to be uneasy, that he kept his shop miserably, sold often without profit for ready money, and often trusted without keeping accounts. That he must therefore fail; which would make a vacancy I might profit of.——I objected my want of money. He then let me know that, his father had a high opinion of me, and from some discourse that had pass'd between them, he was sure would advance money to set us up, if I would enter into partnership with him. My time, says he, will be out with Keimer in the spring. By that time we may have our press and types in from London. I am sensible I am no workman. If you like it, your skill in the business shall be set against the stock I furnish; and we will share the profits equally.——The proposal was agreeable, and I consented. His father was in town and approv'd of it, the more as he saw I had great influence with his son, had prevail'd on him to abstain long from dramdrinking, and he hop'd might break him of that wretched habit entirely, when we came to be so closely connected. I gave an inventory to the father, who carry'd it to a merchant; the things were sent for; the secret was to be kept till they should arrive, and in the mean time I was to get work if I could at the other printing-house. But I found no vacancy there, and so remain'd idle a few days, when Keimer, on a prospect of being employ'd to print some paper-money, in New Jersey, which would require cuts and various types that I only could supply, and apprehending Bradford might engage me and get the jobb from him, sent me a very civil message, that old friends should not part for a few words the effect of sudden passion, and wishing me to return. Meredith persuaded me to comply, as it would give more opportunity for his improvement under my daily instructions.——So I return'd, and we went on more smoothly than for some time

before. The New Jersey jobb was obtained. I contriv'd a copper-plate press for it, the first that had been seen in the country. I cut several ornaments and checks for the bills. We went together to Burlington, where I executed the whole to satisfaction, and he received so large a sum for the work, as to be enabled thereby to keep his head much longer above water.

At Burlington I made an acquaintance with many principal people of the province. Several of them had been appointed by the assembly a committee to attend the press, and take care that no more bills were printed than the law directed. They were therefore by turns constantly with us, and generally he who attended brought with him a friend or two for company. My mind having been much more improv'd by reading than Keimer's, I suppose it was for that reason my conversation seem'd to be more valu'd. They had me to their houses, introduc'd me to their friends and show'd me much civility, while he, tho' the master, was a little neglected. In truth he was an odd fish, ignorant of common life, fond of rudely opposing receiv'd opinions, slovenly to extream dirtiness, enthusiastic in some points of religion, and a little knavish withal. We continu'd there near 3 months, and by that time I could reckon among my acquired friends, Judge Allen, Samuel Bustill, the secretary of the Province, Isaac Pearson, Joseph Cooper, and several of the Smiths, members of Assembly, and Isaac Decow the surveyor-general. The latter was a shrewd sagacious old man, who told me that he began for himself when young by wheeling clay for the brickmakers, learnt to write after he was of age, carry'd the chain for surveyors, who taught him surveying, and he had now by his industry, acquir'd a good estate; and says he, I foresee, that you will soon work this man out of his business and make a fortune in it at Philadelphia. He had not then the least intimation of my intention to set up there or any where. These friends were afterwards of great use to me, as I occasionally was to some of them. They all continued their regard for me as long as they lived.——

Before I enter upon my public appearance in business it may be well to let you know the then state of my mind, with regard to my principles and morals, that you may see how far those influenc'd the future events of my life. My parent's [sic] had early given me religious impressions, and brought me through my childhood piously in the dissenting way. But I was scarce 15 when, after doubting by turns of several points as I found them disputed in the different books I read, I began to doubt of revelation itself. Some books against deism fell into my hands; they were said to be the substance of sermons preached at Boyle's Lectures. It happened that they wrought an effect on me quite contrary

1. **copper-plate press**—Printing from copperplates required a special press, the ordinary printing press (then and now) not being proper for the purpose. 2. **checks**—In one sense of the term, a check for such a money bill is the counterfoil or "stub" of record, kept after the bill is issued. Whether this is Franklin's meaning is not certain. 3. **Burlington**—During the eighteenth century Burlington was one of the two capitals of the "Jerseys," or New Jersey. 18-20. **Judge Allen . . . Isaac Decow**—The best known of these colonial worthies is William Allen (1704-1780), whose judicial career extended from 1737 to 1774. **Bustill** sometimes appears as "Bustall," and **Decow** in its proper French form of "de Cou." The Smiths were a family powerful in social and political life, to whom a special volume, *The Burlington Smiths*, has been devoted. The special student can track down most of Franklin's acquaintances in the New Jersey archives. 37. **Boyle's Lectures**—Robert Boyle (1627-1691) left a sum of money to establish a course of lectures defending Christianity against infidels and skeptics. The first lectures were given in 1692.

to what was intended by them: For the arguments of the deists, which were quoted to be refuted, appeared to me much stronger than the refutations. In short I soon became a thorough deist. My arguments perverted some others, particularly Collins and Ralph: but each of them having afterwards wrong'd me greatly without the least compunction, and recollecting Keith's conduct towards me, (who was another freethinker) and my own towards Vernon and Miss Read, which at times gave me great trouble, I began to suspect that this doctrine, tho' it might be true, was not very useful.——My London pamphlet, which had for its motto these lines of Dryden

> Whatever is, is right. Tho' purblind man
> Sees but a part of the chain, the nearest link,
> His eyes not carrying to the equal beam,
> That poises all, above.

And from the attributes of God, his infinite wisdom, goodness and power concluded that nothing could possibly be wrong in the world, and that vice and virtue were empty distinctions, no such things existing: appear'd now not so clever a performance as I once thought it; and I doubted whether some error had not insinuated itself unperceiv'd, into my argument, so as to infect all that follow'd, as is common in metaphysical reasonings.——I grew convinc'd that *truth, sincerity* and *integrity* in dealings between man and man, were of the utmost importance to the felicity of life, and I form'd written resolutions, (w^{ch} still remain in my journal book) to practice them everwhile I lived. Revelation had indeed no weight with me as such; but I entertain'd an opinion that tho' certain actions might not be bad *because* they were forbidden by it, or good *because* it commanded them, yet probably those actions might be forbidden *because* they were bad for us, or commanded *because* they were beneficial to us, in their own natures, all the circumstances of things considered. And this persuasion, with the kind hand of Providence, or some guardian angel, or accidental favourable circumstances and situations, or all together, preserved me, (thro' this dangerous time of youth and the hazardous situations I was sometimes in among strangers, remote from the eye and advice of my father) without any *wilful* gross immorality or injustice that might have been expected from my want of religion. I say *wilful,* because the instances I have mentioned, had something of *necessity* in them, from my youth, inexperience, and the knavery of others. I had therefore a tolerable character to begin the world with, I valued it properly, and determin'd to preserve it.

We had not been long return'd to Philadelphia, before the new types arriv'd

10-13. Whatever is—Franklin is quoting from memory. The passage as given on the title page of his pamphlet is more nearly like the original, which runs:

> "Whatever is, is in it's causes just;
> Since all things are by Fate. But pur-blind Man
> Sees but a part o' th' Chain; the nearest links;
> His eyes not carrying to that equal Beam
> That poizes all above."
> —Dryden and Lee, *Oedipus,* London,
> 1679, Act III, Scene 2, p. 37.

21. written resolutions—*Cf. Articles of Belief and Acts of Religion,* already referred to; and see *Writings,* Vol. I, pp. 327 ff.

from London. We settled with Keimer, and left him by his consent before he heard of it.——We found a house to hire near the market, and took it. To lessen the rent, (which was then but 24£ a year tho' I have since known it to let for 70) we took in Thomas Godfrey a glazier, and his family, who were to pay a considerable part of it to us, and we to board with them. We had scarce opened our letters and put our press in order, before George House, an acquaintance of mine, brought a countryman to us; whom he had met in the street enquiring for a printer. All our cash was now expended in the variety of particulars we had been obliged to procure, and this countryman's five shillings, being our first fruits and coming so seasonably, gave me more pleasure than any crown I have since earned; and the gratitude I felt toward House, has made me often more ready than perhaps I should otherwise have been, to assist young beginners.

There are croakers in every country always boding its ruin. Such a one then lived in Philadelphia, a person of note, an elderly man, with a wise look and very grave manner of speaking. His name was Samuel Mickle. This gentleman, a stranger to me, stopt one day at my door, and asked me if I was the young man who had lately opened a new printing house. Being answer'd in the affirmative, he said he was sorry for me, because it was an expensive undertaking, and the expense would be lost, for Philadelphia was a sinking place, the people already half bankrupts, or near being so; all appearances to the contrary such as new buildings, and the rise of rents being to his certain knowledge fallacious, for they were in fact among the things that would soon ruin us. And he gave me such a detail of misfortunes now existing or that were soon to exist, that he left me half melancholy. Had I known him before I engaged in this business, probably I never should have done it. This man continued to live in this decaying place, and to declaim in the same strain, refusing for many years to buy a house there, because all was going to destruction; and at last I had the pleasure of seeing him give five times as much for one as he might have bought it for when he first began his croaking.

I should have mentioned before, that in the autumn of the preceeding year, I had form'd most of my ingenious acquaintance into a club for mutual improvement, which we called the junto. We met on Friday evening. The rules I drew up requir'd that every member in his turn should produce one or more queries on any point of morals, politics or natural philosophy, to be discuss'd by the company, and once in three months produce and read an essay of his own writing on any subject he pleased. Our debates were to be under the direction of a president, and to be conducted in the sincere spirit of enquiry after truth, without fondness for dispute, or desire of victory; and to prevent warmth all expressions of positiveness in opinions, or direct contradiction, were after some time made contraband and prohibited under small pecuniary penalties. The first members were Joseph Breintnal, a copyer of deeds for the scriveners, a

11. **crown**—a British coin, worth five shillings. 20. **sinking**—decaying, failing. 33. **junto**—a Spanish word, meaning private cabal, and employed by Franklin to give an atmosphere of secrecy to his club. Franklin's rules are given in *Writings*, Vol. II, pp. 88-90. 42. **Joseph Breintnal**—Most of the members of the Junto rose to fame. Joseph Breintnal, of whom curiously little is known, assisted Franklin in the composition of some of his papers, as the student may learn by consulting the index to Franklin's *Writings*. Thomas Godfrey (1704-1749), to whom Franklin

good-natur'd friendly middle-ag'd man, a great lover of poetry, reading all he could meet with, and writing some that was tolerable; very ingenious in many little nicknackeries, and of sensible conversation. Thomas Godfrey, a self-taught mathematician, great in his way, and afterwards inventor of what is now called Hadley's quadrant. But he knew little out of his way, and was not a pleasing companion, as like most great mathematicians I have met with, he expected universal precision in every thing said, or was forever denying or distinguishing upon trifles to the disturbance of all conversation. He soon left us. Nicholas Scull, a surveyor, afterward surveyor-general, who lov'd books, and sometimes made a few verses. William Parsons, bred a shoemaker, but loving reading, had acquir'd a considerable share of mathematics, which he first studied with a view to astrology that he afterwards laught at. He also became surveyor general. William Maugridge, a joiner, a most exquisite mechanic and a solid sensible man. Hugh Meredith, Stephen Potts, and George Webb, I have characteris'd before. Robert Grace, a young gentleman of some fortune, generous, lively and witty, a lover of punning and of his friends. And William Coleman, then a merchant's clerk, about my age, who had the coolest clearest head, the best heart, and the exactest morals, of almost any man I ever met with. He became afterwards a merchant of great note, and one of our provincial judges. Our friendship continued without interruption to his death upwards of 40 years. And the club continu'd almost as long[,] and was the best school of philosophy, and politics that then existed in the province; for our queries which were read the week preceding their discussion, put us on reading with attention upon the several subjects, that we might speak more to the purpose: and here too we acquired better habits of conversation, every thing being studied in our rules which might prevent our disgusting each other. From hence the long continuance of the club, which I shall have frequent occasion to speak farther of hereafter; but my giving this account of it here, is to show something of the interest I had, every one of these exerting themselves in recommending business to us.——Brientnal particularly procur'd us from the Quakers, the printing 40 sheets of their history, the rest being to be done by Keimer: and upon this we work'd exceeding hard, for the price was low. It was a folio, pro patria size, in pica with long primer notes. I compos'd of it a sheet a day, and Meredith work'd it off at press. It was often 11 at night and sometimes later, before I had finish'd my distribution for the next days work:

rented part of his house, besides being the inventor of an improved quadrant, was the father of Thomas Godfrey, Jr., author of *The Prince of Parthia,* the first American tragedy. William Parsons (died 1757) was surveyor general of Pennsylvania from 1743 to 1748, when he was succeeded by Nicholas Scull (born 1700?), who served to 1761, and whose map of Pennsylvania (1759) was notable. Less is known of Robert Grace, but the career of William Coleman is sufficiently indicated in the text.

31. **Quakers . . . their history**—This was William Sewel, *The History of the Rise, Increase, and Progress, Of the Christian People called Quakers: Intermixed with Several Remarkable Occurrences. . . .* The Third Edition, Corrected. Philadelphia: Printed and Sold by Samuel Keimer in Second Street. M DCC XXVIII. **33. folio**—In printing, a folio is a book formed by folding a sheet of paper once. As Franklin printed 40 sheets, he was responsible for 160 pages. The meaning of **pro patria** is obscure; it apparently refers either to the size of the sheet or to that of the printed page. The book in question is 5 7/16″ by 10 1/16″. **33. pica**—12-point type. **33. long primer**—10-point type. **34. sheet a day**—that is, four pages, two printed on one side of the sheet, and two on the other.

For the little jobbs sent in by our other friends now and then put us back. But so determin'd I was to continue doing a sheet a day of the folio, that one night when having impos'd my forms, I thought my days work over, one of them by accident was broken and two pages reduc'd to pie, I immediately distributed and compos'd it over again before I went to bed. And this industry visible to our neighbours began to give us character and credit; particularly I was told, that mention being made of the new printing office at the merchants every-night club, the general opinion was that it must fail, there being already two printers in the place, Keimer and Bradford; but Doctor Baird (whom you and I saw many years after at his native place, St. Andrews in Scotland) gave a contrary opinion; for the industry of that Franklin, says he, is superior to any thing I ever saw of the kind. I see him still at work when I go home from club; and he is at work again before his neighbours are out of bed. This struck the rest, and we soon after had offers from one of them to supply us with stationary. But as yet we did not chuse to engage in shop business.

I mention this industry the more particularly and the more freely, tho' it seems to be talking in my own praise, that those of my posterity who shall read it, may know the use of that virtue, when they see its effects in my favour throughout this relation.——

George Webb, who had found a friend that lent him wherewith to purchase his time of Keimer, now came to offer himself as a journeyman to us. We could not then imploy him, but foolishly I let him know, as a secret, that I soon intended to begin a newspaper, and might then have work for him. My hopes of success as I told him were founded on this, that the then only newspaper, printed by Bradford was a paltry thing, wretchedly manag'd, no way entertaining; and yet was profitable to him.——I therefore thought a good paper could scarcely fail of good encouragem[t]. I requested Webb not to mention it, but he told it to Keimer, who immediately, to be beforehand with me, published proposals for printing one himself, on which Webb was to be employ'd.——I resented this, and to counteract them, as I could not yet begin our paper, I wrote several pieces of entertainment for Bradford's paper under the title of the Busy Body, which Brient[n]al continu'd some months. By this means the attention of the publick was fix'd on that paper, and Keimers proposals which we burlesqu'd and ridicul'd,.were disregarded. He began his paper however, and after carrying it on three quarters of a year, with at most only 90 subscribers, he offer'd it to me for a trifle, and I having been ready some time to go on with it, took it in hand directly, and it prov'd in a few years extreamly profitable to me.

3. impos'd my forms—that is, he "made up" his forms—locked the type into a form or forme, ready for printing, an operation requiring considerable skill. **4. reduc'd to pie**—more commonly, pi. The type fell out of the form and into complete confusion. Franklin therefore had to distribute the pied type into the cases and recompose the two pages. **9. Doctor Baird**—This man has usually been identified with Dr. John Bard, the famous Philadelphia physician, but as he was born in 1716 he would scarcely be a member of a merchants' club in 1728. **24-25. only newspaper**—The *American Weekly Mercury*, founded in 1719. **29. printing one**—*The Universal Instructor in All Arts and Sciences and Pennsylvania Gazette*, the first number appearing Dec. 24, 1738. Keimer printed *The Universal Instructor* through the thirty-ninth number. **32. Busy Body**—For *The Busy-Body* papers, consult Franklin's *Writings*, Vol. II. **37. took it in hand**—Franklin shortened the title to *The Pennsylvania Gazette*. The first number to be printed under

I perceive that I am apt to speak in the singular number, though our partnership still continu'd. The reason may be, that in fact the whole management of the business lay upon me. Meredith was no compositor, a poor pressman, and seldom sober. My friends lamented my connection with him, but I was to make the best of it.

Our first papers made a quite different appearance from any before in the province, a better type and better printed: but some spirited remarks of my writing on the dispute then going on between Gov^r^ Burnet and the Massachusetts Assembly, struck the principal people, occasion'd the paper and the manager of it to be much talk'd of, and in a few weeks brought them all to be our subscribers. Their example was follow'd by many, and our number went on growing continually.——This was one of the first good effects of my having learnt a little to scribble. Another was, that the leading men, seeing a news paper now in the hands of one who could also handle a pen, thought it convenient to oblige and encourage me. Bradford still printed the votes and laws and other publick business. He had printed an address of the house to the governor in a coarse blundering manner; we reprinted it elegantly and correctly, and sent one to every member. They were sensible of the difference, it strengthen'd the hands of our friends in the house, and they voted us their printers for the year ensuing.

Among my friends in the house I must not forget Mr. Hamilton before mentioned, who was then returned from England and had a seat in it. He interested himself for me strongly in that instance, as he did in many others afterwards, continuing his patronage till his death. Mr. Vernon about this time put me in mind of the debt I ow'd him: but did not press me. I wrote him an ingenuous letter of acknowledgments, crav'd his forbearance a little longer which he allow'd me, and as soon as I was able I paid the principal with interest and many thanks.——So that erratum was in some degree corrected.

But now another difficulty came upon me, which I had never the least reason to expect. Mr. Meredith's father, who was to have paid for our printing house according to the expectations given me, was able to advance only one hundred pounds, currency, which had been paid, and a hundred more was due to the merchant; who grew impatient and su'd us all. We gave bail, but saw that if the money could not be rais'd in time, the suit must come to a judgment and execution, and our hopeful prospects must with us be ruined, as the press and letters must be sold for payment, perhaps at half price.——In this distress two true friends whose kindness I have never forgotten nor ever shall forget while

his direction was dated Sept. 25-Oct. 2, 1729. An announcement says that "no Care and Pains shall be omitted, that may make the *Pennsylvania Gazette* as agreeable and useful an Entertainment as the Nature of the Thing will allow."

7. printed:—After **printed,** Franklin's manuscript has: "Insert these Remarks, in a note.—" **8. Burnet**—William Burnet was transferred from the governorship of New York to that of Massachusetts Bay on Apr. 15, 1728. A warm discussion broke out between the Governor and the Assembly as to the amount and manner of payment of the governor's salary, the Assembly desiring to control the governor. Franklin's **"remarks"** are not reprinted in his works. **22. then**—Franklin first wrote *now,* then wrote **then** above the line, but failed to cross out *now.* **24. death**—Franklin wrote on the margin the note: "I got his son once 500 £." **34-35. judgment and execution**—that is, would get into court, when the sheriff would be instructed to seize and sell the property for the creditor.

I can remember any thing, came to me separately[,] unknown to each other, and without any application from me, offering each of them to advance me all the money that should be necessary to enable me to take the whole business upon myself if that should be practicable, but they did not like my continuing the partnership with Meredith, who as they said was often seen drunk in the streets, and playing at low games in alehouses, much to our discredit. These two friends were *William Coleman* and *Robert Grace*. I told them I could not propose a separation while any prospect remain'd of the Merediths fulfilling their part of our agreement. Because I thought myself under great obligations to them for what they had done and would do if they could. But if they finally fail'd in their performance, and our partnership must be dissolv'd, I should then think myself at liberty to accept the assistance of my friends. Thus the matter rested for some time. When I said to my partner, perhaps your father is dissatisfied at the part you have undertaken in this affair of ours, and is unwilling to advance for you and me what he would for you alone: If that is the case, tell me, and I will resign the whole to you and go about my business. No[,] says he, my father has really been disappointed and is really unable; and I am unwilling to distress him farther. I see this is a business I am not fit for. I was bred a farmer, and it was a folly in me to come to town and put myself at 30 years of age an apprentice to learn a new trade. Many of our Welsh people are going to settle in North Carolina where land is cheap: I am inclin'd to go with them, and following my old employment. You may find friends to assist you. If you will take the debts of the company upon you, return to my father the hundred pound he has advanc'd, pay my little personal debts, and give me thirty pounds and a new saddle, I will relinquish the partnership and leave the whole in your hands. I agreed to this proposal. It was drawn up in writing, sign'd and seal'd immediately. I gave him what he demanded and he went soon after to Carolina; from whence he sent me next year two long letters, containing the best account that had been given of that country, the climate, soil, husbandry, etc. for in those matters he was very judicious. I printed them in the papers, and they gave grate satisfaction to the publick.

As soon as he was gone, I recurr'd to my two friends; and because I would not give an unkind preference to either, I took half what each had offered and I wanted, of one, and half of the other; paid off the company debts, and went on with the business in my own name, advertising that the partnership was dissolved. I think this was in or about the year 1729.——

About this time there was a cry among the people for more paper-money, only 15,000 £ being extant in the province and that soon to be sunk. The wealthy inhabitants oppos'd any addition, being against all paper currency, from an apprehension that it would depreciate as it had done in New England to the prejudice of all creditors.——We had discuss'd this point in our Junto, where I was on the side of an addition, being persuaded that the first small sum struck in 1723 had done much good, by increasing the trade[,] employ-

20-21. Welsh people—The "Welsh Tract" of North Carolina lay in New Hanover County, near Wilmington. **37. 1729**—Franklin's memory played him false. The partnership ended July 14, 1730.

ment, and number of inhabitants in the province, since I now saw all the old houses inhabited, and many new ones building, where as I remember'd well, that when I first walk'd about the streets of Philadelphia, eating my roll, I saw most of the houses in Walnut street between Second and Front streets with bills on their doors to be let; and many likewise in Chesnut street, and other streets; which made me then think the inhabitants of the city were deserting it, one after another.——Our debates possess'd me so fully of the subject, that I wrote and printed an anonymous pamphlet on it, entituled, *The Nature and Necessity of a Paper Currency.* It was well receiv'd by the common people in general; but the rich men dislik'd it; for it increas'd and strengthen'd the clamour for more money; and they happening to have no writers among them that were able to answer it, their opposition slacken'd, and the point was carried by a majority in the house. My friends there, who conceiv'd I had been of some service, thought fit to reward me, by employing me in printing the money, a very profitable jobb, and a great help to me.——This was another advantage gain'd by my being able to write[.] The utility of this currency became by time and experience so evident, as never afterwards to be much disputed, so that it grew soon to 55,000 £, and in 1739 to 80,000 £ since which it arose during war to upwards of 350,000 £. trade, building and inhabitants all the while increasing. Tho' I now think there are limits beyond which the quantity may be hurtful.——

I soon after obtain'd, thro' my friend Hamilton, the printing of the New Castle paper money, another profitable jobb, as I then thought it; small things appearing great to those in small circumstances. And these to me were really great advantages, as they were great encouragements. He procured me also the printing of the laws and votes of that government which continu'd in my hands as long as I follow'd the business.

I now open'd a little stationer's shop. I had in it blanks of all sorts the correctest that ever appear'd among us, being assisted in that by my friend Brientnall; I had also paper, parchment, chapmen's books, etc. One Whitemarsh[,] a compositor I had known in London, an excellent workman now came to me and work'd with me constantly and diligently, and I took an apprentice the son of Aquila Rose. I began now gradually to pay off the debt I was under for the printing-house. In order to secure my credit and character as a tradesman, I took care not only to be in *reality* industrious and frugal, but to avoid all *appearances* of the contrary. I drest plainly; I was seen at no places of idle diversion; I never went out fishing or shooting; a book, indeed, sometimes debauch'd me from my work; but that was seldom, snug, and gave no scandal: and to show that I was not above my business, I sometimes brought home the paper I purchas'd at the stores, thro' the streets on a wheelbarrow. Thus being esteem'd an industrious thriving young man, and paying duly for what I bought, the merchants who imported stationary solicited my custom, others

5. **bills**—signs, "To Let." 8-9. **Nature . . . Paper Currency**—For *A Modest Inquiry into the Nature and Necessity of a Paper Currency,* see *Writings,* Vol. II. 22-23. **New Castle**—that is, for the "three counties" of Delaware. Although Delaware was for the greater part of the eighteenth century an independent political unit, the governor of Pennsylvania was also the governor of Delaware—a fact which accounts for the relations between the two colonies implicit in Franklin's text.

propos'd supplying me with books, I went on swimmingly. In the mean time Keimer's credit and business declining daily, he was at last forc'd to sell his printing-house to satisfy his creditors. He went to Barbadoes, and there lived some years, in very poor circumstances.

His apprentice David Harry, whom I had instructed while I work'd with him, set up in his place at Philadelphia, having bought his materials. I was at first apprehensive of a powerful rival in Harry, as his friends were very able, and had a good deal of interest. I therefore propos'd a partnership to him; which he, fortunately for me, rejected with scorn. He was very proud, dress'd like a gentleman, liv'd expensively, took much diversion and pleasure abroad, ran in debt, and neglected his business, upon which all business left him; and finding nothing to do, he follow'd Keimer to Barbadoes; taking the printing-house with him[.] There this apprentice employ'd his former master as a journeyman. They quarrel'd often, Harry went continually behindhand, and at length was forc'd to sell his types, and return to his country work in Pensilvania. The person that bought them, employ'd Keimer to use them, but in a few years he died. There remain'd now no competitor with me at Philadelphia, but the old one, Bradford, who was rich and easy, did a little printing now and then by straggling hands, but was not very anxious about it. However, as he kept the post office, it was imagined he had better opportunities of obtaining news, his paper was thought a better distributer of advertisements than mine, and therefore had many more, which was a profitable thing to him and a disadvantage to me. For tho' I did indeed receive and send papers by post, yet the publick opinion was otherwise; for what I did send was by bribing the riders who took them privately: Bradford being unkind enough to forbid it: which occasion'd some resentment on my part; and I thought so meanly of him for it, that when I afterwards came into his situation, I took care never to imitate it.

I had hitherto continu'd to board with Godfrey who lived in part of my house with his wife and children, and had one side of the shop for his glazier's business, tho' he work'd little, being always absorb'd in his mathematics. Mrs. Godfrey projected a match for me with a relation's daughter, took opportunity of bringing us often together, till a serious courtship on my part ensu'd, the girl being in herself very deserving. The old folks encourag'd me by continual invitations to supper, and by leaving us together, till at length it was time to explain. Mrs. Godfrey manag'd our little treaty. I let her know that I expected as much money with their daughter as would pay off my remaining debts for the printinghouse, which I believe was not then above a hundred pounds. She brought me word they had no such sum to spare. I said they might mortgage their house in the loan office. The answer to this after some days was, that they did not approve the match; that on enquiry of Bradford they had been in-

2. Keimer's—Keimer seems to have left Philadelphia in 1729. Franklin is not quite fair to his subsequent career. In 1731 he established the *Barbadoes Gazette*, which continued until 1738, and which contained essays of sufficient merit to justify the publication of two volumes selected from the paper as *Caribbeana*, London, 1741. **27. his situation**—Franklin became Deputy Postmaster-General for the Colonies in 1753, this being the only public office for which he ever applied. He then withdrew the privilege of free distribution of newspapers, and charged ninepence a year for each fifty miles of carriage.

form'd the printing business was not a profitable one, the types would soon be worn out and more wanted, that S. Keimer and D. Harry had fail'd one after the other, and I should probably soon follow them; and therefore I was forbidden the house, and the daughter shut up.——Whether this was a real change of sentiment, or only artifice, on a supposition of our being too far engag'd in affection to retract, and therefore that we should steal a marriage, which would leave them at liberty to give or with[h]old what they pleas'd, I know not: But I suspected the latter, resented it, and went no more. Mrs. Godfrey brought me afterwards some more favourable accounts of their disposition, and would have drawn me on again: But I declared absolutely my resolution to have nothing more to do with that family. This was resented by the Godfreys, we differ'd, and they removed, leaving me the whole house, and I resolved to take no more inmates. But this affair having turn'd my thoughts to marriage, I look'd round me, and made overtures of acquaintance in other places; but soon found that the business of a printer being generally thought a poor one, I was not to expect money with a wife unless with such a one, as I should not otherwise think agreable.——In the mean time, that hard-to-be-govern'd passion of youth, had hurried me frequently into intrigues with low women that fell in my way, which were attended with some expence and great inconvenience, besides a continual risque to my health by a distemper which of all things I dread, tho' by great good luck I escaped it.——

A friendly correspondence as neighbours and old acquaintances, had continued between me and Mrs. Read's family, who all had a regard for me from the time of my first lodging in their house. I was often invited there and consulted in their affairs, wherein I sometimes was of service.——I pity'd poor Miss Read's unfortunate situation, who was generally dejected, seldom chearful, and avoided company. I consider'd my giddiness and inconstancy when in London as in a great degree the cause of her unhappiness; tho' the mother was good enough to think the fault more her own than mine, as she had prevented our marrying before I went thither, and persuaded the other match in my absence. Our mutual affection was revived, but there were now great objections to our union. That match was indeed look'd upon as invalid, a preceeding wife being said to be livin[g] in England; but this could not easily be prov'd, because of the distance[.] And tho' there was a report of his death, it was not certain. The[n] tho' it should be true, he had left many debts which his successor might be call'd [on] to pay. We ventur['d] however, over all these difficulties, and I [took] her to wife Sept. 1. 1730. None of the inconveniencies happen[ed] that we had apprehended, she prov'd a good and faithful helpmate, assisted me much by attending the shop, we throve together, and have ever mutually endeavour'd to make each other happy. Thus I corrected that great *erratum* as wel[l] as I could.

1. **not a profitable**—"If a Philadelphian in 1728 had been asked to name the business by which, in Philadelphia, a stranger could make a fortune in twenty years, the business of a printer would have been among the very last to occur to him. There was no good bookstore south of Boston, it is true, but also there was no general regard for books south of Boston. . . . The whole business of printing was trivial, and could be made profitable only by prosecuting successfully a great number of petty projects." (James Parton) The statement about regard for books south of Boston is not, however, accurate. 33. **livin[g]**—The original manuscript has been torn at the edge, and the missing letters in this passage are supplied in brackets.

About [th]is time our club meeting, not at a tavern, but in a little room of Mr. Grace's set apart for that purpose, a proposition was made by me that since our books were often referr'd to in our disquisitions upon the queries, it might be convenient to us to have them all together where we met, that upon occasion they might be consulted; and by thus clubbing our books to a common library, we should, while we lik'd to keep them together, have each of us the advantage of using the books of all the other members, which would be nearly as beneficial as if each owned the whole. It was lik'd and agreed to, and we fill'd one end of the room with such books as we could best spare. The number was not so great as we expected; and tho' they had been of great use, yet some inconveniencies occurring for want of due care of them, the collection after about a year was separated, and each took his books home again.

And now I sent on foot my first project of a public nature, [th]at for a subscription library. [I] drew up the proposals, got them put into form by our great scrivener Brockden, and by the help of my friends in the Junto, procur'd fifty subscribers of 40/ each to begin with and 10/ a year for 50 years, the term our company was to continue. We afterwards obtain'd a charter, the company being increas'd to 100. This was the mother of all the N American subscription libraries now so numerous, is become a great thing itself, and continually increasing.——These libraries have improv'd the general conversation of the Americans, made the common tradesmen and farmers as intelligent as most gentlemen from other countries, and perhaps have contributed in some degree to the stand so generally made throughout the colonies in defence of their privileges.——

A SECOND DIALOGUE BETWEEN PHILOCLES AND HORATIO, CONCERNING VIRTUE AND PLEASURE

The era of Sir Robert Walpole, following the great "world war" of Queen Anne's reign, was marked by much cynicism and profligacy. In a desire to combat the "epicurean" philosophy which he feared might creep into America, Franklin published in the *Pennsylvania Gazette* for June 23 and July 9, 1730, two dialogues between Philocles, who represents Franklin's moral philosophy, and Horatio, a professed libertine. The drift of the first of these may be gathered from the second, which is here reprinted, Franklin's capitalization being modernized. We are to assume that the two speakers are walking through the countryside on their way to Philadelphia.

Philocles. Dear *Horatio!* where hast thou been these three or four months? What new adventures have you fallen upon since I met you in these delightful, all-inspiring fields, and wondred how such a pleasure-hunter as you could bear being alone?

14. library—The Philadelphia Library was established in 1731. **20. conversation**—here about equivalent to "general information" rather than "talk." **24. privileges**—Franklin's manuscript has in the margin the note: "My manner of asking to engage people in this and future undertakings." In the next portion of the *Autobiography*, written in 1784, he explains how he solicited subscriptions. See *Writings*, Vol. I, pp. 322-23.

Horatio. O *Philocles,* thou best of friends, because a friend to reason and virtue, I am very glad to see you. Don't you remember, I told you then, that some misfortunes in my pleasures had sent me to philosophy for relief? But now I do assure you, I can, without a sigh, leave other pleasures for those of philosophy; I can hear the word *reason* mentioned, and virtue praised, without laughing. Don't I bid fair for conversion, think you?

Phil. Very fair, *Horatio!* for I remember the time when reason, virtue, and pleasure, were the same thing with you: when you counted nothing good but what pleas'd, nor any thing reasonable, but what you got by; when you made a jest of a mind, and the pleasures of reflection, and elegantly plac'd your sole happiness, like the rest of the animal creation, in the gratifications of sense.

Hor. I did so; but in our last conversation, when walking upon the brow of this hill, and looking down on that broad, rapid river, and yon widely-extended beautifully-varied plain, you taught me another doctrine: you shewed me, that self-denial, which above all things I abhorred, was really the greatest good, and the highest self-gratification, and absolutely necessary to produce even my own darling sole good, pleasure.

Phil. True: I told you that self-denial was never a duty but when it was a natural means of procuring more pleasure than we could taste without it: that as we all strongly desire to live, and to live only to enjoy, we should take as much care about our future as our present happiness; and not build one upon the ruins of t'other: that we should look to the end, and regard consequences: and if, thro' want of attention we had err'd, and exceeded the bounds which nature had set us, we were then obliged, for our own sakes, to refrain or deny ourselves a present momentary pleasure for a future, constant, and durable good.

Hor. You have shewn me, *Philocles,* that self-denial, which weak or interested men have rendred the most forbidding, is really the most delightful and amiable, the most reasonable and pleasant thing in the world. In a word, if I understand you aright, self-denial is, in truth, self-recognising, self-acknowledging, or self-owning. But now, my friend! you are to perform another promise; and shew me the path which leads up to that constant, durable, and invariable good, which I have heard you so beautifully describe, and which you seem so fully to possess: is not this good of yours a mere chimera? Can any thing be constant in a world which is eternally changing! and which appears to exist by an everlasting revolution of one thing into another, and where every thing without us, and every thing within us, is in perpetual motion? What is this constant, durable good, then, of yours? Prithee, satisfy my soul, for I'm all on fire, and impatient to enjoy her. Produce this eternal blooming goddess with never-fading charms, and see, whether I won't embrace her with as much eagerness and rapture as you.

Phil. You seem enthusiastically warm, *Horatio;* I will wait till you are cool enough to attend to the sober, dispassionate voice of reason.

Hor. You mistake me, my dear *Philocles!* My warmth is not so great as to

9. got by—profited by. **42. enthusiastically**—In the first half of the eighteenth century, enthusiasm, connoting the negation of reason, was viewed as something to be shunned. "Enthusiast" was at first tantamount to "fanatic" as a term of reproach.

run away with my reason: it is only just raised enough to open my faculties, and fit them to receive those eternal truths, and that durable good, which you so triumphantly boasted of. Begin, then; I'm prepared.

Phil. I will. I believe, *Horatio!* with all your scepticism about you, you will allow that good to be constant which is never absent from you, and that to be durable, which never ends but with your being.

Hor. Yes, go on.

Phil. That can never be the good of a creature, which when present, the creature may be miserable, and when absent, is certainly so.

Hor. I think not; but pray explain what you mean; for I am not much used to this abstract way of reasoning.

Phil. I mean all the pleasures of sense. The good of man cannot consist in the mere pleasures of sense; because, when any one of those objects which you love is absent, or can't be come at, you are certainly miserable: and if the faculty be impair'd, though the object be present, you can't enjoy it. So that this sensual good depends upon a thousand things without and within you, and all out of your power. Can this then be the good of man? Say, *Horatio!* what think you, Is not this a chequer'd, fleeting, fantastical good? Can that, in any propriety of speech, be called the good of man which even, while he is tasting, he may be miserable; and which when he cannot taste, he is necessarily so? Can that be our good, which costs us a good deal of pains to obtain; which cloys in possessing; for which we must wait the return of appetite before we can enjoy again? Or, is that our good, which we can come at without difficulty; which is heightened by possession, which never ends in weariness and disappointment; and which, the more we enjoy, the better qualified we are to enjoy on?

Hor. The latter, I think; but why do you torment me thus? *Philocles!* shew me this good immediately.

Phil. I have shewed you what 'tis not; it is not sensual, but 'tis rational and moral good. It is doing all the good we can to others, by acts of humanity, friendship, generosity, and benevolence: this is that constant and durable good, which will afford contentment and satisfaction always alike, without variation or diminution. I speak to your experience now, *Horatio!* Did you ever find yourself weary of relieving the miserable? or of raising the distressed into life or happiness? Or rather, don't you find the pleasure grow upon you by repetition, and that 'tis greater in the reflection than in the act itself? Is there a pleasure upon earth to be compared with that which arises from the sense of making others happy? Can this pleasure ever be absent, or ever end but with your being? Does it not always accompany you? Doth not it lie down and rise with you? live as long as you live? give you consolation in the article of death, and remain with you in that gloomy hour, when all other things are going to forsake you, or you them?

Hor. How glowingly you paint, *Philocles!* Methinks *Horatio* is amongst the enthusiasts. I feel the passion: I am enchantingly convinced; but I don't know why: overborn by something stronger than reason. Sure some divinity

8. That can never—Franklin's grammar is faulty, but the sense is clear. **40. article**—moment. Lat., *in articulo mortis.*

speaks within me; but prithee, *Philocles,* give me cooly the cause, why this rational and moral good so infinitely excels the meer natural or sensual.

Phil. I think, *Horatio!* that I have clearly shewn you the difference between merely natural or sensual good, and rational or moral good. Natural or sensual pleasure continues no longer than the action itself; but this divine or moral pleasure continues when the action is over, and swells and grows upon your hand by reflection: The one is inconstant, unsatisfying, of short duration, and attended with numberless ills; the other is constant, yields full satisfaction, is durable, and no evils preceding, accompanying, or following it. But, if you enquire farther into the cause of this difference, and would know why the moral pleasures are greater than the sensual; perhaps the reason is the same as in all other creatures, that their happiness or chief good consists in acting up to their chief faculty, or that faculty which distinguishes them from all creatures of a different species. The chief faculty in a man is his reason; and consequently his chief good; or that which may be justly called his good, consists not merely in action, but in reasonable action. By reasonable actions, we understand those actions which are preservative of the human kind, and naturally tend to produce real and unmixed happiness; and these actions, by way of distinction, we call actions morally good.

Hor. You speak very clearly, *Philocles!* but, that no difficulty may remain upon my mind, pray tell me what is the real difference between natural good and ill, and moral good and ill? for I know several people who use the terms without ideas.

Phil. That may be: the difference lies only in this; that natural good and ill is pleasure and pain: moral good and ill is pleasure or pain produced with intention and design; for 'tis the intention only that makes the agent morally good or bad.

Hor. But may not a man, with a very good intention, do an ill action?

Phil. Yes, but, then he errs in his judgment, tho' his design be good. If his error is inevitable, or such as, all things considered, he could not help, he is inculpable: but if it arose through want of diligence in forming his judgment about the nature of human actions, he is immoral and culpable.

Hor. I find, then, that in order to please ourselves rightly, or to do good to others morally, we should take great care of our opinions.

Phil. Nothing concerns you more; for, as the happiness or real good of men consists in right action, and right action cannot be produced without right opinion, it behoves us, above all things in this world, to take care that our opinions of things be according to the nature of things. The foundation of all virtue and happiness is thinking rightly. He who sees an action is right, that is, naturally tending to good, and does it because of that tendency, he only is a moral man; and he alone is capable of that constant, durable and invariable good, which has been the subject of this conversation.

Hor. How, my dear philosophical guide, shall I be able to know, and determine certainly, what is right and wrong in life?

Phil. As easily as you distinguish a circle from a square, or light from darkness. Look, *Horatio,* into the sacred book of nature; read your own nature, and view the relation which other men stand in to you, and you to them; and

you'll immediately see what constitutes human happiness, and consequently what is right.

Hor. We are just coming into town, and can say no more at present. You are my good genius, *Philocles.* You have shewed me what is good. You have redeemed me from the slavery and misery of folly and vice, and made me a free and happy being.

Phil. Then I am the happiest man in the world. Be steady, *Horatio!* Never depart from reason and virtue.

Hor. Sooner will I lose my existence. Good night, *Philocles.*

Phil. Adieu! dear *Horatio!*

TO WILLIAM BROWNRIGG

Franklin's most famous scientific contributions were in the field of electricity, but as the letters and documents concerning his electrical work are often technical, his letter to Dr. Brownrigg concerning the uses of oil by navigators has been chosen to illustrate Franklin's clear and easy scientific writing. This letter is an almost perfect illustration of Baconian reasoning, beginning with a series of observations and experiments, arriving at a general theorem, and attempting to deduce from the general theory a practical application for human benefit. The student should observe that Franklin's subject—wave motion and surface tension—is really very complicated, but his incomparable gift of exposition has made a complex subject lucid and deceptively simple. He should also note that Franklin reports an experiment that failed with the same care as he does one that succeeded. The student of physics may determine how far Franklin's theory has been superseded.

William Brownrigg (1711-1800), physician and chemist, did much useful work in making mines safe. He was elected a member of the Royal Society in 1741. He read Franklin's letter before that society in 1774; it was published in the *Philosophical Transactions,* Vol. LXIV, pp. 445 ff. The text has been modernized here, following Smyth.

London, 7 November, 1773

Dear Sir, I thank you for the remarks of your learned friend at Carlisle. I had, when a youth, read and smiled at Pliny's account of a practice among the seamen of his time, to still the waves in a storm by pouring oil into the sea; which he mentions, as well as the use made of oil by the divers; but the stilling a tempest by throwing vinegar into the air had escaped me. I think with your friend, that it has been of late too much the mode to slight the learning of the ancients. The learned, too, are apt to slight too much the knowledge of the vulgar. The cooling by evaporation was long an instance of the latter. This art of smoothing the waves by oil is an instance of both.

12. **learned friend**—"Rev. Mr. Farish, who, in a letter to Dr. Brownrigg, quoted freely from Pliny." (Smyth.) 12. **Carlisle**—In the county of Cumberland, England. 13. **Pliny's account**—Pliny, *Natural History,* Bk. II, Chap. 106: ". . . everything is soothed by oil, and . . . this is the reason why divers send out small quantities of it from their mouths, because it smoothes any part which is rough and transmits the light to them;" Chap. 49 [48]: The "Typhon" "may be in a slight degree counteracted by sprinkling it with vinegar, when it comes near us, this substance being of a very cold nature." 19. **vulgar**—people.

Perhaps you may not dislike to have an account of all I have heard, and learnt, and done in this way. Take it if you please as follows.

In 1757, being at sea in a fleet of ninety-six sail bound against Louisbourg, I observed the wakes of two of the ships to be remarkable smooth, while all the others were ruffled by the wind, which blew fresh. Being puzzled with the differing appearance, I at last pointed it out to our captain, and asked him the meaning of it. "The cooks," says he, "have, I suppose, been just emptying their greasy water through the scuppers, which has greased the sides of those ships a little;" and this answer he gave me with an air of some little contempt, as to a person ignorant of what everybody else knew. In my own mind I at first slighted his solution, though I was not able to think of another; but recollecting what I had formerly read in Pliny, I resolved to make some experiment of the effect of oil on water, when I should have opportunity.

Afterwards being again at sea in 1762, I first observed the wonderful quietness of oil on agitated water, in the swinging glass lamp I made to hang up in the cabin, as described in my printed papers. This I was continually looking at and considering as an appearance to me inexplicable. An old sea captain, then a passenger with me, thought little of it, supposing it an effect of the same kind with that of oil put on water to smooth it, which he said was a practice of the Bermudians when they would strike fish, which they could not see, if the surface of the water was ruffled by the wind. This practice I had never before heard of, and was obliged to him for the information; though I thought him mistaken as to the sameness of the experiment, the operations being different as well as the effects. In one case, the water is smooth till the oil is put on, and then becomes agitated. In the other it is agitated before the oil is applied, and then becomes smooth. The same gentleman told me, he had heard it was a practice with the fishermen of Lisbon when about to return into the river (if they saw before them too great a surf upon the bar, which they apprehended might fill their boats in passing) to empty a bottle or two of oil into the sea, which would suppress the breakers, and allow them to pass safely. A confirmation of this I have not since had an opportunity of obtaining; but discoursing of it with another person who had often been in the Mediterranean, I was informed, that the divers there, who, when under water in their business, need light, which the curling of the surface interrupts by the refractions of so many little waves, let a small quantity of oil now and then out of their mouths, which rising to the surface smooths it, and permits the light to come down to them. All these informations I at times revolved in my mind, and wondered to find no mention of them in our books of experimental philosophy.

At length being at Clapham, where there is, on the common, a large pond,

3. fleet—When Franklin sailed for England in 1757, the packet on which he took passage was compelled to accompany Loudon's expedition against Louisburg for five days. See *Writings*, Vol. I, pp. 425-28. **14. again at sea**—Franklin returned briefly to America at the end of August, 1762, "in company with ten sail of merchant ships under the convoy of a man-of-war." **15. swinging glass lamp**—Franklin describes this phenomenon and experiments conducted by him in a letter to Sir John Pringle (*Writings*, Vol. IV, pp. 177-79). **38-39. experimental philosophy**—about equivalent to "laboratory science." **40. Clapham**—a district of London a mile south of the Thames. The common referred to is Clapham Common, with its pond.

which I observed one day to be very rough with the wind, I fetched out a cruet of oil, and dropped a little of it on the water. I saw it spread itself with surprising swiftness upon the surface; but the effect of smoothing the waves was not produced; for I had applied it first on the leeward side of the pond, where the waves were largest, and the wind drove my oil back upon the shore. I then went to the windward side where they began to form; and there the oil, though not more than a tea spoonful, produced an instant calm over a space several yards square, which spread amazingly, and extended itself gradually till it reached the lee side, making all that quarter of the pond, perhaps half an acre, as smooth as a looking-glass.

After this I contrived to take with me, whenever I went into the country, a little oil in the upper hollow joint of my bamboo cane, with which I might repeat the experiment as opportunity should offer, and I found it constantly to succeed.

In these experiments, one circumstance struck me with particular surprise. This was the sudden, wide, and forcible spreading of a drop of oil on the face of the water, which I do not know that anybody has hitherto considered. If a drop of oil is put on a highly polished marble table, or on a looking-glass that lies horizontally, the drop remains in its place, spreading very little. But, when put on water, it spreads instantly many feet round, becoming so thin as to produce the prismatic colors, for a considerable space, and beyond them so much thinner as to be invisible, except in its effect of smoothing the waves at a much greater distance. It seems as if a mutual repulsion between its particles took place as soon as it touched the water, and a repulsion so strong as to act on other bodies swimming on the surface, as straw, leaves, chips, &c. forcing them to recede every way from the drop, as from a centre, leaving a large, clear space. The quantity of this force, and the distance to which it will operate, I have not yet ascertained; but I think it is a curious inquiry, and I wish to understand whence it arises.

In our journey to the North, when we had the pleasure of seeing you at Ormathwaite, we visited the celebrated Mr. Smeaton, near Leeds. Being about to show him the smoothing experiment on a little pond near his house, an ingenious pupil of his, Mr. Jessop, then present, told us of an odd appearance on that pond, which had lately occurred to him. He was about to clean a little cup in which he kept oil, and he threw upon the water some flies that had been drowned in the oil. These flies presently began to move, and turned round on the water very rapidly, as if they were vigorously alive, though on examination he found they were not so. I immediately concluded that the motion was occasioned by the power of the repulsion above mentioned, and that the oil issuing gradually from the spungy body of the fly continued the motion. He found some more flies drowned in oil, with which the experiment was repeated before us. To show that it was not any effect of life recovered by the flies, I imitated it by little bits of oiled chips and paper, cut in the form of a

30-31. journey to . . . North . . . Ormathwaite—This was apparently during the spring of 1771. Ormathwaite was Brownrigg's paternal estate, situated near Keswick, in Cumberland. **31. Smeaton**—John Smeaton (1724-1792), member of the Royal Society, and famous as the engineer who constructed the third Eddystone lighthouse. **33. Jessop**—This appearance seems to be Mr. Jessop's sole claim to immortality.

comma, of the size of a common fly; when the stream of repelling particles issuing from the point made the comma turn round the contrary way. This is not a chamber experiment; for it cannot be well repeated in a bowl or dish of water on a table. A considerable surface of water is necessary to give room for the expansion of a small quantity of oil. In a dish of water, if the smallest drop of oil be let fall in the middle, the whole surface is presently covered with a thin greasy film proceeding from the drop; but as soon as that film has reached the sides of the dish, no more will issue from the drop, but it remains in the form of oil, the sides of the dish putting a stop to its dissipation by prohibiting the farther expansion of the film.

Our friend Sir John Pringle, being soon after in Scotland, learned there, that those employed in the herring fishery could at a distance see where the shoals of herrings were, by the smoothness of the water over them, which might possibly be occasioned, he thought, by some oiliness proceeding from their bodies.

A gentleman from Rhode Island told me, it had been remarked that the harbour of Newport was ever smooth while any whaling vessels were in it; which probably arose from hence, that the blubber which they sometimes bring loose in the hold, or the leakage of their barrels, might afford some oil, to mix with that water, which from time to time they pump out, to keep their vessel free, and that some oil might spread over the surface of the water in the harbour, and prevent the forming of any waves.

This prevention I would thus endeavor to explain.

There seems to be no natural repulsion between water and air, such as to keep them from coming into contact with each other. Hence we find a quantity of air in water; and if we extract it by means of the air-pump, the same water, again exposed to the air, will soon imbibe an equal quantity.

Therefore air in motion, which is wind, in passing over the smooth surface of water, may rub, as it were, upon that surface, and raise it into wrinkles, which, if the wind continues, are the elements of future waves.

The smallest wave once raised does not immediately subside, and leave the neighbouring water quiet; but in subsiding raises nearly as much of the water next to it, the friction of the parts making little difference. Thus a stone dropped in a pool raises first a single wave round itself; and leaves it, by sinking to the bottom; but that first wave subsiding raises a second, the second a third, and so on in circles to a great extent.

A small power continually operating will produce a great action. A finger applied to a weighty suspended bell can at first move it but little; if repeatedly applied, though with no greater strength, the motion increases till the bell swings to its utmost height, and with a force that cannot be resisted by the whole strength of the arm and body. Thus the small first-raised waves, being continually acted upon by the wind, are, though the wind does not increase in strength, continually increased in magnitude, rising higher and extending their bases, so as to include a vast mass of water in each wave, which in its motion acts with great violence.

11. **Sir John Pringle**—Sir John Pringle (1707-1782), physician to the royal family and ardent Baconian, originally practiced in Edinburgh. In 1772 he was elected president of the Royal Society.

But if there be a mutual repulsion between the particles of oil, and no attraction between oil and water, oil dropped on water will not be held together by adhesion to the spot whereon it falls; it will not be imbibed by the water; it will be at liberty to expand itself; and it will spread on a surface, that besides being smooth to the most perfect degree of polish, prevents, perhaps by repelling the oil, all immediate contact, keeping it at a minute distance from itself; and the expansion will continue till the mutual repulsion between the particles of oil is weakened and reduced to nothing by their distance.

Now I imagine that the wind, blowing over water thus covered with a film of oil, cannot easily *catch* upon it, so as to raise the first wrinkles, but slides over it and leaves it smooth as it finds it. It moves a little the oil indeed, which being between it and the water, serves it to slide with, and prevents friction, as oil does between those parts of a machine that would otherwise rub hard together. Hence the oil dropped on the windward side of a pond proceeds gradually to leeward, as may be seen by the smoothness it carries with it, quite to the opposite side. For the wind being thus prevented from raising the first wrinkles, that I call the elements of waves, cannot produce waves, which are to be made by continually acting upon, and enlarging those elements, and thus the whole pond is calmed.

Totally therefore we might suppress the waves in any required place, if we could come at the windward place where they take their rise. This in the ocean can seldom if ever be done. But perhaps something may be done on particular occasions, to moderate the violence of the waves when we are in the midst of them, and prevent their breaking where that would be inconvenient.

For, when the wind blows fresh, there are continually rising on the back of every great wave a number of small ones, which roughen its surface, and give the wind hold, as it were, to push it with greater force. This hold is diminished, by preventing the generation of those small ones. And possibly too, when a wave's surface is oiled, the wind, in passing over it, may rather in some degree press it down, and contribute to prevent its rising again, instead of promoting it.

This, as mere conjecture, would have little weight, if the apparent effects of pouring oil into the midst of waves were not considerable, and as yet not otherwise accounted for.

When the wind blows so fresh, as that the waves are not sufficiently quick in obeying its impulse, their tops being thinner and lighter are pushed forward, broken, and turned over in a white foam. Common waves lift a vessel without entering it; but these when large sometimes break above and pour over it, doing great damage.

That this effect might in any degree be prevented, or the height and violence of waves in the sea moderated, we had no certain account; Pliny's authority for the practice of seamen in his time being slighted. But discoursing lately on this subject with his Excellency Count Bentinck, of Holland, his son the

44 ff. Count Bentinck . . . Captain Bentinck—William, Count Bentinck (1704-1773), a Dutch diplomat, made various visits to England, and was at one time curator of the Leyden

Honorable Captain Bentinck, and the learned Professor Allemand, (to all whom I showed the experiment of smoothing in a windy day the large piece of water at the head of the Green Park,) a letter was mentioned which had been received by the Count from Batavia, relative to the saving of a Dutch ship in a storm by pouring oil into the sea. I much desired to see that letter, and a copy of it was promised me, which I afterward received.

Extract of a Letter from Mr. Tengnagel to Count Bentinck, dated at Batavia, 5 January, 1770

"Near the islands Paul and Amsterdam, we met with a storm, which had nothing particular in it worthy of being communicated to you, except that the captain found himself obliged for greater safety in wearing the ship, to pour oil into the sea, to prevent the waves breaking over her, which had an excellent effect, and succeeded in preserving us. As he poured out but a little at a time, the East India Company owes perhaps its ships to only six demi-ames of oil-olive. I was present upon deck when this was done; and I should not have mentioned this circumstance to you, but that we have found people here so prejudiced against the experiment, as to make it necessary for the officers on board and myself to give a certificate of the truth on this head, of which we made no difficulty."

On this occasion I mentioned to Captain Bentinck a thought which had occurred to me in reading the voyages of our late circumnavigators, particularly where accounts are given of pleasant and fertile islands which they much desired to land upon, when sickness made it more necessary, but could not effect a landing through a violent surf breaking on the shore, which rendered it impracticable. My idea was, that possibly by sailing to and fro at some distance from such lee-shore, continually pouring oil into the sea, the waves might be so much depressed and lessened before they reached the shore, as to abate the height and violence of the surf, and permit a landing; which, in such circumstances, was a point of sufficient importance to justify the expense of the oil that might be requisite for the purpose. That gentleman, who is ever ready to promote what may be of public utility, though his own ingenious inventions have not always met with the countenance they merited, was so obliging as to invite me to Portsmouth where an opportunity would probably

Academy. His son, Captain John Albert Bentinck (1737-1775), who had "great ingenuity in mechanical pursuits," was appointed to the command of the *Centaur*, a guardship of 74 guns lying off Portsmouth, in 1770.

1. **Professor Allemand**—Jean Nicholas Sébastien Allamand (1713-1787), a learned Swiss and a disciple of Newton, whose interests included electricity, mathematics, and theology. He was associated with the University of Leyden, and was also a member of the Royal Society. 3. **Green Park**—This park, near St. James Park, contained a reservoir. 4. **Batavia**—In Java, the principal seaport of the Dutch East Indies. 9. **Paul and Amsterdam**—the islands of St. Paul and New Amsterdam, lying in the southernmost part of the Indian Ocean. 14. **East India Company**—the Dutch East India Company, dissolved in 1798. 14. **demi-ames**—An ame, or aam, is a Dutch liquid measure of approximately 40 gallons. 21. **late circumnavigators**—In 1768-71 Captain James Cook made his first voyage round the world, an account of which was published in Vols. II and III of Hawkesworth's *Voyages* (1773). Cook's first expedition had been marked by much sickness among his men.

offer, in the course of a few days, of making the experiment on some of the shores about Spithead, in which he kindly proposed to accompany me, and to give assistance with such boats as might be necessary. Accordingly, about the middle of October last, I went with some friends to Portsmouth; and a day of wind happening, which made a lee-shore between Haslar Hospital and the point near Jillkecker, we went from the Centaur with the longboat and barge towards that shore. Our disposition was this; the longboat was anchored about a quarter of a mile from the shore; part of the company were landed behind the point (a place more sheltered from the sea) who came round and placed themselves opposite to the longboat, where they might observe the surf, and note if any change occurred in it upon using the oil. Another party, in the barge, plied to windward of the longboat, as far from her as she was from the shore, making trips of about half a mile each, pouring oil continually out of a large stone bottle, through a hole in the cork, somewhat bigger than a goose-quill. The experiment had not, in the main point, the success we wished, for no material difference was observed in the height or force of the surf upon the shore; but those who were in the longboat could observe a tract of smoothed water, the whole of the distance in which the barge poured the oil, and gradually spreading in breadth towards the long-boat. I call it smoothed, not that it was laid level, but because, though the swell continued, its surface was not roughened by the wrinkles, or smaller waves, before mentioned; and none or very few white caps (or waves whose tops turn over in foam) appeared in that whole space, though to windward and leeward of it there were plenty; and a wherry, that came round the point under sail, in her way to Portsmouth, seemed to turn into that tract of choice, and to use it from end to end as a piece of turnpike road.

It may be of use to relate the circumstances of an experiment that does not succeed, since they may give hints of amendment in future trials; it is therefore I have been thus particular. I shall only add what I apprehend may have been the reason of our disappointment.

I conceive that the operation of oil on water is, first, to prevent the raising of new waves by the wind; and, secondly, to prevent its pushing those before raised with such force, and consequently their continuance of the same repeated height, as they would have done, if their surface were not oiled. But oil will not prevent waves being raised by another power, by a stone, for instance, falling into a still pool; for they then rise by the mechanical impulse of the stone, which the greasiness on the surrounding water cannot lessen or prevent, as it can prevent the winds catching the surface and raising it into waves. Now waves once raised, whether by the wind or any other power, have the same mechanical operation, by which they continue to rise and fall, as a *pendulum* will continue to swing a long time after the force ceases to act by which the motion was first produced; that motion will, however, cease in time; but time is necessary. Therefore, though oil spread on an agitated sea

5. **Haslar Hospital**—This hospital is on the west side of the harbor. Reference to a detailed map of Portsmouth will make the situation clear. 6-7. **longboat . . . barge**—The longboat and the barge are the first and second boats respectively of a man-of-war. 24. **wherry**—here, apparently a barge.

may weaken the push of the wind on those waves whose surfaces are covered by it, and so, by receiving less fresh impulse, they may gradually subside; yet a considerable time, or a distance through which they will take time to move, may be necessary to make the effect sensible on any shore in a diminution of the surf; for we know, that, when wind ceases suddenly, the waves it has raised do not suddenly subside, but settle gradually, and are not quite down till after the wind has ceased. So, though we should, by oiling them, take off the effect of wind or waves already raised, it is not to be expected that those waves should be instantly levelled. The motion they have received will, for some time, continue; and, if the shore is not far distant, they arrive there so soon, that their effect upon it will not be visibly diminished. Possibly, therefore, if we had begun our operations at a greater distance, the effect might have been more sensible. And perhaps we did not pour oil in sufficient quantity. Future experiments may determine this.

I was, however, greatly obliged to Captain Bentinck for the cheerful and ready aids he gave me; and I ought not to omit mentioning Mr. Banks, Dr. Solander, General Carnoc, and Dr. Blagden, who all assisted at the experiment, during that blustering, unpleasant day, with a patience and activity that could only be inspired by a zeal for the improvement of knowledge, such especially as might possibly be of use to men in situations of distress.

I would wish you to communicate this to your ingenious friend, Mr. Farish, with my respects; and believe me to be, with sincere esteem, dear Sir,

Your most obedient humble servant,

B. FRANKLIN

TO JOSEPH PRIESTLEY

Throughout the American Revolution Franklin was a skillful propagandist for the American cause. The letter to Priestley here reprinted is representative of many others.

Joseph Priestley (1733-1804), famous chemist, was one of the group of liberals in England who favored the American cause. Franklin exchanged numerous letters with him.

Philadelphia, 3 October, 1775

Dear Sir:—I am to set out to-morrow for the camp, and, having just heard of this opportunity, can only write a line to say that I am well and hearty. Tell our dear good friend, [Dr. Price,] who sometimes has his doubts and despondencies about our firmness, that America is determined and unanimous;

16-17. **Banks . . . Blagden**—Joseph (later Sir Joseph) Banks (1743-1820), a member of the Royal Society and later its president, had just returned (May 4, 1771) with Cook from the East Indies. Daniel C. Solander (1736-1782), also a member of the Royal Society, had accompanied him. Charles (later Sir Charles) Blagden (1748-1820) was elected to the Royal Society five days after this letter was written; he was the friend of Banks. General Carnoc cannot be identified, though Lazare-Hippolyte-Marguerite Carnot (1753-1823), then a lieutenant of French engineers, was stationed at Calais at this period. Associations like these testify to Franklin's European importance. 17. **assisted**—*assister* (Fr.): to be present at. 26. **set out**—Franklin was appointed one of a committee of three to confer with Washington, the Continental Army then being at Cambridge, on means of its support. 28. **Dr. Price**—Dr. Richard Price (1723-1791), like Priestley, was one of the group of intellectual radicals who supported revolutionary doctrines. He is remembered as a pamphleteer.

a very few Tories and placemen excepted, who will probably soon export themselves. Britain, at the expense of three millions, has killed one hundred and fifty Yankees this campaign, which is twenty thousand pounds a head; and at Bunker's Hill she gained a mile of ground, half of which she lost again by our taking post on Ploughed Hill. During the same time sixty thousand children have been born in America. From these *data* his mathematical head will easily calculate the time and expense necessary to kill us all, and conquer our whole territory. My sincere respects to ——, and to the club of honest Whigs at ——. Adieu. I am ever yours most affectionately.

B. FRANKLIN

FROM THE COUNT DE SCHAUMBERG TO THE BARON HOHENDORF, COMMANDING THE HESSIAN TROOPS IN AMERICA

Besides propaganda in private letters, Franklin also issued pieces like the famous "Sale of the Hessians," which cleverly misrepresented the facts, in favor of the American cause. The real truth concerning the enlistment of Hessian soldiers for the American War can be found in such an article as J. G. Rosengarten's "A Defence of the Hessians," *Pennsylvania Magazine of History and Biography,* Vol. XXIII, pp. 157-83, or in Chapter VII of C. H. Van Tyne, *The War of Independence,* Houghton Mifflin, 1929. The Elector of Hesse-Cassel, Friedrich or Frederick II, seems to have been a relatively conscientious ruler, but there was a widespread belief, of which Franklin takes advantage in this "letter," that he pocketed the money earned by his troops. The personages of Franklin's letter are, of course, imaginary, though the names are real. From the present letter it appears that the Count de Schaumberg, who has hired the troops out to Great Britain, will be paid a bonus upon the death of every soldier. Hence, his elation at the deaths.

Rome, 18 February, 1777.

Monsieur le Baron:—On my return from Naples, I received at Rome your letter of the 27th December of last year. I have learned with unspeakable pleasure the courage our troops exhibited at Trenton, and you cannot imagine my joy on being told that of the 1,950 Hessians engaged in the fight, but 345 escaped. There were just 1,605 killed, and I cannot sufficiently commend your prudence in sending an exact list of the dead to my minister in London. This precaution was the more necessary, as the report sent to the English ministry does not give but 1,455 dead. This would make 483,450 florins instead of the

1. placemen—office-holders. **2. Britain, etc.**—Accuracy is of course not expected of a propagandist. Yankee losses at the battle of Bunker's Hill (fought on Breed's Hill, June 17, 1775) were 450. Franklin was apparently unaware that the British loss was 1,054. **5. Ploughed Hill**—The three hills, in order of nearness to Cambridge, are Breed's Hill, Bunker's Hill, and Ploughed Hill. Taking post on Ploughed Hill by the Americans had little effect on the British situation. **8-9. Whigs at ——**—According to Smyth, the London Coffeehouse, center of Whig interest, is meant. **14. Trenton**—On Christmas night, 1777, Washington's army made a surprise attack on 1,200 Hessian troops under Colonel Rahl stationed at Trenton, New Jersey. The American loss was 2 privates killed, 1 frozen to death, and 6 men wounded. Washington estimated that 20 or 30 Hessians were killed. Hessian prisoners numbered 918. Franklin's figures are exaggerated.

643,500 which I am entitled to demand under our convention. You will comprehend the prejudice which such an error would work in my finances, and I do not doubt you will take the necessary pains to prove that Lord North's list is false and yours correct.

The court of London objects that there were a hundred wounded who ought not to be included in the list, nor paid for as dead; but I trust you will not overlook my instructions to you on quitting Cassel, and that you will not have tried by human succor to recall to life the unfortunates whose days could not be lengthened but by the loss of a leg or an arm. That would be making them a pernicious present, and I am sure they would rather die than live in a condition no longer fit for my service. I do not mean by this that you should assassinate them; we should be humane, my dear Baron, but you may insinuate to the surgeons with entire propriety that a crippled man is a reproach to their profession, and that there is no wiser course than to let every one of them die when he ceases to be fit to fight.

I am about to send you some new recruits. Don't economize them. Remember glory before all things. Glory is true wealth. There is nothing degrades the soldier like the love of money. He must care only for honor and reputation, but this reputation must be acquired in the midst of dangers. A battle gained without costing the conqueror any blood is an inglorious success, while the conquered cover themselves with glory by perishing with their arms in their hands. Do you remember that of the 300 Lacedaemonians who defended the defile of Thermopylae, not one returned? How happy should I be could I say the same of my brave Hessians!

It is true that their king, Leonidas, perished with them; but things have changed, and it is no longer the custom for princes of the empire to go and fight in America for a cause with which they have no concern. And besides, to whom should they pay the thirty guineas per man if I did not stay in Europe to receive them? Then, it is necessary also that I be ready to send recruits to replace the men you lose. For this purpose I must return to Hesse. It is true, grown men are becoming scarcer there, but I will send you boys. Besides, the scarcer the commodity, the higher the price. I am assured that the women and little girls have begun to till our lands, and they get on not badly. You did right to send back to Europe that Dr. Crumerus who was so successful in curing dysentery. Don't bother with a man who is subject to looseness of the bowels. That disease makes bad soldiers. One coward will do more mischief in an engagement than ten brave men will do good. Better that they burst in their barracks than fly in a battle, and tarnish the glory of our arms. Besides, you know that they pay me as killed all who die from disease, and I don't get a farthing from runaways. My trip to Italy, which has cost

3. Lord North's—Frederick North, second Earl of Guilford (1732-1792), known as Lord North, was Prime Minister from 1770 to 1782, and was somewhat unfairly held responsible by the Americans for the events leading to the American Revolution. **7. Cassel**—In the eighteenth century Cassel was the capital city of the electorate of Hesse-Cassel. **26. princes of the empire**—The Landgrave of Hesse-Cassel was an elector of the Holy Roman Empire. **28. thirty guineas**—The exact subsidy which the Landgrave received is not known. Parliament voted almost £3,000,000 to Hesse-Cassel during the eight years of the war. **31. grown men are . . . scarcer**—Franklin undoubtedly exaggerates, though the drain on Hesse-Cassel, the population of which was about 300,000, was heavy, 17,000 soldiers being sent to America.

me enormously, makes it desirable that there should be a great mortality among them. You will therefore promise promotion to all who expose themselves; you will exhort them to seek glory in the midst of dangers; you will say to Major Maundorff that I am not at all content with his saving the 345 men who escaped the massacre at Trenton. Through the whole campaign he has not had ten men killed in consequence of his orders. Finally, let it be your principal object to prolong the war and avoid a decisive engagement on either side, for I have made arrangements for a grand Italian opera, and I do not wish to be obliged to give it up. Meantime I pray God, my dear Baron de Hohendorf, to have you in his holy and gracious keeping.

THE EPHEMERA

AN EMBLEM OF HUMAN LIFE

Some time after Franklin was installed at the Hôtel de Valentinois, Passy (then a suburb of Versailles), where he lived while he was one of the American representatives in France, he bought a small printing press and type, with which he printed short pieces of propaganda for the American cause, or short essays, known as "Bagatelles," for the amusement of his friends. The best known of these latter is "The Whistle." "The Ephemera," which is here reprinted, is, however, more searching in its philosophy, besides showing traces of that French wit which Franklin blended with his native humor. The piece was written in 1778; when it was printed is not exactly known; and, as is the case with many of Franklin's writings, the problem of the text is complicated. See L. S. Livingston, *Franklin and His Press at Passy*, Grolier Club, 1914, especially pp. 28-31.

The original French edition is headed by an "Avertissement du Traducteur" and the following paragraph, omitted in the English version:

"Madame B[rillon] est une Dame fort aimable, & qui possede [*sic*] un talent distingué pour la Musique; elle demeure à Passy où elle est en société avec M. Franklin. Ils avoient dans l'été de 1778 été [*sic*] passés une journée au *Moulin Joly* où ce même jour voltigeoit sur la riviere [*sic*] en essaim de ces petites mouches que l'on nomme Ephemeres, [*sic*] & que le peuple appelle de la Manne. M. Franklin les examina avec attention, & envoya le lendemain à Madame B[rillon] la lettre dont voici la traduction."

YOU MAY remember, my dear friend, that when we lately spent that happy day in the delightful garden and sweet society of the Moulin Joly, I stopt a little in one of our walks, and staid some time behind the company. We had been shown numberless skeletons of a kind of little fly, called an ephemera, whose successive generations, we were told, were bred and expired within the day. I happened to see a living company of them on a leaf,

11. **my dear friend**—Madame Brillon de Jouy, a young and attractive Frenchwoman, with whom Franklin was on intimate terms during his years at Passy. On their relations see *Writings*, Vol. X, pp. 408 ff., and Faÿ, *Franklin*, pp. 463-68. 12. **Moulin Joly**—an English garden on a little island in the Seine. See Franklin's letter to Carmichael, *Writings*, Vol. VIII, pp. 98-100.

who appeared to be engaged in conversation. You know I understand all the inferior animal tongues: my too great application of the study of them is the best excuse I can give for the little progress I have made in your charming language. I listened through curiosity to the discourse of these little creatures; but as they, in their national vivacity, spoke three or four together, I could make but little of their conversation. I found, however, by some broken expressions that I heard now and then, they were disputing warmly on the merits of two foreign musicians, one a *cousin,* the other a *moscheto;* in which dispute they spent their time, seemingly as regardless of the shortness of life as if they had been sure of living a month. Happy people! thought I, you live certainly under a wise, just, and mild government, since you have no public grievances to complain of, nor any subject of contention but the perfections and imperfections of foreign music. I turned my head from them to an old grey-headed one, who was single on another leaf, and talking to himself. Being amused with his soliloquy, I put it down in writing, in hopes it will likewise amuse her to whom I am so much indebted for the most pleasing of all amusements, her delicious company and heavenly harmony.

"It was," said he, "the opinion of learned philosophers of our race, who lived and flourished long before my time, that this vast world, the Moulin Joly, could not itself subsist more than eighteen hours; and I think there was some foundation for that opinion, since, by the apparent motion of the great luminary that gives life to all nature, and which in my time has evidently declined considerably towards the ocean at the end of our earth, it must then finish its course, be extinguished in the waters that surround us, and leave the world in cold and darkness, necessarily producing universal death and destruction. I have lived seven of those hours, a great age, being no less than four hundred and twenty minutes of time. How very few of us continue so long! I have seen generations born, flourish, and expire. My present friends are the children and grandchildren of the friends of my youth, who are now, alas, no more! And I must soon follow them; for, by the course of nature, though still in health, I cannot expect to live above seven or eight minutes longer. What now avails all my toil and labor, in amassing honey-dew on this leaf, which I cannot live to enjoy! What the political struggles I have been engaged in, for the good of my compatriot inhabitants of this bush, or my philosophical studies for the benefit of our race in general! for, in politics, what can laws do without morals? Our present race of ephemeræ will in a course of minutes become corrupt, like those of other and older bushes, and consequently as wretched. And in philosophy how small our progress! Alas! art is long, and life is short! My friends would comfort me with the idea of a name, they say, I shall leave behind me; and they tell me I have lived long enough to nature and to glory. But what will fame be to an ephemera who no longer exists? And what will

3-4. your charming language—Madame Brillon sometimes corrected Franklin's French but, finding that in his anxiety to be correct, his style was losing savor, she advised him to forget the rules and write as he felt. **8. cousin . . . moscheto**—*cousin,* gnat; *moscheto,* mosquito. In 1778 Paris was divided between the adherents of Piccini, who represented the conventional Italianate music, and those of Gluck, the founder of modern opera and representative of the German school. **17. heavenly harmony**—Madame Brillon "has, among other elegant accomplishments, that of an excellent musician." (Franklin to Carmichael, *loc. cit.*)

become of all history in the eighteenth hour, when the world itself, even the whole Moulin Joly, shall come to its end, and be buried in universal ruin?"

To me, after all my eager pursuits, no solid pleasures now remain, but the reflection of a long life spent in meaning well, the sensible conversation of a few good lady ephemeræ, and now and then a kind smile and a tune from the ever amiable *Brillante.*

B. FRANKLIN

TO MRS. SARAH BACHE

While Franklin wrote much in a formal and technical vein on political problems, the greater part of this writing is for the special student; but, as illustrating his attitude towards democracy, the letter to his daughter in which he discusses with characteristic humor the Society of the Cincinnati has been chosen. The text is modernized.

Franklin's daughter, Sarah (1744-1808), to whom many of his most charming letters are written, married in 1767 Richard Bache, a prominent American business man.

Passy, 26 January, 1784

My Dear Child:—Your care in sending me the newspapers is very agreeable to me. I received by Captain Barney those relating to the *Cincinnati.* My opinion of the institution cannot be of much importance. I only wonder that, when the united wisdom of our nation had, in the Articles of Confederation, manifested their dislike of establishing ranks of nobility, by authority either of the Congress or of any particular state, a number of private persons should think proper to distinguish themselves and their posterity, from their fellow-citizens, and form an order of *hereditary knights,* in direct opposition to the solemnly declared sense of their country! I imagine it must be likewise contrary to the good sense of most of those drawn into it by the persuasion of its projectors, who have been too much struck with the ribbands and crosses they have seen hanging to the buttonholes of foreign officers. And I suppose those who disapprove of it have not hitherto given it much opposition, from a principle somewhat like that of your good mother, relating to punctilious persons, who are always exacting little observances of respect: that, *"if people can be pleased with small matters, it is a pity but they should have them."*

In this view, perhaps, I should not myself, if my advice had been asked,

6. Brillante—that is, Madame Brillon. **10. Barney**—Joshua Barney (1759-1818), with John Paul Jones, the most brilliant naval officer in the little American navy. **10. Cincinnati**—The Society of the Cincinnati was organized May 13, 1783, by the officers of the Continental army, near Fishkill, New York, with the following object: "To perpetuate as well the remembrance of this vast event as the mutual friendships which have been formed under the pressure of common danger . . . the officers of the American army do hereby, in the most solemn manner, associate, constitute, and combine themselves into one society of friends to endure as long as they shall endure, or any of their closest male posterity, and in failure thereof, the collateral branches who may be deemed worthy of becoming its supports and members." Because most of the officers would be returning to their farms, the name came from Lucius Quintius Cincinnatus, who is famous in Roman history for the same procedure. The first meeting was held May 7, 1784. Despite the fact that Washington was the first president, the society almost immediately became unpopular, and ceased to exist, though it has since (1893) been revived. **14. Congress**—the Congress sitting under the Articles of Confederation. **16. hereditary knights**—The expression is ironical; the Cincinnati contemplated no order of knighthood.

have objected to their wearing their ribband and badge according to their fancy, though I certainly should to the entailing it as an honor on their posterity. For honour, worthily obtained (as for example that of our officers), is in its nature a *personal* thing, and incommunicable to any but those who had some in obtaining it. Thus among the Chinese, the most ancient, and from long experience the wisest of nations, honour does not *descend,* but *ascends.* If a man from his learning, his wisdom, or his valour, is promoted by the emperor to the rank of Mandarin, his parents are immediately entitled to all the same ceremonies of respect from the people that are established as due to the Mandarin himself; on the supposition that it must have been owing to the education, instruction, and good example afforded him by his parents, that he was rendered capable of serving the public.

This *ascending* honour is therefore useful to the state, as it encourages parents to give their children a good and virtuous education. But the *descending honour,* to posterity who could have no share in obtaining it, is not only groundless and absurd, but often hurtful to that posterity, since it is apt to make them proud, disdaining to be employed in useful arts, and thence falling into poverty, and all the meannesses, servility, and wretchedness attending it; which is the present case with much of what is called the *noblesse* in Europe. Or if, to keep up the dignity of the family, estates are entailed entire on the eldest male heir, another pest to industry and improvement of the country is introduced, which will be followed by all the odious mixture of pride and beggary, and idleness, that have half depopulated [and *decultivated*] Spain; occasioning continual extinction of families by the discouragements of marriage [and neglect in the improvement of estates].

I wish, therefore, that the Cincinnati, if they must go on with their project, would direct the badges of their order to be worn by their parents, instead of handing them down to their children. It would be a good precedent, and might have good effects. It would also be a kind of obedience of the fourth commandment, in which God enjoins us to *honour* our father and mother, but has nowhere directed us to honour our children. And certainly no mode of honouring those immediate authors of our being can be more effectual, than that of doing praiseworthy actions, which reflect honour on those who gave us our education; or more becoming, than that of manifesting, by some public expression or token, that it is to their instruction and example we ascribe the merit of those actions.

But the absurdity of *descending honours* is not a mere matter of philosophical opinion; it is capable of mathematical demonstration. A man's son, for

1. ribband and badge—The emblem of the society was a badge suspended from a light-blue ribbon edged with white, suggesting the union of French and American forces. The badge displays an eagle; Cincinnatus receiving a sword from three Roman Senators, his wife, his cottage, and his plow in the background. This is surrounded by the Latin motto: *Omnia Relinquit Servare Rempublicam*—"He left all to serve the republic." On the reverse of the medal is a rising sun, a city with open gates and vessels entering the harbor, and Fame crowning Cincinnatus with a wreath inscribed *Virtutis Praemium*—"The reward of integrity." Below these are joined hands supporting a heart inscribed *Esto Perpetua*—"Be everlasting." These details make clear Franklin's various references. **23. and decultivated**—Passages in brackets were added to the original draft, now in the Library of Congress (Smyth). **38. mathematical demonstration**—Franklin liked to amuse himself with mathematical games like the making of magic squares and so on. See the index to *Writings* under "Magical circles" and "Magical squares."

instance, is but half of his family, the other half belonging to the family of his wife. His son, too, marrying into another family, his share in the grandson is but a fourth; in the great-grandson, by the same process, it is but an eighth; in the next generation a sixteenth; the next a thirty-second; the next a sixty-fourth; the next an hundred and twenty-eighth; the next a two hundred and fifty-sixth; and the next a five hundred and twelfth. Thus in nine generations, which will not require more than 300 years (no very great antiquity for a family), our present Chevalier of the Order of Cincinnatus's share in the then existing knight will be but a five hundred and twelfth part; which, allowing the present certain fidelity of American wives to be insured down through all those nine generations, is so small a consideration, that methinks no reasonable man would hazard for the sake of it the disagreeable consequences of the jealousy, envy, and ill will of his countrymen.

Let us go back with our calculation from this young noble, the 512th part of the present knight, through his nine generations, till we return to the year of the institution. He must have had a father and a mother, they are two; each of them had a father and a mother, they are four. Those of the next preceding generation will be eight, the next sixteen, the next thirty-two, the next sixty-four, the next one hundred and twenty-eight, the next two hundred and fifty-six, and the ninth in this retrocession five hundred and twelve, who must be now existing, and all contribute their proportion of their future *Chevalier de Cincinnatus*. Those, with the rest, make together as follows:

	2
	4
	8
	16
	32
	64
	128
	256
	512
Total	1022

One thousand and twenty-two men and women, contributors to the formation of one knight. And, if we are to have a thousand of these future knights, there must be now and hereafter existing one million and twenty-two thousand fathers and mothers who are to contribute to their production, unless a part of the number are employed in making more knights than one. Let us strike off, then, the 22,000, on the supposition of this double employ, and then consider whether, after a reasonable estimation of the number of rogues, and fools, and royalists and scoundrels, and prostitutes that are mixed with, and help to make up, necessarily their million of predecessors, posterity will have much reason to boast of the noble blood of the then existing set of Chevaliers de Cincinnatus. [The future genealogists, too, of these Chevaliers, in proving the lineal descent of their honour through so many generations (even

supposing honour capable in its nature of descending), will only prove the small share of this honour which can be justly claimed by any one of them, since the above simple process in arithmetic makes it quite plain and clear that, in proportion as the antiquity of the family shall augment, the right to the honour of the ancestor will diminish; and a few generations more would reduce it to something so small as to be very near an absolute nullity.] I hope, therefore, that the Order will drop this part of their project, and content themselves, as the Knights of the Garter, Bath, Thistle, St. Louis, and other Orders of Europe do, with a life enjoyment of their little badge and ribband, and let the distinction die with those who have merited it. This, I imagine, will give no offence. For my own part, I shall think it a convenience when I go into a company where there may be faces unknown to me, if I discover, by this badge, the persons who merit some particular expression of my respect; and it will save modest virtue the trouble of calling for our regard by awkward roundabout intimations of having been heretofore employed as officers in the Continental service.

The gentleman, who made the voyage to France to provide the ribands and medals, has executed his commission. To me they seem tolerably done; but all such things are criticised. Some find fault with the Latin, as wanting classical elegance and correctness; and, since our nine universities were not able to furnish better Latin, it was pity, they say, that the mottoes had not been in English. Others object to the title, as not properly assumable by any but Gen. Washington, [and a few others] who served without pay. Others object to the *bald eagle* as looking too much like a *dindon,* or turkey. For my own part, I wish the bald eagle had not been chosen as the representative of our country; he is a bird of bad moral character; he does not get his living honestly; you may have seen him perched on some dead tree where, too lazy to fish for himself, he watches the labour of the fishing-hawk; and when that diligent bird has at length taken a fish, and is bearing it to his nest for the support of his mate and young ones, the bald eagle pursues him and takes it from him. With all this injustice he is never in good case; but, like those among men who live by sharping and robbing, he is generally poor, and often very lousy. Besides, he is a rank coward; the little *kingbird,* not bigger than a sparrow, attacks him boldly and drives him out of the district. He is therefore by no means a proper emblem for the brave and honest Cincinnati of America, who have driven all the *kingbirds* from our country; though exactly fit for that order of knights which the French call *Chevaliers d'Industrie.*

I am, on this account, not displeased that the figure is not known as a bald eagle, but looks more like a turkey. For in truth, the turkey is in comparison a much more respectable bird, and withal a true original native of America. Eagles have been found in all countries, but the turkey was peculiar to ours; the first of the species seen in Europe being brought to France by the Jesuits

8. Garter . . . St. Louis—The Knights of the Garter and the Knights of the Bath are English in origin, the Order of the Thistle is Scotch, and that of St. Louis is French. **20. nine universities**—Franklin apparently has in mind the schools which developed as Harvard, Yale, Princeton, Dartmouth, Rutgers, Columbia, Brown, Pennsylvania, William and Mary. **37. Chevaliers d'Industrie**—those who live by their wits.

from Canada, and served up at the wedding table of Charles the Ninth. He is [though a little vain and silly, it is true, but not the worse emblem for that,] a bird of courage, and would not hesitate to attack a grenadier of the British Guards, who should presume to invade his farmyard with a *red* coat on.

I shall not enter into the criticisms made upon their Latin. The gallant officers of America may not have the merit of being great scholars, but they undoubtedly merit much, as brave soldiers, from their country, which should therefore not leave them merely to *fame* for their *"virtutis premium,"* which is one of their Latin mottoes. Their *"esto perpetua,"* another, is an excellent wish, if they meant it for their country; bad, if intended for their order. The states should not only restore to them the *omnia* of their first motto, which many of them have left and lost, but pay them justly, and reward them generously. They should not be suffered to remain, with [all] their new-created chivalry, *entirely* in the situation of the gentleman in the story, which their *omnia reliquit* reminds me of. You know every thing makes me recollect some story. He had built a very fine house, and thereby much impaired his fortune. He had a pride, however, in showing it to his acquaintance. One of them, after viewing it all, remarked a motto over the door "ŌIA VANITAS." "What," says he, "is the meaning of this ŌIA? It is a word I don't understand." "I will tell you," said the gentleman; "I had a mind to have the motto cut on a piece of smooth marble, but there was not room for it between the ornaments, to be put in characters large enough to read. I therefore made use of a contraction anciently very common in Latin manuscripts, whereby the *m*'s and *n*'s in words are omitted, and the omission noted by a line above, which you may see there; so that the word is *omnia,* OMNIA VANITAS." "Oh," says his friend, "I now comprehend the meaning of your motto, it relates to your edifice; and signifies, that, if you have abridged your *omnia,* you have, nevertheless, left your VANITAS legible at full length." I am, as ever, your affectionate father,

B. FRANKLIN

1. **Charles the Ninth**—On this passage William Temple Franklin has the following note: "A learned friend of the Editor's has observed to him, that this is a mistake, as *Turkeys* were found in great plenty by Cortes, when he invaded and conquered Mexico, before the time of Charles the Twelfth. That this, and their being brought to old Spain, is mentioned by Peter Martyr of Anghiera, who was Secretary of the Council to the Indies, established immediately after the discovery of America, *and personally acquainted with Columbus.*" 12. **pay them justly**—The problem of paying the Continental army was one of the most pressing problems before the country, which had seen, and was to see, mutiny among its troops.

JOHN WOOLMAN

1720-1772

1720 Born October 19, at Ancocas (Rancocas), New Jersey, the son of Samuel and Elizabeth (Burr) Woolman, the fourth of thirteen children.
1740–1741 Employed to "tend shop" at Mount Holly, New Jersey. First stirrings of antislavery sentiment.
1743–1746 Apprenticeship in tailoring, ending in the setting up of a tailor's shop in Mount Holly.
1743 Set apart by the "Monthly Meeting of Burlington" as the Quaker equivalent of a minister.
1746 May to August, first visit to Virginia.
1747 Death of Elizabeth, his favorite sister. First visit to New England, March-July.
1749 Married Sarah Ellis, October 18.
1750 Wrote *Some Considerations on the Keeping of Negroes* (Part II, 1760).
1757 Second journey into the Southern colonies (May-July).
1758 Wrote *Considerations on Pure Wisdom and Human Policy.*
1760 Journey through Long Island and into New England (April to August).
1763 Wrote *A Plea for the Poor* (published, 1793). Visited the Indians.
1765–1768 Various journeys through New Jersey and Maryland.
1769 Preparations to visit the West Indies ended by illness.
1770 Published *Considerations on the True Harmony of Mankind.*
1772 May 1, sailed for England. Died October 7, at York, of the smallpox.
1774 (and 1775) *The Works of John Woolman* published, including the *Journal,* begun in 1765.

BIOGRAPHIES: W. Teignmouth Shore, *John Woolman: His Life and Our Times,* Macmillan, 1913; Frank Vigor Morley, *The Tailor of Mount Holly: John Woolman,* London, Friends Book Center, 1926; Janet Whitney, *John Woolman: American Quaker,* Atlantic Monthly Press, 1942. There is an excellent brief life prefixed to Amelia M. Gummere's edition of the *Journal.*

BIBLIOGRAPHY AND EDITIONS: The best edition of the *Journal of John Woolman* is that edited by Amelia M. Gummere, Macmillan, 1922. Excellent also is Vida D. Scudder, ed., *The Journal and Other Writings of John Woolman,* Everyman's Library, 1910. The best bibliographies are those in Gummere and Whitney, noted above, but see also *Literary History of the United States,* Vol. III, pp. 787-88.

From the persecution of the Quakers in seventeenth-century New England to the publication by the Yale University Press in 1949 of *The United States and the Soviet Union: Some Quaker Proposals for Peace,* the Society of Friends has made an impress upon American thought and culture out of proportion to their modest fraction

of the total population in any decade. Not to speak of Whittier, the Quaker tradition touches Whitman among the greater figures, and among the lesser, the literary history of Pennsylvania bears witness to their work. Among writers of more than national fame John Woolman, whose *Journal* Charles Lamb extravagantly admired, must always be counted—indeed, it is said his renown is greater in England than it is in the United States. Aside from his formulation of antislavery sentiments, his proposals for the poor, his plea for sectarian tolerance, and his modesty and self-respect, Woolman is important for his stylistic excellence—his prose is as limpid as spring water—and for the sweetness of his religious mysticism, never possessing the well-nigh sensual qualities of other mystics, but always firm in its trust in the Divine purposes. His *Journal* is also especially valuable because while it traces the development of a mystic, it never loses sure contact with the practical business of the world. Along with Jonathan Edwards, the great Puritan, John Woolman, the great Friend, is America's best contribution to religious autobiography.

[THE EDUCATION OF A QUAKER]

The selection from John Woolman, here reprinted, is Chapter I of *A Journal of the Life and Travels of John Woolman, in the Service of the Gospel.* The text of the *Journal* presents certain complications, but that here given is from the *Works of John Woolman in Two Parts,* published in London, 1795, the particular edition followed being that got out by T. Letchworth. Apparently other London booksellers simultaneously, or almost simultaneously, set up their own "copy," the result being that the edition of the *Journal* in Everyman's Library, though it also depends upon a London text, differs in a variety of ways (punctuation, capitalization, paragraphing, and spelling) from the one here presented. The title used has been given in order to call attention to the fact that virtually all of Woolman's mature interests appeared before he was twenty-four years old.

I HAVE often felt a motion of love to leave some hints in writing of my experience of the goodness of God; and now, in the thirty-sixth year of my age, I begin this work.

I was born in Northampton, in Burlington county, West-Jersey, in the year 1720; and before I was seven years old I began to be acquainted with the operations of divine love. Through the care of my parents, I was taught to read nearly as soon as I was capable of it; and, as I went from school one seventh day, I remember, while my companions went to play by the way, I went forward out of sight, and, sitting down, I read the 22d chapter of the Revelations. "He shewed me a pure river of water of life, clear as chrystal, proceeding out of the throne of God and of the lamb, &c." and, in reading it, my mind was drawn to seek after that pure habitation, which, I then believed, God had prepared for his servants. The place where I sat, and the sweetness that attended my mind, remain fresh in my memory.

This, and the like gracious visitations, had that effect upon me, that when boys used ill language it troubled me; and, through the continued mercies of God, I was preserved from it.

4. **West-Jersey**—New Jersey was originally composed of East Jersey and West Jersey, and commonly referred to as "The Jerseys." **9-10. 22d . . . Revelations**—Rev. 22:1.

The pious instructions of my parents were often fresh in my mind when I happened to be among wicked children, and were of use to me. My parents, having a large family of children, used frequently, on first days after meeting, to put us to read in the holy scriptures, or some religious books, one after another, the rest sitting by without much conversation; which, I have since often thought, was a good practice. From what I had read and heard, I believed there had been, in past ages, people who walked in uprightness before God, in a degree exceeding any that I knew, or heard of, now living: and the apprehension of there being less steadiness and firmness, amongst people in this age than in past ages, often troubled me while I was a child.

A thing remarkable in my childhood was, that once, going to a neighbour's house, I saw, on the way, a robin sitting on her nest, and as I came near she went off, but, having young ones, flew about, and with many cries expressed her concern for them; I stood and threw stones at her, till, one striking her, she fell down dead: at first I was pleased with the exploit, but after a few minutes was seized with horror, as having, in a sportive way, killed an innocent creature while she was careful for her young: I beheld her lying dead, and thought those young ones, for which she was so careful, must now perish for want of their dam to nourish them; and, after some painful considerations on the subject, I climbed up the tree, took all the young birds, and killed them; supposing that better than to leave them to pine away and die miserably: and believed, in this case, that scripture-proverb was fulfilled, "The tender mercies of the wicked are cruel." I then went on my errand, but, for some hours, could think of little else but the cruelties I had committed, and was much troubled. Thus He, whose tender mercies are over all his works, hath placed a principle in the human mind, which incites to exercise goodness towards every living creature; and this being singly attended to, people become tender-hearted and sympathising; but, being frequently and totally rejected, the mind becomes shut up in a contrary disposition.

About the twelfth year of my age, my father being abroad, my mother reproved me for some misconduct, to which I made an undutiful reply; and, the next first day, as I was with my father returning from meeting, he told me he understood I had behaved amiss to my mother, and advised me to be more careful in future. I knew myself blameable, and in shame and confusion remained silent. Being thus awakened to a sense of my wickedness, I felt remorse in my mind, and, getting home, I retired and prayed to the Lord to forgive me; and do not remember that I ever, after that, spoke unhandsomely to either of my parents, however foolish in some other things.

Having attained the age of sixteen years, I began to love wanton company; and though I was preserved from profane language, or scandalous conduct, still I perceived a plant in me which produced much wild grapes; yet my merciful Father forsook me not utterly, but, at times, through his grace, I was brought seriously to consider my ways; and the sight of my backslidings affected me with sorrow; but, for want of rightly attending to the reproofs of

3. first days . . . meeting—Quaker expressions. "First day" is Sunday, and "meeting" is a church meeting for religious purposes. **22. tender mercies**—*cf.* Prov. 12:10. **27. singly**—in the sense of uninterruptedly. **39. wanton**—in the sense of light-hearted.

instruction, vanity was added to vanity, and repentance to repentance: upon the whole, my mind was more and more alienated from the truth, and I hastened toward destruction. While I meditate on the gulph towards which I travelled, and reflect on my youthful disobedience, for these things I weep, mine eyes run down with water.

Advancing in age, the number of my acquaintances increased, and thereby my way grew more difficult; though I had found comfort in reading the holy scriptures, and thinking on heavenly things, I was now estranged therefrom: I knew I was going from the flock of Christ, and had no resolution to return; hence serious reflections were uneasy to me, and youthful vanities and diversions my greatest pleasure. Running in this road I found many like myself; and we associated in that which is the reverse to true friendship.

But in this swift race it pleased God to visit me with sickness, so that I doubted of recovering; and then did darkness, horror, and amazement, with full force, seize me, even when my pain and distress of body was very great. I thought it would have been better for me never to have had a being, than to see the day which I now saw. I was filled with confusion; and in great affliction, both of mind and body, I lay and bewailed myself. I had not confidence to lift up my cries to God, whom I had thus offended; but, in a deep sense of my great folly, I was humbled before him; and, at length, that word which is as a fire and a hammer, broke and dissolved my rebellious heart, and then my cries were put up in contrition; and in the multitude of his mercies I found inward relief, and felt a close engagement, that, if he was pleased to restore my health, I might walk humbly before him.

After my recovery, this exercise remained with me a considerable time; but, by degrees, giving way to youthful vanities, they gained strength, and, getting with wanton young people, I lost ground. The Lord had been very gracious, and spoke peace to me in the time of my distress; and I now most ungratefully turned again to folly; on which account, at times, I felt sharp reproof. I was not so hardy as to commit things scandalous; but to exceed in vanity, and promote mirth, was my chief study. Still I retained a love for pious people, and their company brought an awe upon me. My dear parents, several times, admonished me in the fear of the Lord, and their admonition entered into my heart, and had a good effect for a season; but, not getting deep enough to pray rightly, the tempter, when he came, found entrance. I remember once, having spent a part of the day in wantonness, as I went to bed at night, there lay in a window, near my bed, a Bible, which I opened, and first cast my eye on this text, "We lie down in our shame, and our confusion covers us": this I knew to be my case: and, meeting with so unexpected a reproof, I was somewhat affected with it, and went to bed under remorse of conscience; which I soon cast off again.

Thus time passed on: my heart was replenished with mirth and wantonness, and pleasing scenes of vanity were presented to my imagination, till I attained the age of eighteen years; near which time I felt the judgements of God, in my soul, like a consuming fire; and, looking over my past life, the prospect was moving.—I was often sad, and longed to be delivered from those

4. things I weep—*cf.* Lam. 1:16. **38. We lie down**—*cf.* Jer. 3:25.

vanities; then again, my heart was strongly inclined to them, and there was in me a sore conflict: at times I turned to folly, and then again, sorrow and confusion took hold of me. In a while, I resolved totally to leave off some of my vanities; but there was a secret reserve, in my heart, of the more refined part of them, and I was not low enough to find true peace. Thus, for some months, I had great troubles; there remaining in me an unsubjected will, which rendered my labours fruitless, till at length, through the merciful continuance of heavenly visitations, I was made to bow down in spirit before the Lord. I remember one evening I had spent some time in reading a pious author; and walking out alone, I humbly prayed to the Lord for his help, that I might be delivered from all those vanities which so ensnared me. Thus, being brought low, he helped me; and, as I learned to bear the cross, I felt refreshment to come from his presence; but, not keeping in that strength which gave victory, I lost ground again; the sense of which greatly affected me: and I sought desarts and lonely places, and there, with tears, did confess my sins to God, and humbly craved help of him. And I may say, with reverence, he was near to me in my troubles, and in those times of humiliation opened my ear to discipline. I was now led to look seriously at the means by which I was drawn from the pure truth, and learned this, that, if I would live in the life which the faithful servants of God lived in, I must not go into company as heretofore in my own will; but all the cravings of sense must be governed by a divine principle. In times of sorrow and abasement these instructions were sealed upon me, and I felt the power of Christ prevail over selfish desires, so that I was preserved in a good degree of steadiness; and, being young, and believing at that time that a single life was best for me, I was strengthened to keep from such company as had often been a snare to me.

I kept steadily to meetings; spent first day afternoons chiefly in reading the scriptures and other good books; and was early convinced, in my mind, that true religion consisted in an inward life, wherein the heart doth love and reverence God the Creator, and learns to exercise true justice and goodness, not only toward all men, but also toward the brute creatures.—That as the mind was moved, by an inward principle, to love God as an invisible incomprehensible Being, by the same principle it was moved to love him in all his manifestations in the visible world.—That, as by his breath the flame of life was kindled in all animal sensible creatures, to say we love God, and, at the same time exercise cruelty toward the least creature, is a contradiction in itself.

I found no narrowness respecting sects and opinions; but believed, that sincere upright-hearted people, in every society who truly love God, were accepted of him.

As I lived under the cross, and simply followed the openings of truth, my mind, from day to day, was more enlightened; my former acquaintance were left to judge of me as they would, for I found it safest for me to live in private, and keep these things sealed up in my own breast. While I silently ponder on that change wrought in me, I find no language equal to it, nor any means to convey to another a clear idea of it. I looked upon the works of God in this visible creation, and an awfulness covered me; my heart was tender and often

40. **openings**—revelations.

contrite, and universal love to my fellow-creatures increased in me: this will be understood by such as have trodden the same path. Some glances of real beauty may be seen in their faces, who dwell in true meekness.

There is a harmony in the sound of that voice to which divine love gives utterance, and some appearance of right order in their temper and conduct, whose passions are regulated; yet all these do not fully shew forth that inward life to such as have not felt it: But this white stone and new name is known rightly to such only as have it.

Though I have been thus strengthened to bear the cross, I still found myself in great danger, having many weaknesses attending me, and strong temptations to wrestle with; in the feeling whereof I frequently withdrew into private places, and often with tears besought the Lord to help me, whose gracious ear was open to my cry.

All this time I lived with my parents, and wrought on the plantation; and, having had schooling pretty well for a planter, I used to improve it in winter-evenings, and other leisure times; and, being now in the twenty-first year of my age, a man, in much business at shop-keeping and baking, asked me, if I would hire with him to tend shop and keep books. I acquainted my father with the proposal; and, after some deliberation, it was agreed for me to go.

At home I had lived retired; and now, having a prospect of being much in the way of company, I felt frequent and fervent cries in my heart to God, the father of mercies, that he would preserve me from all corruption; that in this more publick employment, I might serve him, my gracious Redeemer, in that humility and self-denial, with which I had been, in a small degree, exercised in a more private life. The man, who employed me, furnished a shop in Mount-Holly, about five miles from my father's house, and six from his own; and there I lived alone, and tended his shop. Shortly after my settlement here I was visited by several young people, my former acquaintance, who knew not but vanities would be as agreeable to me now as ever; and, at these times, I cried to the Lord, in secret, for wisdom and strength; for I felt myself encompassed with difficulties, and had fresh occasion to bewail the follies of time past, in contracting a familiarity with libertine people: and, as I had now left my father's house outwardly, I found my heavenly Father to be merciful to me beyond what I can express.

By day I was much amongst people, and had many trials to go through; but, in the evenings, I was mostly alone, and may with thankfulness acknowledge, that, in those times, the spirit of supplication was often poured upon me; under which I was frequently exercised, and felt my strength renewed.

In a few months after I came here, my master bought several Scotchmen, servants from on-board a vessel, and brought them to Mount-Holly to sell; one of which was taken sick, and died.

In the latter part of his sickness, he, being delirious, used to curse and swear most sorrowfully; and, the next night after his burial, I was left to sleep alone in the same chamber where he died; I perceived in me a timorousness; I knew,

7. white stone.—*cf.* Rev. 2:17. **14. plantation**—farm. **39. bought . . . Scotchmen**—that is, the Scotchmen were indentured servants who, in order to pay their passage to America, sold their time, usually for a period of four years, to anybody who would hire them. This indenture was transferable by sale.

however, I had not injured the man, but assisted in taking care of him according to my capacity; and was not free to ask any one, on that occasion, to sleep with me: nature was feeble; but every trial was a fresh incitement to give myself up wholly to the service of God, for I found no helper like him in times of trouble. After a while, my former acquaintance gave over expecting me as one of their company; and I began to be known to some whose conversation was helpful to me: and now, as I had experienced the love of God, through Jesus Christ, to redeem me from many pollutions, and to be a succour to me through a sea of conflicts, with which no person was fully acquainted; and as my heart was often enlarged in this heavenly principle, I felt a tender compassion for the youth, who remained entangled in snares, likes those which had entangled me from one time to another: this love and tenderness increased; and my mind was more strongly engaged for the good of my fellow-creatures. I went to meetings in an awful frame of mind, and endeavoured to be inwardly acquainted with the language of the true Shepherd; and, one day, being under a strong exercise of spirit, I stood up, and said some words in a meeting; but, not keeping close to the divine opening, I said more than was required of me; and being soon sensible of my error, I was afflicted in mind some weeks, without any light or comfort, even to that degree that I could not take satisfaction in any thing: I remembered God, and was troubled, and, in the depth of my distress, he had pity upon me, and sent the Comforter: I then felt forgiveness for my offence, and my mind became calm and quiet, being truly thankful to my gracious Redeemer for his mercies; and, after this, feeling the spring of divine love opened, and a concern to speak, I said a few words in a meeting, in which I found peace; this, I believe, was about six weeks from the first time: and, as I was thus humbled and disciplined under the cross, my understanding became more strengthened to distinguish the pure spirit which inwardly moves upon the heart, and taught me to wait in silence sometimes many weeks together, until I felt that rise which prepares the creature.

From an inward purifying, and stedfast abiding under it, springs a lively operative desire for the good of others: all the faithful are not called to the public ministry; but whoever are, are called to minister of that which they have tasted and handled spiritually. The outward modes of worship are various; but, wherever any are true ministers of Jesus Christ, it is from the operation of his spirit upon their hearts, first purifying them, and thus giving them a just sense of the conditions of others.

This truth was clearly fixed in my mind; and I was taught to watch the pure opening, and to take heed, lest, while I was standing to speak, my own will should get uppermost, and cause me to utter words from worldly wisdom, and depart from the channel of the true gospel-ministry.

In the management of my outward affairs, I may say, with thankfulness, I found truth to be my support; and I was respected in my master's family, who came to live in Mount-Holly within two years after my going there.

About the twenty-third year of my age, I had many fresh and heavenly openings, in respect to the care and providence of the Almighty over his creatures

14. awful—solemn. **24. concern**—A "concern," to the Quakers, is an irresistible inward demand.

in general, and over man as the most noble amongst those which are visible. And being clearly convinced in my judgement, that to place my whole trust in God was best for me, I felt renewed engagements, that in all things I might act on an inward principle of virtue, and pursue worldly business no farther, than as truth opened my way therein.

About the time called Christmas, I observed many people from the country, and dwellers in town, who, resorting to public-houses, spent their time in drinking and vain sports, tending to corrupt one another; on which account I was much troubled. At one house, in particular, there was much disorder; and I believed it was a duty incumbent on me to go and speak to the master of that house. I considered I was young, and that several elderly friends in town had opportunity to see these things; but though I would gladly have been excused, yet I could not feel my mind clear.

The exercise was heavy: and as I was reading what the Almighty said to Ezekiel, respecting his duty as a watchman, the matter was set home more clearly; and then, with prayers and tears, I besought the Lord for his assistance, who in loving-kindness, gave me a resigned heart: then, at a suitable opportunity, I went to the public-house; and, seeing the man amongst much company, I went to him, and told him, I wanted to speak with him; so we went aside, and there, in the fear of the Almighty, I expressed to him what rested on my mind; which he took kindly, and afterward shewed more regard to me than before. In a few years afterwards he died, middle-aged; and I often thought that, had I neglected my duty in that case, it would have given me great trouble; and I was humbly thankful to my gracious Father, who had supported me herein.

My employer having a negro woman, sold her, and desired me to write a bill of sale, the man being waiting who bought her: the thing was sudden; and, though the thoughts of writing an instrument of slavery for one of my fellow-creatures felt uneasy, yet I remembered I was hired by the year, that it was my master who directed me to do it, and that it was an elderly man, a member of our society, who bought her; so, through weakness, I gave way, and wrote; but, at the executing it, I was so afflicted in my mind, that I said, before my master and the friend, that I believed slave-keeping to be a practice inconsistent with the Christian religion: this in some degree abated my uneasiness; yet, as often as I reflected seriously upon it, I thought I should have been clearer, if I had desired to have been excused from it, as a thing against my conscience; for such it was. And, some time after this, a young man, of our society, spoke to me to write a conveyance of a slave to him, he having lately taken a negro into his house: I told him I was not easy to write it; for, though many of our meeting and in other places kept slaves, I still believed the practice was not right, and desired to be excused from the writing. I spoke to him in good will; and he told me that keeping slaves was not altogether agreeable to his mind; but that the slave being a gift to his wife, he had accepted of her.

THOMAS PAINE

1737-1809

I. FAILURE (1737–1774)

1737 January 29, born at Thetford, England, the only son of Joseph and Frances Cocke Paine, the father being a Quaker stay-maker. Attended local grammar school.

1750–1754 Worked in father's shop; attempted to enlist on a privateer.

1756 Shipped on privateer *King of Prussia;* returned to London.

1758 Living in Dover.

1759 Living as a master stay-maker in Sandwich, Kent. September 27, married Mary Lambert, who died 1760.

1760 Living in Margate.

1764 December 1, appointed an officer in the excise; dismissed some time about 1766.

1768 February 19, reappointed an excise officer in Lewes, Sussex.

1771 March 26, married Elizabeth Ollive upon the death of her father, a tobacconist. Paine took over the business.

1772 Wrote *The Case of the Officers of the Excise,* an appeal to Parliament, not formally published until 1793. Lived mostly in London during the winter.

1774 April, Paine bankrupt. June, separated from wife for unknown reasons. August, dismissed from the excise. October, left for America at Franklin's suggestion, arriving November 30 at Philadelphia.

II. THE AMERICAN PATRIOT (1774–1787)

1775–1776 Associated with *The Pennsylvania Magazine or American Museum,* which he edited; contributed also to the *Pennsylvania Journal.* Paine now began that career of incessant propaganda, the collected results of which fill ten volumes of his *Works.*

1776 January 10, *Common Sense* published. Paine enlisted in a Pennsylvania division. September 19, appointed aide-de-camp to General Greene. December 19, published the first number of *The American Crisis,* reprinted as a pamphlet after appearing in the *Pennsylvania Journal.* The sixteenth and last *Crisis* appeared December 9, 1783.

1777 January 21, appointed secretary to a commission to treat with the Pennsylvania Indians. April 17, elected secretary of the Committee of Foreign Affairs of the Continental Congress.

1778 Autumn, Paine involved in attacks on Silas Deane, American commissioner to France.

1779 January 8, resigned as secretary. November 2, elected clerk of the Pennsylvania Assembly.

1780 July 4, made a Master of Arts by the University of Philadelphia. October, published *The Crisis Extraordinary.*

1781 February, sailed with Colonel John Laurens for France to negotiate a loan for the American cause, returning August 25.

1783 Having published much propaganda for the union of the colonies, Paine visited Rhode Island in that cause. Bought a house at Bordentown, New Jersey. Determined to devote himself to invention. During this period Paine received various gifts from Congress and the states, some in partial payment of services.

1785 Invented a smokeless candle.

1786 June, perfected models of an iron bridge without piers.

1787 April, sailed for France, arriving in May.

III. THE CITIZEN OF THE WORLD (1787–1802)

1787 May, visited Jefferson in Paris. Went to Thetford, returned to Paris, and went back to England in the autumn.

1788 August, British government granted a patent on his bridge.

1789 First bridge built under Paine's patent, later put in place June, 1790. Paine intimate with Whig leaders in London.

1790 Visited Paris to observe the Revolution. Given a key of the Bastille, which he sent to Washington after returning to London.

1791 February (and again in March) published *The Rights of Man* (Part I) in reply to Burke's *Reflections on the Late Revolution in France* (1789). Paine spent much of the year in Paris, where he was active in a republican club.

1792 February 17, Part II of *The Rights of Man* published. June 8, Paine summoned to stand trial as the author of a libelous work. The trial being postponed, Paine went secretly to Paris. September 6, he had been elected a member of the French Convention from Calais and three other departments. Took his seat September 21. October 11, appointed to the committee on drafting a constitution. December, outlawed from England.

1793 January 20, Paine attempted to speak against the execution of Louis XVI, incurring the hatred of the radicals. In October the fall of the Moderate (Girondin) party led to Paine's arrest December 27. Imprisoned in the Luxembourg. Part I of *The Age of Reason* written.

1794 January 27, Part I of *The Age of Reason* published. November 4, released from prison through the efforts of Monroe. Paine desperately ill.

1795 Paine convalescent at the Monroe home. Part II of *The Age of Reason* published. September 20, wrote *Letter to George Washington.*

1802 September 1, returned to America through the efforts of Jefferson, arriving at Baltimore October 30.

IV. OBLOQUY (1802–1809)

1802 Paine returned to feel the effects of the religious reaction in America, which branded him as an atheist. Lived at Bordentown, and then in New York City.

1805 January, living at New Rochelle, where an attempt was made to assassinate him. During these years Paine struggled to have his just claims on the American government recognized.

1806 In desperate financial straits and poor health. Denied opportunity to vote at New Rochelle on the ground he was not an American citizen.

1807 Part III of *The Age of Reason* published.

1808 Living in New York City in broken health.
1809 June 8, died in New York City.

BIOGRAPHIES: Most of the earlier lives are violently biased and inaccurate. The standard life is M. D. Conway, *Life of Thomas Paine,* Putnam, 1892, 2 vols. Later lives are by Van der Weyde (edition listed below), M. A. Best (Harcourt, Brace, 1927), Hesketh Pearson (Harper, 1937), Frank Smith (Stokes, 1938), and W. E. Woodward (Dutton, 1945).

BIBLIOGRAPHY AND EDITIONS: There is no standard bibliography but see *Literary History of the United States,* Vol. III, pp. 674-78. No collected edition is wholly satisfactory. See *The Writings of Thomas Paine,* ed. by M. D. Conway, Putnam, 1894-96, 4 vols.; *The Life and Works of Thomas Paine,* ed. by W. M. Van der Weyde, Thomas Paine National History Association, 1925, 10 vols. *Complete Writings,* ed. P. S. Foner, Citadel Press, 1945, 2 vols. *Selections from the Works of Thomas Paine,* ed. by A. W. Peach, Harcourt, Brace, 1928, and *Representative Selections from Thomas Paine,* ed. by H. H. Clark (American Writers Series) American Book Co., 1944, are good.

"The morning star of the Revolution," "the ragged philosopher," "a filthy little atheist"—such are some of the epithets that have been applied to him who is affectionately known as Tom Paine. No author in the roll of American writers has had a more striking success, or suffered so deeply from ingratitude and slander. A citizen of three nations, he was outlawed from England, imprisoned and in fear of death in France, and, though the greatest propagandist of the American Revolution, denied recognition in his later years as a national of the Republic. His writings (from which he received almost nothing) are among the most widely circulated productions of eighteenth-century authorship, and he died neglected by the country for which he had done so much, and relatively unknown.

The obloquy that he suffered was due to *The Age of Reason,* which happened to appear in the epoch of religious reaction following the French Revolution, and which, because of its outspoken attacks on Christianity, aroused the ire of the conservatives. Stripped of its hostility to the Bible, *The Age of Reason* is, however, nothing more than a statement of deistic principles in the light of the scientific theory of its day, and contains nothing which had not been formulated by others. Similarly, *The Rights of Man,* which drew down upon Paine the wrath of the English government, is simply a striking exposition of republican principles; the animus aroused by the pamphlets is due to Paine's outspoken attack on monarchical government. And the *Crisis* papers are a summation of what the radical element had been saying in America, mixed in with much propaganda designed to keep alive the courage of the Revolutionists.

If Paine is not an original thinker, he is none the less a striking and original writer. His genius lay in absorbing the ideas that others were fumbling to express, and in stating them in bold, direct, and unmistakable language which rises at times to eloquence, and which is studded with pithy epigrams. As a pamphleteer he is without his equal in American literature, and as a propagandist for the ideas he believed in, one of the three or four most influential in the history of the world. In him eighteenth-century prose in America reaches a pitch of clarity, force, and persuasiveness which his occasional syntactical infelicities do little to harm. Deism and republicanism never had a more eloquent advocate.

The text of Paine offers great difficulties owing to his liberality and carelessness in allowing his work to be pirated and reprinted; the tangle of editions has never been thoroughly straightened out. The editors base the text of the selections here given on that used by Professor Arthur W. Peach in his *Selections from Thomas Paine.*

THOUGHTS ON THE PRESENT STATE OF AMERICAN AFFAIRS

Thoughts on the Present State of American Affairs forms the third part of *Common Sense,* published January 10(?), 1776. The first two parts discuss the origin and design of government in general with special reference to the English constitution and the principles of monarchy and hereditary succession. As the text indicates, Paine is throwing his weight into the scale of a declaration of independence, which came in the following July.

IN THE following pages I offer nothing more than simple facts, plain arguments, and common sense: and have no other preliminaries to settle with the reader, than that he will divest himself of prejudice and prepossession, and suffer his reason and his feelings to determine for themselves: that he will put on, or rather that he will not put off, the true character of a man, and generously enlarge his views beyond the present day.

Volumes have been written on the subject of the struggle between England and America. Men of all ranks have embarked in the controversy, from different motives, and with various designs; but all have been ineffectual, and the period of debate is closed. Arms as the last resource decide the contest; the appeal was the choice of the King, and the continent has accepted the challenge.

It hath been reported of the late Mr. Pelham (who tho' an able minister was not without his faults) that on his being attacked in the House of Commons on the score that his measures were only of a temporary kind, replied, *"they will last my time."* Should a thought so fatal and unmanly possess the Colonies in the present contest, the name of Ancestors will be remembered by future generations with detestation.

The Sun never shined on a cause of greater worth. 'Tis not the affair of a City, a County, a Province, or a Kingdom; but of a Continent—of at least one eighth part of the habitable globe. 'Tis not the concern of a day, a year, or an age; posterity are virtually involved in the contest, and will be more or less affected even to the end of time by the proceedings now. Now is the seed time of continental union, faith and honor. The least fracture now will be like a name engraved with the point of a pin on the tender rind of a young oak; the wound would enlarge with the tree, and posterity read it in full grown characters.

By referring the matter from argument to arms, a new aera for politics is struck—a new method of thinking has arisen. All plans, proposals, &c. prior to the nineteenth of April, i. e. to the commencement of hostilities, are like the almanacks of the last year; which though proper then, are superseded and useless now. Whatever was advanced by the advocates on either side of the question then, terminated in one and the same point, viz. a union with Great Britain; the only difference between the parties was the method of effecting it; the one proposing force, the other friendship; but it has so far happened that the first has failed, and the second has withdrawn her influence.

12. Mr. Pelham—Henry Pelham (1695?-1754), Prime Minister of England (1744-54) and typical of the older corrupt method of administration. **28. nineteenth of April**—date of the Battle of Lexington.

As much has been said of the advantages of reconciliation, which, like an agreeable dream, has passed away and left us as we were, it is but right that we should examine the contrary side of the argument, and enquire into some of the many material injuries which these Colonies sustain, and always will sustain, by being connected with and dependant on Great Britain. To examine that connection and dependance, on the principles of nature and common sense, to see what we have to trust to, if separated, and what we are to expect, if dependant.

I have heard it asserted by some, that as America has flourished under her former connection with Great Britain, the same connection is necessary towards her future happiness, and will always have the same effect.——Nothing can be more fallacious than this kind of argument.——We may as well assert that because a child has thrived upon milk, that it is never to have meat, or that the first twenty years of our lives is to become a precedent for the next twenty. But even this is admitting more than is true; for I answer roundly, that America would have flourished as much, and probably much more, had no European power taken any notice of her. The commerce by which she hath enriched herself are the necessaries of life, and will always have a market while eating is the custom of Europe.

But she has protected us, say some. That she hath engrossed us is true, and defended the Continent at our expence as well as her own, is admitted; and she would have defended Turkey from the same motive, *viz.* for the sake of trade and dominion.

Alas! we have been long led away by ancient prejudices and made large sacrifices to superstition. We have boasted the protection of Great Britain, without considering, that her motive was *interest* not *attachment;* and that she did not protect us from *our enemies* on *our account,* but from her enemies on her own account, from those who had no quarrel with us on any *other account,* and who will always be our enemies on the *same account.* Let Britain waive her pretensions to the continent, or the continent throw off the dependance, and we should be at peace with France and Spain were they at war with Britain. The miseries of Hanover's last war ought to warn us against connections.

It hath lately been asserted in Parliament, that the colonies have no relation to each other but through the parent country, i. e. that Pennsylvania and the Jerseys, and so on for the rest, are sister colonies by the way of England; this is certainly a very roundabout way of proving relationship, but it is the nearest and only true way of proving enmity (or enemyship, if I may so call it). France and Spain never were, nor perhaps ever will be, our enemies as *Americans,* but as our being the *subjects of Great Britain.*

But Britain is the parent country, say some. Then the more shame upon her conduct. Even brutes do not devour their young, nor savages make war upon their families; wherefore, the assertion, if true, turns to her reproach; but it happens not to be true, or only partly so, and the phrase *parent* or *mother*

32. Hanover's last war—During the Seven Years' War (1756-1763), Hanover, the king of which was also King of Great Britain until the reign of Victoria, was repeatedly overrun by the French. **34-35. the Jerseys**—See note 3, p. 100.

country hath been jesuitically adopted by the King and his parasites, with a low papistical design of gaining an unfair bias on the credulous weakness of our minds. Europe, and not England, is the parent country of America. This new world hath been the asylum for the persecuted lovers of civil and religious liberty from *every part* of Europe. Hither have they fled, not from the tender embraces of the mother, but from the cruelty of the monster; and it is so far true of England, that the same tyranny which drove the first emigrants from home, pursues their descendants still.

In this extensive quarter of the globe, we forget the narrow limits of three hundred and sixty miles (the extent of England) and carry our friendship on a larger scale; we claim brotherhood with every European Christian, and triumph in the generosity of the sentiment.

It is pleasant to observe by what regular gradations we surmount the force of local prejudices, as we enlarge our acquaintance with the world. A man born in any town in England divided into parishes, will naturally associate most with his fellow parishioners (because their interests in many cases will be common) and distinguish him by the name of *neighbor;* if he meet him but a few miles from home, he drops the narrow idea of a street, and salutes him by the name of *townsman;* if he travel out of the county and meet him in any other, he forgets the minor divisions of street and town, and calls him *countryman, i. e. countyman;* but if in their foreign excursions they should associate in France, or any other part of *Europe,* their local remembrance would be enlarged into that of *Englishmen.* And by a just parity of reasoning, all Europeans meeting in America, or any other quarter of the globe, are *countrymen;* for England, Holland, Germany, or Sweden, when compared with the whole, stand in the same places on the larger scale, which the divisions of street, town, and county do on the smaller ones; Distinctions too limited for Continental minds. Not one third of the inhabitants, even of this province, are of English descent. Wherefore, I reprobate the phrase of parent or mother country applied to England only, as being false, selfish, narrow and ungenerous.

But, admitting that we were all of English descent, what does it amount to? Nothing. Britain, being now an open enemy, extinguishes every other name and title: and to say that reconciliation is our duty, is truly farcical. The first king of England, of the present line (William the Conqueror) was a Frenchman, and half the Peers of England are descendants from the same country; wherefore, by the same method of reasoning, England ought to be governed by France.

Much hath been said of the united strength of Britain and the Colonies, that in conjunction they might bid defiance to the world: But this is mere presumption, the fate of war is uncertain, neither do the expressions mean any thing; for this Continent would never suffer itself to be drained of inhabitants, to support the British arms in either Asia, Africa or Europe.

Besides, what have we to do with setting the world at defiance? Our plan is commerce, and that, well attended to, will secure us the peace and friendship of all Europe; because it is the interest of all Europe to have America a *free*

a. papistical—here, cunning. **28. this province**—Pennsylvania.

port. Her trade will always be a protection, and her barrenness of gold and silver secure her from invaders.

I challenge the warmest advocate for reconciliation to show a single advantage that this Continent can reap by being connected with Great Britain. I repeat the challenge, not a single advantage is derived. Our corn will fetch its price in any market in Europe, and our imported goods must be paid for buy them where we will.

But the injuries and disadvantages which we sustain by that connection, are without number; and our duty to mankind at large, as well as to ourselves, instruct us to renounce the alliance: Because, any submission to, or dependance on, Great Britain, tends directly to involve this Continent in European wars and quarrels, and set us at variance with nations who would otherwise seek our friendship, and against whom we have neither anger nor complaint. As Europe is our market for trade, we ought to form no partial connection with any part of it. 'Tis the true interest of America to steer clear of European contentions, which she never can do, while by her dependance on Britain, she is made the make-weight in the scale of British politics.

Europe is too thickly planted with kingdoms to be long at peace, and whenever a war breaks out between England and any foreign power, the trade of America goes to ruin, *because of her connection with Britain.* The next war may not turn out like the last, and should it not, the advocates for reconciliation now will be wishing for separation then, because neutrality in that case would be a safer convoy than a man of war. Every thing that is right or reasonable pleads for separation. The blood of the slain, the weeping voice of nature cries, 'TIS TIME TO PART. Even the distance at which the Almighty hath placed England and America is a strong and natural proof that the authority of the one over the other, was never the design of heaven. The time likewise at which the Continent was discovered, adds weight to the argument, and the manner in which it was peopled, encreases the force of it.——The Reformation was preceded by the discovery of America: As if the Almighty graciously meant to open a sanctuary to the persecuted in future years, when home should afford neither friendship nor safety.

The authority of Great Britain over this Continent, is a form of government, which sooner or later must have an end: And a serious mind can draw no true pleasure by looking forward, under the painful and positive conviction that what he calls "the present constitution" is merely temporary. As parents, we can have no joy, knowing that *this government* is not sufficiently lasting to insure any thing which we may bequeath to posterity: And by a plain method of argument, as we are running the next generation into debt, we ought to do the work of it, otherwise we use them meanly and pitifully. In order to discover the line of our duty rightly, we should take our children in our hand, and fix our station a few years farther into life; that eminence will present a prospect which a few present fears and prejudices conceal from our sight.

1-2. barrenness of gold and silver—It should be remembered that the failure to find gold or silver mines on the Atlantic seaboard was one of the principal disappointments of the earlier explorers. **5. corn**—grain. **21. the last**—The Seven Years' War, known in the New World as the French and Indian War, from which Great Britain emerged victorious.

Though I would carefully avoid giving unnecessary offence, yet I am inclined to believe, that all those who espouse the doctrine of reconciliation, may be included within the following descriptions.

Interested men, who are not to be trusted, weak men who *cannot* see, prejudiced men who *will not* see, and a certain set of moderate men who think better of the European world than it deserves; and this last class, by an ill-judged deliberation, will be the cause of more calamities to this continent than all the other three.

It is the good fortune of many to live distant from the scene of present sorrow; the evil is not sufficiently brought to *their* doors to make *them* feel the precariousness with which all American property is possessed. But let our imaginations transport us a few moments to Boston; that seat of wretchedness will teach us wisdom, and instruct us for ever to renounce a power in whom we can have no trust. The inhabitants of that unfortunate city who but a few months ago were in ease and affluence, have now no other alternative than to stay and starve, or turn out to beg. Endangered by the fire of their friends if they continue within the city, and plundered by the soldiery if they leave it, in their present situation they are prisoners without the hope of redemption, and in a general attack for their relief they would be exposed to the fury of both armies.

Men of passive tempers look somewhat lightly over the offences of Great Britain, and, still hoping for the best, are apt to call out, *come, come, we shall be friends again for all this.* But examine the passions and feelings of mankind: Bring the doctrine of reconciliation to the touchstone of nature, and then tell me whether you can hereafter love, honor, and faithfully serve the power that hath carried fire and sword into your land? If you cannot do all these, then are you only deceiving yourselves, and by your delay bringing ruin upon posterity. Your future connection with Britain, whom you can neither love nor honor, will be forced and unnatural, and being formed only on the plan of present convenience, will in a little time fall into a relapse more wretched than the first. But if you say, you can still pass the violations over, then I ask, Hath your house been burnt? Hath your property been destroyed before your face? Are your wife and children destitute of a bed to lie on, or bread to live on? Have you lost a parent or a child by their hands, and yourself the ruined and wretched survivor? If you have not, then are you not a judge of those who have. But if you have, and can still shake hands with the murderers, then are you unworthy the name of husband, father, friend, or lover, and whatever may be your rank or title in life, you have the heart of a coward, and the spirit of a sycophant.

This is not inflaming or exaggerating matters, but trying them by those feelings and affections which nature justifies, and without which we should be incapable of discharging the social duties of life, or enjoying the felicities of it. I mean not to exhibit horror for the purpose of provoking revenge, but to awaken us from fatal and unmanly slumbers, that we may pursue determinately some fixed object. 'Tis not in the power of Britain or of Europe to

12. **Boston**—occupied by British forces until March 17, 1776, and besieged by the Americans.

conquer America, if she doth not conquer herself by *delay* and *timidity*. The present winter is worth an age if rightly employed, but if lost or neglected the whole continent will partake of the misfortune; and there is no punishment which that man doth not deserve, be he who, or what, or where he will, that may be the means of sacrificing a season so precious and useful.

'Tis repugnant to reason, to the universal order of things; to all examples from former ages, to suppose, that this continent can long remain subject to any external power. The most sanguine in Britain doth not think so. The utmost stretch of human wisdom cannot, at this time, compass a plan, short of separation, which can promise the continent even a year's security. Reconciliation is *now* a fallacious dream. Nature has deserted the connection, and art cannot supply her place. For, as Milton wisely expresses, "never can true reconcilement grow where wounds of deadly hate have pierced so deep."

Every quiet method for peace hath been ineffectual. Our prayers have been rejected with disdain; and hath tended to convince us that nothing flatters vanity or confirms obstinacy in Kings more than repeated petitioning—and nothing hath contributed more than that very measure to make the Kings of Europe absolute. Witness Denmark and Sweden. Wherefore, since nothing but blows will do, for God's sake let us come to a final separation, and not leave the next generation to be cutting throats under the violated unmeaning names of parent and child.

To say they will never attempt it again is idle and visionary; we thought so at the repeal of the stamp act, yet a year or two undeceived us; as well may we suppose that nations which have been once defeated will never renew the quarrel.

As to government matters, 'tis not in the power of Britain to do this Continent justice: the business of it will soon be too weighty and intricate to be managed with any tolerable degree of convenience, by a power so distant from us, and so very ignorant of us; for if they cannot conquer us they cannot govern us. To be always running three or four thousand miles with a tale or a petition, waiting four or five months for an answer, which, when obtained, requires five or six more to explain it in, will in a few years be looked upon as folly and childishness.——There was a time when it was proper, and there is a proper time for it to cease.

Small islands not capable of protecting themselves are the proper objects for government to take under their care; but there is something absurd in supposing a Continent to be perpetually governed by an island. In no instance hath nature made the satellite larger than its primary planet; and as England and America, with respect to each other, reverse the common order of nature, it is evident that they belong to different systems. England to Europe: America to itself.

I am not induced by motives of pride, party or resentment to espouse the doctrine of separation and independence; I am clearly, positively, and con-

12. never can—The quotation is from *Paradise Lost*, Bk. IV, lines 98-99. **18. Denmark and Sweden**—Both countries had swung over to more autocratic rule in the last part of the eighteenth century. **23. repeal**—The Stamp Act was repealed in March, 1766; the Townshend Acts followed in May, 1767.

scientiously persuaded that 'tis the true interest of this continent to be so; that everything short of *that* is mere patchwork, that it can afford no lasting felicity —that it is leaving the sword to our children, and shrinking back at a time when a little more, a little further, would have rendered this continent the glory of the earth.

As Britain hath not manifested the least inclination towards a compromise, we may be assured that no terms can be obtained worthy the acceptance of the continent, or any ways equal to the expence of blood and treasure we have been already put to.

The object contended for, ought always to bear some just proportion to the expence. The removal of North, or the whole detestable junto, is a matter unworthy the millions we have expended. A temporary stoppage of trade was an inconvenience, which would have sufficiently balanced the repeal of all the acts complained of, had such repeals been obtained; but if the whole Continent must take up arms, if every man must be a soldier, 'tis scarcely worth our while to fight against a contemptible ministry only. Dearly, dearly do we pay for the repeal of the acts, if that is all we fight for; for, in a just estimation 'tis as great a folly to pay a bunker-hill price for law as for land. As I have always considered the independancy of this Continent, as an event which sooner or later must arrive, so from the late rapid progress of the Continent to maturity, the event cannot be far off. Wherefore, on the breaking out of hostilities, it was not worth the while to have disputed a matter which time would have finally redressed, unless we meant to be in earnest: otherwise it is like wasting an estate on a suit at law, to regulate the trespasses of a tenant whose lease is just expiring. No man was a warmer wisher for a reconciliation than myself, before the fatal nineteenth of April, 1775, but the moment the event of that day was made known, I rejected the hardened, sullen-tempered Pharaoh of England for ever; and disdain the wretch, that with the pretended title of FATHER OF HIS PEOPLE can unfeelingly hear of their slaughter, and composedly sleep with their blood upon his soul.

But admitting that matters were now made up, what would be the event? I answer, the ruin of the continent. And that for several reasons.

First. The powers of governing still remaining in the hands of the king, he will have a negative over the whole legislation of this Continent. And as he hath shown himself such an inveterate enemy to liberty, and discovered such a thirst for arbitrary power, is he, or is he not, a proper person to say to these Colonies, *You shall make no laws but what I please!?* And is there any inhabitant of America so ignorant as not to know, that according to what is called the *present Constitution,* this Continent can make no laws but what the king gives leave to; and is there any man so unwise as not to see, that (considering what has happened) he will suffer no law to be made here but such as suits his purpose? We may be as effectually enslaved by the want of laws

11. **North**—Frederick North, eighth Baron and second Earl of Guilford (1732-1792), known as Lord North, and Prime Minister during most of the American Revolutionary struggle. 12. **stoppage of trade**—referring to the nonimportation agreements, by which colonial merchants agreed not to import English goods. 18. **bunker-hill price**—The battle of Bunker's Hill was fought June 17, 1775. 27. **hardened . . . Pharaoh**—*Cf.* Ex. 7: 13-14 ff.

in America, as by submitting to laws made for us in England. After matters are made up, (as it is called) can there be any doubt, but the whole power of the crown will be exerted to keep this Continent as low and humble as possible? Instead of going forward we shall go backward, or be perpetually quarrelling, or ridiculously petitioning.——We are already greater than the King wishes us to be, and will he not hereafter endeavor to make us less? To bring the matter to one point, Is the power who is jealous of our prosperity, a proper power to govern us? Whoever says *No,* to this question, is an Independant for independency means no more than this, whether we shall make our own laws, or, whether the King, the greatest enemy this Continent hath, or can have, shall tell us *"there shall be no laws but such as I like."*

But the King, you'll say, has a negative in England; the people there can make no laws without his consent. In point of right and good order, it is something very ridiculous that a youth of twenty-one (which hath often happened) shall say to several millions of people older and wiser than himself, "I forbid this or that act of yours to be law." But in this place I decline this sort of reply, tho' I will never cease to expose the absurdity of it, and only answer that England being the King's residence, and America not so, makes quite another case. The King's negative here is ten times more dangerous and fatal than it can be in England; for *there* he will scarcely refuse his consent to a bill for putting England into as strong a state of defence as possible, and in America he would never suffer such a bill to be passed.

America is only a secondary object in the system of British politics, England consults the good of *this* country no further that it answers her *own* purpose. Wherefore, her own interest leads her to suppress the growth of *ours* in every case which doth not promote *her* advantage, or in the least interfere with it. A pretty state we should soon be in under such a second-hand government, considering what has happened! Men do not change from enemies to friends by the alteration of a name: And in order to show that reconciliation *now* is a dangerous doctrine, I affirm, *that it would be policy in the king at this time to repeal the acts, for the sake of reinstating himself in the government of the provinces;* In order that HE MAY ACCOMPLISH BY CRAFT AND SUBTLETY, IN THE LONG RUN, WHAT HE CANNOT DO BY FORCE AND VIOLENCE IN THE SHORT ONE. Reconciliation and ruin are nearly related.

Secondly. That as even the best terms which we can expect to obtain can amount to no more than a temporary expedient, or a kind of government by guardianship, which can last no longer than till the Colonies come of age, so the general face and state of things in the interim will be unsettled and unpromising: Emigrants of property will not choose to come to a country whose form of government hangs but by a thread, and who is every day tottering on the brink of commotion and disturbance: and numbers of the present inhabitants would lay hold of the interval to dispose of their effects, and quit the continent.

But the most powerful of all arguments is, that nothing but independence, i. e. a continental form of government, can keep the peace of the continent and preserve it inviolate from civil wars. I dread the event of a reconciliation with Britain *now,* as it is more than probable that it will be followed by a revolt some

where or other, the consequences of which may be far more fatal than all malice of Britain.

Thousands are already ruined by British barbarity; (thousands more will probably suffer the same fate.) Those men have other feelings than us who have nothing suffered. All they *now* possess is liberty; what they before enjoyed is sacrificed to its service, and having nothing more to lose they disdain submission. Besides, the general temper of the colonies, towards a British government will be like that of a youth who is nearly out of his time; they will care very little about her: And a government which cannot preserve the peace is no government at all, and in that case we pay our money for nothing; and pray what is it that Britain can do, whose power will be wholly on paper, should a civil tumult break out the very day after reconciliation? I have heard some men say, many of whom I believe spoke without thinking, that they dreaded an independance, fearing that it would produce civil wars: It is but seldom that our first thoughts are truly correct, and that is the case here; for there is ten times more to dread from a patched up connection than from independance. I make the sufferer's case my own, and I protest, that were I driven from house and home, my property destroyed, and my circumstances ruined, that as a man, sensible of injuries, I could never relish the doctrine of reconciliation, or consider myself bound thereby.

The colonies have manifested such a spirit of good order and obedience to continental government, as is sufficient to make every reasonable person easy and happy on that head. No man can assign the least pretence for his fears, on any other grounds, than such as are truly childish and ridiculous, viz., that one colony will be striving for superiority over another.

Where there are no distinctions there can be no superiority; perfect equality affords no temptation. The Republics of Europe are all (and we may say always) in peace. Holland and Switzerland are without wars, foreign or domestic; Monarchical governments, it is true, are never long at rest: the crown itself is a temptation to enterprising ruffians at *home;* and that degree of pride and insolence ever attendant on regal authority, swells into a rupture with foreign powers in instances where a republican government, by being formed on more natural principles, would negociate the mistake.

If there is any true cause of fear respecting independance, it is because no plan is yet laid down. Men do not see their way out.——Wherefore, as an opening into that business I offer the following hints; at the same time modestly affirming, that I have no other opinion of them myself, than that they may be the means of giving rise to something better. Could the straggling thoughts of individuals be collected, they would frequently form materials for wise and able men to improve into useful matter.

Let the assemblies be annual, with a president only. The representation more equal, their business wholly domestic, and subject to the authority of a Continental Congress.

Let each Colony be divided into six, eight, or ten, convenient districts, each district to send a proper number of Delegates to Congress, so that each Colony send at least thirty. The whole number in Congress will be at least 390. Each Congress to sit and to choose a President by the following method. When

the Delegates are met, let a colony be taken from the whole thirteen Colonies by lot, after which let the Congress choose (by ballot) a president from out of the Delegates of that province. In the next Congress, let a Colony be taken by lot from twelve only, omitting that Colony from which the president was taken in the former Congress, and so proceeding on till the whole thirteen shall have had their proper rotation. And in order that nothing may pass into a law but what is satisfactorily just, not less than three fifths of the Congress to be called a majority.——He that will promote discord, under a government so equally formed as this, would have joined Lucifer in his revolt.

But as there is a peculiar delicacy from whom, or in what manner, this business must first arise, and as it seems most agreeable and consistent that it should come from some intermediate body between the governed and the governors, that is, between the Congress and the People, Let a CONTINENTAL CONFERENCE be held in the following manner, and for the following purpose,

A Committee of twenty six members of Congress, *viz.* Two for each colony. Two members from each house of Assembly, or Provincial convention; and five Representatives of the people at large, to be chosen in the capital city or town of each Province, for, and in behalf of the whole Province, by as many qualified voters as shall think proper to attend from all parts of the Province for that purpose; or, if more convenient, the Representatives may be chosen in two or three of the most populous parts thereof. In this CONFERENCE, thus assembled, will be united the two grand principles of business, *knowledge* and *power*. The members of Congress, Assemblies, or Conventions, by having had experience in national concerns, will be able and useful counsellors, and the whole, being impowered by the people, will have a truly legal authority.

The conferring members being met, let their business be to frame a CONTINENTAL CHARTER, or Charter of the United Colonies; (answering to what is called the Magna Charta of England) fixing the number and manner of choosing members of Congress, Members of Assembly, with their date of sitting; and drawing the line of business and jurisdiction between them: Always remembering, that our strength is continental, not provincial. Securing freedom and property to all men, and above all things, the free exercise of religion, according to the dictates of conscience; with such other matter as it is necessary for a charter to contain. Immediately after which, the said conference to dissolve, and the bodies which shall be chosen conformable to the said charter, to be the legislators and governors of this continent for the time being: Whose peace and happiness, may God preserve. AMEN.

Should any body of men be hereafter delegated for this or some similar purpose, I offer them the following extracts from that wise observer on governments, DRAGONETTI. "The science," says he, "of the politician consists in fixing the true point of happiness and freedom. Those men would deserve the gratitude of ages, who should discover a mode of government that contained the greatest sum of individual happiness, with the least national expense."

9. Lucifer—*Cf.* Isa. 14: 12 ff. **40. Dragonetti**—Giacinto, Marquis dei Dragonetti (1738-1818), author of *Le virtù ed i premi* (1767), which Paine probably read in a French translation of 1768, or an English one of 1769. **43. expense**—"Dragonetti on 'Virtues and Reward.'" (Paine's note)

But where, say some, is the king of America? I'll tell you, Friend, he reigns above, and doth not make havoc of mankind like the Royal Brute of Great Britain. Yet that we may not appear to be defective even in earthly honors, let a day be solemnly set apart for proclaiming the Charter; let it be brought forth placed on the divine law, the Word of God; let a Crown be placed thereon, by which the world may know, that so far as we approve of monarchy, that in America THE LAW IS KING. For as in absolute governments the king is law, so in free countries the law OUGHT to BE king; and there ought to be no other. But lest any ill use should afterwards arise, let the Crown at the conclusion of the ceremony be demolished, and scattered among the People whose right it is.

A government of our own is our natural right: and when a man seriously reflects on the precariousness of human affairs, he will become convinced, that it is infinitely wiser and safer, to form a Constitution of our own in a cool deliberate manner, while we have it in our power, than to trust such an interesting event to time and chance. If we omit it now, some Massanello may hereafter arise, who, laying hold of popular disquietudes, may collect together the desperate and the discontented, and by assuming to themselves the powers of government, finally sweep away the liberties of the Continent like a deluge. Should the government of America return again into the hands of Britain, the tottering situation of things will be a temptation for some desperate adventurer to try his fortune; and in such a case, what relief can Britain give? Ere she could hear the news, the fatal business might be done; and ourselves suffering like the wretched Britons under the oppression of the conqueror. Ye that oppose independance now, ye know not what ye do; ye are opening a door to eternal tyranny, by keeping vacant the seat of government. There are thousands and tens of thousands, who would think it glorious to expel from the Continent, that barbarous and hellish power, which hath stirred up the Indians and the Negroes to destroy us; the cruelty hath a double guilt, it is dealing brutally by us, and treacherously by them.

To talk of friendship with those in whom our reason forbids us to have faith, and our affections wounded thro' a thousand pores instruct us to detest, is madness and folly. Every day wears out the little remains of kindred between us and them; and can there be any reason to hope, that as the relationship expires, the affection will increase, or that we shall agree better when we have ten times more and greater concerns to quarrel over than ever?

Ye that tell us of harmony and reconciliation, can ye restore to us the time that is past? Can ye give to prostitution its former innocence? neither can ye reconcile Britain and America. The last cord now is broken, the people of England are presenting addresses against us. There are injuries which nature cannot forgive; she would cease to be nature if she did. As well can the lover forgive the ravisher of his mistress, as the Continent forgive the murders of Britain. The Almighty hath implanted in us these inextinguishable feelings for good and wise purposes. They are the guardians of his image in our hearts.

15. **Massanello**—"Thomas Anello, otherwise Massanello, a fisherman of Naples, who after spiriting up his countrymen in the public market place, against the oppression of the Spaniards, to whom the place was then subject, prompted them to revolt, and in the space of a day became king." (Paine's note)

They distinguish us from the herd of common animals. The social compact would dissolve, and justice be extirpated from the earth, or have only a casual existence were we callous to the touches of affection. The robber and the murderer would often escape unpunished, did not the injuries which our tempers sustain, provoke us into justice.

O! ye that love mankind! Ye that dare oppose not only the tyranny but the tyrant, stand forth! Every spot of the old world is over-run with oppression. Freedom hath been hunted round the globe. Asia and Africa have long expelled her. Europe regards her like a stranger, and England hath given her warning to depart. O receive the fugitive, and prepare in time an asylum for mankind.

THE AMERICAN CRISIS

Paine published sixteen numbers of *The American Crisis* from 1776 to the close of 1783, all designed to keep up the spirit of the Americans and to help them achieve independence. The first appeared in the *Pennsylvania Journal,* December 19, 1776, and was immediately issued as a pamphlet. Following Professor Peach, the editors here reprint the edition of December 23, 1776.

For the background of this paper, it is necessary to understand that Paine participated in the American retreat across New Jersey in the autumn of 1776, and crossed the Delaware into Pennsylvania with the army. General Greene had been compelled to evacuate Fort Lee and Fort Washington on the Hudson, and to retreat with the main army; and the story is that during this retreat, while in camp at Newark, New Jersey, Paine wrote the first *Crisis* paper on a drumhead. By Washington's order, the paper was read at the head of each regiment after publication. On Christmas night, Washington made a surprise attack on Trenton, New Jersey, and took a thousand prisoners. Paine participated in this battle, and also in the Battle of Princeton in January, 1777.

THESE are the times that try men's souls: The summer soldier and the sunshine patriot will in this crisis, shrink from the service of his country; but he that stands it Now, deserves the love and thanks of man and woman. Tyranny, like hell, is not easily conquered; yet we have this consolation with us, that the harder the conflict, the more glorious the triumph. What we obtain too cheap, we esteem to[o] lightly:——'Tis dearness only that gives everything its value. Heaven knows how to put a proper price upon its goods; and it would be strange indeed, if so celestial an article as FREEDOM should not be highly rated. Britain, with an army to enforce her tyranny, has declared that she has a right (not only to) TAX but "to BIND *us in* ALL CASES WHATSOEVER", and if being *bound in that manner,* is not slavery, then is there not such a thing as slavery upon earth. Even the expression is impious for so unlimited a power can belong only to God.

Whether the Independence of the Continent was declared too soon, or delayed too long, I will not now enter into as an argument; my own simple opinion is, that had it been eight months earlier, it would have been much better. We did not make a proper use of last winter, neither could we, while we were in a dependent state. However, the fault, if it were one, was all our

own; we have none to blame but ourselves. But no great deal is lost yet; all that Howe has been doing for this month past, is rather a ravage than a conquest, which the spirit of the Jerseys a year ago would have quickly repulsed, and which time and a little resolution will soon recover.

I have as little superstition in me as any man living, but my secret opinion has ever been, and still is, that God Almighty will not give up a people to military destruction, or leave them unsupportedly to perish, who have so earnestly and so repeatedly sought to avoid the calamities of war, by every decent method which wisdom could invent. Neither have I so much of the infidel in me, as to suppose that he has relinquished the government of the world, and given us up to the care of devils; and as I do not, I cannot see on what grounds the king of Britain can look up to heaven for help against us: a common murderer, a highwayman, or a house-breaker, has as good a pretence as he.

'Tis surprising to see how rapidly a panic will sometimes run through a country. All nations and ages have been subject to them: Britain has trembled like an ague at the report of a French fleet of flat-bottomed boats; and in the fourteenth century the whole English army, after ravaging the kingdom of France, was driven back like men petrified with fear; and this brave exploit was performed by a few broken forces collected and headed by a woman, Joan of Arc. Would that heaven might inspire some Jersey maid to spirit up her countrymen, and save her fair fellow sufferers from ravage and ravishment! Yet panics, in some cases, have their uses; they produce as much good as hurt. Their duration is always short; the mind soon grows through them, and acquires a firmer habit than before. But their peculiar advantage is, that they are the touchstones of sincerity and hypocrisy, and bring things and men to light, which might otherwise have lain forever undiscovered. In fact, they have the same effect on secret traitors which an imaginary apparition would have upon a private murderer. They sift out the hidden thoughts of man, and hold them up in public to the world. Many a disguised tory has lately shown his head, that shall penitentially solemnize with curses the day on which Howe arrived upon the Delaware.

As I was with the troops at Fort-Lee, and marched with them to the edge of Pennsylvania, I am well acquainted with many circumstances, which those who live at a distance, know but little or nothing of. Our situation there was exceedingly cramped, the place being a narrow neck of land between the North-River and the Hackensack. Our force was inconsiderable, being not one-fourth so great as Howe could bring against us. We had no army at hand to have relieved the garrison, had we shut ourselves up and stood on our defence. Our ammunition, light artillery, and the best part of our stores, had been removed,

2. Howe—The British general, Lord William Howe (1729-1814), failed to follow up his victory effectively. The motives for his failure have been variously interpreted. **33. Fort-Lee**—Paine intentionally minimizes the loss of Forts Lee and Washington. Twenty-six hundred men were captured with Fort Washington, and a large quantity of military supplies with Fort Lee, though the garrison escaped. General Lee, stationed at Newcastle with about 7,000 men, had selfishly refused to come to the rescue of the forts. Far from being "field forts," the two posts were intended to prevent British navigation of the Hudson River. Nor was the army strengthened by the militia, as Paine intimates; on the contrary, Washington had less than 3,000 men when the paper was written.

on the apprehension that Howe would endeavor to penetrate the Jerseys, in which case Fort Lee could be of no use to us; for it must occur to every thinking man, whether in the army or not, that these kind of field forts are only for temporary purposes, and last in use no longer than the enemy directs his force against the particular object, which such forts are raised to defend. Such was our situation and condition at Fort-Lee on the morning of the 20th of November, when an officer arrived with information that the enemy with 200 boats had landed about seven miles above: Major General Green, who commanded the garrison, immediately ordered them under arms, and sent express to General Washington at the town of Hackensack, distant by the way of the ferry, six miles. Our first object was to secure the bridge over the Hackensack, which laid up the river between the enemy and us, about six miles from us, and three from them. General Washington arrived in about three-quarters of an hour, and marched at the head of the troops towards the bridge, which place I expected we should have a brush for; however, they did not choose to dispute it with us, and the greatest part of our troops went over the bridge, the rest over the ferry, except some which passed at a mill on a small creek, between the bridge and the ferry, and made their way through some marshy grounds up to the town of Hackensack, and there passed the river. We brought off as much baggage as the wagons could contain, the rest was lost. The simple object was to bring off the garrison, and march them on till they could be strengthened by the Jersey or Pennsylvania militia, so as to be enabled to make a stand. We staid four days at Newark, collected our out-posts with some of the Jersey militia, and marched out twice to meet the enemy, on being informed that they were advancing, though our numbers were greatly inferior to theirs. Howe, in my little opinion, committed a great error in generalship in not throwing a body of forces off from Staten-Island through Amboy, by which means he might have seized all our stores at Brunswick, and intercepted our march into Pennsylvania; but if we believe the power of hell to be limited, we must likewise believe that their agents are under some providential control.

I shall not now attempt to give all the particulars of our retreat to the Delaware; suffice it for the present to say, that both officers and men, though greatly harassed and fatigued, frequently without rest, covering, or provision, the inevitable consequences of a long retreat, bore it with a manly and martial spirit. All their wishes centered in one, which was, that the country would turn out and help them to drive the enemy back. *Voltaire* has remarked that King William never appeared to full advantage but in difficulties and in action; the same remark may be made on General Washington, for the character fits him. There is a natural firmness in some minds which cannot be unlocked by trifles, but which, when unlocked, discovers a cabinet of fortitude; and I reckon it among those kind of public blessings, which we do not immediately see, that God hath blessed him with uninterrupted health, and given him a mind that can even flourish upon care.

I shall conclude this paper with some miscellaneous remarks on the state of

27. Staten-Island—where the British first landed in their attack on New York. **27. Amboy**—Perth Amboy, New Jersey. A glance at the map will make clear Paine's criticism. **36. Voltaire**—the famous French *philosophe* (1694-1778), much read in eighteenth-century America, and sympathetic to Paine because of his deism. **36-37. King William**—William III (1650-1702), Prince of Orange, and King of England (1689-1702), the principal opponent of Louis XIV of France.

our affairs; and shall begin with asking the following question, Why is it that the enemy have left the New-England provinces, and made these middle ones the seat of war? The answer is easy: New England is not infested with tories, and we are. I have been tender in raising the cry against these men, and used numberless arguments to show them their danger, but it will not do to sacrifice a world either to their folly or their baseness. The period is now arrived, in which either they or we must change our sentiments, or one or both must fall. And what is a tory? Good God! what is he? I should not be afraid to go with a hundred Whigs against a thousand tories, were they to attempt to get into arms. Every tory is a coward; for servile, slavish, self-interested fear is the foundation of toryism; and a man under such influence, though he may be cruel, never can be brave.

But, before the line of irrecoverable separation be drawn between us, let us reason the matter together: Your conduct is an invitation to the enemy, yet not one in a thousand of you has heart enough to join him. Howe is as much deceived by you as the American cause is injured by you. He expects you will all take up arms, and flock to his standard, with muskets on your shoulders. Your opinions are of no use to him, unless you support him personally, for 'tis soldiers, and not tories, that he wants.

I once felt all that kind of anger, which a man ought to feel, against the mean principles that are held by the tories: A noted one, who kept a tavern at Amboy, was standing at his door, with as pretty a child in his hand, about eight or nine years old, as I ever saw, and after speaking his mind as freely as he thought was prudent, finished with this unfatherly expression, *"Well! give me peace in my day."* Not a man lives on the continent but fully believes that a separation must some time or other finally take place, and a generous parent should have said, *"If there must be trouble, let it be in my day, that my child may have peace;"* and this single reflection, well applied, is sufficient to awaken every man to duty. Not a place upon earth might be so happy as America. Her situation is remote from all the wrangling world, and she has nothing to do but to trade with them. A man can distinguish himself between temper and principle, and I am as confident, as I am that God governs the world, that America will never be happy till she gets clear of foreign dominion. Wars, without ceasing, will break out till that period arrives, and the continent must in the end be conqueror; for though the flame of liberty may sometimes cease to shine, the coal can never expire.

America did not, nor does not want force; but she wanted a proper application of that force. Wisdom is not the purchase of a day, and it is no wonder that we should err at the first setting off. From an excess of tenderness, we were unwilling to raise an army, and trusted our cause to the temporary defence of a well-meaning militia. A summer's experience has now taught us better; yet with those troops, while they were collected, we were able to set bounds to the progress of the enemy, and, thank God! they are again assembling. I always considered militia as the best troops in the world for a sudden exertion, but they will not do for a long campaign. Howe, it is probable, will make an attempt on this city; should he fail on this side the Delaware, he is ruined. If he succeeds, our cause is not ruined. He stakes all on his side against

46. this city—Philadelphia, occupied by the British Sept. 26, 1777.

a part on ours; admitting he succeeds, the consequence will be, that armies from both ends of the continent will march to assist their suffering friends in the middle states; for he cannot go everywhere, it is impossible. I consider Howe as the greatest enemy the tories have; he is bringing a war into their country, which, had it not been for him and partly for themselves, they had been clear of. Should he now be expelled, I wish with all the devotion of a Christian, that the names of whig and tory may never more be mentioned; but should the tories give him encouragement to come, or assistance if he come, I as sincerely wish that our next year's arms may expel them from the continent, and the Congress appropriate their possessions to the relief of those who have suffered in well-doing. A single successful battle next year will settle the whole. America could carry on a two years' war by the confiscation of the property of disaffected persons, and be made happy by their expulsion. Say not that this is revenge, call it rather the soft resentment of a suffering people, who, having no object in view but the GOOD of ALL, have staked their OWN ALL upon a seemingly doubtful event. Yet it is folly to argue against determined hardness; eloquence may strike the ear, and the language of sorrow draw forth the tear of compassion, but nothing can reach the heart that is steeled with prejudice.

Quitting this class of men, I turn with the warm ardor of a friend to those who have nobly stood, and are yet determined to stand the matter out: I call not upon a few, but upon all: not on THIS state or THAT state, but on EVERY state: up and help us; lay your shoulders to the wheel; better have too much force than too little, when so great an object is at stake. Let it be told to the future world, that in the depth of winter, when nothing but hope and virtue could survive, that the city and the country, alarmed at one common danger, came forth to meet and to repulse it. Say not that thousands are gone, turn out your tens of thousands; throw not the burden of the day upon Providence, but *"show your faith by your works,"* that God may bless you. It matters not where you live, or what rank of life you hold, the evil or the blessing will reach you all. The far and the near, the home counties and the back, the rich and the poor, will suffer or rejoice alike. The heart that feels not now is dead; the blood of his children will curse his cowardice, who shrinks back at a time when a little might have saved the whole, and made *them* happy. I love the man that can smile in trouble, that can gather strength from distress, and grow brave by reflection. 'Tis the business of little minds to shrink; but he whose heart is firm, and whose conscience approves his conduct, will pursue his principles unto death. My own line of reasoning is to myself as straight and clear as a ray of light. Not all the treasures of the world, so far as I believe, could have induced me to support an offensive war, for I think it murder; but if a thief breaks into my house, burns and destroys my property, and kills or threatens to kill me, or those that are in it, and to *"bind me in all cases whatsoever"* to his absolute will, am I to suffer it? What signifies it to me, whether he who does it is a king or a common man; my countryman or not my countryman; whether it be done by an individual villain, or an army of them? If we reason to the

27-28. thousands . . . tens of thousands—*Cf.* I Sam. 18:7. **31. home counties**—eastern counties. **31. the back**—western counties.

root of things we shall find no difference; neither can any just cause be assigned why we should punish in the one case and pardon in the other. Let them call me rebel, and welcome, I feel no concern from it; but I should suffer the misery of devils, were I to make a whore of my soul by swearing allegiance to one whose character is that of a sottish, stupid, stubborn, worthless, brutish man. I conceive likewise a horrid idea in receiving mercy from a being, who at the last day shall be shrieking to the rocks and mountains to cover him, and fleeing with terror from the orphan, the widow, and the slain of America.

There are cases which cannot be overdone by language, and this is one. There are persons, too, who see not the full extent of the evil which threatens them; they solace themselves with hopes that the enemy, if he succeed, will be merciful. It is the madness of folly, to expect mercy from those who have refused to do justice; and even mercy, where conquest is the object, is only a trick of war; The cunning of the fox is as murderous as the violence of the wolf, and we ought to guard equally against both. Howe's first object is, partly by threats and partly by promises, to terrify or seduce the people to deliver up their arms and receive mercy. The ministry recommended the same plan to Gage, and this is what the tories call making their peace, *"a peace which passeth all understanding" indeed!* A peace which would be the immediate forerunner of a worse ruin than any we have yet thought of. Ye men of Pennsylvania, do reason upon these things! Were the back counties to give up their arms, they would fall an easy prey to the Indians, who are all armed: this perhaps is what some tories would not be sorry for. Were the home counties to deliver up their arms, they would be exposed to the resentment of the back counties, who would then have it in their power to chastise their defection at pleasure. And were any one state to give up its arms, THAT state must be garrisoned by all Howe's army of Britons and Hessians to preserve it from the anger of the rest. Mutual fear is the principal link in the chain of mutual love, and woe be to that state that breaks the compact. Howe is mercifully inviting you to barbarous destruction, and men must be either rogues or fools that will not see it. I dwell not upon the vapors of imagination; I bring reason to your ears, and, in language as plain as A, B, C, hold up truth to your eyes.

I thank *God* that I fear not. I see no real cause for fear. I know our situation well, and can see the way out of it. While our army was collected, Howe dared not risk a battle; and it is no credit to him that he decamped from the White Plains, and waited a mean opportunity to ravage the defenceless Jerseys; but it is great credit to us, that, with a handful of men, we sustained an orderly retreat for near an hundred miles, brought off our ammunition, all our field-pieces, the greatest part of our stores, and had four rivers to pass. None can say that our retreat was precipitate, for we were near three weeks in performing it, that the country might have time to come in. Twice we marched back to meet the enemy, and remained out till dark. The sign of fear was not seen in

18. Gage—General Thomas Gage (1721-1787) was in command of the British troops in North America until the arrival of Lord Howe. **18-19. peace . . . understanding**—*Cf.* Phil. 4:7. **35-36. White Plains**—Howe attacked Washington at White Plains, New York, Oct. 22, 1776; the Americans were driven back, but a rain intervened, and Howe did not follow up his advantage, so that the Americans withdrew without hindrance to Newcastle. Howe then ceased movement up the Hudson, and turned to New Jersey. **41. country**—that the militia might have time to gather.

our camp, and had not some of the cowardly and disaffected inhabitants spread false alarms through the country, the Jerseys had never been ravaged. Once more we are again collected and collecting, our new army at both ends of the continent is recruiting fast, and we shall be able to open the next campaign with sixty thousand men, well armed and clothed. This is our situation, and who will may know it. By perseverance and fortitude we have the prospect of a glorious issue; by cowardice and submission, the sad choice of a variety of evils—a ravaged country—a depopulated city—habitations without safety, and slavery without hope—our homes turned into barracks and bawdy-houses for Hessians, and a future race to provide for, whose fathers we shall doubt of. Look on this picture and weep over it! and if there yet remains one thoughtless wretch who believes it not, let him suffer it unlamented.

COMMON SENSE.

December 23, 1776.

THE AGE OF REASON

The circumstances of the publication of *The Age of Reason* are noted in the outline biography of Paine. The editors once again are following the text established by Peach. The full title of the work is *The Age of Reason: Being an Investigation of True and of Fabulous Theology.* The first section here quoted is the opening of Part I of the work; the second section here quoted occurs a little later in the same part; and the selections printed are designed to show the basis of Paine's deism in the argument from design. The greater portion of *The Age of Reason* is devoted to an exposé of the inconsistencies of Christian theology and of the Bible; it is probably this aspect of his work that made it popular on the Western frontier. The student will note that Paine's argument from design is supported by his acceptance of the mathematical-mechanical theory of the universe associated with Newton.

IT HAS been my intention, for several years past, to publish my thoughts upon Religion. I am well aware of the difficulties that attend the subject; and, from that consideration, had reserved it to a more advanced period of life. I intended it to be the last offering I should make to my fellow-citizens of all nations; and that at a time when the purity of the motive that induced me to it could not admit of a question, even by those who might disapprove the work.

The circumstance that has now taken place in France, of the total abolition of the whole national order of priesthood and of everything appertaining to compulsive systems of religion, and compulsive articles of faith, has not only precipitated my intention, but rendered a work of this kind exceedingly necessary; lest, in the general wreck of superstition, of false systems of government,

22-24. circumstance . . . faith—Paine dates Part I: "Paris, 8th. Pluviose, Second Year of the French Republic, one and indivisible. January 27, O.S. 1794." By that date the Constituent Assembly had disestablished the Roman Catholic Church in France, "nationalized" its property, and established a civil constitution for the clergy. In 1793-94 the Commune further "de-Christianized" France by setting up a new, non-Christian calendar, and establishing the Worship of Reason.

and false theology, we lose sight of morality, of humanity, and of the theology that is true.

As several of my colleagues, and others of my fellow-citizens of France, have given me the example of making their voluntary and individual profession of faith, I also will make mine; and I do this with all that sincerity and frankness with which the mind of man communicates with itself.

I believe in one God, and no more; and I hope for happiness beyond this life.

I believe the equality of man, and I believe that religious duties consist in doing justice, loving mercy, and endeavoring to make our fellow-creatures happy.

But, lest it should be supposed that I believe many other things in addition to these, I shall, in the progress of this work, declare the things I do not believe, and my reasons for not believing them.

I do not believe in the creed professed by the Jewish church, by the Roman church, by the Greek church, by the Turkish church, by the Protestant church, nor by any church that I know of. My own mind is my own church.

All national institutions of churches—whether Jewish, Christian, or Turkish —appear to me no other than human inventions set up to terrify and enslave mankind and monopolize power and profit.

I do not mean by this declaration to condemn those who believe otherwise. They have the same right to their belief as I have to mine. But it is necessary to the happiness of man, that he be mentally faithful to himself. Infidelity does not consist in believing, or in disbelieving; it consists in professing to believe what he does not believe.

It is impossible to calculate the moral mischief, if I may so express it, that mental lying has produced in society. When a man has so far corrupted and prostituted the chastity of his mind, as to subscribe his professional belief to things he does not believe, he has prepared himself for the commission of every other crime. He takes up the trade of a priest for the sake of gain, and, in order to *qualify* himself for that trade, he begins with a parjury. Can we conceive anything more destructive to morality than this?

Soon after I had published the pamphlet, COMMON SENSE, in America, I saw the exceeding probability that a Revolution in the System of Government would be followed by a revolution in the system of religion. The adulterous connection of church and state, wherever it had taken place, whether Jewish, Christian, or Turkish, had so effectually prohibited, by pains and penalties, every discussion upon established creeds, and upon first principles of religion, that until the system of government should be changed those subjects could not be brought fairly and openly before the world; but that whenever this should be done, a revolution in the system of religion would follow. Human inventions and priest-craft would be detected, and man would return to the pure, unmixed, and unadulterated belief of one God, and no more.

Every national church or religion has established itself by pretending some special mission from God, communicated to certain individuals. The Jews have their Moses; the Christians their Jesus Christ, their apostles and saints; and the Turks their Mahomet—as if the way to God was not open to every man alike.

Each of those churches show certain books which they call *revelation,* or the word of God. The Jews say that their word of God was given by God to Moses face to face; the Christians say that their word of God came by divine inspiration; and the Turks say that their word of God (the Koran) was brought by an angel from heaven. Each of those churches accuse the other of unbelief; and, for my own part, I disbelieve them all.

As it is necessary to affix right ideas to words, I will, before I proceed further into the subject, offer some observations on the word *revelation.* Revelation, when applied to religion, means something communicated *immediately* from God to man.

No one will deny or dispute the power of the Almighty to make such a communication, if he pleases. But admitting, for the sake of a case, that something has been revealed to a certain person, and not revealed to any other person, it is revelation to that person only. When he tells it to a second person, a second to a third, a third to a fourth, and so on, it ceases to be a revelation to all those persons. It is a revelation to the first person only, and *hearsay* to every other; and, consequently, they are not obliged to believe it. It is a contradiction in terms and ideas to call anything a revelation that comes to us at secondhand, either verbally or in writing. Revelation is necessarily limited to the first communication. After this, it is only an account of something which that person says was a revelation made to him; and though he may find himself obliged to believe it, it cannot be incumbent upon me to believe it in the same manner, for it was not a revelation to *me,* and I have only his word for it that it was made to *him.*

When Moses told the children of Israel that he received the two tables of the commandments from the hand of God, they were not obliged to believe him, because they had no other authority for it than his telling them so; and I have no other authority for it than some historian telling me so. The commandments carry no internal evidence of divinity with them. They contain some good moral precepts, such as any man qualified to be a lawgiver, or a legislator, could produce himself, without having recourse to supernatural intervention.

When I am told that the Koran was written in heaven, and brought to Mahomet by an angel, the account comes to near the same kind of hearsay evidence and second-hand authority as the former. I did not see the angel myself, and therefore I have a right not to believe it.

When also I am told that a woman, called the Virgin Mary said, or gave out, that she was with child without any cohabitation with a man, and that her betrothed husband, Joseph, said, that an angel told him so, I have a right to believe them or not; such a circumstance required a much stronger evidence than their bare word for it; but we have not even this; for neither Joseph nor Mary wrote any such matter themselves. It is only reported by others that *they said so.* It is hearsay upon hearsay, and I do not chuse to rest my belief upon such evidence.

25. **Moses**—*Cf.* Ex. 19-20. 31. **intervention**—"It is, however, necessary to except the declaration which says that God visits the sins of the fathers upon the children. This is contrary to every principle of moral justice." (Paine's note) 37. **Virgin Mary**—*Cf.* Matt. 1: 18-25.

It is, however, not difficult to account for the credit that was given to the story of Jesus Christ being the Son of God. He was born at a time when the heathen mythology had still some fashion and repute in the world, and that mythology had prepared the people for the belief of such a story. Almost all the extraordinary men that lived under the heathen mythology were reputed to be the sons of some of their gods. It was not a new thing, at that time, to believe a man to have been celestially begotten; the intercourse of gods with women was then a matter of familiar opinion. Their Jupiter, according to their accounts, had cohabited with hundreds; the story therefore had nothing in it either new, wonderful, or obscene; it was conformable to the opinions that then prevailed among the people called Gentiles, or mythologists, and it was those people only that believed it. The Jews, who had kept strictly to the belief of one God and no more, and who had always rejected the heathen mythology, never credited the story.

It is curious to observe how the theory of what is called the Christian church sprung out of the tail of the heathen mythology. A direct incorporation took place, in the first instance, by making the reputed founder to be celestially begotten. The trinity of gods that then followed was no other than a reduction of the former plurality, which was about twenty or thirty thousand. The statue of Mary succeeded the statue of Diana of Ephesus. The deification of heroes changed into the canonnization of saints. The mythologists had gods for everything; the Christian mythologists had saints for everything. The church became as crouded with the one as the pantheon had been with the other; and Rome was the place of both. The Christian theory is little else than the idolatry of the ancient mythologists, accommodated to the purposes of power and revenue; and it yet remains to reason and philosophy to abolish the amphibious fraud.

Nothing that is here said can apply, even with the most distant disrespect, to the real character of Jesus Christ. He was a virtuous and an amiable man. The morality that he preached and practiced was of the most benevolent kind; and though similar systems of morality had been preached by Confucius, and by some of the Greek philosophers, many years before; by the Quakers since, and by many good men in all ages, it has not been exceeded by any. . . .

But some perhaps will say: Are we to have no word of God—no revelation? I answer: Yes; there is a word of God; there is a revelation.

THE WORD OF GOD IS THE CREATION WE BEHOLD; and it is in *this word,* which no human invention can counterfeit or alter, that God speaketh universally to man.

Human language is local and changeable, and is therefore incapable of being used as the means of unchangeable and universal information. The idea that God sent Jesus Christ to publish, as they say, the glad tidings to all nations, from one end of the earth unto the other, is consistent only with the ignorance of those who knew nothing of the extent of the world, and who believed, as those world-saviors believed and continue to believe for several centuries (and

20. Diana of Ephesus—*Cf.* Acts 19: 24 ff.

that in contradiction to the discoveries of philosophers and the experience of navigators), that the earth was flat like a trencher; and that a man might walk to the end of it.

But how was Jesus Christ to make anything known to all nations? He could speak but one language, which was Hebrew; and there are in the world several hundred languages. Scarcely any two nations speak the same language, or understand each other; and as to translations, every man who knows anything of languages knows that it is impossible to translate from one language into another, not only without losing a great part of the original, but frequently of mistaking the sense; and, besides all this, the art of printing was wholly unknown at the time Christ lived.

It is always necessary that the means that are to accomplish any end be equal to the accomplishment of that end, or the end cannot be accomplished. It is in this that the difference between finite and infinite power and wisdom discovers itself. Man frequently fails in accomplishing his ends from a natural inability of the power to the purpose; and frequently from the want of wisdom to apply power properly. But it is impossible for infinite power and wisdom to fail as man faileth. The means it useth are always equal to the end; but human language, more especially as there is not a universal language, is incapable of being used as a universal means of unchangeable and uniform information; and therefore it is not the means that God useth in manifesting himself universally to man.

It is only in the CREATION that all our ideas and conceptions of a *word of God* can unite. The creation speaketh a universal language, independently of human speech or human language, multiplied and various as they be. It is an ever existing original which every man can read. It cannot be forged; it cannot be counterfeited; it cannot be lost; it cannot be altered; it cannot be suppressed. It does not depend upon the will of man whether it shall be published or not; it publishes itself from one end of the earth to the other. It preaches to all nations and to all worlds; and this *word of God* reveals to man all that is necessary for man to know of God.

Do we want to contemplate his power? We see it in the immensity of the creation. Do we want to contemplate his wisdom? We see it in the unchangeable order by which the incomprehensible Whole is governed. Do we want to contemplate his munificence? We see it in the abundance with which he fills the earth. Do we want to contemplate his mercy? We see it in his not withholding that abundance even from the unthankful. In fine, do we want to know what God is? Search not the book called the scripture, which any human hand might make, but the scripture called the Creation.

The only idea man can affix to the name of God is that of a *first cause,* the cause of all things. And, incomprehensibly difficult as it is for man to conceive what a first cause is, he arrives at the belief of it from the tenfold greater difficulty of disbelieving it. It is difficult beyond description to conceive that space can have no end; but it is more difficult to conceive an end. It is difficult beyond the power of man to conceive an eternal duration of what we call time; but it is more impossible to conceive a time when there shall be no time. In like manner of reasoning, everything we behold carries in itself the internal evidence

that it did not make itself. Every man is an evidence to himself that he did not make himself; neither could his father make himself, nor his grandfather, nor any of his race; neither could any tree, plant, or animal make itself; and it is the conviction arising from this evidence that carries us on, as it were, by necessity, to the belief of a first cause eternally existing, of a nature totally different to any material existence we know of, and by the power of which all things exist; and this first cause, man calls God.

It is only by the exercise of reason that man can discover God. Take away that reason and he would be incapable of understanding anything; and, in this case, it would be just as consistent to read even the book called the Bible to a horse as to a man. How then is it that those people pretend to reject reason?

Almost the only parts of the book called the Bible that convey to us any idea of God are some chapters in Job, and the 19th Psalm; I recollect no other. Those parts are true *deistical* compositions; for they treat of the *Deity* through his works. They take the book of Creation as the word of God; they refer to no other book; and all the inferences they make are drawn from that volume.

I insert, in this place, the 19th Psalm, as paraphrased into English verse by Addison. I recollect not the prose, and where I write this I have not the opportunity of seeing it.

The spacious firmament on high,
With all the blue ethereal sky,
And spangled heavens, a shining frame,
Their great original proclaim.

The unwearied sun, from day to day,
Does his Creator's power display,
And publishes to every land
The work of an Almighty hand.

Soon as the evening shades prevail
The moon takes up the wondrous tale,
And nightly to the listening earth
Repeats the story of her birth;

Whilst all the stars that round her burn
And all the planets, in their turn,
Confirm the tidings as they roll
And spread the truth from pole to pole.

What though in solemn silence all
Move round this dark terrestrial ball;
What though no real voice, nor sound,
Amidst their radiant orbs be found.

In reason's ear they all rejoice,
And utter forth a glorious voice;
Forever singing as they shine,
THE HAND THAT MADE US IS DIVINE.

13. chapters in Job—Presumably Chaps. 38-41. **18. Addison**—Joseph Addison (1672-1719). **18. where I write this**—i.e., in the Luxembourg prison. **20. The spacious**—There are some unimportant variations in spacing and punctuation between this version of Addison's poem, sometimes called the "Divine Ode," and a standard text.

What more does man want to know than that the hand or power that made these things is divine, is omnipotent? Let him believe this with the force it is impossible to repel, if he permits his reason to act, and his rule of moral life will follow of course.

The allusions in Job have, all of them, the same tendency with this Psalm; that of deducing or proving a truth, that would otherwise be unknown, from truths already known.

I recollect not enough of the passages in Job to insert them correctly; but there is one that occurs to me that is applicable to the subject I am speaking upon: "Canst thou by searching find out God? Canst thou find out the Almighty to perfection?"

I know not how the printers have pointed this passage, for I keep no Bible; but it contains two distinct questions that admit of distinct answers.

First, Canst thou by *searching* find out God? Yes, Because, in the first place, I know I did not make myself, and yet I have existence; and by *searching* into the nature of other things, I find that no other thing could make itself; and yet millions of other things exist; therefore it is that I know, by positive conclusion resulting from this search, that there is a power superior to all those things, and that power is God.

Secondly, Canst thou find out the Almighty to *perfection?* No, Not only because the power and wisdom he has manifested in the structure of the Creation that I behold is to me incomprehensible; but because even this manifestation, great as it is, is probably but a small display of that immensity of power and wisdom by which millions of other worlds, to me invisible by their distance, were created and continue to exist.

It is evident that both these questions were put to the reason of the person to whom they are supposed to have been addressed; and it is only by admitting the first question to be answered affirmatively that the second could follow. It would have been unnecessary, and even absurd, to have put a second question more difficult than the first, if the first question had been answered negatively. The two questions have different objects; the first refers to the existence of God, the second to his attributes. Reason can discover the one, but it falls infinitely short in discovering the whole of the other.

I recollect not a single passage in all the writings ascribed to the men called apostles that conveys any idea of what God is. Those writings are chiefly controversial; and the gloominess of the subject they dwell upon, that of man dying in agony on a cross, is better suited to the gloomy genius of a monk in a cell, by whom it is not impossible they were written, than to any man breathing the open air of the Creation. The only passage that occurs to me, that has any reference to the works of God, by which only his power and wisdom can be known, is related to have been spoken by Jesus Christ as a remedy against distrustful care. "Consider the lilies of the field, how they grow; they toil not, neither do they spin." This, however, is far inferior to the allusions in Job and in the nineteenth Psalm; but it is similar in idea, and the modesty of the imagery is correspondent to the modesty of the man.

10. **Canst**—*Cf.* Job 11:7. 12. **pointed**—punctuated. Paine, however, remembered the standard King James version. 42-43. **Consider . . . spin**—*Cf.* Matt. 6:28.

As to the christian system of faith, it appears to me as a species of atheism; a sort of religious denial of God. It professes to believe in a man rather than in God. It is a compound made up chiefly of manism, with but little deism, and is as near to atheism as twilight is to darkness. It introduces between man and his Maker an opaque body, which it calls a Redeemer as the moon introduces her opaque self between the earth and the sun; and it produces by this means a religious or an irreligious eclipse of light. It has put the whole orb of reason into shade.

The effect of this obscurity has been that of turning everything upside down, and representing it in reverse; and, among the revolutions it has thus magically produced, it has made a revolution in theology.

That which is now called natural philosophy, embracing the whole circle of science, of which astronomy occupies the chief place, is the study of the works of God, and of the power and wisdom of God and his works, and is the true theology.

As to the theology that is now studied in its place, it is the study of human opinions and of human fancies *concerning* God. It is not the study of God himself in the works that he has made, but in the works or writings that man has made; and it is not among the least of the mischiefs that the Christian system has done to the world, that it has abandoned the original and beautiful system of theology, like a beautiful innocent, to distress and reproach, to make room for the hag of superstition.

The book of Job and the 19th Psalm, which even the church admits to be more ancient than the chronological order in which they stand in the book called the Bible, are theological orations conformable to the original system of theology. The internal evidence of those orations proves to a demonstration that the study and contemplation of the works of creation, and of the power and wisdom of God, revealed and manifested in those works, make a great part of the religious devotion of the times in which they were written; and it was this devotional study and contemplation that led to the discovery of the principles upon which what are now called sciences are established; and it is to the discovery of these principles that almost all the arts that contribute to the convenience of human life owe their existence. Every principal art has some science for its parent, though the person who mechanically performs the work does not always, and but very seldom, perceive the connection.

It is a fraud of the Christian system to call the sciences *human inventions;* it is only the application of them that is human. Every science has for its basis a system of principles as fixed and unalterable as those by which the universe is regulated and governed. Man cannot make principles; he can only discover them.

For example. Every person who looks at an almanack sees an account when an eclipse will take place, and he sees also that it never fails to take place, according to the account there given. This shows that man is acquainted with the laws by which the heavenly bodies move. But it would be something worse than ignorance were any church on earth to say that those laws are a human invention.

It would also be ignorance, or something worse, to say, that the scientific

principles, by the aid of which man is enabled to calculate and foreknow when an eclipse will take place, are human invention. Man cannot invent anything that is eternal and immutable, and the scientific principles he employs for this purpose must be, and are, of necessity, as eternal and immutable as the laws by which the heavenly bodies move, or they could not be used as they are to ascertain the time when, and the manner how, an eclipse will take place.

The scientific principles that man employs to obtain the foreknowledge of an eclipse, or of anything else relating to the motion of the heavenly bodies, are contained chiefly in that part of science that is called trigonometry, or the property of a triangle, which, when applied to the study of the heavenly bodies, is called astronomy; when applied to direct the course of a ship on the ocean, it is called navigation; when applied to the construction of figures drawn by rule and compass, it is called geometry; when applied to the construction of plans of edifices, it is called architecture; when applied to the measurement of any portion of the surface of the earth, it is called land-surveying. In fine, it is the soul of science. It is an eternal truth; it contains the *mathematical demonstration* of which man speaks, and the extent of its uses is unknown.

It may be said that man can make or draw a triangle, and therefore a triangle is a human invention.

But the triangle, when drawn, is no other than the image of the principle: it is a delineation to the eye, and from thence to the mind, of a principle that would otherwise be imperceptible. The triangle does not make the principle, any more than a candle, taken into a room that was dark, makes the chairs and tables that before were invisible. All the properties of a triangle exist independently of the figure, and existed before any triangle was drawn or thought of by man. Man had no more to do in the formation of those properties, or principles, than he had to do in making the laws by which the heavenly bodies move; and therefore the one must have the same divine origin as the other.

In the same manner as it may be said that man can make a triangle so also may it be said he can make the mechanical instrument called a lever; but the principle by which the lever acts is a thing distinct from the instrument, and would exist if the instrument did not; it attaches itself to the instrument after it is made; the instrument, therefore, can act no otherwise than it does act; neither can all the efforts of human invention make it act otherwise. That which, in all such cases, man calls the *effect,* is no other than the principle itself rendered perceptible to the senses.

Since, then, man cannot make principles, from whence did he gain a knowledge of them, so as to be able to apply them, not only to things on earth, but to ascertain the motion of bodies so immensely distant from him as all the heavenly bodies are? From whence, I ask, *could* he gain that knowledge but from the study of the true theology?

It is the structure of the universe that has taught this knowledge to man. That structure is an ever-existing exhibition of every principle upon which every part of mathematical science is founded. The offspring of this science is mechanics; for mechanics is no other than the principles of science applied practically. The man who proportions the several parts of a mill uses the same

scientific principles as if he had the power of constructing a universe; but as he cannot give to matter that invisible agency by which all the component parts of the immense machine of the universe have influence upon each other, and act in motional unison together, without any apparent contact, and to which man has given the name of attraction, gravitation, and repulsion, he supplies the place of that agency by the humble imitation of teeth and cogs. All the parts of Man's microcosm must visibly touch; but could he gain a knowledge of that agency, so as to be able to supply it in practice, we might then say that another *canonical* book of the word of God had been discovered.

If man could alter the properties of the lever, so also could he alter the properties of the triangle; for a lever (taking that sort of lever which is called a steelyard, for the sake of explanation) forms, when in motion, a triangle. The line it descends from (one point of that line being in the fulcrum), the line it descends to, and the chord of the arc which the end of the lever describes in the air, are the three sides of a triangle. The other arm of the lever describes also a triangle; and the corresponding sides of those two triangles, calculated scientifically or measured geometrically; and also the sines, tangents, and secants generated from the angles and geometrically measured, have the same proportions to each other as the different weights have that will balance each other on the lever, leaving the weight of the lever out of the case.

It may also be said that man can make a wheel and axis; that he can put wheels of different magnitudes together, and produce a mill. Still the case comes back to the same point, which is that he did not make the principle that gives the wheels those powers. That principle is as unalterable as in the former cases, or rather it is the same principle under a different appearance to the eye.

The power that two wheels of different magnitudes have upon each other is in the same proportion as if the semi-diameters of the two wheels were joined together and made into that kind of lever I have described, suspended at the part where the semi-diameters join; for the two wheels, scientifically considered, are no other than the two circles generated by the motion of the compound lever.

It is from the study of the true theology that all our knowledge of science is derived, and it is from that knowledge that all the arts have originated.

The Almighty lecturer, by displaying the principles of science in the structure of the universe, has invited man to study and to imitation. It is as if he had said to the inhabitants of this globe that we call ours: "I rendered the starry heavens visible, to teach him science and the arts. He can now provide for his own comfort, AND LEARN FROM MY MUNIFICENCE, TO BE KIND TO EACH OTHER."

Of what use is it, unless it be to teach man something, that his eye is endowed with the power of beholding to an incomprehensible distance an immensity of worlds revolving in the ocean of space? Of what use is it that this immensity of worlds is visible to man? What has man to do with the Pleiades, with Orion, with Sirius, with the star he calls the North star, with the moving orbs he has named Saturn, Jupiter, Mars, Venus, and Mercury, if no uses are to follow from their being visible? A less power of vision would have been

sufficient for man, if the immensity he now possesses were only given to waste itself, as it were, on an immense desert space glittering with shows.

It is only by contemplating what he calls the starry heavens as the book and school of science that he discovers any use in their being visible to him, or any advantage resulting from his immensity of vision. But when he contemplates the subject in this light, he sees an additional motive for saying that *nothing was made in vain;* for in vain would be this power of vision if it taught man nothing.

THOMAS JEFFERSON

1743-1826

I. THE REVOLUTIONARY (1743–1782)

1743 Born at "Shadwell," Albemarle County, Virginia, April 13, 1743, the third child and eldest son of Peter and Jane (Randolph) Jefferson.

1752 Began the study of Latin, Greek, and French, the foundations of his cosmopolitan outlook and scholarly interests.

1757 The death of Jefferson's father left Thomas 2,750 acres of land.

1760–1762 At William and Mary College, where he was profoundly influenced by Dr. William Small, professor of mathematics and teacher of philosophy.

1762 Studied law under George Wythe, another great personality. Jefferson was admitted to the bar in 1767 and practiced for a few years.

1769 Elected to the House of Burgesses, the beginning of his political career as a revolutionary statesman.

1772 Married Martha Wayles Skelton and moved to "Monticello," still unfinished.

1774 Wrote *A Summary View of the Rights of British America.*

1775 Elected a Virginia representative to the Second Continental Congress.

1776 The Congress adopted The Declaration of Independence, Jefferson being the principal author.

1776–1779 Active in the Virginia legislature, especially in securing a commission to codify and modernize the laws of the commonwealth. Jefferson's Statute of Religious Freedom was not, however, adopted until 1786.

1779–1781 Governor of Virginia, retiring in disgust from public life because of public hostility.

1782 Death of Mrs. Jefferson. The care of three daughters was one of Jefferson's responsibilities.

II. DIPLOMAT AND STATESMAN (1783–1796)

1783–1784 Delegate to the Congress of the Confederation, where he worked to strengthen the Union.

1784 Sent to Paris as American plenipotentiary to assist Franklin and John Adams in negotiating treaties of commerce with foreign nations.

1784–1785 Printed (in Paris) his *Notes on the State of Virginia.*

1785–1789 Served as Franklin's successor as American minister to France, traveling extensively and associating with the moderate leaders of the French Revolution.

1790–1793 Secretary of State under Washington. During this period his differences with Hamilton on constitutional theory led to the establishment of the two-party system.

III. THE PRESIDENCY (1796–1809)

1796 Opposed John Adams in a closely contested presidential election in which Adams was victorious, Jefferson becoming Vice-President.
1798 Drafted the "Kentucky Resolution."
1800 Elected President of the United States as representing the "Republican" (that is, Democratic) party. Served two terms.
1803 Primarily responsible for the Louisiana Purchase and later for the expedition of Lewis and Clark.
1806 His leadership was responsible for the disastrous Embargo Act designed to prevent British and French depredations against American commerce.

IV. THE SAGE OF MONTICELLO (1809–1826)

1809 Retired to "Monticello," where he spent the remaining years of his life.
1812 The sale of his library of 10,000 volumes to the National Government was the foundation of the Library of Congress, and temporarily lifted Jefferson's financial burdens.
1814 Publication of the *History of the Expedition under the Command of Captains Lewis and Clark,* to which Jefferson contributed a biography of Lewis.
1814–1819 Devoted himself to the problem of public education in Virginia, his efforts creating the University of Virginia in 1819.
1815 Gave up the presidency of the American Philosophical Society, an office he had held for eighteen years.
1819 Bankrupt as the result of the failure of Wilson Cary Nicholas, whose note for $20,000 Jefferson had endorsed.
1826 July 4, died at Monticello.

BIOGRAPHIES: Dumas Malone is at work upon a definitive life, of which the first volume, *Jefferson the Virginian,* Little, Brown, appeared in 1948. Two of the older lives are still valuable: H. S. Randall, *The Life of Thomas Jefferson,* 3 vols., New York, 1858 (eulogy); and S. N. Randolph, *The Domestic Life of Thomas Jefferson,* Harper, 1871. Later nineteenth-century biographies are deficient in documentary material made public in the twentieth century. Among recent biographers these are good: Paul Leicester Ford, *Thomas Jefferson,* Elson and Company, Boston, 1904; D. S. Muzzey, *Thomas Jefferson,* Scribner, 1918; Marie Kimball, *Jefferson, the Road to Glory, 1743 to 1776,* Coward-McCann, 1943, *Jefferson: War and Peace,* Coward-McCann, 1947, and *Jefferson: The Scene of Europe, 1784 to 1789,* Coward-McCann, 1950; A. J. Nock, *Jefferson,* Harcourt, Brace, 1926. Claude G. Bowers, *Jefferson and Hamilton,* Houghton Mifflin, 1925, treats vigorously a central portion of Jefferson's political career and is followed by *Jefferson in Power,* 1936, and preceded by *Young Jefferson,* 1945; Gilbert Chinard, *Thomas Jefferson: The Apostle of Americanism,* Little, Brown, 1929, traces his intellectual development. Excellent also is Adrienne Koch, *The Philosophy of Thomas Jefferson,* Columbia, 1943. For special phases of Jefferson consult the bibliography appended to the life by Dumas Malone in the *Dictionary of American Biography* and that in *Literary History of the United States,* Vol. III, pp. 596-602.

BIBLIOGRAPHY AND EDITIONS: The most nearly complete formal bibliography is W. H. Wise and J. W. Cronin, *A Bibliography of Thomas Jefferson,* River-

ford Publishing Company, Washington, 1935. The *Calendar of the Correspondence of Thomas Jefferson,* 3 vols., U. S. Department of State, 1894-1903, is a useful index to Jefferson material in the Library of Congress. A definitive edition, to run to fifty-two volumes, under the editorship of Julian P. Boyd has been begun, two volumes of the *Papers of Thomas Jefferson* having appeared in 1950 from the Princeton University Press. *The Writings of Thomas Jefferson,* ed. by P. L. Ford, 10 vols., Putnam, 1892-99, is the earliest good edition, but this should be supplemented by the Memorial Edition, 20 vols., Thomas Jefferson Memorial Association, 1905. Particularly since 1916 have there been numerous additions to the published correspondence. See *Thomas Jefferson Correspondence Printed from Originals in the Collections of William K. Bixby,* ed. by W. C. Ford, Boston, 1916; Gilbert Chinard, *Volney et l'Amérique,* Paris, 1923, *Les amitiés américaines de Madame d'Houdetot, d'après sa correspondance inédite avec Benjamin Franklin et Thomas Jefferson,* Paris, 1924, *Jefferson et les idéologues,* Paris, 1925, and *Trois amitiés françaises de Jefferson,* Paris, 1927; *The Commonplace Book of Thomas Jefferson,* Johns Hopkins Press, 1927; *The Literary Bible of Thomas Jefferson,* Johns Hopkins Press, 1928; *The Letters of Lafayette and Jefferson,* ed. by G. Chinard, Johns Hopkins Press, 1929; and *Correspondence of Jefferson and Du Pont de Nemours,* Johns Hopkins Press, 1931; *Correspondence between Thomas Jefferson and Pierre Samuel du Pont de Nemours, 1798-1817,* ed. by Dumas Malone, Houghton Mifflin, 1930; *Correspondence between John Adams and Thomas Jefferson,* ed. by Paul Wilstach, Bobbs-Merrill, 1925.

Smaller usable collections are Adrienne Koch and William Peden, ed., *Life and Selected Writings of Thomas Jefferson,* Modern Library, 1944; and Saul K. Padover, ed., *The Complete Jefferson . . . except his Letters,* Duell, Sloan and Pearce, 1943.

The paradox of Thomas Jefferson is that although one edition of his writings runs to twenty volumes, and although the amount of unpublished material from his pen is incredibly large, he was not a literary man in the usual sense of the word. He seldom or never wrote to satisfy esthetic sensibility or for the purpose of fulfilling the demands of artistic form as an end in itself. Yet his prose often has "that felicitous, haunting cadence which is the peculiar quality of Jefferson's best writing," in Carl Becker's phrase; and no literary document in American history has had a wider influence or been more extensively discussed than the Declaration of Independence, just as his first Inaugural Address, like some of Lincoln's addresses, is one of the few public utterances by American Presidents which have literary distinction.

It is of course well known that Jefferson ranks with Franklin as one of the many-sided geniuses this country has produced. Architect, scientist, philologist, agriculturalist, economist, educator, lawyer, historian, sociologist, statesman—he touched every side of American life and almost every side of the eighteenth-century world. He divides with Hamilton the empire of American political opinion. He is, like Franklin, one of the great letter-writers of his generation. To attempt to represent his activities in small compass is to attempt the impossible, but the following selections give at least a taste of his best prose and include some of the most remarkable documents from his busy pen.

IN CONGRESS, JULY 4, 1776

THE UNANIMOUS DECLARATION OF THE THIRTEEN UNITED STATES OF AMERICA

On June 7, 1776, acting upon the instructions of Virginia, Richard Henry Lee moved (and John Adams seconded) a resolution to the effect that "these United Colonies are, and of right ought to be, free and independent States." The Continental Congress debated this question on June 8 and again on June 10, when they postponed further consideration for three weeks by a vote of seven states to five. But on June 11 a committee composed of Thomas Jefferson, John Adams, Benjamin Franklin, Roger Sherman, and Robert R. Livingston was appointed to draft a declaration, since the adoption of Lee's resolution was inevitable. On July 2 this resolution was adopted, a date that John Adams thought should be celebrated as the legal origin of American independence. In the meantime the committee had gone to work, and on June 28 submitted a draft of a Declaration of Independence to the Congress. This draft was principally the work of Thomas Jefferson. As soon as the Lee resolution was adopted, Congress turned to consider the report of the committee of five, which was debated July 3 and part of July 4, a number of changes (often for the better) being made. It was adopted July 4, when John Hancock signed an authenticated copy and Charles Thomson attested it. The committee of five was ordered to "superintend & correct the press"; and apparently during the night of July 4-5 John Dunlap set up and printed the Declaration in broadside form. On July 19 the Congress ordered the document engrossed on parchment and caused the title to read "The Unanimous Declaration of the 13 United States of America." On August 2, "the declaration of Independence being engrossed & compared at the table was signed by the Members." However, all the members did not sign on that date. Printed copies with names attached were first authorized in January, 1777.

It is evident from this brief account that the question of the "standard" or "correct" text of the Declaration of Independence is a difficult one. Is the proper text the original draft by Jefferson? The report of the committee? The form adopted by the Congress on July 4? Or the form finally engrossed and signed? These differ from each other (and other early manuscript copies also differ). The text here reprinted is that found in *The Declaration of Independence 1776 (Literal Print)*, Washington, Department of State, 1911.

For a study of the evolution of this famous document the student should consult Jefferson's *Autobiography* in any edition of his works; John H. Hazelton, *The Declaration of Independence: Its History,* Dodd, Mead, 1906; Carl L. Becker, *The Declaration of Independence: A Study in the History of Political Ideas,* 2d ed., Harcourt, Brace, 1942; and *The Declaration of Independence: The Evolution of the Text as Shown in Facsimiles of Various Drafts by Its Author; Issued in Conjunction with an Exhibit of These Drafts at the Library of Congress on the Two Hundredth Anniversary of the Birth of Thomas Jefferson,* Library of Congress, 1943.

WHEN in the Course of human events, it becomes necessary for one people to dissolve the political bands which have connected them with another, and to assume among the powers of the earth, the separate and equal station to which the Laws of Nature and of Nature's God en-

title them, a decent respect to the opinions of mankind requires that they should declare the causes which impel them to the separation.—We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable Rights, that among these are Life, Liberty and the pursuit of Happiness.—That to secure these rights, Governments are instituted among Men, deriving their just powers from the consent of the governed,—That whenever any Form of Government becomes destructive of these ends, it is the Right of the People to alter or to abolish it, and to institute new Government, laying its foundation on such principles and organizing its powers in such form, as to them shall seem most likely to effect their Safety and Happiness. Prudence, indeed, will dictate that Governments long established should not be changed for light and transient causes; and accordingly all experience hath shewn, that mankind are more disposed to suffer, while evils are sufferable, than to right themselves by abolishing the forms to which they are accustomed. But when a long train of abuses and usurpations, pursuing invariably the same Object evinces a design to reduce them under absolute Despotism, it is their right, it is their duty, to throw off such Government, and to provide new Guards for their future security.—Such has been the patient sufferance of these Colonies; and such is now the necessity which constrains them to alter their former Systems of Government. The history of the present King of Great Britain is a history of repeated injuries and usurpations, all having in direct object the establishment of an absolute Tyranny over these States. To prove this, let Facts be submitted to a candid world.—He has refused his Assent to Laws, the most wholesome and necessary for the public good.—He has forbidden his Governors to pass Laws of immediate and pressing importance, unless suspended in their operation till his Assent should be obtained; and when so suspended, he has utterly neglected to attend to them.—He has refused to pass other Laws for the accommodation of large districts of people, unless those people would relinquish the right of Representation in the Legislature, a right inestimable to them and formidable to tyrants only.—He has called together legislative bodies at places unusual, uncomfortable, and distant from the depository of their public Records, for the sole purpose of fatiguing them into compliance with his measures.—He has dissolved Representative Houses repeatedly, for opposing with manly firmness his invasions on the rights of the people.—He has refused for a long time, after such dissolutions, to cause others to be elected; whereby the Legislative powers, incapable of Annihilation, have returned to the People at large for their exercise; the State remaining in the mean time exposed to all the dangers of invasion from without, and convulsions within.—He has endeavoured to prevent the population of these States; for that purpose obstructing the Laws for Naturalization of Foreigners; refusing to pass others to encourage their migrations hither, and raising the conditions of new Appropriations of Lands.—He has obstructed the Administration of Justice, by refusing his Assent to Laws for establishing Judiciary powers.—He has

21. King—George III (1760-1820). **23. Facts**—For a consideration, item by item, of this bill of particulars see Chaps. X and XI of Herbert Friedenwald, *The Declaration of Independence: An Interpretation and an Analysis*, Macmillan, 1904.

made Judges dependent on his Will alone, for the tenure of their officers, and the amount and payment of their salaries.—He has erected a multitude of New Offices, and sent hither swarms of Officers to harass our people, and eat out their substance.—He has kept among us, in times of peace, Standing Armies without the Consent of our legislatures.—He has affected to render the Military independent of and superior to the Civil power.—He has combined with others to subject us to a jurisdiction foreign to our constitution, and unacknowledged by our laws; giving his Assent to their Acts of pretended Legislation:—For quartering large bodies of armed troops among us:—For protecting them, by a mock Trial, from punishment for any Murders which they should commit on the Inhabitants of these States:—For cutting off our Trade with all parts of the world:—For imposing Taxes on us without our Consent: —For depriving us in many cases, of the benefits of Trial by Jury:—For transporting us beyond Seas to be tried for pretended offences:—For abolishing the free System of English Laws in a neighbouring Province, establishing therein an Arbitrary government, and enlarging its Boundaries so as to render it at once an example and fit instrument for introducing the same absolute rule into these Colonies:—For taking away our Charters, abolishing our most valuable Laws, and altering fundamentally the Forms of our Governments:— For suspending our own Legislatures, and declaring themselves invested with power to legislate for us in all cases whatsoever.—He has abdicated Government here, by declaring us out of his Protection and waging War against us: —He has plundered our seas, ravaged our Coasts, burnt our towns, and destroyed the lives of our people.—He is at this time transporting large Armies of foreign Mercenaries to compleat the works of death, desolation and tyranny, already begun with circumstances of Cruelty & perfidy scarcely paralleled in the most barbarous ages, and totally unworthy the Head of a civilized nation. —He has constrained our fellow Citizens taken Captive on the high Seas to bear Arms against their Country, to become the executioners of their friends and Brethren, or to fall themselves by their Hands.—He has excited domestic insurrections amongst us, and has endeavoured to bring on the inhabitants of our frontiers, the merciless Indian Savages, whose known rule of warfare, is an undistinguished destruction of all ages, sexes and conditions. In every stage of these Oppressions We have Petitioned for Redress in the most humble terms: Our repeated Petitions have been answered only by repeated injury. A Prince, whose character is thus marked by every act which may define a Tyrant, is unfit to be the ruler of a free people. Nor have We been wanting in attentions to our British brethren. We have warned them from time to time of attempts by their legislature to extend an unwarrantable jurisdiction over us. We have reminded them of the circumstances of our emigration and settlement here. We have appealed to their native justice and magnanimity, and we have conjured them by the ties of our common kindred to disavow these usurpations, which, would inevitably interrupt our connections and corre-

6-7. combined with others—that is, the British Parliament. This is the only reference to the Parliament in the Declaration. **15. neighbouring Province**—that is, Quebec. However, the provisions for extending the civil law as against the common law were never enforced. **25. foreign Mercenaries**—that is, Hessian troops.

spondence. They too have been deaf to the voice of justice and of consanguinity. We must, therefore, acquiesce in the necessity, which denounces our Separation, and hold them, as we hold the rest of mankind, Enemies in War, in Peace Friends.

WE, THEREFORE, THE REPRESENTATIVES OF THE UNITED STATES OF AMERICA, in General Congress, Assembled, appealing to the Supreme Judge of the world for the rectitude of our intentions, do, in the Name, and by authority of the good People of these Colonies, solemnly publish and declare, That these United Colonies are, and of Right ought to be FREE AND INDEPENDENT STATES; that they are Absolved from all Allegiance to the British Crown, and that all political connection between them and the State of Great Britain, is and ought to be totally dissolved; and that as Free and Independent States, they have full Power to levy War, conclude Peace, contract Alliances, establish Commerce, and to do all other Acts and Things which Independent States may of right do.—And for the support of this Declaration, with a firm reliance on the protection of divine Providence, we mutually pledge to each other our Lives, our Fortunes and our sacred Honor.

[Signatures]

[FIRST] INAUGURAL ADDRESS

MARCH 4, 1801

On February 28, 1801, Vice-President Jefferson formally notified the Senate that he "propose[d] to retire from the chair"; and on March 4 he reappeared as President-elect. He had ridden to the Capitol attended only by a bodyguard of friends, tied his horse to the "palisades," and entered the unfinished building. "On his entering the Senate Chamber, [Aaron] Burr, who had already taken the oath of office [as Vice-President], gave up his chair, and took his seat on the right. On the left sat the Chief-Justice. Two imposing and usual figures on such occasions were absent—the late President [John Adams] and the late speaker of the House of Representatives [Theodore Sedgwick]. . . . But there was the customary attendance of other officials—and the usual crowd of friends and spectators. Mr. Jefferson rose and delivered the following Inaugural Address" (Randall, *Life of Thomas Jefferson,* Vol. 2, p. 630). At the conclusion of the address Jefferson took the oath.

The text here reprinted is that of the Memorial Edition, Vol. 3, pp. 317-23. A facsimile of the original manuscript may be found in that edition.

FRIENDS AND FELLOW CITIZENS—

Called upon to undertake the duties of the first executive office of our country, I avail myself of the presence of that portion of my fellow citizens which is here assembled, to express my grateful thanks for the favor with which they have been pleased to look towards me, to declare a sincere consciousness that the task is above my talents, and that I approach it with those anxious and awful presentiments which the greatness of the charge and the weakness of my powers so justly inspire. A rising nation, spread over a wide and fruitful

2. **denounces**—gives formal notice of.

land, traversing all the seas with the rich productions of their industry, engaged in commerce with nations who feel power and forget right, advancing rapidly to destinies beyond the reach of mortal eye—when I contemplate these transcendent objects, and see the honor, the happiness, and the hopes of this beloved country committed to the issue and auspices of this day, I shrink from the contemplation, and humble myself before the magnitude of the undertaking. Utterly indeed, should I despair, did not the presence of many whom I here see remind me, that in the other high authorities provided by our constitution, I shall find resources of wisdom, of virtue, and of zeal, on which to rely under all difficulties. To you, then, gentlemen, who are charged with the sovereign functions of legislation and to those associated with you, I look with encouragement for that guidance and support which may enable us to steer with safety the vessel in which we are all embarked amidst the conflicting elements of a troubled world.

During the contest of opinion through which we have passed, the animation of discussions and of exertions has sometimes worn an aspect which might impose on strangers unused to think freely and to speak and to write what they think; but this being now decided by the voice of the nation, announced according to the rules of the constitution, all will, of course, arrange themselves under the will of the law, and unite in common efforts for the common good. All, too, will bear in mind this sacred principle, that though the will of the majority is in all cases to prevail, that will, to be rightful, must be reasonable; that the minority possess their equal rights, which equal laws must protect, and to violate which would be oppression. Let us, then, fellow citizens, unite with one heart and one mind. Let us restore to social intercourse that harmony and affection without which liberty and even life itself are but dreary things. And let us reflect that having banished from our land that religious intolerance under which mankind so long bled and suffered, we have yet gained little if we countenance a political intolerance as despotic, as wicked, and capable of as bitter and bloody persecutions. During the throes and convulsions of the ancient world, during the agonizing spasms of infuriated man, seeking through blood and slaughter his long-lost liberty, it was not wonderful that the agitation of the billows should reach even this distant and peaceful shore; that this should be more felt and feared by some and less by others; that this should divide opinions as to measures of safety. But every difference of opinion is not a difference of principle. We have called by different names brethren of the same principle. We are all republicans—we are all federalists. If there be any among us who would wish to dissolve this Union or to change its republican form, let them stand undisturbed as monuments of the safety with which error of opinion may be tolerated where reason is left free to combat it. I know, indeed, that some honest men fear that a republican government cannot be strong; that this government is not strong enough. But would the honest patriot, in the full tide of successful experiment, abandon a govern-

1. **traversing**—moving across. 5. **auspices**—here, happy omens. 15. **contest of opinion**—The election of 1800 had been bitterly fought. 18. **announced**—in the facsimile of the manuscript, "enounced." 31. **ancient world**—that is, the "Old Regime" in Europe. **spasms** is of course an oblique reference to the Reign of Terror in the French Revolution.

ment which has so far kept us free and firm, on the theoretic and visionary fear that this government, the world's best hope, may by possibility want energy to preserve itself? I trust not. I believe this, on the contrary, the strongest government on earth. I believe it is the only one where every man, at the call of the law, would fly to the standard of the law, and would meet invasions of the public order as his own personal concern. Sometimes it is said that man cannot be trusted with the government of himself. Can he, then, be trusted with the government of others? Or have we found angels in the form of kings to govern him? Let history answer this question.

Let us, then, with courage and confidence pursue our own federal and republican principles, our attachment to our union and representative government. Kindly separated by nature and a wide ocean from the exterminating havoc of one quarter of the globe; too high-minded to endure the degradations of the others; possessing a chosen country, with room enough for our descendants to the hundredth and thousandth generation; entertaining a due sense of our equal right to the use of our own faculties, to the acquisitions of our own industry, to honor and confidence from our fellow citizens, resulting not from birth but from our actions and their sense of them; enlightened by a benign religion, professed, indeed, and practiced in various forms, yet all of them inculcating honesty, truth, temperance, gratitude, and the love of man; acknowledging and adoring an over-ruling Providence, which by all its dispensations proves that it delights in the happiness of man here and his greater happiness hereafter; with all these blessings, what more is necessary to make us a happy and a prosperous people? Still one thing more, fellow citizens—a wise and frugal government, which shall restrain men from injuring one another, shall leave them otherwise free to regulate their own pursuits of industry and improvement, and shall not take from the mouth of labor the bread it has earned. This is the sum of good government, and this is necessary to close the circle of our felicities.

About to enter, fellow citizens, on the exercise of duties which comprehend everything dear and valuable to you, it is proper that you should understand what I deem the essential principles of our government, and consequently those which ought to shape its administration. I will compress them within the narrowest compass they will bear, stating the general principle, but not all its limitations. Equal and exact justice to all men, of whatever state or persuasion, religious or political; peace, commerce, and honest friendship, with all nations—entangling alliances with none; the support of the state governments in all their rights, as the most competent administrations for our domestic concerns and the surest bulwarks against anti-republican tendencies; the preservation of the general government in its whole constitutional vigor, as the sheet anchor of our peace at home and safety abroad; a jealous care of the right of election by the people—a mild and safe corrective of abuses which are lopped by the sword of revolution where peaceable remedies are unprovided; absolute acquiescence in the decisions of the majority—the vital principle of republics, from which is no appeal but to force[,] the vital principle

2. by possibility—that is, perhaps. **35. state**—that is, state of life, status.

and immediate parent of despotism; a well-disciplined militia—our best reliance in peace and for the first moments of war, till regulars may relieve them; the supremacy of the civil over the military authority; economy in the public expense, that labor may be lightly burdened; the honest payment of our debts and sacred preservation of the public faith; encouragement of agriculture, and of commerce as its handmaid; the diffusion of information and arraignment of all abuses at the bar of public reason; freedom of religion; freedom of the press; and freedom of person under the protection of the *habeas corpus;* and trial by juries impartially selected—these principles form the bright constellation which has gone before us, and guided our steps through an age of revolution and reformation. The wisdom of our sages and the blood of our heroes have been devoted to their attainment. They should be the creed of our political faith—the text of civil instruction—the touchstone by which to try the services of those we trust; and should we wander from them in moments of error or alarm, let us hasten to retrace our steps and to regain the road which alone leads to peace, liberty, and safety.

I repair, then, fellow citizens, to the post you have assigned me. With experience enough in subordinate offices to have seen the difficulties of this, the greatest of all, I have learned to expect that it will rarely fall to the lot of imperfect man to retire from this station with the reputation and the favor which bring him into it. Without pretensions to that high confidence you reposed in our first and great revolutionary character, whose preeminent services had entitled him to the first place in his country's love, and destined for him the fairest page in the volume of faithful history, I ask so much confidence only as may give firmness and effect to the legal administration of your affairs. I shall often go wrong through defect of judgment. When right, I shall often be thought wrong by those whose positions will not command a view of the whole ground. I ask your indulgence for my own errors, which will never be intentional; and your support against the errors of others, who may condemn what they would not if seen in all its parts. The approbation implied by your suffrage is a consolation to me for the past; and my future solicitude will be to retain the good opinion of those who have bestowed it in advance, to conciliate that of others by doing them all the good in my power, and to be instrumental to the happiness and freedom of all.

Relying, then, on the patronage of your good will, I advance with obedience to the work, ready to retire from it whenever you become sensible how much better choice it is in your power to make. And may that Infinite Power which rules the destinies of the universe, lead our councils to what is best, and give them a favorable issue for your peace and prosperity.

8-9. habeas corpus—a legal writ requiring anyone having another in his custody to produce his prisoner in person before the court issuing the writ. **17. repair**—that is, betake myself. **22. revolutionary character**—that is, Washington. **35. patronage**—that is, favoring support.

NOTES ON VIRGINIA

In 1781, being still in Virginia, Jefferson received from M. de Marbois of the French legation in Philadelphia a letter containing a series of inquiries about Virginia. Jefferson used this letter as an occasion to codify a series of memoranda about his native commonwealth; his friends desiring copies, when he went to Paris, he had two hundred printed under the title *Notes on the State of Virginia* (dated 1782; issued in 1784-85). This was translated into French when, to prevent the issuance of a bad translation into English, he arranged with John Stockdale, a London publisher, to issue an authorized version in 1787. This was reprinted in Philadelphia in 1788. In an edition of 1800 additional material from Jefferson's hand appeared. At his death a printed copy kept by him with a revised text and many manuscript notes was made the basis of an edition of 1853. However, the present text is the modernized text of the Memorial Edition.

The *Notes on Virginia* is in twenty-three sections, each answering a specific question about Virginia. The order of inquiry is roughly from geography, natural resources, flora and fauna to the sociology, political economy, and history of the commonwealth. During the course of the book Jefferson takes occasion to refute the theory of Buffon that plants, animals, and men are smaller in the New World than in the Old and to start a good many scientific speculations, notably in geology. The selection here given, however, deals with scenery. It is important in American literature for two reasons. The description of the meeting of the Shenandoah and the Potomac became a model for landscape description, the formula of which was followed by many subsequent writers; and the description set a fashion for seeing American scenery in terms of the sublime.

QUERY IV

A NOTICE OF ITS MOUNTAINS?

For the particular geography of our mountains I must refer to Fry and Jefferson's map of Virginia; and to Evans' analysis of this map of America, for a more philosophical view of them than is to be found in any other work. It is worthy of notice, that our mountains are not solitary and scattered confusedly over the face of the country; but that they commence at about one hundred and fifty miles from the sea-coast, are disposed in ridges, one behind another, running nearly parallel with the sea-coast, though rather approaching it as they advance north-eastwardly. To the south-west, as the tract of country between the sea-coast and the Mississippi becomes narrower, the mountains converge into a single ridge, which, as it approaches the Gulf of Mexico, subsides into plain country, and gives rise to some of the waters

1-2. **Fry and Jefferson's map of Virginia**—by Joshua Fry and Peter Jefferson, who surveyed part of the boundary line between Virginia and North Carolina in 1749. This map was printed in London in 1751 and reprinted thereafter. It should be remembered that West Virginia was then part of Virginia. **Evans' analysis**—apparently a reference to a *General Map of the Middle British Colonies in America*, London, 1755. 3. **philosophical**—that is, scientific.

of that gulf, and particularly to a river called the Apalachicola, probably from the Apalachies, an Indian nation formerly residing on it. Hence the mountains giving rise to that river, and seen from its various parts, were called the Apalachian mountains, being in fact the end or termination only of the great ridges passing through the continent. European geographers, however, extended the name northwardly as far as the mountains extended; some giving it, after their separation into different ridges, to the Blue Ridge, others to the North Mountain, others to the Alleghany, others to the Laurel Ridge, as may be seen by their different maps. But the fact I believe is, that none of these ridges were ever known by that name to the inhabitants, either native or emigrant, but as they saw them so called in European maps. In the same direction, generally, are the veins of limestone, coal, and other minerals hitherto discovered; and so range the falls of our great rivers. But the courses of the great rivers are at right angles with these. James and Potomac penetrate through all the ridges of mountains eastward of the Alleghany; that is, broken by no water course. It is in fact the spine of the country between the Atlantic on one side, and the Mississippi and St. Lawrence on the other. The passage of the Potomac through the Blue Ridge is, perhaps, one of the most stupendous scenes in nature. You stand on a very high point of land. On your right comes up the Shenandoah, having ranged along the foot of the mountain an hundred miles to seek a vent. On your left approaches the Potomac, in quest of a passage also. In the moment of their junction, they rush together against the mountain, rend it asunder, and pass off to the sea. The first glance of this scene hurries our senses into the opinion, that this earth has been created in time, that the mountains were formed first, that the rivers began to flow afterwards, that in this place, particularly, they have been dammed up by the Blue Ridge of mountains, and have formed an ocean which filled the whole valley; that continuing to rise they have at length broken over at this spot, and have torn the mountain down from its summit to its base. The piles of rock on each hand, but particularly on the Shenandoah, the evident marks of their disrupture and avulsion from their beds by the most powerful agents of nature, corroborate the impression. But the distant finishing which nature has given to the picture, is of a very different character. It is a true contrast to the foreground. It is as placid and delightful as that is wild and tremendous. For the mountain being cloven asunder, she presents to your eye, through the cleft, a small catch of smooth blue horizon, at an infinite distance in the plain country, inviting you, as it were, from the riot and tumult roaring around, to pass through the breach and participate of the calm below. Here the eye ultimately composes itself; and that way, too, the road happens actually to lead. You cross the Potomac above the junction, pass along its side through the base of the mountain for three miles, its terrible precipices hanging in fragments over you, and within about twenty miles reach Fredericktown, and the fine

1. **Apalachicola**—formed by the junction of the Chattahoochee and Flint rivers in southwest Georgia and running 90 miles to the Gulf of Mexico. **8. North Mountain**—the Shenandoah or Great North Mountains. **17-18. The passage of the Potomac**—The Shenandoah joins the Potomac at the modern town of Harpers Ferry. **21. vent**—outlet. **31. avulsion**—tearing away. **32. distant finishing**—in the general sense of perspective. **36. catch**—fragment, glimpse. **42. Fredericktown**—the modern Frederick, Maryland.

country round that. This scene is worth a voyage across the Atlantic. Yet here, as in the neighborhood of the Natural Bridge, are people who have passed their lives within half a dozen miles, and have never been to survey these monuments of a war between rivers and mountains, which must have shaken the earth itself to its centre. See Appendix (B).

The height of our mountains has not yet been estimated with any degree of exactness. The Alleghany being the great ridge which divides the waters of the Atlantic from those of the Mississippi, its summit is doubtless more elevated above the ocean than that of any other mountain. But its relative height, compared with the base on which it stands, is not so great as that of some others, the country rising behind the successive ridges like the steps of stairs. The mountains of the Blue Ridge, and of these the Peaks of Otter, are thought to be of a greater height, measured from their base, than any others in our country, and perhaps in North America. From data, which may found a tolerable conjecture, we suppose the highest peak to be about four thousand feet perpendicular, which is not a fifth part of the height of the mountains of South America, nor one-third of the height which would be necessary in our latitude to preserve ice in the open air unmelted through the year. The ridge of mountains next beyond the Blue Ridge, called by us the North mountain, is of the greatest extent; for which reason they were named by the Indians the endless mountains.

A substance supposed to be Pumice, found floating on the Mississippi, has induced a conjecture that there is a volcano on some of its waters; and as these are mostly known to their sources, except the Missouri, our expectations of verifying the conjecture would of course be led to the mountains which divide the waters of the Mexican Gulf from those of the South Sea; but no volcano having ever yet been known at such a distance from the sea, we must rather suppose that this floating substance has been erroneously deemed Pumice.

LETTER TO PETER CARR*

Paris, August 19, 1785

DEAR PETER,—I received, by Mr. Mazzei, your letter of April the 20th. I am much mortified to hear that you have lost so much time; and that when you arrived in Williamsburg, you were not at all advanced from what you were

5. **Appendix (B)**—not here reprinted. In it Jefferson speculates further upon the geological history of this region and of Pennsylvania. 12. **Blue Ridge . . . Peaks of Otter**—The highest mountains in Virginia are Mount Rogers, 5,719 feet, and Whitetop, 5,520 feet, in the extreme southwestern part of the state. At Harpers Ferry the altitude is about 300 feet. Mt. Washington, in the New Hampshire White Mountains, rises to 6,293 feet. 16-17. **mountains of South America**—that is, the Andes. Mt. Aconcagua rises to 22,860 feet. 22. **Pumice**—spongy lava. 24. **known to their sources**—Lake Itasca, the true source of the Mississippi River, was first discovered by Schoolcraft in 1832. 26. **South Sea**—Pacific Ocean. * **Peter Carr**—one of Jefferson's nephews, born in 1770, the son of Dabney and Martha (Jefferson) Carr. After his father's death in 1773 Peter Carr became Jefferson's ward, and later his private secretary. The text of this and the following letters is that of the Memorial Edition. 31. **Mazzei**—Philip Mazzei, 1730-1814, agent of Virginia during the American Revolution, who, returning briefly from Europe in 1783, sailed from New York June 16, 1785. 33. **Williamsburg**—that is, the College of William and Mary.

when you left Monticello. Time now begins to be precious to you. Every day you lose will retard a day your entrance on that public stage whereon you may begin to be useful to yourself. However, the way to repair the loss is to improve the future time. I trust, that with your dispositions, even the acquisition of science is a pleasing employment. I can assure you, that the possession of it is, what (next to an honest heart) will above all things render you dear to your friends, and give you fame and promotion in your own country. When your mind shall be well improved with science, nothing will be necessary to place you in the highest points of view, but to pursue the interests of your country, the interests of your friends, and your own interests also, with the purest integrity, the most chaste honor. The defect of these virtues can never be made up by all the other acquirements of body and mind. Make these, then, your first object. Give up money, give up fame, give up science, give the earth itself and all it contains, rather than do an immoral act. And never suppose, that in any possible situation, or under any circumstances, it is best for you to do a dishonorable thing, however slightly so it may appear to you. Whenever you are to do a thing, though it can never be known but to yourself, ask yourself how you would act were all the world looking at you, and act ... Encourage all your virtuous dispositions, and exercise them whenever an opportunity arises; being assured that they will gain strength by exercise, as a limb of the body does, and that exercise will make them habitual. From the practice of the purest virtue, you may be assured you will derive the most sublime comforts in every moment of life, and in the moment of death. If ever you find yourself environed with difficulties and perplexing circumstances, out of which you are at a loss how to extricate yourself, do what is right, and be assured that that will extricate you the best out of the worst situations. Though you cannot see, when you take one step, what will be the next, yet follow truth, justice, and plain dealing, and never fear their leading you out of the labyrinth, in the easiest manner possible. The knot which you thought a Gordian one will untie itself before you. Nothing is so mistaken as the supposition, that a person is to extricate himself from a difficulty, by intrigue, by chicanery, by dissimulation, by trimming, by an untruth, by an injustice. This increases the difficulties tenfold; and those, who pursue these methods, get themselves so involved at length, that they can turn no way but their infamy becomes more exposed. It is of great importance to set a resolution, not to be shaken, never to tell an untruth. There is no vice so mean, so pitiful, so contemptible; and he who permits himself to tell a lie once, finds it much easier to do it a second and third time, till at length it becomes habitual; he tells lies without attending to it, and truths without the world's believing him. This falsehood of the tongue leads to that of the heart, and in time depraves all its good dispositions.

An honest heart being the first blessing, a knowing head is the second. It is time for you now to begin to be choice in your reading; to begin to pursue a regular course in it; and not to suffer yourself to be turned to the right or

5. **science**—knowledge. 30. **Gordian knot**—Gordius, king of Phrygia, tied a knot about his chariot, prophesying that whoever could loose it would rule Asia. Alexander the Great cut the knot with his sword.

left by reading anything out of that course. I have long ago digested a plan for you, suited to the circumstances in which you will be placed. This I will detail to you, from time to time, as you advance. For the present, I advise you to begin a course of ancient history, reading everything in the original and not in translations. First read Goldsmith's history of Greece. This will give you a digested view of that field. Then take up ancient history in the detail, reading the following books, in the following order: Herodotus, Thucydides, Xenophontis Anabasis, Arrian, Quintus Curtius, Diodorus Siculus, Justin. This shall form the first stage of your historical reading, and is all I need mention to you now. The next will be of Roman history. From that, we will come down to modern history. In Greek and Latin poetry, you have read or will read at school, Virgil, Terence, Horace, Anacreon, Theocritus, Homer, Euripides, Sophocles. Read also Milton's "Paradise Lost," Shakspeare, Ossian, Pope's and Swift's works, in order to form your style in your own language. In morality, read Epictetus, Xenophontis Memorabilia, Plato's Socratic dialogues, Cicero's philosophies, Antoninus, and Seneca. In order to assure a certain progress in this reading, consider what hours you have free from the school and the exercises of the school. Give about two of them, every day, to exercise; for health must not be sacrificed to learning. A strong body makes the mind strong. As to the species of exercise I advise the gun. While this gives a moderate exercise to the body, it gives boldness, enterprise, and independence to the mind. Games played with the ball, and others of that nature, are too violent for the body, and stamp no character on the mind. Let your gun, therefore, be the constant companion of your walks. Never think of taking a book with you. The object of walking is to relax the mind. You should therefore not permit yourself even to think while you walk; but divert yourself by the objects surrounding you. Walking is the best possible exercise. Habituate yourself to walk very far. The Europeans value themselves on hav-

5. **Goldsmith's history of Greece**—*The Grecian History, from the Earliest State to the Death of Alexander the Great,* 2 vols, London, 1774, a compilation attributed to Goldsmith. 7-8. **Herodotus . . . Justin—Herodotus,** the "father of history," in the fifth century, B.C., wrote a history in nine books named for the Muses. **Thucydides** (471-401? B.C.) wrote a history of the Peloponnesian War. **Xenophontis Anabasis**—the *Anabasis* is the story of the retreat of ten thousand Greeks from Persia, by Xenophon (444-354? B.C.). **Arrian** (A.D. 90-post 146) wrote a history of Alexander the Great in seven books, as did **Quintus** (Rufus) **Curtius,** who lived in the first century A.D. **Diodorus Siculus,** a contemporary of Julius Caesar and of Augustus, compiled a *Bibliotheca Historica* or universal history down to Caesar's Gallic wars. **Justin,** second century A.D., wrote a history of the Macedonian monarchy, called *Historiarum Philippicarum Libri XLIV.* Jefferson is therefore recommending a historical diet heavily militarized! 10. **Roman history**—"Livy, Sallust, Caesar, Cicero's epistles, Suetonius, Tacitus, Gibbon." (Footnote in the Memorial Edition) 12-13. **Virgil . . . Sophocles**—Of these familiar names only two may require a gloss—**Anacreon** (550-465? B.C.), to whom a series of lyric odes celebrating wine and love is wrongly attributed; and **Theocritus,** a Greek pastoral poet of the third century B.C. 13. **Ossian**—A series of three books, *Fragments of Ancient Poetry Collected in the Highlands of Scotland* (1760), *Fingal* (1762), and *Temora* (1763), was supposed to be translations of an authentic Gaelic poet named Ossian. They were compiled, by James Macpherson (1736-1796). 15-16. **Epictetus . . . Seneca—Epictetus,** who lived under the emperors Nero and Domitian, left behind him a short manual of his teachings, the *Enchiridion,* compiled by Arrian. **Xenophontis Memorabilia** is Xenophon's account of Socrates. **Plato's Socratic dialogues** require no gloss. **Cicero's philosophies**—a blanket reference to nine works by Cicero (106-43 B.C.). Marcus Aurelius **Antoninus** (161-180), whose philosophical work is usually called *Meditations.* L. Annaeus **Seneca** (?5 B.C.-A.D. 50), whose essays, especially *De Beneficiis,* are in question.

ing subdued the horse to the uses of man; but I doubt whether we have not lost more than we have gained, by the use of this animal. No one has occasioned so much the degeneracy of the human body. An Indian goes on foot nearly as far in a day, for a long journey, as an enfeebled white does on his horse; and he will tire the best horses. There is no habit you will value so much as that of walking far without fatigue. I would advise you to take your exercise in the afternoon: not because it is the best time for exercise, for certainly it is not; but because it is the best time to spare from your studies; and habit will soon reconcile it to health, and render it nearly as useful as if you gave to that the more precious hours of the day. A little walk of half an hour, in the morning, when you first rise, is advisable also. It shakes off sleep, and produces other good effects in the animal economy. Rise at a fixed and early hour, and go to bed at a fixed and early hour also. Sitting up late at night is injurious to the health, and not useful to the mind. Having ascribed proper hours to exercise, divide what remain (I mean of your vacant hours) into three portions. Give the principal to History, the other two, which should be shorter, to Philosophy and Poetry. Write to me once every month or two, and let me know the progress you make. Tell me in what manner you employ every hour in the day. The plan I have proposed for you is adapted to your present situation only. When that is changed, I shall propose a corresponding change of plan. I have ordered the following books to be sent to you from London, to the care of Mr. Madison: Herodotus, Thucydides, Xenophon's Hellenics, Anabasis and Memorabilia, Cicero's works, Baretti's Spanish and English Dictionary, Martin's Philosophical Grammar, and Martin's Philosophia Britannica. I will send you the following from hence: Bezout's Mathematics, De la Lande's Astronomy, Muschenbrock's Physics, Quintus Curtius, Justin, a Spanish Grammar, and some Spanish books. You will observe that Martin, Bezout, De la Lande, and Muschenbrock, are not in the preceding plan. They are not to be opened till you go to the University. You are now, I expect, learning French. You must push this; because the books which will be put into your hands when you advance into Mathematics, Natural philosophy, Natural history, &c., will be mostly French, these sciences being better treated by the French than the English writers. Our future connection with Spain renders that the most necessary of the modern languages, after the French. When you become a public man, you may have occasion for it, and the circumstance of your possessing that language may give you a preference over other candidates. I have nothing further to add for the present, but husband well your time,

2. No one—that is, no one other thing. **22. Madison**—James Madison (1751-1836), disciple of Jefferson and fourth President. **Xenophon's Hellenics**—a continuation of the history of Thucydides. **23-24. Baretti's . . . Dictionary**—*Dictionary of Spanish and English and English and Spanish* by Giuseppe Marc' Antonio Baretti. Jefferson presumably refers to the 2d edition, London, 1778. **24. Martin**—Benjamin Martin, *The Philosophical Grammar*, London, 1735, which reached a seventh edition in 1769; and *Philosophia Britannia, or, a New . . . System of the Newtonian Philosophy, Astronomy and Geography*, 2 vols., Reading, 1747; 3d ed., 3 vols., London, 1771. **25-26. Bezout . . . Muschenbrock**—Etienne **Bezout**, *Cours de mathématiques*, 5 parts, Paris, 1764-69, often reprinted; Joseph Jérôme Le Français **De la Lande**, *Abrégé d'astronomie*, Paris, 1774; Pieter van **Muschenbrock**, *Cours de physique expérimentale et mathématique* (French translation), 3 vols., Leyden, 1769. **31-32. Natural philosophy, Natural history**—that is, the physical and biological sciences.

cherish your instructors, strive to make everybody your friend; and be assured that nothing will be so pleasing as your success to, Dear Peter,

Yours affectionately.

LETTER TO PETER CARR

Paris, August 10, 1787

DEAR PETER,—I have received your two letters of December the 30th and April the 18th, and am very happy to find by them, as well as by letters from Mr Wythe, that you have been so fortunate as to attract his notice and good will; I am sure you will find this to have been one of the most fortunate events of your life, as I have ever been sensible it was of mine. I enclose you a sketch of the sciences to which I would wish you to apply, in such order as Mr. Wythe shall advise; I mention, also, the books in them worth your reading, which submit to his correction. Many of these are among your father's books, which you should have brought to you. As I do not recollect those of them not in his library, you must write to me for them making out a catalogue of such as you think you shall have occasion for, in eighteen months from the date of your letter, and consulting Mr. Wythe on the subject. To this sketch, I will add a few particular observations:

1. Italian. I fear the learning this language will confound your French and Spanish. Being all of them degenerated dialects of the Latin, they are apt to mix in conversation. I have never seen a person speaking the three languages, who did not mix them. It is a delightful language, but late events having rendered the Spanish more useful, lay it aside to prosecute that.

2. Spanish. Bestow great attention on this, and endeavor to acquire an accurate knowledge of it. Our future connections with Spain and Spanish America, will render that language a valuable acquisition. The ancient history of that part of America, too, is written in that language. I send you a dictionary.

3. Moral Philosophy. I think it lost time to attend lectures on this branch. He who made us would have been a pitiful bungler, if he had made the rules of our moral conduct a matter of science. For one man of science, there are thousands, who are not. What would have become of them? Man was destined for society. His morality, therefore, was to be formed to this object. He was endowed with a sense of right and wrong, merely relative to this. This sense is as much a part of his nature, as the sense of hearing, seeing, feeling; it is the true foundation of morality, and not the το καλον, truth, &c., as fanciful writers have imagined. The moral sense, or conscience, is as much a part of man, as his leg or arm. It is given to all human beings in a stronger or

7. **Wythe**—George Wythe (1726-1806), Jefferson's early mentor, occupant of the first professorship in law ever established in the United States, and known as the "Virginian Aristides." **12. father**—that is, Dabney Carr. **21. late events**—In 1785 Spain sent Gardoqui to the United States to negotiate a treaty concerning the navigation of the Mississippi, commercial relations, and the effectuation of certain clauses in the Treaty of Peace of 1783. The negotiations proved futile. By Western Americans Spain was charged with stirring up the Indians; and the national government was disturbed about the fixing of the Florida boundary line. **25. ancient history**—that is, early history. **34.** το καλον—the good.

weaker degree, as force of members is given them in a greater or less degree. It may be strengthened by exercise, as may any particular limb of the body. This sense is submitted, indeed, in some degree, to the guidance of reason; but it is a small stock which is required for this: even a less one than what we call common sense. State a moral case to a ploughman and a professor. The former will decide it as well, and often better than the latter, because he has not been led astray by artificial rules. In this branch, therefore, read good books, because they will encourage, as well as direct your feelings. The writings of Sterne, particularly, form the best course of morality that ever was written. Besides these, read the books mentioned in the enclosed paper; and, above all things, lose no occasion of exercising your dispositions to be grateful, to be generous, to be charitable, to be humane, to be true, just, firm, orderly, courageous, &c. Consider every act of this kind, as an exercise which will strengthen your moral faculties and increase your worth.

4. Religion. Your reason is now mature enough to examine this object. In the first place, divest yourself of all bias in favor of novelty and singularity of opinion. Indulge them in any other subject, rather than that of religion. It is too important, and the consequences of error may be too serious. On the other hand, shake off all the fears and servile prejudices, under which weak minds are servilely crouched. Fix reason firmly in her seat, and call to her tribunal every fact, every opinion. Question with boldness even the existence of a God; because, if there be one, he must more approve of the homage of reason, than that of blindfolded fear. You will naturally examine first, the religion of your own country. Read the Bible, then, as you would read Livy or Tacitus. The facts which are within the ordinary course of nature, you will believe on the authority of the writer, as you do those of the same kind in Livy and Tacitus. The testimony of the writer weighs in their favor, in one scale, and their not being against the laws of nature, does not weigh against them. But those facts in the Bible which contradict the laws of nature must be examined with more care, and under a variety of faces. Here you must recur to the pretensions of the writer to inspiration from God. Examine upon what evidence his pretensions are founded, and whether that evidence is so strong, as that its falsehood would be more improbable than a change in the laws of nature, in the case he relates. For example, in the book of Joshua, we are told, the sun stood still several hours. Were we to read that fact in Livy or Tacitus, we should class it with their showers of blood, speaking of statues, beasts, etc. But it is said, that the writer of that book was inspired. Examine, therefore, candidly, what evidence there is of his having been inspired. The pretension is entitled to your inquiry, because millions believe it. On the other hand, you are astronomer enough to know how contrary it is to the law of nature that a body revolving on its axis, as the earth does, should have stopped, should not, by that sudden stoppage, have prostrated animals, trees, buildings, and should after a certain time have resumed its revolution,

9. **Sterne**—Collected editions of Laurence Sterne's writings were published in Dublin in 1779 and in London in 1780. **10. enclosed paper**—has apparently been lost. **24-25. Livy . . . Tacitus**—Titus Livius (B.C. 59-A.D. 17), author of a history of Rome from the foundation of the city to the beginning of the Christian era; C. Cornelius Tacitus (?-after 117), whose principal historical work is the *Annales*, from the death of Nero in 68. **30. faces**—that is, aspects.

and that without a second general prostration. Is this arrest of the earth's motion, or the evidence which affirms it, most within the law of probabilities? You will next read the New Testament. It is the history of a personage called Jesus. Keep in your eye the opposite pretensions: 1, of those who say he was begotten by God, born of a virgin, suspended and reversed the laws of nature at will, and ascended bodily into heaven; and 2, of those who say he was a man of illegitimate birth, of a benevolent heart, enthusiastic mind, who set out without pretensions to divinity, ended in believing them, and was punished capitally for sedition, by being gibbeted, according to the Roman law, which punished the first commission of that offence by whipping, and the second by exile, or death *in furea.* See this Law in the Digest, Lib. 48, tit. 19.28.3 and Lipsius Lib. 2. de cruce, cap. 2. These questions are examined in the books I have mentioned, under the head of Religion, and several others. They will assist you in your inquiries; but keep your reason firmly on the watch in reading them all. Do not be frightened from this inquiry by any fear of its consequences. If it ends in a belief that there is no God, you will find incitements to virtue in the comfort and pleasantness you feel in its exercise, and the love of others which it will procure you. If you find reason to believe there is a God, a consciousness that you are acting under his eye, and that he approves you, will be a vast additional incitement; if that there be a future state, the hope of a happy existence in that increases the appetite to deserve it; if that Jesus was also a God, you will be comforted by a belief of his aid and love. In fine, I repeat, you must lay aside all prejudice on both sides, and neither believe nor reject anything, because any other persons, or description of persons, have rejected or believed it. Your own reason is the only oracle given you by heaven, and you are answerable, not for the rightness, but uprightness of the decision. I forgot to observe, when speaking of the New Testament, that you should read all the histories of Christ, as well of those whom a council of ecclesiastics have decided for us, to be Pseudo-evangelists, as those they named Evangelists. Because these Pseudo-evangelists pretended to inspiration, as much as the others, and you are to judge their pretensions by your own reason, and not by the reason of those ecclesiastics. Most of these are lost. There are some, however, still extant, collected by Fabricius, which I will endeavor to get and send you.

5. Travelling. This makes men wiser, but less happy. When men of sober age travel, they gather knowledge, which they may apply usefully for their country; but they are subject ever after to recollections mixed with regret; their affections are weakened by being extended over more objects; and they learn new habits which cannot be gratified when they return home. Young

11. **in furea**—a misprint for *in furca,* on the gallows; that is, crucifixion as legal punishment. **Digest**—There were (and are) a number of digests of the Pandects (or codes of Roman law) compiled under the Emperor Justinian. Jefferson might have used *Pandectae Justinianeae in novum ordinam digestae,* London, 1782. 12. **Lipsius**—Chapter 2 of Book Two of *De Cruce Libri Tres ad sacram profanamque Historiam Utiles una cum notis* of the sixteenth-century humanist, Justus Lipsius, discusses flagellation as a precedent to crucifixion. 29. **council of ecclesiastics**—that is, Church Councils. 30. **Pseudo-evangelists**—The quickest way to understand Jefferson's reference is to read the article on "Apocryphal Gospels" in the Hastings *Encyclopaedia of Religion and Ethics,* 6:346 f. 34. **Fabricius**—Johann Albert Fabricius (1668-1736), whose *Codex Apocrypha,* 1703, is still standard.

men, who travel, are exposed to all these inconveniences in a higher degree, to others still more serious, and do not acquire that wisdom for which a previous foundation is requisite, by repeated and just observations at home. The glare of pomp and pleasure is analogous to the motion of the blood; it absorbs all their affection and attention, they are torn from it as from the only good in this world, and return to their home as to a place of exile and condemnation. Their eyes are forever turned back to the object they have lost, and its recollection poisons the residue of their lives. Their first and most delicate passions are hackneyed on unworthy objects here, and they carry home the dregs, insufficient to make themselves or anybody else happy. Add to this, that a habit of idleness, an inability to apply themselves to business is acquired and renders them useless to themselves and their country. These observations are founded in experience. There is no place where your pursuit of knowledge will be so little obstructed by foreign objects, as in your own country, nor any, wherein the virtues of the heart will be less exposed to be weakened. Be good, be learned, and be industrious, and you will not want the aid of travelling, to render you precious to your country, dear to your friends, happy within yourself. I repeat my advice, to take a great deal of exercise, and on foot. Health is the first requisite after morality. Write to me often, and be assured of the interest I take in your success, as well as the warmth of those sentiments of attachment with which I am, dear Peter, your affectionate friend.

LETTER TO JOHN ADAMS

Alike in patriotism, opposed in political philosophy, Adams won over Jefferson in 1796 and Jefferson ousted Adams in 1801. The fierce political passions of these troubled years parted the Massachusetts Federalist and the Virginia Republican, nor was their correspondence renewed until 1812, when one was seventy-seven, the other sixty-nine. The renewal came at the instance of Adams, who on January 1, 1812, sent Jefferson "two Pieces of Homespun" and a kind note. Thus began one of the great interchanges of letters in American literature, Adams writing at least 102 epistles and Jefferson 48. But as Adams said: "Never mind if I write four letters to your one, your one is worth more than my four." The two wise old men exchanged views on the great questions of their world, and died on the same day.

The letter here reprinted is in answer to Adams's assertion, in the letters to which Jefferson refers, that the well-born and the wealthy are necessary "in the constitution of human nature, and wrought into the fabric of the universe." He quotes Theognis to show that this was true "five hundred and forty-four years before Jesus Christ." In his second letter he says that "the five pillars of aristocracy are beauty, wealth, birth, genius, and virtue," and that "this great fact in the natural history of man" cannot be "waved out of sight, by a legislator, by a professed writer upon civil government, and upon constitutions of civil government."

Monticello, October 28, 1813.

DEAR SIR,—According to the reservation between us, of taking up one of the subjects of our correspondence at a time, I turn to your letters of August the 16th and September the 2d. . . .

9. **passions**—that is, emotions, sensibilities. 24. **reservation**—condition.

It is probable that our difference of opinion may, in some measure, be produced by a difference of character in those among whom we live. From what I have seen of Massachusetts and Connecticut myself, and still more from what I have heard, and the character given of the former by yourself (volume I, page 111), who know them so much better, there seems to be in those two States a traditionary reverence for certain families, which has rendered the offices of the government nearly hereditary in those families. I presume that from an early period of your history, members of those families happening to possess virtue and talents, have honestly exercised them for the good of the people, and by their services have endeared their names to them. In coupling Connecticut with you, I mean it politically only, not morally. For having made the Bible the common law of their land, they seem to have modeled their morality on the story of Jacob and Laban. But although this hereditary succession to office with you, may, in some degree, be founded in real family merit, yet in a much higher degree, it has proceeded from your strict alliance of Church and State. These families are canonized in the eyes of the people on common principles, "you tickle me, and I will tickle you." In Virginia we have nothing of this. Our clergy, before the Revolution, having been secured against rivalship by fixed salaries, did not give themselves the trouble of acquiring influence over the people. Of wealth, there were great accumulations in particular families, handed down from generation to generation, under the English law of entails. But the only object of ambition for the wealthy was a seat in the King's Council. All their court then was paid to the crown and its creatures; and they Philipized in all collisions between the King and the people. Hence they were unpopular; and that unpopularity continues attached to their names. A Randolph, a Carter, or a Burwell must have great personal superiority over a common competitor to be elected by the people even at this day. At the first session of our legislature after the Declaration of Independence, we passed a law abolishing entails. And this was followed by one abolishing the privilege of primogeniture, and dividing the lands of intestates equally among all their children, or other representatives. These laws, drawn by myself, laid the axe to the foot of pseudo-aristocracy. And had another which I prepared been adopted by the legislature, our work would have been complete. It was a bill for the more general diffusion of learning. This proposed to divide every county into wards of five or six miles square, like your townships; to establish in each ward a free school for reading,

4-5. (volume I, page 111)—of Adams's *Defence of the Constitutions of Government of the United States of America*, 3 vols., 3rd ed., Philadelphia, 1797. (The first two editions were printed in London.) Here Adams says: "Go into every village in New England, and you will find that the office of justice of the peace, and even the place of representative, which has ever depended only on the freest election of the people, have generally descended from generation to generation, in three or four families at most." **13. Jacob and Laban**—Cf. Genesis Chapters 28-29. **22. entails**—A landed estate is entailed when the line of succession is limited to a particular class, usually eldest sons. **23. King's Council**—a body advisory to the Royal Governor in colonial Virginia. **24. Philipized**—took the part of the king. Philip of Macedon began the conquest of the Greek city-states by bribing factions within these cities to advocate his cause. **29. law abolishing entails**—Jefferson's own bill, passed by November 1, 1776. **30. abolishing . . . primogeniture**—that is, a law abolishing the right of the eldest son to be the sole heir, to the prejudice of younger children. **31. intestates**—persons who die leaving no will.

writing, and common arithmetic; to provide for the annual selection of the best subjects from these schools, who might receive, at the public expense, a higher degree of education at a district school; and from these district schools to select a certain number of the most promising subjects, to be completed at an university, where all the useful sciences should be taught. Worth and genius would thus have been sought out from every condition of life, and completely prepared by education for defeating the competition of wealth and birth for public trusts. My proposition had, for a further object, to impart to these wards those portions of self-government for which they are best qualified, by confiding to them the care of their poor, their roads, police, elections, the nomination of jurors, administration of justice in small cases, elementary exercises of militia; in short, to have made them little republics, with a warden at the head of each, for all those concerns which, being under their eye, they would better manage than the larger republics of the county or State. A general call of ward meetings by their wardens on the same day through the State would at any time produce the genuine sense of the people on any required point, and would enable the State to act in mass, as your people have so often done, and with so much effect by their town meetings. The law for religious freedom, which made a part of this system, having put down the aristocracy of the clergy, and restored to the citizen the freedom of the mind, and those of entails and descents nurturing an equality of condition among them, this on education would have raised the mass of the people to the high ground of moral respectability necessary to their own safety, and to orderly government; and would have completed the great object of qualifying them to select the veritable aristoi, for the trusts of government, to the exclusion of the pseudalists; and the same Theognis who has furnished the epigraphs of your two letters, assures us that "Ουδεμιανπω, Κυρν', αγαθοι πολιν ωλεσαν ανδρες." Although this law has not yet been acted on but in a small and inefficient degree, it is still considered as before the legislature, with other bills of the revised code, not yet taken up, and I have great hope that some patriotic spirit will, at a favorable moment, call it up, and make it the keystone of the arch of our government.

With respect to aristocracy, we should further consider, that before the establishment of the American States, nothing was known to history but the man of the old world, crowded within limits either small or overcharged, and steeped in the vices which that situation generates. A government adapted to such men would be one thing; but a very different one, that for the man of these States. Here everyone may have land to labor for himself, if he chooses; or, preferring the exercise of any other industry, may exact for it such compensation as not only to afford a comfortable subsistence, but wherewith to provide for a cessation from labor in old age. Everyone, by his property, or by his satisfactory situation, is interested in the support of law and order. And such men may safely and advantageously reserve to themselves a wholesome control over their public affairs, and a degree of freedom, which in the hands of the *canaille* of the cities of Europe, would be instantly per-

27-28. Ουδεμιανπω . . . ανδρες—"No city yet, Cyrnus, have good men ruined" (Theognis, 1, 43). 45. canaille—riffraff.

verted to the demolition and destruction of everything public and private. The history of the last twenty-five years of France, and of the last forty years in America, nay of its last two hundred years, proves the truth of both parts of this observation.

But even in Europe a change has sensibly taken place in the mind of man. Science had liberated the ideas of those who read and reflect, and the American example had kindled feeling of right in the people. An insurrection has consequently begun, of science, talents, and courage, against rank and birth, which have fallen into contempt. It has failed in its first effort, because the mobs of the cities, the instrument used for its accomplishment, debased by ignorance, poverty, and vice, could not be restrained to rational action. But the world will recover from the panic of this first catastrophe. Science is progressive, and talents and enterprise on the alert. Resort may be had to the people of the country, a more governable power from their principles and subordination; and rank, and birth, and tinsel-aristocracy will finally shrink into insignificance, even there. This, however, we have no right to meddle with. It suffices for us, if the moral and physical condition of our own citizens qualifies them to select the able and good for the direction of their government, with a recurrence of elections at such short periods as will enable them to displace an unfaithful servant, before the mischief he meditates may be irremediable.

I have thus stated my opinion on a point on which we differ, not with a view to controversy, for we are both too old to change opinions which are the result of a long life of inquiry and reflection; but on the suggestions of a former letter of yours, that we ought not to die before we have explained ourselves to each other. We acted in perfect harmony, through a long and perilous contest for our liberty and independence. A constitution has been acquired, which, though neither of us thinks perfect, yet both consider as competent to render our fellow citizens the happiest and the securest on whom the sun has ever shone. If we do not think exactly alike as to its imperfections, it matters little to our country, which, after devoting to it long lives of disinterested labor, we have delivered over to our successors in life, who will be able to take care of it and of themselves.

Of the pamphlet on aristocracy which has been sent to you, or who may be its author, I have heard nothing but through your letter. If the person you suspect, it may be known from the quaint, mystical, and hyperbolical ideas, involved in affected, new-fangled, and pedantic terms which stamp his writings. Whatever it be, I hope your quiet is not to be affected at this day by the rudeness or intemperance of scribblers; but that you may continue in tranquillity to live and to rejoice in the prosperity of our country, until it shall be your own wish to take your seat among the aristoi who have gone before you. Ever and affectionately yours.

2. last twenty-five years of France—that is, since 1789, the year of the beginning of the French Revolution. **6. Science**—knowledge. **25. former letter**—in a letter of July 15, 1813. **34. pamphlet**—For this see Adams's letter to Jefferson, September 15, 1813.

LETTER TO DR. WALTER JONES*

Monticello, January 2, 1814.

DEAR SIR,—Your favor of November the 25th reached this place December the 21st, having been near a month on the way. How this could happen I know not, as we have two mails a week both from Fredericksburg and Richmond. It found me just returned from a long journey and absence, during which so much business had accumulated, commanding the first attentions, that another week has been added to the delay.

I deplore, with you, the putrid state into which our newspapers have passed, and the malignity, the vulgarity, and mendacious spirit of those who write for them; and I enclose you a recent sample, the production of a New England judge, as a proof of the abyss of degradation into which we are fallen. These ordures are rapidly depraving the public taste, and [illegible] its relish for sound food. As vehicles of information, and a curb on our functionaries, they have rendered themselves useless, by forfeiting all title to belief. That this has, in a great degree, been produced by the violence and malignity of party spirit, I agree with you; and I have read with great pleasure the paper you enclosed me on that subject, which I now return. It is at the same time a perfect model of the style of discussion which candor and decency should observe, of the tone which renders difference of opinion even amiable, and a succinct, correct, and dispassionate history of the origin and progress of party among us. It might be incorporated as it stands, and without changing a word, into the history of the present epoch, and would give to posterity a fairer view of the times than they will probably derive from other sources. In reading it with great satisfaction, there was but a single passage where I wished a little more development of a very sound and catholic idea; a single intercalation to rest it solidly on true bottom. It is near the end of the first page, where you make a statement of genuine republican maxims; saying, "that the people ought to possess as much political power as can possibly exist with the order and security of society." Instead of this, I would say, "that the people, being the only safe depository of power, should exercise in person every function which their qualifications enable them to exercise, consistently with the order and security of society; that we now find them equal to the election of those who shall be invested with their executive and legislative powers, and to act themselves in the judiciary, as judges in questions of fact; that the range of their powers ought to be enlarged," etc. This gives both the reason and exemplification of the maxim you express, "that they ought to possess as much political power," etc. I see nothing to correct either in your facts or principles.

You say that in taking General Washington on your shoulders, to bear him

* **Dr. Walter Jones**—Dr. Walter Jones (1745-1815) took his M.D. degree at the University of Edinburgh in 1770, served as medical director of the "middle military department" in the Revolution, and was twice Congressman from Virginia. **10-11. New England judge**—It is impossible to be certain what Jefferson here refers to. **25. catholic**—general. **26. intercalation**—additional matter.

harmless through the federal coalition, you encounter a perilous topic. I do not think so. You have given the genuine history of the course of his mind through the trying scenes in which it was engaged, and of the seductions by which it was deceived, but not depraved. I think I knew General Washington intimately and thoroughly; and were I called on to delineate his character, it should be in terms like these.

His mind was great and powerful, without being of the very first order; his penetration strong, though not so acute as that of a Newton, Bacon, or Locke; and as far as he saw, no judgment was ever sounder. It was slow in operation, being little aided by invention or imagination, but sure in conclusion. Hence the common remark of his officers, of the advantage he derived from councils of war, where hearing all suggestions, he selected whatever was best; and certainly no general ever planned his battles more judiciously. But if deranged during the course of the action, if any member of his plan was dislocated by sudden circumstances, he was slow in re-adjustment. The consequence was, that he often failed in the field, and rarely against an enemy in station, as at Boston and York. He was incapable of fear, meeting personal dangers with the calmest unconcern. Perhaps the strongest feature in his character was prudence, never acting until every circumstance, every consideration, was maturely weighed; refraining if he saw a doubt, but, when once decided, going through with his purpose, whatever obstacles opposed. His integrity was most pure, his justice the most inflexible I have ever known, no motives of interest or consanguinity, of friendship or hatred, being able to bias his decision. He was, indeed, in every sense of the words, a wise, a good, and a great man. His temper was naturally irritable and high toned; but reflection and resolution had obtained a firm and habitual ascendency over it. If ever, however, it broke its bonds, he was most tremendous in his wrath. In his expenses he was honorable, but exact; liberal in contributions to whatever promised utility; but frowning and unyielding on all visionary projects, and all unworthy calls on his charity. His heart was not warm in its affections; but he exactly calculated every man's value, and gave him a solid esteem proportioned to it. His person, you know, was fine, his stature exactly what one would wish, his deportment easy, erect, and noble; the best horseman of his age, and the most graceful figure that could be seen on horseback. Although in the circle of his friends, where he might be unreserved with safety, he took a free share in conversation, his colloquial talents were not above mediocrity, possessing neither copiousness of ideas, nor fluency of words. In public, when called on for a sudden opinion, he was unready, short, and embarrassed. Yet he wrote readily, rather diffusely, in an easy and correct style. This he had acquired by conversation with the world, for his education was merely reading, writing, and common arithmetic, to which he added surveying at a later day. His time was employed in action chiefly, reading little, and that only in agriculture and English history. His correspondence became necessarily extensive, and, with

8. Newton, Bacon, or Locke—Sir Isaac Newton (1642-1727), author of the *Principia;* Francis Bacon, Lord Verulam (1561-1626), author of the *Novum Organon;* John Locke (1632-1704), the most influential philosopher, so far as American eighteenth-century thought is concerned. **14. member**—part. **17. York**—Yorktown. **33. age**—generation. **39-40. conversation**—association, intercourse.

journalizing his agricultural proceedings, occupied most of his leisure hours within doors. On the whole, his character was, in its mass, perfect, in nothing bad, in few points indifferent; and it may truly be said, that never did nature and fortune combine more perfectly to make a man great, and to place him in the same constellation with whatever worthies have merited from man an everlasting remembrance. For his was the singular destiny and merit, of leading the armies of his country successfully through an arduous war, for the establishment of its independence; of conducting its councils through the birth of a government, new in its forms and principles, until it had settled down into a quiet and orderly train; and of scrupulously obeying the laws through the whole of his career, civil and military, of which the history of the world furnishes no other example.

How, then, can it be perilous for you to take such a man on your shoulders? I am satisfied the great body of republicans think of him as I do. We were, indeed, dissatisfied with him on his ratification of the British treaty. But this was short lived. We knew his honesty, the wiles with which he was encompassed, and that age had already begun to relax the firmness of his purposes; and I am convinced he is more deeply seated in the love and gratitude of the republicans, than in the Pharisaical homage of the federal monarchists. For he was no monarchist from preference of his judgment. The soundness of that gave him correct views of the rights of man, and his severe justice devoted him to them. He has often declared to me that he considered our new Constitution as an experiment on the practicability of republican government, and with what dose of liberty man could be trusted for his own good; that he was determined the experiment should have a fair trial, and would lose the last drop of his blood in support of it. And these declarations he repeated to me the oftener and more pointedly, because he knew my suspicions of Colonel Hamilton's views, and probably had heard from him the same declarations which I had, to wit, "that the British constitution, with its unequal representation, corruption, and other existing abuses, was the most perfect government which had ever been established on earth, and that a reformation of those abuses would make it an impracticable government." I do believe that General Washington had not a firm confidence in the durability of our government. He was naturally distrustful of men, and inclined to gloomy apprehensions; and I was ever persuaded that a belief that we must at length end in something like a British constitution, had some weight in his adoption of the ceremonies of levees, birthdays, pompous meetings with Congress, and other forms of the same character, calculated to prepare us gradually for a change which he believed possible, and to let it come on with as little shock as might be to the public mind.

These are my opinions of General Washington, which I would vouch at the

1. **journalizing**—keeping a diary. 14. **republicans**—that is, members of Jefferson's party, now the Democratic party. 15. **British treaty**—the Jay treaty of 1794 with Great Britain, in which, in return for the British promise to evacuate the Northwest Territory, the United States had agreed to make humiliating concessions in commerce, shipping, and so on. 19. **federal monarchists**—that is, the Federalist party. 27-28. **Colonel Hamilton**—Alexander Hamilton (1757-1804), Secretary of the Treasury under Washington when Jefferson was Secretary of State.

judgment seat of God, having been formed on an acquaintance of thirty years. I served with him in the Virginia legislature from 1769 to the Revolutionary war, and again a short time in Congress, until he left us to take command of the army. During the war and after it we corresponded occasionally, and in the four years of my continuance in the office of Secretary of State, our intercourse was daily, confidential, and cordial. After I retired from that office, great and malignant pains were taken by our federal monarchists, and not entirely without effect, to make him view me as a theorist, holding French principles of government, which would lead infallibly to licentiousness and anarchy. And to this he listened the more easily, from my known disapprobation of the British treaty. I never saw him afterwards, or these malignant insinuations should have been dissipated before his just judgment, as mists before the sun. I felt on his death, with my countrymen, that "verily a great man hath fallen this day in Israel."

More time and recollection would enable me to add many other traits of his character; but why add them to you who knew him well? And I cannot justify to myself a longer detention of your paper.

Vale, proprieque tuum, me esse tibi persuadeas.

8-9. French principles—In the period Jefferson is describing conservatives applied the word "French" as modern conservatives apply the word "Communist." **13-14. "verily . . . Israel"**—II Samuel 3:28. **18. Vale . . . persuadeas**—"Farewell, thou persuadest me to be especially thine."

PHILIP FRENEAU

1752-1832

I. THE YOUNG WHIG (1752–1775)

1752 Born in New York, January 2, of French Huguenot parentage.
1762 Family moved to a large estate at Mount Pleasant, near Middletown Point, New Jersey, where he was reared in refinement.
1765 Attended a Latin School in Penolopen, where he became acquainted with the classics and the English poets.
1768 Entered Princeton, a "hotbed of Whiggism." Classmate of James Madison, H. H. Brackenridge, and Aaron Burr.
1770 "The Power of Fancy." Includes an early statement of Freneau's deistic belief that nature is a divine revelation, a belief derived, perhaps, from his reading of Pope's *Essay on Man.*
1771 Graduated from Princeton. His poem for commencement, written in collaboration with Brackenridge, "The Rising Glory of America," envisaged our national "new Jerusalem" and his radical faith in "native innocence," which was to make him hostile toward a coercive Federalism.
1772 Tried schoolteaching on Long Island.

II. "POET OF THE AMERICAN REVOLUTION" (1775–1791)

1775 In New York, writing poems for freedom and satirizing Britain.
1780 On the return voyage from his third visit to the West Indies, Freneau was captured and kept for two months on the *Scorpion,* a prison ship, and the *Hunter,* a hospital ship. This ghastly experience he recorded in "The British Prison Ship."
1780–1786 Wrote rapidly many poems of war propaganda glorifying our heroes and attacking Tories and the British, published in the *Freeman's Journal.* From 1781 to 1784 in the Philadelphia Post Office.
1784 Sailed the Atlantic and the Caribbean as master of a brig.
1786 Publication of *The Poems of Philip Freneau,* first collected edition.
1788 *The Miscellaneous Works of Mr. Philip Freneau,* containing his *Essays and Additional Poems.*
1789 Married Eleanor Forman. Retired from his work as a coast-line sea captain and edited the New York *Daily Advertiser.*

III. THE DEMOCRATIC JOURNALIST (1791–1832)

1791–1793 Editor of *The National Gazette,* a democratic paper opposed by Fenno's *Gazette of the United States.* Freneau served also in the Department of State as Jefferson's translator of foreign languages.

1793 Freneau retired to Mount Pleasant, his estate, devoting himself to writing for periodicals.

1795–1796 Edited the weekly *Jersey Chronicle,* in which some of his best prose was published.

1795 *Poems Written between the Years 1768 & 1794, by Philip Freneau,* a collection containing most of his best work.

1797–1798 Edited *The Time-Piece and Literary Companion* in New York.

1799 Published *Letters on Various Interesting and Important Subjects.*

1803–1807 Driven by poverty to resume his earlier work as master of coast-line freight vessels.

1809 At Mount Pleasant. *Poems Written and Published during the American Revolutionary War,* 2 vols., including prose translations from the classics.

1815 *A Collection of Poems, on American Affairs, and a Variety of Other Subjects, Chiefly Moral and Political; Written between the Year 1797 and the Present Time.* (Many deal with the War of 1812.)

1815 Freneau's house burned, and, poverty-stricken, he moved to the town of Freehold near by.

1832 He was frozen to death, December 18, while trying to reach home at night in a snowstorm.

BIOGRAPHIES: Pattee has supplied a biography in Volume I of the *Poems,* mentioned below; see also M. S. Austin, *Philip Freneau, the Poet of the Revolution,* Wessells, 1901. The most recent biographical study is Lewis Leary, *That Rascal Freneau: a study in literary failure,* Rutgers University Press, 1941. See also various articles by H. H. Clark.

BIBLIOGRAPHY AND EDITIONS: V. H. Paltsits, *A Bibliography of the Separate and Collected Works of Philip Freneau,* Dodd, Mead, 1903; see also the bibliography in Leary, above. *The Poems of Philip Freneau,* ed. by F. L. Pattee, Princeton University Press, 1902-07, 3 vols., is the standard edition of the poems but see Lewis Leary, ed., *The Last Poems of Philip Freneau,* Rutgers, 1946. H. H. Clark is at work on an edition of the prose. Clark's edition, *Poems of Freneau,* Harcourt, Brace, 1929, has a good critical introduction, and his text is the basis of the following selections.

Though the verse of Freneau is uneven in quality, it reveals native vigor and genuine talent. While in his early work he displayed, in common with other precursors of the romantic poets, the conventions of eighteenth-century verse, he had in him more than a streak of native independence. His poems have a freshness and actuality that indicate they must have been inspired on board ship or in the field, rather than in the library. His treatment of the macabre anticipates in power of the imagination the work of Poe. He romanticized the Indian, but with restraint when compared with his followers. He displayed a new strain of delicate feeling for nature, and his poems of the sea are new in kind, authentic, and spirited in tone. "A good hater," Freneau served his country not only during the Revolution, when he wrote his bitterest invectives, but thereafter in his vigorous comments on the times. Cruelty he opposed, and the humble and oppressed found in him, as in Paine, an impassioned friend. He was a man of many moods and arresting in most of them; he is in truth "America's earliest genuine poet."

THE POWER OF FANCY

Written in 1770, and first published in 1786 in *Poems*. Later editions gave it the title "Ode to Fancy," and included only the first twenty and the last fourteen lines; the central portion was much changed and appeared separately as "Fanny's Ramble."

Wakeful, vagrant, restless thing,
Ever wandering on the wing,
Who thy wondrous source can find,
FANCY, regent of the mind;
A spark from Jove's resplendent throne,
But thy nature all unknown.
THIS spark of bright, celestial flame,
From Jove's seraphic altar came,
And hence alone in man we trace,
Resemblance to the immortal race.
Ah! what is all this mighty WHOLE,
These suns and stars that round us roll!
What are they all, where'er they shine,
But *Fancies* of the Power Divine!
What is this *globe*, these *lands*, and *seas*,
And *heat*, and *cold*, and *flowers*, and *trees*,
And *life*, and *death*, and *beast*, and *man*,
And *time*,—that with the *sun* began—
But thoughts on reason's scale combin'd,
Ideas of the Almighty mind?
On the surface of the brain
Night after night she walks unseen,
Noble fabrics doth she raise
In the woods or on the seas,
On some high, steep, pointed rock,
Where the billows loudly knock
And the dreary tempests sweep
Clouds along the uncivil deep.
Lo! she walks upon the moon,
Listens to the chimy tune
Of the bright, harmonious spheres,
And the song of angels hears;
Sees this earth a distant star,
Pendant, floating in the air;
Leads me to some lonely dome,
Where Religion loves to come,
Where the bride of Jesus dwells,
And the deep ton'd organ swells
In notes with lofty anthems join'd,
Notes that half distract the mind.
Now like lightning she descends
To the prison of the fiends,
Hears the rattling of their chains,
Feels their never ceasing pains—
But, O never may she tell
Half the frightfulness of hell.
Now she views Arcadian rocks,
Where the shepherds guard their flocks,
And, while yet her wings she spreads,
Sees chrystal streams and coral beds,
Wanders to some desert deep,
Or some dark, enchanted steep,
By the full moonlight doth shew
Forests of a dusky blue,
Where, upon some mossy bed,
Innocence reclines her head.
SWIFT, she stretches o'er the seas
To the far off Hebrides,
Canvas on the lofty mast
Could not travel half so fast—
Swifter than the eagle's flight
Or instantaneous rays of light!
Lo! contemplative she stands
On Norwegia's rocky lands—
Fickle Goddess, set me down
Where the rugged winters frown
Upon Orca's howling steep,
Nodding o'er the northern deep,
Where the winds tumultuous roar,
Vext that *Ossian* sings no more.
Fancy, to that land repair,
Sweetest Ossian slumbers there;
Waft me far to southern isles
Where the soften'd winter smiles,
To Bermuda's orange shades,
Or Demarara's lovely glades;
Bear me o'er the sounding cape,
Painting death in every shape,
Where daring *Anson* spread the sail
Shatter'd by the stormy gale—

33. **star**—"Milton's Paradise Lost, B. II, v. 1052." (Freneau's note) 67. **Orca's**—probably the Orkney Islands. 70. **Ossian**—a third-century bard of Gaelic legend. James Macpherson published in 1760-63 a cycle of poems, *Songs of Ossian*, supposedly from the ancient Gaelic. 76. **Demarara's**—a section and river of British Guiana. 79. **Anson**—Baron George Anson (1697-1762), British admiral, sent in 1740 to attack Spanish possessions in South America. In rounding Cape Horn, owing to the lateness of the season and consequent stormy weather, half his ships were destroyed, and his voyage continued to be particularly arduous.

Lo! she leads me wide and far,
Sense can never follow her—
Shape thy course o'er land and sea,
Help me to keep pace with thee,
Lead me to yon' chalky cliff,
Over rock and over reef,
Into Britain's fertile land,
Stretching far her proud command.
Look back and view, thro' many a year,
Caesar, Julius Caesar, there.
Now to Tempe's verdant wood,
Over the mid ocean flood
Lo! the islands of the sea
—Sappho, Lesbos mourns for thee:
Greece, arouse thy humbled head,
Where are all thy mighty dead,
Who states to endless ruin hurl'd
And carried vengeance through the world?—
Troy, thy vanish'd pomp resume,
Or, weeping at thy Hector's tomb,
Yet those faded scenes renew,
Whose memory is to *Homer* due.
Fancy, lead me wandering still
Up to Ida's cloud-topt hill;
Not a laurel there doth grow
But in vision thou shalt show,—
Every sprig on Virgil's tomb
Shall in livelier colours bloom,
And every triumph Rome has seen
Flourish on the years between.
Now she bears me far away
In the east to meet the day,
Leads me over Ganges' streams,
Mother of the morning beams—
O'er the ocean hath she ran,
Places me on *Tinian;*
Farther, farther in the east,
Till it almost meets the west,
Let us wandering both be lost
On Taitis sea-beat coast,
Bear me from that distant strand,
Over ocean, over land,
To California's golden shore—
Fancy, stop, and rove no more.

Now, tho' late, returning home,
Lead me to *Belinda's* tomb;
Let me glide as well as you
Through the shroud and coffin too,
And behold, a moment, there,
All that once was good and fair—
Who doth here so soundly sleep?
Shall we break this prison deep?—
Thunders cannot wake the maid,
Lightnings cannot pierce the shade,
And tho' wintry tempests roar,
Tempests shall disturb no more.
YET must those eyes in darkness stay,
That once were rivals to the day—?
Like heaven's bright lamp beneath the main
They are but set to rise again.
FANCY, thou the muses' pride,
In thy painted realms reside
Endless images of things,
Fluttering each on golden wings,
Ideal objects, such a store,
The universe could hold no more:
Fancy, to thy power I owe
Half my happiness below;
By thee Elysian groves were made,
Thine were the notes that Orpheus play'd;
By thee was Pluto charm'd so well
While rapture seiz'd the sons of hell—
Come, O come—perceiv'd by none,
You and I will walk alone.

THE HOUSE OF NIGHT

A VISION

"The House of Night" was composed at Santa Cruz in the West Indies, and first published in *The United States Magazine,* August, 1779, with the subtitle, "Six Hours Lodging with Death, A Vision." This edition of seventy-three stanzas was enlarged to the present one hundred and thirty-six in the 1786 edition, the text of which is given

90. **Caesar**—that is, look back through history to the landing of Julius Caesar on the British Isles (55-54 B.C.). 91. **Tempe's**—a valley between Mount Olympus and Mount Ossa in Thessaly, famed for its beauty. 94. **Sappho, Lesbos**—Sappho was a Greek lyric poetess of Lesbos, in the seventh century B.C. 116. **Tinian**—Tinos, an island in the Aegean, one of the Greek Cyclades. 120. **Taitis**—presumably the Islands of Tahiti in the South Seas, later the scene of Herman Melville's adventures among the cannibals, described in *Typee* (1846). 150. **Orpheus**—After the death of his wife, Eurydice, Orpheus descended to the lower world and so softened the heart of Pluto by his lyre-playing that Pluto permitted Eurydice to return to earth with her husband, provided he would not look back on the journey—a condition he did not fulfill.

here. In the use of the macabre and in the haunting music of its lines this poem was the most remarkable written up to this time in America, and forms an important link between the "Graveyard School" and Poe.

ADVERTISEMENT—This Poem is founded upon the authority of Scripture, inasmuch as these sacred books assert, that *the last enemy* * *that shall be conquered is Death*. For the purposes of poetry he is here personified, and represented as on his dying bed. The scene is laid at a solitary palace (the time midnight) which, tho' before beautiful and joyous, is now become sad and gloomy, as being the abode and receptacle of Death. Its owner, an amiable, majestic youth, who had lately lost a beloved consort, nevertheless with a noble philosophical fortitude and humanity, entertains him in a friendly manner, and by employing Physicians, endeavours to restore him to health, altho' an enemy; convinced of the excellence and propriety of that divine precept, *If thine enemy* † *hunger, feed him; if he thirst, give him drink*. He nevertheless, as if by a spirit of prophecy, informs this (fictitiously) wicked being of the certainty of his doom, and represents to him in a pathetic manner the vanity of his expectations, either of a reception into the abodes of the just, or continuing longer to make havock of mankind upon earth. The patient finding his end approaching, composes his epitaph, and orders it to be engraved on his tombstone, hinting to us thereby, that even Death and Distress have vanity; and would be remembered with honour after he is no more, altho' his whole life has been spent in deeds of devastation and murder. He dies at last in the utmost agonies of despair, after agreeing with an avaricious Undertaker to intomb his bones. This reflects upon the inhumanity of those men, who, not to mention an enemy, would scarcely cover a departed friend with a little dust, without certainty of reward for so doing. The circumstances of his funeral are then recited, and the visionary and fabulous part of the poem disappears. It concludes with a few reflexions on the impropriety of a too great attachment to the present life, and incentives to such moral virtue as may assist in conducting us to a better.

1

Trembling I write my dream, and recollect
A fearful vision at the midnight hour;
So late, Death o'er me spread his sable wings,
Painted with fancies of malignant power!

2

Such was the dream the sage Chaldean saw
Disclos'd to him that felt heav'n's vengeful rod,
Such was the ghost, who through deep silence cry'd,
Shall mortal man—be juster than his God.

3

Let others draw from smiling skies their theme,
And tell of climes that boast unfading light,
I draw a darker scene, replete with gloom,
I sing the horrors of the *House of Night.*

4

Stranger, believe the truth experience tells,
Poetic dreams are of a finer cast
Than those which o'er the sober brain diffus'd,
Are but a repetition of some action past.

5

Fancy, I own thy power—when sunk in sleep
Thou play'st thy wild delusive part so well
You lift me into immortality,
Depict new heavens, or draw scenes of hell.

6

By some sad means, when Reason holds no sway,
Lonely I rov'd at midnight o'er a plain
Where murmuring streams and mingling rivers flow
Far to their springs, or seek the sea again.

* **last enemy**—*Cf.* I Cor. 15:26. † **If thine enemy**—*Cf.* Rom. 12:20. **5. Chaldean**—In Job 4:17 Eliphaz the Temanite tells Job of a vision in which the spirit asks, "Shall mortal man be more just than God?"

7

Sweet vernal May! tho' then thy woods in bloom
Flourish'd, yet nought of this could Fancy see,
No wild pinks bless'd the meads, no green the fields,
And naked seem'd to stand each lifeless tree:

8

Dark was the sky, and not one friendly star
Shone from the zenith or horizon, clear,
Mist sate upon the woods, and darkness rode
In her black chariot, with a wild career.

9

And from the woods the late resounding note
Issued of the loquacious Whip-poor-will,
Hoarse, howling dogs, and nightly roving wolves
Clamor'd from far off cliffs invisible.

10

Rude, from the wide extended Chesapeke
I heard the winds the dashing waves assail,
And saw from far, by picturing fancy form'd,
The black ship traveling through the noisy gale.

11

At last, by chance and guardian fancy led,
I reach'd a noble dome, rais'd fair and high,
And saw the light from upper windows flame,
Presage of mirth and hospitality.

12

And by that light around the dome appear'd
A mournful garden of autumnal hue,
Its lately pleasing flowers all drooping stood
Amidst high weeds that in rank plenty grew.

13

The Primrose there, the violet darkly blue,
Daisies and fair Narcissus ceas'd to rise,
Gay spotted pinks their charming bloom withdrew,
And Polyanthus quench'd its thousand dyes.

14

No pleasant fruit or blossom gaily smil'd,
Nought but unhappy plants or trees were seen,
The yew, the myrtle, and the church-yard elm,
The cypress, with its melancholy green.

15

There cedars dark, the osier, and the pine,
Shorn tamarisks, and weeping willows grew,
The poplar tall, the lotos, and the lime,
And pyracantha did her leaves renew.

16

The poppy there, companion to repose,
Display'd her blossoms that began to fall,
And here the purple amaranthus rose
With mint strong-scented, for the funeral.

17

And here and there with laurel shrubs between
A tombstone lay, inscrib'd with strains of woe,
And stanzas sad, throughout the dismal green,
Lamented for the dead that slept below.

18

Peace to this awful dome!—when strait I heard
The voice of men in a secluded room,
Much did they talk of death, and much of life,
Of coffins, shrouds, and horrors of a tomb.

19

Pathetic were their words, and well they aim'd
To explain the mystic paths of providence,

34. Whip-poor-will—"A Bird peculiar to America, of a solitary nature, who never sings but in the night. Her note resembles the name given to her by the country people." (Freneau's note) **37. Chesapeke**—Chesapeake Bay. **42. dome**—Refers to the home of the "majestic youth" alluded to in the Advertisement. **52. Polyanthus**—the fragrant narcissus. **55. yew . . .**—stock elements of "graveyard poetry." **60. pyracantha**—an evergreen thorny shrub, native of southern Europe, known as the evergreen thorn.

Learn'd were they all, but there remain'd not I
To hear the upshot of their conference.

20

Meantime from an adjoining chamber came
Confused murmurings, half distinguish'd sounds,
And as I nearer drew, disputes arose
Of surgery, and remedies for wounds.

21

Dull were their feuds, for they went on to talk
Of *Anchylosis,* and the shoulder blade,
Os Femoris, Trochanters—and whate'er
Has been discuss'd by Cheselden or Meade:

22

And often each, to prove his notion true
Brought proofs from Galen or Hippocrates—
But fancy led me hence—and left them so,
Firm at their points of hardy No and Yes.

23

Then up three winding stairs my feet were brought
To a high chamber, hung with mourning sad,
The unsnuff'd candles glar'd with visage dim,
'Midst grief, in ecstasy of woe run mad.

24

A wide leaf'd table stood on either side,
Well fraught with phials, half their liquids spent,
And from a couch, behind the curtain's veil,
I heard a hollow voice of loud lament.

25

Turning to view the object whence it came,
My frighted eyes a horrid form survey'd;
Fancy, I own thy power—Death on the couch,
With fleshless limbs, at rueful length, was laid.

26

And o'er his head flew jealousies and cares,
Ghosts, imps, and half the black Tartarian crew,
Arch-angels damn'd, nor was their Prince remote,
Borne on the vaporous wings of Stygian dew.

27

Around his bed, by the dull flambeaux' glare,
I saw pale phantoms—Rage to madness vext,
Wan, wasting grief, and ever musing care,
Distressful pain, and poverty perplext.

28

Sad was his countenance, if we can call
That countenance, where only bones were seen
And eyes sunk in their sockets, dark and low,
And teeth, that only show'd themselves to grin.

29

Reft was his scull of hair, and no fresh bloom
Of cheerful mirth sate on his visage hoar:
Sometimes he rais'd his head, while deep-drawn groans
Were mixt with words that did his fate deplore.

30

Oft did he wish to see the daylight spring,
And often toward the window lean'd to hear,
Fore-runner of the scarlet-mantled morn,
The early note of wakeful Chanticleer.

31

Thus he—But at my hand a portly youth
Of comely countenance, began to tell,

82. Anchylosis—"*Anchylosis*—a morbid contraction of the joints. *Os Femoris*—the thigh bone. *Trochanters*—two processes in the upper part of the thigh bone, otherwise called *rotator major et minor,* in which the tendons of many muscles terminate." (Freneau's note) **84. Cheselden**—William Cheselden (1688-1752), British anatomist, whose *Anatomy of the Human Body* (1713) was widely read; Richard **Mead** (1673-1754), the famous physician celebrated by Pope. *Cf. Imitations of Horace,* III, line 51, "I'll do what Mead and Cheselden advise." **86. Galen or Hippocrates**—Greek physicians. *Cf.* note 20, p. 870. **102. Tartarian**—Tartarus was the abode of the wicked below Hades. **103. Prince**—Lucifer. **104. Stygian**—from the River Styx, in Hades.

"That this was Death upon his dying bed,
"Sullen, morose, and peevish to be well;

32

"Fixt is his doom—the miscreant reigns no more
"The tyrant of the dying or the dead;
"This night concludes his all-consuming reign,
"Pour out, ye heav'ns, your vengeance on his head.

33

"But since, my friend (said he), chance leads you here,
"With me this night upon the sick attend,
"You on this bed of death must watch, and I
"Will not be distant from the fretful fiend.

34

"Before he made this lofty pile his home,
"In undisturb'd repose I sweetly slept,
"But when he came to this sequester'd dome
" 'Twas then my troubles came, and then I wept:

35

"Twice three long nights, in this sad chamber, I,
"As though a brother languish'd in despair,
"Have 'tended faithful round his gloomy bed,
"Have been content to breathe this loathsome air.

36

"A while relieve the languors that I feel,
"Sleep's magic forces close my weary eyes;
"Soft o'er my soul unwonted slumbers steal,
"Aid the weak patient till you see me rise.

37

"But let no slumbers on your eye-lids fall,
"That if he ask for powder or for pill
"You may be ready at the word to start,
"And still seem anxious to perform his will.

38

"The bleeding Saviour of a world undone
"Bade thy compassion rise toward thy foe;
"Then, stranger, for the sake of Mary's son,
"Thy tears of pity on this wretch bestow.

39

" 'Twas he that stole from my adoring arms
"*Aspasia,* she the loveliest of her kind,
"Lucretia's virtue, with a Helen's charms,
"Charms of the face, and beauties of the mind.

40

"The blushy cheek, the lively, beaming eye,
"The ruby lip, the flowing jetty hair,
"The stature tall, the aspect so divine,
"All beauty, you would think, had center'd there.

41

"Each future age her virtues shall extol,
"Nor the just tribute to her worth refuse;
"Fam'd, to the stars URANIA bids her rise,
"Theme of the moral, and the tragic Muse.

42

"Sweet as the fragrance of the vernal morn,
"Nipt in its bloom this faded flower I see;
"The inspiring angel from that breast is gone,
"And life's warm tide forever chill'd in thee!

43

"Such charms shall greet my longing soul no more,
"Her lively eyes are clos'd in endless shade,
"Torpid, she rests on yonder marble floor;
"Approach, and see what havock DEATH has made.

44

"Yet, stranger, hold—her charms are so divine,
"Such tints of life still on her visage glow,
"That even in death this slumbering bride of mine

154. **Aspasia**—mistress of Pericles (died 429 B.C.), Athenian statesman, but the name is used here without specific reference. 155. **Lucretia's**—wife of Collatinus, who killed herself after having been wronged by Sextus Tarquinius, with the resultant expulsion of the Tarquins and the establishment of the Roman Republic. *Cf.* Shakespeare's *The Rape of Lucrece.* 163. **Urania**—the muse of astronomy.

"May seize thy heart, and make thee wretched too.

45

"O shun the sight—forbid thy trembling hand
"From her pale face to raise the enshrouding lawn,—
"Death claims thy care, obey his stern command,
"Trim the dull tapers, for I see no dawn!"

46

So said, at Death's left side I sate me down,
The mourning youth toward his right reclin'd;
Death in the middle lay, with all his groans,
And much he toss'd and tumbled, sigh'd and pin'd.

47

But now this man of hell toward me turn'd,
And strait, in hideous tone, began to speak;
Long held he sage discourse, but I forbore
To answer him, much less his news to seek.

48

He talk'd of tomb-stones and of monuments,
Of equinoctial climes and India shores,
He talk'd of stars that shed their influence,
Fevers and plagues, and all their noxious stores.

49

He mention'd, too, the guileful *calenture,*
Tempting the sailor on the deep sea main
That paints gay groves upon the ocean floor,
Beckoning her victim to the faithless scene.

50

Much spoke he of the myrtle and the yew,
Of ghosts that nightly walk the church-yard o'er,
Of storms that through the wint'ry ocean blow
And dash the well-mann'd galley to the shore.

51

Of broad-mouth'd cannons, and the thunderbolt,
Of sieges and convulsions, dearth and fire,
Of poisonous weeds—but seem'd to sneer at these
Who by the laurel o'er him did aspire.

52

Then with a hollow voice thus went he on,
"Get up, and search, and bring, when found, to me,
"Some cordial, potion, or some pleasant draught,
"Sweet, slumb'rous poppy, or the mild Bohea.

53

"But hark, my pitying friend!—and, if you can,
"Deceive the grim physician at the door—
"Bring half the mountain springs—ah! hither bring
"The cold rock water from the shady bower.

54

"For till this night such thirst did ne'er invade,
"A thirst provok'd by heav'n's avenging hand;
"Hence bear me, friends, to quaff, and quaff again
"The cool wave bubbling from the yellow sand.

55

"To these dark walls with stately step I came,
"Prepar'd your drugs and doses to defy;
"Smit with the love of never dying fame,
"I came, alas! to conquer—not to die!"

56

Glad, from his side I sprang, and fetch'd the draught,
Which down his greedy throat he quickly swills,

193. **calenture**—"*Calenture*—an inflammatory fever, attended with a delirium, common in long voyages at sea, in which the diseased persons fancy the sea to be green fields and meadows, and, if they are not hindered, will leap overboard." (Freneau's note) **208. Bohea**—black Chinese tea.

Then on a second errand sent me strait,
To search in some dark corner for his pills.

57

Quoth he, "These pills have long compounded been,
"Of dead men's bones and bitter roots, I trow;
"But that I may to wonted health return,
"Throughout my lank veins shall their substance go."

58

So down they went-- He rais'd his fainting head
And oft in feeble tone essay'd to talk;
Quoth he, "Since remedies have small avail,
"Assist unhappy Death once more to walk."

59

Then slowly rising from his loathsome bed,
On wasted legs the meagre monster stood,
Gap'd wide, and foam'd, and hungry seem'd to ask,
Tho' sick, an endless quantity of food.

60

Said he, "The sweet melodious flute prepare,
"The anthem, and the organ's solemn sound,
"Such as may strike my soul with ecstacy,
"Such as may from yon' lofty wall rebound.

61

"Sweet music can the fiercest pains assuage,
"She bids the soul to heav'n's blest mansions rise,
"She calms despair, controuls infernal rage
"And deepest anguish, when it hears her, dies.

62

"And see, the mizzling, misty midnight reigns,
"And no soft dews are on my eye-lids sent—!
"Here, stranger, lend thy hand; assist me, pray,
"To walk a circuit of no large extent"—

63

On my prest shoulders leaning, round he went,
And could have made the boldest spectre flee,
I led him up stairs, and I led him down,
But not one moment's rest from pain got he.

64

Then with his dart, its cusp unpointed now,
Thrice with main strength he smote the trembling floor;
The roof resounded to the fearful blow,
And *Cleon* started, doom'd to sleep no more.

65

When thus spoke Death, impatient of controul,
"Quick, move, and bring from yonder black bureau
"The sacred book that may preserve my soul
"From long damnation, and eternal woe.

66

"And with it bring—for you may find them there,
"The works of holy authors, dead and gone,
"The sacred *tome* of moving Drelincourt,
"Or what more solemn Sherlock mus'd upon:

67

"And read, my Cleon, what these sages say,
"And what the sacred Penman hath declar'd,
"That when the wicked leaves his odious way,
"His sins shall vanish, and his soul be spar'd."

68

But he, unmindful of the vain command,
Reason'd with Death, nor were his reasonings few:
Quoth he—"My Lord, what frenzy moves your brain,

256. Cleon—The "amiable youth" of the Advertisement. *Cf.* stanza 46, line 182. **263. Drelincourt**—[Charles] *Drelincourt on Death*, a popular religious manual of the day, translated from the French. It reached a twenty-fourth edition by 1810. **264. Sherlock**—William Sherlock (1641-1707), author of *Practical Discourse Concerning Death*, London, 1689. **267. wicked**—*Cf.*, for example, Acts 8:22.

"Pray, what, my Lord, can Sherlock be to you,

69

"Or all the sage divines that ever wrote,
"Grave Drelincourt, or heaven's unerring page;
"These point their arrows at your hostile breast,
"And raise new pains that time must ne'er assuage.

70

"And why should thus thy woe disturb my rest?
"Much of Theology I once did read,
"And there 'tis fixt, sure as my God is so,
"That Death shall perish, tho' a God should bleed.

71

"The martyr, doom'd the pangs of fire to feel,
"Lives but a moment in the sultry blast;
"The victim groans, and dies beneath the steel,
"But thy severer pains shall always last.

72

"O miscreant vile, thy age has made thee doat—
"If peace, if sacred peace were found for you,
"Hell would cry out, and all the damn'd arise
"And, more deserving, seek for pity too.

73

"Seek not for Paradise—'tis not for thee,
"Where high in heaven its sweetest blossoms blow,
"Nor even where, gliding to the Persian main
"Thy waves, Euphrates, through the garden flow!

74

"Bloody has been thy reign, O man of hell,
"Who sympathiz'd with no departing groan;
"Cruel wast thou, and hardly dost deserve
"To have *Hic Jacet* stampt upon thy stone.

75

"He that could build his mansion o'er the tombs,
"Depending still on sickness and decay,
"May dwell unmov'd amidst these drowsier glooms,
"May laugh the dullest of these shades away.

76

"Remember how with unrelenting ire
"You tore the infant from the unwilling breast—
"ASPASIA fell, and CLEON must expire,
"Doom'd by the impartial God to endless rest:

77

"In vain with stars he deck'd yon' spangled skies,
"And bade the mind to heaven's bright regions soar,
"And brought so far to my admiring eyes
"A glimpse of glories that shall blaze no more!

78

"Even now to glut thy devilish wrath, I see
"From eastern realms a wasteful army rise:
"Why else those lights that tremble in the north?
"Why else yon' comet blazing through the skies?

79

"Rejoice, O fiend; Britannia's tyrant sends
"From German plains his myriads to our shore.
"The fierce Hibernian with the Briton join'd—
"Bring them, ye winds!—but waft them back no more.

80

"To you, alas! the fates in wrath deny
"The comforts to *our* parting moments due,
"And leave you here to languish and to die,
"Your crimes too many, and your tears too few.

81

"No cheering voice to thee shall cry, Repent!
"As once it echoed through the wilderness—

292. **Euphrates**—*Cf.* Gen. 2:14. 296. **Hic Jacet**—"Here Lieth." 313. **Britannia's tyrant**—that is, George III. 314. **The myriads** are the Hessians. 321. **Repent**—*Cf.* Matt. 3:1-2.

"No patron died for thee—damn'd, damn'd art thou
"Like all the devils, nor one jot the less.

82

"A gloomy land, with sullen skies is thine,
"Where never rose or amaranthus grow,
"No daffodils, nor comely columbine,
"No hyacinths nor asphodels for you.

83

"The barren trees that flourish on the shore
"With leaves or fruit were never seen to bend,
"O'er languid waves unblossom'd branches hang,
"And every branch sustains some vagrant fiend.

84

"And now no more remains, but to prepare
"To take possession of thy punishment,
"That's thy inheritance, that thy domain,
"A land of bitter woe, and loud lament.

85

"And oh that HE, who spread the universe,
"Would cast one pitying glance on thee below;
"Millions of years in torments thou might'st fry,
"But thy eternity!—who can conceive its woe!"

86

He heard, and round with his black eyeballs gaz'd,
Full of despair, and curs'd, and rav'd, and swore:
"And since this is my doom," said he, "call up
"Your wood-mechanics to my chamber door:

87

"Blame not on me the ravage to be made;
"Proclaim,—even Death abhors such woe to see;
"I'll quit the world, while decently I can,
"And leave the work to George my deputy."

88

Up rush'd a band, with compasses and scales
To measure his slim carcase, long and lean—
"Be sure," said he, "to frame my coffin strong,
"You, master workman, and your men, I mean:

89

"For if the Devil, so late my trusty friend,
"Should get one hint where I am laid, from you,
"Not with my soul content, he'd seek to find
"That mouldering mass of bones, my body, too!

90

"Of hardest ebon let the plank be found,
"With clamps and ponderous bars secur'd around,
"That if the box by Satan should be storm'd,
"It may be able for resistance found."

91

"Yes," said the master workman, "noble Death,
"Your coffin shall be strong—that leave to me—
"But who shall these your funeral dues discharge?
"Nor friends nor pence you have, that I can see."

92

To this said Death—"You might have ask'd me, too,
"Base caitiff, who are my executors,
"Where my estate, and who the men that shall
"Partake my substance, and be call'd my heirs.

93

"Know, then, that hell is my inheritance,
"The devil himself my funeral dues must pay—
"Go—since you must be paid—go, ask of him,
"For he has gold, as fabling poets say."

94

Strait they retir'd—when thus he gave me charge,
Pointing from the light window to the west,
"Go three miles o'er the plain, and you shall see
"A burying-yard of sinners dead, unblest.

95

"Amid the graves a spiry building stands
"Whose solemn knell resounding through the gloom
"Shall call thee o'er the circumjacent lands
"To the dull mansion destin'd for my tomb.

96

"There, since 'tis dark, I'll plant a glimmering light
"Just snatch'd from hell, by whose reflected beams
"Thou shalt behold a tomb-stone, full eight feet,
"Fast by a grave, replete with ghosts and dreams.

97

"And on that stone engrave this epitaph,
"Since Death, it seems, must die like mortal men;
"Yes—on that stone engrave this epitaph,
"Though all hell's furies aim to snatch the pen.

98

"Death in this tomb his weary bones hath laid,
"Sick of dominion o'er the human kind—
"Behold what devastations he hath made,
"Survey the millions by his arm confin'd.

99

"Six thousand years has sovereign sway been mine,
"None, but myself, can real glory claim;
"Great Regent of the world I reign'd alone,
"And princes trembled when my mandate came.

100

"Vast and unmatch'd throughout the world, my fame
"Takes place of gods, and asks no mortal date—
"No; by myself, and by the heavens, I swear,
"Not Alexander's name is half so great.

101

"Nor swords nor darts my prowess could withstand,
"All quit their arms, and bow'd to my decree,
"Even mighty JULIUS *died beneath my hand,*
"For slaves and Caesars were the same to me!

102

"Traveller, wouldst thou his noblest trophies seek,
"Search in no narrow spot obscure for those;
"The sea profound, the surface of all land
"Is moulded with the myriads of his foes."

103

Scarce had he spoke, when on the lofty dome
Rush'd from the clouds a hoarse resounding blast—
Round the four eaves so loud and sad it play'd
As though all music were to breathe its last.

104

Warm was the gale, and such as travelers say
Sport with the winds on Zaara's barren waste;
Black was the sky, a mourning carpet spread,
Its azure blotted, and its stars o'ercast!

105

Lights in the air like burning stars were hurl'd,
Dogs howl'd, heaven mutter'd, and the tempest blew,
The red half-moon peeped from behind a cloud
As if in dread the amazing scene to view.

106

The mournful trees that in the garden stood
Bent to the tempest as it rush'd along,
The elm, the myrtle, and the cypress sad
More melancholy tun'd its bellowing song.

107

No more that elm its noble branches spread,

393. **Six thousand**—The reign of death, according to Jewish chronology, began four thousand years before the Christian era. **398. mortal date**—Death finds it hard to imagine he is not immortal. **414. Zaara's**—Sahara's.

The yew, the cypress, or the myrtle tree,
Rent from the roots the tempest tore them down,
And all the grove in wild confusion lay.

108

Yet, mindful of his dread command, I part
Glad from the magic dome—nor found relief;
Damps from the dead hung heavier round my heart,
While sad remembrance rous'd her stores of grief.

109

O'er a dark field I held my dubious way
Where Jack-a-lanthorn walk'd his lonely round,
Beneath my feet substantial darkness lay,
And screams were heard from the distemper'd ground.

110

Nor look'd I back, till to a far off wood,
Trembling with fear, my weary feet had sped—
Dark was the night, but at the inchanted dome
I saw the infernal windows flaming red.

111

And from within the howls of Death I heard,
Cursing the dismal night that gave him birth,
Damning his ancient sire, and mother sin,
Who at the gates of hell, accursed, brought him forth.

112

(For fancy gave to my enraptur'd soul
An eagle's eye, with keenest glance to see,
And bade those distant sounds distinctly roll,
Which, waking, never had affected me.)

113

Oft his pale breast with cruel hand he smote,
And tearing from his limbs a winding sheet,
Roar'd to the black skies, while the woods around,
As wicked as himself, his words repeat.

114

Thrice tow'rd the skies his meagre arms he rear'd,
Invok'd all hell, and thunders on his head,
Bid light'nings fly, earth yawn, and tempests roar,
And the sea wrap him in its oozy bed.

115

"My life for one cool draught!—O, fetch your springs,
"Can one unfeeling to my woes be found!
"No friendly visage comes to my relief,
"But ghosts impend, and spectres hover round.

116

"Though humbled now, dishearten'd and distrest,
"Yet, when admitted to the peaceful ground,
"With heroes, kings, and conquerors I shall rest,
"Shall sleep as safely, and perhaps as sound."

117

Dim burnt the lamp, and now the phantom Death
Gave his last groans in horror and despair—
"All hell demands me hence,"—he said, and threw
The red lamp hissing through the midnight air.

118

Trembling, across the plain my course I held,
And found the grave-yard, loitering through the gloom,
And, in the midst, a hell-red, wandering light,
Walking in fiery circles round the tomb.

119

Among the graves a spiry building stood,
Whose tolling bell, resounding through the shade,
Sung doleful ditties to the adjacent wood,
And many a dismal drowsy thing it said.

120

This fabric tall, with towers and chancels grac'd,

434. Jack-a-lanthorn—Freneau thinks of the will-o'-the-wisp as a lantern held by a watchman on his nightly round in the land of death. **443. sire**—*Cf. Paradise Lost,* Bk. II, lines 746 ff.

Was rais'd by sinners' hands, in ages fled;
The roof they painted, and the beams they brac'd,
And texts from scripture o'er the walls they spread:

121

But wicked were their hearts, for they refus'd
To aid the helpless orphan, when distrest,
The shivering, naked stranger they misus'd,
And banish'd from their doors the starving guest.

122

By laws protected, cruel and profane,
The poor man's ox these monsters drove away;—
And left Distress to attend her infant train,
No friend to comfort, and no bread to stay.

123

But heaven look'd on with keen, resentful eye,
And doom'd them to perdition and the grave,
That as they felt not for the wretch distrest,
So heaven no pity on their souls would have.

124

In pride they rais'd this building tall and fair,
Their hearts were on perpetual mischief bent,
With pride they preach'd, and pride was in their prayer,
With pride they were deceiv'd, and so to hell they went.

125

At distance far approaching to the tomb,
By lamps and lanthorns guided through the shade,
A coal-black chariot hurried through the gloom,
Spectres attending, in black weeds array'd.

126

Whose woeful forms yet chill my soul with dread,
Each wore a vest in Stygian chambers wove,
Death's kindred all—Death's horses they bestrode,
And gallop'd fiercely, as the chariot drove.

127

Each horrid face a grizly mask conceal'd,
Their busy eyes shot terror to my soul
As now and then, by the pale lanthorn's glare,
I saw them for their parted friend condole.

128

Before the hearse Death's chaplain seem'd to go,
Who strove to comfort, what he could, the dead;
Talk'd much of Satan, and the land of woe,
And many a chapter from the scriptures read.

129

At last he rais'd the swelling anthem high,
In dismal numbers seem'd he to complain;
The captive tribes that by Euphrates wept,
Their song was jovial to this dreary strain.

130

That done, they plac'd the carcase in the tomb,
To dust and dull oblivion now resign'd,
Then turn'd the chariot tow'rd the House of Night,
Which soon flew off, and left no trace behind.

131

But as I stoop'd to write the appointed verse,
Swifter than thought the airy scene decay'd;
Blushing the morn arose, and from the east
With her gay streams of light dispell'd the shade.

132

What is this Death, ye deep read sophists, say?—
Death is no more than one unceasing change;
New forms arise, while other forms decay,
Yet all is Life throughout creation's range.

486. ox—*Cf.* Job 24: 3. **500. black weeds**—mourning garments. **502. vest**—vestment. **515. captive tribes**—*Cf.* Ps. 137. **525. sophists**—here in the sense of wise men.

133

The towering Alps, the haughty Apennine,
The Andes, wrapt in everlasting snow,
The Apalachian and the Ararat
Sooner or later must to ruin go.

134

Hills sink to plains, and man returns to dust,
That dust supports a reptile or a flower;
Each changeful atom by some other nurs'd
Takes some new form, to perish in an hour.

135

Too nearly join'd to sickness, toils, and pains,
(Perhaps for former crimes imprison'd here)
True to itself the immortal soul remains,
And seeks new mansions in the starry sphere.

136

When Nature bids thee from the world retire,
With joy thy lodging leave, a fated guest;
In Paradise, the land of thy desire,
Existing always, always to be blest.

ON THE MEMORABLE VICTORY,

OBTAINED BY THE GALLANT CAPTAIN PAUL JONES, OF *Le Bon Homme Richard,* (OR FATHER RICHARD) OVER THE *Seraphis,* OF 44 GUNS, UNDER THE COMMAND OF CAPTAIN PEARSON

This poem was contributed to the *Freeman's Journal,* August 8, 1781. The victory here celebrated occurred off Hull, England, September 23, 1779, and was the first important victory for the American navy. Compare Cooper's *The Pilot* (1823). The text is that of the 1786 edition. The poem is clearer if one consults Chapter x of C. T. Brady, *Commodore Paul Jones,* Appleton, 1900.

O'er the rough main with flowing sheet
The guardian of a numerous fleet,
Seraphis from the Baltic came;
A ship of less tremendous force
Sailed by her side the self-same course,
Countess of Scarborough was her name.

And now their native coasts appear,
Britannia's hills their summits rear
Above the German main:
Fond to suppose their dangers o'er,
They southward coast along the shore,
Thy waters, gentle Thames, to gain.

Full forty guns Seraphis bore,
And Scarborough's Countess twenty-four,
Manned with Old England's boldest tars—
What flag that rides the Gallic seas
Shall dare attack such piles as these,
Designed for tumults and for wars!

Now from the top-mast's giddy heights
A seaman cried—"Four sail in sight
"Approach with favouring gales;"
Pearson, resolved to save the fleet,
Stood off to sea, these ships to meet,
And closely braced his shivering sails.

With him advanc'd the Countess bold,
Like a black tar in wars grown old:
And now these floating piles drew nigh;
But, muse, unfold, what chief of fame
In the other warlike squadron came,
Whose standards at his mast head fly.

'Twas Jones, brave JONES, to battle led
As bold a crew as ever bled
Upon the sky-surrounded main;
The standards of the western world
Were to the willing winds unfurled,
Denying Britain's tyrant reign.

The *Good-Man-Richard* led the line;
The *Alliance* next: with these combine
The Gallic ship they *Pallas* call:
The *Vengeance,* armed with sword and flame,

3. **Baltic**—The British war-vessels were convoying a merchant fleet of forty sail from the Baltic Ocean. 9. **the German main**—the North Sea. 16. **Gallic seas**—seas surrounding France. 22. **Pearson**—Sir Richard Pearson (1731-1806), Commander of the *Serapis.* 30. **Whose**—The construction is confused, but the sense is clear if one substitutes "what."

These to attack the Britons came—
But *two* accomplished all.

Now Phoebus sought his pearly bed:
But who can tell the scenes of dread,
The horrors of that fatal night!
Close up these floating castles came;
The Good Man Richard bursts in flame;
Seraphis trembled at the sight.

She felt the fury of *her* ball:
Down, prostrate down, the Britons fall;
The decks were strewed with slain:
Jones to the foe his vessel lashed;
And, while the black artillery flashed,
Loud thunders shook the main.

Alas! that mortals should employ
Such murdering engines, to destroy
That frame by heaven so nicely joined;
Alas! that e'er the god decreed
That brother should by brother bleed,
And pour'd such madness in the mind.

But thou, brave Jones, no blame shalt bear;
The rights of men demand thy care:
For *these* you dare the greedy waves—
No tyrant, on destruction bent
Has planned thy conquests—thou art sent
To humble tyrants and their slaves.

See!—dread Seraphis flames again—
And art thou, *Jones,* among the slain,
And sunk to Neptune's caves below—
He lives—though crowds around him fall,
Still he, unhurt, survives them all;
Almost alone he fights the foe.

And can thy ship these strokes sustain?
Behold thy brave companions slain,
All clasped in ocean's dark embrace.
"STRIKE, OR BE SUNK!"—the Briton cries—
"SINK, IF YOU CAN!"—the chief replies,
Fierce lightnings blazing in his face.

Then to the side three guns he drew,
(Almost deserted by his crew)
And charged them deep with woe:
By *Pearson's* flash he aim'd hot balls;
His main-mast totters—down it falls—
O'erwhelming half below.

Pearson as yet disdained to yield,
But scarce he secret fears concealed,
And thus was heard to cry—
"With hell, not mortals, I contend;
"What art thou—human or a fiend,
"That dost my force defy?

"Return, my lads, the fight renew!"
So called bold Pearson to his crew;
But called, alas! in vain;
Some on the decks lay maimed and dead;
Some to their deep recesses fled,
And more were shrouded in the main.

Distressed, forsaken, and alone,
He hauled his tattered standard down,
And yielded to his gallant foe;
Bold *Pallas* soon the *Countess* took,—
Thus both their haughty colours struck,
Confessing what the brave can do.

But, Jones, too dearly didst thou buy
These ships possest so gloriously,
Too many deaths disgraced the fray:
Thy barque that bore the conquering flame,
That the proud Briton overcame,
Even she forsook thee on thy way;

For when the morn began to shine,
Fatal to her, the ocean brine
Poured through each spacious wound;
Quick in the deep she disappeared,
But Jones to friendly Belgia steered,
With conquest and with glory crowned.

Go on, great man, to scourge the foe,
And bid the haughty Britons know
They to our *Thirteen Stars* shall bend;
The *Stars* that clad in dark attire,
Long glimmered with a feeble fire,
But radiant now ascend.

Bend to the Stars that flaming rise
On western worlds, more brilliant skies.
Fair Freedom's reign restored.
So when the Magi, come from far,

42. two—The *Bon-Homme Richard* and the *Pallas*. The *Vengeance* took no part in the action; the conduct of the *Alliance,* which fired into Jones's ships, has never been satisfactorily explained. **43. Phoebus sought . . .**—The sun set in the sea. **57. frame**—human frame. **124. Magi**—*Cf.* Matt. 1-2; 8-11.

Beheld the God-attending Star,
They trembled and adored.

TO THE MEMORY

OF THE BRAVE AMERICANS, UNDER GENERAL GREENE, IN SOUTH CAROLINA, WHO FELL IN THE ACTION OF SEPTEMBER 8, 1781.

This poem was written in 1781 and published in the 1795 edition of the *Poems*. General Nathanael Greene, though suffering defeat at Eutaw Springs, with a loss of 700 men, harassed Cornwallis in the South to such an extent as to hasten the end of the conflict.

At Eutaw springs the valiant died:
Their limbs with dust are cover'd o'er—
Weep on, ye springs, your tearful tide;
How many heroes are no more!

If in this wreck of ruin, they
Can yet be thought to claim a tear,
O smite thy gentle breast, and say
The friends of freedom slumber here!

Thou, who shalt trace this bloody plain,
If goodness rules thy generous breast,
Sigh for the wasted rural reign;
Sigh for the shepherds, sunk to rest!

Stranger, their humble graves adorn;
You too may fall, and ask a tear:
'Tis not the beauty of the morn
That proves the evening shall be clear—

They saw their injur'd country's woe;
The flaming town, the wasted field;
Then rush'd to meet the insulting foe;
They took the spear—but left the shield,

Led by thy conquering genius, GREENE,
The Britons they compell'd to fly:
None distant view'd the fatal plain,
None griev'd, in such a cause, to die—
But, like the Parthian, fam'd of old,
Who, flying, still their arrows threw;
These routed Britons, full as bold,
Retreated, and retreating slew.

Now rest in peace, our patriot band;
Though far from Nature's limits thrown,
We trust, they find a happier land,
A brighter sun-shine of their own.

On the EMIGRATION TO AMERICA

AND PEOPLING THE WESTERN COUNTRY

"On the Emigration to America" was written in 1784 and first published in Bailey's *Pocket Almanac* for 1785. Later reprints are almost without change.

To western woods, and lonely plains,
Palemon from the crowd departs,
Where Nature's wildest genius reigns,
To tame the soil, and plant the arts—
What wonders there shall freedom show,
What mighty STATES successive grow!

From Europe's proud, despotic shores
Hither the stranger takes his way,
And in our new found world explores
A happier soil, a milder sway,
Where no proud despot holds him down,
No slaves insult him with a crown.

What charming scenes attract the eye,
On wild Ohio's savage stream!
There Nature reigns, whose works outvie
The boldest pattern art can frame;
There ages past have rolled away,
And forests bloomed but to decay.

From these fair plains, these rural seats,
So long concealed, so lately known,
The unsocial Indian far retreats,
To make some other clime his own,
When other streams, less pleasing flow,
And darker forests round him grow.

25. the Parthian—The Parthian horsemen were accustomed to lure their enemies forward by a real or pretended flight, and then, wheeling rapidly, discharge volleys of arrows against them before they could rally. **2. Palemon**—a minor Roman deity invoked to forestall shipwreck. The name here is a euphemism for Jack Tar

Great Sire of floods! whose varied wave
Through climes and countries takes its way,
To whom creating Nature gave
Ten thousand streams to swell thy sway!
No longer shall *they* useless prove,
Nor idly through the forests rove;

Nor longer shall your princely flood
From distant lakes be swelled in vain,
Nor longer through a darksome wood
Advance, unnoticed, to the main,
Far other ends, the heavens decree—
And commerce plans new freights for thee.

While virtue warms the generous breast,
There heaven-born freedom shall reside,
Nor shall the voice of war molest,
Nor Europe's all-aspiring pride—
There Reason shall new laws devise,
And order from confusion rise.

Forsaking kings and regal state,
With all their pomp and fancied bliss,
The traveller owns, convinced though late,
No realm so free, so blest as this—
The east is half to slaves consigned,
Where kings and priests enchain the mind.

O come the time, and haste the day,
When man shall man no longer crush,
When Reason shall enforce her sway,
Nor these fair regions raise our blush,
Where still the *African* complains,
And mourns his yet unbroken chains.

Far brighter scenes a future age,
The muse predicts, these States will hail,
Whose genius may the world engage,
Whose deeds may over death prevail,
And happier systems bring to view,
Than all the eastern sages knew.

THE HURRICANE

This was written in 1784, published in the *Freeman's Journal*, April 13, 1785, as "Verses, made at Sea, in a Heavy Gale," and reprinted without change in the 1786 edition of the *Poems*.

Happy the man who, safe on shore,
Now trims, at home, his evening fire;
Unmov'd, he hears the tempests roar,
That on the tufted groves expire:
Alas! on us they doubly fall,
Our feeble barque must bear them all.

Now to their haunts the birds retreat,
The squirrel seeks his hollow tree,
Wolves in their shaded caverns meet,
All, all are blest but wretched we—
Foredoomed a stranger to repose,
No rest the unsettled ocean knows.

While o'er the dark abyss we roam,
Perhaps, with last departing gleam,
We saw the sun descend in gloom,
No more to see his morning beam;
But buried low, by far too deep,
On coral beds, unpitied, sleep!

But what a strange, uncoasted strand
Is that, where fate permits no day—
No charts have we to mark that land,
No compass to direct that way—
What Pilot shall explore that realm,
What new Columbus take the helm!

While death and darkness both surround,
And tempests rage with lawless power,
Of friendship's voice I hear no sound,
No comfort in this dreadful hour—
What friendship can in tempests be,
What comfort on this raging sea?

The barque, accustomed to obey,
No more the trembling pilots guide:
Alone she gropes her trackless way,
While mountains burst on either side—
Thus, skill and science both must fall;
And ruin is the lot of all.

25. Sire—"Mississippi." (Freneau's note) **44.** Reads in 1786 edition "A debt that reason deems amiss." **48.** Reads in 1786 edition "And half to slavery more refin'd." **13. abyss**—"Near the east end of Jamaica, July 30, 1784." (Freneau's note)

ON RETIREMENT

by Hezekiah Salem

Printed in the 1786 edition as "Retirement," and in 1795 as "The Wish of Diogenes." Hezekiah Salem was frequently used by Freneau as a pen name.

A hermit's house beside a stream
With forests planted round,
Whatever it to you may seem
More real happiness I deem
Than if I were a monarch crown'd.

A cottage I could call my own
Remote from domes of care;
A little garden, wall'd with stone,
The wall with ivy overgrown,
A limpid fountain near,

Would more substantial joys afford,
More real bliss impart
Than all the wealth that misers hoard,
Than vanquished worlds, or worlds restored—
Mere cankers of the heart!

Vain foolish man! how vast thy pride,
How little can thy wants supply!—
'Tis surely wrong to grasp so wide—
We act as if we only had
To triumph—not to die!

THE WILD HONEY SUCKLE

Probably written in Charleston, South Carolina, in July, 1786; first published in the *Freeman's Journal,* August 2, 1786, and republished in the edition of 1788 and later with practically no change. The flower in question, according to Pattee, is probably the *Rhododendron viscosum.*

Fair flower, that dost so comely grow,
Hid in this silent, dull retreat,
Untouched thy honied blossoms blow,
Unseen thy little branches greet:
No roving foot shall crush thee here,
No busy hand provoke a tear.

By Nature's self in white arrayed,
She bade thee shun the vulgar eye,
And planted here the guardian shade,
And sent soft waters murmuring by;
Thus quietly thy summer goes,
Thy days declining to repose.

Smit with those charms, that must decay,
I grieve to see your future doom;
They died—nor were those flowers more gay,
The flowers that did in Eden bloom;
Unpitying frosts, and Autumn's power
Shall leave no vestige of this flower.

From morning suns and evening dews
At first thy little being came:
If nothing once, you nothing lose,
For when you die you are the same;
The space between, is but an hour,
The frail duration of a flower.

THE INDIAN BURYING GROUND

Published in 1788. This poem is the earliest to romanticize the Indian as the child of nature.

In spite of all the learned have said,
I still my old opinion keep;
The *posture,* that *we* give the dead,
Points out the soul's eternal sleep.

Not so the ancients of these lands—
The Indian, when from life released,
Again is seated with his friends,
And shares again the joyous feast.*

His imaged birds, and painted bowl,
And venison, for a journey dressed,
Bespeak the nature of the soul,
ACTIVITY, that knows no rest.

* **feast**—"The North American Indians bury their dead in a sitting posture; decorating the corpse with wampum, the images of birds, quadrupeds, &c: And (if that of a warrior) with bows, arrows, tomahawks and other military weapons." (Freneau's note)

His bow, for action ready bent,
And arrows, with a head of stone,
Can only mean that life is spent,
And not the old ideas gone.

Thou, stranger, that shalt come this way,
No fraud upon the dead commit—
Observe the swelling turf, and say
They do not *lie,* but here they *sit.*

Here still a lofty rock remains,
On which the curious eye may trace
(Now wasted, half, by wearing rains)
The fancies of a ruder race.

Here still an aged elm aspires,
Beneath whose far-projecting shade
(And which the shepherd still admires)
The children of the forest played!

There oft a restless Indian queen
(Pale *Shebah,* with her braided hair)
And many a barbarous form is seen
To chide the man that lingers there.

By midnight moons, o'er moistening dews,
In habit for the chase arrayed,
The hunter still the deer pursues,
The hunter and the deer, a shade!

And long shall timorous fancy see
The painted chief, and pointed spear,
And Reason's self shall bow the knee
To shadows and delusions here.

On the ANNIVERSARY

OF THE STORMING OF THE BASTILLE, AT PARIS. JULY 14TH, 1789

First printed in the *National Gazette,* July 17, 1793, and republished in the edition of 1795, but omitted from the edition of 1809.

The chiefs that bow to Capet's reign,
In mourning, now, their weeds display;
But we, that scorn a monarch's chain,
Combine to celebrate the DAY
Of Freedom's birth that put the seal,
And laid in dust the proud Bastille.

To Gallia's rich and splendid crown,
This mighty *Day* gave such a blow
As time's recording hand shall own
No former *age* had power to do:
No single gem some Brutus stole,
But instant ruin seiz'd the whole.

Now tyrants rise, once more to bind
In royal chains a nation freed—
Vain hope! for they, to death consign'd,
Shall soon, like perjur'd Louis, bleed:
O'er every king, o'er every queen
Fate hangs the sword, and guillotine.

"Plung'd in a gulf of deep distress
France turns her back—(so traitors say)
Kings, priests, and nobles, round her press,
Resolv'd to seize their destin'd prey:
Thus Europe swears (in arms combin'd)
To Poland's doom is France consign'd."

Yet those, who now are thought so low
From conquests that were *basely* gain'd,
Shall rise tremendous from the blow
And free TWO WORLDS, that still are chain'd,
Restrict the Briton to his isle,
And Freedom plant in every soil.

Ye sons of this degenerate clime,
Haste, arm the barque, expand the sail;
Assist to speed that golden time
When Freedom rules, and monarchs fail;
All left to France—*new powers* may join,
And help to crush the cause divine.

1. Capet's reign—Louis XVI, ruler of France from 1774 to 1793. **6. Bastille**—the famous prison in Paris, built in 1369 and destroyed by the popular uprising here celebrated. **11. Brutus**—a republican leader like Marcus Junius Brutus (85-42 B.C.), one of Caesar's assassins. **13. tyrants**—Austria, Prussia, and exiled French nobles had united in a hostile demonstration intended to restore the French monarchy. **16. perjur'd Louis**—Refers to Louis's supposed violation of his oath to support the Constitution of 1791. He was executed on the guillotine Jan. 21, 1793. **24. Poland's doom**—Poland had been thrice partitioned; in Freneau's view, the Allies opposed to France (1793) now intended to disregard popular opinion and restore the Bourbons.

Ah! while I write, dear France ALLIED,
My ardent wish I scarce restrain,
To throw these Sybil leaves aside,
And fly to join you on the main:
Unfurl the topsail for the chace
And help to crush the tyrant race!

ODE

This ode was sung to the tune of "God Save the King" at the Civic Feast given to Citizen Genêt in Philadelphia, June 1, 1793. It was published in the 1795 edition of Freneau's *Poems*.

God save the Rights of Man!
Give us a heart to scan
Blessings so dear:
Let them be spread around
Wherever man is found,
And with the welcome sound
Ravish his ear.

Let us with France agree,
And bid the world be free,
While tyrants fall!
Let the rude savage host
Of their vast numbers boast—
Freedom's almighty trust
Laughs at them all!

Though hosts of slaves conspire
To quench fair Gallia's fire,
Still shall they fail:
Though traitors round her rise,
Leagu'd with her enemies,
To war each patriot flies,
And will prevail.

No more is valour's flame
Devoted to a name,
Taught to adore—
Soldiers of LIBERTY
Disdain to bow the knee,
But teach EQUALITY
To every shore.

The world at last will join
To aid thy grand design,
Dear Liberty!
To Russia's frozen lands
The generous flame expands:
On Afric's burning sands
Shall man be free!

In this our western world
Be Freedom's flag unfurl'd
Through all its shores!
May no destructive blast
Our heaven of joy o'ercast,
May Freedom's fabric last
While time endures.

If e'er her cause require!
Should tyrants e'er aspire
To aim their stroke,
May no proud despot daunt—
Should he his standard plant,
Freedom will never want
Her hearts of oak!

THE REPUBLICAN GENIUS OF EUROPE

Published in the *Jersey Chronicle*, May 23, 1795.

Emperors and kings! in vain you strive
Your torments to conceal—
The age is come that shakes your thrones,
Tramples in dust despotic crowns,
And bids the sceptre fail.

In western worlds the flame began:
From thence to France it flew—
Through Europe, now, it takes its way,
Beams an insufferable day,
And lays all tyrants low.

Genius of France! pursue the chace
Till Reason's laws restore
Man to be Man, in every clime;—

37. **Allied**—Existing treaties between France and the United States bound each to support the other. The American Government avoided the issue by arguing that a treaty signed with the Bourbons did not bind the United States to the French Republic. 39. **Sybil leaves**—prophetic leaves (from Roman mythology). 16. **Gallia's fire**—the French Revolution. 49. **hearts of oak**—This title from one of David Garrick's popular songs was frequently applied to Revolutionary heroes.

That Being, active, great, sublime
Debas'd in dust no more.

In dreadful pomp he takes his way
O'er ruin'd crowns, demolish'd thrones—
Pale tyrants shrink before his blaze—
Round him terrific lightnings play—
With eyes of fire, he looks them through,
And Pride in ruin lays.

ON A HONEY BEE

DRINKING FROM A GLASS OF WINE AND DROWNED THEREIN

Published in 1809 as by Hezekiah Salem. This poem and the next illustrate the lighter vein of their author.

Thou, born to sip the lake or spring,
Or quaff the waters of the stream,
Why hither come, on vagrant wing?
Does Bacchus tempting seem,
Did he for you this glass prepare?
Will I admit you to a share?

Did storms harass or foes perplex,
Did wasps or king-birds bring dismay,
Did wars distress, or labors vex,
Or did you miss your way?
A better seat you could not take
Than on the margin of this lake.

Welcome!—I hail you to my glass:
All welcome here you find;
Here let the cloud of trouble pass,
Here be all care resigned.
This fluid never fails to please,
And drown the griefs of men or bees.

What forced you here we cannot know,
And you will scarcely tell,—
But cheery we would have you go
And bid a glad farewell:
On lighter wings we bid you fly,—
Your dart will now all foes defy.

Yet take not, oh! too deep a drink,
And in this ocean die;
Here bigger bees than you might sink,
Even bees full six feet high.
Like Pharaoh, then, you would be said
To perish in a sea of red.

Do as you please, your will is mine;
Enjoy it without fear,
And your grave will be this glass of wine,
Your epitaph—a tear;
Go, take your seat in Charon's boat;
We'll tell the hive, you died afloat.

TO A CATY-DID

Published in 1815.

In a branch of willow hid
Sings the evening Caty-did:
From the lofty locust bough
Feeding on a drop of dew,
In her suit of green arrayed
Hear her singing in the shade
Caty-did, Caty-did, Caty-did!

While upon a leaf you tread,
Or repose your little head,
On your sheet of shadows laid,
All the day you nothing said:
Half the night your cheery tongue
Reveled out its little song,
Nothing else but Caty-did.

From your lodgings on the leaf
Did you utter joy or grief?—
Did you only mean to say,
I have had my summer's day,
And am passing, soon, away
To the grave of Caty-did:—
Poor, unhappy Caty-did!

But you would have uttered more
Had you known of nature's power—
From the world when you retreat,

29. Pharaoh—*Cf.* Ex. 14: 26-31. **35. Charon's boat**—the boat of the ferryman who carried souls across the river of Hades. **2. Caty-did**—"A well-known insect, when full grown, about two inches in length, and of the exact color of a green leaf. It is of the genius [sic] cicada, or grasshopper kind, inhabiting the green foliage of trees and singing such a song as *Caty-did* in the evening, towards autumn." (Freneau's note)

And a leaf's your winding sheet,
Long before your spirit fled,
Who can tell but nature said,
Live again, my Caty-did!
  Live and chatter, Caty-did.

  Tell me, what did Caty do?
Did she mean to trouble you?
Why was Caty not forbid
To trouble little Caty-did?
Wrong indeed at you to fling,
Hurting no one while you sing
  Caty-did! Caty-did! Caty-did!

  Why continue to complain?
Caty tells me, she again
Will not give you plague or pain:—
Caty says you may be hid,
Caty will not go to bed
While you sing us Caty-did.
  Caty-did! Caty-did! Caty-did!

  But while singing, you forgot
To tell us what did Caty not:
Caty did not think of cold,
Flocks retiring to the fold,
Winter, with his wrinkles old,
Winter, that yourself foretold
  When you gave us Caty-did.

  Stay securely in your nest;
Caty now, will do her best,
All she can to make you blest;
But, you want no human aid—
Nature, when she formed you, said,
"Independent you are made,
My dear little Caty-did:
Soon yourself must disappear
With the verdure of the year,"—
And to go, we know not where,
  With your song of Caty-did.

On the UNIVERSALITY AND OTHER ATTRIBUTES

OF THE GOD OF NATURE

First published in the edition of 1815. It indicates that Freneau's deism was not a passing fancy but a lifelong view.

All that we see, about, abroad,
What is it all, but nature's God?
In meaner works discover'd here
No less than in the starry sphere.

In seas, on earth, this God is seen;
All that exist, upon him lean;
He lives in all, and never stray'd
A moment from the works he made:

His system fix'd on general laws
Bespeaks a wise creating cause;
Impartially he rules mankind
And all that on this globe we find.

Unchanged in all that seems to change,
Unbounded space is his great range;
To one vast purpose always true,
No time, with him, is old or new.

In all the attributes divine
Unlimited perfectings shine;
In these enwrapt, in these complete,
All virtues in that centre meet.

This power who doth all powers transcend,
To all intelligence a friend,
Exists, the *greatest and the best*
Throughout all worlds, to make them blest.

All that he did he first approved,
He all things into *being* loved;
O'er all he made he still presides,
For them in life, or death provides.

23. best—"Jupiter, optimus, maximus.—Cicero." (Freneau's note)

WASHINGTON IRVING

1783-1859

I. AN AMUSED OBSERVER OF LIFE (1783–1815)

1783 Born April 3, in New York, youngest of eleven children of William and Sarah Sanders Irving. The gay son of a Presbyterian merchant.

1798 Entered law firm of Henry Masterton, but preferred scribbling and roving.

1802 Contributed to the *Morning Chronicle,* edited by his brother Peter, *Spectator*-like light satires of local theatrical and social life, signed "Jonathan Oldstyle, Gent."

1803 First contact with frontier in a journey up the Hudson to Montreal.

1804–1806 His brothers sent him abroad for his health. During these years he skylarked in France, Italy, Holland, and England. In Rome he met Washington Allston, the artist, and almost became a painter; in other cities his interest was in the theater.

1806 Admitted to the New York bar, November 21.

1807–1808 January to January. Associated with brother William and with James K. Paulding in editing *Salmagundi,* Addisonian papers lampooning local theater, society, politics. This semimonthly ran for twenty numbers.

1809 Began *A History of New York, by Diedrich Knickerbocker,* in Philadelphia, as a burlesque on Dr. Samuel Mitchell's ponderous *Picture of New York* (1807). After Peter Irving relinquished his part, Washington condensed it into four introductory chapters, and developed his own history of the "Dutch dynasty." This established Irving's reputation. The death of his fiancée, Matilda Hoffman, daughter of his law preceptor, sobered him. Absorbed romantic poetry.

1810–1814 Became a partner in brother's cutlery firm; mingled in Washington society; edited the *Analectic Magazine* in Philadelphia.

II. THE TRAVELER MAKES ROMANTIC SKETCHES (1815–1826)

1815–1832 Lived in England, where he met Scott, who confirmed his interest in legendary themes. Traveled also in Germany, Austria, France, and Spain.

1818 Failure of the Irving firm caused him to take up authorship.

1819–1820 Publication of *The Sketch-Book of Geoffrey Crayon, Gent.,* in seven parts of four or five sketches each. Begun in May, 1819, the entire series of thirty-six was completed in September, 1820. Praised highly by *Edinburgh Review* and *Quarterly Review.*

1822 *Bracebridge Hall* published simultaneously in England and America. Crossed the Rhine to explore "the rich mine of German literature"; visited Dresden and Vienna.

1824 Collaborated with John Howard Payne on plays in Paris. *Tales of a Traveller* appeared, "a hodge-podge of minor German anecdotes" obtained second hand.

III. CHRONICLER OF OLD SPAIN (1826–1859)

1826–1829 Made two diplomatic journeys to Spain and resided in the Alhambra as attaché to the American envoy.

1828 After putting aside translating Navarrete's *Voyages of Columbus,* he published *History of the Life and Voyages of Columbus,* drawn directly from government archives.

1829 Published *The Conquest of Granada;* also finished the *Legends of the Conquest of Spain,* printed in *Crayon Miscellany,* 1835.

1829–1831 He was secretary of the American Legation in London. Published *The Voyages and Discoveries of the Companions of Columbus,* 1831.

1832 Published *The Alhambra,* best of his Spanish material. Returned to the United States.

1835 Journey to the West, resulting in *A Tour on the Prairies.*

1836 Published *Astoria,* sponsored by John Jacob Astor, fur magnate.

1837 Published *The Adventures of Captain Bonneville, U.S.A.,* digested from the *Journal* of Captain B. L. E. Bonneville, concerned with experiences in the Rocky Mountains.

1842–1846 Minister to Spain.

1849 Published *Life of Oliver Goldsmith* and *The Lives of Mahomet and His Successors.*

1855 Published *Wolfert's Roost and Other Papers,* compiled from his notebooks.

1855–1859 *Life of George Washington* published, in five volumes.

1859 Died, November 28, at Sunnyside on the Hudson.

1866 Posthumous publication of *Spanish Papers and Other Miscellanies.*

BIOGRAPHIES: P. M. Irving, *Life and Letters of Washington Irving,* Putnam, 1862-64, 4 vols.; C. D. Warner, *Washington Irving,* Houghton Mifflin, 1881 (American Men of Letters series); H. W. Boynton, *Washington Irving,* Houghton Mifflin, 1901; G. S. Hellman, *Washington Irving, Esquire,* Knopf, 1925. These are now superseded by Stanley T. Williams's monumental *The Life of Washington Irving,* Oxford University Press, 1935, 2 vols. Supplemental studies are: G. S. Hellman, *Letters of Washington Irving to Henry Brevoort,* Putnam, 1915; *Letters of Henry Brevoort to Washington Irving,* Putnam, 1916; and *Washington Irving on the Prairie,* ed. S. T. Williams and Barbara D. Simison, American Book Co., 1937.

BIBLIOGRAPHIES AND EDITIONS: W. R. Langfeld and P. C. Blackburn, *Washington Irving; a bibliography,* New York Public Library, 1933; *A Bibliography of the Writings of Washington Irving, A Check List,* compiled by S. T. Williams and Mary A. Edge, Oxford University Press, 1936. The Author's Revised Edition of *Works,* Putnam, 1848-61, 40 vols., is standard. *The Journals of Washington Irving* were edited by W. P. Trent and G. S. Hellman, Bibliophile Society, 1919, 3 vols. S. T. Williams has edited five volumes of Irving's journals (see *Literary History of the United States,* Vol. III, p. 580). See also *Washington Irving Diary, Spain, 1828-1829,* ed. C. L. Penney, Hispanic Society, 1926, and John F. McDermott, ed., *The Western Journals of Washington Irving,* Oklahoma, 1944. *Knickerbocker's History of New York,* ed. Stanley Williams and Tremaine McDowell, Harcourt, Brace, 1927; *Representative Selections from Washington Irving,* ed. Henry A. Pochmann, Amer-

ican Book Co., 1934; and Saxe Commins, ed., *Selected Writings of Washington Irving,* Modern Library, 1945, are useful.

With Irving, dreamlike reverie and love of the picturesque find a place in American literature. A roistering democracy had little to inspire this urbane Knickerbocker. He preferred to indulge his fancy by casting a spell of romance over the Hudson, or by lingering in reverie over the Alhambra and other Old World shrines. New theories of government were not for him, but as a writer of belles-lettres he was our first success. He indicated the possibility in America of a literature not merely didactic or utilitarian. He had the taste of a squire and the attitude of a romantic. For politics and religion he had less concern than for character and manners. Intellectually he was of the eighteenth century, though he did his best work in the fantastic, legendary tale. He was primarily a chronicler, a writer of "tales of a traveler," in an "old style" that exquisitely expressed his personality. A genial observer, rather than a thinker about the major experiences of life, Irving was nevertheless immensely influential. Paulding, Willis, and the rest of the Knickerbocker group reflect the influence of his style, as do J. P. Kennedy, Donald Grant Mitchell, James Hall, Bret Harte, George William Curtis, and Charles Dudley Warner.

The later work of Irving is insufficiently known. In this period, retaining the genialities of a style already become a little antiquated, he turned to American history for his theme; and, himself a man of the library, wrote of the exploration of the West, of the voyages of Columbus, and of the life of Washington, intermingling these American topics with excursions into Mohammedan history. The science of historical research was not then developed; and though Irving exercised reasonable care in the collection of his materials, he wrote primarily as an artist. It was his aim to create a noble picture of past events, and in this he succeeded. Fashions in historical writing have changed, so that his books are now outmoded, and of course subsequent research has corrected many of his interpretations. Nevertheless, Irving also occupies an important place in the development of historical writing in the United States, being well nigh the first to clothe the muse of history in the garments of literature.

KNICKERBOCKER'S HISTORY OF NEW YORK

These four chapters are taken from the third book of "Diedrich Knickerbocker's" *A History of New York,* which first appeared in 1809, and was revised in 1812 and subsequent editions, when some of the broad humor was eliminated. In the first edition this chapter began with paragraph eight.

Although begun as a burlesque on Samuel Mitchell's *Picture of New York* (1807), it only occasionally deals with the same topics. Irving prefixed the following explanation to the edition of 1848:

THE AUTHOR'S APOLOGY

"The following work, in which, at the outset, nothing more was contemplated than a temporary *jeu d'esprit,* was commenced in company with my brother, the late Peter Irving, Esq. Our idea was, to parody a small handbook which had recently appeared, entitled *A Picture of New York.* Like that, our work was to begin with an historical sketch; to be followed by notices of the customs, manners, and institutions of the city; written in a serio-comic vein, and treating local errors, follies, and abuses with good-humored satire.

"To burlesque the pedantic lore displayed in certain American works, our historical sketch was to commence with the creation of the world; and we laid all

kinds of works under contribution for trite citations, relevant, or irrelevant, to give it the proper air of learned research. Before this crude mass of mock erudition could be digested into form, my brother departed for Europe, and I was left to prosecute the enterprise alone.

"I now altered the plan of the work. Discarding all idea of a parody on the *Picture of New York*, I determined that what had been originally intended as an introductory sketch, should comprise the whole work, and form a comic history of the city. I accordingly moulded the mass of citations and disquisitions into introductory chapters, forming the first book; but it soon became evident to me, that, like Robinson Crusoe with his boat, I had begun on too large a scale, and that, to launch my history successfully, I must reduce its proportions. I accordingly resolved to confine it to the period of the Dutch domination, which, in its rise, progress, and decline, presented that unity of subject required by classic rule. It was a period, also, at that time almost a *terra incognita* in history. In fact, I was surprised to find how few of my fellow-citizens were aware that New York had ever been called New Amsterdam, or had heard of the names of its early Dutch governors, or cared a straw about their ancient Dutch progenitors.

"This, then, broke upon me as the poetic age of our city; poetic from its very obscurity; and open, like the early and obscure days of ancient Rome, to all the embellishments of heroic fiction. I hailed my native city, as fortunate above all other American cities, in having an antiquity thus extending back into the regions of doubt and fable. . . .

"The main object of my work, in fact, had a bearing wide from the sober aim of history; but one which, I trust, will meet with some indulgence from poetic minds. It was to embody the traditions of the city in an amusing form; to illustrate its local humors, customs, and peculiarities; to clothe home scenes and places and familiar names with those imaginative and whimsical associations so seldom met with in our new country, but which live like charms and spells about the cities of the old world, binding the heart of the native inhabitant to his home.

"In this I have reason to believe I have in some measure succeeded. Before the appearance of my work the popular traditions of our city were unrecorded; the peculiar and racy customs and usages derived from our Dutch progenitors were unnoticed or regarded with indifference, or adverted to with a sneer. Now they form a convivial currency, and are brought forward on all occasions; they link our whole community together in good-humor and good fellowship; they are the rallying points of home feeling, the seasoning of our civic festivities, the staple of local tales and local pleasantries, and are so harped upon by our writers of popular fiction, that I find myself almost crowded off the legendary ground which I was the first to explore, by the host who have followed in my footsteps.

"I dwell on this head, because, at the first appearance of my work, its aim and drift were misapprehended by some of the descendants of the Dutch worthies; and because I understand that now and then one may still be found to regard it with a captious eye. The far greater part, however, I have reason to flatter myself, receive my good-humored picturings in the same temper in which they were executed; and when I find, after a lapse of nearly forty years, this hap-hazard production of my youth still cherished among them,—when I find its very name become a 'household word' and used to give the home stamp to everything recommended for popular acceptation, such as Knickerbocker societies, Knickerbocker insurance companies, Knickerbocker steamboats, Knickerbocker omnibuses, Knickerbocker bread, and Knickerbocker ice,—and when I find New Yorkers of Dutch descent priding themselves upon being 'genuine Knickerbockers,'—I please myself with the persuasion that I have struck the right chord."

The remaining books of the *History* treat of the following: Book IV records the reign of Wilhelmus Kieft (incidentally satirizing Jefferson's policies); Books V, VI, VII, narrate the battles of Peter Stuyvesant with the Swedes on the Delaware. The text used here is that of the Author's Revised Edition.

BOOK III

IN WHICH IS RECORDED THE GOLDEN REIGN OF WOUTER VAN TWILLER

CHAPTER I

SETTING FORTH THE UNPARALLELED VIRTUES OF THE RENOWNED WOUTER VAN TWILLER, AS LIKEWISE HIS UNUTTERABLE WISDOM IN THE LAW CASE OF WANDLE SCHOONHOVEN AND BARENT BLEECKER—AND THE GREAT ADMIRATION OF THE PUBLIC THEREAT

GRIEVOUS and very much to be commiserated is the task of the feeling historian, who writes the history of his native land. If it fall to his lot to be the recorder of calamity or crime, the mournful page is watered with his tears; nor can he recall the most prosperous and blissful era, without a melancholy sigh at the reflection that it has passed away forever! I know not whether it be owing to an immoderate love for the simplicity of former times, or to that certain tenderness of heart incident to all sentimental historians; but I candidly confess that I cannot look back on the happier days of our city, which I now describe, without great dejection of spirit. With faltering hand do I withdraw the curtain of oblivion, that veils the modest merit of our venerable ancestors, and as their figures rise to my mental vision, humble myself before their mighty shades.

Such are my feelings when I revisit the family mansion of the Knickerbockers, and spend a lonely hour in the chamber where hang the portraits of my forefathers, shrouded in dust, like the forms they represent. With pious reverence do I gaze on the countenances of those renowned burghers, who have preceded me in the steady march of existence,—whose sober and temperate blood now meanders through my veins, flowing slower and slower in its feeble conduits, until its current shall soon be stopped forever!

These, I say to myself, are but frail memorials of the mighty men who flourished in the days of the patriarchs; but who, alas, have long since mouldered in that tomb towards which my steps are insensibly and irresistibly hastening! As I pace the darkened chamber and lose myself in melancholy musings, the shadowy images around me almost seem to steal once more into existence, —their countenances to assume the animation of life,—their eyes to pursue me in every movement! Carried away by the delusions of fancy, I almost imagine myself surrounded by the shades of the departed, and holding sweet converse with the worthies of antiquity! Ah, hapless Diedrich! born in a degenerate age, abandoned to the buffetings of fortune,—a stranger and a weary pilgrim in

2. Wouter Van Twiller—(ca. 1580-1646) governor of New Netherlands from 1633 to 1637. **20. my feelings**—Knickerbocker's, not Irving's.

thy native land,—blest with no weeping wife, nor family of helpless children, but doomed to wander neglected through those crowded streets, and elbowed by foreign upstarts from those fair abodes where once thine ancestors held sovereign empire!

Let me not, however, lose the historian in the man, nor suffer the doting recollections of age to overcome me, while dwelling with fond garrulity on the virtuous days of the patriarchs,—on those sweet days of simplicity and ease, which never more will dawn on the lovely island of Manna-hata.

These melancholy reflections have been forced from me by the growing wealth and importance of New Amsterdam, which, I plainly perceive, are to involve it in all kinds of perils and disasters. Already, as I observed at the close of my last book, they had awakened the attentions of the mother-country. The usual mark of protection shown by mother-countries to wealthy colonies was forthwith manifested; a governor being sent out to rule over the province, and squeeze out of it as much revenue as possible. The arrival of a governor of course put an end to the protectorate of Oloffe the Dreamer. He appears, however, to have dreamt to some purpose during his sway, as we find him afterwards living as a patroon on a great landed estate on the banks of the Hudson; having virtually forfeited all right to his ancient appellation of Kortlandt or Lackland.

It was in the year of our Lord 1629 that Mynheer Wouter Van Twiller was appointed governor of the province of Nieuw Nederlandts, under the commission and control of their High Mightinesses the Lords States General of the United Netherlands, and the privileged West India Company.

This renowned old gentleman arrived at New Amsterdam in the merry month of June, the sweetest month in all the year; when dan Apollo seems to dance up the transparent firmament,—when the robin, the thrush, and a thousand other wanton songsters, make the woods to resound with amorous ditties, and the luxurious little boblincon revels among the clover-blossoms of the meadows,—all which happy coincidence persuaded the old dames of New Amsterdam, who were skilled in the art of foretelling events, that this was to be a happy and prosperous administration.

The renowned Wouter (or Walter) Van Twiller was descended from a long line of Dutch burgomasters, who had successively dozed away their lives, and grown fat upon the bench of magistracy in Rotterdam; and who had comported themselves with such singular wisdom and propriety, that they were never either heard or talked of—which, next to being universally applauded, should be the object of ambition of all magistrates and rulers. There are two opposite ways by which some men make a figure in the world: one, by talking faster than they think, and the other, by holding their tongues and not thinking at all. By the first, many a smatterer acquires the reputation of a man of quick parts; by the other, many a dunderpate, like the owl, the stupid-

8. Manna-hata—the Indian name, preferred also by Whitman, for New York. **16. Oloffe the Dreamer**—Oloff Stevensen Van Cortlandt, one of the "Nine Men," or governor's council. Irving has burlesqued him in previous chapters. **21.** The date was 1633, not 1629. Moreover, Van Twiller was not the first (see line 14) but the fifth Dutch governor. Irving is dependable, however, in referring to the petty squabbles and numerous unenforceable laws.

est of birds, comes to be considered the very type of wisdom. This, by the way, is a casual remark, which I would not, for the universe, have it thought I apply to Governor Van Twiller. It is true he was a man shut up within himself, like an oyster, and rarely spoke, except in monosyllables; but then it was allowed he seldom said a foolish thing. So invincible was his gravity that he was never known to laugh or even to smile through the whole course of a long and prosperous life. Nay, if a joke were uttered in his presence, that set light-minded hearers in a roar, it was observed to throw him into a state of perplexity. Sometimes he would deign to inquire into the matter, and when, after much explanation, the joke was made as plain as a pike-staff, he would continue to smoke his pipe in silence, and at length, knocking out the ashes, would exclaim, "Well! I see nothing in all that to laugh about."

With all his reflective habits, he never made up his mind on a subject. His adherents accounted for this by the astonishing magnitude of his ideas. He conceived every subject on so grand a scale that he had not room in his head to turn it over and examine both sides of it. Certain it is, that, if any matter were propounded to him on which ordinary mortals would rashly determine at first glance, he would put on a vague, mysterious look, shake his capacious head, smoke some time in profound silence, and at length observe, that "he had his doubts about the matter"; which gained him the reputation of a man slow of belief and not easily imposed upon. What is more, it gained him a lasting name; for to this habit of the mind has been attributed his surname of Twiller; which is said to be a corruption of the original Twijfler, or, in plain English, *Doubter*.

The person of this illustrious old gentleman was formed and proportioned, as though it had been moulded by the hands of some cunning Dutch statuary, as a model of majesty and lordly grandeur. He was exactly five feet six inches in height, and six feet five inches in circumference. His head was a perfect sphere, and of such stupendous dimensions, that dame Nature, with all her sex's ingenuity, would have been puzzled to construct a neck capable of supporting it; wherefore she wisely declined the attempt, and settled it firmly on the top of his backbone, just between the shoulders. His body was oblong and particularly capacious at bottom; which was wisely ordered by Providence, seeing that he was a man of sedentary habits, and very averse to the idle labor of walking. His legs were short, but sturdy in proportion to the weight they had to sustain; so that when erect he had not a little the appearance of a beer-barrel on skids. His face, that infallible index of the mind, presented a vast expanse, unfurrowed by any of those lines and angles which disfigure the human countenance with what is termed expression. Two small gray eyes twinkled feebly in the midst, like two stars of lesser magnitude in a hazy firmament, and his full-fed cheeks, which seemed to have taken toll of everything that went into his mouth, were curiously mottled and streaked with dusky red, like a spitzenberg apple.

His habits were as regular as his person. He daily took his four stated meals, appropriating exactly an hour to each; he smoked and doubted eight hours, and he slept the remaining twelve of the four-and-twenty. Such was the re-

26. statuary—sculptor.

nowned Wouter Van Twiller,—a true philosopher, for his mind was either elevated above, or tranquilly settled below, the cares and perplexities of this world. He had lived in it for years, without feeling the least curiosity to know whether the sun revolved round it, or it round the sun; and he had watched, for at least half a century, the smoke curling from his pipe to the ceiling, without once troubling his head with any of those numerous theories by which a philosopher would have perplexed his brain, in acounting for its rising above the surrounding atmosphere.

In his council he presided with great state and solemnity. He sat in a huge chair of solid oak, hewn in the celebrated forest of the Hague, fabricated by an experienced timmerman of Amsterdam, and curiously carved about the arms and feet, into exact imitations of gigantic eagle's claws. Instead of a sceptre, he swayed a long Turkish pipe, wrought with jasmin and amber, which had been presented to a stadtholder of Holland at the conclusion of a treaty with one of the petty Barbary powers. In this stately chair would he sit, and this magnificent pipe would he smoke, shaking his right knee with a constant motion, and fixing his eye for hours together upon a little print of Amsterdam, which hung in a black frame against the opposite wall of the council-chamber. Nay, it has even been said, that when any deliberation of extraordinary length and intricacy was on the carpet, the renowned Wouter would shut his eyes for full two hours at a time, that he might not be disturbed by external objects; and at such times the internal commotion of his mind was evinced by certain regular guttural sounds, which his admirers declared were merely the noise of conflict, made by his contending doubts and opinions.

It is with infinite difficulty I have been enabled to collect these biographical anecdotes of the great man under consideration. The facts respecting him were so scattered and vague, and divers of them so questionable in point of authenticity, that I have had to give up the search after many, and decline the admission of still more, which would have tended to heighten the coloring of his portrait.

I have been the more anxious to delineate fully the person and habits of Wouter Van Twiller, from the consideration that he was not only the first, but also the best governor that ever presided over this ancient and respectable province; and so tranquil and benevolent was his reign, that I do not find throughout the whole of it a single instance of any offender being brought to punishment,—a most indubitable sign of a merciful governor, and a case unparalleled, excepting in the reign of the illustrious King Log, from whom, it is hinted, the renowned Van Twiller was a lineal descendant.

The very outset of the career of this excellent magistrate was distinguished by an example of legal acumen, that gave flattering presage of a wise and equitable administration. The morning after he had been installed in office, and at the moment that he was making his breakfast from a prodigious earthen dish, filled with milk and Indian pudding, he was interrupted by the appearance of Wandle Schoonhoven, a very important old burgher of New Amster-

11. **timmerman**—cabinetmaker. 14. **stadtholder**—governor. 15. **Barbary powers**—the piratical Moslem states on the African shore of the Mediterranean, to which maritime powers were forced to pay tribute. 37. **King Log**—In one of Aesop's fables the frogs asked Jove for a king, and he gave them a log of wood to be their ruler.

dam, who complained bitterly of one Barent Bleecker, inasmuch as he refused to come to a settlement of accounts, seeing that there was a heavy balance in favor of the said Wandle. Governor Van Twiller, as I have already observed, was a man of few words; he was likewise a mortal enemy to multiplying writings—or being disturbed at his breakfast. Having listened attentively to the statement of Wandle Schoonhoven, giving an occasional grunt, as he shovelled a spoonful of Indian pudding into his mouth,—either as a sign that he relished the dish, or comprehended the story,—he called unto him his constable, and pulling out of his breeches-pocket a huge jack-knife, dispatched it after the defendant as a summons, accompanied by his tobacco-box as a warrant.

This summary process was as effectual in those simple days as was the sealring of the great Haroun Alraschid among the true believers. The two parties being confronted before him, each produced a book of accounts, written in a language and character that would have puzzled any but a High-Dutch commentator, or a learned decipherer of Egyptian obelisks. The sage Wouter took them one after the other, and having poised them in his hands, and attentively counted over the number of leaves, fell straightway into a very great doubt, and smoked for half an hour without saying a word; at length, laying his finger beside his nose, and shutting his eyes for a moment, with the air of a man who has just caught a subtle idea by the tail, he slowly took his pipe from his mouth, puffed forth a column of tobacco-smoke, and with marvellous gravity and solemnity pronounced, that, having carefully counted over the leaves and weighed the books, it was found, that one was just as thick and as heavy as the other: therefore, it was the final opinion of the court, that the accounts were equally balanced: therefore, Wandle should give Barent a receipt, and Barent should give Wandle a receipt, and the constable should pay the costs.

This decision, being straightway made known, diffused general joy throughout New Amsterdam, for the people immediately perceived that they had a very wise and equitable magistrate to rule over them. But its happiest effect was, that not another lawsuit took place throughout the whole of his administration; and the office of constable fell into such decay, that there was not one of those losel scouts known in the province for many years. I am the more particular in dwelling on this transaction, not only because I deem it one of the most sage and righteous judgments on record, and well worthy the attention of modern magistrates, but because it was a miraculous event in the history of the renowned Wouter—being the only time he was ever known to come to a decision in the whole course of his life.

CHAPTER II

CONTAINING SOME ACCOUNT OF THE GRAND COUNCIL OF NEW AMSTERDAM, AS ALSO DIVERS ESPECIAL GOOD PHILOSOPHICAL REASONS WHY AN ALDERMAN SHOULD BE FAT—WITH OTHER PARTICULARS TOUCHING THE STATE OF THE PROVINCE

In treating of the early governors of the province, I must caution my readers against confounding them, in point of dignity and power, with those worthy

12. **Haroun Alraschid**—the celebrated caliph of Baghdad of the eighth century, mentioned in the Arabian Nights. 12. **true believers**—Mohammedans. 32. **losel scouts**—worthless sleuths.

gentlemen who are whimsically denominated governors in this enlightened republic,—a set of unhappy victims of popularity, who are, in fact, the most dependent, hen-pecked beings in the community; doomed to bear the secret goadings and corrections of their own party, and the sneers and revilings of the whole world beside; set up, like geese at Christmas holidays, to be pelted and shot at by every whipster and vagabond in the land. On the contrary, the Dutch governors enjoyed that uncontrolled authority vested in all commanders of distant colonies or territories. They were, in a manner, absolute despots in their little domains, lording it, if so disposed, over both law and gospel, and accountable to none but the mother-country; which it is well known is astonishingly deaf to all complaints against its governors, provided they discharge the main duty of their station—squeezing out a good revenue. This hint will be of importance, to prevent my readers from being seized with doubt and incredulity, whenever, in the course of this authentic history, they encounter the uncommon circumstance of a governor acting with independence, and in opposition to the opinions of the multitude.

To assist the doubtful Wouter in the arduous business of legislation, a board of magistrates was appointed, which presided immediately over the police. This potent body consisted of a schout or bailiff, with powers between those of the present mayor and sheriff; five burgermeesters, who were equivalent to aldermen; and five schepens, who officiated as scrubs, subdevils, or bottleholders to the burgermeesters, in the same manner as do assistant aldermen to their principals at the present day,—it being their duty to fill the pipes of the lordly burgermeesters, hunt the markets for delicacies for corporation dinners, and to discharge such other little offices of kindness as were occasionally required. It was, moreover, tacitly understood, though not specifically enjoined, that they should consider themselves as butts for the blunt wits of the burgermeesters, and should laugh most heartily at all their jokes; but this last was a duty as rarely called in action in those days as it is at present, and was shortly remitted, in consequence of the tragical death of a fat little schepen, who actually died of suffocation in an unsuccessful effort to force a laugh at one of burgermeester Van Zandt's best jokes.

In return for these humble services, they were permitted to say *yes* and *no* at the council-board, and to have that enviable privilege, the run of the public kitchen,—being graciously permitted to eat, and drink, and smoke, at all those snug junketings and public gormandizings for which the ancient magistrates were equally famous with their modern successors. The post of schepen, therefore, like that of assistant alderman, was eagerly coveted by all your burghers of a certain description, who have a huge relish for good feeding, and an humble ambition to be great men in a small way,—who thirst after a little brief authority, that shall render them the terror of the alms-house and the bridewell,—that shall enable them to lord it over obsequious poverty, vagrant vice, outcast prostitution, and hunger-driven dishonesty,—that shall give to their beck a houndlike pack of catchpolls and bumbailiffs—tenfold greater

6. **whipster**—mischievous person. 42. **bridewell**—A bridewell is a jail. The word derives from the Bridewell in London, a famous old jail so named because of the near-by spring, St. Bride's Well.

rogues than the culprits they hunt down! My readers will excuse this sudden warmth, which I confess is unbecoming of a grave historian,—but I have a mortal antipathy to catchpolls, bumbailiffs, and little-great men.

The ancient magistrates of this city correspond with those of the present time no less in form, magnitude, and intellect, than in prerogative and privilege. The burgomasters, like our aldermen, were generally chosen by weight,—and not only the weight of the body, but likewise the weight of the head. It is a maxim practically observed in all honest, plain-thinking, regular cities, that an alderman should be fat,—and the wisdom of this can be proved to a certainty. That the body is in some measure an image of the mind, or rather that the mind is moulded to the body, like melted lead to the clay in which it is cast, has been insisted on by many philosophers, who have made human nature their peculiar study; for, as a learned gentleman of our own city observes, "there is a constant relation between the moral character of all intelligent creatures and their physical constitution, between their habits and the structure of their bodies." Thus we see that a lean, spare, diminutive body is generally accompanied by a petulant, restless, meddling mind: either the mind wears down the body, by its continual motion, or else the body, not affording the mind sufficient house-room, keeps it continually in a state of fretfulness, tossing and worrying about from the uneasiness of its situation. Whereas your round, sleek, fat, unwieldy periphery is ever attended by a mind like iteslf, tranquil, torpid, and at ease; and we may always observe, that your well-fed, robustious burghers are in general very tenacious of their ease and comfort, being great enemies to noise, discord, and disturbance,—and surely none are more likely to study the public tranquillity than those who are so careful of their own. Who ever hears of fat men heading a riot, or herding together in turbulent mobs?—no—no. It is your lean, hungry men who are continually worrying society, and setting the whole community by the ears.

The divine Plato, whose doctrines are not sufficiently attended to by philosophers of the present age, allows to every man three souls: one, immortal and rational, seated in the brain, that it may overlook and regulate the body; a second, consisting of the surly and irascible passions which, like belligerent powers, lie encamped around the heart; a third, mortal and sensual, destitute of reason, gross and brutal in its propensities, and enchained in the belly, that it may not disturb the divine soul by its ravenous howlings. Now, according to this excellent theory, what can be more clear than that your fat alderman is most likely to have the most regular and well-conditioned mind. His head is like a huge spherical chamber, containing a prodigious mass of soft brains, whereon the rational soul lies softly and snugly couched, as on a feather-bed; and the eyes, which are the windows of the bed-chamber, are usually half closed, that its slumberings may not be disturbed by external objects. A mind thus comfortably lodged, and protected from disturbance, is manifestly most likely to perform its functions with regularity and ease. By dint of good feeding, moreover, the mortal and malignant soul, which is confined in the belly, and which, by its raging and roaring, puts the irritable soul in the neigh-

29 ff. **Plato**—See the *Phaedrus*.

borhood of the heart in an intolerable passion, and thus renders men crusty and quarrelsome when hungry, is completely pacified, silenced, and put to rest,—whereupon a host of honest, good-fellow qualities and kind-hearted affections, which had lain *perdu,* slyly peeping out of the loop-holes of the heart, finding this Cerberus asleep, do pluck up their spirits, turn out one and all in their holiday suits, and gambol up and down the diaphragm,—disposing their possessor to laughter, good-humor, and a thousand friendly offices towards his fellow-mortals.

As a board of magistrates, formed on this principle, think but very little, they are the less likely to differ and wrangle about favorite opinions; and as they generally transact business upon a hearty dinner, they are naturally disposed to be lenient and indulgent in the administration of their duties. Charlemagne was conscious of this, and therefore ordered in his cartularies, that no judge should hold a court of justice, except in the morning, on an empty stomach.—A pitiful rule, which I can never forgive, and which I warrant bore hard upon all the poor culprits in the kingdom. The more enlightened and humane generation of the present day have taken an opposite course, and have so managed that the aldermen are the best-fed men in the community; feasting lustily on the fat things of the land, and gorging so heartily on oysters and turtles, that in process of time they acquire the activity of the one, and the form, the waddle, and the green fat of the other. The consequence is, as I have just said, these luxurious feastings do produce such a dulcet equanimity and repose of the soul, rational and irrational, that their transactions are proverbial for unvarying monotony; and the profound laws which they enact in their dozing moments, amid the labors of digestion, are quietly suffered to remain as dead letters, and never enforced, when awake. In a word, your fair, round-bellied burgomaster, like a full-fed mastiff, dozes quietly at the house-door, always at home, and always at hand to watch over its safety; but as to electing a lean, meddling candidate to the office, as has now and then been done, I would as lief put a greyhound to watch the house, or a race-horse to draw an ox-wagon.

The burgomasters, then, as I have already mentioned, were wisely chosen by weight, and the schepens, or assistant aldermen, were appointed to attend upon them and help them eat; but the latter, in the course of time, when they had been fed and fattened into sufficient bulk of body and drowsiness of brain, became very eligible candidates for the burgomasters' chairs, having fairly eaten themselves into office, as a mouse eats his way into a comfortable lodgment in a goodly, blue-nosed, skimmed-milk, New-England cheese.

Nothing could equal the profound deliberations that took place between the renowned Wouter and these his worthy compeers, unless it be the sage divans of some of our modern corporations. They would sit for hours, smoking and dozing over public affairs, without speaking a word to interrupt that perfect stillness so necessary to deep reflection. Under the sober sway of Wouter Van Twiller and these his worthy coadjutors, the infant settlement waxed vigorous

5. Cerberus—in classical mythology the three-headed dog guarding the entrance to Hades. **13. cartularies**—records, codes. Probably a slip for "capitularies," the proper historical term. **40. divans**—oriental councils of state. **41. corporations**—municipalities.

apace, gradually emerging from the swamps and forests, and exhibiting that mingled appearance of town and country, customary in new cities, and which at this day may be witnessed in the city of Washington,—that immense metropolis, which makes so glorious an appearance on paper.

It was a pleasing sight, in those times, to behold the honest burgher, like a patriarch of yore, seated on the bench at the door of his whitewashed house, under the shade of some gigantic sycamore or overhanging willow. Here would he smoke his pipe of a sultry afternoon, enjoying the soft southern breeze, and listening with silent gratulation to the clucking of his hens, the cackling of his geese, and the sonorous grunting of his swine,—that combination of farm-yard melody which may truly be said to have a silver sound, inasmuch as it conveys a certain assurance of profitable marketing.

The modern spectator, who wanders through the streets of this populous city, can scarcely form an idea of the different appearance they presented in the primitive days of the Doubter. The busy hum of multitudes, the shouts of revelry, the rumbling equipages of fashion, the rattling of accursed carts, and all the spirit-grieving sounds of brawling commerce, were unknown in the settlement of New Amsterdam. The grass grew quietly in the highways; the bleating sheep and frolicsome calves sported about the verdant ridge, where now the Broadway loungers take their morning stroll; the cunning fox or ravenous wolf skulked in the woods, where now are to be seen the dens of Gomez and his righteous fraternity of money-brokers; and flocks of vociferous geese cackled about the fields where now the great Tammany wigwam and the patriotic tavern of Martling echo with the wranglings of the mob.

In these good times did a true and enviable equality of rank and property prevail, equally removed from the arrogance of wealth, and the servility and heart-burnings of repining poverty; and, what in my mind is still more conducive to tranquillity and harmony among friends, a happy equality of intellect was likewise to be seen. The minds of the good burghers of New Amsterdam seemed all to have been cast in one mould, and to be those honest, blunt minds, which, like certain manufactures, are made by the gross, and considered as exceedingly good for common use.

Thus it happens that your true dull minds are generally preferred for public employ, and especially promoted to city honors; your keen intellects, like razors, being considered too sharp for common service. I know that it is common to rail at the unequal distribution of riches, as the great source of jealousies, broils, and heart-breakings; whereas, for my part, I verily believe it is the sad inequality of intellect that prevails, that embroils communities more than anything else; and I have remarked that your knowing people, who are so much wiser than anybody else, are eternally keeping society in a ferment. Happily for New Amsterdam, nothing of the kind was known within its walls; the very words of learning, education, taste, and talents were unheard of; a bright genius was an animal unknown, and a blue-stocking lady would

3. **Washington**—The early nineteenth century is filled with complaints about the primitive condition of the city. 22. **Gomez**—probably a usurer. 23. **Tammany**—a benevolent order already wielding political influence contrary to Irving's Federalist view. Its social affairs were held in Martling's tavern.

have been regarded with as much wonder as a horned frog or a fiery dragon. No man, in fact, seemed to know more than his neighbor, nor any man to know more than an honest man ought to know, who has nobody's business to mind but his own; the parson and the council clerk were the only men that could read in the community, and the sage Van Twiller always signed his name with a cross.

Thrice happy and ever to be envied little Burgh! existing in all the security of harmless insignificance,—unnoticed and unenvied by the world, without ambition, without victories, without riches, without learning, and all their train of carking cares;—and as of yore, in the better days of man, the deities were wont to visit him on earth and bless his rural habitations, so, we are told, in the sylvan days of New Amsterdam, the good St. Nicholas would often make his appearance in his beloved city, of a holiday afternoon, riding jollily among the tree-tops, or over the roofs of the houses, now and then drawing forth magnificent presents from his breeches-pockets, and dropping them down the chimneys of his favorites. Whereas, in these degenerate days of iron and brass, he never shows us the light of his countenance, nor ever visits us, save one night in the year, when he rattles down the chimneys of the descendants of patriarchs, confining his presents merely to the children, in token of the degeneracy of the parents.

Such are the comfortable and thriving effects of a fat government. The province of the New Netherlands, destitute of wealth, possessed a sweet tranquillity that wealth could never purchase. There were neither public commotions, nor private quarrels; neither parties, nor sects, nor schisms; neither persecutions, nor trials, nor punishments; nor were there counsellors, attorneys, catchpolls, or hangmen. Every man attended to what little business he was lucky enough to have, or neglected it if he pleased, without asking the opinion of his neighbor. In those days nobody meddled with concerns above his comprehension; nor thrust his nose into other people's affairs; nor neglected to correct his own conduct, and reform his own character, in his zeal to pull to pieces the characters of others;—but, in a word, every respectable citizen ate when he was not hungry, drank when he was not thirsty, and went regularly to bed when the sun set and the fowls went to roost, whether he was sleepy or not; all which tended so remarkably to the population of the settlement, that I am told every dutiful wife throughout New Amsterdam made a point of enriching her husband with at least one child a year, and very often a brace, —this superabundance of good things clearly constituting the true luxury of life, according to the favorite Dutch maxim, that "more than enough constitutes a feast." Everything, therefore, went on exactly as it should do, and in the usual words employed by historians to express the welfare of a country, "the profoundest *tranquillity* and *repose* reigned throughout the province."

16-17. iron and brass—According to Ovid, *Metamorphoses*, Bk. I, lines 89-150, the four ages of the world are, in the order of increasing degeneracy, the ages of gold, silver, brass, and iron. Irving is, of course, playing on words.

CHAPTER III

HOW THE TOWN OF NEW AMSTERDAM AROSE OUT OF MUD, AND CAME TO BE MARVELLOUSLY POLISHED AND POLITE—TOGETHER WITH A PICTURE OF THE MANNERS OF OUR GREAT-GREAT-GRANDFATHERS

Manifold are the tastes and dispositions of the enlightened *literati,* who turn over the pages of history. Some there be whose hearts are brimful of the yeast of courage, and whose bosoms do work, and swell, and foam, with untried valor, like a barrel of new cider, or a train-band captain, fresh from under the hands of his tailor. This doughty class of readers can be satisfied with nothing but bloody battles, and horrible encounters; they must be continually storming forts, sacking cities, springing mines, marching up to the muzzles of cannon, charging bayonet through every page, and revelling in gunpowder and carnage. Others, who are of a less martial, but equally ardent imagination, and who, withal, are a little given to the marvellous, will dwell with wondrous satisfaction on descriptions of prodigies, unheard-of events, hair-breadth escapes, hardy adventures, and all those astonishing narrations which just amble along the boundary-line of possibility. A third class, who, not to speak slightly of them, are of a lighter turn, and skim over the records of past times, as they do over the edifying pages of a novel, merely for relaxation and innocent amusement, do singularly delight in treasons, executions, Sabine rapes, Tarquin outrages, conflagrations, murders, and all the other catalogue of hideous crimes, which, like cayenne in cookery, do give a pungency and flavor to the dull detail of history. While a fourth class, of more philosophic habits, do diligently pore over the musty chronicles of time, to investigate the operations of the human kind, and watch the gradual changes in men and manners, effected by the progress of knowledge, the vicissitudes of events, or the influence of situation.

If the three first classes find but little wherewithal to solace themselves in the tranquil reign of Wouter Van Twiller, I entreat them to exert their patience for a while, and bear with the tedious picture of happiness, prosperity, and peace, which my duty as a faithful historian obliges me to draw; and I promise them, that, as soon as I can possibly alight on anything horrible, uncommon, or impossible, it shall go hard, but I will make it afford them entertainment. This being premised, I turn with great complacency to the fourth class of my readers, who are men, or, if possible, women after my own heart; grave, philosophical, and investigating; fond of analyzing characters, of taking a start from first causes, and so hunting a nation down, through all the mazes of innovation and improvement. Such will naturally be anxious to witness the first development of the newly-hatched colony, and the primitive manners and customs prevalent among its inhabitants, during the halcyon reign of Van Twiller, or the Doubter.

I will not grieve their patience, however, by describing minutely the increase and improvement of New Amsterdam. Their own imaginations will doubtless present to them the good burghers, like so many painstaking and perse-

8. train-band—militia. **20. Sabine rapes . . .**—famous episodes recorded in the first portions of Livy's *History of Rome.*

vering beavers, slowly and surely pursuing their labors: they will behold the prosperous transformation from the rude log hut to the stately Dutch mansion, with brick front, glazed windows, and tiled roof; from the tangled thicket to the luxuriant cabbage-garden; and from the skulking Indian to the ponderous burgomaster. In a word, they will picture to themselves the steady, silent and undeviating march of prosperity incident to a city destitute of pride or ambition, cherished by a fat government, and whose citizens do nothing in a hurry.

The sage council, as has been mentioned in a preceding chapter, not being able to determine upon any plan for the building of their city,—the cows, in a laudable fit of patriotism, took it under their peculiar charge, and, as they went to and from pasture, established paths through the bushes, on each side of which the good folks built their houses,—which is one cause of the rambling and picturesque turns and labyrinths which distinguish certain streets of New York at this very day.

The houses of the higher class were generally constructed of wood, excepting the gable end which was of small, black and yellow Dutch bricks, and always faced on the street, as our ancestors, like their descendants, were very much given to outward show, and were noted for putting the best leg foremost. The house was always furnished with abundance of large doors and small windows on every floor, the date of its erection was curiously designated by iron figures on the front, and on the top of the roof was perched a fierce little weathercock, to let the family into the important secret which way the wind blew.

These, like the weathercocks on the tops of our steeples, pointed so many different ways, that every man could have a wind to his mind;—the most stanch and loyal citizens, however, always went according to the weathercock on the top of the governor's house, which was certainly the most correct, as he had a trusty servant employed every morning to climb up and set it to the right quarter.

In those good days of simplicity and sunshine, a passion for cleanliness was the leading principle in domestic economy, and the universal test of an able housewife,—a character which formed the utmost ambition of our unenlightened grandmothers. The front-door was never opened, except on marriages, funerals, New-Year's days, the festival of St. Nicholas, or some such great occasion. It was ornamented with a gorgeous brass knocker, curiously wrought, sometimes in the device of a dog, and sometimes of a lion's head, and was daily burnished with such religious zeal, that it was ofttimes worn out by the very precautions taken for its preservation. The whole house was constantly in a state of inundation, under the discipline of mops and brooms and scrubbing-brushes; and the good housewives of those days were a kind of amphibious animal, delighting exceedingly to be dabbling in water,—insomuch that an historian of the day gravely tells us, that many of his townswomen grew to have webbed fingers like unto a duck; and some of them, he had little doubt, could the matter be examined into, would be found to have the tails of mermaids,—but this I look upon to be a mere sport of fancy, or, what is worse, a wilful misrepresentation.

The grand parlor was the sanctum sanctorum, where the passion for clean-

ing was indulged without control. In this sacred apartment no one was permitted to enter, excepting the mistress and her confidential maid, who visited it once a week, for the purpose of giving it a thorough cleaning, and putting things to rights,—always taking the precaution of leaving their shoes at the door, and entering devoutly on their stocking-feet. After scrubbing the floor, sprinkling it with fine white sand, which was curiously stroked into angles and curves and rhomboids with a broom,—after washing the windows, rubbing and polishing the furniture, and putting a new bunch of evergreens in the fireplace,—the window-shutters were again closed to keep out the flies, and the room carefully locked up until the revolution of time brought round the weekly cleaning-day.

As to the family, they always entered in at the gate, and most generally lived in the kitchen. To have seen a numerous household assembled round the fire, one would have imagined that he was transported back to those happy days of primeval simplicity, which float before our imaginations like golden visions. The fireplaces were of a truly patriarchal magnitude, where the whole family, old and young, master and servant, black and white, nay, even the very cat and dog, enjoyed a community of privilege, and had each a right to a corner. Here the old burgher would sit in perfect silence, puffing his pipe, looking in the fire with half-shut eyes, and thinking of nothing for hours together; the goede vrouw, on the opposite side, would employ herself diligently in spinning yarn, or knitting stockings. The young folks would crowd around the hearth, listening with breathless attention to some old crone of a negro, who was the oracle of the family, and who, perched like a raven in a corner of the chimney, would croak forth for a long winter afternoon a string of incredible stories about New-England witches,—grisly ghosts, horses without heads,—and hair-breadth escapes, and bloody encounters among the Indians.

In those happy days a well-regulated family always rose with the dawn, dined at eleven, and went to bed at sunset. Dinner was invariably a private meal, and the fat old burghers showed incontestable signs of disapprobation and uneasiness at being surprised by a visit from a neighbor on such occasions. But though our worthy ancestors were thus singularly averse to giving dinners, yet they kept up the social bands of intimacy by occasional banquetings, called tea-parties.

These fashionable parties were generally confined to the higher classes, or noblesse, that is to say, such as kept their own cows, and drove their own wagons. The company commonly assembled at three o'clock, and went away about six, unless it was in winter-time, when the fashionable hours were a little earlier, that the ladies might get home before dark. The tea-table was crowned with a huge earthen dish, well stored with slices of fat pork, fried brown, cut up into morsels, and swimming in gravy. The company being seated round the genial board, and each furnished with a fork, evinced their dexterity in launching at the fattest pieces in this mighty dish,—in much the same manner as sailors harpoon porpoises at sea, or our Indians spear salmon in the lakes. Sometimes the table was graced with immense apple-pies, or saucers full of preserved peaches and pears; but it was always sure to boast an enormous dish of balls of sweetened dough, fried in hog's fat, and called doughnuts, or

olykoeks,—a delicious kind of cake, at present scarce known in this city, except in genuine Dutch families.

The tea was served out of a majestic Delft tea-pot, ornamented with paintings of fat little Dutch shepherds and shepherdesses tending pigs with boats sailing in the air, and houses built in the clouds, and sundry other ingenious Dutch fantasies. The beaux distinguished themselves by their adroitness in replenishing this pot from a huge copper tea-kettle, which would have made the pigmy macaronies of these degenerate days sweat merely to look at it. To sweeten the beverage, a lump of sugar was laid beside each cup, and the company alternately nibbled and sipped with great decorum, until an improvement was introduced by a shrewd and economic old lady, which was to suspend a large lump directly over the tea-table, by a string from the ceiling, so that it could be swung from mouth to mouth,—an ingenious expedient, which is still kept up by some families in Albany, but which prevails without exception in Communipaw, Bergen, Flatbush, and all our uncontaminated Dutch villages.

At these primitive tea-parties the utmost propriety and dignity of deportment prevailed. No flirting nor coquetting,—no gambling of old ladies, nor hoyden chattering and romping of young ones,—no self-satisfied struttings of wealthy gentlemen, with their brains in their pockets, nor amusing conceits and monkey divertisements of smart young gentlemen, with no brains at all. On the contrary, the young ladies seated themselves demurely in their rush-bottomed chairs, and knit their own woollen stockings; nor ever opened their lips excepting to say *yah, Mynheer,* or, *yah, yah, Vrouw,* to any question that was asked them; behaving in all things like decent, well-educated damsels. As to the gentlemen, each of them tranquilly smoked his pipe, and seemed lost in contemplation of the blue and white tiles with which the fireplaces were decorated; wherein sundry passages of Scripture were piously portrayed: Tobit and his dog figured to great advantage; Haman swung conspicuously on his gibbet; and Jonah appeared most manfully bouncing out of the whale, like Harlequin through a barrel of fire.

The parties broke up without noise and without confusion. They were carried home by their own carriages, that is to say, by the vehicles nature had provided them, excepting such of the wealthy as could afford to keep a wagon. The gentlemen gallantly attended their fair ones to their respective abodes, and took leave of them with a hearty smack at the door: which, as it was an established piece of etiquette, done in perfect simplicity and honesty of heart, occasioned no scandal at that time, nor should it at the present;—if our great-grandfathers approved of the custom, it would argue a great want of deference in their descendants to say a word against it.

3. Delft—a Dutch manufacturing town. **8. macaronies**—fops. **15. Communipaw . . .** —early Dutch settlements on the shores of New York Bay. **28. Tobit**—hero of the book of that name in the Apocrypha. **29. Haman**—*Cf.* Esther, 7: 9-10. **30. Jonah**—*Cf.* Jonah, 2: 10. **30. Harlequin**—a character in pantomime.

CHAPTER IV

CONTAINING FURTHER PARTICULARS OF THE GOLDEN AGE, AND WHAT CONSTITUTED A FINE LADY AND GENTLEMAN IN THE DAYS OF WALTER THE DOUBTER

In this dulcet period of my history, when the beauteous island of Manna-hata presented a scene, the very counterpart of those glowing pictures drawn of the golden reign of Saturn, there was, as I have before observed, a happy ignorance, an honest simplicity prevalent among its inhabitants, which, were I even able to depict, would be but little understood by the degenerate age for which I am doomed to write. Even the female sex, those arch innovators upon the tranquillity, the honesty, and gray-beard customs of society, seemed for a while to conduct themselves with incredible sobriety and comeliness.

Their hair, untortured by the abominations of art, was scrupulously pomatumed back from their foreheads with a candle, and covered with a little cap of quilted calico, which fitted exactly to their heads. Their petticoats of linsey-woolsey were striped with a variety of gorgeous dyes,—though I must confess these gallant garments were rather short, scarce reaching below the knee; but then they made up in the number, which generally equalled that of the gentleman's small-clothes; and what is still more praiseworthy, they were all of their own manufacture,—of which circumstance, as may well be supposed, they were not a little vain.

These were the honest days in which every woman staid at home, read the Bible, and wore pockets,—ay, and that too of a goodly size, fashioned with patchwork into many curious devices, and ostentatiously worn on the outside. These, in fact, were convenient receptacles, where all good housewives carefully stored away such things as they wished to have at hand; by which means they often came to be incredibly crammed; and I remember there was a story current, when I was a boy, that the lady of Wouter Van Twiller once had occasion to empty her right pocket in search of a wooden ladle, when the contents filled a couple of corn-baskets, and the utensil was discovered lying among some rubbish in one corner;—but we must not give too much faith to all these stories, the anecdotes of those remote periods being very subject to exaggeration.

Besides these notable pockets, they likewise wore scissors and pin-cushions suspended from their girdles by red ribands, or, among the more opulent and showy classes, by brass, and even silver chains,—indubitable tokens of thrifty housewives and industrious spinsters. I cannot say much in vindication of the shortness of the petticoats; it doubtless was introduced for the purpose of giving the stockings a chance to be seen, which were generally of blue worsted, with magnificent red clocks,—or, perhaps, to display a well-turned ankle, and a neat, though serviceable foot, set off by a high-heeled leathern shoe, with a large and splendid silver buckle. Thus we find that the gentle sex in all ages have shown the same disposition to infringe a little upon the laws of decorum, in order to betray a lurking beauty, or gratify an innocent love of finery.

From the sketch here given, it will be seen that our good grandmothers

6. reign of Saturn—that is, golden age—a literary tag from Virgil, *Eclogues*, Bk. IV, line 6.

differed considerably in their ideas of a fine figure from their scantily dressed descendants of the present day. A fine lady, in those times, waddled under more clothes, even on a fair summer's day, than would have clad the whole bevy of a modern ball-room. Nor were they the less admired by the gentlemen in consequence thereof. On the contrary, the greatness of a lover's passion seemed to increase in proportion to the magnitude of its object,—and a voluminous damsel, arrayed in a dozen of petticoats, was declared by a Low-Dutch sonneteer of the province to be radiant as a sunflower, and luxuriant as a full-blown cabbage. Certain it is, that in those days the heart of a lover could not contain more than one lady at a time; whereas the heart of a modern gallant has often room enough to accommodate half a dozen. The reason of which I conclude to be, that either the hearts of the gentlemen have grown larger, or the persons of the ladies smaller: this, however, is a question for physiologists to determine.

But there was a secret charm in these petticoats, which, no doubt, entered into the consideration of the prudent gallants. The wardrobe of a lady was in those days her only fortune; and she who had a good stock of petticoats and stockings was as absolutely an heiress as is a Kamtchatka damsel with a store of bear-skins, or a Lapland belle with a plenty of reindeer. The ladies, therefore, were very anxious to display these powerful attractions to the greatest advantage; and the best rooms in the house, instead of being adorned with caricatures of dame Nature, in water-colors and needle-work, were always hung round with abundance of homespun garments, the manufacture and the property of the females,—a piece of laudable ostentation that still prevails among the heiresses of our Dutch villages.

The gentlemen, in fact, who figured in the circles of the gay world in these ancient times, corresponded, in most particulars, with the beauteous damsels whose smiles they were ambitious to deserve. True it is, their merits would make but a very inconsiderable impression upon the heart of a modern fair: they neither drove their curricles, nor sported their tandems, for as yet those gaudy vehicles were not even dreamt of; neither did they distinguish themselves by their brilliancy at the table, and their consequent rencontres with watchmen, for our forefathers were of too pacific a disposition to need those guardians of the night, every soul throughout the town being sound asleep before nine o'clock. Neither did they establish their claims to gentility at the expense of their tailors, for as yet those offenders against the pockets of society, and the tranquillity of all aspiring young gentlemen, were unknown in New Amsterdam; every good housewife made the clothes of her husband and family, and even the goede vrouw of Van Twiller himself thought it no disparagement to cut out her husband's linsey-woolsey galligaskins.

Not but what there were some two or three youngsters who manifested the first dawning of what is called fire and spirit; who held all labor in contempt; skulked about docks and market-places; loitered in the sunshine; squandered

7. **Low-Dutch**—a Hollander; not to be confused with Crèvecœur's use of the word. 30. **curricles**—the smart New York vehicles of Irving's day were a light, two-wheeled carriage called the curricle, and the **tandem**, a two-wheeled vehicle drawn by two horses harnessed one before the other. 40. **galligaskins**—breeches.

what little money they could procure at hustle-cap and chuck-farthing; swore, boxed, fought cocks, and raced their neighbors' horses; in short, who promised to be the wonder, the talk, and abomination of the town, had not their stylish career been unfortunately cut short by an affair of honor with a whipping-post.

Far other, however, was the truly fashionable gentleman of those days: his dress, which served for both morning and evening, street and drawing-room, was a linsey-woolsey coat, made, perhaps, by the fair hands of the mistress of his affections, and gallantly bedecked with abundance of large brass buttons; half a score of breeches heightened the proportions of his figure; his shoes were decorated by enormous copper buckles; a low-crowned broad-rimmed hat overshadowed his burly visage; and his hair dangled down his back in a prodigious queue of eel-skin.

Thus equipped, he would manfully sally forth, with pipe in mouth, to besiege some fair damsel's obdurate heart,—not such a pipe, good reader, as that which Acis did sweetly tune in praise of his Galatea, but one of true Delft manufacture, and furnished with a charge of fragrant tobacco. With this would he resolutely set himself down before the fortress, and rarely failed, in the process of time, to smoke the fair enemy into a surrender, upon honorable terms.

Such was the happy reign of Wouter Van Twiller, celebrated in many a long-forgotten song as the real golden age, the rest being nothing but counterfeit copper-washed coin. In that delightful period, a sweet and holy calm reigned over the whole province. The burgomaster smoked his pipe in peace; the substantial solace of his domestic cares, after her daily toils were done, sat soberly at the door, with her arms crossed over her apron of snowy white, without being insulted with ribald street-walkers or vagabond boys,—those unlucky urchins who do so infest our streets, displaying, under the roses of youth, the thorns and briers of iniquity. Then it was that the lover with ten breeches, and the damsel with petticoats of half a score, indulged in all the innocent endearments of virtuous love, without fear and without reproach; for what had that virtue to fear, which was defended by a shield of good linsey-woolseys, equal at least to the seven bull-hides of the invincible Ajax?

Ah, blissful and never to be forgotten age! when everything was better than it has ever been since, or ever will be again,—when Buttermilk Channel was quite dry at low water,—when the shad in the Hudson were all salmon,—and when the moon shone with a pure and resplendent whiteness, instead of that melancholy yellow light which is the consequence of her sickening at the abominations she every night witnesses in this degenerate city!

Happy would it have been for New Amsterdam could it always have existed in this state of blissful ignorance and lowly simplicity; but, alas! the days of childhood are too sweet to last! Cities, like men, grow out of them in time, and are doomed alike to grow into the bustle, the cares, and miseries of the world. Let no man congratulate himself, when he beholds the child of his

1. **hustle-cap**—a game in which coins are shaken in a cap before being tossed to the ground; **chuck-farthing**—a game in which coins are pitched at a mark, then chucked at a hole. 15. **Acis . . . Galatea**—See Virgil's third *Eclogue*. 31. **Ajax**—bravest, after Achilles, of the Greeks who besieged Troy. See Homer's Iliad, VII. 33. **Buttermilk Channel**—separating Governor's Island from Brooklyn.

bosom or the city of his birth increasing in magnitude and importance,—let the history of his own life teach him the dangers of the one, and this excellent little history of Manna-hata convince him of the calamities of the other.

THE AUTHOR'S ACCOUNT OF HIMSELF

This expression of Irving's romantic tastes was prefixed to *The Sketch-Book* (1819-20). *Euphues* was published in 1578-80.

"I am of this mind with Homer, that as the snaile that crept out of her shel was turned eftsoons into a toad, and thereby was forced to make a stoole to sit on; so the traveller that stragleth from his owne country is in a short time transformed into so monstrous a shape, that he is faine to alter his mansion with his manners, and to live where he can, not where he would."

LYLY'S *Euphues*

I was always fond of visiting new scenes, and observing strange characters and manners. Even when a mere child I began my travels, and made many tours of discovery into foreign parts and unknown regions of my native city, to the frequent alarm of my parents, and the emolument of the town-crier. As I grew into boyhood, I extended the range of my observations. My holiday afternoons were spent in rambles about the surrounding country. I made myself familiar with all its places famous in history or fable. I knew every spot where a murder or robbery had been committed, or a ghost seen. I visited the neighboring villages, and added greatly to my stock of knowledge by noting their habits and customs, and conversing with their sages and great men. I even journeyed one long summer's day to the summit of the most distant hill, whence I stretched my eye over many a mile of terra incognita, and was astonished to find how vast a globe I inhabited.

This rambling propensity strengthened with my years. Books of voyages and travels became my passion, and in devouring their contents, I neglected the regular exercises of the school. How wistfully would I wander about the pier-heads in fine weather, and watch the parting ships, bound to distant climes—with what longing eyes would I gaze after their lessening sails, and waft myself in imagination to the ends of the earth!

Further reading and thinking, though they brought this vague inclination into more reasonable bounds, only served to make it more decided. I visited various parts of my own country; and had I been merely a lover of fine scenery, I should have felt little desire to seek elsewhere its gratification: for on no country have the charms of nature been more prodigally lavished. Her mighty lakes, like oceans of liquid silver; her mountains, with their bright aerial tints; her valleys, teeming with wild fertility; her tremendous cataracts, thundering in their solitudes; her boundless plains, waving with spontaneous verdure; her broad deep rivers, rolling in solemn silence to the ocean; her trackless forests, where vegetation puts forth all its magnificence; her skies, kindling with the magic of summer clouds and glorious sunshine;—no, never need an American look beyond his own country for the sublime and beautiful of natural scenery.

15. **terra incognita**—unknown land.

But Europe held forth the charms of storied and poetical association. There were to be seen the masterpieces of art, the refinements of highly-cultivated society, the quaint peculiarities of ancient and local custom. My native country was full of youthful promise: Europe was rich in the accumulated treasures of age. Her very ruins told the history of times gone by, and every moldering stone was a chronicle. I longed to wander over the scenes of renowned achievement—to tread, as it were, in the footsteps of antiquity—to loiter about the ruined castle—to meditate on the falling tower—to escape, in short, from the commonplace realities of the present, and lose myself among the shadowy grandeurs of the past.

I had, besides all this, an earnest desire to see the great men of the earth. We have, it is true, our great men in America: not a city but has an ample share of them. I have mingled among them in my time, and have been almost withered by the shade into which they cast me; for there is nothing so baleful to a small man as the shade of a great one, particularly the great man of a city. But I was anxious to see the great men of Europe; for I had read in the works of various philosophers, that all animals degenerated in America, and man among the number. A great man of Europe, thought I, must therefore be as superior to a great man of America, as a peak of the Alps to a highland of the Hudson; and in this idea I was confirmed, by observing the comparative importance and swelling magnitude of many English travellers among us, who, I was assured, were very little people in their own country. I will visit this land of wonders, thought I, and see the gigantic race from which I am degenerated.

It has been either my good or evil lot to have my roving passion gratified. I have wandered through different countries, and witnessed many of the shifting scenes of life. I cannot say that I have studied them with the eye of a philosopher; but rather with the sauntering gaze with which humble lovers of the picturesque stroll from the window of one print-shop to another; caught sometimes by the delineations of beauty, sometimes by the distortions of caricature, and sometimes by the loveliness of landscape. As it is the fashion for modern tourists to travel pencil in hand, and bring their portfolios filled with sketches, I am disposed to get up a few for the entertainment of my friends. When, however, I look over the hints and memorandums I have taken down for the purpose, my heart almost fails me at finding how my idle humor has led me aside from the great objects studied by every regular traveller who would make a book. I fear I shall give equal disappointment with an unlucky landscape painter, who had travelled on the continent, but, following the bent of his vagrant inclination, had sketched in nooks, and corners, and by-places. His sketchbook was accordingly crowded with cottages, and landscapes, and obscure ruins; but he had neglected to paint St. Peter's, or the Coliseum; the cascade of Terni, or the bay of Naples; and had not a single glacier or volcano in his whole collection.

41-42. cascade of Terni—a series of waterfalls nearly six hundred feet in height in the Veliono River, Italy.

ENGLISH WRITERS ON AMERICA

From *The Sketch-Book* (1819-20). In the *Edinburgh Review* for January, 1820, Sydney Smith asked, "In the four quarters of the globe, who ever reads an American book?" The patronizing attitude of foreign writers to America drew from Lowell in 1869 his well-known essay "On a Certain Condescension in Foreigners." Irving, through his urbanity and understanding, did much to break down the prejudices between the two countries after the War of 1812. The prefatory passage is from Milton's *Areopagitica.*

"Methinks I see in my mind a noble and puissant nation, rousing herself like a strong man after sleep, and shaking her invincible locks. methinks I see her as an eagle, mewing her mighty youth, and kindling her endazzled eyes at the full mid-day beam."

MILTON ON THE LIBERTY OF THE PRESS

It is with feelings of deep regret that I observe the literary animosity daily growing up between England and America. Great curiosity has been awakened of late with respect to the United States, and the London press has teemed with volumes of travels through the Republic; but they seem intended to diffuse error rather than knowledge; and so successful have they been, that, notwithstanding the constant intercourse between the nations, there is no people concerning whom the great mass of the British public have less pure information or entertain more numerous prejudices.

English travelers are the best and the worst in the world. Where no motives of pride or interest intervene, none can equal them for profound and philosophical views of society, or faithful and graphical descriptions of external objects; but when either the interest or reputation of their own country comes in collision with that of another, they go to the opposite extreme, and forget their usual probity and candor, in the indulgence of splenetic remark, and an illiberal spirit of ridicule.

Hence, their travels are more honest and accurate, the more remote the country described. I would place implicit confidence in an Englishman's description of the regions beyond the cataracts of the Nile; of unknown islands in the Yellow Sea; of the interior of India; or of any other tract which other travellers might be apt to picture out with the illusions of their fancies; but I would cautiously receive his account of his immediate neighbors, and of those nations with which he is in habits of most frequent intercourse. However I might be disposed to trust his probity, I dare not trust his prejudices.

It has also been the peculiar lot of our country to be visited by the worst kind of English travelers. While men of philosophical spirit and cultivated minds have been sent from England to ransack the poles, to penetrate the deserts, and to study the manners and customs of barbarous nations, with which she can have no permanent intercourse of profit or pleasure; it has been left to the broken-down tradesman, the scheming adventurer, the wandering mechanic, the Manchester and Birmingham agent, to be her oracles respecting America.

30. **Manchester . . . Birmingham agent**—commercial traveler representing the rising manufacturing interests.

From such sources she is content to receive her information respecting a country in a singular state of moral and physical development; a country in which one of the greatest political experiments in the history of the world is now performing; and which presents the most profound and momentous studies to the statesman and the philosopher.

That such men should give prejudicial accounts of America is not a matter of surprise. The themes it offers for contemplation are too vast and elevated for their capacities. The national character is yet in a state of fermentation; it may have its frothiness and sediment, but its ingredients are sound and wholesome; it has already given proofs of powerful and generous qualities; and the whole promises to settle down into something substantially excellent. But the causes which are operating to strengthen and ennoble it, and its daily indication of admirable properties, are all lost upon these purblind observers; who are only affected by the little asperities incident to its present situation. They are capable of judging only of the surface of things; of those matters which come in contact with their private interests and personal gratifications. They miss some of the snug conveniences and petty comforts which belong to an old, highly-finished, and over-populous state of society; where the ranks of useful labor are crowded, and many earn a painful and servile subsistence by studying the very caprices of appetite and self-indulgence. These minor comforts, however, are all-important in the estimation of narrow minds; which either do not perceive, or will not acknowledge, that they are more than counterbalanced among us by great and generally diffused blessings.

They may, perhaps, have been disappointed in some unreasonable expectation of sudden gain. They may have pictured America to themselves an El Dorado, where gold and silver abounded, and the natives were lacking in sagacity; and where they were to become strangely and suddenly rich, in some unforeseen, but easy manner. The same weakness of mind that indulges absurd expectations produces petulance in disappointment. Such persons become embittered against the country on finding that there, as everywhere else, a man must sow before he can reap; must win wealth by industry and talent; and must contend with the common difficulties of nature, and the shrewdness of an intelligent and enterprising people.

Perhaps, through mistaken, or ill-directed hospitality, or from the prompt disposition to cheer and countenance the stranger, prevalent among my countrymen, they may have been treated with unwonted respect in America; and having been accustomed all their lives to consider themselves below the surface of good society, and brought up in a servile feeling of inferiority, they become arrogant on the common boon of civility: they attribute to the lowliness of others their own elevation; and underrate a society where there are no artificial distinctions, and where, by any chance, such individuals as themselves can rise to consequence.

One would suppose, however, that information coming from such sources, on a subject where the truth is so desirable, would be received with caution by the censors of the press; that the motives of these men, their veracity, their opportunities of inquiry and observation, and their capacities for judging correctly, would be rigorously scrutinized before their evidence was admitted, in

such sweeping extent, against a kindred nation. The very reverse, however, is the case, and it furnishes a striking instance of human inconsistency. Nothing can surpass the vigilance with which English critics will examine the credibility of the traveler who publishes an account of some distant, and comparatively unimportant, country. How warily will they compare the measurements of a pyramid, or the descriptions of a ruin; and how sternly will they censure any inaccuracy in these contributions of merely curious knowledge: while they will receive, with eagerness and unhesitating faith, the gross misrepresentations of coarse and obscure writers, concerning a country with which their own is placed in the most important and delicate relations. Nay, they will even make these apocryphal volumes text-books, on which to enlarge with a zeal and an ability worthy of a more generous cause.

I shall not, however, dwell on this irksome and hackneyed topic; nor should I have adverted to it, but for the undue interest apparently taken in it by my countrymen, and certain injurious effects which I apprehended it might produce upon the national feeling. We attach too much consequence to these attacks. They cannot do us any essential injury. The tissue of misrepresentations attempted to be woven round us are like cobwebs woven round the limbs of an infant giant. Our country continually outgrows them. One falsehood after another falls off of itself. We have but to live on, and every day we live a whole volume of refutation. All the writers of England united, if we could for a moment suppose their great minds stooping to so unworthy a combination, could not conceal our rapidly-growing importance, and matchless prosperity. They could not conceal that these are owing, not merely to physical and local, but also to moral causes—to the political liberty, the general diffusion of knowledge, the prevalence of sound moral and religious principles, which give force and sustained energy to the character of a people; and which, in fact, have been the acknowledged and wonderful supporters of their own national power and glory.

But why are we so exquisitely alive to the aspersions of England? Why do we suffer ourselves to be so affected by the contumely she has endeavored to cast upon us? It is not in the opinion of England alone that honor lives, and reputation has its being. The world at large is the arbiter of a nation's fame; with its thousand eyes it witnesses a nation's deeds, and from their collective testimony is national glory or national disgrace established.

For ourselves, therefore, it is comparatively of but little importance whether England does us justice or not; it is, perhaps, of far more importance to herself. She is instilling anger and resentment into the bosom of a youthful nation, to grow with its growth and strengthen with its strength. If in America, as some of her writers are laboring to convince her, she is hereafter to find an invidious rival, and a gigantic foe, she may thank those very writers for having provoked rivalship and irritated hostility. Every one knows the all-pervading influence of literature at the present day, and how much the opinions and passions of mankind are under its control. The mere contests of the sword are temporary; their wounds are but in the flesh, and it is the pride of the generous to forgive and forget them; but the slanders of the pen pierce to the heart; they rankle longest in the noblest spirits; they dwell ever present in the mind,

and render it morbidly sensitive to the most trifling collision. It is but seldom that any one overt act produces hostilities between two nations; there exists, most commonly, a previous jealousy and ill-will; a predisposition to take offence. Trace these to their cause, and how often will they be found to originate in the mischievous effusions of mercenary writers; who, secure in their closets, and for ignominious bread, concoct and circulate the venom that is to inflame the generous and the brave.

I am not laying too much stress upon this point; for it applies most emphatically to our particular case. Over no nation does the press hold a more absolute control than over the people of America; for the universal education of the poorest classes makes every individual a reader. There is nothing published in England on the subject of our country that does not circulate through every part of it. There is not a calumny dropped from English pen, nor an unworthy sarcasm uttered by an English statesman, that does not go to blight good-will, and add to the mass of latent resentment. Possessing, then, as England does, the fountain-head whence the literature of the language flows, how completely is it in her power, and how truly is it her duty, to make it the medium of amiable and magnanimous feeling—a stream where the two nations might meet together, and drink in peace and kindness. Should she, however, persist in turning it to waters of bitterness, the time may come when she may repent her folly. The present friendship of America may be of but little moment to her; but the future destinies of that country do not admit of a doubt; over those of England there lower some shadows of uncertainty. Should, then, a day of gloom arrive; should those reverses overtake her, from which the proudest empires have not been exempt; she may look back with regret at her infatuation, in repulsing from her side a nation she might have grappled to her bosom, and thus destroying her only chance for real friendship beyond the boundaries of her own dominions.

There is a general impression in England, that the people of the United States are inimical to the parent country. It is one of the errors which have been diligently propagated by designing writers. There is, doubtless, considerable political hostility, and a general soreness at the illiberality of the English press; but, generally speaking, the prepossessions of the people are strongly in favor of England. Indeed, at one time they amounted, in many parts of the Union, to an absurd degree of bigotry. The bare name of Englishman was a passport to the confidence and hospitality of every family, and too often gave a transient currency to the worthless and the ungrateful. Throughout the country there was something of enthusiasm connected with the idea of England. We looked to it with a hallowed feeling of tenderness and veneration, as the land of our forefathers—the august repository of the monuments and antiquities of our race—the birthplace and mausoleum of the sages and heroes of our paternal history. After our own country, there was none in whose glory we more delighted—none whose good opinion we were more anxious to possess—none toward which our hearts yearned with such throbbings of warm consanguinity. Even during the late war, whenever there was the least

45. **late war**—War of 1812.

opportunity for kind feelings to spring forth, it was the delight of the generous spirits of our country to show that, in the midst of hostilities, they still kept alive the sparks of future friendship.

Is all this to be at an end? Is this golden band of kindred sympathies, so rare between nations, to be broken forever?—Perhaps it is for the best—it may dispel an illusion which might have kept us in mental vassalage; which might have interfered occasionally with our true interests, and prevented the growth of proper national pride. But it is hard to give up the kindred tie! and there are feelings dearer than interest—closer to the heart than pride—that will still make us cast back a look of regret, as we wander farther and farther from the paternal roof, and lament the waywardness of the parent that would repel the affections of the child.

Short-sighted and injudicious, however, as the conduct of England may be in this system of aspersion, recrimination on our part would be equally ill-judged. I speak not of a prompt and spirited vindication of our country, nor the keenest castigation of her slanderers—but I allude to a disposition to retaliate in kind; to retort sarcasm, and inspire prejudice; which seems to be spreading widely among our writers. Let us guard particularly against such a temper, for it would double the evil instead of redressing the wrong. Nothing is so easy and inviting as the retort of abuse and sarcasm; but it is a paltry and an unprofitable contest. It is the alternative of a morbid mind, fretted into petulance, rather than warmed into indignation. If England is willing to permit the mean jealousies of trade, or the rancorous animosities of politics, to deprave the integrity of her press, and poison the fountain of public opinion, let us beware of her example. She may deem it her interest to diffuse error, and engender antipathy, for the purpose of checking emigration; we have no purpose of the kind to serve. Neither have we any spirit of national jealousy to gratify, for as yet, in all our rivalships with England, we are the rising and the gaining party. There can be no end to answer, therefore, but the gratification of resentment—a mere spirit of retaliation; and even that is impotent. Our retorts are never republished in England; they fall short, therefore, of their aim; but they foster a querulous and peevish temper among our writers; they sour the sweet flow of our early literature, and sow thorns and brambles among its blossoms. What is still worse, they circulate through our own country, and, as far as they have effect, excite virulent national prejudices. This last is the evil most especially to be deprecated. Governed, as we are, entirely by public opinion, the utmost care should be taken to preserve the purity of the public mind. Knowledge is power, and truth is knowledge; whoever, therefore, knowingly propagates a prejudice, wilfully saps the foundation of his country's strength.

The members of a republic, above all other men, should be candid and dispassionate. They are, individually, portions of the sovereign mind and sovereign will, and should be enabled to come to all questions of national concern with calm and unbiased judgments. From the peculiar nature of our relations with England, we must have more frequent questions of a difficult and delicate character with her than with any other nation; questions that affect the most acute and excitable feelings; and as, in the adjustment of these, our national measures

must ultimately be determined by popular sentiment, we cannot be too anxiously attentive to purify it from all latent passion or prepossession.

Opening, too, as we do, an asylum for strangers from every portion of the earth, we should receive all with impartiality. It should be our pride to exhibit an example of one nation, at least, destitute of national antipathies, and exercising not merely the overt acts of hospitality, but those more rare and noble courtesies which spring from liberality of opinion.

What have we to do with national prejudices? They are the inveterate diseases of old countries, contracted in rude and ignorant ages, when nations knew but little of each other, and looked beyond their own boundaries with distrust and hostility. We, on the contrary, have sprung into national existence in an enlightened and philosophic age, when the different parts of the habitable world, and the various branches of the human family, have been indefatigably studied and made known to each other; and we forego the advantages of our birth, if we do not shake off the national prejudices, as we would the local superstitions of the old world.

But above all let us not be influenced by any angry feelings, so far as to shut our eyes to the perception of what is really excellent and amiable in the English character. We are a young people, necessarily an imitative one, and must take our examples and models, in a great degree, from the existing nations of Europe. There is no country more worthy of our study than England. The spirit of her constitution is most analogous to ours. The manners of her people —their intellectual activity—their freedom of opinion—their habits of thinking on those subjects which concern the dearest interests and most sacred charities of private life, are all congenial to the American character; and, in fact, are all intrinsically excellent; for it is in the moral feeling of the people that the deep foundations of British prosperity are laid; and however the superstructure may be timeworn, or overrun by abuses, there must be something solid in the basis, admirable in the materials, and stable in the structure of an edifice that so long has towered unshaken amidst the tempests of the world.

Let it be the pride of our writers, therefore, discarding all feelings of irritation, and disdaining to retaliate the illiberality of British authors, to speak of the English nation without prejudice, and with determined candor. While they rebuke the indiscriminating bigotry with which some of our countrymen admire and imitate everything English, merely because it is English, let them frankly point out what is really worthy of approbation. We may thus place England before us as a perpetual volume of reference, wherein are recorded sound deductions from ages of experience; and while we avoid the errors and absurdities which may have crept into the page, we may draw thence golden maxims of practical wisdom, wherewith to strengthen and to embellish our national character.

*

RURAL LIFE IN ENGLAND

From *The Sketch-Book* (1819-20). Irving's long stay in England qualified him to speak with appreciation of English country life. The prefatory passage is from Cowper's *The Task*, Book III, which Irving slightly misquotes.

Oh! friendly to the best pursuits of man,
Friendly to thought, to virtue, and to peace,
Domestic life in rural pleasures past!
COWPER

THE STRANGER who would form a correct opinion of the English character must not confine his observations to the metropolis. He must go forth into the country; he must sojourn in villages and hamlets; he must visit castles, villas, farm-houses, cottages; he must wander through parks and gardens; along hedges and green lanes; he must loiter about country churches; attend wakes and fairs, and other rural festivals; and cope with the people in all their conditions, and all their habits and humors.

In some countries the large cities absorb the wealth and fashion of the nation; they are the only fixed abodes of elegant and intelligent society, and the country is inhabited almost entirely by boorish peasantry. In England, on the contrary, the metropolis is a mere gathering-place, or general rendezvous, of the polite classes, where they devote a small portion of the year to a hurry of gayety and dissipation, and, having indulged this kind of carnival, return again to the apparently more congenial habits of rural life. The various orders of society are therefore diffused over the whole surface of the kingdom, and the most retired neighborhoods afford specimens of the different ranks.

The English, in fact, are strongly gifted with the rural feeling. They possess a quick sensibility to the beauties of nature, and a keen relish for the pleasures and employments of the country. This passion seems inherent in them. Even the inhabitants of cities, born and brought up among brick walls and bustling streets, enter with facility into rural habits, and evince a tact for rural occupation. The merchant has his snug retreat in the vicinity of the metropolis, where he often displays as much pride and zeal in the cultivation of his flower-garden, and the maturing of his fruits, as he does in the conduct of his business, and the success of a commercial enterprise. Even those less fortunate individuals, who are doomed to pass their lives in the midst of din and traffic, contrive to have something that shall remind them of the green aspect of nature. In the most dark and dingy quarters of the city, the drawing-room window resembles frequently a bank of flowers; every spot capable of vegetation has its grass-plot and flower-bed; and every square its mimic park, laid out with picturesque taste, and gleaming with refreshing verdure.

Those who see the Englishman only in town are apt to form an unfavorable opinion of his social character. He is either absorbed in business, or distracted by the thousand engagements that dissipate time, thought, and feeling, in this huge metropolis. He has, therefore, too commonly a look of hurry and abstraction. Wherever he happens to be, he is on the point of going somewhere else;

at the moment he is talking on one subject, his mind is wandering to another; and while paying a friendly visit, he is calculating how he shall economize time so as to pay the other visits allotted in the morning. An immense metropolis, like London, is calculated to make men selfish and uninteresting. In their casual and transient meetings, they can but deal briefly in commonplaces. They present but the cold superficies of character—its rich and genial qualities have no time to be warmed into a flow.

It is in the country that the Englishman gives scope to his natural feelings. He breaks loose gladly from the cold formalities and negatives civilities of town; throws off his habits of shy reserve, and becomes joyous and free-hearted. He manages to collect round him all the conveniences and elegancies of polite life, and to banish its restraints. His country-seat abounds with every requisite, either for studious retirement, tasteful gratification, or rural exercise. Books, paintings, music, horses, dogs, and sporting implements of all kinds, are at hand. He puts no constraint either upon his guests or himself, but in the true spirit of hospitality provides the means of enjoyment, and leaves every one to partake according to his inclination.

The taste of the English in the cultivation of land, and in what is called landscape gardening, is unrivalled. They have studied nature intently, and discover an exquisite sense of her beautiful forms and harmonious combinations. Those charms, which in other countries she lavishes in wild solitudes, are here assembled round the haunts of domestic life. They seem to have caught her coy and furtive graces, and spread them, like witchery, about their rural abodes.

Nothing can be more imposing than the magnificence of English park scenery. Vast lawns that extend like sheets of vivid green, with here and there clumps of gigantic trees, heaping up rich piles of foliage; the solemn pomp of groves and woodland glades, with the deer trooping in silent herds across them; the hare, bounding away to the covert; or the pheasant, suddenly bursting upon the wing; the brook, taught to wind in natural meanderings or expand into a glassy lake; the sequestered pool, reflecting the quivering trees, with the yellow leaf sleeping on its bosom, and the trout roaming fearlessly about its limpid waters; while some rustic temple or sylvan statue, grown green and dank with age, gives an air of classic sanctity to the seclusion.

These are but a few of the features of park scenery; but what most delights me, is the creative talent with which the English decorate the unostentatious abodes of middle life. The rudest habitation, the most unpromising and scanty portion of land, in the hands of an Englishman of taste, becomes a little paradise. With a nicely discriminating eye, he seizes at once upon its capabilities, and pictures in his mind the future landscape. The sterile spot grows into loveliness under his hand; and yet the operations of art which produce the effect are scarcely to be perceived. The cherishing and training of some trees; the cautious pruning of others; the nice distribution of flowers and plants of tender and graceful foliage; the introduction of a green slope of velvet turf; the partial opening to a peep of blue distance, or silver gleam of water: all these are managed with a delicate tact, a pervading yet quiet assiduity, like the magic touchings with which a painter finishes up a favorite picture.

The residence of people of fortune and refinement in the country has diffused a degree of taste and elegance in rural economy, that descends to the lowest class. The very laborer, with his thatched cottage and narrow slip of ground, attends to their embellishment. The trim hedge, the grass-plot before the door, the little flower-bed bordered with snug box, the woodbine trained up against the wall, and hanging its blossoms about the lattice, the pot of flowers in the window, the holly, providently planted about the house, to cheat winter of it dreariness, and to throw in a semblance of green summer to cheer the fireside: all these bespeak the influence of taste, flowing down from high sources, and pervading the lowest levels of the public mind. If ever Love, as poets sing, delights to visit a cottage, it must be the cottage of an English peasant.

The fondness for rural life among the higher classes of the English has had a great and salutary effect upon the national character. I do not know a finer race of men than the English gentlemen. Instead of the softness and effeminacy which characterize the men of rank in most countries, they exhibit a union of elegance and strength, a robustness of frame and freshness of complexion, which I am inclined to attribute to their living so much in the open air, and pursuing so eagerly the invigorating recreations of the country. These hardy exercises produce also a healthful tone of mind and spirits, and a manliness and simplicity of manners, which even the follies and dissipations of the town cannot easily pervert, and can never entirely destroy. In the country, too, the different orders of society seem to approach more freely, to be more disposed to blend and operate favorably upon each other. The distinctions between them do not appear to be so marked and impassable as in the cities. The manner in which property has been distributed into small estates and farms has established a regular gradation from the nobleman, through the classes of gentry, small landed proprietors, and substantial farmers, down to the laboring peasantry; and while it has thus banded the extremes of society together, has infused into each intermediate rank a spirit of independence. This, it must be confessed, is not so universally the case at present as it was formerly; the larger estates having, in late years of distress, absorbed the smaller, and, in some parts of the country, almost annihilated the sturdy race of small farmers. These, however, I believe, are but casual breaks in the general system I have mentioned.

In rural occupation there is nothing mean and debasing. It leads a man forth among scenes of natural grandeur and beauty; it leaves him to the workings of his own mind, operated upon by the purest and most elevating of external influences. Such a man may be simple and rough, but he cannot be vulgar. The man of refinement, therefore, finds nothing revolting in an intercourse with the lower orders in rural life, as he does when he casually mingles with the lower orders of cities. He lays aside his distance and reserve, and is glad to waive the distinctions of rank, and to enter into the honest, heartfelt enjoyments of common life. Indeed the very amusements of the country bring men more and more together; and the sound of hound and horn blend all feelings into harmony. I believe this is one great reason why the nobility and gentry are more popular among the inferior orders in England than they are in any other country; and why the latter have endured so many excessive pressures

and extremities, without repining more generally at the unequal distribution of fortune and privilege.

To this mingling of cultivated and rustic society may also be attributed the rural feeling that runs through British literature; the frequent use of illustrations from rural life; those incomparable descriptions of nature that abound in the British poets, that have continued down from the "Flower and the Leaf" of Chaucer, and have brought into our closets all the freshness and fragrance of the dewy landscape. The pastoral writers of other countries appear as if they had paid nature an occasional visit, and become acquainted with her general charms; but the British poets have lived and revelled with her—they have wooed her in her most secret haunts—they have watched her minutest caprices. A spray could not tremble in the breeze—a leaf could not rustle to the ground—a diamond-drop could not patter in the stream—a fragrance could not exhale from the humble violet, nor a daisy unfold its crimson tints to the morning, but it has been noticed by these impassioned and delicate observers, and wrought up into some beautiful morality.

The effect of this devotion of elegant minds to rural occupations has been wonderful on the face of the country. A great part of the island is rather level, and would be monotonous, were it not for the charms of culture: but it is studded and gemmed, as it were, with castles and palaces, and embroidered with parks and gardens. It does not abound in grand and sublime prospects, but rather in little home scenes of rural repose and sheltered quiet. Every antique farm-house and moss-grown cottage is a picture: and as the roads are continually winding, and the view is shut in by groves and hedges, the eye is delighted by a continual succession of small landscapes of captivating loveliness.

The great charm, however, of English scenery is the moral feeling that seems to pervade it. It is associated in the mind with ideas of order, of quiet, of sober well-established principles, of hoary usage and reverend custom. Every thing seems to be the growth of ages of regular and peaceful existence. The old church of remote architecture, with its low massive portal; its gothic tower; its windows rich with tracery and painted glass, in scrupulous preservation; its stately monuments of warriors and worthies of the olden time, ancestors of the present lords of the soil; its tombstones, recording successive generations of sturdy yeomanry, whose progeny still plough the same fields, and kneel at the same altar—the parsonage, a quaint irregular pile, partly antiquated, but repaired and altered in the tastes of various ages and occupants—the stile and footpath leading from the churchyard, across pleasant fields, and along shady hedge-rows, according to an immemorial right of way—the neighboring village, with its venerable cottages, its public green sheltered by trees, under which the forefathers of the present race have sported—the antique family mansion, standing apart in some little rural domain, but looking down with a protecting air on the surrounding scene: all these common features of English landscape evince a calm and settled security, an hereditary transmission of homebred virtues and local attachments, that speak deeply and touchingly for the moral character of the nation.

7. **Chaucer**—Skeat has shown that this poem was written at a time later than Chaucer.

It is a pleasing sight of a Sunday morning, when the bell is sending its sober melody across the quiet fields, to behold the peasantry in their best finery, with ruddy faces and modest cheerfulness, thronging tranquilly along the green lanes to church; but it is still more pleasing to see them in the evenings, gathering about their cottage doors, and appearing to exult in the humble comforts and embellishments which their own hands have spread around them.

It is this sweet home-feeling, this settled repose of affection in the domestic scene, that is, after all, the parent of the steadiest virtues and purest enjoyments; and I cannot close these desultory remarks better, than by quoting the words of a modern English poet, who has depicted it with remarkable felicity:

> Through each gradation, from the castled hall,
> The city dome, the villa crown'd with shade,
> But chief from modest mansions numberless,
> In town or hamlet, shelt'ring middle life,
> Down to the cottaged vale, and strawroof'd shed;
> This western isle hath long been famed for scenes
> Where bliss domestic finds a dwelling-place;
> Domestic bliss, that, like a harmless dove,
> (Honor and sweet endearment keeping guard,)
> Can center in a little quiet nest
> All that desire would fly for through the earth;
> That can, the world eluding, be itself
> A world enjoy'd; that wants no witnesses
> But its own sharers, and approving heaven;
> That, like a flower deep hid in rocky cleft,
> Smiles, though 'tis looking only at the sky.

THE LEGEND OF SLEEPY HOLLOW

FOUND AMONG THE PAPERS OF THE LATE DIEDRICH KNICKERBOCKER

"The Legend of Sleepy Hollow" was included in *The Sketch-Book* (1819-1820).

> *A pleasing land of drowsy head it was,*
> *Of dreams that wave before the half-shut eye,*
> *And of gay castles in the clouds that pass,*
> *Forever flushing round a summer sky.*
> Castle of Indolence *

IN THE bosom of one of those spacious coves which indent the eastern shore of the Hudson, at that broad expansion of the river denominated by the ancient Dutch navigators the Tappan Zee, and where they always prudently shortened sail and implored the protection of St. Nicholas when they crossed, there lies a small market town or rural port, which by some is

12. **Through each**—From Rann Kennedy's poem on the death of Princess Charlotte of Wales, London, 1817.

27. **sky**—Irving appended a note to the first edition as follows: "From a Poem on the death of the Princess Charlotte, by the Reverend Rann Kennedy, A.M." 31. **St. Nicholas**—patron saint of children, and of sailors. Traditionally believed to have been bishop of Myra in Asia Minor and to have died 326 A.D.

* Castle of Indolence, by James Thomson (1700-1748), an English poet, Bk I, lines 46-49.

called Greensburgh, but which is more generally and properly known by the name of Tarry Town. This name was given, we are told, in former days, by the good housewives of the adjacent country, from the inveterate propensity of their husbands to linger about the village tavern on market days. Be that as it may, I do not vouch for the fact, but merely advert to it, for the sake of being precise and authentic. Not far from this village, perhaps about two miles, there is a little valley or rather lap of land among high hills, which is one of the quietest places in the whole world. A small brook glides through it, with just murmur enough to lull one to repose; and the occasional whistle of a quail or tapping of a woodpecker is almost the only sound that ever breaks in upon the uniform tranquillity.

I recollect that, when a stripling, my first exploit in squirrel-shooting was in a grove of tall walnut-trees that shades one side of the valley. I had wandered into it at noontime, when all nature is peculiarly quiet, and was startled by the roar of my own gun, as it broke the Sabbath stillness around and was prolonged and reverberated by the angry echoes. If ever I should wish for a retreat whither I might steal from the world and its distractions, and dream quietly away the remnant of a troubled life, I know of none more promising than this little valley.

From the listless repose of the place, and the peculiar character of its inhabitants, who are descendants from the original Dutch settlers, this sequestered glen has long been known by the name of Sleepy Hollow, and its rustic lads are called the Sleepy Hollow Boys throughout all the neighboring country. A drowsy, dreamy influence seems to hang over the land, and to pervade the very atmosphere. Some say that the place was bewitched by a High German doctor, during the early days of the settlement; others, that an old Indian chief, the prophet or wizard of his tribe, held his powwows there before the country was discovered by Master Hendrick Hudson. Certain it is, the place still continues under the sway of some witching power, that holds a spell over the minds of the good people, causing them to walk in a continual reverie. They are given to all kinds of marvellous beliefs; are subject to trances and visions, and frequently see strange sights, and hear music and voices in the air. The whole neighborhood abounds with local tales, haunted spots, and twilight superstitions, stars shoot and meteors glare oftener across the valley than in any other part of the country, and the nightmare, with her whole ninefold, seems to make it the favorite scene of her gambols.

The dominant spirit, however, that haunts this enchanted region, and seems to be commander-in-chief of all the powers of the air, is the apparition of a figure on horseback, without a head. It is said by some to be the ghost of a Hessian trooper, whose head had been carried away by a cannon-ball, in some nameless battle during the Revolutionary War, and who is ever and anon seen by the country folk hurrying along in the gloom of night, as if on the wings

16. retreat—Irving later acquired this property, named it Sunnyside, and spent his declining years here. **25. High German**—a south German. **28. Hendrick Hudson**—properly Henry Hudson (died 1611), who discovered the river in 1609 while seeking a northwest passage to India. **35. nightmare**—from *King Lear*, Act III, scene iv, line 126. **38. powers of the air**—*Cf.* Eph. 2: 2. **40. Hessian trooper**—one of the mercenary soldiers from Hesse, Germany, hired by the British, of whom Franklin wrote (see pp. 122 ff.).

of the wind. His haunts are not confined to the valley, but extend at times to the adjacent roads, and especially to the vicinity of a church at no great distance. Indeed, certain of the most authentic historians of those parts, who have been careful in collecting and collating the floating facts concerning this spectre, allege that the body of the trooper having been buried in the churchyard, the ghost rides forth to the scene of battle in nightly quest of his head, and that the rushing speed with which he sometimes passes along the Hollow, like a midnight blast, is owing to his being belated, and in a hurry to get back to the churchyard before daybreak.

Such is the general purport of this legendary superstition, which has furnished materials for many a wild story in that region of shadows; and the spectre is known at all the country firesides, by the name of the Headless Horseman of Sleepy Hollow.

It is remarkable that the visionary propensity I have mentioned is not confined to the native inhabitants of the valley, but is unconsciously imbibed by every one who resides there for a time. However wide awake they may have been before they entered that sleepy region, they are sure, in a little time, to inhale the witching influence of the air, and begin to grow imaginative, to dream dreams, and see apparitions.

I mention this peaceful spot with all possible laud; for it is in such little retired Dutch valleys, found here and there embosomed in the great State of New York, that population, manners, and customs remain fixed, while the great torrent of migration and improvement, which is making such incessant changes in other parts of this restless country, sweeps by them unobserved. They are like those little nooks of still water, which border a rapid stream, where we may see the straw and bubble riding quietly at anchor, or slowly revolving in their mimic harbor, undisturbed by the rush of the passing current. Though many years have elapsed since I trod the drowsy shades of Sleepy Hollow, yet I question whether I should not still find the same trees and the same families vegetating in its sheltered bosom.

In this by-place of nature there abode, in a remote period of American history, that is to say, some thirty years since, a worthy wight of the name of Ichabod Crane, who sojourned, or, as he expressed it, "tarried," in Sleepy Hollow, for the purpose of instructing the children of the vicinity. He was a native of Connecticut, a State which supplies the Union with pioneers for the mind as well as for the forest, and sends forth yearly its legions of frontier woodsmen and country schoolmasters. The cognomen of Crane was not inapplicable to his person. He was tall, but exceedingly lank, with narrow shoulders, long arms and legs, hands that dangled a mile out of his sleeves, feet that might have served for shovels, and his whole frame most loosely hung together. His head was small, and flat at top, with huge ears, large green glassy eyes, and a long snipe nose, so that it looked like a weathercock perched upon his spindle neck to tell which way the wind blew. To see him striding along the profile of a hill on a windy day, with his clothes bagging and fluttering about him, one might have mistaken him for the genius of famine descending upon the earth, or some scarecrow eloped from a cornfield.

His schoolhouse was a low building of one large room, rudely constructed

of logs; the windows partly glazed, and partly patched with leaves of old copy-books. It was most ingeniously secured at vacant hours, by a withe twisted in the handle of the door, and stakes set against the window shutters; so that though a thief might get in with perfect ease, he would find some embarrassment in getting out—an idea most probably borrowed by the architect, Yost Van Houten, from the mystery of an eelpot. The schoolhouse stood in a rather lonely but pleasant situation, just at the foot of a woody hill, with a brook running close by, and a formidable birch-tree growing at one end of it. From hence the low murmur of his pupils' voices, conning over their lessons, might be heard in a drowsy summer's day, like the hum of a beehive; interrupted now and then by the authoritative voice of the master, in the tone of menace or command; or, peradventure, by the appalling sound of the birch, as he urged some tardy loiterer along the flowery path of knowledge. Truth to say, he was a conscientious man, and ever bore in mind the golden maxim, "Spare the rod and spoil the child." Ichabod Crane's scholars certainly were not spoiled.

I would not have it imagined, however, that he was one of those cruel potentates of the school who joy in the smart of their subjects; on the contrary, he administered justice with discrimination rather than severity; taking the burden off the backs of the weak, and laying it on those of the strong. Your mere puny stripling, that winced at the least flourish of the rod, was passed by with indulgence; but the claims of justice were satisfied by inflicting a double portion on some little tough, wrong-headed, broad-skirted Dutch urchin, who sulked and swelled and grew dogged and sullen beneath the birch. All this he called "doing his duty by their parents;" and he never inflicted a chastisement without following it by the assurance, so consolatory to the smarting urchin, that "he would remember it and thank him for it the longest day he had to live."

When school hours were over, he was even the companion and playmate of the larger boys; and on holiday afternoons would convoy some of the smaller ones home, who happened to have pretty sisters, or good housewives for mothers, noted for the comforts of the cupboard. Indeed, it behooved him to keep on good terms with his pupils. The revenue arising from his school was small, and would have been scarcely sufficient to furnish him with daily bread, for he was a huge feeder, and, though lank, had the dilating powers of an anaconda; but to help out his maintenance, he was, according to country custom in those parts, boarded and lodged at the houses of the farmers whose children he instructed. With these he lived successively a week at a time, thus going the rounds of the neighborhood, with all his worldly effects tied up in a cotton handkerchief.

That all this might not be too onerous on the purses of his rustic patrons, who are apt to consider the costs of schooling a grievous burden, and schoolmasters as mere drones, he had various ways of rendering himself both useful and agreeable. He assisted the farmers occasionally in the lighter labors of their farms, helped to make hay, mended the fences, took the horses to water, drove the cows from pasture, and cut wood for the winter fire. He laid aside, too, all

6. eelpot—a trap for catching eels; a funnel-shaped opening prevents their escape. **14. maxim** —from Butler's *Hudibras,* Pt. II, Canto I.

the dominant dignity and absolute sway with which he lorded it in his little empire, the school, and became wonderfully gentle and ingratiating. He found favor in the eyes of the mothers by petting the children, particularly the youngest; and like the lion bold, which whilom so magnanimously the lamb did hold, he would sit with a child on one knee, and rock a cradle with his foot for whole hours together.

In addition to his other vocations, he was the singing-master of the neighborhood, and picked up many bright shillings by instructing the young folks in psalmody. It was a matter of no little vanity to him on Sundays, to take his station in front of the church gallery, with a band of chosen singers; where, in his own mind, he completely carried away the palm from the parson. Certain it is, his voice resounded far above all the rest of the congregation; and there are peculiar quavers still to be heard in that church, and which may even be heard half a mile off, quite to the opposite side of the mill-pond, on a still Sunday morning, which are said to be legitimately descended from the nose of Ichabod Crane. Thus, by divers little makeshifts, in that ingenious way which is commonly denominated "by hook and by crook," the worthy pedagogue got on tolerably enough, and was thought, by all who understood nothing of the labor of headwork, to have a wonderfully easy life of it.

The schoolmaster is generally a man of some importance in the female circle of a rural neighborhood; being considered a kind of idle, gentlemanlike personage, of vastly superior taste and accomplishments to the rough country swains, and, indeed, inferior in learning only to the parson. His appearance, therefore, is apt to occasion some little stir at the tea-table of a farmhouse, and the addition of a supernumerary dish of cakes or sweetmeats, or, peradventure, the parade of a silver teapot. Our man of letters, therefore, was peculiarly happy in the smiles of all the country damsels. How he would figure among them in the churchyard, between services on Sundays! gathering grapes for them from the wild vines that overran the surrounding trees; reciting for their amusement all the epitaphs on the tombstones; or sauntering, with a whole bevy of them, along the banks of the adjacent mill-pond; while the more bashful country bumpkins hung sheepishly back, envying his superior elegance and address.

From his half-itinerant life, also, he was a kind of travelling gazette, carrying the whole budget of local gossip from house to house, so that his appearance was always greeted with satisfaction. He was, moreover, esteemed by the women as a man of great erudition, for he had read several books quite through, and was a perfect master of Cotton Mather's "History of New England Witchcraft," in which, by the way, he most firmly and potently believed.

He was, in fact, an odd mixture of small shrewdness and simple credulity. His appetite for the marvellous, and his powers of digesting it, were equally extraordinary; and both had been increased by his residence in this spell-bound

4. lion . . . lamb—from the *New England Primer:* "The lion bold the lamb doth hold."
38. Cotton Mather—(1663-1728) famous son of Increase Mather and, like his father, an intellectual leader of the New England Church. An ascetic and a mystic, he was in the forefront of the Salem trials, believing it his Christian duty to hunt down witches. Irving refers to his *Memorable Providences, Relating to Witchcrafts and Possessions . . .* 1689.

region. No tale was too gross or monstrous for his capacious swallow. It was often his delight, after his school was dismissed in the afternoon, to stretch himself on the rich bed of clover bordering the little brook that whimpered by his school-house, and there con over old Mather's direful tales, until the gathering dusk of evening made the printed page a mere mist before his eyes. Then, as he wended his way by swamp and stream and awful woodland, to the farmhouse where he happened to be quartered, every sound of nature, at that witching hour, fluttered his excited imagination,—the moan of the whip-poor-will from the hillside, the boding cry of the tree toad, that harbinger of storm, the dreary hooting of the screech owl, to the sudden rustling in the thicket of birds frightened from their roost. The fireflies, too, which sparkled most vividly in the darkest places, now and then startled him, as one of uncommon brightness would stream across his path; and if, by chance, a huge blockhead of a beetle came winging his blundering flight against him, the poor varlet was ready to give up the ghost, with the idea that he was struck with a witch's token. His only resource on such occasions, either to drown thought or drive away evil spirits, was to sing psalm tunes; and the good people of Sleepy Hollow, as they sat by their doors of an evening, were often filled with awe at hearing his nasal melody, "in linked sweetness long drawn out," floating from the distant hill, or along the dusky road.

Another of his sources of fearful pleasure was to pass long winter evenings with the old Dutch wives, as they sat spinning by the fire, with a row of apples roasting and spluttering along the hearth, and listen to their marvellous tales of ghosts and goblins, and haunted fields, and haunted brooks, and haunted bridges, and haunted houses, and particularly of the headless horseman, or Galloping Hessian of the Hollow, as they sometimes called him. He would delight them equally by his anecdotes of witchcraft, and of the direful omens and portentous sights and sounds in the air, which prevailed in the earlier times of Connecticut; and would frighten them woefully with speculations upon comets and shooting stars; and with the alarming fact that the world did absolutely turn round, and that they were half the time topsy-turvy!

But if there was a pleasure in all this, while snugly cuddling in the chimney corner of a chamber that was all of a ruddy glow from the crackling wood fire, and where, of course, no spectre dared to show its face, it was dearly purchased by the terrors of his subsequent walk homewards. What fearful shapes and shadows beset his path, amidst the dim and ghastly glare of a snowy night! With what wistful look did he eye every trembling ray of light streaming across the waste fields from some distant window! How often was he appalled by some shrub covered with snow, which, like a sheeted spectre, beset his very path! How often did he shrink with curdling awe at the sound of his own steps on the frosty crust beneath his feet; and dread to look over his shoulder, lest he should behold some uncouth being tramping close behind him! and how often was he thrown into complete dismay by some rushing blast, howling among the trees, in the idea that it was the Galloping Hessian on one of his nightly scourings!

19. **sweetness**—from Milton's "L'Allegro," line 140.

All these, however, were mere terrors of the night, phantoms of the mind that walk in darkness; and though he had seen many spectres in his time, and been more than once beset by Satan in divers shapes, in his lonely perambulations, yet daylight put an end to all these evils; and he would have passed a pleasant life of it, in spite of the Devil and all his works, if his path had not been crossed by a being that causes more perplexity to mortal man than ghosts, goblins, and the whole race of witches put together, and that was—a woman.

Among the musical disciples who assembled, one evening in each week, to receive his instructions in psalmody, was Katrina Van Tassel, the daughter and only child of a substantial Dutch farmer. She was a blooming lass of fresh eighteen; plump as a partridge; ripe and melting and rosy-cheeked as one of her father's peaches, and universally famed, not merely for her beauty, but her vast expectations. She was withal a little of a coquette, as might be perceived even in her dress, which was a mixture of ancient and modern fashions, as most suited to set off her charms. She wore the ornaments of pure yellow gold, which her great-great-grandmother had brought over from Saardam; the tempting stomacher of the olden time, and withal a provokingly short petticoat, to display the prettiest foot and ankle in the country round.

Ichabod Crane had a soft and foolish heart towards the sex; and it is not to be wondered at, that so tempting a morsel soon found favor in his eyes, more especially after he had visited her in her paternal mansion. Old Baltus Van Tassel was a perfect picture of a thriving, contented, liberal-hearted farmer. He seldom, it is true, sent either his eyes or his thoughts beyond the boundaries of his own farm; but within those everything was snug, happy and well-conditioned. He was satisfied with his wealth, but not proud of it; and piqued himself upon the hearty abundance, rather than the style in which he lived. His stronghold was situated on the banks of the Hudson, in one of those green, sheltered, fertile nooks in which the Dutch farmers are so fond of nestling. A great elm tree spread its broad branches over it, at the foot of which bubbled up a spring of the softest and sweetest water, in a little well formed of a barrel; and then stole sparkling away through the grass, to a neighboring brook, that babbled along among alders and dwarf willows. Hard by the farmhouse was a vast barn, that might have served for a church: every window and crevice of which seemed bursting forth with the treasures of the farm; the flail was busily resounding within it from morning to night; swallows and martins skimmed twittering about the eaves; and rows of pigeons, some with one eye turned up, as if watching the weather, some with their heads under their wings or buried in their bosoms, and others swelling, and cooing, and bowing about their dames, were enjoying the sunshine on the roof. Sleek unwieldy porkers were grunting in the repose and abundance of their pens, from whence sallied forth, now and then, troops of sucking pigs, as if to snuff the air. A stately squadron of snowy geese were riding in an adjoining pond, convoying whole fleets of ducks; regiments of turkeys were gobbling through the farmyard, and Guinea fowls fretting about it, like ill-tempered housewives, with their peevish, discontented cry. Before the barn door strutted the gallant cock,

16. **Saardam**—a town near Amsterdam in Holland.

that pattern of a husband, a warrior and a fine gentleman, clapping his burnished wings and crowing in the pride and gladness of his heart,—sometimes tearing up the earth with his feet, and then generously calling his ever-hungry family of wives and children to enjoy the rich morsel which he had discovered.

The pedagogue's mouth watered as he looked upon this sumptuous promise of luxurious winter fare. In his devouring mind's eye, he pictured to himself every roasting-pig running about with a pudding in his belly, and an apple in his mouth; the pigeons were snugly put to bed in a comfortable pie, and tucked in with a coverlet of crust; the geese were swimming in their own gravy; and the ducks pairing cosily in dishes, like snug married couples, with a decent competency of onion sauce. In the porkers he saw carved out the future sleek side of bacon, and juicy relishing ham; not a turkey but he beheld daintily trussed up, with its gizzard under its wing, and, peradventure, a necklace of savory sausages; and even bright chanticleer himself lay sprawling on his back, in a side dish, with uplifted claws, as if craving that quarter which his chivalrous spirit disdained to ask while living.

As the enraptured Ichabod fancied all this, and as he rolled his great green eyes over the fat meadow lands, the rich fields of wheat, of rye, of buckwheat, and Indian corn, and the orchards burdened with ruddy fruit, which surrounded the warm tenement of Van Tassel, his heart yearned after the damsel who was to inherit these domains, and his imagination expanded with the idea, how they might be readily turned into cash, and the money invested in immense tracts of wild land, and shingle palaces in the wilderness. Nay, his busy fancy already realized his hopes, and presented to him the blooming Katrina, with a whole family of children, mounted on the top of a wagon loaded with household trumpery, with pots and kettles dangling beneath; and he beheld himself, bestriding a pacing mare, with a colt at her heels, setting out for Kentucky, Tennessee,—or the Lord knows where!

When he entered the house, the conquest of his heart was complete. It was one of those spacious farmhouses, with high-ridged but lowly sloping roofs, built in the style handed down from the first Dutch settlers; the low projecting eaves forming a piazza along the front, capable of being closed up in bad weather. Under this were hung flails, harness, various utensils of husbandry, and nets for fishing in the neighboring river. Benches were built along the sides for summer use; and a great spinning-wheel at one end, and a churn at the other, showed the various uses to which this important porch might be devoted. From the piazza the wondering Ichabod entered the hall, which formed the centre of the mansion, and the place of usual residence. Here rows of resplendent pewter, ranged on a long dresser, dazzled his eyes. In one corner stood a huge bag of wool, ready to be spun; in another, a quantity of linsey-woolsey just from the loom; ears of Indian corn, and strings of dried apples and peaches, hung in gay festoons along the walls, mingled with the gaud of red peppers; and a door left ajar gave him a peep into the best parlor, where the claw-footed chairs and dark mahogany tables shone like mirrors;

43. **gaud**—showy ornament.

andirons, with their accompanying shovel and tongs, glistened from their covert of asparagus tops; mock-oranges and conch-shells decorated the mantelpiece; strings of various-colored birds' eggs were suspended above it; a great ostrich egg was hung from the centre of the room, and a corner cupboard, knowingly left open, displayed immense treasures of old silver and well-mended china.

From the moment Ichabod laid his eyes upon these regions of delight, the peace of his mind was at an end, and his only study was how to gain the affections of the peerless daughter of Van Tassel. In this enterprise, however, he had more real difficulties than generally fell to the lot of a knight-errant of yore, who seldom had anything but giants, enchanters, fiery dragons, and such like easily conquered adversaries, to contend with; and had to make his way merely through gates of iron and brass, and walls of adamant to the castle keep, where the lady of his heart was confined; all which he achieved as easily as a man would carve his way to the centre of a Christmas pie; and then the lady gave him her hand as a matter of course. Ichabod, on the contrary, had to win his way to the heart of a country coquette, beset with a labyrinth of whims and caprices, which were forever presenting new difficulties and impediments; and he had to encounter a host of fearful adversaries of real flesh and blood, the numerous rustic admirers, who beset every portal to her heart, keeping a watchful and angry eye upon each other, but ready to fly out in the common cause against any new competitor.

Among these, the most formidable was a burly, roaring, roystering blade, of the name of Abraham, or, according to the Dutch abbreviation, Brom Van Brunt, the hero of the country round, which rang with his feats of strength and hardihood. He was broad-shouldered and double-jointed, with short curly black hair, and a bluff but not unpleasant countenance, having a mingled air of fun and arrogance. From his Herculean frame and great powers of limb, he had received the nickname of Brom Bones, by which he was universally known. He was famed for great knowledge and skill in horsemanship, being as dexterous on horseback as a Tartar. He was foremost at all races and cock-fights; and, with the ascendancy which bodily strength always acquires in rustic life, was the umpire in all disputes, setting his hat on one side, and giving his decisions with an air and tone that admitted of no gainsay or appeal. He was always ready for either a fight or a frolic; but had more mischief than ill-will in his composition; and with all his overbearing roughness, there was a strong dash of waggish good humor at bottom. He had three or four boon companions, who regarded him as their model, and at the head of whom he scoured the country, attending every scene of feud or merriment for miles round. In cold weather he was distinguished by a fur cap, surmounted with a flaunting fox's tail; and when the folks at a country gathering descried this well-known crest at a distance, whisking about among a squad of hard riders, they always stood by for a squall. Sometimes his crew would be heard dashing along past the farmhouses at midnight, with whoop and halloo, like a troop of Don Cossacks; and the old dames, startled out of their sleep,

45. **Don Cossacks**—Russian horsemen from the River Don.

would listen for a moment till the hurry-scurry had clattered by, and then exclaim, "Ay, there goes Brom Bones and his gang!" The neighbors looked upon him with a mixture of awe, admiration, and good-will; and, when any madcap prank or rustic brawl occurred in the vicinity, always shook their heads, and warranted Brom Bones was at the bottom of it.

This rantipole hero had for some time singled out the blooming Katrina for the object of his uncouth gallantries, and though his amorous toyings were something like the gentle caresses and endearments of a bear, yet it was whispered that she did not altogether discourage his hopes. Certain it is, his advances were signals for rival candidates to retire, who felt no inclination to cross a lion in his amours; insomuch, that when his horse was seen tied to Van Tassel's paling, on a Sunday night, a sure sign that his master was courting, or, as it is termed, "sparking," within, all other suitors passed by in despair, and carried the war into other quarters.

Such was the formidable rival with whom Ichabod Crane had to contend, and, considering all things, a stouter man than he would have shrunk from the competition, and a wiser man would have despaired. He had, however, a happy mixture of pliability and perseverance in his nature; he was in form and spirit like a supple-jack—yielding, but tough; though he bent, he never broke; and though he bowed beneath the slightest pressure, yet, the moment it was away —jerk!—he was as erect, and carried his head as high as ever.

To have taken the field openly against his rival would have been madness; for he was not a man to be thwarted in his amours, any more than that stormy lover, Achilles. Ichabod, therefore, made his advances in a quiet and gently insinuating manner. Under cover of his character of singing-master, he made frequent visits at the farmhouse; not that he had anything to apprehend from the meddlesome interference of parents, which is so often a stumbling-block in the path of lovers. Balt Van Tassel was an easy, indulgent soul; he loved his daughter better even than his pipe, and, like a reasonable man and an excellent father, let her have her way in everything. His notable little wife, too, had enough to do to attend to her housekeeping and manage her poultry; for, as she sagely observed, ducks and geese are foolish things, and must be looked after, but girls can take care of themselves. Thus, while the busy dame bustled about the house, or plied her spinning-wheel at one end of the piazza, honest Balt would sit smoking his evening pipe at the other, watching the achievements of a little wooden warrior, who, armed with a sword in each hand, was most valiantly fighting the wind on the pinnacle of the barn. In the mean time, Ichabod would carry on his suit with the daughter by the side of the spring under the great elm, or sauntering along in the twilight, that hour so favorable to the lover's eloquence.

I profess not to know how women's hearts are wooed and won. To me they have always been matters of riddle and admiration. Some seem to have but one vulnerable point, or door of access; while others have a thousand avenues, and may be captured in a thousand different ways. It is a great triumph of skill to gain the former, but a still greater proof of generalship to maintain possession

19. **supple-jack**—a climbing shrub. 24. **Achilles**—See Iliad, Bk. I.

of the latter, for a man must battle for his fortress at every door and window. He who wins a thousand common hearts is therefore entitled to some renown; but he who keeps undisputed sway over the heart of a coquette is indeed a hero. Certain it is, this was not the case with the redoubtable Brom Bones; and from the moment Ichabod Crane made his advances, the interests of the former evidently declined: his horse was no longer seen tied to the palings on Sunday nights, and a deadly feud gradually arose between him and the preceptor of Sleepy Hollow.

Brom, who had a degree of rough chivalry in his nature, would fain have carried matters to open warfare and have settled their pretensions to the lady, according to the mode of those most concise and simple reasoners, the knights-errant of yore,—by single combat; but Ichabod was too conscious of the superior might of his adversary to enter the lists against him; he had overheard a boast of Bones, that he would "double the schoolmaster up, and lay him on a shelf of his own schoolhouse;" and he was too wary to give him an opportunity. There was something extremely provoking in this obstinately pacific system; it left Brom no alternative but to draw upon the funds of rustic waggery in his disposition, and to play off boorish practical jokes upon his rival. Ichabod became the object of whimsical persecution to Bones and his gang of rough riders. They harried his hitherto peaceful domains, smoked out his singing-school by stopping up the chimney, broke into the schoolhouse at night, in spite of its formidable fastenings of withe and window stakes, and turned everything topsy-turvy, so that the poor schoolmaster began to think all the witches in the country held their meetings there. But what was still more annoying, Brom took all opportunities of turning him into ridicule in presence of his mistress, and had a scoundrel dog whom he taught to whine in the most ridiculous manner, and introduced as a rival of Ichabod's, to instruct her in psalmody.

In this way matters went on for some time, without producing any material effect on the relative situations of the contending powers. On a fine autumnal afternoon, Ichabod, in pensive mood, sat enthroned on the lofty stool from whence he usually watched all the concerns of his little literary realm. In his hand he swayed a ferule, that sceptre of despotic power; the birch of justice reposed on three nails behind the throne, a constant terror to evil doers; while on the desk before him might be seen sundry contraband articles and prohibited weapons, detected upon the persons of idle urchins, such as half-munched apples, popguns, whirligigs, fly-cages, and whole legions of rampant little paper game-cocks. Apparently there had been some appalling act of justice recently inflicted, for his scholars were all busily intent upon their books, or slyly whispering behind them with one eye kept upon the master; and a kind of buzzing stillness reigned throughout the schoolroom. It was suddenly interrupted by the appearance of a negro in tow-cloth jacket and trousers, a round-crowned fragment of a hat, like the cap of Mercury, and mounted on the back of a ragged, wild, half-broken colt, which he managed with a rope by way of halter. He came clattering up to the school-door with an invitation to Ichabod to attend a merry-making or "quilting frolic," to be held that evening at Mynheer Van Tassel's; and having delivered his message with that

air of importance and effort at fine language which a negro is apt to display on petty embassies of the kind, he dashed over the brook, and was seen scampering away up the Hollow, full of the importance and hurry of his mission.

All was now bustle and hubbub in the late quiet schoolroom. The scholars were hurried through their lessons without stopping at trifles; those who were nimble skipped over half with impunity, and those who were tardy had a smart application now and then in the rear, to quicken their speed or help them over a tall word. Books were flung aside without being put away on the shelves, inkstands were overturned, benches thrown down, and the whole school was turned loose an hour before the usual time, bursting forth like a legion of young imps, yelping and racketing about the green in joy at their early emancipation.

The gallant Ichabod now spent at least an extra half hour at his toilet, brushing and furbishing up his best, and indeed only suit of rusty black, and arranging his locks by a bit of broken looking-glass that hung up in the schoolhouse. That he might make his appearance before his mistress in the true style of a cavalier, he borrowed a horse from the farmer with whom he was domiciliated, a choleric old Dutchman by the name of Hans Van Ripper, and, thus gallantly mounted, issued forth like a knight-errant in quest of adventures. But it is meet I should, in the true spirit of romantic story, give some account of the looks and equipments of my hero and his steed. The animal he bestrode was a broken-down plow-horse, that had outlived almost everything but its viciousness. He was gaunt and shagged, with a ewe neck, and a head like a hammer; his rusty mane and tail were tangled and knotted with burs; one eye had lost its pupil, and was glaring and spectral, but the other had a gleam of a genuine devil in it. Still he must have had fire and mettle in his day, if we may judge from the name he bore of Gunpowder. He had, in fact, been a favorite steed of his master's, the choleric Van Ripper, who was a furious rider, and had infused, very probably, some of his own spirit into the animal; for, old and broken-down as he looked, there was more of the lurking devil in him than in any young filly in the country.

Ichabod was a suitable figure for such a steed. He rode with short stirrups, which brought his knees nearly up to the pommel of the saddle; his sharp elbows stuck out like grasshoppers'; he carried his whip perpendicularly in his hand, like a sceptre, and as his horse jogged on, the motion of his arms was not unlike the flapping of a pair of wings. A small wool hat rested on the top of his nose, for so his scanty strip of forehead might be called, and the skirts of his black coat fluttered out almost to the horse's tail. Such was the appearance of Ichabod and his steed as they shambled out of the gate of Hans Van Ripper, and it was altogether such an apparition as is seldom to be met with in broad daylight.

It was, as I have said, a fine autumnal day; the sky was clear and serene, and nature wore that rich and golden livery which we always associate with the idea of abundance. The forests had put on their sober brown and yellow, while some trees of the tenderer kind had been nipped by the frosts into brilliant dyes of orange, purple, and scarlet. Streaming files of wild ducks began to make their appearance high in the air; the bark of the squirrel might be

heard from the groves of beech and hickory-nuts, and the pensive whistle of the quail at intervals from the neighboring stubble field.

The small birds were taking their farewell banquets. In the fullness of their revelry, they fluttered, chirping and frolicking from bush to bush, and tree to tree, capricious from the very profusion and variety around them. There was the honest cockrobin, the favorite game of stripling sportsmen, with its loud querulous note; and the twittering blackbirds flying in sable clouds; and the golden-winged woodpecker, with his crimson crest, his broad black gorget, and splendid plumage; and the cedar-bird, with its red-tipt wings and yellow-tipt tail and its little monteiro cap of feathers; and the blue jay, that noisy coxcomb in his gay light blue coat and white underclothes, screaming and chattering, nodding and bobbing and bowing, and pretending to be on good terms with every songster of the grove.

As Ichabod jogged slowly on his way, his eye, ever open to every symptom of culinary abundance, ranged with delight over the treasures of jolly autumn. On all sides he beheld vast store of apples: some hanging in oppressive opulence on the trees; some gathered into baskets and barrels for the market; others heaped up in rich piles for the cider-press. Farther on he beheld great fields of Indian corn, with its golden ears peeping from their leafy coverts, and holding out the promise of cakes and hasty-pudding; and the yellow pumpkins lying beneath them, turning up their fair round bellies to the sun, and giving ample prospects of the most luxurious of pies; and anon he passed the fragrant buckwheat fields breathing the odor of the beehive, and as he beheld them, soft anticipations stole over his mind of dainty slap-jacks, well buttered, and garnished with honey or treacle, by the delicate little dimpled hand of Katrina Van Tassel.

Thus feeding his mind with many sweet thoughts and "sugared suppositions," he journeyed along the sides of a range of hills which look out upon some of the goodliest scenes of the mighty Hudson. The sun gradually wheeled his broad disk down in the west. The wide bosom of the Tappan Zee lay motionless and glassy, excepting that here and there a gentle undulation waved and prolonged the blue shadow of the distant mountain. A few amber clouds floated in the sky, without a breath of air to move them. The horizon was of a fine golden tint, changing gradually into a pure apple green, and from that into the deep blue of the mid-heaven. A slanting ray lingered on the woody crests of the precipices that overhung some parts of the river, giving greater depth to the dark gray and purple of their rocky sides. A sloop was loitering in the distance, dropping slowly down with the tide, her sail hanging uselessly against the mast; and as the reflection of the sky gleamed along the still water, it seemed as if the vessel was suspended in the air.

It was toward evening that Ichabod arrived at the castle of the Heer Van Tassel, which he found thronged with the pride and flower of the adjacent country. Old farmers, a spare leathern-faced race, in homespun coats and breeches, blue stockings, huge shoes, and magnificent pewter buckles. Their brisk, withered little dames, in close crimped caps, long-waisted short-gowns,

10. **monteiro**—a huntsman's cap with flaps to cover the ears. (Usually spelled montero.)

homespun petticoats, with scissors and pin-cushions, and gay calico pockets hanging on the outside. Buxom lasses, almost as antiquated as their mothers, excepting where a straw hat, a fine ribbon, or perhaps a white frock, gave symptoms of city innovation. The sons, in short square-skirted coats, with rows of stupendous brass buttons, and their hair generally queued in the fashion of the times, especially if they could procure an eelskin for the purpose, it being esteemed throughout the country as a potent nourisher and strengthener of the hair.

Brom Bones, however, was the hero of the scene, having come to the gathering on his favorite steed Daredevil, a creature, like himself, full of mettle and mischief, and which no one but himself could manage. He was, in fact, noted for preferring vicious animals, given to all kinds of tricks which kept the rider in constant risk of his neck, for he held a tractable, well-broken horse as unworthy of a lad of spirit.

Fain would I pause to dwell upon the world of charms that burst upon the enraptured gaze of my hero, as he entered the state parlor of Van Tassel's mansion. Not those of the bevy of buxom lasses, with their luxurious display of red and white; but the ample charms of a genuine Dutch country tea-table, in the sumptuous time of autumn. Such heaped-up platters of cakes of various and almost indescribable kinds, known only to experienced Dutch housewives! There was the doughty doughnut, the tender olykoek, and the crisp and crumbling cruller; sweet cakes and short cakes, ginger cakes and honey cakes, and the whole family of cakes. And then there were apple pies, and peach pies, and pumpkin pies; besides slices of ham and smoked beef; and moreover delectable dishes of preserved plums, and peaches, and pears, and quinces; not to mention broiled shad and roasted chickens; together with bowls of milk and cream, all mingled higgledy-piggledy, pretty much as I have enumerated them, with the motherly teapot sending up its clouds of vapor from the midst—Heaven bless the mark! I want breath and time to discuss this banquet as it deserves, and am too eager to get on with my story. Happily, Ichabod Crane was not in so great a hurry as his historian, but did ample justice to every dainty.

He was a kind and thankful creature, whose heart dilated in proportion as his skin was filled with good cheer, and whose spirits rose with eating, as some men's do with drink. He could not help, too, rolling his large eyes round him as he ate, and chuckling with the possibility that he might one day be lord of all this scene of almost unimaginable luxury and splendor. Then, he thought, how soon he'd turn his back upon the old school-house; snap his fingers in the face of Hans Van Ripper, and every other niggardly patron, and kick any itinerant pedagogue out of doors that should dare to call him comrade!

Old Baltus Van Tassel moved about among his guests with a face dilated with content and good-humor, round and jolly as the harvest moon. His hospitable attentions were brief, but expressive, being confined to a shake of the hand, a slap on the shoulder, a loud laugh, and a pressing invitation to "fall to, and help themselves."

And now the sound of the music from the common room, or hall, summoned

21. **olykoek**—a cake fried in lard, a cruller or doughnut.

to the dance. The musician was an old gray-headed negro, who had been the itinerant orchestra of the neighborhood for more than half a century. His instrument was as old and battered as himself. The greater part of the time he scraped on two or three strings, accompanying every movement of the bow with a motion of the head; bowing almost to the ground, and stamping with his foot whenever a fresh couple were to start.

Ichabod prided himself upon his dancing as much as upon his vocal powers. Not a limb, not a fibre about him was idle; and to have seen his loosely hung frame in full motion, and clattering about the room, you would have thought St. Vitus himself, that blessed patron of the dance, was figuring before you in person. He was the admiration of all the negroes; who, having gathered, of all ages and sizes, from the farm and the neighborhood, stood forming a pyramid of shining black faces at every door and window; gazing with delight at the scene; rolling their white eye-balls, and showing grinning rows of ivory from ear to ear. How could the flogger of urchins be otherwise than animated and joyous? the lady of his heart was his partner in the dance, and smiling graciously in reply to all his amorous oglings; while Brom Bones, sorely smitten with love and jealousy, sat brooding by himself in one corner.

When the dance was at an end, Ichabod was attracted to a knot of the sager folks, who, with Old Van Tassel, sat smoking at one end of the piazza, gossiping over former times, and drawing out long stories about the war.

This neighborhood, at the time of which I am speaking, was one of those highly favored places which abound with chronicle and great men. The British and American line had run near it during the war; it had, therefore, been the scene of marauding, and infested with refugees, cow-boys, and all kinds of border chivalry. Just sufficient time had elapsed to enable each story-teller to dress up his tale with a little becoming fiction, and, in the indistinctness of his recollection, to make himself the hero of every exploit.

There was the story of Doffue Martling, a large blue-bearded Dutchman, who had nearly taken a British frigate with an old iron nine-pounder from a mud breastwork, only that his gun burst at the sixth discharge. And there was an old gentleman who shall be nameless, being too rich a mynheer to be lightly mentioned, who, in the battle of White Plains, being an excellent master of defence, parried a musket-ball with a small-sword, insomuch that he absolutely felt it whiz round the blade, and glance off at the hilt; in proof of which he was ready at any time to show the sword, with the hilt a little bent. There were several more that had been equally great in the field, not one of whom but was persuaded that he had a considerable hand in bringing the war to a happy termination.

But all these were nothing to the tales of ghosts and apparitions that succeeded. The neighborhood is rich in legendary treasures of the kind. Local tales and superstitions thrive best in these sheltered, long-settled retreats; but are trampled under foot by the shifting throng that forms the population of most of our country places. Besides, there is no encouragement for ghosts in

25. cow-boys—Tory partisans in Westchester County during the Revolution were so called. **32. mynheer**—my lord; here, Dutchman. **33. White Plains**—where General Howe defeated Washington Oct. 28, 1776. **34. small-sword**—ornamental sword.

most of our villages, for they have scarcely had time to finish their first nap and turn themselves in their graves, before their surviving friends have travelled away from the neighborhood; so that when they turn out at night to walk their rounds, they have no acquaintance left to call upon. This is perhaps the reason why we so seldom hear of ghosts except in our long-established Dutch communities.

The immediate cause, however, of the prevalence of supernatural stories in these parts, was doubtless owing to the vicinity of Sleepy Hollow. There was a contagion in the very air that blew from that haunted region; it breathed forth an atmosphere of dreams and fancies infecting all the land. Several of the Sleepy Hollow people were present at Van Tassel's, and, as usual, were doling out their wild and wonderful legends. Many dismal tales were told about funeral trains, and mourning cries and wailings heard and seen about the great tree where the unfortunate Major André was taken, and which stood in the neighborhood. Some mention was made also of the woman in white, that haunted the dark glen at Raven Rock, and was often heard to shriek on winter nights before a storm, having perished there in the snow. The chief part of the stories, however, turned upon the favorite spectre of Sleepy Hollow, the Headless Horseman, who had been heard several times of late, patrolling the country; and, it was said, tethered his horse nightly among the graves in the churchyard.

The sequestered situation of this church seems always to have made it a favorite haunt of troubled spirits. It stands on a knoll, surrounded by locust-trees and lofty elms, from among which its decent whitewashed walls shine modestly forth, like Christian purity beaming through the shades of retirement. A gentle slope descends from it to a silver sheet of water, bordered by high trees, between which, peeps may be caught at the blue hills of the Hudson. To look upon its grass-grown yard, where the sunbeams seem to sleep so quietly, one would think that there at least the dead might rest in peace. On one side of the church extends a wide woody dell, along which raves a large brook among broken rocks and trunks of fallen trees. Over a deep black part of the stream, not far from the church, was formerly thrown a wooden bridge; the road that led to it, and the bridge itself, were thickly shaded by overhanging trees, which cast a gloom about it, even in the daytime; but occasioned a fearful darkness at night. Such was one of the favorite haunts of the Headless Horseman, and the place where he was most frequently encountered. The tale was told of old Brouwer, a most heretical disbeliever in ghosts, how he met the Horseman returning from his foray into Sleepy Hollow, and was obliged to get up behind him; how they galloped over bush and brake, over hill and swamp, until they reached the bridge; when the Horseman suddenly turned into a skeleton, threw old Brouwer into the brook, and sprang away over the tree-tops with a clap of thunder.

This story was immediately matched by a thrice marvellous adventure of Brom Bones, who made light of the Galloping Hessian as an arrant jockey. He affirmed that on returning one night from the neighboring village of

14. **Major André**—John André (1751-1780), British officer, who was captured after negotiating with Arnold, and executed as a spy. **44. arrant jockey**—absolute cheat.

Sing Sing, he had been overtaken by this midnight trooper; that he had offered to race with him for a bowl of punch, and should have won it too, for Daredevil beat the goblin horse all hollow, but just as they came to the church bridge, the Hessian bolted, and vanished in a flash of fire.

All these tales, told in that drowsy undertone with which men talk in the dark, the countenances of the listeners only now and then receiving a casual gleam from the glare of a pipe, sank deep in the mind of Ichabod. He repaid them in kind with large extracts from his invaluable author, Cotton Mather, and added many marvellous events that had taken place in his native State of Connecticut, and fearful sights which he had seen in his nightly walks about Sleepy Hollow.

The revel now gradually broke up. The old farmers gathered together their families in their wagons, and were heard for some time rattling along the hollow roads, and over the distant hills. Some of the damsels mounted on pillions behind their favorite swains, and their light-hearted laughter, mingling with the clatter of hoofs, echoed along the silent woodlands, sounding fainter and fainter, until they gradually died away,—and the late scene of noise and frolic was all silent and deserted. Ichabod only lingered behind, according to the custom of country lovers, to have a tête-à-tête with the heiress; fully convinced that he was now on the high road to success. What passed at this interview I will not pretend to say, for in fact I do not know. Something, however, I fear me, must have gone wrong, for he certainly sallied forth, after no very great interval, with an air quite desolate and chapfallen. Oh, these women! these women! Could that girl have been playing off any of her coquettish tricks? Was her encouragement of the poor pedagogue all a mere sham to secure her conquest of his rival? Heaven only knows, not I! Let it suffice to say, Ichabod stole forth with the air of one who had been sacking a henroost, rather than a fair lady's heart. Without looking to the right or left to notice the scene of rural wealth, on which he had so often gloated, he went straight to the stable, and with several hearty cuffs and kicks roused his steed most uncourteously from the comfortable quarters in which he was soundly sleeping, dreaming of mountains of corn and oats, and whole valleys of timothy and clover.

It was the very witching time of night that Ichabod, heavy-hearted and crestfallen, pursued his travels homewards, along the sides of the lofty hills which rise above Tarry Town, and which he had traversed so cheerily in the afternoon. The hour was as dismal as himself. Far below him the Tappan Zee spread its dusky and indistinct waste of waters, with here and there the tall mast of a sloop, riding quietly at anchor under the land. In the dead hush of midnight, he could even hear the barking of the watch-dog from the opposite shore of the Hudson; but it was so vague and faint as only to give an idea of his distance from this faithful companion of man. Now and then, too, the long-drawn crowing of a cock, accidentally awakened, would sound far, far off, from some farmhouse away among the hills—but it was like a dreaming sound in his ear. No signs of life occurred near him, but occasionally the melan-

34. witching time—*Cf. Hamlet*, Act III, scene ii, line 406.

choly chirp of a cricket, or perhaps the guttural twang of a bull-frog from a neighboring marsh, as if sleeping uncomfortably and turning suddenly in his bed.

All the stories of ghosts and goblins that he had heard in the afternoon now came crowding upon his recollection. The night grew darker and darker; the stars seemed to sink deeper in the sky, and driving clouds occasionally hid them from his sight. He had never felt so lonely and dismal. He was, moreover, approaching the very place where many of the scenes of the ghost stories had been laid. In the centre of the road stood an enormous tulip-tree, which towered like a giant above all the other trees of the neighborhood, and formed a kind of landmark. Its limbs were gnarled and fantastic, large enough to form trunks for ordinary trees, twisting down almost to the earth, and rising again into the air. It was connected with the tragical story of the unfortunate André, who had been taken prisoner hard by; and was universally known by the name of Major André's tree. The common people regarded it with a mixture of respect and superstition, partly out of sympathy for the fate of its ill-starred namesake, and partly from the tales of strange sights, and doleful lamentations, told concerning it.

As Ichabod approached this fearful tree, he began to whistle; he thought his whistle was answered; it was but a blast sweeping sharply through the dry branches. As he approached a little nearer, he thought he saw something white, hanging in the midst of the tree: he paused, and ceased whistling; but, on looking more narrowly, perceived that it was a place where the tree had been scathed by lightning, and the white wood laid bare. Suddenly he heard a groan —his teeth chattered, and his knees smote against the saddle: it was but the rubbing of one huge bough upon another, as they were swayed about by the breeze. He passed the tree in safety, but new perils lay before him.

About two hundred yards from the tree, a small brook crossed the road, and ran into a marshy and thickly-wooded glen, known by the name of Wiley's Swamp. A few rough logs, laid side by side, served for a bridge over this stream. On that side of the road where the brook entered the wood, a group of oaks and chestnuts, matted thick with wild grapevines, threw a cavernous gloom over it. To pass this bridge was the severest trial. It was at this identical spot that the unfortunate André was captured, and under the covert of those chestnuts and vines were the sturdy yeomen concealed who surprised him. This has ever since been considered a haunted stream, and fearful are the feelings of the school-boy who has to pass it alone after dark.

As he approached the stream his heart began to thump; he summoned up, however, all his resolution, gave his horse half a score of kicks in the ribs, and attempted to dash briskly across the bridge; but instead of starting forward, the perverse old animal made a lateral movement, and ran broadside against the fence. Ichabod, whose fears increased with the delay, jerked the reins on the other side, and kicked lustily with the contrary foot: it was all in vain; his steed started, it is true, but it was only to plunge to the opposite side of the road into a thicket of brambles and alder-bushes. The schoolmaster now bestowed both whip and heel upon the starveling ribs of old Gunpowder, who dashed forward, snuffling and snorting, but came to a stand just by the bridge,

with a suddenness that had nearly sent his rider sprawling over his head. Just at this moment a plashy tramp by the side of the bridge caught the sensitive ear of Ichabod. In the dark shadow of the grove, on the margin of the brook, he beheld something huge, misshapen, and towering. It stirred not, but seemed gathered up in the gloom, like some gigantic monster ready to spring upon the traveller.

The hair of the affrighted pedagogue rose upon his head with terror. What was to be done? To turn and fly was now too late; and besides, what chance was there of escaping ghost or goblin, if such it was, which could ride upon the wings of the wind? Summoning up, therefore, a show of courage, he demanded in stammering accents, "Who are you?" He received no reply. He repeated his demand in a still more agitated voice. Still there was no answer. Once more he cudgelled the sides of the inflexible Gunpowder, and, shutting his eyes, broke forth with involuntary fervor into a psalm tune. Just then the shadowy object of alarm put itself in motion, and with a scramble and a bound stood at once in the middle of the road. Though the night was dark and dismal, yet the form of the unknown might now in some degree be ascertained. He appeared to be a horseman of large dimensions, and mounted on a black horse of powerful frame. He made no offer of molestation or sociability, but kept aloof on one side of the road, jogging along on the blind side of old Gunpowder, who had now got over his fright and waywardness.

Ichabod, who had no relish for this strange midnight companion, and bethought himself of the adventure of Brom Bones with the Galloping Hessian, now quickened his steed in hopes of leaving him behind. The stranger, however, quickened his horse to an equal pace. Ichabod pulled up, and fell into a walk, thinking to lag behind,—the other did the same. His heart began to sink within him; he endeavored to resume his psalm tune, but his parched tongue close to the roof of his mouth, and he could not utter a stave. There was something in the moody and dogged silence of this pertinacious companion that was mysterious and appalling. It was soon fearfully accounted for. On mounting a rising ground, which brought the figure of his fellow-traveller in relief against the sky, gigantic in height, and muffled in a cloak, Ichabod was horror-struck on perceiving that he was headless! but his horror was still more increased on observing that the head, which should have rested on his shoulders, was carried before him on the pommel of his saddle! His terror rose to desperation; he rained a shower of kicks and blows upon Gunpowder, hoping by a sudden movement to give his companion the slip; but the spectre started full jump with him. Away, then, they dashed through thick and thin; stones flying and sparks flashing at every bound. Ichabod's flimsy garments fluttered in the air, as he stretched his long lank body away over his horse's head, in the eagerness of his flight.

They had now reached the road which turns off to Sleepy Hollow; but Gunpowder, who seemed possessed with a demon, instead of keeping up it, made an opposite turn, and plunged headlong down hill to the left. This road leads through a sandy hollow, shaded by trees for about a quarter of a mile, where it crosses the bridge famous in goblin story; and just beyond swells the green knoll on which stands the whitewashed church.

As yet the panic of the steed had given his unskilful rider an apparent advantage in the chase; but just as he had got half way through the hollow, the girths of the saddle gave way, and he felt it slipping from under him. He seized it by the pommel, and endeavored to hold it firm, but in vain; and had just time to save himself by clasping old Gunpowder round the neck, when the saddle fell to the earth, and he heard it trampled under foot by his pursuer. For a moment the terror of Hans Van Ripper's wrath passed across his mind,—for it was his Sunday saddle; but this was no time for petty fears; the goblin was hard on his haunches; and (unskilful rider that he was!) he had much ado to maintain his seat; sometimes slipping on one side, sometimes on another, and sometimes jolted on the high ridge of his horse's backbone, with a violence that he verily feared would cleave him asunder.

An opening in the trees now cheered him with the hopes that the church bridge was at hand. The wavering reflection of a silver star in the bosom of the brook told him that he was not mistaken. He saw the walls of the church dimly glaring under the trees beyond. He recollected the place where Brom Bones's ghostly competitor had disappeared. "If I can but reach that bridge," thought Ichabod, "I am safe." Just then he heard the black steed panting and blowing close behind him; he even fancied that he felt his hot breath. Another convulsive kick in the ribs, and old Gunpowder sprang upon the bridge; he thundered over the resounding planks; he gained the opposite side; and now Ichabod cast a look behind to see if his pursuer should vanish, according to rule, in a flash of fire and brimstone. Just then he saw the goblin rising in his stirrups, and in the very act of hurling his head at him. Ichabod endeavored to dodge the horrible missile, but too late. It encountered his cranium with a tremendous crash,—he was tumbled headlong into the dust, and Gunpowder, the black steed, and the goblin rider, passed by like a whirlwind.

The next morning the old horse was found without his saddle, and with the bridle under his feet, soberly cropping the grass at his master's gate. Ichabod did not make his appearance at breakfast; dinner-hour came, but no Ichabod. The boys assembled at the schoolhouse, and strolled idly about the banks of the brook; but no schoolmaster. Hans Van Ripper now began to feel some uneasiness about the fate of poor Ichabod, and his saddle. An inquiry was set on foot, and after diligent investigation they came upon his traces. In one part of the road leading to the church was found the saddle trampled in the dirt; the tracks of horses' hoofs deeply dented in the road, and evidently at furious speed, were traced to the bridge, beyond which, on the bank of a broad part of the brook, where the water ran deep and black, was found the hat of the unfortunate Ichabod, and close beside it a shattered pumpkin.

The brook was searched, but the body of the schoolmaster was not to be discovered. Hans Van Ripper, as executor of his estate, examined the bundle which contained all his worldly effects. They consisted of two shirts and a half; two stocks for the neck; a pair or two of worsted stockings; an old pair of corduroy small-clothes; a rusty razor; a book of psalm tunes full of dog's-ears; and a broken pitch-pipe. As to the books and furniture of the schoolhouse,

17. **bridge**—*Cf.* Burns's "Tam o' Shanter" for a similar view that witches could not cross the stream.

they belonged to the community, excepting Cotton Mather's History of Witchcraft, a New England Almanac, and a book of dreams and fortune-telling; in which last was a sheet of foolscap much scribbled and blotted in several fruitless attempts to make a copy of verses in honor of the heiress of Van Tassel. These magic books and the poetic scrawl were forthwith consigned to the flames by Hans Van Ripper; who, from that time forward, determined to send his children no more to school; observing that he never knew any good come of this same reading and writing. Whatever money the schoolmaster possessed, and he had received his quarter's pay but a day or two before, he must have had about his person at the time of his disappearance.

The mysterious event caused much speculation at the church on the following Sunday. Knots of gazers and gossips were collected in the churchyard, at the bridge, and at the spot where the hat and pumpkin had been found. The stories of Brouwer, of Bones, and a whole budget of others were called to mind; and when they had diligently considered them all, and compared them with the symptoms of the present case, they shook their heads, and came to the conclusion that Ichabod had been carried off by the Galloping Hessian. As he was a bachelor, and in nobody's debt, nobody troubled his head any more about him; the school was removed to a different quarter of the Hollow, and another pedagogue reigned in his stead.

It is true, an old farmer, who had been down to New York on a visit several years after, and from whom this account of the ghostly adventure was received, brought home the intelligence that Ichabod Crane was still alive; that he had left the neighborhood partly through fear of the goblin and Hans Van Ripper, and partly in mortification at having been suddenly dismissed by the heiress; that he had changed his quarters to a distant part of the country; had kept school and studied law at the same time; had been admitted to the bar; turned politician; electioneered; written for the newspapers; and finally had been made a justice of the ten pound court. Brom Bones, too, who, shortly after his rival's disappearance conducted the blooming Katrina in triumph to the altar, was observed to look exceedingly knowing whenever the story of Ichabod was related, and always burst into a hearty laugh at the mention of the pumpkin; which led some to suspect that he knew more about the matter than he chose to tell.

The old country wives, however, who are the best judges of these matters, maintain to this day that Ichabod was spirited away by supernatural means; and it is a favorite story often told about the neighborhood round the winter evening fire. The bridge became more than ever an object of superstitious awe; and that may be the reason why the road has been altered of late years, so as to approach the church by the border of the mill-pond. The schoolhouse being deserted soon fell to decay, and was reported to be haunted by the ghost of the unfortunate pedagogue; and the plough-boy, loitering homeward of a still summer evening, has often fancied his voice at a distance, chanting a melancholy psalm tune among the tranquil solitudes of Sleepy Hollow.

29. **ten pound court**—one in which petty cases are considered.

POSTCRIPT

FOUND IN THE HANDWRITING OF MR. KNICKERBOCKER

The preceding tale is given almost in the precise words in which I heard it related at a Corporation meeting of the ancient city of the Manhattoes, at which were present many of its sagest and most illustrious burghers. The narrator was a pleasant, shabby, gentlemanly old fellow in pepper-and-salt clothes, with a sadly humorous face; and one whom I strongly suspected of being poor,—he made such efforts to be entertaining. When his story was concluded there was much laughter and approbation, particularly from two or three deputy aldermen, who had been asleep the greater part of the time. There was, however, one tall, dry-looking old gentleman, with beetling eyebrows, who maintained a grave and rather severe face throughout; now and then folding his arms, inclining his head, and looking down upon the floor, as if turning a doubt over in his mind. He was one of your wary men, who never laugh but upon good grounds—when they have reason and the law on their side. When the mirth of the rest of the company had subsided, and silence was restored, he leaned one arm on the elbow of his chair, and sticking the other akimbo, demanded, with a slight but exceedingly sage motion of the head, and contraction of the brow, what was the moral of the story, and what it went to prove.

The story-teller, who was just putting a glass of wine to his lips, as a refreshment after his toils, paused for a moment, looked at his inquirer with an air of infinite deference, and, lowering the glass slowly to the table, observed that the story was intended most logically to prove:

"That there is no situation in life but has its advantages and pleasures, provided we will but take a joke as we find it;

"That, therefore, he that runs races with goblin troopers is likely to have rough riding of it;

"Ergo, for a country schoolmaster to be refused the hand of a Dutch heiress is a certain step to high preferment in the state."

The cautious old gentleman knit his brows tenfold closer after this explanation, being sorely puzzled by the ratiocination of the syllogism; while, methought, the one in pepper-and-salt eyed him with something of a triumphant leer. At length he observed that all this was very well, but still he thought the story a little on the extravagant; there were one or two points on which he had his doubts.

"Faith, sir," replied the story-teller, "as to that matter, I don't believe one half of it myself."

*

THE DISCOVERY OF LAND

From *The Life and Voyages of Columbus* (1828), Book III, Chapter IV. Irving's account was based on Navarrete's well-documented *Journal of Columbus.*

ON THE morning of the 7th of October, at sunrise, several of the admiral's crew thought they beheld land in the west, but so indistinctly that no one ventured to proclaim it, lest he should be mistaken, and forfeit all chance of the reward; the *Niña,* however, being a good sailor, pressed forward to ascertain the fact. In a little while a flag was hoisted at her mast-head, and a gun discharged, being the preconcerted signals for land. New joy was awakened throughout the little squadron, and every eye was turned to the west. As they advanced, however, their cloud-built hopes faded away, and before evening the fancied land had again melted into air.

The crews now sank into a degree of dejection proportioned to their recent excitement; but new circumstances occurred to arouse them. Columbus, having observed great flights of small field-birds going towards the southwest, concluded they must be secure of some neighboring land, where they would find food and a resting-place. He knew the importance which the Portuguese voyagers attached to the flight of birds, by following which they had discovered most of their islands. He had now come seven hundred and fifty leagues, the distance at which he had computed to find the island of Cipango; as there was no appearance of it, he might have missed it through some mistake in the latitude. He determined, therefore, on the evening of the 7th of October, to alter his course to the west-southwest, the direction in which the birds generally flew, and continue that direction for at least two days. After all, it was no great deviation from his main course, and would meet the wishes of the Pinzons, as well as be inspiriting to his followers generally.

For three days they stood in this direction, and the farther they went the more frequent and encouraging were the signs of land. Flights of small birds of various colors, some of them such as sing in the fields, came flying about the ships, and then continued towards the southwest, and others were heard also flying by in the night. Tunny fish played about the smooth sea, and a heron, a pelican, and a duck were seen, all bound in the same direction. The herbage which floated by was fresh and green, as if recently from land, and the air, Columbus observed, was sweet and fragrant as April breezes in Seville.

All these, however, were regarded by the crews as so many delusions beguiling them on to destruction; and when on the evening of the third day they beheld the sun go down upon a shoreless horizon, they broke forth into turbulent clamor. They exclaimed against this obstinacy in tempting fate by continuing on into a boundless sea. They insisted upon turning homeward, and abandoning the voyage as hopeless. Columbus endeavored to pacify them by

4. Niña—the third of the three ships, commanded by Vicente Pinzon. **9. air**—"*Hist. del Almirante,* cap. 20. *Journal of Columbus,* Navarette, tom. i." (Irving's note) **22. Pinzons**—Martin and Vicente Pinzon, "magnates" of Palos, helped finally to organize the expedition; Martin commanded the *Pinta,* and Vicente the *Niña.*

gentle words and promises of large rewards; but finding that they only increased in clamor, he assumed a decided tone. He told them it was useless to murmur; the expedition had been sent by the sovereigns to seek the Indies, and, happen what might, he was determined to persevere, until, by the blessing of God, he should accomplish the enterprise.

Columbus was now at open defiance with his crew, and his situation became desperate. Fortunately the manifestations of the vicinity of land were such on the following day as no longer to admit a doubt. Besides a quantity of fresh weeds, such as grow in rivers, they saw a green fish of a kind which keeps about rocks; then a branch of thorn with berries on it, and recently separated from the tree, floated by them; then they picked up a reed, a small board, and, above all, a staff artificially carved. All gloom and mutiny now gave way to sanguine expectation; and throughout the day each one was eagerly on the watch, in hopes of being the first one to discover the long-sought-for land.

In the evening, when, according to invariable custom on board of the admiral's ship, the mariners had sung the *Salve Regina,* or vesper hymn to the Virgin, he made an impressive address to his crew. He pointed out the goodness of God in thus conducting them by soft and favoring breezes across a tranquil ocean, cheering their hopes continually with fresh signs, increasing as their fears augmented, and thus leading and guiding them to a promised land. He now reminded them of the orders he had given on leaving the Canaries, that, after sailing westward seven hundred leagues, they should not make sail after midnight. Present appearances authorized such a precaution. He thought it probable they would make land that very night; he ordered, therefore, a vigilant look-out to be kept from the forecastle, promising to whomsoever should make the discovery, a doublet of velvet, in addition to the pension to be given by the sovereigns.

The breeze had been fresh all day, with more sea than usual, and they had made great progress. At sunset they had stood again to the west, and were plowing the waves at a rapid rate, the *Pinta* keeping the lead, from her superior sailing. The greatest animation prevailed throughout the ships; not an eye was closed that night. As the evening darkened, Columbus took his station on the top of the castle or cabin on the high poop of his vessel, ranging his eye along the dusky horizon, and maintaining an intense and unremitting watch. About ten o'clock he thought he beheld a light glimmering at a great distance. Fearing his eager hopes might deceive him, he called to Pedro Gutierrez, gentleman of the king's bedchamber, and inquired whether he saw such a light; the latter replied in the affirmative. Doubtful whether it might not yet be some delusion of the fancy, Columbus called Rodrigo Sanchez of Segovia, and made the same inquiry. By the time the latter had descended the round-house, the light had disappeared. They saw it once or twice afterwards in sudden and passing gleams, as if it were a torch in the bark of a fisherman, rising and sinking with the waves; or in the hand of some person on shore, borne up and down as he walked from house to house. So transient and uncertain were these

16. **Salve Regina**—*Salve, regina misericordiae* ("Hail, queen of compassion")—the first words of a hymn in the Roman Catholic breviary. 27. **sovereigns**—"*Hist. del Almirante,* cap. 21." (Irving's note) 40. **round-house**—a cabin on the afterpart of the quarter-deck.

gleams that few attached any importance to them; Columbus, however, considered them as certain signs of land, and, moreover, that the land was inhabited.

They continued their course until two in the morning, when a gun from the *Pinta* gave the joyful signal of land. It was first descried by a mariner named Rodrigo de Triana; but the reward was afterwards adjudged to the admiral, for having previously perceived the light. The land was now clearly seen about two leagues distant, whereupon they took in sail and laid to, waiting impatiently for the dawn.

The thoughts and feelings of Columbus in this little space of time must have been tumultuous and intense. At length, in spite of every difficulty and danger, he had accomplished his object. The great mystery of the ocean was revealed; his theory, which had been the scoff of sages, was triumphantly established; he had secured to himself a glory which must be as durable as the world itself.

It is difficult to conceive the feelings of such a man at such a moment; or the conjectures which must have thronged upon his mind, as to the land which lay before him, covered with darkness. That it was fruitful, was evident from the vegetables which floated from its shores. He thought, too, that he perceived the fragrance of aromatic groves. The moving light which he had beheld had proved that it was the residence of man. But what were its inhabitants? Were they like those of the other parts of the globe; or were they some strange and monstrous race, such as the imagination was prone in those times to give to all remote and unknown regions? Had he come upon some wild island far in the Indian sea; or was this the famed Cipango itself, the object of his golden fancies? A thousand speculations of the kind must have swarmed upon him, as, with his anxious crews, he waited for the night to pass away, wondering whether the morning light would reveal a savage wilderness, or dawn upon spicy groves and glittering fanes and gilded cities, and all the splendor of oriental civilization.

LEGEND OF THE MOOR'S LEGACY

Published in *The Alhambra* (1832). The Alhambra is a medieval palace of the Moorish kings on a hill overlooking Granada in southern Spain. The Moorish power declined after the twelfth century, and in 1492 Granada fell into the hands of Ferdinand and Isabella of Spain. Irving lived in the Alhambra for three months in 1829.

Just within the fortress of the Alhambra, in front of the royal palace, is a broad open esplanade, called the Place or Square of the Cisterns (La Plaza de los Algibes), so called from being undermined by reservoirs of water, hidden from sight, and which have existed from the time of the Moors. At one corner of this esplanade is a Moorish well, cut through the living rock to a great depth, the water of which is cold as ice and clear as crystal. The wells made by the Moors are always in repute, for it is well known what pains they took to penetrate to the purest and sweetest springs and fountains. The one of which we now speak is famous throughout Granada, insomuch that water-

carriers, some bearing great water-jars on their shoulders, others driving asses before them laden with earthen vessels, are ascending and descending the steep woody avenues of the Alhambra, from early dawn until a late hour of the night.

Fountains and wells, ever since the scriptural days, have been noted gossiping-places in hot climates; and at the well in question there is a kind of perpetual club kept up during the livelong day, by the invalids, old women, and other curious do-nothing folk of the fortress, who sit here on the stone benches, under an awning spread over the well to shelter the toll-gatherer from the sun, and dawdle over the gossip of the fortress, and question every water-carrier that arrives about the news of the city, and make long comments on everything they hear and see. Not an hour of the day but loitering housewives and idle maid-servants may be seen, lingering, with pitcher on head or in hand, to hear the last of the endless tattle of these worthies.

Among the water-carriers who once resorted to this well, there was a sturdy, strong-backed, bandy-legged little fellow, named Pedro Gil, but called Peregil for shortness. Being a water-carrier, he was a Gallego, or native of Galicia, of course. Nature seems to have formed races of men, as she has of animals, for different kinds of drudgery. In France the shoeblacks are all Savoyards, the porters of hotels all Swiss, and in the days of hoops and hair powder in England, no man could give the regular swing to a sedan-chair but a bog-trotting Irishman. So in Spain, the carriers of water and bearers of burdens are all sturdy little natives of Galicia. No man says, "Get me a porter," but, "Call a Gallego."

To return from this digression, Peregil the Gallego had begun business with merely a great earthen jar which he carried upon his shoulder; by degrees he rose in the world, and was enabled to purchase an assistant of a correspondent class of animals, being a stout shaggy-haired donkey. On each side of this his long-eared aide-de-camp, in a kind of pannier, were slung his water-jars, covered with fig-leaves to protect them from the sun. There was not a more industrious water-carrier in all Granada, nor one more merry withal. The streets rang with his cheerful voice as he trudged after his donkey, singing forth the usual summer note that resounds through the Spanish towns: *"Quien quiere agua—agua mas fria que la nieve?"*—"Who wants water—water colder than snow? Who wants water from the well of the Alhambra, cold as ice and clear as crystal?" When he served a customer with a sparkling glass, it was always with a pleasant word that caused a smile; and if, perchance, it was a comely dame or dimpling damsel, it was always with a sly leer and a compliment to her beauty that was irresistible. Thus Peregil the Gallego was noted throughout all Granada for being one of the civilest, pleasantest, and happiest of mortals. Yet it is not he who sings the loudest and jokes most that has the lightest heart. Under all this air of merriment, honest Peregil had his cares and troubles. He had a large family of ragged children to support, who were hungry and clamorous as a nest of young swallows, and beset him with their outcries for food whenever he came home of an evening. He had a helpmate, too, who

17. **Galicia**—a section of northwestern Spain. 19. **Savoyards**—mountaineers from Savoy, in southeastern France.

was anything but a help to him. She had been a village beauty before marriage, noted for her skill at dancing the *bolero* and rattling the castanets; and she still retained her early propensities, spending the hard earnings of honest Peregil in frippery, and laying the very donkey under requisition for junketing parties into the country on Sundays and saints' days, and those innumerable holidays, which are rather more numerous in Spain than the days of the week. With all this she was a little of a slattern, something more of a lie-abed, and, above all, a gossip of the first water; neglecting house, household, and everything else, to loiter slipshod in the houses of her gossip neighbors.

He, however, who tempers the wind to the shorn lamb, accommodates the yoke of matrimony to the submissive neck. Peregil bore all the heavy dispensations of wife and children with as meek a spirit as his donkey bore the water-jars; and, however he might shake his ears in private, never ventured to question the household virtues of his slattern spouse.

He loved his children, too, even as an owl loves its owlets, seeing in them his own image multiplied and perpetuated; for they were a sturdy, long-backed, bandy-legged little brood. The great pleasure of honest Peregil was, whenever he could afford himself a scanty holiday, and had a handful of *maravedis* to spare, to take the whole litter forth with him, some in his arms, some tugging at his skirts, and some trudging at his heels, and to treat them to a gambol among the orchards of the Vega, while his wife was dancing with her holiday friends in the Angosturas of the Darro.

It was a late hour one summer night, and most of the water-carriers had desisted from their toils. The day had been uncommonly sultry; the night was one of those delicious moonlights which tempt the inhabitants of southern climes to indemnify themselves for the heat and inaction of the day, by lingering in the open air, and enjoying its tempered sweetness until after midnight. Customers for water were therefore still abroad. Peregil, like a considerate, painstaking father, thought of his hungry children. "One more journey to the well," said he to himself, "to earn a Sunday's *puchero* for the little ones." So saying, he trudged manfully up the steep avenue of the Alhambra, singing as he went, and now and then bestowing a hearty thwack with a cudgel on the flanks of his donkey, either by way of cadence to the song, or refreshment to the animal; for dry blows serve in lieu of provender in Spain for all beasts of burden.

When arrived at the well, he found it deserted by every one except a solitary stranger in Moorish garb, seated on a stone bench in the moonlight. Peregil paused at first and regarded him with surprise, not unmixed with awe, but the Moor feebly beckoned him to approach. "I am faint and ill," said he; "aid me to return to the city, and I will pay thee double what thou couldst gain by thy jars of water."

The honest heart of the little water-carrier was touched with compassion at

2. bolero—a Spanish dance representing the progress of love. **10. tempers the wind**—from *A Sentimental Journey through France and Italy* (1768) by Laurence Sterne (1713-1768). **18. maravedis**—small coins worth two-fifths of a cent each. **21. Vega**—district (and river) west of Granada. **22. Angosturas of the Darro**—bridges and open places near the river Darro, which flows through Granada. **30. puchero**—pot of meat.

the appeal of the stranger. "God forbid," said he, "that I should ask fee or reward for doing a common act of humanity." He accordingly helped the Moor on his donkey, and set off slowly for Granada, the poor Moslem being so weak that it was necessary to hold him on the animal to keep him from falling to the earth.

When they entered the city the water-carrier demanded whither he should conduct him. "Alas!" said the Moor, faintly, "I have neither home nor habitation; I am a stranger in the land. Suffer me to lay my head this night beneath thy roof, and thou shalt be amply repaid."

Honest Peregil thus saw himself unexpectedly saddled with an infidel guest, but he was too humane to refuse a night's shelter to a fellow-being in so forlorn a plight; so he conducted the Moor to his dwelling. The children, who had sallied forth open-mouthed as usual on hearing the tramp of the donkey, ran back with affright when they beheld the turbaned stranger, and hid themselves behind their mother. The latter stepped forth intrepidly, like a ruffling hen before her brood when a vagrant dog approaches.

"What infidel companion," cried she, "is this you have brought home at this late hour to draw upon us the eyes of the inquisition?"

"Be quiet, wife," replied the Gallego; "here is a poor sick stranger, without friend or home; wouldst thou turn him forth to perish in the streets?"

The wife would still have remonstrated, for although she lived in a hovel, she was a furious stickler for the credit of her house; the little water-carrier, however, for once was stiffnecked, and refused to bend beneath the yoke. He assisted the poor Moslem to alight, and spread a mat and sheep-skin for him, on the ground, in the coolest part of the house; being the only kind of bed that his poverty afforded.

In a little while the Moor was seized with violent convulsions, which defied all the ministering skill of the simple water-carrier. The eye of the poor patient acknowledged his kindness. During an interval of his fits he called him to his side, and addressing him in a low voice: "My end," said he, "I fear is at hand. If I die, I bequeath you this box as a reward for your charity"; so saying, he opened his *albornoz,* or cloak, and showed a small box of sandal-wood, strapped round his body. "God grant, my friend," replied the worthy little Gallego, "that you may live many years to enjoy your treasure, whatever it may be." The Moor shook his head; he laid his hand upon the box, and would have said something more concerning it, but his convulsions returned with increasing violence, and in a little while he expired.

The water-carrier's wife was now as one distracted. "This comes," said she, "of your foolish good-nature, always running into scrapes to oblige others. What will become of us when this corpse is found in our house? We shall be sent to prison as murderers; and if we escape with our lives, we shall be ruined by notaries and *alguazils.*"

Poor Peregil was in equal tribulation, and almost repented himself of having done a good deed. At length a thought struck him. "It is not yet day," said he; "I can convey the dead body out of the city, and bury it in the sands on the

42. alguazils—constables.

banks of the Xenil. No one saw the Moor enter our dwelling, and no one will know anything of his death."

So said, so done. The wife aided him; they rolled the body of the unfortunate Moslem in the mat on which he had expired, laid it across the ass, and Peregil set out with it for the banks of the river.

As ill-luck would have it, there lived opposite to the water-carrier a barber named Pedrillo Pedrugo, one of the most prying, tattling, and mischief-making of his gossip tribe. He was a weasel-faced, spider-legged varlet, supple and insinuating; the famous barber of Seville could not surpass him for his universal knowledge of the affairs of others, and he had no more power of retention than a sieve. It was said that he slept but with one eye at a time, and kept one ear uncovered, so that even in his sleep he might see and hear all that was going on. Certain it is, he was a sort of scandalous chronicle for the quidnuncs of Granada, and had more customers than all the rest of his fraternity.

This meddlesome barber heard Peregil arrive at an unusual hour at night, and the exclamations of his wife and children. His head instantly popped out of a little window which served him as a look-out, and he saw his neighbor assist a man in Moorish garb into his dwelling. This was so strange an occurrence that Pedrillo Pedrugo slept not a wink that night. Every five minutes he was at his loophole, watching the lights that gleamed through the chinks of his neighbor's door, and before daylight he beheld Peregil sally forth with his donkey unusually laden.

The inquisitive barber was in a fidget; he slipped on his clothes, and, stealing forth silently, followed the water-carrier at a distance, until he saw him dig a hole in the sandy bank of the Xenil, and bury something that had the appearance of a dead body.

The barber hied him home, and fidgeted about his shop, setting everything upside down, until sunrise. He then took a basin under his arm, and sallied forth to the house of his daily customer the Alcalde.

The Alcalde had just risen. Pedrillo Pedrugo seated him in a chair, threw a napkin round his neck, put a basin of hot water under his chin, and began to mollify his beard with his fingers.

"Strange doings!" said Pedrugo, who played barber and newsmonger at the same time,—"strange doings! Robbery, and murder, and burial all in one night!"

"Hey!—how!—what is that you say," cried the Alcalde.

"I say," replied the barber, rubbing a piece of soap over the nose and mouth of the dignitary, for a Spanish barber disdains to employ a brush,—"I say that Peregil the Gallego has robbed and murdered a Moorish Mussulman, and buried him, this blessed night. *Maldita sea la noche;*—Accursed be the night for the same!"

"But how do you know all this?" demanded the Alcalde.

"Be patient, Señor, and you shall hear all about it," replied Pedrillo, taking him by the nose and sliding a razor over his cheek. He then recounted all that

1. **Xenil**—the Xenil or Genil River, a small stream flowing through Granada. 9. **barber of Seville**—Figaro in Beaumarchais's comedy, written in 1773, and in Rossini's opera, 1816. 13. **quidnuncs**—gossips (those asking "What now?"). 29. **Alcalde**—mayor-magistrate.

he had seen, going through both operations at the same time, shaving his beard, washing his chin, and wiping him dry with a dirty napkin, while he was robbing, murdering, and burying the Moslem.

Now it so happened that this Alcalde was one of the most overbearing, and at the same time most griping and corrupt curmudgeons in all Granada. It could not be denied, however, that he set a high value upon justice, for he sold it at its weight in gold. He presumed the case in point to be one of murder and robbery; doubtless there must be a rich spoil; how was it to be secured into the legitimate hands of the law? for as to merely entrapping the delinquent—that would be feeding the gallows; but entrapping the booty—that would be enriching the judge, and such, according to his creed, was the great end of justice. So thinking, he summoned to his presence his trustiest *alguazil*—a gaunt, hungry-looking varlet, clad, according to the custom of his order, in the ancient Spanish garb, a broad black beaver turned up at its sides; a quaint ruff; a small black cloak dangling from his shoulders; rusty black under-clothes that set off his spare wiry frame, while in his hand he bore a slender white wand, the dreaded insignia of his office. Such was the legal bloodhound of the ancient Spanish breed, that he put upon the traces of the unlucky water-carrier, and such was his speed and certainty, that he was upon the haunches of poor Peregil before he had returned to his dwelling, and brought both him and his donkey before the dispenser of justice.

The Alcalde bent upon him one of the most terrific frowns. "Hark ye, culprit!" roared he, in a voice that made the knees of the little Gallego smite together,—"hark ye, culprit! there is no need of denying thy guilt, everything is known to me. A gallows is the proper reward for the crime thou hast committed, but I am merciful, and readily listen to reason. The man that has been murdered in thy house was a Moor, an infidel, the enemy of our faith. It was doubtless in a fit of religious zeal that thou hast slain him. I will be indulgent, therefore; render up the property of which thou hast robbed him, and we will hush the matter up."

The poor water-carrier called upon all the saints to witness his innocence; alas! not one of them appeared; and if they had the Alcalde would have disbelieved the whole calendar. The water-carrier related the whole story of the dying Moor with the straightforward simplicity of truth, but it was all in vain. "Wilt thou persist in saying," demanded the judge, "that this Moslem had neither gold nor jewels, which were the object of thy cupidity?"

"As I hope to be saved, your worship," replied the water-carrier, "he had nothing but a small box of sandal-wood, which he bequeathed to me in reward for my services."

"A box of sandal-wood! a box of sandal-wood!" exclaimed the Alcalde, his eyes sparkling at the idea of precious jewels. "And where is this box? where have you concealed it?"

"An' it please your grace," replied the water-carrier, "it is in one of the panniers of my mule, and heartily at the service of your worship."

He had hardly spoken the words, when the keen *alguazil* darted off, and reappeared in an instant with the mysterious box of sandal-wood. The Alcalde opened it with an eager and trembling hand; all pressed forward to gaze upon

the treasure it was expected to contain; when, to their disappointment, nothing appeared within, but a parchment scroll, covered with Arabic characters, and an end of a waxen taper.

When there is nothing to be gained by the conviction of a prisoner, justice, even in Spain, is apt to be impartial. The Alcalde, having recovered from his disappointment, and found that there was really no booty in the case, now listened dispassionately to the explanation of the water-carrier, which was corroborated by the testimony of his wife. Being convinced, therefore, of his innocence, he discharged him from arrest; nay, more, he permitted him to carry off the Moor's legacy, the box of sandal-wood and its contents, as the well-merited reward of his humanity; but he retained his donkey in payment of costs and charges.

Behold the unfortunate little Gallego reduced once more to the necessity of being his own water-carrier, and trudging up to the well of the Alhambra with a great earthen jar upon his shoulder.

As he toiled up the hill in the heat of a summer noon, his usual good-humor forsook him. "Dog of an Alcalde!" would he cry, "to rob a poor man of the means of his subsistence, of the best friend he had in the world!" And then at the remembrance of the beloved companion of his labors, all the kindness of his nature would break forth. "Ah, donkey of my heart!" would he exclaim, resting his burden on a stone, and wiping the sweat from his brow,—"ah, donkey of my heart! I warrant me thou thinkest of thy old master! I warrant me thou missest the water-jars—poor beast!"

To add to his afflictions, his wife received him, on his return home, with whimperings and repinings; she had clearly the vantage-ground of him, having warned him not to commit the egregious act of hospitality which had brought on him all these misfortunes; and, like a knowing woman, she took every occasion to throw her superior sagacity in his teeth. If her children lacked food, or needed a new garment, she could answer with a sneer, "Go to your father—he is heir to King Chico of the Alhambra: ask him to help you out of the Moor's strong box."

Was ever poor mortal so soundly punished for having done a good action? The unlucky Peregil was grieved in flesh and spirit, but still he bore meekly with the railings of his spouse. At length, one evening, when, after a hot day's toil, she taunted him in the usual manner, he lost all patience. He did not venture to retort upon her, but his eye rested upon the box of sandal-wood, which lay on a shelf with lid half open, as if laughing in mockery at his vexation. Seizing it up, he dashed it with indignation to the floor. "Unlucky was the day that I ever set eyes on thee," he cried, "or sheltered thy master beneath my roof!"

As the box struck the floor, the lid flew wide open, and the parchment scroll rolled forth.

Peregil sat regarding the scroll for some time in moody silence. At length rallying his ideas, "Who knows," thought he, "but this writing may be of some importance, as the Moor seems to have guarded it with such care?" Picking it up therefore, he put it in his bosom, and the next morning, as he was crying

30. **King Chico**—Boabdil, the last Moorish king to possess the Alhambra, known as *El Rey Chico*, "King Do-nothing."

water through the streets, he stopped at the shop of a Moor, a native of Tangiers, who sold trinkets and perfumery in the Zacatin, and asked him to explain the contents.

The Moor read the scroll attentively, then stroked his beard and smiled. "This manuscript," said he, "is a form of incantation for the recovery of hidden treasure that is under the power of enchantment. It is said to have such virtue that the strongest bolts and bars, nay the adamantine rock itself, will yield before it!"

"Bah!" cried the little Gallego, "what is all that to me? I am no enchanter, and know nothing of buried treasure." So saying, he shouldered his water-jar, left the scroll in the hands of the Moor, and trudged forward on his daily rounds.

That evening, however, as he rested himself about twilight at the well of the Alhambra, he found a number of gossips assembled at the place, and their conversation, as is not unusual at that shadowy hour, turned upon old tales and traditions of a supernatural nature. Being all poor as rats, they dwelt with peculiar fondness upon the popular theme of enchanted riches left by the Moors in various parts of the Alhambra. Above all, they concurred in the belief that there were great treasures buried deep in the earth under the Tower of the Seven Floors.

These stories made an unusual impression on the mind of the honest Peregil, and they sank deeper and deeper into his thoughts as he returned alone down the darkling avenues. "If, after all, there should be treasure hid beneath that tower; and if the scroll I left with the Moor should enable me to get at it!" In the sudden ecstasy of the thought he had well nigh let fall his water-jar.

That night he tumbled and tossed, and could scarcely get a wink of sleep for the thoughts that were bewildering his brain. Bright and early he repaired to the shop of the Moor, and told him all that was passing in his mind. "You can read Arabic," said he: "suppose we go together to the tower, and try the effect of the charm; if it fails, we are no worse off than before; but if it succeeds, we will share equally all the treasure we may discover."

"Hold," replied the Moslem; "this writing is not sufficient of itself; it must be read at midnight by the light of a taper singularly compounded and prepared, the ingredients of which are not within my reach. Without such a taper the scroll is of no avail."

"Say no more!" cried the little Gallego; "I have such a taper at hand, and will bring it here in a moment." So saying, he hastened home, and soon returned with the end of yellow wax taper that he had found in the box of sandal-wood.

The Moor felt it and smelled of it. "Here are rare and costly perfumes," said he, "combined with this yellow wax. This is the kind of taper specified in the scroll. While this burns, the strongest walls and most secret caverns will remain open. Woe to him, however, who lingers within until it be extinguished. He will remain enchanted with the treasure."

2. Zacatin—one of the narrow market-streets. **19-20. Tower of the Seven Floors**—through the gate of which Boabdil is said to have left the Alhambra. The fact of the gate's being walled up after his departure gave rise to the legend of buried treasure.

It was now agreed between them to try the charm that very night. At a late hour, therefore, when nothing was stirring but bats and owls, they ascended the woody hill of the Alhambra, and approached that awful tower, shrouded by trees and rendered formidable by so many traditionary tales. By the light of a lantern they groped their way through bushes, and over fallen stones, to the door of a vault beneath the tower. With fear and trembling they descended a flight of steps cut into the rock. It led to an empty chamber, damp and drear, from which another flight of steps led to a deeper vault. In this way they descended four several flights, leading into as many vaults, one below the other, but the floor of the fourth was solid; and though, according to tradition, there remained three vaults still below, it was said to be impossible to penetrate farther, the residue being shut up by strong enchantment. The air of this vault was damp and chilly, and had an earthy smell, and the light scarce cast forth any rays. They paused here for a time, in breathless suspense, until they faintly heard the clock of the watch-tower strike midnight; upon this they lit the waxen taper, which diffused an odor of myrrh and frankincense and storax.

The Moor began to read in a hurried voice. He had scarce finished when there was a noise as of subterraneous thunder. The earth shook, and the floor, yawning open, disclosed a flight of steps. Trembling with awe, they descended, and by the light of the lantern found themselves in another vault covered with Arabic inscriptions. In the centre stood a great chest, secured with seven bands of steel, at each end of which sat an enchanted Moor in armor, but motionless as a statue, being controlled by the power of the incantation. Before the chest were several jars filled with gold and silver and precious stones. In the largest of these they thrust their arms up to the elbow, and at every dip hauled forth handfuls of broad yellow pieces of Moorish gold, or bracelets and ornaments of the same precious metal, while occasionally a necklace of Oriental pearl would stick to their fingers. Still they trembled and breathed short while cramming their pockets with the spoils; and cast many a fearful glance at the two enchanted Moors, who sat grim and motionless, glaring upon them with unwinking eyes. At length, struck with a sudden panic of some fancied noise, they both rushed up the staircase, tumbled over one another into the upper apartment, overturned and extinguished the waxen taper, and the pavement again closed with a [illegible] sound.

Filled with dismay, they did not pause until they had groped their way out of the tower, and beheld the stars shining through the trees. Then, seating themselves upon the grass, they divided the spoil, determining to content themselves for the present with this mere skimming of the jars, but to return on some future night and drain them to the bottom. To make sure of each other's good faith, also, they divided the talismans between them, one retaining the scroll and the other the taper; this done, they set off with light hearts and well-lined pockets for Granada.

As they wended their way down the hill, the shrewd Moor whispered a word of counsel in the ear of the simple little water-carrier.

"Friend Peregil," said he, "all this affair must be kept a profound secret until we have secured the treasure, and conveyed it out of harm's way. If a whisper of it gets to the ear of the Alcalde, we are undone!"

"Certainly," replied the Gallego, "nothing can be more true."

"Friend Peregil," said the Moor, "you are a discreet man, and I make no doubt can keep a secret; but you have a wife."

"She shall not know a word of it," replied the little water-carrier, sturdily.

"Enough," said the Moor, "I depend upon thy discretion and thy promise."

Never was promise more positive and sincere; but, alas! what man can keep a secret from his wife? Certainly not such a one as Peregil the water-carrier, who was one of the most loving and tractable of husbands. On his return home, he found his wife moping in a corner. "Mighty well," cried she as he entered, "you've come at last, after rambling about until this hour of the night. I wonder you have not brought home another Moor as a house-mate." Then bursting into tears, she began to wring her hands and smite her breast. "Unhappy woman that I am!" exclaimed she, "what will become of me? My house stripped and plundered by lawyers and *alguazils;* my husband a do-no-good, that no longer brings home bread to his family, but goes rambling about day and night, with infidel Moors! O my children! my children! what, what will become of us? We shall all have to beg in the streets!"

Honest Peregil was so moved by the distress of his spouse that he could not help whimpering also. His heart was as full as his pocket, and not to be restrained. Thrusting his hand into the latter he hauled forth three or four broad gold-pieces, and slipped them into her bosom. The poor woman stared with astonishment, and could not understand the meaning of this golden shower. Before she could recover her surprise, the little Gallego drew forth a chain of gold and dangled it before her, capering with exultation, his mouth distended from ear to ear.

"Holy Virgin protect us!" exclaimed the wife. "What hast thou been doing, Peregil? surely thou hast not been committing murder and robbery!"

The idea scarce entered the brain of the poor woman than it became a certainty with her. She saw a prison and a gallows in the distance, and a little bandy-legged Gallego hanging pendent from it; and, overcome by the horrors conjured up by imagination, fell into violent hysterics.

What could the poor man do? He had no other means of pacifying his wife, and dispelling the phantoms of her fancy, than by relating the whole story of his good fortune. This, however, he did not do until he had exacted from her the most solemn promise to keep it a profound secret from every living being.

To describe her joy would be impossible. She flung her arms round the neck of her husband, and almost strangled him with her caresses. "Now, wife," exclaimed the little man, with honest exultation, "what say you now to the Moor's legacy? Henceforth never abuse me for helping a fellow-creature in distress."

The honest Gallego retired to his sheep-skin mat, and slept as soundly as if on a bed of down. Not so his wife. She emptied the whole contents of his pockets upon the mat, and sat counting gold pieces of Arabic coin, trying on necklaces and earrings, and fancying the figure she should one day make when permitted to enjoy her riches.

On the following morning the honest Gallego took a broad golden coin, and repaired with it to a jeweller's shop in the Zacatin to offer it for sale, pretending to have found it among the ruins of the Alhambra. The jeweller saw that it

had an Arabic inscription, and was of the purest gold; he offered, however, but a third of its value, with which the water-carrier was perfectly content. Peregil now bought new clothes for his little flock, and all kinds of toys, together with ample provisions for a hearty meal, and returning to his dwelling, set all his children dancing around him, while he capered in the midst, the happiest of fathers.

The wife of the water-carrier kept her promise of secrecy with surprising strictness. For a whole day and a half she went about, with a look of mystery and a heart swelling almost to bursting; yet she held her peace, though surrounded by her gossips. It is true she could not help giving herself a few airs, apologized for her ragged dress, and talked of ordering a new *basquina,* all trimmed with gold lace and bugles, and a new lace *mantilla.* She threw out hints of her husband's intention of leaving off his trade of water-carrying, as it did not altogether agree with his health. In fact, she thought they should all retire to the country for the summer, that the children might have the benefit of the mountain air, for there was no living in the city in this sultry season.

The neighbors stared at each other, and thought the poor woman had lost her wits; and her airs and graces and eloquent pretensions were the theme of universal scoffing and merriment among her friends the moment her back was turned.

If she restrained herself abroad, however, she indemnified herself at home, and putting a string of rich Oriental pearls round her neck, Moorish bracelets on her arms, and an *aigrette* of diamonds on her head, sailed backwards and forwards in her slattern rags about the room, now and then stopping to admire herself in a broken mirror. Nay, in the impulse of her simple vanity, she could not resist, on one occasion, showing herself at the window, to enjoy the effect of her finery on the passers by.

As the fates would have it, Pedrillo Pedrugo, the meddlesome barber, was at this moment sitting idly in his shop on the opposite side of the street, when his ever-watchful eye caught the sparkle of a diamond. In an instant he was at his loophole reconnoitring the slattern spouse of the water-carrier, decorated with the splendor of an Eastern bride. No sooner had he taken an accurate inventory of her ornaments, than he posted off with all speed to the Alcalde. In a little while the hungry *alguazil* was again on the scent, and before the day was over the unfortunate Peregil was once more dragged into the presence of the judge.

"How is this, villain!" cried the Alcalde, in a furious voice. "You told me that the infidel who died in your house left nothing behind but an empty coffer, and now I hear of your wife flaunting in her rags decked out with pearls and diamonds. Wretch that thou art! prepare to render up the spoils of thy miserable victim, and to swing on the gallows that is already tired of waiting for thee."

The terrified water-carrier fell on his knees, and made a full relation of the marvellous manner in which he had gained his wealth. The Alcalde, the *alguazil,* and the inquisitive barber listened with greedy ears to this Arabian

11. **basquina**—petticoat. 12. **bugles**—glass beads. 12. **mantilla**—a woman's light mantle veiling the head and hanging down about the person.

tale of enchanted treasure. The *alguazil* was despatched to bring the Moor who had assisted in the incantation. The Moslem entered, half frightened out of his wits on finding himself in the hands of the harpies of the law. When he beheld the water-carrier standing with sheepish looks and downcast countenance, he comprehended the whole matter. "Miserable animal," said he, as he passed near him, "did I not warn thee against babbling to thy wife?"

The story of the Moor coincided exactly with that of his colleague but the Alcalde affected to be slow of belief, and threw out menaces of imprisonment and rigorous investigation.

"Softly, good Señor Alcalde," said the Mussulman, who by this time had recovered his usual shrewdness and self-possession. "Let us not mar fortune's favors in the scramble for them. Nobody knows anything of this matter but ourselves; let us keep the secret. There is wealth enough in the cave to enrich us all. Promise a fair division, and all shall be produced; refuse, and the cave shall remain forever closed."

The Alcalde consulted apart with the *alguazil.* The latter was an old fox in his profession. "Promise anything," said he, "until you get possession of the treasure. You may then seize upon the whole, and if he and his accomplice dare to murmur, threaten them with the fagot and the stake as infidels and sorcerers."

The Alcalde relished the advice. Smoothing his brow and turning to the Moor: "This is a strange story," said he, "and may be true; but I must have ocular proof of it. This very night you must repeat the incantation in my presence. If there be really such treasure, we will share it amicably between us, and say nothing further of the matter; if ye have deceived me, expect no mercy at my hands. In the meantime you must remain in custody."

The Moor and the water-carrier cheerfully agreed to these conditions, satisfied that the event would prove the truth of their words.

Towards midnight the Alcalde sallied forth secretly, attended by the *alguazil* and the meddlesome barber, all strongly armed. They conducted the Moor and the water-carrier as prisoners, and were provided with the stout donkey of the latter to bear off the expected treasure. They arrived at the tower without being observed, and tying the donkey to a fig-tree, descended into the fourth vault of the tower.

The scroll was produced, the yellow waxen taper lighted, and the Moor read the form of incantation. The earth trembled as before, and the pavement opened with a thundering sound, disclosing the narrow flight of steps. The Alcalde, the *alguazil,* and the barber were struck aghast, and could not summon courage to descend. The Moor and the water-carrier entered the lower vault, and found the two Moors seated as before, silent and motionless. They removed two of the great jars, filled with golden coin and precious stones. The water-carrier bore them up one by one upon his shoulders, but though a strong-backed little man, and accustomed to carry burdens, he staggered beneath their weight, and found, when slung on each side of his donkey, they were as much as the animal could bear.

3. harpies of the law—extortioners. In Greek mythology, harpies are man-devouring monsters, half bird, half woman.

"Let us be content for the present," said the Moor; "here is as much treasure as we can carry off without being perceived, and enough to make us all wealthy to our heart's desire."

"Is there more treasure remaining behind?" demanded the Alcalde.

"The greatest prize of all," said the Moor, "a huge coffer bound with bands of steel, and filled with pearls and precious stones."

"Let us have up the coffer by all means," cried the grasping Alcalde.

"I will descend for no more," said the Moor, doggedly; "enough is enough for a reasonable man—more is superfluous."

"And I," said the water-carrier, "will bring up no further burden to break the back of my poor donkey."

Finding commands, threats, and entreaties equally vain, the Alcalde turned to his two adherents. "Aid me," said he, "to bring up the coffer, and its contents shall be divided between us." So saying, he descended the steps, followed with trembling reluctance by the *alguazil* and the barber.

No sooner did the Moor behold them fairly earthed than he extinguished the yellow taper; the pavement closed with its usual crash, and the three worthies remained buried in its womb.

He then hastened up the different flights of steps, nor stopped until in the open air. The little water-carrier followed him as fast as his short legs would permit.

"What hast thou done?" cried Peregil, as soon as he could recover breath. "The Alcalde and the other two are shut up in the vault."

"It is the will of Allah!" said the Moor, devoutly.

"And will you not release them?" demanded the Gallego.

"Allah forbid!" replied the Moor, smoothing his beard. "It is written in the book of fate that they shall remain enchanted until some future adventurer arrive to break the charm. The will of God be done!" so saying, he hurled the end of the waxen taper far among the gloomy thickets of the glen.

There was now no remedy; so the Moor and the water-carrier proceeded with the richly laden donkey toward the city, nor could honest Peregil refrain from hugging and kissing his long-eared fellow-laborer, thus restored to him from the clutches of the law; and, in fact, it is doubtful which gave the simple-hearted little man most joy at the moment, the gaining of the treasure, or the recovery of the donkey.

The two partners in good luck divided their spoil amicably and fairly, except that the Moor, who had a little taste for trinketry, made out to get into his heap the most of the pearls and precious stones and other baubles, but then he always gave the water-carrier in lieu magnificent jewels of massy gold, of five times the size, with which the latter was heartily content. They took care not to linger within reach of accidents, but made off to enjoy their wealth undisturbed in other countries. The Moor returned to Africa, to his native city of Tangiers, and the Gallego, with his wife, his children, and his donkey, made the best of his way to Portugal. Here, under the admonition and tuition of his wife, he became a personage of some consequence, for she made the worthy little man array his long body and short legs in doublet and hose, with a feather in his hat and a sword by his side, and laying aside his familiar appellation of

Peregil, assume the more sonorous title of Don Pedro Gil: his progeny grew up a thriving and merry-hearted, though short and bandy-legged generation, while Señora Gil, befringed, belaced, and betasseled from her head to her heels, with glittering rings on every finger, became a model of slattern fashion and finery.

As to the Alcalde and his adjuncts, they remained shut up under the great Tower of the Seven Floors, and there they remain spellbound at the present day. Whenever there shall be a lack in Spain of pimping barbers, sharking *alguazils,* and corrupt *alcaldes,* they may be sought after; but if they have to wait until such time for their deliverance, there is danger of their enchantment enduring until doomsday.

JAMES FENIMORE COOPER

1789-1851

I. THE SON OF THE LANDLORD (1789–1826)

1789 Born September 15, Burlington, New Jersey, the son of William and Elizabeth Fenimore Cooper.
1790 Family removed to the future village of Cooperstown, New York, living first in the "manor house" and later (1799) in Otsego Hall.
1799 Sent to Albany for tutoring with the Rev. William Ellison.
1800 September 11, death of Hannah Cooper, a favorite sister.
1802 Entered Yale College; dismissed in the summer of 1806.
1806 Articled to the captain of a merchant vessel sailing to England.
1808 Entered the United States navy as a midshipman January 1, being detailed for service on Lake Ontario.
1811 May 6, resigned from the service, having married Susan Augusta de Lancey January 1. Lived on the De Lancey estate; afterwards at Cooperstown (at Fenimore Farm).
1817 Return to the De Lancey properties near Mamaroneck, New York, living at Angevine. Embarked on various mercantile projects.
1820 Published *Precaution* in imitation of contemporary English novels.
1821 Published *The Spy,* which established his reputation.
1822 Removed to New York City and became active in the Bread and Cheese Club.
1823 Published *The Pioneers* (other Leather-stocking stories: *The Last of the Mohicans,* 1826; *The Prairie,* 1827; *The Pathfinder,* 1840; *The Deerslayer,* 1841).
1824 Published his first sea story, *The Pilot* (dated 1823).
1825 Published *Lionel Lincoln.*
1826 Sailed for Europe with his family as titular consul at Lyons.

II. NOTIONS OF A TRAVELING AMERICAN (1826–1833)

1826 July 2, landed in England, but soon went to Paris. Met Lafayette.
1828 Published *The Red Rover* and *Notions of the Americans.* Visited England, returned to Paris, and set out for Switzerland July 14. Visited Italy.
1829 Published *The Wept of Wish-ton-Wish.*
1830 Visited Germany, but returned to Paris after the Revolution of July. Beginning of the "Finance Controversy" over the relative costs of republican and monarchical government, Cooper's *Letter* being published in 1831.
1831 Published *The Water-Witch* and *The Bravo,* the latter the first of the "European" novels.
1832 Visited Switzerland and Germany. Published *The Heidenmauer.*
1833 Published *The Headsman.* Returned to New York November 5.

III. THE CONTROVERSIALIST (1833–1851)

1834 Returned to Cooperstown as a permanent residence. Beginning of critical attacks on Cooper, to which he retorted in *A Letter to His Countrymen* (1834).
1835 Published *The Monikins,* a social satire.
1836 Published *Sketches of Switzerland* (*Gleanings in Europe,* 6 vols., 1837-1838).
1837 Beginning of the "Three Mile Point" controversy and its ensuing lawsuits.
1838 Published *The American Democrat; The Chronicles of Cooperstown; Homeward Bound; Home as Found,* the reviews of which caused further lawsuits.
1839 Published *The History of the Navy of the United States of America;* controversy followed.
1840 Published *Mercedes of Castile.*
1842 Published *The Wing-and-Wing; The Two Admirals.*
1843 Published *Wyandotté; Ned Myers.*
1844 Published *Afloat and Ashore.*
1845 Began the "Rent War" novels: *Satanstoe,* 1845; *The Chainbearer,* 1845; *The Redskins,* 1846. Published *Lives of American Naval Officers.*
1847 Published *The Crater.*
1848 Published *Jack Tier; The Oak Openings.*
1849 Published *The Sea Lions.*
1850 Published *The Ways of the Hour.*
1851 Died September 14.

BIOGRAPHIES: Cooper himself did not wish for a biography. All lives are based upon W. C. Bryant, "Discourse on the Life and Genius of Cooper," New York, 1852, and Susan Fenimore Cooper, *The Cooper Gallery,* New York, 1865. T. R. Lounsbury, *James Fenimore Cooper,* Houghton Mifflin, 1883; W. B. S. Clymer, *James Fenimore Cooper,* Small, Maynard, 1900; M. E. Phillips, *James Fenimore Cooper,* Lane, 1913; H. W. Boynton, *James Fenimore Cooper,* Century, 1931; R. E. Spiller, *Fenimore Cooper, Critic of his Times,* Minton, Balch, 1931; James Grossman, *James Fenimore Cooper,* Sloane, 1949. See also *The Correspondence of James Fenimore Cooper,* Yale University Press, 1922, 2 vols. A special study of importance is Dorothy Waples, *The Whig Myth of James Fenimore Cooper,* Yale, 1938.

BIBLIOGRAPHY AND EDITIONS: R. E. Spiller and P. C. Blackburn, *A Descriptive Bibliography of the Writings of James Fenimore Cooper,* Bowker, 1934. See also *Literary History of the United States,* Vol. III, pp. 450-55. The text of Cooper has never been scientifically edited, his popularity and the volume of his writings militating against a definitive edition. See the list of *Collected Works* given in Spiller and Blackburn. The edition of 1859-61, illustrated by Darley, is attractive; the Darley illustrations have been reproduced in other books. There are, of course, innumerable reprints of the Leather-stocking tales. None of the collected editions, however, is complete, the nonfiction being difficult to find. Three modern editions should be noted, however: *Autobiography of a Pocket-Handkerchief,* ed. by W. L. Brown, The Golden-Book Press, 1897; *Gleanings in Europe,* ed. by R. E. Spiller, Oxford Press, 1928-30, 2 vols., and *The American Democrat,* ed. by H. L. Mencken, Knopf, 1931 (Americana Deserta series).

Cooper began by being widely known as the American Scott; he was next denounced as one who, having traveled in Europe, had returned to find fault with his

country; after his death the nineteenth century agreed to regard him as the prose-poet of the American frontier and the American navy; and the present century is interested in him as a social critic. These four phases of the history of his reputation point to four essential aspects of his genius. When he began to write, except for Charles Brockden Brown, the American novel was practically nonexistent; and of his contemporaries Scott had set the world ablaze. Temperamentally incapable of writing social comedy like Jane Austen, Cooper took over the technical virtues and some of the technical deficiencies of the Wizard of the North, and so created for himself a mold of fiction which he was never able to break, even when he desired to write social criticism.

His long sojourn in Europe gave him his first opportunity at a comparative view of society; and his "European" novels, though cast in the conventional mold of a Scott historical romance, are also probings into the European theories of government. In Europe he was the defender of things American; upon his return to America he began, like Henry James after him, to apply the comparative method to contemporary society, and the result was personal unhappiness. Despite the resulting unhappy controversies, he could still keep on with his work; he completed the Leather-stocking series, tried his hand at a novel about Christopher Columbus, and returned to the sea in a series of romances which are today too little known. It is, however, significant that the last important group of novels he was to write—the "Rent War" series—constitute a fictional history of an important social development in New York State. For his real theme—aside from the sea—was American history; in that field he wrote his excellent *History of the Navy,* and in that field he made his most striking success.

In the modern world Cooper is mainly read as the creator of Natty Bumppo and as the author of two or three trenchant books of social criticism. His defects as a narrative artist are patent, and have been pointed out to a wearisome extent. But the author of *The American Democrat* wrote a vigorous prose, and it is impossible that one so competent in controversy could be so bad a stylist as faultfinders make him out to be. His faults are, to a degree not always understood, the faults of his age—of that heavy, rhetorical English which was the stock in trade of the Regency and post-Regency periods. In fiction he was content with dialogue that is uncertain in handling, and with characters that are sometimes no more than puppets. But so was Scott; and like Scott, Cooper is the creator of a few unforgettable characters and of a handful of fictional masterpieces which triumph over their defects by virtue of the rich energy of their creator. Large allowances have to be made for Cooper in reading him, but these being made, he is seen to be one of the four or five masters of the American novel.

FIVE EPISODES FROM THE LIFE OF LEATHER-STOCKING

The Leather-stocking Tales are the fictional biography of an American frontiersman, but they were not originally conceived as a unit, and the order in which they should be read is not the order in which they were written. The concept of the central character, whose "real" name is Nathaniel Bumppo, and who appears as Deerslayer, Hawk-eye, Pathfinder, Leather-stocking, and the nameless trapper of *The Prairie,* varies from novel to novel, as does that of Chingachgook, his Indian companion in four of the books, who is the Indian John of *The Pioneers.* Nevertheless, there is a sufficient unity in the books to justify the presentation of a series of ex-

cerpts from the five novels which will illustrate Leather-stocking's career from his first warfare with the Indians to his death; and these excerpts are arranged in the natural chronological order of the hero's life, rather than the order in which the books were written. The editors have also summarized enough of the plots of the novels to carry the narrative forward.

THE DEERSLAYER

In *The Deerslayer* Bumppo, on the threshold of his career, comes to Otsego Lake in New York "between the years 1740 and 1745" in company with "Hurry Harry," to visit Muskrat Castle, the house which Tom Hutter has built in the middle of the lake. Bumppo also plans to meet Chingachgook, a young Mohican (Delaware) chief, who intends to visit his Indian betrothed. Hutter and Harry, because of the presence about the lake of hostile Huron Indians in the pay of the French, resolve to land secretly on the shore of the lake and get what scalps they can, leaving Hutter's two daughters, Judith and Hetty, the latter a simple-minded girl, to the care of Deerslayer. The two men are themselves captured, however. But as the whites possess a monopoly of the boats on the lake, the Indians cannot get at the "castle." It is necessary, however, to retain this monopoly, and to this task Deerslayer has set himself during the night preceding the following episode. Besides the "castle," Hutter is also the owner of a kind of house-boat, referred to in the text as the ark.

The text is that of the first American edition (1841). In the case of this chapter, as in that of others, there is a prefatory poetical quotation, which has been omitted in this version.

CHAPTER VII

DAY HAD fairly dawned before the young man, whom we have left in the situation described in the last chapter, again opened his eyes. This was no sooner done, than he started up, and looked about him with the eagerness of one who suddenly felt the importance of accurately ascertaining his precise position. His rest had been deep and undisturbed; and when he awoke, it was with a clearness of intellect, and a readiness of resources that were much needed at that particular moment. The sun had not risen, it is true, but the vault of heaven was rich with the winning softness that 'brings and shuts the day,' while the whole air was filled with the carols of birds, the hymns of the feathered tribe. These sounds first told Deerslayer the risks he ran. The air, for wind it could scarce be called, was still light, it is true, but it had increased a little in the course of the night, and as the canoes were mere feathers on the water, they had drifted twice the expected distance; and, what was still more dangerous, had approached so near the base of the mountain that here rose precipitously from the eastern shore, as to render the carols of the birds plainly audible. This was not the worst. The third canoe had taken the same direction, and was slowly drifting towards a point where it must inevitably touch, unless turned aside by a shift of wind, or human hands. In other respects, nothing presented itself to attract attention, or to awaken alarm. The castle stood on its shoal, nearly abreast of the canoes, for the drifts had amounted to miles in the course of the night, and the ark lay fastened to its piles, as both had been left so many hours before.

As a matter of course, Deerslayer's attention was first given to the canoe ahead. It was already quite near the point, and a very few strokes of the paddle sufficed to tell him that it must touch before he could possibly overtake it. Just at this moment, too, the wind inopportunely freshened, rendering the drift of the light craft much more rapid and certain. Feeling the impossibility of preventing a contact with the land, the young man wisely determined not to heat himself with unnecessary exertions; but, first looking to the priming of his piece, he proceeded slowly and warily towards the point, taking care to make a little circuit, that he might be exposed on only one side, as he approached.

The canoe adrift, being directed by no such intelligence, pursued its proper way, and grounded on a small sunken rock, at the distance of three or four yards from the shore. Just at that moment, Deerslayer had got abreast of the point, and turned the bows of his own boat to the land; first casting loose his tow, that his movements might be unencumbered. The canoe hung an instant on the rock; then it rose a hair's-breadth on an almost imperceptible swell of the water, swung round, floated clear, and reached the strand. All this the young man noted, but it neither quickened his pulses, nor hastened his hand. If any one had been lying in wait for the arrival of the waif, he must be seen, and the utmost caution in approaching the shore became indispensable; if no one was in ambush, hurry was unnecessary. The point being nearly diagonally opposite to the Indian encampment, he hoped the last, though the former was not only possible, but probable; for the savages were prompt in adopting all the expedients of their particular modes of warfare, and quite likely had many scouts searching the shores for craft to carry them off to the castle. As a glance at the lake from any height or projection, would expose the smallest object on its surface, there was little hope that either of the canoes could pass unseen; and Indian sagacity needed no instruction to tell which way a boat or a log would drift, when the direction of the wind was known. As Deerslayer drew nearer and nearer to the land, the stroke of his paddle grew slower, his eye became more watchful, and his ears and nostrils almost dilated with the effort to detect any lurking danger. 'Twas a trying moment for a novice, nor was there the encouragement which even the timid sometimes feel, when conscious of being observed and commended. He was entirely alone, thrown on his own resources, and was cheered by no friendly eye, emboldened by no encouraging voice. Notwithstanding all these circumstances, the most experienced veteran in forest warfare could not have conducted better. Equally free from recklessness and hesitation, his advance was marked by a sort of philosophical prudence, that appeared to render him superior to all motives but those which were best calculated to effect his purpose. Such was the commencement of a career in forest exploits, that afterwards rendered this man, in his way, and under the limits of his habits and opportunities, as renowned as many a hero whose name has adorned the pages of works more celebrated than legends simple as ours can ever become.

When about a hundred yards from the shore, Deerslayer rose in the canoe,

1-2. **canoe ahead**—a canoe which had been recovered from its hiding-place in the woods, and set adrift to prevent its falling into the hands of the Hurons. When the chapter opens, Deerslayer is in a second canoe, which is towing still a third.

gave three or four vigorous strokes with the paddle, sufficient of themselves to impel the bark to land, and then quickly laying aside the instrument of labour, he seized that of war. He was in the very act of raising the rifle, when a sharp report was followed by the buzz of a bullet that passed so near his body, as to cause him involuntarily to start. The next instant Deerslayer staggered, and fell his whole length in the bottom of the canoe. A yell—it came from a single voice—followed, and an Indian leaped from the bushes upon the open area of the point, bounding towards the canoe. This was the moment the young man desired. He rose on the instant, and levelled his own rifle at his uncovered foe; but his finger hesitated about pulling the trigger on one whom he held at such a disadvantage. This little delay, probably, saved the life of the Indian, who bounded back into the cover as swiftly as he had broken out of it. In the meantime Deerslayer had been swiftly approaching the land, and his own canoe reached the point just as his enemy disappeared. As its movements had not been directed, it touched the shore a few yards from the other boat; and though the rifle of his foe had to be loaded, there was not time to secure his prize, and to carry it beyond danger, before he would be exposed to another shot. Under the circumstances, therefore, he did not pause an instant, but dashed into the woods and sought a cover.

On the immediate point there was a small open area, partly in native grass, and partly beach, but a dense fringe of bushes lined its upper side. This narrow belt of dwarf vegetation passed, one issued immediately into the high and gloomy vaults of the forest. The land was tolerably level for a few hundred feet, and then it rose precipitously in a mountain-side. The trees were tall, large, and so free from under-brush, that they resembled vast columns, irregularly scattered, upholding a dome of leaves. Although they stood tolerably close together, for their ages and size, the eye could penetrate to considerable distances; and bodies of men, even, might have engaged beneath their cover, with concert and intelligence.

Deerslayer knew that his adversary must be employed in re-loading, unless he had fled. The former proved to be the case, for the young man had no sooner placed himself behind a tree, than he caught a glimpse of the arm of the Indian, his body being concealed by an oak, in the very act of forcing the leathered bullet home. Nothing would have been easier than to spring forward, and decide the affair by a close assault on his unprepared foe; but every feeling of Deerslayer revolted at such a step, although his own life had just been attempted from a cover. He was yet unpractised in the ruthless expedients of savage warfare, of which he knew nothing except by tradition and theory, and it struck him as an unfair advantage to assail an unarmed foe. His colour had heightened, his eye frowned, his lips were compressed, and all his energies were collected and ready; but instead of advancing to fire, he dropped his rifle to the usual position of a sportsman in readiness to catch his aim, and muttered to himself, unconscious that he was speaking—

"No, no—that may be red-skin warfare, but it's not a Christian's gifts. Let the miscreant charge, and then we'll take it out like men; for the canoe he *must* not, and *shall* not have. No, no; let him have time to load, and God will take care of the right!"

All this time the Indian had been so intent on his own movements, that he was even ignorant that his enemy was in the wood. His only apprehension was, that the canoe would be recovered and carried away, before he might be in readiness to prevent it. He had sought the cover from habit, but was within a few feet of the fringe of bushes, and could be at the margin of the forest, in readiness to fire, in a moment. The distance between him and his enemy was about fifty yards, and the trees were so arranged by nature that the line of sight was not interrupted, except by the particular trees behind which each party stood.

His rifle was no sooner loaded, than the savage glanced around him, and advanced incautiously as regarded the real, but stealthily as respected the fancied position of his enemy, until he was fairly exposed. Then Deerslayer stepped from behind his own cover, and hailed him.

"This-a-way, red-skin; this-a-way, if you're looking for me," he called out. "I'm young in war, but not so young as to stand on an open beach to be shot down like an owl, by day-light. It rests on yourself whether it's peace, or war, atween us; for my gifts are white gifts, and I'm not one of them that thinks it valiant to slay human mortals, singly, in the woods."

The savage was a good deal startled by this sudden discovery of the danger he ran. He had a little knowledge of English, however, and caught the drift of the other's meaning. He was also too well schooled to betray alarm, but, dropping the butt of his rifle to the earth, with an air of confidence, he made a gesture of lofty courtesy. All this was done with the ease and self-possession of one accustomed to consider no man his superior. In the midst of this consummate acting, however, the volcano that raged within caused his eyes to glare, and his nostrils to dilate, like those of some wild beast that is suddenly prevented from taking the fatal leap.

"Two canoe," he said, in the deep guttural tones of his race, holding up the number of fingers he mentioned, by way of preventing mistakes; "one for you—one for me."

"No, no, Mingo, that will never do. You own neither; and neither shall you have, as long as I can prevent it. I know it's war atween your people and mine, but that's no reason why human mortals should slay each other, like savage creatur's that meet in the woods; go your way, then, and leave me to go mine. The world is large enough for us both; and when we meet fairly in battle, why, the Lord will order the fate of each of us."

"Good!" exclaimed the Indian; "my brother missionary—great talk; all about Manitou."

"Not so—not so, warrior. I'm not good enough for the Moravians, and am too good for most of the other vagabonds that preach about in the woods. No, no, I'm only a hunter, as yet, though afore the peace is made, 'tis like enough there'll be occasion to strike a blow at some of your people. Still, I wish it to be done in fair fight, and not in a quarrel about the ownership of a miserable canoe."

"Good! My brother very young—but he very wise. Little warrior—great talker. Chief, sometimes, in council."

"I don't know this, nor do I say it, Indian," returned Deerslayer, colouring a

little at the ill-concealed sarcasm of the other's manner; "I look forward to a life in the woods, and I only hope it may be a peaceable one. All young men must go on the war-path, when there's occasion, but war isn't needfully massacre. I've seen enough of the last, this very night, to know that Providence frowns on it; and I now invite you to go your own way, while I go mine; and hope that we may part fri'nds."

"Good! My brother has two scalp—grey hair under t'other. Old wisdom—young tongue."

Here the savage advanced with confidence, his hand extended, his face smiling, and his whole bearing denoting amity and respect. Deerslayer met his offered friendship in a proper spirit, and they shook hands cordially, each endeavouring to assure the other of his sincerity and desire to be at peace.

"All have his own," said the Indian; "my canoe, mine; your canoe, your'n. Go look; if your'n, you keep; if mine, I keep."

"That's just, red-skin; though you must be wrong in thinking the canoe your property. Howsoever, seein' is believin', and we'll go down to the shore, where you may look with your own eyes; for it's likely you'll object to trustin' altogether to mine."

The Indian uttered his favourite exclamation of "good!" and then they walked, side by side, towards the shore. There was no apparent distrust in the manner of either, the Indian moving in advance, as if he wished to show his companion that he did not fear turning his back to him. As they reached the open ground, the former pointed towards Deerslayer's boat, and said emphatically—

"No mine—pale-face canoe. *This* red-man's. No want other man's canoe—want his own."

"You're wrong, red-skin, you're altogether wrong. This canoe was left in old Hutter's keeping, and is his'n, according to all law, red or white, till its owner comes to claim it. Here's the seats and the stitching of the bark to speak for themselves. No man ever know'd an Indian to turn off such work."

"Good! My brother little old—big wisdom. Indian no make him. White man's work."

"I'm glad you think so, for holding out to the contrary might have made ill blood atween us; every one having a right to take possession of his own. I'll just shove the canoe out of reach of dispute, at once, as the quickest way of settling difficulties."

While Deerslayer was speaking, he put a foot against the end of the light boat, and giving a vigorous shove, he sent it out into the lake a hundred feet or more, where, taking the true current, it would necessarily float past the point, and be in no further danger of coming ashore. The savage started at this ready and decided expedient, and his companion saw that he cast a hurried and fierce glance at his own canoe, or that which contained the paddles. The change of manner, however, was but momentary, and then the Iroquois resumed his air of friendliness, and a smile of satisfaction.

"Good!" he repeated, with stronger emphasis than ever. "Young head, old mind. Know how to settle quarrel. Farewell, brother. He go to house in water —muskrat house—Indian go to camp; tell chiefs no find canoe."

Deerslayer was not sorry to hear this proposal, for he felt anxious to join the females, and he took the offered hand of the Indian very willingly. The parting words were friendly; and, while the red-man walked calmly towards the wood, with the rifle in the hollow of his arm, without once looking back in uneasiness or distrust, the white man moved towards the remaining canoe, carrying his piece in the same pacific manner, it is true, but keeping his eyes fastened on the movements of the other. This distrust, however, seemed to be altogether uncalled for, and, as if ashamed to have entertained it, the young man averted his look, and stepped carelessly up to his boat. Here he began to push the canoe from the shore, and to make his other preparations for departing. He might have been thus employed a minute, when, happening to turn his face towards the land, his quick and certain eye told him, at a glance, the imminent jeopardy in which his life was placed. The black, ferocious eyes of the savage were glancing on him, like those of the crouching tiger, through a small opening in the bushes, and the muzzle of his rifle seemed already to be opening in a line with his own body.

Then, indeed, the long practice of Deerslayer, as a hunter, did him good service. Accustomed to fire with the deer on the bound, and often when the precise position of the animal's body had in a manner to be guessed at, he used the same expedients here. To cock and poise his rifle were the acts of a single moment, and a single motion; then, aiming almost without sighting, he fired into the bushes where he knew a body ought to be, in order to sustain the appalling countenance, which alone was visible. There was not time to raise the piece any higher, or to take a more deliberate aim. So rapid were his movements, that both parties discharged their pieces at the same instant, the concussions mingling in one report. The mountains, indeed, gave back but a single echo. Deerslayer dropped his piece, and stood, with head erect, steady as one of the pines in the calm of a June morning, watching the result; while the savage gave the yell that has become historical for its appalling influence, leaped through the bushes, and came bounding across the open ground, flourishing a tomahawk. Still Deerslayer moved not, but stood with his unloaded rifle fallen against his shoulders, while, with a hunter's habits, his hands were mechanically feeling for the powder-horn and charger. When about forty feet from his enemy, the savage hurled his keen weapon; but it was with an eye so vacant, and a hand so unsteady and feeble, that the young man caught it by the handle, as it was flying past him. At that instant the Indian staggered and fell his whole length on the ground.

"I know'd it—I know'd it!" exclaimed Deerslayer, who was already preparing to force a fresh bullet into his rifle; "I know'd it must come to this, as soon as I had got the range from the creatur's eyes. A man sights suddenly, and fires quick, when his own life's in danger; yes, I know'd it would come to this. I was about the hundredth part of a second too quick for him, or it might have been bad for me! The riptyle's bullet has just grazed my side—but, say what you will, for or ag'in 'em, a red-skin is by no means as sartain with powder and ball as a white man. Their gifts don't seem to lie that-a-way. Even Chingachgook, great as he is in other matters, is'nt downright deadly with the rifle."

By this time the piece was reloaded, and Deerslayer, after tossing the tomahawk into the canoe, advanced to his victim, and stood over him, leaning on his rifle, in melancholy attention. It was the first instance in which he had seen a man fall in battle—it was the first fellow-creature against whom he had ever seriously raised his own hand. The sensations were novel; and regret, with the freshness of our better feelings, mingled with his triumph. The Indian was not dead, though shot directly through the body. He lay on his back motionless, but his eyes, now full of consciousness, watched each action of his victor—as the fallen bird regards the fowler—jealous of every movement. The man probably expected the fatal blow which was to precede the loss of his scalp; or, perhaps he anticipated that this latter act of cruelty would precede his death. Deerslayer read his thoughts; and he found a melancholy satisfaction in relieving the apprehensions of the helpless savage.

"No, no, red-skin," he said; "you've nothing more to fear from me. I am of a Christian stock, and scalping is not of my gifts. I'll just make sartain of your rifle, and then come back and do you what sarvice I can. Though here I can't stay much longer, as the crack of three rifles will be apt to bring some of your devils down upon me."

The close of this was said in a sort of a soliloquy, as the young man went in quest of the fallen rifle. The piece was found where its owner had dropped it, and was immediately put into the canoe. Laying his own rifle at its side, Deerslayer then returned and stood over the Indian again.

"All inmity atween you and me's at an ind, red-skin," he said; "and you may set your heart at rest, on the score of the scalp, or any further injury. My gifts are white, as I've told you; and I hope my conduct will be white also!"

Could looks have conveyed all they meant, it is probable Deerslayer's innocent vanity, on the subject of colour would have been rebuked a little; but he comprehended the gratitude that was expressed in the eyes of the dying savage, without in the least detecting the bitter sarcasm that struggled with the better feeling.

"Water!" ejaculated the thirsty and unfortunate creature; "give poor Indian water."

"Ay, water you shall have, if you drink the lake dry. I'll just carry you down to it, that you may take your fill. This is the way, they tell me, with all wounded people—water is their greatest comfort and delight."

So saying, Deerslayer raised the Indian in his arms, and carried him to the lake. Here he first helped him to take an attitude in which he could appease his burning thirst; after which he seated himself on a stone, and took the head of his wounded adversary in his own lap, and endeavoured to soothe his anguish, in the best manner he could.

"It would be sinful in me to tell you your time hadn't come, warrior," he commenced, "and therefore I'll not say it. You've passed the middle age, already, and, considerin' the sort of lives ye lead, your days have been pretty well filled. The principal thing, now, is to look forward to what comes next. Neither red-skin nor pale-face, on the whole, calculates much on sleepin' for ever; but both expect to live in another world. Each has his gifts, and will

be judged by 'em, and, I suppose, you've thought these matters over enough, not to stand in need of sarmons, when the trial comes. You'll find your happy hunting-grounds, if you've been a just Indian; if an unjust, you'll meet your desarts in another way. I've my own idees about these things; but you're too old and exper'enced to need any explanations from one as young as I."

"Good!" ejaculated the Indian, whose voice retained its depth even as life ebbed away; "young head—old wisdom!"

"It's sometimes a consolation, when the ind comes, to know that them we've harmed, or *tried* to harm, forgive us. I suppose natur' seeks this relief, by way of getting a pardon on 'arth; as we never can know whether He pardons, who is all in all, till judgment itself comes. It's soothing to know that *any* pardon, at such times; and that, I conclude, is the secret. Now, as for myself, I overlook altogether your designs ag'in my life; first, because no harm came of 'em; next, because it's your gifts, and natur', and trainin', and I ought not to have trusted you at all; and, finally and chiefly, because I can bear no ill-will to a dying man, whether heathen or Christian. So put your heart at ease, so far as I'm consarned; you know best what other matters ought to trouble you, or what ought to give you satisfaction, in so trying a moment."

It is probable that the Indian had some of the fearful glimpses of the unknown state of being which God, in mercy, seems, at times, to afford to all the human race; but they were necessarily in conformity with his habits and prejudices. Like most of his people, and like too many of our own, he thought more of dying in a way to gain applause among those he left, than to secure a better state of existence, hereafter. While Deerslayer was speaking, his mind was a little bewildered, though he felt that the intention was good; and when he had done, a regret passed over his spirit that none of his own tribe were present to witness his stoicism, under extreme bodily suffering, and the firmness with which he met his end. With the high, innate courtesy that so often distinguishes the Indian warrior, before he becomes corrupted by too much intercourse with the worst class of the white men, he endeavoured to express his thankfulness for the other's good intentions, and to let him understand that they were appreciated.

"Good!" he repeated, for this was an English word much used by the savages—"good—young head; young *heart,* too. *Old* heart tough; no shed tear. Hear Indian when he die, and no want to lie—what he call him?"

"Deerslayer is the name I bear now, though the Delawares have said that when I get back from this war-path I shall have a more manly title, provided I can 'arn one."

"That good name for boy—poor name for warrior. He get better quick. No fear *there*"—the savage had strength sufficient, under the strong excitement he felt, to raise a hand and tap the young man on his breast—"eye sartain—finger lightening—aim, death—great warrior, soon. No Deerslayer—Hawkeye—Hawkeye—Hawkeye. Shake hand."

Deerslayer—or Hawkeye, as the youth was then first named, for in after years he bore the appellation throughout all that region—Deerslayer took the hand of the savage, whose last breath was drawn in that attitude, gazing in

admiration at the countenance of a stranger, who had shown so much readiness, skill and firmness, in a scene that was equally trying and novel. When the reader remembers it is the highest gratification an Indian can receive to see his enemy betray weakness, he will be better able to appreciate the conduct which had extorted so great a concession, at such a moment.

"His spirit has fled!" said Deerslayer, in a suppressed, melancholy voice. "Ah's me!—Well, to this we must all come, sooner or later; and he is happiest, let his skin be of what colour it may, who is best fitted to meet it. Here lies the body of, no doubt, a brave warrior, and the soul is already flying towards its heaven, or hell, whether that be a happy hunting-ground, a place scant of game; regions of glory, according to the Moravian doctrine, or flames of fire! So it happens, too, as regards other matters! Here have old Hutter and Hurry Harry got themselves into difficulty, if they havn't got themselves into torment and death, and all for a bounty that luck offers to me in what many would think a lawful and suitable manner. But not a farthing of such money shall cross my hand. White I was born, and white will I die; clinging to colour to the last, even though the King's Majesty, his governors, and all his councils, both at home and in the Colonies, forget from what they come, and where they hope to go, and all for a little advantage in warfare. No, no—warrior; hand of mine shall never molest your scalp, and so your soul may rest in peace on the p'int of making a decent appearance, when the body comes to join it, in your own land of spirits."

Deerslayer arose as soon as he had spoken. Then he placed the body of the dead man in a sitting posture, with its back against the little rock, taking the necessary care to prevent it from falling, or in any way settling into an attitude that might be thought unseemly by the sensitive, though wild notions of a savage. When this duty was performed, the young man stood gazing at the grim countenance of his fallen foe, in a sort of melancholy abstraction. As was his practice, however, a habit gained by living so much alone in the forest, he then began again to give utterance to his thoughts and feelings aloud.

"I didn't wish your life, red-skin," he said, "but you left me no choice atween killing, or being killed. Each party acted according to his gifts, I suppose, and blame can light on neither. You were treacherous, according to your natur' in war, and I was a little oversightful, as I'm apt to be in trusting others. Well, this is my first battle with a human mortal, though it's not likely to be the last. I have fou't most of the creatur's of the forest, such as bears, wolves, painters and catamounts, but this is the beginning with the red-skins. If I was Indian born, now, I might tell of this, or carry in the scalp, and boast of the expl'ite afore the whole tribe; or, if my inimy had only been even a bear, 'twould have been nat'ral and proper to let every body know what had happened; but I don't well see how I'm to let even Chingachgook into this secret, so long as it can be done only by boasting with a white tongue. And why should I wish to boast of it, after all? It's slaying a human, although he was a savage; and how do I know that he was a just Indian; and that he has not been taken away suddenly, to any thing but happy hunting-grounds. When it's onsartain whether good or evil has been done, the wisest way is

not to be boastful—still, I *should* like Chingachgook to know that I haven't discredited the Delawares, or my training!" . . .

THE LAST OF THE MOHICANS

In *The Last of the Mohicans* the capture of the British Fort William Henry on Lake George by the French General Montcalm in 1757 is the historical fact around which the tale revolves. Bumppo is now known as Hawk-eye. In the opening chapters he succeeds in getting a party of whites into the fort before it is besieged. This party is composed of Alice and Cora Munro, daughters of the commander of the fort, Major Duncan Heyward, the lover of Alice, and David Gamut, a wandering New England singing teacher. In this enterprise Hawk-eye is aided by Chingachgook and his son Uncas, and is impeded by hostile Huron Indians, whose leader is Magua, also known as Le Renard Subtil (The Cunning Fox). After the capture of Fort William Henry and the subsequent massacre of numbers of the besieged by the Indians, Magua takes Alice and Cora prisoner. The friends and relatives of the two women follow upon their trail to rescue them; and after many startling adventures, Alice is released through the intervention of a tribe of Delaware Indians with whom Uncas claims kin. Indian justice, however, permits Magua to depart unharmed with Cora; but immediately he is out of the Delaware village, the Delawares pursue him under the leadership of Uncas and Hawk-eye, accompanied by Heyward and Chingachgook. The terrain on which the events of the following selection take place is needlessly complicated in the description; and it is sufficient to understand that a surprise attack on the Hurons by the several bands of Delaware Indians is in progress.

The text is that of the first American edition (1826), in two volumes. The present chapter is XV of the second volume but in the usual edition of the book has its present number.

CHAPTER XXXII

During the time Uncas was making this disposition of his forces, the woods were as still, and, with the exception of those who had met in council, apparently, as much untenanted, as when they came fresh from the hands of their Almighty Creator. The eye could range, in every direction, through the long and shadowed vistas of the trees; but no where was any object to be seen, that did not properly belong to the peaceful and slumbering scenery. Here and there a bird was heard fluttering among the branches of the beeches, and occasionally a squirrel dropped a nut, drawing the startled looks of the party, for a moment, to the place; but the instant the casual interruption ceased, the passing air was heard murmuring above their heads, along that verdant and undulating surface of forest, which spread itself unbroken, unless by stream or lake, over such a vast region of country. Across the tract of wilderness, which lay between the Delawares and the village of their enemies, it seemed as if the foot of man had never trodden, so breathing and deep was the silence in which it lay. But Hawk-eye, whose duty led him foremost in the adventure, knew the character of those with whom he was about to contend, too well, to trust the treacherous quiet.

When he saw his little band again collected, the scout threw "kill-deer" into

the hollow of his arm, and making a silent signal that he would be followed, he led them many rods towards the rear, into the bed of a little brook, which they had crossed in advancing. Here he halted, and after waiting for the whole of his grave and attentive warriors to close about him, he spoke in Delaware, demanding—

"Do any of my young men know whither this run will lead us?"

A Delaware stretched forth a hand, with the two fingers separated, and indicating the manner in which they were joined at the root, he answered—

"Before the sun could go his own length, the little water will be in the big." Then he added, pointing in the direction of the place he mentioned, "the two make enough for the beavers."

"I thought as much," returned the scout, glancing his eye upward at the opening in the tree-tops, "from the course it takes, and the bearings of the mountains. Men, we will keep within the cover of its banks till we scent the Hurons."

His companions gave the usual brief exclamation of assent, but perceiving that their leader was about to lead the way, in person, one or two made signs that all was not as it should be. Hawk-eye, who comprehended their meaning glances, turned, and perceived that his party had been followed thus far by the singing-master.

"Do you know, friend," asked the scout gravely, and perhaps with a little of the pride of conscious deserving in his manner, "that this is a band of rangers, chosen for the most desperate service, and put under the command of one, who, though another might say it with a better face, will not be apt to leave them idle. It may not be five, it cannot be thirty, minutes before we tread on the body of a Huron, living or dead."

"Though not admonished of your intentions in words," returned David, whose face was a little flushed, and whose ordinarily quiet and unmeaning eyes glimmered with an expression of unusual fire, "your men have reminded me of the children of Jacob going out to battle against the Shechemites, for wickedly aspiring to wedlock with a woman of a race that was favoured of the Lord. Now, I have journeyed far, and sojourned much, in good and evil, with the maiden ye seek; and, though not a man of war, with my loins girded and my sword sharpened, yet would I gladly strike a blow in her behalf."

The scout hesitated, as if weighing the chances of such a strange enlistment in his mind before he answered—

"You know not the use of any we'pon. You carry no rifle; and believe me, what the Mingoes take they will freely give again."

"Though not a vaunting and bloodily disposed Goliah," returned David, drawing a sling from beneath his parti-coloured and uncouth attire, "I have not forgotten the example of the Jewish boy. With this ancient instrument of war have I practised much in my youth, and peradventure the skill has not entirely departed from me."

"Ay!" said Hawk-eye, considering the deer-skin thong and apron, with a cold and discouraging eye; "the thing might do its work among arrows, or

30. **Jacob . . . Shechemites**—*Cf.* Gen. 34. 38. **Mingoes**—the Hurons. 39. **Goliah**—See the story of David and Goliath, I Sam. 17.

even knives; but these Mengwe have been furnished by the Frenchers with a good grooved barrel a man. However, it seems to be your gift to go unharmed amid a fire; and as you have hitherto been favoured— Major, you have left your rifle at a cock; a single shot before the time would be just twenty scalps lost to no purpose—Singer, you can follow; we may find use for you in the shoutings."

"I thank you, friend," returned David, supplying himself, like his royal namesake, from among the pebbles of the brook, "though not given to the desire to kill, had you sent me away, my spirit would have been troubled."

"Remember," added the scout, tapping his own head significantly on that spot where Gamut was yet sore, "we come to fight, and not to musickate. Until the general whoop is given, nothing speaks but the rifle."

David nodded, as much as to signify his acquiescence with the terms, and then Hawk-eye, casting another observant glance over his followers, made the signal to proceed.

This route lay, for the distance of a mile, along the bed of the water course. Though protected from any great danger of observation by the precipitous banks, and the thick shrubbery which skirted the stream, for the whole distance, no precaution, known to an Indian attack, was neglected. A warrior rather crawled than walked on each flank, so as to catch occasional glimpses into the forest; and every few minutes the band came to a halt, and listened for hostile sounds, with an acuteness of organs, that would be scarcely conceivable to a man in a less natural state. Their march was, however, unmolested, and they reached the point where the lesser stream was lost in the greater, without the smallest evidence that their progress had been noted. Here the scout again halted, to consult the signs of the forest.

"We are likely to have a good day for a fight," he said, in English, addressing Heyward, and glancing his eye upwards at the clouds, which began to move in broad sheets across the firmament; "a bright sun and a glittering barrel are no friends to true sight. Everything is favourable; they have the wind, which will bring down their noises and their smoke too, no little matter in itself; whereas, with us, it will be first a shot and then a clear view. But here is an end of our cover; the beavers have had the range of this stream for hundreds of years, and what atween their food and their dams, there is, as you see, many a girdled stub, but few living trees."

Hawk-eye had, in truth, in these few words, given no bad description of the prospect that now lay in their front. The brook was irregular in its width, sometimes shooting through narrow fissures in the rocks, and at others, spreading over acres of bottom land, forming little areas that might be termed ponds. Every where along its banks were the mouldering relics of dead trees, in all the stages of decay, from those that groaned on their tottering trunks, to such as had recently been robbed of those rugged coats that so mysteriously contain their principle of life. A few long, low, and moss covered piles were scattered among them, like the memorials of a former and long departed generation.

All these minute particulars were now noted by the scout, with a gravity

1. **Mengwe**—the same as Mingoes. 3. **a**—omitted in later editions. 3. **Major**—that is, Heyward, a major in the Royal Americans.

and interest, that they probably had never before attracted. He knew that the Huron encampment lay a short half mile up the brook, and, with the characteristic anxiety of one who dreaded a hidden danger, he was greatly troubled at not finding the smallest trace of the presence of his enemy. Once or twice he felt induced to give the order for a rush, and to attempt the village by surprise; but his experience quickly admonished him of the danger of so useless an experiment. Then he listened intently, and with painful uncertainty, for the sounds of hostility in the quarter where Uncas was left; but nothing was audible except the sighing of the wind, that began to sweep over the bosom of the forest in gusts, which threatened a tempest. At length, yielding rather to his unusual impatience, than taking counsel from his knowledge, he determined to bring matters to an issue, by unmasking his force, and proceeding cautiously, but steadily, up the stream.

The scout had stood, while making his observations, sheltered by a brake, and his companions still lay in the bed of the ravine, through which the smaller stream debouched; but on hearing his low, though intelligible signal, the whole party stole up the bank, like so many dark spectres, and silently arranged themselves around him. Pointing in the direction he wished to proceed, Hawk-eye advanced, the band breaking off in single files, and following so accurately in his footsteps, as to leave, if we except Heyward and David, the trail of but a single man.

The party was, however, scarcely uncovered, before a volley from a dozen rifles was heard in their rear, and a Delaware leaping high into the air, like a wounded deer, feel at his whole length, perfectly dead.

"Ah! I feared some deviltry like this!" exclaimed the scout, in English; adding, with the quickness of thought, in his adopted tongue, "to cover[,] men, and charge!"

The band dispersed at the word, and before Heyward had well recovered from his surprise, he found himself standing alone with David. Luckily, the Hurons had already fallen back, and he was safe from their fire. But this state of things was evidently to be of short continuance, for the scout set the example of pressing on their retreat, by discharging his rifle, and darting from tree to tree, as his enemy slowly yielded ground.

It would seem that the assault had been made by a very small party of the Hurons, which, however, continued to increase in numbers, as it retired on its friends, until the return fire was very nearly, if not quite, equal to that maintained by the advancing Delawares. Heyward threw himself among the combatants, and imitating the necessary caution of his companions, he supported quick discharges with his own rifle. The contest now grew warm and stationary. Few were injured, as both parties kept their bodies as much protected as possible by the trees; never, indeed, exposing any part of their persons, except in the act of taking aim. But the chances were gradually growing unfavourable to Hawk-eye and his band. The quick sighted scout perceived all his danger, without knowing how to remedy it. He saw it was more dangerous to retreat than to maintain his ground; while he found his enemy throwing out men on his flank, which rendered the task of keeping themselves covered so very difficult to the Delawares, as nearly to silence their fire.

At this embarrassing moment, when they began to think the whole of the hostile tribe was gradually encircling them, to their destruction, they heard the yell of combatants, and the rattling of arms, echoing under the arches of the wood, at the place where Uncas was posted; a bottom which, in a manner, lay beneath the ground on which Hawk-eye and his party were contending.

The effects of this attack were instantaneous, and to the scout and his friends greatly relieving. It would seem that, while his own surprise had been anticipated, and had consequently failed, the enemy, in their turn, having been deceived in its object and in his numbers, had left too small a force to resist the impetuous onset of the young Mohican. This fact was doubly apparent, by the rapid manner in which the battle in the forest rolled upward towards the village, and by an instant falling off in the number of their assailants, who rushed to assist in maintaining their front, and, as it now proved to be, their principal point of defence.

Animating his followers by his voice, and his own example, Hawk-eye then gave the word to bear down upon their foes. The charge, in that rude species of warfare, consisted merely in pushing from cover to cover, nigher to the enemy; and in this manoeuvre he was instantly and successfully obeyed. The Hurons were compelled to withdraw, and the scene of the contest rapidly changed from the more open ground on which it had commenced, to a spot where the assailed found a thicket to rest upon. Here the struggle was protracted, arduous, and, seemingly, of doubtful issue. The Delawares, though none of them fell, beginning to bleed freely, in consequence of the disadvantage at which they were held.

In this crisis, Hawk-eye found means to get behind the same tree, as that which served for a cover to Heyward; most of his own combatants being within call, a little on his right, where they maintained rapid, though fruitless, discharges on their sheltered enemies.

"You are a young man, major," said the scout, dropping the butt of 'killdeer' to the earth, and leaning on the barrel, a little fatigued with his previous industry; "and it may be your gift to lead armies, at some future day, ag'in these imps, the Mingoes. You may here see the philosophy of an Indian fight. It consists, mainly, in a ready hand, a quick eye, and a good cover. Now, if you had a company of the Royal Americans here, in what manner would you set them to work in this business?"

"The bayonet would make a road."

"Ay, there is white reason in what you say; but a man must ask himself, in this wilderness, how many lives he can spare. No—horse," continued the scout, shaking his head, like one who mused; "horse, I am ashamed to say, must, sooner or later, decide these skrimmages. The brutes are better than men, and to horse must we come at last! Put a shodden hoof on the moccasin of a red-skin, and if his rifle be once emptied, he will never stop to load it again."

"This is a subject that might better be discussed another time," returned Heyward; "shall we charge?"

"I see no contradiction to the gifts of any man, in passing his breathing

spells in useful reflections," the scout mildly replied. "As to a rush, I little relish such a measure, for a scalp or two must be thrown away in the attempt. And yet," he added, bending his head aside, to catch the sounds of the distant combat, "if we are to be of use to Uncas, these knaves in our front must be now gotten rid of!"

Then turning, with a prompt and decided air, from Duncan, he called aloud to his Indians, in their own language. His words were answered by a shout, and at a given signal, each warrior made a swift movement around his particular tree. The sight of so many dark bodies, glancing before their eyes at the same instant, drew a hasty, and, consequently, an ineffectual fire from the Hurons. Then, without stopping to breathe, the Delawares leaped, in long bounds, towards the wood, like so many panthers springing upon their prey. Hawk-eye was in front, brandishing his terrible rifle, and animating his followers by his example. A few of the older and more cunning Hurons, who had not been deceived by the artifice which had been practised to draw their fire, now made a close and deadly discharge of their pieces, and justified the apprehensions of the scout, by felling three of his foremost warriors. But the shock was insufficient to repel the impetus of the charge. The Delawares broke into the cover, with the ferocity of their natures, and swept away every trace of resistance by the fury of the onset.

The combat endured only for an instant, hand to hand, and then the assailed yielded ground rapidly, until they reached the opposite margin of the thicket, where they clung to their cover, with the sort of obstinacy that is so often witnessed in hunted brutes. At this critical moment, when the success of the struggle was again becoming doubtful, the crack of a rifle was heard behind the Hurons, and a bullet came whizzing from among some beaver lodges, which were situated in the clearing, in their rear, and was followed by the fierce and appalling yell of the war-whoop.

"There speaks the Sagamore!" shouted Hawk-eye, answering the cry with his own stentorian voice; "we have them now in face and back!"

The effect on the Hurons was instantaneous. Discouraged by so unexpected an assault, from a quarter that left them no opportunity for cover, their warriors uttered a common yell of disappointment and despair, and breaking off in a body, they spread themselves across the opening, heedless of every other consideration but flight. Many fell, in making the experiment, under the bullets and the blows of the pursuing Delawares.

We shall not pause to detail the meeting between the scout and Chingachgook, or the more touching interview that Duncan held with the anxious father of his mistress. A few brief and hurried words served to explain the state of things to both parties; and then Hawk-eye, pointing out the Sagamore to his band, resigned the chief authority into the hands of the Mohican chief. Chingachgook assumed the station to which his birth and experience gave him so distinguished a claim, with the grave dignity that always gives force to the mandates of a native warrior. Following the footsteps of the scout, he led the party back through the thicket, his men scalping the fallen Hurons, and secret-

29. **Sagamore**—chief, that is, Chingachgook, the father of Uncas. 39. **father**—that is, Colonel Munro.

ing the bodies of their own dead as they proceeded, until they gained a point where the former was content to make a halt.

The warriors who had breathed themselves so freely in the preceding struggle, were now posted on a bit of level ground, sprinkled with trees, in sufficient numbers to conceal them. The land fell off rather precipitously in front, and beneath their eyes stretched, for several miles, a narrow, dark, and wooded vale. It was through this dense and dark forest, that Uncas was still contending with the main body of the Hurons.

The Mohican and his friends advanced to the brow of the hill, and listened, with practised ears, to the sounds of the combat. A few birds hovered over the leafy bosom of the valley, as if frightened from their secluded nests, and here and there a light vapoury cloud, which seemed already blending with the atmosphere, arose above the trees, and indicated some spot where the struggle had been more fierce and stationary than usual.

"The fight is coming up the ascent," said Duncan, pointing in the direction of a new explosion of fire-arms; "we are too much in the centre of their line to be effective."

"They will incline into the hollow, where the cover is thicker," said the scout, "and that will leave us well on their flank. Go, Sagamore; you will hardly be in time to give the whoop, and lead on the young men. I will fight this skrimmage with warriors of my own colour! You know me, Mohican; not a Huron of them all shall cross the swell, into your rear, without the notice of 'kill-deer.' "

The Indian chief paused another moment to consider the signs of the contest, which was now rolling rapidly up the ascent, a certain evidence that the Delawares triumphed; nor did he actually quit the place, until admonished of the proximity of his friends, as well as enemies, by the bullets of the former, which began to patter among the dried leaves on the ground, like the bits of falling hail which precede the bursting of the tempest. Hawk-eye and his three companions withdrew a few paces to a sheltered spot, and awaited the issue with that sort of calmness that nothing but great practice could impart, in such a scene.

It was not long before the reports of the rifles began to lose the echoes of the woods, and to sound like weapons discharged in the open air. Then a warrior appeared, here and there, driven to the skirts of the forest, and rallying as he entered the clearing, as at the place where the final stand was to be made. These were soon joined by others, until a long line of swarthy figures was to be seen clinging to the cover, with the obstinacy of desperation. Heyward began to grow impatient, and turned his eyes anxiously in the direction of Chingachgook. The chief was seated on a rock, with nothing visible but his calm visage, considering the spectacle with an eye as deliberate, as if he were posted there merely to view the struggle.

"The time is come for the Delaware to strike!" said Duncan.

"Not so, not so," returned the scout; "when he scents his friends, he will let them know that he is here. See, see; the knaves are getting in that clump of pines, like bees settling after their flight. By the Lord, a squaw might put a bullet in such a knot of dark-skins!"

At that instant the whoop was given, and a dozen Hurons fell by a discharge from Chingachgook and his band. The shout that followed, was answered by a single war-cry from the forest, and a yell passed through the air, that sounded as though a thousand throats were united in a common effort. The Hurons staggered, deserting the centre of their line, and Uncas issued through the opening they left, from the forest, at the head of a hundred warriors.

Waving his hands right and left, the young chief pointed out the enemy to his followers, who instantly separated in the pursuit. The war now divided, both wings of the broken Hurons seeking protection in the woods again, hotly pressed by the victorious warriors of the Lenape. A minute might have passed, but the sounds were already receding in different directions, and gradually losing their distinctness beneath the echoing arches of the woods. One little knot of Hurons, however, had disdained to seek a cover, and were retiring, like lions at bay, slowly and sullenly up the acclivity, which Chingachgook and his band had just deserted to mingle, more closely, in the fray. Magua was conspicuous in this party, both by his fierce and savage mien, and by the air of haughty authority he yet maintained.

In his eagerness to expedite the pursuit, Uncas had left himself nearly alone; but the moment his eye caught the figure of le Subtil, every other consideration was forgotten. Raising his cry of battle, which recalled some six or seven warriors, and reckless of the disparity of their numbers, he rushed upon his enemy. Le Renard, who watched the movement, paused to receive him with secret joy. But at the moment when he thought the rashness of his impetuous young assailant had left him at his mercy, another shout was given, and la Longue Carabine was seen rushing to the rescue, attended by all his white associates. The Huron instantly turned, and commenced a rapid retreat up the ascent.

There was no time for greetings or congratulations; for Uncas, though unconscious of the presence of his friends, continued the pursuit with the velocity of the wind. In vain Hawk-eye called to him to respect the covers; the young Mohican braved the dangerous fire of his enemies, and soon compelled them to a flight as swift as his own headlong speed. It was fortunate that the race was of short continuance, and that the white men were much favoured both in the distance and the ground, by their position, or the Delaware would soon have outstripped all his companions, and fallen a victim to his own temerity. But ere such a calamity could happen, the pursuers and pursued entered the Wyandot village, within striking distance of each other.

Excited by the presence of their dwellings, and tired of the chase, the Hurons now made a stand, and fought around their council lodge with the desperation of despair. The onset and the issue were like the passage and destruction of a whirlwind. The tomahawk of Uncas, the blows of Hawk-eye, and, even, the still nervous arm of Munro, were all busy for that passing moment, and

11. **Lenape**—The Delaware (and Mohican) Indians are known as the Lenni Lenape. **25-26. la Longue Carabine**—"the Long Rifle," the French nickname for Hawk-eye. **38. Wyandot**—that is, Huron. **40-41. desperation of despair**—So the first edition. Other editions read "fury of despair."

the ground was quickly strewed with their enemies. Still Magua, though daring and much exposed, escaped from every effort against his life, with that sort of fabled protection, that was made to overlook the fortunes of favoured heroes in the legends of ancient poetry. Raising a yell that spoke volumes of anger and disappointment, the subtle chief, when he saw his comrades fallen, darted away from the place, attended by his two only surviving friends, leaving the Delawares engaged in stripping the dead of the bloody trophies of their victory.

But Uncas, who had vainly sought him in the mêlé, bounded forward in pursuit; Hawk-eye, Heyward, and David, still pressing on his footsteps. The utmost that the scout could effect, was to keep the muzzle of his rifle a little in advance of his friend, to whom, however, it answered every purpose of a charmed shield. Once Magua appeared disposed to make another and a final effort to revenge his losses; but abandoning his intentions so soon as demonstrated, he leaped into a thicket of bushes, through which he was followed by his enemies, and suddenly entered the mouth of the cave already known to the reader. Hawk-eye, who had only forborne to fire in tenderness to Uncas, raised a shout of success, and proclaimed aloud, that now they were certain of their game. The pursuers dashed into the long and narrow entrance, in time to catch a glimpse of the retreating forms of the Hurons. Their passage through the natural galleries and subterraneous apartments of the cavern was preceded by the shrieks and cries of hundreds of women and children. The place, seen by its dim and uncertain light, appeared like the shades of the infernal regions, across which unhappy ghosts and savage demons were flitting in multitudes.

Still Uncas kept his eye on Magua, as if life to him possessed but a single object. Heyward and the scout still pressed on his rear, actuated, though, possibly, in a less degree, by a common feeling. But their way was becoming intricate, in those dark and gloomy passages, and the glimpses of the retiring warriors less distinct and frequent; and for a moment the trace was believed to be lost, when a white robe was seen fluttering in the further extremity of a passage that seemed to lead up the mountain.

"'Tis Cora!" exclaimed Heyward, in a voice in which horror and delight were wildly mingled.

"Cora! Cora!" echoed Uncas, bounding forward like a deer.

"'Tis the maiden!" shouted the scout. "Courage, lady; we come—we come."

The chase was renewed with a diligence rendered tenfold encouraging by this glimpse of the captive. But the way was now rugged, broken, and, in spots, nearly impassable. Uncas abandoned his rifle, and leaped forward with headlong precipitation. Heyward rashly imitated his example, though both were, a moment afterwards, admonished of its madness, by hearing the bellowing of a piece, that the Hurons found time to discharge down the passage in the rocks, the bullet from which even gave the young Mohican a slight wound.

"We must close!" said the scout, passing his friends by a desperate leap;

9. **mêlé**—misprint for *mêlée*, conflict.

"the knaves will pick us all off at this distance; and see; they hold the maiden so as to shield themselves!"

Though his words were unheeded, or rather unheard, his example was followed by his companions, who, by incredible exertions, got near enough to the fugitives to perceive that Cora was borne along between the two warriors, while Magua prescribed the direction and manner of their flight. At this moment the forms of all four were strongly drawn against an opening in the sky, and then they disappeared. Nearly frantic with disappointment, Uncas and Heyward increased efforts that already seemed superhuman, and they issued from the cavern on the side of the mountain, in time to note the route of the pursued. The course lay up the ascent, and still continued hazardous and laborious.

Encumbered by his rifle, and, perhaps, not sustained by so deep an interest in the captive as his companions, the scout suffered the latter to precede him a little; Uncas, in his turn, taking the lead of Heyward. In this manner, rocks, precipices, and difficulties, were surmounted in an incredibly short space, that at another time, and under other circumstances, would have been deemed almost insuperable. But the impetuous young men were rewarded, by finding that, encumbered with Cora, the Hurons were rapidly losing ground in the race.

"Stay; dog of the Wyandots!" exclaimed Uncas, shaking his bright tomahawk at Magua; "a Delaware girl calls stay!"

"I will go no farther," cried Cora, stopping unexpectedly on a ledge of rocks, that overhung a deep precipice, at no great distance from the summit of the mountain. "Kill me if thou wilt, detestable Huron, I will go no farther."

The supporters of the maiden raised their ready tomahawks with the impious joy that fiends are thought to take in mischief, but Magua suddenly stayed the uplifted arms. The Huron chief, after casting the weapons he had wrested from his companions over the rock, drew his knife, and turned to his captive, with a look in which conflicting passions fiercely contended.

"Woman," he said, "choose; the wigwam or the knife of le Subtil!"

Cora regarded him not; but dropping on her knees, with a rich glow suffusing itself over her features, she raised her eyes and stretched her arms towards Heaven, saying, in a meek and yet confiding voice—

"I am thine! do with me as thou seest best!"

"Woman," repeated Magua hoarsely, and endeavouring in vain to catch a glance from her serene and beaming eye, "choose."

But Cora neither heard nor heeded his demand. The form of the Huron trembled in every fibre, and he raised his arm on high, but dropped it again, with a bewildered air, like one who doubted. Once more he struggled with himself, and lifted the keen weapon again—but just then a piercing cry was heard above them, and Uncas appeared, leaping frantically, from a fearful height, upon the ledge. Magua recoiled a step, and one of his assistants, profiting by the chance, sheathed his own knife in the bosom of the maiden.

The Huron sprang like a tiger on his offending and already retreating countryman, but the falling form of Uncas separated the unnatural combatants. Diverted from his object by this interruption, and maddened by the murder

he had just witnessed, Magua buried his weapon in the back of the prostrate Delaware, uttering an unearthly shout, as he committed the dastardly deed. But Uncas arose from the blow, as the wounded panther turns upon his foe, and struck the murderer of Cora to his feet, by an effort in which the last of his failing strength was expended. Then, with a stern and steady look, he turned to le Subtil, and indicated, by the expression of his eye, all that he would do, had not the power deserted him. The latter seized the nerveless arm of the unresisting Delaware, and passed his knife into his bosom three several times, before his victim, still keeping his gaze riveted on his enemy with a look of inextinguishable scorn, fell dead at his feet.

"Mercy! mercy! Huron," cried Heyward, from above, in tones nearly choked by horror; "give mercy, and thou shalt receive it!"

Whirling the bloody knife up at the imploring youth, the victorious Magua uttered a cry so fierce, so wild, and yet so joyous, that it conveyed the sounds of savage triumph to the ears of those who fought in the valley, a thousand feet below. He was answered by an appalling burst from the lips of the scout, whose tall person was just then seen moving swiftly towards him, along those dangerous crags, with steps as bold and reckless, as if he possessed the power to move in middle air. But when the hunter reached the scene of the ruthless massacre, the ledge was tenanted only by the dead.

His keen eye took a single look at the victims, and then shot its fierce glances over the difficulties of the ascent in his front. A form stood at the brow of the mountain, on the very edge of the giddy height, with uplifted arms, in an awful attitude of menace. Without stopping to consider his person, the rifle of Hawk-eye was raised, but a rock, which fell on the head of one of the fugitives below, exposed the indignant and glowing countenance of the honest Gamut. Then Magua issued from a crevice, and stepping with calm indifference over the body of the last of his associates, he leaped a wide fissure, and ascended the rocks at a point where the arm of David could not reach him. A single bound would carry him to the brow of the precipice, and assure his safety. Before taking the leap, however, the Huron paused, and shaking his hand at the scout, he shouted—

"The pale-faces are dogs! the Delawares women! Magua leaves them on the rocks, for the crows!"

Laughing hoarsely, he made a desperate leap, and fell short of his mark; though his hands grasped a shrub on the verge of the height. The form of Hawk-eye had crouched like a beast about to take its spring, and his frame trembled so violently with eagerness, that the muzzle of the half raised rifle played like a leaf fluttering in the wind. Without exhausting himself with fruitless efforts, the cunning Magua suffered his body to drop to the length of his arms, and found a fragment for his feet to rest on. Then summoning all his powers, he renewed the attempt, and so far succeeded, as to draw his knees on the edge of the mountain. It was now, when the body of his enemy was most collected together, that the agitated weapon of the scout was drawn to his shoulder. The surrounding rocks, themselves, were not steadier than the piece became for the single instant that it poured out its contents. The arms of the Huron relaxed, and his body fell back a little, while his knees

still kept their position. Turning a relentless look on his enemy, he shook his hand at him, in grim defiance. But his hold loosened, and his dark person was seen cutting the air with its head downwards, for a fleeting instant, until it glided past the fringe of shrubbery which clung to the mountain, in its rapid flight to destruction.

THE PATHFINDER

The events of *The Pathfinder* take place on the shores and waters of Lake Ontario and the St. Lawrence River in the year 1760. Bumppo, now known as Pathfinder, is attached to Fort Oswego. The British have established a small post among the Thousand Islands, to cut off Indian trade with the French. A small detachment is sent to relieve the post in the cutter *Scud,* commanded by Jasper Western, known as Eau-douce. In the party are Sarjeant Dunham, his daughter Mabel, her uncle, Cap, a salt-water sailor, Pathfinder, and, eventually, Chingachgook. Pathfinder and Eau-douce have already conveyed Mabel and Cap through various perils, and suspect Arrowhead, a Tuscarora Indian, of treachery. Arrowhead has a wife, Dew-of-June. During the absence of part of the garrison, the British outpost is surprised and massacred, but Mabel is saved through the warnings of Dew-of-June. In the resulting battles for the recapture of the place, Mabel's father is killed, but not before he has required his daughter to marry Pathfinder, though she is really in love with Jasper. Pathfinder, however, discovers that Jasper is in love with Mabel.

The text is from the first American edition (1840).

CHAPTER XIV

The occurrences of the last few days had been too exciting, and had made too many demands on the fortitude of our heroine, to leave her in the helplessness of grief. She mourned for her father, and she occasionally shuddered, as she recalled the sudden death of Jennie, and all the horrible scenes she had witnessed; but, on the whole, she had aroused herself, and was no longer in the deep depression that usually accompanies grief. Perhaps the overwhelming, almost stupefying sorrow that crushed poor June, and left her for nearly twenty-four hours in a state of stupor, assisted Mabel in conquering her own feelings, for she had felt called on to administer consolation to the young Indian woman. This she had done, in the quiet, soothing, insinuating way, in which her sex usually exerts its influence, on such occasions.

The morning of the third day was set for that on which the Scud was to sail. Jasper had made all his preparations; the different effects were embarked, and Mabel had taken leave of June—a painful and affectionate parting. In a word, all was ready, and every soul had left the island but the Indian woman, Pathfinder, Jasper, and our heroine. The former had gone into a thicket to weep, and the three last were approaching the spot where three canoes lay; one of which was the property of June, and the other two were in waiting to

9. Jennie—a soldier's wife tomahawked by Arrowhead. **9. horrible scenes**—Shut up alone in the blockhouse, Mabel has had to witness the massacre of the little garrison. **12. June**—whose husband, Arrowhead, has been killed by Chingachgook, though, as a matter of fact, the traitor was a Scotchman named Muir.

carry the others off to the Scud. Pathfinder led the way, but, when he drew near the shore, instead of taking the direction to the boats, he motioned to his companions to follow, and proceeded to a fallen tree, that lay on the margin of the glade, and out of view of those in the cutter. Seating himself on the trunk, he signed to Mabel to take her place on one side of him, and to Jasper to occupy the other.

"Sit down here, Mabel; sit down there, Eau-douce," he commenced, as soon as he had taken his own seat; "I've something that lies heavy on my mind, and now is the time to take it off, if it's ever to be done. Sit down, Mabel, and let me lighten my heart, if not my conscience, while I've the strength to do it."

The pause that succeeded, lasted two or three minutes, and both the young people wondered what was to come next,—the idea that Pathfinder could have any weight on his conscience, seeming equally improbable to each.

"Mabel," our hero at length resumed, "we must talk plainly to each other, afore we join your uncle in the cutter, where the Salt-water has slept every night since the last rally; for he says it's the only place in which a man can be sure of keeping the hair on his head, he does— Ah's me! what have I to do with these follies and sayings, now? I try to be pleasant, and to feel light-hearted, but the power of man can't make water run up stream. Mabel, you know that the sarjeant, afore he left us, had settled it atween us two, that we were to become man and wife, and that we were to live together, and to love one another as long as the Lord was pleased to keep us both on 'arth; yes, and afterwards, too?"

Mabel's cheeks had regained a little of their ancient bloom, in the fresh air of the morning; but at this unlooked-for address they blanched again, nearly to the pallid hue which grief had imprinted there. Still she looked kindly, though seriously, at Pathfinder, and even endeavoured to force a smile.

"Very true, my excellent friend,"—she answered—"this was my poor father's wish, and I feel certain that a whole life devoted to your welfare and comforts, could scarcely repay you for all you have done for us."

"I fear me, Mabel, that man and wife needs be bound together by a stronger tie than such feelings, I do. You have done nothing for me, or nothing of any account, and yet my very heart yearns towards you, it does; and therefore it seems likely that these feelings come from something besides saving scalps and guiding through woods."

Mabel's cheek had begun to glow again; and, though she struggled hard to smile, her voice trembled a little, as she answered.

"Had we not better postpone this conversation, Pathfinder?" she said; "we are not alone; and nothing is so unpleasant to a listener, they say, as family matters in which he feels no interest."

"It's because we are not alone, Mabel, or rather because Jasper is with us, that I wish to talk of this matter. The sarjeant believed I might make a suitable companion for you; and, though I had misgivings about it—yes, I had many misgivings—he finally persuaded me into the idee, and things came round atween us, as you know. But, when you promised your father to marry me, Mabel, and gave me your hand, so modestly, but so prettily, there was one circumstance, as your uncle called it, that you didn't know; and I've thought it

right to tell you what it is, before matters are finally settled. I've often taken a poor deer for my dinner, when good venison was not to be found; but it's as nat'ral not to take up with the worst, when the best may be had."

"You speak in a way, Pathfinder, that is difficult to be understood. If this conversation is really necessary, I trust you will be more plain."

"Well, then, Mabel, I've been thinking it was quite likely when you gave in to the sarjeant's wishes, that you did not know the natur' of Jasper Western's feelings towards you?"

"Pathfinder!"—and Mabel's cheek now paled to the livid hue of death; then it flushed to the tint of crimson; and her whole frame shuddered. Pathfinder, however, was too intent on his own object, to notice this agitation; and Eau-douce had hidden his face in his hands, in time to shut out its view.

"I've been talking with the lad; and, on comparing his dreams with my dreams, his feelings with my feelings, and his wishes with my wishes, I fear we think too much alike, concerning you, for both of us to be very happy."

"Pathfinder—you forget—you should remember that we are betrothed!" said Mabel, hastily, and in a voice so low, that it required acute attention in the listeners to catch the syllables. Indeed, the last word was not quite intelligible to the guide, and he confessed his ignorance by the usual—

"Anan?"

"You forget that we are to be married; and such allusions are improper, as well as painful."

"Every thing is proper that is right, Mabel; and every thing is right that leads to justice and fair dealing: though it *is painful* enough, as you say; as I find on trial, I do. Now, Mabel, had you known that Eau-douce thinks of you in this way, maybe you never would have consented to be married to one as old and as uncomely as I am."

"Why this cruel trial, Pathfinder? To what can all this lead? Jasper Western thinks no such thing: he says nothing—he feels nothing."

"Mabel!" burst from out of the young man's lips, in a way to betray the uncontrollable nature of his emotions, though he uttered not another syllable.

Mabel buried her face in both her hands; and the two sat like a pair of guilty beings, suddenly detected in the commission of some crime that involved the happiness of a common patron. At this instant, perhaps, Jasper himself was inclined to deny his passion, through an extreme unwillingness to grieve his friend; while Mabel, on whom this positive announcement of a fact that she had rather unconsciously hoped than believed, came so unexpectedly, felt her mind momentarily bewildered; and she scarce knew whether to weep or to rejoice. Still she was the first to speak; since Eau-douce could utter naught that would be disingenuous, or that would pain his friend.

"Pathfinder," she said, "you talk wildly. Why mention this at all?"

"Well, Mabel, if I talk wildly, I *am* half wild, you know; by natur', I fear, as well as by habit." As he said this, he endeavoured to laugh in his usual noiseless way, but the effort produced a strange and discordant sound; and it appeared nearly to choke him. "Yes, I *must* be wild; I'll not attempt to deny it."

"Dearest Pathfinder!—my best, almost my only friend! you *cannot, do not* think I intended to say that!" interrupted Mabel, almost breathless in her haste

to relieve his mortification—"If courage, truth, nobleness of soul and conduct, unyielding principles and a hundred other excellent qualities can render any man respectable, esteemed, beloved, your claims are inferior to those of no other human being."

"What tender and bewitching voices they have, Jasper!" resumed the guide, now laughing freely and naturally—"Yes, natur' seems to have made them on purpose to sing in our ears, when the music of the woods is silent! But we must come to a right understanding, we must. I ask you again, Mabel, if you had known that Jasper Western loves you as well as I do, or better perhaps—though that is scarce possible,—that in his dreams he sees your face in the water of the lake; that he talks to you, and of you, in his sleep; fancies all that is beautiful like Mabel Dunham, and all that is good and virtuous; believes he never knowed happiness until he knowed you; could kiss the ground on which you have trod, and forgets all the joys of his calling, to think of you and of the delight of gazing at your beauty, and in listening to your voice, would you then have consented to marry me?"

Mabel could not have answered this question, if she would, but, though her face was buried in her hands, the tint of the rushing blood was visible between the openings; and the suffusion seemed to impart itself to her very fingers. Still nature asserted her power, for there was a single instant when the astonished, almost terrified girl stole a glance at Jasper, as if distrusting Pathfinder's history of his feelings, read the truth of all he said in that furtive look, and instantly concealed her face again, as if she would hide it from observation for ever.

"Take time to think, Mabel," the guide continued, "for it is a solemn thing to accept one man for a husband, while the thoughts and wishes lead to another. Jasper and I have talked this matter over, freely and like old friends, and though I always knowed that we viewed most things pretty much alike, I couldn't have thought that we regarded any particular object with the very same eyes, as it might be, until we opened our minds to each other about you. Now, Jasper owns that the very first time he beheld you, he thought you the sweetest and winningest creatur' he had ever met; that your voice sounded like murmuring water in his ears; that he fancied his sails were your garments, fluttering in the wind; that your laugh haunted him in his sleep; and that, ag'in and ag'in, has he started up affrighted, because he has fancied some one wanted to force you out of the Scud, where he imagined you had taken up your abode. Nay, the lad has even acknowledged that he often weeps, at the thought that you are likely to spend your days with another, and not with him."

"Jasper!"

"It's solemn truth, Mabel, and it's right you should know it. Now stand up, and choose atween us. I do believe Eau-douce loves you as well as I do myself; he has tried to persuade me that he loves you better, but that I will not allow, for I do not think it possible; but I will own the boy loves you, heart and soul, and he has a good right to be heard. The sarjeant left me your protector, and not your tyrant. I told him that I would be a father to you, as well as a husband, and it seems to me no feeling father would deny his child this

small privilege. Stand up, Mabel, therefore, and speak your thoughts as freely as if I were the sarjeant himself, seeking your good and nothing else."

Mabel dropped her hands, arose, and stood face to face with her two suitors, though the flush that was on her cheeks was feverish, the evidence of excitement, rather than of shame.

"What would you have, Pathfinder?" she asked: "Have I not already promised my poor father to do all you desire?"

"Then I desire this. Here I stand, a man of the forest, and of little larning, though I fear with an ambition beyond my desarts, and I'll do my endivours to do justice to both sides. In the first place, it is allowed that so far as feelings in your behalf are consarned, we love you just the same; Jasper thinks his feelings *must* be the strongest, but this I cannot say, in honesty, for it doesn't seem to me that it *can* be true; else I would frankly and freely confess it, I would. So in this particular, Mabel, we are here before you, on equal tarms. As for myself, being the oldest, I'll first say what little can be produced in my favour, as well as ag'in it. As a hunter, I do think there is no man near the lines that can outdo me. If venison, or bear's meat, or even birds and fish, should ever be scarce in our cabin, it would be more likely to be owing to natur' and Providence, than to any fault of mine. In short, it does seem to me, that the woman who depended on me, would never be likely to want for food. But, I'm fearful ignorant! It's true, I speak several tongues, such as they be, while I'm very far from being expart at my own. Then, my years are greater than your own, Mabel; and the circumstance that I was so long the sarjeant's comrade, can be no great merit in your eyes. I wish, too, I was more comely, I do; but we are all as natur' made us, and the last thing that a man ought to lament, except on very special occasions, is his looks. When all is remembered, age, looks, larning and habits, Mabel, conscience tells me I ought to confess that I'm altogether unfit for you, if not downright unworthy; and I would give up the hope, this minute, I would, if I didn't feel something pulling at my heart strings which seems hard to undo."

"Pathfinder!—noble, generous Pathfinder!"—cried our heroine, seizing his hand, and kissing it with a species of holy reverence; "you do yourself injustice—you forget my poor father and your promise—you do not know *me!*"

"Now, here's Jasper," continued the guide, without allowing the girl's caresses to win him from his purpose; "with *him,* the case is different. In the way of providing, as in that of loving, there's not much to choose atween us, for the lad is frugal, industrious and careful. Then he is quite a scholar—knows the tongue of the Frenchers—reads many books, and some, I know, that you like to read yourself—can understand you at all times, which, perhaps, is more than I can say for myself."

"What of all this"—interrupted Mabel, impatiently—"why speak of it now—why speak of it, at all?"

"Then the lad has a manner of letting his thoughts be known, that I fear I can never equal. If there's any thing on 'arth that would make my tongue bold and persuading, Mabel, I do think it's yourself; and yet, in our late conversations, Jasper has outdone me, even on this point, in a way to make me ashamed of myself. He has told me how simple you were, and how true-

hearted, and kind-hearted; and how you looked down upon vanities, for though you might be the wife of more than one officer, as he thinks, that you cling to feeling, and would rather be true to yourself, and natur', than a colonel's lady. He fairly made my blood warm, he did, when he spoke of your having beauty without seeming ever to have looked upon it, and the manner in which you moved about like a young fa'an, so nat'ral and graceful like, without knowing it; and the truth and justice of your idees, and the warmth and generosity of your heart—"

"Jasper!" interrupted Mabel, giving way to feelings that had gathered an ungovernable force by being so long pent, and falling into the young man's willing arms, weeping like a child, and almost as helpless. "Jasper!—Jasper!—why have you kept this from me?"

The answer of Eau-douce was not very intelligible, nor was the murmured dialogue that followed, remarkable for coherency. But the language of affection is easily understood. The hour that succeeded, passed like a very few minutes of ordinary life, so far as a computation of time was concerned; and when Mabel recollected herself, and bethought her of the existence of others, her uncle was pacing the cutter's deck in great impatience, and wondering why Jasper should be losing so much of a favourable wind. Her first thought was of him, who was so likely to feel the recent betrayal of her real emotions.

"Oh! Jasper!" she exclaimed, like one suddenly self-convicted—"the Pathfinder!"

Eau-douce fairly trembled, not with unmanly apprehension, but with the painful conviction of the pang he had given his friend; and he looked in all directions, in the expectation of seeing his person. But Pathfinder had withdrawn, with a tact and a delicacy, that might have done credit to the sensibility and breeding of a courtier. For several minutes the two lovers sate, silently waiting his return, uncertain what propriety required of them, under circumstances so marked, and so peculiar. At length they beheld their friend advancing slowly towards them, with a thoughtful and even pensive air.

"I now understand what you meant, Jasper, by speaking without a tongue, and hearing without an ear," he said, when close enough to the tree to be heard. "Yes, I understand it, now, I do, and a very pleasant sort of discourse it is, when one can hold it with Mabel Dunham. Ah's me!—I told the sarjeant I wasn't fit for her; that I was too old, too ignorant, and too wild, like—but he *would* have it otherwise!"

Jasper and Mabel sate, resembling Milton's picture of our first parents, when the consciousness of sin first laid its leaden weight on their souls. Neither spoke, neither even moved; though both, at that moment, fancied they could part with their new-found happiness, in order to restore their friend to his peace of mind. Jasper was pale as death; but, in Mabel, maiden modesty had caused the blood to mantle on her cheeks, until their bloom was heightened to a richness that was scarce equalled in her hours of light-hearted buoyancy and joy. As the feeling, which, in her sex, always accompanies the security of love returned, threw its softness and tenderness over her countenance, she was

37. **Milton's picture**—*Cf. Paradise Lost,* Bk. X, lines 720 ff.

singularly beautiful. Pathfinder gazed at her, with an intentness he did not endeavour to conceal, and then he fairly laughed in his own way, and with a sort of wild exultation, as men that are untutored are wont to express their delight. This momentary indulgence, however, was expiated by the pang that followed the sudden consciousness that this glorious young creature was lost to him for ever. It required a full minute for this simple-minded being to recover from the shock of this conviction; and then he recovered his dignity of manner, speaking with gravity—almost with solemnity.

"I have always known, Mabel Dunham, that men have their gifts," he said; "but I'd forgotten that it did not belong to mine, to please the young, and beautiful, and l'arned. I hope the mistake has been no very heavy sin; and if it was, I've been heavily punished for it, I have. Nay, Mabel, I know what you'd say, but it's unnecessary; I *feel* it all, and that is as good as if I *heard* it all. I've had a bitter hour, Mabel—I've had a very bitter hour, lad—"

"Hour!" echoed Mabel, as the other first used the word, the tell-tale blood, which had begun to ebb towards her heart, rushing again tumultuously to her very temples. "Surely not an hour, Pathfinder!"

"Hour!" exclaimed Jasper, at the same instant—"no—no—my worthy friend, it is not ten minutes since you left us!"

"Well, it may be so; though to me it has seemed to be a day. I begin to think, however, that the happy count time by minutes, and the miserable count it by months. But we will talk no more of this; it is all over now, and many words about it, will make you no happier, while they will only tell me what I've lost; and quite likely how much I desarved to lose her. No—no—Mabel, 'tis useless to interrupt me; I admit it all, and your gainsaying it, though it be so well meant, cannot change my mind. Well, Jasper, she is yours; and though it's hard to think it, I do believe you'll make her happier than I could, for your gifts are better suited to do so, though I would have strived hard to do as much, if I know myself, I would. I ought to have known better than to believe the sarjeant; and I ought to have put faith in what Mabel told me at the head of the lake, for reason and judgment might have shown me its truth; but it is so pleasant to think what we wish, and mankind so easily over-persuade us, when we over-persuade ourselves. But what's the use in talking of it, as I said afore? It's true, Mabel seemed to be consenting, though it all came from a wish to please her father, and from being skeary about the savages—"

"Pathfinder!"

"I understand you, Mabel, and have no hard feelings, I hav'n't. I sometimes think I should like to live in your neighbourhood, that I might look at your happiness; but on the whole, it's better I should quit the 55th altogether, and go back to the 60th, which is my natyve rijement, as it might be. It would have been better, perhaps, had I never left it, though my sarvices were much wanted in this quarter, and I'd been with some of the 55th, years agone—Sarjeant Dunham, for instance, when he was in another corps. Still, Jasper, I do not regret that I've known you—"

"And me, Pathfinder?" impetuously interrupted Mabel—"do you regret having known *me?*—could I think so, I should never be at peace with myself!"

"You, Mabel!" returned the guide, taking the hand of our heroine, and looking into her countenance with guileless simplicity, but earnest affection—"how could I be sorry that a ray of the sun came across the gloom of a cheerless day? that light has broken in upon darkness, though it remained so short a time! I do not flatter myself with being able to march quite as light-hearted, as I once used to could, or to sleep as sound, for some time to come; but I shall always remember how near I was to being undesarvedly happy, I shall. So far from blaming you, Mabel, I only blame myself for being so vain as to think it possible I could please such a creatur'; for, sartainly, you told me how it was, when we talked it over, on the mountain, and I ought to have believed you, then; for I do suppose it's nat'ral that young women should know their own minds better than their fathers. Ah's me! It's settled now, and nothing remains but for me to take leave of you, that you may depart; I feel that Master Cap must be impatient, and there is danger of his coming on shore to look for us all."

"To take leave!" exclaimed Mabel.

"Leave?" echoed Jasper: "you do not mean to quit us, my friend?"

"'Tis best, Mabel—'tis altogether best, Eau-douce; and it's wisest. I could live and die in your company, if I only followed feeling; but, if I follow reason, I shall quit you here. You will go back to Oswego, and become man and wife as soon as you arrive; for all that is determined with Master Cap, who hankers after the sea again, and who knows what is to happen: while I shall return to the wilderness and my Maker. Come, Mabel," continued Pathfinder, rising, and drawing nearer to our heroine, with grave decorum, "kiss me. Jasper will not grudge me one kiss: then we'll part."

"Oh! Pathfinder," exclaimed Mabel, falling into the arms of the guide, and kissing his cheeks again and again, with a freedom and warmth she had been far from manifesting while held to the bosom of Jasper—"God bless you, dearest Pathfinder! You will come to us hereafter. We shall see you again. When old, you will come to our dwelling, and let me be a daughter to you?"

"Yes—that's it"—returned the guide, almost gasping for breath: "I'll try to think of it in that way. You're more befitting to be my daughter, than to be my wife; you are. Farewell, Jasper. Now we'll go to the canoe; it's time you were on board."

The manner in which Pathfinder led the way to the shore, was solemn and calm. As soon as he reached the canoe, he again took Mabel by the hands, held her at the length of his own arms, and gazed wistfully into her face, until the unbidden tears rolled out of the fountains of feeling, and trickled down his rugged cheeks in streams.

"Bless me, Pathfinder;" said Mabel, kneeling reverently at his feet. "Oh! at least bless me, before we part."

That untutored, but noble-minded being, did as she desired; and, aiding her to enter the canoe, seemed to tear himself away as one snaps a strong and obstinate cord. Before he retired, however, he took Jasper by the arm, and led him a little aside, when he spoke as follows:—

"You're kind of heart, and gentle by natur', Jasper; but we are both rough and wild, in comparison with that dear creatur'. Be careful of her, and never

show the roughness of man's natur' to her soft disposition. You'll get to understand her, in time; and the Lord who governs the lake and the forest alike—who looks upon virtue with a smile, and upon vice with a frown—keep you happy, and worthy to be so!"

Pathfinder made a sign for his friend to depart; and he stood leaning on his rifle, until the canoe had reached the side of the Scud. Mabel wept as if her heart would break; nor did her eyes once turn from the open spot in the glade, where the form of the Pathfinder was to be seen, until the cutter had passed a point that completely shut out the island. When last in view, the sinewy frame of this extraordinary man was as motionless as if it were a statue set up in that solitary place, to commemorate the scenes of which it had so lately been the witness.

THE PIONEERS

In *The Pioneers* Bumppo is not the central figure. The events take place in 1793, and Bumppo, known as Leather-stocking, is now content with hunting on the shores of the same lake which he knew as a youth in *The Deerslayer*. Aided by Chingachgook, who has sunk far from his first estate, he kills a deer out of season. He is observed by a local worthy named Doolittle, who makes complaint; and a warrant is issued for Bumppo's arrest. Bumppo, however, refuses to admit anyone to his cabin, and in the interval saves Elizabeth Temple, the daughter of the judge and proprietor of most of the land, from death at the hands of a panther. Richard Jones, the Judge's general factotum, who is also the sheriff, arrests Bumppo in the scene here given. The town which has grown up on the lake is named Templeton.

The text is from the first American edition (1823), in two volumes, the chapter containing this passage being Chapter XIII of Volume II. But in the one-volume editions the chapter has its present numbering.

CHAPTER XXXII

. . . It has been already said that the "court of common pleas and general gaol delivery," or, as it is called in vulgar parlance, the "county court," over which Judge Temple presided, held one of its stated sessions on the following morning. The attendants of Richard were officers who had come to the village as much to discharge their usual duties at this court, as to escort the prisoners; and the Sheriff knew their habits too well, not to feel confident he should find most, if not all of them, in the public room of the gaol, discussing the qualities of the keeper's liquors. Accordingly he held his way, through the silent streets of the village, directly to the small and insecure building, that contained all the unfortunate debtors, and some of the criminals of the county, and where justice was administered to such unwary applicants as were so silly as to throw away two dollars, in order to obtain one from their neighbours. The arrival of four malefactors in the custody of a dozen officers, was an event, at that day, in Templeton; and when the Sheriff reached the gaol, he found every indication that his subordinates intended to make a night of it.

The nod of the Sheriff brought two of his deputies to the door, who in their turn drew off six or seven of the constables. With this force Richard led the

way through the village, towards the bank of the lake, undisturbed by any noise, except the barking of one or two curs, who were alarmed by the measured tread of the party, and by the low murmurs that run through their own numbers, as a few cautious questions and answers were exchanged, relative to the object of their expedition. When they had crossed the little bridge of hewn logs that was thrown over the Susquehanna, they left the highway, and struck into that field which had been the scene of the victory over the pigeons. From this they followed their leader into the low bushes of pines and chestnuts which had sprung up along the shores of the lake, where the plough had not succeeded the fall of the trees, and soon entered the forest itself. Here Richard paused, and collected his troop around him.

"I have required your assistance, my friends," he said, in a low voice, "in order to arrest Nathaniel Bumppo, commonly called the Leather-stocking. He has assaulted a magistrate, and resisted the execution of a search-warrant, by threatening the life of a constable with his rifle. In short, my friends, he has set an example of rebellion to the laws, and has become a kind of outlaw. He is suspected of other misdemeanours and offences against private rights; and I have this night taken on myself, by the virtue of my office of sheriff, to arrest the said Bumppo, and bring him to the county gaol, that he may be present and forthcoming to answer to these heavy charges before the court tomorrow morning. In executing this duty, friends and fellow-citizens, you are to use courage and discretion. Courage, that you may not be daunted by any lawless attempts that this man may make, with his rifle and his dogs, to oppose you; and discretion, which here means caution and prudence, that he may not escape from this sudden attack—and—for other good reasons that I need not mention. You will form yourselves in a complete circle around his hut, and at the word 'advance,' called aloud by me, you will rush forward, and, without giving the criminal time for deliberation, enter his dwelling by force, and make him your prisoner. Spread yourselves for this purpose, while I shall descend to the shore with a deputy, to take charge of that point; and all communications must be made directly to me, under the bank in front of the hut, where I shall station myself, and remain in order to receive them."

This speech, which Richard had been studying during his walk, had the effect that all similar performances produce, of bringing the dangers of the expedition immediately before the eyes of his force. The men divided, some plunging deeper into the forest, in order to gain their stations without giving an alarm, and others continuing to advance, at a gait that would allow the whole party to get in order; but all devising the best plans, within their own thoughts, to repulse the attack of a dog, or to escape a rifle-bullet. It was a moment of dread expectation and interest.

When the Sheriff thought time enough had elapsed for the different divisions of his force to arrive at their stations, he raised his voice in the silence of the forest, and shouted the watchword. The sounds played among the arched branches of the trees in hollow cadences; but when the last sinking tone was lost on the ear, in place of the expected howls of the dogs, no other noises were returned, but the crackling of torn branches and dried sticks, as they yielded before the advancing steps of the officers. Even this soon ceased, as if

by a common consent, when, the curiosity and impatience of the Sheriff getting the complete ascendancy over discretion, he rushed up the bank, and in a moment stood on the little piece of cleared ground in front of the spot where Natty had so long lived. To his amazement, in place of the hut, he saw only its smouldering ruins.

The party gradually drew together about the heap of ashes and ends of smoking logs, while a dim flame in the centre of the ruin, which still found fuel to feed its lingering life, threw its pale light, flickering with the passing currents of the air, around the circle, now showing a face with eyes fixed in astonishment, and then glancing to another countenance, leaving the former shaded in the obscurity of night. Not a voice was raised in inquiry, nor an exclamation made in astonishment. The transition from excitement to disappointment was too powerful in its effects for speech: and even Richard lost the use of an organ that was seldom known to fail him.

The whole group were yet in the fulness of their surprise, when a tall form stalked from the gloom into the circle, treading down the hot ashes and dying embers with callous feet, and, standing over the light, lifted his cap, and exposed the bare head and weather-beaten features of the Leather-stocking. For a moment he gazed at the dusky figures who surrounded him, more in sorrow than in anger, before he spoke.

"What would ye with an old and helpless man?" he said. "You've driven God's creaters from the wilderness, where his providence had put them for his own pleasure, and you've brought in the troubles and diviltries of the law, where no man was ever known to disturb another. You have driven me, that have lived forty long years of my allotted time in this very spot, from my home and the shelter of my head, least you should put your wicked feet and wasty ways in my cabin. You've driven me to burn these logs, under which I've eaten and drunk, the first of Heaven's gifts, and the other of the pure springs, for the half of a hundred years, and to mourn the ashes under my feet, as a man would weep and mourn for the children of his body. You've rankled the heart of an old man, that has never harmed you or yourn, with bitter feelings towards his kind, at a time when his thoughts should be on a better world; and you've driven him to wish that the beasts of the forest, who never feast on the blood of their own families, was his kindred and race: and now, when he has come to see the last brand of his hut, before it is melted into ashes, you follow him up, at midnight, like hungry hounds on the track of a worn-out and dying deer! What more would ye have? for I am here—one to many. I come to mourn, not to fight; and, if it is God's pleasure, work your will on me."

When the old man ended, he stood, with the light glimmering around his thinly-covered head, looking earnestly at the group, which receded from the pile, with an involuntary movement, without the reach of the quivering rays, leaving a free passage for his retreat into the bushes, where pursuit, in the dark, would have been fruitless. Natty seemed not to regard this advantage, but stood facing each individual in the circle, in succession, as if to see who would be the first to arrest him. After a pause of a few moments, Richard begun to rally his confused faculties, and advancing, apologized for his duty,

and made him his prisoner. The party now collected, and, preceded by the Sheriff, with Natty in their centre, they took their way towards the village.

During the walk, divers questions were put to the prisoner concerning his reasons for burning the hut, and whither Mohegan had retreated; but to all of them he observed a profound silence, until, fatigued with their previous duties, and the lateness of the hour, the Sheriff and his followers reached the village, and dispersed to their several places of rest, after turning the key of a gaol on the aged and apparently friendless Leather-stocking.

Bumppo is tried, found guilty, and put in the stocks, whence he is rescued with the connivance of Elizabeth Temple by a mysterious "Oliver Edwards," who has also figured in hunting episodes. She promises to bring Bumppo some powder on the mountain top where he is concealed. A forest fire breaks out while she is making her journey, but she is rescued by Bumppo. Chingachgook dies; the mysterious "Oliver Edwards" proves to be an heir of the Effingham family; and Bumppo leaves for less populous regions after the marriage of Oliver and Elizabeth.

THE PRAIRIE

In *The Prairie* we see Bumppo in his old age. The year is 1804, and Ishmael Bush is toiling across the prairie with his family, and a young girl named Ellen Wade. Concealed in their wagon is Inez, who has been more or less kidnapped by them from Duncan Uncas Middleton, the grandson of Alice Heyward of *The Last of the Mohicans*. They meet the aged Leather-stocking. Ellen attracts the attention of a bee-hunter, Paul Hover, whom she meets in secret. Leather-stocking, Ellen, and Middleton get the girls away from Bush, only to fall into a series of hairbreadth escapes from Sioux Indians, a herd of buffaloes, and a prairie fire. They are aided, however, by the Pawnee warrior Hard-Heart. The Sioux, under the leadership of the villainous Mahtoree, finally capture the entire group, but Hard-Heart breaks from the Sioux by a strategem, rallies his tribe, and in fierce combat kills Mahtoree and defeats his followers. The subplot, concerning the death of Asa Bush, is only indirectly related to this story. The whites, except for Leather-stocking, depart, secure in the friendship of the Pawnees. Some years later Middleton and Paul return and once more visit Hard-Heart and the Pawnee village. The text is from Chapter XVII of Volume II of the first edition in two volumes. In the one-volume edition the chapter has its present numbering.

CHAPTER XXXIV

. . . When they entered the town, its inhabitants were seen collected in an open space, where they were arranged with the customary deference to age and rank. The whole formed a large circle, in the centre of which were, perhaps a dozen of the principal chiefs. Hard-Heart waved his hand as he approached and as the mass of bodies opened he rode through, followed by his companions. Here they dismounted, and as the beasts were led apart, the strangers found themselves environed by a thousand grave, composed, but solicitous faces.

Middleton gazed about him in growing concern, for no cry, no song, no shout welcomed him among a people, from whom he had so lately parted with regret. His uneasiness, not to say apprehensions was shared by all his

followers. Determination and stern resolution began to assume the place of anxiety in every eye, as each man silently felt for his arms, and assured himself that his several weapons were in a state for instant and desperate service. But there was no answering symptom of hostility on the part of their hosts. Hard-Heart beckoned for Middleton and Paul to follow, leading the way towards the cluster of forms, that occupied the centre of the circle. Here the visitors found a solution of all the movements which had given them so much reason for apprehension.

The trapper was placed on a rude seat, which had been made with studied care, to support his frame in an upright and easy attitude. The first glance of the eye told his former friends, that the old man was at length called upon to pay the last tribute of nature. His eye was glazed and apparently as devoid of sight as of expression. His features were a little more sunken and strongly marked than formerly; but there, all change, so far as exterior was concerned, might be said to have ceased. His approaching end was not to be ascribed to any positive disease, but had been a gradual and mild decay of the physical powers. Life, it is true, still lingered in his system, but it was as though at times entirely ready to depart, and then it would appear to reanimate the sinking form, as if reluctant to give up the possession of a tenement, that had never been undermined by vice or corrupted by disease. It would have been no violent fancy to have imagined, that the spirit fluttered about the placid lips of the old woodsman, reluctant to depart from a shell, that had so long given it an honest and an honourable shelter.

His body was so placed as to let the light of the setting sun fall full upon the solemn features. His head was bare, the long, thin locks of gray hair [illegible] lightly in the evening breeze. His rifle lay upon his knee, and the other accoutrements of the chase were placed at his side within reach of his hand. Between his feet lay the figure of a hound, with its head crouching to the earth as if it slumbered, and so perfectly easy and natural was its position, that a second glance was necessary to tell Middleton, he saw only the skin of Hector, stuffed, by Indian tenderness and ingenuity, in a manner to represent the living animal. His own dog was playing at a distance with the child of Tachechana and Mahtoree. The mother herself stood at hand, holding in her arms a second offspring, that might boast of a parentage no less honorable, than that which belonged to the son of Hard-Heart. Le Balafré was seated nigh the dying trapper, with every mark about his person, that the hour of his own departure was not far distant. The rest of those immediately in the centre were aged men, who had apparently drawn near, in order to observe the manner, in which a just and fearless warrior would depart on the greatest of his journeys.

The old man was reaping his rewards of a life so remarkable for temperance and activity, in a tranquil and placid death. His vigour had in a manner endured to the very last. Decay, when it did occur, was rapid, but free from pain. He had hunted with the tribe in the spring, and even throughout most of the summer, when his limbs suddenly refused to perform their customary offices. A sympathizing weakness took possession of all his faculties, and the Pawnees believed, that they were going to lose, in this unexpected manner, a sage and counsellor, whom they had begun both to love and respect. But as

we have already said, the immortal occupant seemed unwilling to desert its tenement. The lamp of life flickered without becoming extinguished. On the morning of the day, on which Middleton arrived, there was a general reviving of the powers of the whole man. His tongue was again heard in wholesome maxims, and his eye from time to time recognized the persons of his friends. It merely proved to be a brief and final intercourse with the world, on the part of one who had already been considered, as to mental communion, to have taken his leave of it forever.

When he had placed his guests in front of the dying man, Hart-Heart, after a pause, that proceeded as much from sorrow as decorum, leaned a little forward and demanded—

"Does my father hear the words of his son?"

"Speak," returned the trapper, in tones that issued from his inmost chest, but which were rendered awfully distinct by the death-like stillness, that reigned in the place. "I am about to depart from the village of the Loups, and shortly shall be beyond the reach of your voice."

"Let the wise chief have no cares for his journey," continued Hard-Heart with an earnest solicitude, that led him to forget, for the moment, that others were waiting to address his adopted parent; "a hundred Loups shall clear his path from briars."

"Pawnee, I die, as I have lived, a Christian man," resumed the trapper with a force of voice, that had the same startling effect on his hearers, as is produced by the trumpet, when its blast rises suddenly and freely on the air after its obstructed sounds have been heard struggling in the distance; "as I came into life, so will I leave it. Horses and arms are not needed to stand in the presence of the Great Spirit of my people. He knows my colour and according to my gifts will he judge my deeds."

"My father will tell my young men how many Mingoes he has struck and what acts of valour and justice he has done, that they may know how to imitate him."

"A boastful tongue is not heard in the heaven of a white man!" solemnly returned the old man. "What I have done He has seen. His eyes are always open. That which has been well done, he will remember; wherein I have been wrong will he not forget to chastise, though he will do the same in mercy. No, my son; a Pale-face may not sing his own praises, and hope to have them acceptable before his God!"

A little disappointed, the young partisan stepped modestly back, making way for the recent comers to approach. Middleton took one of the meagre hands of the trapper and struggling to command his voice, he succeeded in announcing his presence. The old man listened like one whose thoughts were dwelling on a very different subject, but when the other had succeeded in making him understand, that he was present, an expression of joyful recognition passed over his faded features—

"I hope you have not so soon forgotten those, whom you so materially served!" Middleton concluded. "It would pain me to think my hold on your memory was so light."

"Little that I have ever seen is forgotten," returned the trapper; "I am at the

close of many weary days, but there is not one among them all, that I could wish to overlook. I remember you with the whole of your company; ay, and your gran'ther, that went before you. I am glad, that you have come back upon these plains, for I had need of one, who speaks the English, since little faith can be put in the traders of these regions. Will you do a favour, lad, to an old and dying man?"

"Name it," said Middleton; "it shall be done."

"It is a far journey to send such trifles," resumed the old man, who spoke at short intervals as strength and breath permitted; "A far and weary journey is the same; but kindnesses and friendships are things not to be forgotten. There is a settlement among the Otsego hills—"

"I know the place," interrupted Middleton, observing that he spoke with increasing difficulty; "proceed to tell me what you would have done."

"Take then this rifle, and pouch, and horn, and send them to the person, whose name is graven on the plates of the stock. A trader cut the letters with his knife, for it is long, that I have intended to send him such a token of my love!"

"It shall be so. Is there more that you could wish?"

"Little else have I to bestow. My traps I give to my Indian son; for honestly and kindly has he kept his faith. Let him stand before me."

Middleton explained to the chief, what the trapper had said, and relinquished his own place to the other.

"Pawnee," continued the old man, always changing his language to suit the person he addressed, and not unfrequently according to the ideas he expressed, "it is a custom of my people for the father to leave his blessing with the son, before he shuts his eyes forever. This blessing I give to you; take it, for the prayers of a Christian man will never make the path of a just warrior, to the blessed prairies, either longer or more tangled. May the God of a white man look on your deeds with friendly eyes, and may you never commit an act that shall cause him to darken his face. I know not whether we shall ever meet again. There are many traditions concerning the place of Good Spirits. It is not for one like me, old and experienced though I am, to set up my opinions against a nation's. You believe in the blessed prairies, and I have faith in the sayings of my fathers. If both are true, our parting will be final; but if it should prove, that the same meaning is hid under different words, we shall yet stand together, Pawnee, before the face of your Wahcondah, who will then be no other than my God. There is much to be said in favour of both religions, for each seems suited to its own people, and no doubt it was so intended. I fear, I have not altogether followed of the gifts of my colour, inasmuch as I find it a little painful to give up for ever the use of the rifle, and the comforts of the chase. But then the fault has been my own, seeing that it could not have been His. Ay, Hector," he continued, leaning forward a little, and feeling for the ears of the hound, "our parting has come at last, dog, and it will be a long hunt. You have been an honest, and a bold, and a faithful hound. Pawnee, you cannot slay the pup on my grave, for where a Christian dog falls, there he lies forever; but you can be kind to him, after I am gone for the love you bear his master."

"The words of my father, are in my ears," returned the young partisan, making a grave and respectful gesture of assent.

"Do you hear, what the chief has promised, dog?" demanded the trapper, making an effort to attract the notice of the insensible effigy of his hound. Receiving no answering look, nor hearing any friendly whine, the old man felt for the mouth, and endeavoured to force his hand between the cold lips. The truth then flashed upon him, although he was far from perceiving the whole extent of the deception. Falling back in his seat, he hung his head, like one who felt a severe and unexpected shock. Profiting by this momentary forgetfulness two young Indians removed the skin with the same delicacy of feeling, that had induced them to attempt the pious fraud.

"The dog is dead!" muttered the trapper, after a pause of many minutes; "a hound has his time as well as a man; and well has he filled his days! Captain," he added, making an effort to wave his hand for Middleton, "I am glad you have come; for though kind, and well meaning according to the gifts of their colour, these Indians are not the men, to lay the head of a white man in his grave. I have been thinking, too, of this dog at my feet; it will not do to set forth the opinion, that a Christian can expect to meet his hound again; still there can be little harm in placing what is left of so faithful a servant nigh the bones of his master."

"None in the least; it shall be as you desire."

"I'm glad, you think with me in this matter. In order then to save labour, lay the pup at my feet; or for that matter, put him side by side. A hunter need never be ashamed to be found in company with his dog!"

"I charge myself with your wish."

The old man made a long, and apparently a musing pause. At times he raised his eyes wistfully as if he would again address Middleton, but some innate feeling appeared always to suppress his words. The other, who observed his hesitation, enquired in a way most likely to encourage him to proceed, whether there was aught else, that he could wish to have done.

"I am without kith or kin in the wide world!" the trapper answered; "when I am gone, there will be an end of my race. We have never been chiefs, but honest, and useful in our way, I hope it cannot be denied, we have always proved ourselves. My father lies buried near the sea, and the bones of his son will whiten on the prairies—"

"Name the spot, and your remains shall be placed by the side of your father," interrupted Middleton.

"Not so, not so, Captain. Let me sleep, where I have lived, beyond the din of the settlements. Still I see no need, why the grave of an honest man should be hid, like a Red-skin in his ambushment. I paid a man in the settlements to make and put a graven stone at the head of my father's resting place. It was the value of twelve beaver-skins, and cunningly and curiously was it carved! Then it told to all comers that the body of such a Christian lay beneath; and it spoke of his manner of life, of his years, and of his honesty. When we had done with the Frenchers in the old war, I made a journey to the spot, in order to see that all was rightly performed, and glad I am to say the workman had not forgotten his faith."

"And such a stone you would have at your grave?"

"I! no, no, I have no son but Hard-Heart, and it is little, that an Indian knows of White fashions and usages. Besides I am his debtor, already, seeing it is so little I have done, since I have lived in his tribe. The rifle might bring the value of such a thing—but then I know, it will give the boy pleasure to hang the piece in his hall, for many is the deer and the bird that he has seen it destroy. No, no, the gun must be sent to him, whose name is graven on the lock!"

"But there is one, who would gladly prove his affection in the way you wish; he, who owes you not only his deliverance from so many dangers, but who inherits a heavy debt of gratitude from his ancestors. The stone shall be put at the head of your grave."

The old man extended his emaciated hand, and gave the other a squeeze of thanks.

"I thought, you might be willing to do it, but I was backward in asking the favour," he said, "seeing that you are not of my kin. Put no boastful words on the same, but just the name, the age and the time of the death, with something from the holy book; no more, no more. My name will then not be altogether lost on 'arth; I need no more."

Middleton intimated his assent, and then followed a pause, that was only broken by distant and broken sentences from the dying man. He appeared now to have closed his accounts with the world, and to await merely for the final summons to quit it. Middleton and Hard-Heart placed themselves on the opposite sides of his seat and watched with melancholy solicitude the variations of his countenance. For two hours there was no very sensible alteration. The expression of his faded and time-worn features was that of a calm and dignified repose. From time to time he spoke, uttering some brief sentence in the way of advice, or asking some simple questions concerning those in whose fortunes he still took a friendly interest. During the whole of that solemn and anxious period each individual of the tribe kept his place, in the most self-restrained patience. When the old man spoke, all bent their heads to listen; and when his words were uttered, they seemed to ponder on their wisdom and usefulness.

As the flame drew nigher to the socket, his voice was hushed, and there were moments, when his attendants doubted whether he still belonged to the living. Middleton, who watched each wavering expression of his weather-beaten visage, with the interest of a keen observer of human nature, softened by the tenderness of personal regard, fancied he could read the workings of the old man's soul in the strong lineaments of his countenance. Perhaps what the enlightened soldier took for the delusion of mistaken opinion did actually occur, for who has returned from that unknown world to explain by what forms and in what manner, he was introduced into its awful precincts! Without pretending to explain what must ever be a mystery to the quick, we shall simply relate facts as they occurred.

The trapper had remained nearly motionless for an hour. His eyes, alone, had occasionally opened and shut. When opened, his gaze seemed fastened on the clouds, which hung around the western horizon, reflecting the bright

colours, and giving form and loveliness to the glorious tints of an American sunset. The hour—the calm beauty of the season—the occasion, all conspired to fill the spectators with solemn awe. Suddenly, while musing on the remarkable position, in which he was placed, Middleton felt the hand, which he held, grasp his own with incredible power, and the old man, supported on either side by his friends, rose upright to his feet. For a moment he looked about him, as if to invite all in presence to listen, (the lingering remnant of human frailty,) and then with a fine military elevation of the head, and with a voice that might be heard in every part of that numerous assembly, he pronounced the word—

"Here!"

A movement so entirely unexpected, and the air of grandeur and humility, which were so remarkably united in the mien of the trapper, together with the clear and uncommon force of his utterance, produced a short period of confusion in the faculties of all present. When Middleton and Hard-Heart, who had each involuntarily extended a hand to support the form of the old man, turned to him again, they found, that the subject of their interest was removed forever beyond the necessity of their care. They mournfully placed the body in its seat, and Le Balafré arose to announce the termination of the scene to the tribe. The voice of the old Indian seemed a sort of echo from that invisible world, to which the meek spirit of the trapper had just departed.

"A valiant, a just and a wise warrior has gone on the path, which will lead him to the blessed grounds of his people!" he said. "When the voice of the Wahcondah called him, he was ready to answer. Go, my children; remember the just chief of the Pale-faces, and clear your own tracks from briars!"

The grave was made beneath the shade of some noble oaks. It has been carefully watched to the present hour by the Pawnees of the Loup, and is often shown to the traveller and the trader as a spot where a just White-man sleeps. In due time the stone was placed at its head, with the simple inscription, which the trapper had himself requested. The only liberty taken by Middleton was to add,—*"May no wanton hand disturb his remains!"*

THE PILOT

The story of *The Pilot* concerns the activities of two American vessels on the "German Ocean" during the American Revolution. The officers of these ships are either related to fair cousins on the English shore or else in love with them, facts which occasion a good deal of ship-to-shore business. The most romantic of these officers is the mysterious Pilot himself, who is, it appears, John Paul Jones. The principal figure among the common seamen is Long Tom Coffin, and the principal villain is an exiled South Carolinian named Dillon. During the course of the story the smaller vessel, the *Ariel,* is wrecked, and in the wreck Long Tom Coffin loses his life. The episode chosen for reprinting here is, however, nearly complete in itself, and relates a brush between the American and British naval forces.

The text is from the first American edition (1823).

CHAPTER XVIII

THE JOYFUL shouts and hearty cheers of the Ariel's crew continued for some time after her commander had reached her deck. Barnstable answered the congratulations of his officers by cordial shakes of the hand, and after waiting for the ebullition of delight among the seamen to subside a little, he beckoned with an air of authority for silence.

"I thank you, my lads, for your good will," he said, when all were gathered around him in deep attention; "they have given us a tough chase, and if you had left us another mile to go, we had been lost. That fellow is a King's cutter; and though his disposition to run to leeward is a good deal mollified, yet he shows signs of fight. At any rate, he is stripping off some of his clothes, which looks as if he were game. Luckily for us, Captain Manual has taken all the marines ashore with him, (though what he has done with them or himself, is a mystery,) or we should have had our decks lumbered with live cattle; but, as it is, we have a good working breeze, tolerably smooth water, and a dead match! There is a sort of national obligation on us to whip that fellow, and, therefore, without more words about the matter, let us turn to and do it, that we may get our breakfasts."

To this specimen of marine eloquence, the crew cheered as usual; the young men burning for the combat, and the few old sailors who belonged to the schooner, shaking their heads with infinite satisfaction, and swearing by sundry strange oaths, that their captain "could talk, when there was need of such a thing, like the best Dictionary that ever was launched."

During this short harangue, and the subsequent comments, the Ariel had been kept, under a cloud of canvass, as near to the wind as she could lie, and as this was her best sailing, she had stretched swiftly out from the land, to a distance whence the cliffs, and the soldiers who were spread along their summits, became plainly visible. Barnstable turned his glass repeatedly, from the cutter to the shore, as different feelings predominated in his breast, before he again spoke.

"If Mr. Griffith is stowed away among those rocks," he at length said, "he shall see as pretty an argument discussed, in as few words, as he ever listened to, provided the gentlemen in yonder cutter have not changed their minds as to the road they intend to journey—what think you, Mr. Merry?"

"I wish with all my heart and soul, sir," returned the fearless boy, "that Mr. Griffith was safe aboard us; it seems the country is alarmed, and God knows what will happen if he is taken! as to the fellow to windward, he'll find it easier to deal with the Ariel's boat, than with her mother; but he carries a broad sail, I question if he means to show play."

"Never doubt him, boy," said Barnstable, "he is working off the shore, like a man of sense, and besides, he has his spectacles on, trying to make out what tribe of Yankee Indians we belong to. You'll see him come to the wind presently, and send a few pieces of iron down this way, by way of letting us know

10. **stripping off . . . clothes**—showing less sail. 24. **canvass**—so in the original; other editions read: canvas.

where to find him. Much as I like your first lieutenant, Mr. Merry, I would rather leave him on the land this day, than see him on my decks. I want no fighting captain to work this boat for me! but tell the drummer, sir, to beat to quarters."

The boy, who was staggering under the weight of his melodious instrument, had been expecting this command, and, without waiting for the midshipman to communicate the order, he commenced that short rub-a-dub air, that will at any time rouse a thousand men from the deepest sleep, and cause them to fly to their means of offence, with a common soul. The crew of the Ariel had been collected in groups, studying the appearance of the enemy, cracking their jokes, and waiting only for this usual order to repair to the guns; and at the first tap of the drum, they spread with steadiness to the different parts of the little vessel, where their various duties called them. The cannon were surrounded by small parties of vigorous and athletic young men; the few marines were drawn up in array with muskets; the officers appeared in their boarding caps, with pistols stuck in their belts and naked sabres in their hands. Barnstable paced his little quarter-deck with a firm tread, dangling a speaking trumpet by its lanyard, on his fore-finger, or occasionally applying the glass to his eye, which, when not in use, was placed under one arm, while his sword was resting against the foot of the mainmast; a pair of heavy ship's pistols were thrust into his belt also; and piles of muskets, boarding-pikes, and naked sabres were placed on different parts of the deck. The laugh of the seamen was heard no longer; and those who spoke, uttered their thoughts only in low and indistinct whispers.

The English cutter held her way from the land until she got an offing of more than two miles, when she reduced her sails to a yet smaller number, and heaving into the wind, she fired a gun in a direction opposite to that which pointed to the Ariel.

"Now I would wager a quintal of codfish, Master Coffin," said Barnstable, "against the best cask of porter that was ever brewed in England, that fellow believes a Yankee schooner can fly in the wind's eye! If he wishes to speak to us, why don't he give his cutter a little sheet, and come down."

The cockswain had made his arrangements for the combat, with much more method and philosophy than any other man in the vessel. When the drum beat to quarters, he threw aside his jacket, vest, and shirt, with as little hesitation as if he stood under an American sun, and with all the discretion of a man who had engaged in an undertaking that required the free use of his utmost powers. As he was known to be a privileged individual in the Ariel, and one whose opinions, in all matters of seamanship, were regarded as oracles by the crew, and were listened to by his commander with no little demonstration of respect, the question excited no surprise. He was standing at the breech of his long gun, with his brawny arms folded on a breast that had been turned to the colour of blood by long exposure, his grizzled locks fluttering in the breeze, and his tall form towering far above the heads of all near him.

"He hugs the wind, sir, as if it was his sweetheart," was his answer; "but

16. **boarding caps**—something like the modern trench helmet. 18. **lanyard**—a cord or strap. 29. **quintal**—hundredweight. 33. **cockswain**—that is, Tom Coffin.

he'll let go his hold, soon; and if he don't, we can find a way to make him fall to leeward."

"Keep a good full!" cried the commander, in a stern voice; "and let the vessel go through the water. That fellow walks well, long Tom; but we are too much for him on a bowline; though, if he continue to draw ahead in this manner, it will be night before we can get alongside him."

"Ay, ay, sir," returned the cockswain; "them cutters carries a press of canvass when they seem to have but little; their gaffs are all the same as young booms, and spread a broad head to their mainsails. But it's no hard matter to knock a few cloths out of their bolt-ropes, when she will both drop astarn and to leeward."

"I believe there is good sense in your scheme, this time," said Barnstable; "for I am anxious about the frigate's people—though I hate a noisy chase; speak to him, Tom, and let us see if he will answer."

"Ay, ay, sir," cried the cockswain, sinking his body in such a manner as to let his head fall to a level with the cannon that he controlled, when, after divers orders, and sundry movements, to govern the direction of the piece, he applied a match, with a rapid motion, to the priming. An immense body of white smoke rushed from the muzzle of the cannon, followed by a sheet of vivid fire, until, losing its power, it yielded to the wind, and, as it rose from the water, spread like a cloud, and, passing through the masts of the schooner, was driven far to leeward, and soon blended in the mists which were swiftly scudding before the fresh breezes of the ocean.

Although many curious eyes were watching this beautiful sight from the cliffs, there was too little of novelty in the exhibition to attract a single look, of the crew of the schooner, from the more important examination of the effect of the shot on their enemy. Barnstable sprung lightly on a gun, and watched the instant when the ball would strike, with keen interest, while long Tom threw himself aside from the line of the smoke with a similar intention; holding one of his long arms extended towards his namesake, with a finger on the vent, and supporting his frame by placing the hand of the other on the deck, as his eyes glanced through an opposite port-hole, in an attitude that most men might have despaired of imitating with success.

"There go the chips!" cried Barnstable. "Bravo! Master Coffin, you never planted iron in the ribs of an Englishman with more judgment; let him have another piece of it, and if he like the sport, we'll play a game of long bowls with him!"

"Ay, ay, sir," returned the cockswain, who, the instant he witnessed the effects of his shot, had returned to superintend the reloading of his gun; "if he holds on half an hour longer, I'll dub him down to our own size, when we can close, and make an even fight of it."

The drum of the Englishman was now, for the first time, heard, rattling across the waters, and echoing the call to quarters that had already proceeded from the Ariel.

5. on a bowline—close-hauled. **8. gaffs**—A gaff is the spar upon which the head of a fore-and-aft sail is extended. The point is the superior spread of sail on the enemy vessel. **10. bolt-ropes**—A boltrope is stitched to the edge of a sail. **40. dub**—trim.

"Ah! you have sent him to his guns!" said Barnstable; "we shall now hear more of it; wake him up, Tom—wake him up."

"We shall start him on end, or put him to sleep altogether, shortly," said the deliberate cockswain, who never allowed himself to be at all hurried, even by his commander. "My shot are pretty much like a shoal of porpoises, and commonly sail in each others' wake. Stand by—heave her breech forward—so; get out of that, you damned young reprobate, and let my harpoon alone."

"What are you at, there, Master Coffin?" cried Barnstable; "are you tongue-tied?"

"Here's one of the boys skylarking with my harpoon in the lee scuppers, and by-and-by, when I shall want it most, there'll be a no-man's-land to hunt for it in."

"Never mind the boy, Tom; send him aft here, to me and I'll polish his behaviour; give the Englishman some more iron."

"I want the little villain to pass up my cartridges," returned the angry old seaman; "but if you'll be so good, sir, as to hit him a crack or two, now and then, as he goes by you to the magazine, the monkey will learn his manners, and the schooner's work will be all the better done for it. A young herring-faced monkey! to meddle with a tool ye don't know the use of. If your parents had spent more of their money on your edication, and less on your outfit, you'd ha' been a gentleman to what ye are now."

"Hurrah! Tom, hurrah!" cried Barnstable, a little impatiently; "is your namesake never to open his throat again!"

"Ay, ay, sir; all ready," grumbled the cockswain; "depress a little; so—so; a damn'd young baboon-behav'd curmudgeon; overhaul that forward fall more; stand by with your match—but I'll pay him! fire!" This was the actual commencement of the fight; for as the shot of Tom Coffin traveled, as he had intimated, very much in the same direction, their enemy found the sport becoming too hot to be endured in silence; and the report of the second gun from the Ariel was instantly followed by that of the whole broadside of the Alacrity. The shot of the cutter flew in a very good direction, but her guns were too light to give them efficiency at that distance, and as one or two were heard to strike against the bends of the schooner, and fall back, innocuously, into the water, the cockswain, whose good humour became gradually restored, as the combat thickened, remarked, with his customary apathy——

"Them count for no more than love taps—does the Englishman think that we are firing salutes!"

"Stir him up, Tom! every blow you give him will help to open his eyes," cried Barnstable, rubbing his hands with glee, as he witnessed the success of his efforts to close.

Thus far the cockswain and his crew had the fight, on the part of the Ariel, altogether to themselves, the men who were stationed at the smaller and shorter guns, standing in perfect idleness by their sides; but in ten or fifteen

6. her breech—that is, the breech of the cannon, which was muzzle-loading. **7. harpoon**—Coffin was a whaling man before he shipped on this vessel. **10. lee scuppers**—The scuppers are openings cut through the bulwarks of a ship that water may flow overboard. **24. depress a little**—lower the muzzle of the cannon a little. **25. fall**—part of the tackle holding the cannon to the deck. **33. bends**—the thickest planks in the sides of the ship.

minutes the commander of the Alacrity, who had been staggered by the weight of the shot that had struck him, found that it was no longer in his power to retreat, if he wished it; when he decided on the only course that was left for a brave man to pursue, and steered, boldly, in such a direction as would soonest bring him in contact with his enemy, without exposing his vessel to be raked by his fire. Barnstable watched each movement of his foe with eagle eyes, and when the vessel had got within a lessened distance, he gave the order for a general fire to be opened. The action now grew warm and spirited on both sides. The power of the wind was counteracted by the constant explosion of the cannon; and, instead of driving rapidly to leeward, a white canopy of curling smoke hung above the Ariel, or rested on the water, lingering in her wake, so as to mark the path by which she was approaching to a closer and still deadlier struggle. The shouts of the young sailors, as they handled their instruments of death, became more animated and fierce, while the cockswain pursued his occupation with the silence and skill of one who laboured in a regular vocation. Barnstable was unusually composed and quiet, maintaining the grave deportment of a commander on whom rested the fortunes of the contest, at the same time that his dark eyes were dancing with the fire of suppressed animation.

"Give it them!" he occasionally cried, in a voice that might be heard amid the bellowing of the cannon; "never mind their cordage, my lads; drive home their bolts, and make your marks below their ridge ropes."

In the mean time, the Englishman played a manful game. He had suffered a heavy loss by the distant cannonade, which no metal he possessed could retort upon his enemy; but he struggled nobly to repair the error in judgment with which he had begun the contest. The two vessels gradually drew nigher to each other, until they both entered into the common cloud, created by their fire, which thickened and spread around them in such a manner as to conceal their dark hulls from the gaze of the curious and interested spectators on the cliffs. The heavy reports of the cannon were now mingled with the rattling of muskets and pistols, and streaks of fire might be seen, glancing like flashes of lightning through the white cloud, which enshrouded the combatants, and many minutes of painful uncertainty followed, before the deeply interested soldiers, who were gazing at the scene, discovered on whose banners victory had alighted.

We shall follow the combatants into their misty wreath, and display to the reader the events as they occurred.

The fire of the Ariel was much the most quick and deadly, both because she had suffered less, and her men were less exhausted; and the cutter stood desperately on to decide the combat, after grappling, hand to hand. Barnstable anticipated her intention, and well understood her commander's reason for adopting this course, but he was not a man to calculate coolly his advantages, when pride and daring invited him to a more severe trial. Accordingly, he met the enemy half-way, and, as the vessels rushed together, the stern of the schooner was secured to the bows of the cutter, by the joint efforts of both

21-22. drive home their bolts—sink their bolts deeper into the timbers; pierce the sides of the vessel. **22. ridge ropes**—life lines running alongside the bowsprit.

parties. The voice of the English commander was now plainly to be heard, in the uproar, calling to his men to follow him.

"Away there, boarders! repel boarders on the starboard quarter!" shouted Barnstable through his trumpet.

This was the last order that the gallant young sailor gave with this instrument, for, as he spoke, he cast it from him, and, seizing his sabre, flew to the spot where the enemy was about to make his most desperate effort. The shouts, execrations, and tauntings of the combatants, now succeeded to the roar of the cannon, which could be used no longer with effect, though the fight was still maintained with spirited discharges of the small arms.

"Sweep him from his decks!" cried the English commander, as he appeared on his own bulwarks, surrounded by a dozen of his bravest men; "drive the rebellious dogs into the sea!"

"Away there, marines!" retorted Barnstable, firing his pistol at the advancing enemy; "leave not a man of them to sup his grog again."

The tremendous and close volley that succeeded this order, nearly accomplished the command of Barnstable to the letter, and the commander of the Alacrity, perceiving that he stood alone, reluctantly fell back on the deck of his own vessel, in order to bring on his men once more.

"Board her! gray beards and boys, idlers and all!" shouted Barnstable, springing in advance of his crew——a powerful arm arrested the movement of the dauntless seaman, and before he had time to recover himself, he was drawn violently back to his own vessel, by the irresistible grasp of his cockswain.

"The fellow's in his flurry," said Tom, "and it wouldn't be wise to go within reach of his flukes; but I'll just step ahead and give him a set with my harpoon."

Without waiting for a reply, the cockswain reared his tall frame on the bulwarks, and was in the attitude of stepping on board of his enemy, when a sea separated the vessels, and he fell with a heavy dash of the waters into the ocean. As twenty muskets and pistols were discharged at the instant he appeared, the crew of the Ariel supposed his fall to be occasioned by his wounds, and were rendered doubly fierce by the sight, and the cry of their commander to—

"Revenge long Tom! board her; long Tom or death!"

They threw themselves forward in irresistible numbers, and forced a passage, with much bloodshed, to the forecastle of the Alacrity. The Englishman was overpowered, but still remained undaunted—he rallied his crew, and bore up most gallantly to the fray. Thrusts of pikes, and blows of sabres were becoming close and deadly, while muskets and pistols were constantly discharged by those who were kept at a distance by the pressure of the throng of closer combatants.

Barnstable led his men in advance, and became a mark of peculiar vengeance to his enemies, as they slowly yielded before his vigorous assaults. Chance had placed the two commanders on opposite sides of the cutter's deck, and the victory seemed to incline towards either party, wherever these daring officers

24. **The fellow**—Tom is talking the language of a whaler. A whale is **in his flurry** after it has been struck by a harpoon and threshes angrily in the water. At such times its flukes, or tail, are dangerous.

directed the struggle in person. But the Englishman, perceiving that the ground he maintained in person was lost elsewhere, made an effort to restore the battle by changing his position, followed by one or two of his best men. A marine, who preceded him, leveled his musket within a few feet of the head of the American commander, and was about to fire, when Merry glided among the combatants, and passed his dirk into the body of the man, who fell at the blow; shaking his piece, with horrid imprecations, the wounded soldier prepared to deal his vengeance on his youthful assailant, when the fearless boy leaped within its muzzle, and buried his own keen weapon in his heart.

"Hurrah!" shouted the unconscious Barnstable, from the edge of the quarter-deck, where, attended by a few men, he was driving all before him. "Revenge!—long Tom and victory!"

"We have them!" exclaimed the Englishman; "handle your pikes! we have them between two fires."

The battle would probably have terminated very differently from what previous circumstances, had indicated, had not a wild looking figure appeared in the cutter's channels at that moment, issuing from the sea, and gaining the deck at the same instant. It was long Tom, with his iron visage rendered fierce by his previous discomfiture, and his grizzled locks drenched with the briny element from which he had risen, looking like Neptune with his trident. Without speaking, he poised his harpoon, and, with a powerful effort, pinned the unfortunate Englishman to the mast of his own vessel.

"Starn all!" cried Tom, by a sort of instinct, when the blow was struck; and catching up the musket of the fallen marine, he dealt out terrible and fatal blows with its butt, on all who approached him, utterly disregarding the use of the bayonet on its muzzle. The unfortunate commander of the Alacrity brandished his sword with frantic gestures, while his eyes rolled in horrid wildness, when he writhed for an instant in his passing agonies, and then, as his head dropped lifeless upon his gored breast, he hung against the spar, a spectacle of dismay to his crew. A few of the Englishmen stood, chained to the spot in silent horror at the sight, but most of them fled to their lower deck, or hastened to conceal themselves in the secret parts of the vessel, leaving to the Americans the undisputed possession of the Alacrity. . . .

[ENGLAND AND AMERICA]

LETTER XXVII

TO RICHARD COOPER, ESQUIRE, COOPERSTOWN, NEW YORK

This chapter on the comparative qualities of the English and the Americans is from the first English edition of *England. With Sketches of Society in the Metropolis,* London, 1837, 3 vols., and is found in the third volume. The American edition of the work was entitled: *Gleanings in Europe. England. By an American,* and was

9. **within its muzzle**—meaning, apparently, within reach of the scope of its muzzle, which had a bayonet affixed to the end of it.

published in two volumes in Philadelphia the same year. It is by such comments as these that Cooper roused the ire of both countries, however sound his observations might be. The text is from the London edition.

IT WOULD be an occupation of interest to note the changes, moral and physical, that time, climate, and different institutions have produced between the people of England, and those of America.

Physically, I do not think the change as great as is usually imagined. Dress makes a sensible difference in appearance, and I find that the Americans, who have been under the hands of the English tailors, are not easily distinguished from the English themselves. The principal points of distinction strike me to be these. We are taller, and less fleshy; more disposed to stoop; have more prominent features, and faces less full; are less ruddy, and more tanned; have much smaller hands and feet, anti-democratical as it may be; and are more slouching in gait. The exceptions, of course, are numerous; but I think these distinctions may be deemed national. The American, who has become Europeanized by dress, however, is so very different a looking animal from what he is at home, that too much stress is not to be laid on them. Then the great extent of the United States is creating certain physical differences in our own population, that render all such comparisons liable to many qualifications.

As to stature and physical force, I see no reason to think that the animal has deteriorated in America. As between England and the old Atlantic states, the difference is not striking, after one allows for the disparity in numbers, and the density of the population here, the eye always seeking exceptions; but I incline to believe that the south-west will turn the scale to our side. I believe it to be a fact, that the aborigines of that portion of the Union were larger than those of our section of the country.

There are obvious physical differences among the English themselves. One county is said to have an undue proportion of red heads, another to have men taller than the common, this again men that are shorter, and all to show traces of their remote origins. It is probable that some of these peculiarities have descended to ourselves, though they have become blended by the unusual admixture of the population.

Morally, we live under the influence of systems so completely the converse of each other, that it is matter of surprise so many points of resemblance still remain. The immediate tendency of the English system is, to create an extreme deference in all the subordinate classes for their superiors; while that of the American is to run into the opposite feeling. The effects of both these tendencies are certainly observable; though relatively, that of our own much less, I think, than that of England. It gives good models a rather better chance here, than they have with us.

In England, the disaffected to the government are among precisely those who most sustain government in America; and the disaffected in America, (if so strong a word can properly be used, as applied to natives,) are of a class whose interests it is to sustain government in England. These facts give

41. **England**—"When the writer went to Europe, it was so unusual to hear anything against the system of America, that disaffection may be said to have become extinct. On his return,

very different aspects to the general features of society. Walking in Regent-street lately, I witnessed an attempt of the police to compel some hackney coachmen to quit their boxes, and go with them before the magistrate. A crowd of a thousand people collected immediately, and its feeling was decidedly against the ministers of the law; so much so, indeed, as to render it doubtful whether the coachmen, whose conduct had been flagrantly criminal, would not be rescued. Now, in America, I think the feeling of such a crowd, would have been just the other way. It would have taken an interest in supporting the authorities of the country, instead of an interest in opposing them. This was not the case of a mob, you will remember, in which passion puts down reason; but an ordinary occurrence of the exercise of the power of the police. Instances of this nature might be multiplied, to show that the mass of the two people act under the influence of feelings diametrically opposed to each other.

On the other hand, Englishmen of the higher classes are, with very few exceptions, and these exceptions are usually instances of mere party opposition, attached to their system, sensitive of the subject of its merits or defects, and ever ready to defend it when assailed. The American of the same class is accustomed to sneer at democracy, to cavil at its fruits, and to colour and exaggerate its faults. Though this latter disposition may be, to a degree, accounted for by the facts, that all merit is comparative, and most of our people have not had the opportunities to compare; and that it is natural to resist most that which most annoys, although the substitution of any other for the actual system would produce even greater discontent; still, I think, the general tendency of aristocratical institutions on the one hand, and of democratical on the other, is to produce this broad difference in feeling, as between classes.

Both the Americans and the English are charged with being offensively boastful and arrogant as nations, and too much disposed to compare themselves advantageously with their neighbours. I have visited no country in which a similar disposition does not exist, and as communities are merely aggregations of men, I fancy that the disposition of a people to take this view of their own merits, is no more than carrying out the well known principle of individual vanity. The English and ourselves, however, well may, and probably do, differ from other nations in one circumstance connected with such a failing. The mass in both nations are better instructed, and are of more account than the mass in other countries, and their sentiments form more of a public opinion than elsewhere. When the bulk of a people are in a condition to make themselves heard, one is not to expect much refinement or delicacy, in the sentiments they utter. The English do not strike me as being a vainer nation than the French, although, in the way of ordinary intercourse, I believe that both they and we are more boastful.

however, after an absence of less than eight years, he was astonished to hear monarchical sentiments openly declared; and he believes that it will be generally admitted by all candid observers, that their avowal is now more open and frequent than they have been at any time within the present century. This is not the place to discuss the reasons; but this explanation is due from the writer, on his own account, as, without it, a change, that has actually taken place among others may be ascribed to himself. No one need be ashamed of having honestly altered his opinions, for good cause, and after mature examination; but, since the publication of these letters has commenced, the writer has been openly accused of changes that, in point of fact, have occurred among other people. Another occasion may offer to examine this point." (Cooper's note)

The English are to be particularly distinguished from the Americans in the circumstance of their being a proud people. This is a useful and even an ennobling quality, when it is sustained by facts, though apt to render a people both uncomfortable and unpleasant, when the glory on which they pique themselves is passed away. We are almost entirely wanting in national pride, though abundantly supplied with an irritable vanity that might rise to pride, had we greater confidence in our facts. Most intelligent Englishmen are ready enough to admit the obvious faults of their climate, and even of their social condition; but it is an uncommon American that will concede anything material on such points, unless it can be made to bear on democracy. We have the sensitiveness of provincials, increased by the consciousness of having our spurs to earn, on all matters of glory and renown, and our jealousy extends even to the reputations of the cats and dogs. It is but an indifferent compliment to human nature to add, that the man who will join complacently, and I may say ignorantly, in the abuse of foreigners against the institutions of the country, and even against its people, always reserving a saving clause in favour of his own particular class, will take fire if an innuendo is hazarded against its beef, or a suggestion made that the four thousand feet of the Round Peak are not equal to the thirteen thousand feet of the Jung Frau. The English are tolerably free from this weakness, and travelling is daily increasing this species of liberality, at least. I presume that the insular situation of England, and our own distance from Europe, are equally the causes of these traits; though there may be said to be a "property qualification" in the very nature of man, that disposes him to view his own things with complacency, and those of his neighbours with disgust. Bishop Heber, in one of his letters to Lord Grenville, in speaking of the highest peaks of the Himalayas, throws into a parenthesis, "which I feel some exultation in saying, is completely within the limits of the British empire;" a sort of sentiment, of which, I dare say, neither St. Chrysostom nor Polycarp was entirely free.

On the subject of sensibility to comments on their national habits and national characters, neither France nor England is by any means as philosophical or indifferent as one might suppose. As a rule, I believe all men are more easily enraged when their real faults are censured, than when their virtues are called in question; and if the defect happen to be unavoidable, or one for which they are not fairly responsible, the resentment is two-fold that which would attend a comment on a vice. The only difference I can discover between the English and ourselves in this particular, is easily to be traced to our greater provincialism, youth, and the consciousness that we are obliged to anticipate some of our renown. I should say that the English are *thin-skinned,* and the Americans *raw*. Both resent fair, frank, and manly comments with the same bad taste, resorting to calumny, blackguardism, and abuse, when wit and pleas-

19. Jung Frau—more commonly Jungfrau, the famous Swiss peak. **25. Bishop Heber**—Reginald Heber (1783-1826), bishop of Calcutta. The passage quoted is from a letter from Bombay, June 1, 1825, which may be found in his *Narrative of a Journey through the Upper Provinces of India,* London, 1846, 2 vols., Vol. II, p. 240. The work originally appeared in 1827. **28. St. Chrysostom**—St. John Chrysostom, or the "Golden-Mouthed" (345-407), ten years of whose life were devoted to ascetic study. **29. Polycarp**—(about 69-155) bishop of Smyrna, mentioned here, apparently, because of his saintliness.

antry would prove both more effective and wiser, and, perhaps, reformation wisest of all. I can only account for this peculiarity, by supposing that the institutions and political facts of the two countries have rendered vulgar-minded men of more account than is usually the case; and that their influence has created a species of public opinion which is less under the correction of taste, principles, and manners, than is the case in nations where the mass is more depressed. Of the fact itself, there can be no question.

In order to appreciate the effect of refinement on this nation, it will be necessary to recur to some of its statistical facts. England, including Wales, contains rather less than fifty-eight thousand square miles of territory; the state of New York, about forty-three thousand. On the former surface, there is a population of something like fifteen millions; on the latter, a population of less than two. One gives a proportion of about two hundred and sixty to the square mile, and the other a proportion of less than fifty. These premises, alone would show us the immense advantage that any given portion of surface in England must possess over the same extent of surface in America, in all those arts and improvements that depend on physical force. If there were ten men of education, and refinement, and fortune, in a county of New York, of one thousand square miles in extent, there ought to be more than fifty men of the same character and means, in an English county of equal territory. This is supposing that the real premises offer nothing more against us than the disproportion between numbers and surface; whereas, in fact, time, wealth, and an older civilization more than quadruple the odds. Even these do not make up the sum of the adverse elements. Though England has but fifteen millions of souls, the empire she controls has nearly ten times that population, and a very undue proportion of the results of so great a physical force centre in this small spot.

The consideration of these truths suggest several useful heads of reflection. In the first place, they show us, if not the absolute impossibility, the great improbability, that the civilization, refinement, knowledge, wealth, and tastes of even the best portions of America can equal those of this country, and suggest the expediency of looking to other points for our sources of pride. I have said, that the two countries act under the influence of moral agencies that are almost the converse of each other. The condensation of improvement and cultivation is so great here, that even the base of society is affected by it, even to deportment; whereas, with us, these properties are so dispersed, as to render it difficult for those who are lucky enough to possess them, to keep what they have got, in face of the overshadowing influence of a lower school, instead of being able to impart them to society. Our standard, in nearly all things, as it is popular, is necessarily one of mediocrity; a highly respectable, and, circumstances considered, a singularly creditable one, but still a mediocrity; whereas, the condition of these people has enabled them to raise a standard which, however much it may be and is wanting in the better elements of a pure taste, has immensely the advantage of our own in most of the obvious blandishments of life. More than half of the peculiarities of America—peculiarities for which it is usual to seek a cause in the institutions, simply because they are so peculiar themselves—are to be traced to facts like these; or, in other words, to the dis-

proportion between surface and numbers, the want of any other commercial towns, and our distance from the rest of the world.

Every condition of society has its own advantages, and its own disadvantages. To claim perfection for any one in particular, would be to deny the nature of man. Their comparative merits are to be decided, only, by the comparative gross results, and it is in this sense, that I contend for the superiority of our own. The utilitarian school, as it has been popularly construed, is not to my taste, either; for I believe there is great utility in the grace and elegance of life, and no one would feel more disposed to resist a system in which these essential properties are proscribed. That we are wanting in both, I am ready to allow; but I think the reason is to be found in facts entirely independent of the institutions, and that the time will come when the civilization of America will look down that of any other section of the world, if the country can pass that state of probation during which it is and will be exposed to the assaults of secret combinations to destroy it; and during which, moreover, it is, in an especial degree, liable to be affected by inherited opinions, and opinions that have been obtained under a system that has so many of the forms, while it has so few of the principles of our own, as easily to be confounded with it, by the ignorant and the unreflecting.

We over-estimate the effects of intelligence as between ourselves and the English. The mass of information, here, probably exceeds that of America, though it is less equally distributed. In *general* knowledge of a practical nature, too, I think no people can compete with our own. But there is a species of information, that is both useful and refining, in which there are few European nations that do not surpass us. I allude, in particular, to most things that serve to embellish life. In addition to this superiority, the Europeans of the better classes very obviously possess over us an important advantage, in their intimate associations with each other, by which means they insensibly imbibe a great deal of current knowledge, of which the similar classes in America are nearly ignorant; or, which, if known at all, is only known through the medium of books. In the exhibition of this knowledge, which embraces all that belongs to what is commonly termed a knowledge of the world, the difference between the European and the American is the difference that is seen between the man who has passed all his days in good society, and the man who has got his knowledge of it from novels and plays.

In a correct estimate of their government, and in an acquaintance with its general action, the English are much our superiors, though we know most of details. This arises from the circumstances that the rights of an Englishman are little more than franchises, which require no very profound examination to be understood; while those of the American depend on principles that demand study, and which are constantly exposed to the antagonist influence of opinions that have been formed under another system. It is true the English monarchy, as a monarchy and as it now exists, is a pure mystification; but the supremacy of parliament being admitted, there can arise no great difficulty on the score of interpretation. The American system, moreover, is complicated and double, and the only true Whig and Tory parties that can exist must have their origin in the circumstance. To these reasons may be added the general

fact, that the educated Englishman reasons on his institutions like an Englishman only; while his American counterpart oftener reasons on the institutions of the republic like an Englishman, too, than like an American. A single fact will show you what I mean, although a hundred might be quoted. In England the government is composed, in theory, of three bases and one summit; in America, it is composed of one base and three summits. In one, there is supposed to be a balance in the powers of the state; and, as this is impossible in practice, it has resulted in a consolidated authority in its action; in the other, there is but one power, that of the entire people, and the balance is in the action of their agents. A very little reflection will show that the maxims of two such systems ought to be as different as the systems themselves.

The English are to be distinguished from the Americans by greater independence of personal habits. Not only the institutions, but the physical condition of our own country has a tendency to reduce us all to the same level of usages. The steam-boats, the over-grown taverns, the speculative character of the enterprises, and the consequent disposition to do all things in common, aid the tendency of the system in bringing about such a result. In England a man dines by himself, in a room filled with other hermits; he eats at his leisure, drinks his wine in silence, reads the paper by the hour; and, in all things, encourages his individuality and insists on his particular humours. The American is compelled to submit to a common rule; he eats when others eat, sleeps when others sleep, and he is lucky, indeed, if he can read a paper in a tavern without having a stranger looking over each shoulder. The Englishman would stare at a proposal that should invade his habits under the pretence of a common wish, while the American would be very apt to yield tacitly, though this common wish should be no more than an impudent assertion of some one who had contrived to effect his own purposes, under the popular plea. The Englishman is so much attached to his independence that he instinctively resists every effort to invade it, and nothing would be more likely to arouse him than to say the mass thinks differently from himself; whereas the American ever seems ready to resign his own opinion to that which is made to seem to be the opinion of the public. I say *seems* to be, for so manifest is the power of public opinion, that one of the commonest expedients of all American managers, is to create an impression that the public thinks in a particular way, in order to bring the common mind in subjection. One often renders himself ridiculous by a foolish obstinacy, and the other is as often contemptible by a weak compliance. A portion of what may be called the *community* of character and habits in America is doubtless owing to the rustic nature of its society, for one more easily maintains his independence in a capital than in a village, but I think the chief reasons are to be found in the practice of referring every thing to the common mind.

It is usual to ascribe the solitary and unsocial habits of English life to the natural dispositions of the people, but, I think, unjustly. The climate is made

23. **shoulder**—"Exaggerated as this may appear, the writer has actually been driven away by strangers leaning over him, in this manner, no less than eleven times, at the Astor House, within the last twelvemonths." (Cooper's note.) The Astor House was the fashionable hotel of New York when this note was written.

to bear the blame of no small portion of this peculiarity. Climate, probably, has an influence on us all, for we know that we are more elastic and more ready to be pleased in a clear bracing air, than in one that is close and *siroccoish,* but, on the whole I am led to think, the English owe their habits to their institutions, more than to any natural causes.

I know no subject, no feeling, nothing, on which an Englishman, as a rule, so completely loses sight of all the better points of his character, on which he is so uniformly bigoted and unjust, so ready to listen to misrepresentation and caricature, and so unwilling to receive truth—on which, in short, he is so little himself in general, as on those connected with America.

As the result of this hasty and imperfect comparison, I am led to believe, that a national character somewhere between the two, would be preferable to either, as it is actually found. This may be saying no more than that man does not exist in a condition of perfection; but were the inequalities named, pared off from both people, an ingenious critic might still find faults of sufficient magnitude to preserve the identity with the human race, and qualities of sufficient elevation, to entitle both to be considered among the greatest and best nations of modern, if not of any other, times.

In most things that pertain to taste, the English have greatly the advantage of us, though *taste* is certainly not the strong side of English character. On this point, alone, one might write a book, but a very few remarks must now satisfy you. In nothing, however, is this superiority more apparent, than in their simplicity, and, particularly, in their simplicity of language. They call a spade, a spade. I very well know, that neither men nor women, in America, who are properly educated, and who are accustomed to its really better tone, differ much, if any, from the English in this particular; but, in this case, as in most others, in which *national* peculiarities are sought, the better tone of America is overshadowed by its mediocrity. Although I deem the government of this country

28. mediocrity—"Mrs. Butler, in her shrewd work on America, has given many good hits at this love for the grandiose. Whenever this lady has gone out of her particular sphere, or that of her sex, her remarks are such as might have been anticipated from a young English woman, visiting America with all her political prejudices about her, and, almost as a matter of course, necessarily ignorant of the true machinery and action of governments. Even in this writer, the expectation, not to say the *longing,* for a dissolution of the Union, that has been so often mentioned in these pages, is sufficiently apparent: she, also, has fallen into the very common error of ascribing things to the institutions, such for instance as the *nonchalance* of the tradespeople, and the noisy, screeching, hoydenish romps of the sexes, which it suits the caprices of certain people to term society, when they ought to be referred, one to the personal independence of a country prosperous beyond example, and the other to the unsettled condition of towns, that double their population every twenty years, and their wealth in ten.

"Mrs. Butler has made many other mistakes, beyond a question, for she has written under erroneous impressions at starting. Of this class are all the misconceptions connected with those usages that are thought to be tending daily towards aristocracy. Any one who knows the country well, knows that in all the ordinary appliances of this nature, America has been gradually receding from such forms for the last forty years. Thus footmen, liveries, hatchments, coats of arms, &c. &c. are all much less common now, than at the commencement of the century. Mrs. Butler has mistaken the twilight for the dawn; the shadows of the past for those of coming events. This is a common misapprehension of the English, and it arises from a disposition to see things in their own way.

"The treatment that this lady has received cannot be too loudly condemned. She has been derided, caricatured, almost, if not positively, slandered, because she has presumed to speak the truth about us! Mrs. Trollope has met with similar denunciations, though with a greater show of reason, for Mrs. Trollope has calumniated her own sex in America. Besides, one sees in the

the very quintessence of hocus pocus, having scarcely a single practice that does not violate its theory, I believe that there is more honesty of public sentiment in England, than in America. The defect at home, I ascribe, in common with the majority of our national failings, to the greater activity, and greater *unresisted* force of ignorance and cupidity, there, than here. High qualities are nowhere collected in a sufficient phalanx to present a front to the enemy, in America.

The besetting, the degrading vice of America, is the moral cowardice by which men are led to truckle to what is called public opinion; though this opinion is as inconstant as the winds—though, in all cases that enlist the feelings of factions, there are *two* and sometimes twenty, each differing from all the others, and though, nine times in ten, these opinions are mere engines set in motion by the most corrupt and the least respectable portion of the community, for unworthy purposes. The English are a more respectable and constant nation than the Americans, as relates to this peculiarity; probably, because the condensed masses of intelligence and character enable the superior portion of the community to produce a greater impression on the inferior, by their collective force. In standing prejudices, they strike me as being worse than ourselves; but in passing impressions, greatly our superiors.

For the last I have endeavoured to account, and I think the first may be ascribed to a system that is sustained by errors that it is not the interest of the more enlightened to remove, but which, instead of weakening in the ignorant, they rather encourage in themselves.

book of Mrs. Trollope, a malignant feeling, and calculations of profit; while the work of Mrs. Butler is as honest as it is fearless. The latter has designated persons too plainly, perhaps, coupled with unpleasant remarks; but all these faults may be overlooked as the whims of a very young female.

"In one thing Mrs. Butler is singularly mistaken. She says that neither England, nor France, manifests any sensibility on the subject of the comments of travellers! The French do not, ordinarily, understand the comments of the English, or the English those of the French. Neither nation reads nor knows any thing about the comments of the Americans at all. Nothing is easier than to manifest indifference to things of which we are totally ignorant. As respects the English, however, one has only to name Pillet, d'Haussez, and Puckler-Muskau, in order to show how much abuse and calumny they can heap on those whose opinions displease them. The stories circulated in English society, concerning the latter, by way of retaliation for his book, were quite on a level with the Trollopeana of America. Both are a disgrace to civilization." (Cooper's note)

Cooper is here discussing the diary of her travels that Fanny Kemble Butler published in 1835.

WILLIAM CULLEN BRYANT

1794-1878

I. THE PRECOCIOUS BOY (1794–1825)

1794 November 3, born at Cummington, Massachusetts, son of Dr. Peter Bryant and Sarah Snell Bryant.
1799 Attended district school.
1803 First verses written. "The Description of the School" published in *The Hampshire Gazette,* Northampton, in 1804.
1808 *The Embargo, or Sketches of the Times, a Satire,* a Federalist attack on Jefferson published in Boston, a revised edition appearing in 1809. Bryant began preparation for college.
1810–1811 Studied as a sophomore in Williams College (to May 8). Withdrew to prepare for Yale, but commenced study of law instead, being admitted to the bar August 9, 1814.
1817 "Thanatopsis" (in first form) published in the *North American Review* for September, attracting wide notice. Bryant began writing more or less regularly for the magazines.
1818 Published "Early American Verse" in the *North American Review* for July, censuring the "poverty and meanness" of the American muse.
1819 Elected town clerk of Great Barrington, whither he had removed in 1817.
1820 Father died, March 20.
1821 Married Fanny Fairchild, June 11. Delivered *The Ages* as Phi Beta Kappa poem at Harvard, August 30. *Poems* published in Boston.
1823 Failed as a dramatist with *The Heroes.*
1824 Active as a reviewer and as a lawyer.
1825 Removed to New York, where he became one of a literary group which eventually included Robert C. Sands, Cooper, Irving, Halleck.

II. POET, EDITOR, AND PUBLIC SPEAKER (1825–1855)

1826 Delivered four lectures on poetry before the American Athenaeum Society in April. Became assistant editor of the *Evening Post.*
1827 Appointed professor on the staff of the National Academy of the Arts of Design, lecturing on mythology (to 1831). Edited the *Talisman* with Sands and G. C. Verplanck (1829-1830; republished as *Miscellanies,* 1832).
1829–1878 Editor-in-chief of the *Evening Post.*
1832 *Poems* published in New York, the London edition being superintended by Irving. Visited Illinois. Contributed short stories to *Tales of the Glauber Spa.*
1833 Visited Canada.
1834–1836 Sailed for Europe June 24, 1834, visiting France, Italy, and Germany,

returning March 26, 1836, when a testimonial dinner was offered him and declined.

1839 Instrumental in publishing Dana's *Two Years before the Mast* (1840).

1842 *The Fountain and Other Poems* published in New York and London.

1843 Visited the South, meeting William Gilmore Simms. Acquired his home, Roslyn, in New York.

1844 *The White Footed Deer and Other Poems* published in New York.

1845 Sailed for Europe April 22, returning in November; met leading literary figures in England.

1846 Illustrated edition of his poems published in Philadelphia.

1848 Delivered eulogy (May 4) on Thomas Cole, the painter, the first of a series of similar commemorative addresses.

1849 Visited Cuba, and once more sailed for Europe (June 13), returning in December. *Letters of a Traveller, or Notes of Things Seen in Europe and America* published in New York; often reprinted.

1852 Delivered commemorative address on Cooper, February 25 ("A Discourse on the Life and Genius of James Fenimore Cooper"), long the only biography. Sailed for the Mediterranean November 13, returning June, 1853.

III. THE GRAND OLD MAN (1855–1878)

1855 Bryant active in organization of the Republican party in the East. *Poems,* 2 vols., published in New York.

1857 Sailed for Europe May 2, visiting Spain and Italy, where he met leading literary men and artists, returning August, 1858.

1860–1865 Active in support of the Union cause.

1864 *Thirty Poems* published in New York. *Hymns* privately printed; and again in 1869.

1866 Mrs. Bryant died July 27. At work on his translation of Homer. Sailed for Europe in October, visiting Spain and Italy, and returning in August, 1867.

1869 *Letters from the East* published. Active as a commemorative orator.

1870 Translation of the Iliad published (Odyssey, 1871-1872).

1871 Published *The Song of the Sower.* Edited *A Library of Poetry and Song* (1871-72). Attacked Darwinism in an address at Williams College.

1872 Visited the Caribbean and Mexico.

1873 Published *The Little People of the Snow.*

1878 Published *The Flood of Years.* Died June 12.

1879 Household edition of Bryant's *Poems* published.

BIOGRAPHIES: There is a life by Parke Godwin in *The Life and Works* (see below). See also John Bigelow, *William Cullen Bryant,* Houghton Mifflin, 1890 (American Men of Letters); W. A. Bradley, *William Cullen Bryant,* Macmillan, 1905 (English Men of Letters). These biographies should be corrected in the light of Allan Nevins, *The Evening Post: A Century of Journalism,* Boni & Liveright, 1922, which approaches Bryant from a fresh point of view. See also the life by Nevins in the Dictionary of American Biography.

BIBLIOGRAPHY AND EDITIONS: Aside from the *Literary History of the United States,* Vol. III, pp. 422-27, the best bibliography is that in the Roslyn edition of the *Poetical Works.*

The Life and Works of William Cullen Bryant, ed. by Parke Godwin,

Appleton, 1883-84, 6 vols. (highly selective for the prose). There is no complete edition of Bryant's prose, and much of his editorial writing has never been collected. The best edition of the poetry is the Roslyn edition: *The Poetical Works of William Cullen Bryant,* ed. by H. C. Sturges, Appleton, 1903. The best book of selections is that by Tremaine McDowell in the American Writers Series (American Book Co., 1935).

One's impression of Bryant is so fixed by the familiar picture of the white-bearded old poet that it is difficult to remember he was once a young, audacious stripling of twenty-one. This impression is further strengthened by the quality of his familiar verse—its stately dignity, its obsession with death and immemorial antiquity, the hoary age of the American landscape, and so on. Such portions of his prose as are generally familiar usually commemorate the virtues of a deceased friend, so that this, too, increases the atmosphere of veneration. It is not surprising therefore that, to the popular mind, Bryant is perpetually eighty years old. To offset these prejudices, it is well to remember that in 1821 Channing invited him to a "literary frolic" in *The Idle Man,* and that Bryant manufactured literary hoaxes in the *Evening Post.*

Most of Bryant's prose is unavailable, and that which is available is too little read. There is, it is true, something elephantine in his clumsy attempts at fiction. His great personal dignity colors all he wrote. Yet he was a vigorous and successful editorial writer, one who could be caustic on occasion, and one who waged valiant literary warfare for his political beliefs, which were in truth sufficiently radical, if one remembers the Federalist predilections of his youth. His commemorative addresses became a literary institution in New York; and though he was prevented by the nature of these occasions from unkind comment on the dead, he often wove a good deal of shrewd criticism into the texture of these speeches. His reviews, and the general articles which he contributed to periodicals, often contain just and vigorous criticism of American literature.

It is, however, as a poet that Bryant is mainly remembered. He is conventionally called the American Wordsworth; but more important than superficial resemblances between his nature poems and those of the English bard is Bryant's relation to the eighteenth-century world from which he emerged. Kirke White, Cowper, Blair, Young, and Bishop Porteus (he of "Death" fame) form the background of "Thanatopsis." Bryant's view of the American landscape has its parallels in such travelers as Bartram and such theorists as Volney in the latter's *Ruins of Empire.* The poet began his career with "The Embargo," which any minor eighteenth-century satirist might have written, and closed it with "The Flood of Years," which any eighteenth-century moralist might have approved. This is not to say that his poems are not contemporary with the occasions which called them forth, but points rather to his intellectual and emotional origins. It is Bryant, rather than the Connecticut Wits, who first led American verse out of the wilderness of arid generalities into the promised land of specific American themes. This is his great historical service.

THANATOPSIS

This most famous of Bryant's poems was first published (in abbreviated form) in the *North American Review,* September, 1817, and then, considerably revised, in the *Poems* of 1821. The first form of the poem includ four indifferent quatrains, which were ir mediately dropped; the blank verse begi with "Yet a few days" of line 17 and exten to "make their bed with thee" of line 66 the present version. The poem underwent number of textual revisions of a minor so

which can be studied in the Roslyn edition, p. lxxxi. The present text, as is the case with the other selections from Bryant, is from the Household edition, copyrighted in 1876, the last to appear in Bryant's lifetime. Of "Thanatopsis" in its original form the story is told that Richard H. Dana exclaimed to Willard Philips (they were both members of the *North American* staff at the time): "Oh, Philips, you have been imposed upon. No one on this side of the Atlantic is capable of writing such verses." The title may be roughly paraphrased as meaning: "About Death."

To him who in the love of Nature holds
Communion with her visible forms, she speaks
A various language; for his gayer hours
She has a voice of gladness, and a smile
And eloquence of beauty, and she glides
Into his darker musings, with a mild
And healing sympathy, that steals away
Their sharpness, ere he is aware. When thoughts
Of the last bitter hour come like a blight
Over thy spirit, and sad images
Of the stern agony, and shroud, and pall,
And breathless darkness, and the narrow house,
Make thee to shudder, and grow sick at heart;—
Go forth, under the open sky, and list
To Nature's teachings, while from all around—
Earth and her waters, and the depths of air—
Comes a still voice— Yet a few days, and thee
The all-beholding sun shall see no more
In all his course; nor yet in the cold ground,
Where thy pale form was laid, with many tears,
Nor in the embrace of ocean, shall exist
Thy image. Earth, that nourished thee, shall claim
Thy growth, to be resolved to earth again,
And, lost each human trace, surrendering up
Thine individual being, shalt thou go
To mix forever with the elements,
To be a brother to the insensible rock
And to the sluggish clod, which the rude swain
Turns with his share, and treads upon. The oak
Shall send his roots abroad, and pierce thy mould.

Yet not to thine eternal resting-place
Shalt thou retire alone, nor couldst thou wish
Couch more magnificent. Thou shalt lie down
With patriarchs of the infant world—with kings,
The powerful of the earth—the wise, the good,
Fair forms, and hoary seers of ages past,
All in one mighty sepulchre. The hills
Rock-ribbed and ancient as the sun,—the vales
Stretching in pensive quietness between;
The venerable woods—rivers that move
In majesty, and the complaining brooks
That make the meadows green; and, poured round all,
Old Ocean's gray and melancholy waste,—
Are but the solemn decorations all
Of the great tomb of man. The golden sun,
The planets, all the infinite host of heaven,
Are shining on the sad abodes of death,
Through the still lapse of ages. All that tread
The globe are but a handful to the tribes
That slumber in its bosom.—Take the wings
Of morning, pierce the Barcan wilderness,
Or lose thyself in the continuous woods
Where rolls the Oregon, and hears no sound,
Save his own dashings—yet the dead are there:
And millions in those solitudes, since first
The flight of years began, have laid them down
In their last sleep—the dead reign there alone.
So shalt thou rest, and what if thou withdraw

29. share—plowshare. **51. Barcan**—Barca refers to the desert region of North Africa, and is so used by the Latin poets; Bryant is here transferring its meaning and has in mind the "Great American Desert" which formerly occupied a large space on maps of the United States. **53. Oregon**—the Columbia River. Lewis and Clark reached the mouth of the Columbia Nov. 7, 1805. **55. millions**—The notion of America as having been peopled by a vanished race, a favorite concept of Bryant's, was part of the romantic anthropology of the day and found support in the theory that the Mound Builders were a people of high culture. See "The Prairies" of Bryant.

In silence from the living, and no friend
Take note of thy departure? All that breathe
Will share thy destiny. The gay will laugh
When thou art gone, the solemn brood of care
Plod on, and each one as before will chase
His favorite phantom; yet all these shall leave
Their mirth and their employments, and shall come
And make their bed with thee. As the long train
Of ages glide away, the sons of men,
The youth in life's green spring, and he who goes
In the full strength of years, matron and maid,
The speechless babe, and the gray-headed man—
Shall one by one be gathered to thy side,
By those, who in their turn shall follow them.

So live, that when thy summons comes to join
The innumerable caravan, which moves
To that mysterious realm, where each shall take
His chamber in the silent halls of death,
Thou go not, like the quarry-slave at night,
Scourged to his dungeon, but, sustained and soothed
By an unfaltering trust, approach thy grave,
Like one who wraps the drapery of his couch
About him, and lies down to pleasant dreams.

THE YELLOW VIOLET

First published in the *Poems* of 1821. The importance of the poem, aside from its charm, is that it celebrates an American flower.

When beechen buds begin to swell,
And woods the blue-bird's warble know,
The yellow violet's modest bell
Peeps from the last year's leaves below.
Ere russet fields their green resume,
Sweet flower, I love, in forest bare,
To meet thee, when thy faint perfume
Alone is in the virgin air.

Of all her train, the hands of Spring
First plant thee in the watery mould,
And I have seen thee blossoming
Beside the snow-bank's edges cold.

Thy parent sun, who bade thee view
Pale skies, and chilling moisture sip,
Has bathed thee in his own bright hue,
And streaked with jet thy glowing lip.

Yet slight thy form, and low thy seat,
And earthward bent thy gentle eye,
Unapt the passing view to meet,
When loftier flowers are flaunting nigh.

Oft, in the sunless April day,
Thy early smile has stayed my walk;
But midst the gorgeous blooms of May,
I passed thee on thy humble stalk.

So they, who climb to wealth, forget
The friends in darker fortunes tried.
I copied them—but I regret
That I should ape the ways of pride.

And when again the genial hour
Awakes the painted tribes of light,
I'll not o'erlook the modest flower
That made the woods of April bright.

INSCRIPTION FOR THE ENTRANCE TO A WOOD

First published in the *North America Review,* 1817, as "Fragment." Received i present title in the *Poems* of 1821. Poetic "inscriptions" were a favorite minor mod among English minor romantic poets lik Bowles. The influence of landscape paintin is to be noted in this poem.

Stranger, if thou hast learned a trut which needs

68. green—"fresh" in some editions. **30. painted tribes of light**—Note the eighteenth-century periphrasis for flowers.

No school of long experience, that the world
Is full of guilt and misery, and hast seen
Enough of all its sorrows, crimes, and cares,
To tire thee of it, enter this wild wood
And view the haunts of Nature. The calm shade
Shall bring a kindred calm, and the sweet breeze
That makes the green leaves dance, shall waft a balm
To thy sick heart. Thou wilt find nothing here
Of all that pained thee in the haunts of men
And made thee loathe thy life. The primal curse
Fell, it is true, upon the unsinning earth,
But not in vengeance. God hath yoked to guilt
Her pale tormentor, misery. Hence, these shades
Are still the abodes of gladness; the thick roof
Of green and stirring branches is alive
And musical with birds, that sing and sport
In wantonness of spirit; while below
The squirrel, with raised paws and form erect,
Chirps merrily. Throngs of insects in the shade
Try their thin wings and dance in the warm beam
That waked them into life. Even the green trees
Partake the deep contentment; as they bend
To the soft winds, the sun from the blue sky
Looks in and sheds a blessing on the scene.
Scarce less the cleft-born wild-flower seems to enjoy
Existence, than the wingèd plunderer
That sucks its sweets. The massy rocks themselves,
And the old and ponderous trunks of prostrate trees
That lead from knoll to knoll a causey rude
Or bridge the sunken brook, and their dark roots,
With all their earth upon them, twisting high,
Breathe fixed tranquillity. The rivulet
Sends forth glad sounds, and tripping o'er its bed
Of pebbly sands, or leaping down the rocks,
Seems, with continuous laughter, to rejoice
In its own being. Softly tread the marge,
Lest from her midway perch thou scare the wren
That dips her bill in water. The cool wind,
That stirs the stream in play, shall come to thee,
Like one that loves thee nor will let thee pass
Ungreeted, and shall give its light embrace.

TO A WATERFOWL

Composed on a walk from Plainfield to Cummington, December 15, 1817, when Bryant was feeling "very forlorn and desolate." Published in the *North American Review*, March, 1818; collected in *Poems* (1821).

Whither, midst falling dew,
While glow the heavens with the last steps of day,
Far, through their rosy depths, dost thou pursue
Thy solitary way?

Vainly the fowler's eye
Might mark thy distant flight to do thee wrong,
As, darkly seen against the crimson sky,
Thy figure floats along.

Seek'st thou the plashy brink
Of weedy lake, or marge of river wide,
Or where the rocking billows rise and sink
On the chafed ocean-side?

There is a Power whose care
Teaches thy way along that pathless coast—
The desert and illimitable air—
Lone wandering, but not lost.

All day thy wings have fanned,
At that far height, the cold, thin atmosphere,

11. **primal curse**—*Cf.* Genesis 3:14 ff. 13. **guilt**—capitalized in some editions, as is **misery** in the next line. 30. **causey**—causeway.

Yet stoop not, weary, to the welcome land,
Though the dark night is near.

And soon that toil shall end;
Soon shalt thou find a summer home, and rest,
And scream among thy fellows; reeds shall bend,
Soon, o'er thy sheltered nest.

Thou'rt gone, the abyss of heaven
Hath swallowed up thy form; yet, on my heart
Deeply has sunk the lesson thou hast given,
And shall not soon depart.

He who, from zone to zone,
Guides through the boundless sky thy certain flight,
In the long way that I must tread alone,
Will lead my steps aright.

GREEN RIVER

First published in the second number of *The Idle Man,* edited by R. H. Dana (1821); and collected in *Poems* (1821). The poem was written in Great Barrington in 1819.

When breezes are soft and skies are fair,
I steal an hour from study and care,
And hie me away to the woodland scene,
Where wanders the stream with waters of green,
As if the bright fringe of herbs on its brink
Had given their stain to the wave they drink;
And they, whose meadows it murmurs through,
Have named the stream from its own fair hue.

Yet pure its waters—its shallows are bright
With colored pebbles and sparkles of light,
And clear the depths where its eddies play,
And dimples deepen and whirl away,
And the plane-tree's speckled arms o'ershoot
The swifter current that mines its root,
Through whose shifting leaves, as you walk the hill,
The quivering glimmer of sun and rill,
With a sudden flash on the eye is thrown,
Like the ray that streams from the diamond-stone.
Oh, loveliest there the spring days come,
With blossoms, and birds, and wild-bees' hum;
The flowers of summer are fairest there,
And freshest the breath of the summer air;
And sweetest the golden autumn day
In silence and sunshine glides away.

Yet, fair as thou art, thou shun'st to glide,
Beautiful stream! by the village side;
But windest away from haunts of men,
To quiet valley and shaded glen;
And forest, and meadow, and slope of hill,
Around thee, are lonely, lovely, and still.
Lonely—save when, by thy rippling tides,
From thicket to thicket the angler glides;
Or the simpler comes, with basket and book,
For herbs of power on thy banks to look;
Or haply, some idle dreamer, like me,
To wander, and muse, and gaze on thee,
Still—save the chirp of birds that feed
On the river cherry and seedy reed,
And thy own wild music gushing out
With mellow murmur of fairy shout,
From dawn to the blush of another day,
Like traveller singing along his way.

That fairy music I never hear,
Nor gaze on those waters so green and clear,
And mark them winding away from sight,
Darkened with shade or flashing with light,
While o'er them the vine to its thicket clings,
And the zephyr stoops to freshen his wings,
But I wish that fate had left me free
To wander these quiet haunts with thee,
Till the eating cares of earth should depart,
And the peace of the scene pass into my heart;
And I envy thy stream, as it glides along
Through its beautiful banks in a trance of song.

18. diamond-stone—The hyphen appears for the first time in the 1854 *Poems.* **33. simpler**—herb-gatherer. **36. thee**—followed by a period until 1854, when the present punctuation was adopted. **40. of**—Reads "or" (1821); "and" (1832, 1836, 1843); "of" (1854).

Though forced to drudge for the dregs of men,
And scrawl strange words with the barbarous pen,
And mingle among the jostling crowd,
Where the sons of strife are subtle and loud—
I often come to this quiet place,
To breathe the airs that ruffle thy face,
And gaze upon thee in silent dream,
For in thy lonely and lovely stream
An image of that calm life appears
That won my heart in my greener years.

THE DEATH OF THE FLOWERS

First published in the *New York Review*, 1825; collected in *Poems* (1832).

The melancholy days are come, the saddest of the year,
Of wailing winds, and naked woods, and meadows brown and sere.
Heaped in the hollows of the grove, the autumn leaves lie dead;
They rustle to the eddying gust, and to the rabbit's tread;
The robin and the wren are flown, and from the shrubs the jay,
And from the wood-top calls the crow through all the gloomy day.

Where are the flowers, the fair young flowers, that lately sprang and stood
In brighter light and softer airs, a beauteous sisterhood?
Alas! they all are in their graves, the gentle race of flowers
Are lying in their lowly beds, with the fair and good of ours.
The rain is falling where they lie, but the cold November rain
Calls not from out the gloomy earth the lovely ones again.

The wind-flower and the violet, they perished long ago,
And the brier-rose and the orchis died amid the summer glow;
But on the hills the golden-rod, and the aster in the wood,
And the yellow sun-flower by the brook in autumn beauty stood,
Till fell the frost from the clear cold heaven, as falls the plague on men,
And the brightness of their smile was gone, from upland, glade, and glen.

And now, when comes the calm mild day, as still such days will come,
To call the squirrel and the bee from out their winter home;
When the sound of dropping nuts is heard, though all the trees are still,
And twinkle in the smoky light the waters of the rill,
The south wind searches for the flowers whose fragrance late he bore,
And sighs to find them in the wood and by the stream no more.

And then I think of one who in her youthful beauty died,
The fair meek blossom that grew up and faded by my side.
In the cold moist earth we laid her, when the forests cast the leaf,
And we wept that one so lovely should have a life so brief:
Yet not unmeet it was that one, like that young friend of ours,
So gentle and so beautiful, should perish with the flowers.

62. **stream**—followed by a comma in 1821, 1832, 1836, which disappears in 1843.

"OH FAIREST OF THE RURAL MAIDS"

Written in 1820 and addressed to his future wife; published in the *Poems* of 1832.

Oh fairest of the rural maids!
Thy birth was in the forest shades;
Green boughs, and glimpses of the sky,
Were all that met thine infant eye.

Thy sports, thy wanderings, when a child,
Were ever in the sylvan wild;
And all the beauty of the place
Is in thy heart and on thy face.

The twilight of the trees and rocks
Is in the light shade of thy locks;
Thy step is as the wind, that weaves
Its playful way among the leaves.

Thine eyes are springs, in whose serene
And silent waters heaven is seen;
Their lashes are the herbs that look
On their young figures in the brook.

The forest depths, by foot unpressed,
Are not more sinless than thy breast;
The holy peace, that fills the air
Of those calm solitudes, is there.

A FOREST HYMN

Published in the *United States Literary Gazette,* April 1, 1825, as "Forest Hymn," and collected in the *Poems* of 1832. Becomes "A Forest Hymn" (apparently to distinguish it from other "Hymns" by Bryant) in the illustrated edition of *Poems* (1847).

The groves were God's first temples. Ere man learned
To hew the shaft,* and lay the architrave,†
And spread the roof above them—ere he framed
The lofty vault, to gather and roll back
The sound of anthems; in the darkling wood,
Amid the cool and silence, he knelt down,
And offered to the Mightiest solemn thanks
And supplication. For his simple heart
Might not resist the sacred influences
Which, from the stilly twilight of the place,
And from the gray old trunks that high in heaven
Mingled their mossy boughs, and from the sound
Of the invisible breath that swayed at once
All their green tops, stole over him, and bowed
His spirit with the thought of boundless power
And inaccessible majesty. Ah, why
Should we, in the world's riper years, neglect
God's ancient sanctuaries, and adore
Only among the crowd, and under roofs
That our frail hands have raised? Let me, at least,
Here, in the shadow of this aged wood,
Offer one hymn—thrice happy, if it find
Acceptance in His ear.

Father, thy hand
Hath reared these venerable columns, thou
Didst weave this verdant roof. Thou didst look down
Upon the naked earth, and, forthwith, rose
All these fair ranks of trees. They, in thy sun,
Budded, and shook their green leaves in thy breeze,
And shot toward heaven. The century-living crow,
Whose birth was in their tops, grew old and died
Among their branches, till, at last, they stood,
As now they stand, massy, and tall, and dark,
Fit shrine for humble worshipper to hold
Communion with his Maker. These dim vaults,
These winding aisles, of human pomp or pride
Report not. No fantastic carvings show
The boast of our vain race to change the form
Of thy fair works. But thou art here—thou fill'st
The solitude. Thou art in the soft winds
That run along the summit of these trees
In music; thou art in the cooler breath
That from the inmost darkness of the place

* **shaft**—pillar. † **architrave**—the entablature resting on the column in classical architecture.

Comes, scarcely felt; the barky trunks, the ground,
The fresh moist ground, are all instinct with thee.
Here is continual worship;—Nature, here,
In the tranquillity that thou dost love,
Enjoys thy presence. Noiselessly, around,
From perch to perch, the solitary bird
Passes; and yon clear spring, that, midst its herbs,
Wells softly forth and wandering steeps the roots
Of half the mighty forest, tells no tale
Of all the good it does. Thou hast not left
Thyself without a witness, in the shades,
Of thy perfections. Grandeur, strength, and grace
Are here to speak of thee. This mighty oak—
By whose immovable stem I stand and seem
Almost annihilated—not a prince,
In all that proud old world beyond the deep,
E'er wore his crown as loftily as he
Wears the green coronal of leaves with which
Thy hand has graced him. Nestled at his root
Is beauty, such as blooms not in the glare
Of the broad sun. That delicate forest flower,
With scented breath and look so like a smile,
Seems, as it issues from the shapeless mould,
An emanation of the indwelling Life,
A visible token of the upholding Love,
That are the soul of this great universe.

My heart is awed within me when I think
Of the great miracle that still goes on,
In silence, round me—the perpetual work
Of thy creation, finished, yet renewed
Forever. Written on thy works I read
The lesson of thy own eternity.
Lo! all grow old and die—but see again,
How on the faltering footsteps of decay
Youth presses—ever gay and beautiful youth
In all its beautiful forms. These lofty trees
Wave not less proudly that their ancestors
Moulder beneath them. Oh, there is not lost
One of earth's charms: upon her bosom yet,
After the flight of untold centuries,
The freshness of her far beginning lies
And yet shall lie. Life mocks the idle hate
Of his arch-enemy Death—yea, seats himself
Upon the tyrant's throne—the sepulchre,
And of the triumphs of his ghastly foe
Makes his own nourishment. For he came forth
From thine own bosom, and shall have no end.

There have been holy men who hid themselves
Deep in the woody wilderness, and gave
Their lives to thought and prayer, till they outlived
The generation born with them, nor seemed
Less aged than the hoary trees and rocks
Around them;—and there have been holy men
Who deemed it were not well to pass life thus.
But let me often to these solitudes
Retire, and in thy presence reassure
My feeble virtue. Here its enemies,
The passions, at thy plainer footsteps shrink
And tremble and are still. O God! when thou
Dost scare the world with tempests, set on fire
The heavens with falling thunderbolts, or fill,
With all the waters of the firmament,
The swift dark whirlwind that uproots the woods
And drowns the villages; when, at thy call,
Uprises the great deep and throws himself
Upon the continent, and overwhelms
Its cities—who forgets not, at the sight
Of these tremendous tokens of thy power,
His pride, and lays his strifes and follies by?
Oh, from these sterner aspects of thy face
Spare me and mine, nor let us need the wrath
Of the mad unchained elements to teach
Who rules them. Be it ours to meditate,
In these calm shades, thy milder majesty,
And to the beautiful order of thy works
Learn to conform the order of our lives.

SONG OF MARION'S MEN

First published in the *New York Mirror*, November, 1831, and collected in *Poems*

(1832). Bryant prefaces the poem with the following note: "The exploits of General Francis Marion, the famous partisan warrior of South Carolina, form an interesting chapter in the annals of the American Revolution. The British troops were so harassed by the irregular and successful warfare which he kept up at the head of a few daring followers, that they sent an officer to remonstrate with him for not coming into the open field and fighting 'like a gentleman and a Christian.'"

Our band is few but true and tried,
  Our leader frank and bold;
The British soldier trembles
  When Marion's name is told.
Our fortress is the good greenwood,
  Our tent the cypress-tree;
We know the forest round us,
  As seamen know the sea.
We know its walls of thorny vines,
  Its glades of reedy grass,
Its safe and silent islands
  Within the dark morass.

Woe to the English soldiery
  That little dread us near!
On them shall light at midnight
  A strange and sudden fear:
When, waking to their tents on fire,
  They grasp their arms in vain,
And they who stand to face us
  Are beat to earth again;
And they who fly in terror deem
  A mighty host behind,
And hear the tramp of thousands
  Upon the hollow wind.

Then sweet the hour that brings release
  From danger and from toil:
We talk the battle over,
  And share the battle's spoil.
The woodland rings with laugh and shout,
  As if a hunt were up,
And woodland flowers are gathered
  To crown the soldier's cup.
With merry songs we mock the wind
  That in the pine-top grieves,
And slumber long and sweetly
  On beds of oaken leaves.

Well knows the fair and friendly moon
  The band that Marion leads—
The glitter of their rifles,
  The scampering of their steeds.
'Tis life to guide the fiery barb
  Across the moonlight plain;
'Tis life to feel the night-wind
  That lifts the tossing mane.
A moment in the British camp—
  A moment—and away
Back to the pathless forest,
  Before the peep of day.

Grave men there are by broad Santee,
  Grave men with hoary hairs;
Their hearts are all with Marion,
  For Marion are their prayers.
And lovely ladies greet our band
  With kindliest welcoming,
With smiles like those of summer,
  And tears like those of spring.
For them we wear these trusty arms,
  And lay them down no more
Till we have driven the Briton,
  Forever, from our shore.

TO THE FRINGED GENTIAN

In *Poems* (1832). Composed in 1829.

Thou blossom bright with autumn dew,
And colored with the heaven's own blue,
That openest when the quiet light
Succeeds the keen and frosty night.

Thou comest not when violets lean
O'er wandering brooks and springs unseen,
Or columbines, in purple dressed,
Nod o'er the ground-bird's hidden nest.

Thou waitest late and com'st alone,
When woods are bare and birds are flown,
And frosts and shortening days portend
The aged year is near his end.

41. **barb**—literally, a Moorish horse; here, any swift steed. 49. **Santee**—the lower Santee River, in South Carolina, held by the British at the time of Marion's activities, and bordered by the great plantations.

Then doth thy sweet and quiet eye
Look through its fringes to the sky,
Blue—blue—as if that sky let fall
A flower from its cerulean wall.

I would that thus, when I shall see
The hour of death draw near to me,
Hope, blossoming within my heart,
May look to heaven as I depart.

THE PRAIRIES

First published in the *Knickerbocker Magazine,* December, 1833; collected in *Poems* (1834). Bryant visited Illinois in 1832, and there "experienced" the prairie country for the first time.

These are the gardens of the Desert, these
The unshorn fields, boundless and beautiful,
For which the speech of England has no name—
The Prairies. I behold them for the first,
And my heart swells, while the dilated sight
Takes in the encircling vastness. Lo! they stretch,
In airy undulations, far away,
As if the ocean, in his gentlest swell,
Stood still, with all his rounded billows fixed,
And motionless forever.—Motionless?—
No—they are all unchained again. The clouds
Sweep over with their shadows, and, beneath,
The surface rolls and fluctuates to the eye;
Dark hollows seem to glide along and chase
The sunny ridges. Breezes of the South!
Who toss the golden and the flame-like flowers,
And pass the prairie-hawk that, poised on high,
Flaps his broad wings, yet moves not—ye have played
Among the palms of Mexico and vines
Of Texas, and have crisped the limpid brooks
That from the fountains of Sonora glide
Into the calm Pacific—have ye fanned
A nobler or a lovelier scene than this?
Man hath no power in all this glorious work:
The hand that built the firmament hath heaved
And smoothed these verdant swells, and sown their slopes
With herbage, planted them with island groves,
And hedged them round with forests. Fitting floor
For this magnificent temple of the sky—
With flowers whose glory and whose multitude
Rival the constellations! The great heavens
Seem to stoop down upon the scene in love,—
A nearer vault, and of a tenderer blue,
Than that which bends above our eastern hills.

As o'er the verdant waste I guide my steed,
Among the high rank grass that sweeps his sides
The hollow beating of his footstep seems
A sacrilegious sound. I think of those
Upon whose rest he tramples. Are they here—
The dead of other days?—and did the dust
Of these fair solitudes once stir with life
And burn with passion? Let the mighty mounds
That overlook the rivers, or that rise
In the dim forest crowded with old oaks,
Answer. A race, that long has passed away,
Built them;—a disciplined and populous race
Heaped, with long toil, the earth, while yet the Greek

3. no name—"Prairie" came into the language from the French. **18. moves not**—"I have seen the prairie-hawk balancing himself in the air for hours together, apparently over the same spot, probably watching his prey." (Bryant's note) **21. Sonora**—a state in Northwest Mexico. **40. dead**—*Cf.* note to line 44 of "Thanatopsis." **42. mounds**—supposed to have been constructed by the vanished Mound Builders, but now believed to be of Indian origin.

Was hewing the Pentelicus to forms
Of symmetry, and rearing on its rock
The glittering Parthenon. These ample fields
Nourished their harvests, here their herds were fed,
When haply by their stalls the bison lowed,
And bowed his manèd shoulder to the yoke.
All day this desert murmured with their toils,
Till twilight blushed, and lovers walked, and wooed
In a forgotten language, and old tunes,
From instruments of unremembered form,
Gave the soft winds a voice. The red man came—
The roaming hunter tribes, warlike and fierce,
And the mound-builders vanished from the earth.
The solitude of centuries untold
Has settled where they dwelt. The prairie-wolf
Hunts in their meadows, and his fresh-dug den
Yawns by my path. The gopher mines the ground
Where stood their swarming cities. All is gone;
All—save the piles of earth that hold their bones,
The platforms where they worshipped unknown gods,
The barriers which they builded from the soil
To keep the foe at bay—till o'er the walls
The wild beleaguerers broke, and, one by one,
The strongholds of the plain were forced, and heaped
With corpses. The brown vultures of the wood
Flocked to those vast uncovered sepulchres,
And sat unscared and silent at their feast.
Haply some solitary fugitive,
Lurking in marsh and forest, till the sense
Of desolation and of fear became
Bitterer than death, yielded himself to die.
Man's better nature triumphed then. Kind words
Welcomed and soothed him; the rude conquerors
Seated the captive with their chiefs; he chose
A bride among their maidens, and at length
Seemed to forget—yet ne'er forgot—the wife
Of his first love, and her sweet little ones,
Butchered, amid their shrieks, with all his race.

Thus change the forms of being. Thus arise
Races of living things, glorious in strength,
And perish, as the quickening breath of God
Fills them, or is withdrawn. The red man, too,
Has left the blooming wilds he ranged so long,
And, nearer to the Rocky Mountains, sought
A wilder hunting-ground. The beaver builds
No longer by these streams, but far away,
On waters whose blue surface ne'er gave back
The white man's face—among Missouri's springs,
And pools whose issues swell the Oregon—
He rears his little Venice. In these plains
The bison feeds no more. Twice twenty leagues
Beyond remotest smoke of hunter's camp,
Roams the majestic brute, in herds that shake
The earth with thundering steps—yet here I meet
His ancient footprints stamped beside the pool.

Still this great solitude is quick with life.
Myriads of insects, gaudy as the flowers
They flutter over, gentle quadrupeds,
And birds, that scarce have learned the fear of man,
Are here, and sliding reptiles of the ground,
Startlingly beautiful. The graceful deer
Bounds to the wood at my approach. The bee,
A more adventurous colonist than man,
With whom he came across the eastern deep,
Fills the savannas with his murmurings,
And hides his sweets, as in the golden age,
Within the hollow oak. I listen long

48. Pentelicus—Marble from the quarries of Pentelicus was much prized by the classical Athenians; it was used for the Parthenon at Athens. **96. Oregon**—the Columbia River.

To his domestic hum, and think I hear
The sound of that advancing multitude
Which soon shall fill these deserts. From the ground
Comes up the laugh of children, the soft voice
Of maidens, and the sweet and solemn hymn
Of Sabbath worshippers. The low of herds
Blends with the rustling of the heavy grain
Over the dark brown furrows. All at once
A fresher wind sweeps by, and breaks my dream,
And I am in the wilderness alone.

THE BATTLE-FIELD

First published in the *Democratic Review,* October, 1837; collected in *Poems* (1839). The ninth stanza is one of the most quoted passages in Bryant. The setting is purely imaginary. The poem forms part of the "peace literature" of the thirties and forties. See M. E. Curti, *The American Peace Crusade, 1815-1860,* Duke University Press, 1929.

Once this soft turf, this rivulet's sands,
Were trampled by a hurrying crowd,
And fiery hearts and armèd hands
Encountered in the battle-cloud.

Ah! never shall the land forget
How gushed the life-blood of her brave—
Gushed, warm with hope and courage yet,
Upon the soil they fought to save.

Now all is calm, and fresh, and still;
Alone the chirp of flitting bird,
And talk of children on the hill,
And bell of wandering kine, are heard.

No solemn host goes trailing by
The black-mouthed gun and staggering wain;
Men start not at the battle-cry,
Oh, be it never heard again!

Soon rested those who fought; but thou
Who minglest in the harder strife
For truths which men receive not now,
Thy warfare only ends with life.

A friendless warfare! lingering long
Through weary day and weary year,
A wild and many-weaponed throng
Hang on thy front, and flank, and rear.

Yet nerve thy spirit to the proof,
And blench not at thy chosen lot.
The timid good may stand aloof,
The sage may frown—yet faint thou not.

Nor heed the shaft too surely cast,
The foul and hissing bolt of scorn;
For with thy side shall dwell, at last,
The victory of endurance born.

Truth, crushed to earth, shall rise again;
Th' eternal years of God are hers;
But Error, wounded, writhes in pain,
And dies among his worshippers.

Yea, though thou lie upon the dust,
When they who helped thee flee in fear,
Die full of hope and manly trust,
Like those who fell in battle here.

Another hand thy sword shall wield,
Another hand the standard wave,
Till from the trumpet's mouth is pealed
The blast of triumph o'er thy grave.

THE ANTIQUITY OF FREEDOM

First published in the *Knickerbocker Magazine,* May, 1842, and collected in *The Fountain and Other Poems* (1842). See the introductory note to "The Battle-Field."

Here are old trees, tall oaks, and gnarléd pines,
That stream with gray-green mosses; here the ground
Was never trenched by spade, and flowers spring up
Unsown, and die ungathered. It is sweet
To linger here, among the flitting birds
And leaping squirrels, wandering brooks, and winds
That shake the leaves, and scatter, as they pass,
A fragrance from the cedars, thickly set

With pale-blue berries. In these peaceful shades—
Peaceful, unpruned, immeasurably old—
My thoughts go up the long dim path of years,
Back to the earliest days of liberty.

O FREEDOM! thou art not, as poets dream,
A fair young girl, with light and delicate limbs,
And wavy tresses gushing from the cap
With which the Roman master crowned his slave
When he took off the gyves. A bearded man,
Armed to the teeth, art thou; one mailéd hand
Grasps the broad shield, and one the sword; thy brow,
Glorious in beauty though it be, is scarred
With tokens of old wars; thy massive limbs
Are strong with struggling. Power at thee has launched
His bolts, and with his lightnings smitten thee;
They could not quench the life thou hast from heaven;
Merciless Power has dug thy dungeon deep,
And his swart armorers, by a thousand fires,
Have forged thy chain; yet, while he deems thee bound,
The links are shivered, and the prison-walls
Fall outward; terribly thou springest forth,
As springs the flame above a burning pile,
And shoutest to the nations, who return
Thy shoutings, while the pale oppressor flies.

Thy birthright was not given by human hands:
Thou wert twin-born with man. In pleasant fields,
While yet our race was few, thou sat'st with him,
To tend the quiet flock and watch the stars,
And teach the reed to utter simple airs.
Thou by his side, amid the tangled wood,
Didst war upon the panther and the wolf,
His only foes; and thou with him didst draw
The earliest furrow on the mountain-side,
Soft with the deluge. Tyranny himself,
Thy enemy, although of reverend look,
Hoary with many years, and far obeyed,
Is later born than thou; and as he meets
The grave defiance of thine elder eye,
The usurper trembles in his fastnesses.

Thou shalt wax stronger with the lapse of years,
But he shall fade into a feebler age—
Feebler, yet subtler. He shall weave his snares,
And spring them on thy careless steps, and clap
His withered hands, and from their ambush call
His hordes to fall upon thee. He shall send
Quaint maskers, wearing fair and gallant forms
To catch thy gaze, and uttering graceful words
To charm thy ear; while his sly imps, by stealth,
Twine round thee threads of steel, light thread on thread,
That grow to fetters; or bind down thy arms
With chains concealed in chaplets. Oh! not yet
Mayst thou unbrace thy corslet, nor lay by
Thy sword; nor yet, O Freedom! close thy lids
In slumber; for thine enemy never sleeps,
And thou must watch and combat till the day
Of the new earth and heaven. But wouldst thou rest
Awhile from tumult and the frauds of men,
These old and friendly solitudes invite
Thy visit. They, while yet the forest-trees
Were young upon the unviolated earth,
And yet the moss-stains on the rock were new,
Beheld thy glorious childhood, and rejoiced.

15. **cap**—the so-called "Liberty Cap" familiar in the French Revolution. 60. **corslet**—body armor

THE POET

First published in *Thirty Poems* (1864). With this poem should be compared Bryant's lectures on poetry in Vol. V of the *Life and Works*.

Thou, who wouldst wear the name
Of poet mid thy brethren of mankind,
And clothe in words of flame
Thoughts that shall live within the general mind!
Deem not the framing of a deathless lay
The pastime of a drowsy summer day.

But gather all thy powers,
And wreak them on the verse that thou dost weave,
And in thy lonely hours,
At silent morning or at wakeful eve,
While the warm current tingles through thy veins,
Set forth the burning words in fluent strains.

No smooth array of phrase,
Artfully sought and ordered though it be,
Which the cold rhymer lays
Upon his page with languid industry,
Can wake the listless pulse to livelier speed,
Or fill with sudden tears the eyes that read.

The secret wouldst thou know
To touch the heart or fire the blood at will?
Let thine own eyes o'erflow;
Let thy lips quiver with the passionate thrill;
Seize the great thought, ere yet its power be past,
And bind, in words, the fleet emotion fast.

Then, should thy verse appear
Halting and harsh, and all unaptly wrought,
Touch the crude line with fear,
Save in the moment of impassioned thought;
Then summon back the original glow, and mend
The strain with rapture that with fire was penned.

Yet let no empty gust
Of passion find an utterance in thy lay,
A blast that whirls the dust
Along the howling street and dies away;
But feelings of calm power and mighty sweep,
Like currents journeying through the windless deep.

Seek'st thou, in living lays,
To limn the beauty of the earth and sky?
Before thine inner gaze
Let all that beauty in clear vision lie;
Look on it with exceeding love, and write
The words inspired by wonder and delight.

Of tempests wouldst thou sing,
Or tell of battles—make thyself a part
Of the great tumult; cling
To the tossed wreck with terror in thy heart;
Scale, with the assaulting host, the rampart's height,
And strike and struggle in the thickest fight.

So shalt thou frame a lay
That haply may endure from age to age,
And they who read shall say:
"What witchery hangs upon this poet's page!
What art is his the written spells to find
That sway from mood to mood the willing mind!"

THE DEATH OF LINCOLN

As "Abraham Lincoln: Poetical Tribute to the Memory of Abraham Lincoln," this poem was published in the *Atlantic Monthly*, January, 1866. Bryant indicates in a note that it was written immediately on hearing of the assassination in April, 1865. Collected in *Poems* (1871), under the present title.

Oh, slow to smite and swift to spare,
Gentle and merciful and just!
Who, in the fear of God, didst bear
The sword of power, a nation's trust!

8. wreak—force. **27. Touch**—that is, fear to touch the crude line.

In sorrow by thy bier we stand,
  Amid the awe that hushes all,
And speak the anguish of a land
  That shook with horror at thy fall.

Thy task is done; the bond are free:
  We bear thee to an honored grave,
  Whose proudest monument shall be
  The broken fetters of the slave.

Pure was thy life; its bloody close
  Hath placed thee with the sons of light,
Among the noble host of those
  Who perished in the cause of Right.

ON POETRY IN ITS RELATION TO OUR AGE AND COUNTRY

In April, 1825, Bryant delivered four lectures before the New York Athenaeum, the texts of which, as delivered, have not been preserved. But in his edition of the *Prose Writings* Parke Godwin printed the lectures from Bryant's manuscript notes, which were, in Godwin's opinion, "no more than sketches or suggestions." To the reader, however, the essays seem complete in themselves, and the third of them is here reproduced from Godwin's text. The first was entitled "On the Nature of Poetry"; the second, "The Value and Uses of Poetry"; and the fourth, "On Originality and Imitation." The opening inevitably suggests Macaulay's theory that as the arts of civilization advance, poetry necessarily declines. This may be found, among other places, in Macaulay's essay on Dryden, published in 1828. Bryant's discussion of the present and probable future of American literature is one of a number of similar discussions by his literary contemporaries.

An opinion prevails, which neither wants the support of respectable names nor of plausible reasonings, that the art of poetry, in common with its sister arts, painting and sculpture, cannot in the present age be cultivated with the same degree of success as formerly. It has been supposed that the progress of reason, of science, and of the useful arts has a tendency to narrow the sphere of the imagination, and to repress the enthusiasm of the affections. Poetry, it is alleged, whose office it was to nurse the infancy of the human race, and to give it its first lessons of wisdom, having fulfilled the part to which she was appointed, now resigns her charge to severer instructors. Others, again, refining upon this idea, maintain that not only the age in which we live must fail to produce anything to rival the productions of the ancient masters of song, but that our own country, of all parts of the globe, is likely to remain the most distant from such a distinction.

Our citizens are held to possess, in a remarkable degree, the heedful, calculating, prosaic spirit of the age, while our country is decried as peculiarly barren of the materials of poetry. The scenery of our land these reasoners admit to be beautiful, but they urge that it is the beauty of a face without expression; that it wants the associations of tradition which are the soul and interest of scenery; that it wants the national superstitions which linger yet in every district in Europe, and the legends of distant and dark ages and of wild and unsettled times of which the old world reminds you at every step. Nor can our country, they say, ever be more fruitful of these materials than at present. For this is not an age to give birth to new superstitions, but to explode and root out old,

however harmless and agreeable they may be, while half the world is already wondering how little the other half will finally believe. Is it likely, then, that a multitude of interesting traditions will spring up in our land to ally themselves with every mountain, every hill, every forest, every river, and every tributary brook. There may be some passages of our early history which associate themselves with particular places, but the argument is that the number of these will never be greatly augmented. The genius of our nation is quiet and commercial. Our people are too much in love with peace and gain, the state of society is too settled, and the laws too well enforced and respected, to allow of wild and strange adventures. There is no romance either in our character, our history, or our condition of society; and, therefore, it is neither likely to encourage poetry, nor capable of supplying it with those materials—materials drawn from domestic traditions and manners—which render it popular.

If these views of the tendency of the present age, and the state of things in our country, are to be received as true, it must be acknowledged that they are not only exceedingly discouraging to those who make national literature a matter of pride, but, what is worse, that they go far toward causing that very inferiority on which they so strongly insist. Not that there is any danger that the demand for contemporary poetry will entirely cease. Verses have always been, and always will be written, and will always find readers; but it is of some consequence that they should be good verses, that they should exert the healthful and beneficial influences which I consider as belonging to the highest productions of the art; not feebly and imperfectly, but fully and effectually.

If, however, excellence in any art is believed to be unattainable, it will never be attained. There is, indeed, no harm in representing it as it really is, in literature as in every other pursuit, as rare and difficult, for by this means they who aspire to it are incited to more vigorous exertions. The mind of man glories in nothing more than in struggling successfully with difficulty, and nothing more excites our interest and admiration than the view of this struggle and triumph. The distinction of having done what few are able to do is the more enviable from its unfrequency, and attracts a multitude of competitors who catch each other's ardor and imitate each other's diligence. But if you go a step farther, and persuade those who are actuated by a generous ambition that this difficulty amounts to an impossibility, you extinguish their zeal at once. You destroy hope, and with it strength; you drive from the attempt those who were most likely and most worthy to succeed, and you put in their place a crowd of inferior contestants, satisfied with a low measure of excellence, and incapable of apprehending anything higher. Should, then, the views of this subject of which I have spoken be untrue, we may occasion much mischief by embracing them; and it becomes us, before we adopt them, to give them an attentive examination, and to be perfectly satisfied of their soundness.

But, if it be a fact that poetry in the present age is unable to attain the same degree of excellence as formerly, it cannot certainly be ascribed to any change in the original and natural faculties and dispositions of mind by which it is produced and by which it is enjoyed. The theory that men have degenerated in their mental powers and moral temperament is even more absurd than the notion of a decline in their physical strength, and is too fanciful to be com-

bated by grave reasoning. It would be difficult, I fancy, to persuade the easiest credulity that the imagination of man has become, with the lapse of ages, less active and less capable of shaping the materials at its command into pictures of majesty and beauty. Is anybody whimsical enough to suppose that the years that have passed since the days of Homer have made men's hearts cold and insensible, or deadened the delicacy of their moral perceptions, or rendered them less susceptible of cultivation? All the sources of poetry in the mind, and all the qualities to which it owes its power over the mind, are assuredly left us. Degeneracy, if it has taken place, must be owing to one of two things—either to the absence of those circumstances which, in former times, developed and cherished the poetical faculty to an extraordinary degree, or to the existence of other intellectual interests which, in the present age, tend to repress its natural exercise.

What, then, were the circumstances which fostered the art of poetry in ancient times? They have been defined to be the mystery impressed on all the operations of nature as yet not investigated and traced to their laws—the beautiful systems of ancient mythology, and, after their extinction, the superstitions that linger like ghosts in the twilight of a later age. Let us examine separately each of these alleged advantages. That there is something in whatever is unknown and inscrutable which strongly excites the imagination and awes the heart, particularly when connected with things of unusual vastness and grandeur, is not to be denied. But I deny that much of this mystery is apparent to an ignorant age, and I maintain that no small degree of inquiry and illumination is necessary to enable the mind to perceive it. He who takes all things to be as they appear, who supposes the earth to be a great plain, the sun a moving ball of fire, the heavens a vault of sapphire, and the stars a multitude of little flames lighted up in its arches—what does he think of mysteries, or care for them? But enlighten him a little further. Teach him that the earth is an immense sphere; that the wide land whose bounds he knows so imperfectly is an isle in the great oceans that flow all over it; talk to him of the boundlessness of the skies, and the army of worlds that move through them—and, by means of the knowledge that you communicate, you have opened to him a vast field of the unknown and the wonderful. Thus it ever was and ever will be with the human mind; everything which it knows introduces to its observation a greater multitude of things which it does not know; the clearing up of one mystery conducts it to another; all its discoveries are bounded by a circle of doubt and ignorance which is wide in proportion to the knowledge it enfolds. It is a pledge of the immortal destinies of the human intellect that it is forever drawn by a strong attraction to the darker edge of this circle, and forever attempting to penetrate the obscurities beyond. The old world, then, is welcome to its mysteries; we need not envy it on that account; for, in addition to our superior knowledge and as a consequence of it, we have even more of them than it, and they are loftier, deeper, and more spiritual.

But the mythologies of antiquity!—in particular, the beautiful mythologies of Greece and Rome, of which so much enters into the charming remains of ancient poetry! Beautiful those mythologies unquestionably were, and exceedingly varied and delightfully adapted to many of the purposes of poetry; yet it

may be doubted whether, on the whole, the art gained more by them than it lost. For remark that, so far as mystery is a quality of poetry, it has been taken away almost entirely by the myth. The fault of the myth was that it accounted for everything. It had a god for every operation of nature—a Jupiter to distil the showers and roll the thunder, a Phoebus to guide the chariot of the sun, a divinity to breathe the winds, a divinity to pour out every fountain. It left nothing in obscurity; everything was seen. Its very beauty consisted in minute disclosures. Thus the imagination was delighted, but neither the imagination nor the feelings were stirred up from their utmost depths. That system gave us the story of a superior and celestial race of beings, to whom human passions were attributed, and who were, like ourselves, susceptible of suffering; but it elevated them so far above the creatures of earth in power, in knowledge, and in security from the calamities of our condition, that they could be the subjects of little sympathy. Therefore it is that the mythological poetry of the ancients is as cold as it is beautiful, as unaffecting as it is faultless. And the genius of this mythological poetry, carried into the literature of a later age, where it was cultivated with a less sincere and earnest spirit, has been the destruction of all nature and simplicity. Men forsook the sure guidance of their own feelings and impressions, and fell into gross offences against taste. They wished to describe the passion of love, and they talked of Venus and her boy Cupid and his bow; they would speak of the freshness and glory of morning, and they fell to prattling of Phoebus and his steeds. No wonder that poetry has been thought a trifling art when thus practiced. For my part I cannot but think that human beings, placed among the things of this earth, with their affections and sympathies, their joys and sorrows, and the accidents of fortune to which they are liable, are infinitely a better subject for poetry than any imaginary race of creatures whatever. Let the fountain tell me of the flocks that have drank at it; of the village girl that has gathered spring flowers on its margin; the traveller that has slaked his thirst there in the hot noon, and blessed its waters; the school-boy that has pulled the nuts from the hazels that hang over it as it leaps and sparkles in its cool basin; let it speak of youth and health and purity and gladness, and I care not for the naiad that pours it out. If it must have a religious association, let it murmur of the invisible goodness that fills and feeds its reservoirs in the darkness of the earth. The admirers of poetry, then, may give up the ancient mythology without a sigh. Its departure has left us what is better than all it has taken away: it has left us men and women; it has left us the creatures and things of God's universe, to the simple charm of which the cold splendor of that system blinded men's eyes, and to the magnificence of which the rapid progress of science is every day adding new wonders and glories. It has left us, also, a more sublime and affecting religion, whose truths are broader, higher, nobler than any outlook to which its random conjectures ever attained.

With respect to later superstitions, traces of which linger yet in many districts of the civilized world—such as the belief in witchcraft, astrology, the agency of foul spirits in the affairs of men, in ghosts, fairies, water-sprites, and goblins of the wood and the mine—I would observe that the ages which gave birth to this fantastic brood are not those which have produced the noblest

specimens of poetry. Their rise supposes a state of society too rude for the successful cultivation of the art. Nor does it seem to me that the bigoted and implicit reception of them is at all favorable to the exercise of poetic talent. Poetry, it is true, sometimes produces a powerful effect by appealing to that innate love of the supernatural which lies at the bottom of every man's heart and mind, and which all are willing to indulge, some freely and some by stealth, but it does this for the most part by means of those superstitions which exist rather in tradition than in serious belief. It finds them more flexible and accommodating; it is able to mould them to its purposes, and at liberty to reject all that is offensive. Accordingly, we find that even the poets of superstitious ages have been fond of going back to the wonders and prodigies of elder days. Those who invented fictions for the age of chivalry, which one would be apt to think had marvels enough of its own, delighted to astonish their readers with tales of giants, dragons, hippogriffs, and enchanters, the home of which was laid in distant ages, or, at least, in remote countries. The best witch ballad, with the exception, perhaps, of "Tam o'Shanter," that I know of is Hogg's "Witch of Fyfe," yet both these were written long after the belief in witches had been laughed out of countenance.

It is especially the privilege of an age which has no engrossing superstitions of its own, to make use in its poetry of those of past ages; to levy contributions from the credulity of all time, and thus to diversify indefinitely the situations in which its human agents are placed. If these materials are managed with sufficient skill to win the temporary assent of the reader to the probability of the supernatural circumstances related, the purpose of the poet is answered. This is precisely the condition of the present age; it has the advantage over all ages that have preceded it in the abundance of those collected materials, and its poets have not been slow to avail themselves of their aid.

In regard to the circumstances which are thought in the present age to repress and limit the exercise of the poetical faculty, the principal if not the only one is supposed to be the prevalence of studies and pursuits unfavorable to the cultivation of the imagination and to enthusiasm of feeling. True it is that there are studies and pursuits which principally call into exercise other faculties of the mind, and that they are competitors with Poetry for the favor of the public. But it is not certain that the patronage bestowed on them would be extended to her, even if they should cease to exist. Nay, there is strong reason to suppose that they have done something to extend her influence, for they have certainly multiplied the number of readers, and everybody who reads at all sometimes reads poetry, and generally professes to admire what the best judges pronounce excellent, and, perhaps, in time come to enjoy it. Various inclinations continue, as heretofore, to impel one individual to one pursuit, and another to another—one to chemistry and another to poetry—yet I cannot see that their different labors interfere with each other, or that, because the chemist prosecutes his science successfully, therefore the poet should lose his inspiration. Take the example of Great Britain. In no country are the sciences studied with greater success, yet in no country is poetry pursued with more ardor. Spring

16. **Hogg's**—James Hogg (1770-1835), the Scotch poet known as "The Ettrick Shepherd."

and autumn reign hand in hand in her literature; it is loaded at once with blossoms and fruits. Does the poetry of that island at the present day—the poetry of Wordsworth, Scott, Coleridge, Byron, Southey, Shelley, and others—smack of the chilling tendencies of the physical sciences? Or, rather, is it not bold, varied, impassioned, irregular, and impatient of precise laws beyond that of any former age? Indeed, has it not the freshness, the vigor, and perhaps also the disorder, of a new literature?

The amount of knowledge necessary to be possessed by all who would keep pace with the age, as much greater as it is than formerly, is not, I apprehend, in danger of oppressing and smothering poetical talent. Knowledge is the material with which Genius builds her fabrics. The greater its abundance, the more power is required to dispose it into order and beauty, but the more vast and magnificent will be the structure. All great poets have been men of great knowledge. Some have gathered it from books, as Spencer and Milton; others from keen observation of men and things, as Homer and Shakespeare. On the other hand, the poetry of Ossian, whether genuine or not, is an instance of no inconsiderable poetical talent struggling with the disadvantages of a want of knowledge. It is this want which renders it so singularly monotonous. The poverty of the poet's ideas confined his mind to a narrow circle, and his poems are a series of changes rung upon a few thoughts and a few images. Single passages are beautiful and affecting, but each poem, as a whole, is tiresome and uninteresting.

I come, in the last place, to consider the question of our own expectations in literature, and the probability of our producing in the new world anything to rival the immortal poems of the old. Many of the remarks already made on the literary spirit of the present age will apply also to this part of the subject. Indeed, in this point of view, we should do ill to despair of our country, at least until the lapse of many years shall seem to have settled the question against us. Where the fountains of knowledge are by the roadside, and where the volumes from which poetic enthusiasms are caught and fed are in everybody's hands, it would be singularly strange if, amid the multitude of pursuits which occupy our citizens, nobody should think of taking verse as a path to fame. Yet, if it shall be chosen and pursued with the characteristic ardor of our countrymen, what can prevent its being brought to the same degree of perfection here as in other countries? Not the want of encouragement surely, for the literary man needs but little to stimulate his exertions, and with that little his exertions are undoubtedly greater. Who would think of fattening a race-horse? Complaints of the poverty of poets are as old as their art, but I never heard that they wrote the worse verses for it. It is enough, probably, to call forth their most vigorous efforts, that poetry is admired and honored by their countrymen. With respect to the paucity of national traditions, it will be time to complain of it when all those of which we are possessed are exhausted. Besides, as I have already shown, it is the privilege of poets, when

14. Spencer—an error—possibly typographical—for Edmund Spenser (1552-1599). **16. Ossian**—James Macpherson (1736?-1796) published in 1761 *Fingal,* and in 1763 *Temora,* which, together with some earlier *Fragments,* he alleged to be translations from ancient Gaelic poems by Ossian.

they suppose themselves in need of materials, to seek them in other countries. The best English poets have done this. The events of Spenser's celebrated poem take place within the shadowy limits of fairy-land. Shakespeare has laid the scene of many of his finest tragedies in foreign countries. Milton went out of the world for the subject of his two epics. Byron has taken the incidents of all his poems from outside of England. Southey's best work is a poem of Spain—of chivalry, and of the Roman Church. For the story of one of his narrative poems, Moore went to Persia; for that of another, to the antediluvian world. Wordsworth and Crabbe, each in a different way, and each with great power, abjuring all heroic traditions and recollections, and all aid from the supernatural and the marvellous, have drawn their subjects from modern manners and the simple occurrences of common life. Are they read, for that reason, with any the less avidity by the multitudes who resort to their pages for pastime, for edification, for solace, for noble joy, and for the ecstasies of pure delight?

It has been urged by some, as an obstacle to the growth of elegant literature among us, that our language is a transplanted one, framed for a country and for institutions different from ours, and, therefore, not likely to be wielded by us with such force, effect, and grace, as it would have been if it had grown up with our nation, and received its forms and its accessions from the exigencies of our experience. It seems to me that this is one of the most unsubstantial of all the brood of phantoms which have been conjured up to alarm us. Let those who press this opinion descend to particulars. Let them point out the peculiar defects of our language in its application to our natural and political situation. Let them show in what respects it refuses to accommodate itself easily and gracefully to all the wants of expression that are felt among us. Till they do this, let us be satisfied that the copious and flexible dialect we speak is as equally proper to be used at the equator as at the poles, and at any intermediate latitude; and alike in monarchies or republics. It has grown up, as every forcible and beautiful language has done, among a simple and unlettered people; it has accommodated itself, in the first place, to the things of nature, and, as civilization advanced, to the things of art; and thus it has become a language full of picturesque forms of expression, yet fitted for the purposes of science. If a new language were to arise among us in our present condition of society, I fear that it would derive too many of its words from the roots used to signify canals, railroads, and steam-boats—things which, however well thought of at present, may perhaps a century hence be superseded by still more ingenious inventions. To try this notion about a transplanted dialect, imagine one of the great living poets of England emigrated to this country. Can anybody be simple enough to suppose that his poetry would be the worse for it?

I infer, then, that all the materials of poetry exist in our own country, with

3. poem—*The Faerie Queene.* **5. two epics**—*Paradise Lost* and *Paradise Regained.* **6. best work**—*Roderic, the Last of the Goths* (1814), which narrates the struggles of the Christians in Spain against the Moors. **8. went to Persia**—The reference is to Moore's long poem, *Lalla Rookh;* the other poem referred to is *The Loves of the Angels.* **9. Crabbe**—George Crabbe (1754-1832), author of a series of realistic tales in verse. Both Wordsworth and Crabbe, however, employed the supernatural as a theme.

all the ordinary encouragements and opportunities for making a successful use of them. The elements of beauty and grandeur, intellectual greatness and moral truth, the stormy and the gentle passions, the casualties and the changes of life, and the light shed upon man's nature by the story of past times and the knowledge of foreign manners, have not made their sole abode in the old world beyond the waters. If under these circumstances our poetry should finally fail of rivalling that of Europe, it will be because Genius sits idle in the midst of its treasures.

RALPH WALDO EMERSON

1803-1882

I. IN SEARCH OF THE OVER-SOUL (1803–1836)

1803 Born May 25, the second son of the Rev. William Emerson and Ruth Haskins Emerson, in the parish house of the First (Unitarian) Church, Boston.

1811 May, Emerson's father died. The widow, aided by Aunt Mary Moody Emerson, amidst grinding poverty strove to educate five boys.

1813 Emerson entered the Boston Latin School. The family removed to the Ezra Ripley home in Concord in 1814.

1817 August, entered Harvard College as president's freshman (messenger), working his way through college, and not greatly touched by the curriculum.

1820 Began keeping his *Journals* (published 1909-14).

1821–1825 After graduating from Harvard, taught in a girls' school in Boston, at first under the direction of his brother William and afterwards alone.

1825 February, entered the Divinity School at Cambridge. Desultory studies interrupted by poor health.

1826 October 10, licensed to preach; November 25, left on a voyage to South Carolina and Florida for his health, returning June, 1827.

1828 Breakdown in health of his brother Edward Bliss Emerson (died in Puerto Rico, 1834).

1829 March, became colleague of the Rev. Henry Ware of the Second (Unitarian) Church, Boston. September 30, married Ellen Tucker (died February 8, 1831).

1832 Resigned his pulpit rather than adhere to the forms of the church, sailing for Europe December 25.

1833 In Europe until October 9, visiting Italy, France, and Great Britain, and making the acquaintance of Landor, Wordsworth, and, above all, Carlyle

1834 Removed to Concord to live with his mother. Emerson continued to preach at intervals until 1847.

1835 Lectured in Boston, beginning a practice which was to last all of his effective life, and which carried him into all parts of the country. September 14, married Lydia (Lidian) Jackson, and bought the house in Concord which he made famous.

1836 September, *Nature* published anonymously in Boston. (Charles Emerson, his brother, died at New York, May 9.)

II. THE TRANSCENDENTALIST (1836–1866)

1836 October 30, Waldo Emerson born (died January 27, 1842). The "Transcendental Club" formed, including in its membership George Ripley, F. H. Hedge, O. A. Brownson, James Freeman Clarke, W. H. Channing, Eliza-

beth Peabody, Margaret Fuller, Theodore Parker, Bronson Alcott, and Emerson.

1837 August 31, delivered "The American Scholar" as the Phi Beta Kappa address at Harvard.

1838 July 15, delivered the "Divinity School Address" at Harvard, incurring the hostility of the orthodox.

1839 February 25, Ellen Emerson born.

1840–1844 The *Dial* published, Emerson serving as sole editor 1842-44.

1841 (The Brook Farm project launched.) *Essays* published, March. November 22, Edith Emerson born.

1844 *Essays; Second Series,* published.

1845 Emerson lectured on *Representative Men* (published 1850).

1846 *Poems* published (dated 1847). No other poems until *May Day and Other Poems* (1868).

1847 October 5, sailed on a lecture tour to England, visiting Paris in 1848, and returning in July, 1848.

1850–1861 Emerson preoccupied with national politics, vigorously defending the abolitionists, including John Brown.

1856 *English Traits* published.

1860 *The Conduct of Life* published.

1866 LL.D. from Harvard College.

III. THE BEAUTIFUL SAGE (1866–1882)

1867 Delivered a second Phi Beta Kappa oration at Harvard. During this period Emerson became a regular attendant at the dinners of the Saturday Club, which included Longfellow, Hawthorne, Motley, Dana, Agassiz, Holmes, and Lowell among its members.

1870 Published *Society and Solitude;* and delivered *Natural History of the Intellect* as lectures at Harvard (published 1893).

1871 Evidences of declining intellectual powers. Trip to California.

1872 July, Emerson's house in Concord burned, and restored by friends during Emerson's absence in Europe, whither he sailed October 24, returning in 1873.

1874 *Parnassus,* an anthology of poetry, appeared as edited by Emerson.

1876 *Letters and Social Aims* appeared.

1882 April 27, Emerson died at Concord, Massachusetts.

1884 *Lectures and Biographical Sketches* and *Miscellanies* published.

BIOGRAPHIES: The standard original life is J. E. Cabot, *A Memoir of Ralph Waldo Emerson,* Houghton Mifflin, 1887, 2 vols. But see also A. B. Alcott, *Ralph Waldo Emerson: An Estimate of His Character and Genius,* Williams, 1882; G. W. Cooke, *Ralph Waldo Emerson: His Life, Writings, and Philosophy,* Osgood, 1881; Alexander Ireland, *Ralph Waldo Emerson,* Simpkin, Marshall, 1882; M. D. Conway, *Emerson at Home and Abroad,* Osgood, 1882; O. W. Holmes, *Ralph Waldo Emerson,* Houghton Mifflin, 1885; F. B. Emerson, *Emerson in Concord,* Houghton Mifflin, 1889; *Letters of Ralph Waldo Emerson to a Friend, 1838-1853,* ed. by C. E. Norton, Houghton Mifflin, 1899; F. B. Sanborn, *Ralph Waldo Emerson,* Small, Maynard, 1901 (Beacon Biographies); G. E. Woodberry, *Ralph Waldo Emerson,* Macmillan, 1907 (Eng-

lish Men of Letters); J. S. Harrison, *The Teachers of Emerson,* Sturgis & Walton, 1910; O. W. Firkins, *Ralph Waldo Emerson,* Houghton Mifflin, 1915; R. M. Gay, *Emerson: A Study of the Poet as Seer,* Doubleday, Doran, 1928; Bliss Perry, *Emerson Today,* Princeton University Press, 1931; Van Wyck Brooks, *The Life of Emerson,* Dutton, 1932. Ralph L. Rusk, *The Life of Ralph Waldo Emerson,* Scribner, 1949, will probably become standard. See also his edition of *Letters of Ralph Waldo Emerson,* Columbia, 1939, 6 vols.

BIBLIOGRAPHY AND EDITIONS: There is an enormous literature about Emerson. For bibliography consult G. W. Cooke, *A Bibliography of Ralph Waldo Emerson,* Houghton Mifflin, 1908, and the bibliography in *Literary History of the United States,* Vol. III, pp. 492-501.

The Complete Works of Ralph Waldo Emerson, Houghton Mifflin, [1883]-93 (Riverside edition), 12 vols.; reprinted 1894 as Standard Library edition; Centenary edition, 1903-04, 12 vols.; reprinted as Concord edition, 1904; as Autograph Centenary edition, 1905. *Uncollected Writings,* Lamb Publishing Co., 1912. *Journals,* ed. by E. W. Emerson and W. E. Forbes, Houghton Mifflin, 1909-14, 10 vols. See also *The Heart of Emerson's Journals,* ed. by Bliss Perry, Houghton Mifflin, 1926. The best book of selections is F. I. Carpenter's in the American Writers Series (American Book Co., 1934). A useful reference book is G. S. Hubbel, *A Concordance to the Poems of Ralph Waldo Emerson,* H. W. Wilson, 1932. *Young Emerson Speaks: unpublished discourses on many subjects,* ed. A. C. McGiffert Jr., Houghton Mifflin, 1938.

The subtitle of a recent popular study of Emerson, "the enraptured Yankee," stresses the two aspects of his character of most importance for American cultural development. As a seer and a mystic, Emerson, the chief proponent of the transcendental philosophy, is in the line of mysticism which stretches from the original Puritan settlers of Massachusetts through Jonathan Edwards and Walt Whitman to our own day. Even when, as is frequently the case, the terms of the transcendental philosophy are not understood, most readers secure from Emerson flashes of sudden insight into spiritual meanings. The vocabulary of transcendentalism is a difficult one, and one not always consistent with itself; and, moreover, Emerson's habit of composition, whereby he sometimes sacrificed logical structure to pithy and brilliant statement, has further muddied the waters for the usual student. The looseness of structure in Emerson's essays has, however, been exaggerated; what he omits is the transition elements which would smooth the path of the reader from one aspect of his subject to another, but the logical structure is nevertheless there. Perhaps the best single key to his meaning is the sensible and simple comment of the little girl on "Brahma"—it just means, she said, God everywhere. It is the nearness of the divine to all the business of men that Emerson teaches. Emerson found support for this doctrine in many places—in Christian theology as understood by Unitarians, in Neo-Platonism, in German thought, in Carlyle, but these are problems for the special student. The beginner may well content himself with the attitude of the little girl.

But the American seer was incarnated in the American Yankee. Emerson's mysticism is not vague and cloudy, but applied to the practical issues of life as these presented themselves to a New Englander. He made many shrewd and sensible comments on the conditions of American civilization—its mediocrity, its mammon-worship, its tendency to mob psychology, its politics. His *Journals* are a mine of such information, but so are his essays. The meal in the firkin is as constant a fact to Emerson as the over-soul. Like Franklin, he never gets entirely away from the

immediate issue. *The American Scholar* presents a platform as pertinent to American life as the platform of a political party. In "The Poet" illustrations from the work of a carpenter and from Jakob Boehme lie close together, and the Oregon question is cheek by jowl with a reference to the Gospel according to St. John. It is this combination of practical good sense with the wisdom of the visionary that makes Emerson characteristic of his region and his time.

WRITTEN AT ROME

Although "Written at Rome" was not published until after Emerson's death (it first appears in the *Poems* of 1884), it was actually written while Emerson was in Rome in 1833, and may be found in his *Journals,* Vol. III, under date of March 27, 1833. The punctuation of the poem as there printed differs in certain small particulars from that of the 1884 text here reproduced. The eccentric spelling "wooes" in line 14 is not found in the *Journals.* The two references to Scipio and Cato are sufficiently obvious.

Alone in Rome. Why, Rome is lonely too;—
Besides, you need not be alone; the soul
Shall have society of its own rank.
Be great, be true, and all the Scipios,
The Catos, the wise patriots of Rome,
Shall flock to you and tarry by your side,
And comfort you with their high company.
Virtue alone is sweet society,
It keeps the key to all heroic hearts,
And opens you a welcome in them all.
You must be like them if you desire them,
Scorn trifles and embrace a better aim
Than wine or sleep or praise;
Hunt knowledge as the lover wooes a maid,
And ever in the strife of your own thoughts
Obey the nobler impulse; that is Rome:
That shall command a senate to your side;
For there is no might in the universe
That can contend with love. It reigns forever.
Wait then, sad friend, wait in majestic peace
The hour of heaven. Generously trust
Thy fortune's web to the beneficent hand
That until now has put his world in fee
To thee. He watches for thee still. His love
Broods over thee, and as God lives in heaven,
However long thou walkest solitary,
The hour of heaven shall come, the man appear.

THE RHODORA:

ON BEING ASKED, WHENCE IS THE FLOWER?

This poem was written in 1834; first published in the *Western Messenger* for July, 1839; thence transferred to the *Poems* of 1847; and reprinted in the *Selected Poems* of 1876, the text of which is here followed. Of the 1876 volume it should be said that the revisions of texts therein contained were made in Emerson's own lifetime, and presumably with his consent, and that they therefore represent the latest revisions which have direct authority. Later changes made by his editors are not always happy.

In May, when sea-winds pierced our solitudes,
I found the fresh Rhodora in the woods,
Spreading its leafless blooms in a damp nook,
To please the desert and the sluggish brook.
The purple petals, fallen in the pool,
Made the black water with their beauty gay;
Here might the red-bird come his plumes to cool,
And court the flower that cheapens his array.
Rhodora! if the sages ask thee why
This charm is wasted on the earth and sky,
Tell them, dear, that if eyes were made for seeing,
Then Beauty is its own excuse for being:
Why thou wert there, O rival of the rose!
I never thought to ask, I never knew;
But, in my simple ignorance, suppose
The self-same Power that brought me there brought you.

THE APOLOGY

This poem was apparently written in 1834 at Newton. It was published in the *Western*

Messenger in 1839, and thence collected into the *Poems* of 1847, the text of which is here reprinted.

Think me not unkind and rude
That I walk alone in grove and glen;
I go to the god of the wood
To fetch his word to men.

Tax not my sloth that I
Fold my arms beside the brook;
Each cloud that floated in the sky
Writes a letter in my book.

Chide me not, laborious band,
For the idle flowers I brought;
Every aster in my hand
Goes home loaded with a thought.

There was never mystery
But 'tis figured in the flowers;
Was never secret history
But birds tell it in the bowers.

One harvest from thy field
Homeward brought the oxen strong;
A second crop thine acres yield,
Which I gather in a song.

CONCORD FIGHT

HYMN SUNG AT THE COMPLETION OF THE BATTLE MONUMENT, APRIL 19, 1836

This poem, originally entitled "Concord Hymn," was given its present title in the *Selected Poems* of 1876. It was originally written to be sung at the celebration of the unveiling of the monument at the Concord battleground, an event which seems to have taken place July 4, 1837, instead of April 19, 1836, the anniversary of the date of the battle. There are some minor textual changes between the first version of the poem and the last which left Emerson's hands.

By the rude bridge that arched the flood,
Their flag to April's breeze unfurled,
Here once the embattled farmers stood,
And fired the shot heard round the world.

The foe long since in silence slept;
Alike the conqueror silent sleeps;
And Time the ruined bridge has swept
Down the dark stream which seaward creeps.

On this green bank, by this soft stream,
We set to-day a votive stone;
That memory may their deed redeem,
When, like our sires, our sons are gone.

Spirit, that made those heroes dare
To die, and leave their children free,
Bid Time and Nature gently spare
The shaft we raise to them and Thee.

THE HUMBLE BEE

"The Humble Bee" was first published in the *Western Messenger,* February, 1839. It was then gathered into the 1847 *Poems,* and reappeared in the *Selected Poems* of 1876, the text of which is here followed. The student should compare the *Journals* for May 9, 1837. *Porto Rique* is, of course, Puerto Rico. The botanical references are to flora in the neighborhood of Emerson's home.

Burly, dozing humble bee,
Where thou art is clime for me.
Let them sail for Porto Rique,
Far-off heats through seas to seek;
I will follow thee alone,
Thou animated torrid-zone!
Zigzag steerer, desert cheerer,
Let me chase thy waving lines:
Keep me nearer, me thy hearer,
Singing over shrubs and vines.

Insect lover of the sun
Joy of thy dominion!
Sailor of the atmosphere;
Swimmer through the waves of air;
Voyager of light and noon;
Epicurean of June;

Wait, I prithee, till I come
Within earshot of thy hum,—
All without is martyrdom.

When the south-wind, in May days,
With a net of shining haze
Silvers the horizon wall,
And with softness touching all,
Tints the human countenance
With a color of romance,
And infusing subtle heats,
Turns the sod to violets,
Thou, in sunny solitudes,
Rover of the underwoods,
The green silence dost displace
With thy mellow, breezy bass.

Hot midsummer's petted crone,
Sweet to me thy drowsy tone
Tells of countless sunny hours,
Long days, and solid banks of flowers;
Of gulfs of sweetness without bound
In Indian wildernesses found;
Of Syrian peace, immortal leisure,
Firmest cheer, and bird-like pleasure.

Aught unsavory or unclean
Hath my insect never seen;
But violets and bilberry bells,
Maple-sap and daffodils,
Grass with green flag half-mast high,
Succory to match the sky,
Columbine with horn of honey,
Scented fern, and agrimony,
Clover, catchfly, adder's-tongue
And brier-roses, dwelt among;
All beside was unknown waste,
All was picture as he passed.

Wiser far than human seer,
Yellow-breeched philosopher!
Seeing only what is fair,
Sipping only what is sweet,
Thou dost mock at fate and care,
Leave the chaff, and take the wheat.
When the fierce northwestern blast
Cools sea and land so far and fast,
Thou already slumberest deep;
Woe and want thou canst outsleep;
Want and woe, which torture us,
Thy sleep makes ridiculous.

EACH AND ALL

This poem first appeared in the *Western Messenger* for February, 1839, was collected into the 1847 *Poems,* and reappeared in the *Selected Poems,* the text of which is here followed. The germinal idea of the piece is found in the *Journals* for May 16, 1834. The reference to Napoleon's passage of the Alps seems to require no comment.

Little thinks, in the field, yon red-cloaked clown
Of thee from the hill-top looking down;
The heifer that lows in the upland farm,
Far-heard, lows not thine ear to charm;
The sexton, tolling his bell at noon,
Deems not that great Napoleon
Stops his horse, and lists with delight,
Whilst his files sweep round yon Alpine height;
Nor knowest thou what argument
Thy life to thy neighbor's creed has lent.
All are needed by each one;
Nothing is fair or good alone.
I thought the sparrow's note from heaven,
Singing at dawn on the alder bough;
I brought him home, in his nest, at even;
He sings the song, but it cheers not now,
For I did not bring home the river and sky;—
He sang to my ear,—they sang to my eye.
The delicate shells lay on the shore;
The bubbles of the latest wave
Fresh pearls to their enamel gave;
And the bellowing of the savage sea
Greeted their safe escape to me.
I wiped away the weeds and foam,
I fetched my sea-born treasures home;
But the poor, unsightly, noisome things
Had left their beauty on the shore,
With the sun, and the sand, and the wild uproar.
The lover watched his graceful maid,
As mid the virgin train she strayed,
Nor knew her beauty's best attire
Was woven still by the snow-white choir.
At last she came to his hermitage,
Like the bird from the woodlands to the cage;—
The gay enchantment was undone,

A gentle wife, but fairy none.
Then I said, "I covet truth;
Beauty is unripe childhood's cheat;
I leave it behind with the games of youth."—
As I spoke, beneath my feet
The ground-pine curled its pretty wreath,
Running over the club-moss burrs;
I inhaled the violet's breath;
Around me stood the oaks and firs;
Pine-cones and acorns lay on the ground;
Over me soared the eternal sky,
Full of light and of deity;
Again I saw, again I heard,
The rolling river, the morning bird;—
Beauty through my senses stole;
I yielded myself to the perfect whole.

THE PROBLEM

This poem was published in the *Dial,* July, 1840, then in the 1847 *Poems,* and then in the *Selected Poems,* from which the present text is taken. Emerson dated the piece November 10, 1839. Consult the *Journals* for August 28, 1838.

I like a church; I like a cowl;
I love a prophet of the soul;
And on my heart monastic aisles
Fall like sweet strains, or pensive smiles;
Yet not for all his faith can see
Would I that cowled churchman be.

Why should the vest on him allure,
Which I could not on me endure?

Not from a vain or shallow thought
His awful Jove young Phidias brought,
Never from lips of cunning fell
The thrilling Delphic oracle;
Out from the heart of nature rolled
The burdens of the Bible old;
The litanies of nations came,
Like the volcano's tongue of flame,
Up from the burning core below,—
The canticles of love and woe;
The hand that rounded Peter's dome,
And groined the aisles of Christian Rome,
Wrought in a sad sincerity;
Himself from God he could not free;
He builded better than he knew;—
The conscious stone to beauty grew.

Know'st thou what wove yon woodbird's nest
Of leaves, and feathers from her breast?
Or how the fish outbuilt her shell,
Painting with morn each annual cell?
Or how the sacred pine-tree adds
To her old leaves new myriads?
Such and so grew these holy piles,
Whilst love and terror laid the tiles.
Earth proudly wears the Parthenon,
As the best gem upon her zone;
And Morning opes with haste her lids,
To gaze upon the Pyramids;
O'er England's abbeys bends the sky,
As on its friends, with kindred eye;
For, out of Thought's interior sphere,
These wonders rose to upper air;
And Nature gladly gave them place,
Adopted them into her race,
And granted them an equal date
With Andes and with Ararat.

These temples grew as grows the grass;
Art might obey, but not surpass.
The passive Master lent his hand
To the vast soul that o'er him planned;
And the same power that reared the shrine
Bestrode the tribes that knelt within.
Ever the fiery Pentecost

1. cowl—the hood of the garment of a priest. **6. cowled**—a dissyllable, and so marked in the Concord edition. **10. Jove . . . Phidias**—The reference is to the famous statue of Zeus at Athens, which has disappeared. Phidias was the most famous Greek sculptor. **12. Delphic oracle**—the oracle of Apollo at Delphi, consulted by all of Greece in ancient times. **18. canticles of love and woe**—that is, Dante's *Divine Comedy,* considered as the supreme literary expression of the Middle Ages. **19. Peter's dome**—The dome of St. Peter's at Rome was completed by Michelangelo. **20. groined**—The groin is the angular curve formed by the crossing of two arches in Gothic (or other) architecture. **27-28. fish . . . cell**—*Cf.* Holmes's poem "The Chambered Nautilus." **33. Parthenon**—The Parthenon at Athens, though in ruins, is usually considered the supreme achievement of ancient architecture. **44. Andes . . . Ararat**—The Andes in the New World, and Mt. Ararat in Asia, cited as two examples of natural antiquity. **51. Pentecost**—*Cf.* Acts 2.

Girds with one flame the countless host,
Trances the heart through chanting choirs,
And through the priest the mind inspires.
The word unto the prophet spoken
Was writ on tables yet unbroken;
The word by seers or sibyls told,
In groves of oak, or fanes of gold,
Still floats upon the morning wind,
Still whispers to the willing mind.
One accent of the Holy Ghost
The heedless world hath never lost.
I know what say the fathers wise,—
The Book itself before me lies,
Old Chrysostom, best Augustine,
And he who blent both in his line,
The younger *Golden Lips* or mines,
Taylor, the Shakspeare of divines.
His words are music in my ear,
I see his cowled portrait dear;
And yet, for all his faith could see,
I would not the good bishop be.

WOODNOTES

"Woodnotes," one of the longest of Emerson's poems, is in two parts, of which only the first portion is here reprinted. No poem of his was more greatly modified in successive appearances. Part I, in its original form, first appeared in the *Dial* for October, 1840, and Part II, in the same magazine a year later. In revised form the poem was then gathered into the *Poems* of 1847. With still other changes in text, it was reprinted in the *Selected Poems* of 1876. But the form of the poem which appears in the *Poems* of 1884, after Emerson's death, is radically different from any of the foregoing; section 3, as here printed, for example, appears for the first time, and there are other important changes. Part II was also radically revised. Sections 2-4 as here printed immediately suggest Thoreau, especially the attributes given the "forest seer" in section 2; and though one member of the Emerson family is said to have said that part of this description was written before Emerson knew Thoreau well, the applicability of the poem to the sage of Walden Pond seems irresistible. In its first form, the poem opened with a short passage lamenting the position of the poet in Emerson's own time. Emerson's sketch of Thoreau should be compared with "Woodnotes."

I

1

When the pine tosses its cones
To the song of its waterfall tones,
Who speeds to the woodland walks?
To birds and trees who talks?
Caesar of his leafy Rome,
There the poet is at home.
He goes to the river-side,—
Not hook nor line hath he;
He stands in the meadows wide,—
Nor gun nor scythe to see:
Sure some god his eye enchants:
What he knows nobody wants.
In the wood he travels glad,
Without better fortune had,
Melancholy without bad.
Knowledge this man prizes best
Seems fantastic to the rest:
Pondering shadows, colors, clouds,
Grass-buds, and caterpillar-shrouds,
Boughs on which the wild bees settle,
Tints that spot the violet's petal,
Why Nature loves the number five,
And why the star-form she repeats:
Lover of all things alive,
Wonderer at all he meets,
Wonderer chiefly at himself,
Who can tell him what he is?
Or how meet in human elf
Coming and past eternities?

2

And such I knew, a forest seer,
A minstrel of the natural year,

56. tables . . . unbroken—*Cf.* Ex. 32: 19. **65. Chrysostom**—John of Antioch (347-407), known as Chrysostom or the Golden Mouth because of his eloquence. **65. Augustine**—St. Augustine (354-430), whose *Confessions* Emerson much admired. **68. Taylor**—Jeremy Taylor (1613-1667), English divine, author of *Holy Living* and *Holy Dying*. **70. cowled**—again a dissyllable. **22. Nature . . . five**—This refers to the doctrine known as quinarianism, a fanciful classification of organic forms on the hypothesis that they dispose themselves in sets of five. It was largely advocated by William Swainson (1789-1855), British naturalist.

Foreteller of the vernal ides,
Wise harbinger of spheres and tides,
A lover true, who knew by heart
Each joy the mountain dales impart;
It seemed that Nature could not raise
A plant in any secret place,
In quaking bog, on snowy hill,
Beneath the grass that shades the rill,
Under the snow, between the rocks,
In damp fields known to bird and fox,
But he would come in the very hour
It opened in its virgin bower,
As if a sunbeam showed the place,
And tell its long-descended race.
It seems as if the breezes brought him;
It seemed as if the sparrows taught him;
As if by secret sight he knew
Where, in far fields, the orchis grew.
Many haps fall in the field
Seldom seen by wishful eyes,
But all her shows did Nature yield,
To please and win this pilgrim wise.
He saw the partridge drum in the woods;
He heard the woodcock's evening hymn;
He found the tawny thrushes' broods;
And the shy hawk did wait for him;
What others did at distance hear,
And guessed within the thicket's gloom,
Was shown to this philosopher,
And at his bidding seemed to come.

3

In unploughed Maine he sought the lumberers' gang
Where from a hundred lakes young rivers sprang;
He trode the unplanted forest floor, whereon
The all-seeing sun for ages hath not shone;
Where feeds the moose, and walks the surly bear,
And up the tall mast runs the woodpecker.
He saw beneath dim aisles, in odorous beds,
The slight Linnaea hang its twin-born heads,
And blessed the monument of the man of flowers,
Which breathes his sweet fame through the northern bowers.
He heard, when in the grove, at intervals,
With sudden roar the aged pine-tree falls,—
One crash, the death-hymn of the perfect tree,
Declares the close of its green century.
Low lies the plant to whose creation went
Sweet influence from every element;
Whose living towers the years conspired to build,
Whose giddy top the morning loved to gild.
Through these green tents, by eldest Nature dressed,
He roamed, content alike with man and beast.
Where darkness found him he lay glad at night;
There the red morning touched him with its light.
Three moons his great heart him a hermit made,
So long he roved at will the boundless shade.
The timid it concerns to ask their way,
And fear what foe in caves and swamps can stray,
To make no step until the event is known,
And ills to come as evils past bemoan.
Not so the wise; no coward watch he keeps
To spy what danger on his pathway creeps;
Go where he will, the wise man is at home,
His hearth the earth,—his hall the azure dome;
Where his clear spirit leads him, there's his road
By God's own light illumined and foreshowed.

4

'Twas one of the charmèd days
When the genius of God doth flow,
The wind may alter twenty ways,
A tempest cannot blow;
It may blow north, it still is warm;
Or south, it still is clear;
Or east, it smells like a clover-farm;
Or west, no thunder fear.
The musing peasant lowly great
Beside the forest water sate;
The rope-like pine roots crosswise grown
Composed the net-work of his throne;
The wide lake, edged with sand and grass,
Was burnished to a floor of glass,
Painted with shadows green and proud
Of the tree and of the cloud.

67. tall mast—that is, the tall pine tree which will make a mast. **69. Linnaea**—a slender flowering evergreen. *Cf.* note 35, p. 404.

He was the heart of all the scene;
On him the sun looked more serene;
To hill and cloud his face was known,—
It seemed the likeness of their own;
They knew by secret sympathy
The public child of earth and sky.
'You ask,' he said, 'what guide
Me through trackless thickets led,
Through thick-stemmed woodlands rough and wide.
I found the water's bed.
The watercourses were my guide;
I travelled grateful by their side,
Or through their channel dry;
They led me through the thicket damp,
Through brake and fern, the beavers' camp,
Through beds of granite cut my road,
And their resistless friendship showed:
The falling waters led me,
The foodful waters fed me,
And brought me to the lowest land,
Unerring to the ocean sand.
The moss upon the forest bark
Was pole-star when the night was dark;
The purple berries in the wood
Supplied me necessary food;
For Nature ever faithful is
To such as trust her faithfulness.
When the forest shall mislead me,
When the night and morning lie,
When sea and land refuse to feed me,
'Twill be time enough to die;
Then will yet my mother yield
A pillow in her greenest field,
Nor the June flowers scorn to cover
The clay of their departed lover.'

THE SPHINX

"The Sphinx" first appeared in the *Dial,* January, 1841; then in the *Poems;* and then in the *Selected Poems.* The present text is from the last of these. There are a few minor textual changes. The Concord edition quotes in connection with this poem the following passage from Emerson's notebooks (1859): "I have often been asked the meaning of the 'Sphinx.' It is this,—The perception of identity unites all things and explains one by another, and the most rare and strange is equally facile as the most common. But if the mind live only in particulars, and see only differences (wanting the power to see the whole—all in each), then the world addresses to this mind a question it cannot answer, and each new fact tears it in pieces, and it is vanquished by the distracting variety." Emerson has in mind both the fable of Oedipus and the Sphinx, and the famous Egyptian Sphinx near the pyramids.

The Sphinx is drowsy,
Her wings are furled;
Her ear is heavy,
She broods on the world.
'Who'll tell me my secret,
The ages have kept?—
I awaited the seer,
While they slumbered and slept;—

'The fate of the man-child;
The meaning of man;
Known fruit of the Unknown;
Daedalian plan;
Out of sleeping a waking,
Out of waking a sleep;
Life death overtaking;
Deep underneath deep?

'Erect as a sunbeam,
Upspringeth the palm;
The elephant browses,
Undaunted and calm;
In beautiful motion
The thrush plies his wings;
Kind leaves of his covert
Your silence he sings.

'The waves, unashamed,
In difference sweet,
Play glad with the breezes,
Old playfellows meet;
The journeying atoms,
Primordial wholes,

12. Daedalian—complicated; from Daedalus, the famous artisan of mythology, who made the wings wherewith Icarus attempted to fly. **25. unashamed**—four syllables, probably. **29. atoms**—Emerson was fond of dwelling upon the principle of polarity in nature. The sense of this passage seems to be that the atoms are driven by an animating principle of polarity to their proper stations.

Firmly draw, firmly drive,
By their animate poles.

'Sea, earth, air, sound, silence,
Plant, quadruped, bird,
By one music enchanted,
One deity stirred,—
Each the other adorning
Accompany still;
Night veileth the morning,
The vapor the hill.

'The babe by its mother
Lies bathed in joy;
Glide its hours uncounted,—
The sun is its toy;
Shines the peace of all being,
Without cloud, in its eyes;
And the sum of the world
In soft miniature lies.

'But man crouches and blushes,
Absconds and conceals;
He creepeth and peepeth,
He palters and steals;
Infirm, melancholy,
Jealous glancing around,
An oaf, an accomplice,
He poisons the ground.

'Out spoke the great mother,
Beholding his fear;—
At the sound of her accents
Cold shuddered the sphere:—
"Who has drugged my boy's cup?
Who has mixed my boy's bread?
Who, with sadness and madness,
Has turned my child's head?"'

I heard a poet answer
Aloud and cheerfully,
'Say on, sweet Sphinx! thy dirges
Are pleasant songs to me.
Deep love lieth under
These pictures of time;
They fade in the light of
Their meaning sublime.

'The fiend that man harries
Is love of the Best;
Yawns the pit of the Dragon,
Lit by rays from the Blest.
The Lethe of Nature
Can't trance him again,
Whose soul sees the perfect,
Which his eyes seek in vain.

'To vision profounder
Man's spirit must dive;
His aye-rolling orb
At no goal will arrive;
The heavens that now draw him
With sweetness untold,
Once found,—for new heavens
He spurneth the old.

'Pride ruined the angels,
Their shame them restores;
And the joy that is sweetest
Lurks in stings of remorse.
Have I a lover
Who is noble and free?—
I would he were nobler
Than to love me.

'Eterne alternation
Now follows, now flies;
And under pain, pleasure,—
Under pleasure, pain lies.
Love works at the centre,
Heart-heaving alway;
Forth speed the strong pulses
To the borders of day.

'Dull Sphinx, Jove keep thy five wits:
Thy sight is growing blear;
Rue, myrrh and cummin for the Sphinx,—
Her muddy eyes to clear!'—
The old Sphinx bit her thick lip,—
Said, 'Who taught thee me to name?

42. bathed—a dissyllable. **60. sphere**—the earth conceived of as a sphere. **75. pit of the Dragon**—*Cf.* Rev. 17: 8; 19: 20; 20: 1-3. **76. Blest**—*Cf.* Rev. 21. **83. aye-rolling**—ever rolling. **91-92.** In the Concord edition these lines read:

"Lurks the joy that is sweetest
In stings of remorse."

97. Eterne—Eternal. **107. Rue, myrrh . . . cummin**—In the herbals these plants are supposed to have curative properties.

I am thy spirit, yoke-fellow,
  Of thine eye I am eyebeam.

'Thou art the unanswered question;
  Couldst see thy proper eye,
Alway it asketh, asketh;
  And each answer is a lie.
So take thy quest through nature,
  It through thousand natures ply;
Ask on, thou clothed eternity;
  Time is the false reply.'

Uprose the merry Sphinx,
  And crouched no more in stone;
She melted into purple cloud,
  She silvered in the moon;
She spired into a yellow flame;
  She flowered in blossoms red;
She flowed into a foaming wave:
  She stood Monadnoc's head.

Thorough a thousand voices
  Spoke the universal dame:
'Who telleth one of my meanings,
  Is master of all I am.'

COMPENSATION

Emerson prefixed to each of his essays in the volume of 1841 a poetical motto of his own composition, as he did to the second series of 1844. These he later cumulated and published in the *May Day* volume of 1868 in the section of "Elements and Mottoes." "Compensation" and "Friendship" are two such poems from the 1841 volume. The ambiguous reference to "electric star or pencil" in line 8 may refer either to a pencil of light or to the telegraph considered as an electric pencil.

I

The wings of Time are black and white,
Pied with morning and with night.
Mountain tall and ocean deep
Trembling balance duly keep.
In changing moon and tidal wave
Glows the feud of Want and Have.
Gauge of more and less through space,
Electric star or pencil plays,
The lonely Earth amid the balls
That hurry through the eternal halls,
A makeweight flying to the void,
Supplemental asteroid,
Or compensatory spark,
Shoots across the neutral Dark.

II

Man's the elm, and Wealth the vine;
Stanch and strong the tendrils twine:
Though the frail ringlets thee deceive,
None from its stock that vine can reave.
Fear not, then, thou child infirm,
There's no god dare wrong a worm;
Laurel crowns cleave to deserts,
And power to him who power exerts.
Hast not thy share? On winged feet,
Lo! it rushes thee to meet;
And all that Nature made thy own,
Floating in air or pent in stone,
Will rive the hills, and swim the sea,
And, like thy shadow, follow thee.

FRIENDSHIP

A ruddy drop of manly blood
The surging sea outweighs,
The world uncertain comes and goes,
The lover rooted stays.
I fancied he was fled,—
And, after many a year,
Glowed unexhausted kindliness,
Like daily sunrise there.
My careful heart was free again,
O friend, my bosom said,
Through thee alone the sky is arched,
Through thee the rose is red;
All things through thee take nobler form,
And look beyond the earth,
The mill-round of our fate appears
A sun-path in thy worth.
Me too thy nobleness has taught
To master my despair;
The fountains of my hidden life
Are through thy friendship fair.

128. **Monadnoc's**—mountain in New Hampshire.

THE SNOW-STORM

First published in the *Dial,* January, 1841, this poem appeared in the 1847 volume, and then in the *Selected Poems,* from which the text is taken. *Cf. Journals* for November 27, 1832.

Announced by all the trumpets of the sky,
Arrives the snow, and, driving o'er the fields,
Seems nowhere to alight: the whited air
Hides hills and woods, the river, and the heaven,
And veils the farm-house at the garden's end.
The sled and traveller stopped, the courier's feet
Delayed, all friends shut out, the housemates sit
Around the radiant fireplace, enclosed
In a tumultuous privacy of storm.

Come see the north wind's masonry.
Out of an unseen quarry evermore
Furnished with tile, the fierce artificer
Curves his white bastions with projected roof
Round every windward stake, or tree, or door.
Speeding, the myriad-handed, his wild work
So fanciful, so savage, nought cares he
For number or proportion. Mockingly,
On coop or kennel he hangs Parian wreaths;
A swan-like form invests the hidden thorn;
Fills up the farmer's lane from wall to wall,
Maugre the farmer's sighs; and, at the gate,
A tapering turret overtops the work:
And when his hours are numbered, and the world
Is all his own, retiring, as he were not,
Leaves, when the sun appears, astonished Art
To mimic in slow structures, stone by stone,
Built in an age, the mad wind's night-work,
The frolic architecture of the snow.

THINE EYES STILL SHINED

This poem, one of the few love poems by Emerson, addressed to the poet's wife, was apparently written about 1828, but was not published until 1847. The present text is from the *Selected Poems.* The Concord edition, Vol. IX, p. 436, prints additional stanzas from manuscript, which Emerson did not apparently desire to appear with the rest.

Thine eyes still shined for me, though far
I lonely roved the land or sea:
As I behold yon evening star,
Which yet beholds not me.

This morn I climbed the misty hill,
And roamed the pastures through;
How danced thy form before my path
Amidst the deep-eyed dew!

When the redbird spread his sable wing,
And showed his side of flame;
When the rosebud ripened to the rose,
In both I read thy name.

THRENODY

"Threnody" first appeared in the 1847 volume. The text here followed is that of the *Selected Poems.* The occasion of the poem was, of course, the death of Waldo Emerson at the age of six on January 27, 1842. Emerson seems to have poured out his grief in the first portion of the poem soon after his child's death, but the portion beginning "The deep Heart answered, 'Weepest thou?'" was added much later when he was in a frame of mind to reason himself into reconciliation with his loss. It is a curious proof of Emerson's absorption in the boy that there is not so much as a single reference to the boy's mother in the poem.

The South-wind brings
Life, sunshine and desire,
And on every mount and meadow
Breathes aromatic fire;
But over the dead he has no power,
The lost, the lost, he cannot restore;
And, looking over the hills, I mourn
The darling who shall not return.

18. Parian—Parian marble, much employed in ancient Greece, was noted for its dazzling whiteness.

I see my empty house,
I see my trees repair their boughs;
And he, the wondrous child,
Whose silver warble wild
Outvalued every pulsing sound
Within the air's cerulean round,—
The hyacinthine boy, for whom
Morn well might break and April bloom,——
The gracious boy, who did adorn
The world whereinto he was born,
And by his countenance repay
The favor of the loving Day,—
Has disappeared from the Day's eye;
Far and wide she cannot find him;
My hopes pursue, they cannot bind him.
Returned this day, the south-wind searches,
And finds young pines and budding birches;
But finds not the budding man;
Nature who lost, cannot remake him;
Fate let him fall, Fate can't retake him;
Nature, Fate, men, him seek in vain.
And whither now, my truant wise and sweet,
O, whither tend thy feet?
I had the right, few days ago,
Thy steps to watch, thy place to know:
How have I forfeited the right?
Hast thou forgot me in a new delight?
I hearken for thy household cheer,
O eloquent child!
Whose voice, an equal messenger,
Conveyed thy meaning mild.
What though the pains and joys
Whereof it spoke were toys
Fitting his age and ken,
Yet fairest dames and bearded men,
Who heard the sweet request,
So gentle, wise and grave,
Bended with joy to his behest,
And let the world's affairs go by,
A while to share his cordial game,
Or mend his wicker wagon-frame,
Still plotting how their hungry ear
That winsome voice again might hear;
For his lips could well pronounce
Words that were persuasions.

Gentlest guardians marked serene
His early hope, his liberal mien;
Took counsel from his guiding eyes
To make this wisdom earthly wise.

Ah, vainly do these eyes recall
The school-march, each day's festival,
When every morn my bosom glowed
To watch the convoy on the road;
The babe in willow wagon closed,
With rolling eyes and face composed;
With children forward and behind,
Like Cupids studiously inclined;
And he the chieftain paced beside,
The centre of the troop allied,
With sunny face of sweet repose,
To guard the babe from fancied foes.
The little captain innocent
Took the eye with him as he went;
Each village senior paused to scan
And speak the lovely caravan.
From the window I look out
To mark thy beautiful parade,
Stately marching in cap and coat
To some tune by fairies played;—
A music heard by thee alone
To works as noble led thee on.
Now Love and Pride, alas! in vain,
Up and down their glances strain.
The painted sled stands where it stood;
The kennel by the corded wood;
His gathered sticks to stanch the wall
Of the snow-tower, when snow should fall;
The ominous hole he dug in the sand,
And childhood's castles built or planned;
His daily haunts I well discern,—
The poultry-yard, the shed, the barn,—
And every inch of garden ground
Paced by the blessed feet around,
From the roadside to the brook
Whereinto he loved to look.
Step the meek fowls where erst they ranged;
The wintry garden lies unchanged;
The brook into the stream runs on;
But the deep-eyed boy is gone.

On that shaded day,
Dark with more clouds than tempests are,
When thou didst yield thy innocent breath
In birdlike heavings unto death,
Night came, and Nature had not thee;
I said, 'We are mates in misery.'
The morrow dawned with needless glow;

Each snowbird chirped, each fowl must crow;
Each tramper started; but the feet
Of the most beautiful and sweet
Of human youth had left the hill
And garden,—they were bound and still[.]
There's not a sparrow or a wren,
There's not a blade of autumn grain,
Which the four seasons do not tend,
And tides of life and increase lend;
And every chick of every bird,
And weed and rock-moss is preferred.

O ostrich-like forgetfulness!
O loss of larger in the less!
Was there no star that could be sent,
No watcher in the firmament,
No angel from the countless host
That loiters round the crystal coast,
Could stoop to heal that only child,
Nature's sweet marvel undefiled,
And keep the blossom of the earth,
Which all her harvests were not worth?
Not mine,—I never called thee mine,
But Nature's heir,—if I repine,
And seeing rashly torn and moved
Not what I made, but what I loved,
Grow early old with grief that thou
Must to the wastes of Nature go,—
'Tis because a general hope
Was quenched, and all must doubt and grope.
For flattering planets seemed to say
This child should ills of ages stay,
By wondrous tongue, and guided pen,
Bring the flown Muses back to men.
Perchance not he but Nature ailed,
The world and not the infant failed.
It was not ripe yet to sustain
A genius of so fine a strain,
Who gazed upon the sun and moon
As if he came unto his own,
And, pregnant with his grander thought,
Brought the old order into doubt.
His beauty once their beauty tried;
They could not feed him, and he died,
And wandered backward as in scorn,
To wait an aeon to be born.
Ill day which made this beauty waste,
Plight broken, this high face defaced!

Some went and came about the dead;
And some in books of solace read;
Some to their friends the tidings say;
Some went to write, some went to pray;
One tarried here, there hurried one;
But their heart abode with none.
Covetous death bereaved us all,
To aggrandize one funeral.
The eager fate which carried thee
Took the largest part of me:
For this losing is true dying;
This is lordly man's down-lying,
This his slow but sure reclining,
Star by star his world resigning.
O that child of paradise,
Boy who made dear his father's home,
In whose deep eyes
Men read the welfare of the times to come,
I am too much bereft.
The world dishonored thou hast left.
O truth's and nature's costly lie!
O trusted broken prophecy!
O richest fortune sourly crossed!
Born for the future, to the future lost!

The deep Heart answered, 'Weepest thou?
Worthier cause for passion wild
If I had not taken the child.
And deemest thou as those who pore,
With aged eyes, short way before,—
Think'st Beauty vanished from the coast
Of matter, and thy darling lost?
Taught he not thee—the man of eld,
Whose eyes within his eyes beheld
Heaven's numerous hierarchy span
The mystic gulf from God to man?
To be alone wilt thou begin
When worlds of lovers hem thee in?
To-morrow, when the masks shall fall
That dizen Nature's carnival,
The pure shall see by their own will,
Which overflowing Love shall fill,
'Tis not within the force of fate
The fate-conjoined to separate.
But thou, my votary, weepest thou?
I gave thee sight—where is it now?
I taught thy heart beyond the reach
Of ritual, bible, or of speech;
Wrote in thy mind's transparent table,
As far as the incommunicable;

176. deep Heart—Nature, conceived as a spiritual entity; the over-soul. **190. dizen**—bedizen.

Taught thee each private sign to raise
Lit by the supersolar blaze.
Past utterance, and past belief,
And past the blasphemy of grief,
The mysteries of Nature's heart;
And though no Muse can these impart,
Throb thine with Nature's throbbing breast,
And all is clear from east to west.

'I came to thee as to a friend;
Dearest, to thee I did not send
Tutors, but a joyful eye,
Innocence that matched the sky,
Lovely locks, a form of wonder,
Laughter rich as woodland thunder,
That thou might'st entertain apart
The richest flowering of all art:
And, as the great all-loving Day
Through smallest chambers takes its way,
That thou might'st break thy daily bread
With prophet, savior and head;
That thou might'st cherish for thine own
The riches of sweet Mary's Son,
Boy-Rabbi, Israel's paragon.
And thoughtest thou such guest
Would in thy hall take up his rest?
Would rushing life forget her laws,
Fate's glowing revolution pause?
High omens ask diviner guess;
Not to be conned to tediousness
And know my higher gifts unbind
The zone that girds the incarnate mind.
When the scanty shores are full
With Thought's perilous, whirling pool;
When frail Nature can no more,
Then the Spirit strikes the hour:
My servant Death, with solving rite,
Pours finite into infinite.

'Wilt thou freeze love's tidal flow,
Whose streams through Nature circling go?
Nail the wild star to its track
On the half-climbed zodiac?
Light is light which radiates,
Blood is blood which circulates,
Life is life which generates,
And many-seeming life is one,—
Wilt thou transfix and make it none?
Its onward force too starkly pent
In figure, bone and lineament?
Wilt thou, uncalled, interrogate,
Talker! the unreplying Fate?
Nor see the genius of the whole
Ascendant in the private soul,
Beckon it when to go and come,
Self-announced its hour of doom?
Fair the soul's recess and shrine,
Magic-built to last a season;
Masterpiece of love benign,
Fairer that expansive reason
Whose omen 'tis, and sign.
Wilt thou not ope thy heart to know
What rainbows teach, and sunsets show?
Verdict which accumulates
From lengthening scroll of human fates,
Voice of earth to earth returned,
Prayers of saints that inly burned,—
Saying, *What is excellent,*
As God lives, is permanent;
Hearts are dust, hearts' loves remain;
Heart's love will meet thee again.
Revere the Maker; fetch thine eye
Up to his style, and manners of the sky.
Not of adamant and gold
Built he heaven stark and cold;
No, but a nest of bending reeds,
Flowering grass, and scented weeds;
Or like a traveller's fleeing tent,
Or bow above the tempest bent;
Built of tears and sacred flames,
And virtue reaching to its aims;
Built of furtherance and pursuing,
Not of spent deeds, but of doing.
Silent rushes the swift Lord
Through ruined systems still restored,
Broadsowing, bleak and void to bless,
Plants with worlds the wilderness;
Waters with tears of ancient sorrow
Apples of Eden ripe to-morrow.
House and tenant go to ground,
Lost in God, in Godhead found.'

ODE,

INSCRIBED TO W. H. CHANNING

This poem appeared first in the 1847 volume. The *Selected Poems* omits it, but it appeared in a "revised" edition of the *Poems*

202. supersolar—literally, beyond the sun; that is, in the world considered as spiritual symbolism. **222-23.** *Cf.* Luke 2: 46-49.

in 1866, from which the text is taken. The Rev. William Henry Channing (1810-1884) was a nephew of William Ellery Channing, an abolitionist, and a Unitarian clergyman whose chief writing was a three-volume biography of his uncle.

Though loath to grieve
The evil time's sole patriot,
I cannot leave
My honied thought
For the priest's cant,
Or statesman's rant.

If I refuse
My study for their politique,
Which at the best is trick,
The angry Muse
Puts confusion in my brain.

But who is he that prates
Of the culture of mankind,
Of better arts and life?
Go, blindworm, go,
Behold the famous States
Harrying Mexico
With rifle and with knife!

Or who, with accent bolder,
Dare praise the freedom-loving mountaineer?
I found by thee, O rushing Contoocook!
And in thy valleys, Agiochook!
The jackals of the negro-holder.

The God who made New Hampshire
Taunted the lofty land
With little men;—
Small bat and wren
House in the oak:—
If earth-fire cleave
The upheaved land, and bury the folk,
The Southern crocodile would grieve.
Virtue palters; Right is hence;
Freedom praised, but hid;
Funeral eloquence
Rattles the coffin-lid.

What boots thy zeal,
O glowing friend,
That would indignant rend
The Northland from the South?
Wherefore? to what good end?
Boston Bay and Bunker Hill
Would serve things still;—
Things are of the snake.

The horseman serves the horse,
The neatherd serves the neat,
The merchant serves the purse,
The eater serves his meat;
'Tis the day of the chattel,
Web to weave, and corn to grind:
Things are in the saddle,
And ride mankind.

There are two laws discrete,
Not reconciled,—
Law for man, and law for thing;
The last builds town and fleet,
But it runs wild,
And doth the man unking.

'Tis fit the forest fall,
The steep be graded,
The mountain tunnelled,
The sand shaded,
The orchard planted,
The glebe tilled,
The prairie granted,
The steamer built.

Let man serve law for man;
Live for friendship, live for love,
For truth's and harmony's behoof;
The state may follow how it can,
As Olympus follows Jove.

Yet do not I implore
The wrinkled shopman to my sounding woods,
Nor bid the unwilling senator
Ask votes of thrushes in the solitudes.
Every one to his chosen work;—

17. Mexico—The Mexican War, fought 1846-48, was bitterly denounced in New England as a war for the extension of slavery. **21-22. Contoocook . . . Agiochook**—The Contoocook River rises in New Hampshire and enters the Merrimac. **Agiochook**, "place of the spirit of the pines," is an Indian name for the White Mountains of New Hampshire (E. M. Haines, *The American Indian*, Mas-sin-ná-gan Co., 1888, p. 706). **45. neat**—cattle. **70. Jove**—Jupiter considered as the father and ruler of the gods.

Foolish hands may mix and mar;
Wise and sure the issues are.
Round they roll till dark is light,
Sex to sex, and even to odd;—
The over-god
Who marries Right to Might,
Who peoples, unpeoples,—
He who exterminates
Races by stronger races,
Black by white faces,—
Knows to bring honey
Out of the lion;
Grafts gentlest scion
On pirate and Turk.

The Cossack eats Poland,
Like stolen fruit;
Her last noble is ruined,
Her last poet mute:
Straight, into double band
The victors divide;
Half for freedom strike and stand;—
The astonished Muse finds thousands at her side.

ODE TO BEAUTY

This lyrical poem, in which Emerson rivals Poe in verbal music, was first published in the *Dial,* October, 1843, then in the *Poems* of 1847, and finally in the *Selected Poems* of 1876, from which the present text is taken. There are some small textual variations among these versions.

Who gave thee, O Beauty,
The keys of this breast,—
Too credulous lover
Of blest and unblest?
Say, when in lapsed ages
Thee knew I of old?
Or what was the service
For which I was sold?
When first my eyes saw thee,
I found me thy thrall,
By magical drawings,
Sweet tyrant of all!
I drank at thy fountain
False waters of thirst;
Thou intimate stranger,
Thou latest and first!
Thy dangerous glances
Make women of men;
New-born, we are melting
Into nature again.

Lavish, lavish promiser,
Nigh persuading gods to err!
Guest of million painted forms,
Which in turn thy glory warms!
The frailest leaf, the mossy bark,
The acorn's cup, the rain-drop's arc,
The swinging spider's silver line,
The ruby of the drop of wine,
The shining pebble of the pond,
Thou inscribest with a bond,
In thy momentary play,
Would bankrupt nature to repay.

Ah, what avails it
To hide or to shun
Whom the Infinite One
Hath granted his throne?
The heaven high over
Is the deep's lover;
The sun and sea,
Informed by thee,
Before me run
And draw me on,
Yet fly me still,
As Fate refuses
To me the heart Fate for me chooses.
Is it that my opulent soul
Was mingled from the generous whole;
Sea-valleys and the deep of skies
Furnished several supplies;
And the sands whereof I'm made
Draw me to them, self-betrayed?
I turn the proud portfolio
Which holds the grand designs
Of Salvator, of Guercino,
And Piranesi's lines.

86. honey—*Cf.* Judg. 14: 9. **90. Poland**—After the failure of the Polish uprising of 1830-31, the Russian government instituted a harsh military despotism in Russian Poland. **54. Salvator**—Salvator Rosa (1615?-1673), Neapolitan painter. **Guercino**—Giovanni Francesco Barbieri Guercino (1590-1606), Bolognese painter. **55. Piranesi's**—Giambattista Piranesi (1720-1778), Italian engraver, whose pictures fascinated many of the romanticists.

I hear the lofty paeans
Of the masters of the shell,
Who heard the starry music
And recount the numbers well;
Olympian bards who sung
Divine Ideas below,
Which always find us young
And always keep us so.
Oft, in streets or humblest places,
I detect far-wandered graces,
Which, from Eden wide astray,
In lowly homes have lost their way.

Thee gliding through the sea of form,
Like the lightning through the storm,
Somewhat not to be possessed,
Somewhat not to be caressed,
No feet so fleet could ever find,
No perfect form could ever bind.
Thou eternal fugitive,
Hovering over all that live,
Quick and skilful to inspire
Sweet, extravagant desire,
Starry space and lily-bell
Filling with thy roseate smell,
Wilt not give the lips to taste
Of the nectar which thou hast.

All that's good and great with thee
Works in close conspiracy;
Thou hast bribed the dark and lonely
To report thy features only,
And the cold and purple morning
Itself with thoughts of thee adorning;
The leafy dell, the city mart,
Equal trophies of thine art;
E'en the flowing azure air
Thou hast touched for my despair;
And, if I languish into dreams,
Again I meet the ardent beams.
Queen of things! I dare not die
In Being's deeps past ear and eye;
Lest there I find the same deceiver
And be the sport of Fate forever.
Dread Power, but dear! if God thou be,
Unmake me quite, or give thyself to me!

EXPERIENCE

"Experience," like "Character," was originally a verse motto prefixed to one of the *Essays: Second Series* (1844). They followed the fortunes of the "Compensation" poem, as noted above. The present text is from the 1876 volume.

The lords of life, the lords of life,—
I saw them pass
In their own guise,
Like and unlike,
Portly and grim,—
Use and Surprise,
Surface and Dream,
Succession swift and spectral Wrong,
Temperament without a tongue,
And the inventor of the game
Omnipresent without name;—
Some to see, some to be guessed,
They marched from east to west:
Little man, least of all,
Among the legs of his guardians tall,
Walked about with puzzled look.
Him by the hand dear Nature took,
Dearest Nature, strong and kind,
Whispered, 'Darling, never mind!
To-morrow they will wear another face,
The founder thou; these are thy race!'

CHARACTER

The sun set, but set not his hope:
Stars rose; his faith was earlier up:
Fixed on the enormous galaxy,
Deeper and older seemed his eye;
And matched his sufferance sublime
The taciturnity of time.
He spoke, and words more soft than rain
Brought the Age of Gold again:
His action won such reverence sweet
As hid all measure of the feat.

57. masters of the shell—the poets, considered as orphic followers of Apollo, who first constructed a lyre from the shell of a turtle. Because of their divine inspiration, they are Olympian bards (line 60).

URIEL

This poem was first published in the 1847 volume. The present text is from the *Selected Poems*. The title owes its existence to *Paradise Lost,* Book III, lines 620 ff., where Uriel, the angel whom St. John saw in the sun, first appears. Uriel is one of those angels who are God's eyes "That run through all the Heavens, or down to the Earth." There is no trace in Milton of any "sad self-knowledge" falling on the angel of the sun. In highly symbolic fashion, however, the present poem sets forth Emerson's spiritual crisis which resulted in his leaving his Boston pulpit.

It fell in the ancient periods
  Which the brooding soul surveys,
Or ever the wild Time coined itself
  Into calendar months and days.

This was the lapse of Uriel,
Which in Paradise befell.
Once, among the Pleiads walking,
Sayd overheard the young gods talking;
And this treason, too long pent,
To his ears was evident.
The young deities discussed
Laws of form, and metre just,
Orb, quintessence, and sunbeams,
What subsisteth, and what seems.
One, with low tones that decide,
And doubt and reverend use defied,
With a look that solved the sphere,
And stirred the devils everywhere,
Gave his sentiment divine
Against the being of a line.
'Line in nature is not found;
Unit and universe are round;
In vain produced, all rays return;
Evil will bless, and ice will burn.'
As Uriel spoke with piercing eye,
A shudder ran around the sky;
The stern old war-gods shook their heads;
The seraphs frowned from myrtle-beds;
Seemed to the holy festival
The rash word boded ill to all;
The balance-beam of Fate was bent;
The bounds of good and ill were rent;
Strong Hades could not keep his own,
But all slid to confusion.

A sad self-knowledge, withering, fell
On the beauty of Uriel;
In heaven once eminent, the god
Withdrew, that hour, into his cloud;
Whether doomed to long gyration
In the sea of generation,
Or by knowledge grown too bright
To hit the nerve of feebler sight.
Straightway, a forgetting wind
Stole over the celestial kind,
And their lips the secret kept,
If in ashes the fire-seed slept.
But now and then, truth-speaking things
Shamed the angels' veiling wings;

5. **lapse**—fall. Emerson symbolizes his turning away from the mild orthodoxy of Unitarianism, in the fall of Uriel. The **Paradise** of the next line is, of course, heaven. 7. **Pleiads**—The Pleiads in Greek mythology were originally seven sisters, but Emerson here prefers to think of them as starry deities. The discussion by the young deities of such metaphysical problems as the laws of form, the nature of the boundaries of the ego, and so forth, may have been suggested by the famous passage in *Paradise Lost,* Bk. II, lines 557-65. 8. **Sayd**—the symbolic figure of the orphic poet often employed by Emerson. 17. **solved**—dissolved; that is, that dissolved the orthodox notions of good and evil. 20. **being of a line**—that is, the speaker cast doubt upon those rigid distinctions between good and evil, between personal identity and the soul of the universe, and so on, which are essential to theology. 22. **Unit and universe**—Here is the doctrine of the transmigration, or at any rate the transfusion, of souls, as set forth in the prose essays. Man comes from the over-soul, and to the over-soul he returns. 24. **Evil will bless**—That which is evil in one aspect of its existence may prove beneficial in another and later aspect. 27. **old war-gods**—apparently a veiled reference to the sterner aspects of theology, such as Calvinism. 31. **beam of Fate**—In Greek mythology Zeus is represented as hanging the balance of Fate in the sky (the zodiacal "sign" of the Scales). 33. **Hades**—in Greek mythology, the god of the underworld. Note the seventeenth-century forced rhyme. 39-40. **Whether doomed**—that is, doomed in the circle of transmigration of souls, to reappear after a long lapse of time, in another incarnation. The passage may owe something to the second part of *Faust.* 43. **forgetting wind**—the rest of the poem expresses the doctrine of the secret quality of real knowledge common among the romantics.

And, shrilling from the solar course,
Or from fruit of chemic force,
Procession of a soul in matter,
Or the speeding change of water,
Or out of the good of evil born,
Came Uriel's voice of cherub scorn,
And a blush tinged the upper sky,
And the gods shook, they knew not why.

HAMATREYA

This poem first appeared in the 1847 volume. The text here is from the *Selected Poems*. The poem is based upon a passage in the *Vishnu Purana,* Book IV; the Concord edition suggests that the title is a variant of Maitreya. See Concord edition, Vol. IX, pp. 416-17.

Bulkeley, Hunt, Willard, Hosmer, Meriam, Flint,
Possessed the land which rendered to their toil
Hay, corn, roots, hemp, flax, apples, wool and wood.
Each of these landlords walked amidst his farm,
Saying ''Tis mine, my children's and my name's:
How sweet the west-wind sounds in my own trees!
How graceful climb those shadows on my hill!
I fancy these pure waters and the flags
Know me, as does my dog: we sympathize;
And, I affirm, my actions smack of the soil.'
Where are these men? Asleep beneath their grounds;
And strangers, fond as they, their furrows plough.
Earth laughs in flowers, to see her boastful boys
Earth-proud, proud of the earth which is not theirs;
Who steer the plough, but cannot steer their feet
Clear of the grave.
They added ridge to valley, brook to pond,
And sighed for all that bounded their domain;
'This suits me for a pasture; that's my park;
We must have clay, lime, gravel, granite-ledge,
And misty lowland, where to go for peat.
The land is well,—lies fairly to the south.
'Tis good, when you have crossed the sea and back,
To find the sitfast acres where you left them.'
Ah! the hot owner sees not Death, who adds
Him to his land, a lump of mould the more.
Hear what the Earth says:—

EARTH-SONG

Mine and yours;
Mine, not yours.
Earth endures;
Stars abide—
Shine down in the old sea;
Old are the shores;
But where are old men?
I who have seen much
Such have I never seen.

The lawyer's deed
Ran sure,
In tail,
To them, and to their heirs
Who shall succeed,
Without fail,
Forevermore.

Here is the land,
Shaggy with wood,
With its old valley,
Mound and flood.
But the heritors?
Fled like the flood's foam,——
The lawyer, and the laws,
And the kingdom,
Clean swept herefrom.

They called me theirs,
Who so controlled me;

51. **Procession**—issuing forth. 1. **Bulkeley . . . Flint**—names of the first settlers of Concord. 8. **flags**—water flags. 39. **In tail**—Land is entailed when it runs in succession through a determined line of heirs, as eldest sons.

Yet every one
Wished to stay, and is gone,
How am I theirs,
If they cannot hold me,
But I hold them?

When I heard the Earth-song,
I was no longer brave;
My avarice cooled
Like lust in the chill of the grave.

DAYS

"Days" was first published in the first issue of the *Atlantic Monthly,* November, 1857. The present text is from the *Selected Poems.*

Daughters of Time, the hypocritic Days,
Muffled and dumb like barefoot dervishes,
And marching single in an endless file,
Bring diadems and fagots in their hands.
To each they offer gifts after his will,
Bread, kingdoms, stars, and sky that holds them all.
I, in my pleachéd garden, watched the pomp,
Forgot my morning wishes, hastily
Took a few herbs and apples, and the Day
Turned and departed silent. I, too late,
Under her solemn fillet saw the scorn.

BRAHMA

This, in its day the most famous, or at any rate the most notorious, of Emerson's poems, was published in the *Atlantic Monthly* for November, 1857. The present text is from the *Selected Poems.* See, for the origins of the poem, Concord edition, Vol. IX, pp. 464-67, and *American Literature* for November, 1929, pp. 234 ff. Emerson divined the best explanation of "Brahma" for ordinary puzzled readers when he said to his daughter: "If you tell them to say Jehovah instead of Brahma, they will not feel any perplexity."

If the red slayer think he slays,
Or if the slain think he is slain,
They know not well the subtle ways
I keep, and pass, and turn again.

Far or forgot to me is near;
Shadow and sunlight are the same;
The vanished gods to me appear;
And one to me are shame and fame.

They reckon ill who leave me out;
When me they fly, I am the wings;
I am the doubter and the doubt,
And I the hymn the Brahmin sings.

The strong gods pine for my abode,
And pine in vain the sacred Seven;
But thou, meek lover of the good!
Find me, and turn thy back on heaven.

ODE

Sung in the Town Hall, Concord, July 4, 1857

The first formal publication of this poem was in *May Day and Other Poems,* 1867, though the occasion of the piece was a breakfast in the Town Hall at Concord on the date stipulated, to raise money for the improvement of a new cemetery. The text is from the 1884 *Poems.*

O tenderly the haughty day
Fills his blue urn with fire;
One morn is in the mighty heaven,
And one in our desire.

The cannon booms from town to town,
Our pulses beat not less,
The joy-bells chime their tidings down,
Which children's voices bless.

For He that flung the broad blue fold
O'er-mantling land and sea,
One third part of the sky unrolled
For the banner of the free.

1. **hypocritic**—here, deceptive. 7. **pleachéd**—that is, with the boughs of the trees interlaced; or, more simply, intertwined, complicated. 12. **Brahmin**—here conceived of as the Hindu priest. 14. **Seven**—the seven highest saints of Brahminic belief.

The men are ripe of Saxon kind
To build an equal state,—
To take the statute from the mind
And make of duty fate.

United States! the ages plead,—
Present and Past in under-song,—
Go put your creed into your deed,
Nor speak with double tongue.

For sea and land don't understand,
Nor skies without a frown
See rights for which the one hand fights
By the other cloven down.

Be just at home; then write your scroll
Of honor o'er the sea,
And bid the broad Atlantic roll,
A ferry of the free.

And henceforth there shall be no chain,
Save underneath the sea
The wires shall murmur through the main
Sweet songs of liberty.

The conscious stars accord above,
The waters wild below,
And under, through the cable wove,
Her fiery errands go.

For He that worketh high and wise,
Nor pauses in his plan,
Will take the sun out of the skies
Ere freedom out of man.

TERMINUS

This poem first appeared in the *Atlantic Monthly*, January, 1867; it was then collected into the *May Day* volume; and reappeared in the *Selected Poems*, from which the text is taken. Terminus was the Roman god of boundaries.

It is time to be old,
To take in sail:—
The god of bounds,
Who sets to seas a shore,
Came to me in his fatal rounds,
And said: 'No more!
No farther shoot
Thy broad ambitious branches, and thy root,
Fancy departs: no more invent,
Contract thy firmament
To compass of a tent.
There's not enough for this and that,
Make thy option which of two;
Economize the failing river,
Nor the less revere the Giver,
Leave the many and hold the few.
Timely wise accept the terms,
Soften the fall with wary foot;
A little while
Still plan and smile,
And, fault of novel germs,
Mature the unfallen fruit.
Curse, if thou wilt, thy sires,
Bad husbands of their fires,
Who, when they gave thee breath,
Failed to bequeath
The needful sinew stark as once,
The Baresark marrow to thy bones,
But left a legacy of ebbing veins,
Inconstant heat and nerveless reins,—
Amid the Muses, left thee deaf and dumb,
Amid the gladiators, halt and numb.'

As the bird trims her to the gale,
I trim myself to the storm of time,
I man the rudder, reef the sail,
Obey the voice at eve obeyed at prime:
'Lowly faithful, banish fear,
Right onward drive unharmed;
The port well worth the cruise, is near,
And every wave is charmed.'

SACRIFICE

This gnomic quatrain first appeared in the *May Day* volume. The present text is that of 1884. According to the Concord edition, the last two lines are from a Puritan sermon

13. **Saxon kind**—A strong consciousness of the "Anglo-Saxon" tradition in New England and America is characteristic of Emerson. 31. **wires**—transatlantic cables. 28. **Baresark**—Berserk; another veiled reference to the Germanic ("Anglo-Saxon") tradition of which Emerson was conscious.

preached before the House of Commons, November 30, 1642, by Caleb Vines.

Though love repine and reason chafe,
There came a voice without reply,—
'Tis man's perdition to be safe,
When for the truth he ought to die.'

WRITTEN IN A VOLUME OF GOETHE

From the *Poems* of 1884. Probably written about 1840.

Six thankful weeks,—and let it be
A meter of prosperity,—
In my coat I bore this book,
And seldom therein could I look,
For I had too much to think,
Heaven and earth to eat and drink.
Is he hapless who can spare
In his plenty things so rare?

MAIA

From the Concord edition, 1904. Maia is the Hindu principle of illusion.

Illusion works impenetrable,
Weaving webs innumerable,
Her gay pictures never fail,
Crowds each on other, veil on veil,
Charmer who will be believed
By man who thirsts to be deceived.

NATURE

The publication of *Nature* in 1836—a little book of less than one hundred pages without Emerson's name on the title-page—begins an epoch in American literature, even though years went by before the first edition of five hundred copies was exhausted. In style and substance it marked the beginning of a literature which was national and not derivative or colonial. The text here reprinted, however, is that of the edition of 1849. There are a few minor variations in the text; and the verse motto here prefixed replaces the prose motto of 1836 from Plotinus.

A subtle chain of countless rings
The next unto the farthest brings;
The eye reads omens where it goes,
And speaks all languages the rose;
And, striving to be man, the worm
Mounts through all the spires * of form.

INTRODUCTION

Our age is retrospective. It builds the sepulchres of the fathers. It writes biographies, histories, and criticism. The foregoing generations beheld God and nature face to face; we, through their eyes. Why should not we also enjoy an original relation to the universe? Why should not we have a poetry and philosophy of insight and not of tradition, and a religion by revelation to us, and not the history of theirs? Embosomed for a season in nature, whose floods of life stream around and through us, and invite us by the powers they supply, to action proportioned to nature, why should we grope among the

* **spires**—spirals.

dry bones of the past, or put the living generation into masquerade out of its faded wardrobe? The sun shines to-day also. There is more wool and flax in the fields. There are new lands, new men, new thoughts. Let us demand our own works and laws and worship.

Undoubtedly we have no questions to ask which are unanswerable. We must trust the perfection of the creation so far, as to believe that whatever curiosity the order of things has awakened in our minds, the order of things can satisfy. Every man's condition is a solution in hieroglyphic to those inquiries he would put. He acts it as life, before he apprehends it as truth. In like manner, nature is already, in its forms and tendencies, describing its own design. Let us interrogate the great apparition that shines so peacefully around us. Let us inquire, to what end is nature?

All science has one aim, namely, to find a theory of nature. We have theories of races and of functions, but scarcely yet a remote approach to an idea of creation. We are now so far from the road to truth, that religious teachers dispute and hate each other, and speculative men are esteemed unsound and frivolous. But to a sound judgment, the most abstract truth is the most practical. Whenever a true theory appears, it will be its own evidence. Its test is, that it will explain all phenomena. Now many are thought not only unexplained but inexplicable; as language, sleep, madness, dreams, beasts, sex.

Philosophically considered, the universe is composed of Nature and the Soul. Strictly speaking, therefore, all that is separate from us, all which Philosophy distinguishes as the NOT ME, that is, both nature and art, all other men and my own body, must be ranked under this name, NATURE. In enumerating the values of nature and casting up their sum, I shall use the word in both senses;—in its common and in its philosophical import. In inquiries so general as our present one, the inaccuracy is not material; no confusion of thought will occur. *Nature,* in the common sense, refers to essences unchanged by man; space, the air, the river, the leaf. *Art* is applied to the mixture of his will with the same things, as in a house, a canal, a statue, a picture. But his operations taken together are so insignificant, a little chipping, baking, patching, and washing, that in an impression so grand as that of the world on the human mind, they do not vary the result.

CHAPTER I

To go into solitude, a man needs to retire as much from his chamber as from society. I am not solitary whilst I read and write, though nobody is with me. But if a man would be alone, let him look at the stars. The rays that come from those heavenly worlds will separate between him and what he touches. One might think the atmosphere was made transparent with this design, to give man, in the heavenly bodies, the perpetual presence of the sublime. Seen in the streets of cities, how great they are! If the stars should appear one night in a thousand years, how would men believe and adore; and preserve for many generations the remembrance of the city of God which had been shown! But every night come out these envoys of beauty, and light the universe with their admonishing smile.

The stars awaken a certain reverence, because though always present, they are inaccessible; but all natural objects make a kindred impression, when the mind is open to their influence. Nature never wears a mean appearance. Neither does the wisest man extort her secret, and lose his curiosity by finding out all her perfection. Nature never became a toy to a wise spirit. The flowers, the animals, the mountains, reflected the wisdom of his best hour, as much as they had delighted the simplicity of his childhood.

When we speak of nature in this manner, we have a distinct but most poetical sense in the mind. We mean the integrity of impression made by manifold natural objects. It is this which distinguishes the stick of timber of the wood-cutter, from the tree of the poet. The charming landscape which I saw this morning is indubitably made up of some twenty or thirty farms. Miller owns this field, Locke that, and Manning the woodland beyond. But none of them owns the landscape. There is a property in the horizon which no man has but he whose eye can integrate all the parts, that is, the poet. This is the best part of these men's farms, yet to this their warranty-deeds give no title.

To speak truly, few adult persons can see nature. Most persons do not see the sun. At least they have a very superficial seeing. The sun illuminates only the eye of the man, but shines into the eye and the heart of the child. The lover of nature is he whose inward and outward senses are still truly adjusted to each other; who has retained the spirit of infancy even into the era of manhood. His intercourse with heaven and earth becomes part of his daily food. In the presence of nature, a wild delight runs through the man, in spite of real sorrows. Nature says,—he is my creature, and maugre all his impertinent griefs, he shall be glad with me. Not the sun or the summer alone, but every hour and season yields its tribute of delight; for every hour and change corresponds to and authorizes a different state of the mind, from breathless noon to grimmest midnight. Nature is a setting that fits equally well a comic or a mourning piece. In good health, the air is a cordial of incredible virtue. Crossing a bare common, in snow puddles, at twilight, under a clouded sky, without having in my thoughts any occurrence of special good fortune, I have enjoyed a perfect exhilaration. I am glad to the brink of fear. In the woods too, a man casts off his years, as the snake his slough, and at what period soever of life, is always a child. In the woods, is perpetual youth. Within these plantations of God, a decorum and sanctity reign, a perennial festival is dressed, and the guest sees not how he should tire of them in a thousand years. In the woods, we return to reason and faith. There I feel that nothing can befall me in life,—no disgrace, no calamity (leaving me my eyes,) which nature cannot repair. Standing on the bare ground,—my head bathed by the blithe air, and uplifted into infinite space,—all mean egotism vanishes. I become a transparent eye-ball; I am nothing; I see all; the currents of the Universal Being circulate through me; I am part or particle of God. The name of the nearest friend sounds then foreign and accidental: to be brothers, to be acquaintances,——master or servant, is then a trifle and a disturbance. I am the lover of uncontained and immortal beauty. In the wilderness, I find something more dear and connate than in streets or

24. maugre—in spite of. **33. slough**—outer skin. **42. particle**—The collected (Concord) edition of the *Works* prints "parcel." **45. connate**—congenial.

villages. In the tranquil landscape, and especially in the distant line of the horizon, man beholds somewhat as beautiful as his own nature.

The greatest delight which the fields and woods minister, is the suggestion of an occult relation between man and the vegetable. I am not alone and unacknowledged. They nod to me, and I to them. The waving of the boughs in the storm is new to me and old. It takes me by surprise, and yet is not unknown. Its effect is like that of a higher thought or a better emotion coming over me, when I deemed I was thinking justly or doing right.

Yet it is certain that the power to produce this delight, does not reside in nature, but in man, or in a harmony of both. It is necessary to use these pleasures with great temperance. For, nature is not always tricked in holiday attire, but the same scene which yesterday breathed perfume and glittered as for the frolic of the nymphs, is overspread with melancholy to-day. Nature always wears the colors of the spirit. To a man laboring under calamity, the heat of his own fire hath sadness in it. Then, there is a kind of contempt of the landscape felt by him who has just lost by death a dear friend. The sky is less grand as it shuts down over less worth in the population.

CHAPTER II

COMMODITY

Whoever considers the final cause of the world will discern a multitude of uses that enter as parts into that result. They all admit of being thrown into one of the following classes: Commodity; Beauty; Language; and Discipline.

Under the general name of Commodity, I rank all those advantages which our senses owe to nature. This, of course, is a benefit which is temporary and mediate, not ultimate, like its service to the soul. Yet although low, it is perfect in its kind, and is the only use of nature which all men apprehend. The misery of man appears like childish petulance, when we explore the steady and prodigal provision that has been made for his support and delight on this green ball which floats him through the heavens. What angels invented these splendid ornaments, these rich conveniences, this ocean of air above, this ocean of water beneath, this firmament of earth between? this zodiac of lights, this tent of dropping clouds, this striped coat of climates, this fourfold year? Beasts, fire, water, stones, and corn serve him. The field is at once his floor, his workyard, his play-ground, his garden, and his bed.

> "More servants wait on man
> Than he'll take notice of."———

Nature, in its ministry to man, is not only the material, but is also the process and the result. All the parts incessantly work into each other's hands for the profit of man. The wind sows the seed; the sun evaporates the sea; the wind blows the vapor to the field; the ice, on the other side of the planet, condenses

19. **Commodity**—used in the eighteenth-century sense of convenience to man's physical existence. 31. **zodiac**—the belt within which the planets move. 35-36. **"More . . . of"**—from the poem by George Herbert which Emerson quotes on p. 421.

rain on this; the rain feeds the plant; the plant feeds the animal; and thus the endless circulations of the divine charity nourish man.

The useful arts are reproductions or new combinations by the wit of man, of the same natural benefactors. He no longer waits for favoring gales, but by means of steam, he realizes the fable of Aeolus's bag, and carries the two and thirty winds in the boiler of his boat. To diminish friction, he paves the road with iron bars, and, mounting a coach with a ship-load of men, animals, and merchandise behind him, he darts through the country, from town to town, like an eagle or a swallow through the air. By the aggregate of these aids, how is the face of the world changed, from the era of Noah to that of Napoleon! The private poor man hath cities, ships, canals, bridges, built for him. He goes to the post-office, and the human race run on his errands; to the book-shop, and the human race read and write of all that happens, for him; to the court-house, and nations repair his wrongs. He sets his house upon the road, and the human race go forth every morning, and shovel out the snow, and cut a path for him.

But there is no need of specifying particulars in this class of uses. The catalogue is endless, and the examples so obvious, that I shall leave them to the reader's reflection, with the general remark, that this mercenary benefit is one which has respect to a farther good. A man is fed, not that he may be fed, but that he may work.

CHAPTER III

BEAUTY

A nobler want of man is served by nature, namely, the love of Beauty.

The ancient Greeks called the world κόσμος, beauty. Such is the constitution of all things, or such the plastic power of the human eye, that the primary forms, as the sky, the mountain, the tree, the animal, give us a delight *in and for themselves;* a pleasure arising from outline, color, motion, and grouping. This seems partly owing to the eye itself. The eye is the best of artists. By the mutual action of its structure and of the laws of light, perspective is produced, which integrates every mass of objects, of what character soever, into a well colored and shaded globe, so that where the particular objects are mean and unaffecting, the landscape which they compose is round and symmetrical. And as the eye is the best composer, so light is the first of painters. There is no object so foul that intense light will not make beautiful. And the stimulus it affords to the sense, and a sort of infinitude which it hath, like space and time, make all matter gay. Even the corpse has its own beauty. But besides this general grace diffused over nature, almost all the individual forms are agreeable to the eye, as is proved by our endless imitations of some of them, as the acorn, the grape, the pine-cone, the wheat-ear, the egg, the wings and forms of

5. **steam**—Until the *Sirius* and *Great Western* crossed the Atlantic entirely under their own power in 1838, the steamboat relied upon auxiliary sails; hence, Emerson's picturesque figure of "two and thirty winds in the boiler." 5. **Aeolus's bag**—Aeolus, in Greek mythology, kept the winds in a bag. *Cf.* the opening of the Aeneid. 7. **iron bars**—Until a little before the publication of *Nature,* rails in America had been of wood faced on top with iron; these were known as strap rails. 25. κόσμος—kosmos, which has the meanings of adornment and order.

most birds, the lion's claw, the serpent, the butterfly, sea-shells, flames, clouds, buds, leaves, and the forms of many trees, as the palm.

For better consideration, we may distribute the aspects of Beauty in a threefold manner.

1. First, the simple perception of natural forms is a delight. The influence of the forms and actions in nature, is so needful to man, that, in its lowest functions, it seems to lie on the confines of commodity and beauty. To the body and mind which have been cramped by noxious work or company, nature is medicinal and restores their tone. The tradesman, the attorney comes out of the din and craft of the street, and sees the sky and the woods, and is a man again. In their eternal calm, he finds himself. The health of the eye seems to demand a horizon. We are never tired, so long as we can see far enough.

But in other hours, Nature satisfies by its loveliness, and without any mixture of corporeal benefit. I see the spectacle of morning from the hill-top over against my house, from day-break to sun-rise, with emotions which an angel might share. The long slender bars of cloud float like fishes in the sea of crimson light. From the earth, as a shore, I look out into that silent sea. I seem to partake its rapid transformations: the active enchantment reaches my dust, and I dilate and conspire with the morning wind. How does Nature deify us with a few and cheap elements! Give me health and a day, and I will make the pomp of emperors ridiculous. The dawn is my Assyria; the sun-set and moon-rise my Paphos, and unimaginable realms of faerie; broad noon shall be my England of the senses and the understanding; the night shall be my Germany of mystic philosophy and dreams.

Not less excellent, except for our less susceptibility in the afternoon, was the charm, last evening, of a January sunset. The western clouds divided and subdivided themselves into pink flakes modulated with tints of unspeakable softness; and the air had so much life and sweetness, that it was a pain to come within doors. What was it that nature would say? Was there no meaning in the live repose of the valley behind the mill, and which Homer or Shakespeare could not re-form for me in words? The leafless trees become spires of flame in the sunset, with the blue east for their back-ground, and the stars of the dead calices of flowers, and every withered stem and stubble rimed with frost, contribute something to the mute music.

The inhabitants of cities suppose that the country landscape is pleasant only half the year. I please myself with the graces of the winter scenery, and believe that we are as much touched by it as by the genial influences of summer. To the attentive eye, each moment of the year has its own beauty, and in the same field, it beholds, every hour, a picture which was never seen before, and which shall never be seen again. The heavens change every moment, and reflect their glory or gloom on the plains beneath. The state of the crop in the surrounding farms alters the expression of the earth from week to week. The

21. Assyria—here used vaguely for Oriental splendor. **22. Paphos**—in classical times, a city of Cyprus noted for its Aphrodite cult. **22-23. England . . . Germany**—In 1836 the regnant philosophical system in England was the "common-sense" philosophy of the Scotch school, based upon sensationalistic psychology; Germany, however, the home of transcendental idealism, was in the opinion of younger thinkers the true haunt of mystic wisdom. **33. calices**—plural of calyx, the cup of a flower.

succession of native plants in the pastures and roadsides, which makes the silent clock by which time tells the summer hours, will make even the divisions of the day sensible to a keen observer. The tribes of birds and insects, like the plants punctual to their time, follow each other, and the year has room for all. By watercourses, the variety is greater. In July, the blue pontederia or pickerel-weed blooms in large beds in the shallow parts of our pleasant river, and swarms with yellow butterflies in continual motion. Art cannot rival this pomp of purple and gold. Indeed the river is a perpetual gala, and boasts each month a new ornament.

But this beauty of Nature which is seen and felt as beauty, is the least part. The shows of day, the dewy morning, the rainbow, mountains, orchards in blossom, stars, moonlight, shadows in still water, and the like, if too eagerly hunted, become shows merely, and mock us with their unreality. Go out of the house to see the moon, and 'tis mere tinsel; it will not please as when its light shines upon your necessary journey. The beauty that shimmers in the yellow afternoons of October, who ever could clutch it? Go forth to find it, and it is gone; 'tis only a mirage as you look from the windows of a diligence.

2. The presence of a higher, namely, of the spiritual element is essential to its perfection. The high and divine beauty which can be loved without effeminacy, is that which is found in combination with the human will. Beauty is the mark God sets upon virtue. Every natural action is graceful. Every heroic act is also decent, and causes the place and the bystanders to shine. We are taught by great actions that the universe is the property of every individual in it. Every rational creature has all nature for his dowry and estate. It is his, if he will. He may divest himself of it; he may creep into a corner, and abdicate his kingdom, as most men do, but he is entitled to the world by his constitution. In proportion to the energy of his thought and will, he takes up the world into himself. "All those things for which men plough, build, or sail, obey virtue," said Sallust. "The winds and waves," said Gibbon, "are always on the side of the ablest navigators." So are the sun and moon and all the stars of heaven. When a noble act is done,—perchance in a scene of great natural beauty; when Leonidas and his three hundred martyrs consume one day in dying, and the sun and moon come each and look at them once in the steep defile of Thermopylæ; when Arnold Winkelried, in the high Alps, under the shadow of the avalanche, gathers in his side a sheaf of Austrian spears to break the line for his comrades; are not these heroes entitled to add the beauty of the scene to the beauty of the deed? When the bark of Columbus nears the shore of America;—before it, the beach lined with savages, fleeing out of all their huts of cane; the sea behind; and the purple mountains of the Indian Archipelago

6. **our . . . river**—the Concord River. 8. **gala**—festivity. 28-29. **"All . . . Sallust**—From *The Conspiracy of Catiline,* Chap. II, by Caius Sallustius Crispus, Roman historian (86-34 B.C.). 29-30. **"The winds . . . navigators"**—From Chapter LXVIII of *The Decline and Fall of the Roman Empire* by Edward Gibbon (1737-1794). 32. **Leonidas**—Leonidas, King of Sparta, defended the pass of Thermopylae, with a small army, of which 300 Spartans were the heart, against the Persian army of 2,000,000 men, in the fifth century B C. All of the Spartans were killed, save one. 34. **Winkelried**—According to tradition, at the battle of Sempach (1386) Arnold von Winkelried, seeing the Swiss hesitate before the invading Austrian pikemen, rushed forward, gathered all the Austrian spears he could to his breast, and so made an opening in the enemy ranks.

around, can we separate the man from the living picture? Does not the New World clothe his form with her palm-groves and savannahs as fit drapery? Ever does natural beauty steal in like air, and envelope great actions. When Sir Harry Vane was dragged up the Tower-hill, sitting on a sled, to suffer death, as the champion of the English laws, one of the multitude cried out to him, "You never sate on so glorious a seat." Charles II., to intimidate the citizens of London, caused the patriot Lord Russel to be drawn in an open coach, through the principal streets of the city, on his way to the scaffold. "But," his biographer says, "the multitude imagined they saw liberty and virtue sitting by his side." In private places, among sordid objects, an act of truth or heroism seems at once to draw to itself the sky as its temple, the sun as its candle. Nature stretcheth out her arms to embrace man, only let his thoughts be of equal greatness. Willingly does she follow his steps with the rose and the violet, and bend her lines of grandeur and grace to the decoration of her darling child. Only let his thoughts be of equal scope, and the frame will suit the picture. A virtuous man is in unison with her works, and makes the central figure of the visible sphere. Homer, Pindar, Socrates, Phocion, associate themselves fitly in our memory with the geography and climate of Greece. The visible heavens and earth sympathize with Jesus. And in common life whosoever has seen a person of powerful character and happy genius, will have remarked how easily he took all things along with him,—the persons, the opinions, and the day, and nature became ancillary to a man.

3. There is still another aspect under which the beauty of the world may be viewed, namely, as it becomes an object of the intellect. Beside the relation of things to virtue, they have a relation to thought. The intellect searches out the absolute order of things as they stand in the mind of God, and without the colors of affection. The intellectual and the active powers seem to succeed each other, and the exclusive activity of the one, generates the exclusive activity of the other. There is something unfriendly in each to the other, but they are like the alternate periods of feeding and working in animals; each prepares and will be followed by the other. Therefore does beauty, which, in relation to actions, as we have seen, comes unsought, and comes because it is unsought, remain for the apprehension and pursuit of the intellect; and then again, in its turn, of the active power. Nothing divine dies. All good is eternally reproductive. The beauty of nature re-forms itself in the mind, and not for barren contemplation, but for new creation.

All men are in some degree impressed by the face of the world; some men even to delight. This love of beauty is Taste. Others have the same love in such excess, that, not content with admiring, they seek to embody it in new forms. The creation of beauty is Art.

4. **Vane**—Sir Henry Vane (1613-1662), statesman and author, executed at the instigation of Charles II for treason. Emerson probably read the long quotations from Sikes's life in James Mackintosh, *Lives of Eminent British Statesmen*, Vol IV, pp. 234-35. 7. **Lord Russel**—William, Lord Russell (1639-1683), English statesman, executed for treason, though he insisted he was merely acting within his parliamentary rights. 8-9. **his biographer**—What biographer Emerson has in mind is not clear. 17. **Homer . . . Phocion**—Homer, the supposed author of the Iliad; Pindar, lyric Greek poet of heroic quality (522-443 B.C.); Socrates (470?-399 B.C.); Phocion (402-318 B.C.), Athenian statesman and general.

The production of a work of art throws a light upon the mystery of humanity. A work of art is an abstract or epitome of the world. It is the result or expression of nature, in miniature. For, although the works of nature are innumerable and all different, the result or the expression of them all is similar and single. Nature is a sea of forms radically alike and even unique. A leaf, a sun-beam, a landscape, the ocean, make an analogous impression on the mind. What is common to them all,—that perfectness and harmony, is beauty. The standard of beauty is the entire circuit of natural forms,—the totality of nature; which the Italians expressed by defining beauty "il piu nell' uno." Nothing is quite beautiful alone: nothing but is beautiful in the whole. A single object is only so far beautiful as it suggests this universal grace. The poet, the painter, the sculptor, the musician, the architect, seek each to concentrate this radiance of the world on one point, and each in his several work to satisfy the love of beauty which stimulates him to produce. Thus is Art, a nature passed through the alembic of man. Thus in art, does nature work through the will of a man filled with the beauty of her first works.

The world thus exists to the soul to satisfy the desire of beauty. This element I call an ultimate end. No reason can be asked or given why the soul seeks beauty. Beauty, in its largest and profoundest sense, is one expression for the universe. God is the all-fair. Truth, and goodness, and beauty, are but different faces of the same All. But beauty in nature is not ultimate. It is the herald of inward and eternal beauty, and is not alone a solid and satisfactory good. It must stand as a part, and not as yet the last or highest expression of the final cause of Nature.

CHAPTER IV

LANGUAGE

Language is a third use which Nature subserves to man. Nature is the vehicle of thought, and in a simple, double, and threefold degree.

1. Words are signs of natural facts.
2. Particular natural facts are symbols of particular spiritual facts.
3. Nature is the symbol of spirit.

1. Words are signs of natural facts. The use of natural history is to give us aid in supernatural history: the use of the outer creation, to give us language for the beings and changes of the inward creation. Every word which is used to express a moral or intellectual fact, if traced to its root, is found to be borrowed from some material appearance. *Right* means *straight; wrong* means *twisted. Spirit* primarily means *wind; transgression,* the crossing of a *line; supercilious,* the *raising of the eyebrow.* We say the *heart* to express emotion, the *head* to denote thought; and *thought* and *emotion* are words borrowed

9. **"il piu nell' uno"**—many in one. 15. **alembic**—distilling apparatus. 36. **Right**—The point lies in the etymology of the words: "right," from O. E. *riht;* "wrong," from O. E. *wrang, wringan;* "spirit," from Latin *spiritus, spirare* (to breathe); "transgression," from Latin *trans* (across) plus *gradi* (*gressus*), to step; "supercilious," from Latin *super* (above) plus *cilium* (eyelid), whence Latin *superciliosus,* "with raised eyebrows." 39. **thought . . . emotion**—The etymology which Emerson assumes for "thought" is not clear. "Emotion" comes from the Latin *emotum,* that which is shaken or stirred up.

from sensible things, and now appropriated to spiritual nature. Most of the process by which this transformation is made, is hidden from us in the remote time when language was framed; but the same tendency may be daily observed in children. Children and savages use only nouns or names of things, which they convert into verbs, and apply to analogous mental acts.

2. But this origin of all words that convey a spiritual import,—so conspicuous a fact in the history of language,—is our least debt to nature. It is not words only that are emblematic; it is things which are emblematic. Every natural fact is a symbol of some spiritual fact. Every appearance in nature corresponds to some state of the mind, and that state of the mind can only be described by presenting that natural appearance as its picture. An enraged man is a lion, a cunning man is a fox, a firm man is a rock, a learned man is a torch. A lamb is innocence; a snake is subtle spite; flowers express to us the delicate affections. Light and darkness are our familiar expression for knowledge and ignorance; and heat for love. Visible distance behind and before us, is respectively our image of memory and hope.

Who looks upon a river in a meditative hour and is not reminded of the flux of all things? Throw a stone into the stream, and the circles that propagate themselves are the beautiful type of all influence. Man is conscious of a universal soul within or behind his individual life, wherein, as in a firmament, the natures of Justice, Truth, Love, Freedom, arise and shine. This universal soul, he calls Reason: it is not mine, or thine, or his, but we are its; we are its property and men. And the blue sky in which the private earth is buried, the sky with its eternal calm, and full of everlasting orbs, is the type of Reason. That which, intellectually considered, we call Reason, considered in relation to nature, we call Spirit. Spirit is the Creator. Spirit hath life in itself. And man in all ages and countries, embodies it in his language, as the FATHER.

It is easily seen that there is nothing lucky or capricious in these analogies, but that they are constant, and pervade nature. These are not the dreams of a few poets, here and there, but man is an analogist, and studies relations in all objects. He is placed in the centre of beings, and a ray of relation passes from every other being to him. And neither can man be understood without these objects, nor these objects without man. All the facts in natural history taken by themselves, have no value, but are barren, like a single sex. But marry it to human history, and it is full of life. Whole Floras, all Linnaeus' and Buffon's volumes, are dry catalogues of facts; but the most trivial of these facts, the habit of a plant, the organs, or work, or noise of an insect, applied to the illustration of a fact in intellectual philosophy, or, in any way associated to human nature, affects us in the most lively and agreeable manner. The seed of a plant,—to what affecting analogies in the nature of man, is that little fruit made use of,

22. Reason—This is the reason, or pure thought, of transcendental philosophy, commonly opposed to the understanding, or common sense. The student should carefully note Emerson's use of Reason in this and other essays. Note especially that Reason, seen from the point of view of nature, is Spirit (lines 25-26). **35. Floras**—the world of plants systematically described. **35. Linnaeus . . . Buffon**—Karl von Linné, Swedish botanist (1707-1778), usually referred to by his Latinized name of Linnaeus, the founder of the modern systematization of genera and species in botany. Georges Louis Leclerc, Comte de Buffon (1707-1788), French naturalist, whose *Natural History* was the first great popular synthesis of the subject.

in all discourse, up to the voice of Paul, who calls the human corpse a seed,—"It is sown a natural body; it is raised a spiritual body." The motion of the earth round its axis, and round the sun, makes the day, and the year. These are certain amounts of brute light and heat. But is there no intent of an analogy between man's life and the seasons? And do the seasons gain no grandeur or pathos from that analogy? The instincts of the ant are very unimportant, considered as the ant's; but the moment a ray of relation is seen to extend from it to man, and the little drudge is seen to be a monitor, a little body with a mighty heart, then all its habits, even that said to be recently observed, that it never sleeps, become sublime.

Because of this radical correspondence between visible things and human thoughts, savages, who have only what is necessary, converse in figures. As we go back in history, language becomes more picturesque, until its infancy, when it is all poetry; or all spiritual facts are represented by natural symbols. The same symbols are found to make the original elements of all languages. It has moreover been observed, that the idioms of all languages approach each other in passages of the greatest eloquence and power. And as this is the first language, so is it the last. This immediate dependence of language upon nature, this conversion of an outward phenomenon into a type of somewhat in human life, never loses its power to affect us. It is this which gives that piquancy to the conversation of a strong-natured farmer or back-woodsman, which all men relish.

A man's power to connect his thought with its proper symbol, and so to utter it, depends on the simplicity of his character, that is, upon his love of truth, and his desire to communicate it without loss. The corruption of man is followed by the corruption of language. When simplicity of character and the sovereignty of ideas is broken up by the prevalence of secondary desires, the desire of riches, of pleasure, of power, and of praise,—and duplicity and falsehood take place of simplicity and truth, the power over nature as an interpreter of the will, is in a degree lost; new imagery ceases to be created, and old words are perverted to stand for things which are not; a paper currency is employed, when there is no bullion in the vaults. In due time, the fraud is manifest, and words lose all power to stimulate the understanding or the affections. Hundreds of writers may be found in every long-civilized nation, who for a short time believe, and make others believe, that they see and utter truths, who do not of themselves clothe one thought in its natural garment, but who feed unconsciously on the language created by the primary writers of the country, those, namely, who hold primarily on nature.

But wise men pierce this rotten diction and fasten words again to visible things; so that picturesque language is at once a commanding certificate that he who employs it, is a man in alliance with truth and God. The moment our discourse rises above the ground line of familiar facts, and is inflamed with passion or exalted by thought, it clothes itself in images. A man conversing in earnest, if he watch his intellectual processes, will find that a material image, more or less luminous, arises in his mind, cotemporaneous with every thought,

2. "It is sown . . ."—*Cf.* I Cor. 15: 44. **11. radical**—fundamental. **13. picturesque**—This is the favorite romantic doctrine of the poetic origins of language.

which furnishes the vestment of the thought. Hence, good writing and brilliant discourse are perpetual allegories. This imagery is spontaneous. It is the blending of experience with the present action of the mind. It is proper creation. It is the working of the Original Cause through the instruments he has already made.

These facts may suggest the advantage which the country-life possesses for a powerful mind, over the artificial and curtailed life of cities. We know more from nature than we can at will communicate. Its light flows into the mind evermore, and we forget its presence. The poet, the orator, bred in the woods, whose senses have been nourished by their fair and appeasing changes, year after year, without design and without heed,—shall not lose their lesson altogether, in the roar of cities or the broil of politics. Long hereafter, amidst agitation and terror in national councils,—in the hour of revolution,—these solemn images shall reappear in their morning lustre, as fit symbols and words of the thoughts which the passing events shall awaken. At the call of a noble sentiment, again the woods wave, the pines murmur, the river rolls and shines, and the cattle low upon the mountains, as he saw and heard them in his infancy. And with these forms, the spells of persuasion, the keys of power are put into his hands.

3. We are thus assisted by natural objects in the expression of particular meanings. But how great a language to convey such pepper-corn informations! Did it need such noble races of creatures, this profusion of forms, this host of orbs in heaven, to furnish man with the dictionary and grammar of his municipal speech? Whilst we use this grand cipher to expedite the affairs of our pot and kettle, we feel that we have not yet put it to its use, neither are able. We are like travellers using the cinders of a volcano to roast their eggs. Whilst we see that it always stands ready to clothe what we would say, we cannot avoid the question whether the characters are not significant of themselves. Have mountains, and waves, and skies, no significance but what we consciously give them, when we employ them as emblems of our thoughts? The world is emblematic. Parts of speech are metaphors, because the whole of nature is a metaphor of the human mind. The laws of moral nature answer to those of matter as face to face in a glass. "The visible world and the relation of its parts, is the dial plate of the invisible." The axioms of physics translate the laws of ethics. Thus, "the whole is greater than its part;" "reaction is equal to action;" "the smallest weight may be made to lift the greatest, the difference of weight being compensated by time;" and many the like propositions, which have an ethical as well as physical sense. These propositions have a much more extensive and universal sense when applied to human life, than when confined to technical use.

In like manner, the memorable words of history, and the proverbs of nations, consist usually of a natural fact, selected as a picture or parable of a moral truth. Thus; A rolling stone gathers no moss; A bird in the hand is worth two in the bush; A cripple in the right way, will beat a racer in the wrong; Make hay while the sun shines; 'Tis hard to carry a full cup even; Vinegar is the son of wine; The last ounce broke the camel's back; Long-lived trees make

21. **pepper-corn**—trivial. 23. **municipal**—provincial.

roots first;—and the like. In their primary sense these are trivial facts, but we repeat them for the value of their analogical import. What is true of proverbs, is true of all fables, parables, and allegories.

This relation between the mind and matter is not fancied by some poet, but stands in the will of God, and so is free to be known by all men. It appears to men, or it does not appear. When in fortunate hours we ponder this miracle, the wise man doubts, if, at all other times, he is not blind and deaf;

> ———"Can these things be,
> And overcome us like a summer's cloud,
> Without our special wonder?"

for the universe becomes transparent, and the light of higher laws than its own, shines through it. It is the standing problem which has exercised the wonder and the study of every fine genius since the world began; from the era of the Egyptians and the Brahmins to that of Pythagoras, of Plato, of Bacon, of Leibnitz, of Swedenborg. There sits the Sphinx at the road-side, and from age to age, as each prophet comes by, he tries his fortune at reading her riddle. There seems to be a necessity in spirit to manifest itself in material forms; and day and night, river and storm, beast and bird, acid and alkali, preëxist in necessary Ideas in the mind of God, and are what they are by virtue of preceding affections in the world of spirit. A Fact is the end or last issue of spirit. The visible creation is the terminus or the circumference of the invisible world. "Material objects," said a French philosopher, "are necessarily kinds of *scoriae* of the substantial thoughts of the Creator, which must always preserve an exact relation to their first origin; in other words, visible nature must have a spiritual and moral side."

This doctrine is abstruse, and though the images of "garment," "scoriae," "mirror," &c., may stimulate the fancy, we must summon the aid of subtler and more vital expositors to make it plain. "Every scripture is to be interpreted by the same spirit which gave it forth,"—is the fundamental law of criticism. A life in harmony with nature, the love of truth and of virtue, will purge the eyes to understand her text. By degrees we may come to know the primitive sense of the permanent objects of nature, so that the world shall be to us an open book, and every form significant of its hidden life and final cause.

A new interest surprises us, whilst, under the view now suggested, we con-

8. **"Can these things be . . ."**—From *Macbeth,* Act III, scene 4. 14. **Egyptians . . . Brahmins**—Ancient Egypt and ancient India were regarded by many writers in the romantic movement as possessed of a secret, mystical wisdom. 14. **Pythagoras . . . Plato**—Pythagoras, a Greek philosopher of the sixth century B.C., taught the immortality and the transmigration of souls. Plato (428-348 B.C.) is mentioned here because of his philosophical idealism. 14-15. **Bacon . . . Leibnitz . . . Swedenborg**—Francis Bacon, Lord Verulam (1561-1626), whose insistence on the inductive method in science does not conceal a mystical view of truth; Gottfried Wilhelm Leibnitz (1646-1716), philosophical optimist; Emanuel Swedenborg (1688-1772), Swedish philosopher and mystic, whose doctrines profoundly interested Emerson. 15. **Sphinx**—By way of punishing King Laius of Thebes the Sphinx established herself by the side of the road leading to that city and destroyed all who could not answer her riddle until Oedipus finally solved it. 18. **preexist**—This passage should be compared with that on Reason, *ante,* p. 404. 21-22. **"Material objects"**—As Emerson's *Journals,* Vol. III, pp. 512 ff., reveal, this passage comes from *The True Messiah* of Guillaume Caspar Lencroy Oegger, professor of philosophy and vicar of Notre Dame which Emerson probably read in a manuscript translation. 22. **scoriae**—dregs.

template the fearful extent and multitude of objects; since "every object rightly seen, unlocks a new faculty of the soul." That which was unconscious truth, becomes, when interpreted and defined in an object, a part of the domain of knowledge,—a new weapon in the magazine of power.

CHAPTER V

DISCIPLINE

In view of the significance of nature, we arrive at once at a new fact, that nature is a discipline. This use of the world includes the preceding uses, as parts of itself.

Space, time, society, labor, climate, food, locomotion, the animals, the mechanical forces, give us sincerest lessons, day by day, whose meaning is unlimited. They educate both the Understanding and the Reason. Every property of matter is a school for the understanding,—its solidity or resistance, its inertia, its extension, its figure, its divisibility. The understanding adds, divides, combines, measures, and finds nutriment and room for its activity in this worthy scene. Meantime, Reason transfers all these lessons into its own world of thought, by perceiving the analogy that marries Matter and Mind.

1. Nature is a discipline of the understanding in intellectual truths. Our dealing with sensible objects is a constant exercise in the necessary lessons of difference, of likeness, of order, of being and seeming, of progressive arrangement; of ascent from particular to general; of combination to one end of manifold forces. Proportioned to the importance of the organ to be formed, is the extreme care with which its tuition is provided,—a care pretermitted in no single case. What tedious training, day after day, year after year, never ending, to form the common sense; what continual reproduction of annoyances, inconveniences, dilemmas; what rejoicing over us of little men; what disputing of prices, what reckonings of interest,—and all to form the Hand of the mind;—to instruct us that "good thoughts are no better than good dreams, unless they be executed!"

The same good office is performed by Property and its filial systems of debt and credit. Debt, grinding debt, whose iron face the widow, the orphan, and the sons of genius fear and hate;—debt, which consumes so much time, which so cripples and disheartens a great spirit with cares that seem so base, is a preceptor whose lessons cannot be forgone, and is needed most by those who suffer from it most. Moreover, property, which has been well compared to snow,—"if it fall level to-day, it will be blown into drifts to-morrow,"—is the surface action of internal machinery, like the index on the face of a clock. Whilst now it is the gymnastics of the understanding, it is hiving, in the foresight of the spirit, experience in profounder laws.

The whole character and fortune of the individual are affected by the least inequalities in the culture of the understanding; for example, in the perception

12. **Understanding . . . Reason**—Here again is the contrast in transcendentalism between the ordinary common-sense logic which gets us through the daily work, and the higher intellectual faculty by which we apprehend nonsensory truths.

of differences. Therefore is Space, and therefore Time, that man may know that things are not huddled and lumped, but sundered and individual. A bell and a plough have each their use, and neither can do the office of the other. Water is good to drink, coal to burn, wool to wear; but wool cannot be drunk, nor water spun, nor coal eaten. The wise man shows his wisdom in separation, in gradation, and his scale of creatures and of merits is as wide as nature. The foolish have no range in their scale, but suppose every man is as every other man. What is not good they call the worst, and what is not hateful, they call the best.

In like manner, what good heed nature forms in us! She pardons no mistakes. Her yea is yea, and her nay, nay.

The first steps in Agriculture, Astronomy, Zoölogy, (those first steps which the farmer, the hunter, and the sailor take,) teach that nature's dice are always loaded; that in her heaps and rubbish are concealed sure and useful results.

How calmly and genially the mind apprehends one after another the laws of physics! What noble emotions dilate the mortal as he enters into the counsels of the creation, and feels by knowledge the privilege to BE! His insight refines him. The beauty of nature shines in his own breast. Man is greater [that] he can see this, and the universe less, because Time and Space relations vanish as laws are known.

Here again we are impressed and even daunted by the immense Universe to be explored. "What we know, is a point to what we do not know." Open any recent journal of science, and weigh the problems suggested concerning Light, Heat, Electricity, Magnetism, Physiology, Geology, and judge whether the interest of natural science is likely to be soon exhausted.

Passing by many particulars of the discipline of nature, we must not omit to specify two.

The exercise of the Will or the lesson of power is taught in every event. From the child's successive possession of his several senses up to the hour when he saith, "Thy will be done!" he is learning the secret, that he can reduce under his will, not only particular events, but great classes, nay the whole series of events, and so conform all facts to his character. Nature is thoroughly mediate. It is made to serve. It receives the dominion of man as meekly as the ass on which the Saviour rode. It offers all its kingdoms to man as the raw material which he may mould into what is useful. Man is never weary of working it up. He forges the subtile and delicate air into wise and melodious words, and gives them wing as angels of persuasion and command. One after another, his victorious thought comes up with and reduces all things, until the world becomes at last only a realized will,—the double of the man.

2. Sensible objects conform to the premonitions of Reason and reflect the conscience. All things are moral; and in their boundless changes have an unceasing reference to spiritual nature. Therefore is nature glorious with form, color, and motion, that every globe in the remotest heaven; every chemical change from the rudest crystal up to the laws of life; every change of vegeta-

19. [that]—"than" (1849). 34-35. **ass . . . Saviour**—*Cf.* Matt. 21:5. 35. **kingdoms**—*Cf.* Matt. 4:28.

tion from the first principle of growth in the eye of a leaf, to the tropical forest and antediluvian coal-mine; every animal function from the sponge up to Hercules, shall hint or thunder to man the laws of right and wrong, and echo the Ten Commandments. Therefore is nature ever the ally of Religion: lends all her pomp and riches to the religious sentiment. Prophet and priest, David, Isaiah, Jesus, have drawn deeply from this source. This ethical character so penetrates the bone and marrow of nature, as to seem the end for which it was made. Whatever private purpose is answered by any member or part, this is its public and universal function, and is never omitted. Nothing in nature is exhausted in its first use. When a thing has served an end to the uttermost, it is wholly new for an ulterior service. In God, every end is converted into a new means. Thus the use of commodity, regarded by itself, is mean and squalid. But it is to the mind an education in the doctrine of Use, namely, that a thing is good only so far as it serves; that a conspiring of parts and efforts to the production of an end is essential to any being. The first and gross manifestations of this truth, is our inevitable and hated training in values and wants, in corn and meat.

It has already been illustrated, that every natural process is a version of a moral sentence. The moral law lies at the centre of nature and radiates to the circumference. It is the pith and marrow of every substance, every relation, and every process. All things with which we deal, preach to us. What is a farm but a mute gospel? The chaff and the wheat, weeds and plants, blight, rain, insects, sun,—it is a sacred emblem from the first furrow of spring to the last stack which the snow of winter overtakes in the fields. But the sailor, the shepherd, the miner, the merchant, in their several resorts, have each an experience precisely parallel, and leading to the same conclusion: because all organizations are radically alike. Nor can it be doubted that this moral sentiment which thus scents the air, grows in the grain, and impregnates the waters of the world, is caught by man and sinks into his soul. The moral influence of nature upon every individual is that amount of truth which it illustrates to him. Who can estimate this? Who can guess how much firmness the sea-beaten rock has taught the fisherman? how much tranquillity has been reflected to man from the azure sky, over whose unspotted deeps the winds forevermore drive flocks of stormy clouds, and leave no wrinkle or stain? how much industry and providence and affection we have caught from the pantomime of brutes? What a searching preacher of self-command is the varying phenomenon of Health!

Herein is especially apprehended the unity of Nature,—the unity in variety,—which meets us everywhere. All the endless variety of things make an identical impression. Xenophanes complained in his old age, that, look where he would, all things hastened back to Unity. He was weary of seeing the same entity in the tedious variety of forms. The fable of Proteus has a cordial truth. A leaf, a drop, a crystal, a moment of time, is related to the whole, and partakes of the

1-2. **tropical . . . coal-mine**—Coal deposits represent decayed vegetable matter overwhelmed and buried by great changes of nature. 2. **Hercules**—type of strong man in classical myth. 13. **Use**—indirect reference to the philosophy of utilitarianism as taught by Jeremy Bentham and his followers. 39. **Xenophanes**—(570-480 B.C.) the Greek founder of the Eleatic philosophy which taught the unity of God and nature. 41. **Proteus**—in Greek mythology, a figure who could assume any shape at will.

perfection of the whole. Each particle is a microcosm, and faithfully renders the likeness of the world.

Not only resemblances exist in things whose analogy is obvious, as when we detect the type of the human hand in the flipper of the fossil saurus, but also in objects wherein there is great superficial unlikeness. Thus architecture is called "frozen music," by De Stael and Goethe. Vitruvius thought an architect should be a musician. "A Gothic church," said Coleridge, "is a petrified religion." Michael Angelo maintained, that, to an architect, a knowledge of anatomy is essential. In Haydn's oratorios, the notes present to the imagination not only motions, as, of the snake, the stag, and the elephant, but colors also; as the green grass. The law of harmonic sounds reappears in the harmonic colors. The granite is differenced in its laws only by the more or less of heat from the river that wears it away. The river, as it flows, resembles the air that flows over it; the air resembles the light which traverses it with more subtile currents; the light resembles the heat which rides with it through Space. Each creature is only a modification of the other; the likeness in them is more than the difference, and their radical law is one and the same. A rule of one art, or a law of one organization, holds true throughout nature. So intimate is this Unity, that, it is easily seen, it lies under the undermost garment of nature, and betrays its source in Universal Spirit. For it pervades Thought also. Every universal truth which we express in words, implies or supposes every other truth. *Omne verum vero consonat.* It is like a great circle on a sphere, comprising all possible circles; which, however, may be drawn and comprise it in like manner. Every such truth is the absolute Ens seen from one side. But it has innumerable sides.

The central Unity is still more conspicuous in actions. Words are finite organs of the infinite mind. They cannot cover the dimensions of what is in truth. They break, chop, and impoverish it. An action is the perfection and publication of thought. A right action seems to fill the eye, and to be related to all nature. "The wise man, in doing one thing, does all; or, in the one thing he does rightly, he sees the likeness of all which is done rightly."

Words and actions are not the attributes of brute nature. They introduce us to the human form, of which all other organizations appear to be degradations. When this appears among so many that surround it, the spirit prefers it to all others. It says, 'From such as this, have I drawn joy and knowledge; in such as this, have I found and beheld myself; I will speak to it; it can speak again; it can yield me thought already formed and alive.' In fact, the eye,—the mind,—is always accompanied by these forms, male and female; and these are incom-

parably the richest informations of the power and order that lie at the heart of things. Unfortunately every one of them bears the marks as of some injury; is marred and superficially defective. Nevertheless, far different from the deaf and dumb nature around them, these all rest like fountain-pipes on the unfathomed sea of thought and virtue whereto they alone, of all organizations, are the entrances.

It were a pleasant inquiry to follow into detail their ministry to our education, but where would it stop? We are associated in adolescent and adult life with some friends, who, like skies and waters, are coextensive with our idea; who, answering each to a certain affection of the soul, satisfy our desire on that side; whom we lack power to put at such focal distance from us, that we can mend or even analyze them. We cannot choose but love them. When much intercourse with a friend has supplied us with a standard of excellence, and has increased our respect for the resources of God who thus sends a real person to outgo our ideal; when he has, moreover, become an object of thought, and, whilst his character retains all its unconscious effect, is converted in the mind into solid and sweet wisdom,—it is a sign to us that his office is closing, and he is commonly withdrawn from our sight in a short time.

CHAPTER VI

IDEALISM

Thus is the unspeakable but intelligible and practicable meaning of the world conveyed to man, the immortal pupil, in every object of sense. To this one end of Discipline, all parts of nature conspire.

A noble doubt perpetually suggests itself, whether this end be not the Final Cause of the Universe; and whether nature outwardly exists. It is a sufficient account of that Appearance we call the World, that God will teach a human mind, and so makes it the receiver of a certain number of congruent sensations, which we call sun and moon, man and woman, house and trade. In my utter impotence to test the authenticity of the report of my senses, to know whether the impressions they make on me correspond with outlying objects, what difference does it make, whether Orion is up there in heaven, or some god paints the image in the firmament of the soul? The relations of parts and the end of the whole remaining the same, what is the difference, whether land and sea interact, and worlds revolve and intermingle without number or end,—deep yawning under deep, and galaxy balancing galaxy, throughout absolute space,—or whether, without relations of time and space, the same appearances are inscribed in the constant faith of man? Whether nature enjoy a substantial existence without, or is only in the apocalypse of the mind, it is alike useful and alike venerable to me. Be it what it may, it is ideal to me so long as I cannot try the accuracy of my senses.

The frivolous make themselves merry with the Ideal theory, as if its conse-

38. **apocalypse**—revelation. 41. **Ideal theory**—the transcendental philosophy, which, by placing knowable reality in the mind, seems to the unthinking to deny the existence of the external world, and to give the control of the external world to the mind.

quences were burlesque; as if it affected the stability of nature. It surely does not. God never jests with us, and will not compromise the end of nature by permitting any inconsequence in its procession. Any distrust of the permanence of laws would paralyze the faculties of man. Their permanence is sacredly respected, and his faith therein is perfect. The wheels and springs of man are all set to the hypothesis of the permanence of nature. We are not built like a ship to be tossed, but like a house to stand. It is a natural consequence of this structure, that, so long as the active powers predominate over the reflective, we resist with indignation any hint that nature is more short-lived or mutable than spirit. The broker, the wheelwright, the carpenter, the tollman, are much displeased at the intimation.

But whilst we acquiesce entirely in the permanence of natural laws, the question of the absolute existence of nature still remains open. It is the uniform effect of culture on the human mind, not to shake our faith in the stability of particular phenomena, as of heat, water, azote; but to lead us to regard nature as a phenomenon, not a substance; to attribute necessary existence to spirit; to esteem nature as an accident and an effect.

To the senses and the unrenewed understanding, belongs a sort of instinctive belief in the absolute existence of nature. In their view, man and nature are indissolubly joined. Things are ultimates, and they never look beyond their sphere. The presence of Reason mars this faith. The first effort of thought tends to relax this despotism of the senses, which binds us to nature as if we were a part of it, and shows us nature aloof, and, as it were, afloat. Until this higher agency intervened, the animal eye sees, with wonderful accuracy, sharp outlines and colored surfaces. When the eye of Reason opens, to outline and surface are at once added grace and expression. These proceed from imagination and affection, and abate somewhat of the angular distinctness of objects. If the Reason be stimulated to more earnest vision, outlines and surfaces become transparent, and are no longer seen; causes and spirits are seen through them. The best moments of life are these delicious awakenings of the higher powers, and the reverential withdrawing of nature before its God.

Let us proceed to indicate the effects of culture. 1. Our first institution in the Ideal philosophy is a hint from nature herself.

Nature is made to conspire with spirit to emancipate us. Certain mechanical changes, a small alteration in our local position apprizes us of a dualism. We are strangely affected by seeing the shore from a moving ship, from a balloon, or through the tints of an unusual sky. The least change in our point of view, gives the whole world a pictorial air. A man who seldom rides, needs only to get into a coach and traverse his own town, to turn the street into a puppet-show. The men, the women,—talking, running, bartering, fighting,—the earnest mechanic, the lounger, the beggar, the boys, the dogs, are unrealized at once, or, at least, wholly detached from all relation to the observer, and seen as apparent, not substantial beings. What new thoughts are suggested by seeing a face of country quite familiar, in the rapid movement of the rail-road car! Nay, the most wonted objects, (make a very slight change in the point of vision,)

3. **inconsequence**—inconsistency. 10. **tollman**—toll-gatherer on a privately built road. 15. **azote**—nitrogen. 41. **unrealized**—that is, seen not to be absolute realities.

please us most. In a camera obscura, the butcher's cart, and the figure of one of our own family amuse us. So a portrait of a well-known face gratifies us. Turn the eyes upside down, by looking at the landscape through your legs, and how agreeable is the picture, though you have seen it any time these twenty years! In these cases, by mechanical means, is suggested the difference between the observer and the spectacle,—between man and nature. Hence arises a pleasure mixed with awe; I may say, a low degree of the sublime is felt from the fact, probably, that man is hereby apprized, that, whilst the world is a spectacle, something in himself is stable.

2. In a higher manner, the poet communicates the same pleasure. By a few strokes he delineates, as on air, the sun, the mountain, the camp, the city, the hero, the maiden, not different from what we know them, but only lifted from the ground and afloat before the eye. He unfixes the land and the sea, makes them revolve around the axis of his primary thought, and disposes them anew. Possessed himself by a heroic passion, he uses matter as symbols of it. The sensual man conforms thoughts to things; the poet conforms things to his thoughts. The one esteems nature as rooted and fast; the other, as fluid, and impresses his being thereon. To him, the refractory world is ductile and flexible; he invests dust and stones with humanity, and makes them the words of the Reason. The Imagination may be defined to be, the use which the Reason makes of the material world. Shakspeare possesses the power of subordinating nature for the purposes of expression, beyond all poets. His imperial muse tosses the creation like a bauble from hand to hand, and uses it to embody any caprice of thought that is uppermost in his mind. The remotest spaces of nature are visited, and the farthest sundered things are brought together, by a subtle spiritual connection. We are made aware that magnitude of material things is relative, and all objects shrink and expand to serve the passion of the poet. Thus, in his sonnets, the lays of birds, the scents and dyes of flowers, he finds to be the *shadow* of his beloved; time, which keeps her from him, is his *chest;* the suspicion she has awakened, is her *ornament;*

> The ornament of beauty is Suspect,
> A crow which flies in heaven's sweetest air.

His passion is not the fruit of chance; it swells, as he speaks, to a city, or a state.

> No, it was builded far from accident;
> It suffers not in smiling pomp, nor falls
> Under the brow of thralling discontent;
> It fears not policy, that heretic,
> That works on leases of short numbered hours,
> But all alone stands hugely politic.

In the strength of his constancy, the Pyramids seem to him recent and transi-

1. **camera obscura**—ancestor of the camera. 28-29. **lays . . . chest**—*Cf.* Shakespeare's Sonnet XCVIII. 31-32. **The ornament . . . air**—from Sonnet LXX, slightly misquoted. 34-39. **No . . . politic**—Condensed and slightly misquoted from Sonnet CXXIV. 40. **Pyramids**—*Cf.* Sonnet CXXIII:

> "The pyramids built up with newer might
> To me are nothing novel, nothing strange."

tory. The freshness of youth and love dazzles him with its resemblance to morning.

> Take those lips away
> Which so sweetly were forsworn;
> And those eyes,—the break of day,
> Lights that do mislead the morn.

The wild beauty of this hyperbole, I may say, in passing, it would not be easy to match in literature.

This transfiguration which all material objects undergo through the passion of the poet,—this power which he exerts to dwarf the great, to magnify the small,—might be illustrated by a thousand examples from his Plays. I have before me the Tempest, and will cite only these few lines.

> ARIEL. The strong based promontory
> Have I made shake, and by the spurs plucked up
> The pine and cedar.

Prospero calls for music to soothe the frantic Alonzo, and his companions;

> A solemn air, and the best comforter
> To an unsettled fancy, cure thy brains
> Now useless, boiled within thy skull.

Again;

> The charm dissolves apace,
> And, as the morning steals upon the night,
> Melting the darkness, so their rising senses
> Begin to chase the ignorant fumes that mantle
> Their clearer reason.
> Their understanding
> Begins to swell: and the approaching tide
> Will shortly fill the reasonable shores
> That now lie foul and muddy.

The perception of real affinities between events, (that is to say, of *ideal* affinities, for those only are real,) enables the poet thus to make free with the most imposing forms and phenomena of the world, and to assert the predominance of the soul.

3. Whilst thus the poet animates nature with his own thoughts, he differs from the philosopher only herein, that the one proposes Beauty as his main end; the other Truth. But the philosopher, not less than the poet, postpones the apparent order and relations of things to the empire of thought. "The problem of philosophy," according to Plato, "is, for all that exists conditionally, to find a ground unconditioned and absolute." It proceeds on the faith that a law determines all phenomena, which being known, the phenomena can be predicted. That law, when in the mind, is an idea. Its beauty is infinite. The true philosopher and the true poet are one, and a beauty, which is truth, and a truth,

3-6. **Take . . . morn**—Slightly misquoted from *Measure for Measure*, Act IV, scene I. 13-15. **The strong . . . cedar**—These lines are spoken by Prospero, not by Ariel, *The Tempest*, Act V, scene I. The rest of the quoted material is from the same scene. 38. **Plato**—*Cf.* the *Republic*, Bk. V.

which is beauty, is the aim of both. Is not the charm of one of Plato's or Aristotle's definitions strictly like that of the Antigone of Sophocles? It is, in both cases, that a spiritual life has been imparted to nature; that the solid seeming block of matter has been pervaded and dissolved by a thought; that this feeble human being has penetrated the vast masses of nature with an informing soul, and recognized itself in their harmony, that is, seized their law. In physics, when this is attained, the memory disburthens itself of its cumbrous catalogues of particulars, and carries centuries of observation in a single formula.

Thus even in physics, the material is degraded before the spiritual. The astronomer, the geometer, rely on their irrefragable analysis, and disdain the results of observation. The sublime remark of Euler on his law of arches, "This will be found contrary to all experience, yet is true;" had already transferred nature into the mind, and left matter like an outcast corpse.

4. Intellectual science has been observed to beget invariably a doubt of the existence of matter. Turgot said, "He that has never doubted the existence of matter, may be assured he has no aptitude for metaphysical inquiries." It fastens the attention upon immortal necessary uncreated natures, that is, upon Ideas; and in their presence, we feel that the outward circumstance is a dream and a shade. Whilst we wait in this Olympus of gods, we think of nature as an appendix to the soul. We ascend into their region, and know that these are the thoughts of the Supreme Being. "These are they who were set up from everlasting, from the beginning, or ever the earth was. When he prepared the heavens, they were there; when he established the clouds above, when he strengthened the fountains of the deep. Then they were by him, as one brought up with him. Of them took he counsel."

Their influence is proportionate. As objects of science they are accessible to few men. Yet all men are capable of being raised by piety or by passion, into their region. And no man touches these divine natures, without becoming, in some degree, himself divine. Like a new soul, they renew the body. We become physically nimble and lightsome; we tread on air; life is no longer irksome, and we think it will never be so. No man fears age or misfortune or death, in their serene company, for he is transported out of the district of change. Whilst we behold unveiled the nature of Justice and Truth, we learn the difference between the absolute and the conditional or relative. We apprehend the absolute. As it were, for the first time, *we exist*. We become immortal, for we learn that time and space are relations of matter; that, with a perception of truth, or a virtuous will, they have no affinity.

5. Finally, religion and ethics, which may be fitly called,—the practice of ideas, or the introduction of ideas into life,—have an analogous effect with all lower culture, in degrading nature and suggesting its dependence on spirit. Ethics and religion differ herein; that the one is the system of human duties commencing from man; the other, from God. Religion includes the personality of God; Ethics does not. They are one to our present design. They both put

2. Antigone—The *Antigone* is one of the finest tragedies of the Greek dramatist Sophocles (496-406 B.C.). **11. Euler**—Leonhard Euler (1707-1783), Swiss mathematician. **15. Turgot**—Anne Robert Jacques Turgot (1727-1781), French economist and statesman. **21. "These are they**—*Cf.* Prov. 8: 23, 27, 28, 30.

nature under foot. The first and last lesson of religion is, "The things that are seen, are temporal; the things that are unseen, are eternal." It puts an affront upon nature. It does that for the unschooled, which philosophy does for Berkeley and Viasa. The uniform language that may be heard in the churches of the most ignorant sects, is,—"Contemn the unsubstantial shows of the world; they are vanities, dreams, shadows, unrealities; seek the realities of religion." The devotee flouts nature. Some theosophists have arrived at a certain hostility and indignation towards matter, as the Manichean and Plotinus. They distrusted in themselves any looking back to these flesh-pots of Egypt. Plotinus was ashamed of his body. In short, they might all say of matter, what Michael Angelo said of external beauty, "it is the frail and weary weed, in which God dresses the soul, which he has called into time."

It appears that motion, poetry, physical and intellectual science, and religion, all tend to affect our convictions of the reality of the external world. But I own there is something ungrateful in expanding too curiously the particulars of the general proposition, that all culture tends to imbue us with idealism. I have no hostility to nature, but a child's love to it. I expand and live in the warm day like corn and melons. Let us speak her fair. I do not wish to fling stones at my beautiful mother, nor soil my gentle nest. I only wish to indicate the true position of nature in regard to man, wherein to establish man, all right education tends; as the ground which to attain is the object of human life, that is, of man's connection with nature. Culture inverts the vulgar views of nature, and brings the mind to call that apparent, which it uses to call real, and that real, which it uses to call visionary. Children, it is true, believe in the external world. The belief that it appears only, is an afterthought, but with culture, this faith will as surely arise on the mind as did the first.

The advantage of the ideal theory over the popular faith, is this, that it presents the world in precisely that view which is most desirable to the mind. It is, in fact, the view which Reason, both speculative and practical, that is, philosophy and virtue, take. For, seen in the light of thought, the world always is phenomenal; and virtue subordinates it to the mind. Idealism sees the world in God. It beholds the whole circle of persons and things, of actions and events, of country and religion, not as painfully accumulated, atom after atom, act after act, in an aged creeping Past, but as one vast picture, which God paints on the instant eternity, for the contemplation of the soul. Therefore the soul holds itself off from a too trivial and microscopic study of the universal tablet. It respects the end too much, to immerse itself in the means. It sees something more

1-2. **"The things . . . eternal"**—*Cf.* II Cor. 4: 18. **3-4. Berkeley . . . Viasa**—George Berkeley (1685-1753), British philosopher and bishop, who taught a system of idealistic philosophy; Vyasa, a legendary Hindu sage to whom the great mass of Sanskrit literature is attributed. **7. theosophists**—here used to mean especially those philosophers of a mystical temperament. **8. Manichean . . . Plotinus**—A Manichean is a believer in the philosophy of Mani, or Manes, a Persian of the third century A.D., who taught that man's body was derived from evil or darkness, his soul from goodness or light. Plotinus (204?-270), an Egyptian living at Rome, modified the teachings of Plato in the direction of a symbolic and mystical idealism. **9. flesh-pots**—*Cf.* Ex. 16: 3. **29. Reason . . . practical**—The practical reason is, in transcendental terminology, the same as the understanding or common-sense logic; the speculative reason is pure intellect. Conduct in common life, well ordered by the practical reason, becomes virtue; the speculative reason, or Reason (as opposed to Understanding), achieves metaphysics (philosophy).

important in Christianity, than the scandals of ecclesiastical history, or the niceties of criticism; and, very incurious concerning persons or miracles, and not at all disturbed by chasms of historical evidence, it accepts from God the phenomenon, as it finds it, as the pure and awful form of religion in the world. It is not hot and passionate at the appearance of what it calls its own good or bad fortune, at the union or opposition of other persons. No man is its enemy. It accepts whatsoever befalls, as part of its lesson. It is a watcher more than a doer, and it is a doer, only that it may the better watch.

CHAPTER VII

SPIRIT

It is essential to a true theory of nature and of man, that it should contain somewhat progressive. Uses that are exhausted or that may be, and facts that end in the statement, cannot be all that is true of this brave lodging wherein man is harbored, and wherein all his faculties find appropriate and endless exercise. And all the uses of nature admit of being summed in one, which yields the activity of man an infinite scope. Through all its kingdoms, to the suburbs and outskirts of things, it is faithful to the cause whence it had its origin. It always speaks of Spirit. It suggests the absolute. It is a perpetual effect. It is a great shadow pointing always to the sun behind us.

The aspect of nature is devout. Like the figure of Jesus, she stands with bended head, and hands folded upon the breast. The happiest man is he who learns from nature the lesson of worship.

Of that ineffable essence which we call Spirit, he that thinks most, will say least. We can foresee God in the coarse, and, as it were, distant phenomena of matter; but when we try to define and describe himself, both language and thought desert us, and we are as helpless as fools and savages. That essence refuses to be recorded in propositions, but when man has worshipped him intellectually, the noblest ministry of nature is to stand as the apparition of God. It is the organ through which the universal spirit speaks to the individual, and strives to lead back the individual to it.

When we consider Spirit, we see that the views already presented do not include the whole circumference of man. We must add some related thoughts.

Three problems are put by nature to the mind; What is matter? Whence is it? and Whereto? The first of these questions only, the ideal theory answers. Idealism saith: matter is a phenomenon, not a substance. Idealism acquaints us with the total disparity between the evidence of our own being, and the evidence of the world's being. The one is perfect; the other, incapable of any assurance; the mind is a part of the nature of things; the world is a divine dream, from which we may presently awake to the glories and certainties of day. Idealism is a hypothesis to account for nature by other principles than those of carpentry and chemistry. Yet, if it only deny the existence of matter, it does not satisfy the demands of the spirit. It leaves God out of me. It leaves me in the splendid labyrinth of my perceptions, to wander without end. Then the heart resists it, because it balks the affections in denying substantive

being to men and women. Nature is so pervaded with human life that there is something of humanity in all, and in every particular. But this theory makes nature foreign to me, and does not account for that consanguinity which we acknowledge to it.

Let it stand, then, in the present state of our knowledge, merely as a useful introductory hypothesis, serving to apprise us of the eternal distinction between the soul and the world.

But when, following the invisible steps of thought, we come to inquire, Whence is matter? and Whereto? many truths arise to us out of the recesses of consciousness. We learn that the highest is present to the soul of man, that the dread universal essence, which is not wisdom, or love, or beauty, or power, but all in one, and each entirely, is that for which all things exist, and that by which they are; that spirit creates; that behind nature, throughout nature, spirit is present; one and not compound, it does not act upon us from without, that is, in space and time, but spiritually, or through ourselves: therefore, that spirit, that is, the Supreme Being, does not build up nature around us, but puts it forth through us, as the life of the tree puts forth new branches and leaves through the pores of the old. As a plant upon the earth, so a man rests upon the bosom of God; he is nourished by unfailing fountains, and draws, at his need, inexhaustible power. Who can set bounds to the possibilities of man? Once inhale the upper air, being admitted to behold the absolute natures of justice and truth, and we learn that man has access to the entire mind of the Creator, is himself the creator in the finite. This view, which admonishes me where the sources of wisdom and power lie, and points to virtue as to

> "The golden key
> Which opes the palace of eternity,"

carries upon its face the highest certificate of truth, because it animates me to create my own world through the purification of my soul.

The world proceeds from the same spirit as the body of man. It is a remoter and inferior incarnation of God, a projection of God in the unconscious. But it differs from the body in one important respect. It is not, like that, now subjected to the human will. Its serene order is inviolable by us. It is, therefore, to us, the present expositor of the divine mind. It is a fixed point whereby we may measure our departure. As we degenerate, the contrast between us and our house is more evident. We are as much strangers in nature, as we are aliens from God. We do not understand the notes of birds. The fox and the deer run away from us; the bear and tiger rend us. We do not know the uses of more than a few plants, as corn and the apple, the potato and the vine. Is not the landscape, every glimpse of which hath a grandeur, a face of him? Yet this may show us what discord is between man and nature, for you cannot freely admire a noble landscape, if laborers are digging in the field hard by. The poet finds something ridiculous in his delight until he is out of the sight of men.

25-26. "The golden . . . eternity"—from Milton's *Comus*, lines 13-14. **29. proceeds**—emanates.

CHAPTER VIII

PROSPECTS

In inquiries respecting the laws of the world and the frame of things, the highest reason is always the truest. That which seems faintly possible—it is so refined, is often faint and dim because it is deepest seated in the mind among the eternal verities. Empirical science is apt to cloud the sight, and by the very knowledge of functions and processes, to bereave the student of the manly contemplation of the whole. The savant becomes unpoetic. But the best read naturalist who lends an entire and devout attention to truth, will see that there remains much to learn of his relation to the world, and that it is not to be learned by any addition or subtraction or other comparison of known quantities, but is arrived at by untaught sallies of the spirit, by a continual self-recovery, and by entire humility. He will perceive that there are far more excellent qualities in the student than preciseness and infallibility; that a guess is often more fruitful than an indisputable affirmation, and that a dream may let us deeper into the secret of nature than a hundred concerted experiments.

For the problems to be solved are precisely those which the physiologist and the naturalist omit to state. It is not so pertinent to man to know all the individuals of the animal kingdom, as it is to know whence and whereto is this tyrannizing unity in his constitution, which evermore separates and classifies things, endeavoring to reduce the most diverse to one form. When I behold a rich landscape, it is less to my purpose to recite correctly the order and superposition of the strata, than to know why all thought of multitude is lost in a tranquil sense of unity. I cannot greatly honor minuteness in details, so long as there is no hint to explain the relation between things and thoughts; no ray upon the *metaphysics* of conchology, of botany, of the arts, to show the relation of the forms of flowers, shells, animals, architecture, to the mind, and build science upon ideas. In a cabinet of natural history, we become sensible of a certain occult recognition and sympathy in regard to the most unwieldy and eccentric forms of beast, fish, and insect. The American who has been confined, in his own country, to the sight of buildings designed after foreign models, is surprised on entering York Minster or St. Peter's at Rome, by the feeling that these structures are imitations also,—faint copies of an invisible archetype. Nor has science sufficient humanity, so long as the naturalist overlooks that wonderful congruity which subsists between man and the world; of which he is lord, not because he is the most subtile inhabitant, but because he is its head and heart, and finds something of himself in every great and small thing, in every mountain stratum, in every new law of color, fact of astronomy, or atmospheric influence which observation or analysis lays open. A perception of this mystery

6. **Empirical**—Experimental. 8. **savant**—expert. 26. **metaphysics**—here, first causes. 26. **conchology**—science of shells and shellfish. 28. **cabinet of natural history**—case of specimens. Before the increase of laboratories in universities and colleges, the collecting of specimens in a cabinet was a common mode of acquiring knowledge of natural history. 32. **York Minster**—York Cathedral, one of the most famous of English cathedrals. 32. **St. Peter's**—the famous cathedral at Rome.

inspires the muse of George Herbert, the beautiful psalmist of the seventeenth century. The following lines are part of his little poem on Man.

"Man is all symmetry,
Full of proportions, one limb to another,
And to all the world besides.
Each part may call the farthest, brother;
For head with foot hath private amity,
And both with moons and tides.

"Nothing hath got so far
But man hath caught and kept it as his prey;
His eyes dismount the highest star:
He is in little all the sphere.
Herbs gladly cure our flesh, because that they
Find their acquaintance there.

"For us, the winds do blow,
The earth doth rest, heaven move, and fountains flow;
Nothing we see, but means our good,
As our delight, or as our treasure;
The whole is either our cupboard of food,
Or cabinet of pleasure.

"The stars have us to bed:
Night draws the curtain; which the sun withdraws.
Music and light attend our head.
All things unto our flesh are kind,
In their descent and being; to our mind,
In their ascent and cause.

"More servants wait on man
Than he'll take notice of. In every path,
He treads down that which doth befriend him
When sickness makes him pale and wan.
Oh mighty love! Man is one world, and hath
Another to attend him."

The perception of this class of truths makes the attraction which draws men to science, but the end is lost sight of in attention to the means. In view of this half-sight of science, we accept the sentence of Plato, that, "poetry comes nearer to vital truth than history." Every surmise and vaticination of the mind is entitled to a certain respect, and we learn to prefer imperfect theories, and sentences which contain glimpses of truth, to digested systems which have no one valuable suggestion. A wise writer will feel that the ends of study and composition are best answered by announcing undiscovered regions of thought, and so communicating, through hope, new activity to the torpid spirit.

I shall therefore conclude this essay with some traditions of man and nature,

1. **Herbert**—George Herbert (1593-1633), English poet and divine. From his poem "Man" Emerson quotes stanzas 3-6 and 8, omitting stanzas 1, 2, 7, and 9. **35. Plato**—probably from *The Laws*, Bk. III, 682. **36. vaticination**—prophecy, forecast.

which a certain poet sang to me; and which, as they have always been in the world, and perhaps reappear to every bard, may be both history and prophecy.

'The foundations of man are not in matter, but in spirit. But the element of spirit is eternity. To it, therefore, the longest series of events, the oldest chronologies are young and recent. In the cycle of the universal man, from whom the known individuals proceed, centuries are points, and all history is but the epoch of one degradation.

'We distrust and deny inwardly our sympathy with nature. We own and disown our relation to it, by turns. We are, like Nebuchadnezzar, dethroned, bereft of reason, and eating grass like an ox. But who can set limits to the remedial force of spirit?

'A man is a god in ruins. When men are innocent, life shall be longer, and shall pass into the immortal, as gently as we awake from dreams. Now, the world would be insane and rabid, if these disorganizations should last for hundreds of years. It is kept in check by death and infancy. Infancy is the perpetual Messiah, which comes into the arms of fallen men, and pleads with them to return to paradise.

'Man is the dwarf of himself. Once he was permeated and dissolved by spirit. He filled nature with his overflowing currents. Out from him sprang the sun and moon; from man the sun; from woman, the moon. The laws of his mind, the periods of his actions externized themselves into day and night, into the year and the seasons. But, having made for himself this huge shell, his waters retired; he no longer fills the veins and veinlets; he is shrunk to a drop. He sees, that the structure still fits him, but fits him colossally. Say, rather, once it fitted him, now it corresponds to him from far and on high. He adores timidly his own work. Now is man the follower of the sun, and woman the follower of the moon. Yet sometimes he starts in his slumber, and wonders at himself and his house, and muses strangely at the resemblance betwixt him and it. He perceives that if his law is still paramount, if still he have elemental power, if his word is sterling yet in nature, it is not conscious power, it is not inferior but superior to his will. It is instinct.' Thus my Orphic poet sang.

At present, man applies to nature but half his force. He works on the world with his understanding alone. He lives in it, and masters it by a penny-wisdom; and he that works most in it, is but a half-man, and whilst his arms are strong and his digestion good, his mind is imbruted, and he is a selfish savage. His relation to nature, his power over it, is through the understanding; as by manure; the economic use of fire, wind, water, and the mariner's needle; steam, coal, chemical agriculture; the repairs of the human body by the dentist and the surgeon. This is such a resumption of power, as if a banished king should buy his territories inch by inch, instead of vaulting at once into his

1. **certain poet**—Emerson was fond of setting up an *alter ego* in whose mouth he could place passages he did not care to express directly. This personage is sometimes nameless, as here, and sometimes Saadi, Osman, and so on. The present passage, however, is based on the "Orphic sayings" of Amos Bronson Alcott. 9. **Nebuchadnezzar**—*Cf* Dan. 4:33. 31. **Orphic**—Orpheus, who in Greek mythology could move rocks and trees by his music, became for the romantics a type of the creative power of the imagination. For the transcendentalists especially an "orphic" utterance meant that half-veiled, symbolic utterance of cloudy truths which seemed to them the highest wisdom.

throne. Meantime, in the thick darkness, there are not wanting gleams of a better light,—occasional examples of the action of man upon nature with his entire force,—with reason as well as understanding. Such examples are; the traditions of miracles in the earliest antiquity of all nations; the history of Jesus Christ; the achievements of a principle, as in religious and political revolutions, and in the abolition of the Slave-trade; the miracles of enthusiasm, as those reported of Swedenborg, Hohenlohe, and the Shakers; many obscure and yet contested facts, now arranged under the name of Animal Magnetism; prayer; eloquence; self-healing; and the wisdom of children. These are examples of Reason's momentary grasp of the sceptre; the exertions of a power which exists not in time or space, but an instantaneous instreaming causing power. The difference between the actual and the ideal force of man is happily figured by the schoolmen, in saying that the knowledge of man is an evening knowledge, *vespertina cognitio,* but that of God is a morning knowledge, *matutina cognitio.*

The problem of restoring to the world original and eternal beauty, is solved by the redemption of the soul. The ruin or the blank that we see when we look at nature, is in our own eye. The axis of vision is not coincident with the axis of things, and so they appear not transparent but opake. The reason why the world lacks unity, and lies broken and in heaps, is, because man is disunited with himself. He cannot be a naturalist, until he satisfies all the demands of the spirit. Love is as much its demand as perception. Indeed, neither can be perfect without the other. In the uttermost meaning of the words, thought is devout, and devotion is thought. Deep calls unto deep. But in actual life, the marriage is not celebrated. There are innocent men who worship God after the tradition of their fathers, but their sense of duty has not yet extended to the use of all their faculties. And there are patient naturalists, but they freeze their subject under the wintry light of the understanding. Is not prayer also a study of truth,—a sally of the soul into the unfound infinite? No man ever prayed heartily without learning something. But when a faithful thinker, resolute to detach every object from personal relations and see it in the light of thought, shall, at the same time, kindle science with the fire of the holiest affections, then will God go forth anew into the creation.

It will not need, when the mind is prepared for study, to search for objects. The invariable mark of wisdom is to see the miraculous in the common. What is a day? What is a year? What is summer? What is woman? What is a child? What is sleep? To our blindness, these things seem unaffecting. We make fables to hide the baldness of the fact and conform it, as we say, to the higher law of the mind. But when the fact is seen under the light of an idea, the gaudy fable fades and shrivels. We behold the real higher law. To the wise,

7. **Hohenlohe . . . Shakers**—Alexander Leopold Franz Emmerich, Prince of Hohenlohe-Waldenburg-Schillingsfurst (1794-1849), a reputed miracle-worker. The Shakers were a contemporary religious sect, who danced as a mode of worship. 8. **Animal Magnetism**—a theory of hypnosis propounded by Franz Anton Mesmer (1733-1815), who held that there was a vital magnetic fluid stored in the body, through which one person could act upon another. There was a contemporary revival of interest in this theory in the United States when Emerson was writing. 14-15. **vespertina cognitio . . . matutina cognitio**—*Cf.* Concord edition, Vol. I, pp. 413-14. 19. **opake**—opaque. 24. **Deep calls**—*Cf.* Ps. 42: 7.

therefore, a fact is true poetry, and the most beautiful of fables. These wonders are brought to our own door. You also are a man. Man and woman and their social life, poverty, labor, sleep, fear, fortune, are known to you. Learn that none of these things is superficial, but that each phenomenon has its roots in the faculties and affections of the mind. Whilst the abstract question occupies your intellect, nature brings it in the concrete to be solved by your hands. It were a wise inquiry for the closet, to compare, point by point, especially at remarkable crises in life, our daily history with the rise and progress of ideas in the mind.

So shall we come to look at the world with new eyes. It shall answer the endless inquiry of the intellect,—What is truth? and of the affections,—What is good? by yielding itself passive to the educated Will. Then shall come to pass what my poet said; 'Nature is not fixed but fluid. Spirit alters, moulds, makes it. The immobility or bruteness of nature, is the absence of spirit; to pure spirit, it is fluid, it is volatile, it is obedient. Every spirit builds itself a house; and beyond its house a world; and beyond its world, a heaven. Know then, that the world exists for you. For you is the phenomenon perfect. What we are, that only can we see. All that Adam had, all that Caesar could, you have and can do. Adam called his house, heaven and earth; Caesar called his house, Rome; you perhaps call yours, a cobler's trade; a hundred acres of ploughed land; or a scholar's garret. Yet line for line and point for point, your dominion is as great as theirs, though without fine names. Build, therefore, your own world. As fast as you conform your life to the pure idea in your mind, that will unfold its great proportions. A correspondent revolution in things will attend the influx of the spirit. So fast will disagreeable appearances, swine, spiders, snakes, pests, mad-houses, prisons, enemies, vanish; they are temporary and shall be no more seen. The sordor and filths of nature, the sun shall dry up, and the wind exhale. As when the summer comes from the south; the snow-banks melt, and the face of the earth becomes green before it, so shall the advancing spirit create its ornaments along its path, and carry with it the beauty it visits and the song which enchants it; it shall draw beautiful faces, warm hearts, wise discourse, and heroic acts, around its way, until evil is no more seen. The kingdom of man over nature, which cometh not with observation,—a dominion such as now is beyond his dream of God,—he shall enter without more wonder than the blind man feels who is gradually restored to perfect sight.'

THE AMERICAN SCHOLAR

In August, 1837, Emerson delivered before the "president and gentlemen" of the Phi Beta Kappa Society at Harvard College the address which Oliver Wendell Holmes described as "our intellectual Declaration of Independence . . . the young men went out from it as if a prophet had been proclaiming to them, 'Thus saith the Lord!' " The address was published as a pamphlet in 1837; republished in 1838; and published again in England in 1844 as *Man Thinking*. The present text is from the volume of 1849, which also contains the revised form of *Nature*. Here, as in the case of other writings by Emerson, the *Complete Works* reprints the prose except for

26. **sordor**—filth, sordidness.

"revisions in punctuation and correction of obvious mistakes," but the 1849 text, being the last text which Emerson supervised, is to be preferred: the very eccentricities of the punctuation bring us nearer to the sound of the speaker's voice.

MR. PRESIDENT AND GENTLEMEN,

I greet you on the re-commencement of our literary year. Our anniversary is one of hope, and, perhaps, not enough of labor. We do not meet for games of strength or skill, for the recitation of histories, tragedies, and odes, like the ancient Greeks; for parliaments of love and poesy, like the Troubadours; nor for the advancement of science, like our co-temporaries in the British and European capitals. Thus far, our holiday has been simply a friendly sign of the survival of the love of letters amongst a people too busy to give to letters any more. As such, it is precious as the sign of an indestructible instinct. Perhaps the time is already come, when it ought to be, and will be, something else; when the sluggard intellect of this continent will look from under its iron lids, and fill the postponed expectation of the world with something better than the exertions of mechanical skill. Our day of dependence, our long apprenticeship to the learning of other lands, draws to a close. The millions, that around us are rushing into life, cannot always be fed on the sere remains of foreign harvests. Events, actions arise, that must be sung, that will sing themselves. Who can doubt, that poetry will revive and lead in a new age, as the star in the constellation Harp, which now flames in our zenith, astronomers announce, shall one day be the pole-star for a thousand years?

In this hope I accept the topic which not only usage, but the nature of our association, seem to prescribe to this day,—the AMERICAN SCHOLAR. Year by year, we come up hither to read one more chapter of his biography. Let us inquire what light new days and events have thrown on his character and his hopes.

It is one of those fables which, out of an unknown antiquity, convey an unlooked-for wisdom, that the gods, in the beginning, divided Man into men, that he might be more helpful to himself; just as the hand was divided into fingers, the better to answer its end.

The old fable covers a doctrine ever new and sublime; that there is One Man,—present to all particular men only partially, or through one faculty; and that you must take the whole society to find the whole man. Man is not a farmer, or a professor, or an engineer, but he is all. Man is priest, and scholar, and statesman, and producer, and soldier. In the *divided* or social state, these functions are parcelled out to individuals, each of whom aims to do his stint of the joint work, whilst each other performs his. The fable implies, that the individual, to possess himself, must sometimes return from his own labor to embrace all the other laborers. But unfortunately, this original unit, this

2. re-commencement—The college year formerly began in August. Emerson had entered Harvard just twenty years before. **3. games**—the Olympic Games, the Dionysiac festivals, and similar contests among the classic Greeks. **5. Troubadours**—medieval poets in southern France (1100-1400), who met in poetic contests and sang of love and chivalry. **6. advancement**—The reference is to the British Association for the Advancement of Science. **17-18. star . . . Harp**—The reference is to a star in the constellation Lyra, toward which the solar system is supposed to be advancing. **24. fables**—The fable in question is found in Plato's *Symposium*, but the editors of the Concord edition call attention to a sentence in Plutarch's *Moralia* conveying the same idea.

fountain of power, has been so distributed to multitudes, has been so minutely subdivided and peddled out, that it is spilled into drops, and cannot be gathered. The state of society is one in which the members have suffered amputation from the trunk, and strut about so many walking monsters,—a good finger, a neck, a stomach, an elbow, but never a man.

Man is thus metamorphosed into a thing, into many things. The planter, who is Man sent out into the field to gather food, is seldom cheered by any idea of the true dignity of his ministry. He sees his bushel and his cart, and nothing beyond, and sinks into the farmer, instead of Man on the farm. The tradesman scarcely ever gives an ideal worth to his work, but is ridden by the routine of his craft, and the soul is subject to dollars. The priest becomes a form; the attorney, a statute-book; the mechanic, a machine; the sailor, a rope of a ship.

In this distribution of functions, the scholar is the delegated intellect. In the right state, he is *Man Thinking*. In the degenerate state, when the victim of society, he tends to become a mere thinker, or, still worse, the parrot of other men's thinking.

In this view of him, as Man Thinking, the theory of his office is contained. Him nature solicits with all her placid, all her monitory pictures; him the past instructs; him the future invites. Is not, indeed, every man a student, and do not all things exist for the student's behoof? And, finally, is not the true scholar the only true master? But the old oracle said, 'All things have two handles: beware of the wrong one.' In life, too often, the scholar errs with mankind and forfeits his privilege. Let us see him in his school, and consider him in reference to the main influences he receives.

I. The first in time and the first in importance of the influences upon the mind is that of nature. Every day, the sun; and, after sunset, night and her stars. Ever the winds blow; ever the grass grows. Every day, men and women, conversing, beholding and beholden. The scholar is he of all men whom this spectacle most engages. He must settle its value in his mind. What is nature to him? There is never a beginning, there is never an end, to the inexplicable continuity of this web of God, but always circular power returning into itself. Therein it resembles his own spirit, whose beginning, whose ending, he never can find,—so entire, so boundless. Far, too, as her splendors shine, system on system shooting like rays, upward, downward, without centre, without circumference,—in the mass and in the particle, nature hastens to render account of herself to the mind. Classification begins. To the young mind, every thing is individual, stands by itself. By and by, it finds how to join two things, and see in them one nature; then three, then three thousand; and so, tyrannized over by its own unifying instinct, it goes on tying things together, diminishing anomalies, discovering roots running under ground, whereby contrary and remote things cohere, and flower out from one stem. It presently learns, that since the dawn of history, there has been a constant accumulation and classifying of facts. But what is classification but the perceiving that these objects are not chaotic, and are not foreign, but have a law which is also a law of the human

6. **planter**—farmer. 8. **ministry**—calling, vocation.

mind? The astronomer discovers that geometry, a pure abstraction of the human mind, is the measure of planetary motion. The chemist finds proportions and intelligible method throughout matter; and science is nothing but the finding of analogy, identity, in the most remote parts. The ambitious soul sits down before each refractory fact; one after another, reduces all strange constitutions, all new powers, to their class and their law, and goes on for ever to animate the last fibre of organization, the outskirts of nature, by insight.

Thus to him, to this school-boy under the bending dome of day, is suggested, that he and it proceed from one root; one is leaf and one is flower; relation, sympathy, stirring in every vein. And what is that Root? Is not that the soul of his soul?—A thought too bold,—a dream too wild. Yet when this spiritual light shall have revealed the law of more earthly natures,—when he has learned to worship the soul, and to see that the natural philosophy that now is, is only the first gropings of its gigantic hand, he shall look forward to an ever expanding knowledge as to a becoming creator. He shall see, that nature is the opposite of the soul, answering to it part for part. One is seal, and one is print. Its beauty is the beauty of his own mind. Its laws are the laws of his own mind. Nature then becomes to him the measure of his attainments. So much of nature as he is ignorant of, so much of his own mind does he not yet possess. And, in fine, the ancient precept, "Know thyself," and the modern precept, "Study nature," become at last one maxim.

II. The next great influence into the spirit of the scholar, is, the mind of the Past,—in whatever form, whether of literature, of art, of institutions, that mind is inscribed. Books are the best type of the influence of the past, and perhaps we shall get at the truth,—learn the amount of this influence more conveniently, —by considering their value alone.

The theory of books is noble. The scholar of the first age received into him the world around; brooded thereon; gave it the new arrangement of his own mind, and uttered it again. It came into him, life; it went out from him, truth. It came to him, short-lived actions; it went out from him, immortal thoughts. It came to him, business; it went from him, poetry. It was dead fact; now, it is quick thought. It can stand, and it can go. It now endures, it now flies, it now inspires. Precisely in proportion to the depth of mind from which it issued, so high does it soar, so long does it sing.

Or, I might say, it depends on how far the process had gone, of transmuting life into truth. In proportion to the completeness of the distillation, so will the purity and imperishableness of the product be. But none is quite perfect. As no air-pump can by any means make a perfect vacuum, so neither can any artist entirely exclude the conventional, the local, the perishable from his book, or write a book of pure thought, that shall be as efficient, in all respects, to a remote posterity, as to cotemporaries, or rather to the second age. Each age, it is found, must write its own books; or rather, each generation for the next succeeding. The books of an older period will not fit this.

Yet hence arises a grave mischief. The sacredness which attaches to the act

2. planetary motion—The reference is to the fact that the radius vector of the several planets sweeps over equal areas in equal times. **22. influence**—here used in its Latin sense of "flowing into."

of creation,—the act of thought,—is transferred to the record. The poet chanting, was felt to be a divine man: henceforth the chant is divine also. The writer was a just and wise spirit: henceforward it is settled, the book is perfect; as love of the hero corrupts into worship of his statue. Instantly, the book becomes noxious: the guide is a tyrant. The sluggish and perverted mind of the multitude, slow to open to the incursions of Reason, having once so opened, having once received this book, stands upon it, and makes an outcry, if it is disparaged. Colleges are built on it. Books are written on it by thinkers, not by Man Thinking; by men of talent, that is, who start wrong, who set out from accepted dogmas, not from their own sight of principles. Meek young men grow up in libraries, believing it their duty to accept the views which Cicero, which Locke, which Bacon, have given, forgetful that Cicero, Locke, and Bacon were only young men in libraries, when they wrote these books.

Hence, instead of Man Thinking, we have the bookworm. Hence, the book-learned class, who value books, as such; not as related to nature and the human constitution, but as making a sort of Third Estate with the world and the soul. Hence, the restorers of readings, the emendators, the bibliomaniacs of all degrees.

Books are the best of things, well used; abused, among the worst. What is the right use? What is the one end which all means go to effect? They are for nothing but to inspire. I had better never see a book, than to be warped by its attraction clean out of my own orbit, and made a satellite instead of a system. The one thing in the world, of value, is the active soul. This every man is entitled to; this every man contains within him, although, in almost all men, obstructed, and as yet unborn. The soul active sees absolute truth; and utters truth, or creates. In this action, it is genius; not the privilege of here and there a favorite, but the sound estate of every man. In its essence, it is progressive. The book, the college, the school of art, the institution of any kind, stop with some past utterance of genius. This is good, say they,—let us hold by this. They pin me down. They look backward and not forward. But genius looks forward: the eyes of man are set in his forehead, not in his hind-head: man hopes: genius creates. Whatever talents may be, if the man create not, the pure efflux of the Deity is not his;—cinders and smoke there may be, but not yet flame. There are creative manners, there are creative actions, and creative words; manners, actions, words, that is, indicative of no custom or authority, but springing spontaneous from the mind's own sense of good and fair.

On the other part, instead of being its own seer, let it receive from another mind its truth, though it were in torrents of light, without periods of solitude, inquest, and self-recovery, and a fatal disservice is done. Genius is always sufficiently the enemy of genius by over influence. The literature of every nation bears me witness. The English dramatic poets have Shakspearized now for two hundred years.

11. **Cicero . . . Locke**—Marcus Tullius Cicero (106-43 B.C.), here cited as an essayist and philosopher; John Locke (1632-1704), whose philosophical writings were dominant in the eighteenth century. 12. **Bacon**—Francis Bacon (1561-1626), proponent of the inductive philosophy. 16. **Third Estate**—In monarchical France there were three "estates" or divisions of the people, the Third Estate being the common people. The phrase became important during the French Revolution. 33. **efflux**—flowing out.

Undoubtedly there is a right way of reading, so it be sternly subordinated. Man Thinking must not be subdued by his instruments. Books are for the scholar's idle times. When he can read God directly, the hour is too precious to be wasted in other men's transcripts of their readings. But when the intervals of darkness come, as come they must,—when the sun is hid and the stars withdraw their shining,—we repair to the lamps which were kindled by their ray, to guide our steps to the East again, where the dawn is. We hear, that we may speak. The Arabian proverb says, "A fig tree, looking on a fig tree, becometh fruitful."

It is remarkable, the character of the pleasure we derive from the best books. They impress us with the conviction, that one nature wrote and the same reads. We read the verses of one of the great English poets, of Chaucer, of Marvell, of Dryden, with the most modern joy,—with a pleasure, I mean, which is in great part caused by the abstraction of all *time* from their verses. There is some awe mixed with the joy of our surprise, when this poet, who lived in some past world, two or three hundred years ago, says that which lies close to my own soul, that which I also had well nigh thought and said. But for the evidence thence afforded to the philosophical doctrine of the identity of all minds, we should suppose some preëstablished harmony, some foresight of souls that were to be, and some preparation of stores for their future wants, like the fact observed in insects, who lay up food before death for the young grub they shall never see.

I would not be hurried by any love of system, by any exaggeration of instincts, to underrate the Book. We all know, that, as the human body can be nourished on any food, though it were boiled grass and the broth of shoes, so the human mind can be fed by any knowledge. And great and heroic men have existed, who had almost no other information than by the printed page. I only would say that it needs a strong head to bear that diet. One must be an inventor to read well. As the proverb says, "He that would bring home the wealth of the Indies, must carry out the wealth of the Indies." There is then creative reading as well as creative writing. When the mind is braced by labor and invention, the page of whatever book we read becomes luminous with manifold allusion. Every sentence is doubly significant, and the sense of our author is as broad as the world. We then see, what is always true, that, as the seer's hour of vision is short and rare among heavy days and months, so is its record, perchance, the least part of his volume. The discerning will read, in his Plato or Shakspeare, only that least part,—only the authentic utterances of the oracle;—all the rest he rejects, were it never so many times Plato's and Shakspeare's.

Of course, there is a portion of reading quite indispensable to a wise man. History and exact science he must learn by laborious reading. Colleges, in like manner, have their indispensable office,—to teach elements. But they can only highly serve us, when they aim not to drill, but to create; when they gather from far every ray of various genius to their hospitable halls, and by the concentrated fires, set the hearts of their youth on flame. Thought and knowledge

12-13. **Chaucer . . . Dryden**—The names are familiar except for Andrew Marvell (1621-1678), English poet and satirist. 29. **"He that . . ."**—*Cf. Journals*, Vol. IV, p. 254.

are natures in which apparatus and pretension avail nothing. Gowns, and pecuniary foundations, though of towns of gold, can never countervail the least sentence or syllable of wit. Forget this, and our American colleges will recede in their public importance, whilst they grow richer every year.

III. There goes in the world a notion, that the scholar should be a recluse, a valetudinarian,—as unfit for any handiwork or public labor as a penknife for an axe. The so-called 'practical men' sneer at speculative men, as if, because they speculate or *see,* they could do nothing. I have heard it said that the clergy,—who are always, more universally than any other class, the scholars of their day,—are addressed as women; that the rough, spontaneous conversation of men they do not hear, but only a mincing and diluted speech. They are often virtually disfranchised; and, indeed, there are advocates for their celibacy. As far as this is true of the studious classes, it is not just and wise. Action is with the scholar subordinate, but it is essential. Without it, he is not yet man. Without it, thought can never ripen into truth. Whilst the world hangs before the eye as a cloud of beauty, we cannot even see its beauty. Inaction is cowardice, but there can be no scholar without the heroic mind. The preamble of thought, the transition through which it passes from the unconscious to the conscious, is action. Only so much do I know, as I have lived. Instantly we know whose words are loaded with life, and whose not.

The world,—this shadow of the soul, or *other me,* lies wide around. Its attractions are the keys which unlock my thoughts and make me acquainted with myself. I run eagerly into this resounding tumult. I grasp the hands of those next me, and take my place in the ring to suffer and to work, taught by an instinct, that so shall the dumb abyss be vocal with speech. I pierce its order; I dissipate its fear; I dispose of it within the circuit of my expanding life. So much only of life as I know by experience, so much of the wilderness have I vanquished and planted, or so far have I extended my being, my dominion. I do not see how any man can afford, for the sake of his nerves and his nap, to spare any action in which he can partake. It is pearls and rubies to his discourse. Drudgery, calamity, exasperation, want, are instructors in eloquence and wisdom. The true scholar grudges every opportunity of action past by, as a loss of power.

It is the raw material out of which the intellect moulds her splendid products. A strange process too, this, by which experience is converted into thought, as a mulberry leaf is converted into satin. The manufacture goes forward at all hours.

The actions and events of our childhood and youth, are now matters of calmest observation. They lie like fair pictures in the air. Not so with our recent actions,—with the business which we now have in hand. On this we are quite unable to speculate. Our affections as yet circulate through it. We no more feel or know it, than we feel the feet, or the hand, or the brain of our body. The new deed is yet a part of life,—remains for a time immersed in our unconscious life. In some contemplative hour, it detaches itself from the life

1. **Gowns**—the academic cap and gown as a symbol of endowed fellowships or professorships. 3. **wit**—wisdom. 36. **mulberry leaf**—on which silkworms are fed.

like a ripe fruit, to become a thought of the mind. Instantly it is raised, transfigured; the corruptible has put on incorruption. Henceforth it is an object of beauty, however base its origin and neighborhood. Observe, too, the impossibility of antedating this act. In its grub state, it cannot fly, it cannot shine, it is a dull grub. But suddenly, without observation, the selfsame thing unfurls beautiful wings, and is an angel of wisdom. So is there no fact, no event, in our private history, which shall not, sooner or later, lose its adhesive, inert form, and astonish us by soaring from our body into the empyrean. Cradle and infancy, school and playground, the fear of boys, and dogs, and ferules, the love of little maids and berries, and many another fact that once filled the whole sky, are gone already; friend and relative, profession and party, town and country, nation and world, must also soar and sing.

Of course, he who has put forth his total strength in fit actions, has the richest return of wisdom. I will not shut myself out of this globe of action, and transplant an oak into a flower-pot, there to hunger and pine; nor trust the revenue of some single faculty, and exhaust one vein of thought, much like those Savoyards, who, getting their livelihood by carving shepherds, shepherdesses, and smoking Dutchmen, for all Europe, went out one day to the mountain to find stock, and discovered that they had whittled up the last of their pine-trees. Authors we have, in numbers, who have written out their vein, and who, moved by a commendable prudence, sail for Greece or Palestine, follow the trapper into the prairie, or ramble round Algiers, to replenish their merchantable stock.

If it were only for a vocabulary, the scholar would be covetous of action. Life is our dictionary. Years are well spent in country labors; in town,—in the insight into trades and manufactures; in frank intercourse with many men and women; in science; in art; to the one end of mastering in all their facts a language by which to illustrate and embody our perceptions. I learn immediately from any speaker how much he has already lived, through the poverty or the splendor of his speech. Life lies behind us as the quarry from whence we get tiles and copestones for the masonry of to-day. This is the way to learn grammar. Colleges and books only copy the language which the field and the work-yard made.

But the final value of action, like that of books, and better than books, is, that it is a resource. That great principle of Undulation in nature, that shows itself in the inspiring and expiring of the breath; in desire and satiety; in the ebb and flow of the sea; in day and night; in heat and cold; and, as yet more deeply ingrained in every atom and every fluid, is known to us under the name of Polarity,—these "fits of easy transmission and reflection," as Newton called them, are the law of nature because they are the law of spirit.

The mind now thinks; now acts; and each fit reproduces the other. When the artist has exhausted his materials, when the fancy no longer paints, when thoughts are no longer apprehended and books are a weariness,—he has always

2. **corruptible**—*Cf.* I Cor. 15:53. **15. oak . . . flower-pot**—a reminiscence of the comparison of Hamlet to an oak tree in a costly vase, in Goethe's *Wilhelm Meister*. **17. Savoyards**—inhabitants of Savoy. **39. "fits . . . reflection"**—A phrase used by Sir Isaac Newton in his *Opticks* (1704), Bk. III. See propositions XI, XII, XIII.

the resource *to live*. Character is higher than intellect. Thinking is the function. Living is the functionary. The stream retreats to its source. A great soul will be strong to live, as well as strong to think. Does he lack organ or medium to impart his truths? He can still fall back on this elemental force of living them. This is a total act. Thinking is a partial act. Let the grandeur of justice shine in his affairs. Let the beauty of affection cheer his lowly roof. Those 'far from fame,' who dwell and act with him, will feel the force of his constitution in the doings and passages of the day better than it can be measured by any public and designed display. Time shall teach him, that the scholar loses no hour which the man lives. Herein he unfolds the sacred germ of his instinct, screened from influence. What is lost in seemliness is gained in strength. Not out of those, on whom systems of education have exhausted their culture, comes the helpful giant to destroy the old or to build the new, but out of unhandselled savage nature, out of terrible Druids and Berserkirs come at last Alfred and Shakspeare.

I hear therefore with joy whatever is beginning to be said of the dignity and necessity of labor to every citizen. There is virtue yet in the hoe and the spade, for learned as well as for unlearned hands. And labor is everywhere welcome; always we are invited to work; only be this limitation observed, that a man shall not for the sake of wider activity sacrifice any opinion to the popular judgments and modes of action.

I have now spoken of the education of the scholar by nature, by books, and by action. It remains to say somewhat of his duties.

They are such as become Man Thinking. They may all be comprised in self-trust. The office of the scholar is to cheer, to raise, and to guide men by showing them facts amidst appearances. He plies the slow, unhonored, and unpaid task of observation. Flamsteed and Herschel, in their glazed observatories, may catalogue the stars with the praise of all men, and, the results being splendid and useful, honor is sure. But he, in his private observatory, cataloguing obscure and nebulous stars of the human mind, which as yet no man has thought of as such,—watching days and months, sometimes, for a few facts; correcting still his old records;—must relinquish display and immediate fame. In the long period of his preparation, he must betray often an ignorance and shiftlessness in popular arts, incurring the disdain of the able who shoulder him aside. Long he must stammer in his speech; often forego the living for the dead. Worse yet, he must accept,—how often! poverty and solitude. For the ease and pleasure of treading the old road, accepting the fashions, the education, the religion of society, he takes the cross of making his own, and, of course, the self-accusation, the faint heart, the frequent uncertainty and loss of time, which are the nettles and tangling vines in the way of the self-relying

13. unhandselled—ungifted. **14. Druids . . . Berserkirs**—The Druids were Celtic priests; the Berserkers, hard-fighting Norse warriors. Emerson has in mind the Celtic and Norman strains in the British nation. **18. labor**—The Brook Farm experiment was a practical comment on this passage. **27. Flamsteed and Herschel**—John Flamsteed (1646-1719), British astronomer, for whom the Greenwich observatory was built. Emerson has probably in mind Sir Frederick William Herschel (1738-1822), though other members of the Herschel family were famous astronomers as well.

and self-directed; and the state of virtual hostility in which he seems to stand to society, and especially to educated society. For all this loss and scorn, what offset? He is to find consolation in exercising the highest functions of human nature. He is one, who raises himself from private considerations, and breathes and lives on public and illustrious thoughts. He is the world's eye. He is the world's heart. He is to resist the vulgar prosperity that retrogrades ever to barbarism, by preserving and communicating heroic sentiments, noble biographies, melodious verse, and the conclusions of history. Whatsoever oracles the human heart, in all emergencies, in all solemn hours, has uttered as its commentary on the world of actions,—these he shall receive and impart. And whatsoever new verdict Reason from her inviolable seat pronounces on the passing men and events of to-day,—this he shall hear and promulgate.

These being his functions, it becomes him to feel all confidence in himself, and to defer never to the popular cry. He and he only knows the world. The world of any moment is the merest appearance. Some great decorum, some fetish of a government, some ephemeral trade, or war, or man, is cried up by half mankind and cried down by the other half, as if all depended on this particular up or down. The odds are that the whole question is not worth the poorest thought which the scholar has lost in listening to the controversy. Let him not quit his belief that a popgun is a popgun, though the ancient and honorable of the earth affirm it to be the crack of doom. In silence, in steadiness, in severe abstraction, let him hold by himself; add observation to observation, patient of neglect, patient of reproach, and bide his own time,—happy enough, if he can satisfy himself alone, that this day he has seen something truly. Success treads on every right step. For the instinct is sure, that prompts him to tell his brother what he thinks. He then learns, that in going down into the secrets of his own mind, he has descended into the secrets of all minds. He learns that he who has mastered any law in his private thoughts, is master to that extent of all men whose language he speaks, and of all into whose language his own can be translated. The poet, in utter solitude remembering his spontaneous thoughts and recording them, is found to have recorded that, which men in crowded cities find true for them also. The orator distrusts at first the fitness of his frank confessions,—his want of knowledge of the persons he addresses,—until he finds that he is the complement of his hearers;—that they drink his words because he fulfils for them their own nature; the deeper he dives into his privatest, secretest presentiment, to his wonder he finds, this is the most acceptable, most public, and universally true. The people delight in it; the better part of every man feels, This is my music; this is myself.

In self-trust, all the virtues are comprehended. Free should the scholar be,—free and brave. Free even to the definition of freedom, "without any hindrance that does not arise out of his own constitution." Brave; for fear is a thing, which a scholar by his very function puts behind him. Fear always springs from ignorance. It is a shame to him if his tranquillity, amid dangerous times, arise from the presumption that, like children and women, his is a protected class; or if he seek a temporary peace by the diversion of his thoughts from politics or vexed questions, hiding his head like an ostrich in the flowering bushes, peeping into microscopes, and turning rhymes, as a boy whistles to keep his courage

up. So is the danger a danger still; so is the fear worse. Manlike let him turn and face it. Let him look into its eye and search its nature, inspect its origin,—see the whelping of this lion,—which lies no great way back; he will then find in himself a perfect comprehension of its nature and extent; he will have made his hands meet on the other side, and can henceforth defy it, and pass on superior. The world is his, who can see through its pretension. What deafness, what stone-blind custom, what overgrown error you behold, is there only by sufferance,—by your sufferance. See it to be a lie, and you have already dealt it its mortal blow.

Yes, we are the cowed,—we the trustless. It is a mischievous notion that we are come late into nature; that the world was finished a long time ago. As the world was plastic and fluid in the hands of God, so it is ever to so much of his attributes as we bring to it. To ignorance and sin, it is flint. They adapt themselves to it as they may; but in proportion as a man has any thing in him divine, the firmament flows before him and takes his signet and form. Not he is great who can alter matter, but he who can alter my state of mind. They are the kings of the world who give the color of their present thought to all nature and all art, and persuade men by the cheerful serenity of their carrying the matter, that this thing which they do, is the apple which the ages have desired to pluck, now at last ripe, and inviting nations to the harvest. The great man makes the great thing. Wherever Macdonald sits, there is the head of the table. Linnaeus makes botany the most alluring of studies, and wins it from the farmer and the herb-woman; Davy, chemistry; and Cuvier, fossils. The day is always his who works in it with serenity and great aims. The unstable estimates of men crowd to him whose mind is filled with a truth, as the heaped waves of the Atlantic follow the moon.

For this self-trust, the reason is deeper than can be fathomed,—darker than can be enlightened. I might not carry with me the feeling of my audience in stating my own belief. But I have already shown the ground of my hope, in adverting to the doctrine that man is one. I believe man has been wronged; he has wronged himself. He has almost lost the light, that can lead him back to his prerogatives. Men are become of no account. Men in history, men in the world of to-day, are bugs, are spawn, and are called 'the mass' and 'the herd.' In a century, in a millennium, one or two men; that is to say,—one or two approximations to the right state of every man. All the rest behold in the hero or the poet their own green and crude being,—ripened; yes, and are content to be less, so *that* may attain to its full stature. What a testimony,—full of grandeur, full of pity, is borne to the demands of his own nature, by the poor clansman, the poor partisan, who rejoices in the glory of his chief. The poor and the low find some amends to their immense moral capacity, for their acquiescence in a political and social inferiority. They are content to be brushed like flies from the path of a great person, so that justice shall be done by him to

21. Macdonald—This phrase, much modified from its original, apparently comes from a sentence uttered by Sancho Panza in *Don Quixote*, Pt. II, Chap. xxxi. **22. Linnaeus**—See note 35, p. 404. **23. Davy**—Sir Humphry Davy (1778-1829), English chemist. **23. Cuvier**—Georges Léopold Chrétien Frédéric Dagobert, Baron de Cuvier (1759-1832), French scientist, founder of comparative anatomy, and famous as a paleontologist.

that common nature which it is the dearest desire of all to see enlarged and glorified. They sun themselves in the great man's light, and feel it to be their own element. They cast the dignity of man from their downtrod selves upon the shoulders of a hero, and will perish to add one drop of blood to make that great heart beat, those giant sinews combat and conquer. He lives for us, and we live in him.

Men such as they are, very naturally seek money or power; and power because it is as good as money,—the "spoils," so called, "of office." And why not? for they aspire to the highest, and this, in their sleep-walking, they dream is highest. Wake them, and they shall quit the false good, and leap to the true, and leave governments to clerks and desks. This revolution is to be wrought by the gradual domestication of the idea of Culture. The main enterprise of the world for splendor, for extent, is the upbuilding of a man. Here are the materials strown along the ground. The private life of one man shall be a more illustrious monarchy,—more formidable to its enemy, more sweet and serene in its influence to its friend, than any kingdom in history. For a man, rightly viewed, comprehendeth the particular natures of all men. Each philosopher, each bard, each actor has only done for me, as by a delegate, what one day I can do for myself. The books which once we valued more than the apple of the eye, we have quite exhausted. What is that but saying, that we have come up with the point of view which the universal mind took through the eyes of one scribe; we have been that man, and have passed on. First, one; then, another; we drain all cisterns, and, waxing greater by all these supplies, we crave a better and more abundant food. The man has never lived that can feed us ever. The human mind cannot be enshrined in a person, who shall set a barrier on any one side to this unbounded, unboundable empire. It is one central fire, which, flaming now out of the lips of Etna, lightens the capes of Sicily; and, now out of the throat of Vesuvius, illuminates the towers and vineyards of Naples. It is one light which beams out of a thousand stars. It is one soul which animates all men.

But I have dwelt perhaps tediously upon this abstraction of the Scholar. I ought not to delay longer to add what I have to say, of nearer reference to the time and to this country.

Historically, there is thought to be a difference in the ideas which predominate over successive epochs, and there are data for marking the genius of the Classic, of the Romantic, and now of the Reflective or Philosophical age. With the views I have intimated of the oneness or the identity of the mind through all individuals, I do not much dwell on these differences. In fact, I believe each individual passes through all three. The boy is a Greek; the youth, romantic; the adult, reflective. I deny not, however, that a revolution in the leading idea may be distinctly enough traced.

Our age is bewailed as the age of Introversion. Must that needs be evil? We, it seems, are critical; we are embarrassed with second thoughts; we cannot enjoy any thing for hankering to know whereof the pleasure consists; we

8. **spoils of office**—the giving of offices as political patronage. The practice was especially notorious in Jackson's administrations.

are lined with eyes; we see with our feet; the time is infected with Hamlet's unhappiness,—

"Sicklied o'er with the pale cast of thought."

It is so bad then? Sight is the last thing to be pitied. Would we be blind? Do we fear lest we should outsee nature and God, and drink truth dry? I look upon the discontent of the literary class, as a mere announcement of the fact, that they find themselves not in the state of mind of their fathers, and regret the coming state as untried; as a boy dreads the water before he has learned that he can swim. If there is any period one would desire to be born in,—is it not the age of Revolution; when the old and the new stand side by side, and admit of being compared; when the energies of all men are searched by fear and by hope; when the historic glories of the old, can be compensated by the rich possibilities of the new era? This time, like all times, is a very good one, if we but know what to do with it.

I read with some joy of the auspicious signs of the coming days, as they glimmer already through poetry and art, through philosophy and science, through church and state.

One of these signs is the fact, that the same movement which effected the elevation of what was called the lowest class in the state, assumed in literature a very marked and as benign an aspect. Instead of the sublime and beautiful; the near, the low, the common, was explored and poetized. That, which had been negligently trodden under foot by those who were harnessing and provisioning themselves for long journeys into far countries, is suddenly found to be richer than all foreign parts. The literature of the poor, the feelings of the child, the philosophy of the street, the meaning of household life, are the topics of the time. It is a great stride. It is a sign—is it not? of new vigor when the extremities are made active, when currents of warm life run into the hands and the feet. I ask not for the great, the remote, the romantic; what is doing in Italy or Arabia; what is Greek art, or Provençal minstrelsy; I embrace the common, I explore and sit at the feet of the familiar, the low. Give me insight into to-day, and you may have the antique and future worlds. What would we really know the meaning of? The meal in the firkin; the milk in the pan; the ballad in the street; the news of the boat; the glance of the eye; the form and the gait of the body;—show me the ultimate reason of these matters; show me the sublime presence of the highest spiritual cause lurking, as always it does lurk, in these suburbs and extremities of nature; let me see every trifle bristling with the polarity that ranges it instantly on an eternal law; and the shop, the plough, and the le[d]ger, referred to the like cause by which light undulates and poets sing;—and the world lies no longer a dull miscellany and lumber-room, but has form and order; there is no trifle; there is no puzzle; but one design unites and animates the farthest pinnacle and the lowest trench.

This idea has inspired the genius of Goldsmith, Burns, Cowper, and, in a

3. **"Sicklied . . . thought"**—from *Hamlet,* Act III, scene I. 29. **Provençal minstrelsy**—the lyric poetry of the troubadours. 32. **firkin**—small cask. 42. **Goldsmith . . . Cowper**—Goldsmith, Burns, and Cowper are here cited for their poems of common life like *The Deserted Village,* "The Jolly Beggars," and *The Task.*

newer time, of Goethe, Wordsworth, and Carlyle. This idea they have differently followed and with various success. In contrast with their writing, the style of Pope, of Johnson, of Gibbon, looks cold and pedantic. This writing is blood-warm. Man is surprised to find that things near are not less beautiful and wondrous than things remote. The near explains the far. The drop is a small ocean. A man is related to all nature. This perception of the worth of the vulgar is fruitful in discoveries. Goethe, in this very thing the most modern of the moderns, has shown us, as none ever did, the genius of the ancients.

There is one man of genius, who has done much for this philosophy of life, whose literary value has never yet been rightly estimated;—I mean Emanuel Swedenborg. The most imaginative of men, yet writing with the precision of a mathematician, he endeavored to engraft a purely philosophical Ethics on the popular Christianity of his time. Such an attempt, of course, must have difficulty, which no genius could surmount. But he saw and showed the connection between nature and the affections of the soul. He pierced the emblematic or spiritual character of the visible, audible, tangible world. Especially did his shade-loving muse hover over and interpret the lower parts of nature; he showed the mysterious bond that allies moral evil to the foul material forms, and has given in epical parables a theory of insanity, of beasts, of unclean and fearful things.

Another sign of our times, also marked by an analogous political movement, is the new importance given to the single person. Every thing that tends to insulate the individual,—to surround him with barriers of natural respect, so that each man shall feel the world is his, and man shall treat with man as a sovereign state with a sovereign state;—tends to true union as well as greatness. "I learned," said the melancholy Pestalozzi, "that no man in God's wide earth is either willing or able to help any other man." Help must come from the bosom alone. The scholar is that man who must take up into himself all the ability of the time, all the contributions of the past, all the hopes of the future. He must be an university of knowledges. If there be one lesson more than another, which should pierce his ear, it is, The world is nothing, the man is all; in yourself is the law of all nature, and you know not yet how a globule of sap ascends; in yourself slumbers the whole of Reason; it is for you to know all; it is for you to dare all. Mr. President and Gentlemen, this confidence in the unsearched might of man belongs, by all motives, by all prophecy, by all preparation, to the American Scholar. We have listened too long to the courtly muses of Europe. The spirit of the American freeman is already suspected to be timid, imitative, tame. Public and private avarice make the air we breathe thick and fat. The scholar is decent, indolent, complaisant. See already the tragic consequence. The mind of this country, taught to aim at low objects, eats upon

1. **Goethe . . . Carlyle**—Emerson was profoundly influenced by Goethe, Wordsworth, and Carlyle, who agree in teaching a spiritual unity in nature and man. 3. **Pope . . . Gibbon**—Alexander Pope (1688-1744); Samuel Johnson (1709-1784), here cited for his polysyllabic prose, and Edward Gibbon (1737-1794), whose *Decline and Fall of the Roman Empire* is written in a stately, self-conscious, though magnificent, style. 11. **Swedenborg**—See note 14, p. 407. Emerson included Swedenborg in his *Representative Men*. 26. **Pestalozzi**—Johann Heinrich Pestalozzi (1746-1827), Swiss educational reformer, who was discouraged by the failure of his attempts to change educational theory. Emerson was introduced to Pestalozzi's ideas by Bronson Alcott.

itself. There is no work for any but the decorous and the complaisant. Young men of the fairest promise, who begin life upon our shores, inflated by the mountain winds, shined upon by all the stars of God, find the earth below not in unison with these,—but are hindered from action by the disgust which the principles on which business is managed inspire, and turn drudges, or die of disgust,—some of them suicides. What is the remedy? They did not yet see, and thousands of young men as hopeful now crowding to the barriers for the career, do not yet see, that, if the single man plant himself indomitably on his instincts, and there abide, the huge world will come round to him. Patience,—patience;—with the shades of all the good and great for company; and for solace, the perspective of your own infinite life; and for work, the study and the communication of principles, the making those instincts prevalent, the conversion of the world. Is it not the chief disgrace in the world, not to be an unit;—not to be reckoned one character;—not to yield that peculiar fruit which each man was created to bear, but to be reckoned in the gross, in the hundred, or the thousand, of the party, the section, to which we belong; and our opinion predicted geographically, as the north, or the south? Not so, brothers and friends,—please God, ours shall not be so. We will walk on our own feet; we will work with our own hands; we will speak our own minds. The study of letters shall be no longer a name for pity, for doubt, and for sensual indulgence. The dread of man and the love of man shall be a wall of defence and a wreath of joy around all. A nation of men will for the first time exist, because each believes himself inspired by the Divine Soul which also inspires all men.

SELF-RELIANCE

First printed in the *Essays* of 1841. This text is from the revised edition of 1847. Emerson printed three mottoes to the first edition of the essay, omitting the third in the 1847 version. The mottoes are:

"Ne te quaesiveris extra" [Do not seek outside yourself]

"Man is his own star, and the soul that can
Render an honest and a perfect man,
Command all light, all influence, all fate,
Nothing to him falls early, or too late.
Our acts our angels are, or good or ill,
Our fatal shadows that walk by us still."

Epilogue to Beaumont and Fletcher's Honest Man's Fortune.

Cast the bantling on the rocks,
Suckle him with the she-wolf's teats:
Wintered with the hawk and fox,
Power and speed be hands and feet.

The third motto is Emerson's own, and also appears in the *Poems.*

I READ the other day some verses written by an eminent painter which were original and not conventional. The soul always hears an admonition in such lines, let the subject be what it may. The sentiment they instil is of more value than any thought they may contain. To believe your own thought, to believe that what is true for you in your private heart is true for all men,— that is genius. Speak your latent conviction, and it shall be the universal sense; for the inmost in due time becomes the outmost,—and our first thought is rendered back to us by the trumpets of the Last Judgment. Familiar as the voice of the mind is to each, the highest merit we ascribe to Moses, Plato, and Milton is, that they set at naught books and traditions, and spoke not what men but what they thought. A man should learn to detect and watch that gleam of light which flashes across his mind from within, more than the lustre of the firmament of bards and sages. Yet he dismisses without notice his thought, because it is his. In every work of genius we recognize our own rejected thoughts: they come back to us with a certain alienated majesty. Great works of art have no more affecting lesson for us than this. They teach us to abide by our spontaneous impression with good-humored inflexibility then most when the whole cry of voices is on the other side. Else, to-morrow a stranger will say with masterly good sense precisely what we have thought and felt all the time, and we shall be forced to take with shame our own opinion from another.

There is a time in every man's education when he arrives at the conviction that envy is ignorance; that imitation is suicide; that he must take himself for better for worse as his portion; that though the wide universe is full of good, no kernel of nourishing corn can come to him but through his toil bestowed on that plot of ground which is given to him to till. The power which resides in him is new in nature, and none but he knows what that is which he can do, nor does he know until he has tried. Not for nothing one face, one character, one fact, makes much impression on him, and another none. This sculpture in the memory is not without preëstablished harmony. The eye was placed where one ray should fall, that it might testify of that particular ray. We but half express ourselves, and are ashamed of that divine idea which each of us represents. It may be safely trusted as proportionate and of good issues, so it be faithfully imparted, but God will not have his work made manifest by cowards. A man is relieved and gay when he has put his heart into his work and done his best; but what he has said or done otherwise, shall give him no peace. It is a deliverance which does not deliver. In the attempt his genius deserts him; no muse befriends; no invention, no hope.

Trust thyself: every heart vibrates to that iron string. Accept the place the divine providence has found for you, the society of your contemporaries, the connection of events. Great men have always done so, and confided themselves childlike to the genius of their age, betraying their perception that the absolutely trustworthy was seated at their heart, working through their hands, predominating in all their being. And we are now men, and must accept in the highest mind the same transcendent destiny; and not minors and invalids in a protected corner, not cowards fleeing before a revolution, but guides, re-

1. **verses . . . painter**—The editors of the Concord edition suggest that these verses were by Washington Allston (1779-1843), painter, poet, and novelist. 41. **genius**—spirit.

deemers, and benefactors, obeying the Almighty effort, and advancing on Chaos and the Dark.

What pretty oracles nature yields us on this text, in the face and behaviour of children, babes, and even brutes! That divided and rebel mind, that distrust of a sentiment because our arithmetic has computed the strength and means opposed to our purpose, these have not. Their mind being whole, their eye is as yet unconquered, and when we look in their faces, we are disconcerted. Infancy conforms to nobody: all conform to it, so that one babe commonly makes four or five out of the adults who prattle and play to it. So God has armed youth and puberty and manhood no less with its own piquancy and charm, and made it enviable and gracious and its claims not to be put by, if it will stand by itself. Do not think the youth has no force, because he cannot speak to you and me. Hark! in the next room his voice is sufficiently clear and emphatic. It seems he knows how to speak to his contemporaries. Bashful or bold, then, he will know how to make us seniors very unnecessary.

The nonchalance of boys who are sure of a dinner, and would disdain as much as a lord to do or say aught to conciliate one, is the healthy attitude of human nature. A boy is in the parlour what the pit is in the playhouse; independent, irresponsible, looking out from his corner on such people and facts as pass by, he tries and sentences them on their merits, in the swift, summary ways of boys, as good, bad, interesting, silly, eloquent, troublesome. He cumbers himself never about consequences, about interests: he gives an independent, genuine verdict. You must court him: he does not court you. But the man is, as it were, clapped into jail by his consciousness. As soon as he has once acted or spoken with eclat, he is a committed person, watched by the sympathy or the hatred of hundreds, whose affections must now enter into his account. There is no Lethe for this. Ah, that he could pass again into his neutrality! Who can thus avoid all pledges, and having observed, observe again from the same unaffected, unbiased, unbribable, unaffrighted innocence, must always be formidable. He would utter opinions on all passing affairs, which being seen to be not private, but necessary, would sink like darts into the ear of men, and put them in fear.

These are the voices which we hear in solitude, but they grow faint and inaudible as we enter into the world. Society everywhere is in conspiracy against the manhood of every one of its members. Society is a joint-stock company, in which the members agree, for the better securing of his bread to each shareholder, to surrender the liberty and culture of the eater. The virtue in most request is conformity. Self-reliance is its aversion. It loves not realities and creators, but names and customs.

Whoso would be a man, must be a nonconformist. He who would gather immortal palms must not be hindered by the name of goodness, but must explore if it be goodness. Nothing is at last sacred but the integrity of your own mind. Absolve you to yourself, and you shall have the suffrage of the world. I remember an answer which when quite young I was prompted to make to a

18. pit—formerly that part of the theater below the stage and immediately behind the orchestra from the point of view of the actor, where the cheaper seats were. **25. eclat**—usually éclat—brilliance. **27. Lethe**—mythological river of forgetfulness. **41. palms**—symbols of triumph.

valued adviser, who was wont to importune me with the dear old doctrines of the church. On my saying, What have I to do with the sacredness of traditions, if I live wholly from within? my friend suggested,—"But these impulses may be from below, not from above." I replied, "They do not seem to me to be such; but if I am the Devil's child, I will live then from the Devil." No law can be sacred to me but that of my nature. Good and bad are but names very readily transferable to that or this; the only right is what is after my constitution, the only wrong what is against it. A man is to carry himself in the presence of all opposition as if everything were titular and ephemeral but he. I am ashamed to think how easily we capitulate to badges and names, to large societies and dead institutions. Every decent and well-spoken individual affects and sways me more than is right. I ought to go upright and vital, and speak the rude truth in all ways. If malice and vanity wear the coat of philanthropy, shall that pass? If an angry bigot assumes this bountiful cause of Abolition, and comes to me with his last news from Barbadoes, why should I not say to him, 'Go love thy infant; love thy wood-chopper; be good-natured and modest: have that grace; and never varnish your hard, uncharitable ambition with this incredible tenderness for black folk a thousand miles off. Thy love afar is spite at home.' Rough and graceless would be such greeting, but truth is handsomer than the affectation of love. Your goodness must have some edge to it,—else it is none. The doctrine of hatred must be preached as the counteraction of the doctrine of love when that pules and whines. I shun father and mother and wife and brother, when my genius calls me. I would write on the lintels of the door-post, *Whim*. I hope it is somewhat better than whim at last, but we cannot spend the day in explanation. Expect me not to show cause why I seek or why I exclude company. Then, again, do not tell me, as a good man did to-day, of my obligation to put all poor men in good situations. Are they *my* poor? I tell thee, thou foolish philanthropist, that I grudge the dollar, the dime, the cent I give to such men as do not belong to me and to whom I do not belong. There is a class of persons to whom by all spiritual affinity I am bought and sold; for them I will go to prison, if need be; but your miscellaneous popular charities; the education at college of fools; the building of meeting-houses to the vain end to which many now stand; alms to sots; and the thousandfold Relief Societies;—though I confess with shame I sometimes succumb and give the dollar, it is a wicked dollar, which by and by I shall have the manhood to withhold.

Virtues are, in the popular estimate, rather the exception than the rule. There is the man *and* his virtues. Men do what is called a good action, as some piece of courage or charity, much as they would pay a fine in expiation of daily non-appearance on parade. Their works are done as an apology or extenuation of their living in the world,—as invalids and the insane pay a high board. Their virtues are penances. I do not wish to expiate, but to live. My life is for itself and not for a spectacle. I much prefer that it should be of a lower strain, so it be genuine and equal, than that it should be glittering and unsteady. I wish it

9. **titular**—existing in name only. 15. **news . . . Barbadoes**—Slavery was officially abolished in Barbadoes in 1834. 22. **father and mother**—*Cf.* Matt. 10:37. 23-24. **lintels . . . door-post**—vaguely reminiscent of Ex. 12:7. The lintel is the crosspiece above a door.

to be sound and sweet, and not to need diet and bleeding. I ask primary evidence that you are a man, and refuse this appeal from the man to his actions. I know that for myself it makes no difference whether I do or forbear those actions which are reckoned excellent. I cannot consent to pay for a privilege where I have intrinsic right. Few and mean as my gifts may be, I actually am, and do not need for my own assurance or the assurance of my fellows any secondary testimony.

What I must do is all that concerns me, not what the people think. This rule, equally arduous in actual and in intellectual life, may serve for the whole distinction between greatness and meanness. It is the harder, because you will always find those who think they know what is your duty better than you know it. It is easy in the world to live after the world's opinion; it is easy in solitude to live after our own; but the great man is he who in the midst of the crowd keeps with perfect sweetness the independence of solitude.

The objection to conforming to usages that have become dead to you is, that it scatters your force. It loses your time and blurs the impression of your character. If you maintain a dead church, contribute to a dead Bible-society, vote with a great party either for the government or against it, spread your table like base housekeepers,—under all these screens I have difficulty to detect the precise man you are. And, of course, so much force is withdrawn from all your proper life. But do your work, and I shall know you. Do your work, and you shall reinforce yourself. A man must consider what a blind man's-buff is this game of conformity. If I know your sect, I anticipate your argument. I hear a preacher announce for his text and topic the expediency of one of the institutions of his church. Do I not know beforehand that not possibly can he say a new and spontaneous word? Do I not know that, with all this ostentation of examining the grounds of the institution, he will do no such thing? Do I not know that he is pledged to himself not to look but at one side,—the permitted side, not as a man, but as a parish minister? He is a retained attorney, and these airs of the bench are the emptiest affectation. Well, most men have bound their eyes with one or another handkerchief, and attached themselves to some one of these communities of opinion. This conformity makes them not false in a few particulars, authors of a few lies, but false in all particulars. Their every truth is not quite true. Their two is not the real two, their four not the real four; so that every word they say chagrins us, and we know not where to begin to set them right. Meantime nature is not slow to equip us in the prison-uniform of the party to which we adhere. We come to wear one cut of face and figure, and acquire by degrees the gentlest asinine expression. There is a mortifying experience in particular, which does not fail to wreak itself also in the general history; I mean "the foolish face of praise," the forced smile which we put on in company where we do not feel at ease in answer to conversation which does not interest us. The muscles, not spontaneously moved, but moved by a low usurping wilfulness, grow tight about the outline of the face, with the most disagreeable sensation.

For nonconformity the world whips you with its displeasure. And therefore

40. **"foolish . . . praise"**—from line 212 of Pope's *Epistle to Dr. Arbuthnot.*

a man must know how to estimate a sour face. The by-standers look askance on him in the public street or in the friend's parlour. If this aversion had its origin in contempt and resistance like his own, he might well go home with a sad countenance; but the sour faces of the multitude, like their sweet faces, have no deep cause, but are put on and off as the wind blows and a newspaper directs. Yet is the discontent of the multitude more formidable than that of the senate and the college. It is easy enough for a firm man who knows the world to brook the rage of the cultivated classes. Their rage is decorous and prudent, for they are timid as being very vulnerable themselves. But when to their feminine rage the indignation of the people is added, when the ignorant and the poor are aroused, when the unintelligent brute force that lies at the bottom of society is made to growl and mow, it needs the habit of magnanimity and religion to treat it godlike as a trifle of no concernment.

The other terror that scares us from self-trust is our consistency; a reverence for our past act or word, because the eyes of others have no other data for computing our orbit than our past acts, and we are loth to disappoint them.

But why should you keep your head over your shoulder? Why drag about this corpse of your memory, lest you contradict somewhat you have stated in this or that public place? Suppose you should contradict yourself; what then? It seems to be a rule of wisdom never to rely on your memory alone, scarcely even in acts of pure memory, but to bring the past for judgment into the thousand-eyed present, and live ever in a new day. In your metaphysics you have denied personality to the Deity: yet when the devout motions of the soul come, yield to them heart and life, though they should clothe God with shape and color. Leave your theory, as Joseph his coat in the hand of the harlot, and flee.

A foolish consistency is the hobgoblin of little minds, adored by little statesmen and philosophers and divines. With consistency a great soul has simply nothing to do. He may as well concern himself with his shadow on the wall. Speak what you think now in hard words, and to-morrow speak what to-morrow thinks in hard words again, though it contradict every thing you said to-day.—'Ah, so you shall be sure to be misunderstood.'—Is it so bad, then, to be misunderstood? Pythagoras was misunderstood, and Socrates, and Jesus, and Luther, and Copernicus, and Galileo, and Newton, and every pure and wise spirit that ever took flesh. To be great is to be misunderstood.

I suppose no man can violate his nature. All the sallies of his will are rounded in by the law of his being, as the inequalities of Andes and Himmaleh are insignificant in the curve of the sphere. Nor does it matter how you gauge and try him. A character is like an acrostic or Alexandrian stanza;—read it forward, backward, or across, it still spells the same thing. In this pleasing, contrite wood-life which God allows me, let me record day by day my honest thought without prospect or retrospect, and, I cannot doubt, it will be found sym-

12. mow—to make a grimace. **25. Joseph**—*Cf.* Gen. 39: 12. **32. Pythagoras**—When Pythagoras sought to establish a school in Samos, his native island, the people would have none of it; and afterwards his followers were attacked in Crotona, whither he had gone. The controversies aroused by the other famous men named by Emerson are more familiar. **36. Himmaleh**—Himalaya Mountains. **38. acrostic**—a short poem in which the initials of the lines in an agreed-upon order, if read successively, form a name, phrase, or sentence. **38. Alexandrian stanza**—a palindrome, or stanza which makes sense whether read backward or forward.

metrical, though I mean it not, and see it not. My book should smell of pines and resound with the hum of insects. The swallow over my window should interweave that thread or straw he carries in his bill into my web also. We pass for what we are. Character teaches above our wills. Men imagine that they communicate their virtue or vice only by overt actions, and do not see that virtue or vice emit a breath every moment.

There will be an agreement in whatever variety of actions, so they be each honest and natural in their hour. For of one will, the actions will be harmonious, however unlike they seem. These varieties are lost sight of at a little distance, at a little height of thought. One tendency unites them all. The voyage of the best ship is a zigzag line of a hundred tacks. See the line from a sufficient distance, and it straightens itself to the average tendency. Your genuine action will explain itself, and will explain your other genuine actions. Your conformity explains nothing. Act singly, and what you have already done singly will justify you now. Greatness appeals to the future. If I can be firm enough to-day to do right, and scorn eyes, I must have done so much right before as to defend me now. Be it how it will, do right now. Always scorn appearances, and you always may. The force of character is cumulative. All the foregone days of virtue work their health into this. What makes the majesty of the heroes of the senate and the field, which so fills the imagination? The consciousness of a train of great days and victories behind. They shed a united light on the advancing actor. He is attended as by a visible escort of angels. That is it which throws thunder into Chatham's voice, and dignity into Washington's port, and America into Adams's eye. Honor is venerable to us because it is no ephemeris. It is always ancient virtue. We worship it to-day because it is not of to-day. We love it and pay it homage, because it is not a trap for our love and homage, but is self-dependent, self-derived, and therefore of an old immaculate pedigree, even if shown in a young person.

I hope in these days we have heard the last of conformity and consistency. Let the words be gazetted and ridiculous henceforward. Instead of the gong for dinner, let us hear a whistle from the Spartan fife. Let us never bow and apologize more. A great man is coming to eat at my house. I do not wish to please him; I wish that he should wish to please me. I will stand here for humanity, and though I would make it kind, I would make it true. Let us affront and reprimand the smooth mediocrity and squalid contentment of the times, and hurl in the face of custom, and trade, and office, the fact which is the upshot of all history, that there is a great responsible Thinker and Actor working wherever a man works; that a true man belongs to no other time or place, but is the centre of things. Where he is, there is nature. He measures you, and all men, and all events. Ordinarily, every body in society reminds us of somewhat else, or of some other person. Character, reality, reminds you of nothing else; it takes place of the whole creation. The man must be so much, that he must make all circumstances indifferent. Every true man is a cause, a country, and

23. **Chatham's**—William Pitt, Earl of Chatham (1708-1778), the great orator. 23. **port**—demeanor, bearing. 24. **Adams's**—possibly John Adams (1735-1826), though Emerson may mean Samuel Adams (1722-1803), the Revolutionary patriot. 30. **gazetted**—that is, gazetted out: said of an officer whose resignation is announced in a gazette. 31. **Spartan fife**—the only music permitted the ancient Spartans.

an age; requires infinite spaces and numbers and time fully to accomplish his design;—and posterity seem to follow his steps as a train of clients. A man Caesar is born, and for ages after we have a Roman Empire. Christ is born, and millions of minds so grow and cleave to his genius that he is confounded with virtue and the possible of man. An institution is the lengthened shadow of one man; as, Monachism, of the Hermit Antony; the Reformation, of Luther; Quakerism, of Fox; Methodism, of Wesley; Abolition, of Clarkson. Scipio, Milton called "the height of Rome"; and all history resolves itself very easily into the biography of a few stout and earnest persons.

Let a man then know his worth, and keep things under his feet. Let him not peep or steal, or skulk up and down with the air of a charity-boy, a bastard, or an interloper, in the world which exists for him. But the man in the street, finding no worth in himself which corresponds to the force which built a tower or sculptured a marble god, feels poor when he looks on these. To him a palace, a statue, or a costly book have an alien and forbidding air, much like a gay equipage, and seem to say like that, 'Who are you, Sir?' Yet they all are his, suitors for his notice, petitioners to his faculties that they will come out and take possession. The picture waits for my verdict: it is not to command me, but I am to settle its claims to praise. That popular fable of the sot who was picked up dead drunk in the street, carried to the duke's house, washed and dressed and laid in the duke's bed, and, on his waking, treated with all obsequious ceremony like the duke, and assured that he had been insane, owes its popularity to the fact, that it symbolizes so well the state of man, who is in the world a sort of sot, but now and then wakes up, exercises his reason and finds himself a true prince.

Our reading is mendicant and sycophantic. In history, our imagination plays us false. Kingdom and lordship, power and estate, are a gaudier vocabulary than private John and Edward in a small house and common day's work; but the things of life are the same to both; the sum total of both is the same. Why all this deference to Alfred, and Scanderbeg, and Gustavus? Suppose they were virtuous; did they wear out virtue? As great a stake depends on your private act to-day, as followed their public and renowned steps. When private men shall act with original views, the lustre will be transferred from the actions of kings to those of gentlemen.

The world has been instructed by its kings, who have so magnetized the eyes of nations. It has been taught by this colossal symbol the mutual reverence that is due from man to man. The joyful loyalty with which men have everywhere suffered the king, the noble, or the great proprietor to walk among them by a

3. **Caesar**—probably Julius Caesar (100-44 B C.), though Caius Julius Caesar Octavianus, known as Caesar Augustus (63 B.C.-14 A.D.), the first Roman Emperor, may be meant. 6. **Monachism**—monasticism. 6. **Antony**—Anthony (250-300?), the first Christian monk 6. **Luther**—Martin Luther (1483-1546). 7. **Fox**—George Fox (1624-1691). 7. **Wesley**—John Wesley (1703-1791). 7. **Clarkson**—Thomas Clarkson (1760-1846), English philanthropist, and leading antislavery agitator. 7-8. **Scipio . . . Rome**—The reference is to *Paradise Lost,* Bk. IX, line 510. 19. **fable**—*Cf.* the Induction to *The Taming of the Shrew.* 30. **Alfred**—Alfred the Great, king of England (848?-901). 30. **Scanderbeg**—George Castriota (1403-1468), Albanian patriot opposed to the Turks, and known as Scanderbeg (Iskander Beg). 30. **Gustavus**—either Gustavus Vasa (1496-1560), or Gustavus Adolphus (1594-1632), both famous kings of Sweden. 35. **The world, etc.**—The student should compare with this portion of the essay Carlyle's *Heroes and Hero-Worship.*

law of his own, make his own scale of men and things, and reverse theirs, pay for benefits not with money but with honor, and represent the law in his person, was the hieroglyphic by which they obscurely signified their consciousness of their own right and comeliness, the right of every man.

The magnetism which all original action exerts is explained when we inquire the reason of self-trust. Who is the Trustee? What is the aboriginal Self, on which a universal reliance may be grounded? What is the nature and power of that science-baffling star, without parallax, without calculable elements, which shoots a ray of beauty even into trivial and impure actions, if the least mark of independence appear? The inquiry leads us to that source, at once the essence of genius, of virtue, and of life, which we call Spontaneity or Instinct. We denote this primary wisdom as Intuition, whilst all later teachings are tuitions. In that deep force, the last fact behind which analysis cannot go, all things find their common origin. For, the sense of being which in calm hours rises, we know not how, in the soul, is not diverse from things, from space, from light, from time, from man, but one with them, and proceeds obviously from the same source whence their life and being also proceed. We first share the life by which things exist, and afterwards see them as appearances in nature, and forget that we have shared their cause. Here is the fountain of action and of thought. Here are the lungs of that inspiration which giveth man wisdom, and which cannot be denied without impiety and atheism. We lie in the lap of immense intelligence, which makes us receivers of its truth and organs of its activity. When we discern justice, when we discern truth, we do nothing of ourselves, but allow a passage to its beams. If we ask whence this comes, if we seek to pry into the soul that causes, all philosophy is at fault. Its presence or its absence is all we can affirm. Every man discriminates between the voluntary acts of his mind, and his involuntary perceptions, and knows that to his involuntary perceptions a perfect faith is due. He may err in the expression of them, but he knows that these things are so, like day and night, not to be disputed. My wilful actions and acquisitions are but roving;—the idlest reverie, the faintest native emotion, command my curiosity and respect. Thoughtless people contradict as readily the statement of perceptions as of opinions, or rather much more readily; for, they do not distinguish between perception and notion. They fancy that I choose to see this or that thing. But perception is not whimsical, but fatal. If I see a trait, my children will see it after me, and in course of time, all mankind,—although it may chance that no one has seen it before me. For my perception of it is as much a fact as the sun.

The relations of the soul to the divine spirit are so pure, that it is profane to seek to interpose helps. It must be that when God speaketh he should communicate, not one thing, but all things; should fill the world with his voice; should scatter forth light, nature, time, souls, from the centre of the present thought; and new date and new create the whole. Whenever a mind is simple, and receives a divine wisdom, old things pass away,—means, teachers, texts,

8. parallax—the difference in the direction of a star as seen from some point on the earth's surface, and as seen from some other assumed point, as the center of the sun. **12. Intuition**—The student should compare this definition of intuition with Emerson's use of the word "Reason" in *Nature.*

temples fall; it lives now, and absorbs past and future into the present hour. All things are made sacred by relation to it,—one as much as another. All things are dissolved to their centre by their cause, and, in the universal miracle, petty and particular miracles disappear. If, therefore, a man claims to know and speak of God, and carries you backward to the phraseology of some old mouldered nation in another country, in another world, believe him not. Is the acorn better than the oak which is its fulness and completion? Is the parent better than the child into whom he has cast his ripened being? Whence, then, this worship of the past? The centuries are conspirators against the sanity and authority of the soul. Time and space are but physiological colors which the eye makes, but the soul is light; where it is, is day; where it was, is night; and history is an impertinence and an injury, if it be anything more than a cheerful apologue or parable of my being and becoming.

Man is timid and apologetic; he is no longer upright; he dares not say 'I think,' 'I am,' but quotes some saint or sage. He is ashamed before the blade of grass or the blowing rose. These roses under my window make no reference to former roses or to better ones; they are for what they are; they exist with God to-day. There is no time to them. There is simply the rose; it is perfect in every moment of its existence. Before a leaf-bud has burst, its whole life acts; in the full-blown flower there is no more; in the leafless root there is no less. Its nature is satisfied, and it satisfies nature, in all moments alike. But man postpones or remembers; he does not live in the present, but with reverted eye laments the past, or, heedless of the riches that surround him, stands on tiptoe to foresee the future. He cannot be happy and strong until he too lives with nature in the present, above time.

This should be plain enough. Yet see what strong intellects dare not yet hear God himself, unless he speaks the phraseology of I know not what David, or Jeremiah, or Paul. We shall not always set so great a price on a few texts, on a few lives. We are like children who repeat by rote the sentences of grandames and tutors, and, as they grow older, of the men of talents and character they chance to see,—painfully recollecting the exact words they spoke; afterwards, when they come into the point of view which those had who uttered these sayings, they understand them, and are willing to let the words go; for, at any time, they can use words as good when occasion comes. If we live truly, we shall see truly. It is as easy for the strong man to be strong, as it is for the weak to be weak. When we have new perception, we shall gladly disburden the memory of its hoarded treasures as old rubbish. When a man lives with God, his voice shall be as sweet as the murmur of the brook and the rustle of the corn.

And now at last the highest truth on this subject remains unsaid; probably cannot be said; for all that we say is the far-off remembering of the intuition. That thought, by what I can now nearest approach to say it, is this. When good is near you, when you have life in yourself, it is not by any known or accustomed way; you shall not discern the foot-prints of any other; you shall not see the face of man; you shall not hear any name;—the way, the thought, the good, shall be wholly strange and new. It shall exclude example and experience. You take the way from man, not to man. All persons that ever existed

12. **apologue**—moral fable.

are its forgotten ministers. Fear and hope are alike beneath it. There is somewhat low even in hope. In the hour of vision, there is nothing that can be called gratitude, nor properly joy. The soul raised over passion beholds identity and eternal causation, perceives the self-existence of Truth and Right, and calms itself with knowing that all things go well. Vast spaces of nature, the Atlantic Ocean, the South Sea,—long intervals of time, years, centuries,—are of no account. This which I think and feel underlay every former state of life and circumstances, as it does underlie my present, and what is called life, and what is called death.

Life only avails, not the having lived. Power ceases in the instant of repose; it resides in the moment of transition from a past to a new state, in the shooting of the gulf, in the darting to an aim. This one fact the world hates, that the soul *becomes;* for that for ever degrades the past, turns all riches to poverty, all reputation to a shame, confounds the saint with the rogue, shoves Jesus and Judas equally aside. Why, then, do we prate of self-reliance? Inasmuch as the soul is present, there will be power not confident but agent. To talk of reliance is a poor external way of speaking. Speak rather of that which relies, because it works and is. Who has more obedience than I masters me, though he should not raise his finger. Round him I must revolve by the gravitation of spirits. We fancy it rhetoric, when we speak of eminent virtue. We do not yet see that virtue is Height, and that a man or a company of men, plastic and permeable to principles, by the law of nature must overpower and ride all cities, nations, kings, rich men, poets, who are not.

This is the ultimate fact which we so quickly reach on this, as on every topic, the resolution of all into the ever-blessed ONE. Self-existence is the attribute of the Supreme Cause, and it constitutes the measure of good by the degree in which it enters into all lower forms. All things real are so by so much virtue as they contain. Commerce, husbandry, hunting, whaling, war, eloquence, personal weight, are somewhat, and engage my respect as examples of its presence and impure action. I see the same law working in nature for conservation and growth. Power is in nature the essential measure of right. Nature suffers nothing to remain in her kingdoms which cannot help itself. The genesis and maturation of a planet, its poise and orbit, the bended tree recovering itself from the strong wind, the vital resources of every animal and vegetable, are demonstrations of the self-sufficing, and therefore self-relying soul.

Thus all concentrates: let us not rove; let us sit at home with the cause. Let us stun and astonish the intruding rabble of men and books and institutions, by a simple declaration of the divine fact. Bid the invaders take the shoes from off their feet, for God is here within. Let our simplicity judge them, and our docility to our own law demonstrate the poverty of nature and fortune beside our native riches.

But now we are a mob. Man does not stand in awe of man, nor is his genius admonished to stay at home, to put itself in communication with the internal ocean, but it goes abroad to beg a cup of water of the urns of other men. We must go alone. I like the silent church before the service begins, better than any

29. **somewhat**—something. 38. **shoes**—*Cf.* Ex. 3:5.

preaching. How far off, how cool, how chaste the persons look, begirt each one with a precinct or sanctuary! So let us always sit. Why should we assume the faults of our friend, or wife, or father, or child, because they sit around our hearth, or are said to have the same blood? All men have my blood, and I all men's. Not for that will I adopt their petulance or folly, even to the extent of being ashamed of it. But your isolation must not be mechanical, but spiritual, that is, must be elevation. At times the whole world seems to be in conspiracy to importune you with emphatic trifles. Friend, client, child, sickness, fear, want, charity, all knock at once at thy closet door, and say,—'Come out unto us.' But keep thy state; come not into their confusion. The power men possess to annoy me, I give them by a weak curiosity. No man can come near me but through my act. "What we love that we have, but by desire we bereave ourselves of the love."

If we cannot at once rise to the sanctities of obedience and faith, let us at least resist our temptations; let us enter into the state of war, and wake Thor and Woden, courage and constancy, in our Saxon breasts. This is to be done in our smooth times by speaking the truth. Check this lying hospitality and lying affection. Live no longer to the expectation of these deceived and deceiving people with whom we converse. Say to them, O father, O mother, O wife, O brother, O friend, I have lived with you after appearances hitherto. Henceforward I am the truth's. Be it known unto you that henceforward I obey no law less than the eternal law. I will have no covenants but proximities. I shall endeavor to nourish my parents, to support my family, to be the chaste husband of one wife,—but these relations I must fill after a new and unprecedented way. I appeal from your customs. I must be myself. I cannot break myself any longer for you, or you. If you can love me for what I am, we shall be the happier. If you cannot, I will still seek to deserve that you should. I will not hide my tastes or aversions. I will so trust that what is deep is holy, that I will do strongly before the sun and moon whatever inly rejoices me, and the heart appoints. If you are noble, I will love you; if you are not, I will not hurt you and myself by hypocritical attentions. If you are true, but not in the same truth with me, cleave to your companions; I will seek my own. I do this not selfishly but humbly and truly. It is alike your interest, and mine, and all men's, however long we have dwelt in lies, to live in truth. Does this sound harsh to-day? You will soon love what is dictated by your nature as well as mine, and if we follow the truth, it will bring us out safe at last.—But so you may give these friends pain. Yes, but I cannot sell my liberty and my power, to save their sensibility. Besides, all persons have their moments of reason, when they look out into the region of absolute truth; then will they justify me, and do the same thing.

The populace think that your rejection of popular standards is a rejection of all standard, and mere antinomianism; and the bold sensualist will use the name of philosophy to gild his crimes. But the law of consciousness abides. There are two confessionals, in one or the other of which we must be shriven. You may fulfil your round of duties by clearing yourself in the *direct,* or in the *reflex* way. Consider whether you have satisfied your relations to father, mother,

15-16. **Thor and Woden**—the Scandinavian god of war and the Scandinavian Odin. 41. **antinomianism**—the doctrine that faith alone is necessary to salvation, and not the moral law.

cousin, neighbour, town, cat and dog; whether any of these can upbraid you. But I may also neglect this reflex standard, and absolve me to myself. I have my own stern claims and perfect circle. It denies the name of duty to many offices that are called duties. But if I can discharge its debts, it enables me to dispense with the popular code. If any one imagines that this law is lax, let him keep its commandment one day.

And truly it demands something godlike in him who has cast off the common motives of humanity, and has ventured to trust himself for a taskmaster. High be his heart, faithful his will, clear his sight, that he may in good earnest be doctrine, society, law, to himself, that a simple purpose may be to him as strong as iron necessity is to others!

If any man consider the present aspects of what is called by distinction *society,* he will see the need of these ethics. The sinew and heart of man seem to be drawn out, and we are become timorous, desponding whimperers. We are afraid of truth, afraid of fortune, afraid of death, and afraid of each other. Our age yields no great and perfect persons. We want men and women who shall renovate life and our social state, but we see that most natures are insolvent, cannot satisfy their own wants, have an ambition out of all proportion to their practical force and do lean and beg day and night continually. Our housekeeping is mendicant, our arts, our occupations, our marriages, our religion, we have not chosen, but society has chosen for us. We are parlour soldiers. We shun the rugged battle of fate, where strength is born.

If our young men miscarry in their first enterprises, they lose all heart. If the young merchant fails, men say he is *ruined.* If the finest genius studies at one of our colleges, and is not installed in an office within one year afterwards in the cities or suburbs of Boston or New York, it seems to his friends and to himself that he is right in being disheartened, and in complaining the rest of his life. A sturdy lad from New Hampshire or Vermont, who in turn tries all the professions, who *teams it, farms it, peddles,* keeps a school, preaches, edits a newspaper, goes to Congress, buys a township, and so forth, in successive years, and always, like a cat, falls on his feet, is worth a hundred of these city dolls. He walks abreast with his days, and feels no shame in not 'studying a profession,' for he does not postpone his life, but lives already. He has not one chance, but a hundred chances. Let a Stoic open the resources of man, and tell men they are not leaning willows, but can and must detach themselves; that with the exercise of self-trust, new powers shall appear; that a man is the word made flesh, born to shed healing to the nations, that he should be ashamed of our compassion, and that the moment he acts from himself, tossing the laws, the books, idolatries, and customs out of the window, we pity him no more, but thank and revere him,—and that teacher shall restore the life of man to splendor, and make his name dear to all history.

It is easy to see that a greater self-reliance must work a revolution in all the offices and relations of men; in their religion; in their education; in their pursuits; their modes of living; their association; in their property; in their speculative views.

34. **Stoic**—that is, a Stoic philosopher. Stoicism taught complete self-reliance. 36-37. **word made flesh**—*Cf.* John 1:14.

1. In what prayers do men allow themselves! That which they call a holy office is not so much as brave and manly. Prayer looks abroad and asks for some foreign addition to come through some foreign virtue, and loses itself in endless mazes of natural and supernatural, and mediatorial and miraculous. Prayer that craves a particular commodity,—anything less than all good,— is vicious. Prayer is the contemplation of the facts of life from the highest point of view. It is the soliloquy of a beholding and jubilant soul. It is the spirit of God pronouncing his works good. But prayer as a means to effect a private end is meanness and theft. It supposes dualism and not unity in nature and consciousness. As soon as the man is at one with God, he will not beg. He will then see prayer in all action. The prayer of the farmer kneeling in his field to weed it, the prayer of the rower kneeling with the stroke of his oar, are true prayers heard throughout nature, though for cheap ends. Caratach, in Fletcher's Bonduca, when admonished to inquire the mind of the god Audate, replies,—

> "His hidden meaning lies in our endeavours;
> Our valors are our best gods."

Another sort of false prayers are our regrets. Discontent is the want of self-reliance: it is infirmity of will. Regret calamities, if you can thereby help the sufferer; if not, attend your own work, and already the evil begins to be repaired. Our sympathy is just as base. We come to them who weep foolishly, and sit down and cry for company, instead of imparting to them truth and health in rough electric shocks, putting them once more in communication with their own reason. The secret of fortune is joy in our hands. Welcome evermore to gods and men is the self-helping man. For him all doors are flung wide: him all tongues greet, all honors crown, all eyes follow with desire. Our love goes out to him and embraces him, because he did not need it. We solicitously and apologetically caress and celebrate him, because he held on his way and scorned our disapprobation. The gods love him because men hated him. "To the persevering mortal," said Zoroaster, "the blessed Immortals are swift."

As men's prayers are a disease of the will, so are their creeds a disease of the intellect. They say with those foolish Israelites, "Let not God speak to us, lest we die. Speak thou, speak any man with us, and we will obey." Everywhere I am hindered of meeting God in my brother, because he has shut his own temple doors, and recites fables merely of his brother's, or his brother's brother's God. Every new mind is a new classification. If it prove a mind of uncommon activity and power, a Locke, a Lavoisier, a Hutton, a Bentham, a Fourier, it imposes its classification on other men, and lo! a new system. In proportion to the depth of the thought, and so to the number of the objects it touches and brings within reach of the pupil, is his complacency. But chiefly

8. pronouncing—*Cf.* Genesis 1:25. **14. Bonduca**—supposed to be by Beaumont and Fletcher. The quotation (which Emerson has slightly altered) is from Act III, scene 1. The deity in question is Andate or Andraste. **29. Zoroaster**—the legendary founder of ancient Persian religion. **31. "Let not**—*Cf.* Ex. 20:19. **36-37. Locke . . . Fourier**—Locke is here considered as the founder of systematic views in political science, philosophy, et cetera; Antoine Laurent **Lavoisier** (1743-1794), the founder of modern chemistry; James **Hutton** (1726-1797), the first "modern" British geologist; Jeremy **Bentham** (1748-1832) "systematized" law and government; François Marie Charles **Fourier** (1772-1837) sought to establish a systematic form of society.

is this apparent in creeds and churches, which are also classifications of some powerful mind acting on the elemental thought of duty, and man's relation to the Highest. Such is Calvinism, Quakerism, Swedenborgism. The pupil takes the same delight in subordinating every thing to the new terminology, as a girl who has just learned botany in seeing a new earth and new seasons thereby. It will happen for a time, that the pupil will find his intellectual power has grown by the study of his master's mind. But in all unbalanced minds, the classification is idolized, passes for the end, and not for a speedily exhaustible means, so that the walls of the system blend to their eye in the remote horizon with the walls of the universe; the luminaries of heaven seem to them hung on the arch their master built. They cannot imagine how you aliens have any right to see,—how you can see; "It must be somehow that you stole the light from us." They do not yet perceive that light, unsystematic, indomitable, will break into any cabin, even into theirs. Let them chirp awhile and call it their own. If they are honest and do well, presently their neat new pinfold will be too strait and low, will crack, will lean, will rot and vanish, and the immortal light, all young, and joyful, million-orbed, million-colored, will beam over the universe as on the first morning.

2. It is for want of self-culture that the superstition of Travelling, whose idols are Italy, England, Egypt, retains its fascination for all educated Americans. They who made England, Italy, or Greece venerable in the imagination did so by sticking fast where they were, like an axis of the earth. In manly hours, we feel that duty is our place. The soul is no traveller; the wise man stays at home, and when his necessities, his duties, on any occasion call him from his house, or into foreign lands, he is at home still, and shall make men sensible by the expression of his countenance, that he goes the missionary of wisdom and virtue, and visits cities and men like a sovereign, and not like an interloper or a valet.

I have no churlish objection to the circumnavigation of the globe, for the purposes of art, of study, and benevolence, so that the man is first domesticated, or does not go abroad with the hope of finding somewhat greater than he knows. He who travels to be amused, or to get somewhat which he does not carry, travels away from himself, and grows old even in youth among old things. In Thebes, in Palmyra, his will and mind have become old and dilapidated as they. He carries ruins to ruins.

Travelling is a fool's paradise. Our first journeys discover to us the indifference of places. At home I dream that at Naples, at Rome, I can be intoxicated with beauty, and lose my sadness. I pack my trunk, embrace my friends, embark on the sea and at last wake up in Naples, and there beside me is the stern fact, the sad self, unrelenting, identical, that I fled from. I seek the Vatican, and the palaces. I affect to be intoxicated with sights and suggestions, but I am not intoxicated. My giant goes with me wherever I go.

3. But the rage of travelling is a symptom of a deeper unsoundness affecting

34. Thebes . . . Palmyra—The ruins of the ancient city of **Thebes** near Karnak and Luxor are among the most impressive monuments of ancient Egypt. The ruins at **Palmyra**, in Syria, are supposed to mark the reign of Zenobia, "Queen of the East." **37. Naples . . . Rome**—cities visited by Emerson during his first trip abroad.

the whole intellectual action. The intellect is vagabond, and our system of education fosters restlessness. Our minds travel when our bodies are forced to stay at home. We imitate; and what is imitation but the travelling of the mind? Our houses are built with foreign taste; our shelves are garnished with foreign ornaments; our opinions, our tastes, our faculties, lean, and follow the Past and the Distant. The soul created the arts wherever they have flourished. It was in his own mind that the artist sought his model. It was an application of his own thought to the thing to be done and the conditions to be observed. And why need we copy the Doric or the Gothic model? Beauty, convenience, grandeur of thought, and quaint expression are as near to us as to any, and if the American artist will study with hope and love the precise thing to be done by him, considering the climate, the soil, the length of the day, the wants of the people, the habit and form of the government, he will create a house in which all these will find themselves fitted, and taste and sentiment will be satisfied also.

Insist on yourself; never imitate. Your own gift you can present every moment with the cumulative force of a whole life's cultivation; but of the adopted talent of another, you have only an extemporaneous, half possession. That which each can do best, none but his Maker can teach him. No man yet knows what it is, nor can, till that person has exhibited it. Where is the master who could have taught Shakspeare? Where is the master who could have instructed Franklin, or Washington, or Bacon, or Newton? Every great man is a unique. The Scipionism of Scipio is precisely that part he could not borrow. Shakspeare will never be made by the study of Shakspeare. Do that which is assigned you, and you cannot hope too much or dare too much. There is at this moment for you an utterance brave and grand as that of the colossal chisel of Phidias, or trowel of the Egyptians, or the pen of Moses, or Dante, but different from all these. Not possibly will the soul, all rich, all eloquent, with thousand-cloven tongue, deign to repeat itself; but if you can hear what these patriarchs say, surely you can reply to them in the same pitch of voice; for the ear and the tongue are two organs of one nature. Abide in the simple and noble regions of thy life, obey thy heart, and thou shall reproduce the Foreworld again.

4. As our Religion, our Education, our Art look abroad, so does our spirit of society. All men plume themselves on the improvement of society, and no man improves.

Society never advances. It recedes as fast on one side as it gains on the other. It undergoes continual changes; it is barbarous, it is civilized, it is christianized, it is rich, it is scientific; but this change is not amelioration. For every thing that is given, something is taken. Society acquires new arts, and loses old instincts. What a contrast between the well-clad, reading, writing, thinking American, with a watch, a pencil, and a bill of exchange in his pocket, and the naked New Zealander, whose property is a club, a spear, a mat, and an undivided twentieth of a shed to sleep under! But compare the health of the two men, and you shall see that the white man has lost his aboriginal strength. If

9. Doric . . . Gothic—that is, why copy classic or medieval architecture? **22. Scipio**—Scipio Africanus Major (237?-183 B.C.), the conqueror of Hannibal, a type of Roman will power. **25. Phidias**—(498-432 B.C.) the Athenian sculptor renowned for colossal statues of Athene and of Zeus. **26. trowel**—that is, of a stonemason.

the traveller tell us truly, strike the savage with a broad-axe and in a day or two the flesh shall unite and heal as if you struck the blow into soft pitch, and the same blow shall send the white to his grave.

The civilized man has built a coach, but has lost the use of his feet. He is supported on crutches, but lacks so much support of muscle. He has a fine Geneva watch, but he fails of the skill to tell the hour by the sun. A Greenwich nautical almanac he has, and so being sure of the information when he wants it, the man in the street does not know a star in the sky. The solstice he does not observe; the equinox he knows as little; and the whole bright calendar of the year is without a dial in his mind. His note-books impair his memory; his libraries overload his wit; the insurance-office increases the number of accidents; and it may be a question whether machinery does not encumber; whether we have not lost by refinement some energy, by a Christianity, entrenched in establishments and forms, some vigor of wild virtue. For every Stoic was a Stoic; but in Christendom where is the Christian?

There is no more deviation in the moral standard than in the standard of height or bulk. No greater men are now than ever were. A singular equality may be observed between the great men of the first and of the last ages; nor can all the science, art, religion, and philosophy of the nineteenth century avail to educate greater men than Plutarch's heroes, three or four and twenty centuries ago. Not in time is the race progressive. Phocion, Socrates, Anaxagoras, Diogenes, are great men, but they leave no class. He who is really of their class will not be called by their name, but will be his own man, and in his turn the founder of a sect. The arts and inventions of each period are only its costume, and do not invigorate men. The harm of the improved machinery may compensate its good. Hudson and Behring accomplished so much in their fishing-boats, as to astonish Parry and Franklin, whose equipment exhausted the resources of science and art. Galileo, with an opera-glass, discovered a more splendid series of celestial phenomena than any one since. Columbus found the New World in an undecked boat. It is curious to see the periodical disuse and perishing of means and machinery, which were introduced with loud laudation a few years or centuries before. The great genius returns to essential man. We reckoned the improvements of the art of war among the triumphs of science, and yet Napoleon conquered Europe by the bivouac, which consisted of falling back on naked valor, and disencumbering it of all aids. The Emperor held it impossible to make a perfect army, says Las Casas, "without abolishing our arms,

6. **Geneva**—Switzerland was formerly the headquarters of fine watchmaking. 6. **Greenwich**—the seat of the Greenwich Royal Observatory. The "Greenwich meridian" is the prime meridian in astronomical calculation. 21-22. **Phocion . . . Diogenes**—These names have been explained except for that of Anaxagoras (about 500-428 B.C.), who foreshadowed Plato and Aristotle. **Diogenes** (about 412-323 B.C.) is well known. 26-27. **Hudson . . . Franklin**—Henry Hudson (died 1611) explored Hudson Bay, 1610-11; Vitus Behring or Bering (1680-1741) explored the area around Bering Sea in 1740-41. Sir William Edward Parry (1790-1855) commenced his career as a polar explorer in 1811, and sought the Northwest Passage from 1819 to 1827-28. Sir John Franklin (1786-1847) disappeared in the Arctic in 1845. Parry and Franklin were associated in an expedition which started in 1820. 28. **Galileo**—Galileo Galilei (1564-1642) in 1609 completed the first telescope. 35. **Emperor**—Napoleon I. 36. **Las Casas**—Emmanuel Augustin Dieudonné, Marquis de Las Cases (1766-1842), who accompanied Napoleon to St. Helena as his secretary, taking notes of Napoleon's conversations, which he incorporated in *Mémorial de Ste Hélène*, 1818, and again in 1823. Emerson read the book in 1838-39.

magazines, commissaries, and carriages, until, in imitation of the Roman custom, the soldier should receive his supply of corn, grind it in his hand-mill, and bake his bread himself."

Society is a wave. The wave moves onward, but the water of which it is composed does not. The same particle does not rise from the valley to the ridge. Its unity is only phenomenal. The persons who make up a nation to-day, next year die, and their experience dies with them.

And so the reliance on Property, including the reliance on governments which protect it, is the want of self-reliance. Men have looked away from themselves and at things so long, that they have come to esteem the religious, learned, and civil institutions as guards of property, and they deprecate assaults on these, because they feel them to be assaults on property. They measure their esteem of each other by what each has, and not by what each is. But a cultivated man becomes ashamed of his property, out of new respect for his nature. Especially he hates what he has, if he see that it is accidental,—came to him by inheritance, or gift, or crime; then he feels that it is not having; it does not belong to him, has no root in him, and merely lies there, because no revolution or no robber takes it away. But that which a man is does always by necessity acquire, and what the man acquires is living property, which does not wait the beck of rulers, or mobs, or revolutions, or fire, or storm, or bankruptcies, but perpetually renews itself wherever the man breathes. "Thy lot or portion of life," said the Caliph Ali, "is seeking after thee; therefore be at rest from seeking after it." Our dependence on these foreign goods leads us to our slavish respect for numbers. The political parties meet in numerous conventions; the greater the concourse, and with each new uproar of announcement, The delegation from Essex! The Democrats from New Hampshire! The Whigs of Maine! the young patriot feels himself stronger than before by a new thousand of eyes and arms. In like manner the reformers summon conventions, and vote and resolve in multitude. Not so, O friends! will the God deign to enter and inhabit you, but by a method precisely the reverse. It is only as a man puts off all foreign support, and stands alone, that I see him to be strong and to prevail. He is weaker by every recruit to his banner. Is not a man better than a town? Ask nothing of men, and, in the endless mutation, thou only firm column must presently appear the upholder of all that surrounds thee. He who knows that power is inborn, that he is weak because he has looked for good out of him and elsewhere, and so perceiving, throws himself unhesitatingly on his thought, instantly rights himself, stands in the erect position, commands his limbs, works miracles; just as a man who stands on his feet is stronger than a man who stands on his head.

So use all that is called Fortune. Most men gamble with her, and gain all, and lose all, as her wheel rolls. But do thou leave as unlawful these winnings, and deal with Cause and Effect, the chancellors of God. In the Will work and

22. **Caliph Ali**—Ali ben Abu Talib (about 600-661), the fourth caliph, to whom much wisdom was attributed. A collection of his supposed sayings, translated by W. Yule, was published in Edinburgh in 1832. 26. **Democrats . . . Whigs**—The references are to political controversies in the thirties, the Whig Party being revived in 1834 to oppose Jackson and the Democrats. 33. **thou**—The syntax would be clearer if the text read: "thou, the only firm column, must," et cetera. 40. **Fortune**—The figure is of the goddess Fortune and her wheel.

acquire, and thou hast chained the wheel of Chance, and shalt sit hereafter out of fear from her rotations. A political victory, a rise of rents, the recovery of your sick, or the return of your absent friend, or some other favorable event, raises your spirits, and you think good days are preparing for you. Do not believe it. Nothing can bring you peace but yourself. Nothing can bring you peace but the triumph of principles.

THE OVER-SOUL

This essay was compounded from many simples, as the suggestive list of sources in the Concord edition, Vol. II, pp. 426-28, indicates. It appeared in the first series of *Essays*. The present text, like that of the preceding essay, is from the revised edition of 1847. It is preceded by the following verse mottoes:

"But souls that of his own good life partake,
He loves as his own self; dear as his eye
They are to Him: He'll never them forsake:
When they shall die, then God himself shall die:
They live, they live in blest eternity."

Henry More.

Space is ample, east and west,
But two cannot go abreast,
Cannot travel in it two:
Yonder masterful cuckoo
Crowds every egg out of the nest,
Quick or dead, except its own;
A spell is laid on sod and stone,
Night and Day've been tampered with,
Every quality and pith
Surcharged and sultry with a power
That works its will on age and hour.

THERE is a difference between one and another hour of life, in their authority and subsequent effect. Our faith comes in moments; our vice is habitual. Yet there is a depth in those brief moments which constrains us to ascribe more reality to them than to all other experiences. For this reason, the argument which is always forthcoming to silence those who conceive extraordinary hopes of man, namely, the appeal to experience, is forever invalid and vain. We give up the past to the objector, and yet we hope. He must explain this hope. We grant that human life is mean; but how did we find out that it was mean? What is the ground of this uneasiness of ours; of this old discontent? What is the universal sense of want and ignorance, but the fine innuendo by which the soul makes its enormous claim? Why do men feel that the natural history of man has never been written, but he is always leaving behind what you have said of him, and it becomes old, and books of metaphysics worthless? The philosophy of six thousand years has not searched the chambers and magazines of the soul. In its experiments there has always

remained, in the last analysis, a residuum it could not resolve. Man is a stream whose source is hidden. Our being is descending into us from we know not whence. The most exact calculator has no prescience that somewhat incalculable may not balk the very next moment. I am constrained every moment to acknowledge a higher origin for events than the will I call mine.

As with events, so is it with thoughts. When I watch that flowing river, which, out of regions I see not, pours for a season its streams into me, I see that I am a pensioner; not a cause but a surprised spectator of this ethereal water; that I desire and look up and put myself in the attitude of reception, but from some alien energy the visions come.

The Supreme Critic on the errors of the past and the present, and the only prophet of that which must be, is that great nature in which we rest, as the earth lies in the soft arms of the atmosphere; that Unity, that Over-Soul, within which every man's particular being is contained and made one with all other; that common heart, of which all sincere conversation is the worship, to which all right action is submission; that overpowering reality which confutes our tricks and talents, and constrains every one to pass for what he is, and to speak from his character, and not from his tongue, and which evermore tends to pass into our thought and hand, and become wisdom, and virtue, and power, and beauty. We live in succession, in division, in parts, in particles. Meantime within man is the soul of the whole; the wise silence; the universal beauty, to which every part and particle is equally related; the eternal ONE. And this deep power in which we exist, and whose beatitude is all accessible to us, is not only self-sufficing and perfect in every hour, but the act of seeing and the thing seen, the seer and the spectacle, the subject and the object, are one. We see the world piece by piece, as the sun, the moon, the animal, the tree; but the whole, of which these are the shining parts, is the soul. Only by the vision of that Wisdom can the horoscope of the ages be read, and by falling back on our better thoughts, by yielding to the spirit of prophecy which is innate in every man, we can know what it saith. Every man's words, who speaks from that life, must sound vain to those who do not dwell in the same thought on their own part. I dare not speak for it. My words do not carry its august sense; they fall short and cold. Only itself can inspire whom it will, and behold! their speech shall be lyrical, and sweet, and universal as the rising of the wind. Yet I desire, even by profane words, if I may not use sacred, to indicate the heaven of this deity, and to report what hints I have collected of the transcendent simplicity and energy of the Highest Law.

If we consider what happens in conversation, in reveries, in remorse, in times of passion, in surprises, in the instructions of dreams, wherein often we see ourselves in masquerade,—the droll disguises only magnifying and enhancing a real element, and forcing it on our distant notice,—we shall catch many hints that will broaden and lighten into knowledge of the secret of nature. All goes to show that the soul in man is not an organ, but animates and exercises all the organs; is not a function, like the power of memory, of calculation, of comparison, but uses these as hands and feet; is not a faculty, but a light; is not the intellect or the will, but the master of the intellect and the will; is the background of our being, in which they lie,—an immensity not possessed and that

cannot be possessed. From within or from behind, a light shines through us upon things, and makes us aware that we are nothing, but the light is all. A man is the façade of a temple wherein all wisdom and all good abide. What we commonly call man, the eating, drinking, planting, counting man, does not, as we know him, represent himself, but misrepresents himself. Him we do not respect, but the soul, whose organ he is, would he let it appear through his action, would make our knees bend. When it breathes through his intellect, it is genius; when it breathes through his will, it is virtue; when it flows through his affection, it is love. And the blindness of the intellect begins, when it would be something of itself. The weakness of the will begins when the individual would be something of himself. All reform aims, in some one particular, to let the soul have its way through us; in other words, to engage us to obey.

Of this pure nature every man is at some time sensible. Language cannot paint it with his colors. It is too subtile. It is undefinable, unmeasurable, but we know that it pervades and contains us. We know that all spiritual being is in man. A wise old proverb says, "God comes to see us without bell"; that is, as there is no screen or ceiling between our heads and the infinite heavens, so is there no bar or wall in the soul where man, the effect, ceases, and God, the cause, begins. The walls are taken away. We lie open on one side to the deeps of spiritual nature, to the attributes of God. Justice we see and know, Love, Freedom, Power. These natures no man ever got above, but they tower over us, and most in the moment when our interests tempt us to wound them.

The sovereignty of this nature whereof we speak is made known by its independency of those limitations which circumscribe us on every hand. The soul circumscribes all things. As I have said, it contradicts all experience. In like manner it abolishes time and space. The influence of the senses has, in most men, overpowered the mind to that degree, that the walls of time and space have come to look real and insurmountable; and to speak with levity of these limits is, in the world, the sign of insanity. Yet time and space are but inverse measures of the force of the soul. The spirit sports with time,—

> "Can crowd eternity into an hour,
> Or stretch an hour to eternity."

We are often made to feel that there is another youth and age than that which is measured from the year of our natural birth. Some thoughts always find us young, and keep us so. Such a thought is the love of the universal and eternal beauty. Every man parts from that contemplation with the feeling that it rather belongs to ages than to mortal life. The least activity of the intellectual powers redeems us in a degree from the conditions of time. In sickness, in languor, give us a strain of poetry, or a profound sentence, and we are refreshed; or produce a volume of Plato, or Shakspeare, or remind us of their names, and instantly we come into a feeling of longevity. See how the deep divine thought reduces centuries, and millenniums, and makes itself present through all ages. Is the teaching of Christ less effective now than it was when first his mouth was opened? The emphasis of facts and persons in my thought has nothing to

16. **"God comes . . ."**—Emerson found this quotation in a list of Spanish proverbs. See *Journals,* Vol. II, p. 480. 31-32. **"Can crowd . . ."**—From William Blake's "Auguries of Innocence."

do with time. And so, always, the soul's scale is one; the scale of the senses and the understanding is another. Before the revelations of the soul, Time, Space, and Nature shrink away. In common speech, we refer all things to time, as we habitually refer the immensely sundered stars to one concave sphere. And so we say that the Judgment is distant or near, that the Millennium approaches, that a day of certain political, moral, social reforms is at hand, and the like, when we mean, that, in the nature of things, one of the facts we contemplate is external and fugitive, and the other is permanent and connate with the soul. The things we now esteem fixed shall, one by one, detach themselves, like ripe fruit, from our experience, and fall. The wind shall blow them none knows whither. The landscape, the figures, Boston, London, are facts as fugitive as any institution past, or any whiff of mist or smoke, and so is society, and so is the world. The soul looketh steadily forwards, creating a world before her, leaving worlds behind her. She has no dates, nor rites, nor persons, nor specialties, nor men. The soul knows only the soul; the web of events is the flowing robe in which she is clothed.

After its own law and not by arithmetic is the rate of its progress to be computed. The soul's advances are not made by gradation, such as can be represented by motion in a straight line; but rather by ascension of state, such as can be represented by metamorphosis,—from the egg to the worm, from the worm to the fly. The growths of genius are of a certain *total* character, that does not advance the elect individual first over John, then Adam, then Richard, and give to each the pain of discovered inferiority, but by every throe of growth the man expands there where he works, passing, at each pulsation, classes, populations, of men. With each divine impulse the mind rends the thin rinds of the visible and finite, and comes out into eternity, and inspires and expires its air. It converses with truths that have always been spoken in the world, and becomes conscious of a closer sympathy with Zeno and Arrian, than with persons in the house.

This is the law of moral and of mental gain. The simple rise as by specific levity, not into a particular virtue, but into the region of all the virtues. They are in the spirit which contains them all. The soul requires purity, but purity is not it; requires justice, but justice is not that; requires beneficence, but is somewhat better; so that there is a kind of descent and accommodation felt when we leave speaking of moral nature to urge a virtue which it enjoins. To the well-born child, all the virtues are natural, and not painfully acquired. Speak to his heart, and the man becomes suddenly virtuous.

Within the same sentiment is the germ of intellectual growth, which obeys the same law. Those who are capable of humility, of justice, of love, of aspiration, stand already on a platform that commands the sciences and arts, speech and poetry, action and grace. For whoso dwells in this moral beatitude already anticipates those special powers which men prize so highly. The lover has no

5. **Millennium**—William Miller (1782-1849) was arousing great excitement in America as Emerson wrote by prophesying that the world would come to an end in 1843. 8. **connate**—born with. 28. **Zeno**—the Greek philosopher, founder of the Stoic school, supposed to have lived in the late fourth and early third centuries B C. 28. **Arrian**—(died 180 A D.) a pupil of Epictetus, whose notes are the main source of modern knowledge of Epictetus. 30-31. **specific levity**—suggested by the phrase "specific gravity" in physics.

talent, no skill, which passes for quite nothing with his enamored maiden, however little she may possess of related faculty; and the heart which abandons itself to the Supreme Mind finds itself related to all its works, and will travel a royal road to particular knowledges and powers. In ascending to this primary and aboriginal sentiment, we have come from our remote station on the circumference instantaneously to the centre of the world, where, as in the closet of God, we see causes, and anticipate the universe, which is but a slow effect.

One mode of the divine teaching is the incarnation of the spirit in a form,—in forms, like my own. I live in society; with persons who answer to thoughts in my own mind, or express a certain obedience to the great instincts to which I live. I see its presence to them. I am certified of a common nature; and these other souls, these separated selves, draw me as nothing else can. They stir in me the new emotions we call passion; of love, hatred, fear, admiration, pity; thence come conversation, competition, persuasion, cities, and war. Persons are supplementary to the primary teaching of the soul. In youth we are mad for persons. Childhood and youth see all the world in them. But the larger experience of man discovers the identical nature appearing through them all. Persons themselves acquaint us with the impersonal. In all conversation between two persons, tacit reference is made, as to a third party, to a common nature. That third party or common nature is not social; it is impersonal; is God. And so in groups where debate is earnest, and especially on high questions, the company become aware that the thought rises to an equal level in all bosoms, that all have a spiritual property in what was said, as well as the sayer. They all become wiser than they were. It arches over them like a temple, this unity of thought in which every heart beats with nobler sense of power and duty, and thinks and acts with unusual solemnity. All are conscious of attaining to a higher self-possession. It shines for all. There is a certain wisdom of humanity which is common to the greatest men with the lowest, and which our ordinary education often labors to silence and obstruct. The mind is one, and the best minds, who love truth for its own sake, think much less of property in truth. They accept it thankfully everywhere, and do not label or stamp it with any man's name, for it is theirs long beforehand, and from eternity. The learned and the studious of thought have no monopoly of wisdom. Their violence of direction in some degree disqualifies them to think truly. We owe many valuable observations to people who are not very acute or profound, and who say the thing without effort, which we want and have long been hunting in vain. The action of the soul is oftener in that which is felt and left unsaid, than in that which is said in any conversation. It broods over every society, and they unconsciously seek for it in each other. We know better than we do. We do not yet possess ourselves, and we know at the same time that we are much more. I feel the same truth how often in my trivial conversation with my neighbours, that somewhat higher in each of us overlooks this by-play, and Jove nods to Jove from behind each of us.

Men descend to meet. In their habitual and mean service to the world, for which they forsake their native nobleness, they resemble those Arabian sheiks,

5. **aboriginal**—in the sense of "from the beginning."

who dwell in mean houses, and affect an external poverty, to escape the rapacity of the Pacha, and reserve all their display of wealth for their interior and guarded retirements.

As it is present in all persons, so it is in every period of life. It is adult already in the infant man. In my dealing with my child, my Latin and Greek, my accomplishments and my money stead me nothing; but as much soul as I have avails. If I am wilful, he sets his will against mine, one for one, and leaves me, if I please, the degradation of beating him by my superiority of strength. But if I renounce my will, and act for the soul, setting that up as umpire between us two, out of his young eyes looks the same soul; he reveres and loves with me.

The soul is the perceiver and revealer of truth. We know truth when we see it, let skeptic and scoffer say what they choose. Foolish people ask you, when you have spoken what they do not wish to hear, 'How do you know it is truth, and not an error of your own?' We know truth when we see it, from opinion, as we know when we are awake that we are awake. It was a grand sentence of Emanuel Swedenborg, which would alone indicate the greatness of that man's perception,—"It is no proof of a man's understanding to be able to affirm whatever he pleases; but to be able to discern that what is true is true, and that what is false is false, this is the mark and character of intelligence." In the book I read, the good thought returns to me, as every truth will, the image of the whole soul. To the bad thought which I find in it, the same soul becomes a discerning, separating sword, and lops it away. We are wiser than we know. If we will not interfere with our thought, but will act entirely, or see how the thing stands in God, we know the particular thing, and every thing, and every man. For the Maker of all things and all persons stands behind us, and casts his dread omniscience through us over things.

But beyond this recognition of its own in particular passages of the individual's experience, it also reveals truth. And here we should seek to reinforce ourselves by its very presence, and to speak with a worthier, loftier strain of that advent. For the soul's communication of truth is the highest event in nature, since it then does not give somewhat from itself, but it gives itself, or passes into and becomes that man whom it enlightens; or, in proportion to that truth he receives, it takes him to itself.

We distinguish the announcements of the soul, its manifestations of its own nature, by the term *Revelation*. These are always attended by the emotion of the sublime. For this communication is an influx of the Divine mind into our mind. It is an ebb of the individual rivulet before the flowing surges of the sea of life. Every distinct apprehension of this central commandment agitates men with awe and delight. A thrill passes through all men at the reception of new truth, or at the performance of a great action, which comes out of the heart of nature. In these communications, the power to see is not separated from the will to do, but the insight proceeds from obedience, and the obedience proceeds from a joyful perception. Every moment when the individual feels himself invaded by it is memorable. By the necessity of our constitution, a certain en-

2. Pacha—Turkish governor. When Emerson wrote, Arabia was part of the Turkish Empire. **17. Swedenborg**—See note 14-15, p. 407. **31. advent**—coming; from ecclesiastical terminology.

thusiasm attends the individual's consciousness of that divine presence. The character and duration of this enthusiasm varies with the state of the individual, from an ecstasy and trance and prophetic inspiration,—which is its rarer appearance,—to the faintest glow of virtuous emotion, in which form it warms, like our household fires, all the families and associations of men, and makes society possible. A certain tendency to insanity has always attended the opening of the religious sense in men, as if they had been "blasted with excess of light." The trances of Socrates, the "union" of Plotinus, the vision of Porphyry, the conversion of Paul, the aurora of Behmen, the convulsions of George Fox and his Quakers, the illumination of Swedenborg, are of this kind. What was in the case of these remarkable persons a ravishment, has, in innumerable instances in common life, been exhibited in less striking manner. Everywhere the history of religion betrays a tendency to enthusiasm. The rapture of the Moravian and Quietist; the opening of the eternal sense of the Word, in the language of the New Jerusalem Church; the *revival* of the Calvinistic churches; the *experiences* of the Methodists, are varying forms of that shudder of awe and delight with which the individual soul always mingles with the universal soul.

The nature of these revelations is the same; they are perceptions of the absolute law. They are solutions of the soul's own questions. They do not answer the questions which the understanding asks. The soul answers never by words, but by the thing itself that is inquired after.

Revelation is the disclosure of the soul. The popular notion of a revelation is, that it is a telling of fortunes. In past oracles of the soul, the understanding seeks to find answers to sensual questions, and undertakes to tell from God how long men shall exist, what their hands shall do, and who shall be their company, adding names, and dates, and places. But we must pick no locks. We must check this low curiosity. An answer in words is delusive; it is really no answer to the questions you ask. Do not require a description of the countries towards which you sail. The description does not describe them to you, and to-morrow you arrive there, and know them by inhabiting them. Men ask concerning the immortality of the soul, the employments of heaven, the state of the sinner, and so forth. They even dream that Jesus has left replies to precisely these interrogatories. Never a moment did that sublime spirit speak in their *patois*. To truth, justice, love, the attributes of the soul, the idea of im-

7. **"blasted . . . light"**—from "The Progress of Poetry" by Thomas Gray, line 101. **8. trances of Socrates**—during which Socrates heard the divine voice speaking to him. **8. "union" of Plotinus**—Plotinus (about 205-270), the most important of the Neo-Platonic philosophers, who taught that the union of the soul with God was through intellectual virtue and purity. **8. vision of Porphyry**—Porphyry (233-about 304), a Greek philosopher and student of Plotinus. **9. conversion of Paul**—*Cf.* Acts 9:1-18; Gal. 1:15-16. **9. aurora of Behmen**—Jakob Boehme (1575-1624), German mystic; the reference is to his book *Aurora, oder die Morgenröte im Aufgang*, the mysticism of which was denounced as heretical. **9. George Fox**—George Fox (1624-1691) founder of the English Quakers, whose mystic illumination was expressed in tremblings and shakings. **14. Moravian**—a sect founded originally in Bohemia, whose tenets stressed the peace of the Christian soul. **14. Quietist**—a seventeenth-century religious movement especially prominent in Latin Catholicism, whose theory was that the soul should passively await the mystic operation of revelation. **15. New Jerusalem Church**—the church of the followers of Swedenborg. **16. experiences**—The Methodists originally laid stress upon the "experience" of religious conversion, and the communication of that experience for the benefit of others. **35. patois**—dialect.

mutableness is essentially associated. Jesus, living in these moral sentiments, heedless of sensual fortunes, heeding only the manifestations of these, never made the separation of the idea of duration from the essence of these attributes, nor uttered a syllable concerning the duration of the soul. It was left to his disciples to sever duration from the moral elements, and to teach the immortality of the soul as a doctrine, and maintain it by evidences. The moment the doctrine of the immortality is separately taught, man is already fallen. In the flowing of love, in the adoration of humility, there is no question of continuance. No inspired man ever asks this question, or condescends to these evidences. For the soul is true to itself, and the man in whom it is shed abroad cannot wander from the present, which is infinite, to a future which would be finite.

These questions which we lust to ask about the future are a confession of sin. God has no answer for them. No answer in words can reply to a question of things. It is not in an arbitrary "decree of God," but in the nature of man, that a veil shuts down on the facts of to-morrow; for the soul will not have us read any other cipher than that of cause and effect. By this veil, which curtains events, it instructs the children of men to live in to-day. The only mode of obtaining an answer to these questions of the senses is to forego all low curiosity, and, accepting the tide of being which floats us into the secret of nature, work and live, work and live, and all unawares the advancing soul has built and forged for itself a new condition, and the question and the answer are one.

By the same fire, vital, consecrating, celestial, which burns until it shall dissolve all things into the waves and surges of an ocean of light, we see and know each other, and what spirit each is of. Who can tell the grounds of his knowledge of the character of the several individuals in his circle of friends? No man. Yet their acts and words do not disappoint him. In that man, though he knew no ill of him, he put no trust. In that other, though they had seldom met, authentic signs had yet passed, to signify that he might be trusted as one who had an interest in his own character. We know each other very well,—which of us has been just to himself, and whether that which we teach or behold is only an aspiration, or is our honest effort also.

We are all discerners of spirits. That diagnosis lies aloft in our life or unconscious power. The intercourse of society,—its trade, its religion, its friendships, its quarrels,—is one wide, judicial investigation of character. In full court, or in small committee, or confronted face to face, accuser and accused, men offer themselves to be judged. Against their will they exhibit those decisive trifles by which character is read. But who judges? and what? Not our understanding. We do not read them by learning or craft. No; the wisdom of the wise man consists herein, that he does not judge them; he lets them judge themselves, and merely reads and records their own verdict.

By virtue of this inevitable nature, private will is overpowered, and, maugre our efforts or our imperfections, your genius will speak from you, and mine from me. That which we are, we shall teach, not voluntarily but involuntarily. Thoughts come into our minds by avenues which we never left open, and thoughts go out of our minds through avenues which we never voluntarily

39. craft—skill. **42. maugre**—in spite of.

opened. Character teaches over our head. The infallible index of true progress is found in the tone the man takes. Neither his age, nor his breeding, nor company, nor books, nor actions, nor talents, nor all together, can hinder him from being deferential to a higher spirit than his own. If he have not found his home in God, his manners, his forms of speech, the turn of his sentences, the build, shall I say, of all his opinions will involuntarily confess it, let him brave it out how he will. If he have found his centre, the Deity will shine through him, through all the disguises of ignorance, of ungenial temperament, of unfavorable circumstance. The tone of seeking is one, and the tone of having is another.

The great distinction between teachers sacred or literary,—between poets like Herbert, and poets like Pope,—between philosophers like Spinoza, Kant, and Coleridge, and philosophers like Locke, Paley, Mackintosh, and Stewart,—between men of the world who are reckoned accomplished talkers, and here and there a fervent mystic, prophesying, half insane under the infinitude of his thought,—is that one class speak *from within,* or from experience, as parties and possessors of the fact; and the other class, *from without,* as spectators merely, or perhaps as acquainted with the fact on the evidence of third persons. It is of no use to preach to me from without. I can do that too easily myself. Jesus speaks always from within, and in a degree that transcends all others. In that is the miracle. I believe beforehand that it ought so to be. All men stand continually in the expectation of the appearance of such a teacher. But if a man do not speak from within the veil, where the word is one with that it tells of, let him lowly confess it.

The same Omniscience flows into the intellect, and makes what we call genius. Much of the wisdom of the world is not wisdom, and the most illuminated class of men are no doubt superior to literary fame, and are not writers. Among the multitude of scholars and authors, we feel no hallowing presence; we are sensible of a knack and skill rather than of inspiration; they have a light, and know not whence it comes, and call it their own; their talent is some exaggerated faculty, some overgrown member, so that their strength is a disease. In these instances the intellectual gifts do not make the impression of virtue, but almost of vice; and we feel that a man's talents stand in the way of his advancement in truth. But genius is religious. It is a larger imbibing of the common heart. It is not anomalous, but more like and not less like other men. There is, in all great poets, a wisdom of humanity which is superior to any talents they exercise. The author, the wit, the partisan, the fine gentleman, does not take place of the man. Humanity shines in Homer, in

12. **Herbert**—George Herbert (1593-1633), English writer of mystic religious verse. 12. **Pope**—Alexander Pope (1688-1744), here referred to because of the mundane tone of his verse satires. 12. **Spinoza**—Baruch Spinoza (1632-1677), a Dutch Jew, one of the great philosophical leaders of pantheism, who taught that God is the substance of all things. 12. **Kant**—Immanuel Kant (1724-1804), founder of transcendental metaphysics. 13. **Coleridge**—Samuel Taylor Coleridge (1772-1834), who, as a philosopher, tried to equate transcendental idealism and Christian theology. 13. **Locke**—See note 11, p. 428. 13. **Paley**—William Paley (1743-1805), English divine, whose *Natural Theology* sought to prove the existence of God from the evidences of design in the world. 13. **Mackintosh**—Sir James Mackintosh (1765-1832), Scotch philosopher, who taught a rationalistic metaphysics. 13. **Stewart**—Dugald Stewart (1753-1828), Scotch philosopher, and one of the "Common-Sense" school, who accepted the existence of both mind and matter as they are perceived in ordinary life.

Chaucer, in Spenser, in Shakspeare, in Milton. They are content with truth. They use the positive degree. They seem frigid and phlegmatic to those who have been spiced with the frantic passion and violent coloring of inferior, but popular writers. For they are poets by the free course which they allow to the informing soul, which through their eyes beholds again, and blesses the things which it hath made. The soul is superior to its knowledge; wiser than any of its works. The great poet makes us feel our own wealth, and then we think less of his compositions. His best communication to our mind is to teach us to despise all he has done. Shakspeare carries us to such a lofty strain of intelligent activity, as to suggest a wealth which beggars his own; and we then feel that the splendid works which he has created, and which in other hours we extol as a sort of self-existent poetry, take no stronger hold of real nature than the shadow of a passing traveller on the rock. The inspiration which uttered itself in Hamlet and Lear could utter things as good from day to day for ever. Why, then, should I make account of Hamlet and Lear, as if we had not the soul from which they fell as syllables from the tongue?

This energy does not descend into individual life on any other condition than entire possession. It comes to the lowly and simple; it comes to whomsoever will put off what is foreign and proud; it comes as insight; it comes as serenity and grandeur. When we see those whom it inhabits, we are apprised of new degrees of greatness. From that inspiration the man comes back with a changed tone. He does not talk with men with an eye to their opinion. He tries them. It requires of us to be plain and true. The vain traveller attempts to embellish his life by quoting my lord, and the prince, and the countess, who thus said or did to *him*. The ambitious vulgar show you their spoons, and brooches, and rings, and preserve their cards and compliments. The more cultivated, in their account of their own experience, cull out the pleasing, poetic circumstance,—the visit to Rome, the man of genius they saw, the brilliant friend they know; still further on, perhaps, the gorgeous landscape, the mountain lights, the mountain thoughts, they enjoyed yesterday,—and so seek to throw a romantic color over their life. But the soul that ascends to worship the great God is plain and true; has no rose-color, no fine friends, no chivalry, no adventures; does not want admiration; dwells in the hour that now is, in the earnest experience of the common day,—by reason of the present moment and the mere trifle having become porous to thought, and bibulous of the sea of light.

Converse with a mind that is grandly simple, and literature looks like word-catching. The simplest utterances are worthiest to be written, yet are they so cheap, and so things of course, that, in the infinite riches of the soul, it is like gathering a few pebbles off the ground, or bottling a little air in a phial, when the whole earth and the whole atmosphere are ours. Nothing can pass there, or make you one of the circle, but the casting aside your trappings, and dealing man to man in naked truth, plain confession, and omniscient affirmation.

Souls such as these treat you as gods would; walk as gods in the earth, accepting without any admiration your wit, your bounty, your virtue even,— say rather your act of duty, for your virtue they own as their proper blood, royal as themselves, and over-royal, and the father of the gods. But what

rebuke their plain fraternal bearing casts on the mutual flattery with which authors solace each other and wound themselves! These flatter not. I do not wonder that these men go to see Cromwell, and Christina, and Charles the Second, and James the First, and the Grand Turk. For they are, in their own elevation, the fellows of kings, and must feel the servile tone of conversation in the world. They must always be a godsend to princes, for they confront them, a king to a king, without ducking or concession, and give a high nature the refreshment and satisfaction of resistance, of plain humanity, of even companionship, and of new ideas. They leave them wiser and superior men. Souls like these make us feel that sincerity is more excellent than flattery. Deal so plainly with man and woman, as to constrain the utmost sincerity, and destroy all hope of trifling with you. It is the highest compliment you can pay. Their "highest praising," said Milton, "is not flattery, and their plainest advice is a kind of praising."

Ineffable is the union of man and God in every act of the soul. The simplest person, who in his integrity worships God, becomes God; yet for ever and ever the influx of this better and universal self is new and unsearchable. It inspires awe and astonishment. How dear, how soothing to man, arises the idea of God, peopling the lonely place, effacing the scars of our mistakes and disappointments! When we have broken our god of tradition, and ceased from our god of rhetoric, then may God fire the heart with his presence. It is the doubling of the heart itself, nay, the infinite enlargement of the heart with a power of growth to a new infinity on every side. It inspires in man an infallible trust. He has not the conviction, but the sight, that the best is the true, and may in that thought easily dismiss all particular uncertainties and fears, and adjourn to the sure revelation of time, the solution of his private riddles. He is sure that his welfare is dear to the heart of being. In the presence of law to his mind, he is overflowed with a reliance so universal, that it sweeps away all cherished hopes and the most stable projects of mortal condition in its flood. He believes that he cannot escape from his good. The things that are really for thee gravitate to thee. You are running to seek your friend. Let your feet run, but your mind need not. If you do not find him, will you not acquiesce that it is best you should not find him? for there is a power, which, as it is in you, is in him also, and could therefore very well bring you together, if it were for the best. You are preparing with eagerness to go and render a service to which your talent and your taste invite you, the love of men and the hope of fame. Has it not occurred to you, that you have no right to go, unless you are equally willing to be prevented from going? O, believe, as thou livest, that every sound that is spoken over the round world, which thou oughtest to hear, will vibrate on thine ear! Every proverb, every book, every byword that belongs to thee for aid or comfort, shall surely come home through open or winding passages. Every friend whom not thy fantastic will, but the great and tender heart in thee craveth, shall lock thee in his embrace. And

3-4. **Cromwell . . . Turk**—The references are all clear except perhaps for two. Queen Christina of Sweden (1626-1689), daughter of Gustavus Adolphus, was notable for her patronage of men of learning and for her eccentricities. The Grand Turk refers to the Sultan of Turkey.
13. **"highest praising"**—from the fourth paragraph of Milton's *Areopagitica*.

this, because the heart in thee is the heart of all; not a valve, not a wall, not an intersection is there anywhere in nature, but one blood rolls uninterruptedly an endless circulation through all men, as the water of the globe is all one sea, and, truly seen, its tide is one.

Let man, then, learn the revelation of all nature and all thought to his heart; this, namely; that the Highest dwells with him; that the sources of nature are in his own mind, if the sentiment of duty is there. But if he would know what the great God speaketh, he must 'go into his closet and shut the door,' as Jesus said. God will not make himself manifest to cowards. He must greatly listen to himself, withdrawing himself from all the accents of other men's devotion. Even their prayers are hurtful to him, until he have made his own. Our religion vulgarly stands on numbers of believers. Whenever the appeal is made—no matter how indirectly—to numbers, proclamation is then and there made, that religion is not. He that finds God a sweet, enveloping thought to him never counts his company. When I sit in that presence, who shall dare to come in? When I rest in perfect humility, when I burn with pure love, what can Calvin or Swedenborg say?

It makes no difference whether the appeal is to numbers or to one. The faith that stands on authority is not faith. The reliance on authority measures the decline of religion, the withdrawal of the soul. The position men have given to Jesus, now for many centuries of history, is a position of authority. It characterizes themselves. It cannot alter the eternal facts. Great is the soul, and plain. It is no flatterer, it is no follower; it never appeals from itself. It believes in itself. Before the immense possibilities of man, all mere experience, all past biography, however spotless and sainted, shrinks away. Before that heaven which our presentiments foreshow us, we cannot easily praise any form of life we have seen or read of. We not only affirm that we have few great men, but, absolutely speaking, that we have none; that we have no history, no record of any character or mode of living, that entirely contents us. The saints and demigods whom history worships we are constrained to accept with a grain of allowance. Though in our lonely hours we draw a new strength out of their memory, yet, pressed on our attention, as they are by the thoughtless and customary, they fatigue and invade. The soul gives itself, alone, original, and pure, to the Lonely, Original, and Pure, who, on that condition, gladly inhabits, leads, and speaks through it. Then is it glad, young, and nimble. It is not wise, but it sees through all things. It is not called religious, but it is innocent. It calls the light its own, and feels that the grass grows and the stone falls by a law inferior to, and dependent on, its nature. Behold, it saith, I am born into the great, the universal mind. I, the imperfect, adore my own Perfect. I am somehow receptive of the great soul, and thereby I do overlook the sun and the stars, and feel them to be the fair accidents and effects which change and pass. More and more the surges of everlasting nature enter into me, and I become public and human in my regards and actions. So come I to live in thoughts, and act with energies, which are immortal. Thus revering the soul, and learning, as the ancient said, that "its beauty is immense," man

8. **'go . . . door'**—*Cf.* Matt. 6:6. 17. **Calvin**—John Calvin (1509-1564), Swiss theologian, the founder of Presbyterian theology.

will come to see that the world is the perennial miracle which the soul worketh, and be less astonished at particular wonders; he will learn that there is no profane history; that all history is sacred; that the universe is represented in an atom, in a moment of time. He will weave no longer a spotted life of shreds and patches, but he will live with a divine unity. He will cease from what is base and frivolous in his life, and be content with all places and with any service he can render. He will calmly front the morrow in the negligency of that trust which carries God with it and so hath already the whole future in the bottom of the heart.

THE POET

"The Poet" first appeared in the second series of *Essays*, published in 1844, of which there was a second edition in 1850. The present text is from this second edition. The importance of the essay lies in the theoretical relation between art and the transcendental philosophy which it embodies. As elsewhere is the case with Emerson's essays, filaments run backward and forward between this essay and the poems, the journals, and other prose compositions.

Emerson preceded the essay by two poetical mottoes, as follows:

A moody child and wildly wise
Pursued the game with joyful eyes,
Which chose, like meteors, their way,
And rived the dark with private ray:
They overleapt the horizon's edge,
Searched with Apollo's privilege;
Through man, and woman, and sea, and star,
Saw the dance of nature forward far;
Through worlds, and races, and terms, and times,
Saw musical order, and pairing rhymes.

Olympian bards who sung
Divine ideas below,
Which always find us young,
And always keep us so.

THOSE who are esteemed umpires of taste, are often persons who have acquired some knowledge of admired pictures of sculptures, and have an inclination for whatever is elegant; but if you inquire whether they are beautiful souls, and whether their own acts are like fair pictures, you learn that they are selfish and sensual. Their cultivation is local, as if you should rub a log of dry wood in one spot to produce fire, all the rest remaining cold. Their knowledge of the fine arts is some study of rules and particulars, or some limited judgment of color or form, which is exercised for amusement or for show. It is a proof of the shallowness of the doctrine of beauty, as it lies in the minds of our amateurs, that men seem to have lost the perception of the instant

19. **amateurs**—connoisseurs. 19. **instant**—immediate.

dependence of form upon soul. There is no doctrine of forms in our philosophy. We were put into our bodies, as fire is put into a pan, to be carried about; but there is no accurate adjustment between the spirit and the organ, much less is the latter the germination of the former. So in regard to other forms, the intellectual men do not believe in any essential dependence of the material world on thought and volition. Theologians think it a pretty air-castle to talk of the spiritual meaning of a ship or a cloud, of a city or a contract, but they prefer to come again to the solid ground of historical evidence; and even the poets are contented with a civil and conformed manner of living, and to write poems from the fancy, at a safe distance from their own experience. But the highest minds of the world have never ceased to explore the double meaning, or, shall I say, the quadruple, or the centuple, or much more manifold meaning, of every sensuous fact: Orpheus, Empedocles, Heraclitus, Plato, Plutarch, Dante, Swedenborg, and the masters of sculpture, picture, and poetry. For we are not pans and barrows, nor even porters of the fire and torch-bearers, but children of the fire, made of it, and only the same divinity transmuted, and at two or three removes, when we know least about it. And this hidden truth, that the fountains whence all this river of Time, and its creatures, floweth, are intrinsically ideal and beautiful, draws us to the consideration of the nature and functions of the Poet, or the man of Beauty, to the means and materials he uses, and to the general aspect of the art in the present time.

The breadth of the problem is great, for the poet is representative. He stands among partial men for the complete man, and apprises us not of his wealth, but of the commonwealth. The young man reveres men of genius, because, to speak truly, they are more himself than he is. They receive of the soul as he also receives, but they more. Nature enhances her beauty, to the eye of loving men, from their belief that the poet is beholding her shows at the same time. He is isolated among his contemporaries, by truth and by his art, but with this consolation in his pursuits, that they will draw all men sooner or later. For all men live by truth, and stand in need of expression. In love, in art, in avarice, in politics, in labor, in games, we study to utter our painful secret. The man is only half himself, the other half is his expression.

Notwithstanding this necessity to be published, adequate expression is rare, I know not how it is that we need an interpreter; but the great majority of men seem to be minors, who have not yet come into possession of their own, or mutes, who cannot report the conversation they have had with nature. There is no man who does not anticipate a super-sensual utility in the sun, and stars, earth, and water. These stand and wait to render him a peculiar service. But there is some obstruction, or some excess of phlegm in our constitution, which does not suffer them to yield the due effect. Too feeble fall the im-

2. **fire . . . pan**—Before matches became cheap and common, it was customary in New England, in case the fire went out, to fetch coals in a pan from a neighbor's to rekindle the fire. 13. **Orpheus**—in Greek legend the inspired poet and singer who moved rocks and trees with his music. 13. **Empedocles**—fifth-century Greek philosopher. *Cf.* Matthew Arnold's poem, *Empedocles on Etna.* 13. **Heraclitus**—Heraclitus (540-475 B.C.), Greek philosopher, and one of the founders of metaphysical inquiry. The other references are clear except possibly that to Plutarch (46-120 A.D.), the "father" of biography. 15-16. **children of the fire**—an oblique reference to the Greek myth that makes Prometheus bring down fire from heaven and so rescue men from their brutish state. 21. **the art**—"his art" in the Concord edition.

pressions of nature on us to make us artists. Every touch should thrill. Every man should be so much an artist, that he could report in conversation what had befallen him. Yet, in our experience, the rays or appulses have sufficient force to arrive at the senses, but not enough to reach the quick, and compel the reproduction of themselves in speech. The poet is the person in whom these powers are in balance, the man without impediment, who sees and handles that which others dream of, traverses the whole scale of experience, and is representative of man, in virtue of being the largest power to receive and to impart.

For the Universe has three children, born at one time, which reappear, under different names, in every system of thought, whether they be called cause, operation, and effect; or, more poetically, Jove, Pluto, Neptune; or, theologically, the Father, the Spirit, and the Son; but which we will call here the Knower, the Doer, and the Sayer. These stand respectively for the love of truth, for the love of good, and for the love of beauty. These three are equal. Each is that which he is essentially, so that he cannot be surmounted or analyzed, and each of these three has the power of the others latent in him, and his own patent.

The poet is the sayer, the namer, and represents beauty. He is a sovereign, and stands on the centre. For the world is not painted or adorned, but is from the beginning beautiful; and God has not made some beautiful things, but Beauty is the creator of the universe. Therefore the poet is not any permissive potentate, but is emperor in his own right. Criticism is infested with a cant of materialism, which assumes that manual skill and activity is the first merit of all men, and disparages such as say and do not, overlooking the fact, that some men, namely, poets, are natural sayers, sent into the world to the end of expression, and confounds them with those whose province is action, but who quit it to imitate the sayers. But Homer's words are as costly and admirable to Homer, as Agamemnon's victories are to Agamemnon. The poet does not wait for the hero or the sage, but, as they act and think primarily, so he writes primarily what will and must be spoken, reckoning the others, though primaries also, yet, in respect to him, secondaries and servants; as sitters or models in the studio of a painter, or as assistants who bring building materials to an architect.

For poetry was all written before time was, and whenever we are so finely organized that we can penetrate into that region where the air is music, we hear those primal warblings, and attempt to write them down, but we lose ever and anon a word, or a verse, and substitute something of our own, and thus miswrite the poem. The men of more delicate ear write down these cadences more faithfully, and these transcripts, though imperfect, become the songs of the nations. For nature is as truly beautiful as it is good, or as it is reasonable, and must as much appear, as it must be done, or be known. Words and deeds are quite indifferent modes of the divine energy. Words are also actions, and actions are a kind of words.

3. **appulses**—impulses from without. 11. **Jove . . . Neptune**—The identification of the classic deities in question with the Christian Trinity seems to be peculiar to Emerson, and somewhat fantastic. 21. **permissive**—optional. 28. **Homer . . . Agamemnon**—a variant of a phrase as old as Horace, who said that, though brave men were living before Agamemnon, Homer preserved the fame of the latter.

The sign and credentials of the poet are, that he announces that which no man foretold. He is the true and only doctor; he knows and tells; he is the only teller of news, for he was present and privy to the appearance which he describes. He is a beholder of ideas, and an utterer of the necessary and causal. For we do not speak now of men of poetical talents, or of industry and skill in metre, but of the true poet. I took part in a conversation, the other day, concerning a recent writer of lyrics, a man of subtle mind, whose head appeared to be a music-box of delicate tunes and rhythms, and whose skill, and command of language, we could not sufficiently praise. But when the question arose, whether he was not only a lyrist, but a poet, we were obliged to confess that he is plainly a contemporary, not an eternal man. He does not stand out of our low limitations, like a Chimborazo under the line, running up from a torrid base through all the climates of the globe, with belts of the herbage of every latitude on its high and mottled sides; but this genius is the landscape-garden of a modern house, adorned with fountains and statues, with well-bred men and women standing and sitting in the walks and terraces. We hear, through all the varied music, the ground-tone of conventional life. Our poets are men of talents who sing, and not the children of music. The argument is secondary, the finish of the verses is primary.

For it is not metres, but a metre-making argument, that makes a poem,— a thought so passionate and alive, that, like the spirit of a plant or an animal, it has an architecture of its own, and adorns nature with a new thing. The thought and the form are equal in the order of time, but in the order of genesis the thought is prior to the form. The poet has a new thought: he has a whole new experience to unfold; he will tell us how it was with him, and all men will be the richer in his fortune. For the experience of each new age requires a new confession, and the world seems always waiting for its poet. I remember, when I was young, how much I was moved one morning by tidings that genius had appeared in a youth who sat near me at table. He had left his work, and gone rambling none knew whither, and had written hundreds of lines, but could not tell whether that which was in him was therein told: he could tell nothing but that all was changed,—man, beast, heaven, earth, and sea. How gladly we listened! how credulous! Society seemed to be compromised. We sat in the aurora of a sunrise which was to put out all the stars. Boston seemed to be at twice the distance it had the night before, or was much farther than that. Rome,—what was Rome? Plutarch and Shakspeare were in the yellow leaf, and Homer no more should be heard of. It is much to know that poetry has been written this very day, under this very roof, by your side. What! that wonderful spirit has not expired! these stony moments are still sparkling and animated! I had fancied that the oracles were all silent, and nature had spent her fires; and behold! all night, from every pore, these fine auroras have been streaming. Every one has some interest in the advent

2. **doctor**—*doctus*, learned, or expert, man. 12. **Chimborazo under the line**—one of the highest peaks in the Andes, near the equator (line), and long supposed to be the highest mountain in the world. It came into literary prominence through the explorations and reports of Humboldt. 34. **aurora**—dawn, albeit in line 42 the same word seems to be used with reference to the aurora borealis or northern lights. 37. **yellow leaf**—*Cf. Macbeth*, Act V, scene 3, line 23.

of the poet, and no one knows how much it may concern him. We know that the secret of the world is profound, but who or what shall be our interpreter, we know not. A mountain ramble, a new style of face, a new person, may put the key into our hands. Of course, the value of genius to us is in the veracity of its report. Talent may frolic and juggle; genius realizes and adds. Mankind, in good earnest, have availed so far in understanding themselves and their work, that the foremost watchman on the peak announces his news. It is the truest word ever spoken, and the phrase will be the fittest, most musical, and the unerring voice of the world for that time.

All that we call sacred history attests that the birth of a poet is the principal event in chronology. Man, never so often deceived, still watches for the arrival of a brother who can hold him steady to a truth, until he has made it his own. With what joy I begin to read a poem, which I confide in as an inspiration! And now my chains are to be broken; I shall mount above these clouds and opaque airs in which I live,—opaque, though they seem transparent,—and from the heaven of truth I shall see and comprehend my relations. That will reconcile me to life, and renovate nature, to see trifles animated by a tendency, and to know what I am doing. Life will no more be a noise; now I shall see men and women, and know the signs by which they may be discerned from fools and satans. This day shall be better than my birth-day: then I became an animal: now I am invited into the science of the real. Such is the hope, but the fruition is postponed. Oftener it falls, that this winged man, who will carry me into the heaven, whirls me into mists, then leaps and frisks about with me as it were from cloud to cloud, still affirming that he is bound heavenward; and I, being myself a novice, am slow in perceiving that he does not know the way into the heavens, and is merely bent that I should admire his skill to rise, like a fowl or a flying fish, a little way from the ground or the water; but the all-piercing, all-feeding, and ocular air of heaven, that man shall never inhabit. I tumble down again soon into my old nooks, and lead the life of exaggerations as before, and have lost my faith in the possibility of any guide who can lead me thither where I would be.

But, leaving these victims of vanity, let us, with new hope, observe how nature, by worthier impulses, has insured the poet's fidelity to his office of announcement and affirming, namely, by the beauty of things, which becomes a new and higher beauty, when expressed. Nature offers all her creatures to him as a picture-language. Being used as a type, a second wonderful value appears in the object, far better than its old value, as the carpenter's stretched cord, if you hold your ear close enough, is musical in the breeze. "Things more excellent than every image," says Jamblichus, "are expressed through images." Things admit of being used as symbols, because nature is a symbol, in the whole, and in every part. Every line we can draw in the sand, has expression; and

6. availed—The Concord edition reads "gone." **17. trifles . . . tendency**—to see the eternal purposes underlying phenomenal events. **20. satans**—that is, fallen beings. **21. science**—knowledge. **28. ocular**—visible. **35. Nature**—*Cf. Nature*, p. 403. **37-38. carpenter's stretched cord**—A chalked cord is used by carpenters to mark a straight line. It is stretched taut and then snapped against the plank to be marked. **39. Jamblichus**—Iamblichus (died 330?), a Syrian philosopher, and one of the most extreme of the Neo-Platonists.

there is no body without its spirit or genius. All form is an effect of character; all condition, of the quality of the life; all harmony, of health; (and, for this reason, a perception of beauty should be sympathetic, or proper only to the good.) The beautiful rests on the foundations of the necessary. The soul makes the body, as the wise Spenser teaches:

> "So every spirit, as it is most pure,
> And hath in it the more of heavenly light,
> So it the fairer body doth procure
> To habit in, and it more fairly dight,
> With cheerful grace and amiable sight.
> For, of the soul, the body form doth take,
> For soul is form, and doth the body make."

Here we find ourselves, suddenly, not in a critical speculation, but in a holy place, and should go very warily and reverently. We stand before the secret of the world, there where Being passes into Appearance, and Unity into Variety.

The Universe is the externization of the soul. Wherever the life is, that bursts into appearance around it. Our science is sensual, and therefore superficial. The earth and the heavenly bodies, physics, and chemistry, we sensually treat, as if they were self-existent; but these are the retinue of that Being we have. "The mighty heaven," said Proclus, "exhibits, in its transfigurations, clear images of the splendor of intellectual perceptions; being moved in conjunction with the unapparent periods of intellectual natures." Therefore, science always goes abreast with the just elevation of the man, keeping step with religion and metaphysics; or, the state of science is an index of our self-knowledge. Since everything in nature answers to a moral power, if any phenomenon remains brute and dark, it is because the corresponding faculty in the observer is not yet active.

No wonder, then, if these waters be so deep, that we hover over them with a religious regard. The beauty of the fable proves the importance of the sense; to the poet, and to all others; or, if you please, every man is so far a poet as to be susceptible of these enchantments of nature; for all men have the thoughts whereof the universe is the celebration. I find that the fascination resides in the symbol. Who loves nature? Who does not? Is it only poets, and men of leisure and cultivation, who live with her? No; but also hunters, farmers, grooms, and butchers, though they express their affection in their choice of life, and not in their choice of words. The writer wonders what the coachman or the hunter values in riding, in horses, and dogs. It is not superficial qualities. When you talk with him, he holds these at as slight a rate as you. His worship is sympathetic; he has no definitions, but he is commanded in nature, by the living power which he feels to be there present. No imitation, or playing of these things, would content him; he loves the earnest of the north wind, of rain,

1. **effect**—The Concord edition reads "effort." **6-12. "So . . . make"**—from "An Hymne in Honour of Beautie" by Edmund Spenser, lines 127-33. **18. sensual**—sensory. **21. Proclus**—a Greek philosopher (410-485), a disciple of Neo-Platonism. **30. fable**—that is, poetical subject. **40. is sympathetic**—that is, is due to a secret sympathy between himself and nature. **42. earnest**—pledge.

of stone, and wood, and iron. A beauty not explicable is dearer than a beauty which we can see to the end of. It is nature the symbol, nature certifying the supernatural, body overflowed by life, which he worships, with coarse, but sincere rites.

The inwardness and mystery of this attachment drives men of every class to the use of emblems. The schools of poets, and philosophers, are not more intoxicated with their symbols, than the populace with theirs. In our political parties, compute the power of badges and emblems. See the great ball which they roll from Baltimore to Bunker Hill! In the political processions, Lowell goes in a loom, and Lynn in a shoe, and Salem in a ship. Witness the cider-barrel, the log-cabin, the hickory-stick, the palmetto, and all the cognizances of party. See the power of national emblems. Some stars, lilies, leopards, a crescent, a lion, an eagle, or other figure, which came into credit God knows how, on an old rag of bunting, blowing in the wind, on a fort, at the ends of the earth, shall make the blood tingle under the rudest, or the most conventional exterior. The people fancy they hate poetry, and they are all poets and mystics!

Beyond this universality of the symbolic language, we are apprised of the divineness of this superior use of things, whereby the world is a temple whose walls are covered with emblems, pictures, and commandments of the Deity, in this, that there is no fact in nature which does not carry the whole sense of nature; and the distinctions which we make in events, and in affairs, of low and high, honest and base, disappear when nature is used as a symbol. Thought makes everything fit for use. The vocabulary of an omniscient man would embrace words and images excluded from polite conversation. What would be base, or even obscene, to the obscene, becomes illustrious, spoken in a new connection of thought. The piety of the Hebrew prophets purges their grossness. The circumcision is an example of the power of poetry to raise the low and offensive. Small and mean things serve as well as great symbols. The meaner the type by which a law is expressed, the more pungent it is, and the more lasting in the memories of men: just as we choose the smallest box, or case, in which any needful utensil can be carried. Bare lists of words are found suggestive, to an imaginative and excited mind; as it is related of Lord Chatham, that he was accustomed to read in Bailey's Dictionary, when he was preparing to speak in Parliament. The poorest experience is rich enough for all the purposes of expressing thought. Why covet a knowledge of new facts? Day and night, house and garden, a few books, a few actions, serve us as well as would all trades and all spectacles. We are far from having exhausted the significance of the few symbols we use. We can come to use them yet with a terrible simplicity. It does not need that a poem should be long. Every word

9. processions—The references here are to the parades which distinguished the election that sent Harrison and Tyler ("Tippecanoe and Tyler too") to the White House, in 1840. Lowell was early distinguished for textile industries, Lynn for the manufacture of shoes, and Salem was the port of the Yankee clipper-built sailing vessels. The cider barrel and the log cabin were especially associated with Harrison, the hickory stick with Andrew Jackson, the palmetto with South Carolina, and therefore with Calhoun. **12. national emblems**—Those listed are the American **stars**, the **lilies** of Bourbon France, the royal **leopards** of Scotland, the Turkish **crescent**, the British **lion**, the American **eagle**. **27. circumcision**—*Cf.* especially Luke 2:21. **32. Lord Chatham**—William Pitt (1708-1778). **33. Bailey's Dictionary**—*The Universal Etymological English Dictionary*, 1721, by Nathan Bailey (died 1742).

was once a poem. Every new relation is a new word. Also, we use defects and deformities to a sacred purpose, so expressing our sense that the evils of the world are such only to the evil eye. In the old mythology, mythologists observe, defects are ascribed to divine natures, as lameness to Vulcan, blindness to Cupid, and the like, to signify exuberances.

For, as it is dislocation and detachment from the life of God, that makes things ugly, the poet, who re-attaches things to nature and the Whole,—re-attaching even artificial things, and violations of nature, to nature, by a deeper insight,—disposes very easily of the most disagreeable facts. Readers of poetry see the factory-village and the railway, and fancy that the poetry of the landscape is broken up by these; for these works of art are not yet consecrated in their reading; but the poet sees them fall within the great Order not less than the bee-hive or the spider's geometrical web. Nature adopts them very fast into her vital circles, and the gliding train of cars she loves like her own. Besides, in a centred mind, it signifies nothing how many mechanical inventions you exhibit. Though you add millions, and never so surprising, the fact of mechanics has not gained a grain's weight. The spiritual fact remains unalterable, by many or by few particulars; as no mountain is of any appreciable height to break the curve of the sphere. A shrewd country-boy goes to the city for the first time, and the complacent citizen is not satisfied with his little wonder. It is not that he does not see all the fine houses, and know that he never saw such before, but he disposes of them as easily as the poet finds place for the railway. The chief value of the new fact, is to enhance the great and constant fact of Life, which can dwarf any and every circumstance, and to which the belt of wampum, and the commerce of America, are alike.

The world being thus put under the mind for verb and noun, the poet is he who can articulate it. For, though life is great, and fascinates, and absorbs,—and though all men are intelligent of the symbols through which it is named,—yet they cannot originally use them. We are symbols, and inhabit symbols; workmen, work, and tools, words and things, birth and death, all are emblems; but we sympathize with the symbols, and, being infatuated with the economical uses of things, we do not know that they are thoughts. The poet, by an ulterior intellectual perception, gives them a power which makes their old use forgotten, and puts eyes, and a tongue, into every dumb and inanimate object. He perceives the independence of the thought on the symbol, the stability of the thought, the accidency and fugacity of the symbol. As the eyes of Lyncaeus were said to see through the earth, so the poet turns the world to glass, and shows us all things in their right series and procession. For, through that better perception, he stands one step nearer to things, and sees the flowing or metamorphosis; perceives that thought is multiform; that within the form of every creature is a force impelling it to ascend into a higher form: and, following with his eyes the life, uses the forms which express that life, and so his speech

25. **belt of wampum**—Shell beads, braided into a belt, served as currency among the North American Indians. 27. **articulate**—enunciate, put in words. 28. **intelligent of**—are aware of, understand. This whole passage should be compared with Carlyle's *Sartor Resartus*. 31. **economical**—orderly. *Cf.* p. 476, line 1. 36. **accidency**—accidental quality, factitious. 36. **fugacity**—flying quality, fugitive. 36. **Lyncaeus**—in Greek mythology, one of the heroes who went in quest of the Golden Fleece, and who was gifted with marvelous eyesight. 38. **procession**—proceeding out of.

flows with the flowing of nature. All the facts of the animal economy, sex, nutriment, gestation, birth, growth, are symbols of the passage of the world into the soul of man, to suffer there a change, and reappear a new and higher fact. He uses forms according to the life, and not according to the form. This is true science. The poet alone knows astronomy, chemistry, vegetation, and animation, for he does not stop at these facts, but employs them as signs. He knows why the plain or meadow of space was strown with these flowers we call suns, and moons, and stars; why the great deep is adorned with animals, with men, and gods; for, in every word he speaks he rides on them as the horses of thought.

By virtue of this science the poet is the Namer or Language-maker, naming things sometimes after their appearance, sometimes after their essence, and giving to every one its own name and not another's, thereby rejoicing the intellect, which delights in detachment or boundary. The poets made all the words, and therefore language is the archives of history, and, if we must say it, a sort of tomb of the muses. For, though the origin of most of our words is forgotten, each word was at first a stroke of genius, and obtained currency, because for the moment it symbolized the world to the first speaker and to the hearer. The etymologist finds the deadest word to have been once a brilliant picture. Language is fossil poetry. As the limestone of the continent consists of infinite masses of the shells of animalcules, so language is made up of images, or tropes, which now, in their secondary use, have long ceased to remind us of their poetic origin. But the poet names the thing because he sees it, or comes one step nearer to it than any other. This expression, or naming, is not art, but a second nature, grown out of the first, as a leaf out of a tree. What we call nature, is a certain self-regulated motion, or change; and nature does all things by her own hands, and does not leave another to baptize her, but baptizes herself; and this through the metamorphosis again. I remember that a certain poet described it to me thus:

Genius is the activity which repairs the decays of things, whether wholly or partly of a material and finite kind. Nature, through all her kingdoms, insures herself. Nobody cares for planting the poor fungus: so she shakes down from the gills of one agaric countless spores, any one of which, being preserved, transmits new billions of spores to-morrow or next day. The new agaric of this hour has a chance which the old one had not. This atom of seed is thrown into a new place, not subject to the accidents which destroyed its parent two rods off. She makes a man; and having brought him to ripe age, she will no longer run the risk of losing this wonder at a blow, but she detaches from him a new self, that the kind may be safe from accidents to which the individual is exposed. So when the soul of the poet has come to ripeness of thought, she detaches and sends away from it its poems or songs,—a fearless, sleepless, deathless progeny, which is not exposed to the accidents of the weary kingdom of time: a fearless, vivacious offspring, clad with wings (such was the virtue of the soul out of which they came), which carry them fast and far, and infix them

21. animalcules—minute animals. **22. tropes**—figures of speech. **29. certain poet**—that is, Emerson himself in his "orphic" capacity. **33. agaric**—a kind of fungus.

irrecoverably into the hearts of men. These wings are the beauty of the poet's soul. The songs, thus flying immortal from their mortal parent, are pursued by clamorous flights of censures, which swarm in far greater numbers, and threaten to devour them; but these last are not winged. At the end of a very short leap they fall plump down, and rot, having received from the souls out of which they came no beautiful wings. But the melodies of the poet ascend, and leap, and pierce into the deeps of infinite time.

So far the bard taught me, using his freer speech. But nature has a higher end, in the production of new individuals, than security, namely, *ascension,* or, the passage of the soul into higher forms. I knew, in my younger days, the sculptor who made the statue of the youth which stands in the public garden. He was, as I remember, unable to tell directly, what made him happy, or unhappy, but by wonderful indirections he could tell. He rose one day, according to his habit, before the dawn, and saw the morning break, grand as the eternity out of which it came, and, for many days after, he strove to express this tranquillity, and, lo! his chisel had fashioned out of marble the form of a beautiful youth, Phosphorus, whose aspect is such, that, it is said, all persons who look on it become silent. The poet also resigns himself to his mood, and that thought which agitated him is expressed, but *alter idem,* in a manner totally new. The expression is organic, or, the new type which things themselves take when liberated. As, in the sun, objects paint their images on the retina of the eye, so they, sharing the aspiration of the whole universe, tend to paint a far more delicate copy of their essence in his mind. Like the metamorphosis of things into higher organic forms, is their change into melodies. Over everything stands its daemon, or soul, and, as the form of the thing is reflected by the eye, so the soul of the thing is reflected by a melody. The sea, the mountain-ridge, Niagara, and every flower-bed, pre-exist, or super-exist, in precantations, which sail like odors in the air, and when any man goes by with an ear sufficiently fine, he overhears them, and endeavors to write down the notes, without diluting or depraving them. And herein is the legitimation of criticism, in the mind's faith, that the poems are a corrupt version of some text in nature, with which they ought to be made to tally. A rhyme in one of our sonnets should not be less pleasing than the iterated nodes of a seashell, or the resembling difference of a group of flowers. The pairing of the birds is an idyl, not tedious as our idyls are; a tempest is a rough ode, without falsehood or rant: a summer, with its harvest sown, reaped, and stored, is an epic song, subordinating how many admirably executed parts. Why should not the symmetry and truth that modulate these, glide into our spirits, and we participate the invention of nature?

This insight, which expresses itself by what is called Imagination, is a very high sort of seeing, which does not come by study, but by the intellect being where and what it sees, by sharing the path or circuit of things through forms,

1. **irrecoverably**—"irrevocably" in the Concord edition. 17. **Phosphorus**—the morning star. 19. **alter idem**—in altered form, yet the same. 25. **daemon**—spirit. 27. **super-exist**—exist in eternal forms. 28. **precantations**—prophecies too fine for mortal ear. 33. **iterated**—repeated. 33. **nodes**—swellings.

and so making them translucid to others. The path of things is silent. Will they suffer a speaker to go with them? A spy they will not suffer; a lover, a poet, is the transcendency of their own nature,—him they will suffer. The condition of true naming, on the poet's part, is his resignation of himself to the divine *aura* which breathes through forms, and accompanying that.

It is a secret which every intellectual man quickly learns, that, beyond the energy of his possessed and conscious intellect, he is capable of a new energy (as of an intellect doubled on itself), by abandonment to the nature of things; that, beside his privacy of power as an individual man, there is a great public power, on which he can draw, by unlocking, at all risks, his human doors, and suffering the ethereal tides to roll and circulate through him: then he is caught up into the life of the Universe, his speech is thunder, his thought is law, and his words are universally intelligible as the plants and animals. The poet knows that he speaks adequately, then, only when he speaks somewhat wildly, or, "with the flower of the mind;" not with the intellect, used as an organ, but with the intellect released from all service, and suffered to take its direction from its celestial life; or, as the ancients were wont to express themselves, not with intellect alone, but with the intellect inebriated by nectar. As the traveller who has lost his way, throws his reins on his horse's neck, and trusts to the instinct of the animal to find his road, so must we do with the divine animal who carries us through this world. For if in any manner we can stimulate this instinct, new passages are opened for us into nature, the mind flows into and through things hardest and highest, and the metamorphosis is possible.

This is the reason why bards love wine, mead, narcotics, coffee, tea, opium, the fumes of sandal-wood and tobacco, or whatever other procurers of animal exhilaration. All men avail themselves of such means as they can, to add this extraordinary power to their normal powers; and to this end they prize conversation, music, pictures, sculpture, dancing, theatres, travelling, war, mobs, fires, gaming, politics, or love, or science, or animal intoxication, which are several coarser or finer *quasi*-mechanical substitutes for the true nectar, which is the ravishment of the intellect by coming nearer to the fact. These are auxiliaries to the centrifugal tendency of a man, to his passage out into free space, and they help him to escape the custody of that body in which he is pent up, and of that jail-yard of individual relations in which he is enclosed. Hence a great number of such as were professionally expressers of Beauty, as painters, poets, musicians, and actors, have been more than others wont to lead a life of pleasure and indulgence; all but the few who received the true nectar; and, as it was a spurious mode of attaining freedom, as it was an emancipation not into the heavens, but into the freedom of baser places, they were punished for that advantage they won, by a dissipation and deterioration. But never can any advantage be taken of nature by a trick. The spirit of the world, the great calm presence of the Creator, comes not forth to the sorceries of opium or of wine. The sublime vision comes to the pure and simple soul in

5. **aura**—subtle emanation. 18. **nectar**—in Greek mythology, the drink of the gods. 21. **this world**—The Concord edition reads "the world." 25. **mead**—an alcoholic drink compounded from honey and water. 33. **centrifugal**—tending to fly from the center.

a clean and chaste body. That is not an inspiration which we owe to narcotics, but some counterfeit excitement and fury. Milton says, that the lyric poet may drink wine and live generously, but the epic poet, he who shall sing of the gods, and their descent unto men, must drink water out of a wooden bowl. For poetry is not 'Devil's wine,' but God's wine. It is with this as it is with toys. We fill the hands and nurseries of our children with all manner of dolls, drums, and horses, withdrawing their eyes from the plain face and sufficing objects of nature, the sun, and the moon, the animals, the water, and stones, which should be their toys. So the poet's habit of living should be set on a key so low, that the common influences should delight him. His cheerfulness should be the gift of the sunlight; the air should suffice for his inspiration, and he should be tipsy with water. That spirit which suffices quiet hearts, which seems to come forth to such from every dry knoll of sere grass, from every pine-stump, and half-imbedded stone, on which the dull March sun shines, comes forth to the poor and hungry, and such as are of simple taste. If thou fill thy brain with Boston and New York, with fashion and covetousness, and wilt stimulate thy jaded senses with wine and French coffee, thou shalt find no radiance of wisdom in the lonely waste of the pinewoods.

If the imagination intoxicates the poet, it is not inactive in other men. The metamorphosis excites in the beholder an emotion of joy. The use of symbols has a certain power of emancipation and exhilaration for all men. We seem to be touched by a wand, which makes us dance and run about happily, like children. We are like persons who come out of a cave or cellar into the open air. This is the effect on us of tropes, fables, oracles, and all poetic forms. Poets are thus liberating gods. Men have really got a new sense, and found within their world, another world, or nest of worlds; for, the metamorphosis once seen, we divine that it does not stop. I will not now consider how much this makes the charm of algebra and the mathematics, which also have their tropes, but it is felt in every definition; as, when Aristotle defines *space* to be an immovable vessel, in which things are contained;—or, when Plato defines a *line* to be a flowing point; or, *figure* to be a bound of solid; and many the like. What a joyful sense of freedom we have, when Vitruvius announces the old opinion of artists that no architect can build any house well, who does not know something of anatomy. When Socrates, in Charmides, tells us that the soul is cured of its maladies by certain incantations, and that these incantations are beautiful reasons, from which temperance is generated in souls; when Plato calls the world an animal; and Timaeus affirms that plants also are animals; or affirms a man to be a heavenly tree, growing with his root, which is his head, upward; and, as George Chapman, following him, writes,—

> "So in our tree of man, whose nervie root
> Springs in his top;"

when Orpheus speaks of hoariness as "that white flower which marks extreme

2. **Milton**—*Cf.* the "Sixth Latin Elegy," lines 55-78. 32. **Vitruvius**—See notes 6-7, p. 411. 34. **Charmides**—one of the dialogues of Plato, as is also *Timaeus* in line 37. 40-41. **"So . . . top"**—The quotation is from the Dedication to the translation of Homer by George Chapman (about 1559-1634). 42. **Orpheus**—A number of writings were ascribed to Orpheus as the founder of a religious sect in Greece in the sixth century B.C.

old age;" when Proclus calls the universe the statue of the intellect; when Chaucer, in his praise of 'Gentilesse,' compares good blood in mean condition to fire, which, though carried to the darkest house betwixt this and the mount of Caucasus, will yet hold its natural office, and burn as bright as if twenty thousand men did it behold; when John saw, in the Apocalypse, the ruin of the world through evil, and the stars fall from heaven, as the figtree casteth her untimely fruit; when Aesop reports the whole catalogue of common daily relations through the masquerade of birds and beasts;—we take the cheerful hint of the immortality of our essence, and its versatile habits and escapes, as when the gypsies say of themselves, "it is in vain to hang them, they cannot die."

The poets are thus liberating gods. The ancient British bards had for the title of their order, "Those who are free throughout the world." They are free, and they make free. An imaginative book renders us much more service at first, by stimulating us through its tropes, than afterward, when we arrive at the precise sense of the author. I think nothing is of any value in books, excepting the transcendental and extraordinary. If a man is inflamed and carried away by his thought, to that degree that he forgets the authors and the public, and heeds only this one dream, which holds him like an insanity, let me read his paper, and you may have all the arguments and histories and criticism. All the value which attaches to Pythagoras, Paracelsus, Cornelius Agrippa, Cardan, Kepler, Swedenborg, Schelling, Oken, or any other who introduces questionable facts into his cosmogony, as angels, devils, magic, astrology, palmistry, mesmerism, and so on, is the certificate we have of departure from routine, and that here is a new witness. That also is the best success in conversation, the magic of liberty, which puts the world, like a ball, in our hands. How cheap even the liberty then seems; how mean to study, when an emotion communicates to the intellect the power to sap and upheave nature: how great the perspective! nations, times, systems, enter and disappear, like threads in tapestry of large figure and many colors; dream delivers us to dream, and, while the drunkenness lasts, we will sell our bed, our philosophy, our religion, in our opulence.

There is good reason why we should prize this liberation. The fate of the poor shepherd, who, blinded and lost in the snowstorm, perishes in a drift within a few feet of his cottage door, is an emblem of the state of man. On the brink of the waters of life and truth, we are miserably dying. The inaccessibleness of every thought but that we are in, is wonderful. What if you come near to it,—you are as remote, when you are nearest as when you are farthest. Every thought is also a prison; every heaven is also a prison. Therefore we love

1. **Proclus**—See note 21, p. 473. 2. **'Gentilesse'**—Emerson refers not to the short poem of Chaucer entitled "Gentilnesse," but to the "Wife of Bath's Tale," lines 1130 ff. 5. **John . . . Apocalypse**—*Cf.* Rev. 6: 13. 21. **Pythagoras**—See note 14, p. 407. 21. **Paracelsus**—Paracelsus (about 1490-1541), German physician and philosopher, accused of magic. 21-22. **Cornelius Agrippa**—(1486-1535) also a German physician and "magician." 22. **Cardan**—Jerome Cardan (1501-1576), Italian mathematician and philosopher, and something of a charlatan. 22. **Kepler**—Johann Kepler (1571-1630), German astronomer and proponent of the Copernican theory. 22. **Schelling**—Friedrich Schelling (1775-1854), German philosopher, one of the transcendental group. 22. **Oken**—Lorenz Oken (1779-1851), German naturalist and philosopher, who foreshadowed modern theories of the cellular structure of organisms. The "protoplasmic basis of life" was still debatable when Emerson wrote.

the poet, the inventor, who in any form, whether in an ode, or in an action, or in looks and behavior, has yielded us a new thought. He unlocks our chains, and admits us to a new scene.

This emancipation is dear to all men, and the power to impart it, as it must come from greater depth and scope of thought, is a measure of intellect. Therefore all books of the imagination endure, all which ascend to that truth, that the writer sees nature beneath him, and uses it as his exponent. Every verse or sentence, possessing this virtue, will take care of its own immortality. The religions of the world are the ejaculations of a few imaginative men.

But the quality of the imagination is to flow, and not to freeze. The poet did not stop at the color, or the form, but read their meaning; neither may he rest in this meaning, but he makes the same objects exponents of his new thought. Here is the difference betwixt the poet and the mystic, that the last nails a symbol to one sense, which was a true sense for a moment, but soon becomes old and false. For all symbols are fluxional; all language is vehicular and transitive, and is good, as ferries and horses are, for conveyance, not as farms and houses are, for homestead. Mysticism consists in the mistake of an accidental and individual symbol for a universal one. The morning-redness happens to be the favorite meteor to the eyes of Jacob Behmen, and comes to stand to him for truth and faith; and he believes should stand for the same realities to every reader. But the first reader prefers as naturally the symbol of a mother and child, or a gardener and his bulb, or a jeweller polishing a gem. Either of these, or of a myriad more, are equally good to the person to whom they are significant. Only they must be held lightly, and be very willingly translated into the equivalent terms which others use. And the mystic must be steadily told,—All that you say is just as true without the tedious use of that symbol as with it. Let us have a little algebra, instead of this trite rhetoric,—universal signs, instead of these village symbols,—and we shall both be gainers. The history of hierarchies seems to show, that all religious error consisted in making the symbol too stark and solid, and, at last, nothing but an excess of the organ of language.

Swedenborg, of all men in the recent ages, stands eminently for the translator of nature into thought. I do not know the man in history to whom things stood so uniformly for words. Before him the metamorphosis continually plays. Every thing on which his eye rests, obeys the impulses of moral nature. The figs become grapes whilst he eats them. When some of his angels affirmed a truth, the laurel twig which they held blossomed in their hands. The noise which, at a distance, appeared like gnashing and thumping, on coming nearer was found to be the voice of disputants. The men, in one of his visions, seen in heavenly light, appeared like dragons, and seemed in darkness: but to each other they appeared as men, and, when the light from heaven shone into their cabin, they complained of the darkness, and were compelled to shut the window that they might see.

There was this perception in him, which makes the poet or seer, an object

15. **vehicular**—a means of conveying. 16. **transitive**—that is, carrying across, as the meaning from speaker to hearer. 19. **Behmen**—See note 9, p. 462. 29. **hierarchies**—systems of priesthood.

of awe and terror, namely, that the same man, or society of men, may wear one aspect to themselves and their companions, and a different aspect to higher intelligences. Certain priests, whom he describes as conversing very learnedly together, appeared to the children, who were at some distance, like dead horses; and many the like misappearances. And instantly the mind inquires, whether these fishes under the bridge, yonder oxen in the pasture, those dogs in the yard, are immutably fishes, oxen, and dogs, or only so appear to me, and perchance to themselves appear upright men; and whether I appear as a man to all eyes. The Bramins and Pythagoras propounded the same question, and if any poet has witnessed the transformation, he doubtless found it in harmony with various experiences. We have all seen changes as considerable in wheat and caterpillars. He is the poet, and shall draw us with love and terror, who sees, through the flowing vest, the firm nature, and can declare it.

I look in vain for the poet whom I describe. We do not, with sufficient plainness, or sufficient profoundness, address ourselves to life, nor dare we chaunt our own times and social circumstance. If we filled the day with bravery, we should not shrink from celebrating it. Time and nature yield us many gifts, but not yet the timely man, the new religion, the reconciler, whom all things await. Dante's praise is, that he dared to write his autobiography in colossal cipher, or into universality. We have yet had no genius in America, with tyrannous eye, which knew the value of our incomparable materials, and saw, in the barbarism and materialism of the times, another carnival of the same gods whose picture he so much admires in Homer; then in the middle age; then in Calvinism. Banks and tariffs, the newspaper and caucus, methodism and unitarianism, are flat and dull to dull people, but rest on the same foundations of wonder as the town of Troy, and the temple of Delphos, and are as swiftly passing away. Our logrolling, our stumps and their politics, our fisheries, our Negroes, and Indians, our boats, and our repudiations, the wrath of rogues, and the pusillanimity of honest men, the northern trade, the southern planting, the western clearing, Oregon, and Texas, are yet unsung. Yet America is a poem in our eyes; its ample geography dazzles the imagination, and it will not wait long for metres. If I have not found that excellent combination of gifts in my countrymen which I seek, neither could I aid myself to fix the idea of the poet by reading now and then in Chalmers's collection of five centuries of English poets. These are wits, more than poets, though there have been poets among them. But when we adhere to the ideal of the poet, we have our difficulties even with Milton and Homer. Milton is too literary, and Homer too literal and historical.

But I am not wise enough for a national criticism, and must use the old

9. **Bramins**—See note 14, p. 407. 26. **Delphos**—"Delphi" in the Concord edition. The oracle at Delphi was supposed to be the voice of Apollo. 30. **Oregon**—In 1843 there was a "Great Immigration" to Oregon, when almost a thousand persons, assembling at Independence, Missouri, crossed the plains and settled in the Columbia River valley. The possession of the region was disputed between Great Britain and the United States. 30. **Texas**—At this time the admission of Texas into the Union was under consideration, but it was not accomplished until 1845. 34. **Chalmers's collection**—a huge collection of the English poets from Chaucer to Cowper in 21 volumes, published in 1810, and edited by Alexander Chalmers (1759-1834). The emphasis of the collection is on poets of the Restoration and the eighteenth century; hence, Emerson's reference to wits in line 35.

largeness a little longer, to discharge my errand from the muse to the poet concerning his art.

Art is the path of the creator to his work. The paths, or methods, are ideal and eternal, though few men ever see them, not the artist himself, for years, or for a lifetime, unless he come into the conditions. The painter, the sculptor, the composer, the epic rhapsodist, the orator, all partake one desire, namely, to express themselves symmetrically and abundantly, not dwarfishly and fragmentarily. They found or put themselves in certain conditions, as, the painter and sculptor before some impressive human figures; the orator, into the assembly of the people; and the others, in such scenes as each has found exciting to his intellect; and each presently feels the new desire. He hears a voice, he sees a beckoning. Then he is apprised, with wonder, what herds of daemons hem him in. He can no more rest; he says, with the old painter, "By God, it is in me, and must go forth of me." He pursues a beauty, half seen, which flies before him. The poet pours out verses in every solitude. Most of the things he says are conventional, no doubt; but by and by he says something which is original and beautiful. That charms him. He would say nothing else but such things. In our way of talking, we say, 'That is yours, this is mine;' but the poet knows well that it is not his; that it is as strange and beautiful to him as to you; he would fain hear the like eloquence at length. Once having tasted this immortal ichor, he cannot have enough of it, and, as an admirable creative power exists in these intellections, it is of the last importance that these things get spoken. What a little of all we know is said! What drops of all the sea of our science are baled up! and by what accident it is that these are exposed, when so many secrets sleep in nature! Hence the necessity of speech and song; hence these throbs and heart-beatings in the orator, at the door of the assembly, to the end, namely, that thought may be ejaculated as Logos, or Word.

Doubt not, O poet, but persist. Say, 'It is in me, and shall out.' Stand there, balked and dumb, stuttering and stammering, hissed and hooted, stand and strive, until, at last, rage draw out of thee that *dream*-power which every night shows thee is thine own; a power transcending all limit and privacy, and by virtue of which a man is the conductor of the whole river of electricity. Nothing walks, or creeps, or grows, or exists, which must not in turn arise and walk before him as exponent of his meaning. Comes he to that power, his genius is no longer exhaustible. All the creatures, by pairs and by tribes, pour into his mind as into a Noah's ark, to come forth again to people a new world. This is like the stock of air for our respiration, or for the combustion of our fireplace, not a measure of gallons, but the entire atmosphere if wanted. And therefore the rich poets, as Homer, Chaucer, Shakspeare, and Raphael, have obviously no limits to their works, except the limits of their lifetime, and resemble a mirror carried through the street, ready to render an image of every created thing.

O poet! a new nobility is conferred in groves and pastures, and not in

21. **ichor**—the blood of the gods. 27. **Logos**—*Cf.* John 1: 1: "In the beginning was the Word [Logos], and the Word was with God, and the Word was God." 37. **Noah's Ark**—*Cf.* Gen. 6: 19. 40. **poets**—in the Greek sense of makers, so as to include a painter such as Raphael.

castles, or by the sword-blade, any longer. The conditions are hard, but equal. Thou shalt leave the world, and know the muse only. Thou shalt not know any longer the times, customs, graces, politics, or opinions of men, but shalt take all from the muse. For the time of towns is tolled from the world by funereal chimes, but in nature the universal hours are counted by succeeding tribes of animals and plants, and by growth of joy on joy. God wills also that thou abdicate a manifold and duplex life, and that thou be content that others speak for thee. Others shall be thy gentlemen, and shall represent all courtesy and worldly life for thee; others shall do the great and resounding actions also. Thou shalt lie close hid with nature, and canst not be afforded to the Capitol or the Exchange. The world is full of renunciations and apprenticeships, and this is thine; thou must pass for a fool and a churl for a long season. This is the screen and sheath in which Pan has protected his well-beloved flower, and thou shalt be known only to thine own, and they shall console thee with tenderest love. And thou shalt not be able to rehearse the names of thy friends in thy verse, for an old shame before the holy ideal. And this is the reward: that the ideal shall be real to thee, and the impressions of the actual world shall fall like summer rain, copious, but not troublesome, to thy invulnerable essence. Thou shalt have the whole land for thy park and manor, the sea for thy bath and navigation, without tax and without envy; the woods and the rivers thou shalt own; and thou shalt possess that wherein others are only tenants and boarders. Thou true land-lord! sea-lord! air-lord! Wherever snow falls, or water flows, or birds fly, wherever day and night meet in twilight, wherever the blue heaven is hung by clouds, or sown with stars, wherever are forms with transparent boundaries, wherever are outlets into celestial space, wherever is danger, and awe, and love, there is Beauty, plenteous as rain, shed for thee, and though thou shouldst walk the world over, thou shalt not be able to find a condition inopportune or ignoble.

1. **by the sword-blade**—referring to the practice of "dubbing" knights by striking them lightly on the shoulders with a sword when they are ennobled. 13. **Pan**—the Greek god of wild nature.

NATHANIEL HAWTHORNE

1804-1864

I. A SOLITARY TELLER OF TALES (1804–1850)

1804 Born in Salem, Massachusetts, July 4, son of Nathaniel Hathorne, sea captain, and Elizabeth Manning.

1816–1820 Lived with widowed mother at Lake Sebago, Maine, with uncle, Richard Manning, and enjoyed outdoor sports.

1821–1825 Attended Bowdoin College, Brunswick, Maine, graduating in the class with Longfellow, but intimate only with Horatio Bridge and Franklin Pierce.

1825–1839 Lived in Salem in seclusion twelve years. Read voluminously and wrote *Seven Tales of My Native Land,* but destroyed it. Wrote tales for gift books and magazines.

1828 Published *Fanshawe,* a failure.

1831 Traveled on his uncle's stagecoach service over much of New England.

1836 Editor of the *American Magazine of Useful and Entertaining Knowledge* in Boston.

1837 Publication of *Twice-Told Tales,* first series, through efforts of Horatio Bridge, with whom he spent the summer at Augusta, Maine. Review of the book by Longfellow in July *North American Review.*

1838 Met Sophia Peabody and was secretly engaged to her.

1839–1841 Served in the Boston Custom House. Position secured through George Bancroft, historian.

1841 Invested $1,000 savings in the Brook Farm Community and lived there from April to November. Published *The Whole History of Grandfather's Chair.*

1842 Married Sophia Peabody, July 9. Published *Twice-Told Tales,* second series.

1842–1846 Lived in the Old Manse at Concord, a neighbor of Emerson and Thoreau, though not congenial with them.

1846–1849 Surveyor at Custom House in Salem, Massachusetts, where maritime trade was ebbing. In 1846 published *Mosses from an Old Manse.*

II. THE ROMANCER (1850–1853)

1850 Published *The Scarlet Letter;* in April moved to Lenox, Massachusetts, in the Berkshires. Herman Melville near, not intimate.

1851 Published *The House of the Seven Gables, The Snow-Image and Other Twice-Told Tales,* and *A Wonder Book for Boys and Girls.*

1852–1853 Resided at the Wayside, Concord, though *The Blithedale Romance* was written at West Newton, Massachusetts, near Brook Farm.

1852 Published a campaign life of Franklin Pierce.

1853 Published *Tanglewood Tales for Girls and Boys.*

III. THE AMBITIOUS GUEST (1853–1864)

1853–1857 Consulship at Liverpool, Pierce's most remunerative appointment. Felt out of place in England.

1857–1860 Travel in Italy, meeting the Brownings; and residence at Redcar and Leamington, England.

1860 Publication of *Transformation* in England (*The Marble Faun* in the United States), and return to the Wayside.

1863 Published *Our Old Home.*

1864 Died May 19, at Plymouth, New Hampshire, while on a trip with ex-President Pierce.

1864 *The Dolliver Romance,* first part in the *Atlantic Monthly;* the other three parts were published in 1876.

1868 *Passages from the American Note-Books* published, edited by Mrs. Hawthorne.

1870 *Passages from the English Note-Books* published.

1872 *French and Italian Note-Books* published. "Septimius Felton" in the *Atlantic Monthly.*

1882–1883 "The Ancestral Footstep" in the *Atlantic Monthly. Dr. Grimshaw's Secret* published, though written about 1861.

BIOGRAPHIES: Henry James, *Hawthorne,* Harper, 1880; Julian Hawthorne, *Nathaniel Hawthorne and His Wife,* Osgood, 1884, 2 vols.; Horatio Bridge, *Personal Recollections of Nathaniel Hawthorne,* Harper, 1893; *Hawthorne's First Diary,* ed. by S. T. Pickard, Houghton Mifflin, 1897; R. H. Lathrop, *Memories of Hawthorne,* Houghton Mifflin, 1897; G. E. Woodberry, *Nathaniel Hawthorne,* Houghton Mifflin, 1902; *Love Letters of Nathaniel Hawthorne, 1839-1841* and *1841-1863,* Society of the Dofobs, 1907, 2 vols.; Caroline Ticknor, *Hawthorne and His Publisher,* Houghton Mifflin, 1913; Newton Arvin, *Hawthorne,* Little, Brown, 1929; Robert Cantwell, *Nathaniel Hawthorne. the American Years,* Rinehart, 1948; Randall Stewart, *Nathaniel Hawthorne,* Yale, 1948; Mark Van Doren, *Nathaniel Hawthorne,* Sloane, 1949. See also criticism by G. P. Lathrop, *A Study of Hawthorne,* Osgood, 1876; J. T. Fields, *Yesterdays with Authors,* Osgood, 1871; P. E. More, *Shelburne Essays: First Series* and *Second Series,* Putnam, 1904 and 1905; W. C. Brownell, *American Prose Masters,* Scribner, 1909; L. E. (Riverside edition); Standard Library edition, Houghton Mifflin, 1891, 15 vols. *The Heart of Hawthorne's Journals,* ed. by Newton Arvin, Houghton Mifflin, 1929. *The American Note-Books,* ed. by Randall Stewart, Yale, 1932; *The English Note-Books,* ed. by Randall Stewart, Oxford University Press, 1941; Arlin Turner, *Hawthorne as Editor,* University of Louisiana, 1941.

Hawthorne was an integral part of the Puritan tradition, as well as the prophet of its decline. His ancestry perhaps caused him to be preoccupied with the problem of sin; but, living at a time when the dogmas of Puritanism were being questioned, he could deal with them imaginatively, rather than didactically. His interpretation was in narrative.

The salient fact about Hawthorne is that he was an artist, an artist with an innate sense of beauty and truth and fitness. He was a keen observer of material phenomena, as his *Note-Books* amply testify, but he was never content until he had pressed beyond the physical fact to the symbol behind it. Romanticism offered the medium through which his genius could best express itself. Viewed through the mists of time, his material suggested more than it revealed; such mental states as pride, isolation, hypocrisy, and avarice took on a significance that is universal and timeless. There are in his tales, to be sure, trappings of Gothic romance; the millers and drunkards are done according to convention; and the story often rambles in a way that requires heavy dependence on situation and scene to hold the reader's interest. But in situations where character is under duress Hawthorne is truly the artist of the beautiful. His notions of the human heart are not distorted, and his psychology is not obsolete. His themes have dignity and are expressed in a style that, coming of a long culture, is always in good taste.

MR. HIGGINBOTHAM'S CATASTROPHE

Appeared anonymously in the *New England Magazine,* December, 1834. Included in *Twice-Told Tales* (1837). The text of this, and the other selections from Hawthorne, is that of the Riverside edition.

A YOUNG fellow, a tobacco pedlar by trade, was on his way from Morristown, where he had dealt largely with the Deacon of the Shaker settlement, to the village of Parker's Falls, on Salmon River. He had a neat little cart, painted green, with a box of cigars depicted on each side panel, and an Indian chief, holding a pipe and a golden tobacco stalk, on the rear. The pedlar drove a smart little mare, and was a young man of excellent character, keen at a bargain, but none the worse liked by the Yankees; who, as I have heard them say, would rather be shaved with a sharp razor than a dull one. Especially was he beloved by the pretty girls along the Connecticut, whose favor he used to court by presents of the best smoking tobacco in his stock; knowing well that the country lasses of New England are generally great performers on pipes. Moreover, as will be seen in the course of my story, the pedlar was inquisitive, and something of a tattler, always itching to hear the news and anxious to tell it again.

After an early breakfast at Morristown, the tobacco pedlar, whose name was Dominicus Pike, had travelled seven miles through a solitary piece of woods, without speaking a word to anybody but himself and his little gray mare. It being nearly seven o'clock, he was as eager to hold a morning gossip as a city shop-keeper to read the morning paper. An opportunity seemed at hand when,

2. Shaker—a celibate communistic sect which established settlements in New England about 1790. Hawthorne in 1831 visited the community at Canterbury, New Hampshire, and the future Brook Farmer was much fascinated by their mode of life. See also his "The Shaker Bridal." **16. Dominicus Pike**—In his first diary Hawthorne mentions a peddler, Dominicus Jordan, telling a ghost story. That nomad may have been the original of the loquacious character in this story.

after lighting a cigar with a sun-glass, he looked up, and perceived a man coming over the brow of the hill, at the foot of which the pedlar had stopped his green cart. Dominicus watched him as he descended, and noticed that he carried a bundle over his shoulder on the end of a stick, and travelled with a weary, yet determined pace. He did not look as if he had started in the freshness of the morning, but had footed it all night, and meant to do the same all day.

"Good morning, mister," said Dominicus, when within speaking distance. "You go a pretty good jog. What's the latest news at Parker's Falls?"

The man pulled the broad brim of a gray hat over his eyes, and answered, rather suddenly, that he did not come from Parker's Falls, which, as being the limit of his own day's journey, the pedlar had naturally mentioned in his inquiry.

"Well then," rejoined Dominicus Pike, "let's have the latest news where you did come from. I'm not particular about Parker's Falls. Any place will answer."

Being thus importuned, the traveller—who was as ill looking a fellow as one would desire to meet in a solitary piece of woods—appeared to hesitate a little, as if he was either searching his memory for news, or weighing the expediency of telling it. At last, mounting on the step of the cart, he whispered in the ear of Dominicus, though he might have shouted aloud and no other mortal would have heard him.

"I do remember one little trifle of news," said he. "Old Mr. Higginbotham, of Kimballton, was murdered in his orchard, at eight o'clock last night, by an Irishman and a nigger. They strung him up to the branch of a St. Michael's pear-tree, where nobody would find him till the morning."

As soon as this horrible intelligence was communicated, the stranger betook himself to his journey again, with more speed than ever, not even turning his head when Dominicus invited him to smoke a Spanish cigar and relate all the particulars. The pedlar whistled to his mare and went up the hill, pondering on the doleful fate of Mr. Higginbotham whom he had known in the way of trade, having sold him many a bunch of long nines, and a great deal of pigtail, lady's twist, and fig tobacco. He was rather astonished at the rapidity with which the news had spread. Kimballton was nearly sixty miles distant in a straight line; the murder had been perpetrated only at eight o'clock the preceding night; yet Dominicus had heard of it at seven in the morning, when, in all probability, poor Mr. Higginbotham's own family had but just discovered his corpse, hanging on the St. Michael's pear-tree. The stranger on foot must have worn seven-league boots to travel at such a rate.

"Ill news flies fast, they say," thought Dominicus Pike; "but this beats railroads. The fellow ought to be hired to go express with the President's Message."

The difficulty was solved by supposing that the narrator had made a mistake of one day in the date of the occurrence; so that our friend did not hesitate to introduce the story at every tavern and country store along the road, expending a whole bunch of Spanish wrappers among at least twenty horrified audiences.

11. suddenly—"sullenly" in the second edition. **24. St. Michael's**—pear-tree imported from the island by that name in the Azores. **31. long nines**—a kind of cigar. The other terms refer to plug tobacco.

He found himself invariably the first bearer of the intelligence, and was so pestered with questions that he could not avoid filling up the outline, till it became quite a respectable narrative. He met with one piece of corroborative evidence. Mr. Higginbotham was a trader; and a former clerk of his, to whom Dominicus related the facts, testified that the old gentleman was accustomed to return home through the orchard about nightfall, with the money and valuable papers of the store in his pocket. The clerk manifested but little grief at Mr. Higginbotham's catastrophe, hinting, what the pedlar had discovered in his own dealings with him, that he was a crusty old fellow, as close as a vice. His property would descend to a pretty niece who was now keeping school in Kimballton.

What with telling the news for the public good, and driving bargains for his own, Dominicus was so much delayed on the road that he chose to put up at a tavern, about five miles short of Parker's Falls. After supper, lighting one of his prime cigars, he seated himself in the bar-room, and went through the story of the murder, which had grown so fast that it took him half an hour to tell. There were as many as twenty people in the room, nineteen of whom received it all for gospel. But the twentieth was an elderly farmer, who had arrived on horseback a short time before, and was now seated in a corner smoking his pipe. When the story was concluded, he rose up very deliberately, brought his chair right in front of Dominicus, and stared him full in the face, puffing out the vilest tobacco smoke the pedlar had ever smelt.

"Will you make affidavit," demanded he, in the tone of a country justice taking an examination, "that old Squire Higginbotham of Kimballton was murdered in his orchard the night before last, and found hanging on his great pear-tree yesterday morning?"

"I tell the story as I heard it, mister," answered Dominicus, dropping his half-burnt cigar; "I don't say that I saw the thing done. So I can't take my oath that he was murdered exactly in that way."

"But I can take mine," said the farmer, "that if Squire Higginbotham was murdered night before last, I drank a glass of bitters with his ghost this morning. Being a neighbor of mine, he called me into his store, as I was riding by, and treated me, and then asked me to do a little business for him on the road. He didn't seem to know any more about his own murder than I did."

"Why, then, it can't be a fact!" exclaimed Dominicus Pike.

"I guess he'd have mentioned, if it was," said the old farmer; and he removed his chair back to the corner, leaving Dominicus quite down in the mouth.

Here was a sad resurrection of old Mr. Higginbotham! The pedlar had no heart to mingle in the conversation any more, but comforted himself with a glass of gin and water, and went to bed where, all night long, he dreamed of hanging on the St. Michael's pear-tree. To avoid the old farmer (whom he so detested that his suspension would have pleased him better than Mr. Higginbotham's), Dominicus rose in the gray of the morning, put the little mare into the green cart, and trotted swiftly away towards Parker's Falls. The fresh breeze, the dewy road, and the pleasant summer dawn, revived his spirits, and might have encouraged him to repeat the old story had there been anybody

awake to hear it. But he met neither ox team, light wagon chaise, horseman, nor foot traveller, till, just as he crossed Salmon River, a man came trudging down to the bridge with a bundle over his shoulder, on the end of a stick.

"Good morning, mister," said the pedlar, reining in his mare. "If you come from Kimballton or that neighborhood, may be you can tell me the real fact about this affair of old Mr. Higginbotham. Was the old fellow actually murdered two or three nights ago, by an Irishman and a nigger?"

Dominicus had spoken in too great a hurry to observe, at first, that the stranger himself had a deep tinge of negro blood. On hearing this sudden question, the Ethiopian appeared to change his skin, its yellow hue becoming a ghastly white, while, shaking and stammering, he thus replied:—

"No! no! There was no colored man! It was an Irishman that hanged him last night, at eight o'clock. I came away at seven! His folks can't have looked for him in the orchard yet."

Scarcely had the yellow man spoken, when he interrupted himself, and though he seemed weary enough before, continued his journey at a pace which would have kept the pedlar's mare on a smart trot. Dominicus stared after him in great perplexity. If the murder had not been committed till Tuesday night, who was the prophet that had foretold it, in all its circumstances, on Tuesday morning? If Mr. Higginbotham's corpse were not yet discovered by his own family, how came the mulatto, at above thirty miles' distance, to know that he was hanging in the orchard, especially as he had left Kimballton before the unfortunate man was hanged at all? These ambiguous circumstances, with the stranger's surprise and terror, made Dominicus think of raising a hue and cry after him, as an accomplice in the murder; since a murder, it seemed, had really been perpetrated.

"But let the poor devil go," thought the pedlar. "I don't want his black blood on my head; and hanging the nigger wouldn't unhang Mr. Higginbotham. Unhang the old gentleman! It's a sin, I know; but I should hate to have him come to life a second time, and give me the lie!"

With these meditations, Dominicus Pike drove into the street of Parker's Falls, which, as everybody knows, is as thriving a village as three cotton factories and a slitting mill can make it. The machinery was not in motion, and but a few of the shop doors unbarred, when he alighted in the stable yard of the tavern, and made it his first business to order the mare four quarts of oats. His second duty, of course, was to impart Mr. Higginbotham's catastrophe to the hostler. He deemed it advisable, however, not to be too positive as to the date of the direful fact, and also to be uncertain whether it were perpetrated by an Irishman and a mulatto, or by the son of Erin alone. Neither did he profess to relate it on his own authority, or that of any one person; but mentioned it as a report generally diffused.

The story ran through the town like fire among girdled trees, and became so much the universal talk that nobody could tell whence it had originated. Mr. Higginbotham was as well known at Parker's Falls as any citizen of the place, being part owner of the slitting mill, and a considerable stockholder in

33. **slitting mill**—a mill or machine by which iron bars (or plates) are slit into rods from which nails can be made.

the cotton factories. The inhabitants felt their own prosperity interested in his fate. Such was the excitement, that the Parker's Falls Gazette anticipated its regular day of publication, and came out with half a form of blank paper and a column of double pica emphasized with capitals, and headed HORRID MURDER OF MR. HIGGINBOTHAM! Among other dreadful details, the printed account described the mark of the cord round the dead man's neck, and stated the number of thousand dollars of which he had been robbed; there was much pathos also about the affliction of his niece, who had gone from one fainting fit to another, ever since her uncle was found hanging on the St. Michael's pear-tree with his pockets inside out. The village poet likewise commemorated the young girl's grief in seventeen stanzas of a ballad. The selectmen held a meeting, and, in consideration of Mr. Higginbotham's claims on the town, determined to issue handbills, offering a reward of five hundred dollars for the apprehension of his murderers, and the recovery of the stolen property.

Meanwhile the whole population of Parker's Falls, consisting of shopkeepers, mistresses of [illegible] factory girls, millmen, and school boys, rushed into the street and kept up such a terrible loquacity as more than compensated for the silence of the cotton machines, which refrained from their usual din out of respect to the deceased. Had Mr. Higginbotham cared about posthumous renown, his untimely ghost would have exulted in this tumult. Our friend Dominicus, in his vanity of heart, forgot his intended precautions, and mounting on the town pump, announced himself as the bearer of the authentic intelligence which had caused so wonderful a sensation. He immediately became the great man of the moment, and had just begun a new edition of the narrative, with a voice like a field preacher, when the mail stage drove into the village street. It had travelled all night, and must have shifted horses at Kimballton, at three in the morning.

"Now we shall hear all the particulars," shouted the crowd.

The coach rumbled up to the piazza of the tavern, followed by a thousand people; for if any man had been minding his own business till then, he now left it at sixes and sevens, to hear the news. The pedlar, foremost in the race, discovered two passengers, both of whom had been startled from a comfortable nap to find themselves in the centre of a mob. Every man assailing them with separate questions, all propounded at once, the couple were struck speechless, though one was a lawyer and the other a young lady.

"Mr. Higginbotham! Mr. Higginbotham! Tell us the particulars about old Mr. Higginbotham!" bawled the mob. "What is the coroner's verdict? Are the murderers apprehended? Is Mr. Higginbotham's niece come out of her fainting fits? Mr. Higginbotham! Mr. Higginbotham!!"

The coachman said not a word, except to swear awfully at the hostler for not bringing him a fresh team of horses. The lawyer inside had generally his wits about him even when asleep; the first thing he did, after learning the cause of the excitement, was to produce a large, red pocket-book. Meantime Dominicus Pike, being an extremely polite young man, and also suspecting that a female tongue would tell the story as glibly as a lawyer's, had handed the lady out of the coach. She was a fine, smart girl, now wide awake and bright as a button,

and had such a sweet pretty mouth, that Dominicus would almost as lief have heard a love tale from it as a tale of murder.

"Gentlemen and ladies," said the lawyer to the shopkeepers, the millmen, and the factory girls, "I can assure you that some unaccountable mistake, or, more probably, a wilful falsehood, maliciously contrived to injure Mr. Higginbotham's credit, has excited this singular uproar. We passed through Kimballton at three o'clock this morning, and most certainly should have been informed of the murder had any been perpetrated. But I have proof nearly as strong as Mr. Higginbotham's own oral testimony, in the negative. Here is a note relating to a suit of his in the Connecticut courts, which was delivered me from that gentleman himself. I find it dated at ten o'clock last evening."

So saying, the lawyer exhibited the date and signature of the note, which irrefragably proved, either that this perverse Mr. Higginbotham was alive when he wrote it, or—as some deemed the more probable case, of two doubtful ones—that he was so absorbed in worldly business as to continue to transact it even after his death. But unexpected evidence was forthcoming. The young lady, after listening to the pedlar's explanation, merely seized a moment to smooth her gown and put her curls in order, and then appeared at the tavern door, making a modest signal to be heard.

"Good people," said she, "I am Mr. Higginbotham's niece."

A wondering murmur passed through the crowd on beholding her so rosy and bright; that same unhappy niece, whom they had supposed, on the authority of the Parker's Falls Gazette, to be lying at death's door in a fainting fit. But some shrewd fellows had doubted, all along, whether a young lady would be quite so desperate at the hanging of a rich old uncle.

"You see," continued Miss Higginbotham, with a smile, "that this strange story is quite unfounded as to myself; and I believe I may affirm it to be equally so in regard to my dear uncle Higginbotham. He has the kindness to give me a home in his house, though I contribute to my own support by teaching a school. I left Kimballton this morning to spend the vacation of commencement week with a friend, about five miles from Parker's Falls. My generous uncle, when he heard me on the stairs, called me to his bedside, and gave me two dollars and fifty cents to pay my stage fare, and another dollar for my extra expenses. He then laid his pocket-book under his pillow, shook hands with me, and advised me to take some biscuit in my bag, instead of breakfasting on the road. I feel confident, therefore, that I left my beloved relative alive, and trust that I shall find him so on my return."

The young lady courtesied at the close of her speech, which was so sensible and well worded, and delivered with such grace and propriety, that everybody thought her fit to be preceptress of the best academy in the State. But a stranger would have supposed that Mr. Higginbotham was an object of abhorrence at Parker's Falls, and that a thanksgiving had been proclaimed for his murder; so excessive was the wrath of the inhabitants on learning their mistake. The millmen resolved to bestow public honors on Dominicus Pike, only hesitating whether to tar and feather him, ride him on a rail, or refresh him with an ablution at the town pump, on the top of which he had declared himself the bearer of the news. The selectmen, by advice of the lawyer, spoke of pros-

ecuting him for a misdemeanor, in circulating unfounded reports, to the great disturbance of the peace of the Commonwealth. Nothing saved Dominicus, either from mob law or a court of justice, but an eloquent appeal made by the young lady in his behalf. Addressing a few words of heartfelt gratitude to his benefactress, he mounted the green cart and rode out of town, under a discharge of artillery from the school boys, who found plenty of ammunition in the neighboring clay-pits and mud holes. As he turned his head to exchange a farewell glance with Mr. Higginbotham's niece, a ball, of the consistence of hasty pudding, hit him slap in the mouth, giving him a most grim aspect. His whole person was so bespattered with the like filthy missiles, that he had almost a mind to ride back, and supplicate for the threatened ablution at the town pump; for, though not meant in kindness, it would now have been a deed of charity.

However, the sun shone bright on poor Dominicus, and the mud, an emblem of all stains of undeserved opprobrium, was easily brushed off when dry. Being a funny rogue, his heart soon cheered up; nor could he refrain from a hearty laugh at the uproar which his story had excited. The handbills of the selectmen would cause the commitment of all the vagabonds in the State; the paragraph in the Parker's Falls Gazette would be reprinted from Maine to Florida, and perhaps form an item in the London newspapers; and many a miser would tremble for his money bags and life, on learning the catastrophe of Mr. Higginbotham. The pedlar meditated with much fervor on the charms of the young schoolmistress, and swore that Daniel Webster never spoke nor looked so like an angel as Miss Higginbotham, while defending him from the wrathful populace at Parker's Falls.

Dominicus was now on the Kimballton turnpike, having all along determined to visit that place, though business had drawn him out of the most direct road from Morristown. As he approached the scene of the supposed murder, he continued to revolve the circumstances in his mind, and was astonished at the aspect which the whole case assumed. Had nothing occurred to corroborate the story of the first traveller, it might now have been considered as a hoax; but the yellow man was evidently acquainted either with the report or the fact; and there was a mystery in his dismayed and guilty look on being abruptly questioned. When, to this singular combination of incidents, it was added that the rumor tallied exactly with Mr. Higginbotham's character and habits of life; and that he had an orchard, and a St. Michael's pear-tree, near which he always passed at nightfall: the circumstantial evidence appeared so strong that Dominicus doubted whether the autograph produced by the lawyer, or even the niece's direct testimony, ought to be equivalent. Making cautious inquiries along the road, the pedlar further learned that Mr. Higginbotham had in his service an Irishman of doubtful character, whom he had hired without a recommendation, on the score of economy.

"May I be hanged myself," exclaimed Dominicus Pike aloud, on reaching the top of a lonely hill, "if I'll believe old Higginbotham is unhanged till I see him with my own eyes, and hear it from his own mouth! And as he's a real

9. hasty pudding—in New England made of Indian meal and water. **23. Daniel Webster**—(1782-1852) mentioned here because of his fame as a trial lawyer in criminal cases.

shaver, I'll have the minister or some other responsible man for an indorser."

It was growing dusk when he reached the toll-house on Kimballton turnpike, about a quarter of a mile from the village of this name. His little mare was fast bringing him up with a man on horseback, who trotted through the gate a few rods in advance of him, nodded to the toll-gatherer, and kept on towards the village. Dominicus was acquainted with the tollman, and, while making change, the usual remarks on the weather passed between them.

"I suppose," said the pedlar, throwing back his whiplash, to bring it down like a feather on the mare's flank, "you have not seen anything of old Mr. Higginbotham within a day or two?"

"Yes," answered the toll-gatherer. "He passed the gate just before you drove up, and yonder he rides now, if you can see him through the dusk. He's been to Woodfield this afternoon, attending a sheriff's sale there. The old man generally shakes hands and has a little chat with me; but to-night, he nodded,— as if to say, 'Charge my toll,' and jogged on; for wherever he goes, he must always be at home by eight o'clock."

"So they tell me," said Dominicus.

"I never saw a man look so yellow and thin as the squire does," continued the toll-gatherer. "Says I to myself, to-night, he's more like a ghost or an old mummy than good flesh and blood."

The pedlar strained his eyes through the twilight, and could just discern the horseman now far ahead on the village road. He seemed to recognize the rear of Mr. Higginbotham; but through the evening shadows, and amid the dust from the horse's feet, the figure appeared dim and unsubstantial; as if the shape of the mysterious old man were faintly moulded of darkness and gray light. Dominicus shivered.

"Mr. Higginbotham has come back from the other world, by way of the Kimballton turnpike," thought he.

He shook the reins and rode forward, keeping about the same distance in the rear of the gray old shadow, till the latter was concealed by a bend of the road. On reaching this point, the pedlar no longer saw the man on horseback, but found himself at the head of the village street, not far from a number of stores and two taverns, clustered round the meeting-house steeple. On his left were a stone wall and a gate, the boundary of a wood-lot, beyond which lay an orchard, farther still, a mowing field, and last of all, a house. These were the premises of Mr. Higginbotham, whose dwelling stood beside the old highway, but had been left in the background by the Kimballton turnpike. Dominicus knew the place; and the little mare stopped short by instinct; for he was not conscious of tightening the reins.

"For the soul of me, I cannot get by this gate!" said he, trembling. "I never shall be my own man again, till I see whether Mr. Higginbotham is hanging on the St. Michael's pear-tree!"

He leaped from the cart, gave the rein a turn round the gate post, and ran along the green path of the wood-lot as if Old Nick were chasing behind. Just then the village clock tolled eight, and as each deep stroke fell, Dominicus gave a fresh bound and flew faster than before, till, dim in the solitary centre of the orchard, he saw the fated pear-tree. One great branch stretched from the old

contorted trunk across the path, and threw the darkest shadow on that one spot. But something seemed to struggle beneath the branch!

The pedlar had never pretended to more courage than befits a man of peaceable occupation, nor could he account for his valor on this awful emergency. Certain it is, however, that he rushed forward, prostrated a sturdy Irishman with the butt end of his whip, and found—not indeed hanging on the St. Michael's pear-tree, but trembling beneath it, with a halter round his neck—the old, identical Mr. Higginbotham!

"Mr. Higginbotham," said Dominicus tremulously, "you're an honest man, and I'll take your word for it. Have you been hanged or not?"

If the riddle be not already guessed, a few words will explain the simple machinery by which this "coming event" was made to "cast its shadow before." Three men had plotted the robbery and murder of Mr. Higginbotham; two of them, successively, lost courage and fled, each delaying the crime one night by their disappearance; the third was in the act of perpetration, when a champion, blindly obeying the call of fate, like the heroes of old romance, appeared in the person of Dominicus Pike.

It only remains to say, that Mr. Higginbotham took the pedlar into high favor, sanctioned his addresses to the pretty schoolmistress, and settled his whole property on their children, allowing themselves the interest. In due time, the old gentleman capped the climax of his favors, by dying a Christian death, in bed, since which melancholy event Dominicus Pike has removed from Kimballton, and established a large tobacco manufactory in my native village.

YOUNG GOODMAN BROWN

Published in the *New England Magazine,* April, 1835; included in *Mosses from an Old Manse* (1846). Fannye Cherry in *American Literature,* Vol. V, pp. 342-48, regards as a source of this story "The Conversation of the Dogs" by Cervantes. The term "Goodman" referred to a commoner when "Mr." was restricted to men of position.

YOUNG GOODMAN BROWN came forth at sunset into the street at Salem village; but put his head back, after crossing the threshold, to exchange a parting kiss with his young wife. And Faith, as the wife was aptly named, thrust her own pretty head into the street, letting the wind play with the pink ribbons of her cap while she called to Goodman Brown.

"Dearest heart," whispered she, softly and rather sadly, when her lips were close to his ear, "prithee put off your journey until sunrise and sleep in your own bed to-night. A lone woman is troubled with such dreams and such thoughts that she's afeard of herself sometimes. Pray tarry with me this night, dear husband, of all nights in the year."

"My love and my Faith," replied young Goodman Brown, "of all nights in the year, this one night must I tarry away from thee. My journey, as thou callest it, forth and back again, must needs be done 'twixt now and sunrise.

12. **"shadow before"**—from "Lochiel's Warning," line 56, by Thomas Campbell (1777-1844).

What, my sweet, pretty wife, dost thou doubt me already, and we but three months married?"

"Then God bless you!" said Faith, with the pink ribbons; "and may you find all well when you come back."

"Amen!" cried Goodman Brown. "Say thy prayers, dear Faith, and go to bed at dusk, and no harm will come to thee."

So they parted; and the young man pursued his way until, being about to turn the corner by the meeting-house, he looked back and saw the head of Faith still peeping after him with a melancholy air, in spite of her pink ribbons.

"Poor little Faith!" thought he, for his heart smote him. "What a wretch am I to leave her on such an errand! She talks of dreams, too. Methought as she spoke there was trouble in her face, as if a dream had warned her what work is to be done to-night. But no, no; 'twould kill her to think it. Well, she's a blessed angel on earth; and after this one night I'll cling to her skirts and follow her to heaven."

With this excellent resolve for the future, Goodman Brown felt himself justified in making more haste on his present evil purpose. He had taken a dreary road, darkened by all the gloomiest trees of the forest, which barely stood aside to let the narrow path creep through, and closed immediately behind. It was all as lonely as could be; and there is this peculiarity in such a solitude, that the traveller knows not who may be concealed by the innumerable trunks and the thick boughs overhead; so that with lonely footsteps he may yet be passing through an unseen multitude.

"There may be a devilish Indian behind every tree," said Goodman Brown to himself; and he glanced fearfully behind him as he added, "What if the devil himself should be at my very elbow!"

His head being turned back, he passed a crook of the road, and, looking forward again, beheld the figure of a man, in grave and decent attire, seated at the foot of an old tree. He arose at Goodman Brown's approach and walked onward side by side with him.

"You are late, Goodman Brown," said he. "The clock of the Old South was striking as I came through Boston, and that is full fifteen minutes agone."

"Faith kept me back a while," replied the young man, with a tremor in his voice, caused by the sudden appearance of his companion, though not wholly unexpected.

It was now deep dusk in the forest, and deepest in that part of it where these two were journeying. As nearly as could be discerned, the second traveller was about fifty years old, apparently in the same rank of life as Goodman Brown, and bearing a considerable resemblance to him, though perhaps more in expression than features. Still they might have been taken for father and son. And yet, though the elder person was as simply clad as the younger, and as simple in manner too, he had an indescribable air of one who knew the world, and who would not have felt abashed at the governor's dinner table or in King William's court, were it possible that his affairs should call him thither. But

31. Old South—church in Boston built in 1730 and used as a meeting-place by the Revolutionary party preceding the war. **43-44. King William's**—William III (1650-1702), King of England, 1689-1702.

the only thing about him that could be fixed upon as remarkable was his staff, which bore the likeness of a great black snake, so curiously wrought that it might almost be seen to twist and wriggle itself like a living serpent. This, of course, must have been an ocular deception, assisted by the uncertain light.

"Come, Goodman Brown," cried his fellow-traveller, "this is a dull pace for the beginning of a journey. Take my staff, if you are so soon weary."

"Friend," said the other, exchanging his slow pace for a full stop, "having kept covenant by meeting thee here, it is my purpose now to return whence I came. I have scruples touching the matter thou wot'st of."

"Sayest thou so?" replied he of the serpent, smiling apart. "Let us walk on, nevertheless, reasoning as we go; and if I convince thee not thou shalt turn back. We are but a little way in the forest yet."

"Too far! too far!" exclaimed the goodman, unconsciously resuming his walk. "My father never went into the woods on such an errand, nor his father before him. We have been a race of honest men and good Christians since the days of the martyrs; and shall I be the first of the name of Brown that ever took this path and kept"—

"Such company, thou wouldst say," observed the elder person, interpreting his pause. "Well said, Goodman Brown! I have been as well acquainted with your family as with ever a one among the Puritans; and that's no trifle to say. I helped your grandfather, the constable, when he lashed the Quaker woman so smartly through the streets of Salem; and it was I that brought your father a pitch-pine knot, kindled at my own hearth, to set fire to an Indian village, in King Philip's war. They were my good friends, both; and many a pleasant walk have we had along this path, and returned merrily after midnight. I would fain be friends with you for their sake."

"If it be as thou sayest," replied Goodman Brown, "I marvel they never spoke of these matters; or, verily, I marvel not, seeing that the least rumor of the sort would have driven them from New England. We are a people of prayer, and good works to boot, and abide no such wickedness."

"Wickedness or not," said the traveller with the twisted staff, "I have a very general acquaintance here in New England. The deacons of many a church have drunk the communion wine with me; the selectmen of divers towns make me their chairman; and a majority of the Great and General Court are firm supporters of my interest. The governor and I, too— But these are state secrets."

"Can this be so?" cried Goodman Brown, with a stare of amazement at his undisturbed companion. "Howbeit, I have nothing to do with the governor and council; they have their own ways, and are no rule for a simple husbandman like me. But, were I to go on with thee, how should I meet the eye of that good old man, our minister, at Salem village? Oh, his voice would make me tremble both Sabbath day and lecture day."

Thus far the elder traveller had listened with due gravity; but now burst into a fit of irrepressible mirth, shaking himself so violently that his snake-like staff actually seemed to wriggle in sympathy.

"Ha! ha! ha!" shouted he again and again; then composing himself, "Well,

24. King Philip's war—the last stand by red men in New England, 1676. **34. Great and General Court**—the Colonial legislature of Massachusetts. **41. lecture day**—Thursday.

go on, Goodman Brown, go on; but, prithee, don't kill me with laughing."

"Well, then, to end the matter at once," said Goodman Brown, considerably nettled, "there is my wife, Faith. It would break her dear little heart; and I'd rather break my own."

"Nay, if that be the case," answered the other, "e'en go thy ways, Goodman Brown. I would not for twenty old women like the one hobbling before us that Faith should come to any harm."

As he spoke he pointed his staff at a female figure on the path, in whom Goodman Brown recognized a very pious and exemplary dame, who had taught him his catechism in youth, and was still his moral and spiritual adviser, jointly with the minister and Deacon Gookin.

"A marvel, truly, that Goody Cloyse should be so far in the wilderness at nightfall," said he. "But with your leave, friend, I shall take a cut through the woods until we have left this Christian woman behind. Being a stranger to you, she might ask whom I was consorting with and whither I was going."

"Be it so," said his fellow-traveller. "Betake you to the woods, and let me keep the path."

Accordingly the young man turned aside, but took care to watch his companion, who advanced softly along the road until he had come within a staff's length of the old dame. She, meanwhile, was making the best of her way, with singular speed for so aged a woman, and mumbling some indistinct words—a prayer, doubtless—as she went. The traveller put forth his staff and touched her withered neck with what seemed the serpent's tail.

"The devil!" screamed the pious old lady.

"Then Goody Cloyse knows her old friend?" observed the traveller, confronting her and leaning on his writhing stick.

"Ah, forsooth, and is it your worship indeed?" cried the good dame. "Yea, truly is it, and in the very image of my old gossip, Goodman Brown, the grandfather of the silly fellow that now is. But—would your worship believe it?—my broomstick hath strangely disappeared, stolen, as I suspect, by that unhanged witch, Goody Cory, and that, too, when I was all anointed with the juice of smallage, and cinquefoil, and wolf's bane—"

"Mingled with fine wheat and the fat of a new-born babe," said the shape of old Goodman Brown.

"Ah, your worship knows the recipe," cried the old lady, cackling aloud. "So, as I was saying, being all ready for the meeting, and no horse to ride on, I made up my mind to foot it; for they tell me there is a nice young man to be taken into communion to-night. But now your good worship will lend me your arm, and we shall be there in a twinkling."

"That can hardly be," answered her friend. "I may not spare you my arm, Goody Cloyse; but here is my staff, if you will."

So saying, he threw it down at her feet, where, perhaps, it assumed life, being one of the rods which its owner had formerly lent to the Egyptian magi. Of this fact, however, Goodman Brown could not take cognizance. He

25. **Goody Cloyse**—an historical character sentenced to death for witchcraft by Hawthorne's great-great-grandfather in 1692, as were Goody Cory (line 31) and Martha Carrier (p. 502, line 45). 32. **smallage**—parsley.

had cast up his eyes in astonishment, and, looking down again, beheld neither Goody Cloyse nor the serpentine staff, but his fellow-traveller alone, who waited for him as calmly as if nothing had happened.

"That old woman taught me my catechism," said the young man; and there was a world of meaning in this simple comment.

They continued to walk onward, while the elder traveller exhorted his companion to make good speed and persevere in the path, discoursing so aptly that his arguments seemed rather to spring up in the bosom of his auditor than to be suggested by himself. As they went, he plucked a branch of maple to serve for a walking stick, and began to strip it of the twigs and little boughs, which were wet with evening dew. The moment his fingers touched them they became strangely withered and dried up as with a week's sunshine. Thus the pair proceeded, at a good free pace, until suddenly, in a gloomy hollow of the road, Goodman Brown sat himself down on the stump of a tree and refused to go any farther.

"Friend," said he, stubbornly, "my mind is made up. Not another step will I budge on this errand. What if a wretched old woman do choose to go to the devil when I thought she was going to heaven: is that any reason why I should quit my dear Faith and go after her?"

"You will think better of this by and by," said his acquaintance, composedly. "Sit here and rest yourself a while; and when you feel like moving again, there is my staff to help you along."

Without more words, he threw his companion the maple stick, and was as speedily out of sight as if he had vanished into the deepening gloom. The young man sat a few moments by the roadside, applauding himself greatly, and thinking with how clear a conscience he should meet the minister in his morning walk, nor shrink from the eye of good old Deacon Gookin. And what calm sleep would be his that very night, which was to have been spent so wickedly, but so purely and sweetly now, in the arms of Faith! Amidst these pleasant and praiseworthy meditations, Goodman Brown heard the tramp of horses along the road, and deemed it advisable to conceal himself within the verge of the forest, conscious of the guilty purpose that had brought him thither, though now so happily turned from it.

On came the hoof tramps and the voices of the riders, two grave old voices, conversing soberly as they drew near. These mingled sounds appeared to pass along the road, within a few yards of the young man's hiding-place; but, owing doubtless to the depth of the gloom at that particular spot, neither the travellers nor their steeds were visible. Though their figures brushed the small boughs by the wayside, it could not be seen that they intercepted, even for a moment, the faint gleam from the strip of bright sky athwart which they must have passed. Goodman Brown alternately crouched and stood on tiptoe, pulling aside the branches and thrusting forth his head as far as he durst without discerning so much as a shadow. It vexed him the more, because he could have sworn, were such a thing possible, that he recognized the voices of the minister and Deacon Gookin, jogging along quietly, as they were wont to do, when bound to some ordination or ecclesiastical council. While yet within hearing, one of the riders stopped to pluck a switch.

"Of the two, reverend sir," said the voice like the deacon's, "I had rather miss an ordination dinner than to-night's meeting. They tell me that some of our community are to be here from Falmouth and beyond, and others from Connecticut and Rhode Island, besides several of the Indian powwows, who, after their fashion, know almost as much deviltry as the best of us. Moreover, there is a goodly young woman to be taken into communion."

"Mighty well, Deacon Gookin!" replied the solemn old tones of the minister. "Spur up, or we shall be late. Nothing can be done, you know, until I get on the ground."

The hoofs clattered again; and the voices, talking so strangely in the empty air, passed on through the forest, where no church had ever been gathered or solitary Christian prayed. Whither, then, could these holy men be journeying so deep into the heathen wilderness? Young Goodman Brown caught hold of a tree for support, being ready to sink down on the ground, faint and overburdened with the heavy sickness of his heart. He looked up to the sky, doubting whether there really was a heaven above him. Yet there was the blue arch, and the stars brightening in it.

"With heaven above and Faith below, I will yet stand firm against the devil!" cried Goodman Brown.

While he still gazed upward into the deep arch of the firmament and had lifted his hands to pray, a cloud, though no wind was stirring, hurried across the zenith and hid the brightening stars. The blue sky was still visible, except directly overhead, where this black mass of cloud was sweeping swiftly northward. Aloft in the air, as if from the depths of the cloud, came a confused and doubtful sound of voices. Once the listener fancied that he could distinguish the accents of townspeople of his own, men and women, both pious and ungodly, many of whom he had met at the communion table, and had seen others rioting at the tavern. The next moment, so indistinct were the sounds, he doubted whether he had heard aught but the murmur of the old forest, whispering without a wind. Then came a stronger swell of those familiar tones, heard daily in the sunshine at Salem village, but never until now from a cloud of night. There was one voice, of a young woman, uttering lamentations, yet with an uncertain sorrow, and entreating for some favor, which, perhaps, it would grieve her to obtain; and all the unseen multitude, both saints and sinners, seemed to encourage her onward.

"Faith!" shouted Goodman Brown, in a voice of agony and desperation; and the echoes of the forest mocked him, crying, "Faith! Faith!" as if bewildered wretches were seeking her all through the wilderness.

The cry of grief, rage, and terror was yet piercing the night, when the unhappy husband held his breath for a response. There was a scream, drowned immediately in a louder murmur of voices, fading into far-off laughter, as the dark cloud swept away, leaving the clear and silent sky above Goodman Brown. But something fluttered lightly down through the air and caught on the branch of a tree. The young man seized it, and beheld a pink ribbon.

"My Faith is gone!" cried he, after one stupefied moment. "There is no good on earth; and sin is but a name. Come, devil; for to thee is this world given."

And, maddened with despair, so that he laughed loud and long, did Goodman Brown grasp his staff and set forth again, at such a rate that he seemed to fly along the forest path rather than to walk or run. The road grew wilder and drearier and more faintly traced, and vanished at length, leaving him in the heart of the dark wilderness, still rushing onward with the instinct that guides mortal man to evil. The whole forest was peopled with frightful sounds —the creaking of the trees, the howling of wild beasts, and the yell of Indians; while sometimes the wind tolled like a distant church bell, and sometimes gave a broad roar around the traveller, as if all Nature were laughing him to scorn. But he was himself the chief horror of the scene, and shrank not from its other horrors.

"Ha! ha! ha!" roared Goodman Brown when the wind laughed at him. "Let us hear which will laugh loudest. Think not to frighten me with your deviltry. Come witch, come wizard, come Indian powwow, come devil himself, and here comes Goodman Brown. You may as well fear him as he fear you."

In truth, all through the haunted forest there could be nothing more frightful than the figure of Goodman Brown. On he flew among the black pines, brandishing his staff with frenzied gestures, now giving vent to an inspiration of horrid blasphemy, and now shouting forth such laughter as set all the echoes of the forest laughing like demons around him. The fiend in his own shape is less hideous than when he rages in the breast of man. Thus sped the demoniac on his course, until, quivering among the trees, he saw a red light before him, as when the felled trunks and branches of a clearing have been set on fire, and throw up their lurid blaze against the sky, at the hour of midnight. He paused, in a lull of the tempest that had driven him onward, and heard the swell of what seemed a hymn, rolling solemnly from a distance with the weight of many voices. He knew the tune; it was a familiar one in the choir of the village meeting-house. The verse died heavily away, and was lengthened by a chorus, not of human voices, but of all the sounds of the benighted wilderness pealing in awful harmony together. Goodman Brown cried out, and his cry was lost to his own ear by its unison with the cry of the desert.

In the interval of silence he stole forward until the light glared full upon his eyes. At one extremity of an open space, hemmed in by the dark wall of the forest, arose a rock, bearing some rude, natural resemblance either to an altar or a pulpit, and surrounded by four blazing pines, their tops aflame, their stems untouched, like candles at an evening meeting. The mass of foliage that had overgrown the summit of the rock was all on fire, blazing high into the night and fitfully illuminating the whole field. Each pendent twig and leafy festoon was in a blaze. As the red light arose and fell, a numerous congregation alternately shone forth, then disappeared in shadow, and again grew, as it were, out of the darkness, peopling the heart of the solitary woods at once.

"A grave and dark-clad company," quoth Goodman Brown.

In truth they were such. Among them, quivering to and fro between gloom and splendor, appeared faces that would be seen next day at the council board of the province, and others which, Sabbath after Sabbath, looked devoutly

heavenward, and benignantly over the crowded pews, from the holiest pulpits in the land. Some affirm that the lady of the governor was there. At least there were high dames well known to her, and wives of honored husbands, and widows, a great multitude, and ancient maidens, all of excellent repute, and fair young girls, who trembled lest their mothers should espy them. Either the sudden gleams of light flashing over the obscure field bedazzled Goodman Brown, or he recognized a score of the church members of Salem village famous for their especial sanctity. Good old Deacon Gookin had arrived, and waited at the skirts of that venerable saint, his revered pastor. But, irreverently consorting with these grave, reputable, and pious people, these elders of the church, these chaste dames and dewy virgins, there were men of dissolute lives and women of spotted fame, wretches given over to all mean and filthy vice, and suspected even of horrid crimes. It was strange to see that the good shrank not from the wicked, nor were the sinners abashed by the saints. Scattered also among their pale-faced enemies were the Indian priests, or powwows, who had often scared their native forest with more hideous incantations than any known to English witchcraft.

"But where is Faith?" thought Goodman Brown; and, as hope came into his heart, he trembled.

Another verse of the hymn arose, a slow and mournful strain, such as the pious love, but joined to words which expressed all that our nature can conceive of sin, and darkly hinted at far more. Unfathomable to mere mortals is the lore of fiends. Verse after verse was sung; and still the chorus of the desert swelled between like the deepest tone of a mighty organ; and with the final peal of that dreadful anthem there came a sound, as if the roaring wind, the rushing streams, the howling beasts, and every other voice of the unconcerted wilderness were mingling and according with the voice of guilty man in homage to the prince of all. The four blazing pines threw up a loftier flame, and obscurely discovered shapes and visages of horror on the smoke wreaths above the impious assembly. At the same moment the fire on the rock shot redly forth and formed a glowing arch above its base, where now appeared a figure. With reverence be it spoken, the figure bore no slight similitude, both in garb and manner, to some grave divine of the New England churches.

"Bring forth the converts!" cried a voice that echoed through the field and rolled into the forest.

At the word, Goodman Brown stepped forth from the shadow of the trees and approached the congregation, with whom he felt a loathful brotherhood by the sympathy of all that was wicked in his heart. He could have well-nigh sworn that the shape of his own dead father beckoned him to advance, looking downward from a smoke wreath, while a woman, with dim features of despair, threw out her hand to warn him back. Was it his mother? But he had no power to retreat one step, nor to resist, even in thought, when the minister and good old Deacon Gookin seized his arms and led him to the blazing rock. Thither came also the slender form of a veiled female, led between Goody Cloyse, that pious teacher of the catechism, and Martha Carrier, who had received the devil's promise to be queen of hell. A rampant hag was she. And there stood the proselytes beneath the canopy of fire.

"Welcome, my children," said the dark figure, "to the communion of your race. Ye have found thus young your nature and your destiny. My children, look behind you!"

They turned; and flashing forth, as it were, in a sheet of flame, the fiend worshippers were seen; the smile of welcome gleamed darkly on every visage.

"There," resumed the sable form, "are all whom ye have reverenced from youth. Ye deemed them holier than yourselves, and shrank from your own sin, contrasting it with their lives of righteousness and prayerful aspirations heavenward. Yet here are they all in my worshipping assembly. This night it shall be granted you to know their secret deeds: how hoary-bearded elders of the church have whispered wanton words to the young maids of their households; how many a woman, eager for widows' weeds, has given her husband a drink at bedtime and let him sleep his last sleep in her bosom; how beardless youths have made haste to inherit their fathers' wealth; and how fair damsels—blush not, sweet ones—have dug little graves in the garden, and bidden me, the sole guest, to an infant's funeral. By the sympathy of your human hearts for sin ye shall scent out all the places—whether in church, bed-chamber, street, field, or forest—where crime has been committed, and shall exult to behold the whole earth one stain of guilt, one mighty blood spot. Far more than this. It shall be yours to penetrate, in every bosom, the deep mystery of sin, the fountain of all wicked arts, and which inexhaustibly supplies more evil impulses than human power—than my power at its utmost—can make manifest in deeds. And now, my children, look upon each other."

They did so; and, by the blaze of the hell-kindled torches, the wretched man beheld his Faith, and the wife her husband, trembling before that unhallowed altar.

"Lo, there ye stand, my children," said the figure, in a deep and solemn tone, almost sad with its despairing awfulness, as if his once angelic nature could yet mourn for our miserable race. "Depending upon one another's hearts, ye had still hoped that virtue were not all a dream. Now are ye undeceived. Evil is the nature of mankind. Evil must be your only happiness. Welcome again, my children, to the communion of your race."

"Welcome," repeated the fiend worshippers, in one cry of despair and triumph.

And there they stood, the only pair, as it seemed, who were yet hesitating on the verge of wickedness in this dark world. A basin was hollowed, naturally, in the rock. Did it contain water, reddened by the lurid light? or was it blood? or, perchance, a liquid flame? Herein did the shape of evil dip his hand and prepare to lay the mark of baptism upon their foreheads, that they might be partakers of the mystery of sin, more conscious of the secret guilt of others, both in deed and thought, than they could now be of their own. The husband cast one look at his pale wife, and Faith at him. What polluted wretches would the next glance show them to each other, shuddering alike at what they disclosed and what they saw!

"Faith! Faith!" cried the husband, "look up to heaven, and resist the wicked one."

Whether Faith obeyed he knew not. Hardly had he spoken when he found

himself amid calm night and solitude, listening to a roar of the wind which died heavily away through the forest. He staggered against the rock, and felt it chill and damp; while a hanging twig, that had been all on fire, besprinkled his cheek with the coldest dew.

The next morning young Goodman Brown came slowly into the street of Salem village, staring around him like a bewildered man. The good old minister was taking a walk along the graveyard to get an appetite for breakfast and meditate his sermon, and bestowed a blessing, as he passed, on Goodman Brown. He shrank from the venerable saint as if to avoid an anathema. Old Deacon Gookin was at domestic worship, and the holy words of his prayer were heard through the open window. "What God doth the wizard pray to?" quoth Goodman Brown. Goody Cloyse, that excellent old Christian, stood in the early sunshine at her own lattice, catechizing a little girl who had brought her a pint of morning's milk. Goodman Brown snatched away the child as from the grasp of the fiend himself. Turning the corner by the meeting-house, he spied the head of Faith, with the pink ribbons, gazing anxiously forth, and bursting into such joy at sight of him that she skipped along the street and almost kissed her husband before the whole village. But Goodman Brown looked sternly and sadly into her face, and passed on without a greeting.

Had Goodman Brown fallen asleep in the forest and only dreamed a wild dream of a witch-meeting?

Be it so if you will; but, alas! it was a dream of evil omen for young Goodman Brown. A stern, a sad, a darkly meditative, a distrustful, if not a desperate man did he become from the night of that fearful dream. On the Sabbath day, when the congregation were singing a holy psalm, he could not listen because an anthem of sin rushed loudly upon his ear and drowned all the blessed strain. When the minister spoke from the pulpit with power and fervid eloquence, and, with his hand on the open Bible, of the sacred truths of our religion, and of saint-like lives and triumphant deaths, and of future bliss or misery unutterable, then did Goodman Brown turn pale, dreading lest the roof should thunder down upon the gray blasphemer and his hearers. Often, awaking suddenly at midnight, he shrank from the bosom of Faith; and at morning or eventide, when the family knelt down at prayer, he scowled and muttered to himself, and gazed sternly at his wife, and turned away. And when he had lived long, and was borne to his grave a hoary corpse, followed by Faith, an aged woman, and children and grandchildren, a goodly procession, besides neighbors not a few, they carved no hopeful verse upon his tombstone, for his dying hour was gloom.

THE MAYPOLE OF MERRY MOUNT

A Parable, published in the *Boston Token* of 1836, and included in *Twice-Told Tales* (1837) and in *Legends of New England* (1877). Captain Wollaston, after founding a colony near Plymouth in 1625, left for Virginia, and was succeeded by Thomas Morton, a London lawyer, who sold firearms and rum to the Indians. In 1628 Miles Standish arrested Morton and he was deported, though he returned

later. During his absence, John Endicott and a band of colonists at Salem cut down the "idoll May Pole," renamed the place Mount Dagon, and advised the colonists to mend their ways "else they would find their merry mount but a woful mount." The student who will compare Hawthorne's account with that in Fiske's *Beginnings of New England* or C. F. Adams's *Three Episodes in Massachusetts History* may see how the romancer adapted his materials. Morton's own account of the "revells" appeared in his *New English Canaan* (1637), Book III, Chap. 14; the Puritan version was given in Bradford's *History of Plymouth Plantation* (Davis edition, 1908, p. 238).

"There is an admirable foundation for a philosophic romance in the curious history of the early settlement of Mount Wollaston, or Merry Mount. In the slight sketch here attempted, the facts, recorded on the grave pages of our New England annalists, have wrought themselves, almost spontaneously, into a sort of allegory. The masques, mummeries, and festive customs, described in the text, are in accordance with the manners of the age. Authority on these points may be found in Strutt's Book of English Sports and Pastimes." (Hawthorne's note)

BRIGHT were the days at Merry Mount, when the Maypole was the banner staff of that gay colony. They who reared it, should their banner be triumphant, were to pour sunshine over New England's rugged hills, and scatter flower seeds throughout the soil. Jollity and gloom were contending for an empire. Midsummer eve had come, bringing deep verdure to the forest, and roses in her lap, of a more vivid hue than the tender buds of Spring. But May, or her mirthful spirit, dwelt all the year round at Merry Mount, sporting with the Summer months, and reveling with Autumn, and basking in the glow of Winter's fireside. Through a world of toil and care she flitted with a dream-like smile, and came hither to find a home among the lightsome hearts of Merry Mount.

Never had the Maypole been so gayly decked as at sunset on midsummer eve. This venerated emblem was a pine-tree, which had preserved the slender grace of youth, while it equalled the loftiest height of the old wood monarchs. From its top streamed a silken banner, colored like the rainbow. Down nearly to the ground the pole was dressed with birchen boughs, and others of the liveliest green, and some with silvery leaves, fastened by ribbons that fluttered in fantastic knots of twenty different colors, but no sad ones. Garden flowers, and blossoms of the wilderness, laughed gladly forth amid the verdure, so fresh and dewy that they must have grown by magic on that happy pine-tree. Where this green and flowery splendor terminated, the shaft of the Maypole was stained with the seven brilliant hues of the banner at its top. On the lowest green bough hung an abundant wreath of roses, some that had been gathered in the sunniest spots of the forest, and others, of still richer blush, which the colonists had reared from English seed. O, people of the Golden Age, the chief of your husbandry was to raise flowers!

But what was the wild throng that stood hand in hand about the Maypole? It could not be that the fauns and nymphs, when driven from their classic groves and homes of ancient fable, had sought refuge, as all the persecuted did, in the fresh woods of the West. These were Gothic monsters, though perhaps

of Grecian ancestry. On the shoulders of a comely youth uprose the head and branching antlers of a stag; a second, human in all other points, had the grim visage of a wolf; a third, still with the trunk and limbs of a mortal man, showed the beard and horns of a venerable he-goat. There was the likeness of a bear erect, brute in all but his hind legs, which were adorned with pink silk stockings. And here again, almost as wondrous, stood a real bear of the dark forest, lending each of his fore paws to the grasp of a human hand, and as ready for the dance as any in that circle. His inferior nature rose half way, to meet his companions as they stooped. Other faces wore the similitude of man or woman, but distorted or extravagant, with red noses pendulous before their mouths, which seemed of awful depth, and stretched from ear to ear in an eternal fit of laughter. Here might be seen the Salvage Man, well known in heraldry, hairy as a baboon, and girdled with green leaves. By his side, a noble figure, but still a counterfeit, appeared an Indian hunter, with feathery crest and wampum belt. Many of this strange company wore foolscaps, and had little bells appended to their garments, tinkling with a silvery sound, responsive to the inaudible music of their gleesome spirits. Some youths and maidens were of soberer garb, yet well maintained their places in the irregular throng by the expression of wild revelry upon their features. Such were the colonists of Merry Mount, as they stood in the broad smile of sunset round their venerated Maypole.

Had a wanderer, bewildered in the melancholy forest, heard their mirth, and stolen a half-affrighted glance, he might have fancied them the crew of Comus, some already transformed to brutes, some midway between man and beast, and the others rioting in the flow of tipsy jollity that foreran the change. But a band of Puritans, who watched the scene, invisible themselves, compared the masques to those devils and ruined souls with whom their superstition peopled the black wilderness.

Within the ring of monsters appeared the two airiest forms that had ever trodden on any more solid footing than a purple and golden cloud. One was a youth in glistening apparel, with a scarf of the rainbow pattern crosswise on his breast. His right hand held a gilded staff, the ensign of high dignity among the revellers, and his left grasped the slender fingers of a fair maiden, not less gayly decorated than himself. Bright roses glowed in contrast with the dark and glossy curls of each, and were scattered round their feet, or had sprung up spontaneously there. Behind this lightsome couple, so close to the Maypole that its boughs shaded his jovial face, stood the figure of an English priest, canonically dressed, yet decked with flowers, in heathen fashion, and wearing a chaplet of the native vine leaves. By the riot of his rolling eye, and the pagan decorations of his holy garb, he seemed the wildest monster there, and the very Comus of the crew.

"Votaries of the Maypole," cried the flower-decked priest, "merrily, all day long, have the woods echoed to your mirth. But be this your merriest hour, my hearts! Lo, here stand the Lord and Lady of the May, whom I, a clerk of Oxford, and high priest of Merry Mount, am presently to join in holy matrimony.

23-24. crew of Comus—*Cf.* Milton's *Comus,* lines 92 ff.

Up with your nimble spirits, ye morris-dancers, green men, and glee maidens, bears and wolves, and horned gentlemen! Come; a chorus now, rich with the old mirth of Merry England, and the wilder glee of this fresh forest; and then a dance, to show the youthful pair what life is made of, and how airily they should go through it! All ye that love the Maypole, lend your voices to the nuptial song of the Lord and Lady of the May!"

This wedlock was more serious than most affairs of Merry Mount, where jest and delusion, trick and fantasy, kept up a continual carnival. The Lord and Lady of the May, though their titles must be laid down at sunset, were really and truly to be partners for the dance of life, beginning the measure that same bright eve. The wreath of roses, that hung from the lowest green bough of the Maypole, had been twined for them, and would be thrown over both their heads, in symbol of their flowery union. When the priest had spoken, therefore, a riotous uproar burst from the rout of monstrous figures.

"Begin you the stave, reverend Sir," cried they all; "and never did the woods ring to such a merry peal as we of the Maypole shall send up!"

Immediately a prelude of pipe, cithern, and viol, touched with practised minstrelsy, began to play from a neighboring thicket, in such a mirthful cadence that the boughs of the Maypole quivered to the sound. But the May Lord, he of the gilded staff, chancing to look into his Lady's eyes, was wonder struck at the almost pensive glance that met his own.

"Edith, sweet Lady of the May," whispered he reproachfully, "is yon wreath of roses a garland to hang above our graves, that you look so sad? O, Edith, this is our golden time! Tarnish it not by any pensive shadow of the mind; for it may be that nothing of futurity will be brighter than the mere remembrance of what is now passing."

"That was the very thought that saddened me! How came it in your mind too?" said Edith, in a still lower tone than he, for it was high treason to be sad at Merry Mount. "Therefore do I sigh amid this festive music. And besides, dear Edgar, I struggle as with a dream, and fancy that these shapes of our jovial friends are visionary, and their mirth unreal, and that we are no true Lord and Lady of the May. What is the mystery in my heart?"

Just then, as if a spell had loosened them, down came a little shower of withering rose leaves from the Maypole. Alas, for the young lovers! No sooner had their hearts glowed with real passion than they were sensible of something vague and unsubstantial in their former pleasures, and felt a dreary presentiment of inevitable change. From the moment that they truly loved, they had subjected themselves to earth's doom of care and sorrow, and troubled joy, and had no more a home at Merry Mount. That was Edith's mystery. Now leave we the priest to marry them, and the masquers to sport round the Maypole, till the last sunbeam be withdrawn from its summit, and the shadows of the forest mingle gloomily in the dance. Meanwhile, we may discover who these gay people were.

Two hundred years ago, and more, the old world and its inhabitants became mutually weary of each other. Men voyaged by thousands to the West: some to barter glass beads, and such like jewels, for the furs of the Indian hunter; some to conquer virgin empires; and one stern band to pray. But none of

these motives had much weight with the colonists of Merry Mount. Their leaders were men who had sported so long with life, that when Thought and Wisdom came, even these unwelcome guests were led astray by the crowd of vanities which they should have put to flight. Erring Thought and perverted Wisdom were made to put on masques and play the fool. The men of whom we speak, after losing the heart's fresh gayety, imagined a wild philosophy of pleasure, and came hither to act out their latest day-dream. They gathered followers from all that giddy tribe whose whole life is like the festal days of soberer men. In their train were minstrels, not unknown in London streets: wandering players, whose theatres had been the halls of noblemen; mummers, rope-dancers, and mountebanks, who would long be missed at wakes, church ales, and fairs; in a word, mirth makers of every sort, such as abounded in that age, but now began to be discountenanced by the rapid growth of Puritanism. Light had their footsteps been on land, and as lightly they came across the sea. Many had been maddened by their previous troubles into a gay despair; others were as madly gay in the flush of youth, like the May Lord and his Lady; but whatever might be the quality of their mirth, old and young were gay at Merry Mount. The young deemed themselves happy. The elder spirits, if they knew that mirth was but the counterfeit of happiness, yet followed the false shadow wilfully, because at least her garments glittered brightest. Sworn triflers of a lifetime, they would not venture among the sober truths of life not even to be truly blest.

All the hereditary pastimes of Old England were transplanted hither. The King of Christmas was duly crowned, and the Lord of Misrule bore potent sway. On the Eve of St. John, they felled whole acres of the forest to make bonfires, and danced by the blaze all night, crowned with garlands, and throwing flowers into the flame. At harvest time, though their crop was of the smallest, they made an image with the sheaves of Indian corn, and wreathed it with autumnal garlands, and bore it home triumphantly. But what chiefly characterized the colonists of Merry Mount was their veneration for the Maypole. It has made their true history a poet's tale. Spring decked the hallowed emblem with young blossoms and fresh green boughs; Summer brought roses of the deepest blush, and the perfected foliage of the forest; Autumn enriched it with that red and yellow gorgeousness which converts each wildwood leaf into a painted flower; and Winter silvered it with sleet, and hung it round with icicles, till it flashed in the cold sunshine, itself a frozen sunbeam. Thus each alternate season did homage to the Maypole, and paid it a tribute of its own richest splendor. Its votaries danced round it, once, at least, in every month; sometimes they called it their religion, or their altar; but always, it was the banner staff of Merry Mount.

Unfortunately, there were men in the new world of a sterner faith than these Maypole worshippers. Not far from Merry Mount was a settlement of Puritans, most dismal wretches, who said their prayers before daylight, and then wrought in the forest or the cornfield till evening made it prayer time again. Their weapons were always at hand to shoot down the straggling savage.

11-12. **church ales**—church festivals. 25. **Eve of St. John**—Midsummer's Eve, formerly so celebrated.

When they met in conclave, it was never to keep up the old English mirth, but to hear sermons three hours long, or to proclaim bounties on the heads of wolves and the scalps of Indians. Their festivals were fast days, and their chief pastime the singing of psalms. Woe to the youth or maiden who did but dream of a dance! The selectmen nodded to the constable; and there sat the light-heeled reprobate in the stocks; or if he danced, it was round the whipping-post, which might be termed the Puritan Maypole.

A party of these grim Puritans, toiling through the difficult woods, each with a horseload of iron armor to burden his footsteps, would sometimes draw near the sunny precincts of Merry Mount. There were the silken colonists, sporting round their Maypole; perhaps teaching a bear to dance, or striving to communicate their mirth to the grave Indian; or masquerading in the skins of deer and wolves, which they had hunted for that especial purpose. Often, the whole colony were playing at blindman's buff, magistrates and all, with their eyes bandaged, except a single scapegoat, whom the blinded sinners pursued by the tinkling of the bells at his garments. Once, it is said, they were seen following a flower-decked corpse, with merriment and festive music, to his grave. But did the dead man laugh? In their quietest times, they sang ballads and told tales, for the edification of their pious visitors; or perplexed them with juggling tricks; or grinned at them through horse collars; and when sport itself grew wearisome, they made game of their own stupidity, and began a yawning match. At the very least of these enormities, the men of iron shook their heads and frowned so darkly that the revellers looked up, imagining that a momentary cloud had overcast the sunshine, which was to be perpetual there. On the other hand, the Puritans affirmed that, when a psalm was pealing from their place of worship, the echo which the forest sent them back seemed often like the chorus of a jolly catch, closing with a roar of laughter. Who but the fiend, and his bond slaves, the crew of Merry Mount, had thus disturbed them? In due time, a feud arose, stern and bitter on one side, and as serious on the other as anything could be among such light spirits as had sworn allegiance to the Maypole. The future complexion of New England was involved in this important quarrel. Should the grizzly saints establish their jurisdiction over the gay sinners, then would their spirits darken all the clime, and make it a land of clouded visages, of hard toil, of sermon and psalm forever. But should the banner staff of Merry Mount be fortunate, sunshine would break upon the hills, and flowers would beautify the forest, and late posterity do homage to the Maypole.

After these authentic passages from history, we return to the nuptials of the Lord and Lady of the May. Alas! we have delayed too long, and must darken our tale too suddenly. As we glance again at the Maypole, a solitary sunbeam is fading from the summit, and leaves only a faint, golden tinge blended with the hues of the rainbow banner. Even that dim light is now withdrawn, relinquishing the whole domain of Merry Mount to the evening gloom, which has rushed so instantaneously from the black surrounding woods. But some of these black shadows have rushed forth in human shape.

Yes, with the setting sun, the last day of mirth had passed from Merry Mount. The ring of gay masquers was disordered and broken; the stag lowered

his antlers in dismay; the wolf grew weaker than a lamb; the bells of the morris-dancers tinkled with tremulous affright. The Puritans had played a characteristic part in the Maypole mummeries. Their darksome figures were intermixed with the wild shapes of their foes, and made the scene a picture of the moment, when waking thoughts start up amid the scattered fantasies of a dream. The leader of the hostile party stood in the centre of the circle, while the route of monsters cowered around him, like evil spirits in the presence of a dread magician. No fantastic foolery could look him in the face. So stern was the energy of his aspect, that the whole man, visage, frame, and soul, seemed wrought of iron, gifted with life and thought, yet all of one substance with his headpiece and breastplate. It was the Puritan of Puritans; it was Endicott himself!

"Stand off, priest of Baal!" said he, with a grim frown, and laying no reverent hand upon the surplice. "I know thee, Blackstone! Thou art the man who couldst not abide the rule even of thine own corrupted church, and hast come hither to preach iniquity, and to give example of it in thy life. But now shall it be seen that the Lord hath sanctified this wilderness for his peculiar people. Woe unto them that would defile it! And first, for this flower-decked abomination, the altar of thy worship!"

And with his keen sword Endicott assaulted the hallowed Maypole. Nor long did it resist his arm. It groaned with a dismal sound; it showered leaves and rosebuds upon the remorseless enthusiast; and finally, with all its green boughs and ribbons and flowers, symbolic of departed pleasures, down fell the banner staff of Merry Mount. As it sank, tradition says, the evening sky grew darker, and the woods threw forth a more sombre shadow.

"There," cried Endicott, looking triumphantly on his work, "there lies the only Maypole in New England! The thought is strong within me that, by its fall, is shadowed forth the fate of light and idle mirth makers, amongst us and our posterity. Amen, saith John Endicott."

"Amen!" echoed his followers.

But the votaries of the Maypole gave one groan for their idol. At the sound, the Puritan leader glanced at the crew of Comus, each a figure of broad mirth, yet, at this moment, strangely expressive of sorrow and dismay.

"Valiant captain," quoth Peter Palfrey, the Ancient of the band, "what order shall be taken with the prisoners?"

"I thought not to repent me of cutting down a Maypole," replied Endicott, "yet now I could find in my heart to plant it again, and give each of these bestial pagans one other dance round their idol. It would have served rarely for a whipping-post!"

"But there are pine-trees enow," suggested the lieutenant.

"True, good Ancient," said the leader. "Wherefore, bind the heathen crew,

12. **Endicott**—John Endicott (about 1588-1665), governor of Massachusetts Bay after 1644. 14. **Blackstone**—"Did Governor Endicott speak less positively, we should suspect a mistake here. The Rev. Mr. Blackstone, though an eccentric, is not known to have been an immoral man. We rather doubt his identity with the priest of Merry Mount." (Hawthorne's note) Blackstone was a young Episcopal clergyman who entertained Winthrop on his arrival in Boston, and was usually on good terms with the Puritans. 34. **Peter Palfrey**—mentioned also in Hawthorne's "Main Street." 34. **Ancient**—Standard-bearer or ensign.

and bestow on them a small matter of stripes apiece, as earnest of our future justice. Set some of the rogues in the stocks to rest themselves, so soon as Providence shall bring us to one of our own well-ordered settlements, where such accommodations may be found. Further penalties, such as branding and cropping of ears, shall be thought of hereafter."

"How many stripes for the priest?" inquired Ancient Palfrey.

"None as yet," answered Endicott, bending his iron frown upon the culprit. "It must be for the Great and General Court to determine, whether stripes and long imprisonment, and other grievous penalty, may atone for his transgressions. Let him look to himself! For such as violate our civil order, it may be permitted us to show mercy. But woe to the wretch that troubleth our religion!"

"And this dancing bear," resumed the officer. "Must he share the stripes of his fellows?"

"Shoot him through the head!" said the energetic Puritan. "I suspect witchcraft in the beast."

"Here be a couple of shining ones," continued Peter Palfrey, pointing his weapon at the Lord and Lady of the May. "They seem to be of high station among these misdoers. Methinks their dignity will not be fitted with less than a double share of stripes."

Endicott rested on his sword, and closely surveyed the dress and aspect of the hapless pair. There they stood, pale, downcast, and apprehensive. Yet there was an air of mutual support, and of pure affection, seeking aid and giving it, that showed them to be man and wife, with the sanction of a priest upon their love. The youth, in the peril of the moment, had dropped his gilded staff, and thrown his arm about the Lady of the May, who leaned against his breast, too lightly to burden him, but with weight enough to express that their destinies were linked together, for good or evil. They looked first at each other, and then into the grim captain's face. There they stood, in the first hour of wedlock, while the idle pleasures, of which their companions were the emblems, had given place to the sternest cares of life, personified by the dark Puritans. But never had their youthful beauty seemed so pure and high as when its glow was chastened by adversity.

"Youth," said Endicott, "ye stand in an evil case, thou and thy maiden wife. Make ready presently, for I am minded that ye shall both have a token to remember your wedding day!"

"Stern man," cried the May Lord, "how can I move thee? Were the means at hand, I would resist to the death. Being powerless, I entreat! Do with me as thou wilt, but let Edith go untouched!"

"Not so," replied the immitigable zealot. "We are not wont to show an idle courtesy to that sex, which requireth the stricter discipline. What sayest thou, maid? Shall thy silken bridegroom suffer thy share of the penalty, besides his own?"

"Be it death," said Edith, "and lay it all on me!"

Truly, as Endicott had said, the poor lovers stood in a woful case. Their foes

8. Great and General Court—the lawmaking body, which held four sessions a year.

were triumphant, their friends captive and abased, their home desolate, the benighted wilderness around them, and a rigorous destiny, in the shape of the Puritan leader, their only guide. Yet the deepening twilight could not altogether conceal that the iron man was softened; he smiled at the fair spectacle of early love; he almost sighed for the inevitable blight of early hopes.

"The troubles of life have come hastily on this young couple," observed Endicott. "We will see how they comport themselves under their present trials ere we burden them with greater. If, among the spoil, there be any garments of a more decent fashion, let them be put upon this May Lord and his Lady, instead of their glistening vanities. Look to it, some of you."

"And shall not the youth's hair be cut?" asked Peter Palfrey, looking with abhorrence at the love-lock and long glossy curls of the young man.

"Crop it forthwith, and that in the true pumpkin-shell fashion," answered the captain. "Then bring them along with us, but more gently than their fellows. There be qualities in the youth, which may make him valiant to fight, and sober to toil, and pious to pray; and in the maiden, that may fit her to become a mother in our Israel, bringing up babes in better nurture than her own hath been. Nor think ye, young ones, that they are the happiest, even in our lifetime of a moment, who misspend it in dancing round a Maypole!"

And Endicott, the severest Puritan of all who laid the rock foundation of New England, lifted the wreath of roses from the ruin of the Maypole, and threw it, with his own gauntleted hand, over the heads of the Lord and Lady of the May. It was a deed of prophecy. As the moral gloom of the world overpowers all systematic gayety, even so was their home of wild mirth made desolate amid the sad forest. They returned to it no more. But as their flowery garland was wreathed of the brightest roses that had grown there, so, in the tie that united them, were intertwined all the purest and best of their early joys. They went heavenward, supporting each other along the difficult path which it was their lot to tread, and never wasted one regretful thought on the vanities of Merry Mount.

THE MINISTER'S BLACK VEIL

A PARABLE *

Published in the *Boston Token,* 1836; reprinted in *Twice-Told Tales* (1837).

THE SEXTON stood in the porch of Milford meeting-house, pulling busily at the bell-rope. The old people of the village came stooping along the street. Children, with bright faces, tripped merrily beside their parents, or mimicked a graver gait, in the conscious dignity of their Sunday clothes. Spruce bachelors looked sidelong at the pretty maidens, and fancied that the

* **A Parable**—"Another clergyman in New England, Mr. Joseph Moody, of York, Maine, who died about eighty years since, made himself remarkable by the same eccentricity that is here related of the Reverend Mr. Hooper. In his case, however, the symbol had a different import. In early life he had accidentally killed a beloved friend; and from that day till the hour of his own death, he hid his face from men." (Hawthorne's note)

Sabbath sunshine made them prettier than on week days. When the throng had mostly streamed into the porch, the sexton began to toll the bell, keeping his eye on the Reverend Mr. Hooper's door. The first glimpse of the clergymen's figure was the signal for the bell to cease its summons.

"But what has good Parson Hooper got upon his face?" cried the sexton in astonishment.

All within hearing immediately turned about, and beheld the semblance of Mr. Hooper, pacing slowly his meditative way towards the meeting-house. With one accord they started, expressing more wonder than if some strange minister were coming to dust the cushions of Mr. Hooper's pulpit.

"Are you sure it is our parson?" inquired Goodman Gray of the sexton.

"Of a certainty it is good Mr. Hooper," replied the sexton. "He was to have exchanged pulpits with Parson Shute, of Westbury; but Parson Shute sent to excuse himself yesterday, being to preach a funeral sermon."

The cause of so much amazement may appear sufficiently slight. Mr. Hooper, a gentlemanly person, of about thirty, though still a bachelor, was dressed with due clerical neatness, as if a careful wife had starched his band, and brushed the weekly dust from his Sunday's garb. There was but one thing remarkable in his appearance. Swathed about his forehead, and hanging down over his face, so low as to be shaken by his breath, Mr. Hooper had on a black veil. On a nearer view it seemed to consist of two folds of crape, which entirely concealed his features, except the mouth and chin, but probably did not intercept his sight, further than to give a darkened aspect to all living and inanimate things. With this gloomy shade before him, good Mr. Hooper walked onward, at a slow and quiet pace, stooping somewhat, and looking on the ground, as is customary with abstracted men, yet nodding kindly to those of his parishioners who still waited on the meeting-house steps. But so wonder-struck were they that his greeting hardly met with a return.

"I can't really feel as if good Mr. Hooper's face was behind that piece of crape," said the sexton.

"I don't like it," muttered an old woman, as she hobbled into the meeting-house. "He has changed himself into something awful, only by hiding his face."

"Our parson has gone mad!" cried Goodman Gray, following him across the threshold.

A rumor of some unaccountable phenomenon had preceded Mr. Hooper into the meeting-house, and set all the congregation astir. Few could refrain from twisting their heads towards the door; many stood upright, and turned directly about; while several little boys clambered upon the seats, and came down again with a terrible racket. There was a general bustle, a rustling of the women's gowns and shuffling of the men's feet, greatly at variance with that hushed repose which should attend the entrance of the minister. But Mr. Hooper appeared not to notice the perturbation of his people. He entered with an almost noiseless step, bent his head mildly to the pews on each side, and bowed as he passed his oldest parishioner, a white-haired great-grandsire, who occupied an arm-chair in the centre of the aisle. It was strange to observe how slowly this venerable man became conscious of something singular in the appearance of his pastor. He seemed not fully to partake of the prevailing wonder, till Mr.

Hooper had ascended the stairs, and showed himself in the pulpit, face to face with his congregation, except for the black veil. That mysterious emblem was never once withdrawn. It shook with his measured breath as he gave out the psalm; it threw its obscurity between him and the holy page, as he read the Scriptures; and while he prayed, the veil lay heavily on his uplifted countenance. Did he seek to hide it from the dread Being whom he was addressing?

Such was the effect of this simple piece of crape, that more than one woman of delicate nerves was forced to leave the meeting-house. Yet perhaps the pale-faced congregation was almost as fearful a sight to the minister, as his black veil to them.

Mr. Hooper had the reputation of a good preacher, but not an energetic one: he strove to win his people heavenward by mild, persuasive influences, rather than to drive them thither by the thunders of the Word. The sermon which he now delivered was marked by the same characteristics of style and manner as the general series of his pulpit oratory. But there was something, either in the sentiment of the discourse itself, or in the imagination of the auditors, which made it greatly the most powerful effort that they had ever heard from their pastor's lips. It was tinged, rather more darkly than usual, with the gentle gloom of Mr. Hooper's temperament. The subject had reference to secret sin, and those sad mysteries which we hide from our nearest and dearest, and would fain conceal from our own consciousness, even forgetting that the Omniscient can detect them. A subtle power was breathed into his words. Each member of the congregation, the most innocent girl, and the man of hardened breast, felt as if the preacher had crept upon them, behind his awful veil, and discovered their hoarded iniquity of deed or thought. Many spread their clasped hands on their bosoms. There was nothing terrible in what Mr. Hooper said, at least, no violence; and yet, with every tremor of his melancholy voice, the hearers quaked. An unsought pathos came hand in hand with awe. So sensible were the audience of some unwonted attribute in their minister, that they longed for a breath of wind to blow aside the veil, almost believing that a stranger's visage would be discovered, though the form, gesture, and voice were those of Mr. Hooper.

At the close of the services, the people hurried out with indecorous confusion, eager to communicate their pent-up amazement, and conscious of lighter spirits the moment they lost sight of the black veil. Some gathered in little circles, huddled closely together, with their mouths all whispering in the centre; some went homeward alone, wrapt in silent meditation; some talked loudly, and profaned the Sabbath-day with ostentatious laughter. A few shook their sagacious heads, intimating that they could penetrate the mystery; while one or two affirmed that there was no mystery at all, but only that Mr. Hooper's eyes were so weakened by the midnight lamp, as to require a shade. After a brief interval, forth came good Mr. Hooper also, in the rear of his flock. Turning his veiled face from one group to another, he paid due reverence to the hoary heads, saluted the middle aged, with kind dignity as their friend and spiritual guide, greeted the young with mingled authority and love, and laid his hands on the little children's heads to bless them. Such was always his custom on the Sabbath-day. Strange and bewildered looks repaid him for his courtesy. None,

as on former occasions, aspired to the honor of walking by their pastor's side. Old Squire Saunders, doubtless by an accidental lapse of memory, neglected to invite Mr. Hooper to his table, where the good clergyman had been wont to bless the food, almost every Sunday since his settlement. He returned, therefore, to the parsonage, and, at the moment of closing the door, was observed to look back upon the people, all of whom had their eyes fixed upon the minister. A sad smile gleamed faintly from beneath the black veil, and flickered about his mouth, glimmering as he disappeared.

"How strange," said a lady, "that a simple black veil, such as any woman might wear on her bonnet, should become such a terrible thing on Mr. Hooper's face!"

"Something must surely be amiss with Mr. Hooper's intellects," observed her husband, the physician of the village. "But the strangest part of the affair is the effect of this vagary, even on a sober-minded man like myself. The black veil, though it covers only our pastor's face, throws its influence over his whole person, and makes him ghostlike from head to foot. Do you not feel it so?"

"Truly do I," replied the lady; "and I would not be alone with him for the world. I wonder he is not afraid to be alone with himself!"

"Men sometimes are so," said her husband.

The afternoon service was attended with similar circumstances. At its conclusion, the bell tolled for the funeral of a young lady. The relatives and friends were assembled in the house, and the more distant acquaintances stood about the door, speaking of the good qualities of the deceased, when their talk was interrupted by the appearance of Mr. Hooper, still covered with his black veil. It was now an appropriate emblem. The clergyman stepped into the room where the corpse was laid, and bent over the coffin, to take a last farewell of his deceased parishioner. As he stooped, the veil hung straight down from his forehead, so that, if her eyelids had not been closed forever, the dead maiden might have seen his face. Could Mr. Hooper be fearful of her glance, that he so hastily caught back the black veil? A person who watched the interview between the dead and living, scrupled not to affirm, that, at the instant when the clergyman's features were disclosed, the corpse had slightly shuddered, rustling the shroud and muslin cap, though the countenance retained the composure of death. A superstitious old woman was the only witness of this prodigy. From the coffin Mr. Hooper passed into the chamber of the mourners, and thence to the head of the staircase, to make the funeral prayer. It was a tender and heart-dissolving prayer, full of sorrow, yet so imbued with celestial hopes, that the music of a heavenly harp, swept by the fingers of the dead, seemed faintly to be heard among the saddest accents of the minister. The people trembled, though they but darkly understood him, when he prayed that they, and himself, and all of mortal race, might be ready, as he trusted this young maiden had been, for the dreadful hour that should snatch the veil from their faces. The bearers went heavily forth, and the mourners followed, saddening all the street, with the dead before them, and Mr. Hooper in his black veil behind.

"Why do you look back?" said one in the procession to his partner.

"I had a fancy," replied she, "that the minister and the maiden's spirit were walking hand in hand."

"And so had I, at the same moment," said the other.

That night, the handsomest couple in Milford village were to be joined in wedlock. Though reckoned a melancholy man, Mr. Hooper had a placid cheerfulness for such occasions, which often excited a sympathetic smile where livelier merriment would have been thrown away. There was no quality of his disposition which made him more beloved than this. The company at the wedding awaited his arrival with impatience, trusting that the strange awe, which had gathered over him throughout the day, would now be dispelled. But such was not the result. When Mr. Hooper came, the first thing that their eyes rested on was the same horrible black veil, which had added deeper gloom to the funeral, and could portend nothing but evil to the wedding. Such was its immediate effect on the guests that a cloud seemed to have rolled duskily from beneath the black crape, and dimmed the light of the candles. The bridal pair stood up before the minister. But the bride's cold fingers quivered in the tremulous hand of the bridegroom, and her deathlike paleness caused a whisper that the maiden who had been buried a few hours before was come from her grave to be married. If ever another wedding were so dismal, it was that famous one where they tolled the wedding knell. After performing the ceremony, Mr. Hooper raised a glass of wine to his lips, wishing happiness to the new-married couple in a strain of mild pleasantry that ought to have brightened the features of the guests, like a cheerful gleam from the hearth. At that instant, catching a glimpse of his figure in the looking-glass, the black veil involved his own spirit in the horror with which it overwhelmed all others. His frame shuddered, his lips grew white, he spilt the untasted wine upon the carpet, and rushed forth into the darkness. For the Earth, too, had on her Black Veil.

The next day, the whole village of Milford talked of little else than Parson Hooper's black veil. That, and the mystery concealed behind it, supplied a topic for discussion between acquaintances meeting in the street, and good women gossiping at their open windows. It was the first item of news that the tavern-keeper told to his guests. The children babbled of it on their way to school. One imitative little imp covered his face with an old black handkerchief, thereby so affrighting his playmates that the panic seized himself, and he well-nigh lost his wits by his own waggery.

It was remarkable that of all the busybodies and impertinent people in the parish, not one ventured to put the plain question to Mr. Hooper, wherefore he did this thing. Hitherto, whenever there appeared the slightest call for such interference, he had never lacked advisers, nor shown himself averse to be guided by their judgment. If he erred at all, it was by so painful a degree of self-distrust, that even the mildest censure would lead him to consider an indifferent action as a crime. Yet, though so well acquainted with this amiable weakness, no individual among his parishioners chose to make the black veil a subject of friendly remonstrance. There was a feeling of dread, neither plainly confessed nor carefully concealed, which caused each to shift the responsibility upon another, till at length it was found expedient to send a deputation of the church, in order to deal with Mr. Hooper about the mystery, before it should grow into a scandal. Never did an embassy so ill discharge its duties. The minister received them with friendly courtesy, but became silent, after they were

seated, leaving to his visitors the whole burden of introducing their important business. The topic, it might be supposed, was obvious enough. There was the black veil swathed round Mr. Hooper's forehead, and concealing every feature above his placid mouth, on which, at times, they could perceive the glimmering of a melancholy smile. But that piece of crape, to their imagination, seemed to hang down before his heart, the symbol of a fearful secret between him and them. Were the veil but cast aside, they might speak freely of it, but not till then. Thus they sat a considerable time, speechless, confused, and shrinking uneasily from Mr. Hooper's eye, which they felt to be fixed upon them with an invisible glance. Finally, the deputies returned abashed to their constituents, pronouncing the matter too weighty to be handled, except by a council of the churches, if, indeed, it might not require a general synod.

But there was one person in the village unappalled by the awe with which the black veil had impressed all beside herself. When the deputies returned without an explanation, or even venturing to demand one, she, with the calm energy of her character, determined to chase away the strange cloud that appeared to be settling round Mr. Hooper, every moment more darkly than before. As his plighted wife, it should be her privilege to know what the black veil concealed. At the minister's first visit, therefore, she entered upon the subject, with a direct simplicity, which made the task easier both for him and her. After he had seated himself, she fixed her eyes steadfastly upon the veil, but could discern nothing of the dreadful gloom that had so overawed the multitude: it was but a double fold of crape, hanging down from his forehead to his mouth, and slightly stirring with his breath.

"No," said she aloud, and smiling, "there is nothing terrible in this piece of crape, except that it hides a face which I am always glad to look upon. Come, good sir, let the sun shine from behind the cloud. First lay aside your black veil: then tell me why you put it on."

Mr. Hooper's smile glimmered faintly.

"There is an hour to come," said he, "when all of us shall cast aside our veils. Take it not amiss, beloved friend, if I wear this piece of crape till then."

"Your words are a mystery, too," returned the young lady. "Take away the veil from them, at least."

"Elizabeth, I will," said he, "so far as my vow may suffer me. Know, then, this veil is a type and a symbol, and I am bound to wear it ever, both in light and darkness, in solitude and before the gaze of multitudes, and as with strangers, so with my familiar friends. No mortal eye will see it withdrawn. This dismal shade must separate me from the world: even you, Elizabeth, can never come behind it!"

"What grievous affliction hath befallen you," she earnestly inquired, "that you should thus darken your eyes forever?"

"If it be a sign of mourning," replied Mr. Hooper, "I, perhaps, like most other mortals, have sorrows dark enough to be typified by a black veil."

"But what if the world will not believe that it is the type of an innocent sorrow?" urged Elizabeth. "Beloved and respected as you are, there may be whispers, that you hide your face under the consciousness of secret sin. For the sake of your holy office, do away this scandal!"

The color rose into her cheeks as she intimated the nature of the rumors that were already abroad in the village. But Mr. Hooper's mildness did not forsake him. He even smiled again—that same sad smile, which always appeared like a faint glimmering of light, proceeding from the obscurity beneath the veil.

"If I hide my face for sorrow, there is cause enough," he merely replied; "and if I cover it for secret sin, what mortal might not do the same?"

And with this gentle, but unconquerable obstinacy did he resist all her entreaties. At length Elizabeth sat silent. For a few moments she appeared lost in thought, considering, probably, what new methods might be tried to withdraw her lover from so dark a fantasy, which, if it had no other meaning, was perhaps a symptom of mental disease. Though of a firmer character than his own, the tears rolled down her cheeks. But, in an instant, as it were, a new feeling took the place of sorrow: her eyes were fixed insensibly on the black veil, when, like a sudden twilight in the air, its terrors fell around her. She arose, and stood trembling before him.

"And do you feel it then, at last?" said he mournfully.

She made no reply, but covered her eyes with her hand, and turned to leave the room. He rushed forward and caught her arm.

"Have patience with me, Elizabeth!" cried he, passionately. "Do not desert me, though this veil must be between us here on earth. Be mine, and hereafter there shall be no veil over my face, no darkness between our souls! It is but a mortal veil—it is not for eternity! O! you know not how lonely I am, and how frightened, to be alone behind my black veil. Do not leave me in this miserable obscurity forever!"

"Lift the veil but once, and look me in the face," said she.

"Never! It cannot be!" replied Mr. Hooper.

"Then farewell!" said Elizabeth.

She withdrew her arm from his grasp, and slowly departed, pausing at the door, to give one long, shuddering gaze, that seemed almost to penetrate the mystery of the black veil. But, even amid his grief, Mr. Hooper smiled to think that only a material emblem had separated him from happiness, though the horrors, which it shadowed forth, must be drawn darkly between the fondest of lovers.

From that time no attempts were made to remove Mr. Hooper's black veil, or, by a direct appeal, to discover the secret which it was supposed to hide. By persons who claimed a superiority to popular prejudice, it was reckoned merely an eccentric whim, such as often mingles with the sober actions of men otherwise rational, and tinges them all with its own semblance of insanity. But with the multitude, good Mr. Hooper was irreparably a bugbear. He could not walk the street with any peace of mind, so conscious was he that the gentle and timid would turn aside to avoid him, and that others would make it a point of hardihood to throw themselves in his way. The impertinence of the latter class compelled him to give up his customary walk at sunset to the burial ground; for when he leaned pensively over the gate, there would always be faces behind the gravestones, peeping at his black veil. A fable went the rounds that the stare of the dead people drove him thence. It grieved him, to the very depth of his kind heart, to observe how the children fled from his approach, breaking up

their merriest sports, while his melancholy figure was yet afar off. Their instinctive dread caused him to feel more strongly than aught else, that a preternatural horror was interwoven with the threads of the black crape. In truth, his own antipathy to the veil was known to be so great, that he never willingly passed before a mirror, nor stooped to drink at a still fountain, lest, in its peaceful bosom, he should be affrighted by himself. This was what gave plausibility to the whispers, that Mr. Hooper's conscience tortured him for some great crime too horrible to be entirely concealed, or otherwise than so obscurely intimated. Thus, from beneath the black veil, there rolled a cloud into the sunshine, an ambiguity of sin or sorrow, which enveloped the poor minister, so that love or sympathy could never reach him. It was said, that ghost and fiend consorted with him there. With self-shudderings and outward terrors, he walked continually in its shadow, groping darkly within his own soul, or gazing through a medium that saddened the whole world. Even the lawless wind, it was believed, respected his dreadful secret, and never blew aside the veil. But still good Mr. Hooper sadly smiled at the pale visages of the worldly throng as he passed by.

Among all its bad influences, the black veil had the one desirable effect, of making its wearer a very efficient clergyman. By the aid of his mysterious emblem—for there was no other apparent cause—he became a man of awful power, over souls that were in agony for sin. His converts always regarded him with a dread peculiar to themselves, affirming, though but figuratively, that, before he brought them to celestial light, they had been with him behind the black veil. Its gloom, indeed, enabled him to sympathize with all dark affections. Dying sinners cried aloud for Mr. Hooper, and would not yield their breath till he appeared; though ever, as he stooped to whisper consolation, they shuddered at the veiled face so near their own. Such were the terrors of the black veil, even when Death had bared his visage! Strangers came long distances to attend service at his church, with the mere idle purpose of gazing at his figure, because it was forbidden them to behold his face. But many were made to quake ere they departed! Once, during Governor Belcher's administration, Mr. Hooper was appointed to preach the election sermon. Covered with his black veil, he stood before the chief magistrate, the council, and the representatives, and wrought so deep an impression, that the legislative measures of that year were characterized by all the gloom and piety of our earliest ancestral sway.

In this manner Mr. Hooper spent a long life, irreproachable in outward act, yet shrouded in dismal suspicions; kind and loving, though unloved, and dimly feared; a man apart from men, shunned in their health and joy, but ever summoned to their aid in mortal anguish. As years wore on, shedding their snows above his sable veil, he acquired a name throughout the New England churches, and they called him Father Hooper. Nearly all his parishioners, who were of mature age when he was settled, had been borne away by many a funeral: he had one congregation in the church, and a more crowded one in the church-

31. **Governor Belcher's**—governor of Massachusetts and New Hampshire, 1730-41. The election sermon was an important occasion. *Cf. The Scarlet Letter,* and Alice Morse Earle, *Customs and Fashions in Old New England,* Scribner, 1893, p. 225.

yard; and having wrought so late into the evening, and done his work so well, it was now good Father Hooper's turn to rest.

Several persons were visible by the shaded candle-light, in the death chamber of the old clergyman. Natural connections he had none. But there was the decorously grave, though unmoved physician, seeking only to mitigate the last pangs of the patient whom he could not save. There were the deacons, and other eminently pious members of his church. There, also, was the Reverend Mr. Clark, of Westbury, a young and zealous divine, who had ridden in haste to pray by the bedside of the expiring minister. There was the nurse, no hired handmaiden of death, but one whose calm affection had endured thus long in secrecy, in solitude, amid the chill of age, and would not perish, even at the dying hour. Who, but Elizabeth! And there lay the hoary head of good Father Hooper upon the death pillow, with the black veil still swathed about his brow, and reaching down over his face, so that each more difficult gasp of his faint breath caused it to stir. All through life that piece of crape had hung between him and the world: it had separated him from cheerful brotherhood and woman's love, and kept him in that saddest of all prisons, his own heart; and still it lay upon his face, as if to deepen the gloom of his darksome chamber, and shade him from the sunshine of eternity.

For some time previous, his mind had been confused, wavering doubtfully between the past and the present, and hovering forward, as it were, at intervals, into the indistinctness of the world to come. There had been feverish turns, which tossed him from side to side, and wore away what little strength he had. But in his most convulsive struggles, and in the wildest vagaries of his intellect, when no other thought retained its sober influence, he still showed an awful solicitude lest the black veil should slip aside. Even if his bewildered soul could have forgotten, there was a faithful woman at his pillow, who, with averted eyes, would have covered that aged face, which she had last beheld in the comeliness of manhood. At length the death-stricken old man lay quietly in the torpor of mental and bodily exhaustion, with an imperceptible pulse, and breath that grew fainter and fainter, except when a long, deep, and irregular inspiration seemed to prelude the flight of his spirit.

The minister of Westbury approached the bedside.

"Venerable Father Hooper," said he, "the moment of your release is at hand. Are you ready for the lifting of the veil that shuts in time from eternity?"

Father Hooper at first replied merely by a feeble motion of his head; then, apprehensive, perhaps, that his meaning might be doubtful, he exerted himself to speak.

"Yea," said he, in faint accents, "my soul hath a patient weariness until that veil be lifted."

"And is it fitting," resumed the Reverend Mr. Clark, "that a man so given to prayer, of such a blameless example, holy in deed and thought, so far as mortal judgment may pronounce; is it fitting that a father in the church should leave a shadow on his memory, that may seem to blacken a life so pure? I pray you, my venerable brother, let not this thing be! Suffer us to be gladdened by your triumphant aspect, as you go to your reward. Before the veil of eternity be lifted, let me cast aside this black veil from your face!"

And thus speaking, the Reverend Mr. Clark bent forward to reveal the mystery of so many years. But, exerting a sudden energy, that made all the beholders stand aghast, Father Hooper snatched both his hands from beneath the bedclothes, and pressed them strongly on the black veil, resolute to struggle, if the minister of Westbury would contend with a dying man.

"Never!" cried the veiled clergyman. "On earth, never!"

"Dark old man!" exclaimed the affrighted minister, "with what horrible crime upon your soul are you now passing to the judgment?"

Father Hooper's breath heaved; it rattled in his throat; but, with a mighty effort, grasping forward with his hands, he caught hold of life, and held it back till he should speak. He even raised himself in bed; and there he sat, shivering with the arms of death around him, while the black veil hung down, awful, at that last moment, in the gathered terrors of a lifetime. And yet the faint, sad smile, so often there, now seemed to glimmer from its obscurity, and linger on Father Hooper's lips.

"Why do you tremble at me alone?" cried he, turning his veiled face round the circle of pale spectators. "Tremble also at each other! Have men avoided me, and women shown no pity, and children screamed and fled, only for my black veil? What, but the mystery which it obscurely typifies, has made this piece of crape so awful? When the friend shows his inmost heart to his friend; the lover to his best beloved; when man does not vainly shrink from the eye of his Creator, loathsomely treasuring up the secret of his sin; then deem me a monster, for the symbol beneath which I have lived, and die! I look around me, and, lo! on every visage a Black Veil!"

While his auditors shrank from one another, in mutual affright, Father Hooper fell back upon his pillow, a veiled corpse with a faint smile lingering on the lips. Still veiled, they laid him in his coffin, and a veiled corpse they bore him to the grave. The grass of many years has sprung up and withered on that grave, the burial stone is moss-grown, and good Mr. Hooper's face is dust; but awful is still the thought that it mouldered beneath the Black Veil!

ENDICOTT AND THE RED CROSS

Published in the *Salem Gazette,* November 14, 1837, anonymously in the *Boston Token* of 1838. Included in *Twice-Told Tales,* Vol. II (1842), and in *Legends of New England* (1877). The story is based on a historical incident of November, 1634. Endicott, according to Fiske's *Beginnings of New England,* "was honest and conscientious, but passionate, domineering, and very deficient in tact." John Winthrop's *Journal* records the episode, November 5 (1634-35).

At noon of an autumnal day, more than two centuries ago, the English colors were displayed by the standard-bearer of the Salem trainband, which had mustered for martial exercise under the orders of John Endicott. It was a period when the religious exiles were accustomed often to buckle on their armor, and practise the handling of their weapons of war. Since the

23. symbol—Hawthorne's fondness for symbolism may be noted elsewhere. Poe's explanation of the mystery may be considered, as given in his review of *Twice-Told Tales.*

first settlement of New England, its prospects had never been so dismal. The dissensions between Charles the First and his subjects were then, and for several years afterwards, confined to the floor of Parliament. The measures of the King and ministry were rendered more tyrannically violent by an opposition, which had not yet acquired sufficient confidence in its own strength to resist royal injustice with the sword. The bigoted and haughty primate, Laud, Archbishop of Canterbury, controlled the religious affairs of the realm, and was consequently invested with powers which might have wrought the utter ruin of the two Puritan colonies, Plymouth and Massachusetts. There is evidence on record that our forefathers perceived their danger, but were resolved that their infant country should not fall without a struggle, even beneath the giant strength of the King's right arm.

Such was the aspect of the times when the folds of the English banner, with the Red Cross in its field, were flung out over a company of Puritans. Their leader, the famous Endicott, was a man of stern and resolute countenance, the effect of which was heightened by a grizzled beard that swept the upper portion of his breastplate. This piece of armor was so highly polished that the whole surrounding scene had its image in the glittering steel. The central object in the mirrored picture was an edifice of humble architecture with neither steeple nor bell to proclaim it—what nevertheless it was—the house of prayer. A token of the perils of the wilderness was seen in the grim head of a wolf, which had just been slain within the precincts of the town, and according to the regular mode of claiming the bounty, was nailed on the porch of the meeting-house. The blood was still plashing on the doorstep. There happened to be visible, at the same noontide hour, so many other characteristics of the times and manners of the Puritans, that we must endeavor to represent them in a sketch, though far less vividly than they were reflected in the polished breastplate of John Endicott.

In close vicinity to the sacred edifice appeared that important engine of Puritanic authority, the whipping-post—with the soil around it well trodden by the feet of evil doers, who had there been disciplined. At one corner of the meeting-house was the pillory, and at the other the stocks; and, by a singular good fortune for our sketch, the head of an Episcopalian and suspected Catholic was grotesquely incased in the former machine; while a fellow-criminal, who had boisterously quaffed a health to the king, was confined by the legs in the latter. Side by side, on the meeting-house steps, stood a male and female figure. The man was a tall, lean, haggard personification of fanaticism, bearing on his breast this label,—A WANTON GOSPELLER,—which betokened that he had dared to give interpretations of Holy Writ unsanctioned by the infallible judgment of the civil and religious rulers. His aspect showed no lack of zeal to maintain his heterodoxies, even at the stake. The woman wore a cleft stick on her tongue, in appropriate retribution for having wagged that unruly member against the elders of the church; and her countenance and gestures gave much cause to apprehend that, the moment the stick should be removed, a repetition of the offence would demand new ingenuity in chastising it.

6. **Laud**—William Laud (1573-1645), archbishop of Canterbury, 1633-45.

The above-mentioned individuals had been sentenced to undergo their various modes of ignominy, for the space of one hour at noonday. But among the crowd were several whose punishment would be life-long; some, whose ears had been cropped, like those of puppy dogs; others, whose cheeks had been branded with the initials of their misdemeanors; one, with his nostrils slit and seared; and another, with a halter about his neck, which he was forbidden ever to take off, or to conceal beneath his garments. Methinks he must have been grievously tempted to affix the other end of the rope to some convenient beam or bough. There was likewise a young woman, with no mean share of beauty, whose doom it was to wear the letter A on the breast of her gown, in the eyes of all the world and her own children. And even her own children knew what that initial signified. Sporting with her infamy, the lost and desperate creature had embroidered the fatal token in scarlet cloth, with golden thread and the nicest art of needlework; so that the capital A might have been thought to mean Admirable, or anything rather than Adulteress.

Let not the reader argue, from any of these evidences of iniquity, that the times of the Puritans were more vicious than our own, when, as we pass along the very street of this sketch, we discern no badge of infamy on man or woman. It was the policy of our ancestors to search out even the most secret sins, and expose them to shame, without fear or favor, in the broadest light of the noonday sun. Were such the custom now, perchance we might find materials for a no less piquant sketch than the above.

Except the malefactors whom we have described, and the diseased or infirm persons, the whole male population of the town, between sixteen years and sixty, were seen in the ranks of the trainband. A few stately savages, in all the pomp and dignity of the primeval Indian, stood gazing at the spectacle. Their flint-headed arrows were but childish weapons compared with the matchlocks of the Puritans, and would have rattled harmlessly against the steel caps and hammered iron breastplates which inclosed each soldier in an individual fortress. The valiant John Endicott glanced with an eye of pride at his sturdy followers, and prepared to renew the martial toils of the day.

"Come, my stout hearts!" quoth he, drawing his sword. "Let us show these poor heathen that we can handle our weapons like men of might. Well for them, if they put us not to prove it in earnest!"

The iron-breasted company straightened their line, and each man drew the heavy butt of his matchlock close to his left foot, thus awaiting the orders of the captain. But, as Endicott glanced right and left along the front, he discovered a personage at some little distance with whom it behooved him to hold a parley. It was an elderly gentleman, wearing a black cloak and band, and a high-crowned hat, beneath which was a velvet skull-cap, the whole being the garb of a Puritan minister. This reverend person bore a staff which seemed to have been recently cut in the forest, and his shoes were bemired as if he had been travelling on foot through the swamps of the wilderness. His aspect was perfectly that of a pilgrim, heightened also by an apostolic dignity. Just as

10. **letter A**—*The Scarlet Letter* made further use of this token. *Cf.* Alice Morse Earle, *Curious Punishments of Bygone Days*, Stone, 1896, Chap. VII, for the requirement that lawbreakers wear letters. 18. **badge of infamy**—*Cf.* "The Minister's Black Veil."

Endicott perceived him, he laid aside his staff, and stooped to drink at a bubbling fountain which gushed into the sunshine about a score of yards from the corner of the meeting-house. But, ere the good man drank, he turned his face heavenward in thankfulness, and then, holding back his gray beard with one hand, he scooped up his simple draught in the hollow of the other.

"What, ho! good Mr. Williams," shouted Endicott. "You are welcome back again to our town of peace. How does our worthy Governor Winthrop? And what news from Boston?"

"The Governor hath his health, worshipful Sir," answered Roger Williams, now resuming his staff, and drawing near. "And for the news, here is a letter, which, knowing I was to travel hitherward to-day, his Excellency committed to my charge. Belike it contains tidings of much import; for a ship arrived yesterday from England."

Mr. Williams, the minister of Salem and of course known to all the spectators, had now reached the spot where Endicott was standing under the banner of his company, and put the Governor's epistle into his hand. The broad seal was impressed with Winthrop's coat of arms. Endicott hastily unclosed the letter and began to read, while, as his eye passed down the page, a wrathful change came over his manly countenance. The blood glowed through it, till it seemed to be kindling with an internal heat; nor was it unnatural to suppose that his breastplate would likewise become red-hot with the angry fire of the bosom which it covered. Arriving at the conclusion, he shook the letter fiercely in his hand, so that it rustled as loud as the flag above his head.

"Black tidings these, Mr. Williams," said he; "blacker never came to New England. Doubtless you know their purport?"

"Yea, truly," replied Roger Williams; "for the Governor consulted, respecting this matter, with my brethren in the ministry at Boston; and my opinion was likewise asked. And his Excellency entreats you by me, that the news be not suddenly noised abroad, lest the people be stirred up unto some outbreak, and thereby give the King and the Archbishop a handle against us."

"The Governor is a wise man—a wise man, and a meek and moderate," said Endicott, setting his teeth grimly. "Nevertheless, I must do according to my own best judgment. There is neither man, woman, nor child in New England, but has a concern as dear as life in these tidings; and if John Endicott's voice be loud enough, man, woman, and child shall hear them. Soldiers, wheel into a hollow square! Ho, good people! Here are news for one and all of you."

The soldiers closed in around their captain; and he and Roger Williams stood together under the banner of the Red Cross; while the women and the aged men pressed forward, and the mothers held up their children to look Endicott in the face. A few taps of the drum gave signal for silence and attention.

"Fellow-soldiers,—fellow-exiles," began Endicott, speaking under strong excitement, yet powerfully restraining it, "wherefore did ye leave your native country? Wherefore, I say, have we left the green and fertile fields, the cottages, or, perchance, the old gray halls, where we were born and bred, the

7. **Winthrop**—John Winthrop (1587-1649), governor of Massachusetts Bay in 1629 and thereafter. 9. **Roger Williams**—(1604-1683) banished to Rhode Island by the Puritans in 1636.

hurchyards where our forefathers lie buried? Wherefore have we come hither o set up our own tombstones in a wilderness? A howling wilderness it is! The wolf and the bear meet us within halloo of our dwellings. The savage ieth in wait for us in the dismal shadow of the woods. The stubborn roots of he trees break our ploughshares, when we would till the earth. Our children ry for bread, and we must dig in the sands of the sea-shore to satisfy them. Wherefore, I say again, have we sought this country of a rugged soil and wintry ky? Was it not for the enjoyment of our civil rights? Was it not for liberty o worship God according to our conscience?"

"Call you this liberty of conscience?" interrupted a voice on the steps of the neeting-house.

It was the Wanton Gospeller. A sad and quiet smile flitted across the mild isage of Roger Williams. But Endicott, in the excitement of the moment, hook his sword wrathfully at the culprit—an ominous gesture from a man like im.

"What hast thou to do with conscience, thou knave?" cried he. "I said lib-rty to worship God, not license to profane and ridicule him. Break not in pon my speech, or I will lay thee neck and heels till this time to-morrow! Hearken to me, friends, nor heed that accursed rhapsodist. As I was saying, ve have sacrificed all things, and have come to a land whereof the old world ath scarcely heard, that we might make a new world unto ourselves, and pain-ully seek a path from hence to heaven. But what think ye now? This son of a Scotch tyrant—this grandson of a Papistical and adulterous Scotch woman, whose death proved that a golden crown doth not always save an anointed head rom the block"—

"Nay, brother, nay," interposed Mr. Williams; "thy words are not meet for a secret chamber, far less for a public street."

"Hold thy peace, Roger Williams!" answered Endicott, imperiously. "My spirit is wiser than thine, for the business now in hand. I tell ye, fellow-exiles, hat Charles of England, and Laud, our bitterest persecutor, arch-priest of Canterbury, are resolute to pursue us even hither. They are taking counsel, saith this letter, to send over a governor-general, in whose breast shall be de-posited all the law and equity of the land. They are minded, also, to establish he idolatrous forms of English Episcopacy; so that, when Laud shall kiss the Pope's toe, as cardinal of Rome, he may deliver New England, bound hand and foot, into the power of his master!"

A deep groan from the auditors,—a sound of wrath, as well as fear and sor-row,—responded to this intelligence.

"Look ye to it, brethren," resumed Endicott, with increasing energy. "If this king and this arch-prelate have their will, we shall briefly behold a cross on the spire of this tabernacle which we have builded, and a high altar within its walls, with wax tapers burning round it at noonday. We shall hear the sacring bell, and the voices of the Romish priests saying the mass. But think ye, Chris-tian men, that these abominations may be suffered without a sword drawn? without a shot fired? without blood spilt, yea, on the very stairs of the pulpit?

19. rhapsodist—religious enthusiast. **23. Scotch tyrant**—James I of England. **23. Scotch woman**—Mary, Queen of Scots. **40. briefly**—immediately.

No,—be ye strong of hand and stout of heart! Here we stand on our own soil which we have bought with our goods, which we have won with our swords which we have cleared with our axes, which we have tilled with the sweat of our brows, which we have sanctified with our prayers to the God that brough us hither! Who shall enslave us here? What have we to do with this mitred prelate,—with this crowned king? What have we to do with England?"

Endicott gazed round at the excited countenances of the people, now full of his own spirit, and then turned suddenly to the standard-bearer, who stood close behind him.

"Officer, lower your banner!" said he.

The officer obeyed; and, brandishing his sword, Endicott thrust it through the cloth, and, with his left hand, rent the Red Cross completely out of the banner. He then waved the tattered ensign above his head.

"Sacrilegious wretch!" cried the high-churchman in the pillory, unable longer to restrain himself, "thou hast rejected the symbol of our holy religion!"

"Treason, treason!" roared the royalist in the stocks. "He hath defaced the King's banner!"

"Before God and man, I will avouch the deed," answered Endicott. "Beat a flourish, drummer!—shout, soldiers and people!—in honor of the ensign of New England. Neither Pope nor Tyrant hath part in it now!"

With a cry of triumph, the people gave their sanction to one of the boldest exploits which our history records. And forever honored be the name of Endicott! We look back through the mist of ages, and recognize in the rending of the Red Cross from New England's banner the first omen of that deliverance which our fathers consummated after the bones of the stern Puritan had lain more than a century in the dust.

RAPPACCINI'S DAUGHTER

"Rappaccini's Daughter" was published in the *Democratic Review,* December 1844, and collected into *Mosses from an Old Manse* (1846). The following half parenthetic note Hawthorne prefixed to this tale employs a device similar to Irving's disguise as Diedrich Knickerbocker. Though Aubépine exists only in Hawthorne's mind, the note may be read for the light it throws on Hawthorne's position with reference to the transcendentalists. It will be observed that as part of the joke Hawthorne has translated into French his own name as well as the titles of a number of his stories.

From *The Writings of Aubépine*

We do not remember to have seen any translated specimens of the productions of M. de l'Aubépine,—a fact the less to be wondered at, as his very name is unknown to many of his own countrymen as well as to the student of foreign literature. As a writer, he seems to occupy an unfortunate position between the Transcendentalists (who, under one name or another, have their share in all the current literature of the world) and the great body of pen-and-ink men who address the intellect and sympathies of the multitude. If not too refined, at all events too remote, too shadowy and unsubstantial in his modes of development, to suit the taste of the latter class, and yet too popular to satisfy the spiritual or metaphysical

requisitions of the former, he must necessarily find himself without an audience, except here and there an individual or possibly an isolated clique. His writings, to do them justice, are not altogether destitute of fancy and originality; they might have won him greater reputation but for an inveterate love of allegory, which is apt to invest his plots and characters with the aspect of scenery and people in the clouds, and to steal away the human warmth out of his conceptions. His fictions are sometimes historical, sometimes of the present day, and sometimes, so far as can be discovered, have little or no reference either to time or space. In any case, he generally contents himself with a very slight embroidery of outward manners,—the faintest possible counterfeit of real life,—and endeavors to create an interest by some less obvious peculiarity of the subject. Occasionally a breath of Nature, a raindrop of pathos and tenderness, or a gleam of humor, will find its way into the midst of his fantastic imagery, and make us feel as if, after all, we were yet within the limits of our native earth. We will only add to this very cursory notice that M. de l'Aubépine's productions, if the reader chance to take them in precisely the proper point of view, may amuse a leisure hour as well as those of a brighter man; if otherwise, they can hardly fail to look excessively like nonsense.

Our author is voluminous; he continues to write and publish with as much praiseworthy and indefatigable prolixity as if his efforts were crowned with the brilliant success that so justly attends those of Eugene Sue. His first appearance was by a collection of stories in a long series of volumes entitled "Contes deux fois racontées." The titles of some of his more recent works (we quote from memory) are as follows: "Le Voyage Céleste à Chemin de Fer," 3 tom., 1838; "Le nouveau Père Adam et la nouvelle Mère Eve," 2 tom., 1839; "Roderic; ou le Serpent à l'estomac," 2 tom., 1840; "Le Culte du Feu," a folio volume of ponderous research into the religion and ritual of the old Persian Ghebers, published in 1841; "La Soirée du Chateau en Espagne," 1 tom., 8vo, 1842; and "L'Artiste du Beau; ou le Papillon Mécanique," 5 tom., 4to, 1843. Our somewhat wearisome perusal of this startling catalogue of volumes has left behind it a certain personal affection and sympathy, though by no means admiration, for M. de l'Aubépine; and we would fain do the little in our power towards introducing him favorably to the American public. The ensuing tale is a translation of his "Beatrice; ou la Belle Empoisonneuse," recently published in *La Revue Anti-Aristocratique*. This journal, edited by the Comte de Bearhaven, has for some years past led the defence of liberal principles and popular rights with a faithfulness and ability worthy of all praise.

A YOUNG man, named Giovanni Guasconti, came, very long ago, from the more southern region of Italy, to pursue his studies at the University of Padua. Giovanni, who had but a scanty supply of gold ducats in his pocket, took lodgings in a high and gloomy chamber of an old edifice which looked not unworthy to have been the palace of a Paduan noble, and which, in fact, exhibited over its entrance the armorial bearings of a family long since extinct. The young stranger, who was not unstudied in the great poem of his country, recollected that one of the ancestors of this family, and perhaps an occupant of this very mansion, had been pictured by Dante as a partaker of the immortal agonies of his Inferno. These reminiscences and associations, together with the tendency to heartbreak natural to a young man for the first time out of his native sphere, caused Giovanni to sigh heavily as he looked around the desolate and ill-furnished apartment.

"Holy Virgin, signor!" cried old Dame Lisabetta, who, won by the youth's

remarkable beauty of person, was kindly endeavoring to give the chamber a habitable air, "what a sigh was that to come out of a young man's heart! Do you find this old mansion gloomy? For the love of Heaven, then, put your head out of the window, and you will see as bright sunshine as you have left in Naples."

Guasconti mechanically did as the old woman advised, but could not quite agree with her that the Paduan sunshine was as cheerful as that of southern Italy. Such as it was, however, it fell upon a garden beneath the window, and expended its fostering influences on a variety of plants, which seemed to have been cultivated with exceeding care.

"Does this garden belong to the house?" asked Giovanni.

"Heaven forbid, signor, unless it were fruitful of better pot herbs than any that grow there now," answered old Lisabetta. "No; that garden is cultivated by the own hands of Signor Giacomo Rappaccini, the famous doctor, who, I warrant him, has been heard of as far as Naples. It is said that he distills these plants into medicines that are as potent as a charm. Oftentimes you may see the signor doctor at work, and perchance the signora, his daughter, too, gathering the strange flowers that grow in the garden."

The old woman had now done what she could for the aspect of the chamber; and, commending the young man to the protection of the saints, took her departure.

Giovanni still found no better occupation than to look down into the garden beneath his window. From its appearance, he judged it to be one of those botanic gardens which were of earlier date in Padua than elsewhere in Italy, or in the world. Or, not improbably, it might once have been the pleasure-place of an opulent family; for there was the ruin of a marble fountain in the centre, sculptured with rare art, but so wofully shattered that it was impossible to trace the original design from the chaos of remaining fragments. The water, however, continued to gush and sparkle into the sunbeams as cheerfully as ever. A little gurgling sound ascended to the young man's window, and made him feel as if a fountain were an immortal spirit that sung its song unceasingly and without heeding the vicissitudes around it, while one century embodied it in marble and another scattered the perishable garniture on the soil. All about the pool into which the water subsided grew various plants, that seemed to require a plentiful supply of moisture for the nourishment of gigantic leaves, and, in some instances, flowers gorgeously magnificent. There was one shrub in particular, set in a marble vase in the midst of the pool, that bore a profusion of purple blossoms, each of which had the luster and richness of a gem; and the whole together made a show so resplendent that it seemed enough to illuminate the garden, even had there been no sunshine. Every portion of the soil was peopled with plants and herbs, which, if less beautiful, still bore tokens of assiduous care, as if all had their individual virtues, known to the scientific mind that fostered them. Some were placed in urns, rich with old carving and others in common garden pots; some crept serpent-like along the ground or climbed on high, using whatever means of ascent was offered them. One plant had wreathed itself round a statue of Vertumnus, which was thus quite veiled

46. Vertumnus—Roman god of the changing seasons.

and shrouded in a drapery of hanging foliage, so happily arranged that it might have served a sculptor for a study.

While Giovanni stood at the window he heard a rustling behind a screen of leaves, and became aware that a person was at work in the garden. His figure soon emerged into view, and showed itself to be that of no common laborer, but a tall, emaciated, sallow, and sickly-looking man dressed in a scholar's garb of black. He was beyond the middle term of life, with gray hair, a thin, gray beard, and a face singularly marked with intellect and cultivation, but which could never, even in his more youthful days, have expressed much warmth of heart.

Nothing could exceed the intentness with which this scientific gardener examined every shrub which grew in his path: it seemed as if he was looking into their inmost nature, making observations in regard to their creative essence, and discovering why one leaf grew in this shape and another in that, and wherefore such and such flowers differed among themselves in hue and perfume. Nevertheless, in spite of this deep intelligence on his part, there was no approach to intimacy between himself and these vegetable existences. On the contrary, he avoided their actual touch or the direct inhaling of their odors with a caution that impressed Giovanni most disagreeably; for the man's demeanor was that of one walking among malignant influences, such as savage beasts, or deadly snakes, or evil spirits, which, should he allow them one moment of license, would wreak upon him some terrible fatality. It was strangely frightful to the young man's imagination to see this air of insecurity in a person cultivating a garden, that most simple and innocent of human toils, and which had been alike the joy and labor of the unfallen parents of the race. Was this garden, then, the Eden of the present world? and this man, with such a perception of harm in what his own hands caused to grow,—was he the Adam?

The distrustful gardener, while plucking away the dead leaves or pruning the too luxuriant growth of the shrubs, defended his hands with a pair of thick gloves. Nor were these his only armor. When, in his walk through the garden, he came to the magnificent plant that hung its purple gems beside the marble fountain, he placed a kind of mask over his mouth and nostrils, as if all this beauty did but conceal a deadlier malice; but, finding his task still too dangerous, he drew back, removed the mask, and called loudly, but in the infirm voice of a person affected with inward disease.

"Beatrice! Beatrice!"

"Here am I, my father. What would you?" cried a rich and youthful voice from the window of the opposite house—a voice as rich as a tropical sunset, and which made Giovanni, though he knew not why, think of deep hues of purple or crimson and of perfumes heavily delectable. "Are you in the garden?"

"Yes, Beatrice," answered the gardener, "and I need your help."

Soon there emerged from under a sculptured portal the figure of a young girl, arrayed with as much richness of taste as the most splendid of the flowers, beautiful as the day, and with a bloom so deep and vivid that one shade more would have been too much. She looked redundant with life, health, and energy; all of which attributes were bound down and compressed, as it were, and gir-

45. **redundant**—overflowing.

dled tensely, in their luxuriance, by her virgin zone. Yet Giovanni's fancy must have grown morbid while he looked down into the garden; for the impression which the fair stranger made upon him was as if here were another flower, the human sister of those vegetable ones, as beautiful as they, more beautiful than the richest of them, but still to be touched only with a glove, nor to be approached without a mask. As Beatrice came down the garden path, it was observable that she handled and inhaled the odor of several of the plants which her father had most sedulously avoided.

"Here, Beatrice," said the latter, "see how many needful offices require to be done to our chief treasure. Yet, shattered as I am, my life might pay the penalty of approaching it so closely as circumstances demand. Henceforth, I fear, this plant must be consigned to your sole charge."

"And gladly will I undertake it," cried again the rich tones of the young lady, as she bent toward the magnificent plant and opened her arms as if to embrace it. "Yes, my sister, my splendor, it shall be Beatrice's task to nurse and serve thee; and thou shalt reward her with thy kisses and perfumed breath, which to her is as the breath of life."

Then, with all the tenderness in her manner that was so strikingly expressed in her words, she busied herself with such attentions as the plant seemed to require; and Giovanni, at his lofty window, rubbed his eyes and almost doubted whether it were a girl tending her favorite flower, or one sister performing the duties of affection to another.

The scene soon terminated. Whether Dr. Rappaccini had finished his labors in the garden or that his watchful eye had caught the stranger's face, he now took his daughter's arm and retired. Night was already closing in; oppressive exhalations seemed to proceed from the plants and steal upward past the open window; and Giovanni, closing the lattice, went to his couch and dreamed of a rich flower and beautiful girl. Flower and maiden were different, and yet the same, and fraught with some strange peril in either shape.

But there is an influence in the light of morning that tends to rectify whatever errors of fancy, or even of judgment, we may have incurred during the sun's decline, or among the shadows of the night, or in the less wholesome glow of moonshine. Giovanni's first movement, on starting from sleep, was to throw open the window and gaze down into the garden which his dreams had made so fertile of mysteries. He was surprised and a little ashamed to find how real and matter-of-fact an affair it proved to be, in the first rays of the sun which gilded the dew-drops that hung upon leaf and blossom, and, while giving a brighter beauty to each rare flower, brought everything within the limits of ordinary experience. The young man rejoiced that, in the heart of the barren city, he had the privilege of overlooking this spot of lovely and luxuriant vegetation. It would serve, he said to himself, as a symbolic language to keep him in communion with Nature. Neither the sickly and thought-worn Dr. Giacomo Rappaccini, it is true, nor his brilliant daughter, were now visible; so that Giovanni could not determine how much of the singularity which he attributed to both was due to their own qualities and how much to his wonder-working fancy; but he was inclined to take a most rational view of the whole matter.

In the course of the day he paid his respects to Signor Pietro Baglioni, professor of medicine in the university, a physician of eminent repute, to whom Giovanni had brought a letter of introduction. The professor was an elderly personage, apparently of genial nature, and habits that might almost be called jovial. He kept the young man to dinner, and made himself very agreeable by the freedom and liveliness of his conversation, especially when warmed by a flask or two of Tuscan wine. Giovanni, conceiving that men of science, inhabitants of the same city, must needs be on familiar terms with one another, took an opportunity to mention the name of Dr. Rappaccini. But the professor did not respond with so much cordiality as he had anticipated.

"Ill would it become a teacher of the divine art of medicine," said Professor Pietro Baglioni, in answer to a question of Giovanni, "to withhold due and well-considered praise of a physician so eminently skilled as Rappaccini; but, on the other hand, I should answer it but scantily to my conscience were I to permit a worthy youth like yourself, Signor Giovanni, the son of an ancient friend, to imbibe erroneous ideas respecting a man who might hereafter chance to hold your life and death in his hands. The truth is, our worshipful Dr. Rappaccini has as much science as any member of the faculty—with perhaps one single exception—in Padua, or all Italy; but there are certain grave objections to his professional character."

"And what are they?" asked the young man.

"Has my friend Giovanni any disease of body or heart, that he is so inquisitive about physicians?" said the professor, with a smile. "But as for Rappaccini, it is said of him—and I, who know the man well, can answer for its truth—that he cares infinitely more for science than for mankind. His patients are interesting to him only as subjects for some new experiment. He would sacrifice human life, his own among the rest, or whatever else was dearest to him, for the sake of adding so much as a grain of mustard seed to the great heap of his accumulated knowledge."

"Methinks he is an awful man indeed," remarked Guasconti, mentally recalling the cold and purely intellectual aspect of Rappaccini. "And yet, worshipful professor, is it not a noble spirit? Are there many men capable of so spiritual a love of science?"

"God forbid," answered the professor, somewhat testily; "at least, unless they take sounder views of the healing art than those adopted by Rappaccini. It is his theory that all medicinal virtues are comprised within those substances which we term vegetable poisons. These he cultivates with his own hands, and is said even to have produced new varieties of poison, more horribly deleterious than Nature, without the assistance of this learned person, would ever have plagued the world withal. That the signor doctor does less mischief than might be expected with such dangerous substances is undeniable. Now and then, it must be owned, he has effected, or seemed to effect, a marvelous cure; but, to tell you my private mind, Signor Giovanni, he should receive little credit for such instances of success,—they being probably the work of chance,—but should be held strictly accountable for his failures, which may justly be considered his own work."

The youth might have taken Baglioni's opinions with many grains of allow-

ance had he known that there was a professional warfare of long continuance between him and Dr. Rappaccini, in which the latter was generally thought to have gained the advantage. If the reader be inclined to judge for himself, we refer him to certain black-letter tracts on both sides, preserved in the medical department of the University of Padua.

"I know not, most learned professor," returned Giovanni, after musing on what had been said of Rappaccini's exclusive zeal for science,—"I know not how dearly this physician may love his art; but surely there is one object more dear to him. He has a daughter."

"Aha!" cried the professor, with a laugh. "So now our friend Giovanni's secret is out. You have heard of this daughter, whom all the young men in Padua are wild about, though not half a dozen have ever had the good hap to see her face. I know little of the Signora Beatrice save that Rappaccini is said to have instructed her deeply in his science, and that, young and beautiful as fame reports her, she is already qualified to fill a professor's chair. Perchance her father destines her for mine! Other absurd rumors there be, not worth talking about or listening to. So now, Signor Giovanni, drink off your glass of lachryma."

Guasconti returned to his lodgings somewhat heated with the wine he had quaffed, and which caused his brain to swim with strange fantasies in reference to Dr. Rappaccini and the beautiful Beatrice. On his way, happening to pass by a florist's he bought a fresh bouquet of flowers.

Ascending to his chamber, he seated himself near the window, but within the shadow thrown by the depth of the wall, so that he could look down into the garden with little risk of being discovered. All beneath his eye was a solitude. The strange plants were basking in the sunshine, and now and then nodding gently to one another, as if in acknowledgment of sympathy and kindred. In the midst, by the shattered fountain, grew the magnificent shrub, with its purple gems clustering all over it; they glowed in the air, and gleamed back again out of the depths of the pool, which thus seemed to overflow with colored radiance from the rich reflection that was steeped in it. At first, as we have said, the garden was a solitude. Soon, however,—as Giovanni had half hoped, half feared, would be the case,—a figure appeared beneath the antique sculptured portal, and came down between the rows of plants, inhaling their various perfumes as if she were one of those beings of old classic fables that lived upon sweet odors. On again beholding Beatrice the young man was even startled to perceive how much her beauty exceeded his recollection of it; so brilliant, so vivid, was its character, that she glowed amid the sunlight, and, as Giovanni whispered to himself, positively illuminated the more shadowy intervals of the garden path. Her face being now more revealed than on the former occasion, he was struck by its expression of simplicity and sweetness,—qualities that had not entered into his idea of her character, and which made him ask anew what manner of mortal she might be. Nor did he fail again to observe, or imagine, an analogy between the beautiful girl and the gorgeous shrub that hung its gemlike flowers over the fountain,—a resemblance which

4. black-letter—Old English style of fat type. **18. lachryma**—lachryma Christi, a red Italian wine.

Beatrice seemed to have indulged a fantastic humor in heightening, both by the arrangement of her dress and the selection of its hues.

Approaching the shrub, she threw open her arms, as with a passionate ardor, and drew its branches into an intimate embrace—so intimate that her features were hidden in its leafy bosom and her glistening ringlets all intermingled with the flowers.

"Give me thy breath, my sister," exclaimed Beatrice; "for I am faint with common air. And give me this flower of thine, which I separate with gentlest fingers from the stem and place it close beside my heart."

With these words the beautiful daughter of Rappaccini plucked one of the richest blossoms of the shrub, and was about to fasten it in her bosom. But now, unless Giovanni's draughts of wine had bewildered his senses, a singular incident occurred. A small orange-colored reptile of the lizard or chameleon species, chanced to be creeping along the path just at the feet of Beatrice. It appeared to Giovanni,—but at the distance from which he gazed, he could scarcely have seen anything so minute,—it appeared to him, however, that a drop or two of moisture from the broken stem of the flower descended upon the lizard's head. For an instant the reptile contorted itself violently, and then lay motionless in the sunshine. Beatrice observed this remarkable phenomenon, and crossed herself, sadly, but without surprise; nor did she therefore hesitate to arrange the fatal flower in her bosom. There it blushed, and almost glimmered with the dazzling effect of a precious stone, adding to her dress and aspect the one appropriate charm which nothing else in the world could have supplied. But Giovanni, out of the shadow of his window, bent forward and shrank back, and murmured and trembled.

"Am I awake? Have I my senses?" said he to himself. "What is this being? Beautiful shall I call her, or inexpressibly terrible?"

Beatrice now strayed carelessly through the garden, approaching closer beneath Giovanni's window, so that he was compelled to thrust his head quite out of its concealment in order to gratify the intense and painful curiosity which she excited. At this moment there came a beautiful insect over the garden wall; it had, perhaps, wandered through the city and found no flowers or verdure among those antique haunts of men until the heavy perfumes of Dr. Rappaccini's shrubs had lured it from afar. Without alighting on the flowers, this winged brightness seemed to be attracted by Beatrice, and lingered in the air and fluttered about her head. Now, here it could not be but that Giovanni Guasconti's eyes deceived him. Be that as it might, he fancied that, while Beatrice was gazing at the insect with childish delight, it grew faint and fell at her feet; its bright wings shivered; it was dead—from no cause that he could discern, unless it were the atmosphere of her breath. Again Beatrice crossed herself and sighed heavily as she bent over the dead insect.

An impulsive movement of Giovanni drew her eyes to the window. There she beheld the beautiful head of the young man—rather a Grecian than an Italian head, with fair, regular features, and a glistening of gold among his ringlets—gazing down upon her like a being that hovered in mid air. Scarcely knowing what he did, Giovanni threw down the bouquet which he had hitherto held in his hand.

"Signora," said he, "there are pure and healthful flowers. Wear them for the sake of Giovanni Guasconti."

"Thanks, signor," replied Beatrice, with her rich voice, that came forth as it were like a gush of music, and with a mirthful expression half childish and half woman-like. "I accept your gift, and would fain recompense it with this precious purple flower; but if I toss it into the air it will not reach you. So Signor Guasconti must even content himself with my thanks."

She lifted the bouquet from the ground, and then, as if inwardly ashamed at having stepped aside from her maidenly reserve to respond to a stranger's greeting, passed swiftly homeward through the garden. But few as the moments were, it seemed to Giovanni, when she was on the point of vanishing beneath the sculptured portal, that his beautiful bouquet was already beginning to wither in her grasp. It was an idle thought; there could be no possibility of distinguishing a faded flower from a fresh one at so great a distance.

For many days after this incident the young man avoided the window that looked into Dr. Rappaccini's garden, as if something ugly and monstrous would have blasted his eyesight had he been betrayed into a glance. He felt conscious of having put himself, to a certain extent, within the influence of an unintelligible power by the communication which he had opened with Beatrice. The wisest course would have been, if his heart were in any real danger, to quit his lodgings and Padua itself at once; the next wiser, to have accustomed himself, as far as possible, to the familiar and daylight view of Beatrice,—thus bringing her rigidly and systematically within the limits of ordinary experience. Least of all, while avoiding her sight, ought Giovanni to have remained so near this extraordinary being that the proximity and possibility even of intercourse should give a kind of substance and reality to the wild vagaries which his imagination ran riot continually in producing. Guasconti had not a deep heart—or, at all events, its depths were not sounded now; but he had a quick fancy, and an ardent southern temperament which rose every instant to a higher fever pitch. Whether or no Beatrice possessed those terrible attributes, that fatal breath, the affinity with those so beautiful and deadly flowers which were indicated by what Giovanni had witnessed, she had at least instilled a fierce and subtle poison into his system. It was not love, although her rich beauty was a madness to him; nor horror, even while he fancied her spirit to be imbued with the same baneful essence that seemed to pervade her physical frame; but a wild offspring of both love and horror that had each parent in it, and burned like one and shivered like the other. Giovanni knew not what to dread; still less did he know what to hope; yet hope and dread kept a continual warfare in his breast, alternately vanquishing one another and starting up afresh to renew the contest. Blessed are all simple emotions, be they dark or bright! It is the lurid intermixture of the two that produces the illuminating blaze of the infernal regions.

Sometimes he endeavored to assuage the fever of his spirit by a rapid walk through the streets of Padua or beyond its gates: his footsteps kept time with the throbbings of his brain, so that the walk was apt to accelerate itself to a race. One day he found himself arrested; his arm was seized by a portly personage

who had turned back on recognizing the young man and expended much breath in overtaking him.

"Signor Giovanni! Stay, my young friend!" cried he. "Have you forgotten me? That might well be the case if I were as much altered as yourself."

It was Baglioni, whom Giovanni had avoided ever since their first meeting, from a doubt that the professor's sagacity would look too deeply into his secrets. Endeavoring to recover himself, he stared forth wildly from his inner world into the outer one and spoke like a man in a dream.

"Yes; I am Giovanni Guasconti. You are Professor Pietro Baglioni. Now let me pass!"

"Not yet, not yet, Signor Giovanni Guasconti," said the professor, smiling, but at the same time scrutinizing the youth with an earnest glance. "What! Did I grow up side by side with your father? and shall his son pass me like a stranger in these old streets of Padua? Stand still, Signor Giovanni; for we must have a word or two before we part."

"Speedily, then, most worshipful professor, speedily," said Giovanni, with feverish impatience. "Does not your worship see that I am in haste?"

Now, while he was speaking there came a man in black along the street, stooping and moving feebly like a person in inferior health. His face was all overspread with a most sickly and sallow hue, but yet so pervaded with an expression of piercing and active intellect that an observer might easily have overlooked the merely physical attributes and have seen only this wonderful energy. As he passed, this person exchanged a cold and distant salutation with Baglioni, but fixed his eyes upon Giovanni with an intentness that seemed to bring out whatever was within him worthy of notice. Nevertheless, there was a peculiar quietness in the look, as if taking merely a speculative, not a human, interest in the young man.

"It is Dr. Rappaccini!" whispered the professor, when the stranger had passed. "Has he ever seen your face before?"

"Not that I know," answered Giovanni, starting at the name.

"He *has* seen you! he must have seen you!" said Baglioni hastily. "For some purpose or other, this man of science is making a study of you. I know that look of his! It is the same that coldly illuminates his face as he bends over a bird, a mouse, or a butterfly, which, in pursuance of some experiment, he has killed by the perfume of a flower; a look as deep as Nature itself, but without Nature's warmth of love. Signor Giovanni, I will stake my life upon it, you are the subject of one of Rappaccini's experiments."

"Will you make a fool of me?" cried Giovanni passionately. *"That,* signor professor, were an untoward experiment."

"Patience, patience!" replied the imperturbable professor. "I tell thee, my poor Giovanni, that Rappaccini has a scientific interest in thee. Thou hast fallen into fearful hands! And the Signora Beatrice,—what part does she act in this mystery?"

But Guasconti, finding Baglioni's pertinacity intolerable, here broke away, and was gone before the professor could again seize his arm. He looked after the young man intently and shook his head.

"This must not be," said Baglioni to himself. "The youth is the son of my old friend, and shall not come to any harm from which the arcana of medical science can preserve him. Besides, it is too insufferable an impertinence in Rappaccini, thus to snatch the lad out of my own hands, as I may say, and make use of him for his infernal experiments. This daughter of his! It shall be looked to. Perchance, most learned Rappaccini, I may foil you where you little dream of it!"

Meanwhile, Giovanni had pursued a circuitous route, and at length found himself at the door of his lodgings. As he crossed the threshold he was met by old Lisabetta, who smirked and smiled, and was evidently desirous to attract his attention; vainly, however, as the ebullition of his feelings had momentarily subsided into a cold and dull vacuity. He turned his eyes full upon the withered face that was puckering itself into a smile, but seemed to behold it not. The old dame, therefore, laid her grasp upon his cloak.

"Signor! signor!" whispered she, still with a smile over the whole breadth of her visage, so that it looked not unlike a grotesque carving in wood, darkened by centuries. "Listen, signor! There is a private entrance into the garden!"

"What do you say?" exclaimed Giovanni, turning quickly about, as if an inanimate thing should start into feverish life. "A private entrance into Dr. Rappaccini's garden?"

"Hush! hush! Not so loud!" whispered Lisabetta, putting her hand over his mouth. "Yes; into the worshipful doctor's garden, where you may see all his fine shrubbery. Many a young man in Padua would give gold to be admitted among those flowers."

Giovanni put a piece of gold into her hand.

"Show me the way," said he.

A surmise, probably excited by his conversation with Baglioni, crossed his mind, that this interposition of old Lisabetta might perchance be connected with the intrigue, whatever were its nature, in which the professor seemed to suppose that Dr. Rappaccini was involving him. But such a suspicion, though it disturbed Giovanni, was inadequate to restrain him. The instant that he was aware of the possibility of approaching Beatrice, it seemed an absolute necessity of his existence to do so. It mattered not whether she were angel or demon; he was irrevocably within her sphere, and must obey the law that whirled him onward, in ever lessening circles, toward a result which he did not attempt to foreshadow; and yet, strange to say, there came across him a sudden doubt whether this intense interest on his part were not delusory; whether it were really of so deep and positive a nature as to justify him in now thrusting himself into an incalculable position; whether it were not merely the fantasy of a young man's brain, only slightly or not at all connected with his heart.

He paused, hesitated, turned half about, but again went on. His withered guide led him along several obscure passages, and finally undid a door, through which, as it was opened, there came the sight and sound of rustling leaves, with the broken sunshine glimmering among them. Giovanni stepped forth,

2. **arcana**—secrets

and, forcing himself through the entanglement of a shrub that wreathed its tendrils over the hidden entrance, stood beneath his own window in the open area of Dr. Rappaccini's garden.

How often is it the case that, when impossibilities have come to pass and dreams have condensed their misty substance into tangible realities, we find ourselves calm, and even coldly self-possessed, amid circumstances which it would have been a delirium of joy or agony to anticipate! Fate delights to thwart us thus. Passion will choose his own time to rush upon the scene, and lingers sluggishly behind when an appropriate adjustment of events would seem to summon his appearance. So was it now with Giovanni. Day after day his pulses had throbbed with feverish blood at the improbable idea of an interview with Beatrice, and of standing with her, face to face, in this very garden, basking in the Oriental sunshine of her beauty, and snatching from her full gaze the mystery which he deemed the riddle of his own existence. But now there was a singular and untimely equanimity within his breast. He threw a glance around the garden to discover if Beatrice or her father were present, and, perceiving that he was alone, began a critical observation of the plants.

The aspect of one and all of them dissatisfied him; their gorgeousness seemed fierce, passionate, and even unnatural. There was hardly an individual shrub which a wanderer, straying by himself through a forest, would not have been startled to find growing wild, as if an unearthly face had glared at him out of the thicket. Several also would have shocked a delicate instinct by an appearance of artificialness indicating that there had been such commixture, and, as it were, adultery, of various vegetable species, that the production was no longer of God's making, but the monstrous offspring of man's depraved fancy, glowing with only an evil mockery of beauty. They were probably the result of experiment, which in one or two cases had succeeded in mingling plants individually lovely into a compound possessing the questionable and ominous character that distinguished the whole growth of the garden. In fine, Giovanni recognized but two or three plants in the collection, and those of a kind that he well knew to be poisonous. While busy with these contemplations he heard the rustling of a silken garment, and, turning, beheld Beatrice emerging from beneath the sculptured portal.

Giovanni had not considered with himself what should be his deportment; whether he should apologize for his intrusion into the garden, or assume that he was there with the privity at least, if not by the desire, of Dr. Rappaccini or his daughter; but Beatrice's manner placed him at his ease, although leaving him still in doubt by what agency he had gained admittance. She came lightly along the path and met him near the broken fountain. There was surprise in her face, but brightened by a simple and kind expression of pleasure.

"You are a connoisseur in flowers, signor," said Beatrice, with a smile, alluding to the bouquet which he had flung her from the window. "It is no marvel, therefore, if the sight of my father's rare collection has tempted you to take a nearer view. If he were here, he could tell you many strange and interesting facts as to the nature and habits of these shrubs; for he has spent a lifetime in such studies, and this garden is his world."

"And yourself, lady," observed Giovanni, "if fame says true,—you likewise are deeply skilled in the virtues indicated by these rich blossoms and these spicy perfumes. Would you deign to be my instructress, I should prove an apter scholar than if taught by Signor Rappaccini himself."

"Are there such idle rumors?" asked Beatrice, with the music of a pleasant laugh. "Do people say that I am skilled in my father's science of plants? What a jest is there! No; though I have grown up among these flowers, I know no more of them than their hues and perfume; and sometimes methinks I would fain rid myself of even that small knowledge. There are many flowers here, and those not the least brilliant, that shock and offend me when they meet my eye. But pray, signor, do not believe these stories about my science. Believe nothing of me save what you see with your own eyes."

"And must I believe all that I have seen with my own eyes?" asked Giovanni, pointedly, while the recollection of former scenes made him shrink. "No, signora; you demand too little of me. Bid me believe nothing save what comes from your own lips."

It would appear that Beatrice understood him. There came a deep flush to her cheek, but she looked full into Giovanni's eyes and responded to his gaze of uneasy suspicion with a queenlike haughtiness.

"I do so bid you, signor," she replied. "Forget whatever you may have fancied in regard to me. If true to the outward senses, still it may be false in its essence; but the words of Beatrice Rappaccini's lips are true from the depths of the heart outward. Those you may believe."

A fervor glowed in her whole aspect and beamed upon Giovanni's consciousness like the light of truth itself; but while she spoke there was a fragrance in the atmosphere around her, rich and delightful, though evanescent, yet which the young man, from an indefinable reluctance, scarcely dared to draw into his lungs. It might be the odor of the flowers. Could it be Beatrice's breath which thus embalmed her words with a strange richness, as if by steeping them in her heart? A faintness passed like a shadow over Giovanni and flitted away; he seemed to gaze through the beautiful girl's eyes into her transparent soul, and felt no more doubt or fear.

The tinge of passion that had colored Beatrice's manner vanished; she became gay, and appeared to derive a pure delight from her communion with the youth not unlike what the maiden of a lonely island might have felt conversing with a voyager from the civilized world. Evidently her experience of life had been confined within the limits of that garden. She talked now about matters as simple as the daylight or summer clouds, and now asked questions in reference to the city, or Giovanni's distant home, his friends, his mother, and his sisters—questions indicating such seclusion, and such lack of familiarity with modes and forms, that Giovanni responded as if to an infant. Her spirit gushed out before him like a fresh rill that was just catching its first glimpse of the sunlight and wondering at the reflections of earth and sky which were flung into its bosom. There came thoughts, too, from a deep source, and fantasies of gemlike brilliancy, as if diamonds and rubies sparkled upward among the bubbles of the fountain. Ever and anon there gleamed across the young man's mind a sense of wonder that he should be walking side by side with the being who had so

wrought upon his imagination, whom he had idealized in such hues of terror; in whom he had positively witnessed such manifestations of dreadful attributes, —that he should be conversing with Beatrice like a brother, and should find her so human and so maidenlike. But such reflections were only momentary; the effect of her character was too real not to make itself familiar at once.

In this free intercourse they had strayed through the garden, and now, after many turns among its avenues, were come to the shattered fountain, beside which grew the magnificent shrub with its treasury of glowing blossoms. A fragrance was diffused from it which Giovanni recognized as identical with that which he had attributed to Beatrice's breath, but incomparably more powerful. As her eyes fell upon it, Giovanni beheld her press her hand to her bosom, as if her heart were throbbing suddenly and painfully.

"For the first time in my life," murmured she, addressing the shrub, "I had forgotten thee."

"I remember, signora," said Giovanni, "that you once promised to reward me with one of these living gems for the bouquet which I had the happy boldness to fling to your feet. Permit me now to pluck it as a memorial of this interview."

He made a step toward the shrub with extended hand; but Beatrice darted forward, uttering a shriek that went through his heart like a dagger. She caught his hand and drew it back with the whole force of her slender figure. Giovanni felt her touch thrilling through his fibres.

"Touch it not!" exclaimed she, in a voice of agony. "Not for thy life! It is fatal!"

Then, hiding her face, she fled from him and vanished beneath the sculptured portal. As Giovanni followed her with his eyes, he beheld the emaciated figure and pale intelligence of Dr. Rappaccini, who had been watching the scene, he knew not how long, within the shadow of the entrance.

No sooner was Guasconti alone in his chamber than the image of Beatrice came back to his passionate musings, invested with all the witchery that had been gathering around it ever since his first glimpse of her, and now likewise imbued with a tender warmth of girlish womanhood. She was human; her nature was endowed with all gentle and feminine qualities; she was worthiest to be worshipped; she was capable, surely, on her part, of the height and heroism of love. Those tokens which he had hitherto considered as proofs of a frightful peculiarity in her physical and moral system were now either forgotten, or, by the subtle sophistry of passion transmuted into a golden crown of enchantment, rendering Beatrice the more admirable by so much as she was the more unique. Whatever had looked ugly was now beautiful; or, if incapable of such a change, it stole away and hid itself among those shapeless half ideas which throng the dim region beyond the daylight of our perfect consciousness.

Thus did he spend the night, nor fell asleep until the dawn had begun to awake the slumbering flowers in Dr. Rappaccini's garden, whither Giovanni's dreams doubtless led him. Up rose the sun in his due season, and, flinging his beams upon the young man's eyelids, awoke him to a sense of pain. When thoroughly aroused, he became sensible of a burning and tingling agony in

his hand—in his right hand—the very hand which Beatrice had grasped in her own when he was on the point of plucking one of the gemlike flowers. On the back of that hand there was now a purple print like that of four small fingers, and the likeness of a slender thumb upon his wrist.

Oh, how stubbornly does love,—or even that cunning semblance of love which flourishes in the imagination, but strikes no depth of root into the heart,—how stubbornly does it hold its faith until the moment comes when it is doomed to vanish into thin mist! Giovanni wrapped a handkerchief about his hand and wondered what evil thing had stung him, and soon forgot his pain in a reverie of Beatrice.

After the first interview, a second was in the inevitable course of what we call fate. A third; a fourth; and a meeting with Beatrice in the garden was no longer an incident in Giovanni's daily life, but the whole space in which he might be said to live; for the anticipation and memory of that ecstatic hour made up the remainder. Nor was it otherwise with the daughter of Rappaccini. She watched for the youth's appearance, and flew to his side with confidence as unreserved as if they had been playmates from early infancy—as if they were such playmates still. If, by any unwonted chance, he failed to come at the appointed moment, she stood beneath the window and sent up the rich sweetness of her tones to float around him in his chamber and echo and reverberate throughout his heart: "Giovanni! Giovanni! Why tarriest thou? Come down!" and down he hastened into that Eden of poisonous flowers.

But, with all this intimate familiarity, there was still a reserve in Beatrice's demeanor, so rigidly and invariably sustained that the idea of infringing it scarcely occurred to his imagination. By all appreciable signs, they loved; they had looked love with eyes that conveyed the holy secret from the depths of one soul into the depths of the other, as if it were too sacred to be whispered by the way; they had even spoken love in those gushes of passion when their spirits darted forth in articulated breath like tongues of long-hidden flame; and yet there had been no seal of lips, no clasp of hands, nor any slightest caress such as love claims and hallows. He had never touched one of the gleaming ringlets of her hair; her garment—so marked was the physical barrier between them—had never been waved against him by a breeze. On the few occasions when Giovanni had seemed tempted to overstep the limit, Beatrice grew so sad, so stern, and withal wore such a look of desolate separation, shuddering at itself, that not a spoken word was requisite to repel him. At such times he was startled at the horrible suspicions that rose, monster-like, out of the caverns of his heart and stared him in the face; his love grew thin and faint as the morning mist; his doubts alone had substance. But, when Beatrice's face brightened again after the momentary shadow, she was transformed at once from the mysterious, questionable being whom he had watched with so much awe and horror; she was now the beautiful and unsophisticated girl whom he felt that his spirit knew with a certainty beyond all other knowledge.

A considerable time had now passed since Giovanni's last meeting with Baglioni. One morning, however, he was disagreeably surprised by a visit from the professor, whom he had scarcely thought of for whole weeks, and would

willingly have forgotten still longer. Given up as he had long been to a pervading excitement, he could tolerate no companions except upon condition of their perfect sympathy with his present state of feeling. Such sympathy was not to be expected from Professor Baglioni.

The visitor chatted carelessly for a few moments about the gossip of the city and the university, and then took up another topic.

"I have been reading an old classic author lately," said he, "and met with a story that strangely interested me. Possibly you may remember it. It is of an Indian prince, who sent a beautiful woman as a present to Alexander the Great. She was as lovely as the dawn and gorgeous as the sunset; but what especially distinguished her was a certain rich perfume in her breath—richer than a garden of Persian roses. Alexander, as was natural to a youthful conqueror, fell in love at first sight with this magnificent stranger; but a certain sage physician, happening to be present, discovered a terrible secret in regard to her."

"And what was that?" asked Giovanni, turning his eyes downward to avoid those of the professor.

"That this lovely woman," continued Baglioni, with emphasis, "had been nourished with poisons from her birth upward, until her whole nature was so imbued with them that she herself had become the deadliest poison in existence. Poison was her element of life. With that rich perfume of her breath she blasted the very air. Her love would have been poison—her embrace death. Is not this a marvelous tale?"

"A childish fable," answered Giovanni, nervously starting from his chair. "I marvel how your worship finds time to read such nonsense among your graver studies."

"By the by," said the professor, looking uneasily about him, "what singular fragrance is this in your apartment? Is it the perfume of your gloves? It is faint, but delicious; and yet, after all, by no means agreeable. Were I to breathe it long, methinks it would make me ill. It is like the breath of a flower; but I see no flowers in the chamber."

"Nor are there any," replied Giovanni, who had turned pale as the professor spoke; "nor, I think, is there any fragrance except in your worship's imagination. Odors being a sort of element combined of the sensual and the spiritual, are apt to deceive us in this manner. The recollection of a perfume, the bare idea of it, may easily be mistaken for a present reality."

"Ay; but my sober imagination does not often play such tricks," said Baglioni; "and, were I to fancy any kind of odor, it would be that of some vile apothecary drug wherewith my fingers are likely enough to be imbued. Our worshipful friend Rappaccini, as I have heard, tinctures his medicaments with odors richer than those of Araby. Doubtless, likewise, the fair and learned Signora Beatrice would minister to her patients with draughts as sweet as a maiden's breath; but woe to him that sips them!"

Giovanni's face evinced many contending emotions. The tone in which the professor alluded to the pure and lovely daughter of Rappaccini was a torture to his soul; and yet the intimation of a view of her character, opposite to his own, gave instantaneous distinctness to a thousand dim suspicions, which now

grinned at him like so many demons. But he strove hard to quell them and to respond to Baglioni with a true lover's perfect faith.

"Signor professor," said he, "you were my father's friend; perchance, too, it is your purpose to act a friendly part toward his son. I would fain feel nothing toward you save respect and deference; but I pray you to observe, signor, that there is one subject on which we must not speak. You know not the Signora Beatrice. You cannot, therefore, estimate the wrong—the blasphemy, I may even say—that is offered to her character by a light or injurious word."

"Giovanni! my poor Giovanni!" answered the professor, with a calm expression of pity, "I know this wretched girl far better than yourself. You shall hear the truth in respect to the poisoner Rappaccini and his poisonous daughter; yes, poisonous as she is beautiful. Listen; for, even should you do violence to my gray hairs, it shall not silence me. That old fable of the Indian woman has become a truth by the deep and deadly science of Rappaccini and in the person of the lovely Beatrice."

Giovanni groaned and hid his face.

"Her father," continued Baglioni, "was not restrained by natural affection from offering up his child in this horrible manner as the victim of his insane zeal for science; for, let us do him justice, he is as true a man of science as ever distilled his own heart in an alembic. What, then, will be your fate? Beyond a doubt you are selected as the material of some new experiment. Perhaps the result is to be death; perhaps a fate more awful still. Rappaccini, with what he calls the interest of science before his eyes, will hesitate at nothing."

"It is a dream," muttered Giovanni to himself; "surely it is a dream."

"But," resumed the professor, "be of good cheer, son of my friend. It is not yet too late for the rescue. Possibly we may even succeed in bringing back this miserable child within the limits of ordinary nature, from which her father's madness has estranged her. Behold this little silver vase! It was wrought by the hands of the renowned Benvenuto Cellini, and is well worthy to be a love gift to the fairest dame in Italy. But its contents are invaluable. One little sip of this antidote would have rendered the most virulent poisons of the Borgias innocuous. Doubt not that it will be as efficacious against those of Rappaccini. Bestow the vase, and the precious liquid within it, on your Beatrice, and hopefully await the result."

Baglioni laid a small, exquisitely wrought silver vial on the table and withdrew, leaving what he had said to produce its effect upon the young man's mind.

"We will thwart Rappaccini yet," thought he, chuckling to himself, as he descended the stairs; "but, let us confess the truth of him, he is a wonderful man —a wonderful man indeed; a vile empiric, however, in his practice, and therefore not to be tolerated by those who respect the good old rules of the medical profession."

Throughout Giovanni's whole acquaintance with Beatrice, he had occasion-

29. **Benvenuto Cellini**—(1500-1571) famous Italian worker in gold and silver. 31. **Borgias**—Rodrigo Borgia (1431-1503), Italian prelate, and his daughter Lucrezia gained notoriety for poisoning their enemies. 40. **empiric**—one who bases his knowledge not on theory, but experiment.

ally, as we have said, been haunted by dark surmises as to her character; yet so thoroughly had she made herself felt by him as a simple, natural, most affectionate, and guileless creature, that the image now held up by Professor Baglioni looked as strange and incredible as if it were not in accordance with his own original conception. True, there were ugly recollections connected with his first glimpses of the beautiful girl; he could not quite forget the bouquet that withered in her grasp, and the insect that perished amid the sunny air, by no ostensible agency save the fragrance of her breath. These incidents, however, dissolving in the pure light of her character, had no longer the efficacy of facts, but were acknowledged as mistaken fantasies, by whatever testimony of the senses they might appear to be substantiated. There is something truer and more real than what we can see with the eyes and touch with the finger. On such better evidence had Giovanni founded his confidence in Beatrice, though rather by the necessary force of her high attributes than by any deep and generous faith on his part. But now his spirit was incapable of sustaining itself at the height to which the early enthusiasm of passion had exalted it; he fell down, groveling among earthly doubts, and defiled therewith the pure whiteness of Beatrice's image. Not that he gave her up; he did but distrust. He resolved to institute some decisive test that should satisfy him, once for all, whether there were those dreadful peculiarities in her physical nature which could not be supposed to exist without some corresponding monstrosity of soul. His eyes, gazing down afar, might have deceived him as to the lizard, the insect, and the flowers; but if he could witness, at the distance of a few paces, the sudden blight of one fresh and healthful flower in Beatrice's hand, there would be room for no further question. With this idea he hastened to the florist's and purchased a bouquet that was still gemmed with the morning dew-drops.

It was now the customary hour of his daily interview with Beatrice. Before descending into the garden, Giovanni failed not to look at his figure in the mirror,—a vanity to be expected in a beautiful young man, yet, as displaying itself at that troubled and feverish moment, the token of a certain shallowness of feeling and insincerity of character. He did gaze, however, and said to himself that his features had never before possessed so rich a grace, nor his eyes such vivacity, nor his cheeks so warm a hue of superabundant life.

"At least," thought he, "her poison has not yet insinuated itself into my system. I am no flower to perish in her grasp."

With that thought he turned his eyes on the bouquet, which he had never once laid aside from his hand. A thrill of indefinable horror shot through his frame on perceiving that those dewy flowers were already beginning to droop; they wore the aspect of things that had been fresh and lovely yesterday. Giovanni grew white as marble, and stood motionless before the mirror, staring at his own reflection there as at the likeness of something frightful. He remembered Baglioni's remark about the fragrance that seemed to pervade the chamber. It must have been the poison in his breath! Then he shuddered—shuddered at himself. Recovering from his stupor, he began to watch with curious eye a spider that was busily at work hanging its web from the antique cornice of the apartment, crossing and recrossing the artful system of interwoven lines—as vigorous and active a spider as ever dangled from an old ceil-

ing. Giovanni bent toward the insect, and emitted a deep, long breath. The spider suddenly ceased its toil; the web vibrated with a tremor originating in the body of the small artisan. Again Giovanni sent forth a breath, deeper, longer, and imbued with a venomous feeling out of his heart; he knew not whether he were wicked or only desperate. The spider made a convulsive gripe with his limbs and hung dead across the window.

"Accursed! accursed!" muttered Giovanni, addressing himself. "Hast thou grown so poisonous that this deadly insect perishes by thy breath?"

At that moment a rich, sweet voice came floating up from the garden.

"Giovanni! Giovanni! It is past the hour! Why tarriest thou? Come down!"

"Yes," muttered Giovanni again. "She is the only being whom my breath may not slay! Would that it might!"

He rushed down, and in an instant was standing before the bright and loving eyes of Beatrice. A moment ago his wrath and despair had been so fierce that he could have desired nothing so much as to wither her by a glance; but with her actual presence there came influences which had too real an existence to be at once shaken off: recollections of the delicate and benign power of her feminine nature, which had so often enveloped him in a religious calm; recollections of many a holy and passionate outgush of her heart, when the pure fountain had been unsealed from its depths and made visible in its transparency to his mental eye; recollections which, had Giovanni known how to estimate them, would have assured him that all this ugly mystery was but an earthly illusion, and that, whatever mist of evil might seem to have gathered over her, the real Beatrice was a heavenly angel. Incapable as he was of such high faith, still her presence had not utterly lost its magic. Giovanni's rage was quelled into an aspect of sullen insensibility. Beatrice, with a quick spiritual sense, immediately felt that there was a gulf of blackness between them which neither he nor she could pass. They walked on together, sad and silent, and came thus to the marble fountain and to its pool of water on the ground, in the midst of which grew the shrub that bore gem-like blossoms. Giovanni was affrighted at the eager enjoyment—the appetite, as it were—with which he found himself inhaling the fragrance of the flowers.

"Beatrice," asked he, abruptly, "whence came this shrub?"

"My father created it," answered she, with simplicity.

"Created it! created it!" repeated Giovanni. "What mean you, Beatrice?"

"He is a man fearfully acquainted with the secrets of Nature," replied Beatrice; "and at the hour when I first drew breath this plant sprang from the soil, the offspring of his science, of his intellect, while I was but his earthly child. Approach it not!" continued she, observing with terror that Giovanni was drawing nearer to the shrub. "It has qualities that you little dream of. But I, dearest Giovanni,—I grew up and blossomed with the plant and was nourished with its breath. It was my sister, and I loved it with a human affection; for, alas!—hast thou not suspected it?—there was an awful doom."

Here Giovanni frowned so darkly upon her that Beatrice paused and trembled. But her faith in his tenderness reassured her, and made her blush that she had doubted for an instant.

"There was an awful doom," she continued, "the effect of my father's fatal love of science, which estranged me from all society of my kind. Until Heaven sent thee, dearest Giovanni, oh, how lonely was thy poor Beatrice!"

"Was it a hard doom?" asked Giovanni, fixing his eyes upon her.

"Only of late have I known how hard it was," answered she, tenderly. "Oh, yes; but my heart was torpid, and therefore quiet."

Giovanni's rage broke forth from his sullen gloom like a lightning-flash out of a dark cloud.

"Accursed one!" cried he, with venomous scorn and anger. "And, finding thy solitude wearisome, thou hast severed me likewise from all the warmth of life and enticed me into thy region of unspeakable horror!"

"Giovanni!" exclaimed Beatrice, turning her large bright eyes upon his face. The force of his words had not found its way into her mind; she was merely thunderstruck.

"Yes, poisonous thing!" repeated Giovanni, beside himself with passion. "Thou hast done it! Thou hast blasted me! Thou hast filled my veins with poison! Thou hast made me as hateful, as ugly, as loathsome and deadly a creature as thyself—a world's wonder of hideous monstrosity! Now, if our breath be happily as fatal to ourselves as to all others, let us join our lips in one kiss of unutterable hatred, and so die!"

"What has befallen me?" murmured Beatrice, with a low moan out of her heart. "Holy Virgin, pity me, a poor heart-broken child!"

"Thou,—dost thou pray?" cried Giovanni, still with the same fiendish scorn. "Thy very prayers, as they come from thy lips taint the atmosphere with death. Yes; let us pray! Let us to church and dip our fingers in the holy water at the portal! They that come after us will perish as by a pestilence! Let us sign crosses in the air! It will be scattering curses abroad in the likeness of holy symbols!"

"Giovanni," said Beatrice calmly, for her grief was beyond passion, "why dost thou join thyself with me thus in those terrible words? I, it is true, am the horrible thing thou namest me. But thou,—what hast thou to do, save with one other shudder at my hideous misery to go forth out of the garden and mingle with thy race, and forget that there ever crawled on earth such a monster as poor Beatrice?"

"Dost thou pretend ignorance?" asked Giovanni, scowling upon her. "Behold! this power have I gained from the pure daughter of Rappaccini."

There was a swarm of summer insects flitting through the air in search of the food promised by the flower odors of the fatal garden. They circled round Giovanni's head, and were evidently attracted toward him by the same influence which had drawn them for an instant within the sphere of several of the shrubs. He sent forth a breath among them, and smiled bitterly at Beatrice as at least a score of the insects fell dead upon the ground.

"I see it! I see it!" shrieked Beatrice. "It is my father's fatal science! No, no, Giovanni; it was not I! Never, never! I dreamed only to love thee and be with thee a little time, and so to let thee pass away, leaving but thine image in mine heart. For, Giovanni, believe it, though my body be nourished with poison, my spirit is God's creature, and craves love as its daily food. But my

father,—he has united us in this fearful sympathy. Yes; spurn me, tread upon me, kill me! Oh, what is death after such words as thine? But it was not I. Not for a world of bliss would I have done it."

Giovanni's passion had exhausted itself in its outburst from his lips. There now came across him a sense, mournful, and not without tenderness, of the intimate and peculiar relationship between Beatrice and himself. They stood, as it were, in an utter solitude; which would be made none the less solitary by the densest throng of human life. Ought not, then, the desert of humanity around them to press this insulated pair closely together? If they should be cruel to one another, who was there to be kind to them? Besides, thought Giovanni, might there not still be a hope of his returning within the limits of ordinary nature, and leading Beatrice, the redeemed Beatrice, by the hand? Oh, weak, and selfish, and unworthy spirit, that could dream of an earthly union and earthly happiness as possible after such deep love had been so bitterly wronged as was Beatrice's love by Giovanni's blighting words! No, no; there could be no such hope. She must pass heavily, with that broken heart, across the borders of Time—she must bathe her hurts in some fount of paradise, and forget her grief in the light of immortality, and *there* be well.

But Giovanni did not know it.

"Dear Beatrice," said he, approaching her, while she shrank away as always at his approach, but now with a different impulse, "dearest Beatrice, our fate is not yet so desperate. Behold! there is a medicine, potent, as a wise physician has assured me, and almost divine in its efficacy. It is composed of ingredients the most opposite to those by which thy awful father has brought this calamity upon thee and me. It is distilled of blessed herbs. Shall we not quaff it together, and thus be purified from evil?"

"Give it me!" said Beatrice, extending her hand to receive the little silver vial which Giovanni took from his bosom. She added, with a peculiar emphasis, "I will drink; but do thou await the result."

She put Baglioni's antidote to her lips; and, at the same moment, the figure of Rappaccini emerged from the portal and came slowly toward the marble fountain. As he drew near, the pale man of science seemed to gaze with a triumphant expression at the beautiful youth and maiden, as might an artist who should spend his life in achieving a picture or a group of statuary and finally be satisfied with his success. He paused; his bent form grew erect with conscious power; he spread out his hand over them in the attitude of a father imploring a blessing upon his children; but those were the same hands that had thrown poison into the stream of their lives. Giovanni trembled. Beatrice shuddered nervously, and pressed her hand upon her heart.

"My daughter," said Rappaccini, "thou art no longer lonely in the world. Pluck one of those precious gems from thy sister shrub and bid thy bridegroom wear it in his bosom. It will not harm him now. My science and the sympathy between thee and him have so wrought within his system that he now stands apart from common men, as thou dost, daughter of my pride and triumph, from ordinary women. Pass on, then, through the world, most dear to one another and dreadful to all besides!"

"My father," said Beatrice, feebly,—and still as she spoke she kept her hand

upon her heart,—"wherefore didst thou inflict this miserable doom upon thy child?"

"Miserable!" exclaimed Rappaccini. "What mean you, foolish girl? Dost thou deem it misery to be endowed with marvelous gifts against which no power nor strength could avail an enemy—misery, to be able to quell the mightiest with a breath—misery, to be as terrible as thou art beautiful? Wouldst thou, then, have preferred the condition of a weak woman, exposed to all evil and capable of none?"

"I would fain have been loved, not feared," murmured Beatrice, sinking down upon the ground. "But now it matters not. I am going, father, where the evil which thou hast striven to mingle with my being will pass away like a dream—like the fragrance of these poisonous flowers, which will no longer taint my breath among the flowers of Eden. Farewell, Giovanni! Thy words of hatred are like lead within my heart; but they, too, will fall away as I ascend. Oh, was there not, from the first, more poison in thy nature than in mine?"

To Beatrice,—so radically had her earthly part been wrought upon by Rappaccini's skill,—as poison had been life, so the powerful antidote was death; and thus the poor victim of man's ingenuity and of thwarted nature, and of the fatality that attends all such efforts of perverted wisdom, perished there, at the feet of her father and Giovanni.

Just at that moment Professor Pietro Baglioni looked forth from the window, and called loudly, in a tone of triumph mixed with horror, to the thunder-stricken man of science,

"Rappaccini! Rappaccini! And is *this* the upshot of your experiment!"

THE OLD MANSE

THE AUTHOR MAKES THE READER ACQUAINTED WITH HIS ABODE

Introductory essay to *Mosses from an Old Manse* (1846), though written last in the series. This historic Concord residence was built in 1765 by Emerson's grandfather, the Rev. William Emerson, who witnessed the fight with the British at Concord bridge. The next resident, the Rev. Ezra Ripley, "the latest inhabitant," planted the apple trees. Emerson lived here, and wrote his essay *Nature* in this house before Hawthorne came to occupy it upon his marriage in 1842.

BETWEEN two tall gateposts of rough-hewn stone (the gate itself having fallen from its hinges at some unknown epoch) we beheld the gray front of the old parsonage terminating the vista of an avenue of black ash-trees. It was now a twelvemonth since the funeral procession of the venerable clergyman, its last inhabitant, had turned from that gateway towards the village burying-ground. The wheel-track leading to the door, as well as the whole breadth of the avenue, was almost overgrown with grass, affording dainty mouthfuls to two or three vagrant cows and an old white horse who had his own living to pick up along the roadside. The glimmering shadows that lay half asleep between the door of the house and the public highway were a

kind of spiritual medium, seen through which the edifice had not quite the aspect of belonging to the material world. Certainly it had little in common with those ordinary abodes which stand so imminent upon the road that every passer-by can thrust his head, as it were, into the domestic circle. From these quiet windows the figures of passing travellers looked too remote and dim to disturb the sense of privacy. In its near retirement and accessible seclusion it was the very spot for the residence of a clergyman,—a man not estranged from human life, yet enveloped in the midst of it with a veil woven of intermingled gloom and brightness. It was worthy to have been one of the time-honored parsonages of England in which, through many generations, a succession of holy occupants pass from youth to age, and bequeath each an inheritance of sanctity to pervade the house and hover over it as with an atmosphere.

Nor, in truth, had the Old Manse ever been profaned by a lay occupant until that memorable summer afternoon when I entered it as my home. A priest had built it; a priest had succeeded to it; other priestly men from time to time had dwelt in it; and children born in its chambers had grown up to assume the priestly character. It was awful to reflect how many sermons must have been written there. The latest inhabitant alone—he by whose translation to paradise the dwelling was left vacant—had penned nearly three thousand discourses, besides the better, if not the greater, number that gushed living from his lips. How often, no doubt, had he paced to and fro along the avenue, attuning his meditations to the sighs and gentle murmurs, and deep and solemn peals of the wind among the lofty tops of the trees! In that variety of natural utterances he could find something accordant with every passage of his sermon, were it of tenderness or reverential fear. The boughs over my head seemed shadowy with solemn thoughts as well as with rustling leaves. I took shame to myself for having been so long a writer of idle stories, and ventured to hope that wisdom would descend upon me with the falling leaves of the avenue, and that I should light upon an intellectual treasure in the Old Manse well worth those hoards of long-hidden gold which people seek for in moss-grown houses. Profound treatises of morality; a layman's unprofessional and therefore unprejudiced views of religion; histories (such as Bancroft might have written had he taken up his abode here as he once purposed) bright with picture, gleaming over a depth of philosophic thought,—these were the works that might fitly have flowed from such a retirement. In the humblest event I resolved at least to achieve a novel that should evolve some deep lesson and should possess physical substance enough to stand alone.

In furtherance of my design, and as if to leave me no pretext for not fulfilling it, there was in the rear of the house the most delightful little nook of a study that ever afforded its snug seclusion to a scholar. It was here that Emerson wrote Nature; for he was then an inhabitant of the Manse, and used to watch the Assyrian dawn and Paphian sunset and moonrise from the summit of our eastern hill. When I first saw the room its walls were blackened with the smoke of unnumbered years, and made still blacker by the grim prints of Puritan

32. Bancroft—George Bancroft (1800-1891), author of *History of the United States* (1834-74), and the man who in 1839 had secured Hawthorne his position in the Boston Custom House. **42. Assyrian . . . —***Cf.* Emerson, *Nature*, p. 400.

ministers that hung around. These worthies looked strangely like bad angels, or at least like men who had wrestled so continually and so sternly with the devil that somewhat of his sooty fierceness had been imparted to their own visages. They had all vanished now; a cheerful coat of paint and golden-tinted paper-hangings lighted up the small apartment; while the shadow of a willow-tree that swept against the overhanging eaves attempered the cheery western sunshine. In place of the grim prints there was the sweet and lovely head of one of Raphael's Madonnas and two pleasant little pictures of the Lake of Como. The only other decorations were a purple vase of flowers, always fresh, and a bronze one containing graceful ferns. My books (few, and by no means choice; for they were chiefly such waifs as chance had thrown in my way) stood in order about the room, seldom to be disturbed.

The study had three windows, set with little, old-fashioned panes of glass, each with a crack across it. The two on the western side looked, or rather peeped, between the willow branches down into the orchard, with glimpses of the river through the trees. The third, facing northward, commanded a broader view of the river at a spot where its hitherto obscure waters gleam forth into the light of history. It was at this window that the clergyman who then dwelt in the Manse stood watching the outbreak of a long and deadly struggle between two nations; he saw the irregular array of his parishioners on the farther side of the river and the glittering line of the British on the hither bank. He awaited in an agony of suspense the rattle of the musketry. It came, and there needed but a gentle wind to sweep the battle smoke around this quiet house.

Perhaps the reader, whom I cannot help considering as my guest in the Old Manse and entitled to all courtesy in the way of sight-showing,—perhaps he will choose to take a nearer view of the memorable spot. We stand now on the river's brink. It may well be called the Concord, the river of peace and quietness; for it is certainly the most unexcitable and sluggish stream that ever loitered imperceptibly towards its eternity—the sea. Positively, I had lived three weeks beside it before it grew quite clear to my perception which way the current flowed. It never has a vivacious aspect except when a northwestern breeze is vexing its surface on a sunshiny day. From the incurable indolence of its nature, the stream is happily incapable of becoming the slave of human ingenuity, as is the fate of so many a wild, free mountain torrent. While all things else are compelled to subserve some useful purpose, it idles its sluggish life away in lazy liberty, without turning a solitary spindle or affording even water-power enough to grind the corn that grows upon its banks. The torpor of its movement allows it nowhere a bright, pebbly shore, nor so much as a narrow strip of glistening sand, in any part of its course. It slumbers between broad prairies, kissing the long meadow grass, and bathes the overhanging boughs of elder bushes and willows or the roots of elms and ash-trees and clumps of maples. Flags and rushes grow along its plashy shore; the yellow water-lily spreads its broad, flat leaves on the margin; and the fragrant white pond-lily abounds, generally selecting a position just so far from the river's brink that it cannot be grasped save at the hazard of plunging in.

It is a marvel whence this perfect flower derives its loveliness and perfume, springing as it does from the black mud over which the river sleeps, and where

lurk the slimy eel and speckled frog and the mud turtle, whom continual washing cannot cleanse. It is the very same black mud out of which the yellow lily sucks its obscene life and noisome odor. Thus we see, too, in the world that some persons assimilate only what is ugly and evil from the same moral circumstances which supply good and beautiful results—the fragrance of celestial flowers—to the daily life of others.

The reader must not, from any testimony of mine, contract a dislike towards our slumberous stream. In the light of a calm and golden sunset it becomes lovely beyond expression; the more lovely for the quietude that so well accords with the hour, when even the wind, after blustering all day long, usually hushes itself to rest. Each tree and rock, and every blade of grass, is distinctly imaged, and, however unsightly in reality, assumes ideal beauty in the reflection. The minutest things of earth and the broad aspect of the firmament are pictured equally without effort and with the same felicity of success. All the sky glows downward at our feet; the rich clouds float through the unruffled bosom of the stream like heavenly thoughts through a peaceful heart. We will not, then, malign our river as gross and impure while it can glorify itself with so adequate a picture of the heaven that broods above it; or, if we remember its tawny hue and the muddiness of its bed, let it be a symbol that the earthliest human soul has an infinite spiritual capacity and may contain the better world within its depths. But, indeed, the same lesson might be drawn out of any mud puddle in the streets of a city; and, being taught us everywhere, it must be true.

Come, we have pursued a somewhat devious track in our walk to the battle-ground. Here we are, at the point where the river was crossed by the old bridge, the possession of which was the immediate object of the contest. On the hither side grow two or three elms, throwing a wide circumference of shade, but which must have been planted at some period within the threescore years and ten that have passed since the battle day. On the farther shore, overhung by a clump of elder bushes, we discern the stone abutment of the bridge. Looking down into the river, I once discovered some heavy fragments of the timbers, all green with half a century's growth of water moss; for during that length of time the tramp of horses and human footsteps has ceased along this ancient highway. The stream has here about the breadth of twenty strokes of a swimmer's arm,—a space not too wide when the bullets were whistling across. Old people who dwell hereabouts will point out the very spots on the western bank where our countrymen fell down and died; and on this side of the river an obelisk of granite has grown up from the soil that was fertilized with British blood. The monument, not more than twenty feet in height, is such as it befitted the inhabitants of a village to erect in illustration of a matter of local interest rather than what was suitable to commemorate an epoch of national history. Still, by the fathers of the village this famous deed was done; and their descendants might rightfully claim the privilege of building a memorial.

A humbler token of the fight, yet a more interesting one than the granite obelisk, may be seen close under the stone-wall which separates the battle-ground from the precincts of the parsonage. It is the grave—marked by a small, mossgrown fragment of stone at the head and another at the foot—the grave

of two British soldiers who were slain in the skirmish, and have ever since slept peacefully where Zechariah Brown and Thomas Davis buried them. Soon was their warfare ended; a weary night march from Boston, a rattling volley of musketry across the river, and then these many years of rest. In the long procession of slain invaders who passed into eternity from the battle-fields of the revolution, these two nameless soldiers led the way.

Lowell, the poet, as we were once standing over this grave, told me a tradition in reference to one of the inhabitants below. The story has something deeply impressive, though its circumstances cannot altogether be reconciled with probability. A youth in the service of the clergyman happened to be chopping wood, that April morning, at the back door of the Manse, and when the noise of battle rang from side to side of the bridge he hastened across the intervening field to see what might be going forward. It is rather strange, by the way, that this lad should have been so diligently at work when the whole population of town and country were startled out of their customary business by the advance of the British troops. Be that as it might, the tradition says that the lad now left his task and hurried to the battle-field with the axe still in his hand. The British had by this time retreated, the Americans were in pursuit; and the late scene of strife was thus deserted by both parties. Two soldiers lay on the ground—one was a corpse; but, as the young New Englander drew nigh, the other Briton raised himself painfully upon his hands and knees and gave a ghastly stare into his face. The boy,—it must have been a nervous impulse, without purpose, without thought, and betokening a sensitive and impressible nature rather than a hardened one,—the boy uplifted his axe and dealt the wounded soldier a fierce and fatal blow upon the head.

I could wish that the grave might be opened; for I would fain know whether either of the skeleton soldiers has the mark of an axe in his skull. The story comes home to me like truth. Oftentimes, as an intellectual and moral exercise, I have sought to follow that poor youth through his subsequent career, and observe how his soul was tortured by the blood stain, contracted as it had been before the long custom of war had robbed human life of its sanctity, and while it still seemed murderous to slay a brother man. This one circumstance has borne more fruit for me than all that history tells us of the fight.

Many strangers come in the summer time to view the battle-ground. For my own part, I have never found my imagination much excited by this or any other scene of historic celebrity; nor would the placid margin of the river have lost any of its charm for me had men never fought and died there. There is a wilder interest in the tract of land—perhaps a hundred yards in breadth—which extends between the battle-field and the northern face of our Old Manse, with its contiguous avenue and orchard. Here, in some unknown age, before the white man came, stood an Indian village, convenient to the river, whence its inhabitants must have drawn so large a part of their subsistence. The site is identified by the spear and arrow heads, the chisels, and other implements of war, labor, and the chase, which the plough turns up from the soil. You see a splinter of stone, half hidden beneath a sod; it looks like nothing worthy of note; but, if you have faith enough to pick it up, behold a relic! Thoreau, who has a strange faculty of finding what the Indians have left behind them, first

set me on the search; and I afterwards enriched myself with some very perfect specimens, so rudely wrought that it seemed almost as if chance had fashioned them. Their great charm consists in this rudeness and in the individuality of each article, so different from the productions of civilized machinery, which shapes everything on one pattern. There is exquiste delight, too, in picking up for one's self an arrowhead that was dropped centuries ago and has never been handled since, and which we thus receive directly from the hand of the red hunter, who purposed to shoot it at his game or at an enemy. Such an incident builds up again the Indian village and its encircling forest, and recalls to life the painted chiefs and warriors, the squaws at their household toil, and the children sporting among the wigwams, while the little wind-rocked pappoose swings from the branch of the tree. It can hardly be told whether it is a joy or a pain, after such a momentary vision, to gaze around in the broad daylight of reality and see stone fences, white houses, potato fields, and men doggedly hoeing in their shirt-sleeves and homespun pantaloons. But this is nonsense. The Old Manse is better than a thousand wigwams.

The Old Manse! We had almost forgotten it, but will return thither through the orchard. This was set out by the last clergyman, in the decline of his life, when the neighbors laughed at the hoary-headed man for planting trees from which he could have no prospect of gathering fruit. Even had that been the case, there was only so much the better motive for planting them, in the pure and unselfish hope of benefiting his successors,—an end so seldom achieved by more ambitious efforts. But the old minister, before reaching his patriarchal age of ninety, ate the apples from this orchard during many years, and added silver and gold to his annual stipend by disposing of the superfluity. It is pleasant to think of him walking among the trees in the quiet afternoons of early autumn and picking up here and there a windfall, while he observes how heavily the branches are weighed down, and computes the number of empty flour barrels that will be filled by their burden. He loved each tree, doubtless, as if it had been his own child. An orchard has a relation to mankind, and readily connects itself with matters of the heart. The trees possess a domestic character; they have lost the wild nature of their forest kindred, and have grown humanized by receiving the care of man as well as by contributing to his wants. There is so much individuality of character, too, among apple-trees that it gives them an additional claim to be the objects of human interest. One is harsh and crabbed in its manifestations; another gives us fruit as mild as charity. One is churlish and illiberal, evidently grudging the few apples that it bears; another exhausts itself in free-hearted benevolence. The variety of grotesque shapes into which apple-trees contort themselves has its effect on those who get acquainted with them: they stretch out their crooked branches, and take such hold of the imagination that we remember them as humorists and odd-fellows. And what is more melancholy than the old apple-trees that linger about the spot where once stood a homestead, but where there is now only a ruined chimney rising out of a grassy and weed-grown cellar? They offer their fruit to every wayfarer,—apples that are bitter sweet with the moral of Time's vicissitude.

I have met with no other such pleasant trouble in the world as that of finding

myself, with only the two or three mouths which it was my privilege to feed, the sole inheritor of the old clergyman's wealth of fruits. Throughout the summer there were cherries and currants; and then came autumn, with his immense burden of apples, dropping them continually from his overladen shoulders as he trudged along. In the stillest afternoon, if I listened, the thump of a great apple was audible, falling without a breath of wind, from the mere necessity of perfect ripeness. And, besides, there were pear-trees, that flung down bushels upon bushels of heavy pears; and peach-trees, which, in a good year, tormented me with peaches, neither to be eaten nor kept, nor, without labor and perplexity, to be given away. The idea of an infinite generosity and exhaustless bounty on the part of our Mother Nature was well worth obtaining through such cares as these. That feeling can be enjoyed in perfection only by the natives of summer islands, where the bread-fruit, the cocoa, the palm, and the orange grow spontaneously and hold forth the ever-ready meal; but likewise almost as well by a man long habituated to city life, who plunges into such a solitude as that of the Old Manse, where he plucks the fruit of trees that he did not plant, and which therefore, to my heterodox taste, bear the closest resemblance to those that grew in Eden. It has been an apothegm these five thousand years, that toil sweetens the bread it earns. For my part (speaking from hard experience, acquired while belaboring the rugged furrows of Brook Farm), I relish best the free gifts of Providence.

Not that it can be disputed that the light toil requisite to cultivate a moderately-sized garden imparts such zest to kitchen vegetables as is never found in those of the market gardener. Childless men, if they would know something of the bliss of paternity, should plant a seed,—be it squash, bean, Indian corn, or perhaps a mere flower or worthless weed,—should plant it with their own hands, and nurse it from infancy to maturity altogether by their own care. If there be not too many of them, each individual plant becomes an object of separate interest. My garden, that skirted the avenue of the Manse, was of precisely the right extent. An hour or two of morning labor was all that it required. But I used to visit and revisit it a dozen times a day, and stand in deep contemplation over my vegetable progeny with a love that nobody could share or conceive of who had never taken part in the process of creation. It was one of the most bewitching sights in the world to observe a hill of beans thrusting aside the soil, or a row of early peas just peeping forth sufficiently to trace a line of delicate green. Later in the season the humming-birds were attracted by the blossoms of a peculiar variety of bean; and they were a joy to me, those little spiritual visitants, for deigning to sip airy food out of my nectar cups. Multitudes of bees used to bury themselves in the yellow blossoms of the summer squashes. This, too, was a deep satisfaction; although when they had laden themselves with sweets they flew away to some unknown hive, which would give back nothing in requital of what my garden had contributed. But I was glad thus to fling a benefaction upon the passing breeze with the certainty that somebody must profit by it, and that there would be a little more honey in the world to allay the sourness and bitterness which mankind is

20-21. Brook Farm—Hawthorne joined this idealistic colony in 1841 but after several months complained of its "thraldom and weariness."

always complaining of. Yes, indeed; my life was the sweeter for that honey.

Speaking of summer squashes, I must say a word of their beautiful and varied forms. They presented an endless diversity of urns and vases, shallow or deep, scalloped or plain, moulded in patterns which a sculptor would do well to copy, since Art has never invented anything more graceful. A hundred squashes in the garden were worthy, in my eyes at least, of being rendered indestructible in marble. If ever Providence (but I know it never will) should assign me a superfluity of gold, part of it shall be expended for a service of plate, or most delicate porcelain, to be wrought into the shapes of summer squashes gathered from vines which I will plant with my own hands. As dishes for containing vegetables they would be peculiarly appropriate.

But not merely the squeamish love of the beautiful was gratified by my toil in the kitchen garden. There was a hearty enjoyment, likewise, in observing the growth of the crook-necked winter squashes, from the first little bulb, with the withered blossom adhering to it, until they lay strewn upon the soil, big, round fellows, hiding their heads beneath the leaves, but turning up their great yellow rotundities to the noontide sun. Gazing at them, I felt that by my agency something worth living for had been done. A new substance was born into the world. They were real and tangible existences, which the mind could seize hold of and rejoice in. A cabbage, too,—especially the early Dutch cabbage, which swells to a monstrous circumference, until its ambitious heart often bursts asunder,—is a matter to be proud of when we can claim a share with the earth and sky in producing it. But, after all, the hugest pleasure is reserved until these vegetable children of ours are smoking on the table, and we, like Saturn, make a meal of them.

What with the river, the battle-field, the orchard and the garden, the reader begins to despair of finding his way back into the Old Manse. But in agreeable weather it is the truest hospitality to keep him out-of-doors. I never grew quite acquainted with my habitation till a long spell of sulky rain had confined me beneath its roof. There could not be a more sombre aspect of external Nature than as then seen from the windows of my study. The great willow-tree had caught and retained among its leaves a whole cataract of water, to be shaken down at intervals by the frequent gusts of wind. All day long, and for a week together, the rain was drip-drip-dripping and splash-splash-splashing from the eaves, and bubbling and foaming into the tubs beneath the spouts. The old, unpainted shingles of the house and out-buildings were black with moisture; and the mosses of ancient growth upon the walls looked green and fresh, as if they were the newest things and afterthought of Time. The usually mirrored surface of the river was blurred by an infinity of raindrops; the whole landscape had a completely water-soaked appearance, conveying the impression that the earth was wet through like a sponge; while the summit of a wooded hill, about a mile distant, was enveloped in a dense mist, where the demon of the tempest seemed to have his abiding-place and to be plotting still direr inclemencies.

Nature has no kindness, no hospitality, during a rain. In the fiercest heat of sunny days she retains a secret mercy, and welcomes the wayfarer to shady nooks of the woods whither the sun cannot penetrate; but she provides no

shelter against her storms. It makes us shiver to think of those deep, umbrageous recesses, those overshadowing banks, where we found such enjoyment during the sultry afternoons. Not a twig of foliage there but would dash a little shower into our faces. Looking reproachfully towards the impenetrable sky,—if sky there be above that dismal uniformity of cloud,—we are apt to murmur against the whole system of the universe, since it involves the extinction of so many summer days in so short a life by the hissing and spluttering rain. In such spells of weather—and it is to be supposed such weather came—Eve's bower in paradise must have been but a cheerless and aguish kind of shelter, nowise comparable to the old parsonage, which had resources of its own to beguile the week's imprisonment. The idea of sleeping on a couch of wet roses!

Happy the man who in a rainy day can betake himself to a huge garret, stored, like that of the Manse, with lumber that each generation has left behind it from a period before the revolution. Our garret was an arched hall, dimly illuminated through small and dusty windows, it was but a twilight at the best; and there were nooks, or rather caverns, of deep obscurity, the secrets of which I never learned, being too reverent of their dust and cobwebs. The beams and rafters, roughly hewn and with strips of bark still on them, and the rude masonry of the chimneys, made the garret look wild and uncivilized,—an aspect unlike what was seen elsewhere in the quiet and decorous old house. But on one side there was a little whitewashed apartment which bore the traditionary title of the Saint's Chamber, because holy men in their youth had slept and studied and prayed there. With its elevated retirement, its one window, its small fireplace, and its closet, convenient for an oratory, it was the very spot where a young man might inspire himself with solemn enthusiasm and cherish saintly dreams. The occupants, at various epochs, had left brief records and ejaculations inscribed upon the walls. There, too, hung a tattered and shrivelled roll of canvas, which on inspection proved to be the forcibly wrought picture of a clergyman, in wig, band, and gown, holding a Bible in his hand. As I turned his face towards the light he eyed me with an air of authority such as men of his profession seldom assume in our days. The original had been pastor of the parish more than a century ago, a friend of Whitefield, and almost his equal in fervid eloquence. I bowed before the effigy of the dignified divine, and felt as if I had now met face to face with the ghost by whom, as there was reason to apprehend, the Manse was haunted.

Houses of any antiquity in New England are so invariably possessed with spirits that the matter seems hardly worth alluding to. Our ghost used to heave deep sighs in a particular corner of the parlor, and sometimes rustled paper, as if he were turning over a sermon in the long upper entry,—where nevertheless he was invisible in spite of the bright moonshine that fell through the eastern window. Not improbably he wished me to edit and publish a selection from a chest full of manuscript discourses that stood in the garret. Once, while Hillard and other friends sat talking with us in the twilight, there came a

13. **lumber**—useless odds and ends. 24. **oratory**—a small chapel for prayer. 31. **original**—the Rev. Daniel Bliss, maternal ancestor of Emerson, at whose invitation the English Calvinist George Whitefield (1714-1770) twice preached at Concord. 34. **ghost**—Hawthorne was amused by his wife's interest in spiritualism. 43. **Hillard**—George Stillman Hillard (1808-1879), lawyer and minor author.

rustling noise as of a minister's silk gown, sweeping through the very midst of the company so closely as almost to brush against the chairs. Still there was nothing visible. A yet stranger business was that of a ghostly servant maid, who used to be heard in the kitchen at deepest midnight, grinding coffee, cooking, ironing,—performing, in short, all kinds of domestic labor,—although no traces of anything accomplished could be detected the next morning. Some neglected duty of her servitude—some ill-starched ministerial band—disturbed the poor damsel in her grave and kept her at work without any wages.

But to return from this digression. A part of my predecessor's library was stored in the garret,—no unfit receptacle indeed for such dreary trash as comprised the greater number of volumes. The old books would have been worth nothing at an auction. In this venerable garret, however, they possessed an interest, quite apart from their literary value, as heirlooms, many of which had been transmitted down through a series of consecrated hands from the days of the mighty Puritan divines. Autographs of famous names were to be seen in faded ink on some of their flyleaves; and there were marginal observations or interpolated pages closely covered with manuscript in illegible shorthand, perhaps concealing matter of profound truth and wisdom. The world will never be the better for it. A few of the books were Latin folios, written by Catholic authors; others demolished Papistry, as with a sledge-hammer, in plain English. A dissertation on the book of Job—which only Job himself could have had patience to read—filled at least a score of small, thickset quartos, at the rate of two or three volumes to a chapter. Then there was a vast folio body of divinity—too corpulent a body, it might be feared, to comprehend the spiritual element of religion. Volumes of this form dated back two hundred years or more, and were generally bound in black leather, exhibiting precisely such an appearance as we should attribute to books of enchantment. Others equally antique were of a size proper to be carried in the large waistcoat pockets of old times,—diminutive, but as black as their bulkier brethren, and abundantly interfused with Greek and Latin quotations. These little old volumes impressed me as if they had been intended for very large ones, but had been unfortunately blighted at an early stage of their growth.

The rain pattered upon the roof and the sky gloomed through the dusty garret windows, while I burrowed among these venerable books in search of any living thought which should burn like a coal of fire, or glow like an inextinguishable gem, beneath the dead trumpery that had long hidden it. But I found no such treasure; all was dead alike; and I could not but muse deeply and wonderingly upon the humiliating fact that the works of man's intellect decay like those of his hands. Thought grows mouldy. What was good and nourishing food for the spirits of one generation affords no sustenance for the next. Books of religion, however, cannot be considered a fair test of the enduring and vivacious properties of human thought, because such books so seldom really touch upon their ostensible subject, and have, therefore, so little business to be written at all. So long as an unlettered soul can attain to saving grace, there would seem to be no deadly error in holding theological libraries to be accumulations of, for the most part, stupendous impertinence.

Many of the books had accrued in the latter years of the last clergyman's

lifetime. These threatened to be of even less interest than the elder works, a century hence, to any curious inquirer who should then rummage them as I was doing now. Volumes of the "Liberal Preacher" and "Christian Examiner," occasional sermons, controversial pamphlets, tracts, and other productions of a like fugitive nature took the place of the thick and heavy volumes of past time. In a physical point of view there was much the same difference as between a feather and a lump of lead; but, intellectually regarded, the specific gravity of old and new was about upon a par. Both also were alike frigid. The elder books, nevertheless, seemed to have been earnestly written, and might be conceived to have possessed warmth at some former period; although, with the lapse of time, the heated masses had cooled down even to the freezing point. The frigidity of the modern productions, on the other hand, was characteristic and inherent, and evidently had little to do with the writer's qualities of mind and heart. In fine, of this whole dusty heap of literature I tossed aside all the sacred part, and felt myself none the less a Christian for eschewing it. There appeared no hope of either mounting to the better world on a Gothic staircase of ancient folios or of flying thither on the wings of a modern tract.

Nothing, strange to say, retained any sap except what had been written for the passing day and year without the remotest pretension or idea of permanence. There were a few old newspapers, and still older almanacs, which reproduced to my mental eye the epochs when they had issued from the press with a distinctness that was altogether unaccountable. It was as if I had found bits of magic looking-glass among the books, with the images of a vanished century in them. I turned my eyes towards the tattered picture above mentioned, and asked of the austere divine wherefore it was that he and his brethren, after the most painful rummaging and groping into their minds, had been able to produce nothing half so real as these newspaper scribblers and almanac makers had thrown off in the effervescence of a moment. The portrait responded not; so I sought an answer for myself. It is the age itself that writes newspapers and almanacs, which, therefore, have a distinct purpose and meaning at the time, and a kind of intelligible truth for all times; whereas most other works—being written by men who, in the very act, set themselves apart from their age—are likely to possess little significance when new, and none at all when old. Genius, indeed, melts many ages into one, and thus effects something permanent, yet still with a similarity of office to that of the more ephemeral writer. A work of genius is but the newspaper of a century, or perchance of a hundred centuries.

Lightly as I have spoken of these old books, there yet lingers with me a superstitious reverence for literature of all kinds. A bound volume has a charm in my eyes similar to what scraps of manuscript possess for the good Mussulman. He imagines that those wind-wafted records are perhaps hallowed by some sacred verse; and I, that every new book or antique one may contain the "open sesame,"—the spell to disclose treasures hidden in some unsuspected cave of Truth. Thus it was not without sadness that I turned away from the library of the Old Manse.

3. **"Liberal Preacher . . . Christian Examiner"**—the *Liberal Preacher*, a monthly magazine of sermons, published 1827-30 and 1831-36; the *Christian Examiner*, a theological review, published 1824-69. 40. **Mussulman**—a Moslem.

Blessed was the sunshine when it came again at the close of another stormy day, beaming from the edge of the western horizon; while the massive firmament of clouds threw down all the gloom it could, but served only to kindle the golden light into a more brilliant glow by the strongly contrasted shadows. Heaven smiled at the earth, so long unseen, from beneath its heavy eyelid. To-morrow for the hill-tops and the wood paths.

Or it might be that Ellery Channing came up the avenue to join me in a fishing excursion on the river. Strange and happy times were those when we cast aside all irksome forms and strait-laced habitudes, and delivered ourselves up to the free air, to live like the Indians or any less conventional race during one bright semicircle of the sun. Rowing our boat against the current, between wide meadows, we turned aside into the Assabeth. A more lovely stream than this, for a mile above its junction with the Concord, has never flowed on earth, —nowhere, indeed, except to lave the interior regions of a poet's imagination. It is sheltered from the breeze by woods and a hill-side; so that elsewhere there might be a hurricane, and here scarcely a ripple across the shaded water. The current lingers along so gently that the mere force of the boatman's will seems sufficient to propel his craft against it. It comes flowing softly through the midmost privacy and deepest heart of a wood which whispers it to be quiet; while the stream whispers back again from its sedgy borders, as if river and wood were hushing one another to sleep. Yes; the river sleeps along its course and dreams of the sky and of the clustering foliage, amid which fall showers of broken sunlight, imparting specks of vivid cheerfulness, in contrast with the quiet depth of the prevailing tint. Of all this scene, the slumbering river has a dream picture in its bosom. Which, after all, was the most real—the picture, or the original?—the objects palpable to our grosser senses, or their apotheosis in the stream beneath? Surely the disembodied images stand in closer relation to the soul. But both the original and the reflection had here an ideal charm; and, had it been a thought more wild, I could have fancied that this river had strayed forth out of the rich scenery of my companion's inner world; only the vegetation along its banks should then have had an Oriental character.

Gentle and unobtrusive as the river is, yet the tranquil woods seem hardly satisfied to allow it passage. The trees are rooted on the very verge of the water, and dip their pendent branches into it. At one spot there is a lofty bank, on the slope of which grow some hemlocks, declining across the stream with outstretched arms, as if resolute to take the plunge. In other places the banks are almost on a level with the water; so that the quiet congregation of trees set their feet in the flood, and are fringed with foliage down to the surface. Cardinal flowers kindle their spiral flames and illuminate the dark nooks among the shrubbery. The pond-lily grows abundantly along the margin—that delicious flower, which, as Thoreau tells me, opens its virgin bosom to the first sunlight and perfects its being through the magic of that genial kiss. He has beheld beds of them unfolding in due succession as the sunrise stole gradually from flower to flower—a sight not to be hoped for unless when a poet adjusts his inward eye to a proper focus with the outward organ. Grape-vines here and

7. **Channing**—William Ellery Channing the younger, nephew of the famous Unitarian preacher, and one of the poets of transcendentalism. See pp. 387-388.

there twine themselves around shrub and tree and hang their clusters over the water within reach of the boatman's hand. Oftentimes they unite two trees of alien race in an inextricable twine, marrying the hemlock and the maple against their will, and enriching them with a purple offspring of which neither is the parent. One of these ambitious parasites has climbed into the upper branches of a tall, white pine, and is still ascending from bough to bough, unsatisfied till it shall crown the tree's airy summit with a wreath of its broad foliage and a cluster of its grapes.

The winding course of the stream continually shut out the scene behind us, and revealed as calm and lovely a one before. We glided from depth to depth, and breathed new seclusion at every turn. The shy kingfisher flew from the withered branch close at hand to another at a distance, uttering a shrill cry of anger or alarm. Ducks that had been floating there since the preceding eve were startled at our approach, and skimmed along the glassy river, breaking its dark surface with a bright streak. The pickerel leaped from among the lily-pads. The turtle, sunning itself upon a rock or at the root of a tree, slid suddenly into the water with a plunge. The painted Indian who paddled his canoe along the Assabeth three hundred years ago could hardly have seen a wilder gentleness displayed upon its banks and reflected in its bosom than we did. Nor could the same Indian have prepared his noontide meal with more simplicity. We drew up our skiff at some point where the overarching shade formed a natural bower, and there kindled a fire with the pine cones and decayed branches that lay strewn plentifully around. Soon the smoke ascended among the trees, impregnated with a savory incense, not heavy, dull, and surfeiting, like the steam of cookery within doors, but sprightly and piquant. The smell of our feast was akin to the woodland odors with which it mingled: there was no sacrilege committed by our intrusion there: the sacred solitude was hospitable, and granted us free leave to cook and eat in the recess that was at once our kitchen and banqueting hall. It is strange what humble offices may be performed in a beautiful scene without destroying its poetry. Our fire, red gleaming among the trees, and we beside it, busied with culinary rites and spreading out our meal on a mossgrown log, all seemed in unison with the river gliding by and the foliage rustling over us. And, what was strangest, neither did our mirth seem to disturb the propriety of the solemn woods; although the hobgoblins of the old wilderness and the will-of-the-wisps that glimmered in the marshy places might have come trooping to share our table talk, and have added their shrill laughter to our merriment. It was the very spot in which to utter the extremest nonsense or the profoundest wisdom, or that ethereal product of the mind which partakes of both, and may become one or the other, in correspondence with the faith and insight of the auditor.

So amid sunshine and shadow, rustling leaves and sighing waters, up gushed our talk like the babble of a fountain. The evanescent spray was Ellery's; and his, too, the lumps of golden thought that lay glimmering in the fountain's bed and brightened both our faces by the reflection. Could he have drawn out that virgin gold and stamped it with the mint mark that alone gives currency, the world might have had the profit, and he the fame. My mind was the richer merely by the knowledge that it was there. But the chief profit of those wild

days to him and me lay, not in any definite idea, not in any angular or rounded truth, which we dug out of the shapeless mass of problematical stuff, but in the freedom which we thereby won from all custom and conventionalism and fettering influences of man on man. We were so free to-day that it was impossible to be slaves again to-morrow. When we crossed the threshold of the house or trod the thronged pavements of a city, still the leaves of the trees that overhang the Assabeth were whispering to us, "Be free! be free!" Therefore along that shady river-bank there are spots, marked with a heap of ashes and half-consumed brands, only less sacred in my remembrance than the hearth of a household fire.

And yet how sweet, as we floated homeward adown the golden river at sunset,—how sweet was it to return within the system of human society, not as to a dungeon and a chain, but as to a stately edifice, whence we could go forth at will into statelier simplicity! How gently, too, did the sight of the Old Manse, best seen from the river, overshadowed with its willow and all environed about with the foliage of its orchard and avenue,—how gently did its gray, homely aspect rebuke the speculative extravagances of the day! It had grown sacred in connection with the artificial life against which we inveighed; it had been a home for many years in spite of all; it was my home too; and, with these thoughts, it seemed to me that all the artifice and conventionalism of life was but an impalpable thinness upon its surface, and that the depth below was none the worse for it. Once, as we turned our boat to the bank, there was a cloud, in the shape of an immensely gigantic figure of a hound, couched above the house, as if keeping guard over it. Gazing at this symbol, I prayed that the upper influences might long protect the institutions that had grown out of the heart of mankind.

If ever my readers should decide to give up civilized life, cities, houses, and whatever moral or material enormities in addition to these the perverted ingenuity of our race has contrived, let it be in the early autumn. Then Nature will love him better than at any other season, and will take him to her bosom with a more motherly tenderness. I could scarcely endure the roof of the old house above me in those first autumnal days. How early in the summer, too, the prophecy of autumn comes! Earlier in some years than in others; sometimes even in the first weeks of July. There is no other feeling like what is caused by this faint, doubtful, yet real perception—if it be not rather a foreboding—of the year's decay, so blessedly sweet and sad in the same breath.

Did I say that there was no feeling like it? Ah, but there is a half-acknowledged melancholy like to this when we stand in the perfected vigor of our life and feel that Time has now given us all his flowers, and that the next work of his never idle fingers must be to steal them one by one away.

I have forgotten whether the song of the cricket be not as early a token of autumn's approach as any other,—that song which may be called an audible stillness; for though very loud and heard afar, yet the mind does not take note of it as a sound, so completely is its individual existence merged among the accompanying characteristics of the season. Alas for the pleasant summer time! In August the grass is still verdant on the hills and in the valleys; the foliage of the trees is as dense as ever, and as green; the flowers gleam forth in richer

abundance along the margin of the river, and by the stone walls, and deep among the woods; the days, too, are as fervid now as they were a month ago; and yet in every breath of wind and in every beam of sunshine we hear the whispered farewell and behold the parting smile of a dear friend. There is a coolness amid all the heat, a mildness in the blazing noon. Not a breeze can stir but it thrills us with the breath of autumn. A pensive glory is seen in the far golden gleams, among the shadows of the trees. The flowers—even the brightest of them, and they are the most gorgeous of the year—have this gentle sadness wedded to their pomp, and typify the character of the delicious time each within itself. The brilliant cardinal flower has never seemed gay to me.

Still later in the season Nature's tenderness waxes stronger. It is impossible not to be fond of our mother now; for she is so fond of us! At other periods she does not make this impression on me, or only at rare intervals; but in those genial days of autumn, when she has perfected her harvests and accomplished every needful thing that was given her to do, then she overflows with a blessed superfluity of love. She has leisure to caress her children now. It is good to be alive at such times. Thank Heaven for breath—yes, for mere breath—when it is made up of a heavenly breeze like this! It comes with a real kiss upon our cheeks; it would linger fondly around us if it might; but, since it must be gone, it embraces us with its whole kindly heart and passes onward to embrace likewise the next thing that it meets. A blessing is flung abroad and scattered far and wide over the earth, to be gathered up by all who choose. I recline upon the still unwithered grass and whisper to myself, "O perfect day! O beautiful world! O beneficent God!" And it is the promise of a blessed eternity; for our Creator would never have made such lovely days and have given us the deep hearts to enjoy them, above and beyond all thought, unless we were meant to be immortal. This sunshine is the golden pledge thereof. It beams through the gates of paradise and shows us glimpses far inward.

By and by, in a little time, the outward world puts on a drear austerity. On some October morning there is a heavy hoar-frost on the grass and along the tops of the fences; and at sunrise the leaves fall from the trees of our avenue without a breath of wind, quietly descending by their own weight. All summer long they have murmured like the noise of waters; they have roared loudly while the branches were wrestling with the thunder gust; they have made music both glad and solemn; they have attuned my thoughts by their quiet sound as I paced to and fro beneath the arch of intermingling boughs. Now they can only rustle under my feet. Henceforth the gray parsonage begins to assume a larger importance, and draws to its fireside,—for the abomination of the air-tight stove is reserved till wintry weather,—draws closer and closer to its fireside the vagrant impulses that had gone wandering about through the summer.

When summer was dead and buried the Old Manse became as lonely as a hermitage. Not that ever—in my time at least—it had been thronged with company; but, at no rare intervals, we welcomed some friend out of the dusty glare and tumult of the world, and rejoiced to share with him the transparent obscurity that was floating over us. In one respect our precincts were like the Enchanted Ground through which the pilgrim travelled on his way to the

Celestial City! The guests, each and all, felt a slumberous influence upon them; they fell asleep in chairs, or took a more deliberate siesta on the sofa, or were seen stretched among the shadows of the orchard, looking up dreamily through the boughs. They could not have paid a more acceptable compliment to my abode, nor to my own qualities as a host. I held it as a proof that they left their cares behind them as they passed between the stone gate-posts at the entrance of our avenue, and that the so powerful opiate was the abundance of peace and quiet within and all around us. Others could give them pleasure and amusement or instruction—these could be picked up anywhere; but it was for me to give them rest—rest in a life of trouble. What better could be done for those weary and world-worn spirits?—for him whose career of perpetual action was impeded and harassed by the rarest of his powers and the richest of his acquirements?—for another who had thrown his ardent heart from earliest youth into the strife of politics, and now, perchance, began to suspect that one lifetime is too brief for the accomplishment of any lofty aim?—for her on whose feminine nature had been imposed the heavy gift of intellectual power, such as a strong man might have staggered under, and with it the necessity to act upon the world?—in a word, not to multiply instances, what better could be done for anybody who came within our magic circle than to throw the spell of a tranquil spirit over him? And when it had wrought its full effect, then we dismissed him, with but misty reminiscences, as if he had been dreaming of us.

Were I to adopt a pet idea, as so many people do, and fondle it in my embraces to the exclusion of all others, it would be, that the great want which mankind labors under at this present period is sleep. The world should recline its vast head on the first convenient pillow and take an age-long nap. It has gone distracted through a morbid activity, and, while preternaturally wide awake, is nevertheless tormented by visions that seem real to it now, but would assume their true aspect and character were all things once set right by an interval of sound repose. This is the only method of getting rid of old delusions and avoiding new ones; of regenerating our race, so that it might in due time awake as an infant out of dewy slumber; of restoring to us the simple perception of what is right, and the single-hearted desire to achieve it, both of which have long been lost in consequence of this weary activity of brain and torpor or passion of the heart that now afflict the universe. Stimulants, the only mode of treatment hitherto attempted, cannot quell the disease; they do but heighten the delirium.

Let not the above paragraph ever be quoted against the author; for, though tinctured with its modicum of truth, it is the result and expression of what he knew, while he was writing, to be but a distorted survey of the state and prospects of mankind. There were circumstances around me which made it difficult to view the world precisely as it exists; for, severe and sober as was the Old Manse, it was necessary to go but a little way beyond its threshold before meet-

ing with stranger moral shapes of men than might have been encountered elsewhere in a circuit of a thousand miles.

These hobgoblins of flesh and blood were attracted thither by the wide-spreading influence of a great original thinker, who had his earthly abode at the opposite extremity of our village. His mind acted upon other minds of a certain constitution with wonderful magnetism, and drew many men upon long pilgrimages to speak with him face to face. Young visionaries—to whom just so much of insight had been imparted as to make life all a labyrinth around them—came to seek the clew that should guide them out of their self-involved bewilderment. Grayheaded theorists—whose systems, at first air, had finally imprisoned them in an iron frame-work—travelled painfully to his door, not to ask deliverance, but to invite the free spirit into their own thraldom. People that had lighted on a new thought, or a thought that they fancied new, came to Emerson, as the finder of a glittering gem hastens to a lapidary, to ascertain its quality and value. Uncertain, troubled, earnest wanderers through the midnight of the moral world beheld his intellectual fire as a beacon burning on a hill-top, and, climbing the difficult ascent, looked forth into the surrounding obscurity more hopefully than hitherto. The light revealed objects unseen before,—mountains, gleaming lakes, glimpses of a creation among the chaos; but, also, as was unavoidable, it attracted bats and owls and the whole host of night birds, which flapped their dusky wings against the gazer's eyes, and sometimes were mistaken for fowls of angelic feather. Such delusions always hover nigh whenever a beacon fire of truth is kindled.

For myself, there had been epochs of my life when I, too, might have asked of this prophet the master word that should solve me the riddle of the universe; but now, being happy, I felt as if there were no question to be put, and therefore admired Emerson as a poet of deep beauty and austere tenderness, but sought nothing from him as a philosopher. It was good, nevertheless, to meet him in the woodpaths, or sometimes in our avenue, with that pure intellectual gleam diffused about his presence like the garment of a shining one; and he so quiet, so simple, so without pretension, encountering each man alive as if expecting to receive more than he could impart. And, in truth, the heart of many an ordinary man had, perchance, inscriptions which he could not read. But it was impossible to dwell in his vicinity without inhaling more or less the mountain atmosphere of his lofty thought, which, in the brains of some people, wrought a singular giddiness,—new truth being as heady as new wine. Never was a poor little country village infested with such a variety of queer, strangely-dressed, oddly-behaved mortals, most of whom took upon themselves to be important agents of the world's destiny, yet were simply bores of a very intense water. Such, I imagine, is the invariable character of persons who crowd so closely about an original thinker as to draw in his unuttered breath and thus become imbued with a false originality. This triteness of novelty is enough to make any man of common sense blaspheme at all ideas of less than a century's standing, and pray that the world may be petrified and rendered immovable in precisely the worst moral and physical state that it ever yet arrived at, rather than be benefited by such schemes of such philosophers.

And now I begin to feel—and perhaps should have sooner felt—that we have

talked enough of the Old Manse. Mine honored reader, it may be, will vilify the poor author as an egotist for babbling through so many pages about a moss-grown country parsonage, and his life within its walls and on the river and in the woods, and the influences that wrought upon him from all these sources. My conscience, however, does not reproach me with betraying anything too sacredly individual to be revealed by a human spirit to its brother or sister spirit. How narrow—how shallow and scanty too—is the stream of thought that has been flowing from my pen, compared with the broad tide of dim emotions, ideas, and associations which swell around me from that portion of my existence! How little have I told! and of that little, how almost nothing is even tinctured with any quality that makes it exclusively my own! Has the reader gone wandering, hand in hand with me, through the inner passages of my being? and have we groped together into all its chambers and examined their treasures or their rubbish? Not so. We have been standing on the greensward, but just within the cavern's mouth, where the common sunshine is free to penetrate, and where every footstep is therefore free to come. I have appealed to no sentiment or sensibilities save such as are diffused among us all. So far as I am a man of really individual attributes I veil my face; nor am I, nor have I ever been, one of those supremely hospitable people who serve up their own hearts, delicately fried, with brain sauce, as a tidbit for their beloved public.

Glancing back over what I have written, it seems but the scattered reminiscences of a single summer. In fairyland there is no measurement of time; and, in a spot so sheltered from the turmoil of life's ocean, three years hastened away with a noiseless flight, as the breezy sunshine chases the cloud shadows across the depths of a still valley. Now came hints, growing more and more distinct, that the owner of the old house was pining for his native air. Carpenters next appeared, making a tremendous racket among the out-buildings, strewing the green grass with pine shavings and chips of chestnut joists, and vexing the whole antiquity of the place with their discordant renovations. Soon, moreover, they divested our abode of the veil of woodbine which had crept over a large portion of its southern face. All the aged mosses were cleared unsparingly away; and there were horrible whispers about brushing up the external walls with a coat of paint—a purpose as little to my taste as might be that of rouging the venerable cheeks of one's grandmother. But the hand that renovates is always more sacrilegious than that which destroys. In fine, we gathered up our household goods, drank a farewell cup of tea in our pleasant little breakfast room,—delicately fragrant tea, an unpurchasable luxury, one of the many angel gifts that had fallen like dew upon us,—and passed forth between the tall stone gateposts as uncertain as the wandering Arabs where our tent might next be pitched. Providence took me by the hand, and—an oddity of dispensation which, I trust, there is no irreverence in smiling at—has led me, as the newspapers announce while I am writing, from the Old Manse into a custom house. As a story teller, I have often contrived strange vicissitudes for my imaginary personages, but none like this.

The treasure of intellectual good which I hoped to find in our secluded

43. custom house—After four blissful years in the Old Manse, Hawthorne received in 1846 the position of surveyor in the Salem Custom House.

dwelling had never come to light. No profound treatise of ethics, no philosophic history, no novel even, that could stand unsupported on its edges. All that I had to show, as a man of letters, were these few tales and essays, which had blossomed out like flowers in the calm summer of my heart and mind. Save editing (an easy task) the journal of my friend of many years, the African Cruiser, I had done nothing else. With these idle weeds and withering blossoms I have intermixed some that were produced long ago,—old, faded things, reminding me of flowers pressed between the leaves of a book,—and now offer the bouquet, such as it is, to any whom it may please. These fitful sketches, with so little of external life about them, yet claiming no profundity of purpose,—so reserved, even while they sometimes seem so frank,—often but half in earnest, and never, even when most so, expressing satisfactorily the thoughts which they profess to image,—such trifles, I truly feel, afford no solid basis for a literary reputation. Nevertheless, the public—if my limited number of readers, whom I venture to regard rather as a circle of friends, may be termed a public—will receive them the more kindly, as the last offering, the last collection, of this nature which it is my purpose ever to put forth. Unless I could do better, I have done enough in this kind. For myself the book will always retain one charm—as reminding me of the river, with its delightful solitudes, and of the avenue, the garden, and the orchard, and especially the dear old Manse, with the little study on its western side, and the sunshine glimmering through the willow branches while I wrote.

Let the reader, if he will do me so much honor, imagine himself my guest, and that, having seen whatever may be worthy of notice within and about the Old Manse, he has finally been ushered into my study. There, after seating him in an antique elbow chair, an heirloom of the house, I take forth a roll of manuscript and entreat his attention to the following tales—an act of personal inhospitality, however, which I never was guilty of, nor ever will be, even to my worst enemy.

ETHAN BRAND

Published in the *Boston Museum,* January 5, 1850, and in the *Dollar Magazine,* May, 1850, and collected in *The Snow-Image and Other Tales* (1851). Hawthorne recorded in *Passages from the American Note-Books* detailed descriptions of the limekiln, the one-armed soap-maker, the German and his diorama, and the dog, all seen in the course of a holiday excursion to North Adams, Massachusetts, July 26 to September 9, 1838.

BARTRAM the lime-burner, a rough, heavy-looking man, begrimed with charcoal, sat watching his kiln at nightfall, while his little son played at building houses with the scattered fragments of marble, when, on the hill-side below them, they heard a roar of laughter, not mirthful, but slow, and even solemn, like a wind shaking the boughs of the forest.

"Father, what is that?" asked the little boy, leaving his play, and pressing betwixt his father's knees.

"Oh, some drunken man, I suppose," answered the lime-burner; "some

merry fellow from the bar-room in the village, who dared not laugh loud enough within doors lest he should blow the roof of the house off. So here he is, shaking his jolly sides at the foot of Graylock."

"But, father," said the child, more sensitive than the obtuse, middle-aged clown, "he does not laugh like a man that is glad. So the noise frightens me!"

"Don't be a fool, child!" cried his father, gruffly. "You will never make a man, I do believe; there is too much of your mother in you. I have known the rustling of a leaf startle you. Hark! Here comes the merry fellow now. You shall see that there is no harm in him."

Bartram and his little son, while they were talking thus, sat watching the same lime-kiln that had been the scene of Ethan Brand's solitary and meditative life, before he began his search for the Unpardonable Sin. Many years, as we have seen, had now elapsed, since that portentous night when the IDEA was first developed. The kiln, however, on the mountain-side, stood unimpaired, and was in nothing changed since he had thrown his dark thoughts into the intense glow of its furnace, and melted them, as it were, into the one thought that took possession of his life. It was a rude, round, tower-like structure about twenty feet high, heavily built of rough stones, and with a hillock of earth heaped about the larger part of its circumference; so that the blocks and fragments of marble might be drawn by cart-loads, and thrown in at the top. There was an opening at the bottom of the tower, like an oven-mouth, but large enough to admit a man in a stooping posture, and provided with a massive iron door. With the smoke and jets of flame issuing from the chinks and crevices of this door, which seemed to give admittance into the hill-side, it resembled nothing so much as the private entrance to the infernal regions, which the shepherds of the Delectable Mountains were accustomed to show to pilgrims.

There are many such lime-kilns in that tract of country, for the purpose of burning the white marble which composes a large part of the substance of the hills. Some of them, built years ago, and long deserted, with weeds growing in the vacant round of the interior, which is open to the sky, and grass and wild-flowers rooting themselves into the chinks of the stones, look already like relics of antiquity, and may yet be overspread with the lichens of centuries to come. Others, where the lime-burner still feeds his daily and night-long fire, afford points of interest to the wanderer among the hills, who seats himself on a log of wood or a fragment of marble, to hold a chat with the solitary man. It is a lonesome, and, when the character is inclined to thought, may be an intensely thoughtful occupation; as it proved in the case of Ethan Brand, who had mused to such strange purpose, in days gone by, while the fire in this very kiln was burning.

The man who now watched the fire was of a different order, and troubled himself with no thoughts save the very few that were requisite to his business. At frequent intervals, he flung back the clashing weight of the iron door, and, turning his face from the insufferable glare, thrust in huge logs of oak, or

3. **Graylock**—Mt. Greylock, or Saddle Mountain, in the Berkshires, the highest mountain in Massachusetts. 26. **Delectable Mountains**—the range of mountains in Bunyan's *Pilgrim's Progress,* from which Christian first sees the Celestial City.

stirred the immense brands with a long pole. Within the furnace were seen the curling and riotous flames, and the burning marble, almost molten with the intensity of heat; while without, the reflection of the fire quivered on the dark intricacy of the surrounding forest, and showed in the foreground a bright and ruddy little picture of the hut, the spring beside its door, the athletic and coal-begrimed figure of the lime-burner, and the half-frightened child, shrinking into the protection of his father's shadow. And when, again, the iron door was closed, then reappeared the tender light of the half-full moon, which vainly strove to trace out the indistinct shapes of the neighboring mountains; and, in the upper sky, there was a flitting congregation of clouds, still faintly tinged with the rosy sunset, though thus far down into the valley the sunshine had vanished long and long ago.

The little boy now crept still closer to his father, as footsteps were heard ascending the hill-side, and a human form thrust aside the bushes that clustered beneath the trees.

"Halloo! who is it?" cried the lime-burner, vexed at his son's timidity, yet half infected by it. "Come forward, and show yourself, like a man, or I'll fling this chunk of marble at your head!"

"You offer me a rough welcome," said a gloomy voice, as the unknown man drew nigh. "Yet I neither claim nor desire a kinder one, even at my own fireside."

To obtain a distincter view, Bartram threw open the iron door of the kiln, whence immediately issued a gush of fierce light, that smote full upon the stranger's face and figure. To a careless eye there appeared nothing very remarkable in his aspect, which was that of a man in a coarse, brown, country-made suit of clothes, tall and thin, with the staff and heavy shoes of a wayfarer. As he advanced, he fixed his eyes—which were very bright—intently upon the brightness of the furnace, as if he beheld, or expected to behold, some object worthy of note within it.

"Good evening, stranger," said the lime-burner; "whence come you, so late in the day?"

"I come from my search," answered the wayfarer; "for, at last, it is finished."

"Drunk!—or crazy!" muttered Bartram to himself. "I shall have trouble with the fellow. The sooner I drive him away, the better."

The little boy, all in a tremble, whispered to his father, and begged him to shut the door of the kiln, so that there might not be so much light; for that there was something in the man's face which he was afraid to look at, yet could not look away from. And, indeed, even the lime-burner's dull and torpid sense began to be impressed by an indescribable something in that thin, rugged, thoughtful visage, with the grizzled hair hanging wildly about it, and those deeply sunken eyes, which gleamed like fires within the entrance of a mysterious cavern. But, as he closed the door, the stranger turned towards him, and spoke in a quiet, familiar way, that made Bartram feel as if he were a sane and sensible man, after all.

"Your task draws to an end, I see," said he. "This marble has already been burning three days. A few hours more will convert the stone to lime."

"Why, who are you?" exclaimed the lime-burner. "You seem as well acquainted with my business as I am myself."

"And well I may be," said the stranger; "for I followed the same craft many a long year, and here, too, on this very spot. But you are a new-comer in these parts. Did you never hear of Ethan Brand?"

"The man that went in search of the Unpardonable Sin?" asked Bartram, with a laugh.

"The same," answered the stranger. "He has found what he sought, and therefore he comes back again."

"What! then you are Ethan Brand himself?" cried the lime-burner, in amazement. "I am a new-comer here, as you say, and they call it eighteen years since you left the foot of Graylock. But, I can tell you, the good folks still talk about Ethan Brand, in the village yonder, and what a strange errand took him away from his lime-kiln. Well, and so you have found the Unpardonable Sin?"

"Even so!" said the stranger, calmly.

"If the question is a fair one," proceeded Bartram, "where might it be?"

Ethan Brand laid his finger on his own heart.

"Here!" replied he.

And then, without mirth in his countenance, but as if moved by an involuntary recognition of the infinite absurdity of seeking throughout the world for what was the closest of all things to himself, and looking into every heart, save his own, for what was hidden in no other breast, he broke into a laugh of scorn. It was the same slow, heavy laugh, that had almost appalled the lime-burner when it heralded the wayfarer's approach.

The solitary mountain-side was made dismal by it. Laughter, when out of place, mistimed, or bursting forth from a disordered state of feeling, may be the most terrible modulation of the human voice. The laughter of one asleep, even if it be a little child,—the madman's laugh,—the wild, screaming laugh of a born idiot,—are sounds that we sometimes tremble to hear, and would always willingly forget. Poets have imagined no utterance of fiends or hobgoblins so fearfully appropriate as a laugh. And even the obtuse lime-burner felt his nerves shaken, as this strange man looked inward at his own heart, and burst into laughter that rolled away into the night, and was indistinctly reverberated among the hills.

"Joe," said he to his little son, "scamper down to the tavern in the village, and tell the jolly fellows there that Ethan Brand has come back, and that he has found the Unpardonable Sin!"

The boy darted away on his errand, to which Ethan Brand made no objection, nor seemed hardly to notice it. He sat on a log of wood, looking steadfastly at the iron door of the kiln. When the child was out of sight, and his swift and light footsteps ceased to be heard treading first on the fallen leaves and then on the rocky mountain-path, the lime-burner began to regret his departure. He felt that the little fellow's presence had been a barrier between his guest and himself, and that he must now deal, heart to heart, with a man who, on his own confession, had committed the one only crime for which Heaven could afford no mercy. That crime, in its indistinct blackness, seemed to overshadow him. The lime-burner's own sins rose up within him, and made his

memory riotous with a throng of evil shapes that asserted their kindred with the Master Sin, whatever it might be, which it was within the scope of man's corrupted nature to conceive and cherish. They were all of one family; they went to and fro between his breast and Ethan Brand's, and carried dark greetings from one to the other.

Then Bartram remembered the stories which had grown traditionary in reference to this strange man, who had come upon him like a shadow of the night, and was making himself at home in his old place, after so long absence, that the dead people, dead and buried for years, would have had more right to be at home, in any familiar spot, than he. Ethan Brand, it was said, had conversed with Satan himself in the lurid blaze of this very kiln. The legend had been matter of mirth heretofore, but looked grisly now. According to this tale, before Ethan Brand departed on his search, he had been accustomed to evoke a fiend from the hot furnace of the lime-kiln, night after night, in order to confer with him about the Unpardonable Sin; the man and the fiend each laboring to frame the image of some mode of guilt which could neither be atoned for nor forgiven. And, with the first gleam of light upon the mountain-top, the fiend crept in at the iron door, there to abide the intensest element of fire until again summoned forth to share in the dreadful task of extending man's possible guilt beyond the scope of Heaven's else infinite mercy.

While the lime-burner was struggling with the horror of these thoughts, Ethan Brand rose from the log, and flung open the door of the kiln. The action was in such accordance with the idea in Bartram's mind, that he almost expected to see the Evil One issue forth, red-hot, from the raging furnace.

"Hold! hold!" cried he, with a tremulous attempt to laugh; for he was ashamed of his fears, although they overmastered him. "Don't, for mercy's sake, bring out your Devil now!"

"Man!" sternly replied Ethan Brand, "what need have I of the Devil? I have left him behind me, on my track. It is with such half-way sinners as you that he busies himself. Fear not, because I open the door. I do but act by old custom, and am going to trim your fire, like a lime-burner, as I was once."

He stirred the vast coals, thrust in more wood, and bent forward to gaze into the hollow prison-house of the fire, regardless of the fierce glow that reddened upon his face. The lime-burner sat watching him, and half suspected this strange guest of a purpose, if not to evoke a fiend, at least to plunge bodily into the flames, and thus vanish from the sight of man. Ethan Brand, however, drew quietly back, and closed the door of the kiln.

"I have looked," said he, "into many a human heart that was seven times hotter with sinful passions than yonder furnace is with fire. But I found not there what I sought. No, not the Unpardonable Sin!"

"What is the Unpardonable Sin?" asked the lime-burner; and then he shrank farther from his companion, trembling lest his question should be answered.

"It is a sin that grew within my own breast," replied Ethan Brand, standing erect, with a pride that distinguishes all enthusiasts of his stamp. "A sin that grew nowhere else! The sin of an intellect that triumphed over the sense of brotherhood with man and reverence for God, and sacrificed everything to its own mighty claims! The only sin that deserves a recompense of immortal

agony! Freely, were it to do again, would I incur the guilt. Unshrinkingly I accept the retribution!"

"The man's head is turned," muttered the lime-burner to himself. "He may be a sinner like the rest of us,—nothing more likely,—but, I'll be sworn, he is a madman too."

Nevertheless, he felt uncomfortable at his situation, alone with Ethan Brand on the wild mountain-side, and was right glad to hear the rough murmur of tongues, and the footsteps of what seemed a pretty numerous party, stumbling over the stones and rustling through the underbrush. Soon appeared the whole lazy regiment that was wont to infest the village tavern, comprehending three or four individuals who had drunk flip beside the bar-room fire through all the winters, and smoked their pipes beneath the stoop through all the summers, since Ethan Brand's departure. Laughing boisterously, and mingling all their voices together in unceremonious talk, they now burst into the moonshine and narrow streaks of firelight that illuminated the open space before the lime-kiln. Bartram set the door ajar again, flooding the spot with light, that the whole company might get a fair view of Ethan Brand, and he of them.

There, among other old acquaintances, was a once ubiquitous man, now almost extinct, but whom we were formerly sure to encounter at the hotel of every thriving village throughout the country. It was the stage-agent. The present specimen of the genus was a wilted and smoke-dried man, wrinkled and red-nosed, in a smartly cut, brown, bob-tailed coat, with brass buttons, who, for a length of time unknown, had kept his desk and corner in the bar-room, and was still puffing what seemed to be the same cigar that he had lighted twenty years before. He had great fame as a dry joker, though, perhaps, less on account of any intrinsic humor than from a certain flavor of brandy-toddy and tobacco-smoke, which impregnated all his ideas and expressions, as well as his person. Another well-remembered, though strangely altered, face was that of Lawyer Giles, as people still called him in courtesy; an elderly ragamuffin, in his soiled shirt-sleeves and tow-cloth trousers. This poor fellow had been an attorney, in what he called his better days, a sharp practitioner, and in great vogue among the village litigants; but flip, and sling, and toddy, and cocktails, imbibed at all hours, morning, noon, and night, had caused him to slide from intellectual to various kinds and degrees of bodily labor, till at last, to adopt his own phrase, he slid into a soap-vat. In other words, Giles was now a soap-boiler, in a small way. He had come to be but the fragment of a human being, a part of one foot having been chopped off by an axe, and an entire hand torn away by the devilish grip of a steam-engine. Yet, though the corporeal hand was gone, a spiritual member remained; for, stretching forth the stump, Giles steadfastly averred that he felt an invisible thumb and fingers with as vivid a sensation as before the real ones were amputated. A maimed and miserable wretch he was; but one, nevertheless, whom the world could not trample on, and had no right to scorn, either in this or any previous stage of his misfortunes, since he had still kept up the courage and spirit of a man, asked nothing in charity, and with his one hand—and that the left one—fought a stern battle against want and hostile circumstances.

Among the throng, too, came another personage, who, with certain points

of similarity to Lawyer Giles, had many more of difference. It was the village doctor; a man of some fifty years, whom, at an earlier period of his life, we introduced as paying a professional visit to Ethan Brand during the latter's supposed insanity. He was now a purple-visaged, rude, and brutal, yet half-gentlemanly figure, with something wild, ruined, and desperate in his talk, and in all the details of his gesture and manners. Brandy possessed this man like an evil spirit, and made him as surly and savage as a wild beast, and as miserable as a lost soul; but there was supposed to be in him such wonderful skill, such native gifts of healing, beyond any which medical science could impart, that society caught hold of him, and would not let him sink out of its reach. So, swaying to and fro upon his horse, and grumbling thick accents at the bedside, he visited all the sick-chambers for miles about among the mountain towns, and sometimes raised a dying man, as it were, by miracle, or quite as often, no doubt, sent his patient to a grave that was dug many a year too soon. The doctor had an everlasting pipe in his mouth, and, as somebody said, in allusion to his habit of swearing, it was always alight with hell-fire.

These three worthies pressed forward, and greeted Ethan Brand each after his own fashion, earnestly inviting him to partake of the contents of a certain black bottle, in which, as they averred, he would find something far better worth seeking for than the Unpardonable Sin. No mind, which has wrought itself by intense and solitary meditation into a high state of enthusiasm, can endure the kind of contact with low and vulgar modes of thought and feeling to which Ethan Brand was now subjected. It made him doubt—and, strange to say, it was a painful doubt—whether he had indeed found the Unpardonable Sin, and found it within himself. The whole question on which he had exhausted life, and more than life, looked like a delusion.

"Leave me," he said bitterly, "ye brute beasts, that have made yourselves so, shrivelling up your souls with fiery liquors! I have done with you. Years and years ago, I groped into your hearts and found nothing there for my purpose. Get ye gone!"

"Why, you uncivil scoundrel," cried the fierce doctor, "is that the way you respond to the kindness of your best friends? Then let me tell you the truth. You have no more found the Unpardonable Sin than yonder boy Joe has. You are but a crazy fellow,—I told you so twenty years ago,—neither better nor worse than a crazy fellow, and the fit companion of old Humphrey, here!"

He pointed to an old man, shabbily dressed, with long white hair, thin visage, and unsteady eyes. For some years past this aged person had been wandering about among the hills, inquiring of all travelers whom he met for his daughter. The girl, it seemed, had gone off with a company of circus-performers, and occasionally tidings of her came to the village, and fine stories were told of her glittering appearance as she rode on horseback in the ring, or performed marvelous feats on the tight-rope.

The white-haired father now approached Ethan Brand, and gazed unsteadily into his face.

"They tell me you have been all over the earth," said he, wringing his hands with earnestness. "You must have seen my daughter, for she makes a grand

figure in the world, and everybody goes to see her. Did she send any word to her old father, or say when she was coming back?"

Ethan Brand's eye quailed beneath the old man's. That daughter, from whom he so earnestly desired a word of greeting, was the Esther of our tale, the very girl whom, with such cold and remorseless purpose, Ethan Brand had made the subject of a psychological experiment, and wasted, absorbed, and perhaps annihilated her soul, in the process.

"Yes," murmered he, turning away from the hoary wanderer, "it is no delusion. There is an Unpardonable Sin!"

While these things were passing, a merry scene was going forward in the area of cheerful light, beside the spring and before the door of the hut. A number of the youth of the village, young men and girls, had hurried up the hill-side, impelled by curiosity to see Ethan Brand, the hero of so many a legend familiar to their childhood. Finding nothing, however, very remarkable in his aspect,—nothing but a sunburnt wayfarer, in plain garb and dusty shoes, who sat looking into the fire as if he fancied pictures among the coals,—these young people speedily grew tired of observing him. As it happened, there was other amusement at hand. An old German Jew, traveling with a diorama on his back, was passing down the mountain-road towards the village just as the party turned aside from it, and, in hopes of eking out the profits of the day, the showman had kept them company to the lime-kiln.

"Come, old Dutchman," cried one of the young men, "let us see your pictures, if you can swear they are worth looking at!"

"Oh yes, Captain," answered the Jew,—whether as a matter of courtesy or craft, he styled everybody Captain,—"I shall show you, indeed, some very superb pictures!"

So, placing his box in a proper position, he invited the young men and girls to look through the glass orifices of the machine, and proceeded to exhibit a series of the most outrageous scratchings and daubings, as specimens of the fine arts, that ever an itinerant showman had the face to impose upon his circle of spectators. The pictures were worn out, moreover, tattered, full of cracks and wrinkles, dingy with tobacco-smoke, and otherwise in a most pitiable condition. Some purported to be cities, public edifices, and ruined castles in Europe; others represented Napoleon's battles and Nelson's sea-fights; and in the midst of these would be seen a gigantic, brown, hairy hand,—which might have been mistaken for the Hand of Destiny, though, in truth, it was only the showman's,—pointing its forefinger to various scenes of the conflict, while its owner gave historical illustrations. When, with much merriment at its abominable deficiency of merit, the exhibition was concluded, the German bade little Joe put his head into the box. Viewed through the magnifying-glasses, the boy's round, rosy visage assumed the strangest imaginable aspect of an immense Titanic child, the mouth grinning broadly, and the eyes and every other feature overflowing with fun at the joke. Suddenly, however, that merry face turned pale, and its expression changed to horror, for this easily impressed and excitable child had become sensible that the eye of Ethan Brand was fixed upon him through the glass.

"You make the little man to be afraid, Captain," said the German Jew, turn-

ing up the dark and strong outline of his visage from his stooping posture. "But look again, and, by chance, I shall cause you to see somewhat that is very fine, upon my word!"

Ethan Brand gazed into the box for an instant, and then starting back, looked fixedly at the German. What had he seen? Nothing, apparently; for a curious youth, who had peeped in almost at the same moment, beheld only a vacant space of canvas.

"I remember you now," muttered Ethan Brand to the showman.

"Ah, Captain," whispered the Jew of Nuremberg, with a dark smile, "I find it to be a heavy matter in my show-box,—this Unpardonable Sin! By my faith, Captain, it has wearied my shoulders, this long day, to carry it over the mountain."

"Peace," answered Ethan Brand, sternly, "or get thee into the furnace yonder!"

The Jew's exhibition had scarcely concluded, when a great, elderly dog—who seemed to be his own master, as no person in the company laid claim to him—saw fit to render himself the object of public notice. Hitherto, he had shown himself a very quiet, well-disposed old dog, going round from one to another, and, by way of being sociable, offering his rough head to be patted by any kindly hand that would take so much trouble. But now, all of a sudden, this grave and venerable quadruped, of his own mere motion, and without the slightest suggestion from anybody else, began to run round after his tail, which, to heighten the absurdity of the proceeding, was a great deal shorter than it should have been. Never was seen such headlong eagerness in pursuit of an object that could not possibly be attained; never was heard such a tremendous outbreak of growling, snarling, barking, and snapping,—as if one end of the ridiculous brute's body were at deadly and most unforgivable enmity with the other. Faster and faster, round about went the cur; and faster and still faster fled the unapproachable brevity of his tail; and louder and fiercer grew his yells of rage and animosity; until, utterly exhausted, and as far from the goal as ever, the foolish old dog ceased his performance as suddenly as he had begun it. The next moment he was as mild, quiet, sensible, and respectable in his deportment, as when he first scraped acquaintance with the company.

As may be supposed, the exhibition was greeted with universal laughter, clapping of hands, and shouts of encore, to which the canine performer responded by wagging all that there was to wag of his tail, but appeared totally unable to repeat his very successful effort to amuse the spectators.

Meanwhile, Ethan Brand had resumed his seat upon the log, and moved, it might be, by a perception of some remote analogy between his own case and that of this self-pursuing cur, he broke into the awful laugh, which, more than any other token, expressed the condition of his inward being. From that moment, the merriment of the party was at an end; they stood aghast, dreading lest the inauspicious sound should be reverberated around the horizon, and that mountain would thunder it to mountain, and so the horror be prolonged upon their ears. Then, whispering one to another that it was late,—that the moon was almost down,—that the August night was growing chill,—they hurried homewards, leaving the lime-burner and little Joe to deal as they might

with their unwelcome guest. Save for these three human beings, the open space on the hill-side was a solitude, set in a vast gloom of forest. Beyond that darksome verge, the firelight glimmered on the stately trunks and almost black foliage of pines, intermixed with the lighter verdure of sapling oaks, maples, and poplars, while here and there lay the gigantic corpses of dead trees, decaying on the leaf-strewn soil. And it seemed to little Joe—a timorous and imaginative child—that the silent forest was holding its breath until some fearful thing should happen.

Ethan Brand thrust more wood into the fire, and closed the door of the kiln; then looking over his shoulder at the lime-burner and his son, he bade, rather than advised, them to retire to rest.

"For myself, I cannot sleep," said he. "I have matters that it concerns me to meditate upon. I will watch the fire, as I used to do in the old time."

"And call the Devil out of the furnace to keep you company, I suppose," muttered Bartram, who had been making intimate acquaintance with the black bottle above mentioned. "But watch, if you like, and call as many devils as you like! For my part, I shall be all the better for a snooze. Come, Joe!"

As the boy followed his father into the hut, he looked back at the wayfarer, and the tears came into his eyes, for his tender spirit had an intuition of the bleak and terrible loneliness in which this man had enveloped himself.

When they had gone, Ethan Brand sat listening to the crackling of the kindled wood, and looking at the little spirts of fire that issued through the chinks of the door. These trifles, however, once so familiar, had but the slightest hold of his attention, while deep within his mind he was reviewing the gradual but marvelous change that had been wrought upon him by the search to which he had devoted himself. He remembered how the night dew had fallen upon him, —how the dark forest had whispered to him,—how the stars had gleamed upon him,—a simple and loving man, watching his fire in the years gone by, and ever musing as it burned. He remembered with what tenderness, with what love and sympathy for mankind, and what pity for human guilt and woe, he had first begun to contemplate those ideas which afterwards became the inspiration of his life; with what reverence he had then looked into the heart of man, viewing it as a temple originally divine, and, however desecrated, still to be held sacred by a brother; with what awful fear he had deprecated the success of his pursuit, and prayed that the Unpardonable Sin might never be revealed to him. Then ensued that vast intellectual development, which, in its progress, disturbed the counterpoise between his mind and heart. The Idea that possessed his life had operated as a means of education; it had gone on cultivating his powers to the highest point of which they were susceptible; it had raised him from the level of an unlettered laborer to stand on a star-lit eminence, whither the philosophers of the earth, laden with the lore of universities, might vainly strive to clamber after him. So much for the intellect! But where was the heart? That, indeed, had withered,—had contracted,—had hardened,—had perished! It had ceased to partake of the universal throb. He had lost his hold of the magnetic chain of humanity. He was no longer a brother-man, opening the chambers or the dungeons of our common nature by the key of holy sympathy, which gave him a right to share in all its secrets; he

was now a cold observer, looking on mankind as the subject of his experiment, and, at length, converting man and woman to be his puppets, and pulling the wires that moved them to such degrees of crime as were demanded for his study.

Thus Ethan Brand became a fiend. He began to be so from the moment that his moral nature had ceased to keep the pace of improvement with his intellect. And now, as his highest effort and inevitable development,—as the bright and gorgeous flower, and rich, delicious fruit of his life's labor,—he had produced the Unpardonable Sin!

"What more have I to seek? what more to achieve?" said Ethan Brand to himself. "My task is done, and well done!"

Starting from the log with a certain alacrity in his gait and ascending the hillock of earth that was raised against the stone circumference of the lime-kiln, he thus reached the top of the structure. It was a space of perhaps ten feet across, from edge to edge, presenting a view of the upper surface of the immense mass of broken marble with which the kiln was heaped. All these innumerable blocks and fragments of marble were red-hot and vividly on fire, sending up great spouts of blue flame, which quivered aloft and danced madly, as within a magic circle, and sank and rose again, with continual and multitudinous activity. As the lonely man bent forward over this terrible body of fire, the blasting heat smote up against his person with a breath that, it might be supposed, would have scorched and shrivelled him up in a moment.

Ethan Brand stood erect, and raised his arms on high. The blue flames played upon his face, and imparted the wild and ghastly light which alone could have suited its expression; it was that of a fiend on the verge of plunging into his gulf of intensest torment.

"O Mother Earth," cried he, "who art no more my Mother, and into whose bosom this frame shall never be resolved! O mankind, whose brotherhood I have cast off, and trampled thy great heart beneath my feet! O stars of heaven, that shone on me of old, as if to light me onward and upward!—farewell all, and forever. Come, deadly element of Fire,—henceforth my familiar friend! Embrace me, as I do thee!"

That night the sound of a fearful peal of laughter rolled heavily through the sleep of the lime-burner and his little son; dim shapes of horror and anguish haunted their dreams, and seemed still present in the rude hovel, when they opened their eyes to the daylight.

"Up, boy, up!" cried the lime-burner, staring about him. "Thank Heaven, the night is gone, at last; and rather than pass such another, I would watch my lime-kiln, wide awake, for a twelvemonth. This Ethan Brand, with his humbug of an Unpardonable Sin, has done me no such mighty favor, in taking my place!"

He issued from the hut, followed by little Joe, who kept fast hold of his father's hand. The early sunshine was already pouring its gold upon the mountain-tops, and though the valleys were still in shadow, they smiled cheerfully in the promise of the bright day that was hastening onward. The village, completely shut in by hills, which swelled away gently about it, looked as if

it had rested peacefully in the hollow of the great hand of Providence. Every dwelling was distinctly visible; the little spires of the two churches pointed upwards, and caught a fore-glimmering of brightness from the sun-gilt skies upon their gilded weathercocks. The tavern was astir, and the figure of the old, smoke-dried stage-agent, cigar in mouth, was seen beneath the stoop. Old Graylock was glorified with a golden cloud upon his head. Scattered likewise over the breasts of the surrounding mountains, there were heaps of hoary mist, in fantastic shapes, some of them far down into the valley, others high up towards the summits, and still others, of the same family of mist or cloud, hovering in the gold radiance of the upper atmosphere. Stepping from one to another of the clouds that rested on the hills, and thence to the loftier brotherhood that sailed in air, it seemed almost as if a mortal man might thus ascend into the heavenly regions. Earth was so mingled with sky that it was a day-dream to look at it.

To supply that charm of the familiar and homely, which Nature so readily adopts into a scene like this, the stage-coach was rattling down the mountain-road, and the driver sounded his horn, while Echo caught up the notes, and intertwined them into a rich and varied and elaborate harmony, of which the original performer could lay claim to little share. The great hills played a concert among themselves, each contributing a strain of airy sweetness.

Little Joe's face brightened at once.

"Dear father," cried he, skipping cheerily to and fro, "that strange man is gone, and the sky and the mountains all seem glad of it!"

"Yes," growled the lime-burner, with an oath, "but he has let the fire go down, and no thanks to him if five hundred bushels of lime are not spoiled. If I catch the fellow hereabouts again, I shall feel like tossing him into the furnace!"

With his long pole in his hand, he ascended to the top of the kiln. After a moment's pause, he called to his son.

"Come up here, Joe!" said he.

So little Joe ran up the hillock, and stood by his father's side. The marble was all burnt into perfect, snow-white lime. But on its surface, in the midst of the circle,—snow-white too, and thoroughly converted into lime,—lay a human skeleton, in the attitude of a person who, after long toil, lies down to long repose. Within the ribs—strange to say—was the shape of a human heart.

"Was the fellow's heart made of marble?" cried Bartram, in some perplexity at this phenomenon. "At any rate, it is burnt into what looks like special good lime; and, taking all the bones together, my kiln is half a bushel the richer for him."

So saying, the rude lime-burner lifted his pole, and, letting it fall upon the skeleton, the relics of Ethan Brand were crumbled into fragments.

HENRY WADSWORTH LONGFELLOW

1807-1882

I. ATHIRST FOR "FUTURE EMINENCE IN LITERATURE" (1807–1835)

1807 Born February 27, in Portland, Maine, the second child of Stephen and Zilpah Wadsworth Longfellow.

1810–1821 Attended private schools, principally the Portland Academy.

1820 First poem appeared in the (Portland) *Gazette of Maine* November 17, the title being "The Battle of Lovell's Pond."

1821 Passed entrance examinations for Bowdoin College, but pursued freshman studies at home.

1822–1825 Student at Bowdoin College, contributing poems and essays to various newspapers and periodicals. "The fact is . . . I most eagerly aspire after future eminence in literature." Graduated in September, 1825.

1825 Offered professorship of modern languages at Bowdoin on condition that he visit Europe.

1826–1829 Left New York May 15, 1826, visiting France, Spain, Italy, Germany, and England, returning home August 11, 1829.

1829–1835 Professor of modern languages and librarian of Bowdoin College; edited textbooks; contributed articles to the *North American Review* on European literatures.

1831 Married Mary Storer Potter of Portland September 14. Contributed essays to the *New England Magazine* (1831-33), which, revised, appear in *Outre-Mer* (1833-34; final form, 1835).

1834 Offered Smith professorship of modern languages at Harvard in succession to George Ticknor with the privilege of preparing himself by a trip to Europe "for the purpose of a more perfect attainment of the German."

II. PROFESSOR, POET, AND NATIONAL FIGURE (1835–1854)

1835–1836 Sailed in April, 1835, with his wife; visited England, Scandinavia, Holland, Germany, Switzerland, and France. Mrs. Longfellow died in Rotterdam November 29, 1835.

1836 Entered upon his professorial duties at Harvard in December, living at Craigie House, Cambridge, after August, 1837. Formation of the "Five of Clubs" group. Intimacy with Hawthorne begun.

1839 Published *Hyperion: A Romance* (prose); and *Voices of the Night* (poetry), the latter in December. Continued to contribute to the *North American Review*. Poe's attacks on Longfellow began with a review of *Hyperion* in October in *Burton's Gentleman's Magazine*.

1841 Published *Ballads and Other Poems* December 19 (title-page dated 1842).

1842 Obtained leave of absence because of ill health and visited Belgium, the Rhine.

and England, returning in December and writing the *Poems on Slavery* (1842), which aroused controversy, on the return voyage.

1843 Married Frances Elizabeth Appleton July 13, and became owner of Craigie House. Published *The Spanish Student* (closet drama) in the summer.

1845–1847 Much editorial work: *The Waif: A Collection of Poems* (1845); *The Poets and Poetry of Europe* (1845); *The Estray: A Collection of Poems* (1847). Published *The Belfry of Bruges and Other Poems* (December 23, 1845).

1847 Published *Evangeline, A Tale of Acadie* October 30. Longfellow now definitely a great national figure.

1849 Published *Kavanagh, a Tale* (prose) and *The Seaside and the Fireside,* which includes "The Building of the Ship." An increasing dissatisfaction with teaching went hand in hand with a keen interest in national politics, reflected in this poem.

1854 Resigned his professorship, James Russell Lowell being his successor.

III. "THE WHITE MR. LONGFELLOW" (1854–1882)

1855 Published *The Song of Hiawatha* November 10. Longfellow now internationally famous.

1857 Published *Drift Wood* (essays). Became a member of the Saturday Club.

1858 Published *The Courtship of Miles Standish and Other Poems* in September.

1859 Received an LL.D. degree from Harvard College.

1861 Mrs. Longfellow died of burns July 9. Longfellow presently resumed work on his translation of Dante's *Divine Comedy* (published 1865-69) to forget his loss.

1863 First part of *Tales of a Wayside Inn* published November 25; part two appeared in *Three Books of Song* (1872); part three in *Aftermath* (1873).

1866 *Flower-de-Luce* published.

1868–1869 Last visit to Europe, principally England, France, and Italy, Longfellow receiving honorary degrees from Cambridge and Oxford in 1868. Returned to America about September 1, 1869.

1872 Completed *Christus: A Mystery,* which he regarded as the principal work of his career (*The Golden Legend* first appeared in 1851; *The New England Tragedies* in 1868; and *The Divine Tragedy* in 1871). *Three Books of Song* published. Longfellow now a patriarchal poet.

1873–1880 Quietly and peacefully at work as a poet and editor, publishing *Aftermath* (1873); *The Hanging of the Crane* (1874); *The Masque of Pandora, and Other Poems* (1875); *Poems of Places* (1876-79), an anthology in 31 vols.; *Kéramos and Other Poems* (1878; privately printed, 1877); *The White Czar and Other Poems* (1878); *Ultima Thule* (1880).

1882 *In the Harbor* (second part of *Ultima Thule*) appeared. Longfellow died March 24.

1883 *Michael Angelo* posthumously published.

BIOGRAPHIES: E. S. Robertson, *Life of Henry Wadsworth Longfellow,* London, 1887; Samuel Longfellow, *Life of Henry Wadsworth Longfellow,* Ticknor, 1885-86, 2 vols. (*Final Memorials,* 1887, constitutes a third volume); G. R. Carpenter, *Henry Wadsworth Longfellow,* Small, Maynard, 1901; T. W. Higginson, *Henry Wadsworth Longfellow,* Houghton Mifflin, 1902; H. S. Gorman, *A Victorian American, Henry Wadsworth Longfellow,* Doran, 1926 (patron-

izing); J. T. Hatfield, *New Light on Longfellow,* Houghton Mifflin, 1933; L. R. Thompson, *Young Longfellow,* Macmillan, 1938; Carl L. Johnson, *Professor Longfellow of Harvard,* Eugene, Ore., 1944.

BIBLIOGRAPHY AND EDITIONS: L. S. Livingston, *A Bibliography of the First Editions in Book Form of . . . Henry Wadsworth Longfellow,* De Vinne Press, 1908; *Literary History of the United States,* Vol. III, pp. 622-26.

Complete Poetical and Prose Works of Henry Wadsworth Longfellow, Houghton Mifflin, 1886, 11 vols. (Riverside edition); *Complete Poetical and Prose Works of Henry Wadsworth Longfellow,* ed. by H. E. Scudder, Houghton Mifflin, 1893 (Cambridge edition). *Longfellow's Boyhood Poems; a paper by the late George Thomas Little; together with the Text of . . . Early Poems and Bibliography,* ed. by R. W. Pettengill, Saratoga Springs, N. Y., 1925.

Following upon the collapse of nineteenth-century poetic conventions, Longfellow fell into disrepute, but there has latterly been a renewal of interest in his work as a narrative poet, a writer of sonnets, and an expert poetic craftsman. Master in all periods of his career of a lucid style, and moving easily in a great variety of verse forms, the poet is deceptively simple, concealing his prosodic dexterity so well as to lead superficial readers to the belief that he is merely "the children's poet." Much of his gentle romanticism is, indeed, outmoded, especially when it takes the form of dreamy didactic verse. This was once widely popular, for Longfellow formerly appealed to a public emerging from the rigors of Calvinism. To them his appeal lay in his moral idealism, his sentiment, and the easy clarity of his style. Modern critics prefer to think of him as an unsurpassed writer of narratives. Familiarity has dulled the edge of that daring experiment, *Hiawatha,* in which Longfellow characteristically "gentled" Indian folklore, but nothing can dim the pictorial excellence of *Evangeline,* and no other American poet has the range and variety of effects found in the *Tales of a Wayside Inn.* Moreover, Longfellow is a master of the sonnet; and even his didactic verse is frequently pithy and laconic. He is also great as a poet of the sea. His principal work in his own time was to forward and popularize the romantic revolution in American poetry and to familiarize his countrymen with European literature through his admirable translations and his rehandling of Old World legends and stories. Even today no one can afford to be ignorant of this aspect of his writing.

THE SPIRIT OF POETRY

Written in the autumn of 1825, first published in the *Atlantic Souvenir* for 1828 and afterwards in *Voices of the Night* (1839), "The Spirit of Poetry" is interesting because it hints at the youthful writer's idea of poetry and because it is filled with literary echoes which indicate what he has been reading.

There is a quiet spirit in these woods,
That dwells where'er the gentle south-wind blows;
Where, underneath the white-thorn, in the glade,
The wild flowers bloom, or, kissing the soft air,
The leaves above their sunny palms outspread.
With what a tender and impassioned voice
It fills the nice and delicate ear of thought,

When the fast ushering star of morning comes
O'er-riding the gray hills with golden scarf;
Or when the cowled and dusky-sandalled Eve,
In mourning weeds, from out the western gate,
Departs with silent pace! That spirit moves
In the green valley, where the silver brook,
From its full laver, pours the white cascade;
And, babbling low amid the tangled woods,
Slips down through moss-grown stones with endless laughter.
And frequent, on the everlasting hills,
Its feet go forth, when it doth wrap itself
In all the dark embroidery of the storm,
And shouts the stern, strong wind. And here, amid
The silent majesty of these deep woods,
Its presence shall uplift thy thoughts from earth,
As to the sunshine and the pure, bright air
Their tops the green trees lift. Hence gifted bards
Have ever loved the calm and quiet shades.
For them there was an eloquent voice in all
The sylvan pomp of woods, the golden sun,
The flowers, the leaves, the river on its way,
Blue skies, and silver clouds, and gentle winds,
The swelling upland, where the sidelong sun
Aslant the wooden slope, at evening, goes,
Groves, through whose broken roof the sky looks in,
Mountain, and shattered cliff, and sunny vale,
The distant lake, fountains, and mighty trees,
In many a lazy syllable, repeating
Their old poetic legends to the wind.

And this is the sweet spirit, that doth fill
The world; and, in these wayward days of youth,
My busy fancy oft embodies it,
As a bright image of the light and beauty
That dwell in nature; of the heavenly forms
We worship in our dreams, and the soft hues
That stain the wild bird's wing, and flush the cloud
When the sun sets. Within her tender eye
The heaven of April, with its changing light,
And when it wears the blue of May, is hung,
And on her lip the rich, red rose. Her hair
Is like the summer tresses of the trees,
When twilight makes them brown, and on her cheek
Blushes the richness of an autumn sky,
With ever-shifting beauty. Then her breath,
It is so like the gentle air of Spring,
As, from the morning's dewy flowers, it comes
Full of their fragrance, that it is a joy
To have it round us, and her silver voice
Is the rich music of a summer bird,
Heard in the still night, with its passionate cadence.

14. laver—bowl, basin.

A PSALM OF LIFE

WHAT THE HEART OF THE YOUNG MAN SAID TO THE PSALMIST

Longfellow long held this poem by him, and first made it public by reading it to a Harvard class during a lecture on Goethe. The subject of the hour was *Wilhelm Meister;* and the poem is to be understood as the American version of the doctrine of self-upbuilding of that novel. The poem is partly a denial of romantic dreaming, and partly an asseveration of a religious attitude opposed to Calvinism. It was published in the *Knickerbocker Magazine,* September, 1838, after Longfellow read it to his class, and collected into *Voices of the Night* (1839). The "Psalmist" is a general reference to David (or perhaps the author of Ecclesiastes) because of the doctrine of the vanity of life occasionally set forth in the Old Testament. Despite the lucidity of the poem, it deserves more careful study than hasty readers usually give it.

Tell me not, in mournful numbers,
  Life is but an empty dream!—
For the soul is dead that slumbers,
  And things are not what they seem.

Life is real! Life is earnest!
  And the grave is not its goal;
Dust thou art, to dust returnest,
  Was not spoken of the soul.

Not enjoyment, and not sorrow,
  Is our destined end or way;
But to act, that each to-morrow
  Find us farther than to-day.

Art is long, and Time is fleeting,
  And our hearts, though stout and brave,
Still, like muffled drums, are beating
  Funeral marches to the grave.

In the world's broad field of battle,
  In the bivouac of Life,
Be not like dumb, driven cattle!
  Be a hero in the strife!

Trust no Future, howe'er pleasant!
  Let the dead Past bury its dead!
Act,—act in the living Present!
  Heart within, and God o'erhead!

Lives of great men all remind us
  We can make our lives sublime,
And, departing, leave behind us
  Footprints on the sands of time;

Footprints, that perhaps another,
  Sailing o'er life's solemn main,
A forlorn and shipwrecked brother,
  Seeing, shall take heart again.

Let us, then, be up and doing,
  With a heart for any fate;
Still achieving, still pursuing,
  Learn to labor and to wait.

HYMN TO THE NIGHT

Ασπασίη, τρίλλιστος

Written in the summer of 1839, published in *Voices of the Night* (1839). Motto: "Welcome, three times prayed for." See line 23.

I heard the trailing garments of the Night
  Sweep through her marble halls!
I saw her sable skirts all fringed with light
  From the celestial walls!

I felt her presence, by its spell of might,
  Stoop o'er me from above;
The calm, majestic presence of the Night,
  As of the one I love.

I heard the sounds of sorrow and delight,
  The manifold, soft chimes,
That fill the haunted chambers of the Night,
  Like some old poet's rhymes.

From the cool cisterns of the midnight air
  My spirit drank repose;
The fountain of perpetual peace flows there,—
  From those deep cisterns flows.

O holy Night! from thee I learn to bear
  What man has borne before!
Thou layest thy finger on the lips of Care,
  And they complain no more.

Peace! Peace! Orestes-like I breathe this prayer!
Descend with broad-winged flight,
The welcome, the thrice-prayed for, the most fair,
The best-beloved Night!

THE BELEAGUERED CITY

Written September, 1839; published in the *Southern Literary Messenger,* November, 1839, and collected into *Voices of the Night* (1839). The poem was suggested by a note in Scott's *Border Minstrelsy:* "Similar to this was the *Nacht Lager,* or midnight camp, which seemed nightly to beleaguer the walls of Prague, but which disappeared upon the recitation of . . . magical words."

I have read, in some old, marvellous tale,
Some legend strange and vague,
That a midnight host of spectres pale
Beleaguered the walls of Prague.

Beside the Moldau's rushing stream,
With the wan moon overhead,
There stood, as in an awful dream,
The army of the dead.

White as a sea-fog, landward bound,
The spectral camp was seen,
And, with a sorrowful, deep sound,
The river flowed between.

No other voice nor sound was there,
No drum, nor sentry's pace;
The mist-like banners clasped the air
As clouds with clouds embrace.

But when the old cathedral bell
Proclaimed the morning prayer,
The white pavilions rose and fell
On the alarmed air.

Down the broad valley fast and far
The troubled army fled;
Up rose the glorious morning star,
The ghastly host was dead.

I have read, in the marvellous heart of man,
That strange and mystic scroll,
That an army of phantoms vast and wan
Beleaguer the human soul.

Encamped beside Life's rushing stream,
In Fancy's misty light,
Gigantic shapes and shadows gleam
Portentous through the night.

Upon its midnight battle-ground
The spectral camp is seen,
And, with a sorrowful, deep sound,
Flows the River of Life between.

No other voice nor sound is there,
In the army of the grave;
No other challenge breaks the air,
But the rushing of Life's wave.

And when the solemn and deep church-bell
Entreats the soul to pray,
The midnight phantoms feel the spell,
The shadows sweep away.

Down the broad Vale of Tears afar
The spectral camp is fled;
Faith shineth as a morning star,
Our ghastly fears are dead.

SERENADE

Written in 1840, published in *Graham's Magazine,* September, 1842, and later incorporated in *The Spanish Student* (1843), Act I, scene 3, where it is sung by Victorian outside Preciosa's bedroom.

Stars of the summer night!
Far in yon azure deeps,
Hide, hide your golden light!
She sleeps!
My lady sleeps!
Sleeps!

21. **Orestes-like**—At the conclusion of Aeschylus's tragedy *The Choephorae,* Orestes, who has murdered his mother to avenge his father, is pursued by the Furies. The subsequent play, *The Eumenides,* relates his expiation and final peace. 4. **Prague**—on the Moldau River, the capital of Czechoslovakia (and of Bohemia proper).

Moon of the summer night!
  Far down yon western steeps,
Sink, sink in silver light!
    She sleeps!
  My lady sleeps!
    Sleeps!

Wind of the summer night!
  Where yonder woodbine creeps,
Fold, fold thy pinions light!
    She sleeps!
  My lady sleeps!
    Sleeps!

Dreams of the summer night!
  Tell her, her lover keeps
Watch! while in slumbers light
    She sleeps!
  My lady sleeps!
    Sleeps!

THE SKELETON IN ARMOR

Written in 1840, first published in the *Knickerbocker Magazine,* January, 1841, and revised and included in *Ballads and Other Poems* (1841). Longfellow's account of the genesis of the poem says a skeleton in armor was dug up near Fall River, and "I suppose it to be the remains of one of the old Northern sea-rovers, who came to this country in the tenth century. Of course I make the tradition myself." The Round Tower (line 134) stood at Newport.

"Speak! speak! thou fearful guest!
Who, with thy hollow breast
Still in rude armor drest,
  Comest to daunt me!
Wrapt not in Eastern balms,
But with thy fleshless palms
Stretched, as if asking alms,
  Why dost thou haunt me?"

Then, from those cavernous eyes
Pale flashes seemed to rise,
As when the Northern skies
  Gleam in December;
And, like the water's flow
Under December's snow,
Came a dull voice of woe
  From the heart's chamber.

"I was a Viking old!
My deeds, though manifold,
No Skald in song has told,
  No Saga taught thee!
Take heed, that in thy verse
Thou dost the tale rehearse,
Else dread a dead man's curse;
  For this I sought thee.

"Far in the Northern Land,
By the wild Baltic's strand,
I, with my childish hand,
  Tamed the gerfalcon;
And, with my skates fast-bound,
Skimmed the half-frozen Sound,
That the poor whimpering hound
  Trembled to walk on.

"Oft to his frozen lair
Tracked I the grisly bear,
While from my path the hare
  Fled like a shadow;
Oft through the forest dark
Followed the were-wolf's bark,
Until the soaring lark
  Sang from the meadow.

"But when I older grew,
Joining a corsair's crew,
O'er the dark sea I flew
  With the marauders.
Wild was the life we led;
Many the souls that sped,
Many the hearts that bled,
  By our stern orders.

"Many a wassail-bout
Wore the long Winter out;
Often our midnight shout
  Set the cocks crowing,

5. **Wrapt not . . .** —that is, unembalmed. **28. gerfalcon**—a falcon common to the Arctic regions. **34. grisly bear**—found only in North America, but Longfellow may mean grisly in the sense of grim. **38. were-wolf's**—in folklore, a person changed into a wolf but retaining human intelligence; while transformed into a wolf, the person so changed commits beastly crimes.

As we the Berserk's tale
Measured in cups of ale,
Draining the oaken pail,
Filled to o'erflowing.

"Once as I told in glee
Tales of the stormy sea,
Soft eyes did gaze on me,
Burning yet tender;
And as the white stars shine
On the dark Norway pine,
On that dark heart of mine
Fell their soft splendor.

"I wooed the blue-eyed maid,
Yielding, yet half afraid,
And in the forest's shade
Our vows were plighted.
Under its loosened vest
Fluttered her little breast,
Like birds within their nest
By the hawk frighted.

"Bright in her father's hall
Shields gleamed upon the wall,
Loud sang the minstrels all,
Chanting his glory;
When of old Hildebrand
I asked his daughter's hand,
Mute did the minstrels stand
To hear my story.

"While the brown ale he quaffed,
Loud then the champion laughed,
And as the wind-gusts waft
The sea-foam brightly,
So the loud laugh of scorn,
Out of those lips unshorn,
From the deep drinking-horn
Blew the foam lightly.

"She was a Prince's child,
I but a Viking wild,
And though she blushed and smiled,
I was discarded!
Should not the dove so white
Follow the sea-mew's flight,
Why did they leave that night
Her nest unguarded?

"Scarce had I put to sea,
Bearing the maid with me,
Fairest of all was she
Among the Norsemen!
When on the white sea-strand,
Waving his armed hand,
Saw we old Hildebrand,
With twenty horsemen.

"Then launched they to the blast,
Bent like a reed each mast,
Yet we were gaining fast,
When the wind failed us;
And with a sudden flaw
Came round the gusty Skaw,
So that our foe we saw
Laugh as he hailed us.

"And as to catch the gale
Round veered the flapping sail,
'Death!' was the helmsman's hail,
'Death without quarter!'
Mid-ships with iron keel
Struck we her ribs of steel;
Down her black hulk did reel
Through the black water!

"As with his wings aslant,
Sails the fierce cormorant,
Seeking some rocky haunt,
With his prey laden,—
So toward the open main,
Beating to sea again,
Through the wild hurricane,
Bore I the maiden.

"Three weeks we westward bore,
And when the storm was o'er,
Cloud-like we saw the shore
Stretching to leeward;
There for my lady's bower
Built I the lofty tower,
Which, to this very hour,
Stands looking seaward.

"There lived we many years;
Time dried the maiden's tears;
She had forgot her fears,
She was a mother;

53. Berserk's—type of violent Norse warrior. **77. Hildebrand**—a name vaguely connoting the north. No particular historical person is meant. **110. Skaw**—the northern point of Jutland in Denmark.

Death closed her mild blue eyes,
Under that tower she lies;
Ne'er shall the sun arise
On such another!

"Still grew my bosom then,
Still as a stagnant fen!
Hateful to me were men,
The sunlight hateful!
In the vast forest here,
Clad in my warlike gear,
Fell I upon my spear,
Oh, death was grateful!

"Thus, seamed with many scars,
Bursting these prison bars,
Up to its native stars
My soul ascended!
There from the flowing bowl
Deep drinks the warrior's soul,
Skoal! to the Northland! *skoal!*"
Thus the tale ended.

MAIDENHOOD

Written in 1841, gathered into *Ballads and Other Poems* (1841), and also published in the *Southern Literary Messenger,* January, 1842.

Maiden! with the meek, brown eyes,
In whose orbs a shadow lies
Like the dusk in evening skies!

Thou whose locks outshine the sun,
Golden tresses, wreathed in one,
As the braided streamlets run!

Standing, with reluctant feet,
Where the brook and river meet,
Womanhood and childhood fleet!

Gazing, with a timid glance,
On the brooklet's swift advance,
On the river's broad expanse!

Deep and still, that gliding stream
Beautiful to thee must seem,
As the river of a dream.

Then why pause with indecision
When bright angels in thy vision
Beckon thee to fields Elysian?

Seest thou shadows sailing by,
As the dove, with startled eye,
Sees the falcon's shadow fly?

Hearest thou voices on the shore,
That our ears perceive no more,
Deafened by the cataract's roar?

O, thou child of many prayers!
Life hath quicksands,—Life hath snares!
Care and age come unawares!

Like the swell of some sweet tune,
Morning rises into noon,
May glides onward into June.

Childhood is the bough, where slumbered
Birds and blossoms many-numbered;—
Age, that bough with snows encumbered.

Gather, then, each flower that grows,
When the young heart overflows,
To embalm that tent of snows.

Bear a lily in thy hand;
Gates of brass cannot withstand
One touch of that magic wand.

Bear through sorrow, wrong, and ruth,
In thy heart the dew of youth,
On thy lips the smile of truth.

O, that dew, like balm, shall steal
Into wounds, that cannot heal,
Even as sleep our eyes doth seal;

And that smile, like sunshine, dart
Into many a sunless heart,
For a smile of God thou art.

159. **Skoal**—"In Scandinavia, this is the customary salutation when drinking a health. I have slightly changed the orthography of the word, in order to preserve the correct pronunciation." (Longfellow's note)

MEZZO CAMMIN

WRITTEN AT BOPPARD ON THE RHINE AUGUST 25, 1842, JUST BEFORE LEAVING FOR HOME

Published in the *Life,* Vol. I (1886). The title is from the first line of the *Divine Comedy* of Dante, *Nel mezzo del cammin di nostra vita*—"Midway upon the journey of our life." Dante began his poem at thirty-five; Longfellow was also half of the biblical three score years and ten.

Half of my life is gone, and I have let
The years slip from me and have not fulfilled
The aspiration of my youth, to build
Some tower of song with lofty parapet.
Not indolence, nor pleasure, nor the fret
Of restless passions that would not be stilled,
But sorrow, and a care that almost killed,
Kept me from what I may accomplish yet;
Though, half-way up the hill, I see the Past
Lying beneath me with its sounds and sights,—
A city in the twilight dim and vast,
With smoking roofs, soft bells, and gleaming lights,—
And hear above me on the autumnal blast
The cataract of Death far thundering from the heights.

THE ARSENAL AT SPRINGFIELD

Written in 1844, published in *Graham's Magazine,* April, 1844, and collected in *The Belfry of Bruges* (1845). On his wedding journey in 1843, Longfellow and his wife visited the United States arsenal at Springfield, Massachusetts, with Charles Sumner. Mrs. Longfellow remarked that the gun barrels which covered the walls looked like an organ on which Death might play. The poem was written at her urging. The forties saw a marked peace movement in the United States, of which the League of Universal Brotherhood, founded by Elihu Burritt in 1846, was a characteristic expression. *Cf.* Bryant's "The Battle-Field."

This is the Arsenal. From floor to ceiling,
Like a huge organ, rise the burnished arms;
But from their silent pipes no anthem pealing
Startles the villages with strange alarms.

Ah! what a sound will rise, how wild and dreary,
When the death-angel touches those swift keys!
What loud lament and dismal Miserere
Will mingle with their awful symphonies!

I hear even now the infinite fierce chorus,
The cries of agony, the endless groan,
Which, through the ages that have gone before us,
In long reverberations reach our own.

On helm and harness rings the Saxon hammer,
Through Cimbric forest roars the Norseman's song,
And loud, amid the universal clamor,
O'er distant deserts sounds the Tartar gong.

I hear the Florentine, who from his palace
Wheels out his battle-bell with dreadful din,
And Aztec priests upon their teocallis
Beat the wild war-drums made of serpent's skin;

The tumult of each sacked and burning village;
The shout that every prayer for mercy drowns;

4. tower of song—the *Christus* (1872), which Longfellow regarded as the central work of his life. **7. care**—the death of his first wife in 1835. **7. Miserere**—the beginning of Ps. 50 in the Vulgate Bible is *"Miserere mei, Domine"*—"Have mercy upon me, O Lord." **13. Saxon hammer**—loosely used for battle club. **14. Cimbric forest**—vague reference to the German forests whence the Cimbri and the Teutones emerged to invade the Roman Empire in the second century B.C. **17-18. Florentine . . . battle-bell**—The Florentines, when going into battle, wheeled the Martinella, or battle bell, near to the standard, and beat upon it. **19. teocallis**—A teocalli was a truncated pyramid surmounted by a temple and used for worship by the Aztecs.

The soldiers' revels in the midst of pillage;
The wail of famine in beleaguered towns;

The bursting shell, the gateway wrenched asunder,
The rattling musketry, the clashing blade
And ever and anon, in tones of thunder,
The diapason of the cannonade.

Is it, O man, with such discordant noises,
With such accursed instruments as these,
Thou drownest Nature's sweet and kindly voices,
And jarrest the celestial harmonies?

Were half the power, that fills the world with terror,
Were half the wealth, bestowed on camps and courts,
Given to redeem the human mind from error,
There were no need of arsenals nor forts:

The warrior's name would be a name abhorred!
And every nation, that should lift again
Its hand against a brother, on its forehead
Would wear forevermore the curse of Cain!

Down the dark future, through long generations,
The echoing sounds grow fainter and then cease;
And like a bell, with solemn, sweet vibrations,
I hear once more the voice of Christ say, "Peace!"

Peace! and no longer from its brazen portals
The blast of War's great organ shakes the skies!
But beautiful as songs of the immortals,
The holy melodies of love arise.

THE EVENING STAR

Written October 30, 1845, "in the rustic seat of the old apple-tree," and first called "Hesperus." Addressed to the poet's second wife. Published in *The Belfry of Bruges* volume (1845).

Lo! in the painted oriel of the West,
Whose panes the sunken sun incarnadines,
Like a fair lady at her casement, shines
The evening star, the star of love and rest!
And then anon she doth divest herself
Of all her radiant garments, and reclines
Behind the sombre screen of yonder pines,
With slumber and soft dreams of love oppressed.
O my beloved, my sweet Hesperus!
My morning and my evening star of love!
My best and gentlest lady! even thus,
As that fair planet in the sky above,
Dost thou retire unto thy rest at night,
And from thy darkened window fades the light.

SEA-WEED

Published first in *Graham's Magazine*, January, 1845; afterwards in *The Belfry of Bruges* (1845), and later transferred to "The Seaside and the Fireside" division of the *Works*.

When descends on the Atlantic
The gigantic
Storm-wind of the equinox,
Landward in his wrath he scourges
The toiling surges,
Laden with seaweed from the rocks:

From Bermuda's reefs; from edges
Of sunken ledges,
In some far-off bright Azore;
From Bahama, and the dashing,
Silver-flashing
Surges of San Salvador;

40. curse of Cain—*Cf.* Gen. 4:11. **1. oriel**—here used loosely as a poetic word for window. **10. morning and . . . evening star**—When Venus appears as the evening star, it is called Hesperus; as the morning star, Phosphorus.

From the tumbling surf, that buries
The Orkneyan skerries,
Answering the hoarse Hebrides;
And from wrecks of ships, and drifting
Spars, uplifting
On the desolate, rainy seas;—

Ever drifting, drifting, drifting
On the shifting
Currents of the restless main;
Till in sheltered coves, and reaches
Of sandy beaches,
All have found repose again.

So when storms of wild emotion
Strike the ocean
Of the poet's soul, erelong
From each cave and rocky fastness,
In its vastness,
Floats some fragment of a song:

From the far-off isles enchanted,
Heaven has planted
With the golden fruit of Truth;
From the flashing surf, whose vision
Gleams Elysian
In the tropic clime of Youth;

From the strong Will, and the Endeavor
That forever
Wrestle with the tides of Fate;
From the wrecks of Hope far-scattered,
Tempest-shattered,
Floating waste and desolate;—

Ever drifting, drifting, drifting
On the shifting
Currents of the restless heart;
Till at length in books recorded,
They, like hoarded
Household words, no more depart.

EVANGELINE

A TALE OF ACADIE

Written 1845-47; published October 30, 1847. The genesis of the tale is a story told by the Rev. H. L. Conolly at Longfellow's dinner table, and offered as a subject for a romance to Hawthorne, who, however, refused it. As noted in Hawthorne's *American Note-Books* the story runs: "H. C. L. heard from a French Canadian a story of a young couple in Acadie. On their marriage-day all the men of the Province were summoned to assemble in the church to hear a proclamation. When assembled, they were all seized and shipped off to be distributed through New England,—among them the new bridegroom. His bride set off in search of him—wandered about New England all her life-time, and at last when she was old, she found her bridegroom on his death-bed. The shock was so great that it killed her likewise." Longfellow drew his local color for Part One largely from T. C. Haliburton, *An Historical and Statistical Account of Nova Scotia* (1829), which contains large extracts from the Abbé Raynal's "emotional account of the French settlers" in his *Histoire philosophique . . . des . . . Indes* (1770). The immense popularity of the poem occasioned numerous investigations of the history of the deportation which serve to show that the Acadians were not so blameless as Raynal and others had supposed.

This is the forest primeval. The murmuring pines and the hemlocks,
Bearded with moss, and in garments green, indistinct in the twilight,
Stand like Druids of eld, with voices sad and prophetic,

3. **Druids**—priests of the ancient Celts, who worshiped in the forests.

Stand like harpers hoar, with beards that rest on their bosoms.
Loud from its rocky caverns, the deep-voiced neighboring ocean
Speaks, and in accents disconsolate answers the wail of the forest.

This is the forest primeval; but where are the hearts that beneath it
Leaped like the roe, when he hears in the woodland the voice of the hunstman?
Where is the thatch-roofed village, the home of Acadian farmers,—
Men whose lives glided on like rivers that water the woodlands,
Darkened by shadows of earth, but reflecting an image of heaven?
Waste are those pleasant farms, and the farmers forever departed!
Scattered like dust and leaves, when the mighty blasts of October
Seize them, and whirl them aloft, and sprinkle them far o'er the ocean.
Naught but tradition remains of the beautiful village of Grand-Pré.

Ye who believe in affection that hopes, and endures, and is patient,
Ye who believe in the beauty and strength of woman's devotion,
List to the mournful tradition, still sung by the pines of the forest;
List to a Tale of Love in Acadie, home of the happy.

PART THE FIRST

I

In the Acadian land, on the shores of the Basin of Minas,
Distant, secluded, still, the little village of Grand-Pré
Lay in the fruitful valley. Vast meadows stretched to the eastward,
Giving the village its name, and pasture to flocks without number.
Dikes, that the hands of the farmers had raised with labor incessant,
Shut out the turbulent tides; but at stated seasons the flood-gates
Opened, and welcomed the sea to wander at will o'er the meadows.
West and south there were fields of flax, and orchards and cornfields
Spreading afar and unfenced o'er the plain; and away to the northward
Blomidon rose, and the forests old, and aloft on the mountains
Sea-fogs pitched their tents, and mists from the mighty Atlantic
Looked on the happy valley, but ne'er from their station descended.
There, in the midst of its farms, reposed the Acadian village.
Strongly built were the houses, with frames of oak and of hemlock,
Such as the peasants of Normandy built in the reign of the Henries.
Thatched were the roofs, with dormer-windows; and gables projecting
Over the basement below protected and shaded the doorway.
There in the tranquil evenings of summer, when brightly the sunset
Lighted the village street, and gilded the vanes on the chimneys,
Matrons and maidens sat in snow-white caps and in kirtles
Scarlet and blue and green, with distaffs spinning the golden
Flax for the gossiping looms, whose noisy shuttles within doors
Mingled their sound with the whir of the wheels and the songs of the maidens.

9. **Acadian farmers**—Nova Scotia, formerly known as Acadie, was until the middle of the eighteenth century mainly settled by farmers from the west coast of France, beginning about 1604. 20. **Basin of Minas**—at the head of the Bay of Fundy. 21. **Grand-Pré**—Great Meadow, as explained in line 23. 29. **Blomidon**—a headland of red sandstone at the entrance of the Basin of Minas. 34. **Henries**—vague reference to the reigns of Henry III (1574-89) and Henry IV (1589-1610) of France.

Solemnly down the street came the parish priest, and the children
Paused in their play to kiss the hand he extended to bless them.
Reverend walked he among them; and up rose matrons and maidens,
Hailing his slow approach with words of affectionate welcome.
Then came the laborers home from the field, and serenely the sun sank
Down to his rest, and twilight prevailed. Anon from the belfry
Softly the Angelus sounded, and over the roofs of the village
Columns of pale blue smoke, like clouds of incense ascending,
Rose from a hundred hearths, the homes of peace and contentment.
Thus dwelt together in love these simple Acadian farmers,—
Dwelt in the love of God and of man. Alike were they free from
Fear, that reigns with the tyrant, and envy, the vice of republics.
Neither locks had they to their doors, nor bars to their windows;
But their dwellings were open as day and the hearts of the owners;
There the richest was poor, and the poorest lived in abundance.

Somewhat apart from the village, and nearer the Basin of Minas,
Benedict Bellefontaine, the wealthiest farmer of Grand-Pré,
Dwelt on his goodly acres; and with him, directing his household,
Gentle Evangeline lived, his child, and the pride of the village.
Stalworth and stately in form was the man of seventy winters;
Hearty and hale was he, an oak that is covered with snow-flakes;
White as the snow were his locks, and his cheeks as brown as the oak-leaves.
Fair was she to behold, that maiden of seventeen summers.
Black were her eyes as the berry that grows on the thorn by the wayside,
Black, yet how softly they gleamed beneath the brown shade of her tresses!
Sweet was her breath as the breath of kine that feed in the meadows.
When in the harvest heat she bore to the reapers at noontide
Flagons of home-brewed ale, ah! fair in sooth was the maiden.
Fairer was she when, on Sunday morn, while the bell from its turret
Sprinkled with holy sounds the air, as the priest with his hyssop
Sprinkles the congregation, and scatters blessings upon them,
Down the long street she passed, with her chaplet of beads and her missal,
Wearing her Norman cap and her kirtle of blue, and the ear-rings
Brought in the olden time from France, and since, as an heirloom,
Handed down from mother to child, through long generations.
But a celestial brightness—a more ethereal beauty—
Shone on her face and encircled her form, when, after confession,
Homeward serenely she walked with God's benediction upon her.
When she had passed, it seemed like the ceasing of exquisite music.

Firmly builded with rafters of oak, the house of the farmer
Stood on the side of a hill commanding the sea; and a shady
Sycamore grew by the door, with a woodbine wreathing around it.
Rudely carved was the porch, with seats beneath; and a footpath
Led through an orchard wide, and disappeared in the meadow.
Under the sycamore-tree were hives overhung by a penthouse,
Such as the traveler sees in regions remote by the roadside,

49. Angelus—bell rung at morning, noon, and night to call the faithful to their devotions. **62. Stalworth**—unusual form of stalwart. **72. hyssop**—instrument used for sprinkling holy water. **74. missal**—book of devotions; specifically, the book of the mass.

Built o'er a box for the poor, or the blessed image of Mary.
Farther down, on the slope of the hill, was the well with its moss-grown
Bucket, fastened with iron, and near it a trough for the horses.
Shielding the house from storms, on the north, were the barns and the farmyard.
There stood the broad-wheeled wains and the antique ploughs and the harrows;
There were the folds for the sheep; and there, in his feathered seraglio,
Strutted the lordly turkey, and crowed the cock, with the selfsame
Voice that in ages of old had startled the penitent Peter.
Bursting with hay were the barns, themselves a village. In each one
Far o'er the gable projected a roof of thatch; and a staircase,
Under the sheltering eaves, led up to the odorous corn-loft.
There too the dove-cot stood, with its meek and innocent inmates
Murmuring ever of love; while above in the variant breezes
Numberless noisy weathercocks rattled and sang of mutation.

Thus, at peace with God and the world, the farmer of Grand-Pré
Lived on his sunny farm, and Evangeline governed his household.
Many a youth, as he knelt in the church and opened his missal,
Fixed his eyes upon her as the saint of his deepest devotion;
Happy was he who might touch her hand or the hem of her garment!
Many a suitor came to her door, by the darkness befriended,
And, as he knocked and waited to hear the sound of her footsteps,
Knew not which beat the louder, his heart or the knocker of iron;
Or, at the joyous feast of the Patron Saint of the village,
Bolder grew, and pressed her hand in the dance as he whispered
Hurried words of love, that seemed a part of the music.
But among all who came young Gabriel only was welcome;
Gabriel Lajeunesse, the son of Basil the blacksmith,
Who was a mighty man in the village, and honored of all men;
For, since the birth of time, throughout all ages and nations,
Has the craft of the smith been held in repute by the people.
Basil was Benedict's friend. Their children from earliest childhood
Grew up together as brother and sister; and Father Felician,
Priest and pedagogue both in the village, had taught them their letters
Out of the selfsame book, with the hymns of the church and the plain-song
But when the hymn was sung, and the daily lesson completed,
Swiftly they hurried away to the forge of Basil the blacksmith.
There at the door they stood, with wondering eyes to behold him
Take in his leathern lap the hoof of the horse as a plaything,
Nailing the shoe in its place; while near him the tire of the cart-wheel
Lay like a fiery snake, coiled round in a circle of cinders.
Oft on autumnal eves, when without in the gathering darkness
Bursting with light seemed the smithy, through every cranny and crevice,
Warm by the forge within they watched the laboring bellows,
And as its panting ceased, and the sparks expired in the ashes,
Merrily laughed, and said they were nuns going into the chapel.
Oft on sledges in winter, as swift as the swoop of the eagle,
Down the hillside bounding, they glided away o'er the meadow.
Oft in the barns they climbed to the populous nests on the rafters,

96. Peter—*Cf.* Matt. 26: 74-75. **122. plain-song**—Gregorian music (unaccompanied) used in church services.

Seeking with eager eyes that wondrous stone, which the swallow
Brings from the shore of the sea to restore the sight of its fledglings;
Lucky was he who found that stone in the nest of the swallow!
Thus passed a few swift years, and they no longer were children.
He was a valiant youth, and his face, like the face of the morning,
Gladdened the earth with its light, and ripened thought into action.
She was a woman now, with the heart and hopes of a woman.
"Sunshine of St. Eulalie," was she called; for that was the sunshine
Which, as the farmers believed, would load their orchards with apples;
She too would bring to her husband's house delight and abundance,
Filling it with love and the ruddy faces of children.

II

Now had the season returned, when the nights grow colder and longer,
And the retreating sun the sign of the Scorpion enters.
Birds of passage sailed through the air, from the ice-bound,
Desolate northern bays to the shores of tropical islands.
Harvests were gathered in; and wild with the winds of September
Wrestled the trees of the forest, as Jacob of old with the angel.
All the signs foretold a winter long and inclement.
Bees, with prophetic instinct of want, had hoarded their honey
Till the hives overflowed; and the Indian hunters asserted
Cold would the winter be, for thick was the fur of the foxes.
Such was the advent of autumn. Then followed that beautiful season,
Called by the pious Acadian peasants the Summer of All-Saints!
Filled was the air with a dreamy and magical light; and the landscape
Lay as if new-created in all the freshness of childhood.
Peace seemed to reign upon earth, and the restless heart of the ocean
Was for a moment consoled. All sounds were in harmony blended.
Voices of children at play, the crowing of cocks in the farm-yards,
Whir of wings in the drowsy air, and the cooing of pigeons,
All were subdued and low as the murmurs of love, and the great sun
Looked with the eye of love through the golden vapors around him;
While arrayed in its robes of russet and scarlet and yellow,
Bright with the sheen of the dew, each glittering tree of the forest
Flashed like the plane-tree the Persian adorned with mantles and jewels.

Now recommenced the reign of rest and affection and stillness.
Day with its burden and heat had departed, and twilight descending
Brought back the evening star to the sky, and the herds of the homestead.
Pawing the ground they came, and resting their necks on each other,
And with their nostrils distended inhaling the freshness of evening.
Foremost, bearing the bell, Evangeline's beautiful heifer,
Proud of her snow-white hide, and the ribbon that waved from her collar,

137. **swallow**—The folk superstitions which appear in the poem are from Pluquet, *Contes populaires,* but Longfellow drew them from Wright, *Literature and Superstitions of England in the Middle Ages.* 144. **St. Eulalie**—According to Pluquet, "If the sun laughs on the day of Saint Eulalie, there will be plenty of apples and cider." St. Eulalie's day is February 12. 149. **Scorpion**—one of the signs of the zodiac, which the sun "enters" in October. 153. **Jacob**—*Cf.* Gen. 32:24-30. 159. **Summer of All-Saints**—our Indian summer. 170. **Persian**—Xerxes. Longfellow found this anecdote in Evelyn's *Silva,* Vol. II, p. 53.

Quietly paced and slow, as if conscious of human affection.
Then came the shepherd back with his bleating flocks from the seaside,
Where was their favorite pasture. Behind them followed the watch-dog,
Patient, full of importance, and grand in the pride of his instinct,
Walking from side to side with a lordly air, and superbly
Waving his bushy tail, and urging forward the stragglers;
Regent of flocks was he when the shepherd slept; their protector,
When from the forest at night, through the starry silence, the wolves howled.
Late, with the rising moon, returned the wains from the marshes,
Laden with briny hay, that filled the air with its odor.
Cheerily neighed the steeds, with dew on their manes and their fetlocks,
While aloft on their shoulders the wooden and ponderous saddles,
Painted with brilliant dyes, and adorned with tassels of crimson,
Nodded in bright array, like hollyhocks heavy with blossoms.
Patiently stood the cows meanwhile, and yielded their udders
Unto the milkmaid's hand; whilst loud and in regular cadence
Into the sounding pails the foaming streamlets descended.
Lowing of cattle and peals of laughter were heard in the farm-yard,
Echoed back by the barns. Anon they sank into stillness;
Heavily closed, with a jarring sound, the valves of the barn-doors,
Rattled the wooden bars, and all for a season was silent.

In-doors, warm by the wide-mouthed fireplace, idly the farmer
Sat in his elbow-chair, and watched how the flames and the smoke-wreaths
Struggled together like foes in a burning city. Behind him,
Nodding and mocking along the wall, with gestures fantastic,
Darted his own huge shadow, and vanished away into darkness.
Faces, clumsily carved in oak, on the back of his arm-chair
Laughed in the flickering light, and the pewter plates on the dresser
Caught and reflected the flame, as shields of armies the sunshine.
Fragments of song the old man sang, and carols of Christmas,
Such as at home, in the olden time, his fathers before him
Sang in their Norman orchards and bright Burgundian vineyards.
Close at her father's side was the gentle Evangeline seated,
Spinning flax for the loom, that stood in the corner behind her,
Silent awhile were its treadles, at rest was its diligent shuttle,
While the monotonous drone of the wheel, like the drone of a bagpipe,
Followed the old man's song, and united the fragments together.
As in a church, when the chant of the choir at intervals ceases,
Footfalls are heard in the aisles, or words of the priest at the altar,
So, in each pause of the song, with measured motion the clock clicked.

Thus as they sat, there were footsteps heard, and, suddenly lifted,
Sounded the wooden latch, and the door swung back on its hinges.
Benedict knew by the hob-nailed shoes it was Basil the blacksmith,
And by her beating heart Evangeline knew who was with him.
"Welcome!" the farmer exclaimed, as their footsteps paused on the threshold,
"Welcome, Basil, my friend! Come, take thy place on the settle

197. valves—in the Latin sense of folding doors. **209. Burgundian**—The Acadians were mainly from Poitou, Aunis, and Saintonge. Burgundy lies in the east of France, and Normandy in the northwest.

Close by the chimney-side, which is always empty without thee;
Take from the shelf overhead thy pipe and the box of tobacco;
Never so much thyself art thou as when through the curling
Smoke of the pipe or the forge thy friendly and jovial face gleams
Round and red as the harvest moon through the mist of the marshes."
Then, with a smile of content, thus answered Basil the blacksmith,
Taking with easy air the accustomed seat by the fireside:—
"Benedict Bellefontaine, thou hast ever thy jest and thy ballad!
Ever in cheerfullest mood art thou, when others are filled with
Gloomy forebodings of ill, and see only ruin before them.
Happy art thou, as if every day thou hadst picked up a horseshoe."
Pausing a moment, to take the pipe that Evangeline brought him,
And with a coal from the embers had lighted, he slowly continued:—
"Four days now are passed since the English ships at their anchors
Ride in the Gaspereau's mouth, with their cannon pointed against us.
What their design may be is unknown; but all are commanded
On the morrow to meet in the church, where his Majesty's mandate
Will be proclaimed as law in the land. Alas! in the mean time
Many surmises of evil alarm the hearts of the people."
Then made answer the farmer: "Perhaps some friendlier purpose
Brings these ships to our shores. Perhaps the harvests in England
By untimely rains or untimelier heat have been blighted,
And from our bursting barns they would feed their cattle and children."
"Not so thinketh the folk in the village," said warmly the blacksmith,
Shaking his head as in doubt; then, heaving a sigh, he continued:—
"Louisburg is not forgotten, nor Beau Séjour, nor Port Royal.
Many already have fled to the forest, and lurk on its outskirts,
Waiting with anxious hearts the dubious fate of tomorrow.
Arms have been taken from us, and warlike weapons of all kinds;
Nothing is left but the blacksmith's sledge and the scythe of the mower."
Then with a pleasant smile made answer the jovial farmer:—
"Safer are we unarmed, in the midst of our flocks and our cornfields,
Safer within these peaceful dikes besieged by the ocean,
Than our fathers in forts, besieged by the enemy's cannon.
Fear no evil, my friend, and tonight may no shadow of sorrow
Fall on this house and hearth; for this is the night of the contract.
Built are the house and the barn. The merry lads of the village
Strongly have built them and well; and, breaking the glebe round about them,
Filled the barn with hay, and the house with food for a twelvemonth.
René Leblanc will be here anon, with his papers and inkhorn.
Shall we not then be glad, and rejoice in the joy of our children?"
As apart by the window she stood, with her hand in her lover's,
Blushing Evangeline heard the words that her father had spoken,
And, as they died on his lips, the worthy notary entered.

238. Gaspereau's—a small river flowing into the Basin of Minas on the southern shore. **249. Louisburg . . . Beau Séjour . . . Port Royal**—Louisburg, on Cape Breton Island, captured by the English in 1745 and 1758, and long a bone of contention between the two powers; Beau Séjour, on the neck connecting Acadia with the mainland, captured in 1755; and Port Royal (Annapolis), captured in 1690 and again in 1710. **261. glebe**—soil, turf. Note the communal customs.

III

Bent like a laboring oar, that toils in the surf of the ocean,
Bent, but not broken, by age was the form of the notary public;
Shocks of yellow hair, like the silken floss of the maize, hung
Over his shoulders; his forehead was high; and glasses with horn bows
Sat astride on his nose, with a look of wisdom supernal.
Father of twenty children was he, and more than a hundred
Children's children rode on his knee, and heard his great watch tick.
Four long years in the times of the war had he languished a captive,
Suffering much in an old French fort as the friend of the English.
Now, though warier grown, without all guile or suspicion,
Ripe in wisdom was he, but patient, and simple, and childlike.
He was beloved by all, and most of all by the children;
For he told them tales of the Loup-garou in the forest,
And of the goblin that came in the night to water the horses,
And of the white Létiche, the ghost of a child who unchristened
Died, and was doomed to haunt unseen the chambers of children;
And how on Christmas eve the oxen talked in the stable,
And how the fever was cured by a spider shut up in a nutshell,
And of the marvelous powers of four-leaved clover and horseshoes,
With whatsoever else was writ in the lore of the village.
Then up rose from his seat by the fireside Basil the blacksmith,
Knocked from his pipe the ashes, and slowly extending his right hand,
"Father Leblanc," he exclaimed, "thou hast heard the talk in the village,
And, perchance, canst tell us some news of these ships and their errand."
Then with modest demeanor made answer the notary public,—
"Gossip enough have I heard, in sooth, yet am never the wiser;
And what their errand may be I know not better than others.
Yet am I not of those who imagine some evil intention
Brings them here, for we are at peace; and why then molest us?"
"God's name!" shouted the hasty and somewhat irascible blacksmith;
"Must we in all things look for the how, and the why, and the wherefore?
Daily injustice is done, and might is the right of the strongest!"
But without heeding his warmth, continued the notary public,—
"Man is unjust, but God is just; and finally justice
Triumphs; and well I remember a story that often consoled me,
When as a captive I lay in the old French fort at Port Royal."
This was the old man's favorite tale, and he loved to repeat it
When his neighbors complained that any injustice was done them.
"Once in an ancient city, whose name I no longer remember,
Raised aloft on a column, a brazen statue of Justice
Stood in the public square, upholding the scales in its left hand,
And in its right a sword, as an emblem that justice presided
Over the laws of the land, and the hearts and homes of the people.
Even the birds had built their nests in the scales of the balance,
Having no fear of the sword that flashed in the sunshine above them.
But in the course of time the laws of the land were corrupted;
